Technical Analysis Division Institute for Applied Technology National Bureau of Standards Washington, D. C. 20234

Final July 1971 - July 1973

Prepared for National Institute of Law Enforcement and Criminal Justice (NILECJ) Law Enforcement Assistance Administration (LEAA) Department of Justice Washington, D. C. 20530

REPORTS FROM THE LEAA POLICE EQUIPMENT SURVEY:

The present report is one in a series of reports produced from data gathered by the LEAA Police Equipment Survey of 1972. Listed below are the seven reports of that survey.

- National Bureau of Standards Report 73-211 (The present report). LEAA POLICE EQUIPMENT SURVEY OF 1972, Volume II: Communications Equipment and Supplies.
- National Bureau of Standards Report 73-210. LEAA POLICE EQUIPMENT SURVEY OF 1972, Volume I: The Need for Standards -- Priorities for Police Equipment.
- National Bureau of Standards Report 73-212. LEAA POLICE EQUIPMENT SURVEY OF 1972, Volume III: Sirens and Emergency Warning Lights.
- National Bureau of Standards Report 73-213. LEAA POLICE EQUIPMENT SURVEY OF 1972, Volume IV: Alarm Displays, Security Equipment, and Surveillance Equipment.
- National Bureau of Standards Report 73-214. LEAA POLICE EQUIPMENT SURVEY OF 1972, Volume V: Handguns and Handgun Ammunition.
- National Bureau of Standards Report 73-215. LEAA POLICE EQUIPMENT SURVEY OF 1972, Volume VI: Body Armor and Confiscated Weapons.
- National Bureau of Standards Report 73-216. LEAA POLICE EQUIPMENT SURVEY CF 1972, Volume VII: Patrolcars.

NBSIR 73-211

LEAA POLICE EQUIPMENT SURVEY OF 1972 VOLUME: COMMUNICATIONS EQUIPMENT AND SUPPLIES

Prepared for National Institute of Law Enforcement and Criminal Justice (NILECJ) Law Enforcement Assistance Administration (LEAA) Department of Justice Washington, D. C. 20530

U. S. DEPARTMENT OF COMMERCE, Frederick B. Dent, Secretary NATIONAL BUREAU OF STANDARDS, Richard W. Roberts, Director .

.

ACKNOWLEDGEMENTS

We are grateful to the 428 police departments throughout the United States who contributed their time and knowledge to make this report possible. Special thanks go to the police departments whose officers and administrators helped the survey team during the developmental and testing phases of the work. In addition, we thank Marshall J. Treado of the Law Enforcement Standards Laboratory, for providing invaluable information. The support and assistance of Lester Shubin, NILECJ, project monitor and consultant, is also gratefully acknowledged.

Although there are only four authors for this report, the work could not have been accomplished without the capable and conscientious efforts of the many members of the Technical Analysis Division who provided support for the whole survey effort:

William L. O'Neal for his help in computerizing the sample selection and for helping design and programming interactive record-keeping system; Jenny L. Eldreth and P. Clare Peiser for maintaining the computerized record-keeping system; June R. Cornog, for her advice, support and help with initial interviews; Diane R. Beall for the many typings of the various versions of the questionnaires; Suellen Halpin, Mary L. Friend, and Susan E. Bergsman, for making follow-up telephone calls; Lorraine S. Freeman for her administrative support; Karen Jackson, a summer employee, for her help with questionnaire coding and record-keeping; Cassandra Streeter and Janice Davis, summer employees, for their help with record-keeping; and Mary Hawkins for typing the report.

Michael R. Vogt receives special thanks for his help in carrying cut the computerized edit and tabulation of the data. Special thanks also go to Dwight F. Doxey for coding this questionnaire and contributing to the preliminary data analysis.

EXECUTIVES' SUMMARY:

- I. SUMMARY OF BACKGROUND AND METHODOLOGY
 - A. Background (pp. 1-2)
 - Law Enforcement Standards Laboratory (LESL) was established in 1970 and became part of the NILECJ Equipment Systems Improvement Program (ESIP).
 - NILECJ asked the Behavioral Sciences Group of the National Bureau of Standards to develop and carry out a procedure to get information from the users of law enforcement equipment.
 - "User" information would aid NILECJ in setting priorities for LESL programs and would provide some detailed information so that research to develop standards could begin.
 - In addition, gathering information from the users would help to make police agencies aware of LESL and ESIP.
 - A nationwide mail sample survey was selected as the best procedure to collect user information.
 - An Equipment Priorities Questionnaire (EPQ) and 6 Detailed Questionnaires (DQs) were developed and administered. A separate report was prepared for each of these seven questionnaires.
 - B. Design of Questionnaires (p. 10)
 - Questionnaires were developed in conjunction with NILECJ, LESL, and cooperating police departments. Questionnaires were pretested at various times with approximately 45 police departments.
 - The EPQ was designed to provide information about priority needs for standards for various types of equipment.
 - In addition, the EPQ asked for data about numbers of fulland part-time officers, activities performed in the department, budget, size of jurisdiction, etc.
 - The six DQs (Alarms, Security and Surveillance Equipment; Communications Equipment and Supplies; Handguns and Handgun Ammunition; Sirens and Emergency Warning Lights; Body Armor and Confiscated Weapons; and Patrolcars) were each developed separately.

- The DQs asked about kinds and quantities of equipment in use, problems with existing equipment, suggestions for improving equipment, needs for standards related to the equipment, etc. Although entitled Detailed Questionnaires, these questionnaires were designed to give an overview of the use of specific items of equipment.
- C. Sample (pp. 2-6)
 - The population sampled was made up of all police departments listed in a computerized file and maintained by the LEAA Statistical Service.
 - Courts, correctional institutions, forensic labs, special police agencies, etc., were excluded.
 - The sample was stratified by LEAA Georgraphic Region (10 Regions) and by Department Type (7 Department Types: State Police; County Police and Sheriffs; City Departments with 1-9 officers; City Departments with 10-49 officers; City Departments with 50 or more officers, excluding the Fifty Largest Cities; the Fifty Largest U.S. Cities by population; and Township Departments).
 - Overall, approximately 10% of the 12,836 departments in the population were selected as respondents (See Table 1.2-2).
 - The Equipment Priorities Questionnaire was sent to every sample department (1386). Each Detailed Questionnaire was sent to all States, to all of the Fifty Largest Cities, and to a randomly selected subsample of the main sample (about 530 departments received each DQ).
 - Thus, States and the Fifty Largest Cities were asked to fill in all seven questionnaires. Each of the remaining 1186 departments were asked to fill in the EPQ and two of the DQs.
 - The sample for the Communications DQ consisted of 528 departments (See Table 1.2-3).
- D. <u>Questionnaire Administration</u> (pp. 6-9)
 - Stringent control of administration was required.
 - Introductory letters were sent to heads of departments asking cooperation.

- On June 1, 1972, questionnaire packages mailed.
- In July 1972, follow-up by self-return post card was begun.
- In August 1972, follow-up by telephone was begun. Departments which had not returned questionnaires were called. Also, calls were made to clear up ambiguities in the returned questionnaires. About 1300 calls were made. About 70% of the sample departments were called at least once.
- Each questionnaire was edited and coded by a specialized team to ensure consistency; they were then keypunched and tabulated.
- Completed questionnaires were accepted for tabulation through January 7, 1973.

E. Rates of Return (pp. 8-9)

- 83% of the 1386 departments returned usable EPQs.
- 81% of the 528 departments returned usable Communications DQs.
- 81 85% of the other DQ subsamples returned usable questionnaires.
- Highest rates of return (over 90%) were from States, the Fifty Largest Cities, and Cities with 50 or more officers.
- Lowest rates of return were from Counties and Townships (less than 75%).
- F. Characteristics of Responding Departments (pp. 11-15)
 - The activities most commonly carried out by the respondents (to the EPQ) were Serving Traffic and Criminal Warrants (88%), Traffic Safety and Traffic Control (87%), and <u>Intra-departmental</u> Communications (87%).
 - All of the responding Fifty Largest Cities said they provided In-House Training and Criminal Investigations. This compared to 68% and 86%, respectively, of all responding departments.
 - Only 13% of all respondents had Crime Laboratories. 73% of the Fifty Largest Cities and 55% of the States had Crime Laboratories.

- About three-fifths of the departments in all Department Types were providing Emergency Aid and Rescue: Ranging from 60% of the Cities with 50 or More Officers to 67% of the Counties.
- Overall, the reported Equipment Budgets represented somewhat over 10% of the Total Budgets reported.
- Among Department Types, there was a wide range of total equipment expenditures: From a mean of about \$10,000 for Cities with 1-9 Officers to a mean of almost \$2.6 million for the Fifty Largest Cities.
- One of the Fifty Largest Cities reported an Equipment Budget of \$40 million.
- Overall, the Fifty Largest Cities reported a mean of 2491 Full-Time Sworn Officers. However, one of the Fifty Largest Cities had 27% of all the Full-Time Officers reported by that Department Type and another had about 12%.

G. Presentation of Data

- Data in this report are presented in two forms: Text tables and full tables (Appendix B). Text tables do not always present a complete break out of the data.
- All tables (text and full) present the data in unweighted form, (i.e., numbers and percentages of the <u>responding</u> departments from the sample for this <u>questionnaire</u>, <u>not</u> figures that have been weighted to expand the data to the total population of police departments in the U.S.)
- The sample selected for this questionnaire was <u>not</u> proportional to the total population of police departments. If decisions are to be made which require estimates of population figures, the appropriate extrapolation must be performed. (See Appendix B, page B-1.)

II. SUMMARY OF RESULTS

- A. Car Radios (pp. 26-43)
 - A total of 67,807 car radios were reported by the 428 respondents.
 - About nine-tenths of the car radios reported were in State and Fifty Largest City departments.
 - About two-thirds of the car radios were bought within the last 5 years.
 - Three-fourths of the car radios reported cost less than \$1001.
 - Almost 6 out of every 10 car radios were made by one manufacturer.
- B. Portable Radios (pp. 43-61)
 - A total of 22,660 portable radios were reported by the 347 respondents which were using portable radios.
 - Almost three-fourths of the portable radios reported were in the Fifty Largest Cities.
 - More than four-fifths of these radios were bought within the last 5 years.
 - Slightly more than three-fourths of the portable radios cost less than \$901.
 - About 7 out of every 10 were made by one manufacturer.
 - About seven-tenths of them weighed between 1-1/4 and 2-1/2 pounds.
 - Nickel-Cadmium batteries were used in about seven-tenths of them.
 - Ninety percent of the departments used rechargeable batteries in their portables.
- C. Channels and Frequencies (pp. 29-37, 46-49)
 - An average of 3.5 channels per department were authorized to responding departments.

- An average of 3.2 channels per department were currently in use.
- About one-half of the reported channels were being used by the Fifty Largest Cities and State police.
- D. Fixed Repeaters (pp. 64-69)
 - About one-third of the departments used fixed repeaters.
 - Almost nine-tenths of departments with fixed repeaters were State or Fifty Largest City departments.
- E. <u>Scramblers</u> (pp. 72-78)
 - Scramblers were currently being used by only 9% (n=40) of the respondents.
 - Of departments which did not have a scrambler system, almost 60% felt they needed that system.
 - Departments most commonly used (or would use) scramblers for undercover investigations and long-term stake outs.
 - More than four-fifths of departments which had or said they needed scramblers, said they would be willing to pay no more than \$500 for a reliable scrambler.
- F. Need for Other Communications Equipment (pp. 78-80)
 - About one-third of departments expressed a need for helmets with built-in communications. This need was most often expressed by State police and departments in the Fifty Largest Cities.
 - Slightly more than two-fifths of the respondents indicated a need for mobile repeaters.
 - Twenty-eight percent of departments favored the voting system; over half of departments were unfamiliar with this system.
- G. Need for Standards for Communications Equipment (pp. 81-84)
 - The three items most commonly chosen as needing standards were mobile radios, portable radios, and batteries.

- State police and larger City departments chose more items as needing standards than did other Department Types.
- Gains expected from standardization were more often expected to come from interchangeability of equipment than from either savings in training costs or savings in equipment costs.

H. Most Critical Communications Needs (pp. 85-87)

- The four most critical communications needs of the respondents were for new equipment, more frequencies, personal transceivers for each officer, and standardization of all equipment.
- Personal transceivers for all officers was the most critical need of larger City departments.
- New equipment was the greatest need of small City departments and Counties.
- More channels was the greatest need of State police.

1.1 Project Background

During the past several years, law enforcement agencies in the United States have become more aware of the importance of equipment in the performance of their duties. Much of their equipment had originally been designed for other uses and had to be modified. Other equipment items had to be used as given. No standards existed against which equipment performance could be measured nor were any standard test methods or procedures available. It has been difficult for agencies to compare the performance of equipment items. Recognizing this problem, in 1970, the Law Enforcement Assistance Administration (LEAA) of the Department of Justice began a concentrated program toward the improvement of law enforcement equipment.

As the first step in its Equipment Systems Improvement Program (ESIP), LEAA, in cooperation with the Department of Commerce established a Law Enforcement Standards Laboratory (LESL) at the National Bureau of Standards (NBS). The broad goal of LESL is to establish <u>voluntary</u> performance standards which can be used as guidelines for the selection of equipment by law enforcement agencies. Additionally, LESL is developing standard test methods and procedures, so that the relative performance of similar items may be evaluated by departments themselves.

In order to provide equipment user information for the ESIP program, in 1971 the National Institute of Law Enforcement and

Criminal Justice (NILECJ) of LEAA asked the Behavioral Sciences Group of the Technical Analysis Division at NBS to gather information from the users of law enforcement equipment about their specialized equipment needs and problems. Although face-toface interviews with a large sample of representatives from law enforcement agencies would have been desirable, time and manpower constraints led to the development of a nationwide, mail sample survey having two general objectives: (1) To assist NILECJ in the establishment of priorities for LESL's standards development activities; and (2) to obtain detailed information about certain broad equipment categories so that research to develop standards in these areas could begin.

