**Publications for which a price is indicated are available from the Superintendent of Documents, U.S. Government Printing Office, Washington 25, D.C. (foreign postage one-fourth additional), except for Technical Notes on which a PB number appears. These are available from the Office of Technical Services, Department of Commerce, Washington 25, D.C. and must be ordered by PB number. Reprints from outside journals and the NBS Journal of Research may often be obtained directly from the authors.*

ANNOUNCEMENT

CRPL Ionospheric Predictions to Replace CRP-D Series, Basic Radio Propagation Predictions

A fundamental change in the title form, and content of the CRPL-D series, Basic Radio Propagation Predictions, will be made in January 1963. The new title will be *Central Radio Propagation Laboratory Ionospheric Predictions*; the first of the new form of predictions will be No. 1, issued in January 1963, containing predictions for April 1963. Beginning with that issue, the predictions will be prepared by a method of numerical mapping using a high speed electronic computer. This method was developed by W. B. Jones and R. M. Gallet of CRPL. Instructions for use of the new predictions will be issued concurrently.

The new format will include tables of coefficients which, when used as input data with a suitable program, make possible the efficient use of a computer for calculation of detailed high frequency radio propagation predictions for any application.

World prediction maps for every even hour, Universal Time, will be provided for those who do not have the use of a computer. These will be actual world maps of zero-MUF and 4000-MUF, instead of the time charts for four zones appearing in previous issues. Methods for using the new maps will be similar to methods for using the former time charts. The new predictions will continue to be issued through the Superintendent of Documents, U.S. Government Printing Office, Washington 25, D.C. No change in subscription price is planned.

International Union of Geodesy and Geophysics to Meet in the United States

The XIII General Assembly of the International Union of Geodesy and Geophysics will be held at the University of California, Berkeley, 19-31 August 1963. The Union embraces the fields of geodesy, seismology, meteorology, geomagnetism, oceanography, volcanology, and hydrology. This will be the first meeting of the IUGG in the United States since 1939. With an estimated attendance of some 3,000 scientists it is expected to be the largest international scientific meeting in the United States next year.

The two-week meeting will be preceded by a symposium at the University of California, Los Angeles, on the International Geophysical Year, and by a hydrology symposium at Stanford University. Following the General Assembly various technical field tours are being planned, and in addition a symposium on meteorology will be held at Boulder, Colorado.

Copies of the First Circular describing the meeting are available upon request from Prof. David K. Todd, IUGG, University of California, Berkeley 4, California.
