## 712.2 STORAGE BATTERIES

American Institute of Electrical Engineers, 36; 1928. American Standards Assn., C40-1928. Storage Batteries. Gives construction, definitions of parts, of capacity, voltage, charging, discharging, efficiency, and rating.

American Institute of Electrical Engineers. Recommended Practice for Electrical Installations on Shipboard, 45; 1940. Addenda, 1942. Emergency Modification and Supplement, 1943. Storage Batteries. Covers installation and location, capacity, voltage, charging equipment, cable sizes, etc.

Assn. of American Railroads, Mechanical Div., Electrical Section. Manual of Standard and Recommended Practice, 1940. Storage Batteries. Guarantee and adjustment arrangement for storage batteries for use in railway passenger cars. To make available to the railway companies, in a uniform manner, such data as may be required concerning the guaranteed life, adjustments and replacements, operating characteristics, ampere-hour capacity of various makes, types and sizes of battery offered for this class of service.

Assn. of American Railroads, Operations and Maintenance Dept., Engineering Div., Signal Section. Manual of Recommended Practice Specification 49-39; 1939. Nickel, Iron, Alkaline Storage Battery. Standard capacities, containers, elements, weights, electrolyte, charging rate, and methods of test.

Assn. of American Railroads, Operations and Maintenance Dept., Engineering Div., Signal Section. Manual of Recommended Practice Specification 53-39; 1939. Lead Acid Stationary Storage Battery. Glass jar battery with plates of composite structure supporting active material in the form of pure lead. Detailed requirements for signal service, capacities, jar sizes, etc.

Assn. of American Railroads, Operations and Maintenance Dept., Engineering Div., Signal Section. Manual of Recommended Practice Specification 58-39; 1939. Lead Acid Stationary Storage Battery. Glass jar battery with plates of pure lead, in combination with plates of alloy supporting active material in paste form. For signal service both new installations and renewals, sizes, charging tests, etc.

Assn. of American Railroads, Operations and Maintenance Dept., Engineering Div., Signal Section. Manual of Recommended Practice Specification 158-39; 1939. Lead Acid Stationary Storage Battery. Pasted plate lead type battery in sealed-in glass jar for railway signal service. Five sizes of capacity and glass jar, composition of elements and separators, sealing compound, tests, etc.

Assn. of American Railroads, Operations and Maintenance Dept., Engineering Div., Signal Section. Manual of Recommended Practice, 1941. Storage Batteries. For stationary, semi-portable and portable batteries, specific gravity corrections for temperature, charging methods, installation, operation, and repairs.

Assn. of American Railroads, Telegraph and Telephone Section, 2-K-4; 1924. Addenda, 1931. Specification for the Installation and Maintenance of Stationary Lead Type Storage Batteries. Includes open and sealed glass jar batteries, construction of plates, chemical action, installation, charging, discharge, and maintenance.

National Board of Fire Underwriters. American Standards Assn., C1-1940. National Electrical Code, 1940. Requirements for unsealed jars and sealed rubber and glass jars, insulation, racks, trays, and battery rooms for lead-acid and alkali-type.

Society of Automotive Engineers. 1944 Handbook, Section 2—Units, Parts and Fittings. S.A.E. Standard Storage Batteries. Revised, 1938. For all types of batteries now in general use in motorboats, motor vehicles, tractors, and automotive industrial applications for 6 and 12 volt electrical requirements. Multiple units of these types may readily be used for higher voltage requirements. Maximum dimensions are indicated in the specifications but, where space limitations are a factor, batteries of slightly reduced dimensions are usually available from the battery manufacturers. The specifications include the 5 second voltage test, thus providing a measure of cranking speed to that of current capacity to meet torque requirements, completing the standard specification for measuring cranking ability. The standard also provides a short time method for measuring

the ability of a battery to maintain its ratings in service. The specifications are supplemented by notes on the test apparatus and procedure that are considered suitable and adquate for use where average laboratory facilities are available for conducting performance tests. Supplementary notes also describe two alternate types of equipment for conducting life tests, materials required, and general directions for assembling the life test equipment.

U. S. Gov., Army-Navy Aeronautical Specification AN-B-13; 1943. Batteries; 12-Volt, 17-Ampere-Hour Shielded Storage.

U. S. Gov., Army-Navy Aeronautical Specification AN-B-14; 1943. Batteries; 24-Volt, 11-Ampere-Hour Shielded Storage.

U. S. Gov., Army-Navy Aeronautical Specification AN-W-B-141-1; 1943. Batteries; Storage, Shielded, General Specification.

U. S. Gov., Army-Navy Aeronautical Specification AN-W-B-146-1; 1943. Battery; Storage, Shielded, 12-Volt, 34- Ampere Hour.

U. S. Gov., Army-Navy Aeronautical Specification AN-W-B-149-1; 1943. Battery; Storage, Shielded, 24-Volt, 17-Ampere Hour.

U. S. Gov., Army-Navy Aeronautical Specification AN-W-B-152-2; 1943. Batteries; 24-Volt, 34-Ampere Hour Shielded Storage.

U. S. Gov., Dept. of Commerce, National Bureau of Standards, H31; 1940. American Standards Assn., C2.1-1941. Safety Rules for the Installation and Maintenance of Electrical Supply Stations. Comprising part 1—for equipment of indoor and outdoor supply stations, provided it is in separate rooms or enclosures, under control of properly qualified persons and accessible only to such persons. Also apply to similar equipment if installed in factories, mercantile establishments, vehicles or elsewhere. Exceptions—if voltage does not exceed 150 volts to ground, and if voltage is not more than 50 volts between conductors and power utilized does not exceed 3,200 volts; and the grounding rules of the fifth edition, National Electrical Safety Code. For Storage batteries (sec. 13), requirements on isolation, ventilation, insulation, rack and tray, floors, wiring, guarding live parts and illumination in rooms enclosing batteries of nonseal type.

U. S. Gov., Federal Specification W-B-131b; 1939. Batteries, Storage; Ignition, Lighting, and Starting. Covers lead-acid type for use on passenger automobiles, motor trucks, motor coaches, and motorcycles. Gives requirements for types, capacities, sizes, ratings, location of battery parts, conditions for shipment, filled and charged, charged and dry, uncharged, connecting straps, intercell connectors, separators, polarity of terminals, tapered terminal posts, plates, post seals, devices, and electrolyte; methods of sampling and test; requirements for packaging, packing, and marking for shipment.

U. S. Gov., Navy Dept. Specification 17B4g; 1940. Batteries; Storage, Portable.

U. S. Gov., Navy Dept. Specification 17B9d; 1944. Batteries; Storage, Lead-Acid, Radio "B."

U. S. Gov., Navy Dept. Specification 17C12b; 1943. Compound; Battery-Sealing.

U. S. Gov., Navy Dept. Specification 18T18h; 1944. Testing Outfits; Storage Battery.

U. S. Gov., Treasury Dept., Procurement Div., 588a; 1944. Batteries; Storage, Lead-Acid (for general Service Including Motive Power, Excluding Sli). Covers storage batteries for general use in stationary service, for general use in portable service, for motive power, and for engine starting of a special nature. Gives requirements for discharge characteristics, plates, elements, separators, retainers, electrolyte, jars, cell covers, sealing compounds, polarity marking, connectors, trays, assembly, sizes, charge condition for shipment initial performance, instructions, accessories, and warranty; methods of sampling, inspection, and tests; and packaging, packing and marking.

U. S. Gov., U. S. Army, Army Air Forces. Specification 70-22-C; 1938. Battery; Storage, Aircraft, Lead-Acid Type, General Specification.

U. S. Gov., U. S. Army, Army Air Forces. Specification 70-28A; 1933. Battery; Aircraft Storage, Type C-2.

U. S. Gov., U. S. Army, Army Air Forces. Specification 70-29A; 1933. Battery; Aircraft Storage, Type D-2.

U. S. Gov., U. S. Army, Army Air Forces. Specification 70-30A; 1933. Battery; Aircraft Storage, Type E-1.

U. S. Gov., U. S. Army, Army Air Forces. Specification 70-31A; 1933. Battery; Aircraft Storage, Type B-1.

U. S. Gov., U. S. Army, Army Air Forces. Specification 70-34; 1935. Battery; Storage, Integrally Shielded, Lead-Acid Type, General Specification.

U. S. Gov., U. S. Army, Army Air Forces. Specification 70-40A; 1942. Battery; Aircraft Storage, Integrally Shielded, Type D-8A.

U. S. Gov., U. S. Army, Army Air Forces. Specification 70-41; 1940. Battery; Aircraft Storage, Type F-1, 24-Volt.

U. S. Gov., U. S. Army, Signal Corps. Specification 70-4C; 1924. Battery; Storage, Telephone.

U. S. Gov., U. S. Army, Signal Corps. Specification 70-20E; 1943. Battery BB-29; Storage, 4-Volt, 80-Ampere Hour.

U. S. Gov., U. S. Army, Signal Corps. Specification 70-28C; 1931. Battery; Storage, Telephone Central Office, Sealed-Top Type.

U. S. Gov., U. S. Army, Signal Corps. Specification 70-33; 1942. Battery; Type BB-46, 75-Ampere Hour Storage, 12-Volt.

U. S. Gov., U. S. Army, Signal Corps. Specification 70-37; 1935. Battery; Type BB-50, Storage, 12-Volt, 55-Ampere Hour.

U. S. Gov., U. S. Army, Signal Corps. Specification 708-20; 1932. Battery; Type BB-45, Portable Lead Storage.

*References.*--Installation and maintenance, *see* 712.0; battery boxes, *see* 712.3; battery terminals and lugs, *see* 712.9; sulphuric acid, *see* 821.7; caustic soda, *see* 834.8.

## 712.3 BATTERY CASES

Assn. of American Railroads, Operations and Maintenance Dept., Engineering Div., Signal Section. Manual of Recommended Practice. Specification 113-39; 1939. Battery Jar. Detail requirements for a primary battery jar, caustic soda, heating, and chilling tests, and standard packing.

U. S. Gov., Navy Dept. Specification 17J3d; 1935. Jars, Storage-Battery, Rubber (Hard); Parts, Storage-Battery, Rubber (Hard and Soft) (Except Separators); (Submarine Use).

U. S. Gov., U. S. Army, Medical Department. Specification 10-2208B; 1942. Battery Box.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-199B; 1927. Box; Type BC-128, for Radio Batteries.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-587; 1931. Case; Type CS-39, Pressed Metal, Battery Carrying.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-658A; 1943. Box BX-4.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-900A; 1940. Box; Type BX-124, Radio Battery.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-923; 1937. Box; Type BX-13, Auxiliary Battery.

*References.*— Wood containers for cells, glass jars, battery trays and covers, *see* 712.2; methods of testing rubber goods, *see* 200.

## 712.4 BATTERY ELECTROLYTE

Assn. of American Railroads, Operations and Maintenance Dept., Engineering Div., Signal Section. Manual of Recommended Practice, 1938. Specification for Electrolyte. For use in lead acid type storage battery, recommends the use of Federal Specification O-A-111 for Acid: Sulphuric, (for) Storage Batteries.

*References.*—Sulphuric acid, sal ammoniac, *see* 821.7, 831.4; caustic soda, copper sulphate, *see* 834.8, 839.33.

## 712.5 BATTERY ANODES AND CATHODES

## 712.9 MISCELLANEOUS BATTERY ACCESSORIES

Radio Manufacturers Assn. Battery Sockets, M4-071 to M4-073; 1941. Diagrammatic drawings showing standard arrangements of sockets for—radio A battery, radio A and B battery, radio B and C battery, and combination radio B and C battery.

U. S. Gov., Navy Dept. Specification 17S6b, 1942. Separators, Sheathings, and Baffledisks; Rubber (Hard), for Lead-Acid Storage Batteries.

U. S. Gov., Treasury Dept., Procurement Div., 347A; 1942. Chargers; Battery, Electronic, Tube Type. Covers two types—(I) suitable for charging automotive batteries, and (II) suitable for charging telephone batteries. Gives requirements for workmanship, case, control, fuse, ammeters, transformers, reactance, electronic tubes or bulbs, cord with plug, instructions, and details for each type; methods of sampling, inspection, and tests; and packing and marking.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-3087; 1944. Battery Adapter FT-501.

# 713. TRANSFORMERS, ELECTRIC CONVERTERS, AND CONDENSERS

## 713.1 ELECTRIC CONDENSERS, STATIC

American Institute of Electrical Engineers, sponsor, No. 18; 1934. American Standards Assn., C55-1934. Standards for Capacitors. Applies to capacitors for; (a) Power applications—power factor correction, high frequency induction furnaces, and capacitor motors; (b) resonant shunts and filters; (c) blocking capacitors; and (d) power oscillator circuits.

American Standards Assn., C 16.6-1943. Fixed Paper-Dielectric Capacitors (Home Receiver Replacement Type) (American War Standard). Covers the basic requirements applicable to fixed paper-dielectric capacitors suitable for use as replacement parts in home radio receivers. Gives material, workmanship, detail requirements, standard capacitances, working voltages, and part numbers.

American Standards Assn., C 16.7-1943. Dry Electrolytic Capacitors (Home Receiver Replacement Type) (American War Standard). Covers the basic requirements applicable to dry electrolytic capacitors suitable for use as replacement parts in home radio receivers. Gives material, workmanship, design, detail requirements, standard capacitance, working voltages, and part numbers.

American Standards Assn., C 16.8-1943. Simplified List of Home Radio Replacement Parts (Paper and Electrolytic Capacitors, Volume Controls, Power and Audio Transformers and Reactors) (American War Standard). This standard covers only the electrical values of the listed parts and deems these values adequate for maintaining in operation the great majority of home radio receivers. Covers fixed paper-dielectric capacitors, dry electrolytic capacitors, volume controls, and transformers and chokes.

American Standards Assn., C 75.3-1942. Fixed Mica-Dielectric Capacitors (American War Standard). Covers physical dimensions, capacitance values, color coding, characteristics, and test procedures and requirements for a range of fixed mica-dielectric capacitors from the smallest sizes used in receivers to the large units for high-power transmitters. Gives applicable specifications and drawings, types, grades, classes, material and workmanship, general and detail requirements, methods of inspection and tests, packaging, packing, marking, requirements applicable to individual government departments, notes, and drawings giving details.

American Standards Assn., C 75.12-1944. Fixed Ceramic-Dielectric Capacitors (Temperature Compensating Types) (American War Standard). For the purpose of facilitating production of fixed ceramic-dielectric capacitors for use as temperature-compensating devices. Covers applicable specifications and drawings, classification, material and workmanship, general requirements, detail requirements; methods of sampling, inspection, and test; packaging, packing, and marking for shipment; requirements applicable to individual government departments; and notes and drawings.

American Standards Assn., C 75.16; 1944. Fixed Paper-Dielectric Capacitors (Hermetically Sealed in Metallic Cases) (American War Standard). Gives applicable specifications and drawings, classification material and workmanship, general requirements, detail requirements, methods of sampling, inspection, tests, packaging, packing, marking for shipment, requirements applicable to individual government departments, notes, and drawings.

Assn. of American Railroads, Operations and Maintenance Dept., Engineering Div., Signal Section. Manual of Recommended Practice. Specification 160-39; 1939. Capacitor for Power Factor Correction. For railway signal power distribution circuits, for various voltage ratings, design, leads and terminals, dielectric requirements, and tested in accordance with A.I.E.E. standards.

National Board of Fire Underwriters. American Standards Assn., C1-1940. National Electrical Code, 1940. Capacitors (Static Condensers). Requirements for installation, inclosure, and grounding.

National Electrical Manufacturers Assn., Edison Electric Institute, and Radio Mfgrs. Assn. (published jointly). Limiting Value of Capacitors When Used As Radio Filters on Portable Appliances, N.E.M.A. 105. Gives a general discussion of the various problems connected with the use of small capacitors on appliances for suppressing radio frequency voltages which may be generated by a make and break contact involved in the operation of the device. Also discusses recommendations and exceptions.

Radio Manufacturers Assn. Capacitors, M4-571 to M4-574, M4-591 to M4-598, and M4-711 to M4-726; 1938. Includes wet electrolytic, dry electrolytic, and fixed capacitors; general structural characteristics, dimensional requirements, and standard mounting hardware; also for fixed capacitors; numerical marking and color coding, voltage rating and testing, insulation resistance and standard performance tests.

U. S. Gov., Army Air Forces. Specification 32412-B; 1945. Capacitors; Fixed (Paper or Mica Dielectric).

U. S. Gov., Joint Army-Navy Specification JAN-C-5; 1944. Capacitors; Mica-Dielectric, Fixed.

U. S. Gov., Joint Army-Navy Specification JAN-C-20; 1944. Capacitors; Ceramic-Dielectric, Fixed (Temperature-Compensating).

U. S. Gov., Joint Army-Navy Specification JAN-C-62; 1944. Capacitors; Dry-Electrolytic, Polarized.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-261; 1924. Condenser; Types CA-102 and CA-103, Telephone.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-350B; 1938. Capacitor; Telephone, Types CA-59 and CA-60.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-516E; 1941. Capacitor; Fixed, Paper or Mica Dielectric.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-692A; 1941. Capacitor Unit BE-59.

*References.*—Definitions, symbols, rating basis, standard voltages and frequencies, methods of test, safety code, *see* 710.

## 713.2 SYNCHRONOUS CONDENSERS AND CONVERTERS

American Institute of Electrical Engineers, sponsor, No. 11; 1937. American Standards Assn., C35-1936. Tentative Standards for Railway Cars and Other Rotating Electrical Machinery in Rail Cars and Locomotives. Definitions, classification, rating, and methods of test for rotating electrical machinery forming a part of the power equipment of electrically propelled railway cars and locomotives. Machines are classified as railway motors, auxiliary motors, generators, auxiliary generators and dynamotors, motors, and phase convertors.

American Standards Assn., C 39.4-1943. Dimensions for External Radio-Frequency Thermocouple Converters (120 Milliamperes to 10 Amperes, Inclusive) (American War Standard). For the purpose of facilitating the production of external radio-frequency thermocouple converters and the equipment in which they are used. Gives drawing showing details.

Electrical Standards Committee of American Standards Assn., sponsor. American Standards Assn., C50-1943. Rotating Electrical Machinery. Covers definitions, direct-current rotating machines, synchronous generators, synchronous motors, synchronous machines in general, synchronous convertors, induction motors and induction machines in general, direct-current and alternating-current fractional horsepower motors, and appendices.

National Electrical Manufacturers Assn. Motor and Generator Standards, 41-64; 1941. Frequency Converters and Motors above 60 Cycles for Industrial Purposes. For frequencies up to 180 cycles, converter rating, performance standards, temperature rise, and voltage regulation.

U. S. Gov., Army-Navy Aeronautical Specification, AN-I-10; 1944. Inverters; 400 Cycle and 800 Cycle.

U. S. Gov., U. S. Army, Army Air Forces. Specification 94-32281; 1940. Inverter; Type B-8 (24 Volts).

U. S. Gov., U. S. Army, Signal Corps. Specification 71-1106; 1942. Inverter Unit PE-89-( ), 27.5-Volt d.c. to 115-Volt and 400-Cycle a.c.; and Inverter Unit PE-109-( ), 13.5-Volt, d.c. to 115-Volt and 400-Cycle a.c.

*References.*—Definitions, symbols, rating standards, voltage and frequency standards, methods of test, protection, safety codes, *see* 710, 711.20; brushes, *see* 711.42; alternating-current motors, *see* 711.21; cast iron, forged steel, shafts, *see* 611.11, 611.51, 611.52; plain bearings, ball and roller bearings, *see* 692.3, 766.2; copper wire, *see* 715.44.

## 713.3 DYNAMOTORS

American Standards Assn., C 75.13-1944. Dynamotors, (American War Standard). Covers applicable specifications and drawings, classification, material and workmanship, general requirements, detail requirements, methods of sampling, inspection, tests, packaging, packing, marking for shipment, requirements applicable to individual government departments, notes, and drawings.

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-250; 1943. Dynamotor; Aircraft Camera Dual Conversion, 250 Watts.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-52-D; 1928. Dynamotor; Types DM-13-B and DM-13-C, Components of Radio Sets.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-56E; 1929. Dynamotor Unit; Type BD-41, Component of Radio Set.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-1658-A; 1943. Test Set I-199 (Dynamotor).

U. S. Gov., U. S. Army, Signal Corps. Specification 71-205C; 1934. Dynamotor Unit; Type BD-46, Component of Radio Set.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-565; 1932. Dynamotor; Type DM-( )-15.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-581A; 1933. Dynamotor Unit and Battery Box, Type PE-45; and Box, Type BX-3, Radio.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-824; 1941. Dynamotor Unit; Types BD-( )-69 and BD-( )-81.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-851B; 1940. Dynamotor Unit; Type BD-87-( ).

U. S. Gov., U. S. Army, Signal Corps. Specification 71-956A; 1939. Dynamotor Unit; Type PE-55.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-957; 1937. Dynamotor Unit; Type DM-19-( ).

U. S. Gov., U. S. Army, Signal Corps. Specification 71-1118; 1941. Dynamotor; Type LM-18-( ).

U. S. Gov., U. S. Army, Signal Corps. Specification 71-1369; 1942. Dynamotor Unit PE-135-( ).

## 713.4 MOTOR GENERATORS

American Institute of Electrical Engineers, A.I.E.E. 11; 1943. American Standards Assn., C35.1-1943. Rotating Electrical Machinery on Railway Locomotives and Rail Cars and Trolley, Gasoline Electric and Oil Electric Coaches. Includes all rotating electrical machinery forming a part of the power equipment of electrically propelled railway cars and locomotives (including trolley, gasoline electric, and oil electric coaches). Covers definitions, rating, insulation, dielectric tests, insulation resistance, commutation, overspeed tests, efficiency, and characteristic curves.

Industrial Truck Statistical Assn. Automatic Battery Charging Motor Generators, Rectifiers and Panels for Industrial Truck Motive Power Service, 1943. Gives requirements for sources of power, systems of battery charging, automatic features, automatic cut-off equipment, other automatic controls, time for recharging, constant current rates, modified constant voltage rates, two-rate charging, constant voltage motor generator design, constant current motor generator design, additional points of motor generator design—both types, motor generator switchboard design—modified constant voltage system, motor generator switchboard design—constant current system, motor generator switchboard design-two-rate systems, additional specifications—all types, rectifiers, table for modified constant voltage charging-design constants, table for modified constant potential charging nickel alkaline batteries, and table for lead-acid type batteries—two-rate charging constants for equipment design.

National Electrical Manufacturers Assn. Motor and Generator Standards 41-64; 1941. Motor-Generator Standards. Includes induction or synchronous direct current general purpose generators, 150 kw or smaller, motion picture motor generators, and synchronous motor generators 200 to 4,000 kw; basis of rating, performance standards, overload, dielectric test, efficiency as determined by American Standards A.S.A. C50, and allowable variations.

U. S. Gov., Army Air Forces. Specification 32327-A; 1942. Motor Generator (3 K.W., 15 Volt, Direct Current).

U. S. Gov., Army Air Forces. Specification 32329-A; 1942. Motor Generator (10 K.W., 30 Volt, Direct Current).

U. S. Gov., Army Air Forces. Specification 32345; 1941. Motor Generator (1,000 Watts, 30 Volts, Direct Current).

U. S. Gov., Army Air Forces. Specification 32448; 1943. Plant; Electric Power, Type B-8 (Gasoline Engine Driven—Stationary).

U. S. Gov., Army Air Forces. Specification 32457; 1944. Drive; Portable Motor Generator.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specifications CAA-246. Reconditioning of Electric Motor Generator.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specifications CAA-364. Motor Generators, Reconditioning (General Electric Co.).

U. S. Gov., U. S. Army, Ordnance Department. Specification 89-3030; 1933. Motor Generator; a.c.-d.c. Casemate.

U. S. Gov., U. S. Army, Ordnance Department. Specification 89-3075; 1941. Motor Generator Sets; a.c.-d.c. Submarine Mine.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-154C; 1927. Motor Generator; Type GN-32, Panel, Type BD-44; and Case, Type CS-24.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-216B; 1930. Motor Generator; Type MG-( )-4 and Panel, Type BD-( )-48 Radio.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-520; 1929. Motor Generator; Type MG-( )-8 and Panel, Type BD-( )-44.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-584B; 1937. Motor Generator; Type MG-( )-10, 10-15 Volts to 450 Volts.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-702B; 1937. Motor Generator and Battery Unit; Type PE-48, 10-15 Volts to 450 Volts.

*References.*— Motors, alternating-current, *see* 711.21; generators, direct-current, *see* 711.12; synchronous converters, *see* 713.2; electric welding machines, *see* 767; *see* also references under 711.21 and 711.12.

## 713.5 TRANSFORMERS

American Institute of Electrical Engineers. Recommended Practice for Electrical Installations on Shipboard, 45; 1940. Addenda, 1942. Emergency Modification and Supplement, 1943. Transformers. Recommends use of dry type, air cooled, unless capacity, space or other restrictions warrant use of immersed (noninflammable liquid) self cooled or other suitable type. Specifies limits of temperature rise and temperature measurement.

American Standards Assn., C16.8-1943. Simplified List Of Home Radio Replacement Parts (Paper and Electrolytic Capacitors, Volume Controls, Power and Audio Transformers and Reactors) (American War Standard). This standard covers only the electrical values of the listed parts and deems these values adequate for maintaining in operation the great majority of home radio receivers. Covers fixed paper dielectric capacitors, dry electrolytic capacitors, volume controls, and transformers and chokes.

American Standards Assn., C 16.9-1943. Power and Audio Transformers and Reactors (Home Receiver Replacement Type) (American War Standard). Covers the basic requirements applicable to power and audio transformers and reactors suitable as replacement parts in home radio receivers. Gives material and workmanship, detail requirements—construction, detail requirements—electrical, detail requirements—humidity resistance, standard units, ratings, and part numbers.

American Standards Assn. Sponsored by Electrical Standards Committee. American Standards Assn., C57.1-1942; C57.2-1942; and C57.3-1942. Transformers,

Regulators and Reactors. These standards apply to the following: (1) Distribution, power, and regulating transformers, and reactors other than current limiting reactors; (2) instrument transformers; (3) constant current transformers of the moving coil type; (4) step voltage and induction voltage regulators; (5) current limiting reactors; (6) general purpose specialty transformers. Covers definitions, standards common to transformers, regulators and reactors, standards for the six types named above, test code for transformers, and guides for operation of transformers and regulators.

Assn. of American Railroads, Operations and Maintenance Dept., Engineering Div., Signal Section. Manual of Recommended Practice. Specification 83-39; 1939. Air-Cooled Transformer. For railway signal service, wound in steps from 57.5 to 575 volts, terminal boards and size of leads, polarity of windings, performance tests, and loss limits. For indoor and outdoor use, cross-arm, wall, or shelf mounting.

Assn. of American Railroads, Operations and Maintenance Dept., Engineering Div., Signal Section. Manual of Recommended Practice. Specification 84-39; 1939. Transformer; Oil-Immersed, Self-Cooled. For railway signal service, outdoor or manhole type, pole or platform mounting. Windings, case, core, insulation, leads, etc. Detailed description of test.

Edison Electric Institute, 1-9, and National Electrical Manufacturers Assn., 110. Joint Committee on Standards for Distribution Transformers, 1942. Establishes design standards for certain mechanical and electrical features of single phase, pole type distribution transformers rated 100 kva and below, 15,000 volts and below. Gives scope voltage ratings, kva ratings, polarity, list of standard transformers and taps, other listed transformers and taps, ratio adjusters, tolerances, interchangeable mounting, bushings, high voltage bushing arrangement, low voltage bushing arrangement, internal connections (low voltage), external grounding provisions, internal grounding provisions, name plate, drain plugs, lifting lugs, oil level marking, protective devices, and list of appended drawings.

Edison Electric Institute. Suggestions for Specifications for Coordinated and Standardized Low Voltage Metering Current Transformers, No. MS-2; 1940. The increased use of low voltage networks and increasing capacities of all low voltage metering makes the development of a new coordinated and standardized line of current transformers desirable. Gives voltage rating, current rating, overload rating, temperature rise, burden, accuracy, polarity, terminals and dimensions, and diagrams with notes.

Edison Electric Institute. Specifications for Standard Current Transformers for Primary Circuits, No. MS-3; 1942. Gives impulse levels, recommended ratings for billing metering, dimensions, and diagram showing indoor type current transformer with table of dimensions.

Electrical Standards Committee of American Standards Assn., sponsor. American Standards Assn., C57.1, C57.2, C57.3. Proposed American Recommended Practices. Test Code for Transformers, Regulators, and Reactors. Guides for Operation of Transformers. Information relating to the terms and conditions upon which the rating and behavior of transformers and other induction apparatus are based, with special reference to the conditions upon which acceptance tests are made, and guides for testing such apparatus and for its operation in service. Definitions covering the various types of apparatus coming within the scope of the work are also included.

National Board of Fire Underwriters. American Standards Assn., C1-1940. National Electrical Code, 1940. Air-Blast, oil-immersed, and air-cooled transformers and auto transformers. Requirements for installation in generating stations, sub-stations, and other buildings; out-door installations; protection of live parts; internal clearances in case; operation; and grounding.

National Electrical Manufacturers Assn. Indicating Electrical Measuring Instruments—Instrument Transformers, Standard 37-42; 1937. Includes transformers suitable for use with measuring instruments, meters, relays, or tripping mechanisms; general requirements, rating, performance, manufacture, and definitions.

National Electrical Manufacturers Assn. Instructions for Care and Operation of Transformers, 37-46; 1937. For large transformers, and for distribution transformers (100 kva and smaller, under 15,000 volts), location, storage, handling, inspection, drying, sampling and testing of oil, operation, and temperature.

National Electrical Manufacturers Assn. Specialty Transformer Standards, 38-52; 1938. Covers manufacture, test, and performance of general purpose, luminous tube, signalling, doorbell, and high reactance control transformers.

National Electrical Manufacturers Assn. Transformer Standards 42-73; 1942. For power and distribution transformers, not including transformers for service such as synchronous converters, electric furnaces, instruments, etc. Gives general standards, lead markings and connections, manufacturings, performance and rating standards, definitions, and symbols.

National Electrical Manufacturers Assn. Transformers, Recommendations for the Conservation of Critical Materials, 42-84; 1943. In the interest of conservation of critical materials to help the war effort, these suggestions are offered with the understanding that they are of an emergency nature for the duration of the war. Covers transformers now in service, new transformers, and determination of KVA rating.

Radio Manufacturers Assn. Radio Transformers, M2-113; 1930; and M4-505, M4-506, and M4-507; 1939. Includes audio transformers, insulation and electrolysis test, and color coding of leads; also for radio power and I.F. transformers, color coding requirements.

Radio Manufacturers Assn., Radio Power Transformers, M4-531, M4-536 to M4-538, M4-541, M4-542, M4-546 to M4-549; 1938. Enclosed dry type having one primary and suitable secondary windings; characteristics, permissible temperature rise, secondary voltages, load test apparatus and methods, dielectric, secondary, and induced voltage tests.

Underwriters' Laboratories, Inc. Standard for Specialty Transformers, 1940. Covers air-cooled

transformers and reactors for general use and for use with mercury-vapor lamps, sun lamps, etc.; bell ringing transformers; oil-burner ignition transformers; gas-tube sign transformers for use with inert gas tubes; and toy transformers; to be employed in accordance with the National Electrical Code. Does not cover oil-filled transformers, special types of transformers covered in requirements for other electrical devices or appliances, auto-transformers forming parts of industrial control equipment, nor transformers having a primary rating of more than 600 volts. Mechanical assembly, cords, bushings, insulating material, coils, wiring devices, performance, enclosure, connections, spacings, rating, marking, and inspection of listed product.

U. S. Gov., Army Air Forces. Specification 32386; 1942. Booster, Voltage; Type A-1 (12 to 24 Volt D.C., Aircraft).

U. S. Gov., Army Air Forces. Specification 32430A; 1945. Transformer; Series (Subway with Detachable Couplings).

U. S. Gov., Army Air Forces. Specification 32470A; 1944. Regulator; Runway Control, Type B-1.

U. S. Gov., Army Air Forces. Specification 32481; 1944. Transformer; Runway Lamp Control, Type A-1.

U. S. Gov., Army Air Forces. Specification 32485-2; 1945. Transformer; Regulator Stabilizing, Type B-1.

U. S. Gov., Army Air Forces. Specification 32498; 1944. Transformer; Instrument Current, Type D-1, 400 Cycle, Aircraft.

U. S. Gov., Army-Navy Aeronautical Specification AN-T-7a; 1942. Transformers; Series multiple (Subway With Detachable Couplings).

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specifications CAA-39. Transformer; Oil, CSP, Power, Distribution 1 1/2-KVA.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specifications CAA-90. Transformer; 5-KVA, Oil-Immersed, for Service Distribution.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specifications CAA-175. Transformer Capacitor Unit, for Neon Approach Lights.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specifications CAA-383. Air Filter for Dust Removal (1,000 CFM Dry Type).

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specifications CAA-486. Air Filter and Drier for Transformer Breather Pipes.

U. S. Gov., Dept. of Commerce, National Bureau of Standards H31; 1940. American Standards Assn., C2.1-1941. Safety Rules for the Installation and Maintenance of Electrical Supply Stations. Comprising part 1 of the National Electrical Safety Code—for equipment of indoor and outdoor supply stations, provided it is in separate rooms or enclosures, under control of properly qualified persons, an accessible only to such persons. They also apply to similar equipment if installed in factories, mercantile establishments, vehicles or elsewhere. Exceptions—if voltage does not exceed 150 volts to ground, and if voltage is not more than 550 volts between conductors and power utilized does not exceed 3,200 volts; and the grounding rules of the fifth edition, National Electrical Safety Code. For transformers (sec. 14), requirements on current-transformer secondary circuits, grounding secondary circuits of instrument transformers, grounding transformer cases, location and arrangement of power transformers, resistance devices, and ground detectors.

U. S. Gov., Dept. of Commerce, National Bureau of Standards Research Paper RP580; 1933. Equipment for Testing Current Transformers. Describes the equipment and test procedure developed at the National Bureau of Standards for measuring the ratio and phase angle of current transformers up to currents of 12,000 amperes at power frequencies. Data are given to show the accuracy of the standard current transformer used in the higher ranges, and the effectiveness of the shaping of the heavy-current circuit so as to minimize errors from stray magnetic fields.

U. S. Gov., Federal Specification W-T-631; 1942. Transformers; Distribution, Single-Phase, 60 Cycles (100 KV.-A. and Below: 15,000 Volts and Below). Covers three types and two classes. Gives requirements for materials, workmanship, classification of insulating materials, continuous rating, transformer performance, tolerances, name-plate marking, windings, taps, radio adjusters and connections of windings, polarity, leads, tank, oil, nonburning liquid, and accessories; methods of inspection and tests; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., Navy Dept. Specification 17T19d; 1939. Transformers; Electric, Miscellaneous (Exclusive of Power or Distribution and Instrument Types).

U. S. Gov., Navy Dept. Specification 17T20d; 1945. Transformers; Electric, Dry, Single-Phase, 60-Cycles.

U. S. Gov., Panama Canal, Purchasing Dept. Specification for Transformers, 1943. Distribution Type, self-cooled, oil-filled, 2400/4160 volts primary, 120/240 volts 3-wire secondary.

U. S. Gov., Panama Canal, Purchasing Dept. Specification for Transformers, 1944. 150 KVA, single-phase, 25 cycles, 2400/4160Y volts primary with four 2 1/2 percent full capacity taps below 2,400 volts, 240/120 volts, 3-wire secondary.

U. S. Gov., Panama Canal, Purchasing Dept. Specification for Transformers, 1944. 150 KVA, 25 cycles, 2,400 volts primary with 4 full-capacity 2 1/2 per cent high-voltage taps below 2,400 volts, 120/240 volts 3-wire secondary.

U. S. Gov., U. S. Army, Army Air Forces. Specification 94-32082; 1941. Transformers; Aircraft, Power Supply.

U. S. Gov., U. S. Army, Medical Department. Specification 10-2777; 1939. Transformer; Cautery, Lamp-Socket Type, With Cord.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2801; 1939. Transformer; Cautery, Hospital Size.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-195B; 1929. Transformer; Type C-50-A, Radio.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-397H; 1941. Transformer; Types C-66-A, and C-107.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-398E; 1941. Transformer; Type C-65.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-399D; 1938. Transformer, Types C-62, C-124, and C-205, Audio Frequency.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-919A; 1938. Transformer; Type C-159.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-932B; 1941. Transformer; Type C-160.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-1004; 1941. Transformer, Types C-253, C-254, and C-255; and Coil, Type C-279.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-1011; 1943. Transformer C-223 and C-224.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-1137; 1942. Transformer C-289-( ); Impedance-Matching for Headset Circuits.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-1524; 1942. Transformer C-410.

*References.*—Transformers for electric arc and resistance welding apparatus, *see* 767; definitions, symbols, rating standards, voltage and frequency standards, methods of test, safety codes, *see* 710; transformer oil, *see* 504.8; auto transformer starters, *see* 714.11; cast iron, malleable cast iron, *see* 711.11, 711.21; sheet steel, *see* 604.2; copper wire, *see* 715.44.

## 713.6 CHOKE COILS, IGNITION COILS

Radio Manufacturers Assn. Iron Core Filter Inductors, M4-511 to M4-518; 1941. Recommended practice on rating filter inductor in henries at specified frequency, alternating voltage, and direct current, and on giving the direct current resistance. Also gives inductance, dielectric, and induced voltage test requirements, and resistance tolerances for various wire sizes.

U. S. Gov., Navy Dept. Specification 17C14b; 1944. Coils, Ignition, High-Tension (for Motorboat Engines).

U. S. Gov., U. S. Army, Signal Corps. Specification 71-670D; 1941. Coil, Types C-105 and C-278, Induction.

*References.*—Definitions, symbols, frequency standards, methods of test, safety codes, *see* 710; impedance track bonds and reactors, *see* 718.49; choke coils for lightning protection, *see* 715.50; reactors, *see* 713.5.

## 713.7 RECTIFIERS

Assn. of American Railroads, Operations and Maintenance Dept., Engineering Div., Signal Section. Manual of Recommended Practice, 1941 Rectifiers and Motor Generators. Instructions for maintenance, adjustment, and test.

Assn. of American Railroads, Operations and Maintenance Dept., Engineering Div., Signal Section. Manual of Recommended Practice. Specification 166-39; 1939. Copper-Oxide Rectifiers and Valves. For battery charging, direct operation of direct current appliances from alternating current source, or as a valve in suppressing arcs formed at contacts, in prolonging the release period of direct current electromagnetic apparatus, as a snubber, etc. Design, rating insulation, and leakage current tests.

Assn. of American Railroads, Operations and Maintenance Dept., Engineering Div., Signal Section. Manual of Recommended Practice. Specification 189-40; 1941. Tantalum Rectifiers and Valves. For Battery charging, direct operation of d.c. appliances from a.c. source, or as a valve for controlling flow of current in railway signaling circuits. Requirements for design, rating, dielectric test, efficiency, and inspection.

Assn. of American Railroads, Telegraph and Telephone Section, 2-G-72; 1935. Four Volt D.C. Power Supply Units. For operation of communication equipment at way stations, including three types for use with storage battery and rectifier, and three types consisting of rectifier and filter. Construction and wiring in accordance with the requirements of the National Electrical Code, with capacity to operate approximately six 100 ohm telegraph sounders, two telephone transmitters, and two selector bells, or a total of 450 milli-amperes current, discharge rate of battery, sealed-in glass design, metal case, finish, and tests.

Assn. of American Railroads, Telegraph and Telephone Section, 2-K-32; 1942. Installation, Maintenance and Operation of Mercury Vapor Rectifiers for Telegraph Service. Gives scope, drawings, general requirements, description, theory, installation, and maintenance.

Underwriters' Laboratories, Inc. Standard for Rectifiers, 1940. Covers portable and stationary rectifiers for battery charging, motion-picture arc supply, signaling, and similar purposes to be employed on lighting and power circuits in accordance with the National Electrical Code. Frame and enclosure, mechanical assembly, corrosion protection, supply connections, wiring, insulating material, transformers, switches, overcurrent protection, capacitors, spacings, grounding, power input, temperature, dielectric strength, marking, and inspection of listed product.

U. S. Gov., Army Air Forces. Specification 32455; 1944. Rectifier; Direct-Current Power Supply (100 Amperes, 28 Volts; 200 Amperes, 14 Volts).

U. S. Gov., Army Air Forces Specification 32464 (B); 1945. Rectifier; Turret Trainer Power Supply (130 Ampere, 28 Volts D.C.).

U. S. Gov., Army Air Forces. Specification 32479; 1944. Rectifier; Aircraft Power, Type A-1.

U. S. Gov., Army Air Forces. Specification 32517; 1945. Rectifier; Direct Current Power Supply, Type B-2 (200 Amperes, 28 Volts).

U. S. Gov., Army Air Forces. Specification 32519; 1945. Rectifier; Direct-Current Power Supply, Type B-3 (400 Amperes, 28 Volts).

U. S. Gov., Navy Dept. Specification 17R3a; 1944. Rectifiers; Electric, Power, Tube Type.

U. S. Gov., Post Office Dept., Div. of Motor Vehicle Service, Bureau of the Fourth Assistant Postmaster General. Specifications for Rectifiers.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-945A; 1939. Rectifier; Type RA-20.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-988; 1941. Rectifier RA-34-( ), Chest CH-57-( ), and Accessory Equipment.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-1003; 1941. Rectifier, Type RA-36-( ), Telephone, Central-Battery Charging.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-1037; 1941. Rectifier RA-37 and Chest CH-51.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-1302; 1942. Rectifier RA-43-( ) and Case CS-82-( ).

U. S. Gov., U. S. Army, Signal Corps. Specification 71-1634B; 1943. Rectifier RA-91-( ), Telephone, Central Battery Charging.

*References.*—Rectifier bulbs, *see* 718.62; synchronous converters, *see* 713.2.

## 714. SWITCHES, PANELS, METERS, AND CONTROLLING EQUIPMENT

### 714.1 CONTROLLING EQUIPMENT

### 714.10 General Items

American Standards Assn., C75.17-1944. Method of Noise-Testing Fixed Composition Resistors (American War Standard). For the purpose of establishing a uniform method of noise-testing fixed composition resistors. Gives scope and purpose, theory of operation, construction, and use.

### 714.11 Electric Controllers and Starters

American Institute of Electrical Engineers, 15; 1944. Joint sponsors with National Electrical Mfrs. Assn. American Standards Assn., C19.1-1943. American Standards for Industrial Control Apparatus. Includes industrial motor control, similar control used for industrial heating, and rheostats including those for generator field. Covers service conditions, definitions, ratings, and performance.

American Institute of Electrical Engineers. Recommended Practice for Electrical Installations on Shipboard, 45; 1940. Addenda, 1942. Emergency Modification and supplement, 1943. Control Apparatus. Covers installation and location, manual and magnetic types, protecting cases, resistors, circuit breakers, corrosion resistant parts, tests, temperature limits, contactors, and application.

American Standards Assn. Sponsored by Electrical Standards Committee. American Standards Assn., C57.1-1942; C57.2-1942; and C57.3-1942. Transformers, Regulators and Reactors. These standards apply to the following: (1) Distribution, power, and regulating transformers, and reactors other than current limiting reactors; (2) instrument transformers; (3) constant current transformers of the moving coil type; (4) step voltage and induction voltage regulators; (5) current limiting reactors; (6) general purpose specialty transformers. Covers definitions, standards common to transformers, regulators and reactors, standards for the six types named above, test code for transformers, and guides for operation of transformers and regulators.

Assn. of American Railroads, Operations and Maintenence Dept., Engineering Div., Electrical Section. Manual of Recommended Practice, 1942. Includes (6-d-41) Motor Control Equipment. Gives recommendations for utilization of manual, magnetic, and semimagnetic full voltage and reduced voltage starters, synchronous type, reduced voltage starters with relays, and relays.

National Board of Fire Underwriters. American Standards Assn., C1-1940. National Electrical Code, 1940. Requirements as to location and function of controllers and starters for motors, generators, and control circuit transformers.

National Electrical Manufacturers Assn. Industrial Control Standards 40-59; 1940. For general standards and definitions applying to resistors, contactors, brakes, auto-transformers and reactors, a.c. and d.c. controllers; machine tool, synchronous motor, printing press, and mine hoist control; magnetic control for steel mill auxiliaries, overhead traveling cranes and floor operated cranes; terminal markings and guides to specifications for building equipment control apparatus.

Underwriters' Laboratories, Inc. Standard for Electric Fence Controllers, 1943. Covers scope, general requirements, frame and enclosure, mounting, mechanical assembly, corrosion protection, supply connections, current-carrying parts, wiring, insulating material, motors, motor control, capacitors, transformers, spacings, grounding, protective and indicating devices, operating characteristics, temperature test, dielectric strength test, rain and humidity tests, endurance test, abuse test, burnout test, rating, marking, and inspection of listed products.

Underwriters' Laboratories, Inc. Standard for Industrial Control Equipment, 1938. Appendix, 1939. Paragraphs 96-101 revised 1941. Switchboards, panelboards, resistors, and rheostats intended for starting, stopping, regulating, controlling or protecting electric motors in industrial applications, including refrigerating systems, used in accordance with the National Electrical Code. Does not include instruments. Covers enclosure, corrosion, switching, overload protection, relays, thermal, fuses, circuit breakers, mercury-tube switches, wiring, terminals, spacings, heating, operation, endurance, burnout, rating, and marking. Also special requirements of refrigerating system controllers.

Underwriters' Laboratories, Inc. Standard for Industrial Control Equipment for Use in Hazardous Locations, 1943. Applies to industrial control equipment for use in class I and class II locations as defined in article 500 of the National Electrical Code. Gives general requirement for class I equipment, "Air Brake Type" and "Oil-Immersed Type," and covers enclosure, provision for connection, oil level, temperatures, performance, and marking. Gives general requirements for class II equipment, and covers enclosure, provision for connection, temperatures, performance, and marking. Also covers inspection of listed products.

U. S. Gov., Army Air Forces. Specification 32470A; 1944. Regulator; Runway Control, Type B-1.

U. S. Gov., Army Air Forces. Specification 32473; 1944. Generator: Integral Turbo Supercharger Speed Control.

U. S. Gov., Army Air Forces. Specification 32511; 1944. Regulator; Alternator Voltage. For 208 volts, alternating-current, aircraft.

U. S. Gov., Army-Navy Aeronautical Specification AN-R-1; 1943. Regulators; Generator Voltage.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specifications CAA-100. Beacon Control Switch. Cabinets, Types G-3 and T.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specifications CAA-418. Airport Lighting Control Panel for Runways.

U. S. Gov., Dept. of Commerce, National Bureau of Standards, H31; 1940. American Standards Assn., C2.1-1941. Safety Rules for the Installation and Maintenance of Electrical Supply Stations. Comprising part 1—for equipment of indoor and outdoor supply stations, provided it is in separate rooms or enclosures, under control of properly qualified persons and accessible only to such persons. Also apply to similar equipment if installed in factories, mercantile establishments, vehicles, or elsewhere. Exceptions—if voltage does not exceed 150 volts to ground, and if voltage is not more than 550 volts between conductors and power utilized does not exceed 3,200 volts; and the grounding rules of the fifth edition, National Electrical Safety Code. Requirements for controllers (sec. 16).

U. S. Gov., Navy Dept. Specification 17C10a; 1938. Controllers; Alternating-Current (Shipboard Use).

U. S. Gov., Navy Dept. Specification 17M9d; 1938. Controllers (and Motors); Direct-Current, for Shipboard Auxiliaries.

U. S. Gov., Navy Dept. Specification 17R2b; 1939. Regulators; Automatic-Voltage, for Generators.

*References.*—Brakes for electric motors, *see* 711.21, 711.22; auto transformers, *see* 713.5; starting rheostats, *see* 714.12; track circuit controllers for railroad signals, *see* 718.42; definitions, symbols, rating basis, standard voltages and frequencies, methods of test, installation, safety codes, *see* 710; relays, *see* 718.43; panels and switchboards, *see* 714.4; fuses, meters, *see* 714.2, 714.3; switches and circuit breakers, *see* 714.5; automatic stations, *see* 714.13.

## 714.12 Resistors and Rheostats

American Standards Assn., C 75.5-1943. External Meter Resistors (Ferrule Terminal Styles), American War Standard. For the purpose of facilitating production of ferrule terminal external meter resistors and the equipment in which they are used. Gives applicable specifications and drawings, classification, material and workmanship, general and detail requirements, methods of sampling, inspection, tests, packaging, packing, marking for shipment, requirements applicable to individual government departments, notes, and drawing showing details.

American Standards Assn., C 75.7-1943. Fixed Composition Resistors, American War Standard. For the purpose of facilitating production of fixed composition resistors and the equipment in which they are used. Gives applicable specifications and drawings, classification, material and workmanship, general and detail requirements, methods of sampling, inspection, tests, packaging, packing, marking for shipment, requirements applicable to individual government departments, notes, and drawings showing tables.

American Standard Assn., C75.9-1944. Power-Type-Wire-Wound Rheostats, American War Standards. Covers applicable specifications and drawings, classification, material and workmanship, general requirements, and detail requirements; methods of sampling, inspection, and tests; packaging, packing, and marking for shipment; requirements applicable to individual government departments, notes, and drawings.

American Standards Assn., C75.10-1944. Variable Wire-Wound Resistors (Low Operating Temperatures), American War Standard. For the purpose of facilitating production of low operating temperature variable wire-wound resistors and the equipment in which they are used. Covers applicable specifications and drawings, classification, material and workmanship, general requirements, detail requirements; methods of sampling, inspection, and tests; packaging, packing, and marking for shipment; requirements applicable to individual government departments, notes, and drawings.

Assn. of American Railroads, Operations and Maintenance Dept., Engineering Div., Signal Section. Manual of Recommended Practice. Specification 106-39; 1939. Resistor. Rating to give total resistance, resistance between taps, minimum resistance, and continuous current capacity, permissible temperature rise, insulation and conductor requirements, surface leakage distance, test requirements for dielectric strength and for excess voltage.

Assn. of American Railroads, Telegraph and Telephone Section, 2-G-24; 1927, and 2-G-25; 1927. Resistance Units AAR-6-B and AAR-8-B. Includes 1,500 ohm, 0.051 ampere unit, and 250 ohm, 0.147 ampere unit for use in ferrule type mountings, protected winding or resistance wire on porcelain tube fitted with brass ferrules, dimensional drawings, finish, and test requirements.

Assn. of American Railroads, Telegraph and Telephone Section, 2-G-31; 1928. Resistance AAR-2-A. For regulating current of telegraph and telephone apparatus, covers 26 sizes from 10 to 5,000 ohms and current ratings of 1.000 to 0.045 ampere. Gives requirements for Edison base, resistance wire wound on an insulating core, finish, tests, and dimensional drawing.

Assn. of American Railroads, Telegraph and Telephone Section, 2-G-62; 1930. Resistance AAR-7-A. For use in regulating the current of communication apparatus, resistance element supported by an insulating core and protected by a covering of fireproof, noncorroding, insulating material, construction and dimensions, nominal resistance of 2,500 ohms.

Assn. of American Railroads, Telegraph and Telephone Section, 4-13; 1927. Protective Resistances and Mountings. For protection of telegraph and telephone plant against currents from operating voltages, but not for regulating operating currents of various circuits. Includes resistances with ferrule or lug terminals, with terminals to fit into a socket, and resistance lamps, design, material, workmanship, electrical and mechanical requirements, and tests.

National Board of Fire Underwriters. National Electrical Code, 1940. American Standards Assn., C1-1940. Resistors and Reactors. Requirements regarding noncombustible supports, air space about resistors, marking of terminals, operating, and design requirements for motor starting rheostats, insulation and installation of connecting wires, requirements on mounting and inclosures, mounting of resistance lamps.

Radio Manufacturers Assn. Resistors, M1-213, M4-214A to M4-217, 1939; M4-221, 1938; and M4-331 to M4-335, 1936. Includes color code for resistance value identification, fixed composition resistor with radial leads, and axial leads, decimal multipliers and tolerances, table of preferred number values for fixed composition resistors, classification of fixed wire wound resistors, determination of ratings, and dimensional requirements.

Radio Manufacturers Assn. Adjustable Resistance Units, M4-611, M4-612, M4-614 to M4-633, M4-635, and M4-641; 1937. Gives standards for shaft dimensions, mounting bushings and nuts, locking projections, definition of test points, performance specifications, and test procedure.

U. S. Gov., Army-Navy Aeronautical Specification AN-R-13; 1942. Resistors; Adjustable Thermocouple Lead.

U. S. Gov., Army-Navy Aeronautical Specification AN-R-14a-2; 1944. Rheostats; Aircraft Power.

U. S. Gov., Dept. of Commerce, National Bureau of Standards H31; 1940. American Standards Assn., C2.1-1941. Safety Rules for the Installation and Maintenance of Electrical Supply Stations. Comprising part 1—for equipment of indoor and outdoor supply stations, provided it is in separate rooms or enclosures, under control of properly qualified persons and accessible only to such persons. Also apply to similar equipment if installed in factories, mercantile establishments, vehicles, or elsewhere. Exceptions—if voltage does not exceed 150 volts to ground, and if voltage is not more than 550 volts between conductors and power utilized does not exceed 3,200 volts; and the grounding rules of the fifth edition, National Electrical Safety Code. Requirements for resistance devices (sec. 14).

U. S. Gov., Joint Army-Navy Specification JAN-R-11; 1944. Resistors; Fixed Composition.

U. S. Gov., Joint Army-Navy Specification JAN-R-19; 1944. Resistors; Variable Wire-Wound (Low Operating Temperature).

U. S. Gov., Joint Army-Navy Specification JAN-R-22; 1944. Rheostats; Wire-Wound, Power-Type.

U. S. Gov., Joint Army-Navy Specification JAN-R-26; 1944. Resistors; Fixed Wire-Wound, Power Type.

U. S. Gov., Joint Army-Navy Specification JAN-R-29; 1944. Resistors; External Meter, High Voltage, Ferrule Terminal Type.

U. S. Gov., Navy Dept. Specification 17R1; 1934. Rheostats (Aircraft Use).

U. S. Gov., Navy Dept. Specification 17R4; 1942. Resistors; Electric (Exclusive of Instrument Multipliers).

U. S. Gov., U. S. Army, Signal Corps. Specification 71-91A; 1931. Rheostat; Type RS-33, for Regulating Battery Current.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-521B; 1935. Resistor; Fixed, 2 Watts Rating.

*References.*—Definitions, symbols, rating basis, methods of test, marking of terminals, service standards, safety codes, *see* 710; resistance wire, *see* 715.43; cast iron, *see* 611.11; porcelain for electrical purposes, *see* 532.22.

## 714.13 Automatic Stations

Electrical Standards Committee of American Standards Assn., sponsor. American Standards Assn., C37.2-1937. American Institute of Electrical Engineers' Standard C37.2. Standard for Automatic Stations. Requirements on automatic power switchgear equipment for all classes of service. Includes service conditions, definitions, ratings, heating and temperature limitations, tests, nameplates, device function numbers and designations, minimum protection standard, and alphabetical index to device function numbers.

U. S. Gov., U. S. Army, Army Air Forces. Specification 94-32205; 1940. Control System, Automatic (Airdrome Lighting, Alternating Current, Electric Power Plants) General Specification for.

*References.*—Definitions, symbols, rating basis, voltage and frequency standards, methods of test, service standards, safety codes, *see* 710; automatic switchgear, *see* 714.50.

## 714.14 Relays

American Standards Assn., C37.1-1937. Sponsored by the Electrical Standards Committee. Standard for Relays Associated With Power Switchgear. This standard covers all relays directly associated with power switchgear. Gives service conditions, definitions, ratings, heat and temperature limitations, limitations other than heating, and dielectric tests.

U. S. Gov., Army Air Forces. Specification 32368; 1942. Relay; Generator Current Control Switch (12 Volt D.C.).

U. S. Gov., Army Air Forces. Specification 32424-B; 1945. Relay; Current, Type B-8A, 24 Volts D.C., Intermittent Duty.

U. S. Gov., Army Air Forces. Specification 32439A; 1944. Relay; Current, Type B-9 (Single Pole, Double Throw, Time Delay).

U. S. Gov., Army Air Forces. Specification 32452; 1944. Relay; Current, Type B-10 (24 Volts D.C., Single-Pole).

U. S. Gov., Army Air Forces. Specification 32467-2; 1944. Relay; Current, Type B-11 (24 Volts D.C., Single-Pole).

U. S. Gov., Army Air Forces. Specification 32471; 1944. Relay; Current, Type D-1 (115 Volts, 400 Cycle, Single Pole).

U. S. Gov., Army Air Forces. Specification 32476; 1944. Relay; Current (24 Volts, D.C.), General Specification for.

U. S. Gov., Army Air Forces. Specification 32489-A; 1945. Relay; Current, Type B-13, 24 Volts D.C., Single Pole.

U. S. Gov., Army Air Forces. Specification 32490-A; 1945. Relay; Current, Type B-14, 24 Volts D.C., Single Pole.

U. S. Gov., Army Air Forces. Specification 32491; 1944. Relay; Current, Type B-15, 24 Volts D.C., Single Pole-Double Throw.

U. S. Gov., Army-Navy Aeronautical Specification AN-C-109; 1944. Cabinet and Relay Assembly; Runway Selector.

U. S. Gov., Army-Navy Aeronautical Specification AN-C-123; 1944. Cabinet and Relay Assembly; Distribution.

U. S. Gov., Army-Navy Aeronautical Specification AN-R-20; 1945. Relays; Direct Current.

U. S. Gov., Navy Dept. Specification 17R6; 1942. Relays; Electric (Shipboard Use).

U. S. Gov., U. S. Army, Ordnance Dept. Specification 89-7100; 1941. Relay; Submarine Mine.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-629-A; 1937. Relay; Type SW-37, Mainline Telegraph.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-1144; 1942. Relay Box BC-615.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-1145; 1942. Relay Box BC-616.

*References.*—Track and railway signal relays, *see* 718.43. Definitions, symbols, rating basis, voltage and frequency standards, methods of test, service standards, safety codes, *see* 710.

## 714.2 FUSES AND FUSE HOLDERS

### 714.20 General Items

U. S. Gov., Navy Dept. Specification 17P6a; 1942. Pullers; Fuse.

### 714.21 Fuses

American Hospital Assn., 19-4. Nonrenewable Inclosed Cartridge Fuses. Based on U. S. Gov., Federal Specification W-F-791, Nonrenewable Inclosed Cartridge Fuses.

American Hospital Assn., 19-7. Renewable (Fusible Links Separately Enclosed). Enclosed Cartridge Fuses. Based on U. S. Gov. Federal Specification W-F-805, Fuses; Cartridge, Enclosed, Renewable (Fusible Links Separately Enclosed).

Assn. of American Railroads, Telegraph and Telephone Section, 4-3; 1924. Telegraph and Telephone Line Fuses. Tubular type, readily replaceable for 7 to 15 amperes, meeting requirements of the National Electrical Code for "fuses of signaling system protectors," materials, and tests.

Assn. of American Railroads, Telegraph and Telephone Section, 4-6; 1924. Telegraph and Telephone Instrument Fuses. For fuses under one ampere, replaceable type, design, material and workmanship, with electrical requirements, marking, and tests.

Assn. of American Railroads, Telegraph and Telephone Section, 4-7; 1924. Telegraph and Telephone Heat Coils. For protection of instruments and wiring on the office side of office arresters, replaceable type for 0.2 to 1.0 ampere capacity, design, material and workmanship, electrical and mechanical requirements, marking, and tests.

Assn. of American Railroads, Telegraph and Telephone Section, 4-17; 1938. Communication Battery Supply Fuses. Includes 1/2 to 5 ampere cartridge type replaceable class B fuses applied to leads from power supply such as motor generators, storage batteries, rectifiers, etc. Requirements for design, material, and workmanship, fiber parts to meet specifications of the National Electrical Manufacturers Assn., for vulcanized fiber, fusing element when tested to meet A.S.T.M. Specification B-35, tests, and marking.

National Electrical Manufacturers Assn. Distribution Cutout and Power Fuse Standards, 44-93; 1944. Gives rating standards, performance standards, application standards, and manufacturing standards for distribution cutouts, fuse links, and power fuses; definitions including general parts, classification by construction, mounting and operation, rating, performance and test, and miscellaneous; and instructions for the installation, operation, and care of distribution cutouts and power fuses.

Society of Automotive Engineers. 1944 Handbook, Section 2—Units, Parts and Fittings. S.A.E. Standard Electric Fuses. Revised, 1941. Although intended primarily for automotive purposes, these fuses are suitable for use to some extent in other equipment such as automobile radio sets, where it is desired to service with these standard fuses as much as possible. Diagram and table of dimensions and cap thicknesses for capacities from 6 to 30 amps.; and requirements for rating, test, length, caps, and completed tube.

Underwriters' Laboratories, Inc. Fusible Links, 1939. For examination and test of fusible links. Gives requirements for design and construction, practicability, durability, strength, reliability of operation, and uniformity.

Underwriters' Laboratories, Inc. Standard for Automotive Glass Tube Fuses, 1938. For the protection of circuits of 25 volts or less, type S.F.E. Covers design and construction of tubes, ferrules, sizes, marking, overload, and tests.

Underwriters' Laboratories, Inc. Standard for Fuses, 1941. Covers 125-volt plug fuses rated at 30 amperes or less, and 250-and 600-volt cartridge-enclosed fuses rated at 600 amperes or less, of the nonrenewable, multiple, and renewable types to be employed in accordance with the National Electrical Code. Does not cover fuses for attachment plugs nor fuses designed for use in car-lighting, instrument-protective, or signal-system fuse holders. Requirements for design and construction, and for inspection of listed product.

U. S. Gov., Army Air Forces. Specification 32505; 1944. Fuses; Alternating Current, 400 Cycle, Aircraft.

U. S. Gov., Dept. of Commerce, National Bureau of Standards H31; 1940. American Standards Assn., C2.1-1941. Safety Rules for the Installation and Maintenance of Electrical Supply Stations. Comprising part 1—for equipment of indoor and outdoor supply stations, provided it is in separate rooms or enclosures, under control of properly qualified persons and accessible only to such persons. They also apply to similar equipment if installed in factories, mercantile establishments, vehicles, or elsewhere. Exceptions—if voltage does not exceed 150 volts to ground, and if voltage is not more than 550 volts between conductors and power utilized does not exceed 3,200 volts; and the grounding rules of the fifth edition, National Electrical Safety Code. For fuses (sec. 16), requirements on where fuses are required, disconnection of fuses before handling, and grounding live parts.

U. S. Gov., Federal Specification W-F-791a; 1942. Fuses; Cartridge, Inclosed, Nonrenewable. Covers two classes—voltages not over 250 and voltages not over 600. Incorporates (by reference) Underwriter's Laboratories Standard for Fuses. Gives requirements for material and workmanship, marking, dimensions, carrying capacity, temperature, and overload blowing; methods of inspection and tests; and requirements for packing and marking for shipment.

U. S. Gov., Federal Specification W-F-803a; 1941. Amendment 4; 1944. Fuses; Cartridge, Inclosed, Renewable (Fusible Links Not Separately Inclosed); and Renewal-Links Therefor. Covers two types—(I) without increased time-lag characteristics and (II) with increased time-lag characteristics; and two classes—voltage not over 250 and voltage not over 600. Gives requirements for material, workmanship, marking dimensions, carrying capacity, temperature, overload blowing, and short circuit test; methods of sampling

inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification W-F-805; 1933. Amendment 4; 1944. Fuses; Cartridge, Inclosed, Renewable (Fusible Links Separately Inclosed). Covers one type and two classes—voltage not over 250 and voltage not over 600. Gives requirements for material, workmanship, dimensions, tolerances, and marking; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., Federal Specification W-F-831; 1935. Amendment 1; 1939. Fuses; Plug, Nonrenewable. Covers medium screw type, carrying capacities 10, 15, 20, 25, and 30 amperes, 125 volts, in two types—(I) without increased time-lag characteristics, blowing time not to exceed 60 seconds at 150 percent of rated current; and (II) with increased time-lag characteristics, blowing time to be not less than 30 seconds, nor more than 120 seconds, at 200 percent of rated current; classed and designated according to material of construction, as fire-resistive molded composition; glass; porcelain; and porcelain with nonferrous metal caps. Gives detail requirements; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Federal Specification W-H-636; 1936. Amendment 1; 1941. Hot-Plates; Electric. Covers Three types—(I) light duty, portable, open-coil and enclosed-coil, designed for light-duty cooking and similar applications of electric heat, single-unit and two-unit, complete with switch control and flexible cord and plug-cap for connection to suitable outlet; and (II) heavy duty, semiportable, enclosed-coil for use as single units, and arranged for banking in multiple, and equipped with outlet box for permanent electrical connection to circuit. Covers nickel-plated, chromium-plated, vitreous-enameled or black-japanned top frames. Standard voltage ratings of the heater elements are either 115 or 230 volts, a.c. or d.c. circuits; class A, double-unit hot plates, type I; class B, single-unit hot plates, type I—nominal rating 1,100 +100 watts, three heats; and class C, single-unit hot plate, type II—nominal rating 2,000 watts + 200 watts, three heats. Gives detail requirements; methods of inspection and tests; and requirements for packing and marking for shipment. Emergency Alternate Federal Specification E-W-H-636; 1942 (issued by Procurement Div., Treasury Dept., U. S. Gov.), changed thickness of chromium plating, omits undercoats for same, deletes nickel-plated, and changes requirements for construction of heating units.

U. S. Gov., Navy Dept. Specification 17F2J; 1945. Fuses; Electric.

U. S. Gov., Navy Dept. Specification 17F10d; 1944. Fuse-Indicators; Lamp-Type.

U. S. Gov., U. S. Army, Army Air Forces. Specification 94-32084; 1941. Fuses; Cartridge, Inclosed Non-Renewable, for Aircraft (Electric Motor Protection).

U. S. Gov., U. S. Army, Ordnance Dept. Specification 89-4513; 1941. Fuse; Time-delay, 0.150-ampere.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-310; 1924. Fuse, Type M-36; for Monochord Switchboard, Types BD-9, BD-10, and BD-11.

*References.*—Fuse blocks, cut-out bases, *see* 714.22; definitions, symbols, service standards, safety codes; *see* 710.

## 714.22 Fuse Blocks, Cut-Out Bases, and Clips

Assn. of American Railroads, Telegraph and Telephone Section, 2-G-5; 1924 and 2-G-6; 1924. Fuse Blocks AAR-1-A and AAR-2-A. Two sizes of white porcelain fuse blocks, requirements as to quality, absorption test, clips of German silver, sealing compound composition, and dimensional drawings of 6-fuse and 10-fuse blocks.

Assn. of American Railroads, Telegraph and Telephone Section, 2-G-77; 1937. Potential Block AAR-1-A. Gives general requirements, material and workmanship, dimensions, finish, assembly, inspection and tests, packing, marking, and warranty.

National Board of Fire Underwriters. National Electrical Code, 1940. American Standards Assn., C1-1940. Cut-out Bases. Capacity limits, spacing of metal parts, break distance for link fuse, for mountings on slate, marble or composition bases, classification of plug and cartridge cut-outs according to voltage and current capacity.

National Electrical Manufacturers Assn. Distribution Cutout Standards 38-53; 1938. Gives requirements for fuse cutout current ratings, fuse link continuous current ratings, switch blades, voltage rating, interrupting capacity rating, etc., performance standards, application, and manufacture. Change (approved Sept. 9, 1942) for duration of emergency, reduces overall length of universal fuse links (0 to 15 kv) for distribution cutouts from 23 to 20 in. (minimum).

National Electrical Manufacturers Assn. Distribution Cutout and Power Fuse Standards, 44-93; 1944. Gives rating standards, performance standards, application standards, and manufacturing standards for distribution cutouts, fuse links, and power fuses; definitions including general, parts, classification by construction, mounting and operation, rating, performance and test, and miscellaneous; and instructions for the installation, operation and care of distribution cutouts and power fuses.

Underwriters' Laboratories, Inc. Standard for Fuse-Holders, 1943. Covers fuse-holders for cartridge, plug, and link fuses, and fuse-holders and adapters for type S fuses, to be employed in lighting and power circuits in accordance with the National Electrical Code. Gives requirements for bases—insulating material, sealing, current-carrying parts, spacings, cover plates, rating, marking, and inspection of listed product.

U. S. Gov., Army Air Forces. Specification 32506; 1944. Fuse-Blocks; Alternating Current, 400 Cycle, Aircraft.

U. S. Gov., Federal Specification W-B-81a; 1935. Bases; Cut-Out, Enclosed-Cartridge, for Open-Link and Plug-Fuses. Covers three types—(I) to receive plug fuses, (II) to receive enclosed cartridge fuses, and (III) to receive open-link fuses. Gives requirements for classification, sizes, material, workmanship, current carrying parts, wiring terminals, cartridge fuse terminals, cartridge-fuse cut-out bases, plug-fuse terminals, link-fuse terminals, spacings (link-fuse cut-out bases). Cover plates, rating, and marking; method of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

*References.*—Slate for electrical purposes, *see* 511.53; porcelain insulation for fuse blocks, *see* 532.22; definitions, symbols, basis of rating, methods of testing, service standards, safety codes, *see* 710; terminal blocks, *see* 715.39.

## 714.3 INSTRUMENTS AND METERS, ELECTRICAL

### 714.30 General Items

American Standards Assn., C 39.2-1944. Electrical Indicating Instruments (2 1/2 and 3 1/2 in., Round Flush-Mounting, Panel-Type), American War Standard. For the purpose of facilitating production of electrical indicating instruments. Gives applicable specifications and drawings, classification, material, and workmanship, general and detail requirements, methods of inspection and tests, packaging, packing, marking, requirements applicable to individual government departments, notes, list of special instruments, and drawings showing details.

Assn. of American Railroads, Mechanical Div., Electrical Section. Manual of Standard and Recommended Practice, 1941. Foam Meter Maintenance. Covers foam meter instrument box, emergency shut-off valve. electrodes, foam meter blow-off cock, solenoid valve, conduit and wiring, and dynamo voltage.

Electrical Standards Committee of American Standards Assn., sponsor. American Standards Assn., C39.1-1938. American Institute of Electrical Engineers' Standard C39.1. Electrical Indicating Instruments. Definitions of instruments and parts, classification, heating limitations and measurement, dielectric test and insulation resistance, construction.

National Board of Fire Underwriters. American Standards Assn., C1-1940. National Electrical Code, 1940. Location of meter in connection with over-current devices.

National Electrical Manufacturers Assn. Indicating Electrical Measuring Instruments—Instrument Transformers, Standard 37-42; 1937. Covers manufacture, test, and performance of electrical measuring instruments; classification as to use, principle of operation and protection; rating, ranges, dimensions, and definitions. Also for the construction of suitable transformers for use with measuring instruments, meters, relays, or tripping mechanism.

*References.*—Automobile instrument mountings, *see* 722.32; measurement of temperature coefficient of resistance of manganin and constantan wire, *see* 715.43.

### 714.31 Ammeters

American Standards Assn., C 39.5-1943. External Ammeter Shunts for Panel-Type Instruments, American War Standard. Covers applicable specifications and drawings, classification, material and workmanship, general and detail requirements; methods of sampling, inspection, and tests; packaging, packing, and marking for shipment; and requirements applicable to individual government departments, notes, and drawings.

Assn. of American Railroads, Operations and Maintenance Dept., Engineering Div., Signal Section. Manual of Recommended Practice. Specification 85-39; 1939. Portable Direct Current Voltmeters, Ammeters and Volt-Ammeters. For railway signal service, self-contained ranges scales, zero corrector, shielding, case, temperature error, and accuracy.

Assn. of American Railroads, Operations and Maintenance Dept., Engineering Div., Signal Section. Manual of Recommended Practice. Specification 112-39; 1939. Portable Alternating Current Ammeter. For testing electrical apparatus and circuits in signal systems. Twelve combinations, ranges, and scales, permissible error due to heating, impedance limits, and dielectric requirements.

U. S. Gov., Army Air Forces. Specification 32463-2; 1945. Ammeter; Direct Current, Type G-1 (Aircraft).

U. S. Gov., Army Air Forces. Specification 32497; 1944. Ammeter; Alternating Current Type H-1, 400 Cycle, Aircraft.

U. S. Gov., Army-Navy Aeronautical Specification AN-A-19a; 1944. Ammeters and Voltmeters; Direct Current.

U. S. Gov., Joint Army-Navy Specification JAN-I-6; 1944. Instruments; Electrical Measuring, Indicating, Basic, Voltmeters and Ammeters.

U. S. Gov., Joint Army-Navy Specification JAN-S-61; 1944. Shunts; External Ammeter (Light Weight Type).

U. S. Gov., Navy Dept. Specification 17-I-51; 1944. Instruments; Electrical-Measuring Split-Core-Ammeter, Portable.

*References.*—Voltammeter, *see* 714.32; definitions, symbols, classification, test requirements, construction, error, safety codes, *see* 714.30, 710; meter binding posts, *see* 714.37; copper wire, *see* 715.44.

### 714.32 Voltammeters

U. S. Gov., U. S. Army, Signal Corps. Specification 71-293B; 1934. Voltammeter, Type I-23, 0-10 Volts, 0-35 Amps., q.c. Watch Case.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-294-A; 1938. Voltammeter, Type I-50, 150-15-3 Volts, 3-15-3 Amperes.

*References.*—*See* references under 714.31.

### 714.33 Voltmeters

American Institute of Electrical Engineers, A.I.E.E. 4; 1943. American Standards Assn., C68.1-1942. Measurement of Test Voltage in Dielectric Tests. Sets forth methods for the measurement of test voltages and wave shapes used in dielectric tests of electrical apparatus or insulating material. These tests are in three classes—(1) puncture tests, (2) flash-over tests, (3) voltage proof tests. Covers dielectric tests, voltage measurements, alternating voltage tests, direct voltage tests, surge voltage tests, and testing equipment and arrangement.

Assn. of American Railroads, Operations and Maintenance Dept., Engineering Div., Signal Section. Manual of Recommended Practice. Specification 115-39; 1939. Portable Alternating Current Voltmeter. For signal testing, two sizes for accurate, and three for less accurate usage, ranges and scales, knife-edge pointer tip, jeweled bearings, case, etc. Requirements as to heating, sensitivity, and accuracy.

U. S. Gov., Army Air Forces. Specification 32371-A (1); 1942. Voltmeter, Portable Direct Current (0-30 Volts).

U. S. Gov., Army Air Forces. Specification 32499; 1944. Voltmeter; Alternating Current, Type C-2, 400 Cycle, Aircraft.

U. S. Gov., Army-Navy Aeronautical Specification AN-A-19a; 1944. Ammeters and Voltmeters; Direct Current.

U. S. Gov., Army-Navy Aeronautical Specification AN-V-19a; 1944. Voltmeters; 0-150 Volt 400 Cycle Alternating Current.

U. S. Gov., Joint Army-Navy Specification JAN-I-6; 1944. Instruments, Electrical Measuring, Indicating, Basic, Voltmeters and Ammeters.

*References.*—*See* references under 714.31.

## 714.34 Watthour Meters

Edison Electric Institute. Joint sponsor with National Bureau of Standards and Assn. of Edison Illuminating Companies. American Standards Assn., C 12-1941. Code for Electricity Meters. Covers devices for the measurement of electric energy distributed by alternating current or by direct current. Gives definitions, standards, measurement of power and energy, specifications for acceptance of types of meters, specifications for acceptance of types of auxiliary apparatus for use with meters, installation methods, watthour meter test methods, and laboratory and service tests.

Edison Electric Institute. Suggestions for Specifications for Standard Dial Constants for Alternating-Current Watthour Meters, MS-1; 1940. Covers the use of standard four dial registers with dial constants of one, ten, and powers thereof Gives formula for computing expected maximum KWHR registration within indexing period, extended load range, dial constants, dial constants other than ten or some power thereof, and table showing dial constants.

U. S. Gov., Navy Dept. Specification 17-I-21; 1942. Instruments, Electrical-Measuring, Voltage—Current Indicating: Varmeters, Wattmeters, and Power-Factor Meters.

U. S. Gov., Navy Dept. Specification 17M4c; 1940. Meters; Watt-Hour (Shore Use).

U. S. Gov., Panama Canal, Purchasing Dept. Specification for Meters, Watthour, Polyphase, 1937.

*References.*—Demand wattmeters, *see* 714.38; definitions, classification, symbols, construction, error, safety codes, standard voltages and frequencies, *see* 714.30, 710; meter cabinets, *see* 715.12; copper wire, *see* 715.44.

## 714.35 Wave Meters

U. S. Gov., U. S. Army, Signal Corps. Specification 71-647; 1931. Wavemeter, Type BC-184.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-650; 1933. Wavemeter, Type BC-( )-153.

*References.*—Radio-frequency meters, *see* 718.65.

## 714.36 Wheatstone Bridge

U. S. Gov., Navy Dept. Specification 17T17c; 1944. Testing-Sets, Electric, Wheatstone-Bridge Type.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-110-D; 1938. Test Set, Type 1-49.

## 714.37 Electrical Meter Parts

## 714.38 Demand Wattmeters

Edison Electric Institute. Joint sponsor with National Bureau of Standards and Assn. of Edison Illuminating Companies. American Standards Assn., C 12-1941. Code for Electricity Meters. Includes demand meters and devices. Gives definitions, classification of demand meters; acceptance tests for curve drawing meters, integrated-demand meters, lagged-demand meters, contact-making clocks, demand-totalizing relays, and contact mechanisms, and laboratory and service tests.

*References.*—Watthour meters, *see* 714.34; definitions, classification, symbols, test requirements, construction, error, safety codes, standard voltages and frequencies, *see* 714.30, 710; copper wire, *see* 715.44.

## 714.39 Miscellaneous Electrical Measuring Instruments

American Standards Assn., C-39.3-1943. Shock-Testing Mechanism for Electrical Indicating Instruments (2 1/2 and 3 1/2 in., Round, Flush-Mounting, Panel-Type), American War Standard. For indicating instruments for use in mobile and field communications equipment and other apparatus subject to severe shock. Gives general design, theory of operation, use, construction, mounting of mechanism, calibration curves, and drawings showing details.

Edison Electric Institute. Specifications for Indicating and Cumulative Demand Register Scales, No. MS-4; 1942. Gives scale classes, multiplying constants, name plates, length of scale, type of scale divisions, type of indicating pointer, marking of register face plates, method of indicating demand reading, indicator dial arrangement, and marking of register face plates.

U. S. Gov., Army Air Forces. Specification 24868-1; 1944. Tester; Electrical Circuit, 24-28 1/2 Volts D.C.

U. S. Gov., Army Air Forces. Specification 24971; 1944. Tester; Electrical Circuit, Type B-2, 24-28 1/2 Volts, D.C.

U. S. Gov., Army Air Forces. Specification 32437 (1); 1944. Tester; High Rate Discharge Battery.

U. S. Gov., Army Air Forces. Specification 32453-1; 1945. Tester; Aircraft Electrical System.

U. S. Gov., Army Air Forces. Specification 32500; 1944. Watt-Varmeter; Alternating Current, Type A-1, for 400 Cycle, Aircraft.

U. S. Gov., Army Air Forces. Specification 32507; 1944. Tester; Electrically Heated Suit.

U. S. Gov., Army Air Forces. Specification 32508; 1944. Frequency-Meter; Alternating Current, Type B-1, for 400 Cycle, Aircraft.

U. S. Gov., Army Air Forces. Specification 40884; 1944. Volt-Ohm-Milliammeter; Instrument Maintenance.

U. S. Gov., Joint Army-Navy Specification JAN-S-44; 1944. Shock Testing Mechanism for Electrical Indicating Instruments (2 1/2 and 3 1/2 Inch, Round, Flush Mounting, Panel-Type).

U. S. Gov., Navy Dept. Specification 17I20; 1943. Instruments, Electrical Measuring: Resistors, Shunts, and Instrument Transformers for.

U. S. Gov., Navy Dept. Specification 17I21; 1942. Instruments, Electrical Measuring, Voltage—Current Indicating: Varmeters, Wattmeters, and Power-Factor Meters.

U. S. Gov., Navy Dept. Specification 17I22; 1941. Instruments, Electrical Measuring Circuit-Characteristic Indicating; Voltage-Testers, Frequency and Phase-Rotation.

U. S. Gov., Navy Dept. Specification 17I23; 1941. Instruments; Electrical Measuring, Temperature Indicating.

U. S. Gov., Navy Dept. Specification 17-I-25a; 1944. Instrument Assemblies; Circuit Analyzing Equipment, Volt-Ohm-Milliammeters, and Power Circuit Analyzers.

U. S. Gov., Navy Dept. Specification 17-I-44; 1944. Instruments, Electrical Measuring, Electron-Power-Tube Testing.

U. S. Gov., Navy Dept. Specification 18-I-8a; 1944. Instruments, Electrical Measuring, Hydrogen-Gas Indicating, Nonportable (Submarine Use).

U. S. Gov., Navy Dept. Specification 18-I-9a; 1944. Instruments; Electrical Measuring, Combustible-Gas Indicating, Portable.

U. S. Gov., U. S. Army, Army Air Forces. Specification 94-27226-E; 1943. Meter; Electric (Aircraft) Direct-Current, General Specification for.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-515A; 1930. Instrument; Electrical Indicating, 3.5-Inch and 2.5-Inch Diameter.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-1661; 1943. Test Set I-199; Dynamotor.

## 714.4 PANELS, PANEL BOARDS, SWITCHBOARDS

### 714.40 General Items

### 714.41 Panels and Panel Boards

Aeronautical Chamber of Commerce of America, Inc. National Aircraft Standard NAS 17, 18, and 19; 1944. Panel-Connector, Electrical. For Nos. 6, 8, and 10 posts, and for 1/4, 5/16, and 3/8 posts. Gives drawings with dimensions and notes. Developed by National Aircraft Standard Committee.

Aeronautical Chamber of Commerce of America, Inc. National Aircraft Standard NAS 45; 1944. Panel Assembly; Electrical Connector. Gives drawing with dimensions and notes. Developed by National Aircraft Standard Committee.

Aeronautical Chamber of Commerce of America, Inc. National Aircraft Standard NAS 191; 1944. Panel Assembly; Molded-in Screw, Electrical. Gives drawings with dimensions and notes. Developed by National Aircraft Standard Committee.

National Board of Fire Underwriters. National Electrical Code, 1940. American Standards Assn., C1-1940. Panel Boards. Location, clearances, accessibility, grounding requirements, construction of noncombustible materials, arrangement of switches and fuses, distances between live parts.

National Electrical Manufacturers Assn., 42-82; 1942. Instructions for the Installation, Operation, and Care of Panelboards.

Underwriters' Laboratories, Inc. Standard for Panelboards, 1941. Requirements in general and for enclosure, bases, current-carrying parts, switches, circuit-breakers, fuses, spacings, wire space, wiring compartments, provision for grounding, insulation resistance, rating, marking, and inspection of listed products.

U. S. Gov., Army-Navy Aeronautical Specification AN-P-58; 1944. Panelboard; Eight Circuit Distribution.

U. S. Gov., Army-Navy Aeronautical Specification AN-P-59; 1944. Panels; Airport Lighting Control.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specifications CAA-147. Cabinet and Panel Board, 3-wire, 220/110 V. for Lighting and Feeder Distribution.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specifications CAA-165. Cabinet; Push Key, 6-Key for Teletype Equipment.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specifications CAA-419. Runway; Contact Lighting Control Panel.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specifications CAA-440. Cabinet; Type "O" With Switch and Relay.

U. S. Gov., Dept. of Commerce, National Bureau of Standards H33; 1940. American Standards Assn., C2.3-1941. Safety Rules for the Installation and Maintenance of Electric Utilization Equipment. Comprising part 3—for 25- to 270-volt equipment which is accessible to other than qualified electrical operators; and the grounding rules of the fifth edition, National Electrical Safety Code. For panel boards (sec. 33), requirements on accessibility and convenient attendance, location and illumination, arrangement and identification, spacings, barriers, covers, grounding of frames, guarding current-carrying parts, arrangement of equipment, material, marking, and protection against moisture. Also location of panel boards in residences.

U. S. Gov., Federal Specification W-P-131a; 1941. Panelboards; Equipped With Automatic Circuit Breakers. Covers only one type, viz, the automatic circuit-breaker type for protection of light and/or power circuits and comprises two classes—(1) with circuit breakers having an a.c. rating not exceeding 600 volts and/or d.c. rating not exceeding 250 volts; (2) with circuit breakers having an a.c. rating not exceeding 250 volts, and not suitable for use on d.c. Gives requirements for current-carrying parts, mechanical construction, grounding, arrangement of circuit breakers on panelboards, barriers and insulation, operation, rating, calibration, and marking; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification W-P-146; 1936. Panelboards; Equipped With Fuse Connections, or Switches and Fuse Connections. Covers panelboard for the protection of light and power circuits and comprises two classes—fuse distribution panelboard and fuse-circuit panelboards. Gives detail requirements; methods of sampling, inspection, and test; and requirements for packaging, packing, and marking. Emergency Alternate Federal Specification E-W-P-146; 1942 (issued by Procurement Div., Treasury Dept., U. S. Gov.), removed requirements to use cadmium plating and requires zinc coating be done by sherardizing or electroplating.

U. S. Gov., Navy Dept. Specification 17C18; 1944. Control Panels; Welding (for Direct-Current Electric Arc Welding Outlets, Constant Potential System).

U. S. Gov., U. S. Army, Signal Corps. Specification 71-543B; 1938. Panel; Type BD-( )-61, Control, Battery Charging.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-630; 1932. Panel; Type BD-68, Telephone.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-696A; 1940. Panel, Type BD-75, and Terminal Strip TM-192, Wire Communication Cross Connecting.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-996; 1941. Panel; Type BD-98, Power.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-1008; 1941. Panel; Type BD-97, Main Distributing Frame.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-1017-B; 1944. Panel BD-90 (Power).

U. S. Gov., U. S. Army, Signal Corps. Specification 71-1610; 1943. Panel; BD-132-( ), Power.

*References.*—Telephone jack panel, *see* 718.22; slate for electrical purposes, see 511.53; cabinets for panel boards, see 715.12; wiring practice, see 715.30; definitions, symbols, standard voltages, service standards, safety codes, methods of test, see 710; switchboards, see 714.42.

## 714.42 Switchboards

American Institute of Electrical Engineers. Recommended Practice for Electrical Installations on Shipboard, 45; 1940. Addenda, 1942. Emergency Modification and Supplement, 1943. Switchboards. Covers installation and location, construction, equipment, grounding, arrangement, overcurrent protection, meter scales, switches, fuses, bus bars, lugs, insulation voltage test, and spare parts.

Assn. of American Railroads, Operations and Maintenance Dept., Engineering Div., Signal Section. Manual of Recommended Practice. Specification 107-39; 1944. Switchboard. For the control and distribution of electric power in railway signal service. Covers design, panels, crucible and metal clad type switchboards, supporting framework, instruments, transformers, fuses, circuit breakers, switches, connections and terminals, handles and buttons, plates, finish, insulation, dielectric requirements, identification, inspection, tests, packing, marking, and warranty.

National Board of Fire Underwriters. National Electrical Code, 1940. American Standards Assn., C1-1940. Switchboards and Panel Boards. Of noncombustible material, location, clearances, accessibility, grounding requirements, insulation of wires, overload protection, and grounding requirements for instruments.

National Electrical Manufacturers Assn. Power Switching Equipment Standards 41-65; 1940. These standards cover manufacture, test, and performance of power switching equipment; general requirements, bus supports and air switches, outdoor substations, high voltage a-c fuse cutouts, current-limiting resistors, definitions of terms, and instructions for installation, operation, and care.

Underwriters' Laboratories, Inc. Standard for Dead-Front Switchboards; 1938. Covers dead-front switchboards for use on lighting and power circuits in accordance with the National Electrical Code. They are designed particularly to provide safety for the operator, but they are not necessarily dead-back boards. They are units which are substantially complete when shipped from the factory and whose final acceptability as switchboards in service does not depend to any great extent upon the method of installation and assembly of parts in the field. Does not cover preset and dimmer-control types such as theater switchboards; switchboards which are wholly or partly of the live-front type; automatic or supervisory switchboards; railway-control or electrification switchboards; generating station or substation switchboards; metal-clad, lift-up equipment, trucks, power cubicles, switch houses, etc.; switchboards consisting largely of oil circuit breakers; nor switchboards having horsepower ratings, current ratings of more than 600 amperes per branch-circuit switch (or circuit breaker), or potential ratings of more than 600 volts. Materials, mechanical assembly, framework and enclosure, provision for mounting, insulating material bases for support of current-carrying parts; wiring; manual switching means; spacings; wiring space; corrosion protection; grounding; heating; overload; endurance; dielectric strength; rating; marking; and inspection of listed product.

U. S. Gov., Army-Navy Aeronautical Specification AN-S-3a; 1942. Switchbox Assembly; Four 100 Ampere Circuits.

U.S. Gov., Dept. of Commerce, National Bureau of Standards H31; 1940. American Standards Assn., C2.1-1941. Safety Rules for the Installation and Maintenance of Electrical Supply Stations. Comprising part 1—for equipment of indoor and outdoor supply stations, provided it is in separate rooms or enclosures, under control of properly qualified persons and accessible only to such persons. Also apply to similar equipment if installed in factories, mercantile establishments, vehicles, or elsewhere. Exceptions—if voltage does not exceed 150 volts to ground, and if voltage is not more than 550 volts between conductors and power utilized does not exceed 3,200 volts; and the grounding rules of the fifth edition, National Electrical Safety Code. For switchboards (sec. 17), requirements on location and accessibility, material and illumination, necessary equipment, arrangement and identification, spacings and barriers against short-circuit, grounding of switchboards, guarding live parts on switchboards, and instrument cases.

U. S. Gov., Dept. of Commerce, National Bureau of Standards H33; 1940. American Standards Assn., C2.3-1941. Safety Rules for Installation and Maintenance of Electric Utilization Equipment. Comprising part 3—for 25-to 270-volt equipment which is accessible to other than qualified electrical operators; and the grounding rules of the fifth edition, National Electrical Safety Code. For switchboards (sec. 33), requirements on accessibility and convenient attendance, location, illumination, arrangement, identification, spacings, barriers, covers, grounding of covers, guarding current-carrying parts, and arrangement and location of fuses.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-31-B; 1942. Switchboard BD-15.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-910; 1937. Switchboard; Type BD-70.

*References.*—Controllers, resistors, fuses, see 714.11, 714.12, 714.2; instruments, instrument transformers, see 714.3, 713.5; circuit breakers, switches, see 714.51, 714.52; telephone panels, see 718.22; slate for electrical purposes, *see* 511.53; steel plates and sheets, see 604.1, 604.2; copper wire, see 715.44; definitions, symbols, standard voltages, methods of test, service standards, safety codes, *see* 710; relays, *see* 714.14.

## 714.5 SWITCHES AND CIRCUIT BREAKERS

### 714.50 General Items

American Society for Testing Materials, B182-43T; 1943. Tentative Method for Life Test of Electrical Contact Materials. Covers procedure for the determination of the life of materials used for electrical contacts.

Gives requirements for apparatus, power supply, preparation of test specimens, procedure, and report.

Electrical Standards Committee of the American Standards Assn., sponsor, C37.8. Proposed American Recommended Practice. Standard Rated Control Voltages. Manual, solenoid or motor operation. Table 5, direct current. Table 6, alternating current.

National Electrical Manufacturers Assn. Power Switchgear Assemblies Standards, 44-92; 1944. Provides practical information concerning construction, test, performance and manufacture of equipment for the control and protection of apparatus used for power generation, conversion, transmission, and distribution.

## 714.51 Circuit Breakers

American Institute of Electrical Engineers, 19; 1943. Alternating-Current Power Circuit Breakers. Applies to all indoor or outdoor types of alternating-current power circuit breakers rated in excess of 600 volts. Covers service conditions, definitions, construction, qualifying terms, rating, heating, and dielectric tests.

American Institute of Electrical Engineers, 20; 1930. Air Circuit Breakers. For indoor a.c. and d.c. air circuit breakers exclusive of enclosed types; definitions, rating, temperature limitations, and dielectric test requirements.

Assn. of Edison Illuminating Companies. Oil Circuit Breakers, 1939. Specifications apply to oil circuit breakers having rated interrupting capacities over 50,000 kva, both indoor and outdoor, and in the following voltage classes: (a) Indoor, under 34,500 volts and (b) outdoor, over 15,000 volts; conforms to latest standards of the American Institute of Electrical Engineers; requirements for power carrying circuit, arc-interrupting mechanism, insulation structure, opening and closing mechanisms, operating features, instrument transformers and wiring, supporting structure and tests.

Electrical Standards Committee of the American Standards Assn.. sponsor, C 37-4, Proposed American Standard. Alternating-Current Power Circuit-Breakers. Apply to all indoor and outdoor types of alternating-current power circuit-breakers rated in excess of 600 volts, service conditions, definitions, rating, heating, dielectric tests, and nameplate markings.

Electrical Standards Committee of the American Standards Assn., sponsor, C 37.6. Proposed American Recommended Practice. Schedule of Preferred Circuit-Breaker Ratings (Applicable to Oil Circuit-Breakers Only). Preferred interrupting ratings, 60-cycle ampere ratings and short time ampere ratings for oil circuit-breakers and metal-clad switchgear. Table 1, outdoor breakers. Table 2, indoor breakers.

Electrical Standards Committee of the American Standards Assn., sponsor, C37.7. Proposed American Recommended Practice. Operation Duty (Duty Cycle) for Standard and Reclosing Service Applicable to Oil Circuit-Breakers Only. Percentages for determining the interrupting rating for oil circuit-breakers at various operating duties. Table 3, oil-tight oil circuit-breakers. Table 4, nonoil-tight oil circuit-breakers.

Electrical Standards Committee of the American Standards Assn., sponsor, C37.9. Proposed American Recommended Practice. Test Code for Oil Circuit-Breakers (Applicable to Oil Circuit-Breakers Only). General considerations and recommendations relative to oil circuit-breakers, review of field tests, effects of laboratory characteristics and testing procedure, transient recovery voltages and transient recovery voltage rates, effect of power factor on circuit-breaker performance, interpretation of oscillograms, comparison of types of operations and tripping schemes upon circuit-breaker performance, current transformers and shunts for short-circuit measurements, bibliography.

National Board of Fire Underwriters. National Electrical Code, 1940. American Standards Assn., C1-1940. Circuit-Breakers. General structural and trip device requirements, location, approved applications, and current setting requirements, fuse and circuit breaker capacity requirements for lighting and appliance branch circuits and for motor circuits.

National Electrical Manufacturers Assn. Large Air Circuit Breaker Standards, 43-90; 1943. These standards provide practical information concerning manufacture, test, and performance of power circuit breakers.

National Electrical Manufacturers Assn. Power Circuit Breaker Standards, 43-91; 1943. Covers oil breakers including terminal bushings from 600-volts upward and in all interrupting ratings, attachments for these breakers, such as bushing current transformers, bushing potential devices, interlocks, etc. Air circuit breakers in excess of 1200 volts applied in a.c. circuits where oil circuit breakers are ordinarily used, and terminal bushings; attachments such as interlocks, under-voltage devices, shunt trips, etc. Also includes liquid circuit breakers other than oil.

Underwriters' Laboratories, Inc. Standard for Branch-Circuit and Service Circuit-Breakers, 1942. Covers circuit-breakers specifically designed to provide service-entrance, meter-service, or branch-circuit protection in accordance with the National Electrical Code. Gives requirements for frame and enclosure, corrosion protection, bases, current-carrying parts, operating mechanism, spacings, wiring space, barriers, performance, rating, marking, inspection of listed product, instructions to inspectors, labels, and inspection reports.

U. S. Gov., Army Air Forces. Specification 32449 (2); 1944. Circuit Breaker; Reverse-Current.

U. S. Gov., Army Air Forces. Specification 32502; 1944. Circuit Breaker; Three Pole, Type A-1, 400 Cycle, Aircraft.

U. S. Gov., Army-Navy Aeronautical Specification AN-C-77a; 1944. Circuit Breakers; Single Pole Non-Trip-Free.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specifications CAA-148. Circuit-Breaker for Radio Transmitter Control Switchboard.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specifications CAA-422. Circuit Breaker, Oil, Motor-Operated, Los Angeles Airports.

U. S. Gov., Dept. of Commerce, National Bureau of Standards H31; 1940. American Standards Assn., C2.1-1941. Safety Rules for the Installation and Maintenance of Electrical Supply Stations. Comprising part 1—for equipment of indoor and outdoor supply stations,

provided it is in separate rooms or enclosures, under control of properly qualified persons and accessible only to such persons. They also apply to similar equipment if installed in factories, mercantile establishments, vehicles, or elsewhere. Exceptions—if voltage does not exceed 150 volts to ground, and if voltage is not more than 550 volts between conductors and power utilized does not exceed 3,200 volts; and the grounding rules of the fifth edition, National Electrical Safety Code. For circuit-breakers (sec. 16), requirements on where automatic circuit-breakers are required, arcing or suddenly moving parts, grounding noncurrent-carrying parts, and guarding live parts.

U. S. Gov., Dept. of Commerce, National Bureau of Standards H33; 1940. American Standards Assn. C2.3-1941. Safety Rules for Installation and Maintenance of Electric Utilization Equipment. Comprising part 3—for 25- to 270-volt equipment which is accessible to other than qualified electrical operators; and the grounding rules of the fifth edition, National Electrical Safety Code. For circuit-breakers (sec. 32), requirements on accessibility, marking, installation, where required, character, disconnection before handling, arcing or suddenly moving parts, guarding live parts, and enclosures.

U. S. Gov., Navy Dept. Specification 17B1c; 1940. Circuit-Breakers; Air, Electric (Shipboard Use).

*References.*—Oil for oil circuit breakers, *see* 504.8; definitions, symbols, rating basis, standard voltages, methods of test, installation, service standards, safety codes, *see* 710; circuit breakers in conjunction with controllers, *see* 714.11; power switching and automatic switchgear equipment, metal clad switchgear, *see* 714.50.

## 714.52 Switches

American Institute of Electrical Engineers, 22; 1942. Air Switches and Bus Supports. Apply to all types of air switches and bus supports above 600 volts, for indoor or outdoor service, but not to air circuit-breakers. Definitions, classification, rating, temperature limitations, and dielectric test.

American Institute of Electrical Engineers, 27; 1942. Standards for Switchgear Assemblies. Cover assemblies of switchgear devices such as switches, interrupting devices, control, metering, protective and regulating equipment with associated interconnections and supporting structures.

American Standards Assn., C75.15-1944. Toggle Switches, American War Standard. Covers applicable specifications and drawings, classification, material and workmanship, general requirements and detail requirements; methods of sampling, inspection, and tests; packaging, packing, and marking for shipment; requirements applicable to individual government departments, notes and drawings.

National Board of Fire Underwriters. National Electrical Code, 1940. American Standards Assn., C1-1940. Switches. Open knife switches, spacing of parts and break distances for switches up to 600 volts, installation, mounting positions, method of connection, and operation requirements. Snap switches, material of sub-base, clearance of wires.

National Electrical Manufacturers Assn. Enclosed Switch Standards, 42-78; 1942. Covers air-break switches, having their current-carrying parts enclosed in metal cases, manually operable by means of external handles and enclosed switches with or without provision for plug or cartridge enclosed fuses. Gives general standards, performance, ratings, and marking.

Radio Manufacturers Assn. On-Off Switches, M4-600 to M4-604; 1932. Gives standard positions for on and off, vertical, horizontal, push-pull, and rotary switches.

Radio Manufacturers Assn. High Frequency Switches, M4-651 and M4-652; Rotary Circuit Switches, M4-661 to M4-679; and Push Button Circuit Switches, M4-691 to M4-698; 1941. For radio receivers, standard diameter of shaft extension, tolerance, set-screw and push-on types, and length of flats; mounting bushings and nuts, locking projections, size, and location.

Underwriters' Laboratories, Inc. Standard for Construction and Performance Under Test of Elevator Hoistway Electrical Limit Switches, 1922. Minimum requirements for hoisting limit switches which are in the control circuit of electric elevators. Design and construction, practicability, durability, strength, reliability of operation, fire and accident prevention features, and uniformity.

Underwriters' Laboratories, Inc. Standard for Enclosed Switches, 1936. Covers air-break hand operated, enclosed switches used in accordance with the National Electrical Code. Cast or sheet metal boxes, doors, latches, operating mechanism, insulation, fusing, sizes, performance, heating, overload, endurance, rating, marking, and dielectric strength.

Underwriters' Laboratories, Inc. Standard for Knife Switches, 1939. Covers open knife switches for use in accordance with the National Electrical Code. Covers switches with or without fuse-holders; switches having individual bases designed for either front or rear wiring connection; and switch parts without bases designed for mounting on switchboards and panelboards. Switches may be single- or multi-pole, and with or without quick-break or auxiliary contacts, except where such contacts are specifically required. Bases, current-carrying parts, spacings, performance, rating, marking, and inspection of listed product.

U. S. Gov., Army-Navy Aeronautical Specification AN-S-7; 1943. Switches; Generator Control Relay.

U. S. Gov., Army-Navy Aeronautical Specification AN-S-20a-1; 1945. Switches; Aircraft Toggle.

U. S. Gov., Army-Navy Aeronautical Specification AN-S-39a; 1944. Switches; Low Travel Limit.

U. S. Gov., Army-Navy Aeronautical Specification AN-S-42-1; 1944. Switches; Generator Control Relay (Differential).

U. S. Gov., Army-Navy Aeronautical Specification AN-S-45; 1944. Switches; Voltmeter Selector.

U. S. Gov., Army-Navy Aeronautical Specification AN-S-47; 1944. Switches; Shielded Ignition.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specifications CAA-264. Control Panel; Teletype.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specifications CAA-489. Control Switch; Light Sensitive.

U. S. Gov., Dept. of Commerce, National Bureau of Standards H31; 1940. American Standards Assn., C2.1-1941. Safety Rules for the Installation and Maintenance of Electrical Supply Stations. Comprising part 1—for equipment of indoor and outdoor supply stations, provided it is in separate rooms or enclosures, under

control of properly qualified persons and accessible only to such persons. Also apply to similar equipment if installed in factories, mercantile establishments, vehicles or elsewhere. Exceptions—if voltage does not exceed 150 volts to ground, and if voltage is not more than 550 volts between conductors and power utilized does not exceed 3,200 volts; and the grounding rules of the fifth edition, National Electrical Safety Code. For switches (sec. 16), requirements on accessible and indicating, oil switches, where switches are required, capacity, arcing or suddenly moving parts, grounding noncurrent carrying metal parts, and guarding live parts.

U. S. Gov., Dept. of Commerce, National Bureau of Standards H33; 1940. American Standards Assn., C2.3-1941. Safety Rules for the Installation and Maintenance of Electric Utilization Equipment. Comprising part 3—for 25- to 270-volt equipment which is accessible to other than qualified electrical operators; and the grounding rules of the fifth edition, National Electrical Safety Code. For switches (sec. 32), requirements on accessibility, marking, installation, special circuits, control, hazardous locations, where required, character, disconnection before handling, arcing or suddenly moving parts, grounding noncurrent-carrying metal parts, guarding live parts, enclosed air-break switches (not including snap switches), and control equipment.

U. S. Gov., Federal Specification W-S-871; 1935. Amendment 1; 1936. Switches; Knife, Open-Type, Front and Rear-Connected. Covers two types—A, heavy duty knife switch of milled and machine-made built-up construction; and C, medium duty knife switches made from punched and bent-up parts, front and rear connected, mounted on individual bases. Gives detail requirements; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking. Emergency Alternate Federal Specification E-W-S-893; 1942 (issued by Procurement Div., Treasury Dept., U. S. Gov.), changed detail requirements.

U. S. Gov., Joint Army-Navy Specification JAN-S-57; 1944. Switches; Vacuum.

U. S. Gov., Navy Dept. Specification 17C16b; 1944. Contact-Makers; Motor-, Pressure-, and Temperature-Operated, Interior-Communication and Fire-Control.

U. S. Gov., Navy Dept. Specification 17S13a; 1935. Switches; Toggle, Low-Voltage (Aircraft Use).

U. S. Gov., Navy Dept. Specification 17S16a; 1944. Switching Equipment; Bus-Transfer, Magnetically and Manually Operated.

U. S. Gov., Navy Dept. Specification 17S18b; 1941. Switches; Electric, Hand-operated, Miscellaneous Special-Purpose Designs.

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-350; 1943. Switch; Selector, Diaphragm Actuating, Type A-2, Manually Operated.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 89-7700; 1944. Switches; Rotary Stepping, Submarine Mine.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-801B; 1936. Disconnector; Type PL-53, Aircraft Headset Cord.

*References.*—Lighting snap switches, *see* 715.22; magnetic switches, knife switches, and contactors in conjunction with controllers, *see* 714.11; switch boxes and inclosures, *see* 715.12; slate for electrical purposes, *see* 511.53; porcelain for electrical purposes, *see* 532.22; definitions, symbols, rating basis, standard voltages, methods of test, service standards, safety codes, *see* 710; power switching and automatic switchgear equipment, metal clad switchgear, *see* 714.50.

## 715. TRANSMISSION AND DISTRIBUTION APPARATUS

### 715.1 CONDUITS AND SWITCHBOXES

### 715.11 Electric Conduit, Wire Raceways, And Fittings

Aeronautical Chamber of Commerce of America, Inc. National Aircraft Standard NAS 52; 1942. Conduit Assembly—Electrical, Shielded, Flexible. Gives drawings with dimensions and notes. Developed by National Aircraft Standard Committee.

American Transit Assn. Recommended Specification and Form of Contract for Electrical Conduit Construction, D121-41; 1941. Gives a general statement concerning underground electrical conduit manholes, fireproofing of cables, cable racks, damage due to cable failure, and gives recommendations for proposal sheet, contract, general conditions of contract, specifications for materials, construction, appendix covering tile duct, and appendix covering fibre duct.

Assn. of American Railraods, Operations and Maintenance Dept., Engineering Div., Signal Section. Manual of Recommended Practice, 1944. Specification for Fibre Conduit. The recommended specification for fibre conduit is current Federal Specification for Conduit and Fittings; Fiber Bituminized. Type I, to be encased in concrete; and type II, not to be encased in concrete.

Assn. of American Railroads, Operations and Maintenance Dept., Engineering Div., Signal Section. Manual of Recommended Practice. Specification 36-13; 1913. Steel Pipe Conduit. General quality of soft steel conduit, dimensions according to Briggs standard for pipe, bends, coating requirements, tension, hydrostatic and flattening tests, acid test for enamel, zinc coatings, etc.

Assn. of American Railroads, Operations and Maintenance Dept., Engineering Div., Signal Section. Manual of Recommended Practice. Specification 37-13; 1913. Wrought Iron Pipe Conduit. Fabrication from hand-puddled pig iron without scrap, follows Briggs standard for pipe; pipe coating, fittings, tensile strength, galvanizing, enamel, and marking.

Assn. of American Railroads, Operations and Maintenance Dept., Engineering Div., Signal Section. Manual of Recommended Practice. Specification 57-39; 1939. Trunking and Capping. For wood trunking and capping used as conduit for insulated wire, in railway signal service. Size and finish, Norway, yellow pine, cedar, cypress and redwood, lists defects, etc.

International Municipal Signal Assn., Inc. Equipment Specification 104; 1942. Fibre Conduit, Fittings and Bends. Covers underground conduit for installation in ground with or without concrete encasement. Material furnished under this specification shall be in accordance with Federal Specifications W-C-581. Gives requirements for type, sizes and dimensions, material and workmanship, and conduit.

International Municipal Signal Assn., Inc. Equipment Specification 105; 1942. Surface Metal Raceways. Covers inside building wiring and shall apply to surface metal raceways for use in fire stations, police stations, and other places where extensions to the municipal signaling circuits are made and which is recommended in lieu of open wiring of such systems. Gives requirements for definitions, classification, material and workmanship, methods of sampling, inspection and tests, packaging, packing and marking, and notes.

National Board of Fire Underwriters. American Standards Assn., C1-1940. National Electrical Code, 1940. Construction dimensions and number of conductors permitted for rigid and flexible conduit and raceways. Installation and accessories.

National Electrical Manufacturers Assn. Conduit Fittings, Cable Fittings, and Accessories Standards, 42-80; 1942. The manufacturing, material and performance requirements of electrical raceway fittings and cable fittings. Covers fittings for rigid conduit, flexible metallic conduit, electric metallic tubing, oval tubing, service entrance cable, armored cable, and nonmetallic sheathed cable.

Society of Automotive Engineers. 1944 Handbook, Section 4—Fabricated Materials. S.A.E. Recommended Practice for Nonmetallic Conduit. Revised, 1932. Reviewed, 1936. General information, construction, dimensions, saturation, tensile requirements, finish, tests, and fireproofing.

Underwriters' Laboratories, Inc. Standard for Electric Metallic Tubing, 1942. Covers electrical metallic tubing for use as a metal raceway for the installation of wires and cables in accordance with the National Electrical Code. Includes requirements for tube, protective coatings (zinc and enamel), dimensions and weight, elbows and bends, finished product, marking, inspection of listed product, labels, and inspection reports.

Underwriters' Laboratories, Inc. Standard for Electrical Fittings for Use in Hazardous Locations; Class I, Group D, 1941. Applies to electrical fittings such as conduit boxes for housing of conductors, terminals, and splices, conduit unions, fixture fittings, and conduit fittings, for sealing, for use in class I locations as defined in article 500 of the National Electrical Code. Material, strength, joints, bolt spacing and location, connections, marking, explosion tests, hydrostatic tests, and inspection of listed products.

Underwriters' Laboratories, Inc. Standard for Flexible Nonmetallic Tubing, 1939. Covers flexible nonmetallic tubing to be employed as a mechanical protection to insulated wires in accordance with the rules of the National Electrical Code. Materials and assembly, double-wall tubing, sizes, tension, moisture absorption, flame-retardant properties, kinking and flattening, flexibility, dripping of compound, marking, and inspection of listed product.

Underwriters' Laboratories, Inc. Standard for Flexible Steel Conduit, 1938. Covers flexible steel conduit designed for use as a metal raceway in the installation of wires and cables in accordance with the National Electrical Code. Gives requirements for strip material, interior surfaces, internal diameter, external diameter, weight of conduit, zinc coating, tension, flexibility, marking, inspection of listed product, instructions to inspectors, labels, and inspection reports.

Underwriters' Laboratories, Inc. Standard for Rigid Steel Conduit, 1942. Covers rigid steel conduit for use as metal raceway for the installation of wires and cables in accordance with the National Electrical Code. Gives requirements for tube, protective coatings, threading and reaming, straight conduit, nipples, elbows and bends, couplings, finished product, identification of conduit, marking, instructions to inspectors, labels, and inspection reports.

Underwriters' Laboratories, Inc. Standard for Surface Metal Raceways and Fittings, 1940. Covers metal raceways and fittings for surface wiring for use in accordance with the National Electrical Code. Design and construction, material, dimensions, fittings, corrosion protection, electrical conductivity, installation, marking, and inspection of listed product.

Underwriters' Laboratories, Inc. Standard for Underfloor Raceways and Fittings, 1943. Covers metallic and nonmetallic underfloor duct system wiring in accordance with the National Electrical Code. Gives conditions for general requirements, metallic duct, nonmetallic duct, boxes and fittings, installation accessories and instructions, inspection of listed product, labels, inspection reports, and field inspection.

Underwriters' Laboratories, Inc. Standards for Wireways, Auxiliary Gutters, and Associated Fittings. Does not cover rigid or flexible conduit, surface raceways, or underfloor raceways. Gives general requirements, design and construction (including material, thickness of metal, flanges and reinforcing strips, knockouts, covers, hinges and latches, supports, and corrosion protection), and inspection of listed product (including general, labels, cost of service, necessary co-operation from the manufacturer, use of name of Underwriters' Laboratories, Inc., test equipment at the factory, and instructions to inspectors).

U. S. Gov., Federal Specification W-C-571; 1942. Conduit and Fittings; Asbestos-Cement (for) Electrical Purposes. Covers two types—(I) for use encased in concrete after installation and (II) for use without encasement in concrete. Sizes, 2, 2 1/2, 3, 3 1/2, 4, 4 1/2, 5, and 6 in. Gives requirements for lengths, thickness of wall, flexural strength and crushing strength; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification W-C-581; 1939. Conduit and Fittings; Fiber, Bitumized. Covers two types—(I) for use encased in concrete (sizes 1, 1 1/2, 2, 2 1/2, 3, 3 1/2, 4, 4 1/2, 5, and 6 in.), and (II) for use without encasement in concrete (sizes 1 1/2, 2, 2 1/2, 3, 3 1/2, 4, 4 1/2, and 5 in.). Gives requirements for material, workmanship, bore, joints, length and wall thickness, water absorption, chemical properties, boiling, heat resistance, crushing strength, beam strength, and impact strength; methods of inspection and tests; and requirements for packing and marking for shipment.

U. S. Gov., Federal Specification W-F-106; 1937. Amendment 1; 1941. Fittings; Cable and Conduit. Covers six types—for rigid steel conduit, electrical metallic (steel) tubing, for armored cable, for oval steel tubing, for service-entrance cable, and for nonmetallic sheathed cable; and the following classes—bar hangers, bar hanger assemblies, connectors (for cable, for armored and flexible metallic conduit, and for nonmetallic sheathed cable), conduit lock nuts, conduit bushings, capped conduit bushings, conduit unions, bush nipples (chase type), conduit straps and clamps, fixture studs, fixture hickeys, fixture extensions, entrance caps, entrance elbows, insulated and fittings, grounding and bonding fittings, conduit reducers and enlargers, conduit angle adopters, conduit entrance ells, threadless fittings, and oval-tubing fittings. Covers fittings of trade sizes-3/8, 1/2, 1, 1 1/4, 3/4, 1 1/2, 2, 2 1/2, 3, 3 1/2, 4, 4 1/2, 5, and 6 in. Gives detail requirements for each type and class; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Federal Specification W-F-406; 1937. Amendment 2; 1944. Fittings; Cable and Conduit. Covers 6 types—rigid steel conduit, electrical metallic (steel) tubing, armored cable, oval steel tubing, service-entrance cable, and nonmetallic sheathed cable; 22 classes; and 14 sizes. Gives requirements for material, workmanship, and details for each type, class, and size; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., Federal Specification W-R-32; 1942. Raceways and Fittings; Metallic, Surface. Covers one type in three sizes. Gives requirements for material, workmanship, design, wall thickness, length, supports, fastenings, connections, fittings, corrosion protection, zinc and enamel coatings, electrical conductivity, and marking; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification W-R-36; 1937. Raceways and Fittings; Metallic, Underfloor. Covers metallic underfloor duct system designed for use as raceways for the installation of wires and cables. Gives requirements for size, material and workmanship, ducts, installation of metallic duct, inserts, protective coating of ducts and preset inserts, junction boxes, fittings, duct supports, protective coating for boxes and fittings, and marking; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., Federal Specification W-R-41; 1937. Raceways and Fittings; Non-Metallic, Under-floor. Covers duct systems of closed and open-bottom types designed for use as raceways for the installation of wires and cables. Gives requirements for sizes, material and workmanship, nonmetallic duct, installation of nonmetallic duct, inserts, junction boxes, fittings, duct supports, protective coating for boxes and fittings, and marking; methods of sampling, inspection and tests; and packaging, packing, and marking.

U. S. Gov., Federal Specification WW-C-566; 1941. Conduit; Steel, Flexible. Stipulates compliance with Underwriters' Laboratories "Standard for Flexible Steel Conduit." Gives requirements for types, sizes, material and workmanship, thickness, internal diameter, weight, corrosion protection, strength, and flexibility; methods of sampling, and tests; packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification WW-C-571; 1933. Conduit; Steel, Rigid, Enameled. Gives requirements for enamel coating, threading and reaming, couplings, length, weight, wall thickness, pitch of threads, variation in length of thread, taper of threads, and fittings; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Federal Specification WW-C-581a; 1935. Amendment 2; 1939. Conduit; Steel, Rigid, Zinc-Coated. Gives requirements for material, workmanship, zinc-coating, threading and reaming, couplings, length, weight, wall thickness, pitch of threads, variation in length of thread, taper of threads, fittings, and elbows and nipples; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., Federal Specification WW-T-806a; 1935. Amendment 1; 1944. Tubing; Electrical, Metallic. Gives requirements for material, workmanship, zinc coating, dimensions, and tolerances; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-313A; 1925. Conduit; Fiber, for Underground Wires and Cable.

## 715.12 Switch Boxes, Outlet and Junction Boxes, Cabinets

Assn. of American Railroads, Telegraph and Telephone Section, 2-G-21; 1926. Metal Boxes. Design and construction of boxes for test panel, resistance, terminal, and protector cabinets; gage of sheet metal based on size of box, hardware, and finish requirements for hinged cover and lift-off cover boxes.

Assn. of American Railroads, Telegraph and Telephone Section, 2-G-70; 1932. Metal Battery Cabinets ARA-6-A and ARA-7-A. Gives general requirements, material and workmanship, dimensions, inspection and tests, packing, marking, and warranty.

National Board of Fire Underwriters. National Electrical Code, 1940. American Standards Assn., C1-1940. Boxes, Cabinets, and Outlet and Terminal Fittings. Requirements for protective coatings, minimum thickness of metal on small boxes, construction and required clearances of current carrying parts for cabinets and cutout boxes of metal or lined wood, minimum depth of outlet boxes, installation requirements of boxes, cabinets, outlet and terminal fittings.

National Electrical Manufacturers Assn. Distribution Cutout Standards 38-53; 1938. Gives requirements for rating standards, performance, mounting and

assembly, test manufacture, brown porcelain insulators, dimensions of fuse links, and classification of insulating materials for enclosed and open type cutouts. Change (Sept. 9, 1942) for duration of emergency reduced overall length of universal fuse links (0 to 15 kv) for distribution cutouts from 23 to 20 in. (minimum).

National Electrical Manufacturers Assn. Distribution Cutout and Power Fuse Standards, 44-93; 1944. Gives rating standards, performance standards, application standards, and manufacturing standards for distribution cutouts, fuse links, and power fuses; definitions including general, parts, classification by construction, mounting and operation, rating, performance and test, and miscellaneous; and instructions for the installation, operation, and care of distribution cutouts and power fuses.

Underwriters' Laboratories, Inc. Requirements for Cabinets and Cutout Boxes, 1941. For enclosures either surface or flush mounted provided with swinging doors, to be used in accordance with the National Electrical Code. Covers cast and sheet metal boxes, outdoor use, hinges, latches, knockouts, labels, etc.

Underwriters' Laboratories, Inc. Standard for Outlet Boxes and Fittings, 1941. Covers outlet boxes, armored cable boxes, conduit boxes, flexible nonmetallic boxes, floor outlet and flush device boxes, junction boxes, nonmetallic sheathed cable boxes, pull boxes, extension rings, and covers. Requirements as to strength and rigidity of material, corrosion, support, connection, grounding, studs, clamps and fasteners, weatherproof boxes, and marking. This standard was approved as American standard C33a-1929 by the American Standards Assn.

Underwriters' Laboratories, Inc. Standard for Service Equipment, 1936. Addenda, 1940. Includes service-entrance switches, meter-service switches, service circuit-breakers, meter test blocks, and combinations with branch circuit fuses and circuit breakers. Enclosures, cast and sheet metal, operating mechanism, switches, current carrying parts, disconnecting means, fusing, capacity, spacings, wiring space, barriers, grounding, performance, overload, endurance, dielectric strength, rating, voltage and current, and marking.

Underwriters' Laboratories, Inc. Standard for Underfloor Raceways and Fittings, 1943. Covers metallic and nonmetallic underfloor duct system wiring in accordance with the National Electrical Code. Gives conditions for general requirements, metallic duct, nonmetallic duct, boxes and fittings, installation accessories and instructions, inspection of listed product, labels, inspection reports, and field inspection.

U. S. Gov., Army Air Forces. Specification 32321 (2); 1942. Cabinet; Power Control.

U. S. Gov., Army-Navy Aeronautical Specification AN-C-59a-1; 1943. Cubicle; Manual Transfer Primary Switch 300/100 KVA.

U. S. Gov., Army-Navy Aeronautical Specification AN-C-60a-1; 1943. Cubicle; Automatic Transfer Primary Switch 300/100 KVA.

U. S. Gov., Army-Navy Aeronautical Specification AN-C-109; 1944. Cabinet and Relay Assembly: Runway Selector.

U. S. Gov., Army-Navy Aeronautical Specification AN-C-123; 1944. Cabinet and Relay Assembly; Distribution.

U. S. Gov., Army-Navy Aeronautical Specification AN-S-48-1; 1945. Switch Boxes; Caging, for Gyro Flux Gate Compass.

U. S. Gov., Federal Specification W-B-616; 1938. Amendment 1; 1944. Boxes and Outlet-Fittings, Floor; (for) Rigid-Steel-Conduit and Electric-Metallic-Tubing (Steel). Covers four types—(I) adjustable floor boxes, (II) semiadjustable floor boxes, (III) nonadjustable floor boxes, and (IV) floor-outlet fittings; and three classes—(A) watertight (universal), (B) watertight (embedded in concrete), and (C) surface-tight. Gives requirements for sizes, material, workmanship, bodies, cover plates, floor-outlet fittings, and marking; methods of sampling, inspection, and tests; and packing and marking for shipment.

U. S. Gov., Federal Specification W-O-806; 1937. Amendment 1; 1944. Outlet-Bodies; Iron (Cast or Malleable), Cadmium or Zinc-Coated, With Covers and Accessories (for Shore Use). Includes several types, such as bodies primarily intended to provide turns, offsets, and branches in rigid steel conduit and electrical metallic steel tubing systems, but which may be used as wire outlets or as mountings for lamp receptacles, rosettes, convenience outlets, and to enclose wire splices, etc; and also bodies for mounting or enclosing surface-wiring devices. Gives requirements for classes, sizes, material and workmanship, and detail requirements; methods of sampling, inspection, and test; and packaging, packing, and marking.

U. S. Gov., Federal Specification W-O-821a; 1937. Amendment 2; 1944. Outlet Boxes, Steel, Cadmium or Zinc-Coated, With Covers and Accessories. Covers one type with extension rings, clamps, and fasteners, either fabricated so that boxes can be ganged, or formed in one piece. Gives requirements for classes, sizes, material and workmanship, and details; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 89-2050; 1933. Box, Junction, for 1-Conductor Submarine Mine Cable.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-65-A; 1927. Switchbox, Types BE-45, BE-46; and BE-47, for Telephone Circuits.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-92; 1921. Junction Boxes; Types JB-3 and JB-5.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-107B; 1931. Switchbox; Type BC-117, Cut-Out.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-284B; 1937. Switchbox; Type BE-54A.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-536A; 1930. Junction Box; Type JB-14, Telephone.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-698; 1936. Junction Box; Type TM-170A.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-701; 1934. Switchbox; Type BE-60, Telephone Switching.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-871B; 1941. Switchbox; Type BC-345, Filter.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-893; 1940. Switchbox; Type BC-363, Interphone.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-974; 1941. Switchbox; BE-73.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-991; 1941. Cabinet; Type BE-79, Main Distributing Frame.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-1000A; 1943. Junction Boxes; JB-19 and JB-80.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-1001; 1941. Cabinet; Type BE-75, Telephone Power.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-1018; 1942. Cabinet; BE-72, Test and Power Distribution.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-1146; 1942. Switchbox BC-705.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-1662A; 1944. Antenna Cords and Junction Boxes, for Radio Direction Finder Central TC-8 and Radio Intercept Central TC-9.

*References.*—Inclosures for inclosed switches, *see* 714.52; zinc coatings, *see* 600.3; cast iron, cast brass, cast bronze, *see* 611.11, 645.21, 646.41; steel sheets, *see* 604.22, 604.23.

### 715.13 Flexible Tubing for Wire Protection

Underwriters' Laboratories, Inc. Coated-Fabric Insulating Tubing, 1942. Covers fabric-base insulating tubing (varnished or lacquer-coated) to be used only for the interval wiring of devices and appliances, rated at 600 volts or less. Gives requirements for base material, wall thickness, dielectric strength, aging test, and flame test.

Underwriters' Laboratories, Inc. Standard for Underfloor Raceways and Fittings, 1943. Covers metallic and nonmetallic underfloor duct system wiring in accordance with the National Electrical Code. Gives conditions for general requirements, metallic duct, nonmetallic duct, boxes and fittings, installation accessories and instructions, inspection of listed product, labels, inspection reports, and field inspection.

U. S. Gov., Army Air Forces. Specification 32012-C (1); 1940. Tubing; Flexible, Nonmetallic Oil-Proof.

U. S. Gov., Federal Specification HH-T-791a; 1940. Tubing; Flexible, Nonmetallic. Covers tubing to be employed as a mechanical protection to insulated wires and cables. Must comply with all requirements of Underwriters' Laboratories. Gives table of sizes; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., U. S. Army, Corps of Engineers. Specification 84-6A; 1930. Tubing; Nonmetallic, Flexible.

## 715.2 SOCKETS, RECEPTACLES, LIGHTING SWITCHES, ROSETTES

### 715.21 Sockets, Receptacles, Plugs

American Institute of Electrical Engineers, 21; 1941. Apparatus Bushings (Proposed A. I. E. E. Standard and Proposed Test Code). Covers proposed standard service conditions, rating, definitions, heating, dielectric tests, and name-plate markings; and proposed test code classification of bushing tests and test procedure.

American Society of Mechanical Engineers, joint sponsor with National Electrical Manufacturers Assn. American Standards Assn., C44-1931. Rolled Threads for Screw Shells of Electric Sockets and Lamp Bases. For miniature, candelabra, intermediate, medium, and mogul types, standard pitch, dimensions, shape of threads, gage tolerances.

Assn. of American Railroads, Mechanical Div., Electrical Section. Manual of Standard and Recommended Practice, 1940. Charging Receptacles. Recommends 100- and 150-ampere capacity battery charging receptacles, location, description, and diagrams; charging plugs necessary, diagrams, and construction.

Assn. of American Railroads, Mechanical Div., Electrical Section. Manual of Standard and Recommended Practice, 1941. Plugs and Receptacles; Standby Service. Covers phase rotation, plugs and receptacles for use in yard and station standby service with 3-phase, 60-cycle power. All standby motors on air conditioned cars shall be connected for operation on 220-volt, 3-phase, 60-cycle power.

Assn. of American Railroads, Operations and Maintenance Dept., Engineering Div., Electrical Section. Manual of Recommended Practice, 1942. Plugs and Receptacles for Standby Service. Proper phasing of 220-volt, 60-cycle, 3-phase wayside receptacles for use with air conditioning facilities, and adopts the latest revision of phase rotation, plugs, and receptacles for use in yard and station standby service with 3-phase, 60-cycle power, of the Mechanical Div., Electrical Section, designated as Plugs and Receptacles, Standby Service, Section C of the Manual of that section.

National Board of Fire Underwriters. National Electrical Code, 1940. American Standards Assn., C1-1940. Lamp Holding Devices and Plug Receptacles. Classification of lamp sockets, rating method of operation, general construction requirements, installation requirements for sockets, attachment plugs, and receptacles.

National Electrical Manufacturers Assn., sponsor. American Standards Assn., C73-1941. Attachment Plugs and Receptacles. Deals with interchangeable separable attachment plugs, receptacles and connectors to be employed in electric light, heat and power circuits, under the conditions of installation and use prescribed by the National Electric Safety Code. Devices for special application are not to be judged by this standard.

Underwriters' Laboratories, Inc. Standard for Attachment Plugs and Receptacles, 1942. Covers attachment plugs and receptacles, cord connectors, some forms of current taps, and flatiron and appliance plugs for use in accordance with National Electrical Code. Gives requirements for materials, current-carrying parts, terminals, female contacts, assembly, overload, attachment plugs, cord connectors, receptacles, current taps, flatiron and appliance plugs, rating, marking and inspection of listed product.

Underwriters' Laboratories, Inc. Standard for Edison-Base Lamp Holders, 1941. Covers Edison-base lamp holders to be employed in accordance with the National Electrical Code. Enclosure, lining, interior, assembly, special features applying to particular types of lamp-holders, performance, rating, marking, and inspection of listed product.

Underwriters' Laboratories, Inc. Standard for Electrode Receptacles for Gas-Tube Signs, 1940. Material, mounting, drainage, current-carrying parts, spacings, dielectric strength, rating, marking, and inspection of listed product.

U. S. Gov., Dept. of Commerce, National Bureau of Standards Handbook H28, 1944. Screw-Thread Standards for Federal Services. Presents complete dimensional data upon which specifications may be based for threaded products for government requirements. Includes terminology (definitions and symbols); American National rolled threads for screw shells of electric sockets and lamp bases (form of thread, thread series, and gages); and appendixes containing supplementary information of both a general and a technical nature, including such specifications as are not intended to be mandatory.

U. S. Gov., Federal Specification W-R-151; 1934. Amendment 5; 1944. Receptacles (Convenience Outlets); Attachment Plugs, Current Taps, and Connectors. Covers receptacles of 10-ampere 250-volt, 15-ampere 125-volt size, double-pole shall be of double-T-slot duplex type. Gives requirements for classification, sizes, and details; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., Navy Dept. Specification 17C15b; 1944. Caps, Attachment-Plug, Separable, for Connection to Flexible Electrical Conductors.

U. S. Gov., Navy Dept. Specification 17S4f; 1944. Sockets; Weatherproof.

U. S. Gov., Navy Dept. Specification 17S17; 1940. Sockets; Electric-Lamp for Shipboard Use.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-805F; 1943. Plug PL-54, PL-55, PL-124, PL-125, and PL-354; 2-Conductor.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-807C; 1941. Plug; Type PL-68, 3-Conductor, Microphone.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-853B; 1938. Plug; Cable Connector, Aircraft.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-1005; 1941. Plug and Socket.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-1119; 1942. Plug, PL-155, 2-Contact, Right-Angled; and Plug PL-168, 3-Contact, Right-Angled.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-1169; 1942. Plug PL-179; Magnetic Microphone-Headset.

*References.*—Sockets for radio vacuum tubes, *see* 718.69; telephone and radio plugs and jacks, *see* 718.21, 718.69; lamp holders for Christmas tree lighting outfits, *see* 716.39.

## 715.22 Lighting Switches

Underwriters' Laboratories, Inc. Standard for Knife Switches, 1939. Covers open knife switches for use in accordance with the National Electrical Code. Covers switches with or without fuse holders; switches having individual bases designed for either front or rear wiring connection; and switch parts without bases designed for mounting on switchboards and panelboards. Switches may be single- or multipole, and with or without quick-break or auxiliary contacts, except where such contacts are specifically required. Bases, current carrying parts, spacings, performance, rating, marking, and inspection of listed product.

Underwriters' Laboratories, Inc. Standard for Snap Switches, 1941. Covers manually operable snap switches to be employed on light and power circuits in accordance with the National Electrical Code. Does not cover switches rated at more than 30 amperes at 600 volts; switches rated at more than two horsepower at 600 volts or less; nor switches having a potential rating of less than 50 volts unless in conjunction with a rating of 125 or 250 volts. Enclosure, lining, bushings and strain relief, bases and bodies, sealing, current-carrying parts, insulating material, actuating members, assembly, performance rating, marking, and inspection of listed product.

U. S. Gov., Dept. of Commerce, National Bureau of Standards H33; 1940. American Standards Assn., C2.3-1941. Safety Rules for the Installation and Maintenance of Electric Utilization Equipment. Comprising part 3—for 25-to 270-volt equipment which is accessible to other than qualified electrical operators; and the grounding rules of the fifth edition, National Electrical Safety Code. For lighting switches (sec. 32), requirements on accessibility, marking and installation, special circuits, control, hazardous locations, where required, character, disconnection before handling, arcing or suddenly moving parts, enclosed air-break switches (not including snap-on), and control equipment.

U. S. Gov., Federal Specification W-S-890; 1944. Switches; Snap, Miscellaneous. Covers one grade. Must be acceptable to Underwriters' Laboratories, Inc., regarding fire and casualty hazards. Gives requirements for types, classes, circuits, ratings, material, workmanship, general design, assembly, enclosures, current-carrying parts, terminals, operating mechanisms, position indication marking, ratings, color, finish, marking, and details; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification W-S-893; 1943. Amendment 3; 1944. Switches; Snap, Multiple Type and Combination Devices, Flush Type with Wall Plates. Covers one type—multiple-type flush snap switches designed for mounting one or more switch units on a single yoke, and combination devices, for mounting in a single gang switch box flush with the wall or other enclosures and with wall plates as specified. Gives requirements for classification, sizes, bases, wall plates, current-carrying parts, mounting and marking; methods of sampling, inspection and tests; and packaging, packing, and marking.

U. S. Gov., Federal Specification W-S-896; 1934. Amendment 3; 1944. Switches; Snap, Single-Unit, Interchangeable Flush-Type With Wall Plates. One type only of the tumbler and toggle class. Gives

requirements for sizes, material, construction, wall plates, current-carrying parts, marking, ratings, and mounting; method of sampling, inspection, and tests; and packaging, packing, and marking.

*References.*—Knife and other type switches, *see* 714.52; automobile lighting switches, *see* 722.32; definitions, symbols, standard voltages, service standards, *see* 710.

### 715.23 Rosettes

## 715.3 WIRING AND WIRING SUPPLIES

### 715.30 General Items

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering, 1942. Specifications for Buildings for Railroad Purposes; Electric Light Wiring. Gives requirements for conduits, wires, joints, outlet boxes, service switches and cabinets, local switches, fuses, wiring systems, and guarantee.

American Transit Assn. Recommended Practice for Trolley Bus Base and Motor Designation, E127-31; 1931. In wiring trolley buses or reading wiring diagrams for same, the left hand trolley base should be considered as positive. The left hand base is the one on the closed side of the bus. The motor on the right hand or open side of the bus should be designated as No. 1. Where motors are placed in tandem the front motor should be designated as No. 1.

American Transit Assn. Recommended Rules for Wiring of Electric Cars, Trolley Buses and Locomotives, E143-39; 1939. These rules are identical with section 1 of the Regulations of the National Board of Fire Underwriters for Electric Cars and Trolley Buses, including houses and yards. The rules referred to in this specification cover electrical installations, wiring methods, trolley buses, protection of main power circuits, wires and cables, main motors and controls, lighting, electric heating, signaling circuits, storage batteries, and lightning protection for cars.

Assn. of American Railroads, Operations and Maintenance Dept., Engineering Div., Signal Section. Manual of Recommended Practice. Specification 119-42, 1943. Wiring. For the purpose of providing installation of wire and cable. Covers drawings, material and workmanship, clearances, common return wire, wire terminals, tagging, line construction, ground leads, cable for direct earth installation, track circuit bonding, inspection, and tests.

Assn. of American Railroads, Telegraph and Telephone Section, 1-A-23; 1927. Specification for Dynamometer Testing of Copper Wire. For determining fitness for further use on the line, general causes of defects, and method of measuring stress for location of weakened portions of old line wire.

Assn. of American Railroads, Telegraph and Telephone Section, 2-H-7; 1932. Wire and Cable Distribution in Offices and Buildings. Description and illustrations of standard elements involved in communication and other wiring of office buildings. Includes entrance, riser shafts, distributing cabinets, underfloor distributing systems, floor outlets, and raceways.

Assn. of American Railroads, Telegraph and Telephone Section, 2-K-6; 1924. Specification for Soldering Inside Plant. Sequence of operations, materials and tools necessary, and description of method with precautions for use of electric irons and torches.

Associated Factory Mutual Fire Insurance Companies. Specifications for Gravity Water Tanks and Steel Towers, Volume 1. Structural Details; 1938. For buildings supporting tanks, requirements as to footings on brick supporting walls, design for anchorage, allowable bearing pressures for supports of various building materials. Concrete buildings according to A.S.T.M. specifications for concrete.

Edison Electric Institute, Illuminating Engineering Society, International Assn. of Electrical Inspectors, National Electrical Contractors Assn., National Electrical Manufacturers Assn., National Electrical Wholesalers Assn., and Radio Manufacturers Assn., sponsors. Handbook of Interior Wiring Design, 1937. Surveys the field of wiring adequacy for buildings. Treats of the electrical needs of the residence, factory, office or store; interprets modern practice in installing wiring; conforms with the requirements of the American Standard Codes set-up for fire prevention and personal safety.

National Board of Fire Underwriters. National Electrical Code, 1940. American Standards Assn., C1-1940. Outside Supply Conductors. Clearances for overhead lines, number of services per building, insulation, protection and clearance of service wires, entrance service wiring and entrance switch installation requirements, grounding.

National Board of Fire Underwriters. National Electrical Code, 1940. American Standards Assn., C1-1940. Wiring Methods, and installation rules, supports, voltage limits, protective guards, conductors per conduit, sizes and insulation of conductors, grounding, dimensions of cleats, knobs, and tubes, installation requirements for open wires, concealed knob and tube work, conduit work, surface metal raceways, armored cable, underfloor raceways, nonmetallic sheathed cable, metallic tubing.

National Electrical Manufacturers Assn. Handbook of Interior Wiring Design, 1937. Covers residence standards of adequacy, chart of outlet requirements, specification form for single dwelling, lighting fundamentals, wiring standards for general occupancies, procedures for lighting and power wiring installations, adequacy standards for multi-family dwellings, and for commercial, public and industrial occupancies, material and installation specifications.

Underwriters' Laboratories, Inc. Standard for Grounding and Bonding Equipment, 1943. Covers grounding and bonding equipment for use in connection with interior wiring systems in accordance with the National Electrical Code. Gives requirements for grounding devices, grounding and bonding bushings, water-meter shunts, armored grounding wire, ground rods, miscellaneous devices, marking, and inspection of listed product.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specifications CAA-86. Combined Telephone and Electric Service.

U. S. Gov., Dept. of Commerce, National Bureau of Standards H31; 1940. American Standards Assn., C2.1-1941. Safety Rules for the Installation and Maintenance of Electrical Supply Stations. Comprising Part 1—for equipment of indoor and outdoor supply stations, provided it is in separate rooms or enclosures, under control of properly qualified persons and accessible only to such persons. Also apply to similar equipment if installed in factories, mercantile establishments, vehicles or elsewhere. Exceptions—if voltage does not exceed 150 volts to ground, and if voltage is not more than 550 volts between conductors and power utilized does not exceed 3,200 volts; and the grounding rules of the fifth edition, National Electric Safety Code. For conductors (sec. 15), requirements on electrical protection, precaution against mechanical and thermal damage, isolation, guarding, taping ends and joints, and wiring for illumination.

U. S. Gov., Navy Dept. Bureau of Yards and Docks. Specification E-9Ye; 1943. Electrical Apparatus, Distributing Systems, and Wiring. (Emergency Edition.)

U. S. Gov., Navy Dept., Bureau of Yards and Docks. Specification 16Ye; 1941. Refrigerating Equipment. Also includes ice-making equipment. Includes requirements for electric motors, control equipment, and wiring.

*References.*—Automobile Wiring, *see* 722.32; ground clamps, *see* 719.72; Traveling electric crane wiring, *see* 744.1.

## 715.31 Insulators

*References.*—Glass pin insulators, *see* 526.1; porcelain insulators for electric lines, porcelain switch and fuse bases, cleats, knobs, *see* 532.22; wood strain insulators, *see* 429.7; wood insulator pins, steel insulator pins, *see* 429.7, 719.61.

## 715.32 Insulator Pins

Edison Electric Institute. Suggestions for Specifications for Insulator and Pin Threads and Gauges, No. TD-71; 1937. Dimensional drawings showing 1-in. and 1 3/8-in. sizes of thread in insulator, wood pin thread, cast lead pin thread, wire pin thread, pressed steel pin thread, insulator gauge thread, insulator gauges, and cast lead pin thread gauges. Also explanatory notes and tolerances.

*References.*—Wood insulator pins, *see* 429.7; steel insulator pins, *see* 719.61.

## 715.33 Insulator Knobs

*References.*—Porcelain knobs and spool insulators, *see* 532.22.

## 715.34 Lugs

National Electrical Manufacturers Assn. Suggested Specification for Standard and Heavy Duty Multiple Bolt Soldering Lugs, N.E.M.A. 101; 1932. For determining choice of types, and gives complete dimensions for multiple bolt pressed and heavy duty cast soldering lugs, diameters and spacing of bolt holes, dimensional diagrams for three classes of lugs, and material requirements for 250,000 to 2,000,000 c.m. cable.

Underwriters' Laboratories, Inc. Standard for Soldering Lugs, 1930. For connecting wires or cables and electrical devices used on lighting and power circuits in accordance with the National Electrical Code. For lugs of copper, brass, or bronze; to be cast, stamped or swaged, requirements as to current capacity, diameter, and depth of cable hole, wall thickness, and contact area for various sizes of wire, and marking.

*References.*—Other lugs and terminals, *see* 715.35; castings of copper, brass, bronze, *see* 642.21, 645.21, 646.41; sheet material of copper, brass, bronze, *see* 641.2, 644.2, 646.2; wiring practice, *see* 715.30.

## 715.35 Terminals and Tags

Aeronautical Chamber of Commerce of America, Inc. National Aircraft Standard NAS 39; 1943. Terminal; Electrical, Mechanical. Gives drawings with dimensions and notes. Developed by National Aircraft Standard Committee.

Aeronautical Chamber of Commerce of America, Inc. National Aircraft Standard NAS 193; 1944. Solderless (Pressure) Terminals for Electric Cables. Intended for the termination of electric cables of copper for aircraft. Gives classification, material and workmanship, general requirements, detail requirements, procedure for qualification test, and table showing cable size designation, test rating in amperes, maximum millivolt drop at nominal test rating, minimum tensile load and weight to be used on vibrating test.

Radio Manufacturers Assn. Cord Tips, M2-112, M4-111, M4-112; 1930. For cylindrical type and pin type tips, for use on loud speaker and head-set cords, dimensions for various standard sizes, pull test for strength of soldering.

Radio Manufacturers Assn. Cable Terminal, M4-114; 1930. Standard dimensions of spade type cable terminal for outer end of battery connecting conductors on radio receiving sets.

Society of Automotive Engineers. 1944 Handbook, Section 2—Units, Parts and Fittings. S.A.E. Standard Cable Terminals. Revised, 1943. To eliminate unnecessary variations in sizes and types of terminals for electrical connections. Gives tables showing sizes and dimensions for stud or screw and hole or slot sizes, straight type A eyelet terminals, offset type A eyelet terminals, side type B eyelet terminals, straight type C spade terminals, side type D spade terminals, and end type E starting cable terminals.

U. S. Gov., Army-Navy Aeronautical Specification AN-T-2b; 1944. Terminals; Steel Cable, for Swaging.

U. S. Gov., Navy Dept. Specification 17C13d; 1944. Connectors and Lugs, Terminal, Pressure-Grip (Solderless, for Electric Cable).

U. S. Gov., Navy Dept. Specification 17L7; 1939. Lugs, Cable-Terminal, Copper, Punched-Tube-Type, for Soldered Connections for Electric Cable.

U. S. Gov., U. S. Army, Army Air Forces. Specification 98-25513F; 1936. Terminal, Warped, for Aircraft Cable.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-100-C; 1928. Terminal Strip; Type TM-84-A, 5 pair.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-132B; 1927. Terminal; Type TM-88 Cable.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-264; 1924. Terminal Strip; Types TM-76 and TM-77.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-436C; 1943. Tag MC-72; Paper, for Wire Identification.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-454; 1928. Terminal; Type TM-98, Telephone.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-480B; 1936. Terminal; Cable, Telephone, Unprotected.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-685; 1933. Cable Terminal; Types TM-171 and TM-173.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-696A; 1940. Panel, Type BD-75, and Terminal Strip TM-192, Wire Communication Cross-Connecting.

*References.*—Lugs, *see* 715.34; battery tray terminal lugs, *see* 721.2; storage battery terminals, *see* 712.9; *see* also references under 715.34.

## 715.36 Cable Reels and Wire Spools

American Transit Assn. Recommended Design of Trolley Wire Reels, Reel Bushings and Reel Braking Device. D109-31; 1931. Covers designs for four sizes of standard wooden reels for trolley wire. Includes several drawings of trolley wire reels.

U. S. Gov., Dept. of Agriculture, Forest Service. Specification 292. Reel; Emergency, Wire Take-up.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R63-28; 1928. Metal Spools. Establishes capacities of metal spools for annealing, handling, and shipping wire.

U. S. Gov., U. S. Army, Corps of Engineers. Specification 23-45; 1926. Reel, Wire; Electric Lighting Equipment, Portable.

U. S. Gov., U. S. Army, Corps of Engineers. Specification 49-2; 1926. Horse, Wire Reel; Electric-Lighting Set, Portable, Engineer.

U. S. Gov., U. S. Army, Corps of Engineers. Specification 49-6; 1938. Reel; Wire, Firing.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 89-3202; 1940. Axle; Cable-Reel, Submarine Mine.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 89-5327a; 1939. Sling; Cable Reel, M1915.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-88B; 1943. Reel RL-17-A; Payout, on Barrow.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-144D; 1932. Reel; Type DR-4, for Holding Field Wire.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-244D; 1943. Cable Reels.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-360; 1925. Reel; Type RL-3, Flat, Rectangular, Hand.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-456C; 1936. Reel for Cable; Submarine Mine, 1-Conductor.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-532A; 1933. Reel; Type RL-20, Airplane Antenna.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-575D; 1943. Reel; DR-4, DR-5, DR-7, and DR-15.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-665B; 1942. Axle; RL-27-A and RL-27-B, for Laying Field Wire.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-666F; 1944. Reel Unit RL-26-D; Engine-Driven, for Laying and Recovering Field Wire.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-862; 1938. Reel; Type RL-30-B, Aircraft Antenna.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-907; 1936. Cart, Reel; Type RL-33, Balloon Wire.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-911A; 1943. Reel Unit RL-31-B; Wire.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-1010; 1941. Reel; Type RL-39.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-1121A; 1943. Reel Control Boxes BC421, BC-461, and BC-461-A.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-1141; 1942. Reel RL-41-A and RL-42-A; Remote Controlled, for Trailing Antenna.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-1712; 1943. Reel RL-42-B; Remote Controlled, for Trailing Antennas.

U. S. Gov., U. S. Army, Signal Corps. Specification 72-2-G; 1943. Reel Cart RL-16-A.

## 715.39 Miscellaneous Wiring Supplies

Assn. of American Railroads, Operations and Maintenance Dept., Engineering Div., Signal Section. Manual of Recommended Practice. Specification 159-39, 1939. Brass and High Tensile Strength Metals and Alloys for Binding Posts, Machine Screws, Nuts, Washers, Etc., Used in Signal Apparatus. Corrosion-resistant metal with properties as may be applicable, stock, composition, physical properties, and tests for tensile strength, elongation, and yield point by A.S.T.M. procedure.

Assn. of American Railroads, Operations and Maintenance Dept., Engineering Div., Signal Section. Manual of Recommended Practice. Specification 183-39; 1939. Multiple Unit Terminal Block. Drawing and design of unit, composition base, binding posts, dielectric requirements, and alternate requisites.

Assn. of American Railroads, Telegraph and Telephone Section, 1-A-82; 1942. Cast Metal Terminal Boxes. For use in terminating small cables on poles or building walls. Gives general requirements, material and workmanship, inspection and tests, packing, marking, and warranty.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Handbook H36; 1940. Safety Rules for Electric Fences. Comprising part 6 of the fifth edition of the National Electric Safety Code. Gives rules which apply to the installation, use, and identification of electric fences and to the construction and characteristics of the controllers used with them and through which electric energy is delivered to the fence.

U. S. Gov., U. S. Army, Signal Corps. Specification 29-43; 1924. Clamp; Guy Wire for Telephone Line Construction.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-33A; 1935. Block; Connecting, for Communication Circuits.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-93B; 1929. Ring, Types PF-73 to PF-76, Inclusive, for Supporting Aerial Cable.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-237A; 1935. Block; Terminal, Type TM-70, for Communication Circuits.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-333A; 1932. Terminal Boxes; Types JB-7, JB-8, and JB-9.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-732; 1936. Carrier; Type RL-34, Wire.

## 715.4 WIRES, CORDS, AND CABLES

### 715.40 General Items

American Transit Assn. Copper Wire Tables, D1-32; 1932. Gives two complete wire tables for standard annealed copper in English and metric units, and one working copper wire table in English units.

American Transit Assn. Definitions and General Standards for Wires and Cables, D5-38; 1938. These standards include definitions and standards of a general character which are applicable to wires and cables for power purposes.

American Transit Assn. Recommended Copper Cable Tables, D111-41; 1941. The details in the tables are based on American Standards Assn. Specification H4.1 for annealed copper wire, which uses 891.58 lb. per mile-ohm and hard drawn copper wire, which uses a resistivity of 910.15 lb. per mile-ohm. Includes five tables covering bare concentric soft copper cables, bare concentric hard drawn copper cables of the A.S.T.M. class A, B, and C stranding, and one on bare concentric hard drawn copper cables with extra flexible stranding.

American Transit Assn. Recommended Guide for Preparation of Specifications for Insulated Wire and Cable, D120-41; 1941. This guide covers general standards for single, multi-conductor belted and multi-conductor nonbelted wires and cables insulated with rubber, varnished cambric or paper insulation and having any of the usual types of sheath or outer covering. It outlines the information that should be given in purchase orders or inquiries for wire and cable. Covers conductors, insulation, conductor identification, conductor assembly, fillers, binder, shielding, protective covering, saturant and finish, armor, and outer protective covering.

Assn. of American Railroads, Operations and Maintenance Dept., Engineering Div., Electrical Section. Manual of Recommended Practice, 1942. (6-e-41) Design of Motor Feeders and Circuits. Includes recommendations for the steps to take in designing motor supply circuits and feeders and selecting and laying out power distribution panels, motor disconnecting switches, feeder and circuit protective devices, and conduits to accommodate feeder and circuit conductors.

Assn. of American Railroads, Operations and Maintenance Dept., Engineering Div., Signal Section. Manual of Recommended Practice, 1942. Wire and Cable. General instructions covering kinking, twisting, bruising, grease, shipping, storing, pulling, conduit, wire joints, cable splicing, terminal eyes, marking, and line wire.

Assn. of American Railroads, Telegraph and Telephone Section, 1-A-40; 1930. Method of Testing Tin Coating on Copper Wire. Sodium-polysulfide test for determining the continuity of coating on copper wire, preparation of sample, reagents, coating and mechanical adhesion procedures.

Assn. of American Railroads, Telegraph and Telephone Section, 1-A-83; 1942. Gas Pressure Testing of Cables. Describes methods, apparatus and materials for the gas pressure testing of lead sheath paper-insulated cables and methods for maintaining these cables under constant gas pressure. Gives gas cylinders, regulators and pressure testing instruments, gas pressure testing of individual reel lengths of cable, flash testing of completed sleeves, gas pressure testing of loading coil cases, pressure dams, pressure testing valves and clamps, charging cables with gas, and gas pressure testing of complete cable.

Copper Wire Engineering Assn. Ice and Wind Loads on Copper Wire (Bare Solid), No. 401; 1938. Gives vertical, horizontal, and resultant loads in pounds per lineal foot of wire for light, medium, and heavy loading in accordance with loading districts of the National Electrical Code. Covers 1 to 8 Awg wire sizes.

National Electrical Manufacturers Assn. Maximum Permissible Current-Carrying Capacity of Rubber-Insulated Building Wire, 1938. Report covers maximum operating temperatures of code rubber factors affecting current-carrying capacity, thermal surface resistivity of cable coverings and conduits, additional considerations, formulae for current-carrying capacity calculation, ambient temperature, table showing summary of cable ratings, and tables showing current-carrying capacity for code grade, performance grade, and heat-resistant grade.

National Electrical Manufacturers Assn. Type Letter Designations of Wire and Cable, 41-70; 1941. Includes a list and brief descriptions of the present designations being used in the industry.

Underwriters' Laboratories, Inc. Standard for Rubber-Covered Wires and Cables, 1940. Covers rubber-insulated wires and cables for use in accordance with the National Electrical Code. Conductors, insulation, coverings, lay of twist, dielectric strength, insulation resistance, mechanical equivalence to type R, marking, and inspection of listed product. Emergency alternate—braids for types R and RW conductors acceptable for the RP and RH conductors.

Underwriters' Laboratories, Inc. Standard for Varnished-Cloth Wires and Cables, 1939. Covers varnished cloth-insulated wires and cables for use in accordance with the National Electrical Code. Conductors, insulation, coverings, cabling, dielectric strength, insulation resistance, dielectric strength after flexing, marking, and inspection of listed products.

U. S. Gov., Army-Navy Aeronautical Specification AN-C-135; 1944. Cable Assemblies; Proof Testing and Prestretching of.

U. S. Gov., Army-Navy Aeronautical Specification AN-S-43. Splicing; Cable Terminal, Process for.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Circular C31; 1914. Copper Wire Tables. Tables based on international standard values for resistivity, temperature coefficient, and density of copper as defined by International Electrotechnical Commission. Tables give diameter, cross-sectional area, and resistance at various temperatures of copper and of aluminum wire and cable. American Wire Gage (B. & S.) with comparison tables for other gages.

## 715.41 Cables, Electrical

American Institute of Electrical Engineers. Recommended for Electrical Installations on Shipboard No.45; 1940. Addenda, 1942. Emergency Modification and Supplement, 1943. Wires and Cables. Covers copper conductors, insulation, rubber filled tape, braid, color code, cabling, fillers, rubber sheath, lead sheath, bituminous compound, armor, paint, dimensional tolerances, tests, constructions, applications, and installation.

American Society for Testing Materials, A 122-41; 1941. American Standards Assn., G 8.6-1943. Zinc-Coated Steel Wire Strand "Galvanized" and Class A ("Extra Galvanized"). For use as guy wire, messenger wire, electrical conductor, etc. Gives requirements as to zinc coating, stranding, ductility of steel and adherence of coating, table of physical properties of strand, sizes and permissible variations, and inspection.

American Society for Testing Materials, A 218-41; 1941. American Standards Assn., G8.11; 1944. Zinc-Coated Steel Wire Strand, Class B and Class C Coatings. For use as guy wires, messenger wires, span wires, electrical conductors, overhead ground wires, etc. Gives requirements for zinc, base metal, joints, stranding, weight and uniformity of coating, physical properties, elongation, ductility, adherence of coating, size and permissible variations, workmanship and finish, packing and marking, and inspection.

American Society for Testing Materials, B 8-44; 1944. Concentric-Lay-Stranded Copper Conductors, Hard, Medium-Hard, or Soft. Covers concentric-lay-stranded conductors, made from round copper wires, either uncoated or coated with tin, lead, or lead alloy for general use for electrical purposes. Gives requirements for wire, joints, lay, construction, physical and electrical tests, density, weight and resistance, variation in area, packing and shipping, marking, and inspection.

American Society for Testing Materials, B 172-42 T; 1942. Tentative Specifications for Rope-Lay-Stranded Copper Conductors Having Bunch-Stranded Members for Electrical Conductors. Covers members made from round copper wires, either uncoated or coated with tin, lead, or lead-alloy coatings, for use as electrical conductors. Classification, requirements for wires, joints, construction, physical and electrical tests, density, weight and resistance, variation in area, marking, and inspection.

American Society for Testing Materials, B 173-42 T; 1942. Tentative Specifications for Rope-Lay-Stranded Copper Conductors Having Concentric-Stranded Members for Electrical Conductors. Covers members made from round copper wires, either uncoated or coated with tin, lead, or lead-alloy coatings, for use as electrical conductors. Classification, requirements for wires, joints, lay, construction, physical and electrical tests, density, weight and resistance, variation in area, marking, and inspection.

American Society for Testing Materials, B 174-42 T; 1942. Tentative Specifications for Bunch-Stranded Copper Conductors for Electrical Conductors. Covers conductors made from round copper wires, either uncoated or coated with tin, lead, or lead-alloy coatings, for use as electrical conductors. Classification, requirements for wires, joints, lay, construction, physical and electrical tests, weight and resistance, variation in area, marking, and inspection.

American Society for Testing Materials, D27-41; 1941. Insulated Wire and Cable; Class AO, 30 Percent Hevea Rubber Compound. Requirements for conductor material, strand, stranding, tensile properties, conductivity and tinning tests; insulation composition, physical and electrical tests; shielding; cable tape; braid; finish, saturant, flame, moisture, and bending tests; lead sheaths; inspection and rejection; annealed copper standard; and interpretation of insulation thicknesses table. A.S.T.M. Emergency Alternate Provision EA-D27a; 1944, affected section 2, Conductor Material; section 7, Tinning Test; section 25, Cable Tape Material; section 28, Types of Cotton Braid; section 29, Standard Braid; section 30, Cotton Braid Material; section 31, Cotton Braid Construction; table IX, Values of Y for Code Braids; and table X, Typical Braid Construction.

American Society for Testing Materials, D 353-41; 1941. Insulated Wire and Cable: Performance Rubber Compound. Except for insulation conforms to A.S.T.M. Designation D 27. Methods of test, physical properties, high voltage test, insulation resistance, moisture absorption, thickness, workmanship, and rejection. A.S.T.M. Emergency Alternate Provision EA-D 353; 1942, affected section 1, Scope; table I, Physical Test Requirements for Insulation; and table III, Insulation Resistance.

American Society for Testing Materials, D469-41; 1941. Insulated Wire and Cable: Heat-Resisting Rubber Compound. For use at temperatures not in excess of 75°C., except rubber insulation conforms to A.S.T.M. Designation D27. Methods of test, physical properties, high-voltage test, insulation resistance, moisture absorption, thickness, workmanship, rejection, and interpretation of insulation thickness table. A.S.T.M. Emergency Alternate Provision EA-D469a; 1943, affected section 1, Scope.

American Society for Testing Materials, D 470-41; 1941. Methods of Testing Rubber Insulated Wire and Cable. Describe procedures for the testing of rubber-insulated wire and cable. They are not to be considered completely applicable to all types of wire and cable, nor do they necessarily include every test applicable to a particular type. To determine the tests to be made on a particular wire or cable, reference should be made to the specifications for that type. Physical and electrical tests of insulation, and tests on finished wire and cable.

American Society for Testing Materials, D 734-43T; 1943. Tentative Specifications for Insulated Wire and Cable; Polyvinyl Insulating Compound. Covers wire and cable insulated with a thermoplastic synthetic insulating compound made from polyvinyl chloride or its copolymer with vinyl acetate. Gives material, strand, shape, stranding, permissible variations in diameter and area, coating test, sampling and methods of test, test specimens, physical properties, heat shock test, heat distortion test, flame-retardant properties, oil resistance test,

cold bend test, high-voltage test, insulation resistance, thickness of insulation, workmanship, and rejection.

American Society for Testing Materials, D 754-43T; 1943. Tentative Specifications for Insulated Wire and Cable: Heat-Resisting Synthetic Rubber Compound. Intended to permit the use of the compound known as "Government Rubber," type GR-S, but are not restricted to this type. Gives physical properties, high-voltage test, insulation resistance, thickness, workmanship, rejection, and methods of testing.

American Society for Testing Materials, D 755-44T; 1944. Tentative Specifications for Insulated Wire and Cable: Performance Synthetic Rubber Compound. Intended to permit the use of the compound known as "Government Rubber," type GR-S, but are not restricted to this type. Gives physical properties, high-voltage test, insulation resistance, thickness, workmanship, rejection, and methods of testing.

American Society for Testing Materials, D 574-40T; 1940. Tentative Specifications for Insulated Wire and Cable: Ozone-Resistant Type Insulation. Except for insulation, conforms to A.S.T.M., D27. Physical properties, high-voltage test, insulation resistance, double-voltage test on short samples, cold-bend, long-time voltage test, capacity and power factor tests, ozone-resistance test, and thickness of insulation. A.S.T.M. Emergency Alternate Provision EA-D574b; 1944, affected section 1(b), Scope.

American Transit Assn. Rubber Insulated Wire and Cable for Outside Use for Power Distribution Purposes—Class A Compound, D10-41; 1941. Apply to the rubber compound used for the insulation of electric wire and cable, and which is known as class A 30 percent Hevea rubber. Gives requirements as to conductor, insulation, cable tape, cotton braid, finish, lead sheaths, and armor.

American Transit Assn. Specification for Impregnated Paper Insulated, Lead Covered Cable, D13-41; 1941. This specification is intended to apply to all sizes and classes of impregnated paper-insulated, lead-covered cable which is to be used for the transmission and distribution of electrical energy in underground conduit systems. Gives general requirements, tests to be made on each length of cable, tests to be made on samples, tests to be made after installation, reels and shipment, and miscellaneous.

American Transit Assn. Recommended Specification for Varnished Cambric Insulated Cables, D113-41; 1941. This specification applies to all sizes and classes of varnished cambric lead covered or braided cables which are to be used for the transmission and distribution of electrical energy, and may apply to either underground, aerial, or station cable, under normal conditions of installation. Gives general requirements, tests to be made on each length of cable, tests to be made on samples, and general provisions.

American Transit Assn. Recommended Specification for Weather-Resistant Weather-Proof Wire and Cable U.R.C. Type, D114-41; 1941. These specifications cover weather-resistant, weatherproof wire and cable, the conductors, the materials used for the fibrous coverings, and the saturating and finishing compounds. Covers materials and properties, acceptance requirements, general requirements, and appendix.

American Transit Assn. Recommended Specification for Heat-Resisting Wires and Cables, D115-32; 1932. This specification covers the usual type of heat-resisting covering commonly known as "slow-burning," as applied to metallic conductors for use in hot, dry locations where the standard insulating materials would not long endure or where the presence of large masses of inflammable materials would be objectionable. It includes materials and properties, and measurements and tests.

American Transit Assn. Recommended Specification for Rubber Insulated Wire and Cable for General Purposes—Code Rubber Insulation, D116-41; 1941. This specification applies to the rubber compound used for insulation of electric wire and cable and which is known as code rubber insulation. Covers general requirements, conductor, insulation, cable tape, braid, finish, lead sheaths, and armor.

American Transit Assn. Recommended Specification for Rubber Insulated Wire and Cable for Outside Use for Power Distribution Purposes—Class AO Compound, D117-41; 1941. These specifications apply to the rubber compound used for the insulation of electric wire and cable and which is known as Class AO 30 percent Hevea rubber. Covers general requirements, conductor, insulation, cable tape, cotton braid, finish, lead sheaths, and armor.

American Transit Assn. Recommended Specification for Rubber Insulated Wire and Cable for Outside Use for Power Distribution Purposes—Performance Rubber Compound, D118-41; 1941. This specification is intended to cover the furnishing and testing of various kinds of rubber insulated conductors for power distribution purposes, the insulation to be of the grade known as Performance Rubber Compound. Covers general requirements, conductor, insulation, cable tape, cotton braid, finish, lead sheaths, and armor.

Assn. of American Railroads, Operations and Maintenance Dept., Engineering Div., Electrical Section. Manual of Recommended Practice, 4-e-42; 1942. Specifications for Rubber Insulated Wires and Cables No. 18 A.W.G. and Larger. Gives general requirements. standards for rubber covered wire and cable conductors, separator, rubber compounds, cable tape, cable assembly, cotton braids, metallic coverings, shipment on cable reels, shipment on coils, and details.

Assn. of American Railroads, Operations and Maintenance Dept., Engineering Div., Signal Section. Manual of Recommended Practice. Specification 54-39; 1939. Aerial Aluminum Cable Steel Reinforced. Detailed requirements for signal service, new and renewal installations. Aluminum wound, steel core conductor, mechanical properties, and footage for various gages in reels and coils.

Assn. of American Railroads, Operations and Maintenance Dept., Engineering Div., Signal Section. Manual of Recommended Practice, Specification 89-40; 1941. Multiple-Conductor, Rubber-Insulated Cable with Weather-Resistant, or Flame-Retarding Moisture-Resistant Braid Covering. Covers material and workmanship, conductor insulation, assembly, braid covering and cable tape, identification, inspection,

tests, acceptance requirements, packing, marking, and warranty. Emergency modification E89-40 was issued which changed requirements to comply with List 27 of W.P.B. Rubber Order R-1.

