PONDEROSA PINE AND SUGAR PINE PLYWOOD

COMMERCIAL STANDARD CS157-49
Effective Date for New Production From March 25, 1949

A RECORDED VOLUNTARY STANDARD OF THE TRADE

UNITED STATES DEPARTMENT OF COMMERCE
CHARLES SAWYER, Secretary

For sale by the Superintendent of Documents, U. S. Government Printing Office
Washington 25, D. C. - Price 5 cents
COMMERCIAL STANDARDS

Simplified Practice Recommendations and Commercial Standards are developed by manufacturers, distributors, and users in cooperation with the Commodity Standards Division of the National Bureau of Standards. The purpose of Simplified Practice Recommendations is to eliminate avoidable waste through the establishment of standards of practice for stock sizes and varieties of specific commodities that currently are in general production and demand. The purpose of Commercial Standards is to establish standard methods of test, rating, certification, and labeling of commodities, and to provide uniform bases for fair competition.

The adoption and use of a Simplified Practice Recommendation or Commercial Standard is voluntary. However, when reference to a Commercial Standard is made in contracts, labels, invoices, or advertising literature, the provisions of the standard are enforceable through usual legal channels as a part of the sales contract.

A Simplified Practice Recommendation or Commercial Standard originates with the proponent industry. The sponsors may be manufacturers, distributors, or users of the specific product. One of these three elements of industry submits to the Commodity Standards Division the necessary data to be used as the basis for developing a standard of practice. The Division, by means of assembled conferences or letter referenda, or both, assists the sponsor group in arriving at a tentative standard of practice and thereafter refers it to the other elements of the same industry for approval or for constructive criticism that will be helpful in making any necessary adjustments. The regular procedure of the Division assures continuous servicing of each effective Simplified Practice Recommendation and Commercial Standard, through review and revision, whenever, in the opinion of the industry, changing conditions warrant such action. Simplified Practice Recommendations and Commercial Standards are printed and made available by the Department of Commerce, through the Government Printing Office.

COMMERCIAL STANDARD FOR PONDEROSA PINE AND SUGAR PINE PLYWOOD

On August 23, 1948, a recommended commercial standard for ponderosa pine and sugar pine plywood, proposed by representative manufacturers of these products, and adjusted in accordance with suggestions from the industry, was circulated to manufacturers, distributors, and consumer organizations for consideration and approval. Those concerned have since accepted and approved the standard as set forth herein.

Project Manager: J. W. Medley, Commodity Standards Division, National Bureau of Standards.

Technical Adviser: V. B. Phelan, Building Technology Division, National Bureau of Standards.
COMMERCIAL STANDARD CS157-49

for

PONDEROSA PINE AND SUGAR PINE PLYWOOD

PURPOSE

1. Because of the increasing production of ponderosa pine and sugar pine plywood, the standard grading rules set forth herein are offered as a universal basis of understanding in the industry. General adoption and use of this standard will facilitate procurement of the proper grade of material for its varied uses and provide a better understanding between buyer and seller.

SCOPE

2. This standard covers requirements for eight grades of special moisture-resistant interior type ponderosa pine and sugar pine plywood. In addition there are included test requirements, standard sizes, size tolerances, inspection rules, labeling, and nomenclature and definitions.

GENERAL REQUIREMENTS

3. All ponderosa pine and sugar pine plywood sold as of commercial standard quality shall meet the following general requirements.

4. Workmanship.—Ponderosa pine and sugar pine plywood shall be well manufactured and free from blisters, laps, or other defects not specifically permitted in the rules for the various grades. Unless otherwise specified, it shall be smoothly sanded on two sides. When rough or unsanded plywood is specified, it may have paper tape on either face or back, or both. Veneers shall be tight, smoothly cut, and of uniform thickness.

5. Bonding.—The entire area of each contacting surface of the plywood shall be bonded in an approved manner with a moisture-resistant adhesive that will meet the test requirements as given in paragraphs 16 and 17.

6. Core and crossbands.—Unless otherwise specified, the cores and crossbands of all panels shall be of one or more pieces of veneer, and may contain knots, plugs, and other defects that do not impair a smooth surface under the face veneer.

DETAIL REQUIREMENTS

7. Ponderosa pine and sugar pine plywood shall be graded according to both sides of the piece into the standard grades described in paragraphs 8 to 15. The grade descriptions set forth the minimum re-
requirements, and, therefore, the majority of panels in any shipment will exceed the specifications given.

