Federal Standard 1030A has been redesignated as Federal Information Processing Standards Publication (FIPS PUB) 142. Issued by the National Institute of Standards and Technology pursuant to Section 111(d) of the Federal Property and Administrative Services Act of 1949 as amended by the Computer Security Act of 1987, Public Law 100-235.

FEDERAL STANDARD

TELECOMMUNICATIONS: ELECTRICAL CHARACTERISTICS OF UNBALANCED VOLTAGE DIGITAL INTERFACE CIRCUITS

Authority. This standard is issued by the General Services Administration pursuant to the Federal Property and Administrative Services Act of 1949, as amended. Its application to both data processing systems and telecommunication systems is mandatory on all Federal agencies to the extent specified herein.

1. SCOPE. This standard specified the electrical characteristics of unbalanced voltage digital interface circuits normally implemented in integrated circuit technology that are to be employed for the interchange of serial binary data, timing, and control signals between voice or data telecommunication equipment where information is being conveyed at the DC baseband level at data signaling rates up to 100 kilobits/s. The functional and mechanical (connector) characteristics of the interface between data terminal equipment and data circuit-terminating equipment employing interface circuits compliant with this standard are described in other Federal Standards (e.g., Federal Standard 1031). In those applications where a connector is not required for interfacing equipment employing interface circuits compliant with this standard, the functional and mechanical characteristics of the interface shall be as defined in the applicable procurement specification.

1.1 Purpose. The purpose of this standard is to facilitate interoperability between telecommunication facilities and systems of the Federal Government and compatibility of these facilities and systems at the computer-communications interface with data processing equipment (systems) of the Federal Government.

1.2 Application. This standard shall be used by all Federal departments and agencies in the design and procurement of telecommunication equipment employing unbalanced voltage digital interface circuits. It is to be used with other applicable Federal standards or design specifications describing functional, mechanical, and procedural characteristics as necessary to achieve compatible interfaces.

2. APPLICABLE DOCUMENTS. The following document forms part of this standard to the extent specified herein:

(Write to Electronic Industries Association, 2001 Eye Street, N.W., Washington, DC 20006 for copies of RS-423A.)

3. REQUIREMENT. The electrical characteristics of unbalanced voltage digital interface circuits shall conform to EIA standard RS-423A. However, Federal departments and agencies who have and will continue to have in their inventory substantial quantities of equipment using interface circuits compliant with MIL-STD-188C or MIL-STD-188-100 shall use MIL-STD-188-114 in lieu of this standard. (Interface circuits described in MIL-STD-188-114 are identical to those prescribed in this standard.)

4. CHANGES. When a Federal agency considers that this standard does not provide for its essential needs, a statement citing inadequacies shall be sent in duplicate to the General Services Administration, Federal Supply Service, Value Engineering Division (FREV), Washington, DC 20406, in accordance with provisions of Federal Property Management Regulations 41 CFR 101-29.3. The General Services Administration will determine the appropriate action to be taken and will notify the agency.

5. CONFLICT WITH REFERENCED DOCUMENTS. Where the requirements stated in this standard conflict with any requirements in a referenced document, the requirements of this standard shall apply. The nature of the conflict between this standard and a referenced document shall be submitted in duplicate to the General Services Administration, Federal Supply Service, Value Engineering Division (FREV), Washington, DC 20406.
6. COMPATIBLE NATIONAL/INTERNATIONAL STANDARD(S):
   - CCITT Recommendation VII/X.27.
