## **Abstract**

In support of marine monitoring measurement programs, the National Institute of Standards and Technology (NIST) conducts yearly interlaboratory comparison exercises to provide one mechanism for participating laboratories/monitoring programs to evaluate the quality and comparability of their performance in measuring selected organic contaminants in environmental samples. In this report, results of the 2002 exercises of the NIST Intercomparison Exercise Program for Organic Contaminants in the Marine Environment are described in which selected polycyclic aromatic hydrocarbons (PAHs), polychlorinated biphenyl (PCB) congeners, and chlorinated pesticides were determined in Marine Sediment XI exercise material, and selected PCB congeners and chlorinated pesticides were determined in Fish Homogenate V exercise material. The analytical methods used by each participating laboratory in this performance-based program are also summarized.

## Introduction

The preparation and distribution of two materials, Fish Homogenate V (QA02FSH5) and Marine Sediment XI (QA02SED11), used in interlaboratory comparison exercises in 2002 for the National Institute of Standards and Technology (NIST) Intercomparison Exercise Program for Organic Contaminants in the Marine Environment and the results of these exercises are described in this report. The analytical methods used by each participating laboratory are also summarized.

Tools and mechanisms for the assessment of data produced by laboratories providing environmental analyses are critical because decision-making based on inaccurate results or data of unknown quality can have significant economic and health consequences. NIST provides a variety of activities in support of environmental monitoring programs for organic contaminants. The largest of these programs was initiated and funded in part for 12 years (until 1999) by the National Oceanic and Atmospheric Administration (NOAA) National Status and Trends (NS&T) Marine Monitoring Program [1,2,3]. The Environmental Protection Agency (EPA) Environmental Monitoring and Assessment Program (EMAP) also participated in the NIST/NOAA NS&T effort for a number of years. Private-sector and other laboratories that could not be accommodated under the NOAA, EPA, and NIST funding have reimbursed NIST for participation costs and have participated in these exercises and workshops as part of the NIST Intercomparison Exercise Program for Organic Contaminants in the Marine Environment. NIST is now continuing this program on a pay-to-participate basis. Through this program, NIST provides mechanisms for assessing the interlaboratory and temporal comparability of data with the goal of improving measurements for the monitoring of organic contaminants such as polycyclic aromatic hydrocarbons (PAHs), polychlorinated biphenyl (PCB) congeners, and chlorinated pesticides in bivalve, sediment, and fish samples. This program includes the development of improved analytical methods, production of needed NIST Standard Reference Materials (SRMs) and other control materials, conduct of annual interlaboratory comparison exercises, and the coordination of workshops to discuss the results of these exercises and to provide a forum for cooperative problem-solving efforts by participants. Current participants represent multi-laboratory monitoring programs as well as a number of individual programs, and include federal, state/municipal, university/college, private sector, and international laboratories. In this performance-based program, each participating laboratory uses its current methods for analysis of similar materials that it would use for its program customers. The target analytes are listed in Table 1.

For the annual intercomparison exercises, samples of two natural-matrix, homogeneous materials derived from the marine environment that have not been fortified with any of the target analytes are analyzed by the participating laboratories. Typical materials, such as mussel or fish tissue homogenates or wetted marine sediment, have levels of target analytes in the 1 ng/g to 15000 ng/g range.

Numerical indices, z- and p-scores, are used to assess and track laboratory performance for accuracy and precision, respectively, and to provide a mechanism for assessing the comparability of data being produced by the participating laboratories for over 75 target analytes, percent total extractable organics (TEO), and percent moisture.

## Sources and Preparation of Materials used in 2002 Intercomparison Exercises

The Fish Homogenate V was a subset of candidate NIST Standard Reference Material (SRM) 1947 Lake Michigan Fish Tissue, and the Marine Sediment XI was prepared from fines (<61 µm) collected during the preparation of NIST SRM 1944 New York/New Jersey Waterway Sediment and fines (<150 µm) collected during the preparation of NIST SRM 1941a Organics in Marine Sediment. These materials were true unknowns at the time of the exercise. The use of candidate SRMs enables eventual comparisons for accuracy-based evaluations of the exercise assigned values and the results of the individual laboratories with certified concentrations for these reference materials. The sediment material was issued as a wet sediment to more closely match the matrix of wet sediments typically analyzed by the laboratories.

Marine Sediment XI. Sediment used in the preparation of this material was collected from six sites in the vicinity of New York Bay and Newark Bay (SRM 1944) and from the Baltimore Harbor (SRM 1941a). For all of the collections, the sampler was an epoxy-coated modified Van Veen-type grab sampler designed to sample the sediment to a depth of 10 cm. The materials were freeze-dried and sieved. The fraction from 250 µm to 61 µm was used for SRM 1944 while the particles passing through the 61 µm sieve were used to prepare Marine Sediment XI (5.00 g per bottle), and the fraction from 250 µm to 150 µm was used for SRM 1941a while the particles passing through the 150 µm sieve were used to prepare Marine Sediment XI (6.00 g per bottle). The materials were blended, radiation-sterilized, and homogenized prior to their being combined to prepare Marine Sediment XI. Each bottle of sediment was prepared gravimetrically with the sediments being combined in the bottles.

Colorless, 2-oz, wide-mouth, glass bottles were rinsed with deionized water, thermally cleaned at 500 °C for 18 h in a ventilated oven, cooled, capped, and labeled. Each label contained the material's name and code (Marine Sediment XI, QA02SED11) as well as an individual bottle number. The Teflon liners of the phenolic screw caps had been removed from the caps, cleaned with hexane, dried, and reinserted in the caps. A calibrated toploader balance (resolution of 0.01 g) was used for weighing the sediment and water. For each sample, approximately 11 g (exact mass known) of the sediment (as received) was weighed into a tared bottle (5.00 g of the fines from SRM 1944 and 6.00 g of the fines from SRM 1941a). The bottle was then capped and stored in the dark at room temperature. Approximately four days before samples were to be shipped to laboratories participating in the intercomparison exercise, approximately 9 g (exact mass known) of HPLC-grade water were added by pipet to each tared bottle of sediment. (Preliminary trials had shown that a minimum of 9 g of water would moisten 11 g of this sediment.) The masses of sediment and water in each bottle were recorded. Each sample was "tilted" by hand until no "dry" sediment was visible. Only a very small amount of water was observed on the top of the wet sediment. After 24 h at room temperature (in the dark), followed by approximately 4 h at -20 °C, each bottle of material was stored at -80 °C until shipped. The bottles were never inverted until the wet samples had been frozen in the bottom of the bottles. The material was not enriched or spiked with any of the analytes of interest in this intercomparison exercise.

**Fish Homogenate V.** Fish Homogenate V was a subset of SRM 1947. Since SRM 1947 was still a candidate material at the time of this exercise, a label with Fish Homogenate V (QA02FSH5), each with individual bottle numbers, was put in place over the SRM 1947 label using a rubber band. Each bottle was filled with approximately 10 g of fish homogenate. The bottles had been precleaned in the same manner as those used for the sediment. This sample is a cryogenically homogenized "fresh" material prepared from the fillet of adult lake trout (*Salvelinus namaycush namaycush*) collected during Wisconsin Department of Natural Resource's fall spawning stock assessment cruise in Lake Michigan.

Each of the three bottles sent to each participant contained approximately 10 g (wet basis) of Fish Homogenate V. This frozen fish homogenate material had not been enriched or spiked. Each 2-oz glass bottle had a Teflon-lined screw cap and was labeled with an individual bottle number as well as the material's name and code (Fish Homogenate V, QA02FSH5).

### **Storage and Distribution of Materials**

Each bottle of Marine Sediment XI and Fish Homogenate V material was stored at -80 °C until shipped via overnight delivery to participating laboratories. Instructions for the storage and use of the exercise material and a diskette with files for electronic submission of data were included with each set of material shipped. These instructions are reproduced in Appendices A and B. Samples of each of these materials have been archived in the National Biomonitoring Specimen Bank at NIST.

Each laboratory participating in these intercomparison exercises was sent the following:

#### **Exercise 1: Fish Homogenate V (QA02FSH5)**

Three bottles of Fish Homogenate V material (shipped on dry ice)

Three bottles of SRM 1946 Lake Superior Fish Tissue, (shipped on dry ice)

Description of the materials and storage/use/reporting instructions for  
the exercise (See Appendix A.)

Data diskette with files for the reporting of results

#### **Exercise 2: Marine Sediment XI (QA02SED11)**

Three bottles of Marine Sediment XI material (shipped on dry ice)

Description of the materials and storage/use/reporting instructions for  
the exercise (See Appendix B.)

Data diskette with files for the reporting of results

In the letter accompanying the shipments participants were asked to analyze each of three replicate samples in order to provide a more realistic assessment of laboratory precision and, if possible, to concurrently analyze NIST SRM 1946 [4] with Fish Homogenate V and NIST SRM 1944 New York/New Jersey Waterway Sediment, [5] with Marine Sediment XI. Samples were sent to the

laboratories in November 2001. Laboratories were requested to submit results for these exercises by April 15, 2002. Laboratories that joined the program later than November 2001 were sent samples as soon as possible after the paperwork was received.

## Evaluation of Exercise Results

### Establishment of the Assigned Values

The following guidelines were used by the NIST exercise coordinators for the establishment of the exercise "Assigned Values" for these two exercises. Each laboratory's performance on concurrent reference material analyses was used to determine if that laboratory's results would be eligible for inclusion in the calculation of the exercise assigned value for the unknown material for a particular analyte. The results reported for the unknown materials from laboratories that did not report results for the reference materials were not used in these calculations. After the exercise assigned values, standard deviations, and 95% confidence limits had been calculated, all reported results for the Fish Homogenate V and Marine Sediment XI materials were evaluated relative to the exercise assigned values.

*Laboratory data submission:* Each participating laboratory was asked to submit data from three replicate determinations of the "unknown" materials (Fish Homogenate V and Marine Sediment XI) and was requested to report results of concurrent analyses of NIST SRM 1946, a cryogenically homogenized fish tissue reference material, and SRM 1944, a marine sediment reference material. Laboratories were requested to report these results to three significant figures, and provide brief descriptions of their extraction, cleanup, and analytical procedures.

*Determination of laboratory analyte means:* For each laboratory, the laboratory analyte mean of the three sample results (S1, S2, and S3) was calculated for each analyte. Non-numerical data were treated as follows: A mean "<value" was used when three "<values" were reported; NA (not analyzed/determined) was used for three reported NAs; and, if the reported results were of mixed type, e.g., S1 and S2 were numerical values and S3 was reported as "<value", the two similar "types" were used to either determine the mean or to set a non-numerical descriptor.

*Determination of assigned values:* The assigned value is the mean of the acceptable results. For a particular analyte, the performance on the reference material was deemed acceptable for the purpose of this exercise if the laboratory result was within 30% of the upper and lower limits of the confidence interval for analytes listed in the Certificates of Analysis for SRM 1946 and SRM 1944. For each analyte of interest not certified for these materials, a "target" concentration and the associated uncertainty were calculated. The targets for SRM 1946 were based on reference concentrations of SRM 1946 and results of the 1999 exercise in which SRM 1946 was also used as an unknown. The targets for SRM 1944 were based on results of the 1995 Marine Sediment V exercise in which SRM 1944 was used as the "unknown material" and the results from the 2000 exercise in which SRM 1944 was used as the control. Laboratory results within target upper and lower limits, typically 30 % to 40 %, of these concentrations were deemed acceptable for this exercise. If a laboratory demonstrated acceptable performance on a particular analyte in the

reference material, that laboratory's results for that analyte in the corresponding "unknown" exercise material was then used in the calculation of the analyte's exercise assigned value unless it was deemed an "outlier." For evaluation of potential outliers, statistical tests and expert analyst judgement were used after viewing both normal and log normal plots of the data. This judgement utilized knowledge of potential coeluters based on the laboratory's reported methods.

In instances in which the analyte concentration was below the detection limit of most participating laboratories, no exercise assigned value was calculated. In data sets such as this with a number of laboratories reporting results as "not detected" at various detection limits, there is no consensus as to what numerical value should be assigned to these results in the computation of grand means, etc.; e.g., "0," half Detection Limit (DL), and the DL value itself have all been used and the choice is influenced by the use of the particular data set.

## Reported Results

Laboratories were assigned numerical identification codes in order of receipt of data with the exception of NIST, which is Laboratory 1 in these exercises. There are three results from NIST reported: 1-MS-1 and 1-MS-2 both generated in the Gaithersburg laboratory and 1-ECD generated in the Charleston laboratory. For the NIST data, the following extraction methods were used: pressurized fluid extraction (PFE) with hexane:acetone (1:1 volume fraction) for 1-MS-1; Soxhlet extraction with dichloromethane for the 1-MS-2; and PFE with dichloromethane for 1-ECD. 1-MS-1 and 1-MS-2 methods used gas chromatography/mass spectrometry (GC/MS) for analysis with either a 50% (mole fraction) phenyl phase and a proprietary nonpolar phase (1-MS-1) in combination or only the proprietary nonpolar phase (1-MS-2) while the 1-ECD method used GC with electron capture detection (GC-ECD), combining results obtained with a 5% (mole fraction) phenyl phase and a proprietary nonpolar phase.

A laboratory was assigned the same code for each material. In this report, the triplicate results as reported by the laboratories for both the exercise materials and the two SRMs are shown in Appendix C (Fish Homogenate V) and Appendix D (Marine Sediment XI) along with reference values for each of the materials and performance scores [numerical indicators of accuracy (bias) and precision (reproducibility)]. The laboratory mean replicate data are shown in Tables 2 and 3 and Tables 4 to 6 for the Fish Homogenate V and Marine Sediment XI materials, respectively. Included in the means tables are the exercise assigned values, the standard deviations of the assigned value, the percent relative standard deviations (%RSD), and the calculated 95% confidence limits of the assigned value for the percent water (sediment), percent TEO (fish), PAHs (sediment), chlorinated pesticides, and PCB congeners. Notes included by a laboratory with its data are listed in Appendices E (Fish Homogenate V) and F (Marine Sediment XI). Summaries of the methods used by each laboratory are in Appendices G (Fish Homogenate V) and H (Marine Sediment XI).

In Appendices I (Fish Homogenate V) and J (Marine Sediment XI), charts of the mean numerical results reported by each laboratory for each analyte are shown for the exercise material and the corresponding reference material.

## Performance Scores

The exercise coordinators recognize that different programs have different data quality needs. The acceptability of the results submitted by a particular laboratory will be decided by the individual program(s) for which the particular laboratory provides data. Typically, the program will use these exercise results in conjunction with the laboratory's performance in the analysis of certified reference materials and/or control materials, and of other quality assurance samples. These exercise results are exhibited in a number of ways in this report to facilitate their use by these programs in their acceptability assessments.

IUPAC guidelines [6] describe the use of z-scores and p-scores for assessment of accuracy and precision in intercomparison exercises such as those described in this report. These indices assess the difference between the result of the laboratory and the exercise assigned value and can be used, with caution, to compare performance on different analytes and on different materials.

### Accuracy Assessment (z-score)

$$\text{z-score} = (\text{bias estimate}) / (\text{performance criterion}) = (x - X) / \sigma$$

where  $x$  is the individual laboratory result,  $X$  is the "Exercise Assigned Value," and  $\sigma$  is the target value for standard deviation.

As described in the IUPAC guidelines, the choice of  $\sigma$  is dependent upon data quality objectives of a particular program. It can be "fixed" and arrived at by perception, prescription, or reference to validated methodology (e.g.,  $\sigma = 0.025 X$ ,  $X$  is the analyte concentration), or it can be an estimate of the actual variation (e.g., the calculated sample standard deviation,  $s$ , from the exercise data). The "fixed" performance criterion is more useful in the comparison of a laboratory's performance on different materials while the use of the actual variation may be more useful within a given exercise, for example, if the determination of a particular analyte is exceptionally problematic.

We have calculated and reported z-scores using both approaches for each analyte for each laboratory. At the initial workshop, it was decided to use "25% of the exercise assigned value" as the fixed target value for standard deviation for this program. We also calculated z-scores based on the standard deviation ( $s$ ) of the exercise assigned value. The z-scores calculated for these exercises can thus be interpreted as shown in the following examples:

z-score (25%  $X$ ):

- +1  $\Rightarrow$  laboratory result is 25% higher than the assigned value
- 2  $\Rightarrow$  laboratory result is 50% lower than the assigned value

z-score (s):

- +1  $\Rightarrow$  laboratory result is one s higher than the assigned value
- 2  $\Rightarrow$  laboratory result is two s lower than the assigned value

From a scientific point of view, IUPAC does not recommend the classification of z-scores but allows that a common classification is:

$ z  \leq 2$	Satisfactory
$2 <  z  < 3$	Questionable
$ z  \geq 3$	Unsatisfactory

The Tables in Appendices C (Fish Homogenate V) and D (Marine Sediment XI) show the calculated z-scores for each laboratory for each reported analyte. These tables of the results and performance include a summary of the number of reported analytes that fall within each category for each laboratory.

#### Precision Assessment (p-score)

$$p\text{-score} = \sigma_{\text{lab}} / \sigma_{\text{target}}$$

Prior to the 1994 exercises, participating laboratories typically analyzed the three replicate samples for an exercise with the same sample set, i.e., one set of samples with the same blank, calibration curve, etc. applicable for each. Since the repeatability for replicates within a set generally shows better reproducibility than for replicates across different sets, this does not result in data that are very useful for realistic uncertainty assessment. Since 1994, laboratories have been requested to process each replicate in a different sample set for uncertainty assessment. For the calculation of p-scores for this program, the  $\sigma$  values used are coefficient of variations (CV calculated as relative standard deviations) with the current target CV for the three replicates being 15%.

The Tables in Appendices C (Fish Homogenate V) and D (Marine Sediment XI) show the calculated p-scores for each laboratory for each reported analyte.

#### **Discussion**

Laboratories were requested to quantify 26 PAHs, 25 chlorinated pesticides, and 25 PCB congeners in this year's exercise. A total of 30 sets of results were submitted for Fish Homogenate V, and 28 sets of results were submitted for Marine Sediment XI. Several laboratories submitted more than one set of data. These occurrences are tagged with a "b",

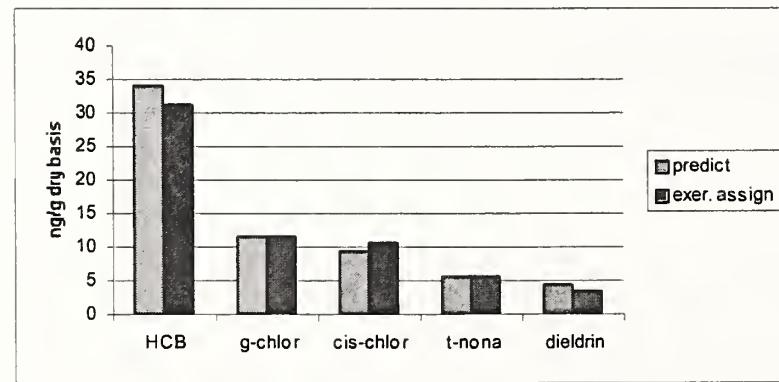

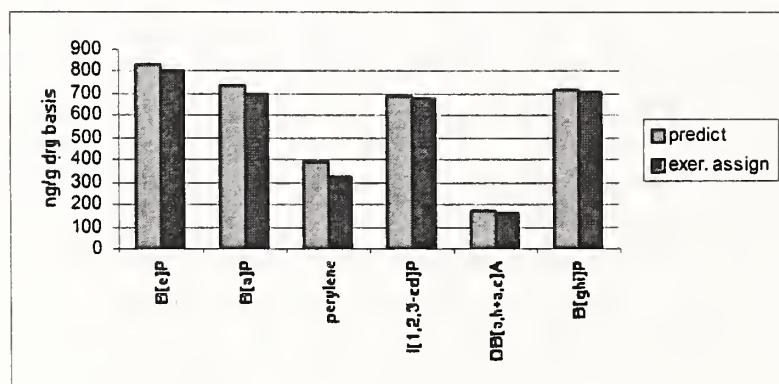

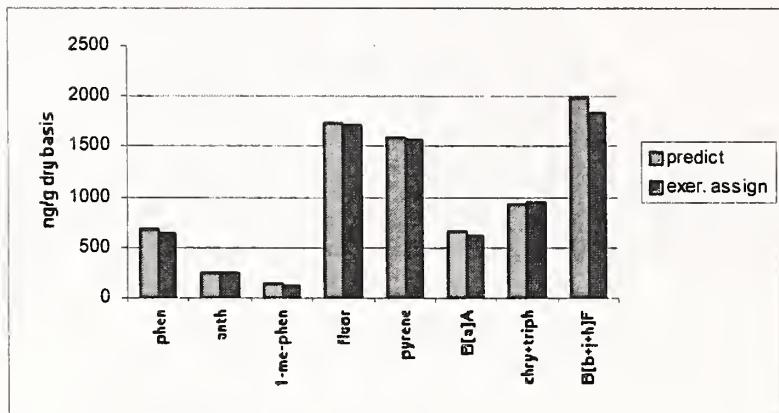

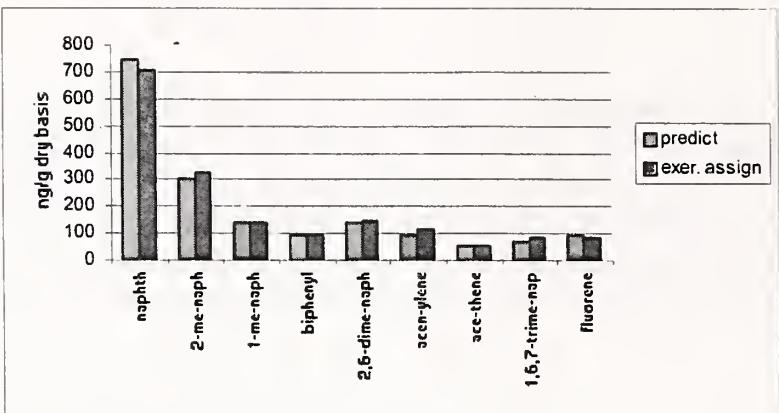

except for laboratory 1 as noted above and laboratory 3 for which the second set of data are represented by laboratory 8. For the sediment exercise, one laboratory (12) reported data for SRM 1941a (Organics in Marine Sediment) as the control material. Their data were evaluated based on the certified and target values for this SRM (see Evaluation of Exercise Results above).

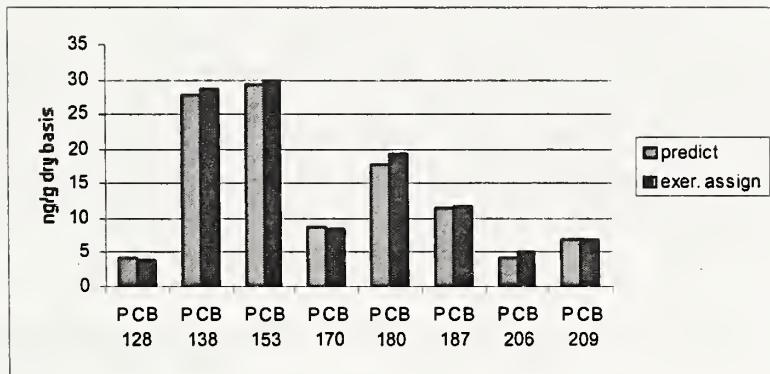

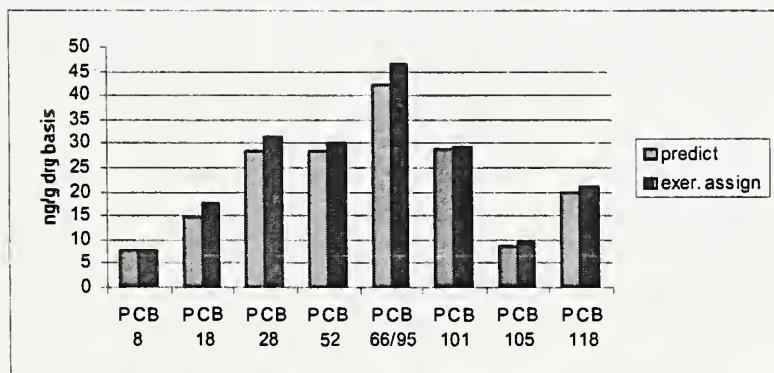

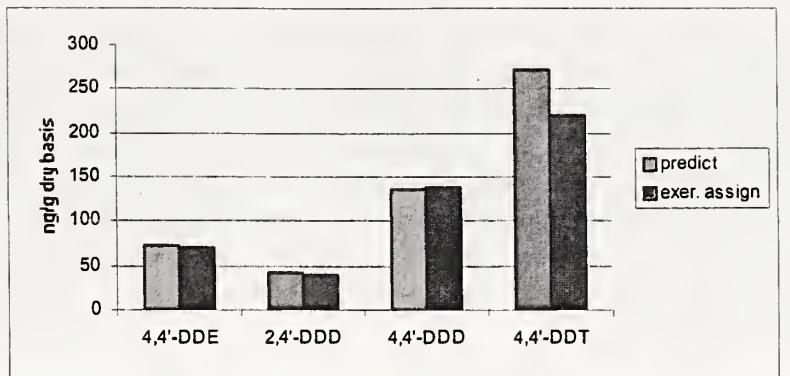

Laboratories 14 and 20 did not submit data for a sediment reference material so the data from these laboratories were not used for the determination of the exercise assigned values for Marine Sediment XI.

The concentrations of the pesticides of interest in Fish Homogenate V range from <2 ng/g wet basis to 621 ng/g wet basis, and the concentrations of the PCB congeners range from 2.5 ng/g wet basis to 200 ng/g wet basis. For the chlorinated pesticides, 18 of the 25 compounds were above the detection limit for the majority of the laboratories reporting, while 24 of the 25 PCB congeners were above the detection limit for the majority of the laboratories. It is interesting to note that the concentrations of the pesticides in Fish Homogenate V tend to be similar to those in SRM 1946 except for dieldrin, 4,4'-DDE, 2,4'-DDD, 4,4'-DDD, and 4,4'-DDT, which are almost two times higher in concentration in Fish Homogenate V than in SRM 1946. SRM 1946 is also a cryogenically homogenized lake trout fillet material but was collected from Lake Superior whereas Fish Homogenate V was collected from Lake Michigan. The concentrations of the PCB congeners are generally higher in Fish Homogenate V than in SRM 1946 with the largest differences noted for the dichlorobiphenyls through the pentachlorobiphenyls. The TEO values are generally in good agreement (9% to 13%), except for laboratory 8 (26%).

The z-scores for the pesticides and PCB congeners based on 25% of the exercise assigned value are summarized for Fish Homogenate V in Tables 7 and 8, respectively. The majority of the z-scores based on 25% are within  $\pm 2$ .

The PAH concentrations in Marine Sediment XI range from 50 ng/g dry basis to 1700 ng/g dry basis. The pesticide concentrations range from below the detection limits of the methods used to 221 ng/g dry basis, while the PCB concentrations range from 2 ng/g dry basis to 30 ng/g dry basis. Since Marine Sediment XI was prepared from materials used in previous exercises (fines from SRM 1941a used in 1994 as Marine Sediment IV and fines from SRM 1944 used in 2000 as Marine Sediment X), the results from this exercise can be compared to values predicted based on past exercise results. The exercise assigned values from the 2002 program agree very well (from -20% difference for dieldrin to +32% for acenaphthylene) with the predicted values for those compounds that were quantified in each of the previous exercises. These comparisons are summarized graphically below.

The z-scores for the PAHs, pesticides, and PCB congeners based on 25 % of the exercise assigned value are summarized for Marine Sediment XI in Tables 9, 10, and 11, respectively. In general, the z-scores based on 25 % were within  $\pm 2$  for Marine Sediment XI except for laboratory 26 (z scores <-2 for PAHs).

As in the past exercises, a variety of methods were used for extraction, extract cleanup, and

analysis. These are summarized in Appendix G for the fish homogenate and Appendix H for the sediment. For the PAHs in the sediment, laboratories 7 and 28 used ion trap mass spectrometry (MS) while for the chlorinated analytes in the sediment, laboratories 5b, 13, 18, 21, and 25 specified the use of high-resolution MS. Laboratories 5b, 13 and 25 also specified the use of high resolution MS for the chlorinated analytes in the fish homogenate. The majority of the laboratories used deuterated PAHs as internal standards/surrogates for the PAHs in the sediment, while laboratories 5, 5b, 21, 25 used carbon-13 labeled chlorinated pesticides and PCB congeners as internal standards/surrogates for the corresponding analytes. There is no obvious correlation between z-scores and method used.

For the 2002 exercises, the data provided in the various figures and tables of this report can be used for assessing the comparability of results for over 75 analytes of interest in this program and the performance of individual laboratories. The z-scores and the p-scores for the individual laboratories are summarized by lab in Appendices C and D for the fish homogenate and sediment, respectively. For both materials, the highest percentage of z-scores and p-scores that were in the unsatisfactory category were for the chlorinated pesticides. The chlorinated pesticides were typically present at lower concentrations in both of these materials than the concentrations of the PAHs and PCB congeners. In these exercises, interlaboratory variability is a greater contributor to measurement incomparability than intralaboratory variability. Laboratories reporting results of concurrent reference material analyses typically showed better performance than those laboratories that did not analyze the reference materials.

Subgroups of the exercise participants have demonstrated comparability of results for many analytes within the 0 to 2 z-range based on use of "25 % of the analyte concentration" as the performance criterion. This implies that this subgroup can distinguish between two samples that have an analyte concentration difference of 100%. The reported accuracy and reproducibility indices (z- and p-scores, respectively) can be easily converted to conform to the acceptability requirements of a particular program. For example, a z-score based on 25% can be multiplied by two to convert to a z-score based on 12.5 % of the analyte concentration.

It is important to evaluate the non-quantitative results reported by each laboratory as well. Although these results are not easily presented or numerically evaluated, they are provided in the various tables of this report that list the mean and individual results of the laboratories. The laboratory and its data users should look closely at these non-quantitative results. Decisions based on false negative or false positive results from a laboratory can lead to significant environmental and/or economic consequences. Some laboratories reported detection limits in these "real" matrix materials that may be too high for the data quality needs of their program(s) and these should be assessed as well.

Intercomparison exercises provide an important mechanism for assessing the comparability, accuracy, precision, and reproducibility of data being produced by the participating laboratories. Exercise materials similar in matrix, form, and analyte concentration to typical samples routinely analyzed by the laboratories are most useful for demonstrating the level of comparability and for revealing potential problem areas.

For the determination of the target compounds in these complex marine matrices with relatively low levels of these analytes, the levels of bias and reproducibility of many of the participating laboratories meet their current acceptability requirements; however, there is certainly room for improvement. Minimizing the among-laboratory biases so that the analytical variability is significantly less than the sampling variability should be an achievable goal.

## Acknowledgments

The time and efforts of the analysts and management of the participating laboratories and the assistance of the NIST Standard Reference Materials Program with the procurement and preparation of the exercise materials are gratefully acknowledged.

## Disclaimer

Certain commercial equipment, instruments, or materials are identified in this report to specify adequately the experimental procedure. Such identification does not imply recommendation or endorsement by the National Institute of Standards and Technology, nor does it imply that the materials or equipment identified are the best available for the purpose.

## List of Tables

- Table 1. Target Analytes in NIST Intercomparison Exercise Program for Organic Contaminants in the Marine Environment.
- Table 2. Fish Homogenate V (QA02FSH5): Laboratory means of three replicates and exercise assigned values - Pesticides and TEO.
- Table 3. Fish Homogenate V (QA02FSH5): Laboratory means of three replicates and exercise assigned values – PCBs.
- Table 4. Marine Sediment XI (QA02SED11): Laboratory means of three replicates and exercise assigned values - Water and PAHs.
- Table 5. Marine Sediment XI (QA02SED11): Laboratory means of three replicates and exercise assigned values - Pesticides.
- Table 6. Marine Sediment XI (QA02SED11): Laboratory means of three replicates and exercise assigned values - PCBs.
- Table 7. Fish Homogenate V (QA02FSH5): z-scores (25%) by laboratory - Pesticides and TEO. A z-score (25%) = +1 if the laboratory's submitted mean value is 25% higher than the exercise assigned value.
- Table 8. Fish Homogenate V (QA02FSH5): z-scores (25%) by laboratory - PCBs. A z-score (25%) = +1 if the laboratory's submitted mean value is 25% higher than the exercise assigned value.
- Table 9. Marine Sediment XI: z-scores (25%) by laboratory - Water and PAHs. A z-score (25%) = +1 if the laboratory's submitted mean value is 25% higher than the exercise assigned value.
- Table 10. Marine Sediment X: z-scores (25%) by laboratory - Pesticides. A z-score (25%) = +1 if the laboratory's submitted mean value is 25% higher than the exercise assigned value.
- Table 11. Marine Sediment X: z-scores (25%) by laboratory - PCBs. A z-score (25%) = +1 if the laboratory's submitted mean value is 25% higher than the exercise assigned value.

**Table 1: Analytes of Interest in NIST Intercomparison Exercise Program for Organic Contaminants in the Marine Environment**

Chlorinated Pesticides

hexachlorobenzene	2,4'-DDE
alpha-HCH (alpha-BHC)	4,4'-DDE
beta-HCH (beta-BHC)	2,4'-DDD
gamma-HCH (gamma-BHC, Lindane)	4,4'-DDD
heptachlor	2,4'-DDT
heptachlor epoxide	4,4'-DDT
<i>cis</i> -chlordanne (alpha-chlordanne)	chlorpyrifos
<i>trans</i> -chlordanne (gamma-chlordanne)	aldrin
oxychlordanne	dieldrin
<i>cis</i> -nonachlor	endrin
<i>trans</i> -nonachlor	endosulfan I
mirex	endosulfan II
	endosulfan sulfate

Polychlorinated Biphenyl Congeners

<i>PCB No.</i>	<i>Compound Name</i>
8	2,4'-dichlorobiphenyl
18	2,2',5-trichlorobiphenyl
28	2,4,4'-trichlorobiphenyl
31	2,4',5-trichlorobiphenyl
44	2,2',3,5'-tetrachlorobiphenyl
49	2,2',4,5'-tetrachlorobiphenyl
52	2,2',5,5'-tetrachlorobiphenyl
66	2,3',4,4'-tetrachlorobiphenyl
95	2,2',3,5',6-pentachlorobiphenyl
99	2,2',4,4',5-pentachlorobiphenyl
101	2,2',4,5,5'-pentachlorobiphenyl
105	2,3,3',4,4'-pentachlorobiphenyl
118	2,3',4,4',5-pentachlorobiphenyl
128	2,2',3,3',4,4'-hexachlorobiphenyl
138	2,2',3,4,4',5-hexachlorobiphenyl
149	2,2',3,4',5,6-hexachlorobiphenyl
153	2,2',4,4',5,5'-hexachlorobiphenyl
156	2,3,3',4,4',5-hexachlorobiphenyl
170	2,2',3,3',4,4',5-heptachlorobiphenyl
180	2,2',3,4,4',5,5'-heptachlorobiphenyl
187	2,2',3,4',5,5',6-heptachlorobiphenyl
194	2,2',3,3',4,4',5,5'-octachlorobiphenyl
195	2,2',3,3',4,4',5,6-octachlorobiphenyl
206	2,2',3,3',4,4',5,5',6-nonachlorobiphenyl
209	decachlorobiphenyl

**Table 1. (continued)**

Polycyclic aromatic hydrocarbons (PAH)

naphthalene	pyrene
2-methylnaphthalene	benz[ <i>a</i> ]anthracene
1-methylnaphthalene	chrysene
biphenyl	triphenylene
2,6-dimethylnaphthalene	benzo[ <i>b</i> ]fluoranthene
acenaphthylene	benzo[ <i>j</i> ]fluoranthene
acenaphthene	benzo[ <i>k</i> ]fluoranthene
1,6,7-trimethylnaphthalene	benzo[ <i>e</i> ]pyrene
fluorene	benzo[ <i>a</i> ]pyrene
phenanthrene	perylene
anthracene	indeno[1,2,3- <i>cd</i> ]pyrene
1-methylphenanthrene	dibenz[ <i>a,h</i> ]anthracene
fluoranthene	benzo[ <i>ghi</i> ]perylene

**Appendix A: Description, Storage, Use, and Reporting Instructions  
for Fish Homogenate V (QA02FSH5)**

**NIST Intercomparison Exercise Program for  
Organic Contaminants in the Marine Environment**

**NIST/NOAA-NS&T QA Program**

---

**Intercomparison Exercise: Fish Homogenate V  
Description of Materials and Instructions**

---

**Intercomparison Exercise Materials:**

**QA02FSH5 (Fish Homogenate V)**

Each of the three bottles contains approximately 10 g (wet basis) of Fish Homogenate V, a frozen fish tissue homogenate material collected from Lake Michigan. The tissue is a cryogenically homogenized "fresh" material still containing its endogenous water. (It has not been freeze-dried.) The material has not been enriched or spiked. Each 2-oz clear glass jar has a Teflon-lined screw cap and is labeled with an individual bottle number as well as the above name. The label with the above name is held in place by a rubber band over top of the SRM 1947 label. This material will eventually be certified for trace elements and issued as SRM 1947 but is not available at the current time.

