SECTION I

INTRODUCTION

By

G. DONALD CAUSEY, Ph.D.
Auditory Research Laboratory
Veterans Administration Hospital
Washington, D. C..

The Veterans Administration's program for measuring and evaluating the performance characteristics of hearing aids was developed as a means of selecting a manageable group of instruments from among the wide variety of models available on the consumer market.

Each year, all interested manufacturers (of record) or their agents are sent a copy of the bid format and invited to participate in our program. For the 1975 Contract Year, 20 manufacturers participated by offering samples. To ensure that the total number of samples would be compatible with laboratory facilities, each manufacturer was limited to the submission of a total of seven models. In addition, a limited number of special models were authorized for submission or were solicited separately. It is a requirement that the models submitted be selected from among those that are currently available as standard items in the manufacturer's production line. VA representatives made a random selection of three sample aids of each model entered in the program from the participating manufacturers' stock. These aids are tested for VA by the Sound Section of the Institute of Basic Standards at the National Bureau of Standards, and the Biocommunications Laboratory, University of Maryland, which subject the aids to a number of specific predetermined acoustic and electronic measurements. Except for those evaluated for meeting a special clinical need, aids are placed in one or more of four power categories: mild, moderate, strong, or extra strong. Aids with special characteristics were evaluated with others having those same characteristics. A total of 123 models were received for this year's program. The voluminous raw test data is turned over to VA's Auditory Research Laboratory for evaluation and conversion into a performance score or "Index of Characteristics". The Index of Characteristics is derived by applying to the test results weighting factors which have been reviewed and approved by a VA advisory group of consulting audiologists and physicists. Selection of hearing aids for contract is made from among those qualified hearing aid models which:

- (a) have Index of Characteristics scores which are markedly better than the other hearing aids in their category, or
- (b) may be deemed clinically necessary to provide adequate hearing rehabilitation for deafened veterans without reference to their measurement results or cost per point of quality, or
- (c) have the lowest cost per point of quality as obtained by dividing the determined cost to the VA by the Index of Characteristics score.

In order to present data which are meaningful and to reduce confusion, we have indicated in Section II those hearing aids which scored in the top 25% of their respective categories or which received a VA contract

because they possess particular characteristics needed for special clinical problems. These aids are labeled with an asterisk. This is not to say that the remaining instruments are not of value. It simply means that they did not score as well on our tests and that we must limit the number of aids on contract because of administrative problems in stocking and handling large quantities of instruments.

The selected hearing aids are purchased in quantity lots directly from the manufacturer and stocked in the VA Supply Depot, Hines, Illinois. The instruments are then distributed to the various VA and contract audiology clinics in accordance with predetermined stock level requirements.

Each hard-of-hearing veteran reporting to these clinics has an otological examination, audiological examination, and receives a trial with 3-5 of these contract models which are known to possess characteristics which might compensate for his hearing deficiency. Once it is determined that a particular hearing aid is most suitable for a veteran's hearing defect, he is issued that specific instrument.

When a veteran is issued a hearing aid, he is normally entitled to be furnished hearing aid repair services and sufficient batteries to operate the instrument. Eligible veterans are provided spare hearing aids to utilize when their regular hearing aid is sent in for repairs, so that they will not be deprived of aided hearing. Ordinarily, the veteran who receives an initial hearing aid may return after six months for a second instrument. The first one issued then becomes his spare aid. Studies have shown that the majority of veterans retain their hearing aids an average of eight years before requesting a replacement. Veterans are furnished replacement hearing aids at such times as they are required.

Individuals with hearing problems should take into account the following factors:

1. There is no "best" hearing aid for all individuals. Aids that perform well for one person may not perform well for someone else. Our general advice to a person with a hearing disability is to seek professional guidance in obtaining the aid best suited to his particular problem.
2. VA does not test all hearing aids - only those submitted by manufacturers who want to participate in the VA program. Of the more than 500 hearing aid models available in the United States, VA tests each year approximately 20%. The information contained in this document should not be used as an absolute buying guide and persons not

finding the aid they now wear listed among those VA buys should not automatically conclude the device they have is inferior.

3. Information contained in this document applies for Contract Year 1975 only. New and improved hearing aids are developed each year and as a result the information provided by VA varies from year to year.

4. Primarily, VA provides hearing aids only to veterans whose hearing disability is the result of military service. For further information these veterans should contact their nearest VA office or hospital. Other veterans and all non-veterans seeking added information are advised to consult specialists in their local communities.

SUBJ: Hearing Aid Testing Program

1. The program of measurement of the acoustic performance of hearing aids carried out for Fiscal Year 1975 by the National Bureau of Standards for the Veterans Administration has been completed. One hundred twenty models were submitted by hearing aid manufacturers for consideration under this program.

2. Tabulation, treatment, and statistical analyses of the data were performed by Dr. Earleen Elkins of the Auditory Research Laboratory. Dr. G. Donald Causey, Chief, Central Audiology and Speech Pathology Program, served as project monitor.

3. The models evaluated are listed below by manufacturer and accompanied by the type of aid, its average gain and saturation sound pressure level (in dB), and the rank it obtained in the category of aids against which it was compared. For hearing aids with standard acoustic characteristics, categorization was made by overall power: Mild, Moderate (Moder.), Strong, and Extra (Ex.) Strong. The remaining aids were categorized by unique characteristics identified as Compression (Comp.), Directional Microphone (Dir.), CROS or BICROS, and maximum amplification above 1000 Hz (Hi-Pass). Models evaluated for special (Spec.) acoustic characteristics are also noted. The small number of in-the-ear, CROS, and BICROS aids precluded a ranking of these categories.

ALL THREE INSTRUMENTS OF THIS MODEL WERE CONSIDERED DEFECTIVE BECAUSE OF A DISCONTINUITY IN THE VOLUME CONTROL AT THE TOP END. ROTATING THE CONTROL DOWN SLIGHTLY CAUSES A DECREASE IN GAIN OF 10 DB FOR VI-235 AND VI-236 AND 7 DB FOR VI-237. INTERMEDIATE GAINS COULD NOT BE ACHIEVED.

REPRESENTATIONS, CERTIFICATIONS, AND ACKNOWLEDGMENTS

The Offeror represents and certifies as part of his offer that: (Check or complete all applicable boxes or blocks.)

1. SMALL BUSINESS (See par. 14 on SF 33-A.)

He is, is not, a small business concern. If offeror is a small business concern and is not the manufacturer of the supplies offered, he also represents that all supplies to be furnished hereunder will, will not, be manufactured or produced by a small business concern in the United States, its possessions, or Puerto Rico.

2. REGULAR DEALER—MANUFACTURER (Applicable only to supply contracts exceeding \$10,000.)

He is a regular dealer in, manufacturer of, the supplies offered.

3. CONTINGENT FEE (See par. 15 on SF 33-A.)

(a) He has, has not, employed or retained any company or person (other than a full-time, bona fide employee working solely for the offeror) to solicit or secure this contract, and (b) he has, has not, paid or agreed to pay any company or person (other than a full-time bona fide employee working solely for the offeror) any fee, commission, percentage, or brokerage fee contingent upon or resulting from the award of this contract; and he agrees to furnish information regarding to (a) and (b) above, as requested by the Contracting Officer. (For interpretation of the representation, including the term "bona fide employee," see Code of Federal Regulations, Title 41, Subpart 1-1.5.)

4. TYPE OF BUSINESS ORGANIZATION

He operates as an individual, a partnership, a nonprofit organization, a corporation, incorporated under the laws of the State of _____

5. AFFILIATION AND IDENTIFYING DATA (Applicable only to advertised solicitations.)

Each offeror shall complete (a) and (b) if applicable, and (c) below:

(a) He is, is not, owned or controlled by a parent company. (See par. 16 on SF 33-A.)

(b) If the offeror is owned or controlled by a parent company, he shall enter in the blocks below the name and main office address of the parent company:

Name of Parent company and main office address _____
(include ZIP Code) _____

(c) Employer's identification number (See par. 17 on SF 33-A.) _____
(Offeror's E.I. No.) _____ (Parent Company's E.I. No.) _____

6. EQUAL OPPORTUNITY

He has, has not, participated in a previous contract or subcontract subject either to the Equal Opportunity clause herein or the clause originally contained in section 301 of Executive Order No. 10925, or the clause contained in section 201 of Executive Order No. 11114; that he has, has not, filed required compliance reports; and that representations indicating submission of required compliance reports, signed by proposed subcontractors, will be obtained prior to subcontract awards. (The above representation need not be submitted in connection with contracts or subcontracts which are exempt from the clause.)

7. BUY AMERICAN CERTIFICATE

The offeror hereby certifies that each end product, except the end products listed below, is a domestic source end product (as defined in the clause entitled "Buy American Act"); and that components of unknown origin have been considered to have been mined, produced, or manufactured outside the United States.

EXCLUDED END PRODUCTS	COUNTRY OF ORIGIN

8. CERTIFICATION OF INDEPENDENT PRICE DETERMINATION (See par. 18 on SF 33-A.)

(a) By submission of this offer, the offeror certifies, and in the case of a joint offer, each party thereto certifies as to its own organization, that in connection with this procurement:

(1) The prices in this offer have been arrived at independently, without consultation, communication, or agreement, for the purpose of restricting competition, as to any matter relating to such prices with any other offeror or with any competitor;

(2) Unless otherwise required by law, the prices which have been quoted in this offer have not been knowingly disclosed by the offeror and will not be knowingly disclosed by the offeror prior to opening in the case of an advertised procurement or prior to award in the case of a negotiated procurement directly or indirectly to any other offeror or to any competitor; and

(3) No attempt has been made or will be made by the offeror to induce any other person or firm to submit or not to submit an offer for the purpose of restricting competition.

(b) Each person signing this offer certifies that:

(1) He is the person in the offeror's organization responsible within that organization for the decision as to the prices being offered herein and that he has not participated, and will not participate, in any action contrary to (a) (1) through (a) (3) above; or

(2) (i) He is not the person in the offeror's organization responsible within that organization for the decision as to the prices being offered herein and that he has been authorized in writing to act as agent for the persons responsible for such decision in certifying that such persons have not participated, and will not participate, in any action contrary to (a) (1) through (a) (3) above, and as their agent does hereby so certify; and (ii) he has not participated, and will not participate, in any action contrary to (a) (1) through (a) (3) above.

9. CERTIFICATION OF NONSEGREGATED FACILITIES

(Applicable to (1) contracts, (2) subcontracts, and (3) agreements with applicants who are themselves performing federally assisted construction contracts exceeding \$10,000 which are not exempt from the provisions of the Equal Opportunity clause.)

