The National Institute of Standards and Technology was established in 1988 by Congress to "assist industry in the development of technology...needed to improve product quality, to modernize manufacturing processes, to ensure product reliability...and to facilitate rapid commercialization...of products based on new scientific discoveries."

NIST, originally founded as the National Bureau of Standards in 1901, works to strengthen U.S. industry’s competitiveness; advance science and engineering; and improve public health, safety, and the environment. One of the agency's basic functions is to develop, maintain, and retain custody of the national standards of measurement, and provide the means and methods for comparing standards used in science, engineering, manufacturing, commerce, industry, and education with the standards adopted or recognized by the Federal Government.

As an agency of the U.S. Commerce Department’s Technology Administration, NIST conducts basic and applied research in the physical sciences and engineering, and develops measurement techniques, test methods, standards, and related services. The Institute does generic and precompetitive work on new and advanced technologies. NIST’s research facilities are located at Gaithersburg, MD 20899, and at Boulder, CO 80303. Major technical operating units and their principal activities are listed below. For more information contact the Publications and Program Inquiries Desk, 301-975-3058.

### Office of the Director
- National Quality Program
- International and Academic Affairs

### Technology Services
- Standards Services
- Technology Partnerships
- Measurement Services
- Technology Innovation
- Information Services

### Advanced Technology Program
- Economic Assessment
- Information Technology and Applications
- Chemical and Biomedical Technology
- Materials and Manufacturing Technology
- Electronics and Photonics Technology

### Manufacturing Extension Partnership Program
- Regional Programs
- National Programs
- Program Development

### Electronics and Electrical Engineering Laboratory
- Microelectronics
- Law Enforcement Standards
- Electricity
- Semiconductor Electronics
- Electromagnetic Fields
- Electromagnetic Technology
- Optoelectronics

### Chemical Science and Technology Laboratory
- Biotechnology
- Physical and Chemical Properties
- Analytical Chemistry
- Process Measurements
- Surface and Microanalysis Science

### Physics Laboratory
- Electron and Optical Physics
- Atomic Physics
- Optical Technology
- Ionizing Radiation
- Time and Frequency
- Quantum Physics

### Materials Science and Engineering Laboratory
- Intelligent Processing of Materials
- Ceramics
- Materials Reliability
- Polymers
- Metallurgy
- NIST Center for Neutron Research

### Manufacturing Engineering Laboratory
- Precision Engineering
- Automated Production Technology
- Intelligent Systems
- Fabrication Technology
- Manufacturing Systems Integration

### Building and Fire Research Laboratory
- Structures
- Building Materials
- Building Environment
- Fire Safety Engineering
- Fire Science

### Information Technology Laboratory
- Mathematical and Computational Sciences
- Advanced Network Technologies
- Computer Security
- Information Access and User Interfaces
- High Performance Systems and Services
- Distributed Computing and Information Services
- Software Diagnostics and Conformance Testing

1At Boulder, CO 80303.
2Some elements at Boulder, CO.
The Journal of Research of the National Institute of Standards and Technology features advances in measurement methodology and analyses consistent with the NIST responsibility as the nation’s measurement science laboratory. It includes reports on instrumentation for making accurate and precise measurements in fields of physical science and engineering, as well as the mathematical models of phenomena which enable the predictive determination of information in regions where measurements may be absent. Papers on critical data, calibration techniques, quality assurance programs, and well-characterized reference materials reflect NIST programs in these areas. Special issues of the Journal are devoted to invited papers in a particular field of measurement science. Occasional survey articles and conference reports appear on topics related to the Institute’s technical and scientific programs.

## STANDARD REFERENCE MATERIALS

### New Standard Is Freeze-Dried *What?*

- Irish/Old Bay Combo Helps Laboratories Assess Ocean Radioactivity
- Highly Accurate Gold/Platinum Thermocouple Thermometers Produced and Certified for Issuance as Standard Reference Material 1749
- High-Purity Tin and Zinc Freezing-Point Cells Produced and Certified for Issuance as Standard Reference Materials 1747 and 1748, Respectively
