# NATIONAL DIRECTORY OF COMMODITY SPECIFICATIONS

## CLASSIFIED AND ALPHABETICAL LISTS AND BRIEF DESCRIPTIONS OF SPECIFICATIONS OF NATIONAL RECOGNITION

Prepared by Paul A. Cooley and Ann E. Rapuzzi
under the direction of A. S. McAllister
Chief of the Division of Codes and Specifications

[Issued June 30, 1945]

UNITED STATES GOVERNMENT PRINTING OFFICE, WASHINGTON : 1945

For sale by the Superintendent of Documents, U. S. Government Printing Office, Washington 25, D. C.

# Foreword

The usefulness of the many commodity specifications in existence is greatly increased if there is a convenient means for locating and comparing them. Situations frequently arise in which a need develops for determining what specifications exist and how they apply.

The National Directory of Commodity Specifications provides a place for recording all specifications of national significance. In previous editions, it has been widely used by governmental agencies and by private organizations. In response to a demand from war agencies and other organizations, it has been completely revised and brought up to date. Although every effort has been made to assure completeness and accuracy, it is realized that improvements may be desirable in future editions. All recommendations that are received will be given very careful consideration.

LYMAN J. BRIGGS, *Director.*

# CONTENTS

# Introduction

This publication is a third edition of the National Directory of Commodity Specifications, published first in 1925, and in revised and enlarged form in 1932. In it will be found listed and briefly described the standards and specifications of trade associations, technical societies, and organizations that are representative in a national way of industry or some branch of industry, as well as the standards and specifications of governmental agencies that represent the Federal Government as a whole. Included also are references to the purchase specifications of several departments and establishments of the Federal Government.

As in the previous editions, the decimal system of classification of commodities is used, some minor changes and additions having been made to take care of new material.

The classification system adopted in the Directory tends to group specifications and standards relating to the same subjects, so that specification-making bodies may take note of, or be forewarned concerning duplication of material. Moreover, a special effort has been made to increase the value of the Directory to the purchaser who desires to employ nationally-recognized specifications. For example, if the use of a commodity is not self-evident from the title of the specification, a brief explanation has been given when possible. A summary of each specification is also included so that the reader may to some extent judge for himself whether the scope of the specification fits his particular needs. Cross-referencing serves to tie up related specifications.

To obtain maximum service from the Directory, full use should be made of the index on pages 1185 to 1311. Here the commodities are listed alphabetically and references are given to the classification groups in the body of the Directory in which the specifications for the particular commodities appear. Directions for obtaining copies of the specifications will be found on page 1162.

Notwithstanding the fact that some of the specifications listed in the Directory will become obsolete in a relatively short time because revised specifications have superseded them, the Directory will lead to up-to-date information if properly utilized. When an issuing agency receives an order for a specification referred to in the Directory, it will supply its current specification unless specifically requested to deliver the one that has been superseded.

# CLASSIFIED LIST OF SPECIFICATIONS

## 000-099 ANIMALS AND ANIMAL PRODUCTS

(Except Wool and Hair)

## 000-009 ANIMALS

### 001. CATTLE

#### 001.1 MILK COWS

U. S. Gov., Dept. of Interior, Purchasing Office. Standard Specifications No. 12 for Cattle, Dairy and Beef. Includes dairy bulls, registered or purebred; dairy cows, registered or purebred; grade dairy cows; beef bulls, registered or purebred; beef cows, registered or purebred; grade beef cows.

#### 001.2 BEEF CATTLE

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. Circular 28; 1928. Revised, 1942. Market Classes and Grades of Calves and Vealers. Covers vealers and calves differentiated, definition of terms; and schedule, classes, weight, grades, and grade description of vealers, slaughter calves, and stocker and feeder calves.

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. Circular 505; 1938. Market Classes and Grades of Feeder and Stocker cattle. Covers feeder and stocker cattle, definitions of terms and classifications for feeder and stocker cattle (classes of feeder and stocker cattle, age selections of feeder and stocker cattle, use selections, and weight selections), grade factors for feeder and stocker cattle, feeder and stocker cattle classification and grades, standards for grades of feeder and stocker steers, heifers, and cows (grades of feeder and stocker steers, grades of feeder and stocker heifers, and grades of feeder and stocker cows).

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. Dept. Bulletin 1464; 1927. Revised, 1940. Market Classes and Grades of Cattle. Covers systems of standard market classes and grades of livestock, basis for standard market classes and grades of cattle, classifying and grading cattle, market uses of cattle, and detailed information concerning slaughter cattle and feeder and stocker cattle.

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. Service and Regulatory Announcement No. 112. Official U. S. Standards for Grades of Slaughter Cattle, effective July 16, 1928, and Amendment 1, issued July 1939. Gives definitions of terms, classes (steer, heifer, cow, bull, and stag); grades for steers and heifers (prime or No. A-1, choice or No. 1, good or No. 2, medium or No. 3, common or No. 4, cutter or No. 5, and canner or No. 6); grades for cows, bulls, and stags (choice or No. 1, good or No. 2, medium or No. 3, common or No. 4, cutter or No. 5, and canner or No. 6).

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. Service and Regulatory Announcement No. 113. U. S. Standards for Grades of Vealers and Slaughter Calves, effective July 16, 1928. Gives definitions of terms, market groups, classes (steer, heifer, bull), and specifications for grades—prime or No. A-1, choice or No. 1, good or No. 2, medium or No. 3, common or No. 4, and cull or No. 5.

U. S. Gov., Dept. of Interior, Purchasing Office. Standard Specifications No. 12 for Cattle, Dairy and Beef. Includes dairy bulls, registered or purebred; dairy cows, registered or purebred; grade dairy cows; beef bulls, registered or purebred; beef cows, registered or purebred; grade beef cows.

### 002. HOGS

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. Circular 569; 1940. Market Classes and Grades of Swine. Covers introduction, development of market classes and grades of swine, classifying and grading, benefits of classifying and grading, definitions of terms and classifications for swine (swine, use selections, classes of swine, and weight selections), grade (grade factors for swine), type, slaughter hogs (slaughter hog schedule, grades of slaughter barrows and gilts, and grades of slaughter sows), slaughter pigs (classes of slaughter pigs, slaughter pig schedule, and grades of slaughter pigs), feeder and stocker swine (classes of feeder and stocker swine, feeder and stocker swine schedule, and grades of feeder and stocker barrows and gilts).

### 003. SHEEP

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. Circular 383. Revised, July 1940. Market Classes and Grades of Lambs and Sheep. Covers need for standardization, classifying and grading, definitions and descriptions of market groups, grade factors (conformation, finish, and quality), factors affecting value (weight, excessive finish, and carcass yield), lambs, lamb schedule (grades of slaughter lambs), sheep, sheep schedule (grades of slaughter sheep and grades of feeder sheep and lambs).

## 004. HORSES

## 004.1 WORK HORSES

## 005. MULES, ASSES, AND BURROS

## 005.1 MULES

## 005.2 ASSES

## 005.3 BURROS

## 007. POULTRY

### 007.0 GENERAL ITEMS

U. S. Gov., Federal Specification LL-P-631; 1932. Poultry; Live. Covers chickens—broilers, fryers, and roasters; fowl—heavy and light; ducks; geese; and turkeys. Includes all breeds of chicken or fowl and turkeys, all breeds of ducks except Moscovies and Indian Runners, and all breeds of geese except Chinese or Swan geese. Gives detail requirements; methods of inspection; and requirements for packaging, packing, and marking.

### 007.1 CHICKENS AND FOWLS

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. Tentative U. S. Standards for Classes and Grades for Live Poultry, 1944. Includes requirements for chickens (broilers, fryers, roasters, capons, stags, fowl, and cocks—old roosters). Covers standards for individual birds, U. S. No.1, U. S. No.2, and rejects; and wholesale grades for live poultry, U. S. No.1, U. S. No.2, and no grade. Gives requirements for each kind of chicken, explanation of terms, and summary for individual birds.

U. S. Gov., Federal Specification LL-P-631; 1932. Poultry; Live. Covers chickens—broilers, fryers, and roasters; fowl—heavy and light; ducks; geese; and turkeys. Includes all breeds of chicken or fowl and turkeys; all breeds of ducks except Moscovies and Indian Runners, and all breeds of geese except Chinese or Swan geese. Gives detail requirements; methods of inspection; and requirements for packaging, packing, and marking.

### 007.2 TURKEYS

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. Tentative U. S. Standards for Classes and Grades for Live Poultry, 1944. Includes requirements for turkeys (young hens, young toms, old hens, old toms). Covers standards for individual birds, U. S. No.1, U. S. No.2, and rejects; and wholesale grades for live poultry, U. S. No.1, U. S. No.2, and no grade. Gives requirements for each kind of turkey, explanation of terms, and summary for individual birds.

U. S. Gov., Federal Specification LL-P-631; 1932. Poultry; Live. Covers chickens—broilers, fryers, and roasters; fowl—heavy and light; ducks; geese; and turkeys. Includes all breeds of chicken or fowl and turkeys, all breeds of ducks except Moscovies and Indian Runners, and all breeds of geese except Chinese or Swan geese. Gives detail requirements; methods of inspection; and requirements for packaging, packing, and marking.

### 007.3 DUCKS

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. Tentative U. S. Standards for Classes and Grades for Live Poultry, 1944. Includes requirements for ducks (young ducks and old ducks). Covers standards for individual birds, U. S. No.1, U. S. No.2, and rejects; and wholesale grades for live poultry, U. S. No.1, U. S. No.2, and no grade. Gives requirements for young and old ducks, explanation of terms, and summary for individual birds.

U. S. Gov., Federal Specification LL-P-631; 1932. Poultry; Live. Covers chickens—broilers, fryers, and roasters; fowl—heavy and light; ducks; geese; and turkeys. Includes all breeds of chicken or fowl and turkeys, all breeds of ducks except Moscovies and Indian Runners, and all breeds of geese except Chinese or Swan geese. Gives detail requirements; methods of inspection; and requirements for packaging, packing, and marking.

### 007.4 GEESE

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. Tentative U. S. Standards for Classes and Grades for Live Poultry, 1944. Includes requirements for geese. Covers standards for individual birds, U. S. No.1, U. S. No.2, and rejects; and wholesale grades for live poultry, U. S. No.1, U. S. No.2, and no grade. Gives explanation of terms and summary for individual birds.

U. S. Gov., Federal Specification LL-P-631; 1932. Poultry; Live. Covers chickens—broilers, fryers, and roasters; fowl—heavy and light; ducks; geese; and turkeys. Includes all breeds of chicken or fowl and turkeys, all breeds of ducks except Moscovies and Indian Runners, and all breeds of geese except Chinese or Swan geese. Gives detail requirements; methods of inspection; and requirements for packaging, packing, and marking.

### 007.5 PIGEONS

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. Tentative U. S. Standards for Classes and Grades for Live Poultry, 1944. Includes requirements for squabs and pigeons. Covers standards for individual birds, U. S. No.1, U. S. No.2, and rejects; and wholesale grades for live poultry, U. S. No.1, U. S. No.2, and no grade. Gives requirements for squabs and pigeons, explanation of terms, and summary for individual birds.

U. S. Gov., U. S. Army, Signal Corps. Specification 25-1; 1935. Pigeons; Homing.

### 007.6 GUINEAS

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. Tentative U. S. Standards for Classes and Grades for Live Poultry, 1944. Includes requirements for guineas (young guineas and old guineas). Covers standards for individual birds, U. S. No.1, U. S. No.2, and rejects; and wholesale grades for live poultry, U. S. No.1, U. S. No.2, and no grade. Gives requirements for young and old guineas, explanation of terms, and summary for individual birds.

# 010-019 MEATS

## 010. GENERAL ITEMS

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis, 1940. Meat. Preparation of sample, determination of moisture, ash, crude fat, total phosphorus, total nitrogen, preservatives, creatin, and tentative methods for determination of ammonia, nitrates, nitrites, starch, glycogen, sugar, metals, coloring matters, nitrogen in various combinations, meat bases, and soluble phosphorus.

## 011. BEEF AND VEAL

### 011.1 BEEF CARCASSES

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. Circular 103; 1930. Revised, 1942. Market Classes and Grades of Dressed Veal and Calf Carcasses. Covers purposes of classifying and grading, definitions of class and grade, veal and calf carcasses differentiated (methods of dressing and weight selections), basis for grading veal and calf carcasses (conformation, finish, and quality), veal-carcass schedule (grades of veal carcasses), calf-carcass schedule (grades of calf carcasses), wholesale cuts of veal and calf carcasses (grades of wholesale cuts of veal and grades of wholesale cuts of calf carcasses), and kosher veal.

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. Service and Regulatory Announcement No. 99. Official U. S. Standards for Grades of Carcass Beef, reprinted with amendments, May 1942. Covers three classes: (1) Steer and heifer (seven grades—prime, choice, good, commercial, utility, cutter, and canner); (2) cow (five grades—good, commercial, utility, cutter, and canner); and (3) bull and stag (six grades—choice, good, commercial, utility, cutter, and canner).

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. Service and Regulatory Announcement No. 114. Official U. S. Standards for Grades of Veal and Calf Carcasses, 1928, and Amendment 1, Oct. 1940. Gives definitions of terms, market groups, classes (steer, heifer, bull), and specifications for grades—prime or No. A-1, choice or No. 1, good or No. 2, commercial or No. 3, utility or No. 4, and cull or No. 5.

U. S. Gov., Federal Specification PP-B-221a; 1941. Amendment 4; 1942. Beef; Fresh. Covers four types—(I) fresh, chilled, carcass, (II) fresh, frozen, carcass, (III) fresh, chilled, wholesale market cuts, and (IV) fresh, frozen, wholesale market cuts; three classes—(1) steer, (2) heifer, and (3) cows; and five grades—(A) low choice, (B) high good, (C) low good, (D) high commercial, and (E) low commercial. Gives detail requirements; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

*References.*—Definitions, methods of analysis, food regulations, *see* 010; veal carcasses, *see* 011.8; beef and veal cuts, *see* 011.91.

### 011.2 BEEF HEARTS

U. S. Gov., Federal Specification PP-H-201; 1931. Amendment 1; 1940. Hearts; Beef. Covers one grade and two classes—(I) chilled and (II) frozen. Gives detail requirements; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

*References.*—Definitions, methods of analysis, food regulations, *see* 010.

### 011.3 BEEF KNUCKLES

### 011.4 BEEF AND VEAL LIVERS

U. S. Gov., Federal Specification PP-L-351; 1931. Amendment 2; 1940. Liver. Covers three classes—(A) calf, (B) beef, and (C) lamb; and two types—(I) chilled and (II) frozen. Gives general and detail requirements; methods of inspection and tests (chemical analyses in accordance with methods of Assn. of Official Agricultural Chemists); and requirements for packaging, packing, and marking.

*References.*—Definitions, methods of analysis, food regulations, *see* 010.

### 011.5 BEEF KIDNEYS

U. S. Gov., Federal Specification PP-K-351; 1931. Amendment 1; 1940. Kidneys; Beef. Covers one grade and two types—(I) chilled and (II) frozen. Gives general and detail requirements; methods of inspection and tests (chemical analyses in accordance with methods of Assn. of Official Agricultural Chemists); and requirements for packaging, packing, and marking.

*References.*—Definitions, methods of analysis, food regulations, *see* 010.

### 011.6 BEEF TONGUES

U. S. Gov., Federal Specifications PP-T-576; 1938. Tongues, Beef; Fresh, and Cured and Smoked. Covers two types—(I) fresh (chilled or frozen) and (II) cured and smoked; and two grades—(A) prime and (B) good. Gives general and detail requirements; methods of inspection and tests (chemical analyses in accordance with methods of Assn. of Official Agricultural Chemists); and requirements for packaging, packing, and marking.

*References.*—Canned beef tongue, *see* 018.11.

### 011.7 OXTAILS

### 011.8 VEAL CARCASSES AND CUTS

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. Circular 103; 1930. Revised, 1942. Market Classes and Grades of Dressed Veal and Calf Carcasses. Covers purposes of classifying and grading, definitions of class and grade, veal and calf carcasses differentiated (methods of dressing and weight selections), basis for grading veal and calf carcasses (conformation, finish, and quality), veal-carcass schedule (grades of veal carcasses), calf-carcass schedule (grades of calf carcasses), wholesale cuts of veal and calf carcasses (grades of wholesale cuts of veal and grades of wholesale cuts of calf carcasses), and kosher veal.

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. Service and Regulatory Announcement No. 114. Official U. S. Standards for Grades of Veal and Calf Carcasses, 1928, and Amendment 1, Oct. 1940. Gives definitions of terms,

market groups, classes (steer, heifer, bull), and specifications for grades—prime or No. A-1, choice or No. 1, good or No. 2, commercial or No. 3, utility or No. 4, and cull or No. 5.

U. S. Gov., Federal Specification PP-V-191a; 1935. Amendment 1; 1941. Veal. Covers two grades—(A-1) choice and (A) good; four types—(I) carcass or sides, fresh, chilled, (II) carcass or sides, fresh, frozen, (III) veal cuts, fresh, chilled, and (IV) veal cuts, fresh, frozen; and two classes—(1) light weight and (2) heavy weight. Gives general and detail requirements; methods of inspection and tests (chemical analyses in accordance with methods of Assn. of Official Agricultural Chemists); and requirements for packaging, packing, and marking.

*References.*—Definitions, methods of analysis, food regulations, *see* 010; fresh veal cuts, *see* 011.91.

## 011.9 MISCELLANEOUS SPECIFICATION FOR BEEF AND VEAL

### 011.91 Fresh Beef and Veal Cuts

*References.*—Other specifications for fresh beef and veal, *see* 011.1, 011.8; definitions, methods of analysis, food regulations, *see* 010.

### 011.92 Veal Sweetbreads

U. S. Gov., Federal Specification PP-S-871; 1932. Sweetbreads; Thymus-Glands. Covers one grade and class—derived from calf carcasses; and two types—fresh, chilled; fresh, frozen. Gives general and detail requirements; methods of inspection and tests (chemical analyses in accordance with methods of Assn. of Official Agricultural Chemists); and requirements for packaging, packing, and marking.

### 011.93 Calf Brains

U. S. Gov., Federal Specification PP-B-656; 1932. Brains; Calf. Covers one grade and two types—fresh, chilled; and fresh, frozen. Gives detail requirements; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

### 011.94 Smoked Beef and Veal

*References.*—Dried beef and veal, *see* 018.13.

### 011.95 Pickled Beef and Veal

*References.*—Definitions, methods of analysis, food regulations, *see* 010.

## 012. PORK, HAM, AND BACON

*References.*—Fresh pork cuts, *see* 012.91.

### 012.1 PORK CARCASSES

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. Circular 288, Oct. 1933. Market Classes and Grades of Pork Carcasses and Fresh Pork Cuts. Covers definitions of class and grade, methods of dressing, classifying and grading, weight selections, dressed schedule (barrows and gilts, sows, stags, and boars), dressing percentages, basis of grading, and definitions of terms.

U. S. Gov., Federal Specification PP-P-571; 1933. Amendment 3; 1942. Pork. Covers four types—(I) fresh, chilled, carcass, (II) fresh, frozen, carcass, (III) pork cuts, fresh, chilled (hams, shoulders, loins, tenderloins, spareribs, Boston butts), (IV) pork cuts, fresh, frozen; and two grades—1 and 2. Gives general and detail requirements; methods of inspection and tests (chemical analyses in accordance with methods of Assn. of Official Agricultural Chemists); and requirements for packaging, packing, and marking.

### 012.2 PORK LOINS

U. S. Gov., Federal Specifications PP-P-571; 1933. Amendment 3; 1942. Pork. Covers four types—(I) fresh, chilled, carcass, (II) fresh, frozen, carcass, (III) pork cuts, fresh, chilled (hams, shoulders, loins, tenderloins, spareribs, Boston butts), (IV) pork cuts, fresh, frozen; and two grades—1 and 2. Gives general and detail requirements; methods of inspection and tests (chemical analyses in accordance with methods of Assn. of Official Agricultural Chemists); and requirements for packaging, packing, and marking.

*References.*—Definitions, methods of analysis, food regulations, *see* 010; dry salt cuts, *see* 012.92; fresh pork cuts, *see* 012.91.

### 012.3 HAM AND SHOULDERS

U. S. Gov., Federal Specification PP-H-61; 1940. Ham; Canned, Whole. Covers one grade. Gives detail requirements; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification PP-H-71; 1931. Amendment 5; 1942. Hams; Sweet-Pickle Cured, Smoked. Covers two types—(I) regular or short-cut and (II) skinned; and two grades—1 and 2. Gives detail requirements; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification PP-P-571; 1933. Amendment 3; 1942. Pork. Covers four types—(I) fresh, chilled, carcass, (II) fresh, frozen, carcass, (III) pork cuts, fresh, chilled (hams, shoulders, loins, tenderloins, spareribs, Boston butts), (IV) pork cuts, fresh, frozen; and two grades—1 and 2. Gives general and detail requirements; methods of inspection and tests (chemical analyses in accordance with methods of Assn. of Official Agricultural Chemists); and requirements for packaging, packing, and marking.

*References.*—Definitions, methods of analysis, food regulations, *see* 010; fresh pork cuts, *see* 012.91.

### 012.4 PORK RIBS

*References.*—Definitions, methods of analysis, food regulations, *see* 010; fresh-pork cuts, *see* 012.91.

### 012.5 BACON

American Meat Institute. Standards for Packinghouse Supplies, Packs, and Equipment, 1928. Standard Packs. For sliced bacon, standard sizes of consumer packages by weight, and number of packages in shipping container.

U. S. Gov., Federal Specification PP-B-81a; 1938. Amendment 2; 1942. Bacon; Smoked. Covers two types—(I) dry sugar box cured (grades 1 and 2) and (II) dry sugar cured (grade 1). Gives detail requirements; methods of sampling, inspection, and tests; and

requirements for packaging, packing, and marking for shipment.

*References.*—Dry salt bellies and sides, *see* 012.92; sweet pickled bellies; *see* 012.94; definitions, methods of analysis, food regulations, *see* 010.

### 012.6 HOG BRAINS

U. S. Gov., Federal Specification PP-B-661; 1932. Brains; Hog. Covers one grade and two types—fresh, chilled; and fresh, frozen. Gives detail requirements; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

### 012.9 MISCELLANEOUS SPECIFICATIONS FOR PORK, HAM, AND BACON

### 012.91 Fresh Pork

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. Circular 288, Oct. 1933. Market Classes and Grades of Pork Carcasses and Fresh Pork Cuts. Covers definitions of class and grade, methods of dressing, classifying and grading, weight selections, dressed schedule (barrows and gilts, sows, stags, and boars), dressing percentages, basis of grading, and definitions of terms.

*References.*—Definitions, methods of analysis, food regulations, *see* 010; other fresh pork, *see* 012.1-012.5.

### 012.92 Dry or Salt Pickled Pork

U. S. Gov., Federal Specification PP-F-81; 1932. Fatbacks; Dry-Salt-Cured. Consists of upper part of the side of hog, with the loin out, and the ham and shoulder removed. Gives detail requirements; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification PP-P-586; 1937. Pork-Bellies, Clear; Dry-Salt-Cured. Covers one type—chilled. Gives general and detail requirements; methods of inspection and tests (chemical analyses in accordance with methods of Assn. of Official Agricultural Chemists); and requirements for packaging, packing, and marking.

*References.*—Hams and shoulders, dry salt, *see* 012.3; ribs, dry salt, *see* 012.4; definitions, methods of analysis, food regulations, *see* 010.

### 012.93 Sugar Cured Pork

### 012.94 Sweet Pickle Cured Pork

*References.*—Hams and shoulders, sweet pickled, *see* 012.3; bacon, sweet pickled, *see* 012.5; definitions, methods of analysis, food regulations, *see* 010.

### 012.95 Smoked Pork

*References.*—Hams and shoulders, smoked, *see* 012.3; smoked bacon, *see* 012.5; definitions, methods of analysis, food regulations. *see* 010.

### 012.96 Pig's Feet

U. S. Gov., Federal Specification PP-P-371; 1932. Pig's Feet. Covers one grade and three types—uncooked, fresh; uncooked, salt pickled; and cooked, vinegar pickled. Gives general and detail requirements; methods of inspection and tests (chemical analyses in accordance with methods of Assn. of Official Agricultural Chemists); and requirements for packaging, packing, and marking.

## 014. MUTTON AND LAMB

### 014.1 LAMB CARCASSES AND CUTS

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. Service and Regulatory Announcement No. 123. Official U. S. Standards for Grades of Lamb Carcasses, Yearling Mutton, and Mutton Carcasses, 1931; and Amendment 1, October 1940. Gives definitions of terms and specifications for grades—prime or No. A-1. choice or No. 1, good or No. 2, commercial or No. 3, utility or No. 4, and cull or No. 5, for lamb carcasses, yearling mutton carcasses, and mutton carcasses.

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. Dept. Bulletin 1470; 1927. Revised, 1942. Market Classes and Grades of Dressed Lamb and Mutton. Covers definition of lamb and mutton, basis for grading lamb and mutton, definition of terms, grades of lamb and mutton carcasses, standard wholesale cuts of lamb and mutton, description of wholesale cuts and subdivisions, percentage yield of wholesale cuts, and standard grades of wholesale lamb and mutton cuts.

U. S. Gov., Federal Specification PP-L-91a; 1943. Lamb. Covers four types—(I) carcass, fresh, chilled, (II) carcass, fresh, frozen, (III) wholesale cuts, fresh, chilled, and (IV) wholesale cuts, fresh, frozen; and three grades—(A) choice, (B) good, and (C) commercial. Gives material and workmanship, general and detail requirements, methods of inspection and tests (chemical analyses in accordance with methods of Assn. of Official Agricultural Chemists); and requirements for packaging, packing, and marking.

*References.*—Definitions, methods of analysis, food regulations, *see* 010.

### 014.2 MUTTON LOINS

### 014.3 CARCASSES, MUTTON

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. Dept. Bulletin 1470; 1927. Revised, 1942. Market Classes and Grades of Dressed Lamb and Mutton. Covers definition of lamb and mutton, basis for grading lamb and mutton, definition of terms, grades of lamb and mutton carcasses, standard wholesale cuts of lamb and mutton, description of wholesale cuts and subdivisions, percentage yield of wholesale cuts, and standard grades of wholesale lamb and mutton cuts.

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. Service and Regulatory Announcement No. 123. Official U. S. Standards for Grades of Lamb Carcasses, Yearling Mutton, and Mutton Carcasses, 1931, and Amendment 1, Oct. 1940. Gives definitions of terms and specifications for grades—prime or No. A-1, choice or No. 1, good or No. 2, commercial or No. 3, utility or No. 4, and cull or No. 5 for lamb carcasses, yearling mutton carcasses, and mutton carcasses.

U. S. Gov., Federal Specification PP-M-791; 1931. Mutton. Covers four types—(I) fresh, chilled, carcass, (II) fresh, frozen, carcass, (III) fresh, chilled, wholesale market cuts, (IV) fresh, frozen, wholesale market cuts; and two grades—(A) good and (B) medium. Gives general and detail requirements; methods of inspection and tests (chemical analyses in accordance with methods of Assn. of Official Agricultural

Chemists); and requirements for packaging, packing, and marking.

*References.*—Definitions, methods of analysis, food regulations, *see* 010.

## 015. POULTRY AND GAME

### 015.1 CHICKENS

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. Tentative U. S. Standards for Classes and Grades for Dressed Chickens, 1943. Covers young birds (broilers, fryers, roasters, stags, capons); old birds (fowl or stewing chickens, cocks); twelve sub-classes according to method of plucking, dressing, finishing, chilling, and packing; plucking (scalded, semi-scalded, dry), dressing (dressed-undrawn and eviscerated) finishing (milk-fed, grain-fed), chilling (fresh dressed, fresh hard-chilled, storage), and packing (dry, iced); for U. S. grades—(AA) commercially perfect specimens, (A) second highest grade, (B) third highest grade, and (C) edible dressed chickens below grade B. Gives definitions of terms and requirements for each type, class, sub-class, and grade.

U. S. Gov., Federal Specification PP-C-248; 1943. Chickens; Dressed (Broilers, Fryers, and Roasters, Stags, Capons, and Fowl). Covers four types—(I) fresh killed, (II) fresh chilled, (III) fresh hard chilled, and (IV) storage; six classes—(1) broilers, (2) fryers, (3) roasters, (4) stags, (5) capons, and (6) fowl; and two grades—(A) prime and (B) choice. Gives requirements for weight, material, workmanship; details for each type, class, and grade; methods of inspection and test; and packaging, packing, and marking for shipment.

*References.*—Fowl, *see* 015.3; definitions, methods of analysis, food regulations, *see* 010; inspection rules, *see* 015.0; live chickens, *see* 007.1.

### 015.2 DUCKS

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. Tentative U. S. Standards for Grades for Dressed Ducks, Geese, Guineas, and Squabs, 1943. Covers three U. S. grades—(A) highest grade, (B) second highest grade, and (C) edible below grade B. Gives details for each kind and grade, defines descriptive terms, table showing weights, and general grading requirements.

U. S. Gov., Federal Specification PP-D-745; 1943. Ducks, Geese, Guineas, and Squabs; Dressed. Covers four types—(I) fresh killed, (II) fresh chilled, (III) fresh hard chilled, and (IV) storage; six classes—(1) young ducks, (2) mature ducks, (3) geese, (4) young guineas, (5) mature guineas, and (6) squabs; and two grades—(A) prime and (B) choice. Covers weights; general requirements; detail requirements for each type, class, and grade; methods of inspection and test; and packaging, packing, and marking for shipment.

*References.*—Live ducks, *see* 007.3.

### 015.3 FOWLS

*References.*—Definitions, methods of analysis, food regulations, *see* 010; inspection rules, *see* 015.0; live poultry, *see* 007.

### 015.4 GEESE

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. Tentative U. S. Standards for Grades for Dressed Ducks, Geese, Guineas, and Squabs, 1943. Covers three U. S. grades—(A) highest grade, (B) second highest grade, and (C) edible below grade B. Gives details for each kind and grade, defines descriptive terms, table showing weights, and general grading requirements.

U. S. Gov., Federal Specification PP-D-745; 1943. Ducks, Geese, Guineas, and Squabs; Dressed. Covers four types—(I) fresh killed, (II) fresh chilled, (III) fresh hard chilled, and (IV) storage; six classes—(1) young ducks, (2) mature ducks, (3) geese, (4) young guineas, (5) mature guineas, and (6) squabs; and two grades—(A) prime and (B) choice. Covers weights; general requirements; detail requirements for each type, class and grade; methods of inspection, and test; and packaging, packing, and marking for shipment.

*References.*—Live geese, *see* 007.4.

### 015.5 TURKEYS

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. Tentative U. S. Standards for Classes and Grades for Dressed Turkeys, 1943. Covers four classes—young hens, young toms, old hens, old toms; twelve sub-classes according to method of plucking, dressing, finishing, chilling, and packing, plucking (scalded, semi-scalded, dry), dressing (dressed-undrawn and eviscerated), finishing (milk-fed-grain-fed), chilling (fresh dressed, fresh hard-chilled, storage), and packing (dry, iced); four U. S. grades—(AA) commercially perfect specimens, (A) second highest grade, (B) third highest grade, and (C) edible birds below grade B. Gives details for each class and grade, description of terms, general grading requirements; weight specifications for dressed turkeys, tentative U. S. wholesale grades for dressed turkeys, and recommendations for standardizing the dressing and packing of dressed turkeys.

U. S. Gov., Federal Specification PP-T-791b; 1943. Turkeys; Dressed. Covers four types—(I) fresh killed, (II) fresh chilled, (III) fresh hard chilled, and (IV) storage; four classes—(1) young hens, (2) young toms, (3) old hens, (4) old toms; and two grades—(A) prime and (B) choice. Gives requirements for weights, workmanship, dressed and eviscerated turkeys, and details for each type, class, and grade; methods of inspection and test; and packaging, packing, and marking for shipment.

*References.*—Definitions, methods of analysis, food regulations, *see* 010; inspection rules, *see* 015.0; live turkeys, *see* 007.2.

### 015.6 MEATS, WILD GAME

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. Tentative U. S. Standards for Classes and Grades for Dressed Domestic Rabbits, 1942. Covers two classes—young and old; three sub-classes for young—broilers, fryers, and roasters; old are classified as stewers; and three grades for young—U. S. prime, U. S. choice, and U. S. commercial. Gives grade specifications for old rabbits, definitions and explanations of terms, and general requirements for grading.

U. S. Gov., Federal Specification PP-R-21; 1932. Rabbits; Dressed. Covers one type, fancy grade. Gives detail requirements; method of inspection; and requirements for packaging, packing, and marking.

U. S. Gov., Federal Specification PP-R-146; 1933. Reindeer Meat. Covers six types—(I) fresh, frozen, whole carcass, skinned; (II) fresh, frozen, double fore quarters, skinned; (III) fresh, frozen, double short hind quarters, with two ribs, skinned; (IV) fresh, frozen, hind or fore quarters, boned, in blocks of approximately 50 lb.; (V) fresh, frozen, boned, hind or fore quarters, in blocks of approximately 100 lb.; and (VI) fresh, unfrozen (whole carcass, quarters, double quarters) for use in Alaska only. Gives detail requirements; method of inspection; and requirements for packaging, packing, and marking.

### 015.7 GUINEAS, DRESSED

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. Tentative U. S. Standards for Grades for Dressed Ducks, Geese, Guineas, and Squabs, 1943. Covers three U. S. grades—(A) highest grade, (B) second highest grade, and (C) edible below grade B. Gives details for each kind and grade, defines descriptive terms, table showing weights, and general grading requirements.

U. S. Gov., Federal Specification PP-D-745; 1943. Ducks, Geese, Guineas, and Squabs; Dressed. Covers four types—(I) fresh killed, (II) fresh chilled, (III) fresh hard chilled, and (IV) storage; six classes—(1) young ducks, (2) mature ducks, (3) geese, (4) young guineas, (5) mature guineas, and (6) squabs; and two grades—(A) prime and (B) choice. Covers weights; general requirements; detail requirements for each type, class, and grade; methods of inspection and test; and packaging, packing, and marking for shipment.

### 015.8 PIGEONS, DRESSED

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. Tentative U. S. Standards for Grades for Dressed Ducks, Geese, Guineas, and Squabs, 1943. Covers three U. S. grades—(A) highest grade, (B) second highest grade, and (C) edible below grade B. Gives details for each kind and grade, defines descriptive terms, table showing weights, and general grading requirements.

U. S. Gov., Federal Specification PP-D-745; 1943. Ducks, Geese, Guineas, and Squabs; Dressed. Covers four types—(I) fresh killed, (II) fresh chilled, (III) fresh hard chilled, and (IV) storage; six classes—(1) young ducks, (2) mature ducks, (3) geese, (4) young guineas, (5) mature guineas, and (6) squabs; and two grades—(A) prime and (B) choice. Covers weights; general requirements; detail requirements for each type, class, and grade; methods of inspection and test; and packaging, packing, and marking for shipment.

## 016. HORSE MEATS

### 016.0 GENERAL ITEMS

## 018. MEATS, PREPARED, PRESERVED, CANNED

### 018.0 GENERAL ITEMS

### 018.1 BEEF AND VEAL, PREPARED, PRESERVED, CANNED

*References.*—Pickled beef, *see* 011.95.

### 018.11 Tongue

U. S. Gov., Federal Specifications PP-5-571; 1931. Amendment 1; 1940. Tongue; Beef, Canned. Covers one grade. Gives general and detail requirements; methods of inspection and tests (chemical analyses in accordance with methods of Assn. of Official Agricultural Chemists); and requirements for packaging, packing, and marking.

*References.*—Definitions, methods of analysis, food regulations, *see* 010.

### 018.12 Corned Beef and Veal

U. S. Gov., Federal Specification PP-B-196; 1938. Beef, Corned; Bulk. Covers three types—(1) brisket (boneless), (II) plate, and (III) rump. Gives detail requirements; methods of sampling, inspection, and tests; and requirements for packaging, packing, and tests.

U. S. Gov., Federal Specification PP-B-201; 1931. Amendment 2; 1937. Beef; Corned, Canned. Covers one grade. Gives detail requirements; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

*Reference.*—*See* references under 018.11.

### 018.13 Dried Beef and Veal

U. S. Gov., Federal Federation PP-B-211; 1931. Amendment 3; 1940. Beef; Dried, Sliced. Covers one grade. Gives detail requirements; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification PP-B-214; 1938. Beef, Dried; Unsliced. Covers two types—(I) insides and (II) knuckles. Gives detail requirements; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

*References.*—*See* references under 018.11.

### 018.14 Luncheon Meat

U. S. Gov., Federal Specification PP-L-791a; 1936. Amendment 2; 1942. Luncheon-Meat. Covers one grade and two types—(I) chilled and (II) frozen. Gives general and detail requirements; methods of inspection and tests (chemical analyses in accordance with methods of Assn. of Official Agricultural Chemists); and requirements for packaging, packing, and marking.

*References.*—*See* references under 018.11.

### 018.15 Corned Beef Hash

U. S. Gov., Federal Specification PP-H-91; 1932. Hash; Corned-Beef, Canned. Covers one grade. Approximately 50 percent corned beef, 47 percent potatoes (or equivalent of reconstituted, cubed dehydrated potatoes) and 3 percent onions. Gives detail requirements; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

### 018.16 Veal Loaf

### 018.17 Spencer Roll

### 018.18 Roast Beef

### 018.19 Miscellaneous Beef Products

U. S. Gov., Federal Specification PP-C-276; 1943. Chili Con Carne; Plain (Without Beans), Concentrated (in Casings). Shall be of the type and grade indicated herein. Covers requirements for material and workmanship, inspection during preparation, proportions of various ingredients, methods of inspection, test, packaging, labeling, packing, and marking.

U. S. Gov., Federal Specification PP-S-74a; 1943. Sausage; Cervelat-Style. Gives general and detail requirements; methods of inspection and tests (chemical analyses in accordance with methods of Assn. of Official Agricultural Chemists); and requirements for packaging, packing, and marking.

U. S. Gov., Federal Specification PP-S-96; 1943. Sausage; Salami. Covers two types—(I) dry and (II) cooked, prepared under supervision of meat Inspection Div., U. S. Dept. of Agriculture. Gives detail requirements and methods of inspection and test, as well as directions for labeling, packing, and marking.

## 018.2 PORK, PREPARED OR PRESERVED

*References.*—Dry or salt pickled pork, *see* 012.92; sugar cured and sweet pickle cured pork, *see* 012.93, 012.94; smoked pork, *see* 012.95.

### 018.20 General Items

American Meat Institute. Standards for Packinghouse Supplies, Packs, and Equipment, 1928. Standard Packs. For sausage, for 1-lb. package, required number to pack in a shipping container.

### 018.21 Head Cheese and Scrapple

U. S. Gov., Federal Specification PP-H-191; 1933. Amendment 1; 1940. Headcheese. Covers one grade and two types—fresh, chilled; and fresh, frozen. Made from hogs' heads (exclusive of lower lips and ears), hogs' rinds, and lean pork trimmings, in proportion of 35 percent of snouts, 30 percent of pork cheeks, 20 percent of lean pork trimmings, and 15 percent hogs' rinds. Gives detail requirements; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification PP-S-141; 1932. Scrapple. Gives general and detail requirements; methods of inspection and tests (chemical analyses in accordance with methods of Assn. of Official Agricultural Chemists); and requirements for packaging, packing, and marking.

*References.*—Definitions, methods of analysis, food regulations, *see* 010., 018,20; standard packs, *see* 018.20.

### 018.22 Sausage, Bologna Style

U. S. Gov., Federal Specification PP-S-71; 1932. Amendment 3; 1942. Sausage; Bologna-Style. Covers one grade and two types—(I) chilled and (II) frozen. Gives general and detail requirements; methods of inspection and tests (chemical analyses in accordance with methods of Assn. of Official Agricultural Chemists); and requirements for packaging, packing, and marking.

*References.*—*See* references under 018.21.

### 018.23 Sausage, Frankfurter Style

U. S. Gov., Federal Specification PP-S-81; 1932. Amendment 4; 1942. Sausage; Frankfurter-Style. Covers three types—(I) fresh, (II) chilled, and (III) frozen. Gives general and detail requirements; methods of inspection and tests (chemical analyses in accordance with methods of Assn. of Official Agricultural Chemists); and requirements for packaging, packing, and marking.

*References.*—*See* references under 018.21.

### 018.24 Sausage, Pork

U. S. Gov., Federal Specification PP-S-78; 1942. Sausage; Farmer (Dry Type). Gives requirements for material and workmanship, preparation, regulations, and details; methods of inspection and test; and packaging, labeling, packing, and marking for shipment.

U. S. Gov., Federal Specification PP-S-91; 1932. Amendment 2; 1940. Sausage; Pork. Covers five types—(I) chilled, (II) frozen, (III) canned, (IV) package, and (V) bulk. Gives general and detail requirements; methods of inspection and tests (chemical analyses in accordance with methods of Assn. of Official Agricultural Chemists); and requirements for packaging, packing, and marking.

*References.*—*See* references under 018.21.

### 018.25 Sausage, Vienna Style

U. S. Gov., Federal Specification PP-S-101; 1932. Amendment 2; 1941. Sausage; Vienna-Style, Canned. Gives general and detail requirements; methods of inspection and tests (chemical analyses in accordance with methods of Assn. of Official Agricultural Chemists); and requirements for packaging, packing, and marking.

*References.*—*See* references under 018.21.

### 018.26 Sausage Substitute

### 018.27 Souse, Pig

### 018.28 Ham, Cooked

### 018.29 Miscellaneous Prepared Pork Products

U. S. Gov., Federal Specification PP-P-578; 1942. Pork; Luncheon-Meat, Canned (Fully-Processed). Gives requirements for material and workmanship, methods of inspection and tests; and requirements for packaging, labeling, packing, and marking for shipment.

U. S. Gov., Federal Specification PP-S-86; 1932. Sausage; Liver. Covers one grade and two types—(I) fresh, and (II) smoked. Gives general and detail requirements; methods of inspection and tests (chemical analyses in accordance with methods of Assn. of Official Agricultural Chemists); and requirements for packaging, packing, and marking.

U. S. Gov., Federal Specification PP-S-96; 1943. Sausage; Salami. Covers two types—(I) dry and (II) cooked, prepared under supervision of Meat Inspection Div., U. S. Dept. of Agriculture. Gives detail requirements and methods of inspection and test, as well as directions for labeling, packing, and marking.

## 018.3 MUTTON AND LAMB, PREPARED OR PRESERVED

*References.*—Prepared mutton suet for medical purposes, *see* 043.1.

## 018.4 CHICKEN, TURKEY, ETC.

## 018.5 MINCEMEAT

U. S. Gov., Federal Specification PP-M-351; 1931. Amendment 2; 1940. Mincemeat. Covers one grade and three

types—(A) mincemeat with low moisture content, (B) mincemeat with maximum moisture content of 30 percent by weight, and (C) fancy. Gives general and detail requirements; methods of inspection and tests (chemical analyses in accordance with methods of Assn. of Official Agricultural Chemists); and requirements for packaging, packing, and marking.

*References.*—Definitions, methods of analysis, food regulations, *see* 010.

### 018.9 MISCELLANEOUS MEATS

U. S. Gov., Federal Specification EE-C-281; 1941. Chili Con Carne; Plain, or With Beans. Covers two types—(I) plain and (II) with beans. Gives general and detail requirements; methods of inspection and tests (chemical analyses in accordance with methods of Assn. of Official Agricultural Chemists); and requirements for packaging, packing, and marking.

## 019. EGGS

### 019.0 GENERAL ITEMS

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis, 1940. Eggs and Egg Products. Method of sampling for liquid eggs, frozen eggs, powdered dried eggs, flaked and drum dried eggs, methods for determination of total solids, organic and ammoniacal nitrogen, water soluble protein-nitrogen, fat, lipoids, lipoid phosphoric acid, unsaponifiable matter, detection of decomposition, acidity of fat, phosphoric pentoxide, chlorine, identification of added color, detection of whole egg or commercial egg yolk solids, estimation of percentage of egg solids.

U. S. Gov., Treasury Dept., Procurement Div., No. 614; 1943. Albumen; Egg, Dried, Technical-Grade. Shall be furnished in one grade and type I (powder) or type II (scales, granules, crystals, etc.). Gives general requirements, non-volatile matter, matter insoluble in water, specific gravity of solution, odor, starch and dextrin, ash, particle size, sampling, inspection, tests, packaging, packing, and marking.

### 019.1 FRESH EGGS

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. Tentative U. S. Standards and Weight Classes for Consumer Grades for Shell Eggs, 1942. Gives requirements for U. S. Consumer Grades AA, A, B, and C; table showing minimum weights per dozen, per 30 dozen, and per individual egg for sizes—jumbo, extra large, large, medium, and small; and summary.

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. Tentative U. S. Standards for Procurement Grades for Shell Eggs, 1943. For use by the U. S. armed forces and other Government agencies. Gives requirements for grades I, II, III, and IV; weight; and quality of individual eggs.

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. Tentative United States Standards and Weights for Wholesale Grades for Shell Eggs, 1943. Gives requirements for grades U. S. Nos. 1, 2, 3, and 4 for specials, extras, and standards; U. S. Nos. 1 and 2 for trades; U. S. light dirties; U. S. dirties; and U. S. checks. Also table showing average, minimum, and basic minimum weights for each grade.

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. United States Standards for Quality for Individual Shell Eggs, 1943. U. S. Standards for quality of individual eggs with—(1) clean unbroken shells (U. S. grade AA, U. S. grade A, U. S. grade B, and U. S. grade C), (2) with dirty unbroken shells (U. S. light dirty and U. S. dirty), (3) with checked or cracked shells (U. S. check and U. S. leaker). Gives explanation of terms descriptive of shell, terms descriptive of yolk, terms descriptive of white, general terms, table showing summary of U. S. standards for quality of individual shell eggs, and chart showing minimum requirements for U. S. grades AA, A, B, and C.

U. S. Gov., Federal Specification C-E-271a; 1943. Eggs; Shell. Covers one type (hen eggs) in four classes—(I) fresh, (II) fresh processed, (III) storage, and (IV) storage processed. Also designates 6 grades—AA, A, B, C, D, and E; 5 weights—jumbo, extra large, large, medium, and small; and 7 qualities—special, extra, standard, trade, light dirty, dirty, and check. Gives general and detail requirements; methods of inspection and tests; and packaging, labeling, packing, and marking for shipment.

*References.*—Food regulations, *see* 010; grading rules for eggs, *see* 019.0.

### 019.2 FROZEN EGGS

New York Product Exchange. Frozen Egg Rules, 1935. Shall be for whole mixed eggs, for whites, or for yolks. Eggs must be of American origin and must be broken and packed in the United States. Gives requirements for temperature, pure and wholesome, and percentage of solids.

U. S. Gov., Federal Security Agency, Food and Drug Administration, S.R.A., F.D.C. 2; 1944. Definitions and Standards for Food. Eggs. Covers liquid eggs, mixed eggs, liquid whole eggs, and mixed whole eggs; frozen eggs, frozen whole eggs, and frozen mixed eggs; dried eggs and dried whole eggs; egg yolks, liquid egg yolks, yolks, and liquid yolks; frozen yolks and frozen egg yolks; and dried egg yolks and dried yolks.

### 019.9 MISCELLANEOUS EGG PRODUCTS

American Leather Chemists Assn. Methods of Sampling and Analysis. Egg Yolk, 1942. Gives requirements for water, ash, sodium chloride, borates, fat, examination of fat, and albumin.

U. S. Gov., Federal Security Agency, Food and Drug Administration, S.R.A., F.D.C.2; 1944. Definitions and Standards for Food. Eggs. Covers liquid eggs, mixed eggs, liquid whole eggs, and mixed whole eggs; frozen eggs, frozen whole eggs, and frozen mixed eggs; dried eggs and dried whole eggs; egg yolks, liquid egg yolks, yolks, and liquid yolks; frozen yolks and frozen egg yolks; and dried egg yolks and dried yolks.

U. S. Gov., U. S. Army, Corps of Engineers. Specification 42.2-1; 1921. Albumen; Egg.

## 021. MILK AND CREAM

### 021.0 GENERAL ITEMS

American Public Health Assn. Standard Methods for the Examination of Dairy Products——Microbiological, Bioassay and Chemical—1941. Includes microbiological methods for the examination of milk, cream, and butter; microbiological methods for the examination of frozen desserts and ingredients of frozen desserts; bioassay of vitamin D milk; chemical methods; and proposed phosphatase methods for determination of pasteurization.

Evaporated Milk Assn. Sanitary Standards for the Evaporated Milk Industry, 1940. Includes standards for plant and equipment, plant operation, personnel, milk supply, transportation of milk to plant, and tests for quality to be applied at receiving room.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Circular C19; 1924. Standard Density and Volumetric Tables. Includes tables and specific gravity and weight per gallon of milk and cream, and volume of milk and cream at various temperatures.

### 021.1 FRESH MILK, INCLUDING PASTEURIZED

American Assn. of Medical Milk Commissions, Inc. Methods and Standards for the Production of Certified Milk, 1944. Covers definitions of certified milk; organization and duties of medical milk commissions; laboratory standards for certified milk; buildings and equipment; care and handling of animals; milking; milk handling, transportation, and distribution; personnel; and medical supervision. Adopted by the Certified Milk Producers Assn. of America (Inc.).

The American Pharmaceutical Assn. and the National Formulary Committee. The National Formulary, Seventh Edition, 1942. Cow's Milk; fresh, unpasteurized or pasteurized milk of the domestic cow.

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis; 1940. Milk. Collection and preparation of sample, determination of solids, ash, total nitrogen, casein, albumin, lactose, fat, amount of added water, presence of gelatin, determination of preservatives, coloring matters, and tentative methods for determination of specific gravity, acidity.

U. S. Gov., Federal Specification C-M-381c; 1942. Milk; Fresh. Covers four types—(I) certified for (a) raw and (b) pasteurized; (II) grade A pasteurized; and (III) pasteurized. Gives general requirements for materials and workmanship; detail requirements for each type; method of inspection and tests (chemical analyses in accordance with methods of Assn. of Official Agricultural Chemists and bacteriological examinations in accordance with methods and technique of the American Public Health Assn.); and requirements for packaging and packing.

*References.*—Definitions, methods of analysis, food regulations, density tables, *see* 021.0.

### 021.2 FRESH CREAM

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis, 1940. Cream. Collection and preparation of sample, determination of total solids, ash, total nitrogen, lactose, fat, gelatin, preservatives, coloring matters, and added water.

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. Tentative U. S. Grades for Churning Cream, issued February 15, 1945. Covers six U. S. grades—AA, A, B, C, D, and reject. Gives requirements for each grade and definitions of terms.

U. S. Gov., Federal Security Agency, Food and Drug Administration, S.R.A., F.D.C.2; 1944. Definitions and Standards for Food. Cream. Covers (1) cream class of food, identity, (2) light cream, coffee cream, table cream; identity, (3) whipping cream class of food, identity, (4) heavy cream, heavy whipping cream; identity.

U. S. Gov., Federal Specification C-C-671a; 1937. Cream; Fresh. Covers four types—(I) grade A pasteurized, (II) grade A pasteurized whipping, (III) pasteurized, and (IV) pasteurized whipping. Gives general and detail requirements; methods of inspection and tests (chemical analysis in accordance with methods of Assn. of Official Agricultural Chemists); and requirements for packaging, packing, and marking.

*References.*—Definitions, methods of analysis, food regulations, density tables, *see* 021.0.

### 021.3 BUTTERMILK

Assn. of American Feed Control Officials. Definitions of Feedingstuffs, 1944. Milk Products. Defines dried buttermilk, evaporated buttermilk, concentrated or condensed buttermilk, dried skimmed milk, evaporated soured skim milk, concentrated or condensed soured skimmed milk, dried whey, and cheese rind.

U. S. Gov., Federal Specification C-B-816; 1932. Amendment 2; 1937. Buttermilk. Covers one grade in two types—(a) plain and (b) cultured; and gives general requirements for material and workmanship, detail requirements for each type, methods of inspection and tests (chemical analysis in accordance with methods of Assn. of Official Agricultural Chemists and bacteriological analysis in accordance with American Public Health Assn.), packing, packaging, and marking.

*References.*—Definitions, methods of analysis, food regulations, density tables, *see* 021.0.

### 021.4 CONCENTRATED MILK

U. S. Gov., Federal Security Agency, Food and Drug Administration, S.R.A., F.D.C.2; 1944. Definitions and Standards for Food. Concentrated Milk and Plain Condensed Milk. Covers identity and label statement of optional ingredients.

### 021.5 CONDENSED MILK

U. S. Gov., Federal Security Agency, Food and Drug Administration, S.R.A., F.D.C.2; 1944. Definitions and Standards for Food. Condensed Milk. Covers (1) sweetened condensed milk, identity, (2) condensed milks which contain corn sirup, and identity.

U. S. Gov., Federal Specification C-M-321; 1931. Amendment 1; 1937. Milk, Condensed. Covers sweetened condensed milk. Gives detail requirements; method of inspection and test (chemical analysis in accordance with methods of Assn. of Official Agricultural Chemists); and requirements for packaging, packing, and marking.

*References.*—Definitions, methods of analysis, food regulations, *see* 021.0.

### 021.6 EVAPORATED MILK

Evaporated Milk Assn. Sanitary Standards for Evaporated Milk Industry, 1940. Covers standards for plant and equipment, plant operation, plant personnel, the milk supply, transportation of milk to plant, tests for quality to be applied at receiving room, and standards for evaporated milk.

U. S. Gov., Federal Security Agency, Food and Drug Administration, S.R.A., F.D.C.2; 1944. Definitions and Standards for Food. Evaporated Milk. Covers identity and label statement of optional ingredients.

U. S. Gov., Federal Specification C-M-371; 1931. Amendment 3; 1942. Milk; Evaporated. Covers unsweetened evaporated milk. Gives requirements on general quality, content of milk fat and of milk solids, methods of test as specified by Assn. of Official Agricultural Chemists.

*References.*— Definitions, methods of analysis, food regulations, *see* 021.0.

### 021.7 MALTED MILK, MILK POWDER

American Dry Milk Institute, Inc. Feed Grades for Dry Skim Milk. Covers three grades—choice, standard, and sample. Gives general requirements, details for each grade, method of sampling, methods of analysis, laboratory tolerations, testing service, and referee to settle disputes.

American Dry Milk Institute, Inc. Grading of Nonfat Dry Milk Solids, 1944. Covers four grades—premium, extra, standard, and unfit for human consumption. Gives general requirements, detail requirements for each grade, method of sampling and preparation, determination of moisture, determination of butterfat, determination of solubility index, bacterial count, foreign sediment and burned particles, determination of titratable acidity, falvor and odor, variations in laboratory results, and testing service.

American Dry Milk Institute, Inc. Sanitary and Quality Standards for the Dry Milk Industry with Methods of Analysis, Bulletin 906; 1944. Applicable to manufacturing plants, receiving stations, and any other plants from which milk in any form is received and used for drying. Covers plant, equipment, plant operations, plant personnel, milk supply, transportation to plant, raw milk quality, methods testing, standards for dry milk, required analyses, and packaging and identification.

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis, 1940. Dried Milk and Malted Milk. Tentative methods for preparation of sample, for determination of moisture, protein, ash, and fat, microscopical identification of malted milk and its flavored products.

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. Tentative U. S. Standards for Grades of Dried Skim Milk and Dried Whole Milk, 1943. For all classes of dried skim milk and dried whole milk for human food and shall meet all requirements of the Federal Food, Drug, and Cosmetic Act. Covers U. S. extra grade and U. S. standard grade for dried skim milk and U. S. extra grade for dried whole milk. Gives requirements for moisture, butterfat, acidity, solubility index, bacteria, and sediment for each grade; guarantee; farm milk quality; plant equipment; plant manufacturing; and methods of sampling, testing, and grading.

U. S. Gov., Federal Security Agency, Food and Drug Administration, S.R.A., F.D.C.2; 1944. Definitions and Standards for Food. Skim Milk. Covers (1) dried skim milk, (2) powdered skim milk, (3) skim milk powder, and identity.

U. S. Gov., Federal Specification C-M-341; 1931. Amendment 1; 1937. Milk; Dry, Malted. Covers one grade, unflavored type. Contains detail requirements; methods of inspection and test (chemical analyses in accordance with methods of Assn. of Official Agricultural Chemists); and requirements for packaging, packing and marking.

U. S. Gov., Federal Specification C-M-351c; 1943. Milk, dry powdered, skimmed, and whole. Covers one grade, two types—(I) skimmed, dry, powdered, and (II) whole, dry, powdered; and three classes—(A) spray process, (B) vacuum drum process, and (C) atmopheric roller process. Gives general requirements for material and workmanship; detail requirements for each type and class; method of inspection (bacterial count procedure according to standard nutrient agar plate method of American Public Health Assn., and moisture and butterfat determination according to methods of Assn. of Official Agricultural Chemists); and requirements for packaging, packing, and marking for shipment.

*References.*—Definitions, methods of analysis, food regulations, *see* 021.0.

### 021.8 MILK FAT OR BUTTERFAT

### 021.9 MISCELLANEOUS SPECIFICATIONS FOR MILK AND CREAM

Assn. of American Feed Control Officials. Definitions of Feedingstuffs, 1944. Milk Products. Defines dried skimmed milk, dried soured skimmed milk, evaporated sour skimmed milk, concentrated or condensed soured skimmed milk, condensed skimmed milk, dried, whey, and cheese rind.

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis, 1940. Ice Cream (Plain). Preparation of sample, determination of fat and of nitrogen, tentative method for detection of coloring matter.

*References.*—Definitions, methods of analysis, food regulations, *see* 021.0.

## 022. BUTTER, CHEESE, AND THEIR SUBSTITUTES

### 022.0 GENERAL ITEMS

### 022.1 BUTTER

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis, 1940. Butter. Sampling determination of moisture, fat, casein, ash, salt, preservatives, coloring matters, microscopic examination.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, Volume 2; 1944. Butter. Covers definition, characteristics, derivation, grades, marketing, containers, storage, and substitutes.

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. Reprinted from Federal Register, Volume 8, No. 22, Washington, Feb. 2, 1943. Official U. S. Standards for Grades of Creamery Butter. Covers six grades—U. S. grade AA or U. S. 93 score, U. S. grade A or U. S. 92 score, U. S. grade B or U. S. 90 score, U. S. grade C or U. S. 89 score,

U. S. cooking grade, and no grade. Gives basis for determination of U. S. grades, classification of flavors in creamery butter (about 50 flavors); rating for defects in body, color, and salt; and table of the relation of U. S. grade to flavor classification and total defects in body, color, and salt.

U. S. Gov., Federal Specification C-B-801b; 1944. Butter. Covers three grades—AA-93 score, A-92 score, and B-90 score. Gives general requirements for cream material and workmanship; all deliveries shall conform to the provisions of the Federal Food, Drug, and Cosmetic Act; detail requirements in each grade for flavor, body, color, salt, package, and factors and ratings of inspection; methods of inspection and test (chemical analysis and the mold count test in accordance with methods of Assn. of Official Agricultural Chemists); and packaging, labeling, packing, and marking for shipment.

*References.*—Food regulations, *see* 022.0; renovated butter, *see* 022.2.

## 022.2 RENOVATED BUTTER

*References.*—Food regulations, *see* 022.0.

## 022.3 BUTTER SUBSTITUTE

U. S. Gov., Federal Specification EE-O-451a; 1942. Oleomargarine. Covers one grade and two types—(A) product containing fats and (B) product not containing animal fats. Gives general and detail requirements; methods of inspection and tests (chemical analyses in accordance with methods of Assn. of Official Agricultural Chemists); and requirements for packaging, packing, and marking.

*References.*—Food regulations, *see* 022.0.

## 022.4 CHEESE

### 022.40 General Items

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis, 1940. Cheese. Selection and preparation of sample, determination of moisture, ash, salt, nitrogen, acidity, fat, and tentative methods for determination of coloring matter, tartaric acid, and citric acid.

### 022.41 Whole Milk Cheese

*References.*—Methods of analysis, *see* 022.40; *see* American (cheddar) cheese 022.45.

### 022.42 Full Cream Cheese

U. S. Gov., Federal Security Agency, Food and Drug Administration, S.R.A., F.D.C.2; 1944. Definitions and Standards for Food. Cream Cheese. Covers identity and label statement of optional ingredients.

### 022.43 Edam Cheese

*References.*—Methods of analysis, *see* 022.40.

### 022.44 Camembert Cheese

*References.*—Methods of analysis, *see* 022.40.

### 022.45 American (Cheddar) Cheese

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. Tentative U. S. Standards for Grades of American Cheddar Cheese, 1943. Covers U. S. grades—AA or U. S. fancy, A or U. S. No. 1, B or U. S. No. 2, and C or U. S. under grade. Cheese below grade C shall be classified no grade. Gives definition, basis of determination for U. S. grade, general specifications for cheese of all ages, specifications applicable to cheese of different ages, specifications for each grade, details for no grade cheese, terms used to describe body and texture, terms used to describe color, and terms used to describe finish and appearance.

U. S. Gov., Federal Security Agency, Food and Drug Administration, S.R.A., F.D.C.2; 1944. Definitions and Standards for Food. Cheddar Cheese. Covers cheddar cheese, cheese, and identity.

U. S. Gov., Federal Specification C-C-271a; 1938. Amendment 5; 1942. Cheese; American (Cheddar or American-Cheddar) and Process American. Covers two types: (I) Natural in three classes—(A) nippy, sharp, or aged; (B) mellow or medium cured; and (C) mild or current; and (II) process in three grades—(A) nippy, sharp, or aged; (B) mellow or medium cured; and (C) mild or current. Gives requirements for material and workmanship, body and texture, flavor, finish, appearance, and color; methods of sampling, inspection, and tests (chemical analysis in accordance with methods of the Assn. of Official Agricultural Chemists); and requirements for packaging, packing, and marking for shipment.

*References.*—Methods of analysis, *see* 022.40; *see* whole milk cheese, 022.41.

### 022.49 Miscellaneous Specifications for Cheese

U. S. Gov., Federal Security Agency, Food and Drug Administration, S.R.A., F.D.C.2; 1944. Definitions and Standards for Food. Covers (1) washed curd cheese, soaked curd cheese; identity, (2) Colby cheese, identity, (3) Neufchatel cheese; identity, label statement of optional ingredients, (4) cottage cheese, identity, and (5) creamed cottage cheese, identity.

U. S. Gov., Federal Specification C-C-281; 1932. Amendment 1; 1937. Cheese; Cottage. Covers curd type in one grade. Gives general and detail requirements; methods of inspection and test (chemical analysis in accordance with methods of Assn. of Official Agricultural Chemists); and requirements for packaging, packing, and marking.

U. S. Gov., Federal Specification C-C-301a; 1938. Amendment 1; 1941. Cheese; Swiss (Domestic and Process). Covers four types: (I) Drum or wheel, in two grades—(A) fancy and (B) No.1; (II) block, in two grades—(A) fancy and (B) No.1; (III) cut, in two grades—(A) fancy and (B) No.1; and (IV) process of the best grade. Gives requirements for material and workmanship, body, texture and eyes, flavor, finish and appearance, and salt; methods of sampling, inspection, and tests (chemical analysis in accordance with methods of Assn. of Official Agricultural Chemists;) and requirements for packaging, packing, and marking for shipment.

*References.*—Methods of analysis, *see* 022.40.

# 030-039 FISH

## 031. FRESH FISH

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis, 1940. Fish and Other Marine Products. Includes fresh fish—preliminary treatment and preparation of sample and determination of salt, ash, and total nitrogen.

U. S. Gov., Federal Specification PP-F-381b; 1941. Fish; Fresh. Covers one grade and six types—(I) fresh, not dressed; (II) fresh, dressed; (III) fresh, fillets or steaks; (IV) frozen, not dressed; (V) frozen, dressed; and (VI) frozen, fillets or steaks. Gives detail requirements; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

## 034. FISH, SALTED OR DRY CURED

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis, 1940. Fish and Other Marine Products. Includes dried smoked or dried salt fish—preliminary treatment and preparation of sample and determination of ash, salt, and total nitrogen.

U. S. Gov., Federal Specification PP-F-401; 1931. Fish; Salted or Smoked. Covers one grade and one type. Gives detail requirements; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

*References.*—Definitions, methods of analysis, food regulations, *see* 010.

## 035. CANNED FISH

### 035.1 CANNED CODFISH AND HADDOCK

*References.*—Definitions, methods of analysis, food regulations, *see* 010.

### 035.2 CANNED SALMON

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis, 1940. Fish and Other Marine Products. Includes canned salmon and similar types of canned fish and canned fish packed in oil—preliminary treatment and preparation of sample and determination of salt, ash, and total nitrogen.

U. S. Gov., Federal Specification PP-S-31a; 1941. Amendment 1; 1942. Salmon; Canned. Covers six types—(A) chinook, (B) red, (C) coho, (D) pink, (E) chum, and (F) steelhead. Gives general and detail requirements; methods of inspection and test (chemical analyses in accordance with methods of Assn. of Official Agricultural Chemists); and requirements for packaging, packing, and marking.

*References.*—*See* references under 035.1.

### 035.3 CANNED SARDINES

U. S. Gov., Federal Specification PP-S-51b; 1938. Sardines (Domestic); Canned. Covers six types—(I) packed in olive oil, (II) packed in edible vegetable oil, (III) packed in mustard, (IV) packed in tomato sauce, (V) soused, (VI) natural. Gives general and detail requirements; methods of inspection and tests (chemical analyses in accordance with methods of Assn. of Official Agricultural Chemists); and requirements for packaging, packing, and marking.

*References.*—*See* references under 035.1.

### 035.4 CANNED FISH FLAKES

U. S. Gov., Federal Specification PP-F-371; 1931. Fish; Flaked, Canned. Covers one grade and three types—(I) codfish, (II) haddock, and (III) codfish and haddock. Gives detail requirements; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

*References.*—Flaked codfish and haddock, *see* 035.1.

### 035.5 CANNED HERRING

*References.*—*See* references under 035.1.

### 035.6 CANNED TUNA

U. S. Gov., Federal Specification PP-T-771; 1931. Amendment 1; 1935. Tuna Fish; Canned. Covers one type and one grade. Gives general and detail requirements; methods of inspection and tests (chemical analyses in accordance with methods of Assn. of Official Agricultural Chemists); and requirements for packaging, packing, and marking.

*References.*—*See* references under 035.1.

### 035.7 CANNED MACKEREL

### 035.8 CANNED ANCHOVIES

## 036. FRESH SHELLFISH

### 036.0 GENERAL ITEMS

American Public Health Assn. Recommended Methods of Precedure for Bacteriological Examination of Shellfish and Shellfish Waters, 1943. Covers introduction, including definition of shellfish and coliform group; bacteriological examination of shellfish-growing waters including collection and transportation of sample, field record, procedure, confirmation, and Escherichia coli; bacteriological examination of shellfish including collection and transportation of sample, field record, procedure, and examination for members of the coliform group and Escherichia coli; and expression of results and appendix.

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis, 1940. Fish and Other Marine Products. Includes shellfish—preliminary treatment and preparation of sample and determination of solids (oysters and scallops only), ash, salt, and nitrogen.

### 036.1 OYSTERS

U. S. Gov., Federal Specification PP-O-956a; 1932. Oysters; Fresh. Covers three grades—(A) averaging 150-200 oysters per gal., (B) averaging 200-250 oysters per gal., and (C) averaging 250-300 oysters per gal. Gives general and detail requirements; methods of inspection and tests (chemical analyses in accordance with methods of Assn. of Official Agricultural Chemists); and requirements for packaging, packing, and marking.

*References.*—Definitions, methods of analysis, food regulations, *see* 010.

### 036.2 CLAMS

U. S. Gov., Federal Specification PP-C-401; 1931. Clams; Fresh. Covers one grade and two types—(I) hard and

(II) soft (or soft-shell). Gives detail requirements; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

*References.*—*See* references under 036.1.

### 036.3 CRAB MEAT

U. S. Gov., Federal Specification PP-C-656; 1931. Amendment 1; 1941. Crabmeat; Fresh. Covers one grade and three types—(I) lump, (II) flake, and (III) claw. Gives detail requirements; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

*References.*—*See* references under 036.1.

### 036.4 LOBSTERS

### 036.5 SHRIMP

U. S. Gov., Federal Specification PP-S-316; 1945. Shrimp; Raw, Boiled, Frozen. Covers unveined and veined in four types—(I) raw, unpeeled; (II) boiled, peeled; (III) frozen, unpeeled; and (IV) frozen, peeled. Gives sizes, grade, material and workmanship, general requirements, and details for each type; methods of inspection and test; and packaging, packing, and marking for shipment.

## 037. CANNED SHELLFISH

### 037.1 CANNED SHRIMP

U. S. Gov., Federal Specification PP-S-311; 1931. Amendment 3; 1941. Shrimp; Canned. Covers one grade and two types—(I) wet pack and (II) dry pack. Gives general and detail requirements; methods of inspection and tests (chemical analyses in accordance with methods of Assn. of Official Agricultural Chemists); and requirements for packaging, packing, and marking.

U. S. Gov., Federal Security Agency, Food and Drug Administration, S.R.A., F.C.C.2; 1944. Definitions and Standards for Food. Canned Shrimp. For canned wet-pack shrimp and canned dry-pack shrimp in non-transparent containers. Covers fill of containers and label statement of substandard fill.

*References.*—Definitions, methods of analysis, food regulations, *see* 010.

### 037.2 CANNED CRAB MEAT

U. S. Gov., Federal Specification PP-C-651; 1933. Amendment 1; 1940. Crabmeat; Canned. Covers three types—(I) white or body meat, (II) claw meat, and (III) body and claw meat. Gives detail requirements; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

### 037.3 CANNED LOBSTERS

### 037.4 CANNED OYSTERS

U. S. Gov., Federal Specification PP-O-951; 1931. Amendment 1; 1936. Oysters; Canned. Covers the type known commercially as "Cove." Gives general and detail requirements; methods of inspection and tests (chemical analyses in accordance with methods of Assn. of Official Agricultural Chemists); and requirements for packaging, packing, and marking.

## 039. MISCELLANEOUS FISH PRODUCTS

### 039.1 CAVIAR

### 039.2 ANCHOVY PASTE

### 039.3 CLAM JUICE

### 039.4 FEEDS OF FISH MEAL

Assn. of American Feed Control Officials. Definitions of Feedingstuffs, 1944. Marine Products. Defines fish meal, fish residue meal, crab meal, and shrimp meal.

*References.*—Definitions, methods of analysis, *see* 010.

# 040-049 ANIMAL AND FISH OILS, FATS, AND GREASES

## 040. GENERAL ITEMS

American Leather Chemists Assn. Methods of Sampling and Analysis. Includes Moellon, 1938. Gives requirements for moisture, ash, unsaponifiable, oxidized fatty acids, and free fatty acids.

American Leather Chemists Assn. Methods of Sampling and Analysis. Sulfonated and Sulfated Oils, 1943. Gives requirements for moisture, organically combined sulfuric anhydride, total desulfated fatty matter, total active ingredients, unsaponifiable nonvolatile matter, inorganic salts, total alkalinity, total ammonia, acidity as free fatty acids or acid number, and neutral fatty matter.

American Oil Chemists' Society. Methods of Analysis, 1941. Crismer Turbidity Test for Non-Drying Oils. Includes butter fat and lard. Covers reagents, apparatus, determination, and table of corrections for acidity of oils tested.

American Oil Chemists' Society. Tentative Methods of Analysis for Sulfonated (Sulfated) Oils, 1938. Covers methods for determination of water, water and other compounds volatile at about 100° C., organically combined sulphuric anhydride, and inorganic sulphates and chlorides.

American Oil Chemists' Society. Standard Methods for the Sampling and Analysis of Commercial Fats and Oils, 1943. Applies to fats and fatty oils used in the soap, candle, and tanning industries, to edible fats and oils, to fats and fatty oils intended for lubricating and burning purposes, and to the raw oils used in the varnish and paint industry, but not intended for waxes. Covers sampling; analysis for moisture and volatile matter, insoluble impurities, soluble mineral matter, fatty acids combined as mineral soap, free fatty acids, titer, unsaponifiable matter, iodine number, saponification number, melting point, softening point, slipping point, flow test, cloud test, bleach test, Halphen test (for cottonseed oil), modified Vallavecchia test, Reichert-Meissl and Polenske numbers, Kirschner value, index of refraction, specific gravity, acetyl and hydroxyl value, smoke, flash and fire points, F.A.C. standard colors, modified Wiley melting point method, thiocyanogen method, and Twitchell method.

American Society for Testing Materials, D94-44; 1944. American Petroleum Institute Standard 547-44. American Standards Assn. Z11.20-1944. Method of Test for Saponification Number of Petroleum Products by Color-Indicator Titration. The method is applicable to new and used petroleum oils including electrical insulating oils and to mixtures of fats and mineral oils. Gives definition, principle of method, apparatus, reagents, blank determinations, sample, procedure, calculation, identification of fat, and reproducibility of results.

American Society for Testing Materials, D500-41; 1941. Methods of Chemical Analysis of Sulfonated and Sulfated Oils. Analytical procedures—moisture (water by distillation with volatile solvent method and moisture and volatile matter by hot-plate method); organically combined sulfuric anhydride (titration test, extration-titration test, and ash-gravimetric test methods); total desulfated fatty matter; total active ingredients; unsaponifiable nonvolatile matter; inorganic salts; total alkalinity; total ammonia; and acidity as free fatty acids or acid number (in the absence of ammonium or triethanolamine soaps, in the presence of dark colored oils but in the absence of ammonium or triethanolamine soaps, and in the presence of ammonium or triethanolamine soaps).

American Society for Testing Materials D500-43T; 1943. Tentative Method of Test for Water-Immiscible Organic Solvents Volatile With Steam in Sulfonated and Sulfated Oils. Alcohol or other volatile compounds that are mutually soluble in water and solvents interfere in this method. Gives apparatus, calibration, procedure, calculation, and reproducibility of results.

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis, 1940. Oils, Fats, and Waxes. Preparation of sample, determination of apparent specific gravity, index of refraction, melting point of fats, titer test, iodine absorption number, saponification number, soluble acids, insoluble acids, free fatty acids, acetyl value, unsaponifiable residue, cottonseed oil, amount of peanut oil and sesame oil, cold test, tentative methods for determination of cholesterol and phytosterol, presence of resin oil, detection of foreign fats containing tristearin in lard, detection of fish oils in presence of vegetable oils, detection of coloring matters.

U. S. Gov., Dept. of Commerce, National Bureau of Standards Commercial Standard CS43-32; 1932. Grading of Sulphonated (Sulphated) Oils, Saponifiable Types. This specification covers the method of grading sulphonated (sulphated) oils, saponifiable types, which split off their organically combined $SO_3$ upon boiling with mineral acids, and includes definition, nomenclature, and methods of analysis.

## 041. ANIMAL OILS

### 041.1 WHALE AND SPERM OIL

American Oil Chemists' Society. Methods of Analysis, 1941. Crismer Turbidity Test for Marine Oil. Includes whale oil. Covers reagents, apparatus, determination, and table of corrections for acidity of oils tested.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, Volume 2; 1944. Sperm Oil and Spermaceti. Covers definition, constants, solubility, conversion factor, derivation, grades, uses, containers, and substitutes.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, Volume 2; 1944. Whale Oil. Covers definition, constants, uses, derivation, grades, containers, and substitutes.

U. S. Gov., Navy Dept. Specification 14O5a; 1916. Oil; Sperm.

U. S. Gov., Treasury Dept., Procurement Div., No. 473; 1941. Oil, Sperm. Covers one type and grade intended for use as a lubricant for light machinery. Gives requirements for specific gravity, pour point, flash point, iodine number, saponification number, and neutralization number; methods of sampling, inspection, and tests; and packaging, packing, and marking.

### 041.2 OLEO OIL

### 041.3 LARD OIL

National Assn. of Wool Manufacturers Specification L-1; 1942. Lard Oil—Now Known as Grease Oil. Gives requirements for grade, free fatty acid, cold test, specific gravity, saponification value, iodine number, unsaponifiable matter, and color.

U. S. Gov., Federal Specification C-O-376; 1934. Oil; Lard. Covers one grade suitable for the lubrication of tools for pipe cutting and threading. Gives general and detail requirements; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

*References.*—Methods of analysis, food regulations, *see* 040; other cutting oils, *see* 504.7.

### 041.4 NEAT'S-FOOT OIL

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, Volume 2; 1944. Neat's-Foot Oil; Covers definition, constants, uses, derivation, grades, containers, and substitutes.

U. S. Gov., Federal Specification C-O-388; 1941. Oil; Neat's-Foot. Covers one grade. Gives detail requirements for color, specific gravity, pour point, free fatty acids, calculated as oleic acid, saponification number, unsaponifiable matter limitation, and iodine number; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

## 042. FISH OIL

### 042.1 COD OIL

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, Volume 2; 1944. Cod Oil and Cod Liver Oil. Covers definition, constants, derivation, uses, grades, containers, and substitutes.

### 042.2 COD LIVER OIL

American Oil Chemists' Society. Recommended Standards for Various Oils, 1943. Cod Liver Oil. Gives table showing recommended standard for cod liver oil.

Assn. of American Feed Control Officials. Definitions of Feedingstuffs, 1944. Cod Liver Oil. Defines species that oil may be obtained from, number of U.S.P. vitamin A units, and of Assn. of Official Agricultural Chemists chick units of vitamin D per gram.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, Volume 2; 1944. Cod Oil and Cod Liver Oil. Covers definition, constants, derivation, uses, grades, containers, and substitutes.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U.S.A., Twelfth Revision, 1942. Cod Liver Oil. Description, solubility, specific gravity, color, undestearinated cod liver oil, unsaponifiable matter, saponification value, iodine value, acid value, spectrophotometric absorption value, assay, and storage. U.S.P. product of cod liver oil—Emulsum Olei Morrhuae.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U.S.A., Twelfth Revision, 1942. Emulsion of Cod Liver Oil. Preparation.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U.S.A., Twelfth Revision, 1942. Halibut Liver Oil. Description, solubility, specific gravity, identification, free fatty acids, unsaponifiable matter, saponification value, iodine value, assay, and storage. U.S.P. product of halibut liver oil—Capsulae Olei Hippoglossi.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U.S.A., Twelfth Revision, 1942. Halibut Liver Oil Capsules. Oil content of capsules, description, tests, assay, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U.S.A., Twelfth Revision, 1942. Non-Destearinated Cod Liver Oil. Description, solubility, water and sediment, iodine value, other requirements, assay, and storage.

*References.*—Methods of analysis, food regulations, *see* 040.

### 042.3 HERRING AND MENHADEN OIL

Assn. of American Feed Control Officials. Definitions of Feedingstuffs, 1944. Herring and Menhaden Oils. Definitions of source of extract.

### 042.4 SARDINE OIL, PILCHARD OIL

Assn. of American Feed Control Officials. Definitions of Feedingstuffs, 1944. Sardine Oil or Pilchard Oil. Definitions of source of extract.

### 042.5 SALMON OIL

Assn. of American Feed Control Officials. Definitions of Feedingstuffs, 1944. Salmon Oil and Salmon Liver Oil. Definitions of source of extract.

### 042.6 TUNA OIL

Assn. of American Feed Control Officials. Definitions of Feedingstuffs, 1944. Tuna Oil. Definitions of source of extract.

## 043. ANIMAL FATS AND GREASES

### 043.0 GENERAL ITEMS

American Meat Institute. Standards for Packinghouse Supplies, Packs, and Equipment, 1928. Standard Packs. For domestic lard and shortening, standard consumer packages by weight, required number to pack in one shipping container, for 1-lb. carton and several sizes of cans.

American Oil Chemists' Society. Methods of Analysis, Tallows, Greases, Fatty Acids, Etc., 1941. Covers apparatus and color determination, apparatus and bleaching determination, refining conditions, fatty acids of soap stock and acidulated soap stock, titer, and table of correction for acidity of oils tested.

New York Produce Exchange. Animal Oils and Fats, 1921. Rules covering licensed inspectors, testers, weighers, and samplers; for packages and weights, deliveries, quality and grades. Includes three grades of tallows, white hog greases, and white stearine grease; also No.2 tallows, yellow grease, yellow grease stearine, house and bone greases; and low grades, brown grease, garbage grease, naphtha grease, and fatty acids.

### 043.1 TALLOW

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, 1938. Tallow; Beef. Covers definition, constants, occurrence, impurities, and general grades available.

New York Produce Exchange. Rules Regulating Transactions in Tallow for Future Delivery, 1939. Must be entirely animal fat, untreated and unbleached, and of good merchantable quality. Gives requirements for color (in accordance with standard color tubes of the American Oil Chemists Society), amount of free fatty acid as oleic, titre, moisture, impurities, and unsaponifiable matter.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U.S.A., Twelfth Revision, 1942. Prepared Suet (Mutton Suet). Description, solubility, melting and congealing points, saponification value, iodine value, acid value, and storage.

U. S. Gov., Federal Specification C-T-91; 1942. Tallow. Covers one type and grade. Gives requirements for material (ash, unsaponifiable matter, water, neutralization number, and melting point); methods of sampling, inspection, and test; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., U. S. Army, Corps of Engineers. Specification 42.2-74; 1921. Tallow; Mutton, Refined.

*References.*—Methods of analysis, *see* 043.0; food regulations, *see* 040., 043.0.

### 043.2 LARD

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, Volume 2; 1944. Lard. Covers definition, derivation, uses, grades and standards, containers, and substitutes.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U.S.A., Twelfth Revision, 1942. Lard. Description, solubility, melting point, chloride, alkalies, beef stearin, cottonseed fats, saponification value, iodine value, acid value, solidification point of fatty acids, and storage. U.S.P. product of lard—Adeps Benzoinatus.

U. S. Gov., Federal Specification EE-S-321; 1944. Shortening. Covers two types: (I) Lard—(a) refined, (b) service style, (c) service style with lecithin, and (d). open-kettle rendered; and (II) shortening other than lard—(a) hydrogenated (animal fats or oils, vegetable fats or oils, and mixed), and (b) blended (animal fats or oils, vegetable fats or oils, and mixed). Gives material and workmanship, general requirements, and details for each type and class; methods of inspection and test (chemical analyses shall be made in accordance with methods of the Assn.

of Official Agricultural Chemists); and packaging, labeling, packing, and marking for shipment.

*References.*—Methods of analysis, standard pack, *see* 043.0; food regulations, *see* 040., 043.0.

### 043.21 Benzoinated Lard

U. S. Pharmacopoeial Convention. Pharmacopoeia of U.S.A., Twelfth Revision, 1942. Benzoinated Lard. Proportions, method of mixing and melting lard with Siam benzoin (in coarse powder form), adding white wax for use in southern latitudes, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U.S.A., Twelfth Revision, 1942. Cerate (Simple Cerate—Rosin Cerate)(Resin Cerate). Preparations and storage.

### 043.3 LARD COMPOUNDS AND LARD SUBSTITUTES

American Hospital Assn., 28-7. Lard Substitutes. Covers two types and one grade. Based on U. S. Gov. Federal Specifications EE-L-101a, and Amendment 3, for lard substitutes, referred to below.

U. S. Gov., Federal Specification EE-L-101a; 1934. Amendment 3; 1940. Lard Substitutes. Covers one grade and two types—(I) prepared from refined or deodorized oils or fats, hydrogenated in whole or in part; and (II) prepared with not less than 15 percent oleo stearine, and special requirements when purchased for use in the Tropics. Gives general and detail requirements; methods of inspection and tests (chemical analysis in accordance with methods of Assn. of Official Agricultural Chemists); and requirements for packaging, packing, and marking.

*References.*—Methods of analysis, standard pack, *see* 043.0; food regulations, *see* 040., 043.0; vegetable shortening, *see* 142.95.

## 045. STEARINE AND STEARIC ACIDS

Assn. of American Feed Control Officials. Definitions of Feedingstuffs, 1944. Stearine and D Activated Animal Sterol. Stearine is the solid material obtained by filtration from animal or vegetable oil after chilling or freezing in the process of refining. D activated animal sterol is a product which is obtained by activation of a sterol fraction of animal origin with ultra-violet light or other means.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U.S.A., Twelfth Revision, 1942. Stearic Acid. Description, solubility, congealing temperature, mineral acid, iodine value, neutral fat or paraffin, and storage.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-448A; 1932. Compound; Stearine, Type IC-3.

## 046. ANIMAL WAXES

Assn. of American Railroads, Telegraph and Telephone Section, 2-G-26; 1927. Beeswax Compound. For use in moisture-proofing formed ends of textile-insulated cables, half beeswax and half cerasin or paraffin, requirements for purity, color, melting point, tests, and packing.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, Volume 2; 1944. Beeswax. Covers definition, constants, solubility, derivation, uses, grades, containers, and substitutes.

Toilet Goods Assn., Inc. Specification No. 9; 1941. Beeswax. Gives requirements for color, odor, taste, melting point, specific gravity, refractive index, saponification value, acid value, ester value, radio number, iodine value, rancidity, fracture, added fats or fatty acids, Japan wax, rosin, soap, carnauba wax, stearic acid, paraffin, ceresin, moisture, ash, solubility and emulsifying properties.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U.S.A., Twelfth Revision, 1942. Cerate (Simple Cerate)—Rosin Cerate (Resin Cerate). Preparations and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U.S.A., Twelfth Revision, 1942. White Wax (Bleached Beeswax). Description, acid value, ester value, other characteristics, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U.S.A., Twelfth Revision, 1942. Yellow Wax (Beeswax). Description, solubility, specific gravity, melting point, carnauba wax, fats or fatty acids, Japan wax, rosin or soap, acid value, ester value, and storage.

U. S. Gov., Federal Specification C-B-191; 1942. Beeswax; Technical-Grade. Covers one grade and type, in cakes weighing approximately one pound, intended for use for industrial purposes such as in polishes, leather dressings, etc. Gives detail requirements as to specific gravity, softening point, acid number, saponification number, ratio number, and rosin; methods of sampling, inspection, and tests; and requirement for packaging, packing, and marking for shipment.

U. S. Gov., Navy Dept. Specification 52B4d; 1941. Beeswax.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 50-11-35A; 1940. Wax; Waterproofing.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-447; 1928. Compound; Beeswax Type IC-2. Use for impregnation.

## 047. WOOL FAT

U. S. Pharmacopoeial Convention. Pharmacopoeia of U.S.A., Twelfth Revision, 1942. Hydrous Wool Fat. Description, solubility, loss on drying, reaction, petrolatum, other requirements, iodine value, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U.S.A., Twelfth Revision, 1942. Wool Fat. Description, solubility, melting point, loss on drying, ash, free alkalies, water-soluble acids or alkalies, chloride, ammonia, glycerin, soluble oxidizable impurities, petrolatum, acid value, iodine value, and storage.

# 050-059 HIDES AND SKINS, RAW

(Except Furs)

## 051. CATTLE HIDES AND SKINS

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, Volume 2; 1944. Calf and Kip Skins. Covers definition, derivation, uses, grades, packing, and substitutes.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, Volume 2; 1944. Hides

(Cattlehides). Covers definition, characteristics and derivation, grades, packing, uses, and substitutes.

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. Tentative Market Classes and Grades of Butcher and Country Green Salted Cattle Hides, 1932. Covers two classes—unbranded and branded; four sub-classes—extremes, buffs, heavies, and bulls; and four grades—No. 1, No. 2, No. 3, and reject. Gives requirements for each grade and chart showing outline of hide having regular pattern.

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. Tentative Market Classes and Grades of Green Salted Kips and Calfskins. Revised, 1931. Gives requirements for three kinds—veal, buttermilk, and grassers; four classes—A, B, C, and D; four grades—Nos. 1,2,3, and 4; cure, condition and tare, and definitions.

### 052. HORSE HIDES

### 053. SHEEP SKINS, RAW

## 060-069 LEATHER AND LEATHER MANUFACTURES

### 060. GENERAL ITEMS

American Leather Chemists Assn. Methods of Sampling and Analysis. Chrome Tanned Leathers, 1938. Gives requirements for sampling, preparation of sample for analysis, and analysis.

American Leather Chemists Assn. Methods of Sampling and Analysis. Physical Testing of Leather, 1942. Gives requirements for sampling and conditioning leather for physical tests and methods for measuring the tensile strength of leather, abrasive resistance of heavy leather, flexibility of leather, tearing strength of leather, bursting strength of leather, dimensions of leather, resistance of leather to cracking and piping, shrinkage temperature of leather, fastness of colored leather to light, abrasive resistance of light leather, elongation of leather, permeability of leather to water vapor, and tendency of colored leather to bleed.

American Leather Chemists Assn. Methods of Sampling and Analysis, Vegetable Tanned Leathers. Adopted, 1942. Gives requirements for sampling, preparation of sample for analysis, and analysis.

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis, 1940. Leathers, Tentative Methods. For vegetable tanned leather, preparation of sample, determination of moisture, total ash, insoluble ash, petroleum benzine extract, mineral acidity, extraction of water-soluble material, glucose, soluble solids, soluble non-tannins, soluble tannin, nitrogen, hide substance, combined tannin.

Tanners' Council of America. Dictionary of Leather Terminology, 1941. Gives raw materials of tanning industry and leather produced therefrom including cattle group; sheep and lamb group; goat and kid group; equine group; buffalo group; pig and hog group; deer group; kangaroo and wallaby group; aquatic group; and minor classes. Defines about 160 terms in general use in the leather industry.

*References.*—Tanning materials, *see* 231, 809.1.

### 061. UPPER LEATHER, EXCEPT PATENT

#### 061.1 ELK LEATHER

#### 061.2 GOATSKIN

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, Volume 2; 1944. Goat and Kid Skins. Covers definition, derivation and characteristics, uses, grades and marketing, packaging, and substitutes.

U. S. Gov., Army-Navy Aeronautical Specification AN-L-24a-2; 1944. Leather; Goatskin.

#### 061.3 HORSEHIDE LEATHER

U. S. Gov., U. S. Army, Army Air Forces. Specification 9-77-B;. 1941. Leather; Horsehide (Chrome Tanned).

#### 061.4 KANGAROO LEATHER

#### 061.5 OIL GRAIN LEATHER

#### 061.6 PIGSKIN

U. S. Gov., Army Air Forces. Specification No. 12019; 1934. Leather; Pigskin (Carpincho).

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 9-26; 1926. Leather; Pigskin, Russet.

#### 061.7 SHEEPSKINS, CHAMOIS SKIN

National Assn. of Dyers and Cleaners of the U. S. and Canada. The Spotting Department, 1940. Includes recommendations for quality, size, and chamois for use in spotting department.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, Volume 2; 1944. Sheep and Lamb Skins. Covers definition, characteristics and derivation, uses, grades, packing, and substitutes.

U. S. Gov., Army Air Forces. Specification 12029A-2; 1944. Leather; Sheepskin, Chrome Tanned.

U. S. Gov., Army Air Forces. Specification 12037 (1); 1944. Leather; Doeskin (Processed Lamb).

U. S. Gov., Army-Navy Aeronautical Specification AN-S-35-3; 1944. Shearling; Sheep.

U. S. Gov., Federal Specification KK-S-416a; 1942. Amendment 1; 1943. Skins; Chamois. Covers two grades and two types—(A) untrimmed skins and (B) trimmed "pocket-shaped" skins. Gives requirements for material, selection, color, finish, tannage, thickness, tensile strength, stretch, chemical composition, and sizes; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., U. S. Army, Army Air Forces. Specification 8-96-C; 1941. Shearling; Lamb.

U. S. Gov., U. S. Army, Army Air Forces. Specification 8-137; 1943. Lambskin; Baby.

U. S. Gov., U. S. Army. Army Air Forces. Specification 9-64; 1929. Leather; Sheepskin.

*References.*—Sheep skins, raw, *see* 053.

#### 061.8 STEER HIDES

*References.*—Steer hides, raw, *see* 051.

### 061.9 MISCELLANEOUS LEATHER

U. S. Gov., Army Air Forces. Specification 12038 (1); 1944. Leather; Deerskin (Chrome Tanned).

U. S. Gov., U. S. Army, Chemical Warfare Service. Specification 97-51-70; 1930. Leather; Calfskin, for Gas-Mask Face Pieces.

## 062. PATENT, ENAMELED, JAPANNED, OR VARNISHED UPPER LEATHER

## 063. SOLE LEATHER

### 063.3 SOLE LEATHER, HEMLOCK TANNED

*References.—See* 063.6.

### 063.6 SOLE LEATHER, OAK AND VEGETABLE TANNED

U. S. Gov., Federal Specification KK-L-261b; 1941. Leather; Sole (Cut, Outer, and Top-Lift), Vegetable-Tanned, Factory. Recognizes one grade of leather in backs and bends, and one grade in cut soles and shoe lifts. Grade is determined by visual observation of number, kind, and location of defects. Gives detail requirements; methods of sampling, inspection, and tests; and requirements for packing and marking for shipment. Emergency alternate Federal Specification E-KK-L-261b; 1942 (issued by Procurement Div., Treasury Dept., U. S. Gov.) changes requirements for grade of cut soles and top lifts, material, water solubles, and grease.

*References.*—Methods of sampling and analysis, *see* 060.

## 064. GLOVE LEATHER

### 064.1 HORSEHIDE GLOVE LEATHER

U. S. Gov., Marine Corps Specification, adopted 1939. Leather, Horsehide Fronts; Oil and Water Risistant (for the Manufacture of Gloves).

## 065. ROUGH TANNED LEATHER

### 065.1 COWHIDE

U. S. Gov., Army Air Forces. Specification 12028-C; 1941. Leather; Cattle Hide (Chrome Tanned).

*References.*—Cowhides, raw, *see* 051.

### 065.2 HARD RAWHIDE

U. S. Gov., U. S. Army, Army Air Forces. Specification 9-41-A; 1926. Leather; Rawhide.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 9-28; 1926. Rawhide; Hard.

## 066. HARNESS, BELTING, AND MISCELLANEOUS LEATHER

### 066.0 GENERAL ITEMS

American Leather Belting Assn. Horse Power Ratings for Oak Tanned Flat Leather Belting, 1940. Gives table I—horse power per inch of width; table II—correction factor for small pulley diameter; table III—service correction factors including atmospheric condition, angle of center line, pulley material, service, peak loads, and peak load factors for electric motor drives; table IV—thickness specifications; and examples showing calculations.

American Leather Belting Assn. Short Center Leather Belt Drive Data. Third Edition, 1940. Covers advantages, efficiency, comparative first costs, drive selection tables, general suggestions for drive selection, A.L.B.A. basic horsepower tables, list prices of endless leather belts, belt life, and installation and operation instructions.

### 066.1 HARNESS LEATHER

U. S. Gov., Federal Specification KK-L-171a; 1941. Amendment 1; 1944. Leather; Harness, Black and Russet (Vegetable-Tanned). Covers three grades—A, B, and C; two classes—(1) sides and (2) backs; and four weights—(a) light, (b) medium, (c) heavy, and (d) extra heavy. Gives requirements for material, trim, tolerance, splitting, finish, color, crackiness, tensile strength, stretch, and chemical requirements; methods of sampling, inspection. and tests; and packing and marking for shipment.

### 066.2 HYDRAULIC LEATHER

U. S. Gov., Federal Specification KK-L-177; 1942. Leather; Hydraulic-Packing, Mineral-Tanned (Regular and Non-Corrosive). Covers three classes—(A) medium, (B) heavy, and (C) extra heavy; two types—(I) regular and (II) non-corrosive; and shall be in the form of butt bends. Gives requirements for trim, tannage, selection, thickness, finish, impregnation, crackiness, tensile strength, stretch, shrinkage, and chemical composition; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification KK-L-181a; 1943. Leather; Hydraulic-Packing (Vegetable-Tanned). Applies to leather in the form of butt ends or sides, in three classes—(A) light, (B) medium, and (C) heavy. Gives requirements for tannage, trim of butt end, trim of side, selection, finish, crackiness, tensile strength, stretch, water absorption, chemical requirements, and thicknesses; methods of sampling, inspection, and tests; and requirements for packing and marking.

U. S. Gov., Navy Dept. Specification 33L3b; 1944. Leather; Hydraulic-Packing, Mineral-Tanned.

U. S. Gov., U. S. Army, Ordnance Department. Specification 9-5A; 1941. Leather; Gasket, Special Mineral Tanned (for Recoil Mechanisms).

*References.*—Methods of analysis, *see* 060.

### 066.3 LEATHER BELTING

American Petroleum Institute, Div. of Production, Standard No. 1; 1940. Belting Specification. Gives physical and dimensional stipulations on finished belting of the following types: Leather, impregnated stitched cotton fabric, solid woven hair, solid woven cloth, balata, rubber, cord, and V-belts and sheaves. Also gives minimum and maximum requirements as to tensile strength, elongation under definitely prescribed loads, and permissible variations in physical dimensions; leather belting must meet certain cracking and piping tests, and the adhesion between piles of rubber and balata belting must meet specified limits.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, 1938. Belting (Leather). Covers definition, quality classification, weight classification, construction, glues and cements, uses, standard widths, specifications, and ordering instructions.

U. S. Gov., Federal Specification KK-B-201a; 1942. Amendment 2; 1944. Belts and Belting; Flat, Leather, Vegetable-Tanned. Covers one grade, made from center stock, and two classes—(I) single-ply and (II) double-ply. Gives requirements for leather, selection, construction, dimensions, straightness, crackiness, piping, tensile strength, stretch, chemical requirements, and cementing; methods of sampling, inspection, and tests; and packing and marking for shipment.

U. S. Gov., Federal Specification KK-B-211a; 1944. Belting; Round, Leather, Vegetable-Tanned, Smooth. Covers one grade. Gives requirements for material, workmanship, defects, finish, number of pieces per spool, size and dimensions, strength, crackiness, chemical composition, grease, ash, acidity; methods of sampling, inspection, and tests; packaging, packing, and marking for shipment.

U. S. Gov., Marine Corps Specification, adopted 1936. Belting; Leather, Round.

*References.*—Methods of analysis, *see* 060; rubber belting, *see* 207.3; cotton belting, *see* 314.1.

## 066.4 LEATHER LACING

U. S. Gov., Federal Specification KK-L-201a; 1942. Amendment 1; 1944. Leather; Lace. Covers one grade; three types—(A) alum-tanned, (B) alum and vegetable-tanned, and (C) chrome-tanned; and two classes—(I) sides and (II) cut laces. Gives requirements for material and workmanship, grade, tannages, sides, finish, cutting, thickness, width, length, strength, stretch, crackiness, shrinkage, and chemical composition; methods of sampling, inspection, and tests; and packing and marking for shipment.

*References.*—Methods of analysis, *see* 060.

## 066.5 LEATHER PACKING

*References.*—Packing leather, *see* 066.2.

## 066.6 STRAP LEATHER

U. S. Gov., Dept. of Commerce, National Bureau of Standards, Commercial Standard CS34-31; 1931. Bag, Case, and Strap Leather. A commercial standard selected and accepted by industry establishing standard thicknesses and tolerances for leathers used in traveling bags, brief cases, suitcases, pocketbooks, and straps, using Woburn standard gage for measuring. Initiated by Tanners Council of America.

U. S. Gov., Federal Specification KK-L-271a; 1943. Leather; Strap, Black and Russet. Covers four grades—A, B, C, and D; five classes—(1) sides, (2) backs, (3) bends, (4) double shoulders, and (5) straps. Gives requirements for material, trim, thickness, color, finish, fastness of color, crackiness, tensile strength, stretch, and chemical requirements; method of sampling, inspection, and tests; and packing and marking.

U. S. Gov., Marine Corps Specification, revised 1941. Leather; Curried 36-in. Centers, Dark Brown Mahogany Shade.

U. S. Gov., U. S. Army, Army Air Forces. Specification 9-29-A; 1929. Leather for Pads, Safety Belt Straps, etc.

## 066.7 UPHOLSTERY AND ARTIFICIAL LEATHER

American Hospital Assn., 67-127. Artificial (Upholstery) Leather. Covers 3 types. Based on U. S. Gov. Federal Specifications KK-L-136a, and Amendment 1, for Artificial (Upholstery) Leather (referred to below); UU-P-268a, and Amendment 1, for Wrapping Kraft Paper; CCC-T-191a, and Amendment 1, for General Specifications, Test Methods, Textiles; and NN-B-621a, and Amendment 1, for Nailed and Lock-Corner Wood Boxes.

American Hospital Assn., 67-130. Upholstery Leather. Covers 2 grades and 4 types. Based on U. S. Gov. Federal Specification KK-L-291, and Amendment 1, for upholstery leather, referred to below.

Tanners' Council of America. Specifications for Upholstery Leather, 1935. Requirements for raw material, defines top grains, hand and machine buffs, deep buffs, and splits, for two grades of hides, tensile strength, and marking.

U. S. Gov., Army Air Forces. Specification 12026-A (3); 1942. Leather; Artificial (Rubber-Base, Fire-Proof).

U. S. Gov., Federal Specification KK-L-136a; 1940. Amendment 1; 1941. Leather; Artificial (Upholstery). Covers two types—(I) pyroxylin or cellulose acetate coated and (II) rubber coated; and one grade—"firsts." Gives requirements for material, workmanship, resistance to water, color, width, length, finish, flexibility of coating, physical properties, adhesion of coating film to backing, and aging test; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment. Emergency alternate Federal Specification E-KK-L-136A; 1942 (issued by Procurement Div., Treasury Dept., U. S. Gov.) deletes requirements for type 2 and gives requirements for an added type 3 (synthetic resin-coated).

U. S. Gov., Federal Specification KK-L-291a; 1943. Amendment 2; 1944. Leather; Upholstery. Covers two grades, two classes, and four types. Dry, brined or green salted hides may be used and upholstery leather shall be furnished in the form of whole hides. Gives requirements for dyeing, coating, thickness, comparison sample, crackiness, tackiness, crocking, tensile strength, stretch, acidity, and grease; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Navy Dept. Specification 34L13; 1944. Leather; Artificial, Fire-Resistant (for Upholstery).

*References.*—Methods of analysis, *see* 060; cellulose acetate and cellulose nitrate products, *see* 846.5.

## 066.8 RIGGING LEATHER

U. S. Gov., Federal Specification KK-L-241a; 1942. Amendment 1; 1944. Leather; Rigging. Covers one grade and three classes—(A) light, (B) medium, and (C) heavy. Gives requirements for trim, selection, tannage, finish, thickness, cracking, tensile strength, stretch, and chemical composition; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

*References.*—Methods of analysis, *see* 060.

### 066.9 MISCELLANEOUS SPECIFICATIONS FOR HARNESS BELTING, AND OTHER LEATHERS

Society of Automotive Engineers. Aeronautical Material Specification 3500A; 1942. Leather; Hot Oil and Gasoline-Resistant. For chrome retan leather suitable for use at high temperature and/or in contact with oil and gasoline. Gives requirements for tanning, quality, requirements, tests, tolerances, samples, reports, identification, approval, and rejection.

U. S. Gov., Federal Specification KK-L-151b; 1943. Leather; Bag. Consists of the grain or first cut from a hide; furnished in the form of sides in two grades—A and B; and in three classes—(A) light, (B) medium, and (C) heavy. Gives requirements for material, workmanship, trim of side, area, color, finish, thicknesses, tolerances, stretch, crackiness, fiber appearance, and chemical requirements; methods of sampling, inspection, and tests; and requirements for packing and marking.

U. S. Gov., Federal Specification KK-L-166a; 1942. Amendment 1; 1944. Leather; Case. Covers two grades—A and B; and three types—(I) smooth, (II) hand boarded, and (III) machine grained. Gives requirements for hides, tannage, color, finish, area, thickness, tolerance, crocking, cracking, tensile strength, and chemical composition; methods of sampling, inspection, and tests; and packing and marking for shipment.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-1052: 1942. Bag BG-82.

U. S. Gov., Veterans Administration. Specification VA-X-54e; 1941. Leather for Crafts Work.

*References.*—Methods of analysis, *see* 060.

## 067. LEATHER FOOTWEAR

### 067.0 GENERAL ITEMS

Textile Color Card Assn. of The U. S., Inc. Standard Ninth Edition Color Card, 1944. A new master color card for all industries and trades. This is not a card presenting fashion colors for but one season only, but it embraces a complete collection of important staple shades having continued popular acceptance. A Research Associate has been established at the National Bureau of Standards to include the calibration of the 216 colors contained in the Ninth Edition of the Standard Color Card of America and the translation of these standards into the language of scientific equivalents and nomenclature.

Textile Color Card Assn. of the U. S., Inc. Shoe Colors, 1944. The 1945 spring shoe and leather colors—eight colors for women's shoes (including black and white) and four colors for men's shoes (including black and white).

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Circular C419; 1938. Shoe Constructions. Covers introduction, what the consumer is buying, United Shoe Machinery Corporation classification, description of various types of shoe construction, discussion of construction classification, consumer value of construction marking on shoes, performance of shoes, summary, and references.

U. S. Gov., War Dept. Army Regulations 850-125; 1942. Foot Measuring and Shoe Fitting. The application of established, practical methods of foot measuring and shoe fitting. Gives requirements for responsibility, shoe size and width record, foot-measuring and shoe-fitting room, machines and devices, operation of foot-measuring machines, final shoe-fitting check, use of short shoe detectors, fitting shoes when foot-measuring machine unavailable, special measurement shoes, and breaking in shoes.

### 067.1 SHOES

American Standards Assn., Z41.1-1944. Specifications for Protective Occupational Footwear. Men's Safety-Toe Shoes (American War Standard). Intended to provide protection to the toes of the wearer and to conserve critical materials during the war effort. Gives general requirements, material and workmanship, safety toe-box, identification, and notes.

American Standards Assn., Z41.2-1944. Specifications for Protective Occupational Footwear. Women's Safety-Toe (Oxford) Shoes (American War Standard). Intended to provide protection to the toes of the wearer and to conserve critical materials during the war effort. Gives general requirements, material and workmanship, safety toe-box, identification, and notes.

American Standards Assn., Z41.3-1944. Specifications for Protective Occupational Footwear. Men's Conductive Shoes (American War Standard). Intended to provide protection to wearers and property from electricity accumulated in the bodies of wearers, and to conserve critical materials during the war effort. Gives general requirements, material and workmanship, conductivity-electrical resistance, identification, and notes.

American Standards Assn., Z41.4; 1944. Specifications for Protective Occupational Footwear. Men's Explosive-Operations (Non-Sparking) Shoes (American War Standard). Intended to provide protection to wearers and property from sparking hazards and to conserve critical materials during the war effort. Gives general requirements, material and workmanship, and identification.

American Standards Assn., Z41.5-1944. Specifications for Protective Occupational Footwear. Men's Electrical-Hazards Shoes (American War Standard). Intended to provide protection to the wearer from certain electrical hazards, to provide protection to the toes of the wearer, and to conserve critical materials during the war effort. Gives general requirements, material and workmanship, electrical properties, and identification.

American Standards Assn., Z41.6-1944. Specifications for Protective Occupational Footwear. Men's Foundry (Molders) Shoes (American War Standard). Intended to provide protection to the foot of the wearer against hazards existant in the handling of molten metal and in similar operations, and to conserve critical materials during the war effort. Gives general requirements, material and workmanship, and identification.

American Standards Assn., Z41.7-1944. Specifications for Protective Occupational Footwear. Women's Safety-Toe (High) Shoes (American War Standard). Intended to provide impact protection to the toes of the wearer, to afford ankle-high coverage for use in welders' and other industrial occupations, and to conserve

critical materials during the war effort. Gives general requirements, material and workmanship, safety toe-box, and identification.

American Standards Assn., Z41.8-1944. Specifications for Protective Occupational Footwear. Women's Explosive-Operations (Non-Sparking) Shoes (American War Standard). Intended to provide protection to wearers and property from sparking hazards, and to conserve critical materials during the war effort. Gives general requirements, material and workmanship, and identification.

American Standards Assn., Z41.9-1944. Specifications for Protective Occupational Footwear. Women's Conductive Shoes (American War Standard). Intended to provide protection to wearers and property from electricity accumulated in the bodies of wearers, and to conserve critical materials during the war effort. Gives general requirements, material and workmanship, conductivity-electrical resistance, identification, and notes.

U. S. Gov., Army Air Forces. Specification 3234-1; 1944. Shoes; Flying, Light, Combat, Type E-1, Composition Sole.

U. S. Gov., Army Air Forces. Specification No. 3235; 1944. Shoes; Flying Light, Combat, Type E-2, Leather Sole.

U. S. Gov., Marine Corps Specification, revised 1943. Shoes; Leather, Field.

U. S. Gov., Navy Dept. Specification 72Sle; 1941. Shoes; Leather, Black.

U. S. Gov., U. S. Army, Army Air Forces. Specification 9-79-C; 1937. Shoes; Aircraft Riggers', Type A-2.

U. S. Gov., U. S. Army, Army Air Forces. Specification 94-3088-A; 1941. Shoe; Winter, Type A-7 (Inserts).

U. S. Gov., U. S. Army, Army Air Forces. Specification 94-3122; 1942. Shoes; Winter Flying, Type A-10 (Pilot's).

U. S. Gov., U. S. Army, Army Air Forces. Specification 94-3131; 1942. Shoes; Winter Flying, Type A-11 (Pilot's).

U. S. Gov., U. S. Army, Ordnance Dept. Specification 9-96; 1943. Footwear; Protective, Occupational.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 9-3A; 1932. Shoes; Welt, Army Nurses'.

*References.*—Elastic shoe goring, *see* 394.5.

### 067.2 BOOTS

U. S. Gov., Marine Corps Specification, revised 1942. Boots; Leather, for Parachute Jumpers.

U. S. Gov., U. S. Army, Quartermaster Corps. Specifications 9-63-A; 1933. Boots; Leather, Laced, for Mounted Enlisted Men.

*References.*—Rubber boots, *see* 203.11.

### 067.3 SLIPPERS

### 067.4 MOCCASINS

### 067.5 MUCKLUCKS

### 067.6 HALF SOLES OR TAPS, INSOLES, OUTSOLES, SLIPSOLES

U. S. Gov., Army Air Forces. Specification 3236-1; 1945. Shoe-Insert; Flying, Electric, Type Q-1.

U. S. Gov., Treasury Dept., Procurement Div., No. 559; 1942. Heel Bases; Leather, Women's Shoe. Covers one type, grade, and style (Cuban). Gives requirements for sizes, height, construction, finish and color, and acidity, methods of sampling, inspection, and tests; and packaging, packing, and marking.

*References.*—Sole leather in form of cut soles, backs, bends, and blocks, *see* 063.6.

### 067.7 SHOE PACS AND COUNTERS

U. S. Gov., Treasury Dept., Procurement Div., No. 536; 1942. Counters; Shoe, Fiber. Covers class 1, women's; and class 2, men's. Gives requirements for material, style, sizes, dimensions, flange, scarfs, weight, and tensile strength; methods of sampling, inspection, and test; and packaging, packing, and marking.

### 067.8 SPECIAL SHOES, ATHLETIC, ETC.

U. S. Gov., Army Air Forces. Specification 3226-2; 1945. Shoe; Women's Intermediate Flying, Type A-16.

U. S. Gov., Marine Corps Specification, adopted 1938. Shoes; Baseball.

U. S. Gov., Navy Dept. Specification 37S2c; 1940. Shoes; Gymnasium.

## 068. LEATHER GLOVES

### 068.0 GENERAL ITEMS

National Conservation Bureau in cooperation with National Assn. of Leather Glove Mfrs., Inc., No. 319; 1940. Safety in the Manufacture of Leather Gloves. A survey of the hazards found in the leather glove industry, with recommendations for eliminating or reducing them. Covers tannage, preparation of hides, construction of leather gloves, laying off, cleaning, employees' home work, and conclusion.

### 068.1 ATHLETIC GLOVES AND MITTENS

National Collegiate Athletic Assn. The Official Boxing Guide, B045, Gloves. Requirements for pattern, weight, thumb length, cuff width, and padding.

### 068.2 LEATHER WORK GLOVES

American Standards Assn., L18.7 to L18.12-1944. Protective Occupational (Safety) Clothing, Leather and Asbestos Gloves and Mittens (American War Standard). L18.7-1944, Welders' Leather Gauntlet Gloves; L18.8-1944, Protective Leather Gloves, Steel-Staples; L18.9-1944, Asbestos Gloves; L18.10-1944, Asbestos Gloves, Leather Reinforced; L18.11-1944, Asbestos Mittens; L18.12-1944, Asbestos Mittens, Leather Reinforced. Covers scope and purpose, types and sizes, pattern and design, construction, material, methods of test, identification, and appendix for breaking strength of asbestos cloth.

U. S. Gov., Army Air Forces. Specification 3143-3; 1944. Glove; Winter Flying, Type A-11.

U. S. Gov., Army Air Forces. Specification 3184A-3; 1945. Shell; Leather Outer. For types F-2 and F-3 electrically heated flying suits.

U. S. Gov., Army Air Forces. Specification 3185-B; 1944. Shell; Outer, Leather, for Type A-11a Flying Glove.

U. S. Gov., Marine Corps Specification, adopted 1944. Gloves; Leather, Lined.

U, S. Gov., Marine Corps Specification, revised 1942. Gloves; Working.

U. S. Gov., Navy Dept. Specification 37G15; 1939. Gloves; Leather, Unlined.

U. S. Gov., Navy Dept. Specification 37M8; 1944. Mitts; One-Finger, Gauntlet, Leather.

U. S. Gov., U. S. Army, Army Air Forces. Specification 94-3102; 1941. Gloves; Mechanics', Type D-2.

U. S. Gov., U. S. Army, Army Air Forces. Specification 94-3154A; 1944. Glove; Mechanic's Winter, Type D-3A.

U. S. Gov., U. S. Army, Army Air Forces. Specification 94-3191-A; 1944. Shell; Leather (for Type D-3A Glove).

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 9-27; 1925. Glove; Leather, Heavy.

U. S. Gov., U. S. Army, Signal Corps. Specification 9-75-B; 1944. Gloves LC-10 (Limeman's Leather).

### 068.3 DRESS GLOVES

### 068.4 RIDING GLOVES

### 068.5 HAND LEATHERS

U. S. Gov., Federal Specification KK-P-91; 1944. Palms; Sewing (Sailmakers' and Saddlers'). Covers three types—(I) roping, (II) seaming, and (III) sewing. Gives requirements for material, workmanship, general design, identification, finish, bid samples of thread, and details for each type; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 17-169; 1937. Palm; Sewing.

### 068.6 MITTENS, LEATHER

American Standards Assn., L18.7 to L18.12-1944. Protective Occupational (Safety) Clothing, Leather and Asbestos Gloves and Mittens (American War Standard). L18.7-1944, Welders' Leather Gauntlet Gloves; L18.8-1944, Protective Leather Gloves, Steel-Stapled; L18.9-1944, Asbestos Gloves; L18.10-1944, Asbestos Gloves, Leather Reinforced; L18.11-1944, Asbestos Mittens; L18.12-1944, Asbestos Mittens, Leather Reinforced. Covers scope and purpose, types and sizes, pattern and design, construction, material, methods of test, identification, and appendix for breaking strength of asbestos cloth.

### 068.7 GAUNTLETS

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 9-40C; 1943. Gauntlets; Barbed Wire.

## 069. MISCELLANEOUS MANUFACTURES OF LEATHER

### 069.1 ATHLETIC GOODS OF LEATHER

Intercollegiate Assn. of Amateur Athletes of America. Official Handbook. Shot. For iron sphere or spherical brass shell filled with lead. Leather or soft bag or container filled with lead for indoor competition.

National Basketball Committee of the U. S. and Canada. Representing the National Collegiate Athletic Assn., National Federation of High School Athletic Assns., Young Men's Christian Assn., Canadian Intercollegiate Athletic Union, Canadian Amateur Basketball Assn. Official Basketball Guide, BB45. Includes materials, size, and weights of balls for adults and for players below senior high school age; requirements for height of bounce; testing for resilience at factory; and stamping with air pressure required to give legal bounce.

National Collegiate Athletic Assn. Official Foot Ball Guide, FB44. Ball. Requirements for materials of cover and bladder, construction, color, inflation pressure, shape, size, dimensions, and weight.

National Collegiate Athletic Assn. Official Soccer Guide, S044. Ball. Requirements for casing, circumference, weight, and inflation pressure.

National Football League. Official Football Rules. Ball. Requirements for materials of cover and bladder, construction, color, inflation pressure, shape, size, dimensions, and weight.

United States Volley Ball Assn. Volley Ball Official Guide, VB45. Ball. Includes requirements for shape, covering, size, weight, and air pressure.

*References.*—Baseball gloves, *see* 068.1; rubber goods, *see* 209.9; athletic and sporting goods, *see* 943.9.

### 069.2 HARNESS AND SADDLERY

U. S. Gov., Dept. of Agriculture, Forest Service. Specifications No. 166. Halter; Leather.

U. S. Gov., Dept. of Agriculture, Forest Service. Specifications No. 167. Halter; Rope.

U. S. Gov., Dept. of Agriculture, Forest Service. Specifications for Harness; Plow.

U. S. Gov., Dept. of Agriculture, Forest Service. Specifications No. 176. Harness; Saddle, Combination.

U. S. Gov., Dept. of Agriculture, Forest Service. Specifications No. 228-S. Latigo.

U. S. Gov., Dept. of Agriculture, Forest Service. Specifications No. 306. Saddle; Pack, Crosstree.

U. S. Gov., Dept. of Agriculture, Forest Service. Specifications MSF-307. Saddle; Pack, Decker.

U. S. Gov., Marine Corps Specification, adopted 1918. Cincha; Pony.

U. S. Gov., Marine Corps Specification, revised 1940. Halter; Horse.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2848; 1939. Halter; Operating, 6-Ring, Veterinary.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2849; 1939. Hood; Humane, Operating, Veterinary.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2853; 1939. Side Line; Horse.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2921; 1939. Harness; Casting, Veterinary.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2922; 1939. Hobble; Complete, Veterinary.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2924; 1939. Sling; Horse, Complete.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 9-57; 1928. Accessories; Pack Load, for browning machine rifle, Cal. 30 M1922 (Set).

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 8-77A; 1938. Equipment; Caparison, M-1937.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 92-7B; 1942. Bridle; Halter, M-1917.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 92-9A; 1937. Saddlebag; M1924.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 92-13; 1933. Saddle; Pack, Phillips, Cargo, Complete.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 92-14; 1933. Saddle; Pack, Phillips, Cavalry, Complete.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 92-15A; 1938. Link; Cavalry.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 92-22; 1937. Bridle; Training, with Martingale, M-1920.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 92-24A; 1942. Harness; Ambulance or Escort Wagon, Lead and Wheel, Double Sets.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 92-26; 1936. Whip; Artillery, M-1913.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 92-27; 1937. Pad; Collar, Zinc.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 92-28; 1936. Harness; Machine-Gun Cart, M-1927, Single Set.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 92-31A; 1941. Halter; M1904, with Tie Rope.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 92-33; 1937. Cavesson; M1912, Complete.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 92-34; 1937. Bridle. M1913; Artillery Harness, M1916.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 92-38; 1937. Hanger; Cargo, Spring Release Type, Pack, Artillery.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 92-41; 1937. Outfit; Picket Line, M1933.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 92-42; 1937. Pad; Saddle, Woven, Olive-Drab.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 92-43; 1938. Collar; Breast, Breeching, and Lead Rope, Veterinary.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 92-46; 1938. Cinchas; Hair.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 92-47; 1939. Harness; Artillery, Breast Collar, M1916; Double Set.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 92-48; 1939. Saddle; McClellan, M1904.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 92-49; 1939. Girth; Saddle, Mohair Cord.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 92-50; 1939. Saddle; McClellan, M-1928, Cavalry.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 92-51; 1939. Saddle; Packers', Riding, Full-Rigged.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 92-52; 1940. Pocket; Pommel, M-1936, Complete.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 92-53A; 1942. Bag; Cantle, M-1936.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 92-56; 1940. Hobble; QM Type.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 92-58; 1941. Hobble; Breeding M1940.

*References.*—Saddlers' nails, *see* 608.11; saddlers' tacks, *see* 608.14.

## 069.3 CLOTHING BELTS, SAFETY BELTS, ETC.

Assn. of American Railroads, Telegraph and Telephone Section, 1-A-18; 1938. Leather Body Belts and Safety Straps. For linemen's use, requirements for quality of leather, styles and dimensions, designs for belt, strap, and snap hook, tensile strength, and stiffness tests.

National Safety Council. American Standards Assn., A39-1933. Recommended Practice for Window Cleaning. Applies to all window cleaning operations performed wholly or partially on the outside of all public buildings more than one story high, or in which the sills of windows are located more than 10 ft. above grade or adjoining roof. Requirements when to use approved safety devices. Requirements on swinging scaffolds, boatswain's chair, sectional ladders, belts, belt terminals, and anchors.

U. S. Gov., Army-Navy Aeronautical Specification AN-B-15—2; 1944. Belts; Gunners' Safety.

U. S. Gov., Dept. of Agriculture, Forest Service. Specifications MSF-314-1. Sheath; Ax, Western Pattern.

U. S. Gov., Dept. of Agriculture, Forest Service. Specifications MSF-314-2. Sheath; Ax, Young's Pattern.

U. S. Gov., Dept. of Agriculture, Forest Service. Specifications MSF-314-3. Sheath; Ax, Cruiser Pattern.

U. S. Gov., Dept. of Agriculture, Forest Service. Specifications MSF-314-4. Sheath; Ax, Boy's Pattern.

U. S. Gov., Dept. of Agriculture, Forest Service. Specifications MSF-314-5. Sheath; Belt Ax.

U. S. Gov., Dept. of Agriculture, Forest Service. Specifications MSF-319. Sheath; Pulaski Tool.

U. S. Gov., Dept. of Agriculture, Forest Service, Specifications MSF-321 Sheath; Brush Knife.

U. S. Gov., Federal Specification KK-B-151; 1937. Belts; Linemen's, Safety, Leather. Covers one type and one grade. Consists of a body belt with holster and a safety strap. Gives detail requirements; methods of sampling, inspection, and tests; and requirements for packing and marking.

U. S. Gov., Marine Corps Specification, revised 1944. Belt; Service (Without Buckle) Dark Brown Mahogany Shade.

U. S. Gov., Navy Dept. Specification 5B5a; 1941. Belts, Battalion-Flagstaff.

U. S. Gov., Navy Dept. Specification 73B1; 1939. Belts; Sword.

U. S. Gov., Treasury Dept., Procurement Div., 406C; 1941. Belts, Safety Body-Pad Type (with or without Shoulder Harness). Body pad shall be made from 4-ply transmission solidly-woven cotton webbing 48 inches long and not less than 3 inches wide. Gives requirements as to thread, belt proper, D-rings, shoulder harness, and performance; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., Treasury Dept., Procurement Div., 419; 1940. Shock Absorbers for Safety Belts. Covers one type and grade, of the following sizes: (I) For indoor use, suitable for 1/2 in. standard manila rope; and (II) for outdoor use, suitable for 3/4 in. standard manila rope. Gives requirements for material, adjustable metal clamp, length, weight, and performance; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., U. S. Army, Army Air Forces. Specification 9-74-B; 1936. Belt; Pilots' Safety.

U. S, Gov., U. S. Army, Quartermaster Corps. Specification 9-70A; 1939. Belt; Officer's, M-1921.

*References.*—Cotton belts, *see* 311.8.

## 069.4 LEATHER CLOTHING

American Standards Assn., L18.1-1944. Protective Occupational (Safety) Clothing. Leather Aprons (American War Standard). Covers scope and purpose, types, sized and dimensions, pattern and design, construction, materials and workmanship, methods of test, identification, and appendix including drawings.

American Standards Assn., L18.2-1944. Protective Occupational (Safety) Clothing. Leather Cape Sleeves and Bibs (American War Standard). Covers scope and purpose, types, sizes and dimensions, pattern and design, construction, materials and workmanship, methods of test, identification, and appendix including drawings.

American Standards Assn., L18.3-1944. Protective Occupational (Safety) Clothing. Leather Leggings (Knee Length). Covers scope and purpose, type and size, thickness, pattern and design, construction, materials and workmanship, methods of test, and identification.

American Standards Assn., L18.4-1944. Protective Occupational (Safety) Clothing. Leather Coats (American War Standard). Gives scope and purpose, pattern and design, special requirements for men's coats, special requirements for women's coats, construction details, materials and workmanship, methods of test, identification, and appendix.

American Standards Assn., L18.5-1944. Protective Occupational (Safety) Clothing. Leather Overalls (American War Standard). Gives scope and purpose, pattern and design, special requirements for men's overalls, special requirements for women's overalls, construction details, materials and workmanship, methods of test, and identification.

American Standards Assn., L18.6-1944. Protective Occupational (Safety) Clothing. Leather Sleeves (American War Standard). Gives scope and purpose, pattern and design, special requirements for men's sleeves, special requirements for women's sleeves, construction details, materials and workmanship, methods of test, and identification.

U. S. Gov., Army-Navy Aeronautical Specification AN-J-3a; 1943. Jackets; Leather Flying.

U. S. Gov., Army-Navy Aeronautical Specification AN-J-4a; 1944. Jackets; Winter Flying.

U. S. Gov., Army-Navy Aeronautical Specification AN-T-35a; 1944. Trousers; Winter Flying.

U. S. Gov., Federal Specification KK-A-606a; 1943. Aprons; Leather, Blacksmiths'. Covers one grade and three types—(I) vegetable-tanned sheepskin leathers, (II) vegetable-tanned split leathers, and (III) chrome-tanned split leathers. Gives requirements for body leather, strap leather, thread, buttons, construction, tolerances, reinforcing, stitching, seams, detail requirements, and figure showing dimensions; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Marine Corps Specification, adopted 1937. Band; Sweat, Leather (with cloth strip attached).

U. S. Gov., Navy Dept. Specification 37C6b; 1943. Clothing; Protective, Leather, for Welders.

U. S. Gov., U. S. Army, Army Air Forces. Specification 8-117; 1940. Vest; Flying, Type C-3.

U. S. Gov., U. S. Army, Army Air Forces. Specification 94-3040; 1932. Jackets; Flying, Type A-2.

U. S. Gov., U. S. Army, Army Air Forces. Specification 94-3052; 1933. Helmet; Flying, Intermediate Type A-7.

U. S. Gov., U. S. Army, Army Air Forces. Specification 94-3053; 1933. Helmet; Flying, Type B-5.

U. S. Gov., U. S. Army, Army Air Forces. Specification 94-3055-B; 1942. Vest; Winter Flying, Type C-2.

U. S. Gov., U. S. Army, Army Air Forces. Specification 94-3085-A; 1941. Trousers; Mechanics' Type B-1.

U. S. Gov., U. S. Army, Army Air Forces. Specification 94-3119; 1942. Trousers; Winter Flying, Type A-6 (Pilot's).

U. S. Gov., U. S. Army, Army Air Forces. Specification 94-3120; 1942. Jacket; Winter Flying, Type B-7 (Pilot's).

U. S. Gov., U. S. Army, Army Air Forces. Specification 94-3126; 1942. Helmet; Flying (Winter) Type B-6.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 9-15; 1926. Helmet; Firemen's.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 9-59; 1928. Leather; Cape.

U. S. Gov., Veterans Administration. Specification VA-MC-310; 1937. Firemen's Helmets (Black).

## 069.5 LEATHER STRAPS

U. S. Gov., Army Air Forces. Specification No. 3229; 1944. Strap; Navigation Watch Wrist.

U. S. Gov., Marine Corps Specification, revised 1942. Sling; Gun, Leather, for M-1903 Rifle (Dark Brown Mahogany Shade).

U. S. Gov., Marine Corps Specification, revised 1942. Strap; Wrist Watch.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 9-56A; 1938. Straps; Chin, Leather, Hat.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 9-82-A; 1942. Straps; Spur, M-1926, and Guard; Stirrup.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 9-84A; 1941. Strap; Shoulder, Military Police.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 92-19; 1933. Strap; Saber, Long and Short.

U. S. Gov., U, S. Army, Signal Corps. Specification 71-603; 1931. Strap; Type ST-26, Leather. 16-in.

*References.*—Lineman's safety straps, *see* 069.3.

## 069.6 BELLOWS LEATHER

## 069.7 LEATHER CASES

U. S. Gov., Federal Specification KK-B-50; 1936. Amendment 1; 1944. Bags; Hand, Leather. Covers one grade; two types—(I) with suitcase bottom and (II) without suitcase bottom; and two classes—(A) 16 in. and (B) 18 in. Gives requirements for leather, lining and pockets, thread, metal, stitching, sizes, color, pockets, locks and hasps, handle, feet, and construction; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., Federal Specification KK-C-121a; 1942. Amendment 2; 1944. Cases; Brief, Leather. Covers eight types—(I) lawyer, (II) special lawyer, (III) secretary, (IV) special secretary, (V) investigator, (VI) inspector, (VII) brief bag, and (VIII) catalog. Gives requirements for leather, thread, steel, tolerances, fronts, backs, flaps, straps, loops, gussets, partitions, color, sizes, pockets, locks, fasteners, buckles, handles, construction, lining, and finish; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification KK-E-561; 1935. Envelopes; Leather. Covers two Classes—(I) letter size and (II) legal size. Gives detail requirements for material, workmanship, color, sizes, thickness, and construction; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., Marine Corps Specification, adopted 1944. Handbag (With Shoulder Strap). (Marine Corps Women's Reserve).

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2967; 1939. Bag; Leather, Obstetrical.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 9-18; 1926. Pouch; Music.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 9-68-A; 1937. Case; Needle (Leather).

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 9-71A; 1939. Scabbard; Rifle, M-1918.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 9-86A; 1941. Scabbard; Rifle, M-1938.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 9-90A; 1941. Scabbard; Sub-Machine Gun, M-1940.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 9-92; 1941. Sheaths; Butcher Knife, Paring Knives, and Cleaver (outfit, cooking, mountain artillery).

U. S. Gov., U. S. Army, Signal Corps. Specification 71-432C; 1932. Pouch; Type CS-34, for Carrying Knife and Pliers, Leather.

U. S. Gov., Veterans Administration. Specification VA-G-63a; 1936. Leather Portfolio (for portable typewriter).

### 069.9 MISCELLANEOUS SPECIFICATIONS FOR LEATHER MANUFACTURES

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, 1938. Leather, Bookbinding. Covers definition, manufacture, types of leather, splits, calfskins, buffings, sheepskins, skivers, goatskins, pigskins, and purchasing.

Society of Automotive Engineers. Aeronautical Material Specification 3500A; 1942. Leather (Hot Oil and Gasoline Resistant). Chrome retan leather suitable for use at high temperatures and/or in contact with oil and gasoline. Gives requirements for tanning, quality. tests, tolerances, samples, reports, identification, approval, and rejections.

U. S. Gov., Federal Specification KK-H-566a; 1939. Holsters; Pistol, Leather. Covers two types: (I) Open-end (class A—pocket with safety strap, class B—open-pocket, and class C—extended belt-loop, with safety strap); and (II) closed-end (class A—pocket with safety strap, class B—open-pocket, and class C—pocket with flap). Gives requirements for material, workmanship, leather, stitching, and construction; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification KK-W-231; 1936. Welting; Leather, Shoe. Covers one grade. Gives requirements for leather, color, finish, hanks, width, thickness, fillet strips, laps, cement, and grooving; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Marine Corps Specification, revised 1939. Drumheads; Batter and Snare.

U. S. Gov., Marine Corps Specification, adopted 1943. Holster; Shoulder, Pistol.

U. S. Gov., Marine Corps Specification, revised 1944. Sheath; Leather, for Knife, Hospital Corps.

U. S. Gov., Navy Dept. Specification 29S1; 1943. Strops; Razor (All-Leather).

U. S. Gov., Navy Dept. Specification 54B3; 1928. Bags; Money, Leather.

U. S. Gov., Navy Dept. Specification 54B5; 1936. Bags; Money, Leather (Suitcase Type).

U. S. Gov., Navy Dept. Specification 73B2; 1941. Bands; Sweat, Cap (Leather).

U. S. Gov., U. S. Maritime Commission. Specification 34-MC-1; 1944. Holsters; Pistol, Leather. Covers one grade and size. Gives requirements for materials, workmanship, construction, leather, color, stitching and thread, and metal parts; sampling, inspection, and methods of test; and packaging, packing, and marking for shipment.

U. S. Gov., U. S. Army, Chemical Warfare Service. Specification 97-51-92A; 1942. Disk; Leather.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 9-13; 1926. Drumheads; Snare, Tympani and Bass.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 92-4A; 1937. Blinder, M-1916.

*References.*—Sandblasting helmets, protective shields, and goggles of leather, *see* 914.5.

## 070-079 FURS

### 071. UNDRESSED FURS

### 073. FURS DRESSED ON THE SKIN

U. S. Gov., Army Air Forces. Specification No. 16086; 1934. Pelts; Reindeer, Fawn.

### 075. MANUFACTURES OF FUR AND FUR SKINS

#### 075.1 PARKA

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 21-1; 1925. Parka; Fur. Alaskan Clothing.

#### 075.2 FUR ROBES

#### 075.3 FUR MITTENS

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 33-1A; 1926. Mitten; Fur, Alaskan Clothing.

#### 075.4 FUR CAPS

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 33-7A; 1941. Cap; Winter, Lambskin-Lined.

# 090-099 MISCELLANEOUS ANIMAL PRODUCTS

## 091. BONES, HOOFS, AND HORNS

## 092. FEATHERS AND MANUFACTURES

### 092.1 FEATHERS

American Hospital Assn., 1-13. Feathers. Covers chicken, duck, and goose feathers. General requirements, detail requirements, and methods of inspections and tests. Bases on U. S. Gov. Federal Specification C-F-151a for Feathers, referred to below.

U. S. Gov., Federal Specification C-F-151a; 1940. Feathers. Covers 1 grade in 3 types—(I) chicken, (II) duck, and (III) goose. Gives requirements for material and workmansnip; general requirements for odor, brittleness, damaged feathers, and cleanness; detail requirements for each type of feathers; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

### 092.2 FEATHER DUSTERS

### 092.9 MISCELLANEOUS MANUFACTURES OF FEATHERS

*References.*—Feather pillows, *see* 315.33.

## 093. GLUE STOCK, GLUE, AND GELATIN

### 093.0 GENERAL ITEMS

American Society for Testing Materials, D773-44T. Tentative Method of Test for Adhesiveness of Gummed Tape.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, Volume 2; 1944. Glue (Animal Glue). Covers definition, derivation, uses, grades, containers, and substitutes.

### 093.1 GLUE STOCK, INCLUDING HIDE CUTTINGS, ETC.

### 093.2 CASEIN GLUE

U. S. Gov., Army Air Forces. Specification 14122 (1); 1943. Glue; Water and Mold Resistant Casein.

U. S. Gov., Federal Specification C-G-456; 1941. Glue; Casein-Type, Water-Resistant. Covers one type and grade in the form of a dry uncaked powder. Gives detail requirements for shear test, working life, and setting properties; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., Navy Dept. Specification 52G6c; 1936. Glue; Marine (Ship).

U. S. Gov., Navy Dept. Specification 52G8c; 1941. Glue; Casein, Water-Resistant.

U. S. Gov., U. S. Army, Army Air Forces. Specification 98-14024; 1934. Glue; Certified Casein Water-resistant, Application of.

### 093.3 FLAKE GLUE

U. S. Gov., Federal Specification C-G-451; 1931. Glue; Animal, for Woodworking. Covers six grades (V1, V2, J1, J2, S1, and S2) in flake, ground, or other form. Gives requirements for material and workmanship, moisture, content, jelly strength, viscosity, reaction foam, odor, and keeping quality; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

*References.*—Methods of testing, *see* 093.0.

### 093.4 HIDE GLUE

U. S. Gov., U. S. Army, Army Air Forces. Specification 98-21001-D; 1931. Glue; Hide, Handling and Testing Glued Joints, Aircraft.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 3-102D; 1941. Glue (for use in the loading of ammunition).

U. S. Gov., U. S. Army, Ordnance Dept. Specification 50-11-112; 1943. Glue; Hide (for Use in the Manufacture of Primers).

### 093.5 PATTERN MAKER'S GLUE

### 093.6 LIQUID GLUE

U. S. Gov., Army Air Forces. Specification 14095-A; 1941. Glue; Liquid.

U. S. Gov., Federal Specification C-G-463; 1941. Glue; Liquid. Covers one type and grade for use primarily as an adhesive for wood. Gives detail requirements as to consistency, keeping qualities, hydroscopicity, and adhesive strength; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., U. S. Army, Corps of Engineers. Specification 42-4; 1924. Glue; Liquid, Photoengravers'.

### 093.7 GELATIN

American Chemical Society. Journal of Industrial and Engineering Chemistry, Jan. 15, 1929. Committee Recommendation. Tentative Specifications for Standard Gelatin. For standard gelatin for physicochemical purposes, of calfskin source, requirements on preparation, ash content, qualities, content of heat coagulable protein, etc.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, Volume 2; 1944. Gelatin. Covers definition, constants, solubility, derivation, uses, forms and grades, containers, and substitutes.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A. Twelfth Revision, 1942. Gelatin. Description, solubility, identification, odor and water-insoluble substances, sulfite, arsenic, heavy metals, gel strength, bacterial content, and storage. U. S. P. product of gelatin—Gelatinum Glycerinatum.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A. Twelfth Revision, 1942. Glycerinated Gelatin. Preparation and storage.

U. S. Gov., Federal Specification C-G-191a; 1937. Amendment 3; 1940. Gelatin, Dessert—Powder and Plain; and Starch-Dessert-Powder. Covers three types—(I) gelatin, plain (unflavored), powdered, (II) dessert powder (flavored), prepared with gelatin, and (III) dessert powder (flavored), prepared with starch. Gives general requirements for each type; method of inspection and test (bloom gelometer test in accordance with methods of the Edible Gelatin Manufacturers' Research Society of America and chemical analysis in accordance with methods of Assn. of Official Agricultural

Chemists); and requirements for packaging, packing, and marking.

U. S. Gov., U. S. Army, Medical Dept. Specification 4-1070; 1937. Gelatin; Granular (for Culture Media).

*References.*—Methods of testing glue, *see* 093.0.

### 093.9 MISCELLANEOUS SPECIFICATIONS FOR GLUE, ETC.

*References.*—Methods of testing glue, *see* 093.0.

## 094. SAUSAGE CASINGS

## 095. IVORY

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, Volume 2; 1944. Ivory. Covers definition, derivation, uses, grades, packaging, and substitutes.

## 096. SHELLS

## 097. SPONGES

American Institute of Homoeopathy. Homoeopathic Pharmacopoeia of U. S., 1941. Sponge and Fresh Water Sponge. Natural order, synonyms, description, habitat, history, parts used, and preparation for tincture, dilutions, and medications for use in homoeopathic medicines.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, Volume 2; 1944. Sponges. Covers definition, characteristics, derivation, marketing, packing and grading, grades, and substitutes.

U. S. Gov., Federal Specification C-S-631b; 1941. Sponges; Natural. Covers fresh stock, best quality sponges, eleven types, in two classes (unbleached and bleached)—(I) Rock Island sheepswool middle range forms No. 1, (II) Florida key sheepswool forms No. 1, (III) Florida yellow forms No. 1, (IV) Nassau reef forms No. 1, (V) Florida key grass cuts No. 1, (VI) Rock Island sheepswool middle range forms No. 2, (VII) Florida key sheepswool forms No. 2, (VIII) Florida yellow forms No. 2, (IX) Rock Island sheepswool middle range cuts No. 2, (X) Florida key sheepswool cuts No. 2, and (XI) Florida yellow cuts No. 2. Gives general and detail requirements for each type; methods of sampling, inspection, and tests; requirements for packaging, packing, and marking; and lists the more general uses of the various types.

## 098. ANIMAL PRODUCTS, UNMANUFACTURED, NOT ELSEWHERE CLASSIFIED

### 098.1 MEAT MEAL, MEAT SCRAPS, BONE MEAL, BLOOD MEAL

Assn. of American Feed Control Officials. Definitions of Feedingstuffs, 1944. Animal Products. Defines blood meal, blood flour, meat, meat by-products, meat meal, meat scraps, digester tankage, meat and bone meal digester tankage, whale meal, animal liver meal, raw bone meal, steamed bone meal, special steamed bone meal, bone charcoal or bone black, and spent bone meal.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, Volume 2; 1944. Bone; Raw (Granulated Bone, Bone Meal). Covers definition, derivation, uses, grades, containers, and substitutes.

*References.*—Bone, hoof and horn meal, fish scrap, dried blood, fish scales, as fertilizers, *see* 850. and 859.

## 099. MANUFACTURED ANIMAL PRODUCTS NOT ELSEWHERE CLASSIFIED

### 099.1 BOUILLON CUBES AND BEEF EXTRACT

### 099.2 WOOL AND HAIR AND MANUFACTURES

*References.*—Wool and woolen products, *see* 360-369.

### 099.3 SILK AND MANUFACTURES THEREOF

*References.*—Silk and silk products, *see* 370-379.

### 099.4 BRISTLES AND MANUFACTURES THEREOF

*References.*—Brushes, *see* 982.1-982.9.

### 099.5 CASEIN

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, Volume 2; 1944. Casein and Casein Plastics. Covers definition, derivation and characteristics, uses, grades and forms, containers, and substitutes.

Technical Assn. of the Pulp and Paper Industry. Analysis of Casein, Standard T607M-44, 1944. Gives requirements for acid and rennet casein. Covers sampling, appearance, moisture, fat, ash, alkali, starch, total acidity, soluble acidity, nitrogen, insoluble matter, solubility, viscosity, and clay-carrying strength.

# 100-199 VEGETABLE FOOD PRODUCTS

## 100-109 GRAINS AND PREPARATIONS

### 100. GENERAL ITEMS

American Assn. of Cereal Chemists. Cereal Laboratory Methods With Reference Tables, 1941. Includes wheat and other whole grains; experimental milling; wheat flour, semolina and similar products; feeds and feeding stuffs; rye; malt; enzymatic, physicochemical and bacteriological methods; baking methods; bread; experimental macaroni processing; macaroni products; fats and shortening materials; leavening agents; yeast foods, bleaching agents, and flour improvers; glossary of cereal chemical terms; statistical principles and experimental errors; preparation and standardization of solutions; reference tables; and moisture correction charts.

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis, 1940. Plants. Methods for determination of sand and silica, calcium, magnesium, manganese, sodium and potassium, copper, zinc, sulphur, phosphorus, chlorine, total nitrogen, and tentative methods for moisture, ash, iron, aluminum, arsenic, sugars, sucrose, starch, ether extract, and crude fiber.

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. Handbook of Official Grain Standards of the U. S. Revised, 1943. Includes important features of grain inspection. Covers inspection requirements, misrepresentation, appeals, finding, fees, licensing of inspectors, penalties, regulations, basis of inspection, sampling of grains, testing weight per bushel, moisture tests, and equipment used in grain inspection.

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. Handbook of Official Grain Standards of the U. S. Revised, 1943. Includes mixed grain. Gives requirements for two grades—"mixed grain" and "sample grade mixed grade"; and definitions and terms.

U. S. Gov., Dept. of Commerce, National Bureau of Standards Miscellaneous Publication M147; 1935. Papermaking Quality of Cornstalks. Study of the papermaking quality of cornstalks was made at the National Bureau of Standards to find the practical possibilities of utilizing this form of waste farm product as a raw material for paper. Special mechanical preparation of the stalks was found essential for successful pulping because of certain structural peculiarities of the type of plant stem. The best results were obtained by using only the outside shell or cortex, which had been separated from the remainder and shredded by mechanical processes.

U. S. Gov., Dept. of Commerce, National Bureau of Standards Miscellaneous Publication M148; 1935. Separation of Cornstalks Into Long Fibers, Pith, and Fines. The wet method of separating pith from cornstalks was modified to produce three fractions of useful materials. Data on the ash of the various fractions and the thermal conductivities of pith and pith board are given, together with a discussion of the uses to which the materials may be put. The yields are 42.5 percent of long fiber, 5 percent of pith, and 22.5 percent of fines.

U. S. Gov., Federal Security Agency, Food and Drug Administration, S.R.A., F.D.C.2; 1944. Definitions and Standards for Food. Substandard Quality and Fill of Container. General statements of substandard quality and substandard fill of container. Gives details concerning these terms.

U. S. Gov., Federal Specification N-G-651a; 1945. Grains. Covers eleven classes—(I) wheat, (II) corn, (III) barley, (IV) oats, (V) feed oats, (VI) mixed feed oats, (VII) rye, (VIII) grain sorghums, (IX) flaxseed, (X) soybeans, and (XI) mixed grain. Shall conform to the provisions of the Federal Food, Drug, and Cosmetic Act. Gives detail requirements; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

### 101. BARLEY AND BARLEY PREPARATIONS

#### 101.1 BARLEY

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, Volume 2; 1944. Barley. Covers definition, characteristics and derivation, uses, grades and standards, containers, and substitutes.

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. Handbook of Official Grain Standards of the U. S. Revised, 1943. Includes barley. Covers four classes: (I) barley—(A) malting barley and (B) barley, (II) black barley, (III) western barley, and (IV) mixed barley. Gives requirements for six grades—No. 1, No. 2, No. 3, No. 4, No. 5, and sample; and definitions and terms.

U. S. Gov., Federal Specification N-B-121; 1931. Barley; Pearl. Covers one grade in No. 2 and No. 3. Gives general requirements; methods of inspection and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Federal Specification N-G-651a; 1945. Grains. Includes barley. Shall conform to the provisions of the Federal Food, Drug, and Cosmetic Act. Gives detail requirements; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

*References.*—Methods of analysis, food regulations, *see* 100.

#### 101.2 BARLEY FLOUR

#### 101.9 MISCELLANEOUS SPECIFICATIONS FOR BARLEY

*References.*— Barley products as feeding stuffs, *see* 119.9.

### 102. BUCKWHEAT AND FLAXSEED

### 102.1 BUCKWHEAT GRAIN

New York Produce Exchange. Grades for Buckwheat. Shall be at least 75 percent of the varieties Japanese and/or silver hull. Gives requirements for No.1, No.2, No.3, No.4, sample grade, tough, damp, and cool and merchantable buckwheat.

*References.*—Methods of analysis, food regulations, *see* 100; buckwheat mill feed products, *see* 118.9.

### 102.2 BUCKWHEAT FLOUR

U. S. Gov., Federal Specification N-F-451; 1931. Flour; Buckwheat. Gives requirements for material, workmanship, and flour; methods of inspection and tests (moisture determination and chemical analyses in accordance with methods of Assn. of Official Agricultural Chemists); and requirements for packaging, packing, and marking.

*References.*—Methods of analysis, food regulations, *see* 100.

### 102.3 FLAXSEED GRAIN

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, Volume 2; 1944. Linseed. Covers definition, derivation, characteristics, uses, grades, marketing and substitutes.

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. Handbook of Official Grain Standards of the U. S. Revised, 1943. Includes flaxseed. Gives requirements for three grades—No.1, No.2, and sample; and definitions and terms.

U. S. Gov., Federal Specification N-G-65la; 1945. Grains. Includes flaxseed. Shall conform to the provisions of the Federal Food, Drug, and Cosmetic Act. Gives detail requirements; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

*References.*—Flaxseed oil cake and meal, *see* 112.1.

## 103. CORN AND GRAIN SORGHUMS AND PREPARATIONS

### 103.0 GENERAL ITEMS

### 103.1 CORN

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, Volume 2; 1944. Corn. Covers definition, derivation, characteristics, uses, classification, grades, containers, and substitutes.

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. Handbook of Official Grain Standards of the U. S. Revised, 1943. Includes corn. Gives requirements for three classes—(I) yellow, (II) white, and (III) mixed; six grades—No.1, No.2, No.3, No.4, No.5, and sample; and definitions and terms.

U. S. Gov., Federal Specification N-G-65la; 1945. Grains. Includes corn. Shall conform to the provisions of the Federal Food, Drug, and Cosmetic Act. Gives detail requirements; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

*References.*—Methods of analysis, food regulations, *see* 100, 103.0.

### 103.2 CORN FLOUR

### 103.3 STARCH

U. S. Gov., Federal Specification N-C-541; 1930. Cornstarch. Covers one grade and type. Gives general and detail requirements for purity, moisture content, fineness, etc.; methods of inspection and tests; and requirements for packaging, packing, and marking.

*References.*—Methods of analysis, food regulations, *see* 100.

### 103.4 CORN MEAL, CORN GLUTEN FEED AND MEAL

Assn. of American Feed Control Officials. Definitions of Feedingstuffs, 1944. Corn Products. Defines corn meal, corn feed meal, corn gluten feed, corn gluten meal, maltose process corn gluten feed, corn germ cake, corn germ meal, and corn screenings.

U. S. Gov., Federal Specification N-C-521; 1931. Amendment 2; 1935. Corn Meal; White or Yellow. Covers one grade and two types—(I) white and (II) yellow. Gives general requirements for quality and preparation; detail requirements for granulated meal; methods of inspection and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Federal Specification N-F-211b; 1944. Feedstuff; Concentrated. Includes requirements for corn gluten feed, corn gluten meal, and corn feed meal to conform to the provisions of the Federal Food, Drug, and Cosmetic Act. Methods of inspection and test (chemical analyses in accordance with methods of Assn. of Agricultural Chemists); and requirements for packaging, labeling, packing, and marking.

*References.*—Methods of analysis, food regulations, *see* 100, 103.0; corn oil cake, corn oil meal, corn germ cake, corn germ meal, *see* 112.9.

### 103.5 GRAIN SORGHUMS

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. Handbook of Official Grain Standards of the U. S. Revised, 1943. Includes grain sorghums. Covers five classes: (I) White grain—(A) white kafir, (B) white durra, and (C) white grain; (II) yellow grain—(A) yellow milo and (B) yellow grain; (III) red grain—(A) red kafir and (B) red grain; (IV) brown grain; and (V) mixed grain. Gives requirements for five grades—No.1, No.2, No.3, No.4, and sample; and definitions and terms.

U. S. Gov., Federal Specification N-G-65la; 1945. Grains. Includes grain sorghums. Shall conform to the provisions of the Federal Food, Drug, and Cosmetic Act. Gives detail requirements; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

*References.*—Methods of analysis, food regulations, *see* 100.

### 103.9 MISCELLANEOUS SPECIFICATIONS FOR CORN

U. S. Gov., U. S. Army, Chemical Warfare Service. Specification 4-503-168B; 1941. Dextrin.

*References.*—Corn shops and grits, *see* 119.2; table corn, canned corn, *see* 122.2, 126.2.

## 104. OATS AND OAT PRODUCTS

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis, 1940. Grain and Stock

Feeds. Oat Hulls in Oats and Oat Feeds. Tentative methods for determination.

### 104.0 GENERAL ITEMS

### 104.1 OATS

U.S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. Handbook of Official Grain Standards of the U. S. Revised, 1943. Includes feed oats and mixed feed oats. Covers four grades—No.1, No.2, No.3, and sample; and definitions and terms.

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. Handbook of Official Grain Standards of the U. S. Revised, 1943. Includes oats. Covers five classes—(I) white, (II) red, (III) grey, (IV) black, and (V) mixed; five grades—No.1, No.2, No.3, No.4, and sample; definitions and terms.

U. S. Gov., Federal Specification N-G-651a; 1945. Grains. Includes oats, mixed feed oats, and feed oats. Shall conform to the provisions of the Federal Food, Drug, and Cosmetic Act. Gives detail requirements; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

*References.*—Methods of analysis and tests, food regulations, *see* 104.0, 100.

### 104.2 OAT FLOUR

*References.*—Methods of analysis, food regulations, *see* 100; other specifications for oatmeal and rolled oats, *see* 109.4.

### 104.9 MISCELLANEOUS SPECIFICATIONS FOR OATS

*References.*—Oats products as mill feeds, *see* 118.9; oatmeal and rolled oats, *see* 109.4.

## 105. RICE AND RICE PRODUCTS

### 105.1 RICE

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. U.S. Standards for Rough Rice, 1942. Covers eleven classes— (I) Edith, (II) Fortuna, (III) Lady Wright, (IV) Rexoro, (V) Nira, (VI) blue rose, (VII) early prolific, (VIII) American pearl, (IX) Calady, (X) miscellaneous classes, and (XI) mixed. Gives requirements for various classes, subclasses, grades, special grades for rough rice, milling quality, and definitions.

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. U. S. Standards for Milled Rice, 1942, and Amendment, 1943. Covers fourteen classes—(I) Edith, (II) Fortuna, (III) Lady Wright, (IV) Rexoro, (V) Nira, (VI) blue rose, (VII) early prolific, (VIII) American pearl, (IX) Calady, (X) miscellaneous classes, (XI) mixed, (XII) second head, (XIII) screenings, and (XIV) brewers. Gives requirements for various classes, subclasses, grades, parboiled milled rice, coated milled rice, weevily milled rice, and definitions.

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. U. S. Standards for Brown Rice, 1942. Covers eleven classes—(I) Edith, (II) Fortuna, (III) Lady Wright, (IV) Rexoro, (V) Nira, (VI) blue rose, (VII) early prolific, (VIII) American pearl, (IX) Calady, (X) miscellaneous classes, and (XI) mixed. Gives definitions and requirements for various classes and grades.

U. S. Gov., Federal Specification N-R-346; 1943. Rice; Brown. Covers three grades (extra fancy, fancy, and choice) for classes 1 to 7 and (fancy, No.1, and No.2,) for classes 8 and 9; and three types (A) long grain of six classes (Edith—class 1, Fortuna—class 2, Lady Wright —class 3, Rexoro—class 4, Nira—class 5, and Calady—class 9; (B) short grain of three classes (blue rose—class 6, early prolific, class—7, and zenith—class 10); and (C) round grain of one class (American pearl—class 8). Shall conform to the provisions of the Federal Food, Drug, and Cosmetic Act. Gives requirements for material and workmanship, details, methods of inspection and tests (chemical analyses shall be made in accordance with the methods of the Assn. of Official Agricultural Chemists), packaging, labeling, packing, and marking.

U. S. Gov., Federal Specification N-R-351a; 1943. Amend. 1; 1944. Rice; Milled. Covers four grades—extra fancy (No.1), fancy (No.2), extra choice (No.3), and choice (No.4); and three types—(A) long grain of six classes (Edith, Fortuna, Lady Wright, Rexoro, Nira, and Calady); (B) short grain of three classes (blue rose, early prolific, and zenith); and (C) round grain of one class (American pearl). Shall conform to the provisions of the Federal Food, Drug, and Cosmetic Act. Gives requirements for material and workmanship, details, methods of inspection and test (chemical analyses shall be made in accordance with the methods of the Assn. of Official Agricultural Chemists), packaging, labeling, packing and marking.

*References.*—Methods of analysis, food regulations, *see* 100; rice feeding stuffs, *see* 119.5.

## 106. RYE AND RYE PREPARATIONS

### 106.1 RYE

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, Volume 2; 1944. Rye. Covers definition, uses, production, grading, sample, and marketing.

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. Handbook of Official Grain Standards of the U. S. Revised, 1943. Includes rye. Gives requirements for five grades—No.1, No.2, No.3, No.4, and sample; and definitions and terms.

U. S. Gov., Federal Specification N-G-651a; 1945. Grains. Includes rye. Shall conform to the provisions of the Federal Food, Drug, and Cosmetic Act. Gives detail requirements; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

*References.*—Methods of analysis, food regulations, *see* 100.

### 106.2 RYE FLOUR

*References.*—Methods of analysis, food regulations, *see* 100.

### 106.9 MISCELLANEOUS SPECIFICATIONS FOR RYE

*References.*—Rye products as mill feeds, *see* 118.9.

## 107. WHEAT AND PREPARATIONS FROM WHEAT

### 107.0 GENERAL ITEMS

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, 1938. Flour. Covers definition, derivation, grades, buying customs, containers, and marketing.

### 107.1 WHEAT

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, Volume 2; 1944. Wheat. Covers definition, derivation, types and grades, marketing, uses, containers, and substitutes.

U.S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. Handbook of Official Grain Standards of the U.S. Revised, 1943. Includes wheat. Gives requirements for seven classes: (I) Hard red spring wheat—(A) dark northern spring, (B) northern spring, and (C) red spring; (II) durum wheat—(A) hard amber durum, (B) amber durum, and (C) durum; (III) red durum wheat; (IV) hard red winter wheat—(A) dark hard winter, (B) hard winter, and (C) yellow hard winter; (V) soft red winter wheat—(A) red winter, and (B) western red; (VI) white wheat—(A) hard white, (B) soft white, (C) white club, and (D) western white; and (VII) mixed wheat—amber mixed durum, mixed durum; six grades—No.1 heavy, No.1, No.2, No.3, No.4, No.5, and sample; and definitions and terms.

U. S. Gov., Federal Specification N-G-651a; 1945. Grains. Includes wheat. Shall conform to the provisions of the Federal Food, Drug, and Cosmetic Act. Gives detail requirements; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

*References*—Methods of analysis, food regulations, *see* 107.0, 100; wheat and wheat products as feeding stuff, *see* 118.1, 118.2, 118.3; flour, *see* 107.2, 107.3, 107.4.

### 107.2 GLUTEN FLOUR

*References*.—Methods of analysis, food regulations, *see* 107.0, 107.3, 100.

### 107.3 WHEAT FLOUR

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis, 1940. Wheat Flour. Determination of moisture, ash, fat, ether extract, crude fiber, protein, hydrogen ion concentration, lipoids, and tentative methods for determination of acidity of water extract, sugars, alcohol soluble proteins, albumin and amino nitrogen, gluten, chlorine, nitrite nitrogen, gasoline color value, starch.

U.S. Gov., Federal Security Agency, Food and Drug Administration, S.R.A., F.D.C.2; 1944. Definitions and Standards for Food. Wheat Flour. Covers—(1) flour, white flour, wheat flour, and plain flour; identity, label statement of optional ingredients; (2) enriched flour; identity, label statement of optional ingredients; (3) bromated flour; identity, label statement of optional ingredients; (4) enriched bromated flour; identity, label statement of optional ingredients; (5) durum flour; identity; (6) self-rising flour, self-rising white flour, self-rising wheat flour; identity, label statement of optional ingredients; (7) enriched self-rising flour; identity, label statement of optional ingredients; (8) phosphated flour, phosphated white flour, phosphated wheat flour; identity, label statement of optional ingredients.

U. S. Gov., Federal Specification N-F-481a; 1942. Flour; Wheat. Covers plain and enriched in two types—(I) hard wheat and (II) soft wheat. Gives requirements for material, workmanship, and flour; methods of inspection and tests (moisture determination and chemical analyses in accordance with methods of Assn. of Official Agricultural Chemists); and requirements for packaging, packing, and marking.

*References*.—Gluten flour, *see* 107.2; whole wheat flour, *see* 107.4; methods of analysis, food regulations, *see* 107.0, 100; purified middlings, semolina, and farina, *see* 109.7; flour mill feeds, *see* 118.3.

### 107.4 WHOLE WHEAT (GRAHAM) FLOUR

U. S. Gov., Federal Security Agency, Food and Drug Administration, S.R.A., F.D.C.2; 1944. Definitions and Standards for Food. Whole Wheat Flour. Covers—(1) whole wheat flour, graham flour, entire wheat flour; identity, label statement of optional ingredients; (2) bromated whole wheat flour; identity, label statement of optional ingredients; (3) whole durum wheat flour; identity, label statement of optional ingredients.

U.S. Gov., Federal Specification N-F-461; 1931. Flour; Graham (Whole Wheat Meal). Gives requirements for material and workmanship; methods of inspection and tests (moisture determination and chemical analyses in accordance with methods of Assn. of Official Agricultural Chemists); and requirements for packaging, packing, and marking.

*References*.—Methods of analysis, food regulations, *see* 100, 107.0, 107.3.

### 107.5 PASTRY FLOUR

## 108. BREAD AND BAKING PRODUCTS

### 108.0 GENERAL ITEMS

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis, 1940. Bread. Methods for determination of total solids, ash, protein, crude fiber and fat, tentative baking test.

### 108.1 BREAD AND ROLLS

American Bakers Assn. Proposed Bread Standards. Cover basic standards of identity for white bread, whole wheat bread, milk bread, and raisin bread.

American Bakers Assn. Recommended Pan Sizes. Covers four sizes of pans for loaves of bread weighing 12, 16, 20, and 24 oz. baked.

American Hospital Assn. 28-1. Bread and Rolls. Covers five types of bread and rolls, three styles of bread, and five styles of rolls. Based on U.S. Gov. Federal Specification EE-B-671a for Bread and Rolls, referred to below.

U. S. Gov., Federal Specification EE-B-671a; 1937. Bread and Rolls. Covers five types—(I) white, rich formula, (II) white, lean formula, (III) whole wheat, (IV) part whole wheat, and (V) rye (bread only); three styles of bread—(A) pan (round top), (B) pan (pullman or sandwich), (C) hearth baked (plain, Vienna, French); and five styles of rolls—(A) pan rusk, (B) Parkerhouse, (C) sandwich, (D) finger, and (E) hard. Gives general and detail requirements; methods of inspection and tests (chemical analyses in

accordance with methods of the Assn. of Official Agricultural Chemists); and requirements for wrapping, packing, and marking.

*References.*—Methods of analysis, food regulations, *see* 108.0, 100; flour, *see* 107.3.

## 108.2 CAKES

U.S. Gov., Federal Specification N-C-71; 1937. Amendment 1; 1938. Cake-Mixtures; Prepared. Covers a powdered product prepared from wheat flour, with sugar or other fermentable carbohydrate substances, suitable shortening, salt, dried milk (whole or skimmed), domestic dried eggs (yolk and/or whites), baking-powder or other suitable leavening agent, with or without added coloring, and with spices and/or other proper flavoring agents. Gives general requirements; methods of inspection and tests; and requirements for packaging, packing, and marking.

## 108.3 CRACKERS

U. S. Gov., Federal Specification EE-C-651a; 1938. Crackers and Cookies. Covers three types—(I) crackers, sponge (grades A and B in plain and salted soda, grade A in plain and salted oyster, and grades A and B in graham); (II) crackers, sweet (raisin filled and fig bars); and (III) cookies (vanilla wafers and ginger snaps). Gives general and detail requirements; methods of inspection and tests (chemical analyses in accordance with methods of Assn. of Official Agricultural Chemists); and requirements for packaging, packing, and marking.

U. S. Gov., Treasury Dept., Procurement Div., No.560; 1942. Crackers and Cookies. Covers type I—crackers, cream (milk); type II—cookies, lemon. Shall conform in every respect to the provisions of the Federal Food, Drug, and Cosmetic Act of June 25, 1938. Gives requirements for ingredients, finished crackers and cookies, and details for each type; methods of sampling, inspection, and tests; and packaging, packing, and marking.

*References.*—*See* references under 108.1.

## 108.4 MACARONI, NOODLES, SPAGHETTI, AND VERMICELLI

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis, 1940. Macaroni Products. Collection and preparation of sample, total solids and moisture, ash, chlorides in ash as sodium chloride, fat, crude fiber, protein, water soluble protein-nitrogen, hydrogen-ion concentration, lipoid and lipoid phosphoric acid, unsaponifiable residue, and extraction, separation, and identification of coloring matter.

## 108.41 Macaroni

U. S. Gov., Federal Specification N-M-51a; 1941. Macaroni, Spaghetti, and Vermicelli. Covers six types—(I) semolina, (II) farina, (III) combination of semolina and farina, (IV) durum wheat flour, (V) hard wheat flour other than durum, and (VI) combination of hard wheat and durum flour. Gives requirements for material and workmanship; methods of inspection and tests (moisture determination and chemical analyses in accordance with methods of Assn. of Official Agricultural Chemists); and requirements for packaging, packing, and marking.

*References.*—Methods of analysis, food regulations, *see* 108.0, 100; flour, *see* 107.3.

## 108.42 Noodles

U.S. Gov., Federal Specification N-N-591; 1931. Amendment 1; 1935. Noodles. Covers one grade and two types—(I) water or plain, and (II) egg. Gives requirements for material and workmanship; methods of inspection and chemical analyses (in accordance with methods of Assn. of Official Agricultural Chemists); and requirements for packaging, packing, and marking.

*References.*—*See* references under 108.41.

## 108.43 Spaghetti

U. S. Gov., Federal Specification N-M-51a; 1941. Macaroni, Spaghetti, and Vermicelli. Covers six types—(I) semolina, (II) farina, (III) combination of semolina and farina, (IV) durum wheat flour, (V) hard wheat flour other than durum, and (VI) combination of hard wheat and durum flour. Gives requirements for material and workmanship; methods of inspection and tests (moisture determination and chemical analyses in accordance with methods of Assn. of Official Agricultural Chemists); and requirements for packaging, packing, and marking.

*References.*—*See* references under 108.41.

## 108.44 Vermicelli

U. S. Gov., Federal Specification N-M-51a; 1941. Macaroni, Spaghetti, and Vermicelli. Covers six types—(I) semolina, (II) farina, (III) combination of semolina and farina, (IV) durum wheat flour, (V) hard wheat flour other than durum, and (VI) combination of hard wheat and durum flour. Gives requirements for material and workmanship; methods of inspection and tests (moisture determination and chemical analyses in accordance with methods of Assn. of Official Agricultural Chemists); and requirements for packaging, packing, and marking.

*References.*—*See* references under 108.41.

## 108.5 DIABETIC FOOD

*References.*—Gluten flour, *see* 107.2.

## 108.9 MISCELLANEOUS SPECIFICATIONS FOR BAKING PRODUCTS

U. S. Gov., Federal Specification N-B-371; 1937. Biscuit and Short-Bread Mixtures; Prepared. Covers a powdered product prepared from wheat flour with suitable shortening, dried milk (whole or skimmed), sugar or other fermentable carbohydrate substance, salt, and baking powder or other suitable leavening agent. Gives general requirements; method of inspection and test; and requirements for packaging, packing, and marking.

U. S. Gov., Federal Specification N-P-361; 1937. Pie-Dough Mixture; Prepared. Gives requirements for material, workmanship, etc.; methods of inspection and tests (chemical analyses in accordance with methods of Assn. of Official Agricultural Chemists); and requirements for packaging, packing, and marking.

U. S. Gov., Federal Specification EE-B-351; 1931. Amendment 2; 1935. Biscuit (Hard Bread); or Biscuit, Canned. Covers one grade. Gives general and detail requirements; method of inspection and tests (chemical analyses in accordance with methods of Assn. of Official Agricultural Chemists); and requirements for packaging, packing, and marking.

*References.*— Methods of analysis, food regulations, *see* 108.0, 100; flour, *see* 107.3.

## 109. MISCELLANEOUS GRAIN PREPARATIONS

### 109.1 GRITS

*References.*—Hominy grits, *see* 109.2; corn chops and grits for feed, *see* 119.2.

### 109.2 HOMINY

U. S. Gov., Federal Specification N-H-521; 1931. Amendment 3; 1941. Hominy Grits. Covers one grade and two types—(A) fine and (B) coarse. Gives requirements for material, workmanship, etc.; methods of inspection and tests (chemical analyses in accordance with methods of Assn. of Official Agricultural Chemists); and requirements for packaging, packing, and marking.

U. S. Gov. Federal Specification N-H-541; 1931. Hominy; Lye, Canned. Covers one grade—fancy. Gives requirements for material, workmanship, etc.; methods of inspection and tests (chemical analyses in accordance with methods of Assn. of Official Agricultural Chemists); and requirements for packaging, packing, and marking.

*References.*— Hominy as stock feed, *see* 117.2; methods of analysis, food regulations, *see* 100; corn, *see* 103.1.

### 109.3 CORN FLAKES, CORN BREAKFAST FOODS

U. S. Gov., Federal Specification N-C-196; 1939. Amendment 2; 1940. Cereals, Breakfast; Prepared (Ready-to-Eat). Includes corn flakes. Gives requirements for corn kernels used and for the completed product; methods of inspection and tests; and requirements for packaging, packing, and marking for shipment.

*References.*— Methods of analysis, food regulations, *see* 100.

### 109.4 OATMEAL AND ROLLED OATS

U. S. Gov., Federal Specification N-O-41a; 1940. Amendment 1; 1941. Oats; Rolled or Flaked. Covers two types—(I) regular and (II) quick. Gives requirements for material, workmanship, etc.; methods of inspection and tests (chemical analyses in accordance with methods of Assn. of Official Agricultural Chemists); and requirements for packaging, packing, and marking.

*References.*— Methods of analysis, food regulations, *see* 100; oats, *see* 104.1.

### 109.5 PUFFED RICE

U. S. Gov., Federal Specification N-C-196; 1939. Amendment 2; 1940. Cereals, Breakfast; Prepared (Ready-to-Eat). Includes puffed rice (gun-puffed), crisp rice (oven-puffed), and rice flakes. Gives requirements for rice grains used and for the completed products; methods of inspection and tests; and requirements for packaging, packing, and marking for shipment.

*References.*—Methods of analysis, food regulations, *see* 100.

### 109.6 WHEAT BREAKFAST FOOD

American Hospital Assn., 28-10. Uncooked Wheat cereal. Covers four types and one grade. Based on U.S. Gov. Federal Specification N-W-261 for Uncooked Wheat Cereal, referred to below.

U. S. Gov., Federal Security Agency, Food and Drug Administration, S.R.A., F.D.C.2; 1944. Definitions and Standards for Food. Wheat. Covers—(1) crushed wheat, coarse ground wheat; identity; (2) cracked wheat; identity.

U.S. Gov., Federal Specification N-C-196; 1939. Amendment 2; 1940. Cereals, Breakfast; Prepared (Ready-to-Eat). Includes shredded wheat biscuits, wheat flakes, wheat-products flakes (25 to 40 percent bran), puffed wheat (gun-puffed), wheat bran (prepared), and malted-cereal granules. Gives requirements for wheat used and for completed product; methods of inspection and tests; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification N-W-261a; 1942. Amendment 2; 1944. Wheat Cereal; Uncooked. Covers four types—(I) farina, (II) farina with bran and germ, (III) whole wheat meal, and (IV) whole wheat cereal, rolled or flaked. Gives general requirements for material and workmanship, detail requirements for each type; methods of inspection and tests (chemical analyses in accordance with methods of Assn. of Official Agricultural Chemists), and requirements for packaging, packing, and marking for shipment.

*References.*—Farina, *see* 109.7; method of analyses, food regulations, *see* 100.

### 109.7 FARINA

U. S. Gov., Federal Security Agency, Food and Drug Administration, S.R.A., F.D.C.2; 1944. Definitions and Standards for Food. Farina. Covers—(1) farina; identity, and (2) enriched farina; identity, label statement of optional ingredients.

U. S. Gov., Federal Security Agency, Food and Drug Administration, S.R.A., F.D.C.2; 1944. Definitions and Standards for Food. Semolina. Covers identity.

U. S. Gov., Federal Specification N-W-621a; 1942. Amendment 2; 1944. Wheat Cereal; Uncooked. Covers four types—(I) farina, (II) farina with bran and germ, (III) whole wheat meal, and (IV) whole wheat cereal, rolled or flaked. Gives general requirements for material and workmanship, detail requirements for each type; methods of inspection and tests (chemical analyses in accordance with methods of Assn. of Official Agricultural Chemists); and requirements for packaging, packing, and marking for shipment.

*References.*—Methods of analysis, food regulations, *see* 100., 107.3; wheat middlings for animal feed, *see* 118.3.

### 109.9 MISCELLANEOUS SPECIFICATIONS FOR GRAIN PREPARATIONS

American Hospital Assn., 28-4. Prepared (Ready-to-Eat) Breakfast Cereals. Covers six varieties of wheat

products, one variety of corn products, and three varieties of rice products. Based on U. S. Gov. Federal Specification N-C-196, and Amendment 2, for Prepared (Ready-To-Eat) Breakfast Cereals, referred to above.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, Volume 2; 1944. Tapioca (Manioc, Mandioca, Cassava, Yuca). Covers definition, derivation, characteristics, uses, grades, containers, and substitutes.

U. S. Gov., Federal Specification N-D-591a; 1939. Doughnut, Pancake, and Waffle Mixtures; Prepared. Gives general and detail requirements for materials, workmanship, and mixtures; methods of inspection and tests; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification N-T-101a; 1938. Tapioca. Covers two types—(I) pearl (medium and small) and (II) granulated (medium and fine). Gives requirements for material and workmanship, and sizes; methods of sampling, inspection, and tests (chemical analyses in accordance with methods of Assn. of Official Agricultural Chemists); and requirements for packaging, packing, and marking for shipment.

*References.*—Methods of analysis, food regulations, *see* 100.

# 110-119 FODDERS AND FEEDS

## 110. GENERAL ITEMS

American Society of Agricultural Engineers. Adopted by the American Society of Animal Production. A Method for Determining and Expressing the Modulus of Fineness and Uniformity of Ground Feed. (ASAE Recommended Practice.) Uniformity is expressed as a ratio of three figures which indicate the proportionate amounts of coarse, medium, and fine particles in ground feed. The sum of these three figures must always equal ten (10), and may vary from a 10:0:0 to a 0:0:10 ratio, which provides sixty-six different combinations for expressing the proportion of coarse, medium, and fine materials.

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis, 1940. Grain and Stock Feeds. Oat Hulls in Oats and Oat Feeds. Tentative methods for determination.

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis, 1940. Plants. Methods for determination of sand and silica, calcium, magnesium, manganese, sodium and potassium, copper, zinc, sulphur, phosphorus, chlorine, total nitrogen, and tentative methods for moisture, ash, iron, aluminum, arsenic, sugars, sucrose, starch, ether extract, and crude fiber.

## 111. HAY

### 111.0 GENERAL ITEMS

U. S. Gov. Dept. of Agriculture, War Food Administration, Office of Distribution. Handbook of Official Hay Standards, including Straw Standards, 1936. Repromulgated, 1940. Includes definitions and class and grade requirements for nine major groups of hay—(I) alfalfa and alfalfa mixed; (II) timothy and clover; (III) prairie; (IV) Johnson and Johnson mixed; (V) grain, wild oat, vetch, and grain mixed; (VI) lespedeza and lespedeza mixed; (VII) soybean and soybean mixed; (VIII) grass; and (IX) mixed. Gives requirements for classes and grades, definitions of groups, important features of official hay standards, and definitions.

U. S. Gov., Federal Specification N-H-121a; 1945. Hay; Feeding. Covers eleven types—(I) alfalfa and alfalfa mixed; (II) timothy and clover; (III) prairie; (IV) Johnson and Johnson mixed; (V) grain, wild oat, veach and grain mixed; (VI) lespedeza and lespedeza mixed; (VII) soybean and soybean mixed; (VIII) cowpea and cowpea mixed; (IX) peanut and peanut mixed; (X) grass; and (XI) mixed. Shall conform to the provisions of the Federal Food, Drug, and Cosmetic Act. Gives detail requirements; inspection; and packaging, packing, and marking for shipment.

### 111.1 ALFALFA HAY

National Hay Assn., Inc. Grades of Hay and Straw, 1922. Alfalfa Hay. Contains requirements for six grades of hay, as to color, permissible other grasses, foreign matter, and baling.

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. Handbook of Official Hay Standards, including Straw Standards, 1936. Repromulgated, 1940. Includes definitions and class and grade requirements for alfalfa and alfalfa mixed hay. Covers ten classes—alfalfa, alfalfa light grass mixed, alfalfa heavy grass mixed, alfalfa light timothy mixed, alfalfa heavy timothy mixed, alfalfa clover mixed, alfalfa light Johnson mixed, alfalfa heavy Johnson mixed, alfalfa light grain mixed, and alfalfa heavy grain mixed; four U. S. grades—No. 1, No. 2, No. 3, and sample; four U. S. grades for extra leafy hay; three U. S. grades for leafy hay; four U. S. grades for extra green hay; three U. S. grades for green hay; and four U. S. grades for coarse hay.

U. S. Gov., Federal Specification N-H-121a; 1945. Hay; Feeding. Includes alfalfa hay and alfalfa mixed hay. Shall conform to the provisions of the Feferal Food, Drug, and Cosmetic Act. Gives detail requirements; inspection; and packaging, packing, and marking for shipment.

*References.*—Alfalfa meal, *see* 112.6; alfalfa mixed hays, *see* 111.5.

### 111.2 CEREAL HAY

National Hay Assn., Inc. Grades of Hay and Straw, 1922. Cereal Hay. Requirements for three grades of wheat, oats, or mixture of the two, with permissible quantity of rye, color, and baling.

*References.*—Wild oat hay, *see* 111.99; cereal mixed hays, *see* 111.5.

### 111.3 BERMUDA HAY

National Hay Assn., Inc. Grades of Hay and Straw, 1922. Bermuda Hay. Requirements for three grades

as to color, mixture of other native grasses, and baling.

## 111.4 CLOVER HAY

National Hay Assn., Inc. Grades of Hay and Straw, 1922. Clover Hay. Contains requirements for two grades of hay, with permissible timothy and other grasses, baled.

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. Handbook of Official Hay Standards, including Straw Standards, 1936. Repromulgated, 1940. Includes definitions and class and grade requirements for timothy and clover hay. Covers eight classes—timothy, timothy light clover mixed, timothy medium clover mixed, timothy light grass mixed, timothy heavy grass mixed, timothy light alfalfa mixed, clover, and clover light timothy mixed; four U. S. grades—No. 1, No. 2, No. 3, and sample; four U. S. grades for extra green hay; three U. S. grades for green hay; and four U. S. grades for stemmy hay.

U. S. Gov., Federal Specification N-H-121a; 1945. Hay; Feeding. Includes timothy and clover hay. Shall conform to the provisions of the Federal Food, Drug, and Cosmetic Act. Gives detail requirements; inspection; and packaging, packing, and marking for shipment.

*References.*—Clover mixed hay, *see* 111.5.

## 111.5 MIXED HAY

National Hay Assn., Inc. Grades of Hay and Straw, 1922. Alfalfa and Johnson Mixed Hay. Gives requirements for three grades, with proportion of each grass, baled.

National Hay Assn., Inc. Grades of Hay and Straw, 1922. Alfalfa, Timothy, and Grass-Mixed Hay. Requirements for five grades, with percentages of constituents for each grade, color, amount of fox tail, baled.

National Hay Assn., Inc. Grades of Hay and Straw, 1922. Cereal or Grain and Vetch Hay. Requirements for three grades with proportions of vetch in each, color and condition, baled.

National Hay Assn., Inc. Grades of Hay and Straw, 1922. Clover Mixed Hay. Requirements for six grades of clover mixed with timothy, and other grasses, amounts of constituents for each grade, baled.

National Hay Assn., Inc. Grades of Hay and Straw, 1922. Mixed Peavine or Soybean Hay. Gives requirements for three grades with permissible amounts of sorghum or crab grass, baled.

National Hay Assn., Inc. Grades of Hay and Straw, 1922. Mixed Timothy and Wild Hay. Requirements for two grades with amount of timothy in each grade, baled.

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. Handbook of Official Hay Standards, including Straw Standards, 1936. Repromulgated, 1940. Includes definitions and class and grade requirements for lespedeza and lespedeza mixed hay. Covers five classes—lespedeza, lespedeza light grass mixed, lespedeza heavy grass mixed, lespedeza light Johnson mixed, and lespedeza heavy Johnson mixed; and four U. S. grades—No. 1, No. 2, No. 3, and sample; four U. S. grades for extra leafy hay; three U. S. grades for leafy hay; four U. S. grades for extra green hay; and three U. S. grades for green hay.

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. Handbook of Official Hay Standards, including Straw Standards, 1936. Repromulgated, 1940. Includes definitions and class and grade requirements for mixed hay. Covers definitions of class, grade requirements, and grade designations.

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. Handbook of Official Hay Standards, including Straw Standards, 1936. Repromulgated, 1940. Includes definitions and class and grade requirements for soybean and soybean mixed hay. Covers five classes—soybean, soybean light grass mixed, soybean heavy grass mixed, soybean light Johnson mixed, and soybean heavy Johnson mixed; and four U. S. grades—No. 1, No. 2, No. 3, and sample; four U. S. grades for extra green hay; three U. S. grades for green hay; three U. S. grades for leafy hay; and four U. S. grades for coarse hay.

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. Handbook of Official Hay Standards, including Straw Standards, 1936. Repromulgated, 1940. Includes definitions and class and grade requirements for grain, wild oat, vetch, and grain mixed hay. Covers five classes of mixed hay—red oat and wild oat mixed, wheat and wild oat mixed; wild oat and grain mixed; oat light alfalfa mixed, wheat light alfalfa mixed, barley light alfalfa mixed; oat light vetch mixed, wheat light vetch mixed; oat and vetch mixed, wheat and vetch mixed, and vetch; and four U. S. grades—No. 1, No. 2, No. 3, and sample; and grades for coarse hay.

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. Handbook of Official Hay Standards, including Straw Standards, 1936. Repromulgated, 1940. Includes definitions and class and grade requirements for timothy and clover hay. Covers eight classes—timothy, timothy light clover mixed, timothy medium clover mixed, timothy light grass mixed, timothy heavy grass mixed, timothy light alfalfa mixed, clover, and clover light timothy mixed; four U. S. grades—No. 1, No. 2, No. 3, and sample; four U. S. grades for extra green hay; three U. S. grades for green hay; and four U. S. grades for stemmy hay.

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. Handbook of Official Hay Standards, including Straw Standards, 1936. Repromulgated, 1940. Includes definitions and class and grade requirements for Johnson and Johnson mixed hay. Covers five classes—Johnson, Johnson light grass mixed, Johnson heavy grass mixed, Johnson light alfalfa mixed, and Johnson light lespedeza mixed; four U. S. grades—No. 1, No. 2, No. 3, and sample; four U. S. grades for extra green hay; three U. S. grades for green hay; four U. S. grades for fine hay; and four U. S. grades for coarse hay.

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. Handbook of Official Hay Standards, including Straw Standards, 1936. Repromulgated, 1940. Includes definitions and class

and grade requirements for alfalfa and alfalfa mixed hay. Covers ten classes—alfalfa, alfalfa light grass mixed, alfalfa heavy grass mixed, alfalfa light timothy mixed, alfalfa heavy timothy mixed, alfalfa clover mixed, alfalfa light Johnson mixed, alfalfa heavy Johnson mixed, alfalfa light grain mixed, and alfalfa heavy grain mixed; four U. S. grades—No.1, No.2, No.3, and sample; four U. S. grades for extra leafy hay; three U.S. grades for leafy hay; four U. S. grades for extra green hay; three U.S. grades for green hay; and four U.S. grades for coarse hay.

U. S. Gov., Federal Specification N-H-121a; 1945. Hay; Feeding. Includes grain, wild oat, vetch, and grain mixed hay. Shall conform to the provisions of the Federal Food, Drug, and Cosmetic Act. Gives detail requirements; inspection; and packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification N-H-121a; 1945. Hay; Feeding. Includes mixed hay. Shall conform to the provisions of the Federal Food, Drug, and Cosmetic Act. Gives detail requirements; inspection; and packaging, packing, and marking for shipment.

## 111.6 TIMOTHY HAY

National Hay Assn., Inc. Grades of Hay and Straw, 1922. Timothy Hay. Gives definitions of three grades of baled hay, with permissible amounts of other grasses and foreign matter.

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. Handbook of Official Hay Standards, including Straw Standards, 1936. Repromulgated, 1940. Includes definitions and class and grade requirements for timothy and clover hay. Covers eight classes—timothy, timothy light clover mixed, timothy medium clover mixed, timothy light grass mixed, timothy heavy grass mixed, timothy light alfalfa mixed, clover, and clover light timothy mixed; four U. S. grades—No.1, No.2, No.3, and sample; four U.S. grades for extra green hay; three U. S. grades for green hay; and four U. S. grades for stemmy hay.

U. S. Gov., Federal Specification N-H-121a; 1945. Hay; Feeding. Includes timothy and clover hay. Shall conform to the provisions of the Federal Food, Drug, and Cosmetic Act. Gives detail requirements; inspection; and packaging, packing, and marking for shipment.

*References.*—Timothy mixed hay, *see* 111.5.

## 111.7 SILAGE

National Assn. of Silo Manufacturers. Grass Silage, 1940. Describes suitable grasses, legumes and cereals to be used, cutting time, quantities to be cut, windrowing, loading equipment, preservative required, filling the silo, and feeding.

## 111.9 MISCELLANEOUS SPECIFICATIONS FOR HAY

### 111.91 Johnson Hay

National Hay Assn., Inc. Grades of Hay and Straw, 1922. Johnson Hay. Requirements for three grades with amount of clover or other native grasses, color, condition, baled.

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. Handbook of Official Hay Standards, including Straw Standards, 1936. Repromulgated, 1940. Includes definitions and class and grade requirements for Johnson and Johnson mixed hay. Covers five classes—Johnson, Johnson light grass mixed, Johnson heavy grass mixed, Johnson light alfalfa mixed, and Johnson light lespedeza mixed; four U.S. grades—No.1, No.2, No.3, and sample; four U. S. grades for extra green hay; three U. S. grades for green hay; four U. S. grades for fine hay; and four U. S. grades for coarse hay.

U. S. Gov., Federal Specification N-H-121a; 1945. Hay; Feeding. Includes Johnson and Johnson mixed hay. Shall conform to the provisions of the Federal Food, Drug, and Cosmetic Act. Gives detail requirements; inspection; and packaging, packing, and marking for shipment.

*References.*—Johnson mixed hay, *see* 111.5.

### 111.92 Lespedeza Hay

National Hay Assn., Inc. Grades of Hay and Straw, 1922. Lespedeza Hay. Requirements for two grades with amount of native grass in each, baled.

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. Handbook of Official Hay Standards, including Straw Standards, 1936. Repromulgated, 1940. Includes definitions and class and grade requirements for lespedeza and lespedeza mixed hay. Covers five classes—lespedeza, lespedeza light grass mixed, lespedeza heavy grass mixed, lespedeza light Johnson mixed, and lespedeza heavy Johnson mixed; and four U. S. grades—No.1, No.2, No.3, and sample; four U. S. grades for extra leafy hay; three U. S. grades for leafy hay; four U. S. grades for extra green hay; and three U. S. grades for green hay.

U. S. Gov., Federal Specification N-H-121a; 1945. Hay; Feeding. Includes lespedeza and lespedeza mixed hay. Shall conform to the provisions of the Federal Food, Drug, and Cosmetic Act. Gives detail requirements; inspection; and packaging, packing, and marking for shipment.

*References.*—Lespedeza hay, *see* 119.9.

### 111.93 Prairie Hay

National Hay Assn., Inc. Grades of Hay and Straw, 1922. Prairie Hay. Requirements for six grades with amount of upland, midland, and permissible weeds, color and condition.

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. Handbook of Official Hay Standards, including Straw Standards, 1936. Repromulgated, 1940. Includes definitions and class and grade requirements for prairie hay. Covers three classes—upland, midland, and upland-midland mixed; four U.S. grades—No.1, No.2, No.3, and sample; four U. S. grades for extra green hay; and three U. S. grades for green hay.

U. S. Gov., Federal Specification N-H-121a; 1945. Hay; Feeding. Includes prairie hay. Shall conform to the provisions of the Federal Food, Drug, and Cosmetic Act. Gives detail requirements; inspection; and packaging, packing, and marking for shipment.

### 111.94 Peanut Hay

National Hay Assn., Inc. Grades of Hay and Straw, 1922. Peanut Hay. Requirements for three grades, including permissible amount of native grasses, foreign matter and dust, baled.

U. S. Gov., Federal Specification N-H-121a; 1945. Hay; Feeding. Includes peanut and peanut mixed hay. Shall conform to the provisions of the Federal Food, Drug, and Cosmetic Act. Gives detail requirements; inspection; and packaging, packing, and marking for shipment.

### 111.95 Peavine

National Hay Assn., Inc. Grades of Hay and Straw, 1922. Peavine or Soybean Hay. Requirements for five grades, either cowpeas or soybeans, color, condition, baled.

U.S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. Tentative U.S. Standards for Cowpea and Cowpea Mixed Hay, 1940. (For research and educational purposes only). Gives definitions, class requirements (cowpea hay, cowpea light grass mixed, cowpea heavy grass mixed, cowpea light Johnson mixed, and cowpea heavy Johnson mixed), U. S. grades (No.1, No.2, No.3, and sample grade), and special grades.

U. S. Gov., Federal Specification N-H-121a; 1945. Hay; Feeding. Includes soybean and soybean mixed hay, and cowpea and cowpea mixed hay. Shall conform to the provisions of the Federal Food, Drug, and Cosmetic Act. Gives detail requirements; inspection; and packaging, packing, and marking for shipment.

### 111.96 Salt or Alkali Hay

National Hay Assn., Inc. Grades of Hay and Straw, 1922. Salt or Alkali Hay. Requirements for four grades of baled hay, color, condition, and weeds.

### 111.97 Sudan Hay

National Hay Assn., Inc. Grades of Hay and Straw, 1922. Sudan Hay. Same as Johnson hay.

### 111.98 Midland Hay

National Hay Assn., Inc. Grades of Hay and Straw, 1922. Midland Hay. Requirements for two grades, as to color and condition, with allowable amount of weeds.

### 111.99 Specifications for Hay Not Elsewhere Classified

National Hay Assn., Inc. Grades of Hay and Straw, 1922. Packing Hay. Defined as wild prairie hay not good enough for other grades and not caked.

National Hay Assn., Inc. Grades of Hay and Straw, 1922. Sample Hay. Defined as sound, baled, mixed grassy, threshed, or hay not covered by other grades.

U.S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. Handbook of Official Hay Standards, including Straw Standards, 1936. Repromulgated, 1940. Includes definitions and class and grade requirements for grain, wild oat, vetch, and grain mixed hay. Covers eleven U. S. classes—oat; red oat; wheat; barley; wild oat; red oat and wild oat mixed, wheat and wild oat mixed; wild oat grain mixed; oat light alfalfa mixed, wheat light alfalfa mixed, barley light alfalfa mixed; oat light vetch mixed, wheat light vetch mixed; oat and vetch mixed, wheat and vetch mixed; and vetch; and four U. S. grades—No.1, No.2, No.3, and sample; and grades for coarse hay.

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. Handbook of Official Hay Standards, including Straw Standards, 1936. Repromulgated, 1940. Includes definitions and class and grade requirements for grass hay. Covers four U. S. grades—No.1, No.2, No.3, and sample; four U. S. grades for extra green hay; and three U.S. grades for green hay.

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. Handbook of Official Hay Standards, including Straw Standards, 1936. Repromulgated, 1940. Includes definitions and class and grade requirements for soybean and soybean mixed hay. Covers five classes—soybean, soybean light grass mixed, soybean heavy grass mixed, soybean light Johnson mixed, and soybean heavy Johnson mixed; and four U.S. grades—No.1, No.2, No.3, and sample; four U. S. grades for extra green hay; three U. S. grades for green hay; three U. S. grades for leafy hay; and four U. S. grades for coarse hay.

U.S. Gov., Federal Specification N-H-121a; 1945. Hay; Feeding. Includes grass hay. Shall conform to the provisions of the Federal Food, Drug, and Cosmetic Act. Gives detail requirements; inspection; and packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification N-H-131a; 1945. Hay and Straw; (for) Bedding. Includes sixteen classes of bedding hay—timothy, timothy light grass mixed, timothy heavy grass mixed, upland prairie, midland prairie, upland-midland prairie mixed, Johnson, Johnson light grass mixed, Johnson heavy grass mixed, wheat, oat, red oat, wild oat, red oat and wild oat mixed, wheat and wild oat mixed, and grass. Grades to conform to Official Standards of the U. S. as promulgated by the War Food Administration, U. S. Dept. of Agriculture. Gives methods of inspection (chemical analyses, if required, shall be in accordance with methods of Official Agricultural Chemists), and packaging, packing, and marking for shipment.

## 112. OIL SEED CAKES AND OIL CAKE MEAL

### 112.0 GENERAL ITEMS

### 112.1 FLAXSEED (LINSEED) OIL CAKE AND MEAL

Assn. of American Feed Control Officials. Definitions of Feedingstuffs, 1944. Linseed and Flax Products. Defines ground flaxseed or flaxseed meal, protein linseed oil cake or chips, protein linseed oil meal, protein linseed cubes or pellets, flaxseed screenings oil feed, protein linseed feed, and flax plant byproduct.

U.S. Gov., Federal Specification N-F-211b; 1944. Feedstuff; Concentrated. Includes requirements for flaxseed meal and linseed cake or meal to conform to the provisions of the Federal Food, Drug, and Cosmetic Act; methods of inspection and test (chemical analyses in accordance with methods of Assn. of

Agricultural Chemists); and requirements for packaging, labeling, packing, and marking.

*References.*—General definitions, *see* 112.0; methods of analysis for cottonseed oil cake, *see* 112.3; methods of analysis of feeding stuffs, *see* 117.0; linseed oil, *see* 143.1, 813.5, 848.1.

## 112.2 PEANUT OIL CAKE AND MEAL

Assn. of American Feed Control Officials. Definitions of Feedingstuffs, 1944. Peanut Products. Defines protein peanut oil cake and meal and unhulled peanut oil feed.

National Cottonseed Products Assn. Rules, 1945. Definitions of Grade and Quality. Article 11. Peanut Cake. Rules 89 and 90. Covers peanut cake and peanut cake prime quality.

National Cottonseed Products Assn. Rules, 1945. Definitions of Grade and Quality. Article 15. Peanut Meal. Rules 115 and 116. Covers peanut meal and peanut meal prime quality.

Southeastern Peanut Assn. Bulletin D. Official Rules, 1944. Peanut Cake. A product of peanut only, composed principally of the kernel, with such portion of the hull, or fiber, and oil, as may be left in the ordinary course of manufacture. Gives requirements for prime quality peanut cake and recommended contents of crude fat and crude fiber.

Southeastern Peanut Assn. Bulletin D. Official Rules, 1944. Peanut Meal. A product of the peanut only, being ground peanut cake, and shall correspond to peanut cake as to its classification and requirements. Gives requirements for prime quality peanut meal and recommended contents of crude fat and crude fiber.

U. S. Gov., Federal Specification N-F-211b; 1944. Feedstuff; Concentrated. Includes requirements for peanut oil meal to conform to the provisions of the Federal Food, Drug, and Cosmetic Act; methods of inspection, and test (chemical analyses in accordance with methods of Assn. of Agricultural Chemists); and requirements for packaging, labeling, packing, and marking.

*References.*—General definitions, *see* 112.0; methods of analysis of cottonseed oil cake, *see* 112.3; methods of analysis of feedingstuffs, see 117.0; peanuts, peanut oil, *see* 135.5, 142.6.

## 112.3 COTTONSEED OIL CAKE AND MEAL

American Oil Chemists' Society. Methods of Analysis, Cottonseed Cake, Meal and Meats, 1942. Covers preparation of sample, moisture, oil, and fat; nitrogen, ammonia and protein; table for the conversion of nitrogen into ammonia and protein; and color of cottonseed cake and cottonseed meal.

American Oil Chemists' Society. Methods of Sampling Slab Cake, Meal, and Cracked Cake, 1940. Includes methods of sampling cottonseed slab cake, meal, and cracked cake.

Assn. of American Feed Control Officials. Definitions of Feedingstuffs, 1944. Cottonseed Products. Defines cottonseed meal, two grades of protein cottonseed meal, protein cottonseed feed, two grades of whole pressed cottonseed, cottonseed cake, six grades of protein cottonseed cake, protein cottonseed cake and meal, and Munsell color standard for cottonseed cake and meal.

National Cottonseed Products Assn. Rules, 1945. Definitions of Grade and Quality. Article 10. Cottonseed Cake. Rules 85 to 87. Covers cottonseed cake, cottonseed cake prime quality, and cottonseed cake off quality.

National Cottonseed Products Assn. Rules, 1945. Definitions of Grade and Quality. Article 12. Sized Cottonseed Cake. Rules 91 to 95. Covers nut-size cake, sheep-size cake, pea-size cake, pebble-size cake, and cottonseed cake screenings.

National Cottonseed Products Assn. Rules, 1945. Definitions of Grade and Quality. Article 13. Cottonseed Meal. Rules 100 to 103. Covers cottonseed meal, cottonseed meal prime quality, type of label for 36 percent cottonseed meal prime quality, type of label for 41 percent cottonseed meal prime quality, type of label for 43 percent cottonseed meal prime quality, Munsell color standards for prime cottonseed cake and meal, and cottonseed meal off quality.

National Cottonseed Products Assn. Rules, 1945. Definitions of Grade and Quality. Article 14. Whole Pressed Cottonseed. Rules 106 to 109. Covers whole pressed cottonseed, whole pressed cottonseed prime quality, and ground whole pressed cottonseed prime quality.

National Cottonseed Products Assn. Rules, 1945. Sampling and Methods of Chemical Analysis. Cake, Meal, and Meats. Rules 244, 245, and 273. Covers methods of sampling, preparation of sample, moisture, oil, fat, nitrogen, ammonia, protein, color of cottonseed cake and cottonseed meal, and odor of cottonseed cake and meal.

U.S. Gov., Federal Specification N-F-211b; 1944. Feedstuff; Concentrated. Includes cottonseed meal to conform to the provisions of the Federal Food, Drug, and Cosmetic Act; methods of inspection, and test (chemical analyses in accordance with methods of Assn. of Agricultural Chemists); and requirements for packaging, labeling, packing, and marking.

*References.*—General definitions, *see* 112.0; cottonseed, cottonseed oil, *see* 141, 142.4, and 813.3; methods of analysis of feedingstuffs, *see* 117.0.

## 112.4 COCOANUT OIL CAKE AND MEAL

Assn. of American Feed Control Officials. Definitions of Feedingstuffs, 1944. Definitions for protein cocoanut oil meal or protein copra oil meal.

*References.*—General definitions, *see* 112.0; methods of analysis of cottonseed oil cake, *see* 112.3; methods of analysis of feeding stuffs, *see* 117.0; cocoanut oil, *see* 142.1.

## 112.5 ALFALFA MEAL

Assn. of American Feed Control Officials. Definitions of Feedingstuffs, 1944. Alfalfa Products. Defines chopped alfalfa or cut alfalfa, alfalfa meal, alfalfa leaf meal, and alfalfa stem meal.

U.S. Gov., Federal Specification N-F-211b; 1944. Feedstuff; Concentrated. Includes requirements for alfalfa meal and alfalfa leaf meal to conform to the provisions of the Federal Food, Drug, and Cosmetic Act; methods of inspection, and test (chemical analyses in accordance with methods of Assn. of Agricultural Chemists); and requirements for packaging, labeling, packing, and marking.

*References.*—Alfalfa hay, *see* 111.1.

### 112.6 SOYBEAN OIL CAKE AND MEAL

Assn. of American Feed Control Officials. Definitions of Feedingstuffs, 1944. Soybean Products. Defines ground soybeans, protein soybean oil cake or chips, and protein soybean oil meal.

National Soybean Processors Assn. Year Book and Trading Rules, 1944-45. Soybean Oil Meal, Official Methods of Analysis. Testing methods as adopted by the Assn. of Official Agricultural Chemists shall be used as the official methods of analysis, except as otherwise specified. Covers moisture, protein, oil, crude fiber, reagents, apparatus, and determination.

U. S. Gov., Federal Specification N-F-211b; 1944. Feedstuff; Concentrated. Includes requirements for soybean oil meal to conform to the provisions of the Federal Food, Drug, and Cosmetic Act; methods of inspection and test (chemical analyses in accordance with methods of Assn. of Agricultural Chemists); and requirements for packaging, labeling, packing, and marking.

### 112.9 MISCELLANEOUS SPECIFICATIONS FOR OIL MEAL AND OIL CAKE

Assn. of American Feed Control Officials. Definitions of Feedingstuffs, 1944. Corn Products. Defines corn oil cake and corn oil meal.

*References.*—General definitions, *see* 112.0; methods of analysis of cottonseed oil cake, *see* 112.3; methods of analysis of feedingstuffs, *see* 117.0; corn meal, *see* 103.4.

## 113. STRAW

### 113.1 RYE STRAW

National Hay Assn., Inc. Grades of Hay and Straw, 1922. Rye Straw. Includes two grades of straight rye straw, and two grades of tangled rye straw, color, condition, and baled requirements.

U.S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. Handbook of Official Hay Standards, including Straw Standards, 1936. Repromulgated, 1940. Includes rye straw. Gives definitions and requirements for chaff, foreign material, color, percentage of chaff and foreign material; grades—U. S. No.1, U. S. No.2, and sample; and special grades including straight rye, long rye, and chaffy.

### 113.2 OAT STRAW

National Hay Assn., Inc. Grades of Hay and Straw, 1922. Oat Straw. Definitions of two grades, the better grade baled.

U.S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. Handbook of Official Hay Standards, including Straw Standards, 1936. Repromulgated, 1940. Includes oat straw. Gives definitions and requirements for chaff, foreign material, color, percentage of chaff and foreign material; and grades—U. S. No.1, U. S. No.2, sample, and chaffy.

### 113.3 WHEAT STRAW

National Hay Assn., Inc. Grades of Hay and Straw, 1922. Wheat Straw. Definitions of two grades, the better grade baled.

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. Handbook of Official Hay Standards, including Straw Standards, 1936. Repromulgated, 1940. Includes wheat straw. Gives definitions and requirements for chaff, foreign material, color, percentage of chaff and foreign material; and grades—U. S. No.1, U. S. No.2, sample, and chaffy.

### 113.4 RICE STRAW

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. Handbook of Official Hay Standards, including Straw Standards, 1936. Repromulgated, 1940. Includes rice straw. Gives definitions and requirements for chaff, foreign material, color, percentage of chaff and foreign material; and grades—U. S. No.1, U. S. No.2, sample, and chaffy.

### 113.5 BARLEY STRAW

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. Handbook of Official Hay Standards, including Straw Standards, 1936. Repromulgated, 1940. Includes barley straw. Gives definitions and requirements for chaff, foreign material, color, percentage of chaff and foreign material; and grades—U. S. No.1, U. S. No.2, sample, and chaffy.

### 113.9 MISCELLANEOUS STRAW

U. S. Gov., Federal Specification N-H-131a; 1945. Hay and Straw; (for) Bedding. Includes five types of bedding straw—wheat, oat, barley, rye, and rice. Grades to conform to Official Standards of the U. S. as promulgated by the War Food Administration, U. S. Dept. of Agriculture. Gives methods of inspection (chemical analyses, if required, in accordance with methods of Assn. of Official Agricultural Chemists) and requirements for packaging, packing, and marking for shipment.

## 117. FODDERS AND POULTRY FEEDS

### 117.0 GENERAL ITEMS

### 117.1 COTTONSEED FEED

*References.*—Cottonseed, *see* 141; cottonseed oil cake and meal, *see* 112.3.

### 117.2 HOMINY FEED

Assn. of American Feed Control Officials. Definitions of Feedingstuffs, 1944. Corn Products. Defines hominy feed.

U.S. Gov., Federal Specification N-F-211b; 1944. Feedstuff; Concentrated. Includes requirements for hominy feed to conform to the provisions of the Federal Food, Drug, and Cosmetic Act; methods of inspection and test (chemical analyses in accordance with methods of Assn. of Agricultural Chemists); and requirements for packaging, labeling, packing, and marking.

*References.*—Hominy, food for humans, *see* 109.2; methods of analysis, *see* 117.0.

### 117.3 RICE FEED

*References.*—Rice, *see* 105.1; rice as a feedingstuff, *see* 119.5; methods of analysis, *see* 117.0.

### 117.4 WHEAT FEED

*References.*—Wheat, *see* 107.1; wheat as a feedingstuff, *see* 118.1.

### 117.9 MISCELLANEOUS FEED

U. S. Gov., U. S. Army, Signal Corps. Specification 24-17B; 1942. Feed; Pigeon.

## 118. MILL FEEDS

### 118.1 WHEAT FEED

Assn. of American Feed Control Officials. Definitions of Feedingstuffs, 1944. Wheat Products. Defines wheat bran, standard middlings, flour middlings, red dog, low-grade feed flour, bran and standard middlings, hard wheat mixed feed, brown shorts, gray shorts, white shorts, and mixed feed.

U. S. Gov., Federal Specification N-F-211b; 1944. Feedstuff; Concentrated. Includes requirements for wheat white shorts, wheat flour middlings, wheat (red dog), and wheat mixed feed to conform to the provisions of the Federal Food, Drug, and Cosmetic Act; methods of inspection and test (chemical analyses in accordance with methods of Assn. of Agricultural Chemists); and requirements for packaging, labeling, packing, and marking.

*References.*—Wheat, *see* 107.1; methods of analyses, *see* 117.0, 100.

### 118.2 BRAN

Assn. of American Feed Control Officials. Definitions of Feedingstuffs, 1944. Bran. Defines bran for rice, rye, corn, and wheat.

U. S. Gov., Federal Specification N-F-211b; 1944. Feedstuff; Concentrated. Includes requirements for bran (wheat bran) and wheat bran and screenings to conform to the provisions of the Federal Food, Drug, and Cosmetic Act; methods of inspection and test (chemical analyses in accordance with methods of Assn. of Agricultural Chemists); and requirements for packaging, labeling, packing, and marking.

*References.*—Wheat, *see* 118.1, 107.1; methods of analysis, *see* 117.0, 100.

### 118.3 MIDDLINGS

Assn. of American Feed Control Officials. Definitions of Feedingstuffs, 1944. Middlings. Defines rye, wheat, oat middlings, and flour middlings.

U. S. Gov., Federal Specification N-F-211b; 1944. Feedstuff; Concentrated. Includes requirements for standard middlings to conform to the provisions of the Federal Food, Drug, and Cosmetic Act; methods of inspection and test (chemical analyses in accordance with methods of Assn. of Agricultural Chemists); and requirements for packaging, labeling, packing, and marking.

*References.*—Wheat, *see* 118.1, 107.1; methods of analysis, *see* 117.0, 100.

### 118.9 MISCELLANEOUS SPECIFICATIONS FOR MILL FEEDS

Assn. of American Feed Control Officials. Definitions of Feedingstuffs, 1944. Buckwheat Products. Defines buckwheat shorts and buckwheat middlings.

Assn. of American Feed Control Officials. Definitions of Feedingstuffs, 1944. Oat Products. Defines oat hulls, oat middlings, oat shorts, oat chop, ground oats, pulverized oats, crushed or crimped oats, oat groats, hulled oats or undried oat groats, feeding oat meal, cut oat groats, cracked oat groats, ground oat groats, clipped oat byproduct, and oat mill feed.

Assn. of American Feed Control Officials. Definitions of Feedingstuffs, 1944. Rye Products. Defines rye bran, rye feed, rye red dog, rye low-grade feed flour, rye middlings, and rye flour middlings.

U.S. Gov., Federal Specification N-F-211b; 1944. Feedstuff; Concentrated. Includes requirements for brown shorts and gray shorts to conform to the provisions of the Federal Food, Drug, and Cosmetic Act; methods of inspection and test (chemical analyses in accordance with methods of Assn. of Agricultural Chemists); and requirements for packaging, labeling, packing, and marking.

*References.*—Rye, oats, buckwheat, wheat, *see* 106.1, 104.1, 102.1, 107.1; methods of analysis, *see* 117.0, 100.

## 119. MISCELLANEOUS FODDERS AND FEEDS

### 119.1 BEET PULP FEED

Assn. of American Feed Control Officials. Definitions of Feedingstuffs, 1944. Definition for dried beet pulp.

U.S. Gov., Federal Specification N-F-211b; 1944. Feedstuff; Concentrated. Includes requirements for beet pulp (dried) to conform to the provisions of the Federal Food, Drug, and Cosmetic Act; methods of inspection and test (chemical analyses in accordance with methods of Assn. of Agricultural Chemists); and requirements for packaging, labeling, packing, and marking.

### 119.2 CORN CHOPS AND GRITS

Assn. of American Feed Control Officials. Definitions of Feedingstuffs, 1944. Corn Products. Defines corn chop, ground corn, cracked corn; screened corn chop, screened ground corn, or screened cracked corn; corn grits or hominy grits; ear corn chops and corn screenings.

*References.*—Corn meal, corn feed meal, *see* 103.4; methods of analysis, *see* 117.0, 100.

### 119.3 MEAT MEAL, MEAT SCRAPS, BONE MEAL, BLOOD MEAL

Assn. of American Feed Control Officials. Definitions of Feedingstuffs, 1944. Animal Products. Defines blood meal, blood flour, meat, meat byproducts, meat meal, meat scraps, digester tankage, meat and bone meal digester tankage, whale meal, animal liver meal, raw bone meal, steamed bone meal, special steamed bone meal, bone charcoal or bone black, and spent bone meal.

*References.*—Methods of analysis, *see* 117.0.

### 119.4 BREWERS' AND DISTILLERS' DRIED GRAINS

Assn. of American Feed Control Officials. Definitions of Feedingstuffs, 1944. Brewers' and Distillers' Products. Defines brewers' dried grains, malt sprouts, percent protein malt cleanings, malt hulls,

corn distillers' dried grains, rye distillers' dried grains, distillers' corn and rye solubles, molasses distillers' solubles, yeast dried grains, or vinegar dried grains.

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis, 1940. Malt-Tentative methods (same as official methods for analysis of malt except editing for style, adopted by the American Society of Brewing Chemists, 1935); prepared corn or rice products (flaked corn or flaked rice)—tentative methods for determination of moisture, fat, and extract; corn grits, corn meal, brewer's rice—tentative methods for determination of moisture, fat, and extract; and refined grits and refined flakes.

U. S. Gov., Federal Specification N-F-211b; 1944. Feedstuff; Concentrated. Includes requirements for distillers grain (dried) to conform to the provisions of the Federal Food, Drug, and Cosmetic Act; methods of inspection and test (chemical analyses in accordance with methods of Assn. of Agricultural Chemists); and requirements for packaging, labeling, packing, and marking.

U. S. Gov., Federal Specification N-M-96; 1939. Malt-Preparations. Covers one grade and two types: (I) Dry powdered malted cereal sirup—(a) nondiastatic, (b) low diastatic, and (c) medium diastatic; and (II) malted cereal sirup—(a) nondiastatic, (b) low diastatic, and (c) medium diastatic. Gives requirements for material, workmanship, minimum percent reducing sugar as maltose hydrate before inversion, maximum dextrose (glucose), percent dextrose in terms of maltose, nitrogen minimum percent, and color; methods of inspection and test (chemical analyses in accordance with methods of Assn. of Official Agricultural Chemists); and requirements for packaging, packing, and marking.

*References.*—Methods of analysis, *see* 117.0.

## 119.5 RICE FEED

Assn. of American Feed Control Officials. Definitions of Feedingstuffs, 1944. Rice Products. Defines rice bran, rice hulls, rice polishings, rice meal, ground rough rice, rice stone bran, and rice huller bran.

*References.*—Methods of analysis, *see* 117.0, 100; rice, *see* 105.1.

## 119.6 DIGESTER TANKAGE

Assn. of American Feed Control Officials. Definitions of Feedingstuffs, 1944. Digester Tankage. Defines digester tankage, meat meal tankage, or feeding tankage, with and without bone.

## 119.9 MISCELLANEOUS SPECIFICATIONS FOR FODDER AND FEED

Assn. of American Feed Control Officials. Definitions of Feedingstuffs, 1944. Barley Products. Defines barley hulls, barley feed, barley mixed feed, ground barley, and mixed feed barley.

Assn. of American Feed Control Officials. Definitions of Feedingstuffs, 1944. Lespedeza Products. Defines lespedeza meal, lespedeza stem meal, and lespedeza straw meal.

Assn. of American Feed Control Officials. Definitions of Feedingstuffs, 1944. Mineral Feeds. Defines mineral feed; preparations for the cure, mitigation, or prevention of disease such as drugs, medicines, or specifics; and iodized salt.

Assn. of American Feed Control Officials. Definitions of Feedingstuffs, 1944. Miscellaneous Products. Defines dried apple pomace, dried apple pectin pulp, dried beet pulp, buckwheat shorts or middlings, chop, dried citrus pulp, protein cocoanut oil meal or copra oil meal, processed garbage, ivory nut meal, palm kernel oil meal, head chops, head stems, sweetpotato pulp, dried tomato pomace, velvet bean meal, and ground velvet bean and pod; also gives recognized English name and synonym of about twenty-four additional officially recognized ingredients.

Assn. of American Feed Control Officials. Definitions of Feedingstuffs, 1944. Screenings. Defines screenings, grain screenings, screenings waste or refuse, and scourings.

Southeastern Peanut Assn. Bulletin D. Official Rules, 1944. Peanut Hulls. Gives detailed requirements for peanut hulls and ground peanut hulls or peanut hull bran.

U. S. Gov., Federal Specification N-F-211b; 1944. Feedstuff; Concentrated. Includes requirements for citrus pulp (dried) to conform to the provisions of the Federal Food, Drug, and Cosmetic Act; methods of inspection and test (chemical analyses in accordance with methods of Assn. of Agricultural Chemists); and requirements for packaging, labeling, packing, and marking.

*References.*—Methods of analysis of feedingstuffs, *see* 117.0; methods of analysis of milk products, *see* 021.0; barley, *see* 101.0.

# 120-129 VEGETABLES

## 120. GENERAL ITEMS

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis, 1940. Metals in Foods. Preparation of reagents, design of apparatus, method for determination of arsenic, tentative method for determination of tin, copper, zinc, lead, fluorine, manganese.

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis, 1940. Plants. Methods for determination of sand and silica, calcium, sulphur, phosphorus, chlorine, total nitrogen, and tentative methods for moisture, ash, iron, aluminum, arsenic, sugars, sucrose, starch, ether extract, and crude fiber.

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis, 1940. Vegetables and Vegetable Products. Preparation of sample, determination of moisture, ash, sodium chloride, total acids, volatile acids, preservatives, and tentative methods for determination of sugars, coloring matters, and metals for canned vegetables in general.

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis, 1940. Vegetables and Vegetable Products. Tentative methods for physical

examination and preparation of sample (for canned products only), total solids, ash, sodium chloride, reducing sugars before inversion and after inversion, sucrose, total acids, volatile acids, preservatives and artificial sweeteners, coloring matters, and metals.

*References.*—Coal-tar food colors, *see* 803.10, 803.13; preservatives and artificial sweeteners, *see* 892.

## 121. FOLIAGE TYPE VEGETABLES, FRESH

### 121.1 CABBAGES AND CAULIFLOWER

U.S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. U. S. Standards for Cabbage, 1939. Covers three grades—U.S. No.1, U.S. commercial, and unclassified. Gives requirements for each grade, tolerances, sizes, and definitions of terms.

U.S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. U. S. Standards for Cabbage for Sauerkraut Manufacture, 1933. Reissued, Aug. 1939. Covers three grades—U. S. No.1, U. S. No.2, and culls. Gives requirements for each grade and definitions of terms.

U.S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. U. S. Standards for Cauliflower, 1939. Covers two grades—U. S. No.1 and unclassified. Gives requirements for each grade, tolerances, minimum size, and definitions of terms.

U.S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. Tentative U.S. Standards for Grades of Frozen Cauliflower, 1943. Covers three grades—U. S. grade A, U. S. grade B, and substandard; and two styles—clusters and quarters. Gives definition, tolerance, and factors used in ascertaining the grade rating including color, uniformity of size, and absence of defects.

U. S. Gov., Federal Specification HHH-C-26a; 1941. Amendment 1; 1942. Cabbage; Fresh. Covers U. S. No.1 and commercial grades of pointed, Danish, domestic, savor, or red types. Gives requirements for grading; methods of inspection and tests (chemical analyses in accordance with methods of the Assn. of Official Agricultural Chemists); and requirements for packaging, packing, and marking.

U. S. Gov., Federal Specification HHH-C-101a; 1941. Amendment 1; 1942. Cauliflower; Fresh. Covers U. S. grade No.1. Gives detail requirements; methods of inspection and tests (chemical analyses in accordance with methods of the Assn. of Official Agricultural Chemists); and requirements for packaging, packing, and marking.

*References.*—Canned cabbage, *see* 125.1; inspection and grading regulations, food laws, *see* 120.

### 121.2 LETTUCE

U.S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. U. S. Standards for Greenhouse Leaf Lettuce; 1934. Reissued, July 1939. Covers three grades—U. S. Fancy, U. S. No.1, and unclassified. Gives requirements for each grade, tolerances, and definitions of terms.

U.S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. U. S. Standards for Lettuce, 1934. Reissued, April 1942. Covers four grades—U. S. fancy, U. S. No.1, U. S. commercial, and U. S. No.2. Gives requirements for each grade, tolerances, standard pack, and definitions of terms.

U. S. Gov., Federal Specification HHH-L-226a; 1941. Amendment 1; 1942. Lettuce; Fresh. Covers iceberg and big Boston types, of four grades—(a) fancy, (b) No.1, (c) commercial, and (d) No.2. Gives detail requirements; methods of inspection and tests (chemical analyses in accordance with methods of the Assn. of Official Agricultural Chemists); and requirements for packaging, packing, and marking.

*References.*—Inspection and grading regulations, food laws, *see* 120.

### 121.3 ENDIVE

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, Volume 2; 1944. Chicory. Covers definition, derivation and characteristics, grades, containers, and substitutes.

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. U. S. Standards for Endive or Escarole or Chicory, 1933. Reissued, Sept. 1, 1939. Covers two grades—U. S. No.1, and unclassified. Gives requirements for each grade, application of tolerances, and definitions of terms. (These grades do not apply to French endive or chicory, which is marketed for its roots.

U. S. Gov., Federal Specification HHH-E-516; 1934. Endive, Escarole, and Chicory; Fresh. Covers U. S. No.1 grade. Gives detail requirements; methods of inspection and tests (chemical analyses in accordance with methods of the Assn. of Official Agricultural Chemists); and requirements for packaging, packing, and marking.

*References.*—*See* references under 121.2.

### 121.4 PARSLEY

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. U. S. Standards for Parsley, 1930. Reissued, April 1940. Covers two grades—U. S. No.1 and unclassified. Gives requirements for each grade and definitions of terms.

U.S. Gov., Federal Specification HHH-P-96; 1936. Parsley; Fresh. Covers the curly type, U. S. No.1 grade. Gives detail requirements; methods of inspection and tests (chemical analyses in accordance with methods of the Assn. of Official Agricultural Chemists); and requirements for packaging, packing, and marking.

*References.*—*See* references under 121.2.

### 121.5 SPINACH

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. U. S. Standards for Fresh Spinach for Canning, 1931. Reissued, Aug. 1939. Covers four grades—U. S. No.1, U. S. No.2, U. S. No.3, and unclassified. Gives requirements for each grade and tolerances.

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. U. S. Standards for Spinach, 1931. Reissued, Aug. 1939. Covers three grades—U. S. No.1, U. S. commercial, and unclassified. Gives requirements for each grade, tolerances, and definitions of terms.

U.S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. Tentative U.S. Standards for Grades of Frozen Spinach, 1943. Covers three grades—U. S. grade A, U. S. grade B, and substandard. Gives definition, package size, net weight, tolerance, and factors used in ascertaining the grade rating including color, absence of defects, and character and texture.

U. S. Gov., Federal Specification HHH-S-616; 1934. Amendment 1; 1942. Spinach; Fresh. Covers two grades—(a) No.1 and (b) commercial. Gives detail requirements; methods of inspection and tests (chemican analyses in accordance with methods of the Assn. of Official Agricultural Chemists); and requirements for packaging, packing, and marking.

*References.*—Canned spinach, *see* 125.5; inspection and grading regulations, food laws, *see* 120.

### 121.6 WATER CRESS

### 121.7 ARTICHOKES

U.S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. U. S. Standards for Globe Artichokes, 1926. Reissued, Aug. 1939. Covers three grades—U. S. No.1, U. S. No.2, and unclassified. Gives requirements for each grade, sizes, and size variations, and definitions of terms.

U. S. Gov., Federal Specification HHH-A-696; 1934. Artichokes; Fresh. Covers U. S. No.1 grade. Gives requirements for grading; methods of inspection and tests (chemical analyses in accordance with methods of the Assn. of Official Agricultural Chemists); and requirements for packaging, packing, and marking.

*References.*—Inspection and grading regulations, food laws, *see* 120.

### 121.8 KALE

U.S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. U. S. Standards for Kale, 1934. Reissued, Sept. 1939. Covers three grades—U. S. No.1, U. S. commercial, and unclassified. Gives requirements for each grade, tolerances, and definitions of terms.

U. S. Gov., Federal Specification HHH-K-106; 1936. Kale; Fresh. Covers U. S. No.1 grade. Gives detail requirement; methods of inspection and tests (chemical analyses in accordance with methods of the Assn. of Official Agricultural Chemists); and requirements for packaging, packing, and marking.

*References.*—*See* references under 121.7.

### 121.9 MISCELLANEOUS FOLIAGE TYPE VEGETABLES

U.S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. Tentative U.S. Standards for Grades of Frozen Broccoli, 1942. Covers three grades—U. S. grade A or U. S. fancy, U. S. grade B or U. S. extra standard, and off-grade. Gives definition, count, tolerance, and factors used in ascertaining the grade rating including uniformity of size, absence of defects, and color.

U.S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. U. S. Standards for Bunched Italian Sprouting Broccoli, 1943. Covers four grades—U. S. fancy, U. S. No.1, U. S. No.2, and unclassified. Gives requirements for each grade, sizes, tolerances, and definitions of terms.

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. U. S. Standards for Mustard Greens, 1928. Reissued, Jan. 1940. Covers two grades—U. S. No.1 and unclassified. Gives requirements for each grade and definitions of terms.

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. U. S. Standards for Romaine, 1928. Reissued, Aug. 1939. Covers two grades—U. S. No.1 and unclassified. Gives requirements for each grade and definitions of terms.

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. U. S. Standards for Turnip Greens, 1928. Reissued, Aug. 1939. Covers two grades—U. S. No.1 and unclassified. Gives requirements for each grade, tolerances, and definitions of terms.

U. S. Gov., Federal Specification HHH-B-691a; 1941. Amendment 1; 1942. Broccoli; Fresh. Covers three grades—(a) fancy, (b) No.1, and (c) No.2. Gives detail requirements; methods of inspection and tests (chemical analyses in accordance with methods of the Assn. of Official Agricultural Chemists); and requirements for packaging, packing, and marking.

U. S. Gov., Federal Specification HHH-G-651; 1934. Greens (Mustard and Turnip); Fresh. Covers U. S. No.1 grade. Gives detail requirements; methods of inspection and tests (chemical analyses in accordance with methods of the Assn. of Official Agricultural Chemists); and requirements for packaging, packing, and marking.

*References.*—Inspection and grading regulations, food laws, *see* 120.