By the submission of this bid, the bidder, offeror, applicant, or subcontractor certifies that he does not maintain or provide for his employees any segregated facilities at any of his establishments, and that he does not permit his employees to perform their services at any location, under his control, where segregated facilities are maintained. He certifies further that he will not maintain or provide for his employees any segregated facilities at any of his establishments, and that he will not permit his employees to perform their services at any location, under his control, where segregated facilities are maintained. The bidder, offeror, applicant, or subcontractor agrees that a breach of this certification is a violation of the Equal Opportunity clause in this contract. As used in this certification the term "segregated facilities" means any waiting rooms, work areas, rest rooms and wash rooms, restaurants and other eating areas, time clocks, locker rooms and other storage or dressing areas, parking lots, drinking fountains, recreation or entertainment areas, transportation, and housing facilities provided for employees which are segregated by explicit directive or are in fact segregated on the basis of race, color, religion or national origin, because of habit, custom, or otherwise. He further agrees that (except where he has obtained identical certifications from proposed subcontractors for specific time periods) he will obtain identical certifications from proposed subcontractors prior to the award of subcontracts exceeding \$10,000 which are not exempt from the provisions of the Equal Opportunity clause; that he will retain such certifications in his files; and that he will forward the following notice to such proposed subcontractors (except where the proposed subcontractors have submitted identical certifications for specific time periods):

Notice to prospective subcontractors of requirement for certifications of nonsegregated facilities.

A Certification of Nonsegregated Facilities must be submitted prior to the award of a subcontract exceeding \$10,000 which is not exempt from the provisions of the Equal Opportunity clause. The certification may be submitted either for each subcontract or for all subcontracts during a period (i.e., quarterly, semiannually, or annually). NOTE: The penalty for making false statements in offers is prescribed in 18 U.S.C. 1001.

ACKNOWLEDGMENT OF AMENDMENTS	AMENDMENT NO.	DATE	AMENDMENT NO.	DATE
The offeror acknowledges receipt of amendments to the Solicitation for Offers and related documents numbered and dated as follows:				

NOTE: Offers must set forth full, accurate, and complete information as required by this Solicitation (including attachments). The penalty for making false statements in offers is prescribed in 18 U.S.C. 1001.

INCORPORATION OF FORMS AND VA MARKETING CENTER SUPPLEMENTAL PROVISIONS: Each of the following forms and VA Marketing Center supplemental provisions are hereby incorporated by reference and made a part of this solicitation. Copies are available from the issuing office upon request.

Standard Form 32 - General Provision (Supply Contract), November, 1969

Standard Form 33A - Solicitation Instructions and Conditions (Supply Contract) March, 1969 (delete Item 1 of Block 9 SF 33)

VA Form 10-1130 (July 1970) and VA Form 10-1131 (June 1970) - VA Solicitation Instructions and Conditions and General Provisions Supplementing SF 33-A and SF 32

VA Marketing Center Supplemental Provisions Number 3, dated October 19, 1973.

LISTING OF EMPLOYMENT OPENINGS: Bidders and offerors should note that this solicitation includes a provision requiring the listing of employment openings with local office of the State employment service system where a contract award is for \$2,500 or more.

PRICING OF ADJUSTMENTS: When costs are a factor in any determination of a contract price adjustment pursuant to the "Change" clause or any other provision of this contract, such costs shall be in accordance with the contract cost principles and procedures in Part 1-15 of the Federal Procurement Regulations (41 CFR 1-15) or section XV of the Armed Service Procurement Regulation in effect on the date of this contract".

TERMINATION FOR CONVENIENCE OF THE GOVERNMENT: Paragraph 105(f) of VA Form 10-1131 (June 1970) is hereby deleted in its entirety and the following substituted therefore:

"(f) Costs claimed, agreed to, or determined pursuant to paragraphs (c), (d), and (e) of this clause shall be in accordance with the applicable contract cost principles and procedures in Part 1-15 of the Federal Procurement Regulations (41 CFR 1-15) in effect on the date of this contract".

PRICE STABILIZATION CERTIFICATION: The bidder or offeror (Contractor) certifies that he is in compliance with the price stabilization requirements of Executive Order 11723, dated June 13, 1973, and amendments thereof, and the regulations of the Cost of Living Council as set forth in title 6, Code of Federal Regulations, part 140, or any additions or revisions to title 6.

DISPUTED MATTER - EQUAL OPPORTUNITY PROGRAM: Any dispute arising under this contract relating to matters pertaining to the equal opportunity program will be handled pursuant to the provisions of the Equal Opportunity clause of this contract (sub-contract or agreement), rather than the Disputes clause contained therein.

PAYMENT OF INTEREST ON CONTRACTOR'S CLAIMS:

(a) If an appeal is filed by the contractor from a final decision of the Contracting Officer under the Disputes clause of this contract, denying a claim arising under the contract, simple interest on the amount of the claim finally determined owed by the Government shall be payable to the Contractor. Such interest shall be at the rate determined by the Secretary of the Treasury pursuant to Public Law 92-41, 85 Stat. 97, from the date the Contractor furnishes to the Contracting Officer his written appeal under the Disputes clause of this contract, to the date of (1) a final

judgment by a court of competent jurisdiction, or (2) mailing to the contractor of a supplemental agreement for execution either confirming completed negotiations between the parties or carrying out a decision of a board of contract appeals.

(b) Notwithstanding (a), above, (1) interest shall be applied only from the date payment was due, if such date is later than the filing of appeal, and (2) interest shall not be paid for any period of time that the Contracting Officer determines the Contractor has unduly delayed in pursuing his remedies before a board of contract appeals or a court of competent jurisdiction.

EQUAL OPPORTUNITY PROGRAM: In order to determine compliance with EEO requirements, each Bidder (or Offeror) will furnish the following information:

1. Number of Employees of Bidder (or Offeror):
 - a. Less than 50 employees.
 - b. 50 or more employees.
2. Name and location of manufacturing plant(s) where contract work will be performed (Indicate Name of Facility and Complete Address:)

3. Name and Location of Subcontractor(s) - (Indicate Name and Complete Address):

AFFIRMATIVE ACTION COMPLIANCE PROGRAM - EQUAL OPPORTUNITY PROGRAM:

The Bidder (or Offeror) represents that:

- a. He has developed and has on file has not developed and does not have on file at each establishment affirmative action programs as required by the rules and regulations of the Secretary of Labor (41 CFR 60-1 and 60-2, - or
- b. He has not previously had contracts subject to the written affirmative action program requirement of the rules and regulations of the Secretary of Labor.

UTILIZATION OF LABOR SURPLUS AREA CONCERNS: The Bidder (or Offeror) certifies, by completing whichever of the following is appropriate, THAT HE IS A:

a. CERTIFIED-ELIGIBLE CONCERN (NOTE): Where eligibility for preference is based upon stated status, the Bidder (or Offeror) shall furnish with his offer such evidence of certification as furnished by the Secretary of Labor.

b. NONCERTIFIED CONCERN - The Bidder (or Offeror) will complete the following statement, to include the geographical area, and identify the labor surplus area as "PERSISTENT" or "SUBSTANTIAL", as defined in the current U. S. Department of Labor publication "Area Trends in Employment and Underemployment".

"The Bidder (or Offeror) agrees to perform the contract or cause the contract to be substantially performed in the geographical area identified below, which is a " _____ " labor surplus area:

GEOGRAPHICAL AREA:

(CITY) _____ (COUNTY) _____ (STATE) _____

UTILIZATION OF MINORITY BUSINESS ENTERPRISES: The following clauses shall apply to contracts in excess of \$5,000.

(a) It is the policy of the Government that minority business enterprises shall have the maximum practicable opportunity to participate in the performance of Government contracts.

(b) The Contractor agrees to use his best efforts to carry out this policy in the award of his subcontracts to the fullest extent consistent with the efficient performance of this contract. As used in this contract, the term "minority business enterprise" means a business, at least 50 percent of which is owned by minority group members or, in case of publicly owned businesses, at least 51 percent of the stock of which is owned by minority group members. For the purposes of this definition, minority group members are Negroes, Spanish-speaking American persons, American-Orientals, American-Indians, American-Eskimos, and American Aleuts. Contractors may rely on written representations by subcontractors regarding their status as minority business enterprises in lieu of an independent investigation.

SHIPPING RATE ADJUSTMENT: Paragraph 15 of VA Form 10-1130, dated July 1970, is hereby deleted.

PRESERVATION, PACKAGING, AND PACKING LEVELS: Paragraph 101 of VA Form 10-1131 (June 1970) is hereby deleted in its entirety and the following substituted therefore:

101: PRESERVATION, PACKAGING, AND PACKING: Unless otherwise specified, preservation, packaging, and packing, shall be to a degree of protection to preclude damage to containers and/or content thereof under normal shipping conditions, handling, etc., and conforms to applicable carrier rules and regulations.

EXTERIOR MARKING: Paragraph 102 VA Form 10-1131 (June 1970) is hereby deleted in its entirety and the following substituted therefor:

102. MARKING PROVISIONS:

1. SHIPPING CONTAINERS: Containers shall be marked in accordance with Federal Standard Number 123C, April 20, 1972, and shall contain at a minimum the following:

- | | |
|-------------------------------|----------------------------------|
| a. Federal Stock Number | b. Item Name |
| c. Quantity and Unit of Issue | d. Contractor's Name and Address |
| e. Purchase Order Number | f. Gross Weight |

NOTE: Contract Number and Cubic Displacement may be omitted. All other required markings listed under Paragraph S5.2.2.3(g) through (k), Federal Standard 123C, shall apply as applicable. Containers shall be marked with characters and figures not less than 3/8 inch in height. Where space does not permit this, characters and figures proportionately smaller in size shall be used, but shall not be less than 3/32 inch high. Marking larger than 3/8 shall be used when required by CFR (See paragraph S4.2 of the Standard).

2. INTERMEDIATE CONTAINERS: Containers shall be marked with regular commercial markings that identify the "ITEM" and "QUANTITY", thereof, or shall be marked with the "FEDERAL STOCK NUMBER, ITEM NAME AND QUANTITY".

3. HAZARDOUS MATERIAL MARKING: Marking as required by CFR, outlined in paragraph S4.1 and 2, Federal Standard 123C, shall be applied as applicable to UNIT and INTERMEDIATE containers, unless otherwise specified in the contract or applicable specification.

4. SPECIAL MARKING: Marking of this nature, if any, shall be as otherwise provided in the contract or applicable specification, all being within the scope of the applicable provisions of Federal Standard 123C.

5. DUAL FEDERAL STOCK NUMBERS: Dual Federal Stock Numbers as required by footnote 1, paragraphs S5.2.2.1(a), 2(a), and 3(a) are not required and will not be listed on the purchase orders issued against the contract.