Assn. of American Railroads, Operations and Maintenance Dept., Engineering Div., Signal Section. Manual of Recommended Practice. Specification 90-40, 1941. Multiple-Conductor, Rubber-Insulated, Submarine Cable, Lead Sheathed and Round Steel Armored. Purpose, tender, alternates, material and workmanship, conductor insulation, assembly, rubber-filled cable tape, lead sheath, armoring and covering, identification, inspection, tests, samples for test, acceptance requirements, packing, marking, and alternate requisites. Emergency Modification E90-40 was issued which changed requirements to comply with List 27 of W.P.B. Rubber Order R-1.

Assn. of American Railroads, Operations and Maintenance Dept., Engineering Div., Signal Section. Manual of Recommended Practice. Specification 91-40; 1941. Single and Multiple-Conductor, Rubber-Insulated Lead Sheathed Cable. Purpose, tender, alternates, material and workmanship, conductor, insulation assembly, rubber-filled cable tape, lead sheath identification, inspection, marking, warranty, and alternate requisites. Emergency Modification E91-40 was issued which changed requirements to comply with List 27 of W.P.B. Rubber Order R-1.

Assn. of American Railroads, Operations and Maintenance Dept., Engineering Div., Signal Section. Manual of Recommended Practice. Specification 111-40; 1942. Signal-Conductor, Rubber-Insulated Wire and Cable With Flame-Retarding, Moisture-Resistant or Weather-Resistant Braid Covering. For use on signal circuits rated at 0-600 and 601-2,500 volts. Covers material and workmanship, conductor, insulation, braid covering and cable tape, identification, inspection, tests, packing, marking, and warranty. Emergency modification E111-40 was issued which changed requirements to comply with List 27 of W.P.B. Rubber Order R-1.

Assn. of American Railroads, Operations and Maintenance Dept., Engineering Div., Signal Section. Manual of Recommended Practice. Specification 145-40; 1941. Single and Multiple-Conductor, Rubber-Insulated, Lead-Covered Parkway Cable Armored With Flat Steel or Zinc Tape. For use on circuits with 0-600 and 601-2,500 volts; requirements for tinned copper conductor meeting A.S.T.M. Specifications B 33 and D 27, for 30 percent Hevea rubber insulation, assembly, cable tape, lead sheath, jute bedding in accordance with American Standard C8.15, flat metallic tape of ungalvanized steel, asphalt or hot tar outer covering served with jute yarn and for marking and inspection. Emergency Modification E145-40 was issued which changed requirements to comply with List 27 of W.P.B. Rubber Order R-1.

Assn. of American Railroads, Operations and Maintenance Dept., Engineering Div., Signal Section. Manual of Recommended Practice. Specification 161-40; 1941. Single and Multiple-Conductor, Rubber-Insulated, Non-Metallic Sheath Cable. For use in direct contact with earth, in ducts, in air or any of these combinations and on circuits rated at 0-600 and 601-2,500 volts. Requirements for tinned copper conductors meeting A.S.T.M. Specifications B 33 and D 27, for 30 percent Hevea rubber insulation, assembly, moisture seal rubber sheath, tape, outer covering, and saturant. Emergency Modification E 161-40 was issued which changed requirements to comply with List 27 of W.P.B. Rubber Order R-1.

Assn. of American Railroads, Operations and Maintenance Dept., Engineering Div., Signal Section. Manual of Recommended Practice, 1942. Wire and Cable. General instructions covering kinking, twisting, bruising, grease, shipping, storing, pulling, conduit, wire joints, cable splicing, terminal eyes, marking, and line wire.

Assn. of American Railroads, Telegraph and Telephone Section, 1-A-9; 1938. Paper Insulated, Lead Covered Communication Cable. Includes two grades based on dielectric strength of insulation, otherwise identical, dimensions and tensile strength of copper conductors, quality and thickness of paper insulation and lead sheath, construction of cable, color codes for quadded and nonquadded pairs, ohmic resistance, dielectric strength, capacitance unbalance, sealing, reels, and marking.

Assn. of American Railroads, Telegraph and Telephone Section, 1-A-12; 1931. Specification for Splicing Lead Sheathed Paper Insulated Cables. Describes and illustrates standard methods of splicing cable, bonding, and other practices allied with splicing operations.

Assn. of American Railroads, Telegraph and Telephone Section, 1-A-48; 1932. Paper Insulated, Submarine Telephone Cable. Requirements for lead covered, armored cable with twisted pairs, in two types, identical except for thickness of insulation; includes Nos. 10 to 22 gage wire, paper wrapping, twists of pairs and quads, color codes, tracers, core insulation, lead sheath, jute roving, galvanized armor wire, conductor resistance, capacitance, dielectric strength, and insulation resistance.

Assn. of American Railroads, Telegraph and Telephone Section, 1-A-49; 1932. No. 19 A.W.G. Pothead Cable. Covers 11 standard sizes of cable, 7 to 152 pairs, rubber-insulated, nonquadded, for use in tipping paper-insulated cables. Requirements for solid wire annealed copper conductors, quality of Hevea rubber insulation, twists of pairs, tracer, sheath, dielectric strength, and insulation resistance.

Assn. of American Railroads, Telegraph and Telephone Section, 1-A-50; 1932. Rubber-Insulated, Braid-Covered Cable With No. 14 A.W.G. Quadded Conductors. Includes 15, 20, and 34 conductor cables; requirements for tinned copper wire, Hevea rubber insulation, tracer, quadding, cabling, color dating, braiding, weatherproofing, finishing wax, and tests.

Assn. of American Railroads, Telegraph and Telephone Section, 1-A-66; 1936. Rubber-Insulated, Quadded, Lead-Covered Cable. Covers 7 sizes from 4 to 76 conductors using Nos. 14 and 16 A.W.G. solid copper wire. Requirements for Hevea rubber insulation, tracer, quadding, cabling, sheath, conductor and insulation resistance and dielectric strength.

Assn. of American Railroads, Telegraph and Telephone Section, 1-A-67; 1937. Specification for Installing Buried, Tape-Armored, Lead-Covered Cable. Includes

quality of materials, trenching, back filling, neutralizing wire, location of splicing chambers, laying cable, splicing, bonding, soldering, and terminating.

Assn. of American Railroads, Telegraph and Telephone Section, 1-A-72; 1938. Specification for Installing Aerial, Tape-Armored, Lead-Covered Cable. Gives method of installing, splicing, and terminating cable AAR-1-A-73; describes and illustrates temporary and permanent bonding and stripping, and completed bond.

Assn. of American Railroads, Telegraph and Telephone Section, 1-A-73; 1938. Tape-Armoring Lead-Covered Cable. Gives requirements for tape-armoring paper-insulated cable AAR-1-A-9, or rubber insulated cable AAR-1-A-66, for aerial use, and for underground use. Includes jute roving, coal tar pitch, asphalt, galvanized tape armor, tensile strength of jute and steel tape, sizes, and tests.

Assn. of American Railroads, Telegraph and Telephone Section, 1-A-75; 1939. Rubber-Insulated, Jute-Covered, Tape-Armored Cable. Includes four sizes of cable, consisting of quads with single conductor forming a core, taped, armored and jute-covered for direct burial in the ground. Requirements for copper wire and steel tape conforming to A.S.T.M. specifications, Hevea rubber insulation, jute covering, and galvanizing by AAR-1-D-5 method, asphalt impregnating compounds, electrical tests, and reeling.

Assn. of American Railroads, Telegraph and Telephone Section, 1-A-76; 1939. Testing, Repair and Splicing of Rubber-Insulated, Braid-Covered Emergency Cable. Description and diagrams for locating faults with violet-ray apparatus, detection tests for open, shorts and crosses, open conductors by bridge method, and attachment of identification tag, and procedure for making and insulating conductor joints.

Assn. of American Railroads, Telegraph and Telephone Section, 1-A-90; 1942. No.16 A.W.G. Rubber Insulated, Lead Sheathed, Steel Armored Cable; Parkway. For direct burial in the ground, and used primarily for laterals from open wire lines. Gives general requirements, conductors, rubber insulating compound, cable lay-up, sheath, jute and steel tape armor—materials, application of jute and steel tape armor, finish, electrical requirements, packing, marking, and warranty. Emergency Alternate 1-A-90EA-2; 1944, changed 1-A-90, in order to conserve critical and scarce materials during the war period.

Assn. of American Railroads, Telegraph and Telephone Section, 1-C-10; 1927. Underground Cable Installation. Specification for installation and removal of underground cables including precautionary measures, ventilation of manholes, rodding and threading ducts, arrangement of tackle, setting up reel and pulling cable, lubricating cable, bonding, sealing, removal methods, with illustrations of typical procedure.

Assn. of American Railroads, Telegraph and Telephone Section, 2-G-2; 1924. Braided Office Cable. Cable of nonquadded twisted pairs of rubber insulated No. 16 A.W.G. tinned copper wire; requirements for number of pairs, Hevea rubber insulation, woven cotton braid, weatherproof compound, paraffin saturated jute filler, tapes and cotton braid sheath, identification marking, construction of cable, physical and electrical tests.

Assn. of American Railroads, Telegraph and Telephone Section, 2-G-19; 1938. Lead Sheath Office Cable Non-Quadded or Quadded. For cable with cotton or silk and cotton-covered tinned enameled Nos.19 or 22 A.W.G. conductors, made up either paired or quadded; requirements for solid copper wire, tinning, enamel, twisting of pairs and quadding, colors of braid and number of plies, lead sheath, sealing, table of color identification, sizes of cables, electrical properties, and reeling.

Assn. of American Railroads, Telegraph and Telephone Section, 2-G-22; 1927. Braided Office Cable of Quadded Rubber Insulated No.16 A.W.G. Conductors. Includes 12 and 20 conductor cables with requirements for solid copper wire conductors, tinning, rubber insulation in accordance with A.S.T.M. specifications, colors of braid, weatherproofing, saturated jute filler, tapes, and woven cotton sheath, manufacture, tinning test, tensile strength of rubber, and electrical tests.

Assn. of American Railroads, Telegraph and Telephone Section, 2-G-78; 1938. Braid or Lead Sheath Impregnated Office Cable. Cable of cotton or silk and cotton tinned enameled Nos.19 or 22 A.W.G. solid copper wire, made up in either paired or quadded conductors and with braid or lead sheath. Requirements for sizes of 5 to 200 paired and 7 to 108 quadded cables, impregnating compound, sheath, color schemes, dielectric strength, resistance, and capacitance unbalance tests.

Assn. of Edison Illuminating Companies. Impregnated Paper Insulated, Lead-Covered Cable; Oil-Filled Type, 1938. Addenda, 1939. These specifications cover single-conductor cable rated between 15 and 230 kv., and 3-conductor, shielded cable rated between 15 and 69 kv., of the oil-filled type; requirements for impregnation, size of wires in conductors, impregnating oil (tested by A.S.T.M. Method D 97), thickness of insulation, sheath, power factor, operating temperature, voltage test, ionization factor, bending test, and test apparatus.

Assn. of Edison Illuminating Companies. Impregnated Paper-Insulated, Lead-Covered Cable; Solid-Type, 1937. Addenda, 1939. These specifications cover cable for distribution of energy in underground conduit systems, except pressure measurement, fire alarm, signaling, and telephone service. Requirements for manufacture as to conductors, copper wire meeting A.S.T.M. Specification B 3, A.S.A. C8-3, conductor-resistance table, paper insulation quality and thickness, for single-conductor, shielded and nonshielded cables, multiple-conductor cable, and shielding and binder tape, impregnation, lead sheath, overall diameter, insulation resistance, power factor, and tests.

Copper Wire Engineering Assn. Design Sags and Tensions (Final), Initial Sags and Tensions. Charts No.250; 1938, No.6 A3; 1940, and 12 W3; 1938. For use in preliminary design and calculation of ruling span curves for stringing conductor in dead-end spans (prestretched and unstretched), heavy, medium, and light load districts. Gives tension limits, at

maximum, initial, and final load, sag in feet for various spans, and tensions.

Copper Wire Engineering Assn. Properties of Copper Cable-Bare, Hard-Drawn, No.401; 1938. For stranded cable sizes in accordance with A.S.T.M. Specification B8, 500,000 to 4 A.W.G., number and diameters of wires, resistance, cross-sectional area, weight and breaking strength. Also gives ice and wind loads (vertical, horizontal, and resultant, in pounds per lineal foot).

Electrical Standards Committee, sponsor. American Standards Assn., C 8.9-1942. Slow-Burning Wire and Cable. Covers scope, conductors, fibrous covering, filling and finish of coverings, acceptance tests, samples for test, identification, packing, and marking, inspection, rejection, and weight of copper conductors and complete coverings.

Electrical Standards Committee of American Standards Assn., sponsor. American Standards Assn., C8.1-1932. American Institute of Electrical Engineers' Standard No.30. Definitions and General Standards for Wires and Cables.

Electrical Standards Committee of American Standards Assn., sponsor. American Standards Assn., C8k1-1932 and C8k2-1932. American Institute of Electrical Engineers' Standards Nos.72 and 73. Published as one pamphlet. Weatherproof (Weather-Resisting) Wires and Cables (C8k1-1932); and Heat-Resisting Wires and Cables (C8k2-1932). C8k2 Specifications cover "slow-burning" materials as applied to conductors for use in hot, dry locations where standard insulating materials would not endure or where the presence of large masses of inflammable materials would be objectionable. Gives number of cotton or other approved fibrous braids, thickness, adhesion, and fireproofing requirements, measurements, and tests. C8k1 Specifications cover materials used for braids and saturating compounds, as applied to metallic conductors. Includes cotton braid, and for No.0 wire and larger inner braids of jute yarn, degree of saturation, thickness sizes and weights, and drip, bending, and melting tests.

Electrical Standards Committee of the American Standards Assn., sponsor. American Standards Assn., C8.12-1942. Cotton Braid for Insulated Wire and Cable for General Purposes. Specification covers braids as applied to rubber and varnished cloth insulated wires and cables. They do not cover "fancy" or special braids or braids for fixture wire or weather-resisting wire and cable. Three classes: heavy, for outdoor or rough service; standard, for indoor or protected service; and code, for installation under the National Electrical Code. Gives detail requirements for materials, construction, and measurement.

Electrical Standards Committee of American Standards Assn., sponsor. American Standards Assn., C8.13-1942. American Standard for Varnished Cloth Insulation for Lead Covered or Braid Covered Power Cable. Apply to varnished cloth insulation in metallic covered and/or braided cable, which is to be used for the transmission and distribution of electrical energy in underground, aerial, or indoor cable systems within following voltage limits: for nonshielded, multiple conductor cable, not over 17,000 volts between conductors; for single conductor and shielded cable operating on an ungrounded neutral system not over 17,000 volts between conductors; for single conductor and shielded cable operating on a grounded neutral system not over 28,000 volts between conductors. The requirements prescribed are identical with those for insulation in the Insulated Power Cable Engineers Assn. Specifications for Varnished Cambric Insulated Cables, 4th edition, July 1939 (also a standard of the National Electrical Manufacturers Assn.).

Electrical Standards Committee of American Standards Assn., sponsor. American Standards Assn., C8.14-1938. Specifications for Bare Concentric-Stranded Copper Cable for Insulated Conductors: Hard, Medium-Hard, or Soft. Requirements on concentric-stranded cable made from round copper wire for general use in the manufacture of covered or insulated electrical conductors.

Electrical Standards Committee of American Standards Assn., sponsor. American Standards Assn., C 8.15-1942. Specifications for Metallic Coverings for Insulated Wires and Cables. Apply to metallic coverings, together with the necessary beddings and protective coverings, for power and lighting circuits. Gives requirements for lead sheath, core covering for nonleaded cable, jute bedding for armored cable, flat steel tape armor, galvanized steel wire armor, interlocked steel tape armor, jute serving over lead sheath, duck tape over lead sheath, and braid over lead sheath.

Electrical Standards Committee of American Standards Assn., sponsor. American Standards Assn., C8.18-1942. Weather-Resistant (Weatherproof) Wire and Cable; U.R.C. Type. Covers wire and cable, the conductors, the materials used for the fibrous coverings, and saturating and finishing compounds. Gives requirements for conductors, fibrous covering, saturant, finish, mineral filler, acceptance requirements, samples for test, identification, packing and marking, inspection, and rejection.

Insulated Power Cable Engineers Assn. Metallic Coverings for Insulated Electric Cables, 1940. For lead sheath, flat steel tape armor, interlocked steel tape armor (except service entrance), and round galvanized steel wire armor; lead sheath quality, alloy sheath, and thickness; jute serving over lead sheath and duck tape over lead sheath without metallic armor; flat steel tape quality, galvanizing, width and thickness, lay and spacing; interlocked metal tape quality, width and thickness; galvanized steel wire quality, tensile strength, galvanizing, flexibility, and size; jute serving, bedding, core covering, rubber filled tape, and cotton braid; bored hole cable, dredge, shaft, and vertical riser cable, round wire armor construction. Adopted by the National Electrical Manufacturers Assn.

Insulated Power Cable Engineers Assn. Ozone Resistant Type Insulation for Electric Cables. Covers ozone resistant type insulation for all sizes and classes of single and multiple conductor power cables which are to be used for the transmission and distribution

of electrical energy, either underground, submarine, aerial, or indoor. Gives information to be supplied by purchaser, conductors, insulation, tape over insulation, shielding, electrical tests, ozone resistance test, and physical and accelerated aging tests. Adopted by the National Electrical Manufacturers Assn.

Insulated Power Cable Engineers Assn. Rubber Insulated Parkway Cables, 1936. Primarily for direct earth installation, includes lead covered metallic armored, lead and jute covered, lead and duck tape covered, and nonmetallic armored cables; general description, conductors, stranding, rubber insulation thickness, shielding, rubber tape, braid, voltage tests, insulation resistance, assembly of multi-conductor cable, identification, lead sheath, jute, steel tape, and duck requirements; methods of test and tables of properties. Adopted by the National Electrical Manufacturers Assn.

Insulated Power Cable Engineers Assn. Rubber Insulated Power Cables, 1935. For cables insulated with code, intermediate, 30 percent, and higher grade rubber compounds; conductors to meet A.S.A. Specification C8b1, insulation thickness practically A.I.E.E. standards, for single, two, and three phase systems, and direct current systems, additional thickness for nonleaded submarine cable, grades of insulation recommended, recommended shielding, test voltages, insulation resistance, and temperature correction, braid standards, rubberized tape, and thickness of lead; tables of properties and bending radii. Adopted by the National Electrical Manufacturers Assn.

Insulated Power Cable Engineers Assn. Varnished Cambric Insulated Cables, 1939. These specifications cover all sizes and classes of varnished cambric insulated lead covered or braided cables underground, aerial, or indoors, except special uses such as vertical risers in buildings exceeding 100 ft. General description, conductors to meet A.S.A. Specification C8b2 and C8a-section 30-152, resistance requirements, tensile strength, varnished cloth to meet A.S.T.M. D295, thickness of insulation, shielding, thickness of braid and braid color code, rubber and cotton braid covers, paint filled, mica-coated pitch, methods of test, lead sheath, thickness and tolerance, for multiple conductor round and flat twin cables, belted and non-belted (with individually shielded conductors); for service up to 17,000 volts for nonshielded multiple conductor cables, and shielded cables operating on grounded neutral at not over 28,000 volts between phases. Adopted by the National Electrical Manufacturers Assn.

International Municipal Signal Assn., Inc. Specification No. 1; 1942. Multi-Conductor Rubber Insulated, Alloy Sheathed, Fire Alarm and Signal Cable. Covers multi-conductor, rubber insulated, alloy sheathed cables for use in fire alarm, police signal and other municipal signal systems operating at 600 volts or less, and approved for installation in underground conduits or for use as aerial cable. Gives requirements for general construction, conductors, insulation, conductor coverings, conductor assembly, fillers, alloy sheath, electrical tests on completed cable, identification, packing and marking for shipment, payment for reels, inspection and tests, and rejection.

International Municipal Signal Assn., Inc. Specification No. 2; 1942. Rubber Insulated, Lead Sheathed and Armored (Parkway) Signal Cable. Covers armored multi-conductor, rubber insulated cables for use in fire alarm, police signal and other municipal signal systems operating at 600 volts or less and approved for direct earth burial. Gives requirements for general construction, conductors, insulation, conductor coverings, conductor assembly, fillers, cable tape, lead sheath, armor, electrical tests on completed cable, identification, packing and marking for shipment, payment for reels, inspection and tests, and rejection.

International Municipal Signal Assn., Inc. Specification No. 3; 1942. Rubber Insulated, Heavy Braid, Multi-Conductor Signal Cable; Type FB. Covers braid covered multi-conductor, rubber insulated cables for use in fire alarm, police signal and other municipal signal systems operating at 600 volts or less and approved for installation in buildings. Gives requirements for general construction, conductors, insulation, conductor coverings, conductor assembly, fillers, cable tape, braid covering, saturant, finish, tests on completed cable, identification, packing and marking for shipment, payment for reels, inspection and test, and rejection.

International Municipal Signal Assn., Inc. Specification No. 4; 1942. Rubber Insulated, Loom Covered, Multi-Conductor Signal Cable. Covers loom covered multi-conductor, rubber insulated cables for use in fire alarm, police signal and other municipal signal systems operating at 600 volts or less and approved for installation in buildings or with aerial messenger. Gives requirements for general construction, conductors, insulation, conductor coverings, conductor assembly, fillers, cable tape, loom covering, saturant, finish, tests on completed cable, identification, packing and marking for shipment, payment for reels, inspection and test, and rejection.

International Municipal Signal Assn., Inc. Specification No. 5; 1942. Rubber Insulated, Rubber Jacketed, With Jute Braid Overall, Multi-Conductor Fire Alarm Signal Cable. Covers rubber jacketed, multi-conductor, rubber insulated cables for use in fire alarm, police signal, and other municipal signal systems operating at 600 volts or less and approved for use in underground ducts or as an aerial cable supported on messenger. Gives requirements for general construction, conductors, insulation, conductor coverings, conductor assembly, fillers, cable tape, protective coverings, tests on completed cable, identification, packing and marking for shipment, payment for reels, inspection and test, and rejection.

International Municipal Signal Assn., Inc. Specification No. 7; 1942. Multiple Conductor Traffic Control Cable. Covers rubber insulated multiple conductor cables in sizes Nos. 14, 12, and 10 A.W.G. for use in traffic control circuits operating from 0 to 600 volts. This cable may be used for general application and is furnished with two types of outer cover. Gives requirements for general construction, conductors, insulation, braids on conductors, conductor assembly, fillers, cable tape, overall coverings, electrical tests on completed cable, identification, packing and marking for shipment, payment for reels, inspection and tests, and rejection.

International Municipal Signal Assn., Inc. Specification No.8; 1942. Multi-Conductor Rubber Insulated, Rubber Jacketed Series Street Lighting Cable. Covers rubber insulated, rubber jacketed multi-conductor cables in sizes 10 to 4 A.W.G. inclusive for use on street lighting circuits at a maximum of 600 volts between conductors and from 600 to 5,000 volts between conductors and ground. The cable may be used for either interior or exterior installations. Gives requirements for general constructions, conductors, insulation, braid on conductors, conductor assembly, rubber jacket, overall coverings, electrical tests on completed cable, identification, packing and marking for shipment, payment for reels, inspection and tests, and rejection.

International Municipal Signal Assn., Inc. Specification No. 16; 1942. 90 Per Cent Unmilled Rubber Insulated (Type FLT-TU) Alloy Sheathed Fire Alarm Signal Cable. Covers multi-conductor cables insulated with 90 percent unmilled rubber for use in fire alarm, police signal, and other municipal signal systems for operation at voltages not exceeding 125 volts a.c. or 250 volts d.c., and approved for installation in underground conduits or for use as aerial cables. Gives requirements for general construction, conductors, insulation, conductor coverings, conductor assembly, fillers, cable tape, protective covering, tests on completed cable, identification, packing and marking for shipment, payment for reels, inspection and tests, and rejection.

International Municipal Signal Assn., Inc. Specification 16-A; 1942. 90 Per Cent Unmilled Rubber Insulated (Type Fal-Tu) Lead Sheathed and Armored (Parkway) Signal Cable. Covers multi-conductor cables insulated with 90 percent unmilled grainless rubber for use in fire alarm, police signal, and other municipal signal systems for operating voltages not exceeding 125 volts a.c. or 250 volts d.c. and approved for direct earth burial. Gives requirements for general construction, conductors, insulation, conductor coverings, conductor assembly, fillers, cable tape, lead sheath, armor, tests on completed cable, identification, packing and marking for shipment, payment for reels, inspection and tests, and rejection.

International Municipal Signal Assn., Inc. Specification 16-B; 1942. 90 Per Cent Unmilled Rubber Insulated (Type FB-TU) Braided Fire Alarm Signal Cable. Covers multi-conductor cables insulated with 90 percent unmilled rubber for use in fire alarm, police signal, and other municipal signal systems for operation at voltages not exceeding 125 volts a.c. or 250 volts d.c., and approved for installation inside buildings. Gives requirements for general construction, conductors, insulation, conductor coverings, conductor assembly, fillers, cable tape, braid covering, saturant, finish, tests on completed cable, identification, packing and marking for shipment, payment for reels, inspection and tests, and rejection.

International Municipal Signal Assn., Inc. Specification 16-C; 1942. 90 Per Cent Unmilled Rubber Insulated (Type Fn-Tu) Loom Covered Fire Alarm Signal Cable. Covers multi-conductor cables insulated with 90 percent unmilled rubber for use in fire alarm, police signal, and other municipal signal systems, for operation at voltages not exceeding 125 volts a.c. or 250 volts d.c. and approved for use as aerial cables. Gives requirements for general construction, conductors, insulation, conductor coverings, conductor assembly, fillers, cable tape, loom covering, saturant, finish, tests on completed cable, identification, packing and marking for shipment, payment for reels, inspection and tests, and rejection.

International Municipal Signal Assn., Inc. Specification 16-D; 1942. 90 Per Cent Unmilled Rubber Insulated (Type Fr-Tu) Rubber Jacketed, Jute Braided Fire Alarm Signal Cable. Covers multi-conductor cables insulated with 90 percent unmilled rubber for use in fire alarm, police signal, and other municipal signal systems for operation at voltages not exceeding 125 volts a.c. or 250 volts d.c. and approved for use in underground ducts and as aerial cable. Gives requirements for general construction, conductors, insulation, conductor coverings, conductor assembly, fillers, cable tape, rubber sheath, tests on completed cable, identification, packing and marking for shipment, payment for reels, inspection and tests, and rejection.

International Municipal Signal Assn., Inc. Specification 16-E; 1942. Emergency Cable, for Municipal Signal Systems, 90 Per Cent Rubber Insulation, Rubber Sheathed. Covers multi-conductor emergency cables for use in fire alarm, police signal, and other municipal signal systems for operation at voltages not exceeding 125 volts a.c. or 250 volts d.c. Gives requirements for general construction, conductors, insulation, braids on conductors, pairs, conductor assembly, fillers, tape, rubber sheath, rubber sheath alternate, tests on completed cable, and identification.

International Municipal Signal Assn., Inc. Specification 17; 1942. 50 Per Cent Rubber Insulated (Type FLT-T) Alloy Sheathed Fire Alarm Signal Cable. Covers multi-conductor cables insulated with 50 percent rubber for use in fire alarm, police signal, and other municipal signal systems for operation at voltages not exceeding 125 volts a.c. or 250 volts d.c., and approved for installation in underground conduits or for use as aerial cables. Gives requirements for general construction, conductors, insulation, conductor coverings, conductor assembly, fillers, cable tape, protective covering, tests on completed cable, identification, packing and marking for shipment, payment for reels, inspection and tests, and rejection.

International Municipal Signal Assn., Inc. Specification 17-A; 1942. 50 Per Cent Rubber Insulated (Type Fal-T) Lead Sheathed and Armored (Parkway) Signal Cable. Covers multi-conductor cable insulated with 50 percent rubber for use in fire alarm, police signal, and other municipal signal systems for operating voltages not exceeding 125 volts a.c. or 250 volts d.c. and approved for direct earth burial. Covers general construction, conductors, insulation, conductor coverings, conductor assembly, fillers, cable tape, lead sheath, armor, tests on completed cable, identification, packing and marking for shipment, payment for reels, inspection and tests, and rejection.

International Municipal Signal Assn., Inc. Specification 17-B; 1942. 50 Per Cent Insulated (Type Fb-T)

Braided Fire Alarm Signal Cable. Covers multi-conductor cables insulated with 50 percent rubber for use in fire alarm, police signal, and other municipal signal systems for operation at voltages not exceeding 125 volts a.c. or 250 volts d.c. and approved for installation inside buildings. Gives requirements for general construction, conductors, insulation, conductor coverings, conductor assembly, fillers, cable tape, braid covering, saturant, finish, tests on completed cable, identification, packing and marking for shipment, payment for reels, inspection and tests, and rejection.

International Municipal Signal Assn., Inc. Specification 17-C; 1942. 50 Per Cent Insulated (Type Fn-T) Loom Covered Fire Alarm Signal Cable. Covers multi-conductor cables insulated with 50 percent rubber for use in fire alarm, police signal, and other municipal signal systems for operation at voltage not exceeding 125 volts a.c. or 250 volts d.c. and approved for use as aerial cables. Gives requirements for general construction, conductors, insulation, conductor coverings, conductor assembly, fillers, cable tape, loom covering, saturant, finish, tests on completed cable, identification, packing and marking for shipment, payment for reels, inspection and tests, and rejection.

International Municipal Signal Assn., Inc. Specification 17-D; 1942. 50 Per Cent Insulated (Type Fr-T) Rubber Jacketed, Jute Braided Fire Alarm Signal Cable. Covers multi-conductor cables insulated with 50 percent rubber for use in fire alarm, police signal, and other municipal signal systems for operation at voltages not exceeding 125 volts a.c. or 250 volts d.c. and approved for use in underground ducts and as aerial cable. Gives requirements for general construction, conductors, insulation, conductor coverings, conductor assembly, fillers, cable tape, rubber sheath, tests on completed cable, identification, packing and marking for shipment, payment for reels, inspection and tests, and rejection.

International Municipal Signal Assn., Inc. Specification 17-E; 1942. Emergency Cable for Municipal Signal Systems, Rubber Sheathed. Covers multi-conductor emergency cables for use in fire alarm, police signal, and other municipal signal systems for operation at voltages not exceeding 125 volts a.c. or 250 volts d.c. Gives requirements for general construction, conductors, insulation, braids on conductors, pairs, conductor assembly, fillers, tape, rubber sheath, rubber sheath alternate, tests on completed cable, and identification.

International Municipal Signal Assn., Inc. Specification No. 18; 1942. Paper Insulated Lead Sheathed Telephone Cable. Covers paper insulated, lead sheathed cables, for telephone circuits and other applicable uses in municipal communication systems whose operating voltages do not exceed 125 volts a.c. or 250 volts d.c. This type of cable is not approved for fire alarm circuits. Gives requirements for general construction, conductors, insulation, colors of insulation, cable assembly, paper covering over core, sheath, density of cable, tests, capacitance, insulation resistance, dielectric strength, identification, defective pairs, armor, packing and marking for shipment, payment for reels, inspection and tests, and rejection.

International Municipal Signal Assn., Inc. Specification No. 32; 1942. 30 Per Cent or 40 Per Cent Conductivity Copper Covered Steel Messenger Strand. Covers copper covered steel strand of two types, high strength and extra high strength for use as messengers in supporting aerial cable, fire alarm, police patrol and traffic signals or other municipal signalling equipment, and for the guying of overhead line poles. Gives requirements for material, properties, samples for test, packing and marking for shipment, payment for reels, inspection and tests, and rejection.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, 1938. Wire and Cable; Copper. Covers definition, constants (copper wire), general properties, types of wire, prices, packing, and purchase practices.

National Board of Fire Underwriters. National Electrical Code, 1940. American Standards Assn., C1-1940. Conductors. Type and thickness of insulation, voltage limits, braid coverings, standard stranding for armored cable and nonmetallic sheathed cable, demand calculations for feeder sizes.

Society of Automotive Engineers. Aeronautical Material Specification 3385, 1941. Markers, Ignition-Cable (Non-Metallic). Tubing closely braided from commercially white cotton or other suitable material, and coated on the inside and outside with a flexible insulating varnish or lacquer, to produce a smooth, uniform finish. Includes requirements for size, markings, tests, approval, and rejections.

Society of Automotive Engineers. Aeronautical Material Specifications 3390 and 3392; 1942. Ignition Cable; High Tension (Copper Conductor). For stranded copper conductors covered with insulating compound and a protective coating. 3390 for .275-.287 in. in actual diameter and 3392 for .345-.360 in. in actual diameter. Covers requirements for shape, construction of cable, insulation, protective coatings, concentricity, age, test samples, tests, packing and marking, reports, approval, and rejections.

Society of Automotive Engineers. Aeronautical Material Specification 3397; 1942. Ignition Cable; High Tension (Steel Conductor—Low Capacitance). For stranded corrosion-resisting steel conductor covered with insulating compound and a protective coating. .275-.287 in. in actual diameter. Covers requirements for construction of cable, insulation, protective coatings, concentricity, identification, age, test samples, tests, packing and marking, reports, approval, and rejections.

Society of Automotive Engineers. 1944 Handbook, Section 4—Fabricated Material. S.A.E. Standard Insulated Cable, revised 1942. Low (general specifications, tests, lighting and starting motor cables and double braid lighting cables) and low tension cable (general specifications, tests, and lighting and starting motor cables).

Underwriters' Laboratories, Inc. Bulletin of Research 25; 1942. Performance of Rubber Insulation of Building Wire in One-Year Oven Tests. This bulletin describes one-year oven tests of rubber insulation of building-wire of several new types, conducted to determine if their performance under test at the maximum temperatures recognized by the National Electrical Code, would indicate proper performance under field conditions. Covers description of samples, methods of test, results of tests, analysis of test results, and summary.

Underwriters' Laboratories, Inc. Standard for Armored Cable, 1941. Armored cable and cord for use in accordance with National Electrical Code. Conductors, fillers, lead coverings, armor, elongation, tightness of armor on conductors, flexibility, dielectric strength, continuity of conductors, marking, and inspection of listed product.

Underwriters' Laboratories, Inc. Standard for Fire-Alarm Cables, 1941. Covers cables having two or more conductors, intended for fire-alarm signaling circuits and for application in accordance with Standards of the National Board of Fire Underwriters for Municipal Fire Alarm Systems. Covers conductors with heavy-wall, thin-wall (type TU), and thin-wall (type T) insulation. Conductors, insulation, conductor coverings and assemblies, cable coverings, electrical tests, markings, and inspection of listed product.

Underwriters' Laboratories, Inc. Standard for Gas-Tube-Sign and Oil-Burner-Ignition Cable, 1943. Covers single-conductor gas-tube-sign and oil-burner-ignition cable for use with gas-tube systems for signs, outline lighting, and interior lighting in accordance with the National Electrical Code and Underwriters' Laboratories, Inc. Gives requirements for conductors, insulation, coverings, routine voltage application, extended voltage application, surface leakage, dripping of compound, flame-retardant properties, cable with overall copper-wire braid, lead-sheathed cable, rating, marking, inspection of listed products, labels, inspection reports, and field inspection.

Underwriters' Laboratories, Inc. Standard for Nonmetallic-Sheathed Cable, 1941. Covers nonmetallic-sheathed cable for use in interior wiring systems involving potentials for 600 volts or less, in accordance with the National Electrical Code. Conductors, protective sheath, assembly of conductors, fillers, impregnation, outer covering, flexibility, dripping of compound, tensile strength, elongation, dielectric strength, polarity identification, marking, and inspection of listed product.

Underwriters' Laboratories, Inc. Standard for Service Cables, 1937. For service-entrance, and service-drop cables, for circuits of 600 volts or less, and for 150 volts or less uninsulated. Types for mechanical resistant to abuse, flame retardance, moisture resistance, underground service, and service-drop. Minimum size wire, rubber-covered conductors, heating, corrosion protection, moisture absorption, compound, bending at low temperature, flame retardant properties, overload, impact, dielectric strength, polarity, and marking requirements.

U. S. Gov., Army Air Forces. Specification 32427 (1); 1943. Cable; Ignition, High Tension (Synthetic Sheathed).

U. S. Gov., Army Air Forces. Specification 32516; 1945. Cable Assembly; External Power Connection, for Aircraft.

U. S. Gov., Army-Navy Aeronautical Specification AN-C-130; 1944. Cable; High Tension Ignition.

U. S. Gov., Army-Navy Aeronautical Specification AN-J-C-48a; 1943. Cable; Electric, Low-Tension, Aircraft.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-31. Cable; Concentric, for Radio Transmission Lines.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-84. Cable; Concentric, Rubber-Insulated R.F., for Radio Transmission Lines.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-161. Cable; Concentric, Rubber-Insulated R. F., for Radio Receiving Lines.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-378. Power Lines; Grounded Neutral (Overhead).

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-441. Cable; Electrical, Non-Metallic Armor, for Underground Use.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-466. Cable; Emergency, Artificial Line To Be Used With.

U. S. Gov., Dept of Commerce, National Bureau of Standards H32; 1941. American Standards Assn., C2.2-1941. Safety Rules for the Installation and Maintenance of Electrical Supply and Communication Lines. Comprising part 2 of the fifth edition, National Electrical Safety Code. Includes requirements on grades of construction and materials for supply cables and conductors; conductor loadings; and strength requirements for open supply conductors, supply cables, and communication cables. Appendixes (A) recommended normal sags of overhead line conductors; (B) minimum permissible sags; (C) sags for line conductors strung to 2,000 lb. limit; and (D) mechanical data for copper, steel, copper-covered steel, and aluminum wires and cables.

U. S. Gov., Federal Specification J-C-31; 1942. Cable Units; Battery and Starter. Covers one grade in two types—(I) ground cable units, uninsulated (class A—rope strand, and class B—strap, flat); and (II) starter cable units, insulated (class A—flexible, and class B—standard). Gives requirements for conductors, tolerances, battery post terminals, lugs, terminals, connections, length, sizes, and insulation; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification J-C-71a; 1944. Cable; Armored (Including Lead Covered Types and Armored Cord), 0 to 600-Volt Service. Gives types, sizes, material and workmanship, general design, copper

conductors, insulation, fibrous insulation covering, fibrous sheathing, lead sheathing, steel armor, marking of armor, twisted assemblies, insulated conductor continuity, bushings, flexibility, dielectric strength, armor, electrical resistance, tightness of armor on conductor assembly, armor resistance to stretching, zinc coating of armor; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification J-C-86; 1943. Cable, Cord, and Wire; Electric, Flexible, Cotton-Covered (General Service). Covers four types. Gives detail requirements as to construction, methods of sampling, inspection, and tests.

U. S. Gov., Federal Specification J-C-103; 1941. Amendment 2; 1944. Cable and Wire; Rubber-Insulated, Building Type (0 to 5,000-Volt Service). The term "rubber" as used throughout this specification includes synthetic rubber. Covers all listed sizes of rubber-insulated wire and cable in two types, R-code grade, and RH-heat-resistant grade. Gives requirements for conductors (resistance, sizes, strands, lead-coated or lead-alloy-coated, splices, and separator), insulation (thickness and physical properties of rubber compound), coverings (fibrous coverings, number of coverings, cotton tapes, cotton braids, cotton wraps or servings, saturation of fibrous coverings, flame-retardant properties, moisture-resistant properties, flexibility, finish, lay of twist, and lead coverings), dielectric strength, insulation resistance, and marking of wire and cable; methods of sampling, inspection and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification J-C-121; 1935. Cable and Wire; Rubber-Insulated (for) Other Than Building Purposes, Superaging-Grade (0 to 8,000-Volt Service). Covers four types of single and multiple conductor wires, and cable-braided; lead-covered (with or without protective covering); armored (with or without lead covering) with interlocking metal, flat metal, round wire, or basket-weave metal; and with nonmetallic sheath. Gives general requirements for conductors (sizes, number of strands), insulation, coverings for wires and cables of the four types, and polarity and identification markers (color scheme for control cables); detail requirements for rubber insulation, tape, and braid; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Federal Specification J-C-138; 1943. Cable and Wire; Varnished-Cloth Insulated (0 to 5,000-Volt Service). Covers varnished-cloth insulated wires and cables of all wire sizes listed in table and designates four types. Gives requirements for material, resistance, sizes, strands, tinning, splices, separator, insulation, coverings, cabling, dielectric strength, insulation resistance, sampling, inspection, tests, packaging, packing, and marking.

U. S. Gov., Joint Army-Navy Specification, JAN-C-17; 1944. Cables; Coaxial and Twin Conductor for Radio Frequency.

U. S. Gov., Navy Dept. Specification 15C11; 1937. Cables; Electric, Insulated (Shipboard Use).

U. S. Gov., Panama Canal, Purchasing Dept. Specification for Rubber-Sheathed Flexible cords and Cables, 1937.

U. S. Gov., Post Office Dept., Div. of Motor Vehicle Service, Bureau of the Fourth Assistant Postmaster General. Specifications for Cable; Two Conductor Rubber Sheathed.

U. S. Gov., Treasury Dept., Procurement Div., 321A; 1942. Cable; Ignition, High-Tension, Automotive. Covers one type and one grade; and conductor shall comprise 19 copper wires each wire covered with lead-alloy coating. Gives requirements for insulation, braid, date and identification markers, size, finish, and rejection; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., U. S. Army, Army Air Forces. Specification 48-40; 1942. Cable; Steel Tape Armored.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 48-3H; 1940. Cable; Submarine Mine, 1-Conductor.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 90-12; 1942. Cable; Low Tension, Automotive.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-50-B; 1922. Cable; Radio-Frequency.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-250H; 1937. Cable; Switchboard, Telephone.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-427D; 1943. Cable WC-601 to WC-614, Inclusive.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-428C; 1932. Cable; Types WC-621 to WC-634, Inclusive, Power.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-429D; 1937. Cable; Types WC-641 to WC-654, Inclusive, Power.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-430B; 1931. Cable; Types WC-661 to WC-674, Inclusive, Power.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-438A; 1931. Cable; Types WC-512, Rubber-Insulated, Lead-Covered.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-453; 1928. Cable; Type WC-358, Armored Submarine.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-457; 1928. Cable; Telephone Wire Center, for Balloon.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-460; 1928. Cable; Types WC-444, WC-445, and WC-446, for Aerial and Underground Use.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-470B; 1933. Cable; Type WC-513, Special Telephone Cable.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-485; 1935. Cable; Lead-Covered, Rubber-Insulated.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-490; 1939. Cable; Telephone, Nos. 19 and 22 A.W.G., Paper- or Pulp-Insulated, Lead-Covered, and Armored.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-586E; 1938. Cable; Telephone, Submarine, No. 19, A.W.G.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-628A; 1935. Cable; Type WC-447 to WC-450, Inclusive, Telephone, No. 24 A.W.G., Lead-Covered.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-638D; 1939. Cable; Types WC-411 to WC-429, Inclusive, Telephone, No.22 A.W.G., Lead-Covered.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-680A; 1937. Cable; Type WC-372, Telephone, No. 19 A.W.G., 50-Pair Quadded.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-690; 1934. Cable; Types WC-507, WC-508, and WC-531, No.19 A.W.G., Rubber-Insulated, Lead-Covered.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-722A; 1938. Cable; Switchboard, No.22 A.W.G., Textile-Insulated and Lead-Covered.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-725; 1935. Cable; Telephone, 64-Pair, 16 and 19 A.W.G., Quadded.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-1129; 1942. Wire W-129.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-1177; 1943. Cable WC-547-( ).

U. S. Gov., U. S. Army, Signal Corps. Specification 71-1179; 1943. Cable WC-549-( ); 50-Ohm, Radio-Frequency, Low Loss, Solid-Dielectric, Semiflexible, Coaxial.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-1180; 1943. Cable WC-550-( ); 95-Ohm, Radio-Frequency, Low-Loss, Solid-Dielectric, Semiflexible, Twin-Conductor.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-1195; 1943. Cable WC-551-( ); 95-Ohm, Radio-Frequency, Low-Loss, Solid-Dielectric, Semiflexible, Twin-Conductor.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-1196; 1943. Cable WC-562-( ); 70-Ohm, Radio-Frequency, Low-Loss, Solid-Dielectric, Semiflexible, Coaxial.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-1709; 1943. Cable; General Specification for, Radio-Frequency, Low-Loss, Solid-Dielectric, Semiflexible.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-1710; 1943. Cable WC-552-( ); 70-Ohm, Radio-Frequency, Low-Loss, Solid-Dielectric, Semiflexible, Coaxial.

## 715.42 Cords, Electrical

Assn. of American Railroads, Telegraph and Telephone Section, 2-G-11; 1924. Single Conductor Cord AAR-5-A. For use in telephone switchboards of the pin jack type, size of wire and number of strands for conductor, thickness of rubber insulation, asbestos braiding, and outer cotton braid, tests, and detailed dimensional drawing of cord and assembly.

Assn. of American Railroads, Telegraph and Telephone Section, 2-G-28; 1927. Double Conductor Patching Cord AAR-2-A. For use with telephone switchboards of pin jack type, consisting of two tinsel conductors with filler of twine, covered with two braidings of green glazed cotton; gives requirements for winding in three strands, colors of conductor thread, reinforcement braiding, number and thickness of copper tinsel ribbons, terminals, finish, tests, and dimensional drawings.

Assn. of American Railroads, Telegraph and Telephone Section, 2-G-29; 1927. Double Conductor Switchboard Cord AAR-3-A. For use in cutting in operator's sets in telephone switchboards, consisting of two copper tinsel conductors with filler of twine, covered with two braidings of green glazed cotton, each conductor made of three strands wound spirally, colors of conductor thread, reinforcement braiding, terminals, finish, tests, and dimensional drawings.

Assn. of American Railroads, Telegraph and Telephone Section, 2-G-32; 1928. Reverse Double Conductor Cord AAR-4-A. For use with pin jack type switchboards, consists of two copper tinsel conductors and twine filler covered with green glazed cotton braid, each conductor made of three strands wound spirally, colors of conductor thread, dimensional drawings of construction, and test requirements for resistance, insulation, and soldering.

Assn. of American Railroads, Telegraph and Telephone Section, 2-G-33; 1928. Single Conductor Cord AAR-1-A. For cutting in operators at telephone switchboards, cord consists of one copper tinsel conductor and twine filler covered with white glazed cotton, conductor made in three strands wound spirally, covered with double serving of tussah floss and impregnated with moisture proofing compound, terminals, finish, and test requirements, with dimensional drawings of construction.

Assn. of American Railroads, Telegraph and Telephone Section, 2-G-76; 1937. Potential Plug and Cord AAR-1-A. Gives general requirements, material and workmanship, dimensions, finish, assembly, inspection and tests, packing, marking, and warranty.

National Board of Fire Underwriters. National Electrical Code; 1940. American Standards Assn., C1-1940. Conductors. Includes flexible cords and fixture wire, type and thickness of insulation, voltage limits, number and treatment of braid coverings, standard stranding, and approved uses for flexible cords.

Underwriters' Laboratories, Inc. Standard for Cord Sets, 1937. Covers cord sets for use as supply connections for portable appliances rated at 250 volts or less as extension cords for such appliances, in accordance with the National Electrical Code. General; flat-iron, appliance, and general-use cord sets; wiring; strain relief; marking; and inspection of listed product.

Underwriters' Laboratories, Inc. Standard for Flexible Cord and Fixture Wire, 1935. Reprinted, 1940. Covers fixture wires and flexible cords, excepting armored cords, of the types recognized by and for the uses indicated in the National Electrical Code. Conductors, insulation, untreated asbestos, impregnated asbestos, impregnated cotton, code rubber, 30 percent rubber, 40 percent rubber, unvulcanized

rubber, fibrous coverings, lay of twist, fillers, rubber jackets, individual types of wire and cord, polarity identification, rating, marking, Underwriters' Laboratories inspection of listed products, testing machine for heater cord, samples for test, and test method.

U. S. Gov., Army-Navy Aeronautical Specification AN-C-68; 1944. Cord; Flexible Electrical.

U. S. Gov., Federal Specification J-C-71a; 1944. Cable; Armored (Including Lead Covered Types and Armored Cord); 0 to 600-Volt Service. Gives types, sizes, material and workmanship, general design, copper conductors, insulation, fibrous insulating covering, fibrous sheathing, lead sheathing, steel armor, marking of armor, twisted assemblies, insulated conductor continuity, bushings, flexibility, dielectric strength, armor, electrical resistance, tightness of armor on conductor assembly, armor resistance to stretching, zinc coating of armor; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification J-C-86; 1943. Cable, Cord, and Wire; Electric, Flexible, Cotton-Covered (General Service). Covers four types. Gives detail requirements as to construction; and methods of sampling, inspection, and tests.

U. S. Gov., Treasury Dept., Procurement Div., 320A; 1942. Cord; Hard Service, Rubber Covered, Flexible, Double Conductor. Covers two types—type SJ, 300 volt maximum; and type S, 600 volt maximum; consisting of stranded flexible conductors, a separator, rubber insulation, jute, hemp, soft cotton or rubber filler, and a rubber jacket. Gives requirements for copper wire, diameter, number of strands, separator, rubber insulation, mechanical strength, dielectric strength, and details for each type; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., U. S. Army, Army Air Forces. Specification 12-5; 1941. Cord; Flexible, Heater.

U. S. Gov., U. S. Army, Army Air Forces. Specification 12-6; 1941. Cord; Flexible, Rubber-Covered.

U. S. Gov., U. S. Army, Signal Corps. Specification 46-2A; 1941. Cords CD-250A and CD-425; Sound and Flash Ranging.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-18-C; 1931. Cord; Type CP-38.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-158D; 1932. Cord; Types CO-100 to CO-103, Inclusive, No.18 A.W.G., Rubber Insulated.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-211-C; 1942. Cordage CO-109, CO-110, CO-112 and CO-113; No.18 A.W.G., Rubber Insulated and Shielded.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-212B; 1932. Cord; Type CO-111, 6-Conductor, Nos. 10 and 18 A.W.G., Rubber Insulated and Shielded.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-219A; 1930. Cord; Type CO-114, 6-Foot, 2-Conductor.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-236D; 1930. Cord; Type CO-49, 18-Inch, 2-Conductor.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-365B; 1929. Cord; Types CC-300, CC-321, CC-322, CC-323, and CC-325.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-394B; 1932. Cord; Type CO-115, 40-Foot, 5-Conductor.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-416; 1929. Cord; Type CO-116, 100-Foot, Single-Conductor.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-417; 1929. Cord; Type CO-117, 55-Foot, Single-Conductor.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-471D; 1938. Cordage; Types CO-98, CO-208, and CO-209.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-539A; 1933. Cord; Types CD-104 and CD-105, 50- and 150-Foot Cables.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-554; 1931. Cord; Type CD-106, 10-Foot, 2-Conductor.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-562B; 1941. Cord; Type CD-107, Power, 2-Conductor, No. 12 A.W.G.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-571C; 1940. Cord; Electric, Tinsel, Conductor.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-599; 1931. Cord; Type CO-53, 11 1/2-Foot, Single-Conductor.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-604B; 1932. Cord; Type CD-108, 10-Foot, 4-Conductor.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-605B; 1932. Cord; Type CO-71, 3-Foot, Single-Conductor.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-606-A; 1931. Cord CO-72.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-676A; 1936. Cord; Type CD-124, Radio, Headset, Extension.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-684A; 1937. Cord; No.18 A.W.G., Close Spiral Construction.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-700A; 1936. Cordage; Shielded, Rubber-Insulated and Jacketed, Radio Power.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-802D; 1939. Cordage CO-119; Electrical, 2-Connector, Rubber-Jacketed.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-814A; 1935. Cordage; Type CO-159, Electrical, 2-Conductor, Shielded.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-817B; 1936. Cordage; Type CO-120 and CO-150, Electrical, 8-Conductor, Shielded.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-818C; 1938. Cordage; Type CO-121, Electrical, 2-Conductor, Shielded.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-826A; 1938. Cordage; Type CO-122, Electrical, 3-Conductor, Rubber-Jacketed.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-827A; 1937. Cordage; Type CO-127, Electrical, No. 14 A.W.G., 2,000-Volt, Shielded.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-828; 1935. Cordage; Type CO-140, Electrical, Multi-Conductor, Jacketed.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-829; 1935. Cordage; Type CO-141, Electrical, 2-Conductor, Rubber-Jacketed.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-830; 1935. Cordage; Type CO-147, Electrical, Single-Conductor, 2,000-Volt, Rubber Insulated.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-880; 1942. Cordage; CO-219, 2-Conductor, Close Spiral Construction, A. W. G. No. 23, Rubber-Jacketed.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-886A; 1942. Cordage CO-122A and CO-122B; 3-Conductor, A.W.G. No. 22 or No. 20, Close Spiral Construction, Rubber-Jacketed; also Cords, CO-76A and CO-76B.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-935C; 1943. Cords and Cordage; No. 20 A.W.G., Close Spiral Construction.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-971; 1939. Cord; Type CD-318.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-1019; 1943. Cords and Cordage; Multipair, Rubber Insulated and Jacketed.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-1106; 1942. Cordage CO-119-A and CO-119-B; 2-Conductor, Close-Spiral Construction, A.W.G. No. 20 or No. 22, Rubber-Jacketed.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-1139-A; 1943. Cord CD-508.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-1175; 1942. Cord CD-495, for Use With Electromagnetic Microphone-Headset.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-1525; 1942. Cord CD-604 and CD-605.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-1616; 1944. Cordage CO-212; No. 8 A.W.G., Concentric Battery Cable.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-1625; 1943. Cord CD-786.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-1653A; 1944. Cord Assembly RC-243 and Cord Assembly RC-244.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-1654; 1944. Cords and Cordages; Intercommunication and Monitoring (for Radio Direction Finder Central TC-8 and Radio Intercept Central TC-9.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-1662A; 1944. Antenna Cords and Junction Boxes (for Radio Direction Finder Central TC-8 and Radio Intercept Central TC-9).

U. S. Gov., U. S. Army, Signal Corps. Specification 71-1697; 1943. Cord CD-189.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-5059; 1944. Cord CX-179/AIC; Retractable, for Use in Aircraft.

## 715.43 High Resistance Wires

American Institute of Electrical Engineers, 46; 1927. American Standards Assn., C11-1927. Hard Drawn Aluminum Conductors. Standard values of resistivity, resistance-temperature coefficient, density, and length-temperature coefficient and explanatory notes.

American Society for Testing Materials, A111-43; 1943. American Standards Assn., G8.3-1944. Zinc-Coated (Galvanized) Iron or Steel Telephone and Telegraph Line Wire. For signal transmission wire where electrical characteristics are important. Requirements for zinc coating, base metal, joints, sampling, tests for uniformity and weight of coating, adherence of coating, breaking strengths of 4 to 14 B.W.G. wire, elongation, twists, resistivity, size and permissible variations, finish and inspection.

American Society for Testing Materials, A 112-33; 1933. American Standards Assn., G8.4-1935. Zinc-Coated (Galvanized) Iron or Steel Tie Wires. For use in tying galvanized telephone or telegraph line wire to insulators. Describes zinc for coating, weight and uniformity of coating, adherence, tensile strength, elongation, sizes and permissible variations, and packing.

American Society for Testing Materials, B 70-39; 1939. Method of Test for Change of Resistance With Temperature of Metallic Materials for Electrical Heating. Applicable over the range of service temperatures; test specimen and leads, electric furnace, resistance measurements, test current, method of procedure for test and preparation of temperature-resistance curve, and singular points in curve.

American Society for Testing Materials, B 76-39; 1939. Method of Accelerated Life Test for Metallic Materials for Electrical Heating. For determining resistance to oxidation at high temperatures under intermittent electrical heating of wire through a prescribed temperature range. Arrangement of test panel, apparatus required, size of specimen, ballast resistance, temperature of test, procedure, and recording of results.

American Society for Testing Materials, B 77-33; 1933. Method of Test for Thermoelectric Power of Electrical-Resistance Alloys. For determination of thermoelectric power of a metal compared to copper, between 0 and 100° C., for suitability for use in resistance apparatus. Includes preparation of test specimen, measurement of temperature, electromotive force, polarity of metal, and form of report.

American Society for Testing Materials, B82-41; 1941. Drawn or Rolled Alloy, 80 Percent Nickel, 20 Percent Chromium, for Electrical Heating Elements. Covers annealed, drawn, or rolled shapes. Gives heat treatment, chemical composition, chemical analysis, elongation, nominal resistivity, test for resistivity, resistance increase with temperature, test for change of resistance, durability, finish, packing, and marking.

American Society for Testing Materials, B83.41; 1941. Drawn or Rolled Alloy, 60 Percent Nickel, 15 Percent Chromium, and Balance Iron, for Electrical Heating Elements. Cover annealed, drawn, or rolled shapes. Heat treatment, chemical composition, chemical analysis, elongation, nominal resistivity, test for resistivity, resistance increase with temperature, test

for change of resistance, durability, finish, packing, and marking.

American Society for Testing Materials, B 84-36; 1936. Method of Test for Temperature-Resistance Constants of Alloy Wires for Precision Resistors. For use in the temperature range 0 to 80° C., selection of sample, terminals, apparatus required, neutral oil bath, temperature measurements, resistance measurements, test procedure, calculation of constants, and form of report.

American Society for Testing Materials, B 114-39; 1939. Method of Test for Temperature-Resistance Constants of Sheet Materials for Shunts and Precision Resistors. For determining constants of materials used in temperature range 0 to 80° C. Requirements for test specimen, terminals, manganin samples, apparatus, baths, temperature and resistance measurements, procedure, and form of report.

American Society for Testing Materials, B 118-42 T; 1942. Tentative Methods of Testing Nickel and Nickel-Alloy Wire and Ribbon for Electronic Tube Filaments. For wire or ribbon without chemical coating; method of chemical analysis, density and tensile strength requirements, test specimen, procedure, weight, resistivity, and determination of demensions.

Assn. of American Railroads, Operations and Maintainance Dept., Engineering Div., Signal Section. Manual of Recommended Practice. Specification 22-39; 1939. Galvanized E.B.B. Steel Bonding Wire. No.8 steel wire for bonding rail joints where track circuits are used. Gives properties test of galvanizing, inspection, etc.

Assn. of American Railroads, Operations and Maintainance Dept., Engineering Div., Signal Section. Manual of Recommended Practice. Specification 196-40; 1941. Copper-Bearing Steel Wire With or Without Weather-Resistant Covering. Requirements for galvanized copper-bearing steel line wire for use on signal circuits. Conductor in accordance with A.A.R. Telegraph and Telephone Section Specification 1-A-53 and covering with American Standard C8.18, except as to thickness. Acceptance tests required and table of weights of bare and finished wire.

Assn. of American Railroads, Telegraph and Telephone Section, 1-A-16; 1927. Galvanized Iron Tie Wires. Includes Nos.8 and 9 B.W.G. wire, elongation, and breaking strain of soft wire, galvanized to meet requirements of A.A.R. Specification 1-D-5.

Assn. of American Railroads, Telegraph and Telephone Section, 1-A-53; 1935. Galvanized Copper Bearing Steel Line Wire. Includes five sizes from 4 to 12 B.W.G., requirements as to composition, permissible variations in size, tensile strength, elongation, torsion, galvanizing, resistivity, and tests.

Assn. of American Railroads, Telegraph and Telephone Section, 1-A-81; 1942. No.16 A.W.G. Copper-Covered Steel Distributing Wire—Single and Twisted Pair. For use in the communication plant. Gives general requirements, material and workmanship, physical requirements, electrical requirements, inspection and tests, packing, marking, and warranty. Emergency Alternate 1-A-81 EA-2; 1944, changed 1-A-81, in order to conserve critical and scarce materials during the war period.

Electrical Standards Committee of American Standards Assn., sponsor. American Standards Assn., C 8.15-1942. Specifications for Metallic Coverings for Insulated Wires and Cables. Apply to metallic coverings, together with the necessary beddings and protective coverings, for power and lighting circuits. Gives requirements for lead sheath, core covering for nonleaded cable, jute bedding for armored cable, flat steel tape armor, galvanized steel wire armor, interlocked steel tape armor, jute serving over lead sheath, duck tape over lead sheath, and braid over lead sheath.

International Municipal Signal Assn., Inc. Specification No.27; 1942. Weather Resistant (Weatherproof) Signal Line Wire 30 Percent Conductivity Bronze Conductor. Covers weather resistant (weatherproof) signal line wire for use in fire alarm, police signal, and other municipal signal systems. Gives requirements for material, conductor, fibrous covering, saturant, finish, mineral filler, acceptance requirements, samples for test, identification, packing and marking for shipment, inspection and tests, and rejection.

International Municipal Signal Assn., Inc. Specification No.28; 1942. Weather Resistant (Weatherproof) Signal Line Wire With 30 Percent or 40 Percent Conductivity Copper Covered Steel Conductors. Covers weather resistant (weatherproof) signal line wire for use in fire alarm, police signal, and other municipal signal systems. Gives requirements for material, conductor, fibrous covering, saturant, finish, mineral filler, acceptance requirements, samples for test, identification, packing and marking for shipment, inspection and tests, and rejection.

Underwriters' Laboratories, Inc. Bulletin of Research, 25; 1942. Performance of Rubber Insulation of Building Wire in One-Year Oven Tests. This bulletin describes one-year oven tests of rubber insulation of building-wire of several new types, conducted to determine if their performance under test at the maximum temperatures recognized by the National Electrical Code would indicate proper performance under field conditions. Covers description of samples, methods of test, results of tests, analysis of test results, and summary.

U. S. Gov., Army-Navy Aeronautical Specification AN-W-8a; 1943. Wire; Iron and Constantan, Thermocouple.

U. S. Gov., Federal Specification QQ-W-421; 1938. Wire; Steel, Copper-Covered. Covers three types—(I) high strength 40 percent conductivity, (II) high strength 30 percent conductivity, and (III) extra high strength 30 percent conductivity. Gives requirements for material, physical requirements, and electrical resistivity; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Navy Dept. Specification 17W2b; 1941. Wire (and Ribbon); Resistance.

U. S. Gov., Navy Dept. Specification 47N1a; 1938. Wire, Nickel-Chromium-Iron-Alloy; Bars; Forgings; Rods; Shapes; Sheets; Strips.

*References.*—Copper wire, bare and insulated, *see* 715.44; terminology, wire tables and gages, *see* 715.40; wiring methods and practice, *see* 715.30; definitions, symbols, methods of test, service standards, safety codes, *see* 710; methods of test and general requirements for metals, *see* 600.1; zinc coatings, tin coatings, *see* 600.3; asbestos insulation, *see* 719.51; resistors, electric heaters, *see* 714.12, 717.1.

## 715.44 Low Resistance Wires

American Institute of Electrical Engineers. Electrical Standards Committee of American Standards Assn., sponsor. American Standards Assn., C8.5-1936, C8.6-1936, and C8.7-1936. Specifications for Cotton Covered Round Copper Magnet Wire. Specifications for Silk Covered Round Copper Magnet Wire. Specifications for Enameled Round Copper Magnet Wire. Requirements on manufacture; properties and tests with maximum and minimum dimensions of wire as used in the manufacture of electrical apparatus.

American Society for Testing Materials, B 1-40; 1940. American Standards Assn., H4.2-1941. Hard-Drawn Copper Wire. Gives requirements for tensile properties, resistivity, dimensions and permissible variations, density, and explanatory notes.

American Society for Testing Materials, B 2-40; 1940. American Standards Assn., H4.3-1941. Medium-Hard-Drawn Copper Wire. For material and tensile requirements, resistivity, dimensions and permissible variations, density, joints, and explanatory notes.

American Society for Testing Materials, B 3-41; 1941. Society of Automotive Engineers Specification No.83. American Standards Assn., H4.1-1942. Soft or Annealed Copper Wire. Covers drawn and annealed or soft round bare copper wire for electrical purposes. Material, tensile properties, resistivity, dimensions, density, joints, finish, packing and shipping, and inspection.

American Society for Testing Materials, B 9-39; 1939. American Standards Assn., H4.5-1940. Bronze Trolley Wire. For round and grooved trolley wire from three classes of bronze; gives requirements for materials, tensile properties, twist tests, dimensions and permissible variations, resistivity, and standard sections of wire.

American Society for Testing Materials, B 33-39; 1939. American Standards Assn., H4.4-1940. Tinned Soft or Annealed Copper Wire for Electrical Purposes. Requirements for pure tin coated wire, tensile properties, resistivity, dimensions and permissible variations, continuity of coating, specimens and procedure for coating tests, mechanical test for adhesion of coating, and explanatory notes.

American Society for Testing Materials, B 47-39; 1939. American Standards Assn., H4.6-1940. Copper Trolley Wire. For round and grooved trolley wire; requirements as to material, tensile properties, twist test, standard sections, dimensions and permissible variations, resistivity, density, and explanatory notes.

American Society for Testing Materials, B 48-42; 1942. Soft Rectangular and Square Copper Wire for Electrical Conductors. Covers soft or annealed wire with rounded corners, in two types, for edgewise bending, and other applications. Requirements for manufacture, tensile properties, bending properties, resistivity, dimensions, and permissible variations.

American Society for Testing Materials, B 105-39; 1939. Hard-Drawn Copper Alloy Wires for Electrical Conductors. Covers ten grades based on conductivity; requirements for material, chemical composition, tensile properties, resistivity, density, dimensions and permissible variations.

American Society for Testing Materials, B 116-40; 1940. Figure-9, Deep-Section Grooved and Figure-8, Copper Trolley Wire for Industrial Haulage. Gives requirements for material, tensile properties of various sizes, standard sections, dimensions and permissible variations, resistivity, density, finish, and explanatory notes.

American Society for Testing Materials, B180-43T; 1943. Tentative Method of Test for Density of Fine Wire and Ribbon for Electronic Devices. Covers a procedure for determining, to an accuracy of 0.1 percent, the density of fine wires ranging from 0.010 to 0.001 in. in diameter, or ribbons of similar thicknesses for electronic devices. Gives definitions and requirements for apparatus, test liquid, test specimen, preparation of specimen, procedure, calculation, and report.

American Society for Testing Materials, B 189-44T; 1944. Tentative Specification for Lead-Coated and Lead-Alloy-Coated Soft Copper Wire for Electrical Purposes. Gives scope, material, tensile properties, resistivity, dimensions and permissible variations, continuity of coating, ammonium persulfate test for continuity of coating, sodium polysulfide-hydrochloric acid test for continuity of coating, joints, finish, packing and shipping, inspection, and rejection.

American Society for Testing Materials, D 27-41; 1941. Insulated Wire and Cable: Class AO, 30 Percent Hevea Rubber Compound. Requirements for conductor material, strand, stranding, tensile properties, conductivity, and tinning tests; insulation composition, physical and electrical tests; shielding; cable tape; braid; finish, saturant, flame, moisture, and bending tests; lead sheaths; inspection and rejection; annealed copper standard; and interpretation of insulation thicknesses table. A.S.T.M. Emergency Alternate Provision EA-D 27a; 1944, affected section 2, Conductor Material; section 7, Tinning Test; section 25, Cable Tape Material; section 28, Types of Cotton Braid; section 29, Standard Braid; section 30, Cotton Braid Material; section 31, Cotton Braid Construction; table IX, Values of Y for Code Braids; and table X, Typical Braid Construction.

American Society for Testing Materials, D 353-41; 1941. Insulated Wire and Cable: Performance Rubber Compound. Except for insulation, conforms to A.S.T.M. Designation D27. Methods of test, physical properties, high voltage test, insulation resistance, moisture absorption, thickness, workmanship, and rejection. A.S.T.M. Emergency Alternate Provision EA-D 353; 1942, affected section 1, Scope; table I, Physical Test Requirements for Insulation; and table III, Insulation Resistance.

American Society for Testing Materials, D469-41; 1941. Insulated Wire and Cable: Heat-Resisting Rubber Compound. For use at temperatures not in excess of 75° C., except rubber insulation conforms to A.S.T.M. Designation D27. Methods of test, physical properties, high-voltage test, insulation resistance, moisture absorption, thickness, workmanship, rejection, and interpretation of insulation thickness table. A.S.T.M. Emergency Alternate Provision EA-D469a; 1943, affected section 1, Scope.

American Society for Testing Materials, D 470-41; 1941. Methods of Testing Rubber Insulated Wire and Cable. Describe procedures for the testing of rubber-insulated wire and cable. They are not to be considered completely applicable to all types of wire

and cable, nor do they necessarily include every test applicable to a particular type. To determine the tests to be made on a particular wire or cable, reference should be made to the specifications for that type. Physical and electrical tests of insulation, and tests on finished wire and cable.

American Society for Testing Materials, D574-40T; 1940. Tentative Specifications for Insulated Wire and Cable: Ozone-Resistant Type Insulation. Except for insulation, conforms to A.S.T.M., D27. Physical properties, high-voltage test, insulation resistance, double-voltage test on short samples, cold-bend, long-time voltage test, capacity and power factor tests, ozone-resistance test, and thickness of insulation. A.S.T.M. Emergency Alternate Provision EA-D574b; 1944, affected section 1(b), Scope.

American Society for Testing Materials, D734-43T; 1943. Tentative Specifications for Insulated Wire and Cable: Polyvinyl Insulating Compound. Covers wire and cable insulated with a thermoplastic synthetic insulating compound made from polyvinyl chloride or its copolymer with vinyl acetate. Gives material, strand, shape, stranding, permissible variations in diameter and area, coating test, sampling and methods of test, test specimens, physical properties, heat shock test, heat distortion test, flame-retardant properties, oil resistance test, cold bend test, high-voltage test, insulation resistance, thickness of insulation, workmanship, and rejection.

American Society for Testing Materials, D754-43T; 1943. Tentative Specifications for Insulated Wire and Cable: Heat-Resisting Synthetic Rubber Compound. Intended to permit the use of the compound known as "Government Rubber," type GR-S, but are not restricted to this type. Gives physical properties, high-voltage test, insulation resistance, thickness, workmanship, rejection, and methods of testing.

American Society for Testing Materials, D755-44T; 1944. Tentative Specifications for Insulated Wire and Cable: Performance Synthetic Rubber Compound. Intended to permit the use of the compound known as "Government Rubber," type GR-S, but are not restricted to this type. Gives physical properties, high-voltage test, insulation resistance, thickness, workmanship, rejection, and methods of testing.

American Transit Assn. Copper Wire Tables, D1-32; 1932. Gives two complete wire tables for standard annealed copper in English and metric units, and one working copper wire table in English units.

American Transit Assn. Specification for Copper Trolley Wire, D2-38; 1938. These specifications cover round and grooved hard-drawn copper trolley wire. Include physical properties and tests, dimensions and permissible variations, finish, packing, and inspection and rejection.

American Transit Assn. Rubber Insulated Wire and Cable for Outside Use for Power Distribution Purposes—Class A Compound, D10-41; 1941. Apply to the rubber compound used for the insulation of electric wire and cable, and which is known as class A 30 percent Hevea rubber. Gives requirements as to conductor, insulation, cable tape, cotton braid, finish, lead sheaths, and armor.

American Transit Assn. Specification for Bronze Trolley Wire, D12-38; 1938. Covers round and grooved bronze trolley wire. Covers requirements of manufacture of three classes of wire, physical properties and tests, dimensions and permissible variations, finish, packing, and inspection and rejection. This specification was prepared under the joint auspices of the American Transit Engineering Assn., the Assn. of American Railroads, and the American Society for Testing Materials.

American Transit Assn. Recommended Specification for Stud Terminal Copper Rail Bonds, D110-31; 1931. This specification is to provide for the manufacture and delivery of rail bonds of the stud terminal type for the bonding of track rails forming the negative return in electric traction systems. It includes definition of terms, manufacture of materials, physical properties and tests, satisfactory dimensions, packing, and inspection and rejection.

American Transit Assn. Recommended Specification for Weather-Resistant Weatherproof Wire and Cable U.R.C. Type, D114-41; 1941. These specifications cover weather-resistant, weatherproof wire and cable, the conductors, the materials used for the fibrous coverings, and the saturating and finishing compounds. Covers materials and properties, acceptance requirements, general requirements, and appendix.

American Transit Assn. Recommended Specification for Rubber Insulated Wire and Cable for General Purposes—Code Rubber Insulation, D116-41; 1941. This specification applies to the rubber compound used for insulation of electric wire and cable and which is known as code rubber insulation. Covers general requirements, conductor, insulation, cable tape, braid, finish, lead sheaths, and armor.

American Transit Assn. Recommended Specification for Rubber Insulated Wire and Cable for Outside Use for Power Distribution Purposes—Class AO Compound, D117-41; 1941. These specifications apply to the rubber compound used for the insulation of electric wire and cable and which is known as Class AO 30 percent Hevea rubber. Covers general requirements, conductor, insulation, cable tape, cotton braid, finish, lead sheaths, and armor.

American Transit Assn. Recommended Specification for Rubber Insulated Wire and Cable for Outside Use for Power Distribution Purposes—Performance Rubber Compound, D118-41; 1941. This specification is intended to cover the furnishing and testing of various kinds of rubber insulated conductors for power distribution purposes, the insulation to be of the grade known as Performance Rubber Compound. Covers general requirements, conductor, insulation, cable tape, cotton braid, finish, lead sheaths, and armor.

Assn. of American Railroads, Mechanical Div., Electrical Section. Manual of Standard and Recommended Practice, 1940. Electric Trainline for Air Brake Control. Lists terminal designation, wire size, and the color code for wires in cars and in jumper cable between cars. Color code conforms to N.E.M.A. Standard.

Assn. of American Railroads, Operations and Maintenance Dept., Engineering Div., Electrical Section. Manual of Recommended Practice, 4-e-42; 1942. Specifications for Rubber Insulated Wires and Cables No. 18 A.W.G. and Larger. Gives general requirements, standards for rubber covered wires and cables

conductors, separator, rubber compounds, cable tape, cable assembly, cotton braids, metallic coverings, shipment on cable reels, shipment on coils, and details.

Assn. of American Railroads, Operations and Maintenance Dept., Engineering Div., Signal Section. Manual of Recommended Practice, 1937. Specification for Bronze Guy and Messenger Strand.

Assn. of American Railroads, Operations and Maintenance Dept., Engineering Div., Signal Section. Manual of Recommended Practice. Specification 70-39; 1939. Forty Per Cent Conductivity Copper-Covered Steel Bonding Wire. No.6 wire for bonding rail joints where track circuits are used, gives general requirements as to fabrication, elongation, inspection, and test.

Assn. of American Railroads, Operations and Maintenance Dept., Engineering Div., Signal Section. Manual of Recommended Practice. Specification 108-20; 1921. Copper Bond Wire. Soft drawn No.6 wire, 98 percent pure copper; elongation and testing.

Assn. of American Railroads, Operations and Maintenance Dept., Engineering Div., Signal Section. Manual of Recommended Practice. Specification 167-41; 1942. Copper-Covered Steel Wire With or Without Weather-Resistant Covering. Includes requirements for 30 percent conductivity wire for use on signal circuits, sizes No.4 to 12 A.W.G. Requirements for bare wire, for weather-resistant covering in accordance with American Standards Assn., C8.18, except for thickness, and gives acceptance tests required with table of weights of bare and finished wire.

Assn. of American Railroads, Operations and Maintenance Dept., Engineering Div., Signal Section. Manual of Recommended Practice. Specification 168-40; 1941. Copper Alloy Wire With or Without Weather-Resistant Covering. Provides for A.S.T.M. grade No.30 wire, for use on signal circuits, in accordance with A.S.T.M. Specification B 105. Covering to meet American Standard C8.18, except as to conductor, inspection, and table of weights of sizes No.4 to 10 A.W.G., bare and finished, etc.

Assn. of American Railroads, Operations and Maintenance Dept., Engineering Div., Signal Section. Manual of Recommended Practice. Specification 169-40; 1941. Hard-Drawn Copper Wire With or Without Weather-Resistant Covering. For use on signal circuits; requirements for conductor meeting A.S.T.M. Specification B 1, except as noted, covering accordance with American Standards Assn. C8.18, except as to thickness acceptance tests, and table of weights of bare and finished wire.

Assn. of American Railroads, Operations and Maintenance Dept., Engineering Div., Signal Section. Manual of Recommended Practice. Specification 192-40; 1941. Single-Conductor, Asbestos Varnished-Cambric Insulated Signal Wire With Flame-Retarding Braid Covering. For use in weather protected locations on circuits rated at 0-600 volts; requirements for oil protective separator if stranded, varnished cambric, felted asbestos, and flame-retarding braid covering; table for 0000 to 18 A.W.G. sizes; for conductor meeting A.S.T.M. Specifications B 33 and D 27 paper or cellophane separator, varnished cloth in accordance with specifications of the Insulated Power Cable Engineers Assn., braid covering same as A.A.R. Signal Section Specification No. 191, and tests.

Assn. of American Railroads, Operations and Maintenance Dept., Engineering Div., Signal Section. Manual of Recommended Practice. Specification 193-40; 1941. Enameled Copper Magnet Wire. Provides for soft or annealed magnet wire for use in manufacture of electrical signal apparatus, conductor and insulation to meet requirements of the American Standards Assn. C8.7.

Assn. of American Railroads, Operations and Maintenance Dept., Engineering Div., Signal Section. Manual of Recommended Practice. Specification 194-40; 1941. Cotton-Covered Copper Magnet Wire. Provides for soft or annealed copper magnet wire for use in manufacture of electrical signal apparatus. Requires that wire be in accordance with American Standards Assn. C8.5.

Assn. of American Railroads, Operations and Maintenance Dept., Engineering Div., Signal Section. Manual of Recommended Practice. Specification 195-40; 1941. Silk-Covered Copper Magnet Wire. For wire used in the manufacture of electrical signal apparatus; provides tests for wire having conductor and insulation in accordance with American Standards Assn. C8.6.

Assn. of American Railroads, Telegraph and Telephone Section, 1-A-13; 1927. Hard-Drawn Bare Copper Wire. Covers quality of material and workmanship; physical, mechanical, and electrical requirements; weights of wire coils, for two sizes of B.W.G. and five sizes of A.W.G.

Assn. of American Railroads, Telegraph and Telephone Section, 1-A-15; 1927. Annealed Copper Tie Wires. For material and workmanship; list of physical and mechanical requirements for six sizes of wire.

Assn. of American Railroads, Telegraph and Telephone Section, 1-A-39; 1930. No.14 A.W.G. Hard-Drawn Copper Outside Distributing Wire. For single conductor or twisted pair wire, each wire insulated and covered with weatherproof braid; requirements for diameter of bare wire, tinning, insulation, braid, weatherproofing, tensile strength, resistance, adhesion, elasticity of insulating compound, aging, electrical, and melting tests.

Assn. of American Railroads, Telegraph and Telephone Section, 1-A-45; 1931. Bronze Line Wire. Includes Nos.6, 8, 9, and 10 A.W.G. bare, hard-drawn, bronze line wire, 1 percent cadmium; diameters, permissible variations, breaking strength, elongation, resistance, nominal weights per mile, bend test, and finish.

Assn. of American Railroads, Telegraph and Telephone Section, 1-A-52; 1935. Bronze Guy and Messenger Strand. Includes three sizes of 7-strand copper-base alloy, requirements as to breaking strength, bending, joints, stranding, pitch, and physical tests.

Assn. of American Railroads, Telegraph and Telephone Section, 1-A-79; 1941. No.16 A.W.G. Copper Bridle Wire. For use in the communication plant. Gives general requirements, material and workmanship, physical requirements, electrical requirements, inspection and tests, packing, marking, and warranty.

Assn. of American Railroads, Telegraph and Telephone Section, 1-A-80; 1941. Flat Copper Wire. For use

in the communication plant. Gives general requirements, material and workmanship, physical requirements, inspection and tests, packing, marking, and warranty.

Assn. of American Railroads, Telegraph and Telephone Section, 1-A-91ES; 1943. No.16 A.W.G. Copperweld Synthetic Insulated Distributing Wire—Single and Twisted Pair. This emergency specification has been prepared as an alternate for rubber insulated wire, for the war period. Gives general requirements, material and workmanship, physical requirements, electrical requirements, inspection and test, packing, marking, and warranty.

Assn. of American Railroads, Telegraph and Telephone Section, 2-G-15; 1925. Twisted Pair Waxed Braid Rubber Insulated Inside Wire. Covers Nos.16 and 18 A.W.G. tinned copper wire, requirements as to quality of Hevea rubber insulation, glazed two-ply cotton braid, weatherproofing saturant, color, and tests for mechanical strength, adhesion of braid, electrical properties, and composition of insulation.

Assn. of American Railroads, Telegraph and Telephone Section, 2-G-16; 1925. Single Conductor Waxed Braid Rubber Insulated Inside Wire. Includes Nos.16 and 18 A.W.G. solid tinned copper wire, quality of rubber, hard glazed cotton braid, weatherproofing saturant, manufacturing process, and requirements for tinning, tensile strength of rubber, adhesion, and electrical tests.

Assn. of American Railroads, Telegraph and Telephone Section, 2-G-67; 1932. Flameproof Cross-Connecting Wire. Covers Nos.16 and 18 A.W.G. conductors of single, twisted pair or quadded types, rubber insulated, flameproof braid, solid tinned copper wire. Quality of materials, construction, colors of braid, physical and electrical tests.

Assn. of American Railroads, Telegraph and Telephone Section, 2-G-85 ES; 1943. Twisted Pair Synthetic Insulated Inside Wire. This emergency specification has been prepared as an alternate for rubber insulated wire, for the war period. Gives general requirements, material, manufacture, tests, inspection, packing, and warranty.

Assn. of American Railroads, Telegraph and Telephone Section, 2-G-86 ES; 1943. No.20 and No.22 A.W.G. Twisted Pair Synthetic Insulated Braid Covered Inside Wire. This emergency specification has been prepared as an alternate waxed braid rubber insulated wire, for the war period. Gives general requirements, material, manufacture, tests, inspection, packing, and warranty.

Copper Wire Engineering Assn. Properties of Copper Wire (Bare-Solid, Hard-Drawn), No.401; 1938. Covers wire sizes 1 to 12 A.W.G.; gives diameters, resistance, cross-sectional area, weight and breaking strength. Based on A.S.T.M. Specification B1.

Copper Wire Engineering Assn. Properties of Type A Copperweld-Copper Conductors, No.401; 1938. For three-wire conductors composed of one copperweld wire and two hard-drawn wires; table covers equivalent H.D. stranded copper conductance, resistance, stranding, cross-sectional area, weight and breaking strength. Also gives ice and wind loads (vertical, horizontal, and resulant, in pounds per linear foot). For sizes 2A to 8A, 8C, 9 1/2D, 3 No.10, 3 No.11, and 3 No.12 A.W.G.

Electrical Standards Committee, sponsor. American Standards Assn., C8.5-1936. Cotton-Covered Round Copper Magnet Wire. For use in manufacture of electrical apparatus; requirements for materials, manufacture, properties, and tests.

Electrical Standards Committee, sponsor. American Standards Assn., C8.6-1936. Silk-Covered Round Copper Magnet Wire. For use in manufacture of electrical apparatus; requirements for materials, manufacture, properties, and tests.

Electrical Standards Committee, sponsor. American Standards Assn., C8.7-1936. Enameled Round Copper Magnet Wire. For use in manufacture of electrical apparatus; requirements for materials, manufacture, properties, and tests.

Electrical Standards Committee, sponsor. American Standards Assn., C8.9-1942. Slow-Burning Wire and Cable. Covers scope, conductors, fibrous covering, filling and finish of coverings, acceptance tests, samples for test, identification, packing and marking, inspection, rejection, and weight of copper conductors and complete coverings.

Electrical Standards Committee, sponsor. American Standards Assn., C8.12-1942. Cotton Braid for Insulated Wire and Cable for General Purposes. Specification covers braids as applied to rubber and varnished cloth insulated wires and cables. They do not cover "fancy" or special braids or braids for fixture wire or weather-resisting wire and cable. Three classes—heavy, for outdoor or rough service; standard, for indoor or protected service; and code, for installation under the National Electrical Code. Gives detailed requirements for materials, construction, and measurement.

Electrical Standards Committee, sponsor. American Standards Assn., C8.15-1942. Specifications for Metallic Coverings for Insulated Wires and Cables. Apply to metallic coverings, together with the necessary beddings and protective coverings, for power and lighting circuits. Gives requirements for lead sheath, core covering for nonleaded cable, jute bedding for armored cable, flat steel tape armor, galvanized steel wire armor, interlocked steel tape armor, jute serving over head sheath, duck tape over lead sheath, and braid over lead sheath.

Electrical Standards Committee, sponsor. American Standards Assn., C8.16-1940. A.I.E.E. Standard C8.16. Specifications for Rubber-Insulated Tree Wire Coverings. Tree wire is defined as a wire or cable having a solid or stranded conductor insulated with a material such as rubber compound and having a covering which is especially resistant to weather and to abrasion. Requirements on materials and properties, abrasion, bend and moisture tests, and inspection and rejection.

Electrical Standards Committee, sponsor. American Standards Assn., C8.18-1942. Weather-Resistant (Weatherproof) Wire and Cable (U.R.C. Type). Covers wire and cable, the conductors, the materials used for the fibrous coverings, and saturating and finishing compounds. Gives requirements for conductors, fibrous covering, saturant, finish, mineral filler, acceptance requirements, samples for test, identification, packing and marking, inspection, and rejection.

Electrical Standards Committee, sponsor. American Standards Assn., C8.19-1939. A.I.E.E. Standard C8.19. Specifications for Weather-Resistant Saturants and Finishes for Aerial Rubber-Insulated Wire and Cable. These specifications cover the physical requirements and performance tests for weather-resistant saturants applied in the fibrous coverings and finishes applied over the saturated fibrous coverings of rubber-covered wire and cable to be used in aerial installation for electric light and power supply.

Electrical Standards Committee, sponsor. American Standards Assn., C8.20-1939. A.I.E.E. Standard C8.20. Specifications for Heavy-Walled Enameled Round Copper Magnet Wire. Heavy-walled enameled round copper magnet wire as used in the manufacture of electrical apparatus.

International Municipal Signal Assn., Inc. Specification No. 6; 1942. Rubber Insulated, Single Conductor, Braid Covered Signal Wire (for Use in Buildings). Covers single conductor, rubber insulated, braid covered cables for use in buildings in fire-alarm, police signal, and other municipal signal systems operating at 600 volts or less. Gives requirements for general construction, conductors, insulation, protective covering, tests on completed wire, identification, packing and marking for shipment, payment for reels, inspection and test, and rejection.

International Municipal Signal Assn., Inc. Specification No. 9; 1942. Single Conductor Street Lighting Cable. Covers rubber insulated single conductor wire or cable in sizes 10 to 4 A.W.G. suitable for series street lighting circuits operating at from 0 to 5,000 volts. Gives requirements for general construction, conductors, insulation, cable tape, protective coverings, electrical tests on completed cable, identification, packing and marking for shipment, payment on reels, and inspection and tests.

International Municipal Signal Assn., Inc. Specification No. 10; 1942. Twisted Pair and Parallel Rubber Insulated Outside Telephone Wire. Covers rubber insulated twisted pair and parallel outside telephone wires for use in fire alarm, police signal, and other municipal signal systems for operation at voltages not exceeding 125 volts a.c. or 259 volts d.c. Gives requirements for general construction, conductors, insulation, braids on conductors, saturant, finish, conductor assembly, tests on completed cable, identification, packing and marking for shipment, payment for reels, inspection and tests, and rejection.

International Municipal Signal Assn., Inc. Specification No. 26; 1942. Weather Resistant (Weatherproof) Signal Line Wire Hard Drawn Copper Conductor. Covers weather resistant (weatherproof) hard drawn copper signal line wire for use in fire alarm, police signal, and other municipal signal systems. Gives requirements for material, conductor, fibrous covering, saturant, finish, mineral filler, acceptance requirements, samples for test, identification, packing and marking for shipment, inspection and acceptance, and rejection.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, 1938. Wire and Cable; Copper. Covers definition, constants (copper wire), general properties, types of wire, prices, packing, and purchase practices.

National Board of Fire Underwriters. National Electrical Code, 1940. American Standards Assn., C1-1940. Conductors. Type and thickness of insulation, voltage limits, number and treatment of braid coverings, and standard stranding for rubber covered wire, varnished cambric insulated wire, asbestos covered and slow burning wire, weatherproof wire, fixture wire, flexible cords, armored cable, nonmetallic sheathed cable. Demand calculations for feeder sizes; approved uses for flexible cords.

National Electrical Manufacturers Assn. Magnet Wire Standards, 36-34; 1936. Includes cotton-covered, silk-covered, and enameled round copper magnet wire—general standards, manufacturing standards, and properties and tests.

National Electrical Manufacturers Assn. Asbestos and Asbestos-Varnished Cambric Insulated Wires and Cables. Standards 39-54; 1939. Covers electrical conductors insulated with asbestos or combinations of asbestos and varnished cambric and finished with cotton braids, asbestos braids, or lead sheaths; requirements as to physical properties, electrical and physical tests, dimensional tables for various voltages, and uses.

National Electrical Manufacturers Assn. Magnet Wire Standards Supplement, 41-69; 1941. Includes requirements for cotton covered, silk covered, and enameled round copper magnet wire; maximum allowable thickness of cotton or silk, method of making joints, manufacture, properties and tests, and tables of properties.

Underwriters' Laboratories, Inc. Bulletin of Research, 25; 1942. Performance of Rubber Insulation of Building Wire in One-Year Oven Tests. This bulletin describes one-year oven tests of rubber insulation of building-wire of several new types, conducted to determine if their performance under test at the maximum temperatures recognized by the National Electrical Code, would indicate proper performance under field conditions. Covers description of samples, methods of test, results of tests, analysis of test results, and summary.

Underwriters' Laboratories, Inc. Standard for Motion Picture Cable and Stove Wire, 1921. Asbestos covered single copper conductors for exposed leads in motion picture machines, on search light controllers, heaters, and other appliances where heat-resistant, flexible, insulating wire is required. Not for use in conduit or under moist conditions. Conductivity, sizes, tinning, stranding, coverings, compound, carbon content, flame and bend test.

Underwriters' Laboratories, Inc. Standard for Slow Burning and Slow Burning Weatherproof Wires and Cables, 1928. For soft annealed copper, concentric stranded, number of strands, number and thickness of cotton braid coverings, saturated with moisture-proof insulating compound, WP marking.

Underwriters' Laboratories, Inc. Standard for Synthetic Insulated Wires. Covers wires having synthetic insulation, for use in accordance with the National Electrical Code, single-conductor employing soft-annealed-copper conductors and having no fibrous coverings. They are made in the Nos. 14-0000 A.W.G. sizes only and are recognized for use at 600 volts or less

and at a temperature not higher than 60° C. Gives requirements for sizes; resistance; coating; joints; separator; insulation thickness, physical properties, and deformation; apparatus and specimens for physical tests; physical test procedure; flame-retardant properties; moisture-resistant properties; finish; dielectric strength; insulation resistance; mechanical equivalence to type R rubber-covered wire; and marking.

Underwriters' Laboratories, Inc. Standard for Weatherproof, Slowburning, and Slowburning-Weatherproof Wires. Covers single-conductor weatherproof, slowburning, and slowburning-weatherproof wires for use in accordance with the National Electrical Code. Includes requirements for conductors, coverings, flexibility, melting of compound, dripping of compound, flame retardant properties, and marking.

U. S. Gov., Dept. of Agriculture, Forest Service. Specification MSF-388-1. Wire; Emergency, Latex-Covered, Single Conductor.

U. S. Gov., Dept. of Agriculture, Forest Service. Specification MSF-388-2. Wire; Emergency, Latex-Covered, Double Conductor.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R180-41; 1941. Copper Conductors for Building Purposes. This recommendation covers a simplified list of stock sizes of copper conductors for building purposes. Sponsored by National Electrical Contractors Assn.

U. S. Gov., Federal Specification J-C-86; 1943. Cable, Cord, and Wire; Electric, Flexible, Cotton-Covered (General Service). Covers four types. Gives detail requirements as to construction; and methods of sampling, inspection, and tests.

U. S. Gov., Federal Specification J-C-103; 1941. Amendment 2; 1944. Cable and Wire; Rubber-Insulated, Building Type (0 to 5,000-Volt Service). The term "rubber" as used throughout this specification includes synthetic rubber. Covers all listed sizes of rubber-insulated wire and cable in two types—(R) code grade, and (RH) heat-resistant grade. Gives requirements for conductors (resistance, sizes, strands, lead coated or lead-alloy coated, splices, and separator); insulation (thickness and physical properties of rubber compound); coverings (fibrous coverings, number of coverings, cotton tapes, cotton braids, cotton wraps or servings, saturation of fibrous coverings, flame-retardant properties, moisture-resistant properties, flexibility, finish, lay of twist, and lead coverings); dielectric strength, insulation resistance, and marking of wire and cable; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification J-C-121; 1935. Cable and Wire; Rubber-Insulated, (for) Other Than Building Purposes, Superaging-Grade (0 to 8,000-Volt Service). Covers four types of single and multiple conductor wires, and cable—braided; lead-covered (with or without protective coverings); armored (with or without lead covering) with interlocking metal, flat metal, round wire, or basket-weave metal; and with nonmetallic sheath. Gives general requirements for conductors (sizes, number of strands), insulation, coverings for wires and cables of the four types, and polarity and identification markers (color scheme for control cables); detail requirements for rubber insulation, tape, and braid; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Federal Specification J-C-138; 1943. Cable and Wire; Varnished-Cloth Insulated (0 to 5,000-Volt Service). Covers varnished-cloth insulated wires and cables of all wire sizes listed in table and designates four types. Gives requirements for material, resistance, sizes, strands, tinning, splices, separator, insulation, coverings, cabling, dielectric strength, insulation resistance, sampling, inspection, tests, packaging, packing, and marking.

U. S. Gov., Federal Specification QQ-W-336; 1937. Wire; Copper, Hard-Drawn and Hard-Rolled. Covers one grade and three types—(I) round, (II) grooved trolley, and (III) other wire of standard sections. Gives requirements for material, sizes, tensile strength, gage, and elongation; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification QQ-W-341; 1936. Amendment 1; 1944. Wire; Copper, Soft or Annealed. Covers one grade, untinned. Gives requirements, material, sizes, tensile strength, elongation, electric resistivity, coils and reels or spools; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Navy Dept. Specification 15W2c; 1917. Wire; Magnet.

U. S. Gov., Navy Dept. Specification 22W3d; 1945. Wire; Copper, Hard-Drawn and Hard-Rolled.

U. S. Gov., Navy Dept. Specification 22W9a; 1934. Wire; Copper, Soft or Annealed.

U. S. Gov., Treasury Dept., Procurement Div., 260B; 1938. Wire; Asbestos-Insulated. Shall be braided; 600 volts maximum. Covers two classes—(A) solid and (B) stranded. Gives requirements for diameter, tensile strength, elongation, resistivity, stranding, asbestos insulation, physical properties, and electrical properties; methods of sampling, inspection, and test; and packaging, packing, and marking.

U. S. Gov., Treasury Dept., Procurement Div., No.513; 1941. Wire; Telephone. Covers three types of rubber-insulated wires—(I) twisted pair (1,296 circular mils) for interior use, (II) twisted pair (4,096 circular mils) for outside use, and (III) twisted pair (2,025 circular mils) drop wire for outside use. Gives requirements for details, standard sizes and characteristics of conductors, bronze, rubber insulation, insulation resistance of cables, braid covering, and tests; packaging, packing, and marking.

U. S. Gov., Treasury Dept., Procurement Div., No.518; 1941. Wire; Fixture, Asbestos-Insulated. Covers two types—(I) plain white on black finish impregnated asbestos insulation and (II) impregnated asbestos insulation with glazed cotton or rayon braid; two classes—(A) solid and (B) stranded. Gives requirements for sizes, material, conductors, asbestos insulation, braids, flame-resisting properties, dielectric strength, and flexibility; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., U. S. Army, Signal Corps. Specification 57-211; 1923. Wire; Magnet.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-41-A; 1931. Wire; Type W-63-A, Lamp Cord, Single Conductor, No.19.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-128H; 1930. Wire; Types W-117 and 118, Telephone, Inside.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-136A; 1922. Wire; Type W-27, Antenna.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-137E; 1941. Wire; Type W-28.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-138D; 1941. Wire; Type W-29 and W-120.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-139-D; 1941. Wire W-30.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-160C; 1941. Wire; Type W-65, No.16 A.W.G., Heavy Rubber Insulated.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-170C; 1932. Wire; Type W-8, 2-Conductor, Tinned.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-171A; 1932. Wire; Type W-10, Paired, Lamp Cord No.10.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-172B; 1932. Wire; Type W-11, Paired, Lamp Cord No.12.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-230-C; 1940. Wire; Type W-6.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-235D; 1932. Wire; Types W-66, W-67, and W-105, Telephone, Flameproof.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-247A; 1929. Wire; Types W-34 and 37, Pot Head and Bridle Wire.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-258E; 1936. Wire; Type W-38, No.17 A.W.G., Twisted Pair, Outside Distributing.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-262; 1924. Wire; Bronze, No.17 A.W.G., for Light Open Lines.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-290; 1925. Wire; Types W-100 to W-102, Inclusive, Weatherproof, Hard Drawn Copper.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-311; 1924. Wire; Type W-70, Sound-Ranging.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-312C; 1936. Wire; Type W-69-A, No.22 A.W.G., Twisted-Pair, Rubber-Insulated.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-360B; 1944. Wire; Iron and Steel, Galvanized, for Communication and Construction Purposes.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-372B; 1938. Wire W-7; Annunciator.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-378A; 1932. Wire; Type W-4, Lamp Cord.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-385; 1925. Wire; Type W-24, Bare, Braided, Antenna.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-422C; 1932. Wire; Type W-108, Parallel Drop Wire.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-481; 1929. Wire; Type W-72, Single-Conductor, for General Use.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-478E; 1944. Wire W-110-B; Field Wire; Twisted Pair, Buna S Insulated.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-526C; 1941. Wire W-106 and W-106A.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-644B; 1936. Wire Instrument; 1-, 2-, and 3-Conductor.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-726A; 1940. Wire; Types W-124, W-125, and W-128, No.14 A.W.G., Rubber-Insulated.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-925; 1944. Wire W-130; Wire W-130A; and Wire WD-3/TT (Assault Wire, Twisted Pair).

U. S. Gov., U. S. Army, Signal Corps. Specification 71-3012; 1944. Wire W-143 (Long Range, Parallel Pair, Field Wire).

U. S. Gov., U. S. Army, Signal Corps. Specification 71-3066-A; 1944. Wire W-153 (Copperclad Steel Line Wire, 0.080 Inch).

U. S. Gov., U. S. Army, Signal Corps. Specification 71-3067; 1944. Wire W-154; Copper or Copperclad-Steel Tie Wires.

## 715.49 Miscellaneous Wires, Cords, and Cables

U. S. Gov., Army-Navy Aeronautical Specification AN-S-38a; 1944. Shunts; 50 Millivolt External Ammeter.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R56-35; 1935. Carbon Brushes (Carbon, Graphite, and Metal-Graphite) and Brush Shunts. This recommendation establishes a standard for brush shunts, standard lengths, sizes, stranding, and size of terminal. Initiated by Electric Power Club (absorbed by National Electrical Manufacturers Assn.)

U. S. Gov., U. S. Army, Army Air Forces. Specification 48-38; 1941. Wire; Iron and Constantan, Thermocouple.

U. S. Gov., U. S. Army, Corps of Engineers. Specification 49-11; 1938. Wire; Firing, Round, Rubber Covered, No.18 B. & S. Gage.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 50-11-84; 1934. Wire; Ignition, Electric Primer.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 89-5736G; 1942. Wire; Insulated, Submarine Mine.

## 715.5 PROTECTIVE APPARATUS FOR ELECTRICAL EQUIPMENT

*References.*—Fuses, circuit breakers, *see* 714.21, 714.51.

## 715.50 General Items

Assn. of American Railroads, Telegraph and Telephone Section, 4-1; 1938. Specification for the Electrical Protection of the Communication Plant. Covers characterists and arrangement of apparatus for the

protection of employees, equipment, and buildings, in new installations and renewals, including lightning protection, fuses, heat coils, arresters, and grounding; location, application, and illustrations.

Assn. of American Railroads, Telegraph and Telephone Section, 4-8; 1924. Telegraph and Telephone Protector Mountings. Covers mountings for fuses and arresters, operating voltage, dielectric strength, and insulation resistance requirements; and protection against ignition.

Assn. of American Railroads, Telegraph and Telephone Section, 4-9; 1924. Telegraph and Telephone Protectors. For combinations assembled of line fuses, cable arresters, office arresters, and instrument fuses or heat coils.

Assn. of American Railroads, Telegraph and Telephone Section, 4-16; 1936. Pole Arresters. For protection of telegraph and telephone equipment by grounding foreign currents exceeding fixed values; design, material, workmanship, and electrical requirements.

Assn. of American Railroads, Telegraph and Telephone Section, 4-20; 1939. Arrester Relays. Covers design of impedance relay with two sets of contacts and provision for mounting two arresters, for short circuiting arresters grounded by abnormal power induction. Design, material, workmanship, and requirements.

National Board of Fire Underwriters. National Electrical Code, 1940. American Standards Assn., C1-1940. Grounding. Grounding requirements for interior wiring circuits, metal inclosures, and electrical equipment; construction of grounds and permissible resistances, sizes, type and installation of ground wire, and clamps and methods of grounding.

U. S. Gov., Dept. of Commerce, National Bureau of Standards, H21; 1937. Joint sponsor with American Institute of Electrical Engineers. American Standards Assn., C5.1-1937, C5.2-1937, and C5.3-1944. Code for Protection Against Lightning. Part I, Protection of Persons (C5.1-1937). Part II, Protection of Buildings and Miscellaneous Property (C5.2-1937). Part III, Protection of Structures Containing Inflammable Liquids and Gases (C5.3-1944). Fundamental principles of protection, materials for lightning rods, requirements on minimum sizes and weights of rods, strength, and electrical resistance of joints, size, and installation of elevation rods, coursing of conductors, number, and location of down conductors, grounding, interconnection of metallic masses, recommendations on structural features of oil and gas tanks for self-protection against lightning.

U. S. Gov., Dept. of Commerce, National Bureau of Standards, H35; 1939. American Standards Assn., C2.5-1940. Safety Rules for Radio Installations (Comprising Part 5 of the Fifth Edition, National Electrical Safety Code). Requirements on location, installation, and guarding of antenna and counterpoise, material, and size of lead-in, type of construction at entrance to building, type and size of grounding conductor and ground, protective devices, etc.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Miscellaneous Publication M95; 1929. Protection of Electrical Circuits and Equipment Against Lightning. Preliminary report of committee working under auspices of American Standards Assn., presenting information about present methods and practices which have been found satisfactory; it indicates how and where lightning arresters should be installed at power houses, substations, transmission lines, railway lines, locomotives and car equipment; kinds of grounds and methods of testing.

U. S. Gov., Navy Dept. Specification 41S42a; 1944. Spreaders; Coil, Armature and Stator (Shipboard Use).

*References.*—Slate insulation, porcelain insulation *see* 511.53, 532.22; copper cable, wire, rods. *see* 715.41, 715.44, 642.11; other safety codes for electrical apparatus, *see* 710.

## 715.51 Lightning Arresters

American Institute of Electrical Engineers, No.28; 1944. American Standards Assn., C62.1-1944. American Standards for Lightning Arresters for Alternating-Current Power Circuits. Covers scope, service conditions, definitions, classification, rating, performance characteristics, design tests, alternating voltage design tests, impulse design tests, operating duty design tests, routine tests, acceptance tests, other tests, and nameplate data.

American Transit Assn., sponsor. American Standards Assn., C15-1935. Specification for 750-Volt Direct Suspension Overhead Trolley Contact Construction. Includes requirements on lightning arresters.

Assn. of American Railroads, Operations and Maintenance Dept., Engineering Div., Signal Section. Manual of Recommended Practice, 1942. Minimizing the Effect of Lightning on Track Circuits. Gives relay, transformer, battery, rectifier, grounds, and discharge resistors.

Assn. of American Railroads, Operations and Maintenance Dept., Engineering Div., Signal Section. Manual of Recommended Practice, 1941. Resistance of Made Grounds. Limits of ground resistance, requires use of approved instrument, and treatment of earth to reduce resistance.

Assn. of American Railroads, Operations and Maintenance Dept., Engineering Div., Signal Section. Manual of Recommended Practice. Specification 52-43; 1944. Low Voltage Lightning Arrester. Indoor type of lightning arrester for railway signal service. Covers material and workmanship, general design, base, binding posts, finish, insulation, dielectric requirements, identification, inspection, tests, packing, marking, and warranty.

Assn. of American Railroads, Operations and Maintenance Dept., Engineering Div., Signal Section. Manual of Recommended Practice. Specification 60-40; 1941. Installation of Made Ground for Protection Against Abnormal Potentials. Provides for elements of galvanized iron rod, size of copper wire lead, resistance, location, multiple units.

Assn. of American Railroads, Telegraph and Telephone Section, 4-4; 1924. Telegraph and Telephone Office Arresters. Replaceable type to be used with line fuses, requirements for voltage operating characteristics, current carrying capacity, and insulation resistance.

Assn. of American Railroads, Telegraph and Telephone Section, 4-5; 1924. Telegraph and Telephone Cable Arresters. Covers readily replaceable type, design, material and workmanship, electrical and mechanical requirements, marking, and tests.

Associated Factory Mutual Fire Insurance Companies. Factory Mutual Bulletin of Loss Prevention 15.65; 1938. Lightning Rods for Factory Stacks. Includes specifications for lightning rod equipments for brick, tile, concrete, and metal stacks.

National Electrical Manufacturers Assn. Lightning Arrester Standards, 44-89; 1944. Gives classification of types, classification of uses, rating standards, service conditions, manufacturing standards, performance standards, testing procedure, methods of test, design tests; lightning arresters—station valve type A-c service; lightning arresters—line valve type A-c service; lightning arresters—distribution valve type A-c service; and definitions.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-128. Lightning Arrestors; Vacuum Type.

U. S. Gov., Dept. of Commerce, National Bureau of Standards, H31; 1940. American Standards Assn., C2.1-1941. Safety Rules for the Installation and Maintenance of Electrical Supply Stations. (Comprising Part 1—for equipment of indoor and outdoor supply stations, provided it is in separate rooms or enclosures, under control of properly qualified persons and accessible only to such persons. They also apply to similar equipment if installed in factories, mercantile establishments, vehicles or elsewhere. Exceptions—if voltage does not exceed 150 volts to ground, and if voltage is not more than 550 volts between conductors and power utilized does not exceed 3,200 volts; and the grounding rules of the Fifth Edition, National Electrical Safety Code.) For lightning arrestors (sec. 18), requirements on location, provision for disconnecting, connecting wires, grounding frames, and guarding live and arcing parts.

U. S. Gov., Dept. of Commerce, National Bureau of Standards, H32; 1941. American Standards Assn., C2.2-1941. Safety Rules for the Installation and Maintenance of Electrical Supply and Communication Lines. Comprising Part 2 of the Fifth Edition, National Electrical Safety Code. Includes lightning protection wires for open supply conductors.

U. S. Gov., Dept. of Commerce, National Bureau of Standards, H33; 1940. Safety Rules for the Installation and Maintenance of Electric Utilization Equipment (Comprising Part 3 and the Grounding Rules of the Fifth Edition, National Electrical Safety Code). These rules apply to the grounding of all lightning arrestors except those on communication circuits, and of all circuits, equipment, or wire raceways when the grounding is intended to be a permanent and effective protective measure. They do not apply to the grounded return of electric railways, nor to the grounding of lightning protection wires which are independent of electric circuits or equipment. These rules do not require that grounding shall be done, but cover the methods for protective grounding. The rules requiring grounding are included under the various parts of this code.

U. S. Gov., U. S. Army, Signal Corps. Specification 46-1A; 1941. Protector; Type AR-8, Sound and Flash Ranging.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-67-D; 1941. Protector AR-6, for Substation Telephone.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-288A; 1924. Rod; Ground, Types GP-11, GP-16, and GP-24, Telephone.

*References.*—Lightning codes, lightning rod protection, *see* 715.50; definitions, symbols, standard voltages, methods of test, safety codes, *see* 710.

## 716. ELECTRIC LAMPS AND LIGHTING EQUIPMENT

### 716.0 GENERAL ITEMS

American Lighting Equipment Assn., Inc. Specification for Residential Luminaires Incorporating I.E.S. Recommended Practice for the Illumination Performance of Residential Luminaires, 1941. Includes definitions of types of luminaires, illumination and brightness requirements of each type, and safety and construction requirements.

American Transit Assn. Recommended Specification for Definitions of Illumination Terms, E147-39; 1939. Provides explanations of the more commonly used terms in the illumination field.

### 716.1 ELECTRIC LAMPS

#### 716.10 General Items

American Medical Assn. Council on Physical Therapy. Acceptance of Sunlamps, 1940. Utilizes the erythemal reaction as a basis of judging the effectiveness of ultraviolet ray sunlamps and includes requirements for acceptance of sunlamps and regulations to control advertising of sunlamps sold to the public.

American Medical Assn. Council on Physical Therapy. Acceptance of Ultraviolet Lamps for Disinfecting Purposes, 1942. Includes physical data on germicidal lamps and tentative requirements for acceptance of ultraviolet lamps for disinfecting air.

Assn. of American Railroads, Operations and Maintenance Dept., Engineering Div., Signal Section. Manual of Recommended Practice, 1941. Electric Lamps. Instructions for replacement, cleaning, contact, voltage, and testing, also a table of life hours.

#### 716.11 Ordinary Incandescent Lamps

American Transit Assn. Recommended Specification for Large Incandescent Lamps, E144-38; 1938. All lamps covered by this specification are large regular tungsten-filament electric incandescent lamps. (See definitions d and h, paragraph 107 for "large" and "regular.") Specification sets forth general requirements for lamp marking, test procedure, physical inspection test, initial rating test, life performance test, and rejection of lamps.

Assn. of American Railroads, Mechanical Div., Electrical Section. Manual of Standard and Recommended Practice, 1943 Lamps. Includes table of recommendations for standard incandescent lamps for cab and headlight used in lighting locomotives.

Assn. of American Railroads, Operations and Maintenance Dept., Engineering Div., Signal Section. Manual of Recommended Practice. Specification 51-43; 1944. Incandescent Electric Lamps. Covers lamps for railway signal lighting. Covers material and workmanship, definition and standards, bulb and stem, base, filament, leading-in wires, identification, inspection, tests, samples for test, acceptance requirements, packing, and marking.

National Board of Fire Underwriters. National Electrical Code, 1940. American Standards Assn., C1-1940. Incandescent Lamps. Limit of ratings for medium and mogul bases; protection requirements of gas filled lamps in show windows.

U. S. Gov., Federal Specification W-L-101e; 1942. Supplement, 1943. Amendment 2; 1944. Lamps; Electric, Incandescent, Large, Tungsten-Filament. Manufacturer is given widest range in selection of materials and processes of manufacture in order that lamps of maximum quality may be produced. Shall meet manufacturers' standard shapes, sizes, and finishes of bulbs, forms of filament and types of leading-in wires and bases on file at the National Bureau of Standards. Gives detail requirements; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification W-L-111B; 1937. Lamps; Electric, Incandescent, Miniature, Tungsten-Filament. "Miniature" lamps designate broadly lamps for automotive, flashlight, and similar types of service. Manufacturer is given widest range in selection of materials and processes of manufacture in order that lamps of maximum quality may be produced. Shall be so designed and made that they will meet manufacturers' standard on file at the National Bureau of Standards. Gives detail requirements for life to burn out, manufacturer's declared efficiency, and candle power maintenance; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Treasury Dept., Procurement Div., No.231. Portable Desk Lamps; Types Nos.1, 2, 2D, 3, and 4. Gives requirements for casings, fixtures, reflectors, and plugs. No incandescent lamps to be furnished.

U. S. Gov., Treasury Dept., Procurement Div., 246C, 1942. Lamps; Desk, Incandescent. Shall be of five types. Gives requirements for lamp socket, switch, insulating bushings and wireways, wire connections, cord, cap or plug, exposed edges, stability, ventilation, finish, dimensions, base, columns, reflector, shade, and illumination; methods of sampling, inspection, and tests; and packaging and marking.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-420; 1927. Lamp; Type LM-4, Miniature, 2.2-Volt.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-1014; 1942. Lamp LM-22.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-1398; 1942. Lamp LM-51 and LM-60.

*References.*—Illumination, nomenclature, lamp testing methods, *see* 716.0; standard thread and screw base sizes, railway sizes and types, *see* 716.10; definitions, symbols, standard voltages, safety codes, *see* 710; dial lamps for radio receivers, *see* 716.14.

## 716.12 Lamps for Automobiles and Motor Boats

American Automobile Assn. Headlight Testing Manual. To aid garages and inspection stations in servicing lighting systems so as to produce the safest illumination possible and in determining when rejections and replacements of parts are necessary for the protection of highway users. Covers space requirements, mounting the chart, adjusting height of chart, locating the car, preliminary inspections, and headlight beam arrangements and patterns.

Society of Automotive Engineers. 1944 Handbook, Section 2—Units, Parts, and Fittings. S.A.E. Standard Electric Lamp Bulbs and Bases, revised 1944. Includes lamp sizes and ratings for bulb types, filament types, and prefocused types; lamp base dimensions, sealed beam headlamp units; sizes, ratings, and types; and electric light bulbs and sealed lighting units for military vehicles.

Society of Automotive Engineers. 1944 Handbook, Section 6—Tests, Ratings, and Codes. S.A.E. Recommended Practice for Direction Signal Lamps, Clearance, Side-Marker, and Identification Lamps, Reflex Reflectors, and Electric Emergency Lanterns, revised 1942. Gives definition, samples for test, laboratory facilities, vibration test, moisture test, dust test, corrosion test, color test, and photometric test.

Society of Automotive Engineers. 1944 Handbook, Section 6—Tests, Ratings, and Codes. S.A.E. Recommended Practice for Electric Supplementary Driving Lamps, adopted 1941. Gives definition, samples for test, laboratory facilities, vibration test, moisture test, dust test, corrosion test, photometric test, and out of focus tests on unsealed units.

Society of Automotive Engineers. 1944 Handbook, Section 6—Tests, Ratings, and Codes. S.A.E. Recommended Practice for Electric Supplementary Passing Lamps, adopted 1942. Gives aiming and usage, definition, laboratory facilities, vibration test, moisture test, dust test, corrosion test, and photometric test.

Society of Automotive Engineers. 1944 Handbook, Section 6—Tests, Ratings, and Codes. S.A.E. Recommended Practice for Headlamp Mountings, adopted 1936. Requirements for beam adjustments and stability of same.

Society of Automotive Engineers. 1944 Handbook, Section 6—Tests, Ratings, and Codes. S.A.E. Recommended Practice for Headlighting Inspection Code, revised 1942. Definitions of beams, general headlamp testing requirements (diagram of car with respect to screen), general lamp inspection limits, and lamp output; focus and aim inspections.

Society of Automotive Engineers. 1944 Handbook, Section 6—Tests, Ratings, and Codes. S.A.E. Recommended Practice for Headlight Switching, adopted 1934. Gives recommendations for driving beam and for beam used for passing other cars.

Society of Automotive Engineers. 1944 Handbook, Section 6—Tests, Ratings, and Codes. S.A.E. Recommended Practice for Sealed Beam Headlamp Units for Motor Vehicles, adopted 1940. Gives application, scope, definitions, samples for test, laboratory facilities, photometric test, maximum beam intensity, country or upper beam, and traffic or lower beam.

Society of Automotive Engineers. 1944 Handbook, Section 6—Tests, Ratings, and Codes. S.A.E. Standard for Adverse Weather Lamps, Tail Lamps, Stop Lamps, and License Plate Lamps, revised 1942. Gives definition, samples for test, laboratory facilities, vibration test, moisture test, dust test, corrosion test, and color test.

Society of Automotive Engineers. 1944 Handbook, Section 6—Tests, Ratings, and Codes. S.A.E. Standard for Color Specification for Electric Lamps, adopted 1942. Gives scope, trichromatic coefficient specification, and visual comparison of colors.

Society of Automotive Engineers. 1944 Handbook, Section 6—Tests, Ratings, and Codes. S.A.E. Standard Electric Headlamps for Motor Vehicles, revised 1937.

Laboratory tests for minimum optical requirements and tests.

Society of Automotive Engineers. 1944 Handbook, Section 6—Tests, Ratings, and Codes. S.A.E. Standard for Lighting Equipment for Motor Vehicles, adopted 1942. Gives scope, samples for test, laboratory facilities, vibration test, moisture test, dust test, corrosion test, and color test.

Underwriters' Laboratories, Inc. Standard for Clearance, Marker, and Identification Lamps for Motor Vehicles, 1940. Gives requirements for form and standards for color determination, design and construction, tests for vibration and shock, moisture and dust resistance, corrosion, photometric test of candlepower, etc.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Commercial Standard CS80-41; 1941. Electric Direction Signal Systems Other Than Semaphore Type for Commercial and Other Vehicles Subject to Special Motor-Vehicle Laws (After Market). This standard covers the requirements and methods for construction, vibration and shock, dust, moisture, corrosion, reliability, and understandability tests for direction signals. Sponsored by Safety Equipment Manufacturers Assn.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Commercial Standard CS81-41; 1941. Adverse-Weather Lamps for Vehicles (After Market). This standard covers the requirements and methods for construction, vibration and shock, dust, moisture, corrosion, and photometric tests of adverse-weather lamps. Sponsored by Safety Equipment Manufacturers Assn.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Commercial Standard CS82-41; 1941. Inner-Controlled Spotlamps for Vehicles (After Market). This standard covers the requirements and methods for construction, vibration and shock, moisture, dust, corrosion, and photometric tests of inner-controlled spotlamps. Sponsored by Safety Equipment Manufacturers Assn.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Commercial Standard CS83-41; 1941. Clearance, Marker, and Identification Lamps for Vehicles (After Market). This standard covers the requirements and methods for construction, vibration and shock, dust, moisture, corrosion, and photometric tests of clearance, marker, and identification lamps. Sponsored by Safety Equipment Manufacturers Assn.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Commercial Standard CS84-41; 1941. Electric Tail Lamps for Vehicles (After Market). This standard covers the requirements and methods for construction, vibration and shock, dust, moisture, corrosion, and photometric tests of electric tail lamps. Sponsored by Safety Equipment Manufacturers Assn.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Commercial Standard CS85-41; 1941. Electric License-Plate Lamps for Vehicles (After Market). This standard covers the requirements and methods for construction, vibration and shock, dust, moisture, corrosion, and photometric tests of electric license-plate lamps. Sponsored by Safety Equipment Manufacturers Assn.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Commercial Standard CS86-41; 1941. Electric Stop Lamps for Vehicles (After Market). This standard covers the requirements and methods for construction, vibration and shock, dust, moisture, corrosion, and photometric tests of electric stop lamps. Sponsored by Safety Equipment Manufacturers Assn.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Commercial Standard CS97-42; 1942. Electric Supplementary Driving and Passing Lamps for Vehicles (After Market). To establish standard specifications and methods of test for supplementary driving and passing lamps (after market) for the guidance of manufacturers, distributors, and users. Covers definitions, general requirements, installation instructions, lamp bulbs, samples for test, laboratory facilities, vibration and shock test, moisture test, dust test, corrosion test, photometric test, marking, and labeling.

U. S. Gov., Federal Specification W-L-111B; 1937. Lamps; Electric, Incandescent, Miniature, Tungsten-Filament. "Miniature" lamps designate broadly lamps for automotive, flashlight, and similar types of service. Manufacturer is given widest range in selection of materials and processes of manufacture in order that lamps of maximum quality may be produced. Shall be so designed and made that they will meet manufacturers' standard on file at the National Bureau of Standards. Gives detail requirements for life to burn out, manufacturer's declared efficiency, and candle power maintenance; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Post Office Dept., Div. of Motor Vehicle Service, Bureau of the Fourth Assistant Postmaster General. Specifications for Lamps; Stop and Tail Lights.

*References.*—Illumination, nomenclature, lamp testing methods, *see* 716.0; standard thread and base for screw base lamps, *see* 716.10.

## 716.13 Electric Hand Lamps and Lanterns

U. S. Gov., Dept. of Agriculture, Forest Service. Specification No. 142. Flashlight.

U. S. Gov., Dept. of Agriculture, Forest Service. Specification No. 224. Lantern; Electric, Heavy-Duty Battery.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R68-33; 1933. Metal and Fiber Flashlight Cases. This recommendation establishes a simplified list of stock types, sizes, and finishes of metal and fiber flashlight cases.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Commercial Standard CS87-41; 1941. Red Electric Warning Lanterns. This standard covers the requirements and methods for construction, vibration and shock, weatherproof, dust, reliability and life, and photometric tests of red electric warning lanterns. Sponsored by Safety Equipment Manufacturers Assn.

U. S. Gov., Federal Specification W-F-421a; 1940. Amendment 2; 1944. Flashlights; Electric, Hand (Without Batteries). Covers two types—(I) with seamless steel cases or continuous-welded steel cases in eleven styles; and (II) with rigid cases having a

nonconducting exterior surface, in six styles. Gives requirements for location of bulb in focusing, reflectors, lenses, switches, body tube, exterior finish, lamp holder, and marking; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification W-L-111B; 1937. Lamps; Electric, Incandescent, Miniature, Tungsten-Filament. "Miniature" lamps designate broadly lamps for automotive, flashlight, and similar types of service. Manufacturer is given widest range in selection of materials and processes of manufacture in order that lamps of maximum quality may be produced. Shall be so designed and made that they will meet manufacturers' standard on file at the National Bureau of Standards. Gives detail requirements for life to burn out, manufacturer's declared efficiency, and candle power maintenance; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Navy Dept. Specification 17F7b; 1934. Flash-Lights; Electric, Hand.

U. S. Gov., Navy Dept. Specification 17L11a; 1944. Lanterns; Electric, Automatic, Floating.

U. S. Gov., Navy Dept. Specification 17L14a; 1944. Lanterns; Electric, Portable, Hand or Head.

U. S. Gov., Navy Dept. Specification 17L17c; 1945. Lanterns; Flood, Storage-Battery, Portable.

U. S. Gov., U. S. Army, Army Air Forces. Specification 94-32286-A; 1944. Lamp Assembly; Flashlight, Type A-5A (Inspection).

U. S. Gov., U. S. Army, Army Air Forces. Specification 94-32413-A; 1944. Lamp Assembly; Flashlight, Type A-8.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 29-94; 1941. Lantern; Electric, Commercial Type.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-1599; 1943. Flashlight TL-194.

U. S. Gov., U. S. Maritime Commission. Specification 17-MC-7a; 1945. Flashlights; Electric. Covers one grade and two types—(I) general purpose, and (II) explosion-proof. Gives requirements for sizes, materials, workmanship, cells, lamps, reflector, lens, switch, case, lamp holder, threads, finish, dimensional stability, watertightness, corrosion resistance, ruggedness, blackout filters, and details; sampling, inspection, and methods of test; packaging, packing, and marking for shipment.

*References.*—Miner's lamps, *see* 716,17; Illumination nomenclature, lamp-testing methods, *see* 716.0; standard thread and base for screw base lamps, *see* 716.10; flash-light batteries, *see* 712.1; dial lamp for radio receivers, *see* 716.14

## 716.14 Dial Illuminating Lamps

Radio Manufacturers Assn. Panel Lamps M4-131 to M4-136, M4-141, and M4-142; 1936. Gives form, dimensions, and ratings for six standard sizes of dial lamps, miniature screw base and miniature bayonet base dimensions, and detail of screw base thread standards.

*References.*—Illumination nomenclature, lamp testing methods, *see* 716.0; standard thread and base for screw base lamps, *see* 716.10.

## 716.15 Mercury Vapor Lamps

National Board of Fire Underwriters. National Electrical Code, 1940. American Standards Assn., C1-1940. Mercury Vapor Lamps. Requirements for grounding, overload protection, and enclosures for resistances and regulators.

U. S. Gov., Veterans Administration. Specification VA-X-182b; 1939. Quartz Mercury Vapor Arc Lamps.

## 716.16 Arc Lamps

American Society for Testing Materials, E 42-42 T; 1942. Tentative Recommended Practice for Characteristics of Standard Carbon Arc Accelerated Weathering Unit. The characteristics recommended cover those points of fundamental importance that will provide an acceptable accelerated weathering unit for many purposes, and at the same time permit the development of detailed and specific cycles needed for the obtaining of particular data and falling within the general structure of this recommended practice.

National Board of Fire Underwriters. National Electrical Code, 1940. American Standards Assn., C1-1940. Arc Lamps. Enclosure, Clearance and mounting requirements of parts, requirements on leads, overload protection, and operating switch.

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-62; 1940. Lamp Assembly; Photographic, Type B-2.

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-128; 1941. Lamp Assembly; Photographic, Type B-3.

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-129; 1941. Lamp Assembly; Photographic, Type C-1.

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-191; 1942. Lamp Assembly; Photographic, Type B-4.

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-291; 1943. Lamp Assembly; Photographic, Type B-5.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2872; 1939. Lamp; Therapeutic, Carbon Arc.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2891; 1939. Lamp; Therapeutic, Mercury Arc, Water-Cooled, and Applicators.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2941; 1939. Lamp; Therapeutic, Mercury Arc, Air-cooled, and Burner.

*References.*—Illumination nomenclature, *see* 716.0; definitions, symbols, methods of test, electric service standards, safety codes, *see* 710; arc projectors and searchlights, *see* 716.2.

## 716.17 Miner's Lamps and Gas Detectors

*References.*—Illumination nomenclature, lamp testing methods, *see* 716.0; standard thread and screw base sizes, *see* 716.10; flame type miners lamp, *see* 997.6.

## 716.18 Fluorescent Lamps

Fluorescent Lighting Assn. Cold-Cathode Fluorescent Lighting Specifications, 1943. A set of tentative specifications covering the essential details of an installation that has actually been made and is now operating satisfactorily. Covers general conditions, color of tubing, diameter of tubing, length of tubing, electrode housings, transformers, transformer boxes, installation, performance, and standard specifications for cold-cathode fluorescent tubing.

Fluorescent Lighting Assn. Cold Cathode Lamp Type Designations, 1942. Covers three classes for standard tubes. Class "A" for tubes which are straight with electrodes sealed on the ends; class "B" for tubes which are straight, except for the electrodes which are bent at right angles; and class "C" designates curved tubes.

Fluorescent Lighting Assn. Revised Length Standards for Finished Straight-Length Lamps, 1944. Gives length of lighted tubing in inches—48, 72, 80, 89, 112, and 136; allowing 4 in. for electrodes making over all length of finished lamps 4 in. more than lighted tubing portion.

Fluorescent Lighting Assn. Three Cold-Cathode Fluorescent "White" Color Standards, 1942. F.L.A. "soft white" is a definitely warmer white with slight pinkish cast for restaurants, food shops, cafes, beauty parlors, retail shops, and other establishments requiring "cozy" illumination. F.L.A. "3,500 white" is a pleasing white light source without the yellowish cast. F.L.A. "daylight" provides illumination of the order of that from a north skylight.

U. S. Gov., Army Air Forces. Specification No.32451; 1944. Lamp Assembly; Cockpit, Type C-8, Ultra-Violet, 28 Volt., Direct Current.

U. S. Gov., Army Air Forces. Specification No.32484; 1944. Lamp Assembly; Cockpit, Type A-9, Ultra-Violet.

U. S. Gov., Federal Specification W-L-131; 1942. Supplement, 1942. Amendment 1; 1942 to 1942 Supplement. Lamp Auxiliaries; Fluorescent. Covers two types—(I) single-lamp ballasts for operation of single lamps, and (II) two-lamp ballasts for operation of two lamps. Gives requirements for power factors, frequencies, materials, workmanship, marking, and temperature rise; wattage, wave shape, voltage range for starting, starting time, preheating, supplementary cathode heating, noise, and radio interference; methods of sampling, inspection, and test; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., Treasury Dept., Procurement Div., No.514; 1941. Lamps; Desk, Fluorescent. Shall be of the type designed to direct almost all light downward. Covers two designs—(I) with shield or screen between lamp and work area, and (II) without shield or screen between lamp and work area; and two classes—(A) pedestal type, and (B) swinging arm type. Current shall be either a.c. or d.c. Gives requirements for illumination, reflecting surface, housing, cord, attachments, switch, socket, and auxiliaries; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., Treasury Dept., Procurement Div., No.570; 1942. Lamps; Electric, Fluorescent. Gives requirements for types, sizes, colors, life to failure, initial lumens per watt, lumens per watt maintenance, dimensions, and color; methods of sampling, inspection, and tests; and packaging, packing, and marking.

### 716.19 Miscellaneous Lamps

American Standards Assn., Z52-43; 1944. Photographic Flash Lamps (American War Standard). Gives types, classes, material and workmanship, general requirements, shapes and dimensions, luminous flux vs. time characteristics, and spectral energy distribution; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

Assn. of American Railroads, Mechanical Div., Electrical Section. Manual of Standard and Recommended Practice, 1940. Electric Marker Lamps. Plug is lightweight and will withstand severe usage. The receptacle can be applied to practically any junction box now in service. Both plug and receptacle are arranged in three contacts, which permits of connecting to a special marker light circuit, the third connection being available for connection to the lamp regulator. Gives figures showing plug, receptacle, and typical connection diagrams for wiring.

Illuminating Engineering Society. Specifications for I.E.S. Portable Lamps, 1941. Covers requirements for effectiveness, safety, construction, 100-watt study and reading lamp, end-table lamp, semi-indirect floor lamp, indirect floor lamp, and I.E.S. better-sight lamp specifications summary.

U. S. Gov., Army Air Forces. Specification No.32514; 1944. Flasher; Lamp Assembly, Type B-1, Periodic.

U. S. Gov., Army-Navy Aeronautical Specification AN-L-28; 1944. Lamps; Red Coated Miniature, Incandescent.

U. S. Gov., Navy Dept. Specification 17L13; 1944. Lamps; Diving, Navy-Standard.

U. S. Gov., Navy Dept. Specification 17L15a; 1944. Lights; Electric, Signaling, Portable, Multi-Purpose (Shipboard Use).

U. S. Gov., Navy Dept. Specification 17L16; 1944. Lights; Electric, Attachable, Small.

U. S. Gov., Navy Dept. Specification 17L19; 1944. Lamps; Negative-Glow.

U. S. Gov., Navy Dept. Specification 57L10; 1943. Lamps; Antral.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2424B; 1941. Lamp; Operating, Dental.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2449A; 1941. Lamp; Operating, Portable.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2823; 1939. Lamp; Blue, Green, Ruby.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2824A; 1942. Light; Safe.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2909A; 1942. Lamp; Therapeutic, Infra-Red.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-583C; 1933. Lamp; Types LM-20 and LM-21, Quick Nigrescent.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-984; 1941. Signal Lamp, Type M-132; and Lamp Mounting, Type MT-159.

U. S. Gov., U. S. Army, Signal Corps. Specification 75-10; 1923. Lamp, Ruby, No.0; Lamp, Kodak, Safelight, Complete With Series 0 Safelight.

U. S. Gov., Veterans Administration. Specification VA-DM-100; 1939. Dental Operating Light (for Mounting on Dental Operating Unit).

## 716.2 SEARCHLIGHTS, PROJECTORS, LOCOMOTIVE HEADLIGHTS, AND REFLECTORS

American Institute of Electrical Engineers. Recommended Practice for Electrical Installations on Shipboard, No.45; 1940. Addenda, 1942. Emergency

Modification and Supplement, 1943. Searchlights. Includes incandescent and arc types, recommendations on reflectors of parabolic or mangin type, angle of rotation, location, corrosion resistance, mounting and operating gear.

Assn. of American Railroads, Mechanical Div., Electrical Section. Manual of Standard and Recommended Practice, 1941. Headlight Reflectors. For locomotives, gives dimensions, diagrams, and refraction for metal and glass-covered reflectors.

Illuminating Engineering Society. Specifications for Testing Lighting Equipment. Specification F-2-1941. Incandescent Filament Floodlights. Includes results to be reported, photometric data, and tables of constants for the conversion of candles into lumens..

Illuminating Engineering Society. Testing Specifications for Lighting Equipment. Section II—Testing Procedure for Narrow Beam Inclosed Projectors. Includes instructions for description of the floodlight, description of the lamp, procedure for making observations, computation of results, essential results to be reported, necessary constants for computation, and sample report sheet.

U. S. Gov., Army Air Forces. Specification No.32429; 1944. Lamp Assembly; Runway and Approach, Type D-1 (High Intensity).

U. S. Gov., Army Air Forces. Specification No.32477; 1944. Lamp Assembly; Beacon, Type F-1 (Code Flashing).

U. S. Gov., Army Air Forces. Specification 32515-1; 1944. Lamp Assembly; Beacon, Type G-1, Obstacle or Code.

U. S. Gov., Army Air Forces. Specification No.40886; 1944. Reflector; Taxi-Strip and Runway, Type B-1.

U. S. Gov., Army-Navy Aeronautical Specification AN-L-4; 1942. Lamp Assembly; 24-Inch Rigid Drum Type Rotating Beacon.

U. S. Gov., Army-Navy Aeronautical Specification AN-L-5a-1; 1944. Lamp Assembly; 24-Inch Drum Type Floodlight.

U. S. Gov., Army-Navy Aeronautical Specification AN-L-6a; 1945. Lamp Assembly; Fresnel Single Unit Portable Floodlight.

U. S. Gov., Army-Navy Aeronautical Specification AN-L-7a-1; 1944. Lamp Assembly; Fresnel Four Unit Stationary Floodlight.

U. S. Gov., Army-Navy Aeronautical Specification AN-L-8a-1; 1943. Lamp Assembly; Fresnel Six Unit Mobile Floodlight.

U. S. Gov., Army-Navy Aeronautical Specification AN-L-9; 1942. Lamp Assembly; Runway Marker.

U. S. Gov., Army-Navy Aeronautical Specification AN-L-10; 1942. Lamp Assembly; Boundary and Obstruction Marker.

U. S. Gov., Army-Navy Aeronautical Specification AN-L-17; 1943. Lamp Assembly; Four Unit Mobile Floodlight.

U. S. Gov., Army-Navy Aeronautical Specification AN-L-19; 1942. Lamp Assembly; Hangar Incandescent Portable Floodlight.

U. S. Gov., Army-Navy Aeronautical Specification AN-L-20; 1942. Lamp Assembly; Hangar Fluorescent Portable Floodlight.

U. S. Gov., Army-Navy Aeronautical Specification AN-L-25a; 1943. Lamps; All-Glass Sealed Reflector.

U. S. Gov., Army-Navy Aeronautical Specification AN-L-26; 1944. Lamp Assembly; Runway Marker (for Snow Areas).

U. S. Gov., Army-Navy Aeronautical Specification AN-T-5a; 1943. Truck; Six Floodlight Field Lighting.

U. S. Gov., Army-Navy Aeronautical Specification AN-T-39; 1943. Truck; Four Floodlight Field Lighting.

U. S. Gov., Dept. of Agriculture, Forest Service. Specification MSF-178. Headlight; Electric.

U. S. Gov., Navy Dept. Specification 17D3b; 1936. Door-Glasses; Dome, Searchlight.

U. S. Gov., Navy Dept. Specification 17F12a; 1944. Floodlights; Incandescent (Shipboard Use).

U. S. Gov., Navy Dept. Specification 17M3e; 1945. Mirrors (Reflectors); Searchlight, Glass, Plate, Parabolic.

U. S. Gov., Navy Dept. Specification 17S14b; 1944. Spotlights; Incandescent, Power-Boat.

U. S. Gov., U. S. Army, Army Air Forces. Specification 94-40091; 1934. Lamp Assembly; Floodlight, Type A-9-B.

U. S. Gov., U. S. Army, Corps of Engineers. Specification 84-47; 1943. Reflector; Lamp, Nonmetallic, 8-Inch Diameter, Conical Type.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-320; 1924. Signal Lamp Equipment, Type EE-6, EE-7; and Set SE-1 (Formerly 14 Cm. and 24 Cm. Projectors).

U. S. Gov., U. S. Maritime Commission. Specification 17-MC-1a. Amendment 1; 1943. Searchlight; 12-Inch Signaling. Of the lightweight incandescent lamp type for signaling purposes on surface vessels. Gives requirements for material, workmanship, interchangeability, weathertightness, weight, shock, beam characteristic, drum and mounting assembly, reflector, signaling shutter, front glass, socket, cable and plug, insulation resistance, dielectric strength, threaded parts, painting, name plate, instruction book, and spare parts; sampling, inspection, and methods of test; and packaging, packing, and marking for shipment.

U. S. Gov., U. S. Maritime Commission. Specification 17-MC-2; 1941. Amended, 1943. Reflector; Cargo. Of the wireless cluster type in one size and one grade. Gives requirements for materials, corrosion-resistant materials, corrosion-resistant treatments, enamel, workmanship, reflector, guard, socket, insulating base, cable, inspection, and tests, with drawing.

U. S. Gov., Veterans Administration. Specification VA-M-179; 1936. Searchlights.

*References.*—Motion-picture projectors, *see* 912.

## 716.3 LIGHTING REQUIREMENTS AND EQUIPMENT

### 716.30 General Items

American Standards Assn., A 85-1942. Protective Lighting for Industrial Properties (American War Standard). Intended as a guide for outdoor protective lighting to those whose responsibility it is to provide for plant protection from theft and sabotage. Covers definitions, specifications, lighting equipment, electrical distribution and control, typical methods of obtaining specified illumination values, and tables and figures covering details.

American Transit Assn. Recommended Practice for Shop, Office, and Yard Lighting, E122-39; 1939. Properties of multiple and arc resisting series incandescent lamps, of reflectors and lighting units, recommendations on type of lighting and the minimum intensity for the different standards in shop, office, and yard.

American Transit Assn. Recommended Practice for Trolley Bus Lighting, E131-38; 1938. In general, the interior lighting requirements of a trolley bus are identical with those of the electric railway car or the motor bus. Therefore, details pertaining to recommended values, types of fixtures, and locations of them may be found in Recommended Practices of A.T.E.A., E121 and E123.

Assn. of American Railroads, Operations and Maintenance Dept., Engineering Div., Electrical Section. Manual of Recommended Practice, 1942. Floodlighting Railroad Yards (10-a-39). Describes two systems of floodlighting generally used, gives requirements for tower connections in classification yards, characteristics of floodlight projectors, illumination intensities, design procedure, and projector characteristics (mechanical).

Illuminating Engineering Society. American Standards Assn., A-11-1942. American Recommended Practice of Industrial Lighting. Covers advantages of good illumination, light and safety, factors of good illumination, maintenance of good illumination, natural lighting, artificial lighting, adequate electrical wiring, and rewiring.

Illuminating Engineering Society. American Standards Assn., Z7.1-1942. Illuminating Engineering Nomenclature and Photometric Standards. Includes photometric quantities, radiation, evaluation of ultraviolet radiation, color, illuminants, materials, and accessories modifying distribution of light, classes, and characteristics of illumination, photometric standards and tests, aeronautic lighting, units, symbols, abbreviations, equivalents, and conversion factors.

Illuminating Engineering Society and the American Institute of Architects, sponsors. American Standards Assn., A23-1938. American Recommended Practice of School Lighting. Recommended amount of illumination for rooms and areas of various occupancy, factors affecting lighting and seeing such as glare, diffusion, color quality of light, finish of ceilings and walls, dirt, dust, furniture, etc.; natural lighting; types of artificial lighting, selection of equipment, layout, automatic photo-electric control, blackboards, classrooms, corridors, dormitory and study rooms, special types of rooms, swimming pools, athletics; wiring capacity provisions and economical operation.

Illuminating Engineering Society. Code of Highway Lighting, 1936. Includes definitions of terms, classification of highways, recommendations for visibility and placement of light sources, prescription for highway lighting, and recommendations for highway lighting.

Illuminating Engineering Society. Recommendations for a Standard Method for Measuring and Reporting Illumination From Artificial Sources in Building Interiors, 1943. Covers general instructions for making reliable illumination measurements and instructions for determining average horizontal foot candles in a regular area.

Illuminating Engineering Society. Recommended Practice for the Illumination Performance of Residential Luminaires, 1941. Covers general requirements, types of luminaires, illumination requirements, and table showing illumination and brightness requirements.

Illuminating Engineering Society. Recommended Practice for Office Lighting, 1942. Covers introduction; lighting and seeing—vision in the office, improvement of the work for better seeing, and quantity of light; factors which affect lighting and seeing—glare and its effects, direction, diffusion and distribution of light, color quality of light, and light reflection value and finish of ceilings and walls; natural lighting of offices—factors affecting natural lighting and automatic photo-electric control of the artificial lighting system; artificial lighting—types of general lighting systems, classification of lighting systems, and maintenance; recommendations for office lighting—general offices, supplementary lighting, office machines, private offices, files, mail room, conference rooms, reception rooms, drafting rooms, corridors, passageways, stairways, and personal service; wiring—adequate wiring, future load trends, and main features of a wiring system.

Illuminating Engineering Society. Recommended Practice for Street Lighting, 1940. Covers visibility for traffic safety—methods of discernment, lighting for night traffic safety, and lighting to safeguard pedestrians; lighting fundamentals—characteristics of illumination, luminaire mounting height and spacing, transverse location of luminaires, glare, appearance, and operation; street pavements, lighting recommendations—classification of streets, illustrative arrangements, business, residential, and industrial streets, intersections, boulevards, parks, alleys, bridges, viaduct, plazas, traffic circles, express roadways, underpasses, and tunnels; measurement and calculation of illumination; and relation between street lighting and motor vehicle lighting.

Illuminating Engineering Society. Researches on Industrial Lighting—Lighting for the Machining of Small Metal Parts, 1939. Covers introduction, fundamental seeing task, procedure of study, design procedure, portable measuring instruments, bench work, machine tools, inspection of polished surfaces, and appendix.

Illuminating Engineering Society. Researches on Industrial Lighting—Lighting for Silk and Rayon Throwing and Wide Goods Weaving, 1938. Covers general nature of problem and method of approach, the manufacturing processes and their lighting requirements, the throwing plant, the weaving plant, summary of lighting recommendations, and glossary of weaving terms.

Illuminating Engineering Society. Researches on Industrial Lighting—Progress Report on Lighting in the Printing Industry, 1936. Covers lighting for work on type, lighting of press operations, lighting of off-set printing, lighting for intaglio or

photogravure processes, lighting for work on copy, lighting for binding, and the economics of good lighting.

Illuminating Engineering Society. Researches on Industrial Lighting—Report on Lighting in the Candy Manufacturing Industry, 1937. Covers relationship of lighting to the industry, chocolate making, chocolate dipping, cream making, kiss making and wrapping, gum drops and jellied forms, hard candy manufacturing, sorting and packing, assorted packing, special holiday mold candy, box making and scoring, special box making, and illumination table.

Illuminating Engineering Society. Researches on Industrial Lighting—Report on Lighting in the Shoe Manufacturing Industry, 1937. Covers sole leather department, upper department, stitching department, making department, finishing department, packing and shipping, and rubber shoes department.

Illuminating Engineering Society. Researches on Industrial Lighting—Report on Lighting in the Textile Industry, Grey Goods and Denim, 1937. Covers determination of the seeing problem, recommended levels of illumination, discussion and recommendations, lighting economics in the grey goods mill—weave shed, seeing problems and levels of illumination, weave shed, and other areas.

Illuminating Engineering Society. Researches on Industrial Lighting—Studies in Lighting of Intricate Production, Assembly and Inspection Processes, 1937. Covers production laboratory of radio plant, tool design, tool making, punch press, machine shop, sheet metal fabrication, wax engraving, photo engraving, line assembly of radio sets, radio cabinet assembly, inspection of radio chassis, and radio cabinet assembly.

Illuminating Engineering Society. Researches on Industrial Lighting—The Lighting of Power Presses, 1939. Covers discussion of seeing problem, shearing, forming and bending, squeezing or coining, material and stock handling, recommendations, economics, die repairing, machine and equipment inspection, and general discussion.

Illuminating Engineering Society. Specifications for Testing Lighting Equipment. Specification C-1-1940. Luminaires for General Lighting. Includes requirements for materials, diffuse enclosing and semi-indirect enclosing globes; direct, indirect, and semidirect luminaires; selection, physical measurements, output, candlepower distribution, brightness, and lamp neck cutoff ratio.

Illuminating Engineering Society. Testing Specifications for Lighting Equipment. Section III—Specifications for Testing Asymmetric Show-Window Reflectors. Includes instructions for selection of sample, physical measurements, output, candlepower distribution, lumen distribution, and gives typical show-window example.

U. S. Gov., Army-Navy Aeronautical Specification AN-C-56-2; 1943. Colors; Aeronautical Lights and Lighting Equipment.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specifications CAA-405. Lighting; Installation Specification for Airport.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specifications CAA-506. Airport Lighting for Alaska; Installation Series.

U. S. Gov., Dept. of Labor, Div. of Labor Standards. Special Bulletin 3; 1941. Protecting Plant Manpower. Practical Points on Industrial Sanitation and Hygiene. Covers introduction, fatigue, criteria of industrial health hazards, preventive measures, heating, ventilation, and cooling of work places; personal respiratory protection, personal service conveniences, industrial health program for the small plant, illumination, and noise.

*References.*—Wiring methods and practice, *see* 715.30.

## 716.31 Electric Signs

National Board of Fire Underwriters. National Electrical Code, 1940. American Standards Assn., C1-1940. Signs and Outline Lighting. Minimum thickness of sheet metal, provisions for drainage, weatherproof cabinets, switches, and fuses; types of sockets and receptacles, minimum size and insulation of wire, method of installing wire, capacity of branch circuits, inclosure of live parts, and grounding requirements.

Underwriters' Laboratories, Inc. Standard for Electric Signs, 1940. Covers incandescent-lamp signs, gas-tube signs, and combinations of both, to be employed in accordance with the National Electrical Code. Does not cover outline lighting requiring field assembly. Enclosure, glass panels and letters, wiring, lamp-holders, gas tubing, electrode receptacles, transformers; fuse-holders, panelboards, switches, etc.; clocks; spacings; guarding of live parts and grounding; dielectric strength of accessories; marking; and inspection of listed product.

U. S. Gov., Dept. of Commerce, National Bureau of Standards, H33; 1940. American Standards Assn., C2.3-1941. Safety Rules for the Installation and Maintenance of Electric Utilization Equipment. (Comprising Part 3—for 25- to 270-volt equipment which is accessible to other than qualified electrical operators—and the grounding rules of the Fifth Edition, National Electrical Safety Code.) For electric signs (Section 36), requirements on accessibility, inclosure of live parts, grounding of non-current-carrying metal parts, control, and connectors.

*References.*—Wiring methods and practice, *see* 715.30; safety code for signs, *see* 710; copper wire, electric lamps, *see* 715.44, 716.11; steel sheets, *see* 604.23; transformers, high frequency apparatus, *see* 713.5, 717.3.

## 716.32 Electric Lighting Fixtures

National Board of Fire Underwriters. National Electrical Code, 1940. American Standards Assn., C1-1940. Fixtures, Construction of lighting fixtures, wireways, thickness of metal tubing, minimum size of wire, method of wiring, grounding, mounting requirements for various locations.

Underwriters' Laboratories, Inc. Standard for Electric Lighting Fixtures and Portable Lamps, 1941. For use in accordance with the National Electrical Code. General mechanical and electrical construction,

show-window and show-case fixtures, vapor-tight fixtures, recessed fixtures, fluorescent-lamp fixtures, stage-type fixtures, portable lamps, and inspection of listed product.

U. S. Gov., Dept. of Agriculture, Forest Service. Specification No.231. Light; Lookout Map Board.

U. S. Gov., Dept. of Commerce, National Bureau of Standards, H33; 1940. American Standards Assn., C2.3-1941. Safety Rules for the Installation and Maintenance of Electric Utilization Equipment. (Comprising Part 3—for 25- to 270-volt equipment which is accessible to other than qualified electrical operators—and the grounding rules of the Fifth Edition, National Electrical Safety Code.) For lighting fixtures (Section 82), requirements on grounding, gas piping as electrode, polarizing lampholders, receptacle for convenience, outlet, exposed live parts, lamps in series circuits, and safe access to arc lamps.

U. S. Gov., Navy Dept., Bureau of Yards and Docks. Specification E-9Ye; 1943. Electrical Apparatus, Distributing Systems, and Wiring (Emergency Edition). Includes requirements for lighting fixtures.

U. S. Gov., Panama Canal, Purchasing Dept. Specification for lighting Fixtures, 1941.

U. S. Gov., Treasury Dept., Procurement Div., 328B; 1941. Reflectors; Metal, Direct Lighting. Shall be of two types—(I) porcelain-enamel reflector and (II) porcelain-enamel reflector and glass globe. Gives requirements for steel or iron, coating, angle of cut-off, dimensions, contour, and efficiency; methods of sampling, inspection, and test; and packaging, packing, and marking.

U. S. Gov., Treasury Dept., Procurement Div., 413B; 1942. Lighting-Units; Pit, Vapor-Proof. Covers vapor tight lighting units for use in pit, tunnel, viaduct, and underpass lighting; suitable for built-in or surface installation; two sizes—No.1, suitable for insertion in 100 and 150 watt lamps; and No.2, for 200 watt lamps. Gives requirements for box or main housing, cover frame, cover glass, guards, brackets, reflectors, receptacle, water tightness, tapping, installation, and finish; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., Treasury Dept., Procurement Div., No.555; 1942. Fixtures; Lighting, Fluorescent, A.C. (General-Lighting Use). Covers four types—(1) closed-end (continuous mounting), (2) closed-end (individual mounting), (3) open-end (continous mounting), and (4) open-end (individual mounting); two styles—(A) two-lamp and (B) three-lamp; and two classes—(A) vitreous enamel reflectors and (B) organic finish reflectors. Gives requirements for reflectors, dimensions, wiring, lampholders, starting switch and socket, ballast, contour, efficiency, assembly, and details for each type; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., Treasury Dept., Procurement Div., No.589; 1942. Fixtures, Lighting, Fluorescent, A.C.; Non-Ferrous; 40-Watt Lamps; General Service. Covers three types—(I) concentrated light distribution (multiple-unit type), (II) medium concentrated light distribution, and (III) medium broad light distribution (R.L.M. type). Gives requirements for assembly, nonferrous feature, general construction, efficiency and flux distribution, mounting design, auxiliaries, reflectors, supply line connection, voltage, finish, and rejection; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-270; 1943. Lamp Assembly; Indirect-Light Box.

U. S. Gov., U. S. Army, Medical Dept. Specification 1-35; 1939. Lamp; Desk, Flexible Arm.

U. S. Gov., U. S. Army, Medical Dept. Specification 32-43; 1940. Lamp; Table.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-712; 1937. Lamp Fixture; Type M-142, Portable.

U. S. Gov., Veterans Administration. Specification VA-G-161a; 1939. Floor Lamps.

U. S. Gov., Veterans Administration. Specification VA-G-162a: 1939. Table Lamps.

*References.*—Wiring methods and practice, *see* 715.30; safety codes, symbols, testing methods, *see* 710; molded insulation, *see* 719.58; sockets and receptacles, *see* 715.21; copper wire, gas fixtures, *see* 715.44, 997.2.

## 716.39 Miscellaneous Lighting Equipment

American Institute of Electrical Engineers. Recommended Practice for Electrical Installations on Shipboard, No.45; 1940. Addenda, 1942. Emergency Modification and Supplement, 1943. (1) Lighting Equipment. Covers location of fixtures, illumination requirements, type of lamp and base, extension outlets, permanent and portable watertight and non-watertight fixtures, switches, etc. (2) Emergency Light and Power System. Covers capacity and fuel supply of Diesel engine-driven generating sets for cargo and passenger vessels over 1,600 gross tons, storage battery systems for cargo vessels and for passenger vessels of 100 to 1,600 gross tons, circuits to be supplied, automatic controls, etc.

American Transit Assn. Recommended Practice for Car Lighting, E121-39; 1939. Recommends a minimum intensity of illumination, general type of lighting, location of lights in car at entrances and exits, gives characteristics of lamps and reflectors, and drawings of car lighting layouts.

American Transit Assn. Recommended Practice for Motor Coach Lighting, E123-38; 1938. Recommendations of illumination intensity, sizes of lamps for various locations and uses, data on representative lamps and reflectors, typical layouts with given recommended illumination intensities, recommended types and construction for headlights, and rules for adjustment; construction and illumination of signs, types of step lights and stop lights; total recommended wattage requirements for various sizes of motor coaches and sizes of wire.

Assn. of American Railroads, Mechanical Div., Electrical Section. Manual of Standard and Recommended Practice, 1940. Electric Train Lighting. Gives general requirements, axle generator mounting and suspensions, clearances, steam and water drips, pulley axles, wiring, and installation of conduit and wire.

Assn. of American Railroads, Mechanical Div., Electrical Section. Manual of Standard and Recommended

Practice, 1939. Illumination of Rolling Stock. Recommends 7 to 15 ft. candles in reading locations, elimination of shadows, glare, and dust, for harmony with architectural treatment, direct, semi-direct, and indirect lighting for railway day coach lighting, dining car, sleeping car, and parlor or club car.

Illuminating Engineering Society. Specifications for Shades for I.E.S. Portable Lamps, 1935. Applies to shades designed for incorporation in certified I.E.S. table and floor lamps. Includes requirements for effectiveness, construction, and proposed specifications for shades for I.E.S. portable lamps.

Underwriters' Laboratories, Inc. Standard for Christmas-Tree and Decorative-Lighting Outfits, 1941. Covers outfits to be employed on lighting circuits in accordance with the National Electrical Code. General, series-connected units, multiple-connected units, wreaths, candle sets, etc.; packing, instructions, rating, marking, and inspection of listed product.

Underwriters' Laboratories, Inc. Standard for Electric Lighting Fixtures for Use in Hazardous Locations, Subject 844; 1942. Covers indoor electric lighting fixtures in two classes—(I) locations are those in which flammable volatile liquids, highly flammable gases, mixtures or other highly flammable substances are manufactured, used, handled, or stored in other than their original containers, and (II) locations are those in which combustible dust is thrown, or is likely to be thrown, into suspension in the air in sufficient quantities to produce explosive mixtures, or those where it is impracticable to prevent such combustible dust from collecting in such quantities on or in motors, lamps, or other electrical devices that they are likely to become overheated because normal radiation is prevented. Gives details for class I and for class II and inspection of listed product.

Underwriters' Laboratories, Inc. Standard for Fluorescent-Lamp Control Equipment, 1942. Covers reactor-type ballasts, resistor-type ballasts, automatic starting switches, and manual starting switches with or without line switches, for use with tubular fluorescent lamps of the hot-cathode type, to be employed in accordance with the National Electrical Code.

U. S. Gov., Army Air Forces. Specification 32425 (1); 1944. Equipment; Field Lighting (Semi-Permanent).

U. S. Gov., Army Air Forces. Specification No. 32454; 1944. Lamp Assembly; Flashlight, Type A-9 (Hand Energized).

U. S. Gov., Army Air Forces. Specification No. 32465; 1944. Lamp Assembly; Flashlight, Type A-10 (Hand Energized).

U. S. Gov., Army Air Forces. Specification 32470A; 1944. Regulator; Runway Control, Type B-1.

U. S. Gov., Army Air Forces. Specification No. 32487; 1944. Lamp Assembly; Flashlight, Type A-11, Luminous Wand.

U. S. Gov., Army Air Forces. Specification 50284-B (1); 1944. Lamp Assembly; Extension (Vapor-Tight).

U. S. Gov., Army-Navy Aeronautical Specification AN-B-1a; 1942. Bridge Assembly; Floodlight.

U. S. Gov., Army-Navy Aeronautical Specification AN-L-11a; 1944. Light Assemblies; Electrically Retractable Landing.

U. S. Gov., Army-Navy Aeronautical Specification AN-L-12a; 1943. Light Assemblies; Aircraft.

U. S. Gov., Army-Navy Aeronautical Specification AN-L-14; 1945. Light Assemblies; Work Table.

U. S. Gov., Army-Navy Aeronautical Specification AN-L-22a; 1944. Lamps; Wing Position Light.

U. S. Gov., Army-Navy Aeronautical Specification AN-L-23-1; 1944. Light Assemblies; Ultraviolet—Fluorescent Cockpit.

U. S. Gov., Army-Navy Aeronautical Specification AN-R-3a; 1943. Regulator Assembly; Runway (Remote Intensity Control).

U. S. Gov., Army-Navy Aeronautical Specification AN-R-17; 1944. Regulator Assembly; Brightness Control.

U. S. Gov., Army-Navy Aeronautical Specification AN-S-2-1; 1944. Set; Portable Field Lighting.

U. S. Gov., Navy Dept. Specification 17B15; 1944. Blinkers; Low-Intensity, for Binoculars.

U. S. Gov., Navy Dept. Specification 17L10b; 1944. Lights; Operating, Electric, Shadow-Reducing, Portable (Shipboard Use).

U. S. Gov., Navy Dept. Specification 17L18; 1943. Luminous Material and Equipment (Non-Radioactive); Electric Lamp Activated.

U. S. Gov., U. S. Army, Army Air Forces. Specification 94-27172; 1929. Lamp Assembly; Instrument, Type A-2.

U. S. Gov., U. S. Army, Army Air Forces. Specification 94-32410; 1944. Lamp Assembly; Flashlight, Type A-7, Floating Identification.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-3012; 1944. Dolly for Field Operating Lamp.

U. S. Gov., Veterans Administration. Specification VA-X-157a; 1938. Illuminator; Radiographic, Triple.

U. S. Gov., Veterans Administration. Specification VA-X-167a; 1938. Illuminator; Radiographic, Single.

*References.*—Lighting codes, illumination nomenclature, *see* 716.30; electric lamps, *see* 716.1; wiring methods and practice, safety code, *see* 715.30, 710.

## 717. HOUSEHOLD DEVICES, HEATERS, AND X-RAY APPARATUS

### 717.0 GENERAL ITEMS

Underwriters' Laboratories, Inc. Bulletin of Research, 27; 1943. Clearances and Insulation of Heating Appliances. This bulletin describes tests conducted to provide definite technical information as a basis for promoting uniformity in the various ordinances, regulations, and standards bearing on the subject. Covers mechanism of heat transfer, test equipment, tests of protective assemblies, temperature measurements, test procedure, test results, and comments.

Underwriters' Laboratories, Inc. Standard for Electric Flatirons and Ironing Machines, 1943. Covers electric flatirons and ironing machines, either with or without automatic temperature control, to be employed in accordance with the National Electrical Code. Definitions, general, frame and enclosure, mechanical assembly, corrosion protection, supply connections, wiring, heating elements, electrical insulation, heat insulation, attachment-plug receptacles, switches, automatic controls, spacings, grounding, motors, performance, rating, marking, and inspection of listed product.

## 717.1 ELECTRIC HEATING AND COOKING DEVICES

American Hospital Assn., 10-37. Electric Heating Pads.

American Hospital Assn., 19-10. Electric Hot-Plates. Covers two types—(I) light duty, portable; and (II) heavy duty, semiportable.

American Hospital Assn., 40-10. Electric Toasters. Covers two types—two-slice and six-slice.

American Institute of Electrical Engineers. Recommended Practice for Electrical Installations on Shipboard, No.45; 1940. Addenda, 1942. Emergency Modification and Supplement, 1943. Heating Equipment. For convector and radiant types of electric heaters, recommended voltages and wattages, design details, guards, corrosion protection, resistance elements, temperature limits, thermal cut-out, etc.

National Electrical Manufacturers Assn., and Edison Electric Institute (prepared jointly). Test Specifications for Automatic Electric Storage Water Heaters, NEMA 103; 1940. Describes uniform testing procedure for determination of safety, performance, durability, construction, and convenience minimum requirements. Definitions, marking, capacity, thermostatic control, insulation, wiring, finishes, etc.

National Electrical Manufacturers Assn., and Edison Electric Institute (prepared jointly). Test Specifications for Household Electric Ranges, NEMA 108; 1940. Describes uniform testing procedure, definitions and test conditions for the determination of safety, performance, durability, construction, and convenience. Includes suggested standards for voltage ratings of range elements and for adaptation to supply circuits.

Underwriters' Laboratories, Inc. Standard for Domestic Electric Ranges, 1940. Do not cover portable appliances. Cover general, frame and enclosure, supply connections, wiring, heating elements, electrical insulation, heat insulation, overload protection, current-carrying parts, attachment-plug receptacles, lampholders, outlets for timer controls, switches, automatic controls, spacings, grounding, power input, temperature, dielectric strength, rating, marking, and inspection of listed product.

Underwriters' Laboratories, Inc. Standard for Electric Flatirons and Ironing Machines, 1943. Covers electric flatirons and ironing machines, either with or without automatic temperature control, to be employed in accordance with the National Electrical Code. Definitions, general, frame and enclosure, mechanical assembly, corrosion protection, supply connections, wiring, heating elements, electrical insulation, heat insulation, attachment-plug receptacles, switches, automatic controls, spacings, grounding, motors, performance, rating, marking, and inspection of listed product.

Underwriters' Laboratories, Inc. Standard for Electric Heating Appliances, 1940. Covers portable and stationary electric heating appliances to be employed on lighting and power circuits in accordance with the National Electrical Code. General, frame and enclosure, mechanical assembly, corrosion protection, supply connections, wiring, heating elements, electrical insulation, heat insulation, overload protection, fusible links, attachment-plug receptacles, lamp-holders, switches, automatic controls, spacings, grounding, power input, insulation resistance, endurance, dielectric strength, instructions, rating, marking, and inspection of listed product.

Underwriters' Laboratories, Inc. Standard for Electric Heating Pads, 1942. Covers portable, domestic, electric heating pads to be employed on lighting and appliance branch circuits in accordance with the National Electrical Code. General-use pads, enclosure, closure of openings, heating element, thermostats, flexible cord and fittings, wiring and connections, and performance. Waterproof pads, performance, tests on treated fabric, and tests on assembled pads. Also covers instructions, rating, marking, and inspection of listed product.

Underwriters' Laboratories, Inc. Standard for Temperature-Indicating and Regulating Equipment, 1942. Covers electrical control equipment for air-conditioning, heating, cooking, and refrigeration, intended to be employed on lighting and power circuits in ordinary locations in accordance with the National Electrical Code. Gives requirements for frame and enclosure, mounting, operating mechanism, corrosion protection, insulating material, supply connections, current-carrying parts, capacities, overcurrent relays, performance, rating, marking, and inspection of listed products.

U. S. Gov., Army Air Forces. Specification 32435-1; 1943. Heater; Oil Immersion, Type C-5.

U. S. Gov., Army Air Forces. Specification 32436-1; 1943. Heater; Oil Immersion, Type C-6.

U. S. Gov., Army Air Forces. Specification 40439-A; 1945. Heater; Oxygen Mask, Electric, Type E-1 (24 Volt D.C., for Type A-14 Mask).

U. S. Gov., Army Air Forces. Specification 40453-A; 1942. Cover; Bombsight, Type A-1, Electrically Heated.

U. S. Gov., Army Air Forces. Specification 40630; 1944. Cover; Bombsight, Type A-2, Electrically Heated.

U. S. Gov., Army Air Forces. Specification 40661; 1943. Container; Food, Type B-1, Electrically Heated, Individual.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specifications CAA-220. Heaters; Space, Electric, Fan Type.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specifications CAA-307. Heaters; Space, Oil-Fired, 50,000 B.T.U.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specifications CAA-388. Heaters; Space, Electric, Convection Type With Separate Control Thermostat.

U. S. Gov., Federal Specification W-H-196; 1942. Heaters; Electric, Water, Storage, Domestic. Covers eight sizes in each of two types—(I) single heating unit and (II) double heating unit. Gives requirements for materials, voltage, name plate, tank, wiring, insulation, heating units, and temperature control; methods of inspection, sampling, and tests; and requirements for packing and marking for shipment.

U. S. Gov., Federal Specification W-H-636a; 1943. Hot Plates; Electric. Type I, for portable use; type II, for permanent connection; type III, for shipboard use; and various classes, styles, and sizes. Gives requirements for materials, workmanship, voltage, wattage, control, units, body, supporting legs, wiring and connections, finish; methods of sampling, inspection, tests; packaging, packing, and marking.