In addition, three concurrent analyses of SRM 1946, Lake Superior Fish Tissue, are recommended. Three bottles of this material is enclosed. The tissue also is a cryogenically homogenized "fresh" material still containing its endogenous water. (It has not been freeze-dried.) The material has not been enriched or spiked. It will be available from the Standard Reference Materials Program at NIST in the next few months.

**Storage of Materials:**

Fish Homogenate V and SRM 1946. The tissue material should be stored in the dark at temperatures of -20 °C or lower. If allowed to thaw or if stored for extended periods at temperatures higher than -40°C, it will lose its powder-like form. This material has been stored at NIST at -80 °C and was shipped to you on dry ice. If only a portion of the contents of a jar is used, the jar should be tightly closed immediately after removal of a subsample to preserve the integrity of the remaining material for later analysis.

**Instructions for Use:**

You are to analyze Fish Homogenate V and SRM 1946, using your laboratory's and/or program's analytical protocols, for the concentrations (wt/wet wt) of the 25 chlorinated

pesticides and 25 polychlorinated biphenyl (PCB) congeners<sup>1</sup> of interest in the current NIST Intercomparison Exercise Program for Organic Contaminants in the Marine Environment. These compounds are listed in Table 1. Concentrations of these analytes in samples collected near the site of this collection were in the 1 to 200 ng/g wet weight range.

It is best if the Fish Homogenate V and SRM 1946 material are not allowed to thaw prior to the taking of samples for analysis; however, if the material has been even partially thawed, you should use the contents of the entire jar as a single sample as it is difficult to take representative samples from a jar once the material has thawed. After removing the material for analysis from the jars, the samples should be used without delay.

The total extractable organics (TEO) or lipid (percent) in the fish materials should be determined. You should have received enough material so that you can perform separate determinations for the TEO if you typically do this determination on a separate aliquot.

The amount of material used for each analysis should correspond to the amount of fish tissue (wet basis) you would typically analyze as prescribed in your protocols. You should analyze three replicate samples of Fish Homogenate V and at least one, and more if possible, of SRM 1946 in three different batches/sets/strings/catalogs using your protocol for fish tissue samples. Specifically, we are asking that you analyze one sample of Fish Homogenate V and one sample of SRM 1946 with one batch of laboratory samples; analyze a second sample of each material with another batch; and the third sample with yet another batch. This will allow a more realistic assessment of laboratory precision over a longer term than the assessment obtained when a laboratory places all three samples in the same extraction and cleanup batch and the resulting extracts are analyzed using the same calibration curve, etc.

#### Reporting of Results:

Please report one result, as if three figures were significant, for each of the requested analytes in each of the three replicates of the Fish Homogenate V and of the SRM 1946. Report results in units of ng/g wet basis. Report the date of measurement of each sample in the requested m/d/y format. Also, report the results of your TEO (lipid) determinations of Fish Homogenate V and SRM 1946 in percent.

We recognize that the reported concentrations for some of the requested determinands will probably include concentrations of compounds reported to coelute with the determinand of interest with methods commonly in use in environmental laboratories. Please note at the bottom of your table of reported results if any of these listed coelutions are not applicable to the data being reported by your laboratory. Please note that any changes you make to the column or row headings within the tables will not be seen by the coordinators because only the table entries and comments at the bottom of the tables are automatically transferred to the exercise database.

---

<sup>1</sup>If your laboratory is not analyzing samples for both chemical classes, you are expected to submit results only for those compounds in classes currently being determined in your laboratory.

We prefer that concentrations be reported for each analyte determined. If the measured concentration is below your typical reporting concentration for an analyte in a particular matrix, you can report the number and list the appropriate detection limit, quantification limit, etc. at the bottom of the data table. However, if you need to report non-numerical data please use the following conventions:

NA	"Not analyzed", "not determined"
<"value"	"Less than specified concentration", e.g., <8 ng/g
Other	"Other"; add note of explanation at end of data table, e.g., interference
DL	"Below detection limit" may be used, however, <"value" is preferable

Do not use negative numbers or parentheses to indicate "less than detection limits".

An EXCEL file, FIS5.XLS has been sent as an e-mail attachment when you were notified that the samples were sent. If you have any software/hardware conversion problems, please contact Michele Schantz. The data file templates also include places for you to list the surrogate/internal standards and type of calibration curve used, and to provide a brief description of the analyses. Please do not add "spaces" before entering numbers in the table cells. Please do not insert any columns or rows within the table in the data file. If you wish to include additional data and/or other information or comments, you may add it to the bottom of the data table in the diskette file or send it in hard copy. A printout of the data file format is shown in Table 2.

Submit your results by April 15, 2002 either as an attached file via e-mail (preferred) or via diskette file to:

Michele M. Schantz

**Appendix B: Description, Storage, Use, and Reporting Instructions  
for Marine Sediment XI (QA02SED11)**

**NIST Intercomparison Exercise Program for  
Organic Contaminants in the Marine Environment**

**NIST QA Program**

---

**Intercomparison Exercise: Marine Sediment XI  
Description of Materials and Instructions**

---

**Intercomparison Exercise Materials:**

**QA00SED11 (Marine Sediment XI)**

Each of the three jars contains 21 g (wet basis) of Marine Sediment XI. This wetted sediment was prepared from material that was collected from several urban areas and then freeze-dried, ground, sieved, and radiation-sterilized. This material has not been enriched or spiked. Each 2-oz clear glass jar has a Teflon-lined screw cap and is labeled with an individual jar number as well as the above name.

In addition, three concurrent analyses of SRM 1944, New York/New Jersey Waterway Sediment, are recommended. This material can be obtained from the NIST Standard Reference Materials Program (\$366/50 g (dry basis) (phone: 301/975-6776; fax: 301/948-3730).

**Storage of Materials:**

**Marine Sediment Material.** This Marine Sediment XI material should be stored in the dark at temperatures of -15 °C or lower. If only a portion of the contents of a jar is used, that jar should be tightly closed immediately after removal of a subsample to preserve the integrity of the remaining material for later analysis.

**Instructions for Use:**

You are to analyze Marine Sediment XI and SRM 1944, using your laboratory's and/or program's analytical protocols, for the concentrations (mass/mass [dry basis]) of the 26 polycyclic aromatic hydrocarbon (PAH) compounds, 25 chlorinated pesticides, and 25 polychlorinated biphenyl (PCB) congeners<sup>1</sup> of interest in the current NIST Intercomparison Exercise Program for Organic Contaminants in the Marine Environment. These compounds are listed in Table 1.

The percentage of water in the Sediment XI material should be determined so that the results can be reported on a dry basis. You should have received sufficient material so that you can perform separate

---

<sup>1</sup>If your laboratory is not analyzing samples for all three chemical classes, you are expected to submit results only for those compounds currently being determined in your laboratory.

determinations for the water content if you do not dry your sediment samples prior to analysis.

The amount of material used for each analysis should correspond to the amount (wet basis) of marine sediment that you would typically analyze as prescribed in your protocols. Prior to removing an aliquot of Sediment XI, you should thaw the sample in the jar and then stir or otherwise mix it thoroughly.

You should analyze three samples of Marine Sediment XI and at least one, and more if possible, of SRM 1944 in three different batches/sets/strings/catalogs using your protocol for marine sediment samples. Specifically, we are asking that you analyze one sample of Sediment XI and one sample of SRM 1944 with one batch of laboratory samples; analyze a second sample of each material with another batch; and the third sample with yet another batch. This will allow a more realistic assessment of laboratory precision over a longer term than the assessment obtained when a laboratory places all three samples in the same extraction and cleanup batch and the resulting extracts are analyzed using the same calibration curve, etc.

### Reporting of Results:

Please report one result, as if three figures were significant, for each of the requested analytes in each of the three replicates of the Marine Sediment XI and of SRM 1944. Report results in units of ng/g dry basis. Report the date of measurement of each sample in the requested m/d/y format. Also, report the results of your percentage water determinations of Marine Sediment XI.

We recognize that the reported concentrations for some of the requested determinands will probably include concentrations of compounds reported to coelute with the determinand of interest with methods commonly in use in environmental laboratories. Please note at the bottom of your table of reported results if any coelution qualifiers are applicable to your data. Please note that any changes you make to the column or row headings within the tables will not be seen by the coordinators because only the table entries and comments at the bottom of the tables are automatically transferred to the exercise database.

We prefer that concentration values be reported for each analyte determined. If the measured concentration is below your typical reporting concentration for an analyte in a particular matrix, you can report the number and list the appropriate detection limit, quantification limit, etc. at the bottom of the data table. However, if you need to report non-numerical data please use the following conventions:

NA	"Not analyzed", "not determined"
<"value"	"Less than specified concentration", e.g., <8 ng/g
Other	"Other"; add note of explanation at end of data table, e.g., interference
DL	"Below detection limit" may be used, however, <"value" is preferable

Do not use negative numbers or parentheses to indicate "less than detection limits".

An EXCEL file, SED11.xls has been sent as an e-mail attachment when you were notified That the samples were sent. If you have any software/hardware conversion problems, please contact Michele

Schantz. The data file templates also include places for you to list the surrogate/internal standards and type of calibration curve used, and to provide a brief description of the analyses. Please **do not add "spaces"** before entering numbers in the table cells and enter them as "numbers" not as "labels". Please **do not insert any columns or rows within** the table in the data file. If you wish to include additional data and/or other information or comments, you may add it to the bottom of the data table in the diskette file or send it in hard copy. A printout of the data file format is shown in Table 2.

Submit your results by **April 15, 2002** either as an attached file via e-mail (preferred) or via diskette file to::

**Table 1: Analytes of Interest in NIST Intercomparison Exercise Program for Organic Contaminants in the Marine Environment**

**Chlorinated Pesticides**

hexachlorobenzene	2,4'-DDE
alpha-HCH (alpha-BHC)	4,4'-DDE
beta-HCH (beta-BHC)	2,4'-DDD
gamma-HCH (gamma-BHC, Lindane)	4,4'-DDD
heptachlor	2,4'-DDT
heptachlor epoxide	4,4'-DDT
<i>cis</i> -chlordane (alpha-chlordane)	chlorpyrifos
<i>trans</i> -chlordane (gamma-chlordane)	aldrin
oxychlordane	dieldrin
<i>cis</i> -nonachlor	endrin
<i>trans</i> -nonachlor	endosulfan I
mirex	endosulfan II
	endosulfan sulfate

**Polychlorinated Biphenyl Congeners**

<i>PCB No.</i>	<i>Compound Name</i>
8	2,4'-dichlorobiphenyl
18	2,2',5-trichlorobiphenyl
28	2,4,4'-trichlorobiphenyl
31	2,4',5-trichlorobiphenyl
44	2,2',3,5'-tetrachlorobiphenyl
49	2,2',4,5'-tetrachlorobiphenyl
52	2,2',5,5'-tetrachlorobiphenyl
66	2,3',4,4'-tetrachlorobiphenyl
95	2,2',3,5',6-pentachlorobiphenyl
99	2,2',4,4',5-pentachlorobiphenyl
101	2,2',4,5,5'-pentachlorobiphenyl
105	2,3,3',4,4'-pentachlorobiphenyl
118	2,3',4,4',5-pentachlorobiphenyl
128	2,2',3,3',4,4'-hexachlorobiphenyl
138	2,2',3,4,4',5'-hexachlorobiphenyl
149	2,2',3,4',5',6-hexachlorobiphenyl
153	2,2',4,4',5,5'-hexachlorobiphenyl
156	2,3,3',4,4',5-hexachlorobiphenyl
170	2,2',3,3',4,4',5-heptachlorobiphenyl
180	2,2',3,4,4',5,5'-heptachlorobiphenyl
187	2,2',3,4',5,5',6-heptachlorobiphenyl
194	2,2',3,3',4,4',5,5'-octachlorobiphenyl
195	2,2',3,3',4,4',5,6-octachlorobiphenyl
206	2,2',3,3',4,4',5,5',6-nonachlorobiphenyl
209	decachlorobiphenyl

**Table 1. (continued)**

Polycyclic aromatic hydrocarbons (PAH)

naphthalene	pyrene
2-methylnaphthalene	benz[ <i>a</i> ]anthracene
1-methylnaphthalene	chrysene
biphenyl	triphenylene
2,6-dimethylnaphthalene	benzo[ <i>b</i> ]fluoranthene
acenaphthylene	benzo[ <i>f</i> ]fluoranthene
acenaphthene	benzo[ <i>k</i> ]fluoranthene
1,6,7-trimethylnaphthalene	benzo[ <i>e</i> ]pyrene
fluorene	benzo[ <i>a</i> ]pyrene
phenanthrene	perylene
anthracene	indeno[1,2,3- <i>cd</i> ]pyrene
1-methylphenanthrene	dibenz[ <i>a,h</i> ]anthracene
fluoranthene	benzo[ <i>ghi</i> ]perylene

## **Appendix C: Results by Laboratory, Fish Homogenate V**

FY02 NIST Intercomparison Exercise  
Sample: QA02FSHS - Fish Homogenate V

Laboratory No.: I-MS-1  
Reporting Date: 4/15/02

(data reported as if three figures were significant)

PESTICIDES	Data as submitted by laboratory												Material reference values						Performance scores <sup>a</sup>

	PCB8 and PCB18 were not detected at these samples, at an estimated minimum level of 0.5 ng/g, wet weight.							
	Lower detection levels are typically targeted and achieved with samples that have lower PCB concentrations.							
4	SRM 1946 results for PCB 8, PCB 18, PCB31, PCB 49, PCB 99, PCB 149, PCB156, and PCB194 do not have certified values for result comparison. SRM 1946, Batch A, Sample #1 did not have sufficient sample volume remaining for % Lipid determination.							
4b	The pesticides oxychlordane, 2,4-DDD, and Endrin appear to be co-eluting with unknown compounds and results may be biased high.							
5	PCB Co-elutions: PCB 8/5, 49/43, 52/73, 66/80, 95/93, 90/101/89, 105/127, 118/106, 138/163/164, 149/139, 170/190 and 187/182							
5b	PCB Co-elutions: PCB 18/30, 20/28, 44/47/65, 95/100/93/102/98, 99/83, 101/90/113, 128/166, 138/163/129/160, 149/147, 153/168, 180/193							
6	Under these chromatographic conditions, the following target PCB congeners co-elute with non-target congeners (1) PCB8 & PCB5 (2) PCB153 & PCB132 (3) PCB138 & PCB163 (4) PCB187 & PCB182							
6b	(1) PCB66 and PCB95 co-elute under these chromatographic conditions and are reported as a sum							
9	PAH analysis following Soxhiet extraction using dichloromethane:hexane (1:1) with sodium sulfate and silica gel for clean-up GC/MS analysis - isotopic dilution - Naphthalene-d8, 1 & 2-methylnaphthalene-d10, biphenyl-d10, 2,6-dimethylnaphthalene-d12, acenaphthylene-d8, Acenaphthene-d10, fluorene-d10, dibenzothiophene-d8, phenanthrene-d10, anthracene-d10, fluoranthene-d10, pyrene-d10, benzo(a)anthracene-d12, chrysene

12	1) Analyte MDL values were not determined. All detected concentrations are reported. 2) An analyte value of DL means " Not Detected" for our data. 3) We extracted and analyzed all three FISH V and the three SRM 1946 samples in one batch. 4) Supplemental pesticide (SRM 2274) and PCB (SRM2275) mixtures were obtained from NIST. Chlorpyrifos was obtained from Ultra Scientific, North Kingstown, RI. 5) For the analyses of PCBs and pesticides, 1 microliter of sample was injected into the GC-ECD. Helium was used as the carrier gas all analyses. 6) Additional PCB Results:	Fish V mean	Fish V s	Fish V %RSD	Fish V n	SRM 1946 mean	SRM 1946 s	SRM 1946 %RSD	SRM 1946 n	
	PCB 77 PCB 110 PCB 126 PCB 151 PCB 169 PCB 183	OtherD 23.03 8.52 2.06 36.5	NA NA 1.25 0.15 0.6	NA 5.44 1.72 1.94 1.7	0 3 3 3 3	OtherD 22.8 DL 4.21 52.1	NA 1.3 NA 0.20 1.8	NA 5.8 NA 4.86 3.5	NA 3 0 0 3	
	7) Other: We found that these pairs of analytes coelute from our DB-5 column. OtherA : PCB 8 and alpha-HCH OtherB : endosulfan 1 and PCB 101 OtherC : alpha-chlordane and PCB 99. OtherD : Since PCB 77and PCB 110 coelute from our column and the response of each congener vary from each other, the relative ratios of two congeners can not be determined. We do not report the concentrations of either PCB 77 or PCB 110.

12	1) Analyte MDL values were not determined. All detected concentrations are reported. 2) An analyte value of DL means " Not Detected" for our data. 3) Due to funding and time limitations, we substituted SRM 1941a for SRM 1944 for this intercomparison exercise. 4) We extracted and analyzed all three Sediment XI and the three SRM 1941a samples in one batch. 5) Supplemental pesticide (SRM 2274) and PCB (SRM2275) mixtures were obtained from NIST.  Chlorpyrifos was obtained from Ultra Scientific, North Kingstown, RI.

12	1) Analyte MDL values were not determined. All detected concentrations are reported. 2) An analyte value of DL means "Not Detected" for our data. 3) Due to funding and time limitations, we substituted SRM 1941a for SRM 1944 for this intercomparison exercise. 4) We extracted and analyzed all three Sediment XI and the three SRM 1941a samples in one batch. 5) Supplemental pesticide (SRM 2274) and PCB (SRM2275) mixtures were obtained from NIST. Chlorpyrifos was obtained from Ultra Scientific, North Kingstown, RI. 6) For the analyses of PCBs and pesticides, 1 microliter of sample was injected into the GC-ECD.																																																

Helium was used as the carrier gas all analyses.

7) Additional PCB Results for Sediment XI:

	Sediment XI	Sediment XI	Sediment XI	Sediment XI
	mean	s	%RSD	n
PCB 77	OtherD	NA	NA	0
PCB 110	OtherD	NA	NA	0
PCB 126	3.42	0.30	8.80	3
PCB 151	4.56	NA	NA	1
PCB 169	1.09	0.50	45.60	3
PCB 183	4.55	0.55	12.10	3

8) Other: The following analytes coelute from our DB-5 column:

OtherA : PCB 8 and alpha-HCH

OtherB : endosulfan I and PCB 101

OtherC : alpha-chlordane and PCB 99.

OtherD : PCB 77 and PCB 110

Since these analytes coelute from our column and the response of each analyte varies from each other, the relative ratios of each coeluted pair of analytes can not be determined. We do not report the concentrations of the coeluted analytes.

9) The recoveries for the PAH internal standards from Sediment XI are:

NAd8 (68.1 ± 6.4%)	ACNd10 (91.5 ± 3.2%)	BaPd12 (85.9 ± 12.8%)
PEd12 (85.9 ± 12.8%)	CHRsd12 (189 ± 20%)	

10) Analysis of SRM 1941a:

We followed the same procedures for sample cleanup and the use of internal standards in the analysis of SRM 1941a as we did for Sediment XI. We also used GC-ECD for the analysis of PCBs and pesticides and GC-MSD in select ion monitoring mode for PAHs using the same columns and conditions as for Sediment XI. Data for PCBs and pesticides were acquired for SRM 1941a on 3/31/02.

Processing of sample extracts for PAHs finished on 5/17/2002.

Approximate amount of sample extracted: 5.03 ± 0.04 g, dry basis

Percent recovery range:	PAH	NAd8 (53.0 ± 23.7%)	ACNd10 (67.3 ± 9.9%)	BaPd12 (69.7 ± 10.3%)
		PEd12 Not Detected	CHRsd12 (202 ± 10%)	
	Pesticides	Ronnel: (94.7 ± 5.5%)	123-TCB: (81.4 ± 3.9%)	
	PCB Congen DOB:	(75.7 ± 3.3%)	PCB 198: (186.1 ± 11.1%)	
		PCB 192: (98.8 ± 3.5%)

	Jar 105	PCBs	EPPGD1AH
	Jar 150	PCBs	EPPJ71AH
	Jar 180	PCBs	EPPJ91AH

One SRM 1944 analysis was done with the first batch of each PCB, PAH and Pesticide sediment sample. Two SRM 1944 analyses were performed after the conclusion of the sediment analyses. Specifically, the SRM1944 work performed under H2D050110 was performed after the analysis of the sediment 11 samples, using the same methods as were used for the sediment samples. Please note the analysis dates of the analyses, provided in the results tables.

The results for Benzo(k)flouranthene may be elevated due to possible coelution with Benzo(j)flouranthene.

There was also an apparent elevation in the analyzed value for Dibenz(a,h)anthracene, which may also be due to coelution.

The following QC issues were observed during the program:

Lot Number: H1K300116, Method(s): KNX-ID-0016 Revision 1: High Resolution GC / Low Resolution MS SIM Analysis for Polycyclic Aromatic Hydrocarbons and Selected Semivolatile Organic Compounds.

The following analytes were present above the minimum level (defined below) in method blanks ETXF31AA and ET4GM1AA: Naphthalene, 2-methylnaphthalene and 1-methylnaphthalene. The level of contamination in the blanks represents 5 to 10% of the amounts observed in the sediments under study. Efforts are underway to determine the source of the contamination.

SRM 1944 was run at a 1:10 dilution to bring all compounds into the instrument's calibration range.

Lot Number: H2D050110, Method(s): KNX-ID-0014 Revision 2: High Resolution GC / Low Resolution MS SIM Analysis for Organochlorine Pesticides.

All QC criteria were met with the following exceptions:

Recovery standard 13C-delta-BHC was not recovered or recovered in very low amounts in the method blank and sample 1944 Ace/Hex 1.

Due to this lack of recovery the following internal standards were quantitated against the 13C-PCB-101 recovery standard in the samples listed above: 13C-beta-BHC, 13C-gamma-BHC, 13C-heptachlor, 13C-hexamchlorobenzene, 13C-methoxychlor. The use of the alternative recovery standard would not affect the quality of the results, since analytes are referenced to labeled internal standards, not recovery standards.

The laboratory control sample duplicate displayed endrin aldehyde and endosulfan sulfate outside of control limits. In addition, the %RPD for endrin ketone between the LCS and LCSD was outside of control limits.

Sample 1944 Ace/Hex 2 displayed the following internal standards below the 20% control limit: 13C-4,4'-DDT, 13C-methoxychlor, 13C-aldrin, and 13C-2,4'-DDT. Results from isotope dilution analyses, if properly applied, are independent of internal standard recoveries.

Lot Number: H1K300116, Method: KNX-ID-0013 Revision 1: High Resolution GC / High Resolution MS SIM Analysis for Polychlorinated Biphenyls.

All samples were analyzed at a 1:5 dilution to bring results within the calibration range.

Lot Number: H1K300116, Method: KNX-ID-0013 Revision 2: High Resolution GC / High Resolution MS SIM Analysis for Organochlorine Pesticides.

The laboratory control sample associated with the first SRM 1944 and Jar 105 had endrin aldehyde and 13C-Methoxychlor recoveries outside control limits. Several internal standards were not recovered on the method blank, and associated native analytes could not be reported.

6	2/22/02	10 wet	6 wet	gravimetric	ultra sonication; ambient temperature; shaking	dichloromethane/acetone (1:1)			3 cycles of 1 min sonication; 4 h shaker table
6b	4/27/02	10 wet	1.5 wet	gravimetric	ultra sonication; ambient temperature; shaking	dichloromethane/acetone (1:1)			3 cycles of 1 min sonication; 4 h shaker table
7	4/2/02	1 wet	2.5 wet	gravimetric	PFE	dichloromethane			temp = 100 °C; pressure 2000 psi; samples dried with hydratans prior to extraction
8	4/5/02	5 wet	5 wet	gravimetric, using 500 uL extract from 10 mL of conc.	NDA System and Trends	dichloromethane			2 min extraction using ultrasonic probe (2x followed by 0.5 cm. shaker table)
9	4/15/02	5 wet	2.5 wet	gravimetric	PFE (EPA SW-846 Method 3545)	dichloromethane/acetone (1:1)			
10	4/8/02	10 wet	10 wet	gravimetric	Scintillite	dichloromethane			12 h
11	4/12/02	1 wet	1 wet	gravimetric	Scintillite	dichloromethane			18 h
12	4/12/02	10.5 wet	7.0 wet	gravimetric using 2 mL from 10 mL of conc. extract	Scintillite	dichloromethane			18 h
13	4/15/02	10 wet	10 wet	gravimetric	Scintillite	dichloromethane/acetone (1:1)			16 h
14	4/15/02	4.7 wet	3.7 wet	gravimetric using 100 uL extract from 1 mL of conc.	Scintillite	dichloromethane/acetone (1:1)			16 h
15	4/14/02	1 wet	1 wet	gravimetric using 1 mL extract	PFE	dichloromethane			
16	4/2/02	6 wet	6 wet	gravimetric using 1 mL extract	Polytron	dichloromethane			3 x 1 min each
17	4/2/02	6 wet	6 wet	extraction sample using dichloromethane in the presence of an enzyme - gravimetric	Scintillite	dichloromethane			overnight (~16 h)
20	5/13/02	8 wet	10 wet	gravimetric using 20-30 uL from 1 mL of conc. extract	PFE	dichloromethane/acetone (1:1)			3 x 1 min basic cycles
21	5/14/02	3-4 wet	3-4 wet	Soxhlet - basic; gravimetric using whole extract	Scintillite	hexane	dichloromethane		100 °C
22	5/13/02	1 wet (OC); 2 wet (PCB)	3 wet	Bligh and Dyer	PFE	dichloromethane			7 h
23	5/15/02	5.5 wet	4 wet	gravimetric	grinding with sodium sulfate and dichloromethane	dichloromethane			3 x 1 min each
24	5/15/02	2.5 wet	8 wet	gravimetric	Scintillite	dichloromethane followed by toluene	dichloromethane		12 h for each solvent
25	5/15/02	5 wet	1.5 wet	gravimetric	Scintillite	dichloromethane			desiccate prior to extraction with sodium sulfate
26	5/15/02	5 wet	3 wet	gravimetric	Scintillite	dichloromethane			24 h
27	5/15/02	3.5 wet	3 wet	gravimetric using 100 uL extract from 3 mL of conc.	PFE	dichloromethane			13 min per sample
29	5/2/02	10 wet	7 wet	SOP SV-59	Scintillite	dichloromethane			16 h

Lab #	Sample extract cleanup method	PCBs and Pesticides Separated?	Method of quantitation
1-MS-1	silica solid phase extraction (SPE) column; condition and elute with 10 % dichloromethane (DCM) in hexane; repeat SPE step one more time; repeat SPE using NH2 SPE column	no	IS
1-MS-2	SEC for lipid removal; separation of PCBs and pesticides using HPLC with aminopropyl column	yes	IS
1-ECD	SEC (PLGel) using dichloromethane as mobile phase; fractionated using aminopropylsilane column (YMC, Waters)	yes	IS
2	SEC (column 2.7 cm id, packed 29.5 cm deep with O1 analytical Envirobeads S-X3 at 19 °C; 1 g florisol column (activated at 450 °C for 17 h and deactivated with 1% HPLC water)	no	IS
3	20 g alumina column -2% deactivate F-20 alumina packed in DCM, sulfuric acid, and HPLC/GPC cleanup	IS	IS
4	sulfuric acid	no	IS
4b	silica gel/copper	no	IS
5	SEC, florisol	no	IS
5b	pesticide - SEC, florisol; PCBs- SEC, florisol, silica, alumina	no	IS
6	alumina/silica gel column; GPC-HPLC	no	IS
6b	alumina/silica gel column; GPC-HPLC	no	IS
7	(1) SEC HPLC (SDVB column using dichloromethane); (2) PCB/pesticide fractionation on silica SPE (F1 -hexane; F2- hexane:DCM (1:1)	IS	IS
8	40 g of 2% deactivated f20 alumina eluted with DCM follows by HPLC/GPC fractionation US EPA SW-846 Method 3620; modified - acetonitrile back partition (Millis, PA, JH Onley, and RA Gaither, 1963); EPA SW-846 Method 3665	no	IS
9	For pest-GPC and Al/Si	somewhat	ES
10	yes	ES	ES
11	florisil chromatography	yes	IS
12	Column chromatography - florisol, silica, and alumina; conc to 5 mL; 2 Phenogel SEC HPLC columns in series.	no	IS
13	3% deactivated florisol, 44% acid silica, sodium sulfate (PCB); 3% silica, 1% florisol and heated sodium sulfate (OC)	yes	IS
14	florisil dry column; silica gel column chromatography	yes	ES
17	Extract concentrated and then cleaned through a 12 g florisol cartridge.	no	IS
19	Extracts filtered through Millipore Millex-SR 0.5 um filter; SEC (Bio-Rad, Bio Beads, S-X3, 200-400 mesh, in DCM); clean-up and fractionation using 7.3% deactivated silica gel	yes	IS
20	C-18 reversed phase	no	IS
21	Pesticide - SEC followed by silica cleanup columns; PCBs- acid/base wash, silica, alumina, additional silica cleanup columns	no	IS
22	pesticides- SEC, Florisol cleanup column, silicic acid cleanup column; PCBs- H411E cleanup (sulfuric acid)/silica gel/ potassium silicate columns	yes	ES
23	silica/alumina and HPLC - SEC	no	IS
24	silica gel/ alumina and HPLC Phenogel	no	IS
25	1668 analysis - silica gel, acid alumina, mercury	yes	IS
26	SEC for lipid removal; florisol - Flis5 was still a little greasy after SEC and florisol - florisol optimized for toxaphene removal	yes	IS
27	silica/alumina column chromatography, HPLC (Phenogel 100 A column), conc to 0.5 mL in water bath	no	IS
29	pesticides - SEC and column chromatography with silica gel; PCBs - column chromatography with florisol	yes	ES

## **Appendix H: Laboratory Methods Used, Sediment XI**

Lab #	Reported	g extracted	% water	Extraction		Extraction	Extraction	Time	Extraction	Extraction
				Determination	Method					
1-MS-1	4/15/02	18 wet	1 dry	oven drying at 105 °C	PFE	hexane/acetone (1:1)		15 min		
1-ECD	6/28/02	3.5 wet	1.3 dry	oven drying 18 h at 90 °C	PFE	diechloromethane				
3	2/21/02	13 wet	6 dry	oven drying at 105 °C overnight	physical agitation plus sonication	dichloromethane (1:1); hexane once and 100% hexane twice		12 h first, 4 h second, 0.5 h third		
4	2/21/02	5.78 wet	5.47 dry	oven drying at 105 °C	PFE	diechloromethane;acetone		15 min		
4b	4/19/02	5.04 wet	2.01 dry	oven drying at 105 °C	microwave extraction	hexane;acetone		20 min		
5	2/22/02	10 wet	2 dry	oven dry; gravimetric	Soxlet	diechloromethane		16 h		
5h	4/15/02	5 wet	1 dry	gravimetric	Soxlet	diechloromethane		16 h		
6	2/22/02	5 wet	1 dry	24 h at 105 °C	ultrasonication; ambient temperature shaking	dichloromethane;acetone (1:1)		3 cycles of 3 min sonication; 4 h shaker table		
6b	4/29/02	10 wet	1 dry	24 h at 105 °C	ultrasonication; ambient temperature shaking	dichloromethane;acetone (1:1)		3 cycles of 3 min sonication; 4 h shaker table		
7	4/8/02	4.5 wet	0.35 dry	16 h at 120 °C	PFE	diechloromethane		3 cycles @ 5 min per cycle		
8	4/5/02	10 wet	5 dry	24 h oven drying	NOAA Status and Trends	diechloromethane		12 h shake; 4 h shake 0.5 h shake		
9	4/11/02	26 wet	3.5 dry	24 h at 105 °C	PFE (EPA SW-846 Method 3545)	diechloromethane		20 min		
10	3-29-02 (PAH) & 4/8/2002 (pest)	17 wet	2 dry	gravimetric	Soxlet	diechloromethane		12 h		
12	4/15/02	17.4 wet	194.1s - 5.03 8	overnight at 120 °C	Soxlet	diechloromethane		18 h		
13	4/15/02	10 wet	10 dry	gravimetric	Soxlet	diechloromethane;hexane (1:1)		16 h		
14	4/15/02	20 wet		freeze-drying	Soxlet	dichloromethane;acetone (3:1)		16 h		
15	4/15/02	5 wet	5 dry	overnight at 105 °C	sonication method 3550	dichloromethane;acetone (1:1)		3 X 3 min w/ approx. 100 mL oil solvent each time		
16	4/8/02	3.4 wet	3.4 dry	24 h at 104 °C	PFE	dichloromethane;acetone (2:1)		30 min		
17	4/15/02	8 wet	5 dry	overnight at 105 °C	PFE	dichloromethane		20 min		
18	4/19/02	2 wet	2 wet	MCAWV 16.0.3	Soxlet	acetone;hexane (1:1)		16 h		
20	5/15/02	14 wet		min 6 h at 103 °C	Soxlet	diechloromethane;acetone (4:1) for pest; volume for PCBs		overnight (>16 h)		
21	5/14/02	1-10 wet		min 12 h at 110 °C	Soxlet for pest; PFE for PCBs	diechloromethane followed by toluene		16 h for pest; 2 x 5 min static cycles		
23	5/15/02	0.8 wet	0.48 dry	24 h at 120 °C	PFE	diechloromethane		26 min		
24	5/16/02	19.9 wet	1.32 dry	oven drying to constant weight	PFE	diechloromethane		20 min		
25	5/15/02	3 wet	3 dry	ASTM method D-2216	Soxlet	diechloromethane followed by toluene		16 h for each solvent		
26	5/15/02	5 wet	1 dry	24 h at 60 °C	Soxlet	diechloromethane		24 h		
27	5/15/02	2 wet	0.5 dry	oven drying at 105 °C until constant weight	PFE	diechloromethane		13 min per sample		
28	5/15/02	5 wet	2-10 dry	EPA method 160.3	PFE (EPA Method 3545)	diechloromethane		approx. 30 min		

Lab #	Sample extract cleanup method	PCBs and Pesticides Separated?	Method of quantitation
1-MS-1	silica solid phase extraction (SPE) column; condition and elute with 10 % dichloromethane (DCM) in hexane; add activated copper powder to fraction; repeat SPE step one more time	no	IS
1-ECD	Activated Cu powder to remove elemental sulfur; For PAHs - 1g aminopropyl SPE cartridge using 10% DCM in hexane; for organochlorines - SEC (PL Gel) using DCM as mobile phase followed by fractionation using aminopropylsilane column (uBondapak, Waters)	yes	IS
3	20 g alumina column -2% deactivate F-20 alumina packed in DCM and sulfuric acid	no	IS
4	sulfuric acid / copper	no	IS
4b	silica gel/copper	no	IS
5	acid/base silica; alumina, florisil	no	IS
5b	pesticide - florisil; PCBs- florisil, silica, alumina; PAH - silica	no	IS
6	alumina/silica gel column; GPC-HPLC	no	IS
6b	alumina/silica gel column; granulated copper	no	IS
7	(1) SEC HPLC (SDVB column using dichloromethane); (2a) 1/2 of extract - aliphatic/aromatic fractionation on silica SPE - aromatic fraction for PAH; (2b) other 1/2 of extract - PCB/pesticide fractionation on silica SPE (F1-hexane; F2- hexane:DCM (1:1) were separated	no	IS
8	40 g of 2% deactivated F20 alumina eluted with DCM follows by HPLC/GPC fractionation	somewhat	ES
9	For Pest/PCB - US EPA SW-846 Method 3620, Florisil; mercury clean-up; concentrated sulfuric acid clean-up, 0% acid clean-up only; For PAH - US EPA SW 846 Method 3630B, silica gel	yes	ES for pest & IS for PAH
10	For pest- GPC and Al/Si; For PAH - GPC	no	
11	Conc to approx. 200 mL - add 50 g of activated copper overnight; column chromatography - florisil, silica, and alumina; conc to 5 mL; 2 Phenogel SEC HPLC columns in series.	no	IS
12	3% deactivated florisil, 44% acid silica, sodium sulfate (PCB); 3% silica; 1% florisil and heated sodium sulfate (OC)	yes	IS
13	silica gel column chromatography, copper treatment, sulfuric acid treatment	yes	ES
14	GPC biobeads SX-3	no	IS
15	florisil cleanup	no	IS
16	For PAH - add copper; for PCB and pest. - 6 g florisil cartridge and copper PCBs- acid wash, florisil; PAHs-silica gel; pest- silica gel	no	isotope dilution IS
17	C-18 reversed phase	no	IS
18	Pesticide - copper, water wash, multiple silica gel cleanup columns; PCBs- acid/base wash, silica, alumina; additional silica cleanup columns	no	IS
19	silica/alumina and HPLC - SEC	no	IS
20	silica gel/ alumina	no	IS
21	1668 analysis - silica gel, acid alumina, mercury; PAH analysis - silica gel, mercury	yes	IS
22	PAH- alumina chromatograph; PCBs - florisil	yes	IS
23	silica/alumina column chromatography, addition of copper; reduce to 1.0 mL using water bath	no	IS
24	chromatographic column with alumina/copper	no	IS

## **Appendix I: Charts of Fish Homogenate V and SRM 1946 Results by Analyte**

See Tables 2 and 3 and Appendix C for results reported as <number, detection limit, etc. Charts for analytes with few reported numerical results are not included in this appendix.

