IV. Pro	oportional weights for various subdivisions of the bushel	19

I. INTRODUCTION

This circular simply shows the legal weights per bushel of various commodities, as fixed by national legislation mainly for customs purposes, or by State legislation for purposes of commerce within the State. In many cases these weights differ considerably in the different States and in only rare instances, such as wheat, oats, and peas, are the legal weights uniform throughout the entire country. It will be noticed that for some commodities which have, in the natural state, a husk or pod, the weights per bushel in the various States differ from one another by as much as 100 per cent. This wide discrepancy may be explained by the fact that it appears to be the practice in some States with regard to such commodities, to require that quantity for a bushel which, when shelled, or husked and shelled (as the case might be), will make a struck bushel of the commodity, while in other States only that quantity in its natural state, with the husk or pod included, which will fill a bushel measure, is taken for a bushel.

The bushel in customary use in the United States is the Winchester bushel, containing 2150.42 cubic inches. This measure is a heritage from colonial days, being the same measure that was

Page

fixed by national legislation. A number of the States, however, have required that some commodities be sold by heaped measure and have described the manner in which the measure should be filled, one of two phraseologies being usually employed in the statutes, namely, "heaped in the form of a cone, the outside of the measure to be the base of the cone, and such cone to be as high as the article will admit," or "heaped as high as may be without special effort or design." General custom, too, dictates this manner of filling the measure in the case of these commodities. Also in a few States the number of cubic inches required to constitute a heaped bushel of one or two specified commodities has been fixed, but these enactments are not uniform one with another.

We find only one decision in the courts which specifies the size of the heaped bushel and this decision is thus of very great interest on account of the broadness of its application. The case in question was decided by the Court of Customs Appeals in February. 1912, and was based upon a dispute as to what constituted a "bushel" of apples under the terms of a tariff law which assessed the duty in terms of "bushels" without descriptive words or without specifying any weight per bushel. The court held that it should be considered that a heaped bushel was referred to since both by custom and by the old English statute quoted above apples have always been required to be so sold; and then after an examination of authorities, decided that a heaped bushel contained 2747.715 cubic inches. This figure is derived by adding to the volume of a struck bushel the volume of a cone having a base diameter of $19\frac{1}{2}$ inches and a height of 6 inches. The $19\frac{1}{2}$ -inch base in the diameter of the Winchester bushel mentioned in the statute quoted above, measured from outside to outside of the measure. This figure makes the heaped bushel about 27.8 per cent larger than the struck bushel. This decision will undoubtedly be followed in customs matters.

The heaped bushel is also commonly defined as 25 per cent larger than the struck bushel, a capacity of about 2686 cubic inches. This calculation is based on a cone of the same height heaped upon the same bushel measure described above, but the cone is considered in this case to be heaped upon the area of the open top of the measure instead of the top including the sides, the diameter thus being $18\frac{1}{2}$ instead of $19\frac{1}{2}$ inches.

Heaped measure is to be used in measuring the more bulky commodities, such as apples, pears, plums, peaches, potatoes, onions, beets, carrots, turnips, etc. It is at once apparent that the quantity which may be heaped upon a measure will depend very largely on the area of the top of the measure; and so it becomes important that there should be a standard diameter for each size of measure. While, as previously noted, this matter has never been determined by national legislation, the following minimum diameters of cylindrical dry measures of various capacities are approved by the Bureau of Standards, and have also been adopted by the Annual Conference on Weights and Measures:

		linimum diameter in inches
1/2 bushel		 133⁄4
I peck		
¹ / ₂ peck	•••	 $8\frac{1}{2}$
2 quarts	• • •	 · · · 65/8
1 quart	•••	 ··· 5 ³ /8
1 pint		 •••• 4

Another factor of importance in buying commodities for which bushel weights have been established is the knowledge of whether one may demand, under the laws of this particular State, the weight specified in the law, regardless of whether the commodities are sold by weight or measure. This depends on the phraseology used in the statute in question, and as to this, there is no general uniformity throughout the States. The question is often one of interpretation, and it is rendered more difficult by the fact that few cases are to be found in which the courts have passed upon these laws. However, information is given below as to what is believed to be the force and effect of the statutes.

(a) STATES REQUIRING SALES BY WEIGHT.—Some States have laws requiring that all dry commodities be sold by weight, while others require that those for which a legal weight has been established, be so sold. In the latter class when a unit of dry measure is called for, this must be determined by weight in accordance with the standard schedule of weights per bushel. In some of these States a special contract may be made by the parties, specifying some other method of sale.

