NATIONAL BUREAU OF STANDARDS LYMAN J. BRIGGS, Director

BINDERS BOARD

FOR BOOKBINDING AND OTHER PURPOSES

COMMERCIAL STANDARD CS50-34

JAN 26 1935

[Issued November 2, 1934] Effective Date for New Production, October 1, 1934

A RECORDED STANDARD OF THE INDUSTRY

Approved by the American Standards Association as American Standard CS50-34

UNITED STATES GOVERNMENT PRINTING OFFICE WASHINGTON : 1934

PROMULGATION STATEMENT

On April 19, 1934, at the instance of the Binders Board Manufacturers Association, a final joint conference of representative manufactures and users of binders board for bookbinding and other purposes adopted Commercial Standard CS50-34 for this commodity. The industry has since accepted and approved for promulgation by the United States Department of Commerce through the National Bureau of Standards the standard as shown herein.

The standard became effective for new production October 1, 1934. Promulgation recommended.

> I. J. Fairchild, Chief, Division of Trade Standards.

Promulgated.

Lyman J. Briggs, Director, National Bureau of Standards.

Promulgation approved.

Daniel C. Roper, Secretary of Commerce.

Π

BINDERS BOARD FOR BOOKBINDING AND OTHER PURPOSES

COMMERCIAL STANDARD CS50-34

SCOPE

1. *Definition.*—For the purpose of establishing definite specifications for binders board, this general definition is accepted:

A single-ply, solid board made on a wet machine from a base stock of mixed papers, kiln or plate dried, and ranging in thickness from 30 points (0.030 inch) to 300 points (0.300 inch).

GENERAL REQUIREMENTS

SURFACE

2. Binders board shall be free from surface lumps and reasonably smooth and flat; the usable portion of the sheet shall be reasonably free from all clip indentations and other mechanical imperfections.

DESIGNATION

3. Binders board is sold by weight; the size and thickness being specified. The weight is to be net weight, including trim. The specified size of the board, expressed in inches, is exclusive of trim. Thickness is expressed either in points or in parts of an inch, a point being one-thousandth part of an inch. The bursting strength is expressed in pounds per square inch pressure, and the density in grams per cubic centimeter.

STANDARD BUNDLE WEIGHT

4. Binders board shall be put up in bundles, the standard bundle weighing 50 pounds, including trim allowance. A tolerance of 3 pounds over or under the standard weight shall be allowed.

DIRECTION OF GRAIN

5. Unless the direction of grain is otherwise specified by the purchaser, the grain will be understood to run parallel to the direction of the second dimension of area.

DETAIL REQUIREMENTS

6. Binders board shall meet the requirements as given in tables 1 and 2, as well as the requirements which refer to physical qualities, methods of test, etc.; all tests being made according to the methods herein described.

STANDARD SIZES

7. The standard sizes of binders board shall be those adopted from time to time and published as a simplified practice recommendation by the National Bureau of Standards, United States Department of Commerce, or any other nationally recognized standardizing body.¹

¹ See Simplified Practice Recommendation R81-28.

COLOR, DENSITY, AND TRIM

8. Color.—The natural pulp color, without the addition of coloring matter, shall be regarded as standard.

9. Density.—The density of individual sheets of binders board shall be not less than 0.8 nor more than 1.0 gram per cubic centimeter.

10. Trim.—An overage of ½-inch minimum to 1-inch maximum of the ordered size shall be provided on both dimensions for trim.²

THICKNESS, BURSTING STRENGTH, AND FLEXURAL PROPERTIES

11. The thickness, bursting strength, and flexural properties (see paragraph 18) of binders board shall conform to the requirements given in table 1.

THICKNESS TOLERANCE

12. A variation of 0.003 inch (3 points) above or below the specified thickness is permitted on boards to and including 0.120 inch in thickness. A variation of 5 percent above or below the specified thickness is permitted on boards over 0.120 inch in thickness. On boards over 32 inches in the shorter dimension of area, an additional tolerance of 50 percent of the above amounts is allowed.

		Flexural properties			
Thickness, nominal	Bursting strength, minimum		load, mini- um	Deflection at rup- ture, minimum	
		Length- wise	Crosswise	Length- wise	Crosswise
$\begin{array}{rrrr} In. & Points\\ 0.050 & 50\\ .058 & 53\\ .005 & 65\\ .070 & 70\\ .075 & 75\\ .000 & 80\\ .088 & 88\\ .098 & 98\\ .110 & 110\\ .120 & 120\\ \end{array}$	$\begin{array}{c} Lb \ /In.^2 \\ 210 \\ 235 \\ 255 \\ 275 \\ 295 \\ 315 \\ 350 \\ 385 \\ 425 \\ 450 \end{array}$	$\begin{array}{c} Lb\\ 1.5\\ 2.1\\ 2.5\\ 2.8\\ 3.3\\ 3.8\\ 4.4\\ 5.1\\ 5.6\\ 6.0\\ \end{array}$	$\begin{matrix} Lb \\ 1.1 \\ 1.6 \\ 1.9 \\ 2.1 \\ 2.4 \\ 2.8 \\ 3.3 \\ 3.8 \\ 4.3 \\ 4.7 \end{matrix}$	$\begin{array}{c} In.\\ 0.22\\ .22\\ .22\\ .22\\ .22\\ .22\\ .22\\ .$	$\begin{array}{c} In.\\ 0.34\\ .34\\ .34\\ .34\\ .34\\ .34\\ .34\\ .34\\ $

