

## Editorial Notice

The next issue of this Journal is to be devoted to the Proceedings of the Symposium on the Ionospheric Propagation of Very Low Frequency Electromagnetic Waves, held at the Central Radio Propagation Laboratory, National Bureau of Standards, Boulder, Colorado on 12, 13, and 14 August 1963. The papers are devoted to subjects of current importance in terrestrial VLF propagation with emphasis being placed on the effects of the ionosphere. Subjects covered include mode theory, theory of formation and physical characteristics of the lower ionosphere, and observations of VLF propagation under normal and disturbed conditions.

Mr. Douglass D. Crombie of the Central Radio Propagation Laboratory, is Guest Editor of this special issue of the Journal. We would like to express our appreciation to Mr. Crombie, for his important contributions to the organization of the Conference and the publication of its Proceedings.

THE EDITORS.