## 122. FRUIT TYPE VEGETABLES, FRESH

### 122.1 BEANS, PEAS, OKRA

#### 122.11 Beans

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. Tentative U. S. Standards for Grades of Frozen Lima Beans, 1943. Covers four grades—U. S. grade A, U. S. grade B, U. S. grade C, and substandard; and two types—thin-seeded and thick-seeded. Gives definition, tolerance, and details concerning factors used in ascertaining the grade rating including color and absence of defects.

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. Tentative U. S. Standards for Grades of Frozen Snap Beans, 1944. Covers four grades—U. S. grade A, U. S. grade B, U. S. grade C, and substandard; two types—round and flat; two colors—green and wax of the yellow or golden varieties; and three styles—whole. cut, and shoestring. Gives definition, tolerance, and factors used in ascertaining the grade rating including color, absence of defects, and texture and maturity.

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. U. S. Standards for Fresh Faba (Fava) Beans, 1931. Reissued, March 1942. Covers two grades—U.S. No.1 and unclassified. Gives requirements for grade and definitions of terms.

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. U. S. Standards for Lima Beans, 1938. Reissued, Sept. 1939. Covers four grades, U. S. No.1, U. S. combination, U. S. No.2,

and unclassified. Gives requirements for each type, tolerances, and definitions of terms.

U.S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. U. S. Standards for Snap Beans, 1936. Reissued, June 1939. Covers five grades—U. S. fancy, U. S. No.1, U. S. combination, U. S. No.2, and unclassified. Gives requirements for each grade, tolerances, and definitions of terms.

U.S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. U. S. Standards for Snap Beans for Canning or Freezing, 1940. Covers three grades—U. S. No.1, U. S. No.2, and culls and cull material. Gives requirements for each grade, definitions of terms, and size classification.

U. S. Gov., Federal Specification HHH-B-141a; 1941. Amendment 1; 1942. Beans, Lima; Fresh. Covers pod or hulled beans of the best commercial grade. Gives requirements for grades; methods of inspection and tests (chemical analyses in accordance with methods of the Assn. of Official Agricultural Chemists); and requirements for packaging, packing, and marking.

U. S. Gov., Federal Specification, HHH-B-156a; 1941. Amendment 1; 1942. Beans; Snap (Green or Wax), Fresh. Covers three grades—(a) No.1, (b) No.2, and (c) combination. Gives detail requirements; methods of inspection and tests (chemical analyses in accordance with methods of the Assn. of Official Agricultural Chemists); and requirements for packaging, packing, and marking.

*References.*—Dried and canned beans, *see* 126.11; inspection and grading regulations, food laws, *see* 120.

## 122.12 Lentils

## 122.13 Peas

U.S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. Tentative U.S. Standards for Grades of Frozen Peas, 1943. Covers four grades—U. S. grade A, U. S. grade B, U. S. grade C, and substandard. Gives definition, tolerance, and factors used in ascertaining the grade rating including color, absence of defects, and tenderness and maturity.

U.S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. U. S. Standards for Fresh Peas, 1942. Covers three grades—U. S. No.1, U. S. fancy, and unclassified. Gives requirements for each grade, tolerances, and definitions of terms.

U. S. Gov., Federal Specification HHH-P-156a; 1945. Peas; Fresh. Covers two grades—(a) fancy and (b) No.1. Gives requirements for varieties and details for each grade; methods of inspection and tests (chemical analyses, if required, in accordance with methods of the Assn. of Official Agricultural Chemists); packing, labeling, and marking for shipment.

*References.*—Canned peas, dry peas, *see* 126.13; inspection and grading regulations, food laws, *see* 120.

## 122.14 Okra

U.S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. U. S. Standards for Okra, 1928. Reissued, Sept. 1939. Covers two grades—U. S. No.1 and unclassified. Gives requirements for each grade and definitions of terms.

*References.*—*See* references under 122.13.

## 122.2 GREEN CORN

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. Tentative U. S. Standards for Grades of Frozen Whole-Grain Corn, 1944. Covers four grades—U. S. grade A, U. S. grade B, U.S. grade C, and substandard; and two colors—golden (yellow) and white. Gives definition, tolerance, and factors used in ascertaining the grade rating including color, absence of defects, and tenderness and maturity.

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. U. S. Standards for Green Corn, 1927. Reissued, Aug. 1939. Covers three grades—U. S. No.1, U. S. fancy, and unclassified. Gives requirements for each grade and definitions of terms.

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. U. S. Standards for Sweet Corn for Canning, 1935. Reissued, Apr. 1940. Covers two grades—U. S. No.1 and U. S. No.2; and three classes—A, B, and C. Gives development of the work, styles of canned corn, common basis of payments, method of inspection, uses made of inspection reports, and definitions of terms.

U. S. Gov., Federal Specification HHH-C-591a; 1941. Amendment 1; 1942. Corn, Green; Fresh. Covers two grades—(a) fancy and (b) No.1, white or yellow types. Gives detail requirements; methods of inspection and tests (chemical analyses in accordance with methods of the Assn. of Official Agricultural Chemists); and requirements for packaging, packing, and marking.

*References.*—Grain corn, canned corn, *see* 103.1, 126.2; inspection and grading regulations, *see* 120.

## 122.3 CUCUMBERS

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. U. S. Standards for Cucumbers for Pickling, 1936. Reissued, Oct. 1939. Covers four grades—U.S. No.1, U.S. No.2, U.S. No.3, and culls. Gives requirements for each grade and definitions of terms.

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. U. S. Standards for Greenhouse Cucumbers, 1934. Reissued, Oct. 1939. Covers four grades—U. S. fancy, U. S. No.1, U. S. No.2, and unclassified. Gives requirements for each grade, tolerance for defects and size, standard pack, marking for size, and definitions of terms.

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. U. S. Standards for Slicing Cucumbers, 1941. Reissued, May 1942. Covers five grades—U. S. fancy, U. S. No.1, U. S. No.2, U. S. No.1 small, and unclassified. Gives requirements for each grade, tolerances, and definitions of terms.

U. S. Gov., Federal Specification HHH-C-75la; 1941. Amendment 2; 1942. Cucumbers; Slicing, Fresh. Covers three grades—(a) fancy, (b) No.1, and (c) No.2 (grades corresponding to the U. S. grades defined in the standards of the U. S. Dept. of Agriculture). Gives detail requirements; methods of inspection and

tests (chemical analyses in accordance with methods of the Assn. of Official Agricultural Chemists); and requirements for packaging, packing, and marking.

*References.*—Cucumber pickles, *see* 129.11; inspection and grading regulations, food laws, *see* 120.

## 122.4 EGGPLANT

U.S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. U. S. Standards for Eggplant, 1933. Reissued, Oct. 1939. Covers three grades—U. S. No.1, U. S. No.2, and unclassified. Gives requirements for each grade, marking requirements for size, application of tolerances, and definitions of terms.

U. S. Gov., Federal Specification HHH-E-236; 1934. Eggplant; Fresh. Covers U. S. No.1 grade. Gives detail requirements; methods of inspection and tests (chemical analyses in accordance with methods of the Assn. of Official Agricultural Chemists); and requirements for packaging, packing, and marking.

*References.*—Inspection and grading regulations, food laws, *see* 120.

## 122.5 PEPPERS

U.S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. U. S. Standards for Sweet Peppers, 1929. Reissued, Oct. 1939. Covers four grades—U. S. fancy, U. S. No.1, U. S. No.2, and unclassified. Gives requirements for each grade, tolerances, red or mixed peppers, and definitions of terms.

U. S. Gov., Federal Specification HHH-P-246; 1936. Peppers; Sweet, Fresh. Covers the bell and bullnose type, U. S. No.1 grade, long or short variety. Gives detail requirements; methods of inspection and tests (chemical analyses in accordance with methods of the Assn. of Official Agricultural Chemists); and requirements for packaging, packing, and marking.

*References.*—Regulations on inspection and grading, food laws, *see* 120; pepper spices, *see* 154.23.

## 122.6 PUMPKINS AND SQUASH

U. S. Gov., Federal Specification HHH-P-796; 1936. Pumpkin; Fresh. Covers the best commercial grade, "field" and "pie" types. Gives detail requirements; methods of inspection and tests (chemical analyses in accordance with methods of the Assn. of Official Agricultural Chemists); and requirements for packaging, packing, and marking.

U. S. Gov., Federal Specification HHH-S-666; 1935. Squash; Fresh. Covers the best commercial grade and three types—(I) Hubbard (blue or green), (II) marrow, and (III) white (Patty Pan type). Gives detail requirements; methods of inspection and tests (chemical analyses in accordance with methods of the Assn. of Official Agricultural Chemists); and requirements for packaging, packing, and marking.

*References.*—Canned pumpkin and squash, *see* 126.6; regulations on inspection and grading, food laws, *see* 120.

## 122.7 TOMATOES

U.S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. U. S. Standards for Canning Tomatoes, 1938. Reissued, July 1939. Covers three grades—U.S. No.1, U.S. No.2, and culls. Gives requirements for each grade, minimum size, and definitions of terms.

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. U. S. Standards for Fresh Tomatoes, 1934. Reissued, Aug. 1939. Covers three grades—U. S. No.1, U. S. No.2, and unclassified. Gives requirements and tolerances for each grade, marking for size, standard packs, and definitions of terms.

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. U. S. Standards for Greenhouse Tomatoes, 1934. Reissued, Aug. 1939. Covers four grades—U. S. fancy, U. S. No.1, U. S. No.2, and unclassified. Gives requirements and tolerances for each grade, size classification, size tolerance, standard pack, marking for size, and definitions of terms.

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. U. S. Standards for Tomatoes for Manufacture of Strained Tomato Products, 1933. Reissued Aug. 1939. Covers three grades—U. S. No.1, U. S. No.2, and culls. Gives requirements for each grade and definitions of terms.

U. S. Gov., Federal Specification HHH-T-576a; 1941. Amendment 1; 1942. Tomatoes. Covers No.1 and No.2 grades. Gives detail requirements; methods of inspection and tests (chemical analyses in accordance with methods of the Assn. of Official Agricultural Chemists); and requirements for packaging, packing, and marking.

*References.*—Canned tomatoes, catsup, *see* 126.7, 129.12; regulations on inspection and grading, food laws, *see* 120.

# 123. ROOT TYPE VEGETABLES, FRESH

## 123.1 BEETS

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. U. S. Standards for Beets With Short-Trimmed Tops, 1942. Covers two grades—U. S. No.1 and unclassified. Gives requirements for each grade, tolerance, size terms, and definitions of terms.

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. U. S. Standards for Bunched Beets, 1927. Reissued, Aug. 1939. Covers two grades—U. S. No.1, and unclassified. Gives requirements for each grade, size terms, bunching, and definitions of terms.

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. U. S. Standards for Topped Beets, 1934. Reissued, Oct. 1939. Covers two grades—U. S. No.1 and unclassified. Gives requirements for each grade, tolerances, sizes, and definitions of terms.

U. S. Gov., Federal Specification HHH-B-166; 1934. Beets; Fresh. Covers U. S. No.1 grade, either bunched or topped. Gives requirements for grading; methods of inspection and tests (chemical analyses in accordance with methods of the Assn. of Official Agricultural Chemists); and requirements for packaging, packing, and marking.

*References.*—Canned beets, *see* 127.1; beet pulp, *see* 119.1; regulations on inspection and grading, food laws, *see* 120.

## 123.2 CARROTS

U.S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. U. S. Standards for Bunched Carrots, 1937. Reissued, Mar. 1942. Covers two grades—U. S. No.1 and unclassified. Gives requirements for each grade, length of tops, standard bunches, tolerances, sizes, and definitions of terms.

U.S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. U. S. Standards for Carrots With Short Trimmed Tops, 1942. Covers two grades—U. S. No.1 and unclassified. Gives requirements for each grade, tolerances, sizes, and definitions of terms.

U.S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. U. S. Standards for Topped Carrots, 1928. Reissued, Oct. 1939. Covers two grades—U. S. No.1 and unclassified. Gives requirements for each grade and definitions of terms.

U. S. Gov., Federal Specification HHH-C-81; 1934. Carrots; Fresh. Covers U. S. No.1 grade. Gives detail requirements; method of inspection and tests (chemical analyses in accordance with the Assn. of Official Agricultural Chemists); and requirements for packaging, packing, and marking.

*References.*—Canned carrots, *see* 127.2; inspection and grading regulations, food laws, *see* 120.

## 123.3 ONIONS AND SCALLIONS

U.S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. U. S. Standards for Bermuda Onions, 1937. Reissued, Aug. 1939. Covers four grades—U.S. No.1, U.S. No.2, U.S. commercial, and unclassified. Gives requirements for each grade, tolerance, pink classification, size classification, and definitions of terms.

U.S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. U. S. Standards for Creole Onions, 1943. Covers four grades—U.S. No.1, U. S. No.2, U. S. combination, and unclassified. Gives requirements for each grade, tolerances, and definitions of terms.

U.S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. U. S. Standards for Northern Grown Onions, 1939. Covers five grades—U. S. No.1, U. S. commercial, U. S. No.1 boilers, U. S. No.1 picklers, and unclassified. Gives requirements for each grade, tolerances, and definitions of terms.

U.S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. U. S. Standards for Onion Sets, 1940. Covers three grades—U. S. No.1, U. S. No.2, and unclassified. Gives requirements for each grade and definitions of terms.

U. S. Gov., Federal Specification HHH-O-532; 1941. Amendment 1; 1942. Onions; Bermuda, Fresh. Covers the crystal wax, white Bermuda, yellow Bermuda, and pink Bermuda varieties; three grades—No.1, No.2, and commercial; and in small, medium, and large sizes. Gives requirements for size and condition; methods of inspection and tests (chemical analyses in accordance with methods of the Assn. of Official Agricultural Chemists); and requirements for packaging, packing, and marking.

U. S. Gov., Federal Specification HHH-O-534; 1941. Amendment 1; 1941. Onions; Creole, Fresh. Covers the white and red creole varieties; three grades—(a) No.1, (b) No.2, and (c) combination; and two sizes—1 3/4-in. minimum for No.1 grade and 1 1/2-in. minimum for No.2 and combination grades. Gives detail requirements; methods of inspection and tests (chemical analyses in accordance with methods of the Assn. of Official Agricultural Chemists); and requirements for packaging, packing, and marking.

U. S. Gov., Federal Specification HHH-O-536; 1941. Amendment 1; 1942. Onions; Northern-Grown Type, Fresh. Covers three grades—(a) No.1, (b) commercial, and (c) No.1 boilers—of sweet Spanish, yellow globe Danvers, Balbosa, yellow onions, yellow globe, white globe, and red globe types. Gives detail requirements; methods of inspection and tests (chemical analyses in accordance with methods of the Assn. of Official Agricultural Chemists); and requirements for packaging, packing, and marking.

U. S. Gov., Federal Specification HHH-O-541; 1936. Onions or Shallots; Green, Bunched. Covers the best commercial grade. Gives detail requirements; methods of inspection and tests (chemical analyses in accordance with methods of the Assn. of Official Agricultural Chemists); and requirements for packaging, packing, and marking.

*References.*—Inspection and grading regulations, food laws, *see* 120.

## 123.4 PARSNIPS AND TURNIPS

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. U. S. Standards for Bunched Turnips, 1927. Reissued, Aug. 1939. Covers two grades—U. S. No.1 and unclassified. Gives requirements, tolerances, size terms, bunching, and definitions of terms.

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. U. S. Standards for Topped Turnips or Rutabagas, 1935. Reissued, Aug. 1939. Covers two grades—U.S. No.1 and unclassified. Gives requirements for each grade, tolerances, size explanation, and definitions of terms.

U. S. Gov., Federal Specification HHH-P-103; 1936. Parsnips; Fresh. Covers the best commercial grade. Gives detail requirements; methods of inspection and tests (chemical analyses in accordance with methods of the Assn. of Official Agricultural Chemists); and requirements for packaging, packing, and marking.

U. S. Gov., Federal Specification HHH-T-851; 1935. Turnips; Fresh. Covers U. S. No.1 grade and two types—(I) turnips, yellow or rutabaga, and (II) white turnips. Gives detail requirements; methods of inspection and tests (chemical analyses in accordance with methods of the Assn. of Official Agricultural Chemists); and requirements for packaging, packing, and marking.

*References.*—Inspection and grading regulations, food laws, *see* 120.

## 123.5 POTATOES

### 123.51 White Potatoes

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. Service and Regulatory

Announcements No. 151; 1942. U. S. Standards for Potatoes. Covers six grades—U. S. fancy, U. S. extra No.1, U. S. No.1, U. S. commercial, U. S. No.2, and unclassified. Gives requirements for each grade, tolerances for defects, size classification for all grades except U. S. fancy, and definitions of terms.

U.S. Gov., Federal Specification HHH-P-611; Amendment 2; 1942. Potatoes; Irish. Covers U. S. No.1 grade. Gives detail requirements; methods of inspection and tests (chemical analyses in accordance with methods of the Assn. of Official Agricultural Chemists); and requirements for packaging, packing, and marking.

*References.*—Methods of analysis, grading regulations, food laws, *see* 120.

### 123.52 Sweetpotatoes

U.S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. U. S. Standards for Sweetpotatoes, 1937. Reissued, Aug. 1939. Covers five grades—U. S. fancy, U. S. extra No.1, U. S. No.1, U. S. No.2, and unclassified. Gives requirements for each grade, tolerances, and definitions of terms.

U. S. Gov., Federal Specification HHH-P-621a; 1941. Amendment 1; 1942. Potatoes; Sweet, Fresh. Covers the dry and moist types and four grades—(a) fancy, (b) extra No.1, (c) No.1, and (d) No.2. Gives detail requirements; methods of inspection and tests (chemical analyses in accordance with methods of the Assn. of Official Agricultural Chemists); and requirements for packaging, packing, and marking.

*References.*—Methods of analyses, grading regulations, food laws, *see* 120.

### 123.6 RADISHES

U.S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. U. S. Standards for Bunched Radishes, 1926. Reissued, Aug. 1939. Covers two grades—U. S. No.1 and unclassified. Gives requirements for each grade, bunching, size terms, and definitions of terms.

U. S. Gov., Federal Specification HHH-R-86; 1936. Radishes; Red, Fresh, Bunched. Covers U. S. No.1 grade. Gives detail requirements; methods of inspection and tests (chemical analyses in accordance with methods of the Assn. of Official Agricultural Chemists); and requirements for packaging, packing, and marking.

*References.*—Methods of analyses, grading regulations, food laws, *see* 120; prepared horse-radish, *see* 154.13.

### 123.7 SALSIFY

### 123.8 SHALLOTS AND GARLIC

U.S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. U. S. Standards for Bunched Shallots, 1941. Covers three grades—U. S. No.1, U. S. No.2, and unclassified. Gives requirements and tolerances for each grade, sizes (small, medium, and large), standard bunches, and definitions of terms.

U.S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. U. S. Standards for Garlic, 1934. Reissued, Sept. 1939. Covers two grades—U. S. No.1 and unclassified. Gives requirements for each grade, tolerances, and definitions of terms.

*References.*—Methods of analysis, grading regulations, food laws, *see* 120.

## 124. STEM TYPE VEGETABLES, FRESH

### 124.1 ASPARAGUS

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. Tentative U. S. Standards for Grades of Frozen Asparagus, 1944. Covers three grades—U. S. grade A, U. S. grade B, and substandard; and three styles—spears or stalks, cut spears, and cuts. Gives definition, sizes, tolerance, and factors used in ascertaining the grade rating including color, uniformity of size, absence of defects, and tenderness and texture.

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. U. S. Standards for Asparagus (Fresh), 1941. Covers three grades—U. S. No.1, U. S. No.2, and unclassified. Gives requirements for grades, tolerances, diameter classifications (very small, small, medium, large, very large), amount of green color, stalk length, and definitions of terms.

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. U. S. Standards for Asparagus Plumosus, 1930. Reissued, Mar. 1940. Covers three grades—U. S. fancy, U. S. No.1, and U. S. commercial. Gives requirements for each grade, sizes (corsage, short, medium, and long), and definitions of size and grade terms.

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. U. S. Standards for Green Asparagus for Canning or Freezing, 1937. Reissued, Oct. 1939. Covers four grades—U. S. No.1, U. S. No.2, culls, and butts. Gives requirements for each grade, diameter, classifications, and definitions of terms.

U. S. Gov., Federal Specification HHH-A-731; 1934. Asparagus; Fresh. Covers U. S. No.1 grade. Gives requirements for grading; methods of inspection and tests (chemical analyses in accordance with methods of the Assn. of Official Agricultural Chemists); and requirements for packaging, packing, and marking.

*References.*—Canned asparagus, *see* 128.1; methods of analysis, grading, regulations, food laws, *see* 120; asparagus sprays, *see* 259.

### 124.2 CELERY

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. U. S. Standards for Rough Celery, 1938. Reissued, Aug. 1939. Covers five grades—U. S. fancy, U. S. No.1, U. S. combination, U.S. No.2, and unclassified. Gives requirements for each grade, tolerances, requirements as to count, and definitions of terms.

U. S. Gov., Federal Specification HHH-C-191b; 1941. Amendment 1; 1942. Celery; Fresh. Covers four grades—(a) fancy, (b) No.1, (c) combination, and (d) No.2. Gives detail requirements; methods of inspection and tests (chemical analyses in accordance with methods of the Assn. of Official Agricultural

Chemists); and requirements for packaging, packing, and marking.

*References.*—Methods of analysis, grading regulations, food laws, *see* 120.

### 124.3 MUSHROOMS

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. U. S. Standards for Mushrooms, 1928. Reissued, Oct. 1939. Covers two grades—U. S. No.1 and unclassified. Gives requirements for each grade, size classification, tolerance, and definitions of terms.

*References.*—*See* references under 124.2.

### 124.4 RHUBARB

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. U. S. Standards for Rhubarb (Field Grown), 1933. Reissued, Aug. 1939. Covers four grades—U. S. fancy, U. S. No. 1, U. S. No.2, and unclassified. Gives requirements for each grade, tolerances, and definitions of terms.

U. S. Gov., Federal Specification HHH-R-301; 1936. Rhubarb; Fresh. Covers U. S. No.1 grade. Gives detail requirements; methods of inspection and tests (chemical analyses in accordance with methods of the Assn. of Official Agricultural Chemists); and requirements for packaging, packing, and marking.

*References.*—*See* references under 124.2.

### 124.5 SWEET ANISE

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. U. S. Standards for Sweet Anise, 1930. Reissued, Aug. 1939. Covers two grades—U. S. No.1 and unclassified. Gives requirements for each grade and definitions of terms.

## 125. FOLIAGE TYPE VEGETABLES, CANNED OR PRESERVED

### 125.0 GENERAL ITEMS

National Canners Assn. Manual for Canned Food Labels, 1942. Definitions and Standards N. C. A. Recommended Terms. Vegetables. Covers artichokes, mustard greens, spinach, and turnip greens.

### 125.1 CANNED CABBAGE, SAUERKRAUT, AND CANNED SAUERKRAUT

National Kraut Packers Assn. Kraut. Utilizes Gov. standards. U. S. Gov. Dept. of Agriculture standards for grades of canned sauerkraut and standards for bulk sauerkraut.

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. Tentative U. S. Standards for Grades of Canned Sauerkraut, 1933. Covers three grades—U. S. grade A (first quality), U. S. grade C (second quality), and off-grade (substandard). Gives definition, condition of container, condition of package and label, fill of container, slack fill, can size, can dimensions, maximum capacity, net drained weight, maximum head space, and factors used in ascertaining the grade rating including color, cut, absence of defects, crispness, and flavor.

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. U. S. Standards for Grades of Barrelled or Bulk Sauerkraut, 1935. Covers three grades—U. S. grade A (first quality), U. S. grade C (second quality), and off-grade (substandard). Gives definition, meaning of "normal flavor," and factors used in ascertaining the grade rating including color, cut, absence of defects, texture, and flavor.

U. S. Gov., Federal Security Agency, Food and Drug Administration, S.R.A., F.D.C.2; 1944. Definitions and Standards for Food. Canned Cabbage. Covers identity, label statement of optional ingredients, and source.

U. S. Gov., Federal Specification JJJ-C-21; 1931. Cabbage; Canned. Covers extra standard grade. Gives detail requirements; and methods of inspection and tests (chemical analyses in accordance with methods of the Assn. of Official Agricultural Chemists); and requirements for packaging, packing, and marking.

U. S. Gov., Federal Specification JJJ-S-71a; 1941. Sauerkraut; Canned. Covers two grades—(A) fancy and (C) standard. Gives requirements for material, workmanship, drained weights, head space, can sizes, and details for each grade; methods of inspection and tests (chemical analyses in accordance with methods of the Assn. of Official Agricultural Chemists), and requirements for packaging, packing, and marking.

*References.*—Fresh cabbage, *see* 121.1; methods of analysis, grading regulations, food laws, *see* 120.

### 125.2 CANNED LETTUCE

### 125.3 CANNED ENDIVE

### 125.4 CANNED PARSLEY

### 125.5 CANNED SPINACH

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. U. S. Standards for Grades of Canned Spinach (and Other Greens), 1941. Covers three grades—U. S. grade A or U. S. fancy, U. S. grade C or U. S. standard, and off-grade. Gives definition, fill of container and drained weights, can size, can dimensions, minimum drained weight, and factors used in ascertaining the grade rating including color, absence of defects, and tenderness and texture.

U. S. Gov., Federal Security Agency, Food and Drug Administration, S. R. A., F. D. C. 2; 1944. Definitions and Standards for Food. Canned Spinach. Covers identity, label statement of optional ingredients, and source.

U. S. Gov., Federal Specification JJ-S-611a; 1941. Spinach; Canned. Covers two grades; fancy and standard. Gives detail requirements; methods of inspection and tests (chemical analyses in accordance with methods of the Assn. of Official Agricultural Chemists); and requirements for packaging, packing, and marking.

*References.*—Fresh spinach, *see* 121.5; method of analysis, grading regulations, food laws, *see* 120.

### 125.6 CANNED WATER CRESS

### 125.9 MISCELLANEOUS CANNED VEGETABLES OF FOLIAGE TYPE

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. U. S. Standards for Grades of Canned Spinach (and Other Greens), 1941.

Covers three grades—U. S. grade A or U. S. fancy, U. S. grade C or U. S. standard, and off-grade. Gives definition, fill of container and drained weights, can size, can dimensions, minimum drained weight, and factors used in ascertaining the grade rating including color, absence of defects, and tenderness and texture.

U. S. Gov., Federal Security Agency, Food and Drug Administration, S.R.A., F.D.C.2; 1944. Definitions and Standards for Food. Canned Artichokes. Covers identity, label statement of optional ingredients, source, and optional forms of vegetable ingredients.

U. S. Gov., Federal Security Agency, Food and Drug Administration, S.R.A., F.D.C.2; 1944. Definitions and Standards for Food. Canned Beet Greens. Covers identity, label statement of optional ingredients, and source.

U. S. Gov., Federal Security Agency, Food and Drug Administration, S.R.A., F.D.C.2; 1944. Definitions and Standards for Food. Canned Broccoli. Covers identity, label statement of optional ingredients, and source.

U. S. Gov., Federal Security Agency, Food and Drug Administration, S.R.A., F.D.C.2; 1944. Definitions and Standards for Food. Canned Brussels Sprouts. Covers identity, label statement of optional ingredients, and source.

U. S. Gov., Federal Security Agency, Food and Drug Administration, S.R.A., F.D.C.2; 1944. Definitions and Standards for Food. Canned Cauliflower. Covers identity, label statement of optional ingredients, and source.

U. S. Gov., Federal Security Agency, Food and Drug Administration, S.R.A., F.D.C.2; 1944. Definitions and Standards for Food. Canned Collards. Covers identity, label statement of optional ingredients, and source.

U. S. Gov., Federal Security Agency, Food and Drug Administration, S.R.A., F.D.C.2; 1944. Definitions and Standards for Food. Canned Dandelion Greens. Covers identity, label statement of optional ingredients, and source.

U. S. Gov., Federal Security Agency, Food and Drug Administration, S.R.A., F.D.C.2; 1944. Definitions and Standards for Food. Canned Kale. Covers identity, label statement of optional ingredients, and source.

U. S. Gov., Federal Security Agency, Food and Drug Administration, S.R.A., F.D.C.2; 1944. Definitions and Standards for Food. Canned Mustard Greens. Covers identity, label statement of optional ingredients, and source.

U. S. Gov., Federal Security Agency, Food and Drug Administration, S.R.A., F.D.C.2; 1944. Definitions and Standards for Food. Canned Swiss Chard. Covers identity, label statement of optional ingredients, and source.

U. S. Gov., Federal Security Agency, Food and Drug Administration, S.R.A., F.D.C.2; 1944. Definitions and Standards for Food. Canned Turnip Greens. Covers identity, label statement of optional ingredients, and source.

U. S. Gov., Federal Specification JJJ-T-806; 1941. Turnip Greens; Canned. Covers two grades—fancy and standard. Gives detail requirements; methods of inspection and tests (chemical analyses in accordance with methods of the Assn. of Official Agricultural Chemists); and requirements for packaging, packing, and marking.

*References.*—Fresh turnip greens and mustard greens, *see* 121.9; methods of analysis, grading regulations, food laws, *see* 120.

## 126. FRUIT TYPE VEGETABLES, CANNED OR PRESERVED

### 126.0 GENERAL ITEMS

National Canners Assn. Manual for Canned Food Labels, 1942. Definitions and Standards N.C.A. Recommended Terms. Vegetables. Covers beans, green and wax; beans, lima or butter; corn; peas; pumpkin; squash; and tomatoes.

### 126.1 BEANS AND PEAS

### 126.11 Canned Beans and Dry Beans

American Oil Chemists' Society. Methods of Analysis, Soybeans, 1941. Covers moisture, pre-drying, grinding, second moisture, oil, ammonia, free fatty acid, calculation of results, calculation of yields, and example of calculation of the yields.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, Volume 2; 1944. Soybean. Covers definition, characteristics, derivation, uses, classes and grades, marketing information, containers, and substitutes.

National Cottonseed Products Assn. Rules, 1945. Methods of Chemical Analysis. Soybeans. Rule 270B. Covers original moisture, pre-drying, grinding, second moisture, oil, ammonia, free fatty acid, and calculation of results.

Northwest Canners Assn. Specifications for Canned Fruit and Vegetables. Includes variety grade, syrup, and description of packed green beans.

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. Handbook of Official Grain Standards of the U. S. Revised, 1943. Includes soybeans. Covers five classes—(I) yellow, (II) green, (III) brown, (IV) black, and (V) mixed. Gives requirements for five grades—No. 1, No. 2, No. 3, No. 4, and sample; and definitions and terms.

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. Tentative U. S. Standards for Grades of Canned Dry Beans, 1934. Covers three grades—U. S. grade A (fancy), U. S. grade C (standard) and off-grade (substandard); and four styles—in tomato sauce, in plain sauce, in tomato sauce with pork, and in plain sauce with pork. Gives definition, explanation, condition of containers, condition of package and label, fill of container, slack fill, can size, can dimensions, maximum capacity, maximum head space, and factors used in ascertaining the grade rating including consistency, absence of defects, tenderness and texture, and flavor.

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. Tentative U. S. Standards for Grades of Canned Lima Beans, 1936. Covers four grades—U. S. grade A (fancy), U. S. grade B (extra standard), U. S. grade C (standard), and off-grade (substandard). Gives definition, meaning of "normal flavor," condition of container, condition of package and label, fill of container, slack fill, can size, can dimensions, maximum capacity, minimum

drained weight, maximum head space, and factors used in ascertaining the grade rating including character of liquor, uniformity of size, absence of defects, and maturity.

U.S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. U. S. Standards for Beans, Dry Edible. Revised, Sept. 1, 1941. Covers twenty-three classes—pea, medium white, marrow, great northern, small white, flat small white, large white, white kidney, light red kidney, dark red kidney, western red kidney, yellow eye beans, old fashioned yellow eye, cranberry, small red, pink, bayo, blackeye, pinto, lima, baby lima, miscellaneous, and mixed. Gives definitions and grade requirements for five U. S. grades—No.1, No.2, No.3, substandard, and sample.

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. U. S. Standards for Grades of Canned Snap (or Stringless) Beans, 1933. Covers four grades—U. S. grade A (fancy), U. S. grade B (extra standard), U. S. grade C (standard) and off-grade (substandard); and two styles—cut and asparagus style. Gives definition, condition of container, condition of package and label, fill of container, slack fill, can size, can dimensions, maximum capacity, maximum head space, drained net weight, artificially colored, and factors used in ascertaining the grade rating including clearness of color, uniformity of color, uniformity of size, absence of defects, maturity, and flavor.

U. S. Gov., Federal Security Agency, Food and Drug Administration, S.R.A., F.D.C.2; 1944. Definitions and Standards for Food. Canned Beans. Covers—(1) green beans or green stringless beans or stringless green beans; identity, label statement of optional ingredients, source, optional forms of vegetable ingredients; (2) wax beans or stringless wax beans; identity, label statement of optional ingredients, source, optional forms of vegetable ingredients; (3) shelled beans; identity, label statement of optional ingredients, and source.

U. S. Gov., Federal Security Agency, Food and Drug Administration, S.R.A., F.D.C.2; 1944. Definitions and Standards for Food. Canned Bean Sprouts. Covers identity, label statement of optional ingredients, and source.

U. S. Gov., Federal Specification N-G-65la; 1945. Grains. Includes soybeans. Shall conform to the provisions of the Federal Food, Drug, and Cosmetic Act. Gives detail requirements; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification JJJ-B-91; 1930. Amendment 5; 1938. Beans; Canned (With Pork). Covers one grade and two types—(A) in tomato sauce, and (B) in plain sauce. Gives detail requirements; methods of inspection, tests, etc. (chemical analyses in accordance with methods of the Assn. of Official Agricultural Chemists); and requirements for packaging, packing, and marking.

U. S. Gov., Federal Specification JJJ-B-96; 1930. Amendment 3; 1938. Beans; Canned (Without Pork). Covers one grade and two types—(A) in tomato sauce and (B) in plain sauce. Gives detail requirements; methods of inspection, tests, etc. (chemical analyses in accordance with methods of the Assn. of Official Agricultural Chemists); and requirements for packaging, packing, and marking.

U. S. Gov., Federal Specification JJJ-B-106a; 1931. Amendment 2; 1935. Beans; Dry. Covers five types—(A) white, (B) kidney, (C) lima, (D) colored, and (E) blackeye. Gives detail requirements; methods of inspection and tests (chemical analyses in accordance with methods of the Assn. of Official Agricultural Chemists); and requirements for packaging, packing, and marking.

U. S. Gov., Federal Specification JJJ-B-126b; 1941. Beans; Lima, Canned. Covers two types—(I) fresh and (II) soaked dry. Gives detail requirements; sizes of the beans, viz., tiny, small, medium, and large; methods of inspection and tests (chemical analyses in accordance with methods of the Assn. of Official Agricultural Chemists); and requirements for packaging, packing, and marking.

U. S. Gov., Federal Specification JJJ-B-151a; 1941. Beans; Snap, Canned. Covers two types—(I) round and (II) flat, green or wax; and three styles—cut, whole, and shoestring (French or Julienne). Gives detail requirements; methods of inspection and tests (chemical analyses in accordance with methods of the Assn. of Official Agricultural Chemists); and requirements for packaging, packing, and marking.

*References.*— Fresh string and wax beans, *see* 122.11; methods of analysis, grading regulations, food laws, *see* 120.

## 126.12 Canned Lentils

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. U. S. Standards for Lentils, 1942. Lentils shall be dry threshed seeds of the lentil plant. Covers four classes—large, medium, small, and mixed; for U. S. grades—No.1, No.2, substandard, and sample grade; and two special grades—high moisture lentils and off-color lentils. Gives definitions of terms.

## 126.13 Canned Peas and Dry Peas

Northwest Canners Assn. Specification for Canned Fruits and Vegetables. Includes variety, grade, syrup, and description of packed peas and mixed carrots and peas.

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. Official U. S. Standards for Dry Peas, 1937. Reissued, Oct. 1941. Gives definitions of terms; classes; four U. S. grades—No.1, No.2, No.3, and sample; color, moisture, and size requirements; special grades of large peas; special grades of small peas; and inspection and certification of thresher-run peas.

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. Tentative U. S. Standards for Grades of Canned Black-Eye Peas (Canned Fresh), 1939. Covers three grades—U. S. grade A (fancy), U. S. grade C (standard), and off-grade (substandard). Gives definition, explanation of terms, condition of container, condition of package and label, fill of container, slack fill, can size, can dimensions, maximum capacity, minimum drained net weight, maximum head space, and factors used in ascertaining the grade rating including character of

liquor, color, uniformity of size, absence of defects, and maturity.

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. Official U. S. Standards for Split-Peas, 1937. Reissued, Nov. 1939. Gives definitions of terms and requirements for two classes—green and yellow; four U. S. grades—No. 1, No. 2, No. 3, and sample; color and size requirements; and grades for split-pea chips.

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. U. S. Standards for Grades of Canned Peas, 1942. Covers four grades—U. S. grade A or U. S. fancy, U. S. grade B or U. S. extra standard, U. S. grade C or U. S. standard, and off-grade; and two types—early peas and sweet peas (or sugar peas). Gives fill of container requirements for canned peas, definition of sizes (seven sizes), tolerance, and factors used in ascertaining the grade rating including clearness of liquor, uniformity of color, absence of defects, and maturity.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R149-33; 1933. Sieve Sizes of Canned Peas. This recommendation establishes a simplified schedule of sieve sizes to be used in the grading of canned peas of the Alaska and sweet varieties types. Initiated by the National Canners Assn.

U. S. Gov., Federal Security Agency, Food and Drug Administration, S.R.A., F.D.C.2; 1944. Definitions and Standards for Food. Canned Black-Eye Peas, Black-Eyed Peas, and Field Peas. Covers identity, label statement of optional ingredients, and source.

U. S. Gov., Federal Security Agency, Food and Drug Administration, S.R.A., F.D.C.2; 1944. Definitions and Standards for Food. Canned Peas. Covers—(1) identity, label statement of optional ingredients, (2) quality, label statement of substandard quality, and (3) fill of container, label statement of substandard fill.

U. S. Gov., Federal Specification JJJ-P-15la; 1941. Peas; Canned. Covers two types—(I) early; that is, early maturing or other smooth-skin varieties; and (II) sweet (or sugar); those maturing later, wrinkled varieties having a natural sweet flavor. Covers seven sizes and three grades—fancy, extra standard, and standard. Gives detail requirements; methods of inspection and tests (chemical analyses in accordance with methods of the Assn. of Official Agricultural Chemists); and requirements for packaging, packing, and marking.

U. S. Gov., Federal Specification JJJ-P- 156; 1938. Peas; Dry, Split. Covers two classes—(A) green, which are manufactured from Alaska, Bluebell, and other varieties of peas; and (B) yellow, manufactured from White Canada, First and Best, and other varieties of peas. Gives detail requirements; methods of inspection and tests (chemical analyses in accordance with methods of the Assn. of Official Agricultural Chemists); and requirements for packaging, packing, and marking.

*References.*—Fresh peas, *see* 122.13; methods of analysis, grading regulations, food laws, *see* 120.

## 126.14 Canned Okra

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. Tentative U. S. Standards for Grades of Canned Okra, 1933. Covers three grades—U. S. grade A (fancy), U. S. grade C (standard), and off-grade (substandard). Gives definition, cut okra, condition of container, condition of package and label, fill of container, slack fill, can size, can dimensions, maximum capacity, maximum head space, and factors used in ascertaining grade rating including clearness of liquor, uniformity of color, uniformity of size, absence of defects, maturity, and flavor.

U. S. Gov., Federal Security Agency, Food and Drug Administration, S.R.A., F.D.C.2; 1944. Definitions and Standards for Food. Canned Okra. Covers identity, label statement of optional ingredients, source, and optional forms of vegetable ingredients.

## 126.2 CANNED CORN AND SUCCOTASH

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. Tentative U. S. Standards for Grades of Canned Succotash, 1944. Composed of cream-style or whole-grain corn and lima beans or snap beans, with or without tomatoes. Covers four grades—U. S. grade A or U. S. fancy, U. S. grade B or U. S. extra standard, U. S. grade C or U. S. standard, and off-grade. Gives proportion of ingredients, fill of container and drained weight; factors used in ascertaining the grade rating including uniformity of color, consistency (of cream-style corn), absence of defects, cut (of corn), maturity, color, and grade of each vegetable.

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. U. S. Standards for Grades of Canned Corn—Cream Style, 1932. Covers four grades—U. S. grade A (fancy), U. S. grade B (extra standard or choice), U. S. grade C (standard), and off-grade (substandard). Gives definition, condition of container, condition of package and label, fill of container, slack fill, can size, can dimensions, maximum capacity, maximum head space, and factors used in ascertaining the grade rating including color, consistency, absence of defects, cut, maturity, and flavor.

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. U. S. Standards for Grades of Canned Corn—Whole-Grain Style, 1932. Covers four graoes—U. S. grade A (fancy), U. S. grade B (extra standard or choice), U. S. grade C (standard), and off-grade (substandard). Gives definitions, condition of container, condition of package and label, fill of container, slack fill, can size, can dimensions, maximum capacity, minimum drained weight, maximum head space, and factors used in ascertaining the grade rating including color, absence of defects, cut, maturity, and flavor.

U. S. Gov., Federal Security Agency, Food and Drug Administration, S.R.A., F.D.C.2; 1944. Definitions and Standards for Food. Canned Corn. Covers: (1) White sweet corn or white corn; (2) white sugar corn; (3) yellow sweet corn, yellow corn, yellow

sugar corn, golden corn, golden sugar corn, golden sweet corn; (4) field corn—with their identity, label statement of optional ingredients, source, and optional forms of vegetable ingredients.

U. S. Gov., Federal Specification N-C-50la; 1941. Amendment 1; 1942. Corn; Sweet, Canned. Covers two types—cream style and whole grain style; two colors—white and golden (yellow); and three grades—(A) fancy, (B) extra standard, and (C) standard. Gives requirements for drained weights and head space; detail requirements for each grade; methods of inspection and test; and requirements for packaging, packing, and marking for shipment.

*References.*—Fresh corn, *see* 122.2; methods of analyses, grading regulations, food laws, *see* 120.

## 126.3 CANNED CUCUMBERS

*References.*—Cucumber pickles, *see* 129.11.

## 126.4 CANNED EGGPLANT

## 126.5 CANNED PEPPERS

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. Tentative U.S. Standards for Grades of Canned Pimientos, 1933. Covers five grades—U. S. grade A (fancy), U. S. grade A (fancy) pieces, U.S. grade C (standard), U.S. grade C (standard) pieces, and off-grade (substandard). Gives definition, condition of container, condition of package and label, fill of container, slack fill, can size, can dimensions, maximum head space, and factors used in ascertaining the grade rating including color, wholeness, firmness, uniformity of size, and absence of defects.

U. S. Gov., Federal Security Agency, Food and Drug Administration, S.R.A., F.D.C.2; 1944. Definitions and Standards for Food. Canned Green Sweet Peppers and Red Sweet Peppers. Covers identity, label statement of optional ingredients, source, and optional forms of vegetable ingredients.

U. S. Gov., Federal Security Agency, Food and Drug Administration, S.R.A., F.D.C.2; 1944. Definitions and Standards for Food. Canned Pimientos or Pimentos. Covers identity, label statement of optional ingredients, source, and optional forms of vegetable ingredients.

## 126.6 CANNED PUMPKIN AND SQUASH

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. Tentative U.S. Standards for Grades of Canned Pumpkin (and Squash), 1934. Covers three grades—U. S. grade A (fancy), U. S. grade C (standard), and off-grade (substandard). Gives definition, condition of container, condition of package and label, fill of container, slack fill, can size, can dimensions, maximum capacity, maximum head space, and factors used in ascertaining the grade rating including consistency, color, finish, absence of defects, and flavor.

U. S. Gov., Federal Specification JJJ-P-79la; 1943. Pumpkin; Canned. Covers two grades—(A) fancy and (B) standard. Gives detail requirements; methods of inspection and tests (chemical analyses in accordance with methods of the Assn. of Official Agricultural Chemists); and requirements for packaging, packing, and marking.

U. S. Gov., Federal Specification JJJ-S-661; 1931. Squash; Canned. Covers two grades—(A) fancy and (B) standard. Gives detail requirements; methods of inspection and tests (chemical analyses in accordance with methods of the Assn. of Official Agricultural Chemists); and requirements for packaging, packing, and marking.

*References.*—Methods of analysis, grading regulations, food laws, *see* 120; fresh pumpkin and squash, *see* 122.6.

## 126.7 CANNED TOMATOES AND TOMATO JUICE

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis, 1940. Vegetables and Vegetable Products. Tomato Products. Preparation of sample, determination of ash, alkalinity of ash, sodium chloride, reducing sugars, sucrose, acetic and citric acids; tentative methods for determination of solids, sand, microanalyses for molds, yeasts, spores, bacteria.

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. U. S. Standards for Grades of Canned Tomatoes, 1942. Covers four grades—U. S. grade A or U. S. fancy, U. S. grade B or U. S. extra standard, U. S. grade C or U. S. standard, and off-grade. Gives fill of container requirements for canned tomatoes, can size, can dimensions, tolerances, and factors used in ascertaining the grade rating including drained weight, wholeness, color, and absence of defects.

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. Tentative U. S. Standards for Grades of Canned Tomato Paste, 1944. Covers three concentrations—heavy, medium, and light; two textures—fine and coarse; and three grades—U. S. grade A or U. S. fancy; U. S. grade C or U. S. Standard; and U. S. grade D or substandard. Gives fill of container, definitions, tolerances for certification of officially drawn samples, and factors used in ascertaining the grade rating including color and absence of defects.

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. U. S. Standards for Grades of Canned Tomato Puree, Tomato Pulp, 1945. Covers grades—U. S. grade A or U. S. fancy, U. S. grade C or U. S. standard, and U. S. grade D or substandard; in three concentrations—heavy, medium, and light. Gives definition, recommended fill of container, explanation of terms, tolerance for certification of officially drawn samples, ascertaining the grade, and factors used in ascertaining the grade rating including color and absence of defects.

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. U. S. Standards for Grades of Tomato Juice (Canned or Bottled), 1938. Covers three grades—U. S. grade A (fancy), U. S. grade C (standard), and off-grade (substandard). Gives definition, condition of container, condition of package and label, fill of container, slack fill, and factors used in ascertaining the grade rating including color, consistency, absence of defects, and flavor.

U. S. Gov., Federal Security Agency, Food and Drug Administration, S.R.A., F.D.C.2; 1944. Definitions and Standards for Food. Canned Tomatoes. Covers—(1) canned tomatoes; identity, label statement of

optional ingredients; (2) canned tomatoes; quality, (3) canned tomatoes; fill of container.

U. S. Gov., Federal Security Agency, Food and Drug Administration, S.R.A., F.D.C.2; 1944. Definitions and Standards for Food. Canned Tomato Juice and Yellow Tomato Juice. Covers identity.

U. S. Gov., Federal Security Agency, Food and Drug Administration, S.R.A., F.D.C.2; 1944. Definitions and Standards for Food. Tomato Paste. Covers identity and label statement of optional ingredients.

U. S. Gov., Federal Security Agency, Food and Drug Administration, S.R.A., F.D.C.2; 1944. Definitions and Standards for Food. Tomato Puree and Tomato Pulp. Covers identity and label statement of optional ingredients.

U. S. Gov., Federal Specification JJJ-T-571a; 1941. Tomatoes; Canned. Covers four grades—fancy, fancy whole, extra standard, and standard. Gives detail requirements; methods of inspection and tests (chemical analyses in accordance with methods of the Assn. of Official Agricultural Chemists); and requirements for packaging, packing, and marking.

U. S. Gov., Federal Specification JJJ-T-576; 1941. Tomato Juice; Canned. Covers two grades—fancy and standard. Gives detail requirements; methods of inspection and tests (chemical analyses in accordance with methods of the Assn. of Official Agricultural Chemists); and requirements for packaging, packing, and marking.

*References.*—Fresh tomatoes, catsup, *see* 122.7, 129.12; methods of analysis, grading regulations, food laws, *see* 120.

## 127. ROOT TYPE VEGETABLES, CANNED OR PRESERVED

### 127.0 GENERAL ITEMS

National Canners Assn. Manual for Canned Food Labels, 1942. Definitions and Standards N.C.A. Recommended Terms. Vegetables. Covers beets, carrots, onions, potatoes, and turnips.

### 127.1 CANNED BEETS

Northwest Canners Assn. Specifications for Canned Fruits and Vegetables. Includes variety, grade, syrup, and description of packed beets.

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. U. S. Standards for Grades of Canned Beets, 1941. Covers three grades—U. S. grade A or U. S. fancy, U. S. grade C or U. S. standard, and off-grade; and six styles—whole, sliced, quartered, diced, shoestring, and cut. Gives definition, fill of container and drained weight, can size, minimum drained weight, size designation, count range per can, and factors used in ascertaining the grade rating including color, uniformity of size, absence of defects, and texture.

U. S. Gov., Federal Security Agency, Food and Drug Administration, S.R.A., F.D.C.2; 1944. Definitions and Standards for Food. Canned Beets. Covers identity, label statement of optional ingredients, source, and optional forms of vegetable ingredients.

U. S. Gov., Federal Specification JJJ-B-181a; 1941. Beets; Canned. Covers two grades—fancy and standard; and six styles—whole, sliced, quartered, diced, shoestring (French or Julienne), and cut. Gives detail requirements; methods of inspection and tests (chemical analyses in accordance with methods of the Assn. of Official Agricultural Chemists); and requirements for packaging, packing, and marking.

*References.*—Fresh beets, *see* 123.1; methods of analysis, grading regulations, food laws, *see* 120.

### 127.2 CANNED CARROTS

Northwest Canners Assn. Specifications for Canned Fruits and Vegetables. Includes variety, grade, syrup, and description of packed carrots and mixed carrots and peas.

U. S. Gov., Dept. of Agriculture, War Food Administration, Food Distirbution. Tentative U. S. Standards for Grades of Canned Carrots, 1940. Covers three grades—U. S. grade A or U. S. fancy, U. S. grade C or U. S. standard, and off-grade (substandard); and six styles—whole, sliced, quartered, diced, shoestring, and cut. Gives definition, explanation of terms, recommended head space and drained weights, can size, can dimensions, maximum capacity, maximum head space, minimum drained weight, and factors used in ascertaining the grade rating including color, uniformity of size, absence of defects, and tenderness and texture.

U. S. Gov., Federal Security Agency, Food and Drug Administration, S.R.A., F.D.C.2; 1944. Definitions and Standards for Food. Canned Carrots. Covers identity, label statement of optional ingredients, source, and optional forms of vegetable ingredients.

U. S. Gov., Federal Specification JJJ-C-76a; 1941. Carrots; Canned. Covers six styles—whole, sliced, quartered, diced, shoestring (French or Julienne), and cut; and two grades—fancy and standard. Gives detail requirements; methods of inspection and tests (chemical analyses in accordance with methods of the Assn. of Official Agricultural Chemists); and requirements for packaging, packing, and marking.

*References.*—Fresh carrots, *see* 123.2; methods of analysis, grading regulations, food laws, *see* 120.

### 127.3 CANNED ONIONS

U. S. Gov., Federal Security Agency, Food and Drug Administration, S.R.A., F.D.C.2; 1944. Definitions and Standards for Food. Canned Onions. Covers identity, label statement of optional ingredients, source, and optional forms of vegetable ingredients.

### 127.4 CANNED PARSNIPS AND TURNIPS

U. S. Gov., Federal Security Agency, Food and Drug Administration, S.R.A., F.D.C.2; 1944. Definitions and Standards for Food. Canned Parsnips. Covers identity, label statement of optional ingredients, source, and optional forms of vegetable ingredients.

U. S. Gov., Federal Security Agency, Food and Drug Administration, S.R.A., F.D.C.2; 1944. Definitions and Standards for Food. Canned Rutabagas. Covers identity, label statement of optional ingredients, source, and optional forms of vegetable ingredients.

U. S. Gov., Federal Security Agency, Food and Drug Administration, S.R.A., F.D.C.2; 1944. Definitions and Standards for Food. Canned Turnips. Covers identity, label statement of optional ingredients, source, and optional forms of vegetable ingredients.

### 127.5 CANNED POTATOES

### 127.51 Canned White Potatoes

U. S. Gov., Federal Security Agency, Food and Drug Administration, S.R.A., F.D.C.2; 1944. Definitions and Standards for Food. Canned Potatoes. Covers identity, label statement of optional ingredients, source, and optional forms of vegetable ingredients.

### 127.52 Canned Sweetpotatoes

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. Tentative U. S. Standards for Grades of Canned Sweetpotatoes, 1934. Covers three grades—U. S. Grade A (fancy), U. S. grade C (standard), and off-grade (substandard). Gives definition, condition of container, condition of package and label, fill of container, slack fill, can size, can dimensions, maximum capacity, minimum drained weight, maximum head space, and factors used in ascertaining the grade rating including wholeness, uniformity of color, uniformity of size, absence of defects, tenderness and texture, and flavor.

U. S. Gov., Federal Security Agency, Food and Drug Administration, S.R.A., F.D.C.2; 1944. Definitions and Standards for Food. Canned Sweetpotatoes. Covers identity, label statement of optional ingredients, source, and optional forms of vegetable ingredients.

U. S. Gov., Federal Specification JJJ-P-611; 1931. Amendment 2; 1937. Potatoes; Sweet, Canned. Covers two types—(I) whole or cut and (II) solid pack (mashed); and two grades—(A) fancy and (B) standard. Gives detail requirements; methods of inspection and tests (chemical analyses in accordance with methods of the Assn. of Official Agricultural Chemists); and requirements for packaging, packing, and marking.

### 127.6 CANNED RADISHES

### 127.7 CANNED SALSIFY

U. S. Gov., Federal Security Agency, Food and Drug Administration, S.R.A., F.D.C.2; 1944. Definitions and Standards for Food. Canned Salsify. Covers identity, label statement of optional ingredients, and source.

## 128. STEM TYPE VEGETABLES, CANNED OR PRESERVED

### 128.0 GENERAL ITEMS

National Canners Assn. Manual for Canned Food Labels, 1942. Definitions and Standards N.C.A. Recommended Terms. Vegetables. Covers asparagus and mushrooms.

### 128.1 CANNED ASPARAGUS

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. U. S. Standards for Grades of Canned Asparagus, 1941. Covers three grades—U. S. grade A or U. S. fancy, U. S. grade C or U. S. standard, and off-grade; two types—culturally bleached and all green; and five styles of—peeled or unpeeled, spears or stalks, tips, points, cut spears, and bottom cuts. Gives definitions, fill of container and drained weight, can size, can dimensions, minimum drained weight, count and size, and factors used in ascertaining the grade rating including clearness of color, color, absence of defects, and tenderness.

U. S. Gov., Federal Security Agency, Food and Drug Administration, S.R.A., F.D.C.2; 1944. Definitions and Standards for Food. Canned Asparagus. Covers identity, label statement of optional ingredients, source, and optional forms of vegetable ingredients.

U. S. Gov., Federal Specification JJJ-A-711b; 1942. Asparagus; Canned. Covers two types—(I) culturally bleached and (II) all green; and two grades—fancy and standard; and five styles. Gives requirements for sizes of cans and contents; methods of inspection and tests (chemical analyses in accordance with methods of the Assn. of Official Argicultural Chemists); and requirements for packaging, packing, and marking.

*References.*—Fresh asparagus, *see* 124.1; methods of analysis, grading regulations, food laws, *see* 120.

### 128.2 CANNED CELERY

U. S. Gov., Federal Security Agency, Food and Drug Administration, S.R.A., F.D.C.2; 1944. Definitions and Standards for Food. Canned Celery. Covers identity, label statement of optional ingredients, source, and optional forms of vegetable ingredients.

### 128.3 CANNED MUSHROOMS

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. U. S. Standards for Grades of Canned Mushrooms, 1941. Covers three grades—U. S. grade A or U. S. fancy, U. S. grade C or U. S. standard, and off-grade; and four styles—whole, button, sliced, and stems and pieces. Gives sizes, can size, capacity, minimum drained weight, explanation of terms, and factors used in ascertaining grade rating including color, uniformity of size and symmetry, absence of defects, and tenderness.

U. S. Gov., Federal Security Agency, Food and Drug Administration, S.R.A., F.D.C.2; 1944. Definitions and Standards for Food. Canned Mushrooms. Covers identity, label statement of optional ingredients, source, and optional forms of vegetable ingredients.

U. S. Gov., Federal Specification JJJ-M-851a; 1940. Mushrooms; Canned. Covers two types—(I) brown and (II) white; two styles—(a) whole or "buttons" and (b) sliced; and two grades—(A) fancy and (C) standard. Gives detail requirements; methods of sampling, inspection, and tests (chemical analyses in accordance with methods of the Assn. of Official Agricultural Chemists); and requirements for packaging, packing, and marking.

### 128.4 CANNED RHUBARB

### 128.9 MISCELLANEOUS CANNED VEGETABLES

U. S. Gov., Federal Security Agency, Food and Drug Administration, S.R.A., F.D.C.2; 1944. Definitions and Standards for Food. Canned Truffles. Covers identity, label statement of optional ingredients, and source.

## 129. MISCELLANEOUS VEGETABLE FOOD PRODUCTS

### 129.1 PICKLES AND SAUCES

### 129.11 Pickles and Pickled Olives

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. Tentative U. S. Standards for Grades of Cucumber Pickles (Canned, Bottled, or Barrelled), 1941. Covers three grades—U. S. grade A or U. S. fancy, U. S. grade C or U. S. standard,

and off-grade; four types—dill (natural cured or genuine and processed or imitation), sour, sweet, and sweet mixed or sour mixed; and three styles—whole, sliced, and cut. Gives definition, explanation of terms, fill of container, size designation (midget, gherkin, sweet, medium, large, jumbo, and dixie), and factors used in ascertaining the grade rating including uniformity of color, uniformity of size, symmetry, absence of defects, and character and texture.

U. S. Gov., Federal Specification JJJ-P-391a; 1937. Amendment 2; 1939. Pickles and Relish. Covers five types—(I) cucumber pickles (whole), sweet and sour; (II) cucumber pickled (whole) dill, imitation and genuine; (III) mixed pickles (cut), sweet and sour; (IV) chow-chow, sweet and sour; and (V) sweet pickle relish. Gives detail requirements; methods of inspection and tests (chemical analyses in accordance with methods of the Assn. of Official Agricultural Chemists); and requirements for packaging, packing, and marking.

*References.*—Fresh cucumbers, *see* 122.3; methods of analysis, grading regulations, food laws, *see* 120; fresh and pickled olives, *see* 131.4.

### 129.12 Catsup, Tomato Puree, Tomato Paste

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. U. S. Standards for Grades of Tomato Catsup, 1941. Covers three grades—U. S. grade A or U. S. fancy, U. S. grade C or U. S. standard, and off-grade. Gives definition, head space and fill requirements, can size, maximum head space, and factors used in ascertaining the grade rating including color, consistency, absence of defects, and flavor.

U. S. Gov., Federal Security Agency, Food and Drug Administration, S.R.A., F.D.C.2; 1944. Definitions and Standards for Food. Catsup, Ketchup, Catchup. Covers identity and label statement of optional ingredients.

U. S. Gov., Federal Specification JJJ-C-91a; 1941. Amendment 2; 1942. Catsup; Tomato. Covers two grades—fancy and standard; and three types. Gives detail requirements; methods of inspection and tests (chemical analyses in accordance with methods of the Assn. of Official Agricultural Chemists); and requirements for packaging, packing, and marking.

*References.*—Fresh tomatoes, canned tomatoes, *see* 122.7, 126.7; methods of analysis, food laws, *see* 126.7, 120.

### 129.13 Sauces

U. S. Gov., Federal Specification EE-S-71a; 1932. Sauces; Chili and Worcestershire. Covers one grade and two types—(A) chili and (B) worcestershire. Gives general and detail requirements; methods of inspection and tests (chemical analyses in accordance with methods of Assn. of Official Agricultural Chemists); and requirements for packaging, packing, and marking.

*References.*—Methods of analysis, food laws, *see* 120; tomato catsup, *see* 129.12; chili pepper, *see* 154.23.

### 129.14 Salad Dressing

*References.*—Salad oil and mayonnaise, *see* 142.94.

## 129.2 SOUPS

### 129.20 General Items

U. S. Gov., Federal Specification JJJ-S-581; 1931. Soups; Canned. Covers condensed type. Gives detail requirements; methods of inspection and tests (chemical analyses in accordance with methods of the Assn. of Official Agricultural Chemists); and requirements for packaging, packing, and marking.

U. S. Gov., Federal Specification JJJ-T-581; 1932. Tomato Puree; Canned. Covers the strained tomato type in two grades—(A) fancy and (B) standard. Gives detail requirements; methods of inspection and tests (chemical analyses in accordance with methods of the Assn. of Official Agricultural Chemists); requirements for packaging, packing and marking.

*References.*—Methods of analysis, food laws, *see* 120.

### 129.21 Bouillon Cubes and Beef Extract

# 130-139 FRUITS AND NUTS

## 130. GENERAL ITEMS

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis, 1940. Fruits and Fruit Products. Preparation of sample, determination of alcohol, moisture in dried fruits, solids, ash, sulphur in ash, protein, acidity, sucrose, reducing sugar, commercial glucose, starch, preservatives, sweetening substitutes, and tentative methods for determining insoluble solids, total sulphur including methods for sulphured products, chlorine in ash, potassium, manganese, calcium, magnesium, alcohol precipitate, pectic, tartaric, and citric acids, free mineral acids, dextrine, gelatine in jellies and jams, agar agar in jellies, added water in white grape juice, metals, and coloring matters.

California Fruit Exchange. Packs Recommended for Blue Anchor Tree Fruits—Season 1944. Gives recommended method of packing plums, peaches, pears, and apricots in various standard size crates and boxes.

California Fruit Exchange. Regulations Governing the Use of the Blue Anchor Trademark—Season 1944. A common insignia distinguishing fruit which conforms to certain known and generally accepted federal or state standards. Gives size and use of insignia; quality, color, and size standards for cherries, apricots, plums, peaches, nectarines, figs, persimmons, pears, and grapes.

Canners League of California. California Canned Fruits, 1938. Specifications for grades, general description of grades, maximum and minimum number of pieces per can, variety, grade, syrup, and description of fruit packed; method of determining drained weight, and rules for judging pro rata deliveries.

National Board of Fire Underwriters. Coloring and Ripening of Fruits and Vegetables, No. 57; 1938. Recommended practice against fire and explosion hazards of process. Includes bananas, citrus fruit, apples, pears, tomatoes, celery, etc. Requirements governing

use of ethylene gas, open flames, gas heaters, kerosene stoves, electric wiring, and general precautions.

## 131. SUBTROPICAL FRUITS, FRESH AND PRESERVED

### 131.1 BANANAS

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, Volume 2; 1944. Banana Powder. Covers definition, characteristics, uses, derivation, containers, grades, and substitutes.

U. S. Gov., Federal Specification Y-B-91; 1933. Amendment 2; 1938. Bananas. Covers one grade—commercial No. 1, yellow variety. Gives detail requirements; method of inspection and test (chemical analyses in accordance with methods of Assn. of Official Agricultural Chemists); and requirements for packaging, packing, and marking.

*References.*—Methods of analysis, grading regulations, food laws, *see* 130, 120.

### 131.2 CITRUS FRUITS

### 131.20 General Items

*References.*—Methods of analysis, grading regulations, food laws, *see* 130, 120.

### 131.21 Citron

*References.*—Citrus fruits of Florida and Texas, *see* 131.20; methods of analysis, grading regulations, food laws, *see* 130, 120.

### 131.22 Grapefruit

California Fruit Growers Exchange. Rules and Regulations Governing Fruit Packed Under the Sunkist and Red Ball Trade-Marks, 1942. Grade Specifications—Grapefruit. Gives detailed requirements for grapefruit complying with sunkist and red ball trade marks; special rules relating to grapefruit maturity; thickness of rind, and frosted and dry fruit; and wrapper and box regulations.

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. U. S. Standards for California and Arizona Grapefruit, 1941. Covers six grades—U. S. fancy, U. S. No. 1, U. S. No. 2, U. S. combination, U. S. No. 3, and unclassified. Gives requirements for each grade, tolerances for each grade, standard pack, standards for export, and definitions of terms.

U. S. Gov., Federal Specification Y-G-680; 1944. Grapefruit; Fresh (California and Arizona). Covers three grades—No. 1, No. 2, and combination. Gives varieties, sizes, general requirements, and detail requirements; methods of inspection and test (chemical analyses in accordance with methods of Assn. of Official Agricultural Chemists); and packing, labeling, and marking for shipment.

U. S. Gov., Federal Specification Y-G-682; 1943. Grapefruit; Fresh (Florida, Texas, and Localities Other Than California and Arizona). Covers six grades—(a) No. 1, (b) No. 1 bronze, (c) No. 1 russet, (d) No. 2, (e) combination, and (f) No. 2 russet. Gives requirements for varieties, sizes, general requirements, and details for each grade; general requirements, and details for each grade; methods of inspection and test; and packing, labeling, and marking for shipment.

*References.*—Florida and Texas grapefruit, *see* 131.20; methods of analysis, grading regulations, food laws, *see* 130, 120.

### 131.23 Lemons

California Fruit Growers Exchange. Rules and Regulations Governing Fruit Packed Under the Sunkist and Red Ball Trade-Marks, 1942. Grade Specifications—Lemons. Gives detailed requirements for lemons complying with sunkist and red ball trade marks; special rules relating to lemons in storage, indications of alternaria development in lemons, juice content, and frosted and dry fruit; and wrapper and box regulations.

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. U. S. Standards for Lemons, 1941. Covers five grades—U. S. No. 1, U. S. No. 2, U. S. combination, U. S. No. 3, and unclassified. Gives requirements for each grade, tolerances, standard pack, standards for export, and definitions of terms.

U. S. Gov., Federal Specification Y-L-231a; 1941. Amendment 2; 1942. Lemons; Fresh. Covers three U. S. Grades—No. 1, No. 2, and combination (defined in the standards issued by the U. S. Gov., Dept. of Agriculture). Gives detail requirements for each grade; method of inspection and test (chemical analyses in accordance with methods of Assn. of Official Agricultural Chemists); and requirements for packaging, packing, and marking.

*References.*—Florida and Texas lemons, *see* 131.20; methods of analysis, grading regulations, food laws, *see* 130, 120.

### 131.24 Limes

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. U. S. Standards for Persian (Tahiti) Limes, 1939. Reissued, Feb. 1940. Covers four grades—U. S. No. 1, U. S. No. 2, U. S. combination, and unclassified. Gives requirements for each grade, tolerances, and definitions of terms.

*References.*—Florida and Texas citrus fruits, *see* 131.20; methods of analysis, grading regulations, food laws, *see* 130, 120.

### 131.25 Oranges

California Fruit Growers Exchange. Rules and Regulations Governing Fruit Packed Under the Sunkist and Red Ball Trade-Marks, 1942. Grade Specifications—Oranges. Gives detailed requirements for oranges complying with sunkist and red ball trade-marks; special rules relating to oranges that have been held in storage, maturity of oranges, and frosted and dry fruit; and wrapper and box regulations.

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. U. S. Standards for California and Arizona Oranges, 1941. Covers six grades—U. S. fancy, U. S. No. 1, U. S. No. 2, U. S. combination, U. S. No. 3, and unclassified. Gives requirements for each grade, tolerances, standard pack, standards for export, and definitions of terms.

U. S. Gov., Federal Specification Y-O-660; 1941. Amendment 2; 1942. Oranges; Fresh (California and Arizona).

Covers five grades of Valencia, navels, etc.—defined in standards issued by U. S. Gov., Dept. of Agriculture—(a) fancy, (b) No.1, (c) No.2, (d) combination, and (e) No.3. Gives requirements as to size, varietal characteristics, texture, dryness and mushy condition, and injury; method of inspection and test (chemical analyses in accordance with methods of Assn. of Official Agricultural Chemists); and requirements for packaging, packing, and marking.

U. S. Gov., Federal Specification Y-O-662; 1942. Oranges; Fresh (Florida, Texas, and Localities Other Than California and Arizona). Covers seven grades corresponding to U.S. grades as defined in standards issued by U. S. Gov., Dept. of Agriculture. Gives requirements for varieties, sizes, juice, and grades; methods of inspection and tests (chemical analysis in accordance with methods of Assn. of Official Agricultural Chemists); and requirements for packing, labeling, and marking for shipment.

*References.*—Florida and Texas oranges, *see* 131.20; methods of analysis, grading regulations, food laws, *see* 130, 120; marmalades, *see* 134.54.

## 131.26 Tangerines

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. U. S. Standards for Tangerines, 1941, and Amendment 1, effective Oct. 27, 1941. Covers seven grades—U. S. fancy, U. S. No.1, U. S. No.1 bronze, U. S. combination, U. S. No. 2, U. S. No.2 russet, and U. S. No.3, Gives requirements and tolerances for each grade, standard pack, and definitions of terms.

U. S. Gov., Federal Specification Y-T-96; 1934. Tangerines; Fresh. Covers one grade—U. S. No.1. Gives detail requirements; method of inspection and test (chemical analyses in accordance with methods of Assn. of Official Agricultural Chemists); and requirements for packaging, packing, and marking.

*References.*—Florida and Texas tangerines, *see* 131.20; methods of analysis, grading regulations, food laws, *see* 130, 120.

## 131.3 FIGS

Canners League of California. California Canned Fruits, 1938. Figs. Requirements as to percentage of sugar in sirup, color, freedom from blemishes, ripeness, woody stems removed, number of pieces per can, etc., for four grades.

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. Tentative U. S. Standards for Grades of Canned Kodata Figs, 1941. Covers six grades—U.S. grade A or U.S. fancy, U. S. grade A split or U. S. fancy split, U. S. grade B or U. S. choice, U. S. grade B split or U. S. choice split, U. S. grade D (seconds), and off-grade. Gives definition, sirup density, explanation of terms, recommended head space and drained weights, can size, can dimensions, maximum head space, minimum drained weight, count, and factors used in ascertaining the grade rating including color, uniformity of size and symmetry, absence of defects, and character of fruit.

U. S. Gov., Federal Specification Z-F-351; 1931. Figs; Canned. Covers three types—(A) Calimyrna, (B) Kadota, and (C) Magnolia; and two grades—fancy and choice. Gives detail requirements; methods of inspection and tests (chemical analyses in accordance with methods of Assn. of Official Agricultural Chemists); and requirements for packaging, packing, and marking.

*References.*—Methods of analysis, grading regulations, food laws, *see* 130, 120.

## 131.4 OLIVES

California Ripe Olive Standardization Act. From the California Agricultural Code, 1935. Division V, chapter 3, article 1. Canned Fruit and Vegetables. Establishes certain standards of quality, condition and/or fill of container and requirements for marking of fruits and vegetables, including olives, packed in tin or glass containers. Covers certain produce not to be canned, canned ripe olive standards, canned olive seconds, marking for seconds, better grades, labels, and canned olive grades.

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. Tentative U. S. Standards for Grades of Canned Ripe Olives, 1941. Covers four grades—U. S. grade A or U. S. fancy, U. S. grade B or U. S. choice, U. S. grade C or U. S. standard, and off-grade; and two types—ripe olives (uniform dark color) and green-ripe olives (yellowish green to light brown color, frequently mottled). Gives definition, sizes of canned ripe olives (nine sizes), drained weight determinations, and factors used in determining the grade rating including color, uniformity of size, uniformity of symmetry, absence of defects, character of fruit, and flavor.

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. Tentative U. S. Standards for Grades of Processed Sicilian Style Olives, 1940. Gives definition, grades, tolerance, unclassified olives, fill of container, sizes, clean, firm, fairly well formed, damage, and normal flavor.

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. Tentative U. S. Standards for Grades of Salt Cured Oil Coated Olives, 1940. Gives definition, grades for salt cured oil coated olives, tolerance, unclassified olives, sizes, cut olives, and normal flavor.

U. S. Gov., Federal Specification Y-O-451a; 1944. Olives. Covers two types: (I) Green—(a) plain, unpitted and (b) stuffed, pimiento; and (II) ripe—(a) dark-ripe, unpitted, (b) green-ripe, unpitted, (c) dark-ripe, pitted, and (d) green-ripe, pitted. Gives requirements for types of pack, sizes and counts, grades, and details; methods of inspection and test; and packaging, labeling, packing, and marking for shipment.

*References.*—Methods of analysis, grading regulations, food laws, *see* 130, 120.

## 131.5 PINEAPPLES

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. Suggested Tentative U. S. Grades for Pineapples, 1931. Reissued, Aug. 1939. Does not apply to Puerto Rican Pineapples. Covers two grades—U. S. No.1 and U. S. No.2. Gives requirements for each grade, marking requirements for size, and definitions of terms.

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. U. S. Standards for Puerto Rican Pineapples, 1931. Reissued, Aug. 1939.

Covers four grades—U. S. fancy, U. S. No.1, U. S. No.2, and unclassified. Gives requirements for each grade, tolerances, size and marking requirements, and definitions of terms.

U. S. Gov., Federal Specification Y-P-381; 1934. Pineapple; Fresh. Covers one grade—U. S. No.1. Gives detail requirements; method of inspection and test (chemical analyses in accordance with methods of Assn. of Official Agricultural Chemists); and requirements for packaging, packing, and marking.

*References.*—Methods of analysis, grading regulations, food laws, *see* 130, 120; canned pineapple, *see* 134.24.

### 131.6 AVOCADOS

*References.*—*See* references under 131.5.

### 131.7 POMEGRANATES

*References.*—*See* references under 131.5.

## 132. FRESH FRUITS, EXCEPT SUBTROPICAL

### 132.1 BERRIES, CURRANTS, AND GRAPES

### 132.11 Berries

American Cranberry Exchange. Cranberries, 1938. Gives general information concerning cranberries and covers varieties, grades, and brands of Cape Cod, New Jersey, and Wisconsin cranberries.

Northwest Canners Assn. Grading Rules for Fresh Fruits and Berries for Canning Purposes, 1932. Includes explanation of grading rules for fresh loganberries, fresh red raspberries, fresh black raspberries, No.1 fresh strawberries, No.1 fresh blackberries, and No.1 fresh gooseberries.

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. Tentative U.S. Standards for Grades of Frozen Red Raspberries, 1942. Covers three grades—U. S. grade A or U. S. fancy, U. S. grade B or U. S. choice, and off-grade. Gives definition, sugar or sirup pack, tolerance, and factors used in ascertaining the grade rating including color, absence of defects, and character of fruit.

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. U. S. Standards for Dewberries and Blackberries, 1928. Reissued, Sept. 1939. Covers three grades—U. S. No.1, U. S. No.2, and unclassified. Gives requirements for each grade and definitions of terms.

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. Tentative U. S. Standards for Grades of Frozen Strawberries, 1944. Covers three grades—U. S. grade A or U. S. fancy, U. S. grade B or U. S. choice, and off-grade; two styles—whole strawberries and sliced strawberries; and three sizes—small, medium, and large. Gives definition, sugar or sirup pack, tolerance, and factors used in ascertaining the grade rating including color, absence of defects, and character of fruit.

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. U. S. Standards for Growers' Stock Strawberries for Manufacture, 1935. Reissued, Aug. 1939. Covers five grades—U.S. No.1, U. S. No.2, U. S. No.3, U. S. No.4, and unclassified. Gives requirements for each grade, tolerances, and definitions of terms.

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. U. S. Standards for Raspberries, 1931. Reissued, Aug. 1939. Covers three grades—U. S. No.1, U. S. No.2, and unclassified. Gives requirements for each grade, tolerances, and definitions of terms.

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. U. S. Standards for Strawberries, 1942. Covers four grades, U. S. No.1, U. S. No.2, U. S. combination, and unclassified. Gives requirements for each grade, tolerances, and definitions of terms.

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. U. S. Standards for Washed and Sorted Strawberries for Freezing, 1935. Reissued, Aug. 1939. Covers two grades—U. S. No.1 and unclassified. Gives requirements for each grade, tolerances, and definitions of terms.

U. S. Gov., Federal Specification Y-B-426; 1933. Blackberries; Fresh. Covers one grade—U. S. No.1. Gives requirements; method of inspection and test (chemical analyses in accordance with methods of Assn. of Official Agricultural Chemists); and requirements for packaging, packing, and marking.

U. S. Gov., Federal Specification Y-B-496; 1933. Blueberries; Fresh. Covers one grade—best commercial. Gives detail requirements; method of inspection and test (chemical analyses in accordance with methods of Assn. of Official Agricultural Chemists); and requirements for packaging, packing, and marking.

U. S. Gov., Federal Specification Y-C-651; 1934. Cranberries; Fresh. Covers one grade—best commercial. Gives detail requirements; method of inspection and test (chemical analyses in accordance with methods of Assn. of Official Agricultural Chemists); and requirements for packaging, packing, and marking.

U. S. Gov., Federal Specification Y-R-101; 1933. Raspberries; Fresh. Covers one grade—U. S. No.1, either red or black variety. Gives detail requirements; method of inspection and test (chemical analyses in accordance with methods of Assn. of Official Agricultural Chemists); and requirements for packaging, packing, and marking.

U. S. Gov., Federal Specification Y-S-726; 1933. Strawberries; Fresh. Covers one grade—U.S. No.1. Gives detail requirements; method of inspection and test (chemical analyses in accordance with methods of Assn. of Official Agricultural Chemists); and requirements for packaging, packing, and marking.

*References.*—Canned berries, jams, and jellies, *see* 134.11, 134.5; methods of analysis, grading regulations, food laws, *see* 130, 120.

### 132.12 Currants

*References.*—Dried currants, *see* 133.12.

### 132.13 Grapes

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. U. S. Standards for American (Eastern Type) Bunch Grapes, 1943. Covers seven grades—U. S. fancy table, U. S. No.1 table, U. S. No.1 juice, U. S. fancy table mixed, U. S. No.1 table mixed, U.S. No.1 juice mixed, and unclassified.

Gives requirements for each grade, application of tolerances, and definitions of terms.

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. U. S. Standards for American (Eastern Type) Bunch Grapes for Processing and Freezing, 1943. Covers three grades—U.S. No.1, U.S. No.2, and unclassified. Gives requirements for each grade, tolerances, and definitions of terms.

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. U. S. Standards for Juice Grapes, 1939. Applies only to European or Vinifera type. Covers five grades—U. S. No.1, U. S. No.1 mixed, U. S. No.2, U. S. No.2 mixed, and unclassified. Gives requirements for each grade, tolerances, color, and maturity requirements, and definitions of terms.

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. U. S. Standards for Sawdust Pack Grapes, 1939. Apply only to European or Vinifera type. Covers three grades—U. S. fancy sawdust pack, U. S. No. 1 sawdust pack, and unclassified. Gives requirements for each grade, tolerance, maturity and color requirements, and definitions of terms.

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. U. S. Standards for Table Grapes, 1939. Applies only to the European or Vinifera type. Covers three grades—U. S. fancy table, U. S. No.1 table, and unclassified. Gives requirements for each grade, tolerance, maturity and color requirements, and definitions of terms.

U. S. Gov., Federal Specification Y-G-671a; 1941. Amendment 2; 1944. Grapes; Fresh. Covers No.1 table grapes, either eastern or western grown, of several varieties. Gives detail requirements; method of inspection and test (chemical analyses in accordance with methods of Assn. of Official Agricultural Chemists); and packing, labeling, and marking for shipment.

*References.*—Raisins, canned grapes, *see* 133.13, 134.13; methods of analysis, grading regulations, food laws, *see* 130, 120.

## 132.2 FLESHY FRUITS

### 132.21 Apples

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. Service and Regulatory Announcement No. 143. Revised, 1938. Grades, Requirements, and Regulations of the Secretary of Agriculture for Carrying Out the Provisions of the Export Apple and Pear Act of June 10, 1933 (48 Stat. 123, 7 U. S. C., Secs. 581–589). Covers definitions and regulations.

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. Service and Regulatory Announcement No.154. U. S. Standards for Apples, 1937. Reissued, Oct. 1939. Covers nine U. S. grades—fancy, No.1, commercial, No.1 early, utility, utility early, combination grades, hail, and unclassified. Gives requirements for each grade, percentage of red color for apples of fancy and No.1 grades, tolerances for grades, condition after storage or transit, size, packing and marking, definitions, and standards for export.

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. U. S. Standards for Cannery Apples, 1930. Reissued, Aug. 1939. Covers three grades—U. S. No.1, U. S. No.2, and ciders. Gives requirements for each grade and minimum size.

*References.*—Dried apples, canned apples, and apple sauce, *see* 133.21, 134.21; methods of analysis, grading regulations, food laws, *see* 130, 120.

### 132.22 Pears

Northwest Canners Assn. Grading Rules for Fresh Fruits and Berries for Canning Purposes, 1932. Includes explanation of grading rules for fresh pears.

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. Service and Regulatory Announcement No. 143. Revised, 1938. Grades, Requirements, and Regulations of the Secretary of Agriculture for Carrying Out the Provisions of the Export Apple and Pear Act of June 10, 1933 (Stat. 123, 7 U. S. C., Secs. 581–589). Covers definitions and regulations.

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. U. S. Standards for Pears for Canning, 1939. Reissued, Sept. 1939. Covers three grades—U. S. No.1, U. S. No.2, and culls. Gives requirements for each grade, size classification, and definitions of terms.

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. U. S. Standards for Summer and Fall Pears Such As Bartlett, Hardy, and Other Similar Varieties, 1940. Covers four grades—U. S. No.1, U. S. No.2, U. S. combination, and unclassified. Gives requirements for each grade, tolerances, definitions of terms, and standard pack.

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. U. S. Standards for Winter Pears Such As Anjou, Bosc, Winter Nelis, Comice, and Other Similar Varieties, 1940. Covers five grades—U.S. extra No.1, U.S. No.1, U. S. No.2, U. S. combination, and unclassified. Gives requirements for each grade, tolerances, definitions of terms, and standard pack.

U.S. Gov., Federal Specification Y-P-167; 1945. Pears; Fresh, Summer and Fall. Covers three grades—(a) No.1, (b) combination, and (c) No.2. Gives requirements for varieties, sizes, and details for each grade; method of inspection and test (chemical analyses, if required, in accordance with methods of Assn. of Official Agricultural Chemists); and packing, labeling, and marking for shipment.

U.S. Gov., Federal Specification Y-P-169; 1945. Pears; Fresh, Winter. Covers four grades—(a) extra No.1, (b) No.1, (c) combination, and (d) No.2. Gives requirements for varieties, sizes, and details for each grade; methods of inspection and test (chemical analysis, if required, in accordance with methods of Assn. of Official Agricultural Chemists); packing, labeling, and marking for shipment.

*References.*—Dried pears, canned pears, *see* 132.22, 134.22; methods of analysis, grading regulations, food laws, *see* 130, 120.

### 132.23 Quinces

## 132.3 MELONS

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. U. S. Standards for Cantaloupes, 1937. Reissued, Sept. 1939. Covers

three grades—U. S. No.1, U. S. commercial, and unclassified. Gives requirements for each grade, tolerances, and definitions of terms.

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. U. S. Standards for Honey Dew and Honey Ball Type Melons, 1937. Reissued, Aug. 1939. Covers four grades—U. S. No.1, U.S. commercial, U.S. No.2, and unclassified. Gives requirements for each grade, tolerances, and definitions of terms.

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. U. S. Standards for Watermelons, 1939. Covers four grades—U. S. No.1, U. S. No.2, U. S. No.3, and unclassified. Gives requirements for each grade, tolerances, size, weights, and definitions of terms.

U. S. Gov., Federal Specification Y-C-96a; 1945. Cantaloupes; Fresh. Covers two grades—(a) No.1 and (b) commercial. Gives requirements for sizes and grades; method of inspection and test (chemical analyses in accordance with methods of Assn. of Official Agricultural Chemists); and packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification Y-M-211; 1933. Melons (Honey Dew, Honey Ball, Persian or Casaba); Fresh. Covers one grade—U. S. No.1. Gives detail requirements; method of inspection and test (chemical analyses in accordance with methods of Assn. of Official Agricultural Chemists): and requirements for packaging, packing, and marking.

U. S. Gov., Federal Specification Y-W-121a; 1941. Amendment 1; 1942. Watermelons. Covers three U. S. grades—Nos. 1, 2, and 3 (defined in standards issued by U. S. Gov., Dept. of Agriculture). Gives detail requirements; method of inspection and test (chemical analyses in accordance with methods of Assn. of Official Agricultural Chemists); and requirements for packaging, packing, and marking.

*References.*—Methods of analyses, grading regulations, food laws, *see* 130, 120.

## 132.4 STONE FRUITS

### 132.41 Apricots

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. U. S. Standards for Apricots, 1928. Reissued, Mar. 1942. Covers three grades—U. S. No.1, U. S. No.2, and unclassified. Gives requirements for each grade, marking, packing, and definitions of terms.

U. S. Gov., Federal Specification Y-A-62la: 1941. Amendment 1; 1942. Apricots; Fresh. Covers two U. S. grades—defined in standards issued by U. S. Gov., Dept. of Agriculture—(a) No.1 and (b) No.2. Gives requirements for each grade; method of inspection and test (chemical analyses in accordance with methods of Assn. of Official Agricultural Chemists): and requirements for packaging, packing, and marking.

*References.*—Dried apricots, canned apricots, *see* 133.41, 134.41; methods of analysis, grading regulations, food laws, *see* 130, 120.

### 132.42 Cherries

Northwest Canners Assn. Grading Rules for Fresh Fruits and Berries for Canning Purposes, 1932. Includes explanation of grading rules for fresh cherries, and No.1 fresh sour cherries.

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. Tentative U.S. Standards for Grades of Frozen Red Sour Pitted Cherries, 1942. Covers three grades—U. S. grade A or U. S. fancy, U.S. grade C or U.S. standard, and off-grade. Gives definition, fill of container, sugar or sirup pack, explanation of terms, tolerance, and factors used in ascertaining the grade rating including color, absence of defects, and character of fruit.

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. U. S. Standards for Red Sour Cherries for Manufacture, 1941. Covers three grades—U. S. No.1, U. S. No.2, and unclassified. Gives requirements for each grade, tolerance, and definitions of terms.

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. U. S. Standards for Sweet Cherries, 1927. Reissued, Aug. 1939. Covers two grades—U. S. No.1 and unclassified. Gives requirements for each grade, tolerance, size, and definitions of terms.

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. U. S. Standards for Sweet Cherries, for Export for Sulphur Brining, 1940. Covers one grade—U. S. No.1. Gives requirements for this grade, size, and definitions of terms.

U. S. Gov., Federal Specification Y-C-306; 1934. Cherries; Fresh. Covers one grade—U. S. No.1. Gives detail requirements; method of inspection and test (chemical analyses in accordance with methods of Assn. of Official Agricultural Chemists); and requirements for packaging, packing, and marking.

*References.*—Canned cherries, *see* 134.42; methods of analysis, grading regulations, food laws, *see* 130, 120.

### 132.43 Dates

U. S. Gov., Federal Specification Y-D-126; 1938. Dates; Unpitted. Covers two varieties—Deglet Noor and Invert sugar; and five grades—extra fancy, fancy, choice, hydrated, and dry. Gives detail requirements; method of inspection and test (chemical analyses in accordance with method of Assn. of Official Agricultural Chemists); and requirements for packaging, packing, and marking.

### 132.44 Peaches

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. U. S. Standards for Freestone Peaches for Canning or Freezing, 1942. Covers three grades—U. S. No.1, U. S. No.2, and unclassified. Gives requirements for each grade, minimum size, tolerances, and definitions of terms.

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. U. S. Standards for Nectarines, 1938. Reissued, 1942. Covers six grades—U. S. fancy, U. S. extra No.1, U. S. No.1, U.S. No.2, U.S. combination, and unclassified. Gives requirements for each grade, tolerances, and definitions.

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. U. S. Standards for Peaches, 1933. Reissued, July 1939. Covers five grades—U. S. fancy, U. S. extra No.1, U. S. No.1,

63677 O—45——5

U. S. No.2, and unclassified. Gives requirements for each grade, tolerances, marking requirements for size, standard pack, and definitions of terms.

U. S. Gov., Federal Specification Y-P-151a; 1941. Amendment 2; 1942. Peaches; Fresh. Covers four U. S. grades—(a) fancy, (b) extra No.1, (c) No.1, and (d) No.2, (defined in standards issued by U. S. Gov., Dept. of Agriculture). Gives detail requirements: method of inspection and test (chemical analyses in accordance with methods of Assn. of Official Agricultural Chemists); and requirements for packaging, packing, and marking.

*References.*—Dried peaches, canned peaches, *see* 133.44, 134.44; methods of analysis, grading regulations, food laws, *see* 130, 120.

### 132.45 Plums and Prunes

Northwest Canners Assn. Grading Rules for Fresh Fruits and Berries for Canning Purposes, 1932. Includes explanation of grading rules for No.1 fresh prunes.

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. U. S. Standards for Plums and Prunes (Fresh), 1937. Reissued, Aug. 1939. Covers four grades—U. S. fancy, U. S. No.1, U. S. No.2, and unclassified. Gives requirements and tolerances for each grade, standard pack, and definitions of terms.

U. S. Gov., Federal Specification Y-P-506a; 1941. Amendment 1: 1942. Plums and Prunes; Fresh. Covers three U. S. grades—(a) Fancy, (b) No.1, and (c) No.2 (defined in standards issued by U. S. Gov., Dept. of Agriculture). Gives detail requirements; methods of inspection and test (chemical analyses in accordance with methods of Assn. of Official Agricultural Chemists); and requirements for packaging, packing, and marking.

*References.*—Dried prunes, canned plums and prunes, *see* 133.45, 134.45; methods of analysis, grading regulations, food laws, *see* 130, 120.

### 132.46 Persimmons

*References.*—Methods of analysis, grading regulations, food laws, *see* 130, 120.

## 133. DRIED AND EVAPORATED FRUITS

## 133.1 DRIED BERRIES, CURRANTS, AND GRAPES

### 133.11 Dried Berries

*References.*—Fresh berries, jams and jellies, *see* 132.11, 134.5.

### 133.12 Dried Currants

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. Tentative U.S. Standards for Grades of Dried Zante Currants, 1943. Covers three grades—U. S. grade A, U. S. grade B, and off-grade; and two types—(I) black and (II) white. Gives definition, table showing defects, and explanation of terms.

U. S. Gov., Federal Specification Z-C-85la; 1944. Currants: Dried (Processed). Covers two types—(I) Zante type (domestic) and (II) other types (foreign); and two grades—A and B. Gives requirements for material, workmanship, and details for each grade; methods of inspection and tests (chemical analyses in accordance with methods of Assn. of Official Agricultural Chemists); and packaging, labeling, packing, and marking for shipment.

*References.*—Methods of analysis, grading regulations, food laws, *see* 130, 120.

### 133.13 Raisins

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. Tentative U.S. Standards for Grades of Processed Raisins, 1942. Covers three grades—U. S. grade A, U. S. grade B, and off-grade; and three types—(I) Thompson seedless (sultanina), (II) muscats, and (III) sultana. Gives definition, explanation of terms, size, color, defects, and details covering type I—bleached (natural), sulphur bleached or golden bleached, and soda dipped; type II—seeded (seeds removed), unseeded (loose), and soda dipped unseeded (Valencia); and type III.

U. S. Gov., Federal Specification Z-R-71b; 1939. Raisins. Covers three types: (I) Thompson seedless—(a) unbleached, (b) sulphur bleached, and (c) soda dipped; (II) muscats—(a) seeded, (b) unseeded, and (c) soda dipped unseeded; and (III) sultana. Gives requirements for sizes, color, grades, and details for each type and grade; methods of inspection and test, and packaging, labeling, packing, and marking.

*References.*—Fresh grapes, canned grapes, *see* 132.13, 134.13; methods of analysis, grading regulations, food laws, *see* 130, 120.

## 133.2 FLESHY FRUITS, DRIED

### 133.21 Dried Apples

Assn. of American Feed Control Officials. Definitions of Feedingstuffs, 1942. Definitions for dried apple pomace and dried apple pectin pulp.

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. U. S. Standards for Grades of Dried Apples, 1943. Covers four grades—U. S. grade A or U. S. fancy, U. S. grade B or U. S. choice, U. S. grade C or U. S. standard, and off-grade; and three styles—rings, quartered, and sliced. Gives definition, explanation of terms, and details.

U. S. Gov., Federal Specification Z-A-613b; 1943. Apples; Evaporated (or Dried). Covers two types—(I) sliced (rings) and (II) quartered (3, 4, or 6 pc.); in three grades—(A) fancy, (B) extra choice, and (C) choice. Gives detail requirements; methods of inspection and tests (chemical analyses in accordance with methods of Assn. of Official Agricultural Chemists); and requirements for packaging, packing, and marking.

*References.*—Fresh apples, canned apples, and apple sauce, *see* 132.21, 134.21; methods of analyses, grading regulations, food laws, *see* 130, 120.

### 133.22 Dried Pears

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. Tentative U.S. Standards for Grades of Dried Pears, 1942. Covers four grades—U. S. grade A or U. S. fancy, U. S. grade B or U. S. choice, U. S. grade C or U. S. standards, and off-grade; and six sizes—No.1 (jumbo), No.2 (extra large), No.3 (large), No.4 (medium), No.5 (small), and No.6 (extra small). Gives definition and explanation of terms.

U. S. Gov., Federal Specification Z-P-206; 1943. Pears: Evaporated (or Dried). Covers six sizes and three

grades. Shall be prepared from any established market variety of fruit of the latest crop, and shall be processed and packed under sanitary conditions in accordance with good commercial practice. Gives details for sizes, grades, methods of inspection, tests, packaging, labeling, packing, and marking.

*References.*—Fresh pears, canned pears, *see* 132.22, 134.22; methods of analysis, grading regulations, food laws, *see* 130, 120.

### 133.23 Dried Quinces

## 133.3 DRIED MELONS

## 133.4 DRIED STONE FRUITS

### 133.41 Dried Apricots

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. Tentative U. S. Standards for Grades of Dried Apricots, 1942. Covers four grades—U. S. grade A or U. S. fancy, U. S. grade B or U. S. choice, U. S. grade C or U. S. standard, and off-grade; and six sizes—jumbo, No. 1 (extra fancy size), No. 2 (fancy size), No. 3 (extra choice size), No. 4 (choice size), and No. 5 (standard size). Gives definition and explanation of terms.

U. S. Gov., Federal Specification S-A-636a; 1942. Apricots; Evaporated (or Dried). Covers four grades—fancy, extra choice, choice, and standard. Gives detail requirements; methods of inspection and tests (chemical analyses in accordance with methods of Assn. of Official Agricultural Chemists); and requirements for packaging, packing, and marking.

*References.*—Fresh apricots, canned apricots, *see* 132.41, 134.41; methods of analysis, grading regulations, food laws, *see* 130, 120.

### 133.42 Dried Cherries

*References.*—Fresh cherries, canned cherries, *see* 132.42, 134.42.

### 133.43 Dried Dates

### 133.44 Dried Peaches

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. Tentative U. S. Standards for Grades of Dried Peaches, 1942. Covers four grades—U. S. grade A or U. S. fancy, U. S. grade B or U. S. choice, U. S. grade C or U. S. standard, and off-grade; six sizes—No. 1 (jumbo), No. 2 (extra fancy); No. 3 (fancy), No. 4 (extra choice), No. 5 (choice), and No. 6 (standard); and two types—freestone (Muir variety, Lovell variety, and other varieties or mixed) and clingstone. Gives definition and explanation of terms.

U. S. Gov., Federal Specification Z-P-193a; 1943. Peaches; Evaporated (or Dried). Covers two types—(I) Freestone and (II) Clingstone; and three grades—(A) fancy, (B) choice, and (C) standard. Gives detail requirements; methods of inspection and tests (chemical analyses in accordance with methods of Assn. of Official Agricultural Chemists); and requirements for packaging, packing, and marking.

*References.*—Fresh peaches, canned peaches, *see* 132.44, 134.44; methods of analysis, grading regulations, food laws, *see* 130, 120.

### 133.45 Dried Plums and Prunes

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. U. S. Standards for Grades of Dried Prunes, 1941. Covers four grades—U. S. grade A or U. S. fancy, U. S. grade B or U. S. choice; U. S. grade C or U. S. standard, and off-grade; three types—(I) French, (II) Italian, and (III) imperials, sugars, or a mixture; and designation for sizes of each type. Gives definition, minor defects, major defects, and explanation of terms.

U. S. Gov., Federal Specification Z-P-681c; 1941. Amendment 1; 1942. Prunes; Evaporated (or Dried). Covers three types—(I) French, (II) Italian, and (III) imperials, sugars, or a mixture of the two; sizes for each type; and three grades—(A) fancy, (B) choice, and (C) standard. Gives detail requirements; methods of inspection and tests (chemical analyses in accordance with methods of Assn. of Official Agricultural Chemists); and requirements for packaging, packing, and marking.

*References.*—Fresh plums and prunes, canned plums and prunes, *see* 132.45, 134.45; methods of analysis, grading regulations, food laws, *see* 130, 120.

## 133.5 DRIED SUBTROPICAL FRUITS

*References.*—Dried figs, *see* 131.3; dried dates, *see* 133.43; dried citron, *see* 131.21.

# 134. CANNED AND PRESERVED FRUITS, JAMS, AND JELLIES

## 134.0 GENERAL ITEMS

National Canners Assn. Manual for Canned Food Labels, 1942. Definitions and Standards N.C.A. Recommended Terms. Fruits. Covers apple sauce, apricots, blackberries, boysenberries, gooseberries, loganberries, black raspberries, red raspberries, strawberries, youngberries, currants, figs, fruits for salads, grapefruit, grapes, olives (ripe), peaches, pears, plums (green gage and egg), plums (prune), and prunes (dried).

## 134.1 CANNED BERRIES, CURRANTS, AND GRAPES

### 134.11 Canned Berries

Northwest Canners Assn. Specifications for Canned Fruits and Vegetables, 1935. Includes variety, grade, syrup, and description of packed loganberries, red raspberries, youngberries, black raspberries, strawberries, gooseberries, and blackberries.

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. Tentative U. S. Standards for Grades of Canned Blackberries, 1940. Covers six grades—U. S. grade A or U. S. fancy, U. S. grade B or U. S. choice, U. S. grade C or U. S. standard, U. S. grade D (seconds), U. S. grade E (water or pie pack), and off-grade (substandard). Gives definition, heavy pack, sirup density, explanation of terms, recommended head space and drained weights, can size, can dimensions, maximum capacity, maximum head space, minimum drained weight, and factors used in ascertaining the grade rating including color, uniformity of size, absence of defects, and character of fruit.

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. Tentative U. S.

Standards for Grades of Canned Red Raspberries, 1940. Covers six grades—U. S. grade A or U. S. fancy, U. S. grade B or U. S. choice, U. S. grade C or U. S. standard, U. S. grade D (seconds), U. S. grade E (water or pie-pack), and off-grade (substandard). Gives definition, sirup density, explanation of terms, recommended head space and drained weights, can size, can dimensions, maximum capacity, maximum head space, minimum drained weight, and factors used in ascertaining the grade rating including color, uniformity of size, absence of defects, and character of fruit.

U.S. Gov., Federal Specification Z-B-421; 1931. Amendment 2; 1934. Blackberries; Canned. Covers four grades—(A) fancy, (B) choice, (C) standard, and (D) water or pie. Gives detail requirements; methods of inspection and tests (chemical analyses in accordance with methods of Assn. of Official Agricultural Chemists); and requirements for packaging, packing, and marking.

U. S. Gov., Federal Specification Z-B-491; 1931. Amendment 1; 1934. Blueberries (Huckleberries); Canned. Covers two grades—(A) fancy and (B) water. Gives detail requirements; methods of inspection and tests (chemical analyses in accordance with methods of Assn. of Official Agricultural Chemists); and requirements for packaging, packing, and marking.

U.S. Gov., Federal Specification Z-L-501; 1931. Amendment 1; 1934. Loganberries; Canned. Covers three grades—(A) fancy, (B) choice, and (C) water or pie. Gives detail requirements; methods of inspection and tests (chemical analyses in accordance with methods of Assn. of Official Agricultural Chemists); and requirements for packaging, packing, and marking.

U.S. Gov., Federal Specification Z-R-91; 1931. Amendment 1; 1934. Raspberries; Canned. Covers two types—(I) red (in Cuthbert, King, Ranere, and Columbia varieties) and (II) black; and four grades—(A) fancy, (B) choice, (C) standard, and (D) water or pie. Gives detail requirements; methods of inspection and tests (chemical analyses in accordance with methods of Assn. of Official Agricultural Chemists); and requirements for packaging, packing, and marking.

*References.*—Fresh berries, *see* 132.11; jams and jellies, *see* 134.5; methods of analysis, grading regulations, food laws, *see* 130, 120.

### 134.12 Canned Currants

*References.*—Dried currants, *see* 133.12.

### 134.13 Canned Grapes

Canners League of California. California Canned Fruits, 1938. Muscat Grapes. Requirements as to percentage of sugar in sirup, ripeness, freedom from blemishes, uniform size, etc., for four grades.

*References.*—Fresh grapes, raisins, *see* 132.13, 133.13; methods of analysis, grading regulations, food laws, *see* 130, 120.

## 134.2 FLESHY FRUITS, CANNED

### 134.21 Applesauce and Canned Apples

Northwest Canners Assn. Specifications for Canned Fruits and Vegetables, 1935. Includes variety, grade, syrup, and description of packed apples.

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. U. S. Standards for Grades of Canned Apples, 1943. Covers three grades—U. S. grade A or U. S. fancy, U. S. grade C or U. S. standard, and off-grade. Gives definition, fill of container and recommended drained weight, can size, can dimensions, minimum drained weight, tolerance, and factors used in ascertaining the grade rating including color, uniformity of size, absence of defects, and character of fruit.

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. U. S. Standards for Grades of Canned Apple Sauce, 1934. Covers three grades—U. S. grade A (fancy), U. S. grade C (standard), and off-grade (substandard). Gives definition, condition of container, condition of package and label, fill of container, slack fill, can size, can dimensions, maximum capacity, maximum head space, and factors used in ascertaining the grade rating including color, consistency, finish, absence of defects, and flavor.

U. S. Gov., Federal Specification Z-A-611b; 1941. Apples; Canned. Covers the "heavy pack" type, with little or no free liquid, in two grades—fancy (grade A), and standard (grade C). Gives detail requirements; methods of inspection and tests (chemical analyses in accordance with methods of Assn. of Official Agricultural Chemists); and requirements for packaging, packing, and marking.

U. S. Gov., Federal Specification Z-A-621a; 1941. Applesauce; Canned. Covers two grades—(A) fancy (B) standard. Gives detail requirements; methods of inspection and tests (chemical analyses in accordance with methods of Assn. of Official Agricultural Chemists); and requirements for packaging, packing, and marking.

*References.*—Fresh apples, dried apples, *see* 132.21, 133.21; methods of analysis, grading regulations, food laws, *see* 130, 120.

### 134.22 Canned Pears

Canners League of California. California Canned Fruits, 1938. Bartlett Pears. Requirements as to percentage of sugar in sirup, color, ripeness, uniform size, freedom from blemishes, and pieces per can, for four grades.

Canners League of California. California Canned Fruits, 1938. Spiced Pears. Requirements for two grades of whole fruit, peeled, for strength of sirup in degrees (Brix), for ripeness, color, freedom from blemishes, and uniform size. To be packed with the addition of vinegar, cinnamon, cloves, and other spices if desired. Number of pieces per can and permissible maximum variation.

Northwest Canners Assn. Specifications for Canned Fruits and Vegetables, 1935. Includes variety, grade, syrup, and description of packed pears.

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. U. S. Standards for Grades of Canned Pears, 1942. Covers seven grades—U. S. grade A or U. S. fancy, U. S. grade B or U. S. choice, U. S. grade C or U. S. standard, U. S. grade D (seconds), U. S. grade E (water grade), U. S. grade F (solid-pack pie), and off-grade; and five styles—halved, quartered, sliced, diced, and whole. Gives sirup density, fill of container and recommended

drained weight, count range, can size, explanation of terms, tolerance, and factors used in ascertaining the grade rating including color, uniformity of size and symmetry, absence of defects, and character of fruit.

U. S. Gov., Federal Security Agency, Food and Drug Administration, S.R.A., F.D.C.2; 1944. Definitions and Standards for Food. Canned Pears. Covers—(1) canned pears; identity, label statement of optional ingredients; (2) canned pears; quality, label statement of substandard quality; and (3) canned pears; fill of container, label statement of substandard fill.

U. S. Gov., Federal Specification Z-P-201a; 1941. Pears; Canned. Covers two types—(I) Bartlett and (II) other varieties; four styles—(1) halved, (2) quartered, (3) sliced, and (4) whole; and six grades—(A) fancy, (B) choice, (C) standard, (D) seconds, (E) water grade, and (F) solid-pack pie. Gives detail requirements; methods of inspection and tests (chemical analyses in accordance with methods of Assn. of Official Agricultural Chemists); and requirements for packaging, packing, and marking.

*References.*—Fresh pears, dried pears, *see* 132.22, 133.22; methods of analysis, grading regulations, food laws, *see* 130, 120.

### 134.23 Canned Quinces

### 134.24 Canned Pineapples

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. Tentative U. S. Standards for Grades of Canned Pineapple, 1943. Covers four grades—U. S. grade A or U. S. fancy, U. S. grade B or U. S. choice, U. S. grade C or U. S. standard (half slices or broken slices), and off-grade; and six styles—slices (whole), half slices, broken slices, crushed pineapple, titbits, and chunks. Gives definition, sirup density, fill of container and recommended drained weight, can size, count and size, explanation of terms, tolerance, and factors used in ascertaining the grade rating including color, uniformity of size and symmetry, absence of defects, and character of fruit.

U. S. Gov., Federal Specification Z-P-351b; 1943. Pineapple; Canned. Covers six styles—(I) slices, (II) titbits, (III) chunks, (IV) crushed, (V) half slices, and (VI) broken slices; and three grades—(A) fancy, (B) choice, and (C) standard. Gives requirements for material and workmanship, sirup, count and size, can size, drained weight and head space, and details for each style and grade; methods of inspection and test; and packaging, labeling, packing, and marking for shipment.

*References.*—Fresh pineapple, *see* 131.5; methods of analysis, grading regulations, food laws, *see* 130, 120.

### 134.25 Canned Grapefruit

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. U. S. Standards for Grades of Canned Grapefruit, 1943. Covers four grades—U. S. grade A or U. S. fancy, U. S. grade B or U. S. choice, U. S, broken, and off-grade. Gives definition, sirup density, fill of container, can size, can dimensions, explanation of terms, tolerance, and factors used in ascertaining the grade rating including drained weight, wholeness, color, absence of defects, and character of fruit.

U. S. Gov., Federal Specification Z-G-676a; 1943. Grapefruit; Canned. Covers three grades—(A) fancy, (B) choice, and (C) broken. Gives requirements for material and workmanship, sirup, drained weights and head space, can size, and details for each grade; methods of inspection and test; and packaging, labeling, packing, and marking for shipment.

## 134.3 CANNED MELONS

## 134.4 CANNED STONE FRUITS

### 134.41 Canned Apricots

Canners League of California. California Canned Fruits, 1938. Apricots. Includes four classes of fruit, requirements as to percentage of sugar in sirup, color, uniform size, freedom from blemishes, and pieces per can.

Canners League of California. California Canned Fruits, 1938. Spiced Apricots. Requirements for two grades of whole, peeled fruit, for strength of sirup in degrees (Brix), for ripeness, color, freedom from blemishes, uniformity in size, and pieces per can. To be packed with the addition of vinegar, cinnamon, cloves, and other spices if desired.

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. Tentative U. S. Standards for Grades of Canned Apricots, 1941. Covers seven grades—U. S. grade A or U. S. fancy, U. S. grade B or U. S. choice, U. S. grade C or U. S. standard, U. S. grade D (seconds), U. S. grade E (seconds packed in water), U. S. grade F (solid pack-pie), and off-grade; and two styles—halved and whole. Gives definition, sirup density, explanation of terms, recommended head space and drained weights, can size, can dimensions, minimum drained weight, maximum head space, count (maximum number per can), and factors used in ascertaining the grade rating including color, uniformity of size and symmetry, absence of defects, and character of fruit.

U. S. Gov., Federal Security Agency, Food and Drug Administration, S.R.A., F.D.C.2; 1944. Definitions and Standards for Food. Canned Apricots. Covers—(1) canned apricots; identity, label statement of optional ingredients; (2) canned apricots; quality, label statement of substandard quality; (3) canned apricots; fill of container, label statement of substandard fill.

U. S. Gov., Federal Specification Z-A-631a; 1941. Apricots; Canned. Covers two styles (either unpeeled or peeled)—(I) halved and (II) whole; in six grades—(A) fancy, (B) choice, (C) standard, (D) seconds, (E) water grade, and (F) solid-pack pie. Gives detail requirements; methods of inspection and tests (chemical analyses in accordance with methods of Assn. of Official Agricultural Chemists); and requirements for packaging, packing, and marking.

*References.*—Fresh apricots, dried apricots, *see* 132.41, 133.41; methods of analysis, grading regulations, food laws, see *130*, *120*.

### 134.42 Canned Cherries

Canners League of California. California Canned Fruits, 1938. Royal Anne Cherries. Requirements as to

percentage of sugar in sirup, freedom from blemishes, uniform size, and ripeness, for four grades.

Northwest Canners Assn. Specifications for Canned Fruits and Vegetables, 1935. Includes variety, grade, syrup, and description of packed Royal Anne, Bing and Lambert, black and white, and red sour cherries.

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. U. S. Standards for Grades of Canned Pitted Sulphured Cherries, 1934. Covers three grades—U. S. No. 1, U. S. No. 2, and sample grade. Gives definition, machine pitted, pitted, properly matured, clean, firm, damage, serious damage, and dimensions for small, medium, and large sizes.

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. U. S. Standards for Grades of Canned Red Sour Pitted Cherries, 1941. Covers three grades—U. S. grade A or U. S. fancy, U. S. grade C or U. S. standard, and off-grade. Gives sirup density, can size, can dimensions, maximum capacity, maximum head space, minimum drained weight, and factors used in ascertaining the grade rating including color, absence of defects, and character of fruit.

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. U. S. Standards for Grades of Canned Sweet Cherries, 1940. Covers six grades—U. S. grade A or U. S. fancy, U. S. grade B or U. S. choice, U. S. grade C or U. S. standard, U. S. grade D (seconds), U. S. grade E (water or pie), and off-grade; and two styles—pitted and unpitted. Gives sirup density, explanation of terms, recommended head space and drained weights, can size, can dimensions, maximum capacity, maximum head space. minimum drained weight, count, and factors used in ascertaining the grade rating including color, uniformity of size and symmetry, absence of defects, and character of fruit.

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. U. S. Standards for Grades of Canned Unpitted Sulphured Cherries, 1934. Covers three grades—U. S. No. 1, U. S. No. 2, and sample grade. Gives definition, properly matured, clean, firm, damage, serious damage, and dimensions for small, medium, and large sizes.

U. S. Gov., Federal Security Agency, Food and Drug Administration, S.R.A., F.D.C. 2; 1944. Definitions and Standards for Food. Canned Cherries. Covers—(1) canned cherries; identity, label statement of optional ingredients; (2) canned cherries; quality, label statement of substandard quality; (3) canned cherries; fill of container, label statement of substandard fill.

U. S. Gov., Federal Specification Z-C-301a; 1941. Cherries; Canned. Covers three types: (I) red sour (red tart) pitted—(a) water pack (b) sirup pack; (II) light sweet—(a) unpitted (b) pitted; and (III) dark sweet—(a) unpitted (b) pitted; in two grades—(A) fancy and (C) standard—for type I; and in six grades—(A) fancy, (B) choice, (C) standard, (D) seconds, (E) water or pie, and (F) heavy-pack pie—for types II and III. Gives detail requirements; methods of inspection and tests (chemical analyses in accordance with methods of Assn. of Official Agricultural Chemists); and requirements for packaging, packing, and marking.

*References.*—Fresh cherries, *see* 132.42; methods of analysis, grading regulations, food laws, *see* 130, 120.

### 134.43 Canned Dates

### 134.44 Canned Peaches

Canners League of California. California Canned Fruits, 1938. Peaches. Includes yellow cling, sliced yellow cling, yellow free, and spiced peaches; requirements on percentage of sugar in sirup, color, ripeness, uniform size, freedom from blemishes, and pieces per can for four grades of peaches—two grades of whole spiced peaches and two grades of halved spiced peaches.

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. Tentative U. S. Standards for Grades of Canned Peaches (Freestone), 1940. Covers seven grades—U. S. grade A or U. S. fancy, U. S. grade B or U. S. choice, U. S. grade C or U. S. standard, U. S. grade D (seconds), U. S. grade E (water or pie-pack), U. S. grade F (solid pie-pack), and off-grade; and two styles—halved and sliced. Gives sirup density, explanation of terms, recommended head space and drained weights, can size, can dimensions, maximum capacity, maximum head space, minimum drained weight, count, and factors used in ascertaining the grade rating including color, uniformity of size and symmetry, absence of defects, and character of fruit.

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. U. S. Standards for Grades of Canned Yellow Clingstone Peaches, 1942. Covers five grades—U. S. grade A or U. S. fancy, U. S. grade B or U. S. choice, U. S. grade C or U. S. standard, U. S. grade D, and off-grade; and five styles—halved, quartered, diced, sliced, and whole. Gives sirup density, fill of container and recommended drained weight, can size, count, explanation of terms, tolerance, and factors used in ascertaining the grade rating including color, uniformity of size and symmetry, absence of defects, and character of fruit.

U. S. Gov., Federal Security Agency, Food and Drug Administration, S.R.A., F.D.C. 2, 1944. Definitions and Standards for Food. Canned Peaches. Covers—(1) canned peaches; identity, label statement of optional ingredients; (2) canned peaches; quality, label statement of substandard quality; and (3) canned peaches; fill of container, label statement of substandard fill.

U. S. Gov., Federal Specification Z-P-191a; 1941. Peaches; Canned. Covers two types: (I) yellow clingstone and (II) freestone—(a) yellow and (b) white; four styles—(I) halved, (II) quartered, (III) sliced, and (IV) whole; and six grades—(A) fancy, (B) choice, (C) standard, (D) seconds, (E) water grade, and (F) solid-pack pie. Gives detail requirements; methods of inspection and tests (chemical analyses in accordance with methods of Assn. of Official Agricultural Chemists); and requirements for packaging, packing, and marking.

*References.*—Fresh peaches, dried peaches, *see* 132.44, 133.44; methods of analysis, grading regulations, food laws, *see* 130, 120.

### 134.45 Canned Plums and Prunes

Canners League of California. California Canned Fruits, 1938. Plums. Requirements as to percentage of sugar

in sirup, freedom from blemishes, uniform size, etc., for four grades.

Canners League of California. California Canned Fruits, 1938. Prepared Prunes in Sirup. Requirements for ripeness, cleanliness, soundness, odor, color, and flavor of dried prunes. For uniformity in size, based on number per pound, for percentage of sugar in sirup, and drained weight per can thirty days after packing for seven sizes of can.

Northwest Canners Assn. Specifications for Canned Fruits and Vegetables, 1935. Includes variety, grade, syrup, and description of packed fresh prunes, plums, yellow egg plums, and green gage plums.

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. Tentative U. S. Standards for Grades of Canned Plums, 1940. Covers six grades—U. S. grade A or U. S. fancy, U. S. grade B or U. S. choice, U. S. grade C or U. S. standard, U. S. grade D (seconds), U. S. grade E (water or pie-pack), and off-grade (substandard); three varieties—Italian prunes, green gage plums, and yellow egg plums; and two styles—whole and halves. Gives definition, sirup density, explanation of terms, recommended head space and drained weights, can size, can dimensions, maximum capacity, maximum head space, minimum drained weight, count, and factors used in ascertaining the grade rating including color, uniformity of size and symmetry, absence of defects, and character of fruit.

U.S. Gov., Federal Specification Z-P-491; 1931. Plums; Canned. Covers four types—(I) green gage, (II) yellow egg, (II) Washington, and (IV) damson; and four grades—(A) fancy, (B) choice, (C) standard, and (D) water or pie. Gives detail requirements; methods of inspection and tests (chemical analyses in accordance with methods of Assn. of Official Agricultural Chemists); and requirements for packaging, packing, and marking.

U. S. Gov., Federal Specification Z-P-671b; 1938. Amendment 1; 1939. Prunes; Dried, Canned. Covers two types—(I) sweet type (French) (Agen) and (II) tart type (Italian); two grades—(A) fancy and (B) choice; and four sizes (number of prunes per pound)—(a) 20-30, (b) 30-40, (c) 40-50, and (d) 50-60. Gives detail requirements and tests (chemical analyses in accordance with methods of Assn. of Official Agricultural Chemists); and requirements for packaging, packing, and marking.

*References.*—Fresh plums and prunes, dried prunes, *see* 132.45, 133.45; methods of analyses, grading regulations, food laws, *see* 130, 120.

### 134.49 Miscellaneous Canned Fruits

## 134.5 JAMS, FRUIT BUTTERS, ETC.

### 134.51 Fruit Butter

U. S. Gov., Federal Security Agency, Food and Drug Administration, S.R.A., F.D.C.2; 1944. Definitions and Standards for Food. Fruit Butter. Covers identity and label statement of optional ingredients.

U. S. Gov., Federal Specification Z-A-616a; 1941. Apple Butter. Gives detail requirements; methods of inspection and tests (chemical analyses in accordance with methods of Assn. of Official Agricultural Chemists); and requirements for packaging, packing, and marking.

*References.*—Methods of analysis, grading regulations, food laws, *see* 130, 120; fruit jams made from stone fruits, *see* 134.52.

### 134.52 Jams

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. Tentative U. S. Standards for Grades of Fruit Preserves (or Jams), 1943. Covers three grades—U. S. grade A or U. S. fancy, U. S. grade B or U. S. choice, and off-grade; and two types—prepared from a single variety of fruit and prepared from a mixture of two or more varieties of fruit. Gives definition, varieties (about thirty five kinds of fruits and berries), mold tolerances, fill of container, explanation of terms, optional saccharine ingredients, other optional ingredients, tolerance, and factors used in ascertaining the grade rating including consistency, color, and absence of defects.

U. S. Gov., Federal Security Agency, Food and Drug Administration, S. R. A., F. D. C. 2; 1944. Definitions and Standards for Food. Fruit Preserves, Jams. Covers identity, label statement of optional ingredients.

U. S. Gov., Federal Specification Z-J-96; 1941. Jams (Preserves); Fruit. Covers two types—(I) prepared from a single variety of fruit and (II) prepared from a mixture of two varieties of fruits. Gives detail requirements; methods of inspection and tests (chemical analyses in accordance with methods of Assn. of Official Agricultural Chemists); and requirements for for packaging, packing, and marking.

*References.*—Methods of analyses, grading regulations, food laws, *see* 130, 120.

### 134.53 Jellies

U. S. Gov., Federal Security Agency, Food and Drug Administration, S.R.A., F.D.C.2; 1944. Definitions and Standards for Food. Fruit Jellies. Covers identity, label statement of optional ingredients.

U. S. Gov., Federal Specification Z-J-191a; 1941. Amendment 1; 1942. Jellies; Fruit. Covers two types—(I) prepared from a single fruit and (II) prepared from a mixture of two kinds of fruit. Gives detail requirements; methods of inspection and tests (chemical analyses in accordance with methods of Assn. of Official Agricultural Chemists); and requirements for packaging, packing, and marking.

*References.*—Methods of analysis, grading regulations, food laws, *see* 130, 120.

### 134.54 Marmalades

U. S. Gov., Federal Specification Z-M-106; 1938. Marmalade. Covers one grade—(A) fancy; three types—(I) sliced, (II) stripped (shoe peg), and (III) chopped; and five varieties—(A) bitter-orange marmalade, (B) sweet-orange marmalade, (C) grapefruit marmalade, (D) citrus-fruit marmalade, blended as follows—(1) bitter and sweet oranges (naval and Seville), (2) kumquat and other citrus fruits, (3) orange-grapefruit; and (E) mixed-fruit marmalade (grapefruit-pineapple) Gives detail requirements; methods of inspection and tests (chemical analyses in accordance with methods

of Assn. of Official Agricultural Chemists); and requirements for packaging, packing, and marking.

*References.*—Citrus fruits, *see* 131.2; methods of analysis, grading regulations, food laws, *see* 130, 120.

### 134.55 Fruit Preserves

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. Tentative U. S. Standards for Grades of Fruit Preserves (or Jams), 1943. Covers three grades—U. S. grade A or U. S. fancy, U. S. grade B or U. S. choice, and off-grade; and two types—prepared from a single variety of fruit and prepared from a mixture of two or more varieties of fruit. Gives definition, varieties (about thirty five kinds of fruits and berries), mold tolerances, fill of container, explanation of terms, optional saccharine ingredients, other optional ingredients, tolerance, and factors used in ascertaining the grade rating including consistency, color, and absence of defects.

U. S. Gov., Federal Security Agency, Food and Drug Administration, S.R.A., F.D.C.2; 1944. Definitions and Standards for Food. Fruit Preserves, Jams. Covers identity, label statement of optional ingredients.

U. S. Gov., Federal Specification Z-J-96; 1941. Jams (Preserves); Fruit. Covers two types—(I) prepared from a single variety of fruit and (II) prepared from a mixture of two varieties of fruits. Gives detail requirements; methods of inspection and tests (chemical analyses in accordance with methods of Assn. of Official Agricultural Chemists); and requirements for packaging, packing, and marking.

*References.*—Methods of analysis, grading regulations, food laws, *see* 130, 120.

### 134.56 Fruit Salads and Sauces

Canners League of California. California Canned Fruits, 1938. Fruit Cocktails. Includes fancy and choice grades, consisting of yellow cling peaches, pears, seedless grapes, pineapple, and maraschino type cherries, requirements as to general quality of fruit; proportions of required varieties, count, weight drained fruit, and cut-out standard for sirup.

Canners League of California. California Canned Fruits, 1938. Fruit Salads. Includes fancy and choice grades, consisting of apricots, Bartlett pears, yellow cling peaches, pineapple, maraschino cherries, requirements as to general quality of fruit, proportion of required varieties, count, drained weight of fruit, and cut-out standard for sirup.

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. Tentative U. S. Standards for Grades of Canned Fruit Cocktail, 1941. Covers three grades—U. S. grade A or U. S. fancy, U. S. grade B or U. S. choice, and off-grade; and shall contain peaches, pears, pineapple, seedless grapes, and maraschino type or natural cherries. Gives definition, sirup density, explanation of terms, recommended head space and drained weights, can size, can dimensions, maximum head space, minimum drained weight, and factors used in ascertaining the grade rating including clearness of sirup, color, uniformity of size, absence of defects, and character of fruit.

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. Tentative U. S. Standards for Grades of Canned Fruits for Salad, 1942. Covers three grades—U. S. grade A or U. S. fancy, U. S. grade B or choice, and off-grade. Gives definition, proportion of fruits (yellow-cling peaches, apricots, pears, pineapple, and cherries or grapes), sirup density, fill of container and recommended drained weight, can size, can dimensions, explanation of terms, tolerance, and factors used in ascertaining the grade rating including color, uniformity of size, absence of defects, and character of fruit.

U. S. Gov., Federal Security Agency, Food and Drug Administration, S.R.A., F.D.C.2; 1944. Definitions and Standards for Food. Canned Fruit Cocktail. Covers—(1) canned fruit cocktail, canned cocktail fruits, canned fruits for cocktail; identity, label statement of optional ingredients; (2) canned fruit cocktail, canned cocktail fruits, canned fruits for cocktail; quality, label statement of substandard quality; (3) canned fruit cocktail, canned cocktail fruits, canned fruits for cocktail; fill of container, label statement of substandard fill.

U. S. Gov., Federal Specification Z-F-681; 1941. Fruit-Cocktail; Canned. Covers two grades—fancy and choice. Gives detail requirements; methods of inspection and tests (chemical analyses in accordance with methods of Assn. of Official Agricultural Chemists); and requirements for packaging, packing, and marking.

*References.*—Sugar and liquor solutions as fruit sauces, *see* 130; methods of analysis, grading regulations, food laws, *see* 130, 120.

## 135. NUTS

### 135.0 GENERAL ITEMS

### 135.1 ALMONDS AND ALMOND PASTE

U. S. Gov., Federal Specification Y-N-711a; 1944. Nuts (Unshelled); Assorted and Mixed (Includes Almonds). Shall be No. 1 grade and covers six kinds—(a) English walnuts, (b) pecans, (c) almonds, (d) filberts, (e) brazils, and (f) mixed nuts. Gives names, sizes, and details for each kind; method of inspection and test (chemical analyses in accordance with methods of Assn. of Official Agricultural Chemists); and packing, labeling, and marking for shipment.

*References.*—Almond extract, *see* 175.1.

### 135.2 CHESTNUTS

### 135.3 COCONUTS AND SHREDDED COCOANUT

U. S. Gov., Federal Specification Z-C-571a; 1933. Amendment 1; 1936. Cocoanut; Prepared. Covers two classes—(A) wholly of domestic manufacture and (B) of partially domestic manufacture (reprocessed); and three types—"long shred," "medium shred," and "short shred." Gives detail requirements; methods of inspection and tests (chemical analyses in accordance with methods of Assn. of Official Agricultural Chemists); and requirements for packaging, packing, and marking.

*References.*—Coconut oil meal, *see* 112.4; methods of analysis, grading regulations, food laws, *see* 120.

### 135.4 FILBERTS

U. S. Gov., Federal Specification Y-N-711a; 1944. Nuts (Unshelled); Assorted and Mixed (Includes Filberts).

Shall be No. 1 grade and covers six kinds—(a) English walnuts, (b) pecans, (c) almonds, (d) filberts, (e) brazils, and (f) mixed nuts. Gives names, sizes, and details for each kind; method of inspection and test (chemical analyses in accordance with methods of Assn. of Official Agricultural Chemists); and packing, labeling, and marking for shipment.

## 135.5 PEANUTS AND PEANUT BUTTER

American Oil Chemists' Society. Methods of Analysis, Whole Peanuts and Shelled Stock, 1940. Covers apparatus, reagents, operation, calculation from partially dry to original moisture basis, free fatty acids in oil in peanuts, and calculation of crushing yields from analytical data on whole peanuts.

American Oil Chemists' Society. Methods of Sampling Peanuts, 1941. Includes apparatus, sampling car lots, truck deliveries, sacked peanuts, original samples, handling and reduction of samples, and samples for analysis.

National Cottonseed Products Assn. Rules, 1945. Definitions of Grade and Quality, article 2. Peanuts. Rules 45 to 47. Covers choice unshelled peanuts, prime unshelled peanuts, and off unshelled peanuts.

National Cottonseed Products Assn. Rules, 1945. Sampling and Methods of Chemical Analysis. Peanuts. Rules 241 and 270C. Covers methods of sampling, analysis of whole peanuts and shelled stock, operation, oil, nitrogen, second moisture, calculation, free fatty acids in oil in peanuts, calculation of crushing yields from analytical data on whole peanuts.

Southeastern Peanut Assn. Bulletin D. Official Rules, 1944. Shelled Spanish Peanuts and Shelled Runner Peanuts. Covers No. 1 and No. 2 grades. Gives requirements for small shriveled peanuts, small pieces of peanuts, foreign material, split peanuts, damaged peanuts, moldy peanuts, dirty peanuts, wormy or worm injured peanuts, noticeably discolored skins, and badly discolored skins.

Southeastern Peanut Assn. Bulletin D. Official Rules, 1944. U. S. Standards for Farmers' Stock Runner Peanuts (1931). Covers four general classes known as No. 1, No. 2, No. 3, and sample grade. Gives requirements for each grade, definitions of terms, explanation, and table showing requirements of U.S. standards.

Southeastern Peanut Assn. Bulletin D. Official Rules, 1944. U. S. Standards for Farmers' Stock White Spanish Peanuts (1928). Covers four general classes known as No. 1, No. 2, No. 3, and sample grade. Gives requirements for each grade, definition of terms, explanation, and table showing requirements of U.S. standards.

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. U. S. Standards for Cleaned (Unshelled) Virginia Type Peanuts, 1935. Reissued, Jan. 1940. Covers three grades—U. S. Jumbo hand picked, U.S. fancy hand picked, and U.S. extra hand picked. Gives requirements and tolerances for each grade and definitions of terms.

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. U. S. Standards for Farmers' Stock Runner Peanuts, 1931. Covers four grades—U. S. No. 1, U. S. No. 2, U. S. No. 3, and U. S. sample. Gives requirements and tolerances for each grade, definitions of terms, and explanation.

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. U. S. Standards for Farmers' Stock Virginia Type Peanuts, 1934. Reissued, Jan. 1940. Covers four grades—U.S. No. 1, U.S. No. 2, U.S. No. 3, and unclassified. Gives requirements for each grade, kernel damage classification, size of kernel description, and definitions of terms.

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. U. S. Standards for Farmers' Stock White Spanish Peanuts, 1928. Reissued, Jan. 1940. Covers four grades—U.S. No. 1, U.S. No. 2, U. S. No. 3, and U. S. sample. Gives requirements and tolerances for each grade, definitions of terms, and explanation.

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. U. S. Standards for Grades of Peanut Butter, 1942. Covers three grades—U. S. grade A, U. S. grade C, and off-grade; three types—fine, medium, and coarse (or chunky); and two colors—light roast and heavy roast. Gives definition, fill of container, tolerance, and factors used in ascertaining the grade rating including color, absence of defects, and flavor and color.

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. U. S. Standards for Shelled Runner Peanuts, 1942. Covers two grades—U. S. No. 1 and U. S. No. 2. Gives requirements for each grade and definitions of terms.

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. U. S. Standards for Shelled Virginia Type Peanuts, 1939. Covers five grades—U. S. extra large, U. S. medium, U. S. No. 1, U. S. splits, and U. S. No. 2. Gives requirements and tolerances for each grade and definitions of terms.

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. U. S. Standards for Shelled White Spanish Peanuts, 1939. Covers two grades—U. S. No. 1 and U. S. No. 2. Gives requirements and tolerances for each grade and definitions of terms.

U. S. Gov., Federal Specification Z-P-198a; 1944. Peanut Butter. Covers three types—(I) fine, (II) medium, and (III) coarse: two colors—(a) light roast and (b) heavy roast; and two grades—A and C. Gives requirements for material and workmanship and details for grades A and C: methods of inspection and test (chemical analyses shall be made in accordance with methods of the Assn. of Official Agricultural Chemists): and packaging, labeling, packing, and marking for shipment.

*References.*—Pressed peanuts, peanut meal, peanut oil cake, *see* 112.2; methods of analysis, grading regulations, food laws, *see* 120; peanut oil, *see* 142.6.

## 135.6 PECANS

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. U. S. Standards for Shelled Pecans, 1938. Covers three grades—U.S. No. 1 halves, U. S. No. 1 pieces, and unclassified. Gives requirements for grades, size of halves, size of pieces, definitions of terms, and pecan grading chart.

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. U. S. Standards for

Unshelled Pecans (Improved Varieties and Large Seedlings), 1938. Covers three grades—U. S. No.1, U. S. commercial, and unclassified. Gives requirements for each grade, tolerances, size, definitions of terms, and pecan grading chart.

U. S. Gov., Federal Specification Y-N-711a; 1944. Nuts (Unshelled); Assorted and Mixed (Includes Pecans). Shall be No.1 grade, and covers six kinds—(a) English walnuts, (b) pecans, (c) almonds, (d) filberts, (e) brazils, and (f) mixed nuts. Gives names, sizes, and details for each kind; method of inspection and test (chemical analyses in accordance with methods of Assn. of Official Agricultural Chemists); and packing, labeling, and marking for shipment.

### 135.7 WALNUTS

California Walnut Growers Assn. Exhibit A, 1944. Size and Variety or Type Specifications for Merchantable Unshelled Walnuts. Gives requirements for varietal packs including large, medium, and babies; seedling or mixed packs including large soft shells, medium soft shells, baby soft shells, and No.1's or No.1 soft shell; and special packs including mammoth Willson wonder, extra large Willson wonder, special Willson wonder, large special grade, jumbo soft shell, jumbo Franquette, and jumbo Mayette.

California Walnut Growers Assn. Exhibit B, 1944. Quality Grade Specifications for Merchantable Unshelled Walnuts. Gives requirements for California quality grades including first quality, second quality, and third quality; defects including insect damage, moldy kernels, shriveled kernels, blanks, rancid kernels, and black kernels; similar quality grades and defects for Oregon-Washington walnuts; and external defects.

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. U. S. Standards for Shelled English Walnuts (Juglans Regia), 1939. Covers seven grades—U.S. No.1 halves, U.S. No.1 extra light halves, U. S. No.1 halves and pieces, U. S. No.1 pieces, U. S. No.2, U. S. No.3, and unclassified. Gives requirements for each grade, tolerances, and definitions of terms, and includes English walnut grading chart.

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. U. S. Standards for Unshelled English Walnuts, (Juglans Regia), 1939. Covers three grades—U. S. No.1, U. S. No.2, and U. S. No.3. Gives requirements for each grade, size, specifications, variety of type specifications, definitions of terms, tolerances, and English walnut grading chart.

U. S. Gov., Federal Specification Y-N-711a; 1944. Nuts (Unshelled); Assorted and Mixed (Includes English Walnuts). Shall be No.1 grade, and covers six kinds—(a) English walnuts, (b) pecans, (c) almonds, (d) filberts, (e) brazils, and (f) mixed nuts. Gives names, sizes, and details for each kind; method of inspection and test (chemical analyses in accordance with methods of Assn. of Official Agricultural Chemists); and packing, labeling, and marking for shipment.

### 135.8 MIXED NUTS

U. S. Gov., Federal Specification Y-N-711a; 1944. Nuts (Unshelled); Assorted and Mixed. Shall be No.1 grade and covers six kinds—(a) English walnuts, (b) pecans, (c) almonds, (d) filberts, (e) brazils, and (f) mixed nuts. Gives names, sizes, and details for each kind; method of inspection and test (chemical analyses in accordance with methods of Assn. of Official Agricultural Chemists); and packing, labeling, and marking for shipment.

### 135.9 MISCELLANEOUS NUTS AND NUT PRODUCTS

U. S. Gov., Federal Specification Y-N-711a; 1944. Nuts (Unshelled); Assorted and Mixed (Includes Brazils). Shall be No.1 grade and covers six kinds—(a) English walnuts, (b) pecans, (c) almonds, (d) filberts, (e) brazils, and (f) mixed nuts. Gives names, sizes, and details for each kind; method of inspection and test (chemical analyses in accordance with methods of Assn. of Official Agricultural Chemists); and packing, labeling, and marking for shipment.

*References.*—Methods of analysis, inspection and grading regulations, food laws, *see* 120.

## 140-149 OIL SEEDS AND VEGETABLE OILS AND FATS

### 141. OILSEEDS

American Oil Chemists' Society. Methods of Analysis, Cottonseed, 1943. Includes laboratory sample, sampling, original moisture, fuming and grinding, second moisture, oil, and free fatty acid; cottonseed hulls for percent of oil in whole seed, in uncut meats and in picked hulls; and content of hull fiber or lint.

American Oil Chemists' Society. Methods of Sampling Cottonseed, 1944. Includes sampling cottonseed in cars before unloading, during unloading, and wagon or truck seed; and handling cottonseed samples.

National Cottonseed Products Assn. Rules, 1945. Definitions of Grade and Quality, Article 1. Cottonseed. Rule 40. Covers basis cottonseed quantity index and grade, basis description, quantity index formulae, quality index and grades, basis quotation, basis settlement, cottonseed purchased on standard grades, and report forms.

National Cottonseed Products Assn. Rules, 1945. Definitions of Grade and Quality, Article 17. Cottonseed Hulls. Rules 125 to 127. Covers prime cottonseed hulls, off hulls, and special contracts.

National Cottonseed Products Assn. Rules, 1945. Methods of Chemical Analysis. Cottonseed Hulls. Rule 271. Covers whole seed and uncut meats, oil, apparatus, procedure, and form of report.

National Cottonseed Products Assn. Rules, 1945. Methods of Chemical Analysis. Pot Cook Method for Determination of Cellulose Yields of Lint and Hull Fibre. Rule 272. Covers apparatus, reagents, laboratory preparation of sample, moisture determination, mixing lint and caustic solutions, digesting, washing, and drying.

National Cottonseed Products Assn. Rules, 1945. Sampling and Methods of Chemical Analysis. Rules 240 and 270A. Covers methods of sampling, sampling equipment, handling sample, preparing sample, methods of analysis, original moisture, fuming and grinding, second moisture, oil, nitrogen, free fatty acid, and calculation of analysis.

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. Standards for Grades of Cottonseed Sold or Offered for Sale for Crushing Purposes Within the United States, Sept. 1943. Gives determination of grade, method of determination of quantity index, determination of quality index for cottonseed (prime quality, superior quality, below prime quality, off quality, and below grade), sampling, analysis, and certification of samples and grades.

*References.*—Peanuts, *see* 135.5; cottonseed oil cake and meal, *see* 112.3; cocoa or cacao beans, *see* 151.1.

## 142. VEGETABLE OILS

### 142.0 GENERAL ITEMS

American Chemical Society. Standard Method for the Sampling and Analysis of Commercial Fats and Oils. Published by American Oil Chemists Society. —*See* below.

American Oil Chemists' Society. Methods of Analysis, 1941. Crismer Turbidity Test for Drying Oils. Includes sunflower oil. Covers reagents, apparatus, determination, and table of corrections for acidity of oils tested.

American Oil Chemists' Society. Methods of Analysis, 1941. Crismer Turbidity Test for Non-Drying Oils. Includes almond, olive, peanut, cocoanut, palm kernel, and palm oils. Covers reagents, apparatus, determination, and table of corrections for acidity of oils tested.

American Oil Chemists' Society. Methods of Analysis, 1941. Crismer Turbidity Test for Semi-Drying Oils. Includes cottonseed, sesame, corn, and rape oils. Covers reagents, apparatus, determination, and table of corrections for acidity of oils tested.

American Oil Chemists' Society. Standard Methods for the Sampling and Analysis of Commercial Fats and Oils, 1943. Applies to fats and fatty oils used in the soap, candle, and tanning industries, to edible fats and oils, to fats and fatty oils intended for lubricating and burning purposes, and to the raw oils used in the varnish and paint industry, but not intended for waxes. Covers sampling: analysis for moisture and volatile matter, insoluble impurities, soluble mineral matter, fatty acids combined as mineral soap, free fatty acids, titer, unsaponifiable matter, iodine number, saponification number, melting point, softening point, slipping point, flow test, cloud test, bleach test, Halphen test (for cottonseed oil), modified Vallavecchia test, Reichert-Meissl and Polenske numbers, Kirschner value, index of refraction, specific gravity, acetyl and hydroxyl value; smoke, flash, and fire points; F. A. C. standard colors, modified Wiley melting point method, thiocyanogen method, and Twitchell method.

American Oil Chemists' Society. Tentative Methods of Analysis for Sulfonated (Sulfated) Oils, 1938. Covers methods for determination of water, water and other compounds volatile at about 100° C., organically combined sulphuric anhydride, and inorganic sulphates and chlorides.

American Society for Testing Materials, D 94-44; 1944. American Petroleum Institute Standard, 547-44. American Standards Assn., Z11.20-1944. Method of Test for Saponification Number of Petroleum Products by Color-Indicator Titration. The method is applicable to new and used petroleum oils, including electrical insulating oils, and to mixtures of fats and mineral oils. Gives definition, principle of method, apparatus, reagents, blank determinations, sample, procedure, calculation, identification of fat, and reproducibility of results.

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis, 1940. Oils, Fats, and Waxes. Preparation of sample, determination of specific gravity, index of refraction, melting point, titer test, iodine absorption number, saponification number, soluble and insoluble acids, Kerschner value, free fatty acids, acetyl value, unsaponifiable residue; amount of cottonseed, peanut, and sesame oils; tentative methods for determination of cholesterol and phytosterol, presence of resin oil, detection of fish oils in presence of vegetable oils, detection of coloring matters.

Institute of Shortening Manufacturers, Inc. Labels for Shortening and Oils. Standard practice of the Institute. Includes hydrogenated, all-vegetable, blended, and fish oil shortenings; soybean, cottonseed, and blended cooking and salad oil; and refined cocoanut oil.

National Cottonseed Products Assn. Rules, 1945. Sampling and Methods of Chemical Analysis. Crude Vegetable Oils. Rules 242 and 274. Covers methods of sampling from barrels and tank cars, mixing sample, moisture or volatile matter, meal or impurities, free fatty acids, refining crude oils, strength and amount of sodium hydroxide solutions, and details concerning crude cottonseed oil, crude peanut oil, crude soybean oil, crude cocoanut oil, and crude corn oil.

National Cottonseed Products Assn. Rules, 1945. Sampling and Methods of Chemical Analysis. Refined Vegetable Oils. Rules 242 and 275. Covers methods of sampling from barrels and tank cars, color, flavor and odor, bleaching, cold test, free fatty acids, and moisture or volatile matter.

*References.*—Lovibond glasses for color determinations, *see* 914.6.

### 142.1 COCOANUT OIL

American Oil Chemists' Society. Methods of Analysis, Refined Cocoanut Oil, 1943. Covers apparatus and color determination, apparatus and bleaching determination, refining conditions, fatty acids of soap stock and acidulated soap stock, titer, and table of correction for acidity of oils tested.

American Oil Chemists' Society. Methods of Analysis, Crude Cocoanut Oil, 1941. Covers provisions for refining tests for settlements, mixing sample, moisture or volatile matter, meal impurities, free fatty acids, refining loss, sodium hydroxide solutions, sodium hydroxide table, lye tables, refining procedure, and calculations.

American Oil Chemists' Society. Recommended Standards for Various Oils, 1943. Cocoanut Oil. Gives table showing recommended standard for cocoanut oil.

National Association of Purchasing Agents. Handbook of Commodity Data Sheets, 1938. Coconut Oil. Covers definition, constants, occurrence, impurities, grades available, uses, containers, and specifications.

National Assn. of Wool Manufacturers. Specification C-1; 1941. Cocoanut Oil. Gives requirements for iodine value, saponification value, melting point, color, free fatty acid, and odor.

New York Produce Exchange. Vegetable Oils, Waxes, and Fats. Bulk Oil Section. Cocoanut Oil. Gives requirements for maximum free fatty acid, maximum moisture and insoluble impurities, and adjustment.

New York Produce Exchange. Vegetable Oils, Waxes and Fats. Cocoanut Oil. Shall be oil obtained by pressure and not extraction unless otherwise stipulated. Gives requirements for moisture and impurities, flavor and odor, free fatty acids, and color for cocoanut oil including refined deodorized, refined, Cochin type, Ceylon type, prime crude, and crude.

*References.*—Cocoanut oil cake, shredded cocoanut, *see* 112.4, 135.3; methods of analysis, *see* 142.0.

## 142.2 CASTOR OIL

American Oil Chemists' Society. Recommended Standards for Various Oils, 1943. Castor Oil. Gives table showing recommended standard for castor oil.

National Assn. of Dyers and Cleaners of the U. S. and Canada. The Spotting Department, 1940. Includes description and recommended uses for sulfonated castor oil used in spotting department.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, Volume 2; 1944. Castor Oil. Covers definition, constants, solubility, derivation, uses, grades, and containers.

U. S. Gov., Army-Navy Aeronautical Specification AN-JJJ-O-316; 1941. Oil; Castor.

U. S. Gov., Federal Specification JJJ-O-318; 1942. Amendment 1; 1942. Oil; Castor, Technical-Grade. Covers one type and grade—for lubrication of machinery requiring the use of this type of oil and for the treatment of leather. Gives detail requirements; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 2-8C; 1941. Castor Oil (for Uses Other Than Aircraft Engine Lubrication).

*References.*—Castor oil, medicinal, *see* 813.1; methods of analysis, food laws, *see* 142.0, 120.

## 142.3 CORN OIL

American Oil Chemists' Society. Methods of Analysis, Refined Corn Oil, 1941. Covers apparatus and color determination, apparatus and bleaching determination, refining conditions, fatty acids of soap stock and acidulated soap stock, titer, and table of correction for acidity of oils tested.

American Oil Chemists' Society. Methods of Analysis, Crude Corn Oil, 1941. Covers provisions for refining tests for settlements, mixing sample, moisture or volatile matter, meal impurities, free fatty acids, refining loss, sodium hydroxide solutions, sodium hydroxide table, lye tables, refining procedure, and calculations.

American Oil Chemists' Society. Recommended Standards for Various Oils, 1943. Corn (Maize) Oil. Gives table showing recommended standard for corn (maize) oil.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, 1938. Corn Oil. Covers definition, constants, derivation, purity, grades, specifications, substitutes, containers, and uses.

New York Produce Exchange. Vegetable Oils, Waxes, and Fats, 1924. Corn Oil. Shall be oil obtained by pressure and not extraction unless otherwise stipulated. Gives requirements for moisture and impurities, flavor and odor, free fatty acids, and color for corn oil including prime refined deodorized, prime refined, prime crude, crude, and standard quality crude.

*References.*—Methods of analysis, food laws, *see* 142.0, 120; corn, corn oil cake, *see* 103.1, 112.9.

## 142.4 COTTONSEED OIL

American Oil Chemists' Society. Composition and Characteristics of Various Oils, 1939. American and Foreign Cottonseed Oils. Gives tables showing analysis of refined American cottonseed oils and both crude and refined foreign cottonseed oils; also tables showing analysis of crude Georgia cottonseed oils and refined Texas cottonseed oils.

American Oil Chemists' Society. Methods of Analysis, Crude Cottonseed Oil, 1938. Covers provisions for refining tests for settlements, mixing sample, moisture or volatile matter, meal impurities, free fatty acids, refining loss, sodium hydroxide solutions, sodium hydroxide table, lye tables, refining procedure, and calculations.

American Oil Chemists' Society. Methods of Analysis, Refined Cottonseed Oil, 1943. Covers apparatus and color determination, apparatus and bleaching determination, refining conditions, fatty acids of soap stock and acidulated soap stock, titer, and table of correction for acidity of oils tested.

American Oil Chemists' Society. Methods of Sampling Oil, 1941. Includes cottonseed oil in barrels, in tank cars, and soap stock and acidulated soap stock.

American Oil Chemists' Society. Recommended Standards for Various Oils, 1943. Cottonseed Oil. Gives table showing recommended standard for North American cottonseed oil.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, Volume 2; 1944. Cottonseed Oil. Covers definition, constants, conversion factors, composition, derivation, characteristics and uses, grades, marketing, containers, and substitutes.

National Cottonseed Products Assn. Rules, 1945. Definitions of Grade and Quality, Article 3. Cottonseed Oil—Crude. Rules 50 to 57. Covers prime crude cottonseed oil, basis prime crude cottonseed oil, off crude cottonseed oil, reddish off crude cottonseed oil, low grade cottonseed oil, cold pressed or expeller process oil, slow breaking oil, and extracted oil.

National Cottonseed Products Assn. Rules, 1945. Definitions of Grade and Quality, Article 4. Cottonseed Oil—Refined. Rules 60 to 68. Covers choice summer

yellow cottonseed oil, prime summer yellow cottonseed oil, prime winter yellow cottonseed oil, good off summer yellow cottonseed oil, off summer yellow cottonseed oil, reddish off summer yellow cottonseed oil, bleachable prime summer yellow cottonseed oil, prime summer white cottonseed oil, and prime winter white cottonseed oil.

New York Produce Exchange. Cottonseed Oil Futures Contracts, 1944. Prime Summer Yellow Cottonseed Oil. Shall be of American origin. Gives requirements for clear, water and settlings, flavor and odor, bleaching, color, and free fatty acids.

New York Produce Exchange. Rules Regulating Transactions in Cottonseed Products, 1936. Crude Cottonseed Oil. Definitions for four grades as to soundness of seed, flavor and odor, freedom from water and settlings, loss on refining, and ability to produce prime summer yellow oil under procedures of the National Cottonseed Products Assn.

New York Produce Exchange. Rules Regulating Transactions in Cottonseed Products, 1936. Refined Cottonseed Oil. Definitions of nine grades of summer and winter, yellow and white oils, as regards clearness, freedom from water and settlings, flavor, odor, color based on Lovibond scale, and allowable free fatty acids, and for cold test under procedures of the National Cottonseed Products Assn.

*References.*—Cottonseed oil for medicinal purposes, *see* 813.3; cottonseed, cottonseed oil cake and meal, *see* 141., 112.3; vegetable shortening, *see* 142.95, methods of analysis, food laws, *see* 142.0, 120; cottonseed salad oil, *see* 142.94.

## 142.5 OLIVE AND PALM OILS

American Oil Chemists' Society. Methods of Analysis, Refined Palm Kernel Oil, 1941. Covers apparatus and color determination, apparatus and bleaching determination, refining conditions, fatty acids of soap stock and acidulated soap stock, titer, and table of correction for acidity of oils tested.

American Oil Chemists' Society. Recommended Standards for Various Oils, 1943. Palm Kernel Oil. Gives table showing recommended standard for palm kernel oil.

American Oil Chemists' Society. Recommended Standards for Various Oils, 1943. Palm Oil. Gives table showing recommended standard for palm oil.

American Oil Chemist' Society. Specifications and Methods of Analysis for Olive Oil, 1939. Covers pressed oil and olive oil foots. Covers Beilstein test for the detection of halogenated solvents in oil, coin test for sulphur olive oils, and silver benzoate test for sulphur olive oils.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, 1938. Palm Oil. Covers definition, constants, solubility, occurrence, impurities, grades available, uses, and marketing.

New York Produce Exchange. Vegetable Oils, Waxes and Fats. Bulk Oil Section. Commercial Olive Oil. Shall be clear, yellow or greenish in color. Gives requirements for free fatty acid and moisture and insoluble impurities.

New York Produce Exchange. Vegetable Oils, Waxes and Fats. Bulk Oil Section. Palm Kernel Oil. Gives requirements for free fatty acid, as Lauric, and moisture and insoluble impurities.

New York Produce Exchange. Vegetable Oils, Waxes and Fats. Bulk Oil Section. Palm Oil. Gives requirements for free fatty acid allowance, and moisture and impurities.

New York Produce Exchange. Vegetable Oils, Waxes and Fats. Bulk Oil Section. Sulfur Olive Oil (Olive Oil Foots). Shall be derived by extraction with a volatile solvent. Gives allowance for combined moisture and insoluble impurities for prime green and choice green.

New York Produce Exchange. Vegetable Oils, Waxes and Fats, 1924. Olive Oil. For manufacturing purposes commonly known as the commercial grade. Gives requirements for allowable percentage of moisture and for sediment, free fatty acids, color, olive oil foots of sulphur olive oil (extracted by bisulphide of carbon), and olive oil foots.

New York Produce Exchange. Vegetable Oils, Waxes and Fats, 1924. Palm Oil. Gives requirements as to origin and allowance to be made for dirt and water.

U. S. Gov., Federal Specification Z-O-351; 1931. Oil; Olive (Edible Grade). Covers one type and grade—table use, first quality. Gives detail requirements; methods of inspection and tests (chemical analyses in accordance with methods of Assn. of Official Agricultural Chemists); and requirements for packaging, packing, and marking.

*References.*—Olive oil for medicinal purposes, *see* 813.6; methods of analysis, food laws, *see* 142.0, 120.

## 142.6 PEANUT OIL

American Oil Chemists' Society. Methods of Analysis, Crude Peanut Oil, 1941. Covers provisions for refining tests for settlements, mixing sample, moisture or volatile matter, meal impurities, free fatty acids, refining loss, sodium hydroxide solutions, sodium hydroxide table, lye tables, refining procedure, and calculations.

American Oil Chemists' Society. Methods of Analysis, Refined Peanut Oil, 1943. Covers apparatus and color determination, apparatus and bleaching determination, refining conditions, fatty acids of soap stock and acidulated soap stock, titer, and table of correction for acidity of oils tested.

American Oil Chemists' Society. Recommended Standards for Various Oils, 1943. Peanut (Arachis) Oil. Gives table showing recommended standard for peanut (arachis) oil.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, Volume 2; 1944. Peanut Oil. Covers definition, constants, constituents, derivation, uses, grades, containers, and substitutes.

National Cottonseed Products Assn. Rules, 1945. Definitions of Grade and Quality, Article 5. Peanut oil—Crude. Rules 70 to 72. Covers prime crude peanut oil, basis prime peanut crude oil, and off crude peanut oil.

National Cottonseed Products Assn. Rules, 1945. Definitions of Grade and Quality, Article 6. Peanut Oil—Refined. Rules 73 to 75. Covers choice peanut oil, prime yellow peanut oil, and good off yellow peanut oil.

New York Produce Exchange. Vegetable Oils, Waxes and Fats. Bulk Oil Section. Peanut Oil. Gives requirements for free fatty acid, combined moisture and insoluble impurities, and allowance.

New York Produce Exchange. Vegetable Oils, Waxes and Fats, 1924. Peanut Oil. Shall be oil obtained by pressure and not extraction unless otherwise stipulated. Gives requirements for moisture and impurities, flavor and odor, free fatty acids, and color for peanut oil including refined deodorized, prime refined, prime crude, crude, and fair average quality crude.

Southeastern Peanut Assn. Bulletin D. Official Rules, 1944. Peanut Oil—Crude. Gives requirements for choice crude peanut oil, prime crude peanut oil, basis prime crude peanut oil, and off crude peanut oil.

Southeastern Peanut Assn. Bulletin D. Official Rules, 1944. Peanut Oil—Refined. Gives requirements for choice peanut oil, prime yellow peanut oil, and good off yellow peanut oil.

U. S. Gov., Federal Specification Z-O-358; 1943. Oil; Peanut. Only properly refined and deodorized oil obtained from sound peanuts in the first pressing operation shall be acceptable under this specification. All deliveries shall conform, in every respect, to the provisions of the Federal Food, Drug, and Cosmetic Act, and regulations promulgated thereunder. Gives detail requirements; methods of inspection, and tests; and packaging, labeling, packing, and marking for shipment.

*References.*—Peanuts, peanut oil cake and meal, *see* 135.5, 112.2; methods of analysis, food laws, *see* 142.0, 120.

## 142.7 POPPY SEED AND SUNFLOWER OILS

American Oil Chemists' Society. Recommended Standards for Various Oils, 1943. Sunflower Seed Oil. Gives table showing recommended standard for sunflower seed oil.

New York Produce Exchange. Vegetable Oils, Waxes and Fats. Bulk Oil Section. Sunflower Seed Oil. Gives requirements for free fatty acid and moisture and insoluble impurities.

*References.*—Methods of analysis, food laws, *see* 142.0, 120.

## 142.8 RAPESEED AND SESAME OILS

American Oil Chemists' Society. Recommended Standards for Various Oils, 1943. Rapeseed and Sesame Oils. Gives tables showing recommended standards for rapeseed oil and sesame oil.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, Volume 2; 1944. Rapeseed Oil. Covers definition, constants, solubility, chemical content, uses, derivation, grades, containers, and substitutes.

New York Produce Exchange. Vegetable Oils, Waxes and Fats. Bulk Oil Section. Sesame Oil. Gives requirements for free fatty acid, moisture and insoluble impurities, and allowance.

New York Produce Exchange. Vegetable Oils, Waxes and Fats, 1924. Rapeseed Oil. Shall be pressed. Gives requirements for free fatty acid, moisture and impurities for rapeseed oil including semirefined, refined, and guaranteed refined.

New York Produce Exchange. Vegetable Oils, Waxes and Fats, 1924. Sesame Oil. Includes hot and cold pressed oils. Gives requirements for moisture and impurities, free fatty acids, sesame oil basis fair average quality, and sesame oil guaranteed.

*References.*—Sesame oil for medicinal purposes, *see* 813.7; methods of analysis, food laws, *see* 142.0, 120.

## 142.9 MISCELLANEOUS SPECIFICATIONS FOR VEGETABLE OIL

### 142.91 Oleomargarine, Nut Margarine

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, Volume 2; 1944. Oleomargarine. Covers definition, characteristics and derivation, marketing, grades, containers, uses, and substitutes.

U. S. Gov., Federal Security Agency, Food and Drug Administration, S.R.A., F.D.C.2; 1944. Definitions and Standards for Food. Oleomargarine. Covers identity, label statement of optional ingredients.

U. S. Gov., Federal Specification EE-O-451a; 1942. Oleomargarine. Covers one grade and two types—(A) product containing fats and (B) product not containing animal fats. Gives general and detail requirements; methods of inspection and tests (chemical analyses in accordance with methods of Assn. of Official Agricultural Chemists); and requirements for packaging, packing, and marking.

*References.*—Methods of analysis, food laws, *see* 142.0, 120.

### 142.92 Vegetable Tallow

New York Produce Exchange. Vegetable Oils, Waxes and Fats, 1924. Chinese Vegetable Tallow. Gives requirements for titre, moisture and impurities, and packing.

*References.*—Methods of analysis, food laws, *see* 142.0, 120.

### 142.93 Cacao Butter

*References.*—Cacao butter, medicinal, *see* 813.8.

### 142.94 Salad Oil and Mayonnaise

U. S. Gov., Federal Specification EE-D-691a; 1943. Dressing; Salad. Covers four types—(A) mayonnaise, (B) salad dressing, (C) French dressing, and (D) all other varieties, such as tartar sauce, Thousand Island, Russian dressing, etc. Shall be of but one grade. Gives material and workmanship, general and detail requirements, methods of inspection and tests (chemical analyses in accordance with methods of Assn. of Official Agricultural Chemists), and requirements for packaging, packing, and marking.

U. S. Gov., Federal Specification JJJ-O-361; 1930. Amendment 3; 1935. Oil; Vegetable, Salad. Covers one grade and two types—(A) any edible vegetable oil, except olive oil; and (B) any designated type of edible vegetable oil, except olive oil. Gives detail requirements; methods of inspection and tests (chemical analyses in accordance with methods of the Assn. of Official Agricultural Chemists); and requirements for packaging, packing, and marking.

*References.*—Methods of analysis, food laws, *see* 142.0, 120.

### 142.95 Vegetable Shortening

American Hospital Assn., 28-7. Lard Substitutes. Covers two types and one grade. Based on U. S. Gov.,

Federal Specifications EE-L-101a, and Amendment 3, for Lard Substitutes, referred to below.

U. S. Gov., Federal Specification EE-S-321; 1944. Shortening. Covers two types: (I) Lard—(a) refined, (b) service style, (c) service style with lecithin, and (d) open-kettle rendered; and (II) shortening other than lard—(a) hydrogenated (animal fats or oils, vegetable fats or oils, and mixed), and (b) blended (animal fats or oils, vegetable fats or oils, and mixed). Gives material and workmanship, general requirements, and details for each type and class; methods of inspection and test (chemical analyses shall be made in accordance with methods of the Assn. of Official Agricultural Chemists); and packaging, labeling, packing, and marking for shipment.

*References.*—Methods of analysis, food laws, *see* 142.0, 120; cottonseed oil, *see* 142.4.

### 142.96 Lavender Oil

*References.*—Lavender oil, medicinal, *see* 813.9.

### 142.97 Lemon and Orange Oils

*References.*—Lemon oil and orange oil for medicinal purposes, *see* 813.9.

### 142.99 Miscellaneous Vegetable Oils

American Oil Chemists' Society. Composition and Characteristics of Various Oils, 1943. Kapok Oil. Gives table showing analysis of refined kapok oil.

American Oil Chemists' Society. Composition and Characteristics of Various Oils, 1943. Rice Bran and Acorn Oils. Gives table showing analysis of rice bran oil and acorn oil.

American Oil Chemists' Society. Composition and Characteristics of Various Oils, 1943. Stillingia Oil. Gives table showing analysis of Chinese oil and American oil.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, Volume 2; 1944. Babassu Oil. Covers definition, constants, derivation, shipment, grades, uses, and substitutes.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, Volume 2; 1944. Cashew Nut Shell Oil. Covers definition, constants, solubility, derivations, uses, grades, containers, and substitutes.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, Volume 2; 1944. Citronella Oil. Covers definition, constants, derivation, uses, grades, containers, and substitutes.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, Volume 2; 1944. Lemongrass Oil. Covers definition, constants, derivation, uses, grades, containers, and substitutes.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, Volume 2; 1944. Oiticica Oil. Covers definition, constants, derivation, sources, uses, shipping, and substitutes.

*References.*—China wood oil, *see* 848.2; perilla oil, *see* 848.4; linseed and soybean oils, *see* 143.

## 143. LINSEED AND SOYBEAN OILS

### 143.0 GENERAL ITEMS

American Chemical Society. Standard Method of Sampling and Analysis of Commercial Fats and Oils. Published by American Oil Chemists' Society.—*see* 143.1, 143.2.

American Oil Chemists' Society. Methods of Analysis, 1941. Crismer Turbidity Test for Drying Oils. Includes linseed and soybean oils. Covers reagents, apparatus, determination, and table of corrections for acidity of oils tested.

### 143.1 LINSEED OIL

American Oil Chemists' Society. Recommended Standards for Various Oils, 1943. Linseed Oil. Gives table showing recommended standard for linseed oil.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, 1938. Linseed Oil. Covers definition, constants, solubility, occurrence, grades, specifications, substitutes, containers, uses, and marketing.

*References.*—Linseed oil for medicinal purposes, *see* 813.5; linseed oil for paint, *see* 848.11, 848.12.

### 143.2 SOYBEAN OIL

American Oil Chemists' Society. Methods of Analysis, Crude Soybean Oil, 1941. Covers provisions for refining tests for settlements, mixing sample, moisture or volatile matter, meal impurities, free fatty acids, refining loss, sodium hydroxide solutions, sodium hydroxide table, lye tables, refining procedure, and calculations.

American Oil Chemists' Society. Methods of Analysis, Refined Soybean Oil, 1941. Covers apparatus and color determination, apparatus and bleaching determination, refining conditions, fatty acids of soap stock and acidulated soap stock, titer, and table of correction for acidity of oils tested.

American Oil Chemists' Society. Recommended Standards for Various Oils, 1943. Soybean Oil. Gives table showing recommended standard for soybean oil.

American Society for Testing Materials, D124-41; 1941. Raw Soybean Oil. Covers specific gracity, acid number, saponification number, unsaponifiable matter, iodine number, loss on heating, appearance, color, maximum foots, and methods of testing.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, 1938. Soybean Oil. Covers definition, constants, solubility, specifications, substitutes, containers, uses, shipping regulations, quality, and marketing.

National Cottonseed Products Assn. Rules, 1945. Definitions of Grade and Quality, article 7. Soybean Oil—Crude. Rules 76 and 77. Covers prime crude soybean oil and crude soybean oil.

National Soybean Processors Assn. Year Book and Trading Rules, 1944-45. Specifications for Crude Soybean Oil for Technical Uses. Testing methods follow handbook of Official and Tentative Methods of the American Oil Chemists' Society. Covers iodine value, unsaponifiable matter, free fatty acids, moisture and volatile matter, and break (modified Gardner method).

New York Produce Exchange. Rules Governing Prime Crude Soy Bean Oil Futures Contracts, 1940. Prime Crude Soy Bean Oil. Shall be pure prime crude soybean oil of fair merchantable quality produced from domestic soybeans. Gives requirements for unsaponifiable matter, moisture and volatile matter, and break.

New York Produce Exchange. Vegetable Oils, Waxes and Fats. Bulk Oil Section. Extracted Soya Bean Oil. Shall be obtained by extraction process. Gives

requirements for free fatty acid, moisture and insoluble impurities, and allowance.

New York Produce Exchange. Vegetable Oils, Waxes and Fats. Bulk Oil Section. Soya Bean Oil. For crude pressed. Gives requirements for free fatty acid, moisture and insoluble impurities, allowance, and rejection.

New York Produce Exchange. Vegetable Oils, Waxes and Fats, 1924. Soya Bean Oil. Shall be oil obtained by pressure and not extraction unless otherwise stipulated. Gives requirements for moisture and impurities, flavor and odor, free fatty acids, and color for soya bean oil including refined deodorized, refined, prime crude, crude, fair average quality crude, and extracted.

U. S. Gov., Federal Specification JJJ-O-348; 1942. Oil; Soybean, Refined (for Paint and Varnish). Covers one type and grade. Gives requirements for color, specific gravity, iodine number, saponification number, unsaponifiable matter, acid number, loss on heating, and break; methods of sampling, inspection, and test; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., Navy Dept. Specification 52-O-10a; 1941. Oil; Soya Bean, Raw.

*References.*—Methods of analysis, *see* 142.0.

# 150-159 COCOA, COFFEE, TEA, SPICES, AND LEAVENING AGENTS

## 151. COCOA

### 151.0 GENERAL ITEMS

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis, 1940. Cacao Bean and Its Products. Preparation of sample, determination of moisture, ash, alkalinity of ash, nitrogen, fat, testing of fat for melting point, index of refraction, iodine number, saponification number, etc.; and tentative methods for determination of casein, crude fiber, starch, sucrose, milk fat in milk chocolate.

### 151.1 COCOA OR CACAO BEANS

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, Volume 2; 1944. Cocoa Beans. Covers definition, derivation, characteristics and grades, uses, containers, marketing, and substitutes.

*References.*—Methods of analysis, *see* 151.0.

### 151.2 COCOA, POWDERED OR PREPARED

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Cacao. Gives chemical composition, description, ether-soluble residue and ether-insoluble residue, assay, storage, and preparation.

U. S. Gov., Federal Specification JJJ-C-501; 1931. Cocoa. Covers the best quality and two types—(I) breakfast and (II) Dutch process. Gives detail requirements; methods of inspection and tests (chemical analyses in accordance with methods of the Assn. of Official Agricultural Chemists); and requirements for packaging, packing, and marking.

*References.*—Chocolate, *see* 151.3; methods of analysis, food regulations, *see* 151.0, 120.

### 151.3 CHOCOLATE, POWDERED OR PREPARED

U. S. Gov., Federal Specification JJJ-C-271; 1931. Amendment 1; 1944. Chocolate. Covers one grade and two types—(I) plain and (II) vanilla, sweetened. Gives requirements for material and workmanship and details for each type; methods of inspection and tests (chemical analyses in accordance with methods of the Assn. of Official Agricultural Chemists); and packaging, packing, and marking.

*References.*—Cocoa, *see* 151.1, 151.2; methods of analysis, food regulations, *see* 151.0, 120.

## 152. COFFEE

### 152.0 GENERAL ITEMS

### 152.1 COFFEE, RAW OR GREEN

American Institute of Homoeopathy. Homoeopathic Pharmacopoeia of the U. S., 1941. Coffee. Natural order, synonyms, description, habitat, history, parts used, and preparations for tincture, dilutions, and medications for use in homoeopathic medicines.

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis, 1940. Green Coffee. Tentative methods for macroscopic examination and for identification of coloring matters.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, Volume 2; 1944. Coffee. Covers definition, derivation, uses, grades, marketing, containers, and substitutes.

U. S. Gov., Federal Specification HHH-C-571; 1931. Amendment 1, 1937. Coffee. Covers green coffee of two grades—(A) equal to or better than Santos No. 4 and (B) Rio or similar quality, to be not lower than Rio grade No. 4. Gives detail requirements; methods of inspection and tests (chemical analyses in accordance with methods of the Assn. of Official Agricultural Chemists); and requirements for packaging, packing, and marking.

*References.*—Definitions of coffee, food laws, *see* 152.0, 120.

### 152.2 COFFEE, ROASTED

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis, 1940. Roasted Coffee. Preparation of sample, determination of ash, alkalinity of ash, phosphoric acid in ash, chlorides, caffeine, crude fiber, ether extract, and tentative methods for determination of macroscopic properties, moisture, soluble solids, starch, sugars, acidity, coating substances of sugar, egg, chicory, waxes.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, Volume 2; 1944. Coffee. Covers definition, derivation, uses, grades, marketing, containers, and substitutes.

U. S. Gov., Federal Specification HHH-C-571; 1931. Amendment 1; 1937. Coffee. Covers roasted coffee of two grades—(A) equal to or better than Santos No. 4

and (B) Rio or similar quality, to be not lower than Rio grade No.4; whole bean or ground. Gives detail requirements; methods of inspection and tests (chemical analyses in accordance with methods of the Assn. of Official Agricultural Chemists); and requirements for packaging, packing, and marking.

*References.*—Definitions of coffee, food laws, *see* 152.0, 120.

### 152.3 COFFEE SUBSTITUTES AND EXTRACT

## 153. TEA

### 153.0 GENERAL ITEMS

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis, 1940. Tea. Preparation of sample, determination of moisture, water extract, ash, alkalinity of ash, phosphoric acid in ash, ether extract, crude fiber, caffeine, and tentative methods for determination of protein, volatile oil, tannin, paraffin and waxy substances, pigments used for coloring or facing.

### 153.1 TEA

American Institute of Homoeopathy. Homoeopathic Pharmacopoeia of U. S., 1941. Tea. Natural order, synonyms, description, habitat, history, parts used, and preparations for tincture, dilutions, and medications for use in homoeopathic medicines.

National Assn. of Purchasing Agents. Handbook of commodity Data Sheets, Volume 2; 1944. Tea. Covers definition, characteristics and derivation, use, grades, containers, and substitutes.

U.S. Gov., Federal Specification HHH-T-191; 1931. Amendment 2; 1934. Tea. Covers four types—(A) black tea, India, Ceylon, Java, Sumatra, and Congou varieties, (B) green tea, Japan and China varieties, (C) Oolong, Formosa Oolong variety, and (D) blended or mixed teas. Gives detail requirements; methods of inspection and tests (chemical analyses in accordance with methods of the Assn. of Official Agricultural Chemists); and requirements for packaging, packing, and marking.

*References.*—Methods of analysis, tea laws, *see* 153.0.

## 154. SPICES, SALT, AND VINEGAR

### 154.0 GENERAL ITEMS

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis, 1940. Spices. Preparation of sample, determination of soluble and insoluble ash, calcium oxide in ash, nitrogen, ether extract, alcohol extract, copper-reducing substances, starch, crude fiber, tannin, sulphur, volatile oils in mustard seed, tentative methods for determination of moisture, cold water extract, olive oil in paprika, and microscopic examination.

### 154.1 SPICES, BARK AND ROOT TYPE, AND HORSE RADISH

### 154.11 Cinnamon

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, Volume 2; 1944. Cinnamon and Cassia. Covers definition, derivation and characteristics, uses, grades, packaging, and substitutes.

U.S. Pharmacopeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Cinnamon.—Description, assay, and storage, U.S.P. products of cinnamon—Aqua Cinnamomi, Oleum Cinnamomi, Spiritus Cinnamomi.

U. S. Gov., Federal Specification EE-S-631a; 1938. Amendment 2; 1941. Spices; Ground and Whole. Includes cinnamon—whole, and ground. Gives general and detail requirements; methods of inspection and tests (chemical analyses in accordance with methods of Assn. of Official Agricultural Chemists); and requirements for packaging, packing, and marking.

*References.*—Methods of analysis, food laws, *see* 154.0, 120; cinnamon extract, *see* 175.9.

### 154.12 Ginger

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, Volume 2; 1944. Ginger. Covers definition, derivation and characteristics, uses, grades, containers, and substitutes.

U. S. Gov., Federal Specification EE-S-631a; 1938. Amendment 2; 1941. Spices; Ground and Whole. Includes ginger—ground. Gives general and detail requirements; methods of inspection and tests (chemical analyses in accordance with methods of Assn. of Official Agricultural Chemists); and requirements for packaging, packing, and marking.

*References.*—Methods of analysis, food laws, *see* 154.0, 120; ginger extract, *see* 175.9.

### 154.13 Horse Radish

American Institute of Homoeopathy. Homoeopathic Pharmacopoeia of U. S., 1941. Horse Radish. Natural order, synonyms, description, habitat, history, parts used, and preparations for tincture, dilutions, and medications for use in homoeopathic medicines.

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. U. S. Standards for Horseradish Roots, 1936. Reissued, Feb. 1940. Covers four grades—U. S. fancy, U. S. No.1, U. S. No.2, and unclassified. Gives requirements for each grade, sizes, tolerances, and definitions of terms.

*References.*—Methods of analysis, food laws, *see* 120.

### 154.19 Miscellaneous Spices of Bark and Root Type

U. S. Gov., Federal Specification EE-S-631a; 1938. Amendment 2; 1941. Spices; Ground and Whole. Includes turmeric—ground. Gives general and detail requirements; methods of inspection and tests (chemical analyses in accordance with methods of Assn. of Official Agricultural Chemists); and requirements for packaging, packing, and marking.

*References.*—Methods of analysis, food laws, *see* 154.0, 120.

### 154.2 SPICES, FRUIT TYPE

### 154.21 Allspice

U. S. Gov., Federal Specification EE-S-631a; 1938. Amendment 2; 1941. Spices; Ground and Whole. Includes allspice—ground and whole. Gives general and detail requirements; methods of inspection and tests (chemical analyses in accordance with methods of Assn. of Official Agricultural Chemists); and requirements for packaging, packing, and marking.

*References.*—Methods of analysis, food laws, *see* 154.0, 120.

### 154.22 Paprika

U. S. Gov., Federal Specification EE-S-631a; 1938. Amendment 2; 1941. Spices; Ground and Whole. Includes paprika—Hungarian style and Spanish style. Gives general and detail requirements; methods of inspection and tests (chemical analyses in accordance with methods of Assn. of Official Agricultural Chemists); and requirements for packaging, packing, and marking.

U. S. Gov., Treasury Dept., Procurement Div., No. 561; 1942. Pimientos; Canned. Shall be prepared from smooth-skinned varieties of the large sweet pepper known as Pimiento. Gives requirements for preparation, size, fill of container, head space, can size, and dimensions; method of inspection and test; and packaging, packing, and marking.

*References.*—Methods of analysis, food laws, *see* 154.0, 120.

### 154.23 Pepper

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, 1938. Pepper; Black. Covers definition, description, impurities, grades, specifications, containers, uses, and sources.

New York Produce Exchange. Rules Governing Futures Transactions, 1939. Black Pepper. Includes Lampong, Aleppy and Tellicherry black pepper. Gives requirements for packing, delivery, quality, dust, dirt, stems, and chaff or extraneous matter.

U. S. Gov., Federal Specification EE-S-631a; 1938. Amendment 2; 1941. Spices; Ground and Whole. Includes Black Pepper (whole and ground), white pepper (ground), red pepper other than cayenne (ground), cayenne pepper (ground) and chili powder (spiced, ground). Gives general and detail requirements; methods of inspection and tests (chemical analyses in accordance with methods of Assn. of Official Agricultural Chemists); and requirements for packaging, packing, and marking.

*References.*—Fresh peppers, *see* 122.5; methods of analysis, food laws, *see* 154.0, 120.

## 154.3 SPICES, FRUIT SEED TYPE

### 154.31 Anise

*References.*—Methods of analysis, food laws, *see* 154.0, 120; anise extract, anise oil, *see* 175.9, 813.9.

### 154.32 Celery Seed

U. S. Gov., Federal Specification EE-S-631a; 1938. Amendment 2; 1941. Spices; Ground and Whole. Includes celery seed—whole and ground. Gives general and detail requirements; methods of inspection and tests (chemical analyses in accordance with methods of Assn. of Official Agricultural Chemists); and requirements for packaging, packing, and marking.

*References.*—Methods of analysis, food laws, *see* 154.0, 120.

### 154.33 Coriander Seed

*References.*—Methods of analysis, food laws, *see* 154.0, 120; oil of coriander, *see* 813.9.

### 154.34 Cumin Seed

*References.*—Methods of analysis, food laws, *see* 154.0, 120.

### 154.35 Dill Seed

*References.*—Methods of analysis, food laws, *see* 154.0, 120.

### 154.36 Fennel Seed

*References.*—Methods of analysis, food laws, *see* 154.0, 120; fennel oil for medicinal purposes, *see* 813.9.

## 154.4 SPICES, LEAF TYPE

### 154.41 Capers

*References.*—Methods of analysis, food laws, *see* 154.0, 120.

### 154.42 Cloves

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Clove (Cloves). Description, purity, clove fruit or cereals, assay, and storage. U.S.P. product of clove—Oleum Caryophylli.

U. S. Gov., Federal Specification EE-S-631a; 1938. Amendment 2; 1941. Spices; Ground and Whole. Includes cloves—whole and ground. Gives general and detail requirements; methods of inspection and tests (chemical analyses in accordance with methods of Assn. of Official Agricultural Chemists); and requirements for packaging, packing, and marking.

*References.*—Methods of analysis, food laws, *see* 154.0, 120; clove extract, oil of cloves, *see* 175.9, 813.9.

### 154.43 Marjoram

U. S. Gov., Federal Specification EE-S-631a; 1938. Amendment 2; 1941. Spices; Ground and Whole. Includes marjoram—whole, and ground. Gives general and detail requirements; methods of inspection and tests (chemical analyses in accordance with methods of Assn. of Official Agricultural Chemists); and requirements for packaging, packing, and marking.

*References.*—Methods of analysis, food laws, *see* 154.0, 120.

### 154.44 Sage

U. S. Gov., Federal Specification EE-S-631a; 1938. Amendment 2; 1941. Spices; Ground and Whole. Includes sage—whole, rubbed, and powdered. Gives general and detail requirements; methods of inspection and tests (chemical analyses in accordance with methods of Assn. of Official Agricultural Chemists); and requirements for packaging, packing, and marking.

*References.*—Methods of analysis, food laws, *see* 154.0, 120.

### 154.45 Thyme

U. S. Gov., Federal Specification EE-S-631a; 1938. Amendment 2; 1941. Spices; Ground and Whole. Includes thyme—whole and powdered. Gives general and detail requirements; methods of inspection and tests (chemical analyses in accordance with methods of Assn. of Official Agricultural Chemists); and requirements for packaging, packing, and marking.

*References.*—Methods of analysis, food laws, *see* 154.0, 120.

### 154.49 Miscellaneous Leaf Type Spices

U. S. Gov., Federal Specification EE-S-631a; 1938. Amendment 2; 1941. Spices; Ground and Whole. Includes

bay leaves—whole. Gives general and detail requirements; methods of inspection and tests (chemical analyses in accordance with methods of Assn. of Official Agricultural Chemists); and requirements for packaging, packing, and marking.

## 154.5 SPICES, SEED TYPE

### 154.51 Cardamon

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Cardamom Seed. Description and storage. U.S.P. product of cardamom seed—Tinctura Cardamoni Composita.

U. S. Gov., Federal Specification EE-S-631a; 1938. Amendment 2; 1941. Spices; Ground and Whole. Includes cardamom seed—whole. Gives general and detail requirements; methods of inspection and tests (chemical analyses in accordance with methods of Assn. of Official Agricultural Chemists); and requirements for packaging, packing, and marking.

*References.*—Methods of analysis, food laws, *see* 154.0, 120; oil of cardamom, *see* 813.9.

### 154.52 Caraway

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Caraway (Caraway Fruit, Caraway Seed). Description and storage.

U. S. Gov., Federal Specification EE-S-631a; 1938. Amendment 2; 1941. Spices; Ground and Whole. Includes caraway seed—whole. Gives general and detail requirements; methods of inspection and tests (chemical analyses in accordance with methods of Assn. of Official Agricultural Chemists); and requirements for packaging, packing, and marking.

*References.*—Methods of analysis, food laws, *see* 154.0, 120; oil caraway, *see* 813.9.

### 154.53 Mace

U. S. Gov., Federal Specification EE-S-631a; 1938. Amendment 2: 1941. Spices; Ground and Whole. Includes mace—whole and ground. Gives general and detail requirements; methods of inspection and tests (chemical analyses in accordance with methods of Assn. of Official Agricultural Chemists); and requirements for packaging, packing, and marking.

*References.*—Methods of analysis, food laws, *see* 154.0, 120.

### 154.54 Mustard

U. S. Gov., Federal Specification EE-M-821; 1931. Mustard; Prepared. Covers one type and includes the yellow (English) style, the dark (German) style, and the French style. Gives general and detail requirements: methods of inspection and tests (chemical analyses in accordance with methods of Assn. of Official Agricultural Chemists); and requirements for packaging, packing, and marking.

U. S. Gov., Federal Specification EE-S-631a; 1938. Amendment 2; 1941. Spices; Ground and Whole. Includes mustard—whole, ground, and flour. Gives general and detail requirements; methods of inspection and tests (chemical analyses in accordance with methods of Assn. of Official Agricultural Chemists); and requirements for packaging, packing, and marking.

*References.*—Methods of analysis, food laws, *see* 154.0, 120; oil of mustard, *see* 813.9.

### 154.55 Nutmeg

U. S. Gov., Federal Specification EE-S-631a; 1938. Amendment 2: 1941. Spices; Ground and Whole. Includes nutmeg—whole and ground. Gives general and detail requirements; methods of inspection and tests (chemical analyses in accordance with methods of Assn. of Official Agricultural Chemists); and requirements for packaging, packing, and marking.

*References.*—Methods of analysis, food laws, *see* 154.0, 120; nutmeg extract, oil of nutmeg, *see* 175.9, 813.9

### 154.56 Saffron

*References.*—Methods of analysis, food laws, *see* 154.0, 120.

## 154.6 SALT

Assn. of American Feed Control Officials. Definitions of Feedingstuffs, 1942. Iodized Salt. Requirements for percentage of iodine.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, 1938. Salt; Rock. Covers definition, constants, solubility, derivation, and uses.

U. S. Gov., Federal Specification SS-S-31b; 1944. Salt; Table and Tablets. Covers one grade and three types—(A) fine ground salt, (B) evaporated salt (free running), and (C) salt tablets. Gives requirements for material and workmanship and details for each type; methods of inspection and tests; and packaging, labeling, packing, and marking for shipment.

U. S. Gov., Treasury Dept., Procurement Div., No. 587a; 1944. Salt; Rock and Evaporated (for Regeneration of Water Softeners). Covers one grade and two types—type I rock salt and type II evaporated salt (kiln dried). Gives requirements for composition, solubility and packing tendency, grease, fat, oil, pH value, and particle size; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 24-18; 1926. Salt; Rock.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 78-23; 1943. Salt; Rock and Evaporated for Regeneration of Water Softeners.

*References.*—Sodium chloride (salt) as a chemical reagent, *see* 834.9; food laws, *see* 120.

## 154.7 VINEGAR

### 154.70 General Items

### 154.71 Vinegar

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Vinegar of Squill. Gives chemical composition, storage, preparation, and average dose.

U. S. Gov., Federal Specification Z-V-401a; 1940. Amendment 2; 1942. Vinegar. Covers three types—(I) cider vinegar, (II) distilled vinegar, and (III) malt vinegar. Gives detail requirements: methods of inspection and tests (chemical analyses in accordance

with methods of Assn. of Official Agricultural Chemists); and requirements for packaging, packing, and marking.

*References.*—Methods of analysis, food laws, *see* 154.70, 120.

### 154.9 MISCELLANEOUS SPICES

U. S. Gov., Federal Specification EE-S-631a; 1938. Amendment 2; 1941. Spices; Ground and Whole. Includes curry powder. Gives general and detail requirements; methods of inspection and tests (chemical analyses in accordance with methods of Assn. of Official Agricultural Chemists); and requirements for packaging, packing, and marking.

## 155. LEAVENING AGENTS

### 155.0 GENERAL ITEMS

### 155.1 BAKING POWDER

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis, 1940. Baking Powders and Baking Chemicals. Preparation of sample, total carbon dioxide, residual carbon dioxide, available carbon dioxide, neutralizing value, tartaric acid (free or combined), cream of tartar and free tartaric acid in tartrate powders, free tartaric acid, starch, aluminum, insoluble ash, iron and aluminum, calcium, potassium and sodium, phosphoric acid, sulfuric acid, ammonia, and arsenic.

U. S. Gov., Federal Specification EE-P-611; 1930. Amendment 2; 1940. Powder; Baking. Covers one grade and five types—(A) in which acid-reacting component is tartaric acid and/or its acid salts, (B) in which acid-reacting component is acid salts of phosphoric acid, (C) in which acid-reacting component is compounds of aluminum, and (D and E) in which acid-resisting components are compounds of aluminum and acid salts of phosphoric acid. Gives general and detail requirements; methods of inspection and tests (chemical analyses in accordance with methods of Assn. of Official Agricultural Chemists); and requirements for packaging, packing, and marking.

*References.*—Methods of analysis, food laws, *see* 155.0 and 120.

### 155.2 BAKING SODA

U. S. Gov., Federal Specification EE-S-571; 1930. Soda; Baking. Covers one grade. Gives general and detail requirements; methods of inspection and tests (chemical analyses in accordance with methods of Assn. of Official Agricultural Chemists); and requirements for packaging, packing, and marking.

*References.*—Sodium bicarbonate as a medicinal agent and as a chemical reagent, *see* 834.5; methods of analysis, food laws, *see* 155.0, 834.5, 120.

### 155.3 CREAM OF TARTAR AND SUBSTITUTES

### 155.4 HOPS

American Institute of Homoeopathy. Homoeopathic Pharmacopoeia of U. S., 1941. Hops. Natural order, synonyms, description, habitat, history, parts used, and preparations for tincture, dilutions, and medications for use in homoeopathic medicines.

U. S. Gov., Federal Specification HHH-H-491; 1930. Hops. Covers one grade. Gives detail requirements; methods of inspection and tests (chemical analyses in accordance with methods of the Assn. of Official Agricultural Chemists); and requirements for packaging, packing, and marking.

*References.*—Methods of analysis, food laws, *see* 120.

### 155.5 YEAST

Assn. of American Feed Control Officials. Definitions of Feedingstuffs, 1944. Yeast. Defines yeast and irradiated yeast.

U. S. Gov., Federal Specification EE-Y-131; 1931. Yeast. Covers one grade and two types—(A) compressed yeast and (B) dry yeast. Gives general and detail requirements; methods of inspection and tests (chemical analyses in accordance with methods of Assn. of Official Agricultural Chemists); and requirements for packaging, packing, and marking.

*References.*—Methods of testing, food laws, *see* 120.

## 160-169 SUGAR, MOLASSES, SIRUP, HONEY, AND CONFECTIONERY

### 160. GENERAL ITEMS

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis, 1940. Sugars and Sugar Products. Sugars, Sirups, and Molasses. Preparation of sample, determination of moisture, solids, ash, alkalinity of ash, nitrogen, mineral adulterants in ash, determination of sucrose, sucrose and raffinose, glucose by polarimetric methods, chemical methods for determination of sucrose, invert, maltose, lactose, and dextrose.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, 1938. Sugar. Covers definition, characteristics, occurrence, manufacture, types and classes, grades, markets and marketing, and packing.

National Canners Assn. Bacterial Standards for Sugar, 1941. For use in non-acid canned foods. Covers sampling, preparation of sample, detection of flat, sour spores, total count, detection of thermophilic anaerobes not producing $H_2S$, detection of thermophilic anaerobes producing $H_2S$ (sulfide spoilage), reporting results, total thermophilic spore count, flat sour spores, thermophilic anaerobic spores, and sulfide spoilage spores.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Circular C398 and Supplement, 1944. Standard Samples. Sucrose (Cane-Sugar), Sample 17; and Dextrose (Glucose), Sample 41. These samples are prepared and sold by the National Bureau of Standards with a certificate of analysis for use in industry and by others as a comparison standard for checking the accuracy of analysis of similar materials.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Technologic Paper T115, 1918. New Baumé Scale for Sugar Solutions. Adopted by Manufacturing

Chemists Assn. of U. S., the National Bureau of Standards, and by all manufacturers of hydrometers. Scale is based on specific gravity values of Plato, 20° C., and the modulus 145. Tables show relation between degrees Brix or percent sucrose, specific gravity, and degrees Baumé.

## 161. SUGAR

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Circular C19, 1924. Standard Density and Volumetric Tables. Includes tables of density of solubility of cane sugar.

### 161.1 SUGAR, GRANULATED

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Sucrose (Saccharum Sugar). Description, solubility, specific rotation, ash, reaction, sulfate, chloride, calcium, heavy metals (insoluble salts, ultra-marine or Prussian blue), invert sugar, and storage.

U. S. Gov., Federal Specification JJJ-S-791a; 1943. Amendment 1; 1944. Sugar; Beet or Cane. Covers two types—(I) white, hard, refined (granulated, powdered, and tablet or cube) and (II) brown, soft (light, medium, and dark). Gives requirements for grade, material and workmanship, conformance to provisions of Federal Food, Drug, and Cosmetic Act, and details for each type; methods of inspection and tests; and packaging, labeling, packing, and marking for shipment.

*References.*—Methods of analysis, density tables, food laws, *see* 160; other sugars, *see* 161.2 to 161.7.

### 161.2 SUGAR, POWDERED

U. S. Gov., Federal Specification JJJ-S-791a; 1943. Amendment 1; 1944. Sugar; Beet or Cane. Covers two types—(I) white, hard, refined (granulated, powdered, and tablet or cube) and (II) brown, soft (light, medium, and dark). Gives requirements for grade, material and workmanship, conformance to provisions of Federal Food, Drug, and Cosmetic Act, and details for each type; methods of inspection and tests; and packaging, labeling, packing, and marking for shipment.

*References.*—Methods of analysis, food laws, density tables, *see* 160.

### 161.3 LOAF SUGAR

U. S. Gov., Federal Specification JJJ-S-791a; 1943. Amendment 1; 1944. Sugar; Beet or Cane. Covers two types—(I) white, hard, refined (granulated, powdered, and tablet or cube) and (II) brown, soft (light, medium, and dark). Gives requirements for grade, material and workmanship, conformance to provisions of Federal Food, Drug, and Cosmetic Act, and details for each type; methods of inspection and tests; and packaging, labeling, packing, and marking for shipment.

*References.*—Methods of analysis, density tables, food laws, *see* 160.

### 161.4 GRAPE AND CORN SUGAR

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Dextrose (Glucose). Description, solubility, optical rotation, identification, color of aqueous solution, loss on drying, ash, reaction, chloride, sulfate, arsenic, heavy metals, dextrin, soluble starch, sulfites, and storage. U.S.P. products of dextrose—Injectio Dextrosi, Injectio Dextrose et Sodii Chloridi.

U. S. Gov., U. S. Army, Medical Dept. Specification 4-1112; 1941. Dextrose; Bacteriologic, Anhydrous Powder.

*References.*—Methods of analysis, density tables, food laws, *see* 160.

### 161.5 SOFT SUGAR

U. S. Gov., Federal Specification JJJ-S-791a; 1943. Amendment 1; 1944. Sugar; Beet or Cane. Covers two types—(I) white, hard, refined (granulated, powdered, and tablet or cube) and (II) brown, soft (light, medium, and dark). Gives requirements for grade, material and workmanship, conformance to provisions of Federal Food, Drug, and Cosmetic Act, and details for each type; methods of inspection and tests; and packaging, labeling, packing, and marking for shipment.

*References.*—Methods of analysis, food laws, density tables, *see* 160.

### 161.6 STARCH SUGAR

*References.*—Grape and corn sugar, *see* 161.4; methods of analysis, density tables, food laws, *see* 160.

### 161.7 LACTOSE, MILK SUGAR

American Institute of Homoeopathy. Homoeopathic Pharmacopoeia of the U. S., 1941. Milk-Sugar. Definition, analysis, and purity and identity for use in homoeopathic medicines.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Lactose (Milk Sugar). Description, solubility, optical rotation, identification, ash, reaction, heavy metals, dextrose, sucrose, starch or dextrin, water-insoluble substances, and storage.

*References.*—Methods of analysis, density tables, food laws, *see* 160.

### 161.9 SUGAR, MISCELLANEOUS

American Leather Chemists Assn. Methods of Sampling and Analysis. Includes Tannery Sugars, 1942. Gives requirements for preparation of sample, moisture, ash, dextrose and purity, reagents, procedure, total sugar, dextrose before inversion, iron, foam, scum, and melting point.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Oil-Sugars. Gives chemical composition and preparation.

U. S. Gov., U. S. Army, Medical Dept. Specification 4-1058; 1937. Saccharose; Reagent Grade.

## 162. HONEY

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis, 1930. Honey. Preparation of sample, determination of moisture, ash, alkalinity of soluble ash, reducing sugars, sucrose, free acid, and tentative methods for polarization, determination of levulose, dextrose, dextrine, commercial glucose, commercial invert sugar, and diastase.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, Volume 2; 1944. Honey. Covers definition, derivation and characteristics, uses, grades, containers, and substitutes.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Honey (Clarified Honey, Strained Honey). Description, specific gravity, ash, reaction, chloride, sulfate, artificial honey, foreign coloring matter, azo dyes, starch or dextrins, free acid, and storage.

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. U. S. Standards for Grades of Extracted Honey, 1943. Covers three grades—U. S. grade A or U. S. fancy, U. S. grade B, and off-grade; seven colors—water-white, extra white, white, extra light amber, light amber, amber, and dark; and two types—liquid and crystallized. Gives fill of container, density, clean fairly clean, damage, serious damage, turbidity, objectionable flavor or odor, and tolerance.

U. S. Gov., Federal Specification C-H-571; 1938. Honey. Covers extracted or strained honey in two grades—(A) fancy and (B) standard; with 7 colors—water-white, extra white, white, extra light amber, light amber, amber, and dark. Gives detail requirements; inspection and tests (chemical analysis in accordance with methods of Assn. of Official Agricultural Chemists); and requirements for packaging, packing, and marking for shipment.

## 163. MOLASSES AND REFINERS SIRUP

### 163.1 MOLASSES, PUERTO RICO

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, Volume 2; 1944. Molasses; Blackstrap. Covers definition, sources, shipping, uses, grades, conversion factors, and substitutes.

U. S. Gov., U. S. Army, Chemical Warfare Service. Specification 96-21-17; 1939. Molasses Residuum, for Simulated HS.

*References.*—Methods of analysis, food laws, *see* 160.

### 163.2 MOLASSES, NEW ORLEANS

U. S. Gov., Federal Specification JJJ-M-576; 1938. Molasses; Sugar-Cane. Covers two grades—(1) first centrifugal and (2) second centrifugal. Gives detail requirements; methods of sampling, inspection, and tests (chemical analyses in accordance with methods of the Assn. of Official Agricultural Chemists); and requirements for packaging, packing, and marking.

*References.*—*See* 163.1.

### 163.3 REFINERS SIRUP

*References.*—Methods of analysis, food laws, *see* 160.

## 164. SIRUP

### 164.1 MAPLE SIRUP

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis, 1940. Sugars and Sugar Products. Maple Products. Preparation of sample of sirup and of sugar, determination of moisture, polarization, reducing sugar, sucrose, commercial glucose, ash, alkalinity of ash, conductivity value, and tentative methods for determination of lead number, malic acid value, metals.

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. U. S. Standards for Maple Sirup for Reprocessing, 1940. Covers five grades—U. S. grade AA (Fancy), U. S. grade A, U. S. grade B, U. S. grade C, and unclassified. Gives requirements for each grade and definitions of terms.

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. U. S. Standards for Table Maple Sirup, 1940. Covers four grades—U. S. grade AA (fancy), U. S. grade A, U. S. grade B, and unclassified. Gives requirements for each grade, tolerances, packing, and definitions of terms.

U. S. Gov., Federal Specification JJJ-S-351a; 1931. Amendment 3; 1940. Sirup. Covers one grade and five types—(I) sugarcane; (II) blended, cane sugar, and refiners'; (III) blended, corn and refiners'; (IV) maple; and (V) sugar and maple.

*References.*—Food laws, *see* 160; sugar density scales, *see* 160.

### 164.2 CORN SIRUP AND GLUCOSE

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Liquid Glucose (Glucose). Description, solubility, identification, loss on drying, ash, acidity, sulfite, arsenic, heavy metals, starch, and storage.

*References.*—Methods of analysis, food laws, *see* 160; sugar density scales, *see* 160.

### 164.3 BLENDED SIRUP

U. S. Gov., Federal Specification JJJ-S-351a; 1931. Amendment 3; 1940. Sirup. Covers one grade and five types—(I) sugarcane; (II) blended, cane sugar and refiners'; (III) blended, corn and refiners'; (IV) maple; and (V) sugar and maple.

*References.*—Methods of analysis, food laws, *see* 160; sugar density scales, *see* 160; sugar and maple sirup, *see* 164.1.

### 164.4 CANE SIRUP

*References.*—Methods of analysis, food laws, *see* 160; sugar density scales, *see* 160.

### 164.5 SORGHUMS

*References.*—Methods of analysis, food laws, *see* 160; sugar density scales, *see* 160.

### 164.6 SUGAR SIRUP

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Syrup (Sirup, Simple Syrup). Preparation, specific gravity, and storage.

*References.*—Sugar, *see* 161.1; methods of analysis, food laws, *see* 160; sugar density scales, *see* 160.

## 165. CONFECTIONERY

### 165.0 GENERAL ITEMS

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis, 1940. Confectionery. Preparation of sample, determination of moisture, ash, alkalinity of ash, nitrogen, sucrose, glucose, alcohol in sirups, tentative methods for determination of mineral adulterants in ash, starch, ether extract, coloring matter, and metals.

### 165.1 CANDY

U. S. Gov., Federal Specification EE-C-71; 1931. Candy. Covers four types—(A) chocolates, creams, or assorted; (B) bon bons, assorted; (C) hard candy, lemon drops; and (D) sugar candy, stick, or cut stick. Gives general and detail requirements; methods of inspection and tests (chemical analyses in accordance with methods of Assn. of Official Agricultural Chemists); and requirements for packaging, packing, and marking.

*References.*—Methods of analysis, food laws, *see* 165.0, 160; sugar, *see* 161.1; chocolate and chocolate coating, *see* 161.3.

### 165.2 CHEWING GUM

### 165.3 ICE CREAM

U. S. Gov., Federal Specification EE-I-116a; 1939. Ice Cream; Sherberts and Ices. Covers three types—(I) plain ice cream, fruit ice cream, nut ice cream, bisque ice cream; (II) French ice cream, French custard ice cream, ice custard, parfait; and (III) sherberts and ices. Gives general and detail requirements; methods of inspection and tests (chemical analyses in accordance with methods of Assn. of Official Agricultural Chemists); and requirements for packaging, packing, and marking.

*References.*—Ice cream brick cartons, brick molds, *see* 954.1, 785.2.

## 170-179 BEVERAGES

### 170. GENERAL ITEMS

### 171. DISTILLED LIQUOR

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis, 1940. Distilled Liquors. Determination of specific gravity, alcohol, extract, ash, acidity, esters, aldehydes, furfural, fusel oil, sugars, methyl alcohol, and tentative methods for determination of coloring matters, caramel.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Brandy. Description, specific gravity, free acid, total solids, storage in wood, other tests, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Whisky (Whiskey). Description, specific gravity, free acid (total solids, glycerin, sugar), storage in wood, esters (acetone, other ketones, isopropyl alcohol, and tertiary butyl alcohol), alkaloids, caramel and certain coal tar dyes, formaldehyde, methanol, heavy metals, and storage.

*References.*—Food laws, strength definitions, *see* 170; alcohol, *see* 822.4.

### 173. WINES

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis; 1940. Wines. Preparation of sample, determination of specific gravity, alcohol, glycerol, extract, non-sugar solids, reducing sugars, sucrose, commercial glucose, ash, alkalinity of ash, phosphoric and sulfuric acids, chlorides, volatile acids, tartaric acid, tannin and coloring matter, protein, pentosans, preservatives.

State of California, Dept. of Public Health, Bureau of Food and Drug Inspection, 1942. Regulations Establishing Standards of Identity, Quality, Purity and Sanitation, and Governing the Labeling and Advertising of Wine in the State of California. Gives seven articles covering standards of identity for wine, prohibited practices, labeling requirements for wine, advertising of wine, sanitation, enforcement, and general provisions.

U. S. Gov., Treasury Dept. Federal Alcohol Administration. Regulations No. 4 Relating to Labeling and Advertising of Wine, 1939. Gives articles covering definitions, standards of identity for wine, labeling requirements for wine, requirements for withdrawal of wine from customs custody, requirements for approval of labels of wine domestically bottled or packed, advertising of wine, general provisions, and appendixes.

*References.*—Food laws, strength definitions, *see* 170; alcohol, *see* 822.4.

### 175. FLAVORING EXTRACTS

### 175.1 ALMOND EXTRACT

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis, 1940. Almond Extract. Tentative methods. Determination of alcohol, benzaldehyde, benzoic acid, hydrocyanic acid, nitrobenzol.

### 175.2 CASSIA EXTRACT

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis, 1940. Cassia Extract. Tentative methods for determination of alcohol, oil, refractive index, and color reaction of oil with ferric chloride.

*References.*—Food laws, *see* 170.

### 175.3 PEPPERMINT EXTRACT

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis, 1940. Peppermint Extract. Tentative method for determination of alcohol and oil.

*References.*—Oil of peppermint for medical purposes, *see* 813.9.

### 175.4 VANILLA EXTRACT

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis, 1940. Vanilla Extract and Its Substitutes. Determination of specific gravity, alcohol, vanillin and coumarin, lead number, solids, ash, sucrose, and tentative methods for determination of glycerol, vanilla resins, color value, coloring matters.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, Volume 2; 1944. Vanilla Beans. Covers definition, derivation, grades and sources, uses, marketing, containers, and substitutes.

U. S. Gov., Federal Specification EE-E-911a; 1941. Extracts, Flavoring; and Flavors, Non-Alcoholic. Includes vanilla—extra, concentrated extract; 4X

strength extract; extract; and imitation, artificially flavored and colored. Gives requirements on preparation and strength of extracts and amount of alcohol, required constituents of imitation extract; methods of inspection and testing (chemical analyses in accordance with methods of Assn. of Official Agricultural Chemists); and requirements for packaging, labeling, packing, and marking for shipment.

*References.*—Vanilla for medicinal purposes, *see* 819.9.

### 175.5 WINTERGREEN EXTRACT

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis, 1940. Wintergreen Extract. Tentative methods for determination of alcohol, oil, and methyl salicylate.

*References.*—Oil of wintergreen for medical purposes, *see* 813.9.

### 175.6 LEMON EXTRACT

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis, 1940. Lemon and Orange Extracts. Determination of specific gravity, alcohol, lemon and orange oils, aldehydes, citral, solids, ash, sucrose, methyl alcohol, and tentative methods for determination of glycerol, and coloring matters.

U. S. Gov., Federal Specification EE-E-911a; 1941. Extracts, Flavoring; and Flavors, Non-Alcoholic. Includes lemon—concentrated extract, extract; terpeneless extract; and non-alcoholic flavor. Gives requirements on preparation and strength of extracts and amount of alcohol, required constituents of imitation extract; methods of inspection and testing (chemical analyses in accordance with methods of Assn. of Official Agricultural Chemists); and requirements for packaging, labeling, packing, and marking for shipment.

*References.*—Oil of lemon for medical purposes, *see* 813.9; lemon oil, nonmedicinal, *see* 142.97.

### 175.7 ORANGE EXTRACT

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis, 1940. Lemon and Orange Extracts. Determination of specific gravity, alcohol, lemon, and orange oils, aldehydes, citral, solids, ash, sucrose, methyl alcohol, and tentative methods of determination of glycerol, and coloring matters.

U. S. Gov., Federal Specification EE-E-911a; 1941. Extracts, Flavoring; and Flavors, Non-Alcoholic. Includes orange—extract; terpeneless extract; and non-alcoholic flavor. Gives requirements on preparation and strength, percentages of alcohol, percentages of oil of orange and of cottonseed oil in non-alcoholic flavor; methods of inspection and testing (chemical analyses in accordance with methods of Assn. of Official Agricultural Chemists); and requirements for packaging, labeling, packing, and marking for shipment.

*References.*—Oil of orange for medical purposes, *see* 813.9; orange oil, nonmedicinal, *see* 142.97.

### 175.9 MISCELLANEOUS SPECIFICATIONS FOR FLAVORING EXTRACT

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis, 1940. Anise and Nutmeg Extracts. Tentative method for determination of oil.

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis, 1940. Ginger Extract. Tentative methods for determination of alcohol, solids, identification of ginger and capsicum.

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis, 1940. Nutmeg Extract. Tentative methods for determination of oil.

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis, 1940. Spearmint Extract. Tentative method for determination of alcohol and of oil.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, Volume 2; 1944. Licorice. Covers definition, characteristics and derivation, grades and types, uses, containers, and substitutes.

*References.*—Spices, *see* 154; oils of various spices for medicinal purposes, *see* 813.9.

## 176. MINERAL WATERS

### 176.0 GENERAL ITEMS

American Bottlers of Carbonated Beverages. Educational Bulletin 4; 1930. Gas Volume Test. Recommended practice on standard method for testing bottled carbonated beverages for gas volume with chart of values for use in making the determination.

### 176.1 SELTZERS

### 176.2 VICHY WATER

### 176.3 TABLE WATERS

U. S. Gov., Federal Specification EE-W-111; 1931. Water; Table, Effervescent. Gives general and detail requirements; methods of inspection and tests (chemical analyses in accordance with methods of Assn. of Official Agricultural Chemists); and requirements for packaging, packing, and marking.

## 177. BITTERS, GINGER ALE, SARSAPARILLA ROOT BEER, BIRCH BEER

### 177.1 BITTERS

### 177.2 GINGER ALE

U. S. Gov., Federal Specification EE-G-391a; 1932. Ginger Ale. Covers two types—(I) dry and (II) aromatic or golden. Gives general and detail requirements; methods of inspection and tests (chemical analyses in accordance with methods of Assn. of Official Agricultural Chemists); and requirements for packaging, packing, and marking.

*References.*—Methods of test, food laws, *see* 176.0, 170.

### 177.3 SARSAPARILLA

*References.*—Methods of test, food laws, *see* 176.0, 170.

### 177.4 ROOT BEER AND BIRCH BEER

### 177.5 CREAM SODA WATER

## 178. FRUIT JUICE BEVERAGES

### 178.0 GENERAL ITEMS

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis, 1940. Beverages (Non-Alcoholic) and Concentrates. Methods for determination of specific gravity, alcohol, acidity, esters, total solids, sucrose, reducing sugars, commercial glucose, ash, alkalinity of ash, preservatives, anthranilic acid esters, tentative methods for determination of citric acid, tartaric acid, coloring matters, and metals.

### 178.1 LEMON JUICE

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. Tentative U. S. Standards for Grades of Canned Lemon Juice, 1941. Covers three grades—U. S. grade A or U. S. fancy, U. S. grade C or U. S. standard, and off-grade. Gives definition, fill of container, explanation of terms, and factors used in ascertaining the grade rating including color, absence of defects, and flavor.

### 178.2 LIME JUICE

### 178.3 ORANGE JUICE

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. Tentative U. S. Standards for Grades of Canned Blended Grapefruit Juice and Orange Juice, 1943. Covers three grades—U. S. grade A or U. S. fancy, U. S. grade C or U. S. standard, and off-grade. Gives definition, explanation of terms, and factors used in ascertaining grade rating including color, absence of defects, and flavor.

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. U. S. Standards for Grades of Canned Orange Juice, 1942. Covers three grades—U. S. grade A or U. S. fancy, U. S. grade C or U. S. standard, and off-grade. Gives definition, fill of container, explanation of terms, tolerance, and factors used in ascertaining the grade rating including color, absence of defects, and flavor.

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. U. S. Standards for Grades of Canned Concentrated Orange Juice, 1943. Covers three grades—U. S. grade A or U. S. fancy, U. S. grade C or U. S. standard, and off-grade. Gives definition, fill of container, explanation of terms, determination of ascorbic acid (vitamin C), percentage of free and suspended pulp, acid, recoverable oil, and factors used in ascertaining the grade rating including color, absence of defects, and flavor.

### 178.4 GRAPE JUICE

U. S. Gov., Federal Specification Z-G-661; 1931. Grape Juice. Covers variety produced from the Concord type of grape. Covers detail requirements; methods of inspection and tests (chemical analyses in accordance with methods of Assn. of Official Agricultural Chemists); and requirements for packaging, packing, and marking.

### 178.5 APPLE JUICE

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. Tentative U. S. Standards for Grades of Canned Apple Juice, 1941. Covers three grades—U. S. grade A or U. S. fancy, U. S. grade C or U. S. standard, and off-grade; and two styles—clarified (filtered) and unclarified (unfiltered). Gives definition, explanation of terms, can size, can dimensions, maximum capacity, maximum head space, and factors used in ascertaining the grade rating including color, absence of defects, and flavor.

### 178.6 GRAPEFRUIT JUICE

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. Tentative U. S. Standards for Grades of Canned Blended Grapefruit Juice and Orange Juice, 1943. Covers three grades—U. S. grade A or U. S. fancy, U. S. grade C or U. S. standard, and off-grade. Gives definition, explanation of terms, and factors used in ascertaining grade rating including color, absence of defects, and flavor.

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. U. S. Standards for Grades of Canned Grapefruit Juice, 1941. Covers three grades—U. S. grade A or U. S. fancy, U. S. grade C or U. S. standard, and off-grade. Gives definition, fill of container, explanation of terms, and factors used in ascertaining the grade rating including color, absence of defects, and flavor.

U. S. Gov., Federal Specification Z-G-686; 1941. Grapefruit Juice; Canned. Covers two types—(I) unsweetened and (II) sweetened; and two grades—(A) fancy and (C) standard. Gives detail requirements; methods of inspection and tests (chemical analyses in accordance with methods of Assn. of Official Agricultural Chemists); and requirements for packaging, packing, and marking.

### 178.7 PINEAPPLE JUICE

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. Tentative U. S. Standards for Grades of Canned Pineapple Juice, 1943. Covers three grades—U. S. grade A or U. S. fancy, U. S. grade C or U. S. standard, and off-grade. Gives definition, fill of container, explanation of terms, tolerance, and factors used in ascertaining the grade rating including color, absence of defects, and flavor.

### 178.9 MISCELLANEOUS FRUIT JUICES

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Cherry Juice. Gives chemical composition, description, specific gravity, refractive index, ash, hydrogen-ion concentration, total solids, reducing sugars, volatile acids, arsenic, lead, assay, storage, and preparation.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Raspberry Juice. Gives chemical composition, description, specific gravity, refractive index, identification, ash, hydrogen-ion concentration, total solids, reducing sugars, volatile acids, absence of coal-tar dyes, arsenic, assay, storage, and preparation.

## 179. MISCELLANEOUS BEVERAGE SPECIFICATIONS

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis, 1940. Beers.

Preparation of sample, determination of specific gravity, alcohol, extract, degree of fermentation, lactic, acetic and phosphoric acids, reducing sugars, glycerol, ash, protein preservatives, and tentative methods for determination of color, dextrin, polarization, coloring matters, and metals.

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis, 1940. Malt Beverages, Sirups and Extracts, and Brewing Materials.

# 200-299 VEGETABLE PRODUCTS

(Except Food, Fiber, and Wood)

## 200-209 RUBBER AND SIMILAR GUMS AND MANUFACTURES THEREOF

### 200. GENERAL ITEMS

American Society for Testing Materials, D 15-41; 1941. American Standards Assn., J1.1-1942. Methods of Sample Preparation for Physical Testing of Rubber Products. Apply to soft vulcanized rubber compounds such as are used for the lining and cover of hose and belting, for carcass and tread tires, and for a wide variety of molded or extruded rubber products. They are not applicable without modification to material ordinarily classed as hard rubber. Place of test, sampling, preparing samples of vulcanized rubber, age and condition of samples, temperature of test, separation of rubber, buffing, methods of testing, and retests.

American Society for Testing Materials, D 297-43T; 1943. Tentative Methods of Chemical Analysis of Rubber Products. These methods are classified into five separate procedures—(A) complete procedure, (B) rubber solvent method, (C) short procedure, (D) direct determination of rubber hydrocarbon, and (E) copper and manganese determination in crude rubber. Gives description of terms, reagents, blank determinations, check determinations, preparation of samples, preliminary examination of sample, and details for the five procedures listed above.

American Society for Testing Materials, D 314-39; 1939. Method of Test for Hardness of Rubber. For common grade of rubber such as tire treads, most automotive mechanical rubber parts, etc., but not for extremely hard or extremely soft rubbers, by measurement of indentation resistance when subjected to a definite pressure by a standard spherical surface. Includes A.S.T.M. hardness number, apparatus, test specimen, and procedure.

American Society for Testing Materials, D 394-40; 1940. Methods of Test for Abrasion Resistance of Rubber Compounds. For soft rubber compounds such as gum stocks, boot and shoe stocks, tread stocks, etc., by use of du Pont, National Bureau of Standards, and U. S. Rubber Co. abrader machines. Gives comparison standards, preparation of sample, method of procedure, and calculations.

American Society for Testing Materials, D 395-40; 1940. Tentative Methods of Test for Compression Set of Vulcanized Rubber. For vulcanized rubber subjected to compressive stresses or shear such as machinery mountings and vibration dampers. For determination of set under constant load, and for constant deflection, description of apparatus, test specimen, heat treatment, recovery period, and report

American Society for Testing Materials, D 412-41; 1941. American Standards Assn., J2.1-1942. Methods of Tension Testing of Vulcanized Rubber. For determining stress-strain properties, tensile strength, ultimate elongation, and permanent set of soft vulcanized rubber such as tire carcass and tread compounds or most mechanical rubber goods, but not for hard rubber. Description of terms, tension test apparatus, calibration of tension testing machine, set test apparatus, die for test specimens, test specimens, number of test specimens, procedure, calculations, and report.

American Society for Testing Materials, D 413-39; 1939. American Standards Assn., J3.1-1942. Methods of Test for Adhesion of Vulcanized Rubber (Friction Test). For determination of the strength of adhesion between plies of fabric bonded with rubber or rubber attached to another material. Includes dead weight and machine methods, test specimen, description of apparatus, and procedure.

American Society for Testing Materials, D 429-39; 1939. Method of Test for Adhesion of Vulcanized Rubber to Metal. For use where rubber part is assembled between two parallel metal plates, but not for metal on one side only. Description of mold for test specimen, apparatus, laboratory tests, and tests for production parts.

American Society for Testing Materials, D 430-40; 1940. Methods of Dynamic Testing for Ply Separation and Cracking of Rubber Products. For comparative ability of soft rubber compounds to resist fatigue, such as tires, belts, footwear, and various molded goods. For ply separation by use of Scott flexing machine, and for cracking produced either by extension or bending by use of De Mattia flexing machine, or by use of du Pont flexing machine. Procedure for tires, belts, test specimen, and report.

American Society for Testing Materials, D 454-41; 1941. Method of Air Pressure Heat Test of Vulcanized Rubber. For accelerated aging test of rubber compounds designed for high-temperature service. Type of test, general methods, apparatus, test specimens, number of tests, tests of original specimens, procedure and physical test of exposed specimens, and calculations and report.

American Society for Testing Materials, D 471-44T; 1944. Tentative Methods of Test for Changes in Properties of Rubber and Rubber-Like Materials in Liquids. Intended for use in estimating the comparative ability of rubber and rubber-like compositions to withstand the effect of liquids. For intercomparisons between compounds rather than for an estimate of service performance of manufactured products. Gives types of test, test conditions, preparation of sample, and details for method A (general procedures) and method B (linear measurement method for increase in volume).

American Society for Testing Materials, D 518-44; 1944. Method of Test for Resistance to Light Checking and Cracking of Rubber Compounds. For estimating comparative resistance to sunlight and weather of soft rubber compounds, but not for hard rubber. Description of specimen, apparatus, and methods of procedures for exposed stressed straight specimen and for looped specimen.

American Society for Testing Materials, D 530-44T; 1944. Tentative Methods of Testing Hard Rubber Products. Includes chemical, physical, and electrical tests of vulcanized compositions having a ratio of combined sulfur to rubber over 15 percent. Chemical analysis using A.S.T.M. method D 297, analysis of ash, procedures for physical tests for tensile strength and elongation, impact resistance, hardness, flexural strength, cold flow, and softening point; and for dielectric strength, power factor, and surface and volume resistivity.

American Society for Testing Materials, D 531-41; 1941. Method of Test for Indentation of Rubber by Means of the Pusey and Jones Plastometer. For measure of the depth of indentation, expressed in hundredths of a millimeter, of an 1/8 inch ball loaded 1 kilogram, allowing plastic flow adjacent to the indentor. Not for determination of hardness. Describes apparatus, preparation of specimen, and test procedure.

American Society for Testing Materials, D 552-44T; 1944. Tentative Methods of Testing Cellular Rubber Products. Covers procedures for testing cellular rubber products in which the base material used in manufacture may be natural rubber, reclaimed rubber, synthetic rubber, or rubber-like materials, alone or in combination. Cellular rubbers may be vulcanized either to soft or to hard (ebonite) rubber. Gives general methods, sampling, standard test slabs, measurement of finished products, apparent density, chemical analysis, tensile strength and elongation, accelerated aging tests, compression-deflection tests, compression set under constant deflection, and flexing test.

American Society for Testing Materials, D572-42; 1942. American Standards Assn., J 4.1-1943. Method of Test for Accelerated Aging of Vulcanized Rubber by the Oxygen-Pressure Method. For use in estimating relative resistance of vulcanized rubber to age deterioration. Nature of test, general methods, apparatus, test specimens, number of test specimens, tests for unaged specimen, procedure for accelerated aging, physical tests of aged specimen, calculations, and reports, section 4(b) and section 8(b), tentatively revised 1941.

American Society for Testing Materials, D573-42; 1942. American Standards Assn., J 5.1-1942. Method of Test for Accelerated Aging of Vulcanized Rubber by the Oven Method. Intended for use in estimating the relative resistance of vulcanized rubber to age deterioration. Nature of test, general methods, apparatus, test specimens, number of test specimens, tests of unaged specimens, procedure for accelerated aging, physical tests of aged specimens, calculations, and report.

American Society for Testing Materials, D575-40T; 1940. Tentative Methods of Test for Compression-Deflection Characteristics of Vulcanized Rubber. Covers tests at specified deflection and at specified load, requirements for compression testing machine, test specimen, preparation of specimen, test conditions, nature of tests, procedures, and report.

American Society for Testing Materials, D599-40T; 1940. Tentative Method of Test for Physical State of Cure of Vulcanized Rubber (T-50 Test). Limited to rubber compounds of relatively high elongation for controlling uniformity of cure, and for correlation of combined sulfur, by stretching, freezing, and gradual warming. Description of test apparatus, test specimen, and methods of procedure.

American Society for Testing Materials, D 623-41T; 1941. Tentative Methods of Test for Compression Fatigue of Vulcanized Rubber. For use in comparing the rate of heat generation and the fatigue characteristics of vulcanized rubber compounds that may be subjected in use to dynamic compression strains. Types of test, preparation of sample; Goodrich, Firestone, and St. Joe flexometer tests; and report.

American Society for Testing Materials, D 624-44; 1944. Method of Test for Tear Resistance of Vulcanized Rubber. A procedure which is widely used for determining tear resistance of the usual grades of soft vulcanized rubber such as tire tread, carcass, and inner tube compounds, or those used in most mechanical rubber goods. It does not apply to the testing of material ordinarily classed as hard rubber. Apparatus, calibration of apparatus, preparation of sample, die for test specimens, test specimens, number of test specimens, procedure, calculation, and report.

American Society for Testing Materials, D 640-44; 1944. Methods of Sampling and Testing Latices of Natural Rubber and Synthetic Rubbers. Sampling and measuring variability in composition of normal and concentrated rubber latex and synthetic rubber latices. Sampling latex in drums and tank cars; total solids, dry rubber content, preparation of sample for chemical analysis, and report.

American Society for Testing Materials, D 676-44T; 1944. Tentative Method of Test for Indentation of Rubber by Means of the Durometer. Covers the procedure for determining the indentation of rubber by means of the durometer having a point made of hardened steel.

American Society for Testing Materials, D735-43T; 1943. Prepared in cooperation with the Society of Automotive Engineers. Tentative Specifications for Rubber and Synthetic Rubber Compounds for Automotive and Aeronautical Applications. Covers vulcanized compounds of natural rubber, reclaimed rubber, synthetic rubber, or rubber-like materials, alone or in combination, which are intended for use in manufacturing products for automotive and aeronautical applications. Gives types of compounds, classes and grades of compounds, composition and manufacture, color, physical properties, sampling, methods of testing, and inspection and rejection.

American Society for Testing Materials, D736-43T; 1943. Tentative Method of Test for Low-Temperature Brittleness of Rubber and Rubber-Like Materials. Intended to determine the ability of compounds made from rubber or rubber-like materials to resist the effect of

low temperatures in causing them to become brittle so as to fracture or crack when bent. Covers apparatus, test specimens, procedure, results, and report.

American Society for Testing Materials, D 749-43T; 1943. Tentative Method of Calibrating a Light Source Used for Accelerating the Deterioration of Rubber. Intended primarily for use in measuring the intensity of radiation from the light source and may be used for measuring and integrating the intensity or total exposure from other light sources which are intermittent or variable in intensity, such as sunlight. Gives nature of test, apparatus, reagents, procedure, and calculations.

American Society for Testing Materials, D 750-43T; 1943. Tentative Method of Test for Resistance to Accelerated Light Aging of Rubber Compounds. For estimating the comparative resistance of soft vulcanized rubber compounds to deterioration when exposed to light but not intended to cover materials ordinarily classed as hard or semihard rubber. Gives nature of test, apparatus, calibration of radiation, test, specimens, precautions, procedure, and report.

American Society for Testing Materials, D 798-44T; 1944. Tentative Specifications for Cellular Rubber Products. Gives scope, description of terms, manufacture, types of cellular rubbers, classes and grades of cellular rubbers, material and workmanship, color, physical properties, sampling, methods of testing, tolerances on dimensions, packing and marking, and inspection and rejection.

American Society for Testing Materials, D 813-44T; 1944. Tentative Method of Test for Resistance of Vulcanized rubber or Synthetic Elastomers to Crack Growth. Gives scope, De Mattia flexing machine, test specimens, number of test specimens, preparation of specimen, clamping specimens in machine, adjustment of machine, procedure, and report.

American Society for Testing Materials, D 814-44T; 1944. Tentative Method of Test for Permeability of Vulcanized Rubber or Synthetic Elastomers to Volatile Liquids. Gives scope, apparatus, test specimens, procedure, and calculation and report.

American Society for Testing Materials, D 816-44T; 1944. Tentative Methods of Testing Rubber Adhesives. Gives scope, classes of tests, materials for bonded specimens, sampling, test conditions, adhesion tests, bonding range, softening point, cold flow, viscosity, stability, cold brittleness, weight per gallon, plastic deformation, and report.

