ABSTRACT

The Department of Defense is placing increasing emphasis on the use of commercially available or branded products in lieu of Military or Federal Specification products in building construction and maintenance. However, there are few industry consensus specifications for paints and coatings. Although non-government consensus coating specifications are being developed, a General Services Administration Federal Supply Schedule provides an additional mechanism through which Federal agencies can obtain commercially available coatings. Specifically, the use of a Multiple Award Federal Supply Schedule in a military painting contract is discussed in this report. Procedures for obtaining the lowest cost material that would meet the Government’s minimum needs are addressed. A description of need based upon performance criteria for the specific end use, that would be included in a painting contract, is suggested. Advantages and disadvantages of using a Multiple Award Schedule in painting contracts are enumerated. Advantages include providing a mechanism for using new coating technology, taking advantage of manufacturer’s technical support and knowledge of regulatory issues, and decreasing the need for revising or preparing new coating specifications. Disadvantages include the additional effort needed to revise guide specifications, train both coating users and suppliers in new procedures and the lack of performance criteria for some end uses. Despite the disadvantages cited, it is concluded that the advantages outweigh the disadvantages and that use of a Multiple Award Schedule in painting contracts is feasible.

1. **INTRODUCTION**

During the past few years, the Department of Defense (DoD) has placed increased emphasis on the use of commercially available or branded products in lieu of military or Federal specification products in facility construction and maintenance [1]. For paints and coatings, the use of commercially available products has been limited because of the lack of industry or other non-government material specifications. There are no non-government coating specifications for residential paints and only a few for industrial paints. Further, some of these specifications are not appropriate for use in areas with volatile organic compound (VOC) content regulations.

Although efforts to write non-government consensus paint specifications are being supported by members of the Federal community, progress is slow. A General Services Administration (GSA) Federal Supply Schedule provides an additional mechanism which could be used to help Federal agencies obtain commercially available coatings. This mechanism is used by GSA to provide Federal agencies with many products and services. The objective of this report is to determine the feasibility of using a Multiple Award Federal Supply Schedule in conjunction with government painting contracts.

2. **GENERAL DESCRIPTION OF A MULTIPLE AWARD SCHEDULE**

A Multiple Award Schedules (MAS) is one of four types of Federal Supply Schedules [2]. The Federal Supply Schedule program, directed and managed by the General Services Administration, provides Federal agencies with a simplified process for obtaining commonly used, commercially available, supplies and services at prices associated with volume buying. Multiple award schedules cover contracts made with more than one supplier for comparable supplies and services. Contractors catalogs and price lists are used with the schedules to prepare delivery orders. For the products of the same generic type on a given schedule, the quality and cost may vary [2].

Consistent with the Competition in Contracting Act, Public Law 98-369, Federal Supply Schedules are competitive [3] in that:

a. All responsible sources are allowed to participate in negotiations.

b. Contracts are awarded to firms which meet the minimum needs of one or more Federal agencies. Each ordering agency is responsible for determining its minimum needs and placing an order with the Multiple Award Schedule contractor which can satisfy the need at the lowest cost.

c. The method of pricing and ordering against a Multiple Award Schedule guarantees that resultant contracts and orders constitute the lowest overall cost alternative to meet the minimum needs of the Government. Prices are negotiated based on the offeror’s most favored customer discounts extended to commercial customers under terms and conditions similar to those established by the Multiple Award Schedule.
d. Contract prices have been determined to be fair and reasonable based on the Government’s competitive position with the contractors, other customers and the prices of similar products of other suppliers.

GSA’s procedures for developing a MAS meet Federal regulations for competition, synopsizing, determining fair and reasonable pricing, and meeting small business-small purchase set-asides [2]. Thus, according to 48 CFR 8.404, contracting officers need not further address these elements when placing an order under a MAS.

