A BIBLIOGRAPHY OF THE NBS ELECTROMAGNETIC FIELDS DIVISION PUBLICATIONS

Edited by
Kathryn A. Gibson and Charles K. S. Miller

This bibliography lists the publications of the personnel of the National Bureau of Standards Electromagnetic Fields Division in the period from January 1982 through December 1983.

Key words: antennas; electromagnetic interference; electromagnetic metrology; microwaves; noise; non-ionizing radiation; radiation hazards; waveform metrology.

INTRODUCTION

This bibliography updates and supplements NBSIR 80-1635 which lists the publications of the Electromagnetic Fields Division from January 1970 through December 1979, and NBSIR 82-1673 which lists publications from January 1980 through December 1981. The publications listed in this supplement were published in 1982 and 1983.

The Electromagnetic Fields Division was formed during the reorganization of NBS in April 1978. The Division develops measurement methods and standards, and provides metrological support for: antenna systems, noise measurement equipment, electromagnetic interference, electromagnetic environmental characterization equipment especially for fields near sources or a near-field like condition, electromagnetic emission and immunity (or susceptibility) testing equipment, and waveform metrology. The editors have attempted to include all work published by the staff members of the Division in the period from January 1982 through December 1983. There are a few exceptions. Relevant work performed by authors prior to joining this Division or work by authors who have left this Division has been included because of its special significance. A miscellaneous category includes general publications. A few references are listed in more than one category where appropriate.

There are several other information sources that may be useful to the reader who is interested in activities at NBS connected with electromagnetic metrology. Companion bibliographies list publications of the Electromagnetic Technology Division. Topics include metrology for: microwave and millimeter wave circuits, laser systems, optical communication equipment, systems using transient or pulsed electromagnetic phenomena, cryoelectronics, superconductors and other unusual electrical engineering materials. Three bibliographies of the publications of the former Electromagnetics Division have been published: NBSIR 73-320 (July 1972-June 1973); NBSIR 74-395 (July 1973-June 1974); NBSIR 75-818 (July 1974-June 1975). These were preceded by a series of unpublished reports (edited by H. M. Altschuler) that cover the period back to 1956. An excellent summary of the whole field of electromagnetic metrology as it stood in 1967 was published as a special issue of the IEEE Proceedings (volume 55, June 1967). Advances in the following decade were described in another special issue of the same journal (volume 66, April 1978).

A NOTE ON ABBREVIATIONS

Most readers will be familiar with the commonly used abbreviations for the names of the various professional journals that appear in this bibliography. There are also several publication series that are peculiar to NBS and call for explanation. They are:

NBSIR - NBS Interagency/Internal Report
NBS-TN - NBS Technical Note
NBS-SP - NBS Special Publication
NBS-MN - NBS Monograph