This report fulfills part of the second general objective and the associated survey questionnaire (See Appendix A) will be referred to as the Communications Detailed Questionnaire (DQ). The remainder of the second objective is accomplished in the reports of the other five DQs: Alarms, Security, and Surveillance Systems; Handguns and Handgun Ammunition; Sirens and Emergency Warning Lights; Body Armor and Confiscated Weapons; and Patrolcars. The first general objective (above) is accomplished in the report on the Equipment Priorities Questionnaire (EPQ)*. A Complete listing of these seven reports may be found on the inside front cover of this report.

^{*} LEAA POLICE EQUIPMENT SURVEY OF 1972, Volume I: The Need for Standards -- Priorities for Police Equipment.

1.2 Sample Design

Although the objective of ESIP is to serve all types of law enforcement agencies, this particular study was purposefully limited to police departments as the largest single group of law enforcement agencies with identifiable equipment needs. No attempt was made to survey correctional institutions, courts, forensic laboratories, or special police agencies such as park police, harbor patrols or university police. The computerized directory of approximately 14,000 police agencies, compiled and maintained by LEAA'S Statistics Division, provided the population from which the sample was drawn. Care was taken to exclude the double listings that existed for some agencies. (Details of the selection process are given in Appendix B of the Equipment Priorities Questionnaire.)

The final list of 12,842 departments was cross-stratified by LEAA geographic region and department type by the mutual agreement of NBS and NILECJ. The assignment of states to regions and the seven department types chosen for study are shown in Table 1.2-1.

Table 1.2-1. Stratification Categories

LEAA GEOGRAPHIC REGIONS: DEPARTMENT TYPES: 1 = Conn., Maine, Mass., N.H., State Police R.I., V2. County Police & Sheriffs 2 = N.J., N.Y.City with 1-9 Officers 3 = Del., Md., Penn., Va., City with 10-49 Officers City with 50 or more Officers* W. Va., D.C. 4 = Ala., Fla., Ga., Ky., Miss.,The 50 Largest U.S. Cities** N.C., S.C., Tenn. Township Departments 5 = Ill., Ind., Mich., Ohio, Wis., Minn. 6 = Ark., La., N.M., Okla., Tex. 7 = Iowa, Kan., Mo., Neb. 8 = Colo., Mont., N.D., S.D., Utah, Wyo. 9 = Ariz., Calif., Nev., Hawaii 10 = Alas., Idaho, Ore., Wash.

* Does not include the 50 Largest Cities.

** By Population, U.S. 1970 Census.

The breakdown of the <u>population</u> of police departments by crossstrata is exhibited in Table 1.2-2. As can be seen from the table, there were no Townships in Regions 4, 6, 7, 8, 9 and 10. Almost 63% of the departments were City police, 43% having 1-9 full-time officers. County departments comprised about 24% of the population. By Region, the smallest (Region 10) contained only 3.4% of the police departments, while Region 5, the largest, had 22.5%. The variation in the number of departments in a cell (Region/Department Type combination) was even greater than that across the strata, i.e. the number of departments in each cell ranged from 0 to 1470.

The considerations discussed in the previous paragraph led to the sampling plan discussed briefly below. All of the State departments and the Fifty Largest City departments were included

Table 1.2-2 Number of Police Departments by Region and Type

LEAA REGION

CULTATMENT TYPE	Ч	2	3	4	5	9	7	8	6	10	TOTAL
State	9	2	5	8	9	5	4	9	4	4	50*

* Questionnaires were actually sent to 56 State Police departments since there were 6 State Departments which listed two police agencies without reference to a common central agency. However, only one set of questionnaires was accepted from each of these 6 agencies as described in Volume I, Appendix B, page B-2. in the sample and were arred to complete all six DQs, i.e., they were sent the entire package of seven questionnaires. For the remaining cells the variation in cell size presented a problem: If the <u>same fraction</u> of the entire population was to be selected from the members of each cell, a constant sampling fraction <u>large</u> enough to make the total sample manageable would yield too few sample units in small cells. To solve this problem, a fixed sample of 30 police departments/cell was chosen, wherever possible, resulting in a different sampling fraction for each cell. A fixed sample size of 30 departments/cell was chosen to facilitate the equitable distribution of the six DQs. This plan resulted in sending the Communications DQ to 534 departments.

The departments were selected randomly within each cell, from the total cell population, each department (other than the States and Fifty Largest Cities) receiving two DQs. Thus, in cells having 30 sample units, the Communication DQ was mailed to 10 departments; cells having fewer sample units were allocated proportionally fewer Communications DQs. Table 1.2-3 presents the total sample for the Communications DQ by Region and Department Type.

Once the sample was selected, each sample unit was assigned a unique seven-digit identification number, coding region, type, and questionnaire assignment.

1.3 Questionnaire Administration

From the beginning of the project, it was evident that stringent control would be required in administering the questionnaires to ensure a high rate or response. Computer-stored

Number in Sample of Departments Selected to Receive the Detailed - by Region and Department Type. Communications Questionnaire: Table 1.2-3.

ۍ د 3, and 2 **Township departments exist only in Regions 1,

daily status records were input via a teletypewriter for each sample department. In general, the following procedure was used:

- (a) Each department in the sample was mailed a letter, signed by the director of NILECJ, addressed to the survey and requested cooperation.
- (b) About one week later, the questionnaire packages were mailed.
- (c) Departments not returning the questionnaires within a month were identified by the computer and were sent a self return postcard requesting information as to the status of the questionnaires. Departments not receiving the questionnaire package were sent another; those not returning the postcard were placed on a list for telephone follow-up.
- (d) About a month and a half later, departments with which no contact had been made were called by telephone.
- (e) Returned questionnaires were reviewed for completeness and either coded for keypunching or filed for telephone call-back to supply missing data or to resulve ambiguities.

Considerable effort was expended to ensure a high rate of response, and this effort was rewarded with an 80% response for the Communications DQ, and between 80% and 85% for each of the other questionnaires. In the course of the survey more than 70% of the sample departments were contacted at least once by telephone. More than 1300 phone calls were made by the survey team.

The distribution of respondents (departments which returned usable Communications DQs) is exhibited in Table 1.3-1. The highest percentages of response were from the States and larger Cities (89-94%), while Counties and Townships had the poorest response rates (under 70%). These data would seem to be partly explained by the fact that the larger departments use more equipment than do smaller departments and, therefore, have a greater

1.4 Development and Design of the Communications DQ

The survey plan and questionnaire design (of all seven questionnaires) evolved over a 12-month period. During this time, the survey team consulted at length with NILECJ equipment experts,

LESL program managers, and equipment manufacturers. In addition, the officers and administrators of about 40 police departments served as consultants and/or as respondents for pretests of various versions of the questionnaires.

The Communications DO, in its final form, is reproduced in Appendix A. This DQ asked respondents to provide data about car radios and portable radios in use in their departments, to answer questions about the power supplies used in portable radios, to provide information about other kinds of communications equipment such as scramblers, helmets with built-in communications and portable/mobile radios; to indicate the need for standards for various kinds of communications equipment and to discuss problems with communications equipment. The questionnaire was limited to general topics because (1) it was not possible, considering the scope of the present survey, to explore in a detailed manner all of the many facets of the various communications systems in use in police departments throughout the United States, and (2) it was felt that the general data gathered in the present effort. would provide important direction for research in the development of standards, the main objective of the survey.

1.5 Characteristics of Subsample Groups

The EPQ of the LEAA Police Equipment Survey* requested data from each department about population served, physical size of jurisdiction served, type of jurisdiction, number of full- and part-time officers, approximate total, equipment, and personnel budgets during 1971, and activities handled by the department.

Table 1.5-1 presents a partial tabulation, by department type, of the responses to a check list of 30 typical police activities by the respondents to the EPQ. (The EPQ respondents include, but are not limited to, the respondents to the Communications DQ. See Section 1.2.) The activities most frequently checked by all departments were (1) Serve Traffic and Criminal Warrants (88%), (2) Traffic Safety and Traffic Control (87%), and (3) Communications for Own Department (87%). The activity with the most consistent level across all department types was that of Emergency Aid and Rescue; ranging from 60% (Cities with 50+ Officers) to 67% (Counties).

Higher percentages of State and Fifty Largest City departments were handling certain of these activities. For example: all of the 45 Fifty Largest City departments responding, and 98% of the State departments, said that their departments provided Police Training for Own Department. These compare to 68% for the total sample of departments. All of the responding Fifty Largest Cities said that they handled Criminal Investigation in

Table 1.5-1.

their own departments. This compares to 86% of the total sample of departments. Although only 13% of the departments overall had Crime Laboratories, 73% of the Fifty Largest Cities and 55% of the States had them.

Counties appeared to be the only Department Type with significant responsibilities for custody and detention for more than 1 week. Seventy-eight percent of those departments had Custody/Detention-Up to 1 Year, as compared with 22% of all responding departments.

Tables 1.5-2 and 1.5-3 present summaries of descriptive data by Department Type and LEAA Region, respectively. As can be seen from the column for Annual Equipment Budget (Table 1.5-2), there was a wide range of expenditures among different Department Types: From a mean of about 10 thousand dollars for Cities (1-9) to almost 2.6 million dollars for the Fifty Largest Cities. Overall, equipment budgets represented somewhat over 10% of the Annual Total Budgets.

The mean Number of Part-time Officers was based on those respondents having part-time officers in their departments. Of the 45 responding from the Fifty Largest Cities, only six had part-time officers, including one city which had nearly 6000. Thus, the mean value of 1115 for this department type is somewhat misleading. It should be noted that the category Part-time Officers included officers described as auxiliary, volunteer, reserve, school-crossing guard, dispatcher, summer, special agent,

traffic supervisor, posse, and cadet. All of these classifications were counted in the Part-time Officer category since it has different meanings for different departments.

Variations in these descriptive averages by LEAA region (Table 1.5-3) were considerably smaller than variations by department type. Regions 1 and 8 had smaller budgets than the others, primarily because each had only one of the Fifty Largest Cities.

2.0 QUESTION BY QUESTION DISCUSSION

2.1 Advice to the Reader

In reading Section 2, certain points should be kept in mind:

- (a) THIS REPORT IS NOT AN EVALUATION OF ANY OF THE EQUIPMENT DESCRIBED OR DISCUSSED WITHIN IT. IT <u>IS</u> A PRESENTATION OF INFORMATION AND OPINIONS OF A STRATIFIED RANDOM SAMPLE OF POLICE DEPARTMENTS GIVEN IN RESPONSE TO A SPECIFIC SET OF QUESTIONS. IT DOES NOT, IN ANY WAY, REFLECT OBJECTIVE TEST-ING OF ANY EQUIPMENT BY THE NATIONAL BUREAU OF STANDARDS.
- (b) The report reflects only what police departments were willing and able to say in response to a specific set of questions. In most cases, no attempt was made to verify the accuracy of the information given or the level of sophistication of the respondent.

- (c) Each discussion begins with the presentation of the question that appeared in the questionnaire, and in most cases the choices supplied, if any, set off in a box. However, the reader is cautioned to become familiar with the questionnaire sent to sample departments (See Appendix A) and to evaluate the data in terms of the exact questions asked.
- (d) The text tables that appear in Section 2 are almost never the complete tables that were tabulated for that question. Data categories for text tables may have been collapsed from the full table, or certain categories of interest may have been singled out for fuller discussion. Appendix B contains the complete tables from which the text tables were extracted. Text tables have been numbered after the question number (e.g., the text tables for question 6A. would be numbered 6A-1, 6A-2, etc.). The tables in Appendix B are also numbered the same as question number, in the same manner. In some cases, tables that appear in the Appendix B will not have been discussed at all in the text.
- (e) Data in the text of this report are usually presented by nearest whole percent of the froup under

consideration. In Appendix B, the data are usually presented by number of respondents and percent. Because of statistical limitations imposed by the sample sizes used in this study, the reader is cautioned to be wary of assigning importance to percentage differences of less than 5% when percentages are based on the total number of respondents, to percentage differences of less than 10% when percentages are based on one of the subsample groups, (e.g., a particular Department Type or Region). No tests of statistical significance are reported.

(f) Data were always tabulated by each of the choices supplied, if any, in the questionnaire. Any "other" choices written in by the respondents were also tabulated and/or recorded verbatim. In most cases, the numbers of respondents giving a specific "other" response do not reflect the numbers of respondents who might have marked that choice if it had been one of those provided. Therefore, in most cases, this report lists or gives examples of "other" responses, but does not present numbers or percents of departments giving that response. For those questions for which choices were not provided in the questionnaire, coding categories were developed after approximately one-fourth of the questionnaires had been returned.

(g) The subsample groups (Department Types and Regions) are capitalized when they are discussed in the text. In addition, the four Department Types which are composed of City departments are at times discussed as a group. In those cases, the word "city" is also capitalized. The following convention has been adopted in the report to designate the four City Department Types:

> City with 1-9 Officers = City (1-9) City with 10-49 Officers = City (10-49) City with 50 or more Officers = City (50+)

The Fifty Largest Cities = Fifty Largest In table headings this same convention has been used except that the parentheses have been removed, and the Fifty Largest Cities are designated "50 Largest".

The reader should keep in mind that when these subsample groups are discussed, (e.g., "Counties said..." or "Cities (1-9) said...") the reference is to that particular subsample group as selected in the sample.

(h) Questions which asked departments to identify manufacturers of their equipment were asked in this manner only to make the question clearer; NOT TO EVALUATE A MANUFACTURER'S PRODUCT.

