1. U.S. Government Radio Publications

The papers on radio subjects issued by the National Bureau of Standards are published either by the Government Printing Office or in various periodicals. Most of them are of interest primarily to the radio engineer or scientist. A list of the Bureau's current radio publications can be secured by addressing a request to National Bureau of Standards, Washington 25, D. C. News of the Bureau's radio work, and announcements of new publications are given in the "Technical News Bulletin", issued monthly and available from the Superintendent of Documents, Government Printing Office, Washington 25, D. C., for \$1.00 a year (to addresses in the United States and its possessions and to countries extending the franking privilege); other countries \$1.35. The publications of the National Bureau of Standards cover many subjects, including, besides radio, electricity, light, sound, heat, chemistry, metallurgy, engineering materials, standards of weight and measure, and many other scientific and technical subjects.

"Basic Radio Propagation Predictions" is a monthly publication for those concerned with radio communication in determining the best sky-wave frequencies over any path at any time of day for average conditions for the month of prediction, which are made three months in advance. Charts of extra-ordinary-wave critical frequency for the F2 layer and of maximum usable frequency for a transmission distance of 4,000 km, of highest frequency of sporadic-E in excess of 15 Mc are included. In addition, there are various maps, charts, diagrams, and nomograms needed to make practical application of the world-wide charts, together with examples of their use. These predictions are available from the Superintendent of Documents, Government Printing Office, Washington 25, D. C., for \$1.50 a year (to addresses in the United States and its possessions and to countries extending the franking privilege); other countries \$2.00.

The laws and regulations governing radio are given in publications listed in Section 2 below.

## 2. Radio Laws and Regulations

Publications.— Radio is regulated internationally by the International Telecommunications Convention and the General Radio Regulations. The Convention is published in a book, "International Radiotelegraph Conference, Madrid, 1932" (State Department Publication S40, Conference Series 15), price 30 cents; and in a book, "Telecommunication" (State Department Treaty Series No. 867), price 20 cents; both obtainable from Superintendent of Documents, Government Printing Office, Washington, D.C. The General Radio Regulations are published in a book, "International Telecommunications Conferences, Cairo 1938" (State Department Publication 1286, Conference Series 39), obtainable for 45 cents from Superintendent of Documents, Government Printing Office, Washington, D.C.

International actions on radio, not having the force of law but used as a guide in national regulations and practice, are the Opinions of the International Consulting Committee. Those in force are given in two publications; "International Radio Consulting Committee, Lisbon 1934, Report of the Delegation of the U.S.A." (State Department Publication 827, Conference Series 21), price 50 cents; and "International Radio Consulting Committee, Bucharest 1937, Report of the Delegation of the U.S.A." (State Department Publication 1352, Conference Series 41), price 35 cents; both obtainable from Superintendent of Documents, Government Printing Office, Washington, D. C.

The radio laws of the United States are given in "The Communications Act of 1934 with amendments and indexes thereto, revised to June 14, 1945", price 15 cents; and "Radio Laws of the United States, Compiled by Elmer A. Lewis, 1944", price 20 cents; both obtainable from Superintendent of Documents, Government Printing Office, Washington 25, D. C.

The regulations issued by the Federal Communications Commission are published in the Federal Register, a daily publication obtainable from the Superintendent of Documents, Government Printing Office, at \$10 per year. These regulations are compiled in a series of pamphlets called "Federal Communications Commission Rules and Regulations", obtainable from the Superintendent of Documents, Government Printing Office. Those dealing with radio are listed here, with prices.

Safety Regulations. - All ordinary precautions required for the safe operation of any electrical equipment should be observed in every radio station; for example, all high-voltage wiring should be carefully insulated and kept as far as possible from other wiring and so placed as to minimize the possibility that persons may come in contact with it, and suitable danger tags should be displayed.

Insurance companies and city governments make certain requirements regarding electrical installations in buildings, radio antennas, etc. The usual requirements are summarized in a small book, the National Electrical Code, which may be obtained for five cents from the National Board of Fire Underwriters, 85 John Street, New York, N. Y.

Standard rules for safety procedure are given in the National Electrical Safety Code. The rules applicable to radio are given in "Safety Rules for Radio Installations," National Bureau of Standards Handbook H35 (1939), which may be obtained for ten cents from the Superintendent of Documents, Government Printing Office, Washington 25, D. C.

Licenses. - Information on radio amateur operators and station licenses is obtainable from the Federal Communications Commission, Amateur Section, Washington, D. C.
