PROMULGATION
of
COMMERCIAL STANDARD CS61–37
for
WOOD-SLAT VENETIAN BLINDS

On March 15, 1937, at the instance of the National Venetian Blind Guild, a general conference of representative manufacturers, distributors, and users of wood-slat venetian blinds adopted a recommended commercial standard for this commodity. The industry has since accepted and approved for promulgation by the United States Department of Commerce, through the National Bureau of Standards, the standard as shown herein.

The standard is effective for new production from September 1, 1937.

Promulgation recommended.

Promulgation approved.

I. J. Fairchild,
Chief, Division of Trade Standards.

Lyman J. Briggs,
Director, National Bureau of Standards.

Daniel C. Roper,
Secretary of Commerce.
WOOD-SLAT VENETIAN BLINDS

COMMERCIAL STANDARD CS61-37

PURPOSE

1. Venetian blinds, a commodity of increasing popularity, lend themselves to certain substitutions in quality that are readily concealed and become manifest only after a period of service. In order to promote a better understanding between buyers and sellers and to provide a basis for labeling as advance assurance of accepted construction and workmanship, this commercial standard is recommended as a guide for all concerned.

SCOPE

2. This commercial standard covers venetian blinds of the free-hanging, tilt-rail type for residence and office use in three widths of slats, 1\%, 2, and 2\% in., respectively, with slats adjustable to various angles and with raising, lowering, and tilting actions controlled by cords, chains, or cables. (See fig. 1.)

![Diagram of Pulley Operated Blind]

Figure 1.—Pulley operated blind showing various operating parts.

GENERAL REQUIREMENTS

3. All venetian blinds sold as conforming to this standard shall meet the following general requirements:

4. Workmanship.—They shall be neatly and smoothly finished, clean, and with no warpage, twisting, or excess bowing of the wood parts, and be equipped with moving devices that function smoothly and effectively.
5. Construction.—Blinds up to 35 sq ft in area and less than 70 in. wide shall be equipped with a single lift or pull (see fig. 2) operating over plain bearing pulleys or gears of brass, lignum vitae, or steel.

6. Blinds of 35 sq ft and up to 100 sq ft in area and 70 in. or more wide shall be equipped with a compound pull or easy lift (see figs. 3 and 4) operating over plain bearing pulleys of brass, lignum vitae, or steel, or some similar compensating device. Ball-bearing pulleys can be furnished on specification.

7. Blinds of 100 sq ft and over in area shall be equipped with oscillating roller lifts (see fig. 5) or with mechanical lifts of a type approved by the standing committee of the industry.
Figure 5.—Oscillating roller lift.

8. Tapes shall be spaced on the blinds not to exceed 28 in. between centers and the overhanging shall not exceed 7 in. from the center of end tapes to the end of the slats, except on oscillating roller blinds.

9. A tilt-rail center support shall be used for each tape in excess of two tapes.

DETAIL REQUIREMENTS

10. Head rails, tilt rails and bottom rails, and slats shall conform to the minimum dimensional requirements shown in table 1. A tolerance of minus \( \frac{1}{64} \) in. shall be permitted in all thickness measurements, and of minus \( \frac{1}{64} \) in. in all width measurements.

</table>

11. Head, tilt, and bottom rails shall be made from thoroughly seasoned, smoothly finished species of wood that by actual experience have demonstrated their suitability for the purpose. They shall be practically free of knots, checks, splits, or other defects that will mar their appearance or affect their serviceability. Bottom rails of blinds equipped with compound pull or easy lift shall be provided with slats or moldings to cover the routings.

12. Slats shall be of no. 1 grade thoroughly seasoned, smoothly finished species of wood that by actual experience have demonstrated their suitability for the purpose. They shall be free of knots, checks, splits,
fuzzy grain, broken edges, and other defects that will mar their appearance or affect their serviceability.

13. Tilt device.—The tilt device shall be of synchronized worm and gear design capable of tilting the slats at various angles. It shall be of die casting or stamped metal construction.