2.1 Description of Multiple Award Schedule for Latex Paints

The General Services Administration has issued a MAS for paints, 10SC 8006, extending from May 1, 1988 to April 30, 1991, as shown in Appendix 1. Both interior and exterior architectural latex primers and finish coats are included. Three gloss levels are available for each type of finish coat. Primers for exterior use are also included. Sixteen to 17 interior products and 10 to 15 exterior products of each type are listed on the schedule. The availability of each product in each of the 13 geographic zones is defined. Both local and nation-wide suppliers have contracted with GSA to place their paints on the schedule.

Some material and material-related requirements have been placed on these products. They include a limit on lead content, prohibition of use of reclaimed halogenated aliphatic hydrocarbons, a method for determining fill, and submission of commercial catalogs or price lists, or both, which show established catalog or market prices (special catalogs printed for the purpose of the MAS are not acceptable).

2.2 Recommendations on Use of Multiple Award Schedules

In response to executive and congressional insistence to increase the use of commercial materials, as opposed to specification materials, the Office of The Secretary of Defense is urging procurement of commercial materials [4]. Use of the Federal Supply Schedule by DoD could help to meet this goal. Procedures for using a FSS were changed in 1991 to make the use of schedules easier and to increase the limit above which documentation is required when an order is placed for other than the lowest priced item [5]. The new limit above which justification for non-use of the lowest cost item is required is $2500, or 10 percent of the small purchase threshold (48 CFR 1-13.106 [6]).

3. USE OF MULTIPLE AWARD SCHEDULES IN PAINTING CONTRACTS

Most of the paint used to maintain military facilities is purchased by a painting contractor rather than directly by the Government. 48 CFR, Ch. 1 Part 51 prescribes policies and procedures for the use of Government supply schedules by contractors [7]. Part 51.101 states, "If it is in the Government's interest, and if supplies or services required in the performance of a Government contract are available from Government supply sources, contracting officers may authorize contractors to use these sources . . . in performing (1)
Government cost-reimbursement contracts and (2) other types of negotiated contracts." Procedures authorizing use of Government supply sources by contractors are described in 48 CFR 51.102 [7].

In addition to these regulatory requirements, material requirements would also be required to ensure that a contractor purchased a material from the schedule that could be expected to meet the minimum needs of the government. A mechanism by which this could be accomplished is discussed below.

3.1 Determining Job-Specific Requirements

As stated above, according to the regulation 48 CFR 8.405 for orders in excess of $2500, the ordering agent is required to buy the material having the lowest delivered price available on a schedule unless a justification can be made that the material does not meet the need. For orders less than $2500, no justification is needed to order a material other than the one having the lowest cost. Justifications for not ordering the lowest cost item can be based on delivery time, special requirements (e.g., environmental regulations), compatibility with existing systems, and special features offered by a product that are required for effective program performance [2]. Thus, materials other than the lowest price could be obtained when there are job-specific requirements that are not met by the lowest price material.

Currently, job-specific requirements enter into a painting contract through material and guide specifications. Although these are not stated specifically in manuals or guide specifications, they are alluded to in guide specifications by recommending particular material specifications for specific end uses. In addition, guidelines for performance requirements developed by non-government associations and the coating industry can also be drawn upon to develop job-specific requirements. Thus, information is available to prepare job-specific requirements.

3.1.1 Examples Using The Latex Paint Multiple Award Schedule

The Multiple Award Schedule for latex paints describes end use according to interior or exterior, primer or topcoat, and gloss level. To obtain material that would meet specific job requirements (which may not necessarily be obtained from the lowest cost material), additional performance requirements would be needed, based upon the end use. For example, if a family room were to be painted, easy removal of soil and stains would be essential and a low gloss paint may be desired. Hence, a specific requirement for excellent scrubbability and low gloss level would be included in the requirements. However, if the paint were being used to restore the appearance of a concrete warehouse, a material with good hiding would be essential and scrubbability would be of lesser importance. In this case, a requirement for one-coat hiding would be included in the requirements.
3.2 Application to a Guide Specification

