NATIONAL TYPE EVALUATION PROGRAM

NIST Indices of NTEP Device Evaluations

The indices in this edition replace those in all previous editions and supplements of NCWM Publication 5 and previous editions of NISTIR 6304. The indices list all ACTIVE, EFFECTIVE, AND INACTIVE Certificate of Conformance numbers issued since January 1, 1986. In the index under "Pub 5 Edition" column, the number indicates the edition of Publication 5 in which the facsimile certificate may be found. An "I" in that column indicates that the certificate may be found on the Internet at www.nist.gov/ntep.

Introduction to NIST Indices of NTEP Device Evaluations

1. General

On October 1, 2000, the National Institute of Standards and Technology Office of Weights and Measures (NIST OWM) ceased management of the National Type Evaluation Program (NTEP). The following indices reflect the status of the program at that time; the policies stated reflect those while under NIST management.

At the request of the States and in the interest of serving industry, NIST OWM initiated a policy in January 1998 of making all newly-issued NTEP Certificates of Conformance (CCs) available on the Internet. This policy was enthusiastically received and accepted. Thus, at the July 1998 Annual Meeting of the National Conference on Weights and Measures (NCWM), the NTEP Committee decided to discontinue the formal publication of NCWM Publication 5 in lieu of certificates being available on the Internet. CCs on the Internet may be accessed at www.nist.gov/ntep. It is the intent of NIST and the NCWM to have all NTEP CCs on the Internet by July 1999. The Fifth through Tenth Editions of NCWM Publication 5 are presently available for purchase from the NCWM. Hard copies of CCs can also be obtained from the manufacturer or from your local weights and measures jurisdiction.

Many States and manufacturers, however, still find the need to have a "hard" copy of indices of NTEP CCs. The listings in the indices that follow include all CCs that have been issued from January 1, 1986 through January 18, 2000. The last column in the indices of Sections 3, 4, and 5 lists the edition of NCWM Publication 5 where a hard copy of the certificate can be found. All CCs issued after January 1, 1998 will have an "I" in that column to indicate that the certificate may be found on the Internet. The indices also list EFFECTIVE CCs. EFFECTIVE CCs will not be placed on the Internet until they are signed by the Chief of the Office of Weights and Measures and become ACTIVE.

The policy of the National Institute of Standards and Technology is to use metric units of measurement in all of its publications. Since this publication is an index of devices evaluated by the National Type Evaluation Program, and many devices listed here are not offered by the manufacturer in a metric version, the information is listed as submitted by the manufacturer and may contain references only to inch-pound units.

2. Guide to Certificate Numbers and Letters

CCs are assigned numbers which identify the year the CC was issued followed by a sequential three digit number. For example, CC number 91-083 was the 83rd CC number assigned in 1991.

CC numbers may also be followed by one or more of the following identifications:

- A Addendum
- P Provisional
- PN Pre-NTEP
- Amended Amendment

A Identifies an addendum to a CC when changes are made to the CC's contents. A number following the letter "A" designates the number of times an addendum has been issued for the CC. Inconsistencies within the CC format may exist in CCs generated in previous years before firm NTEP policy was established. Standard practice now dictates the addendum sequence shown in the following examples: 91-083, 91-083A1, 91-083A2, 91-083A3, etc.

- P Identifies a provisional CC. A provisional CC is issued based on the manufacturer's data when an NTEP participating laboratory performing type evaluation cannot fully test the device. The addenda sequence for provisional CCs is as follows: 91-083P, 91-083PA1, 91-083PA2, 91-083PA3, etc. When a provisional CC is upgraded to a full CC the P suffix is dropped and the standard addendum sequence begins as follows: 91-083, 91-083A1, 91-083A2, 91-083A3, etc. Provisional and full CCs are equivalent in stature; provisional CCs do not reflect substandard devices. Provisional CCs indicate an inability on the part of NTEP to conduct the complete list of tests specified for the device.
- PN Identifies a provisional Pre-NTEP CC which has been issued based on the NTEP policy of accepting results of device type evaluations conducted by State jurisdictions before the NTEP program was established.
- Amended Identifies an amended CC. In previous years, changes were made to CCs to correct errors or for editorial purposes. In these cases the CC was identified as 91-083 Amended, and, if superseded, the "Amended" was dropped in favor of "A" for an addendum. The use of the term "Amended" has been dropped and replaced by the "A"; however, older CCs may still be identified as "Amended". In the "Index of Device Evaluation" listings in this publication, "Am" is used in place of "Amended".

3. Certificate Status

The status of Certificates of Conformance (including pre-NTEP and provisional certificates) listed in Publication 5 is identified with one of the following designations:

- ACTIVE In force with a hard copy of the CC issued and distributed.
- EFFECTIVE Equivalent to ACTIVE, but a hard copy of the CC has not yet been issued and distributed. Therefore, a hard copy cannot be included on the Internet.
- INACTIVE A CC which was previously ACTIVE but the manufacturer has chosen to no longer manufacture the device for commercial use (applications where Handbook 44 applies) or pay the annual maintenance fee. Devices already manufactured, installed or in inventory, but not yet sold, may be used, sold, repaired, and resold, under an Inactive Certificate of Conformance. **An Inactive CC does not invalidate those devices already installed or in the distribution pipeline as does a "Withdrawn" CC.** As of May, 1993 this also identifies the status of provisional load cell CCs for which full CCs were not pursued by the manufacturer. If the status of a certificate is identified as INACTIVE in the listings, the status will be followed by the date the manufacturer declared the certificate was INACTIVE. This means that no devices covered by the certificate will be manufactured for commercial use after that date.
- MULTI CC These certificates are ACTIVE CCs which have been issued to recognize an optional feature(s) for equipment listed on a number of different CCs. For example, a MULTI CC might be issued to recognize the use of a cash acceptor option on multiple different models of retail motor fuel dispensers, each of which is covered by an existing CC. MULTI CC addenda are issued as a cost-effective alternative to revising many separate CCs to recognize a single option.

