ABSTRACT

This publication provides a listing of the standards that are referenced in the building codes promulgated by: (1) the three model building code organizations; i.e., Building Officials and Code Administrators International, Inc. (BOCA), International Conference of Building Officials (ICBO), and the Southern Building Code Congress International, Inc. (SBCCI); (2) the 29 states that have mandatory state building codes; and (3) 35 selected U.S. cities. In addition to identifying each standard referenced in the above-named codes, this publication lists the current date of the standard, its title, the codes referencing it, the date of the code, the locations within the code where the standard is referenced, and the date of the standard referenced in the code. This publication is intended to provide assistance to the building community in updating, using and maintaining the standards referenced in building codes.

Key Words: Building codes; building regulations; building regulatory systems; building technology; standards; standards organizations

ACKNOWLEDGMENTS

The author is indebted to Emil Braun, Physicist, and to Thomas A. Somers, Computer Specialist, Fire Measurement and Research Division, Building and Fire Research Laboratory (BFRL), for the computer programming and formatting of the list of standards referenced in this report, and to Carolyn L. Flood, Secretary, BFRL, for data entry and processing the report for publication. James G. Gross, Assistant Director, BFRL, is gratefully acknowledged for his constructive suggestions and overall direction.

List of Standards Referenced in Model, State and Major City Building Codes	A1-A467

I. BACKGROUND

Building codes are comprehensive legal documents, or ordinances, establishing minimum requirements for the design, construction, alteration or repair of buildings to assure a high level of safety, health and well-being for the occupants. They are established through legislative action of the state, city, or other jurisdictional entity to which they apply.

Three model building codes are developed, published and available for states and cities to adopt and may be adopted as written or with amendments and modifications to suit local conditions. The National Building Code (NBC) is published by the **Building Officials and Code Administrators International, Inc.** (BOCA), which was founded in 1915 and is dedicated to professional code administration and enforcement for the protection of public health, safety and welfare.[1] The Uniform Building Code (UBC) was first enacted by the **International Conference of Building Officials** (ICBO) in 1927. It has as its purpose the development of better building construction and greater safety of the public by uniformity in building laws.[2] **The Southern Building Code Congress International, Inc.** (SBCCI), founded in 1940, has been publishing the Standard Building Code (SBC) since 1945, with its purpose to protect the public's life, health and welfare in the built environment.[3] All three model codes are updated annually and published on a three-year cycle. Although these three model codes are available for adoption by states and cities, some states and cities prefer to develop and use their own, individual building codes.

Building codes reflect the results of research in building and construction and include the opinions of the Nation's experts in all aspects of building technology related to safety, health, comfort and performance. These findings are developed into standards and made available by such nationally recognized organizations as the American National Standards Institute (ANSI), the American Society for Testing and Materials (ASTM), the National Fire Protection Association (NFPA), and many others. Building codes refer to or include portions of those nationally recognized standards.

It is the aim of national standards generating organizations to provide up-to-date information in the standards they produce and offer to the building community. Consequently, standards referenced in building codes are frequently updated, revised, replaced or withdrawn. Promulgators of building codes, then, are faced with a continuing problem of updating their codes to incorporate current, valid, and applicable standards. Even as a building code, or publication such as this one, is being printed and distributed, some of the standards referenced will be replaced, withdrawn, or otherwise changed. It is important that the year of issue of the standard be given in the building code.

Along with the importance for building codes to reference current, up-do-date standards, there are a number of technical judgments, assessments of variations

---

[2] The Uniform Building Code/1991.

[3] The Standard Building Code/1991.

due to geographical or urban differences, and other factors, that present major obstacles to the individuals responsible for upgrading building codes. While this publication does not address those complexities, it is intended that the compilation and comparative listing of all referenced standards will be of assistance to those working toward greater building code uniformity, correctness and effectiveness.

In making the decision to develop this publication, it was determined that a service could be provided by offering pertinent current information regarding standards referenced in various building codes as follows: (1) the three model building codes (i.e., the National Building Code, the Standard Building Code, and the Uniform Building Code), the building codes in those 29 states which have mandatory statewide building codes, and the building codes of 35 cities selected by population and geographic distribution (identification of each building code is identified in Part V); (2) identification of the current date and status of the standards referenced; (3) identification of the appropriate section, or sections, of each code in which a standard is referenced; and (4) the date of the standard referenced in each code.

