INORGANIC ANALYTICAL CHEMISTRYPublications by members of the staff of the
National Bureau of Standards

This letter circular lists publications by members of the staff of the National Bureau of Standards which deal directly, or incidentally, with inorganic chemical analysis. Publications on the platinum metals are not included in this list because a complete tabulation of these is given in Letter Circular LC 426. Publications relating to gas chemistry are covered in Letter Circular LC 546.

The arrangement is in the order of date of publication, except for the small number of general publications known as "Circulars" relating to analysis, which are grouped at the beginning of the list.

For ready reference and convenience in ordering the separate papers, they have been listed with consecutive numbers in the first column, the title in the second column, the serial letter and number in the third column, and the price in the last column. "OP" indicates that the paper is out of print, but may be consulted in libraries. See also paragraph on "Scientific Papers" below. A complete list of the Bureau's publications (Circular No. C24 and Supplements) is also generally available at such libraries.

When the price is stated, the publication may be purchased from the Superintendent of Documents, Government Printing Office, Washington, D. C. The prices quoted are for delivery to addresses in the United States and its possessions, and to certain countries that extend the franking privilege. In the case of all other countries, one-third the cost of the publications should be added to cover postage. Remittances should be made either by coupons (obtainable from the Superintendent of Documents in sets of 20 for \$1.00 and good until used), or by check or money order payable to the "Superintendent of Documents, Government Printing Office," and sent to him with order.

Serial letters are used to designate Bureau publications:

S = "Scientific Papers" of the National Bureau of Standards. S1 to S329, are "Reprints from the Bulletin of the Bureau of Standards." S330 to S572, were published as "Scientific Papers of the Bureau of Standards." This series was superseded by the "Bureau of Standards Journal of Research" in 1928. Each volume of the Bulletin was published in four parts called the Quarterly of the Bulletin of the Bureau of Standards. Most of the Scientific Papers, S1 to S329, which are no longer obtainable as separates, may still be secured by purchasing the Quarterly of the Bulletin which contains the paper or papers desired. The Quarterly of the Bulletin sells at 25 cents each.

T = "Technologic Paper" of the National Bureau of Standards. T1 to T202 were issued, each independent of the other, with individual pagination. Later they were assembled to make the the first 15 volumes of this series, and subsequent separates were given volume pagination (Tech. Pap. BS). This series was superseded by the "Bureau of Standards Journal of Research" in 1928.

RP = "Research Paper." These are reprints of articles appearing in the "Bureau of Standards Journal of Research" and the "Journal of Research of the National Bureau of Standards", the latter being the title of this periodical since July 1934 (volume 13, number 1).

C = "Circular" of the National Bureau of Standards.

For papers in other scientific or technical journals, the name of the journal or of the organization publishing the article is given, together with the volume number (underscored), page, and year of publication. The number of pages is given last. The Bureau can not supply copies of these journals, or reprints from them.

Partial Subject Index

(The numbers in this index refer to the reference numbers in the first column)

- Acid potassium phthalate, stability of aqueous solutions, 178; pH of 0.05 M solution, 266.
- Aldehyde, estimation of in hydrocellulose, 249.
- Alkalies, 15, 16, 61, 95, 140, 171. (See also Glass Analysis)
- Alumina, in steel, 148.
- Aluminates, constitution of, 41; reaction of water on calcium aluminates, 114.
- Aluminous silicates, decomposition of, 123.
- Aluminum, determination as oxide, 51; as phosphate, 81; in bauxite and refractories, 111; in nitriding steels, 154; in non-ferrous materials, 96; use of ammonium aurintricarboxylate for small amounts, 103, 202; use of 8-hydroxyquinoline 117, 154, 171, 172.
- Antimony, in copper-base alloys, 201; in rubber goods, 69, separation from arsenic and tin by distillation, 180.
- Arsenic, distillation, separation, and determination of, 180, 201, 209, 220.
- Arsenious oxide, use in standardizing permanganate, 193.
- Ascorbic acid, determination of, 233.
- Asphalt, determining components of, 237.
- Atomic weights, Aluminum, 186; Bromine, 29; Chlorine, 11; Gallium, 176; Hydrogen, 10; Osmium, 145; Oxygen, difference between oxygen from air and water, 184.
- "Aurin" test for aluminum, 103, 202; preparation of reagent, 203.
- Barium carbonate and sulphate in rubber goods, 48.
- Bauxite, 111.

Benzoic acid, as standard material, 27, 42; heat of combustion, 166; preparation of, 231; purification, 267.

ξ-Benzoinoxime, for molybdenum, 144.

Beryllium, separation from aluminum by 8-hydroxyquinoline, 172.

Bismuthate, method for manganese, 24, 28.

Boiler plugs, reliability of, 121.

Bone black, analysis of, 255.

Bronze, analysis of, 80.

Boric acid buffers, 132.

Boron, in glass, 181, 243; in steel, 204; in phosphate rock, 196.

Bromine, atomic weight of, 29; reaction with furfural, 221

Buffer solutions, pH values, 256.

Calciovolborthite, 38.

Calcium aluminates, 114.

Calcium sulfate, behavior at high temperatures, 246.

Calcium vanadates, 40, 44.

Carbon, in steel, 39, 49, 54, 60, 129; by combustion, 264; in bone black, 255.

Carbon monoxide and carbon dioxide in steels, 58.

Carbon monoxide, determination of, 241.

Carbonate, and silicate rocks, analysis of, 16, 61.

Carnotite, 93.

Ceramic materials, decomposition of, 227.

Chemistry and metallurgy, work of Bureau of Standards, 157a.

Chlorine, atomic weight of, 11.

- Chrome-vanadium steels, analysis of, 18, 23, 30, 86.
- Chromic acid, density of, 124.
- Chromium, in steel, 21, 30, 86; on coatings, 232.
- Cobalt, in steels, 75, 136, 143; interference in manganese determinations, 87a.
- Copper, electroanalytical determination of, 211; in dental alloys, 238.
- Copper sulphate, relation between composition and density of aqueous solutions of, 47.
- Cupferron, use of, 71, 74.
- Cyanide plating solutions, 76, 133, 137, 138, 139, 153.