American Society for Testing Materials, ES 6a; 1943. Emergency Specifications for GR-S Synthetic Rubber Sheath Compound for Electrical Insulated Cords and Cables. Covers a durable, vulcanized synthetic rubber compound suitable for use as the outside covering or sheath on insulated electric cords and cables. Gives requirements for character of sheath, methods of testing, physical requirements, sampling for original physical tests, sampling for accelerated aging tests, test specimens, and rejections.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Division. Manual of Standard and Recommended Practice, 1944. Rubber Goods, General Instructions on Standard Methods of Tests. Emergency Specifications E-M-607-44 annuls Specification M-607-41. All inspection and tests of rubber goods shall be made in accordance with the standard methods of the A.S.T.M.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, Volume 2; 1944. Rubber, Guayule. Covers definition, derivation and characteristics, uses, grades, containers, and substitutes.

Society of Automotive Engineers. Aeronautical Material Specification 2810; 1944. Identification of Natural and Synthetic Rubber Materials. For the identification of sheets, extrusions and moldings made of synthetic rubber, synthetic rubber cork composition, reclaimed rubber, and natural rubber stock. Gives detail requirements and code letters.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Circular C38; 1915. Testing of Rubber Goods. Describes National Bureau of Standards procedure for testing mechanical rubber goods, including thickness measurement, test for set, tensile strength, test for adhesion of plies in rubber line hose and rubber belting, and methods of chemical analysis.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Circular C427; 1940. Synthetic Rubbers. A Review of Their Compositions, Properties, and Uses. This circular classifies 29 commercial varieties of synthetic rubber. Brief discussions are presented concerning the raw materials used, the chemical reactions of manufacture, and the general conditions of polymerization of condensation for the various types of rubber. Published data on the different types are summarized in comparative tables of values of density, refractive index, identity period along the fiber axis, swelling in liquids, tensile strength, and permeability. The reported values of dielectric constant, power factor, and resistivity are also given.

U. S. Gov., Federal Specification ZZ-R-601a; 1940. Rubber Goods; General Specifications (Methods of Physical Tests and Chemical Analyses). Gives general physical and chemical methods for testing soft rubber goods for conformance with requirements of Federal specifications. It does not include the special test methods to certain materials which are described in appropriate specifications nor does it include all of the test methods for soft rubber goods used in the industry.

*References.*—Waterproofing compounds for fabrics, *see* 849.6; test methods for cotton fabrics, *see* 300.4.

## 201. RUBBER UNMANUFACTURED

U. S. Gov., U. S. Army Ordnance Dept. Specification 20-116; 1943. Rubber and Synthetic Rubber for General Mechanical, Aeronautical, and Automotive Application, Except Tire.

### 201.0 GENERAL ITEMS

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, 1938. Rubber. Covers definition, constants, solubility, occurrence, purity and impurities, grades, substitutes, markets and trading, containers or packaging, ordering instructions, and uses.

Society of Automotive Engineers, 1944 Handbook. Section 4—Fabricated Materials. Includes SAE Standard Classifications and Physical Requirements for Rubber Compounds, Revised 1944. These specifications include

vulcanized compounds of natural rubber, reclaimed rubber, synthetic rubber or rubber-like materials, and does not include compounds for tires, inner tuber, sponge rubber, and hard rubber. Gives scope, types of compounds, classes and grades of compounds, composition and manufacture, color, physical requirements, sampling, and methods of test.

## 201.1 CRUDE RUBBER

Rubber Manufacturers Assn., Inc. Crude Rubber Type Descriptions and Packing Specifications for Crude Rubber, 1938. Gives requirements for various qualities of ribbed smoked sheets, thick latex crepes, thin latex crepes, thick brown crepes, thin brown crepes, remilled thick crepes, and remilled thin crepes; and crude rubber packing specifications for the various types of rubber.

Society of Automotive Engineers. Aeronautical Material Specification 3211; 1942. Rubber or Synthetic Rubber Compounds, Coolant-Resistant (55-65). For sheet, strip, tubing, molded shapes, or as ordered. Gives requirements for application, quality, requirements, samples, tolerances, reports, identification, packing and marking, approval, and rejections.

U. S. Gov., Army Air Forces Specification 26568 (1); 1940. Sheet; Latex (Uncured).

U. S. Gov., Army-Navy Aeronautical Specification AN-R-8; 1942. Rubber; Anodic.

## 201.2 SCRAP AND RECLAIMED RUBBER

National Assn. of Waste Material Dealers, Inc., Classification for Scrap Rubber, 1938. Definitions for 28 classes with code word and number, including rubber shoes, hose, tires, tubes, etc., and trade customs. Adopted by the Scrap Rubber Institute.

Rubber Reclaimers Assn., Inc. Scrap Rubber Specifications and Packing, 1934. Definitions for standard grades of scrap rubber including—(1) automobile tires, (2) truck tires, (3) automobile tubes, (4) truck tubes, (5) solid tires, (6) bicycle tires, (7) shoes, (8) hose, and (9) special; subdivisions of each class, and trade customs. Approved by the National Assn. of Waste Material Dealers, Inc.

## 201.3 SPONGE RUBBER

U. S. Gov., Army Air Forces. Specification 26578-A; 1944. Rubber; Sponge (Reclaim and Synthetic).

## 201.9 RUBBER, SYNTHETIC

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, 1938. Rubber; Synthetic. Covers definition, properties, marketing, uses (general), and forms and containers.

Society of Automotive Engineers. Aeronautical Material Specification 3197A; 1944. Synthetic Rubber Sponge (Soft). For sheet, strip, molded shapes, or as ordered. Covers application, quality, requirements, samples, tolerances, reports, identification, packaging, approval, and rejections.

Society of Automotive Engineers. Aeronautical Material Specification 3198A; 1944. Synthetic Rubber Sponge (Medium). For sheet, strip, molded shapes, or as ordered. Covers application, quality, requirements, samples, tolerances, reports, identification, packaging, approval, and rejections.

Society of Automotive Engineers. Aeronautical Material Specification 3199A; 1944. Synthetic Rubber Sponge (Firm). For sheet, strip, molded shapes, or as ordered. Gives requirements for application, quality, requirements, samples, tolerances, reports, identification, packaging, approval, and rejections.

Society of Automotive Engineers. Aeronautical Material Specification 3200A; 1943. Synthetic Rubber, Hydraulic Fluid (Petroleum Base) Resistant (55-65). For sheet, strip, tubing, extrusions, molded shapes, or as ordered. Shall be suitable for seals, gaskets, and similar parts used in aircraft in contact with petroleum base hydraulic fluids. Covers quality, physical requirements, samples, tolerances, reports, identification, packing and marking, code letters, approval, and rejection.

Society of Automotive Engineers. Aeronautical Material specification 3201A; 1943. Synthetic Rubber; Dry Heat Resistant (35-45). For sheet, strip, tubing, extrusions, molded shapes, or as ordered. Shall be suitable for packings, bushings, grommets, and seals where resistance to dry heat is of prime importance. Covers quality, physical requirements, samples, tolerances, reports, identification, packing and marking, code letters, approval, and rejection.

Society of Automotive Engineers. Aeronautical Material Specification 3202A; 1943. Synthetic Rubber; Dry Heat Resistant (55-65). For sheet, strip, tubing, extrusions, molded shapes, or as ordered. Shall be suitable for packings, bushings, grommets, and seals where resistance to dry heat is of prime importance. Covers quality, physical requirements, samples, tolerance, reports, identification, packing and marking, code letters, approval, and rejection.

Society of Automotive Engineers. Aeronautical Material Specification 3204A; 1943. Synthetic Rubber (Low-Temperature Resistant) (25-35). For sheet, strip, tubing, extrusions, molded shapes, or as ordered. Shall be suitable for sleeves, fairings, grommets, and window channels. Covers quality, physical requirements, samples, tolerances, reports, identification, packing and marking, code letters, approval, and rejection.

Society of Automotive Engineers. Aeronautical Material Specification 3205A; 1943. Synthetic Rubber; Low-Temperature Resistant (45-55). For sheet, strip, tubing, extrusions, molded shapes, or as ordered. Shall be suitable for sleeves, fairings, grommets, and window channels. Gives quality, physical requirements, samples, tolerances, reports, identification, packing and marking, code letters, approval, and rejections.

Society of Automotive Engineers. Aeronautical Material Specification 3206A; 1943. Synthetic Rubber; E. P. Lubricant Resistant (65-75). For sheet, strip, tubing, extrusions, molded shapes, or as ordered. Shall be suitable for seals in gear box installations where extreme pressure lubricants are used. Covers quality, physical requirements, samples, tolerances, reports, identification, packing and marking, code letters, approval, and rejections.

Society of Automotive Engineers. Aeronautical Material Specification 3207B; 1944. Synthetic Rubber; Weather Resistant-Chloroprene Type (25-35). For sheet, strip, molded shapes, or as ordered. Shall be suitable for window channels and weather seals. Covers

quality, requirements, sampling, tolerances, reports, identification, packaging, approval, and rejections.

Society of Automotive Engineers. Aeronautical Material Specification 3208B; 1944. Synthetic Rubber; Weather Resistant-Chloroprene Type (45-55). For sheet, strip, tubing, extrusions, molded shapes, or as ordered. Shall be suitable for window channels, bumper pads, and weather seals and strips. Covers quality, requirements, sampling, tolerances, reports, identification, packaging, approval, and rejections. Similar specification, Army Air Forces 26554, type II, grade B.

Society of Automotive Engineers. Aeronautical Material Specification 3209B; 1944. Synthetic Rubber; Weather Resistant-Chloroprene Type (65-75). For sheet, strip, tubing, extrusions, molded shapes, or as ordered. Shall be suitable for bumper pads, chafing strips, and weather seals. Covers quality, requirements, sampling, tolerances, reports, identification, packaging, approval, and rejections. Similar specification, Army Air Forces 26554, type II, grade D.

Society of Automotive Engineers. Aeronautical Material Specification 3211; 1942. Rubber or Synthetic Rubber Compounds; Coolant-Resistant (55-65). For sheet, strip, tubing, molded shapes, or as ordered. Gives requirements for application, quality, requirements, samples, tolerances, reports, identification, packing and marking, approval, and rejections.

Society of Automotive Engineers. Aeronautical Material Specification 3212B; 1944. Synthetic Rubber; Aromatic Fuel Resistant (55-65). For sheet, strip, tubing, extrusions, molded shapes, or as ordered. Shall be suitable for gaskets, diaphragms, bushings, grommets, sleeves, seals, and packings. Covers quality, requirements, sampling, tolerances, reports, identification, packaging, approval, and rejections.

Society of Automotive Engineers. Aeronautical Material Specification 3213A; 1943. Synthetic Rubber; Aromatic Fuel Resistant (75-85). For sheet, strip, tubing, extrusions, molded shapes, or as ordered. Shall be suitable for gaskets, diaphragms, bushings, grommets, sleeves, seals, and packings. Covers quality, physical requirements, samples, tolerances, reports, identification, packing and marking, code letters, approval, and rejections.

Society of Automotive Engineers. Aeronautical Material Specification 3214A; 1944. Synthetic Rubber; Aromatic Fuel Resistant (35-45). For sheet, strip, tubing, extrusions, molded shapes, or as ordered. Gives requirements for application, quality, requirements, sampling, tolerances, reports, identification, packaging, approval, and rejections.

Society of Automotive Engineers. Aeronautical Material Specification 3215A; 1943. Synthetic Rubber; Aromatic Fuel Resistant (65-75). For sheet, strip, tubing, extrusions, molded shapes, or as ordered. Shall be suitable for gaskets, diaphragms, bushings, grommets, sleeves, seals, and packings. Covers quality, physical requirements, samples, tolerances, reports, identification, packing and marking, code letters, approval, and rejections.

Society of Automotive Engineers. Aeronautical Material Specification 3220; 1940. Synthetic Rubber. This compound shall be suitable for packing and sealing joints which come in contact with gasoline, hot lubricating oils, and ethylene glycol. Gives detailed requirements as to quality, methods of test, and methods of approval and rejection.

Society of Automotive Engineers. Aeronautical Material Specification 3221A; 1944. Synthetic Rubber; Rapid Full Swelling (45-55). For sheet, strip, tubing, extrusions, molded shapes, or as ordered. Gives requirements for application, quality, requirements, samples, tolerances, reports, identification, packing and marking, code letters, approval, and rejections.

Society of Automotive Engineers. Aeronautical Material Specification 3222A; 1944. Synthetic Rubber; Hot Oil Resistant-High Swell (45-55). For sheet, strip, tubing, extrusions, molded shapes, or as ordered. Gives requirements for application, quality, requirements, samples, tolerances, reports, identification, packing and marking, code letters, approval, and rejections.

Society of Automotive Engineers. Aeronautical Material Specification 3223A; 1943. Synthetic Rubber; Hot Oil and Coolant Resistant-High Swell (55-65). For sheet, strip, tubing, extrusions, molded shapes, or as ordered. Shall be suitable for seals. Covers quality, physical requirements, samples, tolerances, reports, identification, packing and marking, code numbers, approval, and rejections.

Society of Automotive Engineers. Aeronautical Material Specification 3226A; 1943. Synthetic Rubber; Hot Oil and Coolant Resistant-Low Swell (45-55). For sheet, strip, tubing, extrusions, molded shapes, or as ordered. Shall be suitable for oil and coolant line hose, packings, bushings, grommets, and seals. Covers quality, physical requirements, samples, tolerances, reports, identification, packing and marking, code letters, approval, and rejections.

Society of Automotive Engineers. Aeronautical Material Specification 3227A; 1943. Synthetic Rubber; Hot Oil and Coolant Resistant-Low Swell (55-65). For sheet, strip, tubing, extrusions, molded shapes, or as ordered. Shall be suitable for oil and coolant line hose, packings, bushings, grommets, and seals. Covers quality, physical requirements, samples, tolerances, reports, identification, packing and marking, code letters, approval, and rejections.

Society of Automotive Engineers. Aeronautical Material Specification 3228A; 1943. Synthetic Rubber; Hot Oil and Coolent Resistant-Low Swell (65-75). For sheet, strip, tubing, extrusions, molded shapes, or as ordered. Shall be suitable for packings, bushings, and grommets. Covers quality, physical requirements, samples, tolerances, reports, identification, packing and marking, code letters, approval, and rejections.

Society of Automotive Engineers. Aeronautical Material Specification 3229A; 1943. Synthetic Rubber; Hot Oil Resistant-Low Swell (75-85). For sheet, strip, tubing, extrusions, molded shapes, or as ordered. Shall be suitable for packings, bushings, and grommets. Covers quality, physical requirements, samples, tolerances, reports, identification, packing and marking, code letters, approval, and rejections.

Society of Automotive Engineers. Aeronautical Material Specification 3240; 1944. Synthetic Rubber; Weather Resistant—Chloroprene Type (35-45). For sheet, strip, tubing, extrusions, molded shapes, or as ordered. Gives requirements for application, quality, requirements, sampling, tolerances, reports, identification,

packaging, approval, and rejections. Similar specification, Army Air Forces 26554, type II, grade A.

Society of Automotive Engineers. Aeronautical Specification 3250; 1944. Synthetic Rubber and Cork Composition; General Purpose (35-45). For sheet, strip, molded shapes, or as ordered. Gives requirements for application, quality, requirements, sampling, tolerances, reports, identification, packaging, approval, and rejections.

Society of Automotive Engineers. Aeronautical Material Specification 3251; 1944. Synthetic Rubber and Cork Composition; General Purpose (45-55). For sheet, strip, molded shapes, or as ordered. Gives requirements for application, quality, requirements, sampling, tolerances, reports, identification, packaging, approval, and rejections.

Society of Automotive Engineers. Aeronautical Material Specification 3252; 1944. Synthetic Rubber and Cork Composition; General Purpose (55-65). For sheet, strip, molded shapes, or as ordered. Gives requirements for application, quality, requirements, sampling, tolerances, reports, identification, packaging, approval, and rejections.

U. S. Gov., Army Air Forces. Specification 26583; 1942. Rubber; Synthetic, Molded.

U. S. Gov., Army Air Forces. Specification 26588; 1942. Rubber; Synthetic, Molded, or Extruded Aromatic Resistant.

U. S. Gov., Army Air Forces. Specification 26600; 1944. Rubber; Synthetic, Molded, Electrical Resistant.

U. S. Gov., Navy Dept. Specification 33R5; 1944. Rubber (Synthetic) and Cement for Lining Ferrous Pipe and Fittings (for Salt-Water Lines).

U. S. Gov., Navy Dept. Specification 33R6b; 1944. Rubber (Synthetic), Composition (for Covering Solid Shafts).

## 202. HOSE (RUBBER, COTTON, AND LINEN)

### 202.0 GENERAL ITEMS

American Society for Testing Materials, D 571-44T; 1944. Tentative Methods of Testing Automotive Hydraulic Brake Hose. Covers 1/8 in. assemblies of hose and end fittings as used in the automotive industry; requirements for selection of specimen, test conditions, expansion, bursting strength, fatigue life (whip test) and tensile strength tests, and description of apparatus necessary.

Rubber Manufacturers Assn., Inc. Specification Data Book, Section II. Hose. Includes—(A) glossary of hose terms and (B) hose tolerances.

Rubber Manufacturers Assn., Inc. Specification Data Book, Section III. Methods of Test. Recommends American Society for Testing Materials test methods for use in the testing of belting and hose.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Handbook H28; 1944. Screw-Thread Standards for Federal Services. Presents complete dimensional data upon which specifications may be based for threaded products for government requirements. Includes terminology (definitions and symbols); American National hose coupling and fire-hose coupling threads; and appendixes containing supplementary information of both a general and a technical nature, including such specifications as are not intended to be mandatory.

### 202.1 AIR HOSE

### 202.10 General Items

American Society for Testing Materials, D622-44T; 1944. Tentative Methods of Testing Automotive Air Brake and Vacuum Brake Hose. For use in testing the conventional types of hose employed for the operation of air brake and vacuum brake systems either on a single motor vehicle or as connecting or transmission lines in a combination of vehicles. General methods, sampling, test conditions, air pressure test, bursting test, aging test, tensile strength test, gasoline immersion swelling test, bend test, vacuum test, deformation test, and report.

U. S. Gov., Army Air Forces. Specification 26576C-1; 1944. Hose Assembly; High Pressure, for breathing Oxygen.

U. S. Gov., Army Air Forces. Specification 26579-C; 1945. Hose Assembly; Low Pressure (for Breathing Oxygen).

### 202.11 Air Brake and Signal Hose

American Transit Assn. Standard Specification for Air Brake Hose, E18-37; 1937. This specification covers the manufacture of hose, physical properties and tests, standard sizes and dimensions, workmanship and finish, marking, and inspection and rejection.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Division. Manual of Standard and Recommended Practice, 1942. Air Brake Hose Coupling, Standard. Dimensional drawing of coupling and marking.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Division. Manual of Standard and Recommended Practice, 1942. Air Brake hose Coupling Gages for Gaging Guard Arm and Lips on Used Couplings at Hose Mounting Stations. Recommended Practice. Covers two sizes of gages with dimensional drawings.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Division. Manual of Standard and Recommended Practice, 1942. Air Brake Hose Coupling Packing Ring Gage; Standard. Dimensional drawings of gage and instructions for use.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Division. Manual of Standard and Recommended Practice, 1942. Air Brake Hose Nipple; Standard. Shows detailed dimensional drawing of hose nipple.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Division. Manual of Standard and Recommended Practice, 1942. Hose; Air-Brake and Train Air-Signal, M-601-38, 1938. Rubber hose with cotton duck reinforcement for train service. Requires 4-ply woven duck, rubber end caps, tension, friction and hydrostatic test, sizes, thickness of tube and cover, and labeling.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Division. Manual of Standard and Recommended Practice, 1942. Dummy Hose Couplings. Dimensional drawings of brake pipe hose dummy coupling and signal hose dummy coupling.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Division. Manual of Standard and Recommended Practice, 1944. Hose; Air-Brake and Train Air-Signal. Emergency Specification E-M-601-44;

1944. These emergency specifications are in accordance with the requirements of Supplementary Order R-1, latest revision, of the War Production Board, to restrict the use of rubber.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Division. Manual of Standard and Recommended Practice, 1942. Gages for Gaging New Air Brake Hose Couplings, Standard. Covers dimensional drawings and purposes of twelve types of gages.

Society of Automotive Engineers. 1944 Handbook, Section 4—Fabricated Materials. SAE Standard Air Brake Hose (adopted 1942). Two types—(A) hose having synthetic oil-resisting organic material, (B) hose having a rubber tube; manufacture, hose identification, retests and rejection, sizes (5/8 to 1-3/8 outside diameters), samplex for tests, and test requirements.

U. S. Gov., Army Air Forces. Specification 40331; 1940. Coupling Assembly Air-Hose.

U. S. Gov., Navy Dept. Specification 33C4e; 1942. Couplings and Fittings; Air-Hose.

*References.*—Methods of testing, *see 200;* hose duck, *see* 202.0.

### 202.12 Pneumatic Tool Hose

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Division. Manual of Standard and Recommended Practice, 1944. Hose; Air, Gas and Oxygen. Wrapped and Braided. Emergency Specification E-M-603-44; 1944. These emergency specifications are in accordance with the requirements of Supplementary Order R-1, latest revision, of the War Production Board, to restrict the use of rubber.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Division. Manual of Standard and Recommended Practice, 1944. Hose; Air, Gas and Oxygen, Wrapped and Braided. Specifications M-603-41; 1941. Covers both wrapped canvas and braided air hose for use with pneumatic drills, hammers, hoists, vacuum cleaning outfits, and oxyacetylene apparatus, etc. Gives manufacture, physical properties and tests, dimensions and tolerances, workmanship and finish, marking, and inspection and rejection.

U. S. Gov., Federal Specification ZZ-H-496; 1933. Amendment 1; 1941. Hose; Pneumatic, Braided. Gives requirements for construction, tube, cover, cotton reinforcement length, couplings, and physical test requirements; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking. Emergency Alternate Federal Specification E-ZZ-H-496, Jan. 1943 (issued by Procurement Div., Treasury Dept., U. S. Gov.). Gives requirements for permitting use of butadiene or chloroprene synthetic rubber. Covers construction, length, size, thickness, strength, and chemical requirements.

U. S. Gov., Federal Specification ZZ-H-499a; 1944. Hose; Pneumatic, Wrapped. Covers a single grade of the type known as "wrapped." Gives requirements for construction, tube and cover, fabric, couplings, physical requirements, and brands; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Navy Dept. Specification 33H7c; 1944. Hose; Cutting and Welding (Acetylene-Hydrogen, Oxygen-Air).

U. S. Gov., Navy Dept. Specification 33H12c; 1944. Hose; Vacuum.

U. S. Gov., Navy Dept. Specification 33H25; 1944. Hose; Pneumatic (Braided or Wrapped).

U. S. Gov., U. S. Maritime Commission. Specification 33-MC-1; 1941. Hose; Pneumatic, Wrapped. There shall be but one type and grade. Hose shall consist of a rubber tube, fabric plies or layers, and a rubber cover, and shall be of the wrapped construction. Gives requirements for materials, workmanship, size, tolerances, thickness, fabric, hydrostatic test pressure, burst strength, friction, tensile strength, ultimate elongation, inspection, and method of tests.

*References.*—Methods of testing, *see* 200; standard sizes, hose duck, *see* 202.0.

### 202.13 Divers' Hose

U. S. Gov., Navy Dept. Specification 33H9b; 1945. Hose; Air, Diving-Apparatus.

*References.*—Methods of testing, *see* 200; standard sizes, hose duck, *see* 202.0.

## 202.2 CHEMICAL AND OIL HOSE

### 202.21 Chemical Hose

Underwriters' Laboratories, Inc. Emergency Alternate Specification for Chemical Engine Hose, Subject 92, EAS, 1944. To provide a serviceable hose that will perform according to the requirements of a fire emergency for several years while assisting in the conservation of crude rubber. Covers types and grade, sizes, material and workmanship, construction, length, couplings, strength and twist, physical requirements, color, and methods of sampling for burst, physical, and detail tests; examination, inspection, and test methods; and description of label service.

Underwriters' Laboratories, Inc. Standard for Chemical Engine Hose, Subject 92, 1939. Applies to chemical engine hose for use with chemical fire extinguishers and chemical fire engines. Gives hose in general, rubber parts, cotton reinforcements, attachment of fittings, hydrostatic pressure tests, and tests on rubber parts.

U. S. Gov., Federal Specification ZZ-H-421a; 1938. Amendment 1; 1941. Hose; Chemical. Covers one grade and two types—(A) wrapped and (B) braided. Gives requirements for construction, tube and cover, cotton reinforcements, length, couplings, hydrostatic test, and physical requirements; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking. Emergency Alternate Federal Specification E-ZZ-H-421a; 1943, changes requirements for tube and cover compounds, branding, physical tests, and color.

U. S. Gov., Navy Dept. Specification 58H1a; 1944. Hose; Fire-Extinguisher (Portable, 15-lb., Carbon-Dioxide).

U. S. Gov., Navy Dept. Specification 33H3c; 1944. Hose; Fire-Extinguisher, Twin.

*References.*—Methods of testing, *see* 200; hose duck; *see* 202.0.

### 202.22 Oil Hose

U. S. Gov., Army Air Forces. Specification 28561; 1939. Hose; Heat Resisting, Gas and Oil (Single Ply).

U. S. Gov., Army Air Forces. Specification 26566 (2); 1940. Tubing; Extruded, Neoprene (for Oil, Fluid, and Hydraulic Lines).

U. S. Gov., Army Air Forces. Specification 26591 (1); 1944. Hose; Portable, Gasoline and Oil.

U. S. Gov., Army Air Forces. Specification 26597A; 1944. Hose; Aircraft Flame-Resistant.

U. S. Gov., Army-Navy Aeronautical Specification AN-H-26-2; 1944. Hose; Oil and Coolant Aircraft.

U. S. Gov., Army-Navy Aeronautical Specification AN-ZZ-H-456a-6; 1944. Hose; Synthetic, Aromatic-Resistant.

U. S. Gov., Federal Specification ZZ-H-481b; 1939. Amendment 1, 1941. Hose; Oil-Suction and Discharge. Gives requirements for construction, cotton duck, wire reinforcement, rubber filling strip, rubber layer, cover, nipples, flanges, couplings, and physical requirements; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking. Emergency Alternate Federal Specification E-ZZ-H-481b, Jan. 1943 (issued by Procurement Div., Treasury Dept., U. S. Gov.). Gives three types—type A, utilizing polymerized chloroprene as the basic filler; type B, utilizing a condensation product of an organic dihalide and an inorganic polysulphide as the basic filler; and type C, utilizing a copolymer product of butadiene. Covers requirements and tests for these types.

U. S. Gov., Navy Dept. Specification 33H4f; 1944. Hose; Oil-and-Gasoline-Suction-and-Discharge, Synthetic-Rubber, Wire-Stiffened.

U. S. Gov., Navy Dept. Specification 33H18a; 1944. Hose; Floater, Nonmetallic.

U. S. Gov., Navy Dept. Specification 33H20b; 1944. Hose; Oil-Gasoline-Discharge, Smooth-Bore, Light-Weight.

U. S. Gov., Navy Dept. Specification 33H21a; 1944. Hose; Oil-and-Gasoline-Suction-and-Discharge, Smooth-Bore, Light-Weight, Wire-Stiffened.

U. S. Gov., Navy Dept. Specification 33H23a; 1944. Hose; Oil-and-Gasoline-Suction-and-Discharge, Smooth-Bore, Light-Weight (Circular Woven Fabric, Wire Inserted).

*References.*—Methods of testing, *see* 200; standard sizes, hose duck, *see* 202.0.

## 202.3 GAS AND GASOLINE HOSE

### 202.31 Gas Hose

American Gas Assn. American Standards Assn., Z21-2-1938. Listing Requirements for Flexible Gas Tubing. Performance requirements and methods of test for leakage, capacity, strength, flexibility, resistance to heat and freezing, elasticity and gripping power of rubber slip ends, drawing of standard hose and nozzle.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Division. Manual of Standard and Recommended Practice, 1942. Hose; Air, Gas and Oxygen, Wrapped and Braided, M-603-41; 1941. Air hose for not more than 125 lb. pressure, for operation of pneumatic tools, also hose for vacuum cleaning outfits, and gas welding apparatus. Construction details, test requirements, sizes, armoring, tolerances, and labeling.

U. S. Gov., Federal Specification ZZ-H-461a; 1933. Hose; Gas (Acetylene, Air, Hydrogen, and Oxygen). Covers the "wrapped" or "braided" type and a single grade. Gives requirements for material, construction, tube, cover, reinforcements, couplings, physical requirements, brand, and color; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking. Emergency Alternate Federal Specification E-ZZ-H-461a; 1943, changes requirements for brand, color, physical requirements, and rubber and synthetic rubber compounds.

U. S. Gov., Navy Dept. Specification 33H7c; 1944. Hose; Cutting and Welding (Acetylene-Hydrogen, Oxygen-Air).

U. S. Gov., U. S. Army Signal Corps. Specification 83-2A; 1941. Coupling ML-49, Hose Coupling for Hydrogen-Gas Cylinders.

*References.*—Methods of testing, *see* 200; hose duck, *see* 202.0.

### 202.32 Gasoline Hose

Underwriters' Laboratories, Inc. Standard for 3/4, 1, and 1 1/4 Inch Hose for Conducting Gasoline, 1937. Applies to short lengths of flexible hose in three types of fabrication; construction details as to inner rubber tube or flexible metal tube, reinforcement, cotton or rubber jacket. Bonding to dissipate static, marking, zinc coating, bending test, hydrostatic test, swelling and crushing tests, etc.

U. S. Gov., Army Air Forces. Specification 26551-G (1); 1943. Hose; Gasoline, Nonmetallic.

U. S. Gov., Army Air Forces. Specification 26561; 1939. Hose; Heat Resisting, Gas and Oil (Single Ply).

U. S. Gov., Army Air Forces. Specification 26567-C; 1943. Hose; Gasoline (Thin-Wall).

U. S. Gov., Army Air Forces. Specification 26591 (1); 1944. Hose; Portable, Gasoline and Oil.

U. S. Gov., Army Air Forces. Specification 26597A; 1944. Hose; Aircraft, Flame-Resistant.

U. S. Gov., Army-Navy Aeronautical Specification AN-H-27; 1944. Hose; Self-Sealing, Fuel, Aromatic Resistant.

U. S. Gov., Army-Navy Aeronautical Specification AN-ZZ-H-456a—6; 1944. Hose; Synthetic, Aromatic Resistant.

U. S. Gov., Federal Specification ZZ-H-466b; 1935. Amendment 3; 1943. Hose; Gasoline, Rubber-Metal. Covers one grade. Gives requirements for construction, flexible metal tube, rubber tube, cotton jacket, resistance to gasoline, physical test requirements, couplings, brands, and lengths; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., Federal Specification ZZ-H-471; 1940. Hose; Gasoline, Wire-Stiffened. Covers one type and grade. Gives requirements for construction, tube, cover, adhesion, resistance to gasoline, swelling, cotton jacket, wire reinforcement, couplings, coupling threads, branding, physical properties, and dimensions; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking. Emergency Alternate Federal Specification E-ZZ-H-471; 1943. Changes requirements for types, couplings, construction, dimensions, wire reinforcement, branding, strength, swelling, adhesion, and physical properties.

U. S. Gov., Navy Dept. Specification 33H2f; 1944. Hose; Gasoline, Nonmetallic.

U. S. Gov., Navy Dept. Specification 33H4f; 1944. Hose; Oil-and-Gasoline-Suction-and-Discharge, Synthetic-Rubber, Wire-Stiffened.

U. S. Gov., Navy Dept. Specification 33H8b; 1944. Hose; Gasoline, Synthetic Rubber (Circular Woven Fabric Wire-Inserted).

U. S. Gov., Navy Dept. Specification 33H20b; 1944. Hose; Oil-Gasoline-Discharge, Smooth-Bore, Light-Weight.

U. S. Gov., Navy Dept. Specification 33H21a; 1944. Hose; Oil-and-Gasoline-Suction-and-Discharge, Smooth-Bore, Light-Weight, Wire-Stiffened.

U. S. Gov., Navy Dept. Specification 33H23a; 1944. Hose; Oil-and-Gasoline-Suction-and-Discharge, Smooth-Bore, Light-Weight (Circular Woven Fabric, Wire-Inserted).

U. S. Gov., Navy Dept. Specification 33H31; 1944. Hose; Gasoline, Synthetic-Rubber (Wire-Stiffened).

U. S. Gov., U. S. Army, Army Air Forces. Specification 20-123; 1944. Hose; Fuel Jettison.

*References.*—Methods of testing, *see* 200; hose duck, *see* 202.0.

## 202.4 WATER HOSE, STEAM HOSE

### 202.40 General Items

American Society for Testing Materials, D 380-40T; 1940. Tentative Methods of Testing Rubber Hose. Included natural rubber and synthetic compounds, sampling, measurements, test conditions, tensile strength and elongation, premanent set, adhesion, hydrostatic, steam, and immersion tests for swell and deterioration of hose used for petroleum products, with other tests in accordance with A.S.T.M. methods—D 15 for preparation of sample, D 412 for tension, D 572 for aging, and D 413 for adhesion.

U. S. Gov., Army-Navy Aeronautical Specification AN-H-28; 1944. Hose Assemblies; High-Pressure.

U. S. Gov., Army-Navy Aeronautical Specification AN-ZZ-H-626a-1; 1944. Hose Assemblies; Low-Pressure.

### 202.41 Fire Hose

American Hospital Assn., 22-13. Rubber-Lined Cotton Fire Hose. Covers one grade. Based on U. S. Gov. Federal Specification ZZ-H-451a for Rubber-Lined Cotton Fire Hose (referred to below), WW-C-621a for Cotton (Rubber-Lined) and Linen (Unlined) Hose Couplings, and ZZ-R-601a for General Specifications (Methods of Physical Tests and Chemical Analyses) Rubber Goods.

American Hospital Assn., 22-16. Unlined Linen Fire Hose. Covers one type and one grade. Based on U. S. Gov. Federal Specifications JJ-H-571 for Unlined Linen Fire Hose (referred to below) and WW-C-621a for Cotton (Rubber-Lined) and Linen (Unlined) Hose Couplings.

American Society for Testing Materials, D 296-38; 1938. American Standards Assn., L3.1-1941. Cotton Rubber-Lined Fire Hose for Public and Private Fire Department Use. Includes 1 1/2 to 3 1/2-in. single, double, or triple jacketed hose, quality of seamless cotton fabric, rubber-lining thicknesses, chemical composition, tensile properties and life test requirements; friction, hydrostatic, kink, and bursting strength tests; sizes, flexibility, and workmanship.

National Fire Protection Assn. National Fire Codes for Extinguishing and Alarm Equipment, 1943. Care of Fire Hose. Suggestions for the selection, maintenance, and use of fire hose. Covers cotton rubber-lined hose, linen hose for use in buildings, rubber hose, use of hose for other than fire purposes, rack for washing and drying hose, and care of nozzles, couplings, etc.

National Fire Protection Assn. National Fire Codes for Extinguishing and Alarm Equipment, 1943. Cotton Rubber-Lined Fire Hose. Standard specifications for cotton rubber-lined fire hose for public and private fire department use. Covers sizes, cotton fabric, rubber lining, chemical composition, tensile properties at 60 days, tensile properties at one year, life test, friction test, hydrostatic pressure tests, bursting strength tests, kink tests, place of hydrostatic tests, diameter, length, flexibility, workmanship, marking, sampling, and methods of testing.

Underwriters' Laboratories, Inc. Emergency Alternate Specification for Cotton, Rubber-Lined Fire Hose, Subject 19, EAS, 1942. Applies to the trade sizes of 1 1/2, 2 1/2, 3, and 3 1/2-in. single or double-jacketed cotton, rubber-lined fire hose for use in public or private fire departments. Single-jacketed for use at hydrants, standpipes, and similar places, double-jacketed for use on pumping engines and in places where service conditions require the additional protection against wear. Gives manufacture, hydrostatic pressure tests, diameter and length, physical properties and tests, accelerated aging tests, and inspection and test procedure.

Underwriters' Laboratories, Inc. Standard for Cotton Rubber-Lined Fire Hose for Public and Private Department Use, Subject 19; 1941. Applies to the standard sizes of 1 1/2, 2, 2 1/2, 3, and 3 1/2-in. single, double, or triple-jacketed cotton, rubber-lined fire hose for use in public or private fire departments. Gives manufacture, hydrostatic pressure tests, physical properties and tests, and chemical tests for cotton-jacketed rubber-lined fire hose; physical tests for rubber-covered cotton-jacketed rubber-lined fire hose; tests of rubber parts; and factory inspection and tests.

Underwriters' Laboratories, Inc. Standard for Unlined Fire Hose (Flax Line), 1930. Covers hose without rubber lining for use inside of buildings, grade of flax fibers, quality of yarn, chemical and physical tests, markings, standard hose sizes, diagrams of test equipment.

U. S. Gov., Dept. of Agriculture, Forest Service. Specifications MSF-182-1. Hose; 1 1/2-in., CJRL.

U. S. Gov., Dept. of Agriculture, Forest Service. Specifications MSF-182-2. Hose; 1-in., CJRL.

U. S. Gov., Dept. of Agriculture, Forest Service. Specifications MSF-183. Hose; 1 1/2-in., linen.

U. S. Gov., Federal Specification JJ-H-571; 1933. Hose; Fire, Linen, Unlined. Covers one type and one grade. Gives requirements for flax, fabric, interior of hose, diameter, construction, yarn, tests, length, branding, identification, and couplings; method of sampling, inspection, and tests; and requirements for packaging, packing, and marking. Emergency Alternate Federal Specification E-JJ-H-571; 1942, (issued by Procurement Div., Treasure Dept., U. S. Gov.) changes requirements to comply with Underwriters' Laboratories Standard and Emergency Alternate Specification for Unlined Fire Hose and requires Underwriters' label.

U. S. Gov., Federal Specification WW-P-541a; 1940. Plumbing Fixtures (for) Land Use. Includes requirements for fire-hose rack and hose. Covers malleable iron, steel, or brass rack suitable for hanging 1 1/2-in. diameter linen hose in vertical loops on pins or supports. Requirements given for valves, hose, and fittings; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment. Emergency Alternate Federal Specification E-WW-P-541a; 1942, (issued by Procurement Div., Treasury Dept., U. S. Gov.) changes requirements for metals and finishes, standard materials, and illustrations, selections, and air gaps.

U. S. Gov., Federal Specification ZZ-H-451a; 1941. Amendment 2; 1944. Hose; Fire, Cotton, Rubber-Lined. For rubber and/or synthetic rubber lining. Gives requirements for construction, rubber and/or synthetic rubber lining, cotton jacket, couplings, finished hose, and details; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Navy Dept. Specification 33H16; 1940. Hose; Fire, Cotton, Linen-lined, 2 1/2-in.

*References.*—Methods of testing, *see* 200; standard sizes, *see* 202.0; fire hose fittings, *see* 974.2; chemical fire hose, *see* 202.21; hose duck, *see* 202.0.

## 202.42 Garden and Ordinary Cold Water Hose

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Division. Manual of Standard and Recommended Practice, 1944. Emergency Specification E-M-604-44. Hose; Cold Water, Wrapped and Braided. These emergency specifications are in accordance with the requirements of Supplementary Order R-1, latest revision, of the War Production Board, to restrict the use of rubber.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Division. Manual of Standard and Recommended Practice, 1944. Hose; Cold Water, Wrapped and Braided. Specifications M-604-38; 1938. For both wrapped canvas and braided fabric hose. Gives manufacture, physical properties and tests, dimensions and tolerances, workmanship and finish, marking, and inspection and rejection.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Circular C327; 1927. Selection and Care of Garden Hose. Describes manufacture of three types—wrapped, braided, and cotton rubber lined—with simple methods of inspection and making kink test.

U. S. Gov., Federal Specification ZZ-H-521; 1931. Amendment 3; 1941. Hose; Spray. Covers the "wrapped" type and a single grade. Gives requirements for construction, tube, cover, cotton duck, couplings, and physical test requirements; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking. Emergency Alternate Federal Specification E-ZZ-H-521; Feb. 1943 (issued by Procurement Div., Treasury Dept., U. S. Gov.). Alternate for Federal Specification ZZ-H-521. Changes include elimination of use of new rubber, physical requirements, tensile strength, elongation, and cotton fabric.

U. S. Gov., Federal Specification ZZ-H-601; 1931. Hose; Water, Braided. Covers the "braided" type and a single grade. Gives requirements for construction, tube, cover, cotton reenforcement, length, couplings, and physical test requirements; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking. Emergency Alternate Federal Specification E-ZZ-H-601; 1942 (issued by Procurement Div., Treasury Dept., U. S. Gov.) changes requirements for materials, construction, physical tests, and chemical composition.

U. S. Gov., Federal Specification ZZ-H-611: 1930. Amendment 3; 1941. Hose; Water, Wrapped. Covers water and wash-deck hose of a single grade and type. Gives requirements for construction, tube, cover, cotton duck, couplings, and physical test requirements; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking. Emergency Alternate Federal Specification E-ZZ-H-611; 1942 (issued by Procurement Div., Treasury Dept., U. S. Gov.) changes requirements for construction, physical tests, and chemical requirements.

U. S. Gov., Navy Dept. Specification 33H27; 1944. Hose; Water, Wrapped and Braided.

*References.*—Methods of testing, *see* 200; standard sizes, *see* 202.0; tender and tank hose, *see* 202.45; suction hose, *see* 202.46; hose duck, *see* 202.0.

## 202.43 Radiator Hose

Society of Automotive Engineers. 1944 Handbook, Section 4—Fabricated Materials. SAE Standard Coolant System Hoses, Adopted 1944. Intended as a guide in the selection of suitable materials for use in military types of vehicles and are divided into two types; namely, for severe, heavy duty service such as combat vehicles, and for non-combat vehicles. Gives scope, construction, physical tests, and physical test procedures for each type.

U. S. Gov., Army Air Forces. Specification 26566 (2); 1940. Tubing; Extruded, Neoprene (for Oil, Fluid, and Hydraulic Lines).

U. S. Gov., Army-Navy Aeronautical Specification AN-H-26-2; 1944. Hose; Oil and Coolant Aircraft.

U. S. Gov., Army-Navy Aeronautical Specification AN-ZZ-H-456a-6; 1944. Hose; Synthetic, Aromatic Resistant.

U. S. Gov., Federal Specification ZZ-H-511; 1938. Hose; Radiator (for) Motor Vehicles. Covers the "wrapped" type and a single grade. Gives requirements for construction, tube, cover, cotton duck, boiling test, and physical test requirements; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking. Emergency Alternate Federal Specification E-ZZ-H-511; 1942 (issued by Procurement Div., Treasury Dept., U. S. Gov.) changes requirements for materials, sizes, physical characteristics, and chemical compositions.

U. S. Gov., U. S. Army, Army Air Forces. Specification 20-35; 1926. Hose; Radiator, Wire-Reinforced Type.

## 202.44 Steam and Hot Water Hose

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Division. Manual of Standard and Recommended Practice, 1944. Emergency Specification E-M-605-44. Hose; Steam and Hot Water. These emergency specifications are in accordance with the

requirements of Supplementary Order R-1, latest revision, of the War Production Board, to restrict the use of rubber.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Division. Manual of Standard and Recommended Practice, 1944. Hose; Steam and Hot Water. Specification M-605-38; 1938. Covers hose for conveying steam or hot water. Gives requirements for manufacture, physical properties and tests, dimensions and tolerances, workmanship and finish, marking, and inspection and rejection.

National Assn. of Dyers and Cleaners of the U. S. and Canada. The Spotting Department, 1940. Includes recommendation for size of steam hose for use on spotting board in spotting department.

U. S. Gov., Federal Specification ZZ-H-541; 1931. Amendment 3; 1944. Hose; Steam. Covers the "wrapped" type and a single grade. Gives requirements for construction, tube, cover, cotton duck, couplings, physical requirements, and brands; methods of sampling, inspection, and tests; and packaging, packing, and marking.

*References.*—Methods of testing, *see* 200; standard sizes, *see* 202.0; radiator hose, *see* 202.43; hose duck, *see* 202.0; general requirements for metals, *see* 600.1.

### 202.45 Tender and Tank Hose

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Division. Manual of Standard and Recommended Practice, 1944. Emergency Specification E-M-606-44. Hose; Tender Tank. These emergency specifications are in accordance with the requirements of Supplementary Order R-1, latest revision, of the War Production Board, to restrict the use of rubber.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Division. Manual Standard and Recommended Practice, 1944. Hose; Tender Tank. Specification M-606-38; 1938. Covers non-collapsible corrugated suction hose for water connection between locomotives and tender tanks. Gives manufacture, physical properties and tests, dimensions and tolerances, workmanship and finish, marking, and inspection and rejection.

U. S. Gov., Federal Specification ZZ-H-581; 1934. Hose; Tender, Corrugated, Locomotive. Covers one type and one grade. Gives requirements for construction, tube, cover, layer, cotton duck, wire reinforcement, brand, dimensions, and physical requirements; methods of sampling, inspection, and tests; and packaging, packing, and marking. Emergency Alternate Federal Specification E-ZZ-H-581; 1943, changes requirements for construction, physical rubber layer, cotton duck, dimensions, physical requirements, and sampling.

*References.*—Methods of testing, *see* 200; hose duck, *see* 202.0.

### 202.46 Suction Hose

U. S. Gov., Dept. of Agriculture, Forest Service. Specifications 332. Strainer; Suction Hose.

U. S. Gov., Dept. of Agriculture, Forest Service. Specifications MSF-184. Hose; Suction.

U. S. Gov., Federal Specification ZZ-H-561b; 1939. Amendment 2; 1944. Hose; Suction, Water, Smooth-Bore. Covers one grade; two types—(I) wrapped fabric construction and (II) woven wire filler construction; and four classes utilizing various synthetic compounds. Gives requirements for construction, tube and cover, cotton duck, wire reinforcements, rubber filling strip, soft ends, couplings, nipples, clamps, flanges, strainers, physical requirements, compounds, brands, and vacuum test; methods of sampling, inspection, and tests; requirements for packaging, packing, and marking for shipment.

U. S. Gov., Navy Dept. Specification 33H5d; 1944. Hose; Suction, Water, Smooth-Bore.

U. S. Gov., Navy Dept. Specification 33H21a; 1944. Hose; Oil-and-Gasoline-Suction-and-Discharge, Smooth-Bore, Light-Weight, Wire-Stiffened.

U. S. Gov., Navy Dept. Specification 33H23a; 1944. Hose; Oil-and-Gasoline-Suction-and-Discharge, Smooth-Bore, Light-Weight (Circular Woven Fabric, Wire-Inserted).

*References.*—Oil suction hose, *see* 202.22; standard sizes, *see* 202.0; methods of testing rubber goods, *see* 200; hose duck, *see* 202.0.

### 202.5 METALLIC HOSE

*References.*—Flexible metallic hose, *see* 607.7.

### 202.9 MISCELLANEOUS SPECIFICATIONS FOR HOSE

Society of Automotive Engineers. 1944 Handbook, Section 4—Fabricated Materials. SAE Standard Assembly Specification for 1/8-Inch Hydraulic Brake Hose (adopted 1942). Scope, manufacture, end connections, hose identification, retests and rejection, samples for test, and test requirements.

Society of Automotive Engineers. 1944 Handbook, Section 4—Fabricated Materials. SAE Standard Vacuum Brake Hose (adopted 1942). Scope, manufacture, hose identification, retests and rejection, sizes (23/32 to 1 5/8 outside diameters), samples for test, and test requirements.

U. S. Gov., Army Air Forces. Specification 26601; 1944. Hose; Inflatable Shoe Ice-Elimination System.

U. S. Gov., Army-Navy Aeronautical Specification AN-H-6a-1; 1943. Hose; Three Braided Hydraulic.

U. S. Gov., Army-Navy Aeronautical Specification AN-H-24a; 1944. Hose; Medium High-Pressure Hydraulic.

U. S. Gov., Dept. of Agriculture, Forest Service. Specifications MSF-185. Hose; High-Pressure, 3/4-Inch, Rubber.

U. S. Gov., Dept. of Agriculture, Forest Service. Specifications MSF-186-1. Hose; Back Pack Pump, 3/8-Inch, Rubber.

U. S. Gov., Dept. of Agriculture, Forest Service. Specifications MSF-186-2. Hose; Back Pack Pump, 1/2-Inch, Rubber.

U. S. Gov., Dept. of Agriculture, Forest Service. Specifications MSF-186-3. Hose; Back Pack Pump, Wire-Insert.

U. S. Gov., Navy Dept. Specification 33F4a; 1941. Fittings; Hose, Salvage, Air 1 1/4-Inch.

U. S. Gov., Navy Dept. Specification 33H11b; 1941. Hose; Ships' Sewage Disposal, Rubber.

U. S. Gov., Navy Dept. Specification 33H14; 1944. Hose; Rubber (Synthetic), Wire-Reinforced (for Submarine Rescue Chamber).

U. S. Gov., Navy Dept. Specification 33H19b; 1944. Hose; Paint-or-Dope-Spray.

U. S. Gov., Navy Dept. Specification 33H26; 1944. Hose; Smooth-Bore (Electrically Heated) (for Plastic Paint).

U. S. Gov., Navy Dept. Specification 33H29a; 1945. Hose; Fuel, Armored.

U. S. Gov., Navy Dept. Specification 34F3c; 1936. Fittings; Hose (Water, Steam, and Oil) (Other Than Flexible Metallic).

U. S. Gov., Post Office Dept., Div. of Motor Vehicle Service, Bureau of the Fourth Assistant Postmaster General. Specifications for Clamps; Hose.

U. S. Gov., Post Office Dept., Div. of Motor Vehicle Service, Bureau of the Fourth Assistant Postmaster General. Specifications for Nozzles; Hose.

U. S. Gov., U. S. Army, Chemical Warfare Service. Specification 20-31C; 1942. Hose; Gas Mask, 27-inch.

U. S. Gov., U. S. Army, Chemical Warfare Service. Specification 20-31D; 1941. Hose; M1, Gas Mask.

U. S. Gov., U. S. Army, Chemical Warfare Service. Specification 97-51-106; 1941. Hose; Elbow.

U. S. Gov., U. S. Maritime Commission. Specification 33-MC-2; 1942. Couplings and Clamps; Pneumatic Hose. There shall be but one grade and there are seven types. Gives requirements for sizes, materials, workmanship, details, sampling, inspection, method of test, and drawings.

*References.*—Methods of testing, *see* 200; hose duck, *see* 202.0; dredging sleeves, *see* 209.1.

## 203. RUBBER FOOTWEAR, GLOVES, AND CLOTHING

U. S. Gov., Federal Specification BBB-C-606; 1941. Coats and Trousers; Rubber-Coated (Foul-Weather Clothing). Covers two types: (I) Coats (four classes)—(A) short (jackets), (B) three-quarter length, (C) workman's, and (D) police, standard weight; and (II) trousers and overalls. Gives detail requirements; sizes; and methods of sampling, inspection, and tests. Emergency Alternate Federal Specification E-BBB-C-606; 1942, (issued by Procurement Div., Treasury Dept., U. S. Gov.) changes title to read "Coats and Trousers; Rubber or Synthetic Resin-Coated (Foul-Weather Clothing)" and eliminates the use of new rubber or latex.

### 203.1 RUBBER BOOTS, SHOES, AND HEELS

#### 203.11 Rubber Boots

U. S. Gov., Federal Specification ZZ-B-551a; 1936. Boots; Rubber, Hip. Covers one grade. Gives requirements for chemical composition, tensile strength, ultimate elongation, resistance to abrasion, lasts, and measurements; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking. Emergency Alternate Federal Specification E-ZZ-B-551A; 1942, (issued by Procurement Div., Treasury Dept., U. S. Gov.) changes requirements for the rubber compounds, lasts, and measurements.

U. S. Gov., Federal Specification ZZ-B-556; 1936. Amendment 1; 1942. Boots; Rubber, Short, Heavy. Covers one grade. Gives chemical requirements, tensile strength, ultimate elongation, resistance to abrasion, lasts, measurements, leg form, vamp form, and workmanship; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking. Emergency Alternate Federal Specification E-ZZ-B-556A; 1942, (issued by Procurement Div., Treasury Dept., U. S. Gov.) changes requirements for rubber compounds, resistance to abrasions, girth, leg form, vamp form, and workmanship.

U. S. Gov., Federal Specification ZZ-B-561; 1933. Boots; Rubber, Short, Light. Covers one grade. Gives chemical requirements, tensile strength, ultimate elongation, resistance to abrasion, lasts, measurements, leg form, counter form, and stiffening counter; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

*References.*—Methods of testing rubber goods, *see* 200.

#### 203.12 Rubber Shoes

U. S. Gov., Federal Specification ZZ-O-841; 1935. Amendment 3; 1944. Overshoes; Rubber. Covers a single grade of the type known as "storm rubbers"; black, lightweight, and made to fit without fastening. Gives requirements for synthetic and natural rubber, uppers, insole, outsole and heel, binder sole, counter and heel piece, friction or gum toe cap, gum bind, sizes, weight, height at back, weight, finish, foxing strip, and maximum crude rubber content; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Navy Dept. Specification 72A2b; 1942. Arctics; Cashmerette, Four-Buckle.

U. S. Gov., U. S. Army, Army Air Forces. Specification 94-3118; 1941. Shoes; Pilot's Type A-9.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 20-6A; 1931. Overshoe; Arctic, Cloth Top.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 20-112; 1940. Overshoe; Arctic, Army Nurses'.

*References.*—Leather shoes, *see* 067.1.

#### 203.13 Rubber Heels

U. S. Gov., Federal Specification ZZ-H-141; 1934. Heels; Rubber. Covers one grade. Gives requirements for color, shape, size, thickness, nail holes, hardness, resistance to abrasion, and accelerated aging test; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking. Emergency Alternate Federal Specification E-ZZ-H-141; 1942, (issued by Procurement Div., Treasury Dept., U. S. Gov.) covers four grades in lieu of one—HC, HD, HE, and HL and gives physical, chemical, and other requirements for same.

### 203.2 RUBBER GLOVES

American Society for Testing Materials, D120-40; 1940. American Standards Assn., C59.12-1942. Electrical Gloves (Voltage Rating of Gloves, 3000 Volts). For gloves without external protection, and with leather or other protection. Covers manufacture, voltage and leakage tests, tensile strength, elongation, and set tests before and after aging, size, length and thickness of material, and test apparatus.

Assn. of American Railroads, Telegraph and Telephone Section, 1-A-69; 1937. Rubber Gloves for Employes of the Communication Plant. Includes gloves both with and without external protection of horsehide leather or other material, gauntlet type, in three sizes. Requirements as to quality, dimensions, high voltage, tensile, leakage, tests in accordance with procedure of the American Society for Testing Materials method D-15.

U. S. Gov., Federal Specification ZZ-G-401; 1934. Gloves; Rubber (for) Electrical Workers (for Use in Connection With Apparatus or Circuits Not Exceeding

3,000 Volts to Ground). Covers the reversible seamless type, one grade, and two classes—(A) gloves intended for use without external protection and (B) gloves intended for use with external protection of leather or other material. Gives requirements for design, size, length, thickness, tensile strength, and ultimate elongation; accelerated aging, voltage, and leakage tests; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Navy Dept. Specification 37G2c; 1941. Gloves; Rubber (Natural and Synthetic).

U. S. Gov., Navy Dept. Specification 37G3a; 1941. Gloves; Rubber, Electrical Workers' (for use in connection with apparatus or circuits not exceeding 3,000 volts to ground).

U. S. Gov., Navy Dept. Specification 37G14a; 1944. Gloves; Canton-Flannel, Latex-Covered.

U. S. Gov., Treasury Dept., Procurement Div., 323A; 1942. Gloves; Rubber, Acid. Shall be on one type and grade, seamless, and with extra-long gauntlets; shaped to conform to hand, with fingers properly proportioned and shall be made entirely of rubber compound without friction or backing or any kind. Gives dimensions, chemical requirements, physical requirements and marking of gloves; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

*References.*—Surgeon's rubber gloves, *see* 204.52; methods of testing, *see* 200.

### 203.3 RUBBER HATS

*References.*—Cloth hats, *see* 395.2.

### 203.4 RAINCOAT

U. S. Gov., Marine Corps Specification, revised 1944. Coat; Rain, Synthetic Resin Filler.

*References.*—Waterproof clothing, *see* 392.5; cotton fabrics for rubber coating, *see* 304.71.

### 203.5 RUBBER APRON

U. S. Gov., U. S. Army, Signal Corps. Specification 20-94A; 1933. Apron; Type MC-111, Rubber, for storage Battery Room.

*References.*—Surgeon's aprons, *see* 204.51; cotton aprons, *see* 311.92.

### 203.9 MISCELLANEOUS RUBBER WEARING APPAREL

U. S. Gov., Federal Specification ZZ-P-41; 1937. Pads; Finger, Rubber, (for) Office Use. Covers a single grade and two types—(I) perforated and (II) without perforations. Gives requirements for design, dimensions, accelerated aging test, tensile strength, and ultimate elongation; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking. Emergency Alternate Federal Specification E-ZZ-P-41; 1942, requires pads to be made entirely of reclaimed rubber and changes physical tests.

## 204. DRUGGISTS' RUBBER SUNDRIES

### 204.1 BANDAGES AND PLASTERS

### 204.11 Rubber Bandages

American Hospital Assn., 61-4. Rubber Bandages. Covers one type. Based on U. S. Gov. Federal Specification ZZ-B-101, and Errata 3, for Rubber Bandages, referred to below.

U. S. Gov., Federal Specification ZZ-B-101; 1931. Amendment 1; 1944. Bandages; Rubber and Synthetic Rubber. Gives requirements for dimensions, reinforcing strip, tying tapes, synthetical rubber, tensile strength; ultimate elongation, accelerated aging tests, and sterilization; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

*References.*—Methods of testing, *see* 200. Other surgical dressings, *see* 398.

### 204.12 Plasters

American Hospital Assn., 13-19. Surgical Adhesive Plaster. Covers one grade. Based on U. S. Gov. Federal Specifications U-P-401 for Surgical Adhesive Plaster (referred to below) and CCC-T-191a, and Amendment 1, for General Specifications, Test Methods, Textiles, and U. S. Gov., Dept. of Commerce, National Bureau of Standards Simplified Practice Recommendation R85-37 for Adhesive Plaster.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Adhesive Plaster (Adhesive Tape). Description, dimensions, tensile strength, adhesive strength, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Sterile Adhesive Plaster (Sterile Adhesive Tape). Description, sterility, other requirements, and storage.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R 85-43; 1943. Adhesive Plaster. This recommendation establishes a schecule of stock widths and lengths of adhesive plaster on spools and in rolls.

U. S. Gov., Federal Specification U-P-401a; 1944. Plaster; Adhesive, Surgical. Covers one grade in two types—(I) standard base fabric, nonwater-repellent, and (II) water-repellent base fabric. Gives requirements for material and workmanship, continuous lengths, dimensions in rolls on spools and 12 in. rolls on cores, tolerance, backing, facing, adhesive quality, and color; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Navy Dept. Specification 53T7; 1941. Tape; Cellulose, Adhesive-back.

U. S. Gov., U. S. Army, Chemical Warfare Service. Specification 6-50B; 1932. Fabric; Adhesive.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 50-11-81C; 1943. Tape; Adhesive, Colored and White.

U. S. Gov., U. S. Army, Chemical Warfare Service. Specification 97-54-104A; 1941. Plaster; Adhesive, Non-Surgical.

*References.*—*See* references under 204.11.

### 204.13 Tourniquets

American Hospital Assn., 10-67. Tubular Rubber Tourniquets. Covers one type and one grade. Based on U. S. Gov. Federal Specifications ZZ-T-606.

U. S. Gov., Federal Specification ZZ-T-606; 1934. Amendment 1; 1944. Tourniquets; Rubber, Tubular. Covers one type and grade. Gives requirements for natural rubber and synthetic rubber, design, dimensions, tensile strength, ultimate elongation, and accelerated aging test; methods of sampling,

inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., U. S. Army, Medical Department. Specification 10-2830A; 1942. Tourniquet; Field.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2857A; 1941. Tourniquet; Esmarch.

## 204.2 BAGS, BOTTLES, AND CUSHIONS OF RUBBER

### 204.21 Bags, Ice

American Hospital Assn., 70-16. Helmet-Shaped Ice-Bags. Covers one type. Based on U. S. Gov. Federal Specifications ZZ-I-111 and ZZ-R-601a for General Specifications (Methods of Physical Tests and Chemical Analyses) Rubber Goods; CCC-T-191a, and Amendment 1, for General Specifications, Test Methods, Textiles; and ZZ-S-311a for Rubber Sheeting.

American Hospital Assn., 70-19. Rubber Ice-Bags. Covers one type. Based on U. S. Gov. Federal Specifications ZZ-I-121 and ZZ-R-601a for General Specifications (Methods of Physical Tests and Chemical Analyses) Rubber Goods.

U. S. Gov., Federal Specification ZZ-I-111; 1930. Amendment 1; 1944. Ice-Bags; Helmet-Shaped. Covers a single type, made from a cotton fabric coated on both sides with a synthetic rubber compound or a suitable compound of natural rubber and synthetic rubber. Gives requirements for synthetic rubber, design, fittings, and branding; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., Federal Specification ZZ-I-121; 1939. Amendment 1; 1944. Ice-Bags; Rubber. Covers a single type, made of rubber, walls reinforced at seams and throat. Gives requirements for material and workmanship, shape, construction, dimensions, thickness, rubber content, tensile strength, ultimate elongation, resistance to hot air, pressure test, branding, and color; methods of sampling, inspection, and tests; and packaging, packing, and marking.

*References.*—Methods of testing rubber goods, *see* 200; methods of testing textile fabrics, *see* 300.4; rubber sheeting, *see* 204.33.

### 204.22 Bags, Obstetrical

### 204.23 Bags and Bottles, Water

American Hospital Assn., 61-10. Cloth-Inserted Hot-Water Bottles. Covers oblong shape with rounded corners. Based on U. S. Gov. Federal Specifications ZZ-B-581 for Cloth-Inserted Hot-Water Bottles (referred to below), ZZ-R-601a for General Specifications (Methods of Physical Tests and Chemical Analyses) Rubber Goods, CCC-T-191a for General Specifications Test Methods Textiles, and ZZ-S-311a for Rubber Sheeting.

American Hospital Assn., 61-13. Rubber Hot-Water Bottles. Covers 2 types. Based on U. S. Gov. Federal Specifications ZZ-B-586a for Rubber Hot-Water Bottles (referred to below) and ZZ-R-601a for General Specifications (Methods of Physical Tests and Chemical Analyses) Rubber Goods.

U. S. Gov., Dept. of Agriculture, Forest Service. Specifications MSF-33. Bag; Rubber-Insert.

U. S. Gov., Federal Specification ZZ-B-581a; 1944. Bottles; Hot Water, Cloth-Inserted. Covers the oblong shape with rounded corners in 2 qt. and 3 qt. capacities and two types—(B) synthetic rubber coated and (C) synthetic resin coated; made of double-coated rubber sheeting reinforced at seams or edges and throat. Gives requirements for material, workmanship, thickness, synthetic rubber, synthetic resin coating, rubber, sheeting, pressure test, resistance to hot water, fittings, and branding; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification ZZ-B-586a; 1935. Amendment 1; 1944. Bottles; Hot-Water, Rubber. Covers two types—(A) threaded stopper and (B) stopperless. Gives requirements for material, shape, capacity, thickness, color, branding, design, tensile strength, ultimate elongation, and resistance to inspection; methods of sampling, inspection and tests; and packaging, packing, and marking.

*References.*—Methods of testing rubber goods, *see* 200; methods of testing textile fabrics, *see* 300.4; rubber sheeting, *see* 204.33.

### 204.24 Rubber Basin

U. S. Gov., Navy Dept. Specification 57B19; 1941. Basins; Hand, Rubber.

### 204.25 Rubber Cushions and Pillows

American Hospital Assn., 1-34. Rubber Pillow Cases. Covers a single type and a single grade. Based on U. S. Gov. Federal Specifications ZZ-P-361 for Rubber Pillowcases (referred to below), ZZ-R-601a for Rubber Goods; General Specifications, Methods of Physical Tests and Chemical Analysis, ZZ-S-311a for Rubber Sheeting, and CCC-T-191a for Textiles; General Specifications, Test Methods.

American Hospital Assn., 49-10. Sponge-Rubber Chair Cushions. Based on U. S. Gov. Federal Specification ZZ-C-766 for Sponge-Rubber Chair Cushions (referred to below), ZZ-R-601a for General Specifications (Methods of Physical Tests and Chemical Analyses) Rubber Goods, and CCC-T-191a for General Specifications, Test Methods, Textiles.

American Hospital Assn., 70-7. Cloth-Inserted Ring Cushions. Covers one type. Based on U. S. Gov. Federal Specifications ZZ-C-791 and ZZ-R-601a for General Specifications (Methods of Physical Tests and Chemical Analyses) Rubber Goods; CCC-T-191a for General Specifications, Test Methods, Textiles; and ZZ-S-311a for Rubber Sheeting.

American Hospital Assn., 70-10. Rubber Ring Cushions. Covers one type and one grade. Based on U. S. Gov. Federal Specifications ZZ-C-796.

U. S. Gov., Federal Specification ZZ-C-766; 1940. Cushions; Chair, Sponge-Rubber. Covers three types—(I) molded form, with molded angular or cylindrical cavities, covered with fabric; (II) covered with fabric (without cavities); and (III) covered by felt or rattan on one side. Gives requirements for fabric, compressibility, and density of rubber; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking. Emergency Alternate Federal Specification E-ZZ-C-766; 1942, (issued by Procurement Div., Treasury Dept., U. S. Gov.) substitutes one type in two grades—(A) all wool and (B) wool and cotton mixture; and gives requirements for same.

U. S. Gov., Federal Specification ZZ-C-791; 1930. Amendment 1; 1944. Cushions; Ring, Cloth-Inserted.

Covers one type. Gives requirements for material, design, dimensions, thickness of wall, finished sheeting, inflation, and branding; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., Federal Specification ZZ-C-796; 1930. Amendment 1; 1944. Cushions; Ring, Rubber Synthetic. Covers one type and grade. Gives requirements for material and workmanship, design, dimensions, thickness of wall, synthetic rubber, tensile strength, ultimate elongation, resistance to hot air, inflation, and branding; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., Federal Specification ZZ-C-811; 1938. Cushion (Underlay); Carpet and Rug, Sponge-Rubber. Covers one grade, in either strip form or of definite dimensions; and two types—(I) without woven fabric cover or insert and (II) with woven fabric cover or insert. Gives requirements for dimensions, thickness, width, length, weight, compressibility, and aging; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking. Emergency Alternate Federal Specification E-ZZ-C-811; 1942, (issued by Procurement Div., Treasury Dept., U. S. Gov.) changes requirements for materials.

U. S. Gov., Federal Specification ZZ-P-351; 1933. Amendment 1; 1944. Pillows; Air, Rubber. Covers one type, rectangular in shape, with one or more partitions in the air space; made of cotton sheeting coated on one side with natural rubber, or synthetic rubber, or a mixture of natural and synthetic rubber. Gives requirements for design, valve, finished sheeting, and inflation; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., Federal Specification ZZ-P-361; 1933. Amendment 1; 1944. Pillowcases; Rubber. Covers single types and grade made from single-coated rubber sheeting. Coating shall be natural rubber, or synthetic rubber, or a mixture of natural rubber and synthetic rubber. Gives requirements for design, and color; methods of sampling, inspection, and tests; and packaging, packing, and marking.

*References.*—Methods of testing rubber goods, *see* 200; methods of testing textile fabrics, *see* 300.4; rubber sheeting, *see* 204.33.

### 204.26 Fountain Syringes

American Hospital Assn., 10-49. Cloth-Inserted Fountain Syringes. Covers the rapid-flow type. Based on U. S. Gov. Federal Specifications ZZ-S-901 for Cloth-Inserted Fountain Syringes, ZZ-R-601a for Methods of Physical Tests and Chemical Analysis of Rubber Goods; CCC-T-191a for General Test Methods for Textiles, and ZZ-S-311a for Rubber Sheeting.

American Hospital Assn., 10-52. Rubber Fountain Syringes. Covers the rapid-flow type. Based on U. S. Gov. Federal Specification ZZ-S-916.

U. S. Gov., Federal Specification ZZ-S-901; 1930. Amendment 1; 1944. Syringes; Fountain, Cloth-Inserted. Covers the rapid flow type made with double-coated maroon sheeting, reinforced at seams and edges. Gives requirements for capacity, suspension tab, accessories, branding, finished sheeting, resistance to hot water, tubing, rubber content, tensile strength, and resistance to hot air; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., Federal Specification ZZ-S-916; 1930. Amendment 1; 1944. Syringes; Fountain, Rubber. Covers the rapid flow type made with synthetic rubber or a suitable mixture of natural rubber and synthetic rubber walls reinforced at seams and edges. Gives requirements for capacity, thickness of wall, suspension tab, accessories, tensile strength, ultimate elongation, and physical properties; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., Navy Dept. Specification 57S21; 1941. Syringes; Bulb, Rubber (self-injecting, continuous-flow, complete with one hard rubber rectal tube).

*References.*—Methods of testing rubber goods, *see* 200; methods of testing textile fabrics, *see* 300.4; rubber sheeting, *see* 204.33; syringes and needles, *see* 915.27.

### 204.27 Politzer Bags

U. S. Gov., Federal Specification ZZ-B-71b; 1944. Bags; Politzer. Covers two types—(I) valveless and (II) valve; and two classes—(A) rubber or synthetic rubber bag and tubing and (B) chloroprene polymer type bag and tubing. Gives requirements for material and workmanship, design, dimensions, tensile strength, ultimate elongation, resistance to hot air, branding, and valve; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

*References.*—Methods of testing rubber goods, *see* 200.

### 204.29 Miscellaneous Bags

U. S. Gov., Navy Dept. Specification 57B21; 1941. Bags; Kidney-Compression, Rubber.

## 204.3 BLANKETS, CLOTH, AND SHEETING

### 204.31 Rubber Blankets

American Hospital Assn., 61-7. Rubber Blankets. Covers one grade, two types, and two classes in each type. Based on U. S. Gov. Federal Specifications ZZ-B-426 for Rubber Blankets (referred to below), ZZ-S-311a for Rubber Sheeting, ZZ-R-601a for General Specifications (Methods of Physical Tests and Chemical Analyses) Rubber Goods, and CCC-T-191a for General Specifications Test Methods Textiles.

U. S. Gov., Federal Specification ZZ-B-426; 1939. Blankets; Rubber. Covers one grade and two types—(I) seamless and (II) one middle longitudinal seam, single coated and double coated. Gives requirements for color, rubber content, mechanical properties, stock, and size; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking. Emergency Alternate Federal Specification E-ZZ-B-426; 1943, substitutes synthetic resin for rubber and suitable material for aluminum grommets.

### 204.32 Rubber Cloth

*References.*—Rubber sheeting, *see* 204.33.

### 204.33 Rubber Sheeting

American Hospital Assn., 61-172. Rubber Sheeting. Covers two types in two grades each type. Based on U. S. Gov. Federal Specifications ZZ-S-311a for Rubber

Sheeting (referred to below), ZZ-R-601a for General Specifications (Methods of Physical Tests and Chemical Analyses) Rubber Goods, and CCC-T-191a for General Specifications, Test Methods, Textiles.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Commercial Standard CS38-32; 1932. Hospital Rubber Sheeting. This standard covers types and colors, material and workmanship, general and detailed requirements for hospital rubber sheeting. It includes also methods of sampling, inspection, and tests. Initiated by the American Hospital Assn. and the Rubber Manufacturers Assn.

U. S. Gov., Federal Specification ZZ-S-311a; 1939. Amendment 1; 1944. Sheeting; Rubber. Covers two grades—(B) standard grade rubber and/or synthetic rubber coated and (C) synthetic resin coated; and shall be double-coated. Gives requirements for material and workmanship, synthetic rubber, synthetic resin, construction, dimensions, mechanical properties, rubber, accelerated aging, sterilization in steam, resistance to phenol, resistance to alcohol, and color; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

*References.*—Methods of testing rubber goods, *see* 200; methods of testing textile fabrics, *see* 300.4.

## 204.4 DENTAL RUBBER GOODS

American Dental Assn. Specification No. 10; 1940. Denture Rubber. Technical requirements are similar to those of U. S. Gov. Federal Specification ZZ-R-696, Rubber; Denture.

American Hospital Assn., 61-22. Rubber Dams. Covers one grade. Based on U. S. Gov. Federal Specifications ZZ-D-51 for Rubber Dams (referred to below) and ZZ-R-601a for General Specifications (Methods of Physical Tests and Chemical Analyses) Rubber Goods.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practive Recommendation R138-32; 1932. Dental Rubber (Base and Veneering). This recommendation establishes a simplified schedule of colors and packaging of dental rubber. Initiated by the American Dental Trade Assn.

U. S. Gov., Federal Specification ZZ-D-51; 1931. Amendment 2; 1944. Dams; Rubber. Covers one grade. Gives requirements for natural rubber and synthetic rubber, workmanship, thickness, width, length, tensile strength, ultimate elongation, accelerated aging test, and sterilization test; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., Federal Specification ZZ-R-696; 1940. Amendment 1; 1940. Rubber; Denture. Covers three types, one grade and class—(I) base rubber, (II) general purpose rubber, and (III) veneer rubber. Gives requirements for adhesion to mold, size, satisfactory working qualities, unvulcanized compound, plasticity, instructions for vulcanization, color, and porosity; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

*References.*—Methods of testing, *see* 200; other dental goods, *see* 915.1.

## 204.5 SURGEONS' GOODS

### 204.51 Rubber Aprons

American Hospital Assn., 61-1. Surgeons' Rubber Aprons. Covers two types. Based on U. S. Gov. Federal Specifications ZZ-A-611 for Surgeons' Rubber Aprons (referred to below), ZZ-R-601a for General Specifications (Methods of Physical Tests and Chemical Analyses) Rubber Goods, CCC-T-191a for General Specifications Test Methods Textiles, and ZZ-S-311a for Rubber Sheeting.

U. S. Gov., Federal Specification ZZ-A-611a; 1944. Aprons; Surgeons' (Synthetic Rubber and Resin-Coated). Covers cotton fabric aprons coated on one or both sides with synthetic rubber or synthetic resin in three types—(I) single coated (synthetic rubber), (II) double coated (synthetic rubber), and (III) double coated (synthetic resin). Gives requirements for construction, marking, physical requirements, synthetic rubber, synthetic resin, accelerated aging, sterilization in steam, resistance to phenol, resistance to mineral oil, and resistance to alcohol; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Veterans Administration. Specification VA-X-166a; 1942. Aprons; X-Ray, Protective, Lead-Impregnated Rubber.

*References.*—Methods of testing rubber goods, *see* 200; methods of testing textile fabrics, *see* 300.4; rubber sheeting, *see* 204.33; cotton fabrics for rubber coating, *see* 304.71.

### 204.52 Rubber Gloves and Finger Cots

American Hospital Assn., 61-19. Rubber Finger Cots. Covers one grade. Based on U. S. Gov. Federal Specification ZZ-C-571 for Rubber Finger Cots (referred to below) and ZZ-R-601a for General Specifications (Methods of Physical Tests and Chemical Analyses) Rubber Goods.

American Hospital Assn., 61-25. Rubber Autopsy Gloves. Covers one type, one grade, and one size. Based on U. S. Army Specifications 10-2654 for Rubber Autopsy Gloves (referred to below) and 100-2D for Marking Shipments and U. S. Gov. Federal Specification ZZ-R-601a for General Specifications (Methods of Physical Tests and Chemical Analyses) Rubber Goods.

American Hospital Assn., 61-28. Surgeons' Rubber Gloves. Covers 2 grades. Based on U. S. Gov. Federal Specifications ZZ-G-421a for Surgeons' Rubber Gloves (referred to below) and ZZ-R-601a for General Specifications (Methods of Physical Tests and Chemical Analyses) Rubber Goods.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Commercial Standard CS40-32; 1932. Surgeons' Rubber Gloves. This standard covers minimum requirements for material and workmanship of surgeons' rubber gloves, It gives measurements and weights for eight sizes of gloves. Method of marking gloves, with the name or trade-name of the manufacturer or supplier, is also indicated. Initiated by the American Hospital Assn. and the Rubber Manufacturers Assn.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Commercial Standard CS41-32; 1932. Surgeons' Latex Gloves. This standard covers minimum

requirements for material and workmanship of surgeons' latex gloves. It gives measurements and weights for eight sizes of gloves. Method of marking gloves, with the name or trade-name of the manufacturer or supplier, is also indicated. Initiated by the American Hospital Assn. and the Rubber Manufacturers Assn.

U. S. Gov., Federal Specification ZZ-C-571; 1931. Cots; Finger, Rubber. Covers a single grade. Gives requirements for dimensions, weight, rubber content, tensile strength, ultimate elongation, and accelerated aging and sterilization tests; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Federal Specification ZZ-G-421a; 1940. Amendment 2; 1944. Gloves; Rubber, Surgeons. Covers two grades—(A) intended for use when minimum weight, maximum strength, and best aging quality are required, and (B) intended for use when the requirements for a grade A glove are not essential. Gives material and workmanship, rolled edge, trade mark, physical requirements, acceleraged aging requirements, sterilization requirements, dimensions, weight, and thickness; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2654; 1939. Glove; Autopsy, Rubber.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2685; 1939. Gloves; Rubber, Gauntlet, Cloth-Lined, Veterinary.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2902; 1939. Pouch for Gloves; Rubber.

*References.*—Other rubber gloves, *see* 203.2; methods of testing rubber goods, *see* 200.

## 204.53 Rubber Pads

American Hospital Assn., 52-7. Kelly Surgical-Operating Pads. Covers one grade reversible type. Based on U. S. Gov. Federal Specifications ZZ-P-51 for Surgical-Operating Pads (referred to below; ZZ-R-601a for General Specifications (Methods of Physical Tests and Chemical Analyses) Rubber Goods; ZZ-S-311a for Rubber Sheeting; ZZ-T-831b for Rubber Tubing; CCC-T-191a for General Specifications, Test Methods, Textiles; and KK-L-291 for Upholstery Leather.

American Hospital Assn., 52-10. Operating and Examining Table Pad. Covers 2 types. Based on U. S. Gov., War Dept., Specification 10-2606 for Operating and Examining Table Pad (referred to below); U. S. Gov. Federal Specifications V-T-276b for Cotton Thread; ZZ-S-311a for Rubber Sheeting; CCC-S-271 for Wide Bleached Cotton Sheeting; CCC-T-191a for General Specifications, Test Methods, Textiles; and DDD-T-86 for Bleached, Dyed, or Grey General-Use Cotton Tape.

U. S. Gov., Federal Specification ZZ-P-51; 1933. Amendment 2; 1944. Pads; Surgical-Operating. Covers a single grade, reversible type, made from sheeting coated on both sides with natural rubber, synthetic rubber, or a suitable mixture of natural rubber and synthetic rubber. Gives requirements for construction, fittings, finished sheeting, pressure test and brand; methods of sampling, inspection, and tests; and packaging, packing, and marking.

*References.*—Methods of testing rubber goods, *see* 200; methods of testing textile fabrics, *see* 300.4; rubber sheeting, *see* 204.33.

## 204.54 Stomach and Colon Tubes

American Hospital Assn., 10-73. Colon Tubes. Covers one type. Based on U. S. Gov. Federal Specifications ZZ-T-751.

American Hospital Assn., 10-76. Lavage and Stomach Tubes. Covers one type and one grade consisting of tube and funnel. Based on U. S. Gov. Federal Specifications ZZ-T-791.

U. S. Gov., Federal Specification ZZ-T-751; 1930. Amendment 1; 1944. Tubes; Colon. Covers a single type having one opening in outlet end and one depressed velvet eye on side of outlet end; 30 in. long and 30 French scale in diameter. Gives requirements for natural rubber or synthetic rubber, tensile strength, ultimate elongation, resistance to hot air, finish, and thickness; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., Federal Specification ZZ-T-791; 1933. Amendment 1; 1944. Tubes; Lavage and Stomach. Covers a single grade and a single type consisting of tube and funnel. Gives requirements for natural rubber or synthetic rubber, finish, design, tube, funnel, connection, tensile strength, ultimate elongation, resistance to hot air, and branding; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2793; 1939. Tube; Stomach, Rubber, Veterinary.

*References.*—Methods of testing rubber goods, *see* 200.

## 204.55 Catheters

American Hospital Assn., 10-28. Soft-Rubber Plain Urethral Catheters. Covers one type. Based on U. S. Gov. Federal Specifications ZZ-C-101 for Catheters and ZZ-R-601a for Methods of Physical Tests and Chemical Analysis of Rubber Goods.

U. S. Gov., Federal Specification ZZ-C-101; 1933. Catheters; Urethral, Plain, Soft-Rubber. Covers one type. Gives requirements for design, dimensions, rubber content, rigidity, tensile strength, ultimate elongation, and accelerated aging test; methods of sampling, inspection, and tests; add requirements for packaging, packing, and marking. Amendment 1, July 1943, substitutes synthetic rubber for rubber and changes maximum rigidity and tensile strength.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2780; 1939. Catheter; Rubber, Veterinary.

*References.*—Catheters, glass, metal, and woven, *see* 915.22; methods of testing, *see* 200.

## 204.59 Miscellaneous Surgeons' Goods

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2971; 1940. Isolator; Rubber.

*References.*—Other rubber surgeons goods, *see* 204.1, 204.2, 204.3; surgical instruments and equipment, *see* 915.2 to 915.5.

## 204.6 RUBBER TUBING

American Hospital Assn., 61-40. Rubber Tubing. Covers two grades. Based on U. S. Gov. Federal Specification ZZ-T-831b for Rubber Tubing (referred to below) and ZZ-R-601a for General Specifications (Methods of Physical Tests and Chemical Analyses) Rubber Goods.

U. S. Gov., Federal Specification ZZ-T-831b; 1941. Amendment 2; 1944. Tubing; Rubber. Covers three grades—(A) commercial gum rubber tubing, (B) synthetic rubber (buna S) tubing, and (L) laboratory pure gum rubber tubing; two types—(I) translucent and (II) block. Also covers plastic tubing (polyvinyl chloride base). Gives requirements for rubber and synthetic rubber tubing, plastic tubing, tables showing dimensions, physical requirements, accelerated aging test, details for plastic tubing (polyvinyl chloride base), and flammability; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Navy Dept. Specification 33T7; 1945. Tubing; Rubber, Synthetic.

U. S. Gov., U. S. Army, Medical Dept. Specification 20-102A; 1940. Tubing; Stethoscope, Rubber.

U. S. Gov., U. S. Army, Medical Dept. Specification 20-105; 1939. Tubing; Rubber, Special.

U. S. Gov., U. S. Army, Medical Dept. Specification 20-106; 1939. Tubing; Rubber, Gas.

*References.*—Methods of Testing, *see* 200; gas tubing, *see* 202.31.

## 204.9 MISCELLANEOUS RUBBER SUNDRIES

### 204.90 General Items

American Society for Testing Materials, D553-42; 1942. Methods of Test for Viscosity and Total Solids Content of Rubber Cements. Covers rubber cements containing organic solvents as differentiated from latex cements or dispersions of rubber in water. For weight of total solids after heating at 70 C., description of funnel type and falling cylinder viscosimeter, and procedures for viscosity measurement.

### 204.91 Rubber Bulbs

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2810; 1939. Bulb; Rubber, Compression (for Pipettes).

### 204.92 Rubber Cement

American Hospital Assn., 61-16. Rubber Cement (Artists' and Photographers' and Cold-Patching). Covers one grade in two types. Based on U. S. Gov. Federal Specifications ZZ-C-191a for Rubber Cement (Artists' and Photographers' and Cold-Patching), referred to below, ZZ-R-601a for General Specifications (Methods of Physical Tests and Chemical Analyses) Rubber Goods, and ZZ-T-721c for Automobile and Motorcycle Inner Tubes.

U. S. Gov., Army Air Forces. Specification 26544-B-1; 1944. Cement; Rubber to Metal.

U. S. Gov., Army Air Forces. Specification 26571 (2); 1941. Cement; Synthetic Base.

U. S. Gov., Army Air Forces. Specification 26593-A; 1944. Cement; Rubber, Vulcanizing.

U. S. Gov., Army-Navy Aeronautical Specification AN-C-54; 1942. Cement; Rubber.

U. S. Gov., Federal Specification ZZ-C-191a; 1938. Amendment 1; 1944. Cement; Rubber (Artists' and Photographers' and Cold-Patching). Covers one grade and two types—(I) photographers' and artists' and (II) cold-patching. Gives requirements for materials, composition, color, adhesion, wrinkling, curling, shrinking, staining, and consistency; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Navy Dept. Specification 33R5; 1944. Rubber (Synthetic) and Cement for Lining Ferrous Pipe and Fittings (for Salt-Water, Lines).

U. S. Gov., Navy Dept. Specification 52C3e; 1943. Cement; Rubber.

U. S. Gov., Navy Dept. Specification 52C10; 1934. Cement; Rubber, Non-Hardening.

U. S. Gov., U. S. Army, Army Air Forces. Specification 20-7; 1926. Cement; Rubber, Colored, for Marking Balloons and Airships.

U. S. Gov., U. S. Army, Chemical Warfare Service. Specification 20-29B; 1927. Cement; Rubber.

### 204.93 Erasers

American Hospital Assn., 49-13. Rubber and Rubber-Substitute Erasers. Covers one grade in five types. Based on U. S. Gov. Federal Specification ZZ-E-661a for Rubber and Rubber-Substitute Erasers, referred to below.

U. S. Gov., Federal Specification ZZ-E-661a; 1936. Amendment 2; 1939. Erasers; Rubber and Rubber-Substitute. Covers one grade and five types—(A) pencil (rubber), (B) ink (rubber), (C) typewriter, (D) pencil (rubber-substitute), and (E) combination pencil and ink (one-half type (A) and one-half type (B) stock). Gives requirements for dimensions, hardness, and accelerated aging test; methods of sampling, inspection, and tests: and requirements for packaging, packing, and marking. Emergency Alternate Federal Specification E-ZZ-E-661a; 1942, (issued by Procurement Div., Treasury Dept., U. S. Gov.) substitutes four types in lieu of five—(A) pencil eraser, (B) ink (rubber), (C) typewriter, and (D) pencil (rubber-substitute); and changes requirements accordingly.

### 204.94 Rubber Inflators

### 204.95 Rubber Stoppers

U. S. Gov., Federal Specification ZZ-S-751; 1932. Stoppers; Rubber. Covers two types—(A) solid and (B) perforated; and two grades—(I) laboratory and (II) common. Gives requirements for material, dimensions of stoppers, hardness, perforations, steaming test, and acetone extract; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., U. S. Army, Medical Dept. Specification 20-98A; 1941. Stopper; Rubber, for Vaccine Bottle, With Sleeve and Hollow Core.

*References.*—Methods of testing, *see* 200.

### 204.96 Rubber Tips for Crutches and Furniture

American Hospital Assn., 61-37. Rubber Tips for Crutches, Furniture, Etc. Covers one grade and one

type. Based on U. S. Gov. Federal Specification ZZ-T-351 for Rubber Tips for Crutches, Furniture, Etc., referred to below.

U. S. Gov. Federal Specification ZZ-T-351; 1935. Tips; Rubber, (for) Crutches, Furniture, Etc. Covers a single grade. Gives requirements for material, bid sample, design, and dimensions; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking. Emergency Alternate Federal Specification E-ZZ-T-351; 1943, deletes use of any new natural rubber.

U. S. Gov., Navy Dept. Specification 33T6; 1944. Tips; Rubber (Reclaimed) (for Tables and Benches).

*References.*—Methods of testing, *see* 200.

### 204.99 Rubber Sundries Not Classified

U. S. Gov., U S. Army, Medical Dept. Specification 10-2663; 1939. Ring; Moldine.

## 205. HARD-RUBBER GOODS

### 205.1 ELECTRICAL GOODS, HARD RUBBER

U. S. Gov., U. S. Army, Signal Corps. Specification 20-85; 1928. Strap; Type ST-21, Battery-Carrying.

*References.*—Methods of testing rubber goods, *see* 200; rubber linemen's gloves, *see* 203.2; rubber insulation, *see* 719.55, 719.56.

### 205.2 LABORATORY APPARATUS, HARD RUBBER

U. S. Gov., Federal Specification ZZ-T-91; 1935. Tanks; Photographic, Hard-Rubber, Developing and Fixing. Covers one grade, suitable for contact with photographic solutions, alkaline developer, acid hypo, acid silver nitrate, cyanides, and alcohol. Gives requirements for dimensions, water absorption, alcohol extract, tensile strength, ultimate elongation, warping, and impact strength; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Federal Specification ZZ-T-636; 1935. Trays; Photographic, Hard-Rubber. Covers one grade for use in contact with such photographic solutions as alkaline developer, acid hypo, acid silver nitrate, cyanides, and alcohol. Gives requirements for dimensions, water absorption, alcoholic extract, tensile strength, ultimate elongation, warping, impact strength, methods of sampling, inspection, tests, requirements for packaging, packing, and marking. Emergency Alternate Federal Specification E-ZZ-T-636; 1943, requests the use of Trays; Photographic, Enameled; Federal Specification RR-T-646, which uses no hard rubber.

U. S. Gov., U. S. Army, Medical Dept. Specification 20-89A; 1941. Sprinkler; Powder, Hard-Rubber.

*References.*—Rubber tubing, *see* 204.6.

### 205.3 SURGICAL GOODS, HARD RUBBER

### 205.4 TOILET ARTICLES OF HARD RUBBER

U. S. Gov., Federal Specification ZZ-C-551; 1935. Combs; Rubber (Hard). Gives detail requirements for design, dimensions, and color; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking. Emergency Alternate Federal Specification E-ZZ-C-551; 1942 (issued by Procurement Div., Treasury Dept., U. S. Gov.) substitutes Federal Specification L-C-566 for Combs; Plastic.

### 205.5 TRAYS, HARD RUBBER

U. S. Gov., Dept. of Interior, Purchasing Office. Standard Specifications No. 52. Trays; Hard-Rubber Composition.

U. S. Gov., U. S. Maritime Commission. Specification 64-MC-39a; 1944. Trays; Serving, Non-Metallic. Covers one grade and three types—(I) rectangular trays, (II) oval trays, and (III) round trays. Gives requirements for sizes, material, workmanship, construction, finish, color, odor, resistance to impact, impact strength, rigidity, chemical resistance, resistance to hot water, marking, and details for each type; sampling, inspection, and methods of test; and packaging, packing, and marking for shipment.

U. S. Gov., Veterans Administration. Specification VA-G-340; 1940. Trays; Serving, Special Hard-Rubber Composition.

### 205.9 MISCELLANEOUS HARD-RUBBER GOODS

U. S. Gov., U. S. Army, Medical Dept. Specification 20-90A; 1941. Bottle; Ink, Hard-Rubber.

U. S. Gov., U. S. Army, Signal Corps. Specification 75-12; 1923. Rod; Photographic, Stirring, Hard-Rubber.

## 206. RUBBER TIRES, CASINGS, AND TUBES

### 206.0 GENERAL ITEMS

American Society for Testing Materials, D 412-41; 1941. American Standards Assn. J2.1-1942. Methods of Tension Testing of Vulcanized Rubber. For determining stress-strain properties, tensile strength, ultimate elongation, and permanent set of soft vulcanized rubber, such as tire carcass and tread compounds, or most mechanical rubber goods, but not for hard rubber. Description of terms, tension test apparatus, calibration of tension testing machine, set test apparatus, die for test specimens, test specimens, number of test specimens, procedure, calculations, and report.

Tire and Rim Assn., Inc. Agricultural Handbook, 1944. Agricultural Implement Tires. Recommended Practice for Rib Tread, Moderate Traction Tread, Traction Implement, Plow Tail Wheel, Hillside Combine, and Rice Binder, AI-1; 1944. Gives tables showing tire size, number of plies, tire loads at various inflation pressures, recommended load and inflation, recommended rim, maximum tire section, tube group number or size, and valve.

Tire and Rim Assn., Inc. Agricultural Handbook, 1944. Agricultural Implement Tires. Experimental Practice for Heavy Duty Traction, AI-2; 1944. Gives tables showing tire size, number of plies, tire loads at various inflation pressures, recommended load and inflation, recommended rim, tube group number or size, and valve.

Tire and Rim Assn., Inc. Agricultural Handbook, 1944. Agricultural Tractor Tires. Recommended Practice for Front Wheel, AT-1; 1944. Gives tables showing tire size, number of plies, tire loads at various inflation pressures, recommended load and inflation, recommended rim, maximum tire section, tube size or group number, and valve.

Tire and Rim Assn., Inc. Agricultural Handbook, 1944. Agricultural Tractor Tires. Recommended Practice for Rear Wheel (Cane and Rice), AT-2A; 1944. Gives tables showing tire size, number of plies, tire loads at various inflation pressures, recommended load and inflation, recommended rim, maximum tire section, tire group number or size, and valve.

Tire and Rim Assn., Inc. Agricultural Handbook, 1944. Garden Tractor Tires. Recommended Practice, AT-3A; 1944. Gives tables showing tire size, number of plies, tire loads at various inflation pressures, recommended load and inflation, recommended rim, maximum tire section, and valve.

Tire and Rim Assn., Inc. Agricultural Handbook, 1944. Industrial Tractors Tires. Recommended Practice for Front Wheel (Using Drop Center Rims), Front Wheel, (Using Flat Base Rims), and Rear Wheel, AT1-2A; 1944. Gives tables showing tire size, number of plies, tire loads at various inflation pressures, recommended load and inflation, recommended rim, maximum tire section, tube group number or size, valve, and flap.

Tire and Rim Assn., Inc. Agricultural Handbook, 1944. Agricultural Tractor Tires. Recommended Practice for Rear Wheel, WT-2A; 1944. Gives tables showing tire size, number of plies, tire loads at various inflation pressures, recommended load and inflation, recommended rim, maximum tire section, tube size, and valve.

Tire and Rim Assn., Inc. Military Supplement, Nov. 1943. Combat Tire Bead Dimensions for Use on Divided Rims or Wheels (Military Standard). Drawing and table showing bead widths for tire sizes from 6.00-16 to 14.00-24.

Tire and Rim Assn., Inc. Passenger Car Handbook, 1944. Tires for Motorcycles and Side Cars, Recommended Practice, MC-1A. Covers inflation pressures for various loads for various sizes of tires.

Tire and Rim Assn., Inc. Passenger Car Handbook, 1944. Tires for Passenger Cars and House Trailers, Standard PC-1. Tire loads at various inflation pressures for various sizes of tires together with recommended practice.

Tire and Rim Assn., Inc. Passenger Car Handbook, 1944. Tires for Slow Speed Industrial Vehicles Under 10 Miles Per Hour for Use on Factory Floors and Smooth Surfaces, Recommended Practice, PI-1A. Gives maximum load and inflation pressures for 2, 4, 6, 8, and 10-ply tires of various sizes.

Tire and Rim Assn., Inc. Truck-Bus Handbook, 1944. Tires for Earth-Moving Vehicles, Recommended Practice Table EM-2B. For maximum speed of 10 miles per hour. Gives tire size, ply rating, and tire loads at various inflation pressures for tires from 6.50-20 to 30.00-40.

Tire and Rim Assn., Inc. Truck-Bus Handbook, 1944. Tires for Earth-Moving Vehicles, Recommended Practice Table EM-3C. For maximum speed of 25 miles per hour. Gives tire size, ply rating, and tire loads at various inflation pressures from 6.50-20 to 30.00-40.

Tire and Rim Assn., Inc. Truck-Bus Handbook, 1944. Tires for Earth-Moving Vehicles, General Data, Recommended Practice. Gives tire size, ply rating, recommended and permissible rim, maximum tire section, minimum dual spacing, tube size, valve, and flap for tire sizes from 6.50-20 to 30.00-40.

Tire and Rim Assn., Inc. Truck-Bus Handbook, 1944. Tires for Road Graders, Load and Inflation Table RG-3A, Recommended Practice. For maximum speed of 25 miles per hour. Gives tire size, number of plies, and tire loads at various inflation pressures for tires from 6.00-20 to 14.00-20.

Tire and Rim Assn., Inc. Truck-Bus Handbook, 1944. Tires for Light Trucks and House Trailers, Load and Inflation Table LT-1. Gives tire size, number of plies, and tire loads at various inflation pressures for tire sizes 6.00-16 to 7.50-16.

Tire and Rim Assn., Inc. Truck-Bus Handbook, 1944. Tires for Mining and Logging Service on Improved or Maintained Unpaved Roads, Recommended Practice Table ML-1. For maximum speed of 30 miles per hour. Gives tire size, ply rating, load, inflation, recommended and permissible rim, maximum tire section, minimum dual spacing, tube size, valves, and flap for tires from 7.00-20 to 34.00-32.

Tire and Rim Assn., Inc. Truck-Bus Handbook, 1944. Tires for Trucks and Busses in Highway Service. General Data for Tires Mounted on Present Rims—Recommended Practice. Gives table showing tire size, number of plies, recommended and permissible rim, tire width, minimum dual spacing, tube size. valve, and flap for tires from 6.50-17 to 14.00-24.

Tire and Rim Assn., Inc. Truck-Bus Handbook, 1944. Tires for Trucks and Busses in Highway Service. General Data for Tires Mounted on Rims of Advanced Design—Experimental Practice. Gives table showing tire size, number of plies, recommended and permissible rim, tire width, minimum dual spacing, tube size, valve, and flap for tires from 6.50-17 to 14.00-24.

U. S. Gov.. Dept. of Commerce, National Bureau of Standards. Commercial Standard CS-110-43; 1943. Tire Repairs—Vulcanized (Passenger, Truck, and Bus Tires). To provide recognized specifications for the repairing of passenger, truck, and bus tires which have sustained an injury but have many miles of road service left. Covers general requirements for the inspection of the injury to the tire; the minimum acceptable condition of the tire; the method of repair for maximum service; and the recommended wording of a uniform guarantee label.

U. S. Gov., Dept. of commerce, National Bureau of Standards. Technologic Paper T318; 1926. Endurance Tests of Tires. Describes the method developed at the Bureau for an accelerated endurance test for the tire carcass but not including abrasive resistance test of the tread; size of cleats on test drum and the axle loads used in tests were established in cooperation with the Rubber Assn. of America.

U. S. Gov., Joint Army-Navy Specification JAN-P-4; 1944. Packing for Overseas Shipment: Tires, Tubes and Flaps for Vehicles; General Specifications for.

## 206.1 PNEUMATIC TIRE CASINGS FOR AUTOMOBILES

Tire and Rim Assn., Inc. Military Supplement, July 1942. Highway and Mud and Snow Military Tire Balance Limits (Military Standard). Gives tire size, number of plies, and balance limits from 6.00-16, 6 ply to 14.00-24, 16 ply.

Tire and Rim Assn., Inc. Military Supplement, Nov. 1943. Recommended Marking for Tires for All U. S. Armed Forces and Lend-Lease.

Tire and Rim Assn., Inc. Military Supplement, Nov. 1943. Minimum Dual Center Spacings for Combat Tires (Defense Practice). Gives tire size (from 6.00 to 14.00), contour, and spacing.

Tire and Rim Assn., Inc. Military Supplement, Nov. 1943. New Tire Size Standards (Military Standard). Gives size, number of plies, maximum load, inflation, and recommended rim.

Tire and Rim Assn., Inc. Military Supplement, Nov. 1943. Proposed Load-Inflation Table for Commercial Tires (Military Standard). Gives sizes, number of plies, various loads, and inflation.

Tire and Rim Assn., Inc. Military Supplement, Nov. 1943. Service Load and Inflation Table for Combat Tires (Military Standard). Gives tire sizes, loads, and inflation.

Tire and Rim assn., Inc. Military Supplement, Nov. 1943. Combat Tires and Rims (Military Standard). Gives tire size, number of plies, and rim contour from 6.00-16, 6 ply to 14.00-24, 20 ply.

Tire and Rim Assn., Inc. Military Supplement, Nov. 1943. Recommended Maximum Skid Depths for Lend-Lease Cross-Country Tires, Including Runflat Type (Recommended Practice). Gives table showing various tire sizes and maximum skid depths.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Commercial Standard CS-108-43. Treading Automobile and Truck Tires. To provide a nationally recognized specification for treading automobile and truck tires, and covers inspection of the tire to be treaded. Covers definitions, general requirements, preparation of tire, cement, application, curing equipment, thickness of undertread, curing temperature, guarantee, and labeling.

U. S. Gov., Federal Specification ZZ-T-381d; 1941. Amendment 1; 1944. Tires; Pneumatic, Automobile and Motorcycle. Covers five groups—(I) two and four-ply motorcycle tires; four and six-ply passenger car tires for rims 17 in. or greater; (II) passenger car tires for rims 16 in. or less; (III) six and eight-ply truck and bus tires; (IV) ten and twelve-ply truck and bus tires; and (V) fourteen and sixteen-ply truck and bus tires. Gives requirements for material and workmanship, carcass, cushion, tread, sidewall, bead, flap, branding, and details for each group; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Treasury Dept., Procurement Div., 544A; 1942. Tire Retreading, Recapping, and Repairing. Covers: Type I—treading; class a—full retread, class b—full recap, and class c—top cap; and Type II—repairing; class a—sectional repair, class b—reinforcement repair, and class c—spot repairs. Retreading, recapping, and repairing shall be of the type regularly performed for commercial use. Gives requirements for material, curing, molds, tread thickness, undertread, and details for each type and class; inspection and tests; and packaging, packing, and marking.

*References.*—Methods of testing, *see* 206.0, 200; tire fabrics, *see* 303.8; rims, *see* 722.36.

## 206.2 PNEUMATIC TIRE CASINGS FOR MOTOR CYCLES, BICYCLES AND AIRPLANES

Tire and Rim Assn., Inc. Airplane Handbook, 1944. High Pressure Airplane Tires, Recommended Practice, Table AP-1. Gives table of rim and tire dimensions, load ratings, and types of valves for various sizes of landing and tail wheel tires.

Tire and Rim Assn., Inc. Airplane Handbook, 1944. High Pressure Airplane Tires—Service Load and Inflation Tables, Recommended Practice, Table AP-1A. Gives table showing various loads and inflation for various sizes.

Tire and Rim Assn., Inc. Airplane Handbook, 1944. High Pressure Channel Tread Airplane Tires, Recommended Practice, Table AP-1B. Gives table showing tire and rim sizes, rating, and inflated dimensions for channel tread landing wheel tires, extra high pressure channel tread landing wheel tires, and channel tread tail wheel tires.

Tire and Rim Assn., Inc. Airplane Handbook, 1944. High Pressure Channel Tread Airplane Tires Service Load and Inflation Tables, Recommended Practice, Table AP-1C. Gives table showing load and inflation for extra high pressure channel tread landing wheel tires, channel tread landing wheel tires, and channel tread tail wheel tires.

Tire and Rim Assn., Inc. Airplane Handbook, 1944. Low Pressure Airplane Tires, Recommended Practice, Table AP-2. Gives table of rim and tire dimensions, load ratings, and types of valves for various sizes of landing wheel tires, tail wheel tires, and channel tread tail wheel tires.

Tire and Rim Assn., Inc. Airplane Handbook, 1944. Low Pressure Airplane Tires—Service Load and Inflation Tables, Recommended Practice, Table AP-2A. Gives table showing load and inflation for landing wheel tires and tail wheel tires.

Tire and Rim Assn., Inc. Airplane Handbook, 1944. Beaching Gear Tires, Recommended Practice, Table AP-2B. Gives table of rim and tire dimensions, load ratings, and types of valves for various sizes of low pressure main wheel tires, S. C. main wheel tires, low pressure tail wheel tires, and S. C. tail wheel tires.

Tire and Rim Assn., Inc. Airplane Handbook, 1944. Beaching Gear Tires—Service Load and Inflation Tables, Recommended Practice, Table AP-2C. Gives table showing load and inflation for main wheel tires and tail wheel tires.

Tire and Rim Assn., Inc. Airplane Handbook, 1944. Extra Low Pressure Airplane Tires, Recommended Practice, Table AP-3. Gives table of rim and tire dimensions, load ratings, and types of valves for various sizes of landing wheel tires and tail wheel tires.

Tire and Rim Assn., Inc. Airplane Handbook, 1944. Extra Low Pressure Airplane Tires Service Load and Inflation Tables, Recommended Practice, Table AP-3A. Gives table showing load and inflation for landing wheel tires and tail wheel tires.

Tire and Rim Assn., Inc. Airplane Handbook, 1944. Smooth Contour Airplane Tires, Recommended Practice, Table AP-5. Gives table of rim and tire dimensions, load ratings, and types of valves for various sizes of landing wheel tires and tail wheel tires.

Tire and Rim Assn., Inc. Airplane Handbook, 1944. Smooth Contour Airplane Tires Service Load and

Inflation Tables, Recommended Practice, Table AP-5A. Gives table showing load and inflation for various sizes of landing wheel tires and tail wheel tires.

Tire and Rim Assn., Inc. Airplane Handbook, 1944. Smooth Contour Channel Tread Tail Wheel Tires, Recommended Practice, Table AP-5B. Gives table of rim and tire dimensions, load ratings, and types of valves for various sizes of tires.

Tire and Rim Assn., Inc. Airplane Handbook, 1944. Smooth Contour Channel Tread Tail Wheel Tires Service Load and Inflation Tables, Recommended Practice, Table AP-5C. Gives table showing load and inflation for various sizes of tires.

Tire and Rim Assn., Inc. Airplane Handbook, 1944. Airplane Nose Wheel Tires, Recommended Practice, Table AP-6. Gives table of rim and tire dimensions, load ratings, and types of valves for various sizes of high pressure tires, low pressure tires, S. C. tires, low profile tires, and extra high pressure channel tires.

Tire and Rim Assn., Inc. Military Supplement, Nov. 1943. Recommended Marking for Tires for All U. S. Armed Forces and Lend-Lease.

Tire and Rim Assn., Inc. Truck-Bus Handbook, 1944. Tires for Light Trucks and House Trailers. General Data for Tires Mounted on Tapered Bead Seat Rims, Recommended Practice. Gives table showing tire size, number of plies, recommended and permmssible rim, maximum tire section, minimum dual spacing, tube size, and valve.

Tire and Rim Assn., Inc. Truck-Bus Handbook, 1944. Tires for Low Platform Trailers, Mobile Cranes, Shovels and Mining Cars. Recommended Practice, Table LP-1B. For maximum speed of 10 miles per hour on improved roads. Gives tire size, number of plies, load, inflation, recommended and permissible rim, maximum tire section, tube size, valve, and flap for tires from 6.00-20 to 14.00-24.

Tire and Rim Assn., Inc. Truck-Bus Handbook, 1944. Tires for Trucks and Busses in Highway Service. Load and Inflation Table TB-2B. Gives tire sizes, number of plies, and tire loads at various inflation pressures.

U. S. Gov., Army Air Forces. Specification 26589; 1943. Casings; Aircraft Landing and Auxiliary (Synthetic Tread).

U. S. Gov., Army-Navy Aeronautical Specification AN-C-55d; 1944. Casings; Aircraft Landing, Nose, Tail, and Beaching Tire.

U. S. Gov., Army-Navy Aeronautical Specification AN-C-82b; 1944. Casings; Repair and Treading of Used Aircraft Landing, Nose, Tail, and Beaching Tire.

U. S. Gov., Army-Navy Aeronautical Specification AN-R-18; 1944. Repair and Treading Materials; Aircraft Tire and Inner Tube.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specifications CAA-513 for Retreading and Recapping Tires.

U. S. Gov. Federal Specification ZZ-T-401a; 1941. Amendment 1; 1944. Tires and Tubes (Inner); Bicycles. Covers three types—(I) single tube, (II) clincher casings—class A, pneumatic bicycle casings, and class B, motor bike casings, and (III) wire edged casings; and four inner tube sizes—endless and circular molded. Gives requirements for tires and casings, tubes, synthetic rubber, material, guarantee, branding, design, and details for each type and class; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

*References.*—*See* references under 206.1; rim, *see* 722.36; airplane rims *see* 724.23.

## 206.3 INNER TUBES FOR PNEUMATIC TIRES FOR AUTOMOBILES

Tire and Rim Assn., Inc. Military Supplement, Nov. 1943. Tube Valves and Fittings for Tire Assemblies Using Beadlocks (Military Standard). Gives tire sizes, rim contour, valve number, vertical, bends, horizontal, tip end, bridge washer, hexagon nut, valve lock, and valve cap. Covers rubber valves, metal valves, and optional valves.

Tire and Rim Assn., Inc. Military Supplement, Nov. 1943. Tube Valve and Fittings for Lend-Lease Runflat Tire Assemblies Using Metal Beadlocks (Military Standard). Gives table showing various tire sizes, wheel sizes, valve numbers, and dimensions.

Tire and Rim Assn., Inc. Military Supplement, Nov. 1943. Beadlock Valve Hole Details (Military Standard). Gives diagrammatic dimensional drawings.

Tire and Rim Assn., Inc. Military Supplement, Nov. 1943. Effective Vertical Valve Dimensions Relative to Original Vertical Dimension (Military Standard). Gives diagrammatical drawing and dimensions.

Tire and Rim Assn., Inc. Military Supplement, Nov. 1943. Repair Valve Stems For Convertible Valves (Military Standard). For tires used without beadlocks and for tires used with beadlocks.

Tire and Rim Assn., Inc. Passenger Car Handbook, 1944. Metal Valves for Tires Shown in This Handbook. Gives drawings with dimensions for five types.

Tire and Rim Assn., Inc. Passenger Car Handbook, 1944. Rubber Valves for Tires Shown in This Handbook. Gives drawings with dimensions for four types.

U. S. Gov., Federal Specification ZZ-T-721c; 1941. Tubes; Automobile and Motorcycle, Inner. Gives chemical, physical, and dimensional requirements; finished diameter, volume and length of inner tubes; and methods of sampling, inspection, and tests. Emergency Alternate Federal Specification E-ZZ-T-721c; 1942 (issued by Procurement Div., Treasury Dept., U. S. Gov.) changes requirements for finished diameter, volume, length, and strength of splice.

U. S. Gov. Federal Specification ZZ-T-766; 1935. Amendment 1; 1941. Tubes; Inner, Puncture-Sealing. Covers two types—(I) compressing the rubber to fill hole, and (II) by effecting a seal through the use of plastic type rubber compound placed in the tread portion of the tube. Gives physical, chemical, and dimensional requirements; puncture sealing test; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

*References.*—Methods of testing, *see* 206.0, 200.

## 206.4 INNER TUBES FOR PNEUMATIC TIRES OTHER THAN AUTOMOBILES

Tire and Rim Assn., Inc. Agricultural Handbook, 1944. Metal Valves Used With Tractor and Implement Tires, 1944. Dimensional drawings of various types.

Tire and Rim Assn., Inc. Agricultural Handbook, 1944. Rubber Valves Used With Tractor and Implement Tires, 1944. Dimensional drawings of various types.

Tire and Rim Assn., Inc. Airplane Handbook, 1944. Airplane Valves in Finished Form as Installed on Wheels. Gives drawings with dimensions for various sizes of rubber covered type, rubber base (non-convertible type), and rubber base (convertible type), also valve fittings including bridge washers, ring washers, rim washers, hex nuts, lock nuts, wing nuts, rim slot lugs, and valve caps.

Tire and Rim Assn., Inc. Truck-Bus Handbook, 1944. Convertible Valves. Gives drawings with dimensions for six types.

Tire and Rim Assn., Inc. Truck-Bus Handbook, 1944. Convertible Valve Dimension Chart. For use in converting single bend valves into other shapes. Gives drawing with tables showing tool setting and dimensions.

Tire and Rim Assn., Inc. Truck-Bus Handbook, 1944. Straight Valves. Gives drawings with dimensions for six types.

U. S. Gov., Army Air Forces. Specification 26563-B; 1942. Tube; Inner, Dual Seal (Smooth Contour for Aircraft Nose Wheels).

U. S. Gov., Army Air Forces. Specification 26582 (1); 1942. Tubes; Inner, Repair of (for Aircraft Use).

U. S. Gov., Army-Navy Aeronautical Specification AN-C-120-1; 1944. Caps; High Pressure Air Valve.

U. S. Gov., Army-Navy Aeronautical Specification AN-I-14a; 1944. Inner Tubes; Aircraft Landing, Nose, Tail, and Beaching Tire.

U. S. Gov., Army-Navy Aeronautical Specification AN-R-18; 1944. Repair and Treading Materials; Aircraft Tire and Inner Tube.

*References.*—Methods of testing, *see* 206.0, 200.

## 206.5 SOLID TIRES FOR AUTOMOBILES AND TRUCKS

Tire and Rim Assn., Inc. Passenger Car Handbook, 1944. Industrial Truck and Trailer Solid Tires (Pressed-On and Cured-On Types). Gives table of maximum loads of various diameters of tires at maximum speed of 8 miles an hour.

Tire and Rim Assn., Inc. Passenger Car Handbook, 1944. Standard Industrial Truck and Trailer Solid Tire Sizes for Original Equipment. Gives sizes of tires for pressed-on and cured-on types. These sizes conform to Simplified Practice Recommendation R103-33, U. S. Dept. of Commerce, National Bureau of Standards.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R103-33; 1933. Industrial Truck and Trailer Solid Tires. This recommendation establishes a schedule of stock sizes of industrial truck solid tires of the pressed-on type, and stock sizes for industrial truck and trailer solid tires of the cured-on type. Initiated by Tire and Rim Assn., Inc.

U. S. Gov., Federal Specification ZZ-T-391; 1930. Amendment 2; 1937. Tires; Solid, Industrial and Truck. Covers the pressed-on type, with channel base band conforming to the Tire and Rim Assn. standards adopted by the Society of Automotive Engineers. Gives requirements for rubber tread stock, construction, dimensions, base band, and warranty; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

*References.*—Methods of testing, *see* 206.0, 200; rims. *see* 722.36.

## 206.9 MISCELLANEOUS TIRES

U. S. Gov., U. S. Army, Ordnance Dept. Specification 60-96-2; 1944. Tires; Bogie, Roller, and Idler; Rubber (Natural and Synthetic).

# 207. RUBBER AND BALATA BELTING, PACKING, AND GASKETS

## 207.0 GENERAL ITEMS

American Society for Testing Materials, D378-41; 1941. Methods of Testing Flat Rubber Belting. Covers the test procedure for evaluating the physical properties of the flat type of rubber belting which contains cotton duck reinforcement. The term "rubber" as used in these methods includes synthetic compounds as well as compounds of natural rubber. Such belting includes the types used for transmission of power or conveying and elevating material, and is classified as: Friction surface belt (possessing no distinct rubber cover other than that resulting from the rubber frictioning process); rubber covered belt (possessing a distinct rubber cover extending over the outside and around the edges of the belt); and fabric surface belt (possessing at least one face of plain uncoated duck). General methods, sampling, measurements of dimensions, test conditions, number of tests, tension tests of rubber parts, oil immersion tests, adhesion tests, beading test, tension tests of belting, and inspection and rejection.

Rubber Manufacturers Assn., Inc. Specification Data Book. Section I—Belting. Includes—(A) standard specifications for conveyor belt (conveying bulk material, coal, ore, cement, etc.); (B) supplement to standard specifications for conveyor belt—classifications for conveyor belt standards; (C) standard specifications for general elevator belting (elevating ore, rock, sand, gravel, etc.); (D) supplement to standard specifications for general elevator belting—classification of general elevator belting standards; (E) standard specifications for conveyor and elevator belting (package conveyors, grain conveyors or elevators); (F) standard specifications for railroad axle lighting belt; (G) width tolerances on transmission belt.

Rubber Manufacturers Assn., Inc. Specification Data Book. Section III—Methods of Test. Recommends American Society for Testing Materials test methods for use in the testing of belting and hose.

## 207.1 CONVEYOR BELTING

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, 1938. Conveyor Belts (Rubber). Covers definition, forms, method of manufacture, properties, specifications, tests, uses, substitutes, and packing.

U. S. Gov., Federal Specification ZZ-B-206; 1933. Amendment 4; 1944. Belting; Conveyor, Rubber. Covers four types—(A) smooth rubber cover on both sides; (B) smooth rubber cover on pulley side, "rough top" rubber cover on carrying side; (C) friction surface on both sides; and (D) friction surface on pulley side and "rough top" rubber cover on carrying side. Gives requirements for material, workmanship, ply, tolerances, fasteners, and details for each type; methods of sampling, inspection, and tests; and packaging, packing, and marking.

### 207.2 ELEVATOR BELTING

Rubber Manufacturers' Assn. Specifications for Conveyor, Elevator, Grader, and Other Material Conveying Belts and Flat Transmission Belt (Undated).

### 207.3 TRANSMISSION BELTING

American Petroleum Institute, Div. of Production, Standard No. 1; 1940. Belting Specification. Includes leather, impregnated stitched cotton fabric, solid woven hair, solid woven cotton, balata, rubber, cord, and V-belts and sheaves. Gives physical and dimensional limits, tensile strength, elongation under prescribed loads, and permissible variations. Also adhesion between the plies of rubber and balata belting requirements and methods of test.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, 1938. Transmission Belting; Rubber. Covers definition, forms, method of manufacture, properties, specifications, tests, uses, substitutes, and packing.

U. S. Gov., Treasury Dept., Procurement Div., No. 578; 1942. Belting; Power Transmission, Rubber and Fabric, "V" Type (Industrial). Shall be made from cleaned cotton, of synthetic fibers, and rubber. Rubber shall include synthetic as well as natural rubber compounds. Gives requirements for construction, outer section, center section, inner section, rubber compound, exterior surfaces, outer face, sides, pulley face, physical characteristics, tolerance, and friction; methods of sampling, inspection, and testing; and packaging, packing, and marking.

*References.*—Methods of testing, *see* 200; belt duck tolerances, *see* 207.0; leather belting, *see* 066.3; cotton belting, *see* 314.1.

### 207.4 PACKING AND GASKETS

*References.*—Rubber gaskets, rubber packing, *see* 707.13, 707.24.

## 208. MISCELLANEOUS RUBBER PRODUCTS

### 208.1 RUBBER FLOOR COVERINGS

American Hospital Assn., 25-10. Rubber Floor Tile. Covers one type and one grade. Based on U. S. Gov. Federal Specifications ZZ-T-301 for Rubber Floor Tile (referred to below) and Federal Specification ZZ-R-601a for General Specifications (Methods of Physical Tests and Chemical Analyses) Rubber Goods.

American Hospital Assn., 61-31. Rubber Mats for Shower Stalls. Covers one type, grade, and class. Based on U. S. Gov., Navy Dept., Specification 27 M 12 for Rubber Mats for Shower Stalls (referred to below) and Federal Specification ZZ-R-601a for General Specifications (Methods of Physical Tests and Chemical Analyses) Rubber Goods.

American Hospital Assn., 61-34. Rubber Matting. Covers one grade and two types. Based on U. S. Gov. Federal Specifications ZZ-M-71 for Rubber Matting (referred to below), ZZ-R-601a for General Specifications (Methods of Physical Testing and Chemical Analyses) Rubber Goods, and CCC-T-191a for General Specifications Test Methods Textiles.

American Society for Testing Materials, D178-24; 1924. American Standards Assn., C59.4-1935. Rubber Matting for Use Around Electrical Apparatus or Circuits Not Exceeding 3,000 Volts to Ground. Construction, tensile strength and elongation requirements, test requirements for voltage and dielectric strength tests, and minimum thickness.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Building Materials and Structures Report BMS14; 1939. Indentation and Recovery of Low-Cost Floor Coverings. Indentation and recovery determinations for loads ranging from 25 lb. to 200 lb. on a flat-ended pin 1/4 in. in diameter were made on 23 floor coverings at a relative humidity of 65 percent and temperature of 72° F. Indentation readings were taken for each load at intervals of time up to 30 min. and then recovery readings at intervals of time up to 120 min. Various types of floor coverings were tested, such as asphalt tile, pressed fiber board, linoleums, felt base floor coverings having various wearing surfaces—rubber and wood. A description of the apparatus and the procedure used are given. The results are presented in graphic form to show the relative merits of the various floor coverings with respect to initial and 30-min. indentation under various loads and the recovery after removal of the load.

U. S. Gov. Federal Specification ZZ-F-461; 1936. Amendment 1; 1938. Floor-Covering; Rubber, Sheet. Covers one grade, made of rubber compound and cotton sheeting. Gives requirements for design, surface, width and thickness, hardness, and flexibility; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking. Emergency Alternate Federal Specification E-ZZ-F-461, Mar. 1943, (issued by Procurement Div., Treasury Dept., U. S. Gov.). Requirements for this specification are covered by Federal Specification LLL-F-471, Floor Covering; Felt Back.

U. S. Gov., Federal Specification ZZ-M-46; 1940. Mats; Floor, Rubber, Link-Type. Covers one grade and two classes—(A) made of rubber compound and (B) made of a rubberized fabric. Gives requirements for material, workmanship, odor, staining, weight, links, design of mats, dimensions, color, and accelerated aging; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking. Emergency Alternate Federal Specification E-ZZ-M-46; 1942, requirements covered by Federal Specification DDD-M-156, Mats; Door, Fiber.

U. S. Gov., Federal Specification ZZ-M-61; 1939. Mats; Rubber, Cuspidor. Covers one grade and two types—(I) without cotton backing or insertion and (II) with cotton backing or insertion; either corrugated or smooth surface. Gives requirements for size, physical properties, cotton sheeting, and friction; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Federal Specification ZZ-M-71; 1933. Amendment 2; 1941. Matting; Rubber. Covers one grade and two types—(A) longitudinal corrugations and (B) diamond-shaped or knob-shaped corrugations. Gives requirements for design, surface, width, thickness, and rubber compound; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Federal Specification ZZ-M-81; 1933. Amendment 2; 1941. Matting; Rubber (for Use Around Electrical Apparatus or Circuits Not Exceeding 3,000 Volts to Ground). Covers a single grade—made of a rubber compound and cotton fabric. Gives

requirements for design, surface, dimensions, rubber compound, fabric, friction, flexibility, voltage, and dielectric strength tests; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Federal Specification ZZ-T-301; 1938. Tile; Floor, Rubber. Covers a single grade—consisting of a vulcanized rubber compound with or without fabric. Gives requirements for design, color and pattern, thickness, size of tile, modulus at 10 percent elongation, hardness, fabric, and friction; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking. Emergency Alternate Federal Specification E-ZZ-T-301; 1942, (issued by Procurement Div., Treasury Dept., U. S. Gov.) substitutes Federal Specification LLL-L-361, Linoleum; Plain, Inlaid, and Printed.

U. S. Gov., Navy Dept. Specification 27 M 16; 1943. Matting; Rubber, Natural or Synthetic (for General Purposes Other Than for Use on Weather Decks and Around Electrical Apparatus).

U. S. Gov., Navy Dept. Specification 27 M 17; 1944. Matting; Rubber (Reclaimed) (for Use Around Electrical Apparatus or Circuits Not Exceeding 3,000 Volts to Ground).

U. S. Gov., Navy Dept. Specification 27 M 20; 1943. Matting; Synthetic-Rubber and Plastic-Elastomer (for Use Around Electrical Apparatus or Circuits Not Exceeding 3,000 Volts to Ground).

U. S. Gov., U. S. Army, Medical Dept. Specification 20-107A; 1941. Mat; Rubber, for Dental Chair.

*References.*—Methods of testing, *see* 200.

## 208.2 RUBBER BANDS

U. S. Gov., Federal Specification ZZ-B-111; 1931. Amendment 2; 1941. Bands; Rubber. Covers one grade. Gives requirements for dimensions, weight, physical properties, and chemical composition; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

*References.*—Methods of testing, *see* 200.

## 208.3 RUBBER CEMENT AND COMPOUNDS

*References.*—Rubber cement, *see* 204.92

## 208.4 RUBBER INSULATIONS

American Society for Testing Materials, D532-39T; 1939. Tentative Specifications for Rubber Sheath Compound for Electrical Insulated Cords and Cables. Covers a durable vulcanized rubber compound for use as the outer covering or sheath on insulated electrical cords and cables. Requirements for sampling, physical properties, tear test, and for other tests using A.S.T.M. Method D470. A.S.T.M. Emergency Alternate Provision EA-D-532; 1942, affected section 3 (physical requirements), section 6 (test specimens), and section 8 (methods of testing).

*References.*—Rubber battery jars, *see* 205.1; rubber floor covering, *see* 208.1; rubber gloves, *see* 203.2; rubber covering for electric wires, *see* 719.55; rubber tape, friction tape, *see* 719.55, 719.56.

## 208.5 RUBBER TUBING

U. S. Gov., U. S. Army, Army Air Forces. Specification 20-28; 1926. Tubing; Manometer, for Balloon and Airship Use.

*References.*—Rubber tubing, *see* 204.6.

## 208.6 RUBBER JAR RINGS

U. S. Gov., Federal Specification ZZ-R-351; 1934. Rings; Jar, Rubber. Covers the "lipped" type and a single grade. Gives requirements for dimensions, strength and elongation, accelerated aging and steam-pressure tests, and labels; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

## 208.7 RUBBER MATTRESSES AND CUSHIONS

U. S. Gov., U. S. Maritime Commission. Specification 27-MC-25a; 1941. Mattresses; Latex Rubber Foam. Shall be that known as "latex rubber foam." Grade be as described herein. Thickness shall be 3, 4, 5, and 6 in., and sizes shall be as specified. Gives requirements for rubber, ticking, zippers, snap fasteners, thread, workmanship, odor, structure, accelerated aging, washability, cover, identification, sampling, inspection, and tests.

U. S. Gov., U. S. Maritime Commission. Specification 27-MC-26; 1941. Cushions and Cushioning Material; Latex Rubber Foam. The type shall be that known as "latex rubber foam"; class A—cored cushions, class B—slab cushioning material, and sizes and shapes shall be as specified. Gives requirements for material, workmanship, odor, structure, accelerated aging, washability; tolerances for length, width, and thickness; models, sampling, inspection, and tests.

## 208.8 RUBBER MATS

U. S. Gov. U. S. Maritime Commission. Specification 27-MC-39a; 1942. Mats; Rubber, for Tub or Shower Stall. Mats shall be of the suction cup, non-skid type and there shall be but one grade. Gives requirements for materials, workmanship, size, shape, color, surfaces, suction cups, perforations, weight, rubber compound, sampling, inspection, and tests.

## 208.9 MISCELLANEOUS MECHANICAL RUBBER GOODS

### 208.91 Bumpers of Rubber

### 208.92 Ear Cushions

### 208.93 Expansion Joints, Machinery Mountings

American Assn. of State Highway Officials, M58-42. Standard Specifications for Preformed Expansion Joint Fillers for Concrete (Cork, Self-Expanding Cork, Sponge Rubber, and Cork-Rubber Types). Gives scope, manufacture, character of strips, properties, dimensions and permissible variations, packing, sampling, and methods of testing.

American Society for Testing Materials, D544-41; 1941. Preformed Expansion Joint Fillers for Concrete (Nonextruding and Resilient Types). Includes cork, self-expanding cork, sponge rubber, and cork rubber. Manufacture, character of strips, properties, dimensions and permissible variations, packing, sampling, and methods of testing.

American Society for Testing Materials, D545-41; 1941. Methods of Testing Preformed Expansion Joint Fillers for Concrete (Nonextruding and Resilient Types). Procedures covering tests for expansion in boiler water, recovery, compression, extrusion, boiling in hydrochloric acid, and weathering.

U. S. Gov., Federal Specification HH-F-334; 1941. Filler; Expansion-Joint, Preformed, Nonextruding-Bituminous-Fiber Type (for Concrete). Gives

requirements for material, recovery, compression, loss of weight, and extrusion; methods of sampling and testing; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification HH-F-341; 1940. Filler, Expansion-Joint, Preformed; Nonextruding and Resilient Types (for Concrete). Covers four types—(I) cork, (II) sponge rubber, (III) self-expanding cork, and (IV) cork-rubber. Gives requirements for materials, recovery, compression, extrusion, and expansion; methods of sampling and testing; and requirements for packaging, packing, and marking for shipment.

### 208.94 Pads

U. S. Gov., Treasury Dept., Procurement Div., No. 522; 1941. Pads; Typewriter, Sponge Rubber. Gives requirements for material, construction, alternate constructions, shape and size, color, density of rubber, compressibility, odor, and accelerated aging; methods of sampling, inspection, and test; and packaging, packing, marking.

*References.*—Rubber surgical pads, *see* 204.53.

### 208.95 Rubber Washers

Underwriters' Laboratories, Inc. Specification for Rubber Discs for Dry Pipe Valves, 1936. Requires that rubber must not adhere to metal seat rings and must withstand cutting and abrasion. Chemical and physical tests.

U. S. Gov., Navy Dept. Specification 33D1; 1945. Disks; Rubber, Cellular, Hard.

## 209. MISCELLANEOUS RUBBER MANUFACTURES

### 209.1 DREDGING SLEEVES

U. S. Gov., Federal Specification ZZ-S-451; 1933. Sleeves; Dredging. Covers the "wrapped" type and a single grade. Gives requirements for construction, tube, cover, duck, weight, thread count, breaking strength, rubber layer, rubber end caps, end covers, and physical requirements; methods of sampling, inspection, and tests; and packaging, packing, and marking. Emergency Alternate Federal Specification E-ZZ-S-451, July 1943, changes chemical and physical requirements.

*References.*—Methods of testing, *see* 200; hose duck, *see* 202.0.

### 209.2 HORSESHOE PADS

### 209.4 PLUMBERS' FORCE CUPS

U. S. Gov., Federal Specification ZZ-F-566; 1935. Amendment 1; 1944. Force-Cups; Plumbers'. Covers two types—(A) long handled and (B) short handled. Gives requirements for material, workmanship, construction, marking, tolerances, and details for each type; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., U. S. Maritime Commission. Specification 41-MC-2a; 1942. Force Cups; Plumber's. There shall be but one type and grade. Gives requirements for rubber, handles, workmanship, construction, rubber (accelerated aging), marking, sampling, inspection, and method of test.

### 209.5 SQUILGEES

American Hospital Assn., 34-136. Squilgees. Covers one type and grade. Based on U. S. Gov., Navy Dept., Specifications 38 S 2a. Squilgees.

U. S. Gov., Treasury Dept., Procurement Div., No. 458; 1941. Squilgees; for Floors and Windows. Covers two types—(I) wood block with wood handle, for floors, and (II) brass or bronze ferrule and frame, with wood handle, for windows. Gives requirements for handles, rubber blades, drawings, blocks, ferrule, sizes, metal strips, channel metal, rubber blades, screws, handles, and finish; methods of sampling, inspection, and tests; and packaging, packing, and marking.

### 209.6 WEATHER STRIPPING

### 209.7 GROMMETS OR BUSHINGS

U. S. Gov., Army-Navy Aeronautical Specification AN-G-21-1; 1944. Grommets; Elastic.

*References.*—Bushings, *see* 710.

### 209.8 RUBBER HOSE TIPS

### 209.9 MISCELLANEOUS RUBBER GOODS

### 209.91 Rubber Balls

National Collegiate Athletic Assn. Official Lacrosse Guide, LC44. Ball. Includes requirements for material, circumference, weight, and height of bounce.

U. S. Golf Assn. Rules of Golf, 1944-45. Includes requirements for form and make of golf clubs and balls.

### 209.92 Ice Hockey Puck

National Collegiate Athletic Assn. Official Ice Hockey Guide, IH45. Puck for Ice Hockey. Includes requirements for material (vulcanized black rubber), thickness, diameter, and weight.

### 209.99 Rubber Goods Not Elsewhere Classified

Society of Automotive Engineers. 1942 Handbook, Section 4—Fabricated Materials. Includes SAE Standard Rubber Compounds for Engine Mounts. Table of physical characteristics for ten classifications of rubber compounds.

U. S. Gov., Dept. of Agriculture, Forest Service. Specifications MSF-161. Guard; Saw, Rubber.

U. S. Gov., Navy Dept. Specification 33B3; 1944. Buoyancy-Material; Hard, Cellular, Rubber.

U. S. Gov., Navy Dept. Specification 33L2b; 1944. Lining; Rubber (Synthetic) for Salt-Water Lines.

U. S. Gov., Navy Dept. Specification 33L4a; 1942. Lining; Rubber, for Battery Compartments of Submarines.

U. S. Gov., U. S. Army, Army Air Forces. Specification 20-81; 1928. Ring; Molded Rubber.

U. S. Gov., U. S. Army, Army Air Forces. Specification 20-82A; 1938. Rubber; Round Strip.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 20-101A; 1942. Rubber; Molded.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 89-3837A; 1941. Plug; Rubber, Submarine Mine.

U. S. Gov., U. S. Army. Ordnance Dept. Specification 89-3953; 1940. Cushion; Rubber, Firing-Device.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-567; 1931. Syringe; Type M-21, Bulb Type for Filling Storage Batteries.

U. S. Gov., U. S. Army, Signal Corps. Specification 74-26; 1939. Balloon; Meteorological, Pilot, Types ML-50, ML-51, and ML-64.

*References.*—Rubber pump-valves, *see* 707.3: rubber gas masks. *see* 993.

# 210-219 GUMS, RESINS, AND BALSAMS

## 211. TURPENTINE TAR AND PITCH

### 211.0 GENERAL ITEMS

### 211.1 TURPENTINE

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary Seventh Edition, 1942. Turpentine. Gum Thus or Gum Turpentine. Gives chemical composition, description, solubility, reaction, alcohol-insoluble substances, and preparation.

American Society for Testing Materials, D 13-34; 1934. American Assn. of State Highway Officials, M127-42. American Standard Assn., K32-1937. Spirits of Turpentine. For gum spirits of turpentine, steam-distilled wood turpentine, sulfate wood turpentine, and destructively-distilled wood turpentine. Gives physical requirements, appearance, color, odor, and methods of testing.

American Society for Testing Materials, D 233-44T; 1944. Tentative Methods of Sampling and Testing Turpentine. Gives detailed methods for sampling during loading of tank cars, from loaded tank car or other large vessel, barrels, and small containers. Gives procedure for determination of water, appearance, color, odor, specific gravity, refraction index, distillation range, table of barometric corrections, polymerization, and apparatus required.

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis, 1940. Turpentine Oil (Spirits of Turpentine). Tentative method for determination of color, specific gravity, refractive index, distillation, official method for determination of mineral oil.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, Volume 2; 1944. Turpentine. Covers definition, constants, derivation, uses, grades, substitutes, and hazards.

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. Service and Regulatory Announcements, Naval Stores No. 1; 1938. Regulations for the Enforcement of the Naval Stores Act. Includes Turpentine. Covers gum spirits of turpentine, steam-distilled wood turpentine, destructively-distilled wood turpentine, and sulphate wood turpentine. Regulations include—definition of terms, scope of the act, establishing new or modified standards, loan and care of duplicates of U. S. rosin standards, inspectors, samples (analysis, classification, and grading), certificates, sampling, marking containers of naval stores (cost of analysis, classification, and grading), payment for services (labels, invoices, advertising, and shipping documents), hearings, publication of findings, and The Naval Stores Act. Mar. 3, 1923.

### 211.2 PINE-TAR OIL

### 211.3 PINE OIL

American Hospital Assn., 16-19. Pine Oil Disinfectant. Based on U. S. Gov., Dept. of Commerce, National Bureau of Standards, Commercial Standard CS69-38 for Pine Oil Disinfectant, referred to below.

American Society for Testing Materials, D 802-44 T, 1944. Tentative Methods of Sampling and Testing Pine Oil. Covers scope, sampling, appearance, specific gravity, refractive index, distillation, polymerization, moisture, and total terpene alcohols.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Commercial Standard CS69-38; 1938. Pine Oil Disinfectant. This standard covers materials, physical and chemical properties, and certification of quality of pine oil disinfectant. Initiated by the National Assn. of Insecticide and Disinfectant Manufacturers.

U. S. Gov., Navy Dept. Specification 52012; 1923. Oil; Pine.

### 211.4 TAR (NOT INCLUDING COAL TAR)

U. S. Gov., Federal Specification JJJ-T-121; 1942. Tar; Pine, Technical Grade. Covers one type and one grade. Gives requirements for color of film, distillation range, and viscosity; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Pine Tar (Pix Liquida). Description, solubility, identification, reaction, ash, and storage. U.S.P. products of pine tar—Oleum Picis Rectificatum, Unguentum Picis Pini.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Pine Tar Ointment. Preparation.

### 211.5 TALL OIL

American Society for Testing Materials, D 803-44 T, 1944. Tentative Methods of Testing Tall Oil. Covers scope, sampling, conditioning, viscosity, pour point, flash and fire points, color, moisture, acid number, saponification number, rosin acids number, rosin acids, qualitative test for rosin, unsaponifiable matter, and fatty acids.

American Society for Testing Materials, D 804-44 T, 1944. Tentative Definition of Terms Relating to Tall Oil. Discusses definitions relating to tall oil and defines rosin acids, skimmings, tall oil, tall oil abietic acid, tall oil pitch, and tall oil soap.

## 212. CAMPHOR

American Institute of Homoeopathy. Homoeopathic Pharmacopoeia of U. S., 1941. Camphor. Chemical symbol, synonyms, description, and preparations for tincture, dilutions, medications, triturations, and saturated tincture for use in homoeopathic medicines.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Camphor. Description, solubility, specific gravity, melting point, optical rotation, moisture, non-volatile matter, halogens, and storage. U.S.P. products of camphor—Aqua Camphorae, Linimentum Camphorae, Linimentum Camphorae et Saponis, Linimentum Chloroformi, Spiritus Camphorae, Tinctua Opii Camphorata.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Camphorated Tincture of Opium (Paregoric). Preparation, assay, and alcohol content.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., 1942. Spirit of Camphor. Specific gravity, added water, assay, alcohol content, and storage.

## 213. CHICLE

## 214. BALSAMS

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, Volume 2; 1944. Balsam of Peru. Covers definition, constants, solubility, derivation, uses, grades, containers, and substitutes.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Peruvian Balsam. Description, solubility, specific gravity, reaction, fixed oils, rosin, turpentine, acid value, cinnamein, saponification value, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Storax (Liquid Storax). Description, solubility, loss on drying, rosin or rosin oil, alcohol-insoluble residue, alcohol-soluble residue, acid value, saponification value, and cinnamic acid. U.S.P. product of storax—Tinctura Benzoini Composita.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Tincture of Tolu Balsam (Tolu Tincture). Preparation and alcohol content. U.S.P. product of tincture of tolu balsam—Syrupus Balsami Tolutani.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Tolu Balsam. Description, solubility, reaction, rosin, rosin oil or copaiba, acid value, saponification value, and storage. U.S.P. product of tolu balsam—Syrupus Balsami Tolutani, Tinctura Benzoini Composita, Tinctura Balsami Tolutani.

## 215. VARNISH GUMS AND RESINS

U. S. Gov., Navy Dept. Specification 52G9a; 1932. Gum; Yacca, Red.

*References.*—Varnish gums and resins, *see* 846.6; rosin, *see* 216.

## 216. ROSIN

American Society for Testing Materials, D 269-30; 1930. American Standards Assn., K 21.1-1936. Method of Test for Toluene Insoluble Solid Matter in Rosin (Chiefly Sand, Chips, Dirt, and Bark). Covers the treatment of sample and outlines procedure.

American Society for Testing Materials, D 464-42; 1942. Method of Test for Saponification Number of Rosin. Employs an internal indicator. Is not recommended for use with rosins of grades darker than G.

American Society for Testing Materials, D465-42; 1942. Method of Test for Acid Number of Rosin. Employs an internal indicator. Is not recommended for use with rosins of grades darker than G.

American Society for Testing Materials, D509-44T; 1944. Tentative Methods of Sampling and Grading Rosin. For sampling and determining the grade of rosin delivered in commercial bags, barrels, or drums. Gives apparatus, sampling, grading, and tolerance.

American Society for Testing Materials, E28-42T; 1942. Tentative Method of Test for Softening Point (Ball and Shouldered Ring Apparatus). Applicable to asphalts, tars, pitches, rosins, and most resins—both natural and synthetic. Apparatus, preparation of sample, procedure, softening point, precautions, and reproducibility of results.

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis, 1940. Naval Stores. Rosin. Analytical methods for sampling and determination of acid number, saponification number, toluene-insoluble material, petroleum benzin-insoluble matter, ash, volatile oils, and determination of grade.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, 1938. Rosin. Covers definition, occurrence, constants and properties, solubility, grades, impurities, uses, and marketing.

Technical Assn. of the Pulp and Paper Industry. Analysis of Rosin, Standard T 621 m-42; 1942. Gives various grade classifications, based on color of gum residue. Covers sampling, color, grade, acid number, saponification number, ester number, unsaponifiable matter, ash, and toluene-insoluble matter.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Rosin (Colophony). Description, solubility, specific gravity, ash, reaction, acid value, and storage. U.S.P. product of rosin—Ceratum Resinae.

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. Service and Regulatory Announcements, Naval Stores No. 1; 1938. Regulations for the Enforcement of the Naval Stores Act. Includes rosin. Covers both gum and wood rosin. Regulations include definition of terms, scope of the Act, standards for classification and grading of rosin, establishing new or modified standards, loan and care of duplicates of U. S. Rosin Standards, inspectors, samples (analysis, classification, and grading on request), certificates, sampling, marking containers of Naval Stores (cost of analysis, classification, and grading), payment for services (labels, invoices, advertising, and shipping documents), hearings, publication of findings, and The Naval Stores Act, Mar. 3, 1923.

U. S. Gov., Federal Specification LLL-R-626; 1942. Amendment 1; 1944. Rosin. Covers gum and wood rosin in two types—(I) lump (grades FF, D, E, I, K, N, WG, and WW) and (II) powdered. Gives requirements for color, clarity, toluol-insoluble matter, softening point, and acid value for type I; and toluol-insoluble matter, particle size, and heat test for type II; methods of sampling, inspection, and test; and packaging, packing, and marking for shipment.

U. S. Gov., U. S. Army, Corps of Engineers. Specification 42-6; 1924. Rosin; Powdered, Lithographers'.

U. S. Gov., U. S. Army, Medical Dept. Specification 4-1090; 1939. Rosin; U.S.P.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 50-11-73; 1930. Pitch; Burgundy.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 2-97; 1936. Wax (Saddler's and Stitching).

## 217. MISCELLANEOUS GUMS, BALSAMS, AND RESINS

American Gum Importers Assn. Natural Resins. Handbook, 1939. Basic data on the natural resins, their physical and chemical properties, solubilities in a wide range of paint, varnish, and lacquer solvents and thinners; the compatibility of the natural resins with other resinous products, cellulose derivatives, waxes, pitches, asphalts, drying and nondrying oils; the applications of the resins alone and in combination with other materials in both their original and thermally-processed forms.

American Institute of Homoeopathy. Homoeopathic Pharmacopoeia of the U. S., 1941. Olibanum. Natural order, synonyms, description, and preparation for triturations for use in homoeopathic medicines.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, Volume 2; 1944. Accroides Gum (Acaroid Resin, Yacca Gum, Black Boy Gum). Covers definition, constants, solubility, uses, grades, containers, derivation, and substitutes.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, Volume 2; 1944. Damar. Covers definition, constants, solubility, derivation, grades, containers, and substitutes.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, 1938. Gum Arabic. Covers definition, properties, purity, grades, substitutes, containers, and uses.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, 1938. Gum; Mastic. Covers definition, constants, solubility, grades, containers, and uses.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, Volume 2; 1944. Kauri Gum. Covers definition, constants, solubility, derivation, uses, grades, and containers.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, 1938. Gum; Sandarac. Covers definition, constants, solubility, grades, containers, uses, and substitutes.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, Volume 2; 1944. Resins; Copal. Covers definition, constants, solubility, derivation, uses, grades, containers, and substitutes.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Acacia (Gum Arabic). Description, solubility, identification, optical rotation, water-insoluble residue, starch or dextrin, and tannin-bearing gums. U.S.P. product of acacia—Mucilago Acaciae.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Benzoin. Description, identification, cinnamic acid, benzoic acid assay, and storage. U.S.P. products of benzoin—Tinctura Benzoini, Tincture Benzoini Composita.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Granulated Opium. Preparation, description, assay, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Mucilage of Tragacanth. Preparation and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Mucilage of Acacia (Mucilage of Arabic Gum). Preparation and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Myrrh (Gum Myrrh). Description, identification, and assay. U.S.P. product of myrrh—Tinctura Myrrhae.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Oleoresin of Aspidium (Oleoresin of Male Fern, Oleoresin of Marginal Fern). Description, solubility, specific gravity, assay, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Opium (Gum Opium). Description and assay. U.S.P. products of opium—Aethylmorphinae Hydrochloridum, Apomorphinae Hydrochloridum, Codeina, Codeinae Phosphas, Codeinae Sulfas, Dihydromorphinonae Hydrochloridum, Morphinae Sulfas, Opium Granulatum, Opium Pulveratum, Tinctura Opii, Tinctura Opii Camphorata, Tabellae Codeinae Phosphatis, Tabellae Codeinae Sulfatis, Tabellae Dihydromorphinonae Hydrochloridi, Tabellae Morphinae Sulfatis.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Powdered Opium. Preparation, description, assay, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Tincture of Benzoin. Preparation and alcohol content. Compound Tincture of Benzoin. Preparation and alcohol content.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Tincture of Myrrh. Preparation and alcohol content.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Tragacanth (Gum Tragacanth). Description, identification, and karaya gum. U.S.P. product of tragacanth—Mucilago Tragacanthae.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Circular C411; 1936. Organic Plastics. This circular presents a summary of information assembled regarding those organic plastic materials which are of chief industrial significance, including the raw materials required, the chemical reactions involved, the various methods of processing, and the more important applications. The organic plastics are divided into four principal groups for discussion; namely, the synthetic resins, the natural resins, the cellulose derivatives, and the protein substances. Natural resins of animal, vegetable, and mineral sources are described. The chemistry of the cellulose esters and ethers and cellulose xanthate is outlined. The protein plastics considered include those prepared from casein, blood albumin, and soybeans,

U. S. Gov., Treasury Dept., Procurement Div., No. 481; 1941. Gum Arabic (Acacia). Covers three Classes—(A) granular; (B) lump; and (C) powder; intended for use primarily in photographic and lithographic work and as an adhesive. Gives requirements for water-insoluble residue, total ash, acid-insoluble ash, moisture, tannin-bearing gums, and starch and dextrin; methods of sampling, inspection, and test; and packaging, packing, and marking.

U. S. Gov., Treasury Dept., Procurement Div., No. 598; 1943. Gum Arabic Solution (for) Offset Duplication. Covers one type and one grade intended for use as a "gum" and a protective coating for metal plates in the offset duplicating process. Shall be free from any objectionable odor and gives requirements for appearance and specific gravity; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., U. S. Army, Corps of Engineers. Specification 42.2-24; 1921. Gum; Arabic.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 50-11-15A; 1932. Acacia; Gum Arabic.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 50-11-16A; 1938. Gum Tragacanth.

# 220-229 CRUDE DRUGS AND ESSENTIAL OILS

## 221. CRUDE DRUGS OF VEGETABLE ORIGIN

American Institute of Homoeopathy. Homoeopathic Pharmacopoeia of the United States, 1941. Includes brief definitions of drugs and medicinal substances according to the tenets of homoeopathy; describes preparation processes of bringing crude drugs to the fluid and dry forms; gives requirements for forms of vehicles for prescription; includes practices in the writing of prescriptions; includes standards for the purity and quality of vegetable drugs; and lists several hundred drugs, mostly plant drugs, gives names and synonyms, description of plant, its habitat, the part used for drug purposes, the methods of preparation and standard strengths of tinctures, dilutions, medications, triturations, etc., as used in homoeopathic medicine

*References.*—Medicinal and pharmaceutical preparations, *see* 810-819.

## 222. DRUGS OF VEGETABLE ORIGIN OTHER THAN CRUDE

American Institute of Homoeopathy. Homoeopathic Pharmacopoeia of U. S., 1941. Includes brief definitions of drugs and medicinal substances according to the tenets of homoeopathy; describes preparation processes of bringing crude drugs to the fluid and dry forms; gives requirements for forms of vehicles for prescription; includes practices in the writing of prescriptions; includes standards for the purity and quality of vegetable drugs; and lists several hundred drugs, mostly plant drugs, gives names and synonyms, description of plant, its habitat, the part used for drug purposes, the methods of preparation and standard strengths of tinctures, dilutions, medications, triturations, etc., as used in homoeopathic medicine.

*References.*—Medicinal and pharmaceutical preparations, *see* 810-819.

## 223. ESSENTIAL AND DISTILLED OILS

*References.*—Medicinal oils, *see* 813; vegetable oils, *see* 142.

# 230-239 DYEING AND TANNING MATERIALS OF VEGETABLE ORIGIN

## 231. TANNING MATERIALS

American Leather Chemists Assn. Methods of Sampling and Analysis. Beam House Liquors, 1942. Gives requirements for soak waters, lime liquors, and bate waters.

American Leather Chemists Assn. Methods of Sampling and Analysis. Chrome Tanning Materials, 1938. Gives requirements for one bath chrome liquor analysis (Provisional Method).

American Leather Chemists Assn. Methods of Sampling and Analysis. Vegetable Materials Containing Tannin. Revised, 1942. Gives requirements for sampling, analysis of raw and spent materials, analysis of extract, sugar in tanning materials, general, sheepskin skivers for color testing, analysis of liquor, and total acidity of liquors.

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis, 1940. Tanning Materials, Tentative Methods. Preparation of solution, determination of total solids, soluble solids, insoluble solids, non-tannins, tannin, sugars, sulfite cellulose, for extracts and liquors; for raw and spent materials, determination of moisture, extracting and analysis of extract.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, Volume 2; 1944. Divi Divi. Covers definition, derivation, grades, containers, uses, and substitutes.

*References.*—Synthetic tanning materials, *see* 809.1.

## 232. DYEING MATERIALS

National Assn. of Dyers and Cleaners of the U. S. and Canada. The Spotting Department, 1940. Includes recommendations for dye pads and method of preparing dyes for use with same for spotting department work in dry cleaning.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, Volume 2; 1944. Annatto (Bixine). Covers definition, constants, solubility, derivation and characteristics, grades and forms, containers, uses, and substitutes.

*References.*—Coal-tar dyes, *see* 803.1.

## 233. EXTRACTS FOR DYEING

## 234. TANNING EXTRACTS

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, Volume 2; 1944. Myrobalans and Extract. Covers definition, derivation, grades, uses, containers, and substitutes.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, Volume 2; 1944. Quebracho Extract. Covers definition, constants, solubility, derivation, uses, grades, containers, and substitutes.

*References.*—Tanning materials, *see* 231.

## 240-249 SEEDS

(Except Oil Seeds and Spice Seeds)

### 240. GENERAL ITEMS

U. S. Dept. of Agriculture. Circular 480. Rules and Recommendations for Testing Seeds, July 1938. Adopted by the Assn. of Official Seed Analysts of North America. Gives rules for seed testing (standard analysis, evaluation, and reports) and includes recommendations for testing seeds.

### 241. ALFALFA, CLOVER, AND TIMOTHY SEEDS

### 242. GRASS SEEDS

### 243. FORAGE PLANT SEEDS

### 244. FLOWER SEEDS

### 245. CABBAGE AND TURNIP SEEDS

### 246. GARDEN SEEDS, EXCEPT CABBAGE AND TURNIPS

## 250-259 NURSERY AND GREENHOUSE STOCK

### 250. GENERAL ITEMS

### 251. BULBS AND ROOTS

### 259. MISCELLANEOUS NURSERY AND GREENHOUSE STOCK

American Assn. of Nurserymen. Horticultural Standards, 1940. Covers—deciduous trees, height, measurement, and grading tolerance; height of branching, caliper measurement, and height relationship to caliper of shade trees; and terms for deciduous trees for use other than as shade trees; deciduous shrubs, height measurements for dwarf and for strong growing shrubs, quality definitions, six classifications, and grading tolerance; vines, fast growing, medium growing, clump type, dwarf vines (ground cover), and plants in pots or containers; evergreens, quality definitions, five types of commercial evergreen grades (conifers), five types of commercial broad leaved evergreen grades, height measurement, and grading tolerance; rose grades, tea, hybrid tea and everblooming, rugosa and rugosa hybrids, hybrid perpetual, moss and miscellaneous bush, polyantha (baby roses), and climbing roses; fruit trees—grades, standard and dwarf apple, apricot, sweet and sour cherry, peach, standard and dwarf pear, plum, and quince; small fruit grades, raspberries, transplanted raspberries, blackberries, transplanted blackberries, currants, gooseberries, and grape vines: lining out stock; trees for forest planting, hardwoods and conifers; and recommended balling and burlapping specifications, minimum sizes of balls, ball depths, weight equivalent to ball sizes, and increased ball sizes for collected plants.

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. U. S. Standards for Cut Peonies in the Bud, 1938. Covers three grades—U. S. No.1, U. S. No.2, and unclassified. Gives requirements for each grade, tolerances, standards for bunching, and definitions of terms.

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. U. S. Standards for Asparagus Plumosus, 1930. Reissued, Mar. 1940. Covers three grades—U. S. Fancy, U. S. No.1, and U. S. Commercial. Gives requirements for each grade, sizes (corsage, short, medium, and long), and definitions of size and grade terms.

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. U. S. Standards for Tomato Plants, 1944. Gives requirements for grades, tolerances, standards for bunching, standards for packing, and definitions of terms.

## 260-269 TOBACCO

### 260. GENERAL ITEMS

### 261. TOBACCO, UNMANUFACTURED

American Institute of Homoeopathy. Homoeopathic Pharmacopoeia of U. S., 1941. Tobacco. Natural order, synonyms, description, habitat, history, parts used, and preparation for tincture, dilutions, and medications for use in homoeopathic medicines.

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. Brief Classification of Leaf Tobacco (Covering Classes and Types of Tobacco), 1932. Class 1, flue cured types; class 2, fire cured types; class 3, air cured types; class 4, cigar filler types; class 5, cigar binder types; class 6, cigar wrapper types, miscellaneous types of domestic tobacco, and foreign types.

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. Official Standard Grades for Flue-Cured Tobacco (U. S. Types 11, 12, 13, and 14), Aug. 1936. Covers wrapper grades (A-group), leaf grades (B-group), cutter grades (C-group), lug grades (X-group), and nondescript and scrap (N- and S-groups); defines terms used; and gives grading rules.

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. Official Standard Grades for Fire-Cured Tobacco (U. S. Types 21, 22, 23, and 24), Dec. 1939. Covers wrapper grades (A-group), heavy leaf grades (B-group), thin leaf grades (C-group), short leaf or tips (T-group), lug grades (X-group), and nondescript and scrap (N- and S-groups); defines terms used; and gives grading rules.

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. Official Standard Grades for Burley Tobacco (U. S. Type 31), May 1938. Covers wrapper or fancy cutters and leaf grades (A-group), leaf and filler grades (B-group), lugs or cutters (C-group), granulators or flyers (X-group),

and nondescript and scrap (N- and S-groups); defines terms used; and gives grading rules.

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. Official Standard Grades for Dark Air-Cured Tobacco (U. S. Types 35, 36, and 37), Jan. 1940. Covers wrapper grades (A-group), heavy leaf grades (B-Group), thin leaf grades (C-group), short leaf and tips (T-group), lug grades (X-group), and nondescript and scrap (N- and S-groups); defines terms used; and gives grading rules.

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. Miscellaneous Circular 83; 1926. U. S. Standard Tobacco Sizes. Gives requirements and application of sizes and description of sizing apparatus.

*References.*—Warehousing regulations, *see* 260.

## 262. MANUFACTURES OF TOBACCO

### 262.1 CIGARETTES

### 262.2 CIGARS

### 262.3 CHEWING TOBACCO

### 262.4 NICOTINE INSECTICIDES

*References.*—Nicotine insecticides, *see* 881.24.

# 280-289 STARCH AND VEGETABLE GLUE

## 281. STARCH

American Hospital Assn., 46-19. Laundry Starch. Covers one grade and two classes in four types. Based on U. S. Gov. Federal Specifications JJJ-S-701 for Laundry Starch, referred to below.

National Canners Assn. Method for the Examination of Starch for Thermophilic Bacteria. Covers preparation of sample, detection of flat sour spores, detection of thermophilic anaerobes not producing $H_2S$, detection of thermophilic anaerobes producing $H_2S$, reporting results, total thermophilic spore count, flat sour spores, thermophilic anaerobic spores, and sulfide spoilage spores.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Glycerite of Starch. Preparation and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Starch (Corn Starch). Description, solubility, identification, loss on drying, ash, reaction, iron, and storage. U.S.P. product of starch—Glyceritum Amyli.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Miscellaneous Publication M150; 1935. Suitability of Sweetpotato Starch for the Beater Sizing of Paper. In order to obtain information on the value of starch made from cull sweetpotatoes, a waste farm product, as beater sizing for paper, twenty-six paper-machine runs were made in the Bureau's semicommercial mill. In this work, sweetpotato starch was used in comparison with high-grade commercial starches made from corn and cassava. The relative merits of the different starches used were determined by comparing the results obtained with respect to retention of starch, retention of mineral filler, and properties of the finished papers.

U. S. Gov., Federal Specification JJJ-S-701; 1933. Starch; Laundry, Covers four types, one grade, fine and lump. Gives detail requirements; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Navy Dept. Specification 51C29a; 1943. Chemicals; Testing, Dissolved-Oxygen.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 50-11-99; 1941. Starch; Potato.

*References.*—Cornstarch, *see* 103.3.

## 282. VEGETABLE GLUE

U. S. Gov., Army Air Forces. Specification 14124; 1944. Glue; Low-Temperature-Setting Resin (Phenol, Melamine, and Resorcinol Base).

U. S. Gov., Army-Navy Aeronautical Specification AN-G-8; 1942. Glue; Cold-Setting Resin.

U. S. Gov., Army-Navy Aeronautical Specification AN-G-20-1; 1943. Glue; Application of Cold-Setting Resin.

U. S. Gov., Army-Navy Aeronautical Specification AN-TT-G-486-1; 1942. Glue; Aviation-Marine, Waterproof.

U. S. Gov., Federal Specification C-G-496; 1944. Amendment 1; 1944. Glue; Resin-Type, Liquid and Powder. Covers one grade and three types—(I) powder, with separate catalyst; (II) powder, with incorporated catalyst; and (III) liquid, with separate catalyst. Gives requirements for mixing, caking of powder glue, mixing properties, pH value of set film, filler, catalyst, working life. block shear strength, and plywood shear strength; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 3-169; 1940. Glue; Vegetable.

*References.*—Glue of animal origin, *see* 093; mucilage made from gum acacia, *see* 932.5.

# 290-299 MISCELLANEOUS VEGETABLE PRODUCTS

## 291. IVORY, VEGETABLE, OR TAGUA NUTS

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, Volume 2; 1944. Ivory Nut. Covers definition, characteristics, uses, derivation, shipping, and substitutes.

## 292. MOSS, SEAWEED, AND VEGETABLE SUBSTANCES

U. S. Gov., Treasury Dept., Procurement Div., No. 563; 1942. Peat (Moss, Reed, and Sedge). Covers: Type I—Moss Peat—class A, horticultural grade (fine shreds); class B, poultry litter (medium shreds); class C, stable bedding (coarse shreds); Type II—reed muck or sedge muck; Type III—reed peat or sedge peat—class A, acid grade; class B, nearly neutral grade. Gives requirements for acidity, moisture content, water holding capacity, coarseness classification of shreds, and ash; methods of sampling, inspection, and test; and packaging, packing, and marking.

## 293. FIBER SPONGES

American Hospital Assn., 34-130. Cellulose Sponges. Covers coarse and fine pore types. Based on U. S. Gov., Treasury Dept., Procurement Div. Specifications 304 C for Cellulose Sponges.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, Volume 2; 1944. Loofa Sponges (Vegetable Sponge). Covers definition, derivation and characteristics, uses, grades, and substitutes.

U. S. Gov., Federal Specification L-S-626; 1943. Amendment 3; 1944. Sponges; Cellulose-Type. Covers two types—(I) coarse pore and (II) fine pore (for rectangular-shape only). Gives requirements for material, workmanship, shapes, dimensions, and chemical and physical requirements; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Navy Dept. Specification 13S7b; 1943. Sponges; Loofa.

## 294. BROOM CORN

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, Volume 2; 1944. Broomcorn. Covers definition, characteristics, derivation, uses, packing, marketing, and substitutes.

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. U. S. Standards for Broomcorn, effective Mar. 1, 1931. Gives definitions, and requirements for quality—A, B, C, and D; grades—choice, good, medium, common, sample; classes—whisk, parlor, warehouse; and divisions—hurl, self-working, and underwork.

## 295. WAX

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, Volume 2; 1944. Candelilla Wax. Covers definition, constants, solubility, derivation, uses, grades, containers, and substitutes.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, Volume 2; 1944. Carnauba Wax (Brazil Wax). Covers definition, derivation, constants, solubility, uses, grades, packing and marketing, and substitutes.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 4-503-115A; 1936. Wax; Carnauba.

## 296. INSULATING MATERIALS-ELECTRICAL THERMAL

### 296.0 GENERAL ITEMS

### 296.1 ELECTRICAL INSULATING MATERIALS

*References.*—Electrical insulating materials, *see* 719.5.

### 296.2 THERMAL INSULATING MATERIALS

American Society for Testing Materials, C165-41T; 1941. Tentative Methods of Test for Compressive Strength and Flexural Strength of Preformed Block Type Thermal Insulating Materials. Apparatus, test specimens, procedure, calculations, and report.

American Society for Testing Materials, C166-41T; 1941. Tentative Methods of Test for Covering Capacity and Volume Change Upon Drying of Thermal Insulating Cement. Definitions, apparatus, sampling and preparation of test specimens, procedure, and calculations.

American Society for Testing Materials, C167-44; 1944. Methods of Test for Thickness and Density of Blanket Type Thermal Insulating Materials. The procedures for determining the thickness and density of flexible, felted or woven thermal insulating blanket, rolls, or batts, with or without reinforcement, composed of fibrous materials. Covers apparatus, test specimen, procedure, calculations, and report.

American Society for Testing Materials, C168-44, 1944. Definitions of Terms Relating to Thermal Insulating Materials. Defined preformed thermal insulating block and thermal insulating cement.

American Society for Testing Materials, C193-44T; 1944. Tentative Specification for 85 percent Magnesia Thermal Insulating Cement. Covers scope, composition, physical properties, sampling and mixing, methods of testing, and rejection.

American Society for Testing Materials, C194-44T; 1944. Tentative Specification for Asbestos Thermal Insulating Cement. Covers scope, composition, physical properties, sampling and mixing, methods of testing, and rejection.

American Society for Testing Materials, C195-44T; 1944. Tentative Specification for Mineral Wool Thermal Insulating Cement. Covers scope, physical properties, sampling and mixing, methods of testing, and rejection.

American Society for Testing Materials, C196-44T; 1944. Tentative Specification for Expanded or Exfoliated Vermiculite Thermal Insulating Cement. Covers scope, physical properties, samples and mixing, methods of testing, and rejection.

American Society for Testing Materials, C197-44T; 1944. Tentative Specification for Diatomaceous Silica Thermal Insulating Cement. Covers scope, physical properties, sampling and mixing, methods of testing, and rejection.

American Society for Testing Materials, ES-14; 1942. Emergency Specifications for Blanket Thermal Insulation for Building Purposes. Cover blanket or batt thermal insulating materials furnished in flexible or semirigid form and suitable for building purposes for application to flat or curved surfaces.

American Society for Testing Materials, ES-15; 1942. Emergency Specifications for Blanket Thermal Insulation for Industrial Purposes. Cover blanket insulating materials furnished in flexible or semirigid form and suitable for industrial purposes for application on flat or curved surfaces where surface temperatures exceed 100° F.

American Society for Testing Materials, ES-16; 1942. Emergency Specifications for Blanket Thermal Insulation for Refrigeration Purposes. Cover blanket thermal insulating materials furnished in flexible or semirigid form and suitable for refrigeration purposes for application on flat or curved surfaces.

American Society for Testing Materials, ES-17; 1942. Emergency Specifications for Preformed Pipe Covering Thermal Insulation. Cover preformed (molded or laminated) thermal insulation in the form of semicylindrical pipe covering sections intended for use as an insulation on surfaces at specified temperatures.

American Society for Testing Materials, ES-18; 1942. Emergency Specifications for Preformed Block Thermal Insulation. Cover a rigid or semirigid thermal

insulating material, either flat or segmental, for application as received, and excluding brick of the 9-in. series.

American Society for Testing Materials, ES-19; 1942. Emergency Specifications for Structural Insulating Board (Thermal Insulation). Cover thermal insulating material made principally of vegetable fiber in the form of insulating board suitable for structural purposes.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, 1938. Insulation; Heat, Cold, and Sound. Gives the general definition and characteristics and describes six different kinds—(I) fiberboard insulation; covers grades and classes, commercial standards, specifications, uses, and ordering instructions; (II) corkboard; covers definition, characteristics, specifications, and uses; (III) asbestos board; covers definition, characteristics and forms available, uses, packing, and marketing; (IV) blanket insulation; covers definition, characteristics and forms available, uses, and specifications; (V) loose-fill insulation; covers definition, constants, containers, uses, and ordering instructions; and (VI) reflective insulation; covers definition, characteristics, and specifications. The definition and specifications for acoustical treatments for sound absorption and sound correction are also given.

U. S. Gov., Army Air Forces. Specification 17013; 1940. Paper—Bats.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Commercial Standard CS42-43; 1943. Structural Fiber Insulating Board. Sponsored by the Insulation Board Institute. Gives five classes—(A) building board, (B) lath (for plaster base), (C) roof insulation board, (D) interior board (factory finished), and (E) sheathing. Covers physical requirements and tests for thermal conductivity, strength, absorption, and expansion; sets forth the standard commercial sizes, tolerances; method of sampling and testing; and packing and labeling.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Commercial Standard CS105-43; 1943. Mineral Wool; Loose, Granulated, or Felted Form, in Low-Temperature Installations. To establish minimum specifications for insulating low-temperature areas with mineral wool for the guidance of manufacturers, distributors, installers, contractors, and users. Gives requirements for material, construction, refrigerated spaces, and pipe lines.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Commercial Standard CS117-44; 1944. Mineral Wool; Blankets, Blocks, Insulating Cement and Pipe Insulation for Heated Industrial Equipment. To establish minimum specifications for insulating heated surfaces with mineral wool products and provides minimum requirements for mineral wool blankets, blocks, insulating cement, and pipe insulation for insulating heated industrial equipment. Gives general requirements; detail requirements including blanket insulation, block insulation, insulating cement, and pipe insulation (blanket-type and molded-type); recommended installation requirements including auxiliary material, application, blanket insulation, block insulation, insulating cement, and pipe insulation (blanket-type and molded-type); guides for painting, maintenance, and guarantee labels and certificates.

U. S. Gov., Federal Specification HH-I-521b; 1937. Insulation; Bat or Strip-Form and Loose Fill. Type (I) bat or strip form—two classes—(A) light-weight, (B) medium-weight; and (II) loose-fill form—three classes—(A) light-weight, (B) medium-weight, and (C) heavy-weight. Composed of mineral matter in fibrous form, in granular form, in nodulated fibrous form, in powdered form mixed with cellulose fiber, or in bat form. Gives requirements for materials, sulfur, oil asphalt, wax conductivity, and density; methods of sampling, inspection, and tests; requirements for packaging, packing, and marking.

U. S. Gov., Federal Specification HH-I-528; 1944. Insulation; Cotton, Batts. Covers one grade and three classes—(a) without backing, (b) backing on one side with moisture-resistant paper, and (c) backing on both sides (one side moisture-resistant paper). Gives requirements for material, workmanship, construction, fire resistance, backing, length and width, thickness, weight, and thermal conductivity; methods of sampling, inspection and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification HH-I-556; 1941. Insulation (Glass-Fiber); Semirigid. Covers one grade and four types—(I) standard thickness, pipe covering; (II) double standard thickness, pipe covering; (III) single layer, pipe covering; and (IV) block. Gives requirements for material and workmanship, construction, weight per cubic foot, thicknesses, and finish; methods of sampling, inspection and tests; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification HH-I-578; 1941. Insulation; Vermiculite, Block and Pipe-Covering (Molded). Covers four types—(I) standard thickness, pipe-covering; (II) double standard thickness, pipe-covering; (III) solid thickness, pipe-covering; and (IV) block. Expanded or exfoliated mica, long fiber asbestos, and a suitable binder. Gives requirements for materials, weight, size, thickness, covering, and bands; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment. Emergency Alternate Federal Specification E-HH-I-578; 1942, deletes use of brass bands and changes their width and thickness.

U. S. Gov., Federal Specification HH-M-61; 1934. Magnesia; Block, Cement, and Pipe-Covering (Molded). Covers one grade and four types—(I) standard thickness, (II) double standard thickness, (III) blocks, and (IV) cement or plaster. Shall contain not less than 85 percent of pure hydrated magnesium carbonate and not less than 10 percent long-fiber asbestos. Gives requirements for weight, length, thickness, size, cotton sheeting jacket, and bands; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking. Emergency Alternated Federal Specification E-HH-M-61; 1942, changes requirements for cotton sheeting jacket; and deletes use of brass bands and changes their width and thickness.

U. S. Gov., Federal Specification HH-M-371; 1938. Mineral-Wool; Impregnated, Blanket, Block, and Pipe Covering (Molded), (for Low Temperatures). Includes five types—(I) molded block; (II) molded sectional

pipe covering, ice water thickness; (III) molded sectional pipe covering, brine thickness; (IV) molded sectional pipe covering, heavy brine thickness; and (V) felted blanket. Gives detail requirements for material, workmanship, conductivity, and density; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment. Emergency Alternate Federal Specification E-HH-M-371; 1942, substitutes ordinary steel in lieu of copperized staples and copper-clad steel wire.

U. S. Gov., Federal Specification HH-P-386a; 1939. Pipe-Covering and Cement; Mineral or Rock-Wool. Covers one grade and three types—(I) molded sectional pipe covering, (II) felted blanket pipe covering, and (III) cement. Gives requirements for material and workmanship, sulfur shot, stability, thicknesses, tolerance, and density; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment. Emergency Alternate Federal Specification E-HH-P-386a; 1942, changes requirements for cotton sheeting jacket; and deletes use of brass bands and changes their width and thickness.

U. S. Gov., Federal Specification LLL-I-533; 1943. Insulation (Redwood-Bark, Shredded). Insulation shall be furnished in but one grade and the following class: Class A—loose fill. Gives requirements for material, workmanship, thermal conductivity, density, moisture content, settlement, flame-resistance, odor, adulteration, impurities, sampling, inspection, tests, packing, and marking.

U. S. Gov., Navy Dept. Specification 32C14g; 1944. Cement; Insulation, High-Temperature.

U. S. Gov., Navy Dept. Specification 32C15d; 1944. Cloth, Tape, and Thread; Glass, Fibrous (for Lagging Insulation).

U. S. Gov., Navy Dept. Specification 32 F 4; 1943. Felt; Insulating, Mineral.

U. S. Gov., Navy Dept Specification 32G2c; 1942. Glass: Fibrous, Insulating.

U. S. Gov., Navy Dept. Specification 32 G 3b; 1943. Glass; Fibrous, Stitched on Flameproofed Fabric.

U. S. Gov., Navy Dept. Specification 32G4; 1940. Grog; Insulating, Granular, Calcined.

U. S. Gov., Navy Dept. Specification 32-I-3a; 1944. Insulation; Thermal, Block.

U. S. Gov., Navy Dept. Specification 32 T 1c; 1943. Tape; Insulating, Thermal.

U. S. Gov., Navy Dept. Specification 32 T 2; 1943. Tape; Impregnated (Gasket Material for Heat Insulation).

U. S. Gov., U. S. Maritime Commission. Specification 32-MC-1; 1941. Insulation; Mineral Wool, Blanket Type. Shall be mineral wool felt, blanket form, without covering. Gives requirements for material and workmanship, thickness, density, fire-retardant properties, resistance to corrosion, resistance to bacteria, integrity, miscellaneous properties, sampling, inspection, and tests.

U. S. Gov., U. S. Maritime Commission. Specification 32-MC-2; 1941. Insulation; Mineral Wool, Block Type, for Use Below 225° F. Shall be mineral wool felt in block form, with or without moisture-repellant treatment. Gives requirements for material, workmanship, construction, surfaces, dimensions, edge finish, fire-retardant properties, resistance to corrosion, resistance to bacteria, resistance to moisture, miscellaneous properties, sampling, inspection, and tests.

## 296.3 PLASTIC INSULATING MATERIALS

*References.*—Plastic insulating materials, *see* 893.1; plastics, *see* 846.5; molded and laminated, *see* 719.58; glass cloth, *see* 528.

## 296.4 ACOUSTICAL INSULATING MATERIALS

Acoustical Society of America, sponsor. Approved by American Standards Assn. as Z 24.1-1942. Acoustical Terminology. Includes terminology relating to sound, architectural acoustics, hearing, sound transmission, transmission systems, and music.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, 1938. Insulation; Heat, Cold, and Sound. Gives the general definition and characteristics and describes six different kinds—(I) fiber board insulation; covers grades and classes, commercial standards, specifications, uses, and ordering instructions; (II) corkboard; covers definition, characteristics, specifications, and uses; (III) asbestos board; covers definition, characteristics and forms available, uses, packing, and marketing; (IV) blanket insulation; covers definition, characteristics and forms available, uses, and specifications; (V) loose-fill insulation; covers definition, constants, containers, uses, and ordering instructions; and (VI) reflective insulation; covers definition, characteristics, and specifications. The definition and specifications for acoustical treatments for sound absorption and sound correction are also given.

U. S. Gov., Army-Navy Aeronautical Specification AN-S-32-1; 1944. Soundproofing Materials.

*References.*—Acoustical plaster, *see* 514.65.

## 296.9 MISCELLANEOUS INSULATING MATERIALS

U. S. Gov., Navy Dept. Specification 52C22; 1944. Cement; Adhesive, Insulation, Fibrous.

U. S. Gov., Treasury Dept., Procurement Div., 261A; 1940. Adhesives; Acoustic Material. A wide range in the selection of raw materials and processes of manufacture are given. The cement shall be free from all ingredients which might affect the serviceability thereof or have a deleterious affect upon the acoustic material. Gives requirements for stresses, plasticity, waterproof, and alkali resistant; methods of sampling, inspection, and tests; and packaging, packing, and marking.

# 300-399 TEXTILES

## 300-309 COTTON, COTTON FABRICS, AND KNIT GOODS

### 300. GRADES, DEFINITIONS, AND TESTS OF COTTON

#### 300.0 GENERAL ITEMS

National Assn. of Dyers and Cleaners of the U. S. and Canada. Identification of Fibers, T-145, 1944. For training employees in the identification of textile fibers. Covers natural fibers and synthetic fibers. Gives method of testing and tests for fiber content of pure silk, weighted silk, wool, cotton, regenerated rayon, cellulose acetate rayon, nylon, vinyon, aralac casein, and glass.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, Volume 2; 1944. Cotton. Covers definition, derivation, characteristics and types, uses, marketing, grades, packaging and substitutes.

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. Miscellaneous Publication No. 310; 1938. The Classification of Cotton. Gives nature of cotton and basis of its classification, general practices in sampling and the care and handling of samples, factors of grade, standards for grade, the determination of grade, method of grading irregular and special-condition cotton, inaccuracies in grading cotton, factors of staple and the standards of staple, method of stapling, common errors in stapling, factors of character, effect of moisture on staple and character, relation of classification to prices, and official cotton standards of the U. S. in effect May 1938.

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. Service and Regulatory Announcements No. 117; 1929. Proceedings of International Universal Cotton Standards Conference of 1929 and Items Relating to the Administration of the U. S. Cotton Futures and Cotton Standards Acts. Covers International Universal Cotton Standards Conference of 1929, revision of standards for American Egyptian cotton, revision of standards for extra white cotton, tentative standards for preparation of long-staple cotton, amendments of staple standards, southern delivery on futures contracts of the New York Cotton Exchange, opinions and letters of general interest to the cotton industry, act relating to investigation of new uses of cotton, and excerpt from the appropriations act approved 1929.

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. Service and Regulatory Announcement No. 146; 1934. Items Relating to the Administration of the U. S. Cotton Standards and Cotton Futures Act. Covers licensing of cotton samplers, International Universal Cotton Standards Conferences of 1931 and 1933, revision of standards of extra white cotton, half grades of American Egyptian cotton, determinations of staple length, sample standards, sample premiums, preparation of long staple cotton, excerpts from letters of general interest, joint resolution to provide additional facilities for classification and for licensing of samplers, and excerpts from appropriations act approved 1934.

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. Service and Regulatory Announcement No. 153. Regulations of the Secretary of Agriculture Under the U. S. Cotton Standards Act, effective Aug. 20, 1936, and Amendments 1, 1938; 2, 1939; and 3, 1940. Includes definitions, classifications, sample or type comparison, reviews, supervision of transfers of cotton, licensed classifiers, licensed samplers, and appendices; official cotton standards, American cotton linters, adjustment of disputes.

*References.*— Lime for use in textile industry, *see* 517.2; coal-tar dyes, *see* 803.1.

#### 300.1 U. S. STANDARDS FOR GRADES OF COTTON

New England Cotton Buyers Assn. Accepted by National Assn. of Cotton Manufacturers and American Cotton Shippers Assn. New England Terms for Buying and Selling American Cotton (except Sea Island and American Grown Egyptian Cotton), 1944. Defines short staple and long staple cotton. Gives details for sampling, classifying, claims, etc.

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. Miscellaneous Publication No. 310; 1938. The Classification of Cotton. Gives nature of cotton and basis of its classification, general practices in sampling and the care and handling of samples, factors of grade, standards for grade, the determination of grade, method of grading irregular and special-condition cotton, inaccuracies in grading cotton, factors of staple and the standards of staple, method of stapling, common errors in stapling, factors of character, effect of moisture on staple and character, relation of classification to prices, and official cotton standards of the U. S. in effect May 1938.

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. Service and Regulatory Announcements No. 92; 1925. Standards for Cotton Classification in the U. S. and Abroad. Gives official cotton standards of the U. S. for grades and colors of American upland cotton, and American Egyptian Cotton, for length of staple, and for American cotton linters. Covers distribution of official cotton standards, American cotton in export trade, agreement between Dept. of Agriculture and European cotton associates and exchanges, supplement agreement, and appendix showing U. S. cotton standards act.

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. Service and Regulatory Announcement No. 94; 1925. Official Standards of the U. S. for American Cotton Linters. Includes definitions for grades 1 to 7, hull fiber, compound grades, mixed packed, and extraneous matter; and discusses cotton hair, residual fibers, robust and

flaccid hairs, cutting linters, the reasons for cutting linters, and request for standard grades.

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. Service and Regulatory Announcement No. 109; 1928. Items Relating to the Administration of the U.S. Cotton Futures and Cotton Standards Acts. Includes standards for color for American cotton linters. Definitions of seven color grades as embraced in the colors of the samples composing official standards of U.S. for Cotton linters.

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. Service and Regulatory Announcements No. 117; 1929. Proceedings of International Universal Cotton Standards Conference of 1929 and Items Relating to the Administration of the U. S. Cotton Futures and Cotton Standards Acts. Covers International Universal Cotton Standards Conference of 1929, revision of standards for American Egyptian cotton, revision of standards for extra white cotton, tentative standards for preparation of long-staple cotton, amendments of staple standards, southern delivery on futures contracts of the New York Cotton Exchange, opinions and letters of general interest to the cotton industry, act relating to investigation of new uses of cotton, and excerpt from the appropriations act approved 1929.

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. Service and Regulatory Announcement No. 146; 1934. Items Relating to the Administration of the U.S. Cotton Standards and Cotton Futures Act. Covers licensing of cotton samples. International Universal Cotton Standards Conferences of 1931 and 1933, revision of standards of extra white cotton, half grades of American Egyptian cotton, determinations of staple length, sample standards, sample premiums, preparation of long staple cotton, excerpts from letters of general interest, joint resolution to provide additional facilities for classification and for licensing of samplers, and excerpts from appropriations act approved 1934.

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. Service and Regulatory Announcement No. 150; 1936. Revision of Standards for Grades of American Upland Cotton. Covers universal cotton standards, revised, effective Aug. 20, 1936; classification according to the new standards; public notice establishing official cotton standards; and attendance at meetings in 1935 to consider revision of standards.

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. Service and Regulatory Announcement No. 153. Regulations of the Secretary of Agriculture Under the U. S. Cotton Standards Act, effective Aug. 20, 1936, and Amendments No. 1, 1938; No. 2, 1939; and No. 3, 1940. Includes definitions, classifications, sample or type comparison, reviews, supervision of transfers of cotton, licensed classifiers, licensed samplers, and appendices; official cotton standards, American Cotton linters, adjustment of disputes.

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. Service and Regulatory Announcements No. 163; 1942. Developments in Cotton Standardization and Related Services. Covers International Universal Cotton Standards Conferences of 1936 and 1939, standards for sea-island cotton, standards for American Egyptian cotton, preparation of standards for long-staple cotton, symbols for grade designations for American upland cotton, some reasons for variations in classification of cotton, public cotton classifying service, changes in contracts for future delivery, classing the market news services for organized cotton-improvement groups, cotton fiber testing service, and excerpt from appropriations act approved 1942.

*References.*—Laws and regulations establishing cotton grades, *see* 300.0.

## 300.4 GENERAL METHOD OF TESTING COTTON FABRICS

American Assn. of Textile Chemists and Colorists. 1943 Yearbook. Determination of Copper and Iron in Textiles. Standard method of test covering preparation of sample, standard copper solution, method of procedure, and an alternative method for copper and iron.

American Assn. of Textile Chemists and Colorists. 1943 Yearbook. Determination of Degree of Mercerization of Cotton. Standard method of test covers barium activity numbers, cleaning of sample and standard unmercerized cotton, method of procedure, and computation of the barium activity number.

American Assn. of Textile Chemists and Colorists. 1943 Yearbook. Determining of Finishing Materials in Textile Fabrics. Proposed Method. The practice of textile finishing involves the use of an exceedingly great number of substances which are used alone or in combination with each other. Covers general scheme including petroleum ether soluble, alcohol soluble, water soluble, starches, and ash.

American Assn. of Textile Chemists and Colorists. 1943 Yearbook. Determination of Manganese in Textiles. Standard method of test covers preparation of samples, outline of procedure, and standard permanganate solutions for comparison.

American Assn. of Textile Chemists and Colorists. 1943 Yearbook. Determination of Shrinkage of Textiles. This official method for determining shrinkage in washable woven cotton fabrics covers preparation of sample, standard load, soap solution, washing, drying, pressing, and calculation of results, also includes tentative method for determining the shrinkage of fabrics other than cotton.

American Assn. of Textile Chemists and Colorists. 1943 Yearbook. Determination of Transference of Color. Tentative Method of Test. Includes hot pressing (dry) for color change, mark-off for wet and dry pressing, rubbing (crocking) for wet and dry tests in the standard crock meter, sublimation of transference caused by pressure during storage, transference during bleaching of colored striped material, with classification of materials according to resistance to tests.

American Assn. of Textile Chemists and Colorists. 1943 Yearbook. Determination of Water Resistance of Fabrics. Defines shower resistance and rain resistance in terms of hydrostatic pressure and time. Describes hydrostatic pressure test, spray test, and immersion test with illustrations of apparatus set-up.

American Assn. of Textile Chemists and Colorists. 1943 Yearbook. Determination of Weighting in Silk. Standard method of test covers weighing of dried sample, method of procedure, reagents required, and computation of percentage of weighting.

American Assn. of Textile Chemists and Colorists. 1943 Yearbook. Evaluation of Compounds Designed To Increase the Resistance of Fabrics and Yarns to Insect Pests. Tentative Method. It comprehends not only the initial protection furnished by the treatment in question, but also the permanency of this protection during conditions of ordinary use. Covers test specimen, procedure, cleaning, and classification.

American Assn. of Textile Chemists and Colorists. 1943 Yearbook. Evaluation of Wetting Agents. Method of finding the concentration of wetting agent that is required to cause sinking of 5-gm. skein of unboiled, grey, 2-ply cotton yarn carrying a standard weight in a solution of the agent in pure water. Also applicable to the determination of the wettability of yarns and threads.

American Assn. of Textile Chemists and Colorists. 1943 Yearbook. Fastness to Acids and Alkalies. Covers tests for change of shade when dyed material comes in contact with acid fumes, acid sizes, etc., but does not necessarily cover change in shade which might take place in carbonizing, cross dyeing, acid milling, and acid perspiration. Gives tests for dyed cotton; fastness to alkalies, for dyed cotton, and dyed wool.

American Assn. of Textile Chemists and Colorists. 1943 Yearbook. Fastness to Atmospheric Gases of Dyes on Cellulose Acetate Rayon. Tentative Method. Gives requirements for preparation of test specimen, apparatus, method of procedure, and evaluation of result.

American Assn. of Textile Chemists and Colorists. 1943 Yearbook. Fastness to Carbonizing. Describes official method for laboratory tests for fastness to carbonizing with acid and with aluminum chloride.

American Assn. of Textile Chemists and Colorists. 1943 Yearbook. Fastness to Dry Cleaning. Tentative Method. Covers test specimens, apparatus, solvent, volume, temperature, dry cleaning procedure, hand pressing, steam pressing, steaming, wet cleaning procedure, classification, test controls, caution, and explanatory notes.

American Assn. of Textile Chemists and Colorists. 1943 Yearbook. Fastness to Light of Textiles. This standard method is intended as a basis for mutual understanding between manufacturers of dyestuffs, dyers and printers of textiles, and purchasers of the dyed and printed fabrics or yarns as to the fastness to light of dyed textiles. Covers test specimen, standard dyeings, apparatus and testing conditions, method of procedure, and classification.

American Assn. of Textile Chemists and Colorists. 1943 Yearbook. Fastness to Perspiration of Dyed Textiles, Standard (official method) procedures for determining resistance to perspiration and interpretation of results.

American Assn. of Textile Chemists and Colorists. 1943 Yearbook. Fastness to Rubbing (Crocking). Covers damage to other fabrics, not the fabric tested, by rubbing off of various colored substances from the fabric in question onto other fabrics so as to soil or stain them, usually onto white. Description of special crockmeter, dyeing method, and reference samples prepared by the association.

American Assn. of Textile Chemists and Colorists. 1943 Yearbook. Fastness to Sea Water. This standard method is mainly applicable to goods made of silk or wool which are to be used for flags, bunting, or bathing suits; requirements for strength of salt water solution, method of procedure, and comparison with uncolored swatches.

American Assn. of Textile Chemists and Colorists. 1943 Yearbook. Group C—Fastness Tests for Dyed or Printed Cotton and Linen. Standard methods of test for colorfastness to commercial laundering and to domestic washing of cotton and linen textiles; fastness to fulling of dyed cotton against white cotton, silk and wool; fastness to chlorine of dyed or printed cotton; and fastness to stoving.

American Assn. of Textile Chemists and Colorists. 1943 Yearbook. Group R—Fastness Tests for Dyed or Printed Rayons. For acetate rayons and regenerated cellulose rayons (viscose, nitro, and cuprammonium types). Standard methods of test for fastness to laundering and domestic washing of dyed or printed rayon (official method), preparation of sample, tests, and classification.

American Assn. of Textile Chemists and Colorists. 1943 Yearbook. Group S—Fastness Tests for Dyed or Printed Silk. Standard methods of test for fastness to washing of dyestuffs on silk using launder-ometer (official method), fastness to fulling, fastness to degumming, fastness to stoving, and fastness to peroxide bleaching, preparation of sample, test procedure, and classification with table of values of fastness with respect to color change, staining of white cotton, wool, and silk.

American Assn. of Textile Chemists and Colorists. 1943 Yearbook. Group W—Fastness Tests for Dyed Wool. Standard methods of testing of fastness to laundering and domestic washing of dyed wool (official method) using launder-ometer, fastness to fulling, scouring, and mill washing, fastness to dry and wet heat (sponging and pressing) in respect to bleeding, fastness to stoving, preparation of sample, test procedures, and classification of materials for alteration of color and loss under test, and for staining of other fibers.

American Assn. of Textile Chemists and Colorists. 1943 Yearbook. Identification of Finishing Materials. For the identification and determination of individual constituents. Covers oils, fats and waxes, naphthenic sulfonates, solubilized oils and fats, rosin, glycerin and glycols, albumen casein, glue and gelatin, dextrin, starch, sugars, inorganic fillers, and urea-formaldehyde resin.

American Assn. of Textile Chemists and Colorists. 1943 Yearbook. Launder-Ometer. Standard laundry machine for laboratory washing tests for testing fastness of dyed textile materials. Consists of a copper tank on angle iron frame, with a special brass and aluminum rotor operating at a specified speed, rubber or metal abrasive balls, and tank heater.

American Assn. of Textile Chemists and Colorists. 1943 Yearbook. Methods of Fiber Identification and Quantitative Separation. Covers burning test, color test, solubility tests, and microscopic examination; classifies fibers as mineral, cellulose, and protein; methods of procedure, qualitative analysis, microscopic appearance of hairs and bast fibers, quantitative analysis, microscopic appearance of artificial fibers, and quantitative analysis of fiber mixtures.

American Assn. of Textile Chemists and Colorists. 1943 Yearbook. Standard Methods for Determining the Fastness of Dyestuffs on the Fiber. These methods are classified in groups: Group C—dyed or printed cotton, Group R—dyed or printed rayons, Group S—dyed or printed silk, and Group W—dyed wool. For each group is given numbered fastness tests for that fiber, such as laundering and domestic washing, fulling, chlorine, stoving, degumming, peroxide bleaching, dry and wet heat (sponging and pressing) as applicable. Also indicates the methods for fastness, sizing and finishing, waterproofing, shrinkage, transference of color, moth proofing, mercerization, weighting tests, etc. Refers to standard dyed samples for use in grading of which have been prepared by the assn.

American Assn. of Textile Chemists and Colorists. 1943 Yearbook. Test for Resistance of Fabrics and Yarns to Insect Pests. For testing of fabrics which contain wool or other hair fibers for resistance to moths and carpet beetles. Covers test specimens, excrement weight method, fabric loss method, a tentative procedure for rearing and handling the black carpet beetle, and tentative procedure for rearing and handling the webbing clothes moth.

American Society for Testing Materials, D 39-39; 1939. American Standards Assn., L5-1939. General Methods of Testing Woven Textile Fabrics. Includes standard condition for test, dimensions, and weight determinations, width and thickness, count, crimp, breaking strength, elongation, tearing strength, twist, and bow, test specimen, apparatus, and procedures.

American Society for Testing Materials, D 231-39; 1939. Methods of Testing and Tolerances for Knit Goods. For those classes of knit goods which later enter into manufacturing processes; tolerances for width, weight, and count; bursting strength, test specimen, standard conditions, apparatus and test procedures; moisture regain, grease determination, and percentage of cotton and wool. A.S.T.M. Emergency Alternate Provision, EA-D 231; 1944, affected section 13, grease determination.

American Society for Testing Materials, D 274-36, 1936. Methods of Testing and Tolerances for Certain Light and Medium Weight Cotton Fabrics. For three classes—(A) airplane wing fabric, balloon cloth, osnaburg, etc.; (B) broadcloth, buckram, bunting, carded lawns, clothing twills, cotton flannel, denims, drills, four leaf, twills, print cloth, sateens, sheeting, etc.; and (C) blanket cloths; tolerances permitted; and tests using A.S.T.M. methods D 39, D 433, and D 437 as applicable.

American Society for Testing Materials, D 276-43T; 1943. Tentative Methods for Identification of Fibers in Textiles. Covers procedures for the identification of textile fibers used commercially in woven, knit, or braided fabrics. Gives reference samples, reagents, apparatus, considerations for sampling, test specimens, mounting specimens, preliminary examination, procedures for various types of fibers, and enlarged photographs of various fibers.

American Society for Testing Materials, D 354-41; 1941. American Standards Assn., L13.1-1942. Methods of Testing and Tolerances for Tubular Sleeving and Braids. Tolerances and methods of testing.

American Society for Testing Materials, D 377-37; 1937. Method of Test for Colorimetric Determination of Small Amounts of Copper and Manganese in Textiles. Where copper and manganese content is less than .01 percent, samples, blank tests, reagents, and procedures for determinations by ashing and analysis.

American Society for Testing Materials, D 414-40T; 1940. Tentative General Methods of Testing Cotton Fibers. For determination of fiber length, length distribution, fineness, percentage of thin-walled fibers, strength, and cross-sectional features of loose cotton fibers, whether unprocessed or prepared from cotton products. Covers standard conditions, preparation of specimen, accessories for length, weight fineness, immaturity, tensile strength, cross-sections, nappiness, with test procedures and records.

American Society for Testing Materials, D 433-39; 1939. Methods of Testing and Tolerances for Certain Carded Cotton Gray Goods. Includes broadcloth, buckram, bunting, carded lawns, cotton flannel, denims, drills, osnaburg, pajama checks, print cloths, sateens, sheeting, twills, etc., requirements for sampling, standard condition, tolerances in yardage, selvage, width, count, and weight, with tests for width, count, weight, and other tests using A.S.T.M. method D 39.

American Society for Testing Materials, D 435-42; 1942. Method of Test for Colorfastness to Commercial Laundering and to Domestic Washing of Cotton and Linen Textiles. Applicable to all colored cotton and linen textiles, whether dyed or printed, and deals only with the fastness of the color to laundering or domestic washing without the aid of a bleaching agent. Apparatus, standard dyeings, test specimens, soap solution, procedure, and classification of fastness to washing. This standard method is based upon the method developed by the Research Committee of the American Assn. of Textile Chemists and Colorists.

American Society for Testing Materials, D 437-36; 1936. American Standards Assn., L10-1936. Method of Test for Shrinkage in Laundering of Woven Cotton Cloth. Includes requirements for washing machines, test sample, standard load, soap solution, washing procedure, drying, pressing, and results.

American Society for Testing Materials, D 463-37T; 1937. Tentative Method of Test for Volumetric Determination of Small Amounts of Copper in Textiles. Where copper is less than 0.01 percent but greater than 100 micrograms, requirements for sampling, blank determinations, reagents, and test procedure.

American Society for Testing Materials, D 506-41; 1941. Method of Test for Colorfastness of Colored Textiles to Light. Applicable to all colored textiles and is intended for determining the fastness of the color to sunlight or artificial light. Apparatus, standard dyeings, test specimens, procedure, and classification of fastness of color. This method of test is based upon the method developed by the American Assn. of Textile Chemists and Colorists.

American Society for Testing Materials, D 539-40T; 1940. Tentative Method of Test for Apparent Fluidity of Dispersions of Cellulose Fibers in Cuprammonium Hydroxide. Measure of degradation due to light,

acids, alkalies, and oxidizing agents in processing, in laundering, and use; applicable to scoured or bleached cotton and regenerated cellulose rayon textiles which give apparent fluidities of 45 rhes or less. Viscosimeter, reagent storage and analysis, and sample and test.

American Society for Testing Materials, D 583-40 T; 1940. Tentative Methods of Test for Resistance of Textile Fabrics to Water. Includes hydrostatic pressure, water penetration (drip), and water absorption (spray) methods. Test liquid, apparatus, specimen, and methods of procedure.

American Society for Testing Materials, D 629-42T; 1942. Tentative Methods of Quantitative Analysis of Textiles. Describe procedures for the quantitative analysis of textiles for water, total nonfibrous materials, acetate rayon, silk (including silk noils), regenerated cellulose rayon, cotton, and wool (including reprocessed and reused wool), and varieties of these kinds of fibers in mixtures. Types of analysis, general procedure, moisture content or moisture regain, total sizing, finishing, and other nonfibrous materials; mechanical separation or dissection, chemical analysis, and comparative scale for fineness of various textile fibers.

American Society for Testing Materials, D 679-44; 1944. Methods of Testing Tolerances for Certain Fine Staple Cotton Gray Goods. Methods of testing and tolerances apply to the following fine staple cotton gray goods—combed broadcloth, lawns, longcloths, organdies, oxfords, pongees, poplins, voiles, piques, bedford cords woven on plain looms, and sateens and twills all or partly combed. Gives tolerances for yardage, width, weight, warp count, and filling count; and methods of testing.

American Society for Testing Materials, D 680-44; 1944. Methods of Testing and Tolerances for Certain All-Cotton and Cotton-and-Rayon Fine Fancy Goods. Apply to combed handkerchief cloths, plain combed staples using color in warp or filling; piques and bedford cords woven on dobby looms; other dobby and jacquard weaves, carded or combed; combed shirtings, dress goods, and goods of cotton and rayon mixed yarns manufactured to purchase specifications.

American Society for Testing Materials, D 683-42T; 1942. Tentative Methods of Test for Identification of Finishes on Textiles. Cover the qualitative procedures for the identification of the following finishes on cotton textiles—urea-formaldehyde resin finishes, straight formaldehyde finishes, alkyd resin finishes containing phthalates, polymerized ethylene derivative resin finishes (polyvinyl or polyacryl compounds), nitrocellulose finishes, methyl or ethyl cellulose finishes, and cellulose acetate finishes.

American Society for Testing Materials, D 684-42 T; 1942. Tentative Methods of Test for Resistance of Textile Fabrics to Microorganisms. Methods are applicable to all types of textile fabrics regardless of the kinds of fiber used in their manufacture but are primarily intended for testing treated cotton fabrics designed for outdoor use.

American Society for Testing Materials, D 737-43T; 1943. Tentative Method of Test for Air Permeability of Textile Fabrics. Gives requirements for apparatus, test specimens, test conditions, procedure, and report.

American Society for Testing Materials, E 41-42 T; 1942. Tentative Definitions With Procedures Relating to Conditioning and Weathering. Intended to apply to all cases where combinations of atmospheric influences are an essential part of materials testing. Definitions, relative humidity determination, room temperature determination, and test in standard laboratory atmosphere.

U.S. Gov., Dept. of Commerce, National Bureau of Standards. Commercial Standard CS59-44; 1944. Textiles-Testing and Reporting. The purpose is to provide standard methods of testing textiles from the standpoint of serviceability and a uniform basis for reporting results of tests. This standard provides methods for testing and reporting the breaking strength of woven fabrics; bursting strength of knit fabrics; colorfastness of textiles to chlorine, dry cleaning, crocking (rubbing), atmospheric gases, laundering, light, perspiration, and pressing (dry and wet); shrinkage in laundering and dry cleaning of woven fabrics; and yarn slippage of woven fabrics. Initiated by National Retail Dry Goods Assn.

U.S. Gov., Federal Specification CCC-T-191a; 1937. Amendment 1; 1940. Textiles; General Specifications, Test Methods. Covers the general physical and chemical methods for testing textiles for conformance with the requirements of Federal specifications. It does not include the special test methods applicable to certain materials which are designated in the appropriate specifications nor does it by any means include all of the textile methods used in the industry.

U.S. Gov., U.S. Army, Quartermaster Corps. Specification 100-17; 1944. Mildew-Proofing of Fabrics, Threads, and Cordage; Copper Processes.

*References.*—Textile testing machines, *see* 770; coal tar dyes and colors, *see* 803.1; other textile tests and methods, *see* the individual textile.

## 300.5 TEXTILE TESTING MACHINES

American Society for Testing Materials, D 76-42; 1942. American Standards Assn., L 15.1-1943. Textile Testing Machines. Descriptive of testing machines generally applicable for the determination of certain physical characteristics of textile materials. Covers breaking strength and elongation testing machines, thickness gage, bursting testers, and twist testers.

*References.*—Textile testing machines, *see* 770.

## 300.6 DEFINITIONS OF TEXTILE TERMS

American Society for Testing Materials, D 123-44; 1944. Definitions of Terms Relating to Textile Materials. Defines asbestos, standard atmosphere, braid, carrier, process change, standard condition, cone, cord, cortex, count, course, crimp, cut, denier, dew point, elongation, end, epidermis, felt, fiber, hard or leaf fibers, soft or bast fibers, filament, filling, fineness, flax, float, gage, glass, textile glass, gray goods, hank, Holland finish, absolute humidity, relative humidity, lea, length distribution, linen,

breaking load, lumen, bonded mat, maturity, medulla, moisture, moisture equilibrium, commercial moisture regain, standard moisture regain, pick, pile, pitch, ply, water vapor pressure, rayon, rayon staple, resilience, roving, asbestos roving, reinforced asbestos roving, sample, selvage, shot, sizing, skein, sleeving, sliver, smash, specimen, splice, strength, breaking strength, bursting strength, tearing strength, tensile strength, tape, sewing thread, tube, tubing, twine, twist, direction of twist, balanced twist, cable twist, hawser twist, typp, unit package, wale, warp, commercial weight, oven-dry weight, grease wool, pulled wool, top wool, yarn, yarn appearance, asbestos yarn, metallic asbestos yarn, plain asbestos yarn, reinforced asbestos yarn, backing yarn, yarn construction, yarn number, yarn numbering systems, equivalent single yarn number, pile yarn, ply or folded yarn, porter yarn, shotting yarn, single yarn, spun rayon yarn, woolen yarn, and worsted yarn. Also glossary of terms relating to textile materials, definitions and photographs of defects in woven fabrics, and terms relating to hand of fabrics.

American Society for Testing Materials, D 123-44T; 1944. Tentative Definitions of Terms Relating to Textile Materials. Defines protans..tenacity, turn, cross-blended yarn, and self-blended yarn. Gives tables listing man-made or synthetic fibers and filaments and natural fibers including animal fibers, mineral fibers, seed hair vegetable fibers, and blast and leaf vegetable fibers.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Commercial Standard CS28-32; 1932. Cotton Fabric Tents, Tarpaulins, and Covers. A commercial standard selected and accepted by industry establishing a standard method of marking tents, tarpaulins, and covers to show the original gray goods weight per square yard without reference to finished or loaded weights, also to show type of fabric by markings, such as a single filling duck, etc.

### 300.7 STITCHES AND SEAMS

U. S. Gov., Federal Specification DDD-S-751; 1930. Stitches, Seams and Stitching. Covers the formation of the stitches, seams, and stitching used in U. S. Gov. work. Gives complete details with illustrations.

## 301. PARTIALLY MANUFACTURED COTTON

### 301.1 WASTE AND PACKING

### 301.11 Waste

American Transit Assn. Recommended Specification for New Waste E 145-39; 1939. The material covered by this specification shall consist of either cotton waste, wool waste, or a mixture of the two, as specified. Gives detailed requirements as to what constitutes cotton waste, wool waste, combination of wool and cotton waste, and sets forth methods of tests and inspections.

U. S. Gov., Federal Specification DDD-W-101; 1932. Waste; Cotton, Colored. Covers one grade and quality. Gives requirements for weight of bale, volume of bale, and tare; methods of sampling. inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Federal Specification DDD-W-106; 1932. Amendment 1; 1937. Waste; Cotton, White. Covers one type and grade. Gives requirements for gross weight of bale, volume of value, tare, moisture, and tare content; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

*References.*— Waste for journal boxes, *see* 301.12; wool waste, *see* 363.1.

### 301.12 Journal Box Packing

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Renovated Journal Box Packing, M-910-39; 1939. Renovating to remove dirt and foreign matter from waste, hand picking and screening, washing in hot oil, resilient condition, sampling stock, properties and tests, method of analysis, etc.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Specification M-905-41; 1941. New Waste for Journal Box Packing. Covers new packing waste suitable for freight cars, passenger cars, and locomotives. Gives material, cotton waste, wool waste, combination wool and cotton waste, moisture, oil and dirt, packing and marking, inspection, rejection, and rehearing.

### 301.2 CAULKING COTTON

U. S. Gov., Navy Dept. Specification 21 C 3d; 1943. Cotton; Calking.

### 301.3 LINTERS

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, Volume 2; 1944. Cotton Linters. Covers definition, characteristics, derivation, uses, standards and grades, containers, and substitutes.

National Cottonseed Products Assn. Rules, 1945. Definitions of Grade and Quality. Article 18. Cottonseed Linters. Rules 130 to 136. Covers American cotton linters, excess of low grades, rejections and replacements, linters made from burned or damaged seed, linters containing excess trash, cottonseed hull fiber, and standard weight and dimensions.

*References.*—U. S. grades for other cotton, *see* 300.1.

### 301.4 MATTRESS FILLING

American Hospital Assn., 1-16. Felt (Garnetted) for Mattress Filling. For inner-spring and cotton-felt mattresses. Covers material and workmanship, general and detail requirements, and methods of inspections and tests. Based on U. S. Navy Dept. Specifications 27 F 9 for Felt (Garnetted) for Mattress Filling (referred to below), and U. S. Gov. Federal Specifications CCC-T-191a, and Amendment 1, for Textiles, General Specifications, Test Methods.

U. S. Gov., U. S. Maritime Commission. Specification 27-MC-37; 1941. Mattresses; Cotton Linters (Blown). There shall be but one type and the grade shall be that known commercially as "firsts." Gives requirements for materials, workmanship, case, seams,

stitches, tufting, size, weight, sampling, inspection, and tests.

U. S. Gov., Navy Dept. Specification 27F9; 1936. Felt (Garnetted) for Mattress Filling.

### 301.5 ABSORBENT WASTE

U. S. Gov., Federal Specification DDD-L-427; 1944. Lint; Absorbent. Covers one type and grade. Gives requirements for material, workmanship, weave, bleaching, size, construction, water extract, inorganic matter, reaction, and sizing and loading materials; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

*References.*—Absorbent cotton, surgical, *see* 398.1.

### 301.6 SMOKELESS POWDER COTTON

U.S. Gov., Navy Dept. Specification 4C3; 1923. Cotton; Smokeless-Powder.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 50-11-44; 1930. Cellulose.

*References.*—Guncotton, *see* 862.

### 301.7 TARES

## 302. COTTON YARN, THREAD, AND CORDAGE

### 302.1 COTTON YARN

### 302.10 General Items

American Society for Testing Materials, D 180-44; 1944. General Methods of Testing and Tolerances for Cotton Yarns. Includes carded and combed, both single and plied, and both single and multiple wound. Gives definitions, tolerances, methods of testing, and methods for testing.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, 1938. Cotton Yarn. Covers kinds and uses, specifications for ordering yarn, and import duty.

Underwear Institute. Specification G-2; 1935. Standard Practice of Cone Colors for Single Cotton Yarns. A system of designating single cotton yarn sizes by the colors of the cones upon which they are wound. Gives color of cone and yarn sizes.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Commercial Standard CS11-41; 1941. Regain of Mercerized Cotton Yarns. This standard defines the moisture content and regain to be used in price adjustment of buying and selling cotton yarns and for other purposes. Initiated by National Assn. of Hosiery Manufacturers.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Commercial Standard CS33-43; 1943. Knit Underwear (Exclusive of Rayon). Covers standard methods of measuring and standard measurements for knit underwear (exclusive of rayon) for boys, children, infants, men, and women. Includes recommended practice on cone colors for single cotton yarns; the color of cone on which the yarn is wound designates the size of yarn; 12 colors are recommended.

### 302.11 Sea Island Cotton Yarn

### 302.12 Three-Ply Bleached Cotton Yarn

### 302.13 Asbestos Yarn

*References.*—Asbestos yarn, *see* 645.4.

### 302.2 COTTON THREAD

### 302.20 General Items

American Society for Testing Materials, D 204-42; 1942. Methods of Testing and Tolerances for Cotton Sewing Threads. Includes untreated and glazed or waxed thread, tolerances allowable, and test procedures for breaking strength, yardage per pound, twist, balance, and running qualities.

### 302.21 Thread for Flag Making

### 302.22 Sewing Machine Thread

U. S. Gov., Army-Navy Aeronautical Specification AN-T-46; 1944. Thread; High-Tenacity Cotton.

U. S. Gov., Federal Specification V-T-276b; 1937. Amendment 2; 1943. Thread; Cotton. Covers three types: (I) Machine, in three finishes: (IA) Soft—(IA1) unbleached, (IA2) bleached white and tints, and (IA3) unbleached black and colors; (IB) glazed silk—(IB1) unbleached, (IB2) bleached white and tints, and (IB3) unbleached black and colors; and (IC) mercerized—(IC1) bleached white and tints and (IC2) unbleached black and colors; (II) basting, in one finish—(IIA) glazed silk—(IIA1) bleached white and (IIA2) black; and (III) heavy, unbleached, bleached white, or in colors, in two finishes—(IIIA) soft and (IIIB) glazed silk. Gives requirements for material, workmanship, balance, sewing quality, finish, plyknots and yarn splices, direction of twist, color, fastness to laundering, and physical properties; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

### 302.23 Silkateen or Mercerized Cotton Thread

U.S. Gov., Veterans Administration. Specification VA-X-85d; 1941. Thread; Cotton Crochet Mercerized Perle No.3.

### 302.24 Colored Thread, Polished

### 302.25 Thread for Canvas Work

### 302.29 Miscellaneous Cotton Thread

U.S. Gov., Veterans Administration. Specification VA-X-86c; 1941. Thread; Cotton Knitting No.6.

### 302.3 COTTON TWINE

### 302.31 Cable Laid Twine

U. S. Gov., Navy Dept. Specification 21T4d; 1938. Twine; Cotton, Mattress, Polished, for Use in Tufting-Machines.

### 302.32 Cotton Seine Twine

U. S. Gov., Federal Specification T-T-881a; 1933. Twine; Cotton, Seine. Covers one grade in commercial numbers 6, 9, 12, 15, 18, 24, 30, 36, 48, 72, 84, 96, 108, 120, 144, and 168. Gives requirements for material and workmanship, twist, lengths per pound, and breaking strengths; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Navy Dept. Specification 21C6b; 1944. Clothes-Stops.

*References.*—Tolerances and methods of test for cotton yarn, *see* 302.10; methods of testing textile materials, *see* 300.4.

### 302.33 Broom Twine

### 302.34 White and Khaki Colored Twine

*References.*— Other white twines, *see* 302.31-302.39.

### 302.35 Sailmakers' Twine

### 302.36 Wrapping Twine

American Meat Institute. Standards for Packinghouse Supplies, Packs, and Equipment, 1928. Twine for Tying Paper-Wrapped Smoked Meats. No. 24 cotton, tubular braid, stranding, yarn size, weight, and tensile strength.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R124-31; 1931. Polished Cotton Twine. This recommendation establishes a simplified list of stock varieties of plain and surface-colored polished cotton twine. It includes also requirements relating to packaging and colors.

U. S. Gov., Federal Specification T-T-871; 1930. Twine; Cotton, Wrapping. Covers one grade. Gives requirements for material and workmanship, number of plies (2,3,4,5, and 6), lengths per pound, and breaking strengths; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

*References.*—Tolerances and methods of testing cotton yarn, *see* 302.10; methods of testing textile products, *see* 300.4; jute wrapping twine, *see* 326.

### 302.39 Miscellaneous Cotton Twine

American Meat Institute. Standards for Packinghouse Supplies, Packs, and Equipment, 1928. Boiled Ham Twine for Tying Hams for Boiling; Twine for Roping Boned Loins for Boiling; Twine for Stringing Sweet Pickled Hams and Picnics; Twine for Tying Casings; Twine for Roping and Hanging Bologna; and Twine for Roping Dry Sausage. Requirements for size of each cotton twine, number of strands, size of yarn, weight, and tensile strength.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, 1938. Twines. Covers general discussion of twine and gives details for jute twines; istle twines, sisal twines, Manila twines, Java sisal twines, Mexican sisal twines, Italian hemp, American hemp, and cotton twines.

Tag Manufacturers Institute. Manual of Standard Specifications for Strings, 1939. Gives TMI designation, usual dealers name, technical description according to manufacturers standards, approximate yards per pound, and strength of cotton and silk cords and twines and jute twines.

U. S. Gov., Navy Dept. Specification 21 T 9b; 1943. Twine; Flax, Hemp, or Cotton, Mattress—for Use in Side Stitching.

U. S. Gov., Veterans Administration. Specification VA-X-34e; 1941. Chenille; Cotton.

U. S. Gov., Veterans Administration. Specification VA-X-80j; 1942. Roving; Cotton.

*References.*—Tolerances and methods of testing cotton yarn, *see* 302.10.

## 302.4 COTTON ROPES AND CORDS

### 302.40 General Items

American Society for Testing Materials, D 179-42; 1942. Methods of Testing and Tolerances for Tire Cord, Woven and on Cones. Includes cord fabric and cotton cord for use in pneumatic tires, allowable tolerances and methods of testing weight, thickness, breaking strength, elongation, twist, and calibrating and checking cord testing machines for sensitivity.

Cordage Institute. Method of Testing for Tensile Strength, Etc. Hard Fiber Wrapping Twine, 1940. Requirements for pendulum type, power-driven testing machine, speed of moving head, capstans, holding of specimen, conditioning for test, number of tests and yardage determination.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Technologic Paper T300; 1925. Development of a Standard Bending Test for Rope Yarns. Describes testing machine and gives recommended procedure for making bending test in which the original twist in the yarn is retained during test.

### 302.41 Bell and Signal Cord

### 302.42 Chalk Line

U.S. Gov., U.S. Army, Medical Dept. Specification 17-192; 1939. Chalk Line; With Reel and Awl.

### 302.43 Gill Line

### 302.44 Halyards

U. S. Gov., Marine Corps Specification, adopted 1916. Halyards; Flag, Recruiting.

U. S. Gov., Navy Dept. Specification 21H2a; 1933. Halliards; Signal, Braided.

### 302.45 Lacing Cord

U.S. Gov., Dept. of Agriculture, Forest Service. Specifications MSF-97. Cinch; Lash.

U.S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R168-37; 1937. Braided Shoe Laces. This recommendation establishes a simplified schedule of stock lengths of braided shoe laces. Initiated by the Shoe Lace Institute.

U. S. Gov., Marine Corps Specification, adopted 1943. Cord; Lacing, Olive Drab.

U. S. Gov., Marine Corps Specification, adopted 1940. Cord; Lacing, Khaki.

U.S. Gov., Navy Dept. Specification 4C1b; 1923. Cord; Lacing, Cartridge-Bag, Silk.

U.S. Gov., Navy Dept. Specification 55L3e; 1944. Laces; Trousers, Rayon, Black.

U.S. Gov., Navy Dept. Specification 72L2a; 1944. Laces; Legging.

U. S. Gov., Treasury Dept., Procurement Div., 444A; 1942. Laces; Shoe, Cotton. Covers two types—(I) round, solid, and (II) tubular, glazed, and mercerized;

made of cotton, carded or combed. Gives requirements for sizes, colors, tips, color fastness, length, weight, and breaking strength; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., U. S. Army, Army Air Forces. Specification 6-147; 1929. Cord; Cotton, Braided, 1/8 In. Diameter.

U. S. Gov., U.S. Army, Quartermaster Corps. Specification 6-252; 1937. Laces; Breeches.

### 302.46 Sash Cord

American Hospital Assn., 4-13. Cotton Braided Sash Cord. Covers solid braided unfinished and polished sash cord. Based on U. S. Gov. Federal Specification T-C-571a, and Amendment 1, for Cotton Braided Sash Cord, referred to below.

U. S. Gov., Federal Specification T-C-571a; 1936. Amendment 2; 1938. Cord; Sash, Cotton, Braided. Covers two types—(A) unfinished and (B) polished. Gives requirements for material and workmanship; size, diameter, breaking strengths, number of strands, length per pound, weight of core for each size; nonfibrous material and stretch; methods of sampling, inspection, and tests; and packing and marking.

*References.*—Tolerances and methods of testing yarns, *see* 302.40, 302.10.

### 302.47 Wrapping Cords

*References.*—Wrapping twine, *see* 302.36.

### 302.48 Yoke Ropes

### 302.49 Miscellaneous Cotton Cords and Ropes

U. S. Gov., Federal Specification T-C-466; 1943. Clothesline; Cotton, Braided. Shall be of but one type made of natural color cotton yarn and shall have no finishing material added. Gives requirements for workmanship, construction, tolerance, length, size, diameter, breaking strength, number of carriers, length per pound, weight of core, and stretch; methods of sampling, inspection and test; packaging, packing, and marking.

U.S. Gov., Federal Specification T-R-571; 1931. Rope; Cotton. Covers one grade in diameters of 1/8, 3/16, 1/4, 3/8, 1/2, 3/4, and 1 in. Gives requirements for material, workmanship; length per pound and strength; methods of sampling, inspection, and tests; and marking.

U. S. Gov., Marine Corps Specification, adopted 1932. Cord; Cotton, Braided, Olive Drab (for Pistol Lanyards).

U. S. Gov., Navy Dept. Specification 21L3b; 1932. Lines; Cotton, Braided (Lead Line and Taffrail Log Line).

U.S. Gov., Army-Navy Aeronautical Specification AN-C-122; 1944. Cord; Braided Cotton.

U. S. Gov., U. S. Army, Army Air Forces. Specification 6-27; 1926. Cord; Special Cotton.

U. S. Gov., U. S. Army, Medical Dept. Specification 6-271; 1939. Rope; Cotton, Waterproofed, for Balkan Frame.

U. S. Gov., U. S. Army, Medical Dept. Specification 6-273; 1939. Clothesline.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 50-11-52; 1938. Cord; Cotton, Braided, for Pyrotechnic Parachutes.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 6-309; 1942. Rope; Parachutist.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-217A; 1932. Rope; Type RP-3, Sash Cord No. 5.

U. S. Gov., U. S. Maritime Commission. Specification 21-MC-1; 1941. Lines; Cotton, Braided (for) Hand-Sounding Leads. Lines shall be solid braided-type I, unpolished and type II, polished—in but one grade, and sizes shall be as designated. Gives requirements for materials, workmanship, construction, sampling, inspection, and tests.

*References.*—Tolerances and methods of testing yarns and cord, *see* 302.40, 302.10, 303.8; tire cord, *see* 303.8.

## 303. COTTON MECHANICAL FABRICS

### 303.0 GENERAL ITEMS

American Society for Testing Materials, D 122-37; 1937. Specifications and Methods of Test for Tire Fabrics Other Than Cord Fabrics. For fabrics used in manufacture of pneumatic tires; requirements for physical properties of plied yarn chafer fabrics, single yarn chafer fabrics, and enameling ducks; for tolerances as to width, weight, count, thickness, breaking strength, twist, crimp, and bow, with tests using A.S.T.M. method D 39.

American Society for Testing Materials, D 181-42; 1942. Specifications and Methods of Test for Certain Heavy Cotton Fabric for Manufacture of Hose and Belting. Gives scope, physical properties, tolerances for width, weight, count, thickness, crimp, and breaking strength, and procedures for testing in accordance with A.S.T.M. method D 39.

American Society for Testing Materials, D 230-44; 1944. Numbered Cotton Duck. Gives scope, physical properties, weave, size content, width, length of pieces, and methods of testing.

American Society for Testing Materials, D 626-41 T; 1941. Tentative Specifications for Fire-Retardant Properties of Treated Textile Fabrics. Fire-retardant properties of fabrics used for decorative or other purposes on the inside of buildings or other structures. Fire-retardant properties, sampling, test specimens, apparatus, and procedure. These specifications are based on the recommended requirements of the Committee on Fireproofing and Preservative Treatments of the National Fire Protection Assn.

American Society for Testing Materials, D 629-42 T; 1942. Tentative Methods of Quantitative Analysis of Textiles. Describe procedures for the quantitative analysis of textiles for—water, total nonfibrous materials, acetate rayon, silk (including silk noils), regenerated cellulose rayon, cotton, and wool (including reprocessed and reused wool), and varieties of these kinds of fibers in mixtures. Types of analysis, general procedure, moisture content or moisture regain, total sizing, finishing, and other nonfibrous materials; mechanical separation or dissection, chemical analysis, and comparative scale for fineness of various textile fibers.

U. S. Gov., Dept. of Agriculture, Forest Service. Specifications 85-S. Canvas, for back pack cargoing.

U. S. Gov., Marine Corps Specification, adopted 1944. Dyeing and Finishing of Duck and Tent Twill.

## 303.1 COTTON DUCK

American Hospital Assn., 67-19. Cotton Canvas. Covers "firsts." Based on U. S. Gov., Navy Dept., Specifications 24C8 for Cotton Canvas and U. S. Gov. Federal Specification CCC-T-191a, and Amendment 1, for General Specifications. Test Methods, Textiles.

American Hospital Assn.. 67-85. Bleached Duck. Covers one type in "firsts." Based on U. S. Gov., War Dept., Specifications 6-191B for Bleached Duck and U. S. Gov. Federal Specification CCC-T-191a, and Amendment 1, for General Specifications, Test Methods, Textiles.

American Hospital Assn., 67-88. Bleached Cotton Duck. Covers two types. Based on U. S. Gov., Navy Dept., Specifications 27 D 6a for Bleached Cotton Duck and U. S. Gov. Federal Specifications CCC-T-191a, and Amendment 1, for General Specifications, Test Methods, Textiles.

American Hospital Assn., 67-91. Dressed Cotton Duck. Covers one type and grade. Based on U.S. Gov., Navy Dept., Specifications 27D9 for Dressed Cotton Duck and U. S. Gov. Federal Specification CCC-T-191a, and Amendment 1, for General Specifications, Test Methods, Textiles.

American Hospital Assn., 67-97. Fire, Water, and Weather Resistant Cotton Duck. Covers two types in "firsts." Based on U. S. Gov. Federal Specifications CCC-D-746 for Fire, Water, and Weather Resistant Cotton Duck; CCC-D-771a, and Amendment 1, for Plied-Yarns Cotton Duck, Army, Numbered, and Tent Duck; and CCC-T-191a, and Amendment 1, for General Specifications, Test Methods, Textiles.

American Hospital Assn., 67-100. Plied-Filling-Yarns and Single-Yarns Cotton Duck (Flat Duck). Covers two types and two classes each type. Based on U. S. Gov. Federal Specifications CCC-D-761, and Amendment 2, for Plied-Filling-Yarns and Single-Yarns Duck (Flat-Duck) and CCC-T-191a and Amendment 1, for General Specifications, Test Methods, Textiles.

American Hospital Assn., 67-103. Plied-Yarns Cotton Duck, Army, Numbered, and Tent-Duck. Covers three types of "firsts." Based on U. S. Gov. Federal Specifications CCC-D-771a for Plied-Yarns Cotton Duck, Army, Numbered, and Tent-Duck and CCC-T-191a for General Specifications, Test Methods, Textiles.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R27-36; 1936. Cotton Duck. This recommendation covers numbers and widths of sail and wide cotton duck.