II. ADOPTION OF BUILDING CODES

In 1976, 18 states had mandatory statewide building codes. By 1992, the number had increased 61 percent, to 29. This increase is positive recognition by the officials and legislatures of the additional states of the importance of using consistent statewide building codes to regulate building construction for the public's safety and welfare.

Of these 29 states, 27 have adopted one of the three model codes, either entirely or as a basis for their own codes. Most of these state codes are required as a minimum throughout the state, with local governments allowed to amend if more stringent. Some cities, New York and Milwaukee, for example, are exempt from their state code, using their own locally-developed code instead. Milwaukee's code, however, is based on the Wisconsin state code. In those states where building codes are not mandatory statewide, or where no codes exist at all, all major cities have their own codes for building design and construction. Of the 35 cities selected by population and geographic distribution to be included in this report, 15 are located in the remaining 21 states with no mandatory statewide building code. Of these 15 cities, 14 have chosen to use one of the three model codes, either entirely or with amendments, rather than develop their own codes.

The 18 states with building codes in 1976 were using codes which were 2.2 years old, on average. In 1992, the average age of the building codes of the 29 states with codes was 1.9 years, reflecting an increased interest by the states to maintain up-to-date codes.

III. STANDARDS REFERENCED

A typical building code may reference on the order of 350 standards developed and offered by as many as 50 standards generating organizations. These referenced standards, along with other provisions contained in a building code, become the

legal minimum criteria which building designers and constructors must meet for design, construction, modification, and repair of buildings.

The application of some standards is so widespread that they may be referenced in several chapters, and sections of chapters, covering different but related components of a building. For instance, the American Concrete Institute standard, "Building Code Requirements for Reinforced Concrete," is referenced 844 times in the 67 building codes included in this report. The second most referenced standard is the "Test Method for Surface Burning Characteristics of Building Materials," offered jointly by the American Society for Testing and Materials, the National Fire Protection Association and the Underwriters Laboratories. Other more frequently referenced standards are the National Fire Protection Association's "National Electrical Code," the American National Standards Institute/American Society of Mechanical Engineers' standard, "Safety Code for Elevators and Escalators," and the National Fire Prevention Association's "Installation of Sprinkler Systems." It is noted that these standards with the highest frequencies of reference are all related to the structural integrity, fire, electrical and mechanical safety aspects of the building codes. A similar pattern exists for other standards included in this report. This may be as expected and is consistent with the purpose of building codes to assure a high level of safety, health and well-being for the occupants.

At the same time, it must be recognized that the frequency of use of a standard may depend on other factors. For instance, the way a particular building code is organized, developed and written also has some bearing on the number of times a standard is referenced. Some codes may reference a standard only once or twice, specifically, in a given chapter or section, relying upon detailed information from that standard to describe the code's requirements for design and construction. Another code may choose to refer to the standard repeatedly instead of describing the standard's contents in the code itself, all as a matter of choice and style.

As stated earlier, the three model building codes are revised every year and reprinted every three years to address new and changing conditions and to update the references to standards. Many state and city codes are likewise revised every few years. However, it is evident from the information reported in this publication that, in spite of all the efforts to include the latest in safety, health, and comfort in the design and construction of buildings, many building codes continue to reference outdated, obsolete standards.

For instance, in the 3 model codes, 29 state and 35 city codes included in this study, a combined total of 1723 standards are referenced. Of these, 235, or 13 percent, have been withdrawn, canceled, revised, renumbered, or, for some other reason, are not current standards. As such, those standards are no longer generally available to the designers and constructors charged with the responsibility of complying with the particular building code in question; nor are they available to the local officials responsible for enforcing the building code.

The referencing of outdated standards is found in the three model codes as well as in those building codes that are individually developed and administered by states and cities. In the 1991 edition of the Standard Building Code, for instance, 332 standards are referenced. Of these, 38, or 11 percent, were

revised before that edition was published. The Uniform Building Code uses its own standards which are revised or updated with each new edition. As such, the current date of these standards is the date of the building code itself. However, in preparing its standards, the Uniform Building Code makes use of, to some extent, standards developed by such national standards generating organizations as ANSI, ASTM, NFPA, etc., and includes references to any such standards in its building code. In its 1991 edition, reference is made to 154 of these national standards. Thirty-one of these, or 20 percent, were outdated when that edition was printed.

In this same connection, the National Building Code references 358 standards in the 1991 supplement to its 1990 edition. Thirteen of these, or less than 4 percent, had been withdrawn or replaced before that edition was prepared for printing.