TABLE 1.—Thickness, bursting strength, and flexural properties

METHODS OF SAMPLING AND TESTING

13. Sampling for tests.—The test sample used for making thickness, density, and bursting strength determinations shall consist of 10 specimens cut 10 by 10 inches, each specimen being cut from a different board. Where a delivery consists of less than 30 bundles, not less than 3 bundles shall be sampled. On all deliveries of 30 bundles or more, at least 10 percent of the bundles shall be sampled, except where a delivery consists of more than 100 bundles, in which event 10 bundles shall be sampled.

14. Control testing.—For ordinary control testing, the prevailing temperature and humidity conditions are satisfactory. In controversial cases the specimens shall be tested at 70° F and at 50 percent to 65 percent relative humidity after being exposed to this condition for 72 hours. Such tests may be made in any accredited commercial testing laboratory satisfactory to both buyer and seller.

² Caution.—On board over 0.080 inch (80 points) thick, if additional trim is required for rotary cutting, purchaser should order board of sufficient size to provide such extra trim.

15. *Thickness.*—Twenty readings shall be made, 2 on each of the 10 test specimens cut 10 by 10 inches. Each of the 20 individual readings shall not vary over 0.003 inch above or below the designated nominal thickness. In test reports thickness shall be expressed in decimal parts of an inch.

16(a). Density.—The density is computed from the thickness and the weight per unit area. The latter is determined by measuring the dimensions of each of the 10 test specimens used for the thickness determination to an accuracy of 0.1 inch, and weighing each specimen separately in grams. The density is computed according to the following formula:

Density	Weight of 1 test specimen in grams
(grams per cubic ⁼ centimeter)	$\begin{bmatrix} \text{Area of test specimen} \\ \text{in square inches} \end{bmatrix} \times \begin{bmatrix} \text{Thickness of test speci-} \\ \text{men in decimal parts} \\ \text{of an inch} \end{bmatrix} \times 16.39.$

16(b). The density of each of the individual test specimens shall fall between the limits prescribed for minimum-maximum density under paragraph 9.

FIGURE 1.—Tensile testing machine attachment for determining flexural properties of binders board.

17. Bursting strength.—In determining the bursting strength, 20 bursts shall be made, one on each side of the 10 test specimens. The average of the 20 bursts shall be reported as the average bursting strength. The average bursting strength shall not be lower than the figures given under specific requirements for the designated nominal thickness.

18(a). Flexural properties.—The flexural properties shall be determined with a tensile testing machine, using an attachment by means of which a load is applied with the loading clamp to the specimen at midspan between 2 parallel supports 3 inches, apart suspended from the upper clamp of the tester. (See fig. 1.) The ends of the test specimen shall be equidistant from the supports. The load is applied to the board at the rate of 12 inches per minute. The load in pounds required to break the specimen is recorded as breaking load and the deflection in inches at rupture is recorded as deflection at rupture (a recording device should be provided for convenience in measuring deflection).

18(b). Ten test specimens, 1 by 5 inches, shall be cut in each direction of the board and tested for flexural properties. Two results shall be reported for breaking load; the average of the 10 tests on samples cut lengthwise, and the average of the 10 tests on samples cut crosswise. These averages shall not fall below the corresponding figures for breaking load given in table 1 for the designated nominal thickness. Two results shall be reported for deflection at rupture; the average of the 10 tests on samples cut crosswise. These averages shall not fall below the average of the 10 tests on samples cut lengthwise, and the average of the 10 tests on samples cut crosswise. These averages shall not fall below the corresponding figures for deflection at rupture given in table 1 for the designated nominal thickness.

CALCULATION OF NUMBER OF SHEETS PER BUNDLE OR PER TON

19. To estimate the number of sheets of binders board of any given size in any of the thicknesses in a bundle or ton, divide the square inches per bundle or per ton as listed in table 2 for the given thickness by the area of the sheet desired, without any allowance for trim.

Thickness	Per bundle	Per ton (2,000 lb)
Inch 0.050 .058 .065 .070 .075	Inches 2 29, 120 25, 103 22, 400 20, 800 19, 413	<i>Inches</i> ² 1, 164, 800 1, 004, 120 896, 000 832, 000 776, 520
$\begin{array}{c} .080\\ .088\\ .098\\ .110\\ .120\end{array}$	18, 200 16, 545 14, 857 13, 236 12, 133	728, 000 661, 800 594, 280 529, 440 485, 320

TABLE 2.—Area per bundle or per ton

GUARANTEE LABEL

20. The following illustrates the guarantee statement used by the Binders Board Manufacturers Association, which is applied by rubber stamp to one outside sheet of each bundle.