U. S. Gov., Federal Specification W-P-66; 1941. Pads; Heating, Electric. Covers one grade of a three-heat portable, domestic pad suitable for use on lighting and appliance branch circuits. Gives requirements for instruction, marking, voltage, wattage, size, slip cover, enclosure, waterproofing, heating element, thermostats, fuses, flexible cord and fitting, insulation resistance, heating, flexing, burn-out pull-out, and dielectric strength; methods of sampling, inspection, and test; and requirements for packaging, packing, and marking. Underwriters' Laboratories Standard for Electric Heating-Pads Subject 130, is appliable to and made part of this specification.

U. S. Gov., Federal Specification W-R-101; 1942. Ranges; Electric, Domestic, Cabinet-Type. Electric ranges delivered under this specification shall conform to the standards of the Underwriters' Laboratories as regards fire and casualty hazards. Gives detail requirements; methods of sampling, inspection, and tests; and requirements for packing and marking for shipment.

U. S. Gov., Federal Specification W-U-546; 1943. Units; Heating, Electric, Replacement (for Water Heaters, Ranges, and Hot Plates). Type IB, immersion units, embedded-coil type, for electric hot water heaters; sizes—750, 1,000, 1,500 and 3,000 watts. Type IIA, surface units, exposed-coil type, for electric ranges and hot plates; sizes—1,200 and 2,000 watts. Type IIB, surface units, embedded-coil type, for electric ranges and hot plates; sizes—1,200 and 2,000 watts. Type IIIA, oven units, exposed-coil type, for electric ranges; sizes as specified. Gives requirements for voltage, wattage, metallic content limitations, heating elements, dielectric strength, grounding, and details for each type; methods of inspection, sampling, and tests; and packaging, packing, and marking.

U. S. Gov., Navy Dept. Specification 17H1e; 1944. Heaters; Electric, Disk-Type.

U. S. Gov., Navy Dept. Specification 17H2f; 1939. Heaters; Electric, Air, Ship Type.

U. S. Gov., Navy Dept. Specification 17H3g; 1944. Heaters; Water, Electric.

U. S. Gov., Navy Dept. Specification 17H4e; 1944. Heaters, Electric, Radiant.

U. S. Gov., Navy Dept. Specification 17-I-7d; 1944. Irons, Flat, Electric.

U. S. Gov., Navy Dept. Specification 17-O-1c; 1944. Ovens; Electric, Industrial, Baking (Armature and Core) (Shipboard Use).

U. S. Gov., Navy Dept. Specification 41P28b; 1943. Pots; Glue, Electric.

U. S. Gov., Navy Dept. Specification 64-O-6a; 1933. Ovens; Electric, Warming.

U. S. Gov., Navy Dept. Specification 65G4; 1937. Griddles, Electric.

U. S. Gov., Navy Dept. Specification 65-O-1a; 1938. Ovens; Electric, Food-Baking, Ships'.

U. S. Gov., Navy Dept. Specification 65-O-2; 1937. Ovens; Roasting, Electric.

U. S. Gov., Navy Dept. Specification 65R2; 1937. Ranges and Cooking-Tops; Electric.

U. S. Gov., Navy Dept. Specification 65T4; 1944. Toaster; Electric, Automatic.

U. S. Gov., Navy Dept. Specification 65U1b; 1945. Urns; Coffee.

U. S. Gov., Panama Canal, Purchasing Dept. Specification for Automatic Electric Waterheaters, 1940.

U. S. Gov., Treasury Dept., Procurement Div., 247B; 1942. Heaters; Electric, Reflector. Covers a type of radiant heater suitable for operation with either a.c. or d.c. Gives requirements for heating element, element mounting, heat response, reflector, insulation, handle, wire guard, resistance to corrosion, finish, 600 watt (minimum heater), and 940 watt (minimum) heater; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-242; 1943. Cover; Camera, Electrically Heated, General Specification for.

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-342; 1943. Cover; Camera, Type B-2 (Electrically Heated—Type K-19 Series Cameras).

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-343; 1943. Cover; Camera, Type B-4 (Electrically Heated—Types K-17 and K-17B Cameras With 6-Inch Lens Cone).

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-345; 1943. Cover; Camera, Type B-6 (Electrically Heated—Types K-17 and K-17B Cameras With 24-Inch Lens Cones).

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-346; 1943. Cover; Camera, Type B-5 (Electrically Heated—Types K-17 and K-17B Cameras With 12-Inch Lens Cones).

U. S. Gov., Veterans Administration. Specification VA-M-204; 1936. Sixteen Slice Electric Toaster (Over Type).

U. S. Gov., Veterans Administration. Specification VA-M-205; 1936. Electric Cooking Tops.

U. S. Gov., Veterans Administration. Specification VA-MC-80f; 1940. Electric Ranges (Four Surface Units).

U. S. Gov., Veterans Administration. Specification VA-MC-198a; 1939. Heavy Duty Electric Range.

U. S. Gov., Veterans Administration. Specification VA-MC-199b; 1940. Automatic Electric Toasters.

U. S. Gov., Veterans Administration. Specification VA-MC-203a; 1939. Continuous Type Electric Toaster.

U. S. Gov., Veterans Administration. Specification VA-MC-206a; 1939. Electric Fry Kettle.

U. S. Gov., Veterans Administration. Specification VA-MM-281d; 1942. Electrically Heated Tray Conveyor With Unheated Compartment.

*References.*—Resistant heater wire, *see* 715.43; heater cord, *see* 715.42; plugs, connectors, snap switches, *see* 715.21, 717.0, 715.22; insulated wire, see 715.44; wiring for heaters, *see* 717.0; steel sheets, see 604.22, 604.23; zinc and nickel plating, *see* 600.3..

## 717.2 MOTOR-DRIVEN HOUSEHOLD DEVICES

American Hospital Assn., 40-1. Meat Chopping (Grinding) Machines. Covers hand-operated and motor-operated. Based on U. S. Gov. Federal Specification OO-M-18 for Meat Chopping (Grinding) Machines.

National Electrical Manufacturers Assn. Household Electric Refrigerator Standards, 42-79; 1942. Provides a uniform method of determining the food storage volume and shelf area and a uniform procedure for determining the performance of mechanically

operated household refrigerators. Gives inside dimensions, food storage volume, shelf area, and data to be reported; and test conditions, internal cabinet temperatures, no-load tests, and ice-making test.

U. S. Gov., Dept. of Interior, Purchasing Office, Standard Specification No. 39. Vegetable Peeling Machines.

U. S. Gov., Dept. of Interior, Purchasing Office. Standard Specification No. 82. Slicing Machines; Bread, Electric.

U. S. Gov., Federal Specification W-C-421a; 1940. Amendment 1; 1944. Cleaners; Vacuum, Electric, Portable. Covers two types in various classes and sizes. Type I, enclosed separator, suction only; and type II, exposed separator. Gives requirements for material, marking, exposed surfaces, stability, dirt separation, reversibility, nozzles, agitators, vacuum producer or fan, motor, brushes, motor starter or switch, cord, dust bag, attachments, and detail requirements for each type and class; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification 00-M-18a; 1944. Machines; Chopping (Grinding), Meat. Covers two types—(I) hand operated, and (II) motor operated; in two classes—(A) intermittant duty, and (B) continuous duty; and various sizes for type I and type II, classes A and B. Type II shall be furnished with or without pedestals. Gives requirements for condition, design, operation, chopper body, feed worm, knives, end plates, thrust bearing, accessibility, finish, marking, and details for each type and class; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification 00-M-31b; 1943. Machines, Dishwashing; and Dishbaskets. Covers three spray types suitable for washing dishes in the baskets—(A) single tank; (B) double tank, motor propelled; and (C) double tank, manually propelled. Gives requirements for design, material, workmanship, finish, operation, and details of machines and baskets; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Navy Dept. Specification 61M6; 1930. Machines; Meat, Bone, and Fish Cutting, Electrically Operated.

U. S. Gov., Navy Dept. Specification 66M4d; 1944. Machines; Vegetable-Peeling, Electrically Operated.

U. S. Gov., Navy Dept. Specification 66M11; 1940. Machines; Powdered-Milk-Mixing, Electrically Operated (Shipboard Use).

U. S. Gov., Treasury Dept., Procurement Div., 220c; 1940. Machines; Floor, Cleaning and Finishing, Cylindrical Type. Shall be of two sizes—1/2 horsepower and 3/4 horsepower. Gives requirements for construction and operation, carriage, drum, switch and wiring, vacuum system, handle, motor protective device, lubrication, finish, brushes, steel wool rolls, sanding accessory, motor, weight, and guarantee.

U. S. Gov., Treasury Dept., Procurement Div., 466A; 1942. Mixers; Food, Electric, Domestic-Type. All mixers shall comply with Underwriters' Laboratories standards in effect. Gives requirements for motor, switch, radio interference, beater speeds, drives lubrication, base, cord with plug, beaters, and attachments; methods of sampling, inspection, and tests; and packing and marking.

U. S. Gov., U. S. Army, Medical Dept. Specification 28-14A; 1939. Mixer; Food, Electric.

U. S. Gov., U. S. Army, Medical Dept. Specification 28-68; 1939. Freezer; Ice Cream, Electric.

U. S. Gov., Veterans Administration. Specification VA-M-91a; 1936. Vacuum Cleaners; Electric, Portable.

U. S. Gov., Veterans Administration. Specification VA-MC-95d; 1941. Portable Electric Floor Sanding Machine.

*References.*—Electric fans, *see* 711.23.

## 717.3 X-RAY AND CATHODE RAY APPARATUS AND EQUIPMENT

American Hospital Assn., 43-1. X-Ray Lead Apron. Covers one type, grade, and class.

American Hospital Assn., 43-7. Non-Graduated X-Ray Ureteral Catheters. Covers one type in three sizes.

American Hospital Assn., 43-22. Radio-Opaque (X-Ray) Gloves. Covers one type, one grade, and one class.

National Board of Fire Underwriters. National Electrical Code, 1940. American Standards Assn., C1-1940. X-Ray and High Frequency Apparatus. Requirements for barriers of separate inclosures, insulation and location of operating handles, high voltage leads, and tube terminals; requirements for circuit breaker and automatic switch in transformer circuit, grounding.

National Fire Protection Assn. National Fire Codes for Extinguishing and Alarm Equipment, 1943. Protection of Photographic and X-Ray Nitrocellulose Films. Covers general storage of unexposed films including stores, warehouses and wholesale storage, and portrait and commercial studios; storage of film negatives including vented cabinets, vented storage vaults (inside), and outside storage houses; and general requirements for both unexposed films and film negatives.

U. S. Gov., Army Air Forces. Specification 20026a; 1943. Certification Procedure for the Certification of X-Ray Laboratories.

U. S. Gov., Dept. of Commerce, National Bureau of Standards, H20; 1936. X-Ray Protection. Contains a unified set of safety recommendations relative to protection from X-rays, electrical protection, X-ray equipment in anesthetic rooms, storage of X-ray film, and operating rules.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Research Paper RP56; 1929. The Precise Measurement of X-Ray Dosage. Includes a definition of the international unit of X-radiation; describes the equipment at the National Bureau of Standards and the method of use in the standard measurement of X-ray dosage.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Research Paper RP211; 1930. An Improved Form of Standard Ionization Chamber. Describes a modification of the open-air parallel plate ionization chamber that is portable and is used in the measurement of X-ray intensity. Measurements are as accurate as those made with the primary standard described in RP56.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2414; 1934. Machine, X-Ray, Bedside Unit, Shock-Proof Type.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2443; 1937. Holder; Film Development.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2444A; 1939. Machine; X-Ray, Dental.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2448A; 1941. Film; X-Ray, Dental, Safety Type.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2621A; 1941. Film; X-Ray, Safety Type.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2669; 1939. Fluoroscope; Upright, Complete.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2670; 1939. Machine, X-Ray, Bedside, Mobile, Shockproof.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2671; 1939. Machine; X-Ray, Stationary, Complete.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2684; 1939. Palpator; Spoon Type, X-Ray.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2697; 1939. Stereoscope; Complete, for X-Ray Films.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2713; 1939. Holder; Film Exposure, X-Ray.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2741; 1939. Frame; Printing, X-Ray.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2772; 1939. Glove; Radio-Opaque, X-Ray.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2774; 1939. Stand; Tube, X-Ray.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2778; 1939. Apron; Lead, X-Ray.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2822; 1939. Cassette.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-3003; 1942. Film; X-Ray, Photoroentgenographic, Safety Type.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-1211; 1943. Tube VT-111; Cathode Ray.

U. S. Gov., Veterans Administration. Specification VA-X-110e; 1944. Films; X-Ray, Safety Type.

U. S. Gov., Veterans Administration. Specification VA-X-111c; 1944. X-Ray Films; Dental, Safety Type.

U. S. Gov., Veterans Administration. Specification VA-X-139b; 1936. Screens, Intensifying, X-Ray.

U. S. Gov., Veterans Administration. Specification VA-X-140c; 1938. Cassettes, Without Screens.

U. S. Gov., Veterans Administration. Specification VA-X-158; 1934. Stereoscope; X-Ray Diagnosis.

U. S. Gov., Veterans Administration. Specification VA-X-159d; 1940. Urological X-Ray Table.

U. S. Gov., Veterans Administration. Specification VA-X-160f; 1942. Mobile X-Ray Unit; Shock-Proof.

U. S. Gov., Veterans Administration. Specification VA-X-172; 1936. Oil Immersed Therapy Unit; Self-Contained.

U. S. Gov., Veterans Administration. Specification VA-X-183; 1938. Tube; X-Ray, Radio-Graphic, Air-Cooled Radiator Type.

U. S. Gov., Veterans Administration. Specification VA-MC-332; 1944. Tank; X-Ray, Developing, Two Compartment.

*References.*—Use of cathode ray oscillograph, *see* 718.65.

## 717.4 ELECTRICALLY-HEATED CLOTHING

U. S. Gov., Army Air Forces. Specification 3211-B; 1944. Suit; Flying, Electric, Type F-3A. 24 Volt D.C.

U. S. Gov., Army Air Forces. Specification 3212-B; 1944. Trousers; Electrically-Heated, for Type F-3 Suit.

U. S. Gov., Army Air Forces. Specification 3213-B; 1944. Jacket; Flying, Electric; for Type F-3A Suit.

U. S. Gov., Army Air Forces. Specification 3250; 1945. Blanket; Electrically Heated, Casualty, Type Q-1.

U. S. Gov., U. S. Army, Army Air Forces. Specification 94-3116; 1942. Glove; Pilot's, Type E-1, Electrically Heated, 24 Volts D.C.

U. S. Gov., U. S. Army, Army Air Forces. Specification 94-3117; 1942. Clothing; Electrically Heated.

U. S. Gov., U. S. Army, Army Air Forces. Specification 94-3127; 1942. Helmet; Summer Flying, Type A-9.

# 718. TELEPHONE, TELEGRAPH, RADIO, AND SIGNAL APPARATUS

## 718.0 GENERAL ITEMS

American Institute of Electrical Engineers, Joint sponsor with American Society of Mechanical Engineers. American Standards Assn., Z32.5-1944. Assn. of American Railroads, Telegraph and Telephone Section, M-2. Graphical Symbols for Telephone, Telegraph, and Radio Use. Only symbols which seem to have widespread use and application are given. These symbols are intended primarily to indicate electrical function only.

Assn. of American Railroads, Telegraph and Telephone Section, 1-D-1; 1931. Specification for Locating and Installing Transpositions in Telephone Circuits. For use in reducing cross talk in telephone circuits and inductive effects from telegraph and power circuits by interchanging positions of the two wires in each pair, and of the four wires in each phantom. Method of procedure, transposition diagrams, locating of "S" poles, laying out of sections, materials required, etc.

Assn. of American Railroads, Telegraph and Telephone Section, 1-D-8; 1942. Installation of Carrier Transpositions. For locating and installing transpositions for circuits used in carrier operation. Gives—part I, covering general requirements, locating transposition poles, location of transposition poles to meet construction requirements, "S" poles and junctions, special construction considerations, inductive coordination, installations of transpositions; part II, 30KC transposition system of the Western Union Telegraph Co. covering general requirements, design features, transposition diagrams, "S" pole transpositions, sections having whole line transpositions, and numbering transposition poles; and part III, type D transposition system of the Bell System covering general requirements, design features, transposition diagrams and sections, "S" pole transpositions, sections having whole line transpositions, modification of circuits not transposed for carrier operation, and numbering transposition poles.

Assn. of American Railroads, Telegraph and Telephone Section, 1-E-2; 1927. Instructions for the Making of Pole Line Diagrams for Communication Service

Along Railroads. Gives requirements for standard form of practice for recording and planning of pole line diagrams, size of forms, data to be recorded, and illustrations of standard diagrams.

Assn. of American Railroads, Telegraph and Telephone Section, 1-E-8; 1935. Instructions for the Maintenance of Outside Telegraph and Telephone Plant. Guide for maintaining pole lines, wires, and associated outside plant equipment, inspection, and trouble clearing. Includes general duties, tools and equipment, trouble prevention including tree trimming, tests of copper wire exposed to fire, etc., and correction of troubles.

Assn. of American Railroads, Telegraph and Telephone Section, 2-H-1; 1924. Locations and Layouts for Telegraph and Telephone Apparatus in Way Stations. Description and working drawings for minimum floor and wall space requirements of communication equipment based on four single telegraph, two selectored telephone, and two simplexed block telephone circuits.

Assn. of American Railroads, Telegraph and Telephone Section, 2-J-44; 1943. Typical Example of Laying Out a Type H Carrier System and Drawing Up Ordering Information. Gives general requirements, route, line, terminal and intermediate offices, circuit, determination of layout, effect on other circuits, layout system, and specification of order.

Assn. of American Railroads, Telegraph and Telephone Section, 2-K-5; 1924. Specification for Circuit Cross Connection Records for Wire Chief and Terminal Offices. Covers form of tabulated data for tracing office route of each circuit, numbering terminals, and illustrations of forms.

Assn. of American Railroads, Telegraph and Telephone Section, 2-K-29; 1941. Installation and Operation of Telegraph Directional "OS" Train Announcer. Gives scope, drawings, general requirements, description, and installation.

Assn. of American Railroads, Telegraph and Telephone Section, 2-K-33; 1942. Description and Operation of a Printer Key-Operated Selective Device. Gives purpose, drawings, general requirements, description, and operation.

Assn. of American Railroads, Telegraph and Telephone Section, 11-8; 1939. Portable Transmission Measuring Set. For measurement of volume of sound in decibels by radio frequency methods at 1,000 cycles, or a variable frequency range, with a described portable oscillator and receiver. Requirements for range in decibels, sensitivity, and accuracy.

National Board of Fire Underwriters. National Electrical Code, 1940. American Standards Assn., C1-1940. Signal Systems. Telephone, telegraph, messenger, and call bell circuits, fire and burglar alarms. Insulation and separation from light and power wires, spacing on cross-arms, permissible kinds of insulation for aerial cables, thickness of rubber on wire entering building, requirements for arrestors, fuses, grounding, and size of grounding wire for aerial wires.

U. S. Gov., Dept. of Commerce, National Bureau of Standards, H33; 1940. American Standards Assn., C2.3-1941. Safety Rules for the Installation and Maintenance of Electric Utilization Equipment. (Comprising Part 3—for 25- to 270-volt equipment which is accessible to other than qualified electrical operators—and the grounding rules of the Fifth Edition, National Electrical Safety Code.) For telephone and other communicating apparatus on circuits exposed to supply lines or lightning (Section 39), protective requirements, guarding current-carrying parts, and grounding.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-937B; 1940. Testing of Transmitters and Receivers, for Telephone and Radio Use.

*References.*—Ground clamps, *see* 719.72.

## 718.1 TELEGRAPH APPARATUS

Assn. of American Railroads, Telegraph and Telephone Section, 2-G-51; 1930. Lamp Mounting AAR-3-A. Gives details for design of sheet metal frame for mounting lamp panel AAR-5-A used in telegraph switchboards; gage of metal, dimensions, and finish.

Assn. of American Railroads, Telegraph and Telephone Section, 2-G-52; 1930. Lamp Panel AAR-5-A. Description of lamp panel for use with telegraph switchboards on which are mounted six P. and S. No. 54 sign lamp receptacles; requirements as to quality of materials, workmanship, dimensions, assembly, and tests, with dimensional drawings of parts and assembly.

Assn. of American Railroads, Telegraph and Telephone Section, 2-K-26; 1937. Dotter for Balancing Duplex Sets. For causing reversal of current in adjusting telegraph circuits, schematic outline, and method of operation.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-118. Rectifier; Copper-Oxide, for Teletype Equipment Operation.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-152. Line-Termination Panel Unit, for Tone Telegraph System.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-217. Push Key Switching Unit, for Teletype Equipment.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-283. Rectifier; Heavy Duty, 6-Ampere, for Teletype Equipment Operation.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-315. Teletype Signal Distortion Transmitter Distributor (Bias Test Set).

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-318. Teletype Test Set.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-319. Polar Relay Test Set; Teletypewriter.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-331. Printing Telegraph Page Type Printer Unit, with Keyboard.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-332. Printer Unit, Page Type, Perforating Transmitting Keyboard.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-333. Reperforator Unit; Printing Telegraph for 11/16 Inch Tape.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-334. Printing Telegraph Keyboard, Free Speed; Perforator Unit for 11/16 Inch Tape.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-335. Printing Telegraph, Disc Type; Transmitter-Distributor Unit for 11/16 Inch Tape.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-346. Printing Telegraph Equipment Assembly for D.T.X. Station.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-406. Perforator Unit, for Telegraph Printing Keyboard.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-407. Power Supply; Dry Disc Rectifier Type (Filtered) 0.6 Ampere, 120-Volt, for Operation of a Combined Printing Telegraph Machine With Perforator and Transmitter-Distributor.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-408. Power Supply; Dry Disc, Rectifier Type (Unfiltered) 0.6 Ampere, 120-Volt, for Perforator.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-419. Circuits; Standard Printing Telegraph.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-459. Printing Telegraph Equipment Cabinets and Assn. Equipment.

### 718.11 Telegraph Instruments

U. S. Gov., U. S. Army, Signal Corps. Specification 71-9-F; 1926. Simplex Telegraph Set; Type EE-76.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-95-A; 1925. Resonator; Type TG-3, Telegraph.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-266A; 1925. Sounder; Type EE-11, Telegraph.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-289A; 1925. Switchboard; Types BD-52 and BD-53, Telegraph, 8-Line and 20-Line.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-292A; 1925. Switchboard; Types BD-50 and BD-51, Telegraph, 4-Line and 8-Line.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-300; 1924. Repeater; Automatic Telegraph, Closed Circuit Single Line, Morse.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-468B; 1940. Switchboard; Type BD-( )-57A, Code Practice Equipment.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-491; 1939. Code Transmitter and Recorder; Type TG-8-A, Code Practice Set.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-556C; 1944. Telegraph Set; Type TG-5-B.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-1012; 1942. Printer TG-7-( ), Page, Telegraph; and Chests CH-50-( ) and CH-62-( ).

U. S. Gov., U. S. Army, Signal Corps. Specification 71-1039; 1941. Line Unit; Type BE-77, Telegraph Printer.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-1310; 1942. Switchboard BD-100; and Chest CH-70, Telegraph Printer.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-1316A; 1943. Relay BK-27( ); Telegraph Repeater.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-1646; 1943. Repeater TG-30; Terminal.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-1647; 1943. Repeater TG-31; Intermediate.

U. S. Gov., U. S. Army, Signal Corps. Specification 72-10-B; 1941. Typewriter; Type MC-88, Telegraphers'.

### 718.12 Telegraph Keys

Assn. of American Railroads, Telegraph and Telephone Section, 6-5; 1921. Semi-Automatic Sending Keys. Describes general principles, mechanical adjustment of spring and lever action, contact points, electrical adjustment, and training of operator in proper spacing.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-265; 1924. Key; Telegraph.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-291B; 1935. Key; Type J-36, Telegraph, Vibrating.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-377; 1925. Key; Type J-5-A, Airplane, Flameproof.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-469B; 1942. Key J-38; Telegraph.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-677; 1933. Key; Type J-40, Fastens to Operator's Leg.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-708; 1935. Key; Type J-43, Telegraph.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-721; 1935. Key; Type J-45, Telegraph.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-1399; 1944. Relay Unit BE-84-( ); Teletype, Trunk.

## 718.2 TELEPHONE APPARATUS

### 718.20 General Items

Assn. of American Railroads, Telegraph and Telephone Section, 2-J-37; 1941. Installation and Maintenance of Type H1 Single-Channel Carrier Telephone Equipment. Gives purpose, scope, general requirements, drawings, testing equipment, description and functions of component units, power supply requirements, transmission performance, characteristics of open-wire lines and cables, application, installation, overall system line-up, service adjustments, trouble location tests, and apparatus requirements and adjusting procedures.

Assn. of American Railroads, Telegraph and Telephone Section, 2-J-38; 1941. Installation and Operation of Telephone Directional "OS" Train Announcer. Gives scope, drawings, general requirements, description, and installation.

Assn. of American Railroads, Telegraph and Telephone Section, 2-J-39; 1941. Installation, Operation, and

Maintenance of 1,000-Cycle Ringing Equipment. Gives scope, theory, drawings, equipment details, operation, installation, and maintenance.

Assn. of American Railroads, Telegraph and Telephone Section, 2-J-41; 1942. Installation, Maintenance, and Operation of Selenium Rectifiers for Telephone Service. Gives scope, drawings, general requirements, description, theory, installation, and maintenance of rectifier.

Assn. of American Railroads, Telegraph and Telephone Section, 2-J-42; 1943. Installation and Maintenance of Type 15-A Carrier Telephone Equipment. Gives purpose, scope, general requirements, drawings, description and functions of component units, transmission performance, effect on other services, characteristics of open-wire lines and cables, installation, testing equipment, and initial and routine tests and adjustments.

Assn. of American Railroads, Telegraph and Telephone Section, 4-22; 1941. Installation and Maintenance of Acoustical Shock Reducers. Gives purpose, drawings, description, installation, and maintenance.

Assn. of American Railroads, Telegraph and Telephone Section, 10-6; 1942. Suggested Questions With Answers That May Be Used as an Aid in Determining the Qualifications of Telephone Maintainers. Gives introduction, general requirements, alternating current selector systems, and direct current selector systems.

Assn. of American Railroads, Telegraph and Telephone Section, 11-1; 1939. Telephone Transmission. Recommendations to user, and fundamentals of telephone communication including efficiency of transmitter, receiver, lines, railroad circuits, transmission losses by resistance, leakage, inductance, capacitance, characteristic impedance, return loss and insertion loss, distortion, interference, and reference standards; line facilities and equipment.

Assn. of American Railroads, Telegraph and Telephone Section, 11-4; 1926. Standardization of Transmission Unit. Defines transmission unit; gives application and comparison with previous unit of "mile of standard cable."

U. S. Gov., U. S. Army, Signal Corps. Specification 71-531; 1930. Moistureproofing of Induction and Ringer Coils and Capacitors; Telephone.

## 718.21 Telephone Instruments

Assn. of American Railroads, Telegraph and Telephone Section, 2-G-71; 1932. Portable Telephone Set. For use on magneto telephone circuits including those equipped with selectors by construction, maintenance, and operating forces. Requirements for line terminals, sturdiness, weatherproofing, batteries, insulation, transmission efficiency, generator output, dimensions of carrying case, and gross weight.

U. S. Gov., Dept. of Agriculture, Forest Service. Specifications for Telephone Instruments, All Kinds; Forest Service Telephone Handbook.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-7F; 1924. Telephone, Common Battery, Types EE-69, EE-72, EE-73, EE-74, EE-75, EE-77; and Hand Telephone Switch, Type EE-78.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-27-C; 1922. Telephone; Types EE-66 and EE-67, Portable, Balloon.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-165E; 1932. Telephone; Common Battery, Metal Case, Desk and Wall.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-259A; 1929. Telephone; Type EE-4, Formerly Camp Telephone Model A.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-281; 1924. Relay; Telephone, Self-Restoring Type.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-302B; 1928. Telephone; Type EE-5, Portable, LB Leather Case.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-352D; 1929. Telephone; Head, Type EE-70.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-353A; 1931. Telephone Box; Types EE-71 and EE-72, for Wall Mounting.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-354; 1931. Handset; Type EE-69, Telephone.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-356A; 1931. Telephone Box; Type EE-74, Fire Control, Plotter's Set.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-357A; 1931. Telephone Box; Type EE-75, Fire Control, Gun Telephone.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-484B; 1931. Handset; Type TS-7, for Portable Telephone.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-472B; 1933. Telephone Unit; Type BE-58, for Antiaircraft Plotting.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-493; 1940. Receiver; Type R-2-A.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-509; 1930. Headset; Type P-12, Telephone.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-529; 1933. Panel; type BD-65, telephone Power.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-530A; 1931. Transmitter; Type T-13, Telephone, Chest Type.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-541A; 1932. Headset; Type P-13, Telephone.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-588; 1932. Head and Chest Set; Type HS-17, Telephone.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-609; 1932. Telephone; Common Battery, Wooden Case, Desk and Wall.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-625; 1931. Receiver; Type R-13, Telephone.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-627; 1931. Chest Unit; Type T-18, Telephone.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-631B; 1943. Telephone EE-8-B; Portable.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-667C; 1938. Handset TS-9-( ); Telephone.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-703; 1944. Handset TS-10-( ); Bound Powered.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-707B; 1944. Telephone Box EE-91; Wall Telephone, Less Transmitter and Receiver.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-803-E; 1938. Headset; Type HS-18, Telephone.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-863; 1938. Headset; Type HS-23, Telephone.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-926B; 1942. Receiver R-21-A and R-22-A; Telephone.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-929A; 1937. Head and Chest Set; Type HS-19, Telephone.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-930; 1937. Head and Chest Set; Type HS-17-A, Telephone.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-1183A; 1943. Headset HS-33; Telephone, Low-Impedance, Headband Type, for Use in Aircraft.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-1188A; 1943. Headset HS-38.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-1315; 1942. Handset TS-14-( ).

U. S. Gov., U. S. Army, Signal Corps. Specification 71-1529; 1944. Chest Sets TD-1-A and TD-2-A.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-3024; 1944. Telephone TP-6-( ).

*References.*—Telephone head set for radio, *see* 718.69; safety code for telephone apparatus exposed to electric supply lines, *see* 710.

## 718.22 Telephone Switchboards

Assn. of American Railroads, Telegraph and Telephone Section, 2-G-9; 1924. Porcelain Jack Panel AAR-4-B. Requirements for white porcelain panel used in mounting 16 jacks on switchboard frame, insulation resistance, absorption tests, and dimensional drawing.

Assn. of American Railroads, Telegraph and Telephone Section, 2-G-37; 1928. Moulded Composition Jack Panel AAR-4-C. For mounting jacks on switchboard frame works, panel made from moulded homogeneous black composition, insulation resistance test requirements, and dimensional drawings.

Assn. of American Railroads, Telegraph and Telephone Section, 2-G-46; 1929. Switchboard Framework. For use in supporting electrical apparatus comprised in switchboard; give list of tees, angles, straps, braces, bolts, etc., necessary in assembly; requirements for dimensions and finish, with drawings of assembly and details.

Assn. of American Railroads, Telegraph and Telephone Section, 2-G-55; 1930. Test Panel Unit AAR-8-A. Describes construction of sheet metal test panel with hinged front, with dimensional drawings.

Assn. of American Railroads, Telegraph and Telephone Section, 2-G-56; 1930. Filler Panels AAR-1-A. Includes eight standard sizes of filler panels used to fill unoccupied spaces in switchboards; dimensions, construction, and finish.

Assn. of American Railroads, Telegraph and Telephone Section, 2-G-57; 1930. Lamp Rack Wiring Shield AAR-1-A. For mounting on switchboard framework AAR-2-F to protect the wiring of the equalizing lamps, form and dimensions of asbestos board and sheet metal shield, and finish.

Assn. of American Railroads, Telegraph and Telephone Section, 2-G-73; 1935. Indicating Telephone Jack Boxes. For use in way offices where five or more telephone circuits are cut in for service, in ten- and twenty-line sizes; requirements as to design, materials, and workmanship; finish and tests.

U. S. Gov., U. S. Army, Signal Corps. Specification 68-19; 1927. Switchboard; Western Electric 550-B, Modification.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-109B; 1925. Coil; Type C-61, Retardation, for Telephone Transmitter Circuit.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-304B; 1931. Switch, Types SW-85, SW-86, SW-87, and SW-88; Porcelain-Base Knife Switch.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-340; 1927. Switchboard; Type BD-55, Field Multiple.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-342A; 1926. Switchboard; Type BD-49, Camp and Field Use.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-355A; 1931. Switchboard; Type EE-78, Telephone.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-452A; 1932. Switchboard; Telephone, Common Battery, Nonmultiple.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-488; 1939. Switchboard Equipment; Telephone, Automatic.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-686C; 1943. Switchboard BD-71 and BD-72; Monocord, 6- and 12-Line.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-995; 1942. Switchboard; Type BD-89.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-1007; 1941. Switchboard BD-96; Magneto Switchboard.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-1015; 1942. Switchboard; Type BD-80-( ).

U. S. Gov., U. S. Army, Signal Corps. Specification 71-1611; 1943. Switchboard BD-120-( ).

*References.*—Porcelain for electrical purposes, *see* 532.22; slate for electrical purposes, *see* 511.53; molded insulation, *see* 719.58; symbols, methods of testing, safety codes, *see* 710; switchboard equipment, *see* 718.29.

## 718.29 Miscellaneous Telephone Equipment

Assn. of American Railroads, Telegraph and Telephone Section, 2-G-7; 1924. Block Mounting AAR-1-A. Gives dimensional requirements of steel bracket for mounting terminal blocks or fuse blocks.

Assn. of American Railroads, Telegraph and Telephone Section, 2-G-8; 1924. Terminal Block AAR-2-C. For terminating 10 wires, white porcelain block with suitable soldering clips, requirements as to quality, absorption, gage of brass stock, and dimensional drawings.

Assn. of American Railroads, Telegraph and Telephone Section, 2-G-10; 1924. Jack AAR-200-A. Covers design, materials, and workmanship, with dimensional drawings of parts and assembly.

Assn. of American Railroads, Telegraph and Telephone Section, 2-G-12; 1924. Single Conductor Plug AAR-1-A. For use in conjunction with patching cords on pin jack switchboards; detailed dimensions of brass body, fiber sleeve, screws, and test gage.

Assn. of American Railroads, Telegraph and Telephone Section, 2-G-13; 1924. Designation Card Holder AAR-34-A. For use in conjunction with porcelain jack panel AAR-4-B; gage of brass, enamel finish, and dimensional drawing.

Assn. of American Railroads, Telegraph and Telephone Section, 2-G-14; 1924. Porcelain Filler Button AAR-3-A. For use with porcelain jack panel AAR-4-B; requirements for white porcelain material, water absorption test, and dimensional drawing.

Assn. of American Railroads, Telegraph and Telephone Section, 2-G-17; 1925. Jack AAR-202-A. For use in switchboards, body of cast brass, contacts of German silver, insulation of mica or micanite, composition and hardness requirements, test requirements and permissible variations, with dimensional drawings of parts and assembly.

Assn. of American Railroads, Telegraph and Telephone Section, 2-G-27; 1927. Double Conductor Plug AAR-3-B. For use with cords on pin jack switchboards; body of brass with inner steel rod insulated with hard rubber, quality of materials, workmanship, and drawings of dimensional requirements.

Assn. of American Railroads, Telegraph and Telephone Section, 2-G-35; 1928, and 2-G-36; 1928. Jacks AAR-221-A and AAR-228-A. For use in switchboards, test panel, and other railway purposes; gives detail requirements for body of cast brass, contacts of German silver, mica or micanite insulation, finish, and tests, with dimensional drawings.

Assn. of American Railroads, Telegraph and Telephone Section, 2-G-41; 1928. Dummy Plug AAR-165-A. For use on switchboards and test panels; seasoned maple wood plug, dimensional diagram, workmanship, and finish.

Assn. of American Railroads, Telegraph and Telephone Section, 2-G-47; 1929. Distributing Frame AAR-1-A. Description and dimensional drawings of angle-iron framework, enamel finished.

Assn. of American Railroads, Telegraph and Telephone Section, 2-G-48; 1929. Wall Distributing Frame AAR-4-A. For angle-iron framework, material and workmanship, enamel finish requirements, with dimensional drawings.

Assn. of American Railroads, Telegraph and Telephone Section, 2-G-50; 1930. Relay Rack AAR-1-A. For use in mounting communication equipment, so designed that any number of bays may be assembled; list of parts for one bay, two bays, three bays, and additional bay, with drawings of assembly and details.

Assn. of American Railroads, Telegraph and Telephone Section, 2-G-53; 1930. Resistance Mounting AAR-4-A. For use in mounting resistance units AAR-6-B and AAR-8-B to regulate current in connection with communication apparatus. Covers quality of electrical slate, metallic clips, sealing compound, finish, and dimensional drawings and electrical test requirements.

Assn. of American Railroads, Telegraph and Telephone Section, 2-G-59; 1930. Meter Bracket AAR-2-B. Describes design and construction of cast iron bracket for use on switchboard framework AAR-2-F for mounting electric meter.

Assn. of American Railroads, Telegraph and Telephone Section, 2-G-60; 1930. Jack Box AAR-11-B. Sheet metal jack box for use on switchboards, with dimensional drawings and material requirements.

Assn. of American Railroads, Telegraph and Telephone Section, 2-G-61; 1930. Jack Panel AAR-10-C. Description for construction of slate panel for use on switchboards; dimensions and finish.

Assn. of American Railroads, Telegraph and Telephone Section, 2-G-65; 1931. Coil Racks AAR-1-A, AAR-2-A, and AAR-3-A. For mounting telephone and miscellaneous equipment, in three lengths; includes design, construction, and finish, with bill of materials and working drawings for racks of steel and wood.

Assn. of American Railroads, Telegraph and Telephone Section, 2-G-69; 1932. Apparatus To Provide Switching Facilities Between Three or More Telephone Circuits. Gives general requirements, circuit characteristics, apparatus requirements and operating characteristics, prevention of interference, busy signal and ringback, and requirements for operation and maintenance.

Assn. of American Railroads, Telegraph and Telephone Section, 2-G-74; 1937. Unit Set Racks AAR-1-B. Gives general requirements, material and workmanship, dimensions, finish, assembly, inspection and tests, packing, marking, and warranty.

Assn. of American Railroads, Telegraph and Telephone Section, 2-G-75; 1937. Cover Plates AAR-1-A. Gives General requirements, material and workmanship, dimensions, finish, assembly, inspection and tests, packing, marking, and warranty.

Assn. of American Railroads, Telegraph and Telephone Section, 2-G-79; 1938. Terminal Block AAR-33-A, 6-Wire and 12-Wire. For use in local distribution installations for terminating cable. Construction of white porcelain with Fahnestock clips of phosphor bronze and with working drawings.

Assn. of American Railroads, Telegraph and Telephone Section, 2-G-83; 1939. Floor Supported Relay Racks AAR-2-A to AAR-7-A, Inclusive. For use in mounting communication equipment; requirements for six sizes of racks so designed that a row of any number of bays may be assembled, with working drawings of assembly and details.

Assn. of American Railroads, Telegraph and Telephone Section, 4-21; 1939. Acoustic Shock Reducers. For connection to the telephone circuit in such a manner as will provide minimum interference with speech transmission and maximum reduction of abnormal potentials at the telephone receiver. Gives design, material and workmanship, electrical requirements, mechanical requirements, packing, marking, inspection and tests, and warranty.

U. S. Gov., Navy Dept. Specification 17H6a; 1944. Helmets; Blast, Telephone (Shipboard Use).

U. S. Gov., U. S. Army, Signal Corps. Specification 71-1C; 1923. Switch Key Set; Type EE-79.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-8-K; 1943. Test Set EE-65-G; Universal.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-32-C; 1924. Receivers; Types R-9, R-10, and 11, Telephone.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-102; 1921. Buzzerphone; Type EE-1-A, Portable Field Telegraph Set.

639677 0—45——48

U. S. Gov., U. S. Army, Signal Corps. Specification 71-166A; 1931. Dial; Telephone.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-175; 1936. Transmitter; Type T-10.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-184C; 1930. Interphone Control Box; Type BC-123-A, Airplane.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-185B; 1928. Jack Box; Type BC-126.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-295-E; 1943. Test Set 1-51; Cable Repairman's.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-406; 1927. Telephone Transmitter Tests.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-537A; 1930. Jack Box; Type JB-15, Telephone.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-538A; 1930. Jack-Box; Type JB-16, Telephone.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-550A; 1933. Coil; Type C-75, Telephone, Repeating.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-618A; 1938. Cabinet; Type BE-70-( ), Wire Chief's Testing.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-668B; 1938. Generator GN-38; Hand, Telephone.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-669C; 1944. Ringer; Type MC-131, Telephone.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-672B; 1939. Interrupter; Type BZ-5-( ).

U. S. Gov., U. S. Army, Signal Corps. Specification 71-682C; 1943. Coil C-111; Telephone, Repeating.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-687D; 1944. Coil; Type C-114, Telephone, Loading.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-733C; 1944. Coil; Types C-161 and C-288, Telephone, Repeating.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-804C; 1936. Receiver; Type R-14 Telephone, High Impedance.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-835; 1935. Amplifier; Interphone, Type BC-212, for Aircraft Interphone Equipment.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-836; 1936. Jack Box; Type BC-213, for Aircraft Interphone Equipment.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-845D; 1941. Jack Box; Type BC-213-B, Interphone.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-846A; 1937. Interphone Control Box; Type BC-304B, Receiver Telephone.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-847A; 1937. Interphone Control Box; Type BC-305-A, Remote.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-848E; 1940. Amplifier; Interphone, Type BC-212-C, Aircraft, Radio.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-855A; 1941. Jack Box; Type BC-366.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-859B; 1939. Control Box; Type BC-327, Remote.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-860C; 1941. Interphone Control Box; Type BC-334, Master.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-861B; 1940. Interphone Box; Type BC-335, Remote.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-877-B; 1942. Interphone; Amplifier BC-347-C (Aircraft, Radio).

U. S. Gov., U. S. Army, Signal Corps. Specification 71-928A; 1937. Chest Unit; Type T-26, Telephone Transmitter.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-941; 1940. Jack Box; Type JB-18.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-1143; 1943. Interphone; Amplifier BC-709-( ), Aircraft.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-1155; 1943. Interphone Equipment; RC-73, Aircraft.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-1199; 1943. Interphone; Amplifier BC-1019, Aircraft.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-1552; 1944. Telephone Terminal CF-1-( ); Carrier.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-1609; 1943. Frame FM-64-( ); Distributing.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-1636B; 1943. Telephone Repeater EE-89-( ).

U. S. Gov., U. S. Army, Signal Corps. Specification 71-1672; 1943. Dehydrator Cabinet CH-169-( ).

U. S. Gov., U. S. Army, Signal Corps. Specification 71-3003; 1944. Test Set TS-27/TSM.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-3039; 1944. Carrier Hybrid CF-7-( ).

## 718.3 SIGNAL DEVICES, OTHER THAN RAILWAY AND HIGHWAY SIGNALS

### 718.30 General Items

National Board of Fire Underwriters. Central Station Protective Signaling Systems, No. 71; 1940. Standards for the installation, maintenance and use of central station protective signaling systems for watchman, fire alarm, and supervisory service. Includes definitions, general requirements; common requirements; types of service including manual fire alarm service, watchman's supervisory service, automatic fire alarm service, sprinkler equipment supervisory and water flow alarm services, and automatic journal alarms; and appendix.

National Board of Fire Underwriters. National Electrical Code, 1940. American Standards Assn., C1-1940. Signal Systems. Includes fire and burglar alarms, requirements on insulation and separation from light and power wires, spacing on cross-arms, permissible kinds of insulation for aerial cables, thickness of rubber on wire entering building, requirements for arresters, fuses, and grounding.

National Fire Protection Assn. National Fire Codes for Extinguishing and Alarm Equipment, 1943. Central Station Protective Signaling Systems. Standards for the installation, maintenance, and use of central station protective signaling systems for watchmen, fire alarm, and supervisory service. Covers definitions, general requirements, common requirements, and types of services.

National Fire Protective Assn. National Fire Codes for Extinguishing and Alarm Equipment, 1943. Proprietary, Auxiliary, and Local Protective Signaling Systems. Standards for the installation, maintenance, and use of proprietary, auxiliary, and local protective signaling systems including local or isolated systems for fire alarm and supervisory service. Covers definitions, common requirements, types of services, proprietary systems, auxiliary fire alarm systems, local systems, and miscellaneous.

U. S. Gov. Navy Dept., Bureau of Yards and Docks. Specification 35Y; 1941. Alarm Systems (Fire, Crash, Supervisory, and Watchman) (Proprietary Type).

## 718.31 Burglar Alarms

Underwriters' Laboratories, Inc., 1944. Lists of Inspected Appliances Relating to Accident Hazard, Automotive Equipment, Burglary Protection. This catalog contains three lists that have been inspected by the Underwriters'. The lists are appliances inspected for accident hazard; inspected automotive appliances and inspected burglary protection appliances. The listings are arranged alphabetically as to subject and alphabetically by name of manufacturer under each subject.

Underwriters' Laboratories, Inc. Standard for Central Station Burglar Alarm Systems, Subject 611; 1944. Covers central station burglar alarm systems intended for use at mercantile and banking premises and on safes and vaults for protection against burglary. Gives conditions for physical equipment and protection service for grade B, grade A, and grade AA requirements; and covers transmitter systems, combination transmitter and local systems, and inspection of listed systems.

Underwriters' Laboratories, Inc. Standard for Holdup Alarm Systems, 1933. Remote-station type for banks, stores, cashier cages, etc., for transmitting silent alarm signals. Bandit-resistant enclosure, semi-automatic alarm system, manual alarm system, design and construction, operation and electrical supervision, installation, maintenance, and marking.

Underwriters' Laboratories, Inc. Standard for Installation, Classification, and Certification of Burglar Alarm Systems, Subject 681; 1941. Classified as to type or principle of operation as central station or local; grouped according to class of property for which suitable as bank safe and vault, mercantile premises, or mercantile safe and vault; and each system is divided into two or more grades. Gives requirements for installation of burglar alarm systems, rules for classification of burglar alarm installations, and classification of installations.

Underwriters' Laboratories, Inc. Standard for Local Burglar Alarm Systems, Subjects 609 and 610; 1942. Classified as grade A or grade B according to construction, operation, and performance, and are classified as to their suitability for use either on mercantile premises, on mercantile safes and vaults, or on bank safes and vaults. Gives common requirements for all local systems, mercantile premises alarms, mercantile safe and vault alarms, and inspection of listed systems.

U. S. Gov., Federal Specification W-W-101; 1931. Watchmen's Report-Apparatus. Covers one type only; battery-operated system for registering at a central office through visible and audible means each report of a watchman from a local station, for making permanent record of the time of such report, and for providing telephone communication between watchman's reporting station and central office. Gives detail requirements for report stations, watchman's equipment, wiring, central office equipment, and operation; method of inspection and test; and requirements for packaging, packing, and marking.

*References.*—Burglar alarm systems, *see* 718.30; alarm bells, *see* 718.33; cables and insulated wire, *see* 715.41, 715.44.

## 718.32 Fire Alarms

American Institute of Electrical Engineers. Recommended Practice for Electrical Installations on Shipboard, No.45; 1940. Addenda, 1942. Emergency Modification and Supplement, 1943. Fire Alarm Systems. Includes fire detection systems of electric, pneumatic tube or bulb, smoke pipe, or automatic sprinkler; and visual and audible alarm systems; thermostats, wiring, location, manual alarm, power supply, and supervision requirements.

Assn. of American Railroads, Telegraph and Telephone Section, 2-J-18; 1931. Fire Alarm Systems for Railroad Properties. Includes manual alarm systems and fire detecting systems; requirements for fire alarm boxes, circuits, operating energy, master box, central coding machine systems, alarm apparatus such as whistles and horns, recording registers, fixed point fire detecting system, heat actuating unit, "rate of rise" detecting system, connection to municipal system, and central office supervision.

International Municipal Signal Assn., Inc. Specification No.61; 1942. A Fire Alarm Box Grounding Assembly. Covers a grounding assembly for grounding boxes in fire alarm, police signal, and other municipal signal systems. Gives requirements for material, conductor, fittings, accessories, packing and marking for shipment, and rejection.

International Municipal Signal Assn., Inc. Specification No.62; 1942. Ground Rods. Covers ground rods for use in fire alarm, police signal, and other municipal signal systems. Gives requirements for material, properties, identification, packing and marking for shipment, and rejection.

International Municipal Signal Assn., Inc. Equipment Specification No. 102; 1942. Fire Alarm Box—Underground Pedestals. Covers details for a fire alarm pedestal for use on underground municipal fire alarm and police telegraph systems. Gives requirements for general design, dimensions, pedestals, shafts, anchor rods, finish, workmanship, and inspection tests.

National Board of Fire Underwriters. Proprietary, Auxiliary and Local Signaling Systems, No.72; 1941. Standards for the installation, maintenance, and use of proprietary, auxiliary, and local systems

for watchman, fire alarm, and supervisory service. Covers definitions, common requirements, wiring, current supply, battery cabinets, sounding devices, fire alarm boxes, electrical supervision, types of service, proprietary systems, auxiliary fire alarm systems, local systems, and miscellaneous.

National Board of Fire Underwriters. Municipal Fire Alarm Systems, No.73; 1941. Standards for the installation, maintenance, and use of municipal fire alarm systems. Covers two systems—class A is one where operators are required to check the receipt of alarms and to retransmit them over alarm circuits to fire stations; and class B is one where alarms are transmitted and retransmitted automatically to fire stations. Gives general requirements, wiring for all systems, special rules applying to class A systems only, and special rules applying to class B systems only.

National Fire Protection Assn. National Fire Codes for Extinguishing and Alarm Equipment, 1943. Alarms for Life Safety. Covers general requirements, sounding devices, alarm sending stations, automatic fire detection systems, supervisory control of alarms incidental functions, code signals, and connections to municipal departments.

National Fire Protection Assn. National Fire Codes for Extinguishing and Alarm Equipment, 1943. Municipal Fire Alarm Systems. Standards for the installation, maintenance, and use of municipal fire alarm systems. Covers general requirements, wiring for all systems, special rules applying to class A systems (where operators are required to check the receipt of alarms and to transmit them over alarm circuits to fire stations),and special rules applying to class B systems (where alarms are transmitted or retransmitted automatically to fire stations).

U. S. Gov., Army Air Forces. Specification 40691-A-1; 1945. Detector; Fusible Alloy Fire, for Aircraft.

U. S. Gov., Federal Specification W-F-391; 1930. Fire-Alarm Systems; Electric, Hand Operated. Covers one type, a battery operated, presignal, positive noninterfering, code type, manual system using electromechanical signal gongs. Gives detail requirements for boxes, punch register, take-up reel, electromechanical gongs, control board, batteries, charging apparatus, charging board, and optional specifications; method of inspection and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Federal Specification W-F-396; 1933. Fire-Alarm Systems; Electric, Hand Operated, Shunt-Type. Covers a double supervised code-ringing system using shunt-type noninterfering boxes and electric single-stroke gongs. Gives general requirements for combination systems, coded boxes, presignal system, conduit and wiring; detail requirement for boxes, punch register, take-up reel, time stamp, printing register, gongs, control board, cabinets, wiring, source of energy, supervisory system, and charging apparatus; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Navy Dept. Specification 17F11c; 1944. Fire Alarm Equipment (Shipboard Use).

U. S. Gov., Veterans Administration. Specification VA-M-277; 1937. Fire Alarm Punch Register and Take-Up-Reel.

*References.*—Fire alarm system, *see* 718.30; alarm bells, *see* 718.33; cables and insulated wire, *see* 715.41, 715.44; watchmen's report apparatus, *see* 718.31.

## 718.33 Bells, Buzzers, and Push Buttons

U. S. Gov., Navy Dept. Specification 17A8b; 1944. Annunciators; Call-Bell (Drop Type).

U. S. Gov., Navy Dept. Specification 17S11c; 1940. Signals; Audible, Interior Communication and Motor-Boat (Bells, Buzzers, Horns, and Sirens).

U. S. Gov., Navy Dept. Specification 23B2a; 1945. Bells; Ship and Motor-Boat.

U. S. Gov., U. S. Army, Corps of Engineers. Specification 12-1; 1927. Button; Push.

U. S. Gov., U. S. Army, Corps of Engineers. Specification 29-6; 1926. Bell; Vibrating.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-147B; 1938. Bell; Loud-ringing Extension, Type MC-9.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-255; 1924. Buzzer; Service Type EE-63.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-275; 1924. Buzzer Set; Type EE-14, for Student Instruction.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-305B; 1930. Bell; Time Interval.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-671; 1933. Buzzer; Type BZ-4 and BZ-6, Telephone, A.C.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-953A; 1941. Bell; Type MC-153.

*References.*—Methods of testing, safety codes, *see* 710; zinc and nickel plating, *see* 600.3; insulated wire, *see* 715.44; bell ringing transformers, *see* 713.5.

## 718.34 Sirens

U. S. Gov., Navy Dept. Specification 17S11c; 1940. For Signals; Audible, Interior Communication and Motor-Boat (Bells, Buzzers, Horns, and Sirens).

## 718.35 Time-Clock Systems

Underwriters' Laboratories, Inc. Standard for Time-Indicating and Recording Appliances, 1941. Covers electrically operated clocks, clock motors, time stamps, time-card recorders, and similar time-indicating and recording appliances to be employed on circuits of 300 volts or less in accordance with the National Electrical Code. Frame and enclosure, mechanical assembly, supply connections, insulating material, current carrying parts, internal wiring, performance, and out-door use appliances.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specifications CAA-618. Astronomic Dial Clock and Time Switch.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specifications CAA-791. Astronomic Dial Clock and Time Switch; Special.

U. S. Gov., Federal Specification W-C-471a; 1939. Clock-Systems; Electric. Covers four types—(A) a transformer-rectifier or battery operated, minute impulse master clock and secondary clock system; (B) clocks operated as a system by synchronous motors; and (C) a combination system. Gives requirements for each type; method of inspection and tests; and requirements for packaging, packing, and marking for shipment. Emergency Alternate Federal Specification E-W-C-471a, Mar., 1943, (issued by Procurement Div., Treasury Dept., U. S. Gov.), deletes all reference to types A, B, C, and D clock-systems. Synchronous motor clock installations shall be operated independently and clocks shall comply with Federal Specification GG-C-486.

### 718.36 Maritime Signals

U. S. Gov., U. S. Maritime Commission. Specification 5-MC-4; 1942. Signals; Day Shapes, Black. Gives requirements for type, grade, materials, construction, framework, fabric cover, sampling, inspection, and tests, together with drawing.

### 718.37 Aircraft Signals

### 718.39 Miscellaneous Signal Devices

American Institute of Electrical Engineers. Recommended Practice for Electrical Installations on Shipboard, No. 45; 1940. Addenda, 1942. Emergency Modification and Supplement, 1943. Signal and Communication Systems. Covers source of current supply, installation and location of instruments, instrument details, push-buttons, bells, buzzers, engine order telegraph, etc. Alarm systems, general and for circulating systems affecting safety of ship, siren and whistle control, telephone equipment, and loud speaker system.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-227. Tube Lamp Approach Light Unit.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-281. Seadrome Contact Light.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-330. Neon Signs for Airways Site Identification.

U. S. Gov., Navy Dept. Specification 17S11c; 1940. Signals; Audible, Interior Communication and Motor-Boat (Bells, Buzzers, Horns, and Sirens).

U. S. Gov., Navy Dept. Specification 18H3a; 1932. Holders; Sounding-Tube, Sounding-Machine.

U. S. Gov., Navy Dept. Specification 36C1; 1933. Calls; Boatswains'.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-108F; 1943. Firing Signals EE-22 and EE-23.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-150A; 1932. Time-Interval Apparatus; Type EE-56.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-329; 1924. Switchboard; Type BD-47, Flash Ranging.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-330A; 1941. Outpost Unit; Type BE-51.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-549; 1931. Time-Interval Apparatus; Type EE-83, Mobile Artillery.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-621; 1932. Lamp Signal; Type M-124.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-622; 1932. Tripod; Type LG-9, for Signal Lamps.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-823A; 1931. Filter; Types MC-121 and MC-122, for Signal Lamps.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-881B; 1939. Switchboard; Type BD-74, Fire-Control Communication.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-965B; 1943. Time-Interval Signal BE-65.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-986; 1944. Time-Interval Apparatus; Type EE-85.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-968; 1940. Signal Generator, Type I-72, and Associated Vacuum Tube.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-984; 1941. Signal Lamp, Type M-132; and Lamp Mounting, Type FT-159.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-1048; 1942. Keyer; Type TG-10-( ), Automatic.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-1397; 1942. Signal Lamp Equipment EE-80-A.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-1630; 1943. Alarm MC-420-( ); Cease Firing.

U. S. Gov., U. S. Army, Signal Corps. Specification 75-101; 1942. Time Interval Multiplier PH-264-( ).

U. S. Gov., U. S. Army, Signal Corps. Specification 75-102; 1943. Signal Lamp Equipment SE-11.

*References.*—Noncorrosive coatings for metals, *see* 600.3; aircraft signals and signal equipment, *see* 724.3.

## 718.4 RAILWAY SIGNAL AND TRACK CONTROL EQUIPMENT

### 718.40 General Items

American Institute of Electrical Engineers, 17g5. Joint sponsor with American Assn. for the Advancement of Science, American Society of Civil Engineers, Society for Promotion of Engineering Education, and American Society of Mechanical Engineers. American Standards Assn., Z 10g5; 1933. Graphical Symbols Used for Electric Traction Including Railway Signaling. Used in diagrams for power apparatus, relays and instruments, electric traction, car control wiring, and to indicate types of railway signals.

Assn. of American Railroads, Operations and Maintenance Dept., Engineering Div., Signal Section. Manual of Recommended Practice, 1941. A.C. and D.C. Coded Signal Systems. Requisites in general, requirements for track circuit, signal operating and code selecting circuits, circuit design, etc.

Assn. of American Railroads, Operations and Maintenance Dept., Engineering Div., Signal Section. Manual of Recommended Practice, 1937. A.C. Track Circuit Characteristics. Data to be taken for track circuit adjustment, rail impedance, and ballast resistance. Outline of form, precautions in recording, formulas, diagrams, etc.

Assn. of American Railroads, Operations and Maintenance Dept., Engineering Div., Signal Section. Manual of Recommended Practice, 1941. Alternating Current Track Circuits. Instructions for adjustment,

phase angle measurements, circuit controllers, ballast resistance, bonding, and cross bonding, etc., including correction of defects.

Assn. of American Railroads, Operations and Maintenance Dept., Engineering Div., Signal Section. Manual of Recommended Practice, 1941. Centralized Traffic Control. Gives detailed instructions for the location, nesessities of, and selection of safety control signals, etc. Includes power-operated switches, not power-operated switches, and adjuncts.

Assn. of American Railroads, Operations and Maintenance Dept., Engineering Div., Signal Section. Manual of Recommended Practice, 130-40; 1941. Circuit Controller for Drawbridges. Gives detailed requirements for opening and closing of first and second voltage range electrical circuit between the shore structures and bridge ends of draw bridges. Design, wiring, contacts, voltage test, etc.

Assn. of American Railroads, Operations and Maintenance Dept., Engineering Div., Signal Section. Manual of Recommended Practice, 1941. Direct Current Track Circuits. Gives requirements for adjustment, circuit controllers, ballast, rail and bond resistance, batteries, bonding, insulated rail joints, rectifiers, relays, shunting sensitivity, and general conditions.

Assn. of American Railroads, Operations and Maintenance Dept., Engineering Div., Signal Section. Manual of Recommended Practice, 1930. Guide for Allocating Train Control Expenditures. For railway signal purposes expenditures are divided into charges to signal account, shop machinery account, and locomotive or rolling stock account.

Assn. of American Railroads, Operations and Maintenance Dept., Engineering Div., Signal Section. Manual of Recommended Practice, 1941. Form of Agreement for Interlocking. This form is found in the American Railway Engineering Assn. Manual. This section contains form of agreement on principles applicable to joint use of signal facilities.

Assn. of American Railroads, Operations and Maintenance Dept., Engineering Div., Signal Section. Manual of Recommended Practice, 1938. Minimizing Condensation and Frost Conditions. Instructions for the precautionary measures to be used in railway signal service. Airtightness, housings, ventilation, sealing, and moisture absorption.

Assn. of American Railroads, Operating-Transportation Div. The Standard Code of the A.A.R., 1940. Includes operating rules, block signal rules, and interlocking rules. Gives definitions, diagrams; signals by color, whistle, hand, flag, and lamp; right-of-way, train orders, indications for various signal aspects for typical semaphore and equivalent color light, for signalmen, engine and train crews.

Assn. of American Railroads, Telegraph and Telephone Section, 2-K-34; 1943. Testing, Adjusting, and Maintaining Polar Relays; Types 1-F and 17-B. Gives purpose, drawings, description, adjustments, maintenance, tools, and nomenclature of relay parts.

### 718.41 Railway Signals

Assn. of American Railroads. Bulletin 3; 1942. American Standards Assn., D 8.1-1943. Railroad Highway Grade Crossing Protection. Recommended standards and practices for new installation of railroad-highway grade crossing signs, signals, and automatic gates. Drawings for grade crossing signs, flashing light type and wig-wag type signals, automatic gates, and auxiliary signs.

Assn. of American Railroads, Operations and Maintenance Dept., Engineering Div., Signal Section. Manual of Recommended Practice, 1943. Aspects and Indications for Continuous Automatic Cab Signals. Shows a diagrammatic chart covering this function.

Assn. of American Railroads, Operations and Maintenance Dept., Engineering Div., Signal Section. Manual of Recommended Practice, 1941. Automatic Block Signaling Circuits. General design and installation requirements for track, signal operating, and signal control relay circuits.

Assn. of American Railroads, Operations and Maintenance Dept., Engineering Div., Signal Section. Manual of Recommended Practice, 1941. Automatic Block Signaling Systems. Shall be installed and circuits so arranged that failure of any part of the system affecting the safety of train operation will cause all signals affected to give the most restrictive indications which conditions require.

Assn. of American Railroads, Operations and Maintenance Dept., Engineering Div., Signal Section. Manual of Recommended Practice, 1937. General Classification for Signal Interruptions. Caused by failure of material, apparatus, or parts maintenance, acts of omissions. Also by malicious interference, rail breakage, open or unlocked switches, acts of others, and other agencies.

Assn. of American Railroads, Operations and Maintenance Dept., Engineering Div., Signal Section. Manual of Recommended Practice, 1941. Light and Motor Semaphore Signals. Instructions in general, for color light signal-searchlight type, position light, method of making service test, shop and field electrical torque tests, and tables of operating characteristics.

Assn. of American Railroads, Operations and Maintenance Dept., Engineering Div., Signal Section. Manual of Recommended Practice, 1943. Technical Terms Used in Signaling. Standard nomenclature of electrical engineering usage and related subjects defined.

Assn. of American Railroads, Operations and Maintenance Dept., Engineering Div., Signal Section. Manual of Recommended Practice, Specification 63-41; 1944. Automatic Block Signal System. Covers track to be signaled, buildings, power supply, distribution system (aerial, surface, underground, submarine), foundations, signals, conduits, wires and cables, instrument and battery housing, relays, insulation, painting, bonding, and energy for operating signals, track circuits, etc.

Assn. of American Railroads, Operations and Maintenance Dept., Engineering Div., Signal Section. Manual of Recommended Practice. Specification 79-41; 1942. Electric Motor Semaphore Signal. For the purpose of providing an electric motor semaphore signal. Covers drawings, material and workmanship, signal masts, bases, bracket posts, cable outlets, pinnacles, ladders, semaphore spectacles, motor and mechanism bearings, semaphore bearings, semaphore shaft, lamp brackets, marker lights, lamps, take siding indicator, roundels for signals, blades,

numerals and letters, binding posts, mechanism cases, operating connections—mechanism at base of mast, general mechanism, gears, wiring, terminal board, counters, motor, hold clear device, circuit controller, buffer, finish, dielectric requirements, insulation, identification, painting, inspection, tests, packing, marking, and warranty.

Assn. of American Railroads, Operations and Maintenance Dept., Engineering Div., Signal Section. Manual of Recommended Practice. Specification 80-39; 1939. Electric Color Light Signal. Details as to design, lamp units, lamps, range markers, mounting and wiring, all as covered by A.A.R., Signal Section requirements.

Assn. of American Railroads, Operations and Maintenance Dept., Engineering Div., Signal Section. Manual of Recommended Practice. Specification 81-43; 1944. Position Light Signal. For the purpose of providing a position light signal. Covers design, high signal, framework, lamp units, terminal box, dwarf signal, electric lamps, hoods, lenses, and roundels, cover glass, range, spread, marker lights, mounting, wiring, binding posts, insulation, dielectric requirements, painting, inspection, tests, packing, marking, and warranty.

Assn. of American Railroads, Operations and Maintenance Dept., Engineering Div., Signal Section. Manual of Recommended Practice. Specification 121-27; 1927. Compensation of Pipe Lines for the Operation of Mechanical Units. 10 in. by 13 in. crank compensator, details for territory above or below 120° F., for various lengths of stroke, etc.

Assn. of American Railroads, Operations and Maintenance Dept., Engineering Div., Signal Section. Manual of Recommended Practice. Specification 162-43; 1944. Color Position Light Signal. Covers material and workmanship, design, high signal, dwarf signal, adapter, electric lamps, hoods, lenses and roundels, range, spread, marker lights, mounting wire and wiring, binding posts, insulation, dielectric requirements, paint and painting, inspection, tests, packing, marking, and warranty.

Assn. of American Railroads, Operations and Maintenance Dept., Engineering Div., Signal Section. Manual of Recommended Practice. Specification 174-42; 1943. Electric Lamp Case. Case for electric lamp to be used with reflector for semaphore signal light. Covers drawings, tender, material and workmanship, general requirements, gray iron or castings, reflector, dielectric requirements, painting, inspection, tests, packing, marking and warranty.

Assn. of American Railroads, Operating-Transportation Div. The Standard Code of the A.A.R., 1940. Includes operating rules, block signal rules, and interlocking rules. Gives definitions, diagrams, signals by color, whistle, hand, flag, and lamp; right-of-way, train orders, indications for various signal aspects for typical semaphore and equivalent color light, for signalmen, engine, and train crews.

Assn. of American Railroads, Telegraph and Telephone Section, 2-K-30; 1941. Description and Operation of a Printer Start-Stop Regenerative Repeater. Gives purpose, drawings, general requirements, description, and operation.

*References.*—Signalling, symbols, testing, standard aspects, wiring, circuits, etc., *see* 71. 40: lenses and roundels, *see* 525.3; track transformers, line transformers, *see* 713.5; signal lighting transformers, *see* 713.5; track bonding, *see* 718.49; relays, *see* 718.43; definitions, symbols, voltage and rating standards, methods of test, safety codes, for electrical apparatus, *see* 710; cast iron, forged steel, shafts, *see* 611.11, 611.51, 611.52; impregnation of windings, *see* 719.57, 719.59; other electric motors, *see* 711.21, 711.22; plain bearings, ball and roller bearings, *see* 692.3, 766.2; choke coils and lightning arresters, *see* 715.50, 715.51; electric lamps for signal apparatus, *see* 716.11; switchboard for signal systems (alternating current), *see* 714.42; resistors for signal apparatus, *see* 714.12; oil lamps for signals, *see* 997.1; other signals and signal controlling devices, *see* 718.42.

## 718.42 Switch Operating Mechanisms and Signals

American Institute of Electrical Engineers, sponsor, No. 16; 1933. American Standards Assn., C48-1931. Electric Railway Control Apparatus. Requirements on the control apparatus on all electrical railway applications, including trackless trolleys or vehicles in which electric motors are used for propulsion. Includes definitions, rating, heating limitations, limitations other than heating, and dielectric test.

Assn. of American Railroads, Operations and Maintenance Dept., Engineering Div., Signal Section. Manual of Recommended Practice, 1939. Automatic Gates for Highway Crossings at Grade Over Railway Tracks. Warning signals, design of mechanism, timing of circuits, lighting, painting, adjustment, and repair.

Assn. of American Railroads, Operations and Maintenance Dept., Engineering Div., Signal Section. Manual of Recommended Practice, 1941. Automatic Interlocking. Apparatus must be maintained and tested in accordance with instructions for interlocking and instructions for automatic block signaling systems in so far as they apply. Gives details for testing.

Assn. of American Railroads, Operations and Maintenance Dept., Engineering Div., Signal Section. Manual of Recommended Practice, 1944. Car Retarder Systems. Instructions for use, lubrication, adjustment, replacement of parts, insulation, retarders, skates, and tests, including electro-pneumatic system.

Assn. of American Railroads, Operations and Maintenance Dept., Engineering Div., Signal Section. Manual of Recommended Practice, 1943. Electric Locking. Tests must be made to determine that locking functions are as intended. Covers approach relay, approach locking, time locking, indication locking, switch locking, and traffic locking.

Assn. of American Railroads, Operations and Maintenance Dept., Engineering Div., Signal Section. Manual of Recommended Practice, 1941. Electric Locks for Interlocking Machines. Instructions for the care, operation, and testing of railway signalling systems.

Assn. of American Railroads, Operations and Maintenance Dept., Engineering Div., Signal Section. Manual of Recommended Practice, 1944. Interlocking. Instructions for maintenance, operation, and testing of mechanical locking; mechanical, electro-pneumatic, and electric signal mechanism.

Assn. of American Railroads, Operations and Maintenance Dept., Engineering Div., Signal Section. Manual of Recommended Practice, 1943. Signal Protection for Spring Switches. Spring switch consisting

of spring oil buffer and reinforced pair of switch points. Mechanism may be locked or nonlocked type. Covers marker, signal protection, and speed restrictions.

Assn. of American Railroads, Operations and Maintenance Dept., Engineering Div., Signal Section. Manual of Recommended Practice, 1944. Spring Switches. For the care of railway signal service, switches, adjustment of buffers, oil in buffer, wear, rod packing, facing point locks, train trail test.

Assn. of American Railroads, Operations and Maintenance Dept., Engineering Div., Signal Section. Manual of Recommended Practice, 1941. Switch Circuit Controllers. Adjustment of switch point opening, securing to ties, bolting, etc., gaskets, ventilator openings, and sealing.

Assn. of American Railroads, Operations and Maintenance Dept., Engineering Div., Signal Section. Manual of Recommended Practice. Specification 65-42; 1944. Electric Interlocking. Covers requirements for buildings, power supply, distribution system (aerial, surface, underground and submarine), control apparatus, interlocking machine, foundations, switch operating mechanism and fittings, signals, communicating system, wires and cables, trunking, conduit and supports, instrument and battery housings, insulation, bonding, and painting.

Assn. of American Railroads, Operations and Maintenance Dept., Engineering Div., Signal Section. Manual of Recommended Practice. Specification 66-41; 1944. Electro-Mechanical and Mechanical Interlocking. Covers requirements for buildings, power supply, distribution system (aerial, surface, underground and submarine), control apparatus, interlocking machine, foundations, leadout, pipe line, switch-and-lock movement and fittings, signals, communicating system, wire and cables, trunking, conduit and supports, instrument and battery housing, insulation, bonding, painting, and padlocks.

Assn. of American Railroads, Operations and Maintenance Dept., Engineering Div., Signal Section. Manual of Recommended Practice. Specification 67-43; 1944. Electro-Pneumatic Interlocking. Includes requirements for buildings, electric and pneumatic power supply, distribution system (aerial, surface, underground, submarine, and main air pipe line), control apparatus, interlocking machine, foundations, switch operating mechanism and fittings, signals, communication system, wires and cables, conduit and supports, instrument and battery housings, insulation, bonding, and painting.

Assn. of American Railroads, Operations and Maintenance Dept., Engineering Div., Signal Section. Manual of Recommended Practice. Specification 75-42; 1943. Mechanical Interlocking Machine, S. and F. Locking. For the control of signals, switches, and other interlocking units. Covers drawings, material and workmanship, design, levers, locking, painting, inspection, tests, packing, marking, and warranty.

Assn. of American Railroads, Operations and Maintenance Dept., Engineering Div., Signal Section. Manual of Recommended Practice. Specification 76-39; 1939. Electric Interlocking Machine. For railway signal purposes, machine for interlocking units. Requirements for machine details, levers, mechanical and electric lever locking, time locks, surface leakage distance, and test of insulation.

Assn. of American Railroads, Operations and Maintenance Dept., Engineering Div., Signal Section. Manual of Recommended Practice. Specification 95-39; 1939. Universal Switch Circuit Controller. Apparatus for application to track switches, derails, or other movable apparatus for the control of signal circuits. General design requirements, cam shaft and cam, operating crank, contacts, connections, and voltage test.

Assn. of American Railroads, Operations and Maintenance Dept., Engineering Div., Signal Section. Manual of Recommended Practice. Specification 99-42; 1943. Electric Locks for Interlocking Machines. For first and second voltage ranges for application to interlocking machines. Covers drawings, material and workmanship, design, coils, contacts, finish, painting, binding posts, coil insulation, dielectric requirements, identification, inspection, tests, packing, marking, and warranty.

Assn. of American Railroads, Operations and Maintenance Dept., Engineering Div., Signal Section. Manual of Recommended Practice. Specification 101-43; 1944. Electric Motor Switch Operating Mechanism. Provides for motor driven mechanism with or without dual control, for operating switches, derails, and other movable apparatus. Covers material and workmanship, power operating requirements, hand throw operating requirements, design, wiring, binding posts, finish, painting, coil insulation, dielectric requirements, identification, inspection, tests, packing, marking, and warranty.

Assn. of American Railroads, Operations and Maintenance Dept., Engineering Div., Signal Section. Manual of Recommended Practice. Specification 114-42; 1943. Mechanical Interlocking Machine, Style "A" Locking. For controlling signals, switches, and other interlocking units. Covers drawings, material and workmanship, design, levers, locking, painting, inspection, tests, packing, marking, and warranty.

Assn. of American Railroads, Operations and Maintenance Dept., Engineering Div., Signal Section. Manual of Recommended Practice. Specification 134-43; 1944. Electro-Mechanical Interlocking Machine. For the control of switches, signals, and other interlocking units. Covers material and workmanship, design, electric levers, locking, electric lever locks and locking, time locks, circuit controllers, lever lights, binding posts, cases, finish, painting, coil insulation, dielectric requirements, identification, inspection, tests, packing, marking, and warranty.

Assn. of American Railroads, Operations and Maintenance Dept., Engineering Div., Signal Section. Manual of Recommended Practice. Specification 138-39; 1939. Interlocking Lever Circuit Controller. For application to interlocking machine in railway signal service. General requirements as to design, materials, contact opening, mounting, location, voltage test, and surface leakage distance.

Assn. of American Railroads, Operations and Maintenance Dept., Engineering Div., Signal Section. Manual of Recommended Practice. Specification 141-43; 1944. Automatic Interlocking. For the installation

of system. including power supply, distribution system, (aerial, surface, underground, and submarine), control apparatus, foundations, switch-operating mechanism, signals, wires and cables, conduit and supports, instrument and battery housings, insulation, bonding, and painting.

Assn. of American Railroads, Operations and Maintenance Dept., Engineering Div., Signal Section. Manual of Recommended Practice. Specification 147-40; 1944. Car Retarder System. Covers buildings, power supply, distribution system (aerial, surface, underground, submarine, and main air pipe line), control machine, car retarder, operating mechanism, switch operating mechanism, signal system, communicating system, foundations, wires and cables, trunking, conduit and supports, instrument and battery housing, insulation, bonding, and painting.

Assn. of American Railroads, Operations and Maintenance Dept., Engineering Div., Signal Section. Manual of Recommended Practice. Specification 149-43; 1944. Centralized Traffic Control. Includes requirements for tracks to be signaled, buildings, electric and pneumatic power supply, distributing system (aerial, surface, underground, submarine and main air pipe line), control apparatus, centralized traffic control machine, foundations, switch operating mechanism and fittings, signals, communication system, wires and cables, conduit and supports, instrument and battery housings, insulation, bonding, and painting.

Assn. of American Railroads, Operations and Maintenance Dept., Engineering Div., Signal Section. Manual of Recommended Practice. Specification 150-43; 1944. Centralized Traffic Control Machine. A machine for the control of signals, switches, and other apparatus of a centralized traffic control system. Covers drawings, material and workmanship, design, levers, relays, circuit controllers, binding posts and terminals, light indicators, finish, painting, coil insulation, dielectric requirements, inspection, tests, packing, marking, and warranty.

Assn. of American Railroads, Operations and Maintenance Dept., Engineering Div., Signal Section. Manual of Recommended Practice. Specification 152-43; 1944. Electro-Pneumatic Switch Operating Mechanism. Device for operating and locking switches, derails, and movable point frogs, with detail of the power and hand operating requirements, for new installations and renewals.

Assn. of American Railroads, Operations and Maintenance Dept., Engineering Div., Signal Section. Manual of Recommended Practice. Specification 157-39; 1939. Electric Color Light Signal Operating Mechanism; Searchlight Type. Includes requirements for material and workmanship, mounting, signal mechanism case, operating mechanism, lenses and roundels, color discs, electric lamps, range, spread, operating characteristics, dielectric requirements, sealing and calibration, name plate and wiring diagram, coils, purchaser's order, paint and painting, inspection, tests, packing, marking, and warranty.

Assn. of American Railroads, Operations and Maintenance Dept., Engineering Div., Signal Section. Manual of Recommended Practice. Specification 175-40; 1941. Interlocking at Drawbridges for the Protection of Train Movements. Devices for insuring that bridge and rails are in proper position for the safe passage of trains. Interlocked power, bridge surfacing, rail-end connections, signals, etc.

Assn. of American Railroads, Operations and Maintenance Dept., Engineering Div., Signal Section. Manual of Recommended Practice. Specification 198-42; 1943. Electric Switch Locks. For electric locks for first and second voltage ranges for application of track switches. Covers drawings, material and workmanship, design, coils, contacts, finish, painting, binding posts, coil insulation, dielectric requirements, inspection, tests, packing, marking, and warranty.

Assn. of American Railroads, Operating-Transportation Div. The Standard Code of the A.A.R., 1940. Includes operating rules, block signal rules, and interlocking rules. Gives definitions, diagrams, signals by color, whistle, hand, flag, and lamp, right-of-way, train orders, indications for various signal aspects for typical semaphore and equivalent color light, for signalmen, engine and train crews.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-606A; 1931. Cord; Type CO-72, 5 1/2 Inch, Single-Conductor.

*References.*—Signaling, standard aspects, symbols, wiring, circuits, etc., *see* 718.40; railway signals, *see* 718.41; methods of making electrical tests, *see* 710; wrought-iron pipe and steel pipe for signal and switch operation, *see* 607.3, 607.4; *see* references under 718.41.

## 718.43 Relays

Assn. of American Railroads, Operations and Maintenance Dept., Engineering Div., Signal Section. Manual of Recommended Practice, 1941. Alternating Current Relays. Instructions for meters, repairing, coils, flexible connections, contacts, end play, clearance, operating characteristics, recording, field inspections, shop and field testing, and table of operating characteristics.

Assn. of American Railroads, Operations and Maintenance Dept., Engineering Div., Signal Section. Manual of Recommended Practice, 1943. Minimizing the Effect of Foreign Current on Direct Current Track Circuits. The length of the track section shall be such that the difference of potential between rails with no rail connected will not be sufficient to operate the relay. Covers arrangements of track circuits, bonding, insulated joints, ballast, and foreign current.

Assn. of American Railroads, Operations and Maintenance Dept., Engineering Div., Signal Section. Manual of Recommended Practice, 1940. Tractive Armature Direct Current Relays. Gives meters, repairing, coils, flexible connections, contacts, armature end play, air gap, general operating characteristics, recording, sealing, final test, shipping, and field tests and inspections.

Assn. of American Railroads, Operations and Maintenance Dept., Engineering Div., Signal Section. Manual of Recommended Practice. Specification 78-39; 1939. Alternating Current Relay. For the control of signals and interlocking apparatus of first, second, or third voltage range. Enclosure, clearance, contacts, dielectric requirements, operation, and identification marking.

Assn. of American Railroads, Operations and Maintenance Dept., Engineering Div., Signal Section. Manual of Recommended Practice. Specification 105-39; 1939. Tractive Armature Direct Current Neutral Relay with Two or More Contact Fingers. Covers description of relay, for railway signal service, mounting, armature supports, coils, size of two to ten contact units, and their operating characteristics.

Assn. of American Railroads, Operations and Maintenance Dept., Engineering Div., Signal Section. Manual of Recommended Practice. Specification 148-39; 1939. Alternating Current Power Transfer Relay. For low voltage power transfer relay, to be used in signal service. Gives requirements as to design, mounting, armature supports, air gap, coils, contacts, adjustment, and operating characteristics.

Assn. of American Railroads, Operations and Maintenance Dept., Engineering Div., Signal Section. Manual of Recommended Practice. Specification 154-39; 1939. Tractive Armature Direct Current Neutral Relay for Series Line Approach Lighting. Relay for railway signal service, first voltage range, with two contact fingers for series line approach lighting; gives details to the design, construction and operating characteristics.

Assn. of American Railroads, Operations and Maintenance Dept., Engineering Div., Signal Section. Manual of Recommended Practice. Specification 165-41; 1942. Tractive Armature Direct Current Polarized Relay. For first voltage range with four or more neutral contact fingers and two or more polar contact fingers. Includes requirements for material and workmanship, design, mounting, armature supports, air gap, coils, contacts, flexible connections, binding posts, dielectric requirements, operating characteristics, finish, sealing and calibration, name plate, inspection, tests, packing, marking, and warranty.

Assn. of American Railroads, Operations and Maintenance Dept., Engineering Div., Signal Section. Manual of Recommended Practice. Specification 180-39; 1939. Centralized Traffic Control Detachable Type Neutral Direct Current Relay. Relay for control systems and other nonvital circuits, quick detachable type. Design, type of mounting, armature supports, air gap, coils, contacts, dielectric requirement, and tests.

Assn. of American Railroads, Operations and Maintenance Dept., Engineering Div., Signal Section. Manual of Recommended Practice. Specification 185-39; 1939. Flasher Relay. Direct current, first voltage range relay for railway signal service. Provided with four sets of normal and reverse contacts, outside dimensions given, mounting, armature supports, air gap, coils, operating characteristics, and calibration.

Assn. of American Railroads, Operations and Maintenance Dept., Engineering Div., Signal Section. Manual of Recommended Practice. Specification 186-39; 1939. Tractive Armature Direct Current Neutral Interlocking Relay. Relay for interlocking railway signal service, first voltage range; covers design, mounting, armature supports, air gap, coils, contacts, interlocking mechanism, operating characteristics, and construction.

Assn. of American Railroads, Operations and Maintenance Dept., Engineering Div., Signal Section. Manual of Recommended Practice. Specification 197-41; 1942. Time Element Relay (Tractive Armature Type). Includes requirement for material and workmanship, design, mounting, armature supports, air gap, coils, contacts, flexible connections, binding posts; timing element, dielectric, operating characteristics, finish, sealing and calibration, name plate, inspection, tests, packing, marking, and warranty.

Assn. of American Railroads, Operations and Maintenance Dept., Engineering Div., Signal Section. Manual of Recommended Practice. Specification 202-43; 1944. Time Element Relay (Thermal Type). For the purpose of providing a bimetallic type thermal relay for operation on d.c. or a.c. first voltage range. Covers material and workmanship, design, mounting, heating element, flexible connectors, contacts, binding posts, dielectric requirements, operating characteristics, finish, sealing and calibration, name plate, inspection, tests, packing, marking, and warranty.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specifications CAA-177. Airway Traffic Control Relay Racks.

*References.*—Track signals, *see* 718.40, 718.41, 718.42; industrial controllers and testing, *see* 714.11; definitions, symbols, voltage and rating standards, methods of test, safety codes, *see* 710; power transmission and distribution relays, *see* 714.14.

## 718.44 Emergency Signals

*References.*—Track torpedoes and fusees, *see* 863; signaling flags, *see* 306.4.

## 718.49 Miscellaneous Railway Signals

American Transit Assn. Recommended Specification for Bonding for Surface Lines, D122-37; 1937. Includes capacity of bonds, number of bonds per joint, selection of bonds, type of bonds, cross connections, and testing.

Assn. of American Railroads, Operations and Maintenance Dept., Engineering Div., Electrical Section. Manual of Recommended Practice, 9-b-43; 1943. Specifications for Welded Type Rail Head U-Bonds and Extended Bonds. Gives purpose, drawings, tender, alternates, material and workmanship, design, conductors, terminals, identification, resistance of installed bonds, purchaser's order requirements, inspection, tests, marking, and warranty.

Assn. of American Railroads, Operations and Maintenance Dept., Engineering Div., Signal Section. Manual of Recommended Practice, 1941. Insulated Rail Joints. Conforming to design, condition of rail, renewal, drainage, welding requirements, tightening of bolts, and bearing.

Assn. of American Railroads, Operations and Maintenance Dept., Engineering Div., Signal Section. Manual of Recommended Practice, 1942. Protection of Traffic Against Slides and Rock Falls. Includes requirements for detectors, circuit controller, train protection, and circuits.

Assn. of American Railroads, Operations and Maintenance Dept., Engineering Div., Signal Section. Manual of Recommended Practice, 1935. Signaling for

Gravity Classification Yards. Color light signal indications for yard and cab; for audible signals *see* Standard Code Rule 606.

Assn. of American Railroads, Operations and Maintenance Dept., Engineering Div., Signal Section. Manual of Recommended Practice, 1944. Time Releases Applied to Signal Apparatus. Relation to breaking time, time distance relation, two block and three block apparatus, illustration, slow speed time interval, and tests.

Assn. of American Railroads, Operations and Maintenance Dept., Engineering Div., Signal Section. Manual of Recommended Practice. Specification 23-40; 1941. Channel Pins. For tinplated single groove and double groove pins for securing bond wires or rail connections into the rail; sizes, plating, and quality determinations.

Assn. of American Railroads, Operations and Maintenance Dept., Engineering Div., Signal Section. Manual of Recommended Practice. Specification 74-39; 1939. Impedance Bond. Details for a device to carry current around insulated rail joint, cast iron case, and marking thereof; test requirements, for signal service.

Assn. of American Railroads, Operations and Maintenance Dept., Engineering Div., Signal Section. Manual of Recommended Practice. Specification 104-39; 1939. Air-Cooled Reactor for Line and Track Circuits. Reactor for railway signal service; requirements as to design, voltage rating, current, and impedance, insulation test, surface leakage, and adjustment.

Assn. of American Railroads, Operations and Maintenance Dept., Engineering Div., Signal Section. Manual of Recommended Practice. Specification 128-39; 1939. Mechanical Time Release. Device for introducing a time interval in the control of signal and switch circuits and levers of interlocking machines. Design of contacts, applications, and dielectric requirements.

Assn. of American Railroads, Operations and Maintenance Dept., Engineering Div., Signal Section. Manual of Recommended Practice. Specification 135-42; 1943. Track Circuit Rail Bonding. For the purpose of providing bonding of railway signaling track circuits where rails do not carry return propulsion current. Covers drawings, tender, alternates, material and workmanship, general requirements, bonding, purchaser's order requirements, inspection, and tests.

Assn. of American Railroads, Operations and Maintenance Dept., Engineering Div., Signal Section. Manual of Recommended Practice. Specification 151-42; 1943. Plug Type Rail Bonds and Track Circuit Connectors. For providing plug type rail bonds and track circuit connectors for track circuits where rails do not carry return propulsion current. Covers drawings, material and workmanship, design, conductors, terminals, welding, tinning and galvanizing, elongation, identification, inspection, tests, packing, marking, and warranty.

Assn. of American Railroads, Operations and Maintenance Dept., Engineering Div., Signal Section. Manual of Recommended Practice. Specification 178-42; 1943. Welded Type Rail Head Bonds and Track Circuit Connectors. For providing welded type rail head bonds and track circuit connectors for track circuits where rails do not carry return propulsion current. Covers drawings, material and workmanship, design, conductors, terminals, galvanizing and tinning, elongation, identification, resistance to installed bonds, inspection, tests, packing, marking, and warranty.

Assn. of American Railroads, Operations and Maintenance Dept., Engineering Div., Signal Section. Manual of Recommended Practice. Specification 179-42; 1943. Mechanically Applied Rail Head Type Bonds and Track Circuit Connectors. For providing mechanically applied rail head type bonds and track circuit connectors for track circuits where rails do not carry return propulsion current. Covers drawings, material and workmanship, design, conductors, terminals, plating and tinning, identification, resistance of installed bonds, inspection, tests, packing, marking, and warranty.

*References.*—Petrolatum for impedance bonds, *see* 504.6; methods of electrical testing, *see* 710; methods of testing and general requirements for metals, *see* 600.1; approach, warning, and engineman signs, *see* 998; bonding wire, copper, *see* 715.44; bonding wire, steel, *see* 715.43.

## 718.5 TRAFFIC AND HIGHWAY SIGNALS

American Assn. of State Highway Officials, Institute of Traffic Engineers, and National Conference on Street and Highway Safety. Prepared with advice and assistance of the War Dept. and Office of Civilian Defense. Manual on Uniform Traffic Control Devices for Streets and Highway, War Emergency Edition, 1942. Covers definitions, classification, legal authority, application, design, location and installation, and maintenance of signs, markings, and signals. Also covers safety zones and traffic islands.

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering, 1944. Specification for Highway Crossing Signs and Signals. Railroad advance warning signs should be installed and maintained by the highway authorities. This specification covers flashing light type and wig-wag type of signals and gives drawings and details for the same.

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering, 1944. Specification for Suspended Overhead Highway Sign. May be used with or without reflecting units as conditions require. Gives drawings and details for these types of signals.

Assn. of American Railroads. Bulletin 3; 1942. American Standards Assn., D 8.1-1943. Railroad Highway Grade Crossing Protection. Recommended standards and practices for new installation of railroad-highway grade crossing signs, signals, and automatic gates. Drawings for grade crossing signs, flashing light type and wig-wag type signals, automatic gates, and auxiliary signs.

Assn. of American Railroads, Operations and Maintenance Dept., Engineering Div., Signal Section. Manual of Recommended Practice, 1942. Automatic Highway

Grade Crossing Protective Systems. Gives general instructions, inspections and tests, and performance report.

Assn. of American Railroads, Operations and Maintenance Dept., Engineering Div., Signal Section. Manual of Recommended Practice, 1943. Highway Grade Crossing Signals. Electrically or mechanically operated signal used for the protection of highway traffic at railroad-highway grade crossings, consisting of a swinging red light or swinging disc. Details for flashing light type and wig-wag type. Covers mounting, operating time, circuits, bell, lights, lenses, range and spread, and flashes or cycles.

Assn. of American Railroads, Operations and Maintenance Dept., Engineering Div., Signal Section. Manual of Recommended Practice, 1929. Train Approach Signals. Recommendation 67 in 1929 report of the committee of American Engineering Council on street traffic signs, signals and markings—swinging red light and target, or two flashing red lights in horizontal line.

Assn. of American Railroads, Operations and Maintenance Dept., Engineering Div., Signal Section. Manual of Recommended Practice. Specification 44-39; 1939. Direct Current Vibrating Highway Crossing Bell. 12-in. diameter, gong type, design details, coils, contacts, calibration, and tests.

Assn. of American Railroads, Operations and Maintenance Dept., Engineering Div., Signal Section. Manual of Recommended Practice. Specification 155-42; 1943. Railroad-Highway Grade Crossing Signs. For the purpose of providing signs of various designs for railroad-highway grade crossing protection. Covers drawings, material and workmanship, types, gray iron castings, sheet metal, reflector units, designs and assembly sheet metal signs, painting, synthetic enamel finish, vitreous enamel finish, identification, inspection, tests, packing, marking, and warranty.

Assn. of American Railroads, Operations and Maintenance Dept., Engineering Div., Signal Section. Manual of Recommended Practice. Specification 156-40; 1941. Reflector Unit. Sign for highway grade crossing protection, for new installation or replacement. Single and double refraction types of glass covered, silvered reflectors, tests for shock, solarization, corrosion and seal.

Assn. of American Railroads, Operations and Maintenance Dept., Engineering Div., Signal Section. Manual of Recommended Practice. Specification 176-41; 1944. Highway Grade Crossing Signals. Includes requirements for track to be signaled (single, double, or multiple track); power supply, distributing system (aerial, surface, underground), foundations, signals, trunking, conduits and supports, wire and cables, instrument and battery housings, insulation, painting, bonding, and energy for operating signals, track circuits, etc.

Assn. of American Railroads, Operations and Maintenance Dept., Engineering Div., Signal Section. Manual of Recommended Practice. Specification 190-42; 1943. Flashing Light Signal Lamp Unit. For highway crossing signal lamp unit of the alternately flashing light type. Requirements for lamp case, terminals and wiring, roundels, receptacle, reflector, tests, range and spread, hood, backgrounds, painting, phantom, binding posts, dielectric requirements, identification, inspection, tests, marking, and warranty.

Assn. of American Railroads, Operations and Maintenance Dept., Engineering Div., Signal Section. Manual of Recommended Practice. Specification 199-42; 1943. Electric Motor Mechanism and Gate Arm for Highway Grade Crossing Signal. For providing gates as an adjunct to A.A.R. recommended crossing signals of the flashing light or wig-wag type. Covers gate arm, mechanism, gears, motor, hold-clear device, circuit controller, wiring, finish, dielectric requirements, identification, painting, inspection, tests, marking, and warranty.

Institute of Traffic Engineers. American Standards Assn., D 10.1—1942. Adjustable Face Traffic Control Signal Head Standards. Includes definitions of terms and requirements for position of traffic control indication, housing, doors, gasketing, traffic signal lenses, reflectors, tests and inspection, lamp receptacle, wiring, visors, trunnions and brackets, exterior finish, and method of mounting.

Institute of Traffic Engineers. Technical Report 2; 1943, National Electrical Manufacturers' Assn. American Standards Assn., D11.1-1943. Pre-Timed, Fixed Cycle, Traffic Signal Controllers. Covers purpose, definitions, scope, general design requirements, noninterconnected controllers, future interconnected controllers, interconnected controllers, and master controller.

International Municipal Signal Assn., Inc. Equipment Specification No. 101; 1942. Traffic Signal Standards. Covers details for traffic signal standards for use on underground municipal traffic signal systems. Gives requirements for general design, dimensions, pedestals, shafts, anchor rods, finish, workmanship, and inspection tests.

International Municipal Signal Assn., Inc. Equipment Specification 101-A; 1942. Specification for Traffic Signal Standard. Covers details for a traffic signal standard for use on underground municipal traffic signal systems. Gives requirements for general design, dimensions, shafts, base, anchor rods, finish, workmanship, and inspection tests.

National Conference on Uniform Traffic Accident Statistics, Committee on Definitions. Manual of Definitions of Motor Vehicle Accidents, 1942. Includes primary definitions and guiding examples and interpretations for motor-vehicle accident, motor vehicle, motor-vehicle traffic accident, traffic way, motor-vehicle accident death, motor-vehicle traffic accident death, place of accident, and property damage; and classifications of types of motor-vehicle traffic accidents and causes of death. Endorsed by U.S. Public Health Service, U. S. Bureau of Census, Division of Statistics Standards, U. S. Bureau of the Budget, and U. S. Public Roads Administration.

Underwriters' Laboratories, Inc. Standard for Direction Signal Systems for Automotive Vehicles, 1940. Turn indicators under control of operator, semaphore and stationary or flashing types. Requirements as to suitability, lamps and wiring, pilot

indicator, color, legibility angles and sight distances. Also tests for vibration, moisture, dust, and corrosion.

Underwriters' Laboratories, Inc. Standard for Highway Emergency Signals, 1940. Traffic warning signals for commercial vehicles to be used in the event of enforced parking on a highway. Includes liquid-burning flares, red electric lanterns, and fusees. Design and construction, stability, instructions, and marking. Also vibration, shock, weatherproof qualities, reliability, and photometric tests.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-8. Approach Lights; Neon, Lamp.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-134. Course Light Units.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-154. Beacon; Airways, 24-Inch Rotating, Rigid Drum Type.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-202. Glide Path Receiver.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-218. Sock; Fabric, Wind-Cone, Internally Lighted.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-232. Beacon; 24-Inch, Rotating Dome Type.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-291. Beacons; 36-Inch, Rotating, Double Ended.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-342. Approach Light; Refilling Neon Lamp Tube.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-402. Glide Path; Localizer, Inner Marker Buildings.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-481. Airport Traffic Signals; Green and Fluorescent Lamps.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-485. Boundary Lights, for Alaskan Installation.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-500. Buoy Lights; Cable-Fed.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-504. Beacon; Spherical Reflector for 24-Inch Rotating.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-508. Portable Airport Traffic Signal.

## 718.6 RADIO APPARATUS AND EQUIPMENT

### 718.60 General Items

American Society for Testing Materials, B 128-42; 1942. Methods of Testing Sleeves and Tubing for Radio Tube Cathodes. For determination of dimensions and physical properties of seamed and seamless tubing; apparatus required, test specimen, and outline of procedures.

American Standards Assn., C 75.2-1943. Steatite Radio Insulators (American War Standard). For the purpose of facilitating production of steatite radio insulators. Gives applicable specifications and drawings, classification, material and workmanship, general and detail requirements, methods of inspection and tests, packaging, packing, marking for shipment, requirements applicable to individual government departments, definitions, drawings showing details, and appendix covering design criteria.

American Standards Assn., C 75.4-1943. Ceramic Radio Dielectric Materials, Class H (American War Standard). For the purpose of facilitating production, procurement, and inspection of ceramic radio dielectric materials. Gives applicable specifications, classification, materials, general and detail requirements, methods of test, packing, and marking of packages for shipment, requirements applicable to individual government departments, and notes.

American Standards Assn., C 75.6-1943. Glass-Bonded Mica Radio Insulators (American War Standard). For the purpose of facilitating production of glass-bonded mica radio insulators. Gives applicable specifications, classification, material and workmanship, general and detail requirements, methods of inspection, and tests; packaging, packing, marking for shipment; requirements applicable to individual government departments, notes, and appendix covering design criteria.

Assn. of American Railroads, Telegraph and Telephone Section, 12-1; 1932. Mitigation of Interference to Radio Reception From the Operation of Communication Equipment. Guide for investigation of source and nature of interference, choke coils and by-pass condensers, and re-radiation conditions, with diagrams.

Institute of Radio Engineers. Standards on Facsimile; Definitions of Terms, 1942. Includes definitions for terminal equipment, transmission, and general.

Institute of Radio Engineers. Standards on Radio Wave Propagation; Definitions of Terms, 1942. Includes definitions of terms relating to noise, ionosphere, and general.

Institute of Radio Engineers. Standards on Radio Wave Propagation; Measuring Methods, 1942. Covers the two basic methods (standard-antenna and standard-field), methods of measuring power radiated from an antenna, and methods of measuring noise field intensity.

National Electrical Manufacturers Assn., jointly with Edison Electric Institute and Radio Manufacturers Assn. Methods of Measuring Radio Noise, NEMA 107; 1940. Covers electrical disturbance which excites radio receiver in such a way as to produce acoustic

noise, specifications for 150 to 18,000 k-c radio noise meter, measurement of radio noise-influence voltage, radio noise field intensities, and at radio receiving location. Also suggested forms for data sheets, and instructions for reporting radio noise measurements.

National Electrical Manufacturers Assn., Edison Electric Institute, and Radio Manufacturers Assn. Radio Interference, 1933. General discussion of the problem of interference to radio broadcasting. Covers introduction, radio broadcasting, radio interference, legislation, radio coordination, and summary.

Radio Manufacturers Assn. Frequency Modulation Transmitters, M7-211 and M7-212; 1942. Standards for pre-emphasis and polarization of frequency modulation transmission.

Radio Manufacturers Assn. Standards, 1941. Gives terms and definitions, methods of test for cords, plugs and jacks, voltage breakdown test, soldering test for terminals; insulation and electrolysis test for audio transformers, voltage test for fixed paper capacitors, testing for dry cell A batteries, B batteries and C batteries; design and rating of socket power devices and electric radio receivers, color coding of antenna and ground leads, and standards for various parts. Also gives standard test signals, quieting signal input, deviation sensitivity, and definition of deviation.

Radio Manufacturers Assn. Transmission and Reception Data, 1932. Includes theory of wave propagation, distance ranges of radio waves, and charts of ranges for day and night operation. Reprinted from National Bureau of Standards LC 317-1932.

U. S. Gov., Army-Navy Aeronautical Specification AN-C-100a; 1944. Catalogs; Radio and Radar Equipment Spare Parts.

U. S. Gov., Army-Navy Aeronautical Specification AN-H-19a; 1944. Handbooks; Radio and Radar Equipment Operating.

U. S. Gov., Army-Navy Aeronautical Specification AN-H-20a; 1944. Handbooks: Radio and Radar Equipment Maintenance.

U. S. Gov., Army-Navy Aeronautical Specification AN-H-21a; 1944. Handbooks and Catalogs; Radio and Radar Equipment (General Specification for Printing of).

U. S. Gov., Army-Navy Aeronautical Specification AN-I-24; 1944. Interference Limits; Aircraft Radio.

U. S. Gov., Dept. of Agriculture, Forest Service. Specifications for Radios; All Kinds.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-455. Test Requirements, MRL-ML Radio Range and Telephone Equipment.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-466. Artificial Line; Radio Frequency, To Be Used With Emergency Cable.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Circular C74; 1937. Radio Instruments and Measurements. A 345 page book covering introduction, fundamentals of electromagnetism, principles of alternating currents, radio circuits, damping, wave meters, condensers, coils, current measurement, resistance measurement, sources of high-frequency current, calculation of capacity, design of inductance coils, high-frequency resistance, miscellaneous formulas and data, and appendices.

U. S. Gov., Dept. of Commerce, National Bureau of Standards, H35; 1939. American Standards Assn., C2.5-1940. Safety Rules for Radio Installations (Comprising Part 5 of the Fifth Edition, National Electrical Safety Code). Requirements on location, installation, and guarding of antenna and counterpoise, material, and size of lead-in, type of construction at entrance to building, type and size of grounding conductor and ground, protective devices, etc.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Research Paper RP77; 1929. A Course-Shift Indicator for the Double-Modulation Type Radiobeacon. The purpose of this beacon is to indicate to a station operator whether a given course as laid out in space remains unvarying during a given time of operation, and to greatly facilitate a check of the beacon calibration.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-964A; 1942. Radio Set SCR-197-( ); Components in Truck K-18-( ); Installation of.

## 718.61 Antennas and Equipment

Institute of Radio Engineers. Standards on Transmitters and Antennas, 1938. Includes classification, nomenclature, methods of measurement, and definitions of antenna systems used in transmitting and receiving; single-unit antenna resistance, reactance, angular height and effective height, radiation efficiency, and directional pattern; multi-unit antenna, test methods, rating, gain, impedance, frequency characteristics, three-dimensional directional pattern, load and breakdown tests, weather effects, signal to noise ratio test, and measurement of properties of waves.

Institute of Radio Engineers. Standards on Transmitters and Antennas; Methods of Testing, 1938. Includes methods of tests for power rating, spurious radiations, frequency stability, operational stability, amplitude modualtion, single-unit antenna, multi-unit antenna, and propagation of radio waves.

National Board of Fire Underwriters. National Electrical Code, 1940. American Standards Assn., C1-1940. Radio Equipment. Not applicable to shipboard equipment. Minimum sizes and allowable materials for antenna, counterpoise, lead-in, and grounding conductors, clearance requirements, construction of lead-in bushings, location and operating characteristics of lightning arresters, grounding and grounding switch requirement.

Radio Manufacturers Assn. Definitions, M1-111 to M1-126, 1930; and M1-211, 1936. Terms relating to radio equipment and nomenclature of antenna parts.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-20. Antenna Tuning Unit.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways Specification CAA-23. Antenna; Phantom-Load Unit, Radio.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-64. Antenna; Tuning Unit.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-79. Antenna System for U.H.F. Radio Range.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-91. Antenna; Insulated, Heavy-Duty, Self-Supporting Towers for.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-92. Antenna System; Form 6 Tower, Erection of and Incidental Construction.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-93. Antenna System; Loop Erection of and Incidental Construction.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-130. Antenna System; Heavy-Duty Tower for, Erection of.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-233. Rods; Ground.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-261. Radio Range; U.H.F. Antenna System, Four Course.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-284. Airplane Radio Tuning Antenna Coil and Relay.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-295. Antenna and Transmission Line Fan Marker Radio Radiating System.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-467. Antenna; U.H.F., 5-Loop System (Horizontally Polarized).

U. S. Gov., U. S. Army, Signal Corps. Specification 71-17-A; 1927. Counterpoise; Type CP-3.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-220; 1925. Antenna; Type AN-15.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-224A; 1929. Antenna; Type AN-14.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-383C; 1932. Mast Section; Types MS-14 and MS-28, Radio.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-395A; 1934. Antenna; Type A-53, Artificial.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-405A; 1928. Counterpoise; Type CP-2.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-408A; 1929. Mast; Type MA-1, Radio.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-409; 1929. Ring; Type FT-74, Counterpoise.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-411; 1929. Antenna; Type AN-16.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-413; 1929. Counterpoise; Type CP-9.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-414A; 1929. Antenna; Types AN-8 and 8-A.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-505; 1931. Loop, Type LP-7, Radio Antenna.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-533B; 1941. Weight; Type WT-7-A, Aircraft, Antenna, Teardrop.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-596; 1931. Mast Plate; Type MP-11, Radio.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-597; 1931. Antenna; Type AN-17.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-600; 1931. Counterpoise; Type CO-10.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-601; 1931. Mast Section; Type MS-26, Radio.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-602; 1931. Mast Section; Type MS-27, Radio.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-614; 1931. Antenna; Type AN-19.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-615; 1931. Guy; Type GY-10, Radio Antenna.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-616; 1931. Counterpoise; Type CP-11.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-617A; 1943. Spreader; A-19 and A-20.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-648A; 1933. Mast Section, Types MS-29 to MS-33, Inclusive; Connector, Type M-131; and Mast Base, Type MP-12, Radio.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-675; 1933. Mast Sections; Types MS-34 to MS-41 Inclusive, for Steel-Rod Antennas, Radio.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-699C; 1943. Mast Sections MS-49, MS-50, MS-51, MS-52, MS-53, MS-54, MS-55, MS-56; and Mast Bases MP-14, MP-37, MP-47-A, MP-48-A and MP-57; for Steel-rod Antenna.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-709A; 1936. Antenna; Types AN-21-A to AN-24-A, Inclusive, and Types AN-25 to AN-28, Inclusive.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-713A; 1938. Guy; Types GY-21-A, GY-22-A, GY-23-A, and GY-24-A, Radio Mast.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-800-A; 1935. Fairlead; Type F-7, Airplane Antenna.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-832A; 1939. Weight; Type WT-9, Aircraft Antenna, Spherical.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-834A; 1938. Antenna; Type A-58, Phantom.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-924A; 1943. Mast Base MP-22-A; Radio Antenna.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-950B; 1940. Antenna; Components for Radio Set SCR-197-( ).

U. S. Gov., U. S. Army, Signal Corps. Specification 71-1035; 1942. Antenna Equipment RC-63; Directional, Components for.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-1115; 1941. Fairlead; Type F-10.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-1121A; 1943. Reel Control Boxes BC421, BC461, and BC-461-A.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-1374A; 1943. Antennas AN-29-B, AN-29-C, AN-30-B, and AN-45-G.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-1600A; 1943. Antenna A-27; Phantom.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-1613; 1943. Antenna Equipment RC-219-( ); Antenna AN-78-( ).

U. S. Gov., U. S. Army, Signal Corps. Specification 71-1631; 1943. Clamps MC-421, MC-422, MC-423, MC-424.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-3100; 1944. Antenna Equipment RC-291; Components of.

## 718.62 Electron Tubes

Institute of Radio Engineers, Inc., sponsor. American Standards Assn., C16.2-1939. Standard Vacuum Tube Base and Socket Dimensions. Includes small vacuum tube base, terminal caps for small vacuum tubes, small 4-pin transmitting tube base, and large transmitting tube base and cap.

Institute of Radio Engineers. Standards on Electronics, 1938. Includes methods of testing vacuum tubes for general characteristics, vacuum tube coefficients, ionization and leakage currents, interelectrode capacitance, power output, and detection characteristics; of phototubes, and gives definitions of terms and symbols.

Radio Manufacturers Assn. Terminal Connections for Receiving Tube Types, 1941. Diagrammatic drawings showing vacuum tube basings and indicating terminal connection of such shielding as may be integral with the tube type for all 520 types of receiving tubes of record on Jan. 1, 1941.

Radio Manufacturers Assn. Vacuum Tubes, M8-046 to M8-070, 1940; M8-071 to M8-082, 1938; M8-125 to M8-127, 1941; M8-130, 1941; M8-141, M8-151, and M8-161, 1939; M8-210 to M8-213, 1940; M8-251, 1936; M8-308 to M8-315, 1940; and M8-401 to M8-403, 1939. Gives tube base dimensions for various types of pin arrangements, type designations, grid nomenclature, terminal caps receiving and transmitting tubes, metal vacuum tube shells, receiving tube ratings, filament and heater ratings, vacuum tube bulb dimensions, measurement of interelement capacitances shields; definitions, type designations, focusing and deflecting systems for picture tubes.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-119. Vacuum Tube; Type 805.

U. S. Gov., Navy Dept. Specification 17T21a; 1944. Tubes; Electron, Power Types.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-176A; 1925. Tube; Type VT-1, Radio Receiving.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-178; 1924. Tube; Type VT-5, Radio Receiving.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-382A; 1932. Tube; Type VT-2, Radio Transmitting.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-547C; 1936. Tube; Type VT-24, Radio Receiving.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-786; 1937. Tube; Type VT-86, Radio Receiving, R.M.A., Type 6K7.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-1208; 1942. Tube; Type VT-108, Radio Transmitting, Eimac 450th, or Equal.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-1247; 1941. Tube; Type VT-147; Radio Receiving, R.M.A. Type 1A7GT.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-1266; 1943. Tube VT-166 (Rectifier).

U.S. Gov., U. S. Army, Signal Corps. Specification 71-1408; 1943. Tube VT-208; Radio Receiving, R.M.A., Type 7B8.

U.S. Gov., U. S. Army, Signal Corps. Specification 71-1494; 1943. Tube; R.M.A., Type 12SN7-GT, Radio Receiving.

*References.*—Definitions, symbols, *see* 718.60; tube sockets, *see* 718.69.

## 718.63 Radio Transmitting Apparatus

American Institute of Electrical Engineers. Recommended Practice for Electrical Installations on Shipboard, No.45; 1940. Addenda, 1942. Emergency Modification and Supplement, 1943. Radio Communication Equipment. Technical requirements as to location, power supply, operators' quarters, transmitters and receivers in accordance with Federal Communications Commission regulations, antenna material and construction, rigging, radio-phone, and spare parts.

Institute of Radio Engineers. American Standards Assn., C 16.5-1942. Recommended Practice for Volume Measurements of Electrical Speech and Program Waves. The instrument described in this recommended practice was developed specifically for broadcasting and the telephone plant which provides the interconnecting service among broadcast stations. Covers definitions, volume indicator, and good engineering practice.

Institute of Radio Engineers. Standards on Transmitters and Antennas, 1938. Gives definitions of terms, graphical symbols, methods of testing power rating, spurious radiations, frequency stability, operational stability, and amplitude modulation and phase or frequency modulation. Also methods of testing single-unit, multiunit antenna, and of measurement of properties of waves.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-5. Constant Output Amplifier.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-11. Airport Traffic Control; U.H.F., Transmitter Equipment.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-76. Radio Range U.H.F. Dual Transmitter.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-109. Radio Range and Telephone Transmitter; 133-Watt, for Loop Station.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-139. Amplifier-Rectifier Unit, for Transoceanic Use.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-140. Amplifier-Audio; General Purpose, for Transoceanic Use.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-149. Amplifier; Calibrated, for Transoceanic Use.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-150. Tone-Keyer; Polar Operating Locking, Single Channel.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-189. Transmitter Assembly; Radio, H.F., for Pacific Island Use.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-213. Telegraph Transmitter; Radio, Intermediate Frequency.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-244. Transmitter; Radio, Frequency-Modulated.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-258. Alaska, H.F. Radio Transmitter.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-262. Radio-Telegraph Communication Transmitter.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-300. Alarm-Control Unit, for Radio Transmission Use.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-312. Simultaneous Radio Range and Teletype Transmitter.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-362. Crystals; Quartz Plates; for Radio Use.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-363. Crystal Holder; Rectangular Quartz Plates, Special for Transmitters.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-371. Transmitter; U.H.F., 128 to 132 Megacycles.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-429. Transmitting and Receiving Equipment; U.H.F. Frequency-Modulated.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification. CAA-453. Keyer-Oscillator; Radio Teletype Transmitting.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-456. Transmitter; Radio, 150-Watt.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-502. Transmitter Assembly; U.H.F. Radio, Multi-Unit.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-510. Telegraph Communication, 10 Kw. Radio, Transmitter.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-515. Desk-Type, Moving Coil Microphone.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-516. Telegraph Communication. Low Frequency Radio Transmitter.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-518. Crystal.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-14-H; 1930. Radio Receiver and Transmitter; Type BC-7.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-38-E; 1928. Radio Transmitter; Type BC-86-B.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-53-1; 1929. Radio Transmitter; Type BC-114.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-55-F; 1929. Radio Control Box; Type BC-119.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-187C; 1930. Regulator; Voltage, Type MC-62, for Radio Transmitters.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-190B; 1930. Transmitter; Type T-11, Telephone.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-193E; 1930. Radio Transmitter; Type BC-127.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-206; 1924. Radio Transmitter; Type BC-129.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-238-A; 1925. Key J-12.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-375A; 1931. Transmitter; Type T-12, Microphone, Used With Radio.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-391C; 1928. Radio; Transmitter, Type BC-122.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-504A; 1935. Radio Receiver and Transmitter; Type BC-148.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-527A; 1940. Radio Receiver and Transmitter; Type BC-156.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-528A; 1940. Radio Receiver and Transmitter; Type BC-151.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-564; 1930. Radio Transmitter; 10-Kw.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-576C; 1935. Radio Transmitter; Type BC-176A.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-582; 1931. Radio Receiver and Transmitter; Type BC-157.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-656B; 1942. Radio Transmitter BC-187-A; Radio Modulator BC-188-A; and Associated Vacuum Tube.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-693; 1935. Chest; Type CH-27, Carrying, Radio Transmitter.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-813A; 1939. Radio Transmitting Components for Radio Set, Type SCR-( )-183; and Radio Receiving Components for Radio Sets, Types SCR-( )-183, SCR-( )185, and SCR-( )-187.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-816; 1935. Radio Transmitter, Type BC-( )-191; and Associated Equipment.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-838A; 1939. Radio Transmitter; Type BC-302, Marker Beacon.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-842A; 1939. Radio Transmitter; Type BC-307-( ).

U. S. Gov., U. S. Army, Signal Corps. Specification 71-843B; 1939. Radio Transmitter; Types BC-191-( ); and Associated Equipment.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-870; 1938. Radio Transmitter, Type BC-337-( ); and Associated Equipment.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-873; 1939. Coil Set; Type C-182 and C-184, Transmitting, Crystal Control.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-887; 1939. Radio Transmitter, Type BC-375-( ); and Associated Equipment.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-905A; 1940. Radio Transmitter; Type BC-228A.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-917A; 1938. Radio Receiver and Transmitter; Type BC-222.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-918A; 1938. Radio Receiver and Transmitter; Type BC-322.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-946A; 1939. Radio Set; Type SCR-197-( ).

U. S. Gov., U. S. Army, Signal Corps. Specification 71-947A; 1939. Radio Transmitter; Type BC-325-( ).

U. S. Gov., U. S. Army, Signal Corps. Specification 71-955B; 1941. Radio Transmitter BC-223-A; Transmitter Tuning Units TU-17-B, TU-18-B, and TU-25-A; and Case CS-56.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-1131; 1942. Radio Transmitter BC-467-( ); and Associated Equipment.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-1149; 1942. Radio Receiving and Transmitting Equipment RC-118-( ); Receiving and Transmitting for 2-Way Voice Communication; for Installation in 1/2-ton Commercial Truck.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-1186; 1943. Crystal Unit DC-11-( ); Receiving and Transmitting.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-1314; 1944. Radio Transmitter BC-653-( ), (Amplitude Modulated); Radio Receiver BC-652-( ), (Amplitude Modulated); and Associated Equipment.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-1373; 1943. Radio Set SCR-511-( ).

U. S. Gov., U. S. Army, Signal Corps. Specification 71-1683-A; 1944. Radio Sets SCR-399-( ) and SCR-499-( ); Components for.

## 718.64 Radio Receiving Apparatus

American Institute of Electrical Engineers. Recommended Practice for Electrical Installations on Shipboard, No. 45; 1940. Addenda, 1942. Emergency Modification and Supplement, 1943. Radio Communication Equipment. Technical requirements as to location, power supply, operators' quarters, transmitters and receivers in accordance with Federal Communications Commission regulations, antenna material and construction, rigging, radio-phone, and spare parts.

American Standards Assn., C 16.6-1943. Fixed Paper-Dielectric Capacitors (Home Receiver Replacement Type) (American War Standard). Covers the basic requirements applicable to fixed paper-dielectric capacitors suitable for use as replacement parts in home radio receivers. Gives material and workmanship, detail requirements, and standard capacitances, working voltages, and part numbers.

American Standards Assn., C 16.7-1943. Dry Electrolytic Capacitors (Home Receiver Replacement Type) (American War Standard). Covers the basic requirements applicable to dry electrolytic capacitors suitable for use as replacement parts in home radio receivers. Gives material, workmanship, design, detail requirements, standard capacitance, working voltages, and part numbers.

American Standards Assn., C 16.8-1943. Simplified List of Home Radio Replacement Parts (Paper and Electrolytic Capacitors, Volume Controls, Power and Audio Transformers, and Reactors) (American War Standard). This standard covers only the electrical values of the listed parts and deems these values adequate for maintaining in operation the great majority of home radio receivers. Covers fixed paper-dielectric capacitors, dry electrolytic capacitors, volume controls, and transformers and chokes.

American Standards Assn., C 16.9-1943. Power and Audio Transformers and Reactors. (Home Receiver Replacement Type) (American War Standard). Covers the basic requirements applicable to power and audio transformers and reactors suitable as replacement parts in home radio receivers. Gives material and workmanship, detail requirements—construction, detail requirements—electrical, detail requirements—humidity resistance, standard units, ratings, and part numbers.

American Standards Assn., C 16.10-1943. Volume Controls (Home Receiver Replacement Type) (American War Standard). Covers the basic requirements applicable to composition and wire-wound element variable resistors suitable for use as replacement volume controls in home radio receivers. Gives material and workmanship, detail requirements, standard units, rating, and part numbers.

Institute of Radio Engineers. Standards on Electro-Acoustics, 1938. Includes methods of testing loud speakers for response-frequency, sound-pressure, directional, impedance-frequency, distortion-frequency, and efficiency-frequency characteristics; definitions of terms and graphical symbols.

Institute of Radio Engineers. Standards on Radio Receivers; Definitions of Terms, 1938. Includes definitions of amplification, modulation, rectification; circuits, circuit elements, receivers, auxiliary equipment, and general.

Institute of Radio Engineers. Standards on Radio Receivers; Methods of Testing Broadcast Radio Receivers, 1938. Includes definitions of terms, requirements for apparatus, characteristics of measuring instruments, requirements for standard-signal generators for two-signal tests, and test procedures.

Institute of Radio Engineers. Standards on Radio Receivers, 1938. This standard covers definitions, graphical symbols, and methods of testing broadcast radio receivers; requirements and characteristics of testing apparatus, and procedures for input and output measurements, operating conditions, adjustment, and performance, tests.

Institute of Radio Engineers, Inc., sponsor. American Standards Assn., C16.3-39; 1939. Manufacturing Standards Applying to Broadcast Receivers. Includes nomenclatures, frequency range, and voltage rating; antenna installation instructions; and requirements for terminals, on-off switches, rotary circuit switches, adjustable resistance units, resistors—color code, and panel lamps.

Radio Manufacturers Assn. Cabinet Information, 1930. Includes table and console models, suggested solid woods and veneers, construction of cabinet, matching of veneers, adhesives, moisture content, finishing, and packing.

Radio Manufacturers Assn. Radio Receivers, M3-111 to M3-115 and M3-121 to M3-129, 1932; M3-141 to M3-145,

1936; M3-161 to M3-163 and M3-165 to M3-167, 1939; M3-210, M3-211, M3-213, and M3-214, 1937; M3-215 to M3-217, 1939; M3-220 and M3-221, 1936; M3-251 and M3-252, 1933; M3-271, 1936; and M3-411 to M3-414, 1941. Includes definitions of terms relating to radio receivers, their types and parts, standard on and off positions for lever and push-pull switches, attachment of power cable, standard direction for rotation of controls, and drum type dials, provision for fuses, insulation of leads for external output devices, terminal markings, and voltage ratings and frequency range for automotive radio receivers.

Underwriters' Laboratories, Inc. Standard for Power-Operated Radio Receiving Appliances. American Standards Assn., C65.1-1942. Covers power-operated radio receiving appliances for noncommercial use, designed to be employed on interior wiring systems in accordance with the National Electrical Code. Gives requirements for enclosure, supply connections, insulating material, attachment-plug receptacles, lamp-holders, switches, fuses, capacitors, transformers, batteries, wiring, spacings, current-carrying live parts, power consumption, leakage current, temperature, dielectric strength, strain relief, abnormal operation, rating, and marking.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-2. Remote Radio Receiver.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-12. Automobile; 3-Band Radio Receiver in.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-13. Aircraft Receiver; U.H.F.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-82. Airways Communication Radio Receiver.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-105. Receiver, U.H.F.; Monitor Radio Receiver.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-114. Receiving Equipment; Point to Point Diversity.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-135. Diversity Receiving Equipment.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-188. Barnegat Transoceanic Radio Receiving Station.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-201. Receiver; U.H.F. Localizer.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-226. Receiver; Radio Communication.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-250. Receiver; Frequency-Modulation.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-271. Receiver; Radio Telephone, Remote Airport.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-275. Airways Communication Radio Receiver (Supersedes CAA-21).

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-279. Transceiver; Radio, U.H.F. Short Range, Portable, General Purpose.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-302. Microphone; Moving Coil, Permanent Magnet Type.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-323. Diversity Receivers; Telegraph or Voice-Modulated Signals.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-351. Aircraft receiver; U.H.F.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-431. Airport Traffic Control Receiver; U.H.F.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-482. Monitor Receiving Antenna.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-496. Amplifier; Audio (Line).

U. S. Gov., Joint Army-Navy Specification, JAN-C-16; 1944. Crystal Units CR-1 ( )/AR.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-14-H; 1930. Radio Receiver and Transmitter; Type BC-7.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-36-D; 1928. Radio Receiver; Type BC-98-B.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-57E; 1928. Amplifier; Type BC-116-A, Radio Receiving.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-58-D; 1928. Radio Tuner; Type BC-115, Receiving.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-188F; 1932. Radio Receiver; Type BC-131.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-189E; 1932. Amplifier; Type BC-118-A, Radio.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-214A; 1928. Radio Receiver; Type BC-137.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-401B; 1928. Radio Receiver; Type BC-144.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-465A; 1929. Radio Receiver; Type BC-( )-152.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-504A; 1935. Radio Receiver and Transmitter; Type BC-148.

U. S. Gov., U. S. Army, Signal Crops. Specification 71-527A; 1940. Radio Receiver and Transmitter; Type BC-156.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-528A; 1940. Radio Receiver and Transmitter; Type BC-151.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-577A; 1933. Radio Receiver; Type BC-175.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-582; 1931. Radio Receiver and Transmitter; Type BC-157.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-656B; 1942. Radio Transmitter BC-187-A; Radio Modulator BC-188-A; and Associated Vacuum Tube.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-657B; 1942. Radio Receiver BC-186; and Associated Vacuum Tube.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-662; 1936. Radio Receiver, Type BC-189; and Coil Sets, Types C-142 to C-152, Inclusive; and Coil Set, Type C-154.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-694A; 1938. Chest CH-31A; Carrying, Radio Receiver.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-813A; 1939. Radio Transmitting Components for Radio Set, Type SCR-( )-183; and Radio Receiving Components for Radio Sets, Types SCR-( )-183, SCR-( )-185, and SCR-( )-187.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-839C; 1939. Radio Receiver; Types BC-103 and BC-346, Marker Beacon.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-844; 1935. Coil Units, Types C-156 and C-157; Dual Coil Sets for Radio Receivers, Types BC-AA-179, BC-AB-199, BC-AD-199, BC-AD-219, and BC-AE-229.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-855; 1938. Radio Receiver; Types BC-224-( ), Aircraft.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-872A; 1942. Radio Receiver; Type BC-348-( ), Aircraft.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-904A; 1940. Radio Receiver; Type BC-227A.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-906; 1936. Radio Receiver, Type BC-189-A; and Coil Sets, Types C-142-A to C-152-A, Inclusive.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-914B; 1943. Radio Receivers BC-312-( ) and BC-342-( ).

U. S. Gov., U. S. Army, Signal Corps. Specification 71-917A; 1938. Radio Receiver and Transmitter; Type BC-222.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-918A; 1938. Radio Receiver and Transmitter; Type BC-322.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-934B; 1943. Radio Receivers BC-314-( ) and BC-344-( ).

U. S. Gov., U. S. Army, Signal Corps. Specification 71-946A; 1939. Radio Set; Type SCR-197-( ).

U. S. Gov., U. S. Army, Signal Corps. Specification 71-1053; 1943. Radio Set SCR-536-( ); and Test Equipment IE-17-( ); Principal Components for.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-1117; 1942. Radio Set SCR-277-( ); Principal Component of; Mobile Radio Range, 200-400 kc.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-1149; 1942. Radio Receiving and Transmitting Equipment RC-118-( ); Receiving and Transmitting for 2-Way voice Communication; for Installation in 1/2-Ton Commercial Truck.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-1156; 1942. Radio Set SCR-253-( ); Ground Station, Local and Remote Control.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-1186; 1943. Crystal Unit DC-11-( ); Receiving and Transmitting.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-1314; 1944. Radio Transmitter BC-653-( ), (Amplitude Modulated); Radio Receiver BC-652-( ) (Amplitude Modulated); and Associated Equipment.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-1373; 1943. Radio Set SCR-511-( ).

U. S. Gov., U. S. Army, Signal Corps. Specification 71-1523; 1943. Radio Receiver BC-779-( ), BC-794-( ), BC-1004-( ); Power Supply Units RA-74-( ), RA-84-( ), RA-94-( ); and Cabinet CH-104-( ).

U. S. Gov., U. S. Army, Signal Corps. Specification 71-1641; 1944. Radio Receiver BC-969; Case CS-109; and Mounting FT-411-A.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-1683-A; 1944. Radio Sets SCR-399-( ) and SCR-499-( ); Components for.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-1720; 1943. Crystal Unit DC-20, or FT-243 Alternate.

## 718.65 Radio Instruments and Testing Apparatus

Institute of Radio Engineers. American Standards Assn., C 16.5-1942. Recommended Practice for Volume Measurements of Electrical Speech and Program Waves. The instrument described in this recommended practice was developed specifically for broadcasting and the telephone plant which provides the interconnecting service among broadcast stations. Covers definitions, volume indicator, and good engineering practice.

National Electrical Manufacturers Assn., jointly with Edison Electric Institute, and Radio Manufacturers Assn. Methods of Measuring Radio Noise, NEMA 107; 1940. Covers electrical disturbance which excites radio receiver in such a way as to produce acoustic noise, specifications for 150 to 18,000 kc. radio noise meter, measurement of radio noise-influence voltage, radio noise field intensities, and at radio receiving location. Also suggested forms for data sheets, and instructions for reporting radio noise measurements.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-325. Radio-Telephone Equipment; Portable.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-349B; 1933. Coil; Type C-31-A, Induction.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-404A; 1928. Test Set; Type I-52, Tube Tester.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-419; 1927. Wavemeter; Type BC-40.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-578A; 1933. Radio Control Box; Type BC-177.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-810B; 1937. Test Set; Type I-56-( ), Universal Radio.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-811D; 1943. Frequency Meter Set SCR-211-( ); Major Components for.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-856; 1938. Test Set Type I-66; Components for Testing Marker Beacon Receiving Equipment.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-857A; 1938. Meter, Frequency, Type BC-313; and Case, Type CS-50.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-899A; 1942. Test Oscillator; Type BC-376.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-959B; 1942. Coil; Type C-125, Induction.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-960A; 1944. Coil; Type C-158, Holding Coil.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-1029; 1942. Coil; Type C-281, Induction.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-1053; 1943. Radio Set SCR-536-( ); and Test Equipment IE-17-( ); Principal Components for.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-1107A; 1941. Test Set; Type I-77-( ), Major Components of.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-1142; 1942. Test Set I-100-( ); Component for.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-1150; 1942. Test Set I-103-( ); Transmitter Tuning.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-1388; 1942. Meter Frequency Set I-129-( ); Absorption Type.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-1607A; 1943. Adapter FT-384-A.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-1670; 1943. Maintenance Equipment ME-73-( ).

U. S. Gov., U. S. Army, Signal Corps. Specification 71-1685; 1943. Adapters M-394 and M-399.

*References.*—Meters for measurement of electrical quantities, *see* 714.3; frequency calibration, *see* 718.60.

## 718.66 Applications of Radio

American Institute of Electrical Engineers. Recommended Practice for Electrical Installations on Shipboard, No.45; 1940. Addenda, 1942. Emergency Modification and Supplement, 1943. Radio Direction Finder (Radio Compass). Technical requirements as to perception and frequencies, rotating element and compensator, gyro compass repeater, location, installation, interference, calibration, and operation.

Radio Manufacturers Assn., Engineering Dept. Television System Standards, 1939. Definitions for channel width, television and sound carrier spacing, position of sound carrier, frame frequency, number of lines per frame, aspect ratio, percentage of television signal devoted to synchronization, method of transmission of black level, synchronizing, transmitter modulation capability, output rating, relative radiated power for picture and for sound, and transmitter amplitude characteristic.

Radio Manufacturers Assn. Television Facsimile, M9-111 to M9-125, 1938; M9-126 and M9-127, 1936; M9-151 to M9-158 and M9-201 to M9-211, 1939; M9-212 to M9-220, 1940; M9-241, M9-251, M9-261, and M9-271, 1939; and M9-301 to M9-307, 1942. Covers definitions and requirements for radio television as channel width, spacing, relation to sound carrier, polarity, frame frequency, number of lines per frame, aspect ratio, synchronizing, transmitter modulation capability and output rating, amplitude characteristic, scanning, channel designation, receiver frequencies and controls, synchronizing sensitivity, etc.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-849A; 1937. Compass; Radio, Type SCR-242-( ).

U. S. Gov., U. S. Army, Signal Corps. Specification 71-878; 1939. Radio Compass; Type SCR-273-( ), Dual Remote Control, 12-Volt.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-879; 1939. Radio Compass; Type SCR-263-( ), Dual Remote Control, 24-Volt.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-1537; 1942. Radio Set SCR-503-( ); Direction Finding, Principal Components for.

*References.*—Radio receiving equipment, *see* 718.64; photo tubes, *see* 718.62.

## 718.69 Miscellaneous Radio Apparatus and Equipment

American Institute of Electrical Engineers. Recommended Practice for Electrical Installations on Shipboard, No.45; 1940. Addenda, 1942. Emergency Modification and Supplement, 1943. Depth Sounding Equipment. Fathometers for three classes of service, including depth indicator, amplifier, control unit, sound producer and receiver, power supply, and recorder; location and installation.

Institute of Radio Engineers, American Standards Assn., C 16.4-1942. To outline briefly the apparatus which is now used for testing loudspeakers together with the procedure for obtaining the important characteristics which depict the performance of a loudspeaker. Covers the following tests—response-frequency characteristic, directional characteristic, normal-impedance characteristic, nonlinear-distortion characteristic, and efficiency-frequency characteristic.

Radio Manufacturers Assn. Binding Posts, M4-113; 1930. Covers binding posts for radio receiving sets, standard dimensions of cord tip openings and fastening screw locations to accommodate the standard pin type and cylindrical type of cord tip.

Radio Manufacturers Assn. Radio Plugs and Jacks, M4-117 to M4-121; 1930. Standard dimensions and tolerances for six sizes of plugs and seven sizes of jacks, polarity markings for jacks, required contact pressures for jacks of spring type, voltage test for breakdown and application of test.

Radio Manufacturers Assn. Vacuum Tube Socket Dimensions, M4-127 to M4-131; 1938. Gives standard dimensions and spacing of pin receptacles in sockets, and between centers of mounting holes for 4-pin,

5-pin, and 6-pin tube bases, also for options on 8-hole octal base tube sockets.

Radio Manufacturers Assn. High Frequency Cores, M4-751 to M4-760; 1941. Gives standards for five core sizes, tolerances, screw sizes, tests, requirements as to permeability, Q or figure of merit, and humidity tests.

Radio Manufacturers Assn. Electro-Dynamic Speakers, M5-110 to M5-112, 1938; M5-161 and M5-162, 1939; and M5-181, 1937. Standard method of designating speaker cone diameter, direct current resistance of voice coil in specifying electrical characteristics, mounting dimensions for nine standard sizes, color code for wiring, etc.

Radio Manufacturers Assn. Radio Headset M5-152; 1938. Standard method of marking for polarity.

Radio Manufacturers Assn. Phonograph Pickups M6-111 and M6-112; 1941. Standards for magnetic pick-up jack as to position of wiring, and use of telephone plug ground connection to plus side of standard R.M.A. plug.

Radio Manufacturers Assn. Microphones M6-121; 1939. For use of 5/8 in. American standard screw thread, 1/2 in. American standard pipe thread, or 1/8 in. American standard pipe thread in mounting microphones.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-4. Speech Amplifier.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-16. Coupling Unit; Radio, for Tower Type Station.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-18. Link-Circuit Relay.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-19. Keyer; Radio Range.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-24. Relay Racks; Shelf Assembly, Cabinet Type.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-25. Audio Equalizer; Control Line.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-26. Transformers and Reactors for Radio Equipment Use.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-27. Remote Control Equipment, for Radio Range Use.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-28. Simultaneous Radio Range and Telephone Equipment; Test Requirements.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-30. Radio Facilities; Types SMRA-D and SBRA-D, Installation, and Commissioning of Equipment.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-60. Impedance Measuring Unit.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-63. Coupling Unit; Radio, for Modernized Tower Type Station.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-73. Fan Marker Transmitter.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-77. Interlock, for U.H.F. Range System.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-78. Range Equipment and Material U.H.F. Installation of.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-81. Coupling Unit; Radio, for Tower Type Station.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-83. Radio Facility; Type SRA-D, Installation of Equipment.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-88. Simultaneous Radio Range and Telephone Equipment Test Requirements.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-110. Coupling Unit; Radio, for Loop Type Station, MRL-ML.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-116. Radio Facilities; Types MRL-D or ML-D, Installation, and Commissioning.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-124. Fan Marker; U.H.F., Installation.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-125. Motor-Generator-Alternator; Electric, 4-Unit, 8-Bearing, for U.H.F. Fan Marker.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-126. Fan Marker Equipment Instruction Books; U.H.F.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-127. Fan Marker Radiating System; U.H.F.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-132. Remote Control Equipment.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-141. Audio-Frequency Vacuum Tube Tone Generator.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-142. Filter; Electrical, Narrow Band Pass.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-145. Telegraph System; Tone Channel.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-151. Keying Unit; Vacuum Tube.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-163. Racks; Cabinet Type, Relay.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-166. Radio Board Assembly; 10 Circuit, for Teletype Equipment.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-196. Filter; Combination Band Pass and Rejection.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-197. Audio-Frequency Monitor Unit.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-243. Filter; Combination Band Pass and Band Rejection.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-251. Keying Equipment; Remote.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-253. Filter; Band Pass and Low Pass.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-276. Remote Control Equipment, for Radio Range Use.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-278. Intensity Measuring Set for Radio Field.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-292. Fan Marker Frequency Changer Equipment; U.H.F.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-293. Fan Marker; U.H.F. Radio Equipment.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-294. Motor-Generator-Alternator Units; Electric, for Fan Marker Use.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-296. Fan Marker; Radio, Installation of.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-299. Rectifier; Copper-Oxide, for Strowger Switch Operation.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-313. Coupling Unit; Radio, for Tower Type Station.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-314. Line Amplifier Equipment.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-316. Attenuator; Standard Audio Frequency 100-5,000 C.P.S.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-320. Filter; Radio Band Elimination.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-361. Standard Remote Control Circuits for Airways Radio Station.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-363. Holder, for Quartz Plates of Radio Transmitters.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-419. Filter; Combination Band Pass and Band Rejection, Radio (Obsolete).

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-452. Radio Teletype Receiving Keyer.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-454. Radio Teletype Filters.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-455. Combination Amplifier-Loudspeaker.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-469. Radio Range 2-Pole Interlock Relay; U.H.F.

U. S. Gov., Joint Army-Navy Specification JAN-S-28; 1944. Sockets; Electron-Tube Miniature.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-40-C; 1927. Adapter; Type FT-65-B, for Vacuum-Tube Sockets.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-54-F; 1933. Motor Alternator, Type GN-( )-33; Tone Alternator, Component of Radio Sets.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-64-C; 1927. Post; Binding, Types TM-34, TM-72 to 75, and TM-78 to 83, for Telephone and Testing Apparatus.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-207; 1924. Radio Control Box; Type BC-130.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-215C; 1928. Radio Tuner; Type BC-138.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-316; 1925. Aerophone; Type N-97.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-400C; 1927. Radio Control Box; Type BC-142.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-494A; 1941. Headset; Types P-16, P-18, P-19, and P-20.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-580A; 1933. Box; Type BX-2, Radio Set.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-695; 1936. Radio Control Box; Type BC-206.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-697A; 1936. Radio Control Box; Type BC-214-A.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-723; 1935. Fuse Box; Type BX-10, Radio Set High Voltage Supply.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-819C; 1938. Microphone; Type T-17, Radio, Hand.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-821; 1935. Oscillator Equipment RC-12 (Radio, 150 to 13,000 KCS).

U. S. Gov., U. S. Army, Signal Corps. Specification 71-822A; 1936. Fuse Box; Type BX-11, High Voltage, for Aircraft Radio.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-833; 1935. Radio Control Box; Type BC-215, for Aircraft Radio Equipment.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-848E; 1940. Amplifier; Interphone, Type BC-212-C, Aircraft, Radio.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-850C; 1941. Microphone, Type T-20-( ), Throat; and Microphone Amplifying Equipment, Type RC-19-( ).

U. S. Gov., U. S. Army, Signal Corps. Specification 71-852C; 1940. Jack; Types JK-26, JK-33A, JK-34A, and JK-46A, Receiver and Microphone.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-866A; 1940. Filter; Radio, Type FL-5-( ), Audio-Frequency.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-877B; 1942. Amplifier; Interphone BC-347-C, Aircraft Radio.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-897; 1940. Loudspeaker, Type LS-4; and Loudspeaker, Type LS-5.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-902; 1936. Frame; Type FM-18, Radio Pack.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-903A; 1940. Radio Control Box; Type BC-235A.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-913A; 1937. Headset; Type HS-16-A, Receiving.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-915; 1936. Radio Set; Type SCR-206-( ), Components for, Direction Finding.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-921; 1937. Adapter; Type SO-52, Radio Connecting.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-938A; 1938. Headset; Type HS-22-( ), Radio.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-939; 1938. Handset; Type TS-11-( ), Radio.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-940; 1937. Microphone; Type T-24-( ), Radio.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-944A; 1939. Interrupter; Type BZ-7-( ).

U. S. Gov., U. S. Army, Signal Corps. Specification 71-949A; 1940. Control Unit, Type RM-7-( ); and Monitor.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-962A; 1942. Power Equipment, for Radio Set SCR-197-( ).

U. S. Gov., U. S. Army, Signal Corps. Specification 71-969; 1939. Holder; Type M-167, Radio Log Sheet.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-972; 1939. Control Box; Type BC-321.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-975A; 1942. Holder, Crystal, Type FT-171-B, With Crystal; Piezo Electric Quartz Crystal and Holder, 2,000-5, 250-Kilocycles.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-987; 1940. Remote-Control Equipment; Type RC-47.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-1034; 1942. Remote Control Unit RM-14; and Associated Equipment.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-1049; 1942. Filter FL-10.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-1058; 1942. Handset; Type TS-13-( ), Radio.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-1059; 1942. Headset P-23.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-1122A; 1942. Filter; Radio, Type FL-8-( ), Audio-Frequency.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-1123; 1941. Tuning Shaft MC-215; Parts and Complete Assembly.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-1140; 1941. Cushion MC-162-A, for Receiver R-14.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-1147; 1942. Indicator BC-727.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-1319; 1942. Remote Control Unit RM-29-( ).

U. S. Gov., U. S. Army, Signal Corps. Specification 71-1355A; 1943. Crystal Unit DC-9-AJ.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-1360; 1942. Holder, Crystal FT-243 with Crystal; Piezo Electric Quartz Crystal and Holder.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-1370A; 1944. Maintenance Equipment ME-13-( ); Components for.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-1624; 1943. Maintenance Equipment ME-40-( ); Principal Components for Maintenance of Radio Set SCR-300-( ).

U. S. Gov., U. S. Army, Signal Corps. Specification 71-1626; 1943. Crystal Unit DC-18-( ).

U. S. Gov., U. S. Army, Signal Corps. Specification 71-1672; 1943. Dehydrator Cabinet CH-169-( ).

U. S. Gov., U. S. Army, Signal Corps. Specification 71-1729; 1943. Microphone Adapter M-299.

U. S. Gov., Veterans Administration. Specification VA-M-329; 1943. Radio Attachment Plugs.

U. S. Gov., Veterans Administration. Specification VA-MC-177d; 1940. Radio Headsets Complete With Cords.

*References.*—Telephone plugs and jacks, *see* 718.29.

## 718.7 SOUND RECORDING AND REPRODUCING APPARATUS

Acoustical Society of America, sponsor. American Standards Assn., Z 24.2-1942. Noise Measurement. Define numerical scales and other essentials for measuring the loudness and intensity of sounds. Gives definitions, standards for noise measurement, standards for loudness contours and scale of loudness, and appendix.

Acoustical Society of America, sponsor. American Standards Assn., Z24.3-1944. Sound Level Meters for Measurement of Noise and Other Sounds. For obtaining results which will approximate the loudness level obtained by the more elaborate ear-balance method. Covers purpose and definitions, and appendices cover response-frequency characteristics of sound level meters, tests for root mean square addition, calibration adjustment of individual sound level meter, tolerances in response-frequency characteristic, and correction of reading on specific noises.

Acoustical Society of America, sponsor. American Standards Assn., Z 24.4-1938. Recommended Practice for the Calibration of Microphones. Comprises a part of a group of definitions, standards and specifications for use in acoustial work. Purposes are three-fold—(1) to assist the National Bureau of Standards in establishing calibrating apparatus

for microphones and related acoustical apparatus; (2) to assist in obtaining agreement between different laboratories engaged in the work of calibration pending the availability of the Bureau's equipment; and (3) to further the general knowledge of this subject.

American Institute of Electrical Engineers, No.520; 1939. Test Code for Apparatus Noise Measurement. Sound level tests on apparatus, general considerations, room effects, ambient sound levels, sound level meter in accordance with A.S.A. Tentative Standard Z24.3, standard factory measurement tests, and procedure for field investigations.

American Medical Assn. Council on Physical Medicine. Minimum Requirements for Acceptable Audiometers, 1942. Gives requirements for frequencies, attenuation, range, wave form, extraneous noises, power supply, ruggedness of construction, uniformity of calibration, standard for reference, audiogram or auditory chart, definition of threshold of hearing, and marketing and advertising.

American Medical Assn. Council on Physical Medicine. Minimum Requirements for Acceptable Electric Hearing aids, 1943. Hearing aid shall improve at least 30 decibels for speech the hearing of the deafened ear for which it is prescribed or fitted. Gives detailed requirements.

Radio Manufacturers Assn. Amplifier Power Ratings, M6-221; 1941. Requirements for least power voltage at harmonic frequencies and maximum power output regardless of distortion. Gives standard test conditions for sound equipment.

U. S. Gov., Army Air Forces. Specification 40704-2; 1944. Recorder and Reproducer; Sound, Magnetic Tape Type.

U. S. Gov., Army-Navy Aeronautical Specification AN-N-7; 1944. Noise-Measuring Equipment.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-305. Recorder, for Voice and Permanent Recording Medium.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-505. Recording Surfaces, for Voice Recorders.

U. S. Gov., Navy Dept. Specification 17M18a; 1944. Machines and Equipment; Sound Motion Pictures, 35-Mm. (Shipboard Use).

U. S. Gov., Navy Dept. Specification 17M19a; 1944. Machines and Equipment; Sound Motion Picture, 35-Mm.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-246; 1924. Ground Listening Set; Type GR-1, Formerly Geophone, Sound Ranging.

*References.*—Magnetic pick-up, *see* 718.69; motion picture projectors, *see* 912.

# 719. MISCELLANEOUS ELECTRICAL APPARATUS

## 719.1 AUXILIARY ELECTRICAL EQUIPMENT

U. S. Gov., U. S. Army, Signal Corps. Specification 74-29; 1939. Register; Type ML-103-( ).

*References.*—Auxiliary motors for ships, *see* 711.21, 711.22.

## 719.3 MAGNETOS

Society of Automotive Engineers. Aeronautical Standard No.12; 1941. Mountings for Aircraft Magnetos. Covers three types of flanges for magneto mountings—(1) two-bolt, (2) three-bolt, and (3) four-bolt. Gives requirements for material, workmanship, and design; and includes diagrammatic dimensional drawings.

Society of Automotive Engineers. Aeronautical Standard No.13; 1941. Drives for Aircraft Magnetos. Covers two types of drive couplings—(1) 17-tooth and (2) 33-tooth; and three types of shaft ends—(1) tapered, (2) 6-tooth spline, and (3) 24-tooth spline. Gives general requirements, coupling design, and shaft end design; and includes dimensional diagrammatic drawings.

Society of Automotive Engineers. Aeronautical Standard No.14; 1941. Installation of Aircraft Magnetos. Gives requirements for type disignations, blast tube, outlet elbow, radio interference, ground and high tension terminal connections, and supercharging (or forced ventilating) connections; and includes diagrammatic dimensional drawings.

Society of Automotive Engineers. Aeronautical Standard No.15; 1941. Tests for Aircraft Magnetos. Given for general information and is not to be considered as part of other aeronautical standards or specifications for magnetos. These tests provide for a standard method of checking whether a magneto is performing in a normal acceptable manner and whether it is fit for further use. Includes requirements for visual inspection of magneto housing, drive shaft, spline or coupling, gears, breaker point assembly, timing, distribution finger and blocks; and for tests of coil and condenser, conditioning at room temperature, coming-in speed, primary current, and voltage.

U. S. Gov., Army-Navy Aeronautical Specification AN-M-4-2; 1944. Magnetos; Aircraft Engine Driven.

## 719.4 SPARK PLUGS

Society of Automotive Engineers. Aeronautical Recommended Practice 159; 1943. Quench Bomb Spark Plug Test. This test is considered applicable where more comprehensive information about the condition of the spark plug is desired than is available through a conventional sparking bomb test. Covers general requirements, preparation for test, conduct of test, precautions, and description of parts.

Society of Automotive Engineers. Aeronautical Standard 9A; 1943. Protector and Cable Attachment. Spark Plug Terminal; Aircraft Engine. Diagrammatic dimensional drawing for types I and II.

Society of Automotive Engineers. Aeronautical Standard No.28; 1942. Spark Plugs; Aircraft Engine—18 Mm. Covers two types—(I) ceramic insulated; (II) mica insulated; of three categories each—shielded long reach, shielded short reach, and unshielded short reach. Includes general and specific requirements, qualification tests, inspection tests, and diagrammatic dimensional drawings.

U. S. Gov., Army-Navy Aeronautical Specification AN-P-4-4; 1944. Plugs; Aircraft Engine, Spark.

U. S. Gov., Army-Navy Aeronautical Specification AN-P-67; 1945. Plugs; 14 Mm, Spark.

U. S. Gov., Federal Specification W-P-506; 1936. Plugs; Spark. Covers unshielded spark plugs with insulators of material other than mica for all internal-combustion engines requiring electric ignition, except aircraft engines. Four classes—hot, normal, cold, and very cold. Gives requirements for type designation, sizes, suitability for service, construction and dimensions, shells, bushing, terminal nut, porcelain insulators, threads, and gaskets; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., Navy Dept. Specification 17P1d; 1934. Plugs; Spark.

## 719.5 ELECTRICAL INSULATING MATERIALS

### 719.50 General Items

American Society for Testing Materials, D 48-43 T; 1943. American Standards Assn., C 59.1-1943. Tentative Methods of Testing Molded Materials Used for Electrical Insulation. Apply to the testing of all solid electrical insulating materials (except dry process porcelain) that are formed in molds by the application of pressure, either with or without heat. Acetone extraction, arc-resistance, compressive strength, dielectric strength, deformation under load, distortion under heat, flexural strength, resistance to impact, insulation and volume resistance, power tests, power factor and dielectric constant, shrinkage from mold dimensions, tensile strength, and water absorption.

American Society for Testing Materials, D 149-44; 1944. Methods of Test for Dielectric Strength of Electrical Insulating Materials at Commercial Power Frequencies. For solid, semisolid, and liquid materials, except where a specific material requires special treatment. Covers purpose, apparatus, electrodes, test specimen, conditioning, application of voltage, report, and description of a simple form of motor-operated variable auto-transformer.

American Society for Testing Materials, D 150-44 T; 1944. Tentative Methods of Test for Power Factor and Dielectric Constant of Electrical Insulating Materials. Procedures for the determination of the power factor and dielectric constant of solid and fluid electrical insulating materials at frequencies from 25 cycles per second to 100 megacycles per second. These procedures include five bridge arrangements, and two resonant-circuit methods. Definitions, theory of test, test specimens, electrodes, apparatus and procedure, formulas, and bibliography.

American Society for Testing Materials, D 176-44; 1944. Methods of Testing Solid Filling and Treating Compounds Used for Electrical Insulation. Apparatus and test procedure for brittleness, specific gravity, coefficient of expansion, dielectric strength, volume resistance-temperature characteristics, power factor and dielectric constant, degassing compounds, and tests using A.S.T.M. Methods D 127 for melting point, D 61 for softening point, D 92 for flash point, D 6 for evaporation, D 88 for viscosity, and D 5 for penetration.

American Society for Testing Materials, D178-24; 1924. American Standards Assn., C59.4-1935. Rubber Matting for Use Around Electrical Apparatus or Circuits Not Exceeding 3,000 Volts to Ground. Construction, tensile strength and elongation requirements, test requirements for voltage and dielectric strength tests, and minimum thickness.

American Society for Testing Materials, D 229-43; 1943. American Standards Assn., C 59.13-1943. Methods of Testing Sheet and Plate Materials Used in Electrical Insulation. For phenolic and other types of laminated sheets, vulcanized fiber, hard rubber, asbestos composition board, etc. Covers definitions, conditioning, thickness; tensile, flexural, and compressive strength; resistance to impact, water absorption, volatile matter, dielectric strength, power factor and dielectric constant, bonding strength, Rockwell hardness, ash, flammability; and test specimen and procedures.

American Society for Testing Materials, D 257-38; 1938. American Standards Assn., C59.3-1939. Methods of Test for Insulation Resistance of Electrical Insulating Materials. Design and application of test electrodes to tubular, flat, and liquid insulating materials; apparatus and circuits, control of humidity, procedure for measurement of volume resistance and for surface resistance. and calculations.

American Society for Testing Materials, C 259-44 T; 1944. Tentative Methods of Testing Varnished Cloths and Varnished Cloth Tapes Used in Electrical Insulation. Covers procedures for the testing of varnished cloths and varnished cloth tapes including glass fabrics. Gives requirements for sampling, conditioning, thickness, breaking strength, dielectric strength, endurance, elongation, power factor and dielectric constant, insulation resistance, resistance to oil, weight, threads per inch, and appendix.

American Society for Testing Materials, D350-43; 1943. Methods of Testing Flexible Varnished Tubing Used for Electrical Insulation. Covers tubing and saturated sleeving used as insulation for leads on electrical apparatus. Gives requirements for sampling, conditioning, apparatus, test specimens, procedure, and report for determining dimensions, dielectric strength, aging, heat endurance, and rate of burning.

American Society for Testing Materials, D351-42T; 1942. Tentative Method of Test for Power Factor and Dielectric Constant of Natural Mica. Includes natural block mica and mica splittings; description of test apparatus, selection of specimens, procedure, and information reported.

American Society for Testing Materials, D 374-42; 1942. Methods of Test for Thickness of Solid Electrical Insulation. For determining the thickness of solid insulating materials, except rubber insulating tape and friction tape for electrical purposes. Precision of methods; method A—machinists' micrometer with ratchet; method B—machinists' micrometer without ratchet; method C—dead weight dial micrometer; and calibration of micrometers.

American Society for Testing Materials, D 468-42; 1942. Methods of Testing Pin-Type, Lime-Glass

Insulators. Covers glass insulators for primary and secondary power distribution to 10,000 volts to ground; requirements for sampling, structural defects, resistance to thermal shock, gaging of threads, mechanical strength, electrical tests, and details of thread standards for the power industry.

American Society for Testing Materials, D 495-42; 1942. Method of Test for Arc Resistance of Solid Electrical Insulating Materials. Describes a high-voltage low-current a.c. arc, drawn between two tungsten pointed electrodes resting on the surface of the material under test, increased until the material fails by becoming conducting. Apparatus, test specimens, procedure, and number of tests.

American Society for Testing Materials, D 530-44 T; 1944. Tentative Methods of Testing Hard Rubber Products. Includes chemical, physical, and electrical tests of vulcanized compositions having a ratio of combined sulfur to rubber over 15 percent. Chemical analysis using A.S.T.M. Method D 297, analysis of ash, procedures for physical tests for tensile strength and elongation, impact resistance, hardness, flexural strength, cold flow, and softening point; and for dielectric strength, power factor, and surface and volume resistivity.

American Society for Testing Materials, D 550-44; 1944. Methods of Testing Glass Spool Insulators. For secondary power distribution. Sampling, routine tests, structural defects, gaging, report, record, and marking.

American Society for Testing Materials, D 649-42 T; 1942. Tentative Method of Test for Compressive Strength of Electrical Insulating Materials. Covers a procedure for determining the maximum compressive strength which an electrical insulating material is capable of developing. This method is applicable to molded plastics, sheet and plate materials, and laminated round rods and tubes. Apparatus, test specimens, conditioning test specimens, procedure, and report.

American Society for Testing Materials, D 650-42 T; 1942. Tentative Method of Test for Flexural Strength of Electrical Insulating Materials. Covers a procedure for determining the flexural strength of all solid electrical insulating materials. Apparatus, test specimens, conditioning test specimens, thickness measurements, procedure, and calculation and report.

American Society For Testing Materials, D 651-42 T; 1942. Tentative Method of Test for Tensile Strength of Molded Electrical Insulating Materials. Covers a procedure for determining the tensile strength of all solid electrical insulating materials. Such factors as the speed of testing, manner of specimen preparation, conditioning of the specimen, surface condition of the specimen, skin effect and the presence of strains in the specimen, all influence the reproducibility of test results. Apparatus, test specimens, conditioning test specimens, test conditions, procedure, and report.

American Society for Testing Materials, D 652-43; 1943. Methods of Measuring Mica Stampings Used in Electronic Devices and Incandescent Lamps. Cover the procedures for measuring the hole spacing, thickness, and hole size of small pieces of fabricated natural mica such as bridges, spacers, and supports used in electronic devices and incandescent lamps. Gives requirements for hole spacing, thickness, hole size, and report.

American Society for Testing Materials, D 669-42 T; 1942. Tentative Method of Test for Power Factor and Dielectric Constant Parallel With Laminations of Laminated Sheet and Plate Insulating Materials. Covers the procedure for determining the power factor and dielectric constant of stiff laminated sheet and plate insulating materials in a direction parallel with the laminations.

American Society for Testing Materials, D 681-42 T; 1942. Tentative Methods of Testing and Tolerances for Jute Rove and Plied Yarn for Electrical and Packing Purposes. Apply to plied jute yarn and to single and plied jute rove, both treated and untreated, for electrical and packing purposes.

American Society for Testing Materials, D 741-43T; 1943. Tentative Methods of Measuring Dimensions of Rigid Rods Used in Electrical Insulation. Gives requirements for conditioning, method of measurement, length of rods 12 in. and under in length, length of rods over 12 in. in length, diameter, and warp.

American Transit Assn. Recommended Guide for Preparation of Specifications for Insulated Wire and Cable, D120-41; 1941. This guide covers general standards for single, multi-conductor belted, and multi-conductor non-belted wires and cables insulated with rubber, varnished cambric, or paper insulation and having any of the usual types of sheath or outer covering. It outlines the information that should be given in purchase orders or inquiries for wire and cable. Covers conductors, insulation, conductor identification, conductor assembly, fillers, binder, shielding, protective covering, saturant and finish, armor, and outer protective covering.

American Transit Assn. Recommended Practice of Acceptance Tests for Insulation Resistance of Trolley Buses, E132-36; 1936. Recommends the method of tests for insulation resistance of trolley buses.

American Transit Assn. Recommended Practice for Insulating Materials for Railway Repair Shop Use, E136-34; 1934. Tapes, treated and untreated, mica and asbestos. Sets forth requirements for various grades of tapes referred to in this specification.

Assn. of American Railroads, Operations and Maintenance Dept., Engineering Div., Signal Section. Manual of Recommended Practice, 1941. Insulation Resistance. Covers the properties of electrical insulation materials ohmic resistance, temperature effect, surface leakage, instrument checking, and field test.

National Electrical Manufacturers Assn., American Institute of Electrical Engineers, and Edison Electric Institute (published jointly). Standard Basic Impulse Insulation Levels, NEMA 109; 1941. The general principle of insulation coordination requires a reasonable margin between the voltage level held by the protective device and the various basic levels themselves to insure that adequate protection is provided. Gives table with values set up on this basis and defines basic impulse insulation levels and withstand voltage.

Underwriters' Laboratories, Inc. Bulletin of Research 26; 1942. Electrical Conductivity of Snow and Gas Discharge From First Aid Carbon Dioxide Extinguishers. This bulletin describes the electrical conductivity of gas and snow discharged from carbon dioxide extinguishers of the first aid type, when fighting fires in or adjacent to high-voltage electrical equipment. Covers plan of investigation, description of test assemblies, record of tests, summary of test results, conclusions, and recommendation.

Varnished Tubing Assn., Inc. Standards for Varnished Tubing and Saturated Sleeving Used for Electrical Insulation, 1944. Covers the physical requirements and procedure for testing flexible varnished tubing and saturated sleeving used as electrical insulation. Gives definitions, grades, material, color, dimensions, yarn content, sampling, conditioning, test accessories and specimens, diameter and wall thickness tests, dielectric tests, dielectric test procedure, aging test and procedure, heat endurance tests and procedure, burning test and procedure, packing, marking, inspection, rejection, and rehearing.

## 719.51 Asbestos and Mica

American Society for Testing Materials, D 315-44; 1944. Specifications and Methods of Test for Asbestos Tape for Electrical Purposes. Asbestos tape woven from plain asbestos yarn and suitable for electrical purposes. Gives tolerances, width, thickness, weight, weave, construction, breaking strength, electrical properties, asbestos content, sizing, workmanship, finish, rolls, and methods of testing.

American Society for Testing Materials, D 352-39; 1939. Methods of Testing Pasted Mica Used in Electrical Insulation. Apply to mica sheets made from mica splittings bonded with organic binder, for use in hot molding; commutator insulation, heating plates, and similar purposes. Test specimen and procedures for determining decrease in thickness under pressure, stability, mica and binder content, molding test, dielectric strength, and resistivity.

American Society for Testing Materials, D 375-44; 1944. Specifications and Methods of Test for Asbestos Roving for Electrical Purposes. Covers asbestos textile product for insulation on heat-resisting fixture wire, flexible cord or heater cord, etc. Gives definitions, number (cut), grades, iron content, methods of testing, and total iron content. A. S. T. M. Emergency Alternate Provision EA-D 375; 1942, affected Section 5, Iron Content, and section 14, Procedure.

American Society for Testing Materials, D 748-43T; 1943. Tentative Specifications for Natural Block Mica and Mica Films Suitable for Use in Fixed Mica-Dielectric Capacitors. Gives requirements for types, grades (sizes), electrical and physical properties, visual qualities, methods of testing, and appendix.

American Standards Assn., C 75.6-1943. Glass-Bonded Mica Radio Insulators (American War Standard). For the purpose of facilitating production of glass-bonded mica radio insulators. Gives applicable specifications, classification, material and workmanship, general and detail requirements, methods of inspection, and tests; packaging, packing, and marking for shipment; requirements applicable to individual government departments, notes, and appendix covering design criteria.

National Electrical Manufacturers Assn. Asbestos and Asbestos-Varnished Cambric Insulated Wires and Cables Standards, 39-54; 1939. Cover electrical conductors insulated with asbestos or combinations of asbestos and varnished cambric and finished with cotton braids, asbestos braids, or lead sheaths; gives requirements as to physical properties, electrical and physical tests, dimensional tables for various voltages, and uses.

National Electrical Manufacturers Assn. Manufactured Electrical Mica Standards 39-55; 1939. Includes classification of muscovite and phlogopite (amber) mica splittings; composition, tolerances and properties of manufactured mica sheets and wrappers, dimensions of standard sheets, mica tubes, and rings, using tests in accordance with A.S.T.M. methods.

U. S. Gov., Joint Army-Navy Specification JAN-I-7; 1944. Insulators; Glass-Bonded-Mica, Radio.

U. S. Gov., Navy Dept. Specification 17-I-29; 1942. Insulation; Electrical, Asbestos-Fiber, Treated and Untreated.

U. S. Gov., Navy Dept. Specification 17-I-6d; 1942. Insulation; Electrical, Asbestos-Board, Impregnated.

U. S. Gov., Navy Dept. Specification 17-I-32; 1945. Insulation; Electrical, Mica, Group M.

U. S. Gov., Navy Dept. Specification 17M5c; 1934. Insulation; Electrical, Mica, Plate (Pressed) and Sheet.

U. S. Gov., Treasury Dept., Procurement Div., No.460; 1941. Insulation; Electrical, Asbestos-Board, Impregnated. Shall be of the asbestos-board type, impregnated with a suitable dark colored insulating compound, having a total inorganic content of not less than 80 percent, by weight, of which at least 50 percent shall be asbestos. Gives detail requirements, sampling, inspection, tests, packaging, packing, and marking.

U. S. Gov., Treasury Dept., Procurement Div., No.518; 1941. Wire; Fixture, asbestos-Insulated. Covers two types—(I) plain white or black finish impregnated asbestos insulation and (II) impregnated asbestos insulation with glazed cotton or rayon braid; two classes—(A) solid and (B) stranded. Gives requirements for sizes, material, conductors, asbestos insulation, braids, flame-resisting properties, dielectric strength, amd flexibility; methods of sampling, inspection, and tests; and packaging, packing, and marking.

*References.*—Methods of testing asbestos yarns, *see* 545.4; textile testing machines, *see* 770; methods of testing for insulating qualities, *see* 719.50.

## 719.52 Insulating Fiber and Paper

American Society for Testing Materials, D 202-44T; 1944. Tentative Methods of Sampling and Testing Untreated Paper Used in Electrical Insulation. Sampling, conditioning, moisture content, thickness, weight, apparent density, tensile strength, tearing strength, bursting strength, folding endurance, absorption, air resistance, fiber composition, ash,

acidity or alkalinity, conducting paths, deterioration, and rate of impregnation.

