TEXTILE TESTING EQUIPMENT

By Josephine M. Blandford

CONTENTS

I. INTRODUCTION

This letter circular lists equipment used in textile testing laboratories in the United States, the names and addresses of manufacturers or dealers from whom the equipment can be purchased, and literature about the equipment or its utilization, other than the descriptive literature obtainable from the suppliers. It has been prepared for use in answering requests for information about equipment and sources of supply. The list of equipment is by no means complete as laboratories are continually developing new equipment, and suppliers are offering new and improved equipment for purchase.

The listing of a testing device or source of supply does not constitute endorsement by the National Bureau of Standards. Inquiries regarding the purchase of equipment should be addressed to the supplier and not to the National Bureau of Standards.

References are given to representative literature describing the equipment and its uses. The suppliers may be able to provide additional references to the literature.

Government publications, unless otherwise stated, may be purchased, for the prices indicated, from the Superintendent of Documents, Government Printing Office, Washington 25, D. C.

Remittance should be made by coupons (obtainable from the Superintendent of Documents in sets of 20 for $1.00 and good until used), or by check or money order payable to the "Superintendent of Documents", transmitted with the order. Stamps are not acceptable.

Government publications may be consulted in many Government, technical, colleges, and public libraries throughout the States. Whether or not a given library has a copy of any particular publication can only be determined by inquiring at the library.

Non-Government publications usually may be consulted in libraries. They are not obtainable from the National Bureau of Standards but often may be obtained from the publishers.

II. EQUIPMENT LIST

The names of equipment and of the characteristics for which tests are performed are given in alphabetical order. After each is the key name of the supplier, the full name and address of each being given in Section III. "Ref.", followed by a number, indicates the literature reference cited in Section IV.