The list of States follows: Florida, Idaho, Iowa, Kansas, Massachusetts, Michigan, Nevada, Ohio, Oregon, Utah, and Wisconsin.

In these States purchasers may demand that all orders be actually weighed before delivery, and that full weight as specified in the State law be delivered. It is desirable for purchasers to check the deliveries by weight and compare them with the standard legal weights. (b) STATES REQUIRING DEFINITE WEIGHTS.—In the second class may be grouped a number of States having statutes similar to each other in wording and apparently similar in legal effect. These statutes read somewhat as follows: "The bushel shall consist of or will mean, a stated weight," sometimes with the qualification, "When sold by the bushel." This list includes: California, Delaware, Illinois,¹ Indiana, Kentucky, Minnesota, Missouri, Montana, New Hampshire, New Mexico, New York, North Dakota, Oklahoma, Pennsylvania, South Dakota, Vermont, and Washington.

In these cases it appears to be the clear intent of the legislatures that the weights stated in the laws should be delivered by the dealers, whether the commodities in question are actually weighed or whether they are measured. Therefore, although the purchaser has no legal right to demand that the commodities be weighed by the dealer before delivery, it appears to be perfectly proper to check delivery by weight and to demand that the legal weight be delivered in all cases. As in the first group, some of these States allow the statute to be superseded by special agreement and, therefore, the purchaser should be careful to refrain from any action from which such agreement might be inferred.

(c) STATES ESTABLISHING LEGAL OR STANDARD WEIGHTS.—The next group are those States which establish a legal or standard weight per bushel, usually without a provision for a special agreement clause: Alabama, Arkansas, Colorado, Connecticut, Georgia, Louisiana, Maryland, Nebraska, Rhode Island, South Carolina, Tennessee, Texas, and West Virginia.

This list is shown separately from that immediately preceding on account of the distinctive wording of the laws. The meaning is not essentially different and therefore the checking should be done in the same way as is suggested there.

(d) STATES REQUIRING DEFINITE WEIGHTS FOR SALES BY WEIGHT.—The States in the next list establish a legal weight for various commodities, but specifically limit it to apply to cases where the sale is actually made upon a basis of weight: District of Columbia,² Maine, Mississippi, New Jersey, North Carolina, and Virginia.

In these States if the purchaser has not demanded that the transaction be upon a weight basis, the purchase must be checked by the use of dry measures.

¹ In some of the cities of Illinois, notably Chicago, the conditions given under the first class of States obtain, on account of a city ordinance to that effect.

² The weight per bushel of potatoes only is established by law in the District.

(e) STATES NOT REGULATING THIS MATTER.—The States of Arizona and Wyoming have no laws establishing standard weights per bushel or requiring sales of dry commodities by weight.

While dry measures appear to be legal in these States, the usual practice is to sell dry commodities by weight and therefore they will usually be checked by weight.

(f) CHECKING DRY COMMODITIES BY DRY MEASURES.—In States of all the above classes if a legal weight for any dry commodity is not established and it is not provided that dry commodities be sold by weight only, the checking must be done by dry measures.

(g) INTERPRETATION OF STATE LAWS.—A legal question is presented whether many of the above laws require for fractional parts of the bushel, such as pecks, quarts, etc., the same fractional parts of the legal weight established. However, a reasonable view of the matter would be that such was the intention of the law. Therefore, when a peck, quart, or other fractional part of a bushel is purchased, the weight calculated by taking the same fractional part of the legal weight per bushel may be used for checking purposes.

In regard to weights per bushel in general, it should be remembered that on account of the variations in the densities of commodities in different localities and in different seasons it is impossible to fix with any degree of certainty the weight of a given volume, and in any event the best figure that could be obtained for any commodity would be the average of all localities for a number of years. This figure is only an approximate one and it may vary considerably from the true weight of a bushel of the commodity at the time of any transaction. Therefore it is important that it be distinctly understood whether a bushel by volume or a bushel by weight is the amount intended to be delivered or received. Since amounts determined by weight are much more nearly accurate than similar amounts attempted to be determined by measure, transactions upon a basis of weight are much to be preferred to those upon a basis of measure, and therefore it is recommended that in so far as possible all purchases and sales be made by weight, as is now the practice in wheat transactions.

Attention is called to the fact that dry commodities have in some localities not infrequently been sold by liquid measure instead of dry measure. This should be guarded against, since a given liquid measure is about 14 per cent smaller than the corresponding dry measure. It does not appear to be generally known, and the fact may be of sufficient interest to justify a statement in this place, that the British imperial bushel is about 3 per cent larger than the United States standard bushel. The former contains 2219.36 cubic inches, and is defined as the volume of 80 pounds of pure water, at 62° F, when weighed against brass weights in air at a pressure of 30 inches of mercury; while the latter measure, as before stated, contains 2150.42 cubic inches.