American Society for Testing Materials, D 616-41 T; 1941. Tentative Specifications for Round Phenolic Laminated Tubing for Radio Applications. Cover round phenolic laminated tubing for radio and similar applications where high frequencies are involved. Either rolled or molded tubes may be furnished in accordance with these specifications. Material, punching quality, axial compressive strength, density of rolled tubing, power factor, dielectric constant, and dielectric loss factor; length, standard sizes, inside and outside diameter; permissible variations in diameter and wall thickness; color and finisn, methods of testing, workmanship, packing, marking, inspection, rejection; and appendix—usual applications for the various grades of phenolic laminated tubing.

American Society for Testing Materials, D619-42T; 1942. Tentative Methods of Testing Vulcanized Fiber Used for Electrical Insulation. For the rapid determination, with reasonable accuracy, of the amount of moisture and other volatile matter in vulcanized fiber of all grades and thicknesses. Test specimen, procedure, and calculation and report.

American Society for Testing Materials, D 710-43T; 1943. Tentative Specifications for Vulcanized Fibre Sheets, Rods, and Tubes Used for Electrical Insulation. Gives vulcanized fibre, grades, forms and colors, chemical requirements, detail requirements for sheets, detail requirements for round rods, detail requirements for round tubes, sheet sizes and permissible variations, rod sizes and permissible variations, tube sizes and permissible variations, methods of testing, workmanship, inspection, and rejection.

American Transit Assn. Specification for Impregnated Paper Insulated, Lead Covered Cable, D13-41; 1941. This specification is intended to apply to all sizes and classes of impregnated paper-insulated, lead covered cable which is to be used for the transmission and distribution of electrical energy in underground conduit systems. Gives general requirements, tests to be made on each length of cable, tests to be made on samples, tests to be made after installation, reels and shipment, and miscellaneous.

American Transit Assn. Recommended Specification for Weather-Resistant Weatherproof Wire and Cable U.R.C. Type, D114-41; 1941. These specifications cover weather-resistant, weatherproof wire and cable, the conductors, the materials used for the fibrous coverings, and the saturating and finishing compounds. Covers materials and properties, acceptance requirements, general requirements, and appendix.

Assn. of American Railroads, Operations and Maintenance Dept., Engineering Div., Signal Section. Manual of Recommended Practice. Specification 13-39; 1939. Hard Fibre. For use in railroad track joints, switch rods, signal pipe, etc. for track circuit insulation in signal service. Allowable variations in contour and dimension, test requirements for electrical surface leakage, specific gravity, compression, and absorption of water.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, Volume 2; 1944. Vulcanized Fiber. Covers definition, constants, solubility, derivation, uses, grades and forms, containers, and substitutes.

National Electrical Manufacturers Assn. Vulcanized Fiber Standards, 43-87; 1943. A reference work of practical information concerning the manufacture and test of vulcanized fiber. Covers description and standard grades; standard colors; dimensions of vulcanized fibre sheets, blocks, rods, and tubes; and standards for physical, electrical, and chemical properties.

U. S. Gov., Navy Dept. Specification 17-I-10a; 1941. Paper; Insulating (Electrical), Pressboard.

U. S. Gov., Navy Dept. Specification 17-I-11d; 1944. Insulation; Electrical, Paper, Fish.

*References.*—Methods of electrical testing of insulating materials, *see* 719.50; methods of physical testing of paper and fiber, *see* 470.3; other fiber board (nonelectrical), *see* 472.93; paper in paper insulated cable, *see* 715.41.

## 719.53 Marble and Slate Insulation

*References.*—Electrical slate, *see* 511.53; methods of testing insulating qualities, *see* 719.50; cut-out bases, *see* 714.22; panels and panelboards, *see* 714.41; switchboards, *see* 714.42, 718.22.

## 719.54 Porcelain Insulation

American Standards Assn., C 75.1-1943. Ceramic Radio Insulating Materials, Class L (American War Standard). For the purpose of facilitating production, procurement, and inspection of ceramic radio insulating materials. Gives applicable specifications, classification, materials, general and detail requirements, methods of test, packing and marking of packages, and notes.

American Standards Assn., C 75.4-1943. Ceramic Radio Dielectric Materials, Class H (American War Standard). For the purpose of facilitating production, procurement, and inspection of ceramic radio dielectric materials. Gives applicable specifications, classification, materials, general and detail requirements, methods of test, packing and marking of packages for shipment, requirements applicable to individual government departments, and notes.

U. S. Gov., Joint Army-Navy Specification JAN-I-8; 1944. Insulators; Steatite, Radio.

U. S. Gov., Joint Army-Navy Specification JAN-I-10; 1944. Insulating Materials; Ceramic Radio, Class L.

U. S. Gov., Joint Army-Navy Specification JAN-I-12; 1944. Insulating Materials; Ceramic Radio Dielectric, Class H.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-229D; 1938. Radio Insulator; Ceramic and Vitric.

*References.*—Electrical porcelain, porcelain insulators, *see* 532.22; methods of testing insulating qualities, *see* 719.50, 532.22.

## 719.55 Rubber Compounds and Tapes

American Society for Testing Materials, D119-38; 1938. American Standards Assn., C59.6-1939. Rubber Insulating Tape. For insulating joints in electric wires and cables. Construction, chemical composition, tensile strength, dielectric strength, and fusion test requirements, standard weight, dimensions,

and permissible variations. A.S.T.M. Emergency Alternate Provisions EA-D119; 1942, affected sections 2, 4, 5, 6, 8, 13, and 15.

American Society for Testing Materials, D532-39T; 1939. Tentative Specifications for Rubber Sheath Compound for Electrical Insulated Cords and Cables. Covers a durable vulcanized rubber compound for use as the outer covering or sheath on insulated electrical cords and cables. Requirements for sampling, physical properties, tear test, and for other tests using A.S.T.M. Method D470. A.S.T.M. Emergency Alternate Provision EA-D 532; 1942, affected section 3, Physical Requirements; section 6, Test Specimens; and section 8, Methods of Testing.

American Society for Testing Materials, D 812-44 T; 1944. Tentative Specification for GR-S (Synthetic Rubber) Sheath Compound for Electrical Insulated Cords and Cables Where Extreme Abrasion Resistance Is Not Required. Gives scope, character of sheath, methods of testing, physical requirements, sampling for original physical tests, sampling for accelerated aging tests, test specimens, and rejection.

American Society for Testing Materials, ES 6a; 1943. Emergency Specifications for GR-S Synthetic Rubber Sheath Compound for Electrical Insulated Cords and Cables. Covers a durable, vulcanized synthetic rubber compound suitable for use as the outside covering or sheath on insulated electric cords and cables. Gives requirements for character of sheath, methods of testing, physical requirements, sampling for original physical tests, sampling for accelerated aging tests, test specimens, and rejections.

American Transit Assn. Rubber Insulated Wire and Cable for Outside Use for Power Distribution Purposes—Class A Compound, D10-41; 1941. Apply to the rubber compound used for the insulation of electric wire and cable, and which is known as Class A 30 percent Hevea rubber. Gives requirements as to conductor, insulation, cable tape, cotton braid, finish, lead sheaths, and armor.

American Transit Assn. Recommended Specification for Rubber Insulated Wire and Cable for General Purposes—Code Rubber Insulation, D116-41; 1941. This specification applies to the rubber compound used for insulation of electric wire and cable and which is known as code rubber insulation. Covers general requirements, conductor, insulation, cable tape, braid, finish, lead sheaths, and armor.

American Transit Assn. Recommended Specification for Rubber Insulated Wire and Cable for Outside Use for Power Distribution Purposes—Class AO Compound, D117-41; 1941. These specifications apply to the rubber compound used for the insulation of electric wire and cable and which is known as Class AO 30 percent Hevea rubber. Covers general requirements, conductor, insulation, cable tape, cotton braid, finish, lead sheaths, and armor.

American Transit Assn. Recommended Specification for Rubber Insulated Wire and Cable for Outside Use for Power Distribution Purposes—Performance Rubber Compound, D118-41; 1941. This specification is intended to cover the furnishing and testing of various kinds of rubber insulated conductors for power distribution purposes, the insulation to be of the grade known as Performance Rubber Compound. Covers general requirements, conductor, insulation, cable tape, cotton braid, finish, lead sheaths, and armor.

Assn. of American Railroads, Operations and Maintenance Dept., Engineering Div., Signal Section. Manual of Recommended Practice. Specification 56-41; 1942. Joint Specification of the A.A.R. Electrical Section (Engineering Div.), Signal Section, and Telegraph and Telephone Section. Rubber Insulating Tape. Includes requirements for material and workmanship, tape in accordance with American Society for Testing Materials Specification D 119, inspection, tests, acceptance, packing and marking, and warranty.

Assn. of American Railroads, Telegraph and Telephone Section, 2-G-34; 1928. Rubber Insulating Tape. Quality requirements for rubber, modified A.S.T.M. Method of Chemical Analysis D-15, tensile strength, dielectric properties, and fusion tests, standard weight, dimensions, and variations.

Electrical Standards Committee of American Standards Assn., sponsor. American Standards Assn., C8.11-1936. American Institute of Electrical Engineers' Standard C8.11. Tentative Standard for Code Rubber Insulation for Wire and Cable for General Purposes.

Electrical Standards Committee of American Standards Assn., sponsor. American Standards Assn., C8.17-1936. American Institute of Electrical Engineers' Standard C8.17. Tentative Standard for Class AO 30 Percent Rubber Insulation for Wire and Cable for General Purposes. Apply to the rubber compound used for the insulation of electric wire and cable (up to and including wire and cable for 5,000 rated circuit volts) and which is known as Class AO 30 percent Hevea rubber.

International Municipal Signal Assn., Inc. Specification No.91; 1942. Rubber Insulating Tape. Covers rubber insulating tape suitable for the insulation of joints in electrical wires and cables and for other insulating use in fire alarm, police signal, and other municipal signal systems. Gives requirements for material, separator, rubber compound, dimensions, packing and marking for shipment, sampling and testing, and inspection and acceptance or rejection.

U. S. Gov., Army Air Forces. Specification 26594 (2); 1944. Tape; Rubber, Vulcanized.

U. S. Gov., Army Air Forces. Specification 26595(2); 1944. Tape; Rubber, Vulcanizing.

U. S. Gov., Army Air Forces. Specification 40684 (1); 1944. Kit; Cable Vulcanizing, Type X-1, Portable, Field Lighting.

U. S. Gov., Federal Specification HH-T-111a; 1939. Tape; Rubber, Insulating. Covers one grade. Gives requirements for material and workmanship, composition, dimensions, separator, tensile strength, ultimate elongation, fusion, tackiness, and dielectric strength; methods of sampling, inspection and tests; and packing, packaging, and marking for shipment. Emergency Alternate Federal Specification E-HH-T-111a, July 1943, required one grade suitable for insulating splices in electric conductors under normal conditions and changed requirements for composition, dimensions, tensile strength, ultimate elongation, dielectric strength, sampling, test, packaging, and marking.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-134D; 1930. Compound; Insulating, 30 Percent Rubber, for Wire, Etc.

*References.*—Methods of testing, *see* 719.50; methods of testing rubber goods, *see* 200; rubber insulated cables, cord, wire, *see* 715.41, 715.42, 715.44; rubber matting for use around electrical apparatus, *see* 208.1.

## 719.56 Textiles Used for Electrical Insulation

American Society for Testing Materials, D69-38; 1938. Friction Tape for General Use for Electrical Purposes. Applies to tape commonly used for protecting and binding in place, joints of electrical wires, and other electrical and mechanical purposes. Requirements for cotton sheeting, frictioning compound, impregnation, adhesiveness, tackiness, discoloration of copper, pinholes, tensile strength, dielectric strength, parallelism of threads, sizes, and methods of testing. A.S.T.M. Emergency Alternate Provisions EA-D69a; 1942, affected sections 3, 6, 7, 13, 19, 20, 21, and 22.

American Society for Testing Materials, D 335-36; 1936. 0.007-Inch Cotton Tape for Electrical Purposes. Requirements for uniform woven tape free from "motes" or other impurities, with selvage edge, for sizing, physical properties, tests using A.S.T.M. Method D 259, winding, and size of rolls.

American Society for Testing Materials, D372-44T; 1944. Tentative Specifications for Flexible Treated Cotton and Rayon Sleeving Used in Electrical Insulation. Covers five grades of tubing, requirements for material, color, dielectric strength, aging test, heat endurance, rate of burning, table of standard sizes and permissible variations, and tests in accordance with A.S.T.M. Method D350.

American Society for Testing Materials, D 373-44T; 1944. Tentative Specifications for Black Bias-Cut Varnished Cloth Tape Used for Electrical Insulation. For insulating bus bars, joints and terminals of wire and cable, and electric apparatus connections. Includes requirements for manufacture, surface, breaking strength, elongation, resistance to oil, dielectric strength, dimensions and permissible variations.

American Transit Assn. Recommended Specification for Varnished Cambric Insulated Cables, D113-41; 1941. This specification applies to all sizes and classes of varnished cambric lead covered or braided cables which are to be used for the transmission and distribution of electrical energy, and may apply to either underground, aerial, or station cable, under normal conditions of installation. Gives general requirements, tests to be made on each length of cable, tests to be made on samples, and general provisions.

American Transit Assn. Recommended Practice for Insulating Materials for Railway Repair Shop Use, E136-34; 1934. Cloths, treated and untreated. Gives requirements as to the thicknesses and grades of weave and finish for cloths referred to in this specification.

Assn. of American Railroads, Operations and Maintenance Dept., Engineering Div., Electrical Section. Manual of Recommended Practice, 4-a-41; 1941. Specification for Friction Tape for Railroad Use. Gives purpose, tender, material and workmanship, cotton sheeting, frictioning compound, impregnation of fabric, pin holes, tensile strength, dielectric strength, dimensions, cutting into rolls, inspection, tests, acceptance requirements, packing, and warranty.

Assn. of American Railroads. Operations and Maintenance Dept., Engineering Div., Signal Section. Manual of Recommended Practice. Specification 82-41; 1942. Joint specification with A.A.R. Electrical Section (Engineering Div.), Signal Section, and Telegraph and Telephone Section. Friction Tape for Railroad Use. Includes requirements for material and workmanship, cotton, sheeting, frictioning compound, impregnation of fabric, pin holes, tensile strengths, dielectric strength, dimensions, cutting into rolls, inspection, tests, acceptance, packing and marking, and warranty.

Assn. of American Railroads, Operations and Maintenance Dept., Engineering Div., Signal Section. Manual of Recommended Practice. Specification 182-40; 1941. Weather-Resistant Braid for Insulated Wire and Cable. Provides for rubber-filled tape, outer braid coverings and weather-resistant saturant and finish on insulated wire and cable for use on signal circuits rated at 0-600 and 601-2,500 volts. Braid in accordance with American Standard Assn., C8.12, except angle of yarn, cable tape meeting A.S.T.M. Specification D 27, properties of saturant, mineral filler, performance tests, and alternate requisites.

Assn. of American Railroads, Operations and Maintenance Dept., Engineering Div., Signal Section. Manual of Recommended Practice. Specification 191-40; 1941. Flame-Retarding, Moisture Resistant Braid for Insulated Wire and Cable. Provides for rubber-filled tape, outer braid coverings and flame-retarding, moisture resistant finish on insulated wire and cable for use in weather protected locations and on signal circuits rated at 0-600 and 601-2,500 volts. Braid in accordance with American Standards Assn., C8.12, except angle of yarn, rubber-filled tape meeting A.S.T.M. Specification D 27, saturant of asphalt or stearine pitch base compound, finishing compound, and mica requirements. Also gives performance tests required.

Assn. of American Railroads, Telegraph and Telephone Section, 2-G-30; 1927. Friction Tape. Describes cotton sheeting fabric, adhesive rubber base insulating compound, impregnation, and gives requirements for adhesive test, tensile strength, pin holes, dielectric strength, standard weight, dimensions, and permissible variations.

National Electrical Manufacturers Assn. Black and Yellow Bias-Cut Varnished Cloth Tape. Standard 38-50; 1938. Includes both black tape and yellow tape for insulating electrical connections and apparatus; requirements as to dimensions and permissible variations, manufacture, tensile strength, and resistance to oil, with physical tests in accordance with A.S.T.M. Specification D295.

U. S. Gov., Federal Specification HH-T-101a; 1939. Tape; Friction. Covers two grades—(A) for general use and (B) for tropical conditions. Gives requirements for material, sulfur, adhesion, raveling, physical properties, friction, dielectric strength,

accelerated aging, tackiness, age, sampling, inspection, tests, packaging, packing, and marking. Emergency Alternate Federal Specification E-HH-T-101a; 1943, required one grade and changed requirements for friction compound, physical properties, friction, accelerated aging, tackiness, sampling, inspection, and tests, packaging, and marking.

U. S. Gov., Navy Dept. Specification 17C8a; 1941. Cambric; Insulating, Varnished.

U. S. Gov., Navy Dept. Specification 17-I-30; 1944. Insulation; Electrical, Cotton-Fiber, Untreated (Group CFU).

U. S. Gov., Navy Dept. Specification 17S10b; 1944. Sleeving; Insulating, Cotton.

U. S. Gov., Navy Dept. Specification 17T15b; 1942. Insulation; Electrical, Tape, Linen-Finish, Plain.

U. S. Gov., Navy Dept. Specification 53T4a; 1935. Tape; Linen, Gummed.

U. S. Gov., U. S. Army, Army Air Forces. Specification 6-298; 1941. Duck; Varnished Cotton (for electrical Insulation).

U. S. Gov., U. S. Army, Army Air Forces. Specification 6-299; 1941. Cambric; Varnished (for Electrical Insulation).

U. S. Gov., U. S. Army, Signal Corps. Specification 6-145B; 1930. Bandage; Type TL-97, Cable Splicing.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-75A; 1925. Cloth; Insulating.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-572; 1931. Bandage; Type TL-124, for Underground Conduit Construction.

*References.*—Insulating varnish, *see* 719.57; methods of testing, *see* 719.50; methods of testing rubber filled tape, *see* 200; methods of physical and chemical testing of fabrics, *see* 300.4; test methods and tolerances for electrical cotton yerns, *see* 302.10; varnished cambric insulation on wires and cables, *see* 715.44, 715.41; asbestos tape, *see* 719.51.

## 719.57 Electrical Insulating Varnishes

American Society for Testing Materials, D 115-41; 1941. Methods of Testing Varnishes Used for Electrical Insulation. For varnishes which are applied by brushing, dipping, or spraying and intended primarily for the purpose of providing electrical insulation. Density, viscosity, flash point, thickness, drying time, dielectric strength of varnish in solid state, heat endurance test, oil proof test, draining test, weight of nonvolatile matter, dielectric strength of liquid varnish, and description and use of the remodeled MacMichael viscosimeter.

American Society for Testing Materials, D 411-44; 1944. American Standards Assn., C59.18-1944. Methods of Testing Shellac Used for Electrical Insulation. For tests in accordance with A.S.T.M. Method D 29 for sampling, insoluble matter, iodine number, moisture content, wax, and ash. Requirements for determination of polymerization time, flow test, and details for apparatus; and methods of procedure.

American Society for Testing Materials, D 784-44T; 1944. Tentative Specification for Orange Shellac and Other Indian Lacs for Electrical Insulation. Gives scope, properties, and methods of testing.

American Transit Assn. Recommended Practice for Insulating Materials for Railway Repair Shop Use, E136-34; 1934. Baking varnishes referred to in this specification are composed of linseed or other drying oils, with or without gums or resins, and with a minimum amount of drier. A baking varnish should not be used except where baking at one hundred (100) to one hundred and ten (110) degrees C. is possible. At this temperature the varnish should harden in from twelve (12) to twenty-four (24) hours. Describes also the characteristics of these varnishes.

American Transit Assn. Recommended Practice for Insulating Materials for Railway Repair Shop Use, E136-34; 1934. Spirit varnishes referred to in this specification are composed of animal, vegetable, and synthetic gums or resins, such as shellac, copal, synthetic resin, etc., dissolved in spirits. Characteristics—oil resisting but not generally moisture-proof. This type of varnish is used extensively for stickers and binders in the manufacture of coils.

Assn. of American Railroads, Operations and Maintenance Dept., Engineering Div., Signal Section. Manual of Recommended Practice, 1932. Varnish Treatment of Electrical Windings. Gives insulation requirements, action on other materials, corrosion, life, fissures, elasticity, and temperature rating.

U. S. Gov., Navy Dept. Specification 52V13e; 1944. Varnish; Insulating, Electrical.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 3-182; 1943. Compound; Insulation, Ignition.

*References.*—Varnish, *see* 846; other impregnating treatment of windings, *see* 719.59.

## 719.58 Molded and Laminated Insulating Materials, Bakelite and Similar Products

American Society for Testing Materials, D 256-43T; 1943. Tentative Methods of Test for Impact Resistance of Plastics and Electrical Insulating Materials. Intended to determine the relative susceptibility to fracture by shock of plastic materials and electrical insulating materials as indicated by the energy expended by a standard pendulum type impact machine in breaking a standard specimen in one blow. Gives requirements for apparatus, test specimen, conditioning test specimens, procedure and report for both cantilever beam (Izod type) and simple beam (Charpy type) tests.

American Society for Testing Materials, D 348-42; 1942. American Standards Assn., C 59.14-1943. Methods of Testing Laminated Tubes Used in Electrical Insulation. Includes determination of tensile strength, compressive strength, water absorption, density, dielectric strength, power factor, and dielectric constant; requirements for test specimen, apparatus, and routine of procedures.

American Society for Testing Materials, D 349-42; 1942. American Standards Assn., C 59.15-1943. Methods of Testing Laminated Round Rods Used in Electrical Insulation. Requirements for test specimen, apparatus, and test procedure for determining tensile, flexural, compressive strength, water absorption, and density.

American Society for Testing Materials, D 392-38; 1938. American Standards Assn., C59.10-1941. Methods of Testing Molding Powders Used in Manufacturing Molded Electrical Insulators. Tests for physical

properties of organic binder, organic and inorganic fillers or mixtures, used in making electrical insulators and other plastic molded parts. Sampling, sieve analysis methods, apparent density, bulk factor, powder pourability, requirements for apparatus and procedures.

American Society for Testing Materials, D 467-44T; 1944. Tentative Specifications for Phenolic Laminated Sheet for Radio Applications. Cover six grades for radio or similar applications where high frequencies are involved. Requirements for layers of paper or cotton fabric impregnated with a phenolic compound and compressed into hard dense sheets under heat, for punching quality, flexural strength, power factor, dielectric properties, standard thicknesses, color and finish, with description of usual applications.

American Society for Testing Materials, D 494-41; 1941. Method of Test for Acetone Extraction of Phenolic Molded or Laminated Products. For determination of amount of acetone-soluble matter in molded or laminated phenolic products. Apparatus, preparation of sample, procedure, calculation, and report.

American Society for Testing Materials, D 551-41; 1941. Method of Measuring Shrinkage From Mold Dimensions of Molded Materials Used for Electrical Insulation. For comparison of batch-to-batch uniformity of thermo-plastic or thermosetting materials, but not for determination of shrinkage in any type of mold, nor shrinkage due to aging. Sampling, apparatus, test specimens, procedure, calculations and report, and reproducibility of results.

American Society for Testing Materials, D 570-42; 1942. Method of Test for Water Absorption of Plastics. Covers immersion test for guide to electrical and mechanical properties, and as a control test for uniformity of product. Describes apparatus, preparation of specimen, and procedure including reconditioning, calculation, and report.

American Society for Testing Materials, D 616-41 T; 1941. Tentative Specifications for Round Phenolic Laminated Tubing for Radio Applications. Cover round phenolic laminated tubing for radio and similar applications where high frequencies are involved. Either rolled or molded tubes may be furnished in accordance with these specifications. Material, punching quality, axial compressive strength, density of rolled tubing, power factor, dielectric constant, and dielectric loss factor; length, standard sizes, inside and outside diameter; permissible variations in diameter and wall thickness; color and finish, methods of testing, workmanship, packing, marking, inspection, rejection; and appendix—usual applications for the various grades of phenolic laminated tubing.

American Society for Testing Materials, D618-44T; 1944. Tentative Methods of Conditioning and Classifying for Conditioning Plastics and Electrical Insulating Materials for Testing. Cover procedures for establishing standard periods of time, temperatures, and relative humidities to be used in the pretreatment of plastics and electrical insulating materials prior to testing, as well as in the actual testing of such plastics whose physical properties are subject to rapid change as a result of variations in atmospheric conditions. Classification of materials for conditioning, apparatus, procedure, and report.

American Society for Testing Materials, D752-44T; 1944. Tentative Specifications for GR-M Polychloroprene Sheath Compound for Electrical Insulated Cords and Cables. Gives scope, character of sheath, methods of testing, physical requirements, sampling for original physical tests, sampling for accelerated aging and oil immersion tests, test specimens, oil immersion test, and rejection.

American Society for Testing Materials, D753-44T; 1944. Tentative Specifications for GR-M Polychloroprene Sheath Compound for Electrical Insulated Cords and Cables Where Extreme Abrasion Resistance Is Not Required. Gives scope, character of sheath, methods of testing, physical requirements, sampling for original physical tests, sampling for accelerated aging and oil immersion tests, test specimens, oil immersion test, and rejection.

Assn. of American Railroads, Mechanical Div., Electrical Section. Manual of Standard and Recommended Practice, 1943. Insulating Material for Train Control and Locomotive Lighting Equipment. Recommends material impervious to moisture, durable, strong, and seasoned to resist 300° F., or 400° F., if necessary, form of terminal blocks, and to comply with requirements for molded insulating materials, A.S.T.M. D48-27.

National Electrical Manufacturers Assn. Laminated Phenolic Products Standards 39-57; 1939. Includes phenolic plate, tubing and rod, in four grades of paper base laminated, and fabric base laminated; tolerances, tensile, flexural, dielectric, moisture, absorption properties, and table of equivalent rule numbers.

National Electrical Manufacturers Assn. Recommended Practice for Machining and Punching of Laminated Phenolic Plate, 39-58; 1939. For use in fabrication operations including sawing, drilling, tapping, threading, milling, turning, punching, shaving, and shearing. Includes table of punching properties of various grades.

U. S. Gov., Army Air Forces. Specification 32212-A; 1940. Phenolic-Material; Molded.

U. S. Gov., Federal Specification HH-P-256; 1940. Phenolic-Condensation-Products; Laminated (for Electrical Purposes). Covers three types—(I) paper base laminated phenolic material; (II) fabric base laminated phenolic material; (III) fabric base macerated material; and (IV) asbestos base laminated material. Each type, except III, is available in four forms—sheets, tubes, molded rods, and molded shapes. Type III is available only in sheets and molded shapes. Type I has six grades—X, P, XX, XXP, XXX, and XXXP; type II, four grades—C, CE, L, and LE; type III, one grade—F; and type IV, two grades—A and AA. Gives tables of available thicknesses for each type, grade, and form. Covers requirements for material and workmanship, uniformity, finish, mechanical properties, warp, physical properties, water absorption, and tolerances; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., Joint Army-Navy Specification JAN-P-14; 1944. Plastic-Materials; Molded Thermosetting.

U. S. Gov., Navy Dept. Specification 17M11b; 1942. Molds for Molded Electrical Insulation.

*References.*—Methods of electrical testing, *see* 719.50; methods of physical testing of paper and of fiber board, *see* 470.3.

## 719.59 Miscellaneous Electrical Insulating Materials

American Institute of Electrical Engineers, No. 21; 1941. Apparatus Bushings, Proposed Standard, and Proposed Test Code. Covers proposed standard service conditions, rating, definitions, heating, dielectric tests, and name-plate markings; and proposed test code classification of bushing tests and test procedure.

American Society for Testing Materials, D 668-44; 1944. Methods of Measuring Dimensions of Rigid Tubes Used in Electrical Insulation. Cover procedures for measuring the dimensions of all rigid tubes used in electrical insulation, the limitations imposed being those of the size range of the more common forms of measuring instruments used.

American Standards Assn., C 75.2-1943. Steatite Radio Insulators (American War Standard). For the purpose of facilitating production of steatite radio insulators. Gives applicable specifications, and drawings, classification, material and workmanship, general and detail requirements, methods of inspection and tests, packaging, packing, marking for shipment, requirements applicable to individual government departments, definitions, drawings showing details, and appendix covering design criteria.

American Transit Assn. Recommended Practice for Insulating Materials for Railway Repair Shop Use, E136-34; 1934. Air drying varnishes referred to in this specification should be composed of linseed oil or other drying oils sufficiently treated with or without gums or resins, and with proper amount of driers so that varnish will dry in from three (3) to five (5) hours, leaving a smooth, flexible surface. Such varnish may be obtained which is comparatively oil and moisture resisting. An air drying varnish is used where it is not possible or practicable to employ the baking oven. It is also used as a finishing coat on wound apparatus.

American Transit Assn. Recommended Practice for Insulating Materials for Railway Repair Shop Use, E136-34; 1934. Covers a wide variety of insulating materials, including varnishes, gums, treated and untreated cloths and tapes, mica tapes, sheets, and plates. Requirements concerning the composition and characteristics of each of the items are given in detail. Gives also details relative to the testing of insulated varnishes.

American Transit Assn. Recommended Practice for Insulating Materials for Railway Repair Shop Use, E136-34; 1934. Treating compounds referred to in this specification includes those compounds composed of asphalt and linseed oil. Details are given concerning the characteristics and composition of these compounds.

Assn. of American Railroads, Operations and Maintenance Dept., Engineering Div., Signal Section. Manual of Recommended Practice, 1932. Impregnating Compound Treatment of Electrical Windings. Insulation properties, effect on other materials, corrosion, life, plasticity, and temperature rating requirements.

Assn. of American Railroads, Operations and Maintenance Dept., Engineering Div., Signal Section. Manual of Recommended Practice. Specification 177-39; 1939. Insulating Material for Filling and Sealing Recesses in Signal Apparatus. Material for filling and sealing porcelain, glass, metal, wood, etc. Adhesive qualities and tests. Refers to the A.S.T.M. Test D-36 for melting point, and A.S.T.M. Test D-176 for coefficient of expansion.

Assn. of American Railroads, Operations and Maintenance Dept., Engineering Div., Signal Section. Manual of Recommended Practice. Specification 181-39; 1939. Paint and Painting of Braid-Covered Aerial Wires and Cables. Asphalt or pitch type of cable paint, with volatile thinner, for the preservation of fibrous covering such as braids, servings, tapes, etc., from the effects of weather, acids, alkalies, and gases generally present. Application, and with tests of nonvolatile base by A.S.T.M. D-255, flash point by A.S.T.M. D-56, and dielectric strength by A.S.T.M. D-115 methods.

Assn. of American Railroads, Operations and Maintenance Dept., Engineering Div., Signal Section. Manual of Recommended Practice. Specification 184-40; 1941. Fusible Asphaltic Base Sealing Compound for Protecting Wire Entrances, Outlets, Sleeves, Potheads, Etc., Against the Entrance of Moisture. General requirements, physical and electrical characteristics, inspection, and marking.

Assn. of American Railroads, Operations and Maintenance Dept., Engineering Div., Signal Section. Manual of Recommended Practice. Specification 187-39; 1939. Paint and Painting of Braid-Covered Aerial Wire and Cable. Asphalt or coal tar emulsion type of cable paint with details as to composition, properties, and application. Tested in accordance with A.S.T.M. D-255 for water content, and A.S.T.M. D-140 for sampling, also A.S.T.M. D-115 to determine dielectric strength.

Assn. of American Railroads, Operations and Maintenance Dept., Engineering Div., Signal Section. Manual of Recommended Practice. Specification 188-40; 1941. Cold Application Compound for Closing Wire Entrances and Openings. For closing mechanism cases, switch circuit controllers, relay housings, parkway and trench cable outlets, etc., to exclude insects, vermin, rodents, and foreign material. Gives physical and electrical characteristics required, inspection, and marking.

U. S. Gov., Federal Specification JJJ-W-151a, 1938. Wax; Sealing. Covers two types—(I) stick type to be heated over a flame, and (II) in bulk for use in gas or electrically heated melting pots; and four grades—A, B, C, and D. Gives detail requirements; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Navy Dept. Specification 17-I-13a; 1941. Insulation; Electrical, Slot-Cell, Composite, Armature.

U. S. Gov., Navy Dept. Specification 17-I-15a; 1944. Insulation; Electrical, Plastic-Sealer.

U. S. Gov., Navy Dept. Specification 17-I-16c; 1944. Insulating-Material; Electrical, Liquid, Quick-Drying.

U. S. Gov., Navy Dept. Specification 17-I-31a; 1944. Insulation; Electrical, Glass-Fiber, Untreated, Group GFU.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-449A; 1942. Compound; Insulating, Type IC-1.

*References.*—Varnish treatment of windings, *see* 719.57; transformer oil, *see* 504.8; wooden insulators and insulator pins, *see* 429.7; glass insulators, *see* 526.1; cap and cone insulators for trolley wire support, *see* 719.63; globe, composition, and Brooklyn strain insulators, *see* 719.63; petrolatum for use in impedance bonds, *see* 504.6; petroleum asphaltum for protecting wires in trunking, *see* 505.14.

## 719.6 ELECTRICAL LINE MATERIALS, AERIAL AND UNDERGROUND

### 719.60 General Items

American Transit Assn. Recommended Specification for Joint Use of Wood Poles, D112-31; 1931. This specification applies to all construction on wood poles used jointly by supply and communication circuits. The specification is intended to embody requirements which are most important from the standpoint of safety to employees and the public. It states the minimum requirements for spacings, clearances, and strength of construction. The specification includes definitions, and covers various grades of construction, vertical clearances and runs, communication cables or conductors on suspension strand, climbing space, fixtures for street lighting, trolley span wires and brackets, pole steps, guy attachment and clearances, guy and line insulators, loading, strength requirements, and inspection.

American Transit Assn. Recommended Principles and Practices for Joint Use of Wood Poles, D123-37; 1937. Emphasizes the advantages in the joint use of poles with other agencies from the point of view of conservation, economy, and public relations.

Assn. of American Railroads, Operations and Maintenance Dept., Engineering Div., Electrical Section. Manual of Recommended Practice, 1942. (VI-b-25) Specifications for the Construction of Overhead Electric Supply Lines for Railroad Use on Railroad Property. Describes the standard practices for the construction of electric power transmission and distribution pole lines, exclusive of overhead contact wires. Covers general requirements, construction at railroad crossings and crossings of communication lines, clearances, grading of lines, loading, conductor attachments, insulated pins, crossarms, strength of supporting structures, wood poles, steel structures, concrete, guys, grounding, and permissible unit stresses and proportion of ultimate strength.

Assn. of American Railroads, Operations and Maintenance Dept., Engineering Div., Electrical Section. Manual of Recommended Practice, 1942. (VI-c-26) Specifications for the Joint Use of Poles for Power, Communication, and Signal Circuits. Describes the standard practice for the joint use of electric power, transmission, and distribution circuits, as defined below, with signal and communication circuits on wood pole lines for railroad use, on railroad property. These provisions do not apply to pole lines where class "S" and "T" circuits only are involved.

Assn. of American Railroads, Operations and Maintenance Dept., Engineering Div., Electrical Section. Manual of Recommended Practice, 1942. (VI-d-26) Specifications for the Maintenance of Overhead Electric Supply Lines. Gives instructions and specifications for the guidance of forces engaged in maintaining overhead electric supply lines for railroad use on railroad property.

Assn. of American Railroads, Operations and Maintenance Dept., Engineering Div., Signal Section. Manual of Recommended Practice, 1944. Railroad Specification for Electric Light, Power Supply, and Trolley Lines Crossing Railways.

Assn. of American Railroads, Operations and Maintenance Dept., Engineering Div., Signal Section. Manual of Recommended Practice, 1944. Specification for Communication Lines Crossing the Tracks of Railroads.

Assn. of American Railroads, Operations and Maintenance Dept., Engineering Div., Signal Section. Manual of Recommended Practice, 1934. Specification for Communication Underground Conduit Construction.

Assn. of American Railroads, Telegraph and Telephone Section, 1-A-6; 1939. Specification for the Construction of Railroad Communication Pole Lines. Describes standard requirements for the construction pole lines carrying communication wires and cables, also for joint use with foreign communication or railway signal circuits; strength of lines, clearances of poles and attachments, location, pole setting, fitting, guying, and bracing; wire and aerial cable construction, terminal, and long span construction; and guard screens.

Assn. of American Railroads, Telegraph and Telephone Section, 1-A-24; 1927. Joint Use of Poles for Power, Communication, and Signal Circuits. Gives classification of circuits, requirements for relative position and spacing of circuits, climbing space, methods of supporting conductors and cables, minimum sizes of conductors, insulation and support of vertical conductors, installation of apparatus, pole steppings, and dimensions of crossarms.

Assn. of American Railroads, Telegraph and Telephone Section, 1-B-1; 1937. Communication Lines Crossing the Tracks of Railroads. Requirements for construction and maintenance of telephone and telegraph lines crossing steam and electrified railroads including overhead, underbridge, and underground crossings, clearances, ducts, cable sags, poles, drainage, attachment, and protection from moving vehicles, with tables and dimensional drawings.

Assn. of American Railroads, Telegraph and Telephone Section, 1-C-1; 1940. Underground Conduit Construction. Covers requirements for constructing underground communication electric lines as to precautionary measures, locations and clearances, material including reducers, risers, U guard, manholes, frame and covers, cable racks and hooks, concrete work, trenching, grading, creosoted wood duct, tile duct, iron and steel pipe, fiber duct, laterals, etc.

Assn. of American Railroads, Telegraph and Telephone Section, S-1; 1923. Electric Light, Power Supply, and Trolley Lines Crossing Railways. Requirements for clearance, loading, wires and cables, insulators, supporting structures, grounding, trolley

line crossings, underbridge and underground crossings. This specification was adopted by the American Railway Engineering Assn. Committee on Electricity in 1923.

Assn. of American Railroads, Telegraph and Telephone Section, S-2. Construction of Overhead Electric Supply Lines for Railroad Use on Railroad Property. Specification covering electric power transmission and distribution pole lines, requirements as to location, relative levels, fire hazards, tree trimming, protective coatings, guards and signs, clearances, grading of lines, loading, wires and cables, insulators, crossarms, supporting structures, grounding, and permissible unit stresses for wood and steel supporting structures for two types of construction depending on location of line.

Copper Wire Engineering Assn. Conductor Engineering Data for Rural Lines—Heavy Loading District. Includes reference data on pole outline, sag clearance, span relation, wire clearance over ground, and wire crossing clearance; span companions, poles per mile, and choice of rural conductors; conductor properties (wire and loading tables), splicing sleeves, quantities for various assemblies, and line ties on pin insulators; and design data covering conductivity selection for primaries, staking suggestions, span selection charts, structure selection charts, transverse load-tangent poles, reduced span for reduced tension, line secondaries, various unit costs, guy tables, sags for weatherproof copper conductors, design tables, stringing tables, and sag and tension charts.

Copper Wire Engineering Assn. Conductor Engineering Data for Rural Lines—REA-Type—Medium and Light Loading Districts. Includes reference data on pole outline, sag clearance, span relation, wire clearance over ground, and wire crossing clearance; span companions, poles per mile, and choice of rural conductors; conductor properties (wire and loading tables), splicing sleeves, quantities for various assemblies, and line ties on pin insulators; companion of 8C and 9-1/2D copperweld-copper conductors; and design data covering conductivity selection for primaries, staking suggestions, span selection charts, structure selection charts, transverse load-tangent poles, reduced span for reduced tension, line secondaries, various unit costs, guy tables, sags for weatherproof copper conductors, design tables, stringing tables, and sag and tension charts.

U. S. Gov., Dept. of Commerce, National Bureau of Standards, H32; 1941. American Standards Assn., C2.2-1941 (National Electrical Safety Code). Safety Rules for the Installation and Maintenance of Electrical Supply and Communication Lines. For line insulators for grade A and B construction, requirements for wet porcelain insulators for voltage of 2,300 or above, including ratio of flashover to puncture voltages, dry flashover test requirements for insulators for various voltage applications.

U. S. Gov., Dept. of Commerce, National Bureau of Standards, H32; 1941. American Standards Assn., C2.2-1941 (National Electrical Safety Code). Safety Rules for The Installation and Maintenance of Electrical Supply and Communication Lines. For overhead lines, requirements on relative levels on pole of various classes of lines, on clearance between supporting structures and other objects, between wires and ground or rails, between crossing lines, between conductors of same line, climbing and working spaces, grades of construction, assumed loadings, strength requirements for various parts of line construction, requirements of insulators, tables of recommended normal sags of copper conductors, minimum permissible sags with tensions and stresses, etc.

U. S. Gov., Dept. of Commerce, National Bureau of Standards, H34; 1938. American Standards Assn., C2.4-1939. Safety Rules for the Operation of Electrical Equipment and Lines (Comprising Part 4 of the Fifth Edition, National Electrical Safety Code). Precautions and rules to be observed in handling supply lines and equipment, killing lines or equipment, making protective grounds, for overhead and underground power lines and communication systems, etc.

## 719.61 Electric Wire and Cable Supports

Assn. of American Railroads, Telegraph and Telephone Section, 1-A-20; 1927. Pole Line Hardware. Covers two grades of steel with tensile and bend test requirements, galvanizing conforming to A.A.R. Specification 1-D-5, and dimensional drawings of various standard items of pole line hardware.

Assn. of American Railroads, Telegraph and Telephone Section, 2-G-3; 1924. Cross Connecting Ring AAR-1-A and 2-G-4; 1924. Cross Connecting Ring AAR-2-A. Two sizes of clamps for grouping and supporting the connecting wires between protectors and terminal blocks in metal boxes; requirements for material, workmanship, dimensions; and tests with dimensional drawings.

Assn. of American Railroads, Telegraph and Telephone Section, 2-G-58; 1930. Switchboard Cable Support. To be used for supporting the cabling behind panels mounted on switchboard framework. Gives general requirements, material and workmanship, dimensions, finish, inspection, tests, packing, marking, and warranty.

Assn. of American Railroads, Telegraph and Telephone Section, 2-G-63; 1931. Cross-Connecting Rings ARA-3-A and ARA-4-A. Used to group cross-connecting wires between protectors and terminal blocks in metal boxes. Gives general requirements, material and workmanship, dimensions, finish, inspection, tests, packing, and warranty.

International Municipal Signal Assn., Inc. Specification No.51; 1942. Galvanized Steel Cable Rings. Covers cable rings for general use in aerial construction of multi-conductor, lead and loom covered cables, on messenger for fire alarm, police, and other signal services. Gives requirements for fit of hooks on strand gauge, position assumed by ring when assembled on strand gauge, unobstructed opening in eye of ring when assembled on strand gauge, deflection test, and brittleness test.

International Municipal Signal Assn., Inc. Specification No.51-A; 1942. Copper Covered Steel Cable Rings. Covers copper covered steel wire used in the manufacture of cable rings for supporting aerial cable and finished cable rings made of such wire. Gives requirements for wire, cable rings, and inspection.

U. S. Gov., Joint Army-Navy Specification JAN-G-160; 1944. Grips; Cable, Shipboard Use.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-80B; 1930. Ring; Cable, for Suspending Aerial Cables.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-94C; 1929. Roller; Type LC-26, Cable Roller.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-1020; 1941. Rack; Types FM-34, FM-35, FM-36, and FM-37.

*References.*—Construction of lines, crossings, safety codes, *see* 719.60; zinc coatings, *see* 600.3; methods of testing and general requirements for metals, *see* 600.1; wood insulator pins, *see* 429.7; glass insulators, porcelain insulators, *see* 526.1, 532.22; insulator gages, *see* 615.82.

## 719.62 Poles and Appurtenances

Assn. of American Railroads, Operations and Maintenance Dept., Engineering Div., Electrical Section. Manual of Recommended Practice, 1942. (VI-c-26) Specifications for the Joint Use of Poles for Power, Communication, and Signal Circuits. Describes the standard practice for the joint use of electric power, transmission, and distribution circuits, as defined below, with signal and communication circuits on wood pole lines for railroad use, on railroad property. These provisions do not apply to pole lines where class "S" and "T" circuits only are involved.

Assn. of American Railroads, Operations and Maintenance Dept., Engineering Div., Signal Section. Manual of Recommended Practice, 1929. Specification for Pole Line Hardware.

Assn. of American Railroads, Telegraph and Telephone Section, 1-A-20; 1927. Pole Line Hardware. Covers two grades of steel with tensile and bend test requirements, galvanizing conforming to A.A.R. Specification 1-D-5, and dimensional drawings of various standard items of pole line hardware.

Assn. of American Railroads, Telegraph and Telephone Section, 1-A-43; 1931. Pole Balcony A.A.R.-1-A. Balcony for mounting on poles carrying cable boxes, requirements for wood platform and steel angle platform irons and braces, pipe guard rails, galvanizing, painting, and dimensional drawings.

Assn. of American Railroads, Telegraph and Telephone Section, 1-A-44; 1931. "H" Fixture Balcony A.A.R.-2-A. Balcony for mounting on two poles carrying cable boxes, dimensional drawings and requirements for wood platform, steel angle platform irons and supporting braces, pipe guard rails, galvanizing, and painting.

Assn. of American Railroads, Telegraph and Telephone Section, 1-E-11; 1939. Specification for the Stub Reinforcement of Wood Poles Used in the Communication Plant. For use where poles have deteriorated near ground line, but the balance of the pole is sound. Description of, classification, and method of stub reinforcing, with illustrations.

Edison Electric Institute. Specifications for Strand-Eye Anchor Rods, TD-2; 1942. For use in overhead line construction. Gives requirements for material, dimensions, threads, strength, galvanizing, preferred sizes, finish, packing and shipping, inspection, rejection, and dimensional drawing.

Edison Electric Institute. Suggestions for Specifications for Steel Cross Arm Braces, TD-6; 1940. For use in overhead line construction. Includes—(A) flat braces, (B) alley arm braces, and (C) vertical braces. Gives requirements for material, dimensions, galvanizing, packing and shipping, mechanical requirements of flat steel braces, inspection, rejection, and dimensional drawing.

U. S. Gov., Dept. of Commerce, National Bureau of Standards, H32; 1941. American Standards Assn., C2.2-1941. Safety Rules for the Installation and Maintenance of Electrical Supply and Communication Lines (Comprising Part 2 of the Fifth Edition National Safety Code). Includes requirements on poles and towers, tree trimming, guying, and grounding.

U. S. Gov., U. S. Army, Signal Corps. Specification 23-76B; 1942. Pole; Lance, Type PO-2, for Temporary Telegraph Lines.

U. S. Gov., U. S. Army, Signal Corps. Specification 29-12A; 1930. Brace; Telephone, Crossarm.

U. S. Gov., U. S. Army, Signal Corps. Specification 29-45; 1924. Step; Telephone Pole, Galvanized Steel.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-68A; 1927. Rod; Anchor, Type AH-4, for Telephone Poles.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-73B; 1942. Brackets, Types PF-66; Transposition and Pin, Type PF-62; for Line Construction.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-78B; 1942. Pole Support LC-16.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-81; 1921. Hanger; Messenger, for Supporting Messenger Wire.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-96B; 1943. Pole PO-5, PO-6, and PO-7.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-218A; 1932. Guy; Type GY-8, Radio.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-222A; 1932. Guy; Type GY-9, Radio.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-223; 1925. Guy; Type GY-7, Radio.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-225; 1925. Guy; Type GY-4, Radio.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-252; 1924. Pole; Type PO-1 and Fittings, Tubular Steel, 20-Foot.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-345A; 1928. Bracket; Types PF-65 and PF-71, Telephone Distributing.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-393A; 1927. Stake; Type GP-2.

*References.*—Trolley line materials and construction, *see* 719.63; tubular steel poles, *see* 607.4; wood poles, wood crossarms, *see* 401.3, 402.1; wood insulators, glass insulators, porcelain insulators, *see* 429.7, 526.1, 532.22; metal insulator pins, wood insulator pins, *see* 719.61, 429.7; metal supporting racks and cross connecting rings, *see* 719.61; steel guy and messenger cable, *see* 603.42; eye bolts, machine bolts, carriage bolts, *see* 608.31; washers, round and square, *see* 608.6; methods of testing and general requirements for metals, *see* 600.1, 500.3; pole line construction, safety code, *see* 719.60; steel towers for transmission lines, *see* 605.23.

## 719.63 Railway Trolley and Track Materials

American Institute of Electrical Engineers, 17g5. Joint sponsor with American Assn. for the Advancement

of Science, American Society of Civil Engineers, Society for Promotion of Engineering Education, and American Society of Mechanical Engineers. American Standards Assn., Z-10g5; 1933. Graphical Symbols Used for Electric Traction Including Railway Signaling. Used in diagrams for power apparatus, relays and instruments, electric traction, car control wiring, and to indicate types of railway signals.

American Society for Testing Materials, B 9-39; 1939. American Standards Assn., H4.5-1940. Bronze Trolley Wire. For round and grooved trolley wire from three classes of bronze; gives requirements for materials, tensile properties, twist tests, dimensions and permissible variations, resistivity, and standard sections of wire.

American Society for Testing Materials, B 47-39; 1939. American Standards Assn., H4.6-1940. Copper Trolley Wire. For round and grooved trolley wire; requirements as to material, tensile properties, twist test, standard sections, dimensions and permissible variations, resistivity, density, and explanatory notes.

American Society for Testing Materials, B 116-40; 1940. Figure 9, Deep-Section Grooved and Figure 8, Copper Trolley Wire for Industrial Haulage. Gives requirements for material, tensile properties of various sizes, standard sections, dimensions and permissible variations, resistivity, density, finish, and explanatory notes.

American Transit Assn. American Standards Assn., C15-1935. Specification for 750-Volt Direct Suspension Overhead Trolley Contact Construction, D14-37; 1937. This specification covers material necessary for overhead trolley contact construction, including supporting structures, methods of attaching spans, guys and anchors, structural attachments, supporting system, trolley contact wire, frogs and crossings, feeder, and method of protection.

American Transit Assn. Recommended Specification for Catenary Overhead Construction for Other Than Steam Railroad Electrification, D104-28; 1928. Gives requirements as to the type of material to be used for overhead construction, including bridges, steel and concrete poles, methods of attaching spans and guys, hangers, etc.

American Transit Assn. Recommended Specification for Trolley Bus Overhead Construction, D106-33; 1933. Construction shall conform to the requirements for 750-volt direct suspension overhead trolley contact construction, Manual section D101, wherever possible. In general, the material shall conform to the requirements of section D102-30 of the Engineering Manual. Certain special devices are required for trolley bus operation where swivel harps are used. This specification gives detailed requirements for the construction of trolley bus overhead, including pole spacings, trolley wire supports, separation between trolley wires, and insulation.

American Transit Assn. Recommended Design of Device for Temporary Connections to Trolley Wire, D107-35; 1935.

American Transit Assn., sponsor. American Standards Assn., C15-1935. Specification for 750-Volt Direct Suspension Overhead Trolley Contact Construction. Requirements on supporting structures; methods of attaching spans, guys, and anchors; anchors and guys; structure attachments; supporting system; trolley contact wire; frogs and crossings; feeder; and protection.

American Transit Assn. Recommended Specification for Trolley Poles, Wheels, Harps, and Bases, E124-37; 1937. Gives design for trolley poles, together with tables showing dimensions of the poles for each length and class of service. Drawing and a table showing the contact pressure against the trolley wire with the pole at maximum and minimum heights; and also the clearance between the trolley wire and the trolley pole with the latter at a minimum operating height and the wire directly over the center of the track. There is also included information on a method for the determination of the length of the trolley pole for either single or double truck car with trolley wires at various heights above the running board.

American Transit Assn. Standard Location of and Clearances for Third-Rail Working Conductors, Structures, and Rolling Equipment, W3-15; 1915. Gives diagram showing clearance lines for third-rail and permanent way structures and rolling equipment, and conditions under which rolling equipment and structures must not encroach upon third-rail space.

Assn. of American Railroads, Operations and Maintenance Dept., Engineering Div., Electrical Section. Manual of Recommended Practice, 1942. (7-a-37) Third Rail Clearance Diagram. Covers clearance lines for equipment and permanent way structures adjacent to third rail and for third-rail structure.

Assn. of American Railroads, Operations and Maintenance Dept., Engineering Div., Electrical Section. Manual of Recommended Practice, 1942. (7-b-40) Overhead Clearance Diagram. Covers clearance lines for pantograph, catenary construction, and adjacent permanent way structures.

Assn. of American Railroads, Operations and Maintenance Dept., Engineering Div., Electrical Section. Manual of Recommended Practice, 1942. (9-a-32) Specification for Stud Terminal Copper Rail Bonds. Provides for the manufacture and delivery of rail bonds of the stud terminal type for the bonding of track rails forming the negative return in electric traction systems.

U. S. Gov., Dept. of Commerce, National Bureau of Standards H32; 1941. American Standards Assn., C2.2-1941. Safety Rules for the Installation and Maintenance of Electrical Supply and Communication Lines (Comprising Part 2 of the Fifth Edition National Electrical Safety Code). Includes requirements on electric railway construction, trolley contact conductor supports, high-voltage contact conductors, third rails, prevention of loss of contact at railroad crossings, and guards under bridges.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R65-31; 1931. Packaging of Overhead Electric Railway Material. This recommendation establishes a standard number of units in package for protecting trolley armor, pole bands, fork bolts with insulators, cross-arm braces, crossings or cross-overs, clinch ears, trolley frogs, insulators, cross-arm pins,

pullovers, splicing sleeves, and line section switches. Sponsored by the American Transit Engineering Assn.

### 719.64 Underground Circuit Materials

Assn. of American Railroads, Operations and Maintenance Dept., Engineering Div., Electrical Section. Manual of Recommended Practice, 1942. (XVIII-a-21) Specifications for Underground Conduit Construction for Power Cables. Describes the materials to be used and the processes to be employed in the construction of underground conduit lines for power cables for railroad purposes. Includes general requirements, ducts or conduits, conduit line construction, laying fiber conduit, splicing chambers, and diagrams.

International Municipal Signal Assn., Inc. Equipment Specification No.103; 1942. Transit Underground Conduit and Associated Fittings and Bends. Covers underground conduit for installation in ground with or without concrete encasement. Gives requirements for general construction, composition, size and dimensions, bends, straightness, physical tests and requirements, and methods of inspection.

*References.*—Safety code for underground construction, *see* 719.60.

## 719.7 CUT-OUT BASES AND CONNECTORS

### 719.71 Cut-Out Bases

*References.*—Cut-out bases, *see* 714.22.

### 719.72 Connectors and Clips

Edison Electric Institute. Suggestions for Specifications for Straight Tinned Copper Connectors, TD-8; 1940. For underground construction for round concentric, round compact, sector and sector compact stranded cables and A W G sizes 4 and 6 solid wire. Gives requirements for material, electrical properties of connectors, dimensions, finish, packing and shipping, inspection, rejections, and table showing dimensions.

National Electrical Manufacturers Assn. Electric Power Connector Standards, 37-47; 1937. Includes conductor connectors and terminal connections of bolted, soldered, shrink-fit, and wedge types; also expansion connectors and ground clamps for power switching equipment. Gives rating and manufacturing standards, definitions, and current-carrying capacities of solid and stranded conductors, iron, and copper tubing in iron-pipe and extra heavy iron-pipe sizes.

Underwriters' Laboratories, Inc. Standard for Pressure Wire Connectors, 1939. Covers pressure-type, solderless, wire connectors for use in accordance with the National Electrical Code. Covers wire connectors which depend on pressure rather than solder as a means of providing contact between current-carrying parts—for use at terminals, between lengths of wires, or for tap connections in accordance with the National Electrical Code. Does not cover binding-screw terminals, fixture-wire connectors, built-in terminal connectors or devices rated at 35 amperes or less and intended for outlet-box mounting or having provision for strain relief, nor built-in terminal connectors on devices having integral cable clamps. Material, design and construction, performance, marking, and inspection of listed product.

U. S. Gov., Army Air Forces. Specification 25530-A (1); 1944. Clip; Tube, Cushioned (Loop-Type) General Specification for.

U. S. Gov., Army-Navy Aeronautical Specification AN-S-53; 1944. Splices; Electrical Disconnect.

U. S. Gov., Army-Navy Aeronautical Specification AN-W-C-591a; 1944. Connectors; Electrical.

U. S. Gov., Federal Specification W-C-601a; 1943. Connectors; Wire, Pressure, Solderless, (for Electric Cable and Wire). Covers wire connectors which depend on pressure rather than solder as a means of providing contact between current-carrying parts—for use as terminals, between lengths of wires or for tap connections in accordance with the National Electrical Code. Detail requirements as covered by Underwriters' Laboratories Standard for Pressure Wire Connections. Gives methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., Panama Canal, Purchasing Dept. Specification for Straight Copper Connectors for Splicing Cables, 1938.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 29-70A; 1940. Clip; Galvanized, With Nuts.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-287A; 1926. Connector, Type TM-32-A; Stud, Type FT-49-A; Steel Test Clamp.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-598; 1931. Connector; Type M-120, Antenna and Counterpoise.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-967A; 1943. Line Connector Unit EE-87.

## 719.9 MISCELLANEOUS ELECTRICAL MACHINERY AND SUPPLIES

### 719.91 Electric Welding Apparatus

*References.*—Electric welding machines and apparatus, *see* 767; helmets and goggles, *see* 914.5.

### 719.92 Hotel and Restaurant Electrical Equipment

American Hospital Assn., 40-1. Meat Chopping (Grinding) Machines. Covers hand-operated and motor-operated.

U. S. Gov., Federal Specification CO-M-23; 1936. Amendment 1; 1944. Machines; Coffee-Grinding, Electrically-Operated. Covers two types—counter and pedestal; with the following capacities—60, 90, 150, 250, 350, and 500 lb. per hour. Gives requirements for material and workmanship, machine, base, hopper, burrs, motor, guard, safety stop, receptacle, finish, name plate, and details; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U.S. Gov., Federal Specification CO-M-38; 1942. Amendment 1; 1944. Machines; Food-mixing, Electrically-

Operated, Commercial Type (Cake and Kitchen). Covers the vertical pedestal type having either a cast, fabricated, or formed pedestal; and six sizes—12-, 20- to 22-, 30- to 36-, 60-, 80-, and 100- to 110-qt. bowl capacity. Gives requirements for material, workmanship, condition, service requirements, base, column, spindle, safety device, lubrication, drive, instructions, finish, accessories, motors, starters, clutch, and seals; methods of inspection and tests; and packing and marking for shipment.

U. S. Gov., Federal Specification 00-M-52; 1940. Amendment 1; 1944. Machines; Meat-and Vegetable-Cutting, Electrically-Operated. Covers one type and four sizes. Gives requirements for material, workmanship, construction, operation, capacity, tin coating, bowl, knives, safety device, interlocks, clutch, driving mechanism, housings, frame, pedestal, power take-off device, self-emptying device, lubrication, wiring, finish, attachments, and details; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification 00-M-66; 1940. Amendment 2; 1944. Machines; Slicing, Bread. Covers three types—(I) hand-operated single slicing knife; (II) motor-operated, single slicing knife; and (III) motor-operated, multiple slicing knives. Underwriters' Laboratories, Inc. standard for motor-operated appliances is applicable to this specification. Gives requirements for floor stands, material, workmanship, condition, component parts, gears, grease gun, marking, and details for each type and class; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification 00-M-81; 1939. Amendment 2; 1944. Machines; Slicing, Meat. Covers two types—(I) hand-operated, and (II) motor-operated; and two classes—(A) full automatic, and (B) semi-automatic. Gives requirements for material, workmanship, condition, construction, slicing knife, drive, meat supports, end-holding device, trays, housings and guards, bases and pedestals, bearings, scraper, sharpener, finish, and details for each type and class; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification 00-M-106; 1939. Amendment 2; 1944. Machines; Vegetable-Peeling, Electrically-Operated. Covers two types—(I) abrasive-lined metal cylinder, in four sizes; and (II) cement cylinder, in three sizes. Gives requirements for material, workmanship, condition, design and operation, abrasive, leakage, disk, cylinder covering ring, vegetable outlet, sprayer, fittings, frame, motor support, power transmission, wiring, bearings, lubrication, finish, and details for each type and size; methods of inspection and tests; and packing and marking for shipment.

U. S. Gov., Veterans Administration. Specification VA-M-48; 1934. Electric Bread Slicer.

U. S. Gov., Veterans Administration. Specification VA-M-56a; 1935. Electric Food Separator.

U. S. Gov., Veterans Administration. Specification VA-M-86b; 1936. Coffee Mills.

U. S. Gov., Veterans Administration. Specification VA-M-94c; 1938. Vegetable Peeling Machines.

U. S. Gov., Veterans Administration. Specification VA-M-132b; 1938. Vegetable Huller.

U. S. Gov., Veterans Administration. Specification VA-M-141; 1935. Electric Fruit and Vegetable Slicing Machine, Small Size.

U. S. Gov., Veterans Administration. Specification VA-M-276; 1937. Vegetable Peeling Machine Cylinder and Revolving Disk.

U. S. Gov., Veterans Administration. Specification VA-MC-87b; 1942. Vegetable Washer.

U. S. Gov., Veterans Administration. Specification VA-MC-89d; 1942. Vertical Type Mixer.

U. S. Gov., Veterans Administration. Specification VA-MC-90a; 1940. Doughnut Cutting Machine.

U. S. Gov., Veterans Administration. Specification VA-MC-92a; 1935. Meat Slicing Machines.

U. S. Gov., Veterans Administration. Specification VA-MC-93c; 1938. Meat and Vegetable Choppers.

U. S. Gov., Veterans Administration. Specification VA-MC-125d; 1942. Silver Burnishing Machine.

U. S. Gov., Veterans Administration. Specification VA-MC-136f; 1941. Meat and Bone Cutters.

U. S. Gov., Veterans Administration. Specification VA-MC-173d; 1941. Three Rack Dishwasher.

U. S. Gov., Veterans Administration. Specification VA-MC-196e; 1942. Two Rack Dishwasher.

U. S. Gov., Veterans Administration. Specification VA-MC-221b; 1941. Dishwashers; Diet Kitchen Size, Model No. 1.

U. S. Gov., Veterans Administration. Specification VA-MC-269d; 1941. Four Rack Dishwasher.

U. S. Gov., Veterans Administration. Specification VA-MC-318; 1942. Gravity Feed Electric Slicing Machine.

## 719.93 Microphones, Loudspeakers, and Amplifiers

Acoustical Society of America, sponsor. American Standards Assn., Z 24.4-1938. Recommended Practice for the Calibration of Microphones. Comprises a part of a group of definitions, standards, and specifications for use in acoustical work. Purposes are threefold—(1) to assist the National Bureau of Standards in establishing calibrating apparatus for microphones and related acoustical apparatus; (2) to assist in obtaining agreement between different laboratories engaged in the work of calibration pending the availability of the Bureau's equipment, and (3) to further the general knowledge of this subject.

Assn. of American Railroads, Telegraph and Telephone Section, 2-J-36; 1939. Amplifier and Loud Speaker for Use on Railroad Telephone Dispatching Circuits. Gives requirements for self-contained amplifying unit using only primary source of power; operating on standard frequencies and voltages, in-put transformer, amplifier capable of giving a gain of 60 decibels and an undistorted power output of two watts, high voltage of the ringing current not to materially affect operation, designed for nominal output impedances of 6,000 ohms, adjustable means of reducing output, and for speaker directional, uniform frequency response, moderate size, and impedance matched with amplifier.

Institute of Radio Engineers. American Standards Assn., C 16.4-1942. To outline briefly the apparatus which is now used for testing loudspeakers together with the procedure for obtaining the important characteristics which depict the performance of a loudspeaker. Covers the following tests—response-frequency characteristic, directional characteristic, normal-impedance characteristic, nonlinear-distortion characteristic, and efficiency-frequency characteristic.

U. S. Gov., U. S. Army, Signal Corps. Specification 46-10; 1944. Microphone T-21-B.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-958B; 1943. Loudspeaker LS-3 and LS-9.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-978; 1941. Chest Unit; Type BE-74, for Throat Microphone.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-1062; 1942. Public Address Equipment PA-4-( ); Power Megaphone Component for.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-1124; 1941. Jack; Type JK-48, Microphone, 2-Contact, Lightweight, Molded.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-1153; 1942. Microphone MC-253-( ); Electromagnetic, for Use in Oxygen Mask.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-1154A; 1943. Microphone Unit MC-254A; Carbon, for Use in Oxygen Mask.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-1163; 1942. Microphone T-44-( ); Electromagnetic Microphone Assembly for Use in Oxygen Mask.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-1164A; 1943. Microphone ANB-M-C1; Carbon Microphone Assembly for Use in Oxygen Mask.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-1168; 1942. Jack JK-49; Magnetic Microphone-Headset.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-1386; 1942. Microphone T-48-( ).

U. S. Gov., U. S. Army, Signal Corps. Specification 71-1514; 1942. Loudspeaker LS-7.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-1576; 1943. Public Address Set PA-5-( ).

U. S. Gov., U. S. Army, Signal Corps. Specification 71-1603-B; 1944. Microphone T-45.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-1760; 1943. Loudspeaker LS-10-( ).

## 719.94 Gyroscopes, and Gyro Controlled Equipment

American Institute of Electrical Engineers. Recommended Practice for Electrical Installations on Shipboard, No.45; 1940. Addenda, 1942. Emergency Modification and Supplement, 1943. Gyro Compass Equipment and Gyro Pilot. Includes master compass, repeaters of various types, motor-generator, switchboard, alarm circuit, installation and location, automatic and manual control of steering, two unit, and electric steering engine types, wiring, and spare parts.

U. S. Gov., Army Air Forces. Specification No.27450; 1945. Control; Vertical Gyro, Type L-1 (Indicating).

U. S. Gov., Army Air Forces. Specification No.27451; 1945. Control; Rate Gyro, Type M-1, for Aircraft.

U. S. Gov., Army-Navy Aeronautical Specification AN-T-24a-1; 1945. Transmitters; Gyro Flux Gate Compass.

U. S. Gov., Army-Navy Aeronautical Specification AN-GG-C-555a; 1944. Compasses; Gyro Flux Gate.

## 719.99 Miscellaneous

Aeronautical Chamber of Commerce of America, Inc. National Aircraft Standard NAS 44; 1944. Bus-bar; Electrical. Gives drawing with dimensions and notes. Developed by National Aircraft Standard Committee.

American Society for Testing Materials, D761-44T; 1944. Tentative Specifications for Servicing Units for Tests at Subnormal and Supernormal Temperatures of Electrical Insulating Materials and Plastics. Covers scope, requirements, housing, blower and duct system, heating capacity, refrigeration, and temperature control.

Assn. of American Railroads, Telegraph and Telephone Section, 2-K-31; 1941. Description and Operation of a 5-Unit Single Magnet Reperforator. Gives introduction, drawings and specification, general requirements, description, and operation.

U. S. Gov., Army Air Forces. Specification No.24826; 1942. Target; Scoring (for Type E-3 Aerial Gunnery Trainer).

U. S. Gov., Army Air Forces. Specification No.24865; 1943. Target; Bomb Scoring, Type E-1 (Sonic).

U. S. Gov., Army Air Forces. Specification No.40727; 1944. Bench; Electrical Repair, Type A-1 (Generator).

U. S. Gov., Navy Dept. Specification 17A9a; 1945. Armature-Stands; Electrical, Coil-Winding.

U. S. Gov., U. S. Army, Chemical Warfare Service. Specification 96-71-7A; 1942. Squib; Electric.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-590; 1931. Compound; Cable Pulling.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-868; 1938. Winch; Type MP-34-( ), Electric Motor-Driven.

U. S. Gov., Veterans Administration. Specification VA-G-99d; 1935. Electric Insecticide Dispenser.

U. S. Gov., Veterans Administration. Specification VA-GM-317b; 1940. Electric Dispenser for Liquid Insecticide and Insect Powder.

U. S. Gov., Veterans Administration. Specification VA-MM-311; 1941. Electric Dispenser for Insect Powder.

U. S. Gov., Veterans Administration. Specification VA-MM-312; 1941. Electric Dispenser for Liquid Insecticide and Insect Powder.

U. S. Gov., Veterans Administration. Specification VA-MM-313; 1941. Electric Dispenser for Liquid Insecticide.

## 721. ELECTRIC VEHICLES

### 721.1 ELECTRIC LOCOMOTIVES

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering, 1940. Electric Locomotives. Gives general principles, systems of electrification, types of electric locomotives, difference between steam and electric locomotives, typical speed-tractive effort curves of electric locomotives, split-phase induction-motor locomotives, motor-generator locomotives, and braking effort.

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering, 1940. Oil-Electric Locomotives and Rail Cars. Gives general principles, tractive capacity, power capacity, locomotive output, speed tractive effort curves—oil-electric locomotives, locomotive classification, and weight and capacity.

American Transit Assn. Recommended Practice for System of Nomenclature for Axle and Truck Arrangement of Locomotives Having Electric Drive, E128-32; 1932.

Assn. of American Railroads, Mechanical Div., Electrical Section. Manual of Standard and Recommended Practice, 1941. Automotive and Electric Rolling Stock. Covers lubricating oil filters for Diesel engines, reclamation and reconditioning of Diesel engine parts, and specifications for Diesel-electric switching locomotives of total weight of 95 tons and above.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Standard Method of Rating Electric Locomotives. Conditions of rating, for maximum start, one hour, and continuous test, data required, one hour ratings to start with cold motor stand rating, tractive effort, and speed formulae.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Standard System of Nomenclature for Axle and Truck Arrangement of Electric Locomotives and Internal Combustion Engine Locomotives Having Electric Transmission. Designation of engines based on numbering idle axles, and letters for driving axles.

Assn. of American Railroads, Operations and Maintenance Dept., Operating-Transportation Div., Safety Section. Safety Rules Governing Maintenance of Equipment and Stores Employees, 1942. Gives requirements for prevention of burns (fires, explosions); handling material, tools, and equipment; operation of trucks, tractors, cranes, hoists, and derricks; working on or about machinery, engines, cars, pipe lines, refrigerating or air conditioning units, and elevators; protection against train and engine hazards; and eye protection.

National Electrical Manufacturers Assn. Mining and Industrial Locomotive Standards, 44-96; 1944. A reference work of practical information concerning the manufacture, test, and performance of mining and industrial locomotives and represents general practice in the industry, promotes production economies, and assists users in the proper selection of mining and industrial locomotives. Gives requirements for mining locomotives—trolley type; mining locomotives—storage battery and combination types; industrial locomotives—trolley and third rail types; industrial locomotives—storage battery and combination types; and definitions.

U. S. Gov., Dept. of Commerce, National Bureau of Standards, H33; 1940. American Standards Assn., C2.3-1941. Safety Rules for the Installation and Maintenance of Electric Utilization Equipment (comprising Part 3—for 25- to 270-volt equipment which is accessible to other than qualified electrical operators—and the grounding rules of the Fifth Edition, National Electrical Safety Code). For electrically operated locomotives and cars; requirements on guarding live and moving parts, grounding noncurrent-carrying parts, control of energy supply, control of movement, and subway and car lighting.

U. S. Gov., Interstate Commerce Commission, Bureau of Locomotive Inspection. Laws, Rules, and Instructions for Inspection and Testing of Locomotives Other Than Steam, 1926. Requirements mandatory by law, regarding provision and capacity of safety valves for air brake reservoir, operating characteristics of compressor governor and testing of air brake compressors and reservoirs, maximum brake cylinder travel, lost motion in articulated connections or between chafing irons or couplers, permissible side motion and fit requirements at pin and rod bearings, permissible lateral motion in wheel bearings, intermembering of truck center plates, clearance of side bearings, uniform diameter of wheels, pressing of wheels on axle, minimum width of tires, windows in cab, cab heating, location of cab lights, of whistles, bells and sanders, locking and grounding of pantagraphs, voltage test of jumpers, provision of safety cut-out valve for fuel, grounding of tanks, and provision for starter for internal combustion engines, for boilers the minimum allowed factor of safety, permissible stresses in stay bolts and braces, design strength of materials and rivets, inspection and hydrostatic test of boiler, testing of stay bolts, location, testing and connection of steam gauges, number, location, and setting of safety valves, water glass and gauge equipment, connection of tubes into tube sheets of feed water appliances, etc., permitted wear limits and defects appearing in service.

*References.*—Railway motors, *see* 711.3; storage batteries and containers, *see* 712.2, 712.3; locomotive control apparatus, *see* 714.11; motor rating basis, standard voltages, methods of testing, safety codes for electrical equipment, *see* 710; safety devices for locomotives, *see* 726.2; brake systems and miscellaneous car parts, *see* 726.2; structural steel for locomotives, *see* 605.13; cast-iron wheels, cast-steel wheels, forged steel wheels, and tires, *see* 611.18, 611.49, 611.53; journal boxes, bearings, *see* 611.22, 692.3; brake beams, brake shoes, *see* 611.42, 611.43; couplers and cast steel parts, *see* 611.44, 611.49; axles, steel forgings, *see* 611.51, 611.52;

valves, *see* 607.6; locomotive headlights, wiring for locomotives, *see* 716.2, 715.30; turbo-generator for locomotive lighting, *see* 711.12; tolerances for metal fits, *see* 615.82.

### 721.2 ELECTRIC AUTOMOBILES AND TRUCKS

Industrial Truck Statistical Assn. Spark-Enclosed Construction for Electric Industrial Trucks and Tractors, 1942. To seal the enclosures of the sparking devices in such a manner that any dust or gas from surrounding atmosphere is substantially excluded or its infiltration is greatly retarded. Gives requirements for motors, controllers, contactors, switches, other sparking devices, leads or conductors, terminal boards, resistors, battery compartments, plugs and receptacles, static discharge device, warning signal, and name plate.

*References.*—Electric vehicle motors, *see* 711.22; storage batteries and containers, *see* 712.2, 712.3; controllers, *see* 714.11; definitions, symbols, rating basis and methods of testing motors, *see* 710; automobile parts and accessories, *see* 722.3; wiring for electric automobiles, *see* 722.32; charging plug and receptacle, *see* 715.21; industrial truck tire and rim sizes, *see* 206.5; tolerances on metal fits, *see* 615.82.

## 722. MOTOR TRUCKS AND AUTOMOBILES, EXCEPT ELECTRIC

### 722.0 GENERAL ITEMS

Assn. of American Railroads, Operations and Maintenance Dept., Operating-Transportation Div., Safety Section. Safety Rules Governing Maintenance of Equipment and Stores Employes, 1942. Gives requirements for prevention of burns (fires, explosions); handling material, tools, and equipment; operation of trucks, tractors, cranes, hoists, and derricks; working on or about machinery, engines, cars, pipe lines, refrigerating or air conditioning units, and elevators; protection against train and engine hazards; and eye protection.

Society of Automotive Engineers. 1944 Handbook, Section 6—Tests, Ratings, and Codes. S.A.E. Recommended Practice for Air Cleaner Test Code, adopted 1941. Consists of two divisions—(1) air cleaner test code, and (2) discussion of pertinent factors not included in the code itself; absolute cleaner method and direct mounting method with descriptions of apparatus and procedure.

Society of Automotive Engineers. 1944 Handbook, Section 7—Transportation and Maintenance. S.A.E. Recommended Practices for Maintenance Instruction Cards for Motor Vehicles, approved 1943. Gives recommendations for standard practice instruction cards and for indexing and filing standard practice instructions.

Society of Automotive Engineers. 1944 Handbook, Section 7—Transportation and Maintenance. S.A.E. Recommended Practice for Uniform Motor Vehicle Operating Cost Classification, revised 1934. Provides a uniform basis for cost analysis and comparison and may be used as the basis for bookkeeping accounts. Where accounts are kept in accordance with requirements of regulatory bodies, they can usually be reclassified for analysis and comparison purposes.

Society of Automotive Engineers. 1944 Handbook, Section 7—Transportation and Maintenance. S.A.E. Standard Load and Dimension Limitations on Motor Vehicles, revised 1942. Maximum widths, heights, lengths, and weights, with outlines of the reasons on which each is based.

Society of Automotive Engineers. 1944 Handbook, Section 9—Nomenclature, Tolerances, Conversions. S.A.E. Standard Automotive Nomenclature, revised 1941. Principles and rules governing automotive nomenclature.

Underwriters' Laboratories, Inc. Standard for the Determination of Fire Hazards of Commercial Cars and Motor Trucks, 1924. Gives requirements for fuel supply system, tank mounting, carburetion, electrical equipment, and exhaust system.

U. S. Gov., Army Air Forces. Specification 20020-A; 1941. Protective Coatings and Finishes for Automotive Vehicles; General Specification for.

U. S. Gov., Dept. of Commerce, Bureau of Foreign and Domestic Commerce. Emergency Formula Governing Minimum Sizes and Weights of Commercial Motor Vehicles Which the Governors of All 48 States Have Approved for the Duration of the War.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-368. Vehicles; Gasoline Driven.

U. S. Gov., Dept. of Interior, Purchasing Office. Standard Specification No. 1. Automobiles. (A) light duty, (B) general transportation, (C) medium weight, and (D) heavy weight.

U. S. Gov., Interstate Commerce Commission. Motor Carrier Safety Regulations, 1942. Rules and regulations governing qualification of employees and safety of operation and equipment of common carriers and contract carriers of passengers and property, and of private carriers of property, by motor vehicle; includes qualification of drivers, driving of motor vehicles, parts and accessories necessary for safe operation, reporting of accidents, hours of service of drivers, and inspection and maintenance. Transportation of explosives and other dangerous articles.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 60-0-1A; 1939. Automotive Vehicles and Trailers, Spare and Replacement Parts and Accessories; General Requirements for.

### 722.1 AUTOMOBILE MOTOR TRUCKS

National Fire Protection Assn. National Fire Codes for Flammable Liquids, Gases, Chemicals, and Explosives, 1943. Tank Truck Ordinance. Suggested ordinance regulating the construction and operation of tank trucks, tank trailers, and tank semitrailers used for the transportation of flammable liquids.

National Fire Protection Assn. Tank Truck Ordinance, 1938. Suggested Ordinance for municipalities and state law, gives definitions, requirements for material, capacity, and gauge of steel tank, for joints, test, outlets, compartments, vents, valves and faucets, collision protection, emergency discharge control, grounding; tank truck fuel systems, exhaust systems, trailers and semitrailers, with diagrams.

Society of Automotive Engineers. 1944 Handbook, Section 7—Transportation and Maintenance S.A.E. Standard Certificates of Maximum Net Horsepower for Motor Trucks and Truck-Tractors, adopted 1941.

U. S. Gov., Army Air Forces. Specification 30145; 1942. Truck; Photo Lab, Type N-1.

U. S. Gov., Army Air Forces. Specification 30148; 1942. Truck; Fuel Servicing, Tractor-Trailer, Type F-1A.

U. S. Gov., Army Air Forces. Specification 30153-4; 1944. Truck; Crash, Airdrome, Type O-1.

U. S. Gov., Army Air Forces. Specification 30166; 1944. Truck; Six-Wheel, Six-Wheel-Drive, 7 1/2-Ton, for Crane Truck, Type P-1.

U. S. Gov., Army Air Forces. Specification 40601-A; 1943. Body; Telescoping, Portable Van, General Specification for.

U. S. Gov., Army Air Forces. Specification 40604 (2); 1943. Van; Technical Supply, Portable.

U. S. Gov., Army-Navy Aeronautical Specification AN-T-5a; 1943. Truck; Six Floodlight Field Lighting.

U. S. Gov., Army-Navy Aeronautical Specification AN-T-39; 1943. Truck; Four Floodlight Field Lighting.

U. S. Gov., Dept. of Agriculture, Forest Service. Specifications for Truck; Fire-Weather Forecasting.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-183. Truck; 1/2 Ton, Sedan Delivery or Panel Body.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-392. Supplement to Federal Specifications KKK-T-701a Sections B, C, D, and F. Single Rear Wheel, 1/2 Ton Sedan Delivery Truck.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-394. Supplement to Federal Specifications KKK-T-701a, Sections B, C, D, and F. Single Rear Wheel, 1 1/2 Ton Panel Body Truck.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-395. Supplement to Federal Specifications KKK-T-701a, Sections B, C, D, and F. Single Rear Wheel, 3/4 Ton Pickup Body Truck.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-396. Supplement to Federal Specifications KKK-T-701a, Sections B, C, D, and F. Dual Rear Wheel, 1 1/2 Ton Panel Body Truck.

U. S. Gov., Dept. of Interior, Purchasing Office. Standard Specification Nos. 21 to 29, inclusive. Trucks; All Sizes.

U. S. Gov., Federal Specification KKK-T-701a; 1933. Amendment 1; 1934. Trucks; Motor, Gasoline (Four Wheels—Two-Rear-Wheel-Drive). Gives requirements for chassis, frame, engine, cooling, lubricating, ignition, fuel systems, clutch, transmission, axles, wheels, tires, brakes, springs, controlling mechanism, body, and tests.

U. S. Gov., Federal Specification KKK-T-706; 1934. Trucks; Motor, Gasoline or Diesel Engine (Four Wheels—Four-Wheel-Drive; Six Wheels—Six-Wheel-Drive). Gives requirements for chassis, frame, power unit, engine, cooling, ignition, fuel system, muffler, clutch, transmission, axles, brakes, etc., and tests.

U. S. Gov., Federal Specification KKK-T-716; 1937. Trucks; Motor, Gasoline (1,000-Pound Pay-Load), (Four Wheels—Two-Rear-Wheel-Drive). Gives requirements for chassis, frame, engine, power unit, cooling and lubricating systems, clutch, transmission, ignition and fuel systems, propeller shaft, brakes, cab, etc., and tests.

U. S. Gov., Interstate Commerce Commission. Regulations for Transportation of Explosives and Other Dangerous Articles by Motor, Rail, and Water. Shipping Container Specifications. Specifications MC300, MC301, MC302, MC303, MC310, and MC320, Cargo Tanks To Be Mounted on and To Form Part of Tank Motor Vehicles for Transportation of (MC300, MC301, MC302, and MC303) Inflammable Liquids and Poisonous Liquids, Class B; (MC310) Corrosive Liquids; and (MC320) Liquefied Petroleum Gases. Covers requirements for design and construction, marking, inspection, maintenance and methods of testing. Published by American Trucking Assns., Inc., Tariff Bureau, Agent C. F. Jackson's Motor Carriers' Explosives and Dangerous Articles Tariff No.4-1941(and Supplements Nos.1 and 2-1942.)

U. S. Gov., U. S. Army, Army Air Forces. Specification 91-10; 1928. Truck; Servicing, Hot Oil and Water, Type D-1.

U. S. Gov., U. S. Army, Army Air Forces. Specification 91-52; 1933. Truck; Wrecking, Type C-1.

U. S. Gov., U. S. Army, Army Air Forces. Specification 91-62; 1938. Truck; Wrecking, Tractor Trailer, Type C-2.

U. S. Gov., U. S. Army, Army Air Forces. Specification 91-65B; 1940. Truck-Tractor; Motor, for Type C-2 Wrecking Truck, 6-Wheel Drive, 4DT.

U. S. Gov., U. S. Army, Army Air Forces. Specification 91-67; 1938. Truck; Fuel Servicing, Tractor Trailer, Type F-1.

U. S. Gov., U. S. Army, Army Air Forces. Specification 91-68A; 1942. Tractor-Truck; 7 1/2 Ton, 6-Wheels, 6-Wheel Drive, 4DT, for Type F-1 Fuel-Servicing Semitrailer.

U. S. Gov., U. S. Army, Army Air Forces. Specification 91-75; 1940. Truck; Fuel Servicing, Tractor-Trailer, Type F-2.

U. S. Gov., U. S. Army, Army Air Forces. Specification 91-76; 1940. Truck; Oil Servicing, Type L-1.

U. S. Gov., U. S. Army, Army Air Forces. Specification 91-84; 1943. Truck, Fuel-Servicing, Type F-3.

U. S. Gov., U. S. Army, Army Air Forces. Specification 91-89; 1944. Truck; Aircraft Field Repair Shop, Type A-3A, Tractor-Trailer.

U. S. Gov., U. S. Army, Army Air Forces. Specification 91-95; 1945. Truck; Fuel Servicing, Type F-4 (Half-Track).

## 722.2 AUTOMOBILE FIRE TRUCKS

National Board of Fire Underwriters. Fire Engine Tests and Fire Stream Tables, 1938. Covers method of testing automobile fire engines for new equipment and equipment in use, based on quantity of water discharged at 120 lb. pressure; apparatus necessary, test procedure, fire stream tables, tables for various types of nozzle and hose, and computation of results of tests.

National Fire Protection Assn. National Fire Codes for Extinguishing and Alarm Equipment, 1943. Community

Forest Fire Fighting Equipment. Covers the forest and brush fire problem, hand pumps, power pumps, motorized forest fire truck, hose, hand tools, housing and care of equipment, and availability of parts.

National Fire Protection Assn. National Fire Codes for Extinguishing and Alarm Equipment, 1943. Municipal Fire Apparatus. Specifications for Automobile Fire Apparatus. Covers pumper (triple combination), ladder truck (city service), ladder truck (aerial), ladder truck and pumper (quadruple combination), provisions applying to all types of apparatus, information for municipal officials using specifications on municipal fire apparatus, and lists tools and appliances for pumpers, ladder trucks, and ladder truck and pumper (quadruple combination).

National Fire Protection Assn. National Fire Codes for Extinguishing and Alarm Equipment, 1943. Specifications for Auxiliary Pumpers. Covers provisions applying to pump assembly, special provisions for automobile truck units, special provisions for trailer units, trailer pumpers, advantages and disadvantages of trailer pumpers.

U. S. Gov., Dept. of Agriculture, Forest Service. Specifications for Truck; Barrel and Suppression-Crew.

U. S. Gov., Dept. of Agriculture, Forest Service. Specifications for Truck; Suppression-Squad.

U. S. Gov., Dept. of Agriculture, Forest Service. Specifications for Truck; Tank and Suppression-Crew, Light-Duty.

U. S. Gov., Dept. of Agriculture, Forest Service. Specifications for Trucks; Fire Pump and Tank, Heavy Duty.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-417. Crash and Fire Truck.

*References.*—Industrial automobile trucks, *see* 722.1; truck accessories and parts, *see* 722.3; stationary fire pumps, *see* 755.1; other fire extinguishing equipment and supplies, *see* 970 to 979.

## 722.3 AUTOMOBILE ACCESSORIES AND PARTS

### 722.30 General Items

Society of Automotive Engineers, Inc. Report on Engine Bearings; Replacement Technique for Installation or Fitting. Submitted to Vehicle Maintenance Section, Office of Defense Transportation, 1943. Covers section I, types of bearings and materials of engine bearing construction; and II, operational guide for engine bearing replacement.

### 722.31 Automobile Power-Plant Parts

Society of Automotive Engineers. Aeronautical Material Specification No.7310; 1941. Rings; Piston, Cast Iron. Gives requirements for composition, condition, hardness, quality, finish, elasticity, tension, circularity, light-tightness and periphery, flatness, dimensions and tolerances, marking, identification, rust-proofing, drawings, approval, reports, and rejection. Similar specifications: Army 95-28107; Navy 49R3.

Society of Automotive Engineers. 1944 Handbook, Section 2—Units, Parts, and Fittings. S.A.E. Recommended Practice Air-Cleaning Mounting, Carburetor Air-Horns, adopted 1928. Diagram with table of dimensions for various sizes.

Society of Automotive Engineers. 1944 Handbook, Section 2—Units, Parts, and Fittings. S.A.E. Recommended Practice for Carburetor Intakes, adopted 1921. Requirements for nominal diameter of air intake to take S.A.E. recommended practice for flexible steel carburetor tubing.

Society of Automotive Engineers. 1944 Handbook, Section 2—Units, Parts, and Fittings. S.A.E. Recommended Practice for Insert Valve Seats, adopted 1937. Diagram and table of dimensions for bores in cylinder head and insert valve seats for nominal throat diameters from 7/8 to 2 3/4 in. for regular series (for use in passenger car engines) and heavy duty series (for use in engines in trucks, buses, tractors, and other heavy duty services).

Society of Automotive Engineers. 1944 Handbook, Section 2—Units, Parts, and Fittings. S.A.E. Standard Automotive Type Carburetor Flanges, revised 1928. Diagrams and tables of dimensions for various sizes two-bolt, three-bolt, four-bolt, and duplex flanges.

Society of Automotive Engineers. 1944 Handbook, Section 2—Units, Parts, and Fittings. S.A.E. Standard Engine Flywheel Housing, revised 1941. Diagram with table of dimensions for S.A.E. Size Nos.00 to 6; requirements for clutch housings and disc clutch flywheels.

Society of Automotive Engineers. 1944 Handbook, Section 2—Units, Parts, and Fittings. S.A.E. Standard Engine Mounting, revised 1942. Includes diagrams of, and tables for, dimensions of engine arm sizes Nos.1 to 5, and engine trunnions of starting-crank bracket and gear cover types; and dimensioned line drawings and table of flat pad mounting dimensions for S.A.E. housing numbers 0 to 6.

Society of Automotive Engineers. 1944 Handbook, Section 2—Units, Parts, and Fittings. S.A.E. Standard Piston and Piston Pin Oversizes, revised 1941. Gives standard oversizes for pistons and oversizes of piston pin.

Society of Automotive Engineers. 1944 Handbook, Section 2—Units, Parts, and Fittings. S.A.E. Standard Piston Rings and Grooves, revised 1942. Adopted as a standard primarily for the types of internal combustion engines commonly used in automobiles, motorboats, etc. For pistons used in aircraft engines and engines not of the conventional automobile type, it may be necessary to deviate from the rings and grooves recommended, but such modifications should not be made by changing the piston ring width or radial thickness. Includes tables for piston ring and groove widths, and ring widths for cylinder diameters; formulas for ring grooves; tables for piston ring radial wall thickness and groove diameters, and piston ring radial wall thickness and groove diameters for thick wall compression rings; and S.A.E. Recommended Practice for ring joints and drain holes with tables for ring joint clearances, number of oil ring groove drain holes, size of oil ring drain holes, and "K" type ring and groove dimensions.

Society of Automotive Engineers. 1944 Handbook, Section 2—Units, Parts, and Fittings. Starting Motor Mountings, revised 1940. Diagrams for S.A.E. standard for flange type; S.A.E. recommended practice for outboard installation—barrel type, medium duty, and

heavy duty; S.A.E. standard for inboard type; and S.A.E. recommended practice for starting motor pinions.

Society of Automotive Engineers. 1944 Handbook, Section 7—Transportation and Maintenance. S.A.E. Standard Certificates of Maximum Net Horsepower for Motor Trucks and Truck-Tractors, adopted 1941.

U. S. Gov., Post Office Dept., Div. of Motor Vehicle Service, Bureau of the Fourth Assistant Postmaster General. Specifications for Fan Belts.

U. S. Gov., Treasury Dept., Procurement Div., 249B; 1940. Filters; Oil; Internal Combustion Engine. Shall be designed and suitable for operation on a by-pass oil line, and shall consist of a metal container and an interchangeable filtering element. Gives requirements for engine oil capacity, container housing, filter capacity and dimensions, efficiency; method of inspection and test; and packaging, packing, and marking.

U. S. Gov., Post Office Dept., Div. of Motor Vehicle Service, Bureau of the Fourth Assistant Postmaster General. Specifications for Piston Rings.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 90-1B; 1937. Ring; Piston, for Motor Vehicle Engines.

*References.*—Flexible carbureter and exhaust steel tubing, *see* 607.7; acetylene head lamp, *see* 722.33; crank case drain plug, *see* 607.14; engine test codes, *see* 700; gasoline engines, *see* 705.0; tolerances on metal fits, *see* 615.82.

## 722.32 Automobile Electrical Equipment

American Assn. of Motor Vehicle Administrators, joint sponsor with National Conservation Bureau. American Standards Assn., D 7.1-1941. Inspection Requirements for Motor Vehicles. Minimum requirements for the mechanical condition of the vehicle for safe operation on the highway. Includes testing and inspection of head, rear, clearance, signal, marker, and adverse weather lamps, including output, focus, and aim; with diagram drawings of lamp aim inspections.

American Automobile Assn. Headlight Testing Manual. To aid garages and inspection stations in servicing lighting systems so as to produce the safest illumination possible and in determining when rejections and replacements of parts are necessary for the protection of highway users. Covers space requirements, mounting the chart, adjusting height of chart, locating the car, preliminary inspections, and headlight beam arrangements and patterns.

Society of Automotive Engineers. 1944 Handbook, Section 2—Units, Parts, and Fittings. S.A.E. Recommended Practice for 7 Mm. Distributor Nipple, revised 1941. Diagram for natural or synthetic rubber 7 mm. distributor nipple.

Society of Automotive Engineers. 1944 Handbook, Section 2—Units, Parts, and Fittings. S.A.E. Recommended Practice for Electrical Instrument Binding Posts, revised 1941. Requirements for threads and table of limits for same. Relate primarily to dashboard instruments in motor vehicles.

Society of Automotive Engineers. 1944 Handbook, Section 2—Units, Parts, and Fittings. S.A.E. Recommended Practice for Voltages for Diesel Electric Systems, adopted 1939. For lamps, batteries, heaters, radios, etc., in electrical systems for operation with mobile or automotive Diesel engines. Recommends nominal system ratings of 12, 24, and 32 volts.

Society of Automotive Engineers. 1944 Handbook, Section 2—Units, Parts, and Fittings. S.A.E. Standard Battery Tray Terminal Lugs, adopted 1925. Diagrams and table of dimensions for terminals Nos.2 and 0 for 3/8—16 size bolt and No.0000 for 1/2—13 size bolt.

Society of Automotive Engineers. 1944 Handbook, Section 2—Units, Parts, and Fittings. S.A.E. Standard Distributor Mounting, revised 1941. Diagrams of distributor mounting and hold-down arm and screw.

Society of Automotive Engineers. 1944 Handbook, Section 2—Units, Parts, and Fittings. S.A.E. Standard Electric Lamp Bulbs and Bases, revised 1944. Includes lamp sizes and ratings for bulb types, filament types, and prefocused types; lamp base dimensions, sealed beam headlamp units; sizes, ratings, and types; and electric light bulbs and sealed lighting units for military vehicles.

Society of Automotive Engineers. 1944 Handbook, Section 2—Units, Parts, and Fittings. S.A.E. Standard General Automotive Type Spark Plugs, revised 1935. Diagram with tables for dimensions, plug threads, and tapped hole threads for 7/8 in.-18 and 18-1.5 mm. spark plugs; requirements for tapped hole countersink and for thread gages; and metric conversions used for values in the tables.

Society of Automotive Engineers. 1944 Handbook, Section 2—Units, Parts, and Fittings. S.A.E. Standard Generator Mounting, revised 1929. Diagrams for adapter-flange type, flange type, and base type.

Society of Automotive Engineers. 1944 Handbook, Section 2—Units, Parts, and Fittings. S.A.E. Standard Magneto Mounting, revised 1941. Diagrams with tables of dimensions for magneto coupling and shaft end, and for magneto mounting for all service type (1, 2, 4, and 6 cyl.), motorcycle and lighting plant, small stationary engine base and flange mountings; and dimensioned line diagram for flange type for tractors.

Society of Automotive Engineers. 1944 Handbook, Section 2—Units, Parts, and Fittings. S.A.E. Standard Sockets, Plugs, and Caps, revised 1937. Diagrams showing sizes and dimensions of regular and heavy duty sockets and plugs; miniature sockets; pinched-in sockets; off-set pin socket and plug; screw socket, plug, and cap; moulded cap; and metal cap.

Society of Automotive Engineers. 1944 Handbook, Section 4—Fabricated Materials. S.A.E. Standard Starting Motor Circuits, adopted 1932.

Society of Automotive Engineers. 1944 Handbook, Section 4—S.A.E. Recommended Practice for Automobile Wiring, revised 1940. Ground return wiring systems (definitions, insulated cable, grounding, battery installation, and overload protective devices).

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Commercial Standard CS97-42; 1942. Electric Supplementary Driving and Passing Lamps for Vehicles (After Market). To establish standard specifications and methods of test for supplementary driving and passing lamps (after market) for the guidance of manufacturers, distributors, and

users. Covers definitions, general requirements, installation instructions, lamp bulbs, samples for test, laboratory facilities, vibration and shock test, moisture test, dust test, corrosion test, photometric test, marking, and labeling.

U. S. Gov., Post Office Dept., Div. of Motor Vehicle Service, Bureau of the Fourth Assistant Postmaster General. Specifications for Cable; Ignition.

U. S. Gov., Treasury Dept., Procurement Div., 314A; 1942. Horns; Motor-Vehicle Electrically-Operated, Vibrator-Type. Covers two types—(I) medium pitch tone, single unit, with and without projector; and (II) high pitch tone, with projector, single unit. For operation with 6-volt or 12-volt storage batteries. Gives requirements for materials, workmanship, design, performance, dielectric strength and insulation resistance, brackets, and relay; methods of inspection, sampling, and tests; and packaging, packing, and marking.

*References.*—Storage batteries, *see* 712.2; storage battery containers and jars, *see* 712.3; storage battery terminals, *see* 712.9; storage battery trays and tray terminals for electric vehicles, *see* 721.2; electric vehicle motors, *see* 711.22; charging plug and receptacle, *see* 715.21; ignition coil and timer test, *see* 713.6; fuses and fuse clips, *see* 714.21, 714.22; rubber bushings, *see* 209.7; flexible steel conduit and tubing, *see* 715.11; nonmetallic conduit, *see* 715.13; insulated cable, magnet wire, *see* 715.41, 715.44; lamp lenses, *see* 525.4; incandescent lamps, optical tests of head lamps and tail lamps, *see* 716.12; bases, sockets, and plugs, *see* 715.21, 716.12; connectors, *see* 719.72; spark plugs and terminals, *see* 719.4; breaker contacts, *see* 714.51; starting motor pinions, *see* 611.55; insulation test, *see* 710; starting motors, automobile generators, *see* 711.22, 711.12; motor and generator brushes, *see* 711.42; meter binding posts, *see* 714.37; cable terminals, cable and conduit clips, *see* 715.34, 719.72; flexible conduit ferrules, *see* 715.11; motor coach lighting, *see* 716.39.

## 722.33 Automobile Parts and Fittings

American Assn. of Motor Vehicle Administrators, joint sponsor with National Conservation Bureau.: American Standards Assn., D 7.1-1941. Inspection Requirements for Motor Vehicles. Minimum requirements for the mechanical condition of the vehicle for safe operation on the highway. Includes requirements for horn, glass, windshield wiper, sleet remover, rear view mirror, directional signals, exhaust line, registration and identification plates, fuel tanks and lines, body fittings, cab, seat fittings and controls, fire extinguishers, flares, fuses, lanterns, flags, trailer mounting and coupling and trailer wiring.

Society of Automotive Engineers. 1944 Handbook, Section 2—Units, Parts, and Fittings. S.A.E. Recommended Practice for Ball Studs, revised 1932. Diagrams and tables of dimensions for nuts and ball studs.

Society of Automotive Engineers. 1944 Handbook, Section 2—Units, Parts, and Fittings. S.A.E. Recommended Practice, Crankcase Drain Plugs, revised 1932. Gives drawing with table of dimensions for sizes 1/2, 3/4, and 7/8 in. in diameter.

Society of Automotive Engineers. 1944 Handbook, Section 2—Units, Parts, and Fittings. S.A.E. Recommended Practice for Fuel Pump Mounting, revised 1941. Diagrams for crankcase pads for mounting fuel pumps for passenger cars, motor coaches, trucks, and tractors.

Society of Automotive Engineers. 1944 Handbook, Section 2—Units, Parts, and Fittings. S.A.E. Recommended Practice for Pressure Gage Connections, adopted 1922. Diagrams and table of dimensions for tubing diameters 1/4, 5/16, and 3/8.

Society of Automotive Engineers. 1944 Handbook, Section 2—Units, Parts, and Fittings. S.A.E. Recommended Practice for Serrated Shaft Ends, revised 1944. Gives straight shafts, formulas, taper shafts, drawings, and table giving dimensions of holes and shafts for straight and taper shafts with nominal diameter from 1/8 to 3 in.

Society of Automotive Engineers. 1944 Handbook, Section 2—Units, Parts, and Fittings. S.A.E. Recommended Practice for Steering-Gear Connecting-Rods, Adopted 1928. Diagrams and tables of dimensions for sockets, plugs, ball seats, and springs for nominal ball sizes 1 to 1 3/4 in.

Society of Automotive Engineers. 1944 Handbook, Section 2—Units, Parts, and Fittings. S.A.E. Recommended Practice for Water-Pipe Flanges, revised 1926. Diagram with table of dimensions for nominal sizes from 1 3/16 to 2 3/16 in.

Society of Automotive Engineers. 1944 Handbook, Section 2—Units, Parts, and Fittings. S.A.E. Standard Ball and Socket Joint, adopted 1920. Diagram with table for dimensions and threads per inch (NF-2) in nine sizes from No.5 to 1/2 in. in diameter.

Society of Automotive Engineers. 1944 Handbook, Section 2—Units, Parts, and Fittings. S.A.E. Standard for Oil Filter Mounting, adopted 1932. Diagrams for small and dual types for dimensions of the pads provided on the engine. Areas for locating the connecting oil passages are indicated.

Society of Automotive Engineers. 1944 Handbook, Section 2—Units, Parts, and Fittings. S.A.E. Standard Rod Ends and Pins, revised 1931. Diagrams and table of dimensions and dimension tolerances for light and heavy series, adjustable and plain, yokes and eyes.

Society of Automotive Engineers. 1944 Handbook, Section 2—Units, Parts, and Fittings. S.A.E. Standard for Splined Fittings, revised 1936. Gives diagrams and table of formulas in terms of large diameter for 4, 6, 10, and 16 splines for all fits, permanent fit, to slide not under load, and to slide under load; and tables of fittings for 4 and 6 spline fittings 3/4 to 3 nominal diameter, 10 spline fittings 3/4 to 6 nominal diameter, and 16 spline fittings 2 to 6 nominal diameter.

Society of Automotive Engineers. 1944 Handbook, Section 2—Units, Parts, and Fittings. S.A.E. Standard Square Shaft Ends, revised 1921. Diagram and table of slip fits and permanent fits for square broached fittings for nominal diameters 1/4 to 4.

Society of Automotive Engineers. 1944 Handbook, Section 2—Units, Parts, and Fittings. S.A.E. Standard Taper Shaft Ends, revised 1928. Diagram and table of dimensions for taper fittings with plain or slotted nuts.

Society of Automotive Engineers. 1944 Handbook, Section 2—Units, Parts, and Fittings. S.A.E. Standard for Thermostat Connections, revised 1941. Gives requirements for hose connections and for metallic connections.

Society of Automotive Engineers. 1944 Handbook, Section 2—Units, Parts, and Fittings. S.A.E. Standard Tube Fittings, revised 1944. Diagrams and tables of dimensions of connectors (unions, elbows, and tees) and nuts for connectors—flared, refrigeration and marine, ball sleeve (compression), inverted flared, and threaded sleeve types; and pipe thread modification.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Specifications, Bureau of Federal Airways. Specification CAA-308. Traction Devices, for Automotive Equipment.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 91-44; 1926. Tank; Vacuum, Fuel Feed System.

*References.*—Drain cocks, *see* 645.4; wire cloth, *see* 603.43, 645.39; ball bearings, roller bearings, *see* 766.2; screw threads and tap drill sizes, *see* 608.0; cap screws, machine screws, wood screws, *see* 608.2; bolts, nuts, *see* 608.31, 608.32; wrench openings, *see* 615.42; lock washers, plain washers, *see* 608.8; cotter pins, *see* 608.51; woodruff keys, key slots, keyways, *see* 608.52; split and tubular rivets, *see* 645.9; brake lining, *see* 722.38; lubricator cups, oil and grease cups, threads, *see* 794; tolerances for metal fits, *see* 615.82; lamps, electric (auto), *see* 716.12.

## 722.34 Automobile Transmission Parts

Brake Lining Manufacturers' Assn., Inc. Automotive Data Book, 1941, with 1942-43 Supplement. Asbestos Brake Linings and Clutch Facings. Lists name, model and year of car, truck, bus, or trailer and gives B.L.M.A. catalog number and data for clutch facings and for brake lining.

Society of Automotive Engineers. 1944 Handbook, Section 2—Units, Parts, and Fittings. S.A.E. Recommended Practice Propeller Shaft Midship Mounting for Truck and Motorcoach, revised 1941. Diagram and table of dimensions for three-joint propeller shaft midship mounting for tube diameters of 2, 2 1/4, 2 1/2, and 3 in.

Society of Automotive Engineers. 1944 Handbook, Section 2—Units, Parts, and Fittings. S.A.E. Recommended Practice for Universal-Joint-Hubs, adopted 1921. Diagram and table of maximum and minimum lathe and ground finish hub diameters, finished lengths, and bevels for 3/4 to 2 nominal diameters.

Society of Automotive Engineers. 1944 Handbook, Section 2—Units, Parts, and Fittings. S.A.E. Standard Power Take-Off, revised 1940. Diagram with mounting and gear locations applicable for all general installations of power take-off on the transmission gear box of motor trucks and tractors.

Society of Automotive Engineers. 1944 Handbook, Section 2—Units, Parts, and Fittings. S.A.E. Standard V-Belts and Pulleys, revised 1939. Intended primarily for automotive applications such as fan, generator and pump drives, and where the load capacity of a single standard belt is inadequate, the capacity can usually be obtained by using standard pulleys and belts in multiple. Diagram of V-belt pulley grooves with table of V-belt and pulley dimensions for various S.A.E. sizes; recommended method of making V-belt drive layouts; method of checking V-belts; belt ride-out; diagram of notched pulley for testing fixture; and designation of belt size.

Society of Automotive Engineers. 1944 Handbook, Section 4—Fabricated Materials. S.A.E. Recommended Practice for Clutch Facings, revised 1929. Gives diagrams and tables of sizes and dimensions for multiple-disc and single-plate clutch facings.

U. S. Gov., Treasury Dept., Procurement Div., 248A; 1939. Facings; Clutch, Metallic. Shall be of one type and of good quality. Gives requirements for construction, wearing layer, backing layer, coefficient of friction, hardness, thickness of wearing layer, density, and applicability; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 57-230-3; 1944. Facing; Friction, Metallic.

*References.*—Silent chain, roller chain, roller chain sprocket, *see* 766.1; roller and sprocket chain cutters, *see* 765; tractor power take off speed, *see* 729.5; tractor belts and pulleys, *see* 729.5.

## 722.35 Automobile Axles and Wheels

American Assn. of Motor Vehicle Administrators, joint sponsors with National Conservation Bureau. American Standards Assn., D 7.1-1941. Inspection Requirements for Motor Vehicles. Minimum requirements for the mechanical condition of the vehicle for safe operation on the highway. Includes requirements for wheel alignment and rear axle.

*References.*—Rims, cleats, and lugs for tractor wheels, *see* 729.5.

## 722.36 Automobile Tires and Rims

American Assn. of Motor Vehicle Administrators, joint sponsor with National Conservation Bureau. American Standards Assn., D 7.1-1941. Inspection Requirements for Motor Vehicles. Minimum requirements for the mechanical condition of the vehicle for safe operation on the highway. Includes requirements for pneumatic tires and rims of passenger cars, buses, and commercial vehicles.

Plain Washer Manufacturers' Assn. Felloe Plates, Flat, 1938. Gives dimensional requirements for two sizes of felloe plates.

Tire and Rim Assn., Inc. Agricultural Handbook, 1944. Deep Well Rim contours for Wide Base Rear Tractor Tires. Recommended Practice, 1940. Dimensional drawings.

Tire and Rim Assn., Inc. Agricultural Handbook, 1944. Rim Contours for Tractor and Implement Tires. Recommended Practice, 1940. Dimensional drawings for various rim contours.

Tire and Rim Assn., Inc. Agricultural Handbook, 1944. Rim Contours for Wide Base Rear Tractor Tires. Recommended Practice, 1940. Gives dimensional drawings.

Tire and Rim Assn., Inc. Military Supplement, Nov. 1943. Beadlock Valve Hole Details (Military Standard). Gives diagrammatic dimensional drawings.

Tire and Rim Assn., Inc. Military Supplement, Nov. 1943. Channel Type Beadlock Contour for Use With Divided Rim or Wheel (Military Standard). Gives diagrammatic drawing with dimensions.

Tire and Rim Assn., Inc. Military Supplement, Nov. 1943. Combat Tire Bead Dimensions for Use on Divided Rims or Wheels (Military Standard). Drawing and table showing bead widths for tire sizes from 6.00-16 to 14.00-24.

Tire and Rim Assn., Inc. Military Supplement, Nov. 1943. Combat Tires and Rims (Military Standard). Gives tire size, number of plies, and rim contour from 6.00-16, six ply to 14.00-24, 20 ply.

Tire and Rim Assn., Inc. Military Supplement, Nov. 1943. Commercial Tire Bead Dimensions for Use With Beadlocks on Divided Rims or Wheels (Military Standard). Gives dimensional diagram showing tire sizes, number of plies, rim contour, beadlock, bead width, and tolerances.

Tire and Rim Assn., Inc. Military Supplement, Nov. 1943. Lend-Lease Beadlock Valve Hole and Locater Details (Military Standard). Gives diagrams showing dimensions.

Tire and Rim Assn., Inc. Military Supplement, Nov. 1943. Low Type Beadlock Contours for Lend-Lease "Runflat" Tires (Military Standard). Gives diagram and table showing dimensions for various sizes.

Tire and Rim Assn., Inc. Military Supplement, Nov. 1943. Low Type Beadlock Contours for Use With Divided Rims or Wheels (Military Standard). Gives dimensional diagrams for use with combat tires and rims.

Tire and Rim Assn., Inc. Military Supplement, Nov. 1943. Recommended Maximum Skid Depths for Lend-Lease Cross-Country Tires, including Runflat Type, Recommended Practice. Gives table showing various tire sizes and maximum skid depths.

Tire and Rim Assn., Inc. Military Supplement, Nov. 1943. Rim Contours for Divided Type Rims or Wheels, Defense Practice. Gives dimensional drawings of various sizes.

Tire and Rim Assn., Inc. Military Supplement, Nov. 1943. Rim Contours for Divided Type Rims or Wheels (Military Standard). Gives dimensional drawing, valve slots for divided rims, and projection of rivet heads through divided rims.

Tire and Rim Assn., Inc. Military Supplement, Nov. 1943. Runflat Tire Bead Dimensions for Lend-Lease (Military Standard). Gives diagram and table showing dimensions for various sizes.

Tire and Rim Assn., Inc. Military Supplement, Nov. 1943. Typical Assembly of Combat Tire and Beadlock on Divided Rim. Diagrammatic dimensional drawing.

Tire and Rim Assn., Inc. Passenger Car Handbook, 1944. Load Table for Full Drop Center Rims 16 Inch Diameter (and Smaller) Low Pressure Balloon Tires. Covers rim contour and maximum recommended load for standard rim and heavy duty rim.

Tire and Rim Assn., Inc. Passenger Car Handbook, 1944. Rim Contours for Slow Speed Industrial Vehicles and Passenger Car Baggage Trailers, Drop Center Type, Recommended Practice. Gives diagram of contours of rims for tires.

Tire and Rim Assn., Inc. Passenger Car Handbook, 1944. Rim Contours for Slow Speed Industrial Vehicles and Passenger Car Baggage Trailers, 2-Piece Divided Type, Recommended Practice. Gives diagrams of contours of rims for tires.

Tire and Rim Assn., Inc. Passenger Car Handbook, 1944. Rim Contours for Slow Speed Industrial Vehicles, Recommended Practice. Gives diagrams of contours of rims for tires.

Tire and Rim Assn., Inc. Passenger Car Handbook, 1944. Standard Rim Contours for 16 Inch Diameter (and Smaller) Low Pressure Passenger Balloon Tires. Dimensional diagrams for rim contours for use on passenger cars and similar chassis.

Tire and Rim Assn., Inc. Passenger Car Handbook, 1944. Wide Base Rim Contours for 16 Inch Diameter (and Smaller) Low Pressure Passenger Balloon Tires, Recommended Practice. Dimensional diagrams for rim contours for use on passenger cars and similar chassis.

Tire and Rim Assn., Inc. Truck-Bus Handbook, 1944. Contours of Rims for Light Trucks; Drop Center Type. Gives drawings with dimensions.

Tire and Rim Assn., Inc. Truck-Bus Handbook, 1944. Contours of Rims for Light Trucks; Semi-Drop Center Type. Gives drawings with dimensions.

Tire and Rim Assn., Inc. Truck-Bus Handbook, 1944. Optional Bead Seat Contour for Removable Flanges of All Sizes of Truck and Bus Rims Made to Advanced Program, Experimental Practice. Gives drawing with dimensions.

Tire and Rim Assn., Inc. Truck-Bus Handbook, 1944. Optional Fillet Contours for Truck and Bus Rims, Recommended Practice, Types A and B. Gives drawings with dimensions.

Tire and Rim Assn., Inc. Truck-Bus Handbook, 1944. Rim Contours for Mining, Logging, and Earth Moving Vehicles, Recommended Practice. Gives drawing with table showing dimensions.

Tire and Rim Assn., Inc. Truck-Bus Handbook, 1944. Rim Contours for Tractor and Implement Tires, Recommended Practice. Gives drawings with dimensions for various types and sizes.

Tire and Rim Assn., Inc. Truck-Bus Handbook, 1944. Rim Contours for Truck and Bus Tires, Advanced Program, Experimental Practice. Gives drawings with dimensions for various types and sizes of rim contours.

Tire and Rim Assn., Inc. Truck-Bus Handbook, 1944. Rim Contours for Truck and Bus Tires, Association Standard. Gives drawings with dimensions for various types and sizes of rim contours.

Tire and Rim Assn., Inc. Truck-Bus Handbook, 1944. Valve to Brake Drum Clearance. Gives drawing with dimensions.

Tire and Rim Assn., Inc. Truck-Bus Handbook, 1944. Wide Rims for Mining, Logging, and Earth Moving Vehicles, Experimental Practice. Gives table showing tire size, permissible rim width and flange height, maximum tire section, and minimum dual spacing.

*References.*—Rubber tires, casings and inner tubes, *see* 206; passenger car brake drums, *see* 722.38.

## 722.37 Automobile Frames, Bodies, and Body Parts

Society of Automotive Engineers. 1944 Handbook, Section 2—Units, Parts, and Fittings. S.A.E. Recommended Practice for Motor Truck CA Dimensions, revised 1941. Includes nominal outside motor truck frame width and CA dimensions (distance from extreme back-of-cab to center line of rear axle) for 4- and 6-wheel motor trucks.

Society of Automotive Engineers. 1944 Handbook, Section 2—Units, Parts, and Fittings. S.A.E. Recommended Practice for Spring Rebound Clips, Spacers,

and Bolts, revised 1938. Diagrams and tables of dimensions for rebound clip and spacer and clip bolts and nuts for passenger cars and motor buses; and diagram and requirements for clinch type clips.

Society of Automotive Engineers. 1944 Handbook, Section 2—Units, Parts, and Fittings. S.A.E. Standard Spring Center Bolts, 1938. Diagram and table of dimensions and sizes for center bolts and nuts for spring widths from 1 1/2 to 3 1/2 and over for passenger cars and for motor trucks.

Society of Automotive Engineers. 1944 Handbook, Section 2—Units, Parts, and Fittings. S.A.E. Standard Suspension Springs for Motor Vehicles, adopted 1938. Includes definitions of leaf springs and coil springs; plate sizes and rolling tolerances for leaf springs; nomenclature, dimensions, and checking for load and rate, specified load position, and tests for parallelism of spring eyes for semi-elliptic leaf springs; and S.A.E. recommended practice for nomenclature and checking for load and rate for coil suspension springs.

U. S. Gov., Army Air Forces. Specification 30167-1; 1944. Turntable; Full Revolving, for Type P-1 Crane Truck.

U. S. Gov., Dept. of Interior, Purchasing Office. Standard Specification No.33. Stake Body; Special for Trucks.

U. S. Gov., Dept. of Interior, Purchasing Office. Standard Specification No.87. School Bus Bodies.

U. S. Gov., Post Office Dept., Div. of Motor Vehicle Service, Bureau of the Fourth Assistant Postmaster General. Specifications for Panels; Metal Faced for Truck Construction.

U. S. Gov., U. S. Army, Army Air Forces. Specification 91-48C; 1937. Body and Equipment for Truck; Field Servicing, Heavy Duty, Type E-2.

U. S. Gov., U. S. Army, Army Air Forces. Specification 91-53A; 1934. Truck; Body and Equipment for, Field Servicing, Light-Duty, Type E-3.

U. S. Gov., U. S. Army, Army Air Forces. Specification 91-60; 1935. Truck; Body and Equipment for, Field Lighting, Type J-2.

U. S. Gov., U. S. Army, Army Air Forces. Specification 91-74; 1940. Truck; Body and Equipment for, Balloon Tender, Type A-3.

*References.*—Leaf springs, rebound clips, center bolts, *see* 611.54; upholstery leather, *see* 066.7; plate glass, *see* 521.1; aluminum belt body molding, *see* 631.22; aluminum body sheets, *see* 631.23; door hinges, *see* 617.12; truck bodies and frames, *see* 722.1; body types, nomenclature, *see* 723.0.

## 722.38 Automobile Control Equipment

Society of Automotive Engineers. 1944 Handbook, Section 2—Units, Parts, and Fittings. S.A.E. Standard Vacuum-Brake Manifold Connection, adopted 1928. Establishes hole diameter and thread.

Society of Automotive Engineers. 1944 Handbook, Section 4—Fabricated Materials. S.A.E. Standard Brake Lining, revised 1926. Table of thicknesses and widths.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R66-27; 1927. Automobile Brake Lining. This recommendation establishes a list of standard stock sizes of brake linings covering widths and thicknesses. Sponsored by the Society of Automotive Engineers.

U. S. Gov., Federal Specification HH-L-361a; 1941. Linings; Brake (Automotive-Use). Covers four types—(I) general purpose, medium friction, nonwoven, rigid, for use in sets; (II) light service linings, for use in combination sets; class A, medium friction, nonwoven, rigid, for use in primary or reverse shoes in combination with type I or III; class B, high friction, nonwoven, flexible, for use in combination with type I or III; (III) medium friction, woven; and (IV) high friction, woven. Gives requirements for material and workmanship, physical characteristics, sizes, tolerances, and coefficients of friction; samples for test, identification, and approval; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., Post Office Dept., Div. of Motor Vehicle Service, Bureau of the Fourth Assistant Postmaster General. Specifications for Governors, for Motor Vehicles.

*References.*—Steering gear, connecting rods, ball studs, ball and socket joints, *see* 722.33.

## 722.39 Miscellaneous Automobile Accessories and Parts

Society of Automotive Engineers. 1944 Handbook—S.A.E. Recommended Practice for Glazing Glass. Thickness of glass for vehicles normally operating on land. To comply with American Standard, Z26.1-1938.

Society of Automotive Engineers. 1944 Handbook, Section 2—Units, Parts, and Fittings. S.A.E. Recommended Practice for Passenger Car Trailer Couplings, adopted 1938. Includes definition, coupling nomenclature, and recommendations for location, sizes, ratings, and platform.

Society of Automotive Engineers. 1944 Handbook, Section 2—Units, Parts, and Fittings. S.A.E. Standard Fifth Wheel Kingpin for Commercial Trailers and Semi-Trailers, adopted 1940. Diagram giving shape, size, dimensions, and tolerances.

Underwriters' Laboratories, Inc., 1944. Lists of Inspected Appliances Relating to Accident Hazard, Automotive Equipment, Burglary Protection. This catalog contains three lists that have been inspected by the Underwriters'. The lists are appliances inspected for accident hazard, inspected automotive appliances, and inspected burglary protection appliances. The listings are arranged alphabetically as to subject and alphabetically by name of manufacturer under each subject.

U. S. Gov., Dept. of Agriculture, Forest Service. Specification No.278. Rack; Stock-Truck, Demountable.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Joint sponsor with National Bureau of Casualty and Surety Underwriters. American Standards Assn., Z26.1-1938. Safety Code for Safety Glass for Glazing Motor Vehicles Operating on Land Highways.

U. S. Gov., Post Office Dept., Div. of Motor Vehicle Service, Bureau of the Fourth Assistant Postmaster General. Specifications for Mats; Floor, for Motor Trucks.

U. S. Gov., Post Office Dept., Div. of Motor Vehicle Service, Bureau of the Fourth Assistant Postmaster General. Specifications for Mirrors; Rear View.

U. S. Gov., Post Office Dept., Div. of Motor Vehicle Service, Bureau of the Fourth Assistant Postmaster General. Specifications for Signaling Device for Trucks.

U. S. Gov., Post Office Dept., Div. of Motor Vehicle Service, Bureau of the Fourth Assistant Postmaster General. Specifications for Windshield Wipers.

U. S. Gov., Treasury Dept., Procurement Div., 249B; 1940. Filters; Oil, Internal Combustion Engine. Shall be designed and suitable for operation on a by-pass oil line, and shall consist of a metal container and an interchangeable filtering element. Gives requirements for engine oil capacity, container housing, filter capacity and dimensions, efficiency; method of inspection and test; and packaging, packing, and marking.

U. S. Gov., Treasury Dept., Procurement Div., 349A; 1942. Grinders; Valve-Seat, Engine, Motor-Vehicle. Covers requirements for valve-seat grinder kits. Gives requirements for condition and interchangeability, grinding precision, grinding wheels, dielectric strength, lubrication, driver, motor, switch, cord with plug, handle, and pilots; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., Treasury Dept., Procurement Div., 493a; 1942. Creepers; Automobile. Shall be wood creepers of one type and one class suitable for supporting an operator when resting on his back while making repairs under automobiles or trucks. Gives requirements for construction and design, finish, casters, dimensions, curvature of cross members, and head rest; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 91-51A: 1942. Plate; Registration, U. S. Army.

U. S. Gov., Veterans Administration. Specification VA-M-159a; 1935. Oil Filter; Automotive.

*References.*—Lubricating oils, *see* 504.34; felt, *see* 365.98; rubber hose, clamps, and fittings, *see* 202.43.

## 722.9 MISCELLANEOUS AUTOMOBILE SUPPLIES

### 722.91 Gasoline and Motor Fuel

*References.*—*See* 503.3.

### 722.92 Lubricating Oil

*References.*—*See* 504.23, 504.34.

### 722.93 Anti-Freeze Liquids

U. S. Gov., Navy Dept. Specification 51C39; 1944. Compound; Antifreeze.

U. S. Gov., Treasury Dept., Procurement Div., 362A; 1941. Compound; Anti-Freeze, for the Cooling Systems of Water-Cooled Internal Combustion Engines, Nonvolatile Type. Covers one type and grade, and shall produce no more corrosion of the engine cooling system, foaming, creeping, or leaking than would occur with water. Intended as a protection against freezing at temperatures as low as minus 40°F. Gives requirements for initial boiling point, viscosity, protection, and ash content; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., Treasury Dept., Procurement Div., 365A; 1941. Compound; Anti-Freeze, for the Cooling Systems of Water-Cooled internal Combustion Engines, Volatile Type. Shall be one type (volatile) and one grade, producing no more corrosion of engine cooling system, foaming, creeping, or leaking than would occur with water. Intended as a protection against freezing at temperatures as low as minus 40°F. Gives requirements for viscosity, protection, and ash content; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 4-1116; 1943. Compound; Anti-Freeze (Ethylene Glycol Type).

U. S. Gov., U. S. Army, Ordnance Dept. Specification 4-1117; 1943. Compound; Re-Inhibitor, Corrosion, for Ethylene Glycol.

*References.*—*See* 839.9.

### 722.94 Valve Grinding Compound

U. S. Gov., Navy Dept. Specification 51C22b; 1939. Compound; Valve-Grinding.

U. S. Gov., Treasury Dept., Procurement Div., 457b; 1943. Compound; Valve-Grinding, Grease-Mixed and Water-Mixed. Covers two types—(I) grease-mixed and (II) water-mixed; and six grit numbers—(90) extra coarse, (120) coarse, (150) medium coarse, (180) medium, (220) medium fine, and (240) fine. Gives requirements for abrasive, containers, fineness of abrasive, lubricant for oil-mixed and binder and preservative for water-mixed; methods of sampling, inspection, and tests; and packaging, packing, and marking.

### 722.95 Inspection Apparatus

American Automobile Assn. Headlight Testing Manual. To aid garages and inspection stations in servicing lighting systems so as to produce the safest illumination possible and in determining when rejections and replacements of parts are necessary for the protection of highway users. Covers space requirements, mounting the chart, adjusting height of chart, locating the car, preliminary inspections, and headlight beam arrangements and patterns.

Underwriters' Laboratories, Inc., 1942. Lists of Inspected Appliances Relating to Accident Hazard, Automotive Equipment, Burglary Protection. This catalog contains three lists that have been inspected by the Underwriters'. The lists are appliances inspected for accident hazard, inspected automotive appliances, and inspected burglary protection appliances. The listings are arranged alphabetically as to subject and alphabetically by name of manufacturer under each subject.

### 722.96 Radiator Seal

U. S. Gov., Post Office Dept., Div. of Motor Vehicle Service, Bureau of the Fourth Assistant Postmaster General. Specifications for Radiator Seal.

### 722.97 Hydraulic Brake and Shock Absorber Fluid

U. S. Gov., Post Office Dept., Div. of Motor Vehicle Service, Bureau of the Fourth Assistant Postmaster

General. Specifications for Brake Fluid, for Hydraulic Brakes.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 2-111A; 1943. Fluid; Hydraulic Brake.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 2-112; 1943. Fluid; Shock Absorber (Light and Heavy).

### 722.99 Miscellaneous Automotive Tools

U. S. Gov., Post Office Dept., Div. of Motor Vehicle Service, Bureau of the Fourth Assistant Postmaster General. Specifications for Brake Lining Machines.

U. S. Gov., Veterans Administration. Specification VA-M-157a; 1937. Brake Relining Machine (Automotive).

## 723. AUTOMOBILE PASSENGER CARS, EXCEPT ELECTRIC CARS

### 723.0 GENERAL ITEMS

American Assn. of Motor Vehicle Administrators, joint sponsor with National Conservation Bureau. American Standards Assn., D 7.1-1941. Inspection Requirements for Motor Vehicles. Minimum requirements for the mechanical condition of the vehicle for safe operation on the highway.

American Transit Assn. Recommended Rules for Inspection of Buses, E139-34; 1934. Gives rules concerning inspection of buses and a guide chart covering limits of wear with reference to engine parts.

Society of Automotive Engineers. 1944 Handbook, Section 9—Nomenclature, Tolerances, Conversions. S.A.E. Standard Automotive Nomenclature, revised 1941. Principles and rules governing automotive nomenclature.

Underwriters' Laboratories, Inc. Standard for the Determination of Fire Hazards of Passenger Automobiles and Taxicabs, 1924. Requirements for fuel supply systems, tank, carburetion, electrical equipment, and exhaust system.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-476. Trailer Unit.

### 723.1 AUTOMOBILE PASSENGER CARS

### 723.11 Automobile Coupes

*References.*—Definitions, parts and accessories, *see* 723.0, 722.3.

### 723.12 Automobile Runabouts and Roadsters

*References.*—Definitions, parts and accessories, *see* 723.0, 722.3.

### 723.13 Automobile Sedans

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-393. Automobile; Sedan 5 Passenger, 2 Door, Supplement to Procurement Div. Specification 1700-A-239.

*References.*—Definitions, parts and accessories, *see* 723.0, 722.3.

### 723.14 Automobile Touring Cars

*References.*—Definitions, parts and accessories, *see* 723.0, 722.3.

### 723.15 Automobile Ambulances

U. S. Gov., Panama Canal, Purchasing Dept. Specification for Ambulance, 1943. Trucks, motor, gasoline, with all-steel ambulance body; to have not less than 210 cu.in. piston displacement; not less than 122 in. wheelbase; not less than 3/4 ton payload capacity.

*References.*—Parts and accessories, *see* 722.3.

## 724. AIRCRAFT

### 724.0 GENERAL ITEMS

American Society of Mechanical Engineers. Joint sponsor with American Assn. for Advancement of Science, American Institute of Electrical Engineers, American Society of Civil Engineers, and Society for Promotion of Engineering Education. American Standards Assn., Z10e-1930. Aeronautical Symbols. Standard symbols for quantities used in the design of aircraft.

National Fire Protection Assn. National Fire Codes for Flammable Liquids, Gases, Chemicals, and Explosives, 1943. Airplane Fueling Operations. Recommended good practice requirements for airplane fueling at airports. Covers general requirements, filling airplane tanks, filling from underground tanks by hose, filling from trucks by hose, and filling from drums by hand pump.

U. S. Gov., Army Air Forces. Specification 40135-A; 1944. Report; Aircraft Checker's.

U. S. Gov., Army-Navy Aeronautical Specification AN-C-102; 1943. Charts; Maintenance Instruction.

U. S. Gov., Army-Navy Aeronautical Specification AN-D-11-1; 1944. Drawings and Data Lists; Reproducible and Other Copies of, for Aircraft, Engines, Accessories, Auxiliary Equipment, and Special Tools.

U. S. Gov., Army-Navy Aeronautical Specification AN-D-12-1; 1944. Drawings and Data Lists; Preparation of, for Aircraft.

U. S. Gov., Army-Navy Aeronautical Specification AN-D-13-1; 1944. Drawings and Data Lists; Preparation of, for Engines, Accessories, and Other Auxiliary Equipment.

U. S. Gov., Army-Navy Aeronautical Specification AN-H-8a-1; 1945. Handbooks; Pilots Flight Operating Instruction.

U. S. Gov., Army-Navy Aeronautical Specification AN-M-18; 1944. Measuring and Leveling Provisions, for Aircraft.

U. S. Gov., Army-Navy Aeronautical Specification AN-S-33; 1943. Sound Treatment for Aircraft; General Specification for, Installation of.

U. S. Gov., Army-Navy Aeronautical Specification AN-W-11a; 1944. Weight and Balance Control Data, for Airplanes.

U. S. Gov., Civil Aeronautics Board. Civil Air Regulations Part .04—Airplane Airworthiness as amended to Apr. 1, 1941. Amendments 04-3 to 04-13, inclusive, adopted Feb. 6, 1942. Includes definitions and requirements (with tables) for structural loading conditions, proof of structure, detail design and construction, equipment, powerplant installation, and miscellaneous.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-71. Bonding and Shielding of Aircraft.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-143. Test Equipment; Electrical.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-260. "Z" Marker; Cone of Silence Equipment.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-360. Trans-Pacific Communication Channels for Communication Station.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-436. Methods of Photometric Measurements.

U. S. Gov., U. S. Army, Army Air Forces. Specification 98-40043G; 1942. Model; 5-Foot Wright Field, Wind Tunnel, Airplane.

*References.*—Gas welding of aircraft joints, procedure, *see* 767; airdromes and landing fields, *see* 518.51.

## 724.1 BALLOONS

U. S. Gov., Army Air Forces. Specification 40296 (1); 1940. Data for Preliminary Design and Release for Construction of Complete Barrage Balloons.

U. S. Gov., U. S. Army, Army Air Forces. Specification 94-40683; 1944. Bag; Airplane Lifting, Type F-1, Pneumatic.

U. S. Gov., U. S. Army, Army Air Forces. Specification 99-2050F; 1937. Marking for Airships, Balloons; and Parts Thereof.

U. S. Gov., U. S. Army, Army Air Forces. Specification 99-2088; 1934. Paraffin Coating for Balloon and Airship Envelopes.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 20-69; 1925. Balloon; Target Practice.

U. S. Gov., U. S. Army, Signal Corps. Specification 74-26; 1939. Balloon; Meteorogical, Pilot, Types ML-50, ML-51, and ML-64.

## 724.2 AIRCRAFT ACCESSORIES AND PARTS

### 724.20 General Items

Aeronautical Chamber of Commerce of America, Inc. National Aircraft Standard NAS 30; 1942. Surface Roughness Designation. Gives drawings of finish symbols including basic symbol, to express maximum roughness, and to express high and low roughness limits together with notes. Developed by National Aircraft Standard Committee.

Aeronautical Chamber of Commerce of America, Inc. National Aircraft Standard NAS 31; 1942. Conversion Table, Surface Roughness Designations. A list of companies agreeing to accept the N.A.S. -30 micro-inch R.M.S. equivalents for their surface finish designations. Gives name of company, symbol, name of finish, and micro-inch R.M.S. equivalent. Developed by National Aircraft Standard Committee.

Aeronautical Chamber of Commerce of America, Inc. National Aircraft Standard NAS 48; 1942. Leveling Points. Shall be provided in the form of leveling brackets, plates, or stubs in pairs. Gives longitudinal and lateral leveling for landplanes and seaplanes. Developed by National Aircraft Standard Committee.

Aeronautical Chamber of Commerce of America, Inc. National Aircraft Standard NAS 49; 1944. Specification—Engine Controls Quick Disconnect Fittings. Covers type I, suitable for use with rod type, push-pull controls; and type II, suitable for use with cable controls. Gives requirements for construction, finish, performance, design, size, and illustrations. Developed by National Aircraft Standard Committee.

Aeronautical Chamber of Commerce of America, Inc. National Aircraft Standard NAS 71; 1942. Symbols; Aircraft Wiring Diagram. Developed by National Aircraft Standard Committee.

Aeronautical Chamber of Commerce of America, Inc. National Aircraft Standard NAS 78; 1944. Fitting; Quick Disconnect Tubing. Shall be suitable for use in fluid line connections. Gives requirements for construction, performance, design, size, and operation. Developed by National Aircraft Standard Committee.

Aeronautical Chamber of Commerce of America, Inc. National Aircraft Standard NAS 190; 1944. Dimensioning; Decimal Usage for. Dimensions on all manufacturing drawings shall be expressed in inches and decimals of an inch, with certain exceptions. Give details including exceptions. Developed by National Aircraft Standard Committee.

Society of Automotive Engineers. Aeronautical Material Specification No. 2570; 1942. Engines; Aircraft, Procedure for Preparation for Storage of. Provides procedures for preparing aircraft engines to resist corrosion during shipment and for their maintenance in storage.

Society of Automotive Engineers. Aeronautical Material Specifications Nos. 2800, 2804, and 2808; 1940. Identification. Machine Parts. Castings. Forgings. Covers instructions for temporary and permanent marking of machined parts, with requirements for markings noted on drawings as "stamp," "heavy stamp," "engrave," "electric etch," "deep electric etch," "acid etch," "deep acid etch," "scribe," "heavy scribe," and "rubber stamp"; raised marks, pad, and stamped marks for castings; and raised marks, stamped marks, and approval for forgings.

Society of Automotive Engineers. Aeronautical Recommended Practice 85A; 1943. Airplane Heating and Ventilating Equipment; General Requirements. Based on practical engineering requirements for the design and testing of such types of heating and ventilating equipment as are now used on airplanes and for such as may be developed. Covers scope, heating and ventilating equipment; general, military requirements, commercial requirements, and desirable design features.

Society of Automotive Engineers. Aeronautical Recommended Practice 147; 1944. Nomenclature; Aircraft Air Conditioning Equipment. Lists 83 terms alphabetically and defines the same.

Society of Automotive Engineers, Inc. Aeronautical Recommended Practice 197A; 1945. Preservation and Packaging of Aircraft Engine Parts. Success in the packaging of engine parts, assemblies, or certain specialized parts is dependent upon judicious use

of preservative materials and ingenuity in the design of the complete package. Covers cleaning, preservation and wrapping, dehydration, inner boxing or cartonizing, exterior boxing, markings, table of materials with description and use, preservation and packaging chart, and photographic examples of current methods of packaging aircraft engine components.

Society of Automotive Engineers. Aeronautical Standard 23A; 1945. Tests; Aircraft Hydraulic Systems and Components. Covers individual testing of aircraft hydraulic components, assembly line testing of aircraft hydraulic systems, and test machines for conducting these tests. Gives general requirements and details including preparations to be made prior to testing, test procedures, assembly line testing of aircraft hydraulic systems, machines for testing of aircraft hydraulic systems and components, maintenance of test machines, suggested list of test stand components, and illustration.

Society of Automotive Engineers. Aeronautical Standard 164; 1943. Service Manuals for Aircraft Engines. For the purpose of supplying all necessary instructions to accomplish the proper operation and service maintenance of the particular aircraft engines for which the manual is written. Covers scope, general requirements, and detail requirements.

Society of Automotive Engineers. Aeronautical Standard 165; 1943. Overhaul Manuals for Aircraft Engines. For the purpose of supplying all necessary instructions to accomplish the complete overhaul of the aircraft engines for which the manual is written. Covers scope, general requirements, and detail requirements.

U. S. Gov., Army Air Forces Specification 27497-A-1; 1945. Installation of Type A-1, Fuel and Oil, Pressure Transmitter.

U. S. Gov., Army Air Forces. Specification 28427A; 1944. Radiator; Coolant.

U. S. Gov., Army Air Forces. Specification 28480; 1943. Engines; Aircraft Accessory, Preparation for Storage of.

U. S. Gov., Army Air Forces. Specification 28494-1; 1944. Installation of Electronic Turbosupercharger Regulator (Type B-Series).

U. S. Gov., Army Air Forces. Specification 32044-C; 1944. Installation of Accessory Power Plants in Aircraft.

U. S. Gov., Army Air Forces. Specification 32300-C; 1944. Installation of Aircraft Electrical Equipment; General Specification for.

U. S. Gov., Army Air Forces. Specification 40638-B; 1945. Tests; Landing Gear Shock Absorber Drop.

U. S. Gov., Army-Navy Aeronautical Specification AN-B-9a; 1944. Bulletins; Contractor Service, for Airplanes, Engines, and Accessories.

U. S. Gov., Army-Navy Aeronautical Specification AN-B-10; 1943. Bonding; Electrical, for Air-Craft.

U. S. Gov., Army-Navy Aeronautical Specification AN-C-84-1, 1944. Catalogs; Tools.

U. S. Gov., Army-Navy Aeronautical Specification AN-C-85-1; 1944. Catalogs; Parts, for Airplanes, Engines, and Accessories.

U. S. Gov., Army-Navy Aeronautical Specification AN-H-7a; 1944. Handbooks and Catalogs; Aircraft, Engines and Accessories, General Specification for Preparation of.

U. S. Gov., Army-Navy Aeronautical Specification AN-H-11; 1942. Handbooks; Operation and Service Instruction, for Aircraft Accessories, Aircraft Engine Accessories, and Related Equipment.

U. S. Gov., Army-Navy Aeronautical Specification AN-H-12; 1942. Handbooks; Overhaul Instruction, for Aircraft Accessories, Aircraft Engine Accessories, and Related Equipment.

U. S. Gov., Army-Navy Aeronautical Specification AN-I-8a; 1944. Installation of Engine Charge Air Filters; Design Requirements for.

U. S. Gov., Army-Navy Aeronautical Specification AN-I-9b; 1943. Insignia; National, for Airplane Exterior.

U. S. Gov., Army-Navy Aeronautical Specification AN-I-21a; 1944. Interchangeability and Replaceability of Component Parts for Airplanes.

U. S. Gov., Army-Navy Aeronautical Specification AN-L-15; 1945. Lists; Recommended Spare Parts.

U. S. Gov., Army-Navy Aeronautical Specification AN-M-9—1; 1944. Maintenance Parts Breakdown; Airplane.

U. S. Gov., Army-Navy Aeronautical Specification AN-M-13; 1943. Marking and Tagging; Airframe, Engine, and Accessory Maintenance Parts.

U. S. Gov., Army-Navy Aeronautical Specification AN-W-14; (1), 1944. Wiring; Installation of Aircraft.

U. S. Gov., U. S. Army, Army Air Forces. Specification 98-24105-Q; 1942. Marking for Airplanes and Airplane Parts.

U. S. Gov., U. S. Army, Army Air Forces. Specification 98-24108K; 1937. Surface; Aircraft, Application of Fabric to.

## 724.21 Aircraft Power Plant Parts

Society of Automotive Engineers, Inc. Aeronautical Information Report 11; 1945. Testing of Aircraft Engine Carburetors. Covers laboratory test procedure including testing of aircraft carburetors at carburetor manufacturers' plants, testing of aircraft carburetors at engine manufacturers' plants, carburetion test during full scale nacelle test conducted by the airplane manufacturers, and flight test procedure including outline of test, instrumentation, flight plans, presentation of results, evaluation of results, and engine data to be supplied before flight test.

Society of Automotive Engineers. Aeronautical Material Specification No. 3385; 1941. Markers; Ignition-Cable, Non-Metallic. Tubing closely braided from commercially white cotton or other suitable material, and coated on the inside and outside with a flexible insulating varnish or lacquer, to produce a smooth, uniform finish. Includes requirements for size, markings, tests, approval, and rejections.

Society of Automotive Engineers. Aeronautical Recommended Practice No.71; 1944. Generator Envelope, Auxiliary Engine Driven; Mounting Pad and Drive, 8-Inch Bolt Circle. Gives drawings with notes and dimensions.

Society of Automotive Engineers. Aeronautical Recommended Practice No.72; 1944. Mounting Flange, Pad and Drive. Accessory to Gear Box, 10-Inch Bolt Circle. Gives drawings with notes and dimensions.

Society of Automotive Engineers. Aeronautical Standard 7A; 1943. Plug; Dehydrator-Cylinder, Aircraft Engine. Gives requirements for material, workmanship, loading and packing, and includes diagrammatic drawing of two types. Similar Specifications and Drawings: Army-Navy Aeronautical Specification AN-O-P-481 and Standard Drawing AN-4062.

Society of Automotive Engineers. Aeronautical Standard No.8; 1941. Plug; Dehydrator-Crankcase, Aircraft Engine. Gives requirements for material, workmanship, operation, loading, and packing, and includes diagrammatic drawing.

Society of Automotive Engineers. Aeronautical Standard 9A; 1943. Protector and Cable Attachment. Spark Plug Terminal; Aircraft Engine. Diagrammatic dimensional drawing for types I and II.

Society of Automotive Engineers. Aeronautical Standard No.29; 1942. Ignition Shielding; Aircraft. Includes two types—(I) unfilled, (II) filled; gives general requirements for interchangeability, flexibility, mounting lugs, threads, materials, markers, bonding, coupling, joints, identification, and moisture-proofing; detailed requirements for ferrules, conduits, protective treatment, joint resistance, specific resistance, high potential performance, weight, and capacitance; samples; qualification tests; inspection tests; and diagrams.

Society of Automotive Engineers. Aeronautical Standard No.44; 1942. Starter; Mounting Pads and Drives—Types I, II, III, and IV. Diagrammatic dimensional drawing.

Society of Automotive Engineers. Aeronautical Standard 45A, 1943. Generator; Accessory or Power Take-Off, Mounting Pad and Drive, Type I. Diagrammatic dimensional drawing.

Society of Automotive Engineers. Aeronautical Standard No.46; 1944. Generator Mounting Pad and Drive; 4 Bolt. Gives drawings with dimensions and notes.

Society of Automotive Engineers. Aeronautical Standard 47A; 1944. Pump; Fuel, Mounting Pad and Drive. Diagrammatic dimensional drawing.

Society of Automotive Engineers. Aeronautical Standard 53A; 1943. Generator; Accessory or Power Take-Off, Mounting Pad and Drive, Type II. Diagrammatic dimensional drawing.

Society of Automotive Engineers. Aeronautical Standard No.56; 1941. Carburetor Control Connections, Sizes .250, .3125, and .375. Diagrammatic dimensional drawings.

Society of Automotive Engineers. Aeronautical Recommended Practices 57A, 58A, 59A, and 60A; 1942. Carburetor Envelope; Aircraft, Sizes 48, 58, 78, and 100. Diagrams, dimensions, and notes.

Society of Automotive Engineers. Aeronautical Standards Nos.62, 63, 64, 65, 66, 67, 68, and 69; 1941. Carburetor Flanges; Aircraft. Diagrammatic dimensional drawings of—(62) 2-bolt, single barrel, Nos. 3 and 4; (63) 4-bolt, single barrel, Nos.2, 3, 4, 5, 7, and 9; (64) double barrel, sizes 12 and 16; (65) double barrel, size 24; (66) double barrel, size 24, remote fuel discharge type; (67) rectangular, No.9, and size 12; (68) rectangular, sizes 24 and 30; and (69) triple barrel, size 41.

Society of Automotive Engineers. Aeronautical Standard No.70; 1941. Flange; Tube, Two-Bolt Type, Aircraft Engine. Diagrammatic dimensional drawing.

Society of Automotive Engineers. Aeronautical Standard No.79; 1942. Catalogs; Spare Parts, for Aircraft Engines. For the purpose of identification, procurement, and stocking of spare parts. Covers two types—(1) final (illustrated), and (2) preliminary (unillustrated). Gives general requirements for both types; symbols, binding, part numbers, and detail requirements for both types.

Society of Automotive Engineers. Aeronautical Standard No.80; 1942. Catalogs; Overhaul Tools, for Aircraft Engines. For the purpose of identification, procurement, and stocking of tools. Covers two types—(1) final (illustrated), and (2) preliminary (unillustrated). Gives general requirements for both types; symbols, bindings, and detail requirements for both types.

Society of Automotive Engineers. Aeronautical Standard No.107; 1942. Surface Finish. Provides a method for the application of surface finish control to aircraft engine parts. Gives definitions, surface and finish, scales, lay designation, general notes, plated surfaces, and method of inspection.

Society of Automotive Engineers. Aeronautical Standard No.130; 1943. Bending Radius; Tube, Aircraft Engine. Diagrammatic drawing.

Society of Automotive Engineers. Aeronautical Standard No.131; 1943. Pads; Oil Inlet and Outlet, Types I, II, and III for Airplane Connections, Aircraft Engines. Diagrammatic dimensional drawing.

Society of Automotive Engineers. 1944 Handbook, Section 2—Units, Parts, and Fittings. S.A.E. Standard Piston Rings and Grooves, revised 1942. Adopted as a standard primarily for the types of internal combustion engines commonly used in automobiles, motorboats, etc. For pistons used in aircraft engines and engines not of the conventional automobile type, it may be necessary to deviate from the rings and grooves recommended, but such modifications should not be made by changing the piston ring width or radial thickness. Includes tables for piston ring and groove widths, and ring widths for cylinder diameters; formulas for ring grooves; tables for piston ring radial wall thickness and groove diameters, and piston ring radial wall thickness and groove diameters for thick wall compression rings; and S.A.E. Recommended Practice for ring joints and drain holes with tables for ring joint clearances, number of oil ring groove drain holes, size of oil ring drain holes, and "K" type ring and groove dimensions.

U. S. Gov., Army Air Forces. Specification 28155-B; 1939. Carburetor; Performance and Method of Determining Mixture Strength Desired of.

U. S. Gov., Army Air Forces. Specification 28469-B; 1944. Regulator; Turbo Supercharger, Electronic, General Specification for.

U. S. Gov., Army Air Forces. Specification 28470; 1942. Regulator; Turbo-Supercharger, Type B-1, Electronic.

U. S. Gov., Army Air Forces. Specification 28471; 1942. Regulator; Turbo-Supercharger, Type B-2, Electronic.

U. S. Gov., Army Air Forces. Specification 28472-A (2); 1944. Regulator; Turbo Supercharger, Type B-3, Electronic.

U. S. Gov., Army Air Forces. Specification 28473; 1942. Regulator; Turbo-Supercharger, Type B-4, Electronic.

U. S. Gov., Army Air Forces. Specification 28481; 1943. Control; Automatic Speed and Boost, General Specification for.

U. S. Gov., Army Air Forces. Specification 28492-1; 1944. Regulator; Turbo Supercharger, Electro-Mechanical, General Specification for.

U. S. Gov., Army Air Forces. Specification 28497A; 1944. Regulator; Turbosupercharger, Type C-2, Electro-Mechanical.

U. S. Gov., Army Air Forces. Specification 28500B-1; 1944. Turbosupercharger; Aircraft, General Specification for.

U. S. Gov., Army Air Forces. Specification 28502-11 (1); 1944. Turbosupercharger; Type B-11.

U. S. Gov., Army Air Forces. Specification 28502-17 (1); 1944. Turbosupercharger; Type B-17.

U. S. Gov., Army Air Forces. Specification 28502-22 (1); 1944. Turbosupercharger; Type B-22.

U. S. Gov., Army Air Forces. Specification 28502-31; 1944. Turbosupercharger; Type B-31.

U. S. Gov., Army Air Forces. Specification 28502-32; 1944. Turbosupercharger; Type B-32.

U. S. Gov., Army Air Forces. Specification 28502-33; 1943. Turbosupercharger; Type B-33.

U. S. Gov., Army Air Forces. Specification 28502-39; 1943. Turbosupercharger; Type B-39.

U. S. Gov., Army Air Forces. Specification 28503-23 (1); 1944. Turbosupercharger; Type C-23.

U. S. Gov., Army Air Forces. Specification 28505-2; 1943. Turbosupercharger; Type E-2.

U. S. Gov., Army Air Forces. Specification 28505-21; 1943. Turbosupercharger; Type E-21.

U. S. Gov., Army Air Forces. Specification 32444-A; 1944. Starter; Type G-18 (Combination Electric Inertia-Direct Cranking, 24 Volt, D.C.).

U. S. Gov., Army Air Forces. Specification 32445-A; 1944. Starter; Type G-19 (Combination Electric Inertia-Direct Cranking, 24 Volt, D.C.).

U. S. Gov., Army Air Forces. Specification 32446-A; 1944. Starter; Type G-20 (Combination Electric Inertia-Direct Cranking, 24 Volt, D.C.).

U. S. Gov., Army Air Forces. Specification 40632; 1943. Cradle; Turbo-Supercharger.

## 724.22 Aircraft Parts and Fittings

Aeronautical Chamber of Commerce of America, Inc. National Aircraft Standard NAS 4; 1942 and NAS 5; 1941. End; Rod, Control, Resistance Welding Type, X1020 Steel, and X4130 Steel. Developed by National Aircraft Standard Committee.

Aeronautical Chamber of Commerce of America, Inc. National Aircraft Standard NAS 15 and 16; 1941. Joint; Universal Male and Universal Female. Gives drawings with dimensions and notes. Developed by National Aircraft Standard Committee.

Aeronautical Chamber of Commerce of America, Inc. National Aircraft Standard NAS 21; 1941. Strip; Insulating, Nut, Connector Panel, Electrical. Gives drawings with dimensions and notes. Developed by National Aircraft Standard Committee.

Aeronautical Chamber of Commerce of America, Inc. National Aircraft Standard NAS 22; 1944. Strip; Insulating, Base, Connector Panel, Electrical. Gives drawings with dimensions and notes. Developed by National Aircraft Standard Committee.

Aeronautical Chamber of Commerce of America, Inc. National Aircraft Standard NAS 23; 1943. Terminal; Tank Strap, Plain. Gives drawings with dimensions and notes. Developed by National Aircraft Standard Committee.

Aeronautical Chamber of Commerce of America, Inc. National Aircraft Standard NAS 24; 1941. Terminal; Strap, Tank, Forked. Gives drawings with dimensions and notes. Developed by National Aircraft Standard Committee.

Aeronautical Chamber of Commerce of America, Inc. National Aircraft Standard NAS 25 and 26; 1941. Trunnion; Tank Strap, Threaded and Unthreaded. Gives drawings with dimensions and notes. Developed by National Aircraft Standard Committee.

Aeronautical Chamber of Commerce of America, Inc. National Aircraft Standard NAS 29; 1943. Strap Assembly; Tank. Gives drawings with dimensions and notes. Developed by National Aircraft Standard Committee.

Aeronautical Chamber of Commerce of America, Inc. National Aircraft Standard NAS 36, 37, and 38; 1942. End; Rod, Spherical Bearings, 3/16 x 1/4—28 and

3/16 x 5/16—24, Interchangeable Type. Gives drawings with dimensions, notes, and specifications. Developed by National Aircraft Standard Committee.

Aeronautical Chamber of Commerce of America, Inc. National Aircraft Standard NAS 40; 1943. Hinge; Half, Continuous, Extruded Aluminum Alloy. Gives drawings with dimensions and notes. Developed by National Aircraft Standard Committee.

Aeronautical Chamber of Commerce of America, Inc. National Aircraft Standard NAS 41; 1943. Pin; Continuous Hinge. Gives drawing with dimensions and notes. Developed by National Aircraft Standard Committee.

Aeronautical Chamber of Commerce of America, Inc. National Aircraft Standard NAS 42 and 43; 1943. Spacers—Rivet and Spacers—Screw and Bolt. Gives drawings with dimensions and notes. Developed by National Aircraft Standard Committee.

Aeronautical Chamber of Commerce of America, Inc. National Aircraft Standard NAS 67, 68, and 69. Guide Fastener. NAS 67; 1943. Low Form, Cowl, Dzus Type. NAS 68; 1943. Cowl, Dzus Type. NAS 69; 1941. Cowl, Dzus Type, Dimpled Rivet Holes. Gives drawings with dimensions and notes. Developed by National Aircraft Standard Committee.

Aeronautical Chamber of Commerce of America, Inc. National Aircraft Standard NAS 79; 1944. Standard Indentors and Nests for Applying Mechanical Terminals. Gives drawings showing nest detail, indentor details, and pressure and clearance details together with tables giving dimensions. Developed by National Aircraft Standard Committee.

Aeronautical Chamber of Commerce of America, Inc. National Aircraft Standard NAS 90; 1942. End; Rod, Control, Threaded, X1020 Steel. Gives drawing with dimensions and notes. Developed by National Aircraft Standard Committee.

Aeronautical Chamber of Commerce of America, Inc. National Aircraft Standard NAS 139 and 140; 1942. Stud; Coarse Thread and Fine Thread. Gives drawings with dimensions and notes. Developed by National Aircraft Standard Committee.

Aeronautical Chamber of Commerce of America, Inc. National Aircraft Standard NAS 163 and 164; 1942. Insert and Insignia; Military Control Wheel Hub Cap. Gives drawings with dimensions and notes. Developed by National Aircraft Standard Committee.

Aeronautical Chamber of Commerce of America, Inc. National Aircraft Standard NAS 185; 1944. Spacers; Split, Screw and Bolt. Gives drawing with dimensions and notes. Developed by National Aircraft Standard Committee.

Aeronautical Chamber of Commerce of America, Inc. National Aircraft Standard NAS 240 and 242; 1943. Nut-Coupling, Flared Tube, Plastic; and Nut-Lock, Flared Tube Fitting, Plastic. Gives drawings with dimensions and notes. Developed by National Aircraft Standard Committee.

Aeronautical Chamber of Commerce of America, Inc. National Aircraft Standard NAS 243 and 244; 1943. Cap-Flared Tube Fitting, Plastic; and Cap-Rigid Tube or Hose Fitting, Plastic. Gives drawings with dimensions and notes. Developed by National Aircraft Standard Committee.

Aeronautical Chamber of Commerce of America, Inc. National Aircraft Standard NAS 245, 249, and 251; 1943. Nipples; Plastic. NAS 245, Flared Tube and Pipe Thread. NAS 249, Hose and Flared Tube. NAS 251, Pipe Thread and Hose. Gives drawings with dimensions and notes. Developed by National Aircraft Standard Committee.

Aeronautical Chamber of Commerce of America, Inc. National Aircraft Standard NAS 246, 248, 250, and 252; 1943. Unions; Plastic. NAS 246, Flared Tube. NAS 248, Flared Tube, Bulkhead and Universal. NAS 250, Hose, Flared Tube, Bulkhead and Universal. NAS 252, Hose Bulkhead. Gives drawings with dimensions and notes. Developed by National Aircraft Standard Committee.

Aeronautical Chamber of Commerce of America, Inc. National Aircraft Standard NAS 247; 1943. Reducer; Flared Tube, Plastic. Gives drawing with dimensions and notes. Developed by National Aircraft Standard Committee.

Aeronautical Chamber of Commerce of America, Inc. National Aircraft Standard NAS 253, 254, 255, 256, 257, 258, 259, 260, 261, 262, 263, and 264; 1943. Elbows; Plastic. Covers various types including flared tube, bulkhead, bulkhead and universal, and hose and pipe thread in 90° and 45°. Gives drawings with dimensions and notes. Developed by National Aircraft Standard Committee.

Aeronautical Chamber of Commerce of America, Inc. National Aircraft Standard NAS 265, 266, 267, 268, 269, 270, and 271; 1943. Tees; Plastic. Covers various types of flared tube and hose tees. Gives drawings with dimensions and notes. Developed by National Aircraft Standard Committee.

Aeronautical Chamber of Commerce of America, Inc. National Aircraft Standard NAS 272, 273, and 274; 1943. Crosses; Plastic. Covers flared tube, hose, and hose with thread on bottom. Gives drawings with dimensions and notes. Developed by National Aircraft Standard Committee.

Aeronautical Chamber of Commerce of America, Inc. National Aircraft Standard NAS 275 and 276; 1943. Plug and Bleeder, Screw Thread, Plastic; and Plug, Pipe Thread, Internal Wrenching, Plastic. Gives drawings with dimensions and notes. Developed by National Aircraft Standard Committee.

Aeronautical Chamber of Commerce of America, Inc. National Aircraft Standard NAS 277; 1943. Protector; Flared Tube, Plastic. Gives drawing with dimensions and notes. Developed by National Aircraft Standard Committee.

Society of Automotive Engineers. Aeronautical Standard 48A; 1944. Gun Synchronizer; Mounting Pad and Drive. Diagrammatic dimensional drawing.

Society of Automotive Engineers. Aeronautical Standards 49A, 50A, and 51A; 1944. Pump; Vacuum or Hydraulic, Mounting Pad and Drive, Types I, II, and III. Diagrammatic dimensional drawings.

Society of Automotive Engineers. Aeronautical Standard No. 81; 1941. Primer Electrical Connection; Aircraft. Diagrammatic dimensional drawing.

Society of Automotive Engineers. Aeronautical Standard 84A; 1944. Involute Splines. Covers fundamental principles, spline tooth nomenclature, method of dimensioning splines, basic tooth proportion, dimensions for splines, formulae, diagrams, and tables for basic tooth dimensions; and dimensions

for splines for several diametrical pitches at 30-degree pressure angle.

Society of Automotive Engineers. 1944 Handbook, Section 1—Aeronautical Parts, Materials, and Codes. S.A.E. Recommended Practice for Aluminum Alloy Extruded Structural Shapes for Aircraft, adopted 1931. Diagrams of shapes with tables of sizes, dimensions, area, moments of inertia, section moduli, weight per foot, and radii of gyration for unequal angles, bulb angles, shallow channels, deep channels, bulb channels, tees, and zees.

Society of Automotive Engineers. 1944 Handbook, Section 1—Aeronautical Parts, Materials, and Codes. S.A.E. Standard Aircraft Engine Pipe Plugs, adopted 1941. Drawings and table of dimensions for countersunk hexagonal and square head types in sizes from 1/8 to 2 1/2 in.

U. S. Gov., Army Air Forces. Specification 25279 (2); 1943. Seats; Pilot's, Semi-Adjustable (Long-Range Airplanes).

U. S. Gov., Army Air Forces. Specification 27431-A; 1945. Adapter Assembly; Turbo-Supercharger Tachometer and Turbo-Supercharger Regulator Drive.

U. S. Gov., Army Air Forces. Specification 28166-C (2); 1942. Drive; Accessory Gear (Aircraft-Power Plant Driven), General Specification for.

U. S. Gov., Army Air Forces. Specification No. 28430; 1940. Valve; Fuel, Check.

U. S. Gov., Army Air Forces. Specification No. 28489; 1943. Container; Oil Filter, Aircraft.

U. S. Gov., Army Air Forces. Specification No. 28490; 1943. Cartridge; Lubricating Oil Filter, Aircraft.

U. S. Gov., Army Air Forces. Specification No. 40228-J; 1944. Strut; Aircraft Shock Absorber, Air and Oil Type, General Specification for.

U. S. Gov., Army-Navy Aeronautical Specification AN-B-6—2; 1944. Brackets; High Pressure Oxygen Cylinder.

U. S. Gov., Army-Navy Aeronautical Specification AN-C-65-1; 1943. Couplings; Hydraulic Self-Sealing.

U. S. Gov., Army-Navy Aeronautical Specification AN-C-66b-2; 1944. Cylinders; Hydraulic Actuating.

U. S. Gov., Army-Navy Aeronautical Specification AN-C-131; 1944. Casing; Control Cable Flexible.

U. S. Gov., Army-Navy Aeronautical Specification AN-D-5-1; 1943. Drives; Remote Manually operated Caging, for Gyro Flux Gate Compass.

U. S. Gov., Army-Navy Aeronautical Specification AN-D-7-2; 1944. Domes; Navigator's, Observing.

U. S. Gov., Army-Navy Aeronautical Specification AN-F-8; 1944. Fasteners; Cowling.

U. S. Gov., Army-Navy Aeronautical Specification AN-H-2a; 1944. Hydraulic Systems; Design, Installation and Tests of Aircraft, General Specification for.

U. S. Gov., Army-Navy Aeronautical Specification AN-J-1a; 1944. Jumpers; Bonding and Current Return.

U. S. Gov., Army-Navy Aeronautical Specification AN-J-5; 1944. Jack Pads; Design and Installation of, for Aircraft.

U. S. Gov., Army-Navy Aeronautical Specification AN-J-10; 1944. Joints; Hydraulic Swivel.

U. S. Gov., Army-Navy Aeronautical Specification AN-P-33a; 1944. Pins; Aircraft Flat Head.

U. S. Gov., Army-Navy Aeronautical Specification AN-P-40-1; 1944. Pulleys; Plain Bearing Control.

U. S. Gov., Army-Navy Aeronautical Specification AN-P-60; 1944. Pulleys; Grease-Lubricated Anti-Friction Bearing Control.

U. S. Gov., Army-Navy Aeronautical Specification AN-S-1a-1; 1944. Seats; Pilots', Adjustable, Long-Range Airplane.

U. S. Gov., Army-Navy Aeronautical Specification AN-S-40-1; 1944. Strainers; Fuel System.

U. S. Gov., Army-Navy Aeronautical Specification AN-S-49; 1944. Seats; Pilots', Adjustable, Short-Range Airplane.

U. S. Gov., Army-Navy Aeronautical Specification AN-T-20-1; 1945. Tie Rods; Streamline, Round and Square.

U. S. Gov., Army-Navy Aeronautical Specification AN-T-21a-1; 1944. Terminals; Threaded Clevis Type Tie Rod.

U. S. Gov., Army-Navy Aeronautical Specification AN-T-49-1; 1945. Tanks; Self-Sealing Fuel.

U. S. Gov., Army-Navy Aeronautical Specification AN-WW-F-366a-2; 1945. Fittings; Fluid Connection.

U. S. Gov., Navy Dept. Specification 49C1d; 1938. Cord; Elastic, Shock-Absorber, Aircraft Use.

U. S. Gov., Navy Dept. Specification 49C7c; 1938. Cord; Linen, Braided, Aircraft Use.

U. S. Gov., Navy Dept. Specification 49C10; 1935. Casing; Control-Cable, Flexible, Aircraft Use.

## 724.23 Aircraft Wheels

Society of Automotive Engineers. Aeronautical Standard No. 181; 1944. Wheel and Axle Dimensions; Tail Wheel High Pressure, Straight Axle Type. Gives drawings with table showing dimensions and notes.

Society of Automotive Engineers. Aeronautical Standard No. 182; 1944. Wheel and Axle Dimensions; Tail Wheel High Pressure, Stub Axle Type. Gives drawings with table showing dimensions and notes.

Society of Automotive Engineers. Aeronautical Standard No. 183; 1944. Wheel and Axle Dimensions; Low Profile, Straight Axle Type. Gives drawings with table showing dimensions and notes.

Society of Automotive Engineers. Aeronautical Standard No. 184; 1944. Wheel and Axle Dimensions; Low Profile, Stub Axle Type. Gives drawings with table showing dimensions and notes.

Society of Automotive Engineers. Aeronautical Standard No. 185; 1944. Wheel and Axle Dimensions; High Pressure, Stub Axle Type. Gives drawings with table showing dimensions and notes.

Society of Automotive Engineers. Aeronautical Standard No. 186; 1944. Wheel and Axle Dimensions; High Pressure, Stub Axle Type, Size 24 x 5-14. Gives drawings with dimensions and notes.

Tire and Rim Assn., Inc. Airplane Handbook, 1944. High Pressure Airplane Tires, Recommended Practice, Table AP-1. Gives table of rim and tire dimensions, load ratings, and types of valves for various sizes of landing and tail wheel tires.