U. S. Gov., Federal Specification CCC-D-730; 1943. Duck; Cotton, Bleached. Covers three classes—(A)5 oz. per sq.yd., (B)7 oz. per sq.yd., and (C)8.2 oz. per sq.yd. Gives requirements for material and workmanship, weave, shrinkage, ply, weight, width, construction, breaking strength, sizing, finishing, and nonfibrous materials; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., Federal Specification CCC-D-746; 1939. Duck; Cotton, Fire, Water, and Weather Resistant. Covers one grade and two types—(I) numbered duck and (II) army duck. Gives requirements for treatment, flexibility, tackiness, resistance to high and low temperatures, weave, width, breaking strength, water permeability, and resistance to fire; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification CCC-D-761; 1933. Amendment 2; 1940. Duck; Cotton, Plied-Filling-Yarns and Single-Yarns (Flat-Duck). Covers two types—(I) single-filling and (II) double-filling (plied); and two classes—(A) gray and (B) dyed or finished. Gives requirements for sizing, weave, length of roll, tolerances, construction, weight, width, minimum thread count, and breaking strength; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Federal Specification CCC-D-771b; 1943. Duck; Cotton, Plied-Yarns (Army, Numbered, and Tent-Duck). Covers four types, (I) numbered, (II) dyed numbered, (III) army, and (IV) dyed army. Gives requirements for cotton, yarn, workmanship, weave, width, size content, color, color fastness, resistant finish, dyed duck, length of pieces, weight, width, yarn ply, count number, and breaking strength; methods of sampling, inspection, and tests; and packing and marking.

U. S. Gov., Marine Corps Specification, revised 1944. Duck; Cotton, Plied Yarns, 20-Oz. Per Square Yard.

U. S. Gov., Navy Dept. Specification 23M3a; 1944. Mats, Collision, and Covers.

U. S. Gov., Navy Dept. Specification 24C8g; 1943. Canvas; Cotton.

U. S. Gov., Navy Dept. Specification 24C14b; 1942. Canvas; Impregnated.

U. S. Gov., Navy Dept. Specification 24D3e; 1942. Duck; Cotton, Pipe-Covering.

U. S. Gov., Navy Dept. Specification 24D5; 1939. Duck for Target Screens (Ravens).

U. S. Gov., Navy Dept. Specification 27C26a; 1942. Canvas; Black.

U. S. Gov., Navy Dept. Specification 27D9a; 1941. Duck; Cotton, Dressed.

U. S. Gov., Navy Dept. Specification 55D9; 1921. Duck; Union.

U. S. Gov., U.S. Army, Army Air Forces. Specification 6-46A; 1934. Duck; Cotton, 12-Oz.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 6-327; 1943. Duck; Cotton, Grey, 48-Oz. (Stock No. 24-D-22625 thru 22670).

U. S. Gov., Veterans Administration. Specification VA-X-30b; 1941. Cloth; Cross Stitch Canvas (for Handicrafts).

*References.*—Tolerances, methods of testing, definitions, standard sizes and weights, *see* 303.0, 300.4, 300.6; other cotton duck, *see* 303.2, 303.9.

## 303.2 CLOTHING DUCK

U. S. Gov., Navy Dept. Specification 27C34; 1941. Canvas; Waistband.

U. S. Gov., Navy Dept. Specification 27D7a; 1940. Duck; Linen, Bleached.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 6-191B; 1936. Duck; Bleached.

*References.*—Cotton uniforms, *see* 311.6; *see* references under 303.1.

## 303.3 DUCK FOR BAGS

American Society for Testing Materials, D 205-39; 1939. Specifications and Methods of Test for Osnaburg Cement Sacks. Applies to osnaburg cement sacks and to the fabric used in their construction. Gives tolerances, samples and details for osnaburg fabric and for osnaburg sacks.

U. S. Gov., Marine Corps Specification, adopted 1940. Cloth; Cotton, Osnaburg.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 6-280B; 1944. Cloth; Cotton, Osnaburg.

*References.*—Tolerances, methods of testing, definitions, standard sizes and weights, *see* 303.0, 300.4, 300.6; stitches and stitching, *see* 300.7.

## 303.4 LINING DUCK

## 303.5 TENT DUCK

American Hospital Assn., 67-103. Plied-Yarns Cotton Duck, Army, Numbered, and Tent-Duck. Covers three types of "firsts." Based on U. S. Gov. Federal Specifications CCC-D-771a for Plied Yarns Cotton Duck, Army, Numbered, and Tent-Duck, referred to below, and CCC-T-191a for General Specifications, Test Methods, Textiles.

U. S. Gov., Federal Specification CCC-D,771b; 1943. Duck; Cotton, Plied-Yarns, Army, Numbered, and Tent-Duck. Covers four types — (I) numbered, (II) dyed numbered, (III) army, and (IV) dyed army. Gives requirements for cotton, yarn, workmanship, weave, width, size content, color, color fastness, resistant finish, dyed duck, length of pieces, weight, width, yarn ply, count number, and breaking strength; methods of sampling, inspection, and tests; and packing and marking.

U. S. Gov., Marine Corps Specification, adopted 1942. Duck; Cotton, Plied-Yarns (Army, Numbered, and Tent-Duck).

*References.*— Other cotton duck, *see* 303.1; *see* references under 303.3.

## 303.6 AWNING CLOTH

American Hospital Assn., 67-22. Dyed Canvas (for Ships' Awnings and Outboard Covers). Covers "first." Based on U. S. Gov., Navy Dept. Specifications 24 C 17b for Dyed Canvas, for Ships' Awnings and Outboard Covers, and U. S. Gov. Federal Specification CCC-T-191a for General Specifications, Test Methods, Textiles.

American Hospital Assn., 67-37. Awning Cloth. Covers five types. Based on U. S. Gov. Federal Specifications CCC-C-406 for Awning Cloth and CCC-T-191a for General Specifications, Test Methods, Textiles.

U. S. Gov., Federal Specification CCC-C-406; 1931. Cloth; Awning. Covers five types—(I), (II), and (III) woven stripes; (IV) painted stripes or tinted solid colors; and (V) piece-dyed. Gives requirements for construction, weight, width, thread count, and breaking strength; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

*References.*—*See* references under 303.3.

## 303.7 DUCK FOR MATTRESS COVERS AND COTS

U. S. Gov., Marine Corps Specification, adopted 1926. Duck; Cotton, Unbleached (for Mattress Covers).

*References.*—Duck for canvas cots, *see* 319.94.

## 303.8 TIRE FABRICS

American Society for Testing Materials, D 122-37; 1937. Specifications and Methods of Test for Tire Fabrics Other Than Cord Fabrics. For fabrics used in manufacture of pneumatic tires; requirements for physical properties of plied yarn chafer fabrics, single yarn chafer fabrics, and enameling ducks; for tolerances as to width, weight, count, thickness, breaking strength, twist, crimp, and bow, with tests using A.S.T.M. method D 39.

American Society for Testing Materials, D 179-42; 1942. Methods of Testing and Tolerances for Tire Cord, Woven and on Cones. Includes cord fabric, and cotton cord for use in pneumatic tires, allowable tolerances, and methods of testing weight, thickness, breaking strength, elongation, twist, and calibrating and checking cord testing machines for sensitivity.

American Society for Testing Materials, D 376-35; 1935. Specifications and Methods of Test for Holland Cloth. Includes No.1 and No.2 constructions for use in the tire industry. Gives tolerances, specifications, special requirements, and methods of testing.

U. S. Gov., Army Air Forces. Specification 16137A; 1944. Fabric; Non-Skid Tread.

*References.*—Tolerances, methods of testing, definitions, standard sizes and weights, *see* 303.0, 300.4, 300.6; pneumatic tires, *see* 206.

## 303.9 MISCELLANEOUS MECHANICAL FABRIC OF COTTON

### 303.91 Mode Duck

### 303.92 White Duck

U. S. Gov., Marine Corps Specification, adopted 1934. Duck; White, 15-Oz. (for Leggings).

*References.*—White clothing duck, *see* 303.2.

### 303.93 Enameled Duck

American Hospital Assn., 67-94. Enameled Cotton Duck. Covers one type in "firsts." Based on U. S. Gov. Federal Specifications CCC-D-741 for Enameled Cotton Duck and CCC-T-191a for General Specifications, Test Methods, Textiles.

U. S. Gov., Federal Specification CCC-D-741; 1936. Amendment 1; 1938. Duck; Cotton, Enameled. Covers one grade and one type. Gives requirements for finish, length of roll, color, permeability, oxidation, and physical requirements; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

### 303.94 Rubberized Duck

### 303.95 Waterproof Duck

U. S. Gov., Marine Corps Specification, adopted 1936. Duck; Bleached, Waterproofed (for Shower Curtains).

U. S. Gov., U. S. Army Chemical Warfare Service. Specification 6-126A; 1928. Duck; Paraffined, O.D.

*References.*—Waterproof fabric, *see* 392.4.

### 303.96 Packing and Gaskets

*References.*—Canvas and other fabric packing, *see* 707.25; *see* Flax Packing, 339.7.

### 303.97 Hose and Belt Ducks

American Society for Testing Materials, D 181-42; 1942. Specifications and Methods of Test for Certain Heavy Cotton Fabric for Manufacture of Hose and Belting. Gives scope, physical properties; tolerances for width, weight, count, thickness, crimp, and breaking strength; and procedures for testing in accordance with A.S.T.M. method D 39.

*References.*—Tolerances, methods of test, definitions, standard sizes and weights, *see* 303.0, 300.4, 300.6.

### 303.99 Mechanical Fabrics Not Otherwise Classified

U. S. Gov., Army Air Forces. Specification 16106-A (1); 1944. Cloth; Wire Mesh, Cotton Covered.

## 304. COTTON CLOTH, BLEACHED AND UNBLEACHED

### 304.0 GENERAL ITEMS

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, 1938. Cotton Textile Fabrics. Covers description and terms, finishing, length of pieces, packing, sources, types of purchases, quantities, quality, postponements, and terms of payment.

### 304.1 COTTON CLOTH, PLAIN

U. S. Gov., U. S. Army, Army Air Forces. Specification 6-313; 1943. Cloth; Cotton (Grade B).

U. S. Gov., U. S. Army, Army Air Forces. Specification 6-317; 1943. Cloth; Cotton (Leno Weave).

U. S. Gov., U. S. Army, Ordnance Dept. Specification 50-11-65A; 1941. Cloth; Cotton, Cartridge.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 6-109B; 1941. Cloth; Cotton, Grey and Dyed.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 6-320; 1943. Cloth; Cotton, Fine, Plain.

*References.*—Cotton cloth for rubber and pyroxylin coating, *see* 306.24.

### 304.2 FLANNEL

American Hospital Assn., 67-109. Canton Flannel. Covers two types in "firsts." Based on U. S. Gov. Federal Specifications CCC-F-451 for Canton Flannel and CCC-T-191a for General Specifications, Test Methods, Textiles.

American Hospital Assn., 67-112. Heavy Cotton Flannel (Table Felt). Covers one type and two classes in "firsts." Based on U.S. Gov. Federal Specifications CCC-F-456 for Heavy Cotton Flannel (Table Felt) and CCC-T-191a for General Specifications, Test Methods, Textiles.

American Hospital Assn., 67-115. Outing Flannel. Covers three types in "firsts." Based on U.S. Gov. Federal Specification CCC-F-466 for Outing Flannel.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R186-42; 1942. Cotton Canton Flannels (Unbleached) for Work Gloves. This program was initiated by the Cotton-Textile Institute, Inc., with a view to conserving material and simplifying production by eliminating unessential weights and weaves of cotton canton flannel used in the manufacture of work gloves. According to the sponsors, the general adoption of this simplified schedule will make possible a reduction in variety from 18 weights and weaves to 9.

U. S. Gov., Federal Specification CCC-F-451; 1933. Flannel; Canton. Covers one grade and two types—A and B. Gives requirements for width, weight, thread count, length of bolt or roll, and construction; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Federal Specification CCC-F-456; 1934. Flannel; Cotton, Heavy (Table-Felt). Covers one grade, one type, and two classes—(A) 54 in. wide, and (B) 72 in. wide. Gives requirements for weave, finish, thread count, tolerances, width, weight, length of cuts or rolls, and tensile strength; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Federal Specification CCC-F-466; 1936. Flannel; Outing. Covers one grade and three types—I, II, and III. Gives requirements for construction, weight, thread count, strength, colors, napping, and widths; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Navy Dept. Specification 27F6; 1929. Flannel; Cotton, Domet, Bleached (Aircraft Use).

U. S. Gov., Treasury Dept., Procurement Div., No. 546; 1942. Shirting; Flannel, Plaid, Shrunk. Covers one type and grade known as "firsts," made of thoroughly cleaned cotton. Gives requirements for weave, colors and patterns, color fastness, thread count, breaking strength, weight, width, shrinkage, and sizing; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., U. S. Army, Chemical Warfare Service. Specification 6-54; 1926. Flannel; Domet, Bleached (for Wiping Cloth).

U. S. Gov., U. S. Maritime Commission. Specification 27-MC-22; 1941. Table-Felts; Cotton Flannel. Shall be but one type and the grade shall be that known commercially as "firsts." Gives requirements for material, workmanship, weave, finish, thread count, weight, strength, size, edges, sampling, inspection, and tests.

*References.*—Cotton grades, *see* 300.0, 300.1; tolerances, methods of testing, definitions, *see* 300.4, 300.6.

### 304.3 CHEESE CLOTH

American Hospital Assn., 67-31. Bleached and Unbleached Cheesecloth. Covers two types and two classes in each type. Based on U. S. Gov. Federal Specifications CCC-C-271 for Bleached and Unbleached Cheesecloth and CCC-T-191a for General Specifications, Test Methods, Textiles.

American Meat Institute. Standards for Packinghouse Supplies, Packs, and Equipment, 1928. Cheese Cloth and Muslin. Include six grades for wiping smoked meats and desks, for lining meat boxes and tubs, for sacking meat cuts and smoked meats, and for straining brine; requirements for thread counts and weight.

U. S. Gov., Federal Specification CCC-C-271; 1932. Cheesecloth; Bleached and Unbleached. Covers one grade; two types—(I) unbleached and (II) bleached; and two classes—(A) 38 1/2-in. width and (B) 36-in. width. Gives requirements for construction, weave, length of cuts or rolls, and tolerances; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Federal Specification DDD-C-301; 1932. Cheesecloth; (for) Wiping Purposes (Remnants and Seconds). Covers two types—(I) bleached and (II) unbleached; one grade and two classes—(A) short lengths or remnants and (B) long lengths. Gives requirements for material, workmanship, weave, finish, width, weight, and lengths; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

*References.*—Tolerances, methods of testing, definitions, *see* 300.4, 300.6.

## 304.4 DRILL

American Hospital Assn., 67-43. Unbleached (Fully Shrunk) Drill Cloth. Covers one type in "firsts." Based on U. S. Gov., War Dept., Specifications for Unbleached (Fully Shrunk) Drill Cloth and U. S. Gov. Federal Specification CCC-T-191a for General Specifications, Test Methods, Textiles.

American Hospital Assn., 67-76. Bleached and Shrunk Drill. Covers five types. Based on U. S. Gov., Navy Dept., Specifications 27-D-5c for Bleached and Shrunk Drill and U. S. Gov. Federal Specification CCC-T-191a for General Specifications, Test Methods, Textiles.

American Hospital Assn., 67-79. 39-In. Blue Cotton Drill. Covers one type and grade. Based on U. S. Gov., Navy Dept., Specifications 27 D 8a for 39-In. Blue Cotton Drill and U. S. Gov. Federal Specification CCC-T-191a for General Specifications, Test Methods, Textiles.

American Hospital Assn., 67-82. Unbleached Drill. Covers four types in "firsts." Based on U. S. Gov. Federal Specifications CCC-D-651 for Unbleached Drill and CCC-T-191a for General Specifications, Test Methods, Textiles.

American Society for Testing Materials, D 334-40; 1940. Specifications and Methods of Test for Cotton Goods for Rubber and Pyroxylin Coating. Gives scope, quality, defects, selvage, sizing, injurious chemicals, width, count, unit weight; breaking strength for sheeting, drill, twill, broken twill, and sateen; length of cut and methods of testing.

U. S. Gov., Federal Specification CCC-D651; 1932. Drill; Unbleached. Covers one grade and six types. Gives requirements for finish, weave, width, length of bolt, breaking strength, and construction; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Marine Corps Specification, adopted 1937. Drilling; Bleached (Shrunk).

U. S. Gov., Marine Corps Specification, adopted 1943. Drilling; Cotton, Bleached, Preshrunk, (5-Oz).

U. S. Gov., Navy Dept. Specification 27Dlc; 1944. Drill; Cotton, Fire- and Weather-Resistant.

U. S. Gov., Treasury Dept., Procurement Div., No. 393; 1939. Drill; Pocket, Unbleached. Shall be of one type made of thoroughly cleaned cotton, of the grade known as "firsts." Gives requirements for weight, thread count, weave, breaking strength, and width; method of sampling, inspection, and test; and packaging, packing, and marking.

U.S. Gov., U.S. Army, Quartermaster Corps. Specification 6-247B; 1943. Cloth; Cotton, Drill (Fully Shrunk).

*References.*—Tolerances, methods of testing, definitions, *see* 300.4, 300.6; gray goods for converting trade, *see* 304.1.

## 304.5 JEAN

American Hospital Assn., 67-124. Bleached Jean. Covers one type of "firsts." Based on U. S. Gov. Federal Specifications CCC-J-191 for Bleached Jean and CCC-T-191a for General Specifications, Test Methods, Textiles.

U. S. Gov., Federal Specification CCC-J-191; 1932. Jean; Bleached. Covers one type and grade. Gives requirements for weave, length of rolls, finish, width, weight, thread count, and strength; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Marine Corps Specification, adopted 1944. Cloth; Cotton, Jean. Bleached.

*References.*—Tolerances, methods of testing definitions, *see* 300.4, 300.6; gray goods for converting trade, *see* 304.1.

## 304.6 MUSLINS

American Hospital Assn., 67-139. Bleached Muslin. Covers two types. Based on U. S. Gov. Federal Specifications CCC-M-191 for Bleached Muslin and CCC-T-191a for General Specifications, Test Methods, Textiles.

American Hospital Assn., 67-142. Unbleached Muslin. Covers one class, one type, and one grade. Based on U. S. Army Specifications 10-2514 for Unbleached Muslin.

American Meat Institute. Standards for Packinghouse Supplies, Packs, and Equipment, 1928. Cheese Cloth and Muslin. Include six grades for wiping smoked meats and desks, for lining meat boxes and tubs, for sacking meat cuts and smoked meats, and for straining brine; requirements for thread counts and weight.

U. S. Gov., Federal Specification CCC-M-911; 1936. Amendment 1; 1941. Muslin; Bleached. Covers two types—(I) minimum weight, 3.1 oz. per sq.yd.; and (II) minimum weight, 2.4 oz. per sq.yd.; bleached white; nainsook or pure finish. Gives requirements for finish, tolerance, widths, length of bolt or roll, and construction; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S Gov., Marine Corps Specification, revised 1931. Muslin; Unbleached (for Target Backing).

U. S. Gov., Treasury Dept., Procurement Div., No. 397; 1940. Muslin; Unbleached. Shall be of one type made from throughly cleaned cotton of the grade known as "firsts." Gives requirements for weight, width,

thread count, breaking strength, and finish; method sampling, inspection, and test; and packaging, packing, and marking.

U. S. Gov , U. S. Army, Medical Dept. Specification 10-2514; 1939. Muslin; Unbleached.

*References.*—Gray goods for converting trade, *see* 304.1.

## 304.7 SHEETINGS

### 304.71 Sheetings, Bleached and Unbleached

American Hospital Assn., 67-160. Wide Bleached Cotton Sheeting. Covers six types in "firsts." Based on U. S. Gov. Federal Specifications CCC-S-271 for Wide Bleached Cotton Sheeting and CCC-T-191a for General Specifications, Test Methods, Textiles.

American Hospital Assn., 67-163. Laundry (Cover-Cloth) Cotton Sheeting. Covers one type and two classes in "firsts." Based on U. S. Gov. Federal Specifications CCC-S-276 for Laundry (Cover-Cloth) Cotton Sheeting and CCC-T-191a for General Specifications, Test Methods, Textiles.

American Hospital Assn., 67-166. Narrow Unbleached Cotton Sheeting. Covers six types in "firsts." Based on U. S. Gov. Federal Specifications CCC-S-281 for Narrow Unbleached Cotton Sheeting and CCC-T-191a for General Specifications, Test Methods, Textiles.

American Hospital Assn., 67-169. Wide Unbleached Cotton Sheeting. Covers "firsts." Based on U. S. Gov. Federal Specifications CCC-S-191 for Wide Unbleached Cotton Sheeting and CCC-T-191a for General Specifications, Test Methods, Textiles.

American Society for Testing Materials, D334-40; 1940. Specifications and Methods of Test for Cotton Goods for Rubber and Pyroxylin Coating. Gives scope, quality, defects, selvage, sizing, injurious chemicals, width, count, unit weight; breaking strength for sheeting, drill, twill, broken twill, and sateen; length of cut and methods of testing.

American Society for Testing Materials, D503-40T; 1940. Tentative Specifications for Bleached Wide Cotton Sheeting. For bed sheeting of plain woven fabric made of single yarns, either carded or combed. Covers six types based on number of filling yarns per inch; requirements for count, weight, breaking strength, and sizing, with tests using A. S. T. M. method D39, and for sizing D276.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Commercial Standard CS32-31; 1931. Cotton Cloth for Rubber and Pyroxylin Coating. A Commercial standard selected and accepted by industry covering requirements on textile strengths for various constructions of sheeting, drill, twill, broken twill, and sateen, length of cuts, permissible defects, sizing and injurious chemicals, with methods of test. Initiated by Cotton Textile Institute.

U. S. Gov., Federal Specification CCC-S-271a; 1943. Sheeting; Cotton, bleached, wide. Covers two classes—(A) 4.6 oz. per sq.yd. (74x66), and (B) 4.2 oz. per sq.yd. (68x60). Gives requirements for material, workmanship, weave, width, weight, thread count, breaking strength, and total sizing; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Federal Specification CCC-S-276; 1935. Sheeting; Cotton, Laundry (Cover-Cloth). Covers one grade, one type, and two classes—(A) 72 in. wide and (B) 90 in. wide. Gives requirements for thread count, length of cuts or rolls. width, weight, and finish; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Federal Specification CCC-S-281; 1931. Amendment 3; 1941. Sheeting; Cotton, Unbleached, Narrow. Covers one grade and six types. Gives requirements for weave, length of cuts or rolls, thread count, width, weight, and breaking strength; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Federal Specification CCC-S-291a; 1943. Sheeting; Cotton, Unbleached, Wide. Covers two classes—(A) 4.7 oz. per sq.yd. (68x72) and (B) 4.3 oz. per sq.yd. (64x64). Gives requirements for weave, material, workmanship, length of roll or bolt, thread count, width, weight, and breaking strength; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Marine Corps Specification, adopted 1944. Sheeting; Cotton, Bleached, Preshrunk.

U. S. Gov., Marine Corps Specification, adopted 1943. Sheeting; Cotton, Unbleached, Preshrunk.

U. S. Gov., Navy Dept. Specification 27S11; 1939. Sheeting; Cotton, Bleached and Unbleached, Preshrunk.

U. S. Gov., Treasury Dept., Procurement Div., No. 386; 1939. Sheeting; Colored. Covers one type and grade known as "firsts," made of thoroughly cleaned cotton. Gives requirements for basic and finished fabric, thread count, breaking strength, weight, width, sizing, finish, colors, and color fastness; methods of sampling, inspection, and test; and packaging, packing, and marking.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 6-322; 1943. Cloth; Cotton, Sheeting, Coating Quality.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 6-323; 1943. Cloth; Cotton, Sheeting.

*References.*—Tolerances, methods of testing definitions, *see* 300.4, 300.6; sheets, brown sheeting, *see* 315.2, 304.76; rubber sheeting, *see* 204.33; gray goods for converting trade, *see* 304.1.

### 304.72 Cotton Hull Sheeting

### 304.73 Pontoon Sheeting

### 304.74 Cotton Sheeting for Mounting

### 304.75 Gray Cotton Sheeting

### 304.76 Brown Sheeting

*References.*—Tolerances, methods of testing definitions, *see* 300.4, 300.6; unbleached cotton sheeting, *see* 304.71.

## 304.8 TICKING

American Hospital Assn., 1-40. Mattress and Pillow Ticking. Two types and one grade (i.e., "firsts"). Based on U. S. Gov. Federal Specifications CCC-T-351 for Mattress and Pillow Ticking and CCC-T-191a for Textiles, General Specifications, Test Methods.

U. S. Gov., Federal Specification CCC-T-351; 1931. Ticking; Mattress and Pillow. Gives requirements for design, weave, and tolerances; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

*References.*—Tolerances, methods of testing, definitions, *see* 300.4, 300.6.

## 304.9 COTTON TOWELING

American Hospital Assn., 67-202. Cotton Toweling. Covers "firsts." Based on U. S. Gov., War Dept., Specifications 6-159 for Cotton Toweling.

American Hospital Assn., 67-208. Crash; Cotton, and Cotton and Linen-Mixed Toweling. Covers two types. Based on U. S. Gov. Federal Specifications CCC-T-571 for Crash, Cotton, and Cotton and Linen-Mixed Toweling and CCC-T-191a for General Specifications, Test Methods, Textiles.

## 304.91 Cotton Crash Toweling

American Hospital Assn., 67-217. Crash; Cotton, and Cotton and Linen-Mixed Towels. Covers two types in "firsts." Based on U. S. Gov. Specifications DDD-T-511 for Crash, Cotton, and Cotton and Linen-Mixed Towels and CCC-T-191a for General Specifications, Test Methods, Textiles.

U. S. Gov., Federal Specification CCC-T-571: 1932. Amendment 2; 1938. Toweling; Crash, Cotton, and Cotton and Linen-Mixed. Covers one grade and two types—(A) mixed linen and cotton and (B) all cotton. Gives requirements for weight, thread count, width, breaking strength, and finish; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Federal Specification DDD-T-511; 1932. Towels; Crash, Cotton, and Cotton-and-Linen-Mixed. Covers one grade and two types—(A) mixed linen and cotton and (B) all cotton. Gives requirements for construction, finish, hems, weight, thread count, dimensions, and breaking strength; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

*References.*—Towels, *see* 319.3, tolerances, methods of testing, definitions, *see* 300.4, 300.6.

## 304.92 Cotton Huck Toweling

American Hospital Assn., 67-223. Office Huck Towels (With Woven Name). Covers one grade in "firsts." Based on U. S. Gov. Federal Specifications DDD-T-531 for Office Huck Towels (With Woven Name) and CCC-T-191a for General Specifications, Test Methods, Textiles.

U. S. Gov., Treasury Dept., Procurement Div., 401A; 1942. Toweling; Huck. Shall be made of thoroughly cleaned cotton free from waste. Gives requirements for weave, color, thread count, weight, width, sizing; method of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., Treasury Dept., Procurement Div., 468b; 1943. Towels; Huck, Cotton Hand. Shall be made of thoroughly cleaned cotton, free from waste, of the grade known as "firsts." Covers detail requirements as to weave, color, thread count, weight, width and length, and sizing; methods of sampling, inspection, and tests; and packaging, packing, and marking.

*References.*—*See* references under 304.91.

## 304.93 Turkish Toweling

American Hospital Assn., 67-211. Turkish Toweling. Covers one grade for filtering feed water. Based on U. S. Gov., Navy Dept., Specification 27 T 2c for Turkish Toweling and U. S. Gov. Federal Specification CCC-T-191a for General Specifications, Test Methods, Textiles.

American Society for Testing Materials, D505-40; 1940. Terry (Turkish) Toweling. For cotton fabric covered with loops on both sides, constructed with a set of ground warp yarns, either single or double ply, a set of warp pile yarns, and a set of filling yarns. Includes four types, properties, and methods of testing.

U. S. Gov., Dept of the Treasury, Procurement Div., 403B; 1942. Toweling; Terry, Bleached. Shall be of the terry weave with uncut loops on both sides. At every interval of 40 in. in the length there shall be woven a 6 in. section of unlooped material, with woven fast selvage edges approximately 1/4 in. wide. Gives detail requirements as to yarn count, breaking strength, weight, width, sizing, and method of sampling, inspection, and tests.

U. S. Gov., Navy Dept. Specification 27T2d; 1942. Toweling; Turkish.

*References.*—*See* references under 304.91.

## 304.94 Dish Toweling

American Hospital Assn., 67-205. Glass Cotton Toweling. Covers one type. Based on U. S. Gov. Federal Specifications CCC-T-561 for Glass Cotton Toweling and CCC-T-191a for General Specifications, Test Methods, Textiles.

American Hospital Assn., 67-214. Glass Cotton Towels. Covers one type of "Firsts." Based on U. S. Gov. Federal Specifications DDD-T-501 for Glass Cotton Towels; CCC-T-191a for General Specifications, Test Methods, Textiles; and CCC-T-561 for Glass Cotton Toweling.

American Hospital Assn., 67-220. Union Glass Towels. Covers "Union" type in "firsts." Based on U. S. Gov., Navy Dept., Specification 27 T 8a for Union Glass Towels and U. S. Gov. Federal Specifications CCC-T-191a for General Specifications, Test Methods Textiles.

U. S. Gov., Dept. of Agriculture, Forest Service. Specifications 247-57-S. Toweling; Dish.

U. S. Gov., Federal Specification CCC-T-561; 1932. Toweling; Cotton, Glass. Covers one type and grade. thread count, breaking strength, and length of bolt; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Federal Specification DDD-T-501; 1932. Towels; Cotton, Glass. Covers one type and grade. Gives requirements for material, workmanship, length, and width; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

*References.*—*See* references under 304.91.

## 306. COTTON CLOTH, PRINTED, DYED, COLORED, OR WOVEN FIGURED

### 306.0 GENERAL ITEMS

Textile Color Card Assn. of the U. S., Inc. Standard Ninth Edition Color Card, 1944. A new master color card for all industries and trades. This is not a card presenting fashion colors for but one season only, but it embraces a complete collection of important staple shades having continued popular acceptance. A Research Associate has been established at the National Bureau of Standards to include the calibration of the 216 colors contained in the Ninth Edition of the Standard Color Card of America and the translation of these standards into the language of scientific equivalents and nomenclature.

Textile Color Card Assn. of the U. S., Inc. Military Colors, 1944. Standard color card for the official standardized shades authorized by the Quartermaster General and supplement showing the official colors for arms and services. Also official standard colors for U. S. Navy.

Textile Color Card Assn. of the U. S., Inc. Standard Color Card, 1944. Flag Colors of the United Nations and South American Republics. A standard reference of the authentic flag colors of all the United Nations and the South American Republics.

### 306.1 DRESS MATERIAL

### 306.11 Calico

### 306.12 Chambray

American Hospital Assn., 67-28. Chambray. Covers two types of "firsts." Based on U. S. Gov. Federal Specifications CCC-C-231 for Chambray and CCC-T-191a for General Specifications, Test Methods, Textiles.

U. S. Gov., Federal Specification CCC-C231a; 1942. Chambray. Covers two types and one grade. Gives requirements for weave, length of bolt or roll, tolerances, finish, color, fastness to light and washing, and shrinkage; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Treasury Dept., Procurement Div., No. 382; 1939. Chambray (for Use Only in Emergency Relief Purchases). Shall be of four types—(I) blue and gray, shrunk; (II) blue and gray, unshrunk; (III) fancy, unshrunk; and (IV) fancy and plaids, unshrunk, made of thoroughly cleaned cotton, the grade known as "firsts." Gives requirements for length of bolt, colors, color fastness, threads per inch, breaking strength, shrinkage, weight, width, and sizing; methods of sampling, inspection, and tests; and packaging, packing and marking.

### 306.13 Checks

### 306.14 Lawn

U. S. Gov., Treasury Dept., Procurement Div., 380A; 1940. Lawn. Covers one type and two classes—(A) white lawn, 88 x 80; and (B) printed lawn, 76 x 68, of the grade known commercially as "firsts," suitable for women's and children's dresses. Gives requirements for finish, length of bolt, colors and patterns, color fastness, weight, width, thread count, and breaking strength; methods of sampling, inspection, and tests; and packaging, packing and marking.

### 306.15 Nainsook

U. S. Gov., Marine Corps Specification, adopted 1941. Nainsook; Checked, Bleached.

U. S. Gov., Navy Dept. Specification 27N2; 1942. Nainsook; Checked, Bleached.

U. S. Gov., Treasury Dept., Procurement Div., No. 378; 1939. Nainsook; Plain Bleached. Shall be of one type and the grade known commercially as "firsts," made of thoroughly cleaned cotton. Gives requirements for basic and finished fabrics, weight, width, thread count, finish, breaking strength, and length of bolt; methods of sampling, inspection, and tests; and packaging, packing, and marking.

### 306.16 Seersucker

U. S. Gov., Treasury Dept., Procurement Div., No. 405; 1941. Seersucker; Woven. Shall be crinkled seersucker type, having pronounced creped or seersucker stripes, plain weave, using a tight beam for plain part and slack beam for crepe or seersucker part; suitable for women's and children's garments. Gives requirements for thread count, breaking strength, weight, width, sizing, colors, color fastness; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 6-329; 1944. Cloth; Cotton, Seersucker, 4 Oz.

### 306.17 Swiss

American Hospital Assn., 67-184. Cotton Dotted Swiss. Covers one type and grade. Based on U. S. Gov. Federal Specifications CCC-S-891 for Cotton Dotted Swiss and CCC-T-191a for General Specifications, Test Methods, Textiles.

U. S. Gov., Federal Specification CCC-S-891; 1936. Swiss; Dotted, Cotton. Covers one type and grade. Gives requirements for width, ends and picks, tensile strength, weight, colors, and dots; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

### 306.18 Gingham

American Hospital Assn., 67-118. Gingham. Covers one type of "firsts." Based on U. S. Gov. Federal Specifications CCC-G-391 for Gingham and CCC-T-191a for General Specifications, Test Methods, Textiles.

U. S. Gov., Federal Specification CCC-G-391; 1932. Gingham. Covers one type and grade. Gives requirements for weight, width, finish, weave, thread count, and breaking strength; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

### 306.19 Miscellaneous Cotton Dress Materials

American Hospital Assn., 67-16. Mercerized Cotton Broadcloth. Covers two types. Based on U. S. Gov. Federal Specifications CCC-B-686 for Mercerized Cotton Broadcloth and CCC-T-191a for General Specifications, Test Methods, Textiles.

American Hospital Assn., 67-136. Cotton Longcloth. Covers one type and grade. Based on U. S. Gov. Federal Specifications CCC-L-591 for Cotton Longcloth and CCC-T-191a for General Specifications, Test Methods, Textiles.

American Hospital Assn., 67-151. Percale. Covers one type in "firsts." Based on U. S. Gov. Federal Specifications CCC-P-191 for Percale and CCC-T-191a for General Specifications, Test Methods, Textiles.

American Society for Testing Materials, D 504-41T; 1941. Tentative Specifications for Bleached Cotton Broadcloth. Classification (in four types), physical properties, and methods of testing.

U. S. Gov., Federal Specification CCC-B-686; 1937. Amendment 1; 1941. Broadcloth; Cotton, Mercerized. Covers two types—A and B, and one grade. Gives requirements for material, workmanship, colors, finish, shrinkage, and width; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Federal Specification CCC-L-591; 1938. Longcloth; Cotton. Covers one type and grade. Gives requirements for ends and picks, breaking strength, weight, colors, finish, and width; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Federal Specification CCC-P-191a; 1944. Percale. Covers one type and one grade. Gives requirements for material, workmanship, weave, width, weight, construction, breaking strength, colors and patterns, finish, nonfibrous materials, shrinkage, colorfastness, and length of bolts or rolls; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Marine Corps Specification, revised 1943. Cloth; Cotton, Broadcloth, White and Khaki.

U. S. Gov., Marine Corps Specification, revised 1944. Cloth; Cotton, Poplin, Olive Drab (Wind-Resistant and Water-Repellent).

U. S. Gov., Marine Corps Specification, adopted 1944. Cloth; Cotton, Mercerized, White.

U. S. Gov., Treasury Dept., Procurement Div., No. 376; 1939. Dimity Printed (for Use Only in Emergency Relief Purchases). Shall be of one type and one grade known commercially as "firsts," and made of thoroughly cleaned cotton. Gives requirements for basic fabric, finished fabric, weight, width, thread count, length of bolt, colors, and patterns; method of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., Treasury Dept., Procurement Div., No. 377. 1939. Percales; Cotton (for Use in Emergency Relief Purchases Only). Shall be of one type and grade shall be that known commercially as "firsts," made of thoroughly cleaned cotton. Gives requirements for basic fabric, finished fabric, weight, width, thread count, breaking strength, colors, length of bolt, and color fastness; method of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., Treasury Dept., Procurement Div., No. 387; 1939. Pique. Shall be of one type of the grade known as "firsts," made of thoroughly cleaned cotton. Gives requirements for basic and finished fabric, thread count, breaking strength, width, weight, sizing, colors, and color fastness; and methods of sampling, inspection and tests; and packaging, packing, and marking.

U. S. Gov., Treasury Dept., Procurement Div., No. 388; 1939. Suede; Shrunk. Shall be of one type of the grade known as "firsts," made of thoroughly cleaned cotton. Gives requirements for basic fabric, finished fabric, thread count, breaking strength, width, weight, shrinkage, sizing, finish, color, and color fastness; method of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 6-328; 1944. Cloth; Cotton, Poplin, 4 Oz.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 6-341; 1944. Cloth; Cotton, Oxford and Poplin, for Pajamas.

*References.*—Tolerances, methods of testing, definitions, *see* 300.4, 300.6; standard colors, *see* 306.0.

## 306.2 LINING MATERIALS

U. S. Gov., Navy Dept. Specification 27L7; 1940. Linings.

### 306.21 Canvas, Crinoline, and Buckram

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Commercial Standard CS57-40; 1940. Book Cloths, Buckrams and Impregnated Fabrics for Bookbinding Purposes, Except Library Bindings. General requirements, definitions, groups, specific and minimum requirements, tolerances, test conditions, sampling, and methods of test. Prepared under auspices of and approved by Book Manufacturers Institute, Employing Bookbinders of America, Institute of Book Cloths and Impregnated Fabric Manufacturers. Approved by American Standards Assn. as CS57-40.

U. S. Gov., Marine Corps Specification, adopted 1934. Buckram.

U. S. Gov., Navy Dept. Specification 27B8a; 1942. Buckram; White.

U. S. Gov., Navy Dept. Specification 27C29; 1939. Canvas; Lining.

U. S. Gov., Treasury Dept., Procurement Div. No. 621; 1943. Buckram. Covers two types—(I) for bookbinding and (II) for clothing; and classes A, B, C, and D. Gives requirements for material, workmanship, color, weave, physical requirements, width, length, sizing, finish, thread count, breaking strength, weight and shrinkage; methods of sampling, inspection, and tests; packaging, packing, and marking.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 6-7A; 1942. Cloth; Cotton, Buckram, 12 Oz.

*References.*—Cotton duck, *see* 303.1, 303.2.

### 306.22 Cambric

American Hospital Assn., 67-17. Cambric. Covers one type and grade. Based on U. S. Gov. Federal Specifications CCC-C-81 for Cambric and CCC-T-191a for General Specifications, Test Methods, Textiles.

U. S. Gov., Federal Specification CCC-C-81; 1938. Cambric. Covers one type and grade. Gives requirements for ends and picks, breaking strength, weight, colors, shrinkage, width, and finish;

methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

*References.*—Varnished cambric, *see* 719.56; varnished cloth, *see* 392.13.

### 306.23 Padding

U. S. Gov., Marine Corps Specification, adopted 1940. Cloth; Padding, Cotton.

U. S. Gov., Marine Corps Specification, adopted 1940. Cloth; Padding, Cotton, Hair and Rayon.

U. S. Gov., Marine Corps Specification, adopted 1941. Cloth; Padding, Linen and Cotton, Permanent Finish.

U. S. Gov., Marine Corps Specification, adopted 1926. Padding; Black.

U. S. Gov., Marine Corps Specification, adopted 1926. Padding; Green.

U. S. Gov., Marine Corps Specification, adopted 1927. Padding; Vest (for Officers).

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 14-6A; 1942. Cloth; Padding, Canvas.

### 306.24 Sateen and Silesia

American Society for Testing Materials, D 334-40; 1940. Specifications and Methods of Test for Cotton Goods for Rubber and Pyroxylin Coating. Gives scope, quality, defects, selvage, sizing, injurious chemicals, width, count, unit weight; breaking strength for sheeting, drill, twill, broken twill, and sateen; length of cut and methods of testing.

U. S. Gov., Army Air Forces. Specification 16147A; 1944. Cloth; Cotton Sateen.

U S. Gov., Army-Navy Aeronautical Specification AN-C-112; 1943. Cloth; High Tear Resisting Sateen Cotton.

U. S. Gov., Federal Specification CCC-S-91; 1938. Sateen; Cotton. Covers two types—I and II. Gives requirements for weight, colors, dye, length, width, finish, sizing, weave, and bursting strength; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Marine Corps Specification, adopted 1940. Cloth; Sateen, 2-Ply, Rubberized.

U. S. Gov., Marine Corps Specification, revised 1942. Lining; Sateen, Tan.

U. S. Gov., Marine Corps Specification, adopted 1926. Lining; Sleeve, Striped Sateen (for Officers).

U. S. Gov., Marine Corps Specification, adopted 1942. Silesia (Cotton Lining).

U. S. Gov., Navy Dept. Specification 27S12a; 1944. Silesia; Black.

U. S. Gov., Treasury Dept., Procurement Div., No. 379; 1939. Sateen (for Use Only in Emergency Relief Purchases). Shall be of one type of the grade known commercially as "firsts," made of thoroughly cleaned cotton. Gives requirements for basic and finished fabric, thread count, breaking strength, weight, width, sizing, finish, length of bolt, color, and color fastness; method of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., Treasury Dept., Procurement Div., No. 384; 1939. Silesia. Shall be of one type of the grade known as "firsts," made of thoroughly cleaned cotton. Gives requirements for basic and finished fabric, thread count, weight, width, sizing, breaking strength, colors, and color fastness; method of sampling, inspection and tests; and packaging, packing, and marking.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 6-18D; 1943. Cloth; Cotton, Silesia, 5 Oz.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 6-337; 1944. Cloth; Cotton, Wind-Resistant, Sateen, 9 Oz.

*References.*—Tolerances, methods of testing, definitions, *see* 300.4, 300.6.

### 306.25 Lustrine

U. S. Gov., Navy Dept. Specification 55L4; 1922. Lustrine; Black, 40-In..

### 306.26 Galatea

### 306.27 Wigan

U. S. Gov., Navy Dept. Specification 27W8a; 1944. Wigan; Black.

### 306.28 Venetian

U. S. Gov., Navy Dept. Specification 27V2a; 1936. Venetian; Black.

### 306.29 Miscellaneous Lining Materials

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 6-237; 1936. Cloth; Cotton, Lining for Overcoats.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 6-291; 1941. Cloth; Lining, Collar Stiffening.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 6-325; 1943. Interlining; Cotton, Worsted Spun Hair Filling.

## 306.3 SUITING, COTTON

### 306.31 Denim and Cottonade

American Hospital Assn., 67-61. Indigo Blue Denim (Fully Shrunk). Covers two types in "firsts" and four classes. Based on U. S. Gov. Federal Specifications for Indigo (Fully Shrunk) Blue Denim and CCC-T-191a for General Specifications, Test Methods, Textiles.

American Hospital Assn., 67-64. Indigo Blue Denim (Unshrunk). Covers two types in "firsts." Based on U. S. Gov. Federal Specifications for Unshrunk Indigo Blue Denim and CCC-T-191a for General Specifications, Test Methods, Textiles.

American Hospital Assn., 67-67. Shrunk Brown Denim. Covers "2.20 brown denim, white back," in "firsts." Based on U. S. Gov. Federal Specifications for Shrunk Brown Denim and CCC-T-191a, and Amendment 1, for General Specifications, Test Methods, Textiles.

American Hospital Assn., 67-70. Unshrunk Brown Denim. Covers "2.20 brown denim, white back," in "firsts." Based on U. S. Gov. Federal Specifications for Unshrunk Brown Denim and CCC-T-191a, and Amendment 1, for General Specifications, Test Methods, Textiles.

U. S. Gov., Federal Specification CCC-D-181; 1944. Denim; Shrunk. Covers two types—(I) whiteback and (II) colored filling; four classes—(A) 2.20 yard, (B) 2.00 yard, (C) 1.78 yard, and (D) 1.60 yard; and the grade shall be known commercially as "firsts." Gives requirements for material, workmanship, color, length of cuts, width, weave, colorfastness,

shrinkage, construction, weight, breaking strength, and finish; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification CCC-D-186; 1944. Denim; Unshrunk. Covers two types—(I) whiteback and (II) colored filling; four classes—(A) 2.45 yard, (B) 2.20 yard, (C) 2.00 yard, and (D) 1.78 yard; and the grade shall be known commercially as "firsts." Gives requirements for material, workmanship, color, length of cuts, width, weave, colorfastness, construction, weight, breaking strength, and finish; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Navy Dept. Specification 27D4b; 1940. Denim; Prison, Gray.

U. S. Gov., Treasury Dept., Procurement Div., No. 400; 1940. Suiting, Cottonade. Shall be of two types—(I) shrunk and (II) unshrunk; suitable for men's and boys' trousers, twill weave, having a slightly napped back and sufficiently pliable to permit ready sewing. Gives requirements for patterns and colors, color fastness, thread count, breaking strength, weight, width, shrinkage, and sizing; method of sampling, inspection, and tests; and packaging, packing, and marking.

*References.*—Tolerances, methods of testing, definitions, *see* 300.4, 300.6.

## 306.32 Uniform Cloth, Cotton

U. S. Gov., Army Air Forces. Specification 16151; 1944. Cloth; Cotton Element Mercerized.

U. S. Gov., Marine Corps Specification, adopted 1943. Cloth; Cotton, Suiting, Green.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 6-321A; 1944. Cloth; Cotton, Wind-Resistant.

*References.*—Clothing duck, *see* 303.2; khaki uniform cloth, *see* 306.34; cotton twill uniform cloth, *see* 306.36.

## 306.33 Italian Cloth

U. S. Gov., Marine Corps Specification, adopted 1938. Cloth; Italian (Black and Green).

## 306.34 Khaki Cloth, Cotton

U. S. Gov., Marine Corps Specification, revised 1942. Shirting; Cotton, Khaki (Shrunk).

U. S. Gov., Marine Corps Specification, revised 1942. Suiting; Khaki (Shrunk).

U. S. Gov., Treasury Dept., Procurement Div., No. 383; 1939. Twill; Khaki (Shrunk and Unshrunk). Shall be made of thoroughly cleaned cotton, of the grade known as "firsts," and free from imperfections of manufacture. Gives requirements for basic and finished fabric, length of bolt, color fastness, color, thread count, breaking strength, weight, width, and sizing; method of sampling, inspection, and tests; packaging, packing, and marking.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 6-187A; 1943. Cloth; Cotton, Olive Drab, for Bandoleers.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 6S-201A; 1936. Cloth; Cotton, Khaki, Uniform, for Emergency Purposes.

*References.*—Tolerances, methods of testing, definitions, *see* 300.4, 300.6; standard colors, *see* 306.0.

## 306.35 Print Cloth

U. S. Gov., Treasury Dept., Procurement Div., No. 390; 1939. Prints; Cotton. Covers one type, 2 grades—(A) for women's and children's dresses and (B) for comforter coverings. Gives requirements for basic and finished fabric, colors, color patterns, width, thread count, weight, and sizing; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 6-324; 1943. Cloth; Cotton, Print.

*References.*—Gray goods for converting trade, *see* 304.1.

## 306.36 Cotton Twill

U. S. Gov., Army Air Forces. Specification 16160; 1944. Cloth; Fire-Resistant Cotton Twill.

U. S. Gov., Army-Navy Aeronautical Specification AN-C-103a; 1944. Cloth; Cotton Twill.

U. S. Gov., Joint Army-Navy Specification Jan-C-154; 1944. Cloth; Cotton, Herringbone Twill.

U. S. Gov., Marine Corps Specification, adopted 1943. Twill; Cotton, Bleached (5-Oz.).

U. S. Gov., Marine Corps Specification, adopted 1943. Twill; Cotton, Bleached, Preshrunk, (6-Oz.).

U. S. Gov., Marine Corps Specification, revised 1942. Cloth; Cotton, Herringbone Twill.

U. S. Gov., Marine Corps Specification, revised 1943. Cloth; Cotton, Twill, Olive Green, 5 1/2 to 6-Oz.

U. S. Gov., Navy Dept. Specification 27L6a; 1944. Lining; Twill, Black.

U. S. Gov., Navy Dept. Specification 27T12e; 1944. Twill; Cotton, Black.

U. S. Gov., Navy Dept. Specification 27T21; 1941. Twill; Steep, Cotton, Bleached.

U. S. Gov., Navy Dept. Specification 27T24; 1941. Twill; Cotton, Blue, 39-In.

U. S. Gov., Navy Dept. Specification 27T25a; 1944. Twill; Cotton, Bleached.

U. S. Gov., Treasury Dept., Procurement Div., No. 404; 1940. Suiting; Cotton Tweed. Covers 2 types—(I) shrunk and (II) unshrunk; shall be suitable for women's wear, having a wool appearance and tweed effect. Gives requirements for thread count, colors, color fastness, breaking strength, weight, width, shrinkage, and sizing; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., U. S. Army, Army Air Forces. Specification 6-315; 1943. Fabric; Cotton Twill.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 50-11-54; 1937. Cloth; Cotton, Twill, for Use in Pyrotechnic Parachutes and Powder Bags.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 6-100C; 1943. Cloth; Cotton, Albert Twill, 5 Oz.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 6-201B; 1942. Cloth; Cotton, Uniform, Twill, 8.2 oz.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 6-311; 1942. Cloth; Cotton, Uniform, Twill, 6 Oz.

U. S. Gov., Veterans Administration. Specification VA-X-14f; 1939. Twill; Bleached, for White Coats, Trousers, Caps, and Aprons.

U. S. Gov., Veterans Administration. Specification VA-X-15d; 1942. Twill; Bleached, for Male and Female Smocks.

U. S. Gov., Veterans Administration. Specification VA-X-128f; 1940. Twill; Tan Color, for Trousers, Summer.

U. S. Gov., Veterans Administration. Specification VA-X-187a; 1941. Twill; Bleached, for Aprons.

*References.*—Tolerances, methods of testing, definitions, *see* 300.4, 300.6; gray goods for converting trade, *see* 304.1.

### 306.4 BUNTING

#### 306.41 Cotton Bunting

U. S. Gov., Federal Specification CCC-B-791a; 1937. Amendment 5; 1944. Bunting; Cotton, Mercerized. Covers one grade and two types—(A) light weight and (B) heavy weight. Gives requirements for material, workmanship, weave, mercerization, singeing, selvages, tolerances, length of bolt, color, defects, and physical requirements; methods of sampling, inspection, and tests; and packaging, packing, and marking.

*References.*—Tolerances, methods of testing, definitions, *see* 300.4, 300.6; standard colors, *see* 306.0.

#### 306.42 Wool Bunting

U. S. Gov., Federal Specification CCC-B-801; 1931. Amendment 3; 1944. Bunting; Wool. Covers one type and grade. Gives requirements for material, workmanship, weave, width, length of bolt or roll, weight, threads per inch, ply, color, strength, and selvages; methods of sampling, inspection, and tests; and packaging, packing, and marking.

*References.*—Tolerances, methods of testing, definitions, *see* 360, 300.4, 300.6; standard colors, *see* 306.0.

#### 306.43 Cotton Flags

U. S. Gov., Federal Specification DDD-F-416; 1938. Flags; U. S. Covers the grade known commercially as "firsts"; two types—(I) cotton bunting and (II) wool bunting; and twelve classes. Gives requirements for design, color, dimensions, warp, and manufacture; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 35-2A; 1928. Flag; With Shaft, for Decorating Graves.

U. S. Gov., U. S. Army, Signal Corps. Specification 72-3; 1924. Flag and Flag Kit.

U. S. Gov., U. S. Army, Signal Corps. Specification 72-42; 1942. Flag Set M-238, Tank.

U. S. Gov., U. S. Maritime Commission. Specification 5-MC-1; 1941. Flags; Semaphore. Gives requirements for type, grade, sets, materials, workmanship, bunting, weave, finish, color, details, size, staff, design, sampling, inspection, and tests.

U. S. Gov., U. S. Maritime Commission. Specification 5-MC-3; 1941. Flags; International Code. Gives requirements for types, grade, materials, workmanship, set of flags, size, colors, designs, details, sampling, inspection, and tests. Drawings of alphabet flags and numerical pennants.

#### 306.44 Wool Flags

U. S. Gov., Federal Specification DDD-F-416; 1938. Flags; U. S. Covers the grade known commercially as "firsts"; two types—(I) cotton bunting and (II) wool bunting; and twelves classes. Gives requirements for design, color, dimensions, warp, and manufacture; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., Marine Corps Specification, adopted 1943. Flag; Brigadier General, No. 6 and No. 7 Bunting.

U. S. Gov., Marine Corps Specification, adopted 1943. Flag; Major General, No. 6 and No. 7 Bunting.

U. S. Gov., Marine Corps Specification, adopted 1943. Flags of the Commandant; U. S. Marine Corps, Bunting.

U. S. Gov., U. S. Maritime Commission. Specification 5-MC-2; 1941. Flags; Ensign, Jack, and Mail, U. S. (Wool). Gives requirements for types, classes, grade, materials, workmanship, size, details, colors, design, sampling, inspection, and tests.

U. S. Gov., U. S. Maritime Commission. Specification 5-MC-3; 1941. Flags; International Code. Gives requirements for types, grade, materials, workmanship, set of flags, size, colors, designs, details, sampling, inspection, and tests. Drawings of alphabet flags and numerical pennants.

#### 306.45 Silk Flags

U. S. Gov., Marine Corps Specification, adopted 1939. Flag; Marine Corps Standard.

#### 306.46 Flag Kits

U. S. Gov., U. S. Army, Signal Corps. Specification 72-3; 1924. Flag and Flag Kit.

U. S. Gov., U. S. Army, Signal Corps. Specification 72-9; 1933. Flag Set, Type M-133, International Code.

U. S. Gov., U. S. Army, Signal Corps. Specification 72-32A; 1941. Flag Kit, Type M-26-B, International Code.

## 307. YARN-DYED OR STOCK-DYED COTTON CLOTH

*References.*—*See* items under 306.1, 306.2, and 306.3.

## 308. MISCELLANEOUS COTTON CLOTH

### 308.1 DAMASK

American Hospital Assn., 67-58. Cotton Table Damask (in Bolts). Covers six types in "firsts." Based on U. S. Gov. Federal Specifications CCC-D-71 for Cotton Table Damask (in Bolts), and CCC-T-191a, and Amendment 1, for General Specifications, Test methods, Textiles.

U. S. Gov., Federal Specification CCC-D-71; 1937. Damask; Table, Cotton (in Bolts). Covers one grade and six types. Gives requirements for weave, finish, tolerances, width, weight, breaking strength, and linting; methods of sampling and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Navy Dept. Specification 27 D 10; 1943. Damask; Table, Cotton (in Bolts).

### 308.2 PILE FABRICS, PLUSHES, VELVETEENS, AND CORDUROYS

American Society for Testing Materials, D625-41T; 1941. Tentative Specifications for Medium-Weight

Cotton Corduroy Fabrics. Two types of medium-weight cotton corduroy faorics for use as boys' clothing. Classification, physical properties, methods of testing.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Commercial Standard CS103-42; 1942. Cotton and Rayon Velour (Jacquard and Plain). Provides a minimum quality for cotton and rayon velour (jacquard and plain) for upholstery purposes based on colorfastness, anchorage of pile, abrasion resistance, weight of pile, and weight and construction of the fabric. It also includes methods of tests and illustrates the recommended manner in which manufacturers and distributors may guarantee compliance with the Commercial Standard.

U. S. Gov., Navy Dept. Specification 27C30; 1940. Corduroy; Pocketing (Velveteen, Pocketing).

## 308.3 LINSEY-WOOLSEY

## 308.4 DAIRY CLOTH

## 308.5 DIAPER CLOTH

American Hospital Assn., 67-40. Bird's-Eye (Diaper) Cloth in Bolts. Covers one type in "firsts." Based on U. S. Gov. Federal Specifications CCC-C-411 for Bird's-Eye (Diaper) Cloth in Bolts and CCC-T-191a, and Amendment 1, for General Specifications, Test Methods, Textiles.

U. S. Gov., Federal Specification CCC-C-411; 1932. Cloth; Bird's-Eye (Diaper), in Bolts. Covers one type and one grade. Gives requirements for finish, weave, width, weight, and thread count; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

*References.*—Tolerances, methods of testing, definitions, *see* 300.4, 300.6; diapers, *see* 319.7.

## 308.6 CONVALESCENT CLOTH

## 308.7 MOMIE CLOTH

U. S. Gov., Navy Dept. Specification 27C2c; 1934. Cloth; Momie.

U. S. Gov., U. S. Maritime Commission. Specification 27-MC-35a; 1943. Cloth; Momie. Shall be type I—combed warp, type II—carded warp, and the grade shall be that commercially known as "first." Gives requirements for materials, workmanship, weave, yarns, thread count, weight, color, width, warp, breaking strength, sampling, inspection, and tests.

## 308.8 PROCESS CLOTH

## 308.9 MISCELLANEOUS SPECIFICATIONS FOR COTTON FABRICS

American Society for Testing Materials, D678-42 T; 1942. Tentative Specifications for Finished, All-Cotton, Upholstery Tapestries. Apply to three types of finished, all-cotton tapestry fabrics for use in upholstery furniture—type 1, light-weight tapestries; type 2, medium-weight tapestries; and type 3, heavy-weight tapestries.

Tag Manufacturers Institute. Manual of Standard Specifications. Cloth Stocks and Tag and Label Cloth, 1939. Gives TMI designation, thickness, thread count, tearing strength, tolerance, and various grades.

U. S. Gov., Army Air Forces. Specification 16082; 1932. Gimp; Upholstery.

U. S. Gov., Army Air Forces. Specification 16155; 1944. Cloth; Cotton Mercerized (Water-Repellent and Fireproofed).

U. S. Gov., Army Air Forces. Specification 16159; 1944. Cloth; Cotton, Water and Mildew Resistant.

U. S. Gov., Army Air Forces. Specification 16163; 1944. Fabric; Cotton Chafer.

U. S. Gov., Army Air Forces. Specification 16164; 1944. Fabric; Fire-Resistant Cotton.

U. S. Gov., Federal Specification DDD-C-431; 1939. Cloth; Photo-Mounting. Covers two types—(I) adhesive one side, white, grey, and sepia, and (II) adhesive both sides, white. Gives requirements for color, thickness, thread per inch, tensile breaking strength, and adhesive quality; methods of sampling, inspection, and tests; and requirements for packaging and packing for shipment.

U. S. Gov., Federal Specification DDD-C-471a; 1937. Cloth; Sensitized. Covers one grade and three types—(I) reproduction (semigloss and mat finish), (II) blue process, and (III) brown process. Gives requirements for fabric, quality, waterproofing and sensitizing, finish, permanence, tint, erasing, thickness, flexibility, opacity, printing, and sizing; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Marine Corps Specification, revised 1943. Cloth; Cotton, Camouflage.

U. S. Gov., Marine Corps Specification, adopted 1944. Cloth; Cotton, Plisse, Crinkle, Tan.

U. S. Gov., Marine Corps Specification, revised 1943. Fabric; Impregnated, Camouflage 2-In. by 300-Ft. Rolls (Masslinn).

U. S. Gov., Navy Dept. Specification 27C22f; 1945. Cloth; Jungle.

U. S. Gov., Navy Dept. Specification 27G1b; 1942. Gimp; Buttonhole.

U. S. Gov., Treasury Dept., Procurement Div., 375A; 1942. Broadcloth. Shall be of one type and the grade shall be that known commercially as "firsts." Gives detail requirements as to basic fabric, finished fabric, weight, width, thread count, sizing, breaking strength, finish, length of bolt, colors and patterns, and color fastness; method of sampling, inspection, and test; and packaging, packing, and marking.

U. S. Gov., Treasury Dept., Procurement Div., No. 389; 1939. Pajama Checks; Bleached. Shall be of one type of the grade known as "firsts," made of thoroughly cleaned cotton. Gives requirements for basic and finished fabric, thread count, weight, breaking strength; width and finish; method of sampling, inspection, and test; and packaging, packing, and marking.

U. S. Gov., Treasury Dept., Procurement Div., 391A; 1942. Hickory Stripe Cloth. Covers two grades—(A) 6 oz. and (B) 5.2 oz. Gives requirements for weave, color fastness, length of bolt, finish, weight, width, thread count, and breaking strength; method of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., Treasury Dept., Procurement Div., No. 392; 1939. Covert; Shrunk and Unshrunk. Covers 5 types. Gives requirements for colors and color fastness,

width, weight, thread count, breaking strength, sizing, shrinkage, and weave; method of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., Treasury Dept., Procurement Div., No. 396; 1940. Plisse Crepe. Shall be of one type made of thoroughly cleaned cotton of the grade known as "firsts." Gives requirements for basic and finished fabric, width, thread count, breaking strength, finish, colors, and color fastness; method of sampling, inspection, and test; and packaging, packing, and marking.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 6-97F; 1943. Cloth; Mercerized Cotton.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 6-133B; 1938. Gimp; Cotton, Buttonhole.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 78-8; 1932. Cloth; Sponge.

U. S. Gov., Veterans Administration. Specification VA-X-96g; 1944. Warp; Carpet.

U. S. Gov., Veterans Administration. Specification VA-X-97f; 1941. Warp; Cotton, Mercerized.

*References.*—Waterproof cotton fabric, *see* 392.4; cotton airplane cloth, *see* 396; surgical gauze, *see* 398.2; elastic webbing, *see* 394.5.

## 309. COTTON KNIT GOODS

### 309.0 GENERAL ITEMS

American Society for Testing Materials, D 231-39; 1939. Methods of Testing and Tolerances for Knit Goods. For those classes of knit goods which later enter into manufacturing processes; tolerances for width, weight, count, and bursting strength; test specimen, standard conditions, apparatus, and test procedures; moisture regain, grease determination, and percentage of cotton and wool. A.S.T.M. Emergency Alternate Provision EA-D 231, 1944, affected section 13, grease determination.

### 309.1 GLOVES

*References.*—Rubber gloves, *see* 203.2, 204.52.

### 309.2 HOSIERY

National Assn. of Hosiery Manufacturers. Standard Hosiery Color Card. Sets forth colors for hosiery, adopted in advance by the hosiery industry for the anticipated trade.

Textile Color Card Assn. of the U. S., Inc. and National Assn. of Hosiery and Underwear Manufacturers. Standard Hosiery Color Card of America, 1927. Contains 88 hosiery color samples, each color having a name and number. The Assn. also issues seasonable color cards showing standard colors forecast for the season.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Circular C422; 1938. Methods of Testing Hosiery. The purpose of this circular is to describe the methods of test used by the research associates of the National Assn. of Hosiery Manufacturers at the National Bureau of Standards for those concerned with the testing of hosiery. The test methods given in this circular were selected in order to eliminate unnecessary or undesirable variations in the general testing procedure and to eliminate confusion resulting from a diversity of methods.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Commercial Standard C846-40; 1940. Hosiery Lengths and Sizes. This standard covers methods of measuring and standard lengths of ladies' hosiery, men's, children's, and infants' hosiery, and method of measuring size of foot. Initiated by National Assn. of Hosiery Manufacturers

U. S. Gov., Federal Specification JJ-H-601; 1932. Hosiery; Measuring-Size. Gives details for measuring size of ladies' hosiery; men's, boys', golf, children's, misses' and infants' ribbed and flat hosiery; infants' and children's socks; and folded cuff lengths of boys' golf and children's 7/8 hosiery.

U. S. Gov., Federal Specification JJ-S-566a. Amendment 1; 1944. Socks; Cotton. Covers one grade and four classes—(A) medium weight, unbleached, bleached, or in colors; (B) mercerized, bleached, or in colors; (C) mercerized, light weight, bleached, or in colors; and (D) heavy weight, mixed colors. Gives requirements for material, workmanship, construction, dimensions, elasticity, colors, finish, pairing, length of ends, and details for each class; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Treasury Dept., Procurement Div., No. 541; 1942. Stockings; Cotton, Rayon (Infants', Misses', and Women's). Covers three types—(I) infants' (cotton, ribbed), (II) misses' and children's (cotton, ribbed mercerized), and (III) women's (full length); and two classes—(A) mercerized cotton and (B) rayon. Gives requirements for material, construction, methods of measuring, dimensions, length of foot, length of leg, size, tolerance, seams, color, shrinkage, finish, pairing, and details; methods of sampling, inspection, and tests; and packaging, packing, and marking.

*References.*—Tolerances, methods of testing, definitions, *see* 309.0, 300.4, 300.6; hosiery boxes, *see* 953.2.

### 309.3 KNIT COTTON CLOTH

American Hospital Assn., 13-28. Stockinet Cotton Cloth. Covers two types—(I) rib knit and (II) plain or flat knit. Based on U. S. Army Specifications 6-61B for Stockinet Cotton Cloth.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R194-42; 1942. Cotton Jersey Cloth and Tubing for Work Gloves. Lists three weights and two gages. This program was initiated by the Work Glove Institute.

U. S. Gov., Navy Dept. Specification 27C35; 1942. Cloth; Knitted, for Baling.

U. S. Gov., Navy Dept. Specification 55C13; 1921. Cloth; Jersey, Black.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 6-51B; 1940. Cloth; Cotton, Stockinet.

### 309.4 KNIT UNDERWEAR

Underwear Institute. Specifications 1-1 to 1-3; 1935. Standard Measurements for Infants' Garments. Gives detailed requirements for measuring bands, shirts, pants, and abdominal bands.

Underwear Institute. Specifications I-IV; 1935. General Methods of Measuring Union Suits. Includes requirements for measuring men's, boys', children's, and women's union suits.

Underwear Institute. Specifications B-1 to B-17; 1935. Standard Measurements for Boys' Garments. Gives detailed requirements for measuring various types of union suits, shirts, drawers, fleece lined sweat shirts, fleece lined sport coats, and knitted polo shirts.

Underwear Institute. Specifications C-1 to C-14; 1935. Standard Measurements for Children's Garments. Gives detailed requirements for measuring various types of union suits, vests, pants, bloomers, panties, and sleeping garments.

Underwear Institute. Specification G-4; 1935. Proposed Plan of Symbols for Designating Different Models. A system of symbols for designating different models or types of knitted underwear to be used in marking underwear boxes.

Underwear Institute. Specifications M-1 to M-23; 1935. Standard Measurements for Men's Garments. Gives detailed requirements for measuring various types of union suits, shirts, drawers, shorts, fleece lined sweat shirts, fleece lined sport coats, and knitted polo shirts.

Underwear Institute. Specifications W-1 to W-15; 1935. Standard Measurements for Women's Garments. Gives detailed requirements for measuring various types of union suits, vests, drawers, bloomers, panties, and balbriggan pajamas.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Commercial Standard CS33-43; 1943. Knit Underwear (Exclusive of Rayon). Covers standard methods of measuring and standard measurements for knit underwear (exclusive of rayon) for boys, children, infants, men, and women. Gives requirements for cotton—ribbed, flat knit, panel ribbed, swiss ribbed, fleece-lined; wool—worsted, worsted-merino, wool-cotton; various sizes, weights and types of underwear; and includes sport coats, athletic shirts, polo shirts, sweat shirts, and women's sleeping pajamas; recommended underwear box sizes and recommended cone colors for single cotton yarns. Sponsored by Underwear Institute.

U. S. Gov., Federal Specification JJ-D-641; 1933. Amendment 2; 1936. Drawers; Men's, Cotton, Flat-Knit, Light-Weight. Covers one grade known commercially as "first"; ankle length. Gives detail requirements; method of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Federal Specification JJ-D-653; 1936. Amendment 1; 1944. Drawers; Men's, Cotton-Wool, Mixed. Covers one grade, "firsts"; two types—(I) flat knit and (II) ribbed knit; two classes—(A) heavy weight and (B) medium weight; and 15 subtypes. Gives requirements for fabric, thread, sateen, buttons, tape, workmanship, design, sizes and methods of measuring, stitches, seams, stitching, weights per dozen, and shrinkage; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., Federal Specification JJ-U-513; 1932. Amendment 1; 1944. Undershirts; Men's (Cotton, Flat-Knit, Light-Weight). Covers the short sleeves, pull-over type, of the grade known commercially as "firsts." Gives requirements for yarns, thread, workmanship, design and construction, sizes and method of measuring, stitches, seams, stitching, and weight per dozen; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., Federal Specification JJ-U-517; 1936. Amendment 1; 1944. Undershirts; Men's, Cotton-Wool, Mixed. Covers one grade—"firsts"; two types—(I) flat knit and (II) ribbed knit; two classes—(A) heavy weight and (B) medium weight; and 15 subtypes. Gives requirements for fabric, thread, workmanship, design and construction, sizes and methods of measuring, stitches, seams, stitching, weight per dozen, and shrinkage; methods of sampling, inspection, and test; and packaging, packing, and marking.

U. S. Gov., Federal Specification JJ-U-531; 1932. Amendment 1; 1935. Underwear; Knit, Standard Sizes (Exclusive of Rayon). Provides standard methods of measurement and standard measurements for knit underwear for the guidance of producers, distributors, and users, in order to eliminate confusion resulting from the diversity of measurements and methods and to provide a uniform basis for guaranteeing full sizes.

U. S. Gov., Federal Specification JJ-U-561; 1933. Union Suits; Men's (Cotton-Wool, Ribbed-Knit, Medium-Weight). Gives detail requirements; methods of sampling. inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Marine Corps Specification, adopted 1943. Undershirts; Men's (Cotton, Flat-Knit, Light-Weight).

*References.*—Tolerances, methods of testing, definitions, *see* 309.0, 300.4, 300.6; underwear box sizes, *see* 953.2; wool knit underwear, *see* 367.2, rayon knit underwear, *see* 397.12.

# 310-319 MANUFACTURES OF COTTON FABRIC

## 310.0 GENERAL ITEMS

American Home Economics Assn. Sponsor, 1941. American Standards Assn., L 11.1-1941. Body Sizes for Boys' Garments. For accurate determination of size a combination of two measurements are necessary, a length and girth or weight. Gives table showing height, hip girth, chest girth, and waist girth for size groups and average age for size groups. Age cannot be used since body size for a given age varies greatly. The two measurements most practical are height and girth of hip. Based on measurements made by Bureau of Home Economics, U. S. Dept. of Agriculture (Misc. Pub. 365) in a WPA project.

American Institute of Laundering. Service Bulletin 34. Washing Formulas. This bulletin describes typical family washing formulas, typical commercial flatwork washing formulas, how to determine the proper number of suds, causes of linting, and causes of graying.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Commercial Standard CS13-44; 1944. Dress Patterns. To provide definitions, standard classifications, and corresponding body measurements for the guidance of purchasers, distributors, and users

in order to eliminate confusion. Gives standard classifications and corresponding body measurements for dress patterns for women, misses, juniors, girls, children, infants, boys, and little boys. Measurements include bust, waist, and hip for women and misses, and socket bone to floor, hip, breast, and waist for all others.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Commercial Standard CS65-43; 1943. Methods of Analysis and of Reporting Fiber Composition of Textile Products. This standard provides methods of analyzing finished products composed of cotton, rayon, silk, or woolen fiber, and mixtures of two or more of such fibers, and determining the percentage by weight of each kind of fiber present, and the percentage by weight of total sizing, finishing, and other non-fibrous materials; provides methods of reporting on same; includes definitions of these fibers; and illustrates the manner by which testing laboratories may certify that the analyses have been conducted in accordance with the methods of the standard.

U. S. Gov., Dept of Commerce, National Bureau of Standards. Commercial Standard CS121-45; 1945. Women's Slip Sizes. Covers standard methods of measuring, and standard minimum measurements for women's built-up shoulder and strap-type, straight and bias-cut slips. Gives application, general requirements, standard minimum measurements and methods in detail, and gives tables showing standard minimum measurements for women's straight-cut built-up shoulder, and strap-type slips; bias-cut strap-type slips; and combination straight and bias-cut strap-type slips.

U. S. Gov., Marine Corps Specification, adopted 1943. General Specification for Processing Fabrics. (Mildew Proof and Water-Repellent Requirements).

## 311. COTTON OUTERWEAR

### 311.1 COATS AND JACKETS, COTTON

American Hospital Assn., 67-34. White Dairy or Hospital Coats and Trousers. Covers one grade. Based on U. S. Gov. Federal Specifications BBB-C-586 for White Dairy or Hospital Coats and Trousers; V-B-871, and Amendment 2, for Buttons; V-T-276b, and Amendment 1, for Cotton Thread; CCC-T-191a, and Amendment 1, for General Specification, Test Methods, Textiles; and DDD-S-751 for Stitches, Seams, and Stitching.

American Standards Assn., L 17.3-1944. Jackets, Shirts, and Aprons (American War Standard). To establish specifications for certain industrial garments for women. Covers types, general requirements, fabrics, sizes, and construction; description, additional details, and table showing sizes for industrial jacket (in-and-outer style), industrial shirt (regular style, shirt-tail model), and industrial apron (long style); and identification and labeling.

U. S. Gov., Army Air Forces. Specification 3171 (2); 1943. Jacket; Mechanic's Arctic, Type D-2.

U. S. Gov., Army Air Forces. Specification 3243; 1945. Jacket; Nurses Flying, Very Light, Type K-1.

U. S. Gov., Army-Navy Aeronautical Specification AN-J-2; 1944. Jackets; Summer Flying.

U. S. Gov., Federal Specification BBB-C-586; 1936. Coats and Trousers; Dairy or Hospital, White. Covers one grade. Gives requirements for material, buttons, thread, workmanship, design, sizes, proportions, pockets, sleeves, collar, arm shields, edges, seams, button and eyelet holes, facing, belt, and tunnel loops; and methods of sampling, inspection, and tests.

U. S. Gov., Marine Corps Specification, adopted 1944. Coat; Dress, Summer, Officer and Enlisted Personnel (Marine Corps Women's Reserve).

U. S. Gov., Marine Corps Specification, revised 1943. Coat; Utility.

U. S. Gov., Marine Corps Specification, adopted 1943. Coat; Utility (Marine Corps Women's Reserve).

U. S. Gov., Marine Corps Specification, adopted 1944. Coat; Service, Summer (Marine Corps Women's Reserve).

U. S. Gov., Marine Corps Specification, adopted 1944. Jacket, Field (Marine Corps Women's Reserve).

U. S. Gov., Marine Corps Specification, adopted 1944. Vest; Alpaca Lined (Marine Corps Women's Reserve).

U. S. Gov., Navy Dept. Specification 37J2; 1940. Jackets; Jungle-Cloth.

U. S. Gov., Navy Dept. Specification 55J3a; 1940. Jackets; Mess-Attendants'.

U. S. Gov., Navy Dept. Specification 55J9a; 1943. Jackets and Trousers; Herringbone-Twill.

U. S. Gov., U. S. Maritime Commission. Specification 55-MC-4b; 1944. Coats; Cooks', White, French, Double-Breasted, Semi-Military Collar. Gives requirements for materials, workmanship, collar, sleeves, cuffs, facings and fittings, eyelets, buttonholes, pockets, hangar loops, reinforcements, hems, seams, stitching, sizes, identification, thread, buttons, and fabric; sampling, inspection, and methods of test; packaging, packing, and marking for shipment.

U. S. Gov., U. S. Maritime Commission. Specification 55-MC-6b; 1944. Coats; Messmen's, Single-Breasted, Semi-Military Collar. Covers one grade and two types—(I) hickory and (II) duck. Gives requirements for material, workmanship, collars, sleeves, cuffs, facings and fittings, eyelets, buttonholes, pockets, hangar loops, reinforcements, hems, seams, stitching, sizes, identification, thread, buttons, and details for each type; sampling, inspection, and methods of tests; packaging, packing, and marking for shipment.

### 311.2 DRESSES AND WAISTS, COTTON

American Standard Assn., L 17.1-1944. Bungalow Aprons, and Wrap-Around and Coat Style Dresses (American War Standard). To establish specifications for certain industrial dresses for women. Covers types, general requirements, fabrics, sizes, and construction; description, additional details, and table showing sizes for industrial bungalow apron, industrial dress (wrap-around style), industrial dress (smock type), and industrial dress (coat style, princess-back model); and identification and labeling.

American Standards Assn., L 17.4-1944. Regular and Princess Model Coat Style Dresses (American War Standard). To establish specifications for certain

industrial dresses for women. Covers types, general requirements, fabrics, sizes, and construction; description, additional details, and table showing sizes for industrial dress (coat style, regular model) and industrial dress (coat style, princess model); and identification and labeling.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 6-17A; 1923. Waist; Cotton, White, Nurses'.

*References.*—Boys' waists, *see* 311.6.

## 311.3 WORK CLOTHING

American Hospital Assn., 67-232. Dungaree Trousers. Covers one type only. Based on U. S. Gov., Navy Dept., Specification 55 T 14a for Dungaree Trousers; U. S. Gov. Federal Specifications V-B-871, and Amendment 2, for Buttons; V-T-276b and Amendment 1, for Cotton Thread; CCC-D-151a for Blue Indigo (Fully-Shrunk) Denim; CCC-T-191a, and Amendment 1, for General Specifications, Test Methods, Textiles; and DDD-S-751 for Stitches, Seams, and Stitching; and U. S. Gov., Navy Dept., Specification 27 G 1a for Button Hole Gimp; and 27 T 22 for Garment Tickets.

American Standards Assn., L 17.2-1944. Slacks, Dungarees, Overalls, and Coveralls, (American War Standard). To establish specifications for certain industrial garments for women. Covers types, general requirements, fabrics, sizes, and construction; description, additional details, and table showing sizes for industrial slacks, industrial dungarees, industrial bib overalls (high-back style), industrial bib overalls (low-back style), and industrial coveralls (set-in waistband style); and identification and labeling.

U. S. Gov., Federal Specification BBB-S-786; 1938. Suits; Working, One-Piece. Covers one grade and one type. Gives requirements for material; thread, buttons, buckles, workmanship, design, patterns, stitches, seams and stitching; labels, detailed measurements; and methods of sampling, inspection, and tests.

U. S. Gov., Joint Army-Navy Specification Jan-J-53; 1944. Jumpers; Dungaree.

U. S. Gov., Marine Corps Specification, adopted 1943. Overalls; Utility (Marine Corps Women's Reserve).

U. S. Gov., Navy Dept. Specification 55C32a; 1932. Cover-alls.

U. S. Gov., Veterans Administration. Specification VA-X-131e; 1941. Jumpers; Blue Denim.

U. S. Gov., Veterans Administration. Specification VA-X152g; 1942. Coveralls, Blue Denim.

## 311.4 PANTS, TROUSERS, AND BREECHES, OF COTTON

American Hospital Assn., 67-235. White Trousers. Covers one type and grade. Based on U. S. Gov., Navy Dept., Specifications 55 T 13c for White Trousers; 27 D 5c for Bleached and Shrunk Drill; 27 G 1a for Buttonhole Gimp; 27 T 11a for Bleached Cotton Tape; and 27 T-22 for Garment Tickets; U. S. Gov. Federal Specifications V-B-871, and Amendment 2, for Buttons; V-T-276b, and Amendment 1, for Cotton Thread; CCC-T-191a, and Amendment 1, for General Specifications, Test Methods, Textiles; and DDD-S-751 for Stitches, Seams, and Stitching.

U. S. Gov., Army Air Forces. Specification 3177 (3); 1944. Trousers; Intermediate Flying, Type A-9.

U. S. Gov., Army Air Forces. Specification 3242; 1945. Slacks; Nurses Flying, Very Light, Type K-1.

U. S. Gov., Federal Specification BBB-C-586; 1936. Coats and Trousers; Dairy or Hospital, White. Covers one grade. Gives requirements for material, buttons, thread, workmanship, design, sizes, proportions, pockets, sleeves, collar, arm shields, edges, seams, button and eyelet holes, facing, belt, and tunnel loops; and methods of sampling, inspection, and tests.

U. S. Gov., Joint Army-Navy Specification Jan-T-52; 1944. Trousers; Dungaree.

U. S. Gov., Marine Corps Specification, adopted 1941. Pants; Baseball.

U. S. Gov., Marine Corps Specification, adopted 1941. Pants; Basketball.

U. S. Gov., Marine Corps Specification, adopted 1932. Pants; Football.

U. S. Gov., Marine Corps Specification, revised 1942. Trousers; Service, Summer.

U. S. Gov., Marine Corps Specification, revised 1944. Trousers; Utility.

U. S. Gov., Marine Corps Specification, revised 1942. Trousers; White.

U. S. Gov., Navy Dept. Specification 37T3; 1940. Trousers; Jungle-Cloth.

U. S. Gov., Navy Dept. Specification 55J9; 1943. Jackets and Trousers; Herringbone-Twill.

U. S. Gov., Navy Dept. Specification 55T13e; 1944. Trousers; White.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 6-25; 1926. Trousers; Duck (Alaskan Clothing).

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 6-65A; 1936. Breeches; Cotton, Khaki.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 6-254; 1937. Trousers; Cotton, Khaki.

U. S. Gov., Veterans Administration. Specification VA-X-127j; 1942. Trousers; Cotton, Summer.

*References.*—Pants for uniforms, *see* 311.6.

## 311.5 COTTON SHIRTS

American Standards Assn., L 17.3-1944. Jackets, Shirts, and Aprons (American War Standard). To establish specifications for certain industrial garments for women. Covers types, general requirements, fabrics, sizes, and construction; description, additional details, and table showing sizes for industrial jacket (in-and-outer style), industrial shirt, (regular style, shirt-tail model), and industrial apron (long style); and identification and labeling.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Commercial Standard CS14-43; 1943. Boys' Button-On Waists, Shirts, Junior and Polo Shirts (Made From Woven Fabrics). The purpose is to provide standard methods of measuring and standard

minimum measurements for the guidance of producers, distributors, and users. Covers size designations, methods of measuring, and standard minimum measurements for boys' button-on waists, shirts, junior and sport (in or out) shirts, together with a system of button spacing for button-on waists. Initiated by the International Assn. of Garment Manufactures.

U. S. Gov., Federal Specification DDD-S-301; 1937. Shirts; Broadcloth, Cotton, Mercerized. Covers one type and grade. Gives requirements for style, size, color, construction, finished measurements, and tolerances; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Federal Specification DDD-S-306; 1937. Shirts; Chambray, Blue or Green. Covers one type and grade, coat style, with fall collar having V-shaped opening in front. Gives requirements for front, pocket, back, collar, sleeves, buttons, sizes, and material; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Marine Corps Specification, adopted 1941. Shirt; Baseball.

U. S. Gov., Marine Corps Specification, revised 1942. Shirt; Cotton, Khaki.

U. S. Gov., Marine Corps Specification, revised 1944. Shirt; Cotton, White and Khaki (Marine Corps Women's Reserve).

U. S. Gov., Navy Dept. Specification 27S14; 1941. Shirting; Cotton, Broadcloth and Oxford.

U. S. Gov., Navy Dept. Specification 55S20e; 1944. Shirts; Chambray, Blue.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 6-241; 1938. Shirt; Cotton, Khaki, Suiting Cloth, 8.2 Oz.

## 311.6 SUITS AND UNIFORMS, COTTON

U. S. Gov., Army Air Forces. Specification 3232-1; 1944. Suit; Flying, Very Light, Cotton Twill, Type K-1.

U. S. Gov., Army-Navy Aeronautical Specification AN-S-31a; 1943. Suits; Summer Flying.

U. S. Gov., Federal Specification BBB-S-768; 1938. Suits; Operating (Coats and Trousers). Covers one grade, in small, medium, and large sizes; and three types—(I) with standing collar and short sleeves, (II) without collar and with short sleeves, and (III) without sleeves and without collar. Gives requirements for material, buttons, thread, body of coat, collar, sleeves, pockets, buttons and buttonholes, belt loops, and belt; and methods of sampling, inspection, and tests.

U. S. Gov., Federal Specification BBB-S-776; 1937. Suits; Play, Children's. Covers two types—(I) boys', denim, blue, indigo (shrunk), and (II) girls', covert cloth, cotton. Gives requirements for cloth, thread, buttons, workmanship, finished minimum measurements, construction, sizes, and marking of sizes; and methods of sampling, inspection, and tests.

U. S. Gov., Marine Corps Specification, adopted 1944. Suit; Exercise (Marine Corps Women's Reserve).

U. S. Gov., Navy Dept. Specification 37S7b; 1942. Suits; Wading, Aviation.

U. S. Gov., Navy Dept. Specification 55C31a; 1931. Capes; Navy Nurse Corps.

U. S. Gov., Navy Dept. Specification 55J4b; 1942. Jumpers; Blue, Undress.

U. S. Gov., Navy Dept. Specification 55J5c; 1943. Jumpers; White, Undress.

U. S. Gov., Navy Dept. Specification 55J7b; 1942. Jumpers; Blue, Dress.

U. S. Gov., Navy Dept. Specification 55J8a; 1940. Jumpers; White Dress.

U. S. Gov., Navy Dept. Specification 55U4d; 1942. Uniforms; Navy Nurse Corps, Indoor, White.

U. S. Gov., U. S. Army, Army Air Forces. Specification 94-3039-A; 1942. Suit; Summer Flying Type A-4.

U. S. Gov., U. S. Army, Medical Dept. Specification 6-278A; 1941. Suit; Convalescent.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 6-15D; 1941. Uniform; Cotton, Nurses'.

*References.*—Methods of testing fabrics, *see* 300.4; materials for uniforms, *see* 303.2, 304.4, 306.34, 306.36; wool uniforms, *see* 368.82.

## 311.7 OPERATING GOWNS

American Hospital Assn., 67-121. Operating Gowns. Covers one type, one grade, and three sizes. Based on U. S. Gov. Federal Specifications DDD-G-601a for Operating Gowns; V-T-276b, and Amendment 1, for Cotton Thread; TT-I-542 for Indelible Marking Ink (for Fabrics); CCC-J-191 for Bleached Jean; CCC-T-191a, and Amendment 1, for General Specifications, Test Methods, Textiles; and DDD-S-751 for Stitches, Seams, and Stitching.

U. S. Gov., Federal Specification DDD-G-601a; 1941. Gowns; Operating. Covers one type and grade and three sizes—large, medium, and small; made of bleached jean. Gives requirements for stitches, seams, body of gown, sleeves, collar, pocket, belt, tying tape, shrinkage, measurements, and size tag; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Federal Specification DDD-S-496; 1938. Smocks; Dental. Covers one grade and three types—(I) standing collar, short sleeves, and fastened down back; (II) V-shaped neck opening, long sleeves, and fastened over right shoulder and down right side; and (III) standing collar, short sleeves, and fastened over right shoulder and down right side. Gives requirements for material, length, chest, armhole, sleeve length, pocket, belt, and tying tapes; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Navy Dept. Specification 57A4; 1940. Aprons; Operating, Cotton.

*References.*—Surgeons rubber aprons, *see* 204.51.

## 311.8 BELTS

U. S. Gov., Army Air Forces. Specification 3221-1; 1944. Suspenders; Flying Suit.

U. S. Gov., Federal Specification DDD-S-811; 1935. Suspenders. Covers one type and grade. Gives requirements for webbing, metal parts, leather parts, and length; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Marine Corps Specification, adopted 1940. Suspenders; Belt, Web, Model 1936.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 6-105A; 1942. Belt; Web, Waist, M-1937.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 6-181B; 1941. Belt; Pistol or Revolver, M-1936.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 6-239B; 1941. Suspenders; Belt, M-1936.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 6-248; 1937. Belt; Web, White, With Shoulder Strap, Army Band.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 6-286A; 1941. Belt; Magazine, for Browning Automatic Rifle, M-1937.

*References.*—Methods of testing, *see* 300.4; leather belts, *see* 069.3.

## 311.9 MISCELLANEOUS COTTON OUTERWEAR

*References.*—Hats and caps, *see* 395.

### 311.92 Aprons and Bibs

American Hospital Assn., 67-1. Cooks' Aprons. Covers one type and grade. Based on U. S. Gov., Navy Dept., Specification 55 A 3a for Cooks' Aprons.

American Hospital Assn., 67-4. Cotton Operating Aprons. Covers one type and grade. Based on U. S. Gov., Navy Dept., Specifications 55 A 4 for Cotton Operating Aprons; 55 T 3 for Bleached Cotton Slip Twill; U. S. Gov. Federal Specifications CCC-T-191a, and Amendment 1, for General Specifications, Test Methods, Textiles; and DDD-S-741 for Stitches, Seams, and Stitching.

American Standards Assn., L 17.1-1944. Bungalow Aprons, and Wrap-Around and Coat Style Dresses (American War Standard). To establish specifications for certain industrial dresses for women. Covers types, general requirements, fabrics, sizes, and construction; description, additional details, and table showing sizes for industrial bungalow apron, industrial dress (wrap-around style), industrial dress (smock type), and industrial dress (coat style, princess-back model); and identification and labeling.

American Standards Assn., L 17.3-1944. Jackets, Shirts, and Aprons (American War Standard). To establish specifications for certain industrial garments for women. Covers types, general requirements, fabrics, sizes, and construction; description, additional details, and table showing sizes, for industrial jacket (in-and-outer style), industrial shirt (regular style, shirt-tail model), and industrial apron (long style); and identification and labeling.

U. S. Gov., Joint Army-Navy Specification JAN- A-54; 1944. Aprons; Bakers, Butchers, and Cooks, With Bibs.

U. S. Gov., Marine Corps Specification, adopted 1944. Apron; Bungalow (Marine Corps Women's Reserve).

U. S. Gov., U. S. Army, Army Air Forces. Specification 6-316; 1943. Apron; Mechanic's, Type B-2.

U. S. Gov., U. S. Army, Army Air Forces. Specification 94-3076; 1940. Apron; Laboratory, Type A-2 (Cotton Duck).

U. S. Gov., U. S. Army, Army Air Forces. Specification 94-3099; 1940. Apron; Mechanic's, Type A-3 (Acidproof).

U. S. Gov., U. S. Maritime Commission. Specification 55-MC-2a; 1942. Aprons; Bib and Waist. Type I—bib, type II—waist; class A—duck, class B—drill, class C—denim, and class D—hickory. Gives requirements for material, workmanship, size, hems, thread and stitches, ties, identification, apron fabric, color, sampling, inspection, and tests.

U. S. Gov., Veterans Admenistration. Specification VA-X-12h; 1942. White Smocks for Ward Maids, Female Mess Attendants, and Female Kitchen Helpers.

U. S. Gov., Veterans Administration. Specification VA-X-13g; 1941. Cook's Aprons.

*References.*—Rubber aprons, *see* 204.51.

### 311.93 Gloves and Mittens, Cotton

U. S. Gov., Federal Specification JJ-G-451; 1935. Gloves; Working, Cotton, With Leather-Palm. Covers gauntlet type, one grade. Gives detail requirements; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking. Emergency Alternate Federal Specification E-JJ-G-451; 1942, (issued by Procurement Div., Treasury Dept., U. S. Gov.) changed requirements for body, palm, outer covering, and pattern.

U. S. Gov., Marine Corps Specification, adopted 1934. Gloves; Cotton, White.

U. S. Gov., Navy Dept. Specification 37 M 10; 1943. Mittens; Waterproof, N-1.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 6-136A; 1938. Gloves; Cotton, White, M-1936.

*References.*—Rubber gloves, *see* 203.2, 204.52.

### 311.94 Leggings

U. S. Gov., Marine Corps Specification, revised 1943. Leggings (Enlisted Men).

U. S. Gov., Navy Dept. Specification 72L1a; 1943. Leggings.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 6-288; 1940. Leggings; Canvas, Dismounted, M-1938.

### 311.95 Mackinaws of Cotton

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 6-104A; 1938. Coat; Mackinaw, Olive-Drab, Enlisted Men's.

### 311.96 Cotton Cloth Shoes

U. S. Gov., Army Air Forces. Specification 3151 (1); 1944. Shoes; Winter, Type A-14 (Rubber Soled Duck Muckluck).

U. S. Gov., Marine Corps Specification, adopted 1932. Shoes; Basket-Ball.

U. S. Gov., Treasury Dept., Procurement Div., 283A; 1941. Shoes; Tennis or Gymnasium (Oxford Type). Shall be of the low oxford type—men's, boys', youths', womens', misses', and childs'. Gives requirements for uppers, vamp and toe cap, counter, outer sole, inner sole, binding, laces, eyelets, weights, and finish; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2875B; 1942. Slipper; Hospital.

### 311.97 Parka

### 311.98 Bathrobes, Cotton

### 311.99 Cotton Outerwear Not Otherwise Classified

U. S. Gov., Marine Corps Specification, adopted 1944. Skirt; Dress, Summer, Officer and Enlisted Personnel (Marine Corps Women's Reserve).

U. S. Gov., Marine Corps Specification, adopted 1944. Skirt; Service. Summer (Marine Corps Women's Reserve).

U. S. Gov., Marine Corps Specification, adopted 1943. Shorts; Athletic.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 6-208; 1933. Band; Hat, Pyroxylin-Coated Fabric.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 6-246A; 1944. Insignia; Embroidered.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 6-282; 1939. Neckties; Cotton Khaki (Washable).

## 312. COTTON UNDERWEAR

U. S. Gov., Federal Specification DDD-U-551; 1937. Union Suits; Boys' and Men's, Nainsook. Covers one grade and two types—(I) boys', sleeveless (class A, drop seat, and class B, flap seat) and (II) men's, sleeveless, knee length. Gives requirements for material, thread, buttons, minimum measurements in inches, and method of measuring; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

### 312.1 COTTON DRAWERS

Underwear Institute. Specification IX; 1935. General Methods of Measuring Drawers. Gives requirements for measuring men's, boys', and children's ribbed and flat knit drawers.

U. S. Gov., Marine Corps Specification, revised 1943. Drawers; Nainsook.

U. S. Gov., Navy Dept. Specification 55 D 4h; 1943. Drawers; Nainsook.

U. S. Gov., Navy Dept. Specification 55 S 22a; 1944. Shorts; Cotton, Twill.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 6-188B; 1936. Drawers; Cotton, Shorts.

*References.*—Knit underwear, *see* 309.4.

### 312.2 NIGHTGOWNS

American Hospital Assn., 67-175. Hospital Shirts. Covers one type, one grade, and two sizes. Based on U. S. Gov., Navy Dept., specifications.

U. S. Gov., Federal Specification DDD-N-306; 1938. Nightgowns; Children's and Women's. Covers one grade and four types: (I) Children's, in two classes—(A) flannel, outing, and (B) muslin, bleached; (II) infants, flannel, outing; (III) girls', flannel, outing; and (IV) women's, in two classes—(A) flannel, outing, and (B) muslin, bleached. Gives requirements for sizes and construction; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification DDD-N-316; 1937. Nightshirts; Boys' and Men's. Covers two types—(I) muslin, slip-over style, white (class A, boys', and class B, men's); and (II) outing flannel, slip-over style (class A, boys' high neck, buttoned front; class B, boys' U or V neck, without buttons; class C, men's, high neck, buttoned front; and class D, men's U or V neck, without buttons). Gives requirements for breaking strength, colors, threads per inch, and buttons; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., U. S. Army, Medical Dept. Specification 6-275; 1939. Shirt; Bed, Cotton.

### 312.3 PAJAMAS

American Hospital Assn., 67-148. Hospital Pajama-Coats and Trousers. Covers five types and four sizes. Based on U. S. Gov. Federal Specifications DDD-P-76 for Hospital Pajama-Coats and Trousers; CCC-T-191a, and Amendment 1, for General Specifications, Test Methods, for Textiles; DDD-S-751 for Stitches, Seams, and Stitching; V-T-276b, and Amendment 1, for Cotton Thread; and V-B-871, and Amendment 2, for Buttons.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Commercial Standard Emergency CS(E) 15-43; 1943. Men's Pajamas (Made From Woven Fabric). This standard provides standard methods of measuring and standard minimum measurements for the guidance of producers, distributors, and users, in an effort to conserve essential material, to eliminate confusion resulting from a diversity of measurements and methods, and to provide a uniform basis for guaranteeing full size. Covers size designations, methods of measuring, and standard minimum requirements for men's pajamas, whether made from shrunk or unshrunk fabrics, together with a recommended label for use in guaranteeing full size.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Commercial Standard (Emergency) CS (E) 106-43; 1944. Boys' Pajamas (Made From Woven Fabric). Purpose is to provide standard methods of measuring and standard minimum measurements for the guidance of producers, distributors, and users. Covers size designations, methods of measuring, and standard minimum measurements for boys' pajamas whether made from shrunk or unshrunk fabrics, together with a recommended label for use in guaranteeing full size.

U. S. Gov., Federal Specification, DDD-P-76; 1936. Pajama-Coats and Trousers; Hospital. Covers one grade, five types, and four sizes. Gives requirements for material, measurements, shrinkage, body of coat, collar, sleeves, pockets, frogs, and buttonholes; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

### 312.4 PETTICOATS

### 312.5 COTTON UNDERSHIRTS

Underwear Institute. Specifications V-VIII; 1935. General Methods of Measuring Shirts, Vests, and

Bands. Includes requirements for measuring men's, boys', and children's shirts; children's and women's vests; and infants' bands and shirts.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 6-233C; 1942. Undershirt; Summer, Sleeveless.

*References.*—Knit underwear, *see* 309.4.

### 312.6 COTTON UNION SUITS

Underwear Institute. Specifications WOV-B1 and WOV-B2; 1935. Standard Sizes and Minimum Measurements for Woven Underwear for Boys' Garments. Gives detailed requirements for shorts and union suits.

Underwear Institute. Specifications WOV-C1; 1935. Standard Sizes and Minimum Measurements for Woven Underwear for Children's Garments. Gives detailed requirements for various types of woven waist suits.

Underwear Institute. Specifications WOV-M1 to WOV-M6; 1935. Standard Sizes and Minimum Measurements for Woven Underwear for Men's Garments. Gives detailed requirements for various types of woven shorts and woven union suits.

## 313. HANDKERCHIEFS AND LACES

### 313.1 HANDKERCHIEFS

U. S. Gov., Federal Specification CCC-C-451; 1931. Cloth; Handkerchief, Cotton. Covers two types—(A) medium count and (B) high count. Carded or combed yarns may be used in type (A), and combed yarns in type (B). Gives requirements for weight, thread count, and breaking strength; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Federal Specification DDD-H-71a; 1944. Amendment 1; 1944. Handkerchiefs; Cotton. Covers one grade and three classes—(A) high count, (B) medium count, and (C) low count. Gives requirements for material and workmanship, weave, tolerance, thread count, weight, construction, breaking strength, color, finish, dimensions, and hems; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification, DDD-H-74; 1938. Handkerchiefs; Cotton, Bandanna. Covers two types—(I) blue and (II) red; and two sizes—18 by 18 in. and 21 by 21 in. Gives requirements for weave, tolerances, ends, breaking strength, weight per square yard, finish, and color fastness; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

### 313.2 LACES

*References.*—Gold and silver lace, *see* 399.9.

## 314. COTTON BELTING

### 314.1 FABRIC BELTING

American Petroleum Institute, Div. of Production. Standard No. 1; 1940. Belting Specification. Gives physical and dimensional stipulations on finished belting of the following types—leather, impregnated stitched cotton fabric, solid woven hair, solid woven cotton, balata, rubber, cord, and V-belts and sheaves. Also gives minimum requirements as to tensile strength; minimum and maximum limits for the elongation under definitely prescribed loads, and permissible variations in physical dimensions. Leather belting must meet certain cracking and piping tests, and the adhesion between the piles of rubber and balata belting must meet definite requirements.

American Society for Testing Materials, D 181-42; 1942. Specifications and Methods of Test for Certain Heavy Cotton Fabric for Manufacture of Hose and Belting. Gives scope, physical properties, tolerances for width, weight, count, thickness, crimp, and breaking strength, and procedures for testing in accordance with A.S.T.M. method D 39.

U. S. Gov., Dept. of Agriculture, Forest Service. Specifications MSF-98. Cinch; Packsaddle

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 6-180B; 1941. Belt; Cartridge, Cal. .30, M-1923 (Dismounted and Mounted).

*References.*—Tolerances, methods of testing, definitions, *see* 300.4, 300.6; fabric conveyor belting, *see* 314.3; leather belts, *see* 066.3; rubber belts, *see* 207.

### 314.3 CONVEYOR BELTING

U. S. Gov., Federal Specification DDD-B-166; 1935. Amendment 2; 1940. Belting; Conveyor or Power-Transmission, Narrow (Stitched-Duck). Covers one grade. Gives requirements for finish, width, thread, splices, breaking strength, construction, stitches, elongation, water absorption, stitching thread, and deflection after accelerated aging test; methods of inspection and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Federal Specification DDD-B-171; 1931. Amendment 1; 1936. Belting; Conveyor or Power-Transmission (Stitched-Duck). Covers one grade. Gives requirements for finish, width, weight, thread, stitching thread, seam strip, splices, breaking strength, construction, seams, and stitches; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Federal Specification JJ-B-191; 1935. Amendment 2; 1940. Belting; Conveyor or Power-Transmission, Cotton (Solid-Woven). Covers one type and one grade known commercially as "firsts." Gives requirements for material and workmanship, weave, tolerances, fasteners, finish, width, thread count, yarns, thickness, breaking strength, elongation, and water absorption; methods of inspection and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Navy Dept. Specification 34B3b; 1942. Belting; Conveyor, Ammunition.

*References.*—*See* references under 314.1.

## 315. BEDDING

### 315.0 GENERAL ITEMS

American Hospital Assn., 67-193. Hospital and Institutional Cotton Textiles. Based on U. S. Gov., Dept. of Commerce, National Bureau of Standards, Simplified Practice Recommendation R74-30 for Hospital and Institutional Cotton Textiles.

American Institute of Laundering. Service Bulletin 10. How to Launder Blankets and Comforters. This bulletin furnishes a thorough discussion on the laundering of blankets, including—washing temperatures, sudsing and rinsing time, size of loads, fading and loss of color, spots and stains, soil, laundering of cotton and wool blankets, extraction and drying, binding, mothproofing, and the handling of quilts and comforters.

U. S. Gov , Dept. of Commerce National Bureau of Standards. Simplified Practice Recommendation R74-30; 1930. Hospital and Institutional Cotton Textiles. This recommendation establishes a list of standard sizes for bed pads, pillowcases, sheets, spreads, for adult beds, cribs, and bassinets; bureau scarfs; and bath and hand towels. Initiated by the American Hospital Assn.

## 315.1 MATTRESSES AND MATTRESS COVERS

### 315.10 General Items

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Commercial Standard CS54-35; 1935. Mattresses for Hospitals. This standard covers innerspring mattresses with hair or cotton filling and curled hair mattresses for hospital use. It sets forth types, classes, grades, and sizes, general and detail requirements covering materials, resiliency of spring units, cleanliness, fastness of color, fastness to crocking, fastness to perspiration, and moisture content. Initiated by the American Hospital Assn. Approved as American Tentative Standard, CS54-35, by the American Standards Assn.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Commercial Standard CS55-35; 1935. Mattresses for Institutions. This standard covers minimum requirements for curled hair mattresses filled with hair and cotton felt mattresses filled with all-cotton felt for institutional use. It sets forth types, classes, grades, and sizes, general and detail requirements covering materials, cleanliness, fastness of color, fastness to crocking, fastness to perspiration, and moisture content. Initiated by the American Hospital Assn. Approved as American Tentative Standard, CS55-35, by the American Standards Assn.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R2-32; 1932. Bedsteads, Springs, and Mattresses. Bedsteads. This recommendation establishes a schedule of types and sizes of bedsteads covering straight-foot wood and metal beds. Initiated by the National Assn. of Bedding Manufactures and the National Assn. of Furniture Manufacturers.

U. S. Gov., U. S. Maritime Commission. Specification 27-MC-13; 1941. Pads; Mattress, Quilted. Shall be but one type and the grade shall be that known commercially as "firsts." Gives requirements for materials, workmanship, felt, fabric, thread count, strength, weight, binding, quilting, size, sampling, inspection, and tests.

U. S. Gov., Navy Dept. Specification 27T6a; 1932. Tufting; Wick, Mattress.

U. S. Gov., Navy Dept. Specification 27T19; 1936. Tufts; Mattress.

### 315.11 Cotton Felt Mattresses

American Hospital Assn., 1-22. Cotton (Felted) Mattresses. Three types—(I) plain box edge, (II) rolled box edge, and (III) plain edge (not boxed). Two grades—(A) linters and cotton felt and (B) all linters felt. Based on U. S. Gov. Federal Specifications V-M-81a for Cotton (Felted) Mattresses; V-T-276b, and Amendment 1, for Cotton Thread; CCC-T-191a, and Amendment 1, for Textiles, General Specifications, Test Methods; CCC-T-351, and Amendment 1, for Mattress and Pillow Ticking; and DDD-S-751 for Stitches, Seams, and Stitching.

American Hospital Assn., 1-28. Cotton-Felt Inner-Spring Mattresses. Type having springs in individual pockets. Based on U. S. Navy Dept. Specifications 27 M 11a amended by 27 M 11b, for Cotton-Felt Inner-Spring Mattresses; U. S. Gov. Federal Specifications V-T-276b, and Amendment 1, for Cotton Thread; CCC-T-191a, and Amendment 1, for Textiles, General Specifications, Test methods; CCC-T-351, and Amendment 1, for Mattress and Pillow Ticking; and DDD-S-751 for Stitches, Seams, and Stitching.

U. S. Gov., Federal Specification V-M-81a; 1939. Mattresses; Cotton (Felted). Covers three types—(I) with plain box edge, (II) with rolled box edge, and (III) with plain edge, not boxed; and two grades—(A) with linters and cotton felt and (B) with all linters felt. Gives requirements for linters, cotton, felt, ticking, thread, twine, workmanship, mattress ticking, case, stitches, seams, and stitching, tufting, labels, standard samples, and sizes and weights; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking. Emergency Alternate Federal Specification E-V-M-81a; 1942, issued by Procurement Div., Treasury Dept., U. S. Gov., required one grade all-cotton felt, gave detail requirements accordingly, and changed requirements for bales.

U. S. Gov., Navy Dept. Specification 27M9b; 1937. Mattresses; Cotton (Felted), Berth (Chief Petty Officers' and Sick-Bay).

U. S. Gov., Navy Dept. Specification 27M11b; 1940. Mattresses; Inner-Spring, Cotton-Felt.

U. S. Gov., Navy Dept. Specification 27M18; 1945. Mattresses; Cotton-Felt, for Officers.

U. S. Gov., U. S. Maritime Commission. Specification 27-MC-20b; 1943. Mattresses; Cotton (Felted). Covers one type and grade. Gives requirements for felt, ticking, workmanship, size, weight, construction, and labeling; sampling, inspection, and methods of test; and packaging, packing, and marking.

U. S. Gov., U. S. Maritime Commission. Specification 27-MC-34; 1941. Amendment 1; 1942. Mattresses; Inner Spring. Shall be type I—all wire spring unit, free-end coil construction; type II—all wire spring unit, knotted-end coil construction, and shall be of but one grade. Gives requirements for sizes, felt, ticking, sheeting, spring wire, workmanship, distribution of felt, stitching, casing, tufting, mattress construction, edge construction, border construction, corners, lifting straps, labels, and details for each type; sampling, inspection, and methods of test; and packaging, packing, and marking.

U. S. Gov., U. S. Maritime Commission. Specification 27-MC-38; 1941. Mattresses; Inner Spring (Individual Pockets). There shall be but one type and grade, and the sizes shall be as specified. Gives requirements for materials, spring wire, workmanship, distribution of felt, stitching, casing, tufting, mattress construction, edge construction, border construction, inner spring construction, lifting straps, labels, sampling, inspection, and tests.

*References.*—Ticking for mattresses, *see* 304.8; standard sizes, *see* 315.10.

### 315.12 Kapok Mattresses

U. S. Gov., Dept. of Agriculture, Forest Service. Specifications MSF-34. Bag; Sleeping, Kapok.

U. S. Gov., U. S. Maritime Commission. Specification 27-MC-14; 1941. Mattresses; Kapok. There shall be but one type and the grade shall be that known commercially as "firsts." Gives requirements for materials, workmanship, ticking, design, fastness, weave, thread count, weight, strength, case, edges, seams, stitches, tufting, size, weight, sampling, inspection, and tests.

*References.*—See references under 315.11.

### 315.13 Hair Mattresses

*References.*—Ticking for mattresses, *see* 304.8; standard sizes, *see* 315.10; curled horsehair, *see* 362.1.

### 315.14 Mattress Cases and Covers

American Hospital Assn., 1-10. Mattress Covers. Covers bleached and unbleached preshrunk cotton sheeting for four types of mattresses, material and workmanship, general requirements, detail requirements, and methods of inspections and tests. Based on U. S. Navy Dept. Specification 27 C 27a for Mattress Covers; U. S. Navy Dept. Specification 27 T 11a for Cotton Tape; U. S. Gov. Federal Specifications V-T-276, and Amendment 1, for Cotton Thread; CCC-T-191a, and Amendment 1, for General Specifications and Test Methods of Textiles; and DDD-S-751 for Stitches, Seams, and Stitching.

U. S. Gov., Marine Corps Specification, revised 1942. Cover; Mattress (Unbleached Drill).

U. S. Gov., Marine Corps Specification, revised 1942. Protector; Drill, for Cotton Mattresses.

U. S. Gov., Marine Corps Specification, revised 1942. Protector; Duck, for Cotton Mattresses.

U. S. Gov., Navy Dept. Specification 27C20b; 1942. Covers; Mattress and Pillow (Hammock).

U. S. Gov., Navy Dept. Specification 27C27c; 1944. Covers; Mattress.

U. S. Gov., U. S. Army, Medical Dept. Specification 6-154A; 1941. Bedsack.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 6-118D; 1940. Covers; Mattress, Cotton.

U. S. Gov., U. S. Maritime Commission. Specification 27-MC-4b; 1944. Covers; Mattress. Shall be two types—(I) box (with tie tapes) and (II) envelope (without tie tapes); three classes—(A) bleached (preshrunk), (B) unbleached (preshrunk), and (C) pin-check (preshrunk); and the grade shall be known commercially as "firsts." Gives requirements for material, workmanship, stitching, seams, identification, shrinkage, and details for each type; sampling, inspection, and methods of test; and packaging, packing, and marking for shipment.

U. S. Gov., Veterans Administration. Specification VA-X-186; 1939. Covers and Pads for Hospital Sectional Mattresses.

*References.*—Standard sizes of mattress pads, *see* 315.10, 315.0.

### 315.19 Miscellaneous Mattresses

U. S. Gov., Army Air Forces. Specification 3187A; 1944. Mattress; Pneumatic, Type A-3.

U. S. Gov., U. S. Army, Army Air Forces. Specification 94-3079-B; 1941. Mattress; Pneumatic, Type A-2.

U. S. Gov., U. S. Army, Army Air Forces. Specification 94-3174; 1944. Mattress; Feather and Down Filled, Type B-1.

## 315.2 SHEETS

American Hospital Assn., 67-157. Bleached Cotton Sheets. Covers five types in "firsts." Based on U. S. Gov. Federal Specifications DDD-S-281, and Amendment 1, for Bleached Cotton Sheets; and CCC-T-191a, and Amendment 1, for General Specifications, Test Methods, Textiles.

U. S. Gov., Army Air Forces. Specification 3173-B; 1945. Sheet; Cotton, for Type A-3A Sleeping Bag.

U. S. Gov., Federal Specification DDD-S-281a; 1943. Sheets; Cotton, Bleached. Covers one grade, and two classes—(A) 4.6 oz. per sq.yd. (74x66) and (B) 4.2 oz. per sq.yd. (68x60). Gives requirements for material, length and width, tolerance, hems, stitches, sizing, finishing, and other nonfibrous materials; thread count, weight, breaking strength, sizes, hems and stitches; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Marine Corps Specification, revised 1942. Sheet; Bed, Unbleached.

U. S. Gov., U. S. Maritime Commission. Specification 27-MC-2a; 1942. Sheets; Cotton. Shall be type I—bleached, type II—unbleached; grade A—high quality, grade B—medium quality; and three classes of hems. Gives requirements for materials, workmanship, weave, size, stitches, identification and marking, sampling, inspection, and test.

*References.*—Standard sizes, *see* 315.0; tolerances, methods of testing, definitions, *see* 300.4, 300.6; sheeting, *see* 304.7; rubber sheeting, *see* 204.33.

## 315.3 PILLOWCASES AND PILLOWS

*References.*—Rubber pillows and cushions, *see* 204.25.

### 315.30 General Items

### 315.31 Pillowcases and Sacks

American Hospital Assn., 1-31. Cotton Bleached Pillow Cases. Four types and one grade (i.e. "firsts"). Based on U. S. Gov. Federal Specifications DDD-S-351, and Amendment 1, for Cotton Bleached Pillow Cases; and CCC-T-191a, and Amendment 1, for Textiles General Specifications, Test Methods.

U. S. Gov., Federal Specification DDD-P-351; 1931. Amendment 2; 1942. Pillowcases; Cotton, Bleached. Covers one grade and six types. Gives requirements for thread count, weight, breaking strength, hems, seams, and stitches; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking. Emergency Alternate Federal Specification E-DDD-P-351; 1942, (issued by Procurement Div., Treasury Dept., U. S. Gov.) changed requirements for seams.

U. S. Gov., U. S. Army, Medical Dept. Specification 6-193A; 1941. Pillow; Sack, Hospital.

U. S. Gov., Marine Corps Specification, revised 1942. Pillowcases; Cotton, Unbleached.

U. S. Gov., U. S. Maritime Commission. Specification 27-MC-3a; 1942. Pillowcases; Cotton. Shall be type I—bleached, type II—unbleached; grade A—high quality, grade B—medium quality; and two classes of hems. Gives requirements for materials, workmanship, weave, size, stitches, seams, identification and marking, sampling, inspection, and test.

U. S. Gov., U. S. Maritime Commission. Specification 27-MC-5a; 1944. Covers; Pillow. There shall be but one grade of the envelope type in two classes—(A) bleached (preshrunk) and (B) unbleached (preshrunk). Gives requirements for fabric, stitching, seams, hems, fittings, size, and identification; sampling, inspection, and methods of test; and packaging, packing, and marking for shipment.

*References.*—Pillow ticking, *see* 304.8; standard kinds and sizes, *see* also 315.0, tolerances, methods of testing, definitions, *see* 300.4, 300.6.

### 315.32 Cotton Felt Pillows

*References.*—Pillow ticking, *see* 304.8; standard sizes, *see* 315.30.

### 315.33 Feather Pillows

American Hospital Assn., 1-37. Feather Pillows. Covers three types—(I) chicken feathers, (II) duck feathers, and (III) goose feathers; and one grade, i.e., "firsts". Based on U. S. Gov. Federal Specifications V-P-356, and Amendment 1, for Feather Pillows; C-F-151a for Feathers; CCC-T-351, and Amendment 1, for Mattress and Pillow Ticking; DDD-S-751 for Stitches, Seams, and Stitching; and V-T-276b, and Amendment 1, for Cotton Thread.

U. S. Gov., Federal Specification V-P-356; 1936. Amendment 2; 1942. Pillows; Feather. Covers one grade in three types—(I) chicken, (II) duck, and (III) goose. Gives requirements for ticking, feathers, thread, workmanship, and labels; methods of sampling, inspection, and tests; and requirements for packing and marking.

U. S. Gov., U. S. Maritime Commission. Specification 27-MC-6; 1940. Pillows; Feather. Shall be type I—feather (goose), type II—feather (duck), and type III—feather (chicken, crushed, curled); and shall be that grade known commercially as "firsts." Gives requirements for materials, workmanship, ticking, seams, size and weight, labels, feathers, odor, brittleness, cleanliness, sampling, inspection, and test.

*References.*—Feather Pillows, sizes, *see* 315.30.

### 315.34 Kapok Pillows

*References.*—Kapok pillows, sizes, *see* 315.30.

### 315.35 Hair Pillows and Cushions

U. S. Gov., Federal Specification C-C-811; 1934. Amendment 1; 1942. Cushion; Carpet and Rug, Hair-Felt. Covers one type. Gives requirements for hair, burlap, adhesive, felting thickness and weights, and tolerance in weight; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking. Emergency Alternate Federal Specification E-C-C-811; 1942, (issued by Procurement Div., Treasury Dept., U. S. Gov.) changed the requirements for cushion and for cotton fabric for the core.

*References.*—Hair pillows and cushions, sizes, *see* 315.30.

## 315.4 COUNTERPANES, BEDSPREADS

American Hospital Assn., 67-7. Crinkle Bedspreads. Based on U. S. Gov. Federal Specifications DDD-B-151 for Crinkle Bedspreads and CCC-T-191a, and Amendment 1, for General Specifications, Test Methods, Textiles.

American Hospital Assn., 67-181. Cotton Bed Spreads. Covers five types. Based on U. S. Gov., Navy Dept., Specification 27 S 3 for Cotton Bed Spreads.

U. S. Gov., Federal Specification DDD-B-151; 1932. Bedspreads; Crinkle. Covers one grade. Gives requirements for finish, weave, dimensions, weight, thread count, and strength; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Navy Dept. Specification 27S3b; 1944. Spreads; Bed, Cotton.

U. S. Gov., U. S. Maritime Commission. Specification 27-MC-16; 1940. Counterpanes; Cotton, Crinkled, White. Shall be but one type and the grade shall be that known commercially as "firsts." Gives requirements for material, workmanship, size, construction, weave, color, sizing, thread count, weight, strength, sampling, inspection, and tests.

U. S. Gov., U. S. Maritime Commission. Specification 27-MC-29; 1941. Counterpanes; Cotton, Crochet, Blue and White Patterned. Shall be but one type and the grade shall be that known commercially as "firsts." Gives requirements for material, workmanship, size, construction, weave, color, sizing, thread count, weight, breaking strength, sampling, inspection, and tests.

U. S. Gov., U. S. Maritime Commission. Specification 27-MC-36; 1941. Spreads; Birth (Day). Shall be but one type and grade. Gives requirements for materials, workmanship, size, construction, sides, hems, inspection, and tests.

U. S. Gov., U. S. Maritime Commission. Specification 27-MC-43; 1941. Counterpanes; Cotton, Patterned, Dobby Type. There shall be but one type and the grade shall be known commercially as "firsts." Gives requirements for material, workmanship, identification and markings, size, construction, pattern, weave, thread count, yarn, weight, color, sizing, breaking strength, sampling, inspection, and tests.

*References.*—Standard sizes, *see* 315.0; tolerances, methods of testing, definitions, *see* 300.4, 300.6.

### 315.5 BLANKETS

American Hospital Assn., 67-10. Cotton and Cotton-Warp and Wool-Filling Blankets. Covers two types. Based on U. S. Gov. Federal Specifications DDD-B-421a, and Amendment 1, for Cotton and Cotton-Way and Wool-Filling Blankets and CCC-T-191a, and Amendment 1, for General Specifications, Test Methods, Textiles.

American Society for Testing Materials, D 576-40T; 1940. Tentative Specifications for All Wool, All Cotton, and Wool and Cotton Blanketing (Household). Includes eight types of fabrics with requirements for warp and filling, weight, minimum thickness, breaking strength and air permeability, and methods of testing.

U. S. Gov., Dept. of Agriculture, Forest Service. Specifications MSF-45-S. Blanket; Cotton.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R11-36; 1936. Bed Blanket Sizes. This recommendation establishes a simplified list and 11 sizes of bed blankets (cotton, wool, and cotton and wool mixed). Initiated by the National Assn. of Wool Manufactures.

U. S. Gov., Federal Specification DDD-B-421a; 1934. Amendment 1; 1936. Blankets; Cotton, and Cotton-Warp and Wool-Filling. Covers one grade and two types—(I) all cotton and (II) cotton-warp, wool-filling. Gives requirements for color and patterns, size, weave, thread count, breaking strength, and shrinkage; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., U. S. Maritime Commission. Specification 27-MC-10; 1940, amended 1943. Blankets; Cotton Warp, Wool Filling. Shall be type I—mothproofed, type II—not mothproofed; and the grade shall be that known commercially as "firsts." Gives requirements for material, workmanship, color and appearance, weave, thread count, breaking strength, weight, size, fiber content, shrinkage, binding, mothproofing, sampling, inspection, and tests.

U. S. Gov., U. S. Maritime Commission. Specification 27-MC-12; 1940. Blankets; Cotton Warp, Cotton and Wool Filling. Shall be but one type and the grade shall be that commercially known as "firsts." Gives requirements for material, workmanship, fiber content, color, color fastness, appearance, thread count, strength, weight, size, shrinkage, binding, sampling, inspection, and tests.

*References.*—Standard sizes and grades of blankets, *see* 369.21.

### 315.6 SPRING COVERS

### 315.9 MISCELLANEOUS BEDDING

U. S. Gov., Army Air Forces. Specification 3140-B; 1945. Bag; Sleeping, Type A-3A.

U. S. Gov., Treasury Dept., Procurement Div., No. 685; 1944. Panels; Screen, Cloth (for Hospital Use). Covers one type and one grade. Gives requirements for sizes, material, workmanship, and details; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

## 316. TABLECLOTHS, NAPKINS, AND SILENCE CLOTHS

### 316.1 TABLECLOTHS

American Hospital Assn., 67-49. Cotton Table Cloths. Covers six types. Based on U. S. Gov. Federal Specifications DDD-C-481a for Cotton Table Cloths; CCC-D-71 for Cotton Table Damask in Bolts; and CCC-T-191a, and Amendment 1, for General Specifications, Test Methods, Textiles.

U. S. Gov., Federal Specification DDD-C-481a; 1937. Cloths; Table, Cotton. Covers one grade. Gives requirements for sizes, construction, and linting; methods of sampling and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Navy Dept. Specification 27T23; 1942. Tablecloths, Napkins, and Doilies; Cotton.

U. S. Gov., U. S. Maritime Commission. Specification 27-MC-18a; 1941. Tablecloths and Napkins; Cotton (Damask). Shall be three types and the grade shall be that known commercially as "firsts." Gives requirements, for material, workmanship, weave, patterns, finish, nonfibrous materials, hems, dimensions, identification and marking, construction, linting, sampling, inspection, and tests.

U. S. Gov., U. S. Maritime Commission. Specification 27-MC-21; 1941. Tablecloths; Cotton (Red and White Check). Shall be of one type and the grade shall be that known commercially as "firsts." Gives requirements for material, workmanship, design, color fastness, thread count, strength, weight, hems, size, sampling, inspection, and tests.

U. S. Gov., U. S. Maritime Commission. Specification 27-MC-44; 1941. Tablecloths; Cotton, Striped, and "Allover" Patterned, Dobby Types. Type I—twill, type II—satin; class A—stripe patterned and class B—"allover" patterned. Grade shall be that known commercially as "firsts." Gives requirements for material, workmanship, patterns, finish, nonfibrous materials, hems, dimensions, identification and marking, sampling, inspection, and tests.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 6-128; 1927. Tablecloths; Cotton.

*References.*—Tolerances, methods of testing, definitions, *see* 300.4, 300.6.

### 316.2 NAPKINS

U. S. Gov., Navy Dept. Specification 27T23; 1942. Tablecloths, Napkins, and Doilies; Cotton.

U. S. Gov., U. S. Maritime Commission. Specification 27-MC-18a; 1941. Tabkecloths and Napkins; Cotton (Damask). Shall be three types and the grade shall be that known commercially as "firsts." Gives requirements for material, workmanship, weave, patterns, finish, nonfibrous materials, hems, dimensions, identification and marking, construction, linting, sampling, inspection, and tests.

U. S. Gov., Veterans Administration. Specification VA-X-138d; 1943. Napkins; Cotton.

### 316.3 SILENCE CLOTHS

U. S. Gov., Navy Dept. Specification 27C11b; 1944. Covers; Table.

### 316.4 TRAY CLOTHS

## 317. NETS AND NETTING

### 317.1 BOBBINET

U. S. Gov., Federal Specification JJ-N-191; 1932. Netting; Mosquito (Unbleached-Bobbinet). Covers one type of the grade known commercially as "first." Gives requirements for material, workmanship, finish, ply, weave, width, length, weight, meshes, and strength; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

*References.*—Tolerances, methods of testing, definitions, *see* 300.4, 300.6.

### 317.2 MILLINET

### 317.3 MOSQUITO BAR NETTING

U. S. Gov., Marine Corps Specification, adopted 1942. Net; Mosquito, Bunk.

U. S. Gov., Marine Corps Specification, revised 1943. Net; Mosquito, Cot, Camouflaged.

U. S. Gov., Marine Corps Specification, adopted 1941. Netting; Mosquito (Unbleached Tricot).

U. S. Gov., Treasury Dept., Procurement Div., No. 501; 1941. Netting; Mosquito. Shall be of one type made of cotton. Gives requirements for weave, width, length, weight, meshes, breaking strength, and finish; methods of sampling, inspection, and tests; packaging, packing, and marking.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 6-36C; 1938. Bar; Mosquito.

U. S. Gov., U. S. Maritime Commission. Specification 27-MC-47a; 1944. Bars; Mosquito. Shall be two types—(I) olive drab and (II) white; and the grade shall be known commercially as "first." Give requirements for materials, workmanship, construction marquisette, apron fabric, tape, sewing thread, identification and marking, and color; sampling, inspection, and methods of test; and packaging, packing, and marking.

*References.*—Mosquito bar, *see* 317.1.

### 317.4 FISH NET

### 317.5 HAY NET

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 6-204A; 1938. Net; Hay, M-1918.

### 317.6 HEAD NET

U. S. Gov., Marine Corps Specification, revised 1943. Net; Mosquito, Head (Camouflaged).

### 317.7 VOLLEY BALL AND TENNIS NETS

U. S. Volley Ball Assn. Volley Ball Official Guide, VB45. Net. Includes requirements for width, length, mesh size, and material; binding of top, ends, and sides; height; and markers.

### 317.8 NETS, LAUNDRY BAG TYPE

American Hospital Assn., 46-13. Bag-Type Laundry Nets. Covers two types; one grade. Based on U. S. Gov. Federal Specification, JJ-N-176 for Bag-Type Laundry Nets and CCC-T-191a, and Amendment 1, for General Specifications, Test Methods, Textiles.

U. S. Gov., Federal Specification JJ-N-176a; 1944. Nets; Laundry, Bag-Type. Covers one type and three sizes (1) 10 by 15 in., (2) 12 by 22 in., and (3) 24 by 36 in. Gives requirements for material, workmanship, stitching, cloth construction, net construction, color, and details; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

### 317.9 MISCELLANEOUS NETS

U. S. Gov., Joint Army-Navy Specification JAN-N-70; 1944. Nets; Cargo (Fiber Rope).

U. S. Gov., Marine Corps Specification, adopted 1943. Net; Camouflage (Flame and Mildew-Resistant).

U. S. Gov., Marine Corps Specification, revised 1944. Netting; Cotton, Marquisette, 1.8 Oz., Camouflaged (Mildew-Resistant and Water-Repellent).

U. S. Gov., U. S. Army, Corps of Engineers. Specification 6-70B; 1939. Nets; Camouflage.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2305A; 1941. Bellows; Net for.

U. S. Gov., Veterans Administration. Specification VA-M-167; 1931. Life Saving Nets.

## 319. MISCELLANEOUS MANUFACTURES OF COTTON

### 319.1 COTTON BATTING AND WADDING

U. S. Gov., Federal Specification HH-I-528; 1944. Insulation; Cotton, Batts. Covers one grade and three classes—(a) without backing, (b) backing on one side with moisture-resistant paper, and (c) backing on both sides (one side moisture-resistant paper). Gives requirements for material, workmanship, construction, fire resistance, backing, length and width, thickness, weight, and thermal conductivity; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification CCC-C-606; 1941. Cotton-Batting; Nonabsorbent, Unbleached. Covers one type and two grades—(A) 50-percent, 3/4-in. fibers and (B) 50-percent, 1/2-in. fibers. Gives detail requirements; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Federal Specification CCC-W-51; 1942. Wadding; Cotton, Sheet. Covers one type, one grade, and three sizes—(1) 5 in. by 6 yd., (2) 18 in. by 6 yd., and (3) 36 in. by 6 yd. Gives requirements for material, workmanship, absorbency, tolerance, color, sizing, weight, and formation of roll; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., Marine Corps Specification, adopted 1941. Strip; Wadding, Sleeve.

U. S. Gov., Navy Dept. Specification 27W2b; 1940. Wadding; Gray.

### 319.2 FLAGS AND FLAG KITS

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 6-243; 1936. Cases; Flag, Duck.

*References.*—Railway signal flags, *see* 306.43.

## 319.3 TOWELS AND BATH MATS

American Hospital Assn., 67-52. Turkish Wash Cloths. Covers one type and grade in double face cloths. Based on U. S. Gov. Federal Specifications DDD-C-486 for Turkish Wash Cloths; V-T-276b, and Amendment 1, for Cotton Thread; CCC-T-191a, and Amendment 1, for General Specifications, Test Methods, Textiles; DDD-S-751 for Stitches, Seams, and Stitching; and DDD-T-551, and Amendment 1, for Turkish Towels.

American Hospital Assn., 67-196. Hospital Bath Towel. Covers one type, one grade, and one class. Based on U. S. Gov., War Dept., Specifications 6-152 for Hospital Bath Towel, referred to below.

American Hospital Assn., 67-199. Huck Hand Towel. Covers one type, one class, and one grade. Based on U. S. Gov., War Dept., Specifications 6-153 for Huck Hand Towel, referred to below.

American Hospital Assn., 67-223. Office Huck Towels (With Woven Name). Covers one grade in "firsts." Based on U. S. Gov. Federal Specifications DDD-T-531, and Amendment 2, for Office Huck Towels (With Woven Name); and CCC-T-191a, and Amendment 1, for General Specifications, Test Methods, Textiles.

American Hospital Assn., 67-229. Turkish Towels. Covers three types in "firsts." Based on U. S. Gov. Federal Specifications DDD-T-551, and Amendment 1, for Turkish Towels and CCC-T-191a, and Amendment 1, for General Specifications, Test Methods, Textiles.

U. S. Gov., Dept. of Agriculture, Forest Service. Specifications 247-58-S. Towels; hand, cloth.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R119-31; 1931. Fast-Selvage Terry Towels. This recommendation establishes a simplified list of stock sizes of fast-selvage terry towels known as Turkish towels. Initiated by the Cotton Textile Institute.

U. S. Gov., Federal Specification DDD-C-486; 1937. Cloths; Wash, Turkish. Covers one type and grade. Gives requirements for sizes, edges, weight, color, border, and breaking strength; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Federal Specification DDD-T-531; 1931. Amendment 2; 1936. Towels; Huck, Office (With Woven Name). Covers one type and one grade. Gives requirements for weave, width and length, weight, threads per inch, sizing, and color; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Federal Specification DDD-T-551; 1933. Amendment 1; 1938. Towels; Turkish. Covers one grade and three types— A, B, and C. Gives requirements for finish, weave, hemming, thread count, weight, dimensions, and breaking strength; methods of sampling, inspection and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Navy Dept. Specification 27 T 4b; 1943. Towels; Officers', Face.

U. S. Gov., Treasury Dept., Procurement Div., No. 692; 1944. Towels; Huck, Cotton, Dental. Shall be of a grade commercially known as "firsts." Gives requirements for material, workmanship, weave, thread count, sizing, shrinkage, color, hem, size, and weight; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., U. S. Maritime Commission. Specification 27-MC-8; 1940. Towels; Huck. Types shall be type I—huck (union), type II—huck (cotton), type III—huck (cotton, high count); and the grade shall be that known commercially as "firsts." Gives requirements for material, workmanship, appearance, bleach, weave, hems, size, sampling, inspection, and tests.

U. S. Gov., U. S. Maritime Commission. Specification 27-MC-9; 1940. Mats; Bath, White Cotton. Shall be of one type and grade. Gives requirements for material, workmanship, bleach, weave, hems, thread count, weight, sizing, dimensions, sampling, inspection, and tests.

U. S. Gov., U. S. Maritime Commission. Specification 27-MC-11; 1940. Towels; Bath (Turkish). There shall be three types and the grade shall be that known commercially as "firsts." Gives requirements for material, workmanship, bleach, sizing, weave, hemming, size, tolerance for dimensions, lettering and designs, sampling, inspection, and tests.

U. S. Gov., U. S. Maritime Commission. Specification 27-MC-15a; 1941. Towels; Service (Pantry and Waiters' Side). Shall be type I—pantry (boardered)—class I, bleached, class II, unbleached; and type II—waiters' side (bleached, without borders). The grade shall be that known commercially as "firsts." Gives requirements for material, workmanship, weave, fiber, thread count, weight, strength, hems, identification, borders, bleach, sampling, inspection, and tests.

U. S. Gov., U. S. Maritime Commission. Specification 27-MC-17; 1941. Towels; Crash (Cook's). Shall be type I—cotton warp and linen filling, type II—all cotton; and the grade shall be that known commercially as "firsts." Gives requirements for material, workmanship, weave, hems, identification, size, borders, finish, tolerance (thread count), sampling, inspection, and tests.

U. S. Gov., U. S. Maritime Commission. Specification 27-MC-23; 1943. Towels; Glass. Shall be three types of linen and four types of cotton, and the grade shall be that known commercially as "firsts." Gives requirements for material, workmanship, weave, colored yarns, bleach, hems, identification, size, thread count, strength, fiber, sampling, inspection, and tests.

*References.*—Towels and toweling, *see* 304.91, 304.92, 304.94; paper towels, *see* 471.3.

## 319.4 MOPS (WIPERS AND POLISHING CLOTHS)

American Hospital Assn., 67-55. Wiping Cloths. Covers one grade. Based on U. S. Gov. Federal Specifications DDD-C-491 For Wiping Cloths and CCC-T-191a for General Specifications, Test Methods, Textiles.

National Assn. of Waste Material Dealers, Inc. Specifications for Wiping Cloths; 1938. Definitions for six classes by nature of material, color, and size; requirements for washing and sterilization. Conforms to standards of the Sanitary Institute of America.

Sanitary Institute of America. Specifications for Sale of Wiping Cloths (undated). Includes two grades of colored wiping cloths, two grades of white wiping cloths, and two grades of underwear wiper; requirements for sterilization, kinds of cloths allowable, and tare.

U. S. Gov., Federal Specification DDD-C-301; 1932. Cheesecloth; (for) Wiping Purposes (Remnants and Seconds). Covers two types—(I) bleached and (II) unbleached; one grade, and two classes—(A) short lengths or remnants and (B) long lengths. Gives requirements for material, workmanship, weave, finish, width, weight, and lengths; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Federal Specification DDD-C-441; 1936. Cloths; Polishing. Covers one type and grade. Gives requirements for size, breaking strength, edges, weight, and ends and picks; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification DDD-C-491a; 1943. Cloths; Wiping. Shall be type I—white or type II—mixed light-colored. Gives requirements for material, workmanship, weight, size, absorbency, invoice weights, baling, sampling, inspection, tests, packing, and marking.

U. S. Gov., Federal Specification DDD-C-503a; 1942. Amendment 2; 1944. Cloths; Wiping, Cotton, Mixed-Colored and White, Sterilized (for Machinery). Covers two types—(I) white and (II) mixed-colored. Gives requirements for material, workmanship, weight, size, freedom from stains, washing and sterilization, absorbency, invoice weights, and baling; methods of sampling, inspection and tests; and packing and marking for shipment.

U. S. Gov., Federal Specification DDD-T-541; 1932. Towels; Machinery-Wiping. Covers one grade and one type. Gives requirements for finish, weave, width, lengths, weight, thread count, breaking strength, and over-edging; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Treasury Dept., Procurement Div., No. 433; 1940. Cloths; Dust, Oil-Treated. Shall be made of thoroughly cleaned cotton, not less than 20 x 36 in., or 27 x 26-1/2 in., treated by uniform spraying or other method, with clean mineral oil, perfumed with oil of cedar, pine oil, or similar material. Oil contents shall be not less than 15 percent nor more than 25 percent of the weight of the treated cloth. Gives requirements for thread count, weave and color, and weight; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-443-A; 1932. Cloths; Cable Wiping.

*References.*—Methods of testing, definitions, *see* 300.4, 300.6; cheesecloth for wiping purposes, *see* 304.3; mop sticks, *see* 983.1.

## 319.5 BAGS

*References.*—Cloth bags, *see* 957.1; duck for bags, burlap, *see* 303.3, 322.1, 322.2.

## 319.6 CARPET LINING

U. S. Gov., Federal Specification DDD-L-416; 1936. Lining; Carpet. Covers one type and grade. Gives requirements for width, weight, and construction; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

*References.*—Felt, *see* 365.98, 473.2.

## 319.7 PADS AND DIAPERS

American Hospital Assn., 46-16. Laundry Padding (Stitched-Cotton-Roving). Covers one grade in two types. Based on U. S. Gov. Federal Specification CCC-P-86, and Amendment 1, for Laundry Padding (Stitched-Cotton-Roving), and CCC-T-191a, and Amendment 1, for General Specifications, Test Methods, Textiles.

American Hospital Assn., 67-73. Bird's-eye Diapers. Covers one type in "firsts." Based on U. S. Gov. Federal Specifications DDD-D-301 for Bird's-eye Diapers; CCC-T-191a, and Amendment 1, for General Specifications, Test Methods, Textiles; and CCC-C-411 for Bird's-eye (Diaper) Cloth in Bolts.

U. S. Gov., Federal Specification CCC-P-86; 1937. Amendment 1; 1938. Padding; Laundry (Stitched-Cotton-Roving). Covers two types—(A) commercially known as 1/4 in. thick and (B) commercially known as 5/8 in. thick. Gives requirements for width, weight, thickness, length of roll, and construction; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Federal Specification DDD-D-301; 1932. Diapers; Bird's-eye. Covers one type and grade. Gives requirements for finish, weave, dimensions, weight, and thread count; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Marine Corps Specification, adopted 1942. Pads; Shooting, Canvas (Emergency Alternate).

U. S. Gov., Navy Dept. Specification 27P6a; 1942. Pads; Shoulder and Sleeve, White.

U. S. Gov., Treasury Dept., Procurement Div. Specification No. 655; 1944. Pads; Ironing Board. Covers one type and one grade and shall be made of knitted cotton. Gives details for construction including length, width, and thickness; methods of sampling and inspection; and packaging, packing, and marking for shipment.

*References.*—Surgical operating pads of rubber, *see* 204.53.

## 319.9 MISCELLANEOUS MANUFACTURED COTTON PRODUCTS

### 319.90 General Items

American Institute of Laundering. Service Bulletin 6. How To Launder Curtains. This bulletin tells you how to identify and inspect curtains, how to wash and finish curtains, how to tint curtains, and how light attacks curtain fabrics.

### 319.91 Awnings and Curtains

National Canvas Goods Manufactures' Assn., Inc. Method of Cutting Awnings, undated. Method of cutting awnings, whether they are circular or oval, is just the same. Gives illustrations of cuts Nos. 1, 2, 3, 4, and 5 with instructions for cutting circular awnings.

U. S. Gov., Federal Specification CCC-S-121; 1936. Scrim; Curtain. Covers one type and grade. Gives requirements for ends and picks, tensile strength, weight, width, colors, designs, and bolts; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

638677 O—45——11

U. S. Gov., Navy Dept. Specification 24A6a; 1944. Awnings; Ships'.

U. S. Gov., Navy Dept. Specification 24C16a; 1944. Curtains; Awning, Ships'.

U. S. Gov., Navy Dept. Specification 24C25; 1944. Curtains; Shower.

U. S. Gov., Navy Dept. Specification 27C7c; 1944. Curtains; Skylight Screens and Fixtures; Ship.

U. S. Gov., Navy Dept. Specification 55C29b; 1940. Curtains; Trousers.

U. S. Gov., U. S. Army, Chemical Warfare Service. Specification 97-54-152; 1941. Curtain; Gasproof, M1.

U. S. Gov., U. S. Maritime Commission. Specification 24-MC-1; 1940. Curtains; Shower, Bleached Duck. Shall be but one type and grade, of that known commercially as bleached, pre-shrunk, Army duck. Gives requirements for workmanship, finish, weave, yarn, thread count, breaking strength, weight, sizes, sampling, inspection, and tests.

U. S. Gov., U. S. Maritime Commission. Specification 27-MC-32a; 1943. Curtains (With Fixtures); Port, Door, and Passageway. Covers three types of curtains and six classes of fixtures. Gives requirements for materials, workmanship, construction, dimensions, hems, thread, stitching, metal fittings, fixtures, installation, sampling, inspection, and tests.

*References.*—Window shades, *see* 392.23; awning cloth, *see* 303.6.

### 319.92 Bindings, Braid

U. S. Gov., Federal Specification DDD-B-331; 1937. Amendment 1; 1944. Binding; Cotton, Bias-Cut. Covers three types—(I) cambric, (II) percale, and (III) sateen. Gives requirements for material, workmanship, cutting, sizing, length, width, dyes, thread count, finish, weight, and breaking strength; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., Marine Corps Specification, adopted 1936. Binding; Bias, Black, 7/8-in.

U. S. Gov., Marine Corps Specification, adopted 1944. Piping; White.

U. S. Gov., Navy Dept. Specification 27B5a; 1942. Braid; Cotton, Black.

U. S. Gov., Navy Dept. Specification 27P2c; 1944. Piping; Cotton, Black.

### 319.93 Cotton Sleeving

U. S. Gov., Navy Dept. Specification 17S10b; 1944. Sleeving; Insulating, Cotton.

U. S. Gov., U. S. Army, Chemical Warfare Service. Specification 97-51-87; 1942. Sleeving; Cotton.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-610; 1931. Sleeve; Cotton, Cable Splicing.

### 319.94 Canvas Cots, Hammocks

U. S. Gov., Federal Specification AA-C-571a; 1937. Amendment 1; 1938. Cots; Folding, Canvas. Covers one type and one grade. Gives requirements for length, width, height, woodwork (hickory, birch, rock elm, white ash, beech, red oak, white oak, pecan, or hard maple), steelwork, painting, cover, thread, stitching, and straps; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Navy Dept. Specification 24 H 1d; 1943. Hammocks and Hammock Fittings.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2659A; 1941. Hammock; Balkan Frame, Large and Small.

*References.*—Methods of testing, definitions, *see* 300.4, 300.6; canvas, *see* 303.1.

### 319.95 Sanitary Napkins

### 319.96 Horse Blankets

U. S. Gov., Dept. of Agriculture, Forest Service. Specifications MSF-47-S. Blanket; Saddle.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 92-6A; 1937. Cover; Horse, M-1912, With Surcingle, M-1930.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 92-S6; 1937. Cover; Horse, M1912, Unlined, With Surcingle, M1930, for Emergency Use Only.

### 319.97 Cards, Straps, and Tape

American Hospital Assn., 67-187. Cotton Tape. Covers six types. Based on U. S. Gov., Navy Dept., Specification 27 T 11a for Cotton Tape and U. S. Gov. Federal Specification CCC-T-191a, and Amendment 1, for General Specifications, Test Methods, Textiles.

American Hospital Assn., 67-190. General Use Bleached, Dyed, or Grey Cotton Tape. Covers one type and grade. Based on U. S. Gov. Federal Specifications DDD-T-86 for General Use Bleached, Dyed, or Grey Cotton Tape and CCC-T-191a, and Amendment 1, for General Specifications, Test Methods, Textiles.

American Society for Testing Materials, D 259-44; 1944. Methods of Testing and Tolerances for Woven Tapes. Apply to silk and cotton tapes. Permissible tolerances in weight, width, thickness, and construction, with requirements for sampling, breaking strength, sizing content, acidity test, quinhydrone pH indicator apparatus, and procedures.

American Society for Testing Materials, D 335-36; 1936. 0.007-In. Cotton Tape for Electrical Purposes. Requirements for uniform woven tape free from "notes" or other impurities, with selvage edge, for sizing, physical properties, tests using A.S.T.M. method D 259, winding, and size of rolls.

Society of Automotive Engineers. Aeronautical Material Specification No. 3810; 1944. Adhesive Tape (Cloth Back). Suitable for application on metal, plastic, paper, paint, and permanent organic protective coatings. Covers application, requirements, test procedure, quality, tolerance, reports, packaging, marking, approval, and rejections. Similar Specification: Army-Navy Aeronautical AN-T-12.

U. S. Gov., Army Air Forces. Specification 16157; 1944. Tape; Tubular Nylon, Cotton Filling.

U. S. Gov., Army-Navy Aeronautical Specification AN-T-12a; 1944. Tape; Adhesive, Moisture-Resistant.

U. S. Gov., Army-Navy Aeronautical Specification AN-T-41; 1943. Tape; Non-Elastic Cotton.

U. S. Gov., Army-Navy Aeronautical Specification AN-T-45; 1944. Tape; Nylon (Cotton Filling).

U. S. Gov., Army-Navy Aeronautical Specification AN-T-48; 1944. Tape; Cotton Surface.

U. S. Gov., Army-Navy Aeronautical Specification AN-DDD-T-91a-2; 1944. Tape; Cotton, Reinforcing.

U. S. Gov., Federal Specification DDD-T-86; 1936. Tape; Cotton, Bleached, Dyed, or Grey (General Use). Covers one type and grade. Gives requirements for construction, physical properties, weave, size of yarns, color, and fastness to weather; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking. Emergency Alternate Federal Specification E-DDD-T-86; 1942, (issued by Procurement Div., Treasury Dept., U. S. Gov.) changed requirements for construction and sizes.

U. S. Gov., Joint Army-Navy Specification Jan-P-127; 1944. Tape; Adhesive, Pressure-Sensitive, Water-Resistant.

U. S. Gov., Marine Corps Specification, revised 1933. Tape; Identification.

U. S. Gov., Marine Corps Specification, adopted 1935. Tape; Cotton, Khaki, 11/16-In. Wide (Shrunk).

U. S. Gov., Marine Corps Specification, adopted 1935. Tape; Cotton, White, 1/4-In. Wide.

U. S. Gov., Marine Corps Specification, adopted 1936. Tape; Cotton, White, 5/8-In.

U. S. Gov., Marine Corps Specification, adopted 1935. Tape; Cotton, White, 11/16-In. Wide (Shrunk).

U. S. Gov., Navy Dept. Specification 26S1f; 1944. Straps; Standard, Folding-Berth.

U. S. Gov., Navy Dept. Specification 27T11b; 1944. Tape; Cotton.

U. S. Gov., Navy Dept. Specification 27T15; 1933. Tapes; Tufting, Cotton.

U. S. Gov., U. S. Army, Army Air Forces. Specification 6-29C; 1941. Tape; Cotton, Serving.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 50-11-53; 1938. Tape; Cotton, Reinforcing, for Pyrotechnic Parachutes.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 6-258A; 1940. Tape; Cotton, Identification Tag.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 6-300; 1941. Strap; Carrying, for Bag, Canvas, Field, Olive-Drab, M-1936.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 6-318; 1943. Tape; Ankle, 2 In. (Stock No. 27-T-535).

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 6-319; 1943. Tape; Cotton, Braided (White, Dyed, or Unbleached).

*References.*—Twine, cord, *see* 302.3, 302.4; insulating tape, *see* 719.56; sash cord, wrapping cord, *see* 302.46, 302.47; adhesive tape, adhesive plaster, *see* 204.12.

## 319.98 Tents, Tarpaulins, and Wind Sails

National Canvas Goods Manufacturers' Assn., Inc. The "Kamptop" Tent, 1940. Gives specifications and sizes for 15 tent sizes from 5x7 to 18x24 ft. Covers type of door construction, many reinforced construction features, style of eave and construction, method of holding up walls and gables for ventilation, weight of the materials, waterproofing used in the cloth—it does not rub off, absolutely waterproof, so no fly is required, price is really lower than a khaki tent with a fly in a 10 ox. duck, and guaranteed full size and waterproof.

U. S. Gov., Army Air Forces. Specification 26758-B; 1945. Paulin; Waterproof, for Type A-3A Sleeping Bag.

U. S. Gov., Army Air Forces. Specification 40770; 1944. Shelter; Field Maintenance, Type B-4, Glider Repair.

U. S. Gov., Army Air Forces. Specification 40872; 1944. Shelter; Field Maintenance, Type A-4, Portable.

U. S. Gov., Army Air Forces. Specification, 40873; 1944. Shelter; Field Maintenance, Type A-5.

U. S. Gov., Army-Navy Aeronautical Specification AN-S-34-1; 1944. Sails; Life Raft.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Commercial Standard CS28-32; 1932. Cotton Fabric Tents, Tarpaulins, and Covers. A commercial standard selected and accepted by industry establishing a standard method of marking tents, tarpaulins, and covers to show the original gray goods weight per square yard without reference to finished or loaded weights, also to show type of fabric by markings, such as a single filling duck, etc.

U. S. Gov., Federal Specification K-P-146; 1940. Paulins and Covers; Duck (Tarpaulins). Covers one grade "firsts" and two types—(I) fire, water, and weather resistant and (II) water resistant. Gives requirements for duck, cotton or manila rope, grommets and washers, rings, ferrules, thread, workmanship, size, size tolerances, stitches, seams and stitching, construction, and stamping; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Marine Corps Specification, revised 1943. Paulins; Large (30 by 20 Ft.).

U. S. Gov., Marine Corps Specification, adopted 1944. Paulins; Medium (21Ft. 6 In. by 14Ft. 3 In.).

U. S. Gov., Marine Corps Specification, adopted 1944. Tent; Emergency, First Aid and Blackout.

U. S. Gov., Navy Dept. Specification 24C19; 1944. Covers; Searchlight, Canvas.

U. S. Gov., Navy Dept. Specification 24H2; 1932. Hoods; Hatch.

U. S. Gov., Navy Dept. Specification 24P5a; 1944. Paulins.

U. S. Gov., Navy Dept. Specification 24S6a; 1944. Screens; Bridge.

U. S. Gov., Navy Dept. Specification 24 W 2b; 1943. Wind-Sails.

U. S. Gov., Navy Dept. Specification 27C23; 1933. Cloths; Boat.

U. S. Gov., U. S. Army, Army Air Forces. Specification 94-3077-A; 1942. Tent; Field Shelter, (One Man), Type A-2.

U. S. Gov., U. S. Army, Army Air Forces. Specification 98-26751-G; 1944. Covers; Waterproof (for Aircraft).

U. S. Gov., U. S. Army, Quartermaster Corps. Specifications 6-77; 1937. Screen; Latrine, and Appliances.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 6-200A; 1935. Covers; Tarpaulin, and End Curtains for Transport Bodies.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 6-211; 1936. Cover (Army Field Bake Oven No.1), Canvas, Dough Trough No. 14A.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 6-257; 1938. Cover; Army Field Bake Oven No.1, Canvas, Sponge-Can, M-1938.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 6-306; 1942. Paulins; Canvas.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 6-308; 1942. Tent; Shelter Half, M-1941.

U. S. Gov., U. S. Maritime Commission. Specification 24-MC-3; 1944. Covers; Canvas, for 12-In. Signaling Searchlight. Covers one type and one grade. Gives requirements for material, workmanship, construction, duck, sewing thread, cord, grommets, stitches, seams, stitching, and identification and marking; sampling, inspection, and methods of test; and packaging, packing, and marking for shipment.

*References.*—Cotton duck, *see* 303.1, 303.5.

## 319.99 Miscellaneous Specifications for Cotton Goods

American Assn. of State Highway Officials, M73-38. Standard Specifications for Cotton Mats for Curing Concrete Pavements. Gives scope, general requirements, properties, filling material, thread, dimensions, construction, and packing.

American Hospital Assn., 67-178. Hospital Slippers. Covers one type, one grade, one class, and seven sizes. Based on U. S. Gov., War Dept., Specifications 10-2875A for Hospital Slippers; Federal Specifications, CCC-D-651 for Unbleached Drill; CCC-D-761, and Amendment 2, for Plied-Filling-Yarns and Single-Yarns (Flat-Duck) Cotton Duck; CCC-S-281, and Amendment 3, for Narrow Unbleached Cotton Sheeting; CCC-T-191a, and Amendment 1, for General Specifications, Test Methods, Textiles; and ZZ-R-601a for Methods of Physical Tests and Chemical Analyses of Rubber Goods.

U. S. Gov., Army Air Forces. Specification 3175-B; 1945. Shell; Outer, for Type A-3A Sleeping Bag.

U. S. Gov., Army Air Forces. Specification 28757-A-1; 1945. Covers; Aircraft Wing and Tail.

U. S. Gov., Dept. of Agriculture, Forest Service. Specifications No. 106. Cover; Pack, Large.

U. S. Gov., Dept. of Agriculture, Forest Service. Specifications 107-S. Cover; Pack, Manta.

U. S. Gov., Dept. of Agriculture, Forest Service. Specifications No. 260. Pad; Packsaddle.

U. S. Gov., Dept. of Agriculture, Forest Service. Specifications No. 308. Saw, Carrier; Crosscut.

U. S. Gov., Dept. of Agriculture, Forest Service. Specifications MSF-214. Knapsacks (Packsack).

U. S. Gov., Federal Specification DDD-M-148; 1943. Mats; Cotton (for Concrete-Curing). Covers three classes—(I) 8 oz. fabric, (II) 7 oz. fabric, and (III) 6.1 oz. fabric. Gives physical properties of fabric and methods of sampling, inspection, and tests.

U. S. Gov., Marine Corps Specification, adopted 1944. Case; 3-Pocket, 30-Round for Caliber .45 Magazine.

U. S. Gov., Marine Corps Specification, adopted 1944. Cover With Strap; Handbag, Summer (Marine Corps Women's Reserve).

U. S. Gov., Marine Corps Specification, adopted 1942. Lanyard; Pistol.

U. S. Gov., Marine Corps Specification, revised 1943. Pack; U. S. Marine Corps, M-1941.

U. S. Gov., Marine Corps Specification, revised 1944. Pocket; Magazine, Double-Web (for Pistol and Carbine).

U. S. Gov., Navy Dept. Specification 20C2; 1930. Covers; Battery-Deck.

U. S. Gov., Navy Dept. Specification 23C3d; 1944. Cones; Speed.

U. S. Gov., Navy Dept. Specification 24 C 15a; 1943. Covers; Winch, Canvas.

U. S. Gov., Navy Dept. Specification 24C24; 1944. Covers; Canvas (for Generating Sets).

U. S. Gov., Navy Dept. Specification 27C9; 1932. Covers; Chair, Cotton.

U. S. Gov., Navy Dept. Specification 27C31; 1942. Covers; Chair, Muslin.

U. S. Gov., Navy Dept. Specification 27P1a; 1941. Pillows, Transom, Leather; Covers, Pillow, Transom, Muslin (Unbleached).

U. S. Gov., Navy Dept. Specification 27T22b; 1943. Tickets; Garment, Cap and Hat.

U. S. Gov., Navy Dept. Specification 83C1; 1942. Covers (Aircraft Use); Cockpit, Engine, Tail, Wing.

U. S. Gov., Treasury Dept., Procurement Div., No. 656; 1944. Covers; Ironing Board. Covers one grade and two types—(I) for 54 in. ironing board and (II) for 48 in. ironing board. Gives requirements for sheeting, tape, cord, workmanship, and details for each type; methods of sampling, inspection, and test; and packaging, packing, and marking for shipment.

U. S. Gov. Treasury Dept., Procurement Div., No. 689; 1944. Covers; Bedpan. Covers one type. Gives requirements for material, workmanship, weave, thread count, sizing, color, shrinkage, hem, size, and weight; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Treasury Dept., Procurement Div., No. 690; 1944. Folder; With Bags, for Sterilizing Rubber Gloves. Covers one type. Gives requirements for material, workmanship, folders, bags, stitching, and tolerances; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 6-162C; 1941. Carrier; Pick-Mattock, Intrenching, M-1910.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 6-163B; 1941. Carrier; Pack, M-1928.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 6-S163; 1937. Carrier; Pack, M-1928.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 6-164B; 1941. Carrier; Shovel, Intrenching, M-1910.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 6-169B; 1941. Carrier; Ax, Intrenching, M-1910.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 6-176B; 1941. Haversack; M-1928.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 6-177B; 1941. Sling; Carrying, Machine-Gun and Ammunition.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 6-178B; 1941. Pouch; First Aid Packet, M-1924.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 6-182B; 1941. Pocket; Magazine, Double, Web, M-1923.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 6-183A; 1941. Pouch; Ammunition, Shotgun.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 6-184; 1937. Cover (Army Field Bake Oven No. 1), Canvas, Breadrack, No. 17-A.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 6-220B; 1942. Covers; Canteen, M-1941, Mounted and M-1910, Dismounted.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 6-284A; 1941. Carrier; Wire Cutter, M-1938.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 92-5A; 1937. Cover; Rigging and Pack, Manta.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 92-85; 1937. Cover; Rigging, for Emergency Use Only.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 92-29; 1937. Cover; Cargo and Feed.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 92-54A; 1942. Cover; Saddle, Phillips' Pack, Cargo and Cavalry.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-646A; 1933. Cover; Types BG-54 and BG-55, for Protection of Radio Equipment.

U. S. Gov., U. S. Army, Signal Corps. Specification 72-27; 1926. Panel; Type A1-91 to A1-122, Inc. Signaling.

U. S. Gov., U. S. Army, Signal Corps. Specification 72-29; 1930. Panel; Type A1-123, Weather Block Signal Panel.

U. S. Gov., U. S. Army, Signal Corps. Specification 72-31B; 1943. Panel; AL-124 and AL-125, Ground-to-Aircraft Signaling Panels.

# 320-329 JUTE AND JUTE MANUFACTURES

## 320. GENERAL ITEMS

American Society for Testing Materials, D 276-43T; 1943. Tentative Methods for Identification of Fibers in Textiles. Covers procedures for the identification of textile fibers used commercially in woven, knit, or braided fabrics. Gives reference samples, reagents, apparatus, considerations for sampling, test specimens, mounting specimens, preliminary examination, procedures for various types of fibers, and enlarged photographs of various fibers.

American Society for Testing Materials, D 541-41; 1941. Methods of Testing and Tolerances for Single Jute Yarn. Definitions, tolerances, and methods of testing.

American Society for Testing Materials, D 681-42 T; 1942. Tentative Methods of Testing and Tolerances for Jute Rove and Plied Yarn for Electrical and Packing Purposes. Apply to plied jute yarn and to single and plied jute rove, both treated and untreated, for electrical and packing purposes.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, 1938. Jute. Covers definition, constants, occurrence, grades, uses, and containers.

## 321. JUTE AND JUTE BUTTS

### 321.1 JUTE PACKING

## 322. FABRICS OF JUTE

### 322.1 BURLAP

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, 1938. Burlap and Burlap Bags. Covers definition, properties, forms available, occurrences, grades, specifications, substitutes, uses, and specifications for burlap bags.

U. S. Gov., Federal Specification CCC-B-811; 1932. Amendment 2; 1936. Burlap; Jute. Covers one grade. Gives requirements for weave, tolerances, construction, and width; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking. Emergency Alternate Federal Specification E-CCC-B-811; 1942, (issued by Procurement Div., Treasury Dept., U. S. Gov.) changed requirements for material.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 50-11-56A; 1939. Trace for Igniter Protective Caps.

U. S. Gov., Veterans Administration. Specification VA-X-28g; 1941. Burlap; Jute (Upholstery, for Needle Work, Etc.).

*References.*—Burlap for bags, *see* 322.2; tolerances, methods of testing, definitions, *see* 300.4, 300.6.

### 322.2 JUTE BAGGING

*References.*—Other burlap, *see* 322.1; tolerances, methods of testing, definitions, *see* 300.4, 300.6; cloth bags, *see* 957.1; burlap waste classification, *see* 390.5.

### 322.3 BALING MATERIAL, JUTE

*References.*—Burlap, jute bagging, *see* 322.1, 322.2.

## 324. JUTE YARNS

### 324.1 JUTE YARNS AND ROVING

## 325. JUTE CORDAGE

### 325.1 JUTE CORD

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 14-3A; 1924. Marline; Jute, Tarred.

*References.*—Standard sizes and varieties, *see* 326.

### 325.2 JUTE ROPE

U. S. Gov., Federal Specification T-R-592; 1944. Rope; Jute. Covers two types—(I) pure jute rope and (II) mixed jute rope. Gives requirements for fiber, workmanship, strand, turn, weight, strength, circumference, length of coil, condition of rope ends,

treatment, and four-strand rope; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

*References.*—Standard sizes and varieties, *see* 326.

## 326. JUTE TWINE

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, 1938. Twines. Covers general discussion of twine and gives details for jute twines; istle twines, sisal twines, Manila twines, Java sisal twines, Mexican sisal twines, Italian hemp, American hemp, and cotton twines.

Tag Manufacturers Institute. Manual of Standard Specifications. Standard Specifications for Strings, 1939. Gives TMI designation, usual dealers name, technical description according to manufacturers' standards, approximate yards per pound, and strength of cotton and silk cords, and twine and jute twines.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R110-29; 1929. Soft Fiber (Jute) Twine. This recommendation covers standard stock varieties with grades, weights, average tensile strengths, and standard put-ups for fine finished twine, wrapping, sail, sewing, millers, and baling twine, heavy finished (India) twine, compress and ham twine, heavy finished istle twine, tube rope, papermakers' bale rope, pipe-cord, hide rope, box twine, jute rope, and fleece twine.

U. S. Gov., Federal Specification T-T-911; 1930. Twine; Jute. Covers four types—(A) fine India twine (finished), (B) wrapping twine (unfinished), (C) tube rope (unfinished), and (D) heavy India twine (finished). Gives requirements for material and workmanship, color, twist, stranding, plies, lengths per pound, and strengths; methods of sampling, inspection and test; and requirements for packaging, packing, and marking. Emergency Alternate Federal Specification E-T-T-911; 1942, (issued by Procurement Div., Treasury Dept., U. S. Gov.) changes requirements for material to jute and/or vegetable bast or leaf fibers.

*References.*—Methods of testing, *see* 300.4.

## 329. MISCELLANEOUS MANUFACTURES OF JUTE

### 329.1 PADDING

### 329.2 HORSE BLANKETS

### 329.3 JUTE WEBBING

### 329.4 JUTE FELT

*References.*—Jute and hair felt, *see* 365.98.

# 330-339 FLAX, HEMP, AND RAMIE

## 330. GENERAL ITEMS

American Society for Testing Materials, D 276-43T; 1943. Tentative Methods for Identification of Fibers in Textiles. Covers procedures for the identification of textile fibers used commercially in woven, knit, or braided fabrics. Gives reference samples, reagents, apparatus, considerations for sampling, test specimens, mounting specimens, preliminary examination, procedures for various types of fibers, and enlarged photographs of various fibers.

American Society for Testing Materials, D 739-43T; 1943. Tentative Methods of Testing and Tolerances for Spun, Twisted, or Braided Products Made From Flax, Hemp, Ramie, or Mixtures Thereof. These methods apply to treated or untreated yarns, threads, twines, and cords. Gives definitions, tolerances, and methods of testing.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, Volume 2; 1944. Flax Fiber. Covers definition, derivation, characteristics, uses, grades, packing, and substitutes.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, Volume 2; 1944. Hemp. Covers definition, derivation, characteristics, uses, grades, packaging, and substitutes.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, Volume 2; 1944. Sisal (Including Henequen). Covers definition, uses, derivation, grades, containers, shipping regulations, and substitutes.

U. S. Gov., Navy Dept. Specification 21H1a; 1929. Hemp; American.

## 331. CORDAGE, TWINE AND THREADS

### 331.1 CORDAGE, FLAX, HEMP, AND RAMIE

#### 331.10 General Items

American Society for Testing Materials, D 738-43T; 1943. Tentative Methods of Testing and Tolerances for Rope (Leaf and Bast Fibers). These methods of testing apply only to rope made from leaf or bast fibers or mixtures of these fibers. Gives definitions, tolerances, sampling, test conditions, weight, circumference, length per turn, dry breaking strength, wet breaking strength, extractable matter, analysis for protective treating materials, and mildew resistance.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Technologic Paper T300; 1925. Development of a Standard Bending Test for Rope Yarns. Describes testing machine and gives recommended procedure for making bending test in which the original twist in the yarn is retained during test.

#### 331.11 Fishing Lines

U. S. Gov., Navy Dept. Specification 21L2a; 1943. Line; Fishing.

#### 331.12 Houselines, Hemp

Assn. of American Railroads, Telegraph and Telephone Section, 1-A-92; 1943. Houseline. For use in the communication plant. Gives general requirements, material and workmanship, preservative, physical requirements, inspection and tests, inspection instructions, packing, marking, and warranty. Emergency Alternate 1-A-92 EA; 1944, changed 1-A-92, in

order to conserve critical and scarce materials for the war period.

*References.*—Houseline, *see* 311.16.

### 331.13 Cordage, Hemp and Ramie

*References.*—Hemp cordage, *see* 331.16.

### 331.14 Linen Blocking Cord

U. S. Gov., U. S. Army, Army Air Forces. Specification 15-1D; 1941. Cord; Linen, Waxed, Aircraft.

U. S. Gov., U. S. Army, Army Air Forces. Specification 15-9; 1926. Cord; Linen, Blocking.

### 331.15 Ratline, Hemp

*References.*—Tarred ratline stuff, *see* 331.16.

### 331.16 Hemp Rope and Tarred Hemp Rope

American Petroleum Institute, Div. of Production. Standard 9-B; 1937. Supplement 1; 1939. Manila Cordage. Covers drilling cables, bull and calf ropes, cat lines, and general use rope; gives physical properties, size, weight, length, tensile strength, lubricant content, weights, sizes, and non-manila fiber.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, 1938. Rope; Manila. Covers definition, source, manufacture, types, and handling and storage.

U. S. Gov., Federal Specification T-C-621; 1930. Amendment 1; 1938. Cordage; Hemp, Tarred. Covers eight types—(A) ratline stuff, (B) seizing stuff, (C) marline, (D) yacht marline, (E) spun yarn, (F) houseline, (G) roundline, and (H) hambroline. Gives requirements for material and workmanship; number of yarns, weight, and breaking strength of ratline stuff in circumferences of 3/4, 1, 1-1/8, 1-1/4, 1-3/8 and 1-1/2 in. and in seizing stuff in circumferences of 1/2, 5/8, 7/8, and 1 in.; length per pound and breaking strength of marline (navy, common, and medium), spun yarn (2 and 3 yarns), houseline (3-thread), houseline (houseline and navy houseline), roundline (3-thread), and hambroline (3-thread); methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Federal Specification T-R-601a; 1935. Amendment 2; 1943. Rope; Manila. Covers two grades—(A) first grade and (B) second grade. Gives requirements for kind of fiber, grades of fiber, strand, turn, cordage oil, condition of rope ends, four-strand rope, identification; table showing circumference, diameter (5/8 in. to 4 in.), length of coil, weight, breaking strength, etc., methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., Army Air Forces. Specification 16090; 1935. Rope; Manila, Yacht (for Aircraft).

U. S. Gov., Navy Dept. Specification 20L1b; 1921. Clotheslines.

U. S. Gov., Navy Dept. Specification 21c5; 1932. Cordage; Hemp (4-Strand Tarred Rope and Untarred Marline).

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 92-44; 1939. Rope; Picket, Field-Artillery 1 1/4-In. Diameter, 33 Ft. Long.

*References.*—Grades of fiber, *see* 330; methods of testing, definitions, *see* 331.10, 300.6; sisal rope, *see* 341.2.

## 331.2 TWINE (FLAX, HEMP, RAMIE)

### 331.20 General Items

Cordage Institute. Method of Testing for Tensile Strength, Etc. Hard Fiber Wrapping Twine, 1940. Requirements for pendulum type, power-driven testing machine, speed of moving head, capstans, holding of specimen, conditioning for test, number of tests, and yardage determination.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R92-38; 1938. Hard-Fiber Twine and Lath Yarn (Ply and Yarn Goods). This recommendation establishes a list of standard kinds and put-ups for hard fiber twines, covering quality, ply, weight, and tensile strength for laid Manila, laid and twisted Java, laid and twisted New Zealand, and twisted sisal. Initiated by the Cordage Institute.

### 331.21 Flax Twine

Assn. of American Railroads, Telegraph and Telephone Section, 2-G-18; 1925. Twelve-Ply Cable Sewing Twine. Waxed twine of flax fiber for use in forming wires and cables, size of flax fiber, composition of wax, construction of twine, tests for quantity of wax per yard and for breaking strength.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R136-32; 1932. Flax and Hemp Twine. This recommendation establishes a schedule of stock varieties of fine finished hemp twine and fine unfinished hemp and flax twine; sail and baling. It also gives minimum length per pound and minimum average breaking strength for the various grades of flax and hemp twine.

U. S. Gov., Federal Specification T-L-411; 1930. Amendment 1; 1938. Lines; Shot (for) Line-Throwing-Guns. Covers one grade in three sizes—No. 4, No. 7, and No. 9. Gives requirements for material, number of strands, lay, diameter, circumference, length and weight of coil, length per pound, weight per foot, breaking strength, and tolerances; methods of sampling, inspection, and tests; and requirements for packaging, packing and marking.

U. S. Gov., Federal Specification T-T-891; 1938. Twine; Flax. Covers three types—(I) fine unfinished flax twine, sail and baling, (II) fine finished flax twine, for mattress side stitching, and (III) unfinished flax rope, for wrapping. Gives requirements for material and workmanship; plies, length per pound, and breaking strength of type I; twist, ply, length per pound, and breaking strength of type II; strands, plies, twist, length per pound, and breaking strength of type III; and twists; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment. Emergency Alternate Federal Specification E-T-T-891; 1942, (issued by Procurement Div., Treasury Dept., U. S. Gov.) permits use of flax, hemp, or ramie, a mixture of these fibers, or cotton.

U. S. Gov., Navy Dept. Specification 21 T 9b; 1943. Twine; Flax, Hemp, or Cotton, Mattress, (for Use in Side Stitching).

U. S. Gov., U. S. Army, Army Air Forces. Specification 15-10A; 1941. Cord; Shock Absorber Serving.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-412A; 1933. Twine; Type RP-11, Linen, Braided.

*References.*—Standard kinds and put-ups, *see* 331.20; methods of testing, definitions, *see* 331.10, 300.6; other shot lines for line carrying guns, *see* 619.1.

### 331.22 Hemp Twine

American Meat Institute. Standards for Packinghouse Supplies, Packs, and Equipment, 1928. Twine for Roping Dry Sausage. Twine for Roping Genoa and Salami Sausage. Twine for Sweet Pickled Hams and Picnics. Requirements for size of hemp, number of ply, weight, and tensile strength.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, 1938. Twines. Covers general discussion of twine and gives details for jute twines; istle twines, sisal twines, Manila twines, Java sisal twines, Mexican sisal twines, Italian hemp, American hemp, and cotton twines.

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. Official Standards of the U. S. for Grades of Hemp Line and Hemp Tow, 1942. Covers type W milled D.R. hemp line Nos. 1,2,3; below grade type W D.R. milled hemp; type K milled D.R. hemp line Nos. 1,2, and 3; and below grade type K D.R. milled hemp. Gives requirements for cleanliness, strength, quality, length, and color for above type Nos. 1,2, and 3. Also, covers type W D.R. hemp tow Nos. 1,2, and 3; below grade type W D.R. hemp tow; type K D.R. hemp tow Nos. 1,2, and 3; and below grade type K D.R. hemp tow. This specification covers fiber from the plant "Cannabis Sativa" grown in the continental U. S.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R136-32; 1932. Flax and Hemp Twine. This recommendation establishes a schedule of stock varieties of fine finished hemp twine and fine unfinished hemp and flax twine; sail and bailing. It also gives minimum length per pound and minimum average breaking strength for the various grades of flax and hemp twine.

U. S. Gov., Federal Specification T-T-901a; 1934. Twine; Hemp. Covers one type in Nos. 12, 18, 24, 36, 48, and 60. Gives requirements for material and workmanship, finish, length per pound, and strength; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking. Emergency Alternate Federal Specification E-T-T-901a; 1942, (issued by Procurement Div., Treasury Dept., U. S. Gov.) limits jute content.

U. S. Gov., Navy Dept. Specification 21 T 9b; 1943. Twine; Flax, Hemp, or Cotton, Mattress, (for Use in Side Stitching).

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 13-5; 1924. Twine; Hemp, American, Sail, Unfinished.

*References.*—Standard kinds and put-ups, *see* 331.20; methods of testing, definitions, *see* 331.10, 300.6; grades of fiber, *see* 330.

### 331.24 Marlin Twine

*References.*—Hemp rope and tarred hemp rope, *see* 331.16.

### 331.25 Impregnated Twine

U. S. Gov., U. S. Army, Signal Corps. Specification 15-3d; 1943. Twines; RP-13, RP-14, RP-15.

*References.*—Hemp rope and tarred hemp rope, *see* 331.16.

### 331.3 THREAD OF FLAX, HEMP, RAMIE

U. S. Gov., Army-Navy Aeronautical Specification AN-T-47; 1944. Thread; Linen and Linen-Hemp.

U. S. Gov., Federal Specification V-T-291a; 1933. Amendment 1; 1944. Thread; Linen. Covers three types—(A) three-cord (stitching), (B) lock-stitch twist, and (C) hand shoe. Gives requirements for material, workmanship, boil-off, and finish; number, length per pound, and strength for three-cord thread; ply, length per pound, strength, and turns per inch for lock-stitch-twist thread; number, length per pound, and strength for hand-shoe thread; color; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., Veterans Administration. Specification VA-X-87b; 1940. Thread; Linen, Weaving.

*References.*—Methods of testing textile materials, *see* 300.4.

### 331.4 OAKUM

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, Volume 2; 1944. Oakum. Covers definition, derivation, uses, grades and types, forms and marketing, and substitutes.

U. S. Gov., Federal Specification T-O-56; 1940. Oakum; Marine. Covers type and grade in two classes—(1) spun and (2) unspun. Gives requirements for kind of fiber, tar content, form, and weight of shipment and tare; methods of sampling, inspection, and tests; and requirements for packing and marking for shipment.

U. S. Gov., U. S. Army, Medical Dept. Specification 13-9a; 1939. Oakum; Veterinary.

## 332. CABLES (HEMP, FLAX, RAMIE)

## 333. FABRICS OF FLAX

### 333.2 HOLLANDS, BROWN

U. S. Gov., Navy Dept. Specification 27S15; 1941. Stays; Holland.

U. S. Gov., Navy Dept. Specification 55H2; 1922. Hollands; Brown, 3-Oz., 34-In.

### 333.3 TOWELING, CRASH, HUCK

American Hospital Assn., 67-208. Crash, Cotton, and Cotton and Linen-Mixed Toweling. Covers two types. Based on U. S. Gov. Federal Specifications CCC-T-571, and Amendment 2, for Crash, Cotton, and Cotton and Linen-Mixed Toweling and CCC-T-191a, and Amendment 1, for General Specifications, Test Methods, Textiles.

*References.*—Mixed cotton and linen crash toweling, *see* 304.91; standard sizes and kinds of towels, *see* 319.3.

### 333.4 DAMASK, BLEACHED AND UNBLEACHED

### 333.9 MISCELLANEOUS FABRICS OF FLAX

American Hospital Assn., 67-106. Bleached Linen Duck. Covers one type and grade. Based on U. S. Gov., Navy Dept., Specifications 27 D 7a for Bleached Linen

Duck and U. S. Gov. Federal Specification CCC-T-191a, and Amendment 1, for General Specifications, Test Methods, Textiles.

U. S. Gov., Marine Corps Specification, adopted 1936. Padding; Canvas, Linen (for Officers).

*References.*—Varnished cambric electrical insulating cloth and tape, *see* 719.56; tracing cloth, *see* 392.12; cambric and holland cloth for window shades, *see* 392.22.

## 334. FABRICS OF HEMP AND RAMIE

## 335. COLLARS AND CUFFS OF FLAX

## 339. MISCELLANEOUS MANUFACTURES OF FLAX, HEMP, AND RAMIE

### 339.1 HOSE

*References.*—Rubber, cotton, and linen hose, *see* 202; Hose, *see* 202, 399.6.

### 339.2 RUGS

*References.*—Woolen rugs, *see* 366.1.

### 339.3 TABLE LINEN

American Hospital Assn., 67-133. Table Linen (Doilies, Napkins, and Tablecloths). Covers six types. Based on U. S. Gov. Federal Specifications DDD-L-391a, and Amendment 1, for Table Linen (Doilies, Napkins, and Tablecloths) and CCC-T-191a, and Amendment 1, for General Specifications, Test Methods, Textiles.

U. S. Gov., Federal Specification DDD-L-391a; 1936. Amendment 1; 1937. Linen; Table (Doilies, Napkins, and Tablecloths). Covers a high grade single damask linen, known to the trade as 5-leaf twill construction. Gives requirements for finish, thread count, dimensions, weight, breaking strength, weave, and hems; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., U. S. Maritime Commission. Specification 27-MC-1; 1941. Tablecloths; Linen. Shall be three types and the grade shall be that known commercially as "firsts." Gives requirements for materials, workmanship, finish, weave, hems, dimensions, tolerances, thread count, weight, strength, sampling, inspection, and tests.

U. S. Gov., U. S. Maritime Commission. Specification 27-MC-7; 1940. Napkins and Doilies; Linen. There shall be six types and the grade shall be that known commercially as "firsts." Gives requirements for workmanship, finishing materials, sizes, finish, bleach, color, hems, weave, patterns, thread count, weight, strength, sampling, inspection, and tests.

*References.*—Cotton table cloths and napkins, *see* 316.1, 316.2.

### 339.4 LINEN TAPE AND REFILLS

U. S. Gov., Federal Specification DDD-T-101; 1932. Amendment 1; 1941. Tape; Linen Finish, Red. Covers one type and grade, 5/16 in. wide. Gives requirements for tolerance and tensile strength; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

*References.*—Varnished cambric electrical insulating tape, *see* 719.56.

### 339.5 LINEN TOWELS

### 339.50 General Items

### 339.51 Linen Crash Towels

U. S. Gov., Federal Specification CCC-T-571; 1932. Amendment 2; 1938. Toweling; Crash, Cotton, and Cotton and Linen-Mixed. Covers one grade and two types—(A) mixed linen and cotton and (B) all cotton. Gives requirements for weight, thread count, width, breaking strength, and finish; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., U. S. Maritime Commission. Specification 27-MC-17; 1941. Towels; Crash (Cook's). Shall be type I—cotton warp and linen filling, type II—all cotton, and the grade shall be that known commercially as "firsts." Gives requirements for material, workmanship, weave, hems, identification, size, borders, finish, tolerance (thread count), sampling, inspection, and tests.

*References.*—Standard sizes, *see* 339.50; mixed cotton and linen crash toweling, *see* 304.91.

### 339.52 Linen Hand Towels

### 339.53 Linen Dish Towels

American Hospital Assn., 67-217. Crash, Cotton, and Cotton and Linen-Mixed Towels. Covers two types in "firsts." Based on U. S. Gov. Federal Specifications DDD-T-511 for Crash, Cotton, and Cotton- and Linen-Mixed Towels and CCC-T-191a, and Amendment 1, for General Specifications, Test Methods, Textiles.

American Hospital Assn., 67-226. Linen Towels (for Drying Glassware). Covers one type in "firsts." Based on U. S. Gov. Federal Specifications DDD-T-536 for Linen Towels (for Drying Glassware), and CCC-T-191a, and Amendment 1, for General Specifications, Test Methods, Textiles.

U. S. Gov., Federal Specification DDD-T-511; 1932. Towels; Crash, Cotton, and Cotton- and Linen-Mixed. Covers one grade and two types—(A) mixed linen and cotton and (B) all cotton. Gives requirements for construction, finish, hems, weight, thread count, dimensions, and breaking strength; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Federal Specification DDD-T-536; 1938. Towels; Linen (for Drying Glassware). Covers one grade and one type. Gives requirements for weave, finish, ends and picks, width, length, weight, and breaking strength; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Navy Dept. Specification 27T8b; 1943. Towels; Glass.

U. S. Gov., U. S. Maritime Commission. Specification 27-MC-15a; 1941. Towels; Service (Pantry and Waiters' Side). Shall be type I—pantry (bordered)—class I, bleached, class II, unbleached; and type II—waiters' side (bleached, without borders). The grade shall be that known commercially as "firsts." Gives requirements for material, workmanship, weave, fiber, thread count, weight, strength, hems, identification, borders, bleach, sampling, inspection, and tests.

U. S. Gov., U. S. Maritime Commission. Specification 27-MC-23; 1943. Towels; Glass. Shall be three types of linen and four types of cotton and the grade shall be that known commercially as "firsts." Gives requirements for material, workmanship, weave, colored yarns, bleach, hems, identification, size, thread count, strength, fiber, sampling, inspection, and tests.

### 339.54 Turkish Bath Towels, Linen

### 339.6 STREET BLANKETS

*References.*—Standard sizes of bed blankets, *see* 369.21.

### 339.7 FLAX PACKING

*References.*—Flax packing, *see* 707.22.

## 340-349 MISCELLANEOUS VEGETABLE FIBERS, STRAW, OR GRASS

## 341. CORDAGE

### 341.1 MANILA ROPE AND TWINE

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, 1938. Twines. Covers general discussion of twine and gives details for jute twines; istle twines, sisal twines, Manila twines, Java sisal twines, Mexican sisal twines, Italian hemp, American hemp, and cotton twines.

U. S. Gov., Joint Army-Navy Specification JAN-M-69; 1944. Mats; Cargo.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 92-2A; 1938. Rope; Pack.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 92-11C; 1942. Rope; Halter Tie, M-1912.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 92-23A; 1941. Rope; Drag, With Shoulder Strap, M-1918.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 92-37A; 1940. Picket-Line Set; Pack Artillery.

*References.*—Manila rope, *see* 331.16; hemp twine, *see* 331.22.

### 341.2 SISAL ROPE AND TWINE

American Meat Institute. Standards for Packinghouse Supplies, Packs, and Equipment, 1928. Hide Rope. Unoiled, 2-ply, extra fine sisal, pure Java, or Java mixture, with 15 percent Mexican sisal, weight and tensile strength requirement.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, 1938. Twines. Covers general discussion of twine and gives details for jute twines; istle twines, sisal twines, Manila twines, Java sisal twines, Mexican sisal twines, Italian hemp, American hemp, and cotton twines.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R92-38; 1938. Hard-Fiber Twine and Lath Yarn (Ply and Yarn Goods). This recommendation establishes a list of standard kinds and put-ups for hard-fiber twines, covering quality, ply, weight, and tensile strength for laid Manila, laid and twisted Java, laid and twisted New Zealand, and twisted sisal. Initiated by the Cordage Institute.

U. S. Gov., Federal Specification T-R-631; 1942. Amendment 2; 1944. Rope; Sisal. Covers one grade, firsts. Gives requirements for material, workmanship, strand, turn, condition of rope ends, four-strand rope, and cordage oil; table showing circumference, diameter (3/16 in. to 4 in.), length of coil, weight, breaking strength, etc.; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Navy Dept. Specification 19R1c; 1944. Ropes; Dip, and Assemblies.

U. S. Gov., Navy Dept. Specification 23M3a; 1944. Mats, Collision; and Covers.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 13-3; 1924. Twine; Sisal Binder.

*References.*—Fiber grades, *see* 330; methods of testing, definitions, *see* 331.10, 300.6.

### 341.3 HENEQUEN ROPE AND TWINE

U. S. Gov., Federal Specification T-R-586; 1942. Amendment 1; 1943. Rope; Henequen and Other Hard Fibers. Covers one grade. Gives requirements for fiber, workmanship, strand, turn, weight, strength, circumference, length of coil, condition of rope ends, cordage oil and table showing circumference, diameter (1/4 in. to 1 in.), length of coil, weight, breaking strength, etc.; methods of sampling, inspection, and test; and packaging, packing, and marking for shipment.

## 342. STRAW HATS AND HAT MATERIALS

U. S. Gov., Federal Specification DDD-H-136; 1935. Hats; Straw, Men's. Covers two types—(I) soft and (II) stiff. Gives requirements for material, construction, weight, lining, size, band, sweat band, and style; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

### 342.1 FIBER HELMETS

U. S. Gov., Marine Corps Specification, revised 1944. Helmet: Fibre, Cloth-Covered.

U. S. Gov., Navy Dept. Specification 73H3a; 1943. Helmets; Fiber, Cloth-Covered.

U. S. Gov., Treasury Dept., Procurement Div., 367B; 1941. Hats; Protective. Covers hats with brim suitable for use in industry and mining, constructed to afford maximum protection of wearer's head against falling objects. Hat shall consist of a shell with brim, a lining, and a cradle or hammock suitable for supporting complete hat on wearer's head. Gives requirements for material, total weight, dielectric strength, strength, inflammability, shell, lining, sweatband and padding, cradle, interchangeability, and ventilation; methods of sampling, inspection, and tests; and packaging, packing, and marking.

### 342.2 STRAW HATS

U. S. Gov., Navy Dept. Specification 55C30; 1927. Hats (Caps; Covers, Hat) Navy Nurse Corps.

## 344. ARTIFICIAL SILK MANUFACTURES

*References.*—Rayon and manufactures thereof, *see* 397.

## 349. OTHER MANUFACTURES OF VEGETABLE FIBERS, STRAW, OR GRASS

### 349.1 MATS AND MATTING (FIBER, GRASS, STRAW)

U. S. Gov., Federal Specification DDD-M-156a; 1939. Mats; Door, Fiber. Covers one type. Gives requirements for material, weight, sizes, thickness, weave, color, formation and finish, tensile strength, and binding; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment. Emergency Alternate Federal Specification E-DDD-M-156a; 1942, (issued by Procurement Div., Treasury Dept., U. S. Gov.) changed requirements for sizes.

U. S. Gov., Navy Dept. Specification 27M2a; 1934. Matting; Cocoa.

U. S. Gov., Treasury Dept., Procurement Div., 483a; 1942. Mats; Floor, for Chairs. Covers two types—(I) single lip and (II) double lip. Shall be black, brown, or green, unless otherwise specified, and of hard pressed composition fiber. Gives requirements for finish, strength, hardness, serviceability, color fastness, design, weight, width, length, and thickness; methods of sampling, inspection, and tests; and packing and marking.

### 349.2 KAPOK

*References.*—Mattress sizes, *see* 315.10.

### 349.20 General Items

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, Volume 2; 1944. Kapok Fiber. Covers definition, derivation, sources, uses, shipment, substitutes, and grades.

U. S. Gov., Navy Dept. Specification 27K1b; 1942. Kapok.

U. S. Gov., Treasury Dept., Procurement Div., No. 506; 1941. Kapok. Covers two grades—(A) regular kapok (in original compressed bales) and (B) special kapok (processed). Shall be similar to Javanese kapok. Gives requirements for foreign matter, buoyancy, resiliency, and adulteration; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., U. S. Army, Army Air Forces. Specification 6-30B; 1941. Kapok; Fiber.

### 349.21 Mattress, Kapok

### 349.22 Pillows, Kapok

### 349.23 Kapok Pads and Cushions

U. S. Gov., U. S. Maritime Commission. Specification 27-MC-40; 1941. Pads; Sun Deck, Kapok Filled, Mildew and Water Resistant. There shall be but one type and grade. Gives requirements for materials, workmanship, construction, dimensions, weight, color, water repellancy, mildew resistance, sampling, inspection, and tests.

U. S. Gov., U. S. Maritime Commission. Specification 27-MC-41; 1941. Pads; Steamer Chair, Kapok Filled, Mildew and Water Resistant. There shall be but one type and grade. Gives requirements for materials, workmanship, construction, dimensions, weight, color, water repellancy, mildew resistance, sampling, inspection, and tests.

### 349.24 Kapok Life Coats, Jackets, and Buoys

### 349.25 Felt, Kapok

Society of Automotive Engineers. Aeronautical Material Specification No. 3291; 1942. Felt; Kapok. For applications where sound and/or heat insulation is required. Gives requirements for composition, physical characteristics, quality, tests, tolerances, approval, and rejections. Similar to U. S. Gov., Army Air Corps, Specification No. 16098.

U. S. Gov., Army Air Forces. Specification 16098 (1); 1939. Felt; Wool-Cotton-Kapok.

### 349.29 Miscellaneous Kapok

U. S. Gov., Navy Dept. Specification 27K5; 1944. Kapok; Reclaimed.

### 349.3 RAFFIA

U. S. Gov., Veterans Administration. Specification VA-X-78e; 1941. Raffia.

*References.*—Pillow sizes, *see* 315.30.

### 349.4 COCOANUT FIBER

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, Volume 2; 1944. Coir (Coconut Fiber). Covers definition, derivation and characteristics, uses, grades, packaging, and substitutes.

*References.*—Sizes, mattress pads, *see* 315.10.

### 349.5 PIASSAVA FIBER

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, Volume 2; 1944. Piassava Fiber. Covers definition, derivation, characteristics, grades, uses, packing and shipping, and substitutes.

### 349.6 VEGETABLE FIBER

Technical Assn. of the Pulp and Paper Industry. Species Identification of Norwoody Vegetable Fibers, Suggested Method T 10 sm-41; 1941. May be identified on the basis of their structure as revealed under the microscope. Covers apparatus, reagents, test specimen, reference standards, procedure, structure of the plant stem, characteristics of individual species, illustrations, and key to fibers.

### 349.7 TYPHA FIBER

U. S. Gov., Army Air Forces. Specification 16158-1; 1944. Fiber; Typha.

# 360-369 WOOL AND HAIR AND MANUFACTURES THEREOF

## 360. GRADES, DEFINITION, AND TESTS OF WOOL

American Society for Testing Materials, D 276-43T; 1943. Tentative Methods for Identification of Fibers in Textiles. Covers procedures for the identification of textile fibers used commercially in woven, knit, or braided fabrics. Gives reference samples, reagents, apparatus, considerations for sampling, test specimens, mounting specimens, preliminary examination, procedures for various types of fibers, and enlarged photographs of various fibers.

American Society for Testing Materials, D 403-44; 1944. Methods of Testing and Tolerances for Woolen Yarns. Includes single or plied yarns, scoured spun-in-oil, semiscoured spun-in-oil, and dry-spun; definitions of terms, tolerances, sampling, standard condition, and determination of moisture regain, yarn number, breaking strength, twist, and extractable matter.

American Society for Testing Materials, D 404-44; 1944. Methods of Testing and Tolerances for Worsted Yarns. Covers single or plied worsted yarn, either dry-spun or oil-spun. Gives material and workmanship, packing and marking, weight of shipment, extractable matter, definitions, tolerances, and methods of testing.

American Society for Testing Materials, D 419-44; 1944. Methods of Test for Fineness of Wool. For loose form, top, or roving, also mohair, alpaca, camel hair, cashmere, vicuna, and rabbit hair. Requirements for sampling, design of wedge ruler, cross-section device and wedge measure, and tests using nature of width method and cross-section method.

American Society for Testing Materials, D 436-37; 1937. Method of Test for Colorfastness of Dyed or Printed Wool, Silk, or Rayon Fabrics to Laundering or Domestic Washing. For washing tests of colored fabrics without use of bleaching agent. Gives apparatus, test specimens, soap solution, procedure, classification, and results.

American Society for Testing Materials, D 461-44; 1944. American Standards Assn., L 16.1-1944. Methods of Testing Wool Felt. For built-up interlocking fibers by mechanical work, moisture and heat, neither woven nor knitted. Gives requirements for standard condition, test condition, length, width, thickness, weight, breaking strength, splitting resistance, chemical analysis, microscopic examination, and special tests.

American Society for Testing Materials, D 472-41; 1941. Specifications and Methods of Test for Fineness of Wool Tops. For untwisted band of wool fibers from which shorter fibers or noils have been removed by combing. Fineness, sampling, and fineness tests; width and cross-section methods.

American Society for Testing Materials, D 508-43; 1943. Methods of Testing and Tolerances for Yarns Spun From Mixed Fibers. Applies to single or plied yarns spun on the woolen, worsted, or cotton system. Gives requirements for material and workmanship, packing and marking, weight of shipment, extractable matter, definitions, tolerances, methods of testing, and determination of wool content.

American Society for Testing Materials, D 519-40; 1940. Method of Test for Fiber Length of Wool. For loose form, top, or roving, also other fibers; requirements for standard condition, moisture equilibrium, wool fiber stapling apparatus, sampling, procedure for test, and calculations.

American Society for Testing Materials, D 584-43; 1943. Method of Test for Hard Scoured Wool in Wool in the Grease (Laboratory Scale Operations). Intended for determining the hard scoured wool content of individual fleeces or similar quantities of grease wool on a laboratory scale. Gives definitions, apparatus, scouring liquor, test conditions, procedure, ether and alcohol extractions, ash calculations, and check tests.

National Assn. of Dyers and Cleaners of the U. S. and Canada. Identification of Fibers, T-145; 1944. For training employees in the identification of textile fibers. Covers natural fibers and synthetic fibers. Gives method of testing and tests for fiber content of pure silk, weighted silk, wool, cotton, regenerated rayon, cellulose acetate rayon, nylon, vinyon, aralac casein, and glass.

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. Service and Regulatory Announcements No. 135. Official Standards of the U. S. for Grades of Wool and Rules and Regulations for Distribution of Practical Forms of Wool and Wool Top Standards Under Wool Standards Act of May 17, 1928, and Amendment Dec. 1939. Covers 12 grades—80's or fine, 70's or fine, 64's or fine, 60's or one-half blood, 58's or one-half blood, 56's or three-eights blood, 50's or one-fourth blood, 48's or one-fourth blood, 46's or low one-fourth blood, 44's or common, 40's or braid, and 36's or braid; rules and regulations for distribution of practical forms of wool standards.

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. Service and Regulatory Announcements No. 135. Official Standards of the U. S. for Grades of Wool Top and Rules and Regulations for Distribution of Practical Forms of Wool and Wool Top Standards Act of May 17, 1928, and Amendment Dec. 1939. Covers 13 grades—80's, 70's, 64's, 62's, 60's, 58's, 56's, 50's, 48's, 46's, 44's, 40's, and 36's. Gives rules and regulations for obtaining practical forms of the official wool top standards, and gives details covering various methods of test for grade.

## 361. WOOL UNMANUFACTURED

### 361.1 WOOL

*References.*—Standard grades, methods of testing wool, *see* 360.

## 362. HAIR, UNMANUFACTURED

### 362.1 CURLED HORSEHAIR

American Hospital Assn., 1-19. Curled Horse Hair. Two Types—(A) horse-mane and (B) horse-tail. Material and workmanship, general requirements, detail requirements, and methods of inspections and tests. Based on U. S. Gov. Federal Specification C-H-111 for Curled Horse Hair.

Contracting Plasterers' International Assn. Standard Specification (undated). Includes requirements for hair.

U. S. Gov., Federal Specification C-H-111; 1930. Hair; Horse, Curled. Covers two types—(A) horse-mane and (B) horse-tail. Gives general and detail requirements; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking. Emergency Alternate Federal Specification, July 1943, changes types substituting mixtures of horse hair, long winter hog hair, cattle tail hair, and Tula fiber.

### 362.2 CURED MATTRESS HAIR

*References.*—Curled horse hair, *see* 362.1.

### 362.3 UPHOLSTERY HAIR

U. S. Gov., Post Office Dept., Div. of Motor Vehicle Service, Bureau of the Fourth Assistant Postmaster General. Specifications for Hair, for Upholstering.

*References.*—Curled horse hair, *see* 362.1.

### 362.9 MISCELLANEOUS HAIR

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, 1938. Bristle; Hog. Covers definition, uses, grades, specifications and standards, and references.

U. S. Gov., Army-Navy Aeronautical Specification AN-H-5a; 1942. Hair; Bound.

U. S. Gov., Navy Dept. Specification 27H2a; 1945. Hair; Cattle-Tail-Mixture.

U. S. Gov., Navy Dept. Specification 32H1a; 1939. Hair; Curled, Woven on Burlap (Low-Temperature Insulation).

U. S. Gov., U. S. Maritime Commission. Specification 27-MC-27; 1941. Hair; Cattletail, Cattletail and Hog, and Horse Mane and Hog. Covers four types and the grade shall be as specified herein. Gives requirements for cattletail hair, prime winter hog hair, horse mane hair, mixtures of hair, sampling, inspection, and tests.

## 363. REWORKED WOOL

### 363.1 WOOL WASTE

U. S. Gov., Federal Specification DDD-W-116; 1931. Waste; Wool, Colored. Covers one grade. Gives requirements for moisture and tare content, gross weight of bale, volume of bale, and tare; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

*References.*—Methods of testing, *see* 360, 300.4; cotton waste, *see* 301.11.

### 363.2 WORSTED ZEPHYR

U. S. Gov., Navy Dept. Specification 27W7; 1940. Worsted; Zephyr.

## 364. WOOL, PARTLY MANUFACTURED

U. S. Gov., Treasury Dept., Procurement Div., No.532; 1942. Yarn; Hand Knitting (Worsted). This specification covers three classes—class A, sweater; class B, sock; and class C, shawl.

## 365. FABRICS WHOLLY OR CHIEFLY OF WOOL AND HAIR

### 365.0 GENERAL ITEMS

American Society for Testing Materials, D 462-44; 1944. Methods of Testing and Tolerances for Certain Wool and Part Wool Fabrics. For fabrics wholly or in part wool yarn, excluding blankets, pile fabrics, knitted fabrics, and wool felt. Gives classifications, tolerances, methods of physical testing, and methods of chemical analysis for wool content.

American Society for Testing Materials, D 582-41T; 1941. Tentative Method of Test for Resistance of Textile Fabrics and Yarns to Insect Pests. For treated fabrics or yarns which contain wool or other fibers. Test specimens, larvae, procedure, examination, and report.

American Society for Testing Materials, D 563-40T; 1940. Tentative Methods of Test for Resistance of Textile Fabrics to Water. Includes hydrostatic pressure, water penetration (drip), and water absorption (spray) methods. Test liquid, apparatus, specimen, and methods of procedure.

American Society for Testing Materials, D 627-41T; 1941. Tentative Methods of Test for Evaluating Compounds Designed To Increase Resistance of Fabrics and Yarns to Insect Pests. Cover procedures for the evaluation of compounds or treatments designed to protect textile fabrics and yarns from damage by insect pests, such as moths or carpet beetles. They comprehend not only the initial protection furnished by the treatment, but also the permanency of the protection during conditions of ordinary service. These methods were prepared jointly by the American Assn. of Textile Chemists and Colorists and the American Society for Testing Materials.

Textile Color Card Assn. of the U. S., Inc. Standard Ninth Edition Color Card, 1944. A new master color card for all industries and trades. This is not a card presenting fashion colors for but one season only, but it embraces a complete collection of important staple shades having continued popular acceptance. A Research Associate has been established at the National Bureau of Standards to include the calibration of the 216 colors contained in the Ninth Edition of the Standard Color Card of America and the translation of these standards into the language of scientific equivalents and nomenclature.

Textile Color Card Assn. of the U. S., Inc. Woolen Colors, 1944. The 1945 spring season woolen color card of America—44 colors shown in woolen fabrics—featuring sunlight pastels and liberation colors.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Commercial Standard CS65-43; 1943. Methods of Analysis and of Reporting Fiber Composition of Textile Products. This standard provides methods of analyzing finished products composed of cotton, rayon, silk, or woolen fiber, and mixtures of two or more of such fibers, and determining the percentage by weight of each kind of fiber present, and the percentage by weight of total sizing, finishing, and other nonfibrous materials; provides methods of reporting on same; includes definitions of these fibers; and illustrates the manner by which testing laboratories may certify that the analyses have been conducted in accordance with the methods of the standard.

### 365.1 WOOLEN CLOTH DESIGNATED BY NAME

### 365.11 Beaver Cloth

U. S. Gov., Marine Corps Specification, adopted 1942. Cloth; Beaver, Green, 30-Oz.

### 365.12 Bedford Cord and Whipcord

U. S. Gov., Marine Corps Specification, adopted 1926. Bedford Cord; Green, 24-Oz. (for Officers).

U. S. Gov., Marine Corps Specification, adopted 1926. Whipcord; Green, 13-Oz. (for Officers).

U. S. Gov., Marine Corps Specification, adopted 1926. Whipcord; Green, 20-Oz. (for Officers).

U. S. Gov., Treasury Dept., Procurement Div., No. 402; 1940. Whipcord; Shrunk and Unshrunk. Covers two types—(I) shrunk, 8.5 oz. and 10.0 oz., and (II) unshrunk, 7.9 oz. and 9.5 oz.; made of thoroughly cleaned cotton, shall have a clear face and light napped back with a medium soft handle and finish. Gives requirements for colors, color fastness, weight, thread count, breaking strength, width, shrinkage, and sizing; methods of sampling, inspection, and test; and packaging, packing, and marking.

### 365.13 Broadcloth

U. S. Gov., Marine Corps Specification, adopted 1926. Broadcloth; Black (for Trimmings).

*References.*—Tolerances, methods of testing, definitions, *see* 365.0, 300.4, 300.6.

### 365.14 Doeskin Cloth

U. S. Gov., Marine Corps Specification, adopted 1926. Doeskin; Dark Blue (for Officers).

U. S. Gov., Marine Corps Specification, adopted 1941. Doeskin; Sky Blue, 17-Oz.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 8-129; 1941. Cloth; Wool, Doeskin, Olive-Drab, 28-Oz.

### 365.15 Fearnaught Cloth

### 365.16 Kersey

U. S. Gov., Marine Corps Specification, revised 1936. Kersey; Dark Blue, 15- to 16-Oz.

U. S. Gov., Marine Corps Specification, revised 1941. Kersey; Green, 16-Oz.

U. S. Gov., Marine Corps Specification, revised 1936. Kersey; Green, 22-Oz.

U. S. Gov., Marine Corps Specification, revised 1936. Kersey; Sky-Blue, 16-Oz.

U. S. Gov., Navy Dept. Specification 27K2c; 1944. Kersey; Blue (Dark), 30-Oz.

U. S. Gov., Navy Dept. Specification 27K3b; 1941. Kersey; Scarlet.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 8-20A; 1928. Kersey; Olive-Drab, 26-Oz.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 8-85; 1930. Cloth; Kersey, Sky Blue.

*References.*—Tolerances, methods of testing, definitions, *see* 365.0, 300.4, 300.6.

### 365.17 Melton

U. S. Gov., Navy Dept. Specification 27M10c; 1943. Melton; Blue (Dark), 16-Oz.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 8-135; 1943. Cloth; Wool, Melton, Lining, 30-Oz., O.D.

### 365.18 Serge

U. S. Gov., Army Air Forces. Specification 16152 (1); 1944. Cloth; Worsted Serge.

U. S. Gov., Marine Corps Specification, adopted 1933. Serge; Dark Blue, 15-Oz.

U. S. Gov., Marine Corps Specification, adopted 1943. Serge; Green, 12-Oz.

U. S. Gov., Marine Corps Specification, adopted 1926. Serge; Green, 16-Oz. (for Officers).

U. S. Gov., Marine Corps Specification, adopted 1926. Serge; Green, 20-Oz. (for Officers).

U. S. Gov., Marine Corps Specification, revised 1938. Serge; Sky Blue.

U. S. Gov., Navy Dept. Specification 27S10b; 1944. Serge; Blue, Dark.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 8-94B; 1944. Cloth; Wool, Serge, 18 Oz.

*References.*—Tolerances, methods of testing, definitions, *see* 365.0, 300.4, 300.6.

### 365.19 Miscellaneous Woolen Cloth

National Assn. of Wool Manufacturers. Bulletin of the Wool Manufacturers for 1943. Reprints complete specifications for woolen products as follows: U.S. Army Specifications, U. S. Navy Specifications, U. S. Marine Corps Specifications, and Federal Specifications.

U. S. Gov., Army Air Forces. Specification 16161; 1944. Cloth; Napped Wool.

U. S. Gov., Army Air Forces. Specification No. 16167; 1944. Cloth; Knitted Wool, for Flying Clothing.

U. S. Gov., Marine Corps Specification, adopted 1942. Cloth; Alpaca Pile, 14.50 Oz. per Sq. Yd. (for Lining Coats).

U. S. Gov., Marine Corps Specification, adopted 1943. Cloth; Gabardine, 14-Oz.

U. S. Gov., Marine Corps Specification, adopted 1926. Lining; Overcoat (for Officers).

U. S. Gov., Navy Dept. Specification 27A1; 1931. Alpaca; Lining, Black.

U. S. Gov., U. S. Army, Army Air Forces. Specification 6-234-A; 1943. Cloth; Gabardine, Olive-Drab (Worsted Warp-Cotton Filling).

U. S. Gov., U. S. Army, Army Air Forces. Specification 8-136; 1943. Fabric; Wool, Pile, Coated.

U. S. Gov., U. S. Army, Army Air Forces. Specification 8-142; 1944. Cloth; Alpaca and Wool Pile.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 8-65; 1928. Elastique; Drab, 26 Oz.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 8-80; 1941. Cloth; Wool, Worsted Warp-Woolen Filling.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 8-88; 1930. Cloth; Elastique, 26-Oz., Sky Blue and Dark Blue.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 8-122A; 1942. Cloth; Woolen, Covert, 12-1/2 Oz.

## 365.2 WOOLEN CLOTH DESIGNATED BY COLOR

### 365.21 Dark Blue Cloth

U. S. Gov., Marine Corps Specification, revised 1939. Cloth; Dark Blue, 16-Oz.

U. S. Gov., Navy Dept. Specification 27C19a; 1933. Cloth; Blue (Dark), for Officers' Uniforms.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 8-84; 1930. Cloth; Dark Blue (17 90 18 Oz.).

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 8-112; 1937. Cloth; Woolen, Blue, Face Finished, for Officers' Uniforms.

*References.*—Dark blue serge, *see* 365.18; blue broadcloth, *see* 365.13; dark blue kersey, *see* 365.16.

### 365.22 Light Blue Cloth

*References.*—Blue broadcloth, blue serge, *see* 365.13, 365.18.

### 365.23 Scarlet and White Cloth

U. S. Gov., Marine Corps Specification, adopted 1937. Cloth; Scarlet.

### 365.24 Olive Drab

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 8S-39A; 1936. Suiting; Olive-Drab, 20-Oz.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 8-53-A; 1942. Cloth; Overcoating, Olive-Drab, 32 Oz.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 8-94B; 1944. Cloth; Wool, Serge, 18 Oz.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 8-109; 1937. Cloth; Elastique, Olive-Drab, 18-Oz.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 8-110; 1937. Cloth; Shirting, Worsted, Olive-Drab.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 8-118; 1940. Cloth; Lining, Wool, Knitted, O. D.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 8-131; 1942. Cloth; Wool, Knitted, Tubular, O. D.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 8-134; 1943. Cloth; Wool, Knitted, 26-Oz., O. D.

### 365.25 Gray Uniform Cloth

### 365.26 Forestry Green and Elastique Green Cloth

U. S. Gov., Marine Corps Specification, adopted 1944. Cloth; Tropical Worsted, Green.

U. S. Gov., Marine Corps Specification, adopted 1943. Covert; Green, 14-Oz.

U. S. Gov., Marine Corps Specification, revised 1943. Elastique; Green, 16-Oz.

U. S. Gov., Marine Corps Specification, adopted 1942. Elastique; Green, 19-Oz.

U. S. Gov., Marine Corps Specification, revised 1943. Elastique; Green, 21-Oz.

### 365.27 Khaki Woolen Cloth

U. S. Gov., Marine Corps Specification, adopted 1944. Cloth; Tropical Worsted, Khaki.

### 365.29 Miscellaneous Cloth Designated by Color

U. S. Gov., Marine Corps Specification, adopted 1937. Cloth; Yellow.

## 365.9 MISCELLANEOUS SPECIFICATIONS FOR WOOL AND HAIR CLOTH

### 365.91 Billiard Cloth

U. S. Gov., Navy Dept. Specification 27C1d; 1938. Cloth; Billiard.

### 365.92 Bunting

*References.*—Wool bunting, *see* 306.42.

### 365.93 Flannel

U. S. Gov., Marine Corps Specification, revised 1942. Flannel; Green, 13-Oz.

U. S. Gov., Marine Corps Specification, adopted 1926. Flannel; Scarlet.

U. S. Gov., Marine Corps Specification, revised 1939. Flannel; Shirting, Khaki.

U. S. Gov., Navy Dept. Specification 27C21a; 1940. Flannel (and Cloth), Gray (Prison).

U. S. Gov., Navy Dept. Specification 27F8c; 1943. Flannel; Blue (Dark).

U. S. Gov., Treasury Dept., Procurement Div., No. 531; 1942. Flannel; Wool, and Wool-Cotton. Covers one grade, two types—(I) 75 percent wool and (II) 100 percent wool; and two classes—(A) heavy weight and (B) light weight. Intended for use in making layettes and for demonstration purposes in vocational schools. Gives requirements for material, workmanship, weave, colors, color fastness, length of bolt, width, thread count, breaking strength, and weight; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 8-42A; 1933. Flannel; Gray, Woolen.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 8S-54A; 1927. Flannel; Shirting, Olive-Drab, Substitute, 10-Oz.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 8-54C; 1941. Cloth; Shirting, Flannel, 10-1/2 Oz.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 8-133; 1943. Cloth; Wool, Flannel.

*References.*—Cotton flannel, *see* 304.2.

### 365.94 Prisoners' Uniform Cloth

### 365.95 Facing Cloth for Uniforms

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 8-43B; 1940. Cloth; Facing, 16/17-Oz.

### 365.96 Haircloth

U. S. Gov., Army Air Forces. Specification 16083; 1932. Cloth; Camel Hair, for Flying Suit Linings.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Technologic Paper T231; 1923. Tentative Standard Test Methods and Percentages of Oil and Moisture in Hair Press Cloths. For press cloth used in the oil pressing industry, procedure for sampling; for analysis for moisture content, oil content, and water-soluble material; recommended standard for permissible content of moisture, oil, and water-soluble material.

U. S. Gov., Marine Corps Specification, adopted 1936. Haircloth; Natural (for Officers).

U. S. Gov., Navy Dept. Specification 55F8a; 1942. Fronts; Coat.

*References.*—Methods of testing, *see* 365.98; hair felt, *see* 365.98.

### 365.97 Mohair, and Pile Fabrics

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Commercial Standard CS52-35; 1935. Mohair

Pile Fabrics (100 Percent Mohair Plain Velvet, 100 Percent Mohair Plain Frieze, and 50 Percent Mohair Plain Frieze). This standard covers the following mohair pile fabrics for upholstery purposes—100 percent mohair plain velvet, 100 percent mohair plain frieze, and 50 percent mohair plain frieze.

U. S. Gov., Marine Corps Specification, adopted 1926. Lining; Mohair Serge, Black (for Officers).

U. S. Gov., Marine Corps Specification, adopted 1926. Lining, Mohair Serge, Green (for Officers).

## 365.98 Felt

American Hospital Assn., 58-4. Hair Felt. Covers one grade and one class, that intended for pipe covering. Based on U. S. Gov., Navy Dept., Specification 32 F 2b for Hair Felt.

American Society for Testing Materials, D 146-44 T; 1944. Tentative Methods of Testing Felted and Woven Fabrics Saturated With Bituminous Substances for Use in Waterproofing and Roofing. Covers fabrics saturated (but not coated) with asphalt or coal-tar products for use in membrane waterproofing. Sampling, requirements of finished fabric as to area, weight, loose surfacing, moisture, strength pliability, water absorption, loss on heating, and distillation of coal-tar saturated felt, and for desaturated fabric, weight, carbonaceous matter, total comminuted surfacing, saturant, and ash.

American Society for Testing Materials, D 224-44 T; 1944. Tentative Specifications for Asphalt Roofing Surfaced With Powdered Talc or Mica. Cover asphalt roofing in sheet form surfaced with finely powdered mineral matter, either 36 or 32 in. in width, composed of roofing felt saturated and coated on both sides with asphalt. Manufacture, character of felt, saturant, and coatings; physical properties, freedom from defects, pliability and stickiness, packing, nails and lap-cement, sampling and methods of testing, inspection, and basis of rejection. A.S.T.M. Emergency Alternate Provision EA-D 224b; 1944, omits requirements for protective coating on nails, section 12a, item 2.

American Society for Testing Materials, D 225-44 T; 1944. Tentative Specifications for Asphalt Shingles Surfaced With Coarse Mineral Granules. Cover asphalt roofing in shingle form surfaced with colored mineral granules, composed of roofing felt saturated and coated on both sides with asphalt and surfaced on the weather side with granulated slate or equivalent mineral material (of solid or mixed colors as may be agreed upon by the purchaser and the seller), and on the reverse side with powdered talc or mica. Intended to be used with a "headlap" of not less than 2 in. Individual (American Method) Square Tab Strip and Hexagonal Tab Strip. Manufacture, character of felt, saturant, and coatings; physical properties, surface finish, saturation, freedom from defects, stickiness, packing, sampling, and methods of testing, inspection, and basis of rejection.

American Society for Testing Materials, D 228-44 T; 1944. Tentative Methods of Testing Asphalt Roll Roofing, Cap Sheets, and Shingles. Includes roll roofing coated with powder, surfaced with granules, on weather side, and coated on exposed half of the weather side with mineral granules; requirements for sampling; methods of physical testing for roll roofing, cap sheets, and shingles, and for analysis of roofing composition, saturant in dry felt; weight of weather side coating and reverse side coating soluble in carbon disulfide; ash; weight of dry saturated felt and of mineral matter.

American Society for Testing Materials, D 249-44 T; 1944. Tentative Specifications for Asphalt Roofing Surfaced With Coarse Mineral Granules. Cover asphalt roofing in sheet form surfaced with colored mineral granules, either 36 or 32 in. in width, composed of roofing-felt saturated and coated on both sides with asphalt and surfaced on the weather side with granulated slate or equivalent mineral material (of solid or mixed colors as may be agreed upon by the purchaser and the seller), and on the reverse side with powdered talc or mica. Manufacture, character of felt, saturant, and coatings; physical properties, surface finish, gage, saturation, packing, nails and lap-cement, sampling and testing, inspection, and basis of rejection. A.S.T.M. Emergency Alternate Provision EA-D 249b; 1944, affected section 6, Surface Finish; table I Physical Requirements of Asphalt Roofing; section 10, Packing; and section 12, Nails and Lap-Cement.

American Society for Testing Materials, D 250-44 T; 1944. Tentative Specifications for Asphalt-Saturated Asbestos Felt for Use in Waterproofing and in Constructing Built-Up Roofs. Cover quality of felt containing 85 percent asbestos, saturant, character of felt after saturation, surfacing, physical properties, stickiness, sampling, and testing.

American Society for Testing Materials, D 461-44; 1944. American Standards Assn., L 16.1-1944. Methods of Testing Wool Felt. For built-up interlocking fibers by mechanical work, moisture and heat, neither woven nor knitted. Gives requirements for standard condition, test condition, length, width, thickness, weight, breaking strength, splitting resistance, chemical analysis, microscopic examination, and special tests.

Felt Manufacturers' Assn. Classification of Rag Stock (undated). Covers requirements for rag materials suited for the manufacture of felt.

Society of Automotive Engineers. Aeronautical Material Specification No. 3280; 1942. Felt; Hair. Gives requirements for application, composition, requirements, quality, tolerances, approval, and rejections.

Society of Automotive Engineers. Aeronautical Material Specification No. 3285; 1942. Felt; (Back Check), White, (100 Percent Wool). For material suitable for oil retention in installations which do not compress the felt and for other uses where unusual strength and hardness are required for consideration of wear or assembly. Gives requirements for composition, physical characteristics, quality, tests, tolerances, approval, and rejections. Similar to U. S. Gov. Army Specification 8-15; Navy Dept. Specification 27 F-7, Style F-1.

Society of Automotive Engineers. Aeronautical Material Specification No. 3286; 1942. Felt; (Firm Pad), White (100 Percent Wool). For oil and grease retention where the felt is confined and compressed in the assembly and suitable as a padding insulation and other such application where hardness is not essential.

Gives requirements for composition, physical properties, quality, tests, tolerances, approval, and rejections.

Society of Automotive Engineers. Aeronautical Material Specification No.3287; 1942. Felt; (Back Check), Gray (95 Percent Wool). For oil retention in installations which do not compress the felt, for other uses where a slightly lower than first quality is satisfactory and where unusual strength and hardness are required for consideration of wear or assembly. Gives requirements for composition, physical characteristics, quality, tests, tolerances, approval, and rejections. Similar to U. S. Gov., War Dept., Specification 8-15 and Navy Dept. Specification 27F7, Style F3.

Society of Automotive Engineers. Aeronautical Material Specification No.3288; 1942. Felt; Upholstery (100 Percent Wool). For applications where a firm thin felt is required as padding and lining for instruments and machine parts. Gives requirements for composition, physical characteristics, quality, tests, tolerances, approval, and rejections. Similar to U. S. Gov., War Dept., Specification 8-15.

Society of Automotive Engineers. Aeronautical Material Specification No.3290; 1942. Felt; (Firm Pad), Gray (80 Percent Wool). For sound deadening, soft pads, and for mechanical purposes where abrasion and wear are not important factors. Gives requirements for composition, physical requirements, quality, tests, tolerances, approval, and rejections. Similar to U. S. Gov., War Dept., Specification 8-15 and Navy Dept. Specification 27-F-7, Style F-13.

Society of Automotive Engineers. 1944 Handbook, Section 4—Fabricated Materials. Includes SAE Standard Felts. Revised 1940. General comments, 15 SAE classifications, weight and density requirements, thickness tolerances, chemical requirements, physical requirements, and recommended uses.

Underwriters' Laboratories, Inc. Standard for Class "C" Asphalt Rag-Felt Sheet Roofing and Shingles, 1941. For installation as prepared roof coverings in accordance with direction sheets for application packed with the products. Description, felt, saturant, and coating, surfacing materials, felt after saturation, finished product, dimensions, weight, lap cement, nails for sheet roofing, packing, instructions for application, apparatus and instructions of procedure for tests, and inspection of listed product.

U. S. Gov., Army Air Forces. Specification 16098 (1); 1939. Felt; Wool-Cotton-Kapok.

U. S. Gov., Army-Navy Aeronautical Specification AN-F-14-2; 1944. Felt; Wool.

U. S. Gov., Army-Navy Aeronautical Specification AN-F-15a; 1944. Felt; Hair.

U. S. Gov., Federal Specification C-F-201c; 1944. Felt; Hair. Covers one grade and two classes—(A) insulating (plain) and (B) packing, padding (fabric reinforced). Gives requirements for hair felt, cotton fabric, process, thicknesses and densities, form, size of rolls, organic acidity, and alkalinity and mineral acidity; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification DDD-P-51; 1942. Pads; Chair, Felt. Covers one type and two grades—(A) all wool and (B) wool and cotton mixture. Gives requirements for color (tan or green), material, workmanship, dimensions, felt and colors, shape, straps, and details; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment. Emergency Alternate Federal Specification E-DDD-P-51; Jan. 1943, required one type and grade, and changed requirements for color, material, and details.

U. S. Gov., Marine Corps Specification, revised 1941. Felt; Gray.

U. S. Gov., Marine Corps Specification, adopted 1926. Felt; Green.

U. S. Gov., Navy Dept. Specification 27F7d; 1944. Felt; Wool.

U. S. Gov., Navy Dept. Specification 32F2d; 1944. Felt; Hair.

U. S. Gov., U. S. Army, Chemical Warfare Service. Specification 8-27A; 1932. Felt; Filter, Canister.

U. S. Gov., U. S. Army, Chemical Warfare Service. Specification 97-52-82; 1938. Felt; Dust Filtering.

U. S. Gov., U. S. Army, Medical Dept. Specification 8-70C; 1942. Felt; Saddle and Asbestos, for Splints.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 8-25B; 1942. Felt; Gray.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 33-6; 1933. Felt; Hair, Hard, for Blank Ammunition.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 8-15G; 1942. Felt; Pressed.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 8-79; 1933. Felt; Wool, Woven, Gray.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 8-144; 1944. Felt; Hair for Packing.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-679; 1934. Felt; Telephone, Type MC-87, Base.

*References.*—Hair press cloth, *see* 365.96; rag stock for felt, *see* 390.5; felt base rugs, *see* 391; insulating felt, building, *see* 473.3.

## 366. CARPETS AND RUGS OF WOOL

### 366.0 GENERAL ITEMS

American Society for Testing Materials, D 418-42; 1942. Methods of Testing Pile Floor Covering. Gives requirements for standard condition, length, width, weight, and moisture regain, total and back thickness, net pile thickness, rows, pitch, shot, dissection, tuft length, values for velvet carpet, tests for fastness of color to light, apparatus, reference standard, and procedure.

### 366.1 RUGS

U. S. Gov., Federal Specification DDD-R-751; 1931. Rugs; American-Oriental (Washed). Covers one type. Gives requirements for worsted yarns, dyeing, patterns, washing, dissections, and samples; illustrations of pattern rugs; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking. Amendment 1; 1943, changes requirements for packing.

U. S. Gov., U. S. Maritime Commission. Specification 27-MC-33a; 1942. Carpets and Rugs; Axminster. Shall be but one type and grade. Gives requirements for material, workmanship, yarn, dyeing, dimensions,

patterns, colors, dissections, finishing, edges, sampling, inspection, and tests.

U. S. Gov., Veterans Administration. Specification VA-X-106f; 1944. Yarn; Rug.

*References.*—Axminster, velvet, and Wilton rugs, *see* 366.2; methods of testing, *see* 365.0, 300.4; steamer rugs, *see* 369.7; felt base rugs, *see* 391.

### 366.2 CARPETS

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, Volume 2; 1944. Wool; Carpet. Covers definition, derivation, grades and types, uses, packing, and substitutes.

U. S. Gov., Army-Navy Aeronautical Specification AN-C-93-2; 1944. Carpet; Aircraft.

U. S. Gov., Federal Specification DDD-C-51a; 1942. Carpets and Rugs; Axminster. Covers one type of fabric and two grades—(A) high quality and (B) extra high quality. Gives requirements for material, weaving, dyeing, patterns, dissections, tolerances, and sizing; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment. Amendment 1; 1943, changes requirements for filling and packing.

U. S. Gov., Federal Specification DDD-C-61b; 1937. Carpets and Rugs; Velvet, Plain and Twisted-Pile. Covers two types—(I) plain pile and (II) twisted pile. Gives requirements for yarn, dyeing, dissections, tolerances, weight, and carpet samples; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Federal Specification DDD-C-71a; 1934. Carpets and Rugs; Wilton. Covers four types—(I) worsted Wilton rugs, 6 frames; (II) worsted Wilton carpets, 5 frames; (III) wool Wilton carpets, 2 or 3 frames; and (IV) wool Wilton rugs and carpets (Saxony type). Gives requirements for worsted yarns, wool yarn, dyeing, patterns, dissections, tolerances, small samples, and rug samples; definition; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking. Amendment 1; 1943, changes requirements for stuffers and for packing.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 8-59A; 1931. Carpet for Gun Sponges.