8. **Good 2 Sides (GS)**.—Each face shall be of a single piece of firm, smoothly cut veneer, except that up to 25 percent of the panels may contain one face of two pieces, on widths of 24 in. to 36 in., and of two or three pieces, on widths over 36 in. to 48 in., that are reasonably matched for grain and color, and well joined. Faces shall be free from knots, splits, checks, pitch pockets, and other open defects. The faces shall be without blue stain. Slight discolorations, heart, and sap streaks shall be admitted. Tightly closed end checks, shims not more than \(\frac{3}{16}\) in. wide that occur at ends of panels, and inconspicuous well-matched small patches shall be admitted. This grade is required for uses where a light stain finish, natural finish, or enamel finish is desired. Construction shall be of pine veneer throughout.

9. **Good 1 Side (GIS)**.—The face shall be equal to that described under **Good 2 Sides** grade (par. 8) and the back shall be equal to the **Sound 2 Sides** grade (par. 10). Construction shall be of pine veneer throughout.

10. **Sound 2 Sides (S02S)**.—Each face shall be of one or more pieces of firm smoothly cut veneer. When of more than one piece the pieces shall be well joined. The faces shall be free from knots, splits, checks, pitch pockets, and other open defects. Streaks, discolorations, black pinhead specks, shims, and neatly made patches shall be admitted. This grade shall present a smooth surface suitable for painting. Construction shall be of pine veneer throughout.

11. **Sound 1 Side—Solid 1 Side (So1S—Sol1S)**.—The face shall be of the same grade as described for **Sound 2 Sides** (par. 10). The back shall be of the same grade as described for **Solid 2 Sides** (par. 13). Construction shall be of pine veneer throughout.

12. **Sound 1 Side (So1S)**.—The face shall be equal to that described under **Sound 2 Sides** grade (par. 10). The back shall be unplugged and unpatched and may contain knots, knotholes, pitch pockets, splits, and other defects in number and size that will not seriously affect the strength or serviceability of the panel. Construction shall be of pine veneer throughout.

13. **Solid 2 Sides (Sld2S)**.—Each face shall be of the same grade. The faces shall present a solid surface free from open defects but in addition to characteristics admitted in **Sound** grade veneer (par. 10), they shall also admit neatly made circular plugs as well as synthetic plugs that present a smooth hard surface, knots if both sound and tight, slightly rough but not torn grain, and other minor sanding and patching defects. The grade shall be paintable. Intermixing of species is permitted in inner plies.

14. **Solid 1 Side (Sld1S)**.—The face shall be of the same grade as that described for **Solid 2 Sides** (par. 13). The back shall be unplugged and unpatched and may contain knots, knotholes, pitch pockets, splits, and other defects in number and size that will not seriously affect the strength or serviceability of the panel. Intermixing of species is permitted in inner plies.

15. **Sheathing (Shlg)**.—This is an unsanded plywood panel. The face shall permit the following: (a) not more than 10 knotholes, none of which shall exceed 1\(\frac{1}{2}\) in., (b) no group of knotholes within any 12-in.-diameter circle shall have an aggregate dimension of more than
3 in., (c) no splits wider than 7/16 in., nor open pitch pockets more than 1 in. wide. There may be any number of patches and plugs in the face. No belt sanding is permissible. The back shall be unplugged and unpatched and may contain knots, knotholes, pitch pockets, splits, and other defects in number and size that will not seriously affect the strength or serviceability of the panel. Intermixing of species is permitted in inner plies.

**TEST**

16. **Sampling.**—Pieces for testing shall be taken from 1 percent of the panels in any shipment, but not less than 5 nor more than 10 panels shall be selected. From each panel selected a test piece shall be cut from each end approximately at midwidth of the panel, and from each edge approximately at midlength of the panel, and a fifth piece shall be cut from somewhere near the middle or center of the panel.

17. **Delamination test.**—One test specimen 6 in. by 6 in. shall be taken from each test piece. The specimens shall be submerged in water at room temperature for a period of 4 hours, and then dried at a temperature not exceeding 100°F. for a period of 20 hours. This cycle shall be repeated nine additional times, after which the test specimens must not show a delamination between any two layers of veneer totaling more than 2 in. measured parallel to the edge.

**STANDARD SIZES**

18. Ponderosa pine and sugar pine plywood is made in the standard sizes given in table 1.

<table>

</tbody>
</table>

Sheathing: Same as above.

