DEPARTMENT OF COMMERCE
BUREAU OF STANDARDS
WASHINGTON

Letter
Circular 257
(Superseding LC 164)

February 6, 1929

SOURCES OF INFORMATION ON THE PROPERTIES OF METALS AND ALLOYS
(BOOKS)

The Bureau receives requests for general and comprehensive information on the properties of metals and alloys which cover such a volume of information that it is really possible to answer only with a statement of sources where the information may be obtained. This letter circular attempts to give a working bibliography of reference and handbooks on this subject. No attempt has been made to list literature appearing in periodicals. Such literature is to be found abstracted in the indices and abstracts listed in this letter circular, and in the indices ~~of~~ the various periodicals. The Bureau itself is preparing circulars dealing with the properties of individual metals and alloys. Those so far issued are listed herein. Mechanical properties of metals and alloys are often described by standard specifications such as those of the American Society for Testing Materials. Suggestions for additions to this letter circular are invited.

Letter Circular 118 of the Bureau of Standards lists all publications of members of the Division of Metallurgy, either as Bureau papers or as magazine articles. A copy of that letter circular will be sent on request.

The sources contained herein are arranged topically; the reference books mentioned should be available in any large technical or scientific library.

Addresses of publishers occurring most frequently throughout the letter circular have been listed on page 3, only the name of the publisher being given after that of the book. Less common addresses follow the title of the book.

Index.

188
The following is a list of the species of birds observed at the
various stations during the period of the survey.
The names of the stations are given in the first column, and
the date of the observations in the second. The species are
arranged in groups according to the time of their appearance
at the stations. The dates of the first and last appearance
of each species are given in parentheses.
The number of individuals seen is given in parentheses
in front of the name of each species. The numbers
given in parentheses in front of the names of the
species in the first column are the total number
seen at all the stations.