- (i) In an attempt to make this report more readable, the main topics of the questionnaire have been reordered in the report; the discussion of the findings does <u>not</u> follow the order of the questions. To find the discussion of a particular question quickly, consult the Table of Contents or the List of Tables.
- (j) When the subsample groups are discussed (e.g., "Counties said..." or "Cities (1-9) said ...") the reference is to the <u>responding</u> departments from one of the sample strata. It is particularly important to note that when the text or tables refer to "All Departments" or "All Responding Departments," the reference is to all <u>responding</u> departments from the sample described in Section 1.2. This sample was <u>not</u> proportional to the total population of police departments, and although it is possible to do so, <u>the data in this report have not been</u> weighted to allow direct extrapolation to the total population. (See page B-1, Appendix B.)

2.2 Discussion

2.2.1 Characteristics of Respondents

Title of Respondents

All of the questionnaires in the LEAA Police Equipment Survey were mailed to the Chief (or highest official) of the department with a request that the questionnaires be directed to the person or persons within the department who were felt to be best qualified to answer the questions.

The Communications Questionnaire was usually filled in by the Chief/Unit Head in smaller City departments and Townships and by a Communications Specialist in States and the Fifty Largest Cities.

RANK/TITLE: 1		DI	EPARTMEN	NT TYPE:		
	00	0/0	010	90	00	90
	City	City	City	50		Town-
	1-9	10-49	<u> </u>	Largest	State	ship
Chief	73	. 42	14	4	. 0	52
Asst. Chief	3	9	6	0	• • • •	0
Comm. Spec.	0	2	28	67	77	4

Table i. Rank of Primary Respondent for Communications Questionnaire, by Department Type*.

* Excluding Counties

In Cities (50+) about one-fourth (28%) of the primary respondents were Communications Specialists and one-fifth (20%) were either Chiefs or Assistant Chiefs. Questionnaires from Counties were most often filled in by the Sheriff.

Number of Years of Law Enforcement Experience of Respondent

In general, the questionnaire was filled in by experienced officers. About three-fourths of the respondents had more than 5 years of experience. Although a majority of the respondents had more than 10 years of experience in law enforcement, there were variations among Department Types. More than 70% of the respondents in the Fifty Largest Cities and States had this much experience, while less than half of the respondents in Counties, Cities (1-9), and Townships had more than 10 years in law enforcement work.

Table ii. Years of Experience in Law Enforcement of Primary Respondent.

DEPARTMENT TYPE:	NUMBER OF	YEARS OF LAW	ENFORCEMENT EX	VPERIENCE :
	More than 5 Years	More than 10 Years	More than 20 Years	More than 25 Years
			% Dept. Type	
50 Largest	88	77	24	13
State	81	72	17	4
City (10-49)	84	57	13	5
City (50+)	77	61	22	14
City (1-9)	62	43	21	13
County	58	36	17	13
Township	57	48	9	9

2.2.2 Number of Officers and Characteristics of Jurisdiction

The communications needs and requirements of police departments are usually based on two prime considerations: (a) number of officers in the department and (b) size of jurisdiction.

Data about the average number of officers per Department Type are reproduced in Table iii.

Table iii. Average Number Type.	of Full-Time Officers, by Department
DEPARTMENT TYPE:	MEAN NO. FULL-TIME OFFICERS:
50 Largest State City (50+) County City (10-49) Township City (1-9)	2491 890 125 113 23 16 9

The largest mean number of officers per department was in the Fifty Largest Cities. States averaged slightly less than one-third as many officers as the Fifty Largest Cities. Counties averaged about five times as many officers as did Cities (10-49).

5A. What is the total area within your jurisdiction which must be covered by a communications system? (IN SQUARE MILES)

_____Square Miles

DEPARTMENT TYPE:	1	SIZE:	
	Overall Mean	Minimum	<u>Maximum</u>
	Square Miles	Square Miles	Square Miles
State	62,704	1,497	263,449
County	2,551	14	64,000
50 Largest	237	24	841
City (10-49)	68	1	2,000
City (1-9)	67	1	1,200
City (50+)	34	2	310
Township	32	5	67

The average sizes of communication jurisdictions which State and County police had to cover were larger than those of all types of City departments and Townships. The larger Cities, in terms of number of officers, were not necessarily larger in geographical size. Cities (1-9) and (10-49) had geographically larger jurisdictions than Cities (50+). The relationships between number of officers and geographical size can be seen more clearly in Table 5A-2.

Table 5A-2. Comparison Between Average Number of Officers in Department and Average Size of Jurisdiction.

County	113	2,551
City (10-49)	23	68
Township	16	32
City (1-9)	9	67

Table 5A-1. Average Size of Communications Jurisdiction, by Department Type.

6. Which of the following best describes the general character of your jurisdiction? (MARK X BY MORE THAN ONE, IF NECESSARY)

> Skyscrapers, many tall buildings Some tall buildings Almost no tall buildings Primarily mountainous or very hilly Valley area surrounded by mountains Generally flat with some hills Flat area, no hills

The departments which characterized their jurisdictions as being Mountainous or in a Valley Surrounded by Mountains were most often located in LEAA Regions 1 (New England), 8 (Mountain States), 9 (Far West/Hawaii), and 10 (Northwest/Alaska). Respondents who reported Flat, with Some or No Hills, were most often in LEAA Regions 6 (South/Southwest) and 7 (Midwest). There were few differences among LEAA Regions in the percentages of departments which said they had Almost No Tall Buildings. Departments in Region 5 (Great Lakes) gave the greatest percentage of responses for Skyscrapers, Many Tall Buildings or Some Tall Buildings; this response was given least often by departments in Region 1 (New England).

Table 6. General Character of Jurisdiction, by LEAA Region.

LEAA REGION:

CHARACTER:

	Flat/Some or no Hills % Region	Valley Surrounded By Mountains/or Moun- tainous, Very Hilly % Region	Almost No Tall Bldgs. % Region	Skyscrapers or Some Tall <u>Buildings</u> % Region

.

2.2.3 Mobile Radios

2.2.3.1 Number of Mobile Radios

2A. How many car radios are there in your department?

Number

State departments accounted for slightly more than half (51%) of all the car radios reported by the 428 responding departments. The Fifty Largest Cities accounted for an additional 40% of all radios reported. Thus, less than 10% of all radios reported were found in the other five Department Types.

Table	2A-1.	Number	of	Car	Radios,	by	^v Department	Type.
-------	-------	--------	----	-----	---------	----	-------------------------	-------

DEPARTMENT TYPE:	1					
	No. of	Total.	00	Mean	Max.	Min.
	Respond-	No.	Total	No. Per	in any	in any
	ents	Radios	Radios	Dept.	Dept.	Dept.
State	47	34365	51	731	3510	9 7
50 Largest	46	27221	40	592	4275	101
County	69	2653	4	38	900	1
City (50+)	79	2597	4	33	177	7
City (10-49)	86	631	l	7	21	.1
City (1-9)	78	239	*	3	28	1
Township	23	101	*	4	26	1 ·
All Departments	428	67807	100	158	4275	1

* Less than 1%.

Within the seven Department Types, there were wide ranges of minimum and maximum numbers of mobile radios reported. For example, some County departments had as few as one car radio, while

one County had 900.

Total numbers of car radios were compared with the numbers of patrolcars reported in response to the Patrolcars Questionnaire.* A total of 67,807 car radios were reported by the respondents to the Communications Questionnaire. A total of 46,462 patrolcars were reported by the respondents to the Patrolcars Questionnaire. Therefore, about 46% more car radios than patrolcars were reported by these subsample groups.

Calls were made to a few departments to determine possible reasons for the large observed difference between the number of cars and the number of car radios. Several reasons were given for this apparent discrepancy: (1) Many departments said that they kept extra mobile radios available; some said that they kept a 10-20% backup inventory. (2) Many departments were using communications channels on two different frequency bands, and needed two radios in each patrolcar in order to operate on both bands. In some departments, one band was used for emergencies (and was sometimes part of an area or statewide communications system) and the other was used to handle local jurisdiction communications. (3) In a smaller number of departments, it appeared that errors in reporting the numbers of mobile radios may have occurred. For instance, some of the County departments contacted said that they had included other mobile radios in their jurisdictions which, although they were not used by the County

^{*} These two questionnaires were sent to different but equivalent subsamples, except for States and the Fifty Largest Cities which always filled in both.

police, were tied into the central dispatch system operated by the County. It was also possible that a small number of departments may have included portable radios in their statistics on car radios, even though information about portable radios was specifically requested in Question 11A.

In summary, while it appears that departments did, in fact, have considerably more mobile radios in their departments than they had patrolcars; there is reason to believe that the total of 67,807 car radios reported in the survey may have been somewhat high. Nevertheless, the estimate of the total number of police mobile radios in the country, shown in Table 2A-2, is not likely to have been seriously affected.

2.2.3.2 Spectrum Utilization: Mobile Radios

In this section, mobile communications are considered in terms of police department spectrum utilization. The frequency bands used for transmitting and receiving and the number of

channels authorized and in use by the responding departments are reported.

Give the following information about your car radios:
 List ALL transmitting frequencies (in kHz, MHz, etc.)

The reported frequencies were compiled in four categories: VHF low band (30-50 MHz), VHF high band (150-174 MHz), UHF band (450-470 MHz) and an "other" category which included such answers as call letters, which could not be categorized by band.

VHF high band and UHF frequencies can usually be received in buildings. VHF high band has better penetration, while UHF frequencies are more likely to pass through windows and other nonmetallic openings. One of the main attractions of the UHF band is the availability of unused frequencies compared to VHF low and high bands, which are relatively saturated.

Of all the transmitting frequencies reported by responding departments, almost half (49%) were in the VHF high band (150-174 MHz). The VHF low band (30-50 MHz) accounted for 29% of the reported frequencies and only 19% were in the UHF band.

Since VHF low band frequencies provide the greatest range and are least affected by terrain and foliage, they are more suitable for those departments with the largest jurisdictions, such as States and Counties. In both of these Department Types, over half of the reported transmitting frequencies were in the VHF low band.

		DY DEPARTEMENT IFFE 1400 ACFARTEMENTED INSTANTION				• / 5 • • • •	}

	(n=1333)	(n=292)	(n=168)	(n=109)	(n=153)	(m=181)	(n=393)	(n=37)

Distribution of Transmitting Frequencies Within Bands, by Department Type (406 departments responding). Table lA-1.

The three largest City Department Types and Townships reported the greatest proportions of VHF high band transmitting frequencies. VHF high band, being more line-of-sight, does not provide as much range as low band does, but does transmit farther than UHF for the same transmitter output power. VHF frequencies have been available for law enforcement use longer than the UHF frequencies. As shown by the data, UHF frequencies were not generally being used, with the exception of the two largest City Department Types (50+ and Fifty Largest).

Of the responding departments, 79% said all their transmitting frequencies were in a single band. The remaining 21% used one of the combinations shown in Table 1A-2. Only five departments reported using transmitting frequencies in all three bands.

	e of More Than One Frequency Band for ng by the 65 Departments Reporting Con- age.
BAND COMBINATION:	% All Departments Which Were Using More Than One Band: (n=65)
30-50 and 150-174 MHz 30-50 and 450-470 MHz 150-174 and 450-470 MHz	60 10 30

The means shown in Table 1A-3 were calculated by counting the total number of transmitting frequencies reported within a particular band by departments within a particular Department Type and dividing this total by the number of departments within that Department Type who reported at least one transmitting fre-

quency within the band in question. Thus, for example, if 20 departments of a particular type reported using a total of 30 transmitting frequencies in the VHF low band, the statistic entered in the table would be "1.5".

Table 1A-3. Mean Number of Transmitting Frequencies per Department, by Department Type and Band.

FREQUENCY BAND:		DEPARTMENT TYPE:						
	All Depts.	State	County		City 10-49		50 Largest	Town- ship
30-50 MHz 150-174 MHz 450-470 MHz	2.7	4.2 5.7 5.7		1.4 1.4 2.3	1.5 1.6 2.2	1.8 2.1 2.6	1.7 5.6 6.8	1.4 1.6 3.0
All Bands	3.3	6.2	2.6	1.6	1.8	2.3	8.7	1.7

Historically, the VHF low band has been available for police department use longer than the other two bands. Increasing pressure for channel assignments and technological improvements have permitted the opening of the VHF high band and, most recently, the UHF band for law enforcement communications. With the exception of Counties, all Department Types, if they had made the switch to UHF at all, were using more channels per department in the UHF Band than in the lower two bands. This trend was particularly noticeable in the 50 Largest Cities which reported 5.6 and 6.8 frequencies per department in the VHF high and UHF bands, respectively, <u>vs</u>. only 1.7 frequencies per department in the VHF

low band. Increased spectrum space and the lack of co-channel interference at the UHF frequencies should result in an increase in the proportion of frequency assignments "(now 19%, see Table IA-1) in this band.

1B. List ALL receiving frequencies; if different from Question 1A.

About two-thirds of the Fifty Largest City departments indicated that they were using at least one receiving frequency which was different from their transmitting frequencies. Their responses imply the use of some type of duplex system*. The majority of departments in other Department Types appeared to be operating in the simplex mode. Since the Fifty Largest Cities were the primary users of different receiving frequencies, as well as being the primary users of the UHF Band, they heavily influenced this picture.

^{*} Note, that if one wishes, it is possible to determine the number of departments using simplex and duplex systems by calculating the number of different transmitting and receiving frequencies (from Q. 1A and Q. 1B) and the number of channels (Q. 1D).