NONCOMPLIANCE WITH PACKAGING, PACKING, AND/OR MARKING REQUIREMENTS: Paragraph 103 of VA Form 10-1131 (June 1970) is hereby deleted in its entirety and the following substituted therefore.

NONCOMPLIANCE WITH PACKAGING, PACKING, AND/OR MARKING REQUIREMENTS: Failure to comply with the packaging, packing, and marking requirements indicated herein, or incorporated herein by reference, may result in rejection of the merchandise and request for replacement, or repackaging, repacking, and/or marking. The Government reserves the right without obtaining authority from the Contractor to perform the required repackaging, repacking, and/or marking services and charge the Contractor therefor at a rate of \$11 per man-hour for the first or fractional hour and \$6 for any succeeding or fractional hour, or have the required repackaging, repacking, and/or marking services performed commercially under Government orders and charge the Contractor therefor at the above rates. In connection with any discount offered, time will be computed from the date of completion of such repackaging, repacking, and/or marking services.

COMMUNIST-CONTROLLED AREAS: Paragraph 4 of VA Form 10-1130 (July '70) is hereby deleted in its entirety.

SPECIAL TERMS AND CONDITIONS

SCOPE OF CONTRACT: This proposal covers Veterans Administration requirements for hearing aids from date of award thru September 30, 1975.

The bidder (or offeror) represents, by checking the appropriate block that he will /___/ will not /___/ accept orders from other civil agencies and departments of Federal Government. With acceptance, all provisions of the solicitation shall also apply with respect to orders placed by other Federal Activities. Failure to complete this statement shall constitute acceptance, where upon all provisions of this solicitation shall apply, and each order placed by any other Federal Agency or Department shall be honored.

PRICE REDUCTION FOR DEFECTIVE COST OR PRICING DATA:

a. If the Contracting Officer determines that any price, including profit or fee, negotiated in connection with this contract or any cost reimbursable under this contract was increased by any significant sums because the Contractor, or any subcontractor pursuant to the clause of this contract entitled "Subcontractor Cost or Pricing Data: or "Subcontractor Cost or Pricing Data - Price Adjustments," or any subcontract clause therein required, furnished incomplete or inaccurate cost or pricing data or data not current as certified in his Contractor's Certificate of Current Cost or Pricing Data, then such price or cost shall be reduced accordingly and the contract shall be modified in writing to reflect such reduction.

b. Failure to agree on a reduction shall be a dispute concerning a question of fact within the meaning of the "Disputes" clause of this contract.

(NOTE: Since the contract is subject to reduction under this clause by reason of defective cost or pricing data submitted in connection with certain subcontracts, it is expected that the contractor may wish to include a clause in each such subcontract requiring the subcontractor to appropriately indemnify the contractor. It is also expected that any subcontractor subject to such indemnification will generally require substantially similar indemnification for defective cost or pricing data required to be submitted by his lower tier subcontractors.)

AUDIT PRICE ADJUSTMENTS:

a. This clause shall become operative only with respect to any change or other modification of this contract which involves a price adjustment in excess of \$100,000 unless the price adjustment is based on adequate price competition, established catalog or market prices of commercial items sold in substantial quantities to the general public, or prices set by law or regulation.

b. For purposes of verifying that certified cost or pricing data submitted in conjunction with such a contract change or other modification was accurate, complete, and current, the Contracting Officer, or any authorized representatives, shall, until the expiration of 3 years from the date of final payment under this contract, or of the time period for the particular records specified in Part 1-20 of the Federal Procurement Regulations (41 CFR Part 1-20) whichever expires earlier, have the right to examine those books, records, documents, papers, and other supporting data which involve transactions related to this contract or

which will permit adequate evaluation of the cost or pricing data submitted, along with the computations and projections used therein.

c. The Contractor agrees to insert this clause, including this paragraph (c), in all subcontracts hereunder which when entered, exceed \$100,000 when so inserted, changes shall be made to designate the higher-tier subcontractor at the level involved as the contracting and certifying party, to add "of the Government prime contract" after "Contracting Officer", and to add at the end of (a) above, the words, "provided that the change or other modification to the subcontract results from a change or other modification to the Government prime contract."

PART I

A. GENERAL

1. Part I of this solicitation includes all pertinent information relating to the sampling, measurements, evaluation and selection procedures to be used by the VA in obtaining an adequate variety of the highest quality hearing aids for issue to hard-of-hearing beneficiaries.
2. In this program, the VA will submit to the National Bureau of Standards three (3) samples of each of the various hearing aids obtained from the hearing aid manufacturers. The NBS will measure each instrument for a number of acoustic and electronic factors and submit the resulting raw data to the VA. Upon receipt, this data will be subjected to statistical and comparative analysis. Those hearing aid models which are clinically acceptable and which qualify on the basis of these analyses will be considered for contract.
3. Hearing aid models are evaluated in competition with others in their category. Rather than establishing specifications, it will be noted that actual physical performance is emphasized. In this manner, we take advantage of the hearing aid industry's continuing research and development activities toward providing better hearing for those individuals having hearing disabilities. Manufacturers may feel free to submit any comments, constructive criticisms or suggestions regarding this program.
4. It is essential that participants read all conditions, provisions and instructions CAREFULLY to avoid making any error or omission which would cause disqualification.
5. ALL DATES FOR SUBMISSION AND PARTICIPATION ARE FINAL. EXTENSIONS OR EXCEPTIONS WILL BE GRANTED ONLY IN INSTANCES WHERE, IN THE OPINION OF THE VA, TREATMENT AND SERVICE FOR VETERANS WOULD OTHERWISE BE JEOPARDIZED OR IMPAIRED.
6. The following policy will govern the release of any information resulting from this program:
 - a. The Veterans Administration reserves the right to make public, in such a manner and form and upon such conditions and terms as it deems appropriate in the public interest, all, or any part, of the measurement and evaluation data derived under this program and resulting from this solicitation, whether or not a purchase order is issued. Such data may be released without the prior consent of, or notice to, a manufacturer submitting instrument for testing. The Veterans Administration will furnish each manufacturer, without request, the raw performance data on sample instruments submitted by him; and, upon request and reimbursement of expense incurred, will furnish the results of the tests on other manufacturer's samples for comparison.
 - b. It is understood, of course, that neither the data furnished to a manufacturer nor the qualification for purchase or purchase of his instruments shall be considered or used in advertisements or other public representation as an endorsement by the National Bureau of Standards or the Veterans Administration of his instruments over his competitors.

B. DEFINITIONS

1. "Conventional" or "On-the-Body" hearing aid types (OB) shall refer to those instruments which have been designed primarily to be worn attached to the clothing or suspended on the body by use of a hearing aid garment. The fact that such an instrument is small enough to be worn on the head by means of a headband, as an attachment to conventional spectacles, or worn in the hair by use of special devices, will not cause the hearing aid to be classified as an on-the-head type instrument. (See Fig. 1 Exhibit "I").

2. "On-the-head" or "Ear-Level" hearing aids shall refer to those instruments which are specifically designed to be worn in immediate proximity to or in the ear, and which by design or construction are limited solely to on-the-head use. They shall be categorized as follows:

a. "Eyeglass" Type (EG) refers to any hearing aid designed as an integral part of an ophthalmic lens frame.

(1) "Regular" Eyeglass Type (EG/REG) refers to a hearing aid model which has all hearing aid components in a single temple piece "right" or "left". (See Fig. 2, Exhibit "H").

(2) "Bone Conduction" Eyeglass Type hearing aid (EG/BC) refers to any model in which both the bone conduction oscillator and other hearing aid components are contained in a single temple or in which the bone conduction oscillator is in one temple with hearing aid components in the opposite temple, all connected as a single unit through appropriately wired frame front. "Right" or "left" is determined by the side on which the oscillator is worn.

(3) "CROS" Type hearing aid (EG/CROS) refers to an eyeglass type hearing aid having a receiver located in one temple and a microphone located in the opposite temple. "Right" or "Left" is determined by the side on which the receiver is worn.

(4) "BICROS" Type hearing aid (EG/BICROS) refers to an eyeglass type hearing aid having a microphone in each temple and a receiver in only one temple. "Right" or "Left" is determined by the side on which the receiver is worn.

b. "Over-the-Ear" or "Behind-the-ear" Type (OE) shall refer to a hearing aid designed to be worn on the head and suspended over the ear with the receiver cord or tube extended to, or into, the external ear canal. (See Figures 3 and 4 - Exhibit "H").

c. "In-the-Ear" Type (IE) shall refer to a hearing aid designed so that all components are contained in a single or multiple piece unit, the whole of which is to be worn within the confines of the anatomical boundaries of the external ear. These instruments will be evaluated in the appropriate power category in competition with other hearing aids. (See Fig. 5, Exhibit "H").

3. A "model" shall refer to any group of hearing aids manufactured with the same components and having certain specific characteristics designated by the manufacturer.

4. "Performance of a Model" - for purposes of this program shall be considered as the average performance of the three samples submitted and NOT the performance of a single instrument.

5. "Defective Model" is one for which any three of the original sample instruments or their replacements are considered by the VA to be inoperable or not sufficiently responsive to permit performance measurements under the procedures outlined in Exhibit "G".

6. "Temple Extensions" shall refer to that portion or component part of an eyeglass type hearing aid which serves to connect the eyeglass type transmitter unit to an eyeglass front, (See Fig. 2, Exhibit "H").

7. "VA" as used herein refers to the Veterans Administration.

8. "Clinic" as used herein refers to Audiology and Speech Pathology Clinics operated by or under contract to the Veterans Administration.

9. "New Models" as used herein will refer to:

a. Any new instrument developed by the manufacturer and designated by the assignment of a new name or model number, or

b. Any contract model hearing device in which the manufacturer has instituted mechanical or electronic changes which may alter its performance.

10. "Dealers" as used herein refers to the contractor's branches, agents, distributors and/or dealers.

11. "Supply Depot" as used herein refers to the Veterans Administration Supply Depot, Kinross, Illinois.