19. Width always refers to the distance across the grain of the face plies; length refers to the distance along the grain of the face plies. When ordering, width should always be specified first.

**SIZE TOLERANCES**

20. A tolerance of 3/64 in. over or under the specified thickness shall be allowed on sanded panels, and a tolerance of 3/32 in. on unsanded panels.

21. A tolerance of 3/64 in. over or under the specified length and/or width shall be allowed, but all panels shall be square within 3/8 in.
MEASUREMENT

22. The footage of panels is figured on a full-inch basis. When panels are cut to a special size and the width and/or length are in fractions of an inch, these fractional measurements shall be counted as of the next full inch.

INSPECTION

23. All plywood guaranteed to conform to the commercial standard grading rules is sold subject to inspection in the white only. All complaints regarding the quality of any shipment must be made within 15 days from receipt thereof.

24. If the grade of any plywood shipment is in dispute and a reinspe ction is demanded, the cost of such reinspe ction shall be borne by the seller and the shipment settled for on the basis of the reinspe ction report if the shipment is more than 5 percent below grade, or if it contains more than 1 percent of mismanufactured panels containing defects such as short core, lapped core, blisters, delamination, etc., which render the panel unfit for normal use. The buyer need not accept such defective panels shipped as any standard grade listed in this commercial standard.

25. If reinspe ction establishes the shipment to be 5 percent or less below grade, and to contain 1 percent or less of mismanufactured panels, the buyer shall pay the cost of reinspe ction and shall pay for the shipment as invoiced.

LABELING

26. In order that the purchaser may be assured of obtaining ponderosa pine plywood or sugar pine plywood conforming to the requirements of this standard, it is recommended that shipments complying therewith be accompanied by a statement containing the following wording:

This shipment of ponderosa pine or sugar pine plywood complies with all the requirements of Commercial Standard CS157-49, as developed by the trade, under the procedure of the National Bureau of Standards, and issued by the U. S. Department of Commerce.

(Name of manufacturer)

NOMENCLATURE AND DEFINITIONS

27. The terms used in this standard are defined as follows:

Back.—The side reverse to the face of the panel.

Borer holes.—Voids made by wood-boring insects or worms.

Centers.—See Cores.

Checks.—Small splits running parallel to the grain of the wood caused chiefly by strains produced in seasoning.

Cores.—Cores, or centers, are the innermost layer in plywood construction.
Crossbanding.—Veneer used in the construction of plywood with five or more plies. In five-ply construction it is placed at right angles between the core and faces.

Defects, open.—Checks, splits, open joints, cracks, loose knots, and other defects interrupting the smooth continuity of the panel surface.

Face.—The better side of a panel in any grade calling for a face and a back; also, either side of a panel where the grading rules draw no distinction between faces.

Heartwood.—The darker-colored wood occurring in the inner portion of the tree, sometimes referred to as "heart."

Knot.—Cross section of a branch or limb whose grain usually runs at right angles to that of the piece in which it is found.

Knotholes.—Voids produced by the dropping of knots from the wood in which they were originally embedded.

Lap.—A condition where the veneers used are so misplaced that one piece overlaps the other instead of making a smooth butt joint.

Patches.—Insertions of sound wood glued and placed into panels from which defective portions have been removed.

Small patch.—A patch not larger than ½ in. by 3 in.

Pitch pocket.—A well-defined opening between rings of annual growth, usually containing, or which has contained, more or less pitch, either solid or liquid.

Pitch streak.—A well-defined accumulation of pitch in a more or less regular streak.

Sapwood.—The lighter-colored wood occurring in the outer portion of the tree, sometimes referred to as "sap."

Shim.—A long, narrow patch.

Streak.—Discoloration caused by an accumulation of resinous substance or chemical change within the wood.

EFFECTIVE DATE

28. Having been passed through the regular procedure of the Commodity Standards Division, and approved by the acceptors hereinafter listed, this commercial standard was issued by the United States Department of Commerce, effective from March 25, 1949.

Edwin W. Ely,
Chief, Commodity Standards Division.

HISTORY OF THE PROJECT

Increasing demand for ponderosa pine and sugar pine plywood prompted leading manufacturers, on November 6, 1947, to request the cooperation of the National Bureau of Standards in the establishment of a commercial standard as a means of providing a nationally recognized specification for these products. Complying with this request, the Bureau’s Commodity Standards Division circulated the manufacturers’ preliminary draft to all interests, including representative manufacturers, distributors, and consumer organizations, for advance review and comment.
On August 23, 1948, the recommended standard, adjusted in accordance with the constructive suggestions received, was circulated to the industry and trade for consideration and acceptance.