The states and cities that adopt any of the three model codes, either in whole or in part, can be expected to follow similar patterns as regards referencing outdated standards. Of the states and cities that develop and promulgate their own building codes, two of the largest cities in the Nation continue to reference outdated standards, even though the building codes themselves were recently revised. New York City, in its 1990 edition, references 403 standards of which 89, or 22 percent, are obsolete or otherwise not current. Some of these standards were withdrawn or canceled over 20 years ago.

The City of Chicago, which also produces its own building code, references a comparatively small number of standards, 128, in its 1990 edition. However, 39, or 30 percent, were not current and several of them have not been current for more than 20 years.

This compilation of standards referenced in building codes is built upon earlier work, accomplished some years ago and published as NBSIR 76-1140,[4] which offers a similar listing of standards referenced in various building codes. Since that time, the building codes used throughout the Nation have expanded greatly in coverage with a resultant increase in the number of standards referenced in most building codes. In addition, and as suggested earlier, it has been found that a number of building codes are vastly outdated as regards referencing obsolete or modified standards.

IV. CONTENT AND USE OF TABLES

Consistent with the earlier publication, the following data relative to standards utilization in building codes and their potential use to the building regulatory community are included: (1) location of each standard referenced in each building code to facilitate amendment when the date of the standard changes; (2) data base for determining those standards that are in widespread use; (3) identification of seldom used standards so studies can be initiated to determine the reason(s) that a standard is used in one code and not in another; (4) a compilation of the utilization of standards by various building regulatory

[4] NBSIR 76-1140, "Standards Referenced in Selected Building Codes," Bertram M. Vogel, P.E., October 1976.

authorities which provides an important data base for the promulgation of future Federal regulations; (5) identification of those standards that have the highest priority for conversion to metric (SI); and (6) a data base for organizations such as the Council of American Building Officials (CABO), the National Conference of States on Building Codes and Standards (NCSBCS), the individual model code organizations, as well as individual regulatory agencies, in working towards improvement of building codes through use of up-to-date standards.

This publication provides information relative to standards use for the various segments of the building community listed below.

- For the Building Regulatory Community

  - Current date of referenced standards
  - Correct title of standard
  - Organization generating the standard and the correct address of the organization
  - Location in building code where the standard is referenced
  - Date of the standard referenced in the building code, thus identifying a need for updating the reference
  - Standards which have been discontinued or superseded
  - Standards which should be considered for future reference in the building code
  - Basis for establishing a standards reference library

- For Standards Generating Organizations

  - User, or nonuser, of a particular standard
  - Adequacy of the referenced standard relative to date
  - Adequacy of standard reference in the building code
  - A basis for comparing codes for uniformity
  - Areas where no standards exist

- For Designing Professionals

  - Basis for identifying design standards in other jurisdictions
  - Basis for establishing a standards reference library
  - Current assessment of the state-of-the-art on design standards
  - Areas of concern in the design of projects in other jurisdictions
  - Guide to the standards activities of professional societies

- For Federal Government Agencies

  - Possible conflicts between Federal and local regulations
  - Codes which will probably comply with Federal programs
  - Codes which may require updating
  - Identification of areas where no applicable standards exist

- For Industrial Organizations (including trade associations)

  - Utilization of standards developed by these organizations
  - Determination of standards which should be developed
  - Adequacy of standards referenced in building codes

V. BUILDING CODES INCLUDED IN STUDY

The following building codes are included in this compilation:

1. Model Building Codes (abbreviations and current date)

   a. National Building Code (NBC - 1990 w/1991 Supplement), as promulgated by the Building Officials and Code Administrators International, Inc. (BOCA)

   b. Standard Building Code (SBC - 1991), as promulgated by the Southern Building Code Congress International, Inc. (SBCCI)

   c. Uniform Building Code (UBC - 1991), as promulgated by the International Conference of Conference of Building Officials (ICBO)