12. "Complete Hearing Aid" as used herein will refer to:

a. An on-the-body aid (conventional type aid) consisting of a transmitter, appropriate receiver, three (3) thirty (30) inch cords, one (1) hearing aid jewel or presentation case, AND ONE (1) APPROPRIATE CAREER GARMENT - UNIVERSAL MALE TYPE, IF ITS USE IS RECOMMENDED BY THE MANUFACTURER.

b. An over-the-ear aid (all of the behind-the-ear types, including those attached to headbands or other on-the-head devices, exclusive of eyeglass types) consisting of a transmitter, three (3) sections of plastic tubing of appropriate length and size and a suitable jewel or presentation case. Tubing MUST have adaptor nuts attached. Instruments requiring rigid or semi-rigid connectors must be furnished with such connectors attached. (See Fig. 4, Exhibit "H").

c. A regular eyeglass type hearing aid consisting of one (1) active temple; one (1) matching dummy temple; three (3) sections of plastic tubing of appropriate length and size with adaptor nubs attached for fitting tubing to conventional type ear mold; one (1) set of temple hinges or one set of maximum length "temple extensions" including hinges separately, and one (1) eyeglass hearing aid case (suitable for containing the total eyeglass hearing aid after eyeglass fronts have been added). EYEGLASS FRONTS AND OPHTHALMIC LENSES ARE NOT INCLUDED AS PART OF A COMPLETE REGULAR EYEGLASS TYPE HEARING AID.

d. A "CROS" eyeglass type hearing aid composed of one (1) standard size eyeglass front, appropriately wired; two (2) standard length temples having hearing aid components in each, including a receiver located in one temple and a microphone located in the opposite temple; all properly wired and assembled to form a single unit; three (3) sections of plastic tubing of appropriate length and size without adaptor nubs. The designation "right or left" will be determined by the location of the receiver. OPTHALMIC LENSES ARE NOT INCLUDED.

e. A "BICROS" eyeglass type hearing aid composed of one (1) standard size eyeglass front appropriately wired; two (2) standard size temples containing hearing aid components including a microphone in one temple plus a receiver and a microphone in the opposite temple; all components wired and assembled to form a single unit; three (3) sections of plastic tubing of appropriate length and size with adaptor nub attached. The designation "right" or "left" will be determined by the location of the receiver.

f. An in-the-ear aid in which all electronic components are contained in a single or multiple piece unit, the whole of which is confined within the anatomical boundaries of the external ear; and one set of universal ear inserts or fitting pieces required for testing these instruments on deafened veterans.

13. A "Sample Hearing Aid" shall refer to a complete hearing aid as described in paragraph B 12, above, and bearing a specific model name or number designated by the manufacturer.

14. A "Sample Hearing Aid Model" shall refer to the composite representation of the three individual sample hearing aids submitted for these measurements.

15. SSPL - The abbreviation for "Saturation Sound Pressure Level".

16. "Stock Item" as used or referred to herein means any complete hearing aid or hearing aid component carried in the manufacturer's regular inventory and not requiring special ordering.

C. QUALIFICATIONS - MANUFACTURERS:

1. Samples and quotations will be considered only from those manufacturers who (a) have been actively engaged in the business of manufacturing hearing aids for a period of not less than three (3) years; (b) have established bona fide dealers or distributors in most of the major cities of the United States, with not less than seven (7) such dealers or distributors located within each of the four (4) W designated geographic regions for dealer representation as shown on Exhibit 'C'; (c) have submitted samples in accordance with the provisions herein; and (d) are in a position and willing to render factory or authorized repair dealers repair services.

2. For purposes of this contract, U. S. distributors of foreign-made hearing aids will be included in the term "manufacturer". Only one distributor shall be permitted to represent the manufacturer.

3. Both "distributors" and "manufacturers" of foreign-made hearing aids must meet the same requirements which have been established for domestic manufacturers, except that only one "dealer organization" as required in paragraph 1 (b), above, will be accepted under this contract.

D. REQUIREMENTS FOR MANUFACTURERS' PARTICIPATION:

1. Companies interested in being considered for a VA contract for the contract period, must comply with the following requirements and return the necessary forms postmarked not later than November 15, 1973 to: Chief, Marketing Division, Administrative Medical Supplies and Equipment, VA Marketing Center, P.O. Box 76, Moline, Illinois 60141.

a. Complete and sign in quadruplicate Exhibit "D", Manufacturer's Instruction Sheet, for each model to be considered.

b. Complete and sign in triplicate Exhibit "E", Manufacturer's Qualification Sheet.

c. Complete and sign in triplicate Exhibit "F", Authority for VA Representative to pick up samples from factory. One set of forms for each sample model to be submitted. Entries must coincide with those shown for the complete model listed on Exhibit "D".

d. Furnish four sets (4) of available technical data for each model to be submitted. Each technical data should include information concerning fitting instructions, frequency response curves and any other information pertaining to the operation of the instruments which is normally furnished to dealers or agents.

NOTE: Any manufacturer not fulfilling these requirements by November 15, 1973 will be excluded from further participation in the VA Hearing Aid Evaluation Program for Contract Year 1975.

2. Requirements for Hearing Aid Models to be submitted:

a. Availability: Models submitted must be instruments which will be available to the general public through the manufacturer's dealers as of January 1, 1974. If any of these models are not generally available through dealers on this date, the instruments will be subject to disqualification from this program.

b. Clinical Acceptability: Only clinically acceptable hearing aids will be considered. Clinical unacceptability will be based on (1) poor physical characteristics as related to use in a clinic situation (2) any external controls which do not have permanent markings (preferably imprinted and inked), and (3) poor physical characteristics as related to its use by the wearer. Other factors such as exposed batteries, obscure or inaccessible external controls, objectionable or grotesque design features, etc., are also examples of criteria which will be utilized in making determinations of clinical unacceptability.

c. Telephone Pick-Up Feature: The telephone pick-up will be a requirement for clinical acceptability for all on-the-body hearing aids and those on-the-head hearing aids (except in-the-ear; CROS, BICROS, and HIGH FREQUENCY PHASIS models) which fall into the moderate and strong power categories. While a telephone pickup might be useful, it is not a requirement for clinical acceptability in the mild power category.

NOTE: Although not a requirement, it is preferred that BICROS models have a telephone pick-up.

d. Serial numbers must be imprinted or engraved directly on the hearing aid device in a readily accessible area.

e. If regular eyeglass hearing aid temple extensions are designed to be adjustable for length by cutting and attaching the hinge, they must be furnished WITHOUT THE HINGES ATTACHED. These temples or temple extensions must be designed so as to permit location of the hinge at the proper prescription length in a manner that will result in the same finished appearance that would prevail had the piece not been cut.

f. Temples, either maximum length single units or maximum length multiple piece units, shall be furnished with suitable arrangements for placement of hinges at increments not greater than 1/8", covering a range of 1" to 1-1/2". For example, any hinge recess shall be in the shape of an elongated groove of appropriate dimensions to permit attachment of the hinges at the proper temple length as required by the ophthalmic prescription. Other methods for temple length selection will be considered only if they are determined to be compatible with VA Clinic use.

g. Temple portion of eyeglass hearing aid shall be free from any decorative decals, engraving, or other conspicuous markings.

h. In those instances where active and dummy temples for regular eyeglass hearing aids are composed of more than a single section, they shall be furnished completely assembled and in maximum length available, without hinges attached. In each instance hinges shall be included separately and the hinge end of the temple extension shall be so designed as to permit arbitrary location of the hinge to satisfy ophthalmic prescription requirements for temple length. (See Fig. 2, Exhibit "E").

i. All external hearing aid receivers and adaptor nubs for plastic tubing must fit the standard bushing in the conventional type ear mold. Where the receiver nubs fail to meet this requirement, suitable adaptors must be furnished by the contractor, firmly attached to the receiver at the factory.

j. Battery sizes required for use in hearing aid models submitted must be available from the standard commercial stocks of battery manufacturers. Hearing aid models using a "special" battery will not be acceptable.

k. If an over-the-ear type hearing aid is to be measured with a rigid or semi-rigid "connector" or "adaptor" inserted between the transmitter and the tubing, such "connectors" or "adaptors" must be properly put onto the instrument by the manufacturer at the time the samples are submitted. (If such hearing aid models are accepted on contract, the "connectors" or "adaptors" must be fitted to the instrument by the manufacturer before delivery to the VA).

1. If the over-the-ear and/or in-the-ear models submitted are available in colors matching light and dark skin tones, please check the appropriate block or blocks: Light skin tones (), color _____; dark skin tones (), color _____.

(1) Purchase orders will normally be for the light skin tone shade only.

(2) The bidder agrees to exchange light skin tone cases for dark skin tone cases upon request without charge to the Veterans Administration, without change of serial number if possible, and without change of any other component of the unit concerned.

m. Eyeglass type hearing aids so designed that the temples will fit either ear are preferred. While this is not a requirement, it is deemed highly desirable by the VA, since it simplifies stock maintenance.

NOTE: It is desirable, but not a requirement, that on-the-body hearing aids have large conspicuous controls and markings to facilitate use by elderly veterans and those who are unable to manipulate the controls of smaller instruments.

3. Samples:

a. Number of Samples:

(1) Three (3) complete sample hearing aids of each model will be required for these measurements to provide sufficient data on which to judge the performance characteristics of the specific model being evaluated.

(2) In order to control the number of hearing aid samples to be evaluated, manufacturers are limited to the submission of seven (7) different models - a total of 21 complete instruments selected from his line of headworn and on-the-body type hearing aids. Six of the seven models may be submitted to meet the needs described in paragraphs (a) or (b) below.

(a) Hearing aids adjusted to yield a six db per octave rise which will perform most satisfactorily under the measurements to be conducted (Exhibit "G") and usual method of evaluation (Exhibit "H").

(b) Hearing aids adjusted to yield minimum amplification below 1000 Hz and maximum amplification above 1000 Hz.

NOTE: Manufacturer must complete Item 4, Exhibit "D".

(3) The seventh model (three instruments) may be submitted for informational and clinical evaluation purposes - a hearing aid with advanced or innovative improvements. The manufacturer should submit clinical or other evidence of its efficacy, if available. THE PERFORMANCE CHARACTERISTICS OF THESE INSTRUMENTS WILL NOT NECESSARILY BE MEASURED, EVALUATED, OR REPORTED UNDER THE PROCEDURES APPLIED TO MODELS SUBMITTED TO IN SUPPLY CONTRACT (a) OR (b) ABOVE. In order to determine the adequacy with which aids meet this requirement, appropriate measurements will be conducted and analyses performed.

NOTE: If a manufacturer produces more than 7 different models, those selected for measurement should be the instruments which, in the opinion of the manufacturer, perform best under the conditions set forth under this Program. Hearing aid models designed to be worn in more than one manner will be so designated by the manufacturer, and submitted as a SINGLE MODEL ONLY. The various modes of wearing will be indicated separately.

(c) Once samples are submitted, substitutions will not be considered.