U. S. Gov., U. S. Maritime Commission. Specification 27-MC-33a; 1942. Carpets and Rugs; Axminster. Shall be but one type and grade. Gives requirements for material, workmanship, yarn, dyeing, dimensions, patterns, colors, dissections, finishing, edges, sampling, inspection, and tests.

U. S. Gov., Veterans Administration. Specification VA-X-96g; 1944. Warp; Carpet.

*References.*—Methods of testing, *see* 365.0, 300.4.

## 367. WOOL KNIT GOODS

### 367.0 GENERAL ITEMS

American Society for Testing Materials, D 231-39; 1939. Methods of Testing and Tolerances for Knit Goods. For those classes of knit goods which later enter into manufacturing processes; tolerances for width, weight, count, and bursting strength; test specimen, standard conditions, apparatus, and test procedures; moisture regain, grease determination, and percentage of cotton and wool. A.S.T.M. Emergency Alternate Provision, EA-D 231; 1944, affected section 13, Grease Determination.

Textile Color Card Assn. of the U. S., Inc. Glove Colors, 1944. The 1945 spring season card colors for women's gloves include 17 colors.

### 367.1 SOCKS AND STOCKINGS, WOOLEN

U. S. Gov., Army Air Forces. Specification No. 3192; 1943. Sock; Light Weight Woolen (for Arctic Sock Assembly).

U. S. Gov., Army Air Forces. Specification No. 3193; 1943. Sock; Medium Weight Woolen (for Arctic Sock Assembly).

U. S. Gov., Army Air Forces. Specification No. 3195; 1943. Sock; Net Worsted Jumbo (for Arctic Sock Assembly).

U. S. Gov., Army Air Forces. Specification 3196 (1); 1944. Sock; Knit Felt Duffel (for Arctic Sock Assembly).

U. S. Gov., Federal Specification JJ-S-581a; 1938. Amendment 1; 1944. Socks; Wool and Wool-Cotton Mixture. Covers one grade and three classes—(A) light weight—type 1, silver-gray blend and type 2, black, or in colors; (B) medium weight—silver-gray blend; and (C) heavy weight—silver-gray blend. Gives requirements for material, workmanship, knitting, methods of measuring, dimensions, color, elasticity, shrinkage, finish, pairing, length of ends, and detail for each class; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Joint Army-Navy Specification JAN-S-48; 1944. Socks; Wool, Cushion Sole, O.D.

U. S. Gov., Marine Corps Specification, adopted 1937. Socks; Sweat.

U. S. Gov., Marine Corps Specification, adopted 1937. Stockings; Athletic.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 8-34A; 1927. Socks; Arctic (Alaskan Clothing).

*References.*—Standard sizes, methods of measuring, colors, *see* 309.2; tolerances, methods of testing, *see* 367.0, 365.0, 300.4.

### 367.2 KNIT WOOLEN UNDERWEAR

Underwear Institute. Specifications B-3, B-11, C-3, M-3, M-13, M-17, M-18, and W-2; 1935. Standard Measurements for Woolen Underwear. Gives detailed requirements for measuring boys', children's, men's, and women's worsted, worsted-merino, wool, and wool-cotton union suits; boys' wool and cotton-wool shirts and drawers; men's wool and wool-cotton shirts; and men's worsted, worsted-merino, wool, and wool-cotton drawers.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Commercial Standard CS33-43; 1943. Knit Underwear (Exclusive of Rayon). Covers standard methods of measuring and standard measurements for knit underwear (exclusive of rayon) for boys, children, infants, men, and women. Gives requirements for cotton—ribbed, flat knit, panel ribbed, swiss ribbed, fleece-lined; wool—worsted, worsted-merino, wool-cotton; various sizes, weights and types of underwear; and includes sport coats, athletic shirts, polo shirts, sweat shirts, and women's sleeping

pajamas; recommended underwear box sizes and recommended cone colors for single cotton yarns. Sponsored by Underwear Institute.

U. S. Gov., Federal Specification JJ-D-653; 1936. Amendment 1; 1944. Drawers; Men's, Cotton-Wool, Mixed. Covers one grade—"firsts"; two types—(I) flat knit and (II) ribbed knit; two classes—(A) heavy weight and (B) medium weight; and 15 subtypes. Gives requirements for fabric, thread, sateen, buttons, tape, workmanship, design, sizes and methods of measuring, stitches, seams, stitching, weight per dozen, and shrinkage; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., Federal Specification JJ-U-517; 1936. Amendment 1; 1944. Undershirts; Men's, Cotton-Wool, Mixed. Covers one grade—"firsts"; two types—(I) flat knit and (II) ribbed knit; two classes—(A) heavy weight and (B) medium weight; and 15 subtypes. Gives requirements for fabric, thread, workmanship, design and construction, sizes and methods of measuring, stitches, seams, stitching, weight per dozen, and shrinkage; methods of sampling, inspection, and test; and packaging, packing, and marking.

U. S. Gov., Federal Specification JJ-U-531; 1932. Amendment 1; 1935. Underwear; Knit, Standard Sizes (Exclusive of Rayon). Provides standard methods of measurement and standard measurements for knit underwear for the guidance of producers, distributors, and users, in order to eliminate confusion resulting from the diversity of measurements and methods and to provide a uniform basis for guaranteeing full sizes.

U. S. Gov., Federal Specification JJ-U-561; 1933. Union Suits; Men's (Cotton-Wool, Ribbed-Knit, Medium-Weight). Gives detail requirements; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 8-139; 1943. Undershirts; Wool, (25 Percent and 50 Percent).

*References.*—Methods of measuring and standard measurements, *see* 309.4; tolerances and methods of testing, *see* 367.0, 365.0, 300.4.

### 367.3 HOODS AND TOQUES

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 8-48-A; 1942. Toque; Wool, Knit, M-1941.

### 367.4 JERSEYS AND SWEATERS

U. S. Gov., Federal Specification JJ-S-846; 1937. Sweaters; Wool, Knitted. Covers two types—(I) coat-style—boys' and youths', children's, ladies', men's, and misses'; and (II) slipover style—boys' and youths', children's, and misses'. Gives requirements for material, workmanship, stitches, seams and stitching, method of measuring, sizes, and dimensions; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Marine Corps Specification, adopted 1926. Jersey.

U. S. Gov., Marine Corps Specification, adopted 1933. Jersey; Football.

U. S. Gov., Navy Dept. Specification 55J2h; 1940. Jerseys.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 8-97; 1933. Sweaters; Worsted, Olive-Drab.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 8-121B; 1944. Sweaters; Women's.

### 367.5 MUFFLERS AND SCARFS

U. S. Gov., Army Air Forces. Specification 3239; 1944. Scarf; Flying, Heavy, Type N-1.

U. S. Gov., Marine Corps Specification, adopted 1944. Muffler; Red (Marine Corps Women's Reserve).

U. S. Gov., Marine Corps Specification, adopted 1944. Scarf; Field, Khaki (Marine Corps Women's Reserve).

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 8-99B; 1942. Mufflers; Wool.

### 367.6 BATHING TRUNKS, KNIT WOOL

U. S. Gov., Navy Dept. Specification 37S8b; 1939. Suits; Bathing.

U. S. Gov., Navy Dept. Specification 37T2c; 1944. Trunks; Bathing, Woolen.

### 367.7 WOOLEN GLOVES

U. S. Gov., Marine Corps Specification, adopted 1938. Gloves; Woolen, Green.

U. S. Gov., Marine Corps Specification, adopted 1944. Gloves; Wool, Olive Green, Leather Palm.

U. S. Gov., Navy Dept. Specification 73G2b; 1945. Gloves; Woolen.

U. S. Gov., U. S. Army, Army Air Forces. Specification 94-3190A; 1944. Insert; Knit Woolen (for Type D-3A Glove).

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 8-60A; 1937. Gloves; Woolen, Olive-Drab.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 8-120; 1941. Gloves; Wool, Blue, Nurses'.

U. S. Gov., Veterans Administration. Specification VA-X-149c; 1942. Gloves; Woolen.

*References.*—Rubber gloves, *see* 203.2, 204.52.

### 367.9 MISCELLANEOUS KNIT CLOTHING

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 8-123; 1942. Cuffs and Anklets; Wool, Knitted, O. D.

## 368. WOOL WEARING APPAREL (EXCEPT KNIT APPAREL)

### 368.0 GENERAL ITEMS

American Home Economics Assn., sponsor, 1941. American Standards Assn., L11.1-1941. Body Sizes for Boys' Garments. For accurate determination of size a combination of two measurements are necessary, a length and girth or weight. Gives table showing height, hip girth, chest girth, and waist girth for size groups and average age for size groups. Age cannot be used since body size for a given age varies greatly. The two measurements most practical are height and girth of hip. Based on measurements made by Bureau of Home Economics, U. S. Dept. of Agriculture (Misc. Pub. 365) in a WPA project.

### 368.1 WOOLEN BREECHES

U. S. Gov., Army Air Forces. Specification No. 3177 (3); 1944. Trousers; Intermediate Flying, Type A-9.

U. S. Gov., Army Air Forces. Specification No. 3182; 1943. Insert; Electrically-Heated Trouser (for Type F-2 Electrically-Heated Flying Suit).

U. S. Gov., Army Air Forces. Specification 3219A-1; 1944. Trousers; Flying, Intermediate, Type A-11A.

U. S. Gov., Army Air Forces. Specification No. 3223; 1944. Trousers; Intermediate Flying, Nurses, Type A-13.

U. S. Gov., Marine Corps Specification, adopted 1944 Slacks; Covert (Marine Corps Women's Reserve).

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 8-29A; 1937. Breeches; Woolen, Service, Officers'.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 8-30C; 1937. Breeches; Woolen, Elastique.

*References.*—Breeches for uniforms, *see* 368.82.

## 368.2 COATS AND OVERCOATS

U. S. Gov., Marine Corps Specification, adopted 1944. Blouse; Dress, Summer, A, Officers' (Marine Corps Women's Reserve).

U. S. Gov., Marine Corps Specification, adopted 1943. Coat; Service, Winter, Officer and Enlisted Personnel (Marine Corps Women's Reserve).

U. S. Gov., Marine Corps Specification, adopted 1944. Coat; Service, Winter.

U. S. Gov., Marine Corps Specification, adopted 1944. Coat; Sheepskin or Alpaca Lined.

U. S. Gov., Marine Corps Specification, revised 1944. Overcoat; Enlisted Men.

U. S. Gov., Marine Corps Specification, adopted 1943. Overcoat; Officers' (Marine Corps Women's Reserve).

U. S. Gov., Navy Dept. Specification 55-O-1c; 1944. Overcoats.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 8-11; 1921. Coat; Serge, O.D., Norfolk, Nurses'.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 8-28B; 1940. Coats; Service, Officers'.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 8-31E; 1943. Coats; Wool, Serge, O. D., 18 oz. (Stock Nos. 55-C-69350 thru 55-C-69462.)

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 8-51B; 1940. Overcoats; Wool, Roll Collar.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 8-81; 1930. Cape; Olive-Drab, Nurses'.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 8-93; 1930. Overcoat; Officers', Olive-Drab, Roll Collar.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 8-127; 1941. Coats; Wool, Covert, Blue, Nurses'.

*References.*—Coats for uniforms, *see* 368.82; raincoats, oilskin coats, *see* 392.54, 392.53; cotton coats, *see* 311.1; methods of testing, *see* 365.0, 300.4; wool grades, *see* 360.

## 368.3 BATH ROBES

American Hospital Assn., 67-154. Bath Robes. Covers two types, one grade, and three sizes. Based on U. S. Gov. Federal Specifications DDD-R-591 for Bath Robes; CCC-T-191a for General Specifications, Test Methods, Textiles; DDD-S-751 for Stitches, Seams, and Stitching; and V-T-276b for Cotton Thread.

U. S. Gov., Federal Specification DDD-R-591; 1936. Amendment 1; 1938. Robes; Bath. Covers small, medium, and large sizes, and two types—(I) flannelet and (II) terry cloth. Gives requirements for material, thread count, tensile strength, description, collar, sleeves, pocket, belt, hems, and marking; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

## 368.4 WOOLEN SKIRTS

U. S. Gov., Marine Corps Specification, adopted 1943. Skirt; Service, Winter, Officer and Enlisted Personnel (Marine Corps Women's Reserve).

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 8-12: 1921. Skirts; Serge, O. D., Nurses'.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 8-124; 1941. Skirts; Wool, Covert, Blue, Nurses'.

*References.*—Dress patterns, *see* 311.2.

## 368.5 WOOLEN SHIRTS

U. S. Gov., Marine Corps Specification, revised 1942. Shirt; Flannel, Khaki.

U. S. Gov., Navy Dept. Specification 55S19b; 1944. Shirts; Flannel, Blue.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 8-26C; 1933. Shirt; Flannel, Olive-Drab, Coat Style.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 8-52; 1926. Shirt; Wool, O. D., Officers'.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 8-108; 1937. Shirt; Worsted, Olive-Drab.

*References.*—Standard measurements and methods of measuring, *see* 311.5; undershirts, *see* 367.2.

## 368.6 WOOLEN AND FELT SLIPPERS

## 368.7 WOOLEN DRAWERS AND UNDERSHIRTS

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 8-138; 1943. Drawers; Wool, (25% and 50%).

*References.*—Knit wool underwear, *see* 367.2.

## 368.8 SUITS AND UNIFORMS OF WOOL

### 368.81 Woolen Suits

U. S. Gov., Army Air Forces. Specification 3237-1; 1944. Suit; Flying, Light, Gabardine, Type L-1.

### 368.82 Woolen Uniforms

U. S. Gov., Marine Corps Specification, adopted 1943. Trousers; Service, Winter.

U. S. Gov., Navy Dept. Specification 55 T 12c; 1943. Trousers; Blue, Cloth.

U. S. Gov., Navy Dept. Specification 55U5; 1942. Uniforms; Aviation Cadets', and/or Naval Reserve Officers' Training Corps.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 8-83B; 1937. Trousers; Enlisted Men's, Service, Olive-Drab.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 8-89. 1930. Coat; Dress, for Enlisted Men.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 8-90; 1930. Trousers; Dress, for Enlisted Men.

*References.*—Wool grades, *see* 300.1; methods of testing, *see* 365.0, 300.4; cotton uniforms, *see* 311.6.

### 368.9 MISCELLANEOUS WOOL WEARING APPAREL

U. S. Gov., Army Air Forces. Specification 3171 (2); 1943. Jacket; Mechanic's Arctic, Type D-2.

U. S. Gov., Army Air Forces. Specification 3214-1; 1944. Jacket; Officers' Flight, Type B-13.

U. S. Gov., Army Air Forces. Specification 3216-1; 1944. Jacket; Enlisted Mens' Flight, Type B-14.

U. S. Gov., Army Air Forces. Specification 3220A-2; 1945. Jacket; Flying, Intermediate, Type B-15A.

U. S. Gov., Army Air Forces. Specification No. 3225; 1944. Jacket; Intermediate Flying, Nurses, Type B-17.

U. S. Gov., Army Air Forces. Specification No. 3246; 1945. Slacks; Nurses Flying, Light, Type L-1.

U. S. Gov., Army Air Forces. Specification No. 3247; 1945. Jacket; Nurses Flying, Light, Type L-1.

U. S. Gov., Navy Dept. Specification 37C5; 1934. Clothing; Submarine, Woolen.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 8-119; 1941. Neckties; Black, Wool, M-1940.

*References.*—Caps and hats, *see* 395.

## 369. MISCELLANEOUS MANUFACTURES OF WOOL AND HAIR

### 369.1 BRAIDS AND CORDS

U. S. Gov., Marine Corps Specification, adopted 1923. Braid; Mohair, Black, 1/2-In. (for Officers).

U. S. Gov., Marine Corps Specification, adopted 1923. Braid; Scarlet, Worsted, Tubular.

U. S. Gov., Navy Dept. Specification 71B2a; 1941. Braid; Branch-Mark.

U. S. Gov., Navy Dept. Specification 71B5b; 1944. Braid; Mohair, Black.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 7-11A; 1942. Braid; Mohair Flat.

*References.*—Service stripes, *see* 369.6.

### 369.2 BLANKETS

#### 369.20 General Items

American Institute of Laundering. Service Bulletin 10. How to Launder Blankets and Comforters. This bulletin furnishes a thorough discussion on the laundering of blankets, including—washing temperatures, sudsing and rinsing time, size of loads, fading and loss of color, spots and stains, soil, laundering of cotton and wool blankets, extraction and drying, binding, mothproofing, and the handling of quilts and comforters.

#### 369.21 Bed Blankets

American Hospital Assn., 67-13. Wool Blankets. Covers four types. Based on U. S. Gov., Navy Dept., Specification 27 B 7c for Wool Blankets; U. S. Gov. Federal Specification CCC-T-191a for General Specifications, Test Methods, Textiles; and P-S-611 for Salt-Water Soap.

American Society for Testing Materials, D 576-40T; 1940. Tentative Specifications for All Wool, All Cotton, and Wool and Cotton Blanketing (Household). Includes eight types of fabrics with requirements for warp and filling, weight, minimum thickness, breaking strength, air permeability, and methods of testing.

U. S. Gov., Dept. of Agriculture, Forest Service. Specifications MSF-44-S. Blanket; Wool.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R11-36; 1936. Bed Blanket Sizes. This recommendation establishes a simplified list and 11 sizes of bed blankets (cotton, wool, and cotton and wool mixed). Initiated by the National Assn. of Wool Manufacturers.

U. S. Gov., Marine Corps Specification, revised 1939. Blanket; Wool, Green.

U. S. Gov., Navy Dept. Specification 27B7e; 1945. Blankets; Wool.

U. S. Gov., Navy Dept. Specification 27B10; 1941. Blankets; Wool, Field, Green.

U. S. Gov., Treasury Dept., Procurement Div., 398A; 1942. Blankets, 50 Percent Wool (Double Size). Shall be one type and grade 60 in. by 80 (160 in. over-all length). Gives requirement for wool and cotton content, minimum weight, thread count, breaking strength, and shrinkage; weave, color and patterns, edges, and napping; method of sampling, inspection, and test; and packaging, packing, and marking.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 8-111A; 1940. Blanket; Wool, Olive-Drab, M-1934.

U. S. Gov., U. S. Maritime Commission. Specification 27-MC-10; 1940, Amended 1943. Blankets; Cotton Warp, Wool Filling. Shall be type I—mothproofed, type II—not mothproofed; and the grade shall be that known commercially as "firsts." Gives requirements for material, workmanship, color and appearance, weave, thread count, breaking strength, weight, size, fiber content, shrinkage, binding, mothproofing, sampling, inspection, and tests.

U. S. Gov., U. S. Maritime Commission. Specification 27-MC-12; 1940. Blankets; Cotton Warp, Cotton and Wool Filling. Shall be but one type and the grade shall be that commercially known as "firsts." Gives requirements for material, workmanship, fiber content, color, color fastness, appearance, thread count, strength, weight, size, shrinkage, binding, sampling, inspection, and tests.

U. S. Gov., U. S. Maritime Commission. Specification 27-MC-19; 1941. Blankets; 80% Wool (Crew). Shall be type I—mothproofed, type II—not mothproofed; and the grade shall be that known commercially as "firsts." Gives requirements for material, workmanship, fiber content, color, color fastness, appearance, weave, thread count, strength, weight, size, shrinkage, binding, mothproofing, sampling, inspection, and tests.

U. S. Gov., U. S. Maritime Commission. Specification 27-MC-30; 1941. Blankets; All Wool. Shall be type I—mothproofed, type II—not mothproofed; and the grade shall be that known commercially as "firsts." Gives requirements for material, workmanship, color and appearance, color fastness, weave, shrinkage, size, thread count, strength, weight, binding, mothproofing, sampling, inspection, and tests.

*References.*—Cotton and part wool, *see* 315.5.

#### 369.22 Horse Blankets

U. S. Gov., Marine Corps Specification, adopted 1918. Blanket; Saddle.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 8-106; 1936. Blanket; Saddle, O. D., 73 by 85 In.

### 369.23 Printer's Blankets

### 369.29 Miscellaneous Specifications for Wool Blankets

National Assn. of Wool Manufacturers. Bulletin of the Wool Manufacturers for 1943. Reprints complete specifications for woolen products as follows: U. S. Army Specifications, U. S. Navy Specifications, U. S. Marine Corps Specifications, and Federal Specifications.

*Reference.*—Insulating blanket, *see* 473.3.

### 369.3 MATTRESSES, HAIR

U. S. Gov., Navy Dept. Specification 27M8b; 1940. Mattresses; Hair, Berth and Hammock, 26 by 72 1/2 In.

U. S. Gov., U. S. Maritime Commission. Specification 27-MC-45b; 1944. Mattresses; Curled Hair, Hog. There shall be but one type and grade. Gives requirements for ticking, thread, tufting tape or twine, hair, workmanship, size, weight, construction, hog hair, tags, and identification and marking; sampling, inspection, and method of test; and packaging, packing, and marking for shipment.

*References.*—Curled horsehair, *see* 362.1.

### 369.4 HAIR PILLOWS

### 369.5 FLAGS AND FLAG KITS

*References.*—Wool bunting, flags, *see* 306.42, 306.43.

### 369.6 CHEVRONS AND SERVICE STRIPES

U. S. Gov., Marine Corps Specification, revised 1943. Chevrons; Dress.

U. S. Gov., Marine Corps Specification, adopted 1943. Chevrons; Service, Summer (Woven).

U. S. Gov., Marine Corps Specification, revised 1943. Chevrons; Service, Winter.

U. S. Gov., Navy Dept. Specification 71D1; 1931. Devices, Breast, Collar, and Sleeve; Marks, Shoulder, U. S. Navy and U. S. Coast Guard.

### 369.7 STEAMER RUGS

U. S. Gov., U. S. Maritime Commission. Specification 27-MC-24; 1941. Rugs; Steamer. Shall be three types covering khaki and blue plaid, and the grade shall be that known commercially as "firsts," unless otherwise noted. Gives requirements for materials, workmanship, weave, shrinkage, color fastness, color, pattern, appearance, fringe, quality of wool, physical properties, sampling, inspection, and tests.

### 369.9 MANUFACTURES OF HAIR AND WOOL NOT ELSEWHERE CLASSIFIED

U. S. Gov., Navy Dept. Specification 71E1a; 1933. Epaulets and Devices.

U. S. Gov., Treasury Dept., Procurement Div., No. 532; 1942. Yarn; Hand Knitting (Worsted). Covers one type, one grade, and three classes—(A) sweater, (B) sock, and (C) shawl. Gives requirements for material, workmanship, fiber diameter distribution, fluffiness and elasticity, spinning, count, ply, oil content, twist, reeling, skeins, normal moisture regain, dying, and color fastness; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 8-36A; 1935. Cloth; Fuze.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 78-5A; 1942. Pad; Marking-Machine, Laundry.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 92-49; 1939. Girth; Saddle, Mohair Cord.

*References.*—Hair belting, *see* 314.1; wool rags, *see* 390.5; hair floor sweeps, *see* 981.4; brushes of bristle and hair, *see* 982.

## 370-379 SILK AND MANUFACTURES THEREOF

### 370. GENERAL ITEMS

American Institute of Laundering. Service Bulletin 15. How To Launder Silk and Rayon. This bulletin explains identification and washing of rayon, silk, and silk-rayon mixtures, laundering methods for white cotton-rayon and white cotton-silk mixtures, laundering of colored rayon and silk, bleaching of yellowed silk, finishing silks and rayons, common difficulties in laundering silk and rayon pieces.

American Society for Testing Materials, D 276-43T; 1943. Tentative Methods for Identification of Fibers in Textiles. Covers procedures for the identification of textile fibers used commercially in woven, knit, or braided fabrics. Gives reference samples, reagents, apparatus, considerations for sampling, test specimens, mounting specimens, preliminary examination, procedures for various types of fibers, and enlarged photographs of various fibers.

American Society for Testing Materials, D 416-39; 1939. Method of Test for Maximum Residual Shrinkage of Silk and Rayon Woven Fabrics. For use in commercial laundering and for general technical purposes. Requirements for test sample, washing machine, soap solution, washing and pressing, conditioning, and comparison.

American Society for Testing Materials, D 434-42; 1942. Method of Test for Resistance to Yarn Slippage in Silk, Rayon, and Silk-Rayon Woven Fabrics. Covers slippage of filling yarns on warp yarns, or warp yarns on filling yarns, in excess of normal stretch of the fabric under the same load; preparation of specimen, testing machine, standard condition, and test procedure.

American Society for Testing Materials, D 436-37; 1937. Method of Test for Colorfastness of Dyed or Printed Wool, Silk, or Rayon Fabrics to Laundering or Domestic Washing. For washing tests of colored fabrics without use of bleaching agent. Gives

apparatus, test specimens, soap solution, procedure, classification, and results.

National Assn. of Dyers and Cleaners of the U. S. and Canada. Identification of Fibers, T-145; 1944. For training employees in the identification of textile fibers. Covers natural fibers and synthetic fibers. Gives method of testing and tests for fiber content of pure silk, weighted silk, wool, cotton, regenerated rayon, cellulose acetate rayon, nylon, vinyon, aralac casein, and glass.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, 1938. Silk; Silk Yarns and Silk Fabrics. Covers definition, constants, occurrence, containers, shipping regulations, ordering instructions, general classes, thread sizes, qualities, and trading.

Textile Color Card Assn. of the U. S., Inc. Standard Ninth Edition Color Card, 1944. A new master color card for all industries and trades. This is not a card presenting fashion colors for but one season only, but it embraces a complete collection of important staple shades having continued popular acceptance. A Research Associate has been established at the National Bureau of Standards to include the calibration of the 216 colors contained in the Ninth Edition of the Standard Color Card of America and the translation of these standards into the language of scientific equivalents and nomenclature.

## 371. SILK UNMANUFACTURED

## 372. SILK SKEINS, COPS, OR WARPS

### 372.0 GENERAL ITEMS

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, 1938. Silk Yarns. Covers definition, containers, shipping regulations, qualities, and ordering instructions.

### 372.1 BRAIDING SILK

*References.*—Thrown silk rules, see 372.0; tests for silk fiber and weighting of silk, see 370; standard colors, see 370; raw silk classification, see 371; textile testing methods, see 300.4.

### 372.2 EMBROIDERY SILK

U. S. Gov., Federal Specification V-T-301; 1931. Thread; Silk. Covers four types—machine twist, button hole twist (tailors and dry goods), sewing silk (pound goods and dry goods), sewing silk (pound goods and small goods), and embroidery silk. Gives requirements for material and workmanship; cords, twists, commercial designation (00, 0, A, B, C, D, E, F, and FF), length per ounce, and strength for machine twist (black, white, and colored); cords, twist, commercial designation (6, 8, 10, 12, and 14), length per ounce, and strength for tailors' button hole twist (white, black, and colored); size, and length per ounce of dry goods button hole twist; plies; twist, commercial designation (0, A, B, and C), length per ounce, and strength of sewing silk pound goods (white, black, and colored); size plies, twist, and length per ounce of sewing silk (small goods) (white, black, or in colors); plies, twist, commercial designation (D, E, and EE), length per ounce, and strength of embroidery silk (white, black, and colored); elongation; and color fastness; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Navy Dept. Specification 27S2d; 1932. Silk; Embroidery.

*References.*—See references under 372.1.

### 372.3 SEWING SILK

U. S. Gov., Federal Specification V-T-301; 1931. Thread; Silk. Covers four types—machine twist, buttonhole twist (tailors and dry goods), sewing silk (pound goods and small goods), and embroidery silk. Gives requirements for material and workmanship; cords, twist, commercial designation (00, 0, A, B, C, D, E, F, and FF), length per ounce, and strength for machine twist (black, white, and colored); cords, twist, commercial designation (6, 8, 10, 12, and 14), length per ounce, and strength for tailors' button hole twist (white, black, and colored); size, and length per ounce of dry-goods buttonhole twist; plies, twist, commercial designation (0, A, B, and C), length per ounce, and strength of sewing silk pound goods (white, black, and colored); size plies, twist, and length per ounce of sewing silk (small goods) (white, black, or in colors); plies, twist, commercial designation (D, E, and EE), length per ounce, and strength of embroidery silk (white, black, and colored); elongation; and color fastness; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 7-7A; 1938. Thread; Silk, Sewing (for Powder Bags).

U. S. Gov., Veterans Administration. Specification VA-X-89d; 1943. Thread; Silk (Sewing Silk).

*References.*—See references under 372.1.

### 372.4 SPUN SILK

*References.*—See references under 372.1.

### 372.5 TWIST

U. S. Gov., Federal Specification V-T-301; 1931. Thread; Silk. Covers four types—machine twist, button hole twist (tailors and dry goods), sewing silk (pound goods and dry goods), sewing silk (pound goods and small goods), and embroidery silk. Gives requirements for material and workmanship; cords, twists, commercial designation (00, 0, A, B, C, D, E, F, and FF), length per ounce, and strength for machine twist (black, white, and colored); cords, twist, commercial designation (6, 8, 10, 12, and 14), length per ounce, and strength for tailors' button hole twist (white, black, and colored); size, and length per ounce of dry goods button hole twist; plies, twist, commercial designation (0, A, B, and C), length per ounce, and strength of sewing silk pound goods (white, black, and colored); size plies, twist, and length per ounce of sewing silk (small goods) (white, black, or in colors); plies, twist, commercial designation (D, E, and EE), length per ounce, and strength of embroidery silk (white, black, and colored); elongation; and color fastness; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

*References.*—See references under 372.1.

### 372.6 SURGEONS' SILK

*References.—See* references under 372.1.

### 372.7 INSULATING SILK

*References.—See* references under 372.1.

### 372.8 SILK THREAD FOR AIRCRAFT FABRIC

*References.—See* references under 372.1.

## 373. FABRICS WHOLLY OR CHIEFLY SILK

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Commercial Standard CS65-43; 1943. Methods of Analysis and of Reporting Fiber Composition of Textile Products. This standard provides methods of analyzing finished products composed of cotton, rayon, silk, or woolen fiber, and mixtures of two or more of such fibers, and determining the percentage by weight of each kind of fiber present, and the percentage by weight of total sizing, finishing, and other non-fibrous materials; provides methods of reporting on same; includes definitions of these fibers; and illustrates the manner by which testing laboratories may certify that the analyses have been conducted in accordance with the methods of the standard.

### 373.0 GENERAL ITEMS

American Institute of Laundering. Service Bulletin 6. How To Launder Curtains. This bulletin tells you how to identify and inspect curtains, how to wash and finish curtains, how to tint curtains, and how light attacks curtain fabrics.

### 373.1 RIBBONS

U. S. Gov., Marine Corps Specification, adopted 1922. Ribbon; Silk, Yellow (for Banner, Trumpet).

U. S. Gov., Navy Dept. Specification 55Rib; 1936. Ribbons; Cap.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 7-3B; 1932. Ribbons for Decoration and Service Medals.

### 373.2 SILK CLOTH

American Hospital Assn., 13-25. Oiled Silk. Covers one type, one grade, and two classes—(A) silk and (B) rayon. Based on U. S. Army Specifications 7-17B for Oiled Silk and U. S. Gov. Federal Specification CCC-T-191a for General Specifications, Test Methods, Textiles.

### 373.20 General Items

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, 1938. Silk Fabrics. Covers definition, physical characteristics, type, containers, shipping, ordering instructions, marketing, and substitutes.

### 373.21 Balloon and Parachute Silk

U. S. Gov., Army-Navy Aeronautical Specification AN-CCC-S-371-2; 1944. Silk; Parachute.

U. S. Gov., Navy Dept. Specification 27S9e; 1937. Silk; Parachute.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 50-11-51C; 1941. Silk; Parachute, Pyro-Technic.

### 373.22 Banner Silk

U. S. Gov., Marine Corps Specification, adopted 1922. Colors; National, Silk.

U. S. Gov., Marine Corps Specification, adopted 1917. Marine Corps Colors.

U. S. Gov., Marine Corps Specification, adopted 1935. Silk; Banner.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 7-2A; 1932. Silk; Banner.

### 373.23 Bolting Silk

### 373.24 Cartridge Bag Silk

U. S. Gov., Navy Dept. Specification 27C4b; 1942. Cloth; Cartridge-Bag, Silk.

### 373.25 Silk and Satin Lining

U. S. Gov., Marine Corps Specification, adopted 1926. Lining; Satin, Green (for Officers).

U. S. Gov., Marine Corps Specification, adopted 1926. Lining; Silk, Scarlet, for Jacket, Dress, Evening (for Officers).

### 373.26 Silk Velvet

U. S. Gov., Marine Corps Specification, revised 1931. Velvet; Silk, Black (for Officers).

U. S. Gov., Navy Dept. Specification 55V2; 1927. Velvet; Black.

### 373.27 White Silk for Stencils

### 373.28 Silk Cloth for Bags

### 373.29 Miscellaneous Silk Cloth

*References.*—Tolerances, methods of testing, colors, *see* 373.20, 370., 300.4.

## 374. SILK BANDING, BINDING, WEBBING, ETC.

### 374.1 SILK BRAID

U. S. Gov., Marine Corps Specification, adopted 1938. Braid; Silk, Yellow.

*References.*—Braid for uniforms, *see* 369.6.

### 374.2 SILK TAPE

American Society for Testing Materials, D 259-44; 1944. Methods of Testing and Tolerances for Woven Tapes. Apply to silk and cotton tapes, permissible tolerances in weight, width, thickness, and construction, with requirements for sampling, breaking strength, sizing content, acidity test, quinhydrone pH indicator apparatus, and procedures.

U. S. Gov., Army-Navy Aeronautical Specification AN-T-74; 1944. Tape; Silk.

U. S. Gov. Federal Specification DDD-T-126; 1937. Tape (Taste); Silk. Covers two types—(I) 1/4 in., high grade, and (II) 1/4 in., medium grade. Gives requirements for construction and breaking strength; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., U. S. Army, Army Air Forces. Specification 7-18; 1936. Tape; Silk, Reinforcing.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 50-11-121; 1943. Tape; Silk (for Use in the Loading of Ammunition).

*References.*—Silk electrical tape, *see* 719.56.

### 374.3 RUBBERIZED SILK TAPE

## 375. WEARING APPAREL OF SILK

### 375.0 GENERAL ITEMS

American Institute of Laundering. Service Bulletin 23. How To Launder Hoisery. This bulletin explains how hosiery should be classified, turning rayon and silk hosiery before washing, using as short a washing formula as possible, what is meant by "dull-luster" hosiery and "run-proof" hosiery, finishing precautions for garterless hose, and common hosiery laundering problems.

### 375.1 CRAVATS

U. S. Gov., Navy Dept. Specification 73 N 1d; 1944. Neckties; Stewards'.

U. S. Gov., Navy Dept. Specification 73 N 2D: 1944. Neckties; Four-In-Hand, Black.

### 375.2 SILK HOSIERY

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Miscellaneous Publication M149; 1935. A Basis for a Performance Specification for Women's Full-Fashioned Silk Hosiery. Covers results of a survey on women's full-fashioned silk hosiery purchased from various retail stores in several large cities in different parts of the U. S. Gives description of the samples used, test procedure, and test results.

*References.*—Standard sizes, methods of measuring, standard colors, *see* 309.2.

### 375.3 SILK WAISTS

*References.*—Dress patterns, *see* 311.2.

### 375.4 SILK CLOTHING FOR AVIATORS

## 376. HANDKERCHIEFS AND WOVEN MUFFLERS OF SILK

## 378. LACES, VEILS, NETS, AND EMBROIDERIES OF SILK

*References.*—Gold and silver lace, *see* 399.9.

## 379. MISCELLANEOUS MANUFACTURES OF SILK

### 379.1 CORDS, SILK

Tag Manufacturers Institute. Manual of Standard Specifications. Standard Specifications for Strings, 1939. Gives TMI designation, usual dealers name, technical description according to manufacturers standards, approximate yards per pound, and strength of cotton and silk cords and twines and jute twines.

U. S. Gov., Army-Navy Aeronautical Specification AN-C-126; 1944. Cord; Silk.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 7-12E; 1941. Cordage; Silk.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 50-11-55B; 1941. Twine; Silk Lacing, for Assembly of Propelling Charges.

### 379.2 FLAGS

*References.*—Railway signal flags, *see* 306.43.

### 379.3 FRINGE

U. S. Gov., Marine Corps Specification, adopted 1922. Fringe; Silk, Yellow (for Banner, Trumpet).

### 379.4 GRADING SCREENS OF SILK CLOTH

*References.*—Methods of testing, *see* 370, 300.4.

### 379.9 SILK NOT ELSEWHERE CLASSIFIED

Illuminating Engineering Society. Specifications for Shades for I.E.S. Portable Lamps, 1935. Applies to shades designed for incorporation in certified I.E.S. table and floor lamps. Includes requirements for effectiveness, construction, and proposed specifications for shades for I.E.S. portable lamps.

# 390-399 MISCELLANEOUS TEXTILE PRODUCTS

## 390. GENERAL ITEMS

### 390.4 SPECIFICATIONS AND TOLERANCES FOR RETAIL FABRIC MEASURING DEVICES

U. S. Gov., Dept. of Commerce, National Bureau of Standards, H29; 1942. Specifications, Tolerances, and Regulations for Commercial Weighing and Measuring Devices. Fabric-Measuring Devices. These devices refer to machines which are adapted to measure and to indicate automatically the length of fabric passed through it, for use in connection with retail sales. Specification requirements are given covering basis and character of graduations, pointers and indicators, readability of indications, and tolerances.

### 390.5 CLASSIFICATION OF RAG AND TWINE WASTE STOCK

Felt Manufacturers' Assn. Classification of Rag Stock. Covers requirements for rag materials suited for the manufacture of felt.

Felt Manufacturers Assn. Classification of Rag Stock, 1937. Definitions of seven classes of rag stock including roofing felt stock, jute bagging, carpets, etc. Also gives permissible exceptions for manufacture of felt paper, trade customs, and list of unsuitable materials. Approved by the National Assn. of Waste Materials, Inc.

National Assn. of Waste Material Dealers, Inc. Classification Covering Bagging, 1938. Definitions for all classes of gunny, burlap, and jute bagging. Approved by the Writing Paper Manufacturers' Assn.

National Assn. of Waste Material Dealers, Inc. Classification for Mixed Twines, 1938. Definition for dry baled mixed hemp and jute twines, containing not more than 10 percent straight sisal, and free from tannery sisal, hide ropes, and string. Approved by the Writing Paper Manufacturers' Assn.

National Assn. of Waste Material Dealers, Inc. Cotton Rag Classifications, 1938. Defines 15 grades of old rags and 39 grades of new rags, by color and type of material; requirements as to cleanliness and freedom from foreign matter. Approved by the Writing Paper Manufacturers' Assn.

National Assn. of Waste Material Dealers, Inc. Specifications for Hosiery, 1938. Covers knitted rags

such as are accumulated from hosiery and underwear factories in 18 defined grades by color, kind of material, cleanliness, amount of trimmings, and freedom from foreign matter. Approved by the Writing Paper Manufacturers' Assn.

National Assn. of Waste Material Dealers, Inc. Specifications for Purchase of Rags for Conversion Into Wiping Cloths, 1938. Definitions for 11 classes of material, and requirements for minimum size. Conforms to standards of the Sanitary Institute of America.

National Assn. of Waste Material Dealers, Inc. Classification for Woolen Rags, 1938. For mixed soft woolens, mixed rough cloth, mixed skirted cloth, and merchant tailor clips; definition of each class, and standards for packing and delivery. Approved by the Writing Paper Manufacturers' Assn.

## 390.6 SIZINGS FOR FABRICS

## 391. LINOLEUM FLOOR COVERING

American Hospital Assn., 25-1. Battleship Linoleum. Covers one type, one grade, and three thicknesses—1/8", 3/16", and 6 mm. Based on U. S. Gov. Federal Specification LLL-L-351a for Battleship Linoleum.

American Hospital Assn., 25-4. Plain. Inlaid, and Printed Linoleum. Covers plain, jaspe, granite, straight-line, and molded inlaid, and printed. Based on U. S. Gov. Federal Specification LLL-L-361.

U. S. Gov., Army Air Forces. Specification 26560; 1939. Cement; Linoleum.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Building Materials and Structures Report BMS14; 1939. Indentation and Recovery of Low-Cost Floor Coverings. Indentation and recovery determinations for loads ranging from 25 lb. to 200 lb. on a flat-ended pin 1/4 in. in diameter were made on 23 floor coverings at a relative humidity of 65 percent and temperature of 72° F. Indentation readings were taken for each load at intervals of time up to 30 min. and then recovery readings at intervals of time up to 120 min. Various types of floor coverings were tested, such as asphalt tile, pressed fiber board, linoleums, felt base floor coverings having various wearing surfaces, rubber, and wood. A description of the apparatus and the procedure used are given. The results are presented in graphic form to show the relative merits of the various floor coverings with respect to initial and 30-min. indentation under various loads and the recovery after removal of the load.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Building Materials and Structures Report BMS34; 1940. Performance Test of Floor Coverings for Use in Low-Cost Housing: Part 1. A performance test was conducted in the floor-testing chamber of the National Bureau of Standards on 40 different test installations involving 12 floor coverings and 11 adhesives. The floor coverings tested included several kinds of linoleum, felt-base floor coverings having various wearing surfaces, pressed fiberboard, and three strip-wood floors. The bonding agents used included lignin pastes, various resinous cements, casein-latex cement, asphaltic cements, and nails. Installations on both a concrete subfloor and a wood subfloor were tested. Descriptions of the testing equipment and test installations are given. Results showing the relative magnitude of the depressions in the floor coverings caused by the testing equipment are summarized and presented in tables. The appearance of the various installations after 48,000 cycles of the testing equipment is discussed and representative photographs are shown.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Building Materials and Structures Report BMS43; 1940. Performance Test of Floor Coverings for Use in Low-Cost Housing: Part 2. In the second series, 40 test installations were subjected to a performance test in the floor-testing chamber of the National Bureau of Standards. Included in the tests were battleship linoleum, rubber in sheet and tile form, felt-base floor coverings having various wearing surfaces, three monolithic floors, and a number of asphalt tiles. The bonding agents used included lignin pastes, resinous cements, latex adhesives, rubber cements, cut-back asphalt, and asphalt emulsions. Installations were made on both concrete and wood subfloors. Descriptions of the testing equipment and test installations are given. Results showing the relative depth of the depressions in the floor coverings during the test are presented in tables. Brief summaries showing the performance of the test panels are given, and the appearance of the different floor coverings after 48,000 cycles of the testing equipment is shown by representative photographs.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Building Materials and Structures Report BMS59; 1940. Properties of Adhesives for Floor Coverings. An investigation was conducted on adhesives and primers used for bonding linoleum and other floor coverings to subfloors. Tests were made to determine their resistance to both a straight pull and a stripping pull when used to bond 1/8-in. battleship linoleum to concrete, wood, and metal. Specimens were tested in a dry condition and after exposure to moisture. Pieces of linoleum bonded to concrete slabs with selected adhesives and primers were inspected periodically during exposure to moisture. The methods of testing are described and the results are presented in tables.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Building Materials and Structures Report BMS68; 1941. Performance Test of Floor Coverings for Use In Low-Cost Housing: Part 3. A performance test was conducted in the floor-testing chamber of the National Bureau of Standards on a third series of 40 test installations. Included in the test were linoleums in sheet and tile form, cork-composition tile, sheet rubber, rubber tile, asphalt tiles, fiberboard tiles, felt-base floor coverings having various wearing surfaces, three monolithic floors, and a number of wood floors. The bonding agents used included lignin pastes, cumar-resin cement, alumina cement-latex paste, rubber cements, various asphaltic adhesives, and nails. Installations were made on concrete, strip-wood, and plywood subfloors. Installations on strip-wood subfloors were made with underlays of dry and asphalt-saturated lining

felts. Descriptions of the testing equipment and test installations are given. Results showing the relative depth of the depressions in the floor coverings during the test are presented in tables. Brief summaries of the manner in which the various test installations performed are given, and photographs of the test panels after 48,000 cycles of the testing equipment are shown.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Building Materials and Structures Report BMS73; 1941. Indentation Characteristics of Floor Coverings. The indentation characteristics of 64 floor coverings were determined. Tests were conducted on specimens conditioned in an atmosphere of 65-percent relative humidity and 72° F. temperature, on specimens after exposure to accelerated aging, and on specimens at an elevated temperature of 90° F. The floor coverings tested included such general types as linoleum, cork, rubber, felt base, asphalt, wood, fiberboard, and monolithic compositions. Variations in composition and thickness were included in many of the types. The apparatus and the procedures are briefly described. Summaries of the results are presented to show the relative merits of the various floor coverings with respect to comfort value and permanent indentation.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Building Materials and Structures Report BMS80; 1942. Performance Test of Floor Coverings for Use in Low-Cost Housing: Part 4. A performance test was conducted in the floor-testing chamber of the National Bureau of Standards on a fourth series of 40 different installations involving 26 different floor coverings. Specimens of most of the floor coverings were installed on both a concrete and a wood subfloor. Included in the test were cork tiles, rubber tile containing aluminum oxide aggregate, asphalt tile, marbleized linoleums, felt-backed floor coverings having various wearing surfaces, strip maples, maple unit-block, pecan unit-block, asphalt mastic, coal-tar mastic, alumina cement-rubber latex composition, magnesium oxychloride composition, and 1:2:4 Portland cement concrete. Different underlays and adhesives were also included in the test. The test installations are described and results showing the depth of the depressions in the floor coverings made by the equipment are presented in tables. Brief summaries of the manner in which the various installations performed are given and their appearance at the end of the test is shown by photographs. A few generalized comments and conclusions are made.

U. S. Gov., Federal Specification O-P-106; 1939. Paste; Linoleum. Covers one type and grade. Gives requirements for odor, smoothness and uniformity, alkalinity, bonding, strength, and adhesion; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification LLL-L-351a; 1939. Linoleum; Battleship. Covers one type and grade, in three thicknesses—1/8 in., 3/16 in., and 6 mm. Gives requirements for material, workmanship, color, finish, width, burlap or woven cotton backing, thickness, seasoning, weight, pliability, and water absorption; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., Federal Specification LLL-L-354; 1943. Linoleum; Desk-Top. Linoleum shall be of one type and grade and of the size specified in the invitation for bids. Gives requirements for materials, workmanship, color and finish, width and length, woven fibrous backing, finish, thickness, weight, pliability, seasoning, sampling, inspection, tests, packaging, packing, and marking.

U. S. Gov., Federal Specification LLL-L-359; 1942. Linoleum; Inlaid and Molded. Covers one type and grade in 1/8 in. inlaid-standard and molded-standard. Gives requirements for material, workmanship, color, finish, width, burlap or woven cotton backing, thickness, seasoning, weight, pliability, methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., Federal Specification LLL-L-361; 1931. Linoleum; Plain, Inlaid, and Printed. Intended to cover plain, jaspe, granite, straight-line, and moulded inlaid, and printed linoleums. Covers material and workmanship, color, pattern, finish, seasoning; width, burlap backing, indentation, weight and thickness, and pliability; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., Federal Specification LLL-L-367; 1942. Linoleum; Plain, Jaspé, and Marbleized. Covers one type and grade, standard and 1/8 in. thick, in plain, jaspé, and marbleized. Gives requirements for material, workmanship, color, finish, width, burlap or woven cotton backing, thickness, seasoning, weight, and pliability; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., Navy Dept. Specification 52C5b; 1941. Cement; Linoleum.

U. S. Gov., Navy Dept. Specification 52C33; 1945. Cement; Linoleum, Fire-Retardant.

## 392. COATED, FILLED, AND WATERPROOFED FABRICS

### 392.0 GENERAL ITEMS

American Society for Testing Materials, D 751-43T; 1943. Tentative Methods of Testing Rubber-Coated Fabrics. For the testing of rubber-coated fabrics made by applying either natural rubber compounds or those synthetic elastomers which are processed on rubber machinery. Gives condition, dimensions and weight, breaking strength, elongation, bursting strength, tearing strength, hydrostatic resistance, and adhesion of coating to fabric.

American Society for Testing Materials, D 815-44 T; 1944. Tentative Method of Test for Hydrogen Permeability of Coated Fabrics. Gives scope, apparatus, test temperature, test specimens, preparation of specimens, balancing period, procedure, and report.

National Assn. of Dyers and Cleaners of the U. S. and Canada. A Test for Water Repellency, No. 125; 1942. For water repellent garments that must retain their water repellency after they have been cleaned. Gives method of testing for water repellents.

### 392.1 COATED FABRICS

### 392.11 Enameled Cloth

U. S. Gov., Navy Dept. Specification 27C16c; 1942. Cloth; Enameled, Black.

### 392.12 Tracing and Blueprint Cloth

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Circular C63; 1917. Specification of the Transparency of Paper and Tracing Cloth. Describes a standard method of specifying the transparency using principle of contrast ratio, description of apparatus and method of test, directions for making application test.

U. S. Gov., Federal Specification CCC-C-531c; 1944. Cloth; Tracing. Covers two types—(I) for ink work and (II) for pencil work; in two classes—(A) white and (B) blue. Gives requirements for fabric, workmanship, samples, weave, thread count, breaking strength, erasing qualities, and opacity; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification CCC-C-536; 1931. Cloth; Tracing, Printed. Covers four types—(I) profile, (II) cross-section, (III) logarithmic, and (IV) plan profile. Gives requirements for colors, printing, rulings, fabric, coating, and finish; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

*References.*—Methods of testing, *see* 300.4; tracing paper, *see* 478.35; blue print paper, *see* 478.34.

### 392.13 Varnished Cloth

*References.*—Varnished cambric cloth and tape and friction tape for electrical purposes, *see* 719.56.

### 392.2 BOOK AND WINDOW SHADE CLOTH AND WINDOW SHADES

American Hospital Assn., 67-46. Shade Cloth. Covers three types in "firsts." Based on U. S. Gov. Federal Specifications CCC-C-521a for Shade Cloth and CCC-T-191a for General Specifications, Test Methods, Textiles.

### 392.21 Book Cloth

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Commercial Standard CS57-40; 1940. Book Cloths, Buckrams, and Impregnated Fabrics for Bookbinding Purposes, Except Library Bindings. This commercial standard establishes standards of quality and test procedure which are intended to apply to book cloths and buckrams which are starch-filled, and to the so-called impregnated fabrics used in the bookbinding industry for edition, textbook, trade, catalogue, and all other than library bindings. It includes general requirements, definitions, specific requirements relative to warp plus filling threads, and breaking strength, tolerances, test conditions, and methods of test. This commercial standard was approved as American Standard CS57-40 by the American Standards Assn. Initiated by Book Manufacturers Institute, Employing Bookbinders of America, and Institute of Book Cloth and Impregnated Fabric Manufacturers.

### 392.22 Shade Cloth

U. S. Gov., Federal Specification CCC-C-521a; 1937. Amendment 3; 1942. Cloth; Shade. Covers one grade and three types—(I) cambric, (II) Holland, and (III) pyroxylin-impregnated. Covers blackout shades. Gives requirements for ends and picks, thread count, strength, width, and tolerances; methods of sampling, inspection and tests; and requirements for packaging, packing, and marking.

*References.*—Tolerances, methods of testing, definitions, *see* 300.4, 300.6; window shades, *see* 392.23.

### 392.23 Window Shades

American Hospital Assn., 4-43. Window Shades, Rollers, Slats, Cords, and Accessories. Covers wooden and metal rollers, one type each of cords and slats, and window shades complete. Based on U. S. Gov. Federal Specification DDD-S-251 for Shades, Window Rollers, Slats, Cords, and Accessories; CCC-T-191a for Textiles, General Specifications, Test Methods; and CCC-C-521a for Shade Cloth.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R199-43; 1943. Cloth Window Shades. Covers the kinds of cloth, number of colors, widths, finishes, the number of warp and filling threads for each kind, resistance to cracking, opacity, color fastness, and cleanability for the various cloths. Also lists the lengths and widths of mounted stock shades made from each kind of shade cloth, and diameters and grades of rollers used with each. Sponsored by the Window Shade Institute.

U. S. Gov., Federal Specification DDD-S-251a; 1943. Shades; Window, Rollers, Slats, Cords, and Accessories. Covers three types—(I) class A, translucent cambric shades and class B, opaque cambric shades, (II) Holland shades, and (III) pyroxylin-impregnated shades. Gives requirements for shade cloth, brackets, rollers, ferrules, ends, rollers, slats, cords, workmanship, mounting, color, lengths, widths, hem, roller and springs, and slats; methods of sampling, inspection, and tests; and packaging, packing, and marking.

*References.*—Shade cloth, *see* 392.22.

### 392.3 RUBBERIZED FABRIC

U. S. Gov., Army-Navy Aeronautical Specification AN-F-10—1; 1943. Fabric; Aircraft Flotation Equipment, Rubberized.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Commercial Standard CS32-31; 1931. Cotton Cloth for Rubber and Pyroxylin Coating. A commercial standard selected and accepted by industry covering requirements on textile strengths for various constructions of sheeting, drill, twill, broken twill, and sateen; lengths of cuts, permissible defects, sizing and injurious chemicals, with methods of test. Initiated by Cotton Textile Institute.

U. S. Gov., U. S. Army, Chemical Warfare Service. Specification 97-51-152; 1942. Fabric, Rubberized; Disc, Inlet Valve.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 6-9B; 1939. Cloth; Sateen, 2-Ply, Rubberized.

*References.*—Electrical insulating rubberized tape, *see* 719.56; cotton fabric for rubber coating, *see* 304.71; rubber sheeting, *see* 204.33.

## 392.4 WATERPROOF CLOTH

American Assn. of Textile Chemists and Colorists. 1943 Yearbook. Determination of Water Resistance of Fabrics. Defines shower resistance and rain resistance in terms of hydrostatic pressure and time. Describes hydrostatic pressure test, spray test, and immersion test with illustrations of apparatus set-up.

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering. Specifications for Membrane Waterproofing. Gives requirements for treated fabric.

American Society for Testing Materials, D 173-44; 1944. American Assn. of State Highway Officials, M 117. Woven Cotton Fabrics Saturated With Bituminous Substances for Use in Waterproofing. For use in membrane system of waterproofing. Gives requirements for manufacture, properties of treated and untreated fabric, saturation, sizes, weight, strength, pliability, surface finish, sampling, and testing.

American Society for Testing Materials, D 583-40 T; 1940. Tentative Methods of Test for Resistance of Textile Fabrics to Water. Includes hydrostatic pressure, water penetration (drip), and water absorption (spray) methods. Test liquid, apparatus, specimen, and methods of procedure.

U. S. Gov., Army Air Forces. Specification 16094-E; 1945. Fabric; Waterproofed.

U. S. Gov., Army Air Forces. Specification 16110-1; 1944. Fabric; Gabardine, Cotton, Moisture-Proof.

U. S. Gov., Army-Navy Aeronautical Specification AN-CCC-F-56-4; 1944. Fabric; Processed, Parachute Pack.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Commercial Standard CS 114-43; 1943. Hospital Sheeting for Mattress Protection. To serve as a guide to producers, distributors, and users of sheeting impervious to moisture; used for the protection of hospital mattresses. Gives requirements for thickness, breaking strength, tearing strength, resistance to oil and disinfectants, resistance to sterilization, accelerated aging, cracking and moisture penetration, and burning rate.

U. S. Gov., Federal Specification HH-C-581a; 1935. Cotton Fabric; Woven, Asphalt-Saturated. Covers one type. Gives requirements for appearance, chemical composition, and physical characteristics; methods of inspection, determination of weights and width, sampling, and testing; and requirements for packaging, packing, and marking.

U. S. Gov., Federal Specification HH-C-591; 1935. Cotton Fabric; Woven, Coal-Tar-Saturated. Covers one type. Gives requirements for appearance, physical properties, and chemical composition; methods of inspection, determination of weights and width, sampling, and testing; and requirements for packaging, packing, and marking.

U. S. Gov., Treasury Dept., Procurement Div., Specification 277b; 1943. Covers Typewriter; Fabric. Shall be fabric coated with a suitable nonoxidizing plastic material. Grade shall be commercially known as "first" and sizes shall be as specified. Gives requirements for material, workmanship, coating, water permeability, color and finish, and flexibility of coating; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification CCC-C-501; 1936. Cloth; Pyroxylin-Coated. Covers one type, one grade, and four classes—(A) 68 x 72 sheeting, (B) 48 x 48 sheeting, (C) 104 x 64 sateen, and (D) 104 x 64 sateen. Gives requirements for width, length of roll, weight, thread count, breaking strength, and finish; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., U. S. Army, Chemical Warfare Service. Specification 6-289B; 1943. Cloth; Impermeable.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-152A; 1927. Cloth; Waterproofed.

*References.*—Tolerances, methods of testing, *see* 300.4; asphalt for waterproofing, tar for waterproofing, *see* 505.16, 505.36; oiled waterproof cloth for oilskins, *see* 392.53; waterproof serge, *see* 392.54; cotton fabrics for rubber and pyroxylin coating, *see* 304.71.

## 392.5 WATERPROOF CLOTHING

### 392.51 Ponchos

U. S. Gov., Marine Corps Specification, revised 1943. Poncho; Polyvinyl Butyral Filler.

U. S. Gov., Marine Corps Specification, revised 1940. Poncho; Rubberized.

### 392.52 Slicker

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 6-249; 1937. Slicker; Oilskin (Alaskan Clothing).

### 392.53 Oiled Clothing

U. S. Gov., Navy Dept. Specification 37C4; 1932. Clothing; Submarine, Outer.

### 392.54 Rain Clothing

U. S. Gov., Marine Corps Specification, adopted 1944. Raincoat; Lightweight (Marine Corps Women's Reserve).

U. S. Gov., Marine Corps Specification, adopted 1943. Raincoat; Officers'.

U. S. Gov., Marine Corps Specification, adopted 1943. Trench Coat, With Detachable Woolen Liner and Hood (Marine Corps Women's Reserve).

U. S. Gov., Navy Dept. Specification 55R5a; 1931. Raincoats; Navy Nurse Corps.

U. S. Gov., Navy Dept. Specification 72C1b; 1938. Rain-Clothes (Foul-Weather); Coats; Hats; Trousers.

U. S. Gov., Navy Dept. Specification 72R1a; 1932. Raincoats; Enlisted Men's.

U. S. Gov., Navy Dept. Specification 72R2; 1941. Raincapes; Commissioned Officers'.

U. S. Gov., Navy Dept. Specification 72R3g; 1944. Raincoats; Enlisted Men's, Twill-Fabric.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 20-104A; 1940. Raincoat; Rubberized, M-1938.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 20-108; 1939. Raincoat; Nurses'.

U. S. Gov., Veterans Administration. Specification VA-MC-309; 1941. Fire-Fighters' Coats.

*References.*—Methods of testing fabrics, definitions, *see* 365.0, 300.4, 300.6; oilskin coat, *see* 392.53.

### 392.6 OILCLOTH

American Hospital Assn., 67-145. White Table Oilcloth. Covers one type of "firsts." Based on U. S. Gov. Federal Specifications CCC-O-351 for White Table Oilcloth and CCC-T-191a for General Specifications, Test Methods, Textiles.

U. S. Gov., Federal Specification CCC-O-351; 1932. Oilcloth; Table, White. Covers one grade and one type. Gives requirements for width, length of roll, strength, weight, and surface; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

*References.*—Tolerances, methods of testing, definitions, *see* 300.4, 300.6.

### 392.7 RUBBERIZED CLOTHING

U. S. Gov., Navy Dept. Specification 37 M 10; 1943. Mittens; Waterproof, N-1.

## 393. LABELS AND TAGS, WOVEN

U. S. Gov., Army-Navy Aeronautical Specification AN-L-27; 1943. Labels; Garment.

U. S. Gov., Navy Dept. Specification 27L8b; 1944. Labels; Garment.

## 394. WEBBING

### 394.1 KHAKI WEBBING

U. S. Gov., Marine Corps Specification, adopted 1941. Webbing; Cotton, Khaki, 7/16-In. (for Helmet Straps).

U. S. Gov., Marine Corps Specification, adopted 1935. Webbing; Khaki, 1 3/8-In.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 6-186; 1934. Webbing; Cotton, Khaki, for Bandoleers.

### 394.2 OLIVE-DRAB WEBBING

U. S. Gov., Marine Corps Specification, revised 1944. Webbing; Olive-Drab, 1 3/8-In.

### 394.3 JUTE WEBBING

### 394.4 WEBBING STRAPS

American Hospital Assn., 13-31. Orthopedic Webbing. Covers one type, one grade, and three sizes—1 in., 1 1/2 in., and 2 in. Based on U. S. Army Specifications 6-197A for Orthopedic Webbing and U. S. Gov. Federal Specification CCC-T-191a for General Specifications, Methods of Tests, Textiles.

U. S. Gov., Navy Dept. Specification 26S1f; 1944. Straps; Standard, Folding-Berth.

U. S. Gov., U. S. Army, Chemical Warfare Service. Specification 6-49; 1927. Webbing; Cotton (Black).

U. S. Gov., U. S. Army, Signal Corps. Specification 71-221; 1926. Strap; Type ST-18, Radio.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-514B; 1942. Straps; ST-19-A and ST-42.

### 394.5 ELASTIC CORD AND ELASTIC WEBBING

U. S. Gov., Army Air Forces. Specification No. 26596; 1943. Elastic; Parachute Pack Opening.

U. S. Gov., Army-Navy Aeronautical Specification AN-W-15-1; 1944. Webbing; Elastic Cotton.

U. S. Gov., Army-Navy Aeronautical Specification AN-ZZ-C-561-3; 1944. Cord; Elastic, Exerciser.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R112-29; 1929. Elastic Shoe Goring. This recommendation establishes a schedule of stock varieties of unmercerized carded cotton elastic shoe goring covering qualities and widths of the several varieties. Initiated by Webbing Manufacturers Institute.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Commercial Standard CS58-36; 1936. Woven Elastic Fabrics for Use in Overalls (Overall Elastic Webbing). This standard covers requirements for the material, construction, and methods of testing overall elastic webbing classes and widths—close-weave cord-edge, covered rubber 5/8 to 2 in. and twill-weave, bare rubber 3/4 to 2 in. Initiated by Webbing Manufacturers Institute.

U. S. Gov., Navy Dept. Specification 27W5a; 1937. Webbing; Cotton, Elastic.

U. S. Gov., Navy Dept. Specification 55C28b; 1941. Collars; French, Elastic.

U. S. Gov., Treasury Dept., Procurement Div., No. 500; 1941. Webbing; Elastic, Cotton (Woven). Shall be of the woven type, one grade, and widths as specified. Gives requirements for rubber compound, yarn, workmanship, construction, weave, set, elongation, and color; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., U. S. Army, Army Air Forces. Specification 20-23G; 1939. Cord; Elastic, Shock Absorber.

U. S. Gov., U. S. Army, Chemical Warfare Service. Specification 6-53C; 1941. Webbing; Elastic, Woven.

U. S. Gov., U. S. Army, Medical Dept. Specification 6-197A; 1939. Webbing; Orthopedic.

*References.*—Tolerances, methods of testing, definitions, *see* 300.4, 300.6.

### 394.6 COTTON AND LINEN WEBBING

U. S. Gov., Army Air Forces. Specification No. 16076; 1930. Webbing; Cotton, Hood Lacing.

U. S. Gov., Army Air Forces. Specification No. 16172; 1944. Webbing; Parachute Belt Cotton.

U. S. Gov., Army Air Forces. Specification No. 16174; 1945. Webbing; Woven Pocket, Cotton.

U. S. Gov., Army-Navy Aeronautical Specification AN-W-16; 1944. Webbing; Linen, Linen-Hemp, or Linen-Ramie.

U. S. Gov., Army-Navy Aeronautical Specification AN-JJ-W-151-3; 1943. Webbing; Cotton.

U. S. Gov., Marine Corps Specification, adopted 1937. Webbing; Cotton, Bleached, 1 3/4-in.

U. S. Gov., Marine Corps Specification, revised 1943. Webbing; Cotton, Natural, or in Colors.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 6-185C; 1941. Webbing; Cotton, Natural or in Colors.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 15-11E; 1942. Webbing; Linen.

## 395. HATS AND CAPS (EXCEPT STRAW OR OTHER FIBER, OR RUBBER)

### 395.1 CAPS

Americal Hospital Assn., 67-25. Cotton Operating Caps. Covers one type and one grade in two sizes. Based on U. S. Gov. Federal Specifications DDD-C-48 for Cotton Operating Caps; V-T-276b for Cotton Thread;

CCC-T-181a for General Specifications, Test Methods, Textiles; and DDD-S-751 for Stitches, Seams, and Stitching.

U. S. Gov., Federal Specification DDD-C-44; 1938. Caps; Boys' and Men's. Covers one grade and three types—(I) boys', summer and winter; (II) men's, one-piece-top; and (III) men's, sectional-top, summer and winter. Gives requirements for material, style, construction, and size; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Federal Specification DDD-C-48; 1938. Caps; Operating, Cotton. Covers one type and grade, in large and small sizes. Gives requirements for fabric, construction, size and measurements, thread, and shrinkage; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Navy Dept. Specification 73C1c; 1939. Caps; Blue, Cloth.

U. S. Gov., Navy Dept. Specification 73C2d; 1942. Caps; Combination, Blue and White and Covers; Cap.

### 395.11 Cooks', Bakers', and Nurses' Caps

U. S. Gov., Federal Specification DDD-C-41; 1935. Amendment 2; 1944. Caps; Bakers' and Cooks', White. Covers three types—(I) French (duck, twill, and drill), (II) skull (duck and twill), and (III) turn-up (drill). Gives requirements for material, workmanship, construction, stitches, seams, stitching, proportions, sizes, design, and details; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Marine Corps Specification, adopted 1944. Cap; Messwomen (Marine Corps Women's Reserve).

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 15-12A; 1941. Cap; Nurses', White.

U. S. Gov., U. S. Maritime Commission. Specification 55-MC-3a; 1944. Caps; Cooks'. Covers two types—(I) French style and (II) skull style. Gives requirements for muslin, mesh fabric, sewing thread, workmanship, head sizes, seams and stitching, and details for each type; sampling, inspection, and methods of test; and packaging, packing, and marking for shipment.

U. S. Gov., Veterans Administration. Specification VA-X-135b; 1942. Cook's Caps.

### 395.12 Caps, Winter

U. S. Gov., Army-Navy Aeronautical Specification AN-H-16; 1943. Helmets; Winter Flying.

U. S. Gov., U. S. Army, Army Air Forces. Specification 8-128; 1941. Cap; Mechanic's, Type A-4 (Winter).

U. S. Gov., U. S. Army, Army Air Forces. Specification 94-3096-A; 1942. Cap; Flying (Winter), Type B-2.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 6-255A; 1940. Caps; Winter.

### 395.13 Caps, Dress, Full Dress, Special Dress

U. S. Gov., Marine Corps Specification, revised 1942. Cover; Cap, Blue.

U. S. Gov., Marine Corps Specification, revised 1942. Cover; Cap, Green.

U. S. Gov., Marine Corps Specification, adopted 1944. Cap; Dress, Summer (Marine Corps Women's Reserve).

U. S. Gov., Marine Corps Specification, adopted 1939. Cap; Sky-Blue (Marine Band).

U. S. Gov., Navy Dept. Specification 55C30; 1927. Caps (Hats; and Covers; Hat); Navy Nurse Corps.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 8-125A; 1942. Cap; Garrison, Blue, Nurses'.

### 395.14 Olive-Drab Service and Officers' Caps

U. S. Gov., Army Air Forces. Specification No. 3244; 1945. Cap; Nurses Flying, Very Light, Type K-1.

U. S. Gov., Marine Corps Specification, revised 1944. Cap; Garrison, Service, Summer.

U. S. Gov., Marine Corps Specification, revised 1944. Cap; Garrison, Service, Winter.

U. S. Gov., Marine Corps Specification, adopted 1944. Cap; Service, Winter (Marine Corps Women's Reserve).

U. S. Gov., Marine Corps Specification, revised 1942. Cover; Cap, Khaki.

U. S. Gov., Navy Dept. Specification 73C4a; 1943. Caps; Garrison, Officers'.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 8-5A; 1934. Caps; Enlisted Men's, Service, Woolen.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 8-21; 1923. Hats; Service, Olive-Drab, Officers'.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 8-114B; 1942. Cap; Garrison.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 8-130; 1942. Cap; Wool, Knit, M-1941.

### 395.15 Summer Caps

U. S. Gov., Army-Navy Aeronautical Specification AN-H-15; 1943. Helmets; Summer Flying.

U. S. Gov., Marine Corps Specification, adopted 1941. Cap; Baseball.

U. S. Gov., U. S. Army, Army Air Forces. Specification 6-287-A; 1942. Cap; Mechanic's, Type A-3 (Summer).

U. S. Gov., U. S. Army, Army Air Forces. Specification 94-3095-A; 1942. Cap; Flying (Summer), Type B-1.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 6-326; 1943. Cap; Herringbone Twill, (O.D. 7) (Stock Nos. 73-C-25731 Thru 73-C-25751).

*References.*—White caps for marine officers, *see* 395.13.

### 395.16 Watch Caps

U. S. Gov., Navy Dept. Specification 73C3b; 1943. Caps; Watch.

### 395.17 White Caps, Marine Band and Officers'

U. S. Gov., Marine Corps Specification, revised 1942. Cover; Cap, White.

*References.*—White caps, marine officer's, *see* 395.13.

### 395.18 Fur Caps

### 395.19 Miscellaneous Caps

U. S. Gov., Marine Corps Specification, adopted 1944. Cap; Garrison, Summer (Marine Corps Women's Reserve).

U. S. Gov., Marine Corps Specification, adopted 1944. Cap; Garrison, Utility (Marine Corps Women's Reserve).

U. S. Gov., Marine Corps Specification, adopted 1944. Cap; Utility.

U. S. Gov., Marine Corps Specification, adopted 1944. Cap; Wool, Knit.

U. S. Gov., Marine Corps Specification, revised 1941. Frame; Cap.

## 395.2 HATS, EXCEPT STRAW AND RUBBER HATS

### 395.20 General Items

Textile Color Card Assn. of the U. S., Inc. Men's Hat Colors, 1944. The 1945 spring season card of colors for felt bodies, men's hats, shows three colors in felt with matching ribbon for hat band color.

Textile Color Card Assn. of the U. S., Inc. Millinery Colors, 1944. The 1945 spring millinery colors—listing of colors especially adopted for the three classifications of fur felt, wool felt, and straw hats. Lists 19 colors for fur felt, 22 colors for wool felt, and 12 colors for straw.

Textile Color Card Assn. of the U. S., Inc. Standard Ninth Edition Color Card, 1944. A new master color card for all industries and trades. This is not a card presenting fashion colors for but one season only, but it embraces a complete collection of important staple shades having continued popular acceptance. A Research Associate has been established at the National Bureau of Standards to include the calibration of the 216 colors contained in the Ninth Edition of the Standard Color Card of America and the translation of these standards into the language of scientific equivalents and nomenclature.

### 395.21 Field Hats

U. S. Gov., Marine Corps Specification, adopted 1939. Hat; Field.

### 395.22 Blue Denim Working Hats

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 6-3A; 1937. Hats; Working, Denim.

### 395.23 Olive-Drab (Nurses') Hats

### 395.24 Olive-Drab (Officers') Hats

### 395.25 Hats, Southwester

### 395.26 Hats, Oiled Squam

### 395.27 Felt Hats

U. S. Gov., Federal Specification C-H-131; 1935. Hats; Felt and Wool, Men's. Covers two types—(I) felt and (II) wool; in four shapes—Optimo, Telescope, Alpine, and Pinch Front. Gives requirements for felt, wool, other materials, workmanship, forming, sizes, shape, brim, manufacture; detail requirements for color, trimming, and sweat band; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Treasury Dept., Procurement Div., 499a; 1942. Hats; Felt and Wool, Men's. Covers two types—(I) felt and (II) wool. Gives requirements for felt, wool, forming, sizes, shape, brim, manufacture, color, trimming, and sweat band; methods of sampling, inspection, and tests; and packaging, packing, and marking.

### 395.28 Wool Hats

U. S. Gov., Federal Specification C-H-131, 1935. Hats; Felt and Wool, Men's. Covers two types—(I) felt and (II) wool; in four shapes—Optimo, Telescope, Alpine, and Pinch Front. Gives requirements for felt, wool, other materials, workmanship, forming, sizes, shape, brim, manufacture; detail requirements for color, trimming, and sweat band; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Treasury Dept., Procurement Div., 499a; 1942. Hats; Felt and Wool, Men's. Covers two types—(I) felt and (II) wool. Gives requirements for felt, wool, forming, sizes, shape, brim, manufacture, color, trimming, and sweat band; methods of sampling, inspection, and tests; and packaging, packing, and marking.

### 395.29 Miscellaneous Hats

U. S. Gov., Dept. of Agriculture, Forest Service. Specifications No. 177. Hat; Hardboiled.

U. S. Gov., Joint Army-Navy Specification JAN-H-47; 1944. Hats; White.

U. S. Gov., Marine Corps Specification, revised 1943. Hat; Rain.

U. S. Gov., Marine Corps Specification, adopted 1944. Hat; Service, Summer (Marine Corps Women's Reserve).

U. S. Gov., Marine Corps Specification, adopted 1944. Hat; Utility (Marine Corps Women's Reserve).

U. S. Gov., Navy Dept. Specification 73H2; 1940. Hats; Cocked.

U. S. Gov., Navy Dept. Specification 73H10; 1944. Hats; Outdoor, Navy Nurse Corps.

## 396. BALLOON AND AIRSHIP FABRICS

Society of Automotive Engineers. Aeronautical Material Specification No. 3802; 1944. Cloth; Lightweight Airplane, Cotton, Mercerized. Covers application, material, requirements, tests, tolerances, length of cut, length of roll, packaging and marking, approval, and rejections. Similar specifications—Army Air Forces 16128 and Civil Aeronautics Manual Section 04.415.

U. S. Gov., Army Air Forces. Specification 16081-A; 1940. Cloth; Rayon (for Parachutes).

U. S. Gov., Army Air Forces. Specification No. 16123; 1942. Fabric; Rayon, High Tenacity.

U. S. Gov., Army Air Forces. Specification No. 16126 (4); 1943. Fabric; Rayon (for Aerial Delivery Canopies).

U. S. Gov., Army Air Forces. Specification No. 16141; 1943. Cloth; Acetate Rayon (for Parachutes).

U. S. Gov., Army Air Forces. Specification 16154 (1); 1944. Cloth; Viscose Rayon (for Radio Parachutes).

U. S. Gov., Army Air Forces. Specification 16168-A; 1944. Fabric; Coated, Rayon-Nylon, Rip-Stop.

U. S. Gov., Army-Navy Aeronautical Specification AN-C-113-1; 1944. Cloth; Cellulose Nitrate Predoped Airplane.

U. S. Gov., Army-Navy Aeronautical Specification AN-C-121; 1944. Cloth; Mercerized Cotton, Airplane.

U. S. Gov., Army-Navy Aeronautical Specification AN-C-127-1; 1944. Cloth; Nylon, Parachute.

U. S. Gov., Army-Navy Aeronautical Specification AN-C-132-1; 1945. Cloth; Cellulose Acetate Butyrate Predoped Airplane.

U. S. Gov., Army-Navy Aeronautical Specification AN-CCC-C-491-1; 1944. Cloth; Parachute, Saponified-Acetate.

U. S. Gov., U. S. Army, Army Air Forces. Specification 6-39G; 1937. Cloth; Balloon, Finished.

U. S. Gov., U. S. Army, Army Air Forces. Specification 6-44G; 1936. Fabric; Rubberized, Balloon and Airship.

U. S. Gov., U. S. Army, Army Air Forces. Specification 6-232-A; 1941. Cloth; Cotton (for Parachutes).

U. S. Gov., U. S. Army, Ordnance Dept. Specification 50-11-110; 1942. Cloth; Cotton, Parachute, Pyrotechnic.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 50-11-115; 1943. Cloth; Rayon, for Bomb Parachutes.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 50-11-117; 1943. Cloth; Rayon, High Strength, for Flare Parachutes.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 50-11-119; 1943. Cloth; Rayon, for Signal Parachutes.

*References.*—Tolerances, methods of testing, definitions, *see* 300.4, 300.6.

## 397. RAYON, CELANESE, AND MANUFACTURES THEREOF

### 397.0 GENERAL ITEMS

American Hospital Assn., 13-25. Oiled Silk. Covers one type, one grade, and two classes—(A) silk and (B) rayon. Based on U. S. Army Specifications 7-17B for Oiled Silk and U. S. Gov. Federal Specification CCC-T-191a for General Specifications, Test Methods, Textiles.

American Institute of Laundering. Service Bulletin 6. How To Launder Curtains. This bulletin tells you how to identify and inspect curtains, how to wash and finish curtains, how to tint curtains, and how light attacks curtain fabrics.

American Institute of Laundering. Service Bulletin 15. How To Launder Silk and Rayon. This bulletin explains identification and washing of rayon, silk, and silk-rayon mixtures, laundering methods for white cotton-rayon and white cotton-silk mixtures, laundering of colored rayon and silk, bleaching of yellowed silks, finishing silks and rayons, common difficulties in laundering silk and rayon pieces.

American Society for Testing Materials, D 258-44; 1944. Methods of Testing and Tolerances for Continuous Filament Rayon Yarns. Applies to the determination of commercial weight and clean; oven-dry weight of continuous filament rayon yarns. Gives definition, apparatus, sampling, net weight, test specimens, boil-off, dry weight, commercial moisture regain, commercial weight, retests, and tolerance.

American Society for Testing Materials, D 276-43T; 1943. Tentative Methods for Identification of Fibers in Textiles. Covers procedures for the identification of textile fibers used commercially in woven, knit, or braided fabrics. Gives reference samples, reagents, apparatus, considerations for sampling, test specimens, mounting specimens, preliminary examination, procedures for various types of fibers, and enlarged photographs of various fibers.

American Society for Testing Materials, D 415-38; 1938. Methods of Test for Strength of Rayon Woven Fabric When Wet. Gives requirements for test specimen, normal and wet strength determinations using A.S.T.M. method D 39, section 10, count, normal and wet, and report for corrected wet strength.

American Society for Testing Materials, D 416-39; 1939. Method of Test for Maximum Residual Shrinkage of Silk and Rayon Woven Fabrics. For use in commercial laundering and for general technical purposes. Requirements for test sample, washing machine, soap solution, washing and pressing, conditioning, and comparison.

American Society for Testing Materials, D 434-42; 1942. Method of Test for Resistance to Yarn Slippage in Silk, Rayon, and Silk-Rayon Woven Fabrics. Covers slippage of filling yarns on warp yarns, or warp yarns on filling yarns, in excess of normal stretch of the fabric under the same load; preparation of specimen, testing machine, standard condition, and test procedure.

American Society for Testing Materials, D 436-37; 1937. Method of Test for Colorfastness of Dyed or Printed Wool, Silk, or Rayon Fabrics to Laundering or Domestic Washing. For washing tests of colored fabrics without use of bleaching agent. Gives apparatus, test specimens, soap solution, procedure, classification, and results.

American Society for Testing Materials, D 507-44; 1944. Methods of Testing and Tolerances for Spun Rayon Yarns and Threads. Applies to spun rayon yarns, both single and plied, and to spun rayon threads. Gives definitions, tolerances, and methods of testing.

American Society for Testing Materials, D 539-40 T; 1940. Tentative Method of Test for Apparent Fluidity of Dispersions of Cellulose Fibers in Cuprammonium Hydroxide. Measure of degradation due to light, acids, alkalies, and oxidizing agents in processing, in laundering, and use; applicable to scoured or bleached cotton and regenerated cellulose rayon textiles which give apparent fluidities of 45 rhes or less. Viscosimeter, reagent storage and analysis, and sample and test.

American Society for Testing Materials, D 540-44; 1944. Methods of Testing Rayon Staple. Gives definitions, methods of testing, denier, length and length distribution, and tensile strength.

American Society for Testing Materials, D 680-44; 1944. Methods of Testing and Tolerances for Certain All-Cotton and Cotton-and-Rayon Fine Fancy Goods. Apply to combed handkerchief cloths, plain combed staples using color in warp or filling; piques and bedford cords woven on dobby looms; other dobby and jacquard weaves, carded or combed; combed shirtings, dress goods, and goods of cotton and rayon mixed yarns manufactured to purchase specifications.

American Society for Testing Materials, D 682-42 T; 1942. Tentative Method of Test for Colorfastness to Atmospheric Gases of Dyed Cellulose Acetate Rayon. Based upon a method developed by the

Research Committee of the American Assn. of Textile Chemists and Colorists.

National Assn. of Dyers and Cleaners of the U. S. and Canada. Identification of Fibers, T-145; 1944. For training employees in the identification of textile fibers. Covers natural fibers and synthetic fibers. Gives method of testing and tests for fiber content of pure silk, weighted silk, wool, cotton, regenerated rayon, cellulose acetate rayon, nylon, vinyon, aralac casein, and glass.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, Volume 2; 1944. Rayon. Covers definition, characteristics and derivation, types and grades, uses, packing, and substitutes.

Textile Color Card Assn. of the U. S., Inc. Glove Colors, 1944. The 1945 spring season card colors for women's gloves includes 17 colors.

Textile Color Card Assn. of the U. S., Inc. Rayon Colors, 1944. The 1945 spring season color card of America—44 colors shown in rayon fabrics—featuring collections of petal pastels and heroic colors.

Textile Color Card Assn. of the U. S., Inc. Standard Ninth Edition Color Card, 1944. A new master color card for all industries and trades. This is not a card presenting fashion colors for but one season only, but it embraces a complete collection of important staple shades having continued popular acceptance. A Research Associate has been established at the National Bureau of Standards to include the calibration of the 216 colors contained in the Ninth Edition of the Standard Color Card of America and the translation of these standards into the language of scientific equivalents and nomenclature.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Commercial Standard CS65-43; 1943. Methods of Analysis and of Reporting Fiber Composition of Textile Products. This standard provides methods of analyzing finished products composed of cotton, rayon, silk, or woolen fiber, and mixtures of two or more of such fibers, and determining the percentage by weight of each kind of fiber present, and the percentage by weight of total sizing, finishing, and other non-fibrous materials; provides methods of reporting on same; includes definitions of these fibers; and illustrates the manner by which testing laboratories may certify that the analyses have been conducted in accordance with the methods of the standard.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 50-11-67; 1939. Cloth; Cotton, Mercerized, for Bomb Parachutes.

*References.*—Nitrocellulose and tests of cellulose compounds, *see* 848.5.

## 397.1 RAYON KNIT GOODS

### 397.10 General Items

American Institute of Laundering. Service Bulletin 23. How To Launder Hosiery. This bulletin explains how hosiery should be classified, turning rayon and silk hosiery before washing, using as short a washing formula as possible, what is meant by "dull-luster" hosiery and "run-proof" hosiery, finishing precautions for garterless hose, and common hosiery laundering problems.

### 397.11 Socks and Stockings of Rayon

U. S. Gov., Treasury Dept., Procurement Div., No. 541; 1942. Stockings; Cotton, Rayon (Infants, Misses', and Women's). Covers three types—(I) infants (cotton, ribbed), (II) misses' and children's (cotton, ribbed mercerized), and (III) women's (full length); and two classes—(A) mercerized cotton and (B) rayon. Gives requirements for material, construction, methods of measuring, dimensions, length of foot, length of leg, size, tolerance, seams, color, shrinkage, finish, pairing, and details; methods of sampling, inspection, and tests; and packaging, packing, and marking.

*References.*—Standard sizes, methods of measurement, standard colors of hosiery, *see* 309.2; methods of testing fabrics, *see* 397.0, 300.4.

### 397.12 Rayon Underwear

*References.*—Methods of measuring underwear, *see* 309.4; methods of testing fabric, *see* 397.0, 300.4.

### 397.13 Hoods and Toques of Rayon

### 397.14 Jerseys and Sweaters of Rayon

U. S. Gov., Marine Corps Specification, adopted 1937. Shirt; Basketball.

### 397.15 Rayon Mufflers and Scarfs

U. S. Gov., Navy Dept. Specification 55N2g; 1944. Neckerchiefs; Rayon, Black.

U. S. Gov., Navy Dept. Specification 73M1a; 1942. Mufflers; Rayon, White.

### 397.16 Rayon Cloth

U. S. Gov., Army Air Forces. Specification 16081-A; 1940. Cloth; Rayon (for Parachutes)

U. S. Gov., Army Air Forces. Specification No. 16123; 1942. Fabric; Rayon, High-Tenacity.

U. S. Gov., Army Air Forces. Specification 16126 (4); 1943. Fabric; Rayon (for Aerial Delivery Canopies).

U. S. Gov., Army Air Forces. Specification 16142-A; 1945. Cord; Saponified Acetate Rayon.

U. S. Gov., Army Air Forces. Specification 16144-1; 1945. Cloth; Acetate Rayon, High Impact.

U. S. Gov., Army Air Forces. Specification 16150-A; 1944. Cloth; Rayon Lining.

U. S. Gov., Army Air Forces. Specification 16154 (1); 1944. Cloth; Viscose Rayon (for Radio Parachutes).

U. S. Gov., Army Air Forces. Specification No. 16173; 1944. Fabric; Coated Acetate Rayon Satin, Fluorescent.

U. S. Gov., Army Air Forces. Specification No. 16175; 1945. Cloth; Nylon Oxford.

U. S. Gov., Army-Navy Aeronautical Specification AN-C-104; 1943. Cloth; Acetate Rayon.

U. S. Gov., Army-Navy Aeronautical Specification AN-C-115-1; 1944. Cloth; Cotton Back Rayon Twill.

U. S. Gov., Marine Corps Specification, adopted 1944. Cloth; Cellulose Acetate Rayon, White.

U. S. Gov., Marine Corps Specification, adopted 1933. Lining; Rayon, Green (for Officers).

U. S. Gov., Marine Corps Specification, adopted 1943. Lining; Rayon, Viscose, Green.

U. S. Gov., Navy Dept. Specification 27L9; 1941. Lining; Rayon, Black Satin.

U. S. Gov., Navy Dept. Specification 27L10; 1943. Lining; Rayon, Black, Twill.

U. S. Gov., U. S. Army, Army Air Forces. Specification 7-22; 1944. Cloth; Rayon, for Tow Targets.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 50-11-108; 1942. Cloth; Cartridge, Rayon.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 50-11-115; 1943. Cloth; Rayon, for Bomb Parachutes.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 50-11-117; 1943. Cloth; Rayon, High Strength, for Flare Parachutes.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 50-11-119; 1943. Cloth; Rayon, for Signal Parachutes.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 7-19A; 1944. Cloth; Rayon (Lining).

### 397.19 Miscellaneous Items, Rayon

U. S. Gov., Army Air Forces. Specification 16125-A (6); 1944. Tape; Rayon.

U. S. Gov., Army Air Forces. Specification No. 16141; 1943. Cloth; Acetate Rayon (for Parachutes).

U. S. Gov., Army Air Forces. Specification No. 16170; 1944. Cloth; Rayon Twill.

U. S. Gov., Army Air Forces. Specification No. 16171; 1944. Cloth; Rayon Acetate Satin, Fluorescent.

U. S. Gov., Marine Corps Specification, adopted 1944. Cap; Machine Operators (Marine Corps Women's Reserve).

U. S. Gov., Marine Corps Specification, adopted 1944. Coat; Dress, Summer, "A," Officers' (Marine Corps Women's Reserve).

U. S. Gov., Marine Corps Specification, adopted 1941. Guidon; U.S.M.C.

U. S. Gov., Marine Corps Specification, adopted 1944. Skirt; Dress, Summer, "A," Officers' (Marine Corps Women's Reserve).

U. S. Gov., Navy Dept. Specification 27R2c; 1944. Ribbon; Rayon, Black.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 7-21; 1943. Tape; Rayon.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 50-11-116; 1943. Cordage; Rayon, Braided and Woven.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 50-11-118; 1943. Cordage; Rayon, Braided, for Flare Parachutes.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 7-14; 1929. Cap Band Ribbon and Detachable Cap Bands; Rayon (for Enlisted Men's Dress Caps).

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 7-15C; 1944. Braid; Cord-Edge.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 7-20; 1942. Braid; Cord-Edge, Caps, Garrison (for General Officers, Officers, and Warrant Officers).

U. S. Gov., U. S. Army, Signal Corps. Specification 72-45-A; 1943. Panel Set, AP-50-B.

U. S. Gov., Veterans Administration. Specification VA-X-88d; 1941. Thread; Rayon Floss.

### 397.2 NYLON

U. S. Gov., Army Air Forces. Specification No. 16143; 1943. Cord; Nylon, Flat Braided.

U. S. Gov., Army Air Forces. Specification No. 16153; 1943. Cord; Tubular Woven Flat Nylon.

U. S. Gov., Army Air Forces. Specification No. 16162; 1944. Cloth; Rayon Milanese Knit.

U. S. Gov., Army Air Forces. Specification No. 16165; 1944. Fabric; Coated Nylon.

U. S. Gov., Army Air Forces. Specification No. 16166; 1944. Duck; Coated Nylon.

U. S. Gov., Army Air Forces. Specification No. 16169; 1944. Cloth; Nylon, for Flying Clothing.

U. S. Gov., Army-Navy Aeronautical Specification AN-C-63a-1; 1944. Cord; Nylon.

U. S. Gov., Army-Navy Aeronautical Specification AN-C-127-1; 1944. Cloth; Nylon Parachute.

U. S. Gov., Army-Navy Aeronautical Specification AN-T-9-3; 1943. Thread; Nylon.

U. S. Gov., Army-Navy Aeronautical Specification AN-T-45; 1944. Tape; Nylon (Cotton Filling).

U. S. Gov., Army-Navy Aeronautical Specification AN-W-10a; 1943. Webbing; Tubular Nylon.

### 397.3 CELLULOSE FABRIC

U. S. Gov., Army-Navy Aeronautical Specification AN-CCC-C-491-1; 1944. Cloth; Parachute, Saponified-Acetate.

U. S. Gov., Federal Specification L-C-166; 1942. Cellulose; Absorbent, Surgical. Covers one type and one grade in rolls or flat packages of 2, 5, or 8 lb. Gives requirements for material, workmanship, absorbency, water-soluble substances, ash, size, weight, moisture, and groundwood and unbleached pulp; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

## 398. ABSORBENT COTTON, GAUZE, AND SURGICAL DRESSING

### 398.1 ABSORBENT COTTON

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Purified Cotton (Absorbent Cotton). Description, solubility, ash, alkali or acid, dyes, fatty matter, water-insoluble substances, fiber length, sterility, absorbency, and storage.

U. S. Gov., Federal Specification JJJ-C-561a; 1943. Cotton; Absorbent. Covers Grades A and B, sterilized in rolls, and sterilized in packages. Gives detail requirements as to fiber length, absorbency, methods of sampling, inspection and tests, and packing instructions.

U. S. Gov., Navy Dept. Specification 57C7; 1940. Cotton; Absorbent.

*References.*—Standard cotton grades, *see* 300.1.

### 398.2 GAUZE

#### 398.21 Plain Gauze

American Hospital Assn., 13-16. Plain Gauze. Covers one grade and seven types. Based on U. S. Gov. Federal Specification CCC-G-101a.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Absorbent Gauze (Gauze, Plain Gauze, Non-Sterilized Absorbent Gauze). Description, thread count, weight, ash, absorbency, water extract, acid or alkali, dextrin or starch, fatty matter, dyes, and storage.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation

R86-42; 1942. Surgical Gauze. This recommendation establishes standard stock sizes and varieties covering widths and construction of surgical gauze and crinoline in 100-yd. bolts, and construction, widths, and lengths of bandage rolls and bandages, construction and length of package goods. This 1942 revision was undertaken at the request of the U. S. Gov., War Production Board.

U. S. Gov., Federal Specification CCC-G-101b; 1943. Gauze, Plain. Covers one grade of bleached gauze and commercial designations as seven types—(I) 44-36, (II) 32-28, (III) 28-24, (IV) 24-20, (V) 22-18, (VI) 20-16, and (VII) 20-12. Gives requirements for cleanliness, sterility, color, and details for each type; methods of sampling, inspection, and tests; packaging, packing, and marking.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2469; 1939. Gauze; Plain, Sterilized.

*References.*—Tolerances, methods of testing, definitions, see 300.4, 300.6; gauze bandages, gauze dressings, *see* 398.31, 398.34.

### 398.22 Sublimated Gauze

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2461; 1939. Gauze; Sublimated.

### 398.23 Iodoform Gauze

### 398.24 Adhesive Gauze

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Adhesive Absorbent Gauze (Adhesive Absorbent Compress). Description, sterility, and storage.

### 398.25 Sterile Gauze

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Sterile Absorbent Gauze (Sterile Gauze). Description, dimensions, sterility, and storage.

## 398.3 SURGICAL DRESSING

### 398.31 Bandages

American Hospital Assn., 13-4. Muslin Bandage. Covers one type, one grade, and two sizes—3 in. and 5 in.

American Hospital Assn., 13-7. Compressed Gauze Bandages. Based on U. S. Gov. Federal Specifications DDD-B-51.

American Hospital Assn., 13-10. Plain Roller Gauze Bandages. Covers one type and one grade in six sizes. Based on U. S. Gov. Federal Specifications DDD-B-61a.

American Hospital Assn., 13-13. Plaster-of-Paris Bandages. Covers one type, one grade, and one class in four sizes. Based on U. S. Gov. Federal Specifications GG-B-101a for Plaster-of-Paris Bandages and CCC-G-101a for Plain Gauze.

U. S. Pharmacopoeial Convention. Pharmacopoeia of the U. S. A. Twelfth Revision, 1942. Gauze Bandage (Roller Gauze Bandage). Description, thread count, width, length, weight, absorbency, other requirements, sterility, and storage.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R86-42; 1942. Surgical Gauze. This recommendation establishes standard stock sizes and varieties covering widths and construction of surgical gauze and crinoline in 100-yd. bolts, and construction, widths, and lengths of bandage rolls and bandages, construction and length of package goods. This 1942 revision was undertaken at the request of the U. S. Gov., War Production Board.

U. S. Gov., Federal Specification GG-B-101b; 1943. Bandages; Plaster of Paris. Covers one type, one grade, and five sizes—3 in. by 3 yd., 2 in. by 5 yd., 3 in. by 5 yd., 5 in. by 5 yd., and 6 in. by 5 yd. Gives requirements for material, workmanship, description, amount of plaster, sizing, individual packages, and leakage; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification JJ-B-102; 1944. Bandages; Cotton, Elastic (Washable). Covers one type, one grade, and three sizes. Gives requirements for material, workmanship, construction, elasticity, number of ends and picks, tolerances, tensile strength, weight, and color; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification JJ-B-111; 1944. Bandages; Suspensory, Cotton. Covers one type, grade, and class. Gives requirements for cotton jean, cloth (jersey), tape (binding), drawstrings, waistband, thread, buckle, workmanship, stitching, seams, and details; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification CCC-C-665; 1943. Crinoline; Surgical. Covers one type, one grade, and two sizes—(1) 100 yd. by 36 in. and (2) 6 yd. by 36 in. Gives requirements for material, workmanship, test specimen, tolerances, dimensions, description of put-up, sizing, finishing, and nonfibrous materials; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification DDD-B-51a; 1943. Bandages; Gauze, Compressed. Covers one type and one grade. Gives requirements for sizes, material, workmanship, description, and compression; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., Federal Specification DDD-B-61a; 1938. Amendment 2; 1944. Bandages; Gauze, Roller, Plain. Covers one grade and one type in six sizes. Gives requirements for material, workmanship, description, and sterility; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., Federal Specification DDD-B-81; 1942. Bandages; Muslin (Unbleached), Roller. Covers one type, one grade, and four sizes—(1) 1 in. by 5 yd., (2) 2 in. by 5 yd., (3) 3 in. by 5 yd., and (4) 5 in. by 5 yd. Gives detail requirements; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Treasury Dept., Procurement Div. No. 691; 1944. T-Binders; for Hospital Use. Covers one type. Gives requirements for sheeting, thread, workmanship, construction, stitching, and tolerances; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Treasury Dept., Procurement Div., No. 715; 1945. Scultetus-Binders, for Hospital Use. Covers one type. Gives requirements for material, workmanship, construction, front unit, back unit, stitches, and tolerances; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2462; 1939. Bandage; Gauze, Adhesive.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2486A; 1944. Bandage; Triangular.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2524; 1939. Bandage; Suspensory.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2553; 1939. Bandage; Canton, Flannel.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2974A; 1940. Bandage; Flannel, 3-in.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-3007; 1942. Bandage; Derby.

U. S. Gov., Veterans Administration, Medical and Hospital Supply Section, VA-H-109; 1940. Unbleached Muslin Bandages.

*References.*—Gauze, surgical dressings, *see* 398.21, 398.34; rubber bandages, adhesive plaster, *see* 204.11, 204.12.

### 398.32 Compresses

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2470; 1939. Bandage; Gauze, Compress.

### 398.33 Surgical Tape

*References.*—Adhesive tape, *see* 204.12.

### 398.34 Gauze Dressings, Pads, Etc.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R133-38; 1938. Surgical Dressings. This recommendation covers nomenclature, materials, sizes, and methods of preparation and folding of surgical dressings. Initiated by American College of Surgeons and the American Hospital Assn.

U. S. Gov., Federal Specification DDD-N-101; 1943. Napkins; Gauze, Sterile, Dental. Covers one type, grade, size, and color. Gives requirements for material, workmanship, cutting, size, and sterilization; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., Treasury Dept., Procurement Div., No. 607; 1943. Sponges; Surgical (All Gauze and Gauze and Cotton). Covers two types—(I) all gauze and (II) gauze and cotton; and three classes—(A) 8 ply, (B) 12 ply, and (C) 16 ply. Gives requirements for gauze, absorbent cotton, tolerances, variations, construction, and size and weight; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., Treasury Dept., Procurement Div., No. 608; 1943. Pads; Obstetrical. Covers one type and one grade and three classes—(A) light weight, (B) medium weight, and (C) heavy weight. Gives requirements for filler, covering, cotton, gauze, construction, dimensions, weight, color, acidity, absorbency, ash, and moisture; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., U. S. Army, Medical Dept. Specification 6-277; 1939. Cotton Rolls; Dental.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2991; 1941. Dressing; Gauze, Surgical.

*References.*—Gauze, bandages, *see* 398.21, 398.31.

## 399. MISCELLANEOUS TEXTILE MANUFACTURES

### 399.1 BRASSARDS

U. S. Gov., Marine Corps Specification, adopted 1940. Bands; Arm (Brassards) for Recruiting Service.

U. S. Gov., Marine Corps Specification, adopted 1943. Brassards (Military Police and Fire Dept.).

U. S. Gov., Navy Dept. Specification 71M3a; 1944. Marks; Sleeve.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 34-16B; 1945. Brassards.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 34-S19; 1939. Insignia and Brassard, Embroidered.

### 399.2 CLOTH BUCKETS AND BASINS

U. S. Gov., Dept. of Agriculture, Forest Service. Specifications MSF-68. Bucket; Canvas, Folding.

U. S. Gov., Marine Corps Specification, adopted 1941. Basin; Canvas, Folding.

U. S. Gov., Marine Corps Specification, revised 1944. Bucket; Canvas, Folding.

U. S. Gov., U. S. Army, Medical Dept. Specification 6-265A; 1941. Bucket; Canvas, Collapsible.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 6-67B; 1938. Bucket; Watering, Canvas, 18-Qt.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 6-216B; 1942. Bucket; Canvas, Folding, 8-Qt.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 6-219A; 1941. Basin; Canvas, Folding.

### 399.3 CASES OF CLOTH

U. S. Gov., Marine Corps Specification, revised 1944. Case; Canvas, Dispatch, M-1942.

U. S. Gov., Marine Corps Specification, revised 1944. Roll; Bedding.

U. S. Gov., Marine Corps Specification, revised 1944. Roll; Clothing.

U. S. Gov., Navy Dept. Specification 24C18c; 1944. Cases; Canvas, Bedding-and-Ward-Furniture.

U. S. Gov., U. S. Army, Corps of Engineers. Specification 6-304; 1941. Case; Canvas, Demolition Kit, Infantry.

U. S. Gov., U. S. Army, Corps of Engineers. Specification 6-305; 1941. Cases; Canvas, Planetable and Tripod.

U. S. Gov., U. S. Army, Corps of Engineers. Specification 49-12; 1940. Box; Metal, Cavalry, Demolition, With Canvas Case and Carrying Strap.

U. S. Gov., U. S. Army, Medical Dept. Specification 6-148A; 1941. Blanket Set; Large; Case, Empty.

U. S. Gov., U. S. Army, Medical Dept. Specification 6-149A; 1941. Blanket Set, Small; Case, Empty.

U. S. Gov., U. S. Army, Medical Dept. Specification 6-150A; 1929. Case; Surgical Instruments, Canvas, Empty.

U. S. Gov., U. S. Army, Medical Dept. Specification 6-262A; 1940. Cover; Canvas, for Chest, Pack.

U. S. Gov., U. S. Army, Medical Dept. Specification 6-263; 1939. Cases; Cotton, for Dental Instruments and Burs.

U. S. Gov., U. S. Army, Medical Dept. Specification 6-264; 1939. Case; Canvas, for Veterinary Instruments.

U. S. Gov., U. S. Army, Medical Dept. Specification 6-266A; 1941. Case; Tent Pin.

U. S. Gov., U. S. Army, Medical Dept. Specification 6-267; 1939. Case; Splint Set.

U. S. Gov., U. S. Army, Medical Dept. Specification 6-281A; 1942. Case; Stomach and Rectal, Empty.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 6-142B; 1939. Cover and Case; Textile, Ordnance Equipment.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 6-238A; 1941. Roll; Bedding, Waterproofed, M-1935.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 6-285B; 1942. Cases; Canvas, Dispatch, M-1938.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 6-292; 1942. Kit; Canvas, Utensils.

U. S. Gov., U. S. Army Signal Corps. Specification 71-433-A; 1944. Pouch; CS-35-A (for Knife and Pliers).

U. S. Gov., U. S. Army, Signal Corps. Specification 71-557B; 1942. Case; Type CS-49, Carrying, for Telegraph Set, Type TG-5.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-611A; 1940. Case; Type CS-41, for Generator, GN-35.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-673A; 1938. Roll; Type BG-56A, for Carrying Mast Sections.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-674; 1933. Roll; Type BG-58, for Carrying Mast Sections and Generator Legs.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-714A; 1939. Cover; Radio Equipment.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-901A; 1940. Cover; Type BG-70A, for Radio Pack.

U. S. Gov., U. S. Army, Signal Corps. Specification 72-28A; 1927. Case; Type CS-18.

## 399.4 SLINGS

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 6-240; 1936. Slings; Drum, Web.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 6-294; 1943. Sling; Color, Web.

## 399.5 CUSHIONS AND COVERS

U. S. Gov., Navy Dept. Specification 27C24a; 1942. Covers; Cushion (Boat-Seat).

*References.*—Rubber cushions, *see* 204.25.

## 399.6 HOSE

*References.*—Rubber, linen, and cotton hose, *see* 202.

## 399.7 WICKS

American Society for Testing Materials, D 219-36; 1936. American Petroleum Institute Standard, 503-36. American Standards Assn., Z11.19-1936. Method of Test for Burning Quality of Long-Time Burning Oil for Railway Use. For special kerosene oil used in railway semaphore signal lamps; includes standard semaphore lamp; dimensions of burner; gray round felt wick, and chimney; sight gage and test procedure.

U. S. Gov., Navy Dept. Specification 31B2b; 1934. Wicks (Burners; Chimneys); Running-Light (Oil-Burning).

## 399.8 TYPEWRITER RIBBONS

*References.*—Typewriter, hectograph, and other machine ribbons, *see* 932.2.

## 399.9 TEXTILE PRODUCTS NOT ELSEWHERE CLASSIFIED

American Society for Testing Materials, D 578-44T; 1944. Tentative Methods of Testing and Tolerances for Glass Yarn. For continuous filament and staple glass yarns, both single and plied, and both single and multiple wound. Gives definitions, breaking strength tolerances, glass content, test procedures for single strand, twist, yarn diameter, and glass content.

National Assn. of Dyers and Cleaners of the U. S. and Canada. The Dry Cleaning Department, 1940. Includes a classification of garments for dry cleaning purposes.

U. S. Gov., Marine Corps Specification, adopted 1905. Knots; Shoulder and Aiguillettes, Second Leader, Marine Band.

U. S. Gov., Marine Corps Specification, adopted 1912. Sling; Trumpet, Dress.

U. S. Gov., Navy Dept. Specification 55F6b; 1942. Frogs; Cape.

U. S. Gov., Navy Dept. Specification 71A1; 1937. Aiguillettes.

U. S. Gov., Navy Dept. Specification 71L1b; 1942. Lace; Gold.

U. S. Gov., Navy Dept. Specification 74S1; 1941. Sword-Knots.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 50-11-39C; 1941. Cloth; Cartridge, Silk, Wool, or Mohair.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 34-17; 1938. Lace; Gold.

# 400-499 WOOD AND PAPER

## 400-409 LUMBER (LOGS, TIMBER, AND OTHER UNMANUFACTURED OR PARTLY MANUFACTURED WOOD)

### 400.0 LUMBER STANDARDIZATION

American Society for Testing Materials, D 9-30; 1930. Definitions of Terms Relating to Timber. Defines structural timber, terms relating to wood, standard defects, standard names for structural timbers, and appendix covering details for knots.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Specification M-907-41; 1941. Lumber. Nomenclature for commercial softwood and hardwood, use classification listings, grading provisions, shipping and inspection, measurement, lengths, car lumber, grading classification. Description of grades, vertical sheathing and exposed roofing, horizontal sheathing, finish, flooring and sills, battens, facing, lining, running boards and steps, baffle boards, nailing plank and nailing sills, bearers, bolsters, bumpers, planks, ridge poles, purlins, belting, braces, posts, and definitions of terms and defects.

National Lumber Manufactures Assn. Lumber Literature—A Bibliography. This booklet lists and describes briefly printed information available through the Federated Associations of lumber manufacturers which compose the National Lumber Manufacturers Assn. Printed material available through the latter association also is listed. Practically all commercially important American species of woods are available through the member mills of the Federated Assn. Therefore, this listing includes most of the literature available on lumber and its use.

National Lumber Manufacturers Assn. Wood Structural Design Data, Volume 1; 1941. Includes physical, chemical, and mechanical properties of wood, timber quality—strength relations, glossary of lumber terms, abbreviations of lumber terms, board measure, lumber quantity costs, sizes of American standard yard lumber and timbers, notations and technical symbols, properties of American standard lumber sizes; design data and formulae for computing sizes of beams, columns, and plank and laminated floors; tables of beam sizes required to support a given load over a given span; tables of least dimensions for columns required to support a given load for various column lengths; and tables for sizes of plank and laminated floors of various thicknesses for safe uniform load for a given span.

National Lumber Manufacturers Assn. Wood Structural Design Data, Volume 1; 1941. Supplement 1; 1943. Working Stresses for Structural Lumber. Includes general discussion, determination of required sizes, allowable unit stresses, and timber column formula; and table showing stresses for joists and planks, beams and stringers, and posts and timbers for kinds of lumber.

West Coast Lumbermen's Assn. Standard Grading and Dressing Rules for Douglas Fir, Sitka Spruce, West Coast Hemlock, Western Red Cedar Lumber, No. 11; 1942. Includes official trade and grade marks, general instructions, moisture content provisions, definitions, thicknesses and widths, rules for grading Douglas fir, rules for grading Sitka spruce, rules for grading West Coast (Western) hemlock, rules for grading Western red cedar, and American lumber standard sizes and grades.

Western Pine Assn. Standard Grading Rules for Ponderosa Pine, Sugar Pine, Idaho White Pine, Larch-Douglas Fir, White Fir, Engelmann Spruce, Incense Cedar and Red Cedar Lumber, 1939. Includes official grade, trade, and species marks; general instructions, measurements, and tally; definitions of defects; reinspection; grading rules for Ponderosa pine; grading rules for Idaho white pine; grading rules for sugar pine; and standard manufactured sizes.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R16-39; 1939. Lumber (American Lumber Standards for Softwood Lumber). This recommendation represents the lumber industry's efforts to simplify sizes, nomenclature, and grades of softwood lumber, and to attain uniformity in practice. Standards set up covering classifications, grading marking and grading rules; sizes and grade standards for yard lumber; size standards for factory and shop lumber; classification and general provisions for structural lumber; sizes and grade standards for shingles; nomenclature of commercial softwoods; definitions of terms used in describing standard grades for lumber; American standard patterns for worked lumber; moldings; and standard lumber abbreviations. Initiated by the Central Committee on Lumber Standards and the National Lumber Manufacturers Assn.

U. S. Gov., U. S. Army, Corps of Engineers. Specification 5-1A; 1928. Wood; Fuel.

### 400.1 PHYSICAL ANALYSIS OF LUMBER

National Lumber Manufacturers Assn. Wood Structural Design Data, Volume 1; 1941. Includes physical properties of wood—wood structure, hardwoods and softwoods, heartwood and sapwood, rings of annual growth, springwood and summerwood, density and rate of growth, grain and texture, weights of wood, moisture in wood, heat transmission, and electrical properties.

### 400.12 Properties and Uses of Lumber

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering. Classification of the Uses of Lumber and Timber Under American Railway

Engineering Assn. Specifications. Covers bridge and construction timber, buildings—light-framed construction, buildings—heavy-framed construction, and miscellaneous roadway material.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Building Materials and Structures Report BMS25; 1939. Structural Properties of Conventional Wood-Frame Constructions for Walls, Partitions, Floors, and Roofs. The Forest Products Laboratory built 39 specimens representing conventional wood-frame constructions for walls, partitions, floors, and roofs. In addition, six wall frames without covering were built. The wall-frame specimens were subjected to compressive and transverse loads; the wall and partition specimens to compressive, transverse, concentrated, impact, and racking loads; the floor specimens to transverse, concentrated, and impact loads; and the roof specimens to transverse and concentrated loads. The transverse, concentrated, and impact loads were applied to both faces of wall specimens. For each of these loads, three like specimens were tested. The deformation under load and the set after the load was removed were measured, except for concentrated loads, for which the set only was determined. The results are presented in graphs and in tables.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Building Materials and Structures Report BMS30; 1939. Structural Properties of a Wood-Frame Wall Construction; sponsored by the Douglas Fir Plywood Assn. The Douglas Fir Plywood Assn. submitted 18 specimens representing a wood-frame wall construction. The sheathing on the outside face and the wallboard on the inside face were both Douglas fir plywood. The specimens were subjected to compressive, transverse, concentrated, impact, and racking loads. the transverse, concentrated, and impact loads were applied to both faces of the specimens. For each of these loads, three like specimens were tested, the concentrated-load tests being made on undamaged portions of the impack specimens. The deformation under load and the set after the load was removed were measured for uniform increments of load, except for concentrated loads, for which the set only was determined. The results are presented in graphs and in a table.

### 400.13 Tests of Lumber

American Society for Testing Materials, D143-27; 1927. American Standards Assn., 04a-1927. Methods of Testing Small Clear Specimens of Timber. Selection, preparation, and storage of test specimens, test procedure for static and impact bending, tension, compression, hardness, shear, cleavage, specific gravity. shrinkage, and moisture content.

American Society for Testing Materials, C 160-41T; 1941. Tentative Method of Test for Fire-Retardant Properties of Wood. Covers the procedure for fire tests applicable to untreated wood and wood chemically treated by impregnation to reduce flammability for permanent use in construction. Sampling, apparatus, test specimens, conditioning of test specimens, procedure, and report.

American Society for Testing Materials, D 198-27; 1927. American Standards Assn., 04b-1927. Methods of Static Tests of Timbers in Structural Sizes. Covers number and sizes of test specimens, moisture control, apparatus, and procedure for static bending test, for compression, and for minor tests; permissible variations and sample data sheets.

U. S. Gov., Army-Navy Aeronautical Specification AN-W-3; 1942. Wood; Determination of Moisture Content of.

U. S. Gov., Army-Navy Aeronautical Specification AN-W-4a; 1942. Wood; Determination of Specific Gravity of.

### 400.14 Inspection of Lumber

Technical Assn. of the Pulp and Paper Industry. Species Identification of Wood and Wood Fibers. Suggested Method T 8 sm-40; 1940. Directions for identifying woods and wood fibers on the basis of structure. Covers apparatus, reagents, test specimens, reference standards, procedure, the structure of wood, illustrations, keys for various woods, and appendix.

U. S. Gov., Navy Dept. General Specifications for Inspection of Materials, 1941, Appendix IV, Lumber and Timber (Manufacture, Kiln-Drying, Grading, Inspection, and Shipping, 1941).

### 400.15 Kiln Drying of Lumber

U. S. Gov., Army Air Forces. Specification 20035; 1944. Procedure for Certification of Kiln-Drying Facilities and Operators.

U. S. Gov., Army-Navy Aeronautical Specification AN-C-136; 1944. Certification of Operators and Approval of Kiln-Drying Equipment; Process for.

U. S. Gov., Army-Navy Aeronautical Specification AN-W-2a-2; 1944. Wood; Method for Kiln-Drying.

## 400.2 SOFTWOOD GRADING RULES

### 400.20 General Items

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering, 1941. American Lumber Standards for Softwood Lumber. Gives general definition, classifications, and general grading rule provisions; yard lumber grade standards, size standards, strips, boards, dimensions, factory flooring, heavy roofing, decking, and sheet piling; siding, flooring, ceiling, partition, shiplap, and dressed and matched; factory and shop lumber; structural lumber; and shingles.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, 1938. Lumber; Commercial Softwood. Covers definition, classification, uses, lumbering and manufacturing, gradings, purchasing practices, shipping, and marketing.

National Lumber Manufacturers Assn. Lumber Grade-Use Guide Pamphlet I; 1943. Softwood Lumber. Covers standards for softwood lumber, certified and guaranteed lumber, softwood yard lumber, softwood structural lumber, doors, sash, frames, screens, softwood plywood, softwood interior paneling, specification and use of softwood lumber, and lumber abbreviations.

West Coast Lumbermen's Assn. Standard Grading and Dressing Rules for Douglas Fir, Sitka Spruce, West Coast Hemlock, Western Red Cedar Lumber, No. 12; 1943. Includes official trade and grade marks, general instructions, moisture content provisions, definitions, thicknesses and widths, rules for grading Douglas fir, rules for grading Sitka spruce, rules for grading West Coast (Western) hemlock, rules for grading Western red cedar, and American lumber standard sizes and grades.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R16-39; 1939. Lumber (American Lumber Standards for Softwood Lumber). Standard Lumber Abbreviations. Gives a list of standard lumber abbreviations for use in contracts and other documents arising in the transactions of purchase and sale of American standard lumber. Initiated by the Central Committee on Lumber Standards and the National Lumber Manufacturers Assn.

## 400.21 Cedar Grading Rules

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, 1938. Cedar; Eastern Red. Covers definition, source, classification, standard grades, thicknesses and weights, characteristics, method of production, uses, and purchasing practices.

Northern Hemlock and Hardwood Manufacturers Assn. Lumber Grade-Use Guide Pamphlet VI; 1943. Endorsed by the National Lumber Manufacturers Assn. Eastern Hemlock, Tamarack, and Northern White Cedar. Presents information on the specification and use of shingles and posts for buildings and other structures. Lists a condensed lumber grade-use guide showing the items and grades in which these woods are manufactured and available and the uses for which their grades may be best employed, sizes of lumber and shingles, and a brief description of the quality of each standard grade and items available.

West Coast Lumbermen's Assn. Lumber Grade-Use Guide Pamphlet IV; 1943. Endorsed by the National Lumber Manufacturers Assn. Douglas Fir, West Coast Hemlock, Western Red Cedar, and Sitka Spruce. Presents the grades for buildings and other structures and gives the uses for which these grades may be best employed. Lists a condensed lumber grade-use guide and lists the uses of the grades in building and other construction.

West Coast Lumbermen's Assn. Standard Grading and Dressing Rules for Douglas Fir, Sitka Spruce, West Coast Hemlock, Western Red Cedar Lumber, No. 12; 1943. Includes official trade and grade marks, general instructions, moisture content provisions, definitions, thicknesses and widths, and grading rules for Western red cedar.

Western Pine Assn. Standard Grading Rules for Ponderosa Pine, Sugar Pine, Idaho White Pine, Larch-Douglas Fir, White Fir, Engelmann Spruce, Incense Cedar and Red Cedar Lumber, 1942. Includes official grade, trade, and species marks; general instructions, measurements, and tally; definitions of defects; reinspection; and rules for grading red cedar and incense cedar.

U. S. Gov., Navy Dept. Specification 39C3e; 1944. Cedar; White (Chamaecyparis Thyoides and Thuja Occidentalis).

U. S. Gov., Navy Dept. Specification 39C6e; 1944. Cedar; Port Orford and Alaska Yellow.

*References.*—American Lumber Standards, nomenclature and basic grading rules, *see* 400.0, 400.20.

## 400.22 Cypress Grading Rules

Southern Cypress Manufacturers Assn. Lumber Grade-Use Guide Pamphlet III; 1943. Endorsed by the National Lumber Manufacturers Assn. Tidewater Red Cypress. Gives information on the specifications and use for buildings and other structures. Lists the range of standard grades recommended to be employed for the different uses, gives standard sizes of lumber, and gives a brief description of the quality of each standard grade with typical illustrations.

Southern Cypress Manufacturers Assn. Standard Specifications for Grades of Tidewater Red Cypress—Structural Stress Grades—Grade Marks and Rates of Charges for Inspection and Reinspection Service, 1943. Includes general instructions, grading provisions, nominal and dressed sizes, rough dry sizes, lengths, description, measurement, tally, shipping and inspection provisions; grades for yard lumber, factory lumber, timber and railroad material, and miscellaneous; definitions of defects and blemishes; patterns; percentage tables; structural stress grades; grades marks; certificates of inspection; and rate of charges for inspection and reinspection services.

*References.*—American Lumber Standards, nomenclature and basic grading rules, *see* 400.0, 400.20.

## 400.23 Fir Grading Rules

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, 1938. Douglas Fir. Covers definition, constants, occurrence, grades and forms available, and uses.

Northeastern Lumber Manufacturers' Assn., Inc. Standard Grading Rules for Eastern Spruce and Balsam Fir, 1938. Covers general instructions, yard and industrial size standards, measurement, and tally; inspection and shipping provisions; definitions of defects; inspection rules for B and Btr. (clear), C select (No.1), selected merchantable (No.2), No. 1 (merchantable), No.2 (No.4), No.3 (No.5), and structural joist and plank.

Northern Pine Manufacturers Assn. Standard Grading Rules for Balsam Lumber; 1939. Conforms to American Lumber Standards and includes standard sizes for dressed lumber; standard size of rough lumber; general instructions on grading; sizes, measurements, and tally; inspection and shipping provisions; definitions of defects and blemishes; association standard grades for selects, bevel siding, boards and strips, dimension and timbers, shop, and lath.

West Coast Lumbermen's Assn. Lumber Grade-Use Guide Pamphlet IV; 1943. Endorsed by the National Lumber Manufacturers Assn. Douglas Fir, West Coast Hemlock, Western Red Cedar, and Sitka Spruce. Presents the grades for buildings and other structures and gives the uses for which these grades may be best employed. Lists a condensed lumber grade-use guide and lists the uses of the grades in building and other construction.

West Coast Lumbermen's Assn. Standard Grading and Dressing Rules for Douglas Fir, Sitka Spruce, West

Coast Hemlock, Western Red Cedar Lumber, No. 12; 1943. Includes official trade and grade marks, general instructions, moisture content provisions, definitions, thicknesses and widths, and grading rules for Douglas fir.

Western Pine Assn. Lumber Grade-Use Guide Pamphlet V; 1943. Endorsed by the National Lumber Manufacturers Assn. White Fir. Gives information on its standard grades and sizes and specifications and use of certain grades recommended for specific purposes. Lists the recommended grades for building purposes and other uses, gives unretouched photographic reproductions of the yard grades and a table giving the standard manufactured sizes for various workings, and a brief description of the standard grades.

Western Pine Assn. Lumber Grade-Use Guide Pamphlet VII; 1943. Endorsed by the National Lumber Manufacturers Assn. Larch-Douglas Fir. For the purpose of acquainting the individual, who is not familiar with Larch-Douglas Fir, with its standard grades and sizes, and to recommend the proper grades of the wood for specific uses. Lists the recommended grades for building construction and other uses, shows a table giving standard manufactured sizes, gives unretouched photographic reproductions of each grade, and describes the grades.

Western Pine Assn. Standard Grading Rules for Ponderosa Pine, Sugar Pine, Idaho White Pine, Larch-Douglas Fir, White Fir, Engelmann Spruce, Incense Cedar and Red Cedar Lumber, 1942. Includes official grade, trade, and species marks; general instructions, measurements, and tally; definitions of defects; reinspection; rules for grading white fir; rules for grading Larch-Douglas fir; rules for grading Douglas fir railroad car material; and standard specifications and working stresses for structural grades of Douglas fir structural joists, plant, posts, and timbers.

*References.*—American Lumber Standards, nomenclature and basic grading rules, *see* 400.0, 400.20.

## 400.24 Hemlock Grading Rules

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, 1938. Hemlock; Western. Covers definition, constants, properties, occurrence, grades and forms available, and uses.

Northern Hemlock and Hardwood Manufacturers Assn. Lumber Grade-Use Guide Pamphlet VI; 1943. Endorsed by the National Lumber Manufacturers Assn. Eastern Hemlock, Tamarack, and Northern White Cedar. Presents information on the specification and use of shingles and posts for buildings and other structures. Lists a condensed lumber grade-use guide showing the items and grades in which these woods are manufactured and available and the uses for which their grades may be best employed, sizes of lumber and shingles, and a brief description of the quality of each standard grade and items available.

Northern Hemlock and Hardwood Manufacturers Assn. Official Grading Rules for Hemlock and Tamarack Lumber (conforming to American Lumber Standards) and White Cedar Shingles, 1941. Includes official grade, trade, and species marks; official shipper's certificates; official grading rules for hemlock and tamarack lumber, including yard and industrial size standards, description, measurement, and tally; inspection and shipping provisions; definitions of defects; rules for grading yard lumber, finishing lumber, common boards and strips, dressed and matched, and shiplap, flooring, ceiling, partition, drop siding, bevel siding, dimension or piece stuff, lath, heavy joist, timbers, structural joists and rafters (eastern hemlock), white cedar shingles; and standard planing mill patterns for D and M., flooring, partition, ceiling, shiplap, drop siding, and Byrkit lath. Officially adopted by the Northeastern Lumber Manufacturers Assn., Inc., for the grading of hemlock and tamarack produced in New York, Pennsylvania, and the New England States.

West Coast Lumbermen's Assn. Lumber Grade-Use Guide Pamphlet IV; 1943. Endorsed by the National Lumber Manufacturers Assn. Douglas Fir, West Coast Hemlock, Western Red Cedar, and Sitka Spruce. Presents the grades for buildings and other structures and gives the uses for which these grades may be best employed. Lists a condensed lumber grade-use guide and lists the uses of the grades in building and other construction.

West Coast Lumbermen's Assn. Standard Grading and Dressing Rules for Douglas Fir, Sitka Spruce, West Coast Hemlock, Western Red Cedar Lumber, No. 12; 1943. Includes official trade and grade marks, general instructions, moisture content provisions, definitions, thicknesses and widths, and grading rules for West Coast hemlock.

*References.*—American Lumber Standards, nomenclature and basic grading rules, *see* 400.0, 400.20.

## 400.25 Larch and Tamarack Grading Rules

Northern Hemlock and Hardwood Manufacturers Assn. Lumber Grade-Use Guide Pamphlet VI; 1943. Endorsed by the National Lumber Manufacturers Assn. Eastern Hemlock, Tamarack, and Northern White Cedar. Presents information on the specification and use of shingles and posts for buildings and other structures. Lists a condensed lumber grade-use guide showing the items and grades in which these woods are manufactured and available and the uses for which their grades may be best employed, sizes of lumber and shingles, and a brief description of the quality of each standard grade and items available.

Northern Hemlock and Hardwood Manufacturers Assn. Official Grading Rules for Hemlock and Tamarack Lumber (conforming to American Lumber Standards) and White Cedar Shingles, 1941. Includes official grade, trade, and species marks; official shipper's certificates; official grading rules for hemlock and tamarack lumber, including yard and industrial size standards, description, measurement, and tally; inspection and shipping provisions; definitions of defects; rules for grading yard lumber, finishing lumber, common boards and strips, dressed and matched, and shiplap, flooring, ceiling, partition, drop siding, bevel siding, dimension or piece stuff, lath, heavy joist, timbers, structural joists and rafters (eastern hemlock), white cedar shingles; and standard planing mill patterns for D and M., flooring, partition, ceiling, shiplap, drop siding, and Byrkit lath. Officially adopted by the Northeastern Lumber Manufacturers Assn., Inc., for the grading of hemlock and tamarack produced in New York, Pennsylvania, and the New England States.

Northern Pine Manufacturers Assn. Standard Grading Rules for Tamarack Lumber, 1939. Conforms to American

Lumber Standards and includes standard sizes for dressed lumber; standard size of rough lumber; general instructions of grading; sizes, measurements, and tally; inspection and shipping provisions; definitions of defects and blemishes; association standard grades for selects, bevel siding, boards, and strips, dimension and timbers, shop, and lath.

Western Pine Assn. Lumber Grade-Use Guide Pamphlet VII; 1943. Endorsed by the National Lumber Manufacturers Assn. Larch-Douglas Fir. For the purpose of acquainting the individual, who is not familiar with Larch-Douglas Fir, with its standard grades and sizes, and to recommend the proper grades of the wood for specific uses. Lists the recommended grades for building construction and other uses, shows a table giving standard manufactured sizes, gives unretouched photographic reproductions of each grade, and describes the grades.

Western Pine Assn. Standard Grading Rules for Ponderosa Pine, Sugar Pine, Idaho White Pine, Larch-Douglas Fir, White Fir, Engelmann Spruce, Incense Cedar and Red Cedar Lumber, 1942. Includes official grade, trade, and species mark; general instructions, measurements, and tally; definitions of defects; reinspection; rules for grading Larch-Douglas fir; rules for grading Larch and Douglas fir railroad car material; and standard specifications and working stresses for structural grades of Larch structural joists, plank, posts, and timbers.

*References.*—American Lumber Standards, nomenclature and basic grading rules, *see* 400.0, 400.20.

## 400.26 Pine Grading Rules

Arkansas Soft Pine Bureau. 1939 Standard Specifications for Arkansas Soft Pine Lumber. Includes grading provisions for soft pine conforming to American Lumber Standards; lists defects, requirements for yard and industrial rough and dressed sizes; measurement and tally; moisture; inspection; and shipping.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, Volume 2; 1944. Western White Pine (White Pine, Idaho White Pine). Covers definition, constants, derivation, uses, grades, packing, and substitutes.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, Volume 2; 1944. White Pine (Eastern White Pine, Northern White Pine, Northern Pine, Spruce Pine, Cork Pine, Soft Pine). Covers definition, constants, derivation, uses, grades, packing, and substitutes.

Northeastern Lumber Manufacturers Assn. Lumber Grade-Use Guide Pamphlet II; 1943. Endorsed by the National Lumber Manufacturers Assn. Northern White Pine and Eastern Spruce. Eastern spruce used for structural purposes, staging and scaffolding general millwork, and boxes and crates. Northern white pine used for doors, frames and other millwork, and the lower grades for construction purposes and boxes and crating. Lists the recommended grades for building purposes and other uses and tables giving the standard manufactured sizes.

Northeastern Lumber Manufacturers' Assn. Standard Grading Rules for Northern White Pine (Pinus Strobus—Northeastern Type) and Norway Pine (Pinus Resinosa—Northeastern Type), 1937. American Lumber Standards. Covers general instructions, yard and industrial size standards, standard sizes for dressed lumber, measurement, and tally; definitions of defects; inspection rules for B select and better, C select, C select and better, D select, D select and better, No.1 common, No.2 common, No.1 and 2 common, No.3 common, No.4 common, No.5 common, log run square edge, log run round edge, and round edge box sides.

Northern Hemlock and Hardwood Manufacturers Assn. Lumber Grade-Use Guide Pamphlet XVI; 1943. Northern White Pine, Norway Pine, and Eastern Spruce. Presents information on the specification and use for buildings and other structures. Lists a condensed lumber grade-use guide showing the standard grades of these three species best suited and usually employed in construction of different types and qualities, standard sizes of lumber, and a brief description of the quality of each standard grade and item available.

Northern Hemlock and Hardwood Manufacturers Assn. Official Grading Rules for Northern (Genuine) White Pine, Norway Pine, and Eastern Spruce (conforming to American Lumber Standards), 1941. Variations from American Lumber Standards are noted. Includes official grade, trade, and species marks; official shipper's certificates; general grading instructions; sizes, measurements, and tally; inspection and shipping provisions; definitions of terms describing grades; association standard grades; dimension and timber; structural joists and rafters of Norway pine; and lath.

Northern Pine Manufacturers Assn. Lumber Grade-Use Guide Pamphlet X; 1943. Endorsed by the National Lumber Manufacturers Assn. Northern White Pine, Norway Pine, Eastern Spruce, and Western White Spruce. Presents information on the specification and use for buildings and other structures. Lists a condensed lumber grade-use guide showing the standard grades of these species best suited and usually employed in the construction of different types and qualities, standard sizes of lumber, and a brief description of the quality of each standard grade and item available in these woods.

Northern Pine Manufacturers Assn. Standard Grading Rules for Northern White Pine, Norway Pine, and Jack Pine Lumber, 1939. Conforms to American Lumber Standards and includes standard sizes for dressed lumber; standard size of rough lumber; general instructions on grading; sizes, measurements, and tally; inspection and shipping provisions; definitions of defects and blemishes; association standard grades for selects, bevel siding, boards and strips, dimension and timbers, shop, and lath.

Southern Pine Assn. Lumber Grade-Use Guide Pamphlet IX; 1944. Endorsed by the National Lumber Manufacturers Assn. Longleaf Southern Pine and Shortleaf Southern Pine. Treats the several species, one of which is longleaf and the others shortleaf. Lists a lumber grade-use guide in condensed form for quick reference, tables indicating the standard sizes of lumber and timber, and a description of the quality of each standard grade in the various items for a better understanding of the grade-use guide.

Southern Pine Inspection Bureau of the Southern Pine Assn. The Gulf Coast Classification of Pitch Pine Resawn Lumber and Sawn Timber, 1923. Includes list of defects, general rules, flooring, boards and planks, deals, decking, scantling, dimension, kiln-dried saps, air-dried, saps, merchantable sawn timber, river plate standard, and West Indian.

Southern Pine Inspection Bureau of the Southern Pine Assn. Standard Specifications for Southern Pine Lumber, 1939. Includes general instructions; definitions; general grading provisions; specifications for long leaf yellow pine and for short leaf yellow pine—dimension and small timbers, utility timbers and heavy joists, factory flooring, decking and heavy shiplap, structural lumber; stock sizes; and average weights of Southern pine worked to standard sizes.

Western Pine Assn. Lumber Grade-Use Guide Pamphlet VIII; 1943. Endorsed by the National Lumber Manufacturers Assn. Idaho (Genuine) White Pine. Gives information on its standard grades and sizes and specifications and use of certain grades recommended for specific purposes. Lists the recommended grades for building purposes and other uses, shows a table giving standard manufactured sizes, gives unretouched photographic illustrations of each yard grade, and describes the grades.

Western Pine Assn. Lumber Grade-Use Guide Pamphlet XI; 1943. Endorsed by the National Lumber Manufacturers Assn. Ponderosa Pine. For the purpose of acquainting the individual, who is not familiar with Ponderosa Pine, with its standard yard grades and sizes, and to recommend the proper grades of the wood for specific uses. Lists the recommended grades for building construction and other uses, shows a table giving standard manufactured sizes, gives unretouched photographic reproductions of each grade, and describes the grades.

Western Pine Assn. Lumber Grade-Use Guide Pamphlet XII; 1943. Endorsed by the National Lumber Manufacturers Assn. Sugar Pine (Genuine White Pine). Presents information on standard grades and sizes, and specifications and use of certain grades for specific purposes. Lists the recommended grades for building purposes and other uses, shows a table giving standard manufactured sizes, gives unretouched photographic reproductions of principal yard grades, and describes the grades.

Western Pine Assn. Standard Grading Rules for Ponderosa Pine, Sugar Pine, Idaho White Pine, Larch-Douglas Fir, White Fir, Englemann Spruce, Incense Cedar and Red Cedar Lumber, 1942. Includes official grade, trade, and species marks; general instructions, measurements, and tally; definitions of defects; reinspection; grading rules for Ponderosa pine; grading rules for Idaho white pine; grading rules for sugar pine; and standard manufactured sizes.

*References.*—American Lumber Standards, nomenclature, and basic grading rules, *see* 400.0, 400.20.

## 400.27 Redwood Grading Rules

California Redwood Assn. Lumber Grade-Use Guide Pamphlet XIII; 1943. Endorsed by the National Lumber Manufacturers Assn. California Redwood. Presents information concerning uses, sizes, items, and standard grades. Lists the recommended grades for building purposes and other uses, tables giving the standard manufactured sizes for various working, description of the grades of yard stock, and character of grades and typical uses.

California Redwood Assn. Standard Specifications, 1942. General Instructions. Conforms to American Lumber Standards, except as herein specified. Gives definitions of standard defects; grading provisions; rough dry sizes, description, measurement, and tally; and inspection and shipping provisions.

California Redwood Assn. Standard Specifications, 1942. Redwood Grade Marks. Gives requirements for approved grade marks of lumber inspected by this association, diagrams, and explanatory notes.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, Volume 2; 1944. Redwood (California Redwood, Sequoia, Hembolt Redwood). Covers definition, constants, crushing strength, safe working stresses, derivation, uses, grading, marketing, and substitute.

*References.*—American Lumber Standards, nomenclature, and basic grading rules, *see* 400.0, 400.20.

## 400.28 Spruce Grading Rules

Northeastern Lumber Manufacturers Assn. Lumber Grade-Use Guide Pamphlet II; 1943. Endorsed by the National Lumber Manufacturers Assn. Northern White Pine and Eastern Spruce. Eastern spruce used for structural purposes, staging and scaffolding, general millwork, and boxes and crates. Northern white pine used for doors, frames and other millwork, and the lower grades for construction purposes and boxes and crating. Lists the recommended grades for building purposes and other uses and tables giving the standard manufactured sizes.

Northeastern Lumber Manufacturers' Assn. Standard Grading Rules for Eastern Spruce and Balsam Fir, 1938. Covers general instructions; yard and industrial size standards, measurement, and tally; inspection and shipping provisions; definitions of defects; inspection rules for B and Btr. (clear), C select (No.1), selected merchantable (No.2), No.1 (merchantable), No.2 (No.4), and No.3 (No.5); and structural joist and plank.

Northern Hemlock and Hardwood Manufacturers Assn. Lumber Grade-Use Guide Pamphlet XVI; 1943. Northern White Pine, Norway Pine, and Eastern Spruce. Presents information on the specification and use for buildings and other structures. Lists a condensed lumber grade-use guide showing the standard grades of these three species best suited and usually employed in construction of different types and qualities, standard sizes of lumber, and a brief description of the quality of each standard grade and item available.

Northern Hemlock and Hardwood Manufacturers Assn. Official Grading Rules for Northern (Genuine) White Pine, Norway Pine, and Eastern Spruce (conforming to American Lumber Standards), 1941. Variations from American Lumber Standards are noted. Includes official grade, trade, and species marks; official

shipper's certificates; general grading instructions; sizes, measurements, and tally; inspection and shipping provisions; definitions of terms describing grades; association standard grades; dimension and timbers; structural joists and rafters of Norway pine; and lath.

Northern Pine Manufacturers Assn. Lumber Grade-Use Guide Pamphlet X; 1943. Endorsed by the National Lumber Manufacturers Assn. Northern White Pine, Norway Pine, Eastern Spruce, and Western White Spruce. Presents information on the specification and use for buildings and other structures. Lists a condensed lumber grade-use guide showing the standard grades of these species best suited and usually employed in the construction of different types and qualities, standard sizes of lumber, and a brief description of the quality of each standard grade and item available in these woods.

Northern Pine Manufacturers Assn. Standard Grading Rules for Eastern Spruce and Western White Spruce Lumber, 1939. Conforms to American Lumber Standards and includes standard sizes for dressed lumber; standard size of rough lumber; general instructions on grading; sizes, measurements, and tally; inspection and shipping provisions; definitions of defects and blemishes; association standard grades for selects, bevel siding, boards and strips, dimension and timbers, shop, and lath.

West Coast Lumbermen's Assn. Lumber Grade-Use Guide Pamphlet IV; 1943. Endorsed by the National Lumber Manufacturers Assn. Douglas Fir, West Coast Hemlock, Western Red Cedar, and Sitka Spruce. Presents the grades for buildings and other structures and gives the uses for which tnese grades may be best employed. Lists a condensed lumber grade-use guide and lists the uses of the grades in building and other construction.

West Coast Lumbermen's Assn. Standard Grading and Dressing Rules for Douglas Fir, Sitka Spruce, West Coast Hemlock, Western Red Cedar Lumber, No. 12, 1943. Includes official trade and grade marks, general instructions, moisture content provisions, definitions, thicknesses and widths, and grading rules for Sitka spruce.

Western Pine Assn. Lumber Grade-Use Guide Pamphlet XIV; 1943. Endorsed by the National Lumber Manufacturers Assn. Engelmann Spruce. Contains information relative to the standard grades and sizes and specifications and use of grades recommended for specific purposes. Lists the recommended grades for building construction and other uses, shows unretouched photographic reproductions of examples of yard grades, gives a table of standard manufactured sizes for various working and a brief description of the standard grades.

Western Pine Assn. Standard Grading Rules for Ponderosa Pine, Sugar Pine, Idaho White Pine, Larch-Douglas Fir, White Fir, Engelmann Spruce, Incense Cedar and Red Cedar Lumber, 1942. Includes official grade, trade, and species marks; general instructions, measurements, and tally; definitions of defects; reinspection; and rules for grading Engelmann spruce.

U. S. Gov., Navy Dept. Specification 3933d; 1936. Spruce (Aircraft Use).

*References.*—American Lumber Standards, nomenclature, basic grading rules, *see* 400.0, 400.20.

### 400.29 Miscellaneous Softwood Grading Rules

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, Volume 2; 1944. Balsa Wood, Covers definition, constants, general characteristics, derivation, uses, grades, packaging, and substitutes.

Northern Hemlock and Hardwood Manufacturers Assn. Official Grading Rules for Northern Hardwood and Softwood Logs, Tie Cuts, Box Bolts, Shingle Bolts, Chemical Logs, Bolts and Cordwood, 1943. Gives general instructions, association log inspection service, grading rules, log scaling principles, and detail requirements for hardwood logs, aspen and softwood logs, tie cuts, box bolts, shingle bolts, chemical logs, chemical bolts, and chemical cordwood.

U. S. Gov., Navy Dept. Specification 39B5b; 1944. Balsa (Ochroma).

## 400.3 HARDWOOD GRADING RULES

### 400.30 General Items

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, 1938. Lumber; Hardwood. Covers definition, classification, standard grades, uses, method of producing, purchasing practices, packing, marketing, and substitutes.

National Hardwood Lumber Assn. Rules for the Measurement and Inspection of Hardwood Lumber, Cypress, Veneers, and Thin Lumber, 1944. Includes regulations for inspection, general instructions for inspection, standard grades, standard inspection, and special inspection for hardwoods for wagon stock, construction work, and ties; tally, measurement, grades, and inspection of cypress; rules for measurement and cutting and classified grades of veneer, thin lumber, and plywood veneers; national hardwood lumber sales code; and facsimile of bonded certificate. Veneer, thin lumber, and plywood portion endorsed by the Veneer Association.

National Hardwood Lumber Assn. Standard Specifications for Structural Stress-Grades of Hardwoods and Cypress Joist and Plank, Beams and Stringers, Posts and Timbers, 1941. Includes inspection regulations, general grading specifications, and definitions of terms. Conforms to the Recommendations and Standards of the American Railway Engineering Assn., American Society for Testing Materials, and American Lumber Standards.

National Lumber Manufacturers Assn. Lumber Grade-Use Guide Pamphlet XV; 1943. Hardwood Lumber and Timber for Building and Other Structures. Covers choice of hardwoods, properties of hardwoods, hardness, ability to stay in place, color, grain and texture, finishing, classification and specification, stock millwork, various flooring, interior trim and molding, stair treads and risers, solid hardwood wall paneling, special millwork and cabinet work, specification of veneers and plywood, table giving data on veneer woods, hardwood lumber for building exteriors, hardwoods for structural parts of buildings and other

structures. sizes of special use construction grades, choice of hardwood for structural parts, and recommended structural grades of hardwoods for various uses.

### 400.31 Basswood Grading Rules

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, 1938. Poles; Western Red Cedar. Covers definition, types and grades, properties, preservative treatment, and substitutes.

### 400.32 Birch Grading Rules

### 400.33 Gum Grading Rules

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, Volume 2; 1944. Gum Wood (Sweet Gum, Red Gum, Sap Gum, Satin Walnut, Hazel Pine). Covers definition, constants, general properties, derivation, uses, grades, and substitutes.

### 400.34 Hickory Grading Rules

U. S. Gov., Navy Dept. Specification 39H3; 1928. Hickory Butts.

### 400.35 Mahogany Grading Rules

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, Volume 2; 1944. Mahogany. Covers definition, constants, derivation, uses, grades, shipment, and substitutes.

### 400.36 Maple Grading Rules

U.S. Gov., U.S. Army, Army Air Forces. Specification 82-1B; 1938. Lumber; Maple.

### 400.37 Oak Grading Rules

U.S. Gov., Army Air Forces. Specification 15069-A(1); 1943. Lumber; Oak.

U. S. Gov., Navy Dept. Specification 3905e; 1928. Oak; White (Ship Use).

U. S. Gov., Navy Dept. Specification 3906b; 1938. Oak; White, Bending.

### 400.38 Walnut Grading Rules

American Walnut Manufacturers Assn. Logging American Walnut, undated. Compilation for the selection of merchantable timber, trees which should not be cut, for felling tree and cutting into logs, for piling of logs, and defects in logs.

American Walnut Manufacturers Assn. Rules for Grading American (Black) Walnut Logs, 1940. Specifications for inspection of prime, select, No.2, and cull logs; gives diameter and length requirements and classes of defects. Also includes walnut stumps, in three grades, size and number of pieces in each stump, and intensity of figure.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 82-11B; 1942. Wood; Black Walnut, for Small Arms.

### 400.39 Grading Rules for Other Hardwoods

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, Volume 2; 1944. Lignum Vitae. Covers definition, constants, derivation, uses, forms and grades, containers, and substitutes.

Northern Hemlock and Hardwood Manufacturers Assn. Official Grading Rules for Northern Hardwood and Softwood Logs, Tie Cuts, Box Bolts, Shingle Bolts, Chemical Logs, Bolts and Cordwood, 1943. Gives general instructions, association log inspection service, grading rules, log scaling principles, and detail requirements for hardwood logs, aspen and softwood logs, tie cuts, box bolts, shingle bolts, chemical logs, chemical bolts, and chemical cordwood.

Northern Pine Manufacturers Assn. Standard Grading Rules for Aspen Lumber, 1939. Rules for the Inspection of Aspen Lumber. Conforms to American Lumber Standards and includes standard sizes for dressed lumber; standard size of rough lumber; general instructions on grading, sizes, measurements, and tally; inspection and shipping provisions; definitions of defects and blemishes; association standard grades for selects, bevel siding, boards and strips, dimension and timbers, shop, and lath.

U. S. Gov., Navy Dept. Specification 39A2; 1929. Ash; White (Aircraft Use).

U.S. Gov., U. S. Army, Army Air Forces. Specification 82-3C; 1935. Lumber; Ash, White, for Aircraft Use.

## 400.4 PRESERVATIVE TREATMENT FOR WOOD

### 400.40 Definitions and Standards Relating to Wood Preservation

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering. Specifications for the Preservative Treatment of Wood. Includes table of quantities of creosote for various classes of wood.

American Society for Testing Materials, D 324-41; 1941. Definitions of Terms Relating to Timber Preservatives. Defines coal tar, coke-oven tar, creosote, creosote-coal tar solution, creosote-distillate, creosote oil, gas-house coal tar, and water-gas tar.

American Wood-Preservers' Assn., 2d; 1942. Standard Recommendations for the Purchase and Preservation of Forest Products. Gives general requirements, treatment, results of treatment, preservatives, inspection, and care after treatment.

American Wood-Preservers' Assn., 20c; 1944. Standard Methods for Determining Penetration of Salt Preservatives. Gives method of determining penetration of zinc chloride or chromated zinc chloride, method of determining penetration of Tanalith, and method for determining penetration of zinc meta arsenite.

American Wood-Preservers' Assn., 33b; 1926. Standard Instructions for the Inspection of Preservative Treatment of Wood. Covers full-cell processes for oil treatment, salt treatment, and oil-salt treatment; empty-cell process for oil treatment; and methods for checking measuring devices in use to measure absorption, obtaining cubical contents of treating cylinder, determining average depth of penetration, and taking inventory.

American Wood-Preservers' Assn., 47a; 1932. Glossary of Terms Used in Wood Preservation. Gives definitions of approximately 200 words and terms relative to wood preservation.

American Wood-Preservers' Assn., 50d; 1944. Recommended Practice for the Use of Pressure Treated Lumber in Protecting Buildings Against Decay and Termites. For protection against decay and against subterranean termites and dry-wood termites. Designates construction in contact with the ground and construction not in contact with the ground. Gives minimum

retention (lb.-cu.ft.) required for various kinds of preservatives.

U. S. Gov., Federal Specification TT-W-571b; 1941. Amendment 1; 1944. Wood-Preservative; Recommended Treating Practice. Requires current standard specifications of the American Wood Preservers' Assn. for preservative treatment shall be used and gives tables showing proper specification to be used in the treatment of various products from different species of wood covering both preservative oils and preservative salts; and methods of sampling, inspection, and tests.

## 400.41 Preservative Solutions for Wood

National Door Manufacturers Assn. Millwork Preservatives, 1938. Gives minimum requirements for non-aqueous solution, physical properties, and toxic strength tests. Also to be relatively insoluble in water, nonstaining after volatility test, and have satisfactory depth of penetration.

*References.*—Creosote, zinc chloride, *see* 801.3, 839.38.

## 400.42 Pressure Process of Wood Preservations

American Assn. of State Highway Officials. Standard Specifications for Highway Bridges, 1941. Includes specifications for preservative treatments for timber—requirements for types of treatments; composition and analyses of materials (creosote oil, creosote-coal-tar solution, creosote-petroleum solution, zinc chloride, sodium fluoride-arsenate dinitrophenol solution, chromated zinc chloride, and zinc meta arsenite), sampling and testing (to conform to American Society for Testing Materials specifications), preparation for treatment, amount of preservative, and pressure treatment processes.

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering. Specifications for the Preservative Treatment of Pacific Coast Douglas Fir. Gives general requirements; and requirements for salt and oil treatments, empty-cell Lowry and Rueping process, full-cell Burnet process, full-cell Bethel process, results of treatment, inspection, and re-treatment.

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering. Specifications for Treating Processes. Gives general requirements, and requirements for salt and oil treatments, empty-cell Lowry and Rueping process, full-cell Bethel process, and zinc chloride and creosote Cord process.

American Society for Testing Materials, D52-20; 1920. Wooden Paving Blocks for Exposed Pavements. Describes woods to be treated, quality of timber, size of blocks, coal-tar pitch or other preservative, process of treating wood with preservative, and penetration of sapwood.

American Transit Assn. Recommended Specification for Preservative Treatment of Structural Timber and Cross Ties, W139-31; 1931. Describes the treatment of timber and cross ties by various methods.

American Transit Assn. Standard Specification for Pressure Treatment of Pine Poles, W49-31; 1931. Covers treatment of pine poles for electric railway purposes. It includes requirements for preparation and equipment, absorption and penetration, and treating operations.

American Wood-Preservers' Assn., 34b; 1926. Standard Specification for the Preservative Treatment of Ties by Pressure Processes. For ties, exclusive of Douglas fir, larch or tamarack. Gives requirements for seasoning, preparation for treatment, manner of treatment, retention of preservative, determination of penetration, plant equipment, oil treatment, salt treatment, and oil-salt treatment.

American Wood-Preservers' Assn., 35c; 1929. Standard Specifications for the Preservative Treatment of Timber and Lumber by Pressure Processes. For woods, except Douglas fir, larch or tamarack. Gives requirements for seasoning, preparation for treatment, manner of treatment, retention of preservative, determination of penetration, plant equipment, oil treatment, salt treatment, and oil-salt treatment.

American Wood-Preservers' Assn., 36e; 1944. Standard Specification for the Preservative Treatment of Southern Pine Poles by Pressure Processes. Gives general requirements, treatment, standard processes, results of treatment, preservatives, inspection, and re-treatment.

American Wood-Preservers' Assn., 37d; 1942. Standard Specification for the Preservative Treatment of Round Pine Posts by Pressure Processes. Gives general requirements, treatment, results of treatment, preservatives, inspection, and re-treatment.

American Wood-Preservers' Assn., 38b; 1942. Standard Specification for the Preservative Treatment of Pacific Coast Douglas Fir Ties and Lumber by Pressure Processes. Gives general requirements, treatment, results of treatment, preservatives, inspection, and re-treatment.

American Wood-Preservers' Assn., 39c; 1944. Standard Specification for the Preservative Treatment of Southern Pine Piles by Pressure Processes. Gives general requirements, treatment, results of treatment, preservatives, inspection, and re-treatment.

American Wood-Preservers' Assn., 41b; 1942. Standard Specification for the Preservative Treatment of Pacific Coast Douglas Fir Piles by Pressure Processes. Gives general requirements, treatment, results of treatment, preservatives, inspection, and re-treatment.

American Wood-Preservers' Assn., 51a; 1942. Standard Specification for the Preservative Treatment of Pacific Coast Douglas Fir Poles by Pressure Processes. Gives general requirements, treatment, results of treatment, preservatives, inspection, and re-treatment.

American Wood-Preservers' Assn., 54c; 1944. Standard Specification for the Preservative Treatment of Jack Pine Poles by Pressure Processes. Gives general requirements, treatment, results of treatment, preservatives, inspection, and re-treatment.

American Wood-Preservers' Assn., 55c; 1944. Standard Specification for the Preservative Treatment of Red Pine Poles by Pressure Processes. Gives general requirements, treatment, results of treatment, preservatives, inspection, and re-treatment.

American Wood-Preservers' Assn., 56c; 1944. Standard Specification for the Preservative Treatment of

Lodgepole Pine Poles by Pressure Processes. Gives general requirements, treatment, results of treatment, preservatives, inspection, and re-treatment.

Assn. of American Railroads, Operations and Maintenance Dept., Engineering Div., Signal Section. Manual of Recommended Practice, Specification 140-39; 1939. Preservative Treatment of Capping and Grooved Trunking. Creosote treatment of wood conduit for railway signal purposes, using A.R.E.A. grade 1, creosote oil. Equipment of plants, Reuping, Lowry, full-cell process, penetration, etc.

Assn. of American Railroads, Telegraph and Telephone Section, 1-A-7; 1938. Specification for the Butt Treatment of Cedar Poles. Covers creosote treatment process for western red, and northern white cedar poles, with A.R.E.A. grade one S-4 creosote. Preparation for treatment, incising, minimum length of treated section based on length of pole, treatment, impregnation determination and marking.

Assn. of American Railroads, Telegraph and Telephone Section, 1-A-25; 1928. Pressure Treatment of Pine Poles. Includes southern, western, Norway, jack, and lodgepole pine poles; requirements for creosote A.R.E.A. grade one, preparation of poles for treatment, seasoning, treatment procedures for full-cell and empty-cell processes, penetration, and retention of preservatives.

*References.*—Lumber suitable for treatment, *see* 404.0; definitions, preparatory treatment of wood, *see* 400.40; creosote, zinc chloride, *see* 801.3, 839.38.

### 400.43 Brush and Open Tank Treatment for Wood Preservation

American Transit Assn. Recommended Specification for Preservative Treatment of Structural Timber and Cross Ties, W139-31; 1931. Describes the treatment of timber and cross ties by various methods.

American Transit Assn. Standard Specification for Brush Treatment of Wood Poles, W51-31; 1931. Discusses brush treatment of poles in various stages of usage.

American Transit Assn. Standard Specification for Non-Pressure (Open Tank, Brush and Spray) Treatments for Structural Timber and Ties, W50-31; 1931. Gives detailed requirements as to the method of treatment by open tank, brush, and spray of structural timber and ties.

American Transit Assn. Standard Specification for Open Tank Butt Treatment of Poles (Plain and Incised), W48-30; 1930. This specification covers the treatment of poles by immersion of the butt ends in preservative oils contained in open tanks. It refers also to the preparation for treatment, preservative, treating operations, and inspection of the material.

American Wood-Preservers' Assn., 43c; 1941. Standard Specification for the Preservative Treatment of Pole Butts by the Non-Pressure Process—Incising Method. Gives requirements for seasoning, shaving, incising, classification, preservative oils, plant equipment, length of treated sections, hot and cold baths, penetration, handling, storing, inspection, and sampling.

Western Red and Northern White Cedar Assn. Specifications for the Preservative Treatment of Western Red Cedar and Northern White Cedar Poles, 1940. For three methods of treatment in creosote, a continuous submersion in hot creosote for 15 min., a process using alternately submersion in hot and cold creosote for 6 hr., and a guaranteed penetration treatment, procedure and temperature of preservative for each method, and creosote according to American Wood Preservers' Assn. specifications.

U.S. Gov., Federal Specification TT-W-571b; 1941. Wood-Preservative; Recommended Treating Practice. Requires current standard specifications of the American Wood Preservers' Assn. for preservative treatment be used, and gives schedule of recommended practice in the preservative treatment of timber in various forms. Emergency Alternate Federal Specification E-TT-W-571b; 1942, (issued by Procurement Div., Treasury Dept., U. S. Gov.) states that the following Federal specifications form a part of this specification: TT-W-531, TT-W-560, TT-W-566a, TT-W-576a, TT-W-581, E-TT-W-546, E-TT-W-551, E-TT-W-556a, E-TT-W-568, and E-TT-W-573.

*References.*—Definitions, preparatory treatment of wood, *see* 400.40; creosote, zinc chloride, *see* 801.3, 839.38.

### 400.49 Miscellaneous Specifications for Wood Preservative Treatment

American Wood-Preservers' Assn., 48b; 1941. Standard Instructions for Field Treatment of Creosoted Timber and Piles. It is recommended that insofar as practicable, treated timbers and piles shall be framed and bored before treatment and field work of this character limited to a minimum. Gives instructions for handling treated timber and piles and for treating where field cutting or boring is necessary.

U. S. Gov., Navy Dept. Specification 51C40; 1944. Chemicals; Fire-Retardant, for Lumber and Timber (Recommended Treating Practice).

U. S. Gov., U. S. Army, Signal Corps. Specification 71-2202-A; 1944. Moisture- and Fungus-Resistant Treatment of Signal Corps Ground Signal Equipment (Overall Treatment of Assembled Equipment).

## 400.5 WOOD PULP

### 400.50 General Items

Associated Factory Mutual Fire Insurance Companies. Pamphlet No.52; 1933. Pulpwood Storage, Fire Prevention and Protection, Fire-Fighting Methods. Covers recommendations in brief, storage, fire record, prevention of fire, size and separation of piles, protection of piles, and extinguishing a pulpwood fire.

Certified Pulp Testers' Bureau. American Paper and Pulp Assn., Assn. of American Wood Pulp Importers, and Technical Assn. of the Pulp and Paper Industry, joint sponsors. Official Rules for Weighing, Sampling, and Testing Wood Pulp for Moisture and Trade Practices for Certified Pulp Testers, 1939. Covers baled pulp, roll pulp, loose lap pulp, and double press wet machine pulp in sheets; location and quantity lots; determination of wet weight; sampling by strip; boring, and wedge methods; weighing, drying,

and computation of air-dry weight; moisture test of baled shredded pulp; trade practices for certified pulp testers; and suggested forms of certificates. Approved by the National Assn. of Waste Material Dealers, Inc.

Technical Assn. of the Pulp and Paper Industry. Water Solubility of Wood, Standard T 1 m-41; 1941. Covers apparatus, specimen, procedure, and report for bath cold-water solubility and hot-water solubility.

Technical Assn. of the Pulp and Paper Industry. Methoxyl Groups in Wood, Standard T 2 m-43; 1943. Covers apparatus, reagents, test specimen, procedure, report, and additional information.

Technical Assn. of the Pulp and Paper Industry. Moisture in Wood Chips and Sawdust by Toluene Method, Standard T 3 m-44; 1944. Covers apparatus required, reagent, test specimen, and procedure for testing.

Technical Assn. of the Pulp and Paper Industry. One Per Cent Caustic Soda Solubility of Wood, Standard T 4 m-44; 1944. Method of determining resistance of wood to solution by hot dilute alkali. Detects fungus decay from composite average samples. Lists apparatus required, preparation of solution, and method of procedure.

Technical Assn. of the Pulp and Paper Industry. Ether Solubility of Wood, Standard T 5 m-41; 1941. For measurement of waxes, fats, resins, and similar materials in wood. Covers apparatus required, test specimen, and procedure.

Technical Assn. of the Pulp and Paper Industry. Alcohol-Benzene Solubility of Wood, Standard T 6 m-41; 1941. For measurement of waxes, fats, resins, and certain other ether-insoluble components of wood, including some wood gums. Covers apparatus required, reagent, test specimen, and procedure.

Technical Assn. of the Pulp and Paper Industry. Laboratory Process of Pulp (Beater Method), Standard T 200 m-43; 1943. Concerns the processing of pulp by means of a laboratory standard beater prior to forming handsheets for the purpose of determining its behavior when subjected to a definite beating schedule. Covers apparatus, care of beater, sampling, storage of pulp samples, test specimen, procedure, report, and additional information.

Technical Assn. of the Pulp and Paper Industry. Isolation of Cellulose by Chlorination Method, Standard T 201 m-37; 1937. Covers apparatus required, solutions, test specimen, and procedure.

Technical Assn. of the Pulp and Paper Industry. Chlorine Consumption of Pulp, Standard T 202 m-42; 1942. Chlorination method that may be applied to unbleached sulphite, sulphate, and soda pulps. Covers apparatus, reagents, test specimen, procedure, report, and precision.

Technical Assn. of the Pulp and Paper Industry. Alpha Cellulose in Pulp, Standard T 203 m-40; 1940. For routine test determinations of alpha cellulose in paper-making fiber. Covers test specimen, procedure, modification for unbleached pulps, report, and precision.

Technical Assn. of the Pulp and Paper Industry. Pitch in Wood Pulp, Standard T 204 m-35; 1935. Gives requirements for preparation of sample, solution in sulphuric ether, and in ethyl alcohol for determination of pitch.

Technical Assn. of the Pulp and Paper Industry. Forming Handsheets for Physical Tests of Pulp, Standard T 205 m-40; 1940. For precision method of forming test sheets from pulp and of testing for physical properties. Covers apparatus, sampling, storage of pulp samples, test specimen, procedure, and appendices.

Technical Assn. of the Pulp and Paper Industry. Cuprammonium Disperse Viscosity of Pulp, Standard T 206 m-44; 1944. For routine test applicable to bleached and unbleached chemical pulps and to rag stock. Apparatus and reagent required, test specimen, and procedure.

Technical Assn. of the Pulp and Paper Industry. Water Solubility of Pulp, Standard T 207 m-41; 1941. Covers apparatus, specimen, and procedure for cold-water and hot-water solubility methods of determining the amount soluble.

Technical Assn. of the Pulp and Paper Industry. Moisture in Pulp by Toluene Method, Standard T 208 m-34; 1934. For rapid laboratory sampling, including ground wood pulp, but not for large pulp shipments. Gives apparatus required, reagent, specimen, and procedure.

Technical Assn. of the Pulp and Paper Industry. Methoxyl Groups in Pulp, Standard T 209 m-43; 1943. Covers apparatus, reagents, test specimen, procedure, and additional information.

Technical Assn. of the Pulp and Paper Industry. Weighing, Sampling, and Testing Wood Pulp for Moisture, Standard T 210 m-36; 1936. Gives methods for baled pulp, dried sheets, roll pulp, loose lap pulp, and double-press wet-machine pulp in sheets. Apparatus required, test specimen, and procedure.

Technical Assn. of the Pulp and Paper Industry. Ash in Pulp, Standard T 211 m-44; 1944. Covers apparatus required, test specimen, and method of procedure.

Technical Assn. of the Pulp and Paper Industry. One Per Cent Caustic Soda Solubility of Pulp, Standard T 212 m-44; 1944. Method of determining resistance of pulp sample to solution by hot dilute alkali. Control test for cooking or bleaching process. Apparatus and caustic soda solution, test sample, and procedure.

Technical Assn. of the Pulp and Paper Industry. Dirt in Pulp, Tentative Standard T 213 m-43; 1943. Definition as pertains to paper, apparatus required, test specimen, and procedure.

Technical Assn. of the Pulp and Paper Industry. Permanganate Number of Pulp, Tentative Standard T 214 m-42; 1942. For relative hardness or bleachability of pulp. Special apparatus required, reagents, test specimen, and procedure.

Technical Assn. of the Pulp and Paper Industry. Copper Number of Pulp, Tentative Standard T 215 m-42; 1942. Mainly for evaluation of pulps free from unbleached, ground wood, or other highly lignified fibers. Gives apparatus and reagents required, test specimen, and procedure.

Technical Assn. of the Pulp and Paper Industry. Spectral Reflectivity and Color of Pulp, Standard T 216 m-42; 1942. For method of measuring reflectivity relative to magnesium oxide. Apparatus and reflection standards required, illumination and viewing, calibration, and procedure.

639677 O—45——14

Technical Assn. of the Pulp and Paper Industry. Brightness in Pulp, Suggested Method T 217 sm-42; 1942. Brightness, as applied to white and near-white papers, has come to be associated with the numerical value of the reflectance of these papers to light. Covers apparatus, calibration, test specimens, procedure, report, and appendices.

Technical Assn. of the Pulp and Paper Industry. Forming Handsheets for Optical Tests of Pulps, Tentative Standard T 218 m-42; 1942. For all unbleached and bleached pulps, provided that they have been so processed in manufacture that the individual fibrous elements have become separated. Covers apparatus, sampling, storage of pulp samples, test specimen, and procedure.

Technical Assn. of the Pulp and Paper Industry. Bleach Requirements of Pulp, Tentative Standard T 219 m-42; 1942. To determine directly the amount of calcium hypochlorite bleaching agent necessary to bring a pulp to a selected standard degree of brightness. Covers apparatus, reagent, test specimen, procedure, report, precision, and additional information.

Technical Assn. of the Pulp and Paper Industry. Physical Testing of Pulp Handsheets, Tentative Standard T 220 m-42; 1942. For testing handsheets for strength and other physical properties, excepting optical properties. Covers basis weight, thickness, tensile strength and stretch, bursting strength, tearing strength, moisture, other tests, report, and precision.

Technical Assn. of the Pulp and Paper Industry. Drainage Time and Drainage Factor of Pulp, Tentative Standard T 221 m-42; 1942. For determining numerically a measure of the slowness of stock and is better suited for ground wood or beaten stock. Covers apparatus, calibration, procedure, and report.

Technical Assn. of the Pulp and Paper Industry. Lignin in Wood Pulp, Tentative Standard T 222 m-43; 1943. When wood pulp is treated with strong acids the carbohydrates are hydrolized, leaving an insoluble residue which is determined as lignin. Covers apparatus, reagents, test specimen, procedure, and report.

Technical Assn. of the Pulp and Paper Industry. Pentosans in Pulp, Tentative Standard T 223 m-43; 1943. For use in connection with determining furfural in typical chemical wood fibers. Covers apparatus, reagents, test specimen, procedure, calculations of results, and report.

Technical Assn. of the Pulp and Paper Industry. Laboratory Processing of Pulp (Ball-Mill Method), Suggested Method T 224 sm-43; 1943. Concerns the processing of pulp prior to forming handsheets for the purpose of determining its behavior when subjected to a definite beating schedule. Covers apparatus, sampling, storage of pulp samples, test specimen, procedure, report, and additional information.

Technical Assn. of the Pulp and Paper Industry. Laboratory Processing of Pulp (Kollergang Method), Suggested Method T 225 sm-43; 1943. Concerns the processing of pulp prior to forming handsheets for the purpose of determining its behavior when subjected to a definite beating schedule. Covers apparatus, calibration, sampling, storage of pulp samples, test specimen, procedure, report, precision, and additional information.

Technical Assn. of the Pulp and Paper Industry. Specific External Surface of Pulp, Suggested Method T 226 sm-43; 1943. For determining the specific surface of chemical pulps, ground wood, woodflour, and similar materials. Covers apparatus, reagents, test specimen, procedure, report, precision, and additional information.

Technical Assn. of the Pulp and Paper Industry. Fineness of Pulp, Standard T 227 m-43; 1943.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 50-11-100A; 1943. Cellulose; Wood-Pulp.

### 400.6 SAWDUST

U.S. Gov., Army Air Forces. Specification 15059; 1936. Sawdust; Softwood and Hardwood.

### 400.7 ANALYSIS OF WOOD

Technical Assn. of the Pulp and Paper Industry. Holocellulose in Wood, Standard T 9 m-41; 1941. Holocellulose is a white lignin—free fibrous material composed of the hemicellulose and the cellulose in wood. Covers apparatus, reagents, test specimen, procedure, report, and additional information.

Technical Assn. of the Pulp and Paper Industry. Sampling and Preparing Wood for Analysis, Tentative Standard T 11 m-42; 1942. For the preparation of wood samples for all chemical tests except the determination of cellulose. Covers sampling, grinding and screening, and additional information.

Technical Assn. of the Pulp and Paper Industry. Preparation of Extractive—Free Wood, Tentative Standard T 12 m-42; 1942. For all North American woods and may be applied to bark, straw, and similar fibrous materials and to pulps. Covers apparatus, reagents, specimen, and procedure.

Technical Assn. of the Pulp and Paper Industry. Lignin in Wood, Tentative Standard T 13 m-43; 1943. When wood is treated with strong acids the carbohydrates are hydrolized, leaving an insoluble residue which is determined as lignin. Covers apparatus, reagents, test specimen, procedure, and report.

## 401. RAW AND HEWN TIMBERS

### 401.1 RAILROAD TIES

#### 401.10 General Items

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering. Ties. Specifications for cross ties, application of the specifications for cross ties, marking ties to indicate size acceptance, specifications for machining cross ties, specifications for switch ties, dimensions of ties, economic comparison of cross ties of different materials, methods and practices for proper seasoning of ties, care of ties, and marking for service records.

American Railway Engineering Assn., Joint sponsor with U.S. Forest Service. Approved by American Standards Assn. as 03-1926. Railroad Ties. For cross ties and switch ties, acceptable kinds of wood, requirements on general qualities, resistance to wear, dimensions of standard sizes, permissable defects, classification into groups which may be used untreated and groups which require treatment.

American Transit Assn. Standard Specification for Cross Ties, W26-26; 1926. Specifies kinds of wood, physical requirements of wood, dimensions of ties, manufacture, inspection, and delivery. This specification is identical with the American Standard for Switch Ties, 03-1926, approved by the American Standards Assn.

American Transit Assn. Standard Specification for Switch Ties, W27-26; 1926. Specifies kinds of wood, physical requirements of wood, dimensions of ties, manufacture, inspection, and delivery. This specification is identical with the American Standard for Switch Ties, 03-1926.

Railway Tie Assn. Specifications for Cross Ties and Switch Ties. Adopted, 1940. Includes requirements for kinds of wood, general quality, resistances to wear and decay, dimensions, manufacture, inspection, delivery, and shipment.

Railway Tie Assn. Specifications for Narrow Gage Cross Ties and Switch Ties. Adopted, 1940. Includes requirements for kinds of wood, general quality, resistances to wear and decay, dimensions, manufacture, inspection, delivery, and shipment.

U. S. Federal Specification MM-T-371; 1937. Ties, Wood; Cross and Switch. Covers two types—(I) cross and (II) switch; four forms—(A) sawed—top, bottom, and sides; (B) sawed—top and bottom; (C) hewed—top, bottom, and sides; and (D) hewed—top and bottom; and two classes—(U) untreated and (T) treated. Gives requirements for material, workmanship, dimensions, rate of growth, defects, ties to be used untreated, ties to be used treated, and preservative treatment; methods of inspection, sampling, and tests; and requirements for marking.

### 401.11 Cedar Ties

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering. Cedar, Cross Ties, and Switch Ties. Physical requirements, design, manufacture, inspection, delivery, and shipment.

Railway Tie Assn. Specifications for Cross Ties and Switch Ties. Adopted, 1940. Includes requirements for cedar ties.

Railway Tie Assn. Specifications for Narrow Gage Cross Ties and Switch Ties. Adopted, 1940. Includes requirements for cedar ties.

*References.*—Preservative Treatment, *see* 400.42.

### 401.12 Chestnut Ties

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering. Chestnut Cross Ties and Switch Ties. Physical requirements, design, manufacture, inspection, delivery, and shipment.

Railway Tie Assn. Specifications for Cross Ties and Switch Ties. Adopted, 1940. Includes requirements for chestnut ties.

Railway Tie Assn. Specifications for Narrow Gage Cross Ties and Switch Ties. Adopted, 1940. Includes requirements for chestnut ties.

*References.*—Preservative treatment, *see* 400.42.

### 401.13 Cypress Ties

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering. Cypress Cross Ties and Switch Ties. Physical requirements, design, manufacture, inspection, delivery, and shipment.

Railway Tie Assn. Specifications for Cross Ties and Switch Ties. Adopted, 1940. Includes requirements for cypress ties.

Railway Tie Assn. Specifications for Narrow Gage Cross Ties and Switch Ties. Adopted, 1940. Includes requirements for cypress ties.

*References.*—Preservative treatment, *see* 400.42.

### 401.14 Fir Ties

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering. Fir Cross Ties and Switch Ties. Physical requirements, design, manufacture, inspection, delivery, and shipment.

Railway Tie Assn. Specifications for Cross Ties and Switch Ties. Adopted, 1940. Includes requirements for fir ties.

Railway Tie Assn. Specifications for Narrow Gage Cross Ties and Switch Ties. Adopted, 1940. Includes requirements for fir ties.

West Coast Lumbermen's Assn. Standard Grading and Dressing Rules for Douglas Fir, Sitka Spruce, West Coast Hemlock, Western Red Cedar Lumber, No. 11; 1942. Includes official trade and grade marks, general instructions, moisture content provisions, definitions, thicknesses and widths, and grading rules for Douglas fir ties.

*References.*—Preservative treatment, *see* 400.42.

### 401.15 Oak Ties

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering. Oak Cross Ties and Switch Ties. Physical requirements, design, manufacture, inspection, delivery, and shipment.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, 1938. Crossties; Railroad. Covers definition, types (yellow pine, white oak, and mixed oak), occurrence, uses, weight, specifications, ordering instructions, and substitutes.

Railway Tie Assn. Specifications for Cross Ties and Switch Ties. Adopted, 1940. Includes requirements for oak ties.

Railway Tie Assn. Specifications for Narrow Gage Cross Ties and Switch Ties. Adopted, 1940. Includes requirements for oak ties.

*References.*—Preservative treatment, *see* 400.42.

### 401.16 Pine Ties

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering. Pine Cross Ties and Switch Ties. Physical requirements, design, manufacture, inspection, delivery, and shipment.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, 1938. Cross ties; Railroad.

Covers definition, types (yellow pine, white oak, and mixed oak), occurrence, uses, weight, specifications, ordering instructions, and substitutes.

Railway Tie Assn. Specifications for Cross Ties and Switch Ties. Adopted, 1940. Includes requirements for pine ties.

Railway Tie Assn. Specifications for Narrow Gage Cross Ties and Switch Ties. Adopted, 1940. Includes requirements for pine ties.

*References.*—Preservative treatment, *see* 400.42.

### 401.17 Redwood Ties

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering. Redwood Cross Ties and Switch Ties. Physical requirements, design, manufacture, inspection, delivery and shipment.

California Redwood Assn. Standard Specifications, 1942. No. 1 California Redwood Ties. Gives requirements for general quality of No. 1 split and sawn redwood ties, permissible sapwood, annual rings per inch, slope of grain, knots, splits, shakes, manufacture, size; and exceptions for small ties.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, 1938. Cross ties; Railroad (Redwood). Covers physical and mechanical properties, derivation, specifications, forms available, and substitutes.

Railway Tie Assn. Specifications for Cross Ties and Switch Ties. Adopted, 1940. Includes requirements for redwood ties.

Railway Tie Assn. Specifications for Narrow Gage Cross Ties and Switch Ties. Adopted, 1940. Includes requirements for redwood ties.

*References.*—Preservative treatment, *see* 400.42.

### 401.18 Walnut Ties

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering. Walnut Cross Ties and Switch Ties. Physical requirements, design, manufacture, inspection, delivery, and shipment.

Railway Tie Assn. Specifications for Cross Ties and Switch Ties. Adopted, 1940. Includes requirements for walnut ties.

Railway Tie Assn. Specifications for Narrow Gage Cross Ties and Switch Ties. Adopted, 1940. Includes requirements for walnut ties.

*References.*—Preservative treatment, *see* 400.42.

### 401.19 Miscellaneous Ties

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering, 1944. Fundamentals To Be Considered in Designs of Substitute Ties. Must be designed so as to have sufficient strength to prevent failure of the tie or its fastenings. Gives performance, economy, fastenings, gage, line, surface, insulation, and causes of failure.

## 401.2 POSTS

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specifications CAA-746. Fences, Classes C and D; Wood Posts.

### 401.21 Cedar Posts

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads, Manual for Railway Engineering. Specifications for Standard Right-of-Way Fences, 1935. Covers cedar posts—sizes, depth of setting, and general requirements.

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering. Specifications for Wood Fence Posts. Includes untreated cedar. Gives requirements for physical characteristics, design, manufacture, sizes, inspection, workmanship, delivery, and pressure treatment (A.R.E.A. Specifications).

Western Red and Northern White Cedar Assn. Western Red Cedar Posts, 1929. For split and round posts, standard sizes, minimum small end sizes, shapes for split posts, and permissible defects.

Western Red and Northern White Cedar Assn. Official Manufacturing Specifications Governing the Manufacture and Grading of Northern White Cedar Posts, 1933. For round and sawed posts, standard sizes, lengths, manufacture, insect damage, knots, short kinks, twists, cat faces, rot, crook or sweep, and methods of measuring sweep.

*References.*—Preservative treatment, *see* 400.42; fencing wood, *see* 402.2.

### 401.22 Chestnut Posts

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering. Specifications for Standard Right-of-Way Fences, 1935. Covers chestnut post—sizes, depth of setting, and general requirement.

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering. Specifications for Wood Fence Posts. Includes untreated chestnut. Gives requirements for physical characteristics, design, manufacture, sizes, inspection, workmanship, delivery, and pressure treatment (A.R.E.A. Specifications).

*References.*—Preservative treatment, *see* 400.42.

### 401.23 Cypress Posts

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering. Specifications for Wood Fence Posts. Includes untreated cypress. Gives requirements for physical characteristics, design, manufacture, sizes, inspection, workmanship, delivery, and pressure treatment (A.R.E.A. Specifications).

### 401.24 Locust Posts

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering. Specifications for Wood Fence Posts. Includes untreated black locust. Gives requirements for physical characteristics, design, manufacture, sizes, inspection, workmanship, delivery, and pressure treatment (A.R.E.A. Specifications).

*References.*—Preservative treatment, *see* 400.42.

### 401.25 Oak Posts

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering. Specifications for Standard Right-of-Way Fences, 1935. Covers white oak posts—sizes, depth of setting, and general requirements.

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering. Specification for Wood Fence Posts. Includes treated red oak. Gives requirements for physical characteristics, design, manufacture, sizes, inspection, workmanship, delivery, and pressure treatment (A.R.E.A. Specifications).

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering. Specifications for Wood Fence Posts. Includes untreated white oak. Gives requirements for physical characteristics, design, manufacture, sizes, inspection, workmanship, delivery, and pressure treatment (A.R.E.A. Specifications).

*References.*—Preservative treatment, *see* 400.42.

### 401.26 Pine Posts

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering. Specifications for Wood Fence Posts. Includes treated sap yellow pine. Gives requirements for physical characteristics, design, manufacture, sizes, inspection, workmanship, delivery, and pressure treatment (A.R.E.A. Specifications).

### 401.29 Miscellaneous Specifications for Posts

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering. Specifications for Standard Right-of-Way Fences, 1935. Covers cedar, locust, chestnut, Bois d'Arc, white oak, mulberry, and catalpa posts—sizes, depth of setting, and general requirements.

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering. Specifications for Wood Fence Posts. Covers two classes—(1) untreated (black locust, cypress, catalpa, cedar, chestnut, Douglas fir, black walnut, heart yellow pine, larch, red mulberry, redwood, and white oak); and (T) treated (ash, beech, birch, black gum, cherry, elm, hickory, hackberry, maple, red oak, sap yellow pine, sycamore, and sap fir). Gives requirements for physical characteristics, design, manufacture, sizes, inspection, workmanship, delivery, and pressure treatment (A.R.E.A. Specifications).

California Redwood Assn. Standard Specifications, 1942. Split Posts, Stakes, Shakes, and Pickets. Conforms to American Lumber Standards. Gives requirements for No. 1 posts, split redwood grape stakes, No. 1 grape stakes, and split redwood pickets and shakes.

*References.*—Preservative treatment, *see* 400.42.

## 401.3 POLES, HEWN AND SAWN

### 401.30 General Items

American Transit Assn. Recommended Practice for Selection of Poles for Trolley Line Construction, D119-36; 1936. Describes method for selection and use of line poles for overhead construction, and method to be used in selecting proper poles when loading is known.

American Transit Assn. Recommended Specification for the Maintenance of Pole Timber and Structures, W140-30; 1930. This specification describes two methods of applying wood preservative treatment at the ground line section of standing poles, namely: Charring and spraying method and the hot spray or brush method. Detailed information is given furnishing the two methods used.

American Wood-Preservers' Assn., 14b; 1926. Standard Volumes of Piles and Poles. Table gives average volume per foot of length in cubic feet for diameters from 4 to 25 in. at large end and 4 to 15 in. at small end, and formula for estimating volume.

Assn. of American Railroads, Telegraph and Telephone Section, 1-E-1; 1939. Specification for the Replacement Inspection of Wood Poles in Railroad Communication Pole Lines. Prescribes basis for determining when poles, stubs, and braces in a line should be reinforced or replaced. Includes minimum pole circumference tables and defects to be corrected.

Telephone Group of American Standards Assn., sponsor. Approved by American Standards Assn. as 05a-1933. Ultimate Fiber Stresses of Wood Poles. Standard fiber stresses to be allowed in designing pole lines for Northern white cedar, Western red cedar, chestnut, and creosoted Southern yellow pine poles.

U. S. Gov., Dept. of Agriculture, Rural Electrification Administration. General Procedure Applying to Poles, Their Treatment, and Inspection, 1940.

U. S. Gov., Dept. of Agriculture, Rural Electrification Administration. Specifications for Poles and Pole Treatments. Covers general requirements, pressure-creosoted Douglas fir and Southern yellow pine poles, butt-treated white cedar and Western red cedar poles, creosoted anchor logs and pole keys, sampling and testing, treatment report instructions, and subcontracting.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airway. Specifications CAA-113. Poles; Wood, Treated.

U. S. Gov., Dept. of Commerce, National Bureau of Standards, H32; 1941. American Standards Assn., C2.2-1941. Safety Rules for the Installation and Maintenance of Electrical Supply and Communication Lines. Comprising part 2 of the fifth edition, National Electrical Safety Code. Includes requirements for wood poles and cross arms.

### 401.31 Cedar Poles

American Transit Assn. Specification for Western Red Cedar Poles, D8-36; 1936. Gives material requirements, limits of knot sizes, dimensions, manufacturing requirements, and inspection of Western red cedar

poles; includes also definitions of terms. These poles are classified in accordance with American Standards dimensions of Western red cedar poles approved by the American Standards Assn., 05c2-1931.

American Transit Assn. Specification for Wood Poles, D8-36; 1936. Gives material requirements, limits knot sizes, dimensions, manufacturing requirements, and inspection of Northern white cedar poles; includes also definitions of terms. These poles are classified in accordance with American Standard dimensions of Northern white cedar poles approved by the American Standards Assn., 05b2-1931.

Assn. of American Railroads, Telegraph and Telephone Section, 1-A-60; 1936. Round Western Cedar Poles. Includes definitions of terms, allowable and prohibited defects, sweep, trimming, framing, bark removal, and dimensions of 16- to 90-ft. poles.

Assn. of American Railroads, Telegraph and Telephone Section, 1-A-61; 1936. Northern White Cedar Poles. Includes definitions of terms, permissible and prohibited defects, sweeps, sawing, trimming, bark removal, storage and handling, and dimensions of 16- to 60-ft. poles.

Telephone Group of American Standards Assn., sponsor. Approved by American Standards Assn. as 05.1-1941. Specifications and Dimensions for Northern White Cedar Poles. Adopted by Western Red and Northern White Cedar Assn. Material requirements, dimensions, manufacturing requirements, definitions of terms, and diagram drawings of measurement of sweep and short crook.

Telephone Group of American Standards Assn., sponsor. Approved by American Standards Assn. as 05.2-1941. Adopted by Western Red and Northern White Cedar Assn. Specifications and Dimensions for Western Red Cedar Poles. Material requirements, dimensions, manufacturing requirements, definitions of terms, and diagram drawings of measurement of sweep and short crook.

Western Red and Northern White Cedar Assn. Manufacturing Specifications for Northern White Cedar Poles, 1936. For poles cut from live timber and 16 ft. or more in length; requirements on peeling and trimming; standard top measurements; permissible rot, crook, cat faces, knot, and twist, and standard weights.

U. S. Gov., Dept. of Agriculture, Rural Electrification Administration. Specifications for Poles and Pole Treatments. Covers general requirements, pressure-creosoted Douglas fir and Southern yellow pine poles, butt-treated white cedar and Western red cedar poles, creosoted anchor logs and pole keys, sampling and testing, treatment report instructions, and subcontracting.

*References.*—Preservative treatment, *see* 400.42, 400.43; fiber stress in poles, *see* 401.30; standard sizes, depth of setting, *see* 401.30.

## 401.32 Chestnut Poles

American Transit Assn. Specification for Chestnut Poles, D8-36; 1936. Gives material requirements, limits of knot sizes, dimensions, manufacturing requirements, and inspection of chestnut poles; includes also definitions of terms. These poles are classified in accordance with American Standard dimensions of chestnut poles 05.3, referred to below.

Assn. of American Railroads, Telegraph and Telephone Section, 1-A-62; 1936. Chestnut Poles. Requirements for supplying of chestnut poles such as permissible and prohibited defects, maximum sweep, offset, bark removal, squaring, trimming, and dimensions of 16- to 70-ft. poles.

Telephone Group of American Standards Assn., sponsor. Approved by American Standards Assn. as 05.3-1941. Specifications and Dimensions for Chestnut Poles. Material requirements, dimensions, manufacturing requirements, definitions of terms, and diagram drawings of measurements of sweep and short crook.

*References.*—Preservative treatments, *see* 400.42, 400.43; fiber stress in poles, *see* 401.30; standard sizes, dept. of setting, *see* 401.30.

## 401.33 Cypress Poles

## 401.34 Fir Poles

American Transit Assn. Specification for Douglas Fir Poles, D8-36; 1936. Gives material requirements, limits of knot sizes, dimensions, manufacturing requirements, and inspection of Douglas fir poles; includes also definitions of terms. These poles are classified in accordance with American Standard dimensions of Douglas fir poles 05.6, referred to below.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, 1938. Poles, Creosoted Douglas Fir. Covers definition, occurrence, properties, treatment, and substitutes.

Telephone Group of American Standards Assn., sponsor. Approved by American Standards Assn. as 05.6-1941. Specifications and Dimensions for Douglas Fir Poles. Material requirements, dimensions, manufacturing requirements, storage and handling, definitions of terms, and diagram drawings of measurements of sweep and short crook.

West Coast Lumbermen's Assn., Standard Grading and Dressing Rules for Douglas Fir, Sitka Spruce, West Coast Hemlock, Western Red Cedar Lumber, No. 11, 1942. Includes official trade and grade marks, general instructions, moisture content provisions, definitions, thicknesses and widths, and grading rules for Douglas fir pole stock.

U. S. Gov., Dept. of Agriculture, Rural Electrification Administration. Specifications for Poles and Pole Treatments. Covers general requirements, pressure-creosoted Douglas fir and Southern yellow pine poles, butt-treated white cedar and Western red cedar poles, creosoted anchor logs and pole keys, sampling and testing, treatment report instructions, and subcontracting.

U. S. Gov., Navy Dept. Specification 39P11c; 1944. Poles and Sticks (for Spars and Shores).

## 401.35 Oak Poles

U. S. Gov., Federal Specification FF-H-111; 1933. Hardware; Builders', Shelf, and Miscellaneous. Poles; Sash. Gives requirements for oak sash pole chucked to fit sash pole hook and for bronze hook on handle of japanned or enameled steel tubing. Emergency Alternate Federal Specification E-FF-H-111, July 1943, changed requirements in order to save steel for handles and bronze for hooks.

### 401.36 Pine Poles

American Transit Assn. Specification for Lodgepole Pine Poles, D8-36; 1936. Gives material requirements, limits of knot sizes, dimensions, manufacturing requirements, and inspection of lodgepole pine poles; includes also definitions of terms. These poles are classified in accordance with American Standard dimensions of lodgepole pine poles 05.5, referred to below.

American Transit Assn. Specification for Southern Pine Poles, D8-36; 1936. Gives material requirements, limits of knot sizes, dimension, manufacturing requirements, and inspection of Southern pine poles; includes also definitions of terms. These poles are classified in accordance with American Standard dimensions of Southern pine poles approved by the American Standards Assn., 05.4.

Assn. of American Railroads, Telegraph and Telephone Section, 1-A-59; 1936. Southern Pine Poles Which Are To Be Given a Preservative Treatment. Includes Longleaf, Shortleaf, Loblolly, Slash and Pond pine poles; requirements as to permissible and prohibited defects, shape, bark removal, framing, gains, dimensions for poles 16- to 90-ft. long.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, 1938. Poles; Creosoted Southern Pine. Covers definition, occurrence, grades, treatment, specification, and substitutes for pine poles.

Telephone Group of American Standards Assn., sponsor. Approved by American Standards Assn. as 05.4-1941. Specifications and Dimensions for Southern Pine Poles. Material requirements, dimensions, manufacturing requirements, storage and handling, definitions of terms, and diagram drawings of measurements of sweep and short crook.

Telephone Group of American Standards Assn., sponsor. Approved by American Standards Assn. as 05.5-1941. Specifications and Dimensions for Lodgepole Pine Poles. Material requirements, dimensions, manufacturing requirements, storage and handling definitions of terms, and diagram drawings of measurements of sweep and short crook.

U. S. Gov., Dept. of Agriculture, Rural Electrification Administration. Specifications for Poles and Pole Treatments. Covers general requirements, pressure-creosoted Douglas fir and Southern yellow pine poles, butt-treated white cedar and Western red cedar poles, creosoted anchor logs and pole keys, sampling and testing, treatment report instructions, and subcontracting.

*References.*—Preservative treatment, *see* 400.42, 400.43; fiber stresses in poles, *see* 401.30; standard sizes, depth of setting, *see* 401.30.

### 401.37 Redwood Poles

*References.*—*See* references under 401.36.

### 401.39 Miscellaneous Poles

U. S. Gov., Navy Dept. Specification 39P11c; 1944. Poles and Sticks (for Spars and Shores).

## 401.4 PILING, HEWN AND SAWN

### 401.40 General Items

American Assn. of State Highway Officials. Standard Specifications for Highway Bridges, 1941. Includes requirements for sheet piles and bearing plates—materials, limitation of use, preparation for driving (excavation, caps, collars, pointing, splicing, and painting steel piles), methods of driving (general, hammer for timber and steel piles, hammer for concrete piles, additional equipment, leads, followers, and water jets), defective piles, determination of bearing piles (loading tests, timber piles, and concrete and steel piles), test piles, order lists for piling, storage and handling of timber piles, cutting off timber piles, measurement and payment, payment for test piles, and payment for loading piles.

American Assn. of State Highway Officials. Standard Specifications for Highway Bridges, 1941. Includes specifications for timber piles—requirements for species, quality, and dimensions.

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering. Specifications for Driving Wood Piles. Gives requirements for tests, handling of material, selection and preparation of piles, types of hammers, driving, and framing.

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering. Specifications for Wood Piles. Gives requirements for kinds of wood, physical properties, design, manufacture, inspection, delivery, and shipment.

American Society for Testing Materials, D 25-37; 1937. American Standards Assn. 06-1939. Round Timber Piles. Covers three grades of treated or untreated piles based on use classification; includes general quality of wood, allows sound knots, requirements for sound timber, tip, and butt; taper, sapwood, peeled piles (for grade A and B); diameters of Douglas fir, Southern pine, oak, cypress, chestnut, and cedar piles; straightness and lengths.

American Wood-Preservers' Assn., 14b; 1926. Standard Volumes of Piles and Poles. Table gives average volume per foot of length in cubic feet for diameters from 4 to 25 in. at large end and 4 to 15 in. at small end, and formula for estimating volume.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specifications CAA-387. Piling.

U. S. Gov., Navy Dept. Specification 39P14a; 1940. Piles; Wood.

*References.*—Pile drivers, *see* 741.1.

### 401.41 Cedar Piling

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering. Specifications for Wood Piles. Gives requirements for cedar piles for railway and highway bridges; physical properties, design, manufacture, inspection, delivery, and shipment.

Western Red and Northern White Cedar Assn. Specifications of Western Red Cedar Piling, 1932.

Requirements on production, standard lengths, sizes of butts and tops, and permissible sweep.

*References.*—Requirements for piles irrespective of specie, *see* 401.40; preservative treatment, *see* 400.42.

### 401.42 Chestnut Piling

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering. Specifications for Wood Piles. Gives requirements for chestnut piles for railway and highway bridges; physical properties, design, manufacture, inspection, delivery, and shipment.

*References.*—Requirements for piles irrespective of specie, *see* 401.40; preservative treatment, *see* 400.42.

### 401.43 Cypress Piling

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering. Specifications for Wood Piles. Gives requirements for cypress piles for railway and highway bridges; physical properties, design, manufacture, inspection, delivery, and shipment.

*References.*—Requirements for piles irrespective of specie, *see* 401.40; preservative treatment, *see* 400.42.

### 401.44 Fir Piling

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering. Specifications for Wood Piles. Gives requirements for Douglas fir piles for railway and highway bridges; physical preperties, design, manufacture, inspection, delivery, and shipment.

*References.*—Requirements for piles irrespective of specie, *see* 401.40; preservative treatment, *see* 400.42.

### 401.45 Oak Piling

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering. Specifications for Wood Piles. Gives requirements for oak piles for railway and highway bridges; physical properties, design, manufacture, inspection, delivery, and shipment.

*References.*—Requirements for piles irrespective of specie, *see* 401.40; preservative treatment, *see* 400.42.

### 401.46 Pine Piling

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering. Specifications for Wood Piles. Gives requirements for Southern pine piles for railway and highway bridges; physical preperties, design, manufacture, inspection, delivery, and shipment.

U. S. Gov., The Panama Canal, Purchasing Dept. Specification for Piling, 1944. Southern yellow pine only, creosoted, for marine or salt-water use.

*References.*—Requirements for piles irrespective of specie, *see* 401.40; preservative treatment, *see* 400.42.

### 401.47 Redwood Piling

California Redwood Assn. Standard Specifications, 1942. Round Redwood Piling. Conforms to American Lumber Standards. Gives requirements for quality, taper, dimensions, etc.

*References.*—Requirements for piles irrespective of specie, *see* 401.40; preservative treatment, *see* 400.42.

### 401.49 Miscellaneous Specifications for Piling

American Public Works Assn. Sewers, J1-38; 1938. Includes wood piles, structural timber and lumber to conform with specifications of the American Assn. of State Highway Officials. Grading to meet provisions of American Lumber Standards. Defines limitations for uses of various species in sewer construction, methods of fencing, sheathing and shoring, temporary bridges, requirements for and depth of piling, equipment for driving piles, storage and handling of timber piles, and methods for determination of load bearing values.

*References.*—Requirement for piles irrespective of specie, *see* 401.40; preservative treatment, *see* 400.42.

### 401.5 SHIP'S KNEES

U. S. Gov., Navy Dept. Specification 39K2c; 1944. Knees; Boat and Ship.

### 401.6 CORDWOOD

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, 1938. Cordwood. Covers materials, definition of cord, actual measure, cutting, and specifications and standards.

Northern Hemlock and Hardwood Manufacturers Assn. Official Grading Rules for Northern Hardwood and Softwood and Cordwood, 1943. Gives general instructions, association inspection service, grading rules, and detail requirements for chemical cordwood.

Technical Assn. of the Pulp and Paper Industry. Physical Evaluation of Pulp Cord-Wood, Tentative Standard T 7 p-36; 1936. A determination of the quality of wood per commercial unit of volume. Covers apparatus, test specimen, procedure, calculations, report, and precision for methods A and B.

### 401.9 MISCELLANEOUS SPECIFICATIONS FOR RAW AND HEWN TIMBERS

Assn. of American Railroads, Telegraph and Telephone Section, 1-A-77; 1941. Creosoted Anchor Logs. For cedar and pine anchor logs for use in the communication plant. Gives general requirements, material and workmanship, marking, treatment, storage and handling, inspection, and warranty.

Northern Hemlock and Hardwood Manufacturers Assn. Official Grading Rules for Northern Hardwood and Softwood Logs, Tie Cuts, Box Bolts, Shingle Bolts, Chemical Logs, Bolts, and Cordwood, 1943. Gives general instructions, association log inspection service, grading rules, log scaling principles, and detail requirements for hardwood logs, aspen and softwood logs, tie cuts, box bolts, shingle bolts, chemical logs, chemical bolts, and chemical cordwood.

U. S. Gov., Federal Works Agency, Public Roads Administration. Specifications for Construction of Roads and Bridges in National Forests and National Parks,

as revised July 15, 1941; FP-41. Treated and Untreated Timber.

U. S. Gov., Navy Dept. Specification 6B14b; 1943. Buoys; Anchor, Spar.

U. S. Gov., Navy Dept. Specification 39 L 2d; 1943. Lignum-Vitae.

## 402. ROUGH LUMBER

### 402.1 SAWN STAKES AND CROSS ARMS

American Transit Assn. Specification for Overhead Line Material for Direct and Catenary Suspension, D102-39; 1939. Part of this specification refers to material used in catenary construction, simple suspension, utilizing poles with pole spacing of not more than 150 ft. and for voltages not exceeding 1,200 volts. It includes requirements for pole bracket arms, feed clamp, crossings, catenary hanger, insulator pins, and pole brackets.

American Transit Assn. Specification for Overhead Line Material for Direct and Catenary Suspension, D102-39; 1939. Wood for crossarms referred to in this specification shall conform to the current specification D100 for Untreated Wood Crossarms (Material) of the Edison Electric Institute.

Assn. of American Railroads, Telegraph and Telephone Section, 1-A-28; 1941. Douglas Fir Crossarms. For standard and special crossarms for steel and wood pins. Gives design and dimensions, material requirements, definitions, finish and seasoning, storage, inspection and tests, marking, and warranty.

Assn. of American Railroads, Telegraph and Telephone Section, 1-A-29; 1929. Treated Southern Yellow Pine Crossarms. Requirements for standard crossarms for steel and for wood pins, and for special pole line spacing, including finish, number of annual rings, slant of grain, allowable sapwood, defects and warp, dimensional drawings, and method of preservative treatment using A.P.E.A. grade one creosote.

Edison Electric Institute. Suggestions for Specifications for Type A Untreated Douglas Fir Crossarms, TD-61; 1940. For crossarms from standard crossarm stock. Gives requirements for material, limited defects, prohibited defects, inspection, rejections, storage, definitions, and dimensional drawing.

Edison Electric Institute. Suggestions for Specifications for Type B Untreated Douglas Fir Crossarms, TD-62; 1940. For crossarms made of dense select structural grade. Gives requirements for material, limited defects, prohibited defects, inspection, rejection, storage, definitions, and dimensional drawing.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, 1938. Crossarms; Douglas Fir. Covers wood, two grades, specifications, substitutes, and uses.

West Coast Lumbermen's Assn. Standard Grading and Dressing Rules for Douglas Fir, Sitka Spruce, West Coast Hemlock, Western Red Cedar Lumber, No. 11; 1942. Includes official trade and grade marks; general instructions; moisture-content provisions; definitions; thicknesses and widths; and grading rules for Douglas fir crossarm stock.

U. S. Gov., Dept. of Commerce, National Bureau of Standards, National Electrical Safety Code, H32; 1941. American Standards Assn., C2.2-1941. Safety Rules for the Installation and Maintenance of Electrical Supply and Communication Lines. For overhead lines, requirements on relative levels on pole of various classes of lines, on clearance between supporting structures and other objects, between wires and ground or rails, between crossing lines, between conductors of same line, climbing and working spaces, grades of construction, assumed loadings, strength requirements for various parts of line construction, requirements of insulators, tables of recommended normal sags of copper conductors, minimum permissible sags with tensions and stresses, etc. For crossarms of yellow pine or fir, permissible minimum cross-section dimensions.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-62-B; 1930. Crossarm; Wood, Telephone and Telegraph.

*References.*—Gage for bolt hole sizes in crossarms, *see* 615.82; grading rules for cypress, fir, pine, *see* 400.22, 400.23, 400.26; preservative treatment, *see* 400.4.

### 402.2 FENCING, GUARD RAILS, SCAFFOLDS, AND FALSE WORK

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering. Includes sizes, dimensions, and recommendations for fixed and portable wooden snow fences.

American Road Builders' Assn. Bulletin 53; 1938. Committee on Safe Highways—Report of Problem Committee on Guard Rail. Includes strength classifications, load resistance capacity for assembled guards, type classifications, panel lengths or post spacings, rail steel, rail strength, offset brackets and post rails, offset bracket test, end post attachment, rail joints, spring tensioning devices and their adjustments, end anchorage, intermediate anchorage and take-up, finish, post requirements for all type guards, recommendations for locations and positioning of guard rails, illustrations, and diagrammatic drawings.

Arkansas Soft Pine Bureau Standard Specifications for Arkansas Soft Pine Lumber, 1939. Includes square and flat wooden fence pickets, finish and standard dimensions.

California Redwood Assn. Standard Specifications, 1942. Battens, Pickets, Porch Rail and Other Millwork Items. Conforms to American Lumber standards. Gives requirements for grade A and better.

U. S. Gov., Federal Works Agency, Public Roads Administration. Specifications for Construction of Roads and Bridges in National Forests and National Parks, as revised July 15, 1941; FP-41. Cattle Guards and Hub-High Wood Guardrail.

*References.*—Redwood grading rules, *see* 400.27; pickets and palings, *see* 423.5.

### 402.3 WOOD BLOCKS FOR PAVEMENTS AND FLOORS

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering. Specifications for Buildings for Railroad Purposes: Creosoted Wood Block Pavements; and Wood Block Floors. Gives requirements for grading; subgrade; curb; gutter; kind, quality, and sizes of blocks; methods of laying (mortar bed, bituminous paint coat, and bituminous mastic cushion methods); and guarantee.

American Society For Testing Materials, D 52-20; 1920. Wooden Paving Blocks for Exposed Pavements. Describes woods to be treated, quality of timber, size of blocks, coal-tar pitch or other preservative, process of treating wood with preservative, and penetration of sapwood.

American Wood-Preservers' Assn., 16b; 1923. Standard Specifications for Creosoted Wood Block Street Paving. Gives requirements for timber, size of blocks, preservatives, treatment, handling blocks after treatment, inspection, foundation, expansion joints, filling the joints, open joint construction, maintenance, bituminous filler, free carbon test, and melting point test.

American Wood-Preservers' Assn., 19b; 1923. Standard Specification for Interior Creosoted Wood Block Flooring. Gives timber, size of blocks, preservatives, treatment, handling blocks after treatment, inspection, sub-grade, foundation, laying the blocks, bituminous filler, and melting point test.

*References.*—Preservative treatments, *see* 400.4; road construction; *see* 516.1, 516.2, 516.3; bituminous fillers, *see* 505.15; sand filler, *see* 512.16.

## 402.4 YARD LUMBER

*References.*—American Lumber Standards for softwood yard lumber, *see* 400.0; other yard lumber, *see* 411; structural and factory lumber, *see* 412, 413.

### 402.41 Strips

Arkansas Soft Pine Bureau. Standard Specifications for Arkansas Soft Pine Lumber, 1939. Includes strips, defects, nominal and dressed dimensions for four classes of yard and industrial lumber, moisture content and finish in conformity with American Lumber Standards.

California Redwood Assn. Standard Specifications, 1942. Strips. Conforms to American Lumber Standards. Gives requirements for rough and dressed sizes.

Southern Pine Inspection Bureau of the Southern Pine Assn. Standard Specifications for Southern Pine Lumber, 1939. Includes general instructions, definitions, general grading provisions, specifications, and grading rules for strips.

*References.*—American Lumber Standards for softwood strips, *see* 400.0; grades for boards, *see* 402.42.

### 402.42 Boards

Arkansas Soft Pine Bureau. Standard Specifications for Arkansas Soft Pine Lumber, 1939. Includes common boards, defects, nominal and dressed dimensions for four grades in conformity with American Lumber Standards, and gives moisture content requirements. Available in rough surfaced, shiplap, dressed and matched, beaded or V'd standard workings.

California Redwood Assn. Standard Specifications, 1942. Common Boards. Conforms to American Lumber Standards. Gives requirements for rough and dressed sizes.

Southern Pine Inspection Bureau of the Southern Pine Assn. Standard Specifications for Southern Pine Lumber, 1939. Includes general instructions, definitions, general grading provisions, specifications, and grading rules for boards.

Southern Pine Inspection Bureau of the Southern Pine Assn. The Gulf Coast Classification of Pitch Pine Resawn Lumber and Sawn Timber, 1923. Includes list of defects, general rules, and grading rules for boards.

West Coast Lumbermen's Assn. Standard Grading and Dressing Rules for Douglas Fir, Sitka Spruce, West Coast Hemlock, Western Red Cedar Lumber, No. 11; 1942. Includes official trade and grade marks; general instructions; moisture content provisions; definitions; thicknesses and widths; and grading rules for Douglas fir, West Coast hemlock, Sitka spruce, and Western red cedar boards.

*References.*—American Lumber Standards for softwood boards, *see* 400.0; other shipping crate specifications, *see* 954-36; wooden boxes, *see* 953.3; finish, *see* 411-43; plank, *see* 412.1; shop and factory board, *see* 413; strips, *see* 402.41.

### 402.43 Dimension Lumber

California Redwood Assn. Standard Specifications, 1942. Dimension Boards. Conforms to American Lumber Standards. Gives requirements for rough and dressed sizes.

Northern Hemlock and Hardwood Manufacturers Assn. Official Grading Rules for Hemlock and Tamarack Lumber and White Cedar Shingles, 1941. Conform to American Lumber Standards. Includes official grade, trade, and species marks; official shipper's certificates; official grading rules for hemlock and tamarack lumber, including yard and industrial size standards; description, measurement, and tally; inspection and shipping provisions; definitions of defects; rules for grading yard lumber, finishing lumber, and dimension or piece stuff. Officially adopted by the Northeastern Lumber Manufacturers Assn., Inc., for the grading of hemlock and tamarack produced in New York, Pennsylvania, and the New England States.

Northern Hemlock and Hardwood Manufacturers Assn. Official Grading Rules for Northern (Genuine) White Pine, Norway Pine, and Eastern Spruce, 1941. Conform to American Lumber Standards. Variations from American Lumber Standards are noted. Includes official grade, trade, and species marks; official shipper's certificates; general grading instructions; sizes, measurements, and tally; inspection and shipping provisions; definitions of terms describing grades; association standard grades for dimension and timber.

Southern Pine Inspection Bureau of the Southern Pine Assn. Standard Specifications for Southern Pine Lumber, 1939. Includes general instructions, definitions, general grading provisions, specifications, and grading rules for dimension lumber.

West Coast Lumbermen's Assn. Standard Grading and Dressing Rules for Douglas Fir, Sitka Spruce, West Coast Hemlock, Western Red Cedar Lumber, No. 11; 1942. Includes official trade and grade marks; general instructions; moisture content provisions; definitions; thicknesses and widths; and grading rules for Douglas fir, West Coast hemlock, Sitka spruce, and Western red cedar dimension.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Commercial Standard CS60-36; 1936. Hardwood Dimension Lumber. Hardwood dimension lumber, as covered by this standard, is defined as kiln-dried hardwoods processed to a point where the maximum waste

is left at the dimension mill, and the maximum utility delivered to the user. It sets forth general requirements relative to seasoning, gluing, and workmanship; detail requirements covering grades of flat stock and squares; standard measurement methods; tolerances and inspection; recommended uses of various grades, control of moisture content, and shrinkage of wood. Included, also, is a facsimile of a guarantee certificate to be used by manufacturers in extending to purchasers assurance of the quality of lumber. Sponsored by the Hardwood Dimension Manufacturers Assn.

*References.*—American Lumber Standards for softwood dimension lumber, *see* 400.0; hardwood grading rules, *see* 400.3; structural timbers, *see* 412.1, 412.9; plank, *see* 412.1; furniture dimension stock, *see* 413.53.

## 402.5 LATHS AND SHINGLES

### 402.51 Lath

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering. Specifications for Buildings for Railroad Purposes: Lathing and Plastering. Gives requirements for wood lath and lathing.

Arkansas Soft Pine Bureau. Standard Specifications for Arkansas Soft Pine Lumber, 1939. Includes two grades of common wood lath, dimensions, and permissible defects; also for Byrkit lath, with dimensional diagram of form.

California Redwood Assn. Standard Specifications, 1942. Wood Lath. Conforms to American Lumber Standards. Gives requirements for one grade as to quality and standard dimensions.

Contracting Plasterers' International Assn. Standard Specification. Includes requirements for wood lath.

Northern Hemlock and Hardwood Manufacturers Assn. Official Grading Rules for Hemlock and Tamarack Lumber and White Cedar Shingles, 1941. Conform to American Lumber Standards. Includes official grade, trade, and species marks; official shipper's certificates; rules for grading Bykrit lath and hemlock lath; and standard planing mill patterns for Bykrit lath.

Northern Hemlock and Hardwood Manufacturers Assn. Official Grading Rules for Northern (Genuine) White Pine, Norway Pine, and Eastern Spruce, 1941. Conform to American Lumber Standards. Variations from American Lumber Standards are noted. Includes official grade, trade, and species marks; official shipper's certificates; general grading instructions; sizes, measurements, and tally; inspection and shipping provisions; definitions of terms describing grades; association standard grades for lath.

Southern Pine Inspection Bureau of the Southern Pine Assn. Standard Specifications for Southern Pine Lumber, 1939. Includes general instructions, definitions, general grading provisions, specifications, and grading rules for Byrkit and plastering lath.

West Coast Lumbermen's Assn. Standard Grading and Dressing Rules for Douglas Fir, Sitka Spruce, West Coast Hemlock, Western Red Cedar Lumber, No. 11; 1942. Includes official trade and grade marks; general instructions; moisture content provisions; definitions; thicknesses and widths; and grading rules for Douglas fir, West Coast hemlock, Sitka spruce, and Western red cedar lath.

Western Pine Assn. Standard Grading Rules for Ponderosa Pine, Sugar Pine, Idaho White Pine, Larch-Douglas Fir, White Fir, Engelmann Spruce, Incense Cedar and Red Cedar Lumber, 1939. Includes official grade, trade, and species marks; general instructions, measurements, and tally; definitions of defects; reinspection; and requirements for lath—all species.

*References.*—American Lumber Standards for Byrkit lath, *see* 400.0; lathing practice; *see* 514.83; metal lath, *see* 805.24.

### 402.52 Shingles

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering. Specifications for Buildings for Railroad Purposes: Carpentry and Millwork. Gives requirements for shingles.

California Redwood Assn. Standard Specifications, 1942. Shingles. Rules for manufacture, grading, packing, labeling, and inspection. Conforms to American Lumber Standards. Gives requirements for dimension shingles. Shall conform to the requirements of Simplified Practice Recommendation R16-39 and Commercial Standard CS 31-38 of the Dept. of Commerce, National Bureau of Standards.

Northern Hemlock and Hardwood Manufacturers Assn. Official Grading Rules for Hemlock and Tamarack Lumber and White Cedar Shingles, 1941. Conform to American Lumber Standards. Includes official grade, trade, and species marks; official shipper's certificates; and rules for grading white cedar shingles.

Red Cedar Shingle Bureau. Certigrade Handbook of Red Cedar Shingles, 1940. Covers manufacture, seasoning, and storage of shingles and description; use recommendations for 16-in., 18-in., and 24-in. shingles; discussion of grades; sizes and packing rules; recommended practices in the application of certigrade shingles; master specifications covering sheathing boards, roofers, sheathing paper, shingles, hips and ridges, valleys, nails and nailing, and flashings; and table of covering capacities of certigrade shingles.

Red Cedar Shingle Bureau. Grading and Packing Rules for Certigrade Red Cedar Shingles, 1939. Covers three grades, No. 1, No. 2, and No. 3, for 16-in. (XXXXX), 18-in. (Perfections), and 24-in. (Royals) in random width shingles, and for 24-in., 18-in., and 16-in. dimension shingles; summary of sizes, packing rules, running inches, and shipping weights; covering capacities per bundle in square feet of the various sized shingles; and general rules. Conform to U. S. Dept. of Commerce, National Bureau of Standards CS 31-38.

Red Cedar Shingle Bureau. Lumber Grade-Use Guide Pamphlet XVII; 1943. Endorsed by the National Lumber Manufacturers Assn. Western Red Cedar Shingles. Covers advantages, service, over-roofing, protection, uses, insulation, modernizing, proper nails, covering capacity for various exposures, grading and packing rules, construction details, exposure tables for roofs and sidewalls, and recommended practices in applying.

Southern Pine Inspection Bureau of the Southern Pine Assn. Standard Specifications for Southern Pine

Lumber, 1939. Includes general instructions, definitions, general grading provisions, specifications, and grading rules for shingles.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R16-39; 1939. Lumber (American Lumber Standards for Softwood Lumber). Shingles. Thin lumber tapered lengthwise, used overlapped on roofs and side walls with a definite portion of the length exposed to the weather. Covers grade and size standards, and packing and shipping provisions. Initiated by the Central Committee on Lumber Standards and the National Lumber Manufacturers Assn.

U.S. Gov., Dept. of Commerce, National Bureau of Standards Commercial Standard CS31-38; 1938. Wood Shingles; Red Cedar, Tidewater Red Cypress, California Redwood. This quality standard provides a minimum specification for the highest commercial grade of sawn wood shingles of the above species known as "No. 1 grade" in American Lumber Standards and as published in the 1933 Supplement to Simplified Practice Recommendation R16-29. It covers length, width, thickness, grain, characteristics, color, packing, and the grading tolerances for these requirements. It includes also glossary of terms and a facsimile of label to be used on each bundle of grade 1 shingles. Initiated by California Redwood Assn., Red Cedar Shingle Bureau, and Southern Cypress Manufacturers Assn.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Building Materials and Structures Report BMS6; 1938. Survey of Roofing Materials in the Southeastern States. A survey of the weathering qualities and extent of use of the various roofing materials on dwellings in the Southeastern States is described. Detailed studies of roofing materials in Greensboro, N. C.; Columbia, S. C.; Savannah and Atlanta, Ga.; Jacksonville and Orlando, Fla.; Birmingham, Ala.; Knoxville, Tenn.; and Charleston, W. Va., are reported. A tabulation, by states, of the kinds of roofing materials used on more than 10,000 rural and small-town dwellings, along approximately 2,500 miles of highway, is included. Forty-eight photographs, illustrating types of weathering of roofing materials and features of design and construction of roofs, are shown.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Building Materials and Structures Report BMS29; 1939. Survey of Roofing Materials in the Northeastern States. A survey of the weathering qualities and extent of use of the various roofing materials on dwellings in the Northeastern States is described, with numerous comparative references to a similar survey in the Southeastern States. Detailed studies of roofing materials in Wilmington, Del.; Philadelphia, Pa.; New Haven, Conn.; Boston, Mass.; Manchester, N. H.; Portland, Maine; Rutland, Vt.; and Albany and Syracuse, N. Y., are reported. A tabulation, by states, of the kinds of roofing materials used on more than 10,000 rural and small-town dwellings, along approximately 1,800 miles of highway between the cities listed above, is included; also a summary of the kinds of roofing materials used on almost 21,000 rural and small-town dwellings along 4,000 miles of highway in 20 Eastern States. Forty-eight photographs, illustrating types of weathering of roofing materials and features of design and construction of roofs, are shown.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Building Materials and Structures Report BMS75; 1941. Survey of Roofing Materials in the North Central States. A survey of the weathering qualities and extent of use of the various roofing materials on dwellings in the North Central States is described, with numerous references to similar surveys made previously in the Southeastern and Northeastern States. Detailed studies of roofing materials in Pittsburgh, Pa.; Cincinnati and Toledo, Ohio; Grand Rapids and Lansing, Mich.; Chicago, Ill.; Milwaukee, Wis.; St. Paul, Minn.; Bismarck, N. Dak.; Sioux Falls, S. Dak.; Omaha, Nebr.; Kansas City, Moberly, and St. Louis, Mo.; and Indianapolis, Ind., are reported. A tabulation, by states, of the kinds of roofing materials used on more than 8,000 rural and small-town dwellings, along approximately 3,000 miles of highway between the cities listed above, is included; also a summary of the kinds of roofing materials used on almost 29,000 rural and small-town dwellings along 7,000 miles of highway in the 32 States covered by the three surveys. Forty-eight photographs, illustrating type of weathering of roofing materials, and features of design and construction of roofs, are shown.

*References.*—Asphalt shingles, *see* 505.16.

## 402.6 STRUCTURAL TIMBERS AND SHOP LUMBER

*References.*—Structural timbers, shop lumber, *see* 412, 413.

## 402.7 SOFTWOOD LUMBER SPECIFICATIONS

*References.*—Softwood grading rules, *see* 400.2; structural timbers, *see* 412.

## 402.70 General Items

## 402.8 HARDWOOD LUMBER SPECIFICATIONS

U. S. Gov., Federal Specification MM-L-736; 1935. Amendment 3; 1944. Lumber and Timber; Hardwood. Hardwood factory lumber (i.e., standard grades of firsts and seconds, selects, No. 1 common, No. 2 common, sound wormy, No. 3A common, and No. 3B common) and hardwoods for construction work shall conform to the Rules for the Measurement and Inspection of Hardwood Lumber of the National Hardwood Lumber Assn. In cases where lumber of a special width, length, or thickness is needed, such lumber shall conform to the standard grades of the National Hardwood Lumber Assn. except in the matter of width, length, and thickness.

*References.*—Hardwood grading rules, *see* 400.3; structural timbers, *see* 412.

## 402.9 MISCELLANEOUS SPECIFICATIONS FOR SAWN LUMBER

U. S. Gov., Federal Works Agency. Public Roads Administration. Specifications for Construction of Roads and Bridges in National Forests and National Parks, FP-41. Treated and Untreated Timber.

U. S. Gov., Navy Dept. Specification 39-I-1; 1944. Iroko.

*References.*—Veneer and furniture stock, *see* 413.52, 413.53.

# 403. SURFACED AND WORKED LUMBER

### 403.1 DRESSED LUMBER

*References.*—Dressed lumber, *see* 411,413.

### 403.2 MATCHED, SHIP-LAPPED, AND PATTERNED LUMBER

Arkansas Soft Pine Bureau. Standard Specifications for Arkansas Soft Pine Lumber, 1939. Includes log cabin siding made from and graded under standard dimension, with shiplap or dressed and matched joints, and cut oval exposed face.

*References.*—Matched, ship-lapped, and patterned lumber, *see* 411, 413.

## 404. LUMBER FOR PRESERVATIVE TREATMENT

### 404.0 GENERAL ITEMS

American Wood-Preservers' Assn., 2d; 1942. Standard Recommendations for the Purchase and Preservation of Forest Products. Gives general requirements, treatment, results of treatment, preservatives, inspection, and care after treatment.

*References.*—Preservative treatment of lumber, *see* 400.4.

# 410-419 LUMBER FOR BUILDING AND FACTORY USE

## 411. YARD LUMBER FOR GENERAL BUILDING PURPOSES

### 411.0 GENERAL ITEMS

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering. Specifications for Buildings for Railroad Purposes: Carpentry and Millwork. Gives requirements for sheathing, siding, flooring, furring, grounds, and finish and trim.

National Lumber Manufacturers Assn. Wood Structural Design Data, Volume 1; 1941. Includes table of rough and dressed sizes of American standard yard lumber and timbers and table of properties of American standard lumber sizes giving area of section, moment of inertia, section modulus, board feet per lineal foot, and weight per lineal foot for woods of various weights.

Southern Pine Inspection Bureau of the Southern Pine Assn. Standard Specifications for Southern Pine Lumber; 1939. Includes general instructions, definitions, general grading provisions, specifications, and grading rules for yard lumber.

West Coast Lumbermen's Assn. Standard Grading and Dressing Rules for Douglas Fir, Sitka Spruce, West Coast Hemlock, Western Red Cedar Lumber, No. 11; 1942. Includes official trade and grade marks; general instructions; moisture content provisions; definitions; thicknesses and widths; and grading rules for Douglas fir, West Coast hemlock, Sitka spruce, and Western red cedar yard lumber.

Western Pine Assn. Standard Grading Rules for Ponderosa Pine, Sugar Pine, Idaho White Pine, Larch-Douglas Fir, White Fir, Engelmann Spruce, Incense Cedar and Red Cedar Lumber; 1939. Includes official grade, trade, and species marks; general instructions, measurements, and tally; definitions of defects; reinspection; and grading rules for yard lumber—all species.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R16-39; 1939. Lumber (American Lumber Standards for Softwood Lumber). Yard Lumber. Lumber manufactured and classified into those sizes, shapes, and qualities required for ordinary construction and general-purpose use. Provides grade and size standards, description of the dimensions of lumber, workings and moldings. Initiated by the Central Committee on Lumber Standards and the National Lumber Manufacturers Assn.

U. S. Gov., Federal Specification MM-L-751c; 1942. Amendment 1; 1944. Lumber and Timber; Softwood. Covers the principal species of softwood grown in the United States; the three classes of softwood lumber and timber—yard lumber, structural material, and factory and shop lumber—and the grades in the current grading rules of the various associations of softwood lumber manufacturers that conform to American Lumber Standards.

U. S. Gov., Federal Works Agency. Public Roads Administration. Specifications for Construction of Roads and Bridges in National Forests and National Parks, FP-41. Treated and Untreated Timber.

### 411.1 SIDING

Arkansas Soft Pine Bureau. Standard Specifications for Arkansas Soft Pine Lumber, 1939. Includes drop and bevel siding, dimensions of standard patterns, in plain and end-matched, in conformity with American Lumber Standards.

California Redwood Assn. Standard Patterns of Worked Redwood Lumber. Pattern Book 738; 1941. Includes drop and bevel sidings, cove rustic, and round edge, bungalow, economy, anzac, and log cabin siding, with dimensional diagrams for each pattern.

California Redwood Assn. Standard Specifications, 1942. Siding, Bevel, Bungalow, Colonial, and Drop. Conforms to American Lumber Standards. Gives requirements for rough and dressed sizes, for Clear All Heart and A and B grades.

Northern Hemlock and Hardwood Manufacturers Assn. Official Grading Rules for Hemlock and Tamarack Lumber, and White Cedar Shingles, Conform to American Lumber Standards, 1941. Includes official grade, trade, and species marks; official shipper's certificates; official grading rules for hemlock and tamarack lumber, including yard and industrial size standards; description, measurement, and tally; inspection and shipping provisions; definitions of defects; rules for grading yard lumber, finishing lumber, and drop siding and bevel siding; and standard planing mill patterns for drop siding. Officially adopted by the Northeastern Lumber Manufacturers Assn., Inc., for the grading of hemlock and tamarack produced in New York, Pennsylvania, and the New England States.

Northern Hemlock and Hardwood Manufacturers Assn. Official Grading Rules for Northern (Genuine) White Pine, Norway Pine, and Eastern Spruce, conform to American Lumber Standards, 1941. Variations from

American Lumber Standards are noted. Includes official grade, trade, and species marks; official shipper's certificates; general grading instructions; sizes, measurements, and tally; inspection and shipping provisions; definitions of terms describing grades; association standard grades for bevel siding and drop siding.

Southern Pine Inspection Bureau of the Southern Pine Assn. Standard Specifications for Southern Pine Lumber, 1939. Includes general instructions; definitions; general grading provisions; specifications and grading rules for bevel, barn, log cabin, and drop siding.

West Coast Lumbermen's Assn. Standard Grading and Dressing Rules for Douglas Fir, Sitka Spruce, West Coast Hemlock, Western Red Cedar Lumber, No. 11; 1942. Includes official trade and grade marks; general instructions; moisture content provisions; definitions; thicknesses and widths; and grading rules for Douglas fir, West Coast hemlock, Sitka spruce, and Western red cedar bevel and drop and rustic siding.

Western Pine Assn. Standard Grading Rules for Ponderosa Pine, Sugar Pine, Idaho White Pine, Larch-Douglas Fir, White Fir, Engelmann Spruce, Incense Cedar and Red Cedar Lumber, 1939. Includes official grade, trade, and species marks; general instructions, measurements, and tally; definitions of defects; reinspection; and requirements for bevel, bungalow, and colonial siding.