Table 1B-1	. Percent	Departments	Whose	Transmi	ltting	and Re-	
	ceiving	Frequencies	Were N	lot All	The Sa	ame (n=130)	•

50 Largest	67

1.	Give the following	information about your car radios:
lD.	Number of Channels	Authorized
lE.	Number of Channels	In Use
2		

Although the data for this question. (and for Q. 5B. to. follow) are reported, the reader is cautioned to interpret them carefully. Discussions with departments and the FCC after the survey was conducted, revealed that the term "channel" was defined differently by different people. The major area of confusion was concerned with the meaning of simplex and duplex channel assignments.

In terms of all responding departments, <u>1452 authorized</u> channels were reported and <u>1332</u> channels were reported <u>in use</u>. At the time of this survey, of the channels authorized but <u>not</u> in use (120 channels), State departments and the Fifty Largest Cities accounted for just over half (68).

Table 1D. & E. Comparison of Channels Authorized with Channels In Use for Mobile Radios, by Department Type. (Department Types Listed from Largest to Smallest Based on Mean Number of Full-Time Officers.)

DEPARTMENT TYPE:

	No. Channels Authorized	No. Channels In Use	% of Authorized In Use
50 Largest	411	378	92
State	309	274	89
County	195	186	95
City (50+)	184	174	95
City (10-49)	169	158	94
City (1-9)	144	124	86
Township	40	38	95
All Departments	1452	1332	92

In general, the more officers in the department, the greater was the number of channels authorized for its communications and departments were using almost all (92%) of the channels authorized to them. The overall average number of authorized channels per <u>department</u> was 3.5 and the average number in use was 3.2.

5B. If possible, please tell us how many different law enforcement channels serve this area. This figure would include not only those channels used by your department, but also those used by other law enforcement agencies operating in the same geographical area (e.g., state and local police).

> _____ Channels _____ Don't Know

Responding departments reported an average of 11.6 law enforcement communications channels in use in their areas. This is slightly over three times the average number reported for their own use. However, of the 428 departments which returned Communications Questionnaires, 132 departments (31%) did not answer or did not know the number of different law enforcement channels serving their areas.

Table 1D. & E. & 5B. Comparison of Average Number of Channels Authorized, In Use, and In Area for Mobile Radios, by Department Type.*

DEPARTMENT TYPE:	CHANNELS:		
	Authorized (n=417)	<u>In Use</u> (n=418)	<u>In Area</u> (n=296)
50 Largest State County City (50+) City (10-49) City (1-9)	9.1 6.6 2.9 2.4 2.0 2.0	8. 5.8 2.8 2.5 1.8 1.7	32.6 71.7 5.7 6.2 4.9 4.0
Township	1.7	1.6	5.1

* "No Answers" were excluded from the calculation of averages.

Although State departments who answered this question (18 departments) reported the greatest number of channels in their areas, they also had by far the largest areas. The Fifty Largest Cities had slightly less than half as many authorized channels in their areas as State departments, but these channels were concentrated in much smaller jurisdictions.

5C.	Do you have one common frequency for routine and emergency traffic?
	Yes No (If "No") Do you think you need a common frequency?
,	Yes No

This question was originally intended to obtain information on in<u>ter</u>departmental sharing of frequencies. That is: did the different departments in one district or region have a common frequency for communicating with each other on both a routine and emergency basis? It was subsequently discovered that it had sometimes been interpreted to refer to in<u>tra</u>-departmental capability. Consequently, the data received in answer to this question are not presented here.

2.2.3.3 Characteristics of Mobile Radios

Give the following information about your car radios:
 Output power (in watts)______.

This was a difficult question for some departments to answer and 39 of the respondents did not answer it. Four departments gave output powers under 10 watts (they were using repeaters) and 36 departments gave output powers above 110 watts (probably their base station output power since the maximum power available from commercial mobile radios is 110 watts.)

Table 1C-1. Frequency Count of Reported Output Power, for All Responding Departments.

OUTPUT POWER IN WATTS:	ALL DEPARTME	ENT TYPES:
	No.	00
Less than 10	4	1
10 - 29	28	7
30 - 49	73	17
50 - 69	65	15
70 - 89	24	6
60 - 110	159	37
More than 110	36	8
No Answer	39	9
Total	428	100

The frequency count shows that the most frequently cited output power was in the 90-110 watt range. State departments, as expected by the size of their jurisdictions, showed the greatest use (81%) of high (90-110 watts) output power. Only in the Fifty Largest Cities did the highest proportion of departments cite one of the lower ranges of output power, (i.e., 33% of the Fifty Largest reported output in the 30-49 watt range while 26% reported output powers of 90-110 watts).

Table 1C-2. Percentages of Each Department Type Which Cited Output Power of 90-110 Watts.

(smallest) (largest)	Township City (50+) City (1-9) City (10-49) 50 Largest County State	74 68 64 64 56 84 91

 How recently were most of the car radios bought by your department? (MARK X BY YOUR BEST ESTIMATE)

> Within the last calendar year 1-3 years ago 4-5 years ago More than 5 years ago

Almost half (47%) of the responding departments (evenly across Department Types) had purchased the bulk of their car radios within the last three years and about two-thirds of the departments (65%) had bought most of their car radios within the last five years. The other one-third (34%) bought them more than 5 years ago.*

Of the 65% which had bought most of their radios within the last five years, about half had bought them 1-3 years ago, about one-fourth had bought them 4-5 years ago and the remaining onefourth had bought them within the last year.

^{*} Data about purchase of equipment was provided as of Summer, 1972. The term "most" in the question was used to solicit responses concerning the most recent major purchase(s) of mobile radios.

Table 3. Cumulative Percentages for Period of Time Within Which 428 Departments Bought Most of Their Car Radios, by Department Type.

DEPARTMENT TYPE:		TIME PERIOD:	
	Within the Last Year % Dept. Type	3 Years Ago or Less % Dept. Type	5 Years Ago or Less % Dept. Type
City (50+) Township City (10-49) County City (1-9) 50 Largest State	25 22 19 13 10 7 6	42 44 56 40 48 48 48 46	62 79 65 63 61 68 67
All Departments	15	47	65

There were no major differences among Department Types, although Townships were slightly more likely than the others to have bought their car radios within the last 5 years.

4. About how much did <u>each</u> of the car radios cost that are <u>most</u> frequently used in your department (including base plate, control head, microphone, and speaker)? For example, if most of the radios now in use are Motorolas, please give us the cost of one set. (MARK X BY YOUR BEST ESTIMATE BELOW)

> Less than \$700 \$701-\$800 \$801-\$900 \$901-\$1000 \$1001-\$1500 Over \$1500

More than half (56%) of the responding departments paid \$900 or less for their most frequently used car radios. Very few departments (4% overall) paid more than \$1500 per unit. State departments paid significantly less per unit, and Counties and Townships paid significantly more per unit. It might have been expected that States and Counties would pay more per unit because of a need for higher output power and increased channel capacity to serve their larger jurisdictions. However, this hypothesis held true only for the Counties, suggesting perhaps, that a further examination of the purchasing practices of these two Department Types would be needed to explain the survey results.

2B.		ere in your department?) how many were made by each of the
	Number	<u>Manufacturer</u> Motorola RCA GE Other

Ninety-nine percent of all the car radios reported were manufactured by only three companies, and over half (57%) were pro-

duced by just one manufacturer. The three largest City Department Types seemed to favor Manufacturer C for roughly two-thirds of their car radio purchases. State departments distributed their buying equally between Manufacturers B and C. Manufacturer A captured only 8% of the reported market. Other manufacturers combined represented 1% of the respondents' police mobile radio purchases.

Table 2B-1. Percentages of Car Radios in Use in Department Made by Various Manufacturers, by Department Type.

State	11	44	45	1 .
All Departments	8	34	57	1

Thirty-nine percent of the responding departments had a mixture of brands of mobile radios within their departments. Radios produced by different manufacturers are not always compatible, that is, control heads, microphone jacks, etc. may not mate, and interchangeability of equipment is difficult. This problem was mentioned by many departments (see Section 2.2.6). On the other hand, these data may only be a reflection of the fact that many departments (see Section 2.2.3.2) operated communications equipment on more than one band and consequently may have purchased the

radios for use on one band from one manufacturer and those for use on the other band from another manufacturer (see Section 2.2.3-1.).

City (1-9)	5 3

llA. How many portable radios do you now have in your department? Number

Almost three-fourths (72%) of the portable radios reported were used in the Fifty Largest Cities. Although departments in the Fifty Largest Cities averaged about 356 portable radios per department, use of these radios varied greatly among particular cities. For example, the numbers of portable radios available in any single police department, within the Fifty Largest Cities group, ranged from a maximum of 4500 radios in one of these departments to a minimum of only 15 radios in another.

*Less than 1%.

As the mean number of officers per Department Type increased, che mean number of portable radios per Department Type increased. As was discussed in Section 2.2.3.1, (and is repeated in Table

11A-2. below), State Departments averaged many more <u>mobile</u> radios per department than did the Fifty Largest Cities, even though they averaged fewer officers per department. This anomaly did not occur with respect to portable radios.

Table 11A-2. Comparison Between Mean Number of Officers per Department Type, Mean Number of Car Radios and Mean Number of Portable Radios.

City (1-9)	14,812	16,458
Total	98,113	240,287

Give the following information about your portable radios.
 A. List <u>all</u> transmitting frequencies (in kHz, MHz, etc.)

Three percent of the 348 departments using portable radios did not report their transmitting frequencies. Of the remaining 329 departments, the most used transmitting band for portable radios was the VHF high band (150-174 MHz), with approximately the same proportion of total frequencies as was found for mobile radios.

Table 10A-1.	Comparison of Percentag Frequencies, by Band, f Radios for All Departme	or Mobile and Por	
RADIO:	% Freq. in VHF Low Band	% Freq. in VHF High Band	% Freq. in UHF Band
Mobile	29	49	19
Portable	2 2	51	24

Within Department Types, in all but two cases (Counties and Fifty Largest Cities), the band in which the highest percentage of total <u>mobile</u> transmitting frequencies were used was also the band in which the highest percentage of <u>portable</u> transmitting frequencies existed. In contrast, over half of the portable radio transmitting frequencies reported by Counties were in the VHF high band, while the majority of their mobile transmitting frequencies were VHF low band. The Fifty Largest Cities, which tended to use a greater proportion of UHF frequencies for their

mobile radios, tended to use a greater proportion of VHF high band frequencies for their portable radios.

Table 10A-2. Percentages of Total Mobile and Portable Frequencies, by Band, for County and 50 Largest City Departments. FREQUENCY BAND: DEPARTMENT TYPE: County 50 Largest % Portable Mobile % Portable % Mobile 30-50 MHz 51 36 3 3 150-174 MHz 42 59 33 50 450-470 MHz 5 1 42 44

Within the seven Department Types, the numbers of transmitting frequencies per department for mobile and portable radios were very similar, except for State departments. It is probable that the higher mean number of mobile radio transmitting frequencies reported by States was a reflection of their relative emphasis on highway patrol activities.

Table 10A-3. Mean* Numbers of Portable and Mobile Radio Transmitting Frequencies, by Department Type. (Department Types Ordered from Largest to Smallest by Number of Full-time Officers.)

2.2.4.3 Characteristics of Portable Radios

10.	Give the following information about your portable radios:	
10C.	Output Power in Watts	

As was expected, due to the nature of the power supplies employed, the average output power for portable radios was far lower than the output power for mobile radios. The mean output power, for all departments, for portable radios was 3.9 watts, while the mean output power for mobile radios was 70.9 watts. (Most portable radios currently on the market transmit with an RF output of 5 watts or less.)

In general, the larger the average size of Department Type jurisdiction, the greater the mean reported output power for portable radios. There was only one exception to this general trend: The Fifty Largest Cities, which had the third largest mean size of jurisdiction, reported the lowest mean output power for their portable radios.

Table 10C. Mean Output Power in Watts for Portable Radios, by Department Type -- Arranged from Smallest to Largest Mean Size of Jurisdiction.

DEPARTMENT TYPE:	Mean Output Power in Watts
Township	3.4
City (50+)	3.4
City (1-9)	3.6
City (10-49)	4.2
50 Largest	2.8
County	4.6
State	5.1

A few departments reported very high portable radio output powers, but the problem was not as great, either in frequency or degree, as for mobile radios. Follow-up telephone calls to some of these departments revealed that they had estimated the output power of their portable equipment rather than actually checking the specifications.

22.	
	equipment, and batteries for portable radios be given -
	- High Priority
	- Medium Priority
	- Low Priority
	- Standards are not needed for these items
•	

About three-fourths of departments which used portable radios felt that either High or Medium Priority should be assigned to developing standards for power supplies for portable radios. These departments were evenly divided between those which assigned High versus Medium Priorities. About 25% of all departments using portables either said that no standards for power supplies were needed or that such standards should have Low Priority. The Fifty Largest Cities, which were the biggest users of portable radios, were most likely to assign High Priority to standards for power supplies for portable radios.

Table 22. Priorities Assigned to Standards for Power Supplies for Portable Radios by 348 Departments which Used Portable Radios as Compared to Average Number of Portables Available, by Department Type.

	High <u>Priority</u>	Medium Priority	Low Priority	Don't Need Standards	Average No.

Township	25	50	12	12	3.4
City (1-9)	24	37	22	17	2.7

23.	What types of batteries do you <u>now</u> use for your portable radios? (Mark X by <u>each</u> item that applies)
24.	What types of batteries do you <u>prefer</u> to use for your portable radios? (Mark X by one of the following) Alkaline-Manganese Carbon-Zinc Mercury NiCad (Nickel-Cadmium) Silver Oxide Other

More than 80% of the 348 departments which were using portable radios said that they were using Nickel-Cadmium batteries for those radios. A similar percentage also said that Nickel-Cadmium was the battery they would prefer to use with their portable radios. Although 25% of the portable radio users said they were currently using at least some Alkaline-Manganese or some Mercury batteries, less than half of those who used these two types of batteries said that they would prefer to use them.