(d) If a manufacturer does not initially submit the maximum number of samples permitted, vouchers for additional samples (up to the maximum) may be offered for consideration. These additional vouchers will not be considered if received after January 1, 1974, or if the late submission will cause undue delay in the evaluation program.

b. Selection of Samples:

A representative of the VA will call at each manufacturer's factory or warehouse and select the required number of samples at random directly from stock. He will present the original copy of each authorization represented by Exhibit "F", and a copy of the Manufacturer's Instruction Sheet, Exhibit "D". A minimum, of fifty (50) instruments of each model offered must be available for the selection of samples.

c. Preparation of Samples:

(1) Upon selection of each sample by the VA representative, the serial number will be noted on his copy of Exhibit "F".

(2) The manufacturer will then be required to adjust each sample to comply with the instructions he submitted on Exhibit "D". Each sample will be so prepared in the presence of the VA representative and immediately returned to him. No electronic or mechanical testing, repair or replacement of any part or component, will be permitted on the samples selected.

(3) EACH SAMPLE WILL BE MEASURED AS IT IS RECEIVED FROM THE MANUFACTURER. NO CHANGES IN THE SETTINGS OR ADJUSTMENTS WILL BE MADE BY THE VA OR HIS PERSONNEL FOR PURPOSES OF TESTING OR EVALUATION. ALL COMPONENTS IDENTIFIED BY THE MANUFACTURER AS PART OF THIS SAMPLE MUST BE ATTACHED OR FITTED BY THE FACTORY IN ACCORDANCE WITH THE INSTRUCTIONS SUBMITTED IN EXHIBIT "D". All tubing, connectors, adaptors or other items recommended as providing the most desirable length of the total 'sound channel' must be completely assembled on the instrument as part of the factory preparation privilege.

(4) The manufacturer assumes total responsibility for the proper assembly, adjustment and setting of all sample instruments submitted for participation in the VA Hearing Aid Program. Proper selection of components to provide the best performance of his instruments must be made AT THE TIME EXHIBIT "D" IS PREPARED. No deviation from these instructions will be permitted.

d. Failure to comply with the instructions (a) through (c) above, will be considered as grounds for disqualification of the individual instrument or total sample for further consideration under this solicitation.

4. Issue data: The following percentage figures for each of the power categories and types of hearing aids processed through the VA Supply Depot, Hines, Illinois, are included for your information:

<u>CATEGORY</u>	<u>NO.</u>	<u>% TOTAL</u>		
STRONG	2102	15.0		
MODERATE	4961	35.4		
MILD	6950	49.6		

<u>TYPES</u>	<u>NO.</u>	<u>% TOTAL</u>	<u>% AIR</u>	<u>% BONE</u>
ON-THE-BODY	2130	15.2	92.9	7.1
OVER-THE-EAR	6853	48.9	100.0	0.0
EYEGLASS REGULAR	1527	10.9	97.6	2.4
EYEGLASS BIFOCAL	827	5.9	100.0	0.0
EYEGLASS CROSS	1681	12.0	94.0	6.0
IN-THE-EAR	995	7.1	100.0	0.0

EXPERIENCE SHOWS THAT HEADPHON HEARING AIDS ARE ISSUED IN THE APPROXIMATE PERCENTAGES OF 51.0%, RIGHT, AND 49.0%, LEFT.

PERCENTAGES ARE APPROXIMATE AND ARE BASED ON A TOTAL OF 14,013 HEARING AIDS PROCESSED THROUGH THE VA SUPPLY DEPOT, HINES, ILLINOIS, DURING FISCAL YEAR 1973.

E. HEARING AID MEASUREMENTS:

1. Ordinarily all hearing aids will be subjected to the acoustic and electronic measurements outlined in Exhibit "G".

2. In addition, the performance of certain aids may be measured at the Biocommunications Laboratory, University of Maryland, under contract to the VA. The unique testing environment and equipment at the University of Maryland will be used by IBS and/or VA personnel in making these measurements.

3. Eyeglass hearing aids will be measured as monaural instruments only, either right or left.

4. All hearing aids will be measured at the nominal voltage for the particular type and size battery recommended by the hearing aid manufacturer for use in the sample instruments submitted.

5. Each hearing aid will be measured as received from the factory. It will be manufacturer's responsibility to determine which items, settings, or adjustments will enable his hearing aid to perform most satisfactorily under the measurements to be conducted (Exhibit "G"). The information in paragraph 3(2) (a) and (b), page 15, describes the most desirable gain versus frequency responses for the purpose of this program.

NOTE: See Exhibit "J" - Special Test Mounting for In-The-Ear Models.

F. PERFORMANCE STANDARDS:

1. General:

a. For purposes of these measurements, the performance of a "model" will be considered as the average performance of the three (3) samples submitted, not just the performance of a single instrument.

b. In instances where all three of the original individual sample instruments of a given model are considered by the VA to be "defective", that "model" shall be immediately disqualified and rejected for further consideration and no replacements requested. In instances where less than three of the original individual sample instruments are considered by the VA to be "defective" a replacement will be requested for each individual instrument concerned. A penalty of five (5) points will be deducted from the final performance score for any kind of defect for the first defective aid and an additional twelve and one-half (12.5) points will be deducted for the second defective aid. However, under NO circumstances will replacements be permitted for more than two defective individual instruments of any given "model" submitted.

2. Performance Requirements:

a. Gain: A "model" must have not less than 29 decibels of gain. (Does not apply to high frequency emphasis aids - See note below)

b. Saturation Sound Pressure Level: A "model" must have an SSPL of not less than 97 decibels.

c. Signal-to-Noise Ratio: Any "model" hearing aid must have a signal-to-noise ratio of at least 34 decibels. However, a tolerance of minus two decibels (-2db) will be allowed.

d. Signal-to-Hum Ratio: Any "model" hearing aid must have a signal-to-hum ratio of at least 34 decibels. However, a tolerance of minus two decibels (-2db) will be allowed.

e. Power Categories: These criteria have been evolved solely for VA use in the selection of hearing aids for treatment of hearing impaired veterans. The power category to which a given model is assigned will be based on the actual measurements for average gain and average SSPL without regard to the power category designation of the manufacturer. The average of the measurements for the three instruments of any given model must satisfy the requirements for gain and SSPL for one of the categories listed below:

POWER CATEGORIES FOR VA HEARING AID EVALUATIONS

<u>CATEGORY</u>	<u>AVERAGE GAIN</u> (sine wave signal)	<u>AVERAGE SSPL</u> (random noise signal)
Mild	31 - 52db	99 - 113 db
Moderate	41 - 62db	120 - 129 db
Strong	58 db or above	130 db or above

The tolerance limit for average gain and average SCPL is plus or minus two decibels. This tolerance has not been included in the figures shown.

NOTE: These are not mutually exclusive categories. Aids whose average gain and average SCPL are such as to place them in two categories will be evaluated in both categories. THE AVERAGE GAIN OF AN INSTRUMENT IS DETERMINED BY THE MEAN OF ITS GAIN VALUES FOR THE NINE BANDS WITH MIDPOINTS AT THE FOLLOWING FREQUENCIES: 630, 770, 920, 1070, 1230, 1400, 1570, 1740, and 1920 Hz. Aids with high frequency emphasis will not necessarily be placed into any of the above categories.

G. EVALUATION PROCEDURES: (See Exhibit "I")

1. The Raw Score - The raw score obtained on each measurement will be statistically treated and assigned weighting factors determined by a group of nationally recognized Audiologists and Psychologists serving on the Panel on Hearing Aid Performance, Committee on Prosthetics Research and Development, Division of Medical Sciences of the National Research Council - National Academy of Sciences. For example, one test item might be given a weighting factor of 1.0 while another might be assigned a factor 0.5.
2. The Weighted Scores - The weighted scores obtained by three hearing aids of each sample model are averaged for each measurement. The average score represents the performance of that model on each of the individual measurements.
3. Index of Characteristics - The average weighted scores on each of the measurements are summed to give the measure of total performance achieved by the hearing aid model. This score is designated as the index of characteristic.
4. Defective Instrument Score - The Index of Characteristics will be adjusted according to the number of defective instruments within a model. (See Section F 1 b).

H. DISQUALIFICATION:

1. A hearing aid "model" failing to meet any one of the performance standards or qualification requirements is subject to disqualification for further consideration by the VA.
2. A hearing aid "model" failing to score above the mean in its power category will not ordinarily be further considered for acceptance on VA contract.
3. A hearing aid "model" having physical or electronic characteristics which are deemed to be undesirable or incompatible with VA procedures will be disqualified as being clinically unacceptable.
4. A hearing aid "model" which is designed to use only specially designed or odd-sized batteries not normally manufactured or stocked by battery manufacturers is subject to disqualification.

5. EXCESSIVE INCIDENCE OF POOR HEARING AID REPAIR SERVICE FURNISHED AND/OR EXCESSIVE DELAYS IN PROVIDING THE SERVICES CONTRACTED FOR UNDER THE IMMEDIATE PRIOR YEAR'S HEARING AID REPAIR CONTRACT PERIOD WILL BE INJECTED SUFFICIENT CAUSE TO REJECT THE BIDDERS' ENTIRE SUBMISSION UNDER THIS SOLICITATION.

6. Ordinarily, a hearing aid model which oscillates at full volume control setting will not be accepted on contract.

I. SELECTION FOR CONTRACT NEGOTIATION:

1. The VA will negotiate contracts for a variety of instruments;

a. Strong Power - Approximately five models consisting of on-the-body or qualified head-worn instruments.

b. Moderate Power - Approximately six models, one of which may be an on-the-body type, three of which may be head-worn instruments other than eye-glass models, and two of which may be eyeglass type hearing aids.

c. Mild Power - Approximately six models, one of which may be a body-type instrument.

d. Cros and Bicos Aids - Approximately two models of each.

e. In-the-Ear Models - Approximately two models.

f. Aids with High Frequency Emphasis - Approximately three models.

g. Directional Aids - Approximately two models.

2. Within the limitations set forth in paragraph I. 1. above, only one model of any one type will be eligible for competition in the same category. For example, if a manufacturer has two on-the-body models which qualify in the same category, only one of these will be selected by VA for competition with other manufacturers' products in the same category. On the other hand, if a manufacturer has an on-the-body model and an over-the-ear (or an eye-glass type) model which qualify in the same category, both models will be acceptable for competition against other instruments of the same respective type in the same category.

3. In addition, the VA will negotiate contracts for other instruments which it deems necessary for special medical needs of hearing impaired veterans. These aids ordinarily will have undergone formal acoustic and electronic measurement or informal clinical evaluation.

J. SUMMARY AND CONCLUSIONS:

1. As indicated in paragraph A. 6, Part I, above, the Veterans Administration now reserves the right to release any test data resulting from tests of instruments submitted for testing by manufacturers, even though no purchase order is issued.