*References.*—American Lumber Standards for softwood siding, *see* 411.0.

## 411.2 FLOORING

### 411.21 Cedar Flooring

West Coast Lumbermen's Assn. Standard Grading and Dressing Rules for Douglas Fir, Sitka Spruce, West Coast Hemlock, Western Red Cedar Lumber, No. 11; 1942. Includes official trade and grade marks, general instructions, moisture content provisions, definitions, thicknesses and widths, and grading rules for Western red cedar flooring.

*References.*—American Lumber Standards for softwood flooring, *see* 411.0.

### 411.22 Cypress Flooring

*References.*—American Lumber Standards for softwood flooring, *see* 411.0.

### 411.23 Fir and Douglas Fir Flooring

West Coast Lumbermen's Assn. Standard Grading and Dressing Rules for Douglas Fir, Sitka Spruce, West Coast Hemlock, Western Red Cedar Lumber, No. 11; 1942. Includes official trade and grade marks; general instructions; moisture content provisions; definitions; thicknesses and widths; and grading rules for Douglas fir flooring.

Western Pine Assn. Standard Grading Rules for Ponderosa Pine, Sugar Pine, Idaho White Pine, Larch-Douglas Fir, White Fir, Engelmann Spruce, Incense Cedar and Red Cedar Lumber, 1939. Includes official grade, trade, and species marks; general instructions, measurements, and tally; definitions of defects; reinspection; and grade requirements for industrial flooring and decking.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Building Materials and Structures Report BMS14; 1939. Indentation and Recovery of Low-Cost Floor Coverings. Indentation and recovery determinations for loads ranging from 25 lb. to 200 lb. on a flat-ended pin 1/4 in. in diameter were made on 23 floor coverings at a relative humidity of 65 percent and temperature of 72° F. Indentation readings were taken for each load at intervals of time up to 30 min. and then recovery readings at intervals of time up to 120 min. Various types of floor coverings were tested, such as asphalt tile, pressed fiberboard, linoleums, felt-base floor coverings having various wearing surfaces, rubber, and wood. A description of the apparatus and the procedure used are given. The results are presented in graphic form to show the relative merits of the various floor coverings with respect to initial and 30-min. indentation under various loads and the recovery after removal of the load.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Building Materials and Structures Report BMS68; 1941. Performance Test of Floor Coverings for Use in Low-Cost Housing: Part 3. A performance test was conducted in the floor-testing chamber of the National Bureau of Standards on a third series of 40 test installations. Included in the test were linoleums in sheet and tile form, cork-composition tile, sheet rubber, rubber tile, asphalt tiles, fiberboard tiles, felt-base floor coverings having various wearing surfaces, three monolithic floors, and a number of wood floors. The bonding agents used included lignin pastes, cumar resin cement, alumina cement-latex paste, rubber cements, various asphaltic adhesives, and nails. Installations were made on concrete, stripwood, and plywood subfloors. Installations on stripwood subfloors were made with underlays of dry and asphalt-saturated lining felts. Descriptions of the testing equipment and test installations are given. Results showing the relative depth of the depressions in the floor coverings during the test are presented in tables. Brief summaries of the manner in which the various test installations performed are given, and photographs of the test panels after 48,000 cycles of the testing equipment are shown.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Building Materials and Structures Report BMS73; 1941. Indentation Characteristics of Floor Coverings. The indentation characteristics of 64 floor coverings were determined. Tests were conducted on specimens conditioned in an atmosphere of 65-percent relative humidity and 72° F. temperature, on specimens after exposure to accelerated aging, and on specimens at an elevated temperature of 90° F. The floor coverings tested included such general types as linoleum, cork, rubber, felt base, asphalt, wood, fiberboard, and monolithic compositions. Variations in composition and thickness were included in many of the types. The apparatus and the procedure are briefly described. Summaries of the results are present to show the relative merits of the various floor coverings with respect to comfort value and permanent indentation.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Building Materials and Structures Report BMS80; 1942. Performance Test of Floor Coverings for Use in Low-Cost Housing: Part 4. A performance test was conducted in the floor-testing chamber of the National Bureau of Standards on a fourth series of 40 different installations involving 26 different floor coverings. Specimens of most of the floor coverings were installed on both a concrete and a wood subfloor. Included in the test were work tiles, rubber tile containing aluminum oxide aggregate, asphalt tile, marbleized linoleums, felt-backed floor coverings having various wearing surfaces, strip maples, maple unit-block, pecan unit-block, asphalt mastic, coal-tar mastic, alumina cement-rubber latex composition, magnesium oxychloride composition, and 1:2:4 Portland cement concrete. Different underlays and adhesives were also included in the test. The test installations are described and results showing the depth of the depressions in the floor coverings made by the equipment are presented in tables. Brief summaries of the manner in which the various installations performed are given, and their appearance at the end of the test is shown by photographs. A few generalized comments and conclusions are made.

## 411.24 Hemlock Flooring

Northern Hemlock and Hardwood Manufacturers Assn. Official Grading Rules for Hemlock and Tamarack Lumber and White Cedar Shingles, Conform to American Lumber Standards, 1941. Includes official grade, trade, and species marks; official shipper's certificates; official grading rules for hemlock and tamarack lumber, including yard and industrial size standards; description, measurement, and tally; inspection and shipping provisions; definitions of defects; rules for grading yard lumber, finishing lumber, and flooring; and standard planing mill patterns for flooring. Officially adopted by the Northeastern Lumber Manufacturers Assn., Inc., for the grading of hemlock and tamarack produced in New York, Pennsylvania, and the New England States.

Northern Hemlock and Hardwood Manufacturers Assn. Official Grading Rules for Northern (Genuine) White Pine, Norway Pine, and Eastern Spruce, Conform to American Lumber Standards, 1941. Variations from American Lumber Standards are noted. Includes official grade, trade, and species marks; official shipper's certificates; general grading instructions; sizes, measurements, and tally; inspection and shipping provisions; definitions of terms describing grades; association standard grades for flooring.

West Coast Lumbermen's Assn. Standard Grading and Dressing Rules for Douglas Fir, Sitka Spruce, West Coast Hemlock, Western Red Cedar Lumber, No. 11; 1942. Includes official trade and grade marks; general instructions; moisture content provisions; definitions; thicknesses and widths; and grading rules for West Coast hemlock flooring.

*References.*—American Lumber Standards for softwood flooring, *see* 411.0.

## 411.25 Maple Flooring

Maple Flooring Manufacturers Assn. Grading Rules for Northern Hard Maple (Acer Saccharum), Beech, and Birch Flooring, 1941. Includes description of individual characteristics of Northern hard maple and of Northern beech and birch floorings; grading rules for First, Second, Third, and three Special grades; standard measurements; kiln-drying; end matching; custom in bundling; thicknesses and faces; rules for estimating quantity of flooring required; grade-use recommendations; and uses of different thicknesses.

National Oak Flooring Manufacturers' Assn. Official Flooring Grading Rules, effective Nov. 8, 1943. Birch, Beech, and Hard Maple. Gives requirements for first grade, second grade, third grade, victory grade, special grades, standard sizes, counts and weights, special thicknesses, jointed flooring, general rules, rules governing re-inspections, and how to arrive at the amount of hardwood flooring required.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Building Materials and Structures Report BMS14; 1939. Indentation and Recovery of Low-Cost Floor Coverings. Indentation and recovery determinations for loads ranging from 25 lb. to 200 lb. on a flat-ended pin 1/4 in. in diameter were made on 23 floor coverings at a relative humidity of 65 percent and temperature of 72° F. Indentation readings were taken for each load at intervals of time up to 30 min. and then recovery readings at intervals of time up to 120 min. Various types of floor coverings were tested, such as asphalt tile, pressed fiberboard, linoleums, felt-base floor coverings having various wearing surfaces, rubber, and wood. A description of the apparatus and the procedure used are given. The results are presented in graphic form to show the relative merits of the various floor coverings with respect to initial and 30-min. indentation under various loads and the recovery after removal of the load.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Building Materials and Structures Report BMS34; 1940. Performance Test of Floor Coverings for Use in Low-Cost Housing: Part 1. A performance test was conducted in the floor-testing chamber of the National Bureau of Standards on 40 different test installations involving 12 floor coverings and 11 adhesives. The floor coverings tested included several kinds of lineoleum, felt-base floor coverings having various wearing surfaces, pressed fiberboard, and three stripwood floors. The bonding agents used included lignin pastes, various resinous cements, casein-latex cement, asphaltic cements, and nails. Installations on both a concrete subfloor and a wood subfloor were tested. Descriptions of the testing equipment and test installations are given. Results showing the relative magnitude of the depressions in the floor coverings caused by the testing equipment are summarized and presented in tables. The appearance of the various installations after 48,000 cycles of the testing equipment is discussed and representative photographs are shown.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Building Materials and Structures Report BMS43; 1940. Performance Test of Floor Coverings for Use in Low-Cost Housing: Part 2. In the second series, 40 installations were subjected to a performance test in the floor-testing chamber of the National Bureau of Standards. Included in the tests were battleship linoleum, rubber in sheet and tile

form, felt-base floor coverings having various wearing surfaces, three monolithic floors, and a number of asphalt tiles. The bonding agents used included lignin pastes, resinous cements, latex adhesives, rubber cements, cut-back asphalt, and asphalt emulsions. Installations were made on both concrete and wood subfloors. Descriptions of the testing equipment and test installations are given. Results showing the relative depth of the depressions in the floor coverings during the test are presented in tables. Brief summaries showing the performance of the test panels are given, and the appearance of the different floor coverings after 48,000 cycles of the testing equipment is shown by representative photographs.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Building Materials and Structures Report BMS68; 1941. Performance Test of Floor Coverings for Use in Low-Cost Housing: Part 3. A performance test was conducted in the floor-testing chamber of the National Bureau of Standards on a third series of 40 test installations. Included in the test were linoleums in sheet and tile form, cork-composition tile, sheet rubber, rubber tile, asphalt tiles, fiberboard tiles, felt-base floor coverings having various wearing surfaces, three monolithic floors, and a number of wood floors. The bonding agents used included lignin pastes, cumar resin cement, alumina cement-latex paste, rubber cements, various asphaltic adhesives, and nails. Installations were made on concrete, stripwood, and plywood subfloors. Installations on stripwood subfloors were made with underlays of dry and asphalt-saturated lining felts. Descriptions of the testing equipment and test installations are given. Results showing the relative depth of the depressions in the floor coverings during the test are presented in tables. Brief summaries of the manner in which the various test installations performed are given, and photographs of the test panels after 48,000 cycles of the testing equipment are shown.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Building Materials and Structures Report BMS73; 1941. Indentation Characteristics of Floor Coverings. The indentation characteristics of 64 floor coverings were determined. Tests were conducted on specimens conditioned in an atmosphere of 65-percent relative humidity and 72° F. temperature, on specimens after exposure to accelerated aging, and on specimens at an elevated temperature of 90° F. The floor coverings tested included such general types as linoleum, cork, rubber, felt base, asphalt, wood, fiberboard, and monolithic compositions. Variations in composition and thickness were included in many of the types. The apparatus and the procedures are briefly described. Summaries of the results are presented to show the relative merits of the various floor coverings with respect to comfort value and permanent indentation.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Building Materials and Structures Report BMS80; 1942. Performance Test of Floor Coverings for Use in Low-Cost Housing: Part 4. A performance test was conducted in the floor-testing chamber of the National Bureau of Standards on a fourth series of 40 different installations involving 26 different floor coverings. Specimens of most of the floor coverings were installed on both a concrete and a wood subfloor. Included in the test were cork tiles, rubber tile containing aluminum oxide aggregate, asphalt tile, marbleized linoleums, felt-backed floor coverings having various wearing surfaces, strip maples, maple unit-block, pecan unit-block, asphalt mastic, coal-tar mastic, alumina cement-rubber latex composition, magnesium oxychloride composition, and 1:2:4 Portland cement concrete. Different underlays and adhesives were also included in the test. The test installations are described and results showing the depth of the depressions in the floor coverings made by the equipment are presented in tables. Brief summaries of the manner in which the various installations performed are given, and their appearance at the end of the test is shown by photographs. A few generalized comments and conclusions are made.

U. S. Gov., Federal Specification MM-L-736; 1935. Amendment 3; 1944. Lumber and Timber; Hardwood. Maple, birch, and beech flooring shall conform to the rules of the Maple Flooring Manufacturers' Assn., or to the rules of the National Oak Flooring Manufacturers' Assn. In cases where lumber of a special width, length, or thickness is needed, such lumber shall conform to the standard grades of the National Hardwood Lumber Assn. except in the matter of width, length, and thickness.

*References.*—American Lumber Standards for softwood flooring, *see* 411.0; hardwood grading rules, *see* 400.3.

## 411.26 Oak Flooring

National Oak Flooring Manufacturers' Assn. Official Flooring Grading Rules, effective Nov. 8, 1943. Oak. Gives requirements for quarter-sawed and plain-sawed, standard thicknesses and widths, square edge strip flooring, standard counts and weights, general rules, rules governing re-inspections, and how to arrive at the amount of hardwood flooring required.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Commercial Standard CS56-41; 1941. Oak Flooring. This standard provides minimum specifications for three grades of quarter-sawed and four grades of plain-sawed white oak and red oak flooring. It covers standard dimensions for length, width, and thickness of tongue-and-grooved, and square-edged strip flooring. It also covers defects, bundling, inspection, and a method of certifying compliance with the standards. Initiated by National Oak Flooring Manufacturers Assn.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Building Materials and Structures Report BMS14; 1939. Indentation and Recovery of Low-Cost Floor Coverings. Indentation and recovery determinations for loads ranging from 25 lb. to 200 lb. on a flat-ended pin 1/4 in. in diameter were made on 23 floor coverings at a relative humidity of 65 percent and temperature of 72° F. Indentation readings were taken for each load at intervals of time up to 30 min. and then recovery readings at intervals of time up to 120 min. Various types of floor coverings were tested, such as asphalt tile, pressed fiberboard, linoleums, felt-base floor coverings having various wearing surfaces, rubber, and wood. A description of the apparatus and the procedure used

are given. The results are presented in graphic form to show the relative merits of the various floor coverings with respect to initial and 30-min. indentation under various loads and the recovery after removal of the load.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Building Materials and Structures Report BMS34; 1940. Performance Test of Floor Coverings for Use in Low-Cost Housing: Part 1. A performance test was conducted in the floor-testing chamber of the National Bureau of Standards on 40 different test installations involving 12 floor coverings and 11 adhesives. The floor coverings tested included several kinds of linoleum, felt-base floor coverings having various wearing surfaces, pressed fiberboard, and three stripwood floors. The bonding agents used included lignin pastes, various resinous cements, casein-latex cement, asphaltic cements, and nails. Installations on both a concrete subfloor and a wood subfloor were tested. Descriptions of the testing equipment and test installations are given. Results showing the relative magnitude of the depressions in the floor coverings caused by the testing equipment are summarized and presented in tables. The appearance of the various installations after 48,000 cycles of the testing equipment is discussed and representative photographs are shown.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Building Materials and Structures Report BMS68; 1941. Performance Test of Floor Coverings for Use in Low-Cost Housing: Part 3. A performance test was conducted in the floor-testing chamber of the National Bureau of Standards on a third series of 40 test installations. Included in the test were linoleums in sheet and tile form, cork-composition tile, sheet rubber, rubber tile, asphalt tiles, fiberboard tiles, felt-base floor coverings having various wearing surfaces, three monolithic floors, and a number of wood floors. The bonding agents used included lignin pastes, cumar resin cement, alumina cement-latex paste, rubber cements, various asphaltic adhesives, and nails. Installations were made on concrete, stripwood, and plywood subfloors. Installations on stripwood subfloors were made with underlays of dry and asphalt-saturated lining felts. Descriptions of the testing equipment and test installations are given. Results showing the relative depth of the depressions in the floor coverings during the test are presented in tables. Brief summaries of the manner in which the various test installations performed are given, and photographs of the test panels after 48,000 cycles of the testing equipment are shown.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Building Materials and Structures Report BMS73; 1941. Indentation Characteristics of Floor Covering. The indentation characteristics of 64 floor coverings were determined. Tests were conducted on specimens conditioned in an atmosphere of 65-percent relative humidity and 72° F. temperature, on specimens after exposure to accelerated aging, and on specimens at an elevsted temperature of 90° F. The floor coverings tested included such general types as linoleum, cork, rubber, felt base, asphalt, wood, fiberboard, and monolithic compositions. Variations in composition and thickness were included in many of the types. The apparatus and the procedure are briefly described. Summaries of the results are present to show the relative merits of the various floor coverings with respect to comfort value and permanent indentation.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Building Materials and Structures Report BMS80; 1942. Performance Test of Floor Coverings for Use in Low-Cost Housing: Part 4. A performance test was conducted in the floor-testing chamber of the National Bureau of Standards on a fourth series of 40 different installations involving 26 different floor coverings. Specimens of most of the floor coverings were installed on both a concrete and a wood subfloor. Included in the test were cork tiles, rubber tile containing aluminum oxide aggregate, asphalt tile, marbleized linoleums, felt-backed floor coverings having various wearing surfaces, strip maples, maple unit-block, pecan unit-block, asphalt mastic, coal-tar mastic, alumina cement-rubber latex composition, magnesium oxychloride composition, and 1:2:4 Portland cement concrete. Different underlays and adhesives were also included in the test. The test installations are described and results showing the depth of the depressions in the floor coverings made by the equipment are presented in tables. Brief summaries of the manner in which the various installations performed are given, and their appearance at the end of the test is shown by photographs. A few generalized comments and conclusions are made.

U. S. Gov., Federal Specification MM-L-736; 1935. Amendment 3; 1944. Lumber and Timber; Hardwood. Oak flooring and pecan flooring shall conform to the rules of the National Oak Flooring Manufacturers' Assn. In cases where lumber of a special width, length, or thickness is needed, such lumber shall conform to the standard grades of the National Hardwood Lumber Assn. except in the matter of width, length, and thickness.

*References.*—American Lumber Standards for softwood flooring, *see* 411.0; hardwood grading rules, *see* 400.3.

## 411.27 Pine Flooring

Arkansas Soft Pine Bureau. Standard Specifications for Arkansas Soft Pine Lumber, 1939. Includes plain-end and end-matched, edge and flat grain in four grades of each, with two common grades of flat grain plain, general requirements, moisture content, etc. Conforms to American Lumber Standards. Also factory flooring, heavy roofing, and decking, grades, dimensions, permissible defects, and weights.

Southern Pine Inspection Bureau of the Southern Pine Assn. The Gulf Coast Classification of Pitch Pine Resawn Lumber and Sawn Timber, 1923. Includes list of defects, general rules, and grading rules for flooring.

Southern Pine Inspection Bureau of the Southern Pine Assn. Standard Specifications for Southern Pine Lumber, 1939. Includes general instructions, definitions, general grading provisions, specifications, and grading rules for flooring.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Building Materials and Structures Report BMS14; 1939. Indentation and Recovery of Low-Cost Floor Coverings. Indentation and recovery determinations for loads ranging from 25 lb. to 200 lb. on a flat-ended pin 1/4 in. in diameter were made on 23

floor coverings at a relative humidity of 65 percent and temperature of 72° F. Indentation readings were taken for each load at intervals of time up to 30 min. and then recovery readings at intervals of time up to 120 min. Various types of floor coverings were tested, such as asphalt tile, pressed fiberboard, linoleums, felt-base floor coverings having various wearing surfaces, rubber, and wood. A description of the apparatus and the procedure used are given. The results are presented in graphic form to show the relative merits of the various floor coverings with respect to initial and 30-min. indentation under various loads and the recovery after removal of the load.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Building Materials and Structures Report BMS34; 1940. Performance Test of Floor Coverings for Use in Low-Cost Housing: Part 1. A performance test was conducted in the floor-testing chamber of the National Bureau of Standards on 40 different test installations involving 12 floor coverings and 11 adhesives. The floor coverings tested included several kinds of linoleum, felt-base floor coverings having various wearing surfaces, pressed fiberboard, and three stripwood floors. The bonding agents used included lignin pastes, various resinous cements, casein-latex cement, asphaltic cements, and nails. Installations on both a concrete subfloor and a wood subfloor were tested. Descriptions of the testing equipment and test installations are given. Results showing the relative magnitude of the depressions in the floor coverings caused by the testing equipment are summarized and presented in tables. The appearance of the various installations after 48,000 cycles of the testing equipment is discussed and representative photographs are shown.

*References.*—American Lumber Standards for softwood flooring, *see* 411.0.

### 411.28 Spruce Flooring

West Coast Lumbermen's Assn. Standard Grading and Dressing Rules for Douglas Fir, Sitka Spruce, West Coast Hemlock, Western Red Cedar Lumber, No. 11; 1942. Includes official trade and grade marks; general instructions; moisture content provisions; definitions; thicknesses and widths; and grading rules for Sitka spruce flooring.

*References.*—American Lumber Standards for softwood flooring, *see* 411.0.

### 411.29 Miscellaneous Flooring Specifications

California Redwood Assn. Standard Patterns of Worked Redwood Lumber. Pattern Book 738; 1941. Includes flooring, narrow, standard, and wide in three thicknesses, with dimensional diagrams.

California Redwood Assn. Standard Specifications, 1942. Flooring. Conforms to American Lumber Standards. Gives requirements for rough and dressed sizes, Clear All Heart and A and B grades.

Maple Flooring Manufacturers Assn. Grading Rules for Northern Hard Maple (Acer Saccharum), Beech, and Birch Flooring, 1941. Includes description of individual characteristics of Northern hard maple and of Northern beech and birch floorings; grading rules for First, Second, Third, and three Special grades; standard measurement; kiln-drying; end matching; custom in bundling; thicknesses and faces; rules for estimating quantity of flooring required; grade-use recommendations; and uses of different thicknesses.

National Oak Flooring Manufacturers' Assn. Official Flooring Grading Rules, effective Nov. 8, 1943. Birch, Beech, and Hard Maple. Gives requirements for first grade, second grade, third grade, victory grade, special grades, standard sizes, counts and weights, special thicknesses, jointed flooring, general rules, rules governing re-inspections, and how to arrive at the amount of hardwood flooring required.

National Oak Flooring Manufacturers' Assn. Official Flooring Grading Rules, effective Nov. 8, 1943. Pecan. Gives requirements for red and white, various grades, standard counts and weights, general rules, rules governing re-inspections, and how to arrive at the amount of hardwood flooring required.

U. S. Gov., Federal Specification MM-L-736; 1935. Amendment 3; 1944. Lumber and Timber; Hardwood. Maple, birch, and beech flooring shall conform to the rules of the Maple Flooring Manufacturers' Assn., or to the rules of the National Oak Flooring Manufacturers' Assn. In cases where lumber of a special width, length, or thickness is needed, such lumber shall conform to the standard grades of the National Hardwood Lumber Assn. except in the matter of width, length, and thickness.

U. S. Gov., Federal Specification MM-L-736; 1935. Amendment 3; 1944. Lumber and Timber; Hardwood. Oak flooring and pecan flooring shall conform to the rules of the National Oak Flooring Manufacturers' Assn. In cases where lumber of a special width, length, or thickness is needed, such lumber shall conform to the standard grades of the National Hardwood Lumber Assn. except in the matter of width, length, and thickness.

*References.*—American Lumber Standards for flooring of softwood, *see* 411.0; hardwood grading rules, *see* 400.3.

## 411.3 CEILING LUMBER

Arkansas Soft Pine Bureau. Standard Specifications for Arkansas Soft Pine Lumber, 1939. Includes ceiling lumber plain and end-matched, dressed sizes, standard workings, lengths, moisture content, etc. Conforms to American Lumber Standards.

California Redwood Assn. Standard Patterns of Worked Redwood Lumber. Pattern Book 738; 1941. Includes ceiling, dimensional diagrams of stock patterns.

California Redwood Assn. Standard Specifications, 1942. Ceiling Lumber. Conforms to American Lumber Standards. Gives requirements for Clear All Heart and A and B grades.

Northern Hemlock and Hardwood Manufacturers Assn. Official Grading Rules for Hemlock and Tamarack Lumber and White Cedar Shingles, Conform to American Lumber Standards, 1941. Includes official grade, trade, and species marks; official shipper's certificates; official grading rules for hemlock and tamarack lumber, including yard and industrial size standards, description, measurement, and tally; inspection and shipping provisions; definitions of defects; rules for grading yard lumber, finishing lumber, and ceiling; and standard planing mill patterns for ceiling. Officially adopted by the Northeastern Lumber Manufacturers Assn., Inc., for the grading of hemlock and tamarack produced in New York, Pennsylvania, and the New England States.

Northern Hemlock and Hardwood Manufacturers Assn. Official Grading Rules for Northern (Genuine) White Pine, Norway Pine, and Eastern Spruce, Conform to American Lumber Standards, 1941. Variations from American Lumber Standards are noted. Include official grade, trade, and species marks; official shipper's certificates; general grading instructions; sizes, measurements, and tally; inspection and shipping provisions; definitions of terms describing grades; association standard grades for ceiling.

Southern Pine Inspection Bureau of the Southern Pine Assn. Standard Specifications for Southern Pine Lumber, 1939. Includes general instructions, definitions, general grading provisions, specifications, and grading rules for ceiling.

West Coast Lumbermen's Assn. Standard Grading and Dressing Rules for Douglas Fir, Sitka Spruce, West Coast Hemlock, Western Red Cedar Lumber, No.11; 1942. Includes official trade and grade marks; general instructions; moisture content provisions; definitions; thicknesses and widths; and grading rules for Douglas fir, West Coast hemlock, and Sitka spruce ceiling.

*References.*—American Lumber Standards for softwood ceiling, *see* 411.0; hardwood grading rules, *see* 400.3.

## 411.4 PARTITION LUMBER, MOLDINGS, AND FINISH LUMBER

### 411.41 Partition Lumber

California Redwood Assn. Standard Patterns of Worked Redwood Lumber. Pattern Book 738; 1941. Includes boarding, wall boarding, battens, etc., beaded, mitered and grooved, tongued and grooved, and shiplapped, with dimensional diagrams.

California Redwood Assn. Standard Specifications, 1942. Partition Lumber. Conforms to American Lumber Standards. Gives requirements for Clear All Heart and A and B grades.

Southern Pine Inspection Bureau of the Southern Pine Assn. Standard Specifications for Southern Pine Lumber, 1939. Includes general instructions, definitions, general grading provisions, specifications, and grading rules for partition.

West Coast Lumbermen's Assn. Standard Grading and Dressing Rules for Douglas Fir, Sitka Spruce, West Coast Hemlock, Western Red Cedar Lumber, No.11; 1942. Includes official trade and grade marks; general instructions; moisture content provisions; definitions; thicknesses and widths; and grading rules for Douglas fir, West Coast hemlock, and Sitka spruce partition.

*References.*—American Lumber Standards for softwood partition, *see* 411.0; hardwood grading rules, *see* 400.3.

### 411.42 Moldings

California Redwood Assn. Standard Patterns of Worked Redwood Lumber. Pattern Book 738; 1931. Includes moldings and poster moldings, dimensional diagrams of stock patterns.

California Redwood Assn. Standard Specifications, 1942. Moldings, Lattice. Gives requirements for grade A and better, lengths, finish, and defects.

Southern Pine Inspection Bureau of the Southern Pine Pine Assn. Standard Specifications for Southern Pine Lumber, 1939. Includes general instructions, definitions, general grading provisions, specifications, and grading rules for moldings.

West Coast Lumbermen's Assn. Standard Grading and Dressing Rules for Douglas Fir, Sitka Spruce, West Coast Hemlock, Western Red Cedar Lumber, No.11; 1942. Includes official trade and grade marks; general instructions; moisture content provisions; definitions; thicknesses and widths; and grading rules for Douglas fir, West Coast hemlock, Sitka spruce, and Western red cedar moldings.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R16-39; 1939. Lumber (American Lumber Standards for Softwood Lumber). Moldings. Gives illustrations and correct sizes of moldings of the 7,000 series. They can be used as a guide for design and the specifications of moldings. Initiated by the Central Committee on Lumber Standards and the National Lumber Manufacturers Assn.

U. S. Gov., Dept. of Commerce, National Bureau of Standards Commercial Standard CS76-39; 1939. Hardwood Interior Trim and Molding. This standard provides minimum specifications for two grades of hardwood interior trim and molding known as grade A, which is suitable for natural finish and highest quality paint finish, and grade B, which is normally confined to a paint finish, of sizes and design as shown in the 7,000 Series, Appendix D of Simplified Practice Recommendation R16-29, effective Nov. 1, 1932. It covers allowable defects, design, length, width, bundling, and the grading tolerances for these requirements. Hardwood Dimension Manufacturers Assn., sponsor.

*References.*—American Lumber Standards for softwood molding and interior trim, *see* 411.0; hardwood grading rules, *see* 400.3.

### 411.43 Finish Lumber

Appalachian Hardwood Manufacturers. Standardized Hardwood Wall Paneling, 1939. Includes standard types of vertical, horizontal, and combination panels, moldings and trim; of white oak, beech, birch, chestnut, and maple; also available in red oak, butternut, and yellow poplar. Dimensional drawings of standard shapes, installation instructions, and illustrations.

Arkansas Soft Pine Bureau. Standard Specifications for Arkansas Soft Pine Lumber, 1939. Includes finish lumber in three grades, lengths, for dressed yard and industrial lumber. Nominal and dressed dimensions, widths of dressed material exceeds American Lumber Standards, and gives moisture content requirements.

California Redwood Assn. Standard Patterns of Worked Redwood Lumber. Pattern Book 738; 1941. Includes interior finish lumber, dimensional diagrams of stock patterns.

California Redwood Assn. Standard Specifications, 1942. Finish Lumber. Conforms to American Lumber Standards. Gives requirements for Clear All Heart and A and B grades, with rough and dressed sizes.

Southern Pine Inspection Bureau of the Southern Pine Assn. Standard Specifications for Southern Pine Lumber, 1939. Includes general instructions, definitions, general grading provisions, specifications, and grading rules for finish.

West Coast Lumbermen's Assn. Standard Grading and Dressing Rules for Douglas Fir, Sitka Spruce, West

Coast Hemlock, Western Red Cedar Lumber, No.11; 1942. Includes official trade and grade marks; general instructions; moisture content provisions; definitions; thicknesses and widths; and grading rules for Douglas fir, West Coast hemlock, Sitka spruce, and Western red cedar finish-casing and base.

U. S. Gov., Dept. of Commerce, National Bureau of Standards Commercial Standard CS74-39; 1939. Solid Hardwood Wall Paneling. This standard provides for two classes of 3/4-in. solid hardwood wall paneling manufactured to standard tongued-and-grooved patterns, in six face widths from 3 to 8 in., available in seven exact lengths from 2 ft. 6 in. to 8 ft. 8 in. It also covers random lengths of 2 ft. and up on 6-in. breaks and harmonizing molding and trim patterns. Sponsored by hardwood lumber industry through American Walnut Manufacturers Assn.; Appalachian Hardwood Manufacturers, Inc.; Hardwood Dimension Manufacturers Assn.; Mahogany Assn., Inc.; National Hardwood Lumber Assn.; Northeastern Lumber Manufacturers Assn., Inc.; Northern Hemlock and Hardwood Manufacturers Assn.; Philippine Mahogany Manufacturers' Import Assn., Inc.; and Southern Hardwood Producers, Inc.

U. S. Gov., Federal Specification MM-L-736; 1935. Amendment 3; 1944. Lumber and Timber; Hardwood. Trim shall conform to the rules of the Hardwood Interior Trim Manufacturers' Assn. In cases where lumber of a special width, length, or thickness is needed, such lumber shall conform to the standard grades of the National Hardwood Lumber Assn. except in the matter of width, length, and thickness.

*References.*—American Lumber Standards for softwood finish, *see* 411.0; hardwood grading rules, *see* 400.3; miscellaneous millwork, *see* 423.9.

## 411.5 SHIP-LAP LUMBER

Arkansas Soft Pine Bureau. Standard Specifications for Arkansas Soft Pine Lumber, 1939. Includes shiplap, definitions of defects, dimensional drawings for yard and heavy grades, and permissible defects, in conformity with American Lumber Standards.

California Redwood Assn. Standard Patterns of Worked Redwood Lumber. Pattern Book 738; 1941. Includes shiplap, interior and exterior types of plain and molded patterns, with dimensional diagrams of stock patterns.

California Redwood Assn. Standard Specifications, 1942. Drop Siding or Shiplap. Conforms to American Lumber Standards. Gives requirements for Clear All Heart, and A and B grades.

Northern Hemlock and Hardwood Manufacturers Assn. Official Grading Rules for Hemlock and Tamarack Lumber and White Cedar Shingles, Conform to American Lumber Standards, 1941. Includes official grade, trade, and species marks; official shipper's certificates; official grading rules for hemlock and tamarack lumber, including yard and industrial size standards; description, measurement, and tally; inspection and shipping provisions; definitions of defects; rules for grading yard lumber, finishing lumber, and shiplap; and standard planing mill and detail patterns for shiplap. Officially adopted by the Northeastern Lumber Manufacturers Assn., Inc., for the grading of hemlock and tamarack produced in New York, Pennsylvania, and the New England States.

Southern Pine Inspection Bureau of the Southern Pine Assn. Standard Specifications for Southern Pine Lumber, 1939. Includes general instructions, definitions, general grading provisions, specifications, and grading rules for shiplap.

*References.*—American Lumber Standards for softwood ship-lap, *see* 411.0; hardwood grading rules, *see* 400.3.

## 411.6 DRESSED AND MATCHED YARD LUMBER

Arkansas Soft Pine Bureau. Standard Specifications for Arkansas Soft Pine Lumber, 1939. Includes dressed and matched yard lumber, defect definitions, dimensions and grade definitions with permissible defects in accordance with American Lumber Standards, moisture content requirements.

California Redwood Assn. Standard Specifications, 1942. Dressed and Matched Yard Lumber. Conforms to American Lumber Standards. Gives requirements for rough and dressed sizes, requirements as to quality of various grades with permissible sapwood and defects.

Northern Hemlock and Hardwood Manufacturers Assn. Official Grading Rules for Hemlock and Tamarack Lumber and White Cedar Shingles, Conform to American Lumber Standards, 1941. Includes official grade, trade, and species marks; official shipper's certificates; official grading rules for hemlock and tamarack lumber, including yard and industrial size standards; description, measurement, and tally; inspection and shipping provisions; definitions of defects; rules for grading yard lumber, finishing lumber, and dressed and matched; and standard planing mill patterns for D and M. Officially adopted by the Northeastern Lumber Manufacturers Assn., Inc., for the grading of hemlock and tamarack produced in New York, Pennsylvania, and the New England States.

Northern Hemlock and Hardwood Manufacturers Assn. Official Grading Rules for Northern (Genuine) White Pine, Norway Pine, and Eastern Spruce, conform to American Lumber Standards, 1941. Variations from American Lumber Standards are noted. Includes official grade, trade, and species marks; official shipper's certificates; general grading instructions; sizes; measurements and tally; inspection and shipping provisions; definitions of terms describing grades; association standard grades for dressed lumber.

Southern Pine Inspection Bureau of the Southern Pine Assn. Standard Specifications for Southern Pine Lumber, 1939. Includes general instructions, definitions, general grading provisions, specifications and grading rules for dressed and matched yard lumber.

West Coast Lumbermen's Assn. Standard Grading and Dressing Rules for Douglas Fir, Sitka Spruce, West Coast Hemlock, Western Red Cedar Lumber, No.11; 1942. Includes official trade and grade marks; general instructions; moisture content provisions; definitions; thicknesses and widths; and grading rules for Douglas fir, West Coast hemlock, Sitka spruce, and Western red cedar dressed and matched yard lumber.

Western Pine Assn. Standard Grading Rules for Ponderosa Pine, Sugar Pine, Idaho White Pine, Larch-Douglas Fir, White Fir, Engelmann Spruce, Incense Cedar and Red Cedar Lumber, 1939. Includes official grade, trade, and species marks; general instructions; measurements and tally; definitions of defects; reinspection; and requirements for dressed and matched yard lumber.

*References.*—American Lumber Standards for softwood D. and M., *see* 411.0; hardwood grading rules, *see* 400.3.

### 411.7 ROOFING LUMBER

California Redwood Assn. Standard Specifications, 1942. Decking, Heavy Roofing, and Factory Flooring. Conforms to American Lumber Standards. Gives requirements for three grades of common and rough and dressed sizes.

Southern Pine Inspection Bureau of the Southern Pine Assn. Standard Specifications for Southern Pine Lumber, 1939. Includes general instructions, definitions, general grading provisions, specifications and grading rules for roofing.

*References.*—American Lumber Standards for softwood roofing, *see* 411.0; hardwood grading rules, *see* 400.3; wood shingles, *see* 402.52.

### 411.8 SHELVING

U. S. Gov., Veterans Administration. Specification VA-G-94c; 1937. Wooden Library Shelving.

### 411.9 MISCELLANEOUS SPECIFICATIONS FOR BUILDING LUMBER

Southern Pine Inspection Bureau of the Southern Pine Assn. Standard Specifications for Southern Pine Lumber, 1939. Includes general instructions; definitions; general grading provisions; specifications and grading rules for base, casing, door jambs, window jambs, planks, and trim.

West Coast Lumbermen's Assn. Standard Grading and Dressing Rules for Douglas Fir, Sitka Spruce, West Coast Hemlock, Western Red Cedar Lumber, No.11; 1942. Includes official trade and grade marks; general instructions; moisture content provisions; definitions; thicknesses and widths; and grading rules for Douglas fir, West Coast hemlock, Sitka spruce, and Western red cedar box lumber, capping and grooved trunking, corn cribbing, barge (framing, planking, and decking), battens, flume lumber, ladder stock, paneling, piano posts, pickets, pipe stave stock, porch columns, ship decking, shop plank, silo staves, stepping, wagon bottoms, well tubing and windmill stock.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Commercial Standard CS26-30; 1930. Aromatic Red Cedar Closet Lining. A commercial standard selected and accepted by industry for clothes closet lining covering requirements on species of wood, standard thicknesses, lengths, widths, details of matching, percentage of heartwood, and permissible defects. Sponsored by Aromatic Red Cedar Closet Lining Assn.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Commercial Standard CS89-40; 1940. Hardwood Stair Treads and Risers. This standard provides minimum specifications for hardwood stair treads and risers. It covers three grades of treads in three widths and four grades of risers in four widths which are available in five standard lengths. It also covers species, approved tread-nosing pattern, nomenclature and definitions, and a method of certification of compliance with the standard. Sponsored by Hardwood Dimension Manufacturers Assn.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specifications CAA-129. Alaska-Type Transmitter Building; Erection of.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specifications CAA-157. Alaska-Type Transmitter Building; Prefabricated, Wood, Erection of.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specifications CAA-245. Alaska-Type Quarters Building; Prefabricated, Wood.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specifications CAA-255. Alaska-Type Utility Building; Prefabricated, Wood.

*References.*—American Lumber Standards, *see* 411.0; hardwood grading rules, *see* 400.3.

## 412. STRUCTURAL TIMBERS AND BRIDGES

### 412.0 GENERAL ITEMS

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering, 1944. Specifications for Building for Railroad Purposes: Carpentry and Millwork. Gives requirements for seasoning, species and grades, dressing, treated lumber, termite shields, framing, joists, partitions, and roof framing.

American Society for Testing Materials, D 9-30; 1930. Definitions of Terms Relating to Timber. Defines structural timber, terms relating to wood, standard defects, standard names for structural timbers, and appendix covering details for knots.

American Society for Testing Materials, D 143-27; 1927. American Standards Assn., 04a-1927. Methods of Testing Small Clear Specimens of Timber. Selection, preparation, and storage of test specimens, test procedure for static and impact bending, tension, compression, hardness, shear, cleavage, specific gravity, shrinkage, and moisture content.

American Society for Testing Materials, D 198-27; 1927. American Standards Assn., 04b-1927. Methods of Static Tests of Timbers in Structural Sizes. Covers number and sizes of test specimens, moisture control, apparatus, and procedure for static bending test, for compression, and for minor tests, permissible variations, and sample data sheets.

National Lumber Manufacturers Assn. Heavy Timber Mill Construction Details, 1929. Illustrates (by means of line drawings) good practice in heavy timber construction detailing.

National Lumber Manufacturers Assn. House Framing Details, 1929. Reprinted, 1941. Includes plates illustrating satisfactory methods of assembling the structural parts of frame buildings. The information presented has been developed from the results of common practice that have been demonstrated and proved. It reflects recent research and laboratory findings.

National Lumber Manufacturers Assn. Wood Structural Design Data, Volume 1; 1941. Includes physical, chemical, and mechanical properties of wood, timber quality—strength relations, glossary of lumber terms, abbreviations of lumber terms, board measure, lumber quantity costs, sizes of American standard yard lumber and timbers, notations and technical symbols, properties of American standard lumber sizes; design data and formulae for computing sizes of beams, columns, and plank and laminated floors; tables of beam sizes required to support a given load over a given

span; tables of least dimensions for columns required to support a given load for various column lengths; and tables for sizes of plank and laminated floors of various thicknesses for safe uniform load for a given span.

National Lumber Manufacturers Assn. Wood Structural Design Data, Volume 1; 1941. Supplement No.1; 1943. Working Stresses for Structural Lumber. Includes general discussion, determination of required sizes, allowable unit stresses, and timber column formula; and table showing stresses for joists and planks, beams and stringers, and posts and timbers for kinds of lumber.

National Lumber Manufacturers Assn. Wood Structural Design Data, Volume 1; 1941. Supplement No.3. Maximum Spans for Joists and Rafters. Includes tables of sizes required to support a given load over a given span for ceiling joists, attic floor joists, floor joists, and rafters and roof joists.

National Lumber Manufacturers Assn. Wood Structural Design Data, Volume 1; 1941. Supplement No.4. Wood Columns—Safe Loads. Formulas and safe loads per square inch of cross-sectional area of concentrically loaded simple solid and spaced columns are given. Short-time and long-time safe loads are presented in both tabular and graphical form. By assuming the length of column to be the distance between adjacent lateral supports, the data for simple solid and spaced columns may also be applied to columns or compression members continuous through several lateral supports.

National Lumber Manufacturers Assn. Wood Structural Design Data, Volume 1; 1941. Supplement No.5. Wood Trusses—Stress Coefficients, Length Coefficients, and Angles. Includes glossary of terms, limitations, notations, and tables of strength coefficients, length coefficients, and angles for pitched type trusses (Belgian, Fink and Fan, Howe, and Pratt) and flat type trusses (Howe, Pratt, modified Pratt, and Howard).

National Lumber Manufacturers Assn. Wood Structural Design Data, Volume 1; 1941. Supplement No.6. Timber Connectors—Design and Load Data. Includes illustrations of types of Teco timber connectors, design, and load data tables for each type, specification when galvanizing is required, and legend for timber connectors, grooves, and daps.

National Lumber Manufacturers Assn. Wood Structural Design Data, Volume 1; 1941. Supplement No.7. Stud Walls—Safe Axial Loads. The sizes and spacings of studs in walls as developed through general construction practice have proved conservative and satisfactory. There are cases, however, when it may be desirable to obtain a more accurate design in the interests of economy or structural requirements of wider spacings and unusual loads. Therefore this pamphlet on the strength of stud walls, which is based on the column formulas and recommendations of the Forest Products Laboratory, Forest Service, U.S. Dept. of Agriculture, has been prepared.

National Lumber Manufacturers Assn. Wood Utilization Data No.3; 1940. Plank-and-Beam Floor and Roof System for Residential Construction. The adaption of the plank-and-beam type of floor and roof system to residential construction has brought from architects and builders many technical questions concerning its application. This publication presents detailed technical data pertaining to adaption, advantages and economy, architectural and construction details, and structural requirements of the plank-and-beam system in residential construction.

National Lumber Manufacturers Assn. Wood Utilization Data No.4; 1943. Heavy Timber Construction Details. Includes floor framing, column and floor framing details, roof framing details, types of connections, other details, scope of these details, and thirteen plates showing heavy timber construction details.

Northern Hemlock and Hardwood Manufacturers Assn. Official Grading Rules for Hemlock and Tamarack Lumber and White Cedar Shingles, Conform to American Lumber Standards, 1941. Includes official grade, trade, and species marks; official shipper's certificates; official grading rules for hemlock and tamarack lumber, including yard and industrial size standards; description, measurement, and tally; inspection and shipping provisions; definitions of defects; rules for grading yard lumber, finishing lumber, heavy joist, timbers, and structural joists and rafters. Officially adopted by the Northeastern Lumber Manufacturers Assn., Inc., for the grading of hemlock and tamarack produced in New York, Pennsylvania, and the New England States.

Northern Hemlock and Hardwood Manufacturers Assn. Official Grading Rules for Northern (Genuine) White Pine, Norway Pine, and Eastern Spruce, Conform to American Lumber Standards, 1941. Variations from American Lumber Standards are noted. Includes official grade, trade, and species marks; official shipper's certificates; general grading instructions; sizes, measurements, and tally; inspection and shipping provisions; definitions of terms describing grades; association standard grades for structural joist and rafters of Norway pine.

West Coast Lumbermen's Assn. Standard Grading and Dressing Rules for Douglas Fir, Sitka Spruce, West Coast Hemlock, Western Red Cedar Lumber, No.11; 1942. Includes official trade and grade marks; general instructions; moisture content provisions; definitions; thicknesses and widths; and grading rules for structural grades.

Western Pine Assn. Standard Grading Rules for Ponderosa Pine, Sugar Pine, Idaho White Pine, Larch-Douglas Fir, White Fir, Engelmann Spruce, Incense Cedar and Red Cedar Lumber, 1939. Includes official grade, trade, and species marks; general instructions, measurements, and tally; definitions of defects; reinspection; and standard specifications and working stresses for structural grades of larch and Douglas fir structural joists, plank, posts, and timbers.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R16-39; 1939. Lumber (American Lumber Standards for Softwood Lumber). Structural Lumber. Basic provisions for selection and inspection where working stresses are required. Provides classifications, general provisions, and structural grade limitations for joists and planks, beams and stringers, and posts and timbers. Initiated by the Central Committee on Lumber Standards and the National Lumber Manufacturers Assn.

U. S. Gov., War Production Board, Conservation Div. National Emergency Specifications for the Design,

Fabrication, and Erection of Stress Grade Lumber and Its Fastenings for Buildings—Directive No. 29; Aug. 1943. Covers general-stress grade lumber, allowable unit stresses for stress grade lumber, design loads, design formulas and provisions, timber connector joints, bolted joints, lag screw joints, nail, spike, drift pin, and wood screw joints, glued laminated structural members, and appendices. Endorsed by the National Lumber Mfrs. Assn.

## 412.1 STRUCTURAL TIMBERS

American Assn. of State Highway Officials. Standard Specifications for Highway Bridges, 1941. Includes specifications for structural timber, lumber, and piling—requirements for species of woods and limitations of use; grading yard lumber (to conform to American Lumber Standards); hewn and round timbers; grading of structural timber (conforming to principles of strength grading Simplified Practice Recommendation R-16) for general requirements, knots, shakes, checks, splits, density, grain, structural joist and plank with load applied to either the wide face or the narrow face, structural beams and stringers with load applied to the narrow face, and structural posts and timbers to carry longitudinal loads.

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering, 1941. Specifications for Structural Timbers. Gives requirements for grading structural timbers on the basis of unit working stresses, kinds of wood, physical properties, sizes, tolerances and surfacing allowances, manufacture, and inspection; and standard stress-grades and working stresses for joist and plank, beams and stringers, and posts and timbers of the various grades and species of softwoods and hardwoods.

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering, 1943. Roadway Protection. Covers retaining structures in sliding cuts. Gives requirements for timber, concrete, and metal cribbing; and dry rubble, masonry, and concrete walls.

American Society for Testing Materials, D 245-37; 1937. American Standards Assn., 07-1939. Structural Wood Joist and Plank, Beams and Stringers, and Posts and Timbers. Gives general requirements for all stress grades such as decay, slope of grain, holes, shakes, checks, and splits; additional requirements when heartwood, density, and close grain are required, tables for 1,800, 1,600, 1,400, 1,200, and 1,100-lb. structural joist and plank, for beams and stringers, and for posts and timbers, standard size minimums, and working stresses. These specifications were prepared jointly by the American Railway Engineering Assn. and the A.S.T.M.

Arkansas Soft Pine Bureau. Standard Specifications for Arkansas Soft Pine Lumber, 1939. Includes dimension and small timbers, utility timbers and heavy joists, decking, and heavy shiplap structural lumber; defines density rule, close and medium grain, moisture content requirements, grades and dimensions with table of unit working stresses, weights, and permissible defects, in conformity with American Lumber Standards.

California Redwood Assn. Standard Specifications, 1942. Structural Grades of California Redwood. Conforms to American Lumber Standards. Gives definitions of four grades, quality requirements, sizes, defects, joists and plank, beam and stringer, and table of allowable working stresses for each grade.

Southern Pine Inspection Bureau of the Southern Pine Assn. Standard Specifications for Southern Pine Lumber, 1939. Includes general instructions, definitions, general grading provisions, specifications, and grading rules for structural timbers.

U. S. Gov., Federal Specification MM-L-751c; 1942. Amendment 1; 1944. Lumber and Timber; Softwood. Covers the principal species of softwood grown in the United States; the three classes of softwood lumber and timber—yard lumber, structural material, and factory and shop lumber—and the grades in the current grading rules of the various associations of softwood lumber manufacturers that conform to American Lumber Standards.

*References.*—Other specifications for structural timber, *see* 412.0; American Lumber Standards for structural grades, *see* 412.0; hardwood grading rules, *see* 400.3; planks, dimension lumber, and joists, *see* 402.42, 402.43; heavy flooring and roofing, *see* 411.2, 411.7, 412.9; sheet piling, *see* 401.49; permissible unit stresses, *see* 400.12; methods of testing for strength, moisture, etc., *see* 400.13.

## 412.2 BRIDGES

American Assn. of State Highway Officials. Standard Specifications for Highway Bridges, 1941. Includes general provisions—definition of terms, proposal requirements and conditions, award and execution of contract, scope of work, control of work and materials, legal relations and responsibility to public, prosecution and progress and measurement and payment; specifications for construction—excavation and fill, sheet piles, bearing piles, concrete masonry, reinforcement, ashlar masonry, mortar rubble masonry, dry rubble masonry, brick masonry, steel structures, bronze or copper-alloy bearing and expansion plates, steel grid flooring, railings, painting metal structures, riprap, concrete cribbing, waterproofing, dampproofing, name plates, timber structure, preservative treatments for timber, timber cribbing, sectional plate pipe and arches, and wearing surfaces; recommendations for design—general features of design, loads, distribution of loads, unit stresses, pile loads and bearing power of soils, substructure and retaining walls, structural steel design, concrete design, design of timber structures, sectional plate pipe and arches, and rating of existing bridges; specifications and references to other specifications for cement, water for use with cement, aggregates, reinforcement, structural, eyebar and rivet steels, wrought iron, steel forgings and castings, gray-iron and malleable castings, bronze or copper-alloy bearing and expansion plates, sheet piles, steel sheet piling, steel grid floors, paint, welding, sheet metal for water stops and general use, sectional plate pipe and arches, stone for masonry, brick, bituminous materials and joint fillers, asphalt paving blocks, premolded asphalt plank, structural timber, lumber and piling, and timber preservatives; tables of moments, shears and reactions; formulas for compressive members; and truck train and equipment loadings.

American Assn. of State Highway Officials. Standard Specifications for Highway Bridges, 1941. Includes specifications for timber structures—requirements

for grades of lumber for the various structural purposes; hardware; split-ring, toothed-ring, shear-plate, claw-plate, and spike-grid connectors; storage of material; workmanship; treated lumber; untreated lumber; treatment of pile heads (two methods); holes for bolts, dowels, rods, and log screws; bolts and washers; countersinking; framing; framed bents; caps; bracing; stringers; plank floors; laminated or strip floors; wheel guards and railings; trusses; truss housings; painting; and measurement and payment.

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering, Apr. 1943. Specifications for Design of Wood Bridges and Trestles for Railway Loading. These specifications contemplate the use of sound piles and stress-grades of structural timbers. Gives general features of design, loads and stresses, unit stresses, and working unit stresses for structural timber.

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering, 1935. Specifications for Workmanship for Pile and Framed Trestles of Untreated Material to be Built Under Contract. Covers site, general description, general clauses, detail specifications, caps, posts, sills, sash and sway braces, longitudinal braces, girts, stringers, helper stringers, ties, guard timbers, and bulkheads.

U. S. Gov., Federal Works Agency. Public Works Administration. Specifications for Construction of Roads and Bridges in National Forests and National Parks, FP-41. Culverts and Retaining Walls.

U. S. Gov., Federal Works Agency. Public Works Administration. Specifications for Construction of Roads and Bridges in National Forests and National Parks, FP-41. Log Bridges.

U. S. Gov., Federal Works Agency. Public Works Administration. Specifications for Construction of Roads and Bridges in National Forests and National Parks, FP-41. Log Culverts.

U. S. Gov., Federal Works Agency. Public Works Administration. Specifications for Construction of Roads and Bridges in National Forests and National Parks, FP-41. Timber Bridges.

*References.*—Timber for bridges, *see* 412.0, 412.1; bridge flooring, *see* 411.2, 412.9; permissible unit stresses, *see* 400.12; methods of testing for strength, moisture, etc., *see* 400.13.

## 412.3 FRAME STRUCTURES OTHER THAN BRIDGES

International Assn. of Governmental Labor Officials, endorsing sponsor. American Standards Assn., Z20.1-1941. Specifications for Portable Steel and Wood Grandstands. (Applicable to all portable grandstands any of whose main structural members are of steel or wood.) Definitions of terms and specifications on approval, design, workmanship, loading, foundations, materials of construction, allowable stresses and special requirements.

U. S. Gov., Public Health Service, Federal Security Agency. American Standards Assn., Z4.3-1935. The Sanitary Privy. Gives introduction, health hazards of insanitary disposal of excreta, the construction of sanitary privies as a community-wide activity, the underlying principles of privy construction, the earth-pit privy, types of earth-pit privies that satisfy the minimum specifications, other types of seat risers, the box-can and other types, and appendix (sample ordinance).

## 412.9 MISCELLANEOUS SPECIFICATIONS FOR STRUCTURAL TIMBERS AND BRIDGES

American Assn. of State Highway Officials. Standard Specifications for Highway Bridges, 1941. Includes specifications for timber cribbing—requirements for grades, preparation, and dimensions of timber and logs; construction methods (foundation, mud sills, face logs or timber, ties, and fastening); filling; and measurement and payment.

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering, 1943. Specifications for Timber Substructures for Water Tank (50,000 and 100,000-gal. capacity). Gives requirements for timber, workmanship, painting, and treating; and drawings showing recommended types and designs.

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering, 1944. Wood Bridges and Trestles. Includes plans for open deck pile and framed trestles, multiple story trestles, ballasted deck pile and framed trestles, and overhead wood highway bridge. Shows recommended practice in design, framing, dimensions, etc.

Assn. of American Railroads, Telegraph and Telephone Section, 1-C-4; 1928. Creosoted Pine Plank. Gives requirements for material, dimensions, finish, creosoting, inspection, marking, and warranty.

# 413. SHOP OR FACTORY LUMBER

U. S. Gov., Federal Specification MM-L-751c; 1942. Lumber and Timber; Softwood. Covers the principal species of softwood grown in the United States; the three classes of softwood lumber and timber—yard lumber, structural material, and factory and shop lumber—and the grades in the current grading rules of the various associations of softwood lumber manufacturers that conform to American Lumber Standards.

## 413.0 GENERAL ITEMS

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering, 1944. Specifications for Building for Railroad Purposes: Carpentry and Millwork. Gives requirements for seasoning, species and grades, dressing, treated lumber, termite shields, framing, joists, partitions, and roof framing.

Southern Pine Inspection Bureau of the Southern Pine Assn. Standard Specifications for Southern Pine Lumber, 1939. Includes general instructions, definitions, general grading provisions, specifications, and grading rules for shop and factory lumber.

West Coast Lumbermen's Assn. Standard Grading and Dressing Rules for Douglas Fir, Sitka Spruce, West Coast Hemlock, Western Red Cedar Lumber, No. 11; 1942. Includes official trade and grade marks; general instructions; moisture content provisions; definitions; thicknesses and widths; and grading rules for shop or factory lumber.

Western Pine Assn. Standard Grading Rules for Ponderosa Pine, Sugar Pine, Idaho White Pine, Larch-

Douglas Fir, White Fir, Engelmann Spruce, Incense Cedar and Red Cedar Lumber, 1939. Includes official grade, trade, and species marks; general instructions, measurements, and tally; definitions of defects; reinspection; and requirements for shop or factory lumber.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R16-39; 1939. Lumber (American Lumber Standards for Softwood Lumber). Factory and Shop Lumber. Lumber graded with reference to its use for doors and sash, or on the basis of characteristics affecting its use for general cut-up purposes, or on the basis of size of cuttings. Gives general provisions; size standards as to thicknesses, widths, and lengths; basic classification for factory plank, qualities and sizes of cuttings, and sizes of sash cuttings. Initiated by Central Committee on Lumber Standards and the National Lumber Manufacturers Assn.

## 413.1 TANK STOCK LUMBER

California Redwood Assn. Standard Patterns of Worked Redwood Lumber. Pattern Book 738; 1941. Includes silo staves, dimensional diagram of stock pattern.

California Redwood Assn. Standard Specifications, 1942. Tank Stock and Silo Staves. Conforms to American Lumber Standards. Gives requirements for Clear All Heart and A Grades, with dimensions.

West Coast Lumbermen's Assn. Standard Grading and Dressing Rules for Douglas Fir, Sitka Spruce, West Coast Hemlock, Western Red Cedar Lumber, No. 11; 1942. Includes official trade and grade marks; general instructions; moisture content provisions; definitions; thicknesses and widths; and grading rules for tank stock.

Western Pine Assn. Standard Grading Rules for Ponderosa Pine, Sugar Pine, Idaho White Pine, Larch-Douglas Fir, White Fir, Engelmann Spruce, Incense Cedar and Red Cedar Lumber, 1939. Includes official grade, trade, and species marks; general instructions, measurements, and tally; definitions of defects; reinspection; and grading rules for tank stock.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Commercial Standard CS92-41; 1941. Cedar, Cypress, and Redwood Tank-Stock Lumber. This standard provides minimum specifications for one grade of all heartwood tank-stock lumber made of Western red cedar, Port Orford cedar, Southern cypress, and California redwood in the following range of sizes: Thickness, 1/2 to 4 in.; width, 4 to 12 in.; and length, 6 to 32 ft. It also gives allowable characteristics and conditions, tolerances, method of measurement, nomenclature and definitions, and a plan for certification and grade marking. Initiated by Durable Woods Institute and California Redwood Assn., Southern Cypress Manufacturers Assn., and the West Coast Lumbermen's Assn.

U. S. Gov., U. S. Army, Army Air Forces. Specification 82-16; 1935. Lumber; Tank Stock, Redwood, and Southern Cypress.

*References.*—American Lumber Standards for softwood factory and shop lumber, *see* 413.0; hardwood grading rules, *see* 400.3.

## 413.2 CAR STOCK LUMBER

### 413.20 General Items

Assn. of American Railroads. Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Siding, Flooring, Roofing, and Lining Standard. Sections of car lumber, with detailed dimensional drawings for tongued and grooved, square-edged, shiplapped, etc. Requirements as to moisture content, 13 standard sections of lumber.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Specification M-907-41; 1941. Lumber. Nomenclature for commercial softwood and hardwood, use classification listings, grading provisions, shipping and inspection, measurement, lengths, car lumber, grading classification. Decription of grades, vertical sheathing and exposed roofing, horizontal sheathing, finish, flooring and sills, battens, facing, lining, running boards and steps, baffle boards, nailing planks and nailing sills, bearers, bolsters, bumpers, planks, ridge poles, purlins, belting, braces, posts, and definitions of terms and defects.

Western Pine Assn. Standard Grading Rules for Ponderosa Pine, Sugar Pine, Idaho White Pine, Larch-Douglas Fir, White Fir, Engelmann Spruce, Incense Cedar and Red Cedar Lumber, 1939. Includes official grade, trade, and species marks; general instructions, measurements, and tally; definitions of defects; reinspection; and rules for grading larch and Douglas fir railroad car material.

### 413.21 Fir Car Stock

*References.*— Species of lumber recommended for various uses, *see* 413.20; American Lumber Standards for softwood factory and shop lumber, *see* 413.0; hardwood grading rules, *see* 400.3.

### 413.22 Mahogany Car Stock

*References.*—*See* references under 413.21.

### 413.23 Oak Car Stock

*References.*—Species of lumber recommended for various uses. *see* 413.20; American Lumber Standards for softwood factory and shop lumber, *see* 413.0; hardwood grading rules, *see* 400.3.

### 413.24 Pine Car Stock

Southern Pine Inspection Bureau of the Southern Pine Assn. Standard Specifications for Grades of Southern Yellow Pine Lumber for Freight Cars and Locomotives, 1934. In accordance with Assn. of American Railroads' recommended practice and conforming to American Lumber Standards. Includes general instructions, grading provisions, shipping and inspection provisions, measurement, sizes, patterns, lengths, grades, description of grades, definitions of terms; and Assn. of American Railroads' car material patterns.

*References.*—Species of lumber recommended for various uses, *see* 413.20; American Lumber Standards for softwood factory and shop lumber, *see* 413.0; hardwood grading rules, *see* 400.3.

### 413.25 Spruce Car Stock

*References.*—*See* references under 413.24.

### 413.26 Hemlock Car Stock

*References.*—*See* references under 413.24.

### 413.29 Miscellaneous Car Stock

National Hardwood Lumber Assn. Standard Specifications for Grades of Hardwoods and Cypress Lumber for Freight Cars and Locomotives, 1940. (In accordance with Assn. of American Railroads Recommended Practice, revised 1933, and conforming to American Lumber Standards.) Includes nomenclature of commercial hardwoods and cypress, use classification, inspection regulations, grading provisions, grading specifications, description of grades, and definitions of terms.

*References.*—Species of lumber recommended for various uses, *see* 413.20; American Lumber Standards for softwood factory and shop lumber, *see* 413.0; hardwood grading rules, *see* 400.3.

## 413.3 AIRPLANE STOCK LUMBER

### 413.31 Softwood Airplane Stock

U. S. Gov., Army Air Forces. Specification 15056-A; 1930. Lumber; Balsa (Ochroma).

U. S. Gov., Army-Navy Aeronautical Specification AN-C-72a-1; 1943. Cedar; Aircraft Port Orford.

U. S. Gov., Army-Navy Aeronautical Specification AN-F-6a-2; 1943. Fir; Aircraft Noble.

U. S. Gov., Army-Navy Aeronautical Specification AN-F-7a-2; 1943. Fir; Aircraft Douglas.

U. S. Gov., Army-Navy Aeronautical Specification AN-H-4a-2; 1943. Hemlock; Aircraft Western.

U. S. Gov., Army-Navy Aeronautical Specification AN-P-16-1; 1943. Pine; Aircraft Eastern White.

U. S. Gov., Army-Navy Aeronautical Specification AN-P-18-1; 1943. Pine; Aircraft Western White.

U. S. Gov., Army-Navy Aeronautical Specification AN-P-19-1; 1943. Pine; Aircraft Sugar.

U. S. Gov., Army-Navy Aeronautical Specification AN-S-6a-2; 1943. Spruce; Aircraft.

### 413.32 Hardwood Airplane Stock

U. S. Gov., Army Air Forces. Specification 15058-A; 1939. Lumber; Birch.

U. S. Gov., Army-Navy Aeronautical Specification AN-P-17b—1; 1943. Poplar; Aircraft Yellow.

## 413.4 SHIP STOCK LUMBER

West Coast Lumbermen's Assn. Standard Grading and Dressing Rules for Douglas Fir, Sitka Spruce, West Coast Hemlock, Western Red Cedar Lumber, No. 11; 1942. Includes official trade and grade marks; general instructions; moisture content provisions; definitions; thicknesses and widths; and grading rules for ship decking and ship planking.

U. S. Gov., Navy Dept. Specification 39M3; 1944. Mahogany; Tropical American, African, Philippine (Tanguile) for Boat Planking, Decking, and Timbers.

U. S. Gov., Navy Dept. Specification 39P12a; 1941. Pine; Yellow, Long-Leaf (Pinus Palustris); Decking (Ship Use).

U. S. Gov., Navy Dept. Specification 39T1h; 1942. Teak.

*References.*—American Lumber Standards for softwood factory and shop lumber, *see* 413.0; hardwood grading rules, *see* 400.3.

## 413.5 STOCK FOR WOODEN HANDLES, FURNITURE, AND VEHICLES

### 413.50 General Items

Douglas Fir Plywood Assn. Technical Data on Plywood, 1942. Includes section one—plywood manual for engineers and architects; section two—designing with plywood; and section three—preventing condensation in walls and roofs; pamphlet XVI showing recommended types and grades of Douglas fir plywood, grade descriptions and suitable uses for buildings and other structures, sizes and thickness of Douglas fir plywood, and structural data.

The Veneer Assn. Veneers Reference Data on Principal Cabinet Woods. Gives table showing commercial name, botanical name, origin, color range, types of figures available, price range, hardness, and approximate maximum veneer sizes for the various species.

### 413.51 Handle Stock Lumber

U. S. Gov., U. S. Army, Ordnance Dept. Specification 82-18; 1943. Wood; Birch (For Small Arms).

*References.*—Handles for agricultural implements and for tools, *see* 428.1, 428.2.

### 413.52 Veneer and Plywood

American Society for Testing Materials, D 805-44 T, 1944. Methods of Testing Veneer, Plywood, and Other Wood and Wood-Base Materials. Covers scope, test specimen, report, compression parallel or perpendicular to grain, compression at an angle to the grain, static bending, tension, panel shear, plate shear, toughness, Rockwell hardness, and moisture content and specific gravity.

National Hardwood Lumber Assn. Rules for the Measurement and Inspection of Hardwood Lumber, Cypress, Veneers, and Thin Lumber, 1944. Includes regulations for inspection, general instructions for inspection, standard grades, standard inspection, and special inspection for hardwoods for wagon stock, construction work, and ties; tally, measurement, grades, and inspection of cypress; rules for measurement and cutting, and classified grades of veneer, thin lumber, and plywood veneers; national hardwood lumber sales code; and facsimile of bonded certificate. Veneer, thin lumber and plywood portion endorsed by the Veneer Assn.

U. S. Gov., Army Air Forces. Specification 15057-A(1); 1940. Plywood; Planking, Aircraft (2-Ply Diagonal).

U. S. Gov., Army-Navy Aeronautical Specification AN-P-43; 1943. Plywood; Aircraft, Molded (Fluid Pressure).

U. S. Gov., Army-Navy Aeronautical Specification AN-NN-P-51lb-2; 1943. Plywood and Veneer; Aircraft Flat Panel.

U. S. Gov., Dept. of Agriculture; Forest Service, Forest Products Laboratory No. 1599; 1944. In cooperation with the University of Wisconsin. Aircraft Veneers in Yellow Birch, Hard Maple, Yellow Poplar, and Sweetgum. Covers certain defects that are not specifically covered in Specification AN-NN-P-51lb. Gives requirements for massed minute distortions, bird peck, bird's-eye, black streaks and soot pockets, dog holes, mineral streaks, pitch flecks, ripples, scars, swirls, knots, burls, localized short grain, distinction between burls and localized short grain, black knots, table showing percent of defects, and illustrations.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Commercial Standard CS35-42; 1942. Plywood

(Hardwood and Eastern Red Cedar). Provides minimum specifications for four standard grades of hardwood plywood made with three different types of bondage having a high, moderate, and low resistance to moisture. It covers tests, standard thicknesses, widths, and lengths; tolerances, workmanship, packing, inspection, and nomenclature and definitions. Initiated by manufacturers now represented by the Hardwood Plywood Institute.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Commercial Standard CS45-45; 1945. Douglas Fir Plywood (Sixth Edition). These rules cover six grades of moisture-resistant type and eight grades of exterior type Douglas fir plywood; a laminated board for paneling, sheathing, concrete forms, cabinet work, and many other structural and industrial uses. Gives definition, general requirements, tests, table showing standard Douglas fir plywood sizes, size tolerances, inspection, grade marking and certification, nomenclature and definitions, method of ordering, and table showing grade-use classification for Douglas fir plywood. Initiated by Douglas Fir Plywood Assn.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Commercial Standard CS64-37; 1937. Walnut Veneers. This standard covers minimum specifications for plain and semifigured walnut veneers classified as sliced and half-round, rotary, and quarters, in thicknesses not greater than 1/24 in. It includes cutting yield and quality as governed by manufacturing and natural defects. Initiated by American Walnut Manufacturers Assn.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Commercial Standard CS122-45; 1945. Western Hemlock Plywood. Covers four grades of moisture-resistant type Western hemlock plywood for paneling, sheathing, cabinet work, and structural and industrial uses. Gives definition, general requirements, detail requirements, tests, size tolerances, inspection, grade marking and certification, nomenclature and definitions, and table showing grade, width, length, and thickness.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Building Materials and Structures Report BMS68; 1941. Performance Test of Floor Coverings for Use in Low-Cost Housing: Part 3. A performance test was conducted in the floor-testing chamber of the National Bureau of Standards on a third series of 40 test installations. Included in the test were linoleums in sheet and tile form, cork-composition tile, sheet rubber, rubber tile, asphalt tiles, fiberboard tiles, felt-base floor coverings having various wearing surfaces, three monolithic floors, and a number of wood floors. The bonding agents used included lignin pastes, cumar resin cement, alumina cement-latex paste, rubber cements, various asphaltic adhesives, and nails. Installations were made on concrete, stripwood, and plywood subfloors. Installations on stripwood subfloors were made with underlays of dry and asphalt-saturated lining felts. Descriptions of the testing equipment and test installations are given. Results showing the relative depth of the depressions in the floor coverings during the test are presented in tables. Brief summaries of the manner in which the various test installations performed are given, and photographs of the test panels after 48,000 cycles of the testing equipment are shown.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Building Materials and Structures Report BMS73; 1941. Indentation Characteristics of Floor Coverings. The indentation characteristics of 64 floor coverings were determined. Tests were conducted on specimens conditioned in an atmosphere of 65-percent relative humidity and 72° F. temperature, on specimens after exposure to accelerated aging, and on specimens at an elevated temperature of 90° F. The floor coverings tested included such general types as linoleum, cork, rubber, felt base, asphalt, wood, fiberboard, and monolithic compositions. Variations in composition and thickness were included in many of the types. The apparatus and the procedure are briefly described. Summaries of the results are present to show the relative merits of the various floor coverings with respect to comfort value and permanent indentation.

U. S. Gov., Dept. of Commerce, National Bureau of of Standards. Building Materials and Structures Report BMS80; 1942. Performance Test of Floor Coverings for Use in Low-Cost Housing: Part 4. A performance test was conducted in the floor-testing chamber of the National Bureau of Standards on a fourth series of 40 different installations involving 26 different floor coverings. Specimens of most of the floor coverings were installed on both a concrete and a wood subfloor. Included in the test were cork tiles, rubber tile containing aluminum oxide aggregate, asphalt tile, marbleized linoleums, felt-backed floor coverings having various wearing surfaces, strip maples, maple unit-block, pecan unit-block, asphalt mastic, coal-tar mastic, alumina cement-rubber latex composition, magnesium oxychloride composition, and 1:2:4 Portland cement concrete. Different underlays and adhesives were also included in the test. The test installations are described and results showing the depth of the depressions in the floor coverings made by the equipment are presented in tables. Brief summaries of the manner in which the various installations performed are given, and their appearance at the end of the test is shown by photographs. A few generalized comments and conclusions are made.

U. S. Gov., Joint Army-Navy Specification Jan-P-66; 1944. Plywood; Flat Panel.

U. S. Gov., Post Office Dept. Div. of Motor Vehicle Service, Bureau of the Fourth Assistant Postmaster General. Specifications for Wood, Plywood for Panels.

*References.*—American Lumber Standards for softwood veneer and plywood, *see* 413.0; hardwood grading rules, *see* 400.3.

## 413.53 Furniture Stock Except Plywood and Veneer

*References.*—Veneer and plywood, *see* 413.52; American Lumber Standards for softwood furniture stock, *see* 413.0; hardwood grading rules, *see* 400.3; wooden furniture, *see* 430-439.

## 413.54 Wagon and Vehicle Stock Lumber

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R134-32; 1932. Singletrees, Doubletrees, and Neckyokes. This recommendation establishes a simplified schedule

of stock sizes of singletrees, doubletrees, and neckyokes, including dimensions and weights and kind of wood for each type. Initiated by manufacturers now represented by the Farm Equipment Institute.

*References.*—Railway car stock, *see* 413.2; ship stock, *see* 413.4; American Lumber Standards for softwood shop and factory lumber, *see* 413.0; hardwood grading rules, *see* 400.3.

### 413.6 PATTERN STOCK LUMBER

California Redwood Assn. Standard Specification, 1940. Rules for grading pattern lumber, in conformity with American Lumber Standards, includes vertical and flat grain requirements for Clear All Heart grades.

West Coast Lumbermen's Assn. Standard Grading and Dressing Rules for Douglas Fir, Sitka Spruce, West Coast Hemlock, Western Red Cedar Lumber, No.11; 1942. Includes official trade and grade marks; general instructions; moisture content provisions; definitions; thicknesses and widths; and stock patterns.

U. S. Gov., Army Air Forces. Specification 15068-A (1); 1939. Lumber; Mahogany.

U. S. Gov., U. S. Army, Army Air Forces. Specification 82-15; 1935. Lumber; Pattern Pine.

*References.*—American Lumber Standards for softwood pattern lumber, *see* 413.0; hardwood grading rules, *see* 400.3; pattern colors, *see* 429.9.

### 413.7 COOPERAGE STOCK LUMBER

*References.*—Cooperage, *see* 421.

### 413.8 DOOR, WINDOW, AND MILLWORK LUMBER

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering, 1944. Specifications for Building for Railroad Purposes: Carpentry and Millwork. Gives requirements for seasoning, species and grades, dressing, treated lumber, termite shields, framing, joists, partitions, and roof framing.

California Redwood Assn. Standard Patterns of Worked Redwood Lumber. Pattern Book 738; 1941. Includes bevel and molded sills, wood gutters, plain and molded wall boarding, battens, railings, balusters, and moldings, with dimensional diagrams of stock patterns.

California Redwood Assn. Standard Specification, 1942. Casing and Base, Window and Door Frame Stock, Jambs, Etc. Conforms to American lumber standards. Gives requirements for Clear All Heart, and A and B grades.

Southern Pine Inspection Bureau of the Southern Pine Assn. Standard Specifications for Southern Pine Lumber, 1939. Includes general instructions, definitions, general grading provisions, specifications, and grading rules for door and window jambs.

West Coast Lumbermen's Assn. Standard Grading and Dressing Rules for Douglas Fir, Sitka Spruce, West Coast Hemlock, Western Red Cedar Lumber, No.11; 1942. Includes official trade and grade marks; general instructions; moisture content provisions; definitions; thicknesses and widths; and grading rules for Douglas fir, West Coast hemlock, and Sitka spruce cut door stock, sash cuttings, and millwork.

*References.*—American Lumber Standards for softwood shop and factory lumber, *see* 413.0; hardwood grading rules, *see* 400.3; millwork, *see* 423; molding, casing, baseboard, *see* 411.42; finish and panel stock, *see* 411.43.

### 413.9 MISCELLANEOUS SHOP AND FACTORY LUMBER

National Safety Council (American Society of Safety Engineers, Engineering Section). American Standards Assn. A14-1935. Safety Code for Construction, Care and Use of Ladders. Definitions of terms, kind and quality of materials; definition of timber defects; requirements and relative dimensions of wood side rails, steps, rungs, treads, and cleats; classification of various species of wood for use in ladders.

West Coast Lumbermen's Assn. Standard Grading and Dressing Rules for Douglas Fir, Sitka Spruce, West Coast Hemlock, Western Red Cedar Lumber, No.11; 1942. Includes official trade and grade marks; general instruction; moisture content provisions; definitions; thicknesses and widths; and grading rules for miscellaneous shop and factory lumber.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R59-26; 1926. Rotary-Cut Lumber Stock for Wire-Bound Boxes. This recommendation establishes a simplified list of dimensions for air-and kiln-dried stock produced from gum and pine and other soft woods. Initiated by the Wire-Bound Box Manufacturers Assn.

*References.*—American Lumber Standards for softwood shop and factory lumber, *see* 413.0; hardwood grading rules, *see* 400.3.

## 414. RAW CORK, RATTAN AND REED

### 414.1 CORK

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, Volume 2; 1944. Cork. Covers definition, constants, derivation, grades, uses, marketing, containers, and substitutes.

U. S. Gov., Navy Dept., Bureau of Yards and Docks. Specification 16Ye; 1941. Refrigerating Equipment. Includes requirements for corkboard, granulated cork, and molded cork. Includes also ice-making equipment.

U. S. Gov., Navy Dept. Specification 52C7d; 1943. Cork; Ground.

*References.*—Cork board or compressed cork, *see* 425.2; life preservers of cork, *see* 425.3; cork pipe covering, *see* 707.41.

### 414.2 RATTAN

### 414.3 REED

U. S. Gov., Veterans Administration. Specification VA-X-79e; 1942. Reeds.

# 420-429 MANUFACTURES OF WOOD

(Except Furniture)

## 421. COOPERAGE, BARRELS, BOXES, AND SHOOKS

### 421.0 GENERAL ITEMS

Associated Cooperage Industries of America, Inc. Wooden Barrel Manual, Undated. General Barrel Information. Covers loading barrels for railroad shipment, tools used for barrels, measurements and capacities, and dictionary of cooperage terms.

*References.*—Standard fruit and vegetable barrel, standard lime barrel, *see* 951.10.

### 421.1 TIGHT BARREL STAVES

Associated Cooperage Industries of America, Inc. Wooden Barrel Manual, Undated. Beer Barrels. Covers general requirements, care and handling, laminated barrel care, timber, basis of sale, inspections, stave dimensions, and heading sizes.

Associated Cooperage Industries of America, Inc. Wooden Barrel Manual, Undated. Tight Barrels. Gives tight barrel diagram and covers selecting the proper barrel for your product, opening and closing a barrel, handling and storing barrels, interstate commerce commission regulations, grade rules and specifications, circled tight barrel heading, square tight barrel heading, specifications for export barrels, and use of linings.

*References.*—Tight barrel and tub staves, *see* 951.10, 951.13, 951.24, 951.44, 951.72; tank stock lumber, *see* 413.1.

### 421.2 SLACK BARREL STAVES

Associated Cooperage Industries of America, Inc. Wooden Barrel Manual, Undated. Slack Barrels. Gives slack barrel diagram and covers selecting the proper barrel for your product, opening and closing a barrel, handling and storing barrels, interstate commerce commission regulations, grade rules and specifications for export barrels, export barrels for dried skim milk, and bag liners and head liners.

*References.*—Slack barrel staves, *see* 951.10, 951.13.

### 421.3 BARREL HEADINGS AND HOOPS

Associated Cooperage Industries of America, Inc. Wooden Barrel Manual, Undated. Beer Barrels. Covers general requirements, care and handling, laminated barrel care, timber, basis of sale, inspections, stave dimensions, and heading sizes.

Associated Cooperage Industries of America, Inc. Wooden Barrel Manual, Undated. Slack Barrels. Gives slack barrel diagram and covers selecting the proper barrel for your product, opening and closing a barrel, handling and storing barrels, interstate commerce commission regulations, grade rules and specifications for export barrels, export barrels for dried skim milk, and bag liners and head liners.

Associated Cooperage Industries of America, Inc. Wooden Barrel Manual, Undated. Tight Barrels. Gives tight barrel diagram and covers selecting the proper barrel for your product, opening and closing a barrel, handling and storing barrels, interstate commerce commission regulations, grade rules and specifications, circled tight barrel heading, square tight barrel heading, specifications for export barrels, and use of linings.

*References.*—Headings and hoops, *see* 951.10, 951.13, 951.24, 951.44, 951.72; steel hoops, *see* 604.22.

### 421.4 BOX SHOOKS

*References.*—Box shook, *see* 953.30, 953.31, 953.33, 953.35, 953.36, 953.39; box lumber, *see* 413.0,413.9.

### 421.5 BOXES, BARRELS, CASKS, HOGSHEADS

*References.*—Barrels, drums, and tubs, *see* 951; wooden boxes, *see* 953.3; wooden crates, *see* 954.3; wooden switch boxes, *see* 715.12.

## 422. BASKETS

*References.*—Baskets, *see* 952.

## 423. MILLWORK

### 423.0 GENERAL ITEMS

West Coast Lumbermen's Assn. Standard Grading and Dressing Rules for Douglas Fir, Sitka Spruce, West Coast Hemlock, Western Red Cedar Lumber, No.11; 1942. Includes official trade and grade marks; general instructions; moisture content provisions; definitions; thicknesses and widths; and grading rules for millwork.

### 423.1 WOODEN DOORS

National Door Manufacturers Assn. Manual of Standard Construction, 1940. Pine Garage Doors. Graded in accordance with house door rules, except as to defects in mill-run grade.

National Door Manufacturers Assn. Manual of Standard Construction, 1940. Stock Solid Doors and Frames. Specifications for ponderosa pine material as to quality and moisture content, standard types of door sticking and panels, exterior and interior with dimensional diagrams for eight designs of doors. Available in three quality standards.

National Door Manufacturers Assn. Manual of Standard Construction, 1940. Stock Veneered Doors. Specifications as to laminated pine core interior and exterior doors with option as to face veneer; includes gluing, sanding, stile and rail, number of piles, flush doors, and dimensional diagrams.

West Coast Lumbermen's Assn. Standard Grading and Dressing Rules for Douglas Fir, Sitka Spruce, West Coast Hemlock, Western Red Cedar Lumber, No.11; 1942. Includes official trade and grade marks; general instructions; moisture content provisions; definitions; thicknesses and widths; and grading rules for door cuttings.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Commercial Standard CS73-43; 1943. Old Growth Douglas Fir Standard Stock Doors. This standard provides minimum specifications for four grades of stock fir doors in four thicknesses, 3/4, 1 1/8, 1 3/8, and 1 3/4 in. It covers construction, defects,

and the grading tolerances for these requirements. General requirements, inspection and labeling, detail requirements, house doors, garage doors, designs and layouts, Douglas fir stock door list, and grade marking. Initiated by Fir Door Institute.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Commercial Standard CS91-41; 1941. Factory Fitted Douglas Fir Entrance Doors. This standard provides minimum specifications for one grade of factory fitted Douglas fir entrance doors 1 3/4 in. thick. It covers 27 layouts, 25 of which are panel or sash doors and two are flush doors. All doors are available in two sizes, 3 ft. by 6 ft. 8 in. and 3 ft. by 7 ft. It also covers packaging, inspection, nomenclature and definitions, and the method of certification of compliance with this standard. Initiated by Fir Door Institute.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Commercial Standard CS120-44; 1944. Standard Stock Ponderosa Pine Doors. To establish standard specifications and sizes for ponderosa pine, standard stock doors in four nominal thicknesses, 3/4, 1 1/8, 1 3/8, and 1 3/4 in. Covers general requirements, grading, designs and layouts, inspection, labeling, and nomenclature and definitions.

U. S. Gov., Navy Dept., Bureau of Yards and Docks. Specification 27Yb; 1939. Screens. For doors, windows, transoms, and porches.

U. S. Gov., The Panama Canal, Purchasing Dept. Specification for Doors, 1941.

*References.*—Millwork lumber, *see* 411.4, 413.8, metal doors and tin clad doors, *see* 605.22; softwood and hardwood grading rules, *see* 400.2, 400.3, 413.0.

## 423.2 SASH

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering. Specifications for Buildings for Railroad Purposes: Wood Screens. Gives requirements for woodwork, hardware, tags, finishing, and kinds of wood.

National Door Manufacturers Assn. Manual of Standard Construction, 1940. Stock Window Frames and Sash. Specifications as to material, moisture content, standard details for frames and sash openings, with dimensional diagrams, and options as to preservative treatment, priming, and glazing.

West Coast Lumbermen's Assn. Standard grading and Dressing Rules for Douglas Fir, Sitka Spruce, West Coast Hemlock, Western Red Cedar Lumber, No. 11; 1942. Includes official trade and grade marks; general instructions; moisture content provisions; definitions; thicknesses and widths; and grading rules for sash cuttings.

U. S. Gov., Navy Dept., Bureau of Yards and Docks. Specification 27Yb; 1939. Screens. For doors, windows, transoms, and porches.

*References.*—Millwork lumber, *see* 411.4, 413.8; steel windows, *see* 605.22; softwood and hardwood grading rules, *see* 400.2, 400.3, 413.0; definitions of terms, standard practice, *see* 423.0; screen fasteners, *see* 617.43; screen lifts, *see* 617.35; hinges, *see* 617.12.

## 423.3 SLAT BLINDS

American Hospital Assn., 4-4. Wood Slat Venetian Blinds. Covers free hanging design type with slats adjustable to various angles of three types and sizes and in one grade. Based on U. S. Gov. Federal Specification LLL-B-441, and Amendment 2 for wood slat venetian blinds; T-C-571a and Amendment 1 for cotton braided sash cord; and CCC-T-191a and Amendment 1 for textiles; general specifications; test methods.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Commercial Standard CS61-37; 1937. Wood-Slat Venetian Blinds. Covers venetian blinds of the free-hanging, tilt-rail type for residence and office use in three widths of slats, 1 3/4, 2, and 2 3/8 in., respectively, with slats adjustable to various angles and with raising, lowering, and tilting actions controlled by cords, chains, or cables. It includes also general requirements covering workmanship and construction of single-pull and compound-pull blinds having three and four tapes; also detail requirements relative to minimum dimensions of rails and slats.

U. S. Gov., Federal Specification LLL-B-441; 1937. Amendment 2; 1941. Blinds; Venetian, Wood-Slat. Covers three types—(I) single pull, (II) compound pull, and (III) operated by oscillating roller lifts. Gives requirements for material, finish, slats, tilt device, ladder tape, cords and cables, and slider side guides; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking. Emergency Alternate Federal Specification E-LLL-B-441; 1942 (issued by Procurement Div., Treasury Dept., U. S. Gov.) changed requirements for operating devices, hardware, and finish.

*References.*—Millwork lumber, *see* 411.4, 413.8; softwood and hardwood grading rules, *see* 400.2, 400.3, 413.0; definitions of terms, standard practice, *see* 423.0.

## 423.4 SLATS

U. S. Gov., Federal Specification LLL-S-256; 1938. Shades, Window; Wood-Slats. Gives requirements for finish and color of wood parts, top and bottom molding, slat dimensions, hardware, cord, and twine; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

## 423.5 PICKETS AND PALINGS

Arkansas Soft Pine Bureau. Standard Specifications for Arkansas Soft Pine Lumber, 1939. Includes square and flat wooden fence pickets, finish and standard dimensions.

California Redwood Assn. Standard Patterns of Worked Redwood Lumber. Pattern Book 738; 1941. Includes garden, cape cod, colonial, modern, village, gothic, pointed, and concord patterns of picket pack, with dimensional diagrams of stock sizes.

Southern Pine Inspection Bureau of the Southern Pine Assn. Standard Specifications for Southern Pine Lumber, 1939. Includes general instructions, definitions, general grading provisions, specifications, and grading rules for pickets.

West Coast Lumbermen's Assn. Standard Grading and Dressing Rules for Douglas Fir, Sitka Spruce, West Coast Hemlock, Western Red Cedar Lumber, No. 11; 1942. Includes official trade and grade marks; general instructions; moisture content provisions; definitions; thicknesses and widths; and grading rules for pickets.

*References.*—Softwood and hardwood grading rules, *see* 400.2, 400.3, 413.0; definitions of terms, standard practice, *see* 423.0.

### 423.9 MISCELLANEOUS MILLWORK SPECIFICATIONS

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering. Specifications for Buildings for Railroad Purposes: Carpentry and Millwork. Gives requirements for window and door frames, stairs, cabinets, counters, and sash.

Appalachian Hardwood Manufacturers. Standardized Hardwood Wall Paneling, 1939. Includes standard types of vertical, horizontal, and combination panels, moldings and trim; of white oak, beech, birch, chestnut, and maple; also available in red oak, butternut, and yellow poplar. Dimensional drawings of standard shapes, installation instructions, and illustrations.

Arkansas Soft Pine Bureau. Standard Specifications for Arkansas Soft Pine Lumber, 1939. Includes molded casing and base window and door jambs, and moldings worked to conform to American Lumber Standards' 8000 series, in three grades.

U. S. Gov., Army Air Forces. Specification 15065-A; 1944. Panels; Impregnated Compressed Wood.

U. S. Gov., Dept. of the Treasury, Procurement Div., No. 543; 1942. Fasteners, Wood Joint; Corrugated. Covers two types: I, divergent currugations—class (a) saw edge and class (b) plain edge; and II, parallel corrugations—class (a) saw edge and class (b) plain edge.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-1676; 1943. Shelter HO-21-( ), VHF, Plywood Field Shelter.

U. S. Gov., U. S. Army, Signal Corps. Specification 74-14-B; 1941. Shelter; Type ML-41, Meteorological, Instrument.

*References.*—Millwork lumber, *see* 411.4, 413.8; softwood and hardwood grading rules, *see* 400.2, 400.3, 413.0; definitions of terms, standard practice, *see* 423.0; finish lumber, *see* 411.43.

## 424. TANKS

*References.*—Wood tanks, *see* 956.2; metal tanks, *see* 605.23, 956.2.

## 425. MANUFACTURES OF CORK

### 425.1 CORK STOPPERS

American Hospital Assn., 16-25. Cork Stoppers. Covers two types (uncemented and cemented), four grades, and four classes (short-length, regular-length, extra-long, and extra-extra-long). Based on U. S. Gov., Federal Specification LLL-S-731 for Cork Stoppers.

U. S. Gov., Federal Specification LLL-S-731; 1935. Stoppers; Cork. Covers two types—(I) uncemented, and (II) cemented; four grades—A, B, C, and D; and four classes—(1) short length, (2) regular length, (3) extra long, (4) extra, extra long. Gives requirements for sizes, dimensions, and tolerances; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

### 425.2 CORK BOARD, COMPRESSED CORK

Air Conditioning and Refrigerating Machinery Assn., Inc. Equipment Standards, 4.0; 1941. Miscellaneous Ammonia Standards. (4.4) Cold Storage Room Insulation. Gives recommended thicknesses of insulation for certain required temperatures, including cork.

American Assn. of State Highway Officials, M58-42. Standard Specifications for Preformed Expansion Joint Fillers for Concrete (Cork, Self-Expanding Cork, Sponge Rubber and Cork-Rubber Types). Gives scope, manufacture, character of strips, properties, dimensions and permissible variations, packing, sampling, and methods of testing.

American Public Works Assn. Specification for Portland Cement Concrete Pavement, F1-39; 1939. Gives requirements for premolded cork expansion joint formed from clean cork particles compressed and bound together with a cementing material insoluble in water. Includes weight, boiling, compression, and recovery tests.

American Society for Testing Materials, D 544-41; 1941. Preformed Expansion Joint Fillers for Concrete (Nonextruding and Resilient Types). Includes cork, self-expanding cork, sponge rubber, and cork rubber. Manufacture, character of strips, properties, dimensions and permissible variations, packing, sampling, and methods of testing.

American Society for Testing Materials, D-545-41; 1941. Methods of Testing Preformed Expansion Joint Fillers for Concrete (Nonextruding and Resilient Types). Procedures covering tests for expansion in boiler water, recovery, compression, extrusion, boiling in hydrochloric acid, and weathering.

U. S. Gov., Federal Specification HH-C-561b; 1941. Cork; Compressed (Corkboard) (for Thermal Insulation). Covers one grade. Gives requirements for tolerances, modulus of rupture, thermal conductivity, finish, and width; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification HH-C-576; 1936. Amendment 1; 1937. Cork Composition; Gasket and Sheet. Covers four classes—(1) light, (2) medium light, (3) medium heavy, and (4) heavy compositions. Gives requirements for physical properties, tolerances, and flexibility; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Federal Specification HH-F-341; 1940. Filler, Expansion-Joint, Preformed, Nonextruding and Resilient Types (for Concrete). Covers four types—(I) cork, (II) sponge rubber, (III) self-expanding cork, and (IV) cork rubber. Gives requirements for materials, recovery, compression, extrusion, and expansion; methods of sampling and testing; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., Navy Dept., Bureau of Yards and Docks. Specification 16Ye; 1941. Refrigerating Equipment. Also includes ice-making equipment. Includes requirements for corkboard, granulated cork, and molded cork.

U. S. Gov., Navy Dept. Specification 32C13; 1934. Cork-Composition; for Bulletin Boards.

U. S. Gov., Navy Dept. Specification 33C5; 1935. Cork-Composition; Gasket and Sheet.

U. S. Gov., Navy Dept. Specification 39C7a; 1940. Cork, Sheet; for Ring Life Buoys.

U. S. Gov., U. S. Army, Army Air Forces. Specification 23-30; 1926. Cork, Sheet; for Gaskets.

*References.*—Ground cork, *see* 414.1.

### 425.3 LIFE PRESERVERS, BELTS, AND BUOY RINGS OF CORK

U. S. Gov., Navy Dept. Specification 23B4; 1944. Buoys, Life; Ring, Cork.

*References.*—Ground cork, compressed cork, *see* 414.1, 425.2; balsa wood life buoy, *see* 429.9.

### 425.4 CORK PIPE COVERINGS

U. S. Gov., Federal Specification HH-P-381; 1934. Pipe-Covering; Cork, Molded. Covers three classes—(A) ice water thickness; (B) brine thickness; and (C) special brine thickness. Gives requirements for material and workmanship, fits, molded fitting covering, segments, density, thickness, and construction; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking. Emergency Alternate Federal Specification E-HH-P-381; 1942 (issued by Procurement Div., Treasury Dept., U. S. Gov.) eliminated the use of cork and substituted Federal Specifications HH-I-521B (Insulation; Bat or Strip Form and Loose-Fill); HH-I-556 (Insulation-Glass Fiber, Semi-Rigid); E-HH-I-571 (Insulation—Vegetable or Wood Fiber, Blanket, Felt and Loose-Fill); HH-I-578 (Insulation, Vermiculite, Block and Pipe-Covering); HH-M-371 (Mineral Wool, Impregnated; Blanket, Block and Pipe-Covering-Molded, for Low Temperatures), or C-F-201A (Felt, hair).

*References.*—Cork pipe covering, *see* 707.41; ground cork, compressed cork, *see* 414.1, 425.2.

### 425.5 CORK, GRANULATED

U. S. Gov., Federal Specification HH-C-571a, 1933. Cork; Granulated, Insulating. Covers one grade. Gives requirements for material, sizes, and color; and methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

### 425.6 CORK, CARPET AND TILE

U. S. Gov., Federal Specification LLL-C-96; 1939. Carpet; Cork. Covers one type and grade. Gives requirements for material, color and surface, tolerances, width, thickness, seasoning, burlap backing, key, finish, weight, and pliability; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification LLL-T-431; 1937. Tile; Cork. Covers one type and grade. Gives requirements for material, color, finish, tolerances, size, thickness, weight, indentation and recovery, and ash content; sampling, inspection, and tests; and packing and marking.

### 425.9 MISCELLANEOUS CORK ITEMS

Society of Automotive Engineers, Aeronautical Material Specification 3250; 1944. Synthetic Rubber and Cork Composition, General Purpose (35-45). For sheet, strip, molded shapes or as ordered. Gives requirements for application, quality, requirements, sampling, tolerances, reports, identification, packaging, approval, and rejections.

Society of Automotive Engineers, Aeronautical Material Specification 3251; 1944. Synthetic Rubber and Cork Composition, General Purpose (45-55). For sheet, strip, molded shapes or as ordered. Gives requirements for application, quality, requirements, sampling, tolerances, reports, identification, packaging, approval, and rejections.

Society of Automotive Engineers, Aeronautical Material Specification 3252; 1944. Synthetic Rubber and Cork Composition, General Purpose (55-65). For sheet, strip, molded shapes or as ordered. Gives requirements for application, quality, requirements, sampling, tolerances, reports, identification, packaging, approval, and rejections.

## 426. VEHICLES

*References.*—Wagon stock, *see* 413.54; locomotives, *see* 701.3, 721.1; automobiles and trucks, *see* 721.2, 722, 723; aircraft, *see* 724; bicycles, motocycles, *see* 725.1, 725.2; boats, ships, *see* 725.3, 725.4; railway cars, *see* 726; trucks, other than motor trucks, *see* 729.3.

## 427. ELECTRICAL EQUIPMENT OF WOOD

American Transit Assn. Specification for Overhead Line Material for Direct and Catenary Suspension, D102-39; 1939. Part of this specification relates to material used principally in direct suspension overhead trolley construction, for voltages not exceeding 750 volts. It covers requirements for bracket arms, pole bands, bolts, bracket intermediate fittings, crossings, clinch ears, frogs, insulators, etc.

American Transit Assn. Specification for Overhead Line Material for Direct and Catenary Suspension, D102-39; 1939. Wood for insulator pins referred to in this specification shall conform to the current specification D150 for Wood Insulator Pins (Material) of the Edison Electric Institute.

Association of American Railroads, Telegraph and Telephone Section, 1-A-86; 1942. Deadman. For use in the communication plant. Gives general requirements, material and workmanship, dimensions, identification, inspection and tests, packing, marking, and warranty.

Assn. of American Railroads, Telegraph and Telephone Section, 1-A-87; 1942. Pike Poles. For use in the communication plant. Gives general requirements, material and workmanship, dimensions, identification, inspection and tests, packing, marking, and warranty.

Assn. of American Railroads, Telegraph and Telephone Section, 1-A-94; 1943. Locust Wood Bushings. For use in the communication plant. Gives general requirements, material and workmanship, dimensions, definition of terms, inspection and tests, packing, marking, and warranty.

Assn. of American Railroads, Telegraph and Telephone Section, 1-C-3; 1928. Creosoted Wood Conduit. For conduit of Southern yellow pine, Norway pine, black gum, permissible defects in wood, range in length of one size square conduit with circular bore, dimensions of tenons and mortises, retention of preservative, creosoting according to Specification 1-A-10.

Assn. of American Railroads, Telegraph and Telephone Section, 1-C-11; 1941. Split Single Creosoted Yellow Pine Conduit. For use in underground construction. Gives material, workmanship, dimensions, assembly, finish, creosoting, inspection and tests, marking, and warranty.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-334B; 1933. Rod, Duct; Type LC-43, 3-Foot Lengths.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-458A; 1935. Conduit; Types MC-78 and MC-94-A, Wood, Creosoted.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-476A; 1943. Wire Pike MC-1.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-635A; 1943. Wire Pipe MC-123; Sectional.

*References.*—Wooden insulators and insulator pins, *see* 429.7; wooden poles, cross arms, *see* 401.3, 402.1.

## 428. WOODEN HANDLES, OARS, TENT PINS, AND POLES

### 428.1 HANDLES FOR AGRICULTURAL IMPLEMENTS

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R76-40; 1940. Ash Handles. This recommendation establishes standard grading of long handles and stems for forks, rakes, hoes, and kindred farm and garden tools, as well as for shovels, spades, and scoops. And also covers requirements on color, weight, number of annual rings, maximum permissible cross grain, and admissible blemishes.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R77-39; 1939. Hickory Handles. This recommendation establishes a standard grading of long and short handles for striking tools, such as axes, adzes, picks, sledges, hammers, hatchets, etc. It also covers requirements of color of wood, number of annual rings, weight, admissible blemishes and defects. Initiated by the Hickory Handle Assn.

U. S. Gov., Federal Specification NN-H-81; 1934. Handles; Ash, for Tools. Covers four types—fork, hoe, rake, and shovel; and three grades—XX, X, and 1. Gives requirements for material and workmanship; methods of inspection; and requirements for packaging, packing, and marking.

### 428.2 WOODEN HANDLES FOR TOOLS

### 428.20 General Items

### 428.21 Broom, Mop, and Brush Handles

*References.*—Brooms and broom-handles, *see* 981; brushes and brush handles, *see* 982; mopsticks, *see* 983.1.

### 428.22 Package Handles

### 428.29 Miscellaneous Tool Handles

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering, 1944. Specifications for Hickory Handles for Track Tools. Gives requirements for material, physical characteristics, design, manufacture, inspection, definitions of blemishes and defects, delivery, grade classification, and use of classification.

U. S. Gov., Dept. of Agriculture, Forest Service. Specifications MSF-171-S. Handles; Ash, Tool.

U. S. Gov., Dept. of Agriculture, Forest Service. Specifications MSF-172. Handles; Double-Bit Ax.

U. S. Gov., Dept. of Agriculture, Forest Service. Specifications MSF-173-1-S. Handles; Hickory, Long.

U. S. Gov., Dept. of Agriculture, Forest Service. Specifications MSF-173-2-S. Handles; Hickory, Short.

U. S. Gov., Dept. of Agriculture, Forest Service. Specifications 174, Handles; Crosscut Saw.

U. S. Gov., Dept. of Commerce, National Bureau of Standards, H5; 1923. American Standards Assn., B13-1924. American Logging and Sawmill Safety Code. Requirements on structural features, provision of guards, and rules of operation and procedure, which increase safety for employees, covering felling and logging, sawmill operations, sawmill machinery, and yard operations.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R77-39; 1939. Hickory Handles. This recommendation establishes a standard grading of long and short handles for striking tools, such as axes, adzes, picks, sledges, hammers, hatchets, etc. It also covers requirements of color of wood, number of annual rings, weight, admissible blemishes and defects. Initiated by Hickory Handle Assn.

U. S. Gov., Federal Specification NN-H-93; 1941. Amendment 1; 1944. Handles; Hickory, Striking-Tool. Covers ten types, sledge hammer, riveting hammer, single-bitted ax, double bitted ax, adz eye hammer, adz, railroad or clay pick, blacksmith hammer, hatchet, and machinist hammer; and three grades, AA, A, and B. Gives requirements for materials and workmanship, and details for each type; methods of inspection; and packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification NN-H-106; 1934. Amendment 2; 1944. Handles; Wood, Miscellaneous for Tools. Covers six types—ship auger, bung borer, chisel (socket firmer), file, saw, and soldering iron. Gives requirements for material and workmanship, finish, tolerances, and details for each type; methods of inspection; and packaging, packing, and marking.

*References.*—Standard sizes, *see* 428.20.

### 428.3 OARS AND PADDLES

U. S. Gov., Joint Army-Navy Specification JAN-O-39; 1944. Oars.

U. S. Gov., Joint Army-Navy Specification JAN-P-40; 1944. Paddles; Boat and Life Float.

### 428.4 TENT PINS AND POLES

## 429. MISCELLANEOUS MANUFACTURES OF WOOD

### 429.1 WOODENWARE (DISHES AND KITCHEN UTENSILS)

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R189-42. Round and Flat Hardwood Toothpicks (Sizes and Packaging). This recommendation gives tables showing minimum number of cartons or cans per shipping unit, number of toothpicks per carton or can, and length of toothpicks for both round and flat hardwood toothpicks.

U. S. Gov., Federal Specification LLL-B-551; 1939. Boards; Bread and Pastry. Covers one grade. Gives requirements for material, construction, glue, finish, shape, dimensions, and tolerances; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Federal Specification LLL-B-561; 1939. Amendment 1; 1943. Boards; Carving. Covers one grade. Gives requirements for material, construction, glue, glued joints, dimensions, and marking; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

639677 O—45——16

U. S. Gov., Federal Specification LLL-B-568; 1939. Boards; Chopping. Covers one grade. Gives requirements for material, construction, glue, shapes, sizes, tolerances, and marking; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Federal Specification LLL-B-576; 1941. Boards; Pantry, Wood. Covers one grade. Gives requirements for material, construction, and dimensions; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Federal Specification LLL-M-116; 1941. Mashers; Potato, Wood. Covers one grade. Gives detail requirements; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Federal Specification LLL-P-381; 1941. Pins; Rolling, Wood. Covers one grade and two types—(I) with stationary handles, and (II) with revolving handles. Gives detail requirements; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Federal Specification LLL-S-614; 1941. Spoons; Mixing, Wood. Covers one grade. Gives detail requirements; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Federal Specification LLL-S-617; 1941. Spoons: Mustard, Wood. Covers one grade. Gives detail requirements; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Navy Dept. Specification 64B5d; 1941. Blocks; Meat, Tables, Cutting Meat.

U. S. Gov., U. S. Maritime Commission. Specification 64-MC-1; 1941. Spoons; Wood, Mixing. There shall be but one type and grade, and sizes shall be 12 or 15 in. overall. Gives requirements for materials, workmanship, dimensions, tolerance, construction, finish, methods of inspection, and tests.

U. S. Gov., U. S. Maritime Commission. Specification 64-MC-4; 1941. Paddles; Stirring, Wooden. There shall be but one type and grade. Gives requirements for material, workmanship, blades, handle, finish, dimensions, tolerance, inspection, and method of test.

U. S. Gov., U. S. Maritime Commission. Specification 64-MC-6; 1941. Boards; Bread or Pastry, Meat Cutting or Carving, Wooden. Type I—Bread or pastry boards; type II—meat cutting or carving boards; and shall be but one grade. Gives requirements for materials, workmanship, construction, sizes, tolerance, inspection, and methods of test.

U. S. Gov., U. S. Maritime Commission. Specification 64-MC-15; 1941. Bowls; Chopping, Wooden. All bowls shall be of the round type, with a flat on outside of bottom, and shall be of but one grade. Gives requirements for material, workmanship, construction, dimensions, tolerance, inspection, and test.

U. S. Gov., U. S. Maritime Commission. Specification 64-MC-17; 1941. Peels; (Cracker) Wooden. There shall be but one grade and type. Gives requirements for material, workmanship, blade, handle, length, sampling, inspection, and test.

U. S. Gov., U. S. Maritime Commission. Specification 64-MC-19a; 1944. Pins; Rolling, Wood. Covers one grade and two types—(I) rolling pin with handle, and (II) baker's pie roll. Gives requirements for materials, workmanship, construction, wood, finish, and details for each type including sizes; sampling, inspection, and methods of test; and packaging, packing, and marking for shipment.

## 429.2 WOODEN TOOLS

U. S. Gov., Federal Specification LLL-M-71; 1933. Amendment 3; 1942. Mallets and Mauls; Wood. Covers seven types—(I) mallets, calking; (II) mallets, carpenters', round, round reinforced-head, and square; (III) mallets, coppersmiths'; (IV) mallets, hawsing (beetles); (V) mallets, serving; (VI) mallets, tinners'; and (VII) mauls. Gives requirements for material, construction, handles. finish, and dimentions; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Marine Corps Specification. Revised, 1939. Lasts, Hinge, Marine Corps Shoes (Goodyear Welt).

U. S. Gov., Navy Dept. Specification 41S24a; 1927. Sticks; Packing.

U. S. Gov., Navy Dept. Specification 41W1b; 1936. Wedges.

U. S. Gov., Navy Dept. Specification 72L3; 1943. Lasts; Shoe.

U. S. Gov., Treasury Dept., Procurement Div., 453a; 1942. Mallets, Tamping-Bars, and Wedges, Wood (for Use in Blasting Operations). Covers 3 types—(I) wood mallets; (II) tamping-bars, wood; (III) wedges, wood. Gives requirements for wood, head, handle, and details for each type; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., U. S. Army, Medical Dept. Specification 17-193; 1939. Screw; Hand.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 23-83; 1925. Last, Hinge, Munson, Goodyear Welt.

*References.*—Metal hand tools, *see* 615, 616.

## 429.3 WOODEN POLE BRACKETS AND STEPS

Assn. of American Railroads, Telegraph and Telephone Section, 1-A-35; 1930. Wood Pole Steps. For steps made from seasoned oak to be secured to poles, allowable sapwood, knots, and defects, with dimensional drawing.

Assn. of American Railroads, Telegraph and Telephone Section, 1-A-36; 1936. Wood Pole Brackets. For brackets of seasoned oak for mounting glass insulators, requirements for angle of grain, knots, sapwood, and defects, with dimensional drawings.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-314B; 1943. Brackets PF-57 and PF-58.

*References.*—Steel brackets and steps, *see* 719.62.

## 429.4 WOODEN LADDERS

American Hospital Assn., 34-97. Ladders and Ladder Shoes (Extension, Sectional, and Straight). Covers two and three-section extension ladders; interchangeable section-lock, nut type sectional ladders; and window cleaners' type sectional ladders. Based on U. S. Gov., Federal Specification LLL-L-51 for

(Extension, Sectional, and Straight) Ladders and Ladder Shoes.

American Hospital Assn., 34-100. Stepladders. Covers mechanics' type, 4 to 20 ft., and general purpose type, 3 to 12 ft. Based on U. S. Gov., Federal Specification LLL-L-61 for Stepladders.

National Safety Council (American Society of Safety Engineers, Engineering Section). American Standards Assn., A14-1935. Safety Code for Construction, Care, and Use of Ladders. Definitions of terms, kind and quality of materials; definition of timber defects; requirements and relative dimensions of wood side rails, steps, rungs, treads and cleats; classification of various species of wood for use in ladders; specifications and construction of fixed, single, extension, fire, step, trolley and side-rolling, sectional, trestle and extension trestle ladders; installation of fixed ladders; accessories; care and use.

National Safety Council. American Standards Assn., A 39-1933. Recommended Practice for Window Cleaning. Applies to all window cleaning operations performed wholly or partially c the outside of all public buildings more than one story high, or in which the sills of windows are located more than 10 ft. above grade or adjoining roof. Requirements when to use approved safety devices. Requirements on swinging scaffolds, boatswain's chair, sectional ladders, belts, belt terminals and anchors.

Underwriters' Laboratories, Inc. Standard for Ladders, 1942. Covers portable ladders of the following types: Straight (single), extension, step, trestle, and extension trestle. Gives requirements for timber defects, knots, pitch pockets, classification of woods (four groups), side rails, steps, construction, strength tests, stability tests, marking, inspection of listed products, and instructions to inspectors.

U. S. Gov., Army Air Forces. Specification 40869; 1944. Ladder; Folding Refueling, Type B-1.

U. S. Gov., Army Air Forces. Specification 40917; 1945. Ladder; Folding Refueling, Type B-2 (Portable by Air).

U. S. Gov., Federal Specification LLL-L-51; 1938. Ladders (Extension, Sectional, and Straight); and Ladder-Shoes. Covers four classes. Gives requirements for design, dimensions, and general construction; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking. Emergency Alternate Federal Specification E-LLL-L-51, Jan. 1943 (issued by Procurement Div., Treasury Dept., U. S. Gov.), changed requirements to include metal, wood, and rope.

U. S. Gov., Federal Specification LLL-L-61; 1933. Amendment 1; 1945. Ladders; Step. Covers two types—(I) mechanics', 6 to 16 ft., and (II) general purpose, 4 to 10 ft. Gives requirements for material and workmanship, side rails, back rails, steps, rail spreaders, and details for each type; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., U. S. Army, Army Air Forces. Specification 94-40735; 1944. Ladder; Extension Maintenance, Type A-1 (Mounted on Dolly).

U. S. Gov., Veterans Administration. Specification VA-M-164; 1936. Trussed Ladders of the Extension Type.

U. S. Gov., Veterans Administration. Specification VA-M-165a; 1938. Solid Side Wall Ladders.

U. S. Gov., Veterans Administration. Specification VA-M-174; 1936. Extension Ladders.

*References.*—Ladder stock, *see* 413.9; construction of ladders for mines, *see* 751.

## 429.5 WOODEN ROLLERS

## 429.7 WOODEN INSULATORS AND INSULATOR PINS

American Transit Assn. Specifications for Overhead Line Material for Direct and Catenary Suspension, D102-39; 1939. Part of this specification covers material used in feeder cable construction for voltages not exceeding 750 volts. Requirements are given for cross-arm braces, wood insulator brackets, wood cross-arms, tree and cable guards, feeder insulators, insulator pins, and switch boxes.

Assn. of American Railroads, Telegraph and Telephone Section, 1-A-56; 1935. Ten-Wire Fanning Strip, AAR-1-A. Covers maple separator treated with beeswax and paraffin, with dimensional requirements.

Assn. of American Railroads, Telegraph and Telephone Section, 1-A-84; 1942. Wood Insulator Pins. For use in the communication plant. Gives general requirements, material and workmanship, dimensions, treatment, definitions, inspection and tests, packing, marking, and warranty.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-243; 1923. Insulator; Type IN-53, Line Construction, Wooden.

U. S. Gov., U. S. Army, Singal Corps. Specification 71-315A; 1941. Pins PF-59 and PF-60; Telephone Insulator.

*References.*—Thread Gages for Insulator Pins, *see* 615.82.

## 429.8 WOODEN WHEELS

*References.*—Wood spoke automobile wheels, *see* 722.35; wagon wheel stock, *see* 413.54.

## 429.9 MANUFACTURES OF WOOD NOT ELSEWHERE CLASSIFIED

American Assn. of State Highway Officials, M90-42. Standard Specifications for Redwood Board Expansion Joint Filler for Concrete. Gives scope, general requirements, dimensions, weight per cubic foot, compression, sampling, and methods of testing.

American Bowling Congress. Rules and Regulations, 1944-45. Covers dimension and weight of pins; weight, size, and balance of balls; construction of kickbacks; specifications for gutters, and legal dimensions of alleys.

American Society for Testing Materials, D 358-44T; 1944. Tentative Specifications for Wood To Be Used as Panels in Weathering Tests of Paints and Varnishes. For exterior paints and other materials for similar purpose, either outdoor or accelerated laboratory tests, and for uses of each specie. Includes Western red cedar, white pine, and Southern yellow pine.

Assn. of American Railroads, Telegraph and Telephone Section, 1-A-30; 1929. Wood Booth for Roadway Telephone. General design and dimensional drawings of booth, exterior woodwork and trim of cypress, interior of pine, with asphalt shingle roof. Gives thickness of sheathing, flooring, and door, and requirements for painting.

Assn. of American Railroads, Telegraph and Telephone Section, 1-A-31; 1929. Telephone Shelter Box—Type A. For box of white pine, requirements on thickness and type of boards, grade of tin roof, construction of door, and dimensional drawings, including pole mounting details.

Assn. of American Railroads, Telegraph and Telephone Section, 1-A-42; 1930. Telephone Shelter Box. Covers typical pole mounted box with extended tin roof for housing telephone equipment, constructed of white pine, train order compartment, and dimensional drawing.

Assn. of American Railroads, Telegraph and Telephone Section, 1-A-54; 1935. Cable Boxes. Includes cable boxes for 12 pairs to and including 90 pairs, requirements for cypress wood construction, hardware, and painting, gage of zinc roof, and dimensional drawings of each box.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, Volume 2; 1944. Excelsior. Covers definition, derivation, uses, marketing, and grades.

National Collegiate Athletic Assn. Official Ice Hockey Guide IH45. Hockey Sticks. Includes requirements for material, length, blade heights, and blade length.

U. S. Gov., Army Air Forces. Specification 40825-2; 1945. Bench; Instrument Repair.

U. S. Gov., Dept. of Agriculture, Forest Service. Specifications 49. Board; Lookout Map, Wood.

U. S. Gov., Dept. of Agriculture, Forest Service. Specifications 56. Board; Pack, Canvas-Lined.

U. S. Gov., Dept. of Agriculture, Forest Service. Specifications MSF-55. Board; Pack, Clack.

U. S. Gov., Dept. of Commerce, National Bureau of Standards, H5; 1923. American Standards Assn., B13-1924. American Logging and Sawmill Safety Code. Includes axe handles, requirements on general quality and grain of hickory handles, permissible defects, permissible variations from specified dimensions, number of annual rings. Includes also flume construction. Permissible maximum spacing of supporting posts, minimum size of posts, minimum size of runway, requirements on material of runway and provision of handrail.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R188-42; 1942. Spring and Slotted Clothespins. Covers standard packaging and dimensions of clothespins—three packings for each type.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Commercial Standard CS18-29; 1929. Hickory Golf Shafts. A commercial standard selected and accepted by industry for "B" form shafts for iron-headed clubs, including requirements on general quality of wood, permissible moisture content, dimensions and tolerances, straightness, straightness of grain, stiffness requirement for each of 3 grades, test method.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Commercial Standard CS19-32; 1932. American Standards Assn., B45.1-1932. Foundry Patterns of Wood. Pattern colors selected and accepted by industry as a commercial standard covering colors for unfinished surfaces, machined surfaces, core prints, etc. Same as standard pattern colors sponsored by American Foundrymen's Assn. and other organizations.

U. S. Gov., Federal Specification GG-B-546; 1943. Boards; Drawing. Type I, boards with end cleats; type II, boards with back cleats; and sizes shall conform to tables I and II as specified. Gives requirements for trueness, tolerances, finish, construction, dimensions, sampling, inspection, tests, packaging, packing, and marking.

U. S. Gov., Federal Specification NN-E-911; 1937. Excelsior (Wood). Covers two types—(I) excelsior, and (II) excelsior pads; two classes—A and B; five grades for type I, class A—superfine wood wool, wood wool, extra fine excelsior, fine excelsior, and course or ribbon excelsior; and five grades for type I, class B—wood wool, extra fine or 4X excelsior, fine excelsior, medium excelsior, and course or ribbon excelsior. Gives requirements for materials, workmanship, sizes of strands, weights of type II, and covering for type II; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Federal Specification LLL-B-621; 1941. Amendment 1; 1942. Bowls; Wood. Covers one grade and two types—(I) oval, and (II) round. Gives detail requirements; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Marine Corps Specification. Adopted, 1940. Baton; Drum Major.

U. S. Gov., Marine Corps Specification. Adopted, 1934. Drumstick.

U. S. Gov., Navy Dept. Specification 26H1c; 1934. Hangers; Coat.

U. S. Gov., Navy Dept. Specification 26H2b; 1932. Hanger; Trousers.

U. S. Gov., Navy Dept. Specification 39W2; 1944. Wood; Impregnated, Compressed (for Floor Supports in Magazine and Cold-Storage Spaces).

U. S. Gov., U. S. Maritime Commission. Specification 23-MC-2; 1943. Position Buoy Outfit; Fog. Shall be but one type and grade. Gives requirements for metal, wood, workmanship, component parts, buoy, tow line, windlass, finish, marking, sampling, inspection, test, and drawings.

U. S. Gov., U. S. Army, Ordnance Department. Specification 23-68A; 1934. Buoy; Mine.

U. S. Gov., U. S. Army, Ordnance Department. Specification 89-3021; 1940. Plug; Wooden, for Submarine Mines and Buoys.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 23-2C; 1942. Stirrup, Hooded; and Stirrup, Hooded, With Guidon Socket, for McClellan Saddle.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 23-82A; 1936. Stretcher; Shoe.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 23-104A; 1940. Flagstaff.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 23-108; 1942. Snowshoes; Trial.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 31-23; 1944. Batons; Band Leader.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 92-35; 1937. Tree; Saddle, McClellan, M1904, Without Cover, for McClellan Saddles, M1904 and M1928.

U. S. Gov., U. S. Army, Signal Corps. Specification 74-15; 1923. Support; Type ML-42 Meteorological Instrument Shelter.

# 430-439 FURNITURE OF WOOD

## 431. HOUSEHOLD FURNITURE, EXCEPT CHAIRS

### 431.1 BEDROOM FURNITURE OF WOOD

#### 431.11 Wooden Beds

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R2-32; 1932. Bedsteads, Springs, and Mattresses. Bedsteads. This recommendation establishes a schedule of types and sizes of bedsteads covering straight-foot wood and metal beds. Initiated by the National Assn. of Bedding Manufacturers and the National Assn. of Furniture Manufacturers.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R2-32; 1932. Bedsteads, Springs, and Mattresses. Mattresses. This recommendation establishes a schedule of types and sizes of mattresses to conform to spring dimensions given in the simplified practice recommendation.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2528; 1939. Shoe; Bed.

*References.*—Veneer, plywood, and other furniture stock, *see* 413.52, 413.53; metal beds, *see* 613.1.

#### 431.12 Bureaus and Chiffoniers

*References.*—Plate glass mirrors, *see* 527.

#### 431.13 Cots

U. S. Gov., Federal Specification AA-C-571a; 1937. Amendment 1; 1938. Cots; Folding, Canvas. Covers one type and one grade. Gives requirements for length, width, height, woodwork (hickory, birch, rock elm, white ash, beech, red oak, white oak, pecan or hard maple), steelwork, painting, cover, thread, stitching, and straps; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

*References.*—Metal frame cots, *see* 613.1.

#### 431.14 Wardrobes

U. S. Gov., Federal Specification AA-W-131; 1935. Wardrobes; Wood. Covers two types—(I) double-door, and (II) single-door; and three classes—(A) mahogany finish; (B) oak, quartered, front and sides; and (C) walnut finish. Gives requirements for material, workmanship, and construction; methods of sampling and inspection; and requirements for packaging, packing, and marking.

#### 431.19 Miscellaneous Bedroom Furniture of Wood

### 431.2 NURSERY FURNITURE OF WOOD

### 431.3 BATHROOM FURNITURE OF WOOD

*References.*—Plate glass mirrors, *see* 527.

### 431.4 DINING-ROOM FURNITURE

U. S. Gov., U. S. Army, Medical Dept. Specification 32-23A; 1942. Table; Dining, Extension, Oak.

U. S. Gov., U. S. Army, Medical Dept. Specification 32-35; 1938. Table; Dining, Cafeteria.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 28-25A; 1942. Table; Mess.

U. S. Gov., Veterans Administration. Specification VA-G-54b; 1938. Breakfast Suite.

*References.*—Plate glass mirrors, *see* 527.

## 432. LAWN AND PORCH FURNITURE

## 433. CAMP FURNITURE

### 433.1 FOLDING CAMP COTS

*References.*—Folding canvas cot, *see* 431.13.

### 433.2 FOLDING TABLES

U. S. Gov., Dept. of Agriculture, Forest Service. Specifications 341-1-S. Table; Folding, Fire-Camp, Lightweight.
U. S. Gov., Dept. of Agriculture, Forest Service. Specifications 341-2-S. Table; Folding, Fire-Camp, Mediumweight.
U. S. Gov., Dept. of Agriculture, Forest Service. Specifications 342-1-S. Tables; Folding, Camp-Boss.
U. S. Gov., Dept. of Agriculture, Forest Service. Specifications 343-S. Table; Top, Canvas, Roll-Up.
U. S. Gov., Dept. of Agriculture, Forest Service. Specifications 344. Table-Top Ration Box.
U. S. Gov., U. S. Army, Medical Dept. Specification 32-38; 1939. Table; Dining, Field, Knock-Down Type.
U. S. Gov., U. S. Army, Quartermaster Corps. Specification 28-22A; 1943. Table; Camp, Folding.

## 434. HOSPITAL FURNITURE OF WOOD

American Hospital Assn., 52-4. Motorless Dental Operating Chairs. Covers one type and one grade. Based on U. S. Gov., Federal Specifications AA-C-326 and Amendment 1 for Motorless Dental Operating Chairs, and KK-L-291 and Amendment 1 for Upholstery Leather.
American Hospital Assn., 70-4. Invalid Wheel Chairs. Covers two types and one grade. Based on U. S. Gov. Federal Specifications AA-C-346a for Invalid Wheel Chairs, and American Hospital Assn. Specifications 73-19 for Ball Bearing Rubber Tired Wheels, 26 In. Diameter; and Casters having 10-In. Diameter Ball Bearing, Rubber Tired Wheels; for Wheel Chairs.
U. S. Gov., Federal Specification AA-C-346a; 1938. Chairs; Wheel, Invalid. Covers two types—(I) cane seat and cane back, and (II) solid seat and slat back. Gives requirements for back, seat, leg rests, foot boards, under frame, journals, fork and pin, axles, front wheels, rear wheels, hand rims, arm rests, finish, and over-all dimensions; methods of sampling, inspection, and tests; and requirements for packing and marking for shipment.

*References.*—Metal hospital beds and cots, *see* 613.1.

## 435. OFFICE FURNITURE OF WOOD

### 435.1 WOODEN BOOKCASES

*References.*—Bookcase sections, *see* 435.5.

### 435.2 WOODEN OFFICE CHAIRS AND STOOLS

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specifications CAA-146. Console and Desk Chair; Central Station Control.
U. S. Gov., Federal Specification AA-C-281; 1937. Chairs; Bent-Wood. Covers two types—(I) with arms, in two classes (padded seat, plywood seat), and (II) without arms, in three classes (padded seat, plywood seat, wood seat). Gives general requirements for material and workmanship, glue, glued joints, framing, finish, and color; detail requirements for each type; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.
U. S. Gov., Federal Specification AA-C-311; 1933. Amendment 1; 1937. Chairs; Office, Wood. Covers ten types—(A) rotary, arm chair, No. 1-C; (B) leg, arm chair, No. 2-C; (C) rotary chairs, without arms, No. 3-C; (D) leg chairs, without arms, No. 4-C; (E) rotary chair, No. 5-C; (F) judge's rotary chair, No. 6-C; (G) rotary stool, with back, No. 7-C; (H) rotary stool, without back, No. 8-C; (I) rotary chair, No. 1026; and (J) alternates for No. 1-C and No. 2-C may have perforated leather seats properly reinforced. Gives requirements for design, material, and workmanship; construction, unholstery, hardware, finish, and color; method of inspection; and requirements for packing and marking.
U. S. Gov., Federal Specification AA-S-691; 1943. Stools; Foot. Covers one type and two classes—A, metal and B, wood. Gives requirements for material, workmanship, dimensions, frame, top, legs, rubber tips, and finish; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification AA-S-701; 1937. Stools; Wood. Covers three types—(I) leg (in two classes—(A) bent-wood, cane seat, and (B) wood, wood seat); (II) rotary, with back; and (III) rotary, without back, wood (in two classes—(A) cane seat, and (B) wood seat); and woods and finishes—mahogany, genuine; mahogany, imitation; maple, genuine; oak; walnut, genuine American; walnut, imitation; and white enamel. Gives requirements for material, workmanship, sizes, and construction; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Treasury Dept., Procurement Div., No. 539; 1942. Chairs; Office, Wood (Rotary, Stenographic, and Leg Types). Covers three types: (A) Rotary, army chair, (C) stenographic chair, and (D) leg chair, without arms. Shall be selected birch, hard maple, American walnut, or white oak. Gives requirements for construction, hardware, finish, color, style and design, and dimensions; methods of inspection; and packing and marking.

## 435.3 DESKS AND OFFICE TABLES, WOODEN

U. S. Gov., Dept. of Interior, Purchasing Office. Standard Specifications 71. Desks; Pupil's Table, With Open Front Book Boxes.

U. S. Gov., Dept. of Interior, Purchasing Office. Standard Specifications 72. Desks; Pupil's, Movable, With Study Tops.

U. S. Gov., Federal Specification AA-D-201; 1930. Amendment 2; 1935. Desks; Wood. Covers six types—flat top, single, in six sizes; roll top, in two sizes; and typewriter, flat top, in three types—drop at either right or left side (in one size), drop at center (in one size), compartment in either right or left pedestal and three drawers in other pedestal (in two sizes). Gives requirements for material (mahogany, oak, birch, or other woods selected to match mahogany or walnut), design, construction, legs, panels, tops, heads, decks, slides, drawers, pedestal-partition rails, sweep arms, typewriter beds, fittings, hardware, finish, and color; methods of inspection; and requirements for packing and marking.

U. S. Gov., Federal Specification AA-T-101; 1932. Tables; and Typewriter Stands; Wood. Covers two types—(I) tables for office use, and (II) typewriter stands for office use; in six grades—(A) quartered oak, (B) plain oak, (C) mahogany, (D) imitation mahogany, (E) genuine American Walnut, and (F) imitation walnut. Gives requirements for tops, legs, drawers, locks, and finish; method of inspection; and requirements for packing and marking.

U. S. Gov., Treasury Dept., Procurement Div., 265A; 1938. Desks; Office, Wood. Shall be of 3 types, flat-top, single; flat-top, double; and typewriter, in mahogany, quartered oak, or walnut finish. Gives requirements as to material and workmanship, wood, framing, veneers, design, finish, drawers, methods of inspection, packing, and marking.

U. S. Gov., Treasury Dept., Procurement Div., No. 521; 1941. Desks; Office, Wood. Covers three types—(I) flat-top single (double pedestal and single pedestal), (II) flat-top double, and (III) typewriter (compartment in left pedestal, compartment in right pedestal, drop at center, and drop at left side); and three finishes, (A) quartered oak, (B) combination walnut, and (C) genuine walnut. Gives requirements for wood, glue, exposed surfaces, framing, veneers, design, wiring, legs, glides, panels, tops, slides, drawers, finish, color, and size; methods of inspecting, packing, and marking.

U. S. Gov., Treasury Dept., Procurement Div., 537A; 1942. Desks; Office, Wood, Table Type. Covers two types—(I) typewriter, typewriter well on left; (II) clerical, flat top. Shall be walnut finish. Gives requirements for wood, glue, glued joints, exposed surfaces, framing, veneers, tops, design, tolerances and height, legs, panels and rails, drawer, typewriter well, shelf, and glue blocks and braces; methods of inspection and tests; and packing and marking.

U. S. Gov., Veterans Administration. Specification VA-G-61a; 1935. Desks; Writing, No. 601.

U. S. Gov., Veterans Administration. Specification VA-G-332; 1939. Charging Desk; Leg Type.

*References.*—Veneer, plywood, and other furniture stock, *see* 413.62, 413.53; metal desks and tables, *see* 613.4, 613.6; desk locks, *see* 617.21.

## 435.4 WOODEN DOCUMENT BOXES

## 435.5 WOODEN FILING CASES AND CABINETS

Assn. of American Railroads, Telegraph and Telephone Section, 2-G-44; 1929. Stationery Holder. For mounting on telegraph table, box type of holder with open horizontal shelves, constructed of oak, varnished finish, with dimensional drawings.

U. S. Gov., Federal Specification AA-F-801; 1933. Amendment 1; 1944. Furniture and Cabinets; Office, Sectional, Wood. Includes small sections, horizontal sections, upright sections, bookcase sections, and cabinets and trays, (card filing). Gives requirements for material (quartered white oak, mahogany, walnut, birch, quarter-sawed red gum), design, framing, joints, moldings, face veneers, panels, backs, partitions, drawers, finish, frames, hardware, and details; method of inspection and tests; and packing and marking.

U. S. Gov., Navy Dept. Specification 53F3a; 1938. Files; Board, Paper.

U. S. Gov., Treasury Dept., Procurement Div., 535b; 1942. Files; Wood, Finished End, Vertical Type. Covers type I—letter size, four-drawer; type II—cap size, four-drawer; type III—card index, for 3 x 5 in. cards, 8 or 10 drawers high; type IV—card index, for 4 x 6 in. cards, 8 drawers high; type V—card index, for 5 x 8 in. cards, 7 drawers high; type VI—tabulating card for 3 1/4 x 7 3/8 in. cards, 9 or 10 drawers high. Gives requirements for metal parts, construction, drawers, pulls, locks, and finish; methods of sampling, inspection, and tests; and packing and marking.

U. S. Gov., Treasury Dept., Procurement Div., 552A; 1942. Trays; File, Wood. Covers type I, index card trays—class (a) without cover or compressor, class (b) with cover, class (c) with compressor, class (d) with cover and compressor; type II, letter (vertical file) trays, with or without stands. Gives requirements for card sizes, wood, kind of wood, framing, joints, bottoms, finish, color, and details

for each type; methods of sampling and inspection; and packaging, packing, and marking.

U. S. Gov., Treasury Dept., Procurement Div., No. 635; 1943. Cases; Transfer, Wood. Covers one type and one grade in two sizes, (I) letter size and (II) cap size. Gives requirements for material, panels, construction, drawer, finish, tests, marking, and assembly; methods of sampling, inspection, and tests; and packing and marking for shipment.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-1633-A; 1944. Cabinet BE-89; Plotting, for Radio Direction Finder Central TC-8.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-1656A; 1944. Cabinet BE-93; Plotting, for Radio Direction Finder Central TC-8.

U. S. Gov., Veterans Administration. Specification VA-GC-359; 1942. Drawer Type Proofers.

*References.*—Veneer, plywood, and other furniture stock, *see* 413.52, 413.53; steel filing cases, *see* 613.7.

### 435.6 WASTE PAPER BASKETS

*References.*—Metal baskets, *see* 932.3.

### 435.7 COSTUMERS

U. S. Gov., Federal Specification AA-C-556; 1935. Costumers; Wood. Covers one type and five classes—(A) mahogany, genuine; (B) mahogany, imitation; (C) oak, quartered; (D) walnut, genuine American; (E) walnut, imitation. Gives requirements for wood, glue, glued joints and built-up cores, exposed surfaces, soft wood, tolerance, marking, construction, finish, color, and shape; methods of sampling, inspection; and requirements for packaging, packing, and marking.

## 436. STORE FURNITURE AND FIXTURES, WOODEN

U. S. Gov., Treasury Dept., Procurement Div., No. 596; 1942. Cabinets; Towel, Wood. Covers one type and grade. Gives requirements for general construction, capacity, dimensions, finish, and mounting; methods of sampling, inspection, and tests; and packaging, packing, and marking.

### 436.1 BLOCKS, BUTCHERS

U. S. Gov., Federal Specification NN-B-476; 1944. Blocks; Meat and Tables; Cutting, Meat. Covers one type, one grade, and four sizes of meat blocks; and one type, one grade, and one size of cutting tables. Gives requirements for height, dimensions, material, workmanship, finish, and details for meat blocks and cutting tables; methods of inspection; and packing and marking for shipment.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 23-105; 1941. Block; Butchers'.

U. S. Gov., Veterans Administration. Specification VA-GC-101c; 1938. Meat Blocks.

## 437. CHURCH, SCHOOL, AND THEATER FURNITURE, WOODEN

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation RIII-30; 1930. Color for School Furniture. This recommendation establishes a color brown with fixed light and dark limits of shades within this color for stock varieties of wooden school furniture covering school seating (pupils' desks), teachers' desks, movable desks, recitation seats, chairs, tablet arm chairs, tables, typewriter tables, library furniture, filing cabinets, bookcases, kindergarten tables and chairs, and laboratory furniture. Initiated by National School Supplies and Equipment Assn.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R191-43; 1943. School Tables. Covers the standardization of sizes of school tables other than tables for science and vocational classrooms. Gives sizes and heights for individual pupil table, two-pupil table, general-purpose and library tables, lunchroom and project tables, bookkeeping table, typewriter table, and heights of chairs. Sponsored by the American Council on Education and the Interstate School Building Service.

## 438. WOODEN CHAIRS

### 438.0 GENERAL ITEMS

### 438.1 DINING-ROOM CHAIRS

### 438.2 WOODEN OFFICE CHAIRS

U. S. Gov., U. S. Army, Medical Dept. Specification 32-50; 1942. Chair; Arm, Reception Room.

*References.*—Office chairs, *see* 435.2; packing of chairs, *see* 436.0.

### 438.3 FOLDING CHAIRS AND CAMP STOOLS

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R80-28; 1928. Folding and Portable Wooden Chairs. This recommendation establishes a schedule of types, arrangements, and finishes for folding and portable wooden chairs. Initiated by the National School Supplies and Equipment Assn.

U. S. Gov., Treasury Dept., Procurement Div., No. 672; 1944. Chairs; Folding, Wood. Covers two types—(I) plywood seat and back and (II) solid wood frame seat and back. Gives requirements for colors, solid wood members, workmanship, construction, legs, stretchers, crossties, hardware, wood finish, metal finish, and details for each type; methods of sampling, inspection, and tests; and packing, and marking for shipment.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 32-11B; 1942. Stool; Mess.

U. S. Gov., U. S. Army, Medical Dept. Specification 32-45; 1939. Chair; Field.

U. S. Gov., U. S. Maritime Commission. Specification 26-MC-2a; 1941. Chair; Steamer, Folding, Wood. Shall be type I—all hardwood (one species), with cadmium-plated brass fittings; type II—combined hardwoods, with cadmium-plated brass fittings; shows eight classes, and shall be but one grade and one size. Gives requirements for wood, glue, hardware and fittings, workmanship, sanding, finish, inspection, and tests.

U. S. Gov., U. S. Maritime Commission. Specification 26-MC-4; 1941. Chair; Folding, Flat, Wood. Shall be of but one type, one grade, and one size as herein specified. Gives requirements for wood species, plywood, artificial leather, padding, hardware and

fitting, workmanship, sanding, finish, inspection, and tests.

*References.*—Packing of chairs, *see* 438.0.

### 438.4 WHEEL CHAIRS

### 438.5 STOOLS

U. S. Gov., U. S. Maritime Commission. Specification 26-MC-10; 1943. Stools; Bathroom, Wood. Shall be but one type, grade, and size. Gives requirements for wood, workmanship, construction, finish, sampling, inspection, test, and drawing.

### 438.9 MISCELLANEOUS WOODEN CHAIRS

U. S. Gov., U. S. Army, Medical Dept. Specification 32-34B; 1942. Chair; Arm, Slat, Seat and Back.

U. S. Gov., U. S. Army, Medical Dept. Specification 32-37A; 1942. Chair; Arm, Rocking, Slat Seat and Back.

U. S. Gov., U. S. Army, Medical Dept. Specification 32-42; 1939. Chair; Common, White Oak.

U. S. Gov., U. A. Army, Quartermaster Corps. Specification 23-100A; 1938. Chair; Barrack.

U. S. Gov., Veterans Administration. Specification VA-G-73a; 1935. Chairs; Reclining, No. 470.

U. S. Gov., Veterans Administration. Specification VA-G-74a; 1934. Chairs; Arm, No. 1916.

U. S. Gov., Veterans Administration. Specification VA-G-75b; 1942. Chairs; Arm, Rocking, No. 1917.

U. S. Gov., Veterans Administration. Specification VA-G-76; 1932. Chairs; Arm, Rocking, High Back.

U. S. Gov., Veterans Administration. Specification VA-G-77a; 1939. Chair; Common, Straight Back, No. 954.

U. S. Gov., Veterans Administration. Specification VA-G-79a; 1935. Settee No. 1922.

U. S. Gov., Veterans Administration. Specification VA-G-80; 1932. Settee No. 225.

U. S. Gov., Veterans Administration. Specification VA-G-81a; 1934. Settee No. 230.

U. S. Gov., Veterans Administration. Specification VA-G-87a; 1935. Chairs; Arm, Rocking, No. 1917 Style—Walnut Finish.

U. S. Gov., Veterans Administration. Specification VA-G-96a; 1934. Chair; Windsor.

U. S. Gov., Veterans Administration. Specification VA-G-135d; 1943. Chairs; Folding, Wood, Padded Seat and Back.

U. S. Gov., Veterans Administration. Specification VA-G-156-B; 1937. Arm Chairs, for N. P. Hospitals.

U. S. Gov., Veterans Administration. Specification VA-G-164g; 1940. Barrack Chairs; Straight and Rocker.

U. S. Gov., Veterans Administration. Specification VA-G-266a; 1937. Settees for N. P. Hospitals.

U. S. Gov., Veterans Administration. Specification VA-G-294c; 1930. Douglas Arm Chair.

U. S. Gov., Veterans Administration. Specification VA-X-29a; 1943. Chair; Cane.

## 439. MISCELLANEOUS FURNITURE, EXCEPT METAL FURNITURE

### 439.1 BAMBOO, RATTAN, AND REED FURNITURE, EXCEPT CHAIRS

### 439.2 SCREENS

### 439.9 MISCELLANEOUS WOODEN FURNITURE NOT OTHERWISE CLASSIFIED

U. S. Gov., Veterans Administration, Medical and Hospital Supply Section, VA-H-39b; 1943. Work Room Table (Four-Drawer).

U. S. Gov., Veterans Administration. Specification VA-X-120b; 1941. Tables; Combination Pool and Billiard.

# 470-479 PAPER

(Except Printed Matter)

## 470. GENERAL ITEMS

### 470.1 DEFINITIONS AND CLASSIFICATION OF PAPER

American Paper and Pulp Assn. Dictionary of Paper Including Pulps, Boards, Paper Properties, and Related Paper Making Terms, 1940. Includes classification and definitions of pulps, classification of waste materials used in the paper and board industries, and definitions of papers, boards, and paper making terms.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, 1938. Paper. Covers definition, composition, sources of cellulose fibers, manufacture, marketing requirements, methods of marketing, uses, market packages, grade terms by type of pulp content, classification according to type of manufacture, general classes of paper, and tests for paper.

National Assn. of Waste Material Dealers, Inc. Specifications for Waste Paper, 1938. Definitions for 25 classes including corrugated containers, and requirements for baling, freedom from objectionable foreign matter, etc. Approved by the National Paperboard Assn.

National Paperboard Assn. Boxboard, 1937. Gives definitions, gauge lists for nonbending, bending, solid news and solid wood pulpboard, pasted chipboard, pasted solid newsboard, patent coated and solid manila board, patent coated two sides, and double manila wood pulp filled board; weights per thousand square feet for four finishes; identical with U. S. Dept. of Commerce Simplified Practice Recommendation R44-36, entitled Box Board Thicknesses.

Technical Assn. of the Pulp and Paper Industry. Standard Terms used in the Sulphate Pulping Process, O 400 p-44; 1944. Defines special nomenclature relating to process.

Technical Assn. of the Pulp and Paper Industry. Standard Terms used in the Soda Pulping Process, O 402 p-41; 1941. Defines special nomenclature relating to process.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Miscellaneous Publication M124; 1936. Paper Pulp From Cereal Straws by a Modified Sulfate

Process. A modified sulfate process is outlined for the conversion of oat, rye, and wheat straws to pulps which would be suitable for the production of typewriter, book, and other grades of paper. The variables in digesting, beating, screening, and bleaching were investigated separately for the optimum conditions. Pulps of the above grades were produced in large laboratory equipment.

U. S Gov., Federal Specification UU-P-31a; 1937. Paper; General Specifications. Covers various types and grades of paper used by the field services of the Federal Government. Gives details of specifications and tests common to the article. Gives detail requirements, definition of terms, sampling and inspection; methods of inspection and tests; and requirements for packing and marking of shipments.

*References.*—Wood pulp, *see* 400.50; lime for use in manufacture of paper, *see* 517.2.

## 470.2 SIZES OF PAPER

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R22-40; 1940. Paper (Basic Sheet Sizes). This recommendation establishes a simplified schedule of sizes of bond and writing papers, ledgers, loose-leaf ledgers, machine-posting ledgers, book paper, index bristol, and cover paper. Sponsored by the Book Paper Mfrs. Assn. and Writing Paper Mfrs. Assn.

## 470.3 TESTS OF PAPER

American Oil Chemists' Society. Methods of Testing Soap Wrapper Papers, 1937. For discoloration with white floating, white filled laundry, and uncolored, freshly milled, toilet soaps.

American Society for Testing Materials, D 527-41; 1941. Technical Assn. of Pulp and Paper Industry Standard Method T 426m-40. Method of Test for Bulking Thickness of Paper. For average thickness in a pile, as for use in books, definition, apparatus, calibration, test specimen, and procedure.

American Society for Testing Materials, D 528-41; 1941. Technical Assn. of Pulp and Paper Industry Standard Method T 409m-35. Method of Test for Machine Direction of Paper. For finding direction of paper parallel to forward movement in manufacture, test specimen, and four methods of determination.

American Society for Testing Materials, D 548-41; 1941. Technical Assn. of Pulp and Paper Industry Standard Method T 428m-40. Method of Test for Water-Soluble Acidity or Alkalinity of Paper. For determining water-soluble acidity or alkalinity, except for highly alkaline papers such as those containing casein or calcium carbonate, or electrical insulating papers. Apparatus, reagents, test specimen, procedure, and calculations and report.

American Society for Testing Materials, D 549-41; 1941. Technical Assn. of Pulp and Paper Industry Standard Method T 408m-44. Method of Test for Resin in Paper. Qualitative test and quantitative determination.

American Society for Testing Materials, D 585-42; 1942. Technical Assn. of Pulp and Paper Industry Standard Method T 400m-41. Method of Sampling Paper and Paper Products. Requirements for size and protection of samples, percentage of samples from rolls, cases, frames, skids or bundles, and method of selection.

American Society for Testing Materials, D 586-42; 1942. Technical Assn. of Pulp and Paper Industry Standard Method T 413m-40. Method of Test for Ash Content of Paper and Paper Products. For an approximate measure of the amount of filling and coating materials, residues from chemicals and metallic matter from piping and machinery; requirements for apparatus, specimen, outline of procedure, calculation, and report.

American Society for Testing Materials, D 587-42; 1942. Technical Assn. of Pulp and Paper Industry Standard Method T 415m-41. Method of Test for Casein in Paper (Qualitative). For use where amount of casein is relatively large, as in mineral-coated papers in which casein is used as a binder, but not for small amounts as used in the beater furnished as a constituent of the engine sizing, etc.; reagents, specimen, and procedure.

American Society for Testing Materials, D 588-42; 1942. Technical Assn. of Pulp and Paper Industry Standard Method T 429m-44. Method of Test for Alpha-, Beta-, and Gamma-Cellulose in Paper. For determination of the three fractions into which cellulose can be separated analytically, alpha-cellulose separation method primarily for papers made from rags or chemical wood fibers. Covers Koerner type grinder, mixer, titration apparatus, reagents, test specimen, volumetric and gravimetric methods of separating alpha-cellulose, and beta- and gamma-cellulose procedures, calculations and report.

American Society for Testing Materials, D 589-44; 1944. Technical Assn. of Pulp and Paper Industry Standard Method T 425m-44. Method of Test for Opacity of Paper and Paper Products. For measuring opacity by apparent light reflectance; requirements for test specimen, apparatus necessary, and outline of procedure.

American Society for Testing Materials, D 590-42; 1942. Technical Assn. of Pulp and Paper Industry Standard Method T 405m-40. Method of Test for Paraffin Content of Waxed Paper. For quantitative method of determining amount of paraffin in waxed paper, but not for paraffin-sized papers; requirements for test specimen, apparatus, reagents, and outline of procedure.

American Society for Testing Materials, D 591-42; 1942. Technical Assn. of Pulp and Paper Industry Standard Method T 419m-41. Method of Test for Starch in Paper. Covers qualitative test for evident of starch, and quantitative determination; requirements for test specimen, apparatus, reagents, and outline of procedure.

American Society for Testing Materials, D 641-43; 1943. Method of Conditioning Paperboard, Fiberboard, and Paperboard Containers for Testing. Procedure for conditioning specimens of container grades of paperboard, corrugated board and solid fiberboard, and containers made from such grades of paperboard, prior to testing. Gives requirements for standard condition, apparatus, procedure, and report.

American Society for Testing Materials, D 642-43; 1943. Method of Compression Testing of Corrugated and Solid Fiber Boxes. Gives requirements for appara-

tus, test specimens, preparation of specimens, conditioning test specimens, moisture content, procedure, and report.

American Society for Testing Materials, D 643-43; 1943. Technical Assn. of Pulp and Paper Industry Standard Method T 423m-41. Methods of Test for Folding Endurance of Paper. Covers two test procedures. The Schopper apparatus is applicable for testing papers having a thickness of not over 0.01 in. The M.I.T. apparatus can be adjusted for testing papers of any thickness. There is no constant relation between the values obtained with the two types of apparatus. Gives requirements for apparatus, calibration, sampling, test specimens, test conditions, procedure, and report.

American Society for Testing Materials, D 644-44; 1944. Technical Assn. of Pulp and Paper Industry Standard Method T 412m-42. Method of Test for Moisture in Paper, Paperboard, and Paperboard and Fiberboard Containers. Covers the procedure for determining moisture in all papers except those containing matter other than water volatile at 100 to 105 C. Apparatus, test specimens, procedure, calculation and report, and reproducibility of results.

American Society for Testing Materials, D 645-43; 1943. Technical Assn. of Pulp and Paper Industry Standard Method T 411m-44. Methods of Test for Thickness of Paper and Paper Products. Covers the procedures for determining the thickness of all kinds of paper and paper products except crepe paper and corrugated board. Five methods are covered. Gives requirements for thickness, apparatus, calibration, sampling, test specimens, conditioning, procedure, and report.

American Society for Testing Materials, D 646-44; 1944. Technical Assn. of Pulp and Paper Industry Standard Method T 410m-44. Method of Test for Basis Weight of Paper and Paper Products. Covers the procedure for determining the basis weight of large and small pieces of paper. Factors for conversion of basis weight of large and small pieces of paper. Factors for conversion of basis weight from one commercial size of paper to another are given. Apparatus, calibration of balance, sampling, test specimens, test conditions, procedure, report, reproducibility of results, and appendix.

American Society for Testing Materials, D685-44; 1944. Technical Assn. of Pulp and Paper Industry Standard Method T402m-44. Standard Method of Conditioning Paper and Paper Products for Testing. Giving scope, standard condition, apparatus, calibration of thermometers, determination of relative humidity and temperature, and procedure.

American Society for Testing Materials, D 686-43T; 1943. Technical Assn. of Pulp and Paper Industry Standard Method T 421m-44. Method of Qualitative Examination of Mineral Filler and Mineral Coating of Paper. Covers the procedure for the qualitative determination of the mineral constituents of filled and coated papers. Gives requirements for reagents, test specimens, procedure, and interpretation of results.

American Society for Testing Materials, D 687-44; 1944. Technical Association of Pulp and Paper Industry Standard Method T 407m-42. Method for Quantitative Determination of Coating on Mineral-Coated Paper. This method covers the procedure for the quantitative determination of the coating on the ordinary types of mineral-coated paper, in which casein (or other proteins) or starch is the adhesive. It is not intended for testing special types of coated paper, in which lacquers, varnishes, or similar materials are used.

American Society for Testing Materials, D 688-44; 1944. Technical Assn. of Pulp and Paper Industry Standard Method T 450m-44. Method of Test for Pentosans in Paper. Covers the procedure for determining complex carbohydrates in paper.

American Society for Testing Materials, D 689-44; 1944. Technical Assn. of Pulp and Paper Industry Standard Method T 414m-42. Method of Test for Internal Tearing Resistance of Paper. Covers the procedure for determining the average force in grams required to tear a specimen of paper.

American Society for Testing Materials, D 722-43T; 1943. Technical Assn. of Pulp and Paper Industry Standard Method T 454m-44. Method of Turpentine Test for Grease Resistance of Paper. This test gives an accelerated comparison of the relative rates at which ordinary oils or greases, such as commonly found in foodstuffs, may be expected to penetrate papers, such as uncoated or unimpregnated greaseproof, glassine, and vegetable parchment. Gives requirements for apparatus, reagent, sampling, test specimen, procedure, and report.

American Society for Testing Materials, D 723-43T; 1943. Technical Assn. of Pulp and Paper Industry Standard Method T 440m-42. Method of Test for Degree of Staining of Paper by Alkali. This method is applicable to undyed papers and can be used with hard sized (rosin) papers by first removing the major part of the sizing with ether or methanol. Not recommended for use with pulp. Gives requirements for apparatus, reagents, reference standards, test specimen, procedure, and report.

American Society for Testing Materials, D 724-43T; 1943. Technical Assn. of Pulp and Paper Industry Suggested Method T 458sm-42. Method of Test for Surface Wettability of Paper (Angle-of-Contact Method). Intended for the quantitative determination of the resistance of paper surfaces to wetting and is useful for the determination of writing and ruling qualities of papers, as well as for other problems related to the resistance which the surface of paper offers to water and aqueous vehicles. Gives requirements for apparatus, ink and ruling fluid, sampling, test specimens, procedure, calculation and report, reproducibility, and interpretation of results.

American Society for Testing Materials, D 725-43T; 1943. Technical Assn. of Pulp and Paper Industry Suggested Method T 455sm-42. Methods of Test for Wire and Felt Sides of Paper. The wire and felt sides of paper cannot always be distinguished, this being particularly true of coated and other surface-treated papers, and of specialties made with variations in the usual paper-machine practice. These methods of test cover four procedures, A, B, C, and D.

American Society for Testing Materials, D 726-43T; 1943. Technical Assn. of Pulp and Paper Industry Standard Method T 460m-43. Method of Test for Resistance of Paper to Passage of Air. This method applicable to papers and paper products which per-

mit the passage of 100 cu.cm. of air in 2 sec. to 30 min., except those which cannot be clamped securely against surface leakage, such as crepe and corrugated papers. Gives requirements for apparatus, calibration of apparatus, sampling, test specimens, procedure, report, and reproducibility.

American Society for Testing Materials, D 773-44T; 1944. Technical Assn. of Pulp and Paper Industry Standard Method T 463m-43. Method of Test for Adhesiveness of Gummed Tape. Gives scope, apparatus, calibration of apparatus, test paper, test specimens, procedure, and report.

American Society for Testing Materials, D 774-44T; 1944. Technical Assn. of Pulp and Paper Industry Standard Method T 403m-44. Method of Test for Bursting Strength of Paper. Gives scope, definition, apparatus, calibration of apparatus, test specimens, procedure, report, and reproducibility.

American Society for Testing Materials, D 775-44T; 1944. Technical Assn. of Pulp and Paper Industry Standard Method T 802m-44. Method of Drop Test for Shipping Containers. Gives scope, apparatus, test specimens, identification of container parts, conditioning, height of drop, procedures, and report.

American Society for Testing Materials, D 776-44T; 1944. Technical Assn. of Pulp and Paper Industry Standard Method T 453m-41. Effect of Heating on Folding Endurance of Paper. Gives scope, apparatus, test specimens, procedure, and report.

American Society for Testing Materials, D 777-44T; 1944. Technical Assn. of Pulp and Paper Industry Suggested Method T 461sm-44. Method of Test for Flammability of Treated Paper and Paperboard. Gives scope, apparatus, test specimens, procedure, and report.

American Society for Testing Materials, D 778-44T; 1944. Technical Assn. of Pulp and Paper Industry Standard Method T 435m-42. Method of Test for Hydrogen Ion Concentration (pH) of Paper Extracts. Gives scope, apparatus, reagents, test specimens, procedure, calculation, report, and reproducibility.

American Society for Testing Materials, D 779-44T; 1944. Technical Assn. of Pulp and Paper Industry Standard Method T 433m-44. Method of Test for Time of Penetration by Water of Sized Paper and Paper Products (Dry Indicator Method). Gives scope, apparatus, reagents, test specimens, procedure, report, and reproducibility.

American Society for Testing Materials, D 780-44T; 1944. Technical Assn. of Pulp and Paper Industry Standard Method T 462m-43. Method of Test for Printing Ink Permeation of Paper (Castor Oil Test). Gives scope, apparatus, test specimens, procedure, and report.

American Society for Testing Materials, D 781-44T; 1944. Technical Assn. of Pulp and Paper Industry Standard Method T 803m-44. Method of Test for Puncture and Stiffness of Paperboard, Corrugated and Solid Fiberboard. Gives scope, number of tests, apparatus, adjustment of apparatus, conditioning, and procedure for puncture test and stiffness test.

American Society for Testing Materials, D 782-44T; 1944. Technical Assn. of Pulp and Paper Industry Suggested Method T 800sm-44. Method of Drum Test for Containers in Small Revolving Hexagonal Drum Box-Testing Machine. Gives scope, apparatus, test specimen, conditioning, procedures, and report.

American Society for Testing Materials, D 783-44T; 1944. Technical Assn. of Pulp and Paper Industry Standard Method T 448m-44, Desiccant Method. Tentative Method of Test for Water Vapor Permeability of Paper and Paperboard. Gives scope, definition, apparatus, test specimens, procedure, report, and reproducibility.

Technical Assn. of the Pulp and Paper Industry. Paper Drying Code, Standard E200 p-44; 1944. Water evaporation quantities, heat supplied to drying cylinders, heat supplied to ventilating air, and form for computation of efficiency.

Technical Assn. of the Pulp and Paper Industry. Standard Power Plant Report, E 201 p-44; 1944. Lists data to be obtained, and form of report, for steam, steam-electric power, hydro-electric power, and purchased power operated paper mills.

Technical Assn. of the Pulp and Paper Industry. Comparison Power Plant Report, Standard E 202 p-44; 1944. Lists data to be obtained and form of report, for steam, electric power, mechanical power, process and building heat consumption, etc.

Technical Assn. of the Pulp and Paper Industry. Measuring, Sampling and Analyzing White Waters, Standard M 400 p-40; 1940. Intended to evaluate as accurately as possible paper mill white waters, and to separate fibrous and nonfibrous constituents. Covers measurement of white water volume, sampling of white water, method of analysis, and report.

Technical Assn. of the Pulp and Paper Industry. Alkaline Pulping Thermal Code, Standard O 401 p-44; 1944. For checking steam consumption and meters, and determination of avoidable losses. Outline form of data required and form of report.

Technical Assn. of the Pulp and Paper Industry. Sulphate Recovery Thermal Code, Standard O 404 p-40; 1940. To enable users to better evaluate the thermal factors involved in sulphate recovery and is applicable to both spray-type and rotary-type recovery units. Outline form of data required and form of report.

Technical Assn. of the Pulp and Paper Industry. Fiber Composition of Paper, Standard T 401 m-42; 1942. Covers identification of types of fibers present in paper and their quantitative estimation. Covers apparatus and materials, test specimen, disintegration of sample, preparation of slides, method of procedure, standard stains, and appendix on fiber analysis, illustrations, and tables.

Technical Assn. of the Pulp and Paper Industry. Bursting Strength of Paper, Standard T 403 m-44; 1944. Specifies the use of the hydraulic type tester. Covers apparatus, calibration, test specimen, procedure, and report.

Technical Assn. of the Pulp and Paper Industry. Tensile Breaking Strength of Paper, Standard T 404 m-44; 1944. Covers apparatus required, calibration, test specimen, procedure, report, reproducibility of results, and additional information.

Technical Assn. of the Pulp and Paper Industry. Reducible Sulphur in Paper, Standard T 406 m-41; 1941. For determining total amount of reducible sulphur in paper, but not for determination of silver tar-

nishing. Covers apparatus, reagents, test specimen, procedure, and report.

Technical Assn. of the Pulp and Paper Industry. Proteinaceous Nitrogenous Materials in Paper (Qualitative), Standard T 417 m-34; 1934. For evidence of glue and casein in paper, using ammonium molybdate method.

Technical Assn. of the Pulp and Paper Industry. Proteinaceous Nitrogen in Paper, Standard T 418 m-41; 1941. Covers apparatus required, test specimen, and gunning method of procedure for determining amount of nitrogen present, and conversion factors for glue and casein.

Technical Assn. of the Pulp and Paper Industry. Gloss of Paper, Standard T 424 m-35; 1935. Describes photometer, light source, and diffusing screen apparatus; preparation of specimen, and test method.

Technical Assn. of the Pulp and Paper Industry. Copper Number of Paper, Standard T 430 m-42; 1942. For method of testing all paper, except those containing zinc sulphide. Covers apparatus, reagents, test specimen, procedure, report, and additional information.

Technical Assn. of the Pulp and Paper Industry. Water Resistance of Paper (Dry Indicator Method), Standard T 433 m-44; 1944. Consists of bringing one side of specimen in contact with water and finding time required to pass through, as indicated by the development of color in an indicator powder. Covers apparatus, reagents, test specimen, and precision.

Technical Assn. of the Pulp and Paper Industry. Acid-Soluble Iron in Paper, Standard T 434 m-35; 1935. For determining the portion of iron present that is potentially chemically reactive. Describes reagents necessary, preparation of test specimen, and method of testing.

Technical Assn. of the Pulp and Paper Industry. Hydrogen Ion Concentration (pH) of Paper Extracts, Standard T 435 m-42; 1942. The pH value of a paper refers to its acidity or alkalinity in terms of hydrogen ion concentration of the unfiltered aqueous extract of the cut or ground paper. Covers apparatus, reagents, test specimen, procedure, report, and additional information.

Technical Assn. of the Pulp and Paper Industry. Arsenic in Paper, Standard T 436 m-36; 1936. Gutzeit apparatus used for determination of arsenic, reagents to be used, standard stains, preparation of specimen, and method of test.

Technical Assn. of the Pulp and Paper Industry. Dirt in Paper, Standard T 437 m-43; 1943. Method adapted to numerical estimation of dirt in paper in terms of area and number. Describes standard comparison chart, apparatus, test specimen, procedure, report, and reproducibility of results.

Technical Assn. of the Pulp and Paper Industry. Zinc Pigments in Paper, Standard T 438 m-37; 1937. For determining the amount of zinc pigment contained in the paper filler; reagents required, test specimen, and outline of test procedure.

Technical Assn. of the Pulp and Paper Industry. Titanium Pigments in Paper, Standard T 439 m-44; 1944. Method of analysis of paper ash as modified by presence of three titanium pigments. Describes Jones reductor apparatus, reagents required, preparation of specimen, and qualitative and quantitative analysis procedure.

Technical Assn. of the Pulp and Paper Industry. Water Absorptiveness of Non-Bibulous Papers and Paper Boards, Standard T 441 m-42; 1942. For paper and paperboard over .004 in. in thickness. Covers apparatus, reagent, test specimen, procedure, report, precision, and additional information.

Technical Assn. of the Pulp and Paper Industry. Spectral Reflectivity and Color of Paper, Standard T442 m-40; 1940. For ratio of light reflected by sample to that from a pure magnesium oxide surface, and for color using standard observer and colorimetric coordinate system. Requires use of spectrophotometer for wave-length range of 400 to 700 millicrons, and outlines method of procedure.

Technical Assn. of the Pulp and Paper Industry. Water Permeability of Paper and Paper Boards (Ground Glass Method), Suggested Method T443 sm-39; 1939. For use in mill-control testing and purchasing specifications, especially highly water resistant such as asphalt paper, to obtain transudation time limit. Details selection of specimen and outlines method of testing.

Technical Assn. of the Pulp and Paper Industry. Silver Tarnishing Test of Paper, Standard T 444 M-41; 1941. To determine the presence or absence of materials which will tarnish or stain silver in paper used for wrapping silverware. Covers apparatus, test specimen, procedure, report, and additional information.

Technical Assn. of the Pulp and Paper Industry. Identification of Specks and Spots in Paper, Suggested Method T 445 sm-44; 1944. Requires use of Greenough binocular microscope, and gives tests for alum spots, bark, coal, hair, iron, oil, resin, sand, etc.

Technical Assn. of the Pulp and Paper Industry. Moisture Expansivity of Paper, Standard T 447 m-42; 1942. By expansivity is meant the capacity to change dimensions. Covers apparatus, calibration, test specimen, procedure, precision, and report.

Technical Assn. of the Pulp and Paper Industry. Water Vapor Permeability of Paper and Paperboard, Standard T 448 m-44; 1944. Covers scope, apparatus and equipment, test specimens, procedure, report, and precision.

Technical Assn. of the Pulp and Paper Industry. Bacteriological Examination of Paper and Paperboard, Suggested Method T 449 sm-40; 1940. Covers scope, apparatus and equipment, chemicals and media, sterilization of equipment and media, sampling, preparation of sample, plating and incubating, counting plate cultures, calculation and results, and report.

Technical Assn. of the Pulp and Paper Industry. Rigidity, Stiffness and Softness of Paper and Paperboard, Standard T 451 m-44; 1944. Covers scope, definitions, apparatus, test specimen, procedure, report, precision, and additional information.

Technical Assn. of the Pulp and Paper Industry. Brightness of Paper, Suggested Method T 452 sm-42; 1942. Brightness, as applied to white and near-white papers, has come to be associated with the numerical value of the reflectance of these papers to light. Covers apparatus, calibration, test specimen, procedure, report, and appendices.

Technical Assn. of the Pulp and Paper Industry. Heat Test for Relative Stability of Paper, Standard T 453 m-41; 1941. This method produces the deteriorative chemical reactions, with the exception of photochemical reactions, of the normal components of paper that would cause brittleness of the paper on aging. Covers apparatus, test specimen, procedure, report, and additional information.

Technical Assn. of the Pulp and Paper Industry. Wet Tensile Breaking Strength of Paper, Standard T 456 m-44; 1944. For determining the tensile strength of paper after it has been wetted with water. Covers apparatus, test specimen, procedure, report, and additional information.

Technical Assn. of the Pulp and Paper Industry. Stretch of Paper and Paperboard, Standard T 457 m-42; 1942. Termed the percentage elongation of a strip of paper up to, and partly including, rupture under tension. Covers apparatus, calibration, test specimen, procedure, report, reproducibility of results, and notes.

Technical Assn. of the Pulp and Paper Industry. Wax Test for Surface Strength of Paper, Standard T 459 m-42; 1942. Applicable to coated and uncoated papers and is designed to measure the surface strength of paper or its resistance to picking. Covers apparatus and materials, test specimen, procedure, and report.

Technical Assn. of the Pulp and Paper Industry. Flammability of Treated Paper and Paperboard, Suggested Method T 461 sm-44; 1944. Applicable to papers and paperboards of all types that have been treated to prevent the spread of flame when ignited. Covers apparatus, test specimen, procedure, report, and additional information.

Technical Assn. of the Pulp and Paper Industry. Printing-Ink Permeation of Paper (Castor-Oil Test), Standard T 462 m-43; 1943.

Technical Assn. of the Pulp and Paper Industry. Adhesiveness of Gummed Paper Tape, Standard T 463 M-43; 1943.

U.S. Gov., Dept. of Commerce, National Bureau of Standards. Technologic Paper T250; 1924. Pulp and Paper Fiber Composition Standards. Colored charts as reference standards, showing the color reactions of common paper-making fibers and standard fiber mixtures with various stains for use in identification and estimation of fiber composition of paper, method of preparing the stains used.

*References.*—Tests of electrical insulating paper, *see* 719.50, 719.52.

### 470.4 FILLERS, PAPER

Technical Assn. of the Pulp and Paper Industry. Analysis of Mineral Fillers, Standard T 615 m-44; 1944. Gives requirements and general tests for various white minerals used as fillers in paper manufacture. Covers general tests including sampling, color, and grit (sieve test) and specific tests for clay and calcium sulphate fillers.

### 470.9 MISCELLANEOUS ITEMS

National Safety Council, sponsor. American Standards Assn., P1-1936. Safety Code for Paper and Pulp Mills. Safety rules covering unloading and storage of pulp wood, guarding of saws, hand barkers, barking drums, etc., guards and safe operation in rag and old paper preparation, acid making, chemical processes of making pulp, preparing pulp for paper machine, machine room, and finishing room.

## 471. ABSORBENT PAPER

### 471.1 BLOTTING PAPER

Technical Assn. of the Pulp and Paper Industry. Ink Absorption of Blotting Paper, Standard T 431 m-41; 1941. Covers standard ink, test specimen, procedure, report, and precision.

U. S. Gov., Federal Specification UU-P-63; 1933. Amendment 1, 1936. Paper; Blotting. Covers three types—(A) 25 percent rag blotting, white and colored; (B) desk, blotting, colored; and (C) paper, blotting, white and colored. Gives requirements for stock, weight, bursting strength, finish, absorption, and color; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Federal Specification UU-P-417; 1932. Paper; Photographic, Blotting, White. Covers one grade—furnished in reams, half reams, and rolls. Gives requirements for color, thickness, weight, stock, purity, absorption, and surface finish; methods of inspection and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Gov. Printing Office. Miscellaneous Paper—25 Percent Blotting, White and Colored, 1944. Gives requirements for stock, weight, bursting strength, absorption (1cc. standard ink), color and finish. Developed by Joint Committee of Congress on Printing.

*References.*—Methods of testing, *see* 470.3; definitions and classification, *see* 470.1.

### 471.2 FILTER PAPER

American Chemical Society. Standard Sizes and Shapes of Apparatus, 1927. Includes filter paper, sizes selected as standard for stock.

U. S. Gov., Army Air Forces. Specification 12024; 1937. Filter; Wood Pulp.

U. S. Gov., Federal Specification UU-P-236; 1944. Paper; Filtering. Covers three types—(I) qualitative, (II) quantitative, and (III) hardened; and eight grades. Gives requirements for material, workmanship, and details for each type and grade; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., U. S. Army, Medical Dept. Specification 19-19B; 1938. Paper; Filter.

U. S. Gov., Veterans Administration, Medical and Hospital Supply Section, VA-H-80e; 1941. Filter Paper.

*References.*—Definitions, *see* 470.1.

### 471.3 PAPER TOWELING

American Hospital Assn., 55-4b. Paper Towels. Covers two types. Based on U. S. Gov. Federal Specifications UU-T-591 for Paper Towels; and UU-P-31a for General Specifications Paper.

Technical Assn. of the Pulp and Paper Industry. Water Absorption of Bibulous Papers, Standard T 432 m-42; 1942. For paper having a fairly rapid rate of water absorption, such as paper toweling. Covers test specimen, procedure, report, and precision.

U. S. Gov., Dept. of Agriculture, Forest Service. Specifications 247-59-S. Towels; Hand, Paper.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Circular C407; 1935. Standards for Paper Towels. Gives information of a study made by the National Bureau of Standards with the cooperation of paper towel manufacturers. It covers physical properties of paper towels, testing and a discussion of test data.

U. S. Gov., Federal Specification UU-T-591; 1933. Amendment 4; 1943. Towels; Paper. Covers two types, A and B. Gives requirements for workmanship, sizes, tolerances in all sizes, area, stock, odor, finish, and details for each type; methods of sampling and testing; and packaging, packing, and marking.

*References.*—Methods of testing, *see* 470.3; definitions and classification, *see* 470.1.

### 471.9 MISCELLANEOUS ABSORBENT PAPER

*References.*—Stereotype molding paper, *see* 479.4.

## 472. PAPER BOARDS

### 472.0 GENERAL ITEMS

National Paperboard Assn. Boxboard, 1937. Gives definitions, gage lists for nonbending, bending, solid news and solid wood pulpboard, pasted chipboard, pasted solid newsboard, patent coated and solid manila board, patent coated two sides, and double manila wood pulp filled board; weights per thousand square feet for four finishes; identical with U. S. Dept. of Commerce Simplified Practice Recommendation R44-36 entitled Box Board Thicknesses.

U.S. Gov., Dept. of Agriculture, Forest Service. Specifications No. 51. Board; Lookout Map Base (Koch).

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R44-36; 1936. Box Board Thicknesses. This recommendation establishes a list of standard thicknesses for various weights and finishes for nonbending boards, bending boards, solid news and solid wood pulp board, pasted chip board, pasted solid news board, patent coated, and double manila wood pulp filled board. Initiated by the Folding Paper Box Assn. and the National Paperboard Assn.

### 472.1 COMBINATION BOARD (NONHOMOGENEOUS, ONE OPERATION)

### 472.11 Chip Board (Jute-Lined, Manila-Lined, News Vatlined)

*References.*—Definitions and classification, *see* 470.1.

### 472.12 Manila Board (Clay Coated, Patent Coated)

*References.*—Definitions and classification, *see* 470.1.

### 472.13 News Board (Manila-Lined, Patent Coated)

U. S. Gov., Government Printing Office. Miscellaneous Board—Newsboard, 1944. Gives requirements for weight, thickness, bursting strength, surface and general appearance. Developed by Joint Committee of Congress on Printing.

*References.*—Newsboard as binders board, *see* 472.32; definitions and classification, *see* 470.1.

### 472.14 Pulp Board

*References.*—Pulp board for boxes, *see* 953.2; fillers and flats of pulpboard for egg cases, *see* 953.36; definitions and classification, *see* 470.1.

### 472.15 Strawboard (Jute-Lined, Manila-Lined, Vatlined)

*References.*—Standard sizes, methods of testing, *see* 472.0, 470.3; strawboard for boxes, *see* 953.2; definitions and classification, *see* 470.1.

### 472.16 Boxboard, Lined

U. S. Gov., U. S. Army, Ordnance Dept. Specification 50-11-79A; 1937. Boxboard; for Use in Ammunition.

*References.*—Standard sizes, methods of testing, *see* 472.0, 470.3; definitions and classification, *see* 470.1; corrugated strawboard, *see* 472.25.

### 472.19 Miscellaneous Lined Boards

*References.*—Standard sizes, methods of testing, *see* 472.0, 470.3; definitions and classification, *see* 470.1.

### 472.2 PASTED BOARD (TWO OPERATIONS)

### 472.21 Pasted Chip Board

*References.*—Definitions and classification, *see* 470.1.

### 472.22 Sheet-Lined Chip Board

*References.*—Definitions and classification, *see* 470.1.

### 472.23 Sheet-Lined Straw Board

*References.*—Definitions and classification, *see* 470.1.

### 472.24 Wall Board

U. S. Gov., Federal Specification UU-W-101a; 1935. Wallboard; Composition. Covers one grade—manufactured of vegetable fiber thoroughly mixed with beater size. Gives requirements for physical characteristics, weight, transverse strength, linear expansions, thickness, finish, and tolerances; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

*References.*—Definitions and classification, *see* 470.1.

### 472.25 Corrugated Strawboard

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R177-41; 1941. Single-Faced Corrugated Paper Rolls. This recommendation establishes a standard width and length of paper rolls, and construction and standards covering liners and corrugated sheets. Initiated by the National Retail Dry Goods Assn.

U. S. Gov., U. S. Army, Chemical Warfare Service. Specification 19-10B; 1928. Filer; Strawboard, Corrugated, Single and Double Faced, for General Packing Purposes.

*References.*—Standard sizes, methods of testing, *see* 472.0, 470.3; strawboard for boxes, *see* 953.2; definitions and classification, *see* 470.1.

### 472.26 Lining Board

U. S. Gov., Army Air Forces. Specification 40339; 1940. Paper; Indented, Lining Board.

### 472.3 SOLID BOARD (HOMOGENEOUS, ONE OPERATION)

### 472.31 Chip Board (Plain, Tack Board, Test)

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, 1938. Chip Board and Binder Board. Covers definition, sizes, classification and uses, manufacture, and marketing.

U.S. Gov., Dept. of Commerce, National Bureau of Standards. Commercial Standard CS49-34; 1934. Chip Board, Laminated Chip Board, and Miscellaneous Boards for Bookbinding Purposes. This standard establishes definite specifications for various kinds of boards other than binders board used for covers or cover stiffening in books and for other bookbinding purposes. The standard also includes a classification relating to several grades of boards, detail requirements, and methods of sampling and testing. This standard was approved as American Standard by the American Standards Assn. Initiated by industry, now represented by Book Manufacturers Institute.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 50-11-86; 1934. Chipboard; Plain, for Ammunition Containers.

*References.*—Standard sizes, methods of testing, *see* 472.0, 470.3; definition and classification, *see* 470.1.

### 472.32 Binders Board

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, 1938. Chip Board and Binder Board. Covers definition, sizes, classification and uses, manufacture, and marketing.

U.S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R81-28; 1928. Binder's Board. This recommendation establishes 10 sizes of binder's board as standard for stock purposes. Initiated by manufacturers and Employing Bookbinders of America.

U.S. Gov., Dept. of Commerce, National Bureau of Standards. Commercial Standard CS50-34. American Standards Assn., CS50-1934. Binders Board for Bookbinding and Other Purposes. Requirement on a single-ply, solid board made on a wet machine from a base stock of mixed papers, kiln or plate dried, and ranging in thickness from 30 points (0.030 in.) to 300 points (0.300 in.); standard sizes, color, density, trim, thickness, bursting strength, flexural properties, and thickness tolerance.

U. S. Gov., Federal Specification UU-B-536; 1940. Board; Binders'. Covers one grade. Gives requirements for average thickness, bursting strength, and other properties; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., Gov. Printing Office. Miscellaneous Board—Binder's Board, No. 1 Quality, 1944. Gives requirements for weight, bursting strength, thickness, density, trim, and general requirements. Developed by Joint Committee of Congress on Printing.

U. S. Gov., Gov. Printing Office. Miscellaneous Board—Binder's Board, Best Quality, 1944. Gives requirements for weight, bursting strength, thickness, density, size, water resistance, and general requirements. Developed by Joint Committee of Congress on Printing.

U. S. Gov., Gov. Printing Office. Miscellaneous Board--Chestnut Cover Board, 1944. Gives requirements for weight, bursting strength, thickness, density, tolerances, trim, and general requirements. Developed by Joint Committee of Congress on Printing.

U. S. Gov., Veterans Administration. Specification VA-G-20a; 1936. Board; Binders.

*References.*—Lined strawboard, binders board, *see* 472.15; lined boxboard, binders board, *see* 472.16; marble grained lined board, binders board, *see* 472.19; standard sizes and thicknesses, *see* 472.0; methods of testing, *see* 470.3; definitions and classification, *see* 470.1.

### 472.33 Friction Board

*References.*—Definitions and classification, *see* 470.1.

### 472.34 Jute Board

*References.*—Definitions and classification, *see* 470.1; jute tag board, *see* 474.5.

### 472.35 Leather Board

*References.*—Definitions and classification, *see* 470.1.

### 472.36 Pressboard

U. S. Gov., Army Air Forces. Specification 17008; 1940. Paper—Press Board.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Miscellaneous Publication M123; 1936. Production of Pressboard From Cornstalks. A process for the production of pressboard from cornstalks, consisting in stalk preparation, pulping, forming, pressing, and drying under pressure, and sizing, is outlined. Stalk preparation by reduction to short lengths and removal of wire and dirt facilitated handling and reduced wear on the machines. The experimental results showed that boards could be produced with a range of the modulus of rupture from 2,040 to 7,500 lb./in.$^2$ by varying the degree of cooking given the stalks from 0 to 3 hr. at 140° C., in water, followed by a two-stage mechanical refining treatment. The two-stage milling was found to be advantageous in producing a uniform pulp.

U. S. Gov., Federal Specification UU-P-701a; 1939. Pressboard; Colored. Covers two types. Gives requirements for weight, average thickness, and average bursting strength; methods of sampling, inspection and tests; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., Gov. Printing Office. Miscellaneous Board—Pressboard, Colored, 1944. Gives requirements for bursting strength, thickness, texture, surface, and color. Developed by Joint Committee of Congress on Printing.

*References.*—Standard sizes, methods of testing, *see* 473.0, 470.3; definitions and classification, *see* 470.1.

### 472.37 Pulp Board

*References.*—Pulpboard for boxes, *see* 953.2; fillers and flats of pulpboard for egg cases, *see* 953.36; definitions and classification, *see* 470.1.

### 472.38 Strawboard

U. S. Gov., U. S. Army, Ordnance Dept. Specification 50-11-69; 1939. Strawboard; for Packing Ammunition.

*References.*—Standard sizes, methods of testing, *see* 472.0, 470.3; corrugated strawboard, *see* 472.25; lined strawboard, *see* 472.15; strawboard for boxes,

*see* 953.2; fillers and flats of strawboard for egg cases, *see* 953.36; definitions and classification, *see* 470.1.

## 472.9 MISCELLANEOUS BOARDS

### 472.91 Fish Paper

*References.*—Electrical insulating fiber and paper, *see* 719.52; definitions and classification, *see* 470.1.

### 472.92 Fuller Board

*References.*—Electrical insulating fiber and paper, *see* 719.52; definitions and classification, *see* 470.1.

### 472.93 Fiber Board

Air Conditioning and Refrigerating Machinery Assn., Inc. Equipment Standards. 4.0; 1941. Miscellaneous Ammonia Standards. Cold Storage Room Insulation. Gives recommended thicknesses of insulation for certain required temperatures.

American Hospital Assn., 4-7. Fiber Insulating Board. A minimum specification for two classes of a certain type of fiber insulating board designated as Insulating Building Board and Roof Insulating Board. Based on U. S. Gov., Dept. of Commerce, National Bureau of Standards, Commercial Standard CS 42-35 for Fiber Insulating Board.

American Hospital Assn., 4-19. Structural Hard-Pressed Fiber Board. Covers two classes—(A) untreated and (B) treated. Based on U. S. Gov. Federal Specification LLL-F-311 for Structural and Hard-Pressed Fiber Board.

National Paperboard Assn. Container Boards, 1937. Gives definitions, requirements for rolls, trim, test, moisture content, bending, waterproofing, caliper, weight, standard grade, basic grade, gage lists for double fiberboard made with two jute liners and one or more ply of chip, sized on one side, colored on one or both sides, test boards and non-test boards, weights per thousand square feet.

Society of Automotive Engineers. Aeronautical Material Specification 3552, 1944. Corrugated Fibreboard (Single Wall, Double Face). Covers material, application, construction, requirements, quality, reports, marking, approval, and rejections.

Society of Automotive Engineers. Aeronautical Material Specification 3554; 1944. Corrugated Fibreboard, Double Wall. Gives requirements for material, application, construction, requirements, quality, reports, marking, approval, and rejections.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Commercial Standard CS 42-43; 1943. Structural Fiber Insulating Board. Sponsored by the Insulation Board Institute. Gives five classes: (A) Building board, (B) lath (for plaster base), (C) roof insulation board, (D) interior board (factory finished), and (E) sheathing. Covers physical requirements and tests for thermal conductivity, strength, absorption, and expansion and sets forth the standard commercial sizes, tolerances; and method of sampling and testing; and packing and labeling.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Commercial Standard CS 112-43; 1943. Homogeneous Fiber Wallboard. Covers one type of homogeneous fiber wallboard of a nominal thickness of 5/16 in., 4 ft. wide, and 6 to 12 ft. long. Gives requirements for composition, treatment for destruction of rot-producing fungi, surfaces, edge finish, physical properties, standard commercial sizes, and tolerances; method of sampling and testing; and packing and marking.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Building Materials and Structures Report BMS3; 1938. Suitability of Fiber Insulating Lath as a Plaster Base. The investigation pertains to the properties of wall and plaster boards and the suitability of fiber insulating boards as a plaster base. Such properties as density, strength (flexural and tensile), and linear changes accompanying changes in relative humidity and wetting and drying were studied. Methods of successful application of plaster on insulating lath were determined by experiments in which the thickness, sand content, strength, and time of set of the plasters were varied independently.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Building Materials and Structures Report BMS4; 1938. Accelerated Aging of Fiber Building Boards. The aging treatments include cycles of wetting, drying, freezing, and heating in dry air, and the stability is judged by changes in physical and chemical properties. The properties most affected by aging are water absorption, nail-holding power, flexural strength, and permeability to air.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Building Materials and Structures Report BMS13; 1939. Properties of Some Fiber Building Boards of Current Manufacture. Test data are given showing the properties of the different boards, and the test methods are described. Tests were made for thickness, density, thermal conductivity, flexural properties, water absorption, water permeability, air permeability, linear expansion, and nail-holding strength.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Building Materials and Structures Report BMS34; 1940. Performance Test of Floor Coverings for Use in Low-Cost Housing; Part 1. A performance test was conducted in the floor-testing chamber of the National Bureau of Standards on 40 different test installations involving 12 floor coverings and 11 adhesvies. The floor coverings tested included several kinds of linoleum, felt-base floor coverings having various wearing surfaces, pressed fiberboard, and three stripwood floors. The bonding agents used included lignin pastes, various resinous cements, casein-latex cement, asphaltic cements, and nails. Installations on both a concrete subfloor and a wood subfloor were tested. Descriptions of the testing equipment and test installations are given. Results showing the relative magnitude of the depressions in the floor coverings caused by the testing equipment are summarized and presented in tables. The appearance of the various installations after 48,000 cycles of the testing equipment is discussed and representative photographs are shown.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Building Materials and Structures Report BMS 43; 1940. Performance Test of Floor Coverings for Use in Low-Cost Housing; Part 2. In the second

series, 40 installations were subjected to a performance test in the floor-testing chamber of the National Bureau of Standards. Included in the tests were battleship linoleum, rubber in sheet and tile form, felt-base floor coverings having various wearing surfaces, three monolithic floors, and a number of asphalt tiles. The bonding agents used included lignin pastes, resinous cements, latex adhesives, rubber cements, cut-back asphalt, and asphalt emulsions. Installations were made on both concrete and wood subfloors. Descriptions of the testing equipment and test installations are given. Results showing the relative depth of the depressions in the floor coverings during the test are presented in tables. Brief summaries showing the performance of the test panels are given, and the appearance of the different floor coverings after 48,000 cycles of the testing equipment is shown by representative photographs.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Building Materials and Structures Report BMS50; 1940. Stability of Fiber Building Boards as Determined by Accelerated Aging. Fiber building boards were aged by exposure to cycles of wetting, freezing, drying, and baking and to outdoor weathering. The boards were tested before and after aging to determine the changes produced, and judgment of stability was based on the changes. The properties tested were weight, thickness, expansivity, thermal conductivity, flexural properties, nail-holding strength, water absorption, ash, rosin, and permeability to air and water. Data were obtained on the relationship between the moisture contents of the boards and the relative humidity of the surrounding air and on the resistance of the boards to rot-producing fungi.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Building Materials and Structures Report BMS68; 1941. Performance Test of Floor Coverings for Use in Low-Cost Housing; Part 3. A performance test was conducted in the floor-testing chamber of the National Bureau of Standards on a third series of 40 test installations. Included in the test were linoleums in sheet and tile form, cork-composition tile, sheet rubber, rubber tile, asphalt tiles, fiberboard tiles, felt-base floor coverings having various wearing surfaces, three monolithic floors, and a number of wood floors. The bonding agents used included lignin pastes, cumar-resin cement, alumina cement-latex paste, rubber cements, various asphaltic adhesives, and nails. Installations were made on concrete, stripwood, and plywood subfloors. Installations on stripwood subfloors were made with the underlays of dry and asphalt-saturated lining felts. Descriptions of the testing equipment and test installations are given. Results showing the relative depth of the depressions in the floor coverings during the test are presented in tables. Brief summaries of the manner in which the various test installations performed are given, and photographs of the test panels after 48,000 cycles of the testing equipment are shown.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Building Materials and Structures Report BMS69; 1941. Stability of Fiber Sheathing Boards as Determined by Accelerated Aging. Fiber sheathing boards were aged by exposure to wetting, freezing, drying, and to outdoor weathering. Judgment of stability was based on changes produced in the properties of the boards. The properties tested were weight, thickness, expansivity, thermal conductivity, flexural properties, nail-holding strength, and permeability to air and water. Data were obtained on the resistance of the boards to rot-producing fungi.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Building Materials and Structures Report BMS73; 1941. Indentation Characteristics of Floor Coverings. The indentation characteristics of 64 floor coverings were determined. Tests were conducted on specimens conditioned in an atmosphere of 65-percent relative humidity and 72° F. temperature, on specimens after exposure to accelerated aging, and on specimens at an elevated temperature of 90° F. The floor coverings tested included such general types as linoleum, cork, rubber, felt base, asphalt, wood, fiberboard, and monolithic compositions. Variations in composition and thickness were included in many of the types. The apparatus and the procedures are briefly described. Summaries of the results are presented to show the relative merits of the various floor coverings with respect to comfort value and permanent indentation.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Building Materials and Structures Report BMS 77; 1941. Properties and Performance of Fiber Tile Boards. Performance tests have been made on fiber tile boards by subjecting them to conditions which they might possibly meet in service. The properties examined were resistance to abrasive cleaning powders, resistance to staining by household chemicals, and stability of the boards when subjected to cycles of steaming and drying. In addition, data were obtained on the density, expansivity, and flexural properties of the boards, and on the thickness and impact resistance of the finish coatings.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Building Materials and Structures Report BMS80; 1942. Performance Test of Floor Coverings for use in Low-Cost Housing; Part 4. A performance test was conducted in the floor-testing chamber of the National Bureau of Standards on a fourth series of 40 different installations involving 26 different floor coverings. Specimens of most of the floor coverings were installed on both a concrete and a wood subfloor. Included in the test were cork tiles, rubber tile containing aluminum oxide aggregate, asphalt tile, marbleized linoleums, felt-backed floor coverings having various wearing surfaces, strip maples, maple unit-block, pecan unit-block, asphalt mastic, coal-tar mastic, alumina cement-rubber latex composition, magnesium oxychloride composition, and 1:2:4 Portland cement concrete. Different underlays and adhesives were also included in the test. The test installations are described and results showing the depth of the depressions in the floor coverings made by the equipment are presented in tables. Brief summaries of the manner in which the various installations performed are given, and their appearance at the end of the test is shown by photographs. A few generalized comments and conclusions are made.

U. S. Gov., Federal Specification LLL-F-311; 1939. Amendment 1; 1940. Fiber-Board; Hard-Pressed, Structural. Covers two classes—(A) untreated, and (B) treated. Gives requirements for properties, and tolerances; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Federal Specification LLL-F-321b; 1942. Fiber-Board; Insulating. Covers three classes—(A) building board, (B) lath (for plaster base), and (C) roof board. Gives requirements for physical requirements, and dimensions; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 50-11-111; 1942. Fiberboard; Waterproof, Solid.

### 473.1 ASBESTOS PAPER

*References.*—Asbestos paper and millboard, *see* 545.2; definitions and classification, *see* 470.1.

### 473.2 FELTS (CARPET LINING, DEADENING, SATURATING)

American Society for Testing Materials, D 727-43T; 1943. Technical Assn. of Pulp and Paper Industry Standard Method T 427 M-43. Method of Test for Kerosine Number of Roofing and Flooring Felt by the Vacuum Method. This method of test for the absorptive qualities of felt. Gives requirements for kerosine number, apparatus, kerosine, test specimens, procedure, and calculation and report.

*References.*—Hair felt, wood felt, cotton felt, rag felt, *see* 365.98; roofing felts and roofing, *see* 505.16, 505.36; definitions and classification, *see* 470.1.

### 473.3 THERMAL INSULATING PAPER AND FIBER

Air Conditioning and Refrigerating Machinery Assn., Inc. Equipment Standards, 4.0; 1941. Miscellaneous Ammonia Standards. Cold Storage Room Insulation. Gives recommended thicknesses of insulation for certain required temperatures.

American Hospital Assn., 4-25. Blanket, Felt, and Loose-Fill Insulation (Vegetable or Wood-Fiber). Covers three classes—(A) flexible blanket, (B) semirigid felt, and (C) loose-fill. Based on U. S. Gov. Federal Specifications HH-I-571 for Insulation (Vegetable or Wood-Fiber), Blanket, Felt, and Loose-Fill and LLL-F-321a for Insulating Fiber-Board.

American Society for Testing Materials, ES-14; 1942. Emergency Specifications for Blanket Thermal Insulation for Building Purposes. Cover blanket or batt thermal insulating materials furnished in flexible or semirigid form and suitable for building purposes for application to flat or curved surfaces.

American Society for Testing Materials, ES-15; 1942. Emergency Specifications for Blanket Thermal Insulation for Industrial Purposes. Cover blanket insulating materials furnished in flexible or semirigid form and suitable for industrial purposes for application on flat or curved surfaces where surface temperatures exceed 100° F.

American Society for Testing Materials, ES-16; 1942. Emergency Specifications for Blanket Thermal Insulation for Refrigeration Purposes. Cover blanket thermal insulating materials furnished in flexible or semirigid form and suitable for refrigeration purposes for application on flat or curved surfaces.

American Society for Testing Materials, ES-19; 1942. Emergency Specifications for Structural Insulating Board (Thermal Insulation). Cover thermal insulating material made principally of vegetable fiber, in the form of insulating board suitable for structural purposes.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Paper, Insulation for Refrigerator Cars, M-908-34; 1934. Fibrous material saturated with asphalt bitumen, in 90 and 110-lb. weights, porosity tests with detail of apparatus, Mullen test, bending test, before and after exposure, permissible variation in weight and inspection.

U. S. Gov., Army Air Forces. Specification 17013; 1940. Paper—Bats.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R179-42; 1942. Structural Insulating Board (Vegetable Fiber). This recommendation covers sizes, thicknesses, and treatment of edges of structural insulating board. Initiated by the Insulation Board Institute.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Commercial Standard CS42-43; 1943. Structural Fiber Insulating Board. Sponsored by the Insulation Board Institute. Gives five classes—(A) building board, (B) lath (for plaster base), (C) roof insulation board, (D) interior board (factory finished), and (E) sheathing. Covers physical requirements and tests for thermal conductivity, strength, absorption, and expansion; and sets forth the standard commercial sizes, tolerances; and method of sampling and testing; and packing and labeling.

U. S. Gov., Federal Specification HH-I-571; 1938. Insulation (Vegetable or Wood-Fiber); Blanket, Felt, and Loose-Fill. Covers three classes—(A) flexible blanket, (B) semirigid felt, and (C) loose-fill. Manufactured from cleaned and sterile wood or other vegetable fiber; or a mixture of animal hair and wood-bark fiber. Gives requirements for thermal

conductivity, construction, and thickness; method of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment. Emergency Alternate Federal Specification E-HH-I-571; 1942 (issued by Procurement Div., Treasury Dept., U. S. Gov.) removed requirements to use burlap, copper, and galvanized wire mesh.

U. S. Gov., Navy Dept., Bureau of Yards and Docks. Specification 7Yg; 1934. Roofing, Siding, and Sheet Metal Work; Dampproofing and Membrane Waterproofing. Includes requirements for metal-covered insulation and insulating board for roof decks.

U. S. Gov., Navy Dept. Specification 17F5d; 1944. Fiber; Insulating, Gray.

U. S. Gov., Treasury Dept., Procurement Div., No. 477; 1941. Sheets, Insulation, Reflective. Covers two types—(I) 55 percent reflectivity; and (II) 90 percent reflectivity; intended for use in the thermal insulation of structures, by means of reflection of radiant heat. The sheets shall consist of two layers of kraft paper firmly cemented together by a continuous film of suitable bituminous material surfaced with a stable pigment or foil. Gives detail requirements as to thermal reflectivity, tensile strength, and bleeding; methods of sampling, inspection, and tests; and packaging, packing, and marking.

*References.*—Methods of testing, *see* 470.3; definitions and classification, *see* 470.1.

### 473.4 SHEATHING (WATERPROOF, WHITE FIBER)

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Building Materials and Structures Report BMS35; 1940. Stability of Sheathing Papers as Determined by Accelerated Aging. The more familiar types of sheathing papers were tested to obtain authoritative information on how well they can be expected to retain their desirable qualities in service. The aging treatment included cycles of wetting, freezing, drying, and baking; and the effects of the treatment were observed by comparison of the properties before and after aging. Important properties of this class of papers are resistance to the passage of air, water, and water vapor; hence, the judgment of stability was based largely on the degree of retention of those attributes.

U. S. Gov., Federal Specification UU-P-536; 1935. Amendment 1; 1943. Paper; Sheathing, Waterproof. Covers two grades—(A) for permanent structures, or for other uses where long-continued exposure to dampness may occur; and (B) for temporary structures, or other uses where long service is not required. Shall be waterproofed with asphalt. Gives requirements for tensile strength, water resistance, pliability, and size; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Navy Dept. Specification 59P7; 1944. Paper; Sheathing, Flameproof and Water-Repellent.

*References.*—Definitions and classification, *see* 470.1.

### 473.5 KRAFT (CONCRETE-CURINGS, WATERPROOF)

American Assn. of State Highway Officials, M74-38. Standard Specifications for Subgrade Paper. Gives scope, general requirements, physical properties, and methods of sampling and testing.

American Society for Testing Materials, C 171-42 T; 1942. Specifications for Waterproof Paper for Curing Concrete. Consists of two sheets of plain kraft paper cemented together with a bituminous material.

U. S. Gov., Federal Specification UU-P-264; 1940. Amendment 1; 1943. Paper; Kraft, Concrete-Curing, Water-Proofed. Furnished either in rolls or in rolls joined together with asphalt and lapped not less than 4 in. to form blankets. Gives requirements for stock, purchase basis, sizes of rolls and blankets, construction, tensile strength, and water resistance; methods of sampling, inspection and tests; and packaging, packing, and marking for shipment.

## 474. CARDBOARD

### 474.1 BLANKS

#### 474.11 Nonpasted Blanks

*References.*—Methods of testing, *see* 470.3; definitions and classification, *see* 470.1.

#### 474.12 Pasted Blanks

U. S. Gov., Federal Specification UU-T-54a; 1944. Tabs; Index, Gummed. Covers three types—(I) cloth, class (1) individual blank tabs, (2) individual printed tabs, and (3) blank 6-in. strips; (II) paper, blank 6-in. strips; and (III) transparent-plastic covered, class (1) printed tabs and (2) insertable 6-in. strips. Gives requirements for sizes and colors, material and workmanship, cloth, paper, gum, bid samples, and details for each type and class; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

*References.*—Definitions and classification, *see* 470.1.

### 474.2 INDEX BRISTOLS

American Hospital Assn., 55-13. Manila and Railroad Bristol Cardboard. Covers three types. Based on U. S. Gov. Federal Specifications UU-C-201 for Manila and Railroad Bristol Cardboard and UU-P-31a for General Specifications for Paper.

U. S. Gov., Federal Specification UU-C-201a; 1943. Cardboard; Bristol, Manila, and Railroad. Covers three types—(I) manila board; (II) railroad board, white and colored; and (III) cardboard, wood bristol, colored. Gives requirements for size, material and workmanship, trimming, and comparison sample; details including weight, bursting strength, thickness, stock, ply, thickness, coating, color, and surface; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

*References.*—Methods of testing, *see* 470.3; definitions and classifications, *see* 470.1.

### 474.3 MILL BRISTOLS (FOLDERS, TAGS)

American Hospital Assn., 55-13. Manila and Railroad Bristol Cardboard. Covers three types. Based on U. S. Gov. Federal Specifications UU-C-201 for Manila and Railroad Bristol Cardboard and UU-P-31a for General Specifications for Paper.

U. S. Gov., Army Air Forces. Specification 17C11; 1939. Board; Bristol Sulphite.

U. S. Gov., Federal Specification UU-B-561; 1931. Board; Bristol. Covers two types—(I) rough surface, and (II) smooth surface; and two grades—first and second. Gives requirements for texture and finish; methods of inspection and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Federal Specification UU-C-201a; 1943. Cardboard; Bristol, Manila, and Railroad. Covers three types—(I) manila board, (II) railroad board, white and colored, and (III) cardboard, wood bristol, colored. Gives requirements for size, material and workmanship, trimming, and comparison sample; details including weight, bursting strength, thickness, stock, ply, thickness, coating, color, and surface; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Gov. Printing Office. Cardboard—Manila Board, 1944. Gives requirements for weight, bursting strength, thickness, color, finish, and cleanliness. Developed by Joint Committee of Congress on Printing.

U. S. Gov., Gov. Printing Office. Cardboard—Railroad Board, White and Colored, 1944. Gives requirements for stock, ply, thickness, coating, color, finish, and cleanliness. Developed by Joint Committee of Congress on Printing.

U. S. Gov., Gov. Printing Office. Cardboard—U. S. Postal Card Bristol, 1944. Gives requirements for stock, ash, acidity, moisture content, weight, bursting strength, thickness, writing quality, color, finish, formation, cleanliness, and delivery. Developed by Joint Committee of Congress on Printing.

U. S. Gov., Gov. Printing Office. Cardboard—Wood Bristol, Colored, 1944. Gives requirements for weight, bursting strength, thickness, surface, color, finish, and cleanliness. Developed by Joint Committee of Congress on Printing.

*References.*—Methods of testing, *see* 470.3; definitions and classifications, *see* 470.1.

## 474.4 WEDDING BRISTOLS

*References.*—Definitions and classifications, *see* 470.1.

## 474.5 TAG BOARDS

Tag Manufacturers Institute. Manual of Standard Specifications. Coated Stocks (Not Including Lined Stocks), 1943. Gives TMI designation, composition, weight, thickness, strength, and tolerances.

Tag Manufacturers Institute. Manual of Standard Specifications. Kraft and Dyed Stocks, 1938. Gives TMI designation, composition, weight, thickness, strength, and tolerances.

Tag Manufacturers Institute. Manual of Standard Specifications. Manila Tag Stocks(Not Including Kraft), 1943. Gives TMI designation, chemical composition, weight, thickness, strength, and tolerances.

Tag Manufacturers Institute. Manual of Standard Specifications. White Lined Tag Stocks (Bleached or Pasted White Liner), 1937. Gives construction, TMI designation, composition, weight, thickness, strength, and tolerances.

U. S. Gov., Federal Specification UU-T-81b; 1937. Amendment 3; 1944. Tags; Shipping, and Stock. Covers three types—(A) cloth, (B) paper, and (C) stock, circular, metal-bound. Gives requirements for material and workmanship, curl, surfaces, stock, average thickness, bursting strength, stringing, design, sizes, and color; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., Gov. Printing Office. Tag Board—Calendered Tag, Manila and Colored for Use on Tabulating Machines, 1944. Gives requirements for stock, ash, acidity, weight, folding endurance, bursting strength, thickness, color, finish, and general requirements. Developed by Joint Committee of Congress on Printing.

U. S. Gov., Gov. Printing Office. Tag Board—High-Finish Chemical Wood Manila Tag, 1944. Gives requirements for stock, weight, bursting strength, color, finish, and cleanliness. Developed by Joint Committee of Congress on Printing.

U. S. Gov., Gov. Printing Office. Tag Board—Jute Tag, 1944. Gives requirements for stock, acidity, weight, tearing strength, writing and erasing qualities, color, finish, and cleanliness. Developed by Joint Committee of Congress on Printing.

*References.*—Methods of testing, *see* 470.3; definitions and classification, *see* 470.1; plate wiping paper (tag board), *see* 479.4.

## 474.9 MISCELLANEOUS CARDBOARDS

American Hospital Assn., 49-1. 50 Percent Rag Index Cards. Based on U. S. Gov. Federal Specifications UU-C-111 for 50 Percent Rag Index Cards, and UU-P-31a for General Specifications for Paper.

American Hospital Assn., 49-4. 100 Percent Rag Index Cards For Permanent Record. Based on U. S. Gov. Federal Specifications UU-C-116 for 100 Percent Rag Index Cards for Permanent Record, and UU-P-31a for General Specifications for Paper.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, 1938. Filing Cards. Covers definition, material, sizes, cutting, selection of cards, specifications, and procurement.

U. S. Gov., Army Air Forces. Specification 27588; 1944. Card; Instrument Record.

U. S. Gov., Federal Specification G-C-116; 1940. Amendment 2; 1944. Cards; Tabulating. Covers two types—(I) for electrical-contact tabulating machine and (II) for mechanical-contact tabulating machine. Gives requirements for material and workmanship, bid sample, stock, weight, ash, bursting strength, folding endurance, acidity, size, thickness, corners, printing, and color; method of sampling, inspection and test; and packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification UU-C-76a; 1943. Cards; Guide (Card-Size). Covers one type and one grade. Gives requirements for material, color, grain, finish and cleanliness, projections, samples, stock, ash, acidity, sizing, weight, bursting strength, thickness, tabs, and sizes; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., Federal Specification UU-C-86; 1934. Cards; Guide, Calendered (File-Size). Gives requirements for stock, weight, bursting strength, acidity, sizing, thickness color, finish, cleanliness, grain, size, and tabs; methods of sampling, inspection,

and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Federal Specification J-C-96c; 1944. Cards; Guide, Pressboard (File Size). Gives requirements for types and weights, colors, sizes, material and workmanship, lower projections, texture and finish, grain, bid samples, stock, weight, thickness, bursting strength, folding endurance, and tabs; methods of sampling, inspection, and tests; and packaging, packing and marking for shipment.

U. S. Gov., Federal Specification UU-C-128; 1941. Amendment 2; 1943. Cards; Index. Covers four grades—(1) 100 percent, for permanent records; (2) 50 percent, (3) 25 percent, and (4) wood fiber. Gives requirements for material, workmanship, ply, ruling, qualities, color, finish, size, grain, acidity, curl, detail requirements, methods of sampling, inspection, tests, and requirements for packaging, packing, and marking.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 19-49B; 1942. Pasteboard for Targets.

*References.*—Bristol drawing board and paper, *see* 478.32.

## 475. COVER PAPER, NEWS PAPER, AND PRINTING PAPER

### 475.1 COATED COVER PAPER

U. S. Gov., Gov. Printing Office. Cover Paper—Antique Finish Cover, White and Colored, 1944. Gives requirements for stock, weight, folding endurance, bursting strength, color, finish, and cleanliness. Developed by Joint Committee of Congress on Printing.

U. S. Gov., Gov. Printing Office. Cover Paper—Coated Cover, White and Colored, 1944. Gives requirements for stock, weight, folding endurance, bursting strength, coating and surface, color, finish, and cleanliness. Developed by Joint Committee of Congress on Printing.

U. S. Gov., Gov. Printing Office. Cover Paper—50 Percent Laid Cover, Colored, 1944. Gives requirements for stock, weight, folding endurance, bursting strength, laid design, color, finish, and cleanliness. Developed by Joint Committee of Congress on Printing.

U. S. Gov., Navy Dept. Specification 57C15; 1941. Covers; Tray, Paper.

*References.*—Standard sizes, methods of testing, *see* 470.2, 470.3; definitions and classifications, *see* 470.1.

### 475.2 PASTED COVER PAPER

*References.*—Definitions, classification, methods of test, *see* 470.1, 470.3.

### 475.3 UNCOATED COVER PAPER

U. S. Gov., Federal Specification UU-C-611; 1944. Covers; Bracket-Table, Dental, Paper. Covers one grade, one class and two types—(I) square and (II) round. Gives requirements for material, workmanship, shapes, thickness, color, weight, bursting strength, and absorption; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Veterans Administration. Specification VA-G-30b; 1941. Paper; Cover or Construction.

U. S. Gov., Veterans Administration. Specification VA-G-315c; 1943. Red Rope Folders and Folder Covers.

*References.*—Standard sizes, methods of testing, *see* 470.2, 470.3; definitions and classification, *see* 470.1.

### 475.4 HANGING PAPER (NEWS), WALLPAPER

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Commercial Standard CS16-29; 1929. Wall Paper. This standard covers wall papers known in the trade as printed, plain, embossed papers, pastics, engraved papers, and varnished tiles. It governs the width of raw stock, width of printed pattern, length of commercial single roll, and coverage surface. It establishes a minimum quality level based on weight, color fastness, grounding, printing, and raw stock. Initiated by the Wall Paper Institute.

*References.*—Definitions and classification, methods of test, *see* 470.1, 470.3.

### 475.5 NEWSPRINT

U. S. Gov., Gov. Printing Office. Printing Paper—Newsprint, 1944. Gives requirements for weight, tensile strength, thickness, opacity, color, finish, formation, and cleanliness. Developed by Joint Committee of Congress on Printing.

U. S. Gov., Gov. Printing Office. Printing Paper—Telephone Book News, 1944. Gives requirements for weight, bursting strength, thickness, opacity, color, finish, formation, and cleanliness. Developed by Joint Commmttee of Congress on Printing.

*References.*—Standard sizes, methods of testing, *see* 470.2, 470.3; definitions and classification, *see* 470.1.

### 475.6 COATED PRINTING PAPER

U. S. Gov., Gov. Printing Office. Printing Paper—Coated Book, 1944. Gives requirements for stock, weight, folding endurance, bursting strength, thickness, finish, coating and surface, color, and cleanliness. Developed by Joint Committee of Congress on Printing.

U. S. Gov., Gov. Printing Office. Printing Paper—Dull Coated Book, 1944. Gives requirements for stock, weight, folding endurance, bursting strength, thickness, finish, gloss, coating and surface, color, and cleanliness. Developed by Joint Committee of Congress on Printing.

U. S. Gov., Gov. Printing Office. Printing Paper—Machine-Coated Book, 1944. Gives requirements for weight, folding endurance, bursting strength, thickness, finish, coating and surface, color, and cleanliness. Developed by Joint Committee of Congress on Printing.

*References.*—Standard sizes, methods of testing, *see* 470.2, 470.3; definitions and classification, *see* 470.1.

### 475.7 UNCOATED PRINTING PAPER

*References.*—Newsprint, *see* 475.5; definitions and classification, *see* 470.1.

### 475.71 Bible Paper

*References.*—Definitions and classification, *see* 470.1.

### 475.72 Book Paper

U. S. Gov., Federal Specification UU-P-465; 1933. Amendment 5; 1943. Paper; Printing, Book, Machine-Finish. Covers one type. Gives requirements for size, trimming, weight tolerance, color, stock, acidity, weight, bursting strength, thickness, opacity, oil penetration, and finish; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., Gov. Printing Office. Printing Paper—Antique Book, 1944. Gives requirements for stock, acidity, weight, bursting strength, thickness, opacity, color, finish, formation, and cleanliness. Developed by Joint Committee of Congress on Printing.

U. S. Gov., Gov. Printing Office. Printing Paper—50 Percent Antique Book, 1944. Gives requirements for stock, acidity, weight, bursting strength, thickness, opacity, color, finish, formation, and cleanliness. Developed by Joint Committee of Congress on Printing.

U. S. Gov., Gov. Printing Office. Printing Paper—75 Percent Laid Antique Book, 1944. Gives requirements for stock, acidity, weight, folding endurance, bursting strength, thickness, opacity, color, finish, formation, and cleanliness. Developed by Joint Committee of Congress on Printing.

U. S. Gov., Gov. Printing Office. Printing Paper—Lightweight Machine-Finish Book, 1944. Gives requirements for stock, acidity, weight, bursting strength, thickness, opacity, oil penetration, finish, color, formation, and cleanliness. Developed by Joint Committee of Congress on Printing.

U. S. Gov., Gov. Printing Office. Printing Paper—50 Percent Lightweight Machine-Finish Book, 1944. Gives requirements for stock, acidity, weight, bursting strength, thickness, opacity, oil penetration, finish, color, formation, and cleanliness. Developed by Joint Committee of Congress on Printing.

U. S. Gov., Gov. Printing Office. Printing Paper—Machine-Finish Book, 1944. Gives requirements for stock, acidity, weight, bursting strength, thickness, opacity, oil penetration, finish, color, formation, and cleanliness. Developed by Joint Committee of Congress on Printing.

U. S. Gov., Gov. Printing Office. Printing Paper—Machine-Finish Book End Paper, 1944. Gives requirements for stock, acidity, weight, folding endurance, bursting strength, thickness, color, finish, formation, and cleanliness. Developed by Joint Committee of Congress on Printing.

U. S. Gov., Gov. Printing Office. Printing Paper—Offset Book, 1944. Gives requirements for stock, ash, acidity, sizing, weight, folding endurance, bursting strength, thickness, opacity, curl, surface and finish, formation, color, and cleanliness. Developed by Joint Committee of Congress on Printing.

U. S. Gov., Gov. Printing Office. Printing Paper—Supercalendered Book, 1944. Gives requirements for stock, acidity, weight, bursting strength, thickness, opacity, oil penetration, finish, color, formation, and cleanliness. Developed by Joint Committee of Congress on Printing.

*References.*—Standard sizes, methods of testing, *see* 470.2, 470.3; coated book paper, *see* 475.6; definitions and classification, *see* 470.1; back lining paper, *see* 479.4.

### 475.73 Coating Paper

*References.*—Definitions and classification, *see* 470.1.

### 475.74 Mimeograph Paper

American Hospital Assn., 55-37. Mimeograph Paper. Covers two types. Based on U. S. Gov. Federal Specifications UU-P-388a for Mimeograph Paper and UU-P-31a for General Specifications for Paper.

U. S. Gov., Federal Specification UU-P-388b; 1943. Paper; Mimeograph. Covers three types—(I) 25 percent, (II) chemical wood-white and colored, and (III) ground wood. Gives requirements for size, grain, writing quality, color, finish, formation and cleanliness, mimeographing quality, bid sample, wire mark, stock, weight, bursting strength, thickness, opacity, oil penetration, and finish; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., Gov. Printing Office. Mimeograph Paper—Chemical Wood Mimeograph, White and Colored, 1944. Gives requirements for stock, weight, bursting strength, thickness, opacity, oil penetration, finish, sizing, color, formation, cleanliness, and mimeograph quality. Developed by Joint Committee of Congress on Printing.

U. S. Gov., Gov. Printing Office. Mimeograph Paper—Ground Wood Mimeograph, 1944. Gives requirements for stock, weight, bursting strength, thickness, opacity, oil penetration, finish, sizing, brightness, color, formation, cleanliness, and mimeograph quality. Developed by Joint Committee of Congress on Printing.

U. S. Gov., Gov. Printing Office. Mimeograph Paper—25 Percent Mimeograph, 1944. Gives requirements for stock, weight, bursting strength, thickness, opacity, oil penetration, finish, sizing, color, formation, cleanliness, and mimeograph quality. Developed by Joint Committee of Congress on Printing.

*References.*—Standard sizes, methods of testing, *see* 470.2, 470.3; definitions and classification, *see* 470.1.

### 475.75 Music Paper

*References.*—Definitions and classification, *see* 470.1.

### 475.76 Offset Paper

*References.*—Definitions and classification, *see* 470.1.

## 475.9 MISCELLANEOUS PRINTING PAPER

Assn. of American Railroads, Telegraph and Telephone Section, 2-G-80; 1938. Printer Oiled Perforator Tape AAR-1-A. Covers rolls of sulfite paper for use in the operation of automatic printer transmitters; requirements for color, tensile strength, weight, light paraffin oil, length of roll, warning stripe, and percentage of oil retained in paper.

Assn. of American Railroads, Telegraph and Telephone Section, 2-G-84; 1939. Paper on Rolls for Printer Reception AAR-1-A and AAR-2-A. For regular use in page printer reception in telegraph service, and heavier grade paper. Sulfite paper, dimensions,

weight, thickness, tensile strength, and size tests in accordance with methods of the Technical Assn. of the Pulp and Paper Industries, and make-up of roll.

U. S. Gov., Federal Specification UU-P-185a; 1943. Paper; Computing-Machine. Covers two types—(I) chemical wood and (II) ground wood. Gives requirements for printing quality, writing quality, finish, widths, rolls, stock, weight, bursting strength, and brightness; methods of sampling, inspection, and tests; and packaging, packing, and marking.

## 476. TISSUE PAPER

### 476.1 COPYING TISSUE

*References.*—Carbon paper, *see* 476.21; definitions and classification, *see* 470.1.

### 476.2 INDUSTRIAL TISSUES

#### 476.21 Carbon Paper

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, 1938. Carbon Paper. Covers characteristics of carbon paper, inks, grease carbon, one-time carbon, and containers.

U. S. Gov., Army Air Forces. Specification 17006; 1938. Paper; Carbon, Pencil, Black (Standard Weight).

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Circular C431; 1941. Typewriter Ribbons and Carbon Paper. This circular gives general information about the manufacture of typewriter ribbons and carbon paper, and tells about the methods for testing them. The materials used and the principles involved in making the ink for ribbons and the coating for carbon paper are discussed. No formulas are given for either the ink or the coating because none that can be regarded as up to date are available.

U. S. Gov., Federal Specification UU-P-151a. Amendment 3; 1940. Paper; Carbon, Light-Weight (Typewriter), Black. Covers one grade only, light-weight, suitable for making more than four carbon copies at one time on a standard typewriter. Gives requirements for stock, weight-coated, coating, serviceability, and manifolding; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Federal Specification UU-P-156a. Amendment 3; 1940. Paper; Carbon, Standard-Weight (Typewriter), Black. Covers one grade and weight, for use in making not more than four carbon copies at one time on a standard typewriter. Gives requirements for stock, weight-coated, coating, serviceability, and manifolding; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Navy Dept. Specification 53P19c; 1944. Paper; Carbon, Hectograph.

U. S. Gov., Treasury Dept. Procurement Div. No. 590; 1942. Paper; Carbon, Typewriter, Black. Covers light-weight and standard-weight. Gives requirements for curling, suitability, bid samples, comparison sample, stock, weight-decoated, coating, serviceability and manifolding; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., Veterans Administration. Specification VA-G-56; 1932. Addressograph Carbon Paper, Size 6 x 16 in.

U. S. Gov., Veterans Administration. Specification VA-G-57; 1932. Addressograph Carbon Paper, Size 9 1/4 in. x 15 3/4 in.

U. S. Gov., Veterans Administration. Specification VA-G-58; 1932. Billing Machine Carbon Paper; Flat, 14 x 17 in.

U. S. Gov., Veterans Administration. Specification VA-G-92; 1932. Billing Machine Carbon Paper; Flat, 8 1/2 x 17 in.

U. S. Gov., Veterans Administration. Specification VA-G-120; 1934. Roll Carbon Paper; Single Ply, 15 1/2 in.

*References.*—Standard sizes, methods of testing, *see* 470.2, 470.3; definitions and classification, see 470.1.

#### 476.22 Cigarette Paper

*References.*—Definitions and classification, *see* 470.1.

#### 476.23 Electrical Insulating Tissue Paper

*References.*—Methods of testing electrical insulating paper, *see* 719.52; definitions, *see* 470.1.

#### 476.24 Pattern Paper

*References.*—Standard pattern sizes, *see* 311.2; definitions and classification, *see* 470.1.

#### 476.25 Stereotyping Paper, Tissue and Molding Paper

*References.*—Standard sizes, methods of testing, *see* 470.2, 470.3; definitions and classification, *see* 470.1.

### 476.3 SANITARY TISSUES

#### 476.31 Paper Napkins

American Hospital Assn., 55-22. Paper Table Napkins. Covers one grade. Based on U. S. Gov. Federal Specifications UU-N-106 for Paper Table Napkins and UU-P-31a for General Specifications for Paper.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R46-39; 1939. Tissue Paper. Includes the adopted sizes and weights of standard plain tissue, full crepe, semicrepe, and oversize napkins. Sponsored by the Tissue Assn.

U. S. Gov., Federal Specification UU-N-106a; 1944. Napkins; Table, Paper. Covers one grade. Gives requirements for workmanship, size, weight, bursting strength, finish, color, general appearance, and folding; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Veterans Administration. Specification VA-G-67b; 1934. Napkins; Paper, Flat (Tray Covers) 16 x 22 in.

U. S. Gov., Veterans Administration. Specification VA-G-68a; 1934. Napkins; Paper, Size 13 x 13 in., (Folded).

*References.*—Definitions and classification, *see* 470.1.

#### 476.32 Toilet Paper

American Hospital Assn., 55-40. Roll (Round and Oval) and Sheet Tissue Toilet Paper. Covers three types.

Based on U. S. Gov. Federal Specifications UU-P-556b for Roll (Round and Oval) and Sheet Tissue Toilet Paper, and UU-P-31a for General Specifications for Paper.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R46-39; 1939. Tissue Paper. This recommendation covers stock varieties of tissue paper for wrapping tissue, roll toilet tissue, interfolded toilet tissue, and paper napkins. Gives detail requirements relative to content, sheet sizes, weight of paper, and packing. Sponsored by the Tissue Assn.

U. S. Gov., Federal Specification UU-P-556b; 1937. Amendment 1; 1943. Paper; Toilet, Tissue, Roll (Round and Oval) and Sheet. Covers three types—(I) roll, round, (II) sheet, and (III) roll, oval. Gives requirements for weight, bursting strength, absorption, packages, and rolls; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

*References.*—Definitions and classification, *see* 470.1.

## 476.4 TISSUE WRAPPING PAPER

U. S. Gov., Army Air Forces. Specification 17004-A; 1941. Paper; Wrapping (No. 1 Manila Tissue).

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R46-39; 1939. Tissue Paper. This recommendation covers stock varieties of tissue paper for wrapping tissue, roll toilet tissue, interfolded toilet tissue, and paper napkins. Specific detail requirements are given relative to content, sheet size, weight of paper, and packing, as well as details for wrapping and marking. Sponsored by the Tissue Assn.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R125-31; 1931. Waxed Tissue Paper. This recommendation sets forth requirements on weight of raw stock and of finished material, melting point of wax, for two grades of which one is made from bleached all sulphite tissue, accepted number of standard sizes, sheets per ream or unit, and method of packing, for waxed sheet tissue, sheet lunch rolls, lunch envelopes, butter wraps, and continuous household rolls. Initiated by American Waxed Paper Assn.

U. S. Gov.., Dept. of Commerce, National Bureau of Standards. Commercial Standard CS44-32; 1932. Apple Wraps. This standard is for dry and oiled paper apple wraps. Detail requirements are given for size, weight, bursting and tensile breaking strength. Included, also, are methods of test, packing, and marking. Initiated by Apple Growers Assn.

*References.*—Sanitary wrapping paper, paraffin paper, *see* 477.5; definitions and classification, *see* 470.1.

## 476.9 MISCELLANEOUS TISSUE PAPER

U. S. Gov., Federal Specification UU-P-313a; 1943. Paper; Lens, Tissue. Covers one type and grade, suitable, both wet and dry, for cleaning optical instruments and for other cleaning purposes requiring high-grade tissues. Gives requirements for stock, ash, acidity, weight, tensile strength, stretch, absorption, and size; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Navy Dept. Specification 53P21; 1940. Paper; Tissue.

*References.*—Standard sizes, methods of testing, *see* 470.2, 470.3; definitions and classification, *see* 470.1; paraffin paper, waxed tissue paper, *see* 477.5.

# 477. WRAPPING PAPER

Technical Assn. of the Pulp and Paper Industry. Creasing Quality of Paper, Tentative Standard T 446 sm-42; 1942. To determine ability of wrappers to remain in position after being folded by mechanical wrapping equipment. Covers apparatus, test specimen, procedure, and report.

U. S. Gov., Federal Specification UU-P-611; 1942. Paper; Wrapping, Dispensary. Covers one grade and two types—(I) white and (II) blue. Gives requirements for weight, finish, size, and bursting strength; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

*References.*—Tissue wrapping paper, *see* 476.4.

## 477.1 BOGUS WRAPPING PAPER

*References.*—Definitions and classification, *see* 470.1.

## 477.2 MANILA WRAPPING PAPER

U. S. Gov., Gov. Printing Office. Manila Paper—Chemical Wood Manila, 1944. Gives requirements for stock, weight, folding endurance, bursting strength, color, finish, and cleanliness. Developed by Joint Committee of Congress on Printing.

U. S. Gov., Gov. Printing Office. Manila Paper—Hemp and/or Jute and/or Sisal Manila, 1944. Gives requirements for stock, weight, folding endurance, bursting strength, color, finish, and cleanliness. Developed by Joint Committee of Congress on Printing.

U. S. Gov., Gov. Printing Office. Manila Paper—Wood Manila, 1944. Gives requirements for weight, bursting strength, color, finish, and cleanliness. Developed by Joint Committee of Congress on Printing.

U. S. Gov., U. S. Army, Ordnanoe Dept. Specification 50-11-87A; 1942. Paper; Wood, Manila, Waterproof.

*References.*—Standard sizes, methods of testing, *see* 470.2, 470.3; definitions and classification, *see* 470.1; sulphite manila paper, *see* 477.7.

## 477.3 NUMBER ONE KRAFT PAPEP

American Hospital Assn., 55-28. Wrapping Kraft Paper. Covers No. 1 and No. 2 grades, flat cut and rolls. Based on U. S. Gov. Federal Specifications UU-P-268a for Wrapping Kraft Paper and UU-P-31a for General Specifications for Paper.

