

### Editorial Note

This issue of RADIO SCIENCE is devoted to the (partial) publication of the Report of the United States National Committee of URSI to the XIVth General Assembly of URSI, held in Tokyo, Japan, September 9-20, 1963. The total USNC-URSI report describes the United States' work in the fields of all seven URSI commissions during the triennium 1960-62; this issue of RADIO SCIENCE includes the reports of US Commissions 1 through 5, and 7, the report of US Commission 6 having been published elsewhere. The report for Sub-commission 6.1 (Circuit Theory) will be found in the March 1964 issue of IEEE Transaction on Circuit Theory; that of Sub-commission 6.2 (Information Theory) in the October 1963 issue of IEEE Transactions on Information Theory, while that for Sub-commission 6.3 (Electromagnetics) appeared in the April 1964 issue of RADIO SCIENCE.

# Contents

	Page		Page
Commission 1. Radio measurement methods and standards:		5. Influence of irregularities of terrain and of vegetation on radio wave propagation. A. W. Straiton	560
Review of developments	523	5.1. Effects of terrain and vegetation on signal characteristics	560
1. Atomic frequency and time interval standards. Richard C. Mockler	523	5.2. Scattering at angles near grazing incidence. a. Backscatter	560
1.2. Atomic beam standards	523	b. Forward scatter	561
1.3. Optically pumped standards	524	5.3. Reflection from the earth at near vertical incidence	561
1.4. Molecular beam masers	524	5.4. Radiation from the earth and from foliage	562
1.5. Atomic time	524	5.5. Investigation of transhorizon radio wave propagation over irregular terrain	562
1.6. Frequency and time interval comparisons	524	6. Guided waves in the troposphere. J. B. Smyth	563
2. RF and microwave power measurements. G. F. Engen and N. T. Larsen	527	6.1. Tropospheric layers	563
3. Standards and measurements of attenuation, impedance, and phase shift. Period covered: Sept. 1960–Dec. 1962. R. W. Beatty	529	6.2. Ground wave and VLF propagation	563
3.1. Attenuation standards and measurements	529	7. Radar studies of the sun, moon, and planets. J. H. Chisholm and C. H. Pettengill	565
3.2. Impedance standards and measurements	530	7.1. The Sun	565
3.3. Phase shift standards and measurements	532	7.2. The Moon	566
4. Pulsed and CW sinusoidal voltage and current measurements. M. C. Selby	533	7.3. The planet Venus	566
4.1. Pulsed voltage and current	534	Commission 3. Ionospheric Radio:	
4.1.1. Low voltage amplitudes	534	Introduction. C. G. Little	569
4.1.2. High voltage amplitudes	534	1. Ionizing radiation and constitution of the atmosphere. T. E. VanZandt	569
4.1.3. Frequency, bandwidth, and time intervals	535	1. Introduction	569
4.1.4. Phase and frequency jitter (instability of parameters)	535	2. The neutral atmosphere	569
4.1.5. Pulsed current	535	2.1. Density and temperature	569
4.2. Sinusoidal CW voltages and currents	536	2.2. Composition	569
5. Radio noise measurement methods and standards. W. W. Munford	536	3. Solar ionizing radiation	570
6. Measurements at millimeter and submillimeter wavelength. R. G. Fellers	538	4. Theories of the formation of the ionospheric layers	570
6.1. Devices and techniques in free-space transmission	538	4.1. The <i>D</i> -region	570
6.2. Devices and techniques in oversized waveguide	539	4.2. The <i>E</i> -region	570
6.3. Miscellaneous devices and techniques	539	4.3. The <i>F</i> -region	570
7. Precise measurements of distance and of the velocity of light using lasers. Peter L. Bender	540	2. Geomagnetism and the ionosphere. S. A. Bowhill	572
Appendix. Measurements Standards and Calibration Laboratories in the United States. C. E. White	542	1. Field-aligned ionization irregularities in <i>E</i> -region	572
Part 1	542	2. Spread- <i>F</i> and its interpretation	572
Part 2	543	3. Geomagnetic control of the <i>F</i> <sup>2</sup> layer	572
Commission 2. Tropospheric Radio Propagation: National Committee Report	547	4. Dynamo theory and the <i>sq</i> current system	572
1. Models of the troposphere. R. Bolgiano, Jr.	547	3. Ionospheric storms. S. Matsushita	574
1.1. Stratified structure	547	1. Introduction	574
1.2. Small-scale irregularities	548	2. Ionospheric variations during geomagnetic disturbances	574
1.3. Atomic and molecular phenomena	551	2.1. Electron density and height variations of the ionosphere during geomagnetic storms	574
2. Radio climatology. B. R. Bean	553	2.2. Irregularities, spread <i>F</i> , slant <i>E</i> s, traveling disturbances, and ionospheric motions, during geomagnetic disturbances	574
3. Radar meteorology and cloud physics. S. B. Bigler	555	2.3. Increase of radio absorption during geomagnetic disturbances	575
3.1. Severe local storms	555	2.4. Hydromagnetic waves and electric currents in the ionosphere during geomagnetic disturbances	575
3.2. Hurricanes	555	3. Ionospheric variations caused by solar flares	575
3.3. Forecast and synoptic applications	555	3.1. Ionospheric variations immediately following solar flares	575
3.4. Hydrology	555	3.2. Polar cap absorption	576
3.5. Weather radar and satellites	555	4. Radio, the ionosphere, and IQSY. R. W. Knecht	578
3.6. Non-precipitation echoes (Angels)	556	1. Objectives of the U.S. IQSY program	578
3.7. Measurement of air motion by radar	556	2. Synoptic programs	578
3.8. Attenuation and scattering	556	2.1. Vertical incidence ground-based soundings network	579
4. Tropospheric propagation affecting space communications. D.C. Hogg	558	2.2. Topside soundings	579
4.1. Refractive effects	558	2.3. Scatter radar soundings	579
4.2. Absorptive effects	558	2.4. Fixed-frequency backscatter	579
a. Clear atmosphere—attenuation	558	2.5. Radio noise	579
b. Clear atmosphere—sky noise	558		
c. Precipitates—absorption and sky noise	558		
4.3. Scattering effects	559		
a. Precipitates	559		
b. Tropospheric scatter propagation	559		