Tire and Rim Assn., Inc. Airplane Handbook, 1944. High Pressure Channel Tread Airplane Tires, Recommended Practice, Table AP-1B. Gives table showing tire and rim sizes, rating, and inflated dimensions for channel tread landing wheel tires, extra high pressure channel tread landing wheel tires, and channel tread tail wheel tires.

Tire and Rim Assn., Inc. Airplane Handbook, 1944. Low Pressure Airplane Tires, Recommended Practice, Table AP-2. Gives table of rim and tire dimensions, load ratings, and types of valves for various sizes of landing wheel tires, tail wheel tires, and channel tread tail wheel tires.

Tire and Rim Assn., Inc. Airplane Handbook, 1944. Beaching Gear Tires, Recommended Practice, Table AP-2B. Gives table of rim and tire dimensions, load ratings, and types of valves for various sizes of low pressure main wheel tires, S.C. main wheel tires, low pressure tail wheel tires, and S.C. tail wheel tires.

Tire and Rim Assn., Inc. Airplane Handbook, 1944. Extra Low Pressure Airplane Tires, Recommended Practice, Table AP-3. Gives table of rim and tire dimensions, load ratings, and types of valves for various sizes of landing wheel tires and tail wheel tires.

Tire and Rim Assn., Inc. Airplane Handbook, 1944. Smooth Contour Airplane Tires, Recommended Practice, Table AP-5. Gives table of rim and tire dimensions, load ratings, and types of valves for various sizes of landing wheel tires and tail wheel tires.

Tire and Rim Assn., Inc. Airplane Handbook, 1944. Knurling on Airplane Rims, Recommended Practice. Gives drawing and table giving size, method, and knurl for high pressure, extra high pressure, low pressure, and smooth contour rims.

Tire and Rim Assn., Inc. Airplane Handbook, 1944. Method of Dimensioning and Tolerance Requirements Rim Contours for Airplane Tires. Gives drawing and tables showing inspection tolerances for airplane rims except S.C. rims and inspection tolerances for rim diameters.

Tire and Rim Assn., Inc. Airplane Handbook, 1944. Rim Contours for S.C. Airplane Tires. Gives drawings of rims with tables showing dimensions for smooth contour airplane tires.

Tire and Rim Assn., Inc. Airplane Handbook, 1944. Rim Contours for 65 Inch S.C. 18 and 22 Ply Airplane Tires. Gives drawings of rim with table showing dimensions for 65 in. smooth contour 18 and 22 ply airplane tires.

Tire and Rim Assn., Inc. Airplane Handbook, 1944. Standard Rim Contours for High Pressure and Low-Pressure Airplane Tires. Gives drawings of rims with tables showing dimensions for high pressure and extra high pressure airplane tires and high pressure tail wheel tires.

U. S. Gov., Army Air Forces. Specification 25269-B (3); 1942. Axles; Aricraft Landing Wheels.

U. S. Gov., Army Air Forces. Specification 25273; 1938. Skis; Wheel, Retractable, General Specification for.

U. S. Gov., U. S. Army, Army Air Forces. Specification 98-25257; 1940. Wheel; Tail, for Aircraft.

U. S. Gov., U. S. Army, Army Air Forces. Specification 98-25272; 1943. Wheel; Auxiliary, Smooth Contour, for Aircraft.

*References.*—Airplane tires, *see* 206.2.

## 724.24 Aircraft Propellers

Society of Automotive Engineers. Aeronautical Standard 41A; 1943. Propeller Shaft Ends; Single Rotation. Various diagrammatic drawings and tables giving dimensions.

Society of Automotive Engineers. Aeronautical Standard No.42; 1944. Cap; Thread Protector; Single and Dual Propeller Shafts. Black cellulose acetate material. Drawing with table giving dimensions.

Society of Automotive Engineers. Aeronautical Standard No.43; 1942. Governor; Propeller, Mounting Pad and Drive. Diagrammatic dimensional drawing.

Society of Automotive Engineers. Aeronautical Standard No.90; 1942. Propeller Blades; Aluminum Alloy, Shank Dimensions for. Diagrammatic dimensional drawing.

Society of Automotive Engineers. Aeronautical Standard No.91; 1943. Propeller Shaft Ends; Dual Rotation, Propeller Supplied Bearing. Various diagrammatic drawings and tables giving dimensions.

Society of Automotive Engineers. Aeronautical Standard No.92; 1943. Cones; Front, Propeller Hub. Diagrammatic dimensional drawing.

Society of Automotive Engineers. Aeronautical Standard No.93; 1943. Cones; Rear, Propeller Hub. Diagrammatic dimensional drawing.

Society of Automotive Engineers. Aeronautical Standard No.94; 1943. Snap Ring; Non-Controllable Propeller Hub. Diagrammatic dimensional drawing.

Society of Automotive Engineers. Aeronautical Standard Nos. 126 and 127; 1943. Propeller Shaft End. Gives dimensional drawings with notes for 126 (taper type—number 0) and 127 (flanged type—Nos. 1, 2, and 3).

Society of Automotive Engineers. Aeronautical Standard Nos.128 and 129; 1943. Propeller Hub; Flanged, Spline Type. Gives dimensional drawings with notes for 128 (No.7 1/2) and 129 (No.10).

Society of Automotive Engineers. Aeronautical Standard No.160; 1944. Collar; Propeller Shaft, Shipping. Gives drawings with table showing dimensions and notes covering materials.

Society of Automotive Engineers. Aeronautical Standard No.161; 1944. Lifting Eye; Propeller Shaft. Gives drawings with table showing dimensions and notes.

Society of Automotive Engineers. Aeronautical Standard No.170; 1944. Cap; Thread Protector (Inboard), Dual Propeller Shafts. Material to be aluminum die casting. Gives drawings and table showing dimensions.

Society of Automotive Engineers. Aeronautical Standard No.172; 1944. Nut; Propeller Shaft, Shipping. Gives drawing with table showing dimensions and notes.

Society of Automotive Engineers. Aeronautical Standard No.173; 1944. Cap; Propeller Shaft, Shipping. Gives drawings with table showing dimensions and notes.

Society of Automotive Engineers, Inc. Aeronautical Standard No.178; 1945. Two-Speed Propeller Reduction Gear Control. Applicable to all engines that incorporate two-speed propeller reduction gears. Covers governor mounting pad provisions, engine thrust cover plate provisions, and gives dimensional drawings.

Society of Automotive Engineers. Aeronautical Standard No.180; 1944. Propeller Hub; Single Rotation. Gives drawings, notes, and table showing dimensions.

U. S. Gov., Army Air Forces. Specification 29538 (3); 1944. Blank; Propeller, Compressed Wood.

U. S. Gov., Army Air Forces. Specification No. 29540; 1944. Blades; Detachable, Propeller (Laminated Veneer, Uncompressed), General Specification for.

U. S. Gov., Army-Navy Aeronautical Specification AN-H-3; 1943. Hubs; Fixed Pitch Wood Propeller and Test Club.

U. S. Gov., Army-Navy Aeronautical Specification AN-L-18-1; 1943. Lumber; Aircraft Propeller.

U. S. Gov., Army-Navy Aeronautical Specification AN-P-15a-1; 1943. Propellers and Test Clubs; Fixed-Pitch Wood.

U. S. Gov., Army-Navy Aeronautical Specification AN-P-21-1; 1944. Propellers; General Specification for Ground Adjustable.

U. S. Gov., Army-Navy Aeronautical Specification AN-P-22-2; 1944. Propellers; General Specification for Controllable Pitch.

U. S. Gov., Army-Navy Aeronautical Specification AN-P-23; 1943. Propellers; Installation Model Specification (Instruction for Preparation).

U. S. Gov., Army-Navy Aeronautical Specification AN-P-24; 1943. Propellers; Type Test of.

U. S. Gov., Army-Navy Aeronautical Specification AN-P-25-2; 1944. Propeller Blades; General Specification for Solid, Aluminum Alloy.

U. S. Gov., Army-Navy Aeronautical Specification AN-P-27-1; 1944. Propeller Blades; General Specification for Steel.

U. S. Gov., Army-Navy Aeronautical Specification AN-P-28-1; 1944. Propeller Hubs; General Specification for Ground-Adjustable and Controllable Pitch.

U. S. Gov., Civil Aeronautics Board. Civil Air Regulations 14—Aircraft Propeller Airworthiness, 1942. Includes general provision for rating, airworthiness requisites, and requirements for hubs and blades, testing facilities, military propellers, commercial propellers, design requirements, tests, data required, and other requirements for airworthiness.

U. S. Gov., U. S. Army, Army Air Forces. Specification 98-29500H; 1927. Propeller; Wood, General Specification.

U. S. Gov., U. S. Army, Army Air Forces. Specification 98-29520-A; 1932. Blade; Propeller, Master, Solid Aluminum Alloy, General Specification.

U. S. Gov., U. S. Army, Army Air Forces. Specification 98-40269; 1941. Spinner Anti-Icing; Slinger Ring, Propeller, General Specification.

## 724.25 Aircraft Control Equipment

Aeronautical Chamber of Commerce of America, Inc. National Aircraft Standard NAS 6, 7, 8, and 9; 1941. Manifold—De-Icer. NAS 6, Single Port. NAS 7, Double Port. NAS 8, Triple Port. NAS 9, Four Port. Gives drawings with dimensions and notes. Developed by National Aircraft Standard Committee.

Aeronautical Chamber of Commerce of America, Inc. National Aircraft Standard NAS 34; 1942. Pulley; 3/32 Diameter Engine Control Cable, Anti-Friction. Gives drawings with dimensions and notes. Developed by National Aircraft Standard Committee.

Aeronautical Chamber of Commerce of America, Inc. National Aircraft Standard NAS 35; 1942. Lock; Cable, Pulley, 3/32 Diameter Engine Control Cable. Gives drawings with dimensions and notes. Developed by National Aircraft Standard Committee.

Aeronautical Chamber of Commerce of America, Inc. National Aircraft Standard NAS 91, 92, and 93; 1942. Rod Assembly; Control, 1/4 Solid, Steel. NAS 91, Adjustable Clevis Ends. NAS 92, Adjustable Clevis and Bearing Ends. NAS 93, Adjustable Bearing Ends. Gives drawings with dimensions and notes. Developed by National Aircraft Standard Committee.

Aeronautical Chamber of Commerce of America, Inc. National Aircraft Standard NAS 94; 1944. Rod-Control; 1/4 Solid Steel. Gives drawing with notes. Developed by National Aircraft Standard Committee.

Aeronautical Chamber of Commerce of America, Inc. National Aircraft Standard NAS 95, 96, 98, 99, 100, 103, 104, 105, 106, 107, and 108; 1942. Rod Assembly; Control, Welded Steel Tube. NAS 95, 3/8 O.D. NAS 96, 3/8 O.D., Fixed Clevis and Adjustable Bearing Ends. NAS 98, 3/8 O.D., 1/4 Adjustable Clevis Ends. NAS 99, 3/8 O.D., 1/4 Adjustable Clevis and Bearing Ends. NAS 100, 3/8 O.D., 1/4 Adjustable Bearing Ends. NAS 103, 1.2 O.D., 1/4 Adjustable Clevis Ends. NAS 104, 1/2 O.D., 5/16 Adjustable Clevis Ends. NAS 105, 1/2 O.D., 1/4 Adjustable Clevis and Bearing Ends. NAS 106, 1/2 O.D., 5/16 Adjustable Clevis and Bearing Ends. NAS 107, 1/2 O.D., 1/4 Adjustable Bearing Ends. NAS 108, 1/2 O.D., 5/16 Adjustable Bearing Ends. Gives drawings with dimensions and notes. Developed by National Aircraft Standard Committee.

Aeronautical Chamber of Commerce of America, Inc. National Aircraft Standard NAS 97, 101, 109, and 110; 1942. Welded Assembly-Steel Tube. NAS 97, 3/8 O.D., Clevis and Threaded Rod Ends. NAS 101, 3/8 O.D., Threaded Rod Ends. NAS 109, 1/2 O.D., 1/4 Threaded Rod Ends. NAS 110, 1/2 O.D., 5/16 Threaded Rod Ends. Gives drawings with dimensions and notes. Developed by National Aircraft Standard Committee.

Aeronautical Chamber of Commerce of America, Inc. National Aircraft Standard NAS 111, 112, 113, 116, 117, and 118; 1942. Rod Assembly-Control; Riveted Tube, Aluminum Alloy. NAS 111, 3/8 O.D., 1/4 Adjustable Clevis Ends. NAS 112, 3/8 O.D., 1/4 Adjustable Clevis and Bearing Ends. NAS 113, 3/8 O.D., 1/4 Adjustable Bearing Ends. NAS 116, 1/2 O.D., 1/4 Adjustable Clevis Ends. NAS 117, 1/2 O.D., 1/4 Adjustable Clevis and Bearing Ends. NAS 118, 1/2 O.D., 1/4 Adjustable Bearing Ends. Gives drawings with dimensions and notes. Developed by National Aircraft Standard Committee.

Aeronautical Chamber of Commerce of America, Inc. National Aircraft Standard NAS 114 and 119; 1942. Riveted Assembly-Tube; Aluminum Alloy, Threaded Rod Ends. NAS 114, for 3/8 O.D. NAS 119, for 1/2 O.D. Gives drawings with dimensions and notes. Developed by National Aircraft Standard Committee.

Aeronautical Chamber of Commerce of America, Inc. National Aircraft Standard NAS 120, 121, 122, 123, 124, 125, 126, and 168; 1943. Knob-Control. NAS 120, 3/4-Inch Spherical, Plastic. NAS 121, 1-Inch Spherical, Plastic. NAS 122, 1 1/4-Inch Spherical, Plastic. NAS 123, 1 Diameter x 5/8 Oval, Plastic. NAS 124, 1 1/8 Diameter x 1 Horizontal, Semi-Round, Plastic. NAS 125, 1 1/8 Diameter x 1 3/16 Angular Semi-Round, Plastic. NAS 126, 1 1/8-Inch Cubical,

Plastic. NAS 168, 1-Inch Diameter, Knurled Plastic. Gives drawings with dimensions and notes. Developed by National Aircraft Standard Committee.

Aeronautical Chamber of Commerce of America, Inc. National Aircraft Standard NAS 127; 1942. Button; Control Knob, 1/2 Diameter, Luminous Letter. Gives drawing with dimensions and notes. Developed by National Aircraft Standard Committee.

Aeronautical Chamber of Commerce of America, Inc. National Aircraft Standard NAS 128; 1942. Filler; Control Knob, Lever Slot. Gives drawing with dimensions and notes. Developed by National Aircraft Standard Committee.

Aeronautical Chamber of Commerce of America, Inc. National Aircraft Standard NAS 129; 1942. Data; Standard, Control Knob Engineering Reference. Gives drawings with dimensions and notes. Developed by National Aircraft Standard Committee.

Aeronautical Chamber of Commerce of America, Inc. National Aircraft Standard NAS 160; 1942. Wheel; Control, Pilots', Military, Aileron. Gives drawings with dimensions and notes. Developed by National Aircraft Standard Committee.

Aeronautical Chamber of Commerce of America, Inc. National Aircraft Standard NAS 161; 1942. Cap Assembly; Military Control Wheel Hub. Gives drawing with notes. Developed by National Aircraft Standard Committee.

Aeronautical Chamber of Commerce of America, Inc. National Aircraft Standard NAS 162 and 167; 1942. Cap; Military Control Wheel Hub and Trigger Switch Cavity, Military Control Wheel. Gives drawings with dimensions and notes. Developed by National Aircraft Standard Committee.

Aeronautical Chamber of Commerce of America, Inc. National Aircraft Standards NAS 165 and 166; 1942. Switch, Gun, Military Control Wheel; and Bomb Release and Radio, Military Control Wheel. Gives drawings with dimensions and notes. Developed by National Aircraft Standard Committee.

Aeronautical Chamber of Commerce of America, Inc. National Aircraft Standard NAS 170; 1942. Clevis; Engine Control Rod, Adjustable. Gives drawings with dimension and notes. Developed by National Aircraft Standard Committee.

Society of Automotive Engineers. Aeronautical Standard No.73; 1942. De-Icer; Attachment Assemblies, Inflatable Type. To describe and illustrate the use of standard parts which have been found more suitable for the installation of de-icers and which are widely used on all sizes and types of aircraft. Installation procedure and diagrammatic drawings.

Society of Automotive Engineers. Aeronautical Standard No.74; 1942. Fairing; De-Icer Attachment, for Straight Lengths. Diagrammatic dimensional drawing.

Society of Automotive Engineers. Aeronautical Standard No.75; 1943. Peg; De-Icer Positioning. Diagrammatic dimensional drawing.

Society of Automotive Engineers. Aeronautical Standard No.76; 1942. Rivnut; De-Icer Attachment, Keyless. Diagrammatic dimensional drawing.

Society of Automotive Engineers. Aeronautical Recommended Practice, 89; 1943. Temperature Control Equipment; Automatic Airplane Cabin. Based on practical engineering requirements for such temperature controls as are now used on aircraft and for such as may be developed. Covers scope, automatic temperature controls; general, military requirements, commercial requirements, and desirable design features.

Society of Automotive Engineers. Aeronautical Standard No.106; 1942. Rivnut; De-Icer Attachment, Keyed. Diagrammatic dimensional drawing.

Society of Automotive Engineers. Aeronautical Recommended Practice 148; 1943. Nomenclature Aircraft Ice Elimination Equipment. Covers basic definitions, propeller ice elimination equipment, wing and empennage ice elimination equipment, and windshield ice elimination equipment.

U. S. Gov., Army Air Forces. Specification 24823; 1943. Trigger; Gun Firing, Type A-1.

U. S. Gov., Army Air Forces. Specification 24841 (1); 1944. Control; Pilot Director Indicator, Type A-1.

U. S. Gov., Army Air Forces. Specification 24867-3; 1944. Control; Projector Release, Type A-1, 24 Volts, D.C.

U. S. Gov., Army Air Forces. Specification 24869 (A); 1945. Switch; Bomb Release, Type D-2.

U. S. Gov., Army Air Forces. Specification 24895-1; 1944. Solenoid; Type G-19, Aircraft, 24 Volts, D.C.

U. S. Gov., Army Air Forces. Specification No.24901; 1944. Switch; Control, Type B-6 (Stick).

U. S. Gov., Army Air Forces. Specification No.24910; 1943. Deflectometer, for Type A-3 Gun Turret.

U. S. Gov., Army Air Forces. Specification No.24921; 1944. Control; Bomb Rack, for Type R-2 Fragmentation Bomb Rack.

U. S. Gov., Army Air Forces. Specification 24932 (1); 1944. Solenoid; Type G-20, 24 Volts, D.C.

U. S. Gov., Army Air Forces. Specification 24973-1; 1944. Control; Projector Release, Type A-2, 24 Volts, D.C.

U. S. Gov., Army Air Forces. Specification 27330-A; 1943. Installation of Type A-5 Aircraft Automatic Pilot, General Specification for.

U. S. Gov., Army Air Forces. Specification No.27446; 1945. Accessories, for Types F-1 and F-2 Automatic Pilots.

U. S. Gov., Army Air Forces. Specification No.27447; 1945. Amplifier; Single Channel, Type A-1 (Integral, Aircraft).

U. S. Gov., Army Air Forces. Specification No.27453; 1945. Amplifier; Multiple Channel, Type B-1 (Integral, Aircraft).

U. S. Gov., Army Air Forces. Specification No.27455; 1945. Servo; Type E-1, for Aircraft.

U. S. Gov., Army Air Forces. Specification No.27456; 1945. Controller; Turn and Pitch, Type A-1, for Aircraft.

U. S. Gov., Army Air Forces. Specification No.27500; 1944. Pilots; Aircraft Automatic, General Specification for.

U. S. Gov., Army Air Forces. Specification No.27584; 1945. Pilot; Aircraft Automatic, Type F-1.

U. S. Gov., Army Air Forces. Specification No.27593; 1945. Servo; Type E-2, for Aircraft.

U. S. Gov., Army Air Forces. Specification No.27595; 1945. Amplifier; Multiple Channel, Type B-2, for Aircraft.

U. S. Gov., Army Air Forces. Specification No.32472; 1944. Control; Inverter Changeover, Type A-1, Automatic.

U. S. Gov., Army Air Forces. Specification 40619 (2); 1943. Control; Push-Pull, Flexible.

U. S. Gov., Army-Navy Aeronautical Specification AN-B-2; 1942. Brake Systems; Aircraft, Design of.

U. S. Gov., Army-Navy Aeronautical Specification AN-I-5-1; 1944. Instrument Systems; Installation of, Vacuum Operated.

U. S. Gov., Army-Navy Aeronautical Specification AN-I-20; 1943. Indicators; Engine Synchroscope.

U. S. Gov., Army-Navy Aeronautical Specification AN-J-9-1; 1945. Joints; Aircraft Control, Universal.

U. S. Gov., Army-Navy Aeronautical Specification AN-R-6a; 1944. Regulators; Hydraulic Pressure.

U. S. Gov., Army-Navy Aeronautical Specification AN-S-8a-1; 1943. Signals; Landing Gear Audible Warning.

U. S. Gov., Army-Navy Aeronautical Specification AN-T-36a; 1943. Transmitter Assemblies; Fuel and Oil Pressure.

U. S. Gov., Army-Navy Aeronautical Specification AN-W-6-1; 1943. Wheel and Brake Assemblies; Aircraft.

U. S. Gov., Civil Aeronautics Board. Civil Air Regulations Part 15—Aircraft Equipment Airworthiness as amended, 1940. Amendment 15-1; 1942. Includes provision for rating, classification of items of equipment, factors affecting certification or approval, and requirements for landing gear equipment, landing gear wheels, seaplane floats, skis, navigation appliances, position lights, landing flares, safety equipment and belts, parachutes, and control and structural units.

## 724.26 Aeronautical Instruments

American Standards Assn., C 75.11-1944. Crystal Unit CR-1 ( )/AR (American War Standard). For the purpose of facilitating production of crystal units. Gives applicable specifications and drawings, classification, material and workmanship, general requirements, detail requirements; methods of sampling, inspection, and tests; packaging, packing, and marking for shipment; and requirements applicable to individual government departments.

Society of Automotive Engineers. Aeronautical Standard 10A; 1943. Humidity Indicator. Dimensional diagrammatic drawings with instructions.

Society of Automotive Engineers. Aeronautical Standard No.54; 1941. Tachometer Drive; Type I. Diagrammatic dimensional drawing.

Society of Automotive Engineers. Aeronautical Standard 55A-1944. Tachometer; Mounting Pad and Drive, Type II. Diagrammatic dimensional drawing.

Society of Automotive Engineers. Aeronautical Standard No. 167; 1943. Chart; Humidity Indicator, Color Comparison. This chart gives colors indicating relative humidity as shown by humidity indicator AS10A.

Society of Automotive Engineers. 1944 Handbook, Section 1—Aeronautical Parts, Materials, and Codes. S.A.E. Standard Aircraft Thermometer Bulbs, revised 1938. Diagrams showing size and dimensions.

U. S. Gov., Army Air Forces. Specification No.24671; 1940. Globe; Field of Fire, 10-Inch.

U. S. Gov., Army Air Forces. Specification No.24933; 1944. Computer; Sighting Angle, Type J-1.

U. S. Gov., Army Air Forces. Specification No.24934; 1944. Computer; Sighting Angle, Type J-2.

U. S. Gov., Army Air Forces. Specification 27314 (2); 1941. Valve; Air Vapor Control.

U. S. Gov., Army Air Forces. Specification 27350-B-1; 1944. Indicator; True Airspeed, Type G-1, Aircraft, Pitot-Static.

U. S. Gov., Army Air Forces. Specification 27357-A; 1942. Indicator; Rate of Climb, Type A-8, Aircraft.

U. S. Gov., Army Air Forces. Specification No.27452; 1945. Indicator; Master Direction, Type N-1, for Aircraft.

U. S. Gov., Army Air Forces. Specification No.32369; 1941. Signal Assembly; Type D-4, Stalling Speed, Pitot-Static.

U. S. Gov., Army Air Forces. Specification No.27377; 1942. Tube; Airspeed, Pitot, Type F-1, Aircraft, 12 Volts.

U. S. Gov., Army Air Forces. Specification 27380-B; 1944. Installation of Pitot Tube and Flush-Mounted Static Tube; General Specification for.

U. S. Gov., Army Air Forces. Specification 27388 (1); 1942. Tube; Airspeed, Pitot, Type F-2, Aircraft, 12 Volts.

U. S. Gov., Army Air Forces. Specification 27393-A (1); 1943. Indicator; Turn, Type C-1, Directional Gyro, Aircraft.

U. S. Gov., Army Air Forces. Specification 27394-A (2); 1944. Indicator; Flight, Type E-1, Aircraft, Gyro-Horizon.

U. S. Gov., Army Air Forces. Specification 27397-1; 1943. Barograph; Type B-2, Aircraft.

U. S. Gov., Army Air Forces. Specification No.27398; 1943. Indicator; Bank and Turn, Type A-13, Aircraft.

U. S. Gov., Army Air Forces. Specification No.27414; 1942. Indicator; Rate of Climb, Type A-9, Aircraft.

U. S. Gov., Army Air Forces. Specification 27425-A; 1944. Indicator; Rate of Climb, Type C-4, Aircraft.

U. S. Gov., Army Air Forces. Specification 27442 (1); 1944. Tachometer; Electric, Type E-16 (R-4 Series Helicopters).

U. S. Gov., Army Air Forces. Specification No.27443; 1944. Tachometer; Electric, Type E-17 (R-5 Series Helicopters).

U. S. Gov., Army Air Forces. Specification No.27444; 1944. Tachometer; Electric, Type E-18 (R-6 Series Helicopters).

U. S. Gov., Army Air Forces. Specification 27475-A-1; 1944. Meter; Fuel Flow, Type A-4 (Remote Indicating-Autosyn) (Aircraft, 26 Volts, 400 Cycles).

U. S. Gov., Army Air Forces. Specification 27476-A-1; 1944. Meter; Fuel Flow, Type A-5 (Remote Indicating-Autosyn) (Aircraft, 26 Volts, 400 Cycles).

U. S. Gov., Army Air Forces. Specification 27477-A-1; 1944. Meter; Fuel Flow, Type A-6 (Remote Indicating-Autosyn) (Aircraft, 26 Volts, 400 Cycles).

U. S. Gov., Army Air Forces. Specification No.27481; 1944. Machmeter; Type A-1, Aircraft (2 3/4-Inch Round Dial, Pitot Static).

U. S. Gov., Army Air Forces. Specification No.27489; 1944. Indicator; Bank and Turn, Type A-14, Aircraft.

U. S. Gov., Army Air Forces. Specification No.27493; 1943. Signal Assembly; Carbon Monoxide, Type K-1, Aircraft.

U. S. Gov., Army Air Forces. Specification 27495 (1); 1944. Tachometer; Electric, Type E-15, for Aircraft Turbo Supercharger.

U. S. Gov., Army Air Forces. Specification 27512-1; 1945. Indicator; Airspeed, Type F-4, Aircraft.

U. S. Gov., Army Air Forces. Specification No.27532; 1944. Tachometer; Bombsight Disc Speed, Type F-1, Hand Held.

U. S. Gov., Army Air Forces. Specification 27533-1; 1944. Tachometer; Bombsight, Rotor Speed, Type F-2, Hand Held.

U. S. Gov., Army Air Forces. Specification No.27539; 1944. Generator; Tachometer, Aircraft, Two Pole Type; General Specification for.

U. S. Gov., Army Air Forces. Specification No.27540; 1944. Indicators; Electric Tachometer, Percent Speed Type, General Specification for.

U. S. Gov., Army Air Forces. Specification No.27541; 1944. Tachometer; Electric, Type E-21, Single, Aircraft.

U. S. Gov., Army Air Forces. Specification No.27552; 1944. Trainer; Navigation, Type G-3, Dead Reckoning.

U. S. Gov., Army Air Forces. Specification No.27553; 1944. Synchronizer, for Type A-5 Aircraft Automatic Pilot.

U. S. Gov., Army Air Forces. Specification 27560-A; 1945. Tachometer; Electric, Type E-23 A, Aircraft.

U. S. Gov., Army Air Forces. Specification No.27583; 1944. Computer; Course and Distance, Type A-5, for Mercator Solution.

U. S. Gov., Army Air Forces. Specification No.27606; 1944. Altimeter; Type C-17, Aircraft.

U. S. Gov., Army Air Forces. Specification 27987-A (3); 1943. Table; Pressure-Differential, for Airspeed Indicators.

U. S. Gov., Army Air Forces. Specification 32388-A; 1942. Signal Assembly; Altitude Warning, Type H-1.

U. S. Gov., Army Air Forces. Specification No.32496; 1944. Instruments; Alternating Current, 400 Cycle, Aircraft, General Specification for.

U. S. Gov., Army Air Forces. Specification 40389 (1); 1942. Indicator; Oxygen System, Flow, Type A-1, Aircraft.

U. S. Gov., Army Air Forces. Specification No.40404; 1942. Indicator; Cone Wind, Type A-4.

U. S. Gov., Army Air Forces. Specification No.40487; 1942. Kit; Oxygen Testing, Type K-1, Squadron-Aircraft.

U. S. Gov., Army Air Forces. Specification No.40615; 1943. Oximeter, for Measurement of Arterial Oxygen Saturation.

U. S. Gov., Army Air Forces. Specification 40673-A; 1944. Kit; Aircraft Electric Weighing, Type V-1.

U. S. Gov., Army Air Forces. Specification No.40762; 1944. Tester; Selsyn Instrument, Standard and Field.

U. S. Gov., Army Air Forces. Specification No.40772; 1944. Tester; Magnesyn Instrument, Field.

U. S. Gov., Army-Navy Aeronautical Specification AN-A-2-1; 1942. Altimeters; Barometric Index, Pressure.

U. S. Gov., Army-Navy Aeronautical Specification AN-A-15a; 1944. Amplifiers; Air Position Indicator.

U. S. Gov., Army-Navy Aeronautical Specification AN-B-19; 1944. Bulbs; Electrical Resistance Type Thermometer (-70° C. to +150° C.).

U. S. Gov., Army-Navy Aeronautical Specification AN-C-74a; 1942. Computers; Dead Reckoning.

U. S. Gov., Army-Navy Aeronautical Specification AN-C-90a; 1943. Computers; True Airspeed.

U. S. Gov., Army-Navy Aeronautical Specification AN-C-91a; 1944. Computers; Altitude Correction.

U. S. Gov., Army-Navy Aeronautical Specification AN-C-97a; 1944. Controllers; Air Position Indicator.

U. S. Gov., Army-Navy Aeronautical Specification AN-C-129-2; 1944. Computers; Air Position Indicator.

U. S. Gov., Army-Navy Aeronautical Specification AN-G-2b-1; 1944. Gages; Aircraft Pressure.

U. S. Gov., Army-Navy Aeronautical Specification AN-G-16a; 1944. Generators; Electric Tachometer.

U. S. Gov., Army-Navy Aeronautical Specification AN-I-1a; 1944. Indicator; Tetrahedral Wind Direction.

U. S. Gov., Army-Navy Aeronautical Specification AN-I-2a; 1944. Instruments and Instrument Boards; Installation of.

U. S. Gov., Army-Navy Aeronautical Specification AN-I-3a-1; 1944. Indicators; Electric Tachometer.

U. S. Gov., Army-Navy Aeronautical Specification AN-I-4—1; 1944. Instrument Systems; Installation of, Pitot Static Tube Operated.

U. S. Gov., Army-Navy Aeronautical Specification AN-I-6-1; 1944. Indicators; Thermocouple Thermometer.

U. S. Gov., Army-Navy Aeronautical Specification AN-I-7a-1; 1945. Indicators; Gyro Flux Gate Compass Master.

U. S. Gov., Army-Navy Aeronautical Specification AN-I-12; 1943. Indicators; Oxygen Flow.

U. S. Gov., Army-Navy Aeronautical Specification AN-I-13; 1943. Inclinometers; Aircraft.

U. S. Gov., Army-Navy Aeronautical Specification AN-I-15-1; 1944. Indicators; Electric Turn and Bank.

U. S. Gov., Army-Navy Aeronautical Specification AN-I-22a-1; 1944. Indicating Assemblies; Air Position.

U. S. Gov., Army-Navy Aeronautical Specification AN-I-23; 1944. Indicator Assemblies; Wind Cone, Unlighted and Externally Lighted.

U. S. Gov., Army-Navy Aeronautical Specification AN-I-28; 1944. Indicators; Directional Gyro.

U. S. Gov., Army-Navy Aeronautical Specification AN-I-29-1; 1944. Indicators; Gyro Horizon.

U. S. Gov., Army-Navy Aeronautical Specification AN-M-17; 1944. Meters; Gyro Stabilized Drift.

U. S. Gov., Army-Navy Aeronautical Specification AN-P-5a-2; 1944. Position Indicating Assemblies; Electrical, Wheels and Flaps.

U. S. Gov., Army-Navy Aeronautical Specification AN-P-53a-1; 1944. Pumps; Air Position Indicator.

U. S. Gov., Army-Navy Aeronautical Specification AN-S-21; 1943. Signals; Oxygen Warning, High Pressure System.

U. S. Gov., Army-Navy Aeronautical Specification AN-S-26-1; 1944. Signals; Daytime Drift.

U. S. Gov., Army-Navy Aeronautical Specification AN-S-46; 1944. Shafts; Tachometer Flexible Drive.

U. S. Gov., Army-Navy Aeronautical Specification AN-T-1a; 1943. Tubes; Electrically Heated, Pitot Static.

U. S. Gov., Army-Navy Aeronautical Specification AN-T-18a-1; 1944. Trainers; Instrument, Ground.

U. S. Gov., Army-Navy Aeronautical Specification AN-T-24a-1; 1945. Transmitters; Gyro Flux Gate Compass.

U. S. Gov., Army-Navy Aeronautical Specification AN-T-44; 1944. Tubes; Electrically Heated, Pitot.

U. S. Gov., Army-Navy Aeronautical Specification AN-T-75; 1944. Thermocouples; Engine Cylinder, Bayonet Type.

U. S. Gov., Army-Navy Aeronautical Specification AN-T-76; 1944. Thermocouples; Aircraft Engine Spark Plug Gasket Type.

U. S. Gov., Army-Navy Aeronautical Specification AN-GG-A-98-2; 1943. Accelerometers; Aircraft.

U. S. Gov., Army-Navy Aeronautical Specification AN-GG-A-461-2; 1944. Altimeters; Pressure.

U. S. Gov., Army-Navy Aeronautical Specification AN-GG-I-518-3; 1944. Indicators; Rate-of-Climb.

U. S. Gov., Army-Navy Aeronautical Specification AN-GG-I-522a-2; 1944. Indicators; Thermometer, Electrical-Resistance Type.

U. S. Gov., Army-Navy Aeronautical Specification AN-GG-I-525-2; 1944. Indicators; Turn and Bank.

U. S. Gov., Army-Navy Aeronautical Specification AN-GG-T-791-1; 1943. Tubes; Pitot-Static, Unheated.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-17. Mica Dielectric Capacitor.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-199. Instrument Landing Specifications (8 Sections).

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-277. Monitoring Equipment; Modulation.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-399. Mountings; Resistor.

U. S. Gov., U. S. Army, Army Air Forces. Specification 94-27335-B; 1944. Indicator; Airspeed, Type F-2A, Aircraft.

U. S. Gov., U. S. Army, Army Air Forces. Specification 94-27751-A; 1942. Computer; Time and Distance, Type D-3, Aircraft.

U. S. Gov., U. S. Army, Army Air Forces. Specification 94-27809-A; 1940. Gage; Oil Pressure, Type B-5, Aircraft.

*References.*—Barometers and altimeters, *see* 917.2.

## 724.27 Parachutes and Equipment

U. S. Gov., Army Air Forces. Specification 26536-B; 1944. Band; Parachute Suspension Line Retaining.

U. S. Gov., Army Air Forces. Specification No.40470; 1943. Parachute; Type B-8, Back—Complete.

U. S. Gov., Army Air Forces. Specification No.40668; 1943. Parachute; Attachable, Type A-3.

U. S. Gov., Army Air Forces. Specification No.40730; 1944. Parachute; Complete Attachable Chest, Type A-4.

U. S. Gov., Army Air Forces. Specification No.40731; 1944. Parachute; Seat, Type S-5, Complete.

U. S. Gov., Army Air Forces. Specification No.40732; 1944. Parachute; Type B-9, Back—Complete.

U. S. Gov., Army Air Forces. Specification No.40744; 1944. Parachute; Training, Type T-7, Troop—Complete.

U. S. Gov., Army Air Forces. Specification No.40912; 1945. Parachute; Complete Attachable Chest, Type A-5.

U. S. Gov., Army Air Forces. Specification No.40913; 1945. Parachute; Complete Back, Type B-10.

U. S. Gov., Army-Navy Aeronautical Specification AN-A-P-121a; 1944. Parachutes; General Specification for.

U. S. Gov., U. S. Army Air Forces. Specification 94-40074; 1928. Parachute; Complete Seat, Type S-1.

U. S. Gov., U. S. Army, Army Air Forces. Specification 94-40358; 1941. Parachute; Training, Type T-5, Troop—Complete.

U. S. Gov., U. S. Army, Army Air Forces. Specification 94-40433; 1943. Tower; Parachute Drying, Type A-1.

## 724.29 Miscellaneous Aircraft Accessories and Parts

Aeronautical Chamber of Commerce of America, Inc. National Aircraft Standard NAS 2; 1943. Fittings; Lubrication. Gives drawings with dimensions and notes. Developed by National Aircraft Standard Committee.

Aeronautical Chamber of Commerce of America, Inc. National Aircraft Standard NAS 3; 1941. Plate; Bolt, Locking. Gives drawings with dimensions and notes. Developed by National Aircraft Standard Committee.

Aeronautical Chamber of Commerce of America, Inc. National Aircraft Standard NAS 11; 1942. Valve Assembly; Flapper. Gives drawings with dimensions and notes. Developed by National Aircraft Standard Committee.

Aeronautical Chamber of Commerce of America, Inc. National Aircraft Standard NAS 13; 1941. Seal; Control Tube, Bellows Type. Gives drawings with dimensions and notes. Developed by National Aircraft Standard Committee.

Aeronautical Chamber of Commerce of America, Inc. National Aircraft Standard NAS 14; 1941. Retainer; Bellows Type Seal, Control Tube. Gives drawings with dimensions and notes. Developed by National Aircraft Standard Committee.

Aeronautical Chamber of Commerce of America, Inc. National Aircraft Standard NAS 27; 1943. Turnbuckle; Tank Strap. Gives drawings with dimensions and notes. Developed by National Aircraft Standard Committee.

Aeronautical Chamber of Commerce of America, Inc. National Aircraft Standard NAS 50 and 51; 1942. Rings; Retainer, Internal Type, for Bearing and Shaft Housings, and External Type, for Bearings and Shafting. Gives drawings with dimensions. Developed by National Aircraft Standard Committee.

Aeronautical Chamber of Commerce of America, Inc. National Aircraft Standard NAS 141 and 142; 1942. Tapped Holes for Studs. In aluminum alloy and soft metals, and in steel and hard metals, including brass. Gives drawings with dimensions and notes. Developed by National Aircraft Standard Committee.

Society of Automotive Engineers. Aeronautical Recommended Practice 86; 1943. Heater; Airplane, Exhaust Hot Air Type. Based on practical engineering requirements for such exhaust type heaters as are now used on airplanes and for such as may be developed. Covers scope, exhaust hot air type heater; general, military requirements, commercial requirements, and desirable design features.

Society of Automotive Engineers. Aeronautical Recommended Practice 87; 1943. Heater; Airplane, Steam Type. Based on practical engineering requirements for the design and testing of such types of steam heaters as are now used on airplanes and for such as may be developed. Covers scope, steam type heater; general, military requirements, commercial requirements, and desirable design features.

Society of Automotive Engineers. Aeronautical Recommended Practice 88; 1943. Heater; Airplane, Liquid Type. Based on practical engineering requirements for such liquid type heaters as are now used on airplanes and for such as may be developed. Covers scope, liquid type heater; general, military requirements, commercial requirements, and desirable design features.

Society of Automotive Engineers. Aeronautical Recommended Practice 143; 1943. Heaters; Airplane, Internal Combustion Types. Based on practical engineering requirements for such internal combustion type heaters as are now used on airplanes and for such as may be developed to meet later requirements. Covers internal combustion type heaters; general, military, and commercial requirements, and desirable design features.

U. S. Gov., Army Air Forces. Specification 17012-A; 1945. Markers; Fluorescent, Instrument Identification and Range.

U. S. Gov., Army Air Forces. Specification 24573-B; 1943. Rack; Bomb (Bombardment Type Airplane), General Specification for.

U. S. Gov., Army Air Forces. Specification 24799 (2); 1944. Rack; Parachute Fragmentation Bomb, Type R-1.

U. S. Gov., Army Air Forces. Specification 24800-3; 1944. Rack; Bomb, Type R-2.

U. S. Gov., Army Air Forces. Specification 24809; 1943. Mount; Bomb Sight, Type B-7.

U. S. Gov., Army Air Forces. Specification 24815-A; 1944. Adapter; Gun Mount, Type C-19.

U. S. Gov., Army Air Forces. Specification 24818-A; 1945. Installation; Bomb Hoisting Equipment.

U. S. Gov., Army Air Forces. Specification 24838; 1943. Mount; Gun, Type K-5, Swivel.

U. S. Gov., Army Air Forces. Specification 24848-5; 1944. Release; Bomb Rack, Type A-4, 24 Volts, D.C.

U. S. Gov., Army Air Forces. Specification 24850; 1943. Chuting; Flexible Ammunition (Caliber .50 Machine Gun).

U. S. Gov., Army Air Forces. Specification 24857-A (1); 1944. Bracket; Gun Trunnion, Type A-1A.

U. S. Gov., Army Air Forces. Specification 24874; 1943. Latch; Ammunition Chute, Type A-1.

U. S. Gov., Army Air Forces. Specification 24875; 1943. Adapter; Ammunition Chute, Type L-1.

U. S. Gov., Army Air Forces. Specification 24876; 1943. Adapter; Ammunition Chute, Type L-2.

U. S. Gov., Army Air Forces. Specification 24884 (1); 1944. Mount; Gun, Type K-6A, Swivel.

U. S. Gov., Army Air Forces. Specification 24893; 1943. Adapter; Link Chute, Type M-1.

U. S. Gov., Army Air Forces. Specification 24896; 1943. Post; Gun Mounting, Type A-5.

U. S. Gov., Army Air Forces. Specification 24922; 1944. Mount; Gun Sight, Type C-5.

U. S. Gov., Army Air Forces. Specification 24935-1; 1944. Rack; Bomb, Type S-1, 24 Volts.

U. S. Gov., Army Air Forces. Specification 27458 (1); 1943. Tube; Power Venturi, Plastic, Type A-4, Aircraft.

U. S. Gov., Army Air Forces. Specification 28618-A; 1945. Filter; Adsorbent, Mobile Oil.

U. S. Gov., Army Air Forces. Specification 32331-A; 1943. Filter; Noise, Radio Frequency.

U. S. Gov., Army Air Forces. Specification 40267-B (3); 1941. Equipment for the Elimination of Ice on Aircraft; General Specification for.

U. S. Gov., Army Air Forces. Specification 40271-A; 1940. Filter; Air, Inflatable Shoe.

U. S. Gov., Army Air Forces. Specification 40327; 1941. Recharger; Aircraft Oxygen Cylinder.

U. S. Gov., Army Air Forces. Specification 40352; 1942. Purifier; Oxygen, Type A-3.

U. S. Gov., Army Air Forces. Specification 40396(3); 1943. Spray Equipment; Windshield Anti-Icing, Aircraft.

U. S. Gov., Army Air Forces. Specification 40435 (3); 1944. Transparent Areas; Aircraft, Equipment for Maintaining Vision Through, General Specification for.

U. S. Gov., Army Air Forces. Specification 40450 (2); 1943. Cartridge; Oxygen Purifier.

U. S. Gov., Army Air Forces. Specification 40600; 1943. Nozzle; Self-Closing, Fuel and Oil Servicing.

U. S. Gov., Army Air Forces. Specification 40665; 1943. Equipment; Aerial Delivery, Cargo Type Airplanes and Gliders, General Specification for.

U. S. Gov., Army Air Forces. Specification 40697; 1943. Set; Hydraulic System Field Testing, Type D-1, Portable, for Aircraft.

U. S. Gov., Army Air Forces. Specification 40746A-1; 1944. Installation of Hold-Down Fittings in Aircraft.

U. S. Gov., Army Air Forces. Specification 40751-A; 1945. Kit; Rain Repeller, Type AA-1, for Aircraft Windows.

U. S. Gov., Army Air Forces. Specification 40796; 1944. Packer; Aircraft Wheel Bearing Grease.

U. S. Gov., Army Air Forces. Specification 40831-2; 1945. Cradle; Engine Transportation, Type B-1.

U. S. Gov., Army-Navy Aeronautical Specification AN-A-1; 1944. Anti-Icing System; General Specification for Propeller Fluid.

U. S. Gov., Army-Navy Aeronautical Specification AN-A-3a; 1944. Accumulators; Hydraulic Pressure.

U. S. Gov., Army-Navy Aeronautical Specification AN-F-2; 1942. Filters; Turn and Bank Indicator, Air.

U. S. Gov., Army-Navy Aeronautical Specification AN-F-3a-1; 1944. Filters; Hydraulic.

U. S. Gov., Army-Navy Aeronautical Specification AN-F-9a; 1942. Filters; Air, Vacuum Operated Instruments.

U. S. Gov., Army-Navy Aeronautical Specification AN-I-16; 1943. Insulators; Vibration.

U. S. Gov., Army-Navy Aeronautical Specification AN-J-8-1; 1945. Joints; Oxygen Swivel.

U. S. Gov., Army-Navy Aeronautical Specification AN-K-1; 1944. Kits; Airplane Mooring.

U. S. Gov., Army-Navy Aeronautical Specification AN-N-6-1; 1944. Nozzles; Aircraft Fuel and Oil Servicing.

U. S. Gov., Army-Navy Aeronautical Specification AN-P-3-1; 1943. Plates; Location and Attachment of Identification and Modification.

U. S. Gov., Army-Navy Aeronautical Specification AN-P-38-2; 1944. Plates; Information and Identification.

U. S. Gov., Army-Navy Aeronautical Specification AN-P-47-2; 1944. Plugs; Dehydrator.

U. S. Gov., Army-Navy Aeronautical Specification AN-P-50-1; 1944. Pumps; Engine Driven Air.

U. S. Gov., Army-Navy Aeronautical Specification AN-R-7; 1942. Reservoirs; Hydraulic.

U. S. Gov., Army-Navy Aeronautical Specification AN-S-36a; 1944. Shunts; 50 Millivolt External Ammeter.

U. S. Gov., Army-Navy Aeronautical Specification AN-T-10; 1942. Tubes; Power Venturi.

U. S. Gov., Army-Navy Aeronautical Specification AN-T-17-1; 1943. Towing and Mooring Gear for Seaplanes, Flying Boats, and Amphibians; Design and Installation of.

U. S. Gov., Army-Navy Aeronautical Specification AN-T-42-2; 1944. Tools; Special Airframe and Airframe Accessories, Hand.

U. S. Gov., Civil Aeronautics Board. Civil Air Regulations Part 15—Aircraft Equipment Airworthiness, 1942. Includes provision for rating, classification of items of equipment, factors affecting certification or approval, and requirements for landing gear equipment, landing gear wheels, seaplane floats, skis, navigation appliances, position lights, landing flares, safety equipment and belts, parachutes, and control, and structural units.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-14. MRLD and MLD Stations; Cabinet Type Rack Assemblies.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-22. Cabinet Type Rack Assemblies for SRA-D Stations.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-96. Motor-Alternator Unit; Electric, for U.H.F. Range Use.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-111. MRL-ML Stations; Cabinet Type Rack Assemblies.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-301. R.F. Monitor Unit.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-352. Cross Pointer Instrument.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-433. Colors; Aviation, Lens, Filters, Etc.

U. S. Gov., U. S. Army, Army Air Forces. Specification 94-40268; 1944. Shoes; Inflatable, Ice-Elimination, General Specification for.

*References.*—Turnbuckles, aeronautic, *see* 608.7; bolts and nuts, aeronautic, *see* 608.31, 608.32; airplane cloth, *see* 396.

### 724.3 AIRPLANES

U. S. Gov., Army Air Forces. Specification 1801-C; 1944. Form; Airplane Manufacturers' Model Specification.

U. S. Gov., Army Air Forces. Specification 40118A; 1940. Data for Preliminary Design and Release for Construction of Complete Airplanes.

U. S. Gov., Army-Navy Aeronautical Specification AN-H-1a-1; 1943. Handbooks; Structural Repair, for Airplanes.

U. S. Gov., Army-Navy Aeronautical Specification AN-H-13-1; 1943. Handbooks; Erection and Maintenance Instructions, for Airplanes.

U. S. Gov., Army-Navy Aeronautical Specification AN-H-22; 1944. Handbooks; Erection and Maintenance Instruction, for Experimental Airplanes.

U. S. Gov., Civil Aeronautics Board. Civil Air Regulations Part .04—Airplane Airworthiness, 1942. Includes definitions and requirements (with tables) for structural loading conditions, proof of structure, detail design and construction, equipment, powerplant installation, and miscellaneous.

### 724.4 AIRSHIPS

U. S. Gov., U. S. Army, Army Air Forces. Specification 99-2006; 1937. Envelope; Nonrigid Airship, General Specification.

U. S. Gov., U. S. Army, Army Air Forces. Specification 99-2007; 1937. Control Surface; Nonrigid, Airship, General Specification.

U. S. Gov., U. S. Army, Army Air Forces. Specification 99-2050F; 1937. Marking for Airships; Balloons, and Parts Thereof.

U. S. Gov., U. S. Army, Army Air Forces. Specification 99-2088; 1934. Paraffin Coating for Balloon and Airship Envelopes.

U. S. Gov., U. S. Army, Army Air Forces. Specification 99-2151A; 1929. Accessories; Rigging, Wooden, General Specification.

## 725. CYCLES, BOATS, SHIPS, AND ACCESSORIES

### 725.1 BICYCLES

U. S. Gov., Federal Specification KKK-B-286; 1944. Amendment 1; 1944. Bicycles. Covers four types—(I) delivery, (II) light duty, (III) military, and (IV) standard; and two classes—(A) men's and (B) women's. Gives requirements for sizes, baskets for type I bicycles, material, workmanship, measurement for size, frame joints, washers for attached members, thicknesses and diameters, lubrication, marking, finish, and details for each type and class; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 18-2C; 1942. Bicycle.

U. S. Gov., Veterans Administration. Specification VA-M-78; 1933. Bicycles; Men's.

*References.*—Bicycle tires, *see* 206.2.

### 725.2 MOTORCYCLES AND ACCESSORIES

Tire and Rim Assn., Inc. Passenger Car Handbook, 1944. Standard Contour Drop Center Motorcycle Rim. Gives diagram of contour of rim.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 91-77; 1940. Scooter; Motor, Gasoline, Type A-1.

*References.*—Motorcycle tires, *see* 206.2, 206.4.

### 725.3 BOATS, RAFTS, AND PARTS

National Fire Protection Assn. National Fire Codes for Flammable Liquids, Gases, Chemicals, and Explosives, 1943. Motor Craft; Pleasure and Commercial. Includes gasoline, Diesel, and semi-Diesel powered boats. Covers regulations for fire protection,

including location and construction of fuel tanks, fuel lines, carburetion, motor exhaust, ventilation, hull and galley arrangement, galley stoves, cabin heaters, ice machines, electrical equipment, lightning protection, lamps and lanterns, fire extinguishing apparatus, etc.

Society of Automotive Engineers. 1944 Handbook, Section 2—Units, Parts, and Fittings. S.A.E. Recommended Practice for Motorboat Propeller Shaft Couplings, adopted 1929. For use in cases where it is desired to use the tapered type. Diagrams and tables of marine propeller shaft end dimensions (both ends), and propeller shaft coupling bores for nominal shaft diameters from 3/4 to 3 in.

Society of Automotive Engineers. 1944 Handbook, Section 2—Units, Parts, and Fittings. S.A.E. Recommended Practice for Outboard Motorboat Transoms, adopted 1935. Diagrams and table of height, thickness, and angle of transom, distance for adjustment angle on stern bracket, and antiplate below boat for transoms for regular motors and for racing motors.

Society of Automotive Engineers. 1944 Handbook, Section 2—Units; Parts, and Fittings. S.A.E. Standard Motorboat Controls, adopted 1920. Requirements for spark and throttle control lever locations and operation of gearshift lever for motorboats intended for one man control.

Society of Automotive Engineers. 1944 Handbook, Section 2—Units, Parts, and Fittings. S.A.E. Standard Motorboat Propeller Shaft Ends and Hubs, revised 1935. Diagrams and tables of dimensions for shaft ends and hubs without sleeves for shaft diameters from 3/4 to 8 in. in diameter, and for hubs with sleeves for shaft diameters 3 1/4 to 8 in. in diameter.

Society of Automotive Engineers. 1944 Handbook, Section 2—Units, Parts, and Fittings. S.A.E. Standard Piston Rings and Grooves, revised 1942. Adopted as a standard primarily for the types of internal combustion engines commonly used in automobiles, motorboats, etc. For pistons used in aircraft engines and engines not of the conventional automobile type, it may be necessary to deviate from the rings and grooves recommended, but such modifications should not be made by changing the piston ring width or radial thickness. Includes tables for piston ring and groove widths, and ring widths for cylinder diameters; formulas for ring grooves; tables for piston ring radial wall thickness and groove diameters, and piston ring radial wall thickness and groove diameters for thick wall compression rings; and S.A.E. Recommended Practice for ring joints and drain holes with tables for ring joint clearances, number of oil ring groove drain holes, size of oil ring drain holes, and "K" type ring and groove dimensions.

U. S. Gov., Army Air Forces. Specification 40743-A; 1945. Lifeboat; Airborne, Type A-1.

U. S. Gov., Army-Navy Aeronautical Specification AN-R-2b; 1944. Rafts; One Man Parachute Type, Pneumatic Life.

U. S. Gov., U. S. Army, Army Air Forces. Specification 94-40420; 1943. Rafts; Pneumatic, Type A-3.

*References.*—Incandescent lamps for motorboats, *see* 716.12; steel plates and structural steel for ships, *see* 604.13, 605.15; ships, *see* 725.4; tolerances on metal fits, *see* 615.82.

## 725.4 SHIPS

### 725.40 General Items

The American Assn. of Port Authorities. Port Dictionary of Technical Terms, 1940. Compiled by Committee on Standardization and Special Research.

American Bureau of Shipping. Rules for the Classification and Construction of Steel Vessels, 1944. Includes conditions of classification, definitions, general requirements for keels, stems and stern frames, rudders and steering gears, single and double bottoms, frames, web frames, side stringers, beams, stanchions and deck girders, bulkheads, deep tanks, panting arrangements, shell plating, decks, superstructures, protection of deck openings, machinery space and tunnel, bulwarks, ports, ventilators, port lights, ceiling and sparring, cementing and painting, masts, derrick posts, rigging, equipment, riveting, welding, strengthening for navigation amongst ice, and vessels intended to carry oil in bulk; rules for the construction and classification of machinery, the inspection and testing of materials, surveys, and fees; tables of scantlings; and load line markings for ocean-going and Great Lakes vessels.

National Fire Protection Assn. National Fire Codes for Flammable Liquids, Gases, Chemicals, and Explosives, 1943. Freeing Tanks of Flammable Vapors. Standards for freeing oil tanks, bunkers, and compartments of dangerous concentration of flammable explosive or toxic gases previous to entering for any purpose or making repairs on oil burning or oil tank vessels.

U. S. Gov., Navy Dept., U. S. Coast Guard, Bureau of Marine Inspection and Navigation. General Rules and Regulations Prescribed by the Board of Supervising Inspectors—Great Lakes (1931); Rivers (1929); Bays, Sounds, and Lakes Other Than the Great Lakes (1931); Ocean and Coastwise (1942); Tank Vessels (1941); and Motorboats and Certain Vessels Propelled by Machinery Other Than by Steam, More Than 65 Feet in Length (1941).

### 725.41 Ship Hull Details

American Bureau of Shipping. Rules for the Classification and Construction of Steel Vessels, 1944. Materials for Hull Construction and Equipment. Includes rules for inspection and testing, defects, identification of materials, manufacturers' certificates, marking and retests, standard test pieces, structural steel for hulls, hull castings, hull forgings, anchors, chains, and steel wire rope.

Associated Factory Mutual Fire Insurance Companies. Factory Mutual Bulletin of Loss Prevention, 4.21; 1938. Scuppers and Floor Drains. Gives requirements for the number needed for floors of various types and occupancies, and includes descriptions of approved types of scuppers and floor drains.

U. S. Gov., Navy Dept. Specification 42N2b; 1945. Nameplates, Instruction Plates, and Other Designating Markings for Electrical and Mechanical Equipment; Shipboard Use.

U. S. Gov., Navy Dept. Specification 66F1; 1936. Filters; Gasoline, for Ship Gasoline Systems.

U. S. Gov., U. S. Maritime Commission. Specification 42-MC-4; 1944. Ladders; Escape, Chain, for Engine and Fire Rooms. Covers three types—(I) with disc ears, (II) without disc ears, and (III) combination; two classes for each type—with steel rungs and with combination steel and wood rungs; and but one grade. Gives requirements for materials, workmanship, construction, strength, length, finish, marking, and details for each type and class; inspection, sampling, and methods of test; and packaging, packing, and marking for shipment.

U. S. Gov., U. S. Maritime Commission. Specification 42-MC-5; 1944. Ladders; Pilot, Flexible Chain and Wire Rope. Covers one type, one grade, and three classes—(A) with steel ears, (B) with wooden ears, and (C) with aluminum ears. Gives requirements for materials, workmanship, construction, length, double rung steps and attachments, finish, strength, marking, and details; inspection, sampling, and methods of test; and packaging, packing, and marking for shipment.

*References.*—Ship inspection, *see* 725.40; rigging screws, *see* 608.7; wire rope sockets and thimbles, *see* 603.42; thimbles for manila rope, *see* 619.9; fire hose racks for ships, *see* 974.3; lifeboats, *see* 725.3; medicine chests, *see* 915.43; ship berths and supports, *see* 613.1; door locks and accessories, *see* 617.21, 617.23, 617.31, 617.32; ship bolt locks, *see* 617.61, 617.42; sash hardware for ships, *see* 617.35, 617.43, 617.5; cast iron, cast steel, cast brass, *see* 611.11, 611.41, 645.21; methods of testing and general requirements for metals, *see* 600.1; zinc coatings, *see* 600.3; ship plates and structural steel, *see* 604.13, 605.15; wire rope for ships, *see* 603.42, 647.38; tolerances on metal fits, *see* 615.82; ship hinges and hasps, *see* 617.12, 617.13; hand rail brackets, *see* 617.62; door hooks, *see* 617.63.

## 725.42 Ship Engineering Details

American Bureau of Shipping. Rules for the Classification and Construction of Steel Vessels, 1944. Include requirements for keels, stems and stern frames, rudders and steering gears, single and double bottoms, frames, web frames, side stringers, beams, stanchions and deck girders, bulkheads, deep tanks, panting arrangements, shell plating, decks, superstructures, protection of deck openings, machinery space and tunnel, bulwarks, ports, ventilators, port lights, ceiling and sparring, cementing and painting, ceiling and sparring, cementing and painting, masts, derrick posts, rigging, equipment, riveting, welding, strengthening for navigation amongst ice, and vessels intended to carry oil in bulk; rules for inspection and testing of materials; and tables of scantlings.

American Bureau of Shipping. Rules for the Classification and Construction of Steel Vessels, 1944. Propellers. Includes requirements for general construction, material, blades, studs, key, protection against corrosion, and spare gear.

American Institute of Electrical Engineers. Recommended Practice for Electrical Installations on Shipboard, 45; 1940. Addenda, 1942. Emergency Modification and Supplement, 1943. For the equipment of merchant vessels with electrical apparatus for lighting, signaling, communication, power, and propulsion either direct current or alternating current. Fire Door Equipment; Electrically Operated, Watertight. Includes centralized control panel, motor operating units, control stations, visible and audible signal system, power supply, safety equipment, and spare parts.

National Fire Protection Assn. National Fire Codes for Extinguishing and Alarm Equipment, 1943. Marine Fire Protection. Fire protection regulations for motor craft. Fires and extinguishers divided into three classes—(A) in ordinary combustible material (quenching and cooling), (B) in flammable liquids (blanketing, direct smothering), and (C) in electrical equipment (nonconducting). Gives details concerning properties of fire extinguishers, installation and upkeep, recommended hand extinguisher equipment, and smothering systems.

U. S. Gov., Navy Dept. Specification 18L5b; 1943. Logs; Taffrail.

U. S. Gov., Navy Dept. Specification 18T21b; 1943. Tubes; Sounding-Machine, Chemical.

U. S. Gov., Navy Dept. Specification 33C7; 1940. Connectors; Flexible, Pressure-Gage.

U. S. Gov., Navy Dept. Specification 40S3d; 1944. Shapers; Crank, Universal, Motor-Driven, 16-Inch, Shipboard Use.

U. S. Gov., Navy Dept., U. S. Coast Guard, Bureau of Marine Inspection and Navigation. Marine Engineering Regulations and Material Specifications, 1942. Contains specifications and requirements for materials, design, construction, installation, and inspection of boilers, unfired pressure vessels and appurtenances thereof; also piping, valves, fittings, flanges, safety valves, etc., upon the strength and efficiency of which safety of life is dependent, and are intended for maximum temperatures of 1,000° F. Includes specifications for hot water piping at temperatures exceeding 200° F., oil piping at temperatures exceeding 150° F., regardless of pressure, all other piping at pressures exceeding 125 lb. p.s.i., and piping for pressures and temperatures not noted above. Gives maximum allowable fiber stresses, temperature limitations, flange standards, dimensions and service pressure ratings for flanged fittings and companion flanges, and dimensions of screwed companion and blind flanges.

*References.*—Ship inspection, *see* 725.40; condenser tubes and tube ferrules, *see* 645.24, 645.22; pressure and vacuum gages for ships, *see* 793.2; fire clay refractories for marine service, *see* 534.12; pipe coverings, *see* 707.4; metallic packing for condenser tubes, *see* 707.23; marine boilers and pressure vessels, *see* 703.1; boiler tubes, *see* 703.2; marine boiler plates, *see* 604.11; cast iron, cast steel, cast brass, cast bronze, *see* 611.11, 611.41, 645.21, 648.41; methods of testing and general requirements for metals, *see* 600.1; zinc coatings, *see* 600.3; marine steam engines and turbines, *see* 701.1, 701.2; oil engines, gasoline engines, for ship propulsion, *see* 704.1, 705.7; packing and gaskets for valves and pipe joints, *see* 707.1, 707.2; electric generators for propulsion and for auxiliary service, *see* 711.11, 711.12; electric motors for propulsion and for auxiliary service, *see* 711.21, 711.22; storage batteries for auxiliary light and power, *see* 712.2; controllers and starters, *see* 714.11; switchboards, *see* 714.42; circuit breakers, switches, *see* 714.51, 714.52; conduit, feeder and junction boxes, *see* 715.11, 715.12; receptacles and plugs, *see* 715.21; electric cable and wire for marine use, *see* 715.41, 715.44; searchlights, *see* 716.2; watertight electric light fixture, *see* 716.32; mechanical and electrical telegraphs on shipboard, *see* 718.39; radio transmitters, radio receivers, *see* 718.63, 718.64; radiocompass, *see* 718.66; marine sextant, *see* 916.22; tolerances for metal fits, *see* 615.82.

### 725.43 Ship Operation Details and Supplies

U. S. Gov., Navy Dept. Specification 19R2; 1944. Release-Devices; Hydraulic, For Freeing Life-Saving Equipment Incident To Sinking of Vessels.

U. S. Gov., Navy Dept. Specification 23F2c; 1941. Fenders; Ship, Cane, Woven.

U. S. Gov., Navy Dept. Specification 60M1; 1941. Mufflers; Exhaust, Diesel-Engine.

*References.*—Marine glue for seams for ship decks, *see* 505.36; hose for ships, *see* 202.0, 202.12, 202.22, 202.41, 202.42, 202.44, 202.46; flexible metallic hose, *see* 607.7; mattresses and mattress covers, *see* 315.10, 315.14; bed sheets, *see* 315.2; pillows and pillow cases, *see* 315.30, 315.31; bedspreads, spring covers, *see* 315.4, 315.6; table cloths, tray cloths, *see* 316.1, 316.4, 339.3; towels, bath mats, *see* 319.3, 339.50; marine uniforms, *see* 311.6, 368.82; table glassware and chinaware, *see* 523.9, 532.1; silverware, *see* 691.2; wire rope for ships, *see* 603.42, 647.38; oil burners for ships, *see* 703.9; electric heaters for ships, *see* 717.1.

## 726. STEAM, ELECTRIC, AND GASOLINE RAILWAY CARS

### 726.0 GENERAL ITEMS

American Transit Assn. Recommended Practice for Protective Devices for Car Equipment, E137-37; 1937. Sets forth various devices generally known and classified as follows—choke coil, lightning arrester, automatic circuit breaker, automatic line switch or breaker, and fuses. Also gives recommended practice for the location and operation of devices.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Contour of New Passenger Cars. Standard overall and detail dimensions for new equipment.

Assn. of American Railroads, Operations and Maintenance Dept., Operating-Transportation Div., Safety Section. Safety Rules Governing Maintenance of Equipment and Stores Employees, 1942. Gives requirements for prevention of burns (fires, explosions); handling material, tools, and equipment; operation of trucks, tractors, cranes, hoists, and derricks; working on or about machinery, engines, cars, pipe lines, refrigerating or air conditioning units, and elevators; protection against train and engine hazards; and eye protection.

Manufacturing Chemists' Assn. of the U. S. Manual Sheet 5-25. Sodium Bisulphate (Niter Cake) ($NaHSO_4$) Bulk Shipments in Box Cars. Recommended Practice, adopted 1921. Includes description, loading restrictions, treatment of cars before loading, and treatment of cars after unloading.

Manufacturing Chemists' Assn. of the U. S. Manual Sheet H-1, for Shippers and Consignees. Hydrofluoric Acid (HF). Recommended Practice for the Safe Handling and Discharging of Containers, 1942. Includes description of acid; recommended precautions; recommendations for containers, labels, rubber drums, lined and unlined steel drums, lead carboys, wood barrels, and tank cars for aqueous hydrofluoric acid; recommendations for unbrazed steel cylinders for anhydrous hydrofluoric acid; and facsimile of labels recommended for application to containers.

Manufacturing Chemists' Assn. of the U. S. Manual Sheet P-30. Poisons, I.C.C. Class B—(Solids) Cleaning Out Box Cars After Unloading. Recommended Practice, adopted 1930. Includes description of class B poisons (solids); authority for shipment; necessity for and method of cleaning out box cars after unloading; personal precautions; and placarding cars.

Manufacturing Chemists' Assn. of the U. S. Manual Sheet TC-1 (for Consignees). Cars, Tank-Steel-Unloading, When Filled With Sulphuric Acid or Mixed Nitric and Sulphuric Acids. Recommended Practice, adopted 1938, revised 1939, 1941. Includes safety rules to be observed by employee assigned to unloading; and recommendations for compressed air used for discharge of lading, placement of car for unloading, inspection and repairs of leaks, sampling of product, dome fittings, unloading, safety vent disc, defective discharge pipe, obstructed discharge pipe, frozen (congealed) sulphuric acid and oleum, damage to exterior of tank car during unloading, return of empty cars, railroad defect cards and bad order cards, internal washing, discharge line, and internal and external antidotes—treatment.

Manufacturing Chemists' Assn. of the U. S. Manual Sheet TC-2 (for Consignees). Cars, Tank-Steel, I.C.C. Specification 103B, Rubber-Lined, Unloading, When Filled With Muriatic Acid or Other Liquids Authorized for Shipment Therein. Recommended Practice, adopted 1938. Includes recommendations for placement of cars for unloading, safety rules to be observed by employee assigned to unloading, use of compressed air, sampling of product, dome fittings, unloading, interior rubber lining, damage to exterior of tank car during unloading, removal or reversal of placards, return of empty cars, railroad defect and bad order cards, internal washing and entering of car, discharge line, service, and internal and external antidotes—treatment.

Manufacturing Chemists' Assn. of the U. S. Manual Sheet TC-3 (for Consignees). Unloading Liquid Caustic Cars, Tank-Steel-Unloading, When Filled With Liquid Caustic Soda or Caustic Potash. Recommended Practice, 1942. Includes recommendations for placement of car for unloading, safety rules to be observed by unloaders, cold weather handling—steaming, sampling, unloading of caustic cars, preparation of empty car for return, materials and equipment, delivery lines, railroad defect cards and bad order cards, not entering empty car, service, and first aid treatment.

Manufacturing Chemists' Assn. of the U. S. Manual Sheet TC-4 (for Consignees). Unloading Inflammable Liquids. Cars; Tank-Steel-Unloading, When Filled With Inflammable Liquids. Recommended Practice, 1942. Includes recommendations for placement of tank car for unloading safety rules to be observed by unloaders, protection of property and workmen, sampling, unloading, tank car heating system, and preparation of empty car for return movement.

Manufacturing Chemists' Assn. of the U. S. Manual Sheet TC-5 (for Consignees). Unloading Anhydrous Hydrofluoric Acid From Tank Cars. Recommended Practice, adopted 1943. Includes description of product, general precautions, placement of tank car for unloading, safety rules to be observed by unloaders, dome fittings, valve and fittings specifications, acid storage tank, compressed air when used for discharge of acid, unloading operations, removal or

reversal of placards, return of empty cars, railroad defect and bad order cards, and service.

National Board of fire Underwriters. Discharging Flammable Liquids from Tank Cars, 38; 1932. Recommended practice for unloading systems from railroad tank cars to storage tanks located within cities or towns, for liquids having a flash point below 70°F. Unloading distance from buildings, piping to storage tanks, storage tanks, operating requirements, and hazards involved.

*References.*—Devices for protection against lightning, *see* 715.5.

## 726.1 RAILROAD CARS

American Institute of Electrical Engineers. A.I.E.E. No.11, March 1943. American Standards Assn., C35.1-1943. Rotating Electrical Machinery on Railway Locomotives and Rail Cars and Trolley, Gasoline-Electric, and Oil-Electric Coaches. Includes all rotating electrical machinery forming a part of the power equipment of electrically-propelled railway cars and locomotives (including trolley, gasoline-electric, and oil-electric coaches). Covers definitions, rating, insulation, dielectric tests, insulation resistance, commutation, overspeed tests, efficiency, and characteristic curves.

American Transit Assn. Standard A.A.R., Mechanical Div., Specifications for Use by Electric Railways Following Steam Road Practice, E17-37; 1937. Contains an index for the use of those electric railways desiring to follow steam road practice in regard to journal boxes and contained parts, wheel tread and flange contours, axle specifications and designs, and brake shoes and associated parts.

American Transit Assn. Recommended Specification for the Location of End Connection on Interurban Cars Used in Car Exchange Service, E101-27; 1927. Gives drawing as to the standard location of end connections on interurban cars.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Box Car End; Design and Strength. Specifications for the design of corrugated pressed, or reinforced flat steel plate car ends, for new cars. Thickness of plate, bracing, section modulus, and alternative arrangements. Does not include refrigerator cars.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Car Design; Fundamentals of. Standard dimensions of car, such as height from rail to various car parts, distance between center sills, standardized designation of cars based on journal sizes and number of axles under the car.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1944. Classification of Cars, Definitions and Designating Letters, Recommended Practice. Covers passenger equipment cars, and cars built to operate in passenger trains, by classes—B, C, D, E, M, P, and I. Also general service freight equipment cars, by classes—X, R, V, S, G, H, F, T, L, N, and Y. Includes subheadings for special purposes and capacity figures.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Door for Box Cars. Recommended Practice. Covers weatherproofing, metal door stops, bottom support, starters, rollers, clearance, height of lock, etc. Includes box car end doors, and seal records for cars now in use.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1944. Lettering and Marking of Cars. Gives requirements for letters and figures, equipment, special markings, date built, journal boxes repacked, and details for trucks and various types of cars.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Sills; Wooden, Splicing of. Specification for manner of work, with detailed drawings for various types of splice.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Specification for the Construction of New Passenger Equipment Cars. Recommended Practice, adopted 1939. Structural design requirements for future equipment, basic fundamentals follow railway mail service specification for cars used in trains of over 600,000 lb. light weight. Strength members all metal, trucks, buffing-center sills, bolsters, framing, sheathing, roof, unit stresses to be used for rolled mild steel, subfloor, and insulation.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Tank Cars; Specification for. For cars in use built prior to 1930, and for new cars. Classifies old cars into six classes by underframing, date of building, and special service. Gives requirements on tank, underframe, safety valves, and tests. New cars in accordance with I.C.C. requirements and A.A.R. details, and standards, classifications of designations, specifications for cars, dimensional drawings of marking, safety valves, vents, dome, etc.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. U. S. Safety Appliances for All Classes of Cars and Locomotives. Includes the safety-appliance acts, requirements on number, dimensions, location, and manner of application of hand brakes, running boards, steps, ladders, hand holds, uncoupling levers, and safety railings, with dimensional drawings.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Wooden Cars; Reinforcing of Existing. Gives requirements for the minimum strength to be observed, draft attachments of metal, equivalent area of steel, draft-gear capacity, etc.

Assn. of American Railroads, Telegraph and Telephone Section, 1-A-21; 1927. Standard Outfit Cars for Construction Forces. Gives typical layouts and dimensions of cars, equipment and hot water heating system for dining, sleeping, and tool cars.

National Board of Fire Underwriters. Electric Cars and Trolley Buses Including Houses and Yards, No. 83; 1935. Wiring of cars, buses, and locomotives up to 60 tons, protection of power circuits, motors

and controls, lighting, heating, trolley lines, third rails, construction and maintenance of buildings, fire extinguishing equipment of cars and buildings, etc.

National Hardwood Lumber Assn. Standard Specifications for Grades of Hardwoods and Cypress Lumber for Freight Cars and Locomotives, 1940. (In accordance with Assn. of American Railroads Recommended Practice and conforming to American Lumber Standards.) Includes nomenclature of commercial hardwoods and cypress, use classification, inspection regulations, grading provisions, grading specifications, description of grades, and definitions of terms.

U. S. Gov., Dept. of Commerce, National Bureau of Standards, H5; 1923. American Standards Assn., B13-1924. American Logging and Sawmill Safety Code. For log railroad cars, requirements on provision of log bunks or safety chains, equipment with handholds, steps, and brakes, design features of brake wrench.

U. S. Gov., U. S. Army, Transportation Corps. Specification 43-13; 1931. Car; Unit, Hospital.

*References.*—Test weight cars, *see* 793.5; protective devices, lubrication, classification of materials, *see* 726.0; structural steel for cars, *see* 605.13; alloy structural steel for cars, *see* 621.31, 621.32, 621.33; iron and steel plates and sheets, *see* 604.2; 504.2; mine cars, *see* 751; car lumber, *see* 413.2; flooring for cars, *see* 411.29; siding for cars, *see* 411.1; roofing and lining for cars, *see* 411.7; tank lumber, *see* 413.1; parts and fittings for cars, *see* 726.2; wiring of cars, *see* 715.30; car lighting, car lighting equipment, *see* 716.30, 716.39; electric locomotives, *see* 721.1.

## 726.2 PARTS AND FITTINGS FOR RAILROAD CARS

American Transit Assn. Recommended Practice for Air Brake and Other Air Operated Equipment, E110-37; 1937. This recommendation affords a practical guide that can be followed for future installations, or modifications of existing installations where freezing difficulties are being experienced.

American Transit Assn. Recommended Specification for Trolley Poles, Wheels, Harps, and Bases, E124-37; 1937. Gives design for trolley poles, together with tables showing dimensions of the poles for each length and class of service. Drawing and a table showing contact pressure against the trolley wire with the pole at maximum and minimum heights; and also the clearance between the trolley wire and trolley pole with the latter at a minimum operating height and the wire directly over the center of the track. Also includes method for determining length of the trolley pole for either single or double truck car with the wire at various heights above the running board.

Assn. of American Railroads, Freight Container Bureau. Bulletin 31-1939. Temporary Decking for Use in Refrigerator Cars. Decking used in refrigerator cars for the shipment of fresh fruits and vegetables. Covers construction of support units, installation of decking, and bill of materials.

Assn. of American Railroads, Freight Container Bureau. Bulletin 32-1939. The Loading of Lug Boxes; Divided Load. Includes loading specifications and diagrams covering the crosswise loading of lug boxes, and illustrating and describing the use of center gates constructed with six uprights on each side.

Assn. of American Railroads, Freight Container Bureau. Bulletin 33-1940. Use of End Boards in Loads of Fresh Fruits and Vegetables Packed in Baskets.

Assn. of American Railroads, Freight Container Bureau. Bulletin 35-1940. Type "A" Center Gate for Loads of Standard Cantaloupe Crates. Diagram with explanatory notes.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Air Brakes; General Arrangement and Details. Specification for rods, levers, jaws, and pins; cylinders, triple valves, and dirt collectors; retaining valves, mounting, and miscellaneous.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. House Cars, Placard Boards for Recommended Practice. Instructions for preparation of bulletin board, size and height from floor, also includes routing boards, and painting thereof.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Badge Plate for Showing Proper Dimensions for Body and Truck Brake Gear. Covers requirements marking plate giving dimensions of levers, etc., to be attached to each car; with drawings for freight cars with combined, or detached equipment, hopper cars with detached equipment, and stamped plate showing brake lever dimensions for freight cars with combined equipment.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Hand Brakes. Covers brake chain of wrought iron or steel, and braking power formulas and diagrams. Superseded for cars built after Jan. 1, 1937, by geared hand brakes.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Hatch Plugs for Refrigerator Cars. Gives detailed dimensions and materials for the design of hatch.

Assn. of American Railraods, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Ice Tanks, Refrigerator Cars. Recommended Practice. Minimum capacity of ice tanks for fresh meat cars 5,000 lb.; for fruit and dairy cars 3,000 lb. minimum, or 6,000 lb. per car.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Inspection and Maintenance of Passenger Train Car Hand Brakes. Requirements for servicing brakes, contact, unison, gear mesh, ratchet pawl, lost motion, slack, etc.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Retaining Valve for Passenger Service. Detailed drawing for various cylinder sizes and orifice modifications.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Side Frame Brake Hanger Bracket Gage. Dimensional Drawings for "go" and "no-go" gages.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and

Recommended Practice, 1942. Single Car Testing Device for Testing Air Brake Equipment. Layout drawings for two arrangements of testing devices.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Specifications for Hand Brakes on New, Non-Articulated Passenger Train Cars. Requirements for safety, harmony with power brakes, slack, clearance, angle of contact, arrangement of ratchet, pawl, release, etc.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Specifications for Freight Brakes. For power brakes and appliances for operating system. Requirements for charging, service application, emergency application, release operation; and installation and maintenance.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Steam and Air Connections for Passenger Cars. Standard, revised 1931. Specifies size of pipe and valve opening, diagrams showing location of valves, size and length of hose, steam hose coupler head, nipple and clamp. Includes requirements as to design, etc.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Triple Valve Wear Limit Gages. Calipers for checking diameter of various parts of air brake system for wear limit. Sizes are given.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Minimum Permissible Engagement of Locking Lugs on Angle and Cut-Out Cocks. Shows drawings of valves indicating minimum allowable movement of lug.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Specifications for Geared Hand Brakes. Covers requirements for the operation, design, and installation of vertical wheel brake, horizontal wheel brake, and lever brake.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Stake Pockets; Temporary. Deviations from standard for temporary use, with drawing illustrating application to car.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1944. Stake Pockets; Permament. For railway flat cars. Gives securing to car, size of pockets, spacing, detailed drawing of pocket, and end stakes.

Chlorine Institute, Inc. Standard Dimensions of Dome Cover Plates for Class 105-A Chlorine Tank Cars, 2-B-345; 1936. Includes 31-in. and 33-in. dome cover plates, design, materials, details of studs and gaskets.

Chlorine Institute, Inc. Cover Stop on Dome-Housing New Cars, 22039-G; 1938. Details for dimensions of dome and cover of chlorine tank car.

U.S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R162-35; 1936. Packaging of Air Brake (Electric Railway) Parts. This recommendation establishes a simplified schedule for packaging compressor and governor parts for air brakes for electric railway cars. Sponsored by American Transit Engineering Assn.

## 727. CARRIAGES, BUGGIES, COACHES, BABY CARRIAGES AND CARTS

U. S. Gov., U. S. Army, Corps of Engineers. Specification 18-16; 1930. Cart; Concrete, 6 Cubic Feet Capacity.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 18-3A; 1942. Cart; Hand.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-260; 1924. Wire Cart; Type K-1 (Formerly Type N).

U. S. Gov., Veterans Administration. Specification VA-M-278; 1937. Tray Carts; 16 Tray.

## 729. MISCELLANEOUS VEHICLES AND VEHICLE PARTS

### 729.0 GENERAL ITEMS

U. S. Gov., U. S. Army, Ordnance Dept. Specification 60-0-1A; 1939. Automotive Vehicles and Trailers, Spare and Replacement Parts and Accessories; General Requirements for.

### 729.1 WHEELBARROWS

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R105-32; 1932. Wheelbarrows. This recommendation establishes a schedule of stock sizes and types of wheelbarrows of various types and capacities.

U. S. Gov., Federal Specification KKK-W-291; 1934. Amendment 4; 1944. Wheelbarrows. Covers seven types, including general utility (steel tray), contractors (dirt, concrete, and pan-style all with steel tray), garden (wood bed), and canal (wood tray). Gives requirements for marking, interchangeability, design details, wood, steel trays, margin or lap, reinforcement of metal-tray edges, struck capacity, tray measurement and dimensions, bolts, wheel brackets, finish and details; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

### 729.2 TRAILERS

Society of Automotive Engineers. 1944 Handbook, Section 2—Units, Parts, and Fittings. S.A.E Recom-

mended Practice for Passenger Car Trailer Couplings, adopted 1938. Includes definition, coupling nomenclature, and recommendations for location, sizes, ratings, and platform.

Society of Automotive Engineers. 1944 Handbook, Section 2—Units, Parts, and Fittings. S.A.E. Recommended Practice for Passenger Car Trailer Data Plate, adopted 1938. Recommendations for location of data plate and data to be given thereon.

Society of Automotive Engineers. 1944 Handbook, Section 2—Units, Parts, and Fittings. S.A.E. Standard Fifth Wheel Kingpin for Commercial Trailers and Semi-Trailers, adopted 1940. Diagram giving shape, size, dimensions, tolerances.

U. S. Gov., Army Air Forces. Specification 30127-A (1); 1941. Trailer; Semi (Two Wheel) (2DT), Type F-2, for Fuel Servicing Truck.

U. S. Gov., Army Air Forces. Specification 30135 (2); 1941. Trailers; Semi (Two Wheel) (2DT), for Tactical Organization Field Use.

U. S. Gov., Army Air Forces. Specification 30137-A (2); 1943. Trailer; Semi, Instrument Shop (Armament Accessories, Portable).

U. S. Gov., Army Air forces. Specification 30144 (6); 1945. Trailer; Semi (Two-Wheel) (2DT), for Type F-2A Fuel Servicing Truck.

U. S. Gov., Army Air Forces. Specification 30149 (4); 1944. Trailers; Semi (Four-Wheel) (4DT), for Type F-1A Fuel Servicing Truck.

U. S. Gov., Army Air Forces. Specification 30168-1; 1944. Trailer; Oxygen Servicing, Type E-2.

U. S. Gov., Army Air Forces. Specification 40664; 1944. Dolly; Airplane Wheel, Type E-1.

U. S. Gov., Dept. of Agriculture, Forest Service. Specification for Trailer; Barrel and Pump.

U. S. Gov., Dept. of Agriculture, Forest Service. Specification for Trailer; 8-Ton, Tilting-Bed.

U. S. Gov., Dept. of Agriculture, Forest Service. Specification for Trailer: Fire-Camp Kitchen.

U. S. Gov., Dept. of Agriculture, Forest Service. Specification for Trailer; 5-Ton, Tilting-Bed.

U. S. Gov., Dept. of Agriculture, Forest Service. Specification for Trailer; Heavy-Duty Plow and Tractor.

U. S. Gov., Dept. of Agriculture, Forest Service. Specification for Trailer; Horse and Plow Outfit.

U. S. Gov., Dept. of Agriculture, Forest Service. Specification for Trailer; 1-Horse.

U. S. Gov., Dept. of Agriculture, Forest Service. Specification for Trailer; 1- and 2-Horse.

U. S. Gov., Dept. of Agriculture, Forest Service. Specification for Trailer; Pressure Water Tank.

U. S. Gov., Dept. of Agriculture, Forest Service. Specification for Trailer; Semi, 8-Ton Capacity, Stock.

U. S. Gov., Dept. of Agriculture, Forest Service. Specification for Trailer; 10-Man, Fire Tool Outfit.

U. S. Gov., Dept. of Agriculture, Forest Service. Specification for Trailer; 25-Man Fire-Tool Outfit.

U. S. Gov., Dept. of Agriculture, Forest Service. Specification for Trailer; Water Barrel

U. S. Gov., Dept. of Agriculture, Forest Service. Specification for Trailer; Water Barrel and Back Pack Outfit.

U. S. Gov., Dept. of Agriculture, Forest Service. Specification for Trailer; Water Tank.

U. S. Gov., Dept. of Interior, Purchasing Office. Standard Specification No.78. Trailers or Semi-Trailers; Low Platform Type, 10-, 15-, and 20-Ton Capacities.

U. S. Gov., U. S. Army, Army Air Forces. Specification 91-63A; 1941. Trailer; Semi, for Type C-2 Wrecking Truck, 12 1/2-Ton, 4W, 4DT.

U. S. Gov., U. S. Army, Army Air Forces. Specification 91-64; 1938. Dolly; Trailer, Converter, Type C-2 Wrecking Truck.

U. S. Gov., U. S. Army, Army Air Forces. Specification 91-69B; 1941. Trailer; Semi, 4-Wheel, 4DT. Type F-1, for Fuel-Servicing Truck.

U. S. Gov., U. S. Army, Army Air Forces. Specification 91-70; 1938. Dolly; Trailer, Converter, Type F-1, Fuel-Servicing Truck.

U. S. Gov., U. S. Army, Army Air Forces. Specification 91-79; 1941. Dolly; Trailer Converter, for Type F-2, Fuel-Servicing.

U. S. Gov., U. S. Army, Army Air Forces. Specification 91-82A; 1943. Trailer; Fuel-Servicing, Type A-2A, 220-Gallon Capacity, 3-Wheel.

U. S. Gov., U. S. Army, Army Air Forces. Specification 91-83; 1944. Trailer; 2-Wheel (2DT), Fuel-Servicing, Type A-1, 600-Gallon Capacity.

U. S. Gov., U. S. Army, Army Air Forces. Specification 91-85; 1944. Trailer; Oxygen Servicing, Type E-1.

U. S. Gov., U. S. Army, Army Air Forces. Specification 91-86; 1944. Trailer; Airdrome Utility, Type F-2.

U. S. Gov., U. S. Army, Army Air Forces. Specification 91-87; 1944. Trailers; Fuel Servicing, Type A-3

U. S. Gov., U. S. Army, Army Air Forces. Specification 91-90; 1944. Trailer; Semi, Two Wheel, 2DT. for Type A-3A Aircraft Field Repair Shop Truck.

U. S. Gov., U. S. Army, Army Air Forces. Specification 91-91; 1944. Dolly; Trailer Converter, for Type A-3A Aircraft Field Repair Shop Truck.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-489; 1939. Trailer; Type K-19-( ), Communication Type.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-1128; 1942. Trailer; Type K-29-( ), for Radio-Range Transmitter.

## 729.3 TRUCKS

American Meat Institute. Standards for Packinghouse Supplies, Packs, and Equipment, 1928. Hand Trucks. For 850-lb. sausage meat truck, tank-carrying truck, general purpose truck, hide truck, and steel ham and bacon truck; dimensions, materials for body, handles, wheels, and axles.

Assn. of Lift Truck and Portable Elevator Manufacturers. Specifications for Lift Trucks. For standard capacities of 2,500 to 6,000 lb., but includes 1,000- to 15,000-lb. machines, single- and multi-stroke lift types; height of lowered lifting frame, width of lifting frame, height of lift, handle area of lift, wheels, bearings, trailer attachments, brakes, backstop, etc.

U. S. Gov., Dept. of Interior, Purchasing Office. Standard Specification No.73. Trucks; Dish.

U. S. Gov., Federal Specification FF-C-86; 1938. Casters; Truck. Covers two types—(I) rigid (non-

swiveling), and (II) swivel; and two classes—(A) plain-bearing axle, and (B) antifriction-bearing axle; in three materials—plain-tread metal wheel, rubber-tired metal wheel, and moulded-composition wheel. Covers material and workmanship; general requirements; detail requirements for each type; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., Navy Dept. Specification 69T1; 1936. Trucks; Deck.

U. S. Gov., Post Office Dept., Div. of Motor Vehicle Service, Bureau of the Fourth Assistant Postmaster General. Specifications for Panels; Metal Faced for Truck Construction.

U. S. Gov., Treasury Dept., Procurement Div., 482a; 1942. Trucks; Hand, Box. Shall be of steel construction. Gives requirements for truck capacity, non-tilt style, tilt style, wheels, bearings, locking devices, corrosion protection, hardwood, welding, finish, box, and cover; methods of inspection, sampling, and tests; and packaging, packing, and marking.

U. S. Gov., Treasury Dept., Procurement Div., 484a; 1942. Trucks; Hand, Dolly. Covers hardwood frame type or all-steel frame type, and shall be 15 by 21 in. size, or 18 by 24 in. size. Gives requirements for truck capacity, full swiveling trucks, tilt trucks, wheels, bearings, locking devices, corrosion protection, hardwood, welding, finish, and steel frame construction; methods of inspection, sampling, and tests; and packaging, packing, and marking.

U. S. Gov., Treasury Dept., Procurement Div., No. 594; 1942. Trucks; Hand. Platform. Covers type I, push type; and type II, wagon type; and three classes—heavy duty, medium duty, and light duty. Gives requirements for truck capacity, rated load capacity of casters, bearings, wheels, wheel mountings, swiveling-end trucks, center balancing trucks, lubrication fillings, locking devices, wooden stakes, hardwood, finish, and details for each type; methods of sampling, inspection, and tests; and packing and marking.

U. S. Gov., Veterans Administration. Specification VA-G-18b; 1939. Food Conveyors for Outdoor Use.

U. S. Gov., Veterans Administration. Specification VA-M-168; 1936. Elevating or Lift Truck.

U. S. Gov., Veterans Administration. Specification VA-M-188; 1936. Elevating or Lift Truck.

U. S. Gov., Veterans Administration. Specification VA-M-222b; 1939. Elevator or Lift Truck.

U. S. Gov., Veterans Administration. Specification VA-M-270a; 1941. Small Book Truck; Two Shelf.

U. S. Gov., Veterans Administration. Specification VA-M-271a; 1941. Book Truck; Wood.

U. S. Gov., Veterans Administration. Specification VA-M-274b; 1939. Food Trucks; 6 Wheel Type, 72 In. and 80 In. Long.

U. S. Gov., Veterans Administration. Specification VA-MM-142b; 1939. Dish Trucks; Two Tier.

U. S. Gov., Veterans Administration. Specification VA-MM-143c; 1939. Dish Trucks; Three Tier.

U. S. Gov., Veterans Administration. Specification VA-MM-144; 1935. Serving Trucks; Two Tier.

U. S. Gov., Veterans Administration. Specification VA-MM-145d; 1940. Six Shelf Serving Truck; 12 Tray Type.

U. S. Gov., Veterans Administration. Specification VA-MM-146c; 1940. Six Shelf Serving Truck; 18 Tray Type.

U. S. Gov., Veterans Administration. Specification VA-MM-147c; 1940. Seven Shelf Serving Truck; 28 Tray Type.

U. S. Gov., Veterans Administration. Specification VA-MM-172c; 1939. Truck; Barrel or Drum, Tilter Type.

U. S. Gov., Veterans Administration. Specification VA-MM-272b; 1941. Book Truck.

U. S. Gov., Veterans Administration. Specification VA-MM-302a; 1939. Food Conveyors for Inside Use and Outside Use.

*References.*—Automobile motor trucks, *see* 722.1; electric trucks, *see* 721.2; steel sheets, *see* 604.22, 604.23, 604.25; axles and steel forgings, *see* 611.52, 611.51; cast iron, malleable cast iron, cast steel, *see* 611.11, 611.21, 611.41; sizes of wheels and tires for industrial (inside of plant) trucks, *see* 206.5.

## 729.4 WAGONS, WAGON PARTS, AND MATERIALS

*References.*—Lumber stock for wagons, *see* 413.54; singletrees, *see* 429.6.

## 729.5 TRACTORS AND TRACTOR PARTS

American Society of Agricultural Engineers. Power Take-Off and Drawbar Hitch Locations for Agricultural Tractors and Machines, 1941. Covers requirements for spline for tractor power take-off shaft; locations of hitch point on tractor drawbar, tractor power take-off shaft; and diagrammatic dimensional drawings of spline shafts, spline hubs, drawbar connections, and master power take-off shield.

Society of Automotive Engineers. 1944 Handbook, Section 6—Tests, Ratings, and Codes. S.A.E.-A.S.A.E. (American Society of Agricultural Engineers) Standard Tractor Drawbars and Power Take-Off, revised 1944. Gives drawings of tractor drawbars, drawings of tractor power take-off, table giving dimensions of spline shaft and hub dimensions, table giving dimensions of general shaft and hub dimensions, and drawings of power take-off master.

Society of Automotive Engineers. 1944 Handbook, Section 6—Tests, Ratings, and Codes. S.A.E.-A.S.A.E. (American Society of Agricultural Engineers) Standard Tractor Testing Code, adopted 1937. Belt and drawbar tests.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-353. Alaska Use, Tractors; Crawler Type and Various Graders.

U. S. Gov., Dept. of Interior, Purchasing Office. Standard Specification No. 9. Tractors; Crawler Type, Diesel Powered, Drawbar Pull, 15 Capacities.

U. S. Gov., U. S. Army, Army Air Forces. Specification 91-66-A; 1941. Tractor; Heavy-Duty, 200 Cubic Inches Minimum Displacement, Gasoline Engine.

U. S. Gov., U. S. Army, Army Air Forces. Specification 91-72; 1939. Tractor; Light-Duty, 200 Cubic Inches Minimum Displacement, Gasoline Engine.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 60-12-7; 1938. Tractor; Light, M2.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 60-13-4; 1936. Tractor; Medium, M1.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 60-14-2A; 1940. Tractor; Heavy, M1, Diesel.

U. S. Gov., Veterans Administration. Specification VA-M-57b; 1935. Four Wheel General Purpose Farm Tractor.

U. S. Gov., Veterans' Administration. Specification VA-M-83d; 1938. Industrial Type Tractor Equipped With Pneumatic Tires.

U. S. Gov., Veterans Administration. Specification VA-M-84a; 1935. Farm Type Tractor.

U. S. Gov., Veterans Administration. Specification VA-MC-63a; 1939. Farm Type Tractor; Light.

U. S. Gov., Veterans Administration. Specification VA-MC-64f; 1942. Farm Type Tractor; Heavy.

U. S. Gov., Veterans Administration. Specification VA-MC-73e; 1941. Farm Type Tractor; Medium.

*References.*—Canvas and rubber driving belts, *see* 314.1, 207.3; shafts and forgings, *see* 611.52, 611.51; automobile and truck accessories and parts, *see* 722.3.

### 729.6 SLEDS AND SLEIGHS

Assn. of Lift Truck and Portable Elevator Manufacturers. Specifications for Skid Platforms. Includes capacities, underclearance (for shipping use Simplified Practice Recommendation of U. S. Dept. of Commerce, R95-30), width, length, thickness of top boards, angles and legs, four-way entry, etc.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R95-30; 1930. Skid Platforms. Establishes clearance and over-all dimensions of skid platforms.

### 729.7 TANKS, MILITARY

U. S. Gov., U. S. Army, Ordnance Dept. Specification 60-22-5; 1942. Tank; Medium, M4.

## 730-739 AGRICULTURAL MACHINERY AND IMPLEMENTS

### 730. GENERAL ITEMS

U. S. Gov., Dept. of Agriculture. Miscellaneous Publication No.481; 1942. Watch Your Step—Farm Safety for National Defense. Covers around the farm including machinery, tractors, saws, tools, insect control, livestock, wells, cisterns, pits, testing water analysis, cuts, bruises, and infections; in and about the home including occupational hazards, ladders, railings, stairways, floors, doors, windows, roofs, burns and scalds, asphyxiation, gas burning appliances, poisoning, falls and broken bones, poisonings, gunshot wounds, and rural electrification; some pointers for electrical safety; farm fire prevention including common causes, faulty flues and heaters, combustible roofs, lightning, spontaneous combustion, matches and smoking, electricity, gasoline and kerosene, fire protection, water supplies for fire fighting, and private fire pump; and motor vehicle accidents including first responsibilities, driving after dark, special rules of the road, speed, and protecting the driver.

### 731. MILK, CREAM, AND CHEESE MACHINERY

Evaporated Milk Assn. Dairy Equipment, 1940. Includes strainers, containers, etc.; quality of construction, cleaning, storage, and handling.

International Assn. of Milk Sanitarians jointly with International Assn. of Milk Dealers and Dairy Industries Supply Assn. Three Associations' Standards. The committees from the three associations have accepted standards for—(1) a recessless sanitary union for sanitary milk pipe lines, (2) threaded fittings including bends for use with this union, and (3) improved indicating and recording thermometer connections for tanks, vats, and for pipe lines. Gives drawings of the sanitary union and drawings with tables showing dimensions for various threaded fittings including bends and thermometer connections.

U. S. Gov., Dept. of Interior, Purchasing Office. Standard Specification No.86. Pasteurizers.

*References.*—Cream and butterfat test scales, *see* 793.5.

### 732. PLANTERS, PLOWS, CULTIVATORS, HOES, RAKES, AND MOWERS

American Society of Agricultural Engineers. Power Take-Off and Drawbar Hitch Locations, for Agricultural Tractors and Machines, 1941. Covers requirements for spline for tractor power take-off shaft; locations of hitch point on tractor drawbar, tractor power take-off shaft; and diagrammatic dimensional drawings of spline shafts, spline hubs, drawbar connections, and master power take-off shield.

American Society of Agricultural Engineers. Standard Disk Blades for Disk Plows, Harrows, Drills, Listers, and Cultivators, 1931. Includes requirements for standard gages, nomenclature, polishing, bevel, concavity, sizes, tolerances, and center holes for various disks.

U. S. Gov., Dept. of Agriculture, Forest Service. Specification for Plow; Horse-Drawn, Reversible Side-Hill.

U. S. Gov., Dept. of Agriculture, Forest Service. Specification for Plow; Lightweight, Crawler Tractor Mounted.

U. S. Gov., Dept. of Agriculture, Forest Service. Specification for Plow; Tractor-Drawn, Rolling-Disk Type.

U. S. Gov., Dept. of Agriculture, Forest Service. Specification for Plow; Tractor-Drawn, Walking Type.

U. S. Gov., Dept. of Interior, Purchasing Office. Standard Specification No.32. Snow Plow; One Way Speed Blade, for 5-Ton Truck.

U. S. Gov., Dept. of Interior, Purchasing Office. Standard Specification No.34. Snow Plows; "V" or Reversible for 13,000 to 14,500 G.V.W. Trucks.

U. S. Gov., Dept. of Interior, Purchasing Office. Standard Specification No.35. Snow Plows; "V", One Way, for 18,000 G.V.W. Trucks.

U. S. Gov., Federal Specification OO-M-681; 1937. Amendment 2; 1944. Mowers; Lawn, Power. Covers four types—(I) rotating-reel, (II) rotary flat-knife, (III) sickle-bar, and (IV) combination. Gives requirements for classes, grades, sizes, material and workmanship, condition, construction, service requirements, balance, engine, clutches, controls, handle frame, lubrication, sulky, finish,

tools, and details for each type, class, grade, and size; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., U. S. Army, Corps of Engineers. Specification 44-32; 1929. Plow; Road, 2-Horse, With Extra Share.

U. S. Gov., U. S. Army, Corps of Engineers. Specification 44-33; 1929. Plow; Road, 6-Horse, With Reversible Point.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-1671; 1944. Plow LC-61 (Cable), including Cable Recovery Device MC-548.

U. S. Gov., Veterans Administration. Specification VA-M-68c; 1937. Power Driven Mower; Twin Cylinder.

U. S. Gov., Veterans Administration. Specification VA-M-70h; 1937. Power Driven Mower; Roller Type.

U. S. Gov., Veterans Administration. Specification VA-M-97a; 1936. Non-Reversible Snow Plow; 2- to 3-Ton Truck.

U. S. Gov., Veterans Administration. Specification VA-M-124; 1936. "V" Type Snow Plow; Tractor Mounting.

U. S. Gov., Veterans Administration. Specification VA-M-150b; 1936. Reversible Snow Plow; 2-Ton Truck.

U. S. Gov., Veterans Administration. Specification VA-M-151a; 1938. Reversible Snow Plow; 3-Ton Truck.

U. S. Gov., Veterans Administration. Specification VA-M-152; 1935. Reversible Snow Plow; 3- to 5-Ton Truck.

U. S. Gov., Veterans Administration. Specification VA-M-162a; 1938. Reversible Snow Plow; Tractor Mounted.

U. S. Gov., Veterans Administration. Specification VA-M-192; 1936. Power-Driven Sickle Bar Mower.

U. S. Gov., Veterans Administration. Specification VA-M-218; 1936. "V" Type Snow Plow; 3-5 Ton Truck.

U. S. Gov., Veterans Administration. Specification VA-M-219; 1936. "V" Type Snow Plow; 2-3 Ton Truck.

U. S. Gov., Veterans Administration. Specification VA-M-279; 1937. One Way Snow Plow; 3-5 Ton Truck.

U. S. Gov., Veterans Administration. Specification VA-M-291; 1938. Power Driven Mower.

U. S. Gov., Veterans Administration. Specification VA-M-292; 1938. Power Driven Mower With Low Cutting Bar.

U. S. Gov., Veterans Administration. Specification VA-M-293; 1938. Power Driven Mower; Sickle-Bar Type.

U. S. Gov., Veterans Administration. Specification VA-M-295; 1938. "V" Type Snow Plow; Four Wheel Drive.

U. S. Gov., Veterans Administration. Specification VA-M-296; 1938. One Way Snow Plow; 1 1/2-Ton Truck.

U. S. Gov., Veterans Administration. Specification VA-M-297; 1936. "V" Type Snow Plow; Snow Truck.

U. S. Gov., Veterans Administration. Specification VA-MC-69f; 1941. Power Driven Mower; Wheel Type.

U. S. Gov., Veterans Administration. Specification VA-MC-71e; 1941. Three- or Five-Unit Gang Mowers.

U. S. Gov., Veterans Administration. Specification VA-MC-74j; 1941. Power-Driven Mower With Side Units and Riding Sulky.

U. S. Gov., Veterans Administration. Specification VA-MC-77e; 1939. Reversible Snow Plow; 1 1/2-Ton Truck.

U. S. Gov., Veterans Administration. Specification VA-MC-193a; 1939. Power Unit Gang Mower.

U. S. Gov., Veterans Administration. Specification VA-MC-299; 1939. Power Driven Sickle Bar Mower.

U. S. Gov., Veterans Administration. Specification VA-MC-M-2; 1941. All Types of Power Mowers.

## 733. FERTILIZER DISTRIBUTORS AND SPRAYING MACHINES

U. S. Gov., Navy Dept. Specification 41S40c; 1944. Sprayers; Insecticide, Electric.

U. S. Gov., Treasury Dept., Procurement Div., 442A 1942. Machines; Spraying, Liquid-Insecticide, Electric, Hand and Truck. Shall be of the motor-operated compressor type, for use with oil-base insecticide; two sizes—one quart, and two gallons. Gives requirements for components, design, nozzles, fluid consumption spray, air compressor, hand grip, insecticide cup, motor, spray gun, pressure gage, hose, and truck; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., Treasury Dept., Procurement Div., 461A; 1942. Sprayers; Hand, Liquid-Insecticide. Covers two types—(I) continuous-acting, and (II) single-acting. Gives requirements for construction, spray, liquid container, pump, and finish; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., Veterans Administration. Specification VA-M-182a; 1938. 200-Gallon Power Sprayer.

U. S. Gov., Veterans Administration. Specification VA-M-183; 1936. 300-Gallon Power Sprayer.

U. S. Gov., Veterans Administration. Specification VA-M-185; 1936. 150- Gallon Power Sprayer.

U. S. Gov., Veterans Administration. Specification VA-M-288; 1938. Suction Feed Spray Gun and Engine Cleaner.

U. S. Gov., Veterans Administration. Specification VA-MC-184c; 1940. 300-Gallon Tractor Trailer Sprayer.

U. S. Gov., Veterans Administration. Specification VA-MC-300a; 1939. 50-Gallon Power Sprayer.

*References.*—Power take off for tractors and agricultural machinery, *see* 729.5.

## 734. HARVESTING MACHINERY, THRESHERS, AND POTATO DIGGERS

*References.*—Power take off for tractors and agricultural machinery, *see* 729.5.

## 735. ENSILAGE CUTTERS AND FEED GRINDERS

*References.*—Power take off for tractors and agricultural machinery, *see* 729.5.

## 736. TRACTORS

U. S. Gov., Dept. of Agriculture, Forest Service. Specification for Machine; Brush-Buster.

U. S. Gov., Dept. of Agriculture, Forest Service. Specification for Machine; Snag-Boring.

U. S. Gov., Dept. of Agriculture, Forest Service. Specification for Machine; Snag-Felling.

*References.*—Tractors, *see* 729.5.

# 740-749 CONSTRUCTION, CONVEYING, AND HOISTING MACHINERY

## 740. GENERAL ITEMS

## 741. EXCAVATING AND DREDGING MACHINERY

*References.*—Mining machinery and mining equipment, *see* 751.

### 741.1 PILE DRIVERS

American Public Works Assn. Sewers, J1-38; 1938. Includes equipment for driving piles; gravity hammers for timber piles weighing not less than 2,000 and preferably not less than 3,000 lb., regulated fall not over 20 ft.; steam hammers either single or double action for use in driving timber and concrete piles to develop energy of 3,500 ft.-lb. per cubic yard of concrete in pile, construction of hammer leads, permissible use of followers in water; water jets, number of jets, volume and pressure of water, allowable variations in driving, and methods for determining load bearing values.

### 741.2 BORING MACHINES

U. S. Gov., Federal Specification GGG-D-326; 1942. Diggers; Post-Hole. Covers one type and grade. Gives requirements for material, workmanship, design, and dimensions; methods of sampling, inspection, and test; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., Post Office Dept., Div. of Motor Vehicle Service, Bureau of the Fourth Assistant Postmaster General. Specifications for Boring Bars, for Boring Motor Blocks.

*References.*—Diamond core drill fittings, *see* 741.3.

### 741.3 DRILLING MACHINES

Compressed Air Institute. Trade Standard, 1938. This standard includes requirements for pneumatic hoists, either cylinder hoists or air-driven multiple-piston motor-connected through gearing to a drum on which the cable is wound. Includes table giving air pressure requirements for lifting loads.

U. S. Gov., Dept. of Agriculture, Forest Service. Specification No. 117. Well-Drilling Outfit; Hand Power.

U. S. Gov., Dept. of Agriculture, Forest Service. Specification for Well-Jetting Equipment.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Commercial Standard CS17-42; 1942. Diamond Core Drill Fittings. This standard covers four sizes of fittings, dimensions of rod couplings and casing couplings, dimensions of threads of rod couplings, drill rods, core barrel bits, casings, casing couplings, and casing bits. Sponsored by the Diamond Core Drill Manufacturers Assn.

U. S. Gov., Dept. of Interior, Purchasing Office. Standard Specification No. 17. Rock Drills.

U. S. Gov., Dept. of Interior, Purchasing Office. Standard Specification No. 79. Portable Gasoline Hammer and Driller.

U. S. Gov., Navy Dept. Specification 41P22a; 1924. Posts; Drilling.

*References.*—Oil well machinery, *see* 754.

### 741.4 POWER SHOVELS

U. S. Gov., Dept. of Agriculture, Forest Service. Specification MSF-324-1-S. Shovel; L.H.R.P. No. 2.

U. S. Gov., Dept. of Agriculture, Forest Service. Specification MSF-324-2-S. Shovel; L.H.R.P. No. 0.

U. S. Gov., Dept. of Agriculture, Forest Service. Specification for Trencher; Fire Line.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Commercial Standard CS90E-41; 1941. Crawler Mounted, Revolving Power Shovels, Lifting Cranes, Dragline and Clamshell Excavators (Export Classifications). This standard provides nomenclature, definitions, and requirements for crawler mounted, revolving power shovels, lifting cranes, and dragline and clamshell excavators. It covers shovel dipper capacities ranging from 3/8 to 2 1/2 cu. yd., and crane sizes from 2 1/2 to 50 tons. It sets up uniform methods of taking dimensions and determining working ranges, power, line speeds, line pulls, crane sizes, and lifting capacities which are to be furnished for comparison of models offered by manufacturers for export from the U. S. A. It also covers a uniform method of labeling or certifying compliance with the standard. Also printed in Spanish.

U. S. Gov., Dept. of Interior, Purchasing Office. Standard Specification No. 10. Power Shovels, Draglines, Cranes or Clamshells; 3/8, 1/2, 3/4, 1, 1 1/4, 1 1/2, and 2 Cubic Yard Capacities.

U. S. Gov., U. S. Army, Corps of Engineers, 44-54A; 1945. Shovel; Crawler Mounted, Gasoline Engine Driven, 1/2 and 3/4 Cubic Yard.

### 741.5 DREDGING MACHINERY

U. S. Gov., Dept. of Interior, Purchasing Office. Standard Specification No. 84. Dredging Machines.

U. S. Gov., Panama Canal, Purchasing Dept. Specification for Dredge Dipper, 4 Lips, 1943. For 13 1/2-yd. reinforced dipper.

*References.*—Dredging sleeves, *see* 209.1.

## 742. CONCRETE MIXERS

Associated General Contractors of America. Manual, 1941. Concrete Mixer Standards. Includes standard methods of rating capacity, design and fabrication of machine, water measuring tanks and connections, power charging skip; for five sizes of paving mixers, rated capacities, design and fabrication, water measuring devices and supply connections, traction and traction speeds, method of measurement for reach of paver boom and bucket attachments, and for batch box derrick, standard tools and accessories, engine horsepower ratings, etc.

National Ready Mixed Concrete Assn. Standards for Operation of Truck Mixers and Agitators, 1941. Covers two types of truck mixers and agitators—(A) a closed or water-tight revolving drum suitably mounted and fitted with adequate blades attached to the drum; (B) an open-top water-tight trough-like container suitably mounted and fitted with adequate blades, revolving about an axis parallel to the axis of the trough.

U. S. Gov., Dept. of Interior, Purchasing Office. Standard Specification No. 18. Concrete Mixers.

U. S. Gov., Navy Dept. Specification 6619; 1937. Mixers; Concrete, Construction.

U. S. Gov., Panama Canal, Purchasing Dept. Mixers; Concrete, 1943. Heavy duty, portable, capacity 14 cu. ft.

U. S. Gov., U. S. Army, Corps of Engineers. Specification 44-38B; 1943. Mixer; Concrete, Portable.

U. S. Gov., U. S. Army, Corps of Engineers. Specification 44-45; 1943. Mixer; Rotary Tiller, Soil Stabilization Gasoline Engine Driven, Self-Powered, Trailer Mounted.

U. S. Gov., Veterans Administration. Specification VA-MC-96e; 1940. 3 1/2-Cubic Foot Concrete Mixer.

U. S. Gov., Veterans Administration. Specification VA-MC-200b; 1940. 7-Cubic Foot Concrete Mixer.

*References.*—Donkey engines, *see* 703.1; automobile truck engines, tractors, *see* 722.31, 729.5.

## 743. ROAD-MAKING EQUIPMENT

American Road Builders' Assn. Steel Side Forms for Concrete Pavements. Bulletin 15; 1931. Recommendations on standard widths of base for various heights of form, permissible vertical tolerance on the top, and lateral tolerance on the upstanding leg.

Tire and Rim Assn., Inc. 1942 Year Book. Mud and Snow and Earth Moving Tires and Rims. Gives table of nominal and maximum cross-section of tires and rims, and original equipment recommendations covering various sizes of rims.

Tire and Rim Assn., Inc. 1942 Year Book. Pneumatic Industrial Tires, Cross-Sectional Limits, and Valves. Gives table covering various sizes and types of rims and valves.

Tire and Rim Assn., Inc. 1942 Year Book. Road Building and Maintenance Balloon Tires, Rims, and Valves. Gives table showing nominal and maximum cross-sections of tire sizes, and original equipment recommendations covering various sizes and types of rims, and metal and rubber valves.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Commercial Standard CS90E-41; 1941. Crawler Mounted, Revolving Power Shovels, Lifting Cranes, Dragline and Clamshell Excavators (Export Classifications). This standard provides nomenclature, definitions, and requirements for crawler mounted, revolving power shovels, lifting cranes, and dragline and clamshell excavators. It covers shovel dipper capacities ranging from 3/8 to 2 1/2 cu. yd., and crane sizes from 2 1/2 to 50 tons. It sets up uniform methods of taking dimensions and determining working ranges, power, line speeds, line pulls, crane sizes, and lifting capacities which are to be furnished for comparison of models offered by manufacturers for export from the U. S. A. It also covers a uniform method of labeling or certifying compliance with the standard. Also printed in Spanish.

U. S. Gov., Dept. of Interior, Purchasing Office. Standard Specification No. 7. Leaning Wheel Graders. (A) hand, 6,000 lb. capacity; (B) hand, 8,000 lb.; (C) hand, 10,500 lb.; (D) power, 8,500 lb.; (E) 11,500 lb.; and (F) 12,500 lb. capacities.

U. S. Gov., Dept. of Interior, Purchasing Office. Standard Specification No. 15. Paving Breakers.

U. S. Gov., Dept. of Interior, Purchasing Office. Standard Specification No. 40. Bulldozers.

U. S. Gov., Dept. of Interior, Purchasing Office. Standard Specification No. 70. Road Rippers; Cable-Controlled, Heavy Duty.

U. S. Gov., Dept. of Interior, Purchasing Office. Standard Specification No. 88. Motor Graders; General Specifications, Including Optional Equipment.

U. S. Gov., U. S. Army, Corps of Engineers. Specification 44-34; 1930. Grader; Road, 8-Foot Blade, Complete.

U. S. Gov., U. S. Army, Corps of Engineers. Specification 44-35; 1930. Graders; Road, 12-Foot Blade, Complete.

U. S. Gov., U. S. Army, Corps of Engineers. Specification 44-36; 1929. Scraper; Drag, 5-Cubic Feet Capacity.

U. S. Gov., U. S. Army, Corps of Engineers. Specification 44-40; 1930. Roller; Road, Gasoline, 10-Ton.

U. S. Gov., U. S. Army, Corps of Engineers. Specification 44-43; 1938. Hammer; Gasoline, Portable.

U. S. Gov., U. S. Army, Corps of Engineers. Specification 44-46; 1943. Cultivator, Chisel Tooth, 12-Inch Spacing, 8 Foot Width.

U. S. Gov., U. S. Army, Corps of Engineers. Specification 44-48; 1943. Spreader; Aggregate, Tower Type, Traction Powered, 8 Foot Width.

*References.*—Concrete mixers, tractors, plows, *see* 742, 729.5, 732; weighing equipment for concrete aggregates, *see* 793.5.

## 744. CRANES, HOISTS, AND JACKS

### 744.1 CRANES

American Society of Mechanical Engineers, Joint sponsor with Bureau of Yards and Docks, U. S. Navy Dept. American Standards Assn., B30.2-1943. Safety Code for Cranes, Derricks, and Hoists. Covers scope, interpretations and exceptions, new and old installations, references to other codes, mandatory and advisory rules, definitions, construction, installation, inspection, testing, maintenence, and operation.

Assn. of Iron and Steel Engineers. Electric Overhead Traveling Cranes for Steel Mill Service, 1942. These specifications cover heavy duty, mill type, overhead traveling cranes. All cranes for special service such as charging, pit, stripper, ladle, gantry cranes, or ore bridges, etc., shall so far as possible comply with these specifications. Covers general requirements, structural design, mechanical details, electrical details, appendix, and tables.

U. S. Gov., Army Air Forces. Specification No. 30165; 1944. Truck; Crane, Type P-1, Full Revolving, 10-Ton.

U. S. Gov., Dept. of Commerce, National Bureau of Standards, H33; 1940. American Standards Assn., C2.3-1941. Safety Rules for the Installation and Maintenance of Electric Utilization Equipment (comprising Part 3—for 25- to 270-volt equipment which is accessible to other than qualified electrical operators—and the grounding rules of the Fifth Edition, National Electrical Safety Code). For cranes and hoists, requirements on guarding live

and moving parts, grounding noncurrent-carrying parts, control of energy supply, and control of movement.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Commercial Standard CS90E-41; 1941. Crawler Mounted, Revolving Power Shovels, Lifting Cranes, Dragline and Clamshell Excavators (Export Classifications). This standard provides nomenclature, definitions, and requirements for crawler mounted, revolving power shovels, lifting cranes, and dragline and clamshell excavators. It covers shovel dipper capacities ranging from 3/8 to 2 1/2 cu.yd., and crane sizes from 2 1/2 to 50 tons. It sets up uniform methods of taking dimensions and determining working ranges, power, line speeds, line pulls, crane sizes, and lifting capacities which are to be furnished for comparison of models offered by manufacturers for export from the U. S. A. It also covers a uniform method of labeling or certifying compliance with the standard. Also printed in Spanish.

U. S. Gov., Navy Dept., Bureau of Yards and Docks. Specification 6Yd; 1939. Electric Bridge Cranes (75 Tons Capacity and Under).

U. S. Gov., U. S. Army, Corps of Engineers. Specification 44-24; 1928. Derrick; Guy, Wood, 5-Ton, With Gasoline Hoisting Engine.

U. S. Gov., U. S. Army, Transportation Corps. Specification 43-5A; 1932. Crane; Wrecking, Railroad, Standard Gage.

*References.*—Cast iron, malleable cast iron, cast steel, *see* 611.11, 611.21, 611.41; structural steel, *see* 605.1; electric motors, electric controllers, *see* 711.2, 711.3, 714.11; methods of testing motors, *see* 710, 711.20; electric wire, *see* 715.44; tolerances for metal fits, *see* 615.82.

## 744.2 HOISTS

American Petroleum Institute, Div. of Production. Standard 11-G, 1941. Specification on Rating of Sucker Rod and Tubing Hoisting Equipment. Covers a method of rating hoisting tools on pumping equipment based upon physical tests to the breaking point.

American Society of Mechanical Engineers, joint sponsor with Bureau of Yards and Docks, U. S. Navy Dept. American Standards Assn., B30.2-1943. Safety Code for Cranes, Derricks, and Hoists. Covers scope, interpretations and exceptions, new and old installations, references to other codes, mandatory and advisory rules, definitions, construction, installation, inspection, testing, maintenance, and operation.

Compressed Air Institute. Trade Standard, 1938. This standard includes pneumatic tools and accessories, rock drills, portable compressors, receivers, aftercoolers, filters, piping, and valves. For portable pneumatic grinders, drills, riveting hammers, hoists, sand rammers, and gives requirements as to operating speeds, sizes or types, capacities, safety precautions, hose sizes, operation, and maintenance.

Electric Hoist Manufacturers Assn. Standard Specifications for Wire Rope Electric Hoists. General requirements for material to conform with A.S.T.M. specifications, motors meeting A.I.E.E. specifications for this class of service, controllers complying with National Electrical Manufacturers Assn. standards, wiring in accordance with the National Electrical Code; for factors of safety, hoist gearing, brakes, drums, bearings, lubrication, load block, limit switch, hoisting rope or chain, and marking of capacity.

Monorail Manufacturers Assn. Specifications for Overhead Track Systems, 1938. Includes electric hoists; general requirements for factors of safety. The specifications for hoists are those of the Electric Hoist Manufacturers Assn. and have been approved by this organization.

U. S. Gov., Army Air Forces. Specification No.24797; 1943. Cable Assembly, for Type C-6 Bomb Hoist.

U. S. Gov., Army Air Forces. Specification 24834-2; 1944. Hoist; Bomb, Type C-6, 115 Volts, D. C.

U. S. Gov., Army Air Forces. Specification 40602-1; 1943. Hoist; Maintenance, Truck, Type A-6.

U. S. Gov., Army Air Forces. Specification 40698-1; 1944. Hoist; Engine, Type A-7, Portable, 4,500 Pound Capacity.

U. S. Gov., Army Air Forces. Specification 40750 (2); 1944. Hoist; Collapsible Mobile, Type B-1, 50,000 Pound Capacity.

U. S. Gov., Army Air Forces. Specification No.40881; 1944. Hoist; Turret, Type A-1, for B-17 Aircraft.

U. S. Gov., Dept. of Interior, Purchasing Office. Standard Specification No.37. Double Drum Hoists.

U. S. Gov., Navy Dept. Specification 40H7d; 1944. Hoists; Electric, Motor-Operated.

U. S. Gov., Navy Dept. Specification 40H8a; 1944. Hoists; Pneumatic, Motor, Geared.

U. S. Gov., Navy Dept., Specification 41H12g; 1943. Hoists, Chain, Hand-Operated; and Trolleys.

U. S. Gov., Panama Canal, Purchasing Dept. Specification for Hoists, 1943. Air Motor; 10 Ton, 5 Ton, and 2 Ton.

U. S. Gov., Treasury Dept., Procurement Div., No.368; 1939. Hoists and Buckets, for Earth and Stone Moving; and Passenger Transport Bodies. Hydraulically, mechanically, or combination hydraulically and mechanically operated of two classes, for heavy materials and for light weight materials. Gives requirements for hoist frame, hydraulic hoisting system, sheaves and wire rope, mounting, buckets, lubrication, and finish; methods of sampling, inspection, and tests; and packing and marking.

U. S. Gov., U. S. Army, Corps of Engineers. Specification 90-10; 1930. Hoist; Gasoline, Single-Friction Drum, 20 Hp.

U. S. Gov., U. S. Army, Corps of Engineers. Specification 90-11; 1930. Hoist; Gasoline, Double-Friction Drum, 20 Hp.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-1643; 1943. Boom Equipment LC-60.

U. S. Gov., U. S. Maritime Commission. Specification 41-MC-4; 1941. Hoists; Chain, Fixed, Spur Gear, Ball or Roller Bearing. There shall be but one type and grade. Gives requirements for sizes, materials, workmanship, locking mechanism, hand and load chains, chain wheels, load shaft, hooks and swivels, bearings, gears, covers, methods of sampling, inspection, tests, and efficiency.

*References.*—Mine hoists, *see* 751; elevators, *see* 745.3; steel wire rope, *see* 603.42; cast iron, malleable iron, cast steel, *see* 611.11, 611.21, 611.41; electric motors and controllers, *see* 711.2, 7.11.3, 714.11; methods of test, protection, safety codes

for motors, *see* 710, 711.20; electric wire, *see* 715.44.

### 744.3 JACKS

U. S. Gov., Veterans Administration. Specification VA-MC-50f; 1942. Hydraulic Automobile Lift.

*References.*—Screw jacks and hydraulic jacks, *see* 616.91.

## 745. ELEVATOR AND CONVEYORS

### 745.0 GENERAL ITEMS

U. S. Gov., Dept. of Commerce. Circular of the National Bureau of Standards, C441; 1942. Elevator Wire Rope Maintenance. Covers factors affecting the wear of wire rope, installation of new ropes, rope inspection, special rope maintenance items for drum machines, and saving rope by reduction of service.

U. S. Gov., Dept. of Commerce. Circular of the National Bureau of Standards, C442; 1943. Maintenance of Elevator Mechanical Safety Appliances. Covers governors, releasing carrier, undercar safeties, guide rails, buffers, anchorage, corrosion, flooding, and inspection.

U. S. Gov., Dept. of Commerce. Circular of the National Bureau of Standards, C443; 1943. Maintenance of Elevator Hoistway and Car Enclosures and Equipment. Covers hoistway enclosures and protection, causes of hoistway-door accidents, interlock inspection, maintenance of hardware, hoistway doors and gates, hoistway enclosures, car and car equipment, inspections, and signal systems.

U. S. Gov., Dept. of Commerce. Circular of the National Bureau of Standards, C444; 1943. Maintenance of Elevator Hoisting Machines and Brakes. Covers elevator hoisting machines and brakes. constituent parts of machine, outline of weekly motor inspection, outline of annual motor inspection, brake inspection, gearing, drive sheave and drum maintenance, inspection of belted machines, inspection of overhead sheaves and bearings, and inspection of motor-generator sets.

### 745.1 CONVEYORS

American Meat Institute. Standards for Packinghouse Supplies, Packs, and Equipment, 1928. Trolleys. Requirements on dimensions of one standard size of single wheel trolley with cast iron wheel and steel housing for carrying meats on overhead track.

Monorail Manufacturers Assn. Specifications for Overhead Track Systems, 1938. Gives general requirements, track material and design, suspension fittings, manually operated trolleys or carriers, switches, cranes and transfer bridges, track openers or lift-out links, electrical construction, collector wheels or shoes, electric hoists, wiring and control, in accordance with the requirements of the National Electrical Code.

U. S. Gov., Navy Dept., Bureau of Yards and Docks. Specification 16Ye; 1941. Refrigerating Equipment (also includes Ice-Making Equipment). Includes requirements for meat tracks and trolleys.

### 745.2 DUMBWAITERS

American Society of Mechanical Engineers, joint sponsor with National Bureau of Standards and American Institute of Architects. American Standards Assn., A17.1-1937. Safety Code for Elevators, Dumbwaiters, and Escalators. Covers construction, inspection, maintenance, and operation of elevators, dumbwaiters, escalators and their hoistways excepting belt, bucket, or roller conveyors for freight, piling machines, skip hoists, wharf ramps, amusement devices, elevators of over 30,000 lb. capacity and elevators used during building construction. Requirements as to hoistway construction, guards and landings, elevator requirements as to guides, buffers, counterweights, car construction, safeties for car and hoisting machinery, cables and signal systems, rules for inspection, maintenance, and operation.

American Society of Mechanical Engineers, joint sponsor with National Bureau of Standards and American Institute of Architects. American Standards Assn., A17.3-1942. Supplement to the 1937 Edition of the American Standard Safety Code for Elevators, Dumbwaiters, and Escalators. Includes interpretations of rules and revised rules.

### 745.3 ELEVATORS

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering, 1942. Specifications for Buildings for Railroad Purposes: Electrically-Operated Freight or Baggage Elevators. Gives requirements for car platform, cover, and frame, hatchway and shaft enclosure; hoisting machine; overhead sheaves; lifting cables; counterweights; guide posts and guides; control; operating devices; buffers; governor and safety devices; limit, and safety switches; electrical equipment; signal systems; and guarantee.

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering, 1942. Specifications for Buildings for Railroad Purposes: Hydraulic Elevators—Baggage or Freight. Gives requirements for the system, car platform, car cover, car frame, hatch-ways and shaft enclosure, cylinder wells, cylinders, plungers, stuffing boxes, counterweight, guide posts and guides, control, operating device, buffers, elevator doors, pumping plant, pump, tanks, air supply, pipe, fittings, insulation, electrical equipment, signal system, lubricators, cable lock, lubricants, painting, and guarantee.

American Society of Mechanical Engineers, joint sponsor with National Bureau of Standards and American Institute of Architects. American Standards Assn., A17.1-1937. Safety Code for Elevators, Dumbwaiters, and Escalators. Covers construction, inspection, maintenance, and operation of elevators, dumbwaiters, escalators and their hoistways excepting belt, bucket, or roller conveyors for freight, piling machines, skip hoists, wharf ramps, amusement devices, elevators of over 30,000 lb. capacity and elevators used during building construction. Requirements as to hoistway construction, guards and landings, elevator requirements as to guides, buffers, counterweights, car construction, safeties for car and hoisting machinery, cables and signal systems, rules for inspection, maintenance, and operation.

American Society of Mechanical Engineers, joint sponsor with National Bureau of Standards and American

Institute of Architects. American Standards Assn., A17.2-1937. American Recommended Practice for the Inspection of Elevators (Inspector's Manual). A guide for the general use of elevator inspectors. Based on requirements of American Standard Safety Code for Elevators, Dumbwaiters, and Escalators.

American Society of Mechanical Engineers, joint sponsor with National Bureau of Standards and American Institute of Architects. American Standards Assn., A17.3-1942. Supplement to the 1937 Edition of the American Standard Safety Code for Elevators, Dumbwaiters, and Escalators. Includes interpretations of rules and revised rules.

Assn. of Lift Truck and Portable Elevator Manufacturers. Specifications for Portable Elevators. Covers standard hand and electrically operated types with capacities from 500 to 5,000 lb., lowered platform height, hinge height, overall and lifting height, width, length, base frame, platform, hoist, main frame, power-operated characteristics, and special purpose equipment.

National Board of Fire Underwriters. National Electrical Code, 1940. American Standards Assn., C1-1940. Elevators. Permissible voltages on various parts, types, insulation, minimum sizes, protection, installation of conductors for various circuits, requirements on enclosure of live parts, grounding, clearance around controller panels, location of disconnecting switch, elevator machine, and controller.

National Elevator Manufacturing Industry, Inc. Elevator Engineering Standards. Includes engineering data sheets covering car and hatchway dimensions for freight, passenger, and hospital elevators; and standard specifications for car switch control passenger elevator, car switch variable voltage control passenger elevator, car switch control freight elevator, and continuous pressure push button control freight elevator.

National Elevator Manufacturing Industry. Elevator Engineering Standards, June, 1940. This standard gives dimensional requirements for freight elevators of 2,500 to 10,000 lb. capacity; office building, bank, hotel, etc., capacities 1,500 to 3,500 lb.; retail store elevators with capacities of 3,000 to 5,000 lb.; apartment house elevators with capacities of 1,500 to 2,500 lb.; and hospital elevators with capacities of 3,500 and 4,000 lb.

U. S. Gov., Dept. of Commerce, National Bureau of Standards, H33; 1940. American Standards Assn., C2.3-1941. Safety Rules for the Installation and Maintenance of Electric Utilization Equipment (comprising Part 3—for 25 to 270-volt equipment which is accessible to other than qualified electrical operators—and the grounding rules of the Fifth Edition, National Electrical Safety Code). For elevators, requirements on guarding live and moving parts, grounding noncurrent-carrying parts, control of energy supply, and control of movement.

U. S. Gov., Navy Dept., Bureau of Yards and Docks. Specification 14Yd; 1939. Electric Elevators.

*References.*—Industrial hoists, mine hoists, *see* 744.2, 751; steel cables, *see* 603.42; electric motors, controllers, *see* 711.2, 711.3, 714.11; methods of test, protection, safety code for motors, *see* 710, 711.20; electric wire, *see* 715.44.

## 745.4 ESCALATORS

American Society of Mechanical Engineers, joint sponsor with National Bureau of Standards and American Institute of Architects. American Standards Assn., A17.1-1937. Safety Code for Elevators, Dumbwaiters, and Escalators. Covers construction, inspection, maintenance, and operation of elevators, dumbwaiters, escalators and their hoistways excepting belt, bucket, or roller conveyors for freight, piling machines, skip hoists, wharf ramps, amusement devices, elevators of over 30,000 lb. capacity and elevators used during building construction. Requirements as to hoistway construction, guards and landings, elevator requirements as to guides, buffers, counter-weights, car construction, safeties for car and hoisting machinery, cables and signal systems, rules for inspection, maintenance, and operation.

American Society of Mechanical Engineers, joint sponsor with National Bureau of Standards and American Institute of Architects. American Standards Assn., A17.3-1942. Supplement to the 1937 Edition of the American Standard Safety Code for Elevators, Dumbwaiters, and Escalators. Includes interpretations of rules and revised rules.

## 746. TOWING DEVICES

# 750-759 MINING, OIL WELL, AND PUMPING MACHINERY

## 750. GENERAL ITEMS

American Mining Congress. Joint sponsor with U. S. Gov., Dept. of Interior, Bureau of Mines. American Standards Assn., M2-1926. Safety Rules for Installing and Using Electrical Equipment in Coal Mines. Definitions, limitations on voltage and capacity, use of insulated platforms, grounding of frames and sheaths, guarding of circuits, installation and protection of motors and controllers, safety devices for electric hoists, construction of underground stations and switchboards, installation of lamps, requirements for portable electrical equipment, installation and protection of circuits, trolley wires, signal and telephone circuits, and shot-firing circuits.

American Mining Congress, sponsor. American Standards Assn., M6-1931. Drainage of Coal Mines. Requirements for pumps and pumping stations, specifications for electric driven plunger pumps, for centrifugal pumps, for pump accessories, construction of pumps, practice in priming piston, plunger and centrifugal pumps, semiremote control, safety precautions and attendance, natural drainage, unwatering abandoned workings, mine water and its action upon mine drainage equipment, recommendations of metals and alloys to use.

American Mining Congress. American Standards Assn., M15-1931. Safety Code for Coal Mine Transportation. Requirements on bonding of tracks, clearances along track, installation and operation of stopblocks and derails, signal systems, slope and shaft hoists, permissible types of haulage, location of trolley wires, operation of man trips, hauling explosives, inspection rules.

American Mining Congress, sponsor. American Standards Assn., M17-1930. Fire Fighting Equipment in Metal Mines. Recommendations on type and size of hose and water supply systems for surface and for underground fire fighting equipment; equipment of extinguishers, fire pails, sprinkling systems, oxygen breathing apparatus; recommendations on ventilation, handling explosives, signals, etc.

American Mining Congress, sponsor. American Standards Assn., M24-1932. Safety Rules for Installing and Using Electrical Equipment in Metal Mines.

American Institute of Mining and Metallurgical Engineers, sponsor. American Standards Assn., M 6-1932. Recommended Practice for Methods for Screen Testing of Ores (Hand Method). Covers sieves, preparation of the sample, size of sample or weight of charge, wet splits, standard hand-sieving manipulation, end point in sieving, dry sieving oversize from wet split, and appendix.

American Institute of Mining and Metallurgical Engineers, sponsor. American Standards Assn., M13-1942. Recommended Practice for Rock Dusting Coal Mines To Prevent Coal Dust Explosions. Covers definitions, mines to be rock-dusted, kind of dust to be used, size of dust to be used, parts of mine to be dusted, amount of dust to be used, sampling dust, inspection of dust barriers, and record of sampling.

American Society of Mechanical Engineers. Test Data on Steam and Electrical Rotary Drilling Equipment, 1933. Gives two reports from which it is possible to make direct and accurate comparisons of the dependability, flexibility, cost per foot, etc., between steam and electrical equipment for drilling rotary drilled oil wells.

National Fire Protection Assn. National Fire Codes for Extinguishing and Alarm Equipment, 1943. Fire Fighting Equipment in Metal Mines. Recommended practice for fire fighting equipment, preventative measures, fire signals and fire fighting personnel in metal mines. Covers water and water supply equipment, fire extinguishers, fire pails and sprinkling systems, oxygen breathing apparatus, ventilation and ventilation equipment, explosives, electrical equipment, fire signals, fire fighting personnel, and miscellaneous measures.

U. S. Gov., Dept. of Interior, Bureau of Mines. Tentative Coal-Mine Inspection Standards, I.C.7204; 1942. A guide for Federal inspection of coal mines. Includes surface hazards—general, tipple, or cleaning plant, head frame, machinery and safety appliances in connection therewith, mine refuse disposal, surface haulage, hoisting equipment, cages and shafts, surface electric machinery, surface explosives; and underground hazards—general practice, ventilation, machinery and safety appliances in connection therewith, explosives and blasting devices, electricity underground, control of coal dust and rock-dusting, haulage, timbering, safety organization, and first-aid and mine rescue.

## 751. MINING AND QUARRYING MACHINERY

American Mining Congress, sponsor. American Standards Assn., M10-1928. Miscellaneous Outside Coal Handling Equipment. Hoisting signals, safety requirements for man haulage equipment, safety methods around tipple, fire protection, dimensions of shafting, bearings, pedestals and motor shafts at pulley end.

American Mining Congress, sponsor. American Standards Assn., M12-1928. Tentative Standard for Construction and Maintenance of Ladders and Stairs for Mines. Requirements on construction and protection of mine ladderways; required use and minimum dimensions of stairways and ladders.

American Mining Congress, sponsor. American Standards Assn., M18-1928. Underground Transportation in Metal Mines. Standard type of car, track gage, rail weight, grade of track, and dimensions of drift for hand tramming and motor haulage, weight of locomotive for motor haulage.

American Mining Congress, sponsor. American Standards Assn., M19-1928. Mechanical Loading Underground in Metal Mines. Mechanical shovelers; classification, working conditions, repairs, personnel; recommended requirements on design and size of scrapers, hoists, wire rope, sheaves, lights, and slides.

American Society of Mechanical Engineers, joint sponsor with Bureau of Yards and Docks, U. S. Navy Dept. American Standards Assn., B30.2-1943. Safety Code for Cranes, Derricks, and Hoists. Covers scope, interpretations and exceptions, new and old installations, references to other codes, mandatory and advisory rules, definitions, construction, installation, inspection, testing, maintenance, and operation.

National Safety Council (American Society of Safety Engineers, Engineering Section). American Standards Assn., A14-1935. Code for Construction, Care, and Use of Ladders. Definitions of terms; kind and quality of materials; specifications and construction of fixed mine shaft ladders for use in mine ladderways.

U. S. Gov., Federal Specification W-B-411; 1941. Amendment 1; 1943. Blasting-Apparatus (Machines, Blasting; Glavanometers and Rheostats for Testing Blasting Circuits and Machines). Covers one grade in three types: (I) Galvanometers for testing blasting circuits; (II) blasting machines, in four classes—(A) 10 cap capacity, (B) 30 cap capacity, (C) 50 cap capacity, and (D) 100 cap capacity; and (III) rheostats for testing blasting machines. Gives requirements for each type and class; methods of inspection and tests; and packing and marking for shipment.

U. S. Gov., U. S. Army, Chemical Warfare Service. Specification 96-71-48; 1937. Blasting Machine; 100 Cap, Commercial.

*References.*—Blowers, compressors. *see* 791.1, 791.2; track rails, frogs, switches, *see* 606.1, 606.3; pumps, *see* 755.1; electric motors, controllers for dangerous mines, *see* 711.25, 714.11; other electric motors, *see* 711.2; safety code for electric equipment in mines, *see* 710; oxygen breathing appa-

ratus, *see* 993; safety code for mines, *see* 750; miners' lamps and gas detectors, *see* 997.6 and 716.17; safety code for wooden ladders, *see* 429.4; wire ropes, *see* 603.42; electric wire, *see* 715.44; explosion proof storage batteries and battery boxes, *see* 712.2, 712.3; trolley and track material, *see* 719.63; fire fighting equipment, *see* 970; tolerances for metal fits, *see* 615.82.

## 752. ORE CRUSHING AND ORE SORTING MACHINERY

## 753. SMELTING AND ROASTING MACHINERY

## 754. OIL WELL MACHINERY

American Petroleum Institute, Div. of Production. Code 3; 1928. Code of Recommended Field Practice. Cable Drilling and Fishing Tools. Includes requirements for transportation and handling; making up joints; and heating, dressing, and tempering drilling bits and under-reamer cutters.

American Petroleum Institute, Div. of Production. Code 4; 1934. Code of Recommended Field Practice. Standard Rigs and Derricks. Includes requirements for selection, size, capacity, foundations, name plate data, care of the derrick, and standard rig and equipment housing.

American Petroleum Institute, Div. of Production. Code 5-C-2; 1944. Performance Properties of Casing and Tubing. Gives minimum performance properties for casing and tubing. The values shown herein for casings are final, and are based mainly upon tests; and the values for tubing are tentative, and are calculated. Gives tables showing outside diameter, nominal weight, inside diameter, wall thickness, drift diameter, collapse resistance, internal yield pressure, and joint strength for various sizes.

American Petroleum Institute, Div. of Production. Code 7-A; 1932. Code of Recommended Practice for Hard Facing Rotary Bits.

American Petroleum Institute, Div. of Production. Standard No.3; 1941. Cable Drilling Tools (Taper Joints, Jars, Rope Socket Necks, Etc ). Contains complete dimensional standards only and does not cover chemical or physical properties. Gives requirements for certification of reference master gages, workmanship and finish, marking, basic thread form, method of gaging boxes and pins, size of wrench squares, for drilling and fishing jars, for drilling bits, and for fishing tools, etc.

American Petroleum Institute, Div. of Production. Standard No.4; 1944. Specification for Standard Rigs, Derricks, and Accessory Equipment. This specification covers dimensional and strength requirements of steel and wood derricks, rig and derrick parts, derrick substructures, pumper structures, bolts, and capacity ratings for roller bearings. Covers material, workmanship and finish, steel derrick dimensions, steel derrick strength or capacity requirements, derrick substructures, standard rig parts, capacity rating of pumper structures, allowable unit stresses, specification for bolts, rating of radial bearings, rating of flat thrust bearings, nailed wood derrick dimensions, nailed wood derrick strength or capacity requirements, marking, inspection and rejection, and appendices.

American Petroleum Institute, Div. of Production. Standard 4-A; 1939. Rig Iron Standards. Includes dimensional standards on four sizes of rig iron and on five sizes of sand reels. Rig irons covered by this specification are for oil company purposes.

American Petroleum Institute, Div. of Production. Standard 5-G-3; 1940. Supplement 1; 1941. Standard on Ring Joints for Steel Flanges and Flange Unions, for Use With A.P.I. Tubular Goods. Covers dimensional standards on ring joints for flanges and flange valves, including, by reference, complete chemical and physical properties.

American Petroleum Institute, Div. of Production. Standard No.7; 1944. Transmission Standards. For equipment and machinery used for drilling and production purposes in the oil industry. Applies to shafting and bored members, keys and keyways, and chains. Covers material, workmanship and finish, marking, shafting and keys basic standards, shafting and keys detailed dimensions, chain, inspection and rejection, and appendices.

American Petroleum Institute, Div. of Production. Standard 7-B; 1944. Specification for Rotary Drilling Equipment. Gives final dimensional standards, including gages, for regular and full-hole rotary drilling tool joints, tentative standards for internal-flush rotary drilling tool joints, and standards on auxiliary equipment. Covers material, workmanship and finish, marking, rotary drilling tool joints, drill collars, grief stems, couplings and subs, bits, gaging practice, swivel gooseneck connections and rotary hose, rotary table, brake blocks, slush pumps, recommended practice on measurement, inspection and rejection, gages and appendices.

American Petroleum Institute, Div. of Production. Standard 11-A; 1944. Specifications for Oil Well Pumps. This specification covers dimensional elements of oil well pumps of the reciprocating type, including full barrel and liner barrel. Covers workmanship and finish, marking, typical pump assemblies, part elements, threads and gages, inspection and rejection, and appendices.

American Petroleum Institute, Div. of Production. Standard 11-B; 1942. Sucker Rod Specifications. Covers dimensional standards, gages and gaging practice on five sizes of sucker rods. Gives sufficient dimensional standards to insure interchangeability for five sizes of rods (nominal 5/8 in., 3/4 in., 7/8 in., 1 in., and 1 1/8 in.), these including the dimensions of the threaded pin, of the threaded box, of the coupling for use with "double pin" rods, and of the wrench squares.

American Petroleum Institute, Div. of Production. Standard 11-D; 1943. Supplement 1; 1944. Miscellaneous A.P.I. Pumping Equipment Standards. This specification provides—(a) complete interchangeability between manufacturers on polished rods, bore of stuffing boxes, pull rods and pull rod couplings, (b) standard openings in screened or slotted pipe with standard method of designation, (c) a recommended standard assembly of well-head pressure gage taps and fittings to avoid confusion and delay in the field.

American Petroleum Institute, Div. of Production. Standard 11-E; 1941. Specification for Rating of Steel Helical and Herringbone Gear Speed Reducers for Pumping Machines (including Rating Form for

Rotary Counterbalances). Gives scope, marking, limitations, design of gearing, design of housing, shafts and bearings, service and application, formulas, suggested method for computing well loads, rotary counterbalances, inspection and rejection, and appendices.

American Society of Mechanical Engineers, joint sponsor with Bureau of Yards and Docks, U. S. Navy Dept. American Standards Assn., B30.2-1943. Safety Code for Cranes, Derricks, and Hoists. Covers scope, interpretations and exceptions, new and old installations, references to other codes, mandatory and advisory rules, definitions, construction, installation, inspection, testing, maintenance, and operation.

## 755. PUMPS, POWER-DRIVEN AND HAND PUMPS

### 755.0 GENERAL ITEMS

American Bureau of Shipping. Rules for the Classification and Construction of Steel Vessels, 1944. Pumps and Piping Systems. Include requirements for bilge and ballast systems, boiler feed system, steam and exhaust piping, lubricating oil systems, fuel oil transfer and filling systems, fuel oil service systems, cargo oil systems, vent, sounding and overflow pipes, piping details, and fire protection.

American Society of Mechanical Engineers. Power Test Code. Reciprocating Steam-Driven Displacement Pumps, 1927. For determining the performance of the pump and engine, including reheaters, heaters, and jacket pumps, circulating pumps, condensate pumps, and vacuum pumps, which are concerned in their operation; with auxiliary sections on general considerations, pressure measurement, temperature measurement, electrical measurements, determination of quality of steam, measurement of time, speed measurements, linear measurements, and leakage measurement.

Associated Factory Mutual Fire Insurance Companies. Factory Mutual Bulletin of Loss Prevention, 25.23; 1940. Centrifugal Fire Pumps, Installation. Covers location, suction supply, pipe connections, suction lift, suction always under head, and gives drawings and charts.

Associated Factory Mutual Fire Insurance Companies. Factory Mutual Bulletin of Loss Prevention, 25.24; 1940. Centrifugal Fire Pumps, Power Supplies. Covers electric motor drive, steam turbine drive, gasoline engine drive, and gives drawings.

Associated Factory Mutual Fire Insurance Companies. Factory Mutual Bulletin of Loss Prevention, 25.25; 1941. Centrifugal Fire Pumps, Operation and Maintenance. Covers how to start a centrifugal pump, testing centrifugal fire pumps, diagnosing defects, speed troubles, suction troubles, and mechanical and electrical troubles.

Associated Factory Mutual Fire Insurance Companies. Factory Mutual Bulletin of Loss Prevention, 25.31; 1942. Underwriter Steam Fire Pumps, Operation and Maintenance. To provide plant engineers with helpful information in maintaining and operating these pumps at full efficiency. Covers description of pump, steam supply, suction supply, priming, pump operation, testing, maintenance, and locating troubles.

Hydraulic Institute, Standard. Data Section, 1941. Covers friction table for water, resistance of valves and fittings, viscosity, friction of oil and pipe lines, friction of paper stock in cast iron pipe, materials for pumping various liquids, and properties of water at various temperatures.

Hydraulic Institute, Standard. General Section, 1943. The material in the pamphlet is submitted as being the opinions and recommendations of the Hydraulic Institute as to what is considered good practice in the pump industry. Covers principles of business conduct, standard classification of pumps, pump applications, and sample contract form.

Hydraulic Institute, Standard. Test Code, 1943. Covers Hydraulic Institute test code-centrifugal pumps, hydraulic institute test code-rotary pumps, data and results of centrifugal and rotary pump tests, and laboratory and model tests.

National Board of Fire Underwriters. Centrifugal Fire Pumps, No. 20, 1939. Amendments, 1943. Standards for installation in six standard sizes of centrifugal fire pumps. Covers centrifugal fire pumps, electrical driving and control of pumps, steam turbines driving centriful fire pumps, gasoline engine driving of centrifugal fire pumps, Diesel engine driving of centrifugal fire pumps, tests for acceptance, and operating instructions for centrifugal fire pumps.

U. S. Gov., Army-Navy Aeronautical Specification AN-P-1; (2); 1944. Pump Assemblies; Fluid Metering, General Specification for.

U. S. Gov., Army-Navy Aeronautical Specification AN-P-2a-1; 1944. Pump Assembly; 2 G.P.H. Fluid Metering, Type A.

U. S. Gov., Army-Navy Aeronautical Specification AN-P-41; 1943. Pump Assembly; 5 G.P.H. Fluid Metering, Type B.

### 755.1 PUMPS, POWER-DRIVEN

Associated General Contractors of America. Manual, 1941. Includes self-priming centrifugal pumps, open and closed diaphragm force, closed plunger, and road pumps; requirements for nominal rated capacities, standard sizes, for engine power and displacement, pressures, and rating plates.

Hydraulic Institute, Standard. Centrifugal Pump Section, 1942. Covers definitions of types and parts; standards of volume, head, power and efficiency guarantees; specific speed, suction lift, suction head; Hydraulic Institute upper limits of specific speeds for single stage pumps pumping clear water at sea level at 85°F; net positive suction head for centrifugal hot water pumps; condensate pumps; instructions for installing centrifugal pumps; and special applications of centrifugal pumps.

Hydraulic Institute, Standard. Deep Well Turbine Pump Section, 1941. Covers introduction, definitions,

types of principal component parts, conditions of sale, warranty, efficiencies, field testing, general information, friction losses in deep well columns, mechanical friction in turbine pump line shafts, power balance in deep well turbine pump, air line method of determining depth of water level, and method of plumbing a well.

Hydraulic Institute, Standard. Reciprocating Pump Section, 1941. Covers reciprocating displacement pumps, steam driven types, parts, and definitions; reciprocating displacement pumps, power driven types, parts, and definitions; correction chart for temperature or viscosity; table of capacities for displacement pumps; deep well power pumps; and instructions for installing and operating pumps, reciprocating types.

Hydraulic Institute, Standard. Rotary Pump Section, 1942. Covers general information on rotary pumps, instructions for installing and operating rotary pumps, and locating trouble.

National Fire Protection Assn. National Fire Codes for Extinguishing and Alarm Equipment, 1943. Centrifugal Fire Pumps. Standards for the Installation of Centrifugal Fire Pumps. Covers centrifugal fire pumps, electrical driving and control of pumps, steam turbines driving centrifugal fire pumps, gasoline engine driving of centrifugal fire pumps, Diesel engine driving of centrifugal fire pumps, tests for acceptance, and operating instructions for centrifugal fire pumps.

National Fire Protection Assn. National Fire Codes for Extinguishing and Alarm Equipment, 1943. Specifications for Auxiliary Pumpers. Covers provisions applying to pump assembly, special provisions for automobile truck units, special provisions for trailer units, trailer pumpers, advantages and disadvantages of trailer pumpers.

National Fire Protection Assn. National Fire Codes for Extinguishing and Alarm Equipment, 1943. Steam Fire Pumps. Operation and maintenance of national standard steam fire pumps. Covers general requirements, steam supply, national standard pump sizes, suction supply, priming, pump operation, testing, maintenance, locating trouble, water end of pump, nozzle discharge tables, rating charts, and automatic control.

U. S. Gov., Army Air Forces. Specification 28167-C; 1942. Pump; Vacuum, Type B-3, Aircraft, Engine-Driven.

U. S. Gov., Army Air Forces. Specification No.28364; 1940. Pump; Fuel, Transfer, Type D-10, Electric Motor Driven.

U. S. Gov., Army Air Forces. Specification 28367-B (1); 1942. Pump; Air, Type B-7, Vacuum-Aircraft, Engine-Driven.

U. S. Gov., Army Air Forces. Specification 28371-B (1); 1941. Pump; Hydraulic, Oil, Engine and Electric Motor Driven, General Specification for.

U. S. Gov., Army Air Forces. Specification No.28397; 1940. Pump; Fuel, Power-Driven, Type G-11.

U. S. Gov., Army Air Forces. Specification 28422-A-1; 1944. Pump; Fuel Booster, Type B-5B, Electric Motor Driven.

U. S. Gov., Army Air Forces. Specification 28446-A; 1942. Pump; Vacuum, Type B-13A, Aircraft, Engine-Driven.

U. S. Gov., Army Air Forces. Specification No.28457; 1942. Pump; Hydraulic, Oil, Type B-14, Engine-Driven, Aircraft.

U. S. Gov., Army Air Forces. Specification No.28486; 1943. Pump; Air, Rotor Driven, Fuel Booster, Type K-1.

U. S. Gov., Army Air Forces. Specification No.28491; 1943. Pump; Fuel or Oil, Type D-17, Power Driven, Transfer.

U. S. Gov., Army Air Forces. Specification No.28619; 1944. Pump; Fuel Booster, Type B-18, Electric, Motor Driven.

U. S. Gov., Army Air Forces. Specification 40270-B; 1941. Pump; Aircraft, Propeller Anti-Icing Fluid Metering, Direct-Current Operated.

U. S. Gov., Army-Navy Aeronautical Specification, AN-P-11-1; 1945. Pumps; Engine-Driven, Hydraulic.

U. S. Gov., Army-Navy Aeronautical Specification AN-P-50-1; 1944. Pumps; Engine-Driven, Air.

U. S. Gov., Army-Navy Aeronautical Specification AN-P-52-1; 1944. Pumps; Power-Driven, Fuel, General Specification for.

U. S. Gov., Army-Navy Aeronautical Specification AN-P-55; 1944. Pumps; Fuel, Power-Driven, 200 G.P.H.

U. S. Gov., Army-Navy Aeronautical Specification AN-P-56; 1944. Pumps; Fuel, Power-Driven, 400 G.P.H.

U. S. Gov., Army-Navy Aeronautical Specification AN-P-57; 1944. Pumps; Fuel, Power-Driven, 700 G.P.H.

U. S. Gov., Dept. of Agriculture, Forest Service. Specification for Pump; Tractor-Mounted.

U. S. Gov., Dept. of Agriculture, Forest Service. Specification No.275; Pumps; Power Take-Off, Gear-Driven.

U. S. Gov., Dept. of Agriculture, Forest Service. Specification MSF-273. Pump; Portable Power.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-173. Pump and Well for Water Supply Systems.

U. S. Gov., Dept. of Interior, Purchasing Office. Standard Specification No.36. Centrifugal Pumping Units; Small, Portable.

U. S. Gov., Navy Dept. Specification 11P5b; 1944. Pumps; Centrifugal, for Shipboard Use.

U. S. Gov., Navy Dept. Specification 11P8b; 1944. Pumps; Portable, Air-Turbine-Driven.

U. S. Gov., Navy Dept. Specification 11P9b; 1944. Pumps; Portable, Gasoline-Engine-Driven.

U. S. Gov., Navy Dept. Specification 11P10b; 1944. Pumps; Portable, Submersible, With Alternating-Current Motors.

U. S. Gov., Navy Dept. Specification 11P11b; 1944. Pumps; Submersible, Portable, With Direct-Current Motors.

U. S. Gov., Panama Canal, Purchasing Dept. Specification for Pumping Unit, 1944. Centrifugal, double suction, horizontal split case, bronze fitted, complete with direct-connected motor and bed plate.

U. S. Gov., Panama Canal, Purchasing Dept. Specification for Pumps; Water, 1944. Duplex, horizontal, size 4 1/2 in. x 2 3/4 in. x 4 in.; steam-end working pressure (maximum), 200 lb. per square inch; maximum liquid pressure per square inch, 250 lb.

U. S. Gov., U. S. Army, Corps of Engineers. Specification 87-1C; 1943. Pumping Set; Centrifugal, Gasoline Engine Driven, Capacity 55 G.P.M.

*References.*—Gasoline filling station pumps, *see* 793.6; automobile truck fire pumps, *see* 722.2; methods of test, definitions, classification, *see* 755.0; oil well pumps, *see* 754; cast iron, *see* 611.11; shafts and steel forgings, *see* 611.52, 611.51; tolerances for metal fits, *see* 615.83.

## 755.2 ACCESSORIES AND PARTS FOR PUMPS

U. S. Gov., Army-Navy Aeronautical Specification AN-F-31; 1943. Filters; Air Pump Suction Relief Valve.

U. S. Gov., Army-Navy Aeronautical Specification AN-F-36; 1944. Filter Assembly; Fluid Metering Pump.

U. S. Gov., Army-Navy Aeronautical Specification AN-S-41-1; 1944. Separators; Air Pump Oil.

U. S. Gov., Dept. of Agriculture, Forest Service. Specification 247-S. Outfits; Pump Accessory List.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2300A; 1938. Pump; Filter and Coupling for.

*References.*—Rubber pump valves, *see* 707.3.

## 755.3 HAND PUMPS

Society of Automotive Engineers. Aeronautical Standard No.22; 1942. Pump; Hydraulic Hand. Diagrammatic dimensional drawing and requirements for total handle travel, pump displacement, and rated operating pressure.

U. S. Gov., Army Air Forces. Specification 28476 (1); 1943. Pump; Fuel Hand Primer, General Specification for.

U. S. Gov., Army Air Forces. Specification 28477 (1); 1943. Pump; Fuel Hand Primer, Type E-6.

U. S. Gov., Army Air Forces. Specification 28478 (1); 1943. Pump; Fuel Hand Primer, Type E-7.

U. S. Gov., Army Air Forces. Specification 40559-A; 1941. Pump; Gasoline Servicing, Hand.

U. S. Gov., Army Air Forces. Specification No.40784; 1944. Pump; Hand Air Deflation.

U. S. Gov., Army-Navy Aeronautical Specification AN-P-14b; 1944. Pumps; Hydraulic Hand.

U. S. Gov., Army-Navy Aeronautical Specification AN-P-37-1; 1944. Pumps; Hand-Operated Engine Primer.

U. S. Gov., Army-Navy Aeronautical Specification AN-P-48a; 1944. Pumps; Plastic Hand Air.

U. S. Gov., Dept. of Agriculture, Forest Service. Specification for Pump; Low-Pressure, Semiportable.

U. S. Gov., Dept. of Agriculture, Forest Service. Specification MSF-277. Pump; Back Pack, Hand.

U. S. Gov., Federal Specification XX-P-746; 1942. Pumps; Tire, Hand-Operated. Covers one type and two classes—(A) high-pressure tire and (B) balloon tire. Gives requirements for material, workmanship, components, pump cylinder, cylinder base, cylinder cap, plunger, plunger rod, handle, pump check valve, rubber hose, hose tie connector, finish, and marking; detail requirements for each class; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., Navy Dept. Specification 11P6b; 1944. Pumps; Handy-Billy.

U. S. Gov., Panama Canal, Purchasing Dept. Specification for Pumps, 1943. Rotary, cam and gear type, hand-driven, for transfer of oil, water, etc.

U. S. Gov., U. S. Army, Army Air Forces. Specification 95-28113-A; 1929. Pumps; Hand, Refueling, Type D-3 (Wobble).

U. S. Gov., U. S. Army, Army Air Forces. Specification 95-28191; 1940. Pump; Hand, Fuel, Type D-4.

U. S. Gov., Veterans Administration. Specification VA-MC-163a; 1939. Gasoline Pump; Hand-Operated.

*References.*—Gasoline filling station pumps, *see* 793.6.

## 755.9 MISCELLANEOUS PUMPING EQUIPMENT

U. S. Gov., Army Air Forces. Specification No.40613; 1943. Segregator; Fluid, Type A-6.

U. S. Gov., Army Air Forces. Specification No.40614; 1943. Segregator; Fluid, Type A-7.

U. S. Gov., Army Air Forces. Specification No.40481; 1944. Segregator; Fluid, Type D-6, Tank Car.

U. S. Gov., Army Air Forces. Specification No.40482; 1944. Segregator; Fluid, Type D-7, Portable Pipe Line.

# 756. GAS PRODUCERS

American Society of Mechanical Engineers. Power Test Code. Gas Producers, 1928. Intended primarily for tests of producers whose gas is used for power purposes; with auxiliary sections covering general considerations, pressure measurement, temperature measurement, heat of combustion, flue and exhaust gas analysis, determination of quality of steam, measurement of time, and humidity determinations.

National Board of Fire Underwriters. Internal Combustion Engines and Coal Gas Producers, No.37; 1934. Recommended good practice requirements for installation and use. Covers internal combustion engines giving definition of special terms, location of engines, capacity and location of fuel tanks for carburetion engines, capacity and location of fuel tanks for compression ignition engines, withdrawal of fuel from tank, fuel piping and fittings, carburetor, fuel feed cup on mixing valve, ignition and starting, exhaust piping, muffler or exhaust pot, lubricating oil drips, pans, etc., engine base, gas pressure regulators, gas bag, and care and attendance; and covers coal gas producers giving pressure systems and suction systems.

National Fire Protection Assn. National Fire Codes for Flammable Liquids, Gases, Chemicals, and Explosives, 1943. Coal Gas Producers. Recommended good practice requirements for the installation and use of coal gas producers. Covers pressure systems and suction systems.

U. S. Gov., Army Air Forces. Specification 40477-A (1); 1944. Generator; Portable Oxygen.

U. S. Gov., Army Air Forces. Specification No.40792; 1944. Plant; Mobile Oxygen-Generating, Type A-1, Gas.

U. S. Gov., U. S. Army, Signal Corps. Specification 74-50; 1943. Generator ML-185-( ).

*References.*—General test code requirements, *see* 700; oil efficiency for water gas operation, *see* 997.2; gas codes and gas testing, *see* 997.2.

# 760-769 METAL-WORKING MACHINERY

## 760. GENERAL ITEMS

American Society of Mechanical Engineers. I.S.A. Tolerance Systems, 1942. This unified system of cylindrical fits was developed by the inter-national Standards Assn. The main features are the reference temperature for limit gages is 20°C. nominal size range extends from 0.04 to 19.69 in., fits are given in the basic hole and the basic shaft system, tolerances are unilateral, the series of shafts and holes may be combined at will, and manufacturing tolerances.

American Society of Mechanical Engineers. Manual on Cutting of Metals, 1939. Gives 245 tables of data covering the machining of 35 commonly used steels; cutting speeds and horsepower; extensive table concerning 289 steels and conditions; a discussion of tool shapes and performances; and drawings of tool shapes.

National Safety Council. American Standards Assn., B11-1937. Safety Code for Power Presses and Foot and Hand Presses. Covers presses fitted with rams or plungers for blanking, trimming, drawing, punching, or stamping material, plate shears and plate punches. Rules for providing proper foundations, for working space, lighting, means of disconnecting power, guarding of belts, pulleys, shafts, gears, switches, feeding mechanisms, inclosure of ram, limitation of ram stroke, gate guards, two hand tripping devices, sweep guards, etc.

National Safety Council. Approved as American Recommended Practice by American Standards Assn., B24-1927. Safety Code for Forging and Hot Metal Stamping. Drop forgings and other hammer forgings; includes all hazards peculiar to the forging industry and associated with such machines, but not including cold extrusion of nonferrous metals or hydraulic presses, except small types of the latter. Hot pressing, bull dozing, bolt heading, and rivet making machines, not included. Published by U. S. Gov., Dept. of Labor, Bureau of Labor Statistics, Bulletin 451.

U. S. Gov., Dept. of Labor, Div. of Labor Standards. Special Bulletin 7; 1942. Suggested Standards for Industrial Safeguards. Includes metal working machinery. Covers bar stock machine, milling machine cutter guard, planers, power presses, and squaring shears.

## 761. MACHINE TOOLS

U. S. Gov., Navy Dept. Specification 40T2d; 1936. Tools; Portable, Pneumatic.

### 761.1 LATHES

National Machine Tool Builders' Assn. Accuracy of Engine Lathes. Recommended standards of accuracy in tabulated form for tool room lathes, 12 in. to 18 in. inclusive engine lathes, and 20 in. to 36 in. inclusive engine lathes. Approved by American Standards Assn. as American Defense Emergency Standard B5.16-1941.

U. S. Gov., Navy Dept. Specification 40L1g; 1944. Lathes; Engine, Motor-Driven, Medium-Heavy-Duty, 14-Inch, Shipboard Use.