For Fish Homogenate V plots:

Solid line: exercise assigned value

Dotted line:  $z = \pm 1$ , i. e., 25% from assigned value

Dotted/dashed line:  $z = \pm 2$ , i. e., 50% from assigned value

Dashed line:  $z = \pm 3$ , i. e., 75% from assigned value

For SRM 1946 plots:

Solid line: material certified concentration or target value (see caption of each plot)

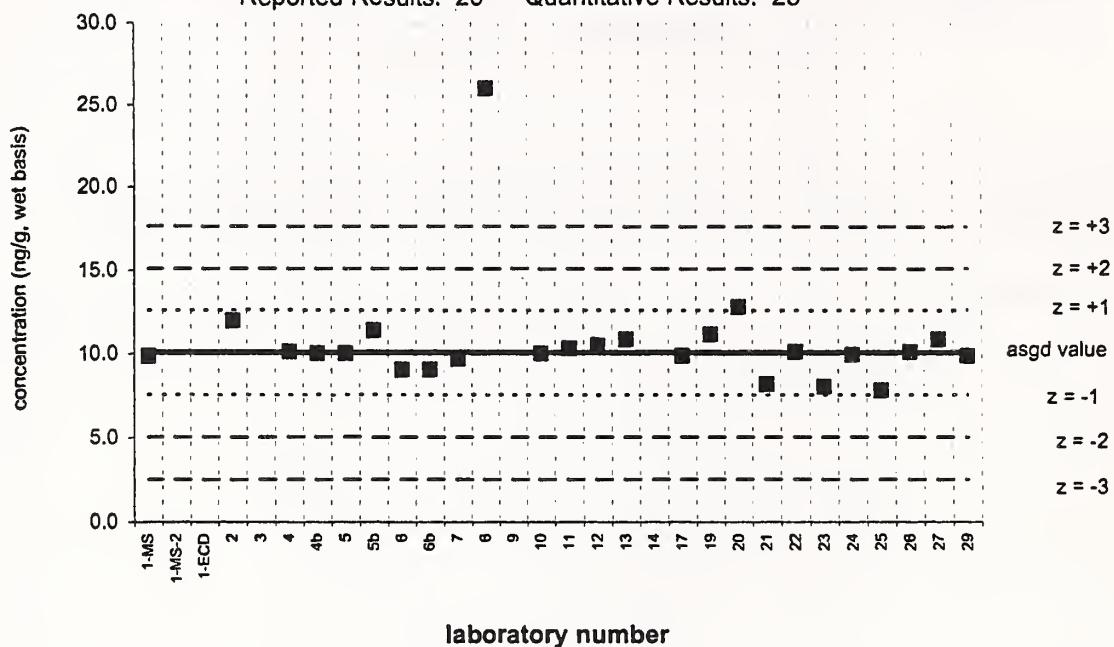

Dotted line: 95% confidence interval (CI)

Dashed line: 30% from 95% confidence interval (CI)

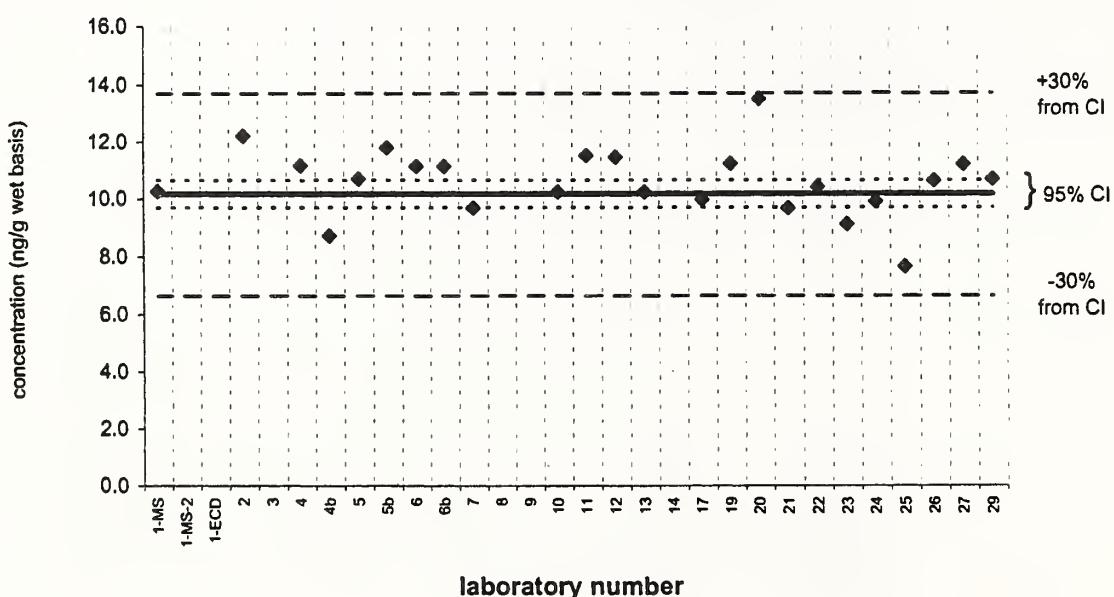

**TEO or lipid****Fish V (QA02FSH5)**

Assigned value = 10.1 ng/g s = 1.2 ng/g 95% CL = 0.5 ng/g (wet basis)

Reported Results: 25 Quantitative Results: 25

**TEO or lipid****SRM 1946**Certified Value =  $10.2 \pm 0.5$  ng/g (wet basis)

Reported Results: 24 Quantitative Results: 24

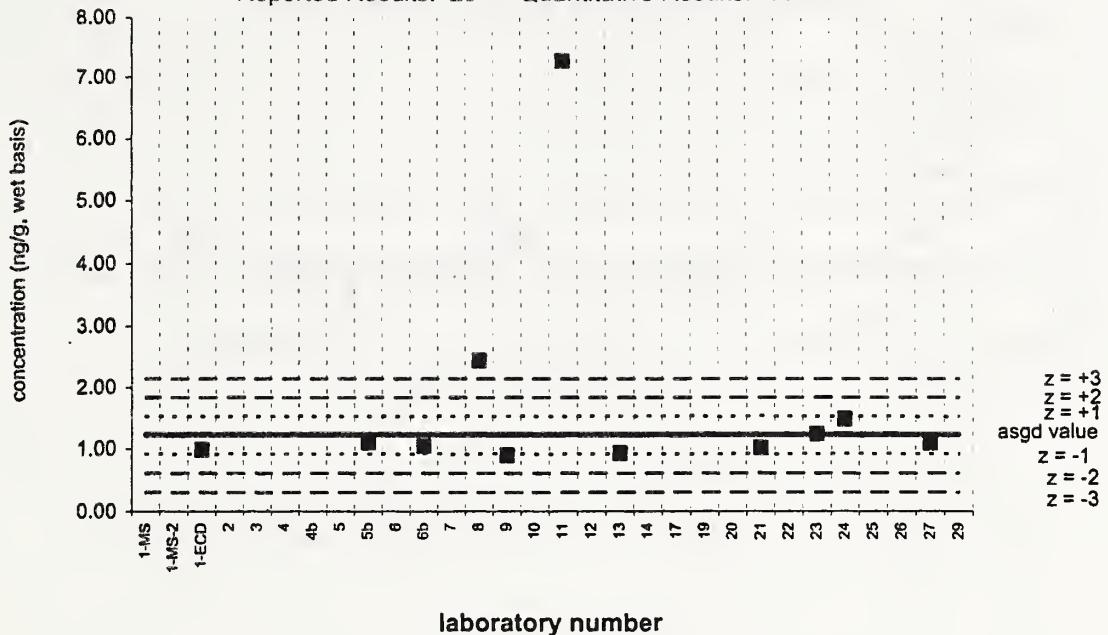

### alpha-HCH (a-BHC)

### Fish V (QA02FSH5)

Assigned value = 1.22 ng/g  $s = 0.46$  ng/g 95% CL = 0.33 ng/g (wet basis)

Reported Results: 20 Quantitative Results: 11

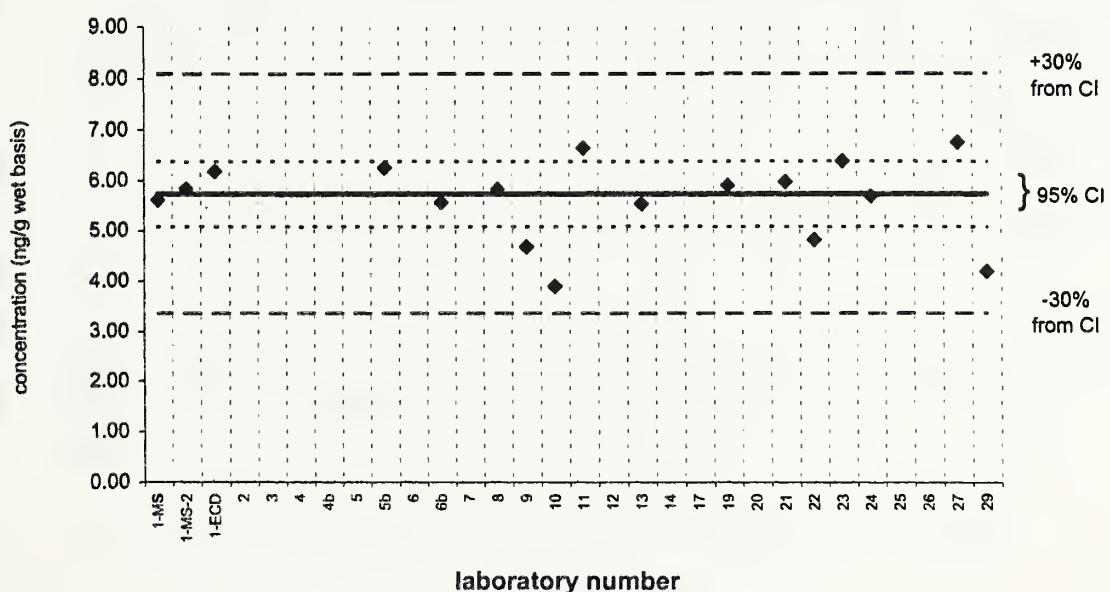

### alpha-HCH (a-BHC)

### SRM 1946

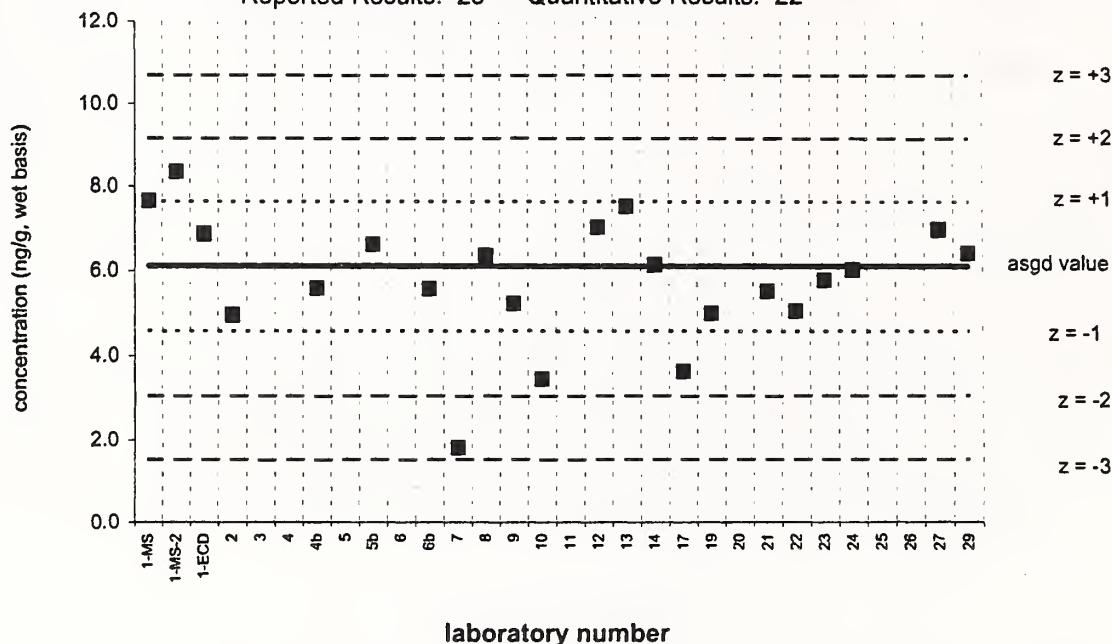

Certified Value = 5.72  $\pm$  0.65 ng/g (wet basis)

Reported Results: 20 Quantitative Results: 17

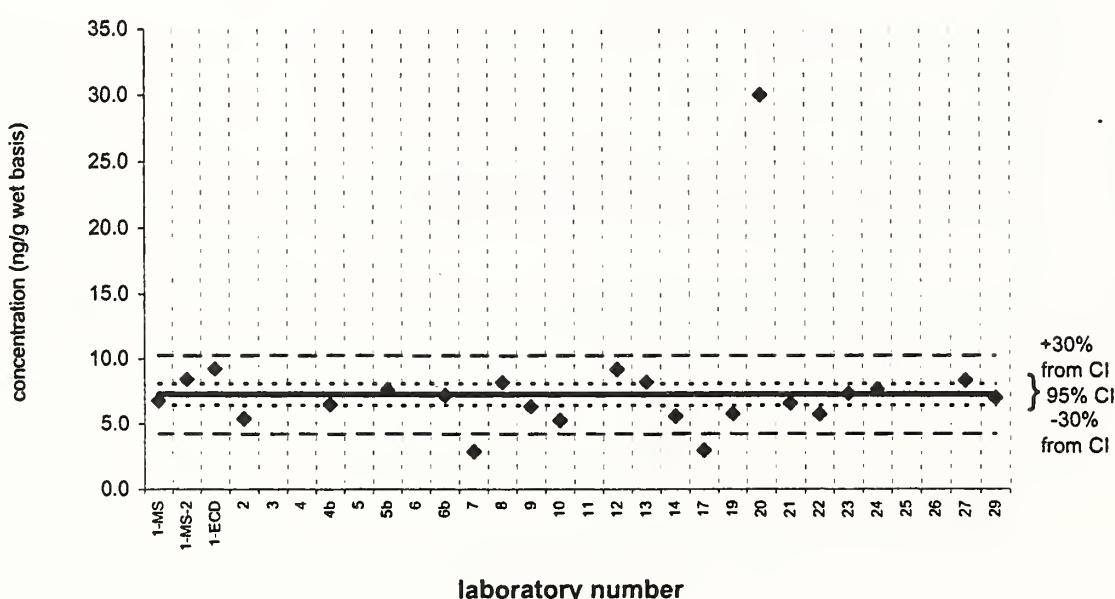

**hexachlorobenzene****Fish V (QA02FSH5)**Assigned value = 6.11 ng/g  $s = 1.13$  ng/g 95% CL = 0.53 ng/g (wet basis)

Reported Results: 23 Quantitative Results: 22

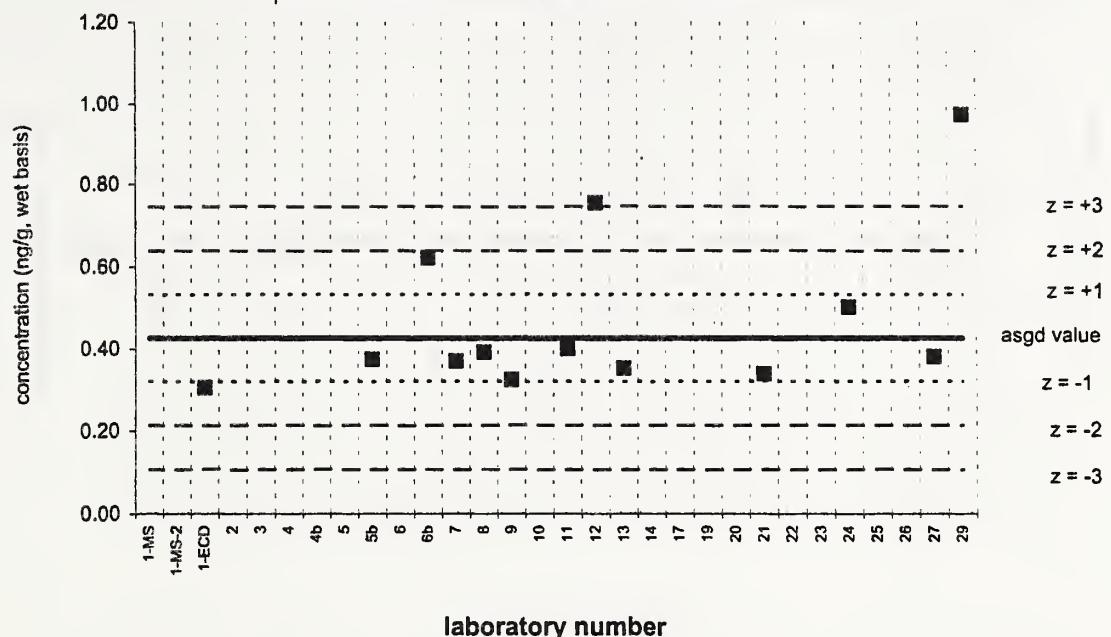

**hexachlorobenzene****SRM 1946**Certified Value =  $7.25 \pm 0.83$  ng/g (wet basis)

Reported Results: 23 Quantitative Results: 23

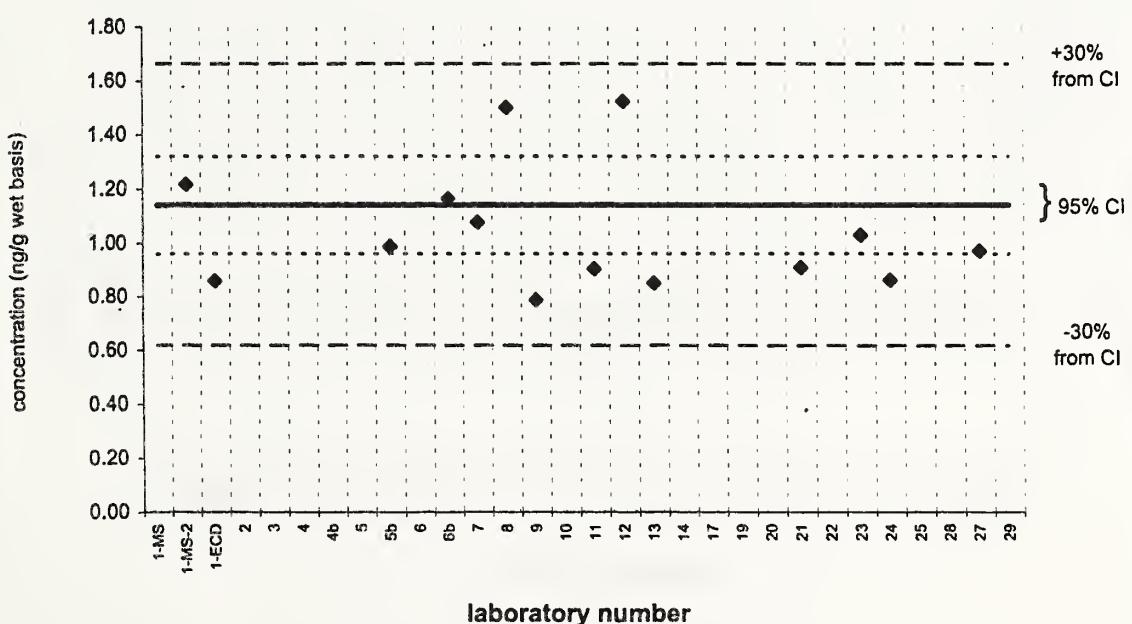

**gamma-HCH (g-BHC,lindane)****Fish V (QA02FSH5)**Assigned value = 0.425 ng/g  $s = 0.135$  ng/g 95% CL = 0.120 ng/g (wet basis)

Reported Results: 23 Quantitative Results: 13

**gamma-HCH (g-BHC,lindane)****SRM 1946**Certified Value =  $1.14 \pm 0.18$  ng/g (wet basis)

Reported Results: 23 Quantitative Results: 14

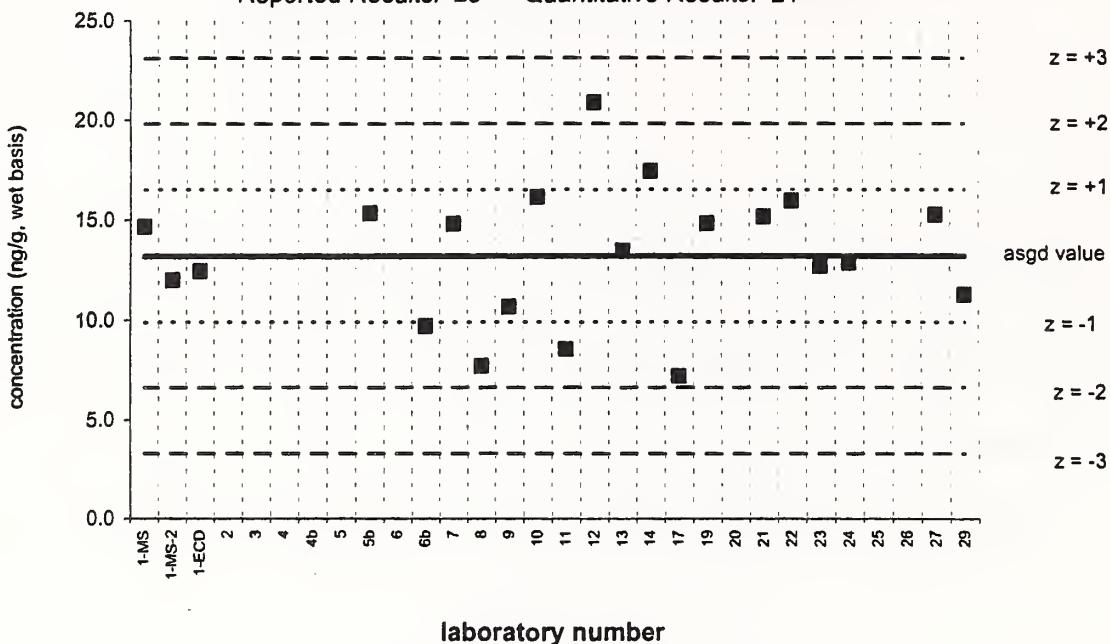

### heptachlor epoxide

### Fish V (QA02FSH5)

Assigned value = 13.2 ng/g  $s = 2.7$  ng/g 95% CL = 1.3 ng/g (wet basis)

Reported Results: 23 Quantitative Results: 21

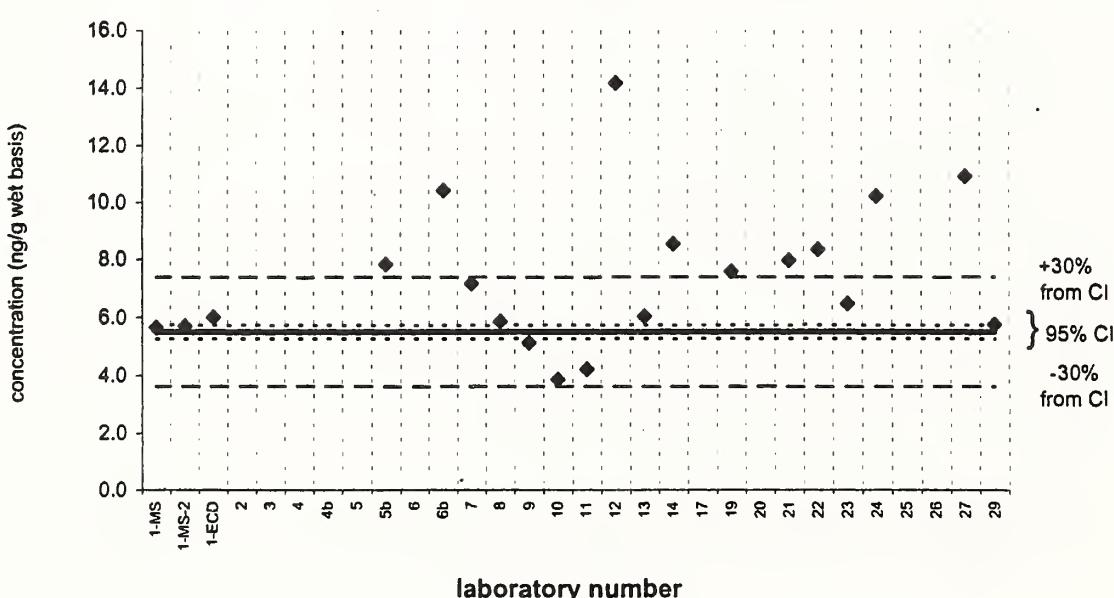

### heptachlor epoxide

### SRM 1946

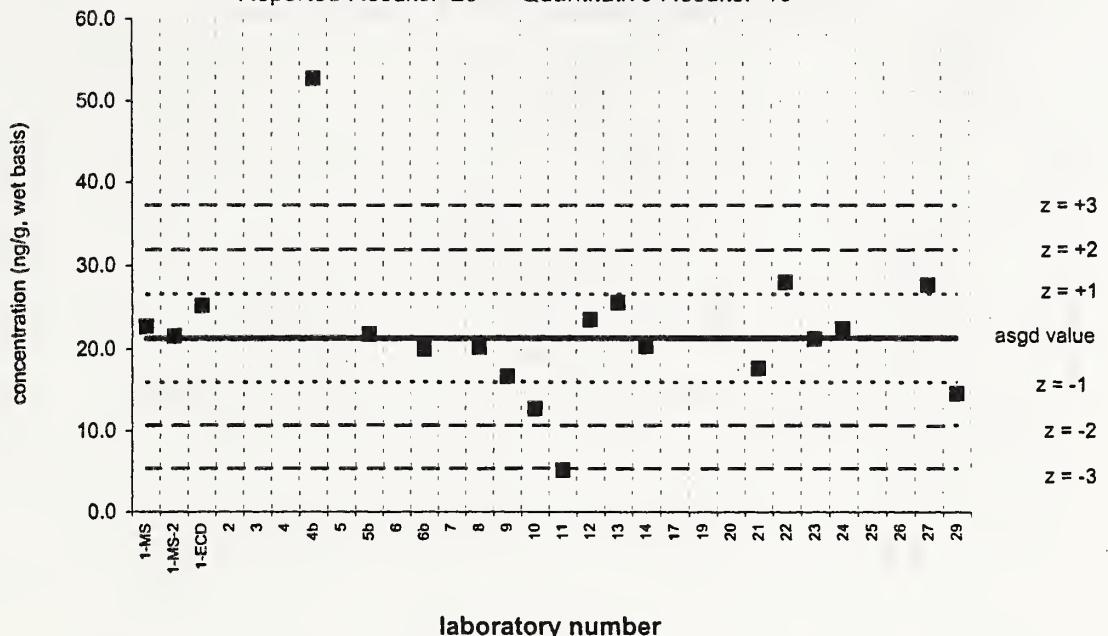

Certified Value =  $5.50 \pm 0.23$  ng/g (wet basis)

Reported Results: 23 Quantitative Results: 20

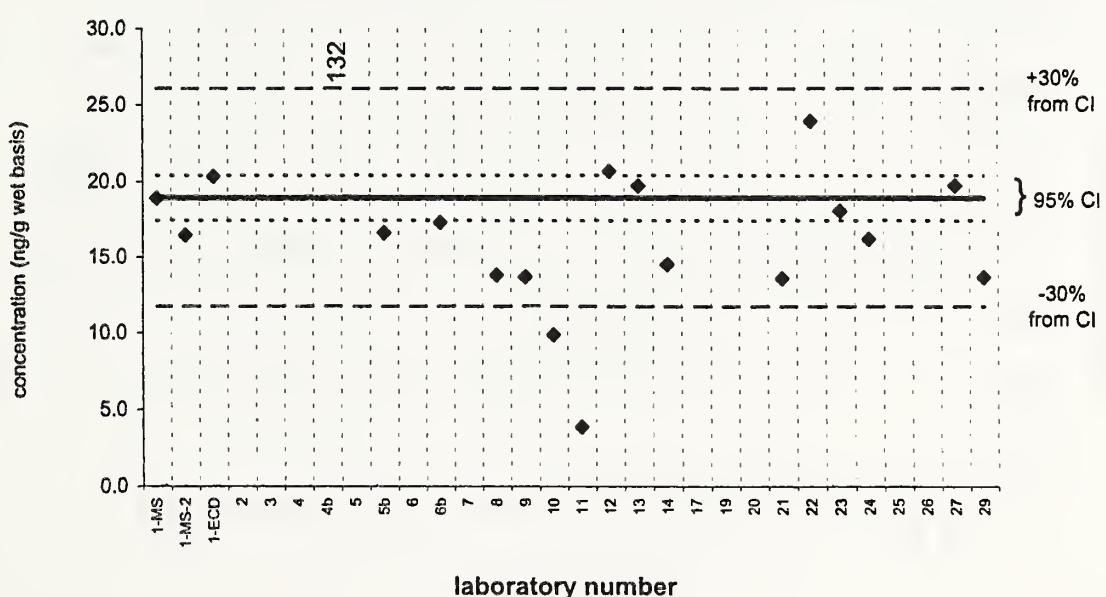

**oxychlordane****Fish V (QA02FSH5)**Assigned value = 21.2 ng/g  $s = 4.2$  ng/g 95% CL = 2.2 ng/g (wet basis)

Reported Results: 20 Quantitative Results: 19

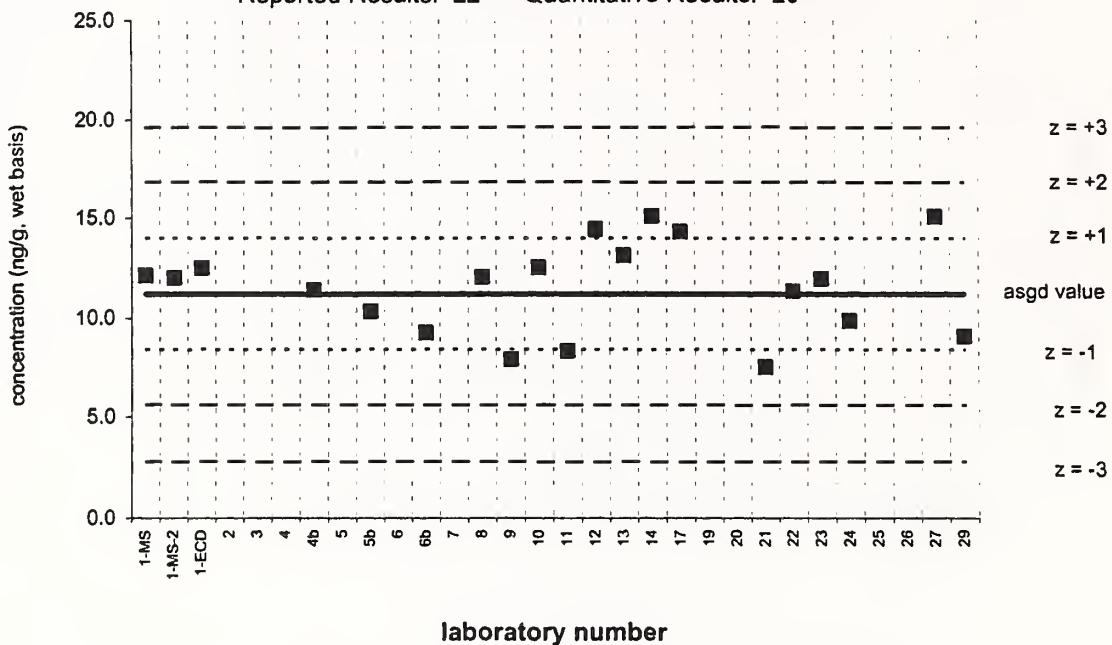

**oxychlordane****SRM 1946**Certified Value =  $18.9 \pm 1.5$  ng/g (wet basis)

Reported Results: 20 Quantitative Results: 19

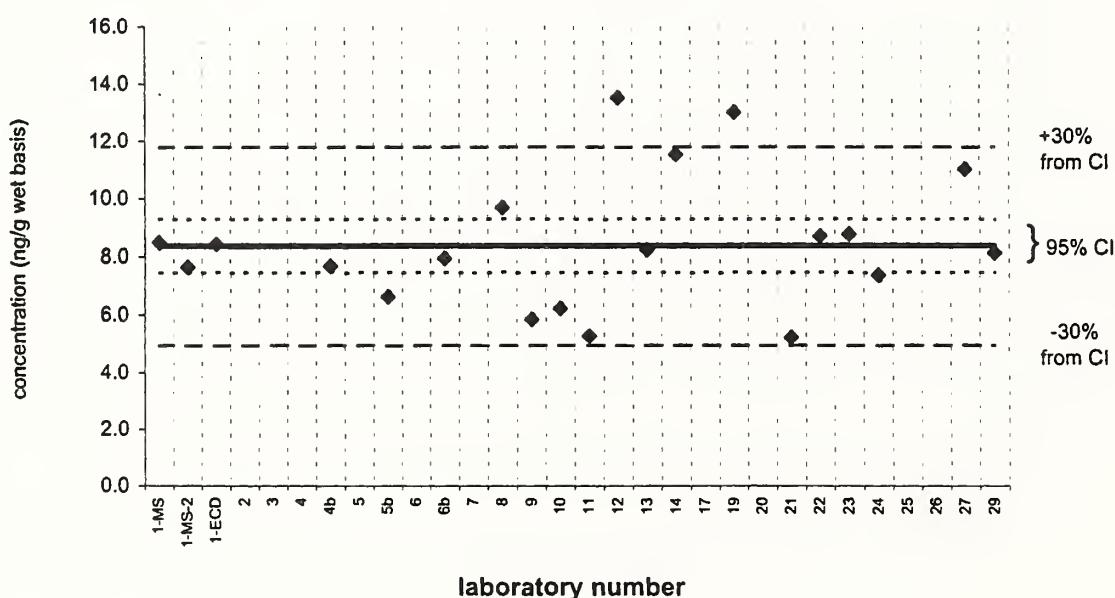

**gamma-chlordane****Fish V (QA02FSH5)**Assigned value = 11.2 ng/g  $s = 2.2$  ng/g 95% CL = 1.1 ng/g (wet basis)

Reported Results: 22 Quantitative Results: 20

**gamma-chlordane****SRM 1946**Certified Value = 8.36  $\pm$  0.91 ng/g (wet basis)

Reported Results: 22 Quantitative Results: 20

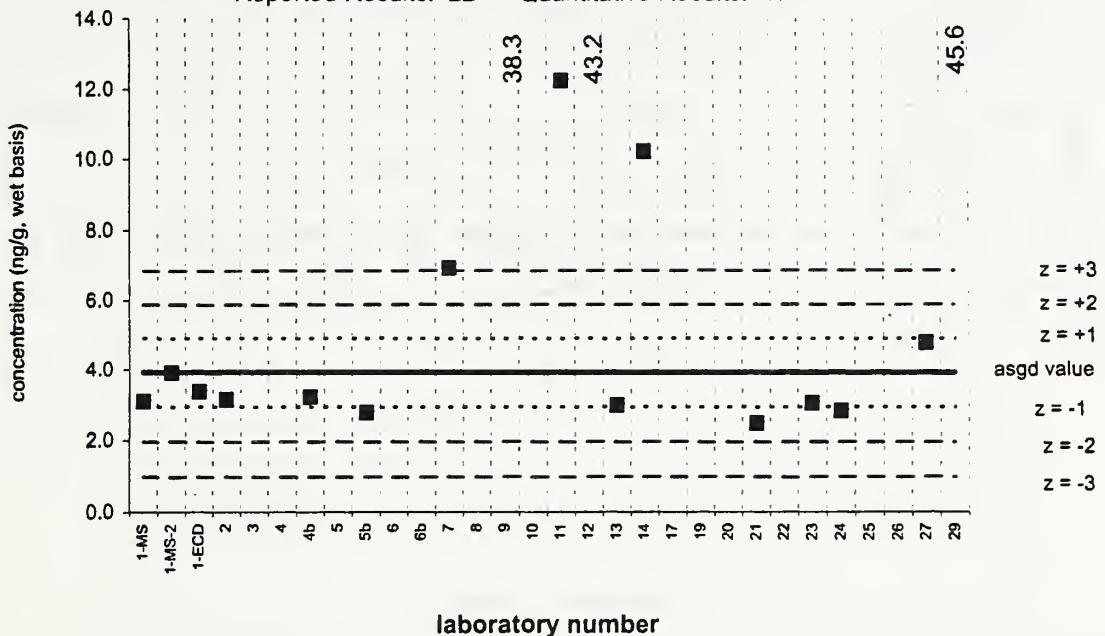

## 2,4'-DDE

## Fish V (QA02FSH5)

Assigned value = 3.91 ng/g  $s = 2.18$  ng/g 95% CL = 1.46 ng/g (wet basis)