The satisfactory results of this circularization warranted promulgation and publication of the proposal as Commercial Standard CS157-49, Ponderosa Pine and Sugar Pine Plywood, and on February 24, 1949, the effective date of the standard, March 25, 1949, was announced.

STANDING COMMITTEE

The following individuals comprise the membership of the standing committee, which is to review, prior to circulation for acceptance, revisions proposed to keep the standard abreast of progress. Comment concerning the standard and suggestions for revisions may be addressed to any member of the committee or to the Commodity Standards Division, National Bureau of Standards, which acts as secretary for the committee.

FAY L. FOVAL (chairman), The Long-Bell Lumber Co., Longview, Wash.
A. J. Honzel, Kalpine Plywood Co., Division of Plywood, Inc., P. O. Box 109, Klamath Falls, Oreg.

NORMAN F. STAMBAUGH, Rhodes Building, 78 Marietta Street, Atlanta 1, Ga (representing the American Institute of Architects).
ACCEPTANCE OF COMMERCIAL STANDARD

If acceptance has not previously been filed, this sheet properly filled in, signed, and returned will provide for the recording of your organization as an acceptor of this commercial standard.

Date ____________________________

Commodity Standards Division,
National Bureau of Standards,
Washington 25, D. C.

Gentlemen:

We believe that the Commercial Standard CS157-49 constitutes a useful standard of practice, and we individually plan to utilize it as far as practicable in the

production ^ distribution ^ purchase ^ testing ^

of ponderosa pine and sugar pine plywood.

We reserve the right to depart from it as we deem advisable.

We understand, of course, that only those articles which actually comply with the standard in all respects can be identified or labeled as conforming thereto.

Signature of authorized officer ________________________________ (In ink)

______________________________

(Kindly typewrite or print the following lines)

Name and title of above officer ________________________________

Organization ________________________________ (Fill in exactly as it should be listed)

Street address ________________________________

City, zone, and State ________________________________

^ Underscore which one. Please see that separate acceptances are filed for all subsidiary companies and affiliates which should be listed separately as acceptors. In the case of related interests, trade associations, trade papers, etc., desiring to record their general support, the words "General Support" should be added after the signature.
TO THE ACCEPTOR

The following statements answer the usual questions arising in connection with the acceptance and its significance:

1. Enforcement.—Commercial standards are commodity specifications voluntarily established by mutual consent of those concerned. They present a common basis of understanding between the producer, distributor, and consumer and should not be confused with any plan of governmental regulation or control. The United States Department of Commerce has no regulatory power in the enforcement of their provisions, but since they represent the will of the interested groups as a whole, their provisions through usage soon become established as trade customs, and are made effective through incorporation into sales contracts by means of labels, invoices, and the like.

2. The acceptor's responsibility.—The purpose of commercial standards is to establish for specific commodities, nationally recognized grades or consumer criteria, and the benefits therefrom will be measurable in direct proportion to their general recognition and actual use. Instances will occur when it may be necessary to deviate from the standard and the signing of an acceptance does not preclude such departures; however, such signature indicates an intention to follow the commercial standard where practicable, in the production, distribution, or consumption of the article in question.

3. The Department's responsibility.—The major function performed by the Department of Commerce in the voluntary establishment of commercial standards on a Nation-wide basis is fourfold: First, to act as an unbiased coordinator to bring all interested parties together for the mutually satisfactory adjustment of trade standards; second, to supply such assistance and advice as past experience with similar programs may suggest; third, to canvass and record the extent of acceptance and adherence to the standard on the part of producers, distributors, and users; and fourth, after acceptance, to publish and promulgate the standard for the information and guidance of buyers and sellers of the commodity.

4. Announcement and promulgation.—When the standard has been endorsed by a satisfactory majority of production or consumption in the absence of active valid opposition, the success of the project is announced. If, however, in the opinion of the standing committee or the Department of Commerce, the support of any standard is inadequate, the right is reserved to withhold promulgation and publication.
AGCEPTORS

The organizations listed below have individually accepted this standard for use as far as practicable in the production, distribution, testing, or purchase of ponderosa pine and sugar pine plywood. In accepting the standard they reserved the right to depart therefrom as they individually deem advisable. It is expected that products which actually comply with the requirements of this standard in all respects will be regularly identified or labeled as conforming thereto, and that purchasers will require such specific evidence of conformity.
