## PROMULGATION

of

COMMERCIAL STANDARD CS49-34

for

### CHIP BOARD, LAMINATED CHIP BOARD, AND MISCELLANEOUS BOARDS FOR BOOKBINDING PURPOSES

---

At the instance of the Employing Bookbinders of America, and later the Book Manufacturers Institute, representing the chief users of the product, a recommended commercial standard covering chip board and miscellaneous boards for bookbinding purposes was widely circulated for written acceptance. The industry has since accepted and approved for promulgation by the U. S. Department of Commerce, through the National Bureau of Standards, the standard as shown herein.

The standard became effective for new production December 15, 1934.

Promulgation recommended.

I. J. Fairchild,  
*Chief, Division of Trade Standards.*

Promulgated.

Lyman J. Briggs,  
*Director, National Bureau of Standards.*

Promulgation approved.

Daniel C. Roper,  
*Secretary of Commerce.*

# CHIP BOARD, LAMINATED CHIP BOARD, AND MISCELLANEOUS BOARDS FOR BOOKBINDING PURPOSES

---

## COMMERCIAL STANDARD CS49-34

### SCOPE

#### DEFINITION

1. For the purpose of establishing definite specifications for boards other than binders board used in bookbinding this general definition is accepted:

Chip board, laminated chip board, and miscellaneous boards for bookbinding purposes are any kind of pulpboard, single ply, laminated, or otherwise manufactured, used for covers or cover stiffening in books and for other bookbinding purposes.

#### CLASSIFICATION

2. Such boards are divided into classes and grades as shown below; the general definition for the various classes and grades being subject to the specific data given under "Specific Requirements" for the corresponding class and grade.

##### *Class 1.—Chip board*

A single-ply board of relatively low density made from a base stock of mixed papers, to a maximum thickness of 72 points (0.072 inch).

##### *Class 2.—Laminated chip and other boards*

Grade A.—A board made by laminating boards of class 1.

Grade B.—A board made by laminating chemical wood-pulp boards.

##### *Class 3.—Miscellaneous boards*

Grades.—In this class appear such varieties of board as news, corn-stalk, chestnut-chip, straw, tag, red (rope) flexible, etc. According to present plans, specifications will be developed for these materials and grades established as the need arises. No attempt is made to classify them into grades at the present time.

### GENERAL REQUIREMENTS

#### SURFACE

3. Boards of all classes and grades shall be free from surface lumps and reasonably smooth and flat; the usable portion of the sheet shall be reasonably free of imperfections.

### DESIGNATION

4. Boards of classes 1 and 2 are purchased by weight; the size, thickness, class, and grade being specified. The weight is to be net weight. The specified size of the board, expressed in inches, is exclusive of trim. Thickness is expressed either in points or in parts of an inch, a point being one-thousandth part of an inch. The bursting strength is expressed in pounds per square inch pressure, and the density in grams per cubic centimeter.

### STANDARD BUNDLE WEIGHT

5. Boards of classes 1 and 2 shall be put up in bundles, the standard bundle weighing 50 pounds. A tolerance of plus or minus 3 pounds is allowed on individual bundles.

### THICKNESS TOLERANCE

6. A variation of 0.003 inch (3 points) above or below the specified thickness is permitted.

### DIRECTION OF GRAIN

7. Unless the direction of the grain is otherwise specified by the purchaser, the grain will be understood to run parallel to the direction of the second dimension of area.

### DETAIL REQUIREMENTS

8. Each class of board shall meet the requirements of its class and grade as given in table 1, as well as the requirements which refer to physical qualities, methods of test, etc.; all tests being made according to the methods herein described.

#### CLASS 1. CHIP BOARD

##### SPECIFIC REQUIREMENTS

9. *Color*.—The natural pulp color, without the addition of coloring matter, shall be regarded as the standard.

10. *Density*.—The average density shall be 0.65 gram, plus or minus 0.05 gram, per cubic centimeter.

11. *Trim*.—Boards shall be trimmed to the size ordered.

12. *Thickness and bursting strength*.—The thickness and bursting strength shall conform with the requirements of table 1, class 1.

#### CLASS 2. LAMINATED CHIP AND LAMINATED CHEMICAL WOOD-PULPBOARD

##### SPECIFIC REQUIREMENTS

13. *Color*.—The natural pulp color, without the addition of coloring matter, shall be regarded as the standard.

14. *Density*.—The average density of laminated chip board, grade A, and laminated wood-pulp board, grade B, shall be 0.65 gram and 0.70 gram plus or minus 0.05 gram, per cubic centimeter, respectively.

15. *Trim*.—Boards shall be trimmed to the size ordered.