U. S. Gov., Navy Dept. Specification 40L2b; 1944. Lathes; Cabinet, Precision, Motor-Driven, Shipboard Use.

U. S. Gov., Navy Dept. Specification 40L3d; 1944. Lathes; Engine, Motor-Driven, Medium-Heavy-Duty, 16-Inch, Shipboard Use.

U. S. Gov., Navy Dept. Specification 40L4c; 1944. Lathes; Engine, Motor-Driven, Medium-Duty, 14-Inch, Submarine Use.

U. S. Gov., Navy Dept. Specification 40L5a; 1944. Lathes; Engine, Motor-Driven, Heavy-Duty, Shore Use.

U. S. Gov., Navy Dept. Specification 40M3a; 1942. Mandrels; Lathe, Expansion.

U. S. Gov., Post Office Dept., Div. of Motor Vehicle Service, Bureau of the Fourth Assistant Postmaster General. Specifications for Lathes, for Garages.

*References.*—Standard driving speeds and shaft diameters, *see* 760.

### 761.2 MILLING MACHINES

U. S. Gov., Navy Dept. Specification 40M5c; 1944. Machines; Boring, Drilling, and Milling, Horizontal, Motor-Driven, 4-Inch Spindle, Shipboard Use.

U. S. Gov., Navy Dept. Specification 40M6d; 1944. Machines; Milling, Universal, Motor-Driven, Shipboard Use.

U. S. Gov., Navy Dept. Specification 40M10b; 1944. Machines; Milling, Motor-Driven, Universal, Small Ship Type.

U. S. Gov., Navy Dept. Specification 40M11a; 1944. Machines; Milling, Universal, Horizontal, Heavy-Duty, Motor-Driven, Shore Use.

U. S. Gov., Navy Dept. Specification 40M12a; 1944. Machines; Milling, Plain, Horizontal, Heavy-Duty, Motor-Driven, Shore Use.

*References.*—Standard driving speeds and shaft diameters, *see* 760.

### 761.9 MISCELLANEOUS MACHINE TOOLS

U. S. Gov., Navy Dept. Specification 40C1a; 1944. Chucks; Drill.

U. S. Gov., Navy Dept. Specification 40M5c; 1944. Machines; Boring, Drilling, and Milling, Horizontal, Motor-Driven, 4-Inch Spindle, Shipboard Use.

U. S. Gov., Veterans Administration. , Specification VA-M-187; 1936. Electric Drill.

*References.*—Portable electric drills, reamers, buffers, and grinders, *see* 711.24; pneumatic, *see* 615.9.

## 762. POWER PRESSES AND FORGING HAMMERS

### 762.1 POWER PRESSES

U. S. Gov., Navy Dept. Specification 41P29a; 1941. Presses; Arbor, Hydraulic, Hand-Operated, 25-Ton Capacity, Shipboard Use.

U.S. Gov., Veterans Administration. Specification VA-M-169; 1936. Drill Press.

U. S. Gov., Veterans Administration. Specification VA-M-207; 1936. Mechanical High Speed Type Press; 28-Ton Capacity.

*References.*—Safety codes, *see* 760.

## 762.2 FORGING HAMMERS

*References.*—Safety codes, *see* 760.

## 763. THREAD-CUTTING AND SCREW MACHINES

U. S. Gov., Veterans Administration. Specification VA-M-180; 1936. Screw Cutting Lathe.

U. S. Gov., Veterans Administration. Specification VA-MC-175e; 1939. Machine; Pipe Threading and Cutting, Portable.

U. S. Gov., Veterans Administration. Specification VA-MC-301a; 1939. Power Pipe Threading Vise and Stand.

*References.*—Standard shaft sizes, standard driving speeds, *see* 760.

## 764. PUNCHING, SHEARING, AND ROLLING MACHINES

U. S. Gov., Navy Dept. Specification 40P1d; 1944. Punches, Machines; Bushings, Coupling Nuts, Dies, High Dies, and Punches.

*References.*—Safety code for punching machines and shearing machines, *see* 760.

## 765. PARTS AND TOOLS FOR METALWORKING MACHINERY

American Foundrymen's Assn. American Standards Assn., Z 43.-1941. Grinding, Polishing, and Buffing Equipment Sanitation. Prescribes the use of exhaust hoods and systems in removing dust, dirt, fumes, and gases generated through the grinding, polishing, and buffing of ferrous and nonferrous metals by means of grinding, polishing, scratch brushing, abrasive cutting-off wheels, grinding and polishing straps and belts.

American Society of Mechanical Engineers. Joint sponsor with National Machine Tool Builders Assn. and Society of Automotive Engineers. American Standards Assn., B5c-1930. Milling Cutters. Establishes dimensions for—plain milling cutters for heavy and light duty, side milling cutters, half-side milling cutters, staggered tooth milling cutters, metal slitting saws, single and double angle milling cutters, end mills, T-slot cutters, shell end mills, involute gear cutters, with large diameters, cutters for fluting reamers, concave cutters, convex cutters, corner rounding cutters, sprocket wheel cutters and arbors.

American Society of Mechanical Engineers. Joint sponsor with National Machine Tool Builders Assn. and Society of Automotive Engineers. American Standards Assn., B5.1-1941. T Slots, Their Bolts, Nuts, Tongues, and Cutters. Tables of dimensions and tolerances of standard sizes.

American Society of Mechanical Engineers. Sponsored by Society of Automotive Engineers and National Machine Tool Builders' Assn. American Standards Assn., B 5.2-1943. Tool Shanks and Tool Posts for Lathes, Planers, Shapers, Boring Mills, and Turret Lathes. For standardization of terminology and definitions; corresponding tool post openings and recesses; simplification of list of preferred sizes of tool bits, tool holders, tool shanks, and tools; and cross sections and lengths of shanks of square and rectangular single point tools. Covers terminology and definitions, illustrative diagrams, and tables showing sizes.

American Society of Mechanical Engineers. Joint sponsor with Society of Automotive Engineers and National Machine Tool Builders' Assn. American Standards Assn., B5.4-1939. Taps, Cut and Ground Threads. General dimensions and working tolerances for hand taps, pulley taps, boiler taps, mud or washout taps, staybolt taps, pipe taps, and combined pipe tap and drill. Thread limits are included for fractional size taps, machine screw taps, straight boiler and staybolt taps, straight pipe taps, bent shanker, tapper taps, and taper pipe taps. Also definitions, table of sizes and pitches for fine and coarse thread series, and marking.

American Society of Mechanical Engineers. Joint sponsor with Society of Automotive Engineers and National Machine Tool Builders Assn. American Standards Assn., B5.5-1932. Rotating Air Cylinders and Adapters. Covers four sizes of standard adapters—(A) for 3- and 4 1/2-in. cylinders, (B) for 6- and 8-in., (C) for 10- to 18-in., and (D) 20-in. cylinder or other power operated device having a draw pull of 26,000 to 40,000 lb. Length of stroke of standard cylinders, position of piston rod at end of stroke, diameter of piston rod, and size of tapped hole in piston rod are standardized so that air cylinder draw rods do not require fitting to individual cylinders.

American Society of Mechanical Engineers. Joint sponsor with National Machine Tool Builders' Assn. and Society of Automotive Engineers. American Standards Assn., B5.6-1941. Jig Bushings. Tables of dimensions and tolerances, includes headless and head types press fit wearing bushings; slip and fixed head types renewable wearing bushings; and headless and head types liner bushings.

American Society of Mechanical Engineers. Joint sponsor with Society of Automotive Engineers and National Machine Tool Builders' Assn. American Standards Assn., B 5.7-1943. Circular and Dovetail Forming Tool Blanks. Covers sizes and types of circular and dovetailed forming tool blanks and the associated mounting portions of their respective holders for use on automatic screw machines. The machines have been classified, for reference purposes, into six different groups of comparable stock capacities. Covers definitions, illustrative drawings, and tables giving reference groups and dimensions.

American Society of Mechanical Engineers. Joint sponsor with Society of Automotive Engineers and National Machine Tool Builders' Assn. American Standards Assn., B 5.8-1936. Chucks and Chuck Jaws for Turret Lathes and Automatic Lathes. Permits interchangeability of chucks and fixtures on different makes of turret lathes, automatic lathes, and engine lathes. Controlling dimensions are established for all chucks from 8-in. to 36-in. diameter of both medium and heavy duty types. There are also dimensions for an extra heavy series of chucks with serrated master jaws, and for power-operated and hand-operated chucks of two-, three-, and four-jaw types.

American Society of Mechanical Engineers. Joint sponsor with Society of Automotive Engineers and National Machine Tool Builders' Assn. American Standards

Assn., B5.9-1936. Lathe Spindle Noses for Turret Lathes and Automatic Lathes. Nomenclature, recommendations, and diagramatic drawings and tables of dimensions of spindle noses, location of holes and driving buttons, chucks and face plates, clamp rings, master ring gages, master plug gages for chucks and face plates, outside micrometer working gages for chucks and face plates, dog plates, cam lock nuts, cam lock screws, stud locking screws, cams, cam screws, and cam springs.

American Society of Mechanical Engineers. Joint sponsor with Society of Automotive Engineers and National Machine Tool Builders' Assn. American Standards Assn., B 5.10-1943. Machine Tapers; Self-Holding and Steep Taper Series. Establishes—(1) standard practice for the slope of self-holding machine and steep tapers, (2) the detailed dimensions for this type of taper tool shank, and (3) the corresponding dimensions for the taper stock in the spindle of the machine. Covers definitions, gaging, nomenclature, illustrative diagrams, and gives tables showing dimensions.

American Society of Mechanical Engineers. Joint sponsor with Society of Automotive Engineers and National Machine Tool Builders' Assn. American Standards Assn., B 5.11-1937. Adjustable Adapters for Multiple Spindle Drilling Heads. The purpose of these adapters is to secure vertical adjustment for taper shank tools when used with multiple spindle drilling heads. Tables contain general dimensions of assembly, detail dimensions for adjustable adapter body, and general dimensions for adjustable adapter nuts. Specifications include material, finish, marking, and tolerances.

American Society of Mechanical Engineers. Joint sponsor with Society of Automotive Engineers and National Machine Tool Builders' Assn. American Standards Assn., B5.12-1940. Twist-Drills; Straight Shank. Establishes—(1) American standard practice for the terminology and definitions of straight shank twist drills, and (2) the preferred diameters of straight shank drills varying in diameter from 0.0135 to 0.500 in., and (3) the corresponding drill lengths and flute lengths.

American Society of Mechanical Engineers. Joint sponsor with Society of Automotive Engineers and National Machine Tool Builders' Assn. American Standards Assn., B5.13-1939. Terminology and Definitions for Single-Point Cutting Tools for Lathes, Planers, Shapers, Turret Lathes, Boring Mills, Etc.

American Society of Mechanical Engineers. Joint Sponsors with National Machine Tool Builders' Assn. and Society of Automotive Engineers. American Standards Assn., B 5.14-1941. Reamers. Gives the general dimensions of 30 standard types of reamers and related tools, along with the magnitude and direction of the tolerances, including the number of flutes in the various types. Special attention is given to terminology and definitions. Thirty-eight sketches are included, illustrating the various types of reamers, also terms applying to reamers.

American Society of Mechanical Engineers. Joint sponsor with Society of Automotive Engineers and The National Machine Tool Builders' Assn. American Standards Assn., B5.15-1939. Involute Splines; Side Bearing. A basis for the design of interchangeable splined shafts and fittings. Gives 18 dimensional tables; 10 for 30° involute splines with 6, 10, 16, 24, and 36 teeth; 2 for measurement of involute splines; 1 on hobs for involute splines; and 5 tables of hob dimensions. Explanatory notes, 15 illustrating sketches of the relationship of hobs and splines, and a diagrammatic comparison of spline depths, shown as percentage of pitch diameter.

American Society of Mechanical Engineers. Woodruff Keys, Keyslots, and Cutters. American Standards Assn., B-17f-1930. Dimensions and tolerances for standard Woodruff keys, keyslots, and cutters, standard key numbers. For keys ranging from 1/16 by 1/2 in. long to 3/8 by 1 1/2 in. long. Tables give overall dimensions of keys, distance from center of circle forming the key profile to the top of the key, and overall dimensions with maximum and minimum limits for keyslots of the series established. For the two series of keyslot cutters adopted, overall dimensions and number of teeth for both fine and coarse series, tolerances, and general design features.

American Society of Mechanical Engineers. Joint sponsor with American Gear Manufacturers' Assn. and Society of Automotive Engineers. American Standards Assn., B29a-1930. Roller Chains, Sprockets, and Cutters. Includes cutters for sprockets, types of space cutters, construction, data for laying out cutter outlines, recommended cutter sizes for standard roller chain and block roller chain sprockets.

American Standards Assn., C 74-1942. Machine Tool Electrical Standards (American War Standard). Covers power driven, complete metal working machines not portable by hand, having one or more tool and work holding devices, used for progressively removing metal in the form of chips. Gives diagrams, control, motors, wiring, grounding, electrical accessories, and standard wiring diagram symbols.

Grinding Wheel Manufacturers Assn. Standard Steel Bushings for Grinding Wheels, 1939. Covers hexagonal top and bottom, round top and hexagonal bottom, and round top and square bottom. Gives dimensional drawings for each type.

Society of Automotive Engineers. 1944 Handbook, Section 8—Tools and Production Equipment. S.A.E. Standard Woodruff Key Slot Cutters and Gages, revised 1930. Adopted by American Standards Assn., B17f-1930. Includes diagrams and tables of sizes and dimensions for key slot cutters, key slot gages, and gage handles; and gives method for gaging key slot depth limits.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R36-34; 1934. Milling Cutters. This recommendation establishes a schedule of simplified sizes and varieties of milling cutters, giving various dimensions and size of hole. Sponsored by the Metal Cutting Tool Institute.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R51-29; 1929. Die Head Chasers, for Self-Opening and Adjustable Die Heads. This recommendation establishes a list of standard stock sizes and threads per inch for national coarse thread and fine thread series, for S.A.E. spark plug and bushing thread,

for lighting fixture and fitting thread, for railway sizes, and for pipe thread.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R115-30; 1930. Full Disk Buffing Wheels. This recommendation establishes a simplified list of diameters for full disk 20-ply buffing wheels. Initiated by the industry (now represented by the Buff and Polishing Wheel Manufacturers Assn.).

U. S. Gov., Navy Dept. Specification 40C2; 1943. Cutters; Milling.

U. S. Gov., Navy Dept. Specification 40P1d; 1944. Punches, Machine; Bushings, Coupling Nuts, Dies, High Dies, and Punches.

U. S. Gov., Navy Dept. Specification 40S1; 1925. Sockets; Tool, Morse-Taper-Shank, Steel.

U. S. Gov., Navy Dept. Specification 41D9b; 1941. Dies; Grommet-Inserting.

U. S. Gov., Navy Dept. Specification 41T15g; 1936. Dies; Diestocks; Taps; and Wrenches, Tap.

U. S. Gov., Post Office Dept., Div. of Motor Vehicle Service, Bureau of the Fourth Assistant Postmaster General. Specifications for Buffing Outfits.

*References.*—Portable electric drills, reamers, buffers and grinders, *see* 711.24; hack saw blades, *see* 615.62; abrasive and grinding wheels, *see* 541.3; carbon tool steel, alloy tool steel, *see* 603.32, 621.35; heat treatment of tool steels, blanking dies, punches, shear blades, *see* 600.5; tolerances on metal fits, *see* 615.82.

## 766. POWER TRANSMISSION MACHINERY

### 766.0 GENERAL ITEMS

American Society of Mechanical Engineers. Joint sponsor with National Bureau of Casualty and Surety Underwriters and International Assn. of Industrial Accident Boards and Commissions. American Standards Assn., B15-1927. Safety Code for Mechanical Power-Transmission Apparatus. Requirements on guards and guarding for connecting rods, cranks, flywheels, shafting, pulleys, belts, link belts, chains, ropes, gears, sprockets, cams, couplings, clutches, counterweights, up to but not including point of operation; requirements for bolts, keys, set screws, and oil cups; rules for care and operation of equipment.

U. S. Gov., Dept. of Labor, Div. of Labor Standards. Special Bulletin 7; 1942. Suggested Standards for Industrial Safeguards. Includes transmission machinery. Covers belts, clutches and couplings, cranks and connecting rods, fly wheels, materials and construction of guards, and shafting.

### 766.1 POWER TRANSMISSION AND CONVEYOR CHAINS AND SPROCKET WHEELS

American Petroleum Institute, Div. of Production, Standard No.7; 1944. Transmission Standards. For equipment and machinery used for drilling and production purposes in the oil industry. Applies to shafting and bored members, keys and keyways, and chains. Covers material, workmanship and finish, marking, shafting and keys basic standards, shafting and keys detailed dimensions, chain, inspection and rejection, and appendices.

American Petroleum Institute, Div. of Production. Standard 11-E; 1941. Specification for Rating of Steel Helical and Herringbone Gear Speed Reducers for Pumping Machines (including Rating Form for Rotary Counterbalances). Gives scope, marking, limitations, design of gearing, design of housing, shafts and bearings, service and application, formulas, suggested method for computing well loads, rotary counter-balances, inspection and rejection, and appendices.

American Petroleum Institute, Div. of Production. Standard 11-E-1; 1941. Specification for Rating of Roller-Chain Speed Reducers for Pumping Machines. Provides a method of rating of roller-chain drives in speed reducers; does not cover chemical properties of material nor use of the equipment.

American Society of Mechanical Engineers. Joint sponsor with American Gear Manufacturers' Assn. and Society of Automotive Engineers. American Standards Assn., B29a-1930. Roller Chains, Sprockets, and Cutters. Includes cutters for sprockets, types of space cutters, construction, data for laying out cutter outlines, recommended cutter sizes for standard roller chain and block roller chain sprockets.

*References.*—Safety codes, *see* 766.0; methods of testing, general requirements for metals, *see* 600.1; cutters for roller chain sprockets, *see* 765; tolerances on metal fits, *see* 615.82.

### 766.2 BALL AND ROLLER BEARINGS

Anti-Friction Bearing Manufacturers Assn., Inc. Ball and Roller Bearing Standard Specification, 1942. Covers introduction; types and specifications for ball bearings, cylindrical roller bearings, spherical roller bearings, and tapered roller bearings; material and workmanship; sampling, inspection, and tests; packing and marking; and deviations from specification. Gives tables showing data for various types of ball bearings, cylindrical roller bearings, snap ring dimensions, ball thrust bearings, closer tolerances, and taper roller bearings.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, Volume 2; 1944. Bearings; Roller, Tapered, Heavy-Duty. Covers definition, characteristics, types and sizes, uses, and substitutes.

Society of Automotive Engineers, Inc., joint sponsor with American Society of Mechanical Engineers. American Standards Assn., B3-1-1933, B3-2-1930, and B3.3-1933. Ball and Roller Bearings. Standard Annular Ball Bearings, Single Row Type (B3.1-1933) specifies the boundary dimensions and their tolerances, of annular ball bearings as affecting their interchangeability, for light, medium, and heavy series. Recommended Practice Annular Ball and Roller Bearings, Wide Type (B3.2-1930) is the same as the regular light, medium, and heavy series of wide type of the S. A. E. Standard (p. 285, 1930 edition S. A. E. Handbook) with extended sizes supplementing the regular light medium series only. Standard Angular Contact Ball Bearings (B3.3-1933) specifies dimensions and tolerances for light, medium, and heavy series.

Society of Automotive Engineers. 1944 Handbook, Section 1—Aeronautical Parts, Materials, and Codes. S.A.E. Standard Aircraft Ball Bearings, revised 1940. These bearings constitute nine series developed especially for use in aircraft for which the regular types are not so well suited. They are dimensioned entirely in decimal inches, the bores being in even

increments of 1/16 in. Includes diagrams of each series with table of sizes, dimensions, and tolerances.

Society of Automotive Engineers. 1944 Handbook, Section 2—Units, Parts, and Fittings. S.A.E. Standard Ball and Roller Bearings, revised 1944. The accompanying tables include the types, complete range of standard sizes and their boundry dimensions of standard ball and roller bearings commonly used for automotive and other industrial applications. Covers tolerances, aircraft control ball bearings, standard for measurements, conversion factors, rounding off numbers, eccentricity, corner radius and fillets, endplay, shielded bearings, bearing code numbers, types of ball and roller bearings, and tables giving types and sizes for various ball and roller bearings.

Society of Automotive Engineers. 1944 Handbook, Section 2—Units, Parts, and Fittings. S.A.E. Standard Ball and Roller Bearing Lock Nuts and Washers, revised 1944. Gives drawings, size designations, and tables giving sizes and dimensions for ball bearing shafts, ball bearing lock nuts, ball and roller bearing lock washers, taper roller bearing shafts, and taper roller bearing lock nuts.

Society of Automotive Engineers. 1944 Handbook, Section 2—Units, Parts, and Fittings. S.A.E. Standard Ball Thrust Bearings, revised 1944. Diagrams and tables of dimensions with tolerances for ball thrust bearings, self-aligning ball thrust bearings, and ball bearings.

Society of Automotive Engineers. 1944 Handbook, Section 2—Units, Parts, and Fittings. S.A.E. Standard Taper Roller Bearings, revised 1944. Diagrams and tables of dimensions with tolerances for various types of taper roller bearings.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R67-36; 1936. Taper Roller Bearings. This recommendation establishes a list of standard sizes of roller bearings for the light, medium, and heavy series, and steep angle taper roller bearings. Sponsored by the Society of Automotive Engineers.

U. S. Gov., Federal Specification FF-B-171; 1941. Amendment 2; 1942. Bearings; Ball. Covers two grades—(I) precision, and (II) standard; and nine types—(A) radial single row (light, 30 and 200 series; medium, 300 series; and heavy, 400 series); (B) angular contact, single row, single mounting (light, 7200 series; medium, 7300 series; and heavy, 7400 series); (C) angular contact, single row, duplex mounting (light, 7200 series; medium, 7300 series; and heavy, 7400 series; (D) radial and angular contact, double row (light, 5200 series; medium, 5300 series; and heavy, 5400 series); (E) radial, double row, self aligning (light, 1200 series; medium, 1300 series; and medium wide, 2300 series); (F) thrust, single-direction, flat face (medium, 20300 series; and heavy, 20400 series); (G) radial, single shielded, single row (light, 200 Z series; and medium, 300 Z series); (H) radial, double shielded, single row (light, 200 Y series; and medium, 300 Y series); and (S) radial, single row, inch (medium, S series). Covers material and workmanship; general requirements; detail requirements for each type; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification FF-B-186; 1941. Amendment 1; 1942. Bearings; Roller. Covers three classes—(a) light, (b) medium, and (c) heavy; three grades—(I) ultraprecision, (II) precision, and (III) standard; and four types—(A) cylindrical, standard width; (B) cylindrical, wide; (C) tapered, shallow angle; and (D) tapered, steep angle. Covers material and workmanship; general requirements; detail requirements for each type; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., Navy Dept. Specification 42B5c; 1939. Bearings; Ball.

U. S. Gov., Navy Dept. Specification 42B6a; 1940. Balls; Bearing, Steel.

U. S. Gov., Navy Dept. Specification 42B10; 1937. Bearings; Roller.

U. S. Gov., Post Office Dept., Div. of Motor Vehicle Service, Bureau of the Fourth Assistant Postmaster General. Specifications for Bearings; Tapered Roller.

*References.*—Steel for ball and roller bearings, *see* 621.31.

## 766.9 MISCELLANEOUS POWER TRANSMISSION MACHINERY

*References.*—Leather belting, rubber and balata belting, *see* 066.3, 207.3; cotton belting, hair belting, *see* 314.1; shafts and shafting, *see* 611.52; pulleys, pinions and gears, *see* 611.16, 611.55.

## 767. WELDING AND FLAME-CUTTING MACHINERY

American Bureau of Shipping. Rules for the Classification and Construction of Steel Vessels, 1944. Welding. Include requirements for plans and specifications, approval of procedure, electrode approval, qualification of welding operators, workmanship and supervision, details of joints, forms of welds required, and tests.

American Institute of Electrical Engineers, No. 38; 1934. Joint sponsor with National Electrical Manufacturers Assn. American Standards Assn., C52.1-1933. Standards for Electric Arc Welding Apparatus. Includes d.c. generators, motor generator sets, a.c. transformers, and resistors, used in arc welding. Definitions, duty classification, rating, heating limits and methods of testing, measurement of efficiency, dielectric test, standard values for current and voltage. Efficiency limits not stated.

American Institute of Electrical Engineers, No. 39; 1934. Joint sponsor with National Electric Manufacturers Assn. American Standards Assn., C52.2-1933. Standards for Resistance Welding Apparatus. Applies to resistance welding transformers and apparatus for electro-percussive welding. Definitions, duty classification, rating, heating limits and measurement, measurement of input to transformer, dielectric test.

American Institute of Steel Construction. Tentative Standard Welded Connections for Tier Buildings, 1939. For welding of steel framed buildings; recommended principles for heavily coated electrodes, flexibility of connections, welding in cold weather, and fillet weld sizes, with diagrams of details.

American Society of Mechanical Engineers. Boiler Construction Code. Welding qualifications, 1943. Rules apply to the manual application of the arc and gas welding processes and to those ferrous metals which in their unwelded conditions will meet the requirements of the guided bend test prescribed in the code. Also outlines in detail the operator's qualification tests.

American Society for Metals. Metals Handbook, 1939 edition. Welding of Metals; General. Covers welding of metals.

American Standards Assn., Z49.1-1944. Safety in Electric and Gas Welding and Cutting Operations (American War Standard). Intended as a guide for the protection of workers from injury and illness and for the protection of property from fire or other damage arising out of the installation operation, and maintenance of electric and gas welding and cutting equipment. Gives definitions, installation and operation of gas welding and cutting equipment, installation and operation of arc-welding and arc-cutting equipment, installation and operation of resistance-welding equipment, fire prevention, protection of personnel, and ventilation and health protection.

American Transit Assn. Standard Rules for Arc Welding, W47-36; 1936. Covers instructions to welders, inspection of work and progress, maintenance of a daily record, a training course, and repairs and upkeep of machines. It also covers method of welding rail joints, cupped rail ends, and manganese-steel.

American Welding Society. An Investigation of Welded Seat Angle Connections, 1934. From an economic viewpoint it is desirable to know the minimum size of weld made necessary by the respective requirements of vertical shear and of bending, the bending being affected by the nature and position of the load. Covers synopsis, introduction, general statement of the problem, test program, test data, discussion of results, theoretical analysis, and recommendations for design.

American Welding Society. Code of Minimum Requirements for Instruction of Welding Operators. Part A—Arc Welding of Steel 3/16 to 3/4 Inch Thick, Tentative, 1942. Covers general requirements, equipment and facilities of the school, qualifications and duties of instructor, instruction in welding practice, instruction in welding theory, final tests, and appendices.

American Welding Society. Code of Minimum Requirements for Instruction of Welding Operators. Part B-1—Oxy-Acetylene Welding of Steel-Aircraft, 1944. Covers general requirements, equipment and facilities of the school, qualifications and duties of instructor, instructions in welding practice including course I and course II, instruction in related information, final tests, and appendices.

American Welding Society. Definitions of Welding Terms and Master Chart of Welding Processes, 1942. Includes definitions of general terms, types of joints and welds, details of joints and welds, arc welding, gas welding, resistance welding, brazing, thermit welding, forge welding, arc and oxygen cutting, testing and inspection, illustrative diagrams, and master chart of welding processes.

American Welding Society. Engineering Essentials for Welders, 1942. A presentation and discussion of the engineering aspects of welding residing in the hands of welders and those immediately responsible for fabrication and erection of welded structures. Covers introduction, forces and stresses, steel, welding design, stress paths, bending, temperature effects, fatigue stresses, conclusion, and appendix.

American Welding Society. Filing Classification of Welding, Brazing, Soldering and Cutting Processes, Materials, and Applications, 1936. Gives complete details for a standard filing or classification system covering the entire welding field and allied processes and may be used as either a filing system or an indexing system.

American Welding Society. Guide to the Weldability of Steels. A proposed system of determining the effect of welding procedure upon the ductility of the heated zone adjacent to the weld in plain carbon and alloy steels. Covers introduction, how to use this guide book for the solution of practical problems, the experimental basis of the system, and effects of secondary variables.

American Welding Society. Inspection Method Used in Manufacture of U-69 and U-70 Pressure Vessels, 1938. Where X-ray equipment is available it is recommended in place of plugs removed. This covers the application of the trepanned plug method. Gives selection of location and number of plugs removed, size of plugs and their removal, examination of plugs and their approval or rejection, and filling holes made by the removal of plugs.

American Welding Society. Measurement of Cooling Rates Associated With Arc Welding and Their Application to the Selection of Optimum Welding Conditions, 1943. To evaluate the weldability of steels for the arc-welding fabrication of tanks, gun mounts, and other war material for the purpose of selecting optimum welding conditions. Gives a detailed discussion of the subject with numerous charts showing curves and tables of data.

American Welding Society. Qualifying Welding Operators for Important Work, 1943. The purpose of this article is to present a general survey of the subject of welding operator qualification tests, and the qualifications required of welding operators for various types of work. Covers code requirements, A.W.S. standard qualification procedure, inspection agencies, requirements for government employment, table giving type of welding, title of code or specification, and name of sponsoring organization, field of application, and source from which copy of code may be obtained.

American Welding Society. Recommended Practices for Inspection of Fusion Welding, Tentative, 1942. Covers qualifications of welding inspectors, duties of inspectors, inspection and testing of welded structures, welding characteristics of ferrous metals, welding characteristics of nonferrous metals, and etching reagents.

American Welding Society. Recommended practice for the Spot and Seam Welding of Low Carbon Steel, 1943. An A.W.S. Emergency Standard. The data submitted on the following charts have been complied by canvassing approximately 60 fabricators of mild steel structures and resistance welding equipment manu-

facturers. Discusses low carbon spot welding data, and low carbon steel seam welding data, and gives tables showing data for the two types of welding.

American Welding Society. Recommended Procedure To Be Followed in Preparing for Welding or Cutting Certain Types of Containers Which Have Held Combustibles, 1940. Applies to containers that may not be entirely free of combustible solids, liquids, vapors, dusts, and gases, when such containers are to be subjected to any type of hot work or operation that might create a spark or flame. Covers scope, general precautions, initial treatment, hot chemical method of cleansing, steaming method of cleaning, water filling treatment, inert gas treatment, and appendix.

American Welding Society. Report of the Structural Steel Welding Committee of the American Bureau of Welding, 1931. Covers introduction, procedure, qualification test results, adjustment of length and cross-section, program test results, miscellanea, conclusions. recommendations, fields for further research, and appendices giving detailed records.

American Welding Society. Report of Thermal Stresses and Shrinkage in Welded Ship Construction, 1941. The phenomena of shrinkage in welded joints creates a most important problem in welded ship construction—first, as a matter of dimension; and second, with regard to the stresses which would be set up in the structure. Gives introduction and discusses loss of dimension, distortion, residual or "locked-up" stress, conclusions, and appendix.

American Welding Society. Rules for Field Welding of Steel Storage Tanks, 1940. Amendments, 1942. These rules are intended to apply to the construction of fusion welded bulk storage tanks of the above-ground type for holding liquid products operating generally at atmospheric pressure or at not over 15 lb. per square inch gage pressure. Covers materials, qualification of welding procedure and testing of welding operators, weld design values, joint design, welding design details, details of welding procedure, stipulations for testing welded shell joints by sectioning methods, tank testing, repairs, and appendix.

American Welding Society. Rules for Fusion Welding Piping in Marine Construction, 1944. Prescribed for plain carbon steel piping in which the carbon does not exceed 0.35 percent. Covers qualification of welding procedure, rules for qualification of welding operators, design of piping, layout and dimensions of piping, types of welded joints to be used, class 2 piping, preheating, stress relieving, radiographic and other tests, stamping of work, and hydrostatic tests.

American Welding Society. Sponsored by American Institute of Electrical Engineers and American Society of Mechanical Engineers. American Standards Assn., Z 32.1-1942. Graphic Symbols for Use on Drawings in Welding and Instructions for Their Use. Intended to provide means for conveying the information from the designer to the workmen.

American Welding Society. Standard Methods for Mechanical Testing of Welds, 1942. These standards are the best compromise which could be found in the expectation that existing codes and specifications could be revised to comply with this standard with the least trouble and expense. It gives the requirements for the specimens, the testing procedure, and the methods of obtaining the properties.

American Welding Society. Structural Failures in Welded Ship Construction, Tentative, 1944. Covers principal factors causing failure, definitions, residual stresses, means to reduce residual stresses, reaction stresses, general precautions relative to reaction stresses, stress concentration, cold weather, metallurgical considerations, and engineering control.

American Welding Society. Tentative Standards and Recommended Practices and Procedures for Spot Welding of Aluminum Alloys, 1942. Covers standards of weld quality, material preparation, welding technique, methods of testing, inspection, design, welding equipment and installation, personnel, production, and appendix.

American Welding Society. Tentative Standard Qualification Procedure, 1941. Includes the method to be pursued in investigating and qualifying a welding procedure and outlines the method of qualifying welding operators. They are intended to apply only to the manual application of the arc-and-gas-welding processes, and to those ferrous metals which in their unwelded condition will meet the requirements of the guided bend test prescribed.

American Welding Society. Welded Beam-Column Connections, 1936. This paper deals with beam-column connections designed for certain end restraints. Covers preparation of specimens, test procedure, discussion of results of tension tests, analysis of connections, discussion of cantilever test, discussion of complete beam-to-column connections, proposed method of design, and conclusions.

American Welding Society. Welding Standards for Alternate Aircraft Steels, Tentative, 1944. The tests herein described are presented as satisfactory weldability tests to compare proposed alternate steels with standard aircraft steels. Gives details for tee-bend test, transverse butt-joint tension test of 1/4 in. plate, transverse butt-joint tension test of 1/8 in. sheet, transverse butt-joint tension test of 1 in. tubing, and welded-tube triangle test.

Assn. of American Railroads, Mechanical Div., Electrical Section. Manual of Standard and Recommended Practice, 1941. Arc welding. Gives requirements for arc welding and covers electric metallic process, welding cast iron; gives details for metallic arc welding various grades of steel, steel alloy, and various metals; and for carbon arc welding mild steel and copper.

Assn. of American Railroads, Mechanical Div., Electrical Section. Manual of Standard and Recommended Practice, 1941. Electric Welding. Includes definitions and fundamentals, metallurgical characteristics of a weld, weldability of ferrous metals, and chemistry of welding; spot, butt, and seam welding machines; control of current, resistance, and time; inertia, mechanical, motor, induction, electronic, compensated, and automatic timers; precision control; and interrupted spot welding, and qualification test for welders.

Assn. of American Railroads, Mechanical Div., Electrical Section. Manual of Standard and Recommended Practice, 1941. Oxy-Acetylene Welding and Cutting.

Covers introduction, oxygen, regulators, accessories, oxy-acetylene flame, setting up equipment, flashback or sustained backfire, cutting, oxy-acetylene welding, equipment, and information a welder should know.

Assn. of American Railroads, Mechanical Div., Electrical Section. Manual of Standard and Recommended Practice. 1941. Welding of Metals and Alloys. Covers technique and procedure for welding of metals and alloys in general use, and oxy-acetylene welding procedure for metals and alloys.

Assn. of American Railroads, Operations and Maintenance Dept., Engineering Div., Signal Section. Manual of Recommended Practice, 1941. Track Welding or Heat Treating in Track Circuit Territory. Precautions to be observed in the use of electric arc or oxygen-acetylene in the vicinity of railway signal circuits. Grounding, insulation replacement, etc.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1944. Fusion Welding and Bronze Welding, Limits and Regulations. Recommended Practice, revised 1943. Requirements for the certification of operators, preparation, welding procedure, weld contour, building up worn surfaces, heat treatment after welding, marking welds, welding limitations, and diagrammatic illustrations.

Heating, Piping, and Air Conditioning Contractors National Assn. Specifications for Metallic Arc Welding of Steel Pipe, Fittings, and Flanges, No. 1; 1939. Describes process, base metal and filler metal to meet A.S.T.M. standards, preparation of base material, nature of electric current, number of beads and current characteristics, cleaning, defect, peening, heat treatment, and illustrations of welds.

Heating, Piping, and Air Conditioning Contractors National Assn. Specifications for Oxy-Acetylene Welding of pipes, Fittings, and Flanges, No.2; 1939. Gives requirements for base material conforming to A.S.T.M. specifications, limits carbon content to .35 for filler metal, preparation of base material, size of welding tip, nature of flame, method of welding, cleaning, defects, heat treatment, and dimensional drawings of standard welds.

Heating, Piping, and Air Conditioning Contractors National Assn. Specifications for Metallic Arc Welding of Carbon Molybdenum Pipe, Fittings, and Flanges, No.3; 1939. Covers requirements for base materials conforming to A.S.T.M. specifications, but limits carbon content to .35 for filler metal, and preparation of base material, nature of current, number of beads of welding and current characteristics, cleaning, defect, peening, preheating, stress relieving, and illustrations of typical welds.

Heating, Piping, and Air Conditioning Contractors National Assn. Standard Manual on Pipe Welding, 1931. This standard covers welding apparatus, including regulators, welding and cutting torches, acetylene generators, accessories, oxygen, acetylene, and welding rod; also gives mechanics of welding and cutting, including pipe welding and tests, designing, laying out and fabricating welded pipe joints and fittings, and application to pipe installation. Includes specifications for welding of steel and wrought iron pipe, strength of welds, precautions and safe practices.

Heating, Piping, and Air Conditioning Contractors National Assn. Standard Manual on Pipe Welding, 1931. This standard includes specifications for welding of steel and wrought iron pipe, both standard and extra heavy weight, plain or galvanized, for steam and process piping operating at pressures not exceeding 250 lb., and temperatures not exceeding 406° F. Pipe to meet A.S.T.M. specifications, qualifications of welder, design of welded joints, tests, and diagrams of standard operations.

International Acetylene Assn. Bronze Welding or Brazing of Iron and Steel by the Oxy-Acetylene Process. The growing Importance of bronze welding makes this pamphlet a very timely one.

International Acetylene Assn. Effect of Flame-Cutting on Steel. The original pamphlet consisted of not much more than a bibliography, but has now been expanded to a treatise of some 60 pp., completely covering the subject.

International Acetylene Assn. Hard-Facing by the Oxy-Acetylene Process. Economics of hard-facing, the various hard-facing materials and factors determining their selection, complete procedures for applying hard-facing materials to steel and cast iron, and typical applications of hard-facing in important industries. Hardness tests and conversion scales are included in the appendix.

International Acetylene Assn. Miscellaneous Uses of the Oxy-Acetylene and Air-Acetylene Flames. A pamphlet devoted to the many uses of the oxy-acetylene and air-acetylene flames, other than in welding and cutting.

International Aceytlene Assn. Oxy-Acetylene Cutting. A comprehensive treatise on manual and machine flame-cutting and flame-machining, including the chemistry of the processes, the cutability of various metals, etc.

International Acetylene Assn. Oxy-Acetylene Welding and Its Applications. The chemistry of the welding process, the technique of welding various ferrous and nonferrous metals and alloys, the testing of welds, etc.

International Acetylene Assn. Safe Practices for Installation and Operation of Oxy-Acetylene Welding and Cutting Equipment. Covers the storage of calcium carbide and gases, as well as the installation, operation, and use of oxy-acetylene welding and cutting equipment. Chapters are devoted to eye protection, safe clothing, fire prevention, accident prevention, and industrial health.

International Acetylene Assn. Sample Pipe Welding Specifications. To meet the demand of architects and engineers for specifications covering the welding of piping to be incorporated in any general specifications.

International Aceytlene Assn. Standard Hose Connection Specifications, 1939. Includes four classes of hose connections, for oxygen and for fuel gas, size, type and kind of thread, etc., optional material, diameter of drilling through external fitting and gland, form of end shank, etc.

International Acetylene Assn. Tests for the Selection of Welding Operators. Intended for such

purposes as the quick, economical selection of competent welding operators for other than so-called "code work."

International Acetylene Assn. Training Oxy-Acetylene Welding and Cutting Operators, Instructor's Outlines—including Outline Course for Inspectors. Presents in outline form a series of self-contained lessons for training welding and cutting operators and inspectors. These lessons have been arranged in the ideal order for presenting a general course in welding, courses in aircraft welding and pipe welding, a general course in cutting, a course for structural steel cutting operators, and a course for inspectors. Suggestions for rearrangement and amplification to plan any type of course are included. Each lesson contains an outline of theory or related material to be covered in lecture, suggested assignments for outside study, recommendations for demonstrations, and practice exercises.

International Acetylene Assn. Welding Codes and Specifications. Resumes of the fusion-welding provisions of various codes and specifications, including the A.S.M.E. Boiler and Unfired Pressure Vessel Code, the A.S.A. Pressure Piping Code, Etc., brought up-to-date and enlarged, due to recent rulings by authoritative bodies permitting increased use of welding and cutting on so-called "code work."

National Board of Boiler and Pressure Vessel Inspectors. Recommended Rules for Repairs by Fusion Welding to Power Boilers and Unfired Pressure Vessels, 1941. Covers general requirements, rules for welding, permissible welded repairs, and appendix.

National Board of Fire Underwriters. Gas Systems for Welding and Cutting, No.51; 1942. Covers the use of all gases used for fusion welding and oxygen cutting; stationary generators, outside housing, inside generator rooms, ventilation, protection from freezing, gas holder, compressor, portable generator, service piping requirements, shop pipe line headers, storage of cylinders, oxygen, calcium carbide, and welding equipment.

National Electrical Manufacturers Assn. Electric Arc-Welding Machine and Electrode Standards, 42-81; 1942. Covers the manufacture, test, and performance of d.c. and a.c. arc-welders. D.c. arc-welding generators and motor-generator sets, a.c. arc-welding equipment, rectifier arc-welding equipment, general auxiliary equipment, temperature tests, efficiency, dielectric tests, manufacturing standards, and definitions.

National Fire Protection Assn. National Fire Codes for Flammable Liquids, Gases, Chemicals, and Explosives, 1943. Gas Systems for Welding and Cutting. Covers acetylene generators-general, stationary acetylene generators, portable acetylene generators, service piping systems for all gases, storage of cylinders, storage of calcium carbide, miscellaneous, and operating procedure.

Resistance Welder Manufacturers Assn. Electrical Standards for Resistance Welding Equipment, 1944. Gives nomenclature and definitions and covers service conditions, duty classification, rating, temperature limitations, measurement of input, dielectrical test, electrical output of resistance welding machines, conversion of resistance welding machines from 60-cycle to 25-cycle operation, and name and rating plates.

Resistance Welder Manufacturers Assn. Seam Welding Electrodes, 1940. Covers seam welding electrodes and replacable resistance welding electrodes. Gives tables covering recommended electrode materials for spot welding similar and dissimilar metals using conventional spot welding methods; classification of comparative alloys; coding system for pointed, dome, flat, and offset standard electrodes; pointed tips with tapered shanks; flat tips with tapered shanks; dome tips with tapered shanks; and offset tips with tapered shanks.

Resistance Welder Manufacturers Assn. Seam Welder Standards, 1944. Gives nomenclature and definitions and covers machine sizes and types of operation, electrical capacities, nominal throat depths, nominal electrode forces, mechanical features, electrical features, and optional features.

Resistance Welder Manufacturers Assn. Spot and Projection Welder Standards, Press Type, 1944. Gives nomenclature and definitions and covers machine sizes and types of operation, electrical capacities, nominal throat depths, nominal electrode forces, mechanical features, electrical features, and optional features.

Resistance Welder Manufacturers Assn. Spot Welder Standards, Horn Type, 1944. Gives nomenclature and definitions and covers machine sizes and types of operation, electrical capacities, nominal throat depths, nominal electrode forces, mechanical features, electrical features, and optional features.

Resistance Welder Manufacturers Assn. Stored Energy Welder Standards, 1944. Gives nomenclature and definitions and covers machine sizes and types of operation, welding capacities, nominal throat depths, mechanical features, electrical features, and optional features.

Resistance Welder Manufacturers Assn. Upset-Butt and Flash-Butt Welder Standards, 1944. Gives nomenclature and definitions and covers machine sizes, electrical capacities, nominal upset forces, mechanical features, electrical features, and optional features for upset-butt welders and flash-butt welders.

Underwriters' Laboratories, Inc. Standard for Blowpipes or Torches for Welding, Cutting, Heating, Lead Burning, and Soldering, 1928. Covers oxy-acetylene or other oxy-fuel gas torches. Recommends left hand thread on fuel gas fittings, and right hand thread on oxygen fittings as per standard of the International Acetylene Assn. Includes construction of nozzle, and performance tests.

Underwriters' Laboratories, Inc. Standard for Transformer Type Arc-Welding Equipment, 1937. To be employed on power circuits in accordance with National Electrical Code. General, frame and enclosure, corrosion and protection, supply connections, internal wiring, current-carrying parts, electrical insulation, lampholders, switches and control devices, transformers, spacings, grounding, secondary terminals and open-circuit potentials, power input, temperature, overload, endurance, dielectric strength, burnout, rating, marking, and inspection of listed products.

U. S. Gov., Army Air Forces. Specification 20011D, 1944. Welding; Spot, General Specification for.

U. S. Gov., Army Air Forces. Specification 20028-A (1); 1943. Charge; Welding, Portable Equipment Set.

U. S. Gov., Army Air Forces. Specification No.20036, 1944. Welding; Flash, Butt and Pressure Gas, General Specification for.

U. S. Gov., Army-Navy Aeronautical Specification AN-T-38a; 1944. Tests; Aircraft Welding Operators' Certification.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Handbook H28; 1944. Screw-Thread Standards for Federal Services. Presents complete dimensional data upon which specifications may be based for threaded products for government requirements. Includes terminology (definitions and symbols); miscellaneous standardized product threads of American National thread form or American National pipe-thread form; and appendixes containing supplementary information of both a general and a technical nature, including such specifications as are not intended to be mandatory.

U. S. Gov., Dept. of Interior, Purchasing Office. Standard Specification No.13. Electric Arc Welding Machines.

U. S. Gov., Dept. of Labor, Div. of Labor Standards. Special Bulletin 5; 1941. Control of Welding Hazards in Defense Industries. Covers eye injuries, burns, gases, fumes and smoke, metal fume fever, metal poisonings, control of gases and fumes, use of respirators, oxyacetylene welding and cutting, and summary.

U. S. Gov., Dept. of Labor, Div. of Labor Standards. Standards for the Protection of Workers in Gas and Electric Welding, 1943. Covers gas welding and flame cutting, electric arc welding, resistance welding, eye protection in gas and electric welding, and ventilation and health protection standards for gas and electric arc welding. Issued by permission of the State of New Jersey Dept. of Labor.

U. S. Gov., Navy Dept., Bureau of Yards and Docks. Specification 22Yb; 1939. Structural Steel Welding.

U. S. Gov., Navy Dept. General Specifications for Inspection of Materials, 1941, Appendix VII, Welding, Part A, Section A-2, Symbols for Arc, Gas, and Resistance Welding With Instructions for Use, 1941; Appendix VII, Welding, Part D, Section D-1, General Qualifications of Welding Processes, 1938; Appendix VII, Welding, Part E, Section E-1, Qualification Tests for Metal Arc Welders, 1938; Appendix VII, Welding, Part E, Section E-2, Qualification Tests for Gas Welders, 1939; and Appendix VII, Welding, Part G, Section G-1, General Qualification of Equipment, 1938.

U. S. Gov., Navy Dept. Specification 17W1d; 1940. Welding-Sets; Electric, Direct-Current Arc, Variable Voltage.

U. S. Gov., Navy Dept. Specification 41I4b; 1939. Igniters; Oxyacetylene-Torch.

U. S. Gov., Navy Dept. Specification 41T181; 1943. Torches, Welding and Cutting, Hand, for Oxyacetylene and Oxyhydrogen Gases; Torch-Cutting Attachments and Replacement Torch Tips.

U. S. Gov., Navy Dept. Specification 41T25c; 1944. Torches; Oxyacetylene, Oxyhydrogen, Welding, Hand, Aircraft Use.

U. S. Gov., Navy Dept., U. S. Coast Guard, Bureau of Marine Inspection and Navigation. Marine Engineering Regulations and Material Specifications, 1942. Contains specifications and requirements for materials, design, construction, installation, and inspection of boilers, unfired pressure vessels, and appurtenances thereof; also piping, valves, fittings, flanges, safety valves, etc., upon the strength and efficiency of which safety of life is dependent, and are intended for maximum temperatures of 1,000° F. Includes specifications for fusion welding.

U. S. Gov., Post Office Dept., Div. of Motor Vehicle Service, Bureau of the Fourth Assistant Postmaster General. Specifications for Welding Outfits.

U. S. Gov., Treasury Dept., Procurement Div., 542b; 1943. Electrodes; Arc Welding, Iron and Steel. Covers 30 classes showing welding positions, covering or coating and polarity and current of electrodes, tensile strength, yield point, and elongation. Gives requirements for sizes and lengths, material, finish, and details; methods of sampling, inspection, and tests; and packing and marking.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 57-205-2; 1944. Welding; Symbols for.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 57-205-3; 1944. Welding; Joint Design.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 57-206-1; 1944. Welding of Constructional Steel; Metal-Arc, Manual or Machine, for Artillery and Small Arms Material, Excluding Submarine Mines and Observation Towers.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 57-206-11; 1944. Welding of Constructional Steel; Gas, Manual or Machine, for Artillery and Small Arms Material, Excluding Submarine Mines and Observation Towers.

## 768. FOUNDRIES AND FOUNDRY MACHINERY

American Foundrymen's Assn. and National Founders' Assn., Joint sponsors. American Standards Assn., B 8-1932. Safety code for the Protection of Industrial Workers in Foundries. To provide safety for life, limb and health, general requirements on construction, upkeep and operation of entrances, floors, pits, galleries, gangways, aisles, foundry equipment, finishing and cleaning machinery, heating and ventilation, protective clothing, and allowable duties of female workers.

American Foundrymen's Assn. Recommended Good Safety Practices for the Protection of Workers in Foundries, 1940. For safe working environment, safeguards, good housekeeping, warning signs, regulations, investigation of accidents, plant layout, and cupola charging equipment, repairing, shields, tap holes, etc. Also for safe material handling, storage, cleaning, finishing, moving of machinery, guard-

ing of power apparatus, metal and wood working machines; and personal protective devices as shoes, leggings, clothing, goggles, masks, etc.; ladders, mixers, heating, electrical equipment, illumination, and first aid.

# 770-779 TEXTILE, SEWING, AND SHOE MACHINERY

## 770. GENERAL ITEMS

American Assn. of Textile Chemists and Colorists. 1943 Yearbook. Launder-Ometer. Standard laundry machine for laboratory washing tests for testing fastness of dyed textile materials. Consists of a heavily constructed copper tank supported on angle iron frame, with a brass and aluminum rotor, operated at a specified speed, rubber or metal abrasive balls, and tank heater.

American Society for Testing Materials, D 76-42; 1942. American Standards Assn., L 15.1-1943. Textile Testing Machines. Descriptive of testing machines generally applicable for the determination of certain physical characteristics of textile materials. Covers breaking strength and elongation testing machines, thickness gage, bursting testers, and twist testers.

American Society for Testing Materials, E 41-42 T; 1942. Tentative Definitions With Procedures Relating To Conditioning and Weathering. Intended to apply to all cases where combinations of atmospheric influences are an essential part of materials testing. Definitions, relative humidity determination, room temperature determination and test in standard laboratory atmosphere.

American Society for Testing Materials, E 42-42 T; 1942. Tentative Recommended Practice for Characteristics of Standard Carbon Arc Accelerated Weathering Unit. The characteristics recommended cover those points of fundamental importance that will provide an acceptable accelerated weathering unit for many purposes, and at the same time permitthe development of detailed and specific cycles needed for the obtaining of particular data and falling within the general structure of this recommended practice.

National Safety Council. Safety Code for Textiles. American Standards Assn., L1-1929. Published by U. S. Dept. of Labor, Bureau of Labor Statistics. A standard for safeguarding textile machinery and equipment by concerns operating such machinery and by the manufacturers of textile machinery and equipment; provides for guards and safe operating features for machines and equipment.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R143-39; 1939. Paper Cones and Tubes, for Textile Winding. This recommendation establishes a simplified list of sizes of paper cones and parallel tubes.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R152-34; 1934. Basic Dimensions for Cones for Warp and Knitting Yarns and Hole Sizes for Bobbins for Filling Cop Winders. This recommendation establishes basic dimensions for worsted and cotton and worsted warp yarns, and for mercerized and silk hosiery knitting yarns; and hole sizes for various types of bobbins for filling cop winders.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R153-34; 1934. Hole Sizes for Taper Tubes for Filling Cop Winders. This recomendation establishes standard hole sizes for taper tubes made of paper, wood, metal, or other material.

*References.*—Methods of testing cotton fabrics, *see* 300.4.

## 771. KNITTING AND LACE-MAKING MACHINERY

*References.*—Safety code for textile machinery, *see* 770.

## 772. COTTON-MANUFACTURING MACHINERY

*References.*—Safety code for textile machinery, *see* 770.

## 773. WOOL-MANUFACTURING MACHINERY

*References.*—Safety code for textile machinery, *see* 770.

## 774. JUTE MACHINERY

*References.*—Safety code for textile machinery, *see* 770.

## 775. SEWING MACHINES

U. S. Gov., Joint Army-Navy Specification JAN-E-30; 1944. Extinguisher; Fire, Demountable, Nestable, Four-Gallon, Water Pump Type.

U. S. Gov., Navy Dept. Specification 66M6e; 1943. Machines; Sewing.

U. S. Gov., Treasury Dept., Procurement Div., 318e; 1944. Sewing Machines. Covers seven types—(I) household, foot treadle; (II) household, motor-driven; (III) household, portable, motor-driven, full size head; (IV) household, portable, motor-driven three-quarter size head; (V) medium-heavy-duty, foot treadle, with round bobbin; (VI) medium-heavy-duty, motor-driven, with round bobbin; (VII) medium-heavy-duty, motor driven, high speed, with round bobbin. Gives requirements for material and workmanship, type of stitch, performance, reversible stitching, wood work, motors and control, adjustment, guards, lubrication, tools, belts, and details for each type; methods of inspection and tests; and packing and marking for shipment.

U. S. Gov., Treasury Dept., Procurement Div., 452B; 1942. Tables; Power, Sectional, Sewing. Covers three types—(I) tables arranged for individual motor drive; (II) tables arranged for line shaft; and (III) tables arranged for "safety" drive. Gives requirements for woodwork, shafting, transmitters, motors, treadles, and accessories; methods of sampling and inspection; and packing and marking.

U. S. Gov., Veterans Administration. Specification VA-M-251b; 1941. Sewing machines; Hand and Foot Power.

U. S. Gov., Veterans Administration. Specification VA-M-304c; 1941. Power Sewing Machines, for Use in Hospitals.

U. S. Gov., Veterans Administration. Specification VA-M-319; 1942 to VA-M-326; 1942, inclusive. Power Sewing Machines.

U. S. Gov., Veterans Administration. Specification VA-M-328; 1943. Sewing Machines; Foot Power, for Use in Hospitals.

*References.*—Safety code for textile machinery, *see* 770

### 776. SHOE MACHINERY

## 780-789 INDUSTRIAL PLANT MACHINERY

### 781. WEIGHING, PACKAGING, BOTTLING, AND MAILING MACHINERY

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 100-1; 1924. Baling of Clothing and Equipage.

*References.*—Conveyor chains for bottling plant, *see* 766.1.

### 782. CHEMICAL-PLANT EQUIPMENT, CEMENT PLANT, PULP AND PAPER, AND CLAY-WORKING MACHINERY

National Safety Council, sponsor. American Standards Assn., P1-1936. Safety Code for Paper and Pulp Mills. Safety rules covering unloading and storage of pulp wood, guarding of saws, hand barkers, barking drums, etc., guards and safe operation in rag and old paper preparation, acid making, chemical processes of making pulp, preparing pulp for paper machine, machine room, and finishing room.

### 783. GLASS-FACTORY EQUIPMENT, PAINT MACHINERY, BREWERS MACHINERY, RUBBER-MILL MACHINERY

National Safety Council. Joint sponsor with International Assn. of Industrial Accident Boards and Commissions. American Standards Assn., B28a-1927. Safety Code for Rubber Mills and Calenders. Requirements on installation of safety-trip controls and quick-stop facilities, determination of distance of travel of rolls, limits on stopping distances. Published by U. S. Gov., Dept. of Labor, Bureau of Labor Statistics, Bulletin 447.

### 784. WOODWORKING MACHINERY

#### 784.0 GENERAL ITEMS

National Conservation Bureau, joint sponsor with International Assn. of Industrial Accident Boards and Commissions. American Standards Assn., 01.1-1944. Safety Code for Woodworking Machinery. Intended as a guide for the safe installation, operation, and maintenance of woodworking machinery, including cooperage operations and the making of veneer. Covers general requirements, plant layout, machines and equipment, woodworking machinery, veneer machinery, cooperage machinery, operating rules, appendix, and illustrations.

National Fire Protection Assn. and U. S. Dept. of Agriculture, joint sponsors. American Standards Assn., Z 12.5-1942. Code for the Prevention of Dust Explosions in Wood-working Plants. Covers hazards involved by production of finely divided wood particles in the course of woodworking operations; regulations for construction, ventilation, woodwaste collecting equipment, woodwaste disposal, housekeeping, electrical equipment and wiring, and fire protection.

U. S. Gov., Dept. of Commerce, National Bureau of Standards, H5; 1923. American Standards Assn. B13-1924. American Logging and Sawmill Safety Code. Requirements on structural features, provision of guards, and rules of operation and procedure, which increase safety for employees, covering felling and logging, sawmill operations, sawmill machinery, and yard operations.

U. S. Gov., Dept. of Labor, Div. of Labor Standards. Special Bulletin 7; 1942. Suggested Standards for Industrial Safeguards. Includes woodworking machinery. Covers band re-saw, band saw or band knife, circular re-saw, circular rip saw, disc sander, drum sander, jointer, mortising machines, moulder, post sander, shaper, swing cut-off saw, and tenoner.

#### 784.1 WOODWORKING MACHINERY

U. S. Gov., Navy Dept. Specification 40S4d; 1944. Shaper-Planers; Motor-Driven, Openside, Shipboard Use.

U. S. Gov., Navy Dept. Specification 40T6b; 1935. Tools; Woodworking, Shipboard Use.

U. S. Gov., Post Office Dept., Div. of Motor Vehicle Service, Bureau of the Fourth Assistant Postmaster General. Specifications for Machines; Woodworking, for Garages.

U. S. Gov., Veterans Administration. Specification VA-M-82d; 1936. Combination Woodworking Machine.

U. S. Gov., Veterans Administration. Specification VA-M-225a; 1936. Lathe; Wood Turning, Belt Driven.

U. S. Gov., Veterans Administration. Specification VA-M-228c; 1941. Mortiser.

U. S. Gov., Veterans Administration. Specification VA-M-298; 1938. Overhead Arm Type Woodworking Machine.

U. S. Gov., Veterans Administration. Specification VA-MC-314, 1941. Machines; Woodworking, Overhead Arm Type, Electric Driven Motor.

U. S. Gov., Veterans Administration. Specification VA-MM-98a; 1939. Woodturning Lathe.

U. S. Gov., Veterans Administration. Specification VA-MM-189b; 1940. Portable Bench Sander; Dustless Belt Type.

U. S. Gov., Veterans Administration. Specification VA-MM-240e; 1941. Saw; Band.

U. S. Gov., Veterans Administration. Specification VA-MM-244f; 1941. Saw; Universal, Portable, With Stand.

U. S. Gov., Veterans Administration. Specification VA-MM-261c; 1940. Jointer; Portable, 8 Inch.

U. S. Gov., Veterans Administration. Specification VA-MM-287a; 1940. Shaper; Woodworking.

## 785. REFRIGERATING, ICE MAKING, AND ICE-CREAM MACHINERY

### 785.0 GENERAL ITEMS

American Bureau of Shipping. Rules for the Classification and Construction of Steel Vessels, 1944. Refrigerating Machinery and Insulating of Cargo Space. Include requirements for construction, hydrostatic tests, cooling tests, coils and pipe joints, brine circulation, water circulation, and air circulation.

American Society of Mechanical Engineers. Power Test Code. Refrigerating Systems, 1927. For use in the determination of the performance of compression systems in which compressors of the reciprocating type are used, as well as absorption machines. With auxiliary sections on general considerations, pressure measurement, temperature measurement, electrical measurements, measurement of time, speed measurements, linear measurements, measurement of surface areas, density determinations, humidity determinations, and leakage measurement.

American Society of Refrigerating Engineers. Circular 14; 1941. Standard Method of Rating and Testing Mechanical Condensing Units. Includes definitions, standard test methods, types of capacity measuring apparatus, data to be recorded, and description of eight test methods.

American Society of Refrigerating Engineers. Circular 17; 1939. Standard Method of Rating and Testing Refrigerant Expansion Valves. Includes methods of rating and testing thermostatic and automatic expansion valves.

American Society of Refrigerating Engineers. Circular 18; 1940. Standard Methods of Rating and Testing Self-Contained Mechanically Refrigerated Drinking Water Coolers. Includes definitions, testing, procedure, and test data.

American Society of Refrigerating Engineers. Circular 19; 1940. Standard Water Content Limits for Refrigerating System Parts. To establish the maximum permissible water content of sealed refrigerant system tubing and cooling coils. Includes dehydration of refrigerant system, sealing of refrigerant system, maximum permissible water content of refrigerant system, and method for determining moisture content including equipment and chemicals, preparation of tubing and coils to be tested, and procedure for determining the moisture content.

American Society of Refrigerating Engineers. Circular 20. Standard Methods of Rating and Testing Evaporative Condensers. Includes scope and purposes, classification, method of rating, standard test methods, instruments, apparatus, test procedure, and definitions.

American Society of Refrigerating Engineers. Circular 21-41; 1941. Proposed Methods of Rating and Testing Complete Can-Type Milk Coolers. Includes purpose, definitions, values to be determined under specified conditions, rating tests, calculation of test reports, general data to be recorded, test report, and published capacity data.

American Society of Refrigerating Engineers. Circular 22. Proposed Standard Methods of Rating and Testing Water-Cooled Refrigerant Condensers. Includes purpose, classification, and definition of terms; ratings, test methods; instruments, apparatus, and tables of physical properties; and test procedure.

American Society of Refrigerating Engineers. Circular 23. Proposed Standard Methods of Rating and Testing Refrigerant Compressors. Includes definition of terms and establishes eight operating conditions for standard rating purposes to include all refrigerant condensors, whether belt-driven or direct connected.

American Society of Refrigerating Engineers. Circular 24. Proposed Standard Methods of Rating and Testing Water and Brine Coolers. Includes purpose, classification, and definition of terms; ratings; test methods; instruments, apparatus, and tables of physical properties; and test procedure.

American Society of Refrigerating Engineers. Circular 25. Proposed Standard Methods of Rating and Testing Forced-Circulation Air Coolers for Commercial and Industrial Refrigeration. Includes purpose and definition of terms; and testing-modification of A.S.R.E. standard method.

American Society of Refrigerating Engineers. Joint sponsor with U. S. Bureau of Home Economics. Approved as American Recommended Practice by American Standards Assn., B38c1-1931. Code for Testing Domestic Refrigerators Using Ice. A means for the determination of the performance of domestic iced refrigerators in terms of ice meltage and internal temperatures, under standard conditions of test.

American Society of Refrigerating Engineers, sponsor. American Standards Assn., B9-1939. Circular 15; 1939. Safety Code for Mechanical Refrigeration. Includes definitions, classification of refrigerating systems, restrictions on location, required minimum test pressures, specifications for safety devices and their use, and operating precautions.

Assn. of American Railroads, Operations and Maintenance Dept., Operating-Transportation Div., Safety Section. Safety Rules Governing Maintenance of Equipment and Stores, Employees, 1942. Gives requirements for prevention of burns (fires, explosions); handling material, tools, and equipment; operation of trucks, tractors, cranes, hoists, and derricks; working on or about machinery, engines, cars, pipe lines, refrigerating or air conditioning units, and elevators; protection against train and engine hazards; and eye protection.

Calcium Chloride Assn. Bulletin 30; 1943. Refrigeration Data With Special Reference to the Use and Properties of Calcium Chloride for Refrigeration Brine. Covers the development and practice of refrigeration, brine for refrigeration systems, initial charges of calcium chloride brine, properties of calcium chloride brines, maintenance of calcium chloride brines, theory of corrosion and use of inhibitors, mechanics of refrigeration, miscellaneous refrigeration data, flow of brine in pipe systems, conversion tables, safety first hints, and blank forms for brine record.

Heat Exchange Institute. Steam Jet Ejector and Vacuum Cooling Section, 1938. This standard includes Part I, Steam Jet Ejectors—covering nomenclature, operating principles, types of assemblies, capacity, and standard accessories and materials of construction; Part II, Test Code for Steam Jet Ejectors—covering purpose of code, scope of code, and illustrations;

and Part III, Steam Jet Vacuum Refrigerator Equipment—covering nomenclature, definitions, performance, construction, standard units, and special types.

Underwirters' Laboratories, Inc. Standard for Air-Conditioning and Commercial Refrigerating Equipment. Covers three systems classified as—class C, containing more than 20 lb. but not more than 100 lb. of refrigerant; class D, containing more than 6 lb. but not more than 20 lb. of refrigerant; and class E, containing 6 lb. or less of refrigerant. Design and construction, examination and test, and inspection of listed product.

Underwriters' Laboratories, Inc. Standard for Temperature-Indicating and Regulating Equipment, 1942. Covers electrical control equipment for air-conditioning, heating, cooking, and refrigeration, intended to be employed on lighting and power circuits in ordinary locations in accordance with the National Electrical Code. Gives requirements for frame and enclosure, mounting, operating mechanism, corrosion protection, insulating material, supply connections, current-carrying parts, capacities, overcurrent relays, performance, rating, marking, and inspection of listed products.

Underwriters' Laboratories, Inc. Standard for Unit Refrigerating Systems. Covers two systems classified as—class D, containing more than 6 lb. but not more than 20 lb. of refrigerant; and class E, containing 6 lb. or less of refrigerant. Design and construction, examination and test, and inspection of listed product.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Commercial Standard CS-105-43. Mineral Wool; Loose, Granulated, or Felted Form, in Low-Temperature Installations. To establish minimum specifications for insulating low-temperature areas with mineral wool, and covers minimum physical and chemical requirements. Covers material, auxiliary material, construction, refrigerated spaces, preparation of surfaces, vapor barrier, floors and ceilings, walls, pipe lines, application, finish, painting, and guarantee.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Commercial Standard (Emergency) CS (E) 107-43. Commercial Electric Refrigeration Condensing Units. To establish minimum standard specifications and methods of test for commercial electric refrigeration condensing units and covers requirements, rating, motor loading, and testing. Covers requirements, condensing units, motors, controls, receiver tanks, shut-off valves, performance standards, production tests, installation, and service instructions.

## 785.1 REFRIGERATING SYSTEMS

Air Conditioning and Refrigerating Machinery Assn., Inc. Equipment Standards, 1.0; 1941. Ammonia Compressors and Condensing Units. Includes—(1.1) standard nomenclature for reciprocating compressors; (1.2) enclosed ammonia compressors, standard equipment, rotative speeds, and ammonia discharge gas temperatures; (1.3) performance of vertical single-acting ammonia compressors; and standard equipment for ammonia condensing units.

Air Conditioning and Refrigerating Machinery Assn., Inc. Equipment Standards, 2.0; 1941. Ammonia Condensers and Receivers. Includes—(2.1) construction of vertical open shell-and-tube ammonia condensers, (2.2) performance of vertical open shell-and-tube ammonia condensers, (2.3) construction of horizontal closed shell-and-tube ammonia condensers, (2.4) performance of horizontal closed shell-and-tube ammonia condensers, and (2.5) ammonia liquid receivers.

Air Conditioning and Refrigerating Machinery Assn., Inc. Equipment Standards, 3.0; 1941. Ammonia Brine Coolers. Includes—(3.1) construction of horizontal closed ammonia shell-and-tube (flooded) brine coolers, (3.2) performance of horizontal closed ammonia shell-and-tube (flooded) brine coolers, and (3.3) submerged open ammonia brine coolers.

Air Conditioning and Refrigerating Machinery Assn., Inc. Equipment Standards, 4.0; 1941. Miscellaneous Ammonia Standards. Includes—(4.1) location and inspection of data plate on insulated refrigerant containing vessels.

Air Conditioning and Refrigerating Machinery Assn., Inc. Equipment Standards, 4.0; 1941. Miscellaneous Ammonia Standards. Includes—(4.2) ammonia mains. Requirements for the proper size of mains with chart showing the maximum tons of refrigeration normally allowed for certain sizes of pipe, and another chart showing the equivalent feet of pipe for valves and fittings.

Air Conditioning and Refrigerating Machinery Assn., Inc. Equipment Standards, 5.0; 1941. Self-Contained Air Conditioning Units. Includes—(5.1) cooling air conditioning units and (5.2) self-contained room coolers and self-contained room air conditioners.

Air Conditioning and Refrigerating Machinery Assn., Inc. Equipment Standards, 6.0; 1941. Freon-12 Condensers and Receivers. Includes—(6.1) freon-12 evaporative condenser units, (6.2) horizontal closed shell-and-tube freon-12 condensers, and (6.3) freon 12 liquid receivers.

Air Conditioning and Refrigerating Machinery Assn., Inc. Equipment Standards, 7.0; 1941. Miscellaneous Freon-12 Standards. Includes—(7.1) standard equipment for freon-12 condensing units, (7.2) mean temperature difference for freon-12 water coolers, and (7.3) freon-12 mains.

Air Conditioning and Refrigerating Machinery Assn., Inc. Interim Equipment Standards, 1942. Freon-12 Water and Brine Coolers, Forced Air Coolers for Commercial and Industrial Use.

Heat Exchange Institute. Steam Jet Ejector and Vacuum Cooling Section, Standard, 1938. Includes steam jet vacuum refrigeration equipment standards, gives nomenclature for surface condenser and barometric condenser types, construction, performance, standard units, and special types of vacuum cooling units.

National Board of Fire Underwriters. Air Conditioning, Warm Air Heating, Air Cooling, and Ventilating Systems, No. 90; 1942. Standards for the installation of these systems. Part I, for systems other than residences, gives standards applying to air duct systems employing mechanical means for the movement of air and used for heating and ventilating, including warm air heating systems, plain

ventilating systems, combination heating and ventilating systems, air cooling systems, and exhaust systems; part II, for systems in residences, gives standards applying to systems such as are used for heating, ventilating, or cooling or any combination of these functions, either with or without a fan.

National Fire Protection Assn. National Fire Codes for Flammable Liquids, Gases, Chemicals, and Explosives, 1943. Refrigeration Safety Code, Safety Code for Mechanical Refrigeration. Covers definitions, building occupancy classification, refrigerating system classification by type, refrigerant classification, institution occupancies, public assembly occupancies, residential occupancies, commercial occupancies, industrial occupancies, installation requirements, refrigerant piping, valves, fittings, design, construction, safety devices, tests, and instructions.

Underwriters' Laboratories, Inc. Standard for Absorption Refrigerating Systems; 1941. Covers refrigerating systems wherein the refrigerant is driven from solution or compound by the application of heat and returned to solution or compound by the absorptive action of the solvent, absorbent, or adsorbent. Covers three systems classified as—class C, containing more than 20 lb. but not more than 100 lb. of refrigerant; class D, containing more than 6 lb. but not more than 20 lb. of refrigerant; and class E, containing 6 lb. or less of refrigerant. Design and construction, gas equipment, kerosene equipment, electrical construction, mechanical construction, examination and test, and inspection of listed product.

Underwriters' Laboratories, Inc. Standard for Unit Refrigerating Systems, 1940. Unit systems of class D and E types containing less than 20 lb. of refrigerant, including household cabinets, ice-cream cabinets, water coolers, and self-contained air-conditioning apparatus. Details as to design, construction, and testing.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-349. Refrigeration Equipment, for Pacific Islands.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Commercial Standard CS107-45; 1945. Commercial Electric-Refrigeration Condensing Units. Purpose is to establish minimum standard specifications and methods of test and rating for commercial electric-refrigeration oondensing units, all applications, for the guidance of manufacturers, distributors, installers, contractors, and users. Covers requirements, rating, motor loading, and testing of air-cooled and water-cooled, belt-driven commercial electric-refrigeration condensing units, in 1/5 to 3 hp. sizes, and water-cooled units of 5 hp. Covers all applications, including air conditioning.

U. S. Gov., Navy Dept., Bureau of Yards and Docks. Specification 16Ye; 1941. Refrigerating Equipment. Includes requirements for piping and accessories, and ice making equipment.

U. S. Gov., Navy Dept. Specification 66M10; 1939. Machinery, Ice-Cream, and Equipment, Soda-Fountain; and Installation Thereof, for Airplane Carriers, Battleships, and Cruisers.

U. S. Gov., Veterans Administration. Specification VA-M-134d; 1942. Electric Ice Cream Dispensing Cabinets.

*References.*— Definitions, testing code, safety code, *see* 785.0, 700; air compressors, *see* 791.2; cast iron, *see* 611.11; shafts and forged steel, *see* 611.52, 611.51; copper tubing for refrigerators, *see* 642.24; household refrigerators, *see* 959.4; synchronous motors for compressors, *see* 711.21.

## 785.2 ICE-CREAM MOLDS

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R120-40; 1940. Ice-Cream-Brick Molds and Cartons. This recommendation establishes standard covering stock dimensions for 2-gal. molds, 1-pt. and 1-qt. machine-filled cartons, and ice-tray pint carton for brick ice cream. Sponsored by the International Assn. of Ice Cream Manufacturers.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R164-36; 1936. Tinned Steel Ice Cream Cans. This recommendation establishes a schedule of stock types, sizes, and capacities of tinned steel ice cream cans of the high type and low (squat) type. Sponsored by the International Assn. of Ice Cream Manufacturers.

## 786. BAKERY MACHINERY

American Bakers Assn. Recommended Maximum Pan Lengths. For loaves weighing 12, 16, 20, and 24 oz. baked.

American Society of Bakery Engineers. Dump Bins, Blending Bins, and Storage Bins. Bulletin 102; 1935. Gives maximum dumping heights and volume for dump and blending units, volume per 100 lb. of unsifted flour, and of sifted flour for storage bins.

American Society of Bakery Engineers. Flour Hoppers. Bulletin 102; 1935. Gives minimum angle, shape, material, and capacity.

American Society of Bakery Engineers. High Speed Dough Mixers. Bulletin 102; 1935. Includes nine types based on batch capacities of 180 to 1,600 lb., maximum height, minimum ingredient, flour, and water openings, minimum height from floor to lip of tub when fully dumped, jacket opening and water pressure.

American Society of Bakery Engineers. Sifters and Bolting Reels. Bulletin 102; 1935. Gives standard capacities, mesh of screen bolting reel, and mesh of auxiliary sifter.

American Society of Bakery Engineers. Sponge Troughs. Bulletin 115; 1936. Provides for use of 75 percent sponges, dimensional requirements of standard trough for yeast foods, and table of comparative capacities of 6 to 10 ft. lengths giving cubic content and weight of sponge.

U. S. Gov., Dept. of Interior, Purchasing Office. Standard Specification No. 65. Dough Mixers; Large Capacity.

U. S. Gov., Dept. of Interior, Purchasing Office. Standard Specification No. 83. Mixers; Dough, for Food, Light Bread, or Cake.

U. S. Gov., Marine Corps Specification, 1942. Sifter; Flour, for General Use and No. 1 Field Range.

U. S. Gov., Navy Dept.. Specification 6486a; 1941. Scrapers; Bakery.

U. S. Gov., Navy Dept. Specification 6488a; 1943. Sieves; Flour.

U. S. Gov., Navy Dept. Specification 66M14a; 1943. Machines; Dough-Mixing, Electrically Operated.

U. S. Gov., Treasury Dept., Procurement Div., No.474; 1941. Sieves; Flour. Two types—(I) household size (with crank) and (II) institution size (without crank). Gives general description and requirements for sheet metal, hopper or body, wire cloth, agitator or base, handles, finish, and strength; methods of inspection and tests; and packaging, packing, and marking.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 28-23; 1937. Table; Moulding, with Legs, Army Field Bake Oven, No.1.

U. S. Gov., U. S. ARMY, Quartermaster Corps. Specification 28-24; 1937. Rack; Bread, Folding No.16-A, Army Field Bake Oven, No.1.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 28-48; 1937. Trough; Dough, No.15-A, Army Field Bake Oven, No.1.

U. S. Gov., U. S. Maritime Commission. Specification 64-MC-31; 1941. Sieve; Flour. There shall be but one type and grade, and sizes shall be as specified. Gives requirements for hardwood, wire cloth; workmanship, construction, sizes, inspection, and methods of tests.

U. S. Gov., Veterans Administration. Specification VA-M-81; 1934. Roll Dividing and Rounding Machines.

U. S. Gov., Veterans Administration. Specification VA-M-128; 1937. Dough Rounder.

U. S. Gov., Veterans Administration. Specification VA-MC-122d; 1942. Loaf Moulder.

U. S. Gov., Veterans Administration. Specification VA-MC-126d; 1942. Flour Handling Outfit.

U. S. Gov., Veterans Administration. Specification VA-MC-127 b; 1942. Dough Divider.

*References.*—Water tanks for bakery, *see* 956.2.

## 787. LAUNDRY AND DRY CLEANING MACHINERY AND APPLIANCES

American Gas Assn., American Standards Assn., Z 21.9-1940. Approval Requirements for Hot Plates and Laundry Stoves. Includes—part I, construction requirements for use with all gases; part II, performance requirements for use with natural and manufactured gases; part III, performance requirements for use with liquefied petroleum gases; part IV, performance requirements for use with butane-air gas; and appendix, definitions and hose end nozzle.

American Hospital Assn., 46-1. Metal Frame Laundry Basket. Covers one type, one grade, and one class.

American Hospital Assn., 46-7. Electric Flat Irons. Covers two types.

American Hospital Assn., 46-10. Simplified Practice Recommendation Laundry Machinery. Based on U. S. Gov., Dept. of Commerce, National Bureau of Standards, Simplified Practice Recommendations R139-32 Commercial Laundry Extractors, R140-32 Commercial Laundry Flatwork Ironers, R142-32 Commercial Laundry Washers, and R141-32 Commercial Laundry Tumblers.

American Institute of Laundering, International Assn. of Governmental Labor Officials, National Assn. of Mutual Casualty Companies, sponsors. American Standards Assn., Z 8-1924. Safety Code for Laundry Machinery and Operations. Requirements for the provision of interlocks, guards, enclosures, trip bars, etc. for washing machines, extractor, starching, drying, finishing machines, etc., operating rules.

National Board of Fire Underwriters. Dry Cleaning and Dry Dyeing Plants, No.32; 1944. Standards safeguarding processes and plants. Installations shall be arranged in four classes according to the rating of hazards of flammable liquids employed. Gives definitions, general requirements, and detailed requirements for each of the four classes.

National Fire Protection Assn. National Fire Codes for Flammable Liquids, Gases, Chemicals, and Explosives, 1943. Dry Cleaning. Standards for safeguarding cleaning and dyeing plants. Covers definitions, general requirements for two classes based on type of solvent used, location, building, ventilation, lighting, heating, power, tanks, clarifiers, pumps and piping, washers, extractors, etc., brushing and spotting, operating requirements, dry cleaning and dry dyeing, and air conditioning.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R139-32; 1932. Commercial Laundry Extractors. This recommendation establishes as standard extractors of the hand-driven type, either open-type or solid-curb construction. It also sets forth a simplified list of standard diameters of extractors. Sponsored by the Laundry and Cleaners Allied Trades Assn.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R140-32; 1932. Commercial Laundry Flat-Work Ironers. This recommendation sets forth standard diameters and lengths of pad rolls and type of drive for six classes of laundry flat-work ironers. Sponsored by the Laundry and Cleaners Allied Trades Assn.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R141-32; 1932. Commercial Laundry Tumblers. This recommendation establishes a standard list of sizes of reversing and nonreversing tumblers, reversing tumblers (steam only), and semispecial recirculating type. In it are set forth dimensions as to diameters and lengths, number of cylinder doors, number of vertical partitions, and number of compartments for each type. Sponsored by the Laundry and Cleaners Allied Trade Assn.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R142-32; 1932. Commercial Laundry Washers. This recommendation establishes dimensions for various sizes of metal, silk, metal blanket, wood, and wood blanket washers. It also gives details relative to number of compartments, number of vertical and horizontal partitions, number of cylinder doors, and type of drive for each size. Sponsored by the Laundry and Cleaners Allied Trade Assn.

U. S. Gov., Federal Specification OO-L-131c; 1943. Amendment 3; 1944. Laundry Appliances and Wool-Presses (Tailor Shop). Covers marking machines, washing machines, extractors, drying tumblers, laundry presses, flatwork ironers, soap tanks, starch cookers, ironing boards, truck tubs, stationary tubs, seams dampeners, laundry tables, starch tables, etc. Gives general and detail requirements; methods of sampling, inspection, and tests; and requirements for packing and marking.

U. S. Gov., U. S. Army, Medical Dept. Specification 78-9; 1939. Basket; Laundry, Metal Frame.

U. S. Gov., U. S. Army, Medical Dept. Specification 78-10; 1939. Outfit; Stamp, Fabric Marking.

U. S. Gov., Veterans Administration. Specification VA-M-186b; 1941. Rug and Carpet Washing Machine.

U. S. Gov., Veterans Administration. Specification VA-MC-76c; 1942. Ironer Canopy.

U. S. Gov., Veterans Administration. Specification VA-MC-133b; 1942. Ironing Forms.

U. S. Gov., Veterans Administration. Specification VA-MC-210a; 1939. Dry Cleaning Presses.

U. S. Gov., Veterans Administration. Specification VA-MC-223d; 1939. Laundry Washers.

U. S. Gov., Veterans Administration. Specification VA-MC-308; 1941. Sheet Folding Machine.

*References.*—Testing machine for resistance of fabric to laundering, *see* 770; electric motors, electric controllers, starters, *see* 711.2, 714.11; cast iron, malleable cast iron, *see* 611.11, 611.21; steel plates and sheets, *see* 604.1, 604.2; galvanized sheets, *see* 604.32; lumber for tanks and tubs, *see* 413.1; insulating coverings, *see* 707.4; copper sheets, *see* 641.21, 641.23; valves and cocks, *see* 607.6; laundry and starch tables, *see* 613.6; launderometer for testing textiles, *see* 770.

## 788. TYPESETTING, PRINTING, AND BINDING MACHINERY

International Assn. of Electrotypers and Stereotypers, Inc. A Ratio Unit Value Scale Based on Average Cost of Production, 1941. Gives instructions, quality discount, column chart, tables showing detailed requirements, trade customs, and area chart with scale superseding all previous scales.

International Assn. of Electrotypers and Stereotypers. Engraving, Composition and Lockup Standards for Better Electrotypes, 1941. Covers wax mold electros, black or color, etching depth, backs, zinc halftones, line engravings, vignettes, dead metal, beveling, routing, blocking, and color plates. Requirements for lead molding, composition, foundry lockup, etc.

International Assn. of Electrotypers and Stereotypers. How To Get Better Electrotypes. A primer of electrotyping including making of case, molding, graphiting, electroplating, tinfoiling, casting, etc.

International Assn. of Electrotypers and Stereotypers of America. Standards in Printing Plates, 1930. Includes thickness of unmounted electrotypes, of curved electrotypes, bevel of edges of patent base plates, quality of shell as to toughness and hardness, and formula for electrotype backing metal.

National Assn. of Printers' Roller Manufacturers, Inc. Standard Method of Figuring Weights of Cylinder Press Rollers and Units of Job Press Rollers for Use With Composition Rollers, 1941. A method of determining the difference between job and cylinder rollers. Rollers classed as cylinder rollers are figured on the weight basis, for which a detailed scale is furnished for determining weights. This weight basis is arrived at by the cubic content of a roller, and on the basis that a cubic inch of composition weighs .0468 lb. Rollers classified as job rollers are figured on a unit basis, and this is determined by multiplying the finished face of the roller by the finished diameter. A scale is also furnished giving the number of units each sized roller contains.

Optical Society of America. American Standards Assn., Z 38.7.5-1943. Methods of Testing Printing and Projection Equipment. Covers test for uniformity of contact between negative and positive in printing equipment, measurement of film or slide temperature, and measurement of the uniformity of illumination of the screen.

U. S. Gov., Dept. of Agriculture, Forest Service. Specifications for Printer; Azimuth Circle.

U. S. Gov., Dept. of Labor, Div. of Labor Standards. Special Bulletin 7; 1942. Suggested Standards for Industrial Safeguards. Includes paper and printing Covers job platen press, lacing or fly leafing machines, and paper cutter.

U. S. Gov., Treasury Dept., Procurement Div., 236A; 1942. Machines; Blueprinting, Horizontal Type. Shall be built of metal with a cast iron or steel frame construction. Gives detail requirements as to type, design, illumination, contact, conveyor, feed, speed, control, ventilation, protection, and finish; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., U. S. Army, Signal Corps. Specification 72-38; 1942. Converter M-209-( ); Ciphering Device.

U. S. Gov., U. S. Maritime Commission. Specification 66-MC-1; 1940. Binder; Staple, for Print Shop. Pedestal type for foot operation and the grade shall be that specified herein. Gives requirements for materials, workmanship, construction, finish, color, base construction, inspection, and methods of test.

U. S. Gov., U. S. Maritime Commission. Specification 66-MC-5; 1940. Machine; Linecasting, Typesetting, for Print Shop. There shall be but one type and grade. Gives requirements for materials, workmanship, finish, color, base construction, safety devices, spare parts, details, metal pot, inspection, and methods of test.

U. S. Gov., U. S. Maritime Commission. Specification 66-MC-7; 1940. Press; Printing, Horizontal or Vertical Bed, for Print Shop. There shall be but one type and grade. Gives requirements for materials, workmanship, finish, color, base construction, safety devices, electrical equipment, spare parts, detail requirements, inspection, and method of test.

U. S. Gov., U. S. Maritime Commission. Specification 66-MC-8; 1940. Presses; Printing, Platen Type, for Print Shop. Type I, size 8 x 12 in.; type II, size 10 x 15 in.; type III, size 12 x 18 in.; type IV, size 14 1/2 x 22 in.; and grade shall be as specified. Gives requirements for materials, workmanship, finish, color, base construction, safety devices, electrical equipment, spare parts, detail requirements, inspection, and methods of tests.

U. S. Gov., U. S. Maritime Commission. Specification 66-MC-9; 1940. Press; Proof, for Print Shop. Type I, for bench or table operation (without cabinet); type II same as type I but provided with steel cabinet; and there shall be but one grade. Gives requirements for materials, workmanship, finish, color, safety devices, size, base construction, detail requirements, inspection, and methods of test.

U. S. Gov., Veterans Administration. Specification VA-MC-99b; 1939. Electric Marking Machines.

## 789. INDUSTRIAL PLANT MACHINERY NOT ELSEWHERE CLASSIFIED

American Foundrymen's Assn. Metal Cleaning Sanitation, 1939. Gives definitions and requirements for cleaning processes including dust and chemical hazards, accident, fire and explosion hazards; alkaline cleaning processes, solutions, handling, heat control, tank construction, handling product, location, and ventilation; solvent cleaning processes, solvent specifications, handling, tank construction, location and ventilation, spraying methods, air drying, and personal protection; solvent degreasing processes, metal pickling processes, tumbling mill, and abrasive blast processes; design, installation, operation, health and safety protection, etc.

Assn. of American Railroads, Operations and Maintenance Dept. Operating-Transportation Div., Safety Section. Safety Rules Governing Maintenance of Equipment and Stores Employes, 1942. Gives requirements for prevention of burns (fires, explosions); handling material, tools, and equipment; operation of trucks, tractors, cranes, hoists, and derricks; working on or about machinery, engines, cars, pipe lines, refrigerating or air conditioning units, and elevators; protection against train and engine hazards; and eye protection.

National Fire Protection Assn.and U. S. Dept. of Agriculture, joint sponsors. American Standards Assn., Z 12.2-1944. Code for the Prevention of Dust Explosions in Starch Factories. Gives general and specific regulations for construction and arrangement of buildings, for kilns, dry starch grinding and grading, pearl and powdered starch bulk packing; lump starch cooking, pressing, grading and packing; control and removal of dust, prevention of ignition, mechanical precautions, and housekeeping.

National Fire Protection Assn. and U. S. Dept. of Agriculture, joint sponsors. American Standards Assn., Z 12.3-1942. Code for the Prevention of Dust Explosions in Flour and Feed Mills. Requirements for good housekeeping, construction of buildings, location, equipment, grain driers, removal and control of dust, removal of static dust, electrical equipment, and fire protection.

National Fire Protection Assn. and U. S. Dept. of Agriculture, joint sponsors. American Standards Assn., Z 12.4-1942. Code for the Prevention of Dust Explosions in Terminal Grain Elevators. Requirements for construction of buildings, bins and tanks, spacing of buildings, ventilation, mechanical equipment, grain driers, removal of dust from grain handling equipment, removal of static dust, electrical equipment, miscellaneous, and fire protection.

National Fire Protection Assn. and U. S. Dept. of Agriculture, joint sponsor. American Standards Assn., Z 12.5-1942. Code for the Prevention of Dust Explosions in Woodworking Plants. Covers hazards involved by production of finely divided wood particles in the course of woodworking operations; regulations for construction, ventilation, woodwaste collecting equipment, woodwaste disposal, housekeeping, electrical equipment and wiring, and fire protection.

National Fire Protection Assn. and U. S. Dept. of Agriculture, joint sponsors. American Standards Assn., Z 12.6-1942. Code for Pulverizing Systems for Sugar and Cocoa. Regulations for location, construction, communications, power, lighting, wiring, mechanical precautions, housekeeping, and fire protection.

National Fire Protection Assn. and U. S. Dept. of Agriculture, joint sponsors. American Standards Assn., Z 12.7-1942. Code for the Prevention of Dust Explosions in Coal Pneumatic Cleaning Plants. Covers screens, pneumatic jigs or tables, and other machines. Gives requirements for buildings, machines, apparatus, installation, electricity for light, heat and power, and fire and explosion protection.

National Fire Protection Assn. and U. S. Dept. of Agriculture, joint sponsors. American Standards Assn., Z 12.8-1942. Code for the Prevention of Dust Explosions in Wood Flour Manufacturing Establishments. Regulations for location, building construction, communications, electric power, lighting and wiring, preventive measures, housekeeping, and for fire protection.

National Fire Protection Assn. and U. S. Dept. of Agriculture, joint sponsors. American Standards Assn., Z 12.9-1942. Code for the Prevention of Dust Ignitions in Spice Grinding Plants. Requirements for location, construction of building, electric power, lighting, wiring, communications, prevention of ignition, housekeeping, and fire protection.

National Fire Protection Assn. and U. S. Dept. of Agriculture, joint sponsors. American Standards Assn., Z 12.10-1943. Code for the Use of Inert Gas for Fire and Explosion Prevention. For use of carbon dioxide or other inert gas for preventive purposes, by admixture with air, but not for carbon dioxide fire extinguishing systems. Regulations covering approval of installations, determining amount of inert gas required, table of maximum percentage of oxygen permissible for various materials, sources of inert gas supply, gas conditioning equipment, gas distributing system; analyzing, indicating, and recording apparatus; and test for approval.

National Fire Protection Assn. and U. S. Dept. of Agriculture, joint sponsors. American Standards Assn., Z 12.11-1942. Code for the Prevention of Dust Explosion in the Manufacture of Aluminum Bronze Powder. Covers location and buildings, making and conveying of powder, electricity for light and power, control of static electricity, prevention of accumulation of aluminum powder or dust, prevention of ignition of powder, storage of powder, fire fighting methods, and safety provisions.

National Fire Protection Assn. and U. S. Dept. of Agriculture, joint sponsors. American Standards Assn., Z 12.12-1943. Code for the Prevention of Sulphur Dust Explosions and Fires. Applies to the crushing, grinding, pulverizing and to certain specific operations in handling of sulphur; and does not apply to mining of sulphur or transportation in common carriers. Covers buildings, electrical equipment, inert gases, conveyors and collectors, prevention of ignition, housekeeping, fire fighting, handling coarse sizes of sulphur in bulk, and sulphur in the liquid or vapor phases.

National Fire Protection Assn. and U. S. Dept. of Agriculture, joint sponsors. American Standards Assn., Z 12.13-1943. Code for Prevention of Dust Ignitions in Country Grain Elevators. Covers structural

features, equipment, grain driers, removal and control of dust, removal of static dust, electrical equipment, miscellaneous precautions, and fire protection.

National Fire Protection Assn. and U. S. Dept. of Agriculture, joint sponsors. American Standards Assn., Z 12.14-1943. Suggested Good Practices for the Application of Suction and Venting for the Control of Dust in Grain Elevators and Storage Units. Covers methods of dust control, suction, venting, application of suction or venting, and inspection traps and velocity control devices.

National Fire Protection Assn. and U. S. Dept. of Agriculture, joint sponsors. American Standards Assn., Z 12.15-1944. Code for Explosion and Fire Protection in Plants Producing or Handling Magnesium Powder or Dust. Applies to plants producing or handling magnesium powder and in plants producing dust, shavings, or chips in connection with the sawing, grinding, machining, or buffing of castings or stampings made from magnesium or its alloys. Covers location of plants, construction of buildings, making and handling magnesium powder, electrical wiring and equipment, control of static electricity, lighting protection, preventing ignitions of magnesium powder, storage of magnesium powder, fire protection for magnesium powder plants, safety precautions, and collection and disposal of waste dust from grindings, buffing, and similar dust producing operations in the handling of magnesium or magnesium alloy products.

National Fire Protection Assn. and U. S. Dept. of Agriculture, joint sponsors, 1944. Fundamental Principles for the Prevention of Dust Explosions in Industrial Plants. Gives general precautions for building construction, equipment design and installation, housekeeping, sources of ignition, venting, inert gas systems, electrical requirements, static electricity, special precautions for grinders, elevators, conveyors, dust collectors, bins and hoppers, dryers, blowers and exhausters, cooling and refrigeration apparatus, fire prevention and fire extinguishing. (These regulations have been adopted by the National Board of Fire Underwriters).

Underwriters' Laboratories, Inc. Bulletin of Research, 24; 1942. Effectiveness of a Choke for Arresting Starch Explosions in Wood Box Screw Conveyors. Covers description of choke and conveyor; plan of investigation, theory of dust explosions, theory of arrest of explosions by the choke, critical elements of the choke, and test procedure; test record, description of samples, methods of test, and explosion test results; and conclusions.

Underwriters' Laboratories, Inc. Sponsored by National Board of Fire Underwriters. A New Type of Bomb for Investigation of Pressures Developed by Dust Explosions, 1944. Covers abstract, introduction, theoretical considerations, construction details, explosion tests, summary, and references.

U. S. Gov., Dept. of Interior, Purchasing Office. Standard Specification No. 8. Rock Crushers. (A) Crusher only, mounted on steel truck; (B) crusher and power unit mounted on steel truck; (C) crusher, power unit, and bucket elevator mounted on steel truck; and (D) crusher, power unit, bucket elevator, conveyors, storage bin, and screens.

U. S. Gov., Dept. of Interior, Purchasing Office. Standard Specification No. 16. Rock Crushing Plants; Complete Circuit.

U. S. Gov., Navy Dept. Specification 17M12b; 1944. Machines; Armature- and Stator-Coil-Winding, Motor-Driven, Shipboard Use.

U. S. Gov., Navy Dept. Specification 17M13; 1938. Machines; Coil-Winding, Motor-Driven, Shipboard Use.

U. S. Gov., Navy Dept. Specification 40M2a; 1934. Machines; Filing-and-Setting, Band-Saw.

U. S. Gov., Navy Dept. Specification 40M7c; 1944. Machines; Cylinder-Boring, Portable, Motor-Driven, Shipboard Use.

U. S. Gov., Navy Dept. Specification 40R1a; 1923. Machines; Valve-Reseating.

U. S. Gov., Navy Dept. Specification 41M5; 1933. Machines; Sheet-Metal-Working.

U. S. Gov., Post Office Dept., Div. of Motor Vehicle Service, Bureau of the Fourth Assistant Postmaster General. Specifications for Chain Repair Tool.

U. S. Gov., Post Office Dept., Div. of Motor Vehicle Service, Bureau of the Fourth Assistant Postmaster General. Specifications for Clutch Rebuilding Machine.

U. S. Gov., Post Office Dept., Div. of Motor Vehicle Service, Bureau of the Fourth Assistant Postmaster General. Specifications for Creeper; Garage.

U. S. Gov., Post Office Dept., Div. of Motor Vehicle Service, Bureau of the Fourth Assistant Postmaster General. Specifications for Cutter, for Cutting Bead From Tires.

U. S. Gov., Post Office Dept., Div. of Motor Vehicle Service, Bureau of the Fourth Assistant Postmaster General. Specifications for Grinders; Circular Brake Lining.

U. S. Gov., Post Office Dept., Div. of Motor Vehicle Service, Bureau of the Fourth Assistant Postmaster General. Specifications for Spark Plug Cleaner and Tester.

U. S. Gov., Post Office Dept., Div. of Motor Vehicle Service, Bureau of the Fourth Assistant Postmaster General. Specifications for Tester, Armature, Etc.

U. S. Gov., Post Office Dept., Div. of Motor Vehicle Service, Bureau of the Fourth Assistant Postmaster General. Specifications for Tester; Spring.

U. S. Gov., Post Office Dept., Div. of Motor Vehicle Service, Bureau of the Fourth Assistant Postmaster General. Specifications for Tire Changer.

U. S. Gov., Post Office Dept., Div. of Motor Vehicle Service, Bureau of the Fourth Assistant Postmaster General. Specifications for Tire Spreader.

U. S. Gov., Post Office Dept., Div. of Motor Vehicle Service, Bureau of the Fourth Assistant Postmaster General. Specifications for Washer; Car.

U. S. Gov., Post Office Dept., Div. of Motor Vehicle Service, Bureau of the Fourth Assistant Postmaster General. Specifications for Wheel Aligner.

U. S. Gov., Veterans Administration. Specification VA-M-195; 1937. Concrete Block Machine.

U. S. Gov., Veterans Administration. Specification VA-MC-24f; 1941. Washer; Car, High Pressure, Heavy Duty.

*References.*—Motors and controllers for explosive atmospheres, *see* 711.25, 714.11; blower and exhaust systems, *see* 791.0; coal cleaning plants, *see* 750; pulverizers, coal, *see* 703.9.

## 791. BLOWERS AND COMPRESSORS

### 791.0 GENERAL ITEMS

American Foundrymen's Assn. American Standards Assn., Z 43.-1941. Grinding, Polishing, and Buffing Equipment Sanitation. Prescribes the use of exhaust hoods and systems in removing dust, dirt, fumes, and gases generated through the grinding, polishing, and buffing of ferrous and nonferrous metals by means of grinding, polishing, scratch brushing, abrasive cutting-off wheels, grinding and polishing straps and belts.

American Foundrymen's Assn. Design, Construction, Operation, and Maintenance of Exhaust Systems, 1938. For removal of dust, refuse, fumes, and mists for the protection of health, safety, and good housekeeping; definitions and requirements for matter to be handled, enclosed processes, codified hoods, partial enclosures, range and velocity, ventilation, factors affecting air flow, dust collectors, stacks, venturi ejectors, centrifugal and disc fans, fan sizes and power requirements, designing, construction, vacuum cleaning equipment, operation, etc.

American Society of Mechanical Engineers. Joint sponsor with American Society of Safety Engineers, Engineering Section. National Safety Council. American Standards Assn., B19-1938. Safety Code for Compressed Air Machinery and Equipment. Applies to compressed air machinery and equipment, such as air compressors of the positive displacement type (both stationary and portable), air receivers, piping systems, pneumatic hammers, pneumatic drills, and other equipment used in providing and utilizing compressed air for performing operations such as cleaning, drilling, hoisting, and chipping. Not intended to apply to compressed air machinery and equipment used on transportation vehicles such as steam railroad cars, electric railway cars, and automotive equipment.

American Society of Mechanical Engineers. Power Test Code. Compressors and Exhausters, 1935. This code provides standard directions for conducting and reporting tests on centrifugal compressors and exhausters. The information is presented as follows—(1) object and scope, (2) enumeration and description of terms, (3) guiding principles, (4) instruments and testing apparatus required and measurement methods, (5) computation of results, (6) form for reporting data and results of tests. In addition, the method of measuring flow with nozzles is explained in detail, and formulas are given for flow measuring nozzles. Diagrams are included to show the nozzle shape applying to all arrangement.

American Society of Mechanical Engineers. Power Test Code. Displacement Compressors, Vacuum Pumps, and Blowers, 1939. Applies to displacement compressors, blowers, vacuum pumps, and all rotary types of machines operated on a positive displacement principle. Important new rules and data relate to measuring the capacity of discharging the output of the compressor to the atmosphere through a low pressure nozzle, nozzle coefficients, maximum allowable variation in operation conditions, capacity calculations and corrections, adjusting test results to reconcile them with operating conditions, etc.

National Board of Fire Underwriters. Blower and Exhaust Systems for Dust, Stock, and Vapor Removal, No. 91; 1937. Regulations cover systems for the removal of flammable vapors, dust, stock, and refuse conveying systems. Includes fans, ducts, ventilation of restaurant type cooking equipment, automatic dampers for duct passages through walls, cyclone collectors, refuse fuel vaults, automatic sprinklers, minimum gauge of metal, etc.

National Fire Protection Assn., proprietary sponsor. Adopted by National Board of Fire Underwriters and published in N.B.F.U. Pamphlets 90 and 91. American Standards Assn., as Z 33.1-1938. Regulations for Air Conditioning and Blower Systems. Includes regulations of the installation of air conditioning, warm air heating or cooling, and ventilating systems in residences and other than residences; of blower and exhaust systems for dust, stock, and vapor removal; and an appendix on maintenance of air conditioning, warm air heating or cooling, and ventilating systems in other than residences.

### 791.1 FANS AND BLOWERS

American Foundrymen's Assn. Design, Construction, Operation, and Maintenance of Exhaust Systems, 1938. Includes vacuum cleaning equipment for industrial plants, permanent and portable; location of discharge, period of use, air capacity per unit of cloth area and requirements for mole skin cloth, weight and thread count.

National Assn. of Fan Manufacturers. Sound Measurement Test Code for Centrifugal and Axial Fans. Bulletin 104; 1942. For uniform methods of conducting and reporting sound measurement of contrifugal and axial fans. Covers general requirements, room effects, centrifugal fan sound tests, axial fan sound tests, and facsimile of label "certified ratings."

National Assn. of Fan Manufacturers. Standard Methods Adopted for Centrifugal Fans and Blowers. Third Edition, 1942. Supplement A; 1944. Standards for multiblade and nonoverloading fans in 25 sizes. Includes comparison chart for single inlet-single width multiblade and nonoverloading fan; comparison chart for double inlet-double width multiblade and nonoverloading fan; operating limits for class I, II, III, and IV fans; air density ratios at various altitudes and air temperatures; diagrams showing arrangements of drive and designation of direction of rotation and discharge; typical specifications for heating, ventilating, and air conditioning; comparison charts for industrial exhausters (straight bladed wheels) and cast-iron volume fans (straight bladed wheels), motor position, belt or chain drive; abrasion, field test, and performance of fans; standard, air and flue gas densities; and facsimile of label "certified ratings."

National Assn. of Fan Manufacturers. Standard Test Code for Centrifugal and Axial Fans. Bulletin 103; 1941. Covers definitions, centrifugal fan tests, axial fan tests, testing instruments, determinations, observations and calculations, results, test

data, nomenclature-symbols, formulae, instructions, description, and operation of typical hook gauge, tables showing weight of saturated and partly saturated air, egg crate straightener, field test of fans, and facsimile of label "certified ratings."

National Assn. of Fan Mfrs. Table 10—Names and Definitions of Types of Fans, 1944. Illustrates and defines propeller fan, tubaxial fan, vaneaxial fan, and centrifugal fan.

U. S. Gov., Army Air Forces. Specification 40741-1; 1944. Blower; Gasoline-Engine-Driven, Type A-2, Portable, Ventilation.

U. S. Gov., Army Air Forces. Specification 40771 (1); 1944. Blower; Gasoline-Engine-Driven, Type A-1.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-59. Fan; Ventilator, Gable.

U. S. Gov., Federal Specification GG-P-606; 1941. Powder-Blowers; Hand. Covers one grade, type, and class. Gives detail requirements; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., Navy Dept. Specification 17B10c; 1944. Blowers; Electric, for Cleaning and Drying Electrical Equipment.

U. S. Gov., Navy Dept. Specification 17F8; 1929. Fans; Ventilating.

U. S. Gov., Navy Dept. Specification 17F9d; 1944. Fans; Electric, Ventilating, Portable.

U. S. Gov., Navy Dept. Specification 60B1a; 1944. Blowers; Soot, Shipboard Use.

U. S. Gov., Panama Canal, Purchasing Dept. Specification for Blowers, 1943. To have free air capacity of not less than 980 cu.ft. per minute at 1,425 r.p.m.

U. S. Gov., Panama Canal, Purchasing Dept. Specification for Blowers, 1944. To have free air capacity of not less than 1,550 cu.ft. per minute.

U. S. Gov., Panama Canal, Purchasing Dept. Specification for Ventilating Fans, 1944. Portable, 1,000 cu.ft. per minute against 2 in. static pressure.

U. S. Gov., Treasury Dept., Procurement Div., 525a; 1942. Fans; Electric, Air Circulators, Rigid Blades (Not for Marine Service). Covers nonoscillating electric air circulator fans operating on alternating or direct current and intended for use under ordinary office conditions. Gives requirements for sizes, mounting, base, adjustments, blades, guard, motor, cord and plug, finish, and performance; methods of sampling, inspection, and test; and packaging, packing, and marking.

U. S. Gov., U. S. Army, Chemical Warfare Service. Specification 97-54-126; 1939. Blower; Motor Driven, Direct-Connected.

U. S. Gov., Veterans Administration. Specification VA-MC-307; 1941. Blower; Electric, Portable, Medium Type.

*References.*—Test codes, *see* 791.0, 700; ventilation systems, *see* 791.0; portable desk and wall fans, *see* 711.23; d.c. motors for ventilating fans, *see* 711.22.

## 791.2 COMPRESSORS AND SPRAYERS

Air Conditioning and Refrigerating Machinery Assn., Inc. Equipment Standards, 1.0; 1941. Ammonia Compressors and Condensing Units. Includes—(1.1) standard nomenclature for reciprocating compressors; (1.2) enclosed ammonia compressors, standard equipment, rotative speeds, and ammonia discharge gas temperatures; (1.3) performance of vertical single-acting ammonia compressors; and standard equipment for ammonia condensing units.

American Society of Mechanical Engineers. Power Test Code. Compressors and Exhausters, 1935. Besides methods of testing, this code contains information on instruments used, measurements, formulas for flow of air and gas through nozzle, etc.; with auxiliary sections on general considerations, pressure measurement, temperature measurement, head measuring apparatus, electrical measurements, measurement of time, speed measurements, and humidity determinations.

American Society of Mechanical Engineers. Power Test Code. Displacement Compressors, Vacuum Pumps, and Blowers, 1939. Applies to displacement compressors, blowers, vacuum pumps, and all rotary types of machines operated on a positive displacement principle. Important new rules and data relate to measuring the capacity by discharging the output of the compressor to the atmosphere through a low pressure nozzle, nozzle coefficients, maximum allowable variation in operating conditions, capacity calculations and corrections, adjusting test results to reconcile them with operating conditions, etc.; with auxiliary sections on general considerations, pressure measurement, temperature measurement, measurement of time, speed measurements, and linear measurements.

American Society of Refrigerating Engineers. Circular 23. Proposed Standard Methods of Rating and Testing Refrigerant Compressors. Includes definition of terms and establisnes eight operating conditions for standard rating purposes to include all refrigerant condensers, whether belt-driven or direct connected.

Compressed Air Institute. Trade Standards, 1938. Gives definitions, nomenclature, rating standards, test standards, data, tables, and formulae. Includes installation, maintenance, uses for reciprocating compressors, vacuum pumps, rotary compressors, blowers, centrifugal compressors, and blowers. Also describes compressor accessories such as receivers, after-coolers, filters, piping, and valves; portable compressors, rock drills, and accessories, and pneumatic tools and accessories.

U. S. Gov., Army Air Forces. Specification No. 40778; 1944. Compressor; Single-Stage, Air, Type A-1, Gasoline Engine Driven, Portable.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R 202-43; 1943. Air Compressors for Automotive Service Stations and Garages (Motor-Driven, 1/2 to 10 Horsepower). Proposed by the Pneumatic Automotive Equipment Assn. Covers stock automatic start and stop compressors of air-cooled construction, complete, horizontal-tank mounted, electric-motor-driven, operating above 100 lb. per square inch and up to and including 200 lb. per square inch. Table shows horsepower of motors, type of compressors, and tank capacities.

U. S. Gov., Dept. of Interior, Purchasing Office. Standard Specification No. 85. Air Compressors; Portable.

U. S. Gov., Navy Dept. Specification 57C10; 1941. Compressors; Air, Automatic, With Tank.

U. S. Gov., Panama Canal, Purchasing Dept. Specification for Air Compressor, 1943. Electric-motor driven, capacity 85 cu.ft. free air per minute.

U. S. Gov., Post Office Dept., Div. of Motor Vehicle Service, Bureau of the Fourth Assistant Postmaster General. Specifications for Compressor; Air.

U. S. Gov., Treasury Dept., Procurement Div., Specification No. 233. Portable Air-Compressor; Two-Stage. Shall consist of a vertical or V-type, two-stage air-compressor connected to a gasoline engine, properly mounted and connected in a compact manner to allow for quick repairs or adjustments. Gives detail requirements as to compressor, gasoline engine, regulation, air receiver and gasoline tanks, equipment, size, and service requirements.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2945A; 1940. Compressor Unit.

U. S. Gov., Veterans Administration. Specification VA-MC-62g; 1942. Air Compressor; Garage.

U. S. Gov., Veterans Administration. Specification VA-MC-283d; 1942. Air Compressors, Tanks, and Motors.

*References.*—Test codes, *see* 791.0, 700; compressors for refrigerating machinery, *see* 785.0, 785.1; synchronous motors for compressors, *see* 711.21.

## 792. HEATING, VENTILATING, AND AIR-CONDITIONING EQUIPMENT

### 792.0 GENERAL ITEMS

Air Conditioning and Refrigerating Machinery Assn., Inc. Code of Application Engineering Standards for Air Conditioning for Comfort, 1940. Limited to application engineering standards and practices for determining the conditions and the loads for which to design systems for conditioning air for the comfort of persons. Includes design load factors, design outside conditions, design inside conditions, sunlight radiation through glass, design outside air quantity, infiltration, ventilation requirements, design occupancy, heat from appliances, transmission coefficients, total air circulation, air distribution, and capacity specifications.

American Foundrymen's Assn. Design, Construction, Operation, and Maintenance of Exhaust Systems, 1938. Includes theory of air flow in exhaust systems, applications, variable air conditions, resistance, centrifugal and propeller type fans, power requirements, design, construction specifications, charts and tables, testing, and supervision.

American Foundrymen's Assn. Testing and Measuring Air Flow in Exhaust Systems, 36-27; 1937. Covers technique for determining volume and velocity of air flow in foundry exhaust ventillating systems, general types of instruments necessary including pitot tube, manometer gauges, anemometers, swinging vane type velocity meter, illustrations, and charts.

American Society of Bakery Engineers. Standardization of Humidifier Practice in Baking Plants. Bulletin 74; 1932. Gives recommended standards for temperature and relative humidity of fermentation rooms, proof rooms, for air changes and distribution, materials for humidifiers and duct work, and explanatory notes.

American Society of Heating and Ventilating Engineers. Code of Minimum Requirements for Heating and Ventilating Garages, 1935. Includes basement and subbasement garages, specifies volume of air supply and exhaust, sprinkler system, use of space, ratio of exit area, and prohibits handling of gasoline. Covers heating systems, ventilation, repair work, inspection and repair pits and trestles, and the carbon monoxide hazard.

American Society of Heating and Ventilating Engineers. Heating, Ventilating, Air Conditioning Guide, 1944. Contains a technical data section of reference material on the design and specification of heating, ventilating, and air conditioning systems based on—the transactions, the investigations of the research laboratory and cooperating institutions, and professional practice. Includes principle of thermodynamics of air and water mixtures, physiological principles, heating and load calculations, combustion, steam and hot water heating, air conditioning, automatic controls, instruments, and motors. Also special applications such as drying systems, industrial and transportation air conditioning, etc.

American Society of Heating and Ventilating Engineers. Standard Code for Testing and Rating Air Cleaning Devices Used in General Ventilation Work.

American Society of Heating and Ventilating Engineers. Standard Test Code for Heat Transmission Through Walls, 1928. This code has not been framed for the purpose of offering detailed instructions for testing the heat transmission of building materials, or for constructing testing apparatus, but rather for defining certain standards, the applications of which it is hoped, will bring the results of different investigations into better conformity than is found at the present time. Includes definitions and formulas, conductivity of homogeneous materials, and over-all heat transmission.

American Society of Heating and Ventilating Engineers. Ventilation Standards, 1932. A statement of those requirements which, based on present day knowledge, will provide adequate ventilation for spaces intended for human occupancy. Includes air temperature, humidity, quality, motion, dixtribution, and quantity; definitions; and tables of effective temperatures.

American Society of Refrigerating Engineers. Circular 13; 1936. Standard Method of Rating and Testing Air Conditioning Equipment. Includes scope, classification, ratings, instruments and apparatus, testing cooling equipment, testing heating equipment, testing humidifying equipment, and definitions.

American Society of Refrigerating Engineers. Circular 16; 1940. Standard methods of Rating and Testing Self-Contained Air Conditioning Units for Comfort Cooling. Includes scope and purposes, classification, method of rating, instruments, apparatus, cooling capacity tests, heating capacity tests, humidifying capacity tests, and definitions.

Heating, Piping, and Air Conditioning Contractors National Assn. Engineering Standards, 1939. Air conditioning requirements including definitions for summer air conditioning, winter air conditioning, and year-round air conditioning; includes humidification, psychrometric chart, heat content tables,

mean outdoor temperatures for various cities, heat gain for various appliances, average water main temperatures, refrigeration pipe sizes for various refrigerants, volumes of air required for various ventilation purposes, etc.

Heating, Piping, and Air Conditioning Contractors National Assn. Engineering Standards, 1939. Covers procedures for figuring radiation (heat losses) for brick, veneered, concrete, tile, stone, stuccoed, cinder block, clapboard frame, wood shingled, and interior walls, floors, openings, roofs, etc., plastered and insulated. Gives tables for exposure and temperature factors in various American cities, and for required inside temperatures on various classes of buildings. Also gives radiation loads for low pressure heating boilers, requirements for chimneys, automatic heating devices, pipe sizes, standard dimensions of valves, fittings, and materials. Also includes air conditioning and humidification.

Heating, Piping, and Air Conditioning Contractors National Assn. Engineering Standards, Part I. Heat Loss Calculations, 1943. All rules for determining the required amount of radiation necessary to heat properly a given space are based on the heat needed to offset the losses due to the transfer of heat through the walls, windows, floors, ceilings, and roofs, and the additional heat required to bring the air that leaks into that space up to the design temperature. Gives conductivities and coefficients of transmission for various types of masonry, insulation, building boards, roofing construction, plastering materials, and frame building construction; covers infiltration and inside temperatures usually required; and gives data on radiation estimating.

Heating, Piping, and Air Conditioning Contractors National Assn. Engineering Standards, Part III. Pipe Sizes and Design, 1945. This information, it is anticipated, will provide engineers and contractors with a standard method for selecting pipe sizes for steam heating systems that will result in the design of plants that are scientifically correct. Gives data and tables covering flow of steam in pipes, capacities and velocities, conversion data, and various steam systems, vapor systems, and vacuum pump systems; piping details; tables covering gravity hot water pipe sizes; details of gravity hot water systems; tables covering mechanically circulated hot water pipe sizes and details; and tank sizes and valve tappings.

Heating, Piping, and Air Conditioning Contractors National Assn. Engineering Standards, part IV. Comfort Air Conditioning, 1944. This section is not intended to be applied to industrial air conditioning. Covers psychrometric definitions, psychrometric properties of air, heat content of air and water vapor, winter inside dry-bulb temperatures usually specified, desirable inside conditions in summer corresponding to outside temperatures, design conditions, heat of persons, heat gain from various sources, ventilation standards, infiltration through windows, solar heat gain through roofs and walls, temperature differentials for shaded surfaces, infiltration through doors, sunlight radiation through glass, maximum permissible relative humidities, temperature of city water during summer season (over 100,000), heat due to fan horsepower, heat due to pump horsepower, and appendix.

Heating, Piping, and Air Conditioning Contractors National Assn. Engineering Standards, Part V; 1945. Graphic Symbols for Use on Drawings and Scheme for the Identification of Piping Systems. Contains two sections. The first gives graphical symbols for use on drawings; and the second, methods of identifying piping systems.

Industrial Hygiene Foundation of America, Inc. Preventive Engineering Series, Bulletin 3, Part 1; 1942. Air Flow Measurement by the Dilution Method. This method is capable of measuring the rate of air flow in a complex system which has multiple air inlets and outlets. Discusses the method and gives accuracy and application.

Industrial Hygiene Foundation of America, Inc. Preventive Engineering Series, Bulletin 3, Part 2; 1942. Measuring Air Flow in Industrial Ventilation. Covers air flow and static suction, technique of measurement, hood entry coefficient, examples, exhaust from chambers, velocity pressure measurements, pitot tube, pitot tube accessories, air flow through ventilation openings, checking, velocity at point in space, and gives tables showing related data.

Industrial Unit Heater Assn. Standard Code for Testing Hot Water Unit Heaters, 1942. Gives definitions, rating, standard basis of rating, outline of tests, equipment for testing, test procedure, computation of results, addenda giving standard code for testing and rating steam unit heaters.

National Board of Fire Underwriters. Air Conditioning, Warm Air Heating, Air Cooling, and Ventilating Systems, No.90; 1942. Standards for the installation of these systems. Part I, for systems other than residences, gives standards applying to air duct systems employing mechanical means for the movement of air and used for heating and ventilating, including warm air heating systems, plain ventilating systems, combination heating and ventilating systems, air cooling systems, and exhaust systems; Part II, for systems in residences, gives standards applying to systems such as are used for heating, ventilating or cooling, or any combination of these functions, either with or without a fan.

National District Heating Assn. Handbook, 1932. Provides an authoritative and complete manual of practice for the use of those engaged in district heating work.

National Warm Air Heating and Air Conditioning Assn. A Yardstick for the Evaluation of a Forced Warm Air Heating System, 1941. Covers three classes—(A) excellent practice, (B) good practice, and (C) poor practice. This booklet attempts to explain for the benefit of the home owner what constitutes a good forced warm air heating system, what specifications he and the architect should have for a class A or a class B installation, and what features a heating contractor can offer in accordance with the best modern practice.

National Warm Air Heating and Air Conditioning Assn. Standard Code Application Manual for Gravity Warm Air Heating Systems, 1941. The Manual shows recommended sizes, B.t.u. ratings, and suggested installational procedure. The purpose of the recommendations and tables included is to simplify the selection of the equipment in the design of gravity

warm-air heating systems. The manual includes a method to estimate heat losses and illustrations.

National Warm Air Heating and Air Conditioning Assn. The Practical Code for the Design and Installation of Mechanical Warm Air Heating Systems, 1942. For average installations up to 100,000 B.t.u. at the register and 2,000 C.f.m. with register air temperature 110° to 150°. These rules are submitted with the idea of expressing their provisions in such form that they may be understood and applied by anyone. Not intended for application to large or unusual institutions.

National Warm Air Heating and Air Conditioning Assn. The Standard Gravity Code for the Design and Installation of Gravity Warm Air Heating Systems, 1940. A set of rules to govern the proper design and installation of gravity warm air heating systems subject to the limitations. Consists essentially of a furnace with casing and smoke pipe, together with a properly designed system of heating pipes and outlets, known as registers; also air ducts to convey the return air to the furnace.

National Warm Air Heating and Air Conditioning Assn. The Technical Code for the Design and Installation of Mechanical Warm Air Heating Systems, 1942. This code is formulated to provide reliable methods of design and installation of mechanical warm air heating systems for the protection of the buying public. It covers fundamental data and rules which of necessity must be observed. In all cases, however, experience is necessary to obtain full value of its application. This code does not attempt to provide the application of all variables found in practice.

Underwriters' Laboratories, Inc. Bulletin of Research, 27; 1943. Clearances and Insulation of Heating Appliances. This bulletin describes tests conducted to provide definite technical information as a basis for promoting uniformity in the various ordinances, regulations, and standards bearing on the subject. Covers mechanism of heat transfer, test equipment, tests of protective assemblies, temperature measurements, test procedure, test results, and comments.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Building Materials and Structures Report BMS54; 1940. Effect of Soot on the Rating of an Oil-Fired Heating Boiler. It is shown that the rating of a boiler, obtained by a test method based on constant flue—gas temperature, can be seriously affected by soot on the heating surfaces, although the soot may be too slight in amount to affect greatly either the capacity or the efficiency at a constant firing rate. At constant firing rate the soot has a large effect on the flue-gas temperature.

U. S. Gov., Dept. of Labor, Div. of Labor Standards. Special Bulletin 3; 1941. Protecting Plant Manpower. Practical Points on Industrial Sanitation and Hygiene. Covers introduction, fatique, criteria of industrial health hazards, preventive measures, heating, ventilation, and cooling of work places, personal respiratory protection, personal service conveniences, industrial health program for the small plant, illumination, and noise.

U. S. Gov., Navy Dept., Bureau of Yards and Docks. Specification 21Yc; 1940. Installation of Power-Plant, Heating, and Ventilating Apparatus and Piping.

## 792.1 HEATING EQUIPMENT

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering, 1942. Specifications for Buildings for Railroad Purposes: Hot Water Heating System, Two-Pipe Gravity; Steam Heating System, One-Pipe Gravity; Steam Heating System, Two-Pipe Gravity; Hot Air Heating; and Hot Blast Heating System. Gives requirements for the various equipments and items involved and the installation of same.

American Society of Heating and Ventilating Engineers. Code for Testing and Rating Return Line Low Vacuum Heating Pumps, 1934. Provides a standard method of testing and rating the air and water capacity of vacuum heating pumps under specified conditions. Definitions, basis of rating, method of test, test procedure, diagram of test set-up, and specimen test calculation.

American Society of Heating and Ventilating Engineers, and Industrial Unit Heater Assn. Standard Code for Testing and Rating Steam Unit Heaters, 1930. Prepared jointly by the two organizations. Covers definitions, basis of rating, test procedure, equipment necessary, computations of results, and diagrams of test set-ups.

Underwriters' Laboratories, Inc. Standard for Temperature-Indicating and Regulating Equipment, 1942. Covers electrical control equipment for air-conditioning, heating, cooking, and refrigeration, intended to be employed on lighting and power circuits in ordinary locations in accordance with the National Electrical Code. Gives requirements for frame and enclosure, mounting, operating mechanism, corrosion protection, insulating material, supply connections, current-carrying parts, capacities, overcurrent relays, performance, rating, marking, and inspection of listed products.

U. S. Gov., Navy Dept Bureau of Yards and Docks. Specification 36Y; 1942. Forced-Circulation Hot-Water Heating Systems.

U. S. Gov., Navy Dept., Bureau of Yards and Docks. Specification 37Y; 1942. Steam-Heating and Ventilating Systems.

U. S. Gov., Navy Dept. Specification 45S1; 1939. Strainers; Steam, for Small Branch Steam Lines.

U. S. Gov., Navy Dept. Specification 66Pla; 1937. Power-Plant, Heating, and Ventilating Apparatus and Piping; Shore Use.

*References.*—Heating systems, heat transmission tests, *see* 792.0; electric heaters, *see* 717.1; house heating boilers and radiators, *see* 614.0, 614.4; heating equipment for power and heating boilers, *see* 703.9; sheet iron and steel, *see* 604.2, 604.3; fans and blowers, *see* 791.1; gas and gas appliances, *see* 997.2; gasoline vapor machines and systems, *see* 997.4; acetylene equipment for heating, *see* 997.5; power test code, *see* 700.

## 792.2 VENTILATING EQUIPMENT

Air Conditioning and Refrigerating Machinery Assn., Inc. Equipment Standards, 5.0; 1941. Self-Contained Air Conditioning Units. Includes—(5.1) cooling air conditioning units, and (5.2) self-contained

room coolers and self-contained room air conditioners.

American Society of Heating and Ventilating Engineers. Code of Minimum Requirements for Comfort Air Conditioning, 1938. Provides a uniform procedure and methods for use in establishing the fundamental basis for the design of comfort air conditioning installations in the U. S. and Canada. The requirements herein set forth are intended to serve as minimum design requirements, and are not to be construed as limiting good practice nor preventing progress in the art of air conditioning. These requirements are intended to be applied only to systems provided with mechanical circulation of the air. Includes definitions and abbreviations, design temperatures and relative humidities, design load estimates, source for heat transfer, infiltration and ventilation rates, air distribution, apparatus rating, requirements for the selection of refrigerating equipment, noise control, and guarantees and exceptions.

American Society of Heating and Ventilating Engineers. Standard Code for Testing and Rating Steam Unit Ventilators, 1932. Provides a method of testing and rating the heat and air output of steam unit ventilators. Includes definitions, basis of rating, outline of tests, equipment for testing, test procedure, and computation of results. Adopted by the Industrial Unit Heater Assn.

Industrial Hygiene Foundation of America, Inc. Preventive Engineering Series, Bulletin 2, Part 4; 1938. Design of Exhaust Hoods. Covers suction and velocity requirements for hoods, table showing minimum air velocities required to capture certain industrial dusts, table showing minimum air velocities required to capture certain foundry dusts, protection against corrosion, and table showing materials to be used for the protection of exhaust systems against corrosion.

Industrial Hygiene Foundation of America, Inc. Preventive Engineering Series, Bulletin 2, Part 5; 1938. Design of Duct Work for Exhaust Systems. Covers duct sizes, method of determining pressure drop in ducts, conveying capacity of ducts, construction, and codes.

U. S. Gov., Navy Dept., Bureau of Yards and Docks. Specification 10Yc; 1938. Metal Windows. Includes requirements for manual and electric-motor-operated ventilating sash operators.

U. S. Gov., Navy Dept., Bureau of Yards and Docks. Specification 37Y; 1942. Steam-Heating and Ventilating Systems.

U. S. Gov., Navy Dept. Specification 66D2; 1942. Dehumidifiers; Silica-Gel, Portable Type.

U. S. Gov., Navy Dept. Specification 66P1a; 1937. Power-Plant, Heating, and Ventilating Apparatus and Piping; Shore Use.

*References.*—Ventilation systems, *see* 792.0; safety code for coal mine ventilation, *see* 751; blowers and fans, *see* 791.1, 791.0; sheet iron and steel, *see* 604.2, 604.3.

### 792.3 AIR-CONDITIONING EQUIPMENT

Air Conditioning and Refrigerating Machinery Assn., Inc. Equipment Standards, 6.0; 1941. Freon-12 Condensers and Receivers. Includes—(6.1) freon-12 evaporative condenser units, (6.2) horizontal closed shell-and-tube freon-12 condensers, and (6.3) freon-12 liquid receivers.

Air Conditioning and Refrigerating Machinery Assn., Inc. Equipment Standards, 7.0; 1941. Miscellaneous Freon-12 Standards. Includes—(7.1) standard equipment for freon-12 condensing units, (7.2) mean temperature difference for freon-12 water coolers, and (7.3) freon-12 mains.

Assn. of American Railroads, Mechanical Div., Electrical Section. Manual of Standard and Recommended Practice, 1940. Car Air-Conditioning Equipment. For railway passenger service. Gives methods of inspection and maintenance of steam ejector, water-ice, compressor, direct mechanical, ice-engine, and liquefied propane gas system, types of air-conditioning equipment at maintaining terminals; includes battery, traps, pumps, filters, fans, controls, lubrication, etc.

Underwriters' Laboratories, Inc. Standard for Air-Conditioning and Commercial Refrigerating Equipment, 1940. Covers classes C, D, and E systems containing less than 100 lb. of refrigerant. Design and construction requirements, wiring, motor, controls, refrigerant, fittings, etc.

U. S. Gov., Army Air Forces. Specification 40742-3; 1944. Cooler; Portable, Airborne Air, Type A-1, Gasoline Engine Driven.

U. S. Gov., Army Air Forces. Specification 40871; 1944. Cooler; Stationary Air, Type B-1.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Commercial Standard CS107-45; 1945. Commercial Electric-Refrigeration Condensing Units. Purpose is to establish minimum standard specifications and methods of test and rating for commercial electric-refrigeration condensing units, all applications, for the guidance of manufacturers, distributors, installers, contractors, and users. Covers requirements, rating, motor loading, and testing of air-cooled and water-cooled, belt-driven commercial electric-refrigeration condensing units, in 1/5 to 3 hp. sizes, and water-cooled units of 5 hp. Covers all applications, including air conditioning.

U. S. Gov., Federal Specification 00-A-361; 1938. Air-Conditioning Units (Room-Coolers); Electric-Motor Driven, Portable. Covers air-cooled and water-cooled types. Gives requirements for design and construction, cabinet and ducts cooling capacity, ventilation, filters, control, refrigerant, noise, etc.; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

## 793. MEASURING AND RECORDING APPARATUS

### 793.0 GENERAL ITEMS

American Society of Mechanical Engineers. Flow Measurement, 1940. Presents procedures for the use of flow nozzle and orifice plates in the measurement of the volume of fluids of various kinds. Covers introduction, letter symbols, equations and definitions, recommended technique, primary elements, giving the tolerances for flow measurements by means of nozzles and orifice plates, computations and examples, and derivations of equations.

American Society of Mechanical Engineers. Fluid Meters—Their Theory, Application, Selection, Description, and Installation, 1937. Covers theory and application including design, coefficients, general behavior, gives reliable information on the various types of fluid meters, and describes in detail the various methods of measurement; description of meters presents a brief description of the individual makes of meters which are in commercial manufacture; and selection and installation gives dependable information on the selection of a meter for a particular use and the proper installation of the various types of meters.

American Society of Mechanical Engineers. Power Test Code, Auxiliary Section. Part 1—General Considerations, 1935. The instruments and apparatus here considered are those used for measuring physical and chemical quantities in connection with tests of power equipment.

American Society of Mechanical Engineers. Power Test Code, Auxiliary Section. Part 5, Chapter 4—Flow Measurement by Means of Standardized Nozzles and Orifice Plates, 1940. Contents described on page 12 under title of Flow Measurement.

American Society of Mechanical Engineers. Power Test Code, Auxiliary Section. Part 13—Speed Measurements, 1939. Describes and classifies speed; deals with precautions to be observed in taking readings; discusses calibration and its need in order to determine the instrument errors. Counter and timepiece methods are defined. The operating principles of the various types of tachometers are described, and the factors affecting their accuracy are given. The methods by which a tachometer drive may be obtained are outlined, as well as the stroboscopic method of measuring rotative speed.

American Society of Mechanical Engineers. Power Test Code, Auxiliary Section. Part 14—Linear Measurements, 1936. Contains concise information on calipers, dividers, tapes, rules, scales, micrometers, etc.

American Society of Mechanical Engineers. Power Test Code, Auxiliary Section. Part 15—Measurement of Surface Areas, 1944. Describes and illustrates polar and radial planimeters, and discusses their use in measuring surface areas.

American Society of Mechanical Engineers. Report on Orifice Coefficients, 1936. Joint A.G.A.—A.S.M.E. recommendations for the construction and installation of pipe orifices. Covers history, various researches conducted, analysis of data available, recommendations on the proper methods of constructing and installing concentric orifices, precautions and accuracy to be expected, information on effect of pulsating flow on measurements by an orifice, and tables and curves of orifice coefficients.

Natural Gasoline Assn. of America. Tentative Standard Method for Calculation of High Pressure Gas Measurement.

Underwriters' Laboratories, Inc. Standard for Temperature-Indicating and Regulating Equipment, 1942. Covers electrical control equipment for air-conditioning, heating, cooking, and refrigeration, intended to be employed on lighting and power circuits in ordinary locations in accordance with the National Electrical Code. Gives requirements for frame and enclosure, mounting, operating mechanism, corrosion protection, insulating material, supply connections, current-carrying parts, capacities, overcurrent relays, performance, rating, marking, and inspection of listed products.

U. S. Gov., Dept. of Commerce, National Bureau of Standards, H26; 1941. Weights and Measures Administration. Presents a general discussion of weights and measures supervisory work, as this should be carried on by state and local regulatory officers. Beginning with a statement of the functions of the weights and measures officials and a tabulation of the present organization of weights and measures administration in the U. S. Part I of the text proceeds to a consideration of a model form of weights and measures organization, fee and licensing systems, essential elements of the law, the training of officials, and other general subjects. Part II deals with those activities of the official which have to do with scales, weights, measures, etc., treating separately such topics as standards and equipment, and the testing, sealing rejection, adjustment, and repair of commercial equipment. The supervisory side of weights and measures administration, as distinguished from the mechanical side, is discussed in part III; the education of the users of commercial equipment and of the public, try-out inspections, the investigation of complaints, and prosecutions are among the subjects treated. Part IV is devoted to systems of weights and measures records. Three appendixes are included, the first presenting Federal weights and measures laws and regulations, the second giving the full texts of the three forms of the Model State Law on Weights and Measures, and the last listing the specific items of standards and equipment recommended for state and local departments of weights and measures. The handbook has been prepared to provide basic information for weights and measures officials, to encourage the extension of weights and measures supervision to communities not now enjoying that protection by providing the facts for the study of the subject by consumer groups and others, and to supply data for the enactment of laws and the establishment of adequate regulatory agencies in the weights and measures field.

U. S. Gov., Dept. of Commerce, National Bureau of Standards, H29; 1942. Specifications, Tolerances, and Regulations for Commercial Weighing and Measuring Devices. The specifications and tolerances given in this handbook are intended to apply to weights and measures and weighing and measuring devices used in commercial transactions which have been adopted by the National Conference on Weights and Measures.

U. S. Gov., Dept. of Commerce, National Bureau of Standards, Handbook H37; 1945. Testing of Weighing Equipment. A manual for state and local weights and measures officials, describing various types of commercial weighing equipment, the principles of their operation, and methods for their inspection and test. Covers basic principles, basic elements, automatic weight indication, types of ordinary scales, types of special scales, elements of scale

performance, inspection of commercial scales, testing of commercial scales, weights used with commercial scales, and appendices.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Miscellaneous Publication M121; 1936. Units of Weight and Measure Definitions and Tables of Equivalents.

## 793.1 COUNTERS, TAXIMETERS, SPEEDOMETERS

Society of Automotive Engineers. 1944 Handbook, Section 2—Units, Parts, and Fittings. S.A.E. Recommended Practice for Speedometers, adopted 1939. For use as the basis for speedometer drive gear computation and compensation for errors; for speedometer performance and identification; and for flexible shaft-end construction. It differentiates between the drives intended for marine, medium, and heavy duty motor truck, motorcoach, and tractor installations and those for passenger cars and light trucks.

U. S. Gov., Dept. of Commerce, National Bureau of Standards, H29; 1942. Specification, Tolerances, and Regulations for Commercial Weighing and Measuring Devices. Odometers. Refers to a machine designed to be attached permanently to a vehicle and adapted automatically to register the distance traversed by the vehicle. Includes detail requirements and tolerances, to include also hub odometers, cable-driven odometers, and the mileage-recording, or odometer, portions of the so-called "speedometer" assemblies for automobiles.

U. S. Gov., Dept. of Commerce, National Bureau of Standards, H29; 1942. Specifications, Tolerances, and Regulations for Commercial Weighing and Measuring Devices. Taximeters. Refers to a machine adapted automatically to calculate, at a predetermined rate or rates, and to register the charge for hire of a vehicle. Detail requirements are given covering construction, operation of taximeters, and tolerances.

U. S. Gov., U. S. Army, Corps of Engineers. Specification 17-135; 1921. Counter; Hand Tally.

## 793.2 GAGES, EXCEPT DIMENSION GAGES

American Foundrymen's Assn. Testing and Measuring Air Flow in Exhaust Systems, 36-27; 1937. Includes instruments for measuring air flow in pipes such as pitot tubes, inclined and vertical manometer gages; for air flow into hoods and enclosures, as—revolving vane type anemometers, and swinging vane type direct reading velocity meters. Also method of use, illustrations, and graphs.

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering. Specifications for Buildings for Railroad Purposes: Steel, Iron, Brick, and Reinforced Concrete Chimneys. Gives requirements for draft gages.

American Society of Mechanical Engineers. Indicating Pressure and Vacuum Gages. American Standards Assn., B40.1-1939. Applies to round, dial type indicating gages utilizing an elastic chamber for confining the pressure medium. Tables give gage sizes and dimensions, dial ranges, grades of accuracy, and values of graduations. Rules cover indicating pointer, installation, and use of gages; mounting holes; stop pins; location, type, and size of pressure connections; accuracy requirements, and testing to determine the accuracy of gage.

American Society of Mechanical Engineers. Power Test Code, Auxiliary Section. Part 2—Pressure Measurement, Chapter 4; 1938. Instruments here described in considerable detail include Bourdon, Bellows, Diaphragm, and Deadweight Gages.

American Society of Mechanical Engineers. Power Test Code, Auxiliary Section. Part 2—Pressure Measurement, Chapter 5, Liquid Column Gages, 1942. Describes and illustrates the various types of liquid column gages; provides installation rules; points out precautions to be observed; and includes calibration instructions.

American Society of Mechanical Engineers. Power Test Code, Auxiliary Section. Part 4—Head Measuring Apparatus, 1933. Apparatus described includes float gage, flat plate and rod gage, water column, hook gage, stilling box, dial pressure gage, and manometers.

Underwriters' Laboratories, Inc. Standard for High Pressure Gas Gauges, 1930. For high pressure containers of gases used in welding and cutting, internal explosion test requirements, accuracy of indication on original calibration, and after overpressure test, impulse test, vibration test, marking, and size of dial.

Underwriters' Laboratories, Inc. Standard for Nonrecording Spring-Pressure Gages, Section III, Subject 393; 1921. Includes general requirements for pressure-indicating gages. Gives design and construction, practicability, durability, strength, reliability of operation, accident hazard, and uniformity.

U. S. Gov., Army Air Forces. Specification No.27487; 1944. Gage; Emergency, Oxygen, Type L-2.

U. S. Gov., Army Air Forces. Specification 27546-1; 1944. Gage; Pressure, Type O-1, Aircraft, General Purpose.

U. S. Gov., Army Air Forces. Specification 40781-A-1; 1945. Regulator; Oxygen Pressure, Type C-1.

U. S. Gov., Army-Navy Aeronautical Specification AN-G-9-2; 1944. Gages; Manifold Pressure.

U. S. Gov., Army-Navy Aeronautical Specification AN-G-12; 1943. Gages; High Pressure Oxygen.

U. S. Gov., Army-Navy Aeronautical Specification AN-G-13a; 1944. Gages; Low Pressure Oxygen.

U. S. Gov., Army-Navy Aeronautical Specification AN-G-17a-1; 1944. Gage Units; Engine, With Capillary Thermometer.

U. S. Gov., Army-Navy Aeronautical Specification AN-G-18a-1; 1944. Gage Units; Engine, With Electric Thermometer.

U. S. Gov., Army-Navy Aeronautical Specification AN-G-19-2; 1944. Gages; General Specification for Fuel and Oil Quantity.

U. S. Gov., Federal Specification GG-G-66; 1935. Gages; Pressure (for) Direct Stem-Mounting. Covers four types of stem or socket mounted indicating gages—(I) lubricating-oil pressure (range 0 to 60 lb.; (II) steam heating (range 0 to 30 lb., retard); (III) hot water heating (range 0 to 70 ft.); and (IV) compound vacuum and steam heating (range 30 in. vacuum to 30-lb. pressure, retard). Gives detail requirements; methods of sampling, inspection,

and test; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification GG-G-76; 1935. Gages; Pressure and Vacuum, (for) Air, Ammonia, Oil, Steam, and Water. Covers five types designed for gage-board mountings—(A) pressure gages, up to 800 lb.; (B) pressure, 800 lb. and over; (C) vacuum and compound; (D) ammonia; and (E) duplex. Gives detail requirements; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., Navy Dept. Specification 18G4b; 1944. Gage-Testing Outfits; Portable.

U. S. Gov., Navy Dept. Specification 45D1; 1940. Dampeners; Pulsation, for Use With Pressure Gages.

U. S. Gov., Navy Dept. Specification 45G1n; 1945. Gages; Pressure and Vacuum, for Air, Ammonia, Steam, Oil, and Water.

U. S. Gov., Navy Dept. Specification 45G3a; 1929. Gages; Pressure, Acetylene, Hydrogen, and Oxygen.

U. S. Gov., Navy Dept. Specification 45G4b; 1941. Gages; Pressure.

U. S. Gov., Navy Dept. Specification 45G6c; 1944. Gages; Draft, Fireroom.

U. S. Gov., Navy Dept. Specification 45G7b; 1944. Gages; Pressure, for Direct Stem Mounting.

U. S. Gov., Navy Dept. Specification 45C9; 1940. Gages; Absolute Pressure, Indicating Type, Shipboard Use.

U. S. Gov., Navy Dept. Specification 45G10a; 1944. Gages; Boiler-Water.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 91-56A; 1934. Gage; Tire.

*References.*—Water level gage glass, lubricator glasses, *see* 526.6; calibration of gages, *see* 793.0; dimensional gages, hand gages, *see* 615.82.

## 793.3 INDICATORS, ENGINE CYLINDER

U. S. Gov., Navy Dept. Specification 1311; 1922. Indicators; Engine, Internal-Combustion.

U. S. Gov., Navy Dept. Specification 18I2c; 1936. Indicators; Engine, Steam.

## 793.4 WATER METERS

American Society of Heating and Ventilating Engineers. Code for Use of Pitot Tube, 1914.

American Water Works Assn. Tentative Standard Specifications for Cold Water Meters, Displacement Type, 7M.1-T; 1941. Covers scope, kind and type, capacity, size, length, cases, external case bolts, connections, registers, register boxes, intermediate gear trains, measuring chambers, strainers, seal wire holes, registration, pressure test, workmanship and materials, rejected meters, sample meter, and notes.

Hydraulic Institute. Code for the Measurement of Water Using Standard I.S.A. Orifices With Free Discharge, 1941. Part I, application of the meter, covers scope, the free-discharge I.S.A. orifice meter, approach pipe, orifice plate and holder, manometer, test procedure, computations, accuracy, and head on pump; and part II, construction specifications, covers dimensions of orifice plate and holders, specific dimensions for I.S.A. orifice meters, meters for larger diameters and intermediate sizes, special instructions for orifice plate, manometers, calibration, materials, and list of meter manufacturers.

Technical Assn. of the Pulp and Paper Industry. Flow Measurements of White Waters and Wastes, Standard E2 p-41; 1941. Measurement of flow of liquid by use of weir, Venturi flume, submerged weir, orifice, and water meter. Includes details for construction of weir, weir readings and corrections, construction of Venturi flume and use in mill sewers, submerged weirs, with flow diagram; orifices and their use; and tables of weir flows, Venturi flume flows, and orifice flows.

U. S. Gov., Navy Dept. Specification 45M2b; 1941. Meters; Water, Cold and Hot, Positive Displacement Type, Shipboard Use.

U. S. Gov., Panama Canal, Purchasing Dept. Specification for Water Meters, 1943. Displacement type, 3/4 in. and 1 1/2 in. sizes.

*References.*—Calibration of meters, *see* 793.0; cast iron, cast bronze, *see* 611.11, 646.41.

## 793.5 WEIGHING SCALES AND BALANCES

American Hospital Assn., 40-7. Dietetic Scales. Covers one type, grade, and class.

American Hospital Assn., 70-25. Baby Scale. Covers one type, one grade, and one class of portable baby scale.

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering, 1942. Large-Capacity Scales, Tolerances, S.R. Requirements, and Regulations.

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering, 1942. Rules for the Location, Maintenance, Operation, and Testing of Railway Track Scales.

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering, 1942. Specifications for the Manufacture and Installation of Four-Section, Knife-Edge Railway Track Scales. Gives requirements for capacity, working stresses and formulas, length of scale, scale levers, pivots and bearings, nose irons, lever fulcrum stands, loops and connections, checks, weighbeams and accessories, antifriction points and plates, clearances, interchangeability weighbridges, protection from corrosion, approach rails, dead rails and dead rail beams, deck, exclusion of dirt, lighting, location and elevation, foundation and pit, setting of scale, weighbeam house, sensibility reciprocal, tolerance, scale shed, and car pullers.

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering, 1944. Specifications for the Manufacture and Installation of Hand-Operated Grain-Hopper Scales. Gives capacity, plans, working stresses and formulas, scale levers, pivots and bearings, nose irons, lever fulcrum stands, loops and connections, checks, weighbeams and accessories, antifriction points and plates, clearances, interchangeability, hopper and garner, foundation, installation, and performance requirements.

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads.

Manual for Railway Engineering, 1942. Specifications for the Manufacture and Installation of Motor Truck, Built-In, Self-Contained, and Portable Scales for Railway Service. Covers knife-edge kind and applies basically to scales equipped with weighbeams. For automatic or recording type scales, or scales with automatic-indicating or recording attachments, the specifications apply to all parts except the mechanism essential to the automatic feature. Gives requirements for information to be supplied by purchaser, classes, capacities and sizes, working stresses, formulas, particulars of loading, scale levers, pivots and bearing steels, nose irons, loops and connections, lever fulcrum stands, checks, weighbeams and accessories, antifriction points and plates, clearances, interchangeability, sensibility reciprocal, performance requirements, location and elevation, foundations, weighbeam house or box, installation, platforms, light, drainage, ventilation, entrance to scale pit, and protection from corrosion.

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering, 1942. Specifications for the Manufacture and Installation of Two-Section, Knife-Edge Railway Track Scale. Gives requirements for capacity, working stresses and formulas, length of scale, scale levers, pivots and bearings, nose irons, lever fulcrum stands, loops and connections, checks, weighbeams and accessories, antifriction points and plates, clearances, interchangeability, weighbridges, protection from corrosion, approach rails, exclusion of dirt, lighting, location and elevation, foundation and pit, setting of scale, weighbeam house, sensibility reciprocal, and tolerance.

American Road Builders' Assn. Standardization of Weighing Devices for Concrete Aggregate. Bulletin 15; 1931. This specification covers weighing devices for use with bin batcher and central mixing plant; requirements for construction of bin, hopper, scales, scale levers, pivots, leveling lugs, weigh beams, poises, graduated dials, arrangement, etc.

American Road Builders' Assn. Standardization of Weighing Devices for Concrete Aggregates (for Mixers of One-Half Cubic Yard Capacity or Less). Bulletin 15; 1931. Requirements for weighing container, scales, leveling, minimum graduations, clearance, calibration, and operation.

Assn. of American Railroads. Sponsored jointly by the Traffic Dept., Operations and Maintenance Dept. Scales, 1942. Covers four-section, knife-edge railway track scales; two-section, knife-edge railway track scales; and motor truck, built-in, self-contained, and portable scales for railway service. Rules and specifications apply generally to large-capacity weighing equipment. They were developed in the Construction and Maintenance Section, A.A.R. (American Railway Engineering Assn.), with the collaboration of the National Bureau of Standards, the National Scalemen's Assn., the Scale and Balance Mfrs. Assn., and the Traffic Dept., A.A.R.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Circular C199; 1925. Hand-Operated Grain Hopper Scales. Requirements on permissible working stresses in various materials, in steel pins, and in concrete; design requirements on levers, nose irons, pivots, knife edges, bearings, loops, lever and beam fulcrum stands, weighbeam, hopper, and foundation; installation; test requirements.

U. S. Gov., Dept. of Commerce, National Bureau of Standards, H29; 1942. Specifications, Tolerances, and Regulations for Commercial Weighing and Measuring Devices. Computing Scales. Requirements on value intervals on computing chart, location of indicators for weight and value, size and spacing of graduations, leveling provisions, tolerances on measurement.

U. S. Gov., Dept. of Commerce, National Bureau of Standards, H29; 1942. Specifications, Tolerances, and Regulations for Commercial Weighing and Measuring Devices. Counter Scales. Requirements on general structural features, material of bearings, limits on size and spacing of graduations, leveling provisions, allowable sensibility reciprocal, allowable tolerances on measurements.

U. S. Gov., Dept. of Commerce, National Bureau of Standards, H29; 1942. Specifications, Tolerances, and Regulations for Commercial Weighing and Measuring Devices. Cream Test and Butterfat Test Scales. Requirements on scale graduation, leveling provision, sensibility reciprocal, shift of weight test, tolerance on measurement.

U. S. Gov., Dept. of Commerce, National Bureau of Standards, H29; 1942. Specifications, Tolerances, and Regulations for Commercial Weighing and Measuring Devices. Large Capacity Automatic-Indicating Scales. Not including railroad or counter scales, tolerances on accuracy of indications, kind of material for knife-edges, etc.

U. S. Gov., Dept. of Commerce, National Bureau of Standards, H29; 1942. Specifications, Tolerances, and Regulations for Commercial Weighing and Measuring Devices. Prescription Scales and Balances. For two classes dependent on accuracy, requirements on graduation markings of scales and indicators, leveling provision, sensibility reciprocal, allowable tolerances on measurement, material in knife-edges and bearings, etc.

U. S. Gov., Dept. of Commerce, National Bureau of Standards, H29; 1942. Specifications, Tolerances, and Regulations for Commercial Weighing and Measuring Devices. Scales. General specifications. Definition of rated capacity, requirements on use of hardened steel for knife-edges and bearings, structural features, minimum width of graduations, definitions of balance and sensibility reciprocal.

U. S. Gov., Dept. of Commerce, National Bureau of Standards, H29; 1942. Specifications, Tolerances, and Regulations for Commercial Weighing and Measuring Devices. Scales. Gives general definitions and detail specifications covering design, construction, and performance, as well as tolerances, of spring scales, computing scales, cream-test and butterfat-test scales, and prescription scales and balances.

U. S. Gov., Dept. of Commerce, National Bureau of Standards, H29; 1942. Specifications, Tolerances, and Regulations for Commercial Weighing and Measuring Devices. Spring Scales. Requirements on size and spacing of graduations, structural and design

features, tolerances on accuracy of indications and for shift of load test at half capacity.

U. S. Gov., Dept. of Commerce, National Bureau of Standards, H29; 1942. Specifications, Tolerances, and Regulations for Commercial Weighing and Measuring Devices. Weights. Permissible materials, requirements on finish, protective coating, marking of value on weight, tolerances allowed on weights for avoirdupois system, for apothecaries' system, and for metric system, for weights up to 50 lb.

U. S. Gov., Dept. of Commerce, National Bureau of Standards, H29; 1942. Specifications, Tolerances, and Regulations for Commercial Weighing and Measuring Devices. Wheel-Load Weighers. Used for determining the axle loads of trucks on highways; requirements on accuracy.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Technologic Paper T199; 1921. Method of Precision Test of Large-Capacity Scales. Outlines a scientific and systematic method used by the Bureau for testing railroad master and grain hopper scales; includes means for accurately measuring the position of the beam.

U. S. Gov., Federal Specification AAA-S-79; 1942. Scales; Motor-Truck, Built-In, and Self-Contained. Specifies requirements to conform to U. S. Gov., Dept. of Commerce, National Bureau of Standards Letter Circular LC663, Specifications for the Manufacture and Installation of Motor-Truck, Built-In, Self-Contained, and Portable Scales, 1941; method of inspection and test; and marking.

U. S. Gov., Federal Specification AAA-S-91; 1935. Amendment 1; 1944. Scales; Prescription. Covers a single type for weighing by pharmacists of the ingredients of medicinal and other formulas prescribed by physicians and others; having an equal-arm lever system, stabilized pans, and a fully-enclosed lever system. Gives requirements for workmanship, materials, finish, capacity and class marking, balancing means, conditions of level, arresting means, indicating means, antifriction elements, pivots, bearings, weighbeam and poises, pans, permanency and maintenance of accuracy, and details; method of inspection and test; and packaging, packing, and marking.

U. S. Gov., Federal Specification AAA-S-101a; 1942. Scales; Railroad-Track. Specifications and tolerances set forth in Bureau of Standards Circular 83, shall be complied with in all respects. Gives methods of inspection and test.

U. S. Gov., Federal Specification AAA-S-121b; 1943. Amendment 1; 1944. Scales; Weighing, General Specifications. Applicable to all types and classes of commercial weighing scales except cream-test and butter-fat-test scales, computing scales, person-weighing scales, wheel-load scales and weighers, prescription scales, motor truck, built-in, self-contained, and railway track. Defines basic requirements only and is to be supplemented in the invitation for bids by a description of the detail requirements defining the specific type and class of scale desired. Gives definitions, general requirements, and detail requirements; methods of inspection and tests; and packaging, packing, and marking.

U. S. Gov., Navy Dept., Bureau of Yards and Docks. Specification 16Ye; 1941. Refrigerating Equipment. Includes requirements for track scales and ice-making equipment.

U. S. Gov., Navy Dept. Specification 18S13d; 1942. Scales; Weighing.

U. S. Gov., Navy Dept. Specification 58S1; 1929. Scales; Platform.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2158C; 1940. Balance; Analytical, Chain Weight.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2159A; 1941. Weights for Analytical Balance.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2228A; 1941. Balance, Analytical; Rest for, Glass.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2229A; 1941. Balance; Prescription.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2230A; 1941. Balance Prescription; Weights.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2233A; 1939. Scale; Physicians.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2441; 1937. Scale; Baby.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2493; 1939. Scale; Dietetic.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2519; 1939. Balance; Portable, With Weights.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2675; 1939. Balance; Prescription, Field.

U. S. Gov., U. S. Army, Medical Dept. Specification 28-36; 1939. Scale; Meat, Beam.

U. S. Gov., U. S. Army, Medical Dept. Specification 28-95; 1939. Scale; Grocers'.

U. S. Gov., U. S. Army, Signal Corps. Specification 75-2B; 1937. Scale PH-14-A; Weighing, Photographic.

*References.*—Weights for use with scales and balances, *see* 919.1; railway cars, *see* 726.1.

## 793.6 LIQUID MEASURING DEVICES

Underwriters' Laboratories, Inc. Standard for Construction and Performance of Hand-Operated Discharge Devices and Hand-Operated Pumps, 1930. For dispensing motor fuels at automobile filling stations, installed in accordance with the regulations of the National Board of Fire Underwriters. Gives minimum requirements for construction of housing, pumping unit, removable head, stuffing boxes, rotor, mechanism, piping, hose, and accessories. Also includes wiring, locking, and labeling.

Underwriters' Laboratories, Inc. Standard for Construction and Performance of Outside Visible-Measure Discharge Devices, 1929. For use in dispensing motor fuels at automobile filling stations, installed in accordance with regulations of the National Board of Fire Underwriters. Covers construction of housing, pumps, air and vacuum systems, control mechanism, metering, piping, hose, electrical equipment, locking, and labeling.

Underwriters' Laboratories, Inc. Standard for Power-Operated Discharge Devices, 1930. For dispensing motor fuels at filling stations, installed in accordance with the regulations of the National Board of Fire Underwriters. Housing or enclosure, power pumps, delivery capacity and pressure, bypass and relief valves, metering, piping and hose fittings,

control mechanism, electrical equipment, switches, locking, and labeling.

Underwriters' Laboratories, Inc. Standard for Power-Operated Pumps and Discharge-Device-Accessory Pumps, 1938. Pumps for dispensing motor fuels at filling stations, etc., installed in accordance with the regulations of the National Board of Fire Underwriters. Covers construction of base, body, head, stuffing boxes, rotor, cylinder, piston, relief valve, piping, tests, workmanship, and labeling.

U. S. Gov., Army Air Forces. Specification 27478-B; 1945. Meter; Fuel Flow, Type B-1A, Remote Indicating, Autosyn, Aircraft, 26 Volts, 400 Cycles.

U. S. Gov., Army Air Forces. Specification 27479A-1; 1944. Meter; Fuel Flow, Type B-2, Remote Indicating, Autosyn, Aircraft, 26 Volts, 400 Cycles.

U. S. Gov., Army Air Forces. Specification 27480B-2; 1945. Meter; Fuel Flow, Type B-3A, Remote Indicating, Autosyn, Aircraft, 26 Volts, 400 Cycles.

U. S. Gov., Army-Navy Aeronautical Specification AN-F-41-1; 1944. Flowmeters; Fuel.

U. S. Gov., Army-Navy Aeronautical Specification AN-P-1(2); 1944. Pump Assemblies; Fluid Metering, General Specification for.

U. S. Gov., Army-Navy Aeronautical Specification AN-P-2a-1; 1944. Pump Assembly; 2 G.P.H. Fluid Metering, Type A.

U. S. Gov., Army-Navy Aeronautical Specification AN-P-41; 1943. Pump Assembly; 5 G.P.H. Fluid Metering, Type B.

U. S. Gov., Dept. of Commerce, National Bureau of Standards, H29; 1942. Specifications, Tolerances, and Regulations for Commercial Weighing and Measuring Devices. These refer to mechanisms or machines adapted to measure and deliver liquid by volume, both wholesale and retail. Detail requirements are given for design, construction, and kind of materials used, as well as allowable tolerances.

U. S. Gov., Federal Specification GG-M-191; 1931. Measuring Devices; Liquid, Retail Type. Covers devices which on account of character of their primary indicating elements are obviously designed for unit deliveries of less than 50 gal. Does not apply to water meters of any size or to grease-measuring devices. Gives detail requirements; method of inspection and tests; and requirements for packing and marking.

U. S. Gov., Navy Dept. Specification 41R8; 1936. Rules; Oil-Sounding, Jointed.

U. S. Gov., Navy Dept. Specification 45M1d; 1938. Meters; Fuel, Shipboard Use.

U. S. Gov., Navy Dept. Specification 45M3; 1938. Meters; Gasoline, Shipboard Use.

U. S. Gov., Panama Canal, Purchasing Dept. Specification for Diesel-Oil Metering Equipment, 1944. Consists of two meters, each having an orifice plate and flanges for 12 in. pipe as the primary device, an indicating, integrating, and recording manometer, and a contact-making device as the secondary device.

U. S. Gov., Veterans Administration. Specification VA-M-75; 1933. Gasoline Storage Tank and Pump.

U. S. Gov., Veterans Administration. Specification VA-MC-49b; 1941. Gasoline Storage Tank and Pump.

*References*—Other power operated pumps, *see* 755.1; water meters, *see* 793.4.

## 793.7 GREASE-MEASURING DEVICES

U. S. Gov., Dept. of Commerce, National Bureau of Standards, H29; 1942. Specifications, Tolerances, and Regulations for Commercial Weighing and Measuring Devices. Grease-Measuring Devices. These refer to mechanisms or machines adapted to measure and deliver grease or transmission oil by weight. Specification requirements are given relative to the construction, design, and materials used, including allowable tolerances.

## 793.9 MISCELLANEOUS MEASURING AND RECORDING APPARATUS

U. S. Gov., Army Air Forces. Specification 40400 (1); 1942. Meter; Ground Flow Check, Oxygen System.

U. S. Gov., Navy Dept. Specification 18M7; 1941. Meters; Moisture, for Determination of Moisture Content of Lumber.

*References.*—Fabric measuring devices, *see* 390.4; electric meters, *see* 714.3; standard weights and measures, *see* 919.1.

# 794. LUBRICATING DEVICES

Assn. of American Railroads. Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Lubricators, fittings for locomotives, dimensional drawings for location of joints and holding arm, pipe joints and fittings, and holding arm. Shows form of thread, length, shoulder, size of nut, etc.

U. S. Gov., Army-Navy Aeronautical Specification AN-F-38; 1944. Fittings; Pressure-Grip Lubricator.

U. S. Gov., Navy Dept. Specification 10S2; 1944. Strainers; Lubricating-Oil, Small.

U. S. Gov., Navy Dept. Specification 41G5e; 1941. Guns, Lubricating, Pressure, Hand-Operated; and Fittings, Shipboard Use.

U. S. Gov., Navy Dept. Specification 45C6c; 1943. Cups; Oil.

U. S. Gov., Navy Dept. Specification 45C7b; 1943. Cups; Grease.

U. S. Gov., Treasury Dept., Procurement Div., 250A; 1942. Guns; Lubricating, Cartridge Type. Shall be made of rolled drawn iron or steel. Gives requirements for type, capacity, cartridge-attaching means, barrel, feed, mechanism, pump unit, pump packing, discharge nozzle, gaskets, interchangeability, attachments, and finish; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., Veterans Administration. Specification VA-MC-156a; 1941. Lubricating Oil Tank With Pump; 60-Gallon Capacity.

# 795. MECHANICAL GOVERNORS

American Society of Mechanical Engineers. Power Test Code. Speed-Responsive Governors, 1927. Covers performance of speed-responsive governors as applied to steam turbines, hydraulic turbines, reciprocating steam engines, and reciprocating oil and gas engines when employed for driving electrical generators, mills, etc., or for uses where the speed-regulation requirements are similar to those for electrical generators; with auxiliary sections on

general considerations, measurement of time, and speed measurements.

*References.*—General requirements for test codes, *see* 700; steam turbines, *see* 701.2.

## 796. WATER PURIFICATION UNIT

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-339. Sea Water Distilling Equipment.

U. S. Gov., Joint Army-Navy Specification JAN-D-164; 1944. Distillation Unit; Skid Mounted, Thermo-compression Type, 3,000 Gallons Per Day.

U. S. Gov., U. S. Army, Corps of Engineers. Specification 87-5; 1942. Water Purification Unit; Portable.

U. S. Gov., U. S. Army, Corps of Engineers. Specification 87-6A; 1944. Water Purification Unit; Gasoline Engine Driven, Truck Mounted 75 G.P.M.

## 797. SAFETY APPLIANCES, DEVICES, AND EQUIPMENT

*References.*—Safety belts and straps, *see* 069.3; safety code for ladders, *see* 429.4; safety writing papers, *see* 478.33; safety code for building exit, *see* 518.51; safety code for abrasive wheels, *see* 541.3; safety chain, *see* 603.56, 631.9; safety codes for gas, electrical and lighting, *see* 710, 607.0, 715.50; safety valves, *see* 607.6; safety code for pulverized-fuel systems, *see* 703.9; safety codes for transportation, ventilation, and electrical equipment for coal mines, *see* 750, 710; safety code for colors for traffic signals, *see* 718.5; safety code for automobile brakes, *see* 722.38; aeronautic safety codes, *see* 724.3; safety codes for elevators and escalators, *see* 734.3; safety codes for forging and hot metal stamping and for power presses, *see* 760; safety code for power-transmission, *see* 766.0; safety code for protection of industrial workers in foundries, *see* 768; safety codes for textiles, paper and pulp mills, logging and sawmill machinery, and wood-working plants, *see* 770, 782, 784.0; safety code for rubber mills, *see* 783; code for mechanical refrigeration, *see* 785.0; code for laundry machinery, *see* 787; codes for prevention of dust explosions and for pulverizing systems for sugar and cocoa, *see* 789; code for protection of heads and eyes of industrial workers, *see* 914.5; safety matches, *see* 991; safety code for gas-mask canisters, *see* 993.

### 797.0 GENERAL ITEMS

National Conservation Bureau. A Series of Pocket Size Pamphlets for Employees on Safety Instructions. No. 302; 1939, Restaurant Safety Rules. No. 303; 1940, Automobile Service Station Safety Instructions. No. 304; 1940, Mercantile Establishments Safety Instructions. No. 305; 1939, Apartment House Safety Instructions. No. 313; 1940, Theater Safety Instructions. No. 314; 1940, Laundry Safety Instructions. No. 315; 1940, Bakery Safety Instructions. No. 327; 1941, Food Store Safety Instructions. No. 336; 1943, Textile Mill Safety Instructions. No. 337; 1943, Office Building Safety Instructions.