A maintenance fee is not assessed for MULTI CC certificates; however the manufacturer must pay a maintenance fee on the CC issued to the basic device in order to maintain it as an ACTIVE CC.

- **WITHDRAWN** A certificate that has been found to have deficiencies in the type or when production of devices does not meet type. **The certificate is no longer valid**, and devices covered under the certificate may no longer be manufactured or remanufactured for commercial applications. A Withdrawn CC invalidates those devices already installed and/or in the distribution pipeline.

4. Copies of Certificates

Copies of all ACTIVE Certificates of Conformance issued from January 1, 1986 through December 31, 1997 are included in the Fifth through Tenth Editions of Publication 5. Beginning January 1998, all ACTIVE CCs may be accessed on the Internet at www.nist.gov/ntep. When an EFFECTIVE CC is an addendum, a hard copy of its previous CC is included in one of the previous editions or may be found on the Internet as indicated in the last column of the indices.

5. Guidelines for When Certificates are Required

Each State determines which devices require an NTEP CC. However, based upon the Handbook 44 requirement G-A.6. of the General Code and the policies established through NTEP, the following guidelines are usually applicable after the date the State requires devices to have NTEP CCs. In general, NTEP conducts evaluations only on those types of devices for which type evaluation criteria have been established. If NTEP CCs are not available for some types of devices or for "one-of-a-kind" devices, the field enforcement official should conduct a more extensive initial inspection of these devices and apply all applicable Handbook 44 requirements during the field inspection.

- Devices (1) purchased or loaned for commercial use, (2) noncommercial devices subsequently placed into commercial use, and (3) devices used for enforcement of highway weight enforcement laws are generally required to have an NTEP CC. "One-of-a-kind" devices must have prior approval by the State Director of Weights and Measures. Devices installed before the State required devices to have NTEP CCs may have been "grandfathered" by a State prior to its adoption of NTEP requirements; check with the State Weights and Measures Director.
- Main elements added to an existing device, such as the replacement of a weighbeam with a load cell and digital indicator, must have an NTEP CC, unless there are no NTEP CCs for the type of replacement elements installed.
- An NTEP CC applies only to the specific design (model, type, series, or family) of a specific manufacturer. The parameters for a particular family of devices are defined on the CC.
- A CC does not apply to a similar device made by another manufacturer even if the design is copied from a device with a CC because the quality control aspects and any specialized manufacturing techniques may not be a part of the process of the other manufacturer. That device must be submitted for a type evaluation.
- A company that is marketing a device (e.g., scale, indicator, load cell, etc.) from a manufacturer and relabeling the device under its own name must submit a separate request for a CC. The request must include a statement that, except for the change in proprietary markings, the device is not changed from the original design. The original manufacturer must also send an authorization letter.
- If a company or individual buys NTEP load cells and an NTEP indicating element and then manufactures a scale from the parts, the complete scale must be submitted for type evaluation to assess its performance characteristics for compliance with Handbook 44. A fully electronic scale system consists of three main elements: an indicating element, load cell or cells, and a weighing/load-receiving element.
- If a company or individual makes changes to a device to the extent that the metrological characteristics are changed, that specific device is no longer traceable to the NTEP CC.

- If companies or individuals repair or remanufacture a device, they are obligated to repair or remanufacture it consistent with the manufacturer's original design; otherwise, that specific device is no longer traceable to the NTEP CC.
- Load cells from the same or a different manufacturer may be substituted into a scale provided that the load cells used in the scale originally were covered under a separate CC and the load cells to be substituted: (1) have been evaluated separately and have a CC; (2) have as many or more verification scale divisions for the same application as the load cells previously used in the scale; (3) have a minimum verification scale division that is suitable for the application; (4) are the same basic type as the load cells being replaced; (5) can be placed in the scale without modification to the basic design of the load cell mounting assembly; and (6) have a capacity that is greater than or not less than 85 percent of the capacity of the original cell.
- If a company modifies the device by replacing a lever system with load cells, complete NTEP evaluation on the modified type is required in order for the device to be covered by an NTEP CC.
- If a company converts a device from mechanical to electro-mechanical (i.e., installing a load cell into a steelyard rod), the change is considered a modification of type and is covered by the CC without additional testing.
- If a company wants to convert a vehicle scale to include an optional application for use as a livestock scale, the application as a livestock scale must be listed on the CC. The request must be on the application when it is submitted for testing, or an application must be submitted to add the livestock scale option to an existing vehicle scale CC. For the evaluation of a *new* vehicle scale with a livestock scale option or an addition of the livestock scale option to an *existing* CC, evaluation of the livestock scale must be performed.