Reported Results: 22 Quantitative Results: 17

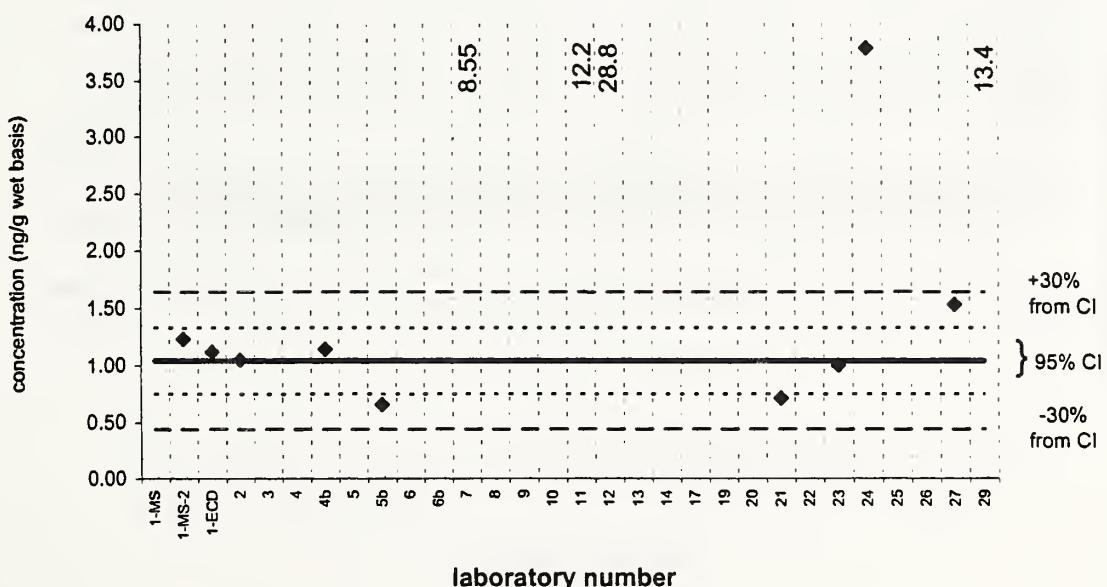

## 2,4'-DDE

## SRM 1946

Reference Value =  $1.04 \pm 0.29$  ng/g (wet basis)

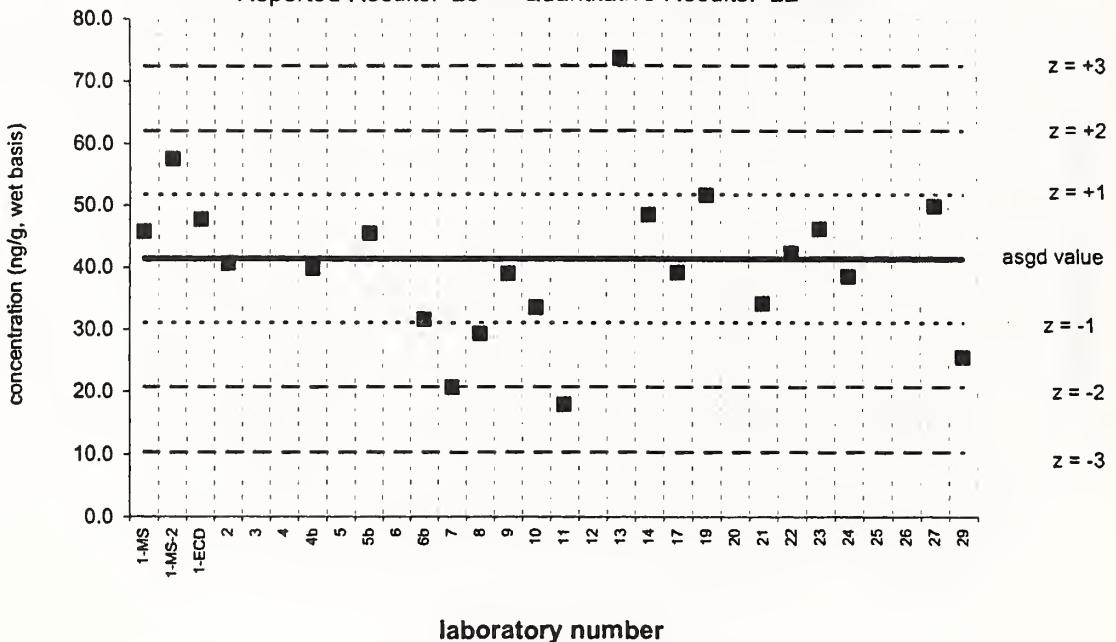

Reported Results: 22 Quantitative Results: 13

**cis-chlordane (alpha-chlordane)****Fish V (QA02FSH5)**

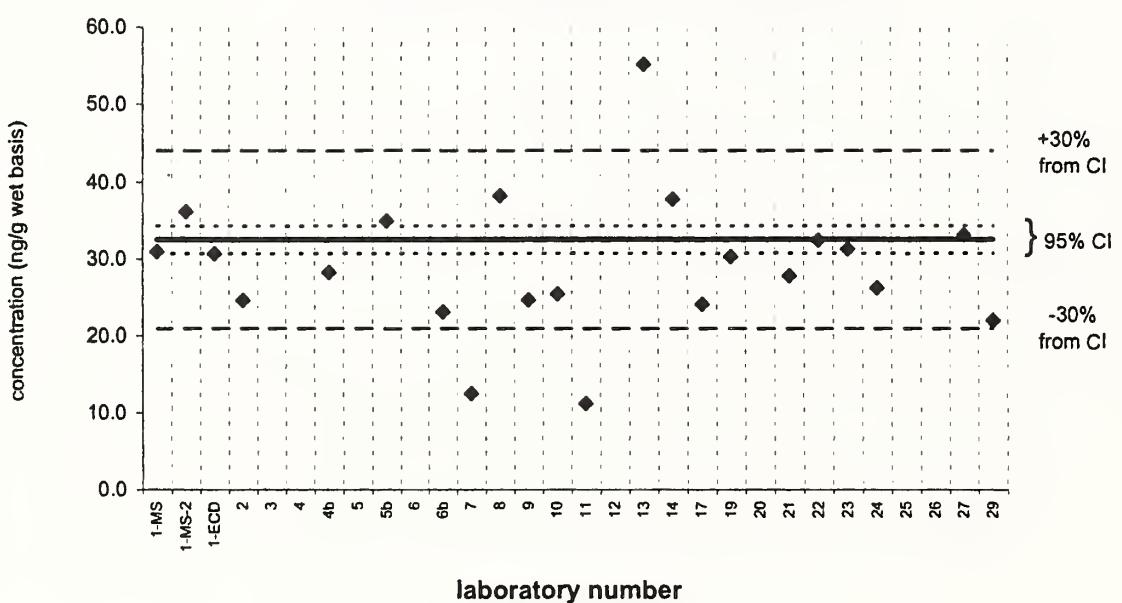

Assigned value = 41.4 ng/g s = 8.2 ng/g 95% CL = 4.0 ng/g (wet basis)

Reported Results: 23 Quantitative Results: 22

**cis-chlordane (alpha-chlordane)****SRM 1946**

Certified Value = 32.5 ± 1.8 ng/g (wet basis)

Reported Results: 23 Quantitative Results: 22

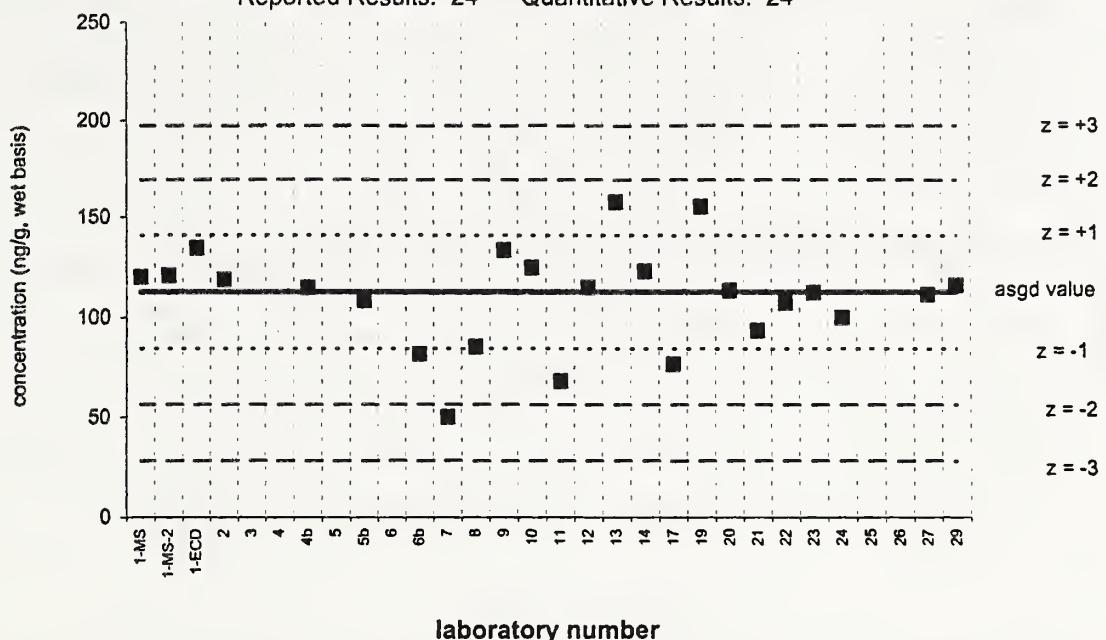

### trans-nonachlor

### Fish V (QA02FSH5)

Assigned value = 113 ng/g  $s = 22$  ng/g 95% CL = 10 ng/g (wet basis)

Reported Results: 24 Quantitative Results: 24

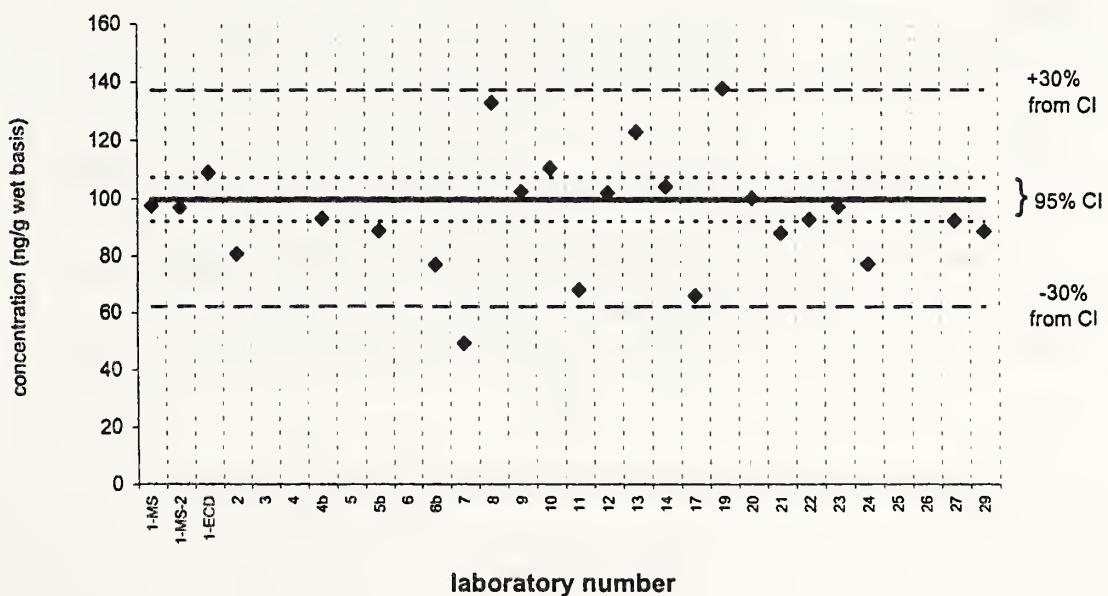

### trans-nonachlor

### SRM 1946

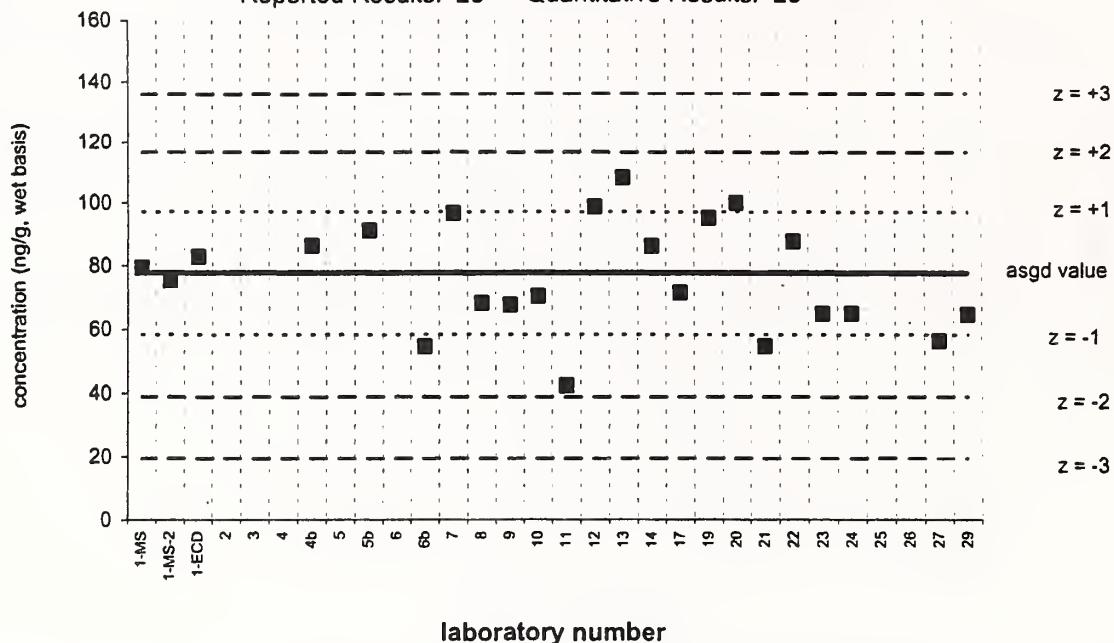

Certified Value =  $99.6 \pm 7.6$  ng/g (wet basis)

Reported Results: 24 Quantitative Results: 24

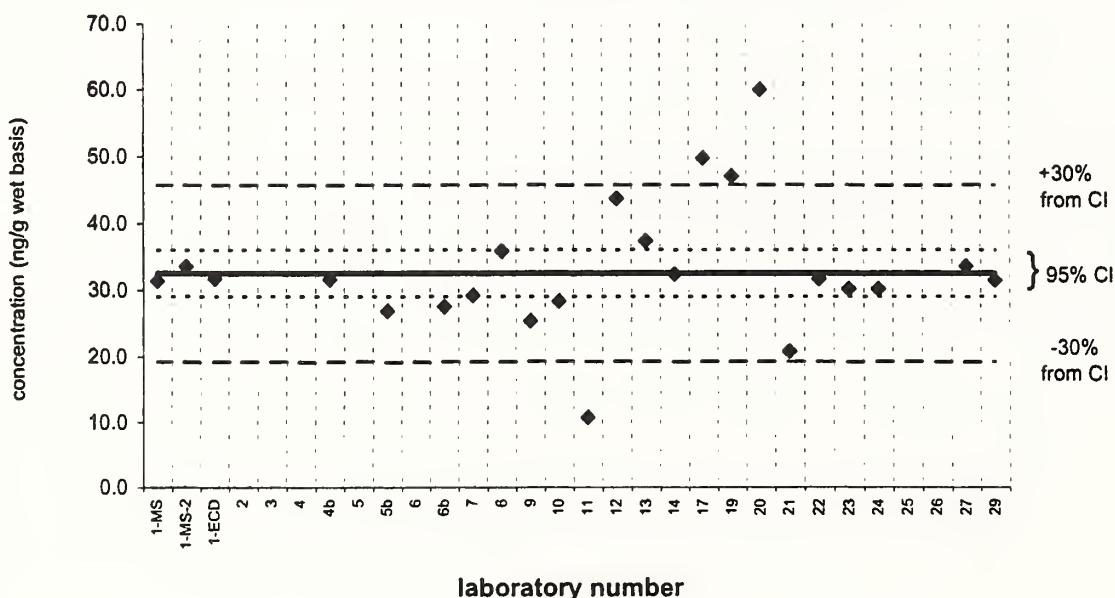

**dieldrin****Fish V (QA02FSH5)**Assigned value = 77.7 ng/g  $s = 15.8$  ng/g 95% CL = 7.4 ng/g (wet basis)

Reported Results: 23 Quantitative Results: 23

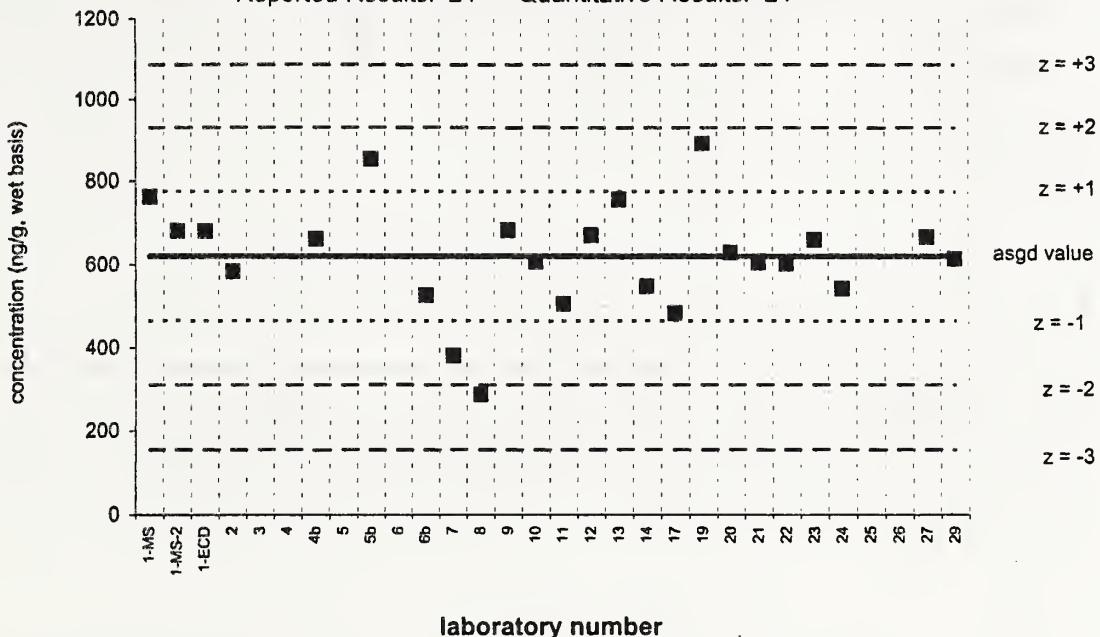

**dieldrin****SRM 1946**Certified Value =  $32.5 \pm 3.5$  ng/g (wet basis)

Reported Results: 23 Quantitative Results: 23

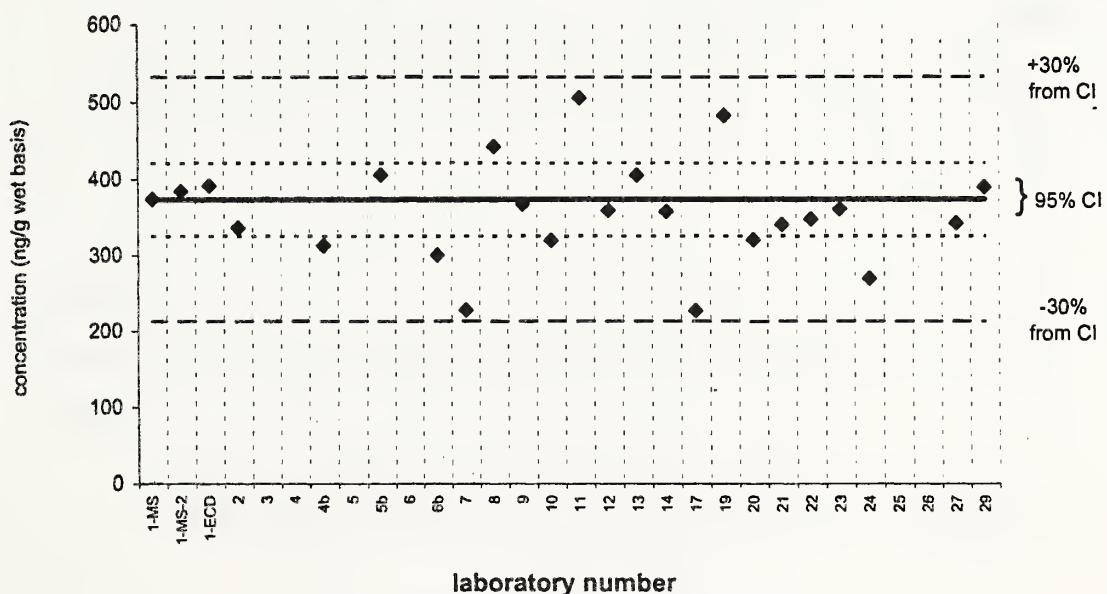

**4,4'-DDE****Fish V (QA02FSH5)**Assigned value = 621 ng/g  $s = 133$  ng/g 95% CL = 56 ng/g (wet basis)

Reported Results: 24 Quantitative Results: 24

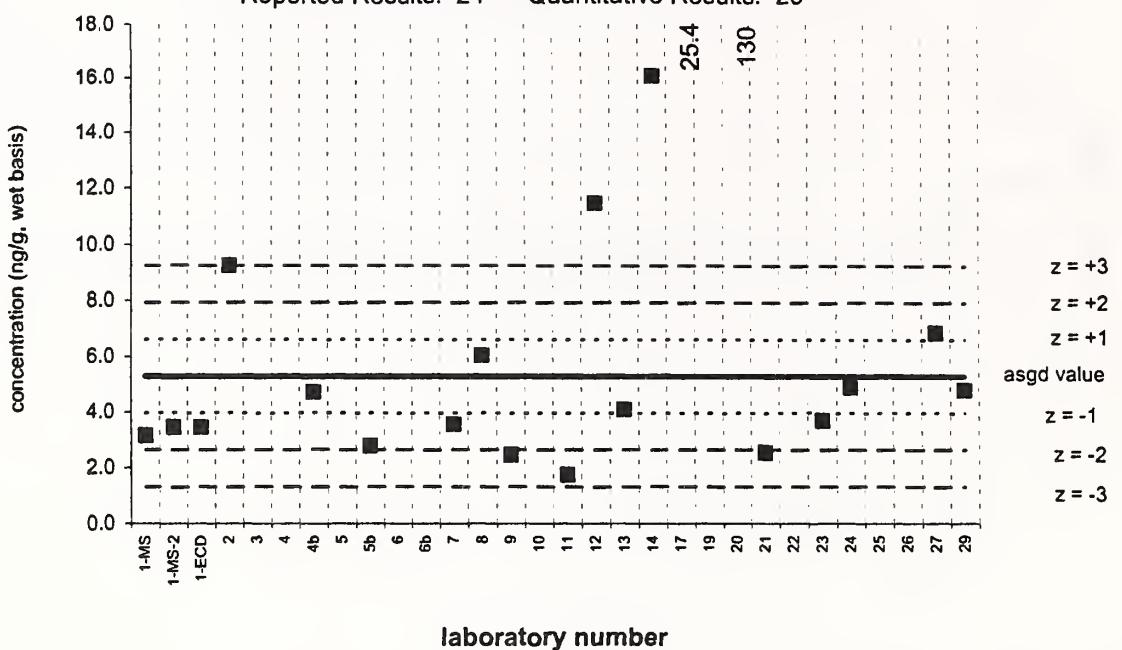

**4,4'-DDE****SRM 1946**Certified Value =  $373 \pm 48$  ng/g (wet basis)

Reported Results: 24 Quantitative Results: 24

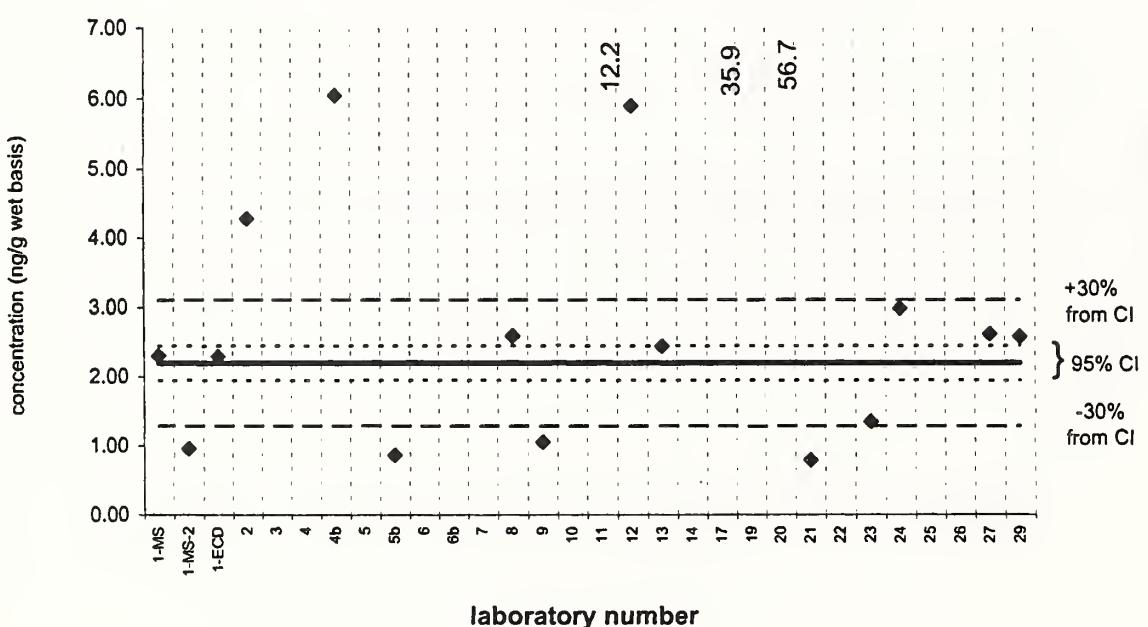

**2,4'-DDD****Fish V (QA02FSH5)**Assigned value = 5.28 ng/g  $s = 3.65$  ng/g 95% CL = 1.81 ng/g (wet basis)

Reported Results: 24 Quantitative Results: 20

**2,4'-DDD****SRM 1946**Certified Value = 2.20  $\pm$  0.25 ng/g (wet basis)

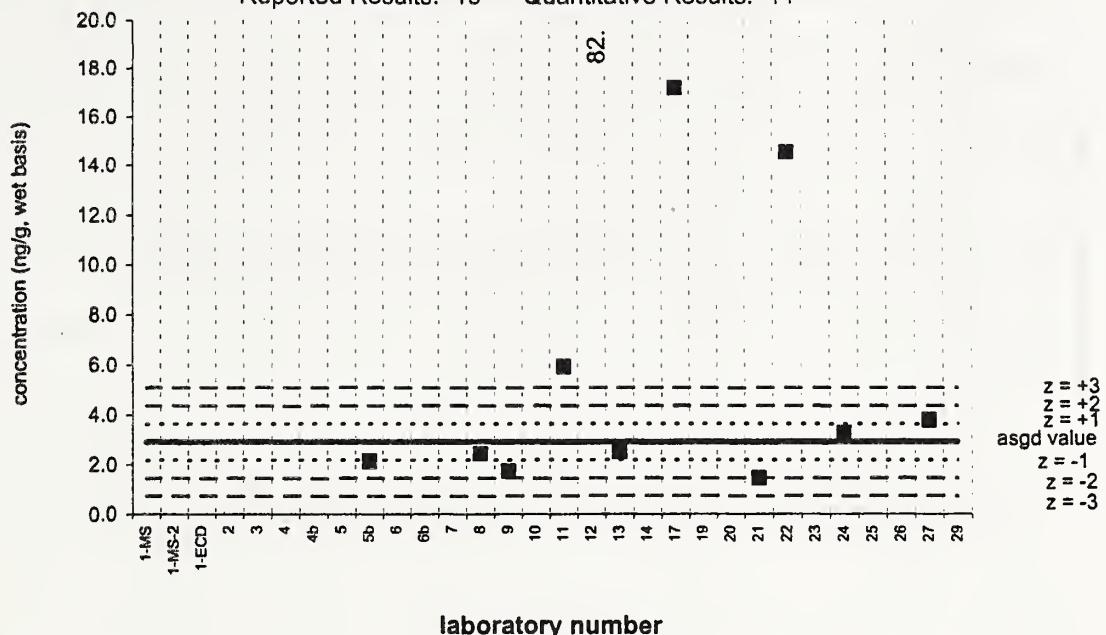

Reported Results: 22 Quantitative Results: 18

**endrin****Fish V (QA02FSH5)**

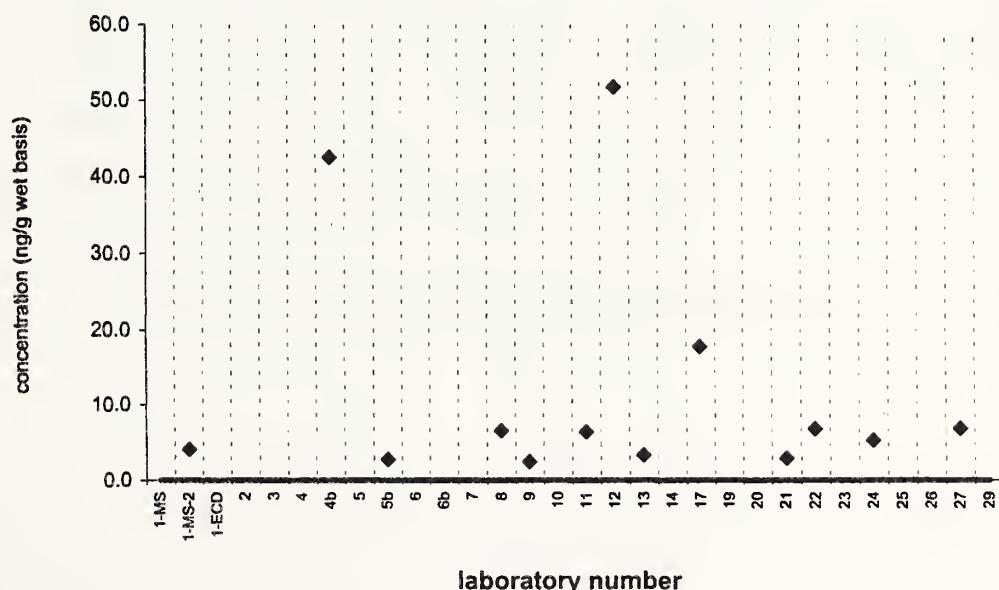

Assigned value = 2.91 ng/g s = 1.44 ng/g 95% CL = 1.20 ng/g (wet basis)

Reported Results: 19 Quantitative Results: 11

## **Appendix J: Charts of Sediment XI and SRM 1944 Results by Analyte**

See Tables 4, 5, and 6 and Appendix D for results reported as <*number*, detection limit, etc. Charts for analytes with few reported numerical results are not included in this appendix.