16. *Thickness and bursting strength.*—The thickness and bursting strength shall conform with the requirements of table 1, class 2, grade A, and class 2, grade B.

TABLE 1.—*Thickness and bursting strength*

## CLASS 1. CHIP BOARD

Thick- ness (inch)	Thick- ness (points)	Bursting strength (lb/in. <sup>2</sup> )	Thick- ness (inch)	Thick- ness (points)	Bursting strength (lb/in. <sup>2</sup> )	Thick- ness (inch)	Thick- ness (points)	Bursting strength (lb/in. <sup>2</sup> )
0.040	40	65	0.050	50	85	0.060	60	105
.045	45	75	.055	55	95	.065	65	115

## CLASS 2. GRADE A, LAMINATED CHIP BOARD

0.050	50	100	0.075	75	150	0.100	100	200
.055	55	110	.080	80	160	.105	105	210
.060	60	120	.085	85	170	.110	110	220
.065	65	130	.090	90	180	.115	115	230
.070	70	140	.095	95	190	.120	120	240

## CLASS 2. GRADE B, LAMINATED CHEMICAL WOOD-PULPBOARD

0.050	50	160	0.075	75	235	0.100	100	310
.055	55	175	.080	80	250	.105	105	325
.060	60	190	.085	85	265	.110	110	340
.065	65	205	.090	90	280	.115	115	355
.070	70	220	.095	95	295	.120	120	370

## METHODS OF SAMPLING AND TESTING

## ALL CLASSES AND GRADES

17. *Sampling for tests.*—The test sample used for making thickness, density, and bursting-strength determinations shall consist of 10 specimens cut 10 by 10 inches, each specimen being cut from a different board. Where a delivery consists of less than 30 bundles, not less than 3 bundles shall be sampled. On all deliveries of 30 bundles or more, at least 10 percent of the bundles shall be sampled, except where a delivery consists of more than 100 bundles, in which event 10 bundles shall be sampled.

18. *Control testing.*—For ordinary control testing, the prevailing temperature and humidity conditions are satisfactory. In controversial cases the specimens shall be tested at 70° F and at 50 percent to 65 percent relative humidity after being exposed to this condition for 72 hours. Such tests may be made in any accredited commercial testing laboratory satisfactory to both buyer and seller.

19. *Thickness.*—Twenty readings shall be made, 2 on each of the 10 test specimens cut 10 by 10 inches. Each of the 20 individual readings shall not vary over 0.003 inch above or below the thicknesses given under specific requirements for the class, grade, and thickness ordered. In test reports thickness shall be expressed in decimal parts of an inch.

20. *Density.*—The average density is computed from the thickness and the weight per unit area. The 10 test specimens are weighed together accurately to the nearest gram and the average weight of

one test specimen is determined. The density is calculated according to the following formula:

$$\left. \begin{array}{l} \text{Average} \\ \text{density} \\ \text{(g/cm}^3\text{)} \end{array} \right\} = \frac{\text{average weight of one test specimen in grams}}{\left. \begin{array}{l} \text{area of test} \\ \text{specimen} \\ \text{(in.}^2\text{)} \end{array} \right\} \times \left. \begin{array}{l} \text{average thickness} \\ \text{of test specimen} \\ \text{in decimal parts} \\ \text{of an inch} \end{array} \right\} \times 16.39$$

21. *Bursting strength*.—In determining the bursting strength, 20 bursts shall be made, one on each side of the 10 test specimens. The average of the 20 bursts shall be reported as the average bursting strength. The average bursting strength shall be not lower than the figures given under specific requirements for the class, grade, and thickness ordered.

### GUARANTEE LABEL

22. The following illustrates the guarantee statement to be used by the manufacturers, which is to be applied by rubber stamp to one outside sheet of each bundle:

The ----- Company, manufacturer, certifies that this class -----, grade ----- of ----- thickness, ----- size complies with all requirements specified in Commercial Standard CS49-34 issued by the United States Department of Commerce and approved by the American Standards Association. The liability of the manufacturer shall be limited to the replacement of board, before it has been cut.

### EFFECTIVE DATE

The standard became effective for new production December 15 1934.

### STANDING COMMITTEE

The following comprise the membership of the standing committee, which is to review, prior to circulation for acceptance, revisions proposed to keep the standard abreast of progress:

#### *Book Manufacturers Institute;*

E. W. PALMER (*chairman*), Chairman, Research Committee, Book Manufacturers Institute, in care of Kingsport Press, Inc., Kingsport, Tenn.

F. R. BLAYLOCK, research associate, Book Manufacturers Institute, in care of Government Printing Office, Washington, D. C.