Table 23 & 24. Comparison Between Batteries Now in Use and Batteries Preferred, by the 348 Departments Using Portable Radios.

BATTERY TYPE: ALL DEPARTMENTS USING PORTABLE RADIOS:

	(Q. 23) % All Depts. Now Using*	(Q. 24) % All Depts. Would Prefer to Use
Alkaline-Manganese	11	6
Carbon-Zinc	6	1
Mercury	14	6
Nickel-Cadmium	82	83
Silver Oxide	0	0
Other	3	1
No Answer	3	4

*Percentages add to more than 100% since departments could give more than one answer to Question 23.

25. D	o you	use	batteries	for	your	portable	radios	which
n	ust be	red	charged?					
	<u></u>		Yes			No		

Nine out of every 10 departments which had portable radios used batteries which had to be recharged. There were no major differences among Department Types, although percentages of departments using batteries which must be recharged were slightly smaller for State, County and small City (1-9) departments than for larger City types. These differences may not be statistically significant.

Table 25. Use of Batteries Which Must Be Recharged, by 348 Departments Which Used Portable Radios.

DEPARTMENT TYPE:	Batteries Must Be Recharged
	% Dept. Type
50 Largest City (50+) City (10-49) Township County State	98 94 94 94 84 83
City (1-9)	80
All Depts.	90

(Do you use batteries for your portable radio which must be recharged?) YES How long can you use the battery before it must be 25A. recharged? Hours 25B. How long does it usually take to recharge the battery to a point where it can be used again? Hours 25C. How long does it usually take to fully recharge the battery? Hours 25D. How long can you usually use these batteries before they must be replaced? Months

Responses from the departments using rechargeable batteries showed that they averaged 8 hours of battery use before recharging was required. This was also the most commonly reported figure by all Department Types (modal response).

On the average, departments reported that a portable radio could be recharged enough to be usable in a little more than half the time it took for a full charge: Mean time to fully recharge = 9.2 hours; mean time to recharge to usable point = 5.6 hours. There was, however, considerable variability to their answers. Some departments said that it took a minimum of 24 hours to recharge portable radio batteries to a usable point while others said it required only one hour. Similarly, for full recharging, some departments said one hour was sufficient, several said 24 hours were required, and at least one County department said full recharging took 48 hours. This wide range of responses

probably was a reflection of the use of "quick-charge" and "slowcharge" systems, the ages of the charging systems in use, and the design parameters of many different portable radio/battery systems in use.

Table 25. Length of Time to Partially and Completely Recharge A.&B.&C.& Batteries: Length of Time Batteries Can Be Used D. Before Needing Recharging, and Needing Replacement, by Departments which Use Rechargeable Batteries in Their Portable Radios.

QUESTION:	DEPARTMEN	TS RECHARGI	NG BATTERIES:
	Mean No. Hours	Maximum No. Hours	Minimum No. Hours
A. No. of <u>hours</u> battery can be used before needing recharging (261 responses)	8.0	50	1
B. No. of <u>hours</u> required to recharge battery to point where it can be used again (260 responses)	5.6	24	l
C. No. of <u>hours</u> required to fully recharge battery (259 responses)	9.2	48	1
D. No. of months battery can be used before being replaced (206 responses)	$\frac{\text{Months}}{16.7}$	Months 60	Months 3

No. of Depts. never needing to replace batteries: 26 (8%)

Departments replaced their rechargeable batteries, on the average, every 16.7 months. Excluding those departments (8%) who had never needed to replace their batteries (no data is available on how long these batteries had been in use), battery life ranged from as little as three months to as long as five years.

The larger departments (States, 50 Largest, Cities (50+), and Cities (10-49) reported average battery lives between 1 1/2 and 2 years. On the other hand, Counties and Cities (1-9) were only able to use their batteries for six or seven months before replacement. Follow-up phone calls revealed that few departments kept actual battery use and life records; these data, therefore, are probably based, in large measure, on estimates.

1	
	12. About how much does one of these "most used" portable
	radios weigh?
	Less than 20 oz. 33 oz. to 38 oz.
	20 oz. to 26 oz. More than 38 oz.
	27 oz. to 32 oz.
	13. How do you feel about the weight of the "most used" portable radios?
	The weight is about right
	The unit is somewhat heavy
	The unit is entirely too heavy
- 1	

.

Table 12 & 13-1.	Weight of Portable Radios, by 348 Departments Using Portable Radios.
WEIGHT:	% Depts. Using Portables
Less than 20 oz. 20 oz. to 26 oz. 27 oz. to 32 oz. 33 oz. to 38 oz. More than 38 oz.	5 26 25 20 21
No Answer	2

About 7 out of every 10 departments reported that their portable radios weighed between 20 and 38 oz. (.567 to 1.077 Kg). About one-fifth of the departments had radios weighing more than 1.077 Kg.

Table 12 & 13-2.	Comparison Between Weight of Most Used Portable Radios and Respondents' Feeling About That Weight					
HOW RESPONDENTS						
FEEL ABOUT WEIGHT:	REPORTE	D WEIGHT O	F PORTABLE	RADIOS:		
	% Less Than 20 oz.		% 27 oz. - 32 oz.		% More Than <u>38 oz.</u>	% No Answer
Weight is right	7	38	29	17	9	1
Somewhat heavy	2	17	28	36	23	3
Entirely too heavy	4	6	8	18	60	4

Departments with units weighing over 1.077 Kg. (38oz.) more frequently reported that the radios were "entirely too heavy" than those which had lighter weight sets.

12A. When did you buy most of these "most used" portable radios? Within the last calendar year 1-3 years ago 4-5 years ago More than 5 years ago

Table 12A . When Departments Bought Most of Their "Most Often Used" Brands of Portable Radios.

WHEN PURCHASED:	% Depts. Using Portables
	(n = 348)
Within last year	17
3 years ago or less	67
5 years ago or less	90
No Answer	1

Half of the departments in the sample had bought the portable radios most commonly used in their department, one to three years ago.* About one-fourth had bought them four to five years ago. *Data about purchase of equipment was provided as of Summer, 1972. Seventeen percent had purchased their radios within the previous year and the remaining 10% had radios which were more than five years old. All seven Department Types reflected roughly these same proportions.

It appears that departments had made major purchases of portable radios more recently than they had made major purchases of mobile radios (90% of the departments had purchased portables, and 65% had purchased mobile radios in quantity within the last 5 years). This finding may have resulted in part because of improved portable radio technology, the recent availability of Federal Purchase funds and/or the relatively shorter life of portable radios.

12B. About how much did you pay for one of these "most used" portable radios (including antenna, carrying case, and spare batteries)? Less than \$500 \$501-\$700 \$701-\$900 \$901-\$1100 \$1101-\$1500 Over \$1500

Fourty-four percent of the departments paid between \$700 and \$900 apiece for thier portable radios and 77% of them paid \$900 or less. About one-fourth of Cities (1-9) bad bought their portables for less than \$500, these small cities along with the 50 Largest Cities, paid a wide range of prices. Two percent of Cities (1-9) paid more than \$1101 as did 13% of the 50 Largest Cities. Counties, in general, paid higher prices for their portable radios and states paid lower prices.

		DEPART	MENT TYP	Е:

No Answer	0	6	5	0	0	2	0

Table 12B. Cumulative Percentages for Costs of "Most Commonly Used" Portable Radios in 348 Departments.

11B. (How many portable radios do you now have in your department?) Of those portable radios, about how many were made by the following manufacturers?

Number	Manufacturer
······	

Manufacturer A made roughly 7 out of every 10 portable radios used by the respondents. There were no major differences among Department Types, except that a smaller percentage of portables in States and Cities (1-9) were made by this company than in the larger City Department Types. Manufacturer B made slightly more than 1 out of every 10 portable radios and Manufacturers C and D each made only 1 out of every 20 radios reported. Only in Cities (1-9) did a manufacturer other than Manufacturer A capture a significant proportion of the reported market (35% - Manufacturer B).

	Percentage Made by Var				_

2.2.5 Special Systems

2.2.5.1 Mobile Repeaters

13.	A portable radio can be used with a repeater by a	
	patrolman when he is out of his car. The portable	
	radio transmits to the car radio which then relays	
	the signals to the base radio. Do you need repeaters	
	like this in your communication system?	

Yes	No	Why?	

Table 13-1. Percent Departments Which Need Repeaters Within Their Mobile Systems, by Department Type, Arranged According to Average Size of Jurisdiction.

DEPARTMENT TYPE:	NEED: % <u>Yes</u>
Township	31
City (50+)	35
City (1-9)	44
City (10-49)	40
50 Largest	26
County	58
State	68

:22

Almost half of the respondents (43%) indicated a need for a mobile repeater system, (i.e. a system in which a mobile car radio is used to relay transmissions from a low powered portable radio to a base station location). Generally, the larger the average size of the Department Type jurisdiction, the higher the percentage of departments saying they needed mobile repeater systems. In exception to this pattern, only 26% of the Fifty Largest Cities indicated a need for mobile repeater systems.

Table 13-2. If "Yes", Why Do You Need Mobile Repeaters?

REASONS:	All Depts. Saying Yes*
	(n=150)
1. To overcome distance (range) problems	23
2. To improve or strengthen portables	21
3. Constant communication necessary	18
4. To overcome terrain caused problems	16
5. Mobility of officers improved	11
6. Good for special assignments	9
Other	7
No Answer	11 -

*Percentages add to more than 100% because the respondents could give more than one reason.

Since there is a relationship between jurisdiction size and frequency of need for mobile repeaters (except for the Fifty Largest Cities), it was not surprising that the most frequently given reason for needing this system was to Overcome Distance (Range) Problems. The other four most commonly given reasons for choosing this system were all somewhat related to the problems of covering large areas of territory (To Strengthen the Portable System, To Remain in Constant Communication, To Overcome Terrain-Caused Problems and To Increase Officer Mobility).

Table 13-3. If "No", Why Don't You Need Mobile Repeaters?

	All Depts.
REASONS:	Saying No*
	(n=194)
1. Not needed - current equipment adequate	21
2. Use or prefer other system	19
3. Not needed - area not large enough to	
warrant use	18
4. Have no hand and/or car radios	2
Other	9
No Answer	38

*Percentages add to more than 100% because respondents could give more than one reason.

Departments usually indicated that they did not need a mobile repeater system when their Current Equipment was Adequate, when their Area was Not Large Enough to Warrant Use, or when theyUsed or Preferred Other Systems for handling problems of distance, such as fixed repeaters and/or voting systems.

Half of the 32 departments in the Fifty Largest Cities which did not need mobile repeater systems said that they Use or Prefer Other Systems. This probably accounted for the atypical response of the Fifty Largest Cities which often indicated that they did not need a mobile repeater system even though they had larger average jurisdictions to cover than Townships and other City Department Types.

7A. Do you use fixed repeaters in your area (to cover dead spots in communication which otherwise would exist
Yes No

Fixed repeaters can be used to overcome obstacles, either natural or man-made which would otherwise create dead spots in communications and to increase the range of system coverage. They are also used to cut mobile transmitter costs because, in general, less powerful car transmitters are needed when repeater systems are employed.

About one-third of the 428 responding departments used repeaters. State police and police in the Fifty Largest Cities were the two most frequent users of this equipment.

It might be hypothesized that there could be a relationship between the size of the jurisdiction to be covered and the use of fixed repeaters. It can be seen that State police departments, which were the most frequent users of fixed repeaters did have the largest jurisdictions to cover. However, less than onethird of County police, who had the second largest average size of jurisdiction, used repeaters. Within City Department Types, the frequency of use of repeaters increased with the size of the Department Type in terms of number of officers, rather than in terms of average size of jurisdiction.

Table 7A-1.	Use of Fixed Repeaters by Department Type, as		
	Compared to Average S	Size of Jurisdiction.

City (1-9)	13	67	
Township	9	31	
-		4	

	"YES" TO QUESTION your department h	any fixed r	epeaters
utes	your department i	ixed Repeat	ers

Most of the fixed repeaters were found in State police departments or in the Fifty Largest Cities. About 3 out of every 5 repeaters cited were used by State police departments. A little more than one-fourth of all repeaters were operated by the Fifty Largest Cities. Thus, almost 90% of fixed repeaters were employed by these 2 groups. Of the departments reporting fixed repeater operations, State police departments each operated 21 repeater units and the Fifty Largest Cities each operated 11 repeater units (means). Between 20% and 37% of other larger City Department Types (at least 10 officers or more) and County

police, reported using fixed repeaters (Q. 7A.) but these Department Types generally had an average (mean) of only one or two repeaters in each department.

Table 7B-1. Percentage of Total Repeaters in Use, and Mean Number Per Department of Those Using Repeaters, by Department Type.

DEPARTMENT TYPE :	% Total Reported Repeaters (n=1197)	Mean No. Repeaters Per Dept. of Those Using Any Repeaters
State	62	20.6
50 Largest	27	10.9
City (50+)	5	2.1
County	4	1.9
City (10-49)	2	1.1
City (1-9)	1	* *
Township	*	* *
All Depts.	100	

* Less Than 1%

**Mean probably not valid; number of respondents too small.

The largest mean numbers of repeaters were found in departments along the East Coast (in the Middle Atlantic and New York/ New Jersey areas) and along the West Coast (in the Region which includes California, Nevada, Arizona and also Hawaii). Although more than two-thirds of departments in Region 10 (which includes the Northwestern states of Washington, Oregon, Idaho and Alaska) reported using fixed repeaters, this Region had the smallest average number of repeaters per department. Table 7B-2. Average Number of Fixed Repeaters, by LEAA Region, Compared to Percentage of Departments in Region which Use Fixed Repeaters.