14. Automatic stop.—The automatic stop or lifting cord lock shall be of a design that will hold the blind at any height without the necessity of fastening the lifting cord. It shall be a die casting or of stamped metal provided with one or more pulleys to lessen wear on the lifting cords.

15. Textile tape.—Textile tape shall be of the ladder type of the best domestic grade yarn dyed cotton (imported if domestic is not procurable) with side straps not less than 1½ in. wide. It shall have loose or solid woven ladders % in. in width with ends interwoven with the back of the face tapes. The ladders shall be spaced accurately and evenly. Side straps, when tested individually, shall have a minimum breaking strength of 250 lb. Cross straps or ladders, when tested individually, shall have a minimum breaking strength of 30 lb without breaking or tearing away from the face tapes.

16. Cord and cables.—Cords for lifting pulley operated blinds shall be not less than size 4½ and uniformly braided and finished to minimize wear and stretch. They shall have a minimum breaking strength of 175 lb. Cables or cords for lifting oscillating roll head blinds shall be of flexible bronze, copper, galvanized steel, or size 4½ cord as described above, with a minimum breaking strength of 175 lb. Cord or chain or combination of both with a minimum breaking strength of 45 lb may be used for tilting devices.

BLIND WIDTHS AND AREAS

17. Commercial standard venetian blinds are recommended in widths not to exceed 15 ft 6 in., while maximum areas are recommended not to exceed 250 sq ft.

FINISH

18. All hardware, fixtures, or operating mechanisms shall be either of noncorrosive metal or other metal plated with brass, copper, nickel, zinc, cadmium, or finished with lacquer or enamel.

19. All wood parts shall be coated on both faces and ends in a manner that will provide a hard, smooth, uniform finish that is commercially color fast, that will not chalk or disintegrate under exposure to the sun, and that will not rub off in the ordinary cleaning operations. The ends of slats and other members shall be coated.

GUARANTEE

20. In order to identify and distinguish venetian blinds made according to this commercial standard of quality, manufacturers may affix thereto guarantee labels stating that the blinds thus identified conform to all provisions of the standard.

21. Venetian blinds made according to this commercial standard are equipped with tape and cord dyed in the yarn to obtain comparatively nonfading colors. However, under the very severe circumstances of exposure, it is impracticable to guarantee tapes and cords against fading. Certain colors are more permanent than others and helpful assistance in their selection is available from experienced distributors.
22. Due to rapid changes of humidity, it is further impractical to guarantee tapes or cords against a small degree of stretching or shrinking.

**EFFECTIVE DATE**

The standard became effective for new production on September 1, 1937.

**STANDING COMMITTEE**

The following comprises the membership of the standing committee, which is to review, prior to circulation for acceptance, revisions proposed to keep the standard abreast of progress. Each association nominated its own representatives. Comment concerning the standard and suggestions for revision, may be addressed to any member of the committee or to the Division of Trade Standards, National Bureau of Standards, which acts as Secretary for the committee:

W. M. H. Sherwood, Acorn Venetian Blind and Window Shade Works, 4915 Cottage Grove Ave., Chicago, Ill.
G. A. Grassby, Chain Tape Venetian Blind Co., Rockford, Ill.
H. B. Stamm, The Columbia Mills Inc., 225 Fifth Ave., New York, N. Y.
Howard S. Crane, Burlington Venetian Blind Co., Burlington, Vt.
John J. Childers, Marshall Field and Co., 121 N. State St., Chicago, Ill.
C. A. Whitcomb, Sears, Roebuck and Co., Chicago, Ill.
W. M. H. Walsh, American Hospital Association, Chicago, Ill.
Representative, National Retail Dry Goods Association.
Representative, National Council of Women.
Harry H. Steidle, Division of Trade Standards, National Bureau of Standards, Washington, D. C.

**HISTORY OF PROJECT**

Due to the popularity of venetian blinds and the growing tendency to cheapen their construction, the National Venetian Blind Guild, under date of January 18, 1937, requested the cooperation of the National Bureau of Standards to assist in setting up a commercial standard of quality for wood-slat venetian blinds.