The -------- Company, manufacturer, certifies that this binders board of —— thickness and —— size complies with all requirements specified in Commercial Standard CS50-34, issued by the United States Department of Commerce, and approved by the American Standards Association. The liability of the manufacturer shall be limited to replacement of board before it has been cut.

LAMINATED BINDERS BOARD

21. Laminated binders board is a board made by laminating 2 or more sheets of binders board.

EFFECTIVE DATE

The standard became effective for new production October 1, 1934.

STANDING COMMITTEE

The following comprises the membership of the standing committee, which is to review, prior to circulation for acceptance, proposed revisions to keep the standard abreast of progress. Each association nominated its own representatives:

Binders Board Manufacturers' Association:

John A. Dodd, Chairman, the Davey Co.

John A. Dodd, Chairman, the Davey Co. Dayton O. Trubee, Fandango Mills. Caroline L. Lloyd, Binders Board Manufacturers Association. Book Manufacturers' Institute: E. W. Palmer, Kingsport Press. F. R. Blaylock, Research Associate, U.S. Government Printing Office. Raymond E. Baylis, Eugene C. Lewis Co. National Association of Book Publishers: John Benbow, Longmans, Green & Co.

HISTORY OF PROJECT

On October 14, 1931, at the request of the Binders Board Manufacturers Association, a general conference of representative producers, distributors, and users of binders board, referred the then proposed commercial standard to a joint committee of the Binders Board Manufacturers Association and the Research Committee of the Book Manufacturers' Institute for harmonization of some unsettled requirements.

Several meetings of the joint committee were held and finally on April 19, 1934, all items were harmonized and circulation of the recommended standard to manufacturers and consumers for written acceptance was approved. Official acceptances estimated to represent a satisfactory majority of production by volume having been received, and in the absence of active opposition, a circular letter dated July 25, 1934, was issued to the trade announcing successful completion of the standard as a guide for the specification, production, and acceptance of binders board. This Commercial Standard meets with the complete approval of the Book Manufacturers Institute and the Binders Board Manufacturers Association.

AMERICAN STANDARD

This Commercial Standard was approved as American Standard CS50-34 by the American Standards Association on October 29, 1934.

CS50-34

ACCEPTANCE OF COMMERCIAL STANDARD

This sheet properly filled in, signed, and returned will provide for the recording of your organization as an acceptor of this commercial standard.

Date_____

DIVISION OF TRADE STANDARDS, NATIONAL BUREAU OF STANDARDS, Washington, D.C.

GENTLEMEN: Having considered the statements on the reverse side of this sheet, we accept the Commercial Standard

CS50-34 as our standard of practice in the $\begin{cases} \text{production}^{1} \\ \text{distribution}^{1} \\ \text{use}^{1} \end{cases}$ of

binders board for bookbinding and other purposes.

We will assist in securing its general recognition and use, and will cooperate with the standing committee to effect revisions of the standard when necessary.

Signature_____

(Kindly typewrite or print the following lines)

Title
Company
Street address
City and State

¹ Please designate which group you represent by drawing lines through the other two. In the case of related interests, trade papers, colleges, etc., desiring to record their general approval, the words "In principle" should be added after the signature.

7

TO THE ACCEPTOR

The following points are given in answer to the usual questions arising in connection with the acceptance form:

1. Commercial standards are commodity specifications voluntarily established by mutual consent of the industry. They present a common basis of understanding between the producer, distributor, and consumer and should not be confused with any plan of governmental regulation or control. The United States Department of Commerce has no regulatory power in the enforcement of their provisions, but since they represent the will of the industry as a whole, their provisions through usage soon become established as trade customs.

2. The acceptor's responsibility.—The purpose of commercial standards is to establish for specific commodities, nationally recognized grades or consumer criteria and the benefits therefrom will be measurable in direct proportion to their general recognition and actual use. Instances will occur when it may be necessary to deviate from the standard and the signing of an acceptance does not preclude such departures; however, such signature indicates an intention to follow the commercial standard where practicable, in the production, distribution, or consumption of the article in question.

3. The Department's responsibility.—The function performed by the Department of Commerce in the establishment of a commercial standard is fourfold; first, to act as an unbiased coordinator to bring all branches of the industry together for the mutually satisfactory adjustment of trade standards; second, to supply such assistance and advice as past experience with similar programs may suggest; third, to canvass and record the extent of acceptance and adherence to the standard; and fourth, to add all possible prestige to the enterprise by publication and promulgation when accepted by the industry.

When the standard has been endorsed by companies representing a satisfactory majority of production, the success of the project is announced. If, however, in the opinion of the standing committee of the industry or the United States Department of Commerce, the support of any standard is inadequate, the right is reserved to withhold promulgation and publication.

ACCEPTORS

(Individuals and organizations listed below have indicated, in writing, acceptance of this specification as their standard of practice, but such endorsement does not signify that they may not find it necessary to deviate from the standard, or that they guarantee all their products to conform to the requirements of this standard).