For Sediment XI plots:

Solid line: exercise assigned value

Dotted line:  $z = \pm 1$ , i. e., 25% from assigned value

Dotted/dashed line:  $z = \pm 2$ , i. e., 50% from assigned value

Dashed line:  $z = \pm 3$ , i. e., 75% from assigned value

For SRM 1944 plots:

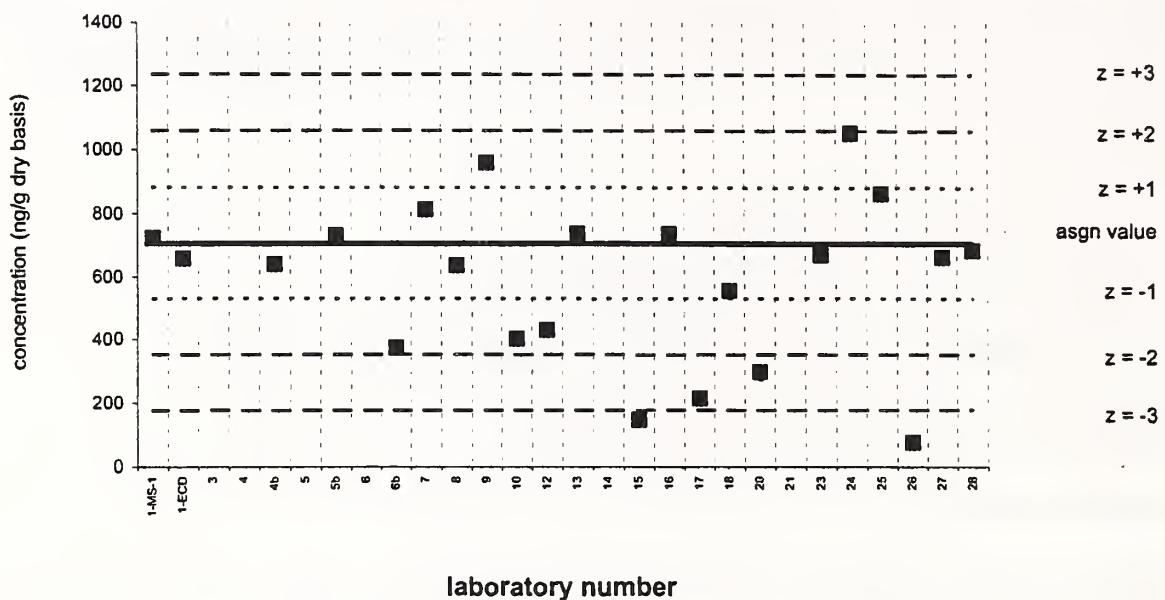

Solid line: material certified concentration, certificate reference concentration or target value (see caption of each plot)

Dotted line: 95% confidence interval (CI)

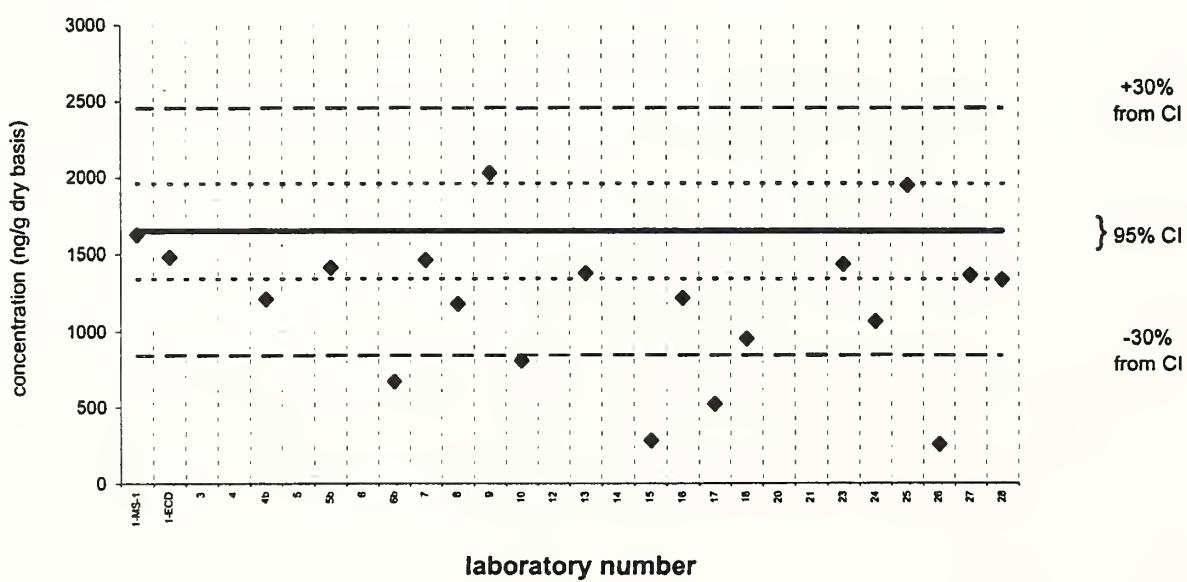

Dashed line: 30% from 95% confidence interval (CI)

## 4,4'-DDE

## SRM 1944

Reference Value =  $86.0 \pm 12.0$  ng/g (dry basis)

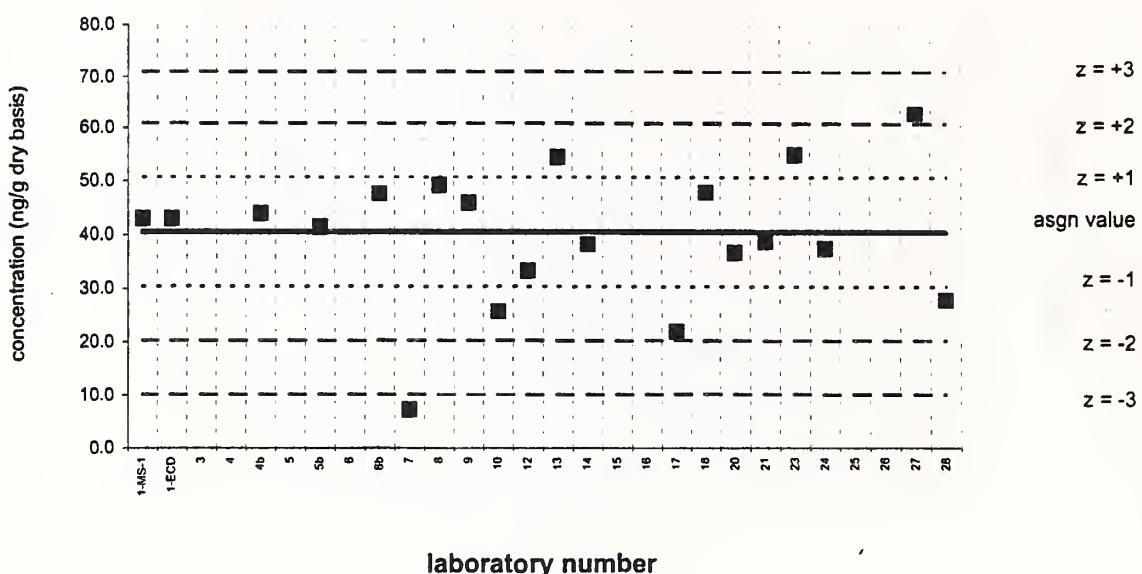

Reported Results: 16 Quantitative Results: 16

**2,4'-DDD****Sediment XI (QA02SED11)**

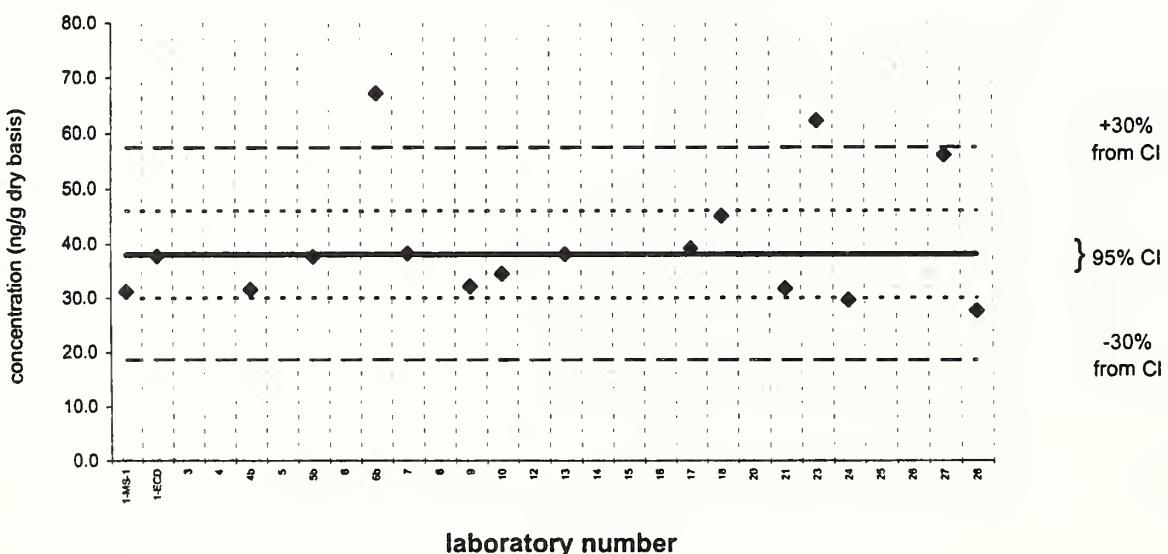

Assigned value = 40.6 ng/g s = 11.0 ng/g 95% CL = 6.1 ng/g (dry basis)

Reported Results: 20 Quantitative Results: 20

**2,4'-DDD****SRM 1944**

Reference Value = 38.0 ± 8.0 ng/g (dry basis)

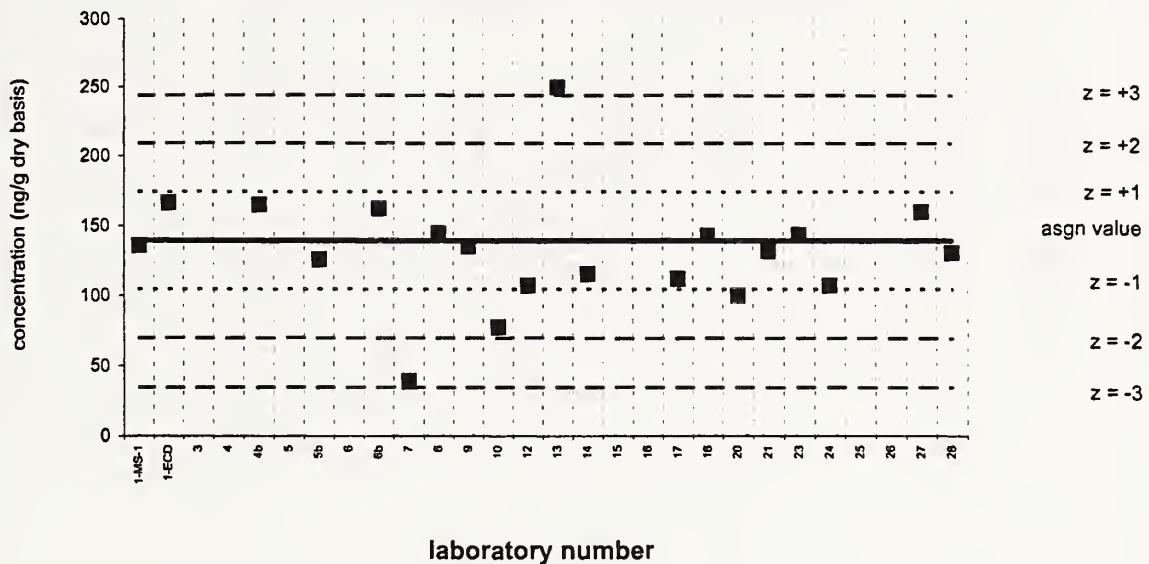

Reported Results: 16 Quantitative Results: 16

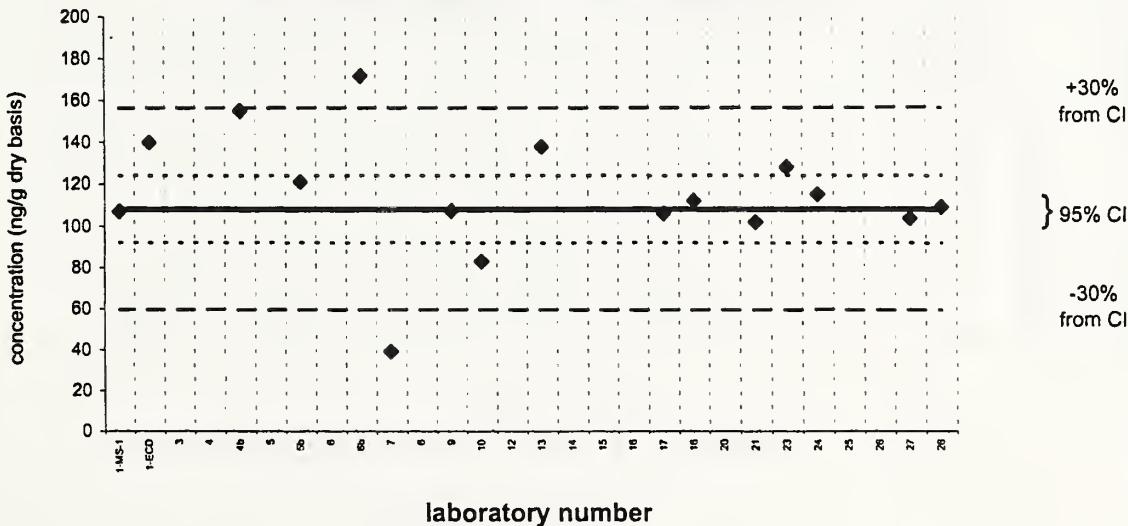

**4,4'-DDD****Sediment XI (QA02SED11)**

Assigned value = 139 ng/g s = 39 ng/g 95% CL = 21 ng/g (dry basis)

Reported Results: 20 Quantitative Results: 20

**4,4'-DDD****SRM 1944**Reference Value =  $108 \pm 16$  ng/g (dry basis)

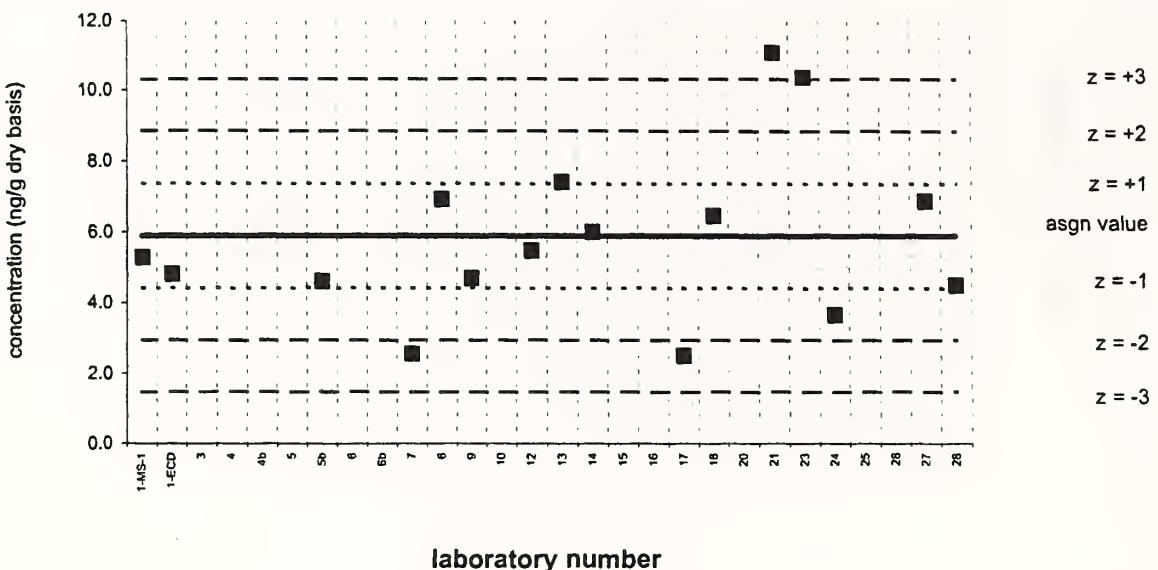

Reported Results: 16 Quantitative Results: 16

**2,4'-DDT****Sediment XI (QA02SED11)**

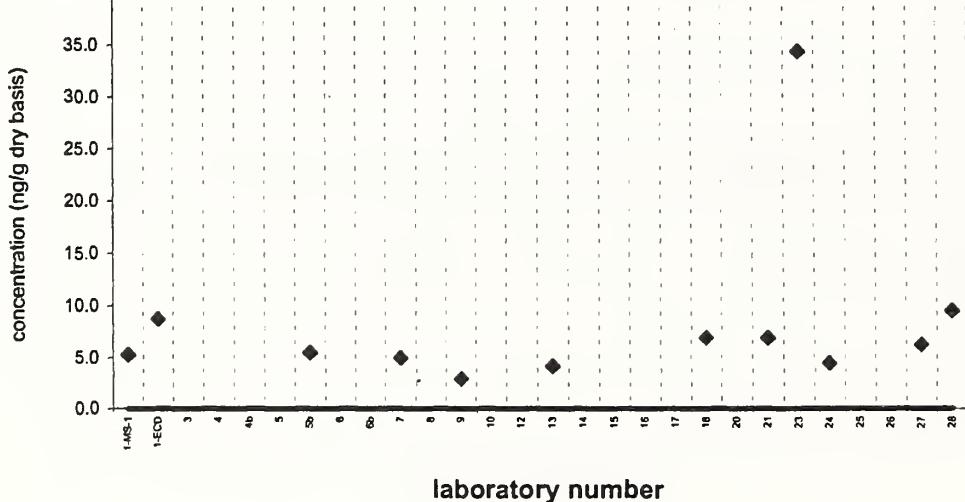

Assigned value = 5.89 ng/g s = 2.12 ng/g 95% CL = 1.22 ng/g (dry basis)

Reported Results: 20 Quantitative Results: 16

**2,4'-DDT****SRM 1944**

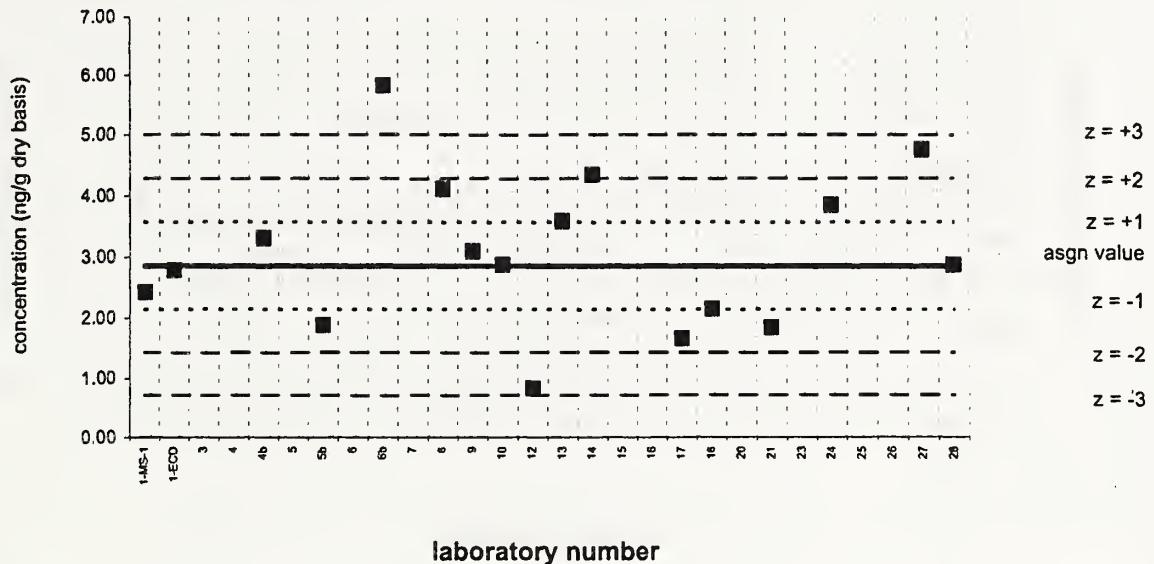

Target Value = no target ng/g (dry basis)

Reported Results: 13 Quantitative Results: 12

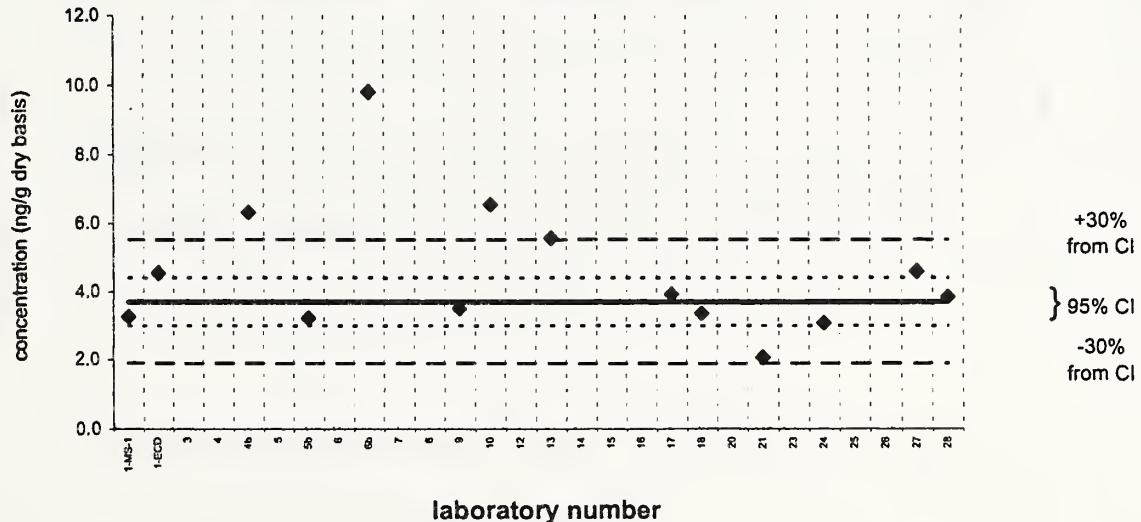

**cis-nonachlor****Sediment XI (QA02SED11)**Assigned value = 2.86 ng/g  $s = 0.89$  ng/g 95% CL = 0.54 ng/g (dry basis)

Reported Results: 19 Quantitative Results: 17

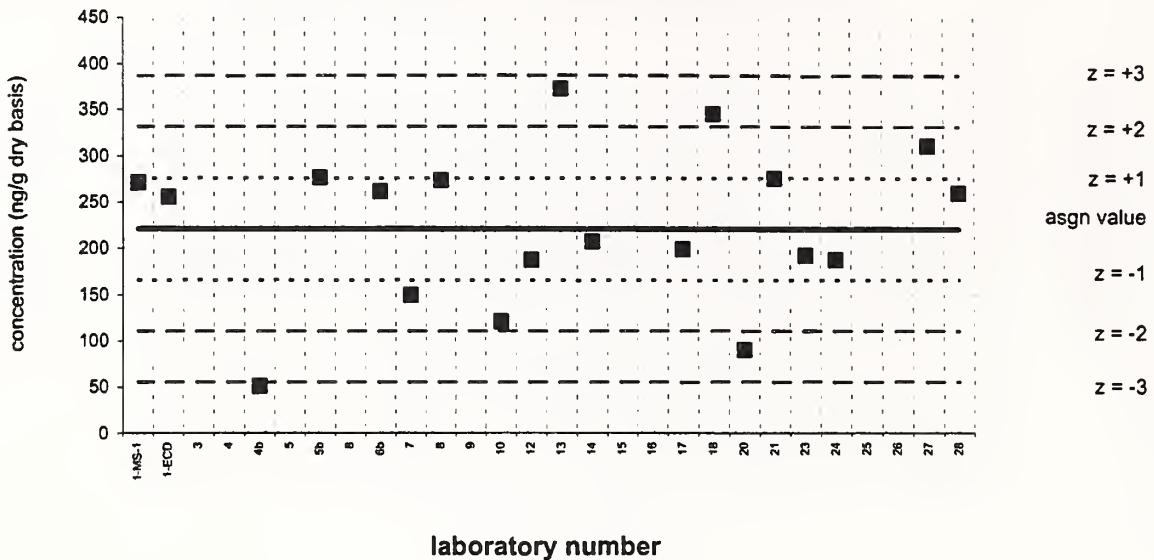

**cis-nonachlor****SRM 1944**Reference Value =  $3.70 \pm 0.70$  ng/g (dry basis)

Reported Results: 15 Quantitative Results: 14

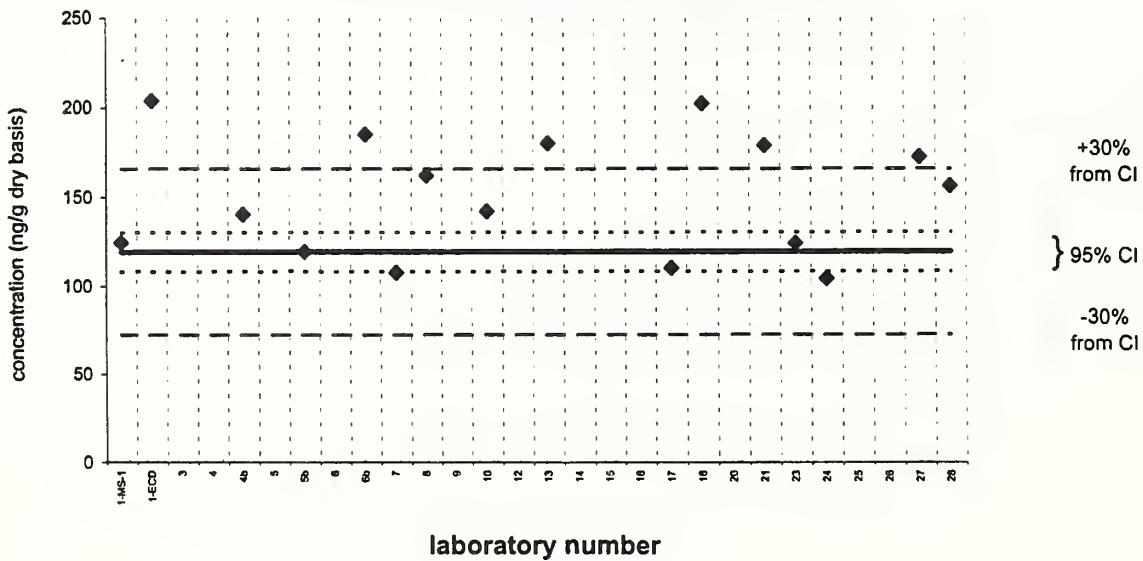

**4,4'-DDT****Sediment XI (QA02SED11)**Assigned value = 221 ng/g  $s = 61$  ng/g 95% CL = 38 ng/g (dry basis)

Reported Results: 19      Quantitative Results: 19

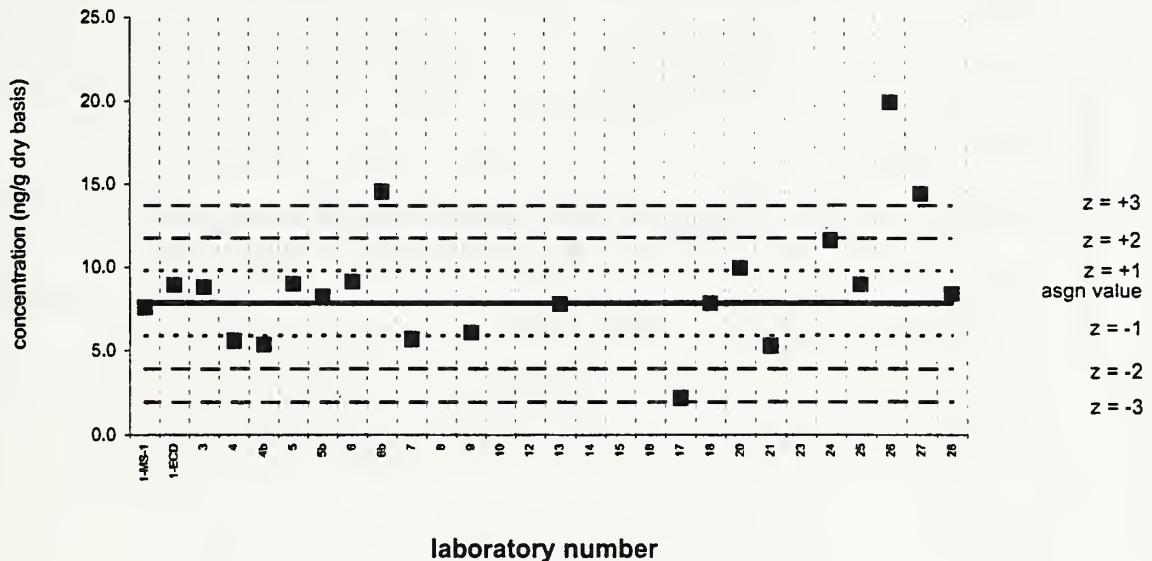

**4,4'-DDT****SRM 1944**Certified Value =  $119 \pm 11$  ng/g (dry basis)

Reported Results: 16      Quantitative Results: 16

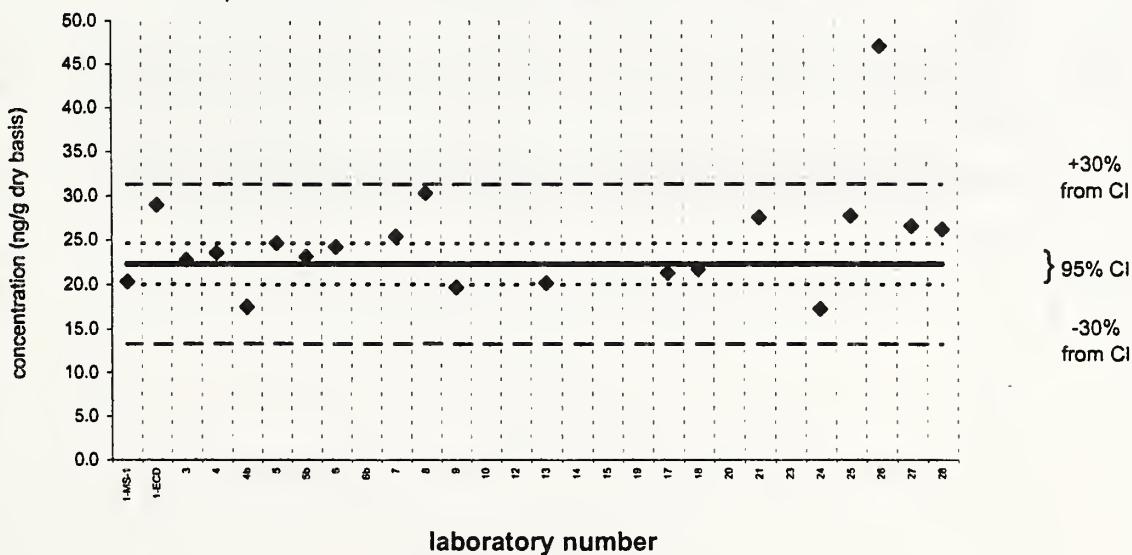

**PCB 8****Sediment XI (QA02SED11)**Assigned value = 7.84 ng/g  $s = 2.69$  ng/g 95% CL = 1.34 ng/g (dry basis)

Reported Results: 22 Quantitative Results: 21

**PCB 8****SRM 1944**Certified Value =  $22.3 \pm 2.3$  ng/g (dry basis)

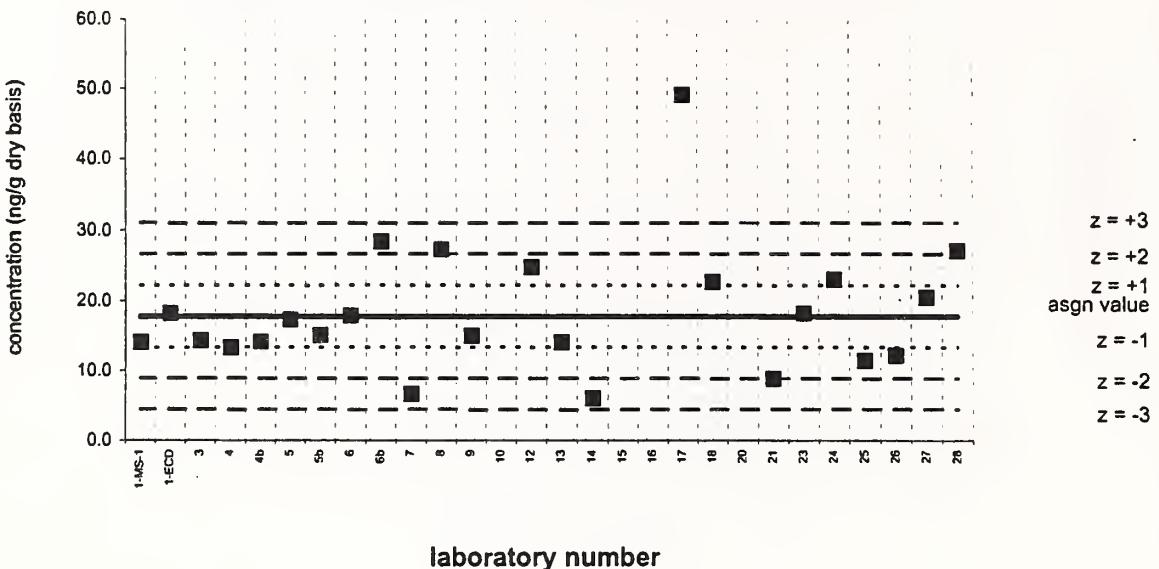

Reported Results: 21 Quantitative Results: 20

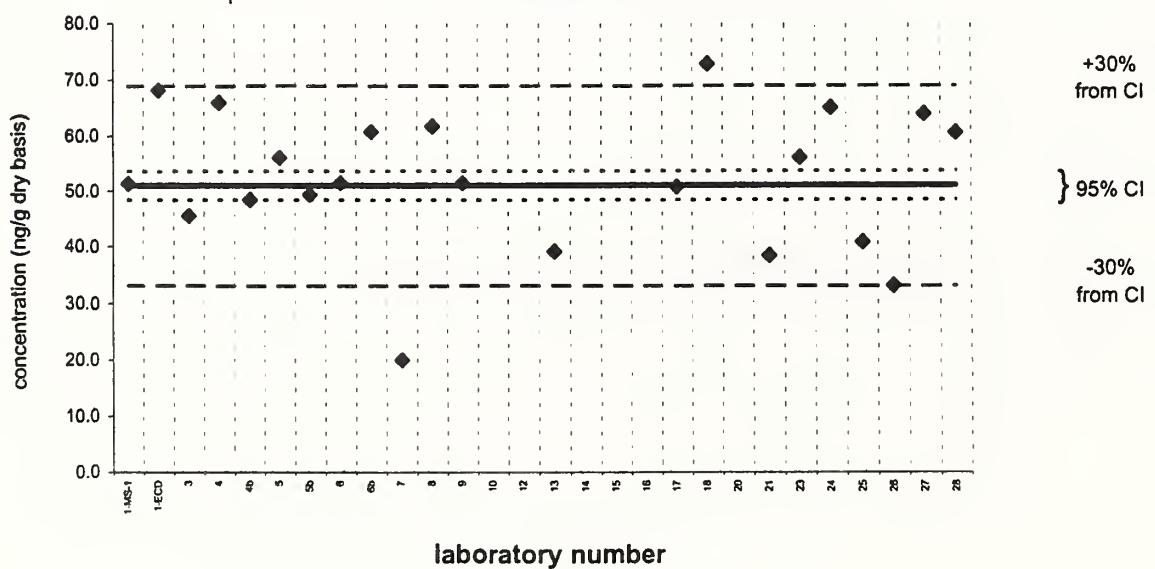

**PCB 18****Sediment XI (QA02SED11)**

Assigned value = 17.8 ng/g s = 5.7 ng/g 95% CL = 2.7 ng/g (dry basis)