The specifications committee of the guild drafted a proposed standard which was circulated to all known manufacturers, many prominent distributors, and a number of consumer groups, together with an invitation to attend a general conference under the auspices of the National Bureau of Standards to discuss the proposed standard.

The conference, held in Chicago, Ill., on March 15, 1937, was very well attended and a number of modifications were made in the standard as proposed. The conference voted to recommend the standard in its modified form for general acceptance by the entire industry. It was sent from the National Bureau of Standards on April 2, 1937, together with an acceptance form by which those interested could record their intention to follow the standard as far as practicable.

A satisfactory majority of the production volume of the wood-slat venetian-blind industry indicated acceptance of the recommended commercial standard and the success of the project was announced July 1, 1937. The standard became effective for new production on September 1, 1937.
ACCEPTANCE OF COMMERCIAL STANDARD

This sheet properly filled in, signed, and returned will provide for the recording of your organization as an acceptor of this commercial standard.

Date

Division of Trade Standards,
National Bureau of Standards,
Washington, D. C.

Gentlemen:

Having considered the statements on the reverse side of this sheet, we accept the Commercial Standard CS61-37 as our standard of practice in the

Production 1  Distribution 1  Use 1

of wood-slat venetian blinds.

We will assist in securing its general recognition and use, and will cooperate with the standing committee to effect revisions of the standard when necessary.

Signature __________________________________________

(Kindly typewrite or print the following lines)

Name and title _______________________________________

Company ___________________________________________

Street address ________________________________________

City and State ________________________________________

1 Please designate which group you represent by drawing lines through the other two. Please file separate acceptances for all subsidiary companies and affiliates which should be listed separately as acceptors. In the case of related interests, trade papers, colleges, etc., desiring to record their general approval, the words “in principle” should be added after the signature.
TO THE ACCEPTOR

The following statements answer the usual questions arising in connection with the acceptance and its significance:

1. Enforcement.—Commercial standards are commodity specifications voluntarily established by mutual consent of the industry. They present a common basis of understanding between the producer, distributor, and consumer and should not be confused with any plan of governmental regulation or control. The United States Department of Commerce has no regulatory power in the enforcement of their provisions, but since they represent the will of the industry as a whole, their provisions through usage soon become established as trade customs, and are made effective through incorporation into sales contracts by means of labels, invoices, and the like.

2. The acceptor's responsibility.—The purpose of commercial standards is to establish for specific commodities, nationally recognized grades or consumer criteria and the benefits therefrom will be measurable in direct proportion to their general recognition and actual use. Instances will occur when it may be necessary to deviate from the standard and the signing of an acceptance does not preclude such departures; however, such signature indicates an intention to follow the commercial standard where practicable, in the production, distribution, or consumption of the article in question.

3. The Department's responsibility.—The major function performed by the Department of Commerce in the voluntary establishment of commercial standards on a Nation-wide basis is fourfold: first, to act as an unbiased coordinator to bring all branches of the industry together for the mutually satisfactory adjustment of trade standards; second, to supply such assistance and advice as past experience with similar programs may suggest; third, to canvass and record the extent of acceptance and adherence to the standard on the part of producers, distributors, and users; and fourth, after acceptance, to publish and promulgate the standard for the information and guidance of buyers and sellers of the commodity.

4. Announcement and promulgation.—When the standard has been endorsed by companies representing a satisfactory majority of production, the success of the project is announced. If, however, in the opinion of the standing committee of the industry or the Department of Commerce, the support of any standard is inadequate, the right is reserved to withhold promulgation and publication.
Individuals and organizations listed below have indicated, in writing, acceptance of this specification as their standard of practice in the production, distribution, or use of wood slat Venetian blinds, but such endorsement does not signify that they may not find it necessary to deviate from the standard, nor does it signify that the producers so listed guarantee all of their products to conform with the requirements of this standard. Therefore specific evidence of quality certification should be obtained where required.