RAYMOND E. BAYLIS, Eugene C. Lewis Co., 461 Eighth Avenue, New York, N. Y.

#### *Manufacturers and Distributors of Boards for Bookbinding Purposes;*

A. J. BROOKOVER, Downingtown Paper Co., Downingtown, Pa.

E. R. HARRIS, Mead Sales Corporation, 230 Park Avenue, New York, N. Y.

E. C. BETZ, vice president, Consolidated Paper Co., Monroe, Mich.

#### *National Association of Book Publishers;*

JOHN BENBOW, Longmans, Green & Co., 114 Fifth Avenue, New York, N. Y.

### HISTORY OF PROJECT

The general conference on binders board (see CS50-34) held in New York City on October 14, 1931, appointed a joint committee of representatives of the Binders Board Manufacturers Association and the

Book Manufacturers Institute for harmonization of some unsettled requirements. In connection with the work of this committee, the Book Manufacturers Institute submitted a specification for chip board, laminated chip board and miscellaneous boards for bookbinding purposes, which epitomized results obtained by F. R. Blaylock, research associate at the United States Government Printing Office, and which had been prepared in consultation with producers, distributors, and users of chip board.

This specification was first presented as a part of a broader specification to include all paper boards for bookbinding purposes, but on recommendation of the joint committee on April 19, 1934, it was decided to consider binders board separately. Accordingly, on May 23, 1934 the Recommended Commercial Standard for Chip Board was circulated for written acceptance, and announcement of success of the project was issued on October 19, 1934.

#### AMERICAN STANDARD

This commercial standard was approved as American Standard by the American Standards Association on January 9, 1935.

## ACCEPTANCE OF COMMERCIAL STANDARD

This sheet, properly filled in, signed, and returned will provide for the recording of your organization as an acceptor of this commercial standard.

Date .....

Division of Trade Standards,  
National Bureau of Standards,  
Washington, D. C.

GENTLEMEN:

Having considered the statements on the reverse side of this sheet, we accept the commercial standard CS49-34 as our standard of practice in the  $\left\{ \begin{array}{l} \text{production}^1 \\ \text{distribution}^1 \\ \text{use}^1 \end{array} \right\}$  of chip board, laminated chip board, and miscellaneous boards for bookbinding purposes.

We will assist in securing its general recognition and use, and will cooperate with the standing committee to effect revisions of the standard when necessary.

Signature .....

(Kindly typewrite or print the following lines)

Title .....

Company .....

Street address .....

City and State .....

<sup>1</sup> Please designate which group you represent by drawing lines through the other two. In the case of related interests, trade papers, colleges, etc., desiring to record their general approval the words "In principle" should be added after the signature.

## TO THE ACCEPTOR

The following statements answer the usual questions arising in connection with the acceptance and its significance:

1. *Enforcement.*—Commercial standards are commodity specifications voluntarily established by mutual consent of the industry. They present a common basis of understanding between the producer, distributor, and consumer and should not be confused with any plan of governmental regulation or control. The Department of Commerce has no regulatory power in the enforcement of their provisions, but since they represent the will of the industry as a whole, their provisions through usage soon become established as trade customs, and are made effective through incorporation into sales contracts by means of labels, invoices, and the like.

2. *The acceptor's responsibility.*—The purpose of commercial standards is to establish for specific commodities, nationally recognized grades or consumer criteria and the benefits therefrom will be measurable in direct proportion to their general recognition and actual use. Instances will occur when it may be necessary to deviate from the standard and the signing of an acceptance does not preclude such departures; however, such signature indicates an intention to follow the commercial standard where practicable, in the production, distribution, or consumption of the article in question.

3. *The Department's responsibility.*—The major function performed by the Department of Commerce in the voluntary establishment of commercial standards on a Nation-wide basis is fourfold: First, to act as an unbiased coordinator to bring all branches of the industry together for the mutually satisfactory adjustment of trade standards; second, to supply such assistance and advice as past experience with similar programs may suggest; third, to canvass and record the extent of acceptance and adherence to the standard on the part of producers, distributors, and users; and fourth, after acceptance, to publish and promulgate the standard for the information and guidance of buyers and sellers of the commodity.

4. *Announcement and promulgation.*—When the standard has been endorsed by companies representing a satisfactory majority of production, the success of the project is announced. If, however, in the opinion of the standing committee of the industry or the Department of Commerce, the support of any standard is inadequate, the right is reserved to withhold promulgation and publication.

## ACCEPTORS

---

Individuals and organizations listed below have indicated in writing, acceptance of this specification as their standard of practice, but such endorsement does not signify that they may not find it necessary to deviate from the standard, nor that they guarantee all of their products to conform with the requirements of this standard.