Most military facility painting is done under a painting contract prepared using information obtained from a military guide specification. For example, the Navy specification is NFGS 09910 for painting of military facilities, while the Army specification is CEGS 09900. (A revision of the current documents is being developed by all three services and will be presented for consideration as a Tri-Service Specification). Currently, the guide specifications recommend coatings based upon Federal or military specification coatings. Particular specifications are chosen by people preparing the guide specifications to meet the intended end use. The expected performance of the material is based primarily upon experience with a given prescriptive formulation specification (the required formulation is given in the material specification) or the performance requirements in a coating specification. If materials from a MAS were to be used in a painting contract, a different procedure for specifying material requirements would be needed, since the lowest cost material may not meet the job requirements. One possibility would be to develop a set of general and specific requirements for various end uses. General requirements would be those expected of all coatings and would include such factors as application, drying and curing properties. Specific requirements would be directly related to end use and provide a mechanism of specifying high-performance coatings, if needed, or low-cost, limited service life material, if desired. Another possible procedure for specifying material requirements would be to require that a material meet a given material specification. Consensus, non-government specifications would be the preferred type of specification, since they often describe commercially available materials and do not rely upon Government staff to maintain.

As illustrated above, there are several feasible possibilities for including performance requirements in guide specifications and painting contracts. The major disadvantage in changing from material specifications to performance requirements would be the effort needed to revise the documents and train personnel in their use.

4. DISCUSSION

The use of MAS in government contracts is possible under the current Code of Federal Regulations (48 CRF 1-51.102). Advantages of using the MAS to procure materials in lieu of Federal and Military Specifications in situations in which there are no military-unique requirements include:

- reducing reliance on military and Federal paint specifications as encouraged by the Federal Government
- providing a mechanism for using commercially available materials
- stimulating development and use of sound performance criteria
making use of paint manufacturer's responsibility for and knowledge of procedures for complying with environmental regulations

facilitating the use of new technology

decreasing the need for new or revised specifications

obtaining benefits associated with brand name

improving technical support from a contractor.

On the other hand, there are disadvantages. These include:

implementation would require substantial revision of guide specifications and training for both suppliers and users

resolution of painting problems may be more difficult

performance criteria have not been completely developed for some end uses.

Overall, the advantages appear to out weigh the disadvantages, particularly in encouraging innovation and promoting the performance concept. The major efforts required to implement the use of MAS in painting contracts would be to develop performance-based job specific coating requirements and train the staff in the use of revised guide specifications. It is anticipated that once the initial work to revise the guide specifications and train the staff had been completed, the amount of effort to maintain the system would significantly decrease.

5. CONCLUSIONS AND RECOMMENDATIONS

Based upon this study, it is concluded that there appear to be important advantages in using a Multiple Award Schedule in specifying coatings in painting contracts, although rather major changes in current procedures and documents would be required. Documents would need to be revised and training design and contracting staffs, as well as suppliers of coatings, would be required. However, it is concluded that the use of Multiple Award Schedules in facility painting contracts is feasible. It is recommended that, as a first step, material performance criteria for specific end uses be developed. This is an essential step to assure that the coating obtained from a MAS will meet the user's need.
6. ACKNOWLEDGEMENTS

This investigation was conducted under the sponsorship of the Tri-Services Facilities Coatings Committee with joint sponsorship by the US Army, Engineering Housing Services Center; US Navy, Naval Facilities Engineering Command; and US Air Force, Air Force Engineering and Services Center.

GENERAL INFORMATION

GEOGRAPHIC COVERAGE
This schedule covers the 48 contiguous states and Washington, DC; also Alaska, Hawaii and Puerto Rico, if indicated in the contractor’s price list.

MANDATORY USERS
All departments and independent establishments, including wholly owned government corporations, in the executive branch of the federal government except DOD and the US Postal Service.

INCORPORATION OF FORMS
Federal Supply Schedules incorporate the following form(s) containing provisions and/or contract clauses by reference, with the same force and effect as if they were included in full text. Upon request, the contracting officer will make the forms available. Questions concerning the forms should be directed to the contracting officer.