2. It must be clearly understood that any hearing aid model accepted for participation in the VA Hearing Aid Program does not automatically qualify for consideration for acceptance on VA contract. On the other hand, any hearing aid model not specifically rejected and the manufacturer so notified, shall be judged acceptable to the VA from the standpoint of quality, whether it is or is not finally accepted on contract.

3. At the conclusion of the measurements and evaluations, it is intended that one of the sample instruments of each model will be returned to the manufacturer. The two remaining samples will be retained permanently by the Veterans Administration for research purposes, and will not be returned to the manufacturer.

PART II

A. GENERAL

1. Part II provides for the submission of bid quotations and also describes and establishes the requirements and special conditions for participation in the VA Hearing Aid Program for the Contract Year 1975.

2. Each bidder is furnished additional pages upon which he may submit under Schedules "A" and "B", his proposed bid prices for each complete hearing aid and the component parts listed thereon. Bid prices are requested on each model submitted.

3. Failure to comply with the provisions of either of these Parts will automatically disqualify a manufacturer from further participation in the VA Hearing Aid Evaluation Program for the contract period.

4. Each hearing aid manufacturer wishing to participate in the VA Hearing Aid Program for the above period MUST COMPLETE AND RETURN THIS PART OF THE QUOTATION SOLICITATION NOT LATER THAN November 15, 1973. The date for submission is final. Extensions or exceptions will be granted only in instances where, in the opinion of the VA, treatment and service for veterans would otherwise be jeopardized or impaired.

5. BIDDERS WILL NOTE THAT THIS SOLICITATION DOES NOT INCLUDE REPAIR SERVICE Repair services for Contract Year 1975 will be covered in a separate contract.

B. REQUIREMENTS

1. The bidder must submit with his quotation a list of dealers through whom business may be transacted if awarded a contract under Schedule "A". He will also submit full particulars concerning this contract to such dealers, authorizing and instructing them to furnish the supplies and services covered by the contract to the VA at the prices and in accordance with conditions hereof.

2. Within 30 days after award of contract, the manufacturer will forward seventy five sets of available technical data on each hearing aid model accepted, to the Chief, Central Audiology and Speech Pathology Program (888/194), VA Hospital, 59 Irving Street, N.W., Washington, D. C. 20422.

3. REQUIREMENTS AFTER CONTRACT EXPIRATION OR TERMINATION

a. The contractor agrees, if he remains in business and his contract expires or is terminated for any reason, to maintain factory repair service on all instruments procured hereunder, for a seven-year period from the date of such expiration or termination, with the understanding that the charges for such repairs will not exceed the lowest cost imposed by the contractor on any agent of the contractor or on any other company or individual at the time of making such repairs.

b. Upon expiration of a contract or if for any reason a contract is terminated and a new contract is not consummated the contractor agrees to accept the return of a maximum of one hundred of each model of his make hearing device, accessories, and extra dummy temples in stock in clinics and/or the Supply Depot, provided that such models are returned to the contractor within one hundred and twenty days of the expiration or termination of the contract. For purposes of this section of the contract, hearing aids designed as "rights" and "lefts" will be considered as separate models even though the basic instrument and the model number are the same. The contractor further agrees to refund an amount for the returned items equal to the original price paid by the VA, less the total cost of repairing any devices which are not in a condition as good as they were at the time of purchase. Checks shall be made payable to the VA.

C. SPECIAL CONDITIONS

1. DELIVERY TERMS AND DISCOUNTS

a. Delivery - Delivery of new hearing devices and accessories will be made F.O.B. at and within the doors of the VA field stations, contract clinics or VA Supply Depot designated on the purchase order.

b. TIME OF DELIVERY AND DISCOUNTS - SCHEDULE "A"

HEARING AIDS PURCHASED UNDER SCHEDULE "A" MUST BE AVAILABLE FOR DELIVERY UPON RECEIPT OF PURCHASE ORDER.

c. TIME OF DELIVERY AND DISCOUNTS - SCHEDULE "B"

(1) The initial purchase order for the contract period shall be for a minimum of 50 complete instruments of each model accepted on contract. The contractor agrees to ship this minimum order so as to reach the VA Supply Depot, Moline, Illinois, no later than 45 days after receipt of the initial ordering document. Delivery of the remaining number of instruments of each model (if any) on the initial order, and all subsequent orders, will be required as shown in Columns D and E of the chart below. Special discounts for volume purchases will be allowed as shown by the manufacturer in the empty spaces in Column D of the chart. The discount will be applied to the full amount of the purchase order regardless of the date of shipment of the order in whole or part.

A.	B.	C.	D.	E.
AMOUNT OF PURCHASE ORDER	VOLUME DISCOUNT	DELIVERY TIME INITIAL 50 AIDS	DELIVERY TIME REMAINDER OF INITIAL ORDER	DELIVERY TIME FOR SUBSEQUENT ORDER
(a) Up to \$1,000	-----	45 days	30 days	30 days
(b) \$1,000.01 to \$5,000	-----	45 days	30 days	30 days
(c) \$5,000.01 to \$15,000	-----	45 days	40 days	40 days
(d) \$15,000.01 to \$30,000	-----	45 days	50 days	50 days
(e) \$30,000.01 and up	-----	45 days	60 days	60 days

(2) THE AVERAGE OF THE DISCOUNTS OFFERED IN ITEMS (a) THROUGH (c) ABOVE WILL BE USED IN CALCULATING THE COST OF COMPLETE INSPECTION FOR PURPOSES OF DETERMINING THE COST PER POUND OF QUALITY, A FIGURE WHICH MAY BE USED TO DETERMINE CONTRACT AWARDS.

(3) Time Discounts if offered on page 1 of the quotation will be applied on the total amount of the purchase order after deduction of all volume discounts.

2. SPLIT DELIVERIES

a. Indicate in the space provided below whether purchase orders requiring split deliveries will be accepted. (CHECK ONE).

(1) () YES (2) () NO

b. If answer is YES, fill in the spaces in the following:

MAXIMUM NUMBER OF SHIPMENTS PER PURCHASE ORDER :
 MAXIMUM OVER-ALL PERIOD OF TIME FOR COMPLETE DELIVERY OF PURCHASE ORDER :
 : FINAL DELIVERY : CALENDAR DAYS.

3. PRICES

a. The bidder will submit prices on all items as requested in the attached schedules. Two schedules will be included: Schedule "A" purchases made through dealers by VA field stations and Schedule "B" for purchases made directly from the factory by the VA Contracting Center for delivery to the VA Supply Depot, Pines, Illinois 60141.

b. The bidder certifies that the prices quoted in Schedule "A" and "B" are not in excess of the prices charged by the bidder to its agents, the general public or other government agencies. The VA reserves the right to reject any quotation in its entirety, or any item on which the quotation is considered to be excessive or indefinite.

4. PURCHASES MADE FROM AUTHORIZED DEALERS - SCHEDULE "A"

a. Under Schedule "A", VA field stations may utilize the services of authorized dealers for purchases of hearing aids, together with parts and accessories therefor.

b. The bidder will indicate by checking the appropriate block provided below, to which the purchase orders and check in payment therefor will be drawn:

- () Purchase orders and checks in payment therefor will be drawn in favor of and mailed to the contractor.
- () Purchase orders and checks in payment therefor will be drawn in favor of the contractor. Purchase orders will be forwarded to the designated dealers who will make delivery and forward the order to the contractor for billing. Checks in payment will be mailed to the contractor.
- () Purchase orders and checks in payment therefor will be drawn in favor of the contractor. Purchase orders and checks in payment will be mailed to the designated dealers who will make delivery.
- () Purchase orders and checks in payment therefor will be drawn in favor of and mailed to the designated dealers.

5. SUBSTITUTION OF PARTS - SCHEDULE "A": The purpose of this condition is to provide for purchases of all desirable combination of hearing aid component parts which are usable with the transmitter specified under "COMPLETE INSTRUMENTS", Schedule "A" of the contract. In the event a receiver, cord or accessory which is different from the standard component part specified under "COMPLETE INSTRUMENTS", Schedule "A" is ordered, the price of the substituted part will be added to the cost of the complete instrument and the price of the standard part for which the substitution is made will be deducted therefrom. Bidders are therefore requested to quote prices under Schedule "A": for all receivers, cords or accessories which are usable with the transmitter specified under "COMPLETE INSTRUMENTS", Schedule "A". Discounts, if any, will then be applied to the new total price of the instrument. Under no circumstances will parts be substituted without a specific order from the Veterans Administration.

6. PURCHASES MADE DIRECT FROM FACTORY - SCHEDULE "B"

a. Hearing devices, together with parts and accessories therefor, to be stocked in clinics, will normally be ordered by the VA Marketing Center, Hines, Illinois, directly from the manufacturer at the prices quoted in Schedule "B".

b. Delivery of hearing devices and accessories under Schedule "B" will be made to the VA Supply Depot, Hines, Illinois, unless otherwise specified in the purchase order. The invoice submitted by the contractor, covering each hearing aid purchase, must list the serial number of each hearing aid being delivered.

c. All instruments delivered to the VA Supply Depot, Hines, Illinois, must be "set and adjusted" at the factory. These settings and adjustments must conform with those recommended by the manufacturer for the VA Hearing Aid Program, Contract Year 1975.

d. Manufacturers whose eyeglass hearing aids are accepted on contract will be required to:

(1) Furnish each VA and Contract Audiology Clinic listed in Exhibit "K", as well as any new clinics added during the contract period, one universal fitting front consisting of an average size eyeglass front without lenses and with a universal fitting device attached to the hinge to hold the hearing temples in place during clinical examination. Fitting devices must accept full length one piece eyeglass type hearing aids and/or eyeglass hearing aids submitted with full length temple extensions attached. Manufacturers will be required to furnish temple extension fitting kits, if available.

NOTE: The contractor will not be required to furnish new fitting fronts if previously furnished fitting fronts will fit the new instruments accepted on contract.

(2) Furnish each VA contract ophthalmic prescription laboratory servicing a VA installation, complete details concerning the attachment of hinges to regular eyeglass hearing aid temples.

NOTE: The VA will furnish each hearing aid manufacturer, whose eyeglass hearing aids are accepted, with a list of the ophthalmic prescription laboratories at the time an optical contract award is made.

(3) Include in each package containing a regular eyeglass hearing aid complete instructions for attaching hinges, along with detailed directions as to the specific location on the temple portion which may be used for fitting adjustments and the proper techniques to be used in shaping and adjusting the temples to fit the wearer, e.g., kind and amount of heat to be applied in each specific area, how to bend, etc. See Exhibit "N".

e. Manufacturers who have been awarded contracts for eyeglass hearing aid models having frame fronts containing components necessary to the operation of the instruments will be subject to the following additional requirements:

(1) The manufacturer will furnish, along with his bid quotation, a list of sizes of frame fronts for both male and female users which he carries as "stock" items for use with the particular model submitted. See Exhibit "L".