Reported Results: 25 Quantitative Results: 24

**PCB 18****SRM 1944**Certified Value =  $51.0 \pm 2.6$  ng/g (dry basis)

Reported Results: 22 Quantitative Results: 22

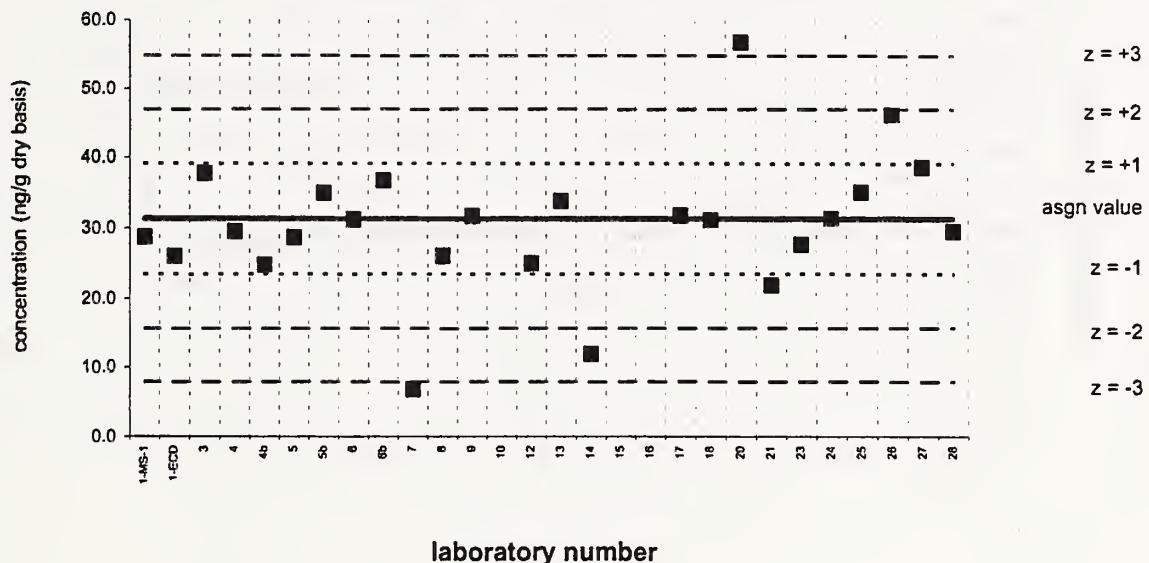

PCB 28

Sediment XI (QA02SED11)

Assigned value = 31.3 ng/g s = 5.5 ng/g 95% CL = 2.4 ng/g (dry basis)

Reported Results: 25 Quantitative Results: 25

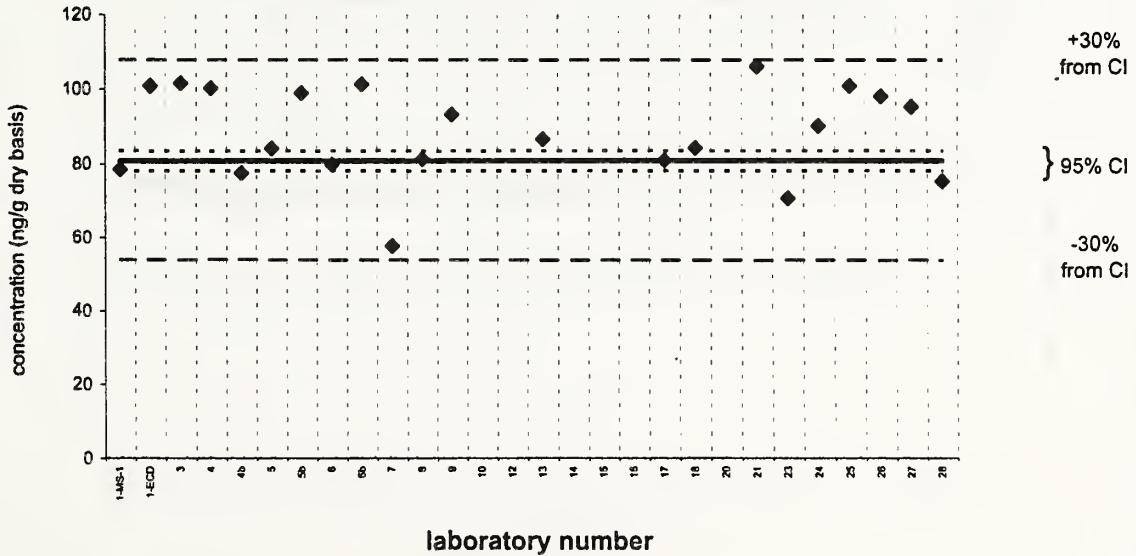

PCB 28

SRM 1944

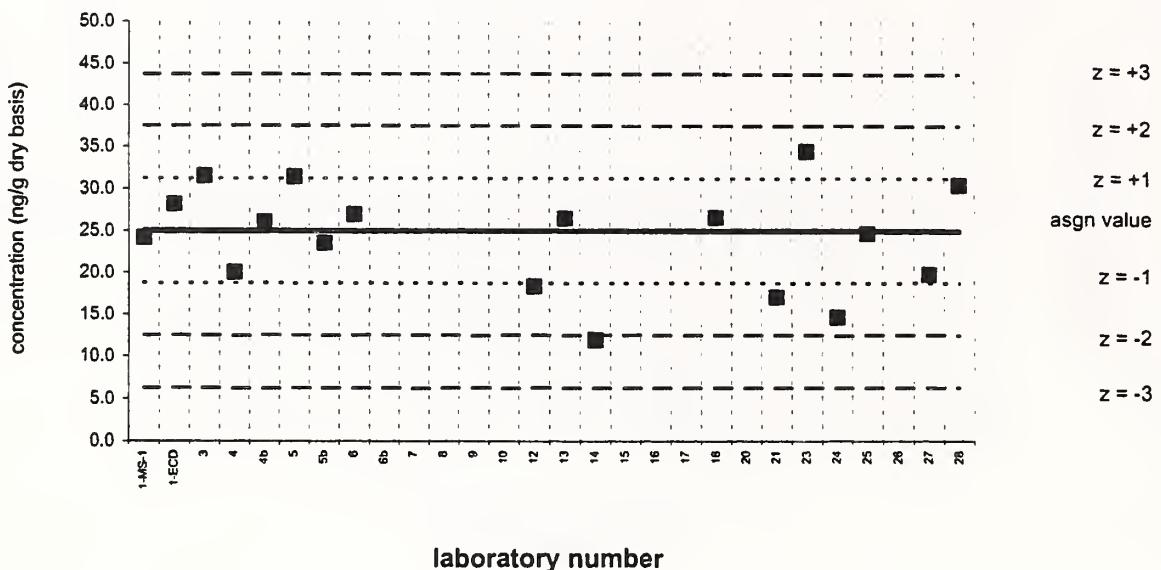

Certified Value =  $80.8 \pm 2.7$  ng/g (dry basis)

Reported Results: 22 Quantitative Results: 22

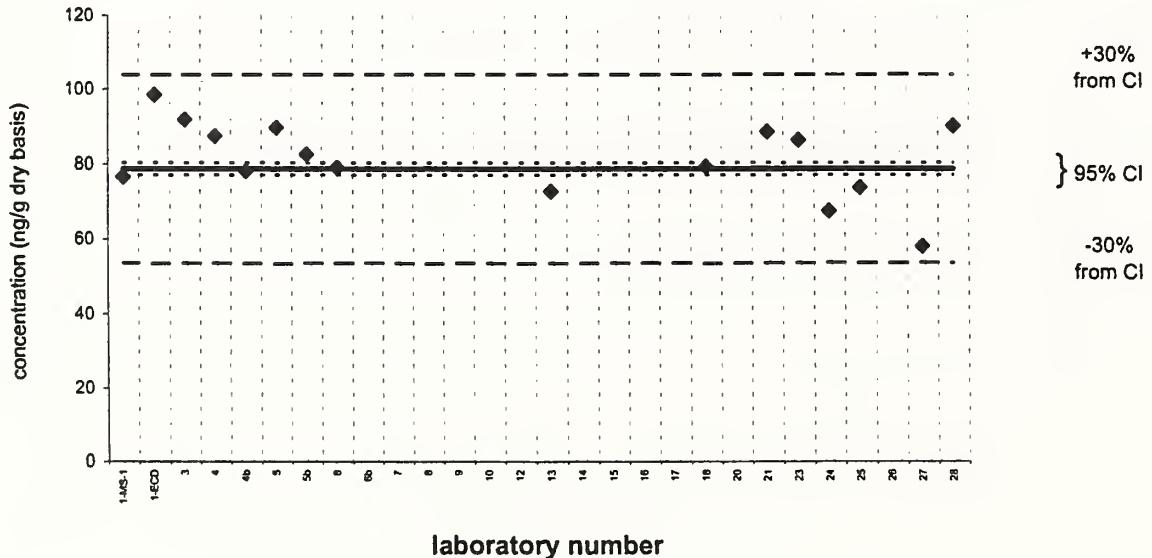

**PCB 31****Sediment XI (QA02SED11)**Assigned value = 25.0 ng/g  $s = 5.6$  ng/g 95% CL = 2.9 ng/g (dry basis)

Reported Results: 18      Quantitative Results: 18

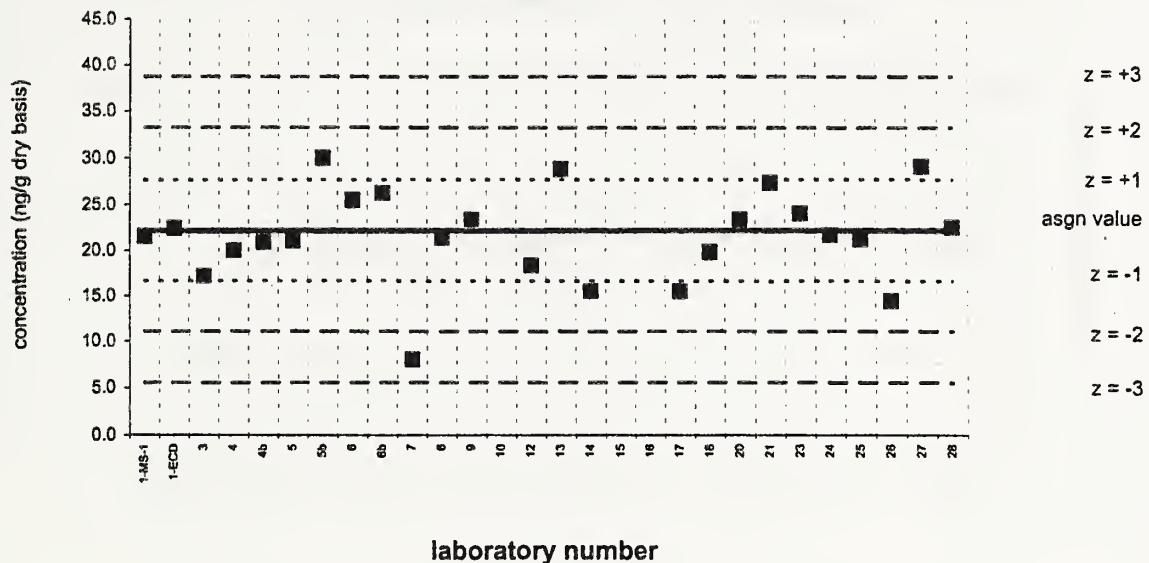

**PCB 31****SRM 1944**Certified Value =  $78.7 \pm 1.6$  ng/g (dry basis)

Reported Results: 16      Quantitative Results: 16

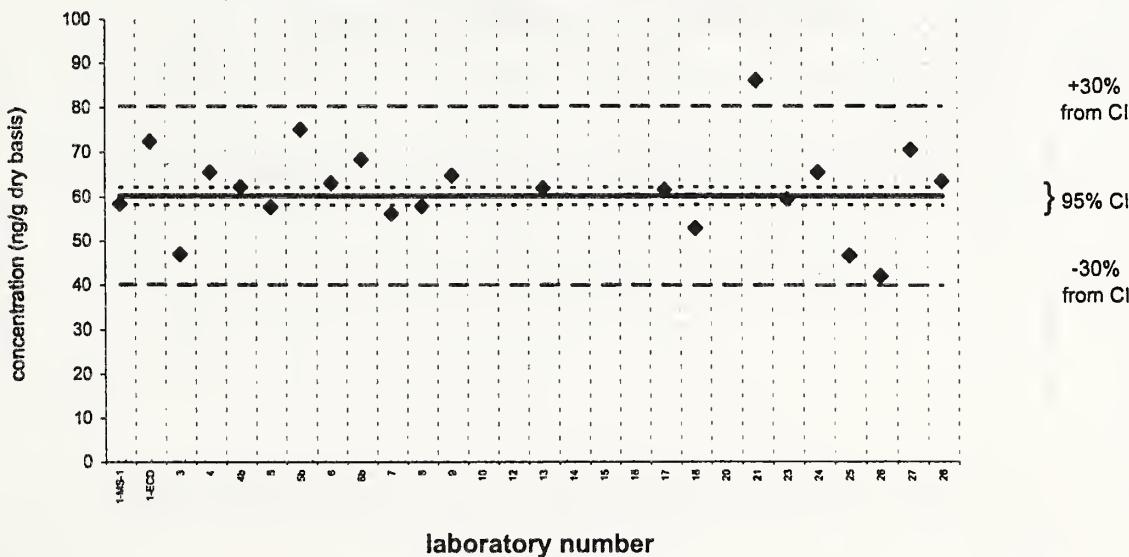

**PCB 44****Sediment XI (QA02SED11)**Assigned value = 22.1 ng/g  $s = 4.2$  ng/g 95% CL = 1.9 ng/g (dry basis)

Reported Results: 25 Quantitative Results: 25

**PCB 44****SRM 1944**Certified Value =  $60.2 \pm 2.0$  ng/g (dry basis)

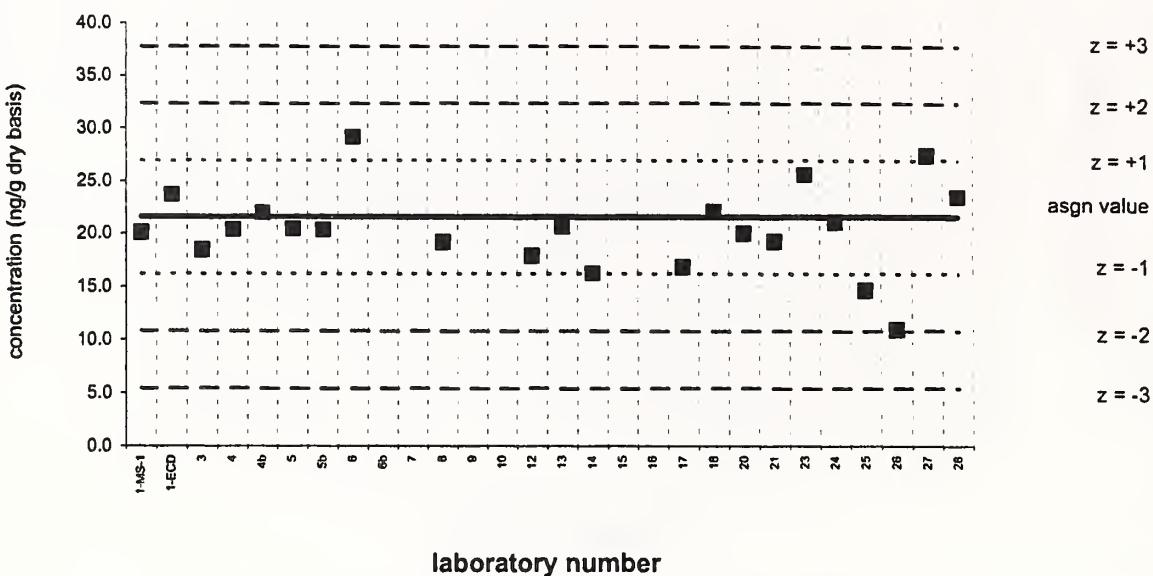

Reported Results: 22 Quantitative Results: 22

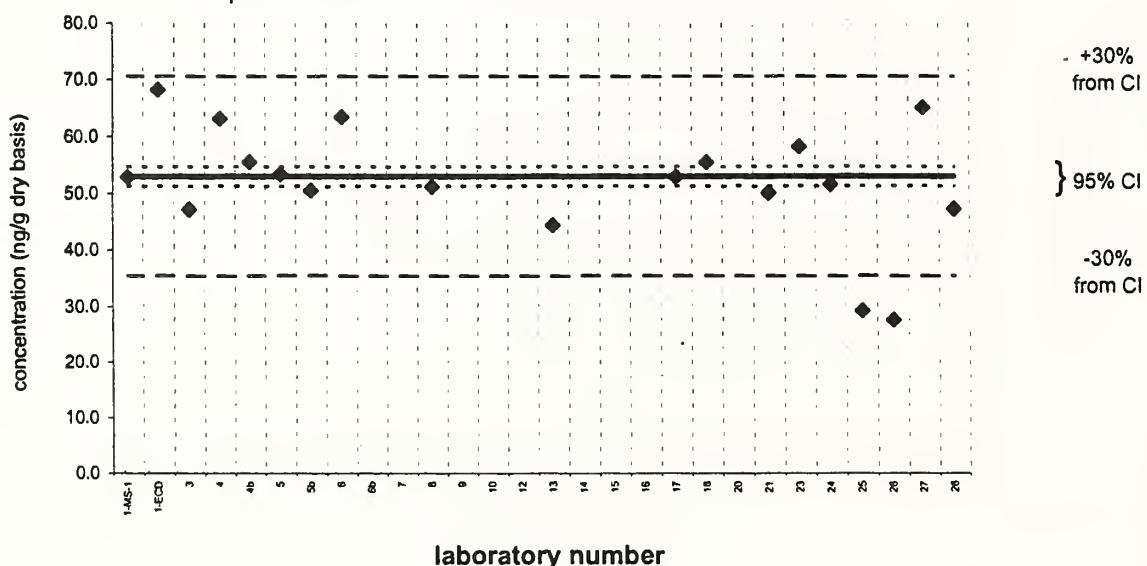

**PCB 49****Sediment XI (QA02SED11)**

Assigned value = 21.6 ng/g s = 3.3 ng/g 95% CL = 1.6 ng/g (dry basis)

Reported Results: 22 Quantitative Results: 22

**PCB 49****SRM 1944**Certified Value =  $53.0 \pm 1.7$  ng/g (dry basis)

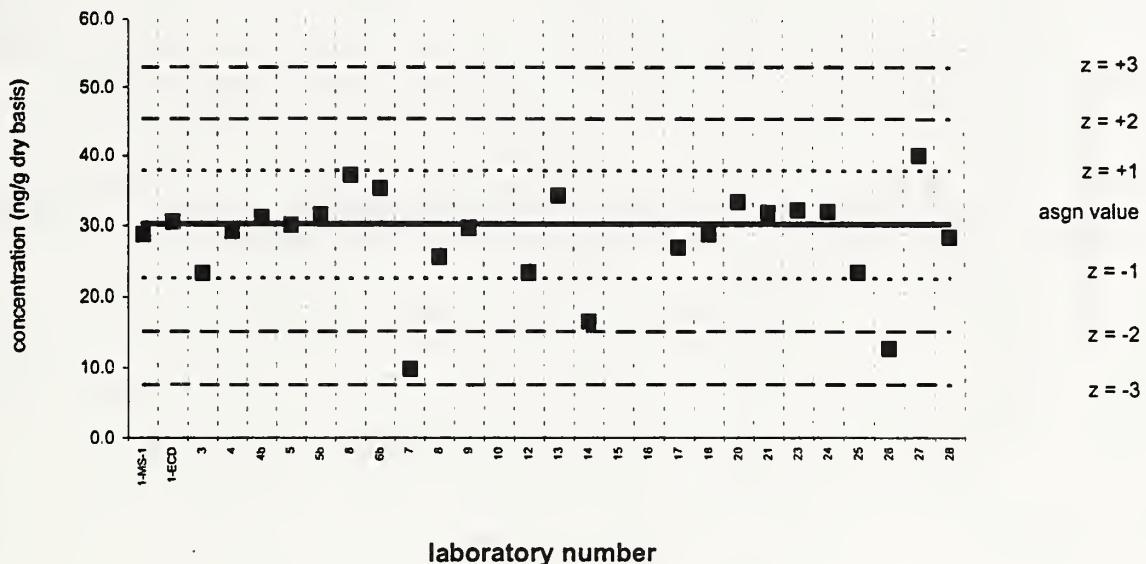

Reported Results: 19 Quantitative Results: 19

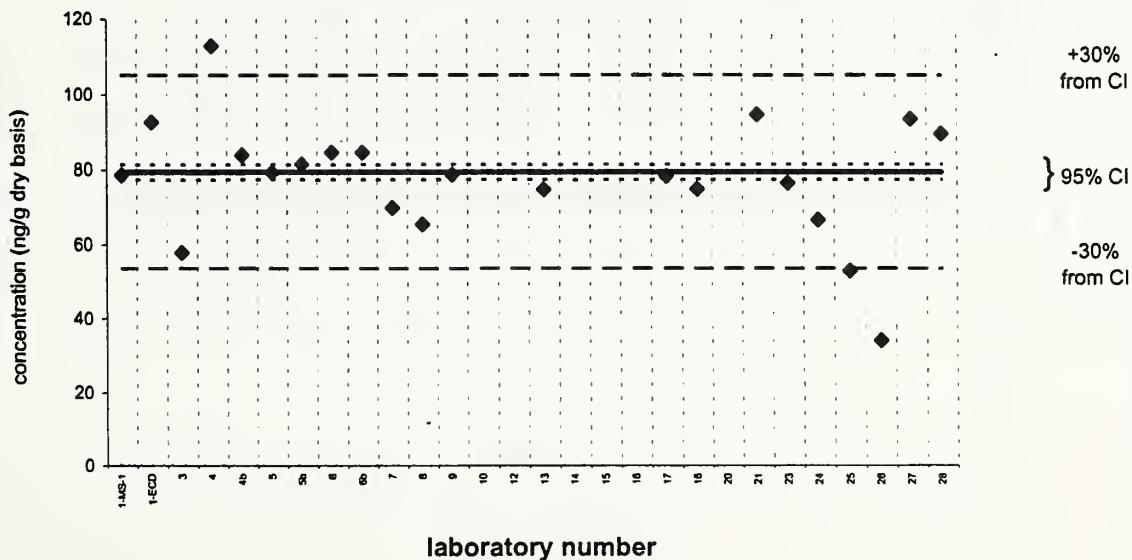

**PCB 52****Sediment XI (QA02SED11)**

Assigned value = 30.2 ng/g s = 4.6 ng/g 95% CL = 2.1 ng/g (dry basis)

Reported Results: 25 Quantitative Results: 25

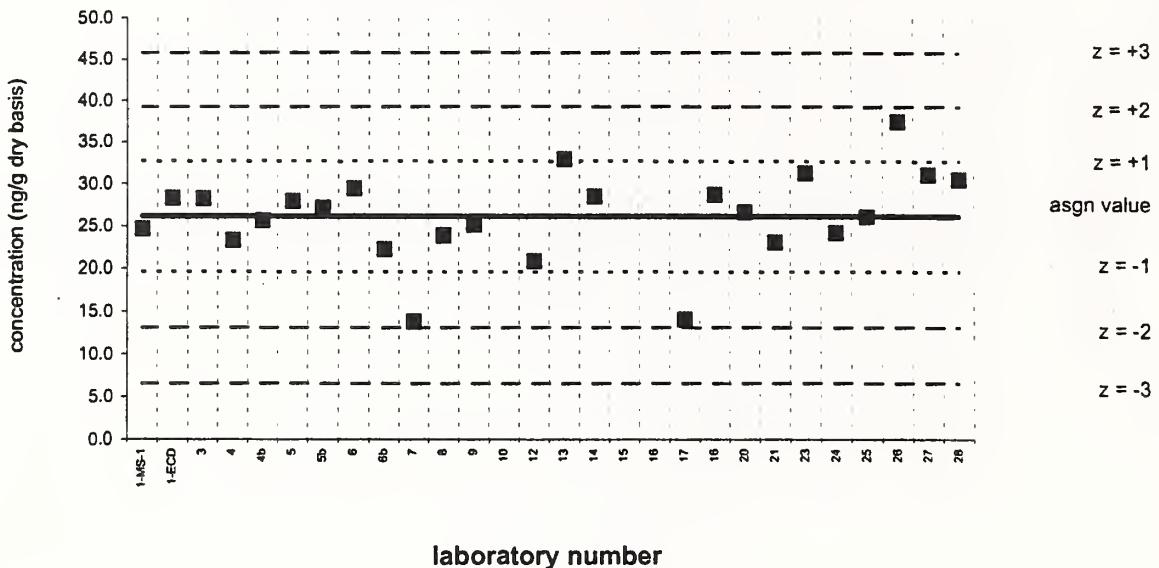

**PCB 52****SRM 1944**Certified Value =  $79.4 \pm 2.0$  ng/g (dry basis)

Reported Results: 22 Quantitative Results: 22

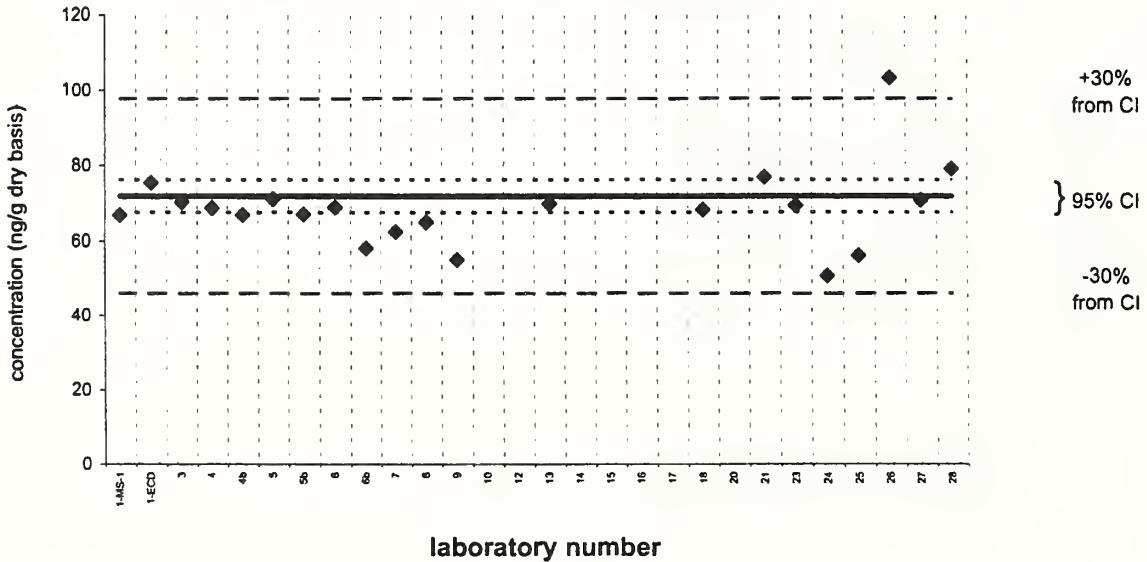

**PCB 66****Sediment XI (QA02SED11)**Assigned value = 26.2 ng/g  $s = 4.3$  ng/g 95% CL = 2.0 ng/g (dry basis)

Reported Results: 25 Quantitative Results: 25

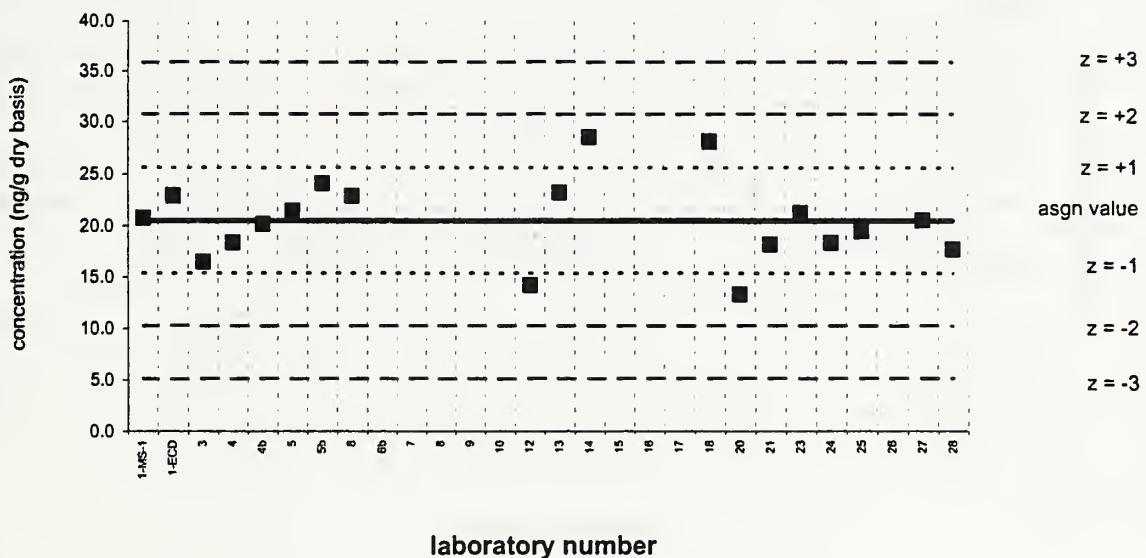

**PCB 66****SRM 1944**Certified Value =  $71.9 \pm 4.3$  ng/g (dry basis)

Reported Results: 21 Quantitative Results: 21

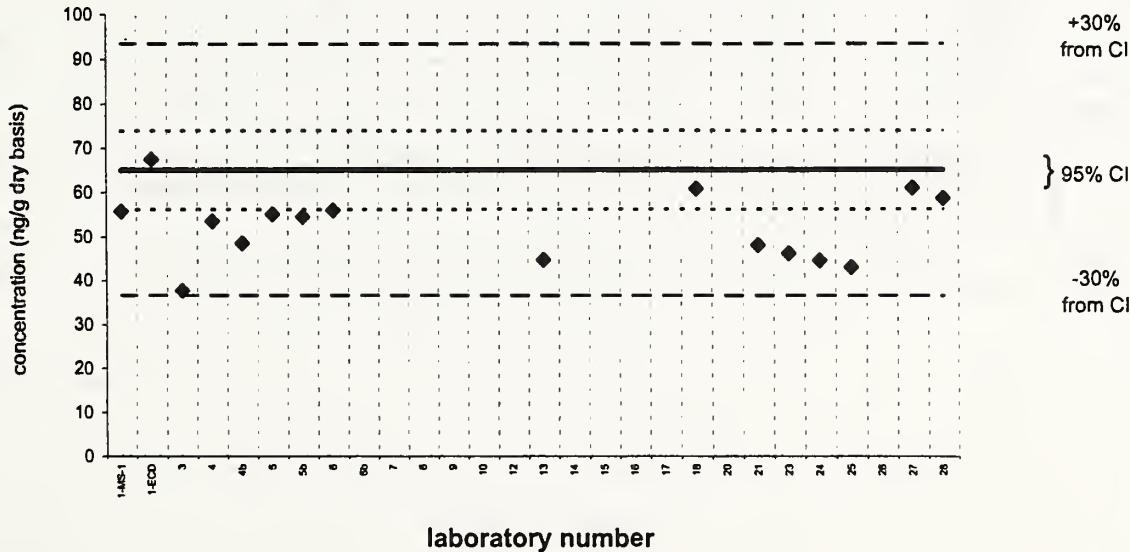

**PCB 95****Sediment XI (QA02SED11)**Assigned value = 20.5 ng/g  $s = 3.3$  ng/g 95% CL = 1.7 ng/g (dry basis)

Reported Results: 19 Quantitative Results: 19

**PCB 95****SRM 1944**Certified Value =  $65.0 \pm 8.9$  ng/g (dry basis)

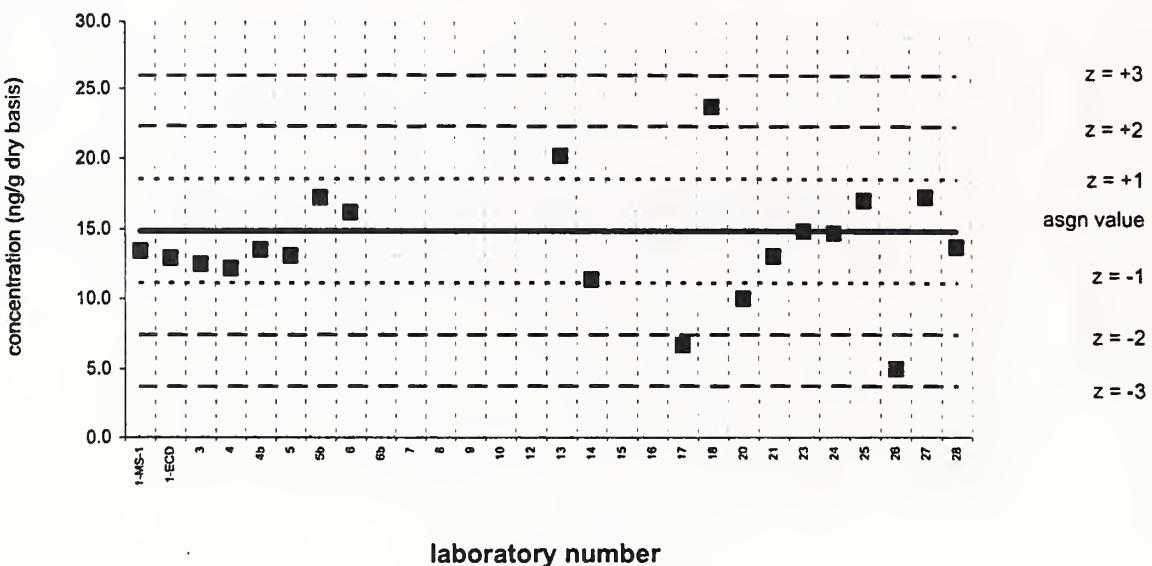

Reported Results: 16 Quantitative Results: 16

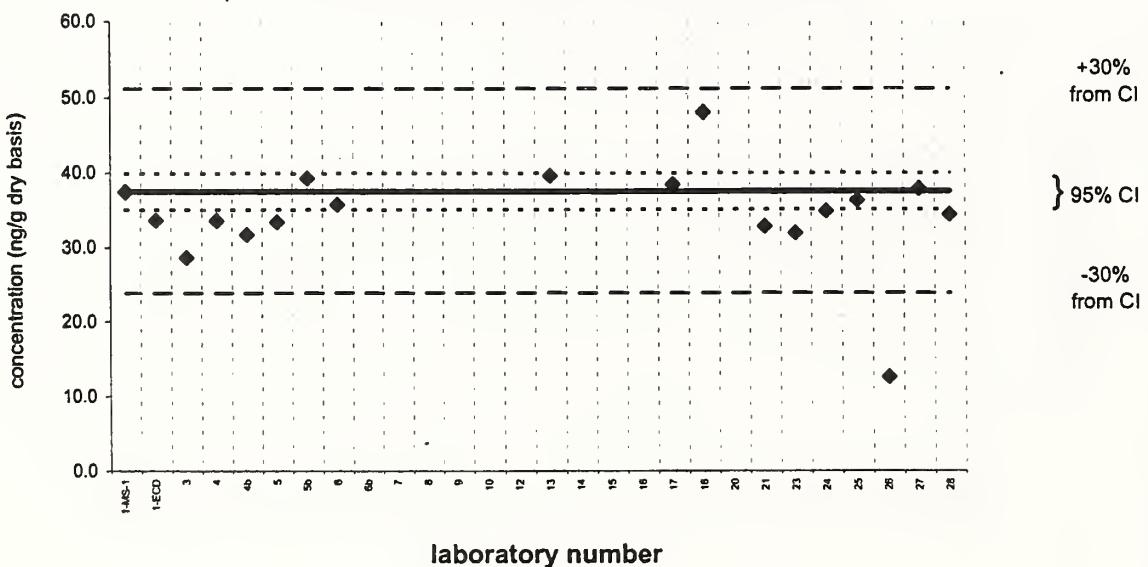

**PCB 99****Sediment XI (QA02SED11)**

Assigned value = 14.8 ng/g s = 3.7 ng/g 95% CL = 1.9 ng/g (dry basis)