U. S. Gov., Federal Specification UU-P-268b; 1943. Paper; Kraft, Wrapping. Covers four grades of kraft wrapping paper—(A) No. 1, (B) No. 2, (C) No. 3, and (D) imitation. Gives requirements for materials, cut, size, sizing, and comparison samples; details for each grade showing stock, weight, folding endurance, and bursting strength; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., Federal Specification UU-P-271a; 1943. Paper; Kraft, Wrapping, Waterproofed. Covers a large number of types. Gives requirements for material, workmanship, stock, purchase basis, cut, sizes, bleeding, construction, details, tensile strength, water resistance, stretch, weight of asphaltum, weight of paper, methods of sampling, inspection, tests, packaging, packing, and marking.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 50-11-77; 1933. Paper; Kraft, Asphalt, Impregnated.

*References.*—Standard sizes, methods of testing, *see* 470.2, 470.3; definitions and classification, *see* 470.1.

## 477.4 NUMBER TWO KRAFT PAPER

American Hospital Assn., 55-28. Wrapping Kraft Paper. Covers No.1 and No.2 grades, flat cut and rolls. Based on U. S. Gov. Federal Specifications UU-P-268a for Wrapping Kraft Paper and UU-P-31a for General Specifications for Paper.

U. S. Gov., Army Air Forces. Specification 17002-A; 1941. Paper; Wrapping, Kraft, Waxed.

U. S. Gov., Federal Specification UU-P-268b; 1943. Paper; Kraft, Wrapping. Covers four grades of kraft wrapping paper—(A) No.1, (B) No.2, (C) No.3, and (D) imitation. Gives requirements for materials, cut, size, sizing, and comparison samples; details for each grade showing stock, weight, folding endurance, and bursting strength; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., Federal Specification UU-P-271a; 1943. Paper; Kraft, Wrapping, Waterproofed. Covers a large number of types. Gives requirements for material, workmanship, stock, purchase basis, cut, sizes, bleeding, construction, details, tensile strength, water resistance, stretch, weight of asphaltum, weight of paper, methods of sampling, inspection, tests, packaging, packing, and marking.

U. S. Gov., Gov. Printing Office. Kraft Paper—No.2 Kraft, 1944. Gives requirements for stock, weight, folding endurance, bursting strength, color, and finish. Developed by Joint Committee of Congress on Printing.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 50-11-88; 1936. Paper; Kraft, Duplex, Waterproof Wrapping, for Ammunition Container.

*References.*—Standard sizes, methods of testing, *see* 470.2, 470.3; definitions and classification, *see* 470.1.

## 477.5 SANITARY WRAPPING PAPER, PARAFFIN PAPER

American Hospital Assn., 55-31. Paraffined Wrapping Kraft Paper. Covers three types. Based on U. S. Gov. Federal Specifications UU-P-270 for Paraffined Wrapping Kraft Paper and UU-P-31a for General Specifications for Paper.

American Society for Testing Materials, D 590-42; 1942. Technical Assn. of Pulp and Paper Industry Standard Method T 405m-40. Method of Test for Paraffin Content of Waxed Paper. For quantitative method of determining amount of paraffin in waxed paper, but not for paraffin-sized papers; requirements for test specimen, apparatus, reagents, and outline of procedure.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R125-31; 1931. Waxed Tissue Paper. This recommendation sets forth requirements on weight of raw stock and finished material, melting point of wax, for two grades of which one is made from bleached all sulfite tissue, accepted number of standard sizes, sheets per ream or unit, and method of packing for waxed sheet tissue, sheet lunch rolls, lunch envelopes, butter wraps, and continuous household rolls. Initiated by American Waxed Paper Assn.

U. S. Gov., Federal Specification UU-P-252; 1940. Paper, Impervious; Paraffined (for Surgical Dressings). Covers one type and grade, and three sizes—(1) 24 in. by 5 yd., (2) 24 in. by 50 yd., and (3) 18 in. by 300 yd. Gives requirements for color, paraffin content, weight, bursting strength, and tolerances; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Federal Specification UU-P-270; 1936. Amendment 2; 1940. Paper; Kraft, Wrapping, Paraffined. Covers three types—(A) paraffin-impregnated, creped one direction; (B) paraffin-impregnated, creped both directions; and (C) paraffin-impregnated, uncreped. Gives requirements for tensile strength, content of paraffin, and stretch; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 50-11-78; 1932. Paper; Paraffin.

*References.*—Standard sizes, methods of testing, *see* 470.2, 470.3; definitions and classification, *see* 470.1; waxed paper linings for shipping boxes, *see* 957.2.

## 477.6 SCREENINGS

American Meat Institute. Standards for Packinghouse Supplies, Packs, and Equipment, 1928. Paper. Include 11 varieties of paper, weight requirements, standard sizes for wrapping smoked meats, for grease-proof, vegetable parchment, glassine, packers' manila, gray ham paper, screenings, water and dry finished fiber, kraft, and transparent cellulose papers.

*References.*—Definitions and classification, *see* 470.1.

## 477.7 SULPHITE WRAPPING PAPER

*References.*—Standard sizes, methods of testing, *see* 470.2, 470.3; definitions and classification, *see* 470.1.

## 477.8 WATERPROOF WRAPPING PAPER

U. S. Gov., Army-Navy Aeronautical Specification AN-B-18; 1944. Barriers; Waterproof (Materials for).

U. S. Gov., Federal Specification UU-P-271a; 1943. Paper; Kraft, Wrapping, Waterproofed. Covers a large number of types. Gives requirements for material, workmanship, stock, purchase basis, cut, sizes, bleeding, construction, details, tensile strength, water resistance, stretch, weight of asphaltum, weight of paper, methods of sampling, inspection, tests, packaging, packing, and marking.

U. S. Gov., Joint Army-Navy Specification, JAN-P-125; 1944. Packaging and Packing for Overseas Shipment—Barrier-Materials, Waterproof, Flexible.

*References.*—Definitions and classification, *see* 470.1.

### 477.9 MISCELLANEOUS WRAPPING PAPERS

American Meat Institute. Standards for Packinghouse Supplies, Packs, and Equipment, 1928. Paper. Include 11 varieties of paper, weight requirements, standard sizes for wrapping smoked meats, for grease-proof, vegetable parchment, glassine, packers' manila, gray ham paper, screenings, water and dry finished fiber, kraft, and transparent cellulose papers.

Society of Automotive Engineers. Aeronautical Material Specification 2574; 1943. Preservations of Engines (Limited Period). Provides preparing aircraft engines to resist corrosion during shipment and limited storage under favorable conditions. Material and equipment, preliminary operation, preparation for storage procedure, recommended procedure for represervation, and general.

Society of Automotive Engineers. Aeronautical Material Specification 3540; 1943. Wrapper; Greaseproof Paper (Single-Ply). Primarily a coated or impregnated paper base sheet for a greaseproof and noncorrosive material for use as a primary wrapper in contact with highly finished and corrodible metallic surfaces, which usually will be coated with an oil or preservative compound. General and detail requirements, test procedures, quality, reports, marking, approval, and rejection. Similar to Army-Navy Aeronautical Specification AN-P-12.

Society of Automotive Engineers. Aeronautical Material Specification 3542; 1944. Wrapper; Greaseproof Paper (Laminated). Covers material, application, general requirements, detail requirements, tests, quality, reports, marking, approval, and rejections. Similar to Army-Navy Aeronautical Specification AN-P-12.

U. S. Gov., Army-Navy Aeronautical Specification AN-P-12b-1; 1945. Paper; Greaseproof Wrapping.

U. S. Gov., Army-Navy Aeronautical Specification AN-W-18; 1944. Wadding; Creped Cellulose.

U. S. Gov., Federal Specification UU-B-71; 1933. Bands; Paper, Shirt, Laundry. Covers one type. Gives requirements for construction, composition, adhesive material, and size; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Joint Army-Navy Specification JAN-P-121; 1944. Barrier-Material; Greaseproof.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 5C-11-70A; 1941. Felt; Protecting, Paper, for Use in Primer Protector Cap.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-446A; 1934. Paster, Types MC-73 and MC-73A, Paper, for Cable Splicing.

*References.*—Standard sizes, methods of testing, *see* 470.2, 470.3; definitions and classification, *see* 470.1.

## 478. WRITING PAPER, DRAWING AND CHART PAPER

### 478.1 COMMERCIAL WRITING PAPER

### 478.10 General Items

Writing Paper Manufacturers Assn. Trade Customs of the Writing Paper Industry, 1940. Covers sizes, broken cartons, colors, differentials for special finishes, variation in weight and billing, cores, marking, over-runs and under-runs, special watermarks, cutting to small sizes, tolerance in trimming, folding and punching, packing differentials, claims, quotations, samples, make and hold orders, freight conditions, quantity differentials, terms of sale, commissions on paper sold through merchants, light weights, and substance weights; tables showing weights for cut sizes and standard weights; and supplementary trade customs.

### 478.11 Bond Writing Paper

American Hospital Assn., 55-25. White and Colored Bond Paper. Covers three types. Based on U. S. Gov. Federal Specifications UU-P-121c for White and Colored Bond Paper and UU-P-31a for General Specifications for Paper.

U. S. Gov., Federal Specification UU-P-121c; 1939. Amendment 3; 1943. Paper; Bond, White and Colored. Covers four types—(A) 25 percent white and colored, (B) 50 percent white and colored, (C) 75 percent white, and (D) chemical wood white and colored. Gives requirements for stock, ash, acidity, sizing, weight, folding endurance, bursting strength, color, finish, ruling, writing, and erasing qualities; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., Gov. Printing Office. Bond Paper—Chemical Wood Bond, White and Colored, 1944. Gives requirements for stock, ash, acidity, sizing, weight, folding endurance, bursting strength, ruling, writing, and erasing qualities, color, finish, formation, and cleanliness. Developed by Joint Committee of Congress on Printing.

U. S. Gov., Gov. Printing Office. Bond Paper—25 Percent Bond, White and Colored, 1944. Gives requirements for stock, ash, acidity, sizing, weight, folding endurance, bursting strength, ruling, writing, and erasing qualities, color, finish, formation, cleanliness, and watermark. Developed by Joint Committee of Congress on Printing.

U. S. Gov., Gov. Printing Office. Bond Paper—50 Percent Bond, White and Colored, 1944. Gives requirements for stock, ash, acidity, sizing, weight, folding endurance, bursting strength, ruling, writing, and erasing qualities, color, finish, formation, cleanliness, and watermark. Developed by Joint Committee of Congress on Printing.

U. S. Gov., Gov. Printing Office. Bond Paper—75 Percent White Bond, 1944. Gives requirements for stock, ash, acidity, sizing, weight, folding endurance, bursting strength, ruling, writing, and erasing qualities, color, finish, formation, cleanliness, and watermark. Developed by Joint Committee of Congress on Printing.

U. S. Gov., Gov. Printing Office. Bond Paper—100 Percent Declaration Bond for Permanent Records, 1944. Gives requirements for stock, alpha cellulose, copper number, ash, acidity, sizing, weight, folding endurance, bursting strength, writing quality,

color, finish, formation, cleanliness, and watermark. Developed by Joint Committee of Congress on Printing.

U. S. Gov., Gov. Printing Office. Bond Paper—100 Percent White Bond for Permanent Records, 1944. Gives requirements for stock, alpha cellulose, copper number, ash, acidity, sizing, weight, folding endurance, bursting strength, ruling, writing, and erasing qualities, color, finish, formation, cleanliness, and watermark. Developed by Joint Committee of Congress on Printing.

*References.*—Standard sizes, methods of testing, *see* 470.2, 470.3; definitions and classification, *see* 470.1.

### 478.12 Flat Writing Paper

U. S. Gov., Federal Specification UU-P-641; 1933. Amendment 6; 1943. Paper; Writing. Covers one type and grade. Gives requirements for size, writing quality, trimming, weight tolerance, color, finish, formation, cleanliness, ruling, and writing qualities; stock, ash, weight, folding endurance, bursting strength, and brightness; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

*References.*—Definitions and classification, *see* 470.1.

### 478.13 Ledger Paper

American Hospital Assn., 55-34. Ledger Paper. Covers two types. Based on U. S. Gov. Federal Specifications UU-P-288 for Ledger Paper and UU-P-31a for General Specifications for Paper.

U. S. Gov., Federal Specification UU-P-288; 1933. Amendment 6; 1943. Paper; Ledger. Covers two types—(A) 25 percent ledger, white and colored; and (B) wood fiber ledger, white and colored. Gives requirements for size, writing, ruling, and erasing qualities, trimming, weight tolerance, color, finish formation, cleanliness, stock, ash, acidity, sizing, weight, folding endurance, bursting strength, and watermark; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Gov. Printing Office. Ledger Paper—Chemical Wood White Ledger, 1944. Gives requirements for stock, ash, acidity, sizing, weight, folding endurance, bursting strength, ruling, writing, and erasing qualities, color, finish, formation, and cleanliness. Developed by Joint Committee of Congress on Printing.

U. S. Gov., Gov. Printing Office. Ledger Paper—25 Percent Ledger, White and Colored, 1944. Gives requirements for stock, ash, acidity, sizing, weight, folding endurance, bursting strength, ruling, writing, and erasing qualities, color, finish, formation, cleanliness, and watermark. Developed by Joint Committee of Congress on Printing.

U. S. Gov., Gov. Printing Office. Ledger Paper—50 Percent Ledger, White and Colored, 1944. Gives requirements for stock, ash, acidity, sizing, weight, folding endurance, bursting strength, ruling, writing, and erasing qualities, color, finish, formation, cleanliness, and watermark. Developed by Joint Committee of Congress on Printing.

U. S. Gov., Gov. Printing Office. Ledger Paper—75 Percent Ledger, White and Colored, 1944. Gives requirements for stock, ash, acidity, sizing, weight, folding endurance, bursting strength, ruling, writing, and erasing qualities, color, finish, formation, cleanliness, and watermark. Developed by Joint Committee of Congress on Printing.

U. S. Gov., Gov. Printing Office. Ledger Paper—100 Percent White Ledger For Permanent Records, 1944. Gives requirements for stock, alpha cellulose, copper number, ash, acidity, sizing, weight, folding endurance, bursting strength, ruling, writing, and erasing qualities, color, finish, formation, cleanliness, and watermark. Developed by Joint Committee of Congress on Printing.

*References.*—Standard sizes, methods of testing, *see* 470.2, 470.3; definitions and classification, *see* 470.1.

### 478.14 Linen Paper

*References.*—Definitions and classification, *see* 470.1.

### 478.15 Papeterie Paper

*References.*—Definitions and classification, *see* 470.1.

### 478.16 Parchment Deed Paper

U. S. Gov., Gov. Printing Office. Bond Paper—100 Percent Parchment Deed For Permanent Records, 1944. Gives requirements for stock, alpha cellulose, copper number, ash, acidity, sizing, weight, folding endurance, bursting strength, ruling, and writing qualities; color, finish, formation, and cleanliness. Developed by Joint Committee of Congress on Printing.

*References.*—Standard sizes, methods of testing, *see* 470.2, 470.3; definitions and classification, *see* 470.1.

### 478.17 Railroad Writing Paper

*References.*—Definitions and classification, *see* 470.1.

### 478.18 Wedding Writing Paper

*References.*—Definitions and classification, *see* 470.1.

### 478.19 Miscellaneous Commercial Writing Paper

U. S. Gov., Federal Specification UU-P-21a; 1943. Pads; Memorandum. Covers two types—(I) chemical wood, and (II) ground wood. Gives requirements for sizes, material, workmanship, number of sheets, padding and back, ruling, comparison sample, writing quality, stock, weight, and bursting strength; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., Federal Specification UU-P-258a; 1942. Amendment 2; 1943. Paper; Index. Covers three grades—(1) 50 percent index, (2) 25 percent index, and (3) wood fiber index. Gives requirements for material and workmanship, size, trimming, ply, ruling, color, finish, detail requirements, methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification UU-P-301; 1935. Amendment 3; 1943. Paper; Legal-Cap, Ruled. Covers

one type and grade. Gives requirements for materials, workmanship, writing quality, color, finish, formation, cleanliness, stock, weight, folding endurance, bursting strength, ash, and dimensions and ruling; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., Gov. Printing Office. Index Paper—Chemical Wood White and Colored Index, 1944. Gives requirements for stock, ash, acidity, sizing, weight, bursting strength, thickness, ply, ruling, writing, and erasing qualities, color, finish, and cleanliness. Developed by Joint Committee of Congress on Printing.

U. S. Gov., Gov. Printing Office. Writing Paper—Ground Wood Writing, White and Colored, 1944. Gives requirements for stock, ash, weight, bursting strength, ruling, and writing quality; color, finish, formation, and cleanliness. Developed by Joint Committee of Congress on Printing.

U. S. Gov., Gov. Printing Office. Writing Paper—U.S.M.O. Writing, White and Blue, 1944. Gives requirements for stock, ash, weight, folding endurance, bursting strength, writing quality, color, finish, formation, cleanliness, and watermark. Developed by Joint Committee of Congress on Printing.

U. S. Gov., Gov. Printing Office. Index Paper—50 Percent Index, White and Colored, 1944. Gives requirements for stock, ash, acidity, sizing, weight, bursting strength, thickness, ply, ruling, writing, and erasing qualities; color, finish, and cleanliness. Developed by Joint Committee of Congress on Printing.

U. S. Gov., Gov. Printing Office. Index Paper—100 Percent White Index for Permanent Records, 1944. Gives requirements for stock, alpha cellulose, copper number, ash, acidity, sizing, weight, bursting strength, thickness, ply, ruling, writing, and erasing qualities; color, finish, formation, and cleanliness. Developed by Joint Committee of Congress on Printing.

*References.*—Standard sizes, methods of testing, *see* 470.2, 470.3; safety writing paper, *see* 478.33; definitions and classification, *see* 470.1.

## 478.2 DUPLICATING PAPER

U. S. Gov., Federal Specification UU-P-231; 1943. Paper; Duplicator, Liquid Process. Shall be of the following types: Types I—Master paper and Type II—Copy paper. Covers size, color, finish, formation, cleanliness, and bid sample. Type I—stock, weight, bursting strength, thickness, curl, and copying quality. Type II—stock, weight, ash, mineral pigment, bursting strength, thickness, opacity contrast ratio, writing quality, curl, and copying quality. Methods of sampling, inspection, tests, packaging, packing, and marking for shipment.

### 478.21 French Folio Paper

*References.*—Definitions and classification, *see* 470.1.

### 478.22 Manifold Paper (Includes Stencil Paper)

U. S. Gov., Federal Specification UU-P-328a; 1934. Amendment 7; 1943. Paper; Manifold. Covers five types—(A) 100 percent white manifold; (B) 50 percent white and colored manifold; (C) 50 percent white glazed manifold; (D) 25 percent white and colored manifold; (E) chemical wood white and colored manifold. Gives requirements for size, writing quality, trimming, weight tolerance, color, finish, formation, cleanliness, stock, ash, acidity, sizing, weight, folding endurance, and bursting strength; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Federal Specification UU-P-543a; 1939. Amendment 1; 1940. Paper; Stencil, Board. Suitable for use with brush and ink. Covers two types—(I) unoiled, and (II) oiled. Gives requirements for weight, thickness, and bursting strength; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification UU-P-545; 1943. Paper; Stencil, Duplicating-Machine, Dry Process. Covers one type, one grade, and one class. Gives requirements for materials and workmanship, backing sheet, cushion sheets, printing, sizes and scale numbers, odor, tensile strength, stretch, moisture resistance, permanence, opacity, finish, cut-outs and type filling, correction properties, use with stylus, and duplicating quality; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., Gov. Printing Office. Manifold Paper—Chemical Wood Manifold, White and Colored, 1944. Gives requirements for stock, ash, acidity, weight, bursting strength, writing quality, color, finish, formation, and cleanliness. Developed by Joint Committee of Congress on Printing.

U. S. Gov., Gov. Printing Office. Manifold Paper—50 Percent Manifold, White and Colored, 1944. Gives requirements for stock, ash, acidity, sizing, weight, folding endurance, bursting strength, writing quality, color, finish, formation, and cleanliness. Developed by Joint Committee of Congress on Printing.

U. S. Gov., Gov. Printing Office. Manifold Paper—50 Percent White Glazed Manifold, 1944. Gives requirements for stock, ash, acidity, sizing, weight, folding endurance, bursting strength, writing quality, color, finish, formation, and cleanliness. Developed by Joint Committee of Congress on Printing.

U. S. Gov., Gov. Printing Office. Manifold Paper—100 Percent White Manifold, 1944. Gives requirements for stock, ash, acidity, sizing, weight, folding endurance, bursting strength, writing quality, color, finish, formation, and cleanliness. Developed by Joint Committee of Congress on Printing.

U. S. Gov., Veterans Administration. Specification VA-G-32a; 1936. Paper; Stencil, Oilboard.

*References.*—Standard sizes, methods of testing, *see* 470.2, 470.3; definitions and classification, *see* 470.1.

### 478.23 Onionskin Paper

U. S. Gov., U. S. Army, Ordnance Dept. Specification 50-11-49B; 1942. Paper; Onionskin.

*References.*—Definitions and classification, *see* 470.1; manifold paper, *see* 478.22.

### 478.24 Teletype Paper (Roll and Tape)

U. S. Gov., Federal Specification UU-P-547c; 1944. Amendment 1; 1944. Paper; Teletype, Roll and Tape.

Covers three types: (I) roll-form, ungummed, for use with teletype and duplicating inks (classes A—without carbon paper, B—interleaved with carbon paper, and C—auto-copy), (II) tape-form, for use with typewriter ribbon ink (classes A—gummed and B—ungummed), and (III) tape-form, oiled, perforator, for use with automatic teletype apparatus. Gives details for each type and class; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

### 478.29 Miscellaneous Duplicating Paper

U. S. Gov., Veterans Administration. Specification VA-G-91; 1933. Transcript Paper; Flat and Rolls.

## 478.3 INDUSTRIAL PAPER

### 478.31 Chart and Map Paper

U. S. Gov., Federal Specification UU-P-171a; 1943. Amendment 1; 1944. Paper; Chart, 100 Percent, Lithograph-Finish, White. Covers one type and grade. Gives requirements for sizes, material, erasing quality, trimming, surface and finish, sorting, formation, grain, color, cleanliness, writing and printing qualities, stock, alpha cellulose, copper number, ash, moisture content, acidity, sizing, weight, folding endurance, bursting strength, and thickness; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification UU-P-201; 1931. Paper; Cross-Section, Printed, Drawing, and Tracing. Covers two types—(I) drawing, and (II) tracing; and eight classes—(A) profile, (B) cross-section, (C) logarithmic, (D) plan profile, (E) township, (F) coordinate, (G) isometric, and (H) statistical diagrammatic. Gives requirements for colors, printings, rulings, mounting, lines, and ink; methods of inspection and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Federal Specification UU-P-203; 1931. Paper; Cross-Section, Ruled. Gives requirements for colors, rulings, lines, and ink; methods of inspection and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Federal Specification UU-P-361; 1944. Paper; Map, High Wet-Strength. Covers one type and grade. Gives requirements for size, material and workmanship, trimming, erasing quality, surface, grain, writing quality, abrasion, blocking, color, finish, formation and cleanliness, stability, bid sample, and details; methods of sampling, inspection, and tests; and packing and marking for shipment.

U. S. Gov., Gov. Printing Office. Map Paper—High Wet Strength Map, 1944. Gives requirements for stock, moisture content, acidity, weight, folding endurance, tearing strength, bursting strength, tensile strength, thickness, opacity, finish, water resistance, expansivity, curl, erasing quality, writing quality, wet writability, abrasion, trim, surface, resistance to blocking, color, finish, formation, cleanliness, and packing. Developed by Joint Committee of Congress on Printing.

U. S. Gov., Gov. Printing Office. Map Paper—Lithograph-Finish Map, 1944. Gives requirements for stock, ash, moisture content, weight, folding endurance, bursting strength, thickness, finish, surface, color, formation, and cleanliness. Developed by Joint Committee of Congress on Printing.

U. S. Gov., Gov. Printing Office. Map Paper—50 Percent Lithograph-Finish Map, 1944. Gives requirements for stock, ash, moisture content, acidity, sizing, weight, folding endurance, bursting strength, thickness, finish, surface, color, formation, and cleanliness. Developed by Joint Committee of Congress on Printing.

U. S. Gov., Gov. Printing Office. Map Paper—75 Percent Lithograph-Finish Map, 1944. Gives requirements for stock, ash, moisture content, acidity, sizing, weight, folding endurance, bursting strength, thickness, finish, surface, color, formation, and cleanliness. Developed by Joint Committee of Congress on Printing.

U. S. Gov., Gov. Printing Office. Map Paper—50 Percent White Chart, Lithograph-Finish, 1944. Gives requirements for stock, ash, acidity, sizing, weight, folding endurance, bursting strength, thickness, erasing quality, surface and finish, expansivity, finish, moisture resistance, color, finish, and general appearance, and sorting. Developed by Joint Committee of Congress on Printing.

U. S. Gov., Gov. Printing Office. Map Paper—100 Percent White Chart, Lithograph-Finish for Permanent Records, 1944. Gives requirements for stock, alpha cellulose, copper number, ash, moisture content, acidity, sizing, weight, folding endurance, bursting strength, thickness, erasing quality, color, surface and finish, formation, and sorting. Developed by Joint Committee of Congress on Printing.

U. S. Gov., U. S. Army, Corps of Engineers. Specification 19-48A; 1937. Paper; Map, Lithograph-Finish, 50 Percent Rag.

*References.*—Standard sizes, methods of testing, *see* 470.2, 470.3; definitions and classification, *see* 470.1.

### 478.32 Drawing Paper

Aeronautical Chamber of Commerce of America, Inc. National Aircraft Standard NAS 10; 1941. Standard Form for National Aircraft Standard Drawings. Gives diagram and notes. Developed by National Aircraft Standard Committee.

U. S. Gov., Federal Specification UU-B-561; 1931. Amendment 1; 1943. Board; Bristol. Covers two types—(I) rough surface and (II) smooth surface; and two grades (A) first and (B) second. Gives requirements for material and workmanship, texture and finish, sizes and thicknesses, and samples; method of inspection and tests; and packaging, packing, and marking.

U. S. Gov., Federal Specification UU-P-216; 1931. Paper; Detail-Drawing. Covers the highest grade, in three types—(I) white detail, (II) buff or cream detail, and (III) manila. Gives requirements for color, stock, weight, bursting strength, folding endurance, formation, and defects; methods of inspection and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Federal Specification UU-P-226; 1932. Amendment 1; 1943. Paper; Drawing. Covers four types (I) white drawing (highest grade), (II) buff

or cream drawing, (III) students' drawing (ordinary grade), and (IV) Whatman type papers (selected best). Gives requirements for finish, quality, stock, weights, mounting, watermarks, samples, and details for each type; methods of inspection and tests; packaging, packing, and marking.

U. S. Gov., U. S. Army, Corps of Engineers. Specification 42.2-52; 1921. Paper; Sketching, 12 1/2 by 13 1/8 in.

*References.*—Standard sizes, methods of testing, *see* 470.2, 470.3; definitions and classification, *see* 470.1.

## 478.33 Safety Writing Paper

U. S. Gov., Gov. Printing Office. Writing Paper—Blue U.S.M.O Safety Writing, 1944. Gives requirements for stock, ash, weight, folding endurance, bursting strength, thickness, writing quality, color, finish, formation, cleanliness, safety properties, and watermark. Developed by Joint Committee of Congress on Printing.

*References.*—Standard sizes, methods of testing, *see* 470.2, 470.3; definitions and classification, *see* 470.1.

## 478.34 Sensitizing Paper

Optical Society of America. American Standards Assn., Z38.1.4-1942. Dimensions of Photographic Paper. For leaders for sensitized photographic paper rolls (where leaders are required). Refers to those commonly used for light protective purposes where the length of the leader has no particular bearing on the operation of an exposing machine. Covers geophysical recording roll leaders, photocopy roll leaders, and limit signals for geophysical recording rolls.

Optical Society of America. American Standards Assn., Z38.1.5-1943. Dimensions of Photographic Papers Inch Width Rolls). Gives requirements for width, length, allowance for splices, and method of measuring.

Optical Society of America. American Standards Assn., Z38.1.6-1943. Dimensions of Photographic Papers (Centimeter Size Sheets and Rolls). Gives requirements for nominal size, tolerance, and method of measuring cut sheets and for nominal width, tolerance, length of rolls, allowance for splices, and method of measuring rolls.

Optical Society of America. American Standards Assn., Z38.1.7-1943 to Z38.1.15-1943, inclusive. Dimensions for Amateur Roll Film, Backing Paper, and Film Spools. Gives diagrams and dimensions for amateur roll film and backing paper—numbers 1 to 9, inclusive.

Optical Society of America. American Standards Assn., Z38.2.3. Proposed American Standard Method of Processing for Sensitometry of Photographic Paper. Relates to the exposing and processing, for sensitometric purposes, of "metallic silver image" developing-out photographic paper intended for projection or contact printing of continuous-tone picture negatives. Covers condition of the sample before testing, exposure, processing, and measurement of density.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R98-43; 1943. Photographic Paper. This recommendation establishes a simplified schedule of cut and roll sizes of photographic paper.

U. S. Gov., Federal Specification UU-P-79b; 1943. Paper; Blueprint (Sensitized and Unsensitized). Covers two types—(I) sensitized and (II) unsensitized, and four grades—(1) 100 percent rag, (2) 50 percent rag, (3) 25 percent rag, and (4) wood fiber. Gives requirements for stock, size, weight, folding endurance, tearing strength, and wet tensile strength; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., Federal Specification UU-P-141a; 1937. Paper; Brownprint (Sensitized, and Sensitized and Transparent). Covers one grade. Gives requirements for stock, weight, sizes, and opacity; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Federal Specification UU-P-416; 1932. Paper; Photographic, Black-Line. Suitable for making black-line prints which are subject to severe and frequent handling. Gives requirements for weight, tensile strength, and chemical properties (raw stock); methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Federal Specification UU-P-418; 1932. Paper; Photographic, Negative. Suitable for making clear, sharp, black negative prints. Gives requirements for weight, wet tensile strength, chemical properties, and stock; methods for sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Federal Specification UU-T-431; 1933. Tissue; Dry-Mounting, Photographic. Covers one grade, consisting of a thermoplastic adhesive coating applied to the front and back surfaces of a paper support. Gives requirements for support, coating, and thickness; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., U. S. Army, Army Air Forces. Specification 19-67; 1944. Paper; Direct-Positive Sensitized (Dry Processing).

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-385; 1944. Paper; Reflex-Copy Photographic.

U. S. Gov., U. S. Army, Signal Corps. Specification 46-3; 1937. Paper; Type PH-79, Oscillograph, Sensitized.

*References.*—Standard sizes, methods of testing, *see* 470.2, 470.3; definitions and classification, *see* 470.1; photographic blotting paper, *see* 471.1; litmus paper, *see* 839.9; blue print cloth, *see* 392.12.

## 478.35 Tracing Paper

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Circular C63; 1917. Specification of the Transparency of Paper and Tracing Cloth. Describes a standard method of specifying the transparency, using principle of contrast ratio; description of apparatus and method of test, directions for making application test.

U. S. Gov., Federal Specification UU-P-561c; 1942. Paper; Tracing. Covers three types—(I) white, rag; (II) white, sulphite; and (III) white, transparentized;

and two classes—(1) smooth surface, (2) slightly grained surface. Gives requirements for weight, fiber composition, folding endurance before accelerated aging, retention of folding strength after aging, and opacity; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

*References.*—Standard sizes, methods of testing, *see* 470.2, 470.3; definitions and classification, *see* 470.1; tracing cloth, *see* 392.12.

## 479. MISCELLANEOUS SPECIFICATIONS FOR PAPER

U. S. Gov., Federal Specification UU-L-56; 1941. Labels; Vial. Covers one type, one grade, and two sizes—large and small. Gives sizes and detail requirements; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

### 479.1 TRANSFER PAPER

U. S. Gov., U. S. Army, Corps of Engineers. Specification 42.2-49; 1921. Paper; Transfer, Nontransparent, 17 by 22 In.

U. S. Gov., U. S. Army, Corps of Engineers. Specification 42.2-53; 1921. Paper; Transfer, Transparent, 17 by 22 In.

*References.*—Definitions and classification, *see* 470.1.

### 479.2 GUMMED PAPER

American Hospital Assn., 55-43. Gummed Kraft Paper Tape. Covers three grades. Based on U. S. Gov. Federal Specifications UU-T-111 for Gummed Kraft Paper Tape and UU-P-31a for General Specifications for Paper.

U. S. Gov., Army Air Forces. Specification 17000D-4; 1944. Tape; Masking, Paper Backed.

U. S. Gov., Army Air Forces. Specification 17010(1); 1941. Paper; Gummed, White.

U. S. Gov., Army Air Forces. Specification 17016(1); 1944. Paper; Adhesive, Waterproof.

U. S. Gov., Army Air Forces. Specification 17019; 1943. Tape; Water Resistant Adhesive (Paper-Plastic).

U. S. Gov., Army-Navy Aeronautical Specification AN-T-12a; 1944. Tape; Adhesive Moisture Resistant.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R114-30; 1930. No. 1 Kraft Paper Sealing Tape. This recommendation establishes a standard schedule of stock varieties of sealing tape, with weight, bursting strength, length per roll, width, and packaging requirements for each variety. Initiated by Gummed Industries Assn.

U. S. Gov., Federal Specification UU-T-111a; 1944. Tape; Paper, Gummed (Kraft). Covers three grades—(A) light weight, for light packages; (B) medium weight, for medium-size packages; and (C) heavy weight, for heavy bulky packages. Gives requirements for stock, workmanship, adhesive, tearing resistance, tensile strength, rolls, weight, bursting strength, width and length; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification UU-T-101b; 1942. Amendment 2; 1944. Tape, Gummed; Mending, Reinforcing, and Securing. Covers five types (water soluble gum and water-insoluble gum). Gives requirements for material and workmanship, construction, tensile strength, adhesion, opacity, blocking, aging quality, and sizes; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., Gov. Printing Office. Miscellaneous Paper—White Gummed, 1944. Gives requirements for stock, weight, curl, color, finish, and adhesive quality. Developed by Joint Committee of Congress on Printing.

U. S. Gov., Joint Army-Navy Specification JAN-A-101; 1944. Adhesive; Water-Resistant, for Sealing Fiberboard Boxes.

U. S. Gov., Joint Army-Navy Specification JAN-P-128; 1944. Packaging and Packing for Overseas Shipment. Tape; Water Resistant, Gummed.

U. S. Gov., Marine Corps Specification. Adopted, 1939. Flypaper; Ribbon.

U. S. Gov., Marine Corps Specification. Adopted, 1942. Tape; Paper, Gummed, 3-In. (Emergency Alternate).

U. S. Gov., Navy Dept. Specification 53T6; 1939. Tape; Masking.

*References.*—Methods of testing, *see* 470.3.

### 479.3 PAPER FOR ABRASIVE PAPERS

*References.*—Standard sizes, methods of testing, *see* 470.2, 470.3.

### 479.4 MISCELLANEOUS PAPERS USED IN PRINTING PROCESS

U. S. Gov., Federal Specification G-L-41; 1940. Labels; Microslide. Covers one type, grade, and class. Gives detail requirements as to weight, gumming, color, size, writing quality, and assembly; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., Gov. Printing Office. Miscellaneous Paper—High-Finish Red Sulphite, 1944. Gives requirements for stock, weight, bursting strength, writing quality, color, and finish. Developed by Joint Committee of Congress on Printing.

U. S. Gov., Gov. Printing Office. Printing Paper—50 Percent Machine-Finish Lithograph, 1944. Gives requirements for stock, acidity, sizing, weight, bursting strength, thickness, surface and finish, color, formation, and cleanliness. Developed by Joint Committee of Congress on Printing.

U. S. Gov., Navy Dept. Specification 53P7c; 1938. Paper; Templet.

*References.*—Standard sizes, methods of testing, *see* 470.2, 470.3; stereotype tissue and molding paper, *see* 476.25; definitions and classification, *see* 470.1.

# 480-489 BOOKS AND OTHER PRINTED MATTER

## 481. BOOKS AND PAMPHLETS

Book Manufacturers Institute, Inc. Official Minimum Manufacturing Standards and Specifications for Textbooks, 1939. Covers class, definitions, paper, margins, general, signatures, end papers, reinforcements, inserts, stitching or sewing, tapes, rounding and backing, casing-in and drying, procedure for testing, binders board, pyroxylin impregnated fabrics, pyroxylin coated fabrics, standard grades of impregnaged fabrics, and standard grades of coated fabrics.

Paper Stationery and Tablet Manufacturers Assn. Simplification and Standardization of Sizes, 1939. Includes standard size recommendations for standard sizes for the principal categories of school paper and school blank books (wire-bound, sewed, glued, or the like) with a few commercial items.

Society of Automotive Engineers. Aeronautical Standard 79; 1942. Catalogs, Spare Parts, for Aircraft Engines. For the purpose of identification, procurement, and stocking of spare parts. Covers two types—(1) final (illustrated) and (2) preliminary (unillustrated). Gives general requirements for both types, symbols, binding, part numbers, and detail requirements for both types.

Society of Automotive Engineers. Aeronautical Standard 80; 1942. Catalogs, Overhaul Tools, for Aircraft Engines. For the purpose of identification, procurement, and stocking of tools. Covers two types—(1) final (illustrated) and (2) preliminary (unillustrated). Gives general requirements for both types, symbols, bindings, and detail requirements for both types.

Society of Automotive Engineers. Aeronautical Standard 164; 1943. Service Manuals for Aircraft Engines. For the purpose of supplying all necessary instructions to accomplish the proper operation and service maintenance of the particular aircraft engines for which the manual is written. Covers scope, general requirements, and detail requirements.

Society of Automotive Engineers. Aeronautical Standard 165; 1943. Overhaul Manuals for Aircraft Engines. For the purpose of supplying all necessary instructions to accomplish the complete overhaul of the aircraft engines for which the manual is written. Covers scope, general requirements, and detail requirements.

U. S. Gov., Army-Navy Aeronautical Specification AN-B-9a; 1944. Bulletins; Contractor Service, for Airplanes, Engines, and Accessories.

U. S. Gov., Army-Navy Aeronautical Specification AN-C-84-1; 1944. Catalogs; Tools.

U. S. Gov., Army-Navy Aeronautical Specification AN-C-85-1; 1944. Catalogs; Parts, for Airplanes, Engines, and Accessories.

U. S. Gov., Army-Navy Aeronautical Specification AN-C-100a; 1944. Catalogs; Radio and Radar Equipment Spare Parts.

U. S. Gov., Army-Navy Aeronautical Specification AN-H-1a-1; 1943. Handbooks; Structural Repair (for Airplanes).

U. S. Gov., Army-Navy Aeronautical Specification AN-H-7a; 1944. Handbooks and Catalogs; Aircraft, Engines and Accessories (General Specification for Preparation of).

U. S. Gov., Army-Navy Aeronautical Specification AN-H-8a-1; 1945. Handbooks; Pilots Flight Operating Instruction.

U. S. Gov., Army-Navy Aeronautical Specification AN-H-9-1; 1943. Handbooks; Service Instruction (for Aircraft Engines).

U. S. Gov., Army-Navy Aeronautical Specification AN-H-10; 1942. Handbooks; Overhaul Instruction (for Aircraft Engines)

U. S. Gov., Army-Navy Aeronautical Specification AN-H-11; 1942. Handbooks; Operation and Service Instruction (for Aircraft Accessories, Aircraft Engine Accessories and Related Equipment).

U. S. Gov., Army-Navy Aeronautical Specification AN-H-12; 1942. Handbooks; Overhaul Instruction (for Aircraft Accessories, Aircraft Engine Accessories and Related Equipment).

U. S. Gov., Army-Navy Aeronautical Specification AN-H-13-1; 1943. Handbooks; Erection and Maintenance Instructions (for Airplanes).

U. S. Gov., Army-Navy Aeronautical Specification AN-H-19a; 1944. Handbooks; Radio and Radar Equipment Operating.

U. S. Gov., Army-Navy Aeronautical Specification AN-H-20a; 1944. Handbooks; Radio and Radar Equipment Maintenance.

U. S. Gov., Army-Navy Aeronautical Specification AN-H-21a; 1944. Handbooks and Catalogs; Radio and Radar Equipment, (General Specification for Printing of).

U. S. Gov., Dept. of Agriculture, Forest Service. Specifications for Book, Cook, Fire-Camp.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R84-28; 1928. Composition Books. This recommendation establishes a schedule of standard stock varieties covering two grades of ground wood paper, four grades of writing paper with writing-with-ink test, four grades or weights of cover stock, number of leaves for crown size and demy size.

U. S. Gov., Federal Specification G-D-331; 1942. Dictionaries; English. Covers three types—(I) office in two classes (A) 45,000 vocabulary terms and (B) 70,000 vocabulary terms; (II) general use, 100,000 vocabulary terms; and (III) unabridged in two classes (A) 400,000 vocabulary terms and (B) 550,000 vocabulary terms. Gives requirements for material and workmanship, method of indicating pronunciation, etymologies, type, illustrations, definitions, abbreviations, foreigh work and phrases, proper names, thumb index, and general features; detail requirements for vocabulary and binding of each type and class; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., Joint Army-Navy Specification, JAN-B-42; 1944. Book; Song, and Service (for Army and Navy Chaplains) (Field Service and Sea Duty).

U. S. Gov., Joint Army-Navy Specification, JAN-H-37; 1944. Hymnals.

U. S. Gov., Navy Dept. Specification 18B7; 1944. Books; Instruction (Instruments, Electrical, for Navigational Purposes) (Shipboard Use).

U. S. Gov., U. S. Army, Medical Dept. Specification 19-11; 1939. Book; Prescription Filing.

U. S. Gov., U. S. Army, Medical Dept. Specification 19-55; 1939. Book; Note, Manifolding, Binder.

U. S. Gov., U. S. Army, Medical Dept. Specification 19-61; 1939. Book; Note, Manifolding, Filler.

U. S. Gov., U. S. Army, Medical Dept. Specification 19-63; 1940. Book; Blank, Ledger.

*References.*—Standard paper sizes, methods of testing, *see* 470.2, 470.3.

## 482. MAPS, CHARTS, AND MUSIC

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering, 1943. Specifications for Preparation of Maps and Profiles. Covers preparation of certain maps and profiles of the property and available methods of reproducing copies of the same. Gives details of maps and profiles required showing charts.

American Society of Mechanical Engineers. American Standards Assn., Z 15.1-1932. Engineering and Scientific Charts for Lantern Slides. A valuable set of rules for drawing the original charts and for their reproduction as lantern slides. Standard also specifies types and sizes of lettering, different line widths, and sizes of symbols commonly used in graphs. An appendix contains a table of commercial lettering templates and lettering pens with which charts may be easily reproduced in the manner recommended.

U. S. Gov., Army-Navy Aeronautical Specification AN-C-102; 1943. Charts; Maintenance Instruction

U. S. Gov., Dept. of Agriculture, Forest Service. Specifications for Alinement Charts for Duff Moisture.

*References.*—Chart and map paper, *see* 478.31; navigational and topographical symbols for map making, *see* 910.

## 483. LITHOGRAPHIC PRINTS

## 484. BOOKLETS

## 485. DRAWINGS AND BLUEPRINTS

U. S. Gov., Army-Navy Aeronautical Specification AN-D-11-1; 1944. Drawings and Data Lists; Reproducible and Other Copies of, for Aircraft, Engines, Accessories, Auxiliary Equipment and Special Tools.

U. S. Gov., U. S. Army, Army Air Forces. Specification 98-40033-H; 1944. Drawings and Drawing List (Originals).

U. S. Gov., U. S. Army, Army Air Forces. Specification 98-40100B; 1943. Drawing and Data Lists, Preparation of, for Aircraft.

U. S. Gov., U. S. Army, Army Air Forces. Specification 98-40103B; 1943. Drawing and Data Lists, Preparation of, for Aircraft Engines, Aircraft Accessories, and Other Auxiliary Equipment.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-1588; 1944. Manufacturer's Drawings (for Signal Corps Equipment).

## 489. MISCELLANEOUS PRINTED MATTER

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering, 1943. Bridge and Building Records (Numbering of Buildings). Gives details and shows prints of various types of forms.

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering, 1943. Cost-Keeping Methods, Statistical Records, and Forms for Analyzing Expenditures for Assistance in Controlling Expenditures. Gives details and shows prints of various types of forms.

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering, 1944. Rail Record Forms. The following forms are considered essential and are recommended for keeping records of rail purchased and in track. Gives forms for reporting results of mill inspection and shipments, for reporting and recording failures in track, for reporting heat numbers of rail in track, for reporting and recording measurements of rail batter, and miscellaneous.

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railroad Engineering, April 1943. Railway and Structures—Records and Reports. Gives details and shows prints of various types of forms.

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering, 1943. Specifications for the Design, Arrangement, and Printing of Forms. For general records and reports. Gives details and shows prints of various types of forms.

American Standards Assn., Z39.1-1943. Reference Data and Arrangement of Periodicals. Includes data for identification, contents, pagination, illustrations, errata, bibliographic information, title page, table of contents, index, policy changes and mergers, supplements, and society and institutional publications.

National Assn. of Purchasing Agents, Inc. Purchase Contract Clauses, 1934. Reference manual of typical clauses for purchase contracts.

National Assn. of Purchasing Agents, Inc. Purchase Order Forms, 1932. A survey and analysis of forms most commonly used.

National Assn. of Purchasing Agents, Inc. Purchase Requisition Forms, 1937. A survey and analysis of forms most commonly used.

Tag Manufacturers Institute. Manual of Standard Specifications. Pin Ticket Stocks and Styles of Pin Tickets, 1940. Gives TMI designation, composition, weight, thickness, strength, tolerances, and various styles of card pin tickets and folding pin tickets.

Tag Manufacturers Institute. Manual of Standard Specifications, 1938. Presents standard specifications of essential tag materials. Gives suggested standard procedure for testing of tag stocks, including sampling, conditioning, and physical tests; and conditions under which specifications are standardized including specifications for tag stocks (paper stocks and cloth stocks) and specifications for strings.

Tag Manufacturers Institute. Manual of Standard Specifications. Standard Sizes of Tags, 1939. Gives standard sizes, dimensions, and areas of shipping tags.

Tag Manufacturers Institute. Manual of Standard Specifications. Stock Pin Tickets, 1938. Gives TMJ designation, dimensions, ruling, diameter of wire, and length of pins, for card tickets and folding tickets.

Tag Manufacturers Institute. Manual of Standard Specifications. TMI Designations and Illustrations, 1939. Gives styles of card tickets and illustrations of various card pin tickets; styles and illustrations of detachable, nondetachable, and single pin folding tickets; and illustration of kimflex tickets.

Tag Manufacturers Institute. Sizes of Marking Tags and Jewelry Tags, 1939. Gives sizes and designs of marking tags, jewelry tags, and metal rim tags.

U. S. Gov., Army-Navy Aeronautical Specification AN-M-9-1; 1944. Maintenance Parts Breakdown; Airplane.

U. S. Gov., Army-Navy Aeronautical Specification AN-M-13; 1943. Marking and Tagging; Airframe, Engine, and Accessory Maintenance Parts.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R34-24; 1924. Warehouse Forms. Simplified practice recommended and accepted by industry establishing standard forms, their dimensions, the arrangement and content of printed matter, for rate quotation form; over, short, and damage report; warehouse receipts, notice of order filled, bill of lading, account of stock, household goods form, packing ticket, etc. Sponsored by American Warehousemen's Assn.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R37-38; 1938. Commercial Forms (Invoice, Purchase Order, and Inquiry). This recommendation establishes standard dimensions, arrangement and content of printed matter appearing on form, for simplified invoice form, inquiry form, and purchase order form. Sponsored by the National Assn. of Purchasing Agents.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R50-26; 1926. Bank Checks, Notes, Drafts, and Similar Instruments. This recommendation establishes standard sizes for bank checks, bank drafts, notes, trade acceptances, counter checks, customers' checks, pocket checks, deposit slips, with uniform arrangement of subject-matter on checks. Sponsored by American Bankers Assn.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R93-39; 1939. Paper Shipping Tags. This recommendation establishes standard sizes of paper shipping tags made from manila stocks, kraft and dyed stocks, coated stocks, and white-lined stocks. Requirements are also given relative to weight in pounds, thickness in inches, and tare testing. Initiated by Tag Manufacturers Institute.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R113-30; 1930. Restaurant Guest Checks. This recommendation establishes a standard schedule of guest checks made of cardboard and paper, and covering weights and thicknesses, widths, numbering, and printing and tinting. Initiated by the American Hotel Assn. of the United States and Canada, and National Restaurant Assn.

U. S. Gov., Federal Specification G-L-51; 1941. Labels; Poison. Covers one type, one grade, and two sizes—large and small. Gives requirements for material, workmanship, weight, gumming, color, letters, dimensions, and assembly; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification GG-C-101a; 1939. Calendar Pads and Stands. Covers three types—(I) ordinary folding, (II) bound daily memorandum, and (III) executive large size, folding. Gives requirements for material, workmanship, stand, rubber shoes, pad; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment. Emergency Alternate Federal Specification E-GG-C-101a; 1943, changes requirements for material, binding wires, sample, and specifies protective shoes in lieu of rubber shoes.

U. S. Gov., Federal Specification UU-T-81b; 1937. Amendment 3; 1944. Tags; Shipping, and Stock. Covers three types—(A) cloth, (B) paper, and (C) stock, circular, metal-bound. Gives requirements for material and workmanship, curl, surfaces, stock, average thickness, bursting strength, stringing, design, sizes, and color; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., Interstate Commerce Commission. Regulations for Transportation of Explosives and Other Dangerous Articles. Placards on Cars. Includes requirements for Explosives, Dangerous, Poison Gas, Dangerous-Empty, Fireworks, and Tear Gas placards, commodity name on loads, and application. Published by American Trucking Assn., Inc., Tariff Bureau, and Assn. American Railroads, Bureau of Explosives.

U. S. Gov., Navy Dept. Specification 35D1a; 1943. Drawings; Instrument, (Electrical) (for Navigational Purposes).

## 490-499 MISCELLANEOUS PAPER PRODUCTS

### 491. CONTAINERS

Liquid Tight Paper Container Assn. Paper Liquid Tight Containers, 1942. For 1/4 pint, 1/2 pint, pint, quart, 2 quart, and 1 gallon containers. Gives description of container and requirements for paper, thickness of paper, sizes or capacities of containers, and diameters.

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-374; 1944. Preserver; Paper Negative (Photographic).

*References.*—Paper bags and paper linings for containers, *see* 957.2; fiber barrels, *see* 951.11; fiber drums, *see* 951.31; fiber firkins, *see* 951.45; fiber pails, *see* 951.63; fiber kits, *see* 951.66; fiber tubs, *see* 951.73; fiberboard baskets, *see* 952.14; paper and fiberboard boxes, *see* 953.2; cartons, *see*

954.1; paper and fiber cases, *see* 954.22; paper wrappings and coverings, *see* 959.6; paper cups, *see* 954.5.

## 492. ELECTRICAL INSULATING PAPER

## 493. PAPER PULLEYS

## 494. ENVELOPES AND FILE FOLDERS

American Hospital Assn., 43-31. Paper Negative Preservers (Photographic). Covers one grade in thin and medium weights. Based on U. S. Gov. Federal Specification G-P-641 for Paper Negative Preservers (Photographic).

American Hospital Assn., 49-16. Pressboard File Folders. Covers two types. Based on U. S. Gov. Federal Specifications UU-F-581b for Pressboard File Folders, UU-P-31a for General Specifications for Paper, and CCC-T-191a for General Specifications, Test Methods, Textiles.

American Hospital Assn., 49-19. Vertical File (Calendered) Folders. Covers three grades. Based on U. S. Gov. Federal Specifications UU-F-571b for Vertical File (Calendered) Folders and UU-P-31a for General Specifications for Paper.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R187-42; 1942. Food Trays, or Dishes (Waxed Paper, Molded Wood Pulp, and Wood Types). Covers food trays, used as containers by grocery and delicatessen stores, meat markets, etc., and was approved at a general conference of members of the food-tray industry with a view to standardizing the weights for the various sizes of trays and to conserve materials.

U. S. Gov., Dept. of Commerce, National Bureau of Standards Technologic Paper, T343; 1927. Study of the Window of Window Envelopes for the Purpose of Developing Standard Specifications. Includes suggested specifications on permissible opacity, gloss, and impregnating material and required bursting strength for 1-piece envelopes and on opacity, gloss, bursting strength, and adhesion of windows in 2-piece envelopes. U. S. postal regulations relating to window envelopes as regards location of window, allowance of other printed matter on envelope, return address, etc.

U. S. Gov., Federal Specification G-P-641; 1931. Amendment 1; 1937. Preservers; Negative, Kraft Paper (Photographic). Covers one grade in thin and medium weights. Gives requirements for quality, sizes, manufacture, stock, weight, folding endurance, bursting strength, style, finish, and sizes; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Federal Specification UU-F-571c; 1944. Folders; File (Calendered), Vertical. Covers three types—(1) 100 percent chemical pulp, extra durable; (2) 100 percent chemical pulp; and (3) not less than 70 percent chemical pulp. Gives requirements for construction, tabs, writing quality, color, sizes, expansion, bid samples, stock, acidity, weight, average thickness, and average tearing strength; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification UU-F-581c; 1944. Folders; File, Pressboard. Gives types and weights, colors, sizes, material, texture and finish, grain, corners, bid sample, and detail requirements; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Navy Dept. Specification 53F4d; 1942. Folders; Wallet-Type.

U. S. Gov., U. S. Army, Medical Dept. Specification 19-56; 1933. Preserver; Negative, Open-End Envelope for Filing X-Ray Negatives.

*References.*—Methods of testing paper, *see* 470.3; paper for envelopes, *see* 478.19.

## 495. FIBER CONDUIT

*References.*—Fiber conduit for electrical wiring, *see* 715.11.

## 496. TUBING

*References.*—Cotton yarn, *see* 302.10.

## 497. PAPER DISHES

### 497.1 PAPER CUPS

American Hospital Assn., 55-16. Paper Cups. Covers three types—(A) flat bottom (one-piece), (B) flat bottom (two-piece), and (C) conical or wedge-shape. Gives requirements for material, capacity, weight, thickness, bursting strength, leakage, and construction.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R132-36; 1936. Ice Cream Cups and Cup Caps. This recommendation establishes a schedule of sizes of ice cream cups and cup caps. Sponsored by International Assn. of Ice Cream Manufacturers.

U. S. Gov., Federal Specification UU-C-806b; 1944. Cups; Paper. Covers four types—(I) flat bottom, one piece (class A, paraffined and class B, nonparaffined); (II) flat bottom, two piece (class A, paraffined and class B, nonparaffined); (III) conical or wedge-shaped; and (IV) flat (not nested) rectangular or tapered. Gives requirements for material, workmanship, dispensers, rigidity, capacity, weight, thickness, bursting strength, leakage, and construction; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Navy Dept. Specification 53C12; 1945. Cups; Paper, Ice-Cream, With Cover-Disks, and Cover-Dispensing-Carton.

U. S. Gov., U. S. Army, Medical Dept. Specification 19-58; 1934. Cup; Paper, Collapsible.

## 499. PAPER PRODUCTS NOT ELSEWHERE CLASSIFIED

American Chemical Society, Specifications for Analytical Reagents, 1941. Litmus Paper. Gives requirements for ash, rosin acids, etc., sensitiveness, and tests.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 19-33A; 1937. Paper; Target.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 78-4; 1932. Nest; Collar.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 78-6; 1932. Board; Shirt.

# 500-599 NONMETALLIC MINERALS

## 500-509 COAL, PETROLEUM, ASPHALT, AND MINERAL WAX

### 500. GENERAL ITEMS

American Petroleum Institute, Div. of Production. Code 27; 1942. Standard Procedure for Determining Permeability of Porous Media. Gives an approved laboratory procedure for permeability measurements, including uniform notation and definition of units; a bibliography is included.

American Petroleum Institute, Div. of Production. Code 29; 1942. Recommended Practice on Standard Field Procedure for Testing Drilling Fluids (Tentative). Covers determination of density, viscosity, sand content, hydrogen-ion content, and shear strength.

American Society of Mechanical Engineers. Power Test Codes, Auxiliary Section. Part 9—Heat of Combustion, 1943. Treats of calorimetric apparatus for solid, liquid, and gaseous fuels.

American Society of Mechanical Engineers. Power Test Codes, Auxiliary Section. Part 20—Smoke Density Determinations, 1936. Describes methods of measurements, instruments used, and smoke scale. Includes samples of standard smoke charts.

American Society for Testing Materials, C 108-44 T; 1944. Tentative Symbols for Heat Transmission. Gives special practices relating to heat flow terms including terms ending in "ivity," "ance," and "ion"; transmission; and conduction. Also heat flow symbols including area, density, specific heat, temperature, time, weight, flow rate, thermal conductivity, thermal resistivity, thermal resistance, thermal conductance, heat transfer, radiant flux, and thermal diffusivity.

American Society for Testing Materials, D 407-44; 1944. Definitions of the Terms Gross Calorific Value and Net Calorific Value of Fuels. Defines values for solid and liquid fuels of low volatility.

American Society for Testing Materials, E 4-36; 1936. American Assn. of State Highway Officials, T 67-42. Methods of Verification of Testing Machines. Includes definitions; methods of verifying machines that measure load by standard weights, by proving levers, by elastic calibration device, and by comparison method; test specimen, procedure, permissible variations, interval between verifications and reports.

American Society for Testing Materials, E 6-36; 1936. Definitions of Terms Relating to Methods of Testing. Covers stress, strain, elastic limit, field strength, tensile strength, compressive strength, and modulus of elasticity.

American Society for Testing Materials, E 12-27; 1927. American Assn. of State Highway Officials, M 132-42. Definitions of Terms Relating to Specific Gravity. Defines absolute specific gravity of solids and liquids, specific gravity, apparent specific gravity of solids, and bulk specific gravity of solids.

American Society for Testing Materials, E 13-42; 1942. Definition of the Term Screen (Sieve). Includes plate, or sheet, or woven cloth type.

American Society for Testing Materials, E 20-33 T; 1933. Tentative Method of Test for Particle Size Distribution of Subsieve Size Particulate Substances. Covers the range of sizes between the 74-micron (No. 200) sieve and 0.2-micron. The method is applicable to homogeneous materials. Definitions, rough separation of sample into size groups, preparation of mount, procedure, measurement of diameter, scale limits for measurement, and expression of results.

American Society for Testing Materials, E 24-42; 1942. Definitions of Terms Relating to Rheological Properties of Matter. Defines consistency, plasticity, elasticity, liquid, simple liquid, plastic and elastic solids, etc.

American Society for Testing Materials, E 28-42 T; 1942. Tentative Method of Test for Softening Point (Ball and Shouldered Ring Apparatus). Applicable to asphalts, tars, pitches, rosins, and most resins—both natural and synthetic. Apparatus, preparation of sample, procedure, softening point, precautions, and reproducibility of results.

Calcium Chloride Assn. Bulletin 37. Dustproofing and Freezeproofing Coal With Calcium Chloride. Covers general mechanical advices on calcium chloride treatment, calcium chloride treating solution, dry application, spray application, manual application, mechanical application, and additional facts.

National Fire Protection Assn. National Fire Codes for Flammable Liquids, Gases, Chemicals, and Explosives, 1943. Fire-Hazard Properties of Flammable Liquids, Gases, and Volatile Solids. Gives tables showing flash point, ignition temperature, explosive limits, specific gravity, vapor density, boiling point, Underwriters' Laboratories classification, and extinguishing agents.

*References.*—Other specifications for sieves, *see* 645.31.

### 501. COAL AND COKE

#### 501.0 GENERAL ITEMS

American Boiler Manufacturers Assn. and Affiliated Industries. Grindability of Coals. Tabulation of data from various sources as to properties of coals tested in accordance with A.S.T.M. tentative method D-409-37T covering anthracite, bituminous, and subbituminous coals of U.S. and Canada.

American Society of Mechanical Engineers. Power Test Code. Solid Fuels, 1931. Recommends standard methods for a determination of those ascertainable chemical and physical properties which serve as indicators of the value of extensively used solid fuels when burned in boiler, industrial and domestic furnaces. With auxiliary sections covering general considerations, temperature measurement, heat of combustion, flue and exhaust gas analyses, and measurement of time.

American Society for Testing Materials, D 21-40; 1940. American Standards Assn., K46-1940. Method of

Sampling Coal for Analysis. For necessity of securing representative sample, time of sampling, size increments, collection of gross sample, quantity represented, crushing, minimum size, hand preparation, mechanical preparation, and for separate collection of moisture sample or for use of standard sample for moisture determination.

American Society for Testing Materials, D 121-30; 1930. Definitions of Terms Relating to Coal and Coke. Defines proximate analysis, ultimate analysis, moisture, ash, volatile matter, fixed carbon, beehive coke, byproduct coke, coke breeze, and dry coke.

American Society for Testing Materials, D 197-30; 1930. Method of Sampling and Fineness Test of Powdered Coal. Requirements for sieve analysis using standard micron square hole sieves, sampling in multiple and unit systems, preparation of sample, fineness test, and procedure for determination by hand or rapid routine machine sieving.

American Society for Testing Materials, D 271-44; 1944. American Standards Assn., K 18.1-1944. Methods of Laboratory Sampling and Analysis of Coal and Coke. Requirements for preparation, apparatus, coal appearing wet or dry, determination of moisture, ash, volatile matter, fixed carbon, sulfur, phosphorus in ash, and fusibility of ash; and for ultimate analysis for carbon and hydrogen, nitrogen, and oxygen; calorific value; methods of calculation, reproducibility of results, and deterioration of coal samples.

American Society for Testing Materials, D 388-38; 1938. American Standards Assn., M20.1-1938. Classification of Coals by Rank. Based on degree of metamorphism, or progressive alteration, in the natural series from lignite to anthracite, using fixed carbon and calorific value calculated to the mineral-matter-free basis. Classification by rank, weathering index, agglomerating index, symbols for expressing classification, sampling, methods of analysis and tests using A.S.T.M. method D-271, and formulas for calculation to mineral-matter-free basis. Includes appendix on published analyses.

American Society for Testing Materials, D 389-37; 1937. American Standards Assn., M20.2-1937. Classification of Coals by Grade. Covers classification by quality, as determined by size designation, calorific value, ash, ash-softening temperature, and sulfur. Includes symbols for grading coal, size designation using A.S.T.M. method D-431, sampling method D-21, and analysis method D-271.

American Society for Testing Materials, D 408-37T; 1937. Tentative Method of Test for Grindability of Coal by the Ball-Mill Method. Energy necessary to pulverize coal in a ball mill and number of revolutions required to grind so that 80 percent of the sample passes a 74-micron sieve. Describes special small ball mill for test, preparation of sample, method of procedure, and rapid control modification, with table of conversion of values to the Hardgrove grindability index.

American Society for Testing Materials, D 409-37T; 1937. Tentative Method of Test for Grindability of Coal by the Hardgrove Machine Method. Determining ease of pulverizing in comparison with a coal chosen as 100 grindability, based on Rittinger's Law. Gives design of Hardgrove machine, requirements for standard sieves, preparation of sample, test procedure, and computation of the Hardgrove grindability index.

American Society for Testing Materials, D 410-38; 1938. Method of Test for Screen Analysis of Coal. For all coal except anthracite, powdered coal used in boiler plants, and crushed coal as charged into coke ovens. Requirements for standard screens and wire cloth sieves with square openings, time of sampling; collection of, weight of, and reduction of gross sample; drying sample, screen analysis, and report.

American Society for Testing Materials, D431-44; 1944. American Standards Assn., M20.3-1944. Method of Designating the Size of Coal From Its Screen Analysis. Covers natural continuous ranges of sizes as produced by mining, handling, crushing, screening, etc., but does not cover standardization of screens used in the commercial preparation of coal. Sampling using A.S.T.M. method D410, 8-in. to 3/8-in. round-hole screens, No.4 to No.200 wire cloth sieves with square openings, size designations, and condensed size designation.

American Society for Testing Materials, D 440-37T; 1937. Tentative Method of Drop Shatter Test for Coal. For determining the relative size stability and friability of lump coal, indicating ability of coal to withstand breakage in handling at the mine and during transit to the consumer. Method for testing 2 to 3-in. standard single size, and a supplementary test for other single sizes, and for mixed sizes of the same coal. Construction of shatter test machine, screens, routine of procedure, and report of screen analysis before and after testing.

American Society for Testing Materials, D 441-37T; 1937. Tentative Method of Tumbler Test for Coal. For relative friability of a particular size of lump coal, as a measure of liability to breakage in handling at the mine or subsequently. Describes porcelain jar tumbler and iron jar tumbler, sample preparation, test procedure, and sieve analysis.

American Society for Testing Materials, D 492-43T; 1943. Tentative Methods of Sampling Coals Classed According to Ash Content. Covers principles of sampling and precautions, commercial sampling procedure, special purpose sampling procedure, increments, reduction of gross samples, sampling for determination of total moisture, procedure for standard and for special moisture sample, handling of moisture samples in laboratory, and calculation.

American Society for Testing Materials, D 547-41; 1941. Method of Test for Index of Dustiness of Coal and Coke. For determination of a relative index of dust produced when handling. Apparatus, sample, method and preparation of sample, drying and testing procedures, and expression of index values.

American Society for Testing Materials, D 720-43T; 1943. Tentative Method of Test for Free-Swelling Index of Coal. A small-scale laboratory test and the results may be used as an indication of the coking characteristic of the coal when burned as a fuel. Gives requirements for apparatus, preparation of sample, calibration of burner, procedure, and report.

Associated Factory Mutual Fire Insurance Companies. Factory Mutual Bulletin of Loss Prevention, 12.80; 1942. Safe Storage of Bituminous Coal. Gives suggestions on the storage of bituminous coal including

conditions which influence spontaneous heating, buying coal by specifications, method of storage, roll-packing coal piles, checking temperatures, and handling coal fires.

National Assn. of Purchasing Agents, Inc. Factors Recommended for Consideration in the Selection of Coal. Includes charts as a guide both to the consumer who wishes to know what coal characteristics should be considered in order to make the proper selection of coal for his particular needs, and to the coal producer who wishes to reach those markets for which his products are best suited. It is not claimed that the ratings on the charts are accurate in every detail, but they do represent in each instance the average present opinion of a number of fuel technologists. Space has not permitted the inclusion of every coal-selection factor. For example, ultimate analysis has not been included although it has had successful use for special coal-selection purposes and is also used in heat-balance calculations. Nor has it been possible to show the influence of the factors upon each other.

Technical Assn. of the Pulp and Paper Industry. Sampling and Analysis of Coal, Standard T 605 m-44; 1944. Covers sampling, preparation of laboratory sample, method of laboratory sampling, moisture, ash, volatile matter, fixed carbon, calorimetric determination (B.T.U.), and tolerances. This is essentially the same as A.S.T.M. standards D 21-40 and D 271-43.

## 501.1 ANTHRACITE COAL

American Society for Testing Materials, D 310-34; 1934. Method of Test for Size of Anthracite. Covers determination of percentage of undersize or oversize in any commercial size, dimensions and design of screens, screen openings, collection and preparation of sample using A.S.T.M. method D 21, and procedure.

Anthracite Institute. Standard Anthracite Specifications, 1944. Lists standard mesh through and over, tolerances, maximum percentage of slate, bone, and ash for broken; egg, stove, nut, pea, buck, rice, barley, No.4, and No.5 sizes of anthracite (hard coal).

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, Volume 2; 1944. Coal; Anthracite. Covers definition, constants, chemical composition, derivation, grades, marketing, uses, and substitutes.

*References.*—Definitions, methods of sampling and and of testing, *see* 500., 501.0.

## 501.2 BITUMINOUS COAL

American Society for Testing Materials, D 166-24; 1924. Gas and Coking Coals. Gives limits within which gas and coking coals usually fall; method of sampling, analysis, mine moisture limits, fusion point of ash, volatile matter, ash, sulfur, quality of coke, and for coke, phosphorus, and shrinkage.

American Society for Testing Materials, D 291-29; 1929. American Standards Assn., K20.1-1936. Method of Test for Cubic Foot Weight of Crushed Bituminous Coal. For coarsely crushed coal, less than 1 1/2 in. in size, such as charged into coke ovens, but not applicable to powdered coal as used in boiler plants. Requirements for measuring box, sampling using A.S.T.M. method D-21, and test procedure.

American Society for Testing Materials, D 311-30; 1930. Method of Test for Sieve Analysis of Crushed Bituminous Coal. For coarsely crushed bituminous coal, less than 1 1/2 in. in size, such as charged into coke ovens; not applicable to testing of powdered coal as used in boiler plants. Requirements as to ratio of sieve openings for successive sieves, sampling according to A.S.T.M. method D 21, and for test procedure.

American Society for Testing Materials, D493-39; 1939. American Standards Assn., M20.4-1939. Definitions for Commercial Varieties of Bituminous and Sub-Bituminous Coals. Defines common banded coal, splint coal, cannel coal, and boghead coal.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, Volume 2; 1944. Coal; Bituminous. Covers definition, derivation, uses, and grades.

*References.*—Definitions, methods of sampling and of testing, *see* 500., 501.0.

## 501.3 SEMIBITUMINOUS COAL

## 501.4 COAL-TAR PRODUCTS

*References.*—Coal-tar chemical products, *see* 800-809.

## 501.5 COKE

American Society for Testing Materials, D 141-23; 1923. American Standards Assn., K20.4-1936. Method of Drop Shatter Test for Coke. For resistance to breakage in handling and in transit; requirements as to dimensions and design of shatter test machine, sampling of beehive and byproduct coke at source and at delivery, and test procedure.

American Society for Testing Materials, D 167-24; 1924. American Standards Assn., K20.5-1936. Method of Test for Volume of Cell Space of Lump Coke. Formula for volume of cell space, description of apparatus required, unit for sampling, sampling at source and at delivery, and outline of procedure for apparent specific gravity and true specific gravity.

American Society for Testing Materials, D 292-29; 1929. American Standards Assn., K20.2-1936. Method of Test for Cubic Foot Weight of Coke. For coke passing 5-in. square-mesh sieve; requirements for measuring box, sampling, and test procedure.

American Society for Testing Materials, D 293-29; 1929. Method of Test for Sieve Analysis of Coke. Covers requirements for range of sizes of standard square-hole sieves, method of sampling, procedure for test, and average of analyses.

American Society for Testing Materials, D 294-29; 1929. American Standards Assn., K20.3-1936. Method of Tumbler Test for Coke. For measure of resistance to degradation by abrasion; description of tumbler machine, sieve sizes, preparation of sample, and requirements for test.

American Society for Testing Materials, D 346-35; 1935. Method of Sampling Coke for Analysis. Covers procedures for collection and preparation of samples for laboratory analysis; requirements for sample for all determinations except total moisture, place of sampling, size of increments, minimum weight of gross sample, crushing sample, reduction of sample, and sample for determining total moisture.

U. S. Gov., Federal Specification Q-C-571a; 1935. Coke; Foundry. Covers three grades—(A) cupola; (B) general foundry, large, and (C) general foundry, small. Gives requirements for chemical analysis, size, foundry, and

shatter test; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Navy Dept. Specification 7C2b; 1942. Coke; Foundry and Shop.

*References.*—Definitions, methods of sampling and of testing, *see* 500., 501.0.

### 501.6 CHARCOAL

American Institute of Homoeopathy. Homoeopathic Pharmacopoeia of U.S., 1941. Animal Charcoal and Vegetable Charcoal. Natural order, synonyms, description, habitat, history, parts used, and preparation for tincture, dilutions, and medications for use in homoeopathic medicines.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Purified Animal Charcoal. Gives description, solubility, loss on drying, reaction, impurities soluble in hydrochloric acid, absorptive power, storage, and average dose.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, Volume 2; 1944. Charcoal; Wood. Covers definition, constants, solubility, derivation, uses, grades, containers, and substitutes.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Activated Charcoal. Description, volatile substances, ash, reaction, chloride, sulfate, sulfide, cyanogen compounds, acid-soluble substances, heavy metals, uncarbonized constituents, absorptive power, and storage.

U. S. Gov., Federal Specification LLL-C-251; 1933. Charcoal. Covers one grade in lump and briquet form by charring hard or soft wood. Gives requirements for contamination, size, ash, moisture, and volatile matter; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2692; 1939. Charcoal; Block.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 50-11-42B; 1938. Charcoal; for Black Powder.

### 501.9 MISCELLANEOUS PRODUCTS

U. S. Gov., Navy Dept. Specification 51C14; 1925. Compounds; Carburizing.

## 502. PETROLEUM

### 502.0 GENERAL ITEMS

American Leather Chemists Assn. Methods of Sampling and Analysis. Cloud and Pour Points of Oil, 1938. The cloud point of a petroleum oil is the temperature at which paraffin wax or other solid substances begin to crystallize out or separate from solution when the oil is chilled under definite prescribed conditions. The pour point of a petroleum oil is the lowest temperature at which the oil will pour or flow when it is chilled without disturbance under definite prescribed conditions. Gives requirements for apparatus, procedure, and special procedure for black oils and cylinder stocks.

American Petroleum Institute, Div. of Production. Code. 25; 1940, and Supplement 3; 1943. Code for Measuring, Sampling, and Testing Crude Oil. Covers tank measurement and calibration, gaging, sampling, and testing crude oil—general; tank measurement and calibration, gaging, sampling, and testing crude oil—marine; and accounting forms and methods.

American Society for Testing Materials, D 88-44; 1944. American Petroleum Institute Standard, 518-44. American Assn. of State Highway Officials, T72-44. American Standards Assn., Z11.2-1944. Method of Test for Viscosity by Means of the Saybolt Viscosimeter. Covers use of Saybolt Universal viscosimeter for general use, and of Saybolt Furol viscosimeter for fuel and road oils, dimensions and design of apparatus, temperatures of tests, and outline of procedure.

American Society for Testing Materials, D 287-39; 1939. American Petroleum Institute Standard, 526-39. American Standards Assn., Z11.31-1939. Method of Test for Gravity of Petroleum and Petroleum Products by Means of the Hydrometer. Covers the determination of the specific gravity and the A.P.I. gravity of crude petroleum and petroleum products normally handled as liquids. The determination of the gravity of mixtures of petroleum products with other substances is treated as a special case, owing to the fact that the coefficients of expansion of such mixtures may not be the same as those of petroleum or its products. The determination of the specific gravity of road oils, road tars, asphalt cements, and soft tar pitches is covered by the Standard Method of Test D 70 of the American Society for Testing Materials, and the testing of these products is, therefore, specifically excluded from the scope of this method.

American Society for Testing Materials, D 288-39; 1939. American Petroleum Institute Standard, 535-39. American Standards Assn., Z11.28-1939. Definitions of Terms Relating to Petroleum. Defines benzine, crude petroleum, crude shale oil, end point, engine distillate, fuel oil, gasoline, kerosene, oil-shale, petroleum grease, petroleum naphtha, petroleum spirits, pitch, tar, topped crude petroleum, tops, and weathered crude petroleum.

American Society for Testing Materials, D 446-39; 1939. American Petroleum Institute Standard, 534-39. American Standards Assn., Z11.46-1941. Method for Conversion of Kinematic Viscosity to Saybolt Universal Viscosity. Includes table of values and equation for converting kinematic viscosity in centistokes at any temperature to Saybolt viscosity in seconds at the same temperature.

American Society for Testing Materials, D 482-43T; 1943. Tentative Method of Test for Ash Content of Petroleum Oils. Intended for use in the determination of the ash content of fuel oils and other petroleum oils. Gives requirements for procedure, reporting results, and reproducibility of results.

American Society for Testing Materials, D664-44T; 1944. Tentative Method of Test for Acid and Base Numbers of Petroleum Products by Electrometric Titration. Designed to indicate in petroleum products and lubricants and compounded products the presence of organic constituents having acid or basic characteristics. Gives definitions, outline of method, apparatus, preparation of electrode system, procedure, calculation, and report.

American Wood-Preservers' Assn., 40c; 1940. Standard Abridged Volume Correction Tables for Petroleum Oils. Gives abridged tables containing factors for reducing

oil volumes on the basis of 60° F. (Table 1), and 100° F. (Table 2), for observed temperatures from 30° F. to 220° F. Based on the National Bureau of Standards Circular C410. Only group 0 and group 1 oils considered. Group 0 with gravity ranges up to 14.9 degrees A.P.I. and group 1 with gravity range 15.0 to 34.9 degrees A.P.I.

National Assn. of Dyers and Cleaners of the U.S. and Canada. The Dry Cleaning Department, 1940. Includes methods of practical tests of petroleum solvents for water alkali, sulfuric acid, soaps, and fatty acid or determination of acid number.

National Assn. of Dyers and Cleaners of the U.S. and Canada. The Dry Cleaning Department, 1940. Includes petroleum solvents and soaps used in them for dry cleaning purposes, and methods for clarifying solvents.

## 502.1 CRUDE PETROLEUM

American Society for Testing Materials, D270-33; 1933. American Petroleum Institute Standard, 528-33. American Standards Assn., Z11.33-1935. Methods of Sampling Petroleum and Petroleum Products. Includes all petroleum products except gases. Requirements for experienced personnel, and description of apparatus; for bottle or beaker sampling of tank cars and trucks; and shore, ship, or barge tanks; continuous sampling of pipe lines, dipper sampling of streams; thief sampling of cans, drums, and tank cars; borings sampling of wax, soft solids in cases, cakes, bags, or barrels; and grab sampling of lumpy material in bins, bunkers, sacks, and barrels.

American Society for Testing Materials, D285-41; 1941. American Petroleum Institute Standard, 525-41. American Standards Assn., Z11.32-1941. Method of Test for Distillation of Crude Petroleum. For determining the percentages and distillation range of the naphtha in any refinable crude but does not define quality of naphtha. Description of Hempel distillation flask, fractioning column, condenser, heater, and 300-ml. pipette; preparation of apparatus and distillation procedure for naphtha distillation A.S.T.M. method D 86 and correction for barometric pressure.

## 502.2 PETROLEUM PRODUCTS

American Assn. of State Highway Officials, T79-42. Standard Method of Test for Flash Point With Tagliabue Open Cup. For use with material having a flash point of less than 175° F. Gives details for this method of test.

American Society for Testing Materials, D 92-33; 1933. American Petroleum Institute Standard, 511-33. American Assn. of State Highway Officials, T48-42. American Standards Assn., Z11.6-1933. Method of Test for Flash and Fire Points by Means of Open Cup. For all petroleum products except fuel oils and those having an open cup flash below 175°F. Includes description of Cleveland open cup, heating plate, and procedure for flash and fire points.

American Society for Testing Materials, D 95-40; 1940. American Petroleum Institute Standard, 519-40. American Assn. of State Highway Officials, T 55-42. American Standards Assn., Z 11.9-1940. Method of Test for Water in Petroleum Products and Other Bituminous Materials. Especially applicable to petroleum, fuel oil, road oil, coal tar, water-gas tar, coke oven tar, etc. Determination of water by distilling sample with volatile solvent, dimensions and design of still, distillation requirements of solvent, test procedure.

American Society for Testing Materials, D 96-40; 1940. American Petroleum Institute Standard, 520-40. American Standards Assn., Z11.8-1940. Method of Test for Water and Sediment in Petroleum Products by Means of Centrifuge. May be used for crude mineral oils and fuel oils; a more accurate method is given in A.S.T.M. method D 95. Structural requirements and speed of centrifuge, capacity and graduation for centrifuge tubes, and test procedure.

American Society for Testing Materials, D 97-39; 1939. American Petroleum Institute Standard, 506-39. American Standards Assn., Z11.5-1939. Method of Test for Cloud and Pour Points. Cloud point test limited to transparent oil, for determining temperature at which paraffin wax or other solids begin to separate when oil is chilled, and pour point test for lowest temperature at which oil will flow under prescribed conditions. Description of apparatus, and methods of procedure, with special procedures for black oils, cylinder stocks, and non-distillate fuel oils. A.S.T.M. Emergency Alternate Provision, EA-D 97, 1944, affected section 5, Procedure for Pour Point.

American Society for Testing Materials, D 286-30; 1930. American Petroleum Institute Standard, 522-30. American Standards Assn., Z 11.23-1932. Method of Test for Autogenous Ignition Temperatures of Petroleum Products. For liquid and semiliquid petroleum products, determination of minimum ignition temperature of fuel admitted to flask immersed in a solder bath, description of apparatus, and test procedure.

American Society for Testing Materials, D323-43; 1943. American Petroleum Institute Standard, 539-43. American Standards Assn., Z11.44-1943. Method of Test for Vapor Pressure of Petroleum Products (Reid Method). Intended for the determination of the vapor pressure of volatile, nonviscous petroleum products. Gives apparatus, sampling, procedure, calculation, and reproducibility of results.

American Society for Testing Materials, D 341-43; 1943. American Petroleum Institute Standard, 533-43. American Standards Assn., Z 11.39-1943. Viscosity-Temperature Charts for Liquid Petroleum Products. Means for ascertaining the viscosity of a petroleum oil at any temperature within a limited range, provided viscosities at two temperatures are known. Includes three charts for Saybolt and kinematic viscosity, and covers precaution, description, procedure, and extrapolation.

American Society for Testing Materials, D445-42T; 1942. Tentative Method of Test for Kinematic Viscosity, Intended for determining the kinematic viscosity of any petroleum product or lubricant which is a true viscous liquid at the temperature of the test. Gives apparatus, procedure, calibration, and reporting results.

American Society for Testing Materials, D 447-41; 1941. American Petroleum Institute Standard, 538-41.

American Standards Assn., Z11.43-1941. Method of Test for Distillation of Plant Spray Oils. Apparatus and procedure.

American Society for Testing Materials, D483-40; 1940. American Petroleum Institute Standard, 536-40. American Standards Assn., Z11.41-1940. Method of Test for Unsulfonated Residue of Plant Spray Oils. Requirements for special solutions, apparatus, and outline of procedure for determinations.

American Society for Testing Materials, D567-41; 1941. American Petroleum Institute Standard, 540-41. American Standards Assn., Z11.45-1941. Method for Calculating Viscosity Index. Provides a means for calculating the viscosity index of a petroleum product or lubricant from its viscosity at 100° and 210° F. Gives definition, formulas and tables, calculation, reproducibility, and tables showing values.

American Society for Testing Materials, D611-44T; 1944. Tentative Method of Test for Aniline Point and Mixed Aniline Point of Petroleum Products. Intended for determining the aniline point of petroleum products not darker than No. 8, A.S.T.M. color, provided the aniline point lies between the initial boiling point and the solidification point of the aniline-sample mixture. Gives definitions, apparatus, reagents, preparation of sample, procedure, report, and reproducibility of results.

American Society for Testing Materials, D663-44T; 1944. Tentative Method of Test for Acid and Base Numbers of Petroleum Products by Color-Indicator Titration. Designed to indicate in petroleum products and lubricants and compounded products the presence of organic constituents having acid or basic characteristics. Gives definitions, outline of method, apparatus, reagents, procedure, and calculation and report.

American Society for Testing Materials, E 12-27; 1927. American Assn. of State Highway Officials, M 132-42. Definitions of Terms Relating to Specific Gravity. Defines absolute specific gravity of solids and liquids, specific gravity, apparent specific gravity of solids, and bulk specific gravity of solids.

American Wood-Preservers' Assn., 49c; 1943. Standard Specification for Petroleum for Blending With Creosote. Gives requirements for specific gravity, permissible water and sediment, flash point, and viscosity tolerance, using tests in accordance with A.S.T.M. methods.

National Fire Protection Assn. National Fire Codes for Flammable Liquids, Gases, Chemicals, and Explosives, 1943. Flash Point Test-Tag Closed Tester. For determining the flash point of mobile liquids flashing below 175° F. and lacquer solvents or diluents of low flash points. Covers apparatus, procedure, repeat tests, average value of flash point, and correction for barometric pressure.

Society of Automotive Engineers. Aeronautical Material Specification 3070A; 1943. Oil; Corrosion-Preventive (Carburetor Slushing). Material shall be refined petroleum oil without the admixture of other additive compounds not naturally occurring in petroleum and suitable for protecting the interior of carburetors from corrosion during shipment and storage. Covers physical requirements, tests, reports, identification, approval, and rejection. Similar to Army-Navy Aeronautical Specification AN-VV-O-446, Grade 1065.

Toilet Goods Assn., Inc. Mineral Oil (Non-Paraffin Base), 1940. Gives requirements for color, odor, taste, solubility, viscosity, specific gravity, saponification, free acids, free alkalis, sulfur compounds, carbonizable substances and unsaturated hydrocarbons. ash, arsenic, and lead.

Toilet Goods Assn., Inc. Mineral Oil (Paraffin Base), 1940. Gives requirements for color, odor, taste, solubility, viscosity, specific gravity, saponification value, free acids, free alkalis, sulfur compounds, carbonizable substances and unsaturated hydrocarbons, ash, arsenic, and lead.

Toilet Goods Assn., Inc. Specification 1A; 1941. Mineral Oil. Gives requirements for color, cloud point, odor, taste, solubility, viscosity, specific gravity, free acids and alkalis, saponification value, sulfur and sulfides, carbonizable substances and unsaturated hydrocarbons, ash, arsenic, and lead.

U. S. Gov., Army Air Forces. Specification 3580-D (1); 1944. Fluid; Hydraulic (Petroleum Base).

U. S. Gov., Navy Dept. Specification 52C16; 1943. Compound; Metal-Conditioning.

U. S. Gov., Navy Dept. Specification 52P14a; 1941. Petroleum-Residuum; Blown.

*References.*—Definitions and methods of testing, *see* 502.0; fuel and illuminating oils, *see* 503; lubricating oils and greases, *see* 504; oil asphalt, *see* 505.14; miscellaneous oils, *see* 509.

## 503. FUEL AND ILLUMINATING OILS

### 503.0 GENERAL ITEMS

American Oil Chemists' Society. Standard Methods for the Sampling and Analysis of Commercial Fats and Oils, 1943. Applies to fats and fatty oils used in the soap, candle, and tanning industries, to edible fats and oils, to fats and fatty oils intended for lubricating and burning purposes, and to the raw oils used in the varnish and paint industry, but not intended for waxes. Covers sampling; analysis for moisture and volatile matter, insoluble impurities, soluble mineral matter, fatty acids combined as mineral soap, free fatty acids, titer, unsaponifiable matter, iodine number, saponification number, melting point, softening point, slipping point, flow test, cloud test, bleach test, Halphen test (for cottonseed oil), modified Vallavecchia test, Reichert-Meissl and Polenske numbers, Kirschner value, index of refraction, specific gravity, acetyl and hydroxyl value; smoke, flash, and fire points, F.A.C. standard colors, modified Wiley melting point method, thiocyanogen method, and Twitchell method.

American Society of Mechanical Engineers. Power Test Code. Liquid Fuels, 1930. Specifies standard methods for the determination of those ascertainable chemical and physical properties which serve as indicators of the value of those liquid fuels which are extensively used in generation of heat and power.

American Society for Testing Materials, D 6-39 T; 1939. American Assn. of State Highway Officials, T 47-42. Tentative Method of Test for Loss on Heating of Oil and Asphaltic Compounds. Covers test of water-free material for loss of volatile matter when heated

under specified temperature in specially described electric oven for definite period.

American Society for Testing Materials, D 56-36; 1936. American Petroleum Institute Standard, 509-36. American Standards Assn., Z11.24-1936. Method of Test for Flash Point by Means of the Tag Closed Tester. For all mobile liquids flashing below 175° F., except for fuel oil which is preferably tested with the Pensky-Martens closed tester. Dimensions of tag closed tester, requirements for thermometers, procedure for average value of flash point, and variation for lacquer solvents or diluents of low flash point.

American Society for Testing Materials, D 86-40, 1940. American Petroleum Institute Standard, 507-40. American Assn. of State Highway Officials, T 115-42. American Standards Assn., Z11.10-1940. Methods of Test for Distillation of Gasoline, Naphtha, Kerosene, and Similar Petroleum Products. Dimensions and design of flask, condenser, support, and thermometers; test procedure, corrections for barometric pressure.

American Society for Testing Materials, D 88-44; 1944. American Petroleum Institute Standard, 518-44. American Assn. of State Highway Officials, T 72-44. American Standards Assn., Z11.2-1944. Method of Test for Viscosity by Means of the Saybolt Viscosimeter. Covers use of Saybolt Universal viscosimeter for general use, and of Saybolt Furol viscosimeter for fuel and road oils, dimensions and design of apparatus, temperatures of tests, and outline of procedure.

American Society for Testing Materials, D 90-41 T; 1941. Tentative Method of Test for Sulfur in Petroleum Oils by Lamp Method. For determination of sulfur in gasoline, kerosene, petroleum naphtha, and other petroleum oils that can be burned completely in a wick lamp. This method may be applied to mixtures of petroleum oils with other volatile organic liquids, provided the only acidic compounds produced are those derived from sulfur. Apparatus, reagents, procedure, calculation, check determination, and reproducibility of results.

American Society for Testing Materials, D93-42; 1942. American Petroleum Institute Standard, 510-42. American Assn. of State Highway Officials, T73-42. American Standards Assn., Z11.7-1942. Method of Test for Flash Point by Means of the Pensky-Martens Closed Tester. For fuel oils, dimensions and design of tester cup, stirring device, air bath, thermometer, and test procedure.

American Society for Testing Materials, D 95-40; 1940. American Petroleum Institute Standard, 519-40. American Assn. of State Highway Officials, T 55-42. American Standards Assn., Z11.9-1940. Method of Test for Water in Petroleum Products and Other Bituminous Materials. Especially applicable to petroleum, fuel oil, road oil, coal tar, water-gas tar, coke oven tar, etc. Determination of water by distilling sample with volatile solvent, dimensions and design of still, distillation requirements for solvent, test procedure.

American Society for Testing Materials, D 96-40; 1940. American Petroleum Institute Standard, 520-40. American Standards Assn., Z11.8-1940. Method of Test for Water and Sediment in Petroleum Products by Means of Centrifuge. May be used for crude mineral oils and fuel oils; a more accurate method is given in A.S.T.M. method D 95. Structural requirements and speed of centrifuge, capacity and graduation of centrifuge tube, and test procedure.

American Society for Testing Materials, D129-44; 1944. American Petroleum Institute Standard, 516-44. American Standards Assn., Z11.13-1944. Method of Test for Sulfur in Petroleum Oils by Bomb Method. For oils which cannot be burned completely in a wick lamp. Gives apparatus, special solutions required, procedure, calculation, and reproducibility. Emergency Alternate Provision EA-D129 affected section 1, Scope; section 3, Special Solutions; section 4, Procedure, and section 8, Reproducibility.

American Society for Testing Materials, D 156-38; 1938. American Petroleum Institute Standard, 530-38. American Standards Assn. Z11.35-1938. Method of Test for Color of Refined Petroleum Oil by Means of Saybolt Chromometer. For color of naphthas, kerosene, etc. Description of Saybolt chromometer, and procedure for comparing color of oil with standard color disks.

American Society for Testing Materials, D 158-41; 1941. American Petroleum Institute Standard, 512-41. American Standards Assn., Z11.26-1941. Method of Test for Distillation of Gas Oil and Similar Distillate Fuel Oils. For distillates having viscosities intermediate between kerosene and lubricating oil. Description of Saybolt distilling flask, condenser, heater, and graduates, preparation of apparatus, and outline of procedure.

American Society for Testing Materials, D 189-41; 1941. American Petroleum Institute Standard, 505-41. American Standards Assn., Z11.25-1941. Method of Test for Carbon Residue of Petroleum Products (Conradson Carbon Residue). For the relative carbon-forming propensity of lubricants for internal-combustion engines, domestic oil fuels, and oils used in the manufacture of gas. Describes evaporating apparatus, insulator and burner, with standard procedure, and special procedures for high and for low carbon residues.

American Society for Testing Materials, D 206-36; 1936. American Petroleum Institute, 500-36. American Standards Assn., Z11.1-1936. Prepared by the National Bureau of Standards. Abridged Volume Correction Table for Petroleum Oils. Table for reducing oil volumes to the basis of 60° F., when extreme accuracy is not required. Includes eight groups covering coefficients of expansion, gravity (degrees API), and gravity ranges.

American Society for Testing Materials, D 240-39; 1939. American Petroleum Institute Standard, 517-39. American Standards Assn., Z11.14-1939. Method of Test for Thermal Value of Fuel Oil. Covers suitable makes of calorimeters, requirements for capacity and jacketing of calorimeter bomb, determination of water equivalent of bomb by the combustion of standard samples obtained from the National Bureau of Standards, radiation equivalent, and procedure for test.

American Society for Testing Materials, D 270-33; 1933. American Petroleum Institute Standard, 528-33. American Standards Assn., Z11.33-1935. Methods of

Sampling Petroleum and Petroleum Products. Includes all petroleum products except gases. Requirements for experienced personnel and description of apparatus; for bottle or beaker sampling of tank cars and trucks; and shore, ship, or barge tanks; continuous sampling of pipe lines, dipper sampling of streams; thief sampling of cans, drums, and tank cars; borings sampling of wax, soft solids in cases, cakes, bags, or barrels; and grab sampling of lumpy material in bins, bunkers, sacks, and barrels.

American Society for Testing Materials, D 286-30; 1930. American Petroleum Institute Standard, 522-30. American Standards Assn., Z11.23-1932. Method of Test for Autogenous Ignition Temperatures of Petroleum Products. For liquid and semiliquid petroleum products, determination of minimum ignition temperature of fuel admitted to flask immersed in a solder bath, description of apparatus, and test procedure.

American Society for Testing Materials, D287-39; 1939. American Petroleum Institute Standard, 526-39. American Standards Assn., Z11.31-1939. Method of Test for gravity of Petroleum and Petroleum Products by Means of the Hydrometer. Covers the determination of the specific gravity and the A.P.I. gravity of crude petroleum and petroleum products normally handled as liquids. The determination of the gravity of mixtures of petroleum products with other substances is treated as a special case, owing to the fact that the coefficient of expansion of such mixtures may not be the same as those of petroleum or its products. The determination of the specific gravity of road oils, road tars, asphalt cements, and soft tar pitches is covered by the Standard method of test D 70 of the American Society for Testing Materials, and the testing of these products is, therefore, specifically excluded from the scope of this method.

American Society for Testing Materials, D288-39; 1939. American Petroleum Institute Standard, 535-39. American Standards Assn., Z11.28-1939. Definitions of Terms Relating to Petroleum. Defines benzine, crude petroleum, crude shale oil, and point, engine distillate, fuel oil, gasoline, kerosene, oil-shale, petroleum grease, petroleum naphtha, petroleum spirits, pitch, tar, topped crude petroleum, tops, and weathered crude petroleum.

American Society for Testing Materials, D357-44; 1944. American Petroleum Institute Standard, 532-44. American Standards Assn., Z11.37-1944. Method of Test for Knock Characteristics of Motor Fuels. For determining knock characteristics, in terms of an arbitrary scale of octane numbers, of fuels for use in spark-ignition engines other than engines for aircraft. Gives requirements for A.S.T.M. motor octane number, apparatus, reference fuels, standard engine and operating conditions, outline of test, starting and stopping the engine, obtaining standard knock intensity, adjusting bouncing pin, checking test conditions, adjusting compression ratio and carburetor, bracketing the test fuel, test fuel rating, reproducibility of results, and appendices.

American Society for Testing Materials, D446-39; 1939. American Petroleum Institute Standard, 534-39. American Standards Assn., Z11.46-1941. Method for Conversion of Kinematic Viscosity to Saybolt Universal Viscosity. Includes table of values and equation for converting kinematic viscosity in centistokes at any temperature to Saybolt viscosity in seconds at the same temperature.

American Society for Testing Materials, D524-42; 1942. American Petroleum Institute Standard, 541-42. American Standards Assn., Z11.47-1942. Method of Test for Carbon Residue of Petroleum Products (Ramsbottom Carbon Residue). Test for relative carbon-forming propensities of oils but in general not numerically equal to the Conradson carbon residue values. Design and dimensions of coking bulb, other apparatus requirements, and outline of test procedures. Emergency Alternate Provisions, EA-D524; 1942, affected section 2, Apparatus; and section 3, Procedure.

American Society for Testing Materials, D567-41; 1941. American Petroleum Institute Standard, 540-41. American Standards Assn., Z11.45-1941. Method for Calculating Viscosity Index. Provides a means for calculating the viscosity index of a petroleum product or lubricant from its viscosity at 100° and 210° F. Gives definition, formulas and tables, calculation, reproducibility, and tables showing values.

American Society for Testing Materials, D 613; 43T-1943. Tentative Method of Test for Ignition Quality of Diesel Fuels. Intended for determining the ignition quality of Diesel fuels in terms of an arbitrary scale of A.S.T.M. cetane numbers. Gives requirements for A.S.T.M. cetane number, apparatus, reference fuels, standard engine and operating conditions, starting and stopping the engine, injection indicator contact setting, basic combustion indicator contact setting, final combustion indicator contact setting, bracketing the test fuel, calculation and report, and appendices.

American Society for Testing Materials, D614-44T; 1944. Tentative Method of Test for Knock Characteristics of Aviation Fuels. Intended for determining the knock characteristics of fuels for use in aircraft engines of the spark-ignition type. Gives requirements for A.S.T.M. aviation octane number, apparatus, reference fuels, standard engine and operating conditions, starting and stopping the engine, adjusting compression ratio and carburetor, bracketing the test fuel, test fuel rating, procedure, A.S.T.M. aviation knock value, reproducibility, and appendices.

American Society for Testing Materials, ES-32; 1943. Emergency Method of Test for Color of U.S. Army Motor Fuel (All-Purpose) by Means of an A.S.T.M. Color Standard. Covers the procedure for rapidly determining whether the color of a motor fuel conforms to the requirements by visual comparison with color standard. Gives requirements for A.S.T.M. color standard, procedure, and precautions.

Associated Factory Mutual Fire Insurance Companies. Factory Mutual Bulletin of Loss Prevention, 13.20; 1940. Flammable Liquid Safeguards; General Principles for Safe Industrial Installations. Discusses the seven safeguards for flammable liquids which are—isolate the hazard, confine the liquid, ventilate to prevent explosive mixtures, install explosive vents where needed, eliminate ignition sources, educate employees on hazards and safeguards, and provide adequate fire protection.

National Fire Protection Assn. National Fire Codes for Flammable Liquids, Gases, Chemicals, and Explosives, 1943. Flammable Liquids Ordinance. Suggested ordinance Regulating the Use, Handling, Storage, and Sale of Flammable Liquids and the Products Thereof. Includes new and existing installations for three classes of liquids with flash point below 200° F. closed cup tester, definitions, general requirements, capacity and location of storage tanks, piping and appurtenances, petroleum products, paints, varnishes, etc. Appendix on safeguards for tanks in flooded regions.

National Fire Protection Assn. National Fire Codes for Flammable Liquids, Gases, Chemicals, and Explosives, 1943. Flash Point Test-Pensky-Martens Closed Cup Tester. For determining the flash point of fuel oils, cut-back asphalts, and other viscous materials and suspensions of solids. Describes apparatus, procedure, flash point, barometric pressure, and reproducibility of results.

National Fire Protection Assn. National Fire Codes for Flammable Liquids, Gases, Chemicals, and Explosives, 1943. Gasoline and Kerosene on the Farms. Covers the safe use and storage of gasoline and kerosene; including starting fires, oil lamps, heaters, stoves, incubators, brooders, and lanterns; cleaning hazards, spraying disinfectants, paints and lacquers, lighting and cooking systems, automobiles, trucks, tractors, and stationary engines; transferring to another container, fuel-oil burners, proper storage, and extinguishing of gasoline and kerosene fires.

Natural Gasoline Assn. of America. Standard Factors for Volume Correction and Specific Gravity Conversion of Liquefied Petroleum Gases and Volatile Gasolines.

Natural Gasoline Assn. of America. Standard Method for Determining the Specific Gravity of Volatile Hydrocarbon Products by Means of the Hydrometer.

Society of Automotive Engineers. 1944 Handbook, Section 3—Processed Materials. Includes SAE Recommended Practice Method of Rating Fuels for Detonation. Revised, 1936.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Circular C19; 1924. Standard Density and Volumetric Tables. Includes comparison table of degrees Baumé, degrees A.P.I., pounds per gallon, and specific gravity, also tables for graduation of various types of hydrometers.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Circular C410; 1936. National Standard Petroleum Oil Tables. Approved by the American Petroleum Institute, American Society for Testing Materials, and the U. S. Bureau of Mines. The tables contained in this circular are based largely on an investigation of American petroleum oils, both crude and refined; A.P.I. scale chosen as standard for density measurement. Tables converting observed degrees A.P.I. volume and specific gravity to corresponding values at 60° F., and tables converting degrees A.P.I. to specific gravity, pound per gallon, and degrees Baumé.

U. S. Gov., Federal Specification VV-L-791b; 1942. Lubricants and Liquid Fuels; General Specifications (Methods for Sampling and Testing). Gives a detailed description of the various methods of test for lubricants and liquid fuels, apparatus, and drawings.

## 503.1 BENZINE AND PETROLEUM ETHER

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A. Twelfth Revision, 1942. Purified Benzin (Petroleum Ether, Purified Petroleum Benzin). Description, solubility, specific gravity, distillation range, nonvolatile residue, sulfur compounds, sulfur compounds or silver-reducing substances, benzene, and storage.

U. S. Gov., Federal Specification O-E-751; 1931. Ether; Petroleum. Covers two grades, A and B. Gives requirements for color, moisture and sediment, boiling point range, limit of residue, spot test, acidity, and benzene hydrocarbons; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

*References.*—Definitions, methods of sampling and testing, *see* 503.0.

## 503.2 DISTILLATES OF PETROLEUM

American Society for Testing Materials, D 86-40; 1940. American Assn. of State Highway Officials, T 115-42. American Petroleum Institute Standard, 507-40. American Standards Assn., Z11.10-1940. Method of Test for Distillation of Gasoline, Naphtha, Kerosene, and Similar Petroleum Products. Includes specifications for low-distillation and for high-distillation thermometers, graduated in centigrade or Fahrenheit, dimensions, graduation, construction, standardization, accuracy, test for permanency of range, for ranges of 0° to 300° C. and of 0° to 400° C.

American Society for Testing Materials, D 235-39; 1939. American Assn. of State Highway Officials, M 128-42. Petroleum Spirits (Mineral Spirits). Apply only to petroleum distillates. Requirements for appearance, color, flash point, blackening, distillation, dry point, and acidity of distillation residue, using tests by A.S.T.M. methods.

American Society for Testing Materials, D 484-40; 1940. American Petroleum Institute Standard, 537-40. American Standards Assn., Z11.42-1940. Stoddard Solvent. For a petroleum distillate of low flammability used in dry cleaning. Requirements and methods of testing for color, corrosive properties, doctor test, sulfuric acid absorption, flash point, distillation, acidity, and cleansing of containers.

National Assn. of Dyers and Cleaners of the U. S. and Canada. Fatty Acids in Dry-Cleaning Solvents, T-70; 1939. The main impurities which accumulate in dry-cleaning solvent and which may cause trouble are fatty acids. Gives method of testing for dry cleaners to determine when fatty acids have accumulated to such an extent that odor troubles may result.

National Assn. of Dyers and Cleaners of the U. S. and Canada. Laboratory Tests on Solvent, T-62; 1938. For new and used solvents both petroleum solvents and synthetic solvents. Tests on new solvent include appearance, color, odor, flash point, corrosion, distillation range, acidity, doctor test, and sulphuric acid absorption test; and tests on used solvent include acid number, residue, distillation range, flash point, rancidity, moisture, and color.

National Assn. of Dyers and Cleaners of the U. S. and Canada. Solvent Tests for the Dry-Cleaning Room, T-59; 1938. Cleaning room tests for soap, alkali, and moisture. Covers acid number, materials necessary, procedure, moisture, and soap.

Society of Automatic Engineers. Aeronautical Material Specification 3160; 1943. Solvent Petroleum. A carefully refined straight-run distillate from crude petroleum without the admixture of benzol, ether, alcohol, chlorinated hydrocarbons, and other compounds not occurring naturally in crude petroleum. Requirements, quality, reports, identification, approval, and rejection. Similar to Federal Specification P-S-661.

U. S. Gov., Army-Navy Aeronautical Specification AN-T-37-1; 1944. Trichlorethylene; Stabilized.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Commercial Standard CS3-40; 1940. Stoddard Solvent. This commercial standard covers physical and chemical properties, methods of testing, and certification of a grade of petroleum distillate of low flammability used in dry cleaning. Covers general requirements relative to material, color, odor, flash point, distillation, etc.; also methods of sampling, inspection, and testing. Initiated by the National Assn. of Dyers and Cleaners of the U. S. and Canada.

U. S. Gov., Federal Specification P-S-661a; 1938. Amendment 1; 1940. Solvent; Dry-Cleaning. Covers a petroleum distillate known as "Stoddard Solvent." Gives requirements for appearance, color, odor, corrosive properties, flash point; methods of inspection, sampling, and tests; and requirements for packaging, packing, and marking for shipment. (Conforms to requirements of Stoddard Solvent Commercial Standard CS3-40 issued by the U. S. Gov., National Bureau of Standards.)

U. S. Gov., Navy Dept. Specification 7F1; 1945. Fluid (Oil); Fog, No. 1.

U. S. Gov., Treasury Dept., Procurement Div., No. 721; 1945. Door-Check Liquid. Covers one type and one grade and shall be a well-refined petroleum oil. Gives requirements for appearance, viscosity, pour point, acidity, corrosion test, and flash point; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., U. S. Army, Chemical Warfare Service. Specification 97-54-133; 1941. Trichlorethylene; Technical.

*References.*—Definitions, methods of sampling and of testing, *see* 502.2, 503.0; petroleum thinners for paint, *see* 848.7; benzine, petroleum ether, *see* 503.1; gasoline and naphtha, *see* 503.3; kerosene, *see* 503.5; mineral seal oil, *see* 503.6; long time burning oil, *see* 503.7; lubricating oils, *see* 504; transformer oils, *see* 504.8.

## 503.3 GASOLINE AND NAPHTHA

American Assn. of State Highway Officials, M83-42. Standard Specifications for Liquefier. Covers liquefier to be used in preparation of bituminous mastic bedding for brick pavement. Gives general requirements, distillation, methods of sampling and testing, and table showing initial boiling point, fifty percent over, and end point for light and heavy grade.

American Gas Assn. and Natural Gasoline Assn. of America. Standard Compression and Charcoal Tests for Determining the Natural Gasoline Content of Natural Gas, Testing Code 101-43; 1943. Gives a general discussion of the purpose and general facts concerning the problem of testing natural gas for gasoline content; standard compression test including apparatus, diagrams, procedure of test, and computation of yield; standard charcoal test including adsorption apparatus and materials, diagrams, adsorption procedure, distillation apparatus and materials, distillation procedure, and computation of results; and appendices.

American Petroleum Institute, Div. of Production. Code 50-A; 1942. Code for Measuring, Sampling, and Testing Natural Gas (Tentative). Contains sections on measuring natural gas (with appendixes on pressure bases and special extension tables), on sampling, determination of specific gravity, fractional analysis, determination of hydrogen sulfide, carbon dioxide, water vapor, free oxygen, heating value, and gasoline content.

American Petroleum Institute, Div. of Production. Code 50-B; 1942. Code for Measuring, Sampling, and Testing Natural Gasoline. Includes sections on storage and measurement, sampling, determination of gravity, color, doctor test, corrosion, vapor pressure, and distillation selected from standards now in use.

American Society for Testing Materials, D 130-30; 1930. American Petroleum Institute Standard, 521-30. American Standards Assn., Z11.21-1930. Method of Test for Detection of Free Sulfur and Corrosive Sulfur Compounds in Gasoline. Test procedure using discoloration of mechanically polished copper strip method.

American Society for Testing Materials, D 156-38; 1938. American Petroleum Institute Standard, 530-38. American Standards Assn., Z11.35-1938. Method of Test for Color of Refined Petroleum Oil by Means of Saybolt Chromometer. For color of naphthas, kerosene, etc. Description of Saybolt chromometer and procedure for comparing color of oil with standard color disks.

American Society for Testing Materials, D 216-40; 1940. American Petroleum Institute Standard, 508-40. American Standards Assn., Z11.11-1940. Method of Test for Distillation of Natural Gasoline. Dimensions of Engler flask, and apparatus for distillation test, collection of sample, and outline of procedure, with correction for barometric pressure.

American Society for Testing Materials, D 381-44; 1944. American Petroleum Institute Standard, 529-44. American Standards Assn., Z11.36-1944. Method of Test for Gum Content of Gasoline. For comparative indication of amount of gum deposition which may take place in service, but not for gum stability in storage; includes description and assembly of apparatus and outline of procedure.

American Society for Testing Materials, D 439-40 T; 1940. Tentative Specifications for Gasoline. For use of purchasing agencies in formulating specifications for purchase of gasoline under contract. Does not include all types of motor fuel as some trucks and busses may require lower vapor pressures and higher distillation temperatures. Includes types for normal, high volatility, and relatively nonvolatile fuel; provides for automatic variation by seller to meet seasonal changes and locality by providing three vapor pressures and four geographic sections

by States with schedules of specified variations; and methods of testing.

American Society for Testing Materials, D481-39; 1939. American Petroleum Institute Standard, A.P.I., 531-39. Method of Test for Acid Heat of Gasoline. For acid heat of aviation and motor gasolines with Reid vapor presures under 15 lb., roughly indicative of the amount of unsaturated hydrocarbons in the gasoline that are reactive with sulfuric acid. Description of apparatus, reagent necessary, test sample, and method of procedure.

American Society for Testing Materials, D525-42T; 1942. Tentative Method of Test for Oxidation Stability of Gasoline. For an accelerated oxidation test by means of which the induction period is determined as an indication of the tendency to form gum in storage. Requirements for apparatus, details of bomb, and test procedure.

American Society for Testing Materials, D526-42; 1942. American Petroleum Institute Standard, 542-42. American Standards Assn., Z11.48-1942. Method of Test for Tetraethyl Lead in Gasoline. For ethyl gasoline and other volatile distillates, conversion of tetraethyl lead to lead chloride by refluxing with hydrochloric acid and the lead determined volumetrically by titration with ammonium molybdate or gravimetrically as the chromate or sulfate. Dimensions of extractor, reagents required, and method of procedure.

American Society for Testing Materials, ES-45; 1943. Emergency Method of Test for Olefins, Aromatics, Parafins, and Naphthenes in Aviation Gasoline (Without Distillation Into Fractions). Gives scope, principle of method, determination of olefins, determination of aromatics, determination of paraffins and naphthenes, and appendices.

American Society for Testing Materials, ES-46; 1943. Emergency Method of Test for Benzene, Toluene, and Higher-Boiling Aromatics in Aviation Gasoline. Gives scope, outline of method, apparatus, procedure, calculation and report, and reproducibility and accuracy.

American Transit Assn. Recommended Rules of Regulations for Handling of Gasoline, E133-33; 1933. Recommends certain precautionary measures in connection with the handling of gasoline at filling stations where inflammable liquids are transferred from storage tanks to the tanks of buses, trucks, airplanes, rail motor coaches, and internal-combustion locomotives.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, 1938. Naphtha. Covers definition, types, general properties, uses, sources, and shipping regulations.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, 1938. Gasoline (Automotive Fuel). Covers definition, properties, lubricating properties, derivation, grades, purity, substitutes, marketing method, shipping regulations, and uses.

Natural Gasoline Assn. of American. Liquefied Petroleum Gas Specifications and Test Methods, Tentative Standards. Revised, July 1940. Includes definitions for commercial propane, commercial butane, and butane-propane mixtures; mercury-freezing test for determination of the nature and extent of contamination of commercial propane with heavier hydrocarbon materials; method for determination of vapor pressures of liquefied petroleum gas products; open cylinder weathering test for determination of the nature and extent of contamination of commercial butanes with heavier hydrocarbon materials; cobalt bromide test for qualitative determination of the water content of commercial propane; specific gravity method for the determination of the specific gravity of volatile hydrocarbon liquids; and total sulphur method for the determination of total sulphur in liquefied petroleum gas products.

Natural Gasoline Assn. of America. Official Specifications and Methods of Sampling and Testing for Natural Gasoline, effective Jan. 1, 1938. Includes definitions, sampling methods and containers, tests, and abridged volume correction table. Sampling methods and containers same as American Petroleum Institute Code 50-B; Reid vapor pressure test, corrosion test, color test, and distillation test, same as American Society for Testing Materials Specifications D 323-41, D 130-30, D 156-38, and D 216-40, respectively.

Technical Assn. of the Pulp and Paper Industry. Analysis of Gasoline Standard, T 601 m-35; 1935. For use in automobiles and similar engines, requirements on freedom from water and suspended matter, corrosion test, distillation range, allowable sulphur, vapor pressure, and methods of test according to A.S.T.M. and Federal Specification VV-G-101.

U. S. Gov., Army-Navy Aeronautical Specification AN-F-22; 1943. Fuel; Aircraft-Engine, Grade 62.

U. S. Gov., Army-Navy Aeronautical Specification AN-F-23-1; 1943. Fuel; Grade 73 Aircraft-Engine.

U. S. Gov., Army-Navy Aeronautical Specification AN-F-24-2; 1943. Fuel; Grade 80 Aircraft-Engine.

U. S. Gov., Army-Navy Aeronautical Specification AN-F-25-3; 1943. Fuel; Grade 87 Aircraft-Engine.

U. S. Gov., Army-Navy Aeronautical Specification AN-F-26-2; 1943. Fuel; Aircraft-Engine Grade 91.

U. S. Gov., Army-Navy Aeronautical Specification AN-N-3; 1942. Naphtha; Petroleum Aliphatic.

U.S.Gov., Army-Navy Aeronautical Specification AN-VV-F-746-1; 1940. Fuel; Aircraft-Engine, General Specification (Method for Knock-Test).

U.S. Gov., Army-Navy Aeronautical Specification AN-VV-N-96-3; 1944. Naphtha; Petroleum, Aromatic.

U. S. Gov., Dept. of Agriculture, Forest Service. Specifications MSF-150-S. Gas; Liquid, for Torches.

U. S. Gov., Federal Specification VV-G-101a; 1936. Amend 1; 1944. Gasoline; Motor, U. S. Government. Covers one grade. Gives requirements for sampling, inspection, and test, distillation, vapor pressure, sulphur, and corrosion; and packing and marking.

U. S. Gov., Federal Specification VV-M-564; 1943. Motor Fuel R. Shall be one type with automatic provisions for locality and climatic conditions. Gives detail requirements as to sampling, inspection, and test.

U.S. Gov., Federal Specification VV-M-567; 1943. Motor-Fuel S. Shall be of one type only with automatic provisions for locality and climatic conditions. Covers a hydrocarbon fuel, free from tetraethyl lead or other octane improvers, water, and suspended matter. Gives requirements for distillation test,

residue, vapor pressure, octane number, gum, sulfur, corrosion, and modifications for seasons and altitude; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification VV-M-571b; 1941. Motor Fuel V. Covers one grade— suitable for use as fuel in internal combustion engines, with modifications for altitude and type of equipment. Gives detail requirements; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., Navy Dept. Specification 7M1b; 1943. Motor-Fuel V.

Ul S. Gov., Navy Dept. Specification 52N1b; 1941. Naphtha; Coal-Tar.

U. S. Gov., U. S. Army, Army Air Forces. Specification 4-1040; 1931. Naphtha; Lacquer Diluent.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 2-103B; 1943. Motor Fuel (All Purpose).

U. S. Gov., U. S. Army, Ordnance Dept. Specification 2-114; 1942. Motor Fuel; 72 Octane.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 2-116; 1943. Gasoline (Unleaded and Undyed).

U. S. Gov., U. S. Army, Ordnance Dept. Specification 3-180; 1943. Thinner; Naphtha, Low-boiling.

*References.*—Definitions, methods of sampling and of testing, *see* 502.2, 503.0; rating of gasoline for detonation, *see* 503.0; solvent naphtha (xylene), *see* 801.8.

## 503.4 FUEL AND GAS OILS

American Hospital Assn., 31-1. Fuel Oils. Covers 6 grades. Based on U. S. Gov., Dept. of Commerce, National Bureau of Standards, Commercial Standard 12-40 for Fuel Oils and American Society for Testing Materials D 482-38T, Tentative Method of Test for Ash Content of Petroleum Oils.

American Society of Mechanical Engineers. Power Test Code. Liquid Fuels, 1930. Specifies standard methods for a determination of those ascertainable chemical and physical properties which serve as indicators of the value of those liquid fuels which are extensively used in the generation of heat and power. With auxiliary sections on general considerations, temperature measurement, heat of combustion, flue and exhaust gas analysis, measurement of time, density determinations, and determination of viscosity of liquids.

American Society for Testing Materials, D158-41; 1941. American Petroleum Institute Standard, 512-41. American Standards Assn., Z11.26-1941. Method of Test for Distillation of Gas Oil and Similar Distillate Fuel Oils. For distillates having viscosities intermediate between kerosene and lubricating oil. Description of Saybolt distilling flask, condenser, heater, and graduates, preparation of apparatus, and outline of procedure.

American Society for Testing Materials, D 396-39 T; 1939. Tentative Specifications for Fuel Oils. Covers five grades of fuel oil for various types of fuel-oil-burning equipment, general requirements, and table of detailed requirements of various grades.

American Society for Testing Materials, D 473-38 T; 1938. Tentative Method of Test for Sediment in Fuel Oil by Extraction. Determination of sediment by extraction with 90 percent benzol, design of apparatus, and method of procedure.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, 1938. Fuel Oil. Covers definition, source, grades, chemical composition, properties, impurities, shipping regulations, uses, ordering instructions, oil measurement, and industry standards and tests; also definition, characteristics, derivation, general specifications, and invoicing for Oil, Bunker "C."

National Fire Protection Assn. National Fire Codes for Flammable Liquids, Gases, Chemicals, and Explosives, 1943. Liquefied Petroleum Gases. Standards for the design, installation, and construction of containers and pertinent equipment for the storage and handling of liquefied petroleum gases. Covers application of rules, basic rules, systems utilizing I.C.C. containers, systems utilizing containers other than I.C.C., tank trucks for liquefied petroleum gases, liquefied petroleum gas as a motor fuel, storage of containers not installed for use at final utilization point, and required sizes of safety valves for containers.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Commercial Standard CS12-40; 1940. Fuel Oils. This commercial standard covers five grades of fuel oil for various types of fuel oil burning equipment. The standard includes detail requirements covering description of each grade of fuel oil, flash point, pour point, carbon percentage of carbon residue, distillation temperatures, and viscosity in seconds. Initiated by American Oil Burner Assn., now the Oil Burner Institute.

U. S. Gov., Federal Specification VV-O-326; 1943. Oil; Fuel (for Oil Burners). Covers five grades. Shall be a hydrocarbon oil, free from grit, dirt, and fibrous material. Gives detail requirements as to methods of sampling, inspection, and tests.

U. S. Gov., Navy Dept. Specification 7-0-1f; 1944. Oil; Fuel, Boiler.

U. S. Gov., Navy Dept. Specification 7-0-2d; 1943. Oil; Fuel, Diesel.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 2-102B; 1941. Oil; Fuel, Diesel for High Speed, Automotive Type, Diesel Engines.

*References.*—Definitions, methods of sampling and of testing, *see* 502.2, 503.0; gasoline and naphtha, *see* 503.3; kerosene, *see* 503.5.

## 503.5 KEROSENE AND SIMILAR ILLUMINATING OILS

American Society for Testing Materials, D 187-39; 1939. American Petroleum Institute Standard, 502-39. American Standards Assn., Z11.17-1939. Method of Test for Burning Quality of Kerosene Oils. For burning quality of ordinary kerosene used for illuminating purposes, description of standard brass Saybolt test lamp, Miller No. 2 burner, MacBeth-Evans No. 514 pearl top chimney, detailed dimensions of burner, wick, balance and sight gage, and test procedure.

U. S. Gov., Federal Specification VV-K-211a; 1941. Kerosene. Covers one grade—suitable for ordinary use as an illuminating oil. Gives detail requirements; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

*References.*—Definitions, methods of sampling and of testing, *see* 502.2, 503.0; mineral seal oil, *see*

503.6; long-time burning oil, *see* 503.7; gasoline and naphtha, *see* 503.3.

### 503.6 MINERAL SEAL OIL

American Society for Testing Materials, D239-30; 1930. American Petroleum Institute Standard, 504-30. American Standards Assn., Z11.18-1930. Method of Test for Burning Quality of Mineral Seal Oil. For burning quality of special illuminating oil known as mineral seal oil, 300 oil, or mineral colza oil, used in railway coach lamps. Using Dressel standard No.520 side lamp; dimensions of font, burner, chimney, and wick; sight gage and outline of procedure.

U. S. Gov., Federal Specification VV-O-391; 1933. Oil; Illuminating (300° Mineral-Seal). Covers one grade, suitable for use where a high-flash illuminating oil is required. Gives detail requirements; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., Navy Dept. Specification 1408c; 1934. Oil; Mineral, Light-Colored (for Cordage Oils).

*References.*—Definitions, methods of sampling and of testing, *see* 502.2, 503.0.

### 503.7 LONG-TIME BURNING (SIGNAL) OIL

American Society for Testing Materials, D219-36; 1936. American Petroleum Institute Standard, 503-36. American Standards Assn., Z11.19-1936. Method of Test for Burning Quality of Long-Time Burning Oil for Railway Use. For special kerosene oil used in railway semaphore signal lamps; includes standard semaphore lamp; dimensions of burner; gray round felt wick and chimney; sight gage and test procedure.

U. S. Gov., Federal Specification VV-O-381; 1933. Oil; Illuminating, Long-Time Burning. Covers one grade, suitable for use where a long-time burning oil is required. Gives detail requirements; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

*References.*—Definitions, methods of sampling and of testing, *see* 502.2, 503.0.

## 504. LUBRICATING OILS, INSULATING OILS, AND GREASES (INCLUDES PARAFFIN OIL)

*References.*—Animal oils and greases, *see* 040-043; vegetable oils, *see* 142.

### 504.0 GENERAL ITEMS

American Assn. of State Highway Officials, T79-42. Standard Method of Test for Flash Point With Tagliabue Open Cup. For use with material having a flash point of less than 175° F. Gives details for this method of test.

American Gear Manufactures Assn. Standard 254.01; 1944. Data Sheet—Basic Information on Lubricating Oils. To give elementary data on the properties of oils used in enclosed and open gearing. Covers viscosity, flash point, pour point, carbon residue, neutralization number, specific gravity, viscosity index, paraffin base oils, compounded oil, deterioration of oils, extreme pressure, and liquid lubricants.

American Gear Manufactures Assn. Standard 250.01; 1944. Lubrication of Enclosed and Open Gearing, Tentative. Covers the method of lubricating and the type and grade of oil to be used in enclosed gear drives and open gearing. Applicable to helical, herringbone, straight bevel, spiral bevel, worm, hypoid, and spur types of gearing. Gives limitations, lubrication of gear teeth, temperature, type of oil, viscosity, methods of lubrication, lubrication recommendations, and maintenance.

American Gear Manufactures Assn. Standard 254.04; 1944. Data Sheet—Data on Extreme Pressure Lubricants. Gives a detailed discussion concerning where gear teeth are subjected to very heavy loads that may cause scuffing or excessive wear and abrasion, gears that run hot due to an overload, and extreme pressure lubricants necessary for such gears.

American Gear Manufacturers Assn. Standard 254.05; 1944. Data Sheet—Lubrication of Nonmetallic Gearing. Discusses gears made of phenolic compounds such as bakelite, also vulcanized fiber and other nonmetallic materials, and pinions made from these materials used in contact with steel or cast iron gears. Gives requirements for lubrication of these nonmetallic gears and pinions.

American Leather Chemists Assn. Methods of Sampling and Analysis. Mineral Oil, 1942. Gives requirements for evaporation loss.

American Oil Chemists' Society. Standard Methods for the Sampling and Analysis of Commercial Fats and Oils, 1943. Applies to fats and fatty oils used in the soap, candle, and tanning industries, to edible fats and oils, to fats and fatty oils intended for lubricating and burning purposes, and to the raw oils used in the varnish and paint industry, but not intended for waxes. Covers sampling; analysis for moisture and volatile matter, insoluble impurities, soluble mineral matter, fatty acids combined as mineral soap, free fatty acids, titer, unsaponifiable matter, iodine number, saponification number, melting point, softening point, slipping point, flow-test, cloud test, bleach test, Halphen test (for cottonseed oil), modified Vallavecchia test, Reichert-Meissl and Polenske numbers, Kirschner value, index of refraction, specific gravity, acetyl and hydroxyl value; smoke, flash, and fire points; F.A.C. standard colors, modified Wiley melting point method, thiocyanogen method, and Twitchell method.

American Society of Mechanical Engineers. General Discussion on Lubrication, 1938. The information was arranged with the cooperation of 51 engineering societies and covers the whole field of the practice and theory of lubrication. Covers journal and thrust bearings, engine lubrication for internal combustion and reciprocating steam engines, industrial applications, and properties and testing.

American Society of Mechanical Engineers. Power Test Codes, Auxiliary Section. Part 17—Determination of the Viscosity of Liquids, 1931. Outlines procedure to follow and precautions to be observed in taking readings. Describes types of viscometers.

American Society for Testing Materials, D 88-44; 1944. American Petroleum Institute Standard, 518-44. American Assn. of State Highway Officials, T 72-44. American Standards Assn., Z11.2-1944. Method of Test for Viscosity by Means of the Saybolt Viscosimeter. Covers use of Saybolt Universal viscosimeter for general use, and of Saybolt Furol viscosimeter for fuel and road oils, dimensions and design of apparatus, temperatures of tests, and outline of procedure.

American Society for Testing Materials, D 91-40; 1940. American Petroleum Institute Standard, 527-40. American Standards Assn., Z11.30-1940. Method of Test for Precipitation Number of Lubricating Oils. For steam cylinder stocks and black oils and may be used for other lubricating oils. Definition, centrifuge, centrifuge tubes, petroleum naphtha diluent, and method of procedure for determinations.

American Society for Testing Materials, D 92-33; 1933. American Assn. of State Highway Officials, T 48-42. American Petroleum Institute Standard, 511-33. American Standards Assn., Z11.6-1933. Method of Test for Flash and Fire Points by Means of Open Cup. For all petroleum products except fuel oils and those having an open cup flash below 175° F. Includes description of Cleveland open cup, heating plate, and procedure for flash and fire points.

American Society for Testing Materials, D 97-39; 1939. American Petroleum Institute Standard, 506-39. American Standards Assn., Z11.5-1939. Method of Test for Cloud and Pour Points. Cloud point test limited to transparent oil for determining temperature at which paraffin wax or other solids begin to separate when oil is chilled, and pour point test for lowest temperature at which oil will flow under prescribed conditions. Description of apparatus and methods of procedure, with special procedures for black oils, cylinder stocks, and non-distillate fuel oils. A.S.T.M. Emergency Alternate Provision, EA-D 97; 1944, affected section 5, Procedure for Pour Point.

American Society for Testing Materials, D128-40; 1940. American Petroleum Institute Standard, 501-40. American Standards Assn., Z11.16-1940. Methods of Analysis of Grease. Methods for determination of fillers, ash, soap bases, soap, fat, water, excess alkali or acid, petroleum products, and unsaponifiable matter; qualitative tests for glycerine and preparation of solvents.

American Society for Testing Materials, D 155-39 T; 1939. Tentative Method of Test for Color of Lubricating Oil and Petrolatum by Means of A.S.T.M. Union Colorimeter.--Gives description of special colorimeter, lists glass color standards, and procedures for light and for dark lubricating oils and petrolatum.

American Society for Testing Materials, D 157-36; 1936. American Petroleum Institute Standard, 515-36. American Standards Assn., Z11.15-1936. Method of Test for Steam Emulsion of Lubricating Oils. Covers turbine oils, and where emulsion, demulsibility, or emulsification test is required for any oil. Steam emulsification number, by time in seconds for oil to separate when emulsified under specified conditions, description of apparatus, and test procedure.

American Society for Testing Materials, D189-41; 1941. American Petroleum Institute Standard, 505-41. American Standards Assn., Z11.25-1941. Method of Test for Carbon Residue of Petroleum Products (Conradson Carbon Residue). For the relative carbon-forming propensity of lubricants for internal-combustion engines, domestic oil fuels, and oils used in the manufacture of gas. Describes evaporating apparatus insulator and burner, with standard procedure, and special procedures for high and for low carbon residues.

American Society for Testing Materials, D217-44; 1944. Tentative Method of Test for Consistency of Lubricating Greases and Petrolatum. For measuring with a penetrometer the unworked or the worked consistency of lubricating greases and the original consistency of petrolatum. Gives apparatus, procedure, and number of tests required for lubricating grease and for petrolatum.

American Society for Testing Materials, D 270-33; 1933. American Petroleum Institute Standard, 528-33. American Standards Assn., Z11.33-1935. Methods of Sampling Petroleum and Petroleum Products. Includes all petroleum products except gases. Requirements for experienced personnel and description of apparatus; for bottle or beaker sampling of tank cars and trucks; and shore, ship, or barge tanks; continuous sampling of pipe lines, dipper sampling of streams; thief sampling of cans, drums, and tank cars; borings sampling of wax, soft solids in cases, cakes, bags, or barrels; and grab sampling of lumpy material in bins, bunkers, sacks, and barrels.

American Society for Testing Materials, D 287-39; 1939. American Petroleum Institute Standard, 526-39. American Standards Assn., Z11.31-1939. Method of Test for Gravity of Petroleum and Petroleum Products by Means of the Hydrometer. Covers the determination of the specific gravity and the A.P.I. gravity of crude petroleum and petroleum products normally handled as liquids. The determination of the gravity of mixtures of petroleum products with other substances is treated as a special case, owing to the fact that the coefficient of expansion of such mixtures may not be the same as those of petroleum or its products. The determination of the specific gravity of road oils, road tars, asphalt cements, and soft tar pitches is covered by the Standard Method of Test D 70 of the American Society for Testing Materials, and the testing of these products is, therefore, specifically excluded from the scope of this method.

American Society for Testing Materials, D 322-35; 1935. American Petroleum Institute Standard, 524-35. American Standards Assn., Z11.29-1935. Method of Test for Dilution of Crankcase Oils. Gives amount of dilution when gasoline has been used as fuel. Description of dilution trap, test apparatus, and method of procedure.

American Society for Testing Materials, D 445-42 T; 1942. Tentative Method of Test for Kinematic Viscosity. Intended for determining the Kinematic viscosity of any petroleum product or lubricant which is a true viscous liquid at the temperature of the test. Gives apparatus, procedure, calibration, and reporting results.

American Society for Testing Materials, D 446-39; 1939. American Petroleum Institute Standard, 534-39. American Standards Assn., Z11.46-1941. Method for Conversion of Kinematic Viscosity to Saybolt Universal Viscosity. Includes table of values and equation for converting kinematic viscosity in centistokes at any temperature to Saybolt viscosity in seconds at the same temperature.

American Society for Testing Materials, D524-42; 1942. American Petroleum Institute Standard 541-42. American Standards Assn., Z11.47-1942. Method of Test for Carbon Residue of Petroleum Products

(Ramsbottom Carbon Residue). Test for relative carbon-forming propensities of oils but in general not numerically equal to the Conradson carbon residue values. Design and dimensions of coking bulb, other apparatus requirements, and outline of test procedures. Emergency Alternate Provisions EA-D524; 1942, affected section 2, Apparatus; and section 3, Procedure.

American Society for Testing Materials, D567-41; 1941.

American Petroleum Institute Standard, 540-41. American Standards Assn., Z11.45-1941. Method for Calculating Viscosity Index. Provides a means for calculating the viscosity index of a petroleum product or lubricant from its viscosity at 100° and 210° F. Gives definitions, formulas and tables, calculation, reproducibility, and tables showing values.

American Society for Testing Materials, D663-44T; 1944. Tentative Method of Test for Acid and Base Numbers of Petroleum Products by Color-Indicator Titration. Designed to indicate in petroleum products and lubricants and compounded products the presence of organic constituents having acid or basic characteristics. Gives definitions, outline of method, apparatus, reagents, procedure, and calculation and report.

American Society for Testing Materials, D664-44T; 1944. Tentative Method of Test for Acid and Base Numbers of Petroleum Products by Electrometric Titration. Designed to indicate in petroleum products and lubricants and compounded products the presence of organic constituents having acid or basic characteristics. Gives definitions, outline of method, apparatus, preparation of electrode system, procedure, calculation, and report.

American Society for Testing Materials, D808-44T; 1944. Tentative Method of Test for Chlorine in Lubricating Oils by Bomb Method. Gives scope, outline of method, apparatus, reagents, procedure, volumetric determination of chlorine, and gravimetric determination of chlorine.

American Society for Testing Materials, D809-44T; 1944. Tentative Method of Chemical Analysis for Phosphorus in Lubricating Oils. Gives scope, outline of method, apparatus, reagents, procedure, and reproducibility.

American Society for Testing Materials, D 810-44T; 1944. Tentative Chemical Analysis for Lead. Copper and Iron in Lubricating Oils. Gives scope, outline of method, preparation of sample, preliminary separations, apparatus, reagents, and procedure for determining lead, copper, and iron.

American Society for Testing Materials, D 811-44T; 1944. Tentative Chemical Analysis for Metals in Lubricating Oils. Gives scope, outline of method, preparation of sample, preliminary separations, apparatus, reagents, and procedure for determining tin, silica, barium, zinc, aluminum, calcium, magnesium, sodium, and potassium.

American Society for Testing Materials, ES-42; 1944. Emergency Method of Test for Isopentane and Benzene Insolubles in Used Lubricating Oils. Gives scope, definitions, outline of method, apparatus, reagents and solvents, preparation of sample, procedure, calculation and reporting, and precision.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, 1938. Oils; Lubricating. Covers definition, description, derivation, grades, production, specification factors, tests, packing, specifications, and marketing.

National Lubricating Grease Institute. Tentative N.L.G.I. Classification of Semi-Fluid Greases. Covers grade numbers—0, 1, 2, 3, 4, 5, and 6. This classification is based on consistency only and is not intended to evaluate factors of apparent viscosity, type of soap, mineral oil constituent, or quality. Method of test is identical with A.S.T.M. D 217-38T with designated modifications.

Society of Automotive Engineers. 1944 Handbook, Section 3—Processed Materials. Recommended Practice for Engine Tests for Evaluating Crankcase Oils. Revised, 1944. Covers measuring bearing corrosion, determining the oxidization resistance, and measuring other properties of oil such as detergency, ring sticking, and piston scuffing.

Society of Automotive Engineers. 1944 Handbook, Section 3—Processed Materials. SAE General Information for Corresponding Ranges in Kinematic, Redwood and Engler Viscosities. Adopted, 1940. Gives tables covering crankcase oils and covering transmission and axle lubricants.

U. S. Gov., Army Air Forces. Specification 3601; 1943. Oil; Petroleum (for Thinning Lubricants).

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Circular C398 and Supplement, 1944. Standard Samples. Oil Samples, Sample No.387d; Report of Absolute Viscosity, sample No.387a; Report of Kinematic Viscosity, Sample No.387b; and Report of Saybolt Viscosity, Sample No.387c. These samples are prepared and sold by the National Bureau of Standards with a certificate of analysis, for use in industry and by others as a comparison standard for checking the accuracy of analysis of similar materials.

U. S. Gov., Federal Specification VV-L-791b; 1942. Lubricants and Liquid Fuels; General Specifications (Methods for Sampling and Testing). Gives a detailed description of the various methods of test for lubricants and liquid fuels, apparatus, and drawings.

## 504.1 SPECIAL LUBRICATING OILS

### 504.11 Heavy Asphaltic Lubricating Oils

### 504.12 Lubricating Oils for Car Axle Generators

### 504.13 Journal Box Lubricating Oils

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Renovated Car Oil, M-904-40; 1940. Specifications for oil acceptable for use in journal box packing for freight and passenger cars, includes field samples, laboratory samples, properties and tests, and methods of analysis.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual Standard and Recommended Practice, 1944. New Car Oil. Specifications M-906-39; 1939. For saturating waste in journal box packing, free oiling, or as specified. Gives properties and tests, and test for tarry matter and insoluble impurities (dirt).

*References.*—Definitions, methods of sampling and of testing, *see* 502.2, 503.0, 504.0.

## 504.14 Mineral Lubricating Oils

*References.*—Definitions, methods of sampling and of testing, *see* 502.2, 503.0, 504.0; journal box oil, *see* 504.13; misc. lubricating oils, *see* 504.19; cylinder and engine oils, *see* 504.2; machine lubricating oils, *see* 504.3; paraffin oil, *see* 504.53; transformer and switch oils, *see* 504.8.

## 504.19 Miscellaneous Lubricating Oils

Assn. of American Railroads, Operations and Maintenance Dept., Engineering Div., Signal Section. Manual of Recommended Practice. Specification 102-40; 1941. Zero Fahrenheit Lubricating Oil; Summer Grade. For use in lubricating signal mechanism, not relays or dash pots, down to 0° F. Details for flash point, viscosity, pour, moisture, sulphur, and acid tests, and for labeling.

Assn. of American Railroads, Operations and Maintenance Dept., Engineering Div., Signal Section. Manual of Recommended Practice. Specification 103-40; 1941. 45 Degrees Below Zero Fahrenheit Lubricating Oil, Winter Grade. For low-temperature use in lubrication of signal mechanism; not to be used in oil dash pots. Oil to be free from animal or vegetable oils and fats; flash point, fire, viscosity, pour, acid, sulphur, and moisture test requirements.

U. S. Gov., Army Air Forces. Specification 3582A-2; 1944. Oil; Lubricating and Preservative.

U. S. Gov., Army Air Forces. Specification 3606; 1945. Oil; Low-Temperature Lubricating.

U. S. Gov., Army-Navy Aeronautical Specification AN-O-3—3; 1944. Oil; Low-Temperature Lubricating Gear.

U. S. Gov., Army-Navy Aeronautical Specification AN-O-4; 1943. Oil; Gyro Instrument Lubricating.

U. S. Gov., Army-Navy Aeronautical Specification AN-O-6a-2; 1945. Oil; General Purpose, Low-Temperature Lubricating.

U. S. Gov., Federal Specification VV-O-471; 1945. Oil; Lubricating, Car and Locomotive-Engine. Covers one grade. Gives general requirements, flash point, viscosity, pour point, water, neutralization number, and precipitation number; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification VV-O-526; 1943. Oil; Lubricating, Machine. Covers four grades designated by the numbers 8, 10, 20, and 30, and shall be a refined petroleum oil suitable for general lubrication of machinery. Gives requirements for viscosity, flash point, pour point, carbon residue, neutralization number, and corrosion; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Navy Dept. Specification 14 L 9; 1943. Lubricant; General-Purpose, No.1.

U. S. Gov., Navy Dept. Specification 14 L 10; 1943. Lubricant; General-Purpose, No.2.

U. S. Gov., Navy Dept. Specification 14 L 11; 1943. Lubricant; Water-pump, No.4.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 2-60D; 1943. Oil; Lubricating, Car and Locomotive Engine.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 2-120; 1944. Oil; Lubricating Preservative, Special.

*References.*—Definitions, methods of sampling and of testing, *see* 502.2, 503.0, 504.0.

## 504.2 CYLINDER OILS

### 504.21 Compressor Oils, for Air and for Ammonia Compressors

U. S. Gov., Federal Specification VV-O-581; 1934. Oil; Lubricating, Refrigerating-Machine. Suitable for the lubrication of the cylinders of refrigerating machines. Covers five grades—8, 10, 20, 30, and 40. Gives detail requirements; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

*References.*—Definitions, methods of sampling and of testing, *see* 502.2, 503.0, 504.0.

### 504.22 Engine Oils, for Steam Engine Cylinders and for Turbines

U. S. Gov., Federal Specification VV-O-541; 1935. Oil; Lubricating, Marine Engine, Compounded. Covers one grade, suitable for the lubrication of reciprocating steam engines in marine service. Gives detail requirements; methods of sampling, inspection and tests; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification VV-O-551; 1935. Oil; Lubricating, Marine Engine, Mineral. Covers one grade, suitable for the lubrication of reciprocating steam engines in marine service. Gives detail requirements; methods of sampling, inspection, and tests; and requirements for packaging, packing and marking for shipment.

U. S. Gov., Federal Specification VV-O-601; 1935. Oil; Lubricating, Steam-Cylinder, Compounded. Suitable for the lubrication of steam cylinders of noncondensing engines and pumps. Covers three grades—1, 2, and 3. Gives detail requirements; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification VV-O-611; 1935. Oil; Lubricating, Steam-Cylinder, Mineral. Suitable for the lubrication of noncondensing steam engine cylinders. Gives detail requirements; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification VV-O-661; 1934. Oil; Lubricating, Turbine, Dynamo, and High-Speed Steam Engine. Suitable for the lubrication of turbines, dynamos, and high-speed steam engines. Covers five grades—8, 10, 20, 25, and 30. Gives detail requirements; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

*References.*—Definitions, methods of sampling and of testing, *see* 502.2, 503.0, 504.0.

### 504.23 Cylinder Oils, for Internal Combustion Engines

U. S. Gov., Army Air Forces. Specification 3583; 1937. Oil Text (Lubricating)—Multi-Cylinder Engine, General Specification for.

U. S. Gov., Army Air Forces. Specification 3594; 1940. Oil; Lubricating, Class D (for Internal-Combustion Engines Other Than Aircraft and Diesel).

U. S. Gov., Army-Navy Aeronautical Specification AN-VV-O-446a; 1943. Oil; Lubricating, Aircraft-Engine.

U. S. Gov., Federal Specification VV-O-496; 1931. Oil; Lubricating, Class D (for Internal-Combustion Engines

and Other Than Aircraft and Diesel). Covers six grades designated by their S.A.E. (Society of Automotive Engineers) viscosity numbers from 20 to 70. Gives detail requirements; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification VV-O-511; 1934. Oil; Lubricating, Diesel Engine. Covers five grades, designated by numbers 20, 30, 40, 50, and 55. Gives detail requirements; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., Navy Dept. Specification 14-O-13a; 1944. Oil; Lubricating, Diesel-Engine.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 2-104B; 1943. Oil; Engine.

*References.*—Definitions, methods of sampling and of testing, *see* 502.2, 503.0, 504.0; auto engine crank-case oil, *see* 504.34.

### 504.24 Valve Oils

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Specification M-912-41; 1941. Triple Valve Oil. Covers oil for lubricating triple valves, service and emergency portion pistons, and all other pistons in the air brake equipment having bronze packing rings. Gives properties and tests, apparatus, procedure, packing, marking, rejection, and rehearing.

## 504.3 MACHINE OILS

### 504.31 Oils for Dynamos, Spindles, Pumps, Etc.

U. S. Gov., Federal Specification VV-O-581; 1934. Oil; Lubricating, Refrigerating-Machine. Suitable for the lubrication of the cylinders of refrigerating machines. Covers five grades—8, 10, 20, 30, and 40. Gives detail requirements; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

*References.*—Definitions, methods of sampling and of testing, *see* 502.2, 503.0, 504.0.

### 504.32 Machine-Gun Oil

U. S. Gov., U. S. Army, Ordnance Dept. Specification 2-27E; 1941. Oil; Lubricating, for Aircraft Instruments and Machine Guns.

*References.*—Definitions, methods of sampling and of testing, *see* 502.2, 503.0, 504.0.

### 504.33 Recoil and Recuperator Oils for Guns

U. S. Gov., U. S. Army, Ordnance Dept. Specification 2-36D; 1941. Oil; Recoil.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 2-77; 1930. Recoil Oil for Aircraft Machine Guns.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 2-96A; 1941. Oil; Recoil, Heavy.

*References.*—Definitions, methods of sampling, and of testing, *see* 502.2, 503.0, 504.0; recuperator grease, *see* 504.49.

### 504.34 Transmission and Crankcase Oil for Automobiles

Society of Automotive Engineers. 1944 Handbook, Section 3—Processed Materials. SAE Recommended Practice Crankcase Oil Classification. Revised, 1941. Covers viscosity number, viscosity range, general information, viscosity temperature charts, method for estimating viscosity, and temperatures for recommending crankcase oils.

Society of Automotive Engineers. 1944 Handbook, Section 3—Processed Materials. SAE Recommended Practice Transmission and Axle Lubricant Classification. Revised, 1940. Covers viscosity number, viscosity range, consistency, general information, viscosity, channeling, stability and oxidization resistance, solid matter, foaming, chemical activity, and corrosion and wear.

*References.*— Definitions, methods of sampling and of testing, *see* 502.2, 503.0, 504.0; engine oil for internal combustion engines. *see* 504.23.

### 504.35 Typewriter, Sewing Machine, and Clock Oils

National Assn. of Hosiery Manufacturers. Standard Stainless Lubricant for Knitting Machine, Mar. 1931. Specification for a stainless mineral oil for lubricating knitting and other machines used for the manufacturing of hosiery.

U. S. Gov., Federal Specification VV-O-836; 1942. Oil; Typewriter. Covers one grade of a well-refined, straight-run petroleum distillate. Suitable for lubrication of typewriters and similar mechanical devices and machines. Gives detail requirements; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 2-47A; 1944. Oil; Clock and Watch.

### 504.36 Oil for Door Closers and Door Checks

*References.*— Definitions, methods of sampling and of testing, *see* 502.2, 503.0, 504.0.

### 504.37 Hydraulic Oil

U. S. Gov., Army Air Forces. Specification 3586C; 1942. Fluid; Hydraulic (Castor Oil Base)

U. S. Gov., Army-Navy Aeronautical Specification AN-VV-O-366b-2; 1944. Oil; Hydraulic, Petroleum Base.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 2-79A; 1941. Oil; Hydraulic.

## 504.4 LUBRICATING GREASES

### 504.40 General Items

American Leather Chemists Assn. Methods of Sampling and Analysis. Hard Greases, 1938. Gives requirements for melting point, titer test, unsaponifiable, free fatty acids.

American Society for Testing Materials, D 128-40; 1940. American Petroleum Institute Standard, 501-40. American Standards Assn., Z11.16-1940. Methods of Analysis of Grease. For the determination of fillers, ash, soap bases, soap, fat, water, excess alkali or acid, petroleum products, and unsaponifiable matter. Method of sampling, reagents, two methods of procedure, apparatus, calculations, and report.

American Society for Testing Materials, D 566-42; 1942. American Petroleum Institute Standard, 543-42. American Standards Assn., Z 11.51-1943. Method of Test for Dropping Point of Lubricating Grease. Gives

definition, requirements for apparatus, procedure, and reproducibility of results.

American Society for Testing Materials, D 666-44; 1944. American Petroleum Institute Standard, 548-44. American Standards Assn., Z11.53; 1944. Method for Conversion of Kinematic Viscosity to Saybolt Furol Viscosity. Provides a means for converting kinematic viscosity in centistokes at 122° F. to Saybolt Furol viscosity in seconds at 122° F.

Anti-Friction Bearing Manufacturers Assn., Inc. Recommended by Annular Bearing Engineers Committee and National Lubricating Grease Instutute. (1) Tentative method for determination of low temperature torque characteristics of greases in antifriction bearings, (2) S.O.D. pressure-viscosimeter, (3) S.O.D. pressure-viscosimeter for low temperatures, (4) the measurement of low temperatures by thermal electric procedures.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, 1938. Grease; Mineral, Lubricating. Covers definition, manufacture and types of greases, uses, properties, packing, and specifications.

National Lubricating Grease Institute. Revised Norma—Hoffmann Oxidation Test for Greases, 1944. This method of test describes a procedure for determining the resistance to oxidation of lubricating greases when stored under static conditions for long periods of time; for example, when coated in thin films on antifriction bearings, on motor parts, or the like. Gives apparatus, describes procedure, and appendix covers precautions and oxidation storage test.

National Lubricating Grease Institute. Tentative Method for Determination of Performance Characteristics of Lubricating Grease in Anti-Friction Bearings at Elevated Temperatures, 1944. Covers the procedure to be used for evaluating the performance characteristics of lubricating grease in antifriction bearings intended for use at temperatures above 175° F. Gives apparatus, preparation of test bearing, assembly of bearings in test spindle, procedure A, procedure B, spindle disassembly, examination of bearings after disassembly, report form, significance and limitations of the high temperature performance test, and drawings.

## 504.41 Cup Greases

U. S. Gov., Federal Specification VV-G-681; 1934. Grease; Lubricating, Mineral. Suitable for lubrication of such parts of motor equipment and other machinery as are lubricated by means of compression cups and for use in roller and ball bearings. Covers three grades—soft, medium, and hard. Gives detail requirements; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

*References.*—Definitions, methods of sampling and of testing, *see* 504.0.

## 504.42 Cylinder Greases

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Specification M-914-42; 1942. Brake Cylinder Lubricant. Covers grease suitable for lubricating brake cylinder packing cups. Gives requirements for general properties and tests, physical properties and tests, packing and marking, rejection, and rehearing.

## 504.43 Gear, Chain, and Wire Rope Greases

American Mining Congress, Sponsor. Approved by American Standards Assn. as M11-1927. Wire Ropes for Mines. Includes lubrication and lubricant for wire ropes, recommendations as to general quality of lubricant.

U. S. Gov., Federal Specification VV-L-751; 1934. Lubricant; Chain and Wire-Rope. Covers one grade—suitable for the lubrication and protection of all heavy equipment. Gives detail requirements; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., Navy Dept. Specification 14L4; 1936. Lubricant; Gear.

U. S. Gov., U. S. Army, Army Air Forces. Specification 2-98; 1937. Lubricant; Gear, Retractable Landing Gear Mechanism.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 2-105A; 1944. Lubricant; Gear, Universal, Hypoid and Other Types.

*References.*—Definitions, methods of sampling and of testing, *see* 504.0; liquid lubricant for gear, chain, and wire rope, *see* 504.19.

## 504.44 Graphite Greases

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Specification M-913-41; 1941. Triple Valve Graphite. Covers graphite suitable for lubricating slide valves and graduating valves of triple valves and other air brake valves. Gives graphitic carbon, ash, free iron, fineness, determination of ash, free iron and fineness, packing, marking, rejection, and rehearing.

U. S. Gov., Army-Navy Aeronautical Specification AN-G-6—2; 1944. Grease; Lubricating, Graphite.

U. S. Gov., Federal Specification VV-G-671a; 1934. Amendment 1; 1942. Grease; Lubricating, Graphite. Covers three grades—soft, medium, and hard. Gives detail requirements; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., Treasury Dept., Procurement Div., No. 476; 1941. Graphite; Lubricating, Amorphous. Shall be of the natural or artificial variety, free from flake graphite, powdered coal, lampblack, carbon black, grit, oil, grease, or other deleterious material. Gives requirements for graphitic carbon, volatile carbon, and particle size; methods of sampling, inspection, and tests; and packaging, packing, and marking.

*References.*—Definitions, methods of sampling and of testing, *see* 504.0.

## 504.46 Crank-Pin, Driving-Journal, and Rod-Cup Greases

U. S. Gov., Federal Specification VV-G-651; 1934. Grease; Lubricating, Crank-Pin and Rod-Cup. Covers one grade. Gives detail requirements; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification VV-G-661; 1934. Grease; Lubricating, Driving-Journal. Covers one grade. Gives detail requirements; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

*References.*—Definitions, methods of sampling and of testing, *see* 504.0.

### 504.49 Miscellaneous Lubricating Greases

U. S. Gov., Army Air Forces. Specification 3560-F; 1945. Grease; High-Melting Point (Medium Grade).

U. S. Gov., Army-Navy Aeronautical Specification AN-G-3a-2; 1944. Grease; Low-Temperature, Lubricating.

U. S. Gov., Army-Navy Aeronautical Specification AN-G-4-3; 1944. Grease; Aluminum Soap.

U. S. Gov., Army-Navy Aeronautical Specification AN-G-5a; 1944. Grease; High-Temperature, Lubricating.

U. S. Gov., Army-Navy Aeronautical Specification AN-G-10-2; 1944. Grease; Extreme Pressure, Low-Temperature, Lubricating.

U. S. Gov., Army-Navy Aeronautical Specification AN-G-14; 1943. Grease; Gasoline and Oil-Resistant.

U. S. Gov., Navy Dept. Specification 14G7; 1944. Grease; Wool, Rope-Lubricant.

U. S. Gov., Navy Dept. Specification 14G11; 1942. Grease; Lubricating, Mineral.

U. S. Gov., Navy Dept. Specification 14L3b; 1936. Lubricant; Ball-and Roller-Bearing.

U. S. Gov., Navy Dept. Specification 14L5; 1936. Lubricant; Waterproof.

U. S. Gov., Navy Dept. Specification 14L6; 1939. Lubricant for Plug-Type Scupper Valves.

U. S. Gov., U. S. Army, Medical Dept. Specification 2-101; 1939. Grease; Lubricating, for Engine Handpieces, Dental.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 2-39C; 1924. Grease for Recoil Mechanisms.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 2-106; 1942. Grease; General Purpose, No. 0.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 2-107; 1942. Grease; General Purpose, No. 1.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 2-108; 1942. Grease; General Purpose, No. 2.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 2-109; 1942. Grease; Water Pump.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 2-110; 1942. Grease; Wheel-Bearing, Heavy Duty.

*References.*—Definitions, methods of sampling and of testing, *see* 504.0.

## 504.5 PARAFFIN, PARAFFIN OIL, AND PARAFFIN WAX

### 504.50 General Items

American Society for Testing Materials, D721-44; 1944. American Petroleum Institute Standard, 546-44. American Standards Assn., Z11.52-1944. Method of Test for Oil Content of Paraffin Wax. For the determination of the percentage of oil in paraffin wax having a melting point of 105° F. or higher and containing not more than 15 percent by weight of oil. Gives requirements for nature of test, apparatus, solvent, procedure, calculation, and reproducibility of results.

Natural Gasoline Assn. of America. Standard Table of Physical Constants for Paraffin Hydrocarbons.

### 504.51 Candles

U. S. Gov., Dept. of Agriculture, Forest Service. Specifications MSF-77-S. Candle; Smoke Chaser's Lantern (Plumber).

U. S. Gov., Federal Specification C-C-91; 1933. Candles. Covers two types—(I) stearic acid and (II) stearic acid and paraffin; and three classes for the latter type—(A) five per pound, (B) six per pound, and (C) ten per pound. Gives general and detailed requirements, properties and dimensions for both types; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

### 504.52 Illuminating Wax

### 504.53 Paraffin Oils

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Chlorinated Paraffin (Chlorocosane). Gives chemical composition, description, miscibility, specific gravity, identification, ash, acids or alkalies, free chlorine, chloride, completeness of chlorination, and storage.

U. S. Gov., U. S. Army, Chemical Warfare Service. Specification 4-503-127A; 1940. Paraffin; Chlorinated.

U. S. Gov., U. S. Army, Medical Dept. Specification 4-1114A; 1944. Paraffin; Refined for Histological, Pharmaceutical, and Dental Use.

*References.*—Definitions, methods of sampling and of testing, *see* 502.2, 503.0, 504.0; petrolatum, *see* 504.6.

### 504.54 Paraffin Wax

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Paraffin. Gives chemical composition, description, solubility, identifications, melting point, carbonizable substances, reaction, and storage.

American Society for Testing Materials, D 87-42; 1942. American Petroleum Institute Standard, 513-42. American Standards Assn., Z11.4-1942. Method of Test for Melting Point of Paraffin Wax. Definition of A. S.T.M. paraffin wax melting point, dimensions and design of test apparatus, and outline of test.

American Society for Testing Materials, D 612-43; 1943. American Petroleum Institute Standard, 544-43. American Standards Assn., Z 11.50-1943. Method of Test for Carbonizable Substances in Paraffin Wax. Applicable to paraffin wax to ascertain whether it conforms to the standard of quality required for pharmaceutical use. Gives requirements for apparatus, reagents, procedure, and interpretation of results.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, Volume 2; 1944. Paraffin Wax. Covers definition, derivation, constants, solubility, grades, uses, containers and shipping, and substitutes.

New York Produce Exchange. Vegetable Oils, Waxes, and Fats, 1924. Paraffin Wax. White crude wax sold on basis of 2 percent oil and moisture content; yellow crude wax sold on basis of 4 percent oil and moisture content; and refined paraffin wax sold on basis of melting point.

Toilet Goods Assn., Inc. Specification No.7; 1941. Petroleum Wax; Crystalline. Gives requirements for

color, odor, fracture, solubility, melting point, melting range, carbonizable impurities, free acids and alkalis, sulfur and sulfides, ash, arsenic, and lead.

Toilet Goods Assn., Inc. Specification No.8; 1941. Petroleum Wax; Amorphous. Gives requirements for color, odor, fracture, solubility, melting point, melting range, free acids and alkalis, sulfur and sulfides, ash, arsenic, and lead.

U. S. Gov., Federal Specification VV-P-121; 1942. Wax; Paraffin. Covers three types—(I) fully refined, (II) semirefined, and (III) white crude scale. Gives requirements for melting point, color, odor, taste, oil, and moisture; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Federal Specification JJJ-W-141; 1942. Wax; Carnauba. Covers two grades—(1) yellow-green and (2) commercial "No.3 North Country." Gives detail requirements; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., U. S. Army, Chemical Warfare Service. Specification 4-503-127B; 1943. Paraffin; Chlorinated.

*References.*—Definitions, methods of sampling and of testing, *see* 504.0.

## 504.6 PETROLATUM

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Emulsion of Liquid Petrolatum with Phenolphthalein. Gives chemical composition, storage, alcohol content, preparation, and average dose.

American Society for Testing Materials, D 127-30; 1930. American Petroleum Institute Standard, 523-30. American Standards Assn., Z11.22-1932. Method of Test for Melting Point of Petrolatum. Describes apparatus and test procedure for determination of the melting point temperature at which petrolatum is sufficiently fluid to drop from the thermometer under prescribed conditions.

American Society for Testing Materials, D 155-39 T; 1939. Tentative Method of Test for Color of Lubricating Oil and Petrolatum by Means of A.S.T.M. Union Colorimeter. Gives description of special colorimeter, lists glass color standards and procedures for light and for dark lubricating oils and petrolatum.

American Society for Testing Materials, D565-43; 1943. American Petroleum Institute Standard, 545-43. American Standards Assn., Z11.49-1943. Method of Test for Carbonizable Substances in White Mineral Oil (Liquid Petrolatum). Test for conformity to standard of quality required for pharmaceutical use. Gives apparatus, reagents, procedure, and interpretation of results.

Assn. of American Railroads, Operations and Maintenance Dept., Engineering Div., Signal Section. Manual of Recommended Practice. Specification 77-41; 1942. Insulating Compound for Use in Impedance Bonds. Includes requirements for material and workmanship, physical characteristics, inspection, tests, packing, marking, and warranty.

Toilet Goods Assn., Inc. Specification No. 6; 1941. Petrolatum. Gives requirements for color, odor, taste, solubility, viscosity, melting point, specific gravity, ash, saponifiable matter, free acids and alkalis, sulfur and sulfides, arsenic, and lead.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Light Liquid Petrolatum (Light Liquid Paraffin, Light White Mineral Oil). Viscosity, specific gravity and other tests, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Liquid Petrolatum (Liquid Paraffin, White Mineral Oil, Heavy Liquid Petrolatum). Description, solubility, specific gravity, viscosity, carbonizable substances, reaction, solid paraffin, sulfur compounds, and storage. U.S. P. product of liquid petrolatum-Emulsum Petrolati Liquidi.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Petrolatum (Petroleum Jelly). Description, solubility, specific gravity, melting point, ash, organic acids, alkali, mineral acids, fixed oils, fats or rosin, consistency, color, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. White Petrolatum (White Petroleum Jelly). Description, color, other tests, and storage.

U. S. Gov., Army-Navy Aeronautical Specification AN-P-51-1; 1944. Petrolatum.

U. S. Gov., Navy Dept. Specification 14P1c; 1934. Petrolatum.

U. S. Gov., Treasury Dept., Procurement Div., 479A; 1943. Petrolatum; Technical Grade. Shall be in one type and in one grade. Gives requirements for melting point, flash point, penetration, evaporation loss, neutralization number, precipitation number, odor, corrosion, reaction, and abrasion; methods of sampling, inspection, and test; and packaging, packing, and marking.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 2-67A; 1940. Petrolatum (for Lubrication of Ordnance Materiel).

U. S. Gov., U. S. Army, Ordnance Dept. Specification 50-11-34A; 1938. Petroleum Jelly, for Use in Smokeless Powder.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 50-11-37A; 1938. Grease; Shell.

*References.*—Definitions, methods of sampling and of testing, *see* 502.2, 503.0, 504.0; liquid petrolatum, *see* 504.53.

## 504.7 CUTTING OILS

U. S. Gov., Federal Specification VV-O-251; 1934. Oil; Cutting, Mineral-Lard. Covers two grades—1 and 2; suitable as a cutting oil and coolant for machine cutting tools. Gives Detail requirements; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification VV-O-261; 1934. Amendment 1; 1934. Oil; Cutting, Soluble. Covers one grade, suitable for use as a coolant and lubricant for cutting and threading tools. Gives detail requirements; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., Navy Dept. Specification 14011a; 1939. Oil; Cutting, Mineral-Lard, Sulfur-Treated.

U. S. Gov., Treasury Dept., Procurement Div., No. 469; 1941. Oil; Cutting, Mineral-Lard, Sulfur-Treated. Covers a clean and homogeneous solution of well refined oil; shall not deposit gum on machinery or parts with use, nor shall separation of fatty or mineral oils occur at working temperatures. Gives requirements for color, specific gravity, water, flash point, pour point, viscosity, saponifiable oil content, neutralization number, and sulfur; methods of sampling, inspection, and tests; and packaging, packing, and marking.

*References.*—Definitions, methods of sampling and of testing for lubricating oils, *see* 504.0; definitions, methods of sampling and of testing for animal oils and fats, *see* 040; other lard oils, *see* 041.3.

### 504.8 TRANSFORMER AND SWITCH INSULATING OILS

American Society for Testing Materials, D 94-44; 1944. American Petroleum Institute Standard, 547-44. American Standards Assn., Z11.20-1944. Method of Test for Saponification Number of Petroleum Products by Color-Indicator Titration. The method is applicable to new and used petroleum oils including electrical insulating oils and to mixtures of fats and mineral oils. Gives definition, principle of method, apparatus, reagents, blank determinations, sample, procedure, calculation, identification of fat, and reproducibility of results.

American Society for Testing Materials, D117-43; 1943. American Standards Assn., C 59.2-1944. Methods of Testing Electrical Insulating Oils. Apply to oils for use in transformers, oil circuit-breakers, and similar apparatus as an insulating or cooling medium. Gives requirements for sampling, specific gravity, color, viscosity, flash point, pour point, neutralization number, saponification number, sludge, mineral acids, free and corrosive sulfur, steam emulsification test, dielectric strength, and report.

American Society for Testing Materials, D 670-42 T; 1942. Tentative Methods of Test for Sludge Formation in Mineral Transformer Oil. Applicable in the evaluation of the sludge forming tendency in new mineral transformer oils.

Assn. of American Railroads, Operations and Maintenance Dept., Engineering Div., Signal Section. Manual of Recommended Practice. Specification 46-41; 1942. Transformer Oil. Includes requirements for color, flash, fire, pour point, viscosity, acidity, alkali, water, free sulphur and chlorides, dielectric strength, inspection, tests according to current methods of American Society for Testing Materials, packing, marking, and warranty.

U. S. Gov., Federal Specification VV-O-401; 1942. Oil; Insulating (for Transformers, Switches, and Circuit Breakers). Covers one grade. Gives requirements for physical and chemical characteristics; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., Navy Dept. Specification 14-O-12b; 1943. Oil; Transformer.

*References.*—Definitions, methods of sampling and of testing, *see* 502.2, 503.0, 504.0.

### 504.9 MISCELLANEOUS OILS

American Society for Testing Materials, D 665-44 T; 1944. Tentative Method of Test for Rust-Preventing Characteristics of Steam-Turbine Oil in the Presence of Water. Intended to indicate the ability of steam-turbine oils, including those used for steam-turbine gears, to aid in preventing the rusting of ferrous parts should water become admixed with the oil.

National Assn. of Wool Manufacturers. Specification P-1; 1941. Refined Mineral Oil. Gives requirements for flash point, viscosity at 100° F., pour, color, neutralization number, saponification number, evaporation loss, and light stability.

Society of Automotive Engineers. Aeronautical Material Specification No. 3070; 1942. Oil Corrosion Preventive (Carburetor Slushing). A refined petroleum oil suitable for protecting the interior of carburetors from corrosion during shipment and storage. Includes requirements for quality, physical properties, tests, reports, identification, approval, and rejections. Similar to U. S. Gov., Navy Dept., Bureau of Aeronautics Specification AN-VV-O-446, grade 1065A.

U. S. Gov., Army Air Forces. Specification 3604; 1944. Oil; Corrosion-Preventive, Soluble.

U. S. Gov., Army Air Forces. Specification 3605; 1944. Oil; Preservative, for Hydraulic Equipment.

U. S. Gov., Federal Specification P-O-361; 1938. Oil; Floor, Mineral. Covers one type and one grade. Gives requirements for viscosity, flash point, color, pour point, and saponification number; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

*References.*—Castor oil for medicinal purposes, *see* 813.1; cottonseed oil, *see* 142.4.

## 505. ASPHALT AND OTHER BITUMINOUS MATERIALS

### 505.0 GENERAL ITEMS

American Assn. of State Highway Officials, T41-35. Standard Method of Sampling Bituminous Mixtures. In selecting samples of bituminous paving mixtures the most applicable method should be used. Gives details for sampling at place of manufacture and for sampling at point of delivery.

American Assn. of State Highway Officials, T43-35. Standard Method of Test for Specific Gravity of Bituminous Materials. The specific gravity of bituminous materials shall be expressed preferably at the ratio of the weight of a given volume of the material at 25° C. (77° F.) Gives details for hydrometer method used for thin fluid bitumens, pycnometer method used for viscous fluid and semisolid bitumens and emulsions, displacement method used for semisolids, and displacement method used for hard, solid bitumens.

American Assn. of State Highway Officials, T44-42. Standard Method of Test for Determination of Bitumen. Gives scope, apparatus, preparation of sample, preparation of crucible, and procedure for method No. 1 and method No. 2.

American Assn. of State Highway Officials, T46-35. Standard Method of Test for Percentage of Bitumen Insoluble in Paraffin Naphtha. Gives details for method of procedure.

American Assn. of State Highway Officials, T54-35. Standard Method of Test for Specific Viscosity (Engler). The viscosity of fluid bituminous road materials may be determined at any suitable temperature by means of the Engler viscosimeter. Gives details for this process.

American Assn. of State Highway Officials, T58-37. Standard Methods of the Determination of the Percentage of Bitumen in Bituminous Mixtures. Gives detailed procedure for centrifugal method and for method for examination of bituminous mortars and sheet asphalt.

American Assn. of State Highway Officials, T77-38. Standard Method of Sampling and Testing Premolded Asphalt Plank. Gives sampling, inspection, absorption test, brittleness test, indentation test, and mineral surfacing test.

American Assn. of State Highway Officials, T101-42. Standard Methods of Determining Swell Characteristics of Aggregates When Mixed With Bituminous Materials. These methods provide for the determination of the swell characteristics of dense-graded bituminous mixtures and aggregates used in such mixtures. Gives apparatus, bituminous binder, procedure, measuring, immersion, calculation of results, and report.

American Assn. of State Highway Officials, T102-42. Standard Method of Spot Test of Asphaltic Materials. This method is applicable only to asphaltic products derived from petroleum and should not be applied to natural asphalts containing nonbituminous matter insoluble in xylene. Gives materials, apparatus, samples, procedure, procedure in disputed cases, and xylene equivalents.

American Assn. of State Highway Officials, T109-42. Standard Method of Test for Settlement Ratio of Mineral Matter in Bituminous Filler. This method of test is used as a measure of the rate at which mineral matter in mixtures of asphalt and mineral matter will settle when maintained without agitation at a temperature of 325° F. Gives apparatus, sample, procedure, and results.

American Assn. of State Highway Officials, T110-42. Standard Method for Determination of Moisture or Volatile Distillates in Bituminous Mixtures. This method may be used for determination by direct measurement of moisture or volatile fractions of the bitumen in bituminous mixtures. Gives apparatus, samples, and procedure.

American Assn. of State Highway Officials, T111-42. Standard Method of Test for Inorganic Matter or Ash. Intended for the determination of mineral matter in solid, semisolid, or liquid bitumens. Gives apparatus, preparation of sample, procedure, and calculations.

American Society for Testing Materials, D4-42; 1942. American Standards Assn., A 37.3-1943. Method of Test for Determination of Bitumen. Intended for the determination of bitumen in materials containing at least 25 percent bitumen. Covers apparatus, preparation of sample, preparation of Gooch crucible, methods of procedure, calculation, and report.

American Society for Testing Materials, D 5-25; 1925. American Assn. of State Highway Officials, T 49-42. American Standards Assn., A37.1-1930. Method of Test for Penetration of Bituminous Materials. Dimensions and construction of container and needle, water bath standard temperature, preparation of sample, test procedure.

American Society for Testing Materials, D 6-39 T; 1939. American Assn. of State Highway Officials, T 47-42. Tentative Method of Test for Loss on Heating of Oil and Asphaltic Compounds. For loss of weight (exclusive of water) when heated in special apparatus described, preparation of sample, and method of procedure.

American Society for Testing Materials, D 8-33; 1933. Definitions of Terms Relating to Materials for Roads and Pavements. Covers bituminous materials such as emulsion, cut-back, asphalts, coal tar and pitch, terms relating to tests, nonoituminous materials, etc.

American Society for Testing Materials, D 36-26; 1926. American Standards Assn., A 37.10-1943. American Assn. of State Highway Officials, T 53-42. Method of Test for Softening Point of Bituminous Materials (Ring-and-Ball Method). Gives dimensions and design of ring, steel ball, container, and thermometer; method of preparing sample, rate of heating, permissible variations, modifi ions for hard materials, and precautions to be observed.

American Society for Testing Materials, D 61-38; 1938. Method of Test for Softening point of Tar Products (Cube-in-Water Method). For arbitrary method applicable to pitches softening under 176° F., including hard and soft pitches, description of apparatus, preparation of sample, and test methods.

American Soceity for Testing Materials, D 70-27; 1927. Method of Test for Specific Gravity of Road Oils, Road Tars, Asphalt Cements, and Soft Tar Pitches. Requirements for pycnometer or weighing bottle, size and weight, and ratio of weight of fluid to that of distilled water, with precautions to be observed.

American Society for Testing Materials, D 71-27; 1927. Method of Test for Specific Gravity of Asphalts and Tar Pitches Sufficiently Solid To Be Handled in Fragments. For determination by use of an analytical balance equipped with a pan straddle or other stationary support. Preparation of test specimen and method of procedure.

American Society for Testing Materials, D 92-33; 1933. American Assn. of State Highway Officials, T 48-42. American Petroleum Institute Standard, API 511-33. American Standards Assn., Z11.6-1933. Method of Test for Flash and Fire Points by Means of Open Cup. For all petroleum products except fuel oils and those having an open cup flash below 175° F. Includes description of Cleveland open cup, heating plate, and procedure for flash and fire points.

American Society for Testing Materials, D 95-40; 1940. American Petroleum Institute Standard, 519-40. American Assn. of State Highway Officials, T 55-42. American Standards Assn., Z11.9-1940. Method of Test for Water in Petroleum Products and Other Bituminous Materials. Especially applicable to petroleum, fuel oil, road oil, coal tar, water-gas and coke oven tars, etc. Determination of water by distilling sample with volatile solvent, dimensions and design of still, distillation requirements for solvents, test procedure.

American Society for Testing Materials, D 113-44; 1944. American Assn. of State Highway Officials, T 51-44. American Standards Assn., A 37.11; 1944. Method of Test for Ductility of Bituminous Materials. For measurement of elongation before rupture at standard temperature and specified speed; gives requirements for apparatus, molding test specimen, and tensile test method.

American Society for Testing Materials, D139-27; 1927. American Assn. of State Highway Officials, T 50-42. American Standards Assn., A37.2-1930. Method of Float Test for Bituminous Materials. Weight and dimensions of aluminum float and brass collar, assembly of apparatus, design and graduation of thermometer, preparation of sample, and test procedure for asphalt products and for tar products.

American Society for Testing Materials, D 140-41T; 1941. American Assn. of State Highway Officials, T 40-42. Tentative Methods of Sampling Bituminous Materials. Samples may be taken either (a) to represent as nearly as possible an average of the bulk of the material sampled or (b) to ascertain the maximum variation in characteristics which the material may possess. Protection and preservation, time and place, sizes of samples, containers; sampling under pressure, under gravity flow, from tank cars, barrels, drums, and cakes for solid, semisolid, and liquid materials, and for crushed fragments.

American Society for Testing Materials, D 147-41; 1941. Methods of Testing Bituminous Mastics, Grouts, and Like Mixtures. Definitions of bituminous grout, asphalt mastic, and asphalt mastic cake; preparation of samples, description of extraction apparatus for small and for large samples, test procedures for analysis of 10 to 30 gm. and 50 to 500 gm. samples, recovery and examination of extract bitumen, and solubility of aggregate in hydrochloric acid. A.S.T.M. Emergency Alternate Provision, EA-D 147; 1941, affected section 3, apparatus.

American Society for Testing Materials, D165-42; 1942. American Assn. of State Highway Officials, T 45-42. American Standards Assn., A 37.12; 1943. Method of Test for Proportion of Bitumen Soluble in Carbon Tetrachloride. Covers apparatus required, preparation of sample, outline of procedure, and calculation of percentage.

American Society for Testing Materials, D243-36; 1936. American Assn. of State Highway Officials, T 56-42. American Standards Assn., A 37.13-1943. Method of Test for Residue of Specified Penetration. Applies to specified penetration of residue obtained by heating road oil or semisolid asphalt at 249° to 260° C. Describes apparatus necessary, sample, procedure, precautions, and reproducibility of results.

American Society for Testing Materials, D 244-42; 1942. American Assn. of State Highway Officials, T 59-42. Methods of Testing Emulsified Asphalt. For examination of emulsions composed principally of a semisolid or liquid asphaltic base, water, and emulsifying agent. Requirements for determination of viscosity, distillation test, determination of water, settlement, demulsibility, sieve test, coating test, freezing test, penetration of residue, solubility of residue, ductility of residue, specific gravity, and ash in residue.

American Society for Testing Materials, D 255-28; 1928. Method of Test for Steam Distillation of Bituminous Protective Coatings. General method for the separation and recovery of the solvent and base in bituminous mixtures, description and assembly of apparatus, and outline of procedure.

American Society for Testing Materials, D 270-33; 1933. American Petroleum Institute Standard, 528-33. American Standards Assn., Z11.33-1935. Methods of Sampling Petroleum and Petroleum Products. Includes all petroleum products except gases. Requirements for experienced personnel and description of apparatus; for bottle or beaker sampling of tank cars and trucks; and shore, ship, or barge tanks; continuous sampling of pipe lines, dipper sampling of streams; thief sampling of cans, drums, and tank cars; borings sampling of wax, soft solids in cases, cakes, bags, or barrels; and grab sampling of lumpy material in bins, bunkers, sacks, and barrels.

American Society for Testing Materials, D 313-41; 1941. Method of Test for Coarse Particles in Mixtures of Asphalt and Mineral Matter. Covers the procedure for determining the amount of particles of mineral or other insoluble matter in asphaltic mixtures that are retained upon a No.200 (74-micron) sieve. Sampling, preparation of sample, apparatus, procedure, and calculation.

American Society for Testing Materials, D 446-39; 1939. American Petroleum Institute Standard, 534-39. American Standards Assn., Z11.46-1941. Method for Conversion of Kinematic Viscosity to Saybolt Universal Viscosity. Includes table of values and equation for converting kinematic viscosity in centistokes at any temperature to Saybolt viscosity in seconds at the same temperature.

American Society for Testing Materials, D 529-39T; 1939. Tentative Recommended Practice for Accelerated Weathering Test of Bituminous Materials. For simulating extreme outdoor exposure, description of apparatus, intensity of light, temperature control, refrigeration temperature, test specimen, cycles for cold, water, light exposure, and determination of extent of weathering.

American Society for Testing Materials, D 567-41; 1941. American Petroleum Institute Standard, 540-41. American Standards Assn., Z11.45-1941. Method for Calculating Viscosity Index. Provides a means for calculating the viscosity index of a petroleum product or lubricant from its viscosity at 100° and 210° F. Gives definition, formulas and tables, calculation, reproducibility, and tables showing values.

American Society for Testing Materials, D 762-44 T; 1944. Tentative Method of Test for Hot Extraction of Asphaltic Materials and Recovery of Bitumen by the Modified Abson Procedure. Covers the procedure for the extraction of benzol soluble bitumen from asphaltic mixtures, the removal of mineral matter from the solution, and the recovery of the bitumen from solution in sufficient quantity for further testing. Gives apparatus, reagents, sample, and procedure.

American Society for Testing Materials, E 28-42 T; 942. Tentative Method of Test for Softening Point Ball and Shouldered Ring Apparatus). Applicable to asphalts, tars, pitches, rosins, and most resins,

both natural and synthetic. Apparatus, preparation of sample, procedure, softening point, precautions, and reproducibility of results.

National Fire Protection Assn. National Fire Codes for Flammable Liquids, Gases, Chemicals, and Explosives, 1943. Flash Point Test-Pensky-Martens Closed Cup Tester. For determining the flash point of fuel oils, cut-back asphalts, and other viscous materials, and suspensions of solids. Describes apparatus, procedure, flash point, barometric pressure, and reproducibility of results.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R4-36; 1936. Asphalt. This recommendation establishes grades of asphalt for paving purposes as determined by penetration limits. It defines the range of asphalt used in the construction of sheet asphalt, asphaltic concrete, asphalt-macadam pavements, surface treatment, and for joint filler or for preparation of joint filler for various types of construction. Initiated by the Asphalt Institute.

## 505.1 ASPHALTS

### 505.10 General Items

### 505.11 Native Asphalt

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, Volume 2; 1944. Gilsonite. Covers definition, constants, solubility, derivation, grades, uses, substitutes, and shipping.

U. S. Gov., Federal Specification SS-A-706a; 1940. Asphalt (for Use in) Road and Pavement Construction. Covers 24 grades and types. Gives requirements for physical and chemical properties; methods for sampling and testing; and requirements for packing and marking for shipment.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 50-11-74; 1939. Asphaltum, Gilsonite.

*References.*—Definitions, methods of sampling and of testing, *see* 502.2, 505.0.

### 505.12 Asphalt, Pavement

*References.*—Asphalt pavements, *see* 518.37.

### 505.13 Asphalt Cement

American Assn. of State Highway Officials, M20-42. Standard Specifications for Asphalt Cement (prepared from petroleum). For penetration grades 30-40, 40-50, 50-60, 60-70, 70-85, 85-100, 100-120, 120-150, 150-200. Gives scope, general requirements, properties and tests, and methods of sampling and testing.

American Assn. of State Highway Officials, M22-42. Standard Specifications for Asphalt Cement (prepared from Trinidad Lake asphalt). For penetration grades 30-40, 40-50, 50-60, 60-70, 70-85, 85-100, 100-120, 120-150, 150-200. Gives scope, general requirements, properties and tests, methods of sampling and testing, and table showing physical properties of various grades.

American Public Works Assn. Specification for Pavement Foundation of Asphaltic Concrete, B-5; 1936. Includes asphalt cement requirements for homogenous, water-free, nonfoaming mixture; specific gravity, flash point, penetration, ductility, loss on heating, bitumen soluble in carbon tetrachloride, sampling, and tests using A.S.T.M. methods.

American Public Works Assn. Specification for Sheet Asphalt Pavement, G1-36; 1936. Includes asphalt cement requirements; for homogeneous, water free, nonfoaming mixture; penetration, ductility, loss on heating, flash point, and bitumen soluble in carbon tetrachloride, with tests in accordance with A.S.T.M. methods.

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering. Specifications for Buildings for Railroad Purposes: Asphalt Mastic Floors and Asphalt Block Floors. Gives requirements for asphaltic cement.

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering. Specifications for Buildings for Railroad Purposes: Sheet Asphalt Pavements; Asphalt Block Pavements; and Asphalt Macadam Pavements. Gives requirements for asphaltic cement.

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering. Specifications for Membrane Waterproofing. Gives requirements for plastic cement.

Asphalt Institute. Construction Series 64; 1942. Asphalt Cements. Shall be prepared by the refining of petroleum, and no mineral filler other than that naturally contained in the asphalt shall be present. Includes flash point, penetration of original sample, loss on heating, penetration after loss on heating, ductility, and solubility in carbon tetrachloride.

U. S. Gov., Federal Specification SS-C-153; 1933. Cement; Bituminous, Plastic. Covers two types—(I) asphaltic base and (II) coal-tar base. Composed of an inorganic filler, a solvent, and a nonvolatile bituminous binder. Gives requirements for material and physical properties; methods of sampling and testing; and requirements for packaging, packing, and marking.

U. S. Gov., Treasury Dept., Procurement Div., No. 276; 1938. Cement; Bituminous, Plastic, Special-Asphaltic-Base (for Vertical Surfaces). Shall be one type and grade, composed of a suitable inorganic filler, a suitable solvent, and a nonvolatile bituminous binder. The binder shall be mainly asphaltic. Gives requirements for nonvolatile matter, inorganic filler, workability, heat and cold test, joint test, and strain test; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., Treasury Dept., Procurement Div., No. 278; 1938. Cement; Bituminous, Plastic Vegetable-Oil-Pitch-Base. Covers one type and one grade. Cement shall be composed of a suitable inorganic filler, suitable solvent, and a nonvolatile bituminous binder. The binder shall be mainly a vegetable-oil-pitch. Intended for use in repairs of roofs, walls, and foundations and as an expansion joint and caulking material. Gives requirements for nonvolatile matter, inorganic filler, workability, heat and cold test, joint test, strain test, and bleeding test; methods of sampling, inspection, and tests; and packaging and marking.

*References.*—Definitions, methods of sampling and of testing, *see* 502.2, 505.0.

## 505.14 Oil Asphalt

American Assn. of State Highway Officials, M81-42. Standard Specifications for Cut-Back Asphalt. Covers liquid petroleum products, produced by flushing an asphaltic base with suitable light volatile solvent, to be used in the treatment of road surfaces. Gives general requirements, properties and tests, methods of sampling and testing, and table showing physical requirements for various grades.

American Assn. of State Highway Officials, M82-42. Standard Specifications for Cut-Back Asphalt. Covers liquid petroleum products, produced by flushing an asphaltic base with suitable distillates, to be used in the treatment of road surfaces. Gives general requirements, properties and tests, methods of sampling and testing, and table showing physical requirements for various grades.

American Public Works Assn. Specification for Modified Asphalt Macadam Pavement, G7-36; 1936. Cut-back asphalt requirements as to Furol viscosity, distillation range, ductility of residue, penetration, bitumen soluble in carbon disulfide; using A.S.T.M. methods of test.

American Society for Testing Materials, D41-41; 1941. American Assn. of State Highway Officials, M116-42. Primer for Use With Asphalt in Dampproofing and Waterproofing. Cover asphaltic primer for application to concrete or masonry surfaces, for use with asphalt in dampproofing and waterproofing. Viscosity, distillation, residue penetration ranges, directions for sampling, and methods of testing.

American Society for Testing Materials, D 402-36; 1936. American Assn. of State Highway Officials, T 78-42. Method of Test for Distillation of Cut-Back Asphaltic Products. For separation of volatile and nonvolatile portions of cut-back asphalt; requirements for apparatus with details as to design and assembly, preparation of sample and dehydration, and outline of procedure.

American Society for Testing Materials, D 597-40T; 1940. Tentative Specifications for Cut-Back Asphalt (Rapid Curing Type). Covers liquid petroleum products, produced by fluxing asphalt base with volatile solvent for treatment of road surfaces. Requirements for six grades including uses, flash point, viscosity, distillation range, penetration, ductility, and gives methods of testing.

American Society for Testing Materials, D 598-40T; 1940. Tentative Specifications for Cut-Back Asphalt (Medium Curing Type). Covers liquid petroleum products, produced by fluxing an asphalt base with suitable distillates for treatment of road surfaces. Includes requirements for six grades based on uses, viscosity, flash point, distillation range, penetration, ductility, and gives tests.

U. S. Gov., Federal Specification SS-A-701; 1933. Asphalt-Primer; (for) Roofing and Waterproofing. Covers one type, of an asphaltic base thinned to suitable brushing consistency with a volatile solvent. Gives requirements for asphaltic base and solvent; methods of sampling and testing; and requirements for packaging, packing, and marking.

U. S. Gov., Federal Specification SS-A-706b; 1943. Asphalt (for Use in) Road and Pavement Construction. Shall be asphalts prepared by the distillation of asphaltic petroleum or by the fluxing of hard native Trinidad asphalt with a suitable petroleum flux. Covers nine types of petroleum asphalt and nine types of fluxed Trinidad asphalt. Gives details for each type including specific gravity, flash point, softening point, penetration at 25° C., ductility at 25° C., loss at 163° C., bitumen (soluble in carbon disulphide), and uniformity; methods of sampling and testing; and packing and marking for shipment.

*References.*— Definitions, methods of sampling and of testing, *see* 502.2, 505.0; asphalt emulsion, *see* 505.19.

## 505.15 Asphalt and Other Bituminous Fillers

American Assn. of State Highway Officials, M18-42. Standard Specifications for Oil Asphalt Filler. Gives scope, general requirements, properties and tests, methods of sampling and testing, and table showing physical properties of grades A and B.

American Assn. of State Highway Officials, M33-42. Standard Specifications for Preformed Expansion Joint Filler for Concrete (Bituminous Type). Gives scope, general requirements, dimensions, sampling, and methods of testing.

American Assn. of State Highway Officials, M59-42. Standard Specifications for Preformed Expansion Joint Filler for Concrete (Bituminous Fiber Type). Gives scope, general requirements, dimensions, properties, sampling, and methods of testing.

American Assn. of State Highway Officials, M89-42. Standard Specifications for Mixed Asphalt and Mineral Filler. Gives scope, general requirements, mineral filler, fineness of mineral filler, properties of mixture, and methods of sampling and testing.

American Assn. of State Highway Officials, T42-42. Standard Method of Test for Preformed Expansion Joint Filler for Concrete. Gives scope, absorption, brittleness, distortion, preparation of test specimens, expansion in boiling water, recovery and compression, extrusion, boiling in hydrochloric acid, accelerated weathering tests, and weight per cubic foot.

American Public Works Assn. Specification for Vitrified Brick Pavement, D1-36. Includes requirements for asphalt filler as to specific gravity, water, foaming, flash point, melt point, penetration ductility, loss on heating, bitumen soluble in carbon disulfide and in carbon tetrachloride, tests in accordance with A.S.T.M. methods. Also includes requirements for tar or cut-back asphalt bituminous material used in preparation of mastic cushion. Adopted by National Paving Brick Assn.

American Public Works Assn. Specification for Portland Cement Concrete Pavement, F1-39; 1939. Gives requirements for premolded joint fillers consisting of cane or other fiber and asphalt, tolerances, asphalt properties, weight, absorption, brittleness, distortion, deflection, and extrusion; poured-in-place joint fillers, properties of asphalt, mastic type filler, etc.

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering. Specifications for Buildings for Railroad Purposes: Brick Pavements and

Floors. Gives requirements for bituminous mastic cushion and applying asphalt filler.

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering. Specifications for Buildings for Railroad Purposes: Creosoted Wood Block Pavements and Wood Block Floors. Gives requirements for bituminous paint coat and bituminous mastic cushion for laying blocks.

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering. Specifications for the Construction of Monolithic Concrete Crossings. Gives requirements for rail fillers,—premoulded bituminous fillers and poured bituminous fillers.

American Society for Testing Materials, D 112-30; 1930. Coal-Tar Pitch for Stone Block Filler. Gives requirements for allowable water, softening point, distillation test, specific gravity, ductility, total bitumen, and applicable A.S.T.M. methods of testing.

American Society for Testing Materials, D 170-41; 1941. Bituminous Grout for Use in Waterproofing Above Ground Level. For use in protective covering of membrane waterproofing, or for bedding brick, or filling joints, or flooding surfaces of brick protective covering; also suitable for waterproofing railroad bridges, culverts, subways, etc. Properties, bituminous binder, mineral aggregate, and methods of testing.

American Society for Testing Materials, D 171-41; 1941. Bituminous Grout for Use in Waterproofing Below Ground Level. Suitable for protective covering of membrane waterproofing, or for bedding brick, or filling joints, or flooding of surface of brick protective covering; also for use in waterproofing tunnels, subways, etc. Properties, bituminous binder, mineral aggregate, and methods of testing.

American Society for Testing Materials, D 241-43; 1943. Asphalt Filler for Brick Pavements. Includes two grades based on foaming temperatures—(A) 350° F. and (B) 446° F. Gives requirements for softening point, flash point, penetration, ductility, loss on heating, bitumen soluble in carbon disulfide, and bitumen soluble in carbon tetrachloride.

American Society for Testing Materials, D 544-41; 1941. Preformed Expansion Joint Fillers for Concrete (Nonextruding and Resilient Types). Includes cork, self-expanding cork, sponge rubber, and cork rubber. Manufacture, character of strips, properties, dimensions and permissible variations, packing, sampling, and methods of testing.

American Society for Testing Materials, D 545-41; 1941. Methods of Testing Preformed Expansion Joint Fillers for Concrete (Nonextruding and Resilient Types). Procedures covering tests for expansion in boiler water, recovery, compression, extrusion, boiling in hydrochloric acid, and weathering.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R4-36; 1936. Asphalt. This recommendation establishes grades of asphalt for paving purposes as determined by penetration limits. Defines range of asphalt used in construction of sheet asphalt, asphaltic concrete, and asphalt macadam pavements, surface treatment, and for joint filler, or for preparation of joint filler for various types of construction. Initiated by the Asphalt Institute.

U. S. Gov., Federal Specification R-T-111; 1933. Tar; (for) Joint-Filler. Covers three grades—TPF-1-Y (intended use—mixed with sand as a mastic filler for joints of stone-block pavements), TPF-2-Y (intended use—filler for joints of brick and stone-block pavements), and TPF-3-Y (intended use—filler for joints of wood-block pavements). Gives requirements for composition, specific gravity, softening point, total distillate, softening point of residue, and bitumen; methods of testing for specific gravity, softening point, distillation test, and bitumen (soluble in carbon disulphide) in accordance respectively with American Society for Testing Materials Standard Methods D70-27, D36-26, D20-20, and D4-27; and requirements for packing and marking.

U. S. Gov., Federal Specification SS-A-696; 1931. Amendment 1; 1937. Asphalt; Petroleum, Type PAF-1-25 (for) Joint Filler (Squeegee or Pouring Method). Covers one grade—prepared from asphaltic petroleum. Gives requirements for chemical composition and physical properties; methods of tests; and requirements for packing and marking.

U. S. Gov., Federal Specification SS-C-153; 1933. Cement; Bituminous, Plastic. Covers two types—(I) asphaltic base and (II) coal-tar base. Composed of an inorganic filler, a solvent, and a nonvolatile bituminous binder. Gives requirements for material and physical properties; methods of sampling and testing; and requirements for packaging, packing and marking.

U. S. Gov., Federal Specification SS-F-336; 1942. Filler; Joint-Sealing, Hot-Poured Type (for Concrete). Covers one grade. Gives requirements for material and methods of testing.

U. S. Gov., Navy Dept., Bureau of Yards and Docks. Specification 4Yd; 1939. Construction of Portland Cement Concrete Pavements. Includes requirements for premolded joint material.

U. S. Gov., Treasury Dept., Procurement Div., No. 278; 1938. Cement; Bituminous, Plastic Vegetable-Oil-Pitch-Base. Covers one type and one grade. Cement shall be composed of a suitable inorganic filler, suitable solvent, and a nonvolatile bituminous binder. The binder shall be mainly a vegetable-oil-pitch. Intended for use in repairs of roofs, walls, and foundations and as an expansion joint and caulking material. Gives requirements for nonvolatile matter, inorganic filler, workability, heat and cold test, joint test, strain test, and bleeding test; methods of sampling, inspection, and tests; and packaging and marking.

*References.*—Definitions, methods of sampling and of testing; *see* 502.2, 505.0, 505.30; nonbituminous fillers, *see* 512.16.

## 505.16 Asphalt and Asphalt Felt for Roofing and Waterproofing

American Assn. of State Highway Officials. Standard Specifications for Highway Bridges, 1941. Includes specifications for waterproofing and for dampproofing—requirements for material, fabric and joint filler (to conform with American Society for Testing Materials specification); storage of fabric, preparation of

surface; application; damage patching; protection course; and measurement and payment.

American Assn. of State Highway Officials, M115-42. Standard Specifications for Asphalt for Dampproofing and Waterproofing. Gives scope, primer, types, properties, methods of sampling and testing, and table showing requirements for types A and B.

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering. Specifications for Buildings for Railroad Purposes: Built-Up Roofing, Gives requirements for materials (pitch, asphalt, asphalt primer, roofing felt, ready or prepared asphalt roofings, flashings, gravel, and slag); tarred rag felt, pitch and gravel (or slag) over wood or pre-cast units (type A-1), and over homogeneous roofs cast in place (type A-2); tarred rag felt, steep roofing pitch and slag, for use over wood or pre-cast concrete or gypsum units (type A-3), and over homogeneous roofs cast in place (type A-4); asphalt rag felt, asphalt and gravel (or slag) over wood or pre-cast units (type B-1), and over homogeneous roofs cast in place (type B-2); asphalt impregnated asbestos felt and asphalt (smooth surface) over wood or pre-cast units (type C-1—classes 1, 2, and 3), and over homogeneous roofs cast in place (type C-2— classes 1, 2, and 3); and asphalt rag felt and asphalt (smooth surface) over wood or pre-cast units (type D-1), and over homogeneous roofs cast in place (type D-2).

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering. Specifications for Buildings for Railroad Purposes: Slate Roofing. Gives requirements for roofing felt.

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering. Specifications for Membrane Waterproofing. Gives requirements for asphaltic primer.

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering. Specifications for Membrane Waterproofing. Gives requirements for bitumen, asphalt for mopping above ground, asphalt for mopping below ground, coal-tar pitch for saturant and mopping, creosote primer, untreated and treated fabrics, felt, insulating paper, plastic cement, asphalt mastic, premoulded asphalt blocks, materials for concrete, and application. Emergency Provisions adopted Dec. 14, 1942, waives requirements for ductility at 770° F. for the duration.

American Society for Testing Materials, D 146-44 T; 1944. Tentative Methods of Testing Felted and Woven Fabrics Saturated With Bituminous Substances for Use in Waterproofing and Roofing. Covers fabrics saturated (but not coated) with asphalt or coal-tar products for use in membrane waterproofing. Sampling, requirements of finished fabric as to area, weight, loose surfacing, moisture, strength, pliability, water absorption, loss on heating, and distillation of coal-tar saturated felt, and for desaturated fabric, weight, carbonaceous matter, total comminuted surfacing, saturant, and ash.

American Society for Testing Materials, D 170-41; 1941. Bituminous Grout for Use in Waterproofing Above Ground level. For use in protective covering of membrane waterproofing, for bedding brick, or filling joints, or flooding surfaces of brick protective covering; also suitable for waterproofing railroad bridges, culverts, subways, etc. Properties, bituminous binder, mineral aggregate, and methods of testing.

American Society for Testing Materials, D 171-41; 1941. Bituminous Grout for Use in Waterproofing Below Ground Level. Suitable for protective covering of membrane waterproofing, or for bedding brick, or filling joints, or flooding of surface of brick protective covering; also for use in waterproofing tunnels, subways, etc. Properties, bituminous binder, mineral aggregate, and methods of testing.

American Society for Testing Materials, D 173-44, 1944. American Assn. of State Highway Officials, M 117. Woven Cotton Fabrics Saturated With Bituminous Substances for Use in Waterproofing. For use in membrane system of waterproofing. Gives requirements for manufacture, properties of treated and untreated fabric, saturation, sizes, weight, strength, pliability, surface finish, sampling, and testing.

American Society for Testing Materials, D 224-44 T; 1944. Tentative Specifications for Asphalt Roofing Surfaced With Powdered Talc or Mica. Cover asphalt roofing in sheet form surfaced with finely powdered mineral matter, either 36 or 32 in. in width, composed of roofing felt saturated and coated on both sides with asphalt. Manufacture, character of felt, saturant, and coatings; physical properties, freedom from defects, pliability and stickiness, packing, nails and lap-cement, sampling and methods of testing, inspection, and basis of rejection. A.S.T.M. Emergency Alternate Provision, EA-D 224b, 1944, omits requirements for protective coating on nails, section 12a, item 2.

American Society for Testing Materials, D 225-44T; 1944. Tentative Specifications for Asphalt Shingles Surfaced With Coarse Mineral Granules. Cover asphalt roofing in shingle form surfaced with colored mineral granules, composed of roofing felt saturated and coated on both sides with asphalt and surfaced on the weather side with granulated slate or equivalent mineral material (of solid or mixed colors as may be agreed upon by the purchaser and the seller) and on the reverse side with powdered talc or mica. Intended to be used with a "headlap" of not less than 2 in. Individual (American Method), Square Tab Strip, and Hexagonal Tab Strip. Manufacture, character of felt, saturant, and coatings; physical properties, surface finish, saturation, freedom from defects, stickiness, packing, sampling and methods of testing, inspection, and basis of rejection.

American Society for Testing Materials, D 226-44; 1944. Asphalt-Saturated Roofing Felt for Use in Waterproofing and in Constructing Built-Up Roofs. Covers two types—15-lb. and 30-lb. Gives requirements for mopping materials, manufacture, character of felt, character of saturant, surface finish, physical properties, pliability and stickiness, packing, marking, sampling and testing, and inspection.

American Society for Testing Materials, D 228-44 T; 1944. Tentative Methods of Testing Asphalt Roll Roofing, Cap Sheets, and Shingles. Includes roll roofing coated with powder, surfaced with granules on weather side and coated on exposed half of the weather side with mineral granules; requirements for sampling, methods of physical testing for roll and cap sheets and for shingles; and for analysis of roofing composition, saturant in dry felt, weight of weather side coating and reverse side coating soluble in carbon disulfide; ash, weight of dry saturated felt, and weight of mineral matter.

American Society for Testing Materials, D 249-44T; 1944. Tentative Specifications for Asphalt Roofing Surfaced With Coarse Mineral Granules. Covers asphalt roofing in sheet form surfaced with colored mineral granules, either 36 or 32 in. in width, composed of roofing-felt saturated and coated on both sides with asphalt and surfaced on the weather side with granulated slate or equivalent mineral material (of solid or mixed colors as may be agreed upon by the purchaser and the seller) and on the reverse side with powdered talc or mica. Manufacture, Character of felt, saturant, and coatings; physical properties, surface finish, gage, saturation, packing, nails and lap-cement, sampling and testing, inspection, and basis of rejection. A.S.T.M. Emergency Alternate Provision EA-D 249b; 1944, affected section 6 Surface Finish, table I Physical Requirements of Asphalt Roofing, section 10 Packing, and section 12 Nails and Lap-Cement.

American Society for Testing Materials, D 250-44T; 1944. Tentative Specifications for Asphalt-Saturated Asbestos Felt for Use in Waterproofing and in Constructing Built-Up Roofs. Covers quality of felt containing 85 percent asbestos, saturant, character or felt after saturation, surfacing, physical properties, stickiness, sampling, and testing.

American Society for Testing Materials, D 312-44; 1944. Asphalt for Use in Constructing Built-Up Roof Coverings. Covers asphalt intended for use as hot-cement and mopping coat in the construction of built-up roof coverings for roofs surfaced in various manners, laid either over boards or concrete on various inclines, in connection with the Tentative Specifications for Asphalt-Saturated Roofing Felt for Use in Waterproofing and in Constructing Built-Up Roofs (A.S.T.M. Designation D 226) or the Standard Specifications for Asphalt-Saturated Asbestos Felt for Use in Constructing Built-Up Roofs (A.S.T.M. Designation D 250) of the American Society for Testing Materials. Types, properties, and sampling and methods of testing.

American Society for Testing Materials, D 313-41; 1941. Method of Test for Coarse Particles in Mixtures of Asphalt and Mineral Matter. Covers the procedure for determining the amount of particles of mineral or other insoluble matter in asphaltic mixtures that are retained upon a No. 200 (74-micron) sieve. Sampling, preparation of sample, apparatus, procedure, and calculation.

American Society for Testing Materials, D 371-44; 1944. Wide Selvage Asphalt Roofing Surfaced With Coarse Mineral Granules. Covers asphalt roofing in sheet form, either 36 or 32 in. in width, composed of asphalt-saturated roofing felt coated on approximately one-half of the width of the weather side with asphalt, and surfaced on the coated portion with mineral granules. This roofing is used as a cap sheet in the construction of built-up roofs. Manufacture, character of felt, saturant and coatings, properties, surface finish, freedom from defects, pliability and stickiness, packing, sampling and methods of testing, and basis of rejection.

American Society for Testing Materials, D 449-42 T; 1942. Tentative Specifications for Asphalt for Dampproofing and Waterproofing. For use as mopping coat in dampproofing, or as plying or mopping cement in construction of membrane system of waterproofing. Requires that primer meet D 41, asphalt felt D 226, asbestos felt D 250, and cotton fabrics D 173 of A.S.T.M. Includes soft, adhesive, self-healing asphalt for use below ground, and a less susceptible asphalt for use above ground, physical properties, and tests using A.S.T.M. methods.

American Society for Testing Materials, D 451-40; 1940. Method of Test for Sieve Analysis of Granular Mineral Surfacing for Asphalt Roofing and Shingles. For Crushed slate, stone, etc., used on the weather surface of prepared asphalt roofing and shingles. Covers a set of consecutive sieves conforming to A.S.T.M. specification E 11, sieve shaker, preparation of sample, method of analysis, and form of report.

American Society for Testing Materials, D 452-40; 1940. Method of Test for Sieve Analysis of Nongranular Mineral Surfacing for Asphalt Roofing and Shingles. For mica, talc, and other powdered or flaky minerals used on the weather surface of prepared asphalt roofing and on the nonweather-exposed surface of asphalt shingles. Covers a set of sieves conforming to A.S.T.M. specification E 11, sieve shaker, preparation of sample, method of analysis, and form of report.

American Society for Testing Materials, D 491-41; 1941. Asphalt Mastic for Use in Waterproofing (Asphalt Cement, Mineral Filler, Mineral Aggregate). For waterproofing the floors of buildings and bridges; for reservoirs, waterways, subways, and similar structures; but not for use as a pavement for either foot or vehicular traffic. Character of mastic, properties of asphalt cement and of asphalt mastic, and methods of testing.

American Society for Testing Materials, D 655-44 T; 1944. Tentative Specifications for Asphalt-Saturated and Coated Asbestos Felts for Use in Constructing Built-Up Roofs. Cover asphalt-saturated and asphalt-coated asbestos felts in sheet form for use in the construction of built-up roofs.

American Society for Testing Materials, D 699-44; 1944. Asphalt Siding Surfaced With Coarse Mineral Granules. Cover asphalt siding in strip or individual form surfaced with colored mineral granules, and composed of roofing felt saturated and coated on both sides with asphalt and surfaced on the weather side with granulated slate or equivalent mineral material, and surfaced on the reverse side with suitable material to prevent sticking in the package.

Underwriters' Laboratories, Inc. Standard for Class "C" Asphalt Rag-Felt Sheet Roofing and Shingles, 1941. For installation as prepared roof coverings in accordance with direction sheets for application

packed with the products. Description, felt, saturant, and coating, surfacing materials, felt after saturation, finished product, dimensions, weight, lap-cement, nails for sheet roofing, packing, instructions for application, apparatus and instructions of procedure for tests, and inspection of listed product.

Underwriters' Laboratories, Inc. Standard for Rag-Felt Roof Covering Materials for Use in Construction of Built-Up Roof Coverings, 1941. Covers asphalt, asphalt-saturated rag-felt, coal tar and coal-tar saturated rag-felt for installation as built-up roof coverings in accordance with the descriptive matter contained in the List of Inspected Fire Protection Equipment and Materials published periodically by Underwriters' Laboratories, Inc. Covers asphalt; asphalt-saturated rag-felt; coal tar; coal-tar saturated rag-felt; apparatus and methods of procedure for tests of roof-covering materials; and inspection of listed product.

United Roofing Contractors Assn. Recommended Roof Standardization, 1942. It is recommended that only 29 types of asphalt-prepared roofing and siding be produced as regular stock types. Gives table showing size, square feet per roll, headlap, exposure, total area of roofing per square, weight of dry felt, nominal weight per 100 sq.ft., maximum number of colors or finishes, and shipping weight for these 29 types which include strip shingles, individual shingles, siding, mineral-surfaced roll roofings, smooth-surfaced roll roofings, and saturated felts for built-up roofing.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Building Materials and Structures Report BMS8; 1938. Survey of Roofing Materials in the Southeastern States. A survey of the weathering qualities and extent of use of the various roofing materials on dwellings in the Southeastern States is described. Detailed studies of roofing materials in Greensboro, N. C.; Columbia, S. C.; Savannah and Atlanta, Ga.; Jacksonville and Orlando, Fla.; Birmingham, Ala.; Knoxville, Tenn.; and Charleston, W. Va., are reported. A tabulation, by states, of the kinds of roofing materials used on more than 10,000 rural and small-town dwellings, along approximately 2,500 miles of highway, is included. Forty-eight photographs, illustrating types of weathering of roofing materials and features of design and construction of roofs, are shown.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Building Materials and Structures Report BMS29; 1939. Survey of Roofing Materials in the Northeastern States. A survey of the weathering qualities and extent of use of the various roofing materials on dwellings in the Northeastern States is described, with numerous comparative references to a similar survey in the Southeastern States. Detailed studies of roofing materials in Wilmington, Del.; Philadelphia, Pa.; New Haven, Conn.; Boston, Mass.; Manchester, N. H.; Portland, Maine; Rutland, Vt.; and Albany and Syracuse, N. Y., are reported. A tabulation, by states, of the kinds of roofing materials used on more than 10,000 rural and small-town dwellings, along approximately 1,600 miles of highway between the cities listed above, is included; also a summary of the kinds of roofing materials used on almost 21,000 rural and small-town dwellings along 4,000 miles of highway in 20 Eastern States. Forty-eight photographs, illustrating types of weathering of roofing materials and features of design and construction of roofs, are shown.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Building Materials and Structures Report BMS70; 1941. Asphalt-Prepared Roll Roofings and Shingles. Asphalt-prepared roofings are defined, their development is sketched briefly, and recent statistics of production are presented. Factors which influence the choice of roofing materials generally are discussed. Materials used in the manufacture of asphalt-prepared roofings and the processes of manufacture are described. Analyses of typical roofings are shown. Factors which should be considered in purchasing asphalt-prepared roll roofings and shingles are discussed and illustrated graphically for types of shingles that are used most generally. Methods of application and maintenance are described, and the weathering of asphalt-prepared roofings is discussed.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Building Materials and Structures Report BMS75; 1941. Survey of Roofing Materials in the North Central States. A survey of the weathering qualities and extent of use of the various roofing materials on dwellings in the North Central States is described, with numerous references to similar surveys made previously in the Southeastern and Northeastern States. Detailed studies of roofing materials in Pittsburgh, Pa.; Cincinnati and Toledo, Ohio; Grand Rapids and Lansing, Mich.; Chicago, Ill.; Milwaukee, Wis.; St. Paul, Minn.; Bismarch, N. Dak.; Sioux Falls, S. Dak.; Omaha, Nebr.; Kansas City, Moberly, and St. Louis, Mo.; and Indianapolis, Ind., are reported. A tabulation, by states, of the kinds of roofing materials, used on more than 8,000 rural and small-town dwellings, along approximately 3,000 miles of highway between the cities listed above, is included; also a summary of the kinds of roofing materials used on almost 28,000 rural and small-town dwellings along 7,000 miles of highway in the 32 states covered by the three surveys. Forty-eight photographs, illustrating type of weathering of roofing materials, and features of design and construction of roofs, are shown.

U. S. Gov., Federal Specification HH-F-191a; 1942. Felt; Asphalt-Saturated, (for) Flashings, Roofing, and Waterproofing. Covers two types—(I) for mineral-surfaced built-up roofing and for membrane waterproofing and (II) for flashings. Gives requirements for material, appearance, physical characteristics, and chemical requirements; methods of inspection, determination of weight and width, sampling, and testing; and requirements for packaging, packing, and marking.

U. S. Gov., Federal Specification SS-A-666; 1933. Asphalt; (for) Built-Up Roofing, Waterproofing, and Dampproofing. Covers three types—(I) for surfaced, built-up roofing; (II) for unsurfaced, built-up roofing; and (III) for waterproofing and dampproofing. Gives requirements for chemical and physical properties; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Federal Specification SS-R-451; 1933. Roof-Coating; Asphalt, Brushing-Consistency. Covers one type. Gives requirements for condition in container, consistency, nonvolatile matter, mineral filler, and behavior at 60° C. and 0° C; methods of sampling and testing; and requirements for packaging, packing, and marking.

U. S. Gov., Federal Specification SS-R-501; 1933. Roofing; Asphalt-Prepared, Smooth-Surfaced. Covers two grades—(A) heavy weight and (B) medium weight. Gives requirements for appearance, chemical and physical properties, and lap-cement; methods of inspection, determination of weight and width, sampling, and testing; and requirements for packaging, packing, and marking. Emergency Alternate Federal Specification E-SS-R-501; 1941, (issued by Procurement Div., Treasury Dept., U. S. Gov.) changes requirements for grades, material, appearance, physical characteristics, chemical composition, and lap-cement.

U. S. Gov., Federal Specification SS-R-511; 1933. Roofing; Asphalt and Asbestos-Prepared, Mineral-Surfaced. Covers one type. Gives requirements for color and appearance, chemical and physical properties, and lap-cement; methods of inspection, determination of weight and width, sampling and testing; requirements for packaging, packing, and marking.

U. S. Gov., Federal Specification SS-R-521; 1933. Roofing and Shingles; Asphalt-Prepared, Mineral-Surfaced. Covers two types—(I) roofing (II) shingles. Gives requirements for color and appearance, physical and chemical properties, and lap-cement; methods of inspection, determination of weight and width, sampling and testing; and requirements for packaging, packing, and marking.

U. S. Gov., Federal Works Agency, Public Roads Administration. Specifications for Construction of Roads and Bridges in National Forests and National Parks, FP-41. Waterproofing.

U. S. Gov., Federal Works Agency, Public Roads Administration. Specifications for Construction of Roads and Bridges in National Forests and National Parks, FP-41. Dampproofing.

U. S. Gov., Navy Dept., Bureau of Yards and Docks. Specification 7Yg; 1934. Roofing, Siding, and Sheet Metal Work; Dampproofing and Membrane Waterproofing.

U. S. Gov., Navy Dept., Bureau of Yards and Docks. Specification 15Yb; 1934. Standard Methods for Inspection of Materials for Roofing, Siding, Sheet Metal Work, Dampproofing, and Waterproofing.

U. S. Gov., Treasury Dept., Procurement Div., 438A; 1942. Priming-Material, Bituminous (Nonbleeding), Brushing and Spraying Consistency (for Concrete, Masonry, and Other Mineral Surfaces). Shall consist of a suitable bituminous base dissolved in a suitable Volatile organic solvent. Gives requirements for color, consistency, nonvolatile matter, ash content, heat and cold test, and paint bleeding test; methods of sampling, inspection, and tests.

*References.*—Definitions, methods of sampling and of testing, *see* 502.2, 505.0; granular slate for roofings, *see* 511.52; roofing felts, *see* 365.98, 473.2; roofing nails, *see* 608.11; tar roofing and waterproofing, *see* 505.36; roof construction, *see* 518.57; cotton fabric for waterproofing, *see* 392.4.

## 505.17 Asphaltic Mastic Flooring

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering. Specifications for Buildings for Railroad Purposes: Asphalt Mastic Floors and Asphalt Block Floors. Gives requirements for sub-grade and foundation, mastic slabs, asphaltic cement, aggregate, and construction.

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering. Specifications for Membrane Waterproofing. Gives requirements for asphalt mastic.

American Soceity for Testing Materials, D 491-41; 1941. Asphalt Mastic for Use in Waterproofing (Asphalt Cement, Mineral Filler, Mineral Aggregate). For waterproofing the floors of buildings and bridges, for reservoirs, waterways, subways, and similar structures but not for use as a pavement for either foot or vehicular traffic. Character of mastic, properties of asphalt cement and of asphalt mastic, and methods of testing.

American Society for Testing Materials, D 517-40; 1940. Asphalt Plank. For use in bridge floors, plain and mineral-surfaced asphalt plank; requirements for manufacture, mineral surfacing, asphalt cement, fibrous material, mineral filler, absorption, brittleness, indentation, sampling, and methods of testing.

Associated Factory Mutual Fire Insurance Companies. Factory Mutual Bulletin of Loss Prevention, 4.20; 1938. Watertight Floors. Covers methods for improving construction where floor leakage is a serious defect. Includes description of common methods of waterproofing (hot asphalt mastic flooring, emulsified asphalt flooring, magnesite composition flooring, and light weight special surfacing); recent developments in waterproofing; and general precautions.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Building Materials and Structures Report BMS14; 1939. Indentation and Recovery of Low-Cost Floor Coverings. Indentation and recovery determinations for loads ranging from 25 lb. to 200 lb. on a flat-ended pin 1/4 in. in diameter were made on 23 floor coverings at a relative humidity of 65 percent and temperature of 72° F. Indentation readings were taken for each load at intervals of time up to 30 min. and then recovery readings at intervals of time up to 120 min. Various types of floor coverings were tested, such as asphalt tile, pressed fiber board, linoleums, felt-base floor coverings having various wearing surfaces, rubber, and wood. A description of the apparatus and the procedure used are given. The results are presented in graphic form to show the relative merits of the various floor coverings with respect to initial and 30-min. indentation under various loads and the recovery after removal of the load.

U. S. Gov., Dept. of Commerce. National Bureau of Standards. Building Materials and Structures Report BMS43; 1940. Performance Test of Floor Coverings for Use in Low-Cost Housing: Part 2. In the second series, 40 installations were subjected to a performance test in the floor-testing chamber of the National Bureau of Standards. Included in the tests were battleship linoleum, rubber in sheet and tile form, felt-base

floor coverings having various wearing surfaces, three monolithic floors, and a number of asphalt tiles. The bonding agents used included lignin pastes, resinous cements, latex adhesives, rubber cements, cut-back asphalt, and asphalt emulsions. Installations were made on both concrete and wood subfloors. Descriptions of the testing equipment and test installations are given. Results showing the relative depth of the depressions in the floor coverings during the test are presented in tables. Brief summaries showing the performance of the test panels are given, and the appearance of the different floor coverings after 48,000 cycles of the testing equipment is shown by representative photographs.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Building Materials and Structures Report BMS68; 1941. Performance Test of Floor Coverings for Use in Low-Cost Housing: Part 3. A performance test was conducted in the floor-testing chamber of the National Bureau of Standards on a third series of 40 test installations. Included in the test were linoleums in sheet and tile form, cork-composition tile, sheet rubber, rubber tile, asphalt tiles, fiberboard tiles, felt-base floor coverings having various wearing surfaces, three monolithic floors, and a number of wood floors. The bonding agents used included lignin pastes, cumar resin cement, alumina cement-latex paste, rubber cements, various asphaltic adhesives, and nails. Installations were made on concrete, stripwood, and plywood subfloors. Installations on stripwood subfloors were made with underlays of dry and asphalt-saturated lining felts. Descriptions of the testing equipment and test installations are given. Results showing the relative depth of the depressions in the floor coverings during the test are presented in tables. Brief summaries of the manner in which the various test installations performed are given, and photographs of the test panels after 48,000 cycles of the testing equipment are shown.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Building Materials and Structures Report BMS73; 1941. Indentation Characteristics of Floor Coverings. The indentation characteristics of 64 floor coverings were determined. Tests were conducted on specimens conditioned in an atmosphere of 65 percent relative humidity and 72° F. temperature, on specimens after exposure to accelerated aging, and on specimens at an elevated temperature of 90° F. The floor coverings tested included such general types as linoleum, cork, rubber, felt base, asphalt, wood, fiberboard, and monolithic compositions. Variations in composition and thickness were included in many of the types. The apparatus and the procedures are briefly described. Summaries of the results are present to show the relative merits of the various floor coverings with respect to comfort value and permanent indentation.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Building Materials and Structures Report BMS80; 1942. Performance Test of Floor Coverings for Use in Low-Cost Housing: Part 4. A performance test was conducted in the floor-testing chamber of the National Bureau of Standards on a fourth series of 40 different installations involving 26 different floor coverings. Specimens of most of the floor coverings were installed on both a concrete and a wood subfloor. Included in the test were cork tiles, rubber tile containing aluminum oxide aggregate, asphalt tile, marbleized linoleums, felt-backed floor coverings having various wearing surfaces, strip maples, maple unit-block, pecan unit-block, asphalt mastic, coal-tar mastic, alumina cement-rubber latex composition, magnesium oxychloride composition, and 1:2:4 Portland cement concrete. Different underlays and adhesives were also included in the test. The test installations are described and results showing the depth of the depressions in the floor coverings made by the equipment are presented in tables. Brief summaries of the manner in which the various installations performed are given, and their appearance at the end of the test, is shown by photographs. A few generalized comments and conclusions are made.

U. S. Gov., Federal Works Agency, Public Roads Administration. Specifications for Construction of Roads and Bridges in National Forests and National Parks, FP-41. Mineral-Surfaced Asphalt Plank.

*References.*—Definitions, methods of sampling and of testing, *see* 502.2, 505.0; asphalt for bituminous carpets, *see* 505.19.

## 505.19 Miscellaneous Specifications for Asphalt

American Assn. of State Highway Officials, M46-38. Standard Specifications for Premolded Asphalt Plank. Gives scope, manufacture, mineral surfacing, workmanship, asphalt cement, fiber, mineral filler, dimensions, absorption, brittleness, indentation, and sampling and testing.

American Assn. of State Highway Officials, M47-42. Standard Specifications for Emulsified Asphalt. Covers emulsified asphalt for open-graded coarse aggregate plant mixtures. Gives general requirements, properties and tests, basis of purchase, methods of sampling, and methods of testing.

American Assn. of State Highway Officials, M48-42. Standard Specifications for Emulsified Asphalt. Covers emulsified asphalt for open-graded coarse aggregate mixed-in-place construction. Gives general requirements, properties and tests, basis of purchase, methods of sampling, and methods of testing.

American Assn. of State Highway Officials, M49-42. Standard Specifications for Emulsified Asphalt. Covers emulsified asphalt for summer use in bituminous concrete mixtures for repair work. Gives general requirements, properties and tests, basis of purchase, methods of sampling, and methods of testing.

American Assn. of State Highway Officials, M50-42. Standard Specifications for Emulsified Asphalt. Covers emulsified asphalt which does not separate as the result of freezing. Gives general requirements, properties and tests, basis of purchase, methods of sampling, and methods of testing.

American Assn. of State Highway Officials, M51-42. Standard Specifications for Emulsified Asphalt. Covers emulsified asphalt for penetration macadam construction. Gives general requirements, properties and tests, basis of purchase, methods of sampling, and methods of testing.

American Assn. of State Highway Officials, M88-42. Standard Specifications for Emulsified Asphalt. Covers emulsified asphalt for the surface treatment of roads. Gives general requirements, properties and tests, basis of purchase, methods of sampling, and methods of testing.

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering. Specifications for Bituminous Emulsions for Dampproofing. Covers materials and methods for dampproofing steel and concrete surfaces by use of asphalt emulsions (clay type) and concrete surfaces by use of coal-tar emulsions (soap type). Gives requirements for materials and applications.

American Society for Testing Materials, D 397-39; 1939. Medium-Setting Emulsified Asphalt (for Coarse Aggregate Plant Mixes). Gives limits for retention on 1/8-in. screen, homogeneity, viscosity, residue, settlement, demulsibility, miscibility in water, and requirements for coating dry stone, sampling, and methods of testing.

American Society for Testing Materials, D 398-39; 1939. Medium-Setting Emulsified Asphalt (for Retread and Coarse Aggregate Mixes). Covers a low consistency emulsified asphalt for retread mixes; limits for retention on 1/8-in. sieve, homogeneity, viscosity, residue, settlement, demulsibility, miscibility with water; requirements for coating dry stone, sampling, and methods of testing.

American Society for Testing Materials, D 399-39; 1939. Medium-Setting Emulsified Asphalt (Heavy Premix—Summer Grade). Covers a high-consistency emulsified asphalt for plant mix or patching with coarse aggregates; limits for retention on 1/8-in. sieve, homogeneity, residue, miscibility with water; requirements for coating dry stone, sampling, and methods of testing.

American Society for Testing Materials, D 401-40; 1940. Quick-Setting Emulsified Asphalt (for Penetration and Surface Treatment). Gives requirements for homogeneity, viscosity, residue, settlement, penetration, ductility, sampling, and tests in accordance with A.S.T.M. method D 244.

American Society for Testing Materials, D 466-42; 1942. Methods of Testing Films Deposited From Bituminous Emulsions. Covers resistance to flow under heat (slide test), and resistance to water action. Slide test for emulsions applied at rate of not less than 3 gal. per 100 sq.ft. on substantially vertical surfaces, using standard ceramic tile and brass mask test in heated oven, and test procedure for adhesion or dried film and resistance to re-emulsification.

American Society for Testing Materials, D 631-43; 1943. Slow-Setting Emulsified Asphalt (for Fine Aggregate Mixes). Cover a slow-setting emulsified asphalt for fine aggretate mixes in which a substantial quantity of aggregate passes a 1/8-in. sieve and a portion may pass a No.200 (74-micron) sieve. Covers properties and tests, basis of purchase, sampling, and methods of testing.

Associated Factory Mutual Fire Insurance Companies. Factory Mutual Bulletin of Loss Prevention 4.20; 1938. Watertight Floors. Covers methods for improving construction where floor leakage is a serious defect. Includes description of common methods of waterproofing (hot asphalt mastic flooring, emulsified asphalt flooring, magnesite composition flooring, and light weight special surfacing); recent developments in waterproofing; and general precautions.