National Conservation Bureau. Getting Results Through Traffic Engineering, No. 203C, Booklet I—gives examples 1 through 24 of the "Before and After" traffic engineering examples. No. 203D, Booklet II—gives examples 25 through 48 containing many examples of interest to war plant transportation supervisors, covering such procedure as group riding, staggering of hours, improving public transit service, timing of traffic signals, elimination of unnecessary stops, and pooling deliveries.

National Conservation Bureau. Handbook of Industrial Safety Standards, including Supplement on Wartime Protection, 1942. This handbook is a compilation of generally recognized industrial safety requirements and aims to cover not the entire field of industrial safety, but only the more important items. Covers supervision, inspection and employee education; first aid and hospital; resuscitation; personal protection; housekeeping and storage of materials; sanitation; illumination; building exits; protection against tripping and falling; elevators; traveling cranes; handling and transportation of material; steam boilers; unfired pressure vessels; engines and turbines; identification of piping; electrical equipment; mechanical power transmission equipment; moving parts of machines; guards for woodworking machines; guards for metal working machines; guards for paper and printing machines; guards for leather working machines; guards for textile and laundry machines; guards for machines in the food industry; guards for rubber working and similar machines; hand tools; exhaust; explosive vapors and gases; spray coating; tank operations; acids and caustic liquids; supplement includes duties of the defense coordinator; fire protection; incendiary bombs; warden services; police protection and the prevention of sabotage; medical services; operation and maintenance protection; camouflage or protective concealment; blackout methods and materials.

National Conservation Bureau, No. 137. Standardization a Force in Promoting Safety. Describes National Conservation Bureau's activities in promoting standardization in safety campaigns.

National Conservation Bureau, No. 321; 1940. Accident Reporting and Recording. Describes frequent weaknesses in present methods of accident reporting and outlining a practical formula method.

Underwriters' Laboratories, Inc., 1944. Lists of Inspected Applicances Relating to Accident Hazard, Automotive Equipment, Burglary Protection. This catalog contains three lists that have been inspected by the Underwriters'. The lists are appliances inspected for accident hazard; inspected automotive appliances; and inspected burglary protection appliances. The listings are arranged alphabetically by name of manufacturer under each subject.

Underwriters' Laboratories, Inc., 1944. List of Inspected Gas, Oil, and Miscellaneous Appliances. This catalog lists gas, oil, and miscellaneous appliances that have been inspected by the Underwriters'. Section I includes devices, materials, and systems which have been examined with reference to fire hazards and such accident hazards as are involved in the class under which they are listed. Section II includes products classified as to fire hazard only. There is an index and the items are arranged alphabetically in each section, as to the subject and alphabetically by name of manufacturer under each subject.

U. S. Gov., Dept. of the Treasury, Bureau of Public Health Service. American Standards Assn., Z4.1-1935. Safety Code for Industrial Sanitation in Manufacturing Establishments. Applies to all permanent places of employment in which articles are manufactured, repaired, cleaned, sorted, or renovated, in whole or in part, for profit, sale, or compensation.

## 797.1 PROTECTIVE CLOTHING

U. S. Gov., Federal Specification GGG-H-171; 1938. Helmets; Babbitting. Covers one type. Gives requirements for design and construction, finish, body of helmet, apron, headgear, window, window container, and marking; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification GGG-H-201; 1938. Helmets and Masks; (for) Abrasive-Cleaning. Covers one type of helmets for outside blasting, and one type of masks for inside blasting. Gives requirements for construction, principal parts, face-piece, spare parts, needle valve, body harness, lens protective assembly, filter cartridge, chemical absorbent, filter material, and efficacy of equipment; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification GGG-H-211; 1938. Amendment 1; 1942. Helmets and Shields; Hand-Held, Welders'. Covers one type. Gives requirements for design and construction, finish, body of helmet or shield, filter-glass mounting, filter glasses, cover glasses, transmission and tolerances in transmission of various shades of glasses, head gear for helmet, and hand for hand shield; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., Navy Dept. Specification 37H4c; 1944. Helmets and Shields; Hand-Held, Welders'.

U. S. Gov., Navy Dept. Specification 37H7a; 1931. Helmets; Aviators', Communication, Gosport.

U. S. Gov., Navy Dept. Specification 37H8a; 1934. Helmets; Aeronautical, Fabric, Unlined.

U. S. Gov., Navy Dept. Specification 37H10; 1939. Helmets; Jungle-Cloth.

U. S. Gov., Navy Dept. Specification 37H11b; 1944. Hats; Protective.

U. S. Gov., Navy Dept. Specification 37H12; 1945. Helmets; Welders' (Protective Hat Combination).

U. S. Gov., Treasury Dept., Procurement Div., 494b; 1942. Guards; Protective, Foot and Shin. Shall be one grade in three types—(I) foot guards (metal), (II) foot and shin guards (metal), and (III) shin guards (vulcanized fiber). Intended for protecting feet and shins of workers from occupational hazards. Gives detail requirements for each type; methods of sampling, inspection and tests; and packaging, packing, and marking.

## 797.2 LIFE PRESERVERS

U. S. Gov., Army Air Forces. Specification No. 3240; 1944. Preserver; Pneumatic Life Vest, Type B-5.

U. S. Gov., Army-Navy Aeronautical Specification AN-V-18-1; 1944. Vests; Pneumatic Life.

U. S. Gov., Joint Army-Navy Specification JAN-P-45; 1944. Preservers; Life, Belt, Self-Inflating, Dual-Tube.

U. S. Gov., Panama Canal, Purchasing Dept. Specification for Life Preservers, 1944. Jacket type, reversible, adult.

# 800-899 CHEMICALS AND ALLIED PRODUCTS

## 800-809 COAL-TAR PRODUCTS

### 800.0 GENERAL ITEMS

American Society for Testing Materials, E 20-33 T; 1933. Tentative Method of Test for Particle Size Distribution of Subsieve Size Particulate Substances. Covers the range of sizes between the 74-micron (No.200) sieve and 0.2-micron. The method is applicable to homogeneous materials. Definitions, rough separation of sample into size groups, preparation of mount, procedure, measurement of diameter, scale limits for measurement, and expression of results.

American Society for Testing Materials, E 24-42; 1942. Definitions of Terms Relating to Rheological Properties of Matter. Defines consistency, plasticity, elasticity, liquid, simple liquid, plastic and elastic solids, etc.

National Fire Protection Assn. National Fire Codes for Flammable Liquids, Gases, Chemicals, and Explosives, 1943. Fire-Hazard Properties of Flammable Liquids, Gases, and Volatile Solids. Gives tables showing flash point, ignition temperature, explosive limits, specific gravity, vapor density, boiling point, Underwriters' Laboratories classification, and extinguishing agents.

National Fire Protection Assn. National Fire Codes for Flammable Liquids, Gases, Chemicals, and Explosives, 1943. Table of Common Hazardous Chemicals. Covers flammable limits and explosive range, ignition temperature, propagation of flame, flash point, oxygen breathing equipment or helmets; and gives table of common hazardous chemicals showing usual shipping container, fire hazard, life hazard, storage, fire fighting phases, and remarks.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Circular C398 and Supplement, 1944. Standard Samples, Hydrocarbons. Gives 45 standard samples of hydrocarbons including n-pentane, 2-methylbutane (isopentane), n-hexane, 2-methylpentane, 3-methylpentane, 2, 2-dimethylbutane, 2, 3-dimethylbutane, methylcyclopentane, cyclohexane, benzene, methylbenzene (toluene), ethylbenzene, 1, 2-dimethylbenzene (o-xylene), 1, 3-dimethylbenzene (m-xylene), and 1, 4-dimethylbenzene (p-xylene). These samples are prepared and sold by the National Bureau of Standards with a certificate of analysis, for use in industry and by others as a comparison standard for checking the accuracy of analysis of similar materials.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Miscellaneous Publication M126; 1937. Temperature Interconversion Tables (C to F) and Melting Points of the Chemical Elements.

## 801. CRUDE COAL-TAR PRODUCTS

### 801.0 GENERAL ITEMS

### 801.1 BENZENE (BENZOL)

American Chemical Society. Specifications for Analytical Reagents, 1941. Benzene. Gives requirements for boiling range, solidification temperature, nonvolatile matter, substances darkened by sulfuric acid, thiophene, sulfur compounds, and tests.

American Society for Testing Materials, D 361-36; 1936. Industrial 90 Percent Benzene (Benzol). Covers limiting values for specific gravity, color, distillation range, nonvolatile matter, odor, water, acidity, and sulfur as $H_2SO_4$, with requirements for tests in accordance with A.S.T.M. method D 268.

American Standards Assn., Z 37.4-1941. U. S. Public Health Service, endorsing sponsor. Allowable Concentration of Benzene. Prescribes the permissible concentration of benzene in the atmosphere of work places for the protection of the health of all workers. Gives properties of benzene, permissible concentration, sampling, and analytical methods.

Industrial Hygiene Foundation of America, Inc. Preventive Engineering Series, Bulletin 2, Part 1; 1938. The Determination of Benzol Vapor in the Atmosphere. Covers taking of sample, analysis of samples, and sample calculation.

U. S. Gov., Federal Specification VV-B-231; 1942. Benzol (Benzene); Technical-Grade. Covers one type and grade. Gives detail requirements; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., Navy Dept. Specification 51B3d; 1940. Benzol.

U. S. Gov., U. S. Army, Army Air Forces. Specification 2-58B; 1930. Benzol; Aviation Grade.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 4-1016B; 1936. Benzene.

*References.*—Testing of lacquer solvents and diluents, *see* 822.0.

### 801.2 TOLUENE

American Chemical Society. Specifications for Analytical Reagents, 1941. Toluene. Gives requirements for boiling range, nonvolatile matter, substances darkened by sulfuric acid, sulfur compounds, water, and tests.

American Society for Testing Materials, D 362-36; 1936. Industrial Pure Toluene (Toluol). Limiting values for specific gravity, color, distillation range, nonvolatile matter, odor, water, acidity, and sulfur as $H_2SO_4$, with tests in accordance with A.S.T.M. method D 268.

American Standards Assn., Z 37.12-1943. Allowable Concentration of Toluene. To prescribe the permissible concentration of toluene in the atmosphere of work places for guidance in establishing control procedures for the protection of the health of workers. Covers general properties, physical-chemical properties, toxic properties, permissible concentration, sampling procedure, and analytical methods.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, Volume 2; 1944. Toluol (Toluene; Methylbenzene). Covers definition, constants, solubility, derivation, uses, grades, containers, hazards, shipping regulations, and substitutes.

Society of Automotive Engineers. Aeronautical Material Specification No. 3180; 1940. Toluene Thinner (Commercial). This is a thinner used primarily for various enamels and primers but may be used in manufacture of organic protective coatings. It specifies the quality and grade of thinner, distillation test, corrosion test, and method of rejection.

U. S. Gov., Army-Navy Aeronautical Specification AN-R-T-541; 1941. Toluene.

U. S. Gov., Marine Corps Specification, adopted 1934. Toluene (Toluol).

U. S. Gov., Navy Dept. Specification 52T7; 1938. Toluene (Toluol).

U. S. Gov., Treasury Dept., Procurement Div., No. 502; 1941. Toluene (Toluol); Technical-Grade. Covers one type and one grade intended for use as a diluent or nonsolvent ingredient in the manufacture of organic protective coatings. Gives requirements for appearance, color, odor, specific gravity, nonvolatile matter, sulfur, water, acidity, spot test, distillation range, copper corrosion, and wash test; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 50-11-38D. Toluene.

*References.*—Testing of lacquer solvents and diluents, *see* 822.0.

## 801.3 CREOSOTE AND WOOD PRESERVATIVES

American Assn. of State Highway Officials, M133-42. Standard Specifications for Timber Preservatives. Includes creosote oil, creosote-coal-tar solution, creosote-petroleum solution, zinc chloride, sodium fluoride-arsenate dinitrophenol solution, chromated zinc chloride, and zinc meta arsenite. Gives properties and methods of sampling and testing.

American Institute of Homoeopathy. Homoeopathic Pharmacopoeia of U. S., 1941. Creosote. Natural order, synonyms, description, habitat, history, parts used, and preparations for tincture, dilutions, and medications for use in homoeopathic medicines.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Creosote. Gives description, miscibility, specific gravity, distilling range, identification, reaction, so-called coal-tar creosote, hydrocarbons and bases, phenol and so-called coal-tar creosote, other impurities, storage, and average dose.

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering, 1939. Specifications for Creosote Analysis. Covers percentage of water, insoluble in benzol, specific gravity, distillation, specific gravity of creosote fractions, float test, coke residue, and standard methods for the determination of tar acids in creosote.

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering. Specifications for Membrane Waterproofing. Gives requirements for creosote primer.

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering. Specifications for Preservatives. Gives requirements for creosote, creosote-coal-tar solutions, and zinc chloride.

American Society for Testing Materials, D 38-33; 1933. American Assn. of State Highway Officials, T 60-42. Methods of Sampling and Testing Creosote. Requirements for continuous drip, routine zone, and referee methods of sampling; applications, apparatus, and procedures in accordance with A.S.T.M. methods of testing for water, matter insoluble in benzol, specific gravity, distillation, float test of residue, and coke residue.

American Society for Testing Materials, D 43-41; 1941. American Assn. of State Highway Officials, M 121-42. Creosote for Priming Coat With Coal-Tar Pitch in Dampproofing and Waterproofing. For application to concrete and masonry surfaces, for use with coal-tar pitch in dampproofing and waterproofing. Maximum water, consistency, specific gravity, matter insoluble in benzol, distillation range, coke residue, procedure for sampling, and methods of testing.

American Society for Testing Materials, D 168-30; 1930. American Assn. of State Highway Officials, T 61-42. Method of Test for Coke Residue of Creosote. Describes crucible and electric tube furnace, using residue resulting from distillation test obtained from A.S.T.M. method D 246, procedure and calculation for percentage. A.R.E.A. Method for Coke Residue of Creosote.

American Society for Testing Materials, D 246-42; 1942. American Assn. of State Highway Officials, T 62-42. Method of Test for Distillation of Creosote. Covers test suitable for all types and grades of creosote and mixtures of creosote with tars and oils used in timber preservation. Describes apparatus, preparations of sample, dehydration of sample, assembly of apparatus, and outline of procedure for test. Conforms to American Railway Engineering Assn. method of test for distillation of creosote.

American Society for Testing Materials, D 324-41; 1941. Definitions of Terms Relating to Timber Preservatives. Defines coal tar, coke-oven tar, creosote, creosote-coal-tar solution, creosote-distillate, creosote oil, gas-house coal tar, and water-gas tar.

American Society for Testing Materials, D 347-33; 1933. Volume and Specific Gravity Correction Tables for Creosote and Coal Tar. For reducing volumes to the basis of 100°F. (38°C.) and for reducing specific gravity to the same temperature; includes creosote, solutions (up to 50 percent coal tar) and for coal tar. These tables were prepared by the National Bureau of Standards for use of the wood preserving industry. Conforms to American Railway Engineering Assn. volume and specific gravity correction tables.

American Society for Testing Materials, D 367-33; 1933. American Assn. of State Highway Officials, T 81-42. Methods of Test for Insoluble Matter in Creosote. Includes porous thimble method, and for routine procedure the asbestos mat method for the extraction of insoluble matter (free carbon) from creosote and creosote-coal-tar solutions with hot benzol. Covers apparatus and method of procedure. Conforms to American Railway Engineering Assn. methods for insoluble matter in creosote.

American Society for Testing Materials, D 368-33; 1933. American Assn. of State Highway Officials, T 82-42. Method of Test for Specific Gravity of Creosote. For determining specific gravity by use of two conventional hydrometers standardized at 15.5/15.5°C. and reading 1.000 to 1.080 and 1.070 to 1.150 by .001. Conforms to American Railway Engineering Assn. method of test for specific gravity of creosote.

American Society for Testing Materials, D 369-33; 1933. American Assn. of State Highway Officials, T 74-42. Method of Test for Specific Gravity, 38/15.5°C., of Creosote Fractions. For fractions either solid or liquid at 38°C., and other distillation fractions where only small amounts are available. Requires use of pycnometers, water bath, special thermometer, and outlines procedure for testing. Conforms to American Railway Engineering Assn. method of test for specific gravity of creosote fractions.

American Society for Testing Materials, D 370-33; 1933. American Assn. of State Highway Officials, T 83-42. Method of Test for Water in Creosote. For creosote and creosote-coal-tar solution, for dehydrating creosote containing over 3 percent water for distillation test, and alternative method where rapid determination of water only is required. Covers still and condenser, apparatus assembly, and outlines of methods of procedure. Conforms to American Railway Engineering Assn. method of test for water in creosote.

American Society for Testing Materials, D 390-36; 1936. Creosote. For use in the preservative treatment of timber by creosote distilled from coal-gas or coke-oven tar. Allowable percentage of water, matter insoluble in benzol, specific gravity, distillation range, and coke residue, sampling and testing in accordance with A.S.T.M. methods. Conforms with American Railway Engineering Assn. specifications for creosote.

American Society for Testing Materials, D 391-36; 1936. Creosote-Coal-Tar Solution. Covers product of at least 80 percent distillate of coal-gas or coke-oven tar for preservative treatment of timber. Gives allowable percentage of water, matter insoluble in benzol, specific gravity, distillation range, and coke residue, sampling and testing in accordance with A.S.T.M. methods. Conforms to American Railway Engineering Assn. specification for creosote-coal-tar solution.

American Society for Testing Materials, D 453-41; 1941. Method of Test for Tar Acids in Creosote and Creosote-Coal-Tar Solutions. Covers the procedure for determining the amount of tar acids in fractions distilled from creosote and creosote-coal-tar solutions. Apparatus procedure and calculation.

American Transit Assn. Standard Preservative Oils Suitable for Non-Pressure Open Tank, Brush and Spray Treatments, W52-31; 1931. Gives detailed requirements, and composition and methods of tests of anthracene oil and heavy creosote oil.

American Wool-Preservers' Assn., 4f; 1936. Standard Specification for Creosote. Shall be a distillate of coal-gas tar or coke-oven tar. Gives requirements for maximum percentage of water, matter insoluble in benzol, specific gravity, distillation limits, and coke residue.

American Wood-Preservers' Assn., 5e; 1942. Standard Specification for Creosote-Coal-Tar Solutions. Shall be a pure coal-tar product obtained from the high temperature carbonization of coal and is in four grades. Gives requirements for percentage of coal-tar distillate, maximum water, matter insoluble in benzol, coke residue, specific gravity, and distillation range.

American Wood-Preservers' Assn., 6b; 1926. Standard Float Test of the Residue in Creosote Oil. Gives requirements for apparatus, diagram of set-up, preparations of sample, and method of procedure.

American Wood-Preservers' Assn., 7d; 1933. Standard Method for the Determination of Coke Residue in Creosote Oil. Gives diagram of electric tube furnace and requirements for apparatus, procedure, and calculations.

American Wood-Preservers' Assn., 8b; 1933. Standard Method for the Determination of the Amount of Material Insoluble in Benzol. Gives description of apparatus necessary and outline of procedure.

American Wood-Preservers' Assn., 9c; 1934. Standard Method for the Determination of the Specific Gravity, 38°/15.5°C., of Creosote Fractions. For determining the specific gravity of the relatively small amounts of distillation fractions of creosote and is also suitable for creosote-oil and creosote-coal-tar solution where only small amounts are available. Gives requirements for apparatus, calibration of pycnometer, procedure, and calculation.

American Wood-Preservers' Assn., 10d; 1936. Standard Method for the Determination of Water in Creosote. For determining the percentage of water in creosote, also for dehydrating creosote containing water in preparation for the distillation test. This method is suitable for creosote, tar, petroleum and mixtures thereof. Gives requirements for apparatus, sampling, and procedure.

American Wood-Preservers' Assn., 11f; 1941. Standard Distillation of Creosote. Suitable for all types and grades of creosote, tar, and mixtures of creosote with tars used for timber preservation. Gives requirements for apparatus, preparation of sample, and procedure.

American Wood-Preservers' Assn., 13c; 1933. Volume and Specific Gravity Correction Tables for Creosote, Creosote-Coal-Tar Solution (Up to 50 Percent Tar), and Coal Tar (Coke-Oven Tar). Table of factors for determining volume of 100°F. occupied by unit volume at temperatures ranging from 60 to 220°F. Also table of factors for determining specific gravity at 100°F. when temperatures range from 60 to 220°F.

American Wood-Preservers' Assn., 15b; 1938. Standard Specification for Preservatives for Flooring and Paving Blocks. Includes coal-tar creosote. Gives requirements for water content, matter insoluble in benzol, specific gravity, distillation limits, and coke residue.

American Wood-Preservers' Assn., 18c; 1933. Standard Method for the Determination of the Specific Gravity of Creosote Oil. Description of standardized hydrometers, standard temperature of oil, and corrections.

American Wood-Preservers' Assn., 24f; 1939. Standard Specification for Preservative Oils for Non-Pressure Treatments. For creosote for open tank treatment, for creosote for brush and spray treatment, and anthracene oil. Gives requirements for water content, matter insoluble in benzol, specific gravity, distillate limits, and coke residue.

American Wood-Preservers' Assn., 25b; 1931. Standard Method of Sampling Creosote Oil in Tank Cars. Description of sampling device and alternative zone sampling apparatus; procedures for standard and simplified method for obtaining zone samples. Includes tables of combining factors for computing percentage of water in tank.

American Wood-Preservers' Assn., 26b; 1939. Standard Method for the Determination of Tar Acids. For fractions distilled from creosote and creosote-coal-tar solutions; description of tar-acid separatory funnel, types 1 and 2; procedure and formula for expression of result.

American Wood-Preservers' Assn., 31c; 1938. Standard Specification for Water-Gas-Tar Distillate for Use With Zinc Chloride. Gives requirements for maximum water, matter insoluble in benzol, specific gravity, distillate limits, and coke residue.

American Wood-Preservers' Assn., 32c; 1938. Standard Specification for Water-Gas-Tar Solution for Use With Zinc Chloride. Composed of distillate of water-gas-tar and refined or filtered water-gas-tar. Gives requirements for water content, matter insoluble in benzol, specific gravity, distillate limits, and coke residue.

U. S. Gov., Army Air Forces. Specification 14097 (1); 1939. Tar Acid Oil (Creosote Oil).

U. S. Gov., Federal Specification TT-W-531; 1941. Wood-Preservative; Anthracene-Oil (for) Brush, Spray, or Open-Tank Treatment. Covers one grade. Gives details requirements; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification TT-W-546; 1941. Amendment 1; 1944. Wood-Preservative; Celcure (Acid-Cupric-Chromate). Covers one grade. Gives requirements for preparation, chemical composition, impurities, retention of preservative, and determination of contents; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification TT-W-551; 1941. Amendment 1; 1944. Wood-Preservative; Chromated-Zinc-Chloride. Covers one grade. Gives requirements for zinc chloride, sodium dichromate dihydrate, concentrated solution, and treating solution; tests shall be made in accordance with current standard methods of American Wood Preservers' Assn; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification TT-W-556a; 1941. Amendment 1; 1944. Wood-Preservative; Coal-Tar-Creosote. Covers two types and shall be a distillate of coal-gas tar or coke-oven tar. Gives requirements for water, material insoluble in benzol, coke residue, specific gravity, and distillate limits for creosote for pressure treatment of poles or for mixing with petroleum and for treating ties, lumber, piles, posts, and miscellaneous structural timber; methods of sampling, inspection, and tests made in accordance with current standard methods of the American Wood Preservers' Assn.; and packaging, packing and marking for shipment.

U. S. Gov., Federal Specification TT-W-560; 1941. Wood-Preservative; Coal-Tar-Creosote (Crystal-Free), (for) Brush, Spray, or Open-Tank Treatment. Covers one grade made in accordance with current standard methods of the American Wood-Preservers' Assn. Gives detail requirements; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Federal Specification TT-W-566a; 1941. Wood-Preservative; Creosote-Coal-Tar Solution (for) Ties and Structural-Timbers. Covers one grade and two types. Gives detail requirements and methods of tests.

U. S. Gov., Federal Specification TT-W-568; 1941. Amendment 1; 1944. Wood-Preservative; Creosote-Petroleum-Solution. Covers one grade. Gives requirements for preparation, coal-tar creosote, petroleum, specific gravity, water and sediment, flash point and viscosity; tests shall be made in accordance with the standard methods of American Society for Testing Materials currently in effect; and methods of sampling, inspection, and tests.

U. S. Gov., Federal Specification TT-W-573; 1941. Amendment 1; 1944. Wood-Preservative; Wolman-Salt (Tanalith). Covers one grade in dry form. Gives requirements for chemical composition and determination of content of sodium fluoride, disodium hydrogen arsenate, sodium chromate, and dinitrophenol; and methods of sampling, inspection, and tests.

*References.*—Zinc chloride as wood preservative, *see* 839.38; pressure process, brush and open tank processes of preservative treatments of lumber, *see* 400.42, 400.43; creosote carbonate, medicinal agents, *see* 803.23.

## 801.4 NAPHTHALENE, NAPHTHOL

American Institute of Homoeopathy. Homoeophathic Pharmacopoeia of U. S., 1941. Naphthalin. Chemical symbol, synonyms, description, and preparations for triturations for use in homoeopathic medicines.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, Volume 2; 1944. Naphthalene. Covers definition, constants, solubility, derivation, uses, grades and forms, packing, fire hazards, and substitutes.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Betanaphthol. Description, solubility, melting point, indentification, ash, free acid, alphanaphthol, naphthalene or other organic impurities, and storage.

U. S. Gov., Federal Specification R-N-91; 1933. Naphthalene; Balls and Flakes. Covers one grade in two classes—(A) balls and (B) flakes. Gives requirements for color, solidifying point, residue on ignition, and solubility; methods of inspection and tests; and requirements for packaging, packing, and marking.

## 801.5 CRUDE COAL TAR

*References.*—Crude coal tar, *see* 505.3.

### 801.6 REFINED COAL-TAR OIL

*References.*—Coal-tar oil, *see* 505.37.

### 801.8 XYLENE (XYLOL)

American Chemical Society. Specifications for Analytical Reagents, 1941. Xylene. Gives requirements for boiling range, nonvolatile matter, substances darkened by sulfuric acid, sulfur compounds, water, and tests.

American Standards Assn., Z 37.10-1943. Allowable Concentration of Xylene (American War Standard). To prescribe the maximum permissible concentration of xylene in the atmosphere of work places for guidance in establishing control procedures for the protection of the health of workers. Gives properties of xylene. permissible concentration, sampling procedure, and analytical methods.

U. S. Gov., Army-Navy Aeronautical Specification, AN-R-X-876-2; 1943. Xylene.

*References.*—Testing of lacquer solvents and diluents, *see* 822.0.

## 802. INTERMEDIATE COAL-TAR PRODUCTS

### 802.1 ACIDS

American Chemical Society. Specifications for Analytical Reagents, 1941. Acid Benzoic. Gives requirements for melting point, nonvolatile matter, solution in ammonium hydroxide, chlorine compounds, heavy metals and tests.

American Institute of Homoeopathy. Homoeopathic Pharmacopoeia of U. S., 1941. Benzoic Acid, Carbolic Acid, Picric Acid, and Salicylic Acid. Chemical symbol, synonyms, description, and preparations for triturations, tincture, dilutions, and medications for use in homoeopathic medicines.

The American Pharmaceutical Assn. and the National Formulary Committee. The National Formulary, Seventh Edition, 1942. Glycerite of Phenol (Glycerite of Carbolic Acid). Gives chemical composition, storage, average dose, and preparation.

The American Pharmaceutical Assn. and the National Formulary Committee. The National Formulary, Seventh Edition, 1942. Phenolated Water (Carbolic Acid Water or Solutio Phenoli, P.I.). Gives chemical composition and storage.

The American Pharmaceutical Assn. and the National Formulary Committee. The National Formulary, Seventh Edition, 1942. Pyrogallol. Gives chemical composition, description, solubility, melting point, identifications, ash, reaction, and storage.

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis, 1940. Caustic Poisons. Phenol. Official method for determination of phenol in commercial cresols, saponified cresol solns, coal-tar dips, and disinfectants, and to kerosene solns of phenols, except in presence of salicylates or betanaphthol and in the presence of salicylates.

National Assn. of Dyers and Cleaners of the U. S. and Canada. The Spotting Dept., 1940. Includes general description and recommended uses for phenal and other intermediate coal-tar acids used in spotting department.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, 1938. Phenol. Covers common name, constants, color and properties, derivation, solubility, uses, grades, and packing.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Acetylsalicylic Acid (Aspirin). Description, solubility, melting point, identification, loss on drying, ash, carbonizable substances, chloride, sulphate, free salicylic acid, heavy metals, substances insoluble in sodium carbonate, assay, and storage. U.S.P. Product of acetylsalicylic acid—Tabellae Acidi Acetylsalicylici.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Acetylsalicylic Acid Tablets (Aspirin Tablets). Identification, assay, storage, and sizes.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Aminoacetic Acid. Description, solubility, identification, loss on drying, ash, carbonizable substances, reaction, chloride, sulphate, heavy metals, hydrolyzable substances, assay, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Benzoic Acid. Description, solubility, melting point, identification, ash, carbonizable substances, chlorinated compounds, heavy metals, oxidizable impurities, assay, and storage. U.S.P. Product of benzoic Acid—Tinctura Opii Camphorata.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Liquefied Phenol (Liquefied Carbolic Acid). Description, solubility, specific gravity, boiling point, other requirements, assay, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Methyl Salicylate (Oil of Wintergreen, Oil of Sweet Birch). Description, solubility, specific gravity, boiling range, optical rotation, refractive index, identification, reaction, heavy metals, limit of free acid, assay, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Phenol (Carbolic Acid). Description, solubility, congealing temperature, indentification, nonvolatile residue, reaction, assay, and storage. U.S.P. Products of phenol—Phenol Liquefactum, Unguentum Phenolis.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Phenol Ointment (Ointment of Carbolic Acid). Preparation and assay.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Salicylic Acid. Description, solubility, melting point, identification, ash, carbonizable substances, chloride, sulfate, heavy metals, coloring matter, phenol, assay, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Trinitrophenol (Picric Acid). Description, solubility, melting point, identification, reaction, sulfate, insoluble matter, and storage.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Circular C398 and Supplement, 1944. Standard Samples. Benzoic Acid, Sample 39f. This sample is prepared and sold by the National Bureau of Standards with a certificate of analysis for use in industry

and by others as a comparison standard for checking the accuracy of analysis of similar material.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Circular C398 and Supplement, 1944. Standard Samples (Microchemical Standards). Benzoic Acid, Sample 140. This sample is prepared and sold by the National Bureau of Standards with a certificate of analysis for use in industry and by others as a comparison standard for checking the accuracy of analysis of similar material.

U. S. Gov., U. S. Army, Ordnance Dept., Specification 4-1028; 1929. Phenol.

### 802.2 ANILINE OIL AND SALTS

American Chemical Society. Specifications for Analytical Reagents, 1941. Aniline. Gives requirements for color, nonvolatile matter, hydrocarbons and nitrobenzene, boiling range, and tests.

American Institute of Homoeopathy. Homoeopathic Pharmacopoeia of U. S., 1941. Anilin and Anilin Sulfate. Chemical symbol, synonyms, description, and preparations for tincture and solutions for use in homoeopathic medicines.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Compound Powder of Acetanilid. Gives chemical composition, description, identifications, storage, average dose, and preparation.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, 1938. Oil; Aniline. Covers definition, derivation, solubility, purity, uses, and packing.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Acetanilid. Description, solubility, melting point, identification, loss on drying, ash, carbonizable substances, reaction, and storage.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Circular C398 and Supplement, 1944. Standard Samples (Microchemical Standards). Acetanilide, Sample 141. This sample is prepared and sold by the National Bureau of Standards with a certificate of analysis for use in industry and by others as a comparison standard for checking the accuracy of analysis of similar material.

U. S. Gov., U. S. Army, Chemical Warfare Service. Specification 97-54-145; 1941. Aniline; Technical.

### 802.3 DIPHENYLAMINE FOR SMOKELESS POWDER

U. S. Gov., U. S. Army, Ordnance Dept. Specification 60-11-27A; 1930. Diphenylamine.

U. S. Gov., Navy Dept. Specification 51D1b; 1941. Diphenylamine, Smokeless-Powder.

## 803. FINISHED COAL-TAR PRODUCTS

### 803.1 COAL-TAR COLOR, DYERS, AND STAINS

#### 803.10 General Items

American Assn. of Textile Chemists and Colorists. 1943 Yearbook. Tabulation of American Dyes. Covers an extensive list of dyestuffs and chemical specialties related to textiles, tabulated alphabetically, and gives color index numbers, classification, manufactures, and foreign prototypes.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, 1938. Dyes. Covers definition, derivation and characteristics, classifications, containers, and marketing customs.

Technical Assn. of the Pulp and Paper Industry. Color Strength and Shade of Dyestuffs, Suggested Method T 626 sm-43; 1943. Following methods are designed for the evaluation of dyes used for coloring paper in terms of a preselected dye to be known as the standard dye. Covers sampling; method A—for calender coloring and dip dyeing includes apparatus, dye test solutions, procedure, and report; and method B—for beater dyeing, includes apparatus, reagents, preparation of test pulps, preparation of samples, procedure, formation of handsheets, dyeing the sheets, evaluation, report, precision, and additional information.

U. S. Gov., Federal Security Agency, Food and Drug Administration. S.R.A., F.D.C.3; 1940. Coal-Tar Color Regulations. Covers definitions, general specifications for straight colors, straight colors—food drugs and cosmetics, mixtures which may be certified, sampling, storage and packaging, certification, labeling, records of distribution, procedure for admitting colors to listing, and appendix.

*References.*—Standard color card for fabrics, *see* 306.0; methods of testing fastness of dyestuffs on fabrics, *see* 300.4.

#### 803.11 Indigo, Natural and Synthetic

American Hospital Assn., 46-4. Laundry Bluing. Covers two classes in non-sour type and one class in sour type. Based on U. S. Gov. Federal Specification O-B-491.

American Institute of Homoeopathy. Homoeopathic Pharmacopoeia of U. S., 1941. Indigo. Natural order, synonyms, description, habitat, history, parts used, and preparations for tincture, dilutions, and medications for use in homoeopathic medicines.

U. S. Gov., Federal Specification O-B-491; 1934. Bluing; Laundry. Covers two types: (I) Non-sour in two classes—(A) balls, blocks, or cubes; and (B) powder or tablet form and (II) sour type in powder or tablet form. Gives requirements for material, color of liquid, and fineness of suspended particles; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

#### 803.12 Color Lakes

U. S. Gov., Navy Dept. Specification 52P8b; 1934. Part-Lake; Carriage.

#### 803.13 Coal-Tar Food Colors

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis, 1940. Coloring Matters in Foods. Pigments and lakes, soluble coloring matters and their lakes, separation by immiscible solvents procedure, permitted coal-tar food colors, natural coloring matters, and commercial coal-tar food colors.

*References.*—Methods of test and analysis, *see* 803.10.

### 803.19 Miscellaneous Coal-Tar Colors, Dyes, and Stains

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Commission on Standardization of Biological Stains certifies dyes which are most suitable for preparing these solutions. Staining Solutions. Gives formulas for acid fuchsin solution, alcoholic eosin solution, aqueous eosin solution, aqueous methylene blue solution, basic fuchsin solution, Bismarck brown solution, Delafield's hematoxylin solution, Ehrlich's aniline gentian violet solution, Heidenhain's hematoxylin solution, hematoxylin and eosin solution, Hucker's gentian violet solution, iodine water, Loeffler's alkaline methylene blue solution, Mallory's stain, Mayer's hemalum solution, Nicolle carbol-gentian violet solution, neutral red solution, Pappenheim's methyl green-pyronin solution, safranin solution, Stirling's gentian violet solution, and Ziehl-Neelsen carbol-fuchsin solution.

U. S. Gov., Federal Specification O-E-571; 1932. Eosin Y (Color Index 768). Covers one grade. Gives requirements; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Navy Dept. Specification 51D5; 1943. Dye; Direct, Khaki, for Landing Forces.

U. S. Gov., Navy Dept. Specification 52M5; 1944. Methyl-Violet-Toner, Dry Powdered Form.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 27-2A; 1938. Dye; Scarlet, for Igniter Pads.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 27-3; 1934. Dye; Green, for Cartridge Cloth.

U. S. Gov., U. S. Army, Signal Corps. Specification 75-14; 1942. Dye; Aniline,

U. S. Gov., Veterans Administration. Specification VA-X-43b; 1941. Dye; Household, Package.

*Reference.*—Color numbers, *see* 803.10.

## 803.2 COAL-TAR MEDICINALS

### 803.20 General Items

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Coal Tar. Gives description, solubility, ash, storage, and preparations.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Tablets of Acetanilid. Gives chemical composition, identifications, assay, and averages dose.

### 803.21 Dichloramine-T

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Dichloramine-T. Gives chemical Composition, description, solubility, melting point, identifications, chloroform-insoluble substances, assay, and storage.

### 803.22 Xylene

*References.*—Xylene, *see* 801.8.

### 803.23 Creosote Carbonate

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Creosote Carbonate. Gives description, miscibility, specific gravity, boiling point of creosote, identification, ash, free creosote, storage, and average dose.

*Reference.*—Creosote as a medicinal agent, *see* 801.3.

### 803.24 Orthocresol, Cresol

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, Volume 2; 1944. Cresol. Covers definition, derivation, types and grades, uses, and packing.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Cresol. Description, solubility, specific gravity, distillation range, identification, reaction, hydrocarbons, and storage. U.S.P. product of cresol—Liquor Cresolis Saponatus.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Saponated Solution of Cresol (Compound Solution of Cresol). Characteristics of the liberated fatty acids, assay, storage, and alcohol content.

*References.*—Commercial cresol, coal-tar dips, *see* 803.4.

### 803.25 Thymol

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Thymol. Description, solubility, melting point, identification, nonvolatile matter, reaction, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Thymol Iodide. Description, solubility, identification, loss on drying, ash, soluble halides, alkalies, free iodine, assay, and storage.

### 803.29 Miscellaneous Coal-Tar Medicinals

American Institute of Homoeopathy. Homoeopathic Pharmacopoeia of U. S., 1941. Nitro Benzol and Salol. Chemical symbol, synonyms, description and preparations for use in homoeopathic medicines.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Chloroformic Solution of Coal Tar. Gives chemical composition, description, storage, external use, and preparation.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Emulsion of Liquid Petrolatum With Phenolphthalein. Gives chemical composition, storage, alcohol content, preparation, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Ointment of Coal Tar. Gives chemical composition, preparation, and storage.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Solution of Coal Tar (Liquor Carbonis

Detergens). Gives chemical composition, description, identification, storage, alcohol content, average dilution for external use, and preparation.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Tablets of Acetophenetidin and Phenyl Salicylate (Phenacetin and Salol Tablets). Gives chemical composition, identifications, assay for acetophenetidin and for phenyl salicylate, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Tablets of Phenolphthalein. Gives chemical composition, identification, assay, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Tablets of Phenyl Salicylate (Salol Tablets). Gives chemical composition, identifications, uncombined phenol or salicylic acid, assay, and average dose.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Acetophenetidin. Description, solubility, melting point, identification, loss on drying, ash, carbonizable substances, reaction, acetanilid, paraphenetidin, and storage. U.S.P. product of acetophenetidin—Tabellae Acetophenetidini.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Acetophenetidin Tablets (Phenacetin Tablets). Identification, acetanilid, assay, storage, and sizes.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Amaranth. Description, solubility, color, standard, and storage. U.S.P. product of amaranth—Liquor Amaranthi.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Phenolphthalein. Description, solubility, melting point, identification, loss on drying, ash, arsenic, heavy metals, colored substances, fluorane, sensitiveness, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Phenolsulfonphthalein (Phenol Red). Description, solubility, identification, loss on drying, ash, arsenic, insoluble substances, sensitiveness, and storage. U.S.P. product of phenolsulfonphthalein—Injectio Phenolsulfonphthaleini.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Phenyl Salicylate (Salol). Description, solubility, melting point, identification, loss on drying, ash, free acid, free phenol or salicylic acid, chloride, sulfate, and storage.

*Reference.*—Creosote, medicinal agent, *see* 801.3: betanaphthol, naphthalene, medicinal agents, *see* 801.4; carbolic acid, benzoic acid, picric acid, salicylic acid, acetylsalicylic acid, pyrogallic acid, picric acid, as medicinal agents, *see* 802.1; aniline, acetanilid, as medicinal agents, *see* 802.2; indigo, as medicinal agent, *see* 803.11.

### 803.3 EXPLOSIVES

*References.*—Explosives, fireworks and ammunition, *see* 860-869.

### 803.31 Picric Acid

U. S. Gov., U. S. Army, Ordnance Dept. Specification 50-13-2A; 1938. Acid; Picric, Trinitrophenol.

*References.*—Picric Acid as a medicinal and as a chemical reagent, *see* 802.1.

### 803.32 Trinitrotoluol

U. S. Gov., Navy Dept. Specification 51T2b; 1941. Trinitrotoluol.

U. S. Gov., U. S. Army, ordnance Dept. Specification 50-13-5C; 1942. Trinitrotoluene.

### 803.33 Ammonium Picrate

U. S. Gov., U. S. Army, Ordnance Dept. Specification 50-13-3C; 1938. Ammonium Picrate; Explosive D.

### 803.34 Tetryl

U. S. Gov., U. S. Army, Ordnance Dept. Specification 50-13-4C; 1942. Tetryl.

### 803.35 Dinitrotoluene

U. S. Gov., U. S. Army, Ordnance Dept. Specification 50-13-10B; 1941. Dinitrotoluene, DNT.

### 803.4 COAL-TAR DIPS AND DISINFECTANTS

American Hospital Assn., 16-7. Coal Tar Disinfectant (Emulsifying Type). Based on U. S. Gov., Dept. of Commerce, National Bureau of Standards, Commercial Standard CS70-38 for Coal-Tar disinfectant (Emulsifying Type), referred to below.

American Hospital Assn., 16-10. Cresylic Disinfectants. Based on U. S. Gov., Dept. of Commerce, National Bureau of Standards, Commercial Standard CS71-38 for Cresylic Disinfectants, referred to below.

*References.*—Miscellaneous disinfectants, *see* 881.9.

## 809. MISCELLANEOUS COAL-TAR PRODUCTS

### 809.1 SYNTHETIC TANNING MATERIALS

American Leather Chemists Assn. Methods of Sampling and Analysis, 1938. Includes vegetable materials containing tannin, chrome tanning materials, beam house liquors, and miscellaneous tannery materials.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Technologic Paper T316; 1926. Analysis of Synthetic Tanning Materials. Methods found most satisfactory and reliable at the Bureau for the determination of acidity, total sulphur, total inorganic matter, free sulphuric acid and sulphates, nonvolatile matter, total organic matter, and tanning material.

*References.*—Vegetable and other tanning materials and methods of test and analysis, *see* 231.

### 809.2 INK POWDER

*References.*—Iron gallotannate ink powder, *see* 933.1.

### 809.3 PHOTOGRAPHIC DEVELOPER, METAL

U. S. Gov., Federal Specification O-M-571; 1931. Mono-Methyl-Parmainophenol Sulfate (Metol). Covers one grade. Gives requirements for solubility; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., U. S. Army, Signal Corps. Specification 75-4; 1923. Acrol; Diamidophenol.

# 810-819 MEDICINAL AND PHARMACEUTICAL PREPARATIONS

## 810. GENERAL ITEMS

American Drug Manufacturers Assn. Proceedings, 1944. Physical Tests and Standards. Establishes reference melting point standards in order to largely eliminate the difficulties many laboratories have encountered with melting point determinations. Gives tables showing extensive data for vanillin, acetanilid, acetophenetidin, sulfanilamide, sulfapyridine, and caffeine.

American Institute of Homoeopathy. Homoeopathic Pharmacopoeia of U. S., 1941. Includes brief definitions of drugs and medicinal substances according to the tenets of homoeopathy; describes preparation processes of bringing crude drugs to the fluid and dry forms; gives requirements for forms of vehicles for prescription; includes practices in the writing of prescriptions; includes standards for the purity and quality of vegetable drugs; and lists several hundred drugs, mostly plant drugs, gives names and synonyms, description of plant, its habitat, the part used for drug purposes, the methods of preparation and standard strengths of tinctures, dilutions, medications, triturations, etc., as used in homoeopathic medicine.

American Medical Assn., Council on Pharmacy and Chemistry. New and Nonofficial Remedies, 1941. Contains a descriptive list of the proprietary drugs and medicines with the name of the manufacturers, such articles having met the rules of the American Medical Assn. as regards giving compositions and identification tests, absence of advertising, absence of unwarranted therapeutic claims, etc. The listing of an article does not imply a recommendation by the American Medical Assn. Does not contain articles given in U. S. Pharmacopoeia.

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis, 1940. Radioactivity of Foods and Drugs. Official method for determining the presence of radioactivity in clear solutions of drugs and waters and method for determining the amount of radium present.

National Tuberculosis Assn. and the American Trudeau Society. Diagnostic Standards and Classification of Tuberculosis, 1940. Covers statement of principles relating to diagnosis of tuberculosis and technical procedures for making tests.

Technical Assn. of the Pulp and Paper Industry. Preparation of Liquid Analytical Reagents, Standard T 606 m-36; 1936. Requires use of commercially pure chemicals, distilled water, neutral to litmus paper unless otherwise stated, filtered unless perfectly clear or otherwise required; includes acids and other liquids ordinarily needed in a paper manufacturing laboratory.

U. S. Gov., Dept. of Commerce, National Bureau of Standards, H23; 1938. Radium Protection.

U. S. Gov., Dept. of Commerce, National Bureau of Standards, H27; 1941. Safe Handling of Radioactive Luminous Compound.

U. S. Gov., Federal Specification U-M-186; 1944. Medicinal Products and Clinical Laboratory Reagents; General Specification for Containers (Packaging and Packing). Gives requirements for types and classes, grades and sizes, material, workmanship, labeling, compatibility of container, and details for glass, metal, fiber, paper, plastic, and wood containers; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Navy Dept. Specification 51C21a; 1935. Chemicals; Testing, Boiler-Water.

U. S. Gov., U. S. Army, Medical Dept. Specification 4-1053A; 1941. Drugs, Chemicals and Reagents, New and Nonofficial Remedies Quality.

U. S. Gov., U. S. Army, Medical Dept. Specification 4-1113; 1941. Drugs and Chemicals, National Formulary.

*References.*—Medical and surgical supplies for ships, standard list, *see* 915.50.

## 811. ALKALOIDS AND SALTS

American Institute of Homoeopathy. Homoeopathic Pharmacopoeia of U. S., 1941. Apomorphin Hydrochlorid, Atropine, Atropine Sulfate, Berberine, Brucine, Caffeine, Cinchonin Sulfate, Cocaine Hydrochlorid, Codeine, Eserine, Hydrastine, Hyoscyamin Sulfate, Morphine, Morphine Acetate, Morphine Hydrochlorid, Morphine Sulfate, Narceine, Narcotine, Pilocarpin Hydrochlorid, Pilocarpin Nitrate, Quinin Arsenate, Quinin Arsenite, Quinin Hydrochlorid, Quinin Sulfate, Quinine, Sparteine Sulphate, Strychnine Arsenate, Strychnine Nitrate, Strychnine Phosphate, and Strychnine Sulfate. Chemical symbol, synonyms, description, and preparations for triturations for use in homoeopathic medicines.

American Institute of Homoeopathy. Homoeopathic Pharmacopoeia of U. S., 1941. Bebeerin Sulfate, Opium, and Veratrine. Natural order, synonyms, description, habitat, history, parts used, and preparations for tincture, dilutions, and medications for use in homoeopathic medicines.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Ampuls of Ephedrine Sulfate. Gives chemical composition, assay, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Ampuls of Procaine Hydrochloride. Gives chemical composition, assay, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Ampuls of Quinine and Urea Hydrochloride. Gives chemical composition, assay, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Ampuls of Quinine Dihydrochloride. Gives chemical composition, assay, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Arecoline Hydrobromide. Gives chemical composition, description, solubility, melting point, identifications, loss and drying, ash, acidity, sulfate, other alkaloids, storage, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Brucine Sulfate. Gives chemical

composition, description, solubility, identifications, loss on drying, ash, acidity, strychnine, storage, preparation, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Cinchonidine Sulfate. Gives chemical composition, description, solubility, optical rotation, identifications, loss on drying, ash, carbonizable substances, reaction, cinchonine and quinidine sulfates, quinine or quinidine, storage, preparation, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Cinchonine Sulfate. Gives chemical composition, description, solubility, optical rotation, identification, loss on drying, ash, carbonizable substances, reaction, distinction from cinchonidine and quinine, quinine sulfate and cinchonidine sulfate, quinine or quinidine, distinction from quinine and quinidine, storage, preparation, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Cotarnine Chloride. Gives chemical composition, description, solubility, identifications, loss on drying, ash, reaction, storage, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Hydrastine Hydrochloride. Gives chemical composition, description, solubility, identifications, loss on drying, ash, reaction, hydrastinine, berberine, storage, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Jelly of Ephedrine Sulfate. Gives chemical composition, assay, storage, and preparation.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Morphine Hydrochloride. Gives chemical composition, description, solubility, identifications, loss on drying, ash, free acid, ammonium salts, apomorphine, meconate, foreign alkaloids, storage, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Papaverine Hydrochloride. Gives chemical composition, description, solubility, identifications, loss on drying, ash, reaction, cryptopine, thebaine, or other organic impurities, morphine, storage, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Pilocarpine Hydrochloride. Gives chemical composition, description, solubility, melting point, identifications, loss on drying, reaction, ash, carbonizable impurities, other alkaloids, storage, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Quinine, Gives chemical composition, description, solubility, optical rotation, identifications, loss on drying, ash, reaction, ammonium salts, other cinchona alkaloids, storage, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Quinine Hydrobromide. Gives chemical composition, description, solubility, identifications, loss on drying, ash, carbonizable impurities, reaction, sulfate, barium, inorganic salts, other cinchona alkaloids, storage, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Quinine Phosphate. Gives chemical composition, description, solubility, identifications, carbonizable impurities, reaction, chloride, sulfate, other cinchona alkaloids, assay, storage, preparation, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Quinine Salicylate. Gives chemical composition, description, solubility, identifications, loss on drying, ash, reaction, chloride, sulfate, other cinchona alkaloids, storage, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Solution of Ephedrine Sulfate. Gives chemical composition, preparation, description, optical rotation, identifications, reaction, assay, storage, and average dilution for use on mucous membranes.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Solution of Methylrosaniline Chloride (Solution of Crystal Violet). Gives chemical composition, description, residue, storage, alcohol content, external use, and preparation.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Solution of Nux Vomica Alkaloids. Gives chemical composition, description, identifications, reactions, assay for total alkaloidal salts and for strychnine sulfate and brucine sulfate, storage, average dose (metric or apothecaries) for horses and cattle and for sheep and swine, based on weight of the animal, and preparation.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Solution of Procaine Hydrochloride. Gives chemical composition, description, identifications, assay, storage, preparation, and average parenteral dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Sparteine Sulfate. Gives chemical composition, description, solubility, identifications, reaction, loss on drying, ash, carbonizable impurities, ammonium salts, aniline, storage, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Strychnine. Gives chemical composition, description, solubility, identifications, ash, carbonizable impurities, reaction, brucine, storage, preparations, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Strychnine Nitrate. Gives chemical composition, description, solubility, optical rotation, identifications, ash, free acid, chloride,

639677 O—45——56

sulfate, brucine, storage, preparation, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Strychnine Phosphate. Gives chemical composition, description, solubility, identifications, carbonizable impurities, reaction, chloride, sulfate, brucine, assay, storage, preparation, and average dose.

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis, 1940. Acetanilid and Caffeine. Preparation of reagents and of solution of sample; tentative methods for determination of caffeine and of acetanilid.

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis, 1940. Acetanilid, Caffeine, and Codeine. Tentative Methods. Preparation of sample; determination of amount of each of above constituents.

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis, 1940. Acetanilid, Caffeine, and Quinine. Tentative Methods. Preparation of sample, determination of amount of each of above constituents.

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis, 1940. Acetanilid, Caffeine, Quinine, and Morphine. Tentative Methods. Preparation of sample; determination of each of above constituents.

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis, 1940. Antipyrin and Caffeine. Tentative methods for determination of amount of antipyrin and of caffeine.

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis, 1940. Apomorphine in Tablets. Tentative method for determining amount of apomorphine hydrochloride.

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis, 1940. Assay of Ergot. Tentative method of determining amount of the alkaloid in unknown solutions by tests with rabbits.

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis, 1940. Atropine in Tablets. Tentative methods for determination of amount of atropine.

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis, 1940. Bioassay of Drugs. Method of determining percentage of total alkaloid in unknown solutions using the cat-eye procedure.

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis, 1940. Cinchona Alkaloids. Tentative Methods. Preparation of reagents, determination of amounts of quinine, cinchonidine quinidine, and cinchonine.

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis, 1940. Cocaine. Methods for determination of amount of cocaine.

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis, 1940. Codeine in Tablets. Preparation of sample; tests for presence of and for amount of codeine.

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis, 1940. Diacetylmorphine (Heroin) in Tablets. Tests for identity and purity.

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis, 1940. Emetine Hydrochloride in Tablets. Tentative method for determination of amount of emetine hydrochloride.

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis, 1940. Ephedrine in Inhalants. Ephedrine in Tablets. Tentative methods for identifying and for determining the amount of ephedrine.

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis, 1940. Fluidextract of Ipecac. Tentative method for preparation of solution and determination of amount of ipecac.

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis, 1940. Microchemical Tests for Alkaloids. For alkaloids in compounds and for hypodermic tablets, method of preparing sample, examination under microscope, and identifying the alkaloid through type of crystals formed with various reagents.

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis, 1940. Morphine in Tablets. Tests for presence of and for amount of morphine.

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis, 1940. Pilocarpine. Tentative method for determination of amount of pilocarpine.

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis, 1940. Procaine Hydrochloride (Novocaine). Tests for identification and for amount of procaine.

Assn. of Official agricultural Chemists. Official and Tentative Methods of Analysis, 1940. Separation of Quinine and Strychnine. Tentative method of separation and determining amount of each alkaloid.

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis, 1940. Strychnine in Liquid Preparations. Strychnine in Tablets. Tests for purity; other alkaloids being absent.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, Volume 2; 1944. Caffeine. Covers definition, constants, solubility, derivation, uses, grades, containers, and substitutes.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, Volume 2; 1944. Nux Vomica (Including Strychnine and Brucine). Covers definition, derivation, uses, grades and forms, containers, shipping regulations, and substitutes.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, Volume 2; 1944. Quinine and Cinchona Bark. Covers definition, constants, derivation, uses, grades, containers, and substitutes.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Apomorphine Hydrochloride. Description, solubility, identification, ash, reaction, decomposition products, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Atropine. Description, solubility, melting point, identification, ash, carbonizable substances, other alkaloids, apoatropine or belladonnine, and storage. U.S.P. product of atropine—Atropinae Sulfas, Tabellae Atropinae Sulfatis.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Atropine Sulfate.

Description, solubility, melting point, identification, loss on drying, ash, carbonizable substances, reaction, other alkaloids, apoatropine or belladonnine, and storage. U.S.P. product of atropine sulfate—Tabellae Atropinae Sulfatis.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Atropine Sulfate Tablets. Identification, assay, storage, and sizes.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Belladonna Leaf (Deadly Nightshade Leaf). Description, assay, and storage. U.S.P. products of belladonna leaf—Atropina, Atropinae Sulfas, Extractum Belladonnae, Tabellae Atropinae Sulfatis, Tinctura Belladonnae, Unguentum Belladonnae.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Belladonna Ointment. Preparation and assay.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Belladonna Plaster. Description, assay, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Belladonna Root (Deadly Nightshade Root). Description, assay, and storage. U.S.P. product of belladonna root—Emplastrum Belladonnae.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Caffeine. Description, solubility, melting point, identification, loss on drying, ash, carbonizable substances, reaction, heavy metals, other alkaloids, and storage. U.S.P. products of caffeine—Caffeina Citrata, Caffeinaet Sodii Benzoas, Injectio Caffeinae et Sodii Benzoatis.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Caffeine and Sodium Benzoate. Description, solubility, identification, loss on drying, carbonizable substances, reaction, chlorinated compounds, heavy metals, assay for caffeine, assay for sodium benzoate, and storage. U.S.P. product of caffeine and sodium benzoate—Injectio Caffeinae et Sodii Benzoatis.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Chrysarobin. Description, solubility, identification, ash, reaction, and storage. U.S.P. product of chrysarobin—Unguentum Chrysarobini.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Chrysarobin Ointment. Preparation.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Citrated Caffeine. Description, solubility, melting point, identification, loss on drying, ash, reaction, sulfate, tartrate, heavy metals, assay for caffeine, assay for citric acid, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Cocaine. Description, solubility, melting point, identification, loss on drying, ash, carbonizable substances, reaction, cinnamyl-cocaine and other reducing substances, isoatropyl-cocaine, and storage. U.S.P. product of cocaine—Cocainae Hydrochloridum.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Cocaine Hydrochloride. Description, solubility, optical rotation, identification, loss on drying, ash, carbonizable substances, acidity, cinnamyl-cocaine and other reducing substances, isoatropyl-cocaine, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Codeine. Description, solubility, melting point, identification, loss on drying, ash, carbonizable substances, reaction, morphine, and storage. U.S.P. products of codeine—Codeinae Phosphas, Codeina Sulfas, Tabellae Codeinae Phosphatis, Tabellae Codeinae Sulfatis.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Codeine Phosphate. Description, solubility, identification, reaction, chloride, sulfate, morphine, assay, and storage. U.S.P. product of codeine phosphate—Tabellae Codeinae Phosphatis.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Codeine Phosphate Tablets. Identification, morphine, assay, storage, and sizes.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Codeine Sulfate. Description, solubility, identification, loss on drying, ash, carbonizable substances, free acid, morphine, and storage. U.S.P. product of codeine sulfate—Tabellae Codeinae Sulfatis.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Codeine Sulfate Tablets. Identification, morphine, assay, storage, and sizes.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Colchicine. Description, solubility, melting point, identification, loss on drying, ash, chloroform, colchiceine, and storage. U.S.P. product of colchicine—Tabellae Colchicinae.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Colchicine Tablets. Identification, assay, storage, and sizes.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Emetine Hydrochloride. Description, solubility, identification, loss on drying, ash, carbonizable substances, free acid, cephaeline, and storage. U.S.P. product of emetine hydrochloride—Injectio Emetinae Hydrochloridi.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Emetine Hydrochloride Injection (Emetine Hydrochloride Ampuls). Identification, assay, storage, and sizes.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Ephedrine. Description, solubility, melting point, optical rotation, identification, ash, reaction, chloride, sulfate, assay, labeling, and storage. U.S.P. products of ephedrine—Ephedrinae Hydrochloridum, Ephedrinae Sulfas, Tabellae Ephedrinae Sulfatis.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Ephedrine Hydrochloride. Description, solubility, melting point, optical rotation, identification, loss on drying, ash, reaction, sulfate, assay, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Ephedrine Sulfate. Description, solubility, optical rotation,

identification, loss on drying, ash, reaction, chloride, assay, and storage. U.S.P. product of ephedrine sulfate—Tabellae Ephedrinae Sulfatis.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Ephedrine Sulfate Tablets. Identification, assay, storage, and sizes.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Epinephrine. Description, solubility, optical rotation, identification, loss on drying, ash, reaction, vegetable alkaloids, and storage. U.S.P. products of epinephrine—Injectio Epinephrinae Hydrochloridi, Liquor Epinephrinae Hydrochloridi, Nebula Epinephrinae Hydrochloridi.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Epinephrine Hydrochloride Injection (Epinephrine Hydrochloride Ampuls). Identification, assay, storage, and sizes.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Epinephrine Hydrochloride Spray (Solution of Epinephrine Hydrochloride). Description, assay, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Ergonovine Maleate. Description, solubility, melting point, optical rotation, identification, loss on drying, ergotoxine and ergotamine, assay, and storage. U.S.P. Product of ergonovine maleate—Tabellae Ergonovinae Maleatis.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Ergonovine Maleate Tablets. Identification, foreign alkaloids and ergotamine, ergotoxine and ergotamine, assay, storage, and sizes.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Ergot. Description, identification, purity, assay, and storage. U.S.P. products of ergot—Ergonovinae Maleas, Ergotaminae Tartras, Fluidextractum Ergotae, Tabellae Ergonovinae Maleatis, Tabellae Ergotaminae Tartratis.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Ergotamine Tartrate. Description, solubility, melting point, optical rotation, identification, foreign substances, and storage. U.S.P. product of ergotamine tartrate—Tabellae Ergotaminae Tartratis.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Ergotamine Tartrate Tablets. Identification, assay, storage, and sizes.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Ethylmorphine Hydrochloride. Description, solubility, melting point, identification, loss on drying, ash, reaction, ammonium compounds, morphine, distinction from codeine hydrochloride, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Eucaine Hydrochloride (Betaeucaine Hydrochloride). Description, solubility, identification, loss on drying, cocaine hydrochloride, ash, carbonizable substances, reaction, cocaine and alphaeucaine, assay, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Eucatropine Hydrochloride. Description, solubility, melting point, identification, ash, reaction, atropine, scopolamine or hyoscyamine, assay, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Extract of Belladonna—Pilular Extract of Belladonna. Preparation and assay. Powdered Extract of Belladonna. Preparation and assay. U.S.P. products of extract of belladonna—Unguentum Belladonnae.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Glyceryl Triacetate (Triacetin). Description, solubility, specific gravity, distillation range, refractive index, identification, moisture, free acid, unsaturated compounds, saponification value, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Homatropine Hydrobromide. Description, solubility, melting point, identification, loss on drying, ash, reaction, atropine, hyoscyamine or scopolamine, most other alkaloids, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Hyoscyamus (Henbane). Description and assay. U.S.P. products of hyoscyamus—Extractum Hyoscyami (Pilular and Powdered), Tinctura Hyoscyami.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Ipecac. Description and assay. U.S.P. products of ipecac—Fluidextractum Ipecacuanhae Syrupus Ipecacuanhae.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Theobromine and Sodium Acetate. Description, solubility, identification, reaction, alkalinity, color and completeness of solution, caffeine, assay, and storage. U.S.P. product of theobromine and sodium acetate—Capsulae Theobrominae et Sodii Acetatis.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Theophylline. Description, solubility, melting point, identification, loss on drying, ash, reaction, carbonizable substances (difference from caffeine, theobromine, or paraxanthine), and storage. U.S.P. product of theophylline—Tabellae Theophyllinae.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Theophylline Tablets. Identification, assay, storage, and sizes.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Theophylline Ethylenediamine (Aminophylline). Description, solubility, identification, ash, reaction, assay for theophylline, assay for ethylenediamine, and storage. U.S.P. products of theophylline ethylenediamine—Injectio Theophyllinae Aethylenediaminicae, Tabellae Theophyllinae Aethylenediaminicae.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Theophylline Ethylenediamine Injection (Theophylline Ethylenediamine Ampuls, Aminophylline Ampuls). Identification, assay, storage, and sizes.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Theophylline Ethylenediamine Tablets (Aminophylline Tablets). Identification, assay, storage, and sizes.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Theophylline and Sodium Acetate (Theophylline with Sodium Acetate). Description, solubility, identification, reaction, limit of caffeine, assay, and storage. U.S.P. product of theophylline and sodium acetate—Tabellae Theophyllinae et Sodii Acetatis.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Theophylline and Sodium Acetate Tablets. Identification, assay, storage, and sizes.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Tincture of Opium (Laudanum, Tincture of Deodorized Opium). Preparation, assay, and alcohol content.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Tincture of Stramonium. Preparation, assay, and alcohol content.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Totaquine. Description, solubility, identification, loss on drying, ash, assay for quinine and cinchonidine, assay for quinidine, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Urea (Carbamide). Description, solubility, melting point, identification, ash, reaction, chloride, sulfate, alcohol-insoluble matter, heavy metals, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Menthol. Description, solubility, melting point, identification, wax, paraffin or inorganic substances, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Mersalyl and Theophylline Injection (Mersalyl and Theophylline Ampuls). Identification, reaction, mercuric ion, assay for mercury, assay for theophylline, storage, and sizes.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Methenamine Tablets. Identification, assay, storage, and sizes.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Methylrosaniline Chloride (Gentian Violet, Methyl Violet, Crystal Violet). Description, solubility, identification, loss on drying, ash, arsenic, lead, dextrin, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Methylthionine Chloride (Methylene Blue). Description, solubility, identification, loss on drying, ash, arsenic, copper or zinc, assay, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Morphine Sulfate. Description, solubility, identification, loss on drying, ash, free acid, meconate, ammonium salts, foreign alkaloids, and storage. U.S.P. product of morphine sulfate—Tabellae Morphinae Sulfatis.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Morphine Sulfate Tablets. Identification, assay, storage, and sizes.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Neoarsphenamine. Description, solubility, identification, loss on drying, completeness of solubility, thermo-stability, assay for arsenic, storage, and labeling.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Neocinchophen. Description, solubility, melting point, identification, loss on drying, ash, cinchophen, and storage. U.S.P. product of neocinchophen—Tabellae Neocinchopheni.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Neocinchophen Tablets. Identification, cinchophen, assay, storage, and sizes.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Nux Vomica. Description and assay. U.S.P. products of nux vomica—Strychninae Sulfas, Tabellae Strychninae Sulfatis, Tinctura Nucis Vomicae.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Ouabain. Description, solubility, melting point, optical rotation, identification, loss on drying, ash, reaction, alkaloids, and storage. U.S.P. product of ouabain—Injectio Ouabaini.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Ouabain Injection (Ouabain Ampuls). Assay, storage, and sizes.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Pamaquine Naphthoate (Aminoquin Naphthoate). Description, solubility, identification, loss on drying, assay for methylene, assay for pamaquine base, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Pelletierine Tannate. Description, solubility, identification, ash, carbonizable substances, reaction, foreign alkaloids, assay, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Phenacaine Hydrochloride. Description, solubility, melting point, identification, loss on drying, ash, acetophenetidin, reaction, assay, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Phenolsulfonphthalein Injection (Phenolsulfonphthalein Ampuls). Identification, sensitiveness, assay, storage, and sizes.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Physostigmine Salicylate (Eserine Salicylate). Description, solubility, identification, loss on drying, ash, reaction, carbonizable substances, sulfate, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Picrotoxin (Cocculin). Description, solubility, melting point, identification, ash, reaction, alkaloids, and storage. U.S.P. product of picrotoxin—Injectio Picrotoxini.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Picrotoxin Injection. Identification, limit of sodium chloride, assay, storage, and sizes.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Pilocarpine Nitrate. Description, solubility, melting point, identification, loss on drying, ash, carbonizable substances, reaction, chloride, various foreign alkaloids, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Procaine

Hydrochloride (Procaine). Description, solubility, melting point, identification, difference from cocaine, loss on drying, ash, reaction, carbonizable substances, heavy metals, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Quinacrine Hydrochloride (Mepacrine Hydrochloride). Description, solubility, identification, loss on drying, ash, hydrogen-ion concentration, assay, and storage. U.S.P. product of quinacrine hydrochloride—Tabellae Quinacrinae Hydrochloridi.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Quinacrine Hydrochloride Tablets. Identification, assay, storage, and sizes.

U. S. Pharmacopoeial Convention. Pharmocopoeia of U. S. A., Twelfth Revision, 1942. Quinidine Sulfate. Description, solubility, identification, loss on drying, ash, carbonizable substances, reaction, ammonium or other inorganic salts, other cinchona alkaloids, and storage. U.S.P. product of quinidine sulfate—Tabellae Quinidinae Sulfatis.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Quinidine Sulfate Tablets. Identification, assay, storage, and sizes.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Quinine and Urea Hydrochloride. Description, solubility, identification, ash, carbonizable substances, reaction, ammonium compounds, other cinchona alkaloids, assay, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Quinine Bisulfate (Quinine Acid Sulfate). Description, solubility, identification, loss on drying, ash, carbonizable substances, reaction, ammonium salts, other cinchona alkaloids, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Quinine Dihydrochloride. Description, solubility, identification, loss on drying, ash, carbonizable substances, sulfate, barium, other cinchona alkaloids, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Quinine Ethylcarbonate (Euquinine). Description, solubility, melting point, identification, loss on drying, ash, reaction, chloride, sulfate, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Quinine Hydrochloride and Ethyl Carbamate Injection (Quinine-Urethane Injection). Identification, assay for quinine hydrochloride, assay for ethyl carbamate, storage, and sizes.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Quinine Hydrochloride. Description, solubility, identification, loss on drying, ash, carbonizable substances, reaction, sulfate, inorganic salts, barium, other cinchona alkaloids, and storage. U.S.P. product of quinine hydrochloride—Injectio Quininae Hydrochloridi et Aethylis Carbamatis.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Quinine Sulfate. Description, solubility, identification, loss on drying, ash, carbonizable substances, reaction, inorganic salts, other cinchona alkaloids, and storage. U.S.P. product of quinine sulfate—Tabellae Quininae Sulfatis.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Quinine Sulfate Tablets. Identification, assay, storage, and sizes.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Scopolamine Hydrobromide (Hyoscine Hydrobromide). Description, solubility, melting point, optical rotation, identification, loss on drying, ash, reaction, apoatropine, other foreign alkaloids, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Solution of Epinephrine Hydrochloride. Description, identification, assay, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Stramonium (Jimson Weed, Jamestown Weed). Preparation, description, and assay. U.S.P. products of stramonium—Extractum Stramonii (Pilular and Powdered), Tinctura Stramonii.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Strophanthin. Description, solubility, identification, ash, reaction, assay, and storage. U.S.P. product of strophanthin—Injectio Strophanthini.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Strophanthin Injection (Strophanthin Ampuls). Assay, storage, and sizes.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Strychnine Sulfate. Description, solubility, identification, loss on drying, ash, carbonizable substances, free acid, brucine, and storage. U.S.P. product of strychnine sulfate—Tabellae Strychninae Sulfatis.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Strychnine Sulfate Tablets. Identification, assay, storage, and sizes.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Theobromine and Sodium Acetate Capsules. Identification, assay, storage, and sizes.

*References.*—Food and Drug Act and Regulations, *see* 810; powdered extracts of alkaloids, *see* 819.1.

## 812. BIOLOGICAL MEDICINALS

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Commission on Standardization of Biological Stains certifies dyes which are most suitable for preparing these solutions. Staining Solutions. Gives formulas for acid fuchsin solution, alcoholic eosin solution, aqueous eosin solution, aqueous methylene blue solution, basic fuchsin solution, Bismarck brown solution, Delafield's hematoxylin solution, Ehrlich's aniline gentian violet solution, Heidenhain's hematoxylin solution, hematoxylin and eosin solution, Hucker's gentian violet solution, iodine water, Loeffler's alkaline methylene blue solution, Mallory's stain, Mayer's hemalum solution, Nicolle carbol-gentian violet solution, neutral red solution, Pappenheim's methyl green-pyronin solution, safranin solution, Stirling's gentian violet solution, and Ziehl-Neelsen carbol-fuchsin solution.

American Veterinary Medical Assn. Biological Products, 1944. Discusses biological products and lists biological products classified as acceptable including antitoxins, serums, aggressins, diagnostics, toxoids, vaccines and viruses, and bacterins.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Antimeningococcic Serum (Antimeningococcus Serum, Meningococcus Serum, Meningitis Serum). Description, regulations, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Antipneumococcic Serum, Type Specific (Antipneumococcus Serum, Pneumonia Serum). Description, regulations, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Bacterial Vaccine Made From the Typhoid Bacillus and the Paratyphoid "A" and "B" Bacilli (Typhoid Combined Vaccine, Typhoid-Paratyphoid Combined Vaccine, Mixed Enteric Vaccine). Description, regulations, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Bacterial Vaccine Made From the Typhoid Bacillus (Typhoid Prophylactic, Enteric Vaccine, Typhoid Vaccine). Description, regulations, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Diphtheria Antitoxin. Description, regulations, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Diphtheria Toxin for the Schick Test (Schick Test Toxin). Description, regulations, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Diphtheria Toxoid, Alum Precipitated (Refined Diphtheria Toxoid). A turbid, white, slightly gray, or slightly pink, suspension prepared by adding a sterile aqueous solution of alum to diphtheria toxoid; and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Diphtheria Toxoid (Diphtheria Anatoxin, Anatoxin—Ramon). A sterile aqueous solution of the products of growth of the diphtheria bacillus, description, and regulations.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Human Measles Immune Serum (Measles Convalescent Serum). Description, regulations, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Human Scarlet Fever Immune Serum (Scarlet Fever Convalescent Serum). Description, regulations, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Normal Human Serum (Human Serum). Description, regulations, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Old Tuberculin (Concentrated Tuberculin, Crude Tuberculin). Description, regulations, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Rabies Vaccine (Pasteur Treatment, Pasteur Prophylactic). Description, regulations, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Scarlet Fever Streptococcus Antitoxin. Description, regulations, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Scarlet Fever Streptococcus Toxin (Scarlet Fever Toxin for Immunization and for the Dick Test). Description, regulations, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Small Pox Vaccine. Description, regulations, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Tetanus Antitoxin. Description, regulations, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Tetanus Toxoid. A sterile solution of the products of growth of the tetanus bacillus, description, and regulations.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Tetanus Toxoid, Alum Precipitated (Refined Tetanus Toxoid). A turbid white or slightly gray suspension prepared by adding a sterile aqueous solution of alum to tetanus toxoid; and storage.

U. S. Gov., U. S. Army, Medical Dept. Specification 4-1072; 1939. Stains; Biological.

U. S. Gov., U. S. Army, Medical Dept. Specification 4-1073B; 1940. Biological Products; Medical.

*References.*—Biological stains, *see* 803.19; Food and Drug Act and Regulations, *see* 810; standard list of vaccines and antitoxins for ship medical supplies, *see* 915.50.

## 813. MEDICINAL OILS

### 813.1 CASTOR OIL

American Institute of Homoeopathy. Homeopathic Pharmacopoeia of U. S., 1941. Castor Oil. Synonyms, description, and preparations for tincture, dilutions, and medications for use in homoeopathic medicines.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Aromatic Castor Oil. Gives chemical composition, storage, alcohol content, average dose, and preparation.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Castor Oil. Description, solubility, specific gravity, distinction from most other fixed oils, saponification value, iodine value, acid value, and storage.

*References.*—Food and Drug Act and Regulations, *see* 810.

### 813.2 COD LIVER OIL

American Institute of Homoeopathy. Homoeopathic Pharmacopoeia of U.S., 1941. Cod Liver Oil. Class, order, family, synonyms, and description.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Emulsion of Cod Liver Oil With Egg. Gives chemical composition, preparation, storage, alcohol content, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Emulsion of Cod Liver Oil With Hypophosphites. Gives chemical composition, preparation, storage, alcohol content, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Emulsion of Cod Liver Oil With Malt. Gives chemical composition, preparation, storage, and average dose.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, Volume 2; 1944. Cod Oil and Cod Liver Oil. Covers definition, constants, derivation, uses, grades, containers, and substitutes.

*References.*—Food and Drug Act and Regulations, *see* 810, 042.2.

## 813.3 COTTONSEED OIL

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Cottonseed Oil (Cotton Seed Oil). Description, solubility, specific gravity, congealing temperature, identification, saponification value, iodine value, solidification temperature of the fatty acids, and storage.

*References.*—Food and Drug Act and Regulations. *see* 810; cottonseed oil for other than medical purposes, *see* 142.4.

## 813.4 OIL OF ALMONDS

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Expressed Almond Oil (Oil of Sweet Almond). Description, solubility, specific gravity, congealing temperature, foreign kernel oils, sesame, cottonseed oil, mineral oil and foreign fatty oils, foreign oils, saponification value, iodine value, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Oil of Bitter Almond (Bitter Almond Oil). Description, solubility, specific gravity, optical rotation, refractive index, reaction, heavy metals, halogens, nitrobenzene, assay of benzaldehyde, assay of hydrogen cyanide, and storage.

*References.*—Food and Drug Act and Regulations, *see* 810.

## 813.5 LINSEED OIL

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Linseed Oil (Oil of Flaxseed, Raw Linseed Oil). Description, solubility, specific gravity, nondrying oils, mineral or rosin oil, rosin or rosin oils, unsaponifiable matter, saponification value, iodine value, acid value, and storage.

*References.*—Food and Drug Act and Regulations, *see* 810; linseed oil for paints, *see* 848.11, 848.12.

## 813.6 OLIVE OIL

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Olive Oil (Sweet Oil). Description, solubility, specific gravity, cottonseed oil, peanut oil, sesame oil, teaseed oil, saponification value, iodine value, acid value, solidification temperature of fatty acids, and storage.

*References.*—Food and Drug Act and Regulations, *see* 810; olive oil for food purposes, *see* 142.5.

## 813.7 SESAME OIL

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Sesame Oil (Teel or Benne Oil). Gives description, miscibility, specific gravity, identification, free acid, cottonseed oil, saponification value, iodine value, storage, and preparation.

*References.*—Food and Drug Act and Regulations, *see* 810; sesame oil for food purposes, *see* 142.8.

## 813.8 THEOBROMA OIL

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Theobroma Oil (Cacao Butter, Cocoa Butter, Oil of Theobroma). Description, solubility, melting point, specific gravity, refractive index, wax, stearin, tallow, saponification value, iodine value, solidification temperature of the fatty acids, and storage.

U. S. Gov., U. S. Army, Medical Dept. Specification 4-1083; 1939. Oil; Theobroma Sticks.

U. S. Gov., U. S. Army, Medical Dept. Specification 4-1110; 1940. Oil; Theobroma, Modified.

*References.*—Food and Drug Act and Regulations, *see* 810; cacao butter, food products, *see* 142.93.

## 813.9 MISCELLANEOUS MEDICINAL OILS

American Institute of Homoeopathy. Homoeopathic Pharmacopoeia of U. S., 1941. Animal Oil, Coal Oil, Croton Oil, Eupion, Oil of Cajaput, Oil of Santal, and Oil of Turpentine. Synonym, description, and preparations for tincture, dilutions, and medications for use in homoeopathic medicines.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Croton Oil. Gives description, miscibility, specific gravity, identification, foreign oils, reaction, saponification value, iodine value, storage, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Ethereal Oil. Gives chemical composition, description, reaction, specific gravity, storage, and preparation.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Oil of Bergamot. Gives chemical composition, description, miscibility, specific gravity, optical rotation, reaction, fixed oil, chlorinated compounds, assay, storage, and preparation.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Oil of Bitter Orange. Gives description, miscibility, specific gravity, optical rotation, identification, reaction, storage, preparation, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Oil of Caraway. Gives chemical composition, description, miscibility, specific gravity, optical rotation, refractive index, assay, storage, preparations, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Oil of Cardamom. Gives description, miscibility, specific gravity, optical rotation, reaction, storage, and preparations.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Oil of Myrcia (Oil of Bay). Gives

chemical composition, description, miscibility, specific gravity, optical rotation, identifications, reaction, assay, storage, and preparation.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Oil of Orange Flowers (Oil of Neroli). Gives description, miscibility, specific gravity, optical rotation, identification, reaction, storage, and preparation.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Oil of Pimenta (Oil of Allspice). Gives chemical composition, description, miscibility, specific gravity, optical rotation, assay, storage, preparation, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Oil of Santal (Sandalwood Oil). Gives chemical composition, description, miscibility, specific gravity, optical rotation, refractive index, reaction, assay for esters and for alcohols, storage, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Oil of Thyme. Gives chemical composition, description, miscibility, specific gravity, optical rotation, water-soluble phenols, assay, storage, preparations, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Phenolated Oil (Carbolized Oil or Oleum Carbolatum). Gives chemical composition, preparation, and storage.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Phosphorated Oil. Gives chemical composition, description, storage, average dose, and preparation.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Rectified Oil of Birch Tar. Gives description, miscibility, specific gravity, identification, juniper tar, storage, and preparation.

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis, 1940. Chaulmoogra Oil. Tentative method of test for solubility in alcohol; determination of viscosity and determination of acid and iodine numbers of alcohol-soluble portion, using methods of U. S. Pharmacopoeia.

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis, 1940. Oil of Chenopodium. Tentative method for determining amount of ascaridole.

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis, 1940. Turpentine Oil (Spirits of Turpentine). Tentative method for determination of color, specific gravity, refractive index, distillation, mineral oil in turpentine.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Allyl Isothiocyanate (Mustard Oil). Description, solubility, specific gravity, refractive index, identification, reaction, alcohol, chloroform, petroleum, fatty oils, phenols, assay, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Camphor Liniment (Camphorated Oil). Preparation, assay, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia or U. S. A., Twelfth Revision, 1942. Chaulmoogra Oil (Hydnocarpus Oil). Description, solubility, specific gravity, optical rotation, castor oil or free fatty acids, saponification value, iodine value, acid value, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Compound Spirit of Orange. Preparation, assay, alcohol content, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Compound Tincture of Lavender (Compound Spirit of Lavender). Preparation and alcohol content.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Emulsion of liquid Petrolatum (Mineral Oil Emulsion). Description.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Emulsion of Oil of Turpentine. Preparation.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Eucalyptol. Description, solubility, specific gravity, congealing point, boiling range, optical rotation, refractive index, identification, reaction, phenols, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Eugenol. Description, solubility, specific gravity, refractive index, boiling point, hydrocarbons, phenol, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Iodized Oil. Description, solubility, identification, ash, free acid, assay for iodine, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Juniper Tar (Oil of Cade, Oleum Juniperi Empyreumaticum). Description, solubility, specific gravity, identification, reaction, rosin or rosin oils, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Oil of Anise (Anise Oil). Description, solubility, specific gravity, congealing temperature, optical rotation, refractive index, heavy metals, phenols, and storage. U.S.P. products of oil of anise—Aqua Anisi, Spiritus Anisi.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Oil of Cedar Leaf (Oil and Arbor Vitae, Oil of Thuja). Description, solubility, specific gravity, optical rotation, refractive index, assay, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Oil of Chenopodium (Oil of American Wormseed). Description, solubility, specific gravity, optical rotation, refractive index, heavy metals, assay, and storage. U.S.P. product of oil of chenopodium—Capsulae Olei Chenopodii.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Oil of Chenopodium Capsules (Oil of American Wormseed Capsules). Assay, storage, and sizes.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Oil of Cinnamon (Oil of Cassia). Description, solubility, specific gravity, optical rotation, refractive index, reaction, heavy metals, halogens, rosin or rosin oils, assay for total aldehydes, and storage. U.S.P. products of oil of cinnamon—Aqua Cinnamomi, Spiritus Cinnamomi.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Oil of Clove (Oil of Cloves). Discription, solubility, specific gravity, optical rotation, refractive index, reaction, heavy metals, phenol, assay, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Oil of Coriander (Coriander Oil). Description, solubility, specific gravity, optical rotation, refractive index, heavy metals, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Oil of Dwarf Pine Needles (Pine Needle Oil). Description, solubility, specific gravity, optical rotation, distillation limits, assay, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Oil of Eucalyptus (Eucalyptus Oil). Description, solubility, specific gravity, congealing temperature, refractive index, reaction, heavy metals, phellandrene, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Oil of Fennel (Fennel Oil). Description, solubility, specific gravity, congealing temperature, optical rotation, refractive index, heavy metals, reaction, and storage. U.S.P. product of oil of fennel—Aqua Foeniculi.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Oil of Juniper (Juniper Oil). Description, solubility, specific gravity, optical rotation, refractive index, reaction, heavy metals, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Oil of Lavender (Oil of Lavender Flowers). Description, solubility, specific gravity, optical rotation, refractive index, alcohol, esters, assay, and storage. U.S.P. products of oil of lavender—Spiritus Lavandulae, Tinctura Lavandulae Composita.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Oil of Lemon (Lemon Oil). Description, solubility, specific gravity, optical rotation, refractive index, reaction, foreign oils, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Oil of Myristica (Myristica Oil, Oil of Nutmeg). Description, solubility, specific gravity, optical rotation, refractive index, residue, reaction, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Oil of Orange (Orange Oil, Oil of Sweet Orange). Description, solubility, specific gravity, optical rotation, refractive index, reaction, heavy metals, washed citrus oils, foreign oils, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Oil of Peppermint (Peppermint Oil). Description, specific gravity, optical rotation, refractive index, reaction, dementholized or impure peppermint oil, dimenthyl sulfide found in unrectified peppermint oils, distinction from oil of mentha arvensis, assay for esters, assay for total menthol, and storage. U.S.P. products of oil of peppermint—Aqua Menthae Piperitae, Spiritus Menthae Piperitae.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Oil of Rose (Otto of Rose). Description, solubility, specific gravity, optical rotation, refractive index, and storage. U.S.P. products of oil of rose—Aqua Rosae, Aqua Rosae Fortior.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Oil of Rosemary (Rosemary Oil). Description, Solubility, specific gravity, optical rotation, refractive index, assay for esters, assay for total borneol, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Oil of Sassafras (Sassafras Oil). Description, solubility, specific gravity, optical rotation, refractive index, reaction, heavy metals, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Oil of Spearmint (Spearmint Oil). Description, solubility, specific gravity, optical rotation, refractive index, reaction, assay, and storage. U.S.P. products of oil of spearmint—Aqua Menthae Viridis, Spiritus Menthae Viridis.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Oil of Turpentine (Turpentine Oil, "Spirits of Turpentine"). Description, solubility, specific gravity, optical rotation, refractive index, reaction, distillation range, fixed oil, mineral oil, mineral or rosin oils, other foreign substances, and storage. U.S.P. product of oil of turpertine—Oleum Terebinthinae Rectificatum.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Persic Oil (Apricot Kernel Oil, Peach Kernel Oil). Description, solubility, specific gravity, mineral oil, other oils, saponification value, iodine value, solidification temperature, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Rectified Oil of Tar. Description, solubility, specific gravity, reaction, and storage. U.S.P. product of rectified oil of tar—Syrupus Picis Pini.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Rectified Oil of Turpentine (Rectified Turpentine Oil). Description, specific gravity, nonvolatile residue, and storage. U.S.P. product of rectified oil of turpentine—Emulsum Olei Terebinthinae.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Spirit of Anise. Preparation, assay, alcohol content, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Spirit of Cinnamon. Preparation, assay, alcohol content, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Spirit of Lavender. Preparation, assay, alcohol content, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Spirit of Peppermint

(Essence of Peppermint). Preparation, assay, alcohol content, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Spirit of Spearmint. Preparation, assay, alcohol content, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. White Ointment (Unguentum, Ointment, Simple Ointment). Preparation.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Yellow Ointment. Preparation.

*References.*—Turpentine for commercial purposes, *see* 211.1; Food and Drugs Act and Regulations, *see* 810; creosote oil for medicinal purposes, *see* 801.3.

## 814. IODINE AND ARSENIC

### 814.1 IODINE

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Ampuls of Iodine. Gives chemical composition and assay.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Glycerite of Iodine and Zinc Iodide (Diluted Talbot's Solution). Gives chemical composition, preparation, and storage.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Phenolated Solution of Iodine (Carbolized Solution of Iodine). Gives chemical composition, description, specific gravity, identification, free iodine, ash, storage, external use, and preparation.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Stronger Tincture of Iodine (Churchill's Tincture for Iodine). Gives chemical composition, preparation, assay for potassium iodide and for iodine, alcohol content, and external use.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Tincture of Iodides. Gives chemical composition, preparation, alcohol content, and external use.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Chiniofon Tablets. Identification, inorganic iodine, assay, storage, and sizes.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Iodine. Description, solubility, identification, nonvolatile residue, chloride or bromide, assay, and storage, U.S.P. products of iodine—Liquor Iodi, Liquor Iodi Fortis, Tinctura Iodi, Tinctura Iodi Mitis, Unguentum Iodi.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Iodine Ointment. Preparation and assay.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Iodized Oil. Description, solubility, identification, ash, free acid, assay for iodine, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Iodophthalein Sodium (Soluble Iodophthalein, Tetraiodophenolphthalein Sodium, Tetraiodophthalein Sodium, Tetiothalein Sodium). Description, solubility, identification, free phthalein, assay for tetraiodophenolphthalein, assay for iodine, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Mild tincture of Iodine. Description, identification and assays, storage, and alcohol content.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Sodium Iodide. Description, solubility, identification, loss on drying (iodate, nitrate, thiosulfate, and barium), (nitrite, nitrate, and ammonia), alkalinity, heavy metals, potassium, assay, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Solution of Iodine. Description, identification, assay for iodine, assay for sodium iodide, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Strong Solution of Iodine (Lugol's Solution). Description, identification, assay, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Thymol Iodide. Description, solubility, identification, loss on drying, ash, soluble halides, alkalies, free iodine, assay, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Tincture of Iodine. Description, identification, assay, storage, and alcohol content.

U. S. Gov., U. S. Army, Medical Dept. Specification 4-1025C; 1938. Iodine and Potassium Iodide.

U. S. Gov., U. S. Army, Medical Dept. Specification 4-1031B; 1944. Iodine Swabs.

*References.*—Iodine for commercial uses, *see* 839.9; Food and Drugs Act and Regulations, *see* 810.

### 814.2 ARSENIC

American Institute of Homoeopathy. Homoeopathic Pharmacopoeia of U. S., 1941. Arsenic Disulfid, Arsenious Iodid, Arsenious Oxid, Arsenious Sulfid, and Metallic Arsenic. Chemical symbol, synonyms, description, and preparations for triturations for use in homoeopathic medicines.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Arsenic Triiodide (Arsenous Iodide). Gives chemical composition, description, solubility, identifications, residue, free iodine, assay, storage, preparation, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Solution of Arsenic and Mercuric Iodides (Donovan's Solution). Gives chemical composition, description, identifications, assay for arsenic triiodide and for mercuric iodide, storage, average dose, and preparation.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Tablets of Arsenic Trioxide (Arsenous Acid Tablets). Gives chemical composition, identification, assay, and average dose.

American Standards Assn., Z37.9—1943. Developed by the U. S. Public Health Service. Allowable Concentration

of Metallic Arsenic and Arsenic Trioxide (American War Standard). To prescribe the maximum permissible concentration of metallic arsenic and of arsenic trioxide in the atmosphere of work places for guidance in establishing control procedures for the protection of the health of workers. Gives properties of arsenic, permissible concentration, sampling procedure, and analytical methods.

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis, 1940. Arsenicals. Tentative method for determination of arsenic in iron-arsenic tablets, official methods for determining amount of arsenic in sodium cacodylate, in iron methylarsenates, in arsphenamine and neoarsphenamine.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Arsenic Trioxide (Arsenious Acid, Arsenious Oxide). Description, solubility, identification, loss on drying, residue on ignition, foreign substances, antimony, tin, cadmium, assay, and storage. U.S.P. product of arsenic trioxide—Liquor Acidi Arseniosi, Liquor Potassii Arsenitis.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Arsphenamine. Description, solubility, identification, acidity, completeness of solubility, thermostability, assay for arsenic, storage, and labeling.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Carbarsone. Description, solubility, melting point, identification, loss on drying, reaction, arsenate, assay, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Neoarsphenamine. Description, solubility, identification, loss on drying, completeness of solubility, thermostability, assay for arsenic, storage, and labeling.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Solution of Potassium Arsenite (Fowler's Solution). Description, identification, arsenate, assay, alcohol content, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Sulfarsphenamine. Description, solubility, identification, completeness of solubility, thermostability, assay, storage, and labeling.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Tryparsamide. Description, solubility, identification, distinction from sodium cacodylate, loss on drying, reaction, arsenate, arsanilic acid, arsphenamine compounds, assay, storage, and labeling.

U. S. Gov., U. S. Army, Chemical Warfare Service. Specification 4-503-45; 1924. Arsenic Trichloride.

U. S. Gov., U. S. Army, Chemical Warfare Service. Specification 4-503-50; 1924. Arsenic; White.

U. S. Gov., U. S. Army Ordnance Dept. Specification 4-1034; 1931. Arsenic Disulphide ($As_2S_2$).

*References.*—Food and Drugs Act and Regulations, *see* 810; arsenic insecticides, *see* 881.1; determination of arsenic in foods, *see* 120; arsenic trioxide, chemical reagent, *see* 839.9.

## 815. ANESTHETICS

### 815.1 ETHER

American Chemical Society. Specifications for Analytical Reagents, 1941. Ether. Gives requirements for specific gravity, nonvolatile matter, acid, aldehyde, peroxide, substances darkened by sulfuric acid, and tests.

American Chemical Society. Specifications for Analytical Reagents, 1941. Ether; Absolute. Gives requirements for specific gravity, nonvolatile matter, acid, aldehyde, peroxide, substances darkened by sulfuric acid, and tests.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Ether (Ethyl Ether, Diethyl Ether). Description, solubility, specific gravity, boiling point, residue on evaporation, reaction, foreign odor, aldehyde, free acid, peroxide, and storage.

U. S. Gov., U. S. Army, Medical Dept. Specification 4-1054; 1937. Ether, for Anesthesia.

U. S. Gov., Veterans Administration, Medical and Hospital Supply Section, VA-H-4j; 1943. Ether; U.S.P. XII, for Anesthesia.

*References.*—Food and Drugs Act and Regulations, *see* 810.

### 815.2 CHLOROFORM

American Chemical Society. Specifications for Analytical Reagents, 1941. Chloroform. Gives requirements for specific gravity, nonvolatile matter, acetone or aldehyde, acid and chloride, free chlorine, substances darkened by sulfuric acid, and tests.

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis, 1940. Chloroform and Carbon Tetrachloride. For chloroform and chloroform mixtures, tentative methods for determining amount of chloroform.

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis, 1940. Chloroform in Mixtures. Tentative method for determining amount of chloroform.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Chlorobutanol (Chlorobutol, Acetone-Chloroform). Description, solubility, melting point, identification, ash, reaction, chloride, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Chloroform. Description, solubility, specific gravity, boiling point, residue or evaporation, carbonizable substances, chloride ion and chlorine, odorous and chlorinated decomposition products, acids and phosgene, aldehydes and ketones, foreign odor, and storage. U.S.P. products of chloroform—Aqua Chloroformi, Linimentum Chloroformi.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Chloroform Liniment. Preparation, assay, alcohol content, and storage.

U. S. Gov., Treasury Dept., Procurement Div., No. 709; 1944. Chloroform; Technical Grade. Covers one type and one grade. Gives requirements for appearance, odor, specific gravity, nonvolatile matter, spot test, acidity, distillation range, and free chlorine; methods of sampling, inspection and tests; and packaging, packing, and marking for shipment.

U. S. Gov., U. S. Army, Chemical Warfare Service. Specification 96-21-19; 1940. Chloroform; Technical.

U. S. Gov., U. S. Army, Medical Dept. Specification 4-1008B; 1939. Chloroform; Anesthetic.

U. S. Gov., Veterans Administration, Medical and Hospital Supply Section, VA-H-113a; 1941. Chlorofrom, for Anesthesia.

*References.*—Food and Drugs Act and Regulations, *see* 810.

### 815.3 ETHYLENE

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Ethylene. Description, solubility, identification, acids or alkalies, carbon dioxide, acetylene, aldehyde, hydrogen sulfide, phosphine, carbon monoxide, assay, and storage.

## 816. BOTANICAL MEDICINALS

### 816.1 ROOTS, RHIZOMES, AND BULBS

### 816.11 Althea

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, 1938. Althea Root. Covers definition and characteristics, derivation, constants, uses, grades, packing, and substances.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Althea (Marsh Mallow Root). Description, identification, and storage.

### 816.12 Aspidium

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Aspidium. Description and assay. U.S.P. product of aspidium—Oleoresina Aspidii.

### 816.13 Gentian

American Institute of Homoeopathy. Homoeopathic Pharmacopoeia of U. S., 1941. Yellow Gentian. Natural order, synonyms, description, habitat, history, parts used, and preparations for tincture, dilutions, and medications for use in homoeopathic medicines.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Compound Infusion of Gentian. Gives chemical composition, storage, alcohol content, average dose, and preparation.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Elixir of Gentian. Gives chemical composition, storage, alcohol content, and preparation.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Elixir of Gentian and Iron. Gives chemical composition, storage, alcohol content, average dose, and preparation.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Extract of Gentian. Gives preparation of pilular extract and of powdered extract of gentian and the average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Fluidextract Gentian. Gives alcohol content, preparations, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Glycerinated Elixir of Gentian. Gives chemical composition, storage, alcohol content, and preparation.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Compound Tincture of Gentian. Preparation and alcohol content.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Gentian (Gentian Root). Description, identification, moisture, and assay. U.S.P. product of gentian—Tinctura Gentianae Composita.

### 816.14 Glycyrrhiza

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Compound Mixture of Opium and Glycyrrhiza (Brown's Mixture). Gives chemical composition storage, alcohol content, average dose, and preparation.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Elixir of Glycyrrhiza (Elixir of Licorice). Gives chemical composition, storage, alcohol content, and preparation.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Extract of Glycyrrhiza (Extract of Licorice Root, Licorice). Description, insoluble matter, foreign starch, ash, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Fluidextract of Glycyrrhiza (Fluidextract of Licorice Root). Preparation and alcohol content.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Glycyrrhiza (Licorice Root). Description. U.S.P. products of Glycyrrhiza—Extractum Glycyrrhizae, Extractum Glycyrrhizae Purum, Fluidextractum Glycyrrhizae, Syrupus Glycyrrhizae.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Pure Extract of Glycyrrniza (Pure Extract of Licorice Root). Description and storage.

### 816.15 Rhubarb

American Institute of Homoeopathy. Homoeopathic Pharmacopoeia of U. S., 1941. Rhubarb. Natural order, synonyms, description, habitat, history, parts used, and preparations for tincture, dilutions, and medications for use in homoeopathic medicines.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Alkaline of Elixir of Rhubarb. Gives chemical composition, storage, alcohol content, average dose, and preparation.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Compound Powder of Rhubarb (Gregory's Powder). Gives chemical composition, description, storage, average dose, and preparation.

The Americam Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Fluidextract of Rhubarb. Gives alcohol content, preparations, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Mixture of Rhubarb and Soda. Gives chemical composition, storage, alcohol content, average dose, and preparation.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Sweet Tincture of Rhubarb. Gives chemical composition, preparation, alcohol content, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Tincture of Rhubarb. Gives chemical composition, preparation, alcohol content, and average dose.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Aromatic Tincture of Rhubarb. Preparation and alcohol content. U.S.P. product of aromatic tincture of rhubarb—Syrupus Rhei Aromaticus.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Extract of Rhubarb (Powdered Extract of Rhubarb). Preparation.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Rhubarb. Description, anthraquinone compounds, emodin and chrysophanic acid, European rhubarbs, assay, and storage. U.S.P. products of rhubarb—Extractum Rhei, Syrupus Rhei Aromaticus, Tinctura Rhei Aromatica.

## 816.16 Sarsaparilla

American Institute of Homoeopathy. Homoeopathic Pharmacopoeia of U. S., 1941. Sarsaparilla. Natural order, synonyms, description, habitat, history, parts used, and preparations for tincture, dilutions, and medications for use in homoeopathic medicines.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Compound Fluidextract of Sarsaparilla. Gives chemical composition, alcohol content, average dose, and preparation.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Fluidextract of Sarsaparilla. Preparation and alcohol content.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Sarsaparilla. Description and storage. U.S.P. products of sarsaparilla—Fluidextractum Sarsaparillae, Syrupus Sarsaparillae Compositus.

## 816.17 Ginger

American Institute of Homoeopathy. Homoeopathic Pharmacopoeia of U. S., 1941. Ginger. Natural order, synonyms, description, habitat, history, parts used, and preparations for tincture, dilutions and medications for use in homoeopathic medicines.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Ginger. Description, assay for cold-water extractive and assay for ether-soluble extractive. U.S.P. product of ginger—Fluidextractum Zingiberis.

## 816.18 Snakeroot

American Institute of Homoeopathy. Homoeopathic Pharmacopoeia of U. S., 1941. Brazilian Snakeroot, Button Snakeroot, Seneca Snakeroot, Virginia Snakeroot, and White Snakeroot. Natural order, synonyms, description, habitat, history, parts used, and preparations for tincture, dilutions, and medications for use in homoeopathic medicines.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Asarum (Canada snake-root or Wild-ginger). Gives chemical composition, description of unground asarum and powdered asarum, histology, preparation, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Cimicifuga (Black Cohosh or Black Snakeroot). Gives chemical composition, description of unground cimicifuga and powdered cimicifuga, histology, preparations, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Senega (Seneca-Snakeroot). Gives chemical composition, description of unground and powdered senega, histology, preparation, and average dose.

## 816.19 Miscellaneous Roots, Rhizomes, and Bulbs

American Institute of Homoeopathy. Homoeopathic Pharmacopoeia of U. S., 1941. Aconite, Aconite Root, Adam's Needle, American Arum, American Hellebore, Arnica Montana, Asarabacca, Baneberry, Barberry, Bayberry, Bear's Foot, Bitter Wood, Black Bryony, Black Cohosh, Black Indian Hemp, Blood Root, Blue Cohosh, Blue Flag, Blue Vervain, Burdock, Burnet Saxifrage, Butterfly Weed, Butter Nut, Celandine, Chicory, Christmas Rose, Columbo, Comfrey, Common Arum, Cone Flower, Cotton Plant, Couch Grass, Crosswort, Culver's Root, David's Root, Elecampane, European Pond Lily, False Gromwell, False Unicorn, Flowering Spurge, Fragrant Sumach, Garlic, Ginseng, Golden Seal, Green Dragon, Herb Bennet, Indian Turnip, Ipecac, Jalap, Jamaica Dogwood, Kava Kava, Lady's Slipper, Leopard's Bane, Locust, Male Fern, Marsh-Mallow, May Apple, Meadow Parsnip, Meadow Saffron, Milkweed, Moonseed, Mountain Grape, Mudar, Mugwort, Musk Root, Onion, Pareira, Parsnip, Peony, Pink Root, Pitcher Plant, Poke, Pomegranate, Queen's Delight, Radish, Rhatany, Rush, Sassafras Bark, Sea Holly, Seven Barks, Skunk Cabbage, Sowbread, Spikenard, Spotted Water Hemlock, Spreading Dogbane, Squill, Star Grass, Stone Root, Swamp Milkweed, Sweet Water Lily, Trumpet Weed, Valerian, Vetiver, Wake Robin, Water Dropwort, Water Hemlock, White Bryony, White Fraxinella, White Hellebore, Wild Cranesbill, Wild Ginger, Wild Indigo, Wild Ipecac, Wild Yam, Winged Leaved Paullinia, Wyethia, Yellow Dock, and Yellow Jessamine. Natural order, synonyms, description, habitat, history, parts used, and preparations for tincture, dilutions, and medications for use in homoeopathic medicines.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Aconite (Aconite Root, Monkshood, or Aconiti Tuber P.I.). Gives chemical composition, description of unground aconite, histology, assay, preparations, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh

Edition, 1942. Aletris (Stargrass or True Unicorn-Root). Gives chemical composition, description of unground aletris and powdered aletris, histology, preparations, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Apocynum (Black Indian Hemp or Canada-hemp). Gives chemical composition, description of unground apocynum and powdered apocynum, histology, assay, preparation, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Aralia (American Spikenard or Spignet). Gives chemical composition, description of unground aralia and powdered aralia, histology, preparations, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Berberis (Oregongrape Root). Gives chemical composition, description of unground berberis and powdered berberis, preparation, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Blue Flag. Gives chemical composition, descriptions of unground and powdered blue flag, histology, average dose, and preparation.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Bryonia. Gives chemical composition, description of unground bryonia and powdered bryonia, identification, preparation, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Calamus (Sweetflag). Gives chemical composition, description of unground calamus and powdered calamus, histology, cereal flours and althea, unpeeled calamus, assay, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Calumba (Colombo). Gives chemical composition, description of unground calumba and powdered calumba, histology, preparations, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Caulophyllum (Blue Cohosh). Gives chemical composition, description of unground caulophyllum and powdered caulophyllum, histology, preparation, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Chionanthus (Fringe Tree Bark). Gives chemical composition, description of unground chionanthus and powdered chionanthus, histology, assay, preparation, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Colchicum Corm. Gives chemical composition, description of unground colchicum corm and powdered colchicum corm, assay, preparations, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Convallaria (Convallaria Root N.F. VI or Lily-of-the-Valley Root). Gives chemical composition, description of unground convallaria and powdered convallaria, histology, assay, preparation, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Corydalis (Turkeycorn or Squirrel-corn). Gives chemical composition, description of unground and powdered corydalis, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Cotton Root Bark. Gives chemical composition, description of unground and powdered cotton root bark, histology, preparation, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Dioscorea (Wild Yam Root). Gives chemical composition, description of unground and powdered dioscorea, histology, preparations, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Echinacea. Gives chemical composition, description of unground and powdered echinacea, histology, preparation, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Euonymus (Wahoo Bark). Gives chemical composition, unground and powdered euonymus, histology, preparation, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Gelsemium (Yellow Jasmine Root). Gives chemical composition, description of unground and powdered gelsemium, histology, preparations, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Helonias (False Unicorn-Root). Gives chemical composition, description of unground and powdered helonias, histology, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Hydrangea (Seven-Bark). Gives chemical composition, description of unground and powdered hydrangea, histology, preparations, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Hydrastis (Goldenseal or Hydrastidis Rhizoma P.I.). Gives chemical composition, description of unground and powdered hydrastis, histology, identification, assay, preparations, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Ipomea (Orizaba Jalap or Mexican Scammony). Gives chemical composition, description of unground and powdered ipomea, histology, assay, preparations, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Jalap. Gives chemical composition, descriptions of unground and powdered jalap,

histology, assay, preparations, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Krameria (Rhatany). Gives chemical composition, descriptions of unground Peruvian rhatany and Para rhatany, and powdered krameria, preparation, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Lappa (Burdock Root). Gives chemical composition, descriptions of unground and powdered lappa, histology, preparation, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Leptandra (Culversroot). Gives chemical composition, descriptions of unground and powdered leptandra, preparations, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Orris. Gives chemical composition, descriptions of unground and powdered orris, histology, and preparation.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Phytolacca (Pokeroot). Gives chemical composition, description of unground and powdered phytolacca, histology, preparation, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Podophyllum (Mandrake or May Apple). Gives chemical composition, description of unground podophyllum, powdered podophyllum, and Indian podophyllum, histology, assay, and preparation.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Pulsatilla (Pasqueflower). Gives chemical composition, description of unground and powdered pulsatilla, preparation, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Sanguinaria (Bloodroot). Gives chemical composition, description of unground and powdered sanguinaria, histology, preparations, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Serpentaria. Gives chemical composition, description of unground and powdered serpentaria, histology, preparations, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Squill. Gives chemical composition, description of unground and powdered squill, histology, red squill, storage, and preparations.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Stillingia (Queensroot). Gives chemical composition, description of unground and powdered stillingia, histology, preparation, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Sumbul (Musk Root). Gives chemical composition, description of unground and powdered sumbul, histology, preparation, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Taraxacum (Dandelion Root). Gives chemical composition, description of unground and powdered taraxacum, histology, preparations, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Trillium (Bethroot). Gives chemical composition, description of unground and powdered trillium, histology, preparations, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Triticum (Dog-Grass or Couchgrass). Gives chemical composition, description of unground and powdered triticum, histology, test for purity, preparation, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Valerian. Gives chemical composition, description of unground and powdered valerian, histology, preparations, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Veratrum Viride (Green Hellebore or American Hellebore). Gives chemical composition, description of unground and powdered veratrum viride, histology, preparation, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Viburnum Prunifolium (Blackhaw). Gives chemical composition, description of unground and powdered viburnum prunifolium, histology, preparations, and average dose.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, Volume 2; 1944. Squill, (Red Squill, White Squill, Sea Onion). Covers definition, derivation and characteristics, uses, grades and forms, containers, and substitutes.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Belladonna Root (Deadly Nightshade Root). Description, assay, and storage. U.S.P. product of belladonna root—Emplastrum Belladonnae.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Ipecac. Description and assay. U.S.P. products of ipecac—Fluidextractum Ipecacuanhae, Syrupus Ipecacuanhae.

## 816.2 FRUITS AND BERRIES

### 816.21 Orange

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Elixir of Bitter Orange (Elixir Curassao). Gives chemical composition, preparation, storage, and alcohol content.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Bitter Orange Peel. Description. U.S.P. products of bitter orange peel—Tinctura Aurantii Amori, Tinctura Gentianae Composita.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Sweet Orange Peel. Description. U.S.P. products of sweet orange peel—Oleum Aurantii, Syrupus Aurantii, Tinctura Aurantii Dulcis.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Tincture of Bitter Orange Peel. Preparation and alcohol content.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Tincture of Sweet Orange Peel. Preparation and alcohol content. U.S.P. product of tincture of sweet orange peel—Syrupus Aurantii.

### 816.22 Lemon

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Lemon Peel. Description. U.S.P. products of lemon peel—Oleum Limonis, Syrupus Acidi Citrici, Tinctura Limonis.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Tincture of Lemon. Preparation and alcohol content. U.S.P. product of tincture of lemon—Syrupus Acidi Citrici.

### 816.23 Rhamnus Cathartica

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Rhamnus Cathartica (Buckthorn-Berries). Gives chemical composition, description of unground and powdered rhamnus cathartica, identification, preparation, and average dose.

### 816.24 Serenoa

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Compound Elixir of Serenoa and Sandalwood (Compound Elixir of Saw Palmetto and Santal or Sabal-Santal Elixir). Gives chemical composition, storage, alcohol content, preparation, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Fluidextract of Serenoa (Fluidextractum Sabal, N.F. VI). Gives alcohol content, preparation, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Serenoa (Saw Palmetto-Berries). Gives chemical composition, description of unground and powdered serenoa, preparations, and average dose.

### 816.25 Apple

American Institute of Homoeopathy. Homoeopathic Pharmacopoeia of U. S., 1941. Balsam Apple, Bitter Apple, and Thorn Apple. Natural order, synonyms, description, habitat, history, parts used, and preparations for tincture, dilutions, and medications for use in homoeopathic medicines.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Colocynth (Colocynth Pulp or Bitter Apple). Gives chemical composition, description of unground colocynth, powdered colocynth, and epicarp and seed; histology, assay, preparations, and average dose.

### 816.29 Miscellaneous Fruits and Berries

American Institute of Homoeopathy. Homoeopathic Pharmacopoeia of U. S., 1941. American Holly, Black Alder, Black Nightshade, Black Pepper, Burning Bush, Chaste Tree, Cubebs, English Walnut, Hawthorn, Manchineel, Mistletoe, Nipple Nightshade, Prickly Ash, Purging Buckthorn, Saw Palmetto, and Water Hemlock. Natural order, synonyms, description, habitat, history, parts used, and preparations for tincture, dilutions, and medications for use in homoeopathic medicines.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Capsicum (Cayenne Pepper). Gives chemical composition, description of unground capsicum and powdered capsicum, histology, assay, storage, preparations, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Cocculus. Gives chemical composition, description of unground cocculus and powdered cocculus, and preparation.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Cubeb. Gives chemical composition, description of unground and powdered cubeb, histology, identification, assay, preparations, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Juniper. Gives chemical composition, descriptions of unground and powdered juniper, histology, assay, preparations, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Vanilla. Gives chemical composition, description of unground vanilla, histology, test for purity, assay, storage, and preparation.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Xanthoxylum Fruit (Prickly Ash Berries). Gives chemical composition, description of unground and powdered xanthoxylum fruit, and average dose.

## 816.3 LEAVES, FLOWERS, AND BUDS

### 816.31 Digitalis

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Extract of Digitalis. Gives assay, average dose, and preparation.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Infusion of Digitalis. Gives chemical composition, preparation, storage, alcohol content, and average dose.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Digitalis (Foxglove). Description, assay, and storage. U.S.P. products of digitalis—Capsulae Digitalis, Digitalis Pulverata, Injectio Digitalis, Tabellae Digitalis, Tinctura Digitalis.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Digitalis Capsules. Assay, storage, and sizes.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Digitalis Injection (Digitalis Ampuls). Assay, storage, and sizes.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Digitalis Tablets. Assay, storage, and sizes.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Powdered Digitalis. Description and physical properties, assay, and storage. U.S.P. products of digitalis—*see* Digitalis.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Tincture of Digitalis. Preparation, assay, and alcohol content.

### 816.32 Eriodictyon

American Institute of Homoeopathy. Homoeopathic Pharmacopoeia of U. S., 1941. Yerba Santa. Natural order, synonyms, description, habitat, history, parts used, and preparations for tincture, dilutions, and medications for use in homoeopathic medicines.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Eriodictyon (Yerba Santa). Description. U.S.P. product of eriodictyon—Fluidextractum Eriodictyi.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Fluidextract of Eriodictyon (Fluidextract of Yerba Santa). Preparation and alcohol content.

### 816.33 Peppermint

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Peppermint. Description. U.S.P. products of peppermint—Aqua Menthae Piperitae, Oleum Menthae Piperitae, Spiritus Menthae Piperitae.

### 816.34 Spearmint

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Spearmint. Description. U.S.P. products of spearmint—Aqua Menthae Viridis, Oleum Menthae Viridis, Spiritus Menthae Viridis.

### 816.35 Senna

American Institute of Homoeopathy. Homoeopathic Pharmacopoeia of U. S., 1941. Senna. Natural order, synonyms, description, habitat, history, parts used, and preparations for tincture, dilutions, and medications for use in homoeopathic medicines.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Compound Powder of Senna (Compound Licorice Powder). Gives chemical composition, description, identification, sulfide, storage, average dose, and preparation.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Infusion of Senna With Magnesium Sulfate. Gives chemical composition, preparation, storage, and average dose.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, Volume 2; 1944. Senna Leaves. Covers definition, characteristics and derivation, uses, grades, containers, and substitutes.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Fluidextract of Senna. Preparation and alcohol content.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Senna (Senna Leaves). Description and identification. U.S.P. products of senna—Fluidextractum Sennae, Syrupus Sennae.

### 816.36 Cloves

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Clove (Cloves). Description, purity, clove fruit or cereals, assay, and storage. U.S.P. product of clove—Oleum Caryophylli.

### 816.37 Cocaine

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Cocaine. Description, solubility, melting point, identification, loss on drying, ash, carbonizable substances, reaction, cinnamyl-cocaine and other reducing substances, isocatropyl-cocaine, and storage. U.S.P. product of cocaine—Cocainae Hydrochloridum.

### 816.38 Hyoscyamus

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Fluidextract of Hyoscyamus (Fluidextract of Henbane). Gives assay, alcohol content, average dose, and preparation.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Extract Hyoscyamus (Extract of Henbane)—Pilular Extract of Hyoscyamus. Assay. Powdered Extract of Hyoscyamus. Assay and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Hyoscyamus (Henbane). Description and assay. U.S.P. products of hyoscyamus—Extractum Hyoscyami (Pilular and Powdered), Tinctura Hyoscyami.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Tincture of Hyoscyamus (Tincture of Henbane). Preparation, assay, and alcohol content.

### 816.39 Miscellaneous Leaves Flowers, and Buds

American Institute of Homoeopathy. Homoeopathic Pharmacopoeia of U. S., 1941. Adam's Needle, Alfalfa (Spanish), American Holly, Aspen, Bearberry, Bird Cherry, Blackthorn, Blue Vervain, Boneset, Brazilian Burdock, Brazilian Snakeroot, Buchu, Buku, Caroba Bark, Century Plant, Cherry Laurel, Chestnut, Coca, Dead Nettle, Duboisia, Elder, Englisn Walnut, European Elder, Fever Tree, Foxglove, Golden Flowered Rhododendron, Golden Rod, Guaco, Guao, Gum Plant, Hemlock Spruce, House Leek, Indian Shot, Magnolia, Manchineel, Mimosa, Mistletoe, Morning Glory, Mountain Laurel, Myrtle, New Jersey Tea, Paraguay Tea, Passion Flower, Pennywort, Pilocarpus, Plumbago Littoralis, Poison Ivy, Poison Sumach, Puka Puka, Red Clover, Rose Laurel, Saffron, Sage, Savin, Smooth Sumach, Snake-Headed Grindelia,

Solanum Arrebenta, Sorrel, Sour Wood, Southernwood, Spiderwort, Sunflower, Tansy, Tea, Tobacco, Tree of Heaven, Tree of Life, Tree Stramonium, Virgin's Bower, White Clover, White Melilot, Wormseed, and Yellow Melilot. Natural order, synonyms, description, habitat, history, parts used, and preparations for tincture, dilutions, and medications for use in homoeopathic medicines.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Arnica. Gives chemical composition, description of unground arnica and powdered arnica, preparations, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Buchu. Gives chemical composition, description of unground short buchu, unground oval buchu, unground long buchu, and powdered buchu, histology, assay, preparations, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Calendula (Marigold). Gives chemical composition, description of unground calendula and powdered calendula, preparations, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Castanea (Chestnut Leaves). Gives chemical composition, description of unground castanea and powdered castanea, preparation, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Cataria (Catnip or Catmint). Gives chemical composition, description of unground cataria and powdered cataria, preparation, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Chimaphila (Pipsissewa). Gives chemical composition, description of unground chimaphila and powdered chimaphila, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Corn-Silk. Gives kind, description, histology, identification, preparations, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Crocus (Spanish Saffron). Gives chemical composition, description of unground crocus, histology, composite florets, identification, loss on drying, organic dyes, fixed oil or glycerin, assay for color, and storage.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Damiana (Turnera). Gives chemical composition, description of unground and powdered damiana, preparation, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Eupatorium (Thoroughwort or Boneset). Gives chemical composition, unground and powdered eupatorium, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Gambir (Pale Catechu). Gives chemical composition, description of unground and powdered gambir, identification, assay for water-soluble and for alcohol-soluble extractive, preparation, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Grindelia. Gives chemical composition, description of unground and powdered grindelia, preparation, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Hamamelis Leaf (Witch-Hazel Leaves). Gives chemical composition, description of unground and powdered hamamelis leaf, histology, preparation, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Humulus (Hops). Gives chemical composition, description of unground and powdered humulus, storage, preparation, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Kamala (Glandulae Rottlerae). Gives chemical composition, description, assay, average dose, and preparation.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Lobelia (Indian-Tobacco). Gives chemical composition, description of unground and powdered lobelia, storage, preparations, and average dose.

The American Pharmaceutical Assn. and The National Formulary, Committee. The National Formulary, Seventh Edition, 1942. Lupulin. Gives chemical composition, description, assay, storage, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Matricaria (Hungarian Chamomile or German Chamomile). Gives chemical composition, description of unground and powdered matricaria, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Poplar Bud. Gives chemical composition, description of unground poplar bud, histology, assay, preparations, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Rose (French Rose or Rosa Gallica). Gives chemical composition, description of unground rose, storage, and preparation.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Sage. Gives chemical composition, descriptions of unground sage, powdered sage, and other sage species, histology, assay, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Sambuscus (Elder Flowers).

Gives chemical composition, description, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Thyme. Gives chemical composition, description of unground and powdered thyme, histology, assay, preparations, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Trifolium (Red Clover Blossoms). Gives chemical composition, description of unground and powdered trifolium, preparation, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Uva Ursi (Bearberry). Gives chemical composition, description of unground and powdered uva ursi, histology, identifications, preparations, and average dose.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Belladonna Leaf (Deadly Nightshade Leaf). Description, assay, and storage. U.S.P. products of belladonna leaf—Atropina Atropinae Sulfas, Extractum Belladonnae, Tabellae Atropinae Sulfatis, Tinctura Belladonnae, Unguentum Belladonnae.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Pilocarpine Nitrate. Description, solubility, melting point, identification, loss on drying, ash, carbonizable substances, reaction, chloride, various foreign alkaloids, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Stramonium (Jimson Weed, Jamestown Weed). Preparation, description, and assay. U.S.P. products of stramonium—Extractum Stramonii (Pilular and Powdered), Tinctuea Stramonii.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Tincture of Belladonna (Tincture of Belladonna Leaf). Preparation, assay, and alcohol content.

## 816.4 SEEDS AND NUTS

### 816.41 Colchicum

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Colchicine. Description, solubility, melting point, identification, loss on drying, ash, chloroform, colchiceine, and storage. U.S.P. product of colchicine—Tabellae Colchiciane.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Colchicum Seed. Description, assay, and storage. U.S.P. products of colchicum seed—Colchicina, Tabellae Colchicinae, Tinctura Colchici Seminis.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Tincture of Colchicum Seed (Tincture of Colchicum). Preparation, assay, and alcohol content.

### 816.42 Linseed (Flaxseed)

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Linseed (Flaxseed). Description, starch or starch-bearing seeds, and assay. U.S.P. product of Linseed—Oleum Lini.

### 816.43 Myristica (Nutmeg)

American Institute of Homeopathy. Homeopathic Pharmacopoeia of U. S., 1941. Nutmeg. Natural order, synonyms, description, habitat, history, parts used, and preparations for tincture, dilutions, and medications for use in homeopathic medicines.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Myristica, (Nutmeg). Description and assay. U.S.P. product of muristica—Oleum Myristicae.

### 816.44 Rice Polishings

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Rice Polishings (Rice Bran, Tikitiki). Description, histology, rice hull or other foreign matter, identification, starch, and storage. U.S.P. product of rice polishings—Extractum Perpolitionum Oxyzae.

### 816.45 Mustard

American Institute of Homoeopathy. Homoeopathic Pharmacopoeia of U. S., 1941. Black Mustard and White Mustard. Natural order, synonyms, description, habitat, history, parts used, and preparations for tincture, dilutions, and medications for use in homoeopathic medicines.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Black Mustard (Brown Mustard). Description and assay. U.S.P. product of black mustard—Emplastrum Sinapis.

### 816.46 Cardamom

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Cardamom Seed. Description and storage. U.S.P. product of cardamom seed—Tinctura Cardamoni Composita.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Compound Elixir of Cardamom. Gives chemical composition, preparation, storage, and alcohol content.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Compound Tincture of Cardamom. Preparation and alcohol content.

### 816.47 Caraway

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Caraway (Caraway Fruit, Caraway Seed). Description and storage.

### 816.49 Miscellaneous Seeds and Nuts

American Institute of Homoeopathy. Homoeopathic Pharmacopoeia of U. S., 1941. American Coffee Tree, Bitter Almond, Bitter Candytuft, Brazilian Cocoa, Buckeye, Burdock, Castor Oil Plant, Cedrone, Cevadilla, Common Pawpaw, Corn Cockle, Cotton Plant, Darnel, False Gromwell, Hickory Nut, Horse Chestnut, Indian Cockle, Jambol Seeds, Madagascar Poison Nut, Marking Nut, Oat, Physic Nut, Poison Nut, Red Pepper, Rose Apple, St. Mary's Thistle, Star Anise, Stavesacre, Strophanthus Hispidus, and Wild Vetch.

Natural order, synonyms, description, habitat, history, parts used, and preparations for tincture, dilutions, and medications for use in homoeopathic medicines.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Anise. Gives chemical composition, description of unground anise and powdered anise, histology, conium maculatum fruit, assay, preparation, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Areca (Arecanut or Betelnut). Gives chemical composition, description of unground areca and powdered areca, histology, assay, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Cacao. Gives chemical composition, description, ether-soluble residue and ether-insoluble residue, assay, storage, and preparation.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Celery Fruit (Celery Seed). Gives chemical composition, description of unground celery fruit and powdered celery fruit, histology, assay, preparations, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Coriander. Gives chemical composition, description of unground and powdered coriander, histology, assay, preparation, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Fennel. Gives chemical composition, description of unground and powdered fennel, histology, preparations, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Guarana. Gives chemical composition, description of unground and powdered guarana, assay, preparations, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Kola (Cola or Kolanuts). Gives chemical composition, descriptions of unground and powdered kola, assay, preparation, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Larkspur. Gives chemical composition, description of unground and powdered larkspur, histology, and preparations.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Oat. Gives chemical composition, description of unground oat and powdered oat, histology, preparations, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Plantago Seed (Psyllium or Plantain Seed). Gives chemical composition, description of unground plantago seed, histology, test for quality, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Strophanthus. Gives chemical composition, description of unground (Kombe), unground (Hispidus), and powdered strophantus, histology, identification, purity, assay, preparation, and average dose.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Nux Vomica. Description and assay. U.S.P. products of nux vomica—Strychninae Sulfas Tabellae Strychninae Sulfatis, Tinctura Nucis Vomicae.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Ouabain. Description, solubility, melting point, optical rotation, identification, loss on drying, ash, reaction, alkaloids, and storage. U.S.P. product of ouabain—Injectio Ouabaini.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Picrotoxin (Cocculin). Description, solubility, melting point, identification, ash, reaction, alkaloids, and storage. U.S.P. product of picrotoxin—Injectio Picrotoxini.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Tincture of Nux Vomica. Preparation, assay, and alcohol content.

## 816.5 BARK AND STEM

### 816.51 Cherry

American Institute of Homoeopathy. Homoeopathic Pharmacopoeia of U. S., 1941. Bird Cherry, Choke Cherry, and Wild Black Cherry. Natural order, synonyms, description habitat, history, parts used, and preparations for tincture, dilutions, and medications for use in homoeopathic medicines.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Wild Cherry (Wild Black Cherry Bark). Description and storage. U.S.P. product of wild cherry—Syrupus Pruni Virginianae.

### 816.52 Red Saunders

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Red Saunders. Description, identification, and purity.

### 816.53 Cascara Sagrada

American Institute of Homoeopathy. Homoeopathic Pharmacopoeia of U. S., 1941. Cascara. Natural order, synonyms, description, habitat, history, parts used, and preparations for tincture, dilutions, and medications for use in homoeopathic medicines.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Elixir of Cascara Sagrada. Gives chemical composition, preparation, storage, alcohol content, and average dose.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Aromatic Fluidextract of Cascara Sagrada (Aromatic Fluidextract of Rhamnus Purshiana). Preparation and alcohol content.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Cascara Sagrada. Description and identification. U.S.P. products of cascara sagrada—Extractum Cascarae Sagradae, Fluidextractum Cascarae Sagradae, Fluidextractum Cascarae Sagradae Aromaticum, Tabellae Cascarae Sagradae.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Extract of Cascara Sagrada (Extract of Rhamnus Purshiana). Preparation.

U. S. Pharmacopoeial Convention. Pharamcopoeia of U. S. A., Twelfth Revision, 1942. Fluidextract of Cascara Sagrada (Fluidextract of Rhamnus Purshiana). Preparation and alcohol content.

### 816.54 Cinnamon

American Institute of Homoeopathy. Homoeopathic Pharmacopoeia of U. S., 1941. Cinnamon. Natural order, synonyms, description, habitat, history, parts used, and preparations for tincture, dilutions, and medications for use in homoeopathic medicines.

U. S. Pharmacopoeial Convention. Pharamcopoeia of U. S. A., Twelfth Revision, 1942. Cinnamon. Description, assay, and storage. U.S.P. products of Cinnamon—Aqua Cinnamomi, Oleum Cinnamomi, Spiritus Cinnamomi.

### 816.55 Cinchona

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Cinchona (Cinchona Bark or Peruvian Bark). Gives chemical composition, description of unground cinchona and powdered cinchona, histology, identification, assay, preparation, and average dose.

### 816.56 Ash

American Institute of Homoeopathy. Homoeopathic Pharmacopoeia of U. S., 1941. American Mountain Ash, Prickly Ash, and White Ash. Natural order, synonyms, description, habitat, history, parts used, and preparations for tincture, dilutions, and medications for use in homoeopathic medicines.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Xanthoxylum (Prickly Ash Bark). Gives chemical composition, description of unground and powdered xanthoxylum, histology, test for purity, preparation, and average dose.

### 816.57 Dogwood

American Institute of Homoeopathy. Homoeopathic Pharmacopoeia of U. S., 1941. Dogwood, Round-Leaved Dogwood, Shrubby Trefoil, and Swamp Dogwood. Natural order, synonyms, description, habitat, history, parts used, and preparations for tincture, dilutions, and medications for use in homoeopathic medicines.

### 816.59 Miscellaneous Bark and Stem

American Institute of Homoeopathy. Homoeopathic Pharmacopoeia of U. S., 1941. American Ivy, Aspen, Bayberry, Bitter Wood, Black Alder, Black Haw, Black Willow, Buckthorn, Butternut, Cascarilla, Cereus Bonplandii, China, Condor Plant, Cuspari Bark, Dita Bark, Fringe Tree, Guao, Hemlock Spruce, High Bush Cranberry, Locust, Logwood, Manchineel, Mezereon, Night-Blooming Cereus, Poison Sumach, Purple Willow, Red Cedar, Red Wood, Sassy Bark, Savin, Scotch Pine, Smooth Sumach, Soap Bark, Sweet-Scented Spurge Laurel, Tag Alder, Tree of Heaven, Virgin's Bower, Wahoo, Wicopy, Wild Indigo, Witch Hazel, and Yew. Natural order, synonyms, description, habitat, history, parts used, and preparations for tincture, dilutions, and medications for use in homoeopathic medicines.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Adonis (Adonis Vernalis or Pheasanteye). Gives chemical composition, description of unground adonis and powdered adonis, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Cactus Grandiflorus (Night-Blooming Cereus). Gives description of whole cactus grandiflorus, histology, storage, preparation, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Condurango. Gives chemical composition, description of unground condurango and powdered condurango, histology, identification, preparation, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Elm. Gives chemical composition, description of unground and powdered elm, histology, identification, and preparation.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Euphorbia Pilulifera (Pill-Bearing Spurge). Gives chemical composition, unground and powdered euphorbia pilulifera, preparations, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Frangula (Buckthorn Bark). Gives chemical composition, description of unground and powdered frangula, histology, identifications, preparation, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Kino. Gives descriptions of unground and powdered kino, identification, descriptions of alcohol-soluble extractive and water-soluble extractive, preparation, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Mezereum. Gives chemical composition, description of unground and powdered mezereum, histology, preparation, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Mitchella (Squawvine). Gives chemical composition, description of unground and powdered mitchella, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Quassia (Bitter Wood). Gives

chemical composition, description of unground Jamaica quassia, unground Surinam quassia, and powdered quassia, histology, preparations, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Quillaja (Soaptree-Bark). Gives chemical composition, description of unground and powdered quillaja, and preparations.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Sassafras. Gives chemical composition, description of unground and powdered sassafras, assay, preparations, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Scutellaria (Skullcap). Gives chemical composition, description of unground and powdered scutellaria, preparation, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Viburnum Opulus (High-Bush Cranberry Bark or True Cramp Bark). Gives chemical composition, description of unground and powdered viburnum opulus, histology, preparations, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Viburnum Prunifolium (Blackhaw). Gives chemical composition, description of unground and powdered viburnum prunifolium, histology, preparations, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. White Pine. Gives chemical composition, description of unground and powdered white pine, histology, preparations, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. White Sandalwood. Gives chemical composition, description of unground white sandalwood, histology, assay, and average dose.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Totaquine. Description, solubility, identification, loss on drying, ash, assay for quinine and cinchonidine, assay for quinidine, and storage.

## 816.6 SEAWEED, MOSS, ALGA, AND LICHEN

### 816.61 Agar

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Agar (Agar-Agar). Description, solubility, identification, foreign starch, and gelatin.

U. S. Gov., U. S. Army, Medical Dept. Specification 4-1041; 1935. Agar; Bacteriological.

### 816.62 Chondrus

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Chondrus (Irish-moss). Gives chemical composition, description of whole chondrus, identifications, gelatine and starch, sulfites, and preparation.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Mucilage of Chondrus (Mucilage of Irish Moss). Gives chemical composition, preparation, and storage.

### 816.63 Cudbear

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Cudbear. Gives chemical composition, description, identification, logwood, coal-tar colors, starch, arsenic, assay for color, and preparation.

### 816.64 Lycopodium

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Lycopodium. Description, identification, fine pollen, and starch or dextrin.

### 816.65 Bearded Usnea

American Institute of Homoeopathy. Homoeopathic Pharmacopoeia of U.S., 1941. Bearded Usnea. Natural order, synonyms, description, habitat, history, parts used, and preparations for tincture, dilutions, and medications for use in homoeopathic medicines.

### 816.66 Club Moss

American Institute of Homoeopathy. Homoeopathic Pharmacopoeia of U. S., 1941. Club Moss. Natural order, synonyms, description, habitat, history, parts used, and preparations for tincture, dilutions, and medications for use in homoeopathic medicines.

### 816.67 Lungwort

American Institute of Homoeopathy. Homoeopathic Pharmacopoeia of U. S., 1941. Lungwort. Natural order, synonyms, description, habitat, history, parts used, and preparations for tincture, dilutions, and medications for homoeopathic medicines.

### 816.68 Sea Wrack

American Institute of Homoeopathy. Homoeopathic Pharmacopoeia of U. S., 1941. Sea Wrack. Natural order, synonyms, description, habitat, history, parts used, and preparations for tincture, dilutions, and medications for use in homoeopathic medicines.

## 816.7 BALSAMS, RESINS, OLEORESINS, AND GUMS

### 816.70 General Items

### 816.71 Manna

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Manna. Gives chemical composition, description, assay, preparation, and average dose.

### 816.72 Mastic

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Mastic. Gives chemical

composition, description, acid number, assay for alcohol-insoluble residue and for ether-insoluble residue, and preparation.

### 816.73 Copaiba

American Institute of Homoeopathy. Homoeopathic Pharmacopoeia of U. S., 1941. Balsam of Copaiba. Natural order, synonyms, description, habitat, history, parts used, and preparations for tincture, dilutions, and medications for use in homoeopathic medicines.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Copaiba. Gives description, solubility, specific gravity, acid value, paraffin or fatty oils, paraffin oils, gurjun balsam, dehydrated alcohol-insoluble matter, African copaiba, storage, preparation, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Mixture of Copaiba (Lafayette Mixture). Gives chemical composition, storage, alcohol content, average dose, and preparation.

### 816.74 Capsicum

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Oleoresin of Capsicum. Gives test for quality, storage, preparation, and average dose.

### 816.75 Cubeb

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Oleoresin of Cubeb. Gives preparation, assay, storage, and average dose.

### 816.76 Ginger

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Oleoresin of Ginger. Gives chemical composition, assay, storage, preparation, and average dose.

### 816.77 Camphor

American Institute of Homoeopathy. Homoeopathic Pharmacopoeia of U. S., 1941. Camphor. Chemical symbol, synonyms, description, and preparations for tincture, dilutions, medications, triturations, and saturated tincture for use in homoeopathic medicines.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Ampuls of Camphor. Gives chemical composition, preparation, description, test for sterility, assay, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Camphorated Phenol. Gives chemical composition and preparation.

### 816.79 Miscellaneous Balsams, Resins, Oleoresins, and Gums

American Institute of Homoeopathy. Homoeopathic Pharmacopoeia of U. S., 1941. Asafoetida, Australian Red Gum, Balsam of Peru, Benzoin, Black Spruce, Gamboge, Guaiac, Gum Ammoniac, Gum Euphorbium, Olibanum, and Resin of Podophyllum. Natural order, synonyms, description, habitat, history, parts used, and preparations for tincture, dilutions, and medications for use in homoeopathic medicines.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Asafetida. Gives chemical composition, description, identifications, most foreign resins, galbanum, ammoniac, rosin, assay, preparations, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Gamboge. Gives chemical composition, description of unground gamboge and powdered gamboge, identification, starch, assay, preparation, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Guaiac. Gives chemical composition, description, solubility, melting point, identifications, rosin, assay, preparations, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Resin of Ipomea (Resin of Mexican Scammony). Gives description, solubility, identification, loss on drying, ash, alcohol-insoluble residue, soluble impurities, aloin, guaiac, rosin, storage, preparation, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Resin of Jalap. Gives description, solubility, solubility in chloroform, loss on drying, acid resins, guaiac, rosin, rosin or other resins, soluble impurities and aloin, storage, preparations, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Resin of Podophyllum. Gives chemical composition, description, solubility, identifications, ash, reaction, difference from resin of podophyllum emodi, storage, preparations, and average dose.

## 816.8 PLANTS

### 816.81 Buttercup

American Institute of Homoeopathy. Homoeopathic Pharmacopoeia of U. S., 1941. Buttercup, Celery-Leaved Buttercup, Creeping Buttercup, and Tall Buttercup. Natural order, synonyms, description, habitat, history, parts used, and preparations for tincture, dilutions, and medications for use in homoeopathic medicines.

### 816.82 Lily

American Institute of Homoeopathy. Homoeopathic Pharmacopoeia of U. S., 1941. Lily of the Valley and Tiger Lily. Natural order, synonyms, description, habitat, history, parts used, and preparations for tincture, dilutions, and medications for use in homoeopathic medicines.

### 816.83 Marigold

American Institute of Homoeopathy. Homoeopathic Pharmacopoeia of U. S., 1941. Garden Marigold and Marsh Marigold. Natural order, synonyms, description, habitat, history, parts used, and preparations for tincture, dilutions, and medications for use in homoeopathic medicines.

### 816.84 Nettle

American Institute of Homoeopathy. Homoeopathic Pharmacopoeia of U. S., 1941. Common Nettle, Dwarf Nettle, and Horse Nettle. Natural order, synonyms, description, habitat, history, parts used, and preparations for tincture, dilutions, and medications for use in homoeopathic medicines.

### 816.85 Parsley

American Institute of Homoeopathy. Homoeopathic Pharmacopoeia of U. S., 1941. Parsley, Fool's Parsley, and Mountain Parsley. Natural order, synonyms, description, habitat, history, parts used, and preparations for tincture, dilutions, and medications for use in homoeopathic medicines.

### 816.86 Thistle

American Institute of Homoeopathy. Homoeopathic Pharmacopoeia of U. S., 1941. Blessed Thistle, Canada Thistle, and St. Mary's Thistle. Natural order, synonyms, description, habitat, history, parts used, and preparations for tincture, dilutions, and medications for use in homoeopathic medicines.

### 816.87 Thyme

American Institute of Homoeopathy. Homoeopathic Pharmacopoeia of U. S., 1941. Cat Thyme and Wild Thyme. Natural order, synonyms, description, habitat, history, parts used, and preparations for tincture, dilutions, and medications for use in homoeopathic medicines.

### 816.89 Miscellaneous Plants

American Institute of Homoeopathy. Homoeopathic Pharmacopoeia of U. S., 1941. Aconite, American Arum, American Pulsatilla, American Wormseed, Asarsbacca, Asparagus, Balmony, Bear's Breech, Beechdrop, Bittersweet, Black Nightshade, Blue Cardinal Flower, Brooklime, Buckbean, Buckwheat, Bugle Weed, Butter Bur, Canada Fleabane, Cardinal Flower, Celandine, Chamomile, Common Vervain, Common Wormwood, Compass Plant, Cone Flower, Daisy, Dandelion, Deadly Nightshade, Dog's Mercury, Dyer's Weed, Evening Primrose, Everlasting, Eyebright, Figwort, Fire Weed, Frost-Weed, Hedge Hyssop, Heliotrope, Hemp, Henbane, Herb Paris, Herb Robert, Indian Acalypha, Indian Pennywort, Indian Pipe, Indian Tobacco, Large Spotted Spurge, Leopard's Bane, Liferoot, Liverwort, Low Cudweed, Mullein, Pansy, Partridge Berry, Pennyroyal, Peppermint, Periwinkle, Pheasant's Eye, Pipsissewa, Pitcher Plant, Plantain, Poison Hemlock, Poisonous Lettuce, Prickly Pear, Purging Flax, Rag Weed, Rattlesnake Root, Red Root, Roman Chamomile, Rue, St. John's Wort, Scarlet Pimpernel, Scouring Rush, Sea Holly, Shepherd's Purse, Shrubby Plectanthus, Skull Cap, Snow Berry, Stone Crop, Sundew, Sweet Vernal Grass, Thorn Apple, Toad Flax, Tomato, Trailing Arbutus, Violet, Waterleaf, Water Smart Weed, Wild Rosemary, Wind Flower, Wintergreen, and Yarrow. Natural order, synonyms, description, habitat, history, parts used, and preparations for tincture, dilutions, and medications for use in homoeopathic medicines.

## 816.9 MISCELLANEOUS BOTANICAL MEDICINALS

### 816.91 Beans

American Institute of Homoeopathy. Homoeopathic Pharmacopoeia of U. S., 1941. Calabar Bean, St. Ignatius' Bean, and Tongo Bean. Natural order, synonyms, description, habitat, history, parts used, and preparations for tincture, dilutions, and medications for use in homoeopathic medicines.

### 816.92 Fungi

American Institute of Homoeopathy. Homoeopathic Pharmacopoeia of U. S., 1941. Bug Agaric, Emetic Mushroom, Larch Agaric, Maize Smut, Pine Agaric, Puff Ball, and Rye Ergot. Natural order, synonyms, description, habitat, history, parts used, and preparations for tincture, dilutions, and medications for use in homoeopathic medicines.

### 816.99 Miscellaneous Botanical Medicinals Not Otherwise Classified

American Institute of Homoeopathy. Homoeopathic Pharmacopoeia of U. S., 1941. Cowhage. Natural order, synonyms, description, habitat, history, parts used, and preparations for tincture, dilutions, and medications for use in homoeopathic medicines.

# 817. MEDICINALS FOR APPLICATIONS AND INJECTIONS

## 817.1 CLAYS AND EARTH

### 817.11 Bentonite

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Magma of Bentonite. Gives chemical composition, storage, and preparations.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Bentonite. Description, solubility, identification, fineness of powder, loss on drying, reaction, arsenic, and storage. U.S.P. product of bentonite—Mistura Cretae.

### 817.12 Chalk (Calcium Carbonate )

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Chalk Mixture. Preparation.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Compound Chalk Powder. Preparation.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Mercury With Chalk (Gray Powder). Description, identification, mercurous oxide, mercuric oxide, assay, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoiea of U. S. A., Twelfth Revision, 1942. Precipitated Calcium Carbonate (Precipitated Chalk). Description, solubility, identification, loss on drying, acid-insoluble material, barium, heavy metals, iron, magnesium and alkali salts, assay, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Prepared Chalk (Drop Chalk). Description, solubility, identification, acid-insoluble residue, heavy metals, assay, and storage. U.S.P. products of prepared chalk—Hydrargyrum cum Creta, Mistura Cretae, Pulvis Cretae Compositus.

### 817.13 Siliceous Earth

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Purified Siliceous Earth (Purified Kieselguhr, Purified Infusorial Earth). Description, identification, loss on ignition, acid-soluble substances, organic impurities, carbonate, sulfate, water-soluble iron and reaction, and storage.

### 817.14 Pumice

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Pumice. Gives chemical composition, description, solubility, description of powdered pumice, soluble substances, acid soluble residue, iron, and storage.

### 817.15 Kaolin

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Kaolin. Gives chemical composition, description, solubility, identification, loss on ignition, acid-soluble substances, carbonate, iron, storage, and preparation.

### 817.16 Lava

American Institute of Homoeopathy. Homoeopathic Pharmacopoeia of U. S., 1941. Hecla Lava. Natural order, synonyms, description, habitat, history, parts used, and preparations for tincture, dilutions, and medications for use in homoeopathic medicines.

### 817.17 Gastein Rock

American Institute of Homoeopathy. Homoeopathic Pharmacopoeia of U. S., 1941. Gastein Rock. Natural order, synonyms, description, habitat, history, parts used, and preparations for tincture, dilutions, and medications for use in homoeopathic medicines.

## 817.2 INJECTIONS

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Injections. Vehicles for injections, preparation of injections, preservatives and other added substances, bacteriostatic agents, sterilization methods, containers, single and multiple doses, determination of the volume of injection in containers, appearance of solutions or suspensions, labeling, and quantities in ampuls and other containers.

### 817.21 Bismuth Injection

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Bismuth and Potassium Tartrate Injection (Bismuth and Potassium Tartrate Ampuls). Aqueous solution, identification, and assay. Oil suspension, identification, assay, storage, and sizes.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Bismuth Subsalicylate Injection (Bismuth Subsalicylate Ampuls). Identification, assay, storage, and sizes.

### 817.22 Dextrose Injection

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Dextrose and Sodium Chloride Injection (Dextrose and Sodium Chloride Ampuls). Identification, heavy metals, assay for dextrose, assay for sodium chloride, pyrogens, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Dextrose Injection (Dextrose Ampuls). Identification, heavy metals, assay, pyrogens, and storage.

### 817.23 Liver Injection

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Liver Injection (Liver Extract for Parenteral Use). Description, storage, and sizes.

### 817.24 Insulin Injection

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Insulin Injection (Insulin, Insulin Hydrochloride). Description, identification, reaction, total nitrogen, zinc, ash, assay, blood-sugar determination, interpretation of the data, and storage.

### 817.25 Parathyroid Injection

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Parathyroid Injection (Solution of Parathyroid, Parathyroid Extract). Assay, determination of serum calcium, storage, and sizes.

### 817.26 Suppositories

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Suppositories of Boroglycerin. Gives chemical composition, preparation, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Glycerin Suppositories. Preparation and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Suppositories. Recommended sizes, weights, and shapes. Processes of manufacture for suppositories made with oil of theobroma and made with glycerinated gelatin.

### 817.29 Miscellaneous Injections

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Caffeine and Sodium Benzoate Injections (Caffeine and Sodium

Benzoate Ampuls). Identification, assay for caffeine, assay for sodium benzoate, storage, and sizes.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Calcium Gluconate Injection (Calcium Gluconate Ampuls). Identification, assay, storage, and sizes.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Digitalis Injection (Digitalis Ampuls). Assay, storage, and sizes.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Emetine Hydrochloride Injection (Emetine Hydrochloride Ampuls). Identification, assay, storage, and sizes.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Epinephrine Hydrochloride Injection (Epinephrine Hydrochloride Ampuls). Identification, assay, storage, and sizes.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Histamine Phosphate Injection (Histamine Acid Phosphate Injection). Description, identification, storage, and sizes.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Mercuric Salicylate Injection (Mercuric Salicylate Ampuls). Identification, assay, storage, and sizes.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Mercurophylline Injection. Description, identification, mercury ions, assay of mercury, assay of theophylline, storage, and sizes.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Mersalyl and Theophylline Injection (Mersalyl and Theophylline Ampuls). Identification, reaction, mercuric ion, assay for mercury, assay for theophylline, storage, and sizes.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Neostigmine Methylsulfate Injection (Neostigmine Methylsulfate Ampuls). Identification, assay, storage, and sizes.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Ouabain Injection (Ouabain Ampuls). Assay, storage, and sizes.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Phenolsulfonphthalein Injection (Phenolsulfonphthalein Ampuls). Identification, sensitiveness, assay, storage, and sizes.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Picrotoxin Injection. Identification, limit of sodium chloride, assay, storage, and sizes.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Posterior Pituitary Injection (Solution of Posterior Pituitary, Solution of Pituitary). Description, assay, storage, and sizes.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Quinine Hydrochloride and Ethyl Carbamate Injection (Quinine-Urethane Injection). Identification, assay for quinine hydrochloride, assay for ethyl carbamate, storage, and sizes.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Strophanthin Injection (Strophanthin Ampuls). Assay, storage, and sizes.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Sulfobromophthalein Sodium Injection (Sulfobromophthalein Sodium Ampuls). Identification, sensitiveness, assay, storage, and sizes.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Theophylline Ethylenediamine Injection (Theophylline Ethylenediamine Ampuls, Aminophylline Ampuls). Identification, assay, storage, and sizes.

## 817.3 LINIMENTS

### 817.31 Camphor Liniment

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Camphor and Soap Liniment (Soap Liniment). Preparation, alcohol content, and storage. U.S.P. product of camphor and soap liniment—Linimentum Chloroformi.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Camphor Liniment (Camphorated Oil). Preparation, assay, and storage.

### 817.32 Chloroform Liniment

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Liniment of Aconite and Chloroform. Gives chemical composition, storage, and alcohol content.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Chloroform Liniment. Preparation, assay, alcohol content, and storage.

### 817.33 Soap Liniment

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Compound Liniment of Soft Soap (Compound Tincture of Green Soap). Gives chemical composition, storage, alcohol content, and composition.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Solid Liniment of Soap (Camphorated Soap Liniment or Solid Opodeldoc). Gives chemical composition, storage, alcohol content, and preparation.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Camphor and Soap Liniment (Soap Liniment). Preparation, alcohol content, and storage. U.S.P. product of camphor and soap liniment—Linimentum Chloroformi.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Liniment of Soft Soap (Tincture of Green Soap). Preparation and alcohol content.

### 817.34 Dental Liniment

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Compound Dental Liniment of

Aconite and Iodine. Gives chemical composition, preparation, alcohol content, and storage.

### 817.35 Ammonia Liniment

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Ammonia Liniment (Volatile Liniment or Hartshorn Liniment). Gives chemical composition, preparation, and storage.

### 817.36 Belladonna Liniment

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Belladonna Liniment. Gives chemical composition, storage, alcohol content, and preparation.

### 817.37 Turpentine Liniment

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Acetic Liniment of Turpentine (Linimentum Album, N.F., St. John Long's Liniment, or Stoke's Liniment). Gives chemical composition, preparation, and storage.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Turpentine Liniment (Kentish Ointment). Gives chemical composition, storage, and preparation.

### 817.39 Miscellaneous Liniments

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Calamine Liniment. Gives chemical composition, storage, and preparation.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Lime Liniment (Carron Oil). Gives chemical composition, preparation, and storage.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Neocalamine Liniment. Gives chemical composition, preparation, and storage.

## 817.4 PASTES AND WAXES

### 817.41 Acid Pastes

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Compound Paste of Acetylsalicylic Acid (Dental Anodyne Paste). Gives chemical composition, storage, and preparation.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Paste of Zinc Oxide With Salicylic Acid. Gives chemical composition, assay, storage, and preparation.

### 817.42 Bismuth Paste

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Paste of Bismuth (Beck's Bismuth Paste). Gives chemical composition, preparation, and storage.

### 817.43 Pectin Paste

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Pectin Paste. Gives chemical composition, preparation, and storage.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Thin Pectin Paste. Gives chemical composition, preparation, and storage.

### 817.44 Resorcinol Paste

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Mild Paste of Resorcinol (Lassar's Mild Resorcinol Paste). Gives chemical composition, assays for resorcinol and zinc oxide, storage, and preparation.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Strong Paste of Resorcinol (Lassar's Stronger Resorcinol Paste). Gives chemical composition, preparation, assay for resorcinol and for zinc oxide, and storage.

### 817.45 Zinc-Oxide Paste

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Hard Paste of Zinc Oxide (Unna's Hard Zinc Paste. Gives chemical composition and storage.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Paste of Zinc Oxide. Gives chemical composition, assay, storage, and preparation.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Paste of Zinc Oxide With Salicylic Acid. Gives chemical composition, assay, storage, and preparation.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Soft Paste of Zinc Oxide (Unna's Soft Zinc Paste. Gives chemical composition, preparation, and storage.

### 817.46 Kaolin Paste

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Cataplasm of Kaolin. Gives chemical composition, preparation, and storage.

### 817.47 Waxes

U. S. Gov., U. S. Army, Medical Dept. Specification 4-1085; 1939. Wax; Bone, Sterile.

## 817.5 OINTMENTS

### 817.50 General Items

U. S. Gov., U. S. Army, Medical Dept. Specification 4-1075A; 1941. Ointments in Collapsible Tubes.

### 817.51 Acid Ointment

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh

Edition, 1942. Ointment of Benzoic and Salicylic Acid (Whitfield's Ointment). Gives chemical composition, preparation, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Boric Acid Ointment (Boracic Acid Ointment). Preparation and assay.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Tannic Acid Ointment. Preparation.

### 817.52 Belladonna Ointment

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Belladonna Ointment. Preparation and assay.

### 817.53 Mercury Ointment

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Ointment of Mercuric Nitrate (Citrine Ointment). Gives chemical composition, preparation, and storage.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Ointment of Mild Mercurous Chloride (Calomel Ointment). Gives chemical composition, preparation, and storage.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Ointment of Red Mercuric Oxide. Gives chemical composition, preparation, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Ammoniated Mercury Ointment (White Precipitate Ointment). Preparation and assay.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Mild Mercurial Ointment (Diluted Mercurial Ointment, Blue Ointment). Preparation and assay.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Strong Mercurial Ointment (Mercurial Ointment). Preparation and assay. U.S.P. product of strong mercurial ointment—Unguentum Hydrargyri Mite.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Yellow Mercuric Oxide Ointment. Preparation and assay.

U. S. Gov., U. S. Army, Medical Dept. Specification 4-1084; 1939. Mercurous Chloride Ointment; Mild.

### 817.54 Iodine Ointment

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Ointment of Potassium Iodide. Gives chemical composition, preparation, and storage.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Stainless Iodized Ointment. Gives chemical composition, preparation, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Iodine Ointment. Preparation and assay.

### 817.55 Tar Ointment

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Compound Ointment of Tar. Gives chemical composition, preparation, and storage.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Ointment of Coal Tar. Gives chemical composition, preparation, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Pine Tar Ointment. Preparation.

### 817.56 Sulfur Ointment

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Alkaline Ointment of Sulfur. Gives chemical composition, preparation, and storage.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Compound Ointment of Sulfur (Wilkinson's Ointment or Hebra's Itch Ointment). Gives chemical composition, preparation, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Sulfur Ointment. Preparation and assay.

### 817.57 Zinc Ointment

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Ointment of Zinc Stearate. Gives chemical composition, preparation, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Zinc Oxide Ointment (Zinc Ointment). Preparation (calcium, magnesium, and other foreign substances) and assay.

### 817.59 Miscellaneous Ointments

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Compound Ointment of Menthol. Gives chemical composition, preparation, and storage.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Compound Ointment of Resorcinol. Gives chemical composition, preparation, and storage.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Ointment of Calamine (Unguentum Calaminare or Turner's Cerate). Gives chemical composition, preparation, and storage.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Ointment of Camphor. Gives chemical composition, preparation, and storage.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Ointment of Capsicum. Gives chemical composition, preparation, and storage.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Ointment of Ichthammol. Gives chemical composition, preparation, and storage.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Ointment of Lead Oleate. Gives chemical composition, preparation, and storage.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Ointment of Mustard. Gives chemical composition, preparation, and storage.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Ointment of Neocalamine. Gives chemical composition, preparation, and storage.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Ointment of Scarlet Red. Gives chemical composition, preparation, and storage.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Ointment of Stramonium. Gives chemical composition, preparation, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Chrysarobin Ointment. Preparation.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Ethyl Aminobenzoate Ointment. Preparation.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Phenol Ointment (Ointment of Carbolic Acid). Preparation and assay.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Rose Water Ointment. Preparation and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. White Ointment (Unguentum, Ointment, Simple Ointment). Preparation.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Yellow Ointment. Preparation.

## 817.6 PLASTERS

### 817.61 Adhesive Plasters

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Adhesive Absorbent Gauze (Adhesive Absorbent Compress). Description, sterility, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Adhesive Plaster (Adhesive Tape). Description, dimensions, tensile strength, adhesive strength, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Sterile Adhesive Plaster (Sterile Adhesive Tape). Description, sterility, other requirements, and storage.

### 817.62 Belladonna Plasters

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Belladonna Plaster. Description, assay, and storage.

### 817.63 Mustard Plasters

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Mustard Plaster (Mustard Paper). Description and storage.

### 817.64 Cantharides Plaster

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Plaster of Cantharides. Gives chemical composition, storage, and preparation.

### 817.65 Lead Plasters

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Plaster of Lead Oleate (Lead Plaster or Diachylon Plaster). Gives chemical composition, storage, and preparation.

## 817.7 COLLODIONS

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Collodion. Description, specific gravity, identification, free acid, assay, alcohol content, and storage. U.S.P. product of collodion—Collodium Flexile.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Flexible Collodion. Alcohol content and storage.

## 817.70 General Items

### 817.71 Salicylic Collodion

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Salicylic Collodion. Gives chemical composition, preparation, and storage.

### 817.72 Styptic Collodion

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Styptic Collodion. Gives chemical composition, preparation, and storage.

## 817.8 LOTIONS

### 817.81 White Lotion

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. White Lotion (Lotio Sulfurata). Gives chemical composition, storage, and preparation.

### 817.82 Yellow Lotion

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Yellow Lotion (Yellow Wash). Gives chemical compound, preparation, and storage.

### 817.83 Calamine Lotion

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Calamine Lotion. Gives chemical composition, storage, and preparation.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh

Edition, 1942. Neocalamine Lotion. Gives chemical composition, storage, and preparation.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Phenolated Lotion of Calamine. Gives chemical composition and storage.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Phenolated Lotion of Neocalamine. Gives chemical composition and storage.

### 817.84 Black Lotion

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Black Lotion. Gives chemical composition, storage, and preparation.

### 817.89 Miscellaneous Lotions

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Lotion of Lead and Opium. Gives chemical composition, preparation, storage, and alcohol content.

## 817.9 MISCELLANEOUS MEDICINALS FOR APPLICATION AND INJECTION

### 817.91 Salve

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Compound Cerate of Rosin (Deshler's Salve). Gives chemical composition, preparation, and storage.

### 817.92 Glycerogelatins

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Glycerogelatins. Gives chemical composition, preparation, and storage.

# 818. LIQUID MEDICAL PREPARATIONS

## 818.1 WATER

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Aromatic Waters. Saturated solutions of volatile oils or other aromatic or volatile substances in distilled water, distillation, solution, alternate solution method.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Distilled Water. Description, dissolved solids, reaction, chloride, sulfate, ammonia, calcium, carbon dioxide, and heavy metals.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Sterilized Distilled Water. Description and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Water (Aqua). Description, reaction, heavy metals, zinc, foreign volatile matters, dissolved solids, and B. coli. U.S.P. products of water—Aqua Destillata, Aqua Destillata Sterilisata, Aqua Pro Injectione.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Water for Injection. Use in preparation, physical and chemical standards, pyrogens, and added substances.

## 818.10 General Items

### 818.11 Orange Flower Water

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Orange Flower Water. Description, residue, reaction, and heavy metals. U.S.P. product of orange flower water—Syrupus Aurantii Florum.

### 818.12 Camphor Water

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Camphor water. A saturated solution of camphor in distilled water.

### 818.13 Chloroform Water

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Chloroform Water. Description and storage.

### 818.14 Cinnamon Water

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Cinnamon Water. A clear, saturated solution of oil of cinnamon in distilled water.

### 818.15 Fennel Water

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Fennel Water. A clear, saturated solution of oil of fennel in distilled water.

### 818.16 Peppermint Water

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Peppermint Water. A clear, saturated solution of oil of peppermint in distilled water.

### 818.17 Spearmint Water

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Spearmint Water. A clear, saturated solution of oil of spearmint in distilled water.

### 818.18 Rose Water

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Rose Water and Stronger Rose Water. Description, reaction, residue, and heavy metals. U.S.P. product of stronger rose water—Aqua Rosae.

### 818.19 Miscellaneous Waters

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Bitter Almond Water. Gives composition.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Hamamelis Water (Witch-hazel Water or Distilled Extract of Witch-hazel). Gives preparation, chemical composition, description, specific gravity, residue, reaction, acetone and isopropyl alcohol, formaldehyde, methanol, storage, and alcohol content.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh

Edition, 1942. Phenolated Water (Carbolic Acid Water or Solutio Phenoli, P.I.). Gives chemical composition and storage.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Wintergreen Water. Gives composition.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Anise Water. A clear, saturated solution of oil of anise in distilled water.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 4-25A; 1930. Witch-Hazel.

## 818.2 EMULSIONS

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Emulsions. Description.

### 818.21 Cod Liver Oil Emulsion

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Emulsion of Cod Liver Oil. Preparation.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Emulsion of Cod Liver Oil With Egg. Gives chemical composition, preparation, storage, alcohol content, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Emulsion of Cod Liver Oil With Hypophosphites. Gives chemical composition, preparation, storage, alcohol content, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Emulsion of Cod Liver Oil With Malt. Gives chemical composition, preparation, storage, and average dose.

### 818.22 Oil of Turpentine Emulsion

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Emulsion of Oil of Turpentine. Preparation.

### 818.23 Liquid Petrolatum Emulsion

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Emulsion of Liquid Petrolatum With Phenolphthalein. Gives chemical composition, storage, alcohol content, preparation, and average dose.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Emulsion of Liquid Petrolatum (Mineral Oil Emulsion). Description.

## 818.3 FLUIDEXTRACTS

### 818.30 General Items

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Fluidextracts. Gives five processes—(A) percolation with one alcoholic menstruum, (B) percolation with two menstrua, (C) fractional or divided percolation, (D) extraction with water, and (E) pressure percolation; and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Fluidextracts (Fluid-Extracts). Description, processes, and storage.

### 818.31 Fluidextract of Roots, Rhizomes, and Bulbs

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Compound Fluidextract of Sarsaparilla. Gives chemical composition, alcohol content, average dose, and preparation.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Fluidextract of Aconite. Gives assay, alcohol content, preparations, average dose, and chemical compostion.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Fluidextract of Aletris. Gives alcohol content, preparation, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Fluidextract of Apocynum (Fluidextract of Canada-hemp). Gives assay, alcohol content, average dose, and preparation.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Fluidextract of Belladonna Root. Gives assay, alcohol content, preparation, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Fluidextract of Berberis. Gives alcohol content, average dose, and preparation.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Fluidextract of Calumba. Gives alcohol content, average dose, and preparation.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Fluidextract of Caulophyllum (Fluidextract of Blue Cohosh). Gives alcohol content, average dose, and preparation.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Fluidextract of Chionanthus. Gives alcohol content, average dose, and preparation.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Fluidextract of Cimicifuga (Fluidextract of Black Cohosh). Gives alcohol content, preparation, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Fluidextract of Colchicum Corm. Gives assay, alcohol content, preparation, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Fluidextract of Convallaria (Fluidextract of Lily-of-the-valley Root). Gives assay, alcohol content, average dose, and preparation.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Fluidextract of Cotton Root Bark. Gives alcohol content, average dose, and preparation.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Fluidextract of Dioscorea. Gives alcohol content, average dose, and preparation.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Fluidextract of Echinacea. Gives alcohol content, average dose, and preparation.

The American Pharmaceutical Assn. and the National Formulary Committee. The National Formulary, Seventh Edition, 1942. Fluidextract of Euonymus. Gives alcohol content, average dose, and preparation.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Fluidextract of Gelsemium. Gives alcohol content, preparation, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Fluidextract of Gentian. Gives alcohol content, preparations, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Fluidextract of Hydrangea. Gives alcohol content, average dose, and preparation.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Fluidextract of Hydrastis (Fluidextract of Goldenseal or Extractum Hydrastidis Fluidum P. I.). Gives assay, alcohol content, preparations, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Fluidextract of Jalap. Gives assay, alcohol content, average dose, and preparation.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Fluidextract of Krameria (Fluidextract of Rhatany). Gives alcohol content, average dose, and preparation.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Fluidextract of Lappa (Fluidextract of Burdock Root). Gives alcohol content, average dose, and preparation.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Fluidextract of Leptandra (Fluidextract of Culversroot). Gives alcohol content, average dose, and preparation.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Fluidextract of Phytolacca (Fluidextract of Pokeroot). Gives alcohol content, average dose, and preparation.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Fluidextract of Rhubarb. Gives alcohol content, preparations, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Fluidextract of Sanguinaria (Fluidextract of Bloodroot). Gives alcohol content, average dose, and preparation.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Fluidextract of Seneca (Fluidextract of Seneca-Snakeroot). Gives alcohol content, preparations, and average dose.

The American Pharamceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Fluidextract of Serpentaria. Gives alcohol content, average dose, and preparation.

The American Pharamceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Fluidextract of Squill. Gives alcohol content, preparations, and average dose.

The American Pharamceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Fluidextract of Stillingia. Gives alcohol content, average dose, and preparation.

The American Pharamceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Fluidextract of Taraxacum (Fluidextract of Dandelion Root). Gives alcohol content, preparations, and average dose.

The American Pharamceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Fluidextract of Trillium (Fluidextract of Bethroot). Gives alcohol content, preparation, and average dose.

The American Pharamceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Fluidextract of Triticum (Fluidextract of Couchgrass). Gives alcohol content, average dose, and preparation.

The American Pharamceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Fluidextract of Valerian. Gives alcohol content, average dose, and preparation.