	Page		Page
2.6. Riometry	580	6. Whistlers. D. L. Carpenter	609
2.7. Whistlers and VLF emissions (ionospheric)	580	1. Field operations	609
2.8. Ionospheric drifts	580	2. Methods of spectrum analysis	609
2.9. Optical and radio patrol observations of the sun	581	3. Methods of scaling whistlers	609
2.10. Geomagnetism	581	4. Electron density studies	610
3. Special experiments	581	5. Propagation of whistlers	610
3.1. Conjugate point observations	581	6. Fixed-frequency experiments	612
3.2. <i>D</i> -region studies	581	7. Satellite studies	613
3.3. Study of ionization released by low energy solar flare radiation	581	8. Artificially stimulated ionospheric noise	614
3.4. Satellite beacon observations	582	7. Summary of research on VLF and ELF emissions. Roger M. Gallet	615
3.5. Moon radar studies	582	1. The VLF emissions—their relations with whistlers and high energy particle phenomena	615
3.6. Cosmic radio noise spectrum studies	582	2. Trends in the field of VLF and ELF emissions since 1960	616
3.7. Rocket measurements in the ionosphere	582	3. Morphological and statistical studies	616
3.8. Related satellite experiments	583	4. New direction of research—more specific approach	617
3.9. Related radio propagation experiments	583	a. Program	617
5. The guided propagation of ELF and VLF radio waves between the earth and the ionosphere. D. D. Crombie and A. G. Jean	584	b. Some new results	617
1. Introduction	584	8. Energetic particles in the magnetosphere. John R. Winckler and Roger L. Arnoldy	619
2. Theoretical studies	584	Commission 5. Radio and Radar Astronomy: Review of developments	631
3. Experimental studies	584	1. University of Alabama, University, Ala	631
4. Applications	586	2. Cornell University, Ithaca, N.Y.	631
5. Conclusions	586	3. Air Force Cambridge Research Laboratories Sagamore Hill Radio Observatory, Bedford, Mass	632
6. Electron distribution distribution in the ionosphere. J. W. Wright	589	3.1. Solar studies	632
1. Introduction	589	a. Occultation of the Crab nebula	632
2. <i>D</i> -region	589	b. Solar eclipse results	632
3. <i>E</i> -region	589	c. VLF envelope of solar bursts	632
4. <i>F</i> -region	589	3.2. Hydrogen-line observations	632
4.1. The subpeak <i>F</i> -region	590	3.3. Sky temperature measurements	632
4.2. The suprapeak <i>F</i> -region	590	3.4. Flux measurements	633
4.2.1. Total electron content of the ionosphere	591	3.5. Atmospheric studies	633
4.2.2. Electron density profiles by rockets	591	3.6. Conferences	633
4.2.3. Electron distributions by the incoherent scatter technique	592	4. Collins Radio Company, Cedar Rapids, Iowa	634
7. Some miscellaneous topics	594	5. Carnegie Institution of Washington, Department of Terrestrial Magnetism, Washington, D.C.	635
7.1. HF Doppler studies	594	6. University of Florida, Gainesville, Fla	635
7.2. High latitude studies	594	7. Harvard College Observatory Harvard Radio Astronomy Station, Fort Davis, Tex	636
7.3. High altitude explosions in the ionosphere	595	7.1. Solar radio bursts	636
Commission 4. Magnetospheric Radio: National Committee Report	597	7.2. Additions to station facilities	637
1. Constitution of the atmosphere at magnetospheric levels. S. J. Bauer	597	7.3. Cosmic radio sources	637
1. Composition	597	8. Harvard College Observatory Radio Astronomy Group and Space Radio Project, Cambridge, Mass	637
2. Temperature	598	9. Harvard College Observatory, Radio Meteor Project, Cambridge, Mass	638
2. Theory of magnetospheric radio scattering. H. G. Booker	600	10. University of Illinois, Urbana, Ill	639
3. Terrestrial radio noise. William Q. Crichlow and Robert T. Disney	600	11. Jet Propulsion Laboratory, Pasadena, Calif	640
1. Introduction	600	12. Lincoln Laboratory Massachusetts Institute of Technology, Lexington, Mass	640
2. Worldwide measurements	601	13. University of Michigan, Ann Arbor, Michigan	640
3. Amplitude-probability distribution	601	14. National Aeronautics and Space Agency, Goddard Space Flight Center, Greenbelt, Maryland	644
4. Worldwide predictions	601	15. National Bureau of Standards, Boulder, Colo	645
5. Ionospheric effects	601	16. National Center for Atmospheric Research, High Altitude Observatory, Boulder, Colo	645
5.1. Changes in atmospheric noise levels associated with high-altitude thermonuclear explosions	601	17. National Radio Astronomy Observatory, Greenbank, W. Va	646
5.2. Sychrotron emission from energetic electrons in the upper atmosphere	601	18. Ohio State University Radio Observatory, Columbus, Ohio	647
5.3. Thermal noise from the ionosphere	602	19. Stanford Radio Astronomy Institute, Stanford, Calif	648
6. Waveforms and fields, ELF, VLF, and, IF	602	20. University of Texas, Austin, Tex	649
4. Geomagnetism and the magnetosphere. A. J. Dessler	603	21. U.S. Naval Research Laboratory, Washington, D.C.	649
1. Introduction	603	22. Yale University, New Haven, Conn	653
2. The solar wind and the magnetosphere	603	Commission 7. Radio electronics: Review of developments	655
3. Quiet-day ring current	604	1. Progress in microwave power tubes. J. Feinstein	655
4. Geomagnetic storm effects	605	1. Klystrons	655
5. Short period transient variations	605		
5. Theory of radio and hydromagnetic wave propagation in the magnetosphere. H. G. Booker	607