(2) Instruments purchased initially will be limited to one complete "standard" male size only, i.e., eye size 46 mm; bridge size 22 mm; temple length 4-1/4 inches to the bend. Female sizes will be ordered as needed. The styles available shall be limited to one standard female style having a keyhole type bridge and one standard male style having a keyhole or saddle bridge.

(3) Upon selection for issue by an audiology clinic, the manufacturer will be required to exchange, without charge, the "standard" eyeglass front and the "standard" temple extensions for similar items from his "stock" which will permit the instrument to fit the veteran's measurement requirements for eyeglass frames. The manufacturer must be prepared to stock a range of sizes which are typically requested. See Exhibit "L".

(4) Eyeglass hearing aids requiring frame front sizes other than those normally carried as "stock" items by the manufacturer will be furnished upon special request. Any additional charges for these services will be in accordance with prices quoted in this bid solicitation. See Exhibit "L".

(5) Upon selection for issue, the VA will forward to the manufacturer either the complete "standard" eyeglass hearing aid or the "standard" front and temple extensions, along with a properly prepared prescription for the veteran's eyeglass frame measurements. (lenses are not included). See Exhibit "L".

(6) Eyeglass hearing aids sent to the manufacturer for exchange of component parts, referred to above, will be completed and returned to the referring VA station within five (5) working days of the date of receipt.

(7) Manufacturers will include in each package containing a front wired eyeglass type hearing aid detailed instructions as to the techniques to be used in shaping and fitting the frames to fit the wearer, and the preferred method for the insertion and removal of lenses. Instructions must be specific regarding areas in which shaping and bending the frames may be accomplished and the methods to be used, i. e., kind and amount of heat or bending permissible, at what points, etc. See Exhibit "L".

7. UNITS FOR PROCUREMENT

a. SCHEDULE "A": Prices will be quoted as follows:

(1) COMPLETE HEARING AIDS: The prices for each hearing device under this schedule will cover a complete instrument as defined in Part I, Paragraph B, 12, of this proposal, including three batteries required for the operation of the hearing aid. Quotations will not include a specially molded ear piece. Charges for an ear mold will be listed and charged for as a separate item when ordered under this schedule.

(2) TRANSMITTER UNIT:

(a) For on-the-body types, prices shall be for a single transmitter unit including an appropriate case and garment carrier.

(b) For eyeglass types, prices shall be for one transmitter unit consisting of one active and one matching dummy temple including hinges, extensions, plates, and/or such other items as may be required for the attachment of the temples to an eyeglass front to complete one eyeglass type hearing aid, and one eyeglass hearing aid carrying case suitable for containing the complete instrument after the cathartic fronts have been added. EYEGLASS FRONTS ARE NOT TO BE INCLUDED except for those aids in which the eyeglass front contains components necessary for operation of the aid.

(c) For over-the-ear types, prices shall be for a single transmitter unit and case.

(d) For in-the-ear types, prices shall be for a single transmitter unit and case, including one set of universal fitting pieces.

(3) RECEIVERS: Bone conduction receivers will include headband, headband pads, and other items, except cords, necessary for proper fitting.

(4) CORDS OR TUBING: Cords 30 inches long for air and bone conduction type receivers, or plastic tubing in appropriate sizes and length with adapter nubs attached for fitting to conventional ear-rolls.

b. SCHEDULE "B": The prices for each hearing device under this schedule will cover a complete instrument as defined in part I, B, 12.

8. DESCRIPTION OF BATTERIES: The bidder will furnish under Schedule "A" a description of the batteries to be used with each hearing device bid upon, giving type, voltage, etc.

9. AWARD OF CONTRACT: Paragraph 10 of Standard Form 33A, March 1969 Edition is amended to include the following:

a. Selection for contracts will be made from among those qualified hearing aid models which:

(1) Have the lowest cost per point of quality as obtained by dividing the determined cost to the VA by the Index of Characteristics (performance score) earned as a result of the measurements and evaluations, or

(2) May be deemed medically necessary to provide adequate hearing rehabilitation for deafened veterans without reference to their measurement results or cost per quality point.

b. Schedule "A": It is contemplated that awards under this Schedule will be made on those instruments and accessories accepted under Schedule "B" plus, for substitution purposes, any desired additional components usable with transmitters accepted under "COMPLETE INSTRUMENTS".

c. Schedule "B":

(1) It is contemplated that the VA will negotiate contracts for a variety of complete instruments in each of the categories in accordance with the selections indicated in paragraph I, Part I of this bid solicitation.

(2) In addition to the items referred to in sub-paragraph 9a (1) and (2) above, one bone conduction overglass model may be accepted on contract without regard to results of measurements performed under this Program.

(3) No award will be made on instruments under Schedule "B" unless the instruments are available under Schedule "A".

d. BEFORE AWARD OF CONTRACTS, IT WILL BE ASCERTAINED WHETHER EACH BIDDER HAVING ONE OR MORE ACCOUNTABLE MODELS, HAS ALSO SUBMITTED AN ACCEPTABLE BID ON THE SEPARATE HEARING AID REPAIR CONTRACT. NO CONTRACT FOR NEW HEARING AIDS WILL BE APPROVED UNLESS A CONTRACT FOR REPAIR SERVICES IS ALSO APPROVED FOR THE SAME COMPANY.

10. NEW MODELS

a. For the purpose of this contract, a new model hearing device will be:

(1) Any new instrument developed by the manufacturer and designated as such by the assignment of a new model number, or

(2) Any contract model hearing device in which the manufacturer has made mechanical or electronic changes which may alter its performance.

11. SUBMISSION OF NEW MODELS

a. A new model may not be submitted during the contract period unless the manufacturer has a similar model on contract and designates the model as its replacement. The VA reserves the right to determine whether a changed contract model will continue as a contract item or will be classified as a new model as described in paragraph 10a (2).

b. If during the contract period a new model hearing device is developed by the contractor to replace a current contract model, he may submit this aid for testing, together with a supplemental quotation for consideration toward acceptance. All supplemental quotations must be submitted on proper forms which may be requested from the Chief, Marketing Division, Administrative Medical Supplies and Equipment, VA Marketing Center, P.O. Box 76, Moline, Illinois 60141.

c. If the new model is to replace a model which has been accepted under contract, the contractor will be required to continue to furnish the contract item for the duration of the contract, or until such time as the new model is accepted by the VA on contract. If the performance of the new model is equal to or better than the model under contract, and if the cost is no higher than the model being replaced, it will be accepted.

d. If the new model is accepted for consideration, the contractor will furnish three (3) samples, preferably on or before the date of its availability to his dealers. The three (3) complete samples, together with all basic technical data including response curves, power output, battery drain, etc., shall be forwarded to the Chief, Central Audiology and Speech Pathology Program (900/204), VA Hospital, 50 Irving St., W.W., Washington, D. C. 20422. If accepted, one (1) complete sample instrument will be returned to the bidder and the two (2) remaining samples will be retained permanently by the Veterans Administration. At the time samples of a new model are submitted, Supplemental Quotations will be submitted to the Chief, Marketing Division, at the address shown in 11b, above.

e. The contractor agrees to instruct his agents not to demonstrate any new models of hearing devices to veterans until such time as they have been tested and accepted by the VA.

12. RETURN OF MODELS BEING REPLACED: The contractor agrees to accept the return of a maximum of 100 of each transmitter, receiver, cords or tubing (sets of 3), accessories therefore, including extra dummy temples, in stock in clinics and/or the Supply Depot, Miness, Illinois, for each model being replaced by substitution, and allow an amount equal to the original net purchase price, which amount will be deducted from the purchase price of the new models, together with accessories therefore, being purchased for stock. For purposes of this requirement of the contract, hearing aids designed as "rights" and "lefts" will be considered as separate models even though the basic instrument and the model number are the same. In the event the amount to be allowed for the replaced models exceeds the amount to be paid for the replacement models, a check for the difference will be issued to the VA. The total cost for repairing any devices which are not in a condition as good as they were at time of purchase will be deducted from the credit to be allowed the VA for the replaced models. It is understood that all models will be returned within one hundred and twenty (120) days after receipt of the new models by the clinics. Models being replaced will be returned to the factory of the manufacturer as indicated below. The cost of transportation for the return of models being replaced will be assured by the VA unless otherwise indicated by the contractor.

ADDRESS TO WHICH HEARING AIDS BEING REPLACED WILL BE SHIPPED:

13. RETENTION OF NON-CONTRACT HEARING AIDS AND/OR ACCESSORIES: If the contractor is a successful bidder in Contract year 1975, but is not successful in obtaining a contract in Contract Year 1976, he is willing () not willing () to authorize the VA to retain his hearing aids and/or accessories in the VA Audiology clinics for an additional year. If agreeable, we will retain the items with the understanding that the contractor will accept their return (up to 100 of each item) within 60 days after September 30, 1976. The VA will allow 25% of the original purchase price in addition to the cost of necessary repairs, if any, to be deducted from refund required for each complete instrument returned under this special condition.

14. GUARANTEE

a. Hearing devices purchased under this contract must meet the VA performance standards for that model when delivered to the veteran. If an instrument is found to be unsatisfactory due to performance or faulty construction it will be returned to the contractor for correction, adjustment or replacement, if necessary, to give satisfactory results without further charge.

b. All transmitters and receivers shall be guaranteed from defective workmanship and/or materials for a period of two years beginning with the date of issuance to the VA beneficiary, but not to exceed three years from the date the transmitter and/or receiver is delivered to the VA ordering activity.

(NOTE:) The issue date of a hearing device is shown on the notification which is forwarded to contractors when a hearing device is issued to a veteran. If within the guaranty period, a transmitter or receiver is found to be unsatisfactory due to defective workmanship and/or materials, upon return the same will be corrected, adjusted or replaced, if necessary, by the contractor without charge to the VA.

15. INVOICES: Hearing devices purchased hereunder shall be invoiced to the VA ordering office in a manner clearly indicating the schedule under which the purchase was made.

16. CANCELLATION: Delete paragraph 109 of VA Form 10-1131 and substitute the following: This proposal, if accepted shall become a contract and shall remain in force from date of award, through September 30, 1975, unless terminated in whole or in part at the request of either party after thirty days notice in writing.