Reported Results: 20 Quantitative Results: 20

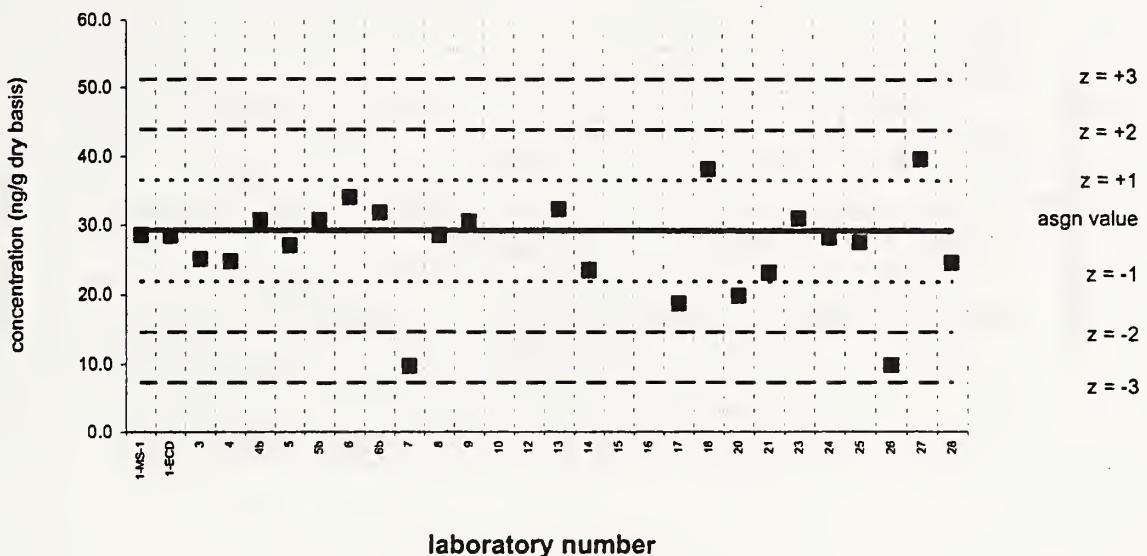

**PCB 99****SRM 1944**Certified Value =  $37.5 \pm 2.4$  ng/g (dry basis)

Reported Results: 17 Quantitative Results: 18

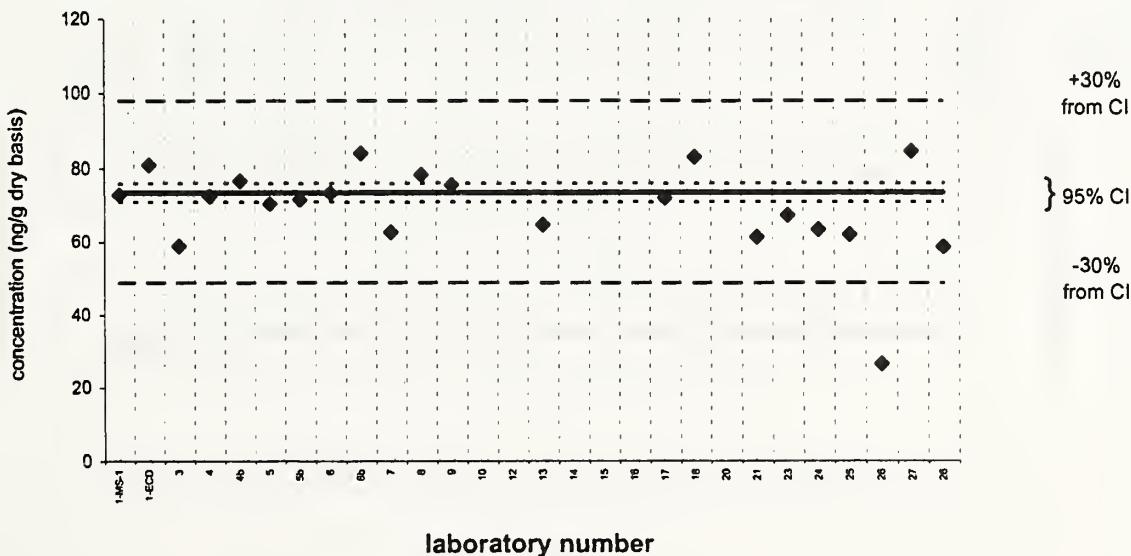

**PCB 101****Sediment XI (QA02SED11)**Assigned value = 29.2 ng/g  $s = 4.9$  ng/g 95% CL = 2.3 ng/g (dry basis)

Reported Results: 24 Quantitative Results: 24

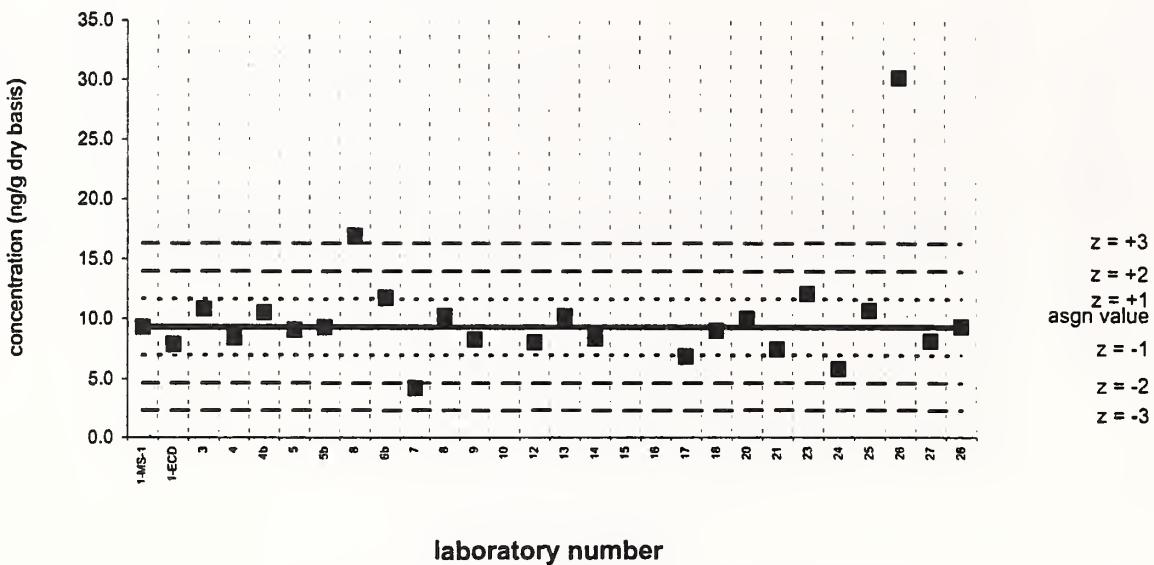

**PCB 101****SRM 1944**Certified Value =  $73.4 \pm 2.5$  ng/g (dry basis)

Reported Results: 22 Quantitative Results: 22

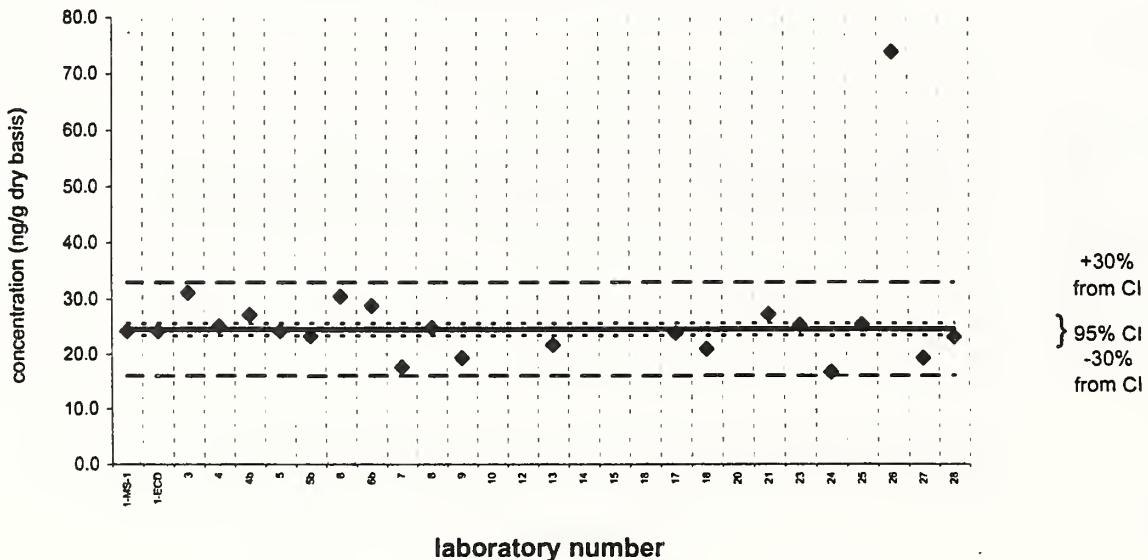

**PCB 105****Sediment XI (QA02SED11)**Assigned value = 9.31 ng/g  $s = 2.50$  ng/g 95% CL = 1.11 ng/g (dry basis)

Reported Results: 25 Quantitative Results: 25

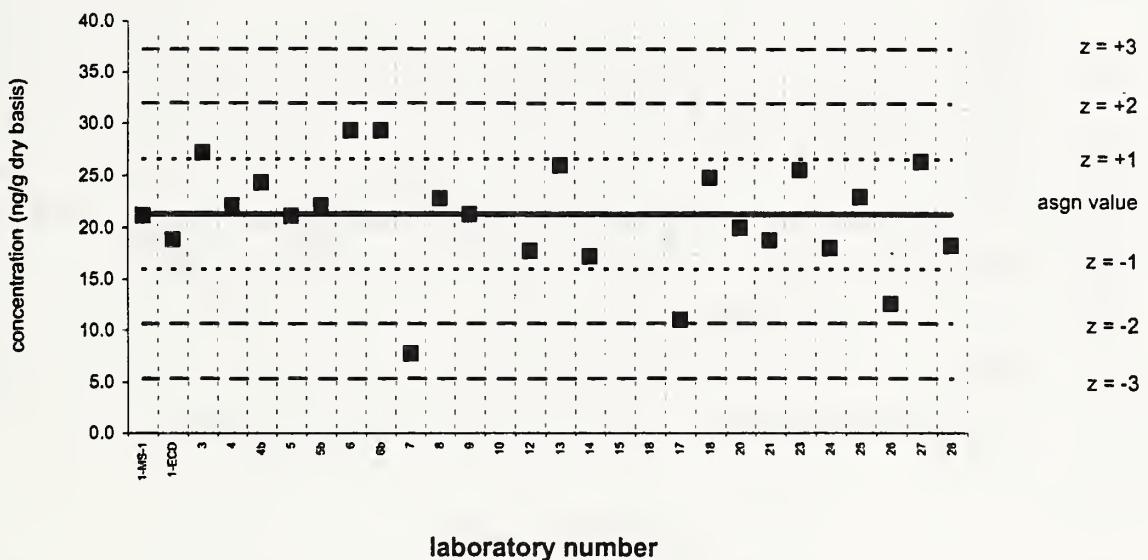

**PCB 105****SRM 1944**Certified Value =  $24.5 \pm 1.1$  ng/g (dry basis)

Reported Results: 22 Quantitative Results: 22

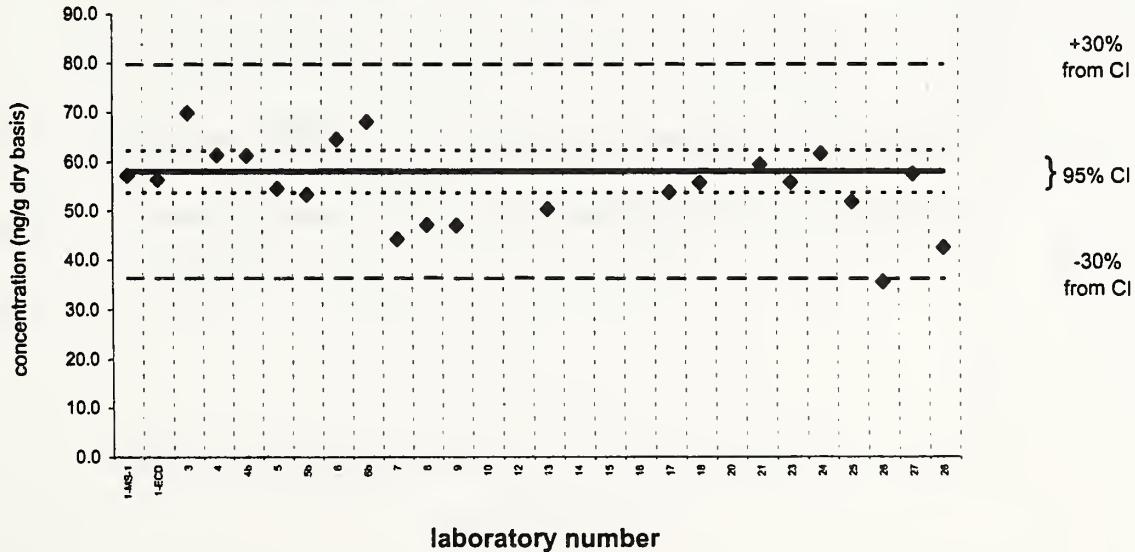

**PCB 118****Sediment XI (QA02SED11)**Assigned value = 21.3 ng/g  $s = 5.5$  ng/g 95% CL = 2.4 ng/g (dry basis)

Reported Results: 25 Quantitative Results: 25

**PCB 118****SRM 1944**Certified Value =  $58.0 \pm 4.3$  ng/g (dry basis)

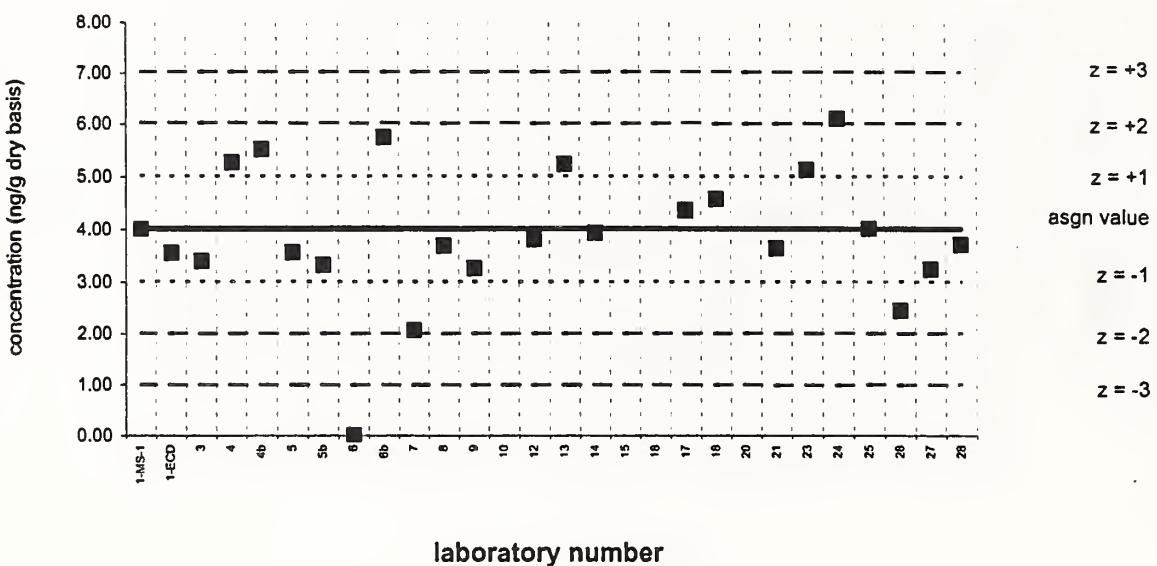

Reported Results: 22 Quantitative Results: 22

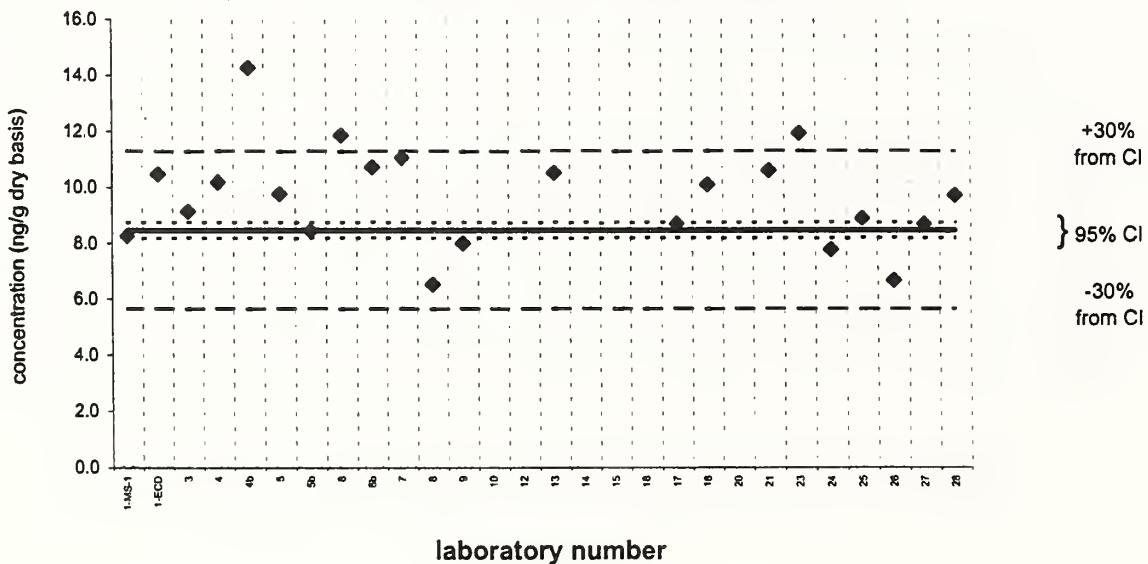

**PCB 128****Sediment XI (QA02SED11)**

Assigned value = 4.02 ng/g s = 1.03 ng/g 95% CL = 0.47 ng/g (dry basis)

Reported Results: 25 Quantitative Results: 23

**PCB 128****SRM 1944**Certified Value =  $8.47 \pm 0.28$  ng/g (dry basis)

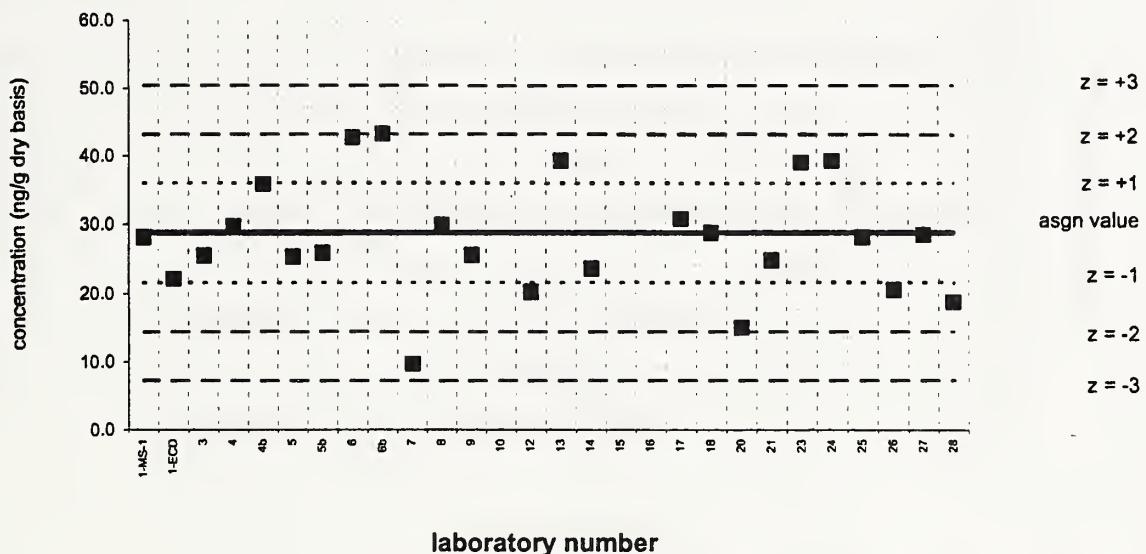

Reported Results: 22 Quantitative Results: 22

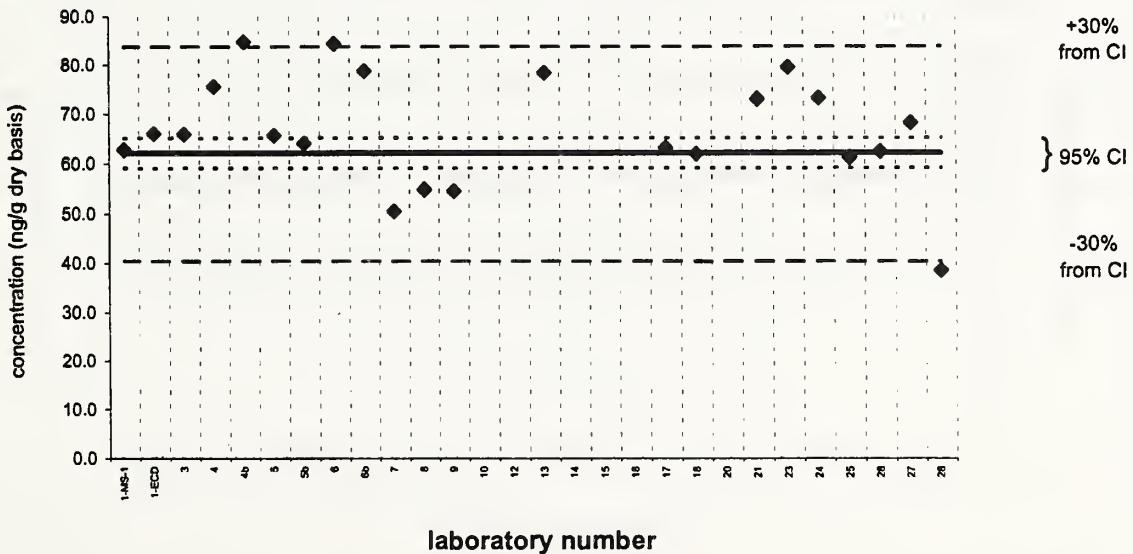

**PCB 138****Sediment XI (QA02SED11)**

Assigned value = 28.8 ng/g s = 8.2 ng/g 95% CL = 3.6 ng/g (dry basis)

Reported Results: 25 Quantitative Results: 25

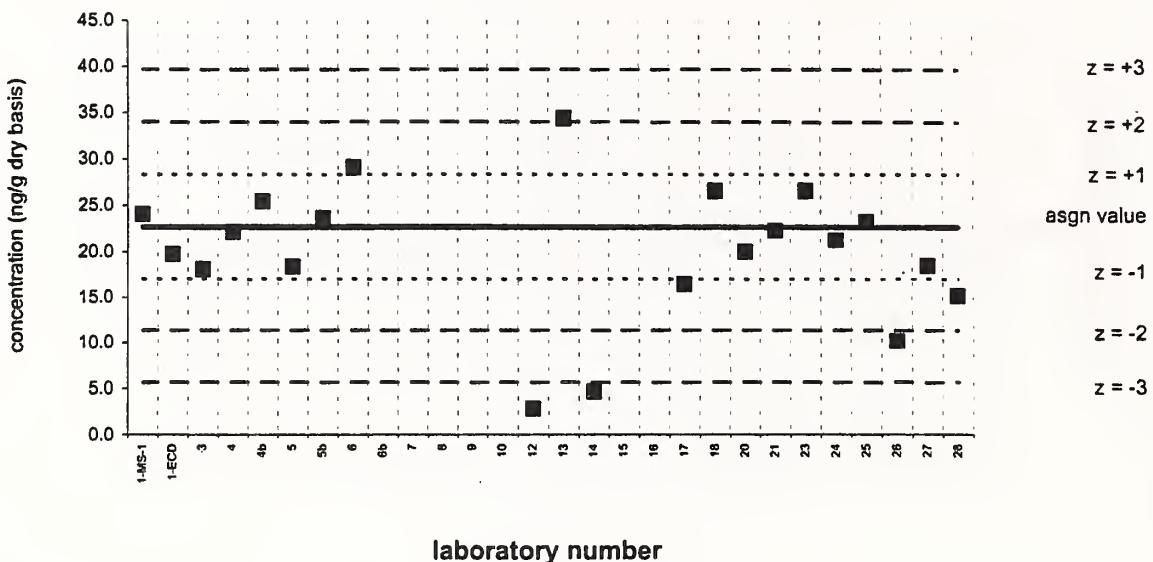

**PCB 138****SRM 1944**Certified Value =  $62.1 \pm 3.0$  ng/g (dry basis)

Reported Results: 22 Quantitative Results: 22

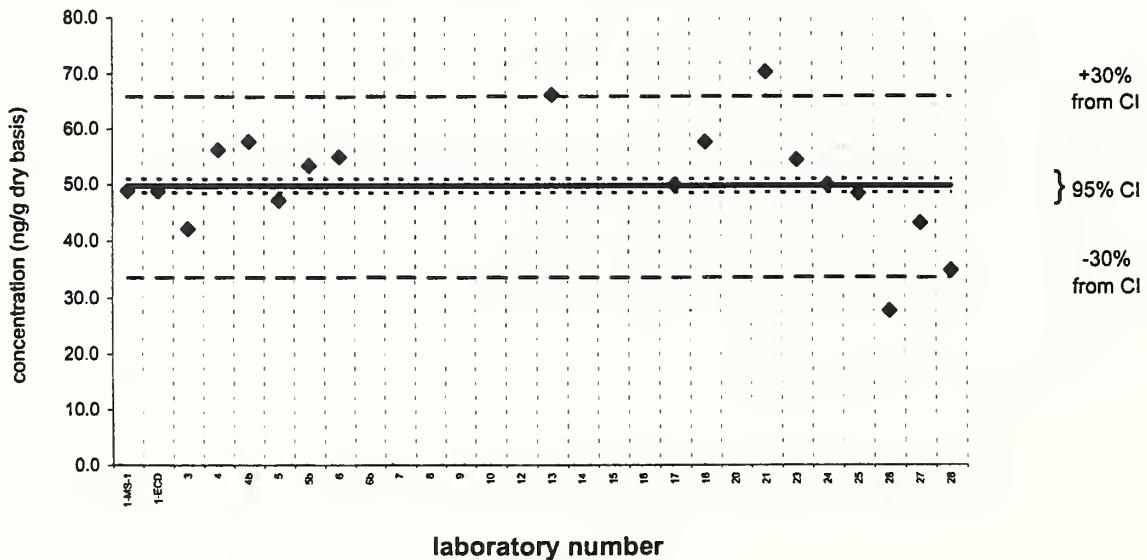

**PCB 149****Sediment XI (QA02SED11)**Assigned value = 22.7 ng/g  $s = 4.9$  ng/g 95% CL = 2.5 ng/g (dry basis)

Reported Results: 21 Quantitative Results: 21

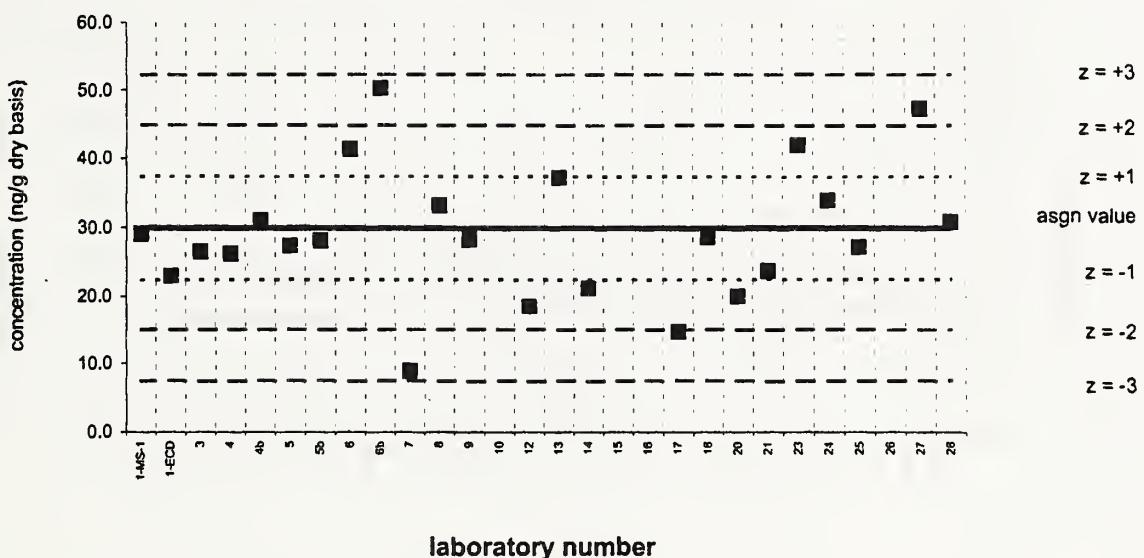

**PCB 149****SRM 1944**Certified Value =  $49.7 \pm 1.2$  ng/g (dry basis)

Reported Results: 18 Quantitative Results: 18

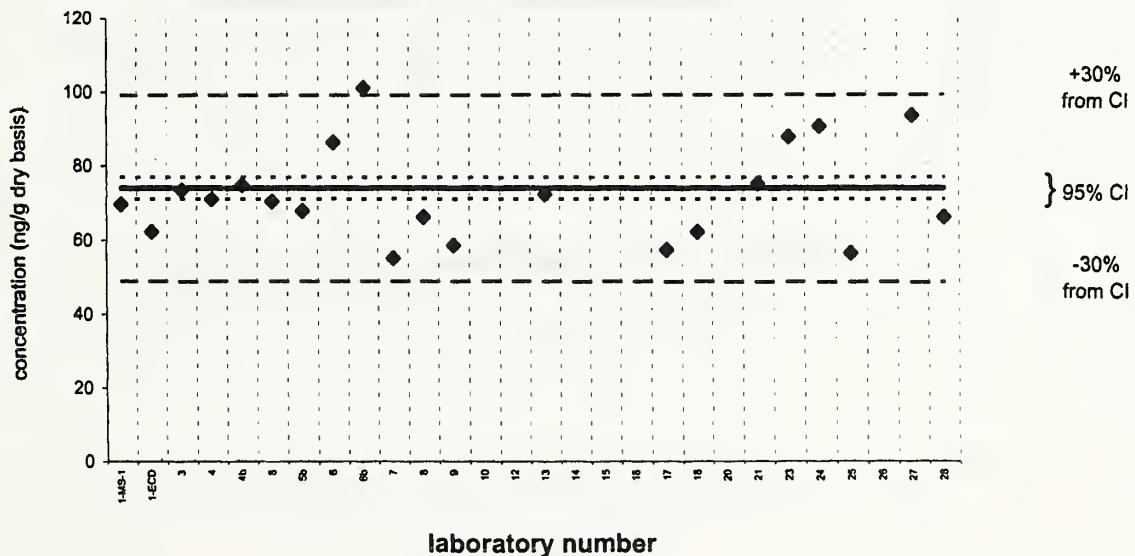

**PCB 153****Sediment XI (QA02SED11)**Assigned value = 29.9 ng/g  $s = 9.8$  ng/g 95% CL = 4.4 ng/g (dry basis)

Reported Results: 24 Quantitative Results: 24

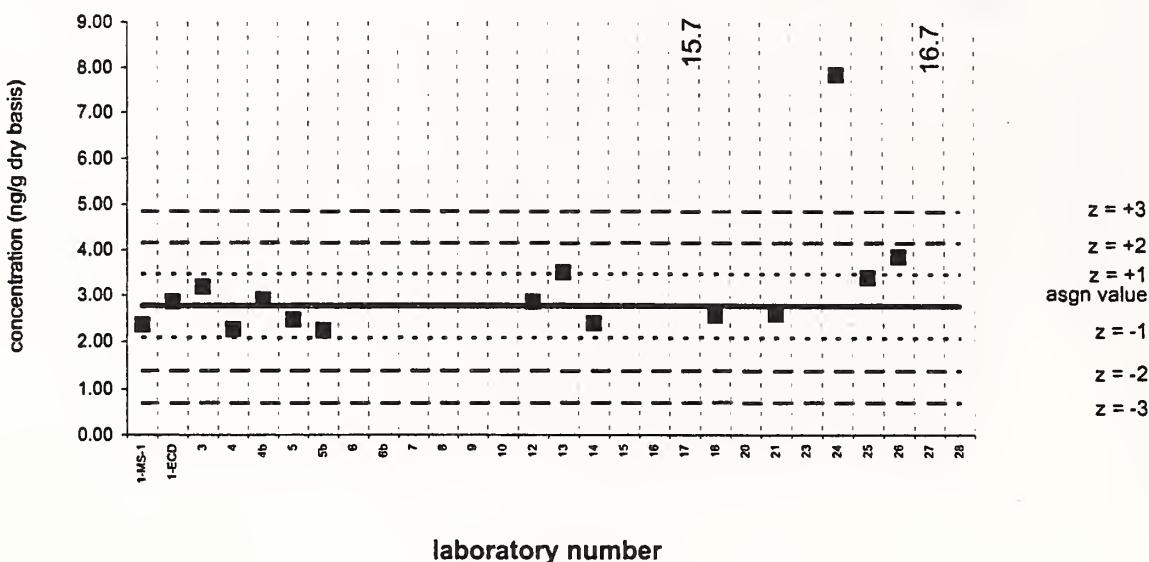

**PCB 153****SRM 1944**Certified Value =  $74.0 \pm 2.9$  ng/g (dry basis)

Reported Results: 21 Quantitative Results: 21

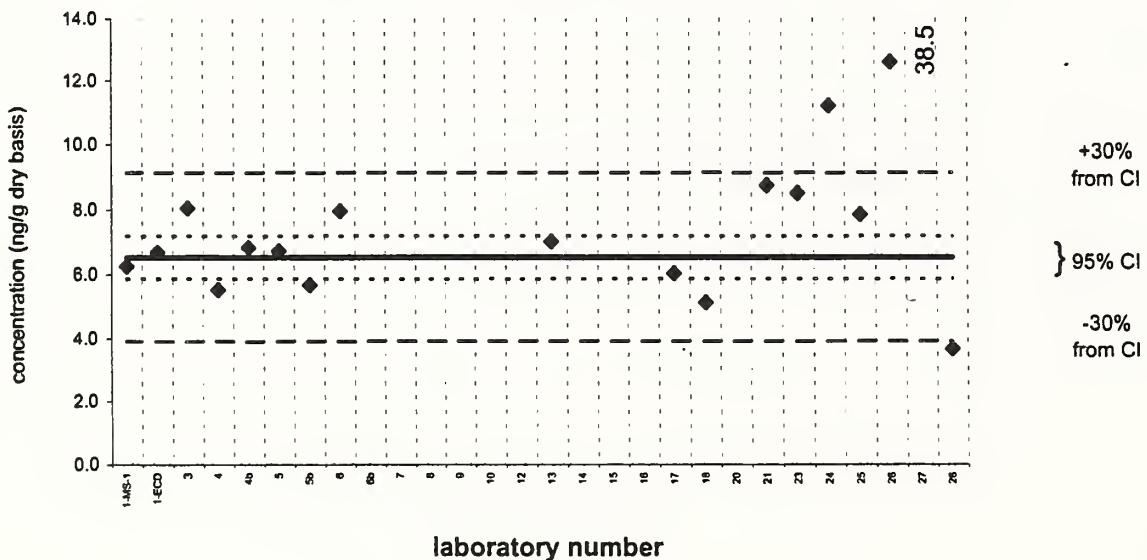

**PCB 156****Sediment XI (QA02SED11)**Assigned value = 2.77 ng/g  $s = 0.42$  ng/g 95% CL = 0.27 ng/g (dry basis)

Reported Results: 21 Quantitative Results: 17

**PCB 156****SRM 1944**Certified Value =  $6.52 \pm 0.66$  ng/g (dry basis)

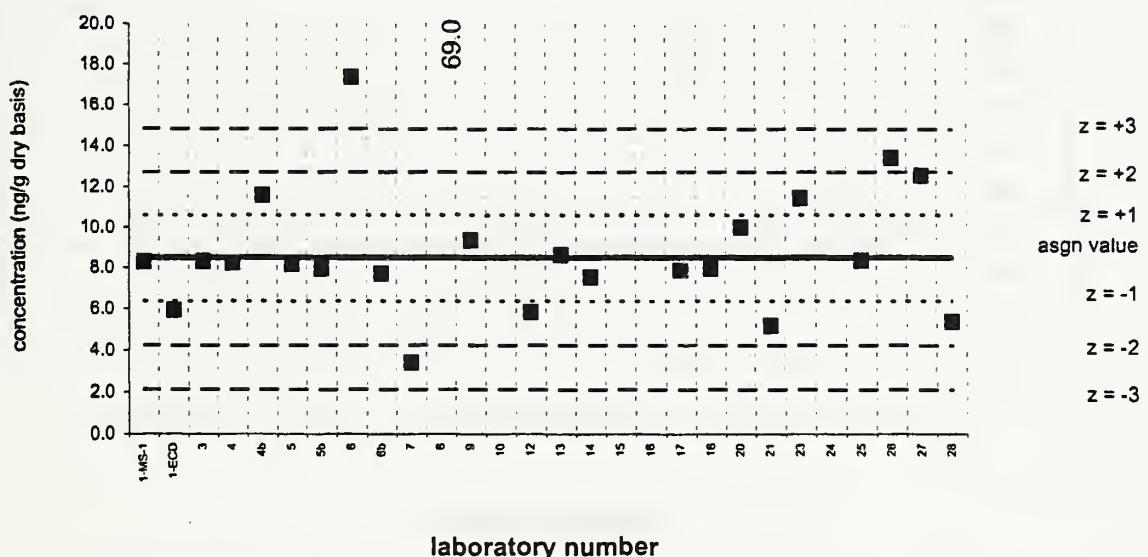

Reported Results: 18 Quantitative Results: 18

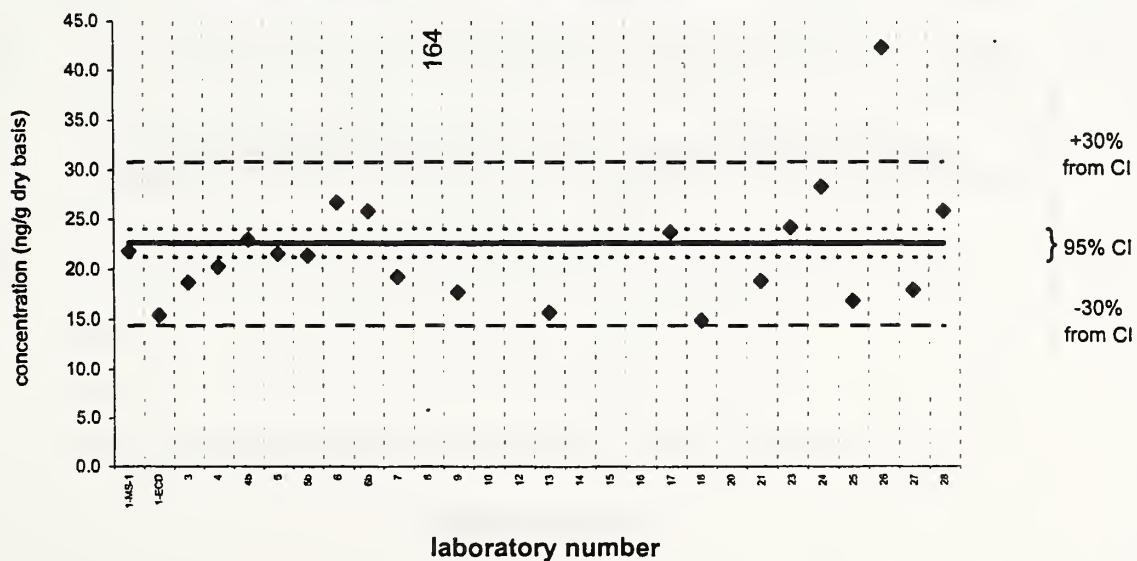

**PCB 170****Sediment XI (QA02SED11)**

Assigned value = 8.47 ng/g s = 3.05 ng/g 95% CL = 1.43 ng/g (dry basis)