LEAA REGION: NUMBER AND USE OF REPEATERS:

		Mean No. Repeaters in Region	% Departments Which Use Fixed Repeaters
9	(Far West/Hawaii)	15.7	48
3	(Middle Atlantic)	15.6	17
2	(New York/New Jersey)	13.6	17
7	(Midwest)	9.4	19
5	(Great Lakes)	6.8	39
4	(South)	6.4	38
6	(South/Southwest)	6.2	26

1	(New England)	5.1	27
10	(Northwest/Alaska)	4.0	68

8. If you use, or will be using fixed repeaters, which of the following types do you prefer? Will not use fixed repeaters FlFl repeater (same frequency in and out) FlF2 repeater (two different frequencies) No preference

The FlFl system, in which communications are transmitted and received on the same frequency is not generally being marketed because it has not yet been perfected. Thus, State departments and large City departments (Fifty Largest and 50+) preferred the FlF2 system (in which communications are transmitted and received on different frequencies). Smaller Department Types also selected this system if they indicated a preference at all.

Table 8A.	Preference for FlFl Type.	or FlF2 Re	peaters, by	Department

2.2.5.3 Portamobile Radios with Voting Systems

14.	Some law enforcement agencies use portamobile radios with several receivers and a voting system. Do you favor such a system?
	Yes No If "Yes" or "No", why?
	Unfamiliar with voting system

More than half of the respondents who used portable radios (N=348) were unfamiliar with voting systems, an arrangement which provides more reliable communications by employing one or more satellite receivers for each channel. These receivers are situated at scattered locations throughout the coverage area. The audio output signals of the satellite receivers are transmitted to a selector or comparator at the base station by radio or land lines. The comparator performs the voting process by selecting the strongest of the several possible signals received from the portable or mobile radio via the satellite receivers. State

police and police in the Fifty Largest Cities were the only Department Types in which most respondents had knowledge of voting systems. About three-fourths (74%) of the respondents in the Fifty Largest Cities and about half (53%) in the State departments favored the system.

Data from this question further explained why, in Question 13, only 26% of the Fifty Largest Cities said they needed mobile repeaters and most often gave as a reason their preference for other systems. About three-fourths of the Fifty Largest Cities favored the voting system. Twenty-eight of the 45 respondents (65%) familiar with the concept favored the use of such a system.

Table 14-1. Of the 348 Departments With Portable Radios, Percentages of Responses About Voting Systems, by Department Type.

DEPARTMENT TYPE:

DO YOU FAVOR A VOTING SYSTEM?

	% Yes	<u>% No</u>	% Unfamiliar With System
Township	0	- 0	100
City (10-49)	10	12	78
County	16	12	72
City (1-9)	5	24	71
City (50+)	28	17	5 5
State	53	32	15
50 Largest	74	13	13
All Depts.	28	17	5 5

The three reasons most often given for favoring the voting system (by all respondents, and also by the Fifty Largest Cities) were that the system Improves Transmitting/Receiving Coverage and extends range, that the department Already Uses the System and likes it and that the system Increases the Flexibility and Usefulness of the portable radios.

Table 14-2. Reasons Given for Favoring A Portamobile Radio With A Voting System, by 98 Departments Which Favored This System.

REASONS:	% Depts. Favoring Voting System* (n=98)
 Improves transmitting/receiving coverage and extends range Already use and/or think it's a good sys Increases portable usefulness and flexing Voter relays best signal For extra back-up Miscellaneous 	31 stem 23
No Answer	11

*Percentages add to more than 100% since departments allowed multiple answers.

Departments which did not favor the voting system most commonly gave as reasons that they had No Need or Practical Use for the system or that they Considered the Voting System Inadeguate.

Reasons Given for Not Favoring A Portamobile Table 14-3. Radio With A Voting System, by 58 Departments Which Do Not Favor This System.

	REASONS:	% Depts. Not Favoring Voting System*
		(n = 58)
1.	No need or practical use	21
2.	Consider voting system inadequate	17
3.	Current system adequate	10
	Area too small to warrant use	10
5.	Too expensive	7
6.	Important calls voted out**	3
	Miscellaneous	10
	No Answer	31

*Percentages add to more than 100% since departments allowed multiple answers.

**This answer cannot really be considered a valid reason for not favoring a voting system. It is probably better interpreted as an indication of lack of knowledge about this system.

2.2.5.4 Scrambler Systems

> In some areas, police use voice privacy systems which 17. scramble messages so that they cannot be received by people other than police. Do you HAVE a system of this type? Yes NO (IF "NO.") Do you NEED a scrambler system of this type? Yes (IF "NO", SKIP TO QUESTION 21) No

Scramblers were in use in less than 10% of the 428 responding departments. Cities (50+), States, and the Fifty Largest Cities tended to have greater percentages of departments using scramblers. Counties and the two smallest City Department Types tended to have lower percentages of users.

Table 17-1.	Availability of	Scramblers, by Department Type.
DEPARTMENT TY	PE:	Have Scramblers: % Dept. Type
City (50+) State 50 Largest		18 13 11
Township City (10-49) City (1-9) County		9 8 5 3

Almost three-fifths of departments which did not have scramblers felt that they needed this system. Medium-sized Cities (10-49) were much more likely than State police to perceive a need for these systems. There were no major differences between the Fifty Largest Cities and smaller departments such as Townships, Counties and Cities (1-9) in their responses to this question. These data represent the departments' assessments of their need for scramblers and did not distinguish between various degrees of need such as "essential to the functioning of the department" and "desirable but not essential".

Table 17-2. Perceived Need for Scrambler System by 388 Departments Which Currently Do Not Have the System, by Department Type.

DEPARTMENT TYPE:	Need Scramber System % Dept. Type	No Answer % Dept. Type
City (10-49)	71	4
City (50+)	65	5
County	61	3
Township	57	0 .
50 Largest	54	10
City (1-9)	46	3
State	44	5

18.	If "Yes" (in Q. 17) For which of the following
	purposes do you need, or would you like, a scrambler
	system? (MARK X BY EACH ITEM THAT APPLIES.)
	General Communications
	During robberies
	Long-term stake out
	Demonstrations or protests
	Undercover investigations
	Other (Specify)

Departments which had scramblers (n=40, 9%) and departments which said they needec scramblers (n=225, 53%) were adked to answer this question. For three of the choices (Undercover Investigations, Robberies, and Long-Term Stake Out) the percentages of votes from the "have" and the "need" groups were fairly comparable. However, departments which did <u>not</u> currently have scramblers were much more likely to say they would use them for General Communications (49%) than were those departments which already had them (15%). In contrast, those departments which were already using scramblers were more likely to say they would use them during Demonstrations or Protests (60%) than were those departments which said they needed but did not yet have scramblers (45%). Table 18. Purposes for Which Scramblers Were (Or Would Be) Used, By All Departments Currently Using Scramblers and All Departments Saying Scramblers Were Needed.

USE FOR SCRAMBLER:	% Depts. Using Scramblers* (n=40)	% Depts. <u>Needing Scramblers*</u> (n=225)
Undercover Investigations	82	78
Demonstrations	60	45
Robberies	52	42
Long-Term Stake Out	50	63
General Communications	15	49
Other	37	16

*Percentages add to more than 100% since multiple answers were allowed.

Nineteen percent of departments which had, or needed, scramblers indicated Other uses for scramblers. Some of the more commonly mentioned Other uses were: For fires and accidents, for administrative operations, for crimes in progress (in addition to robberies), and for use in command units (communications vans).

19. (IF "YES" TO Q. 17) How do you (would you) use your scramblers? (MARK X BY ONE OF THE FOLLOWING.) With car radios With portable radios With both car radios and portable radios Only in special vehicles (Specify)

The perceptions of the 225 departments which did not have, but said they needed scramblers were very different from the answers of the 40 departments which were currently using scramblers. More than half (58%) of the users of scramblers said

they were using them With Car Radios <u>only</u>. An additional 35% of the current users said they were using their scramblers with Both Car Radios and Portable Radios.

In contrast, three-quarters (76%) of the departments which said they needed scramblers said they would use them with Both Car Radios and Portable Radios. Only 15% said they would use them with Car Radios only.

Table 19. Use of Scramblers with Car Radios, Portable Radios, and Special Vehicles, By All Departments Currently Using Scramblers and All Departments Saying Scramblers Were Needed.

USE WITH:	% Depts. Using Scramblers (Q. 17.)* (n=40)	% Depts. Needing Scramblers (Q. 17.)* (n=225)
Car Radios Only	58	15
Portable Radios Only	2	3
Both Car & Portable Radios	35	76
Special Vehicles	18	8

*The categories were meant to be mutually exclusive. However, a number of departments marked more than one of the available choices. The first three categories were made mutually exclusive in the tabulations. Double responses using the Special Vehicles category were permitted and therefore, the total percentages add to more than 100%.

20. (IF "YES" TO Q. 17.) How much do you think your department would pay for a good, reliable scrambler system? (MARK X BY YOUR BEST ESTIMATE BELOW.) Less than \$250 per unit \$251 - \$500 per unit \$501 - \$750 per unit \$751 - \$1000 per unit More than \$1000 per unit These data were useful as an indication of the accuracy of the respondents' perceptions of the costs of voice privacy systems. The simplest scramblers now on the market are inverters. They cost between \$200 and \$400 each, provide good intelligibility but offer only a low degree of privacy (an electronic hobbyist can easily build a low cost unscrambler). Eighty-three percent of the respondents which had (or needed) scramblers said that they were willing to pay \$500 or less for a "good, reliable scrambler system." These departments would only be able to buy a "low privacy" inverter system.

Scramblers, using cryptographic techniques, provide many different key settings, a substantial degree of privacy, and cost \$800-\$2000. Only 2% of the respondents with an interest in scramblers said they would be willing to pay more than \$750 -enough to buy a cryptographic type system. More of the Fifty Largest Cities (30%) than any other Department Type said they would be willing to pay more than \$500 for a reliable scrambler system.

2.2.5.5 Communications Helmet

21.	. Helmets with built-in communications h developed and are now on the market.	
	need for such helmets in your departme	nt?
	Yes	
	No	
	Why? or Why Not?	

Although only about one-third of all 428 respondents to the Communications Questionnaire said they needed helmets with builtin communications, almost three-quarters of the State and Fifty Largest City departments said they needed them.

Table 21-1. Need for Built-i	n Communications in Helmets, by
Department Type.	(All Respondents, n=428)
DEPARTMENT TYPE:	Need Built-in
	Communications

City (10-49)	19
City (1-9)	15
Township	9
÷	

Half of the 139 departments which expressed need for helmet communications gave as their reason the usefulness of this system in Crowd Control or Riots. About one-third of those departments said it would be useful for Motorcycle Duty. These two reasons were also most often chosen by the States and Fifty Largest Cities. For State police, Motorcycle Duty was most often chosen while Crowd Control was second; the reverse was true of departments in the Fifty Largest Cities.

Table 21-2. Reasons for Needing Built-in Helmet Communications, by 139 Departments Which Said They Needed This System.

REASONS:

No Answer

*Percentages add to more than 100% since multiple answers were allowed.

The majority of respondents (67%, n=286) said that their departments did not need built-in helmet communications. Many of the reasons for saying "no" to Question 21 were simply that the respondents saw no need for that type of communications system in their departments: Use Not Warranted Based on Department or Area (22%), Impractical/Don't Need (16%), No Helmets Used by Department (13%). The reason given with greatest frequency (Expense Not Warranted, 66%) might also be said to be in the general "no need" category. Only 4% of those saying builtin helmet communications were not needed mentioned a perceived negative aspect of this system as their reason.

2.2.6 General Information

2.2.6.1 Need for Standards and Expected Gains from Standards

Many policemen have indicated the need for standardi- zation of communications equipment. Which of the following equipment and components would you like to
see standardized? (MARK X BY EACH ITEM THAT APPLIES)
Portable radios
Mobile radios
Batteries for portable radios
Control heads
Microphones
Switches on control heads
Mounting brackets
Cable between microphone and control head Other (specify)

About two-thirds of the respondents said standards were needed for Mobile Radios (70%) and Portable Radios (66%). More than half of the departments said Batteries for Portable Radios needed standards (56%). No item listed was selected by less than one-third of the respondents. This interest in standards for communications equipment further supports the findings of the Equipment Priorities Questionnaire of this survey in which communications equipment was either the first or second most important category of equipment for every Department Type in terms of need for standards.

Table 15-1.	Nẹed for Standards	for Communications	Equipment,
	by All Respondents.	,	

EQUIPMENT ITEM:	% Depts. Indicating Standards are Needed
Mobile Radios Portable Radios Batteries Control Heads Mounting Brackets Microphones Switches on Control Heads Cable Between Microphone and Control Head	70 66 56 42 37 36 36 36
Other .	12

States and Fifty Largest Cities tended to say that more of the items in the list needed standards than did the other Department Types. In five of the Department Types (Cities 1-9, Cities 10-49, Cities 50+, Counties, and Townships) Portable Radios, Mobile Radios, and Batteries for Portable Radios always received one of the three highest percentages of votes. States chose Mobile Radios and Batteries for Portable Radios among the top three, but not Portable Radios. The Fifty Largest Cities chose Portable Radios and Batteries for Portable Radios among the top three, but not Mobile Radios.

Table 15-2.	Items Said to Need Standards by 40% OR MORE of
	the Departments Within a Department Type. Ordered
	from Highest to Lowest Frequency of Response by All
	428 Departments.