2. State Building Codes (abbreviations) - dates of codes

   a. Alaska (AK) - 1991
   b. Arkansas (AR) - 1991
   c. California (CA) - 1989
   d. Connecticut (CT) - 1989
   e. Florida* (FL) - 1991
   f. Georgia (GA) - 1991
   g. Indiana (IN) - 1989
   h. Kentucky (KY) - 1991
   i. Massachusetts (MA) - 1990
   j. Michigan (MI) - 1989
   k. Minnesota (MN) - 1990
   l. Montana (MT) - 1989
   m. New Hampshire (NH) - 1992
   n. New Jersey (NJ) - 1991
   o. New Mexico (NM) - 1988
   p. New York (NY) - 1990
   q. North Carolina (NC) - 1991
   r. North Dakota (ND) - 1991
   s. Ohio (OH) - 1989
   t. Oregon (OR) - 1990
   u. Rhode Island (RI) - 1990
   v. Tennessee (TN) - 1988
   w. Utah (UT) - 1990
   x. Vermont (VT) - 1989
   y. Virginia (VA) - 1990
   z. Washington (WA) - 1991
   aa. West Virginia (WV) - 1989
   bb. Wisconsin (WI) - 1992
   cc. Wyoming (WY) - 1992

*Does not include Dade County, Broward County, and EPCOT.

3. Major City Building Codes* - dates of codes

a. Atlanta - 1983
b. Baltimore - 1991
c. Boston - 1990
d. Chicago - 1990
e. Cincinnati - 1990
f. Cleveland - 1991
g. Columbus - 1989
h. Dallas - 1990
i. Denver - 1990
j. Detroit - 1991
k. District of Columbia (D.C.) - 1987
l. El Paso - 1991
m. Fort Worth - 1989
n. Houston - 1989
o. Indianapolis - 1989
p. Jacksonville - 1990
q. Kansas City, MO - 1989
r. Los Angeles - 1990
s. Memphis - 1990
t. Miami - 1988
u. Milwaukee - 1991
v. Minneapolis - 1990
w. Nashville - 1992
x. New Orleans - 1987
y. New York - 1990
z. Oklahoma City - 1991
aa. Philadelphia - 1991
bb. Phoenix - 1991
cc. Pittsburgh - 1991
dd. St. Louis - 1988
ee. San Antonio - 1987
ff. San Diego - 1990
gg. San Francisco - 1990
hh. San Jose - 1990
ii. Seattle - 1992

*Some large cities are not included since they are in states requiring the cities within those states to use the state code with no amendments. Typical, but not all inclusive, of the cities falling within this category are Little Rock, Arkansas; Louisville, Kentucky; Trenton, New Jersey; Portland, Oregon; and Richmond, Virginia.

VI. FORMAT OF TABULAR PRESENTATION

The tabular presentation of the standards referenced in building codes is based on the alphabetical listing, by acronym, of the standards generating organizations. Appendix A contains the addresses and acronyms for the 120 organizations which have developed standards included in the study.

As illustrated in Figure 1, each standards generating organization is listed along with the standards which are included in at least one building code. In general, these standards are listed by the standard numbers, or letters, and title assigned by the generating organization. This is not always the case since several standards generating organizations do not assign numbers or letters to their standards. When this occurs, identifying letters and numbers have been assigned arbitrarily for identification by the computer. Additional information provided for each referenced standard includes: (1) current date of the standard (if the standard is still active), as well as the date referenced in the building codes; (2) names and current dates of the building codes which reference the standard; and (3) section, or sections, in each included code where the standard is referenced.

10. SUPPLEMENTARY NOTES

11. ABSTRACT (A 200-WORD OR LESS FACTUAL SUMMARY OF MOST SIGNIFICANT INFORMATION. IF DOCUMENT INCLUDES A SIGNIFICANT BIBLIOGRAPHY OR LITERATURE SURVEY, MENTION IT HERE.)

This publication provides a listing of the standards that are referenced in the building codes promulgated by: (1) the three model building code organizations; i.e., Building Officials and Code Administrators International, Inc. (BOCA), International Conference of Building Officials (ICBO), and the Southern Building Code Congress International, Inc. (SBCCI); (2) the 29 states that have mandatory state building codes; and (3) 35 selected U.S. cities. In addition to identifying each standard referenced in the above-named codes, this publication lists the current date of the standard, its title, the codes referencing it, the date of the code, the locations within the code where the standard is referenced, and the date of the standard referenced in the code. This publication is intended to provide assistance to the building community in updating, using and maintaining the standards referenced in building codes.

12. KEY WORDS (6 TO 12 ENTRIES; ALPHABETICAL ORDER; CAPITALIZE ONLY PROPER NAMES; AND SEPARATE KEY WORDS BY SEMICOLONS)

Building codes; building regulations; building regulatory systems; building technology; standards; standards organizations