U. S. Gov., Federal Specification SS-A-671a; 1941. Asphalt; Cut-Back (for) Road Work. Covers six types of medium curing, and six types of rapid curing. Gives requirements for chemical composition and physical properties; methods of testing; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification SS-A-674a; 1944. Asphalt; Emulsion (for) Road Work. Covers six types—(I) open graded coarse aggregate plant mixtures, (II) open graded coarse aggregate mixed-in-place construction, (III) for summer use in bituminous concrete mixtures for repair work, (IV) for winter use in bituminous concrete mixtures for repair work, (V) penetration macadam and surface treatment work, and (VI) fine aggregate mixes in which a substantial quantity of aggregate passes a 1/8-in. sieve and a portion may pass a No.200 sieve. Gives detailed requirements for physical properties; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., Treasury Dept., Procurement Div., 439A; 1942. Coating-Material; Bituminous (Nonbleeding), Brushing-Consistency (for Foundations, Roofs, Walls, Etc). Shall be composed of suitable inorganic filler, volatile organic solvent, and binder consisting of suitable bituminous materials; intended for use as a dampproofing material in the maintenance of bituminous and metal roofing and for application on walls and foundations. Gives requirements for colors; consistency, nonvolatile matter, inorganic filler and tinting material, heat and cold test, and paint bleeding test; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 3-160; 1933. Asphalt, for Use in Manufacture of Fiber Containers.

*References.*—Definitions, methods of sampling and of testing, *see* 502.2, 505.0.

## 505.2 ROAD OILS

### 505.20 General Items

American Assn. of State Highway Officials, T54-35. Standard Method of Test for Specific Viscosity (Engler). The viscosity of fluid bituminous road materials may be determined at any suitable temperature by means of the Engler viscosimeter. Gives details for this process.

American Society for Testing Materials, D 95-40; 1940. American Petroleum Institute Standard, 519-40. American Assn. of State Highway Officials, T 55-42. American Standards Assn., Z11.9-1940. Method of Test for Water in Petroleum Products and Other Bituminous Materials. Especially applicable to petroleum, fuel oil, road oil, coal tar, water-gas tar, coke-oven tar, etc. Determination of water by distilling sample with volatile solvent, dimensions and design of still, distillation requirements of solvent, test procedure.

### 505.21 Oil for Cold Application to Roads

*References.*—Definitions, methods of sampling and of testing, *see* 502.2, 505.0, 505.20; asphaltic road oils, *see* 505.14; road tars, *see* 505.31-505.35.

### 505.22 Oil for Hot Application to Roads

U. S. Gov., Federal Specification VV-O-751; 1931. Oil; Road, Type OH-1-25, Hot Application. Gives detail requirements; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

*References.*—Definitions, methods of sampling and of testing, *see* 502.2, 505.0, 505.20; asphaltic road oils, *see* 505.14; road tars, *see* 505.31-505.35.

### 505.23 Oil Asphalt

*References.*—Oil asphalt, *see* 505.14.

### 505.29 Miscellaneous Specifications for Road Oils

American Society for Testing Materials, D 98-34; 1934. Calcium Chloride. Includes use for dust prevention, acceleration of setting of concrete, and curing concrete. Gives requirements for chemical composition, screen analysis, and packing.

*References.*—Definitions, methods of sampling and of testing, *see* 502.2, 505.0, 505.20.

### 505.3 TAR AND TAR PITCH

*References.*—Coal-tar chemical products, *see* 800-809.

### 505.30 General Items

American Assn. of State Highway Officials, T108-42. Standard Method of Test for Sulfonation Index of Road Tar. Gives scope, solutions required, apparatus, procedure, and precautions.

American Society for Testing Materials, D4-42; 1942. American Standards Assn., A 37.3-1943. Method of Test for Determination of Bitumen. Intended for the determination of bitumen in materials containing at least 25 percent bitumen. Covers apparatus, preparation of sample, preparation of Gooch crucible, methods of procedure, calculation, and report.

American Society for Testing Materials, D 5-25; 1925. American Assn. of State Highway Officials, T 49-42. American Standards Assn., A37.1-1930. Method of Test for Penetration of Bituminous Materials. Dimensions and construction of container and needle, water bath standard temperature, preparation of sample, test procedure.

American Society for Testing Materials, D 20-30; 1930. American Standards Assn., A 37.9-1943. American Assn. of State Highway Officials, T 52-42. Method of Test for Distillation of Tar Products Suitable for Road Treatment. Covers apparatus, preparation and dehydration of sample, details for assembly of apparatus, and method of procedure for determination of percentages distilled at varying temperatures.

American Society for Testing Materials, D 36-26; 1926. American Standards Assn., A 37.10-1943. American Assn. of State Highway Officials, T 53-42. Method of Test for Softening Point of Bituminous Materials (Ring-and-Ball Method). Gives dimensions and design of ring, steel ball, container, and thermometer; method of preparing sample, rate of heating, permissible variations, modifications for hard materials, and precautions to be observed.

American Society for Testing Materials, D 61-38; 1938. Method of Test for Softening Point of Tar Products (Cube-in-Water Method). Describes form of mold, hook, and container; assembly of apparatus, preparation of sample, and procedures for ordinary and low melting point pitches.

American Society for Testing Materials, D 70-27; 1927. Method of Test for Specific Gravity of Road Oils, Road Tars, Asphalt Cements, and Soft Tar Pitches. Requirements for pycnometer or weighing bottle size and weight, and ratio of weight of fluid to that of distilled water, with precautions to be observed.

American Society for Testing Materials, D 71-27; 1927. Method of Test for Specific Gravity of Asphalts and Tar Pitches Sufficiently Solid To Be Handled in Fragments. For determination by use of an analytical balance equipped with a pan straddle or other stationary support. Preparation of test specimen and method of procedure.

American Society for Testing Materials, D 95-40; 1940. American Petroleum Institute Standard, 519-40. American Assn. of State Highway Officials, T 55-42. American Standards Assn., Z 11.9-1940. Method of Test for Water in Petroleum Products and Other Bituminous Materials. Especially applicable to petroleum, fuel oil, road oil, coal tar, water-gas tar, coke-oven tar, etc. Determination of water by distilling sample with volatile solvent, dimensions and design of still, distillation requirements of solvent, test procedure.

American Society for Testing Materials, D 139-27; 1927. American Assn. of State Highway Officials, T 50-42. American Standards Assn., A37.2-1930. Method of Float Test for Bituminous Materials. Weight and dimensions of aluminum float and brass collar, assembly of apparatus, design and graduation of thermometer, preparation of sample, and test procedure for asphalt products and for tar products.

American Society for Testing Materials, D 165-42; 1942. American Assn. of State Highway Officials, T 45-42. American Standards Assn., A 37.12-1943. Method of Test for Proportion of Bitumen Soluble in Carbon Tetrachloride. Covers apparatus required, preparation of sample, outline of procedure, and calculation of percentage.

American Society for Testing Materials, D 243-36; 1936. American Assn. of State Highway Officials, T 56-42. American Standards Assn., A 37.13-1943. Method of Test for Residue of Specified Penetration. Applies to specified penetration of residue obtained by heating road oil or semisolid asphalt at 249° to 260° C. Describes apparatus necessary, sample, procedure, precautions, and reproducibility of results.

American Society for Testing Materials, D 633-44; 1944. Volume Correction Table for Tar and Coal-Tar Pitch. A short and convenient table for reducing volumes of road tar and coal-tar pitch to the basis of 60° F. when extreme accuracy is not required. The table shows the volume occupied at 60° F. by a quantity of material occupying unit volume at the indicated temperature.

American Society for Testing Materials, E 28-42 T; 1942. Tentative Method of Test for Softening Point (Ball and Shouldered Ring Apparatus). Applicable to

asphalts, tars, pitches, rosins, and most resins—both natural and synthetic. Apparatus, preparation of sample, procedure, softening point, precautions, and reproducibility of results.

## 505.31 Tars for Cold Application to Roads

American Public Works Assn. Specification for Pavement Foundation of Tar Macadam (Cold Penetration Type), B7-36; 1936. For materials and methods of construction, including requirements for refined tar for cold application, tested in accordance with A.S.T.M. methods.

American Society for Testing Materials, D 490-43T; 1943. Tentative Specifications for Tar. Includes 14 grades of tar for use in prime coat application, light surface treatment, surface treatment, road mix, plant mix, seal coat, penetration, crack filler, and patching, including low-temperature application and quick-setting. Gives requirements for sampling, specific gravity, specific viscosity, float test, distillation, softening point, sulfonation index, and total bitumen.

U. S. Gov., Navy Dept. Specification 52T5a; 1942. Tar; Coal.

*References.*—Definitions, methods or sampling and of testing, *see* 502.2, 505.0, 505.30; tar for repair work, cold application, *see* 505.34.

## 505.32 Tars for Hot Application to Roads

American Public Works Assn. Specification for Pavement Foundation of Tar Macadam (Hot Penetration Type), B6-36; 1936. For materials and methods of construction including requirements for refined tar, tests in accordance with A.S.T.M. methods, crushed stone, and for block pavement surface course preparation of sand-tar cushion.

American Society for Testing Materials, D 490-43T; 1943. Tentative Specifications for Tar. Includes 14 grades of tar for use in prime coat application, light surface treatment, surface treatment, road mix, plant mix, seal coat, penetration, crack filler, and patching, including low-temperature application and quick-setting. Gives requirements for sampling, specific gravity, specific viscosity, float Test, distillation, softening point, sulfonation index, and total bitumen.

*References.*—Definitions, methods of sampling and of testing, *see* 502.2, 505.0, 505.30; bituminous fillers, *see* 505.15; tar for repair work, hot application, *see* 505.34.

## 505.33 Tars for Road Construction

American Assn. of State Highway Officials, M52-42. Standard Specifications for Tar for Use in Road Construction. Gives scope, general requirements, properties, methods of sampling and testing, and table showing physical properties for various grades.

American Public Works Assn. Specification for Stone Block Pavement, E1-36; 1936. Includes requirements for tar pitch filler as to water, softening point, distillation range, specific gravity, ductility, and total bitumen soluble in carbon disulfide; and for asphalt cement filler as to water, penetration, flash point, loss on heating, ductility, and bitumen soluble in carbon tetrachloride. Also for mixture of tar and asphalt filler.

American Wood-Preservers' Assn., 15b; 1938. Standard Specifications for Preservatives for Flooring and Paving Blocks. Includes coal-tar paving solution. Shall be a coal-tar product, of which at least 65 percent shall be a distillate of coal tar and the remainder shall be refined or filtered coal-gas tar. Gives requirements for water content, matter insoluble in benzol, specific gravity, distillation limits, and coke residue.

U. S. Gov., Federal Specification R-T-143; 1940. Amendment 1; 1944. Tars, (for Use in) Road Construction. Covers 14 grades. Gives requirements for materials, Engler specific viscosity, float test, specific gravity, total bitumen, water percent by volume, distillation percent by weight, and softening point of distillation residue; methods for sampling and testing; and packing and marking for shipment.

*References.*—Definitions, methods of sampling and of testing, *see* 502.2, 505.0, 505.30; pitch and other bituminous fillers, *see* 505.15; tar for cold application, *see* 505.31; tar for hot application, *see* 505.32; tar for repair work, *see* 505.34; tar cement, *see* 505.35.

## 505.34 Tars for Repair Work

American Society for Testing Materials, D 490-43T; 1943. Tentative Specifications for Tar. Includes 14 grades of tar for use in prime coat application, light surface treatment, surface treatment, road mix, plant mix, seal coat, penetration, crack filler, and patching, including low-temperature application and quick-setting. Gives requirements for sampling, specific gravity, specific viscosity, float test, distillation, softening point, sulfonation index, and total bitumen.

*References.*—Definitions, methods of sampling and of testing, *see* 502.2, 505.0, 505.30; tar cement, *see* 505.35.

## 505.35 Tar Cement

American Public Works Assn. Specification for Modified Tar Macadam Pavement, G6-36; 1936. Includes requirements for cold tar cement as to water, specific gravity, viscosity, distillation range, residue, softening point, and bitumen soluble in carbon disulfide; also for tar seal coat, using A.S.T.M. methods of test.

American Public Works Assn. Specification for Tar Macadam Pavement, G9-36; 1936. For hot tar cement, homogeneous and water-free, specific gravity, float test, distillation range, residue by weight, softening point, and bitumen soluble in carbon disulfide, using A.S.T.M. methods for test.

American Society for Testing Materials, D 490-43T; 1943. Tentative Specifications for Tar. Includes 14 grades of tar for use in prime coat application, light surface treatment, surface treatment, road mix, plant mix, seal coat, penetration, crack filler, and patching, including low-temperature application and quick-setting. Gives requirements for sampling specific gravity, specific viscosity, float test, distillation, softening point, sulfonation index, and total bitumen.

U. S. Gov., Treasury Dept., Procurement Div., No. 278; 1938. Cement; Bituminous, Plastic Vegetable-Oil-Pitch-Base. Covers one type and one grade. Cement shall be composed of a suitable inorganic filler,

suitable solvent, and a nonvolatile bituminous binder. The binder shall be mainly a vegetable-oil-pitch. Intended for use in repairs of roofs, walls, and foundations and as an expansion joint and caulking material. Gives requirements for nonvolatile matter, inorganic filler, workability, heat and cold test, joint test, strain test, and bleeding test; methods of sampling, inspection, and tests; and packaging and marking.

*References.*—Definitions, methods of sampling and of testing, *see* 502.2, 505.0, 505.30; tar cement for repair work, *see* 505.34.

## 505.36 Tar and Tar Felt for Roofing and Waterproofing

American Assn. of State Highway Officials, M118-42. Standard Specifications for Coal-Tar Pitch for Roofing, Dampproofing, and Waterproofing. Gives scope, primer, types, properties, methods of sampling and testing, and table showing requirements.

American Assn. of State Highway Officials. Standard Specifications for Highway Bridges, 1941. Includes specifications for waterproofing and for dampproofing—requirements for material, fabric and joint filler (to conform with American Society for Testing Materials specification); storage of fabric, preparation of surface; application; damage patching; protection course; and measurement and payment.

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering. Specifications for Buildings for Railroad Purposes: Built-Up Roofing. Gives requirements for materials (pitch, asphalt, asphalt primer, roofing felt, ready or prepared asphalt roofings, flashings, gravel, and slag); tarred rag felt, pitch and gravel (or slag) over wood or pre-cast units (type A-1), and over homogeneous roofs cast in place (type A-2); tarred rag felt, steep roofing pitch and slag, for use over wood or pre-cast concrete or gypsum units (type A-3), and over homogeneous roofs cast in place (type A-4); asphalt rag felt, asphalt and gravel (or slag) over wood or pre-cast units (type B-1), and over homogeneous roofs cast in place (type B-2); asphalt impregnated asbestos felt and asphalt (smooth surface) over wood or pre-cast units (type C-1—classes 1, 2, and 3), and over homogeneous roofs cast in place (type C-2— classes 1, 2, and 3); and asphalt rag felt and asphalt (smooth surface) over wood or pre-cast units (type D-1), and over homogeneous roofs cast in place (type D-2).

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering. Specifications for Membrane Waterproofing. Gives requirements for coal-tar pitch for saturant and mopping.

American Society for Testing Materials, D 43-41; 1941. American Assn. of State Highway Officials, M 121-42. Creosote for Priming Coat With Coal-Tar Pitch in Dampproofing and Waterproofing. For application to concrete and masonry surfaces, for use with coal-tar pitch in dampproofing and waterproofing. Maximum water, consistency, specific gravity, matter insoluble in benzol, distillation range, coke residue, procedure for sampling, and methods of testing.

American Society for Testing Materials, D 146-44T; 1944. Tentative Methods of Testing Felted and Woven Fabrics Saturated With Bituminous Substances for Use in Waterproofing and Roofing. Covers fabrics saturated (but not coated) with asphalt or coal-tar products for use in membrane waterproofing. Sampling, requirements of finished fabric as to area, weight, loose surfacing, moisture, strength, pliability, water absorption, loss on heating, and distillation of coal-tar saturated felt, and for desaturated fabric, weight, carbonaceous matter, total comminuted surfacing, saturant, and ash.

American Society for Testing Materials, D 227-44; 1944. Coal-Tar Saturated Roofing Felt for Use in Waterproofing and in Constructing Built-Up Roofs. Manufacture, character of felt, saturant, character of felt after saturation, surfacing, physical properties, stickiness, packing, sampling and methods of testing, inspection, and basis of rejection.

American Society for Testing Materials, D 450-41; 1941. Coal-Tar Pitch for Roofing, Dampproofing, and Waterproofing. For use as mopping coat in built-up roofs surfaced with slag or gravel, as mopping coat in dampproofing, or as plying or mopping cement in membrane materials, types, properties, and methods of sampling and testing.

American Society for Testing Materials, D 654-42 T; 1942. Tentative Specifications for Coal-Tar Pitch for Steep Built-Up Roofs. Cover coal-tar pitch suitable for use as a mopping coat and for embedding slag or gravel in the construction of steep built-up roofs with inclines of 1 to 6 in. per horizontal foot, where nailing is employed.

Underwriters' Laboratories, Inc. Standard for Rag-Felt Roof Covering Materials for Use in Construction of Built-Up Roof Coverings, 1941. Covers asphalt, asphalt-saturated rag-felt, coal tar and coal-tar saturated rag-felt for installation as built-up roof coverings in accordance with the descriptive matter contained in the List of Inspected Fire Protection Equipment and Materials published periodically by Underwriters' Laboratories, Inc. Covers asphalt; asphalt-saturated rag-felt; coal tar; coal-tar saturated rag-felt; apparatus and methods of procedure for tests of roof-covering materials; and inspection of listed product.

United Roofing Contractors Assn. Gravel or Slag Roofing Specification, 1915. One construction specification for use over concrete and one for use over board sheathing, requirements on procedure in laying felt, amount of lap, mopping and nailing procedure, minimum weights of felt and of gravel, required use of U.R.C.A. inspected materials, inspection requirements of materials not stated. Covers pitch roofs only.

U. S. Gov., Army-Navy Aeronautical Specification AN-C-94; 1944. Compound; Waterproofing Bituminous, for Crate Topcoating.

U. S. Gov., Federal Specification R-P-381; 1933. Pitch; Coal-Tar (for) Mineral-Surfaced Built-Up Roofing, Waterproofing and Dampproofing. Covers two types—(I) coal-tar pitch for built-up roofing and (II) coal-tar pitch for waterproofing and dampproofing. Gives requirements for appearance, softening point, ductility, specific gravity,

insoluble in carbon bisulphide, ash, distillate, and specific gravity of distillate; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Federal Specification HH-F-201; 1933. Amendment 1; 1943. Coal-Tar-Saturated (for) Roofing and Waterproofing. Covers two types—(I) 15-lb. and (II) 30-lb. Gives requirements for material, appearance, physical characteristics, and chemical composition; methods of inspection, determination of weight and width, sampling, and testing; and requirements for packaging, packing, and marking.

U. S. Gov., Federal Works Agency, Public Roads Administration. Specifications for Construction of Roads and Bridges in National Forests and National Parks, FP-41. Waterproofing.

U. S. Gov., Federal Works Agency, Public Roads Administration. Specifications for Construction of Roads and Bridges in National Forests and National Parks, FP-41. Dampproofing.

U. S. Gov., Navy Dept., Bureau of Yards and Docks. Specification 7Yg; 1934. Roofing, Siding, and Sheet Metal Work; Dampproofing and Membrane Waterproofing.

U. S. Gov., Navy Dept., Bureau of Yards and Docks. Specification 15Yb; 1934. Standard Methods for Inspection of Materials for Roofing, Siding, Sheet Metal Work, Dampproofing, and Waterproofing.

U. S. Gov., Treasury Dept., Procurement Div., 438A; 1942. Priming-Material; Bituminous (Nonbleeding), Brushing and Spraying Consistency (for Concrete, Masonry, and Other Mineral Surfaces). Shall consist of a suitable bituminous base dissolved in a suitable volatile organic solvent. Gives requirements for color, consistency, nonvolatile matter, ash content, heat and cold test, and paint bleeding test; methods of sampling, inspection, and test.

*References.*—Definitions, methods of sampling and of testing, *see* 502.2, 505.0, 505.30; asphalt roofing and waterproofing, *see* 505.16; roofing felts, *see* 365.98, 473.2; roof construction, *see* 518.57; cotton fabric for waterproofing, *see* 392.4.

### 505.37 Tar Oils

American Wood-Preservers' Assn., 15b; 1938. Standard Specifications for Preservatives for Flooring and Paving Blocks. Includes refined water-gas tar. Gives requirements for water content, matter insoluble in benzol and chloroform, specific gravity, and distillation limits.

*References.*—Definitions, methods of sampling and of testing, *see* 502.2, 505.0, 505.30; creosote and naphthalene, *see* 801.3, 801.4.

### 505.39 Miscellaneous Specifications for Tar

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering. Specifications for Bituminous Emulsions for Dampproofing. Covers materials and methods for dampproofing steel and concrete surfaces by use of asphalt emulsions (clay type) and concrete surfaces by use of coal-tar emulsions (soap type). Gives requirements for materials and applications.

American Society for Testing Materials, D 112-30; 1930. Coal-Tar Pitch for Stone Block Filler. Gives requirements for allowable water, softening point, distillation test, specific gravity, ductility, total bitumen, and applicable to A.S.T.M. methods of testing.

U. S. Gov., Treasury Dept., Procurement Div., 439A; 1942. Coating-Material; Bituminous (Nonbleeding), Brushing-Consistency (for Foundations, Roofs, Walls, Etc.). Shall be composed of suitable inorganic filler, volatile organic solvent, and binder consisting of suitable bituminous materials; intended for use as a dampproofing material in the maintenance of bituminous and metal roofing and for application on walls and foundations. Gives requirements for colors; consistency, nonvolatile matter, inorganic filler and tinting material, heat and cold test, and paint bleeding test; methods of sampling, inspection, and tests; and packaging, packing, and marking.

*References.*—Definitions, methods of sampling and of testing, *see* 502.2, 505.0, 505.30; other tar fillers, *see* 505.15.

## 505.4 BITUMINOUS SURFACE TREATMENTS

U. S. Gov., Navy Dept., Bureau of Yards and Docks. Specification 34Yb; 1943. Bituminous Coating of Steel Surfaces (waterfront and underground service—pipe, tanks, floating equipment, bulkheads, piers, etc.).

*References.*—Bituminous macadam and bituminous concrete pavements, *see* 518.34; asphalt pavements, *see* 518.37.

## 506. OZOKERITE AND OTHER MINERAL WAXES

U. S. Gov., Navy Dept. Specification 52W3b; 1943. Wax; Ceresin, Yellow, Domestic.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 2-97; 1936. Wax (Saddler's and Stitching).

*References.*—Paraffin wax, *see* 504.54.

## 507. BITUMINOUS PRODUCTS

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Commercial Standard CS116-44; 1944. Bituminized-Fibre Drain and Sewer Pipe. Covers uses, general requirements, dimensions, physical and chemical properties, and methods of testing of bituminized-fibre drain and sewer pipe (including 45- and 90-degree bends, straight couplings, and 5-degree angle couplings) in diameters ranging from 2 to 8 in. and in 5- and 8-ft. lengths.

## 509. MISCELLANEOUS OILS

U. S. Gov., Army Air Forces. Specification 3591; 1938. Oil; Ice-Preventive.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 2-80A; 1940. Oils; Tempering.

*References.*—Petroleum distillate thinner for paint, *see* 848.7.

# 510-519 STONE, SAND, AND CEMENTITIOUS MATERIAL

## 510. GENERAL ITEMS

American Foundrymen's Assn., Inc. Testing and Grading Foundry Sands and Clays, 1938. Permeability Tests. Method for determining green sand permeability, determination of permeability for shop control, determination of baked or dry sand permeability, and precautions to be observed in using permeability apparatus.

American Foundrymen's Assn., Inc. Testing and Grading Foundry Sands and Clays, 1938. Standard Determination of Moisture.

American Foundrymen's Assn., Inc. Testing and Grading Foundry Sands and Clays, 1938. Standard Fineness Test. Requirements as to classes of sands for test, selection and preparation of sample, equipment, and sizes of standard sieves.

American Foundrymen's Assn., Inc. Testing and Grading of Sands and Clays, 1938. Terms Used in Foundry Sand Work. Cover a variety of terms which relate to materials, tests, and properties used in foundry sand work, with their definitions.

American Society for Testing Materials, D 2-33; 1933. Method of Test for Abrasion of Rock by Use of the Deval Machine. Similar in most respects to the Deval abrasion test of French School of Roads and Bridges; dimensions and design of machine, sieve, test sample, and procedure for determining the coefficient of wear.

American Society for Testing Materials, D 3-18; 1918. American Assn. of State Highway Officials, T5-35. American Standards Assn., A5-1930. Method of Test for Toughness of Rock. Procedure for determining the toughness of rock, including requirements on apparatus, sampling, test specimens, test procedure, and report.

American Society for Testing Materials, D 8-33; 1933. Definitions of Terms Relating to Materials for Roads and Pavements. Covers bituminous materials such as emulsion, cut-back, asphalts, coal tar and pitch, terms relating to tests, nonbituminous materials, etc.

American Society for Testing Materials, E 4-36; 1936. American Assn. of State Highway Officials, T 67-42. Methods of Verification of Testing Machines. Includes definitions, methods of verifying machines that measure load by standard weights, by proving levers, by elastic calibration device, and by comparison method; test specimen, procedure, permissible variations, interval between verifications and reports.

American Society for Testing Materials, E 6-36; 1936. Definitions of Terms Relating to Methods of Testing. Covers stress, strain, elastic limit, field strength, tensile strength, compressive strength, and modulus of elasticity.

American Society for Testing Materials, E 12-27; 1927. American Assn. of State Highway Officials, M 132-42. Definitions of Terms Relating to Specific Gravity. Defines absolute specific gravity of solids and liquids, specific gravity, apparent specific gravity of solids, and bulk specific gravity of solids.

U. S. Gov., U. S. Army, Corps of Engineers. Specification 81-1A; 1927. Rock; Toughness of, Standard Test.

## 511. STONE AND STONE MANUFACTURES

### 511.0 GENERAL ITEMS

American Society for Testing Materials, C 97-36; 1936. Methods of Test for Absorption and Apparent Specific Gravity of Natural Building Stone. Procedures for determining absorption by weight or by volume, and for the apparent specific gravity by weight of specified sample in water.

American Society for Testing Materials, C 99-36; 1936. Method of Flexure Testing of Natural Building Stone (Determination of Modulus of Rupture). Method of selecting test specimen, apparatus required, conditioning and measuring specimen, and procedure for test.

American Society for Testing Materials, C 100-36; 1936. Method of Test for Modulus of Elasticity of Natural Building Stone. Covers apparatus, the determination of elasticity in flexure and in compression, selection of test specimen, conditioning and measuring specimen, and outlines procedure for tests.

American Society for Testing Materials, C 102-36; 1936. Method of Shear Testing of Natural Building Stone. For determining the shearing strength of stone by use of modified Johnson shear tool or the Dutton punching shear device and standard testing machine, with details for both types. Selection of test specimen, conditioning and marking specimen, and outline of procedure for tests.

American Society for Testing Materials, C 170-41T; 1941. Tentative Method of Test for Compressive Strength of Natural Building Stone. Sampling, apparatus, test specimens, conditioning, procedure, calculations, report, and explanatory notes.

### 511.1 GRANITE

National Building Granite Quarries Assn., Inc. Granite in Architecture. Covers granite specifications, standard cut granite work, granite veneer, color classification, standard finishes, bonded construction, machine process work, and processing information.

*References.*—Definitions, methods of sampling and of testing, *see* 500, 510; granite curb, *see* 518.63; stone block, *see* 511.71; riprap, *see* 511.72; ashlar stone, rubble stone, riprap stone, *see* 511.9.

### 511.2 LIMESTONE AND DOLOMITE

American Ceramic Society. Journal of A.C.S. for June 1928. National Bureau of Standards. Circular 118. Adopted by A.C.S. in 1924. Limestone, Quicklime, and Hydrated Lime. Use of lime in manufacture of glass, definitions; requirements on chemical composition of nonvolatile portion of limestone, quicklime, or hydrated lime; fineness, methods of sampling and testing.

American Society for Testing Materials, C 25-44; 1944. Methods of Chemical Analysis of Limestone,

Quicklime, and Hydrated Lime. Covers scope, analysis, special solution required, insoluble matter, silicon dioxide, iron and aluminum oxides, total iron, calcium oxide, strontium oxide, magnesium oxide, loss on ignition, mechanical moisture, carbon dioxide, sulfur trioxide, total sulfur, phosphorus, manganese, ferrous iron, available lime index, and appendix.

Indiana Limestone Institute. Indiana Limestone, 1940. For analysis of buff and gray stone, average weight, physical properties, definitions of all 11 grades as to fineness of grain, allowable variations in density, color and texture, permissible streaks, seams, pit holes, etc. Surface finishes and special uses.

Technical Assn. of the Pulp and Paper Industry. Analysis of Limestone, Standard T 618 m-44; 1944. For use in tower system of making bisulphite cooking acid from either high-calcium or high-magnesium limestone. Covers sampling, loss on ignition, silica and insoluble matter, iron oxide and alumina, lime, and magnesia.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Circular C398 and Supplement, 1944. Standard Samples. Limestone, Argillaceous, Sample No.1a; and Limestone, Dolomitic, Sample No.88. These samples are prepared and sold by the National Bureau of Standards with a certificate of analysis for use in industry or by others as a comparison standard for checking the accuracy of analysis of similar materials.

*References.*—Definitions, methods of sampling and of testing, *see* 500, 510; stone block, *see* 511.71; riprap, *see* 511.72; ashlar, rubble, and riprap stone, *see* 511.9.

## 511.3 MARBLE, TERRAZZO, AND MOSAICS

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering. Specifications for Buildings for Railroad Purposes: Marble and Tile Work. Gives requirements for terrazzo (monolithic and tile).

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering. Specifications for Buildings for Railroad Purposes: Marble and Tile Work. Gives requirements for thicknesses, setting and anchoring, finish, joints, supports, floors, borders, and beds.

National Assn. of Marble Dealers. Interior Marble Work, 1926. Explanatory of the material a specification for interior marble work should contain, includes grouping of marbles according to properties for finishing, kinds of finish and where used, standard thicknesses for marble for different applications, recommended details and methods of construction, 42 plates illustrating typical installations.

National Terrazzo and Mosaic Assn. Divider Strip Location and Data. Covers the purpose of dividers, floated type of terrazzo floor, pattern work, carry a line division through, locate dividers at critical points, panel size, wall base, borders, wainscots, base beads and shelf type strips, grounded grills, sizes, materials, anchorage features, and proper use and location of dividers.

National Terrazzo and Mosaic Assn. Technical Data and Specifications for Terrazzo and Mosaic Work, 1939. Specifications for Mosaics. Marble mosaic shall be prepared mounted on paper in the mosaic shop. Gives requirements for concrete foundation, setting, grouting, finishing, and glass mosaic.

National Terrazzo and Mosaic Assn. Technical Data and Specifications for Terrazzo and Mosaic Work, 1939. Specifications for Terrazzo Work. Gives requirements for underbed, strips, terrazzo mix, installation, curing, surfacing, finishing, warning, nonslip floors, bases, stairs, wainscots, and partitions.

National Terrazzo and Mosaic Assn. Terrazzo Maintenance. Covers physical characteristics, selection of methods and selection of materials, filler or seal, special treatment, scrubbing, cleaning, maintenance, and caution.

Portland Cement Assn. Concrete Floor Finishes, 1938. Includes specifications for construction of terrazzo floors; requirements for base slab, samples, aggregates, color pigments, mixtures, placing, curing, machine rubbing, cleaning, and for nonslip terrazzo, with illustrations of various color combinations.

U. S. Gov., Navy Dept., Bureau of Yards and Docks. Specification 11Yc; 1939. Marble and Tile Work.

U. S. Gov., Navy Dept., Bureau of Yards and Docks. Specification 23Yb; 1934. Terrazzo.

*References.*—Definitions, methods of sampling and of testing, *see* 500, 510; electrical panels and switchboards, *see* 714.4; telephone switchboards, *see* 718.22; fuse blocks, *see* 714.22; switches and switch bases, *see* 714.52; cut-out bases, *see* 714.22.

## 511.4 SANDSTONE

*References.*—Definitions, methods of sampling and of testing, *see* 500, 510: stone block, *see* 511.71; riprap, *see* 511.72; ashlar, riprap, and rubble stone, *see* 511.9; sandstone curb, *see* 518.63.

## 511.5 SLATE

### 511.50 General Items

American Society for Testing Materials, C 119-27; 1927. Definition of the Term "Slate."

American Society for Testing Materials, C 120-31; 1931. Methods of Flexure Testing of Slate, Modulus of Rupture, Modulus of Elasticity. Requirements for structural or electrical slate and for roofing slate specimen; dimensions of knife-edges supporting specimen, sensitivity of test machine, conditioning and measuring specimen, and outline of procedure for tests.

American Society for Testing Materials, C 121-31; 1931. Method of Test for Water Absorption of Slate. Gives requirements for care in preparing specimens for test; for drying, weighing, and saturating specimen; and form of report.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Research Paper RP477; 1932. Physical Properties and Weathering Characteristics of Slate. Covers results of laboratory studies on commercial slates in this country and gives a brief description of general characteristics and uses of slates.

## 511.51 Blackboard Slate

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R15-35; 1935. Blackboard Slate. This recommendation covers sizes, finish, and thickness of blackboard slate. Recommended dimensions are given for blackboard slabs, location of slab joints in covering wall spaces, and dimensions and clear writing surfaces for portable or small blackboards—bulletin boards, school slates, kitchen slates, score-card slates, and memorandum slates. Initiated by National Slate Assn.

*References.*—Definitions, methods of sampling and of testing, *see* 511.50.

## 511.52 Building Slate and Slate Plumbing Fixtures

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering. Specifications for Buildings for Railroad Purposes: Slate Roofing. Gives requirements for materials, application, sheet metal work, and guarantee.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R13-28; 1928. Structural Slate (for Plumbing and Sanitary Purposes). This recommendation establishes a schedule of dimensions, sizes, and nomenclature of structural slate for plumbing and sanitary purposes. It covers sizes and dimensions of slate laundry tubs, sinks, slop hoppers, shower stalls, toilet inclosures, and urinals. Initiated by the National Slate Assn.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R14-28; 1928. Roofing Slate. This recommendation establishes a schedule of stock sizes and dimensions of slate shingles for sloping roofs and for flat roofs. It gives also a recommended color and dimension nomenclature. Initiated by National Slate Assn.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Building Materials and Structures Report BMS8; 1938. Survey of Roofing Materials in the Southeastern States. A survey of the weathering qualities and extent of use of the various roofing materials on dwellings in the Southeastern States is described. Detailed studies of roofing materials in Greensboro, N. C.; Columbia, S. C.; Savannah and Atlanta, Ga.; Jacksonville and Orlando, Fla.; Birmingham, Ala.; Knoxville, Tenn.; and Charleston, W. Va., are reported. A tabulation, by states, of the kinds of roofing materials used on more than 10,000 rural and small-town dwellings, along approximately 2,500 miles of highway, is included. Forty-eight photographs, illustrating types of weathering of roofing materials and features of design and construction of roofs, are shown.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Building Materials and Structures Report BMS29; 1939. Survey of Roofing Materials in the Northeastern States. A survey of the weathering qualities and extent of use of the various roofing materials on dwellings in the Northeastern States is described, with numerous comparative references to a similar survey in the Southeastern States. Detailed studies of roofing materials in Wilmington, Del.; Philadelphia, Pa.; New Haven, Conn.; Boston, Mass.; Manchester, N. H.; Portland, Maine; Rutland, Vt.; and Albany and Syracuse, N. Y., are reported. A tabulation, by states, of the kinds of roofing materials used on more than 10,000 rural and small-town dwellings, along approximately 1,800 miles of highway between the cities listed above, is included; also a summary of the kinds of roofing materials used on almost 21,000 rural and small-town dwellings along 4,000 miles of highway in 20 Eastern States. Forty-eight photographs, illustrating types of weathering of roofing materials and features of design and construction of roofs, are shown.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Building Materials and Structures Report BMS75; 1941. Survey of Roofing Materials in the North Central States. A survey of the weathering qualities and extent of use of the various roofing materials on dwellings in the North Central States is described, with numerous references to similar surveys made previously in the Southeastern and Northeastern States. Detailed studies of roofing materials in Pittsburgh, Pa.; Cincinnati and Toledo, Ohio; Grand Rapids and Lansing, Mich.; Chicago, Ill.; Milwaukee, Wis.; St. Paul, Minn.; Bismarck, N. Dak.; Sioux Falls, S. Dak.; Omaha, Nebr.; Kansas City, Moberly, and St. Louis, Mo.; and Indianapolis, Ind., are reported. A tabulation, by states, of the kinds of roofing materials used on more than 8,000 rural and small-town dwellings, along approximately 3,000 miles of highway between the cities listed above, is included; also a summary of the kinds of roofing materials used on almost 29,000 rural and small-town dwellings along 7,000 miles of highway in the 32 states covered by the three surveys. Forty-eight photographs, illustrating type of weathering of roofing materials, and features of design and construction of roofs, are shown.

U. S. Gov., Federal Specification SS-S-451; 1932. Slate; Roofing. Covers one type and three grades—A, B, and C. Gives detail requirements for color, strength, absorption, and acid resistance; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

*References.*—Definitions, methods of sampling and of testing, *see* 511.50; roofing construction, *see* 518.57.

## 511.53 Slate for Electrical Purposes

American Society for Testing Materials, D 273-40; 1940. Methods of Test for Conducting Paths in Electrical Slate. Includes simple spark coil test for routine factory or quarry use where numerical readings are not necessary, and procedure for measuring the leakage current when subjected to high voltage of commercial frequency for laboratory or where large volume of slate is to be tested. Description of apparatus, test specimen, and procedure.

*References.*—Definitions, methods of sampling and of testing, *see* 511.50; electrical panels and

switchboards, *see* 714.4; telephone switchboards, *see* 718.22; fuse blocks, *see* 714.22; switches and switch bases, *see* 714.52; cut-out bases, *see* 714.22; methods of testing insulating qualities, *see* 719.50.

## 511.6 SOAPSTONE

U. S. Gov., Federal Specification WW-P-541a; 1940. Plumbing Fixtures (for) Land Use. Includes requirements for cast iron, soapstone, and concrete laundry trays with and without backs. Covers trays of single and double compartments for cast iron; single, double, and triple compartments for soapstone; and double compartments for concrete. Includes also requirements for supports and fittings; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment. Emergency Alternate Federal Specification E-WW-P-541a; 1942 (issued by Procurement Div., Treasury Dept., U. S. Gov.), changed requirements for metals and finishes, standard materials, and illustrations; selections and air gaps.

U. S. Gov., Federal Specification WW-P-541a; 1940. Plumbing Fixtures (for) Land Use. Includes requirements for sinks made of soapstone including supports, trimmings, and fittings; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment. Emergency Alternate Federal Specification E-WW-P-541a; 1942, (issued by Procurement Div., Treasury Dept., U. S. Gov.), changed requirements for metals and finishes, standard materials, and illustrations; selections and air gaps.

## 511.7 ROCK AND STONE FOR ROAD BUILDING

### 511.70 General Items

American Society for Testing Materials, D 3-18; 1918. American Assn. of State Highway Officials, T5-35. American Standards Assn., A5-1930. Method of Test for Toughness of Rock. Procedure for determining the toughness of rock, including requirements on apparatus, sampling, test specimens, test procedure, and report.

American Society for Testing Materials, D 75-42T; 1942. American Assn. of State Highway Officials, T2-42. Tentative Methods of Sampling Stone, Slag, Gravel, Sand, and Stone Block for Use as Highway Materials. For preliminary investigation of sources of supply, acceptance or rejection of source of supply, and inspection of shipments of materials. Includes stone from ledges or quarries, field stone and boulders, sand and gravel from commercial or non-commercial deposits, bank run sand and gravel, stone block, and miscellaneous materials; requirements for samples, size and marking of samples and records.

### 511.71 Stone and Granite Blocks

American Society for Testing Materials, D 59-39; 1939. Granite Block for Pavements. For general quality of block, percentage of wear and toughness using A.S.T.M. methods D 2 and D 3 of testing, size, dressing, and inspection.

American Society for Testing Materials, D 131-39; 1939. Recut Granite Block for Pavements. Covers grain size, uniformity of quality and texture, percentage of wear and toughness by tests using A.S.T.M. methods, standard dimensions, dressing, and inspection.

American Society for Testing Materials, D 132-39; 1939. Granite Block for Durax Pavements. General quality of block, percentage of wear and toughness determined by A.S.T.M. methods, limiting dimensions, dressing, and inspection.

U. S. Gov., Federal Specification SS-G-651; 1931. Granite Blocks, Recut Granite, and Durax Granite Pavements. Gives requirements for physical properties and dimensions, methods of sampling and testing, and requirements for packing and marking.

*References.*—Definitions, methods of sampling and of testing, *see* 500, 510, 511.70; granite, limestone, sandstone, *see* 511.1, 511.2, 511.4; cast stone, *see* 516.4; stone block pavements, *see* 518.36.

### 511.72 Riprap

U. S. Gov., Federal Works Agency, Public Roads Administration. Specifications for Construction of Roads and Bridges in National Forests and National Parks, FP-41. Loose Riprap.

*References.*—Definitions, methods of sampling and of testing, *see* 500, 510, 511.70; riprap, *see* 511.9; granite, limestone, sandstone, *see* 511.1, 511.2, 511.4; retaining and head walls, *see* 518.66; rubble and ashlar masonry, *see* 518.81, 518.82.

### 511.73 Railway Ballast

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering, 1944. Specifications for Prepared Stone, Slag, and Gravel Ballast. Covers the requirements for grading and other significant physical properties of mineral aggregates for prepared ballast. Gives general requirements, quality requirements, grading requirements, handling, inspection, testing, methods of test, and measurement.

National Sand and Gravel Assn. Circular 23; 1944. Specifications for Prepared Stone, Slag, and Gravel Ballast. Covers scope, general requirements, quality requirements, grading requirements, handling, inspection, testing, methods of test, and measurement. Reprint from the copyrighted proceedings American Railway Engineering Assn.

U. S. Gov., Federal Specification SS-C-72; 1942. Crushed-Stone, Crushed-Slag, and Gravel, (for) Railroad Ballast. Covers four types and sizes. Gives requirements for material, resistance to abrasion, weight of slag, soundness, deleterious substances, and grading; and methods of sampling and tests.

*References.*—Definitions, methods of sampling and of testing, *see* 500, 510, 511.70, 512.10; gravel, sand, broken stone, slag, *see* 512.11, 512.12, 512.15, 512.2.

## 511.9 MISCELLANEOUS STONE AND STONE MANUFACTURES

*References.*—Definitions, methods of sampling and of testing, *see* 500, 510, 511.70.

# 512. SAND, GRAVEL, BROKEN STONE, SLAG

## 512.1 SAND, GRAVEL, BROKEN STONE

### 512.10 General Items

American Assn. of State Highway Officials, M56-42. Standard Specifications for Materials for Stabilized Base Course. Covers the quality and size of sand-clay mixtures; gravel, stone, or slag screenings; or sand, crusher run course aggregate consisting

of gravel, crushed stone, or slag combined with soil mortar or any combination of these materials for use in the construction of a stabilized base course. Gives types, general requirements, physical properties, moisture content, admixtures, and methods of sampling and testing.

American Assn. of State Highway Officials, M61-42. Standard Specifications for Materials for Stabilized Surface Course. Gives scope, types, general requirements, detail requirements, moisture content, admixtures, and methods of testing.

American Assn. of State Highway Officials, T3-35. Standard Method of Test for Abrasion of Stone and Slag by Use of the Deval Machine. Gives description of machine and detailed procedure for making the test.

American Assn. of State Highway Officials, T10-35. Standard Method of Test for Percentage of Shale in Aggregate. Gives method for the separation of shale and other pieces having low specific gravity from concrete aggregate by using a solution of a satisfactory liquid having a specific gravity of approximately 1.95.

American Assn. of State Highway Officials, T30-37. Standard Method of Test for Mechanical Analysis of Extracted Aggregates. For mineral aggregate left after extraction of bituminous materials. Gives procedure for drying and screening.

American Assn. of State Highway Officials, T36-24. Standard Method of Test for Sampling Mineral Filler. Gives method of sampling for mineral filler which is the same as for Portland cement received in carload lots.

American Assn. of State Highway Officials, T101-42. Standard Methods of Determining Swell Characteristics of Aggregates When Mixed With Bituminous Materials. These methods provide for the determination of the swell characteristics of dense-graded bituminous mixtures and aggregates used in such mixtures. Gives apparatus, bituminous binder, procedure, measuring, immersion, calculation of results, and report.

American Assn. of State Highway Officials, T103-42. Standard Method of Test for Soundness of Aggregates by Freezing and Thawing. Gives scope, apparatus, samples, preparation of test sample, method of exposure, cycles, measurement of disintegration, quantitative examination, qualitative examination, and report.

American Assn. of State Highway Officials, T109-42. Standard Method of Test for Settlement Ratio of Mineral Matter in Bituminous Filler. This method of test is used as a measure of the rate at which mineral matter in mixtures of asphalt and mineral matter will settle when maintained without agitation at a temperature of 325° F. Gives apparatus, sample, procedure, and results.

American Foundrymen's Assn., Inc. Testing and Grading Foundry Sands and Clays, 1938. Durability Tests. Describes several methods for measuring the durability of life of sands and clays.

American Foundrymen's Assn., Inc. Testing and Grading Foundry Sands and Clays, 1938. Dye Absorption Qualities of Molding Sand. Gives requirements as to the selection and preparation of sample, the equipment and reagents required, and the procedure to be followed in making the test.

American Foundrymen's Assn., Inc. Testing and Grading Foundry Sands and Clays, 1938. Recommended Method of Determining Sea-Coal in Foundry Sand. Gives requirements relative to method of sea-coal analysis, foundry sand analysis, and application to heap sand or facing analysis.

American Foundrymen's Assn., Inc. Testing and Grading Foundry Sands and Clays, 1938. Sampling Foundry Sands and Clays. Describes four methods of sampling, namely—routine method for samples of testing foundry sands as shipped or delivered; sampling method when accuracy is desired in case of dispute; sand as sampled in the foundry for routine testing of sand heaps or system sands; and clays, including bentonites, as shipped or delivered.

American Foundrymen's Assn., Inc. Testing and Grading Foundry Sands and Clays, 1938. Sintering Point of Sand. Describes a standard method for determining the sintering point of foundry sand.

American Foundrymen's Assn., Inc. Testing and Grading Foundry Sands and Clays, 1938. Standard Preparation of Samples To Be Tested. Includes sampling of new sands, range of moisture content, preparation of samples, and plant control check.

American Foundrymen's Assn., Inc. Testing and Grading Foundry Sands and Clays, 1938. Standard Form and Preparation of Test Specimen. The standard specimen of sand is used in determining permeability; tensile, shear, and compression strengths; deformations and sintering point of foundry sands.

American Foundrymen's Assn., Inc. Testing and Grading Foundry Sands and Clays, 1938. Strength of Baked Cores. Gives descriptions of the methods for testing the baked strength of cores and mixtures. Two methods have been approved as tentative standard, namely—tensile test and transverse strength test.

American Foundrymen's Assn., Inc. Testing and Grading Foundry Sands and Clays, 1938. Strength Tests. Includes standard methods for determining green compression strength, dry compression strength, green sand shear strength, bar strength of green sand, tensile strength, etc.

American Foundrymen's Assn., Inc. Testing and Grading Foundry Sands and Clays, 1938. Tentative Standard Method of Testing Core Binders. Includes requirements for selection and preparation of sample, equipment to be used, procedure to be followed, and testing for physical properties.

American Foundrymen's Assn., Inc. Testing and Grading Foundry Sands and Clays, 1938. Tentative Standard Determination of Permeability of Baked Cores; Gives definition and requirements as to selection and preparation of samples, test specimens, equipment, and procedure to be followed.

American Foundrymen's Assn., Inc. Testing and Grading Foundry Sands and Clays, 1938. Tentative Standard Method for Determining Green Sand Mold Surface Hardness. Gives requirements as to equipment to be used, controlling specifications, and instrument calibration.

American Foundrymen's Assn., Inc. Testing and Grading Foundry sands and Clays, 1938. Tentative

Standard Specifications for Testing Oven Used in Baking Core Test Specimens. Gives requirements as to the type of oven to be used relative to heat, temperature control, shelf construction, circulating fan, number of vents, and openings.

American Public Works Assn. Sewers, J1-38; 1938. Includes concrete aggregates such as sand, gravel, crushed stone, or other inert materials having hard, strong, durable pieces free from organic impurities. Also sand for preparation of masonry mortar and for tests using A.S.T.M. methods.

American Society for Testing Materials, C 29-42; 1942. American Assn. of State Highway Officials, T 19-42. Method of Test for Unit Weight of Aggregate. Covers necessary apparatus, condition of sample, calibration of measure, compact weight determination by rodding procedure and jigging procedure, and loose weight determination.

American Society for Testing Materials, C 30-37; 1937. American Assn. of State Highway Officials, T 20-42. American Standards Assn., A 19-1937. Method of Test for Voids in Aggregate for Concrete. Formula for determination of percentage of voids with definitions of terms.

American Society for Testing Materials, C 40-33; 1933. Method of Test for Organic Impurities in Sands for Concrete. For approximate determination of the presence of injurious organic compounds in natural sands. Gives size of sample necessary, reference standard color solution, method of test, and comparison of color value.

American Society for Testing Materials, C 58-28; 1928. Definition of the Term "Sand."

American Society for Testing Materials, C 58-28T; 1928. Tentative Definition of the Term "Aggregate."

American Society for Testing Materials, C 88-44T; 1944. American Assn. of State Highway Officials, T 104-44. Tentative Method of Test for Soundness of Aggregates by Use of Sodium Sulfate or Magnesium Sulfate. The procedure to be followed in testing aggregates to determine their resistance to disintegration by saturated solutions of sodium sulfate or magnesium sulfate. Covers apparatus, special solutions required, samples, preparation of test sample, procedure, quantitative examination, qualitative examination, and report.

American Society for Testing Materials, C 117-37; 1937. American Assn. of State Highway Officials, T 11-42. American Standards Assn., A 37.4-1943. Method of Test for Amount of Material Finer Than No. 200 Sieve in Aggregates. Describes sieves and container for test sample and procedure for washing and weighing screened material to determine the loss of matter finer than No. 200 sieve.

American Society for Testing Materials, C 125-44; 1944. Definitions of Terms Relating to Concrete and Concrete Aggregates. Defines admixture, blast-furnace slag, crushed gravel, crushed stone, elongated piece, fineness modulus, flat piece, gravel, and water-cement ratio.

American Society for Testing Materials, C 127-42; 1942. American Assn. of State Highway Officials, T 85-42. American Standards Assn., A 37.5-1943. Method of Test for Specific Gravity and Absorption of Coarse Aggregate. For determining bulk and apparent specific gravity and absorption, after 24 hr. in water at room temperature, of coarse aggregate. Covers necessary apparatus, sampling, method of procedure, and the derivation of bulk specific gravity, apparent specific gravity, and percentage of absorption.

American Society for Testing Materials, C 128-42; 1942. American Assn. of State Highway Officials, T 84-42. American Standards Assn., A 37.8-1943. Method of Test for Specific Gravity and Absorption of Fine Aggregate. For determining bulk specific gravity, apparent specific gravity, and absorption, after 24 hr. in water at room temperature. Describes apparatus, preparation of sample, outlines procedure, and calculations.

American Society for Testing Materials, C 131-44; 1944. American Standards Assn., A 37.7-1944. American Assn. of State Highway Officials, T 96-44. Method of Test for Abrasion of Coarse Aggregate by Use of the Los Angeles Machine. For testing crushed rock, crushed slag, uncrushed gravel, and crushed gravel for resistance to abrasion. Covers apparatus, abrasive charge, test sample, procedure, and calculation.

American Society for Testing Materials, C 136-39; 1939. American Assn. of State Highway Officials, T 27-42. American Standards Assn., A 37.8-1943. Method of Test for Sieve Analysis of Fine and Coarse Aggregates. For determination of particle size distribution of fine and coarse aggregates but not for aggregates recovered from bituminous mixtures or for mineral fillers. Describes sieves, balances, and selection of samples, and outlines procedure for analysis.

American Society for Testing Materials, C 142-39; 1939. American Assn. of State Highway Officials, T 112-42. Method of Test for Clay Lumps in Aggregates. For approximate determination of clay lumps in routine examination of aggregates. Covers apparatus, test samples, and outlines procedure for test.

American Society for Testing Materials, D 2-33; 1933. Method of Test for Abrasion of Rock by Use of the Deval Machine. Similar in most respects to the Deval abrasion test of French School of Roads and Bridges; dimensions and design of machine, sieve, test sample, and procedure for determining the coefficient of wear.

American Society for Testing Materials, D 3-18; 1918. American Assn. of State Highway Officials, T5-35. American Standards Assn., A5-1930. Method of Test for Toughness of Rock. Procedure for determining the toughness of rock, including requirements on apparatus, sampling, test specimens, test procedure, and report.

American Society for Testing Materials, D 75-42T; 1942. American Assn. of State Highway Officials, T2-42. Tentative Methods of Sampling Stone, Slag, Gravel, Sand, and Stone Block for Use as Highway Materials. For preliminary investigation of sources of supply, acceptance or rejection of source of supply, and inspection of shipments of materials. Includes stone from ledges or quarries, field stone and boulders, sand and gravel from commercial or noncommercial deposits, bank run sand and gravel,

stone block, and miscellaneous materials; requirements for samples, size and marking of samples, and records.

American Society for Testing Materials, D 289-42T; 1942. Tentative Method of Test for Abrasion of Gravel by Use of the Deval Machine.

American Society for Testing Materials, D 556-40T; 1940. Tentative Specifications for Materials for Stabilized Base Course. Covers the quality and size of sand-clay mixtures, gravel, stone or slag screenings, sand, crusher-run coarse aggregate consisting of gravel, crushed stone, or slag combined with soil mortar, or any combination thereof for construction of a stabilized base course. General requirements, sieve analysis, liquid limit, plasticity index, moisture content, admixtures, and methods of testing.

American Society for Testing Materials, D 557-40 T; 1940. Tentative Specifications for Materials for Stabilized Surface Course. Covers the quality and size of sand-clay mixtures; gravel, stone, or slag screenings; sand, crusher-run aggregate, or combinations thereof. Gives general requirements, sieve analysis, liquid limit, plasticity index, moisture content, admixtures, and methods of testing.

National Sand and Gravel Assn. Circular 15; 1937. Studies of Sodium and Magnesium Sulfate Soundness Tests. These methods provide for the alternate soaking and drying of aggregates under controlled conditions to secure data relative to the resistance of aggregates to weathering and other factors causing disintegration. Covers scope, materials and test methods, discussion of tests, and conclusion. Reprinted from the copyrighted proceedings of the A.S.T.M.

National Sand and Gravel Assn. Circular 16. The Effect of Deleterious Materials in Aggregate for Concrete. A general discussion of the harmful effects of unsound particles prevalent in certain gravels.

National Sand and Gravel Assn. Circular 17. Some Engineering Research Problems of the Sand and Gravel Industry. Outlines in general terms some of the important engineering research problems which confront the sand and gravel industry. Covers sand and gravel in bituminous mixtures, suggested bituminous-mixture researches, sand and gravel in concrete, soundness of aggregates, deleterious particles, standardization of specifications, production problems, miscellaneous problems, and conclusion.

National Sand and Gravel Assn. Circular 18; 1938. The Relation Between Los Angeles Abrasion Test Results and the Service Records of Coarse Aggregates. It appears that there is a definite relation between the loss in the Los Angeles test and the service record of materials used in concrete, bituminous construction, and surface treatment. Covers the subject by a general discussion, gives tables of comparison between Los Angeles test result and service record by the highway departments of several states, and gives figures showing percentage of wear. Los Angeles test from data furnished by the highway departments of several states. Reprint from the proceedings of the Highway Research Board.

National Sand and Gravel Assn. Circular 20; 1940. Degradation of Aggregates Under Road Rollers. Reports data on the degradation produced by 5-ton and 10-ton rollers in compacting typical uncoated surface treatment aggregates both on a bituminous mat and on a concrete base. Several gradings of six limestones, four crushed and four uncrushed gravels, and one blast-furnace slag were tested. Data are also reported showing the relationship between degradation of aggregates under rollers and losses obtained in the Los Angeles tests. Covers description of equipment, roller test procedure, roller test results, Los Angeles test results, and conclusions. Reprint from the copyrighted proceedings of the A.S.T.M.

National Sand and Gravel Assn. Circular 22; 1943. Soundness of Aggregates. Indications of unsound aggregates in concrete exposed to the elements fall into four broad classifications which may be described as pitting, spalling, surface scaling, and map cracking. Discusses these four classifications, methods of testing, indications from exposed concrete, indications of soundness tests, and conclusions. Reprint from the copyrighted report published by the A.S.T.M.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, 1938. Glass Sand. Covers definition, constants, solubility, occurrence, derivations, purity, grades, specifications, substitutes, containers, shipping regulations, uses, and ordering instructions.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Circular C398 and Supplement, 1944. Standard Samples. Glass Sand, Sample 81. This sample is prepared and sold by the National Bureau of Standards with a certificate of analysis for use in industry and by others as a comparison standard for checking the accuracy of analysis of similar material.

U. S. Gov., Federal Works Agency, Public Roads Administration. Specifications for Construction of Roads and Bridges in National Forests and National Parks, FP-41. Includes requirements for materials for stone or gravel sheathing; spot subgrade reinforcement; selected borrow base course; stabilized sail base course; gravel base course; crushed gravel or crushed stone base course; telford base course; sledged stone base course; dry choked stone or slag base course; waterbound macadam base course; reconstructed stone or gravel base course; bituminous macadam base course; hot bituminous base course; selected borrow surface course; gravel surface course; crushed gravel or crushed stone surface course; class B-1 and class C-1 dense graded road-mix surface courses; class B-2, dense graded plant-mix surface course; class C-2, open graded road-mix surface course; class D, type D-1, mosaic macadam pavement; class D, type D-2, three application macadam pavement; class E-2, type EM, four application macadam pavement; class F, type F-1, dense graded plant-mix surface course; and class F, type F-2, open graded plant-mix surface course.

## 512.11 Gravel

American Assn. of State Highway Officials, M62-42. Standard Specifications for Crushed Stone, Crushed

Slag, and Crushed Gravel for Dense-Graded Bituminous Road and Plant-Mix Surface Course. Gives scope, general requirements, physical properties, and methods of testing.

American Assn. of State Highway Officials, M63-42. Standard Specifications for Crushed Stone, Crushed Slag, and Crushed Gravel for Open-Graded Bituminous Road-Mix Surface Course. Gives scope, general requirements, physical properties, grading, and methods of sampling and testing.

American Assn. of State Highway Officials, M80-42. Standard Specifications for Coarse Aggregate for Portland Cement Concrete. Gives scope, general requirements, deleterious substances, percentage of wear, weight per cubic foot of slag, soundness, grading, and methods of sampling and testing.

American Assn. of State Highway Officials, T4-35. Standard Method of Test for Abrasion of Gravel by Use of the Deval Machine. Gives requirements on screening of sample and preparation according to one of five standard grade classes, size of sample, duration of test in Deval abrasion testing machine, speed of machine, measurement of loss by abrasion; for gravel containing no crushed pieces and for gravel containing crushed pieces.

American Society for Testing Materials, C 131-44; 1944. American Standards Assn., A 37.7-1944. American Assn. of State Highway Officials, T 96-44. Method of Test for Abrasion of Coarse Aggregate by Use of the Los Angeles Machine. For testing crushed rock, crushed slag, uncrushed gravel, and crushed gravel for resistance to abrasion. Covers apparatus, abrasive charge, test sample, procedure, and calculation.

American Society for Testing Materials, D 692-42T; 1942. Tentative Specifications for Crushed Stone, Crushed Slag, and Gravel for Bituminous Concrete Base and Surface Courses of Pavements. Includes requirements for sieve analysis and for tests using A.S.T.M. methods.

American Society for Testing Materials, D 694-44; 1944. Crushed Stone, Crushed Slag, and Gravel for Water-Bound Base and Surface Courses of Pavements. Cover general characteristics, physical requirements, sizes, sieve analysis, and methods of sampling and testing using A.S.T.M. methods.

U. S. Gov., U. S. Army, Corps of Engineers. Specification 81-7A; 1933. Roofing Material; Surfacing, Built-Up, Bituminous.

*References.*—Definitions, methods of sampling and of testing, *see* 500, 510, 511.70, 512.10; railway ballast, *see* 511.73; fine and coarse aggregate, *see* 512.13, 512.14; gravel for concrete, concrete bricks and blocks, concrete sidewalks, concrete poles and posts, *see* 516.3, 516.4, 516.5, 516.9; gravel for road construction and pavement, *see* 518.1, 518.2, 518.3; gravel for bridges and piling, *see* 518.4; gravel for buildings and parts of buildings, *see* 518.5; gravel for drainage structures, concrete drain and sewer pipe, *see* 518.6; gravel for tanks and concrete masonry, *see* 518.7, 518.8.

## 512.12 Sand

American Assn. of State Highway Officials, M29-42. Standard Specifications for Sand for Bituminous Mixtures. For use in bituminous pavements, bituminous mortars, bituminous filler or mastics. Gives general requirements, grading, and methods of sampling and testing.

American Assn. of State Highway Officials, M45-42. Standard Specifications for Mortar Sand. Gives scope, general requirements, organic impurities, mortar strength, grading, and methods of sampling and testing.

American Assn. of State Highway Officials, T21-42. Standard Method of Test for Organic Impurities in Sands for Concrete. Covers the procedure for an approximate determination of the presence of injurious organic compounds in natural sand which are to be used in cement mortar or concrete. Gives sample, reference standard color solution, procedure, and determination of color value.

American Ceramic Society. Journal of A.C.S. for June 1928. Tentative Method. Complete Sand Analysis, 1928. Preparation and dissolving of sample, method of determination of $R_2O_3$, CaO, MgO, and loss on ignition; determination of iron, zirconia, alumina, silica, and electrometer method for iron in glass sands.

American Foundrymen's Assn., Inc. Testing and Grading Foundry Sands and Clays, 1938. Foundry Sand Grading Classifications. The classification factors are grain fineness number, grain fineness class, grain distribution numbers, clay content class, and grain shape class, with detailed information under each factor.

American Foundrymen's Assn., Inc. Testing and Grading Foundry Sands and Clays, 1938. Standard Chemical Analysis of Foundry Sands. Includes preparation of sample, determination of water, total volatile matter, silica, iron, aluminum and titanium oxides, ferric oxide, titania, alumina, lime, magnesia, carbon dioxide, potassium and sodium oxides, and ferrous oxide.

American Foundrymen's Assn., Inc. Testing and Grading Foundry Sands and Clays, 1938. Standard Testing Sand. Shall consist of washed and dried, rounded-grain, silica sand, having a maximum dye adsorption of 40. States percentage of sand which must pass through certain mesh sieves.

American Foundrymen's Assn., Inc. Testing and Grading Foundry Sands and Clays, 1938. Tentative Standard Procedure for Determining Bonding Power of Clays. Gives requirements as to the sand to be used, preparation of the test sample, and testing.

American Public Works Assn. Specification for Vitrified Brick Pavement, D1-36; 1936. Includes requirements for sand, stone or slag screenings, granulated slag, and crushed shells as to general quality and grading percentages in U. S. Standard Sieve Series. Adopted by National Paving Brick Assn.

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering, 1944. Specifications for Buildings for Railroad Purposes: Architectural Terra Cotta. Gives requirements for sand.

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering, 1942. Specifications for Buildings for Railroad Purposes: Brick Pavements and Floors. Gives requirements for sand for cushion and for cement grout filler.

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads.

Manual for Railway Engineering, 1944. Specifications for Buildings for Railroad Purposes: Brickwork. Gives requirements for sand for mortar.

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering, 1944. Specifications for Buildings for Railroad Purposes: Clay Hollow Tile. Gives requirements for sand.

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering, 1944. Specifications for Buildings for Railroad Purposes: Concrete Architectural Stone. Gives requirements for sand.

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering, 1944. Specifications for Buildings for Railroad Purposes: Sewers and Drainage. Gives requirements for sand for mortar for pipe joints.

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering, 1942. Specifications for Buildings for Railroad Purposes: Sheet Asphalt Pavements; Asphalt Block Pavements; and Asphalt Macadam Pavements. Gives requirements for sand for binder and wearing courses of sheet asphalt pavements.

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering, 1942. Specifications for Shotcrete. Gives requirements for grading of sand.

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering, 1944. Specifications for Buildings for Railroad Purposes: Stone Masonry and Cut Stone Work. Gives requirements for sand.

American Society for Testing Materials, C 35-39; 1939. Sand for Use in Plaster. Gives requirements for a fine granular material composed of hard, strong durable uncoated particles free from injurious amounts of saline, alkaline, organic, and other deleterious substances; sieve analysis; and tests in accordance with A.S.T.M. methods.

American Society for Testing Materials, C 58-28; 1928. Definition of the Term "Sand."

American Society for Testing Materials, C 123-44; 1944. American Assn. of State Highway Officials, T 113-44. Method of Test for Coal and Lignite in Sand. For approximate determination of coal, lignite, and other particles of low specific gravity in the routine laboratory examination of sands. Covers apparatus, procedure, and calculation.

American Society for Testing Materials, D 162-29; 1929. Sand for Sheet Asphalt and Bituminous Concrete Pavements. Includes general quality requirements, limiting percentages retained on and passing various screen sizes, sampling and testing in accordance with A.S.T.M. methods D 75, C 136.

Contracting Plasterers' International Assn. Standard Specification. Includes requirements for sand.

U. S. Gov., Federal Specification SS-M-51; 1931. Materials; (for) Cushion Course, Brick, Stone-Block, or Wood-Block Pavements (Sand, Slag, Limestone, Screenings, Etc.) Covers sand, granulated slag, slag screenings, and limestone screenings. Gives requirements for material and grading; and methods of sampling and testing.

U. S. Gov., Federal Specification SS-S-51; 1934. Sand; (for) Cement-Mortar-Bed (for) Brick, Stone-Block, or Wood-Block Pavements. Covers one grade. Gives requirements for size and strength; and methods of sampling and testing.

U. S. Gov., Federal Specification SS-S-61; 1931. Sand; (for) Grout-Filler, Brick and Stone-Block Pavements. Covers one grade. Gives requirements for size and strength; and methods of sampling and testing.

U. S. Gov., Federal Specification SS-S-71a; 1942. Sand; (for Use in) Sheet-Asphalt or Bituminous-Concrete Pavements. Gives requirements for grading; and methods of sampling and testing.

U. S. Gov., U. S. Army, Corps of Engineers. Specification 87-4; 1941. Filter; Sand for Water Purification Units.

*References.*—Definitions, methods of sampling and of testing, *see* 500, 510, 511.70, 512.10; sand for mineral fillers, *see* 512.16; fine aggregate, *see* 512.13; sand for plasters, *see* 514.3, 514.4, 514.5, 514.6; sand for stucco, concrete and mortar, concrete bricks and blocks, concrete sidewalks, concrete poles and posts, *see* 516.2, 516.3, 516.4, 516.5, 516.9; sand for road construction and pavement, *see* 518.1, 518.2, 518.3; sand for bridges and piling, *see* 518.4; sand for buildings, *see* 518.5; sand for drainage structures, concrete drain and sewer pipe, *see* 518.6; sand for tanks and concrete masonry, *see* 518.7, 518.8; abrasive sand, *see* 541.4; silica mold wash for foundries, *see* 593.

## 512.13 Fine Aggregate

American Assn. of State Highway Officials, M6-42. Standard Specification for Fine Aggregate for Portland Cement Concrete. Gives scope, general requirements, deleterious substances, soundness, organic impurities, structural strength, grading, uniformity of grading, and methods of sampling and testing.

American Public Works Assn. Specification for Concrete Sidewalks, C1-36; 1936. Includes requirements for fine aggregates consisting of sand or other approved inert materials having hard, strong, durable particles, with maximum allowable percentages of deleterious substances, including coal, clay lumps, shale, mica, soft fragments, organic matter, and to show a practically colorless solution. Also includes sieve analysis, and strength of standard sample as compared with sample prepared from Ottawa sand, and requirements for coarse aggregates.

American Public Works Assn. Specification for Vitrified Brick Pavement, D1-36; 1936. Includes requirements for fine aggregate composed of sand, stone, or slag screenings, granulated slag, or crushed shells consisting of clean, hard, strong, durable, uncoated particles graded from coarse to fine, with coarse particles predominating, free from lumps of clay and all organic matter, and sieve analysis. Also for test of sample prepared with cement as to strength compared with specimen prepared from standard Ottawa sand. Adopted by National Paving Brick Assn.

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering, 1942. Specifications for

Buildings for Railroad Purposes: Asphalt Mastic Floors; and Asphalt Block Floors. Gives requirements for aggregate for slab and mineral aggregate added in field.

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering, 1944. Specifications for Concrete and Reinforced Concrete Railroad Bridges and Other Structures. Gives requirements for fine aggregate—material, grading, uniformity, organic impurities, and methods of sampling and testing. Emergency Provisions Adopted Feb. 3, 1943, modified above specifications in order to use local materials to conserve transportation.

American Society for Testing Materials, C 33-44; 1944. Concrete Aggregates. Covers fine and coarse aggregates suitable for use in concrete. Gives general characteristics, deleterious substances, grading, mortar strength, and soundness for fine aggregate; general characteristics, deleterious substances, grading, weight of slag, and soundness for coarse aggregate; and methods of sampling and testing.

American Society for Testing Materials, C 70-44T; 1944. Tentative Method of Test for Surface Moisture in Fine Aggregate. Field procedure for determining the amount of surface moisture in fine aggregate by displacement in water. Covers apparatus, sample, procedure, and calculation.

American Society for Testing Materials, C 87-44; 1944. American Assn. of State Highway Officials, T 71-44. Method of Test for Structural Strength of Fine Aggregate Using Constant Water-Cement-Ratio Mortar. Covers scope, mortar, flow test, molding specimens, temperature, and capping specimens.

American Society for Testing Materials, C 128-42; 1942. American Assn. of State Highway Officials, T 84-42. American Standards Assn., A 37.6-1943. Method of Test for Specific Gravity and Absorption of Fine Aggregate. For determining bulk specific gravity, apparent specific gravity, and absorption, after 24 hr. in water at room temperature. Describes apparatus, preparation of sample, outlines procedure, and calculations.

American Society for Testing Materials, C 130-42; 1942. Lightweight Aggregates for Concrete. Covers pumice, lava, tufa, slag, burned clay, burned shale, certain cinders, or other material having strong, durable particles. Gives limits for deleterious substances, organic impurities, grading, unit weight, mortar strength, soundness, and tests in accordance with A.S.T.M. methods.

American Society for Testing Materials, C 136-39; 1939. American Assn. of State Highway Officials, T 27-42. American Standards Assn., A 37.8-1943. Method of Test for Sieve Analysis of Fine and Coarse Aggregates. For determination of particle size distribution of fine and coarse aggregates but not for aggregates recovered from bituminous mixtures or for mineral fillers. Describes sieves, balances, and selection of samples, and outlines procedure for analysis.

American Society for Testing Materials, C 144-44; 1944. Aggregate for Masonry Mortar. For a fine granular material composed of hard, strong, durable mineral particles which are free from injurious amounts of saline, alkaline, organic, or other deleterious substances. Covers grading, deleterious substances, mortar strength test, and methods of testing.

U. S. Gov., Federal Specification SS-A-281a; 1941. Amendment 1; 1942. Aggregate; (for) Portland-Cement Concrete. Covers two classes—(1) fine aggregate and (2) coarse aggregate; two grades—(A) for use in concrete structures in general and (B) for use only in concrete protected from the weather. Gives requirements for sizes, materials, grading, mortar strength, soundness, and resistance to abrasion; and methods of sampling, inspection, and tests.

U. S. Gov., Navy Dept., Bureau of Yards and Docks. Specification 4Yd; 1939. Construction of Portland Cement Concrete Pavements. Includes requirements for fine aggregates.

U. S. Gov., Navy Dept., Bureau of Yards and Docks. Specification 13Yc; 1935, and Addendum 1; 1942. Concrete Construction. Includes requirements for fine aggregate.

*References.*—Definitions, methods of sampling and of testing, *see* 500, 510, .511.70, 512.10; gravel. sand, slag, *see* 512.11, 512.12, 512.2; fine aggregate for stucco, concrete, concrete bricks and blocks, concrete sidewalks, concrete poles and posts, *see* 516.2, 516.3, 516.4, 516.5, 516.9; fine aggregate for road construction, *see* 518.2, 518.3; fine aggregate for bridges and piling, *see* 518.4; fine aggregate for buildings, *see* 518.5; fine aggregate for drainage structures. concrete drain and sewer pipe, *see* 518.6; fine aggregate for tanks and concrete masonry, *see* 518.7, 518.8.

## 512.14 Coarse Aggregate

American Assn. of State Highway Officials, M43-42. Standard Specifications for Standard Sizes of Coarse Aggregate for Highway Construction. Gives scope, manufacture, standard sizes, and table showing standard sizes of coarse aggregate.

American Assn. of State Highway Officials, M80-42. Standard Specifications for Coarse Aggregate for Portland Cement Concrete. Gives scope, general requirements, deleterious substances, percentage of wear, weight per cubic foot of slag, soundness, grading, and methods of sampling and testing.

American Public Works Assn. Specification for Portland Cement Concrete Pavement, F1-39; 1939. For coarse aggregates this organization has adopted the A.S.T.M. specification C33, except for grading limits.

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering, 1942. Specifications for Buildings for Railroad Purposes: Macadam Pavements; and Cement Grouted Macadam Platforms, Floors, Pavements, and Pavement Bases. Gives requirements for gradation of coarse aggregates.

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering, 1944. Specifications for Concrete and Reinforced Concrete Railroad Bridges and Other Structures. Gives requirements for coarse aggregate—material, grading, resistance to abrasion, and methods of sampling and testing. Emergency Provision Adopted Feb. 3, 1943, modified above specification in order to use local materials to conserve transportation.

American Society for Testing Materials, C 33-44; 1944. Concrete Aggregates. Covers fine and coarse aggregates suitable for use in concrete. Gives general characteristics, deleterious substances, grading, mortar strength, and soundness for fine aggregate; general characteristics, deleterious substances, grading, weight of slag, and soundness for coarse aggregate; and methods of sampling and testing.

American Society for Testing Materials, C 127-42; 1942. American Assn. of State Highway Officials, T 85-42. American Standards Assn., A 37.5-1943. Method of Test for Specific Gravity and Absorption of Coarse Aggregate. For determining bulk and apparent specific gravity and absorption, after 24 hr. in water at room temperature, of coarse aggregate. Covers necessary apparatus, sampling, method of procedure, and the derivation of bulk specific gravity, apparent specific gravity, and percentage of absorption.

American Society for Testing Materials, C 130-42; 1942. Lightweight Aggregates for Concrete. Covers pumice, lava, tufa, slag, burned clay, burned shale, certain cinders, or other material having strong, durable particles. Gives limits for deleterious substances, organic impurities, grading, unit weight, mortar strength, soundness, and tests in accordance with A.S.T.M. methods.

American Society for Testing Materials, C 131-44; 1944. American Standards Assn., A 37.7-1944. American Assn. of State Highway Officials, T 96-44. Method of Test for Abrasion of Coarse Aggregate by Use of the Los Angeles Machine. For testing crushed rock, crushed slag, uncrushed gravel, and crushed gravel for resistance to abrasion. Covers apparatus, abrasive charge, test sample, procedure, and calculation.

American Society for Testing Materials, C 136-39; 1939. American Assn. of State Highway Officials, T 27-42. American Standards Assn., A 37.8-1943. Method of Test for Sieve Analysis of Fine and Coarse Aggregates. For determination of particle size distribution of fine and coarse aggregates, but not for aggregates recovered from bituminous mixtures or for mineral fillers. Describes sieves, balances, and selection of samples; and outlines procedure for analysis.

American Society for Testing Materials, D 448-42T; 1942. Tentative Specifications for Standard Sizes of Coarse Aggregate for Highway Construction. Cover standard size designations and maximum permissible ranges in mechanical analyses for standard sizes of coarse aggregate and screenings for use in the construction or maintenance of various types of highways and highway structures. Manufacture and standard sizes.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R163-39; 1939. Coarse Aggregates (Crushed Stone, Gravel, and Slag). This recommendation establishes a simplified list of sizes of coarse aggregates and a table showing typical uses for sizes given in the list. Initiated by the National Crushed Stone Assn., National Sand and Gravel Assn., and National Slag Assn.

U. S. Gov., Federal Specification SS-A-281a; 1941. Amendment 1; 1942. Aggregate; (for) Portland-Cement Concrete. Covers two classes—(1) fine aggregate and (2) coarse aggregate; two grades—(A) for use in concrete structures in general and (B) for use only in concrete protected from the weather. Gives requirements for sizes, materials, grading, mortar strength, soundness, and resistance to abrasion; and methods of sampling, inspection, and tests.

U. S. Gov., Navy Dept., Bureau of Yards and Docks. Specification 4Yd; 1939. Construction of Portland Cement Concrete Pavements. Includes requirements for coarse aggregates.

U. S. Gov., Navy Dept., Bureau of Yards and Docks. Specification 13Yc; 1935, and Addendum 1; 1942. Concrete Construction. Includes requirements for coarse aggregate.

*References.*—Definitions, methods of sampling and of testing, *see* 500, 510, 511.70, 512.10; gravel, broken stone, slag, *see* 512.11, 512.15, 512.2; coarse aggregate for concrete, concrete bricks and blocks, concrete sidewalks, concrete poles and posts, *see* 516.3, 516.4, 516.5, 516.9; coarse aggregate for road construction, *see* 518.2, 518.3; coarse aggregate for bridges and piling, *see* 518.4; coarse aggregate for buildings, *see* 518.5; coarse aggregate for drainage structures, concrete drain and sewer pipe, *see* 518.6; coarse aggregate for tanks and concrete masonry, *see* 518.7, 518.8.

## 512.15 Broken Stone

American Assn. of State Highway Officials, M62-42. Standard Specifications for Crushed Stone, Crushed Slag, and Crushed Gravel for Dense-Graded Bituminous Road and Plant-Mix Surface Course. Gives scope, general requirements, physical properties, and methods of testing.

American Assn. of State Highway Officials, M63-42. Standard Specifications for Crushed Stone, Crushed Slag, and Crushed Gravel for Open-Graded Bituminous Road-Mix Surface Course. Gives scope, general requirements, physical properties, grading, and methods of sampling and testing.

American Assn. of State Highway Officials, M75-42. Standard Specifications for Crushed Stone and Crushed Slag for Base Course. Gives scope, general requirements, physical properties, grading, and methods of sampling and testing.

American Assn. of State Highway Officials, M76-42. Standard Specification for Crushed Stone and Crushed Slag for Bituminous Concrete Base Course. Gives scope, general requirements, physical properties, grading, and methods of sampling and testing.

American Assn. of State Highway Officials, M77-42. Standard Specification for Crushed Stone and Crushed Slag for Waterbound Surface Course. Gives scope, general requirements, physical properties, grading, and methods of sampling and testing.

American Assn. of State Highway Officials, M78-42. Standard Specification for Crushed Stone and Crushed Slag for Bituminous Macadam Surface Course. Gives scope, general requirements, physical properties, grading, and methods of sampling and testing.

American Assn. of State Highway Officials, M79-42. Standard Specification for Crushed Stone and Crushed Slag for Bituminous Concrete Surface Course. Gives scope, general requirements, physical properties, grading, and methods of sampling and testing.

American Assn. of State Highway Officials, M80-42. Standard Specifications for Coarse Aggregate for Portland Cement Concrete. Gives scope, general

requirements, deleterious substances, percentage of wear, weight per cubic foot of slag, soundness, grading, and methods of sampling and testing.

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering, 1942. Specifications for Buildings for Railroad Purposes: Sheet Asphalt Pavements, Asphalt Block Pavements, and Asphalt Macadam Pavements. Gives requirements for stone for binder course sheet asphalt pavements.

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering, 1944. Specifications for Concrete and Reinforced Concrete Railroad Bridges and Other Structures, Gives requirements for broken stone—material, grading, resistance to abrasion, and methods of sampling and testing. Emergency Provisions, adopted Feb. 3, 1943, modified above specification in order to use local materials to conserve transportation.

American Society for Testing Materials, C 131-44; 1944. American Standards Assn., A 37.7-1944. American Assn. of State Highway Officials, T 96-44. Method of Test for Abrasion of Coarse Aggregate by Use of the Los Angeles Machine. For testing crushed rock, crushed slag, uncrushed gravel, and crushed gravel, for resistance to abrasion. Covers apparatus, abrasive charge, test sample, procedure, and calculation.

American Society for Testing Materials, D 448-42T; 1942. Tentative Specifications for Standard Sizes of Coarse Aggregate for Highway Construction. Cover standard size designations and maximum permissible ranges in mechanical analyses for standard sizes of coarse aggregate and screenings for use in the construction or maintenance of various types of highways and highway structures. Manufacture and standard sizes.

American Society for Testing Materials, D 692-42T; 1942. Tentative Specifications for Crushed Stone, Crushed Slag, and Gravel for Bituminous Concrete Base and Surface Courses of Pavements. Includes requirements for sieve analysis and for tests using A.S.T.M. methods.

American Society for Testing Materials, D 693-44; 1944. Crushed Stone and Crushed Slag for Bituminous Macadam Base and Surface Courses of Pavements. Cover the quality and grading of crushed stone to be used in the construction of bituminous macadam base and surface courses. General characteristics, physical properties, sizes, sieve analysis, and methods of sampling and testing.

American Society for Testing Materials, D 694-44; 1944. Crushed Stone, Crushed Slag, and Gravel for Water-Bound Base and Surface Courses of Pavements. Cover general characteristics, physical requirements, sizes, sieve analysis, and methods of sampling and testing using A.S.T.M. methods.

U. S. Gov., Federal Specification SS-C-726a; 1940. Amendment 1; 1940. Crushed-Stone, Crushed-Gravel, and Crushed-Slag; (for) Binder-Course, Sheet-Asphalt Pavement. Gives requirements for size, resistance to abrasion, weight of slag, and grading; and methods of sampling and testing.

U. S. Gov., Federal Specification SS-C-731a; 1940. Amendment 1; 1941. Crushed-Stone, Crushed-Gravel, and Crushed-Slag; (for) Bituminous-Concrete Base or Surface-Course. Gives detail requirements for resistance to abrasion, weight of slag, and grading; and methods of sampling and testing.

U. S. Gov., Federal Specification SS-C-736a; 1940. Amendment 1; 1941. Crushed-Stone and Crushed-Slag; (for) Bituminous-Macadam Base or Surface-Course. Gives requirements for resistance to abrasion, weight of slag, and grading; and methods of sampling and testing.

U. S. Gov., Federal Specification SS-C-741a; 1940. Amendment 1; 1941. Crushed-Stone, Crushed-Slag, and Gravel; (for) Bituminous-Surface Treatment. Gives requirements for resistance to abrasion, grading, and methods of sampling and testing.

U. S. Gov., Federal Specification, SS-C-746a; 1940. Amendment 1; 1941. Crushed-Stone and Crushed-Slag; (for) Waterbound-Base or Wearing-Course. Gives requirements for resistance to abrasion, weight of slag, and grading; and methods of sampling and testing.

U. S. Gov., Federal Works Agency, Public Roads Administration. Specifications for Construction of Roads and Bridges in National Forests and National Parks, FP-41. Loose Riprap.

U. S. Gov., Federal Works Agency, Public Roads Administration. Specifications for Construction of Roads and Bridges in National Forests and National Parks, FP-41. Stone for Gravel Sheathing, Shoulders, and Watering.

*References.*—Definitions, methods of sampling and of testing, *see* 500, 510, 511.70, 512.10; railway ballast, *see* 511.73; fine and coarse aggregates, *see* 512.13, 512.14; broken stone for concrete, concrete bricks and blocks, concrete sidewalks, concrete poles and posts, *see* 516.3, 516.4, 516.5, 516.9; broken stone for road construction, *see* 518.1, 518.2, 518.3; broken stone for bridges and piling, *see* 518.4; broken stone for buildings, *see* 518.5; broken stone for drainage structures, concrete drain and sewer pipe, *see* 518.6; broken stone for tanks and concrete masonry, see 518.7, 518.8.

## 512.16 Mineral Fillers

American Assn. of State Highway Officials, M17-42. Standard Specifications for Mineral Filler for Sheet Asphalt and Bituminous Concrete Pavements. Gives scope, general requirements, grading, and methods of sampling and testing.

American Assn. of State Highway Officials, M89-42. Standard Specifications for Mixed Asphalt and Mineral Filler. Gives scope, general requirements, mineral filler, fineness of mineral filler, properties of mixture, and methods of sampling and testing.

American Society for Testing Materials, C 117-37; 1937. American Assn. of State Highway Officials, T 11-42. American Standards Assn., A 37.4-1943. Method of Test for Amount of Material Finer Than No.200 Sieve in Aggregates. Describes sieves and container for test sample and procedure for washing and weighing screened material to determine the loss of matter finer than No.200 sieve.

American Society for Testing Materials, D 57-20; 1920. American Standards Assn., A31-1924. Materials for Cement Grout Filler for Brick and Stone Block Pavements. General quality and grading requirements for sand; test requirements for tensile strength for cement mortar made with the sand to specified

proportions; cement according to A.S.T.M. specifications for Portland cement.

American Society for Testing Materials, D 242-39; 1939. Mineral Filler for Sheet Asphalt and Bituminous Concrete Pavements. Includes limestone dust, Portland cement, or other mineral matter; screen grading requirements, tested in accordance with A.S.T.M. method D 546.

American Society for Testing Materials, D 546-41; 1941. American Standards Assn., A 37.14-1943. American Assn. of State Highway Officials, T 37-42. Method of Test for Sieve Analysis of Mineral Filler. Fillers used in road and paving materials. Covers apparatus, sample, drying of sample, procedure, machine sieving, report, and reproducibility of results.

U. S. Gov., Federal Specification SS-M-351; 1931. Mineral-Filler; (for) Sheet Asphalt or Asphaltic Concrete Pavements (Portland Cement, Limestone Dust, and Dolomite Dust). Gives requirements for material and grading and methods of testing.

*References.*—Definitions, methods of sampling and of testing, *see* 500, 510, 511.70, 512.10; sand, *see* 512.12; bituminous fillers, *see* 505.15.

## 512.2 SLAG

American Assn. of State Highway Officials, M62-42. Standard Specifications for Crushed Stone, Crushed Slag, and Crushed Gravel for Dense-Graded Bituminous Road and Plant-Mix Surface Course. Gives scope, general requirements, physical properties, and methods of testing.

American Assn. of State Highway Officials, M63-42. Standard Specifications for Crushed Stone, Crushed Slag, and Crushed Gravel for Open-Graded Bituminous Road-Mix Surface Course. Gives scope, general requirements, physical properties, grading, and methods of sampling and testing.

American Assn. of State Highway Officials, M75-42. Standard Specifications for Crushed Stone and Crushed Slag for Base Course. Gives scope, general requirements, physical properties, grading, and methods of sampling and testing.

American Assn. of State Highway Officials, M76-42. Standard Specification for Crushed Stone and Crushed Slag for Bituminous Concrete Base Course. Gives scope, general requirements, physical properties, grading, and methods of sampling and testing.

American Assn. of State Highway Officials, M77-42. Standard Specification for Crushed Stone and Crushed Slag for Waterbound Surface Course. Gives scope, general requirements, physical properties, grading, and methods of sampling and testing.

American Assn. of State Highway Officials, M78-42. Standard Specification for Crushed Stone and Crushed Slag for Bituminous Macadam Surface Course. Gives scope, general requirements, physical properties, grading, and methods of sampling and testing.

American Assn. of State Highway Officials, M79-42. Standard Specification for Crushed Stone and Crushed Slag for Bituminous Concrete Surface Course. Gives scope, general requirements, physical properties, grading, and methods of sampling and testing.

American Assn. of State Highway Officials, M80-42. Standard Specifications for Coarse Aggregate for Portland Cement Concrete. Gives scope, general requirements, deleterious substances, percentage of wear, weight per cubic foot of slag, soundness, grading, and methods of sampling and testing.

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering, 1944. Specifications for Concrete and Reinforced Concrete Railroad Bridges and Other Structures. Gives requirements for slag—material, grading, resistance to abrasion, and methods of sampling and testing. Emergency Provisions, adopted Feb. 3, 1943, modified above specifications in order to use local materials to conserve transportation.

American Society for Testing Materials, C 130-42; 1942. Lightweight Aggregates for Concrete. Covers pumice, lava, tufa, slag, burned clay, burned shale, certain cinders, or other material having strong, durable particles. Gives limits for deleterious substances, organic impurities, grading, unit weight, mortar strength, soundness, and tests in accordance with A.S.T.M. methods.

American Society for Testing Materials, C 131-44; 1944. American Standards Assn., A 37.7-1944. American Assn. of State Highway Officials, T 96-44. Method of Test for Abrasion of Coarse Aggregate by Use of the Los Angeles Machine. For testing crushed rock, crushed slag, uncrushed gravel, and crushed gravel for resistance to abrasion. Covers apparatus, abrasive charge, test sample, procedure, and calculation.

American Society for Testing Materials, D 448-42T; 1942. Tentative Specifications for Standard Sizes of Coarse Aggregate for Highway Construction. Cover standard size designations and maximum permissible ranges in mechanical analyses for standard sizes of coarse aggregate and screenings for use in the construction or maintenance of various types of highways and highway structures. Manufacture and standard sizes.

American Society for Testing Materials, D 692-42T; 1942. Tentative Specifications for Crushed Stone, Crushed Slag, and Gravel for Bituminous Concrete Base and Surface Courses of Pavements. Includes requirements for sieve analysis and for tests using A.S.T.M. methods.

American Society for Testing Materials, D 693-44; 1944. Crushed Stone and Crushed Slag for Bituminous Macadam Base and Surface Courses of Pavements. Cover the quality and grading of crushed stone to be used in the construction of bituminous macadam base and surface courses. General characteristics, physical properties, sizes, sieve analysis, and methods of sampling and testing.

American Society for Testing Materials, D 694-44; 1944. Crushed Stone, Crushed Slag, and Gravel for Water-Bound Base and Surface Courses of Pavements. Cover general characteristics, physical requirements, sizes, sieve analysis, and methods of sampling and testing, using A.S.T.M. methods.

National Slag Assn. Blast Furnace Slag as Concrete Aggregate, 1930. Covers definition of blast furnace slag, introduction, processing blast furnace slag, physical and chemical characteristics of slag, and properties of slag concrete. Reprint from the copyrighted Journal of the American Concrete Institute.

National Slag Assn. Report of Investigation of Crushed Blast Furnace Slag as a Medium in Sewage Trickling Filters, 1929. Reprinted, 1935. Covers manufacture and properties of blast furnace slag, preparation of slag for commercial use, purpose of sewage filters, qualities to be considered in a filtering material, field investigations, durability, clogging, cementation, gradation of material, size of material, surface texture of material, cleanliness of material, flies, physical and chemical data on samples of slag collected from existing filters, summary, and conclusions.

U. S. Gov., Federal Specification SS-C-726a; 1940. Amendment 1; 1940. Crushed-Stone, Crushed-Gravel, and Crushed-Slag; (for) Binder-Course, Sheet-Asphalt Pavement. Gives requirements for size, resistance to abrasion, weight of slag, and grading; and methods of sampling and testing.

U. S. Gov., Federal Specification SS-C-731a; 1940. Amendment 1; 1941. Crushed-Stone, Crushed-Gravel, and Crushed-Slag; (for) Bituminous-Concrete Base or Surface-Course. Gives detail requirements for resistance to abrasion, weight of slag, and grading; and methods of sampling and testing.

U. S. Gov., Federal Specification SS-C-736a; 1940. Amendment 1; 1941. Crushed-Stone and Crushed-Slag; (for) Bituminous-Macadam Base or Surface-Course. Gives requirements for resistance to abrasion, weight of slag, and grading; and methods of sampling and testing.

U. S. Gov., Federal Specification SS-C-741a; 1940. Amendment 1; 1941. Crushed-Stone, Crushed-Slag, and Gravel; (for) Bituminous-Surface Treatment. Gives requirements for resistance to abrasion, grading, and methods of sampling and testing.

U. S. Gov., Federal Specification SS-C-746a; 1940. Amendment 1; 1941. Crushed-Stone and Crushed-Slag; (for) Waterbound-Base or Wearing-Course. Gives requirements for resistance to abrasion, weight of slag, and grading; and methods of sampling and testing.

U. S. Gov., Federal Specification SS-M-51; 1931. Materials; (for) Cushion Course, Brick, Stone-Block, or Wood-Block Pavements (Sand, Slag, Limestone, Screenings, Etc.) Covers sand, granulated slag, slag screenings, and limestone screenings. Gives requirements for material and grading and methods of sampling and testing.

U. S. Gov., U. S. Army, Corps of Engineers. Specification 81-7A; 1933. Roofing Material; Surfacing, Built-Up, Bituminous.

*References.*—Definitions, methods of sampling and of testing, *see* 500, 510, 512.10; railway ballast, *see* 511.73; fine and coarse aggregates, *see* 512.13, 512.14; phosphate slag as fertilizer, *see* 852; *see* references under 512.13 and 512.14 which are in general applicable to slag.

## 513. SAND-LIME BRICK

American Society for Testing Materials, C 73-39; 1939. American Standards Assn., A78.1-1942. Sand-Lime Building Brick. For use in brick masonry, three grades based on exposure to freezing and moisture, or for use as back-up; requirements for minimum compressive strength and modulus of rupture; dimensions of standard size; inspection and tests in accordance with A.S.T.M. method C 67.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R38-37; 1937. Sand-Lime Brick. This recommendation establishes one standard size of sand-lime brick and tolerances of 1/8 in. in width and for thickness and 1/4 in. in length. Initiated by the Sand-Lime Brick Assn.

U. S. Gov., Federal Specification SS-B-681; 1932. Brick; Sand-Lime. Covers three grades—(H) hard, (M) medium, and (S) soft; made of lime and sand, crushed stone, or crushed blast-furnace slag, hardened by treatment with high-pressure steam. Gives requirements for absorption and strength; method of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

*References.*—Definitions, methods of sampling and of testing, *see* 500, 534.10; lime for sand lime brick, *see* 517.2; brick pavements. *see* 518.35; clay brick, fire brick, *see* 534.11, 534.12; brick in building construction, *see* 518.5; brick masonry, *see* 518.83.

## 514. GYPSUM, GYPSUM PLASTERS, AND OTHER PLASTERS

### 514.0 GENERAL ITEMS

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering, 1942. Specifications for Buildings for Railroad Purposes: Lathing and Plastering. Gives requirements for interior plastering.

American Society for Testing Materials, C11-41; 1941. Definitions of Terms Relating to Gypsum. Defines accelerator, binder, cement, calcined gypsum, crushed gypsum, gypsum, gypsum lath, gypsum molding plaster, gypsum pottery plaster, gypsum partition tile or block, gypsum sheathing board, gypsum wall board, Keene's cement, lath, mortar, plaster, retarder, sized gypsum, stucco, and wood fiber.

American Society for Testing Materials, C 11-41T; 1941. Tentative Definitions of Terms Relating to Gypsum. Defines aggregate, consistency, gypsum concrete, gypsum fiber concrete, perforated gypsum lath, and plasticity.

American Society for Testing Materials, C 26-42; 1942. American Standards Assn., A70.1-1942. Methods of Testing Gypsum and Gypsum Products. Cover procedures for the determination of chemical analysis and physical testing of gypsum materials; for free water, fineness, carbon dioxide, silicon dioxide, iron and alumina, lime, magnesium oxide, sulfur dioxide, and sodium chloride; normal consistency, water-carrying capacity, dry bulk, wet bulk, tensile strength, compressive strength, and report. Also for sand, wood fiber content, compressive strength of gypsum partition tile or block, absorption of tile or block, and flexural strength of boards.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Building Materials and Structures Report BMS3; 1938. Suitability of Fiber Insulating Lath as a Plaster Base. The investigation pertains to the properties of wall and plaster boards and the suitability of fiber insulating boards as a plaster base. Such properties as density, strength (flexural and tensile), and linear changes accompanying changes in relative humidity and wetting and drying were studied. Methods of successful application of

plaster on insulating lath were determined by experiments in which the thickness, sand content, strength, and time of set of the plasters were varied independently.

*References.*—Methods of lathing and plastering, *see* 514.63.

## 514.1 GYPSUM

American Society for Testing Materials, C 22-41; 1941. American Standards Assn., A 49.1-1941. Gypsum. Covers gypsum containing 64.5 percent by weight of calcium sulfate combined with two molecules of water in crystalline form; requirements for run-of-mine, crushed, sized, and ground to pass four degrees of fineness sieves; sampling, methods of test, packing, and marking.

*References.*—Definitions, methods of sampling and of testing, *see* 500, 514.0; calcined gypsum, plaster of Paris, *see* 514.2; gypsum plaster, *see* 514.3; gypsum plaster board and wall board, *see* 514.61; gypsum tiles and blocks, *see* 514.62.

## 514.2 CALCINED GYPSUM (PLASTER OF PARIS)

American Hospital Assn., 13-13. Plaster-of-Paris Bandages. Covers one type, one grade, and one class in four sizes. Based on U. S. Gov. Federal Specifications GG-B-101a for Plaster-of-Paris Bandages and CCC-G-101a for Plain Gauze.

American Hospital Assn., 13-22. Surgical Plaster of Paris. Covers two types (orthopedic and impression), one grade, and one class. Based on U. S. Army Specifications 10-2422A for Surgical Plaster of Paris, U.S. Gov. Federal Specifications RR-S-366 for Standard Testing Sieves, and SS-G-901 for Calcined Gypsum.

American Society for Testing Materials, C 61-40; 1940. American Standards Assn., A 66.1-1941. Keene's Cement. Covers anhydrous calcined gypsum the set of which is accelerated by other materials; requirements for time of setting, tensile strength, fineness, sampling, methods of testing, and simple field test for identification.

American Society for Testing Materials, C 72-40; 1940. American Standards Assn., A 65.1-1941. Calcined Gypsum for Dental Plasters. Covers three grades—(Q) quick setting, (M) medium setting, and (S) slow setting. Gives requirements for composition, time of setting, tensile strength, fineness, sampling, laboratory samples, methods of testing, packing and marking, inspection, rejection, and rehearing.

U. S. Gov., Federal Specification GG-B-101b; 1943. Bandages; Plaster-of-Paris. Covers one type, one grade, and five sizes—3 in. by 3 yd., 2 in. by 5 yd., 3 in. by 5 yd., 5 in. by 5 yd., and 6 in. by 5 yd. Gives requirements for material, workmanship, description, amount of plaster, sizing, individual packages, and leakage; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U.S. Gov., Federal Specification SS-G-901; 1930. Gypsum; Calcined. Covers two grades—(I) fine and (II) medium. Gives requirements for chemical composition, tensile strength, compressive strength, fineness, and time of set; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Treasury Dept., Procurement Div., No.366; 1939. Plaster-of-Paris; Orthopedic and Impression (Dental). Shall contain not less than 93 percent calcined gypsum, dry and free from foreign material and partly set or caked lumps. Gives detail requirements as to fineness, setting, expansion, testing consistency, compressive strength, and setting time; methods of inspection and tests; and packing and marking.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2422B; 1941. Plaster of Paris; Surgical.

*References.*—Definitions, methods of sampling and of testing, *see* 500, 514.0; gypsum, *see* 514.1; packaging of dental investments, *see* 915.10.

## 514.3 GYPSUM PLASTER

American Institute of Architects, joint sponsor with American Society for Testing Materials. Specifications for Gypsum Plastering (Including Requirements for Lathing and Furring), 1942. American Standards Assn., A 42.1-1942. Gives general provisions, description of terms, materials meeting A.S.T.M. specifications; requirements for base coat, hand and mechanical mixing, minimum temperature, condition of base and types of base, and finishing. Also gives requirements for gypsum lath, wood lath, fiber insulation lath, metal lath, and paper backed wire fabric; lathing, ceiling erection, solid partitions, furring, etc.

Gypsum Assn., joint sponsor with Building Officials' Conference of America, Inc. American Standards Assn., A59.1-1941. Reinforced Gypsum Concrete. Recommended building code requirements, including—(1) materials, (2) strength of gypsum concrete, (3) reinforcement, (4) design, and (5) inspection.

American Society for Testing Materials, C 28-40; 1940. American Standards Assn., A49.3-1940. Gypsum Plasters. Definition, composition, time of setting, tensile strength, requirements for first and second coat of gypsum, ready-sanded plaster, neat plaster, wood-fibered plaster, and calcined gypsum for finishing coat, using A.S.T.M. test method C 26.

American Society for Testing Materials, C 59-40; 1940. American Standards Assn., A49.4; 1940. Gypsum Molding Plaster. For making interior embellishments, cornices, etc.; requirements on percentage of calcined gypsum; time of setting, tensile strength, and sampling, using A.S.T.M. test method C 26.

American Society for Testing Materials, C 60-40; 1940. American Standards Assn., A49.5-1940. Gypsum Pottery Plaster. Calcined gypsum for making pottery molds; requirements on percentage of calcined gypsum; time of setting, tensile strength, fineness, and sampling requirements, using A.S.T.M. test method C 26.

U. S. Gov., Federal Specification SS-P-401; 1931. Plaster; Gypsum. Covers four types—(W) wood-fibered, (N) neat, (B) sanded brown coat, and (S) sanded scratch coat. Gives requirements for material and workmanship, chemical composition, and physical properties; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

*References.*—Definitions, methods of sampling and of testing, *see* 500, 514.0; sand, *see* 512.12; gypsum, *see* 514.1; wall plasters and methods of plastering, *see* 514.63.

## 514.4 LIME PLASTER

National Lime Assn. Specifications for Lime Plaster and Lime Stucco. Requirements on materials, mix proportions, application, and workmanship; recommendations for preparation of masonry and concrete surface to receive plaster and desirable thicknesses on various backings.

*References.*—Definitions, methods of sampling and of testing, *see* 500, 514.0; sand, *see* 512.12; lime, *see* 517.2; wall plasters and methods of plastering, *see* 514.63.

## 514.5 PORTLAND CEMENT PLASTER

Portland Cement Assn. Plasterer's Manual for Applying Portland Cement Stucco and Plaster, 1941. Covers Portland cement stucco including—material specifications, coloring materials, bases, suction, curing, proportioning and mixing, flashing, application, refinishing old stucco jobs, causes of discoloration, finish coat, textures, and plastering and texturing tools; Portland cement plaster including—material specifications, bases, suction, curing, proportioning and mixing, application, and painting; and construction details.

## 514.6 PLASTER MANUFACTURES

### 514.61 Gypsum Plaster Board and Wall Board

American Hospital Assn., 4-40. Gypsum Plaster Board. Covers one type. Based on U. S. Gov. Federal Specification SS-P-431a for Gypsum Plaster Board.

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering, 1942. Specifications for Buildings for Railroad Purposes: Lathing and Plastering. Gives requirements for gypsum lath and lathing.

American Society for Testing Materials, C 36-42; 1942. American Standards Assn., A69.1-1942. Gypsum Wall Board. For use without the addition of plaster for walls, ceilings, and partitions, and suitable to receive decoration. Gives requirements for composition, flexural strength, sampling, dimensions, weights and permissible variations, finish, and marking.

American Society for Testing Materials, C 37-42; 1942. American Standards Assn., A67.1-1942. Gypsum Lath. Includes plain, perforated, and aluminum foil backed plaster board designed as a base for gypsum plaster; requirements as to composition, flexural strength, sampling, sizes, weights and permissible variations, and finish.

American Society for Testing Materials, C 79-42; 1942. American Standards Assn., A68.1-1942. Gypsum Sheathing Board. For sheathing of buildings; requirements for composition, flexural strength, sampling, dimensions, weights and permissible variations, finish, and marking.

U. S. Gov., Federal Specification SS-P-431a; 1935. Plaster-Board; Gypsum. Covers one type—set gypsum plaster, with or without fiber, reinforced on the surface with sheets of fibrous material. Gives requirements for material and workmanship and bond; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Federal Specification SS-S-276; 1943. Sheathing-Board; Gypsum. Covers one type. Gives requirements for material and workmanship, thickness, width, length, weight, and flexural strength; methods of sampling, inspection, and tests; packaging, packing, and marking.

U. S. Gov., Federal Specification SS-W-51a; 1935. Amendment 1; 1937. Wall-Board; Gypsum. Covers two types—(A) boards with square edges, with or without recess, designed for butted joints and (B) boards with rounded edges, designed for filled joints. Gives requirements for thickness, width, length, weight, and strength; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

*References.*—Definitions, methods of sampling and of testing, *see* 500, 514.0; gypsum, *see* 514.1; fire tests of building materials, *see* 518.50.

### 514.62 Gypsum Tiles and Blocks

American Society for Testing Materials, C 52-41; 1941. Gypsum Partition Tile or Block. For use in nonloadbearing construction in the interior of buildings and for the protection of columns, elevator shafts, etc., against fire. Composition, compressive strength, sampling, form, core spaces, dimensions, scoring, marking, inspection, rejection and rehearing.

*References.*—Definitions, methods of sampling and of testing, *see* 500, 514.0; gypsum, *see* 514.1; fire tests of building materials, *see* 518.50.

### 514.63 Wall Plasters

American Society for Testing Materials, C 61-40; 1940. American Standards Assn., A66.1-1941. Keene's Cement. Covers anhydrous calcined gypsum the set of which is accelerated by other materials; requirements for time of setting, tensile strength, fineness, sampling, methods of testing, and simple field test for identification.

Contracting Plasterers' International Assn. Standard Specification. Includes requirements for dimensions of metal and wood lath, sizes of nails, requirements on lathing, furring, suspended ceiling construction, quality of materials used, preparation of lime putty, application of hard finish, scratch and brown coats, composition and application of stucco scratch coat and brown coat, minimum thickness of plaster and of grounds, rules for measurement of lathing and plastering.

U. S. Gov., Federal Specification SS-C-161; 1933. Cement; Keene's. Covers anhydrous calcined gypsum of two types—(I) for base and finish coat plastering and (II) for finish coat plastering. Gives requirements for chemical composition, tensile strength, fineness, and time of set; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

*References.*—Definitions, methods of sampling and of testing, *see* 500, 514.0; gypsum plaster, *see* 514.3; lime plaster, *see* 514.4.

### 514.65 Acoustical Plaster

U. S. Gov., Federal Specification SS-A-111; 1940. Acoustic-Materials; (for) Plastic-Application. Covers three types — (I) acoustic plaster, composed of

a granular aggregate mixed with a binder, (II) acoustic materials other than plaster which are applied with a trowel, and (III) fibrous materials combined with a binder agent which are sprayed on with an air gun or blower. Gives requirements for sound absorption coefficients, classes for noise reduction, and material; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

## 515. MAGNESITE

Associated Factory Mutual Fire Insurance Companies. Factory Mutual Bulletin of Loss Prevention, 4.20; 1938. Watertight Floors. Covers methods for improving construction where floor leakage is a serious defect. Includes description of common methods of waterproofing (hot asphalt mastic flooring, emulsified asphalt flooring, magnesite composition flooring, and light weight special surfacing); recent developments in waterproofing; and general precautions.

U. S. Gov., Navy Dept. Specification 51M3; 1935. Magnesite; Dead-Burned.

U. S. Gov., U. S. Maritime Commission. Specification 59-MC-1; 1942. Preparation of Steel Plating in Way of Magnesite Deck Covering. Gives requirements for bituminous solution and enamel, reinforcing mesh, expanded metal, furring stools, cleaning of deck plating, placement of furring stools, application of primer and enamel, placement of reinforcing mesh, sampling, and inspection.

### 515.0 GENERAL ITEMS

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, Volume 2; 1944. Magnesite, Dead Burned and Calcined (Calcined Magnesite; Caustic Magnesite; Dead Burned Magnesite). Covers definition, derivation and characteristics, uses, grades and forms, containers, and substitutes.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Circular C398 and Supplement, 1944. Standard Samples. Burned Magnesite, Sample 104. This sample is prepared and sold by the National Bureau of Standards with a certificate of analysis for use in industry and by others as a comparison standard for checking the accuracy of analysis of similar material.

## 516. CEMENT, CONCRETE, AND MORTAR

### 516.0 GENERAL ITEMS

American Assn. of State Highway Officials, T1; 42. Standard Methods of Sampling and Physical Testing of Portland Cement. Gives scope, sampling, fineness, mixing cement pastes and mortars, normal consistency, soundness, time of setting, tensile strength, and specific gravity.

American Assn. of State Highway Officials, T25-35. Standard Method of Test for Absorption by Concrete. Gives details for selecting samples and for preforming the absorption test.

American Assn. of State Highway Officials, T26-35. Standard Method of Test for Quality of Water To Be Used in Concrete. Gives test procedure for testing for acidity, alkalinity, total solids and inorganic matter, and comparison with distilled water in making concrete.

American Concrete Institute in connection with Portland Cement Assn., Concrete Reinforcing Steel Institute, and Rail Steel Bar Assn. Reinforced Concrete Design Handbook. Includes list of symbols and notation and gives formulae with application discussions and examples for design and investigation of flexural members, design of stirrups, columns, and footings; and includes tables for reference in design.

American Concrete Institute. A.C.I. Manual of Concrete Inspection, 1941. Gives requirements for inspection organization and equipment, qualifications and responsibility of the inspector, fundamentals of concrete, inspection and testing of materials, proportioning methods, inspection before concreting, inspection of concreting, inspection after concreting, testing of concrete, records and reports, special methods of concreting, references, and check list of principal features of inspection.

American Concrete Institute. Building Regulations for Reinforced Concrete, A.C.I. 318-41; 1941. Includes provisions for permits and drawings, special systems, definitions, and covers materials and tests, quality and working stresses, mixing and placing, forms, and details of construction, general design considerations, flexural computations, shear and diagonal tension, bond and anchorage, flat slabs, columns and walls, and footings.

American Public Works Assn. Sewers, J1-38; 1938. Includes specifications for bulk and package delivery, storage and inspection, sampling and tests using A.S.T.M. methods, and requirements for quality of construction water.

American Society for Testing Materials, C 31-44; 1944. American Assn. of State Highway Officials, T 23. Method of Making and Curing Concrete Compression and Flexure Test Specimens in the Field. For concrete samples from concrete being used in construction. Covers sampling of concrete, size of specimens, molds, molding specimens, capping specimens, and curing specimens for compression test specimens and flexure test specimens.

American Society for Testing Materials, C 39-44; 1944. American Assn. of State Highway Officials, T 22. Method of Test for Compressive Strength of Molded Concrete Cylinders. Covers scope, apparatus, test specimens, procedure, calculation, and report.

American Society for Testing Materials, C 42-44; 1944. American Assn. of State Highway Officials, T 24. Methods of Securing, Preparing, and Testing Specimens From Hardened Concrete for Compressive and Flexural Strengths. For specimens of hardened concrete from structures and pavements. Covers precautions, apparatus, test specimens, procedure, length of drilled core specimens, compressive strength, and flexural strength.

American Society for Testing Materials, C 78-44; 1944. American Assn. of State Highway Officials, T 97. Method of Test for Flexural Strength of Concrete, Using Simple Beam With Third-Point Loading. Covers scope, apparatus, test specimens, procedure, measurement of specimens after test, calculations, and report.

American Society for Testing materials, C 85-42; 1942. Method of Test for Cement Content of Hardened Portland-Cement Concrete. For hardened concretes except those containing aggregates such as slag, diatomites, and sodium silicate which liberate soluble silica under conditions of test. Covers solutions required, preparation of sample, and method of procedure.

American Society for Testing Materials, C 109-44; 1944. American Assn. of State Highway Officials, T 106. Method of Test for Compressive Strength of Hydraulic Cement Mortars. Covers scope, apparatus, temperature and humidity, graded standard sand, sieve analysis of sand, number of specimens, preparing specimen molds, proportioning, consistency, mixing of mortars, determination of flow, molding test specimens, storing test specimens, procedure, calculation, and faulty cubes and retests.

American Society for Testing Materials, C 116-44; 1944. Method of Test for Compressive Strength of Concrete Using Portions of Beams Broken in Flexure, Modified Cube Method. Covers scope, test specimens, preparation of test specimen, procedure, and calculation and report.

American Society for Testing Materials, C 124-39; 1939. American Assn. of State Highway Officials, T 120-42. Method of Test for Flow of Portland-Cement Concrete by Use of the Flow Table. Covers description and diagrams of mold and flow table, securing of sample, and calculation of flow percentage from spread of molded specimen over flow table.

American Society for Testing Materials, C 125-44; 1944. Definitions of Terms Relating to Concrete and Concrete Aggregates. Defines admixture, blast-furnace slag, crushed gravel, crushed stone, elongated piece, fineness modulus, flat piece, gravel, and water-cement ratio.

American Society for Testing Materials, C 138-44; 1944. American Assn. of State Highway Officials, T 121. Method of Test for Weight Per Cubic Foot, Yield, and Air Content (Gravimetric) of Concrete. Covers scope, apparatus, calibration of measure, sample, procedure, and calculations.

American Society for Testing Materials, C 143-39; 1939. American Assn. of State Highway Officials, T 119-42. Method of Slump Test for Consistency of Portland-Cement Concrete. For use where aggregate is mainly under 2 in. in size; description of mold, securing of sample for test, filling of mold, and recording of slump.

American Society for Testing Materials, C 156-44T; 1944. Tentative Method of Test for Water Retention Efficiency of Methods for Curing Concrete. For laboratory use and measured by their ability to prevent moisture loss during the early hardening period. Covers scope, apparatus, test specimens, control specimens, proportioning and mixing mortar, molding specimens, number of specimens, storage of specimens, application of curing materials, duration of test, corrections, and calculations.

American Society for Testing Materials, C 157-43; 1943. Method of Test for Volume Change of Cement Mortar and Concrete. Covers standardized procedure to measure volume changes due to chemical change, moisture change, or similar causes where temperature changes are kept negligible. Covers apparatus, test specimens, storage of specimens, procedure, and report.

American Society for Testing Materials, C 163-44; 1944. Methods of Sampling and Mixing Thermal Insulating Cement. For preparation of specimens for use in all tests on the cement. Covers apparatus, mixing water, sampling, and procedure for mixing.

American Society for Testing Materials, C 164-44; 1944. Method of Test for Bulk Density of Thermal Insulating Cement. The procedure for determining the bulk density of thermal insulating cement to permit the calculation of the necessary storage space for a given quantity of cement in packages as received. Covers definition, apparatus, procedure, and calculation.

American Society for Testing Materials, C 172-44; 1944. Method of Sampling Fresh Concrete. For obtaining samples of fresh concrete from mixers, hoppers, or transportation units. Covers size of sample, procedure for sampling, and mixing composite sample.

American Society for Testing Materials, C 173-42T; 1942. Tentative Method of Test for Air Content (Volumetric) of Freshly Mixed Concrete. For all ordinary types of concrete and mortar. Gives apparatus, calibration of pycnometer and measure, determination of density of laboratory water, procedure, and calculation.

American Society for Testing Materials, C 174-44; 1944. Method of Measuring Length of Drilled Concrete Cores. For determining the length of a core drilled from a concrete structure, particularly from a concrete pavement. Covers apparatus, test specimens, procedure, and report.

American Society for Testing Materials, C 183-44; 1944. Method of Sampling Hydraulic Cement. Covers scope, size and number of samples, by whom taken, sampling from cars, trucks, etc.; sampling from bulk storage, preparation of sample, and number of tests.

American Society for Testing Materials, C 184-44; 1944. Method of Test for fineness of Hydraulic Cement by the No.200 Sieve. Covers scope, apparatus, procedure, calculation, and mechanical sieving.

American Society for Testing Materials, C 185-44 T; 1944. Tentative Method of Test for the Air Content of Portland-Cement Mortar. Covers scope, apparatus, temperature, standard sand, procedure, calculation, and reproducibility.

American Society for Testing Materials, C 186-44 T; 1944. Tentative Method of Test for Heat of Hydration of Portland Cement. Covers scope, apparatus, reagents, procedure for determining heat capacity of apparatus, procedure for determining heat of hydration, and calculations.

American Society for Testing Materials, C 187-44; 1944. Method of Test for Normal Consistency of Hydraulic Cement. Covers scope, apparatus, temperature, procedure, and calculation.

American Society for Testing Materials, C 188-44; 1944. Method of Test for Specific Gravity of Hydraulic Cement. Covers scope, apparatus, procedure, calculation, and reproducibility.

American Society for Testing Materials, C 189-44; 1944. Method of Test for Soundness of Hydraulic Cement Over Boiling Water, Pat Test. Covers scope, apparatus, test specimen, procedure, and illustrations.

American Society for Testing Materials, C 190-44; 1944. Method of Test for Tensile Strength of Hydraulic-Cement Mortars. Covers scope, apparatus, temperature and humidity, standard sand, test specimens, proportioning, consistency, mixing of mortars, molding test specimens, storage of test specimens, procedure, faulty briquets, and retests.

American Society for Testing Materials, C 191-44; 1944. Method of Test for Time of Setting of Hydraulic Cement by the Vicat or Gillmore Needles. Covers scope, apparatus, temperature and humidity, preparation of cement paste, procedure for Vicat method, and procedure for Gillmore method.

American Society for Testing Materials, C 192-44 T; 1944. Tentative Methods of Making and Curing Concrete Compression and Flexure Test Specimens in the Laboratory. Covers scope, preparation of materials, weighing materials, mixing concrete, consistency and yield of concrete, number of specimens; and size of specimens, molds, molding specimens, capping specimens, and curing specimens for compression and flexure test specimens.

Calcium Chloride Assn. Bulletin 28; 1943. Early Strength Concrete—The Use of Calcium Chloride in Concreting. For early high strength, cold weather protection, more workable concrete, easier finishing, uniform and dependable curing, and greater strength. Covers general information, practical experience with calcium chloride, technical abstracts and references, and specifications.

Concrete Reinforcing Steel Institute. Reinforced Concrete, 1943. Code of Standard Practice. The practices and customs contained in this code are in accordance with good engineering practice, tend to insure safety in reinforced concrete construction, and are standard within the industry. Covers engineering service, estimating, materials, execution, and standard procedure.

Concrete Reinforcing Steel Institute. Reinforced Concrete, 1943. Specifications for Placing Accessories. All reinforcing steel shall be accurately located in the forms, and firmly held in place, before and during the placing of concrete, by means of wire supports adequate to prevent displacement during the course of construction and to keep the steel at a proper distance from the forms. Covers one way slab construction, joist-beam-girder construction, flat slab construction, and accessory specifications and standard nomenclature, together with diagrams.

Concrete Reinforcing Steel Institute. Reinforced Concrete, 1943. Specifications for Placing Reinforcement. All reinforcing steel must be placed in accordance with the following requirements—(a) bars shall be clean and sound, (b) bars shall be formed to correct dimensions, (c) bars shall be properly spaced, (d) bars shall be continuous, (e) special anchorage, and (f) bars shall be properly embedded.

Concrete Reinforcing Steel Institute. Reinforced Concrete, 1943. Standard Details of Design. To assist the designer in giving his clients the most economical and satisfactory structure that can be designed. Covers design, code of standard practice, sizes of bars and spirals, grade of steel, length of bars, beams and girders, flat slabs, height of stories, columns, footings, forms, and fabrication of reinforcing steel.

National Sand and Gravel Assn. Bulletin 1; 1931. Estimating Quantities of Materials for Concrete. The method described in this paper is based on the obvious fact that the volume of concrete is equal to the volume of the solids in the aggregate plus the volume of cement paste, so long as there is a negligible quantity of unfilled voids or entrained air. Gives simple formula, derivation of equations, diagram for estimating barrels of cement per cubic yard of concrete, examples of application of method, comparisons of measured quantities, five tables showing data, and advantages of low voids.

National Sand and Gravel Assn. Bulletin 4; 1935. Tables of Quantities of Materials for Concrete. To present tables from which quantities of cement, fine and coarse aggregate per cubic yard of concrete, may be determined for a wide range in proportions, consistency, and gradings of aggregate. Covers comparison with other tables, scope of tables, use of tables, determination of voids, determination of quantity of mixing water, typical problems, and gives ten tables showing quantities of materials per cubic yard of concrete for various mixes.

National Sand and Gravel Assn. Circular 21; 1941. Proportioning Concrete Mixtures. The water-ratio principle, because of its simplicity and its basic soundness, has survived and found universal application in specifications for proportioning concrete. Gives a general discussion and includes tables showing compressive strength, water gallons per sack of cement, maximum size of gravel, water gallons per cubic yard of concrete, and sand percent by weight of total aggregate.

National Sand and Gravel Assn. Circular 26; 1944. Resistance of Concrete to Freezing and Thawing as Affected by Aggregates. This paper deals only with the ability of concrete to resist what is probably the most common and destructive weathering agency—freezing and thawing—and how that ability is affected by soundness of the aggregates. Covers manifestations of unsound aggregates, freezing and thawing tests of concrete, concrete investigations, and concluding remarks. Reprint from proceedings of conference on plans for Post-War Highways.

National Sand and Gravel Assn. Effect of Size of Specimen in Studies of Durability of Concrete as Affected by Aggregates, 1942. Freezing and thawing tests of concrete are finding wide acceptance as means for determining the suitability of aggregates for use in concrete exposed to weathering. Covers outline of tests, preparation and testing of specimens, and discussion of test results. Reprinted from the copyrighted A.S.T.M. Bulletin.

National Slag Assn. Materials Required per Cubic Yard of Slag, Stone, and Gravel Concrete, 1939. Data in tabular form showing the quantities of material required per cubic yard of concrete under varying conditions. Gives a series of tables showing quantities of aggregate in moist field condition and in dry condition per cubic yard of concrete in mixes

containing various quantities of cement for various sizes of slag or stone aggregate and for various sizes of uncrushed gravel aggregate.

Portland Cement Assn. Concrete Facts for Concrete Contractors, Third Edition, 1942. Covers concrete—what it is, selection of materials, proportioning, mixing, placing, finishing, curing, colored concrete, colored concrete topping—suggested specifications, special surface finishes, forms, reinforced concrete, watertight concrete, high early strength concrete, and cold weather construction.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Circular C398 and Supplement, 1944. Standard Samples. Cement (Turbidimetric Standard), Sample 114d. This sample is prepared and sold by the National Bureau of Standards with a certificate of analysis for use in industry and by others as a comparison standard for checking the accuracy of analysis of similar material.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Building Materials and Structures Report BMS61; 1940. Structural Properties of Two Nonreinforced Monolithic Concrete Wall Constructions. The Masonry Construction Section of the National Bureau of Standards built 24 specimens representing two nonreinforced monolithic concrete wall constructions. The only difference in their construction was in the proportions of the concrete. The specimens were subjected to compressive, transverse, impact, concentrated, and racking loads. For each of these loads, three like specimens were tested. The deformation under load and the set after the load was removed were measured for each increment of load. The results are presented in graphs and a table.

## 516.1 CEMENT

### 516.10 General Items

American Society for Testing Materials, C 114-44; 1944. American Assn. of State Highway Officials, T 105. Chemical Analysis of Portland Cement. Covers scope, sampling, apparatus, purity of water and reagents, concentration of reagents, glassware, number of chemical determinations, and procedure for determining silicon dioxide, aluminum oxide, ferric oxide, calcium oxide, magnesium oxide, sulfur trioxide, loss on ignition, sodium oxide and potassium oxide, water soluble alkali, phosphorus pentoxide, manganic oxide, insoluble residue, chloroform soluble organic substances, free calcium oxide, and alternate methods.

American Society for Testing Materials, C 114-44T; 1944. Tentative Methods of Chemical Analysis of Portland Cement. Covers general requirements, and gives apparatus, reagents, and procedure for determining sodium oxide and potassium oxide, sulfide sulfur, sulfur trioxide, and vinsol resin.

American Society for Testing Materials, C 115-42; 1942. American Assn. of State Highway Officials, T 98. Method of Test for Fineness of Portland Cement by means of the Turbidimeter. Covers the Wagner turbidimeter apparatus and procedure for determining the fineness of Portland cement as represented by specific surface expressed as total surface area in square centimeters per gram of cement. Gives description of apparatus including light source, water cell, retarding filter, sedimentation tank, photoelectric cell, shield, and elevating device; microammeter, method of calibration, sieve determination, preparation of the suspension, procedure, and calculations.

American Society for Testing Materials, C 151-43; 1943. American Assn. of State Highway Officials, T 107. Method of Test for Autoclave Expansion of Portland Cement. For determining soundness by test of a neat cement specimen. Gives requirements for apparatus, temperature and humidity, preparation of test specimens, procedure, calculation, and retests.

### 516.11 Portland Cement

American Assn. of State Highway Officials. Standard Specifications for Highway Bridges, 1941. Includes five classes of Portland cement conforming to American Society for Testing Materials Specification C 150, recommended uses for each type, and sampling and testing according to American Society for Testing Materials Specification C 77.

American Assn. of State Highway Officials, M85-42. Standard Specifications for Portland Cement. Gives scope, basis of purchase, definition, chemical limits, physical requirements, packaging and marking, storage, inspection, rejection, and methods of sampling and testing.

American Public Works Assn. Sewers, J1-38; 1938. For Portland cement this organization has adopted the current specification of the American Society for Testing Materials for Portland cement and also for high-early-strength Portland cement.

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering, 1944. Specifications for Portland Cement. Quality of cement and the methods of sampling and testing shall be same as American Society for Testing Materials Specification C 150.

American Society for Testing Materials, C 150-44; 1944. Portland Cement. Covers five types of Portland cement—(I) for use in general concrete construction, (II) for use in general concrete construction exposed to moderate sulfate action or where moderate heat of hydration is required, (III) for use when high early strength is required, (IV) for use when a low heat of hydration is required, (V) for use when high sulfate resistance is required. Covers basis of purchase, definition, chemical requirements, physical requirements, packaging and marking, storage, inspection, rejection, and methods of testing.

American Society for Testing Materials, C 175-44 T; 1944. Tentative Specifications for Air-Entraining Portland Cement for Concrete Pavements. For use in concrete pavements exposed to severe frost action. Covers basis of purchase, definition, chemical requirements, physical requirements, packaging and marking, storage, inspection, rejection, and methods of testing.

U. S. Gov., Federal Specification SS-C-191b; 1941. Amendment 1; 1943. Cement; Portland. Covers one grade. Gives requirements for materials and workmanship, chemical composition, fineness, soundness, time of setting, compressive strength, tensile

strength, use of compressive or tensile tests, age at testing, and additions during grinding; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification SS-C-201a; 1941. Amendment 1; 1943. Cement; Portland, High-Early-Strength. Covers one grade. Gives requirements for materials and workmanship, chemical composition, fineness, soundness, time of setting, compressive strength, tensile strength, use of compressive or tensile tests, age at testing, and additions during grading; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification SS-C-206a; 1941. Amendment 1; 1943. Cement; Portland, Moderate-Heat-of-Hardening. Covers one grade. Gives requirements for materials and workmanship, chemical composition, fineness, soundness, time of setting, compressive strength, tensile strength, use of compressive or tensile tests, age of testing, additions during grinding, and heat of hydration; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification SS-C-208a; 1941. Cement; Portland, Pozzolana. Covers one grade of an intimately interground mixture of Portland cement and those natural or artificial products composed essentially of silica and alumina. Gives requirements for chemical composition, soundness, time of setting, compressive strength, and additions during grinding; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification SS-C-211a; 1940. Cement; Portland, Sulphate-Resisting. Covers one grade. Gives requirements for chemical composition, fineness, soundness, time of setting, and tensile and compressive strengths; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

*References.*—Definitions, methods of sampling and of testing, *see* 500, 516.0.

### 516.12 Natural Cement

American Society for Testing Materials, C 10-37; 1937. Natural Cement. Covers finely pulverized calcined argillaceous limestone with not over five percent added nondeleterious substances. Requirements for fineness, soundness, time of setting, tensile strength, marking, storage and inspection, with tests by A.S.T.M. methods.

*References.*—Definitions, methods of sampling and of testing, *see* 500, 516.0.

### 516.19 Miscellaneous Cements

American Society for Testing Materials, C 91-40; 1940. Masonry Cement. For use with sand for making mortar for laying masonry units; requirements for time of setting, soundness, compressive strength, water retention, staining, methods of testing, and apparatus for test.

American Society for Testing Materials, C 91-44T; 1944. Tentative Specifications for Masonry Cement. For cement to be used in conjunction with sand in the making of mortar for laying units of masonry construction. Covers time of setting, soundness, compressive strength, water retention, staining, packaging and marking, storage, inspection, rejection, and sampling and methods of testing.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, 1938. High-Temperature Refractory Cements. Covers definition, description, air-setting cements, sources of raw materials, desired properties, uses, and specifications.

U. S. Gov., Federal Specification HH-C-176; 1933. Cement; Silica. Covers one grade. Gives requirements for composition, softening point, and fineness; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Federal Specification SS-C-158a; 1941. Amendment 1; 1943. Cements; Hydraulic; General Specifications (Methods for Sampling, Inspection, and Testing). Covers requirements which are common to all detail specifications for cements unless specifically excepted in detail specification. It does not describe the material or article but provides means for determining whether the material or article conforms to the detail requirements. Complete test methods are given in detail.

U. S. Gov., Federal Specification SS-C-181b; 1938. Amendment 1; 1939. Cement; Masonry. For use in masonry mortars—water repellent, or nonstaining to limestone. Covers two types—(I) where not exposed to frost action and (II) general use. Gives requirements for fineness, time of setting, soundness, and strength; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Navy Dept. Specification 32C8b; 1941. Cement; silica.

U. S. Gov., Navy Dept. Specification 52C13a; 1943. Cement-Compound; Iron or Steel.

*References.*—Definitions, methods of sampling and of testing, *see* 500, 516.0.

### 516.2 STUCCO

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering. Specifications for Buildings for Railroad Purposes: Lathing and Plastering. Gives requirements for exterior stucco work.

Contracting Plasterers' International Assn. Standard Specification. Includes requirements for composition and application of scratch coat and of brown coat, application of stucco to masonry and concrete walls, ceilings and columns, and to painted walls.

National Lime Assn. Specification for Lime Plaster and Lime Stucco. Requirements on materials, mix proportions, application, and workmanship; recommendations for preparation of masonry and concrete surfaces to receive stucco and desirable thicknesses on various backings.

Portland Cement Assn. Plasterer's Manual for Applying Portland Cement Stucco and Plaster, 1941. Covers Portland cement stucco including—material specifications, coloring materials, bases, suction, curing, proportioning and mixing, flashing, application, refinishing old stucco jobs, causes of discoloration, finish coat, textures, and plastering and texturing tools; Portland cement plaster including—material specifications, bases, suction, curing,

proportioning and mixing, application, and painting; and construction details.

Portland Cement Assn. Specifications for Portland Cement Stucco (on Concrete Masonry Walls), 1940. Covers general requirements, materials meeting A.S.T.M. specifications, preparation of surfaces, lathing, stucco mix proportions, thickness of stucco, curing and illustrations of procedure, and types of finishes.

*References.*—Definitions, methods of sampling and of testing, *see* 500, 510, 512.10, 516.0; cement and lime, *see* 516.1, 517.2; sand and fine aggregate, *see* 512.12, 512.13.

## 516.3 CONCRETE AND MORTARS

American Public Works Assn. Sewers, J1-38; 1938. Includes specifications for bulk and package delivery, storage, inspection, work in freezing weather, water for concrete construction, measurement of water by weight and volume, concrete proportions and strength requirements for four classes of concrete, sampling and number of tests required for various volumes of work, depositing concrete under water, vibration, construction joints, and for test procedures using A.S.T.M. methods.

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering, 1942. Specifications for Buildings for Railroad Purposes: Architectural Terra Cotta. Gives requirements for mortar.

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering, 1942. Specifications for Buildings for Railroad Purposes: Asphalt Mastic Floors and Asphalt Block Floors. Gives reouirements for mortar bed for block floors.

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering, 1942. Specifications for Buildings for Railroad Purposes: Brick Pavements and Floors. Gives requirements for cement mortar cushion and cement grout filler.

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering, 1944. Specifications for Buildings for Railroad Purposes: Brickwork. Gives requirements for mortar and mortar color.

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering, 1944. Specifications for Buildings for Railroad Purposes: Clay Hollow Tile. Gives requirements for mortar.

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering, 1944. Specifications for Buildings for Railroad Purposes: Concrete Architectural Stone. Gives requirements for mortar.

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering, 1942. Specifications for Buildings for Railroad Purposes: Creosoted Wood Block Pavements and Wood Block Floors. Gives requirements for mortar bed for laying blocks.

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering, 1942. Specifications for Buildings for Railroad Purposes: Macadam Pavements; and Cement Grouted Macadam Platforms, Floors, Pavements, and Pavement Bases. Gives requirements for grout.

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering, 1944. Specifications for Buildings for Railroad Purposes: Stone Masonry and Cut Stone Work. Gives requirements for mortar.

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering, 1944. Specifications for Concrete and Reinforced Concrete Railroad Bridges and Other Structures. Gives requirements for materials; proportioning and mixing; depositing in air, under water, in sea water, and in alkali soils or waters; curing; forms; metal reinforcement; protective covering; joints; waterproofing; and surface finish. Emergency Provisions adopted Feb. 3, 1943, provides for maximum reuse of material for forms and conserving metal by using outside bracing for metal ties and bituminous mastic for water tight joints in lieu of metal dams.

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering. Specifications for Shotcrete. Gives requirements for bonding surface, reinforcement. dowels, shotcrete, shooting strips, application, and curing.

American Society for Testing Materials, C 94-44; 1944. Ready-Mixed Concrete. Covers ready-mixed concrete for general use. Gives basis of purchase, materials, quality of concrete, range in slump, measuring materials, batching plant, mixers and agitators, mixing and delivery, inspection, sampling, slump, certification, strength, alternate strength basis, failure to meet specifications, and methods of testing.

American Society for Testing Materials, C 111-36; 1936. Sodium Silicate for Curing Concrete. For application to the surface of concrete for preventing moisture loss during curing. Covers formula and specific gravity, requirements for container size and type, and marking.

American Society for Testing Materials, C 161-44T; 1944. Tentative Specifications for Mortar for Reinforced Brick Masonry. Covers two alternative specifications—(1) property specifications in which the acceptability of the mortar is based on the properties of the ingredients and the properties of the mortar mixture, (2) proportion specifications in which the acceptability of the mortar is based on the properties and fixed proportions of the ingredients. Property specifications cover materials, mortar and grout, water retention, compressive strength, sampling, and methods of testing. Proportion specifications cover materials, and mortar and grout.

American Society for Testing Materials, C 178-44T; 1944. Tentative Specifications for Air-Setting Refractory Mortars (Wet Type) for Boiler and Incinerator Services. Gives scope, classes, quality, test requirements, retests, and methods of testing.

American Society for Testing Materials, D 98-34; 1934. Calcium Chloride. Includes use for dust prevention,

acceleration of setting of concrete, and curing concrete. Gives requirements for chemical composition, screen analysis, and packing.

American Standards Assn. A 59.1-1941. Sponsored by Gypsum Assn. and Building Officials Conference of America, Inc. Reinforced Gypsum Concrete. Gives requirements for materials, strength of gypsum concrete, allowable stresses, design, and inspection.

American Assn. of State Highway Officials. Standard Specifications for Highway Bridges, 1941. Includes requirements for concrete masonry—materials (cement, water, fine and coarse aggregates, and reinforcement to conform to specific A.A.S.H.O. specifications, respectively), care and storage of aggregates, storage of cement, classes of concrete (five classes with class-use recommendations), classification and proportioning of concrete mixtures, consistency, mixing (at site, by truck mixer, by hand), handling and placing, pneumatic placing, pumping, depositing under water, construction joints, rubble or cyclopean concrete, concrete exposed to sea water, concrete exposed to alkali soils or alkali water, falsework, forms and housing, concreting in cold weather, curing concrete, expansion and fixed joints and bearings, finishing concrete surfaces (six classes of finish with class-use recommendations), sidewalk finish, pneumatically applied mortar, and measurement and payment.

American Water Works Assn. Joint sponsor with American Gas Assn., American Society for Testing Materials, and New England Water Works Assn. Cement Mortar Lining for Cast Iron Pipe and Fittings, 1939. American Standards Assn., A21.4-1939. Gives requirements for Portland cement and sand meeting A.S.T.M. specifications, for mixture of mortar, preparation of pipe for lining, method of application and thickness of lining, curing, tests of lining for water absorption, and finish; for optional bituminous outside coatings, whitewash for protection from sun, and for bituminous seal coat; with test for purity of water in lined specimen.

Concrete Reinforcing Steel Institute. Reinforced Concrete, 1943. General Specifications for Materials, Mixing, and Placing of Concrete. Reinforced concrete includes all concrete in which metal, other than that provided for shrinkage or temperature changes, is embedded in such a manner that the two materials act together in resisting forces. Covers drawings, quality of materials, concrete quality, tests, concrete proportions and consistency, mixing and conveying, depositing, forms and conduits, placing of reinforcement, construction joints, cold weather requirements, curing, exposed concrete, waterproof concrete, surfaces, floors, and code of standard practice.

Concrete Reinforcing Steel Institute. Reinforced Concrete, 1943. Standard Specifications for 3,000 Lb. Concrete for Structures—Water-Cement Ratio Method. Gives requirements for Portland cement, concrete aggregates, water, storage, concrete quality, proportions based on water-cement ratio for average materials, and curing.

National Lime Assn. Specifications for Mortars for Use in Unit Masonry. Requirements on materials for lime and lime-cement mortars, proportions recommended for general use, below grade and above grade.

National Ready Mixed Concrete Assn. Control of Quality of Ready-Mixed Concrete, 1944. Covers introduction, problems of concrete control, control of concrete at source, batching plants and batching control, mixing control, discharge control, inspection and maintenance of equipment, cold weather concrete, accelerators, tests and test methods, personnel, over-design to meet specifications and appendices; determining percentage of sand by fineness modulus method, determining percentage of sand by voids in coarse aggregate, formulae pertaining to cold weather concrete, and list of references.

Portland Cement Assn. Design and Control of Concrete Mixtures, Seventh Edition, 1940. Covers designing mixtures for definite requirements, proportioning concrete mixtures, design of concrete mixtures, proportioning concrete mixtures by trial, control of concrete in the field, special processes and materials, shrinkage and expansion of concrete, specifications for plain and reinforced concrete, and specifications and tests of the American Society for Testing Materials.

Structural Clay Products Institute. Recommended Mortar for Clay Products Masonry, 1942. Gives mortar ingredients and properties conclusions; recommendations; property specifications for mortar for clay products masonry; proportion specifications for mortar for clay products masonry; recommended mortar for clay products masonry including definition, cementitious materials, plasticizers and admixtures, Portland cement, natural cement, hydraulic hydrated lime, masonry cements, lime, quicklime, hydrated lime, finely ground clay, admixtures, integral waterproofing, color, aggregate, mortar properties, workability and water retentivity, bond, weather resistance or durability, strength, volume change, efflorescence, extensibility and elasticity, permeability, and mortar adapted to masonry units; appendix I giving estimating tables; and appendix II giving standard specifications.

U. S. Gov., Dept. of Commerce, National Bureau of Standards, BH6; 1924. Recommended Minimum Requirements for Masonry Wall Construction. For exterior and interior masonry walls for all buildings, construction requirements recommended by building code committee for adoption by city and state code making bodies. Covers solid brick walls; walls of hollow tile, concrete block, concrete, and stone; hollow walls of brick, veneered walls, requirements on quality of materials, working stresses, thickness, bond, reinforcement, etc.

U. S. Gov., Dept. of the Interior, Bureau of Reclamation. Concrete Manual, 1938. Contains information, advice, and instruction relating to the control of concrete construction—concrete, concrete materials, investigation prior to construction, construction control, and appendixes.

U. S. Gov., Federal Specification HH-M-611a; 1943. Mortar; Air-Setting, Refractory, Bonding (Wet and Dry types). Covers two types—(I) wet and (II) dry; and three grades for each type—(A) high-heat and super-duty, (B) moderate, intermediate and slag-resistant duty, and (C) back-up duty. Gives requirements for material and workmanship, plasticity and preservation, fineness, troweling, dipping, bonding strength, and heat soaking; methods of

sampling, inspection, and tests; and packing and marking.

U. S. Gov., Federal Specification HH-M-662; 1944. Mortar; Heat-Setting, Refractory. Covers one type and two grades—(A) super duty and high-heat duty and (B) intermediate and slag resistant duty. Gives requirements for material and workmanship, fineness, bond, linear shrinkage, and pyrometric cone equivalent; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Federal Works Agency, Public Works Administration. Specifications for Construction of Roads and Bridges in National Forests and National Parks, FP-41. Concrete—Classes A, B, D, and S.

U. S. Gov., Federal Works Agency, Public Works Administration. Specifications for Construction of Roads and Bridges in National Forests and National Parks, FP-41. Concrete—Classes XA, XB, XC, XX, XY, and XS.

U. S. Gov., Navy Dept. Specification 32M3b; 1944. Mortar; Refractory, High-Temperature, Air-Setting.

U. S. Gov., Navy Dept. Specification 32M4b; 1944. Mortar; Refractory, High-Temperature, Heat-Setting.

U. S. Gov., Navy Dept., Bureau of Yards and Docks. Specification 3Yb; 1929. Standards of Design for Concrete.

U. S. Gov., Navy Dept., Bureau of Yards and Docks. Specification 13Yc; 1935. Addendum 1; 1942. Concrete Construction.

*References.*—Definitions, methods of sampling and of testing, *see* 500, 510., 512.10, 516.0; method of test for refractories, *see* 534.10; gravel, sand, fine aggregate, coarse aggregate, broken stone, slag, *see* 512.11, 512.12, 512.13, 512.14, 512.15, 512.2; cement and lime, *see* 516.1, 517.2; concrete brick, block, cast stone, *see* 516.4; concrete sidewalks, poles, and posts, *see* 516.5, 516.9; concrete road construction, *see* 518.21, 518.31; concrete bridges and piling, *see* 518.4; concrete in building construction, *see* 518.5; concrete drain structures and pipe, *see* 518.6; concrete for tanks and masonry, *see* 518.7, 518.8.

## 516.4 CONCRETE BRICKS, BLOCKS, AND CAST STONE

American Concrete Institute. Proposed Specification for Cast Stone, 1942. Gives requirements for compressive strength and absorption, selection of specimens for testing, and methods of testing.

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering, 1942. Specifications for Buildings for Railroad Purposes: Concrete Architectural Stone. Gives requirements for composition, tests, working loads and unit stresses, handling, surface finish and carving, cement, sand, lime, mortar, anchors and dowels, setting, cleaning and pointing, protection, and guarantee.

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering, 1943. Roadway Protection. Covers retaining structures in sliding cuts. Gives requirements for timber, concrete, and metal cribbing; and dry rubble, masonry, and concrete walls.

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering, 1944. Specifications for Buildings for Railroad Purposes: Concrete Roofing Tile. Covers two types—(a) small, supported directly on roofing paper and roof sheathing and (b) large, spanning between purlins, interlocking and flat. Gives requirements for materials, manufacture, dimensions, tests, laying, and guarantee.

American Society for Testing Materials, C 55-37; 1937. American Standards Assn., A75.1-1942. Concrete Building Brick. Covers two grades—for exposure to freezing in presence of moisture and for back-up or interior masonry. Requirements as to minimum compressive strengths, modulus of rupture, dimensions of standard size, inspection, and tests in accordance with A.S.T.M. method C 67.

American Society for Testing Materials, C 90-44; 1944. American Standards Assn., A79.1-1944. Hollow Load-Bearing Concrete Masonry Units. For units for wall construction made from Portland cement and suitable aggregates such as sand, gravel, crushed stone, cinders, burned clay or shale, and blast furnace slag. Covers cinder aggregate, physical requirements, permissible variations in dimensions, visual inspection, marking, sampling and testing, rejection, and expense of tests.

American Society for Testing Materials, C 129-39; 1939. American Standards Assn., A80.1-1942. Hollow Nonload-Bearing Concrete Masonry Units. Covers compressive strength and moisture content of tile as delivered, nature of aggregate, dimensions and permissible variations, visual inspection, marking, and sampling.

American Society for Testing Materials, C 139-39; 1939. American Standards Assn., A73.1-1942. Concrete Masonry Units for Construction of Catch Basins and Manholes. For solid, precast, segmental units made from Portland cement and suitable aggregates. Specifies minimum compressive strength, maximum absorption, dimensions and permissible variations, visual inspection, marking, sampling and testing.

American Society for Testing Materials, C 140-39; 1939. American Standards Assn., A 84.1; 1942. Methods of Sampling and Testing Concrete Masonry Units. Methods for determining compressive strength, absorption, weight, and moisture content. Includes selection of samples and outline of procedure for tests.

American Society for Testing Materials, C 145-40; 1940. American Standards Assn., A81.1-1942. Solid Load-Bearing Concrete Masonry Units. Covers cement block or tile having 75 percent or more net area with suitable aggregates such as sand, gravel, crushed stone, bituminous or anthracite cinders, burned clay or shale, and blast-furnace slag. Gives limits for combustible content in aggregate, physical requirements, dimensions and permissible variations, and visual inspection.

Underwriters' Laboratories, Inc. Standard for Concrete Masonry Units, 1938. Covers units which have been shown by fire tests to be eligible for fire retardant classifications under standard fire exposure conditions as specified in the American Standard Fire Test Specifications. Design, dimensions, materials, cement-aggregate proportion, strength, consistency, curing methods, and fire endurance tests.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation

R32-38; 1938. Concrete Building Units. This recommendation covers dimensions of concrete block, tile, and brick. Sponsored by the American Concrete Institute, National Concrete Masonry Assn., and Portland Cement Assn.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Commercial Standard CS53-35; 1935. Colors and Finishes for Cast Stone. This standard covers those colors and finishes which constitute a very large proportion of the production of the cast stone industry. As the demand arises this standard may be extended to include other colors and finishes. This standard includes a table setting forth standard colors and finishes for cast stone. It was approved as American Tentative Standard CS53-35 by the American Standards Assn. Sponsored by the Cast Stone Institute.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Building Materials and Structures Report BMS21; 1939. Structural Properties of a Concrete-Block Cavity-Wall Construction Sponsored by the National Concrete Masonry Assn. The Association submitted 12 specimens representing a concrete-block cavity-wall construction. The specimens were subjected to compressive, transverse, concentrated, impact, and racking loads. For each of these loads, three like specimens were tested. The deformation under load and the set after the load was removed were measured for uniform increments of load, except for concentrated loads, for which the set only was determined. The results are presented graphically and in a table.

U. S. Gov., Federal Specification SS-B-663; 1932. Brick; Concrete. Covers three grades—(H) hard, (M) medium, and (S) soft; of Portland cement mortar or concrete. Gives requirements for material, workmanship, absorption, and strength; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Federal Specification SS-C-621; 1931. Amendment 1; 1935. Concrete-Units; Masonry, Hollow. Covers two types for wall construction—(I) load bearing and (II) nonload bearing. Gives requirements for material, workmanship, and compressive strength; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Federal Specification SS-S-721; 1931. Stone; Architectural, Cast. Covers material intended as interior and exterior architectural finish or decorations for buildings or other structures; two types—(I) cast stone, homogeneous throughout, and (II) cast stone, with not less than 1 in. of facing. Gives requirements for material, workmanship, construction, and marking; and methods of sampling, inspection, and tests.

U. S. Gov., Navy Dept. Specification 42W2; 1943. Weights; Ballast.

*References.*—Definitions, methods of sampling and of testing, see 500, 510, 512.10, 516.0; methods of sampling and testing clay brick and fire clay brick, see 534.10; gravel, sand, fine aggregate, coarse aggregate, broken stone, slag, see 512.11, 512.12, 512.13, 512.14, 512.15, 512.2; cement, see 516.1; concrete brick and blocks in building construction, see 518.5.

## 516.5 CONCRETE SIDEWALKS AND DRIVEWAYS

American Public Works Assn. Specification for Concrete Sidewalks, C1-36; 1936. For use in residence and business districts, either one- or two-course sidewalks; includes preparation of sub-base, laying and finishing, and protection during hardening. Gives requirements for cement and aggregates, tested in accordance with A.S.T.M. methods.

Portland Cement Assn. Concrete Walks, Driveways, Aprons, Terraces, Porch Floors, and Retaining and Garden Walls, 1940. Suggestions for one-course walk construction, concrete topping, precast concrete flagstone, proportions, coloring, finishes, and curing, with illustrations of procedures.

U. S. Gov., Federal Works Agency, Public Works Administration. Specifications for Construction of Roads and Bridges in National Forests and National Parks, FP-41. Concrete Sidewalk.

*References.*—Definitions, methods of sampling and of testing, see 500, 510, 512.10, 516.0; gravel, sand, fine aggregate, coarse aggregate, broken stone, slag, see 512.11, 512.12, 512.13, 512.14, 512.15, 512.2; cement, see 516.1.

## 516.9 MISCELLANEOUS SPECIFICATIONS FOR CEMENT AND CONCRETE

American Public Works Assn. Sewers, J1-38; 1938. Includes standard and high-early-strength Portland cements, storage, inspection, concrete sewer pipe, plain and reinforced, form work, concrete piles, quality of water for mixing concrete, concrete masonry construction, work in freezing weather, proportions and consistency, depositing concrete under water, vibration and concrete vibrators, construction joints, curing, general qualities of concrete finish, granolithic mixtures, reinforcement, built in place concrete sewers, plastering of concrete surfaces, and requires tests for materials using A.S.T.M. methods.

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering, 1942. Specifications for Buildings for Railroad Purposes: Brickwork. Gives requirements for cast concrete.

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering, 1942. Specifications for Concrete Fence Posts. Gives requirements for materials, proportioning and mixing, molds, placing reinforcing, compacting, finish, curing, inspection, tests, and patents.

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering, 1942. Specifications for Pile Foundations. Covers the investigation, design, and construction of pile foundations. Gives requirements for concrete piles—pre-cast and cast-in-place.

merican Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering, 1942. Specifications for Shotcrete. Gives requirements for bonding surface, reinforcement, dowels, shotcrete, shooting strips, application, and curing.

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering, 1943. Roadway Protection. Covers retaining structures in sliding cuts. Gives requirements for timber, concrete, and metal cribbing; and dry rubble, masonry, and concrete walls.

American Water Works Assn. Tentative Emergency Specifications for Reinforced Concrete Pressure Pipe, 7B-T-1943. Covers type, designation, size range, minimum design head, maximum operating head, and materials and methods used in construction. Gives requirements applying to all types, steel cylinder reinforced concrete pressure pipe, noncylinder reinforced concrete pressure pipe, and centrifugal reinforced concrete pressure pipe.

Assn. of American Railroads, Telegraph and Telephone Section, 1-A-41; 1930. Concrete Telephone Booth. For housing telephone equipment at outlying points along railroads, unit or sectional, requirements for reinforcing, workmanship, and includes dimensional drawing.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Building Materials and Structures Report BMS43; 1940. Performance Test of Floor Coverings for Use in Low-Cost Housing: Part 2. In the second series, 40 test installations were subjected to a performance test in the floor-testing chamber of the National Bureau of Standards. Included in the tests were battleship linoleum, rubber in sheet and tile form, felt-base floor coverings having various wearing surfaces, three monolithic floors, and a number of asphalt tiles. The bonding agents used included lignin pastes, resinous cements, latex adhesives, rubber cements, cut-back asphalt, and asphalt emulsions. Installations were made on both concrete and wood subfloors. Descriptions of the testing equipment and test installations are given. Results showing the relative depth of the depressions in the floor coverings during the test are presented in tables. Brief summaries showing the performance of the test panels are given, and the appearance of the different floor coverings after 48,000 cycles of the testing equipment is shown by representative photographs.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Building Materials and Structures Report BMS68; 1941. Performance Test of Floor Coverings for Use in Low-Cost Housing: Part 3. A performance test was conducted in the floor-testing chamber of the National Bureau of Standards on a third series of 40 test installations. Included in the test were linoleums in sheet and tile form, cork-composition tile, sheet rubber, rubber tile, asphalt tiles, fiberboard tiles, felt-base floor coverings having various wearing surfaces, three monolithic floors, and a number of wood floors. The bonding agents used included lignin pastes, cumar-resin cement, alumina cement-latex paste, rubber cements, various asphaltic adhesives, and nails. Installations were made on concrete, stripwood, and plywood subfloors. Installations on strip-wood subfloors were made with underlays of dry and asphalt-saturated lining felts. Descriptions of the testing equipment and test installations are given. Results showing the relative depth of the depressions in the floor coverings during the test are presented in tables. Brief summaries of the manner in which the various test installations performed are given, and photographs of the test panels, after 48,000 cycles of the testing equipment, are shown.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Building Materials and Structures Report BMS73; 1941. Indentation Characteristics of Floor Coverings. The indentation characteristics of 64 floor coverings were determined. Tests were conducted on specimens conditioned in an atmosphere of 65-percent relative humidity and 72° F. temperature, on specimens after exposure to accelerated aging, and on specimens at an elevated temperature of 90° F. The floor coverings tested included such general types as linoleum, cork, rubber, felt base, asphalt, wood, fiberboard, and monolithic compositions. Variations in composition and thickness were included in many of the types. The apparatus and the procedure are briefly described. Summaries of the results are presented to show the relative merits of the various floor coverings with respect to comfort value and permanent indentation.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Building Materials and Structures Report BMS80; 1942. Performance Test of Floor Coverings for Use in Low-Cost Housing: Part 4. A performance test was conducted in the floor-testing chamber of the National Bureau of Standards on a fourth series of 40 different installations involving 26 different floor coverings. Specimens of most of the floor coverings were installed on both a concrete and a wood subfloor. Included in the test were cork tiles, rubber tile containing aluminum oxide aggregate, asphalt tile, marbleized linoleums, felt-backed floor coverings having various wearing surfaces, strip maples, maple unit-block, pecan unit-block, asphalt mastic, coal-tar mastic, alumina cement-rubber latex composition, magnesium oxychloride composition, and 1:2:4 Portland cement concrete. Different underlays and adhesives were also included in the test. The test installations are described and results showing the depth of the depressions in the floor coverings made by the equipment are presented in tables. Brief summaries of the manner in which the various installations performed are given, and their appearance at the end of the test is shown by photographs. A few generalized comments and conclusions are made.

U. S. Gov., Federal Specification SS-P-371; 1937. Pipe; Concrete, Non-Pressure, Non-Reinforced, and Reinforced. Covers two types—(I) nonreinforced of bell and spigot pattern, and (II) reinforced. Gives requirements for materials, workmanship, dimensions, strength, and design; methods of sampling, inspection, and tests; and requirements for packing and marking.

U. S. Gov. Federal Works Agency, Public Roads Administration. Specifications for Construction of Roads and Bridges in National Forests and National Parks, FP-41. Culverts and Retaining Walls.

*References.*—Definitions, methods of sampling and of testing, *see* 500, 510, 512.10, 516.0; gravel, sand, fine aggregate, coarse aggregate, broken stone, slag, *see* 512.11, 512.12, 512.13, 512.14, 512.15, 512.2; cement, *see* 516.1; concrete in road construction, *see* 518.21, 518.31; concrete in bridge and

building construction, *see* 518.4, 518.5; concrete drainage structures and pipe, *see* 518.6; concrete tanks and masonry, *see* 518.7, 518.8; concrete burial vaults, *see* 959.3.

# 517. LIME

## 517.0 GENERAL ITEMS

American Society for Testing Materials, C 50-27; 1927. Methods of Sampling, Inspection, Packing, and Marking of Quicklime and Lime Products. Requirements for securing of samples; for lump or granular material in bulk, in packages; for powdered material in bulk or packages; treatment of sample, inspection, packing and marking.

American Society for Testing Materials, C 51-44; 1944. Definitions of Terms Relating to Lime. Defines lime, quicklime, lump lime, lump lime screened, pulverized lime, hydrated lime, liming material, air-slaked lime, calcia, magnesia, building or construction lime, chemical lime, agricultural lime, and available lime.

American Society for Testing Materials, C 51-44T; 1944. Tentative Definitions of Terms Relating to Lime. Defines run-of-kiln quicklime, quicklime sizes, hydraulic hydrated lime, high-calcium hydraulic hydrated lime, and high-magnesium hydraulic hydrated lime.

American Society for Testing Materials, C 110-38T; 1938. Tentative Methods of Physical Testing of Quicklime and Hydrated Lime. For determination of residue of quicklime and hydrated lime, for standard consistency of lime putty, plasticity of lime putty by use of the Emley plasticimeter, and for constancy of volume.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, 1938. Lime; Chemical. Covers definition, solubility, impurities, grades, packing, uses, and inspection.

## 517.1 LIME

*References.*— Lime, quicklime, and hydrated lime, *see* 517.2.

## 517.2 HYDRATED LIME AND QUICKLIME

American Ceramic Society. Journal of A.C.S. for June 1928. U. S. National Bureau of Standards. Circular 118. Adopted by A.C.S. in 1924. Limestone, Quicklime, and Hydrated Lime. Use of lime in manufacture of glass, definitions, requirements on chemical composition of nonvolatile portion of limestone, quicklime or hydrated lime, fineness, methods of sampling and testing.

American Leather Chemists Assn. Methods of Sampling and Analysis. Lime, 1942. Gives requirements for available calcium oxide, gravimetric analysis lime or limestone, acid insoluble siliceous matter, iron and aluminum oxides, iron oxide, calcium oxide, magnesium oxide, and sulfur trioxide.

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering. Specifications for Hydrated Lime To Be Used in Water Treatment. Covers two grades—high-calcium and calcium. Gives requirements for chemical and physical properties and tests, packing, inspection, penalization, and rejection.

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering. Specifications for Quicklime To Be Used in Water Treatment. Covers two grades—high-calcium and calcium; and four forms—lump, pebble, ground, and pulverized. Gives requirements for chemical properties and tests, packing, inspection, and rejection.

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering, 1944. Specifications for Buildings for Railroad Purposes: Brickwork. Gives requirements for lime.

American Society for Testing Materials, C 5-26; 1926. Quicklime for Structural Purposes. Includes crushed, granular, ground, lump, pebble, and pulverized calcium or magnesium quicklime for structural purposes. Requirements for chemical composition, fineness of residue from slaking test, sampling and inspection, with tests by A.S.T.M. methods. Includes directions for slaking and preparation of lime putty for use.

American Society for Testing Materials, C 6-44; 1944. Normal Finishing Hydrated Lime. Covers finishing hydrated lime for scratch, brown, and finish coats of plaster; for stucco, mortar, and as an addition to Portland cement concrete. Gives chemical composition, residue, soundness, plasticity, sampling, inspection, and methods of testing.

American Society for Testing Materials, C 25-44; 1944. Methods of Chemical Analysis of Limestone, Quicklime, and Hydrated Lime. Covers scope, analysis, special solution required, insoluble matter, silicon dioxide, iron and aluminum oxides, total iron, calcium oxide, strontium oxide, magnesium oxide, loss on ignition, mechanical moisture carbon dioxide, sulfur trioxide, total sulfur, phosphorus, manganese, ferrous iron, available lime index, and appendix.

American Society for Testing Materials, C 45-25; 1925. Quicklime and Hydrated Lime for Cooking of Rags in Paper Manufacture. Requirements as to chemical composition of quicklime or hydrated lime, economic considerations for higher or lower limits, and tests according to A.S.T.M. method C 25.

American Society for Testing Materials, C 46-27; 1927. Quicklime for Sulfite Pulp Manufacture. For "Milk of Lime" or "Tank System" for use in making the cooking liquor. Limiting percentages of calcium and magnesium oxides; oxides of silicon, iron, and aluminum; and tests according to A.S.T.M. method C 25.

American Society for Testing Materials, C 47-27; 1927. Hydrated Lime for Varnish Manufacture. For oleoresinous varnishes, general requirements, chemical composition, fineness, reactivity, tung-oil heat test, sampling, and inspection.

American Society for Testing Materials, C 48-24; 1924. Quicklime and Hydrated Lime for Use in the Textile Industry. For treatment of cotton, linen, and jute for liming the kiers, boiling out or scouring, and for bleaching. Gives general requirements, chemical composition, and tests according to A.S.T.M. method C 25.

American Society for Testing Materials, C 49-42; 1942. Quicklime and Hydrated Lime for Silica Brick Manufacture. Requirements on percentages of oxides of

calcium, magnesium, iron and aluminum, silica, insoluble matter, and of carbon dioxide, using test by A.S.T.M. method C 25.

American Society for Testing Materials, C 53-39; 1939. Quicklime and Hydrated Lime for Water Treatment. For purification and softening of water for municipal and industrial purposes; general requirements, available lime percentages for quicklime and hydrated lime, and sampling and inspection.

American Society for Testing Materials, C 141-42; 1942. Hydraulic Hydrated Lime for Structural Purposes. For scratch or brown coat plaster, for stucco, cementitious material in concrete, or for admixture in Portland cement concrete, either high calcium, or magnesium hydraulic hydrate. Requirements for chemical composition, fineness, time of setting, soundness, compressive strength, sampling, and methods of test.

Contracting Plasterers' International Assn. Standard Specification. Includes requirements for lime.

Technical Assn. of the Pulp and Paper Industry. Analysis of Lime, Standard T 617 m-44; 1944. Quicklime (Unslaked Lime) and Hydrated (Slaked Lime). This association has adopted the following specifications of the American Society of Testing Materials: for use in cooking rags, standard C45-25; for use in sulphite pulp manufacture, standard C46-27; and for use in water treatment, standard C53-39. Covers sampling and analysis.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Circular C231; 1925. Quicklime and Hydrated Lime for Use in the Purification of Water. Approved by the Interdepartmental Conference on Chemical Lime. Requirements on percentage of available lime in quicklime and of available calcium hydroxide in hydrate lime, methods of sampling and testing.

U. S. Gov., Federal Specification SS-L-351; 1930. Lime; Hydrated (for) Structural Purposes. Covers two types—(M) masons and (F) finishing. Gives requirements for chemical composition, fineness, soundness, and plasticity; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Federal Specification SS-L-361; 1928. Amendment 1; 1939. Lime; Hydraulic, Hydrated. Covers two types—(C) calcium and (M) magnesium; with or without water-repellent additions. Gives requirements for chemical composition, fineness, strength, time of setting, soundness, water retention, and water repellency; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification SS-Q-351; 1930. Quicklime; (for) Structural Purposes. Covers two types—(C) calcium and (M) magnesium. Gives requirements for material and workmanship, chemical composition, and waste; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., U. S. Army, Chemical Warfare Service. Specification 4-503-245A; 1941. Lime; Hydrated (for Soda Lime).

*References.*—Definitions, method of sampling and of testing, *see* 500, 517.0; lime for fertilizer, *see* 859; lime whitewash, *see* 843.5.

# 518. CONSTRUCTION WORK

## 518.0 GENERAL ITEMS

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering. Specifications for Test Borings. Gives requirements for plant, depth, exploration methods, records, samples, and inspection; and sample page of test boring data.

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering. Uniform General Contract Forms. Proposal, construction contract, cost-plus percentage construction contract.

American Society for Testing Materials, D 426-39; 1939. Method of Test for Field Moisture Equivalent of Soils. For determination of the minimum moisture content at which a drop of water placed on a smoothed surface of the soil is not immediately absorbed. Describes evaporator, selection of sample, method of adding water, and oven drying to obtain percentage of field moisture.

Associated Factory Mutual Fire Insurance Companies. Factory Mutual Bulletin of Loss Prevention, 7.16 (1938), 7.17, 7.18, 7.19, and 7.20 (1939). Anchorage of Steel-Deck Roofs. A series of bulletins showing details of wind-anchorage methods for various types of steel-deck roofs.

Associated General Contractors of America. Manual, 1925. Includes contract forms for engineering construction, building contract of the American Institute of Architects, subcontract form, standard municipal contract, standard government contract (U.S. standard form No. 23), A.G.C. cost plus fee contract, highway contract approved provisions, construction service contract, equipment rental contract, A.G.C. proposal form, and separate contracts—government decision.

Associated General Contractors of America. Manual, 1926. Includes highway estimate sheets, building estimate summary forms, contractors' equipment ownership expense (revised, 1938), equipment record forms, standard prequalification questionnaires and financial statements for prospective bidders (1933), financial statement and questionnaire for credit transactions, advantages of winter construction, functions of general contractor, classification of construction occupations (1935), and code of ethics.

Associated General Contractors of America. American Standards Assn., A 10.1-1939. Manual of Accident Prevention in Construction, 1938. Gives safe practices on construction work; including first aid, for excavation, explosives, demolition, hoists and derricks, pile driving, concreting, scaffolding, barricades, shoring, boilers and pressure vessels, trucks and railroad track usage, fire prevention, tunneling, road construction, electrical equipment, protection of the public, and occupational diseases.

U. S. Gov., Federal Housing Administration. Minimum Construction Requirements. These requirements provide a Minimum Standard of Construction and shall apply to all new construction on which the mortgage is insured by the Federal Housing Administration. They are considered necessary to produce a well-constructed dwelling which will serve as sound security for a long-term mortgage loan. Since these

requirements are essentially minimum, they are not to be built down to but form a basis from which to build up. Copies are available in the F.H.A. insuring offices throughout the U. S. Include requirements for excavation, masonry, adobe construction, structural steel and iron, lumber, wood framing, termite prevention, roof coverings, sheet metal, lathing, plastering, stucco, painting, plumbing, heating, electrical work, etc., according to geographical location and local building code requirements.

U. S. Gov., Federal Specification SS-R-406a; 1942. Amendment 1; 1944. Road and Paving Materials; General Specifications (Methods for Sampling and Testing). Gives methods of sampling and testing that are used officially in the routine examination of certain road and paving materials covered by federal specifications.

*References.*—Safety code for building construction, *see* 518.50.

## 518.1 GRADING FOR ROADS

### 518.10 General Items

American Assn. of State Highway Officials. A Policy on Intersections at Grade, 1940. Covers introduction, definitions, type of intersection, assumed design vehicles, designs for edge of pavement on curves at intersections, minimum right-angle intersections, minimum oblique-angle intersections, separate turning lanes, flared intersections, acceleration and deceleration lanes, islands and channels, alinement and grades at intersections, sight distance at intersections, location of signs at intersections, illustrative existing intersections, approved conclusions, illustrations, and tables.

American Assn. of State Highway Officials, M57-42. Standard Specifications for Materials for Embankments and Subgrades. Gives scope, definitions, general requirements, and methods of testing.

American Assn. of State Highway Officials, T86-42. Standard Methods of Surveying and Sampling Soils for Highway Subgrades. Gives purpose of subgrade survey, scope of subgrade survey, equipment for subgrade survey, soil profile determination, examination of soil section, selection of samples, mapping the soil profile, and analysis of data.

American Assn. of State Highway Officials, T87-42. Standard Methods of Preparing Disturbed Soil Samples for Test. This method describes the preparation of soil samples as received from the field for mechanical analysis, the determination of the soil characteristics, and the compaction test. Gives apparatus, size of sample, preparation of sample, test sample for mechanical analysis, test sample for subgrade soil constants, and test sample for the compaction test.

American Assn. of State Highway Officials, T93-42. Standard Methods of Determining the Field Moisture Equivalent of Soils. The field moisture equivalent of a soil is the minimum water content at which a drop of water placed on a smooth surface of the soil will not be completely absorbed in 30 seconds. Gives apparatus, sample, procedure, and calculation.

American Petroleum Institute, Division of Production. Code 26; 1935. Recommended Practice on Form of Agreement and Specifications for Pipe-line Crossings Under Railroad Tracks.

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering. Specifications for Formation of the Roadway. Gives requirements for construction, alignment, grade, cross-section, clearing and grubbing, grading, and work in vicinity of operated tracks.

American Society for Testing Materials, D 420-42T; 1942. Tentative Methods of Surveying and Sampling Soils for Highway Subgrades. Covers purpose, scope, and equipment for subgrade survey, soil profile determination, examination of soil section, for roads in service and new roads, typical survey sheets, and analysis of data.

American Society for Testing Materials, D 421-39; 1939. Method of Preparing Soil Samples for Mechanical Analysis and Determination of Subgrade Soil Constants. For samples as received from the field; requirements for preparing sample, apparatus, test samples for mechanical analysis, and for subgrade soil constants.

American Society for Testing Materials, D 558-44; 1944. Method of Test for Moisture-Density Relations of Soil-Cement Mixtures. For relationship between moisture content of soil-cement mixtures and resulting densities (oven-dry weight) when mixture is compacted in the laboratory, before cement hydration. Gives apparatus required, method of procedure, and calculation of moisture-density relationship.

American Society for Testing Materials, D 559-44; 1944. Method of Wetting-and-Drying Test of Compacted Soil-Cement Mixtures. For determining soil-cement losses, moisture changes, swell and shrinkage produced by repeated wetting and drying of compacted specimen. Covers apparatus required, preparation of material and molding of specimen, and outline of procedure.

American Society for Testing Materials, D 560-44; 1944. Method of Freezing-and-Thawing Test of Compacted Soil-Cement Mixtures. For determining soil-cement losses, moisture changes, swell and shrinkage produced by freezing and thawing compacted specimen. Gives apparatus required, preparation of material and molding of specimen, and outline of procedure.

U. S. Gov., Federal Works Agency, Public Roads Administration. Specifications for Construction of Roads and Bridges in National Forests and National Parks, FP-41. Includes clearing and grubbing; random clearing; random grubbing; selective removal of trees and snags; stripping and storing topsoil; roadway and drainage excavation; unclassified excavation for structures; borrow; overhaul; and special overhaul of borrow.

### 518.11 Roadway Preparation

American Public Works Assn. Specification for Earth Subgrade, B1-36; 1936. Covers grading and preparation of earth subgrades for pavement foundations, including stakes, excavating, fill, rock, drainage, rolling, and temporary crossings.

U. S. Gov., Federal Works Agency, Public Roads Administration. Specifications for Construction of Roads and Bridges in National Forests and National Parks,

FP-41. Obliteration of Old Roadways and Roadside Clean-up (Wooded Areas).

*References.*—Definitions, methods of sampling and of testing, *see* 518.0, 518.10.

### 518.12 Excavation and Embankment

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering. Specifications for Construction, Excavation, and Temporary Lining of Tunnels. Gives requirements for laying out work, sanitary provisions, excavation, change in area on account of curvature, slides and falls, excavation below grade, refuge niches, shafts, classification, disposition of material and overhaul, wiring, blasting, drainage, timber lining, packing, portals, ventilation, and lighting.

U. S. Gov., Federal Works Agency, Public Roads Administration. Specifications for Construction of Roads and Bridges in National Forests and National Parks, FP-41. Includes embankment; foundation fill; backfill for structures other than pipe culverts; bedding for backfill for pipe culverts; disposal of surplus material; replacing topsoil; tree wells and tree root protection; and furrow ditches.

U. S. Gov., Federal Works Agency, Public Roads Administration. Specifications for Construction of Roads and Bridges in National Forests and National Parks, FP-41. Includes hand-laid rock embankment.

U. S. Gov., Navy Dept., Bureau of Yards and Docks. Specification 4Yd; 1939. Construction of Portland Cement Concrete Pavements. Includes requirements for clearing and earthwork.

*References.*—Definitions, methods of sampling and of testing, *see* 518.0, 518.10.

### 518.13 Slopes and Shoulders for Roads

*References.*—Definitions, methods of sampling and of testing, *see* 518.0, 518.10; gravel, broken stone, slag for shoulders, *see* 512.11, 512.15, 512.2.

### 518.14 Subbases for Roads

U. S. Gov., Federal Works Agency, Public Roads Administration. Specifications for Construction of Roads and Bridges in National Forests and National Parks, FP-41. Includes spot subgrade reinforcement; subgrade; finishing earth graded roads; and fine grading subgrade and shoulders.

*References.*—Definitions, methods of sampling and of testing, *see* 518.0, 518.10; other specifications for subbases and foundations, *see* 518.2; gravel, broken stone, slag, *see* 512.11, 512.15, 512.2.

## 518.2 FOUNDATION FOR ROADS

### 518.20 General Items

American Transit Assn. Recommended Design of Proper Foundation for Tracks in Paved Streets, W102-23; 1923.

### 518.21 Cement Concrete Foundation for Roads

American Public Works Assn. Specification for Pavement Foundation of Portland Cement Concrete, B4-36; 1936. Gives requirements for spreading of concrete on foundation prepared in accordance with A.P.W.A. Specification B1-36, materials to comply with A.S.T.M. specifications.

American Society for Testing Materials, D 58-37; 1937. Materials for Sand-Cement Bed for Brick and Block Pavements. For brick, stone block, wood block, asphalt block, and other block pavements; requirements for quality of sand, sieve analysis, Portland cement mortar strength, and testing by A.S.T.M. methods.

*References.*—Definitions, methods of sampling and of testing, *see* 500, 510, 512.10, 518.0, 518.0, 518.10; street railway foundation, *see* 518.20; sand, gravel, broken stone, slag, *see* 512.1, 512.2; cement and concrete, *see* 518.1, 518.3; preparation of roadway, *see* 518.11, 518.12.

### 518.22 Telford Foundation for Roads

U. S. Gov., Federal Works Agency, Public Roads Administration. Specifications for Construction of Roads and Bridges in National Forests and National Parks, FP-41. Telford Base Course.

*References.*—Definitions, methods of sampling and of testing, *see* 510; preparation of roadway, *see* 518.11, 518.12.

### 518.23 Macadam Foundation for Roads

American Public Works Assn. Specification for Pavement Foundation of New Macadam, B2-36; 1936. Includes mineral aggregates composed of coarse aggregates and filler tested in accordance with A.S.T.M. methods, construction, compacting, and admission of traffic.

American Public Works Assn. Specification for Pavement Foundation of Reconstructed Macadam, B3-36; 1936. For scarifying old macadam, adding of coarse aggregate and filler, construction methods, and quality of materials.

U. S. Gov., Federal Works Agency, Public Roads Administration. Specifications for Construction of Roads and Bridges in National Forests and National Parks, FP-41. Waterbound Macadam Base Course.

*References.*—Definitions, methods of sampling and of testing, *see* 500, 510, 512.10; sand, gravel, and broken stone, *see* 512.1; slag, *see* 512.2; slag foundation, *see* 518.28; bituminous macadam foundation, *see* 518.25; asphaltic foundation, *see* 518.27; broken stone foundation, *see* 518.24; ballast, *see* 511.73; preparation of roadway, *see* 518.11, 518.12.

### 518.24 Broken Stone Foundation for Roads

U. S. Gov., Federal Specification SS-M-51; 1931. Materials; (for) Cushion Course, Brick, Stone-Block, or Wood-Block Pavements (Sand, Slag, Limestone, Screening, Etc.) Covers sand, granulated slag, slag screenings, and limestone screenings. Gives requirements for material and grading and methods of sampling and testing.

U. S. Gov., Federal Works Agency, Public Roads Administration. Specifications for Construction of Roads and Bridges in National Forests and National Parks, FP-41. Crushed Gravel or Crushed Stone Base Course.

U. S. Gov., Federal Works Agency, Public Roads Administration. Specifications for Construction of Roads and Bridges in National Forests and National Parks, FP-41. Reconstructed Stone or Gravel Base Course.

*References.*—Definitions, methods of sampling and of testing, *see* 500, 510, 512.10; broken stone, *see* 512.15; ballast, *see* 511.73; telford foundation, *see* 518.22; macadam foundation, *see* 518.23; bituminous macadam foundation, *see* 518.25; asphaltic foundation, *see* 518.27; preparation of roadway, *see* 518.11, 518.12.

### 518.25 Bituminous Macadam Foundation for Roads

American Public Works Assn. Specification for Pavement Foundation of Tar Macadam (Cold Penetration Type), B7-36; 1936. For materials and methods of construction, including requirements for refined tar for cold application, tested in accordance with A.S.T.M. methods.

U. S. Gov., Federal Works Agency, Public Roads Administration. Specifications for Construction of Roads and Bridges in National Forests and National Parks, FP-41. Bituminous Macadam Base Course (Asphalt or Tar).

U. S. Gov., Federal Works Agency, Public Roads Administration. Specifications for Construction of Roads and Bridges in National Forests and National Parks, FP-41. Reconditioning of Used Roadbed (Preparatory To Bituminizing).

*References.*—Other bituminous (asphalt) macadam base courses, *see* 518.27; definitions, methods of sampling and of testing of bituminous materials, *see* 502.2, 505.0, 505.30; definitions, methods of sampling and of testing of nonbituminous materials, *see* 500, 510, 512.10; sand, gravel, broken stone, *see* 512.1; slag, *see* 512.2; asphalts, road oils, tar, *see* 505.1, 505.2, 505.3; preparation of roadway, *see* 518.11, 518.12; bituminous concrete foundation, *see* 518.26.

### 518.26 Bituminous Concrete Foundation for Roads

American Public Works Assn. Specification for Pavement Foundation of Tar Macadam (Hot Penetration Type), B6-36; 1936. For materials and methods of construction, including requirements for refined tar, tested in accordance with A.S.T.M. methods, crushed stone, and for block pavement surface course preparation of sand-tar cushion.

U. S. Gov., Federal Works Agency, Public Roads Administration. Specifications for Construction of Roads and Bridges in National Forests and National Parks, FP-41. Hot Bituminous Concrete Base Course.

*References.*—Other bituminous (asphalt) concrete foundations, *see* 518.27; definitions, methods of sampling and of testing bituminous materials, *see* 502.2, 505.0, 505.30; definitions, methods of sampling and of testing nonbituminous materials, *see* 500, 510, 512.10; bituminous macadam foundation, *see* 518.25; sand, gravel, and broken stone, *see* 512.1; slag, *see* 512.2; asphalts, road oils, tar, *see* 505.1, 505.2, 505.3; preparation of roadway, *see* 518.11, 518.12.

### 518.27 Asphaltic Foundation for Roads

American Public Works Assn. Specification for Pavement Foundation of Asphaltic Concrete, B-5; 1936. For materials and methods of construction including requirements for asphalt cement, tests in accordance with A.S.T.M. methods, preparation and composition of asphaltic base mixture, and formation of joints.

American Public Works Assn. Specification for Pavement Foundation of Asphalt Macadam, B9-36; 1936. Describes materials and methods of construction, including mineral aggregate, asphalt cement, tests in accordance with A.S.T.M. methods, heating and distributing of asphalt cement.

*References.*—Other asphaltic (bituminous) foundations, *see* 518.25, 518.26; definitions, methods of sampling and of testing bituminous materials, *see* 502.2, 505.0; definitions, methods of sampling and of testing nonbituminous materials, *see* 500, 510, 512.10; sand, gravel, broken stone, *see also* 512.1; slag, *see* 512.2; asphalt, road oils, *see* 505.1, 505.2; preparation of roadway, *see* 518.11, 518.12.

### 518.28 Slag Foundation for Roads

U. S. Gov., Federal Works Agency, Public Roads Administration. Specifications for Construction of Roads and Bridges in National Forests and National Parks, FP-41. Dry Choked Stone or Slag Base Course.

*References.*—Definitions, methods of sampling and of testing, *see* 500, 510, 512.10; slag, *see* 512.2; preparation of roadway, *see* 518.11, 518.12.

### 518.29 Miscellaneous Specifications for Foundations for Roads

American Public Works Assn. Specification for Pavement Foundation of Reconstructed Brick, Block, or Concrete Pavement, B8-36; 1936. For use of worn pavement as base for new surface by filling depressions with asphaltic concrete, including preparation, placing, and compacting.

U. S. Gov., Federal Works Agency, Public Roads Administration. Specifications for Construction of Roads and Bridges in National Forests and National Parks, FP-41. Gravel Base Course.

U. S. Gov., Federal Works Agency, Public Roads Administration. Specifications for Construction of Roads and Bridges in National Forests and National Parks, FP-41. Reconstructed Stone or Gravel Base Course.

U. S. Gov., Federal Works Agency, Public Roads Administration. Specifications for Construction of Roads and Bridges in National Forests and National Parks, FP-41. Selected Borrow Base Course.

U. S. Gov., Federal Works Agency, Public Roads Administration. Specifications for Construction of Roads and Bridges in National Forests and National Parks, FP-41. Sledged Stone Base Course.

U. S. Gov., Federal Works Agency, Public Roads Administration. Specifications for Construction of Roads and Bridges in National Forests and National Parks, FP-41. Stabilized Soil Base Course.

*References.*—Definitions, methods of sampling and of testing, *see* 500, 510, 512.10, 518.0, 518.10; rock and stone, *see* 511.7; sand, gravel, and broken stone, *see* 512.1; slag, *see* 512.2; preparation of roadway, *see* 518.11, 518.12.

## 518.3 PAVEMENT SURFACES

### 518.30 General Items

American Assn. of State Highway Officials. A Policy on Criteria for Marking and Signing No-Passing Zones on Two- and Three-Lane Roads (Standards for Marking and Signing No-Passing Zones), 1940. Covers introduction, assumed design speed, no-passing zones in opposite directions, sight distance at no-passing zones, locating no-passing zones, no-passing zones approaching intersections, relation of limits of no-passing zones to P.I. of vertical curves for purpose of marking pavements, transitions between roads having different numbers of traffic lanes, approved conclusions, and standards for marking and signing no-passing zones.

American Assn. of State Highway Officials. A Policy on Highway Classification, 1940. Covers introduction, class designation, traffic density, assumed period of time, approved traffic density, traffic

capacity, character of traffic, assumed design speed, and list of references.

American Assn. of State Highway Officials. A Policy on Highway Types (Geometric), 1940. Covers introduction, the traffic lane, shoulders, guardrails and curbs, parking lanes, sidewalks, highways with single-lane surfaces, two-lane highways, three-lane highways, four-lane highways, dividing the four-lane highway, median strips at intersections at grade, median strips in general, crown and superelevation, effects of grade separations, effects of service roads, approved conclusions, and illustrations.

American Assn. of State Highway Officials. A Policy on Intersections at Grade, 1940. Covers introduction, definitions, type of intersection, assumed design vehicles, designs for edge of pavement on curves at intersections, minimum right-angle intersections, minimum oblique-angle intersections, separate turning lanes, flared intersections, acceleration and deceleration lanes, islands and channels, alinement and grades at intersections, sight distance at intersections, location of signs at intersections, illustrative existing intersections, approved conclusions, illustrations, and tables.

American Assn. of State Highway Officials. A Policy on Rotary Intersections, 1942. Covers introduction, advantages and disadvantages of rotaries, traffic conditions favorable to rotary design, principles of rotary design, speed of rotary movement, distance between radial roads, the central island, the rotary roadway, outer curb outline, entrance and exits, directional islands, roadway cross slopes, sight distance and grades, curbs and shoulders, landscape development, signs, pavement stripes or markers, lighting, stop-and-go control, examples and adaptations of rotary design, approved conclusions, and illustrations.

American Assn. of State Highway Officials. A Policy on Sight Distance for Highways, 1940. Covers introduction, non-passing minimum sight distance, perception and brake reaction time, braking distance, effect of grade, safe passing sections, passing minimum sight distance, perception time, speed and number of overtaken vehicles, spacing of moving vehicles, acceleration of vehicles, speed of opposing traffic, passing sight distance two-lane highways, passing sight distance three-lane highways, effect of grade, sight distance for four-lane highways, extra lanes for passing, height of eye and object, measuring sight distance, recording sight distance, general application, approved conclusions, and addenda.

American Society for Testing Materials, D 290-39; 1939. Recommended Practice for Bituminous Paving Plant Inspection. Defines the duties and authority of the inspector at a paving plant, engineer, contractor, laboratory, and plant laboratory. Outlines position of inspector, plant equipment and operation, sampling, preparation of mixtures, plant testing of materials, and form of report.

Calcium Chloride Assn. Bulletin 26; 1942. Soil—Aggregate Stabilization and the Use of Calcium Chloride for Military Roads and Airport Runways. Covers dustless, firm military roads and runways, growth of road stabilization, stabilized mixtures for military roads and airports, use of calcium chloride in road construction practice, chart of mechanical stabilization procedure, consolidating gravel surfaces using mix-in-place methods, consolidated runway at Selma Airport, Kankakee Ordnance Plant roads, stabilizing effects of calcium chloride, and value of calcium chloride in concreting.

Calcium Chloride Assn. Bulletin 27; 1942. Skidproofing Icy Roads and Streets—Calcium Chloride in Ice Control Practice. Covers cold weather map of the U. S., ice control policy and practice, skid tests data, freeze-proofing and embedment values, abrasive preparation and pre-treatment, ice treating properties, skidproofing value of calcium chloride in abrasives, ice melting rates of calcium and sodium chlorides, calcium chloride treatment, economic advantage of treated abrasives, spreading rate and effectiveness, placement and storage of abrasives, organized ice treating operations, preventing formation of ice, ice removal—roads and streets, other locations, and table of freezing points.

Calcium Chloride Assn. Bulletin 29; 1942. Surface Consolidation and Maintenance With Calcium Chloride. For low-cost roads and base development emergency roads and airport runways. Covers highway development through maintenance, surface consolidation described, consolidation objectives, planning and preparation for surface consolidation, importance of proper binder-soil, test procedure for controlled proportioning, determination of quantity of soil fines, "rule-of-thumb" methods, essentials in mixing and placing operations, moisture is a critical factor, use of calcium chloride, stabilizing effects of calcium chloride, economics of maintenance with calcium chloride, maintenance of consolidated roads, resurfacing with prestabilized material, and extended fields for surface consolidation.

Calcium Chloride Assn. Brief 179. Dust Control With Calcium Chloride. For tennis courts, playgrounds, parks and cemeteries, driveways, parking areas, factory yards, and drive-in theaters. Covers dust—a serious problem, sprinkling not lasting, calcium chloride holds moisture, binds dust, spreading is simple, soil variation and weather factors, for highway maintenance, for dustproofing drives, street frontages and playgrounds, general recommendations, and packing and shipping.

Highway Research Board. Use of Calcium Chloride in Road Stabilization, 1938. Covers calcium chloride, principles of stabilization, mixture design specifications, computing quantities, properties of calcium chloride and how they function in road stabilization, calcium chloride stabilization types, surface consolidation by maintenance methods, construction of designed stabilized roads, construction costs, maintenance, utility of calcium chloride roads as future bases, research and references.

National Sand and Gravel Assn. Circular 13; 1935. The Use of Gravel in Cement Bound Macadam. Gives a general discussion of the use of gravel in cement bound macadam together with a history of the subject and recent findings.

Structural Clay Products Institute. Mason's Handy Guide. Gives mortar recommendations, mortar proportions, weights of materials, and tables for estimating

number of bricks, cubic feet of mortar, number of hollow wall tile, and quantities of lump quicklime, pulverized quicklime, and hydrated lime required.

## 518.31 Cement Concrete Pavements

American Public Works Assn. Specification for Portland Cement Concrete Pavement, F1-39; 1939. For concrete and reinforced concrete pavements; requirements for cement and aggregates tested in accordance with A.S.T.M. methods, water, reinforcement, steel including wire fabric, bars, bar mats, dowel and tie bars, and deformed metal plate, joint fillers, premolded and poured-in-place types, cork expansion joints, joints, metal and wood forms, curb and gutter, proportioning concrete, mixing, depositing, hand and machine finishing, curing, and appendix covering recommendation of design, A.S.T.M. specifications applicable to materials and methods of test, definitions, and sampling.

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering. Specifications for Buildings for Railroad Purposes: Concrete Pavements and Foundations. Gives requirements for grading, subgrade, curbing, joint filler, forms, joints, expansion joints, placing reinforcement, placing and finishing concrete, curing and protection, and guarantee.

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering. Specifications for the Construction of Monolithic Concrete Crossings. Gives requirements for design of crossing, rail fillers, end crossing, concrete, and steel.

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering. Specifications for the Construction of Precast Concrete Slab Crossings. Gives requirements for design, materials, installation, loading, flangeways, outside of rail head, anchorage, variable depth, concrete, steel, ties, shines, and bevel strips.

American Society for Testing Materials, C 175-44 T; 1944. Tentative Specifications for Air-Entraining Portland Cement for Concrete Pavements. For use in concrete pavements exposed to severe frost action. Covers basis of purchase, definition, chemical requirements, physical requirements, packaging and marking, storage, inspection, rejection, and methods of testing.

Portland Cement Assn. Concrete Pavement Inspector's Manual, 1940. Covers your job, sampling and testing aggregates, at the proportioning plant, form setting, preparing the subgrade, joints, at the mixer, finishing the surface, curing, tests for concrete, curb and gutter, cold weather construction, and city pavements.

Portland Cement Assn. Concrete Pavement Manual of Suggested Practice for Office and Field, Third Edition, 1942. Covers design of concrete pavements including width, curves, gradients, joints, reinforcement, car track paving, alleys, curbs, crown, drainage, resurfacing, cement bound macadam, concrete bases, colored concrete for pavements and walks, traffic lines of concrete, and sidewalks; and construction of concrete pavements including materials, aggregate storage, concrete for pavements, subgrade, mixing concrete, placing concrete, placing reinforcement, part width at a time, joints, finishing, cracking during construction, curb or curb and gutter, curing, test of concrete, and maintenance.

U. S. Gov., Navy Dept., Bureau of Yards and Docks. Specification 4Yd; 1939. Construction of Portland Cement Concrete Pavements.

*References.*—Definitions, methods of sampling and of testing, *see* 500, 510, 512.10, 516.0; sand, gravel, broken stone, slag, *see* 512.1, 512.2; concrete, *see* 516.3; grading for roadway, *see* 518.1; foundations for roads, *see* 518.2; concrete sidewalks. *see* 518.5; curbs and gutters, *see* 518.63, 518.84; general road design, *see* 518.30; road building equipment, weighing equipment, *see* 743, 793.5.

## 518.32 Gravel Pavements

American Society for Testing Materials, D 694-44; 1944. Crushed Stone, Crushed Slag, and Gravel for Water-Bound Base and Surface Courses of Pavements. Cover general characteristics, physical requirements, sizes, sieve analysis, and methods of sampling and testing, using A.S.T.M. methods.

U. S. Gov., Federal Works Agency, Public Works Administration. Specifications for Construction of Roads and Bridges in National Forests and National Parks, FP-41. Crushed Gravel or Crushed Stone Surface Course.

U. S. Gov., Federal Works Agency, Public Works Administration. Specifications for Construction of Roads and Bridges in National Forests and National Parks, FP-41. Gravel Surface Course.

*References.*—Definitions, methods of sampling and of testing, *see* 500, 510, 512.10; gravel, sand, *see* 512.11, 512.12; grading for roadways, *see* 518.1; foundations of roads, *see* 518.2; curbs and gutters, *see* 518.63, 518.84; road building equipment, *see* 743.

## 518.33 Macadam Pavements

American Public Works Assn. Specification for Modified Tar Macadam Pavement, G8-36; 1936. Consists of broken stone or slag bound with cold tar and stone or slag particles introduced from the surface and laid on suitable foundation. Describes aggregates, tar cement, construction, and tests using A.S.T.M. methods.

American Public Works Assn. Specification for Tar Macadam Pavement, G9-36; 1936. For wearing course consisting of crushed stone or slag consolidated by rolling and subsequently filled with hot tar and finer crushed stone or slag. Requirements for aggregates, hot tar, construction, and tests using A.S.T.M. methods for materials.

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering. Specifications for Buildings for Railroad Purposes: Macadam Pavements; and Cement Grouted Macadam Platforms, Floors, Pavements, and Pavement Bases. Gives requirements for grade, subgrade, curb, gutter, material, construction and guarantee.

Portland Cement Assn. Cement Bound Macadam Pavement; 1934. General requirements for coarse aggregate pavement bound together with Portland cement grout; materials in accordance with A.S.T.M. specifications.

for construction of subgrade, forms, joints, compation prior to grouting, composition of grout, machine and hand finishing methods, and curing.

U. S. Gov., Federal Works Agency, Public Works Administration. Specifications for Construction of Roads and Bridges in National Forests and National Parks, FP-41. Includes: Class B-1, dense graded road-mix surface course; class B-2, dense graded plant-mix surface course; class C-1, dense graded road-mix surface course; class C-2, open graded road-mix surface course; class D-1, mosaic macadam pavement; class D-2, three-application pavement; class E-1, plant-mixed seal coat macadam; class E-2, four-application macadam; class F-1, dense graded plant-mixed surface course; and class F-2, open graded plant-mixed surface course.

*References.*—Definitions, methods of sampling and of testing, *see* 500, 510, 512.10; sand, gravel, broken stone, slag, *see* 512.1, 512.2; bituminous macadam pavements, *see* 518.34, 518.37; grading for roadway, *see* 518.1; foundations and base courses, *see* 518.2; curbs and gutters, *see* 518.63, 518.64; general road design, *see* 518.30; road building equipment, *see* 743.

## 518.34 Bituminous Macadam and Bituminous Concrete Pavements

American Assn. of State Highway Officials. Standard Specifications for Highway Bridges, 1941. Includes specifications for bituminous carpets—requirements for materials (tar, asphalt, aggregates), preparation of subfloor, construction of tar mat surface, construction of asphalt mat surface (mixed and penetration methods), opening to traffic, and measurement and payment.

American Public Works Assn. Specification for Sheet Asphalt Pavement, G1-36; 1936. Gives general description for construction of binder course and wearing surface, requirements for materials including sources, aggregates, paving plant, composition of binder mixture, and surface mixture, construction, maintenance, and tests.

American Public Works Assn. Specification for Stone Filled Sheet Asphalt Pavement, G2-36; 1936. For materials and methods of construction including requirements for sources of supply, aggregates, fillers, asphalt cement, paving plant, testing equipment, composition of asphaltic concrete mixture, placing, compacting, and for tests of materials by A.S.T.M. methods.

American Public Works Assn. Specification for Asphalt Macadam Pavement, G3-36; 1936. Consists of coarse broken stone or slag consolidated by rolling, enterstices filled with hot asphalt and fine stone or slag. Requirements for thickness, sub-base, seal coat, aggregates, asphalt cement, construction, and tests of materials following A.S.T.M. methods.

American Public Works Assn. Specification for Fine Aggregate Asphaltic Concrete Pavement, G4-36; 1936. Covers mixture of broken stone, or stone and sand, mineral filler and asphalt laid on sub-base and finished with seal coat of hot asphalt and stone chips or sand. Requirements for thickness, aggregates, asphalt, construction, and tests using A.S.T.M. methods.

American Public Works Assn. Specification for Coarse Aggregate Asphaltic Concrete Pavement, G5-36; 1936. Consists of mixture of broken stone, or stone and sand, mineral filler and asphalt laid on sub-base and sealed with hot asphalt and stone chips or sand. Materials, paving plant, construction, and tests of materials by A.S.T.M. methods.

American Public Works Assn. Specification for Modified Asphalt Macadam Pavement, G7-36; 1936. Gives requirements for materials and method of construction, including aggregates, cut-back asphalt, seal coat, compacting, and finishing, using A.S.T.M. tests.

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering. Specifications for the Construction of Bituminous Crossings. Covers the use of emulsified asphalt, rock asphalt, and cut-back products. Gives requirements for foundation, handling materials, and method of constructing pavement.

American Society for Testing Materials, D 692-42T; 1942. Tentative Specifications for Crushed Stone, Crushed Slag, and Gravel for Bituminous Concrete Base and Surface Courses of Pavements. Includes requirements for sieve analysis and for tests using A.S.T.M. methods.

American Society for Testing Materials, D 693-44; 1944. Crushed Stone and Crushed Slag for Bituminous Macadam Base and Surface Courses of Pavements. Cover the quality and grading of crushed stone to be used in the construction of bituminous macadam base and surface courses. General characteristics, physical properties, sizes, sieve analysis, and methods of sampling and testing.

U. S. Gov., Federal Works Agency, Public Roads Administration. Specifications for Construction of Roads and Bridges in National Forests and National Parks, FP-41. Bituminous Preservative Treatment.

U. S. Gov., Federal Works Agency, Public Works Administration. Specifications for Construction of Roads and Bridges in National Forests and National Parks, FP-41. Bituminous Prime Coat.

U. S. Gov., Federal Works Agency, Public Works Administration. Specifications for Construction of Roads and Bridges in National Forests and National Parks, FP-41. Bituminous Sidewalk.

U. S. Gov., Federal Works Agency, Public Works Administration. Specifications for Construction of Roads and Bridges in National Forests and National Parks, FP-41. Bituminous Tack Coat.

U. S. Gov., Federal Works Agency, Public Roads Administration. Specifications for Construction of Roads and Bridges in National Forests and National Parks, FP-41. Class A. Seal Coats.

U. S. Gov., Federal Works Agency, Public Works Administration. Specifications for Construction of Roads and Bridges in National Forests and National Parks, FP-41. Class A Surface Treatments.

*References.*—Other bituminous (asphalt) pavement, *see* 518.37; definitions, methods of sampling and of testing for bituminous materials, *see* 502.2, 505.0, 505.30; definitions, methods of sampling and of testing for nonbituminous materials, *see* 500, 510, 512.10; sand, gravel, broken stone, slag, *see* 512.1, 512.2; asphalts, road oils, tar, *see* 505.1, 505.2, 505.3; grading for roadways, *see* 518.1; foundations and base courses, *see* 518.2; curbs and gutters, *see* 518.63, 518.64; mineral filler, *see* 512.16; general road design, *see* 518.30; road building equipment, *see* 743.

## 518.35 Brick Pavements

American Public Works Assn. Specification for Vitrified Brick Pavement, D1-36; 1936. Requirements as to quality of paving brick, cement, aggregates, asphalt filler, mastic bed, foundation, headers, untreated bed, cement-sand bed, brick laying, rolling, expansion joints, bituminous filler, cement grout filler, maintenance, brick gutters, and parking strips, etc. Materials to be tested in accordance with A.S.T.M. methods. Adopted by National Paving Brick Assn.

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering. Specifications for Buildings for Railroad Purposes: Brick Pavements and Floors. Gives requirements for grading, subgrade, foundation, curb, gutters, materials, expansion joints, laying, tamping, rolling, applying fillers, and guarantee.

U. S. Gov., Federal Works Agency, Public Works Administration. Specifications for Construction of Roads and Bridges in National Forests and National Parks, FP-41. Brick Sidewalk.

*References.*—Definitions, methods of sampling and of testing, *see* 500, 512.10, 534.10; sand-lime brick, *see* 513; clay brick, *see* 534.11; cushioning materials, *see* 512.12, 512.2, 518.20; sand filler, mineral fillers, *see* 512.12, 512.16; cement grout filler, *see* 516.9; bituminous filler, *see* 505.15; grading for roadway, *see* 518.1; foundations for roads, *see* 518.2; curbs and gutters, *see* 518.63, 518.64; general road design, *see* 518.30; road building equipment, *see* 743.

## 518.36 Stone Block Pavements

American Public Works Assn. Specification for Stone Block Pavement, E1-36; 1936. For stone block on sand cushion or cement-sand bed paved on concrete base course; requirements for new granite blocks as to quality, size and dressing, resurfacing blocks, new sandstone blocks, durax paving blocks, cement grout and bituminous mastic fillers, construction, and protection of finished surface.

*References.*—Definitions, methods of sampling and of testing, *see* 500, 510, 512.10; stone block, *see* 511.71; mineral filler, grout filler, *see* 512.18, 516.9; bituminous fillers, *see* 505.15; cushioning materials, *see* 512.12, 512.2, 518.20; preparation of roadway, *see* 518.1; foundations for roads, *see* 518.2; curbs and gutters, *see* 518.63, 518.64; general road design, *see* 518.30; road building equipment, *see* 743.

## 518.37 Asphalt Pavements

American Assn. of State Highway Officials. Standard Specifications for Highway Bridges, 1941. Includes specifications for asphalt block wearing surfaces—requirements for asphalt block (composition, physical characteristics, manufacture), preparation of sub-floor, mortar bed, laying the blocks, opening to traffic, and measurement and payment.

American Public Works Assn. Specification for Cold Laid Asphaltic Concrete Pavement (Plant Mix Liquefier Type), TG8-36; 1936 (Tentative). Consists of two courses of cold laid asphaltic concrete and top dressing on prepared sub-base. Requirements for materials, including aggregate, hydrated lime, asphalt cement, and naphtha liquefier for warm and for cold weather, composition of mixtures, paving plant, and construction, using A.S.T.M. methods of tests for materials.

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering, 1944. Specifications for Buildings for Railroad Purposes: Sheet Asphalt Pavements; Asphalt Block Pavements; and Asphalt Macadam Pavements. Gives requirements for grading, subgrade, foundations, curbs, gutters, materials, filler, asphaltic cement, construction, and guarantee.

Asphalt Institute. Construction Specifications A-1; 1942. Asphalt Macadam Surface Course (Penetration Method With Hot Asphalt Cement). Includes general description, mineral aggregate, asphalt cement, approval of materials, methods of testing, spreading and compacting coarse aggregate, first application of asphalt cement, filling surface voids with fine aggregate, seal coat, back rolling, protection of pavement, and measurement and payment.

Asphalt Institute. Construction Specifications A-2; 1942. Asphaltic Concrete Surface Course (Coarse Graded Aggregate Type). Includes general description, coarse aggregate, fine aggregate, mineral filler, asphalt cement, approval of materials, methods of testing, paving plant essentials, preparation of asphalt cement, preparation of mineral aggregate, preparation and composition of mixture, paving plant inspection, transportation of mixture, general conditions, placing asphalt mixture, joints, compaction of mixture, and measurement and payment.

Asphalt Institute. Construction Specifications A-3; 1942. Stone Filled Sheet Asphalt Surface Course. Includes general description, stone or slag, sand, mineral filler, asphalt cement, approval of materials, methods of testing, paving plant essentials, preparation of asphalt cement, preparation of mineral aggregate, preparation and composition of mixture, paving plant inspection, transportation of mixture, general conditions, placing asphalt mixture, joints, compaction of mixture, surface finish, and measurement and payment.

Asphalt Institute. Construction Specifications A-4; 1942. Sheet Asphalt Binder and Surface Courses. Includes general description, coarse aggregate, sand for binder course, sand for surface course, mineral filler, asphalt cement, approval of materials, methods of testing, paving plant essentials, preparation of asphalt cement, preparation of mineral aggregates, preparation and composition of binder course mixture, preparation and composition of surface course mixture, paving plant inspection, transportation of mixtures, general conditions, placing asphalt mixtures, joints, compaction of mixtures, coarse surface finish for sheet asphalt mixture, and measurement and payment.

Asphalt Institute. Construction Specifications A-5; 1942. Sand-Asphalt Base Surface Courses (Hot-Mix Type). Includes general description, sand, mineral filler, asphalt cement, approval of materials, methods of testing, paving plant essentials, preparation of asphalt cement, preparation of sand, preparation and composition of mixture, paving plant inspection, transportation of mixtures, general conditions, placing asphalt mixtures, joints, compaction of mixtures, and measurement and payment.

Asphalt Institute. Construction Specifications B-8; 1942. Patching, Reducing Crown and Correcting Profile (of Old Surfaces Which Are To Serve as

Foundations). Includes general description, materials, reduction of grade, removal of loose and foreign material, removal of bumps and waves, priming waterbound surfaces, patching, special patching mixture, leveling course, approval of materials, and methods of testing.

Asphalt Institute. Construction Specifications B-7; 1942. Asphalt Macadam Base (Penetration Method With Hot Asphalt Cement). Includes general description, mineral aggregate, asphalt cement, approval of materials, methods of testing, spreading and compacting coarse aggregate, first application of asphalt cement, filling surface voids with fine aggregate, second application of asphalt cement, back rolling, protection of base, and measurement and payment.

Asphalt Institute. Construction Specifications B-8; 1942. Asphaltic Concrete Base (Coarse Graded Aggregate Type). Includes general description, coarse aggregate, fine aggregate, asphalt cement, approval of materials, methods of testing, paving plant essentials, preparation of asphalt cement, preparation of mineral aggregate, preparation and composition of mixture, paving plant inspection, transportation of mixture, general conditions, placing asphalt mixture, joints, compaction of mixture, and measurement and payment.

Asphalt Institute. Construction Specifications S-1; 1942. Asphalt Surface Treatment or Retreatment of Old Bituminous Surfaces. Includes general description, mineral aggregate, cut-back asphalt, approval of materials, methods of testing, preparation of existing road surface, application of cut-back asphalt, application of mineral aggregate, and measurement and payment.

Asphalt Institute. Construction Specifications S-2; 1942. Asphalt Surface Treatment of Water Bound or Traffic Bound Surfaces. Includes general description, mineral aggregate, asphaltic materials, approval of materials, methods of testing, preparation of existing road surface, application of asphalt primer, application of asphalt binder, application of mineral aggregate, and measurement and payment.

Asphalt Institute. Construction Specifications S-3; 1942. Asphalt Surface Treatment of Loosely Bonded Surfaces. Includes general description, mineral aggregate, asphaltic material, approval of materials, methods of testing, preparation of existing road surface, pressure distributor, first application of asphaltic material, application of mineral aggregate cover, second application of asphaltic material, blading and compaction, and measurement and payment.

Asphalt Institute. Construction Specifications S-4; 1942. Emulsified Asphalt Surface Treatment of Old Bituminous or Other Paved Surfaces (Particularly Adapted to Smooth Texture Surfaces). Includes general description, mineral aggregate, emulsified asphalt, approval of materials, methods of testing, preparation of existing road surface, application of materials, rolling and brooming, and measurement and payment.

Asphalt Institute. Construction Specifications S-5; 1942. Emulsified Asphalt Single and Double Surface Treatments of Waterbound and Rough Texture Surfaces. Includes general description, mineral aggregate, emulsified asphalt, approval of materials, methods of testing, preparation of old surface, application of emulsified asphalt, first application of mineral aggregate for double surface treatment, seal coat application, protection of pavement, preparation and priming of base, and measurement and payment.

Asphalt Institute. Construction Specifications CL-1; 1942. Cold-Laid Asphaltic Plant-Mix Surface Course (Primed Macadam Aggregate Type). Includes general description, mineral aggregate, hydrated lime, asphaltic materials, approval of materials, methods of testing, paving plant essentials, preparation of asphalt cement, preparation of mineral aggregate, preparation and composition of mixtures, paving plant inspection, preparation of base, transportation of mixtures, general conditions, placing coarse and medium mixtures, joints, compaction of mixtures, application of top dressing, and measurement and payment.

Asphalt Institute. Construction Specifications CL-2; 1942. Cold-Laid Asphaltic Plant-Mix Surface Course (Macadam Aggregate Type). Includes general description, mineral aggregate, asphaltic materials, approval of materials, methods of testing, paving plant essentials, preparation of cut-back asphalt, preparation of mineral aggregate, preparation and composition of mixture, paving plant inspection, preparation of base, transportation of mixture, general conditions, placing asphalt mixture, joints, compaction of mixture, application of seal coat, and measurement and payment.

Asphalt Institute. Construction Specifications CL-3; 1942. Cold-Laid Asphaltic Plant-Mix Surface Course (Dense Graded Aggregate Type). Includes general description, mineral aggregate, asphaltic materials, approval of materials, methods of testing, paving plant essentials, preparation of cut-back asphalt, preparation of mineral aggregate, preparation and composition of mixture, paving plant inspection, preparation of base, transportation of mixture, general conditions, spreading and compacting the mixture, application of seal coat, and measurement and payment.

Asphalt Institute. Construction Specifications CL-4; 1942. Cold-Mix—Cold-Laid Emulsified Asphalt Plant-Mix Base and Surface Courses (Dense Graded Aggregate Type). Includes general description, mineral aggregate, emulsified asphalt, approval of materials, methods of testing, computation of quantity of emulsion, preparation of mixtures, paving plant inspection, preparation of base, transportation of mixtures, general conditions, spreading mixtures, rolling, and measurement and payment.

Asphalt Institute. Construction Specifications CP-1; 1942. Stock-Pile Asphalt Paving Mixtures for Making Quick Repairs of Bombed Surfaces. Includes general description, mineral aggregate, asphaltic materials, approval of materials, methods of testing, paving plant, preparation and composition of mixture (alternate 1, 2, and 3), stock piling, and measurement and payment.

Asphalt Institute. Construction Specifications MP-1; 1942. Modified Penetration Emulsified Asphalt Surface Course. Includes general description, mineral aggregate, asphalt, approval of materials, methods of testing, preparation of base, application of

coarse aggregate, first penetration application of emulsified asphalt, filling surface voids with intermediate aggregate, second application of emulsified asphalt, seal coat, protection of pavement, and measurement and payment.

Asphalt Institute. Construction Specifications MP-2; 1942. Modified Penetration Cut-Back Asphalt Surface Course. Includes general description, mineral aggregate, asphaltic materials, approval of materials, methods of testing, preparation of base, application of coarse aggregate, first application of asphalt binder, filling surface voids with fine aggregate, seal coat, protection of pavement, and measurement and payment.

Asphalt Institute. Construction Specifications RM-1; 1942. Asphaltic Road-Mix Surface Course (Macadam Aggregate Type). Includes general description, mineral aggregate, asphaltic materials, approval of materials, methods of testing, preparation of existing base, application of asphalt primer, spreading coarse aggregate, first application of asphaltic binder, mixing operation, compaction, application of seal coat, and measurement and payment.

Asphalt Institute. Construction Specifications RM-2; 1942. Asphaltic Road Mix Surface Course (Dense Graded Aggregate Type). Includes general description, mineral aggregate, asphaltic materials, approval of materials, methods of testing, preparation of existing base, application of asphalt primer, preparation of mineral aggregate for treatment, application of asphaltic binder, mixing operation, spreading and compacting the mixture, application of seal coat, and measurement and payment.

Asphalt Institute. Construction Specifications RM-3: 1942. Sand-Asphalt Road Mix Course on Natural Sand Subgrade. Includes general description, sand, mineral filler, asphaltic materials, approval of materials, methods of testing, mixing equipment, pressure distributor, rollers, preparation of mineral aggregate for treatment, application of asphaltic binder, mixing operation, compaction, application of seal coat, and measurement and payment.

U. S. Gov., Federal Specification SS-A-706b; 1943. Asphalt (for Use in) Road and Pavement Construction. Shall be asphalts prepared by the distillation of asphaltic petroleum or by the fluxing of hard native Trinidad asphalt with a suitable petroleum flux. Covers nine types of petroleum asphalt and nine types of fluxed Trinidad asphalt. Gives details for each type including specific gravity, flash point, softening point, penetration at 25°C., ductility at 25°C., loss at 163°C., bitumen (soluble in carbon disulphide), and uniformity; methods of sampling and testing; and packing and marking for shipment.

*References.*—Other asphaltic (bituminous) pavements, *see* 518.34; definitions, methods of sampling and of testing asphaltic materials, *see* 502.2, 505.0; definitions, methods of sampling and of testing nonbituminous materials, *see* 500, 510, 512.10; sand, gravel, broken stone, slag, *see* 512.1, 512.2; asphalts, road oils, *see* 505.1, 505.2; mineral filler, *see* 512.16; grading for roadway, *see* 518.1; foundations and base courses, *see* 518.2; curbs and gutters, *see* 518.63, 518.64; road design, *see* 518.30; road building equipment, *see* 743.

### 518.38 Sand Clay or Top-Soil Pavements

Portland Cement Assn. Soil-Cement Airport Runways and Landing Areas, SC-101; 1939. Specifications for a combination of soil and Portland cement, moistened, compacted, and shaped to conform to grades; requirements for preparation of soil, materials in accordance with A.S.T.M. specifications; mixing of cement with cultivators, gang plows, or disc harrows; and protection of finished surface.

U. S. Gov., Federal Works Agency, Public Roads Administration. Specifications for Construction of Roads and Bridges in National Forests and National Parks, FP-41. Selected Borrow Surface Course.

*References.*—Definitions, methods of sampling and of testing, *see* 500, 510, 512.10; sand, *see* 512.11; grading for roadways, *see* 518.1; foundations for roads, *see* 518.2; grading of soils, *see* 594; road building equipment, *see* 743.

### 518.39 Miscellaneous Pavements Specifications

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering. Specifications for the Construction of Rail Type Street Crossings. Cover second-hand or scrap steel rails of lighter weight section than the running rails. Gives requirements for materials and installation.

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering. Specifications for the Construction of Wood Plank Street Crossings. Gives requirements for materials and construction.

American Society for Testing Materials, D 806-44 T; 1944. Tentative Method of Test for Cement Content of Soil-Cement Mixtures. Covers scope, apparatus, reagent, samples, procedure, and calculations.

Portland Cement Assn. Soil-Cement Mixtures, Laboratory Handbook, 1942. For using common soils and Portland cement to produce a usable construction material for light-traffic roads, runways, and parking areas. Covers soil identification and classification, soil surveys and soil sampling, A.S.T.M. soil-cement tests, supplementary soil-cement tests, procedures for setting up cement contents to be investigated in soil-cement tests, analysis of soil and soil-cement test data, cement-modified soil, research on soil-cement, appendix, tables, and charts.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specifications CAA-95. Driveway.

*References.*—Wood block and wood block pavements, *see* 402.3.

## 518.4 BRIDGE CONSTRUCTION

### 518.41 Bridges

American Assn. of State Highway Officials. Standard Specifications for Highway Bridges, 1941. Includes general provisions—definition of terms, proposal requirements and conditions, award and execution of contract, scope of work, control of work and materials, legal relations and responsibility to public, prosecution and progress, and measurement and payment; specifications for construction—excavation and fill, sheet piles, bearing piles, concrete masonry, reinforcement, ashlar masonry, mortar rubble masonry, dry rubble masonry, brick masonry, steel structures, bronze or copper-alloy bearing and expansion plates, steel grid flooring, railings, painting metal structures, riprap, concrete cribbing,

waterproofing, dampproofing, name plates, timber structure, preservative treatments for timber, timber cribbing, sectional plate pipe and arches, and wearing surfaces; recommendations for design—general features of design, loads, distribution of loads, unit stresses, pile loads, and bearing power of soils, substructure and retaining walls, structural steel design, concrete design, design of timber structures, sectional plate pipe and arches, and rating of existing bridges; specifications and references to other specifications for cement, water for use with cement, aggregates, reinforcement, structural, eyebar and rivet steels, wrought iron, steel forgings and castings, gray-iron and malleable castings, bronze or copper-alloy bearing and expansion plates, sheet piles, steel sheet piling, steel grid floors, paint, welding, sheet metal for water stops and general use, sectional plate pipe and arches, stone for masonry, brick, bituminous materials and joint fillers, asphalt paving blocks, premolded asphalt plank, structural timber, lumber and piling, and timber preservatives; tables of moments, shears, and reactions; formulas for compressive members; and truck train and equipment loadings.

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering, 1944. Specifications for Concrete and Reinforced Concrete Railroad Bridges and Other Structures. Gives requirements for materials; proportioning and mixing; depositing in air, under water, in sea water, and in alkali soils or water; curing; forms; metal reinforcement; protective covering; joints; waterproofing; and surface finish. Emergency Provisions, adopted Feb. 3, 1943, provides for maximum reuse of material for forms and conserving metal by using outside bracing for metal ties and bituminous mastic for water tight joints in lieu of metal dams.

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering. Specifications for Rigid Frame Concrete Bridges. Gives requirements for design, formulas for analysis, and details of design of various items involved.

U. S. Gov., Federal Works Agency, Public Roads Administration. Specifications for Construction of Roads and Bridges in National Forests and National Parks, FP-41. Concrete and Stone Masonry Bridges.

U. S. Gov., Federal Works Agency, Public Works Administration. Specifications for Construction of Roads and Bridges in National Forests and National Parks, FP-41. Culverts and Retaining Walls.

*References.*—Stone, *see* 511; sand, gravel, broken stone, slag, *see* 512; cement, *see* 516.1; concrete and mortars, *see* 516.3; cast stone, concrete cribbing, concrete blocks, *see* 516.4; steel reinforcement, *see* 805.25; wooden bridges, *see* 412.2; steel bridges, *see* 805.21; asphalts, *see* 505.1; tar and pitch, *see* 505.3; riprap, *see* 511.72; rubble and ashlar masonry, *see* 518.81, 518.82; brick masonry, *see* 518.83; masonry arches, *see* 518.48, 518.84.

## 518.42 Piling

American Assn. of State Highway Officials. Standard Specifications for Highway Bridges, 1941. Includes specifications for bearing piles—materials, limitation of use, preparation for driving (excavation, caps, collars, pointing, splicing, and painting steel piles), methods of driving (general, hammer for timber and steel piles, hammer for concrete piles, additional equipment, leads, followers, and water jets), defective piles, determination of bearing piles (loading tests, timber piles, and concrete and steel piles), test piles, order lists for piling, storage and handling of timber piles, cutting off timber piles, cutting off steel or steel shell piles, capping timber piles, manufacture of precast concrete piles (general, concrete, form work, reinforcement, casting, finish, and curing), storage and handling of precast concrete piles, manufacture of cast-in-place concrete piles (general, inspection of metal shells, class of concrete, reinforcement, and placing concrete), extensions or "Build-Ups," painting steel piles and steel pile shells, measurement and payment (two methods), payment for test piles, and payment for loading piles.

American Assn. of State Highway Officials. Standard Specifications for Highway Bridges, 1941. Includes specifications for sheet piles to be left in place so that it becomes a part of the finished structure—timber sheet piles, concrete sheet piles, steel sheet piles, and measurement and payment.

American Public Works Assn. Sewers, J1-38; 1938. Includes specifications for piling, including wood, concrete and reinforced concrete; requirements for structural timber and piling to meet specifications of the American Association of State Highway Officials for highway bridges and incidental structures, grading of timber in accordance with provisions of American Lumber Standards, limitations for uses of species, timber sheet piles, concrete piles, plain and reinforced built-in-place piles, driving of piles and pile driving equipment, methods of determination of load bearing values, storage and handling of wood piles, length and diameters of piles, etc.

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering. Specifications for Making and for Driving Precast Concrete Piles. Gives requirements for materials; class; workability, placement, and curing of concrete; handling; driving equipment; jetting; load capacity; replacing and redriving; and cut-off.

Portland Cement Assn. Concrete Piles, 1939. Includes precast and poured-in-place foundation piles, classification of soil structure, pile driving formulas, load capacities of single and group piling; design, manufacture, and driving of precast piles; shell, shell-less and pipe formed poured concrete piles; sheet piles, and bulkheads, materials meeting A.S.T.M. specifications, mixing and placing concrete, forms, and curing.

U. S. Gov., Federal Works Agency, Public Roads Administration. Specifications for Construction of Roads and Bridges in National Forests and National Parks, FP-41. Piling.

## 518.43 Parapets and Railings

*References.*—Sand, gravel, broken stone, *see* 512.1; cement, *see* 516.1; concrete and mortars, *see* 516.3;

steel reinforcement, *see* 605.25; cast iron pipe for railings, *see* 607.13; other iron and steel pipe, *see* 607.2, 607.3, 607.4; masonry bridges, *see* 518.41; wooden railing lumber, *see* 402.2.

### 518.44 Bridge Slabs and Girders

*References.*—Sand, gravel, broken stone, *see* 512.1; cement, *see* 516.1; concrete and mortars, *see* 516.3; steel reinforcement, *see* 605.25; masonry bridges, *see* 518.41.

### 518.45 Concrete Floors for Bridges

*References.*—Sand, gravel, broken stone, slag, *see* 512; cement, concrete, *see* 516.1, 516.3; steel reinforcement, *see* 605.25; brick, *see* 534.11; paving surfaces, *see* 518.3.

### 518.46 Bridge Arches

American Assn. of State Highway Officials. Standard Specifications for Highway Bridges, 1941. Includes specifications for sectional plate pipe and arches—requirements for materials (conforms to A.A.S.H.O. Specification M-36); description, forming, and punching of plates; field erection (pipe structures, arches); strutting; arch substructures and headwalls; workmanship; method of measurement; and basis of payment.

*References.*—Sand, gravel, broken stone, slag, *see* 512; cement and concrete, *see* 516.1, 516.3; steel reinforcement, *see* 605.25; other masonry arches, *see* 518.84; rubble and ashlar masonry, *see* 518.81, 518.82.

## 518.5 BUILDING CONSTRUCTION AND MATERIAL

*References.*—Steel buildings and metal parts of buildings, *see* 605.22.

### 518.50 General Items

American Institute of Architects, Document 172; 1942. For filing information on building materials, appliances, and equipment. To simplify the filing problem of architects, engineers, landscape architects, contractors, and others desirous of selecting and filing for convenient reference not only the catalogs and other descriptive literature distributed by manufacturers and producers of building materials, appliances, and equipment, but other informative material referring to building and construction and related activities. Classifications and file numbers are arranged under 41 major divisions. Provides a filing system with the necessary flexibility and comprehensive alphabetical index.

American Institute of Architects, Document 239. Cubic Contents of Buildings—A Standard Method of Calculation and Form of Statement. Gives definition of "standard cubic contents," interpretation, supplementary information, explanation, and examples.

American Municipal Assn. and Building Officials' Conference of America, Inc., sponsors. American Standards Assn., A55.1; 1944. Administrative Requirements for Building Codes. Covers title and scope, organization, powers and duties of building official, application for permit, permits, fees, inspection, certificate of occupancy, posting floor loads, board of appeal, appeals, decisions of the board of appeal, violations, invalidity, enforcement jurisdiction, and appendices covering permit fees and enforcement.

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering. Specifications for Buildings for Railroad Purposes. Gives list of unit weights of materials of construction.

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering. Specifications for Buildings for Railway Purposes, 1939. Incorporates the American Railway Engineering Assn. Construction Contract Form. Gives general conditions; requirements for excavation, filling and back-filling, sewers and drainage, concrete, brickwork, stone masonry and cut stone work, clay hollow tile, architectural terra cotta, concrete architectural stone, concrete roofing tile, clay roofing tile, slate roofing, built-up roofing, sheet metal work, structural steel and iron, ornamental and miscellaneous metal work, carpentry and millwork, lathing and plastering, marble and tile work, painting and glazing, hardware, plumbing, heating, oil burning equipment, electric light wiring, brick pavements and floors, concrete pavements and foundations, creosoted wood block pavements, wood block floors, sheet asphalt pavements, asphalt mastic floors, asphalt block pavements and floors, macadam pavements, asphalt macadam pavements, sprinkler system, elevators, chimneys, and screens.