EQUIPMENT ITEM:	DEPARTMENT TYPE:						
	% State	% 50 Largest	% Cities _50 +	%Cities 10-49	% County	% Township	% Cities
Mobile Radios	64	59	57	76	72	83	79
Portable Radios	49	70	68	67	68	70	68
Batteries for Portables	66	78	67	55	49	61	
Control Heads	68	63	42	43			•
Mounting Brackets	49		41	-			
Microphones	57	46		-			
Switches on Con Head	49	43		41			
Cable btw Mike & Con Head	51	46					

Items not listed in the questionnaire which were sometimes mentioned as needing standards included: Chargers, antennas, crystals, connectors, other controls, and other cables.

16. What will your department gain by the standardization discussed above? (MARK X BY EACH ITEM THAT APPLIES) 10% lower cost of equipment 25% lower cost of equipment 50% lower cost of equipment Interchangeability of radios Interchangeability of components Savings in training of technicians Savings in training of patrolmen Interchangeability with other communications systems Other (specify)

According to all 428 respondents as a group, and according to each Department Type, the biggest gain that would be realized by police departments if standards were set for communications equipment would be an improvement in the Interchangeability of equipment; about half or more of all respondents chose each Interchangeability item. About a quarter of the respondents chose each of the Savings in Training items.

tions Equipment, by All Respondents.	
EXPECTED GAIN:	% All Depts.* (n=428)
Interchangeability of Radios of Components with Other Comm. Systems	6 2 5 2 4 7
Savings in Training of Technicians of Patrolmen	28 23
Lower Cost of Equipment 10% Lower Cost 25% Lower Cost 50% Lower Cost	16 13 3

Table 16-1. Expected Gains from Standardization of Communica-

*Percentages add to more than 100% since multiple answers were allowed. The reader should be particularly careful in interpretations of Tables 16-1. and 16-2. because of the multiple responses. It is much more likely, for example, that a responent would have selected only one of the three Lower Cost of Equipment choices than it is that he would have selected only one of the two or three choices in the other two general categories.

Among the seven Department Types, the same general proportions of responses were found. The States and the Fifty Largest Cities tended to have higher percentages of departments expecting to see better Interchangeability of Radios and Components result from standardization. These two Department Types also had higher percentages of departments expecting Savings in Training of Technicians. States and Townships had higher percentages expecting Savings in Training of Patrolmen. Cities (1-9) appeared to feel they had the least to gain overall from the standardization of communications equipment.

In terms of expected cost benefits from standardization, departments most often said they expected to see costs lowered

83

by 25% or less. Only about one-third of the respondents said that they expected any cost benefit from standardization of communications equipment.

Table 16-2. Expected Gains from Standardization of Communications Equipment, by Department Type.*

EXPECTED GAIN:	° 50 Largest	% State	DEPARTM % City 50+	ENT TYPE % City 10-49		% City 1-9	% Township
Interchangeability of Radios of Components with Other Systems	78 70 52	74 72 30	67 59 46	63 53 55	55 42 54	50 28 37	43 48 57

*Percentages add to more than 100% since multiple answers were allowed.

2.2.6.2 Communications Needs

26. What are your most critical communications needs? (MARK X BY EACH ITEM THAT APPLIES) More frequencies and channels New equipment More reliable equipment Personal transceivers for each officer Portamobile voting system Scramblers Standardization of all equipment Other (specify) Five of the eight choices in the questionnaire were cited as "critical communications needs" by one-third or more of the respondents. Nearly half of the departments said New Equipment, More Frequencies/Channels, and Personal Transceivers for Each Officer were critical communications needs.

Table 26-1. Most Critical Communications Needs, by All Respondents.

	% All Departments'
New Equipment	45
More Frequencies/Channels	44
Personal Transceivers	43
Standardize all Equipment	38
Scramblers	34
More Reliable Equipment	21
Portamobile Voting System	8
Other	11

*Percentages add to more than 100% since multiple answers were allowed.

Personal Transceivers for Each Officer seemed to be the most critical communications need for all City Department types with more than 10 officers and Townships. Cities (1-9) and Counties most often said they needed New Equipment. Almost three-quarters of the States said that More Frequencies and Channels was a critical communications need. The fact that 45% of The Cities (10-49) said the same thing is not surprising in view of their answers to Question 17: 71% of the Cities (10-49) which did not currently have scramblers said that this equipment was needed in their departments.

85

Table 26-2. Most Critical Communications Needs Indicated by <u>40% OR MORE</u> of the Departments Within Each Department Type.*

Other

* Percentages add to more than 100% since multiple answers were allowed.

2.2.6.3 Problems with and Failures of Communications Equipment

27. What are your most serious problems with communications equipment?

Question 27 was "open-ended" allowing respondents to write in their problems with communications equipment and categories for these narrative responses were developed after the questionnaires were returned. Many of the responses to this question were related to the "critical communications needs" discussed in the previous question. Some of the most commonly indicated problems were: Overcrowding and Congestion of channels, problems with Old Equipment, and problems having to do with Repairs, Maintenance and Lack of Reliability of equipment. Since there were many

86

different answers to this question, <u>none</u> of the categories of problems in Table 27. was mentioned by as many as one-quarter of the respondents. Perhaps the most important aspect of this question is the fact that more than 75% of the departments listed some communications problem that they considered to be serious. (100% - 11% No Answer - 13% "No Problems".)

Table 27. Most Serious Problems with Communications Equipment, by All Respondents.

PROBLEM:	<u>% All Depts.*</u> (n=428)
Overcrowding/congestion	19
Old equipment/need new or more	16
Malfunctions, breakdowns, failures	14
Repair, maintenance, service	11
Inadequacy of equipment (range, power)	10
Electrical/Mechanical interference (skip)	8
Reliability/lack of Quality Control	6
Character of area/terrain causing dead spots	5
Unauthorized monitoring	4
Standardization, interchangeability needs	3
Expense/high cost	2
Other	6
No problems	13
No Answer	11
*Percentages add to more than 100% since multiple a	nswers were

allowed.

28. What are your most common equipment failures, whether entire units or specific components?

As in Question 27., response categories were developed from the narrative answers supplied to this question. Eighty-two percent of the respondents listed at least one common equipment failure (16% No Answer and 12% "No Problems"). Three failure categories stood out: Tubes, Transistors, Capacitors (25%); Specific Components, Normal Wear and Tear (18%); and Mike Cables, Connections, Wiring (15%).

Table 28. Most Common Equipment Failures, by All Respondents. % All Depts.* FAILURE CATEGORY: (n=428)25 Tubes, transistors, capacitors Specific components, normal wear and tear 18 Mike cables, connections wiring 15 9 Antennas, relays, cables .9 Switches/Fuses (circuit breakers) 9 Crystals, trimmers frequency problems 7 Transmitter problems/failures Portable/Mobile radios and accessories 6 4 Power supplies, vibrators, inverters, reeds 7 Other No failures 12 16 No answer

*Percentages add to more than 100% since multiple answers were allowed.

2.2.7 Comments

29. Do you have any other general comments or observations about communications equipment that might be helpful to the people who will be studying and testing this equipment for police use?

. . .

No attempt was made to actually code the comments received to this question. They have been retained verbatim, and can be made available for research purposes (without identification of specific respondents). When a "comments" section is provided at the end of a lengthy questionnaire such as this one, the response rate is usually expected to be low. However, in the case of the Communications Questionnaire, over one-fourth of the 428 respondents provided an additional comment or statement.

Table 29. Additional Comments/Observations About Communications Equipment, by Department Type.

DEPARTMENT TYPE:	% All Respondents
State	45
City (10-49)	38
50 Largest	36
Township	33
City (50+)	26
County	18
City (1-9)	17
All Respondents	29

The comments appeared to be well thought out and expressed the high degree of concern the respondents felt about their communications equipment. Several areas of particular concern were identified: High expense of communications equipment, maintenance for the equipment, the need for scramblers, overcrowding of frequency bands, and need for improvement in portable radios and power sources. Examples of the expression of these concerns follow:

The High Expense of Communications Equipment:

"Communications equipment and systems are expensive. It appears each manufacturer adds new features one at a time so obsolescence comes at shorter intervals. An advanced technology by one manufactorer may not be available by another causing a problem in developing an open specification. Or the technology may be similar yet different enough to create not only bidding difficulties but maintenance differences requiring different techniques and test equipment."

"Cost of equipment - many P.D.s operate on small limited budgets; therefore, cannot afford to purchase proper amount of equipment for proper security."

"Require LEAA expenditures be made only for equipment that meets the same performance standards of best make tested. Money spent for inferior equipment is money wasted."

"Some replacement components are priced too high. More standard components are needed."

"Would like to see standardized equipment at lower cost so departments with limited budgets can get more equipment."

"Small departments are unable to purchase much needed equipment because of budgets & city leaders who think in the past."

"Keep the price down."

The Need for Scramblers:

"The biggest problem that my department has is the monitoring of the frequency that we are assigned. A call can be transmitted and the person we are looking for can be gone upon the arrival of officers, since he or she has heard our transmissions. This will occur daily. Or someone will call by public service wanting to know why their name or their neighbor's name was mentioned or why we are looking for them. To insure or secure efficient police work we must cut down on outside monitors." "In our department what is needed is a scrambler system which can be used with the base station, mobile radios, and handheld radios, which is priced within reach of the average department."

"A well built and high quality scramble device at a moderate price range is one of the greatest needs of law enforcement today. Studying and testing scramble devices should have a high priority."

"For purposes of security, we would like to see an absolutely foolproof scrambler system."

"We also need good scramblers at a reasonable cost."

The Problem of Maintenance:

"There should be a survey on maintenance, new methods of servicing electronic equipment, standards for electronic technicians and some means of providing good in-service training regarding all electronic equipment the men service."

"Manufacturers, due to feedback from users, are informed of common equipment failure but they do not pass information on to local repair shops."

"Any study of Police communications should also consider estimated life of hardware, general maintenance, installation and other long term requirements for reliability and performance. There should be no "down time" on Police Communication facilities, which are often used 15 years or more. Especially true of Base facilities."

"Current Communications Maintenance programs are inadequate. Equipment receives no attention until it fails. Often no "backup" hardware is available, pressuring technicians into "hurry-up" jobs and inadequate service."

The Problem of Overcrowded Frequency Bands:

"The use of power allocations and frequency allocations should be checked more closely. Crowded conditions and non-essential chatter is causing a great deal of problems in emergency situations."

"We are on a frequency with at least 15 other towns. We are constantly drowned out by others who must be overmodulated."

"Frequency coordination has always been a problem. At the present time, we have cities operating on our channel which are less than 40 miles away."

"We would like to see, in this area, a frequency with a channel of our own with no outsiders."

The Need for Improvements in Portable Radios and Power Sources:

"Our portables are useless. They almost never work right."

"This department purchased two hand portable units. We've had them about 18 months and they have been returned to factories several times for repairs."

"Portable radios with capacity for long distance receiving and transmitting."

"Consideration should be given to designing a radio for a police officer that would be durable and waterproof under the most extreme condition a police officer may be called upon to perform service."

"Handheld radio lighter in weight but retain and improve the present power output levels."

"One of the biggest problems is the weight and size of the portable radios. The output power is low, but the weight of the unit makes it cumbersome." "I believe there is a great need for reasonably priced integrated-circuit designed radios to be carried or worn by all officers for constant communication availability. Might eventually eliminate need for radios in cars."

"Battery size and weight reduction should receive high priority."

"We feel that batteries used in portable and handcarried equipment are too large and too heavy -- that the power source development have not been kept with circuitry sophistication. We would like to see a 5watt hand-carried portable transceiver with very small dimensions."

"One suggestion is that manufacturers of power source batteries be given the necessary incentive to "catch up" with the communications industry by making compatible batteries that are smaller in size, weigh less, have a longer life and increase the power output." .

.

.

APPENDIX A

NBS-885 May 1972 OMB 41-F72030

Approval Expires June 30, 1973

U.S. Department of Commerce National Bureau of Standards

DETAILED QUESTIONNAIRE: COMMUNICATIONS

POLICE EQUIPMENT SURVEY

Sponsored By:

National Institute of Law Enforcement and Criminal Justice Law Enforcement Assistance Administration U. S. Department of Justice

Directed and Conducted By:

Behavioral Sciences Group National Bureau of Standards Washington, D.C. 20234 Phone: 301-921-3558 INTRODUCTION: Maintaining good communications under very poor conditions is important to good police action. Many departments have lost communication when they needed it most. System parts often cannot be interchanged, batteries are unreliable and some equipment is too expensive for many departments to buy. In order to make it easier for law enforcement departments to be able to buy communications equipment that meets their needs, the Law Enforcement Standards Laboratory will be writing performance standards for this equipment. These standards will be available to any department that wishes to use them.

<u>PURPOSE OF THIS QUESTIONNAIRE</u>: The purpose of this "detailed" questionnaire is to get answers from YOU, the user, about the communications equipment you are now using, and the problems you find in using it. Your answers will be used to determine what kinds of testing need to be done, and what sorts of problems must be solved. We must find out what YOUR needs are.

GENERAL INSTRUCTIONS:

- 1. Fill in the questionnaire completely. Even if you do not have all the information you need "at your fingertips", please make your best effort to supply every answer AS ACCURATELY AS POSSIBLE.
- 2. Answer all questions FOR YOUR OWN DEPARTMENT. Do not attempt to supply information that might exist in some other department.
- 3. The results of this questionnaire will be compiled by computer. It is very important that you follow directions and answer every question in the boxes and spaces provided.
- 4. No individual department will be identified in the report of this survey; the results will be published only in table form.
- 5. Additional instructions for filling in your answers appear after some questions. Follow the directions given.
- 6. Please PRINT all answers and comments CLEARLY.
- 7. When this questionnaire has been completely filled in; place it, with the other questionnaires sent to your department, in the stamped, addressed envelope supplied. Return all of them to: Technology Building, A-110 National Bureau of Standards Washington, D.C. 20234
- If you have any questions, write to the above address or call collect: E. Bunten, or P. Klaus Phone: 301-921-3558
- 9. Remember that it is only by getting YOUR DEPARTMENT'S answers to these questions that it will be possible to begin really working on problems that police have with communications equipment and supplies.