17. PACKAGING, PACKING AND MARKING OF SHIPMENT OF HEARING AIDS FOR DELIVERY TO THE VA SUPPLY DEPO, HINES, ILLINOIS, 60141:

a. PACKAGING AND PACKING:

(1) A complete aid as defined in Part I, Paragraph 212 will be packed in sufficient size carton to hold the aid, instruction book and accessories, if any, for remailing to the individual clinics. Cartons shall contain adequate cushioning material to prevent damage in transit.

b. MARKING:

(1) Individual cartons containing complete aids as defined in Part I, B with the model number and Federal Stock Number as specified in the purchase order.

(2) Shipping containers shall be marked as follows:

- (a) Name, City and State of consignor
- (b) VA Purchase Order Number
- (c) Gross weight of container
- (d) Hearing Aids - Accessories

(3) In the event more than one shipping container is required, in addition to the packing indicated above, each shipping container shall be marked "1 of 2", "2 of 2", etc.

18. SOLICITATION OF BENEFACTORS: Bidder agrees he will neither directly nor through his dealers solicit benefactors, but will confine these activities to the responsible official of the VA.

EXHIBIT "C"

HEARING AID MEASUREMENTS TO BE MADE BY THE NATIONAL BUREAU OF STANDARDS FOR THE VETERANS ADMINISTRATION

Definition of Random-Noise Signal

The random noise signal used in this procedure is one which has an essentially constant energy per unit bandwidth from 200 Hz to 900 Hz. The higher frequency part of the signal is rolled off with a single RC time constant of 177 microseconds, which places the 3 db down point at 900 Hz. Below 200 Hz the signal level is rolled off at a rate of 12 db/oct. From 200 Hz to 5000 Hz, the acoustical pressure developed is held to this defined curve within $\pm 2 \frac{1}{2}$ db.

1. Saturation Sound Pressure Level

With the volume control turned full on, the random noise signal is applied and the input level is increased until no further increase in the output of the hearing aid is noted. The input and output levels are noted.

2. Gain

With the random-noise input signal at a level of 60 db, the volume control setting of the hearing aid is reduced until its output is 12 db below saturation. If the hearing aid does not have sufficient gain to reach this level with a 60 db input, the maximum gain setting is used. The gain for a pure-tone of 1 kHz at an input level of 60 db is noted.

3. Response versus Frequency

With the volume control set as in section 2 above, and a sound input level of 60 db plus or minus 1.5 db, an automatic recording will be made of the gain versus frequency curve for pure tones from 200 to 500 Hz, in order to measure gain and frequency response. Recordings will be made over the range of 100 to 7000 Hz if the response of the aid extends beyond the narrower limits.

4. Battery Drain

With the volume control set as in No. 2 above, the battery drain will be determined with (a) a random noise signal at a sound input level of 65 db and (b) no sound input.

5. Harmonic Distortion with Volume Control Set as for Response Curve

The harmonic distortion will be measured with sinusoidal input signals and with the gain set as in No. 2 above. The input signal level will be the same as the input level of a random noise signal which causes the output to be 12 db below saturation. Normally, this will be an input level of 60 db. However, for those aids whose output is not as high as 12db below saturation with the maximum gain setting, the random noise input level will be increased

EXHIBIT "G". (CONT'D)

until this output level is reached. The sinusoidal input is then set to that input level. Harmonic distortion measurements will be made at frequencies of 500, 700, and 900 Hz, and at that frequency above 500 Hz where maximum distortion occurs.

Next, the harmonic distortion will be measured with an input 10 db higher than the level used above. Normally, this will be with an input level of 70 db, except as noted above. Frequencies will be as above, with the frequency of maximum distortion determined separately for each level.

6. Signal-to-Noise Ratio

With the volume control as in No. 2 above and an input level of 65 db, the sound pressure output of the hearing aid for a 1000 Hz signal will be noted. Next, in the absence of a signal, the output sound pressure level due to electrical self-noise will be noted. The signal-to-noise ratio will be calculated.

7. Signal-to-Hum Ratio

With the volume control as in No. 2 above, the RMS output sound pressure level due to magnetic field pick-up in the most sensitive direction will be noted at various levels of magnetic field strength. The magnetic field will be composed of a mixture of 60, 180, and 300 Hz in the relative proportions of 100, 25 and 10, respectively. The sound output and field strength will be noted for which it is determined that the hearing aid is operating in a linear region. This sound pressure output will be extrapolated back to a field of the composition noted above, in which the strength of the 60 Hz components would be 1 milligauss. A signal-to-hum ratio will be calculated, using the signal of No. 6, above. This test will only be performed on instruments which have significant hum pick-up as determined by preliminary screening.

Outline of Procedure for Statistical Analysis of Data

The performance of each of the three instruments representing a model will be considered separately in the analysis of data. The distribution of raw scores for each of the subtests is converted to a common scale with a specified mean and standard deviation. A conversion is necessary since the scores from the various subtests represent different measurement scales, ranges, and distributions. The converted scores can then be treated by routine arithmetic manipulation. The conversion from raw score to derived score is accomplished by using the following formula (Guilford, 1965):

$$X1 = (SD1/SD2) (X2) - (SD1/SD2) (M2) - M1$$

- Where X1 = unknown score on the standard scale corresponding to X2
X2 = a raw score
M1 = mean of X1 (always 20.0)
M2 = mean of X2
SD1 = standard deviation of the standard score (always 10.0)
SD2 = standard deviation of raw scores

Each scaled score is then weighted by multiplying it by a factor which represents the value of the that subtest to the total measurement program. In order that subtests to be viewed in such manner that the higher the score the better the performance, it is necessary to reverse standardized scores for some subtests. The scores which are reversed are those for uniformity of slope, product uniformity, and all distortion scores. Reversal is effected by subtracting the standard score from 40. In these instances, weighting is accomplished after the distribution of raw scores has been standardized and reversed. The raw test data obtained by the National Bureau of Standards will be analyzed using the weights appearing below:

<u>Harmonic Distortion</u>	<u>60-db Input</u>	<u>70 db Input</u>
500 Hz	0.15	0.15
700 Hz	0.15	0.15
900 Hz	0.15	0.15
Frequency of Maximum distortion	0.15	0.15
Signal-to-noise Ratio	0.3	
Index of Effectiveness	1.9	
Uniformity of Slope	1.0	
Product Uniformity	0.6	

EXHIBIT "1" (Cont'd)

With the exception of Index of Effectiveness, Uniformity of Slope and Product Uniformity, a description of the subtests may be found in the American Standard Methods for Measurement of Electroacoustic Characteristics of Hearing Aids (ANSI S 3.3-1960, Lybarger, 1961 b and c) or the Hearing Aid Industry Conference (HAIC) procedures (Lybarger, 1961a). The Index of Effectiveness is based upon the instrument's gain, its frequency response, the severity of the hearing impairment it should counteract, and selected dynamic characteristics of speech. The concept of the index of Effectiveness was developed by Carhart and will be the subject of a published paper. Copies of a paper explaining the principles of Index of Effectiveness are available from the Chief, Central Audiology and Speech Pathology Program, VA Hospital, Washington, D. C.

The Uniformity of Slope subtest was devised to determine how well the hearing aids meet the requested gain-frequency curve of 6 db per octave rise. The key points at which measurements are made are the 20 midpoints of bands research has shown to be equal in contribution to full intelligibility of speech (Kryter, 1950, 1962). Using a 6 db per octave floating base line, gain values for the 20 band midpoints are ranked from highest to lowest, and the median of the ranking obtained. A line 5 db down from the median value is drawn utilizing a slope of 6 db per octave. Only those key points above this line are employed in the computation. The differences between any key points occurring above this line and the median values are summed without regard to sign. The mean of the differences constitutes the instrument's raw score. This computation is made for every instrument in each power category. The raw scores are then converted to a derived scale, reversed and weighted.

The Product Uniformity subtest was designed to provide a measure of the performance similarity among the three samples of each model. Average gain and average saturation SPL are included in the subtest by converting these values to derived scales and giving each a weight of 0.6. The range between the highest weighted score and lowest weighted score for each subtest, including gain and SSPL is summed and becomes the Product Uniformity raw score value for each model. The distribution of raw scores is then converted to the derived scale, reversed, and weighted. For this subtest there is only one score for each model. The Index of Characteristics for each model is the sum of the mean weighted scores from the following subtests: Harmonic distortion, Signal-to-Noise Ratio, Index of Effectiveness, Uniformity of Slope, and the weighted score for Product Uniformity. Hearing aids will be rank ordered by the Index of Characteristics. The scoring system has been so designed that the mean of the distribution for each power category is 100.

Hearing aid models having Indices of Characteristics above 100 are considered acceptable to the Veterans Administration. It is recognized that certain types of hearing aids, such as in-the-ear models or models with restricted frequency range, will not score well on these tests in comparison with other instruments. Therefore, in order to accomplish a more realistic appraisal of their relative performance, modification of the procedures described above may be necessary. The results of the VA Hearing Aid Test Program must be viewed in relation to the needs of the hearing-impaired population to be served and the specific methods of measurement. Any questions should be referred to Dr. G. Donald Causey, Chief, Auditory Research Laboratory, VA Hospital, 50 Irving Street, N.W., Washington, D. C. 20422.

It is understood that components conforming to these measurements (are) (are not) available from the contractor's stock.

EXHIBIT "H"

THIS FORM MUST BE COMPLETED FOR EACH EYEGLASS HEARING AID MODEL SUBMITTED. Using the schematics below, the manufacturer will indicate by appropriate markings, the particular areas to which heat and/or pressure may be applied to shape and adjust frames to fit wearer. Specific instructions will be given regarding the following:

1. Recommended methods for bending temples at hinges and other areas:
2. Where and what type of heat (moist, dry, direct, etc.) or pressure may be applied:
3. Specific instructions for lens insertion and removal:
4. Potential for reduction or enlargement of bridge size:

(This Exhibit May be Reproduced as Needed)

SUGGESTIONS FOR COMPLETING PRICING SCHEDULES:-

Schedules are for use in pricing models you wish to submit for consideration for the different types and should be returned with your bid forms.

On first line, insert make and model number.

For on-the-body or eyeglass types, if submitting same model in bone conduction, use another set of forms and change air to bone.

On second set also change item number to next unused number (such as 1 to 6).

Cross out features not applicable to the particular model, such as deletion of headband if other than bone conduction.

If telephone pick-up feature is not available, cross out this reference.

If submitting more than one model of same type, change item number on additional sets of forms to next unused number. (For example - 1 thru 1E may become 6 thru 6E for second model, etc.)

If instrument takes two batteries to operate it, change number of batteries to 6 for schedule A.

For on-the-body aids, if garment carrier is not commercially available from your firm, delete item.

For IE or EG types, indicate if instruments come for fitting left or right, or interchangeable.

Pricing schedules should be completed and returned in 3 copies. Additional copies are available from issuing office upon request, or photo copies may be used.