International Scientific Radio Union  
U.S.A. National Committee

Chairman.....	Dr. J. P. Hagen
Vice-Chairman.....	Prof. S. Silver
Secretary.....	Prof. M. G. Morgan
Treasurer.....	Prof. A. H. Wayniek
Associate Editor of the URSI Informa- tion Bulletin.....	Prof. L. A. Manning
Junior Past-Chairman.....	Prof. W. E. Gordon
Executive Committee.....	The foregoing, plus Dr. L. V. Berkner Prof. H. G. Booker

The National Committee maintains the following technical commissions:

1. Radio Measurement Methods and Standards, Prof. A. A. Oliner, chairman
2. Radio Propagation in Non-Ionized Media, Prof. A. T. Waterman, Jr., chairman
3. Ionospheric Radio, Dr. C. G. Little, chairman
4. Magnetospheric Radio, Prof. H. G. Booker, chairman
5. Radio and Radar Astronomy, Prof. A. E. Lilley, chairman
6. Radio Waves and Transmission of Information, Prof. L. A. Zadeh, chairman
7. Radio Electronics, Prof. M. Chodorow, chairman

Members-at-large:

Mr. R. W. Beatty	Dr. W. Pfister
Dr. K. L. Bowles	Prof. V. H. Rumsey
Mr. K. Bullington	Provost C. H. Townes
Dr. J. F. Clark	Prof. O. G. Villard, Jr.
Dr. A. J. Dessler	Dr. J. R. Wait
Prof. C. O. Hines	Prof. J. R. Winckler
Prof. E. C. Jordan	

Institute of Electrical and Electronics Engineers: Mr. S. L. Bailey, Prof. E. Weber

U.S. Government

Defense.....	Dr. L. Hartman
Army.....	Mr. F. H. Dickson
Navy.....	Mr. A. H. Schooley
Air Force.....	Mr. J. E. Keto
Commerce.....	Mr. A. H. Shapley
NSF.....	Dr. A. Roe
FCC.....	Mr. E. W. Allen
Honorary.....	Dr. L. V. Berkner
Ex-Officio	

Officers of URSI resident in the United States  
(including honorary presidents and chairmen of commissions)  
Foreign Secretary and Chairman of the Division of Physical Sciences, NAS-NRC