PART I: CAR RADIOS

1. Give the following information about your car radios: 1.A. List ALL transmitting frequencies (in KHz, MHz, etc.) (Attach an additional sheet if necessary.) (10-17)*** 1.B. List ALL receiving frequencies; if different from Question 1.A. (18 - 25)1.C. Output power (in watts) (26 - 28)1.D. Number of Channels Authorized (29-30) 1.E. Number of Channels in Use_____ (31-32) 2.A. How many car radios are there in your department? (33 - 36)Number 2.B. Of those car radios, about how many were made by each of the following manufacturers? NUMBER MANUFACTURER (37 - 40)Motorola (41 - 44)RCA (45 - 48)GE Other (Specify) (49-52)3. How recently were most of the car radios bought by your department? (Mark X by your best estimate) (53 - 56)Within the last calendar year l - 3 years ago 4 - 5 years ago More than 5 years ago

***Numbers in parentheses are for computer use only.

- 4. About how much did <u>each</u> of the car radios cost that are <u>most</u> <u>frequently</u> used in your department (including base plate, control head, microphone, and speaker)? For example, if most of the radios now in use are Motorolas, please give us the cost of one set. (MARK X BY YOUR BEST ESTIMATE BELOW)
- (57-62) Less than \$700 \$701-\$800 \$801-\$900 \$901-\$1000 \$1001-\$1500

Over \$1500

5.A. What is the total area within your jurisdiction which must be covered by a communication system? (IN SQUARE MILES)

- 5.B. If possible, please tell us how many different law enforcement channels serve this area. This figure would include not only those channels used by your department, but also those used by other law enforcement agencies operating in the same geographical area (e.g., state and local police).
- (69-70) Channels

5.C. Do you have one common frequency for routine and emergency traffic?

Yes

No

(72) Yes

No (IF "NO") Do you think you need a common frequency?

(73)

A-4

- 6. Which of the following best describes the general character of your jurisdiction? (MARK X BY MORE THAN ONE, IF NECESSARY)
- (74-80) Skyscrapers, many tall buildings
 - Some tall buildings
 - Almost no tall buildings
 - Primarily mountainous or very hilly
 - Valley area surrounded by mountains
 - Generally flat with some hills
 - Flat area, no hills
 - 7.A. Do you use fixed repeaters in your area (to cover dead spots in communication which otherwise would exist)?

(10) <u>Yes</u>

No

7.B. (IF "YES" TO QUESTION 7.A.) How many fixed repeaters does your department have?

(11-12) Fixed Repeaters

- 8. If you use, or will be using fixed repeaters, which of the following types do you prefer?
- (13-16) Will not use fixed repeaters

FlF1 repeater (same frequency in and out)

F1F2 repeater (two different frequencies)

No preference

PART II: PORTABLE (HAND-HELD) RADIOS

9.	Do you	n now úse portable (hand-held) radios in your department?
(17)	Y	/es
	N	O (IF "NO", SKIP TO PART III, QUESTION 15)
	(<u>IF</u> "Y	ES" TO QUESTION 9, ANSWER QUESTIONS 10-14)
10. (18-25)	Give t 10.A.	he following information about your portable radios: List ALL <u>transmitting</u> frequencies (in KHz, MHz, etc.) (Attach an additional sheet if necessary.)
	10.B.	List ALL receiving frequencies; if different from Question 1.A.
(26-33)		
(34-35)	10.C.	Output power (in watts)
(36-37)	10.D.	Number of Channels Authorized
(38-39)	10.E.	Number of Channels in Use
	11.A.	How many portable radios do you now have in your department?
(40-44)		Number
	11.B.	Of those portable radios, about how many were made by the following manufacturers?
		NUMBER MANUFACTURER
(45-49) (50-54) (55-59) (60-64) (65-69)		Motorola RCA General Electric Halicrafters Other (Specify) Other (Specify)

- 12. What model of portable radio do you have more of in your department than any other?
- (70-71) MANUFACTURER

(72-80) MODEL OR MODEL NUMBER

- 12.A. When did you buy most of these "most used" portable radios?
- (10-13) Within the last calendar year

l-3 years ago

4-5 years ago

More than 5 years ago

- 12.B. About how much did you pay for one of these "most used" portable radios (including antenna, carrying case, and spare batteries)?
- (14-19) Less than \$500
 - \$501-\$700
 - \$701-\$900
 - \$901-\$1100
 - \$1101-\$1500
 - Over \$1500
 - 12.C. About how much does one of these "most used" portable radios weigh?
- (20-24) Less than 20 oz.
 - 20 oz. to 26 oz.
 - 27 oz. to 32 oz.
 - 33 oz. to 38 oz.
 - More than 38 oz.
 - 12.D. How do you feel about the weight of the "most used" portable radios?
- (25-27) The weight is about right
 - The unit is somewhat heavy
 - The unit is entirely too heavy

13. A portable radio can be used with a repeater by a patrolman when he is out of his car. The portable radio transmits to the car radio which then relays the signals to the base radio. Do you need repeaters like this in your communications system?

(28)	Ye	es
	Nc	0
		Why?

14. Some law enforcement agencies use portamobile radios with several receivers and a voting system. Do you favor such a system?

29)	 Unfamil:	iar v	with '	'votir	ng syst	em"		
	 Yes							
	 No							
		(IF '	'YES"	<u>or</u> "N	NO", WH	Y?	 	
	_							
	-		and the second	the second se			 	

(

PART III: NEED FOR STANDARDS

- 15. Many policemen have indicated the need for standardization of communications equipment. Which of the following equipment and components would you like to see standardized? (MARK X BY EACH ITEM THAT APPLIES)
- (30-38) Portable radios

Mobile radios

Batteries for portable radios

Control heads

Microphones

_____ Switches on control heads

Mounting brackets

Cable between microphone and control head

Other (Specify)

- Other (Specify)
- 16. What will your department gain by the standardization discussed above? (X EACH ITEM THAT APPLIES)
- (39-47) 10% lower cost of equipment
 - _____ 25% lower cost of equipment
 - 50% lower cost of equipment
 - Interchangeability of radios
 - Interchangeability of components
 - _____ Savings in training of technicians
 - Savings in training of patrolmen
 - _____ Interchangeability with other communications systems

Other (Specify)

PART IV: SCRAMBLERS

- 17. In some areas, police use "voice privacy" systems which scramble messages so that they cannot be received by people other than police. Do you HAVE a scrambler system of this type?
- (48) Yes

No (IF "NO") Do you NEED a scrambler system of this type?

(49)

No (IF "NO" SKIP TO QUESTION 21)

.

18. For which of the following purposes do you need, or would you use, a scrambler system? (MARK X BY EACH ITEM THAT APPLIES)

____Yes

- (50-55) General communications
 - During robberies
 - Long-term stake out

Demonstrations or protests

Undercover investigations

_____Other (Specify)

Other (Specify)

Other (Specify)

- 19. How do you (would you) use your scramblers? (MARK X BY ONE OF THE FOLLOWING)
- (56-59) With car radios
 - With portable radios
 - With both car radios and portable radios
 - Only in special vehicles (Specify)
 - 20. How much do you think your department would pay for a good, reliable scrambler system? (MARK X BY YOUR BEST ESTIMATE BELOW.)

(60-64)	Less than \$250 per unit	\$751-\$1000 per unit
	\$251-\$500 per unit	More than \$1000 per
	\$501-\$750 per unit	unit

PART V: HELMET COMMUNICATIONS

21. Helmets with built-in communications have been developed and are now on the market. Is there a need for such helmets in your department?

(65)	Yes
	No
	Why? or Why not?
PA	RT VI: POWER SUPPLIES
22	. Should standards for power supplies such as charging equipment, and batteries for portable radios be given? (CHOOSE <u>ONE</u> OF THE FOLLOWING
(66-69)	High priority
	Medium priority
	Low priority
	Standards are not needed for these items
23	• What types of batteries do you <u>now</u> use for your portable radios? (MARK X BY <u>EACH</u> ITEM THAT APPLIES)
(70-75)	Alkaline-Manganese
	Carbon-Zinc
	Mercury
	NiCad (Nickel-cadmium)
	Silver Oxide
	Other (Specify)

- 24. What type of batteries do you prefer to use for your portable radios? (MARK X BY ONE OF THE FOLLOWING)
- (10-15) Alkaline-Manganese
 - _____ Carbon-Zinc
 - _____ Mercury
 - NiCad (Nickel-cadmium)
 - Silver Oxide
 - _____Other (Specify)
 - 25. Do you use batteries for your portable radios which must be recharged?
- (16) Yes
 - No (IF "NO" SKIP TO QUESTION 26, PART VII)
 - 25.A. (IF "YES" TO Q. 25) How long can you use the battery before it must be recharged?
- (17-19) Hours
 - 25.B. (IF "YES" TO Q. 25) How long does it usually take to recharge the battery to a point where it can be used again?
- (20-21) Hours
 - 25.C. (IF "YES" TO Q. 25) How long does it usually take to fully recharge the battery?
- (22-23) Hours
 - 25.D. (IF "YES" TO Q. 25) How long can you usually use these batteries before they must be replaced?
- (24-25) Months

PART VII: GENERAL COMMENTS

- 26. What are your most critical communications needs? (MARK X BY EACH ITEM THAT APPLIES)
- (26-31) More frequencies and channels
 - _____ New equipment
 - More reliable equipment
 - Personal transceivers for each officer
 - Portamobile voting system
 - Scramblers
 - Standardization of all equipment
 - Other (Specify)
 - Other (Specify)

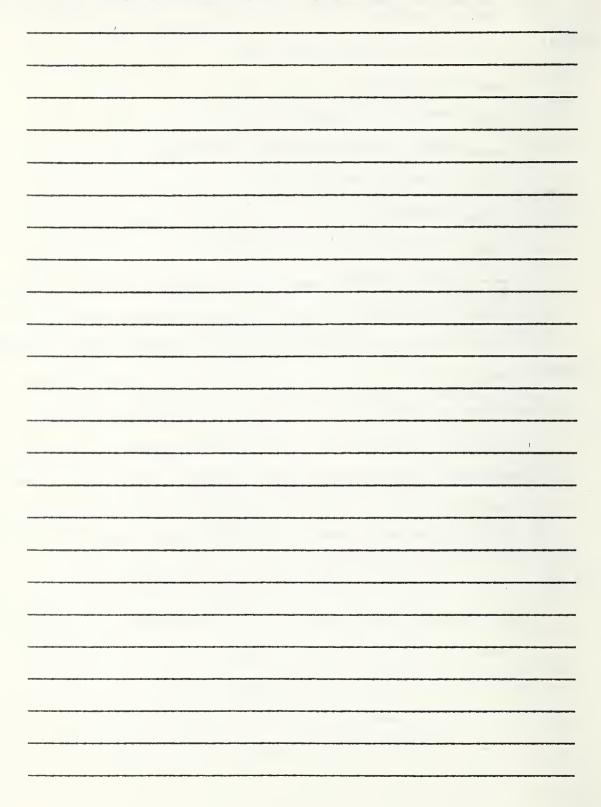

27. What are your most serious problems with communications equipment?

(32 - 33)

28. What are your most common equipment failures, whether entire units or specific components?

(34-35)

29. Do you have any other general comments or observations about communications equipment that might be helpful to the people who will be studying and testing this equipment for police use?

APPENDIX B

DATA TABLES

B.1 Advice to the Reader

- (a) The data presented in the following tables resulted from the responses of a stratified random sample (see Section 1.2) of police departments in response to a specific set of questions (see Appendix A). These data do not, in any way, reflect objective testing of any of the equipment by the National Bureau of Standards. The reader is cautioned to become familiar with the questionnaire and to evaluate the data in terms of the exact questions asked.
- (b) Tables have been numbered after the question number (e.g., the tables for Question 6A. would be numbered 6A-1, 6A-2, etc.). The data are usually presented by number of respondents and nearest whole percentage. Because of the statistical limitations imposed by the sample sizes used in this study, the reader is cautioned to be wary of assigning importance to percentage differences of less than 5% when percentages are based on all respondents, and to percentage differences of less than 10% when percentages are based on one of the subsample groups, (e.g., a particular Department Type or Region). No statistical tests of significance are reported.
- (c) These tables are based on the responding departments from the specific sample selected for this questionnaire. This sample was not proportional to the total population of police departments, and although it is possible to do so, the data in these tables have not been weighted to allow direct extrapolation to the total population.
- (d) In order to extrapolate to the total population from the respondent data presented in this report, use the fullowing procedure: For each Department Type, multiply the percentage of respondents of a particular Department Type giving the answer of interest (See B.2 Data Type, Appendix B) by the total number of departments of that Department Type in the population (See Table 1.2-2, Section 1.2); add those seven subtotals; and divide the total by the total number of police departments in the population (Table 1.2-2). The quotient of this division will be an estimate of the percentage of all U.S. police departments that would choose the answer of interest.

The report outlines	the methodology of and sum	marizes a portic	on of the	data	
from the LEAA Police Equipment Survey of 1972. One of a series of seven reports resulting from this nationwide mail survey of a stratified random					
sample of police departments, the present report summarizes the answers					
of 428 police departments concerning their communications equipment and					
supplies: Use of Mobile Radios and Portable Radios; Power Supplies for					
portable radios; Scramblers; Portable/mobile Radios; Helmets with Built-in Communications; Needs for standards and problems associated with communi-					
cations equipment and supplies. The data are presented by all responding					
departments and by seven department types.