The following tables cover all available legislation in relation to weights per bushel up to and including the 1916–17 legislative term.

II. COMMODITIES FOR WHICH BUSHEL WEIGHTS HAVE BEEN ESTAB-LISHED IN NOT MORE THAN THREE STATES

BEANS, pole, 50 pounds (Nebraska).

BEANS, shell, 28 pounds (Maine, Massachusetts, and Vermont).

BEANS, velvet, in hull, 78 pounds (Florida).

BEANS, wax, 24 pounds (Illinois).

BEETS, sugar, 60 pounds (Connecticut and Maine).

BEETS, turnip, 60 pounds (Maine).

BEGGARWEED SEED, 62 pounds (Florida).

BERMUDA GRASS SEED, 40 pounds (New Mexico and Oklahoma), 14 pounds (North Carolina).

BLACKBERRIES, dried, 28 pounds (North Carolina, South Carolina, and Tennessee).

BLUEBERRIES, 42 pounds (Maine and West Virginia).

BROMUS INERMUS, 14 pounds (Iowa, Nebraska, and North Dakota).

CANTALOUPE MELON, 50 pounds (North Carolina, South Carolina, and Tennessee). CHUFAS, 54 pounds (Florida).

CLOVER, alsike (or Swedish), 60 pounds (Maryland, Oklahoma, and Wisconsin).

CLOVER, burr, 8 pounds (North Carolina). (This is for seed in the burr.)

CLOVER, German, 60 pounds (North Carolina). (This is also more commonly known as "crimson clover.")

CLOVER, Japan, Lespedeza, in hulls, 25 pounds (North Carolina).

CLOVER (seed), sweet, unhulled, 33 pounds (Illinois).

CORN, green, with shucks, 100 pounds (South Carolina and Tennessee). CULM, 80 pounds (Maryland).

DANDELIONS, 12 pounds (Maine, Massachusetts, and Vermont).

FEED, 50 pounds (Maine and Massachusetts).

FETERITA, 56 pounds (Kansas).

GRASS SEED, all meadow and fescue except tall, 14 pounds (North Carolina).

GRASS SEED, Italian rye, 20 pounds (North Carolina, South Carolina, and Tennessee).

GRASS SEED, Johnson, 28 pounds (Arkansas); 25 pounds (North Carolina).

GRASS SEED, perennial rye, 14 pounds (North Carolina).

GRASS SEED, tall meadow and tall fescue, 24 pounds (North Carolina).

GRASS SEED, velvet, 7 pounds (North Carolina, South Carolina, and Tennessee).

GREENS, beet, 12 pounds (Maine, Massachusetts, and Vermont).

GUAVAS, 54 pounds (Florida).

INDIA WHEAT, 46 pounds (Vermont). (This is a species of buckwheat.)

LAND PLASTER, 100 pounds (North Carolina, South Carolina, and Tennessee). LENTILS, 60 pounds (Pennsylvania and Federal Statutes).

38084°-18-2

MANGELWURZEL, 60 pounds (Connecticut and Maine).

MEAL, except oatmeal, 50 pounds (Maine and Massachusetts).

MIDDLINGS, coarse, 30 pounds (Indiana).

MILO MAIZE, 56 pounds (Kansas).

MUSTARD SEED, 58 pounds (North Carolina).

PARSLEY, 8 pounds (Maine, Massachusetts, and Vermont).

PEANUTS, Spanish, 30 pounds (North Carolina and Virginia).

PEACH SEED, 50 pounds (North Carolina).

PEARS, dried, 26 pounds (North Carolina, South Carolina, and Tennessee).

PEAS, black-eye and other cowpeas, 60 pounds (Virginia); cowpeas, 60 pounds (Indiana and Maryland).

PIEPLANT, 50 pounds (North Carolina, South Carolina, and Tennessee).

POPPY SEED, 47 pounds (Federal Statutes).

RADISH SEED, 50 pounds (Iowa and South Dakota).

RHUBARB, 50 pounds (Minnesota).

ROOT CROPS (not otherwise specified), 50 pounds (Iowa and Nebraska).

SAGE, 4 pounds (North Carolina, South Carolina, and Tennessee).

SALADS, mustard, spinach, kale, and turnips, 10 pounds (North Carolina); 30 pounds (South Carolina and Tennessee).

SUGAR CANE (amber), 57 pounds (New Jersey).

SUNFLOWER SEED, 24 pounds (North Carolina).

TEOSINTE, 59 pounds (North Carolina).