Reported Results: 24 Quantitative Results: 24

**PCB 170****SRM 1944**Certified Value =  $22.6 \pm 1.4$  ng/g (dry basis)

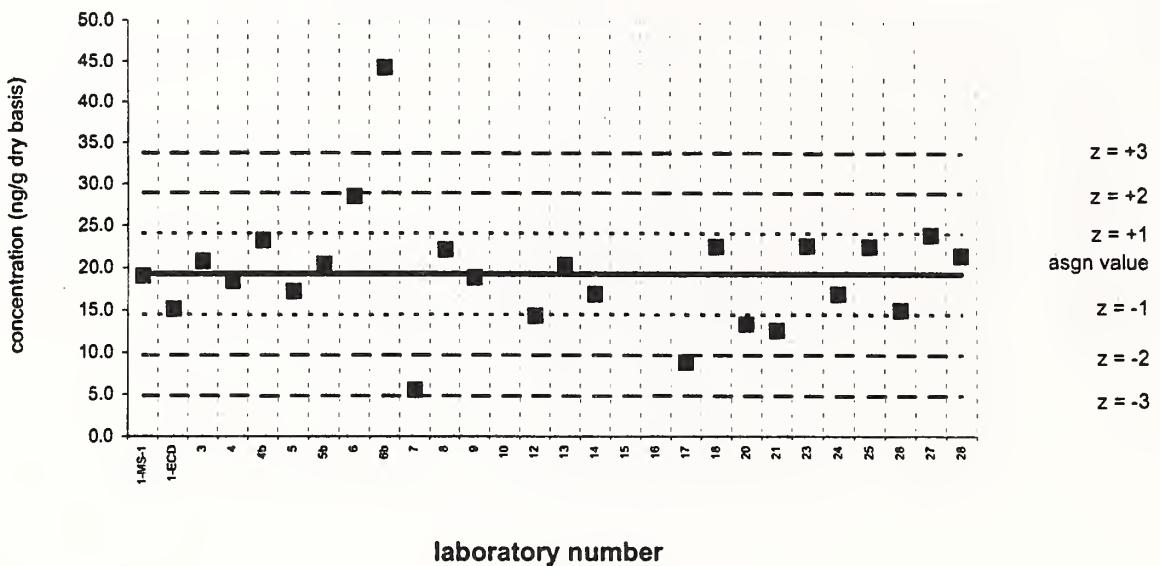

Reported Results: 22 Quantitative Results: 22

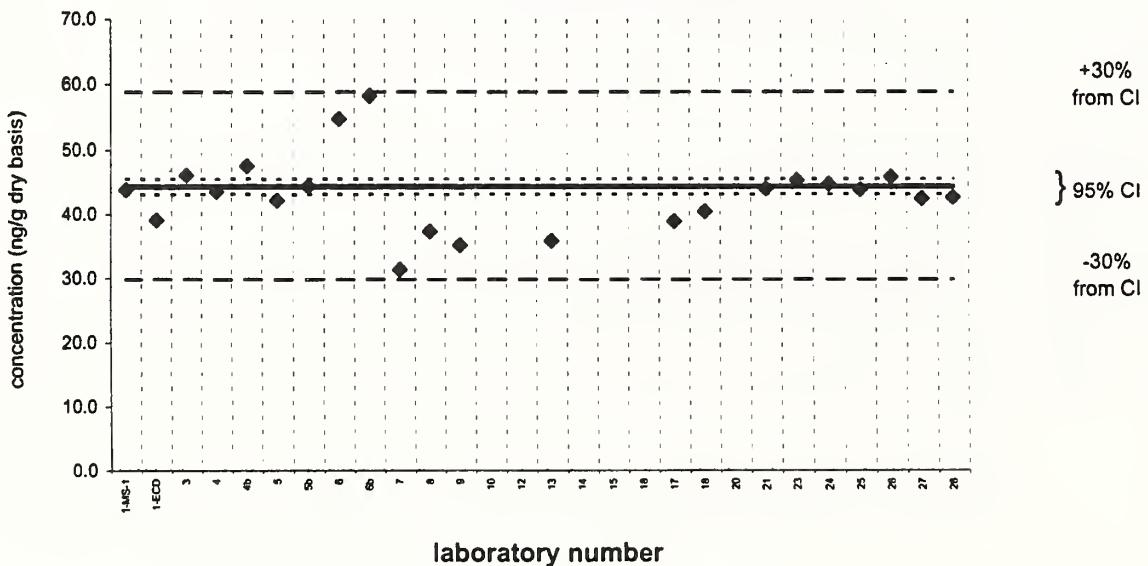

**PCB 180****Sediment XI (QA02SED11)**

Assigned value = 19.3 ng/g s = 4.5 ng/g 95% CL = 2.0 ng/g (dry basis)

Reported Results: 25 Quantitative Results: 25

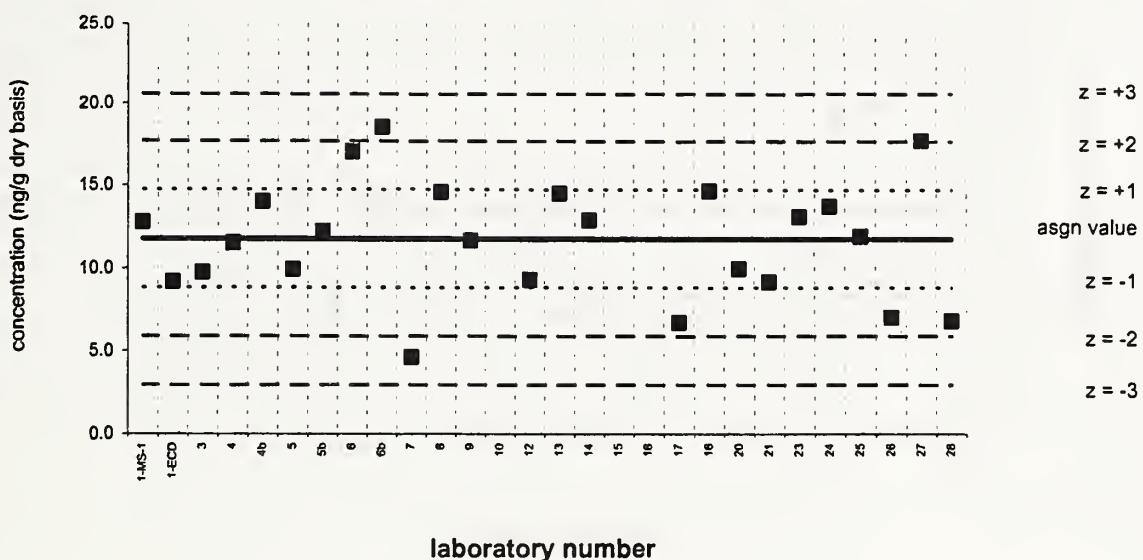

**PCB 180****SRM 1944**Certified Value =  $44.3 \pm 1.2$  ng/g (dry basis)

Reported Results: 22 Quantitative Results: 22

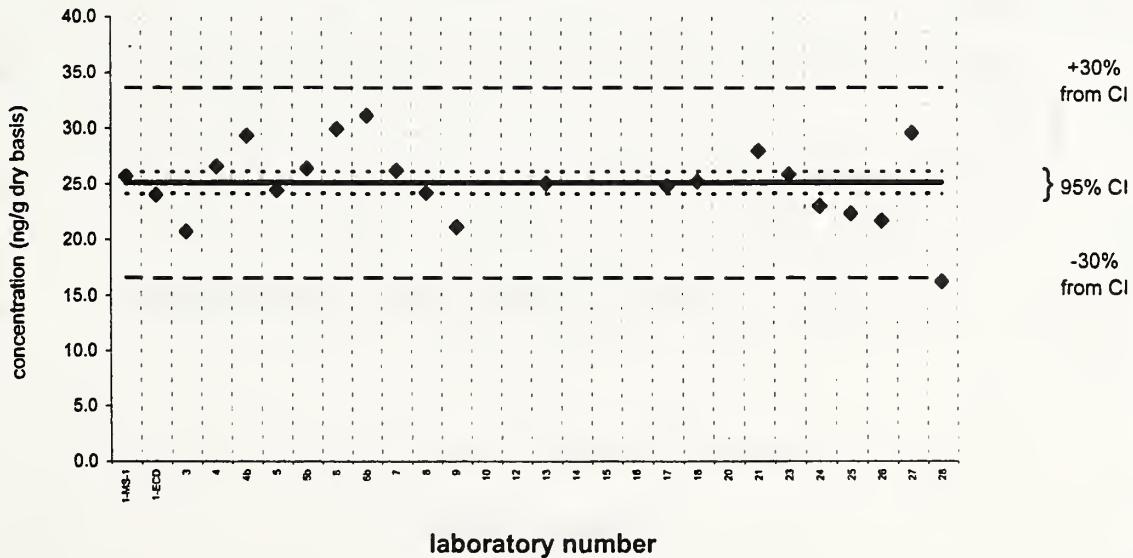

**PCB 187****Sediment XI (QA02SED11)**Assigned value = 11.8 ng/g  $s = 3.7$  ng/g 95% CL = 1.6 ng/g (dry basis)

Reported Results: 25 Quantitative Results: 25

**PCB 187****SRM 1944**Certified Value =  $25.1 \pm 1.0$  ng/g (dry basis)

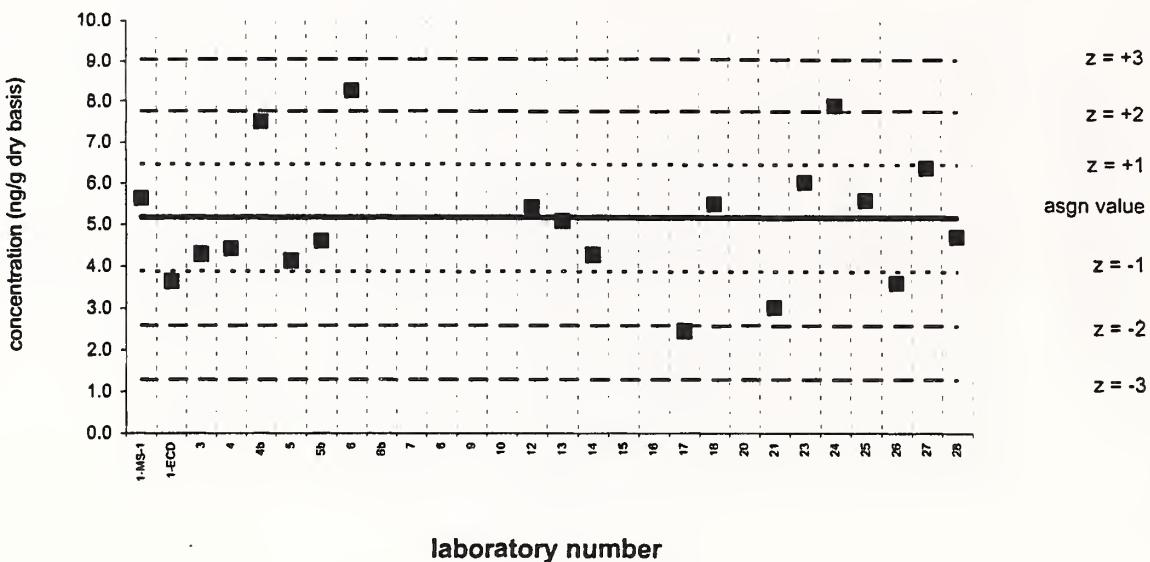

Reported Results: 22 Quantitative Results: 22

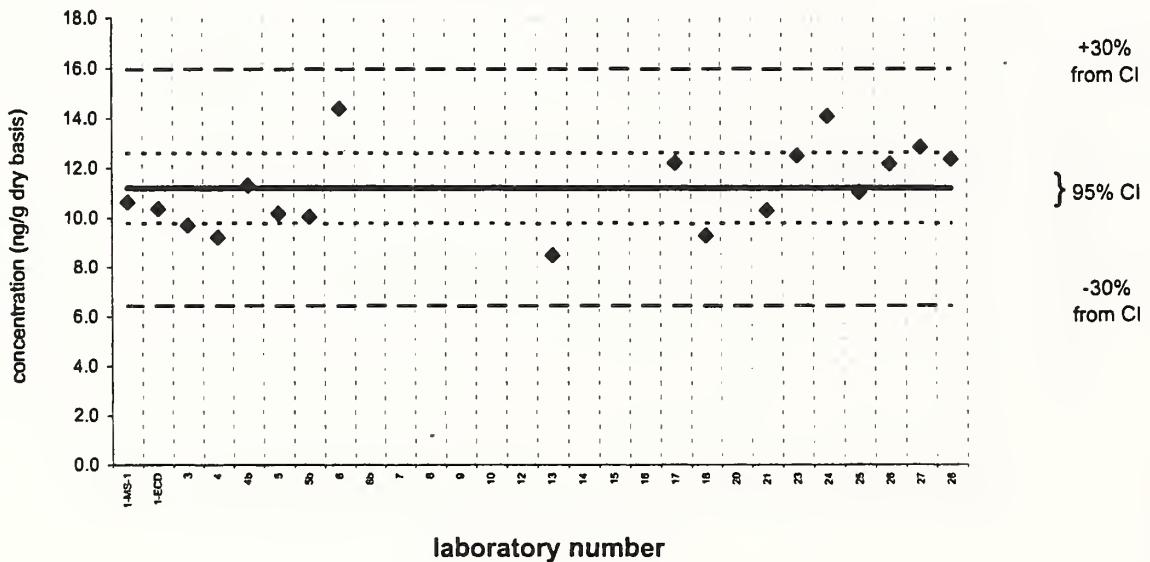

**PCB 194****Sediment XI (QA02SED11)**

Assigned value = 5.17 ng/g s = 1.58 ng/g 95% CL = 0.76 ng/g (dry basis)

Reported Results: 21 Quantitative Results: 20

**PCB 194****SRM 1944**Certified Value =  $11.2 \pm 1.4$  ng/g (dry basis)

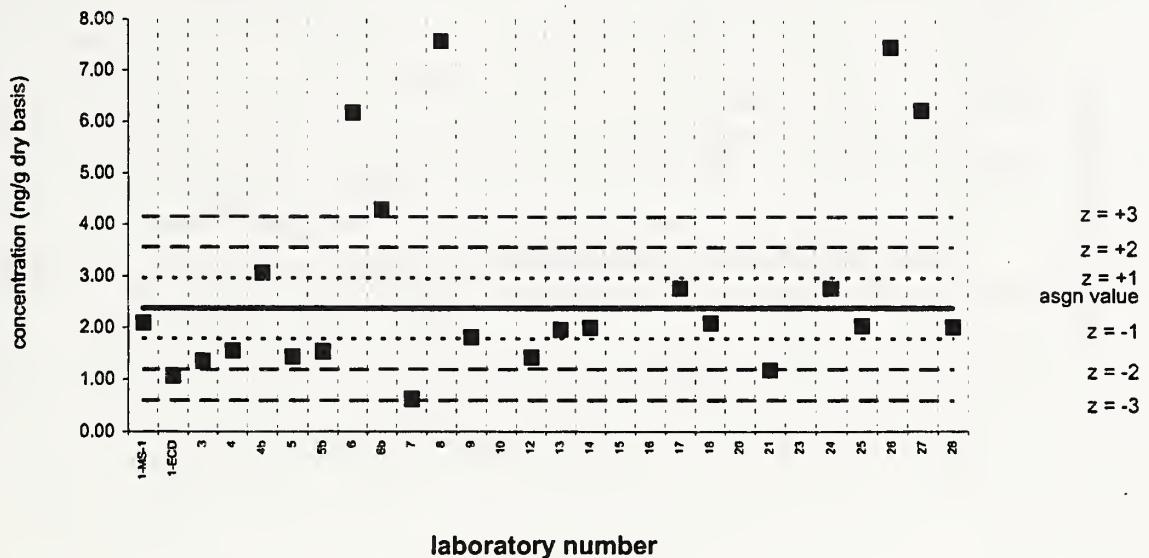

Reported Results: 18 Quantitative Results: 18

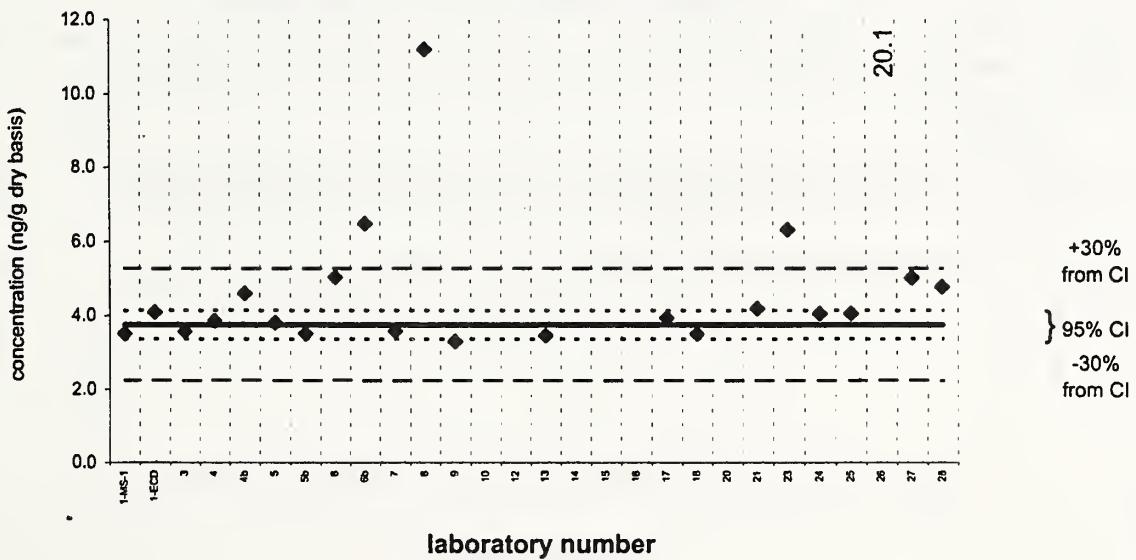

**PCB 195****Sediment XI (QA02SED11)**

Assigned value = 2.37 ng/g s = 1.54 ng/g 95% CL = 0.72 ng/g (dry basis)

Reported Results: 25 Quantitative Results: 23

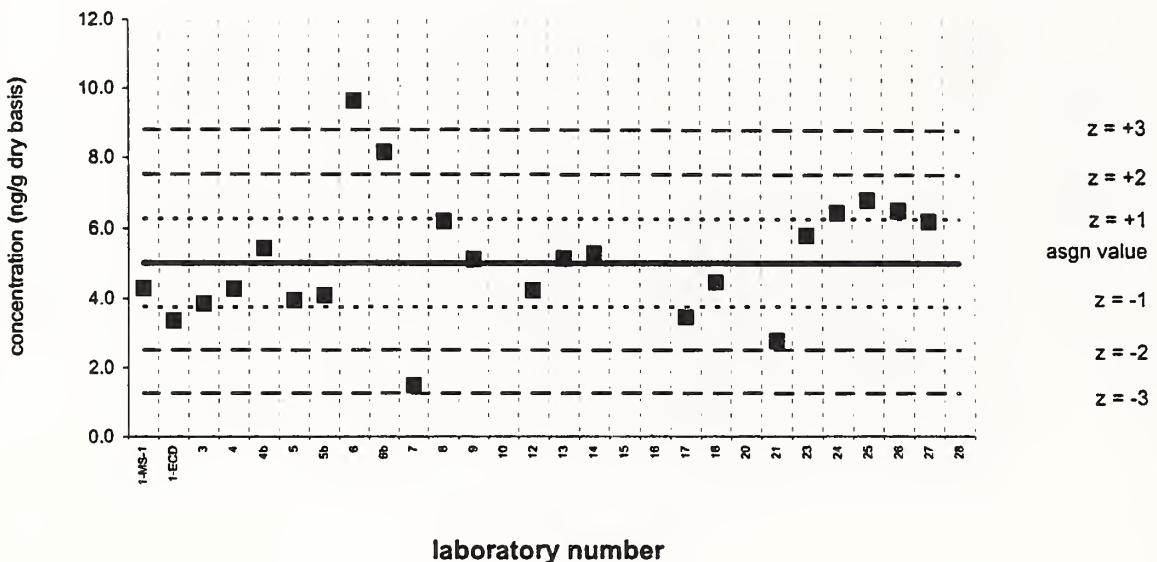

**PCB 195****SRM 1944**Certified Value =  $3.75 \pm 0.39$  ng/g (dry basis)

Reported Results: 22 Quantitative Results: 22

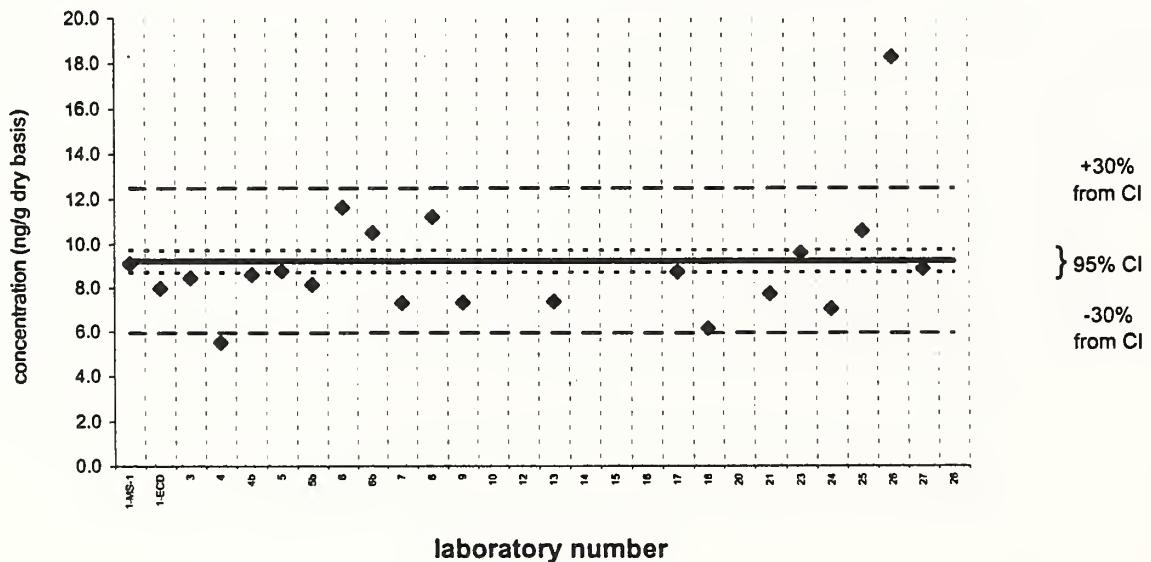

**PCB 206****Sediment XI (QA02SED11)**Assigned value = 5.02 ng/g  $s = 1.84$  ng/g 95% CL = 0.84 ng/g (dry basis)

Reported Results: 24 Quantitative Results: 23

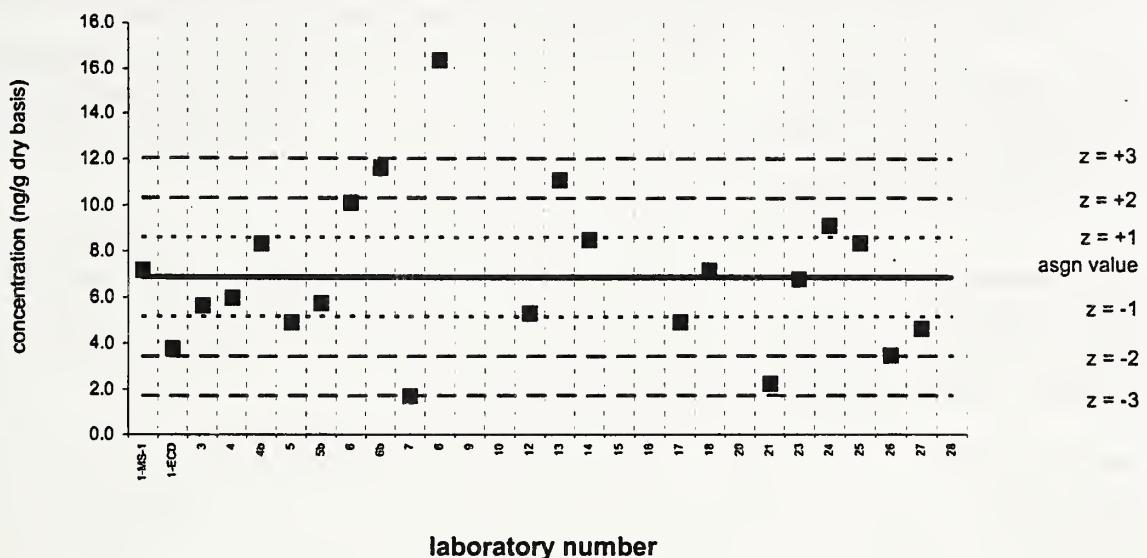

**PCB 206****SRM 1944**Certified Value =  $9.21 \pm 0.51$  ng/g (dry basis)

Reported Results: 21 Quantitative Results: 21

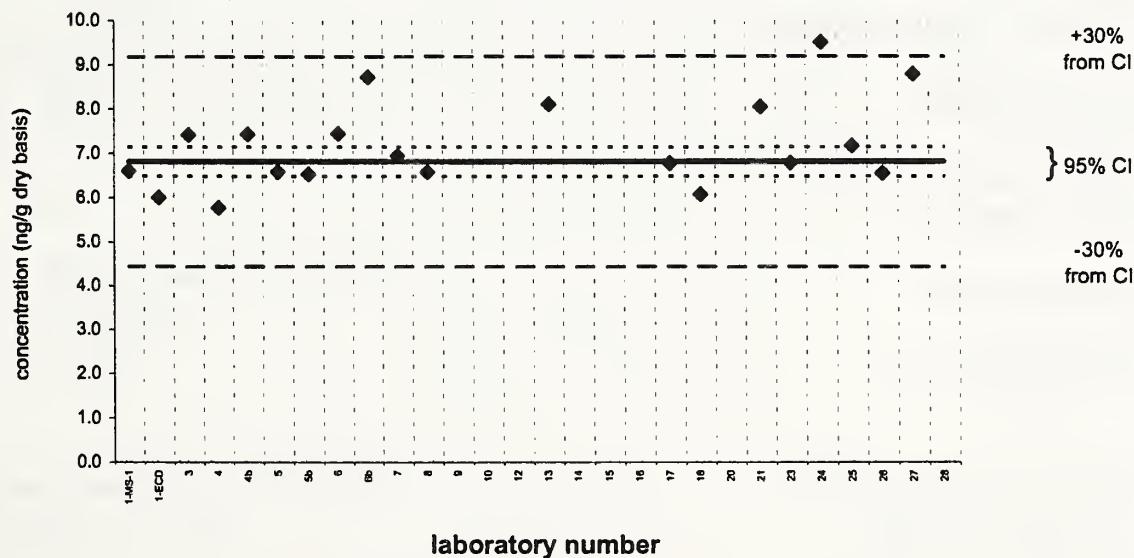

**PCB 209****Sediment XI (QA02SED11)**Assigned value = 6.88 ng/g  $s = 3.46$  ng/g 95% CL = 1.57 ng/g (dry basis)

Reported Results: 23 Quantitative Results: 22

**PCB 209****SRM 1944**Certified Value =  $6.81 \pm 0.33$  ng/g (dry basis)

Reported Results: 20 Quantitative Results: 20

## **Appendix K: List of Laboratories Participating in 2002 Intercomparison Exercises**

For this exercise, data were received from the following laboratories within the required timeframe. (This listing does NOT correspond to the laboratory number identification codes used in this report which were assigned in order of receipt of data with the exception of NIST which is Laboratory #1 in this exercise. The same code was used for both exercises.)

Academy of Natural Sciences  
1900 Benjamin Franklin Parkway  
Philadelphia, PA 19103  
Jeffrey Ashley / Matt Welhelm

ALS Environmental  
1988 Triumph Street  
Vancouver, BC V5L 1K5  
Blair Easton / Patrick Mueller

Arthur D. Little, Inc.  
20 Acorn Park  
Cambridge, MA 02140  
Rick Purdy

Axys Analytical Services, LTD  
2045 Mills Road West  
P.O. Box 2219  
Sidney, BC V8L3S8  
Canada  
Dale Hoover / Laurie Phillips

B& B Laboratories  
1902 Pinon  
College Station, TX 77845  
Sue MacDonald

Battelle Columbus  
505 King Ave  
Columbus, OH 43201  
Mary Schrock

Battelle Duxbury Operations  
397 Washington Street  
Duxbury, MA 02332  
Greg Durell / Bob Lizotte

Bedford Institute of Oceanography  
Marine Environmental Sciences Division  
1 Challenger Drive  
P.O. Box 1006  
Dartmouth, NS B2Y 4A2  
Jocelyne Hellou/Sean Stellar

Chesapeake Biological Laboratory  
1 Williams Street, P.O. Box 38  
Solomons, MD 20688-0038  
Joel Baker / Dan Liebert

City of Los Angeles  
Environmental Monitoring Division  
12000 Vista del Mar  
Playa del Rey, CA 90293  
Lucy Jao / Ofelia Kim

East Bay Municipal Utility District  
PO Box 24055, MS 59  
Oakland, CA 94623  
François Rodigari

EnChem, Inc  
525 Science Drive  
Madison, WI 53711  
Todd Noltemeyer

Environment Canada  
Environmental Sciences Centre  
P. O. Box 23005  
Moncton, New Brunswick E1A6S8  
Canada  
Martin Leger

King County Environmental Laboratory  
322 West Ewing Street  
Seattle, WA 98119  
Michael Doubrava

Manchester Environmental Laboratory  
7411 Beach Drive East  
Port Orchard, WA 98366  
Karin Feddersen

Mississippi State Chemical Laboratory  
112 Hand Lab  
Morrell Road  
Mississippi State, MS 39762  
Paul Brignac / Christine Lusk

Murray State University  
Department of Chemistry  
456 Blackburn Science Bldg.  
Murray KY 42071-3346  
Bommanna G. Loganathan

NIST  
100 Bureau Drive, Stop 8392  
Gaithersburg, MD 20899-8392  
Michele Schantz / Dianne Poster

NIST-Charleston Laboratory  
219 Fort Johnson Road  
Charleston, SC 29412-9110  
John Kucklick

NOAA-NMFS-NEFSC  
James J. Howard Marine Science Lab at Sandy Hook  
74 Magruder Road  
Highlands, NJ 07732  
Ashok Deshpande

NOAA-NMFS  
2725 Montlake Boulevard, East  
Seattle, WA 98112  
Donald Brown / Jennie Bolton

NOAA/NOS/CCEHBR  
219 Fort Johnson Road  
Charleston, SC 29412  
Dan Bearden

Philip Analytical Services  
5555 North Service Road  
Burlington, Ontario L7M4A6  
Canada  
Shari Typer / Ada Blythe

Orange County Sanitation District  
Environmental Sciences Laboratory  
10844 Ellis Avenue  
Fountain Valley, CA 92708  
Kim Christensen

STL Knoxville  
5815 Middlebrook Pike  
Knoxville, TN 37921  
David Thal

STL Sacramento  
880 Riverside Parkway  
West Sacramento, CA 95605  
Patrick Rainey / Michael Flournoy  
Texas A & M University  
GERG  
833 Graham Road  
College Station, TX 77845  
Terry Wade

USGS  
National Water Quality Laboratory  
PO Box 25046  
Denver Federal Center  
Bldg 95, Ent E3, MS 407  
Denver, CO 80225-0048  
Mary Cast / Tom Maloney

Woods Hole Group Environmental Lab  
375 Paramount Dr, Suite B  
Raynham, MA 02767  
Elizabeth Porta / Peter Kane