GSA Form 2891, Federal Supply Schedule clauses
GSA Form 3507, GSA Supply Contract clauses

PUBLICIZING CONTRACT ACTIONS
The solicitation and resulting contracts of this Federal Supply Schedule have been synopsized in the Commerce Business Daily and satisfy the requirements of the Competition in Contracting Act (Pub L 98 369) and FAR Part 5, Publicizing Contract Action.

ORDERING INFORMATION
Ordering offices should review this schedule to determine: Special Item Numbers, item names and descriptions, contractor addresses and telephone numbers and contract numbers and contract effective dates.

Small Requirements/Minimum Order
See contractor’s catalog/price list under “Small Requirements” for the lowest value order that will be accepted. Notwithstanding the above, it is optional on the government to place orders below $300 with the schedule contractor. However, the contractor is obligated to accept any order between the minimum and maximum order limitations.

Colorants and Formula Booklets
Colorants and Formula Booklets are available from the following firms:
Devoe & Reynolds Co
Farwest Paint Mfg Co
The Glidden Co
Hyklas Paints Inc
The Sherwin Williams Co

Payment by Credit Card
Definitions. “Government Commercial Credit Card” means the uniquely numbered credit card issued by the contractor under single award schedule, Federal Supply Schedule IG 615, Governmentwide Commercial Credit Card Service, to named individual government employees to pay for official government purchases.

“Oral delivery order” means an order placed orally, either in person or by telephone, which is paid for by government commercial credit card.

At the option of the government and if agreeable to the contractor, payments of $25,000 or less for oral or written delivery orders may be made using the government commercial credit card.

The contractor shall not process a transaction for payment through the credit card clearinghouse until the purchased supplies have been shipped or services performed. Unless the cardholder requests correction or replacement of a defective or faulty item in accordance with other contract requirements, the contractor shall immediately credit a cardholder’s account for items returned as defective or faulty.
For the purpose of this schedule, zones consist of geographic areas specified below. See the “Contractors” section to determine which zones were awarded to each individual contractor.

**Zone 1**
Connecticut, Maine, Massachusetts, New Hampshire, Rhode Island and Vermont.

**Zone 2**
New Jersey and New York.

**Zone 3**
Delaware, Maryland, Pennsylvania, Virginia, Washington, DC and West Virginia.

**Zone 4**
Alabama, Florida, Georgia, Kentucky, Mississippi, North Carolina, South Carolina and Tennessee.

**Zone 5**
Illinois, Indiana, Michigan, Minnesota, Ohio and Wisconsin.

**Zone 6**
Iowa, Kansas, Missouri and Nebraska.

**Zone 7**
Arkansas, Louisiana, New Mexico, Oklahoma and Texas.

**Zone 8**
Colorado, Montana, North Dakota, South Dakota, Utah and Wyoming.

**Zone 9**
Arizona, California and Nevada.

**Zone 10**
Idaho, Oregon and Washington.

**Zone 11**
Hawaii.

**Zone 12**
Alaska.

**Zone 13**
Puerto Rico and the Virgin Islands.

**Abstract**

The Department of Defense is placing increasing emphasis on the use of commercially available or branded products in lieu of Military or Federal Specification products in building construction and maintenance. However, there are few industry consensus specifications for paints and coatings. Although non-government consensus coating specifications are being developed, a General Services Administration Federal Supply Schedule provides an additional mechanism through which Federal agencies can obtain commercially available coatings. Specifically, the use of a Multiple Award Federal Supply Schedule in a military painting contract is discussed in this report. Procedures for obtaining the lowest cost material that would meet the Government's minimum needs are addressed. A description of need based upon performance criteria for the specific end use, that would be included in a painting contract, is suggested. Advantages and disadvantages of using a Multiple Award Schedule in painting contracts are enumerated. Advantages include providing a mechanism for using new coating technology, taking advantage of manufacturer's technical support and knowledge of regulatory issues, and decreasing the need for revising or preparing new coating specifications. Disadvantages include the additional effort needed to revise guide specifications, train both coating users and suppliers in new procedures and the lack of performance criteria for some end uses. Despite the disadvantages cited, it is concluded that the advantages outweigh the disadvantages and that use of a Multiple Award Schedule in painting contracts is feasible.