The American Pharamceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Fluidextract of Viburnum Prunifolium (Fluidextract of Blackhaw). Gives alcohol content, preparation, and average dose.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Fluidextract of Ginger. Preparation, assay, and alcohol content.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Fluidextract of Glycyrrhiza (Fluidextract of Licorice Root). Preparation and alcohol content.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Fluidextract of Ipecac. Preparation, assay, and alcohol content.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Fluidextract

of Sarsaparilla. Preparation and alcohol content.

## 818.32 Fluidextract of Fruits and Seeds

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Fluidextract of Celery Fruit. Gives alcohol content, preparation, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Fluidextract of Colchicum Seed. Gives assay, alcohol content, average dose, and preparation.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Fluidextract of Cubeb. Gives the assay, alcohol content, average dose, and preparation.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Fluidextract of Guarana. Gives assay, alcohol content, preparation, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Fluidextract of Juniper. Gives alcohol content, average dose, and preparation.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Fluidextract of Nux Vomica. Gives assay, alcohol content, average dose, and preparation.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Fluidextract of Oat. Gives alcohol content, preparation, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Fluidextract of Rhamnus Cathartica (Fluidextract of Buckthorn-Berries). Gives alcohol content, average dose, and preparation.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Fluidextract of Serenoa (Fluidextractum Sabal, N.F. VI). Gives alcohol content, preparation, and average dose.

## 818.33 Fluidextract of Leaves and Flowers

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Compound Fluidextract of Buchu. Gives chemical composition, alcohol content, preparation, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Fluidextract of Arnica. Gives alcohol content, average dose, and preparation.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Fluidextract of Belladonna Leaf. Gives assay, alcohol content, average dose, and preparation.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Fluidextract of Buchu. Gives assay, alcohol content, average dose, and preparation.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Fluidextract of Calendula (Fluidextract of Marigold). Gives alcohol content, average dose, and preparation.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Fluidextract of Castanea (Fluidextract of Chestnut Leaves). Gives alcohol content, average dose, and preparation.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Fluidextract of Damiana. Gives alcohol content, average dose, and preparation.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Fluidextract of Grindelia. Gives alcohol content, average dose, and preparation.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Fluidextract of Hamamelis Leaf (Fluidextract of Witch-Hazel Leaves). Gives alcohol content, average dose, and preparation.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Fluidextract of Hyoscyamus (Fluidextract of Henbane). Gives assay, alcohol content, average dose, and preparation.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Fluidextract of Lobelia. Gives alcohol content, preparation, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Fluidextract of Rose. Gives alcohol content, preparation, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Fluidextract of Stramonium. Gives assay, alcohol content, average dose, and preparation.

The American Pharamceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Fluidextract of Thyme. Gives alcohol content, preparation, and average dose.

The American Pharamceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Fluidextract of Trifolium (Fluidextract of Red Clover Blossoms). Gives alcohol content, average dose, and preparation.

The American Pharamceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Fluidextract of Uva Ursi. Gives alcohol content, average dose, and preparation.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Fluidextract of Eriodictyon (Fluidextract of Yerba Santa). Preparation and alcohol content.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Fluidextract of Senna. Preparation and alcohol content.

### 818.34 Fluidextract of Barks and Stems

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Fluidextract of Condurango. Covers alcohol content, average dose, and preparation.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Fluidextract of Frangula (Fluidextract of Buckthorn Bark). Gives alcohol content, average dose, and preparation.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Fluidextract of Quassia. Gives alcohol content, average dose, and preparation.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Fluidextract of Viburnum Opulus (Fluidextract of True Cramp Bark). Gives alcohol content, preparation, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Fluidextract of Viburnum Prunifolium (Fluidextract of Blackhaw). Gives alcohol content, preparation, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Fluidextract of Wild Cherry. Gives alcohol content, preparation, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Fluidextract of Xanthoxylum (Fluidextract of Prickly-Ash Bark). Gives alcohol content, preparation, and average dose.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Aromatic Fluidextract of Cascara Sagrada (Aromatic Fluidextract of Rhamnus Purshiana). Preparation and alcohol content.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Fluidextract of Cascara Sagrada (Fluidextract of Rhamnus Purshiana). Preparation and alcohol content.

### 818.39 Miscellaneous Fluidextracts

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Fluidextract of Euphorbia Pilulifera. Gives alcohol content, preparation, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Fluidextract of Humulus (Fluidextract of Hops). Gives alcohol content, average dose, and preparation.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Fluidextract of Kola. Gives assay, alcohol content, average dose, and preparation.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Fluidextract of Zea (Fluidextract of Corn-Silk). Gives alcohol content, preparation, and average dose.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Fluidextract of Ergot. Preparation and alcohol content.

## 818.4 SOLUTIONS

### 818.41 Acid Solutions

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Solution of Boric Acid. Gives chemical composition, preparation, description, identification, reaction, arsenic, heavy metals, assay, storage, and dilution for ophthalmic use.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Solution of Arsenious Acid (Hydrochloric Solution or Arsenic, Solution of Arsenic Chloride). Description, identification, reaction, assay, and storage.

### 818.42 Ammonia Solutions

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Ammoniacal Solution of Silver Nitrate. Gives chemical composition, description, specific gravity, identifications, reaction, copper, potassium and sodium, assay for silver and for ammonia, storage, oral use, and preparation.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Solution of Ammonium Acetate. Gives chemical compositions, description, identification, ash, assay, storage, preparation, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Solution of Iron and Ammonium Acetate (Basham's Mixture). Gives chemical composition, description, identifications, reaction, assay for ammonia and for iron, storage, alcohol content, average dose, and preparation.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Diluted Solution of Ammonia (Solution of Ammonium Hydroxide). Description, specific gravity, identification, reaction, nonvolatile substances, heavy metals, oxidizable substances, assay, and storage. U.S.P. product of diluted solution of ammonia—Spiritus Ammoniae Aromaticus.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Strong Solution of Ammonia (Stronger Ammonia Water). Description, specific gravity, reaction, other tests, assay, and storage. U.S.P. product of strong solution of ammonia—Liquor Ammoniae Dilutus.

### 818.43 Hydroxide Solutions

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Solution of Potassium Hydroxide. Gives chemical composition, description, specific gravity, identification, reaction, arsenic, assay, storage, preparations, and average dose.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Solution of Calcium Hydroxide (Lime Water). Description,

identification, reaction, alkalies and other carbonates, assay, and storage.

### 818.44 Formaldehyde Solutions

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Solution of Formaldehyde. Description, solubility, identification, free acid, assay, and storage.

*References.*—Aldehydes, *see* 824.

### 818.45 Hydrogen Peroxide Solutions

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Solution of Hydrogen Peroxide (Solution of Hydrogen Dioxide). Description, specific gravity, identification, reaction, nonvolatile matter, acidity, arsenic, barium, heavy metals, limit of preservative, assay, and storage.

### 818.46 Iodine and Iodide Solutions

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Phenolated Solution of Iodine (Carbolized Solution of Iodine). Gives chemical composition, description, specific gravity, identification, free iodine, ash, storage, external use, and preparation.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Solution of Arsenic and Mercuric Iodides (Donovan's Solution). Gives chemical composition, description, identifications, assay for arsenic triiodide and for mercuric iodide, storage, average dose, and preparation.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Solution of Potassium Iodide. Gives chemical composition, description, specific gravity, identification, reaction, other tests, assay, storage, average dose, and preparation.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Solution of Iodine. Description, identification, assay for iodine, assay for sodium iodide, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Strong Solution of Iodine (Lugol's Solution). Description, identification, assay, and storage.

### 818.47 Sodium Solution

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Compound Solution of Sodium Borate (Dobell's Solution). Gives chemical composition, description, identifications, reaction, storage, use on mucous membranes, and preparation.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Diluted Solution of Sodium Hypochlorite (Modified Dakin's Solution). Gives chemical composition, description, specific gravity, total solids, alkalinity, assay, storage, and preparation.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Solution of Sodium Arsenate. Gives chemical composition, description, identification, reaction, assay, storage, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Solution of Sodium Citrate (Potio Riverli, Mistura Sodii Citratis). Gives chemical composition, description, identifications, reaction, assay, storage, average dose, and preparation.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Solution of Sodium Phosphate. Gives chemical composition, description, specific gravity, identification, reaction, arsenic, heavy metals, assay, storage, average dose, and preparation.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Anticoagulant Solution of Sodium Citrate. Description, identification, hydrogen ion concentration, limit of sodium chloride, assay for sodium citrate, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Isotonic Solution of Sodium Chloride (Physiological Salt Solution, Normal Saline Solution). Description, hydrogen ion concentration, identification, heavy metals, arsenic, assay, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Solution Sodium Hypochlorite. Description, identification, assay, and storage.

### 818.49 Miscellaneous Solutions

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Alkaline Aromatic Solution. Gives chemical composition, description, specific gravity, ash, reaction, storage, alcohol, oral use, and preparation.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Caramel (Saccharum Ustum or Burnt Sugar Coloring). Gives description, miscibility, specific gravity, purity, ash, storage, and preparation.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Chloroformic Solution of Coal Tar. Gives chemical composition, description, storage, external use, and preparation.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Diluted Solution of Lead Subacetate (Lead Water). Gives chemical composition, description, identifications, reaction, copper or iron, assay, storage, and external use.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. N. F. Antiseptic Solution. Gives chemical composition, description, specific gravity, reaction, quantitative test for boric acid and test for antiseptic value, storage, alcohol content, external or oral use, and preparation.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh

Edition, 1942. Solution of Aluminum Acetate (Burow's Solution). Gives chemical compositions, preparation for each composition, description, specific gravity, identification, hydrogen-ion concentration, lead, limit for boric acid, assay for aluminum oxide and for acetic acid, storage, and average dilution for external use.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Solution of Aluminum Chloride. Gives chemical composition, description, specific gravity, identification, assay, storage, and external use.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Solution of Aluminum Subacetate. Gives chemical composition, description, identification, reaction, limit for boric acid, assay for aluminum oxide and for acetic acid, storage, average dilution for external use, and preparation.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Solution of Carmine. Gives chemical composition, description, specific gravity, ash, lead precipitate residue, absence of coal-tar dyes, color standard, storage, and preparation.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Solution of Coal Tar (Liquor Carbonis Detergens). Gives chemical composition, description, identification, storage, alcohol content, average dilution for external use, and preparation.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Solution of Cochineal (Cochineal Color). Gives chemical composition, description, identification, absence of coal-tar dyes, color standard, storage, and preparation.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Solution of Ephedrine Sulfate. Gives chemical composition, preparation, description, optical rotation, identifications, reaction, assay, storage, and average dilution for use on mucous membranes.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Solution of Ferric Chloride (Solution of Iron Perchloride). Gives chemical composition, description, miscibility, specific gravity, identification, alkali and alkaline earth salts, nitrate, ferrous salts, zinc or copper, assay for hydrochloric acid and for iron, storage, preparations, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Solution of Ferric Subsulfate (Solution of Basic Ferric Sulfate). Gives chemical composition, description, miscibility, specific gravity, identification, reaction, nitrate, ferrous salts, assay, storage, average dose, external use as a styptic, and preparation.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Solution of Ferric Sulfate (Solution of Iron Tersulfate). Gives chemical composition, description, miscibility, specific gravity, identification, nitrate, ferrous iron, assay, and storage.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Solution of Lead Subacetate (Goulard's Extract). Gives chemical composition, description, specific gravity, identifications, reaction, alkaline earths, copper or iron, assay, storage, preparations, and average dilution for external use.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Solution of Merbromin. Gives chemical composition, description, identifications, bromine ions, mercury ions; assay for merbromin, for bromine, and for mercury; and storage.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Solution of Methylrosaniline Chloride (Solution of Crystal Violet). Gives chemical composition, description, residue, storage, alcohol content, external use, and preparation.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Solution of Nux Vomica Alkaloids. Gives chemical composition, description, identifications, reaction, assay for total alkaloidal salts and for strychnine sulfate and brucine sulfate, storage, average dose (metric or apothecaries) for horses and cattle and for sheep and swine, based on weight of the animal, and preparation.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Solution of Peptonized Iron. Gives chemical composition, description, specific gravity, identifications, assay, storage, alcohol content, average dose, and preparation.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Solution of Peptonized Iron and Manganese. Gives chemical composition, description, specific gravity, identifications, assay for iron, storage, alcohol content, average dose, and preparation.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Solution of Potassium Citrate. Gives chemical composition, description, identification, reaction, tartrate, arsenic, heavy metals, assay, storage, average dose, and preparation.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Solution of Procaine Hydrochloride. Gives chemical composition, description, identifications, assay, storage, preparation, and average parenteral dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh

Edition, 1942. Solution of Resorcin Brown. Gives chemical composition, description, identification, storage, and preparation.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Solution of Soda and Mint. Gives chemical composition, description, identifications, reaction, storage, alcohol content, average dose, and preparation.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Solution of Sulfurated Lime (Vlemincks' Lotion). Gives chemical composition, description, identifications, reaction, storage, average dilution for external use, and preparation.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Surgical Solution of Merbromin. Gives chemical composition, preparation, description, identification, distinction from solution of merbromin, bromine ions, mercury ions, assay for each, total solids, bromine and mercury, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Isotonic Solution of Three Chlorides (Ringer's Solution). Description, hydrogen ion concentration, heavy metals, arsenic, assay for calcium chloride, assay for potassium chloride, assay for total chlorides, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Saponated Solution of Cresol (Compound Solution of Cresol). Characteristics of the liberated fatty acids, assay, storage, and alcohol content.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Solution of Amaranth. Description, residue, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Solution of Chloroazodin. Description, specific gravity, identification, moisture, assay for chloroazodin, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Solution of Epinephrine Hydrochloride. Description, identification, assay, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Solution of Liver (Liquid Extract of Liver). Alcoholic and glycerin content and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Solution of Magnesium Citrate. Description, identification, chloride, sulfate, tartaric acid, minimum of total citric acid, and assay for magnesium oxide.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Solution of Potassium Arsenite (Fowler's Solution). Description, identification, arsenate, assay, alcohol content, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Solution of Tribromoethanol (Solution of Tribromoethyl Alcohol). Description, free acid, assay, and storage.

## 818.5 SPIRITS

### 818.51 Ammonia Spirits

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Anisated Spirit of Ammonia. Gives chemical composition, storage, alcohol content, average dose, and preparation.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Aromatic Spirit of Ammonia. Description, specific gravity, assay for total ammonia, assay for normal ammonium carbonate, alcohol content, and storage.

### 818.52 Orange Spirits

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Compound Spirit of Orange. Preparation, assay, alcohol content, and storage.

### 818.53 Camphor Spirits

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Spirit of Camphor. Specific gravity, added water, assay, alcohol content, and storage.

### 818.54 Cinnamon Spirits

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Spirit of Cinnamon. Preparation, assay, alcohol content, and storage.

### 818.55 Whiskey

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Whisky (Whiskey). Description, specific gravity, free acid (total solids, glycerin, sugar), storage in wood, esters (acetone, other ketones, isopropyl alcohol, and tertiary butyl alcohol), alkaloids, caramel and certain coal-tar dyes, formaldehyde, methanol, heavy metals, and storage.

### 818.56 Lavender Spirits

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Spirit of Lavender. Preparation, assay, alcohol content, and storage.

### 818.57 Brandy

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Brandy. Description, specific gravity, free acid, total solids, storage in wood, other tests, and storage.

### 818.59 Miscellaneous Spirits

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Compound Spirit of Cardamom. Gives chemical composition, storage, alcohol content, and preparation.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Compound Spirit of Ether (Hoffmann's Anodyne). Gives chemical composition, storage, alcohol content, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Compound Spirit of Myrcia. Gives chemical composition, storage, alcohol content, and preparation.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Compound Spirit of Vanillin. Gives chemical composition, storage, alcohol content, and preparation.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Perfumed Spirit (Cologne Water or Aqua Coloniensis). Gives chemical composition, storage, alcohol content, and preparation.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Spirit of Benzaldehyde. Gives chemical composition, storage, alcohol content, average dose, and preparation.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Spirit of Chloroform. Gives chemical composition, assay, storage, alcohol content, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Spirit of Ether (Hoffmann's Drops). Gives chemical composition, description, miscibility, specific gravity, reaction, residue, storage, alcohol content, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Spirit of Ethyl Nitrite (Spirit of Nitrous Ether or Sweet Spirit of Nitre). Gives chemical composition, description, specific gravity, identification, reaction, free acid, aldehyde, assay, storage, alcohol content, preparation, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Spirit of Formic Acid. Gives chemical composition, identification, purity, assay, storage, alcohol content, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Spirits of Volatile Oils. Gives chemical composition and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Spirit of Anise. Preparation, assay, alcohol content, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Spirit of Glyceryl Trinitrate (Spirit of Nitroglycerin). Description, specific gravity, identification, reaction, assay, alcohol content, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Spirit of Peppermint (Essence of Peppermint). Preparation, assay, alcohol content, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Spirit of Spearmint. Preparation, assay, alcohol content, and storage.

### 818.6 SYRUPS

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Syrup (Sirup, Simple Syrup). Preparation, specific gravity, and storage.

### 818.60 General Items

### 818.61 Acid Syrups

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Syrup of Citric Acid. Preparation and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Syrup of Hydriodic Acid. Preparation, description, specific gravity, identification, free iodine, assay, and storage.

### 818.62 Orange Syrups

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Syrup of Orange. Preparation, alcohol content, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Syrup of Orange Flowers. Preparation and storage.

### 818.63 Ipecac Syrups

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Syrup of Ipecac. Preparation, alcohol content, and storage.

### 818.64 Pine Tar Syrups

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Syrup of Pine Tar (Syrup of Tar). Preparation and storage.

### 818.65 Cherry Syrups

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Syrup of Cherry. Gives chemical composition, storage, alcohol content, and preparation.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Syrup of Wild Cherry. Preparation, alcohol content, and storage.

### 818.66 Sarsaparilla Syrups

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Compound Syrup of Sarsaparilla. Preparation, alcohol content, and storage.

### 818.67 Senna Syrups

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Syrup of Senna. Preparation, alcohol content, and storage.

### 818.68 Honey

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Honey (Clarified Honey, Strained Honey). Description, specific gravity, ash, reaction, chloride, sulfate, artificial honey, foreign coloring matter, azo dyes, starch or dextrins, free acid, and storage.

## 818.69 Miscellaneous Syrups

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Aromatic Syrup of Eriodictyon ( Syrupus Corrigens or Aromatic Syrup of Yerba Santa). Gives chemical composition, storage, alcohol content, preparations, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Compound Syrup of Asarum. Gives chemical composition, preparation, storage, and alcohol content.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Compound Syrup of Hypophosphites. Gives chemical composition, storage, average dose, and preparation.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Compound syrup of Squill (Hive Syrup). Gives chemical composition, storage, alcohol content, average dose, and preparation.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Compound Syrup of White Pine. Gives chemical composition, storage, alcohol content, preparation, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Compound Syrup of White Pine With Codeine. Gives chemical composition, storage, alcohol content, average dose, and preparation.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Syrup of Acacia. Gives chemical composition, preparation, and storage.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Syrup of Althea. Gives chemical composition, preparation, storage, and alcohol content.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Syrup of Ammonium Hypophosphite. Gives chemical composition, preparation, storage, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Syrup of the Bromides. Gives chemical composition, preparation, storage, alcohol content, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Syrup of Cacao (Cocoa Syrup of Chocolate-Flavored Syrup). Gives chemical composition, preparation, storage, and alcohol content.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Syrup of Calcium Lactophosphate. Gives chemical composition, preparation, storage, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Syrup of Cinnamon. Gives chemical composition, storage, and alcohol content.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Syrup of Ephedrine Sulfate. Gives chemical composition, storage, alcohol content, average dose, and preparation.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Syrup of Ferrous Iodide. Gives chemical composition, description, specific gravity, identifications, free iodine, assay, storage, average dose, and preparation.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Syrup of Ginger. Gives chemical composition, storage, alcohol content, average dose, and preparation.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Syrup of Hypophosphites. Gives chemical composition, storage, average dose, and preparations.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Syrup of Ipecac and Opium (Syrup of Dover's Powder). Gives chemical composition, storage, alcohol content, average dose, and preparation.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Syrup of Potassium Guaiacolsulfonate. Gives chemical composition, storage, alcohol content, average dose, and preparation.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Syrup of Raspberry. Gives chemical composition, storage, alcohol content, and preparation.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Syrup of Rhubarb. Gives chemical composition, storage, alcohol content, average dose, and preparation.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Syrup of Senega. Gives chemical composition, storage, alcohol content, average dose, and preparation.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Syrup of Squill. Gives chemical composition, preparation, storage, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Syrup of Thyme. Gives chemical composition, storage, alcohol content, and preparation.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Aromatic Syrup of Rhubarb. Preparation, alcohol content, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Liquid Glucose (Glucose). Description, solubility, identification, loss on drying, ash, acidity, sulfite, arsenic, heavy metals, starch, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Syrup of Glycyrrhiza (Syrup of Licorice). Preparation, alcohol content, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Syrup of Tolu Balsam (Syrup of Tolu). Preparation, alcohol content, and storage.

## 818.7 TINCTURES

### 818.70 General Items

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Ethereal Tinctures. Gives chemical composition and preparation.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Tinctures. Gives definition, processes for percolation and maceration, preparation of tinctures from fluidextracts, and storage.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Tinctures of Fresh Drugs. Gives chemical composition and preparation.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Tinctures. Alcoholic or hydro-alcoholic solutions prepared from animal or vegetable drugs or from chemical substances, process P; modification for assayed tinctures, process M; and storage.

### 818.71 Tincture of Orange Peel

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Tincture of Bitter Orange Peel. Preparation and alcohol content.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Tincture of Sweet Orange Peel. Preparation and alcohol content. U.S.P. product of tincture of sweet orange peel—Syrupus Aurantii.

### 818.72 Tincture of Belladonna

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Tincture of Belladonna (Tincture of Belladonna Leaf). Preparation, assay, and alcohol content.

### 818.73 Tincture of Gentian

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Compound Tincture of Gentian. Preparation and alcohol content.

### 818.74 Tincture of Iodine

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Stronger Tincture of Iodine (Churchill's Tincture of Iodine). Gives chemical composition, preparation, assay for potassium iodide and for iodine, alcohol content, and external use.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Tincture of Iodides. Gives chemical composition, preparation, alcohol content, and external use.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Mild Tincture of Iodine. Description, identification and assays, storage, and alcohol content.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Tincture of Iodine. Description, identification, assay, storage, and alcohol content.

### 818.75 Tincture of Lemon

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Tincture of Lemon. Preparation and alcohol content. U.S.P. product of tincture of lemon—Syrupus Acidi Citrici.

### 818.76 Tincture of Nux Vomica

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Tincture of Nux Vomica. Preparation, assay, and alcohol content.

### 818.77 Tincture of Opium

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Compound Mixture of Opium and Glycyrrhiza (Brown Mixture). Gives chemical composition, storage, alcohol content, average dose, and preparation.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Tincture of Ipecac and Opium (Tincture of Dover's Powder). Gives chemical composition, alcohol content, preparation, and average dose.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Camphorated Tincture of Opium (Paregoric). Preparation, assay, and alcohol content.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Tincture of Opium (Laudanum, Tincture of Deodorized Opium). Preparation, assay, and alcohol content.

### 818.79 Miscellaneous Tinctures

American Institute of Homoeopathy. Homoeopathic Pharmacopoeia of U. S., 1941. Hahnemann's Causticum and St. Mary's Thistle. Synonyms, description, and preparations for tincture, dilutions, and medications for use in homoeopathic medicines.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Acetic Tincture of Larkspur. Gives chemical composition, preparation, alcohol content, and external use.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Ammoniated Tincture of Guaiac. Gives chemical composition, preparation, alcohol content, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Ammoniated Tincture of Valerian. Gives chemical composition, preparation, alcohol content, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh

Edition, 1942. Compound Tincture of Cinchona. Gives chemical composition, preparation, assay, alcohol content, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Compound Tincture of Cudbear. Gives chemical composition, preparation, and alcohol content.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Compound Tincture of Gambir. Gives chemical composition, preparation, alcohol content, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Compound Tincture of Viburnum. Gives chemical composition, preparation, alcohol content, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Strong Tincture of Colchicum Corm. Gives chemical composition, preparation, assay, alcohol content, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Sweet Tincture of Rhubarb. Gives chemical composition, preparation, alcohol content and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Tincture of Aconite. Gives chemical composition, preparation, assay, alcohol content, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Tincture of Aloe. Gives chemical composition, identification, alcohol content, average dose, and preparation.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Tincture of Aloe and Myrrh. Gives chemical composition, preparation, alcohol content, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Tincture of Antimony (Tincture of Tartar Emetic). Gives chemical composition, preparation, alcohol content, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Tincture of Arnica. Gives chemical composition, preparation, alcohol content, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Tincture of Asafetida. Gives chemical composition, preparation, alcohol content, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Tincture of Bryonia. Gives chemical composition, preparation, alcohol content, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Tincture of Cactus Grandiflorus. Gives chemical composition, preparation, alcohol content, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Tincture of Calendula. Gives chemical composition, preparation, alcohol content, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Tincture of Calumba. Gives chemical composition, preparation, alcohol content, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Tincture of Cantharides. Gives chemical composition, preparation, alcohol content, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Tincture of Capsicum. Gives chemical composition, preparation, test for quality, alcohol content, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Tincture of Capsicum and Myrrh (Hot Drops). Gives chemical composition, preparation, alcohol content, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Tincture of Cimicifuga (Tincture of Black Cohosh). Gives chemical composition, preparation, alcohol content, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Tincture of Cinnamon. Gives chemical composition, alcohol content, preparations, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Tincture of Cocculus. Gives chemical composition, preparation, alcohol content, and external use.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Tincture of Cubeb. Gives chemical composition, preparation, assay, alcohol content, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Tincture of Cudbear. Gives chemical composition, assay for color, alcohol content, and preparation.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Tincture of Ferric Chloride (Tincture of Iron). Gives chemical composition, description, specific gravity, identifications, nitrate, assay, alcohol content, preparations, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Tincture of Ferric Citrochloride. Gives chemical composition, assay, alcohol content, preparation, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Tincture of Gelsemium. Gives chemical composition, preparation, alcohol content, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Tincture of Guaiac. Gives chemical composition, preparation, alcohol content, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Tincture of Hydrastis (Tincture of Goldenseal). Gives chemical composition, preparation, assay, alcohol content, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Tincture of Ipecac. Gives chemical composition, preparation, assay, alcohol content, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventn Edition, 1942. Tincture of Ipecac and Opium (Tincture of Dover's Powder). Gives chemical composition, alcohol content, preparation, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Tincture of Jalap. Gives chemical composition, preparation, assay, alcohol content, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Tincture of Kino. Gives chemical composition, preparation, storage, alochol content, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Tincture of Larkspur. Gives chemical composition, preparation, alcohol content, and external use.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Tincture of Lobelia. Gives chemical composition, preparation, alcohol content, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Tincture of Pulsatilla. Gives chemical composition, preparation, alcohol content, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Tincture of Quassia. Gives chemical composition, preparation, alcohol content, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Tincture of Quillaja (Tincture of Soapbark). Gives chemical composition, preparation, and alconol content.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Tincture of Rhubarb. Gives chemical composition, preparation, alcohol content, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Tincture of Sanguinaria (Tincture of Bloodroot). Gives chemical composition, preparation, alcohol content, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Tincture of Serpentaria (Tincture of Virginia Snakeroot). Gives chemical composition, preparation, alcohol content, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Tincture of Squill. Gives chemical composition, preparation, alcohol content, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Tincture of Strophanthus. Gives chemical composition, preparation, assay, alcohol content, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Tincture of Valerian. Gives chemical composition, preparation, alcohol content, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Tincture of Vanilla. Gives chemical composition, preparation, and alcohol content.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Tincture of Veratrum Viride. Gives chemical composition, preparation, alcohol content, and average dose.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Aromatic Tincture of Rhubarb. Preparation and alcohol content, U.S.P. product of aromatic tincture of rhubarb—Syrupus Rhei Aromaticus.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Compound Tincture of Cardamom. Preparation and alconol content.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Compound Tincture of Lavender (Compound Spirit of Lavender). Preparation and alcohol content.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Tincture of Benzoin. Preparation and alcohol content. Compound Tincture of Benzoin. Preparation and alcohol content.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Tincture of Colchicum Seed (Tincture of Colchicum). Preparation, assay, and alcohol content.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Tincture of Digitalis. Preparation, assay, and alconol content.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Tincture of

Hyoscyamus (Tincture of Henbane). Preparation, assay, and alcohol content.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Tincture of Myrrh. Preparation and alcohol content.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Tincture of Stramonium. Preparation, assay, and alcohol content.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Tincture of Tolu Balsam (Tolu Tincture). Preparation and alcohol content. U.S.P. product of tincture of tolu balsam—Syrupus Balsami Tolutani.

## 818.8 ELIXIRS

### 818.81 Elixir of Iron

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Elixir of Beef and Iron. Gives chemical composition, preparation, storage, alcohol content, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Elixir of Gentian and Iron. Gives chemical composition, storage, alcohol content, average dose, and preparation.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Elixir of Iron, Quinine, and Strychnine Phosphates. Gives chemical composition, preparation, storage, alcohol content, and average dose.

### 818.82 Aromatic Elixirs

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Red Aromatic Elixir. Gives chemical composition, storage, and alcohol content.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Aromatic Elixir (Simple Elixir). Description, alcohol content, and storage.

### 818.83 Elixir of Bismuth

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Elixir of Bismuth. Gives chemical composition, preparation, storage, alcohol content, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Elixir of Pepsin and Bismuth. Gives chemical composition, storage, alcohol content, preparation, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Elixir of Pepsin, Bismuth, and Strychnine. Gives chemical composition, storage, alcohol content, average dose, and preparation.

### 818.84 Elixirs of Botanical Origin

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Alkaline Elixir of Rhubarb. Gives chemical composition, storage, alcohol content, average dose, and preparation.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Compound Elixir of Buchu. Gives chemical composition, preparation, storage, alcohol content, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Compound Elixir of Cardamom. Gives chemical composition, preparation, storage, and alcohol content.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Compound Elixir of Euphorbia (Hare's Elixir). Gives chemical composition, preparation, storage, alcohol content, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Compound Elixir of Hydrastis (Alkaline Elixir). Gives chemical composition, storage, alcohol content, average dose, and preparation.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Compound Elixir of Serenoa and Sandalwood (Compound Elixir of Saw Palmetto and Santal or Sabal-Santal Elixir). Gives chemical composition, storage, alcohol content, preparation, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Compound Elixir of Taraxacum. Gives chemical composition, storage, alcohol content, and preparation.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Compound Elixir of Vanillin. Gives chemical composition, storage, preparation, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Compound Elixir of Viburnum Opulus. Gives chemical composition, storage, alcohol content, preparation, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Elixir of Bitter Orange (Elixir Curassao). Gives chemical composition, preparation, storage, and alcohol content.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Elixir of Buchu. Gives chemical composition, storage, alcohol content, preparation, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Elixir of Buchu and Potassium Acetate. Gives chemical composition, preparation, storage, alcohol content, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Elixir of Buchu, Juniper, and Potassium Acetate. Gives chemical composition, preparation, storage, alcohol content, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Elixir of Cascara Sagrada.

Gives chemical composition, preparation, storage, alcohol content, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Elixir of Cataria and Fennel. Gives chemical composition, preparation, storage, alcohol content, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Elixir of Cinchona Alkaloids (Elixir Calisaya, Alkaloidal). Gives chemical composition, preparation, storage, alcohol content, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Elixir of Gentian. Gives chemical composition, storage, alcohol content, and preparation.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Elixir of Gentian and Iron. Gives chemical composition, storage, alcohol content, average dose, and preparation.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Elixir of Glycyrrhiza (Elixir of Licorice). Gives chemical composition, storage, alcohol content, and preparation.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Elixir of Guarana and Celery. Gives chemical composition, storage, alcohol content, average dose, and preparation.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Elixir of Hydrangea and Lithium. Gives chemical composition, storage, alcohol content, average dose, and preparation.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Elixir of Iron, Quinine, and Strychnine. Gives chemical composition, preparation, storage, alcohol content, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Elixir of Iron, Quinine, and Strychnine Phosphates. Gives chemical composition, preparation, storage, alcohol content, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Elixir of Pepsin, Bismuth, and Strychnine. Gives chemical composition, storage, alcohol content, average dose, and preparation.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Elixir of Viburnum Prunifolium (Elixir of Blackhaw). Gives chemical composition, storage, alcohol content, average dose, and preparation.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Glycerinated Elixir of Gentian. Gives chemical composition, storage, alcohol content, and preparation.

## 818.85 Elixirs of Animal Origin

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Compound Elixir of Pepsin (Elixir Lactated Pepsin or Compound Digestive Elixir). Gives chemical composition, assay, storage, alcohol content, average dose, and preparation.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Elixir of Beef and Iron. Gives chemical composition, preparation, storage, alcohol content, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Elixir of Pepsin. Gives chemical composition, assay, storage, alcohol content, average dose, and preparation.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Elixir of Pepsin and Bismuth. Gives chemical composition, storage, alcohol content, preparation, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Elixir of Pepsin and Rennin. Gives chemical composition, preparation, assay, storage, alcohol content, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Elixir of Pepsin, Bismuth, and Strychnine. Gives chemical composition, storage, alcohol content, average dose, and preparation.

## 818.86 Elixir of Potassium

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Elixir of Buchu, Juniper, and Potassium Acetate. Gives chemical composition, preparation, storage, alcohol content, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Elixir of Buchu and Potassium Acetate. Gives chemical composition, preparation, storage, alcohol content, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Elixir of Potassium Bromide. Gives chemical composition, assay, storage, alcohol content, preparation, and average dose.

## 818.87 Elixir of Sodium

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Compound Elixir of Sodium Salicylate. Gives chemical composition, storage, alcohol content, preparation, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Elixir of Calcium and Sodium Glycerophosphates. Gives chemical composition, preparation, storage, alcohol content, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh

Edition, 1942. Elixir of Sodium Bromide. Gives chemical composition, assay, storage, alcohol content, preparation, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Elixir of Sodium Salicylate. Gives chemical composition, assay, storage, alcohol content, preparation, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Elixir of Sodium Thiocyanate (Elixir of Sodium Sulfocyanate). Gives chemical composition, storage, alcohol content, preparation, and average dose.

### 818.89 Miscellaneous Elixirs

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Compound Elixir of Benzaldehyde. Gives chemical composition, storage, alcohol content, and preparation.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Compound Elixir of Glycerophosphates. Gives chemical composition, storage, alcohol content, average dose, and preparation.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Elixir of Aminopyrine. Gives chemical composition, assay, alcohol content, storage, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Elixir of. Ammonium Bromide. Gives chemical composition, preparation, assay, alcohol content, storage, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Elixir of Ammonium Valerate. Gives chemical composition, preparation, alcohol content, storage, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Elixir of Barbital. Gives chemical composition, preparation, assay, storage, alcohol content, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Elixir of Calcium Lactophosphate. Gives chemical composition, preparation, storage, alcohol content, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Elixir of Five Bromides. Gives chemical composition, preparation, assay, storage, alcohol content, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Elixir of Phosphorus. Gives chemical composition, storage, alcohol content, preparation, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Elixir of Terpin Hydrate. Gives chemical composition, storage, alcohol content, preparation, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Elixir of Terpin Hydrate and Codeine. Gives chemical composition, storage, alcohol content, preparation, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Elixir of Three Bromides. Gives chemical composition, preparation, assay, storage, alcohol content, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Iso-Alcoholic Elixir. Gives chemical compositions for low-alcoholic and high-alcoholic elixirs, storage, alcohol contents, and table for adjustment of iso-alcoholic elixir.

## 818.9 MISCELLANEOUS LIQUIDS

### 818.91 Decoctions

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Decoctions. Preparation.

### 818.92 Sprays

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Aromatic Spray. Gives chemical composition, preparation, and storage.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Compound Spray of Ephedrine (Compound Ephedrine Inhalant). Gives chemical composition, assay, storage, and preparation.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Compound Spray of Menthol. Gives chemical composition, preparation, and storage.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Ephedrine Spray. Gives chemical composition, assay, storage, and preparation.

### 818.93 Juices

American Institute of Homoeopathy. Homoeopathic Pharmacopoeia of U. S., 1941. Aloes, Lettuce Opium, Murex, Squirting Cucumber, and Sugar Pine. Natural order, synonyms, description, habitat, history, parts used, and preparations for tincture, dilutions, and medications for use in homoeopathic medicines.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Cherry Juice. Gives chemical composition, description, specific gravity, refractive index, ash, hydrogen-ion concentration, total solids, reducing sugars, volatile acids, arsenic, lead, assay, storage, and preparation.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Kino. Gives descriptions of unground and powdered kino, identification, descriptions of alcohol-soluble extractive and water-soluble extractive, preparation, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Raspberry Juice. Gives chemical composition, description, specific gravity, refractive index, identification, ash, hydrogen-ion concentration, total solids, reducing sugars, volatile acids, absence of coal-tar dyes, arsenic, assay, storage, and preparation.

### 818.94 Glycerites

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Fluidglycerates. Gives chemical composition and preparation.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Glycerite of Bismuth. Gives chemical composition, description, specific gravity, assay, storage, and preparations.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Glycerite of Egg Yolk (Glyconin). Gives chemical composition, preparation, and storage.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Glycerite of Iodine and Zinc Iodide (Diluted Talbot's Solution). Gives chemical composition, preparation, and storage.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Glycerite of Pepsin. Gives chemical composition, assay, storage, average dose, and preparation.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Glycerite of Phenol (Glycerite of Carbolic Acid). Gives chemical composition, storage, average dose, and preparation.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Glycerite of Tragacanth. Gives chemical composition, storage, and preparation.

### 818.95 Infusions

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Compound Infusion of Gentian. Gives chemical composition, storage, alcohol content, average dose, and preparation.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Infusion of Digitalis. Gives chemical composition, preparation, storage, alcohol content, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Infusion of Senna With Magnesium Sulfate. Gives chemical composition, preparation, storage, and average dose.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Infusions. Description.

## 819. MISCELLANEOUS MEDICINAL AND PHARMACEUTICAL PREPARATIONS

### 819.0 GENERAL ITEMS

American Society for Testing Materials, E 20-33 T; 1933. Tentative Method of Test for Particle Size Distribution of Subsieve Size Particulate Substances. Covers the range of sizes between the 74-micron (No.200) sieve and 0.2-micron. The method is applicable to homogeneous materials. Definitions, rough separation of sample into size groups, preparation of mount, procedure, measurement of diameter, scale limits for measurement, and expression of results.

### 819.1 POWDERS

American Institute of Homoeopathy. Homoeopathic Pharmacopoeia of U. S., 1941. Chrysarobin and Lupulin. Natural order, synonyms, description, habitat, history, parts used, and preparations for tincture, dilutions, and medications for use in homoeopathic medicines.

American Institute of Homoeopathy. Homoeopathic Pharmacopoeia of U. S., 1941. Magnesia, Osmium, and Solanine. Chemical symbol, synonyms, description, and preparations for triturations for use in homoeopathic medicines.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Aromatic Powder. Gives chemical composition, description, storage, preparation, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Aromatic Powder of Chalk. Gives chemical composition, storage, average dose, and preparation.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Compound Powder of Jalap. Gives chemical composition, description, storage, average dose, and preparation.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Compound Powder of Pancreatin (Peptonizing Powder). Gives chemical composition, preparation, and storage.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Compound Powder of Rhubarb (Gregory's Powder). Gives chemical composition, description, storage, average dose, and preparation.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Compound powder of Senna (Compound Licorice Powder). Gives chemical composition, description, identification, sulfide, storage, average dose, and preparation.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Compound Powder of Zinc Sulfate. Gives chemical composition, test for antiseptic value, storage, and preparation.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Powder of Ipecac and Opium (Dover's Powder). Gives chemical composition, description, storage, average dose, and preparation.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Aloe. Description, identification, alcohol-insoluble matter, and assay. U.S.P. product of aloe—Aloinum.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Aloin. Description, solubility, identification, ash, reaction, emodin, water-insoluble substances, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Cascara Sagrada. Description and identification. U.S.P. products of cascara sagrada—Extractum Cascarae Sagradae, Fluidextractum Cascarae Sagradae, Fluidextractum Cascarae Sagradae Aromaticum, Tabellae Cascarae Sagradae.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Chiniofon. Description, solubility, identification, free iodine, iodide, assay, and storage. U.S.P. product of chiniofon—Tabellae Chiniofoni.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Chrysarobin. Description, solubility, identification, ash, reaction, and storage. U.S.P. product of chrysarobin—Unguentum Chrysarobini.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Compound Chalk Powder. Preparation.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Compound Effervescent Powders (Seidlitz Powders). Identification, assay for sodium bicarbonate, assay for potassium and sodium tartrate, assay for tartric acid, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Digitalis Capsules. Assay, storage, and sizes.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Dihydromorphinone Hydrochloride. Description, solubility, identification, loss on drying, ash, sulfate, ammonium salts, codeine, acidity, and storage. U.S.P. product of dihydromorphinone hydrochloride—Tabellae Dihydromorphinoni Hydrochloridi.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Diphenylhydantoin Sodium. Description, solubility, identification, reaction, loss on drying, clarity and color of solution, chloride, sulfate, heavy metals, assay, and storage. U.S.P. product of diphenylhydantoin sodium—Capsulae Diphenylhydantoini Sodici.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Dried Aluminum Hydroxide Gel. Description, solubility, identification, reaction, acid-consuming capacity, chloride, sulfate, assay, and storage. U.S.P. product of dried aluminum hydroxide gel—Gelatum Alumini Hydroxidi.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Epinephrine. Description, solubility, optical rotation, identification, loss on drying, ash, reaction, vegetable alkaloids, and storage. U.S.P. products of Epinephrine—Injectio Epinephrinae Hydrochloridi, Liquor Epinephrinae Hydrochloridi, Nebula Epinephrinae Hydrochloridi.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Ergonovine Maleate. Description, solubility, melting point, optical rotation, identification, loss on drying, ergotoxine and ergotamine, assay, and storage. U.S.P. product of ergonovine maleate—Tabellae Ergonovinae Maleatis.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Estradiol Benzoate. Description, solubility, melting point, optical rotation, identification, completeness and reaction of solution, ash, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Eucaine Hydrochloride (Betaeucaine Hydrochloride). Description, solubility, identification, loss on drying, cocaine hydrochloride, ash, carbonizable substances, reaction, cocaine and alphaeucaine, assay, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U.S.A., Twelfth Revision, 1942. Eucatropine Hydrochloride. Description, solubility, melting point, identification, ash, reaction, atropine, scopolamine or hyoscyamine, assay, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Exsiccated Sodium Phosphate (Dried Sodium Phosphate). Description, solubility, identification, loss on drying, other tests, assay, and storage. U.S.P. product of exsiccated sodium phosphate—Sodii Phosphas Effervescens.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Exsiccated Sodium Sulfite. Description, solubility, identification, reaction, thiosulfate, arsenic, heavy metals, assay, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Extract of Stramonium. Pilular Extract of Stramonium. Assay. Powdered Extract of Stramonium. Assay and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Fluorescein Sodium (Soluble Fluorescein). Description, solubility, identification, loss on drying, chloride, sulfate, zinc, acriflavine, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelftn Revision, 1942. Lactose (Milk Sugar). Description, solubility, optical rotation, identification, asn, reaction, heavy metals, dextrose, sucrose, starch or dextrin, water-insoluble substances, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Neocinchophen. Description, solubility, melting point, identification, loss on drying, asn, cinchophen, and storage. U.S.P. product of neocinchophen—Tabellae Neocinchopheni.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelftn Revision, 1942. Neostigmine Bromide. Description, solubility, melting point, identification, loss on drying, ash, reaction, sulfate, assay, and storage. U.S.P. product of neostigmine bromide—Tabellae Neostigminae Bromidi.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelftn Revision, 1942. Neostigmine Methylsulfate. Description, solubility, melting point,

identification, loss on drying, ash, reaction, chloride, sulfate ion, assay, and storage. U.S.P. product of neostigmine methylsulfate—Injectio Neostigminae Methylsulfatis.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Nicotinamide (Nicotinic Acid Amide, Niacinamide). Description, solubility, melting point, identification, loss on drying, carbonizable substances, reaction, heavy metals, assay, and storage. U.S.P. product of nicotinamide—Tabellae Nicotinamidi.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Pamaquine Naphthoate (Aminoquin Naphthoate). Description, solubility, identification, loss on drying, assay for methylene, assay for pamaquine base, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Pelletierine Tannate. Description, solubility, identification, ash, carbonizable substances, reaction, foreign alkaloids, assay, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Phenolphthalein. Description, solubility, melting point, identification, loss on drying, ash, arsenic, heavy metals, colored substances, fluorane, sensitiveness, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Phenolsulfonphthalein (Phenol Red). Description, solubility, identification, loss on drying, ash, arsenic, insoluble substances, sensitiveness, and storage. U.S.P. product of phenolsulfonphthalein—Injectio Phenolsulfonphthaleini.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Phenyl Salicylate (Salol). Description, solubility, melting point, identification, loss on drying, ash, free acid, free phenol or salicylic acid, chloride, sulfate, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Posterior Pituitary (Pituitary, Hypophysis Sicca). Description, solubility, assay, and storage. U.S.P. product of posterior pituitary—Injectio Pituitarii Posterioris.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Potassium Carbonate. Description, solubility, identification, loss on drying, insoluble substances, reaction, arsenic, heavy metals, assay, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Powdered Digitalis. Description and physical properties, assay, and storage. U.S.P. products of digitalis—*See* Digitalis.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Powdered Opium. Preparation, description, assay, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Precipitated Sulfur. Description, solubility and identification, loss on drying, residue on ignition, acid or alkali, arsenic, other forms of sulfur, assay, and storage. U.S.P. product of precipitated sulfur—Unguentum Sulfuris.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Purified Talc. Description, identification, loss on ignition, acid-soluble substances, reaction and soluble substances, water-soluole iron, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Quinacrine Hydrochloride (Mepacrine Hydrochloride). Description, solubility, identification, loss on drying, ash, hydrogen-ion concentration, assay, and storage. U.S.P. product of quinacrine hydrochloride—Tabellae Quinacrinae Hydrochloridi.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Quinine Dihydrochloride. Description, solubility, identification, loss on drying, ash, carbonizable substances, sulfate, barium, other cinchona alkaloids, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Sodium Benzoate. Description, solubility, identification, loss on drying, alkalinity, heavy metals, chlorinated compounds, assay, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Sodium Bicarbonate (Baking Soda). Description, solubility, identification, insoluble substances, reaction, carbonate, ammonia, arsenic, heavy metals, assay, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Sodium Nitrite. Description, solubility, identification, loss on drying, reaction, heavy metals, assay, and storage. U.S.P. product of sodium nitrite—Tabellae Sodii Nitritis.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Sodium Stearate. Description, solubility, identification, loss on drying, alcohol-insoluble substances, reaction, free alkali and free acids, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Strophanthin. Description, solubility, identification, ash, reaction, assay, and storage. U.S.P. product of strophanthin—Injectio Strophanthini.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Sublimed Sulfur (Flowers of Sulfur). Description, solubility, identification, residue on ignition, arsenic, assay, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Sulfarsphenamine. Description, solubility, identification, completeness of solubility, thermostability, assay, storage, and labeling.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Sulfobromophthalein Sodium. Description, solubility, identification, loss on drying, sensitiveness, color and completeness of solution, halide ion, sulfate, arsenic, and storage. U.S.P. product of sulfobromopnthalein sodium—Injectio Sulfobromophthaleini Sodici.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Tetracaine Hydrochloride. Description, solubility, melting point, identification, loss on drying, ash, assay, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Theophylline. Description, solubility, melting point, identification, loss on drying, ash, reaction, carbonizable substances (difference from caffeine, theobromine, or paraxanthine), and storage. U.S.P. product of theophylline—Tabellae Theophylline.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Tribromoethanol (Tribromoethyl Alcohol). Description, solubility, melting point, identification, loss on drying, ash carbonizable substances, reaction, halogen ions, sulfate, aldehyde, assay, and storage. U.S.P. product of tribromoethanol—Liquor Tribromoaethanolis.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Triturations. Preparation.

*References.*—Other alkaloids, *see* 811, Food and Drugs Act and Regulations, *see* 810.

## 819.2 PREPARATIONS IN TUBES

U. S. Gov., U. S. Army, Medical Dept. Specification 4-1075A; 1941. Ointments in Collapsible Tubes.

## 819.3 IODUM-POTASSII

*References.*—Food and Drugs Act and Regulations, *see* 810.

## 819.4 MEDICINALS OF ANIMAL ORIGIN

American Institute of Homoeopathy. Homoeopathic Pharmacopoeia of U. S., 1941. Ambergris, Bird Spider, Black Spider of Curacoa, Castor, Cochineal, Coral Snake, Cuban Tarantula, Diadem Spider, Honey Bee, Honey Bee Poison, Lachesis, Musk, Naja, Rattlesnake, Red Coral, Sepia, Skunk-Poison, Spanish Fly, Star Fish, Tarantula, and Thyroid Gland. Natural order, synonyms, description, habitat, history, parts used, and preparations for tincture, dilutions, and medications for use in homoeopathic medicines.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Anterior Pituitary. Gives chemical composition, description, histology, storage, average dose, and preparation.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Cantharides Cerate (Blistering Cerate). Gives chemical composition, storage, and preparation.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Cantharides (Spanish Flies, Russian Flies, or Pulvis Cantharidis P.I.). Gives chemical composition, description of unground cantharides and powdered cantharides, mylabris beetles, moisture, assay, preparations, and storage.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Carmine. Gives description, solubility, loss on drying, ash, tin, lead, and soluble barium compounds; insoluble barium salts; storage and preparation.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Compound Elixir of Pepsin (Elixir Lactated Pepsin or Compound Digestive Elixir). Gives chemical composition, assay, storage, alcohol content, average dose, and preparation.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Compound Powder of Pancreatin (Peptonizing Powder). Gives chemical composition, preparation, and storage.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Corpus Luteum. Gives preparation, description, solubility, histological characters, storage, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Egg (Hen's Egg). Gives preparation.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Egg Yolk. Gives preparations.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Elixir of Beef and Iron. Gives chemical composition, preparation, storage, alcohol content, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Elixir of Pepsin. Gives chemical composition, assay, storage, alcohol content, average dose, and preparation.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Elixir of Pepsin and Bismuth. Gives chemical composition, storage, alcohol content, preparation, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Elixir of Pepsin and Rennin. Gives chemical composition, preparation, assay, storage, alcohol content, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Extract of Beef. Gives description, solubility, nitrate, total solids, ash, sodium chloride, alcohol-insoluble solids, assay for nitrogen content of alcohol-soluble substances and for nitrogen as ammonia, and preparation.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Glycerite of Egg Yolk (Glyconin). Gives chemical composition, preparation, and storage.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Glycerite of Pepsin. Gives chemical composition, assay, storage, average dose, and preparation.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Ovarian Residue. Gives chemical composition, description, solubility, histology, storage, average dose, and preparation.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh

Edition, 1942. Ovary. Gives chemical composition, description, solubility, histology, storage, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Pepsin. Gives description, solubility, destruction of activity, identification, assay, storage, preparations, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Plaster of Cantharides. Gives chemical composition, storage, and preparation.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Rennin. Gives description, solubility, tests for purity, assay, storage, and preparation.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Saccharated Pepsin. Gives chemical composition, storage, average dose, and preparation.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Solution of Carmine. Gives chemical composition, description, specific gravity, ash, lead precipitate residue, absence of coal-tar dyes, color standard, storage, and preparation.

The American Pharmaceutical Assn. and The National Formulary Committee: The National Formulary, Seventh Edition, 1942. Solution of Cochineal (Cochineal Color). Gives chemical composition, description, identification, absence of coal-tar dyes, color standard, storage, and preparation.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Suprarenal. Gives chemical composition, description, solubility, histology, assay, storage, average dose, and preparation.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Tincture of Cantharides. Gives chemical composition, preparation, alcohol content, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Whole Pituitary. Gives chemical composition, description, histology, storage, average dose, and preparation.

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis, 1940. Pepsin in Liquids. Tentative methods for preparation of sample and reagents and for percentage of pepsin.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Citrated Normal Human Plasma (Normal Human Plasma). Description, regulations, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Cochineal. Description, identification, weighting materials, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Estrone. Description, solubility, melting point, optical rotation, identification, ash, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Extract of Liver (Dry Liver Extract). Description and storage. U.S.P. product of extract of liver—Injectio Hepatis, Liquor Hepatis.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Extract of Ox Bile. Description, solubility, reaction, insoluble substances, assay, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Extract of Ox Bile Tablets. Assay, storage, and sizes.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Gelatin. Description, solubility, identification, odor and water-insoluble substances, sulfite, arsenic, heavy metals, gel strength, bacterial content, and storage. U.S.P. product of gelatin—Gelatinum Glycerinatum.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Human Immune Globulin (Measles Prophylactic). Description, regulations, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Insulin Injection (Insulin, Insulin Hydrochloride). Description, identification, reaction, total nitrogen, zinc, ash, assay, blood-sugar determination, interpretation of the data, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Liver Injection (Liver Extract for Parenteral Use). Description, storage, and sizes.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Ox Bile (Oxgall). Description, specific gravity, identification, and reaction. U.S.P. products of ox bile—Extractum Fellis Bovis, Tabellae Extracti Fellis Bovis.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Pancreatin. Description, solubility, identification, fat, assay for starch digestive power, assay for casein digestive power, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Parathyroid Injection (Solution of Parathyroid, Parathyroid Extract). Assay, determination of serum calcium, storage, and sizes.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Posterior Pituitary (Pituitary, Hypophysis Sicca). Description, solubility, assay, and storage. U.S.P. product of posterior pituitary—Injectio Pituitarii Posterioris.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Posterior Pituitary Injection (Solution of Posterior Pituitary, Solution of Pituitary). Description, assay, storage, and sizes.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Powdered Stomach (Dried Stomach). Preparation and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Solution of Liver (Liquid Extract of Liver). Alcoholic and glycerin content and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Spermaceti. Description, solubility, specific gravity, melting point, paraffin and free acids, stearic acid, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Thyroid. Description, identification, moisture, assay, and storage. U.S.P. product of thyroid—Tabellae Thyroidei.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Thyroid Tablets. Assay, storage, and sizes.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Thyroxin. Description, solubility, identification, loss on drying, ash, soluble halides, assay, and storage.

*References.*—Biological medicinal agents, *see* 812; cod liver oil, *see* 813.2; Food and Drugs Act and Regulations, *see* 810.

## 819.5 VITAMINS

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Ascorbic Acid (Vitamin C). Description, solubility, melting point, optical rotation, identification, ash, heavy metals, assay, and storage. U.S.P. product of absorbic acid—Tabellae Acidi Ascorbici.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Ascorbic Acid Tablets (Vitamin C Tablets). Identification, assay, storage, and sizes.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Concentrated Oleovitamin A and D. Description, free fatty acids, assays, and storage. U.S.P. product of concentrated oleovitamin A and D—Capsulae Oleovitaminae A et D Concentratae.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Concentrated Oleovitamin A and D Capsules (Concentrated Vitamin A and D Capsules). Oil content of capsules, description, tests, assay, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Menadione. Description, solubility, melting point, identification, ash, loss on drying, assay, and storage. U.S.P. product of menadione—Tabellae Menadioni.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Menadione Tablets. Identification, assay, storage, and sizes.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Nicotinamide (Nicotinic Acid Amide, Niacinamide). Description, solubility, melting point, identification, loss on drying, carbonizable substances, reaction, heavy metals, assay, and storage. U.S.P. product of nicotinamide—Tabellae Nicotinamidi.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Nicotinamide Tablets (Niacinamide Tablets). Identification, assay, storage, and sizes.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Nicotinic Acid. Description, solubility, melting point, identification, loss on drying, ash, chloride, sulfate, heavy metals, assay, and storage. U.S.P. product of nicotinic acid—Tabellae Acidi Nicotinici.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Nicotinic Acid Tablets (Niacin Tablets). Identification, assay, storage, and sizes.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Oleovitamin A and D. Description, solubility, color, free fatty acids, assays, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Oleovitamin A Capsules. Oil content of capsules, description, tests, assay, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Oleovitamin A (Natural Vitamin A in Oil). Description, free fatty acids, assays, and storage. U.S.P. product of oleovitamin A—Capsulae Oleovitaminae A.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Riboflavin (Lactoflavin, Vitamin $B_2$, Vitamin G). Description, solubility, melting point, optical rotation, identification, loss on drying, ash, reaction, lumiflavin, nitrogen, and storage. U.S.P. product of riboflavin—Tabellae Riboflavini.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Riboflavin Tablets. Assay, storage, and sizes.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Synthetic Oleovitamin D (Viosterol in Oil). Description, solubility, free fatty acids, assay, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Thiamine Hydrochloride (Thiamin Chloride, Vitamin $B_1$ Hydrochloride, Vitamin $B_1$). Description, solubility, identification, loss on drying, ash, reaction, color of solution, sulfate, ammonium salts, assay for hydrogen chloride, assay for nitrogen, assay for sulfur, and storage. U.S.P. product of thiamine hydrochloride—Tabellae Thiaminae Hydrochloridi.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Thiamine Hydrochloride Tablets (Thiamin Chloride Tablets, Vitamin $B_1$ Tablets). Identification, assay, storage, and sizes.

## 819.6 SULFONAMIDES

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Steril Sulfapyridine Sodium (Sterile Sodium Sulfapyridine). Description, solubility, identification, reaction, loss on drying, chloride, sulfate, heavy metals, assay, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Sulfanilamide. Description, solubility, melting point, identification, loss on drying, ash, reaction, chloride, sulfate, heavy metals, assay, and storage. U.S.P. product of sulfanilamide—Tabellae Sulfanilamidi.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Sulfanilamide Tablets. Identification, assay, storage, and sizes.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Sulfapyridine.

Description, solubility, melting point, identification, loss on drying, ash, clarity and color of solution, acidity, chloride, sulfate, heavy metals, assay, and storage. U.S.P. product of sulfapyridine—Tabellae Sulfapyridini.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Sulfapyridine Tablets. Identification, assay, storage, and sizes.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Sulfathiazole. Description, solubility, melting point, identification, loss on drying, ash, clarity and color of solution, acidity, chloride, sulfate, heavy metals, assay, and storage. U.S.P. product of sulfathiazole—Tabellae Sulfathiazoli.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Sulfathiazole Tablets. Identification, assay, storage, and sizes.

U. S. Gov., U. S. Army, Medical Dept. Specification 4-1124; 1944. Sulfanilamide; Crystalline, U.S.P.

U. S. Gov., U. S. Army, Medical Dept. Specification 4-1126; 1944. Sulfadiazine Tablets; 7.7. Grains.

## 819.7 MEDICINAL EXTRACTS

### 819.70 General Items

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Extracts. Gives description, diluents, defatting, preparation, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Extracts. Description, diluents, defatting extracts, methods of preparing, and storage.

### 819.71 Extracts of Roots and Rhizomes

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Extract of Gelsemium. Gives average dose and preparation.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Extract of Gentian. Gives preparation of pilular extract and of powdered extract of gentian and the average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Extract of Hydrastis (Extract of Goldenseal or Powdered Extract of Hydrastis). Gives assay, average dose, and preparation.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Extract of Leptandra (Extract of Culversroot or Powdered Extract of Leptandra). Gives preparation and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Extract of Sumbul (Extract of Musk Root). Gives chemical composition, preparation of pilular extract and powdered extract of sumbul, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Extract of Taraxacum (Extract of Dandelion Root). Gives chemical composition, preparation of pilular extract of taraxacum and powdered extract of taraxacum, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Extract of Valerian. Gives average dose, chemical composition, and preparation.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Extract of Glycyrrhiza (Extract of Licorice Root, Licorice). Description, insoluble matter, foreign starch, ash, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Extract of Rhubarb (Powdered Extract of Rhubarb). Preparation.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Pure Extract of Glycyrrhiza (Pure Extract of Licorice Root). Description and storage.

### 819.72 Extracts of Fruits and Seeds

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Compound Extract of Colocynth. Gives chemical composition, preparations, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Extract of Colocynth (Extract of Bitter Apple or Powdered Extract of Colocynth). Gives preparation and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Extract of Nux Vomica (Powdered Extract of Nux Vomica or Extractum Strychni P.I.). Gives chemical composition, preparation, assay, and average dose.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Extract of Malt. Description, solubility, specific gravity, assay, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Extract of Rice Polishings. Description, solubility, specific gravity, identification, assay for vitamin $B_1$, and storage.

### 819.73 Extracts of Leaves and Flowers

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Extract of Aloe. Gives average dose and preparation.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Extract of Digitalis. Gives assay, average dose, and preparation.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Extract of Opium (Powdered Extract of Opium or Extractum Opii Aquosum P.I.). Gives chemical composition, preparation, assay, and average dose.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Extract of Belladonna—Pilular Extract of Belladonna. Preparation and assay. Powdered Extract of Belladonna. Preparation and assay. U.S.P. products of extract of belladonna—Unguentum Belladonnae.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Extract Hyoscyamus (Extract of Henbane)—Pilular Extract of Hyoscyamus. Assay. Powdered Extract of Hyoscyamus. Assay and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Extract of Stramonium—Pilular Extract of Stramonium. Assay. Powdered Extract of Stramonium. Assay and storage.

### 819.74 Extracts of Barks and Stems

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Extract of Cascara Sagrada (Extract of Rhamnus Purshiana). Preparation.

### 819.75 Extracts of Animal Origin

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Extract of Beef. Gives description, solubility, nitrate, total solids, ash, sodium chloride, alcohol-insoluble solids, assay for nitrogen content of alcohol-soluble substances and for nitrogen as ammonia, and preparation.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Extract of Liver (Dry Liver Extract). Description and storage. U. S. P. product of extract of liver—Injectio Hepatis, Liquor Hepatis.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Extract of Ox Bile. Description, solubility, reaction, insoluble substances, assay, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Extract of Ox Bile Tablets. Assay, storage, and sizes.

### 819.79 Miscellaneous Extracts

American Institute of Homoeopathy. Homoeopathic Pharmacopoeia of U. S., 1941. Curare and Indian Hemp. Natural order, synonyms, description, habitat, history, parts used, and preparations for tincture, dilutions, and medications for use in homoeopathic medicines.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Extract of Ergot. Gives assay, average dose, and preparation.

## 819.8 PILLS AND TABLETS

### 819.80 General Items

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Pills. Gives general directions for preparing pills official in this formulary.

### 819.81 Bismuth Compounds

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Tablets of Bismuth Subcarbonate. Gives chemical composition, identification, alkaline earths, assay, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Tablets of Bismuth Subgallate. Gives chemical composition, identifications, alkaline earths, assay, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Tablets of Bismuth Subnitrate. Gives chemical composition, identifications, ammonium compounds, assay, and average dose.

### 819.82 Sodium Compounds

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Tablets of Caffeine With Sodium Benzoate. Gives chemical composition, identifications, assay, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Tablets of Mild Mercurous Chloride and Sodium Bicarbonate (Calomel and Soda Tablets). Gives chemical composition, identifications, assay, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Tablets of Procaine Hydrochloride. Gives chemical composition, identifications, assay, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Tablets of Sodium Bicarbonate. Gives chemical composition, identifications, assay, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Tablets of Sodium Bromide. Gives chemical composition, identification, chloride, assay, and average dose.

U. S. Gov., U. S. Army, Medical Dept. Specification 4-1109A; 1940. Normal Saline Solution Tablet.

### 819.83 Calcium Compounds

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Tablets of Calcium Carbonate. Gives chemical composition, identification, barium or strontium, assay, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Tablets of Calcium Lactate. Gives chemical composition, identification, assay, and average dose.

### 819.84 Mercury Compounds

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Compound Pills of Mild Mercurous Chloride (Compound Cathartic Pills). Gives chemical composition, preparation, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Tablets of Mild Mercurous Chloride (Calomel Tablets). Gives chemical composition, identifications, mercuric chloride, assay, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh

Edition, 1942. Tablets of Mild Mercurous Chloride and Sodium Bicarbonate (Calomel and Soda Tablets). Gives chemical composition, identifications, assay, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Tablets of Red Mercuric Iodide. Gives chemical composition, identifications, assay, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Tablets of Yellow Mercurous Iodide. Gives chemical composition, identifications, assay, and average dose.

## 819.85 Potassium Compounds

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Tablets of Potassium Chlorate. Gives chemical composition, identifications, assay, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Tablets of Potassium Iodide. Gives chemical composition, identification, cyanide, assay, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Tablets of Potassium Permanganate. Gives chemical composition, identifications, assay, and average dose.

## 819.89 Miscellaneous Pills and Tablets

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Compound Pills for Cascara (Hinkle's Pills). Gives chemical composition, preparation, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Compound Pills of Colocynth and Jalap (Vegetable Cathartic Pills). Gives chemical composition, preparation, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Pills of Aloe. Gives chemical composition, preparation, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Pills of Aloe and Mastic (Lady Webster Dinner Pills). Gives chemical composition, preparation, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Pills of Aloe and Myrrh. Gives chemical composition, preparation, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Pills of Aloin, Strychnine, and Belladonna. Gives chemical composition, preparation, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Pills of Aloin, Strychnine, Belladonna, and Cascara. Gives chemical composition, preparation, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Pills of Aloin, Strychnine, Belladonna, and Ipecac. Gives chemical composition, preparation, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Pills of Asafetida. Gives chemical composition, preparation, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Pills of Ferrous Iodide. Gives chemical composition, preparation, test for purity, storage, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Pills of Iron, Quinine, Strychnine, and Arsenic (Aitken's Pills). Gives chemical composition, preparation, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Pills of Rhubarb and Aloe. Gives chemical composition, preparation, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Tablets of Acetanilid. Gives chemical composition, identifications, assay, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Tablets of Acetophenetidin and Phenyl Salicylate (Phenacetin and Salol Tablets). Gives chemical composition, identifications, assay for acetophenetidin and for phenyl salicylate, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Tablets of Aminopyrine. Gives chemical composition, identifications, assay, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary Seventh Edition, 1942. Tablets of Ammonium Chloride. Gives chemical composition, identification, reaction, thiocyanate, assay, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Tablets of Apomorphine Hydrochloride. Gives chemical composition, identifications, assay, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Tablets of Arsenic Trioxide (Arsenous Acid Tablets). Gives chemical composition, identification, assay, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Tablets of Cinchophen. Gives chemical composition, identifications, assay, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Tablets of Citrated Caffeine. Gives chemical composition, identifications, assay and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Tablets of Cocaine Hydrochloride. Gives chemical composition, identifications, assay, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Tablets of Ephedrine Hydrochloride. Gives chemical composition, assay, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Tablets of Methenamine and Sodium Biphosphate (Tablets of Methenamine and Acid Sodium Phosphate). Gives chemical composition, identifications, aluminum and calcium, ammonium salts, assay, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Tablets of Morphine and Atropine Sulfates. Gives chemical composition, identifications, assay, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Tablets of Phenolphthalein. Gives chemical composition, identification, assay, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Tablets of Phenyl Salicylate (Salol Tablets). Gives chemical composition, identifications, uncombined phenol or salicylic acid, assay, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Tablets of Scopolamine Hydrobromide (Hyoscine Hydrobromide Tablets). Gives chemical composition, identifications, assay, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Tablets of Strychnine Nitrate. Gives chemical composition, identifications, assay, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Tablets of Three Bromides. Gives chemical composition, identification, chloride, assay for bromine and for ammonium bromide, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Troches of Elm. Gives chemical composition, preparation, and average dose.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Cascara Sagrada Tablets (Extract of Cascara Sagrada Tablets). Preparation, storage, and sizes.

U. S. Gov., U. S. Army, Medical Dept. Specification 4-1078; 1939. Lead Acetate, Compound Tablets.

U. S. Gov., U. S. Army, Medical Dept. Specification 4-1079A; 1941. Pills and Capsules, Special Formula.

U. S. Gov., U. S. Army, Medical Dept. Specification 4-1081A; 1940. Tablets, Veterinary.

U. S. Gov., U. S. Army, Medical Dept. Specification 4-1108; 1939. Arecoline Hydrobromide Hypodermic Tablets.

## 819.9 DRUGS AND MEDICINALS NOT ELSEWHERE CLASSIFIED

American Institute of Homoeopathy. Homoeopathic Pharmacopoeia of U. S., 1941. Camphor Monobromid, Glonoin, Iodin, Picrotoxin, Resorcin, Salicin, and Santonine. Chemical symbol, synonyms, description, and preparations for triturations, tincture, dilutions, and medications for use in homoeopathic medicines.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Acriflavine (Acriflavine Base or Neutral Acriflavine). Gives chemical composition, description, solubility, identifications, loss on drying, ash, water-insoluble substances, arsenic, assay, and storage.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Acriflavine Hydrochloride. Gives chemical composition, description, solubility, stability of solutions, identifications, loss on drying, ash, arsenic, assay, and storage.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Ampuls of Methenamine (Ampuls of Hexamethylenamine). Gives chemical composition, assay, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Anethol. Gives chemical composition, description, miscibility, specific gravity, congealing point, boiling point, optical rotation, index of refraction, reaction; aldehydes and ketones; phenols, storage, preparations, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Camphorated Menthol (Camphor-Menthol). Gives chemical composition, preparation, and storage.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Carbromal (Bromdiethylacetylurea). Gives chemical composition, description, solubility, melting point, identification, ash, carbonizable impurities, reaction, chloride and sulfate, storage, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Carminative Mixture (Dalby's Carminative). Gives chemical composition, storage, alcohol content, average dose, and preparation.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Cerium Oxalate. Gives chemical composition, description, solubility, identifications, minimum percent of oxides, carbonates; aluminum and zinc; arsenic, storage, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh

Edition, 1942. Chlorothymol. Gives chemical composition, description, solubility, melting point, identifications, ash, reaction, storage, and preparation.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Coumarin. Gives chemical composition, description, solubility, melting point, identifications, distinction from vanillin, acetanilid, and storage.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Ethylhydrocupreine Hydrochloride. Gives chemical composition, description, solubility, identifications, loss on drying, ash, carbonizable impurities, reaction, ammonium salts, quinine salts, assay, and storage.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Expectorant Mixture (Stoke's Expectorant). Gives chemical composition, storage, alcohol content, average dose, and preparation.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Guaiacol Carbonate. Gives chemical composition, description, solubility, melting point, identification, ash, carbonizable impurities, reaction, free guaiacol, storage, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Iodine Petroxolin. Gives chemical composition, preparation, and storage.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Iodoform (Triiodomethane). Gives chemical composition, description, solubility, melting point, loss on drying, ash; coloring matter, acids, and alkalies; assay and storage.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Liquid Petroxolin. Gives chemical composition, description, specific gravity, miscibility, storage, and preparation.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Methyl Parahydroxybenzoate. Gives chemical composition, description, solubility, melting point, identification, ash, carbonizable impurities, reaction, chloride, sulfate, heavy metals, assay, and storage.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Monobromated Camphor. Gives chemical composition, description, solubility, melting point, identification, ash, soluble bromide, storage, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Phenothiazine (Thiodiphenylamine). Gives chemical composition, description, solubility, melting point, identifications, loss on drying, ash, ether-insoluble substances, assay, storage, and average dose (metric and apothecaries) for animals, swine, and chickens, based on the weight of the animal.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Resorcin Brown. Gives chemical composition, description, solubility, color, stability (fastness), standard, storage, and preparation.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Salicin. Gives chemical composition, description, solubility, melting point, optical rotation, identifications, loss on drying, ash, reaction, alkaloids, salicylic acid, heavy metals, storage, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Santonin. Gives chemical composition, description, solubility, melting point, optical rotation, identifications, ash, reaction, alkaloids, storage, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Scarlet Red (Scarlet Red, Medicinal or Biebirch, Scarlet Red). Gives chemical composition, description, solubility, identifications, ash, water-soluble substances, storage, and preparation.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Solid Petroxolin. Gives chemical composition, storage, and preparation.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Sulfonethylmethane. Gives chemical composition, description, solubility, melting point, identifications, ash, reaction, readily oxidizable impurities, chloride, sulfate, storage, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Sulfonmethane. Gives chemical composition, description, solubility, melting point, identifications, loss on drying, ash, reaction, readily oxidizable substances, chloride, sulfate, storage, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Toothache Drops, N. F. Gives chemical composition and storage.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Washed Sulfur. Gives chemical composition, description, solubility, identification, ash, reaction, arsenic, assay, storage, preparation, and average dose.

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis, 1940. Barbital and Phenobarbital. Method of testing for purity; tentative test for melting point according to U.S.P. method.

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis, 1940. Drugs. Nitroglycerin. Methods for preparation of samples and reagents and for percentage of nitroglycerin.

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis, 1940. Hexamethylenetetramine in Tablets. Tentative methods.

Preparation of sample and reagent, determination of purity.

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis, 1940. Iodoform. Tentative method for determining percentage of iodoform.

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis, 1940. Menthol. Tentative method for determining percentage of total menthol.

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis, 1940. Pyramidon. Tests for identity and purity.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Barbital. Description, solubility, melting point, identification, loss on drying, ash, carbonizable substances, reaction, benzene derivatives, and storage. U.S.P. product of barbital—Tabellae Barbitali.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Barbital Tablets. Identification, assay, storage, and sizes.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Butacaine Sulfate. Description, solubility, melting point, identification, ash, carbonizable substances, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Chiniofon Tablets. Identification, inorganic iodine, assay, storage, and sizes.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Chloral Hydrate, Description, solubility, identification, ash, carbonizable substances, reaction, chloride, chloral alcoholate, assay, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Chloroazodin. Description, solubility, identification, ash, chloride, assay, and storage. U.S.P. product of chloroazodin—Liquor Chloroazodini.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Cyclopropane (Trimethylene). Description, solubility, acids and alkalies, carbon dioxide, halogens, propylene, allene and other unsaturated hydrocarbons, carbon monoxide, assay, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Dihydromorphinone Hydrochloride. Description, solubility, identification, loss on drying, ash, sulfate, ammonium salts, codeine, acidity, and storage. U.S.P. product of dihydromorphinone hydrochloride—Tabellae Dihydromorphinoni Hydrochloridi.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Dihydromorphinone Hydrochloride Tablets. Identification, assay, storage, and sizes.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Estradiol Benzoate. Description, solubility, melting point, optical rotation, identification, completeness and reaction of solution, ash, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Elixir of Phenobarbital. Description, assay, alcohol content, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Erythrityl Tetranitrate Tablets (Erythrol Tetranitrate Tablets, Tetranitrol Tablets). Solubility, melting point, identification, assay, storage, and sizes.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Glyceryl Trinitrate Tablets (Nitroglycerin Tablets, Trinitrin Tablets). Assay, storage, and sizes.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Histamine Phosphate (Histamine Acid Phosphate). Description, solubility, melting point, identification, loss on drying, reaction, and storage. U.S.P. product of histamine phosphate—Injectio Histaminae Phosphatis.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Histamine Phosphate Injection (Histamine Acid Phosphate Injection). Description, identification, storage, and sizes.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Isotonic Solution of Three Chlorides (Ringer's Solution). Description, hydrogen ion concentration, heavy metals, arsenic, assay for calcium chloride, assay for potassium chloride, assay for total chlorides, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Menthol. Description, solubility, melting point, identification, wax, paraffin or inorganic substances, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Methenamine (Hexamethylenamine, Hexamethylenetetramine). Description, solubility, identification, loss on drying, ash, reaction, chloride, sulfate, ammonia salts, heavy metals, assay, and storage. U.S.P. product of methenamine—Tabellae Methenaminae.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Neostigmine Bromide Tablets. Identification, assay, storage, and sizes.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Phenobarbital (Phenylethylmalonylurea, Phenobarbitone). Description, solubility, melting point, identification, distinction from barbital, loss on drying, ash, carbonizable substances, reaction, phenylbarbituric acid, and storage. U.S.P. products of phenobarbital—Tabellae Phenobarbitali, Elixir Phenobarbitali.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Phenobarbital Tablets. Identification, assay, storage, and sizes.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Solution of Chloroazodin. Description, specific gravity, identification, moisture, assay for chloroazodin, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Solution of Hydrogen Peroxide (Solution of Hydrogen Dioxide).

Description, specific gravity, identification, reaction, nonvolatile matter, acidity, arsenic, barium, heavy metals, limit of preservative, assay, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Tetracaine Hydrochloride. Description, solubility, melting point, identification, loss on drying, ash, assay, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Tetrachloroethylene, (Perchloroethylene, Ethylene Tetrachloride). Description, solubility, specific gravity, boiling point, nonvolatile residue, free acid, chloride ion, free chlorine, readily carbonizable substances, phosgene, and storage. U.S.P. product of tetrachloroethylene—Capsulae Tetrachloroaethyleni.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Tetrachloroethylene Capsules. Identification, assay, storage, and sizes

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Trichloroethylene. Description, solubility, specific gravity, boiling point, distinction from chloroform and carbon tetrachloride, nonvolatile residue, free acids, chloride ion, free chlorine, acetylene, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Vanillin. Description, solubility, melting point, identification, loss on drying, ash, reaction, and storage.

U. S. Gov., U. S. Army, Medical Dept. Specification 4-1056; 1937. Naphthylamine (Alpha) Hydrochloride; Reagent Grade.

U. S. Gov., U. S. Army, Medical Dept. Specification 4-1057; 1937. Dimethylaminoazobenzene; Reagent Grade.

U. S. Gov., U. S. Army, Medical Dept. Specification 4-1059; 1937. Lacmoid; Reagent Grade.

U. S. Gov., U. S. Army, Medical Dept. Specification 4-1091; 1939. Orthotolidin; Recrystallized.

*References.*—Coat-tar products, as medicinals, *see* 803.2; Food and Drugs Act and Regulations, *see* 810; other chemicals in which some medicinal agents are included, *see* 820-839.

# 820-829 ACIDS (EXCEPT COAL-TAR) AND ANHYDRIDES, ALCOHOL, ETC.

## 820. GENERAL ITEMS

National Assn. of Dyers and Cleaners of the U. S. and Canada. The Dry Cleaning Department, 1940. Includes formula for "Hexalin Pre-Spotter" and recommendations for use.

National Assn. of Dyers and Cleaners of the U. S. and Canada. The Spotting Department, 1940. Includes general descriptions and recommended uses of the acids used in spotting department.

## 821. ACIDS AND ANHYDRIDES

### 821.0 GENERAL ITEMS

U. S. Gov., Dept. of Labor, Div. of Labor Standards. Special Bulletin 9; 1942. Safe Handling of Nitric Acid. Covers the safe use and handling of carboys including general care, filling carboys, care of cocks and valves, and moving carboys; personal equipment and safety clothing including goggles, rubber gloves, rubber boots, rubber aprons, rubber coats, woolen clothing, and gas masks; and safety showers.

### 821.1 ACETIC ACID

American Chemical Society. Specifications for Analytical Reagents, 1941. Acetic Anhydride. Gives requirements for assay, nonvolatile matter, chloride, sulfate, phosphate, substances reducing permanganate, heavy metals, and tests.

American Chemical Society. Specifications for Analytical Reagents, 1941. Acid; Acetic, Glacial. Gives requirements for assay, dilution test, nonvolatile matter, chloride, sulfate, substances reducing permanganate, heavy metals, and tests.

American Institute of Homoeopathy. Homoeopathic Pharmacopoeia of U. S., 1941. Acetic Acid. Chemical symbol, synonyms, description, and preparations for solution, dilutions, and triturations for use in homoeopathic medicines.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Diluted Acetic Acid. Gives chemical composition, description, miscibility, specific gravity, identification, reaction, other tests, assay, storage, and average dose.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, Volume 2; 1944. Acetic Acid. Covers definition, characteristics, solubility, acidity, derivation, uses, grades, containers, shipping, and substitutes.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Acetic Acid. Description, solubility, specific gravity, reaction, identification, nonvolatile residue, chloride, sulfate, heavy metals, readily oxidizable substances, assay, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Glacial Acetic Acid. Description, solubility, congealing point, boiling point, identification, nonvolatile residue, chloride, sulfate, heavy metals, readily oxidizable substances, assay, and storage.

U. S. Gov., Federal Specification O-A-76; 1935. Acid; Acetic (Technical). Covers one grade. Gives detail requirements; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

*References.*—Acidimetric standards (benzoic acid), *see* 802.1; unit weights, *see* 820; Food and Drugs Act and Regulations, *see* 810; acetic acid as a laundry sour, *see* 871.25; vinegar, *see* 154.70, 154.71.

### 821.2 BORIC ACID

American Chemical Society. Specifications for Analytical Reagents, 1941. Acid Boric. Gives requirements

for insoluble in alcohol, nonvolatile with methanol, chloride, phosphate, sulfate, arsenic, calcium, heavy metals, iron, and tests.

American Institute of Homoeopathy. Homoeopathic Pharmacopoeia of U. S., 1941. Boric Acid. Chemical symbol, synonyms, description, and preparation for trituration for use in homoeopathic medicines.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Solution of Boric Acid. Gives chemical composition, preparation, description, identification, reaction, arsenic, heavy metals, assay, storage, and dilution for ophthalmic use.

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis, 1940. Preservatives and Artificial Sweeteners. Boric Acid. Qualitative and quantitative test methods.

Toilet Goods Assn., Inc. Specification No. 5; 1941. Boric Acid. Gives requirements for color, odor, identity, $H_3BO_3$, solutility, water insoluble substances, alcohol insoluble substances, arsenic, lead, and other heavy metals.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Boric Acid (Boracic Acid). Description, solubility, identification, alcohol-insoluble substances, water-insoluble substances, reaction, arsenic, heavy metals, assay and storage. U.S.P. products of boric acid—Glyceritum Boroglycerini, Unguentum Acidi Borici.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Boric Acid Ointment (Boracic Acid Ointment). Preparation and assay.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Glycerite of Boroglycerin. Preparation, reaction, assay, and storage.

U. S. Gov., Treasury Dept., Procurement Div., No. 645; 1944. Acid; Boric, Technical Grade. Covers one type and one grade in granular form intended for use in photographic processes. Gives boric acid content and solubility test; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

*References.*—Acidimetric standards (benzoic acid), *see* 802.1; unit weights, *see* 820; Food and Drugs Act and Regulations, *see* 810.

## 821.3 HYDROCHLORIC (MURIATIC) ACID

American Chemical Society. Specifications for Analytical Reagents, 1941. Acid; Hydrochloric. Gives requirements for appearance, strength, nonvolatile matter, sulfate, free chlorine, sulfite, arsenic, iron, heavy metals, and tests.

American Institute of Homoeopathy. Homoeopathic Pharmacopoeia of U. S., 1941. Hydrochloric Acid. Chemical symbol, synonyms, description, and preparations for solution and dilutions for use in homoeopathic medicines.

Manufacturing Chemists' Assn. of the U. S. Manual Sheet T-3. Table—Hydrochloric Acid. Standard. Adopted, 1903. Embodies specific gravity, percentage, Baumé and Tw.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, Volume 2; 1944. Hydrochloric Acid (Muriatic Acid). Covers definition, derivation, constants, solubility, impurities, uses, grades, containers, hazards, shipping regulations, and substitutes.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Diluted Hydriodic Acid. Description, specific gravity, identification, residue on ignition, reaction, chloride, free iodine, sulphate, arsenic, barium, heavy metals, limit of hypophosphorous acid, assay for hydriodic acid, and storage. U.S.P. product of diluted hydriodic acid—Syrupus Acidi Hydriodici.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Diluted Hydrochloric Acid. Description, specific gravity, reaction, other tests, heavy metals, assay, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Hydrochloric Acid. Description, specific gravity, identification, residue on ignition, reaction, bromide or iodide, free bromine or chlorine, sulfate, sulfite, arsenic, heavy metals, assay, and storage. U. S. P. product of hydrochloric acid—Acidum Hydrochloricum Dilutum.

U. S. Gov., Federal Specification O-A-86; 1943. Acid; Hydrochloric (Muriatic), Technical Grade. Shall be of one grade. Gives requirements for specific gravity, total acid content, residual acid, sampling, tests, packaging, packing, and marking.

U. S. Gov., U. S. Army, Medical Dept., Specification 4-1064; 1937. Acid; Hydrochloric, Technical.

U. S. Gov., U. S. Army, Signal Corps. Specification 75-17; 1925. Acid; Hydrochloric.

*References.*—Acidimetric standards (benzoic acid), *see* 802.1; unit weights, labeling requirements, *see* 820, 821.0; Food and Drugs Act and Regulations, *see* 810.

## 821.4 HYDROFLUORIC ACID

American Chemical Society. Specifications for Analytical Reagents, 1941. Acid; Hydrofluoric. Gives requirements for assay, fluosilicic acid, nonvolatile matter, chloride, sulfate, sulfite, heavy metals, iron, and tests.

American Institute of Homoeopathy. Homoeopathic Pharmacopoeia of U. S., 1941. Hydrofluoric Acid. Chemical symbol, synonyms, and descriptions for solutions and dilutions for use in homoeopathic medicines.

Manufacturing Chemists Assn. Manual Sheet H-2. Unloading Anhydrous Hydrofluoric Acid From Cylinders. Recommended Practice, 1944. Includes description of product, general precautions (first aid and general treatment), cylinder types, cylinder handling precautions, consumers' equipment, emptying the cylinder, operating cylinder valves, and introduction of anhydrous hydrofluoric acid into process.

U. S. Gov., Navy Dept. Specification 51A12; 1944. Acid; Hydrofluoric, Technical.

U. S. Gov., Treasury Dept., Procurement Div., No. 643; 1943. Acid; Hydrofluoric, Technical Grade. Covers one type, one grade, and two classes—(A) 30 percent acid, and (B) 52 percent acid. Gives requirements for each class including hydrofluoric acid content, hydrofluosilicic acid content, and sulfuric

acid content; methods of sampling, inspection, and tests; and packaging, packing, and marking.

*References.*—Acidimetric standards (benzoic acid), *see* 802.1; unit weights, labeling requirements, *see* 820, 821.0; Food and Drugs Act and Regulations, *see* 810.

## 821.5 NITRIC ACID

American Chemical Society. Specifications for Analytical Reagents, 1941. Acid Nitric. Gives requirements for appearance, strength, nonvolatile matter, sulfate, chloride, arsenic, heavy metals, and tests.

American Institute of Homoeopathy. Homoeopathic Pharmacopoeia of U. S., 1941. Nitric Acid. Chemical symbol, synonyms, description, and preparations for solution and dilutions for use in homoeopathic medicines.

Manufacturing Chemists' Assn. of the U. S. Manual Sheet T-5. Table—Nitric Acid. Standard. Adopted, 1903. Embodies specific gravity, percentage, Baumé and Tw.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, Volume 2; 1944. Nitric Acid (Aqua Fortis). Covers definition, derivation, constants, solubility, uses, grades, containers, shipping regulations, hazards, and substitutes.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Nitric Acid. Description, specific gravity, identification, residue on ignition, reaction, arsenic, chloride, sulfate, heavy metals, assay, and storage.

U. S. Gov., Federal Specification O-A-88; 1943. Acid; Nitric, Technical Grade. Shall be in one type and in one grade. Gives requirements for appearance, total acid content, specific gravity, residual acid, chloride, sampling, tests, packaging, packing, and marking.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 50-11-3B; 1941. Acid; Nitric, for use in Manufacturing Explosives.

*References.*—Acidimetric standards (benzoic acid), *see* 802.1; unit weights, labeling requirements, *see* 820, 821.0; Food and Drugs Act and Regulations, *see* 810.

## 821.6 OXALIC ACID

American Chemical Society. Specifications for Analytical Reagents, 1941. Acid Oxalic. Gives requirements for insoluble matter, nonvolatile matter, chloride, sulfate, nitrogen compounds, heavy metals, substances darkened by hot sulfuric acid, and tests.

American Institute of Homoeopathy. Homoeopathic Pharmacopoeia of U. S., 1941. Oxalic Acid. Chemical symbol, synonyms, description, and preparations for triturations, tincture, dilutions, and medications for use in homoeopathic medicines.

American Leather Chemists Assn. Method of Sampling and Analysis. Oxalic Acid, 1942. Gives requirements for oxalates, insoluble matter, ash, neutral oxalates, iron, aluminum, calcium, magnesium, sulfate, and chloride.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, Volume 2; 1944. Oxalic Acid. Covers definition, constants, solubility, derivation, uses, grades, containers, hazards, and substitutes.

U. S. Gov., Federal Specification O-A-91; 1935. Acid; Oxalic, Technical. Covers three types in one grade—(I) large-crystal, (II) small-crystal, and (III) powdered. Gives detail requirements for each type; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

*References.*—Oxalic acid as laundry sour, *see* 871.25; acidimetric standards (benzoic acid), *see* 802.1; unit weights, *see* 820; Food and Drugs Act and Regulations, *see* 810.

## 821.7 SULPHURIC AND SULPHUROUS ACID

American Chemical Society. Specifications for Analytical Reagents, 1941. Acid; Sulfuric. Gives requirements for appearance, strength, nonvolatile matter, chloride, nitrate, ammonium, substances oxidizable by permanganate, arsenic, heavy metals, and tests.

American Chemical Society. Specifications for Analytical Reagents, 1941. Acid; Sulfurous. Gives requirements for assay, nonvolatile matter, chloride, arsenic, heavy metals, iron, and tests.

American Institute of Homoeopathy. Homoeopathic Pharmacopoeia of U. S., 1941. Sulphuric Acid. Chemical symbol, synonyms, description, and preparations for solution and dilutions for use in homoeopathic medicines.

American Leather Chemists Assn. Methods of Sampling and Analysis. Sulfuric Acid, 1942. Gives requirements for total acid as $H_2SO_4$.

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis, 1940. Preservatives and Artificial Sweeteners. Sulfurous Acid. Qualitative test; determination of total sulfurous acid and of free sulphurous acid.

Manufacturing Chemists' Assn. of the U. S. Manual Sheet T-7. Table—Sulphuric Acid. Standard. Adopted, 1904. Embraces specific gravity, percentages, Baumé and Tw.

Manufacturing Chemists' Assn. of the U. S. Manual Sheet T-7A. Table—Sulphuric Acid, 94-100 Percent. Standard. Adopted, 1938. Embraces specific gravity, percentages, Baumé and Tw.

Manufacturing Chemists' Assn. of the U. S. Manual Sheet TC-8. Oleum Freezing Point Diagram. Covers the freezing point of purified oleum in the range 0-85 percent free $SO_3$. Freezing points are plotted in the form of an equilibrium diagram calibrated for both centigrade and Fahrenheit temperature scales, composition being expressed in terms of free $SO_3$, total $SO_3$, and $H_2SO_4$.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, 1938. Acid; Sulphuric. Covers definition, constants, solubility, derivation, impurities, grades, substitutes, containers, shipping regulations, and uses.

Technical Assn. of the Pulp and Paper Industry, Analysis of Sulphuric Acid. Standard T 602 m-35; 1935. Concentrated 93 percent pure, using specific gravity hydrometer, Imhoff cone test for sediment, and test for the presence of iron. Also includes volumetric test method.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Diluted Sulfuric Acid. Description, specific gravity, reaction, other tests, assay, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Sulfuric Acid. Description, miscibility, specific gravity, identification, nonvolatile substances, reaction, chloride, nitrate, nitrite or sulfite, arsenic, heavy metals, assay, and storage. U.S.P. product of sulfuric acid—Acidum Sulfuricum Dilutum.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Circular C19; 1924. Standard Density and Volumetric Tables. Includes tables of density of solutions of sulphuric acid.

U. S. Gov., Federal Specification O-A-111; 1935. Acid; Sulphuric, (for) Storage Batteries. Covers two classes—(A) concentrated sulphuric acid and (B) diluted sulphuric acid. Gives general requirements for specific gravity of each class; detail requirements for strengths, colors, and limits of impurities; methods of sampling, inspection, and test; and requirements for packing and marking (safety requirements to conform to requirements of Interstate Commerce Commission).

U. S. Gov., Navy Dept. Specification 51A2f; 1943. Acid; Sulphuric, for Storage-Battery Electrolyte.

U. S. Gov., Navy Dept. Specification 51A6b; 1940. Acid; Sulfuric, Pickling.

U. S. Gov., Navy Dept. Specification 51C29a; 1943. Chemicals; Testing, Dissolved-Oxygen.

U. S. Gov., Treasury Dept., Procurement Div., No. 609; 1943. Acid; Sulfuric, Technical Grade. Shall be furnished in types I and II; and Grade A, general use and Grade B, galvanizing and plating. Gives requirements for specific gravity, total acid content, insoluble matter, and arsenic; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., U. S. Army, Medical Dept. Specification 4-1068A; 1939. Acid; Sulfuric, Fuming, Reagent Grade.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 50-11-1A; 1938. Acid; Sulfuric, and Oleum.

*References.*—Acidimetric standards (benzoic acid), *see* 802.1; unit weights, labeling requirements, *see* 820, 821.0; Food and Drugs Act and Regulations, *see* 810.

## 821.9 MISCELLANEOUS ACIDS AND ANHYDRIDES

American Chemical Society. Specifications for Analytical Reagents, 1941. Acid; Citric. Gives requirements for insoluble matter, residue on ignition, oxalate, phosphate, sulfate, tartrate, heavy metals, iron, and tests.

American Chemical Society. Specifications for Analytical Reagents, 1941. Acid; Formic. Gives requirements for assay, dilution test, nonvolatile matter, acetic acid, chloride, sulfate, sulfite, heavy metals, and tests.

American Chemical Society. Specifications for Analytical Reagents, 1941. Acid; Hydriodic. Gives requirements for assay, nonvolatile matter, chloride and bromide, phosphorus, sulfate, heavy metals, iron, and tests.

American Chemical Society. Specifications for Analytical Reagents, 1941. Acid; Molybdic Anhydride. Gives requirements for assay, insoluble in ammonium hydroxide, chloride, nitrate, phosphate, sulfate, heavy metals, ammonia, and tests.

American Chemical Society. Specifications for Analytical Reagents, 1941. Acid; Molybdic, 85 Percent. Gives requirements for assay, insoluble in ammonium hydroxide, chloride, phosphate, sulfate, heavy metals, and tests.

American Chemical Society. Specifications for Analytical Reagents, 1941. Acid; Perchloric, 60 Percent. Gives requirements for assay, nonvolatile matter, chloride, nitrogen compounds, sulfate, ammonia, heavy metals, iron, and tests.

American Chemical Society. Specifications for Analytical Reagents, 1941. Acid; Phosphoric. Gives requirements for assay, chloride, nitrate, reducing substances, sulfate, volatile acids, alkali and other phosphates, arsenic, heavy metals, iron, and tests.

American Chemical Society. Specifications for Analytical Reagents, 1941. Acid; Sulfanilic. Gives requirements for residue on ignition, insoluble in sodium carbonate solution, chloride, nitrite, sulfate, and tests.

American Chemical Society. Specifications for Analytical Reagents, 1941. Acid; Tartaric. Gives requirements for insoluble matter, residue on ignition, oxalate, phosphate, sulfate, heavy metals, iron, and tests.

American Institute of Homoeopathy. Homoeopathic Pharmacopoeia of U. S., 1941. Chromic Acid, Citric Acid, Formic Acid, Gallic Acid, Hydrocyanic Acid, Lactic Acid, Nitro-Hydrochloric Acid, Normal Butyric Acid, Phosphoric Acid, Tannic Acid, and Tartanic Acid. Chemical symbol, synonyms, description, and preparations for triturations, tincture, dilutions, and medications for use in homoeopathic medicines.

American Leather Chemists Assn. Methods of Sampling and Analysis. Lactic Acid, 1942. Gives requirements for free sulfuric acid, volatile acid, free acid and anhydride, and distillation table.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Cinchophen (Phenylcinchoninic Acid or Phenyl-Quinoline-Carboxylic Acid). Gives chemical composition, description, solubility, melting point, identifications, ash, loss on drying, readily carbonizable substances, aniline derivatives, assay, storage, preparation, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Diluted Hydrocyanic Acid (Diluted Prussic Acid). Gives chemical composition, description, identification, residue, reaction, limit for hydrochloric acid, assay for hydrocyanic acid, storage, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Diluted Nitrohydrochloric Acid (Diluted Nitromuriatic Acid). Gives chemical composition, description, residue, reaction, storage, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Formic Acid. Gives chemical

composition, description, miscibility, specific gravity, identifications, residue, reaction, chloride, oxalate, sulfate, sulfurous acid, heavy metals, acetic acid, acrolein and allyl formate, assay, storage, preparation, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Gallic Acid. Gives chemical composition, description, solubility, identifications, loss on drying, ash, reaction, tannic acid, storage, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Nitrohydrochloric Acid (Nitromuriatic Acid or Aqua Regia). Gives chemical composition, description, identification, residue, reaction, storage, preparation, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Pectin. Gives chemical composition, description, solubility, identifications, starch, sugars and organic acids, methanol, arsenic, lead, assay for methoxyl groups and for galacturonic acid, storage, and preparations.

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis, 1940. Preservatives and Artificial Sweeteners. Formic Acid. Preparation of reagents, description of apparatus, and method for quantitative determination of formic acid in sample.

National Assn. of Dyers and Cleaners of the U. S. and Canada. The Spotting Department, 1940. Includes formulae for general spotting agent, carbon disulfide mixtures, and commercial rust removers—methods of preparation and recommended uses.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, Volume 2; 1944. Formic Acid. Covers definition, constants, solubility, derivation, grades, uses, packaging and shipping, and substitutes.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, Volume 2; 1944. Stearic Acid. Covers definition, constants, solubility, derivation, grades and forms, packing, uses, and substitutes.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Carbarsone. Description, solubility, melting point, identification, loss on drying, reaction, arsenate, assay and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Citric Acid. Description, solubility, identification, difference from tartaric acid, ash, carbonizable substances, reaction, oxalic acid, sulphate, heavy metals, assay, and storage. U.S.P. product of citric acid—Syrupus Acidi Citrici.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Diluted Phosphoric Acid. Description, specific gravity, other tests, reaction, alkali phosphates, heavy metals, assay, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Glycerite of Tannic Acid. Preparation and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Hexylresorcinol Description, solubility, melting point, identification, ash, acid, resorcinol and other phenols, assay, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Hypophosphorous Acid. Description, specific gravity, identification, reaction, arsenic, barium, oxalate, heavy metals, assay, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Lactic Acid. Description, solubility, specific gravity, identification, ash, readily carbonizable substances, reaction, chloride (citric, oxalic, phosphoric, or tartaric acid), sulfate, heavy metals, sugars, assay, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Mandelic Acid (Racemic Mandelic Acid). Description, solubility, melting point, identification, loss on drying, ash, reaction, chloride, heavy metals, assay, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Oleic Acid. Description, solubility, specific gravity, congealing temperature, ash, mineral acids, iodine value, acid value, neutral fat or mineral oil, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Phosphoric Acid. Description, solubility, specific gravity, identification, reaction, nitrate, phosphorous or hypophosphorous acid, sulfate, arsenic, alkali phosphates, heavy metals, assay, and storage. U.S.P. product of phosphoric acid—Acidum Phosphoricum Dilutum.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Resorcinol (Resorcin). Description, solubility, melting point, identification, loss on drying, ash, reaction, phenol, catechol, assay, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Solution of Arsenious Acid (Hydrochloric Solution of Arsenic, Solution of Arsenic Chloride). Description, identification, reaction, assay, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Stearic Acid. Description, solubility, congealing temperature, mineral acid, iodine value, neutral fat or paraffin, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Tannic Acid (Gallotannic Acid, Tannin). Description, solubility, identification, loss on drying, ash, gum or dextrin, resinous substances, and storage. U.S.P. product of tannic acid—Glyceritum Acidi Tannici, Unguentum Acidi Tannici.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Tannic Acid Ointment. Preparation.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Tartaric Acid. Description, solubility, identification, difference in citric acid, ash, reaction, oxalate, sulfate, loss on drying, heavy metals, assay, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Trichloroacetic

Acid. Description, solubility, identification, ash, reaction, chloride, sulfate, assay, and storage.

U. S. Gov., Army-Navy Aeronautical Specification AN-A-21; 1944. Acid; Chromic.

U. S. Gov., Dept of Commerce, National Bureau of Standards. Circular C398 and Supplement, 1944. Standard Samples. Anisic Acid, Sample 142; and Cystine, Sample 143. These samples are prepared and sold by the National Bureau of Standards with a certificate of analysis for use in industry and by others as a comparison standard for checking the accuracy of analysis of similar materials.

U. S. Gov., Navy Dept. Specification 51A18; 1944. Acid; Phosphoric, Technical.

U. S. Gov., Navy Dept. Specification 52L11a; 1941. Linoleate; Maganese.

U. S. Gov., Treasury Dept., Procurement Div., No.564; 1942. Acid; Butyric, Technical. Covers one type and grade intended for use as a base in the manufacture of esters to be used as artificial flavoring ingredients. Gives requirements for appearance, color, odor, specific gravity, distillation, range, nonvolatile matter, purity, chlorides, sulfates, heavy metals, and water; methods of sampling, inspection, and test; and packaging, packing, and marking.

U. S. Gov., Treasury Dept., Procurement Div., No.639; 1943. Citric Acid; Technical Grade. Covers one type and grade of colorless, crystalline monohydrate of citric acid. Gives requirements for citric acid content, oxalates, ash content, and particle size; methods of sampling, inspection, and tests; and packaging, packing and marking.

U. S. Gov., Treasury Dept., Procurement Div., No.663; 1944. Acid; Phosphoric, Technical Grade. Covers one grade, two types—(I) 75 percent acid and (II) 85 percent acid. For use in lithographic work and in the chemical treatment of ferrous metal surfaces. Gives requirements for specific gravity, total acidity, sulfate, arsenic, alkali and other phosphates, and heavy metals; methods of sampling, inspection and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Treasury Dept. Procurement Div., No.668; 1944. Glycin (p-hydroxyphenylamino-acetic-acid), (for Photographic Purposes). Covers one type and one grade in the form of finely divided material. Gives requirements for appearance, crystallizing point, ash content, solubility in ammonia, and solubility in hydrochloric acid; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., U. S. Army, Chemical Warfare Service. Specification 4-503-15; 1924. Acid; Monochloracetic.

U. S. Gov., U. S. Army, Chemical Warfare Service. Specification 96-21-20; 1940. Phosphoric Acid, Technical Grade.

U. S. Gov., U. S. Army, Medical Dept. Specification 4-1055; 1937. Acid; Sulfosalicylic, Reagent Grade,

U. S. Gov., U. S. Army, Medical Dept. Specification 4-1065; 1937. Acid; Phosphotungstic, Crystal, Reagent Grade.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 50-11-7A; 1938. Acid; Mixed, for Use in Nitrating.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 50-11-47A; 1942. Acid; Stearic, for Use in Ammunition Loading.

U. S. Gov., U. S. Army, Signal Corps. Specification 75-16; 1923. Acid; Chromic, C.P.

U. S. Gov., U. S. Army, Signal Corps. Specification 75-18; 1923. Acid; Phosphoric.

*References.*—Coal-tar acids, *see* 802.1; acidimetric standards (benzoic acid), *see* 802.1; unit weights, labeling requirements, *see* 820, 821.0; Food and Drugs Act and Regulations, *see* 810.

## 822. Alcohols

### 822.0 GENERAL ITEMS

American Standards Assn., Z37.14-1944. Allowable Concentration of Methanol. The purpose of this standard is to prescribe the maximum permissible concentration of methanol in the atmosphere of work places for guidance in establishing control procedures for the protection of the health of workers. Covers properties of methanol, permissible concentration, and sampling procedure and analytical methods.

### 822.1 AMYL ALCOHOL

American Chemical Society. Specifications for Analytical Reagents, 1941. Amyl Alcohol (Isoamyl Alcohol). Gives requirements for nonvolatile matter, boiling range, acids and esters, aldehydes, substances darkened by sulfuric acid, and tests.

American Society for Testing Materials, D 319-40; 1940. Amyl Alcohol (Synthetic). Specifications cover water white alcohol for lacquer solvent, specific gravity, distillation range, nonvolatile matter, odor, water, acidity, and tests by A.S.T.M. Method D 268.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Amylene Hydrate (Tertiary Amyl Alcohol). Description, solubility, specific gravity, boiling point, identification, nonvolatile residue, reaction, heavy metals, aldehyde, readily oxidizable substances, water, and storage.

U. S. Gov., U. S. Army, Army Air Forces. Specification 4-1047-A; 1941. Amyl Alcohol; Secondary.

*References.*—Methods of testing, *see* 822.0; definitions, regulations on making and using alcohol, *see* 822.0.

### 822.2 BUTYL ALCOHOL

American Society for Testing Materials, D 304-40; 1940. Butanol (Normal Butyl Alcohol). For lacquer solvent or diluent. Specifications cover gravity, color, distillation range, nonvolatile matter, odor, water, acidity, and test by A.S.T.M. Method D 268.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, Volume 2; 1944. Alcohol; Butyl. Covers definition, derivation, constants, solubility, uses, containers, shipping regulations, and substitutes.

U. S. Gov., Army Air Forces. Specification 14083; 1935. Secondary Butyl Alcohol (Refined 98 Percent Grade).

U. S. Gov., Army-Navy Aeronautical Specification AN-O-A-391; 1941. Alcohol; Butyl, Normal.

*References.*—Methods of testing, *see* 822.0; definitions, regulations on making and using alcohol, *see* 822.0.

## 822.3 ETHYL ALCOHOL, DENATURED

U. S. Gov., Army-Navy Aeronautical Specification AN-A-18; 1943. Alcohol; Specially Denatured Ethyl.

U. S. Gov., Navy Dept. Specification 51A13a; 1944. Alcohol; Ethyl.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 4-1018A; 1939. Alcohol; Ethyl.

*References.*—Ethyl alcohol, wood alcohol, *see* 822.4, 822.5; methods of testing, *see* 822.0; definitions, regulations on making and using alcohol, *see* 822.0.

## 822.4 ETHYL ALCOHOL, PURE GRAIN

American Chemical Society. Specifications for Analytical Reagents, 1941. Alcohol; Ethyl. Gives requirements for assay, solubility in water, residue on evaporation, acetone isopropyl alcohol, acidity, alkalinity, fusel oil, methanol, substances darkened by sulfuric acid, substances reducing permanganate, and tests.

American Chemical Society. Specifications for Analytical Reagents, 1941. Alcohol; Ethyl, Absolute. Gives requirements for assay, solubility in water, residue on evaporation, acetone isopropyl alcohol, acidity, alkalinity, fusel oil, methanol, substances darkened by sulfuric acid, substances reducing permanganate, and tests.

American Institute of Homoeopathy. Homoeopathic Pharmacopoeia of U. S., 1941. Alcohol or Alcohol Fortior (Strong Alcohol) and Official Alcohol or Dispensing Alcohol (Alcohol Officinale). Definition, analysis, and purity and identity requirements for use in homoeopathic medicines.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Alcohol (Ethanol, Ethyl Alcohol). Description, miscibility, specific gravity, boiling point, free acid, total solids, fusel oil constituents, amyl alcohol or nonvolatile, carbonizable impurities, aldehydes, organic impurities, acetone, other ketones, isopropyl alcohol, and tertiary butyl alcohol, alkaloids and formaldehyde, methanol, and storage. U.S.P. products of alcohol—Alcohol Dehydratum, Alcohol Dilutum.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Dehydrated Alcohol (Dehydrated Ethanol, "Absolute Alcohol"). Description, specific gravity, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1943. Diluted Alcohol (Diluted Ethanol). Description, specific gravity, other tests, and storage.

U. S. Gov., Dept of Commerce, National Bureau of Standards. Circular C19; 1924. Standard Density and Volumetric Tables. Includes tables of density of mixtures of ethyl alcohol and water, specific gravity of such mixtures, and percentages of volume corresponding to various percentages of weight.

U. S. Gov., Navy Dept. Specification 51A13a; 1944. Alcohol; Ethyl.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 4-1018A; 1939. Alcohol; Ethyl.

*References.*—Denatured alcohol, *see* 822.3; methods of testing, *see* 822.0; definitions, regulations on making and using alcohol, *see* 822.0; Food and Drugs Act and Regulations, *see* 810.

## 822.5 METHYL OR WOOD ALCOHOL (METHANOL)

U. S. Gov., Army-Navy Aeronautical Specification AN-M-32-1; 1945. Methanol; Synthetic.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Circular C19; 1924. Standard Density and Volumetric Tables. Includes tables of density and of specific gravity of mixtures of methyl alcohol and water and percentages by volume corresponding to various percentages by weight.

U. S. Gov., Treasury Dept., Procurement Div., No.586; 1942. Methanol; Technical Grade. Covers one grade of either synthetic or a product of wood distillation intended for use as a solvent. Gives requirements for specific gravity, appearance, color, odor, spot test, neutrality, nonvolatile at 105° to 110° C., and distillation range; methods of sampling, inspection, and tests; and packaging, packing, and marking.

*References.*—Denatured alcohol, *see* 822.3; methods of testing, *see* 822.0; definitions, regulations on making and using alcohol, *see* 822.0.

## 822.9 MISCELLANEOUS ALCOHOLS

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Guaiacol. Gives chemical composition, description, solubility, specific gravity, melting point, distilling range, identification, impurities, ash, hydrocarbons, storage, and average dose.

American Society for Testing Materials, D 770-44 T; 1944. Tentative Specifications for Isopropyl Alcohol. Covers isopropyl alcohol, 99 percent grade. Gives properties and methods of testing.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, Volume 2; 1944. Alcohol; Furfuryl (Furyl Carbinol). Covers definition, constants, solubility, derivation, uses, grades, containers, hazards, and substitutes.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, Volume 2; 1944. Alcohol; Isopropyl (Dimethyl Carbinol; Isopropanol). Covers definition, constants, solubility, derivation, uses, grades, containers, shipping regulations, hazards, and substitutes.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Solution of Tribromoethanol (Solution of Tribromoethyl Alcohol). Description, free acid, assay, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Terpin Hydrate. Description, solubility, melting point, identification, ash, reaction, residual turpentine, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Tribromoethanol (Tribromoethyl Alcohol). Description, solubility, melting point, identification, loss on drying, ash,

carbonizable substances, reaction, halogen ions, sulfate, aldehyde, assay, and storage. U.S.P. product of tribromoethanol—Liquor Tribromoaethanolis.

U. S. Gov., Army-Navy Aeronautical Specification AN-A-7; 1943. Alcohol; Diacetone.

U. S. Gov., Army-Navy Aeronautical Specification AN-E-2b; 1944. Ethylene Glycol; Non-Corrosive (Anti-Freeze and Cooling Liquid for Aircraft Engines).

U. S. Gov., Army-Navy Aeronautical Specification AN-F-13; 1943. Fluid; Anti-Icing (Isopropyl Alcohol).

U. S. Gov., Treasury Dept., Procurement Div., No.565; 1942. Diacetone Alcohol (Commercially Pure). Covers one type and grade intended for use as an ingredient in fluid for hydraulic brakes, shock struts and automatic pilots, and in the manufacture of organic protective coatings. Gives requirements for appearance, color, odor, specific gravity, distillation range, nonvolatile matter, water test (dryness), water solubility, acidity, and index of refraction; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., U. S. Army, Medical Dept. Specification 4-1088; 1939. Mannite.

*References.*—Food and Drugs Act and Regulations, *see* 810.

## 823. GLYCERINE

American Chemical Society. Specifications for Analytical Reagents, 1941. Glycerol. Gives requirements for color, specific gravity, nonvolatile matter, neutrality, chloride, sulfate, fatty acid esters, silver-reducing substances, substances darkened by sulfuric acid, heavy metals, and tests.

American Institute of Homoeopathy. Homoeopathic Pharmacopoeia of U. S., 1941. Glycerin. Description, properties, specific gravity, and tests for identifying material for use in homoeopathic medicine.

American Oil Chemists' Society. Standard Methods for Sampling and Analysis of Glycerine, 1938. Covers methods of crude glycerine analysis, acetin process for the determination of glycerol, instructions for calculating the glycerol content, bichromate process for glycerol determination, and appendix.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, Volume 2; 1944. Glycerin. Covers definition, constants, solubility, conversion factors, derivation, uses, grades, marketing, containers, and substitutes.

Toilet Goods Assn., Inc. Specification No.3; 1940. Glycerine. Gives requirements for color, odor, solubility, identify, specific gravity, free acids and alkalis, carbonaceous and mineral residue, mineral residue, carbonizable substances, fatty acids and esters, sulfates, oxalates, chlorides, heavy metals, acrolein, glucose and ammonium compounds, grit, and packaging.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Glycerin (Glycerol). Description, solubility, specific gravity, identification, nonvolatile residue and ash, carbonizable substances, reaction, chloride, sulfate, arsenic, heavy metals, acrolein, glucose, ammonium compounds, fatty acids and esters, color, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Glycerinated Gelatin. Preparation and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Glycerite of Boroglycerin. Preparation, reaction, assay, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Glycerite of Starch. Preparation and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Glycerite of Tannic Acid. Preparation and storage.

U. S. Gov., Federal Specification O-G-491; 1931. Glycerin (Glycerol). Covers three grades—(A) U.S.P., (B) "high-gravity" ("dynamite glycerin"), and (C) "yellow distilled." Gives requirements for appearance, color, odor, specific gravity, acidity or alkalinity, ash, and chlorides (calculated as chlorine); methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Navy Dept. Specification 51G1e; 1941. Glycerin (Glycerol).

*References.*—Food and Drugs Act and Regulations, *see* 810.

## 824. ALDEHYDES

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Benzaldehyde. Gives chemical composition, description, miscibility, specific gravity, hydrocyanic acid, chlorinated compounds, nitrobenzene, assay, storage, preparations, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Camphorated Chloral. Gives chemical composition, preparation, and storage.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Compound Elixir of Benzaldehyde. Gives chemical composition, storage, alcohol content, and preparation.

American Standards Assn., Z37.16-1944. Allowable Concentration of Formaldehyde. The purpose of this standard is to prescribe the permissible concentration of formaldehyde in the atmosphere of work places for guidance in establishing control procedures for the protection of the health of workers. Covers properties of formaldehyde, permissible concentration, and sampling procedure and analytical methods.

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis, 1940. Insecticides and Fungicides. Formaldehyde Solutions. Official methods for determination of formaldehyde.

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis, 1940. Preservative and Artificial Sweeteners. Formaldehyde. Preparation of sample; test methods for indicating presence of formaldehyde.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, Volume 2; 1944. Furfural (Furfuraldehyde). Covers definition, constants, solubility, derivation, grades, containers, uses, hazards and substitutes.

Technical Assn. of the Pulp and Paper Industry. Analysis of Formaldehyde. Standard T 600 m-36; 1936. To determine the formaldehyde content of aqueous solutions, for use as glue preservative, and to render glue and casein insoluble. Requirements for testing and reagents necessary. This is the official method of the Assn. of Official Agricultural Chemists.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Paraldehyde (Paracetaldehyde). Description, solubility, specific gravity, distillation range, congealing temperature, identification, free acid, chloride, sulfate, amyl alcohol, residue on evaporation, acetaldehyde, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Solution of Formaldehyde. Description, solubility, identification, free acid, assay, and storage.

U.S. Gov., Treasury Dept., Procurement Div., No. 631; 1943. Paraformaldehyde; Technical Grade. Shall be in one type and one grade in powdered form free from hard lumps and foreign particles. Intended for use in photographic processes. Gives requirements for paraformaldehyde content, ash, acidity, solubility, and particle size; methods of sampling, inspection, and tests; and packaging, packing, and marking.

*References.*— Preservatives and artificial sweeteners, *see* 892; insecticides, *see* 881; Food and Drugs Act and Regulations, *see* 810.

# 830-839 CHEMICAL COMPOUNDS

(Except Medicinals, Acids, Alcohols, and Coal-Tar Products)

## 830. GENERAL ITEMS

American Assn. of Textile Chemists and Colorists. 1943 Yearbook. Textile Chemical Specialties. Gives an index to standard chemicals used in the textile industry, tabulated alphabetically, trade names, principal uses, chemical nature, complete qualitative composition if a mixture, method of manufacture (briefly), and manufacturers.

National Assn. of Dyers and Cleaners of the U. S. and Canada. The Spotting Department, 1940. Includes general description and recommended uses of chemical compounds used in spotting department.

Technical Assn. of the Pulp and Paper Industry. Indicators for Volumetric Analyses. Standard T 609 m-42; 1942. The indicators ordinarily used for volumetric analyses shall be made up as described below, unless otherwise specified. Covers methyl orange, methyl red, phenolphthalein, starch, potassium and sodium chromate, and ferric nitrate.

Technical Assn. of the Pulp and Paper Industry. Preparation and Standardization of Volumetric Solutions. Standard T 610 m-42; 1942. Details method of preparing various solutions used in paper manufacturing laboratory, with correction factor for temperature of preparation, with permissible variations.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Circular C19; 1924. Standard Density and Volumetric Tables. Includes tables of density and weight of water at various temperatures.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Circular C279; 1925. Relations Between the Temperatures, Pressures, and Densities of Gases. The purpose of this circular is to show in a simple manner the methods by which the relations between the temperatures, pressures, and densities of gases may be computed and to present the necessary experimental data in such a way that they can be directly and easily used for solving practical problems.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Miscellaneous Publication M126; 1937. Temperature Interconversion Tables (°C—°F) and Melting Points of the Chemical Elements. Table of melting points of elements and boiling points of some liquids with the values indicated which are used by the Bureau as standard temperatures for calibration of thermometers and pyrometers.

U. S. Gov., Treasury Dept., Procurement Div., No. 674; 1944. Chemical; General Specifications (Methods for Testing). This general specification covers specified methods for testing chemicals. Test methods include volatile matter, loss on heating, residue on ignition, precipitate (calcium, magnesium, and ammonium hydroxide), heavy metals, iron, bromides and iodides, carbonates and bicarbonates, sulfates, oxalates, water insoluble matter, solubility, and neutrality.

## 831. AMMONIUM AND AMMONIUM COMPOUNDS

### 831.1 ANHYDROUS AND AQUA AMMONIA

American Chemical Society. Specifications for Analytical Reagents, 1941. Ammonium Hydroxide. Gives requirements for appearance, strength, nonvolatile matter, carbon dioxide, total sulfur, chloride, pyridine, substances reducing permanganate, heavy metals, and tests.

American Institute of Homoeopathy. Homoeopathic Pharmacopoeia of U. S., 1941. Ammonium Hydrate. Chemical symbol, synonyms, description, and preparations for solution and dilutions for use in homoeopathic medicines.

Manufacturing Chemists' Assn. of the U. S. Manual Sheet T-1. Table—Aqua Ammonia. Standard. Adopted, 1903. Embodies specific gravity, percentage, Baumé and Tw.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, 1938. Ammonia. Covers definition, grades, containers, uses, shipping regulations, and source.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Aromatic Spirit of Ammonia. Description, specific gravity, assay for total ammonia, assay for normal ammonium carbonate, alcohol content, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Diluted Solution of Ammonia (Solution of Ammonium Hydroxide). Description, specific gravity, identification, reaction, nonvolatile substances, heavy metals, oxidizable substances, assay, and storage. U.S.P. product of diluted solution of ammonia—Spiritus Ammoniae Aromaticus.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Strong Solution of Ammonia (Stronger Ammonia Water). Description, specific gravity, reaction, other tests, assay, and storage. U.S.P. product of strong solution of ammonia—Liquor Ammoniae Dilutus.

U. S. Gov., Federal Specification O-A-445; 1943. Ammonia; Anhydrous (Compressed). Shall be furnished in one grade suitable for refrigeration and nitriding purposes. Gives requirements for ammonia, residue, capacity of cylinders, type of cylinders, and finishes and markings of cylinders; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification O-A-451; 1935. Ammonia; Aqua (Ammonium-Hydroxide), Technical. Covers one type of two compositions—class A, diluted and class B, concentrated. Gives detail requirements for specific gravity and strength; methods of sampling, inspection, and test; and requirements for packaging, packing, and marking.

U. S. Gov., U. S. Army, Chemical Warfare Service. Specification 97-54-143; 1940. Ammonia; Anhydrous.

U. S. Gov., U. S. Army, Medical Dept. Specification 4-1076A; 1940. Ammonia; Aromatic.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 4-18; 1928. Ammonium Hydroxide, Aqua Ammonia.

*References.*—Unit weights, *see* 830; Food and Drugs Act and Regulations, *see* 810.

## 831.2 BICHROMATE, AMMONIUM

U. S. Gov., Treasury Dept., Procurement Div., No. 628; 1943. Ammonium Dichromate; Technical Grade. Covers one type and one grade, in granular form, and not caked in containers. Intended for use in lithographic processes. Gives requirements for chemical composition, water-insoluble matter, and particle size; methods of sampling, inspection, and tests; and packaging and marking.

U. S. Gov., U. S. Army, Signal Corps. Specification 75-20; 1923. Ammonium Bichromate.

## 831.3 CARBONATE AND BICARBONATE, AMMONIUM

American Chemical Society. Specifications for Analytical Reagents, 1941. Ammonium Carbonate. Gives requirements for assay, insoluble matter, nonvolatile matter, chloride, sulfur compounds, heavy metals, iron, and tests.

American Institute of Homoeopathy. Homoeopathic Pharmacopoeia of U. S., 1941. Ammonium Carbonate. Chemical symbol, synonyms, description, and preparations for solutions and dilutions for use in homoeopathic medicines.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Ammonium Carbonate. Description, solubility, identification, residue on ignition, reaction, chloride, sulfate, heavy metals, empyreumatic matter, assay, and storage. U.S.P. product of ammonium carbonate—Spiritus Ammoniae Aromaticus.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 4-16A; 1936. Ammonium Carbonate; Lump Form (for Use in Metal-Fouling Solutions).

*References.*—Unit weights, *see* 830; Food and Drugs Act and Regulations, *see* 810.

## 831.4 CHLORIDE, AMMONIUM

American Chemical Society. Specifications for Analytical Reagents, 1941. Ammonium Chloride. Gives requirements for insoluble matter, nonvolatile matter, free acid, phosphate, sulfate, calcium and magnesium precipitate, heavy metals, iron, and tests.

American Institute of Homoeopathy. Homoeopathic Pharmacopoeia of U. S., 1941. Ammonium Chloride. Chemical symbol, synonyms, description, and preparations for solution, dilutions, medications, and triturations for use in homoeopathic medicines.

American Leather Chemists Assn. Methods of Sampling and Analysis. Ammonium Chloride, 1942. Gives requirements for water, insoluble matter, ammonium salts, nonvolatile matter, and analysis of nonvolatile matter.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Tablets of Ammonium Chloride. Gives chemical composition, identification, reaction, thiocyanate, assay, and average dose.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Ammonium Chloride (Muriate of Ammonia). Description, solubility, identification, loss on drying, residue on ignition, free acid, thiocyanate, heavy metals, assay, and storage. U.S.P. product of ammonium chloride—Capsulae Ammonii Chloridi.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Ammonium Chloride Capsules. Identification, assay, and sizes.

U. S. Gov., Federal Specification O-A-491; 1930. Ammonium-Chloride (Sal Ammoniac). Covers two grades—(A) for battery purposes (B) for galvanizing purposes. Grade A ammonium chloride is a white crystalline or granular powder, without odor. Grade B ammonium chloride is what is known as "gas house" sal ammoniac. Gives detail requirements for each grade; methods of sampling, inspection, and test; and requirements for packaging, packing, and marking.

*References.*—Unit weights, *see* 830; Food and Drugs Act and Regulations, *see* 810.

## 831.5 NITRATE, AMMONIUM

American Chemical Society. Specifications for Analytical Reagents, 1941. Ammonium Nitrate. Gives requirements for insoluble matter, nonvolatile matter, free acid, chloride, nitrite, phosphate, sulfate, heavy metals, iron, and tests.

American Institute of Homoeopathy. Homoeopathic Pharmacopoeia of U. S., 1941. Ammonium Nitrate. Chemical symbol, synonyms, description, and preparations for solution, dilutions, medications, and triturations for use in homoeopathic medicines.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 50-11-59D; 1942. Ammonium Nitrate.

*References.*—Unit weights, *see* 830; Food and Drugs Act and Regulations, *see* 810.

## 831.6 PHOSPHATE, AMMONIUM

American Chemical Society. Specifications for Analytical Reagents, 1941. Ammonium Phosphate Dibasic (Diammonium Hydrogen Phosphate). Gives requirements for insoluble matter, reaction to phenolphthalein, chloride, nitrate, sulfur compounds, alkali salts, arsenic, heavy metals, iron, and tests.

American Institute of Homoeopathy. Homoeopathic Pharmacopoeia of U. S., 1941. Ammonium Phosphate. Chemical symbol, synonyms, description, and preparations for triturations for use in homoeopathic medicines.

*References.*—Unit weights, *see* 830; Food and Drugs Act and Regulations, *see* 810.

## 831.7 SULPHATE AND PERSULPHATE, AMMONIUM

American Chemical Society. Specifications for Analytical Reagents, 1941. Ammonium Persulfate. Gives requirements for assay, insoluble matter, nonvolatile matter, chloride, manganese, heavy metals, and tests.

American Chemical Society. Specifications for Analytical Reagents, 1941. Ammonium Sulfate. Gives requirements for insoluble matter, nonvolatile matter, free acid, chloride, nitrate, phosphate, arsenic, heavy metals, iron, and tests.

U. S. Gov., Treasury Dept., Procurement Div., No. 673; 1944. Ammonium Persulfate (for Photographic Purposes). Covers one type and one grade in white, granular form. Gives ammonium persulfate content, water insoluble matter, residue on ignition, heavy metals, and particle size; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 4-17; 1928. Ammonium Persulphate, for Metal-Fouling Solutions.

*References.*—Unit weights, *see* 830.

## 831.9 MISCELLANEOUS AMMONIUM COMPOUNDS

American Chemical Society. Specifications for Analytical Reagents, 1941. Ammonium Acetate. Gives requirements for insoluble matter, nonvolatile matter, chloride, nitrate, sulfate, heavy metals, iron, and tests.

American Chemical Society. Specifications for Analytical Reagents, 1941. Ammonium Oxalate. Gives requirements for insoluble matter, nonvolatile matter, chloride, sulfate, heavy metals, and tests.

American Chemical Society. Specifications for Analytical Reagents, 1941. Ammonium Thiocyanate. Gives requirements for appearance, insoluble matter, nonvolatile matter, chloride, sulfate, heavy metals, and tests.

American Institute of Homoeopathy. Homoeopathic Pharmacopoeia of U. S., 1941. Ammonium Acetate, Ammonium Benzoate, Ammonium Bromid, Ammonium Iodid, Ammonium Picrate, and Ammonium Valerianate. Chemical symbol, synonyms, descriptions, and preparations for solution and triturations for use in homoeopathic medicines.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Acid Ammonium Valérate (Ammonium Valerianate). Gives chemical composition, description, solubility, identifications, loss on drying, residue, reaction, heavy metals; assay for ammonium valerate and assay for free valeric acid; storage, preparation, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Ammonia Liniment (Volatile Liniment or Hartshorn Liniment). Gives chemical composition, preparation, and storage.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Ammonium Bromide. Gives chemical composition, description, solubility, identification, residue on ignition, free acid, other halogen salts, sulfate, barium, heavy metals, iron, bromate, iodide, assay, storage, preparations, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Ammonium Hypophosphite. Gives chemical composition, description, solubility, identification, loss on drying, reaction, oxalate, phosphate, arsenic, calcium, heavy metals, assay, storage, preparation, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Ammonium Iodide. Gives chemical composition, description, solubility, identification, loss on drying, residue, reaction, free iodine, barium, heavy metals, assay, storage, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Ammonium Salicylate. Gives chemical composition, description, solubility, identification, ash, free acid, heavy metals, assay, storage, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Ampuls of Green Iron and Ammonium Citrates. Gives chemical composition, assay, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Anisated Spirit of Ammonia. Gives chemical composition, storage, alcohol content, average dose, and preparation.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Elixir of Ammonium Bromide. Gives chemical composition, preparation, assay, alcohol content, storage, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Elixir of Ammonium Valerate. Gives chemical composition, preparation, alcohol content, storage, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh

Edition, 1942. Ichthammol (Ammonium Ichthosulfonate). Gives chemical composition, description, miscibility, identifications, loss on drying, ash, assays for ammonia, ammonium sulfate and total sulfur, storage, preparation, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Solution of Ammonium Acetate. Gives chemical compositions, description, identification, ash, assay, storage, preparation, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Syrup of Ammonium Hypophosphite. Gives chemical composition, preparation, storage, and average dose.

U. S. Gov., Navy Dept. Specification 51 C 38; 1944. Chemicals; Fire-Retardant, for Lumber and Timber.

U. S. Gov., Navy Dept. Specification 51P11a; 1919. Ammonium Picrate.

U. S. Gov., U. S. Army, Chemical Warfare Service. Specification 4-503-35; 1926. Ammonium Perchlorate.

U. S. Gov., U. S. Army, Signal Corps. Specification 75-19; 1923. Ammonia; Caustic.

*References.*—Unit weights, *see* 830; Food and Drugs Act and Regulations, *see* 810.

## 832. POTASSIUM AND POTASSIUM COMPOUNDS

### 832.1 CYANIDE OF POTASSIUM

American Institute of Homoeopathy. Homoeopathic Pharmacopoeia of U. S., 1941. Potassium Cyanid. Chemical symbol, synonyms, description, and preparations for triturations for use in homoeopathic medicines.

U. S. Gov., Treasury Dept., Procurement Div., No. 723; 1945. Potassium Cyanide for Photographic Purposes. Covers one type and one grade in the form of white fragments or granules. Gives requirements for potassium cyanide content, sulfide, heavy metals, and iron; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

*References.*—Unit weights, labeling of poisons, *see* 830.

### 832.2 CARBONATE OF POTASH

American Institute of Homoeopathy. Homoeopathic Pharmacopoeia of U. S., 1941. Potassium Carbonate. Chemical symbol, synonyms, description, and preparations for triturations for use in homoeopathic medicines.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Potassium Carbonate. Description, solubility, identification, loss on drying, insoluble substances, reaction, arsenic, heavy metals, assay, and storage.

U. S. Gov., Treasury Dept., Procurement Div., No. 657; 1944. Potassium Carbonate; Hydrated (for Photographic Purposes). Covers one type and one grade and shall be white, granular in form. Gives requirements for loss on drying, total alkali, bicarbonate content, water insoluble residue, and particle in size; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

*References.*—Unit weights, *see* 830; Food and Drugs Act and Regulations, *see* 810.

### 832.3 CRUDE POTASH AND CAUSTIC POTASH (HYDROXIDE)

American Chemical Society. Specifications for Analytical Reagents, 1941. Potassium Hydroxide. Gives requirements for potassium hydroxide, potassium carbonate, chloride, sulfate, phosphate, silica and ammonium hydroxide precipitate, nitrogen, iron, heavy metals, and tests.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Solution of Potassium Hydroxide. Gives chemical composition, description, specific gravity, identification, reaction, arsenic, assay, storage, preparations, and average dose.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, 1938. Caustic Potash. Covers definition, properties, derivation, impurities, uses, and marketing customs.

U. S. Gov., Navy Dept. Specification 51P7a; 1940. Potash; Carbonate (Granular Form), Caustic (Stick Form), and Crude (Lump Form).

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Potassium Hydroxide (Caustic Potash). Description, solubility, identification, reaction, heavy metals, insoluble substances, assay, and storage.

*References.*—Unit weights, labeling of poisons, *see* 830; Food and Drugs Act and Regulations, *see* 810.

### 832.4 POTASH SALTS

American Chemical Society. Journal of Industrial and Engineering Chemistry, Volume 19, May 1927, and Volume 3 of Analytical Edition of J.I.E.C., April 15, 1931, and reprint November 1940 Edition. Recommended Specifications for Analytical Reagent Chemicals. Potassium Bromate, Potassium Bromide, Potassium Iodate, Potassium Iodide, Potassium Phosphate. For each, permissible kinds and amounts of impurities; methods of test.

American Chemical Society. Volume 19, May 1927, of Journal of Industrial and Engineering Chemistry as corrected in July 15, 1930, issue. Potassium Chlorate. Reagent for chemical analysis, permissible kinds and amounts of impurities, methods of test.

American Chemical Society. Specifications for Analytical Reagents, 1941. Potassium and Sodium Tartrate. Gives requirements for insoluble matter, neutrality, chloride, phosphate, sulfate, ammonia, calcium, heavy metals, iron, and tests.

American Chemical Society. Specifications for Analytical Reagents, 1941. Potassium Biphthalate. Gives requirements for assay, insoluble matter, loss at 100° C., chlorine compounds, heavy metals iron, and tests.

American Chemical Society. Specifications for Analytical Reagents, 1941. Potassium Bisulfate; Fused. Gives requirements for acidity, insoluble matter and ammonium hydroxide precipitate, chloride, phosphate,

arsenic, calcium and magnesium precipitate, heavy metals, iron, and tests.

American Chemical Society. Specifications for Analytical Reagents, 1941. Potassium Bromate. Gives requirements for assay, insoluble matter, neutrality, bromide, nitrogen compounds, sulfate, heavy metals, iron, sodium, and tests.

American Chemical Society. Specifications for Analytical Reagents, 1941. Potassium Bromide. Gives requirements for insoluble matter, neutrality, bromate, chloride, nitrogen compounds, sulfate, barium, calcium, magnesium and ammonium hydroxide precipitate, heavy metals, iron, and tests.

American Chemical Society. Specifications for Analytical Reagents, 1941. Potassium Carbonate; Anhydrous. Gives requirements for insoluble matter, loss on ignition, chloride and chlorate, sulfur compounds, nitrogen compounds, phosphate, silica and ammonium hydroxide precipitate, calcium and magnesium precipitate, arsenic, heavy metals, sodium, and tests.

American Chemical Society. Specifications for Analytical Reagents, 1941. Potassium Chlorate. Gives requirements for insoluble matter, bromate, chloride, nitrogen compounds, sulfate, arsenic, calcium, magnesium and ammonium hydroxide precipitate, heavy metals, iron, sodium, and tests.

American Chemical Society. Specifications for Analytical Reagents, 1941. Potassium Chloride. Gives requirements for insoluble matter, neutrality, chlorate, and nitrate, nitrogen compounds, phosphate, sulfate, barium, calcium, magnesium and ammonium hydroxide precipitate, heavy metals, iron, sodium, and tests.

American Chemical Society. Specifications for Analytical Reagents, 1941. Potassium Chromate. Gives requirements for insoluble matter, chloride, free alkali, sulfate, calcium, sodium, and tests.

American Chemical Society. Specifications for Analytical Reagents, 1941. Potassium Dichromate. Gives requirements for insoluble matter, chloride, sulfate, aluminum, calcium, sodium, and tests.

American Chemical Society. Specifications for Analytical Reagents, 1941. Potassium Ferricyanide. Gives requirements for insoluble matter, chloride, sulfate, ferro compounds, and tests.

American Chemical Society. Specifications for Analytical Reagents, 1941. Potassium Ferrocyanide. Gives requirements for insoluble matter, chloride, sulfate, and tests.

American Chemical Society. Specifications for Analytical Reagents, 1941. Potassium Iodate. Gives requirements for insoluble matter, neutrality, chlorate, chloride and bromide, iodide, nitrogen compounds, sulfate, heavy metals, iron, sodium, and tests.

American Chemical Society. Specifications for Analytical Reagents, 1941. Potassium Iodide. Gives requirements for insoluble matter, moisture, alkalinity, chloride, bromide, iodate, nitrogen compounds, phosphate, sulfate, barium, calcium, magnesium and ammonium hydroxide precipitate, heavy metals, iron, sodium, and tests.

American Chemical Society. Specifications for Analytical Reagents, 1941. Potassium Nitrate. Gives requirements for insoluble matter, neutrality, chlorine total, iodate, nitrite, phosphate, sulfate, calcium, magnesium and ammonium hydroxide precipitate, heavy metals, iron, sodium, and tests.

American Chemical Society. Specifications for Analytical Reagents, 1941. Potassium Oxalate. Gives requirements for insoluble matter, neutrality, chloride, sulfate, ammonia, heavy metals, iron, sodium, substances darkened by hot sulfuric acid, and tests.

American Chemical Society. Specifications for Analytical Reagents, 1941. Potassium Permanganate. Gives requirements for appearance, chloride and chlorate, nitrogen compounds, sulfate, and tests.

American Chemical Society. Specifications for Analytical Reagents, 1941. Potassium Phosphate; Monobasic (Potassium Dihydrogen Phosphate). Gives requirements for insoluble, calcium, and ammonium hydroxide precipitate, loss on drying over sulfuric acid, loss on ignition, hydrogen-ion concentration, chloride, nitrogen compounds, sulfate, heavy metals, iron, sodium, and tests.

American Chemical Society. Specifications for Analytical Reagents, 1941. Potassium Sulfate. Gives requirements for insoluble matter, neutrality, chloride, nitrogen compounds, arsenic, calcium, magnesium and ammonium hydroxide precipitate, heavy metals, iron, sodium, and tests.

American Institute of Homoeopathy. Homoeopathic Pharmacopoeia of U. S., 1941. Potassium Acetate, Potassium Arsenite, Potassium Bromid, Potassium Chlorate, Potassium Chlorid, Potassium Chromate, Potassium Dichromate, Potassium Ferrocyanid, Potassium Hydrate, Potassium Hypophosphite, Potassium Iodid, Potassium Nitrate, Potassium Oxalate, Potassium Permanganate, Potassium Phosphate, Potassium Picrate, Potassium Sulfate, and Potassium Tartrate. Chemical symbol, synonyms, description, and preparations for triturations for use in homoeopathic medicines.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Compound Effervescent Salt of Potassium Bromide (Effervescent Potassium Bromide With Caffeine). Gives chemical composition, preparation, storage, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Ointment of Potassium Iodide. Gives chemical composition, preparation, and storage.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Potassium Chlorate. Gives chemical composition, description, solubility, identifications, reaction, heavy metals, assay, storage, and preparations.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Potassium Guaiacolsulfonate. Gives chemical composition, description, solubility, identifications, loss on drying, reaction, sulfate, heavy metals, assay, storage, preparation, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh

Edition, 1942. Potassium Hypophosphite. Gives chemical composition, description, solubility, identification, loss on drying, reaction, free alkali, carbonate, phosphate, arsenic, calcium, heavy metals, assay, storage, preparations, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Potassium Sulfate. Gives chemical composition, description, solubility, identification, reaction, chloride, arsenic, calcium, heavy metals, magnesium, sodium, assay, storage, preparations, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Potassium Thiocyanate (Potassium Sulfocyanate or Potassium Rhodanate). Gives chemical composition, description, solubility, identification, loss on drying, reaction, chloride, cyanide, sulfate, ammonium salts, arsenic, heavy metals, assay, storage, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Tablets of Potassium Chlorate. Gives chemical composition, identifications, assay, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Tablets of Potassium Iodide. Gives chemical composition, identification, cyanide, assay, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Tablets of Potassium Permanganate. Gives chemical composition, identifications, assay, and average dose.

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis, 1940. Definitions of Terms for Fertilizers and Liming Materials. Muriate of Potash (Commercial Potassium Chloride). Required percentage of potash ($K_2O$), chiefly as chloride.

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis, 1940. Definitions of Terms for Fertilizers and Liming Materials. Nitrate of Potash (Commercial Potassium Nitrate). Required percentage of potash ($K_2O$).

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis, 1940. Definitions of Terms for Fertilizers and Liming Materials. Sulphate of Potash (Commercial Potassium Sulphate). Required percentage of potash and permissible content of chlorine.

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis, 1940. Definitions of Terms for Fertilizers and Liming Materials. Sulphate of Potash-Magnesia. Required content of potash and of sulphate of magnesia; permissible content of chlorine.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Bismuth and Potassium Tartrate. Description, solubility, identification, alcohol-soluble extractive, arsenic, lead, assay, and storage. U.S.P. product of bismuth and potassium tartrate—Injectio Bismuthi et Potassii Tartratis.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Bismuth and Potassium Tartrate Injection (Bismuth and Potassium Tartrate Ampuls). Aqueous solution, identification, and assay. Oil suspension, identification, assay, storage, and sizes.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Effervescent Potassium Citrate. Preparation and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Potassium Acetate. Description, solubility, identification, reaction, arsenic, heavy metals, assay, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Potassium and Sodium Tartrate (Rochelle Salt). Description, solubility, identification, loss on drying, reaction, ammonia, heavy metals, assay, and storage. U.S.P. product of potassium and sodium tartrate—Pulveres Effervescentes Compositi.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Potassium Bicarbonate. Description, solubility, identification, reaction, carbonate, heavy metals, assay, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Potassium Bitartrate (Cream of Tartar, Acid Potassium Tartrate). Description, solubility, identification, reaction, insoluble matter, ammonia, heavy metals, assay, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Potassium Bromide. Description, solubility, identification, loss on drying, alkalinity, bromate, iodide, sulfate, arsenic, barium, heavy metals, assay, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Potassium Chloride. Description, solubility, identification, loss on drying, reaction, iodide or bromide, arsenic, calcium and magnesium, heavy metals, sodium, assay, and storage. U.S.P. products of potassium chloride—Liquor Chloridorum Trium Isotonicus, Tabellae Potassii Chloridi.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Potassium Chloride Tablets. Identification, calcium and magnesium, sodium, assay, storage, and sizes.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Potassium Citrate. Description, solubility, identification, loss on drying, reaction, tartrate, arsenic, heavy metals, assay, and storage. U.S.P. product of potassium citrate—Potassii Citras Effervescens.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Potassium Iodide. Description, solubility, identification, reaction, loss on drying, alkalinity (iodate, nitrite, thiosulfate, and barium), (nitrate, nitrite, and ammonia), heavy metals, assay, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Potassium Nitrate (Saltpeter). Description, solubility, identification, loss on drying, reaction, chlorate, chloride, heavy metals, assay, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Potassium Permanganate. Description, solubility, identification, loss on drying, assay, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Solution of Potassium Arsenite (Fowler's Solution). Description, identification, arsenate, assay, alcohol content, and storage.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Circular C398 and Supplement, 1944. Standard Samples. Acid Potassium Phthalate, Sample 84b. This sample is prepared and sold by the National Bureau of Standards with a certificate of analysis for use in industry and by others as a comparison standard for checking the accuracy of analysis of similar material.

U. S. Gov., Federal Specification O-P-551; 1944. Potassium Bromide, for Photography. Covers one grade. Gives requirements for color and form, solution, loss on drying, assay, alkalinity, heavy metals, iodide, and bromate; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification O-P-558; 1944. Potassium Iodide, for Photography. Covers one grade. Gives requirements for color and form, solution, loss on drying, assay, alkalinity, heavy metals, iodate, nitrate, thiosulfate, and barium; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Navy Dept. Specification 51C29a; 1943. Chemicals; Testing, Dissolved-Oxygen.

U. S. Gov., Treasury Dept., Procurement Div., No. 619; 1943. Potassium Dichromate; Technical Grade. Shall be furnished in one grade and in two types—type I, crystals and type II, granular. Gives requirements for potassium dichromate content, volatile matter, water-insoluble matter, particle size, sampling, inspection, and tests.

U. S. Gov., Treasury Dept., Procurement Div., No. 641; 1943. Potassium Ferricyanide (Red Prussiate of Potash); Technical Grade. Covers one type and one grade of ruby-red crystals. Gives requirements for potassium ferricyanide content, ferro-compounds, water insoluble matter, and particle size; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Treasury Dept., Procurement Div., No. 666; 1944. Potassium Chloride, for Photographic Purposes. Covers one type and one grade in granular form. Gives requirements for volatile matter, chloride content, precipitates, heavy metals, iron, bromides and iodides, solubility, neutrality, and sodium; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Treasury Dept., Procurement Div., No. 724; 1945. Potassium Oxalate, for Photographic Purposes. Covers one type and one grade in the form of colorless crystals. Gives requirements for potassium oxalate, heavy metals, iron content, solubility, neutrality, and particle size; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., U. S. Army, Medical Dept. Specification 4-1025C; 1938. Iodine and Potassium Iodide.

U. S. Gov., U. S. Army, Medical Dept. Specification 4-1087A; 1942. Potassium Phosphate; Dipotassium.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 50-11-11B; 1936. Potassium Chlorate, for Use in Ammunition.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 50-11-26B; 1937. Potassium Nitrate.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 50-11-93A; 1941. Potassium Sulfate.

*References.*—Unit weights, labeling of poisons, *see* 830; Food and Drugs Act and Regulations, *see* 810.

## 832.9 MISCELLANEOUS POTASSIUM COMPOUNDS

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Elixir of Buchu and Potassium Acetate. Gives chemical composition, preparation, storage, alcohol content, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Elixir of Buchu, Juniper, and Potassium Acetate. Gives chemical composition, preparation, storage, alcohol content, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Elixir of Potassium Bromide. Gives chemical composition, assay, storage, alcohol content, preparation, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Gargle of Potassium Chlorate With Iron (Golden Gargle). Gives chemical composition, storage, alcohol content, and preparation.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Solution of Potassium Citrate. Gives chemical composition, description, identification, reaction, tartrate, arsenic, heavy metals, assay, storage, average dose, and preparation.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Solution of Potassium Iodide. Gives chemical composition, description, specific gravity, identification, reaction, other tests, assay, storage, average dose, and preparation.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, Volume 2; 1944. Potassium Metabisulphite (Potassium Pyrosulphite, Metabisulphite of Potash). Covers definition, constants, solubility, derivation, uses, grades, containers, and substitutes.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Sulfurated Potash. Description, solubility, identification, minimum of sulfides, and storage.

U. S. Gov., Treasury Dept., Procurement Div., No. 664a; 1944. Potassium Metabisulfite, for Photographic Purposes. Covers one type and one grade in granular form intended for photographic purposes. Gives requirements for potassium metabisulfite content, heavy metals, iron, and water insoluble matter; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-280; 1943. Powder; Tropic, for Photographic Developers.

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-285; 1943. Powder; Hardening, Stop Bath, for Photographic Use.

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-300; 1943. Powder; Hardener, Fixing Bath, for Photographic Use.

U. S. Gov., U. S. Army, Medical Dept. Specification 4-1068; 1937. Potassium Metabisulfite; Reagent Grade.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 50-11-101; 1941. Potassium Perchlorate.

## 833. CALCIUM AND CALCIUM COMPOUNDS, INCLUDING LIME

### 833.0 GENERAL ITEMS

American Society for Metals. Metals Handbook, 1939 Edition. Properties of Calcium. Covers physical constants of calcium.

Calcium Chloride Assn. Reprint No. 178. Dehumidification With Calcium Chloride. To End Dampness and Remove Excess Room Moisture. Covers humidity and air conditioning, what "relative humidity" means, high humidity damaging, how calcium chloride dehumidifies, methods of dehumidifying with calcium chloride, simple devices available for calcium chloride, and solution from dehumidification, has many valuable uses.

### 833.1 CALCIUM CARBIDE

U. S. Gov., Army Air Forces. Specification 20028-A (1); 1943. Charge; Welding (Portable Welding Equipment Set).

U. S. Gov., Dept. of Agriculture, Forest Service. Specifications MSF-90-S. Carbide, All Kinds.

U. S. Gov., Federal Specification O-C-101; 1930. Amendment 4; 1944. Calcium-Carbide. Covers one grade. Gives requirements for material, sizes (lump, egg, nut, 1/4 by 1/12, rice, and 14 N.D.), and volume of gas; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., Treasury Dept., Procurement Div., No. 568; 1942. Acetylene; Technical Grade (for Use in Cutting and Welding). Shall be furnished in but one grade. Gives capacity of cylinders and requirements for gas, acetone, cylinders, and valves; methods of sampling, inspection, and tests; and packaging, packing, and marking.

### 833.2 CALCIUM CHLORIDE

American Chemical Society. Specifications for Analytical Reagents, 1941. Calcium Chloride. Gives requirements for assay, insoluble and ammonium hydroxide precipitate, alkalinity, acidity, nitrate, sulfate, ammonia, barium, heavy metals, iron, magnesium and alkali salts, and tests.

American Chemical Society. Specifications for Analytical Reagents, 1941. Calcium Chloride; Anhydrous. Gives requirements for assay, alkalinity, magnesium and alkali salts, and tests.

American Institute of Homoeopathy. Homoeopathic Pharmacopoeia of U. S., 1941. Calcium Chlorid. Chemical symbol, synonyms, description, and preparations for solution, dilutions, and medications for use in homoeopathic medicines.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Forumlary, Seventh Edition, 1942. Ampuls of Calcium Chloride. Gives chemical composition, assay, and average dose.

American Society for Testing Materials, D 98-34; 1934. Calcium Chloride. Includes use for dust prevention, acceleration of setting of concrete, and curing concrete. Gives requirements for chemical composition, screen analysis, and packing.

American Society for Testing Materials, D 345-34; 1934. Methods of Chemical Analysis of Calcium Chloride. Includes determination of total calcium, total alkalinity and magnesium compounds, total alkali chlorides as sodium chloride, and a rapid technical method for ordinary use, with explanatory notes. Title and section 1 tentatively revised and new sections 2 and 3 tentatively added 1941.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, 1938. Calcium Chloride. Covers color and properties, derivation, solubility, purity, uses, grades, supply, and packing.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Calcium Chloride. Description, solubility, identification, reaction, iron, aluminum, phosphate, magnesium and alkali salts, heavy metals, assay, and storage. U.S.P. product of calcium chloride—Liquor Chloridum Trium Isotonicus.

U. S. Gov., Federal Specification O-C-106a; 1944. Amendment 1; 1944. Calcium-Chloride; Hydrated, Technical Grade. Covers one type and one grade in flake form. Gives requirements for calcium-chloride content, impurities, and particle sizes; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Treasury Dept., Procurement Div., No. 470; 1941. Calcium Chloride; Hydrated, Special (for Anti-Freeze Use in Fire-Extinguishers). Shall be furnished in one type and grade. Gives requirements for particle size and chemical composition; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., Treasury Dept., Procurement Div., No. 622; 1943. Calcium Chloride; Anhydrous, Technical Grade. Shall be in one type, one grade, and two classes—(A) granular and (B) lump. Intended for use as a desiccating (drying) agent. Calcium chloride shall not be caked in the container. Gives requirements for calcium chloride content, impurities, and particle size of granular and lump; methods of sampling, inspection, and tests; packaging, packing, and marking.

U. S. Gov., U. S. Army, Chemical Warfare Service. Specification 96-82-2; 1939. Calcium Chloride; Technical Grades.

*References.*—Chloride of lime bleach, *see* 891; unit weights, *see* 830; Food and Drugs Act and Regulations, *see* 810.

### 833.3 CALCIUM CARBONATE

American Chemical Society. Specifications for Analytical Reagents, 1941. Calcium Carbonate. Gives requirements for insoluble in hydrochloric acid and ammonium hydroxide precipitate, alkalinity, chloride, nitrate, sulfate, ammonia, barium, heavy

metals, iron, magnesium and alkali salts, and tests.

American Chemical Society. Specifications for Analytical Reagents, 1941. Calcium Carbonate—Low in Alkalies. Gives requirements for insoluble in hydrochloric acid and ammonium hydroxide precipitate, chloride, sulfate, alkalies, barium, heavy metals, iron, magnesium and alkalies, and tests.

American Institute of Homoeopathy. Homoeopathic Pharmacopoeia of U. S., 1941. Calcium Carbonate of Hahnemann. Chemical symbol, synonyms, description, and preparations for triturations for use in homoeopathic medicines.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Tablets of Calcium Carbonate. Gives chemical composition, identification, barium or strontium, assay, and average dose.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Compound Chalk Powder. Preparation.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Precipitated Calcium Carbonate (Precipitated Chalk). Description, solubility, identification, loss on drying, acid-insoluble material, barium, heavy metals, iron, magnesium and alkali salts, assay, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Prepared Chalk (Drop Chalk). Description, solubility, identification, acid-insoluble residue, heavy metals, assay, and storage. U.S.P. products of prepared chalk—Hydrargyrum cum Creta, Mistura Cretae, Pulvis Cretae Compositus.

U. S. Gov., U. S. Army, Chemical Warfare Service. Specification 96-31-11; 1938. Calcium Carbonate; Whiting, Commercial.

*References.*—Unit weights, *see* 830; Food and Drugs Act and Regulations, *see* 810; chalk, ceramic whiting, *see* 546; limestone, *see* 511.2.

## 833.4 CALCIUM PHOSPHIDE AND CALCIUM PHOSPHATE

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Tribasic Calcium Phosphate (Precipitated Calcium Phosphate). Description, solubility, identification, loss on ignition, acid-insoluble matter, soluble salts, carbonate, chloride, nitrite, sulfate, arsenic, barium, dibasic salt and calcium oxide, fluorine, heavy metals, and assay.

U. S. Gov., Navy Dept. Specification 51C2d; 1940: Calcium Phosphide.

## 833.5 CAUSTIC (QUICKLIME) AND HYDRATED LIME

American Institute of Homoeopathy. Homoeopathic Pharmacopoeia of U. S., 1941. Calcium Hydrate. Chemical symbol, synonyms, description, and preparations for solutions, dilutions, and triturations for use in homoeopathic medicines.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Lime (Calcium Oxide or Quicklime). Gives chemical composition, description, solubility, identifications, insoluble substances loss on ignition, reaction, carbonate; alkalies or magnesium; assay, storage, and preparation.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Lime Liniment (Carron Oil). Gives chemical composition, preparation, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Calcium Hydroxide. Description, solubility, identification, hydrochloric acid-insoluble matter, carbonate, heavy metals, magnesium, assay, and storage. U.S.P. product of calcium hydroxide—Liquor Calcii Hydroxide.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Soda Lime. Description, size of granules, identification, moisture absorption, loss on drying, carbon dioxide absorption capacity, hardness, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Solution of Calcium Hydroxide (Lime Water). Description, identification, reaction, alkalies and other carbonates, assay, and storage.

U. S. Gov., Treasury Dept., Procurement Div., No.710; 1944. Calcium Hydroxide; Technical Grade. Covers one type and one grade in the form of fine white powder. Gives requirements for calcium hydroxide content and particle size; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Veterans Administration, Medical and Hospital Supply Section, VA-H-112; 1941. Soda-Lime for Medical Use.

*References.*—Unit weights, *see* 830; Food and Drugs Act and Regulations, *see* 810; quicklime and hydrated lime for water treatment, *see* 882.2; quicklime and hydrated lime for various other purposes, *see* 517.2.

## 833.9 MISCELLANEOUS CALCIUM COMPOUNDS

American Institute of Homoeopathy. Homoeopathic Pharmacopoeia of U. S., 1941. Calcium Acetate of Hahnemann, Calcium Arsenate, Calcium Bromid, Calcium Fluorid, Calcium Iodid, Calcium Oxalate, Calcium Phosphate, Calcium Sulfate, and Impure Calcium Sulfid. Chemical symbol, synonyms, and preparations for solution, dilutions, triturations, and medications for use in homoeopathic medicines.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Calcium Bromide. Gives chemical composition, description, solubility, identification, reaction, chloride, bromate, iodide, sulfate, barium, heavy metals, iron, and magnesium and alkali salts; assay, storage, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Calcium Creosotate. Gives chemical composition, description, solubility, identifications, assay, storage, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Calcium Glycerophosphate. Gives chemical composition, description, solubility, identifications, loss on drying, alcohol-soluble substances, free alkali, chloride, phosphate,

sulphate, arsenic, heavy metals, assay, storage, preparations, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Calcium Hypophosphite. Gives chemical composition, description, solubility, identification, loss on drying, water-insoluble substances, phosphorous compounds, arsenic, heavy metals, free acid, assay, storage, preparations, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Elixir of Calcium Lactophosphate. Gives chemical composition, preparation, storage, alcohol content, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Elixir of Calcium and Sodium Glycerophosphates. Gives chemical composition, preparation, storage, alcohol content, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Syrup of Calcium Lactophosphate. Gives chemical composition, preparation, storage, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Tablets of Calcium Lactate. Gives chemical composition, identification, assay, and average dose.

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis, 1940. Insecticides and Fungicides. Calcium Cyanide. Methods for determination of cyanogen and chlorine.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, 1938. Calcium Aluminate. Covers definition, constants, specifications, solubility, derivation, uses, and containers.

Technical Assn. of the Pulp and Paper Industry. Analysis of Bisulphite Cooking Liquor. Standard T604 m-35; 1935. For control tests in mill using volumetric control analysis and complete gravimetric analysis. Preparation of sample and outlines of each method of testing.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Calcium Gluconate. Description, solubility, identification, reaction, chloride, sulfate, arsenic, heavy metals, sucrose and reducing sugars, assay and storage. U.S.P. product of calcium gluconate—Injectio Calcii Gluconatis.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Calcium Gluconate Injection (Calcium Gluconate Ampuls). Identification, assay, storage, and sizes.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Calcium Iodobehenate. Description, solubility, loss on drying, identification, magnesium and alkali salts, carbonate, soluble salts, chloride and sulfate, inorganic salts, assay for iodine, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Calcium Lactate, Description, solubility, identification, loss on drying, free acid, heavy metals, magnesium and alkali salts, volatile fatty acid, assay, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Calcium Mandelate. Description, solubility, identification, loss on drying, completeness and clarity of solution, free acid, chloride, sulfate, heavy metals, magnesium and alkali salts, assay, and storage.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Circular C398 and Supplement, 1944. Standard Samples. Calcium Molybdate, Sample 71. This sample is prepared and sold by the National Bureau of Standards with a certificate of analysis for use in industry and by others as a comparison standard for checking the accuracy of analysis of similar material.

U. S. Gov., Treasury Dept., Procurement Div., No. 725; 1945. Calcium Sulfate; Anhydrous (for Drying and Desiccating Purposes). Covers one type and one grade and shall be in granular form. Gives requirements for water absorption, temperature rise, and particle size; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 50-11-89A; 1941. Calcium Resinate.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 50-11-105; 1941. Calcium Fluoride.

*References.*—Unit weights, labeling of poisons, *see* 830; Food and Drugs Act and Regulations, *see* 810; calcium fertilizers, *see* 850-859; calcium arsenate and insecticides, *see* 881.12; gypsum, calcined gypsum, *see* 514.1, 514.2.

## 834. SODIUM AND SODIUM COMPOUNDS

### 834.0 GENERAL ITEMS

American Society for Testing Materials, D 501-43; 1943. Methods of Sampling and Chemical Analysis of Special Detergents. Covers inorganic alkaline detergents. Gives procedure for sampling and testing caustic soda, soda ash, modified soda (sesquicarbonate type), sodium metasilicate and sodium sesquisilicate, trisodium phosphate, and tetrasodium pyrophosphate.

### 834.1 SODIUM CYANIDE

American Chemical Society. Specifications for Analytical Reagents, 1941. Sodium Cyanide. Gives requirements for assay, chloride, ferrocyanide, sulfate, sulfide, thiocyanate, and tests.

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis, 1940. Insecticides and Fungicides. Sodium and Potassium Cyanides. Official methods for determination of cyanogen and chlorine.

U. S. Gov., Federal Specification O-S-591; 1930. Amendment 1, 1934. Sodium-Cyanide; for Use As an Insecticide in Fumigation. Covers one grade. Gives detail requirements; method of sampling, inspection, and test; and requirements for packaging, packing, and marking.

*References.*—Unit weights, labeling of poisons, *see* 830.

## 834.2 SODIUM NITRATE

American Chemical Society. Specifications for Analytical Reagents, 1941. Sodium Nitrate. Gives requirements for insoluble matter, neutrality, chlorine total, iodate, nitrite, phosphate, sulfate, calcium and magnesium precipitate, heavy metals, iron, and tests.

American Institute of Homoeopathy. Homoeopathic Pharmacopoeia of U. S., 1941. Sodium Nitrate. Chemical symbol, synonyms, description, and preparations for triturations for use in homoeopathic medicines.

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis, 1940. Definitions of terms for Fertilizers and Liming Materials. Nitrate of Soda (Commercial Sodium Nitrate). Required percentage of nitrogen, chiefly as sodium nitrate.

U. S. Gov., Navy Dept. Specification 51S31a; 1941. Sodium Nitrate (for Use in the Heat Treatment of Aluminum Alloy).

U. S. Gov., Treasury Dept., Procurement Div., No. 617a; 1944. Sodium Nitrate (Nitrate of Soda), (for Fertilizer Purposes). Covers one type and one grade in granular or pellet form. Gives requirements for nitrogen content, moisture and other volatile matter, water-insoluble matter, and particle size; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

*References.*—Unit weights, *see* 830.

## 834.3 SODIUM BORATE (BORAX)

American Chemical Society. Specifications for Analytical Reagents, 1941. Borax (Sodium Borate). Gives requirements for insoluble matter, chloride, phosphate, sulfate, calcium, heavy metals, iron, and tests.

American Institute of Homoeopathy. Homoeopathic Pharmacopoeia of U. S., 1941. Sodium Pyroborate. Chemical symbol, synonyms, description, and preparations for triturations for use in homoeopathic medicines.

American Leather Chemists Assn. Methods of Sampling and Analysis. Borax, 1942. Gives requirements for sodium borate, insoluble matter, iron, aluminum, calcium, magnesium, sulfate, chloride, and free alkali.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Compound solution of Sodium Borate (Dobell's Solution). Gives chemical composition, description, identifications, reaction, storage, use on mucous membranes, and preparation.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, 1938. Borax; Dehydrated (Sodium Tetraborate; Anhydrous—Borax "Glass"; Calcined or "Burnt" Borax, Etc.). Covers definition, constants, derivation, purity, grades, containers, and uses.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, 1938. Borax (Sodium Tetraborate Dehydrate, Sodium Biborate, or Sodium Borate). Covers definitions, constants, solubility, occurance purity, grades, substitutes, containers, uses, and marketing.

Toilet Goods Assn., Inc. Specification No. 4; 1941. Borax. Gives requirements for color, odor, identity, $Na_2B_4O_7$, $Na_2B_4O_7 10H_2O$, solubility, pH, carbonates and bicarbonates, arsenic, lead, and other heavy metals.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Sodium Borate (Borax, Sodium Tetraborate). Description, solubility, identification, reaction, carbonate or bicarbonate, arsenic, heavy metals, assay, and storage.

U. S. Gov., Federal Specification SS-B-611; 1933. Amendment 1; 1942. Borax (Sodium Borate). Covers one grade, and three types—(A) crystal, (B) granulated, and (C) powdered. Gives requirements for material; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

*References.*—Unit weights, *see* 830; Food and Drugs Act and Regulations, *see* 810.

## 834.4 SODIUM CARBONATE, SODA ASH

American Chemical Society. Specifications for Analytical Reagents, 1941. Sodium Carbonate; Anhydrous. Gives requirements for insoluble matter, loss on ignition, chloride, sulfur compounds, nitrogen compounds, phosphate, silica and ammonium hydroxide precipitate, calcium and magnesium precipitate, potassium, arsenic, heavy metals, and tests.

American Chemical Society. Specifications for Analytical Reagents, 1941. Sodium Carbonate; Anhydrous (2). Gives requirements for insoluble matter, ammonium hydroxide precipitate, and tests.

American Hospital Assn., 16-22. Soda Ash. Covers three types—ordinary or light, extra-light, and dense. Based on U. S. Gov. Federal Specification O-S-571a for Soda Ash, referred to below.

American Institute of Homoeopathy. Homoeopathic Pharmacopoeia of U. S., 1941. Sodium Carbonate. Chemical symbol, synonyms, description, and preparations for triturations for use in homoeopathic medicines.

American Leather Chemists Assn. Methods of Sampling and Analysis. Soda Ash, 1942. Gives requirements for total alkali, sodium bicarbonate, sodium carbonate, and sodium chloride.

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering. Specifications for Soda Ash To Be Used in Water Treatment. Gives requirements for chemical and physical properties and tests, packing and marking, and inspection and rejection.

American Society for Testing Materials D 458-39; 1939. Soda Ash. For material suitable for various washing, cleaning, and scouring processes, with or without soap, where a moderately strong alkaline material is desired, composed of high-grade anhydrous sodium carbonate in powdered form; requirements as to chemical composition, loss on heating, light and extra light types, and tests using A.S.T.M. Method D 501.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, 1938. Soda Ash. Covers definition, constants, solubility, derivation, purity, grades, specifications, containers, and uses.

Technical Assn. of the Pulp and Paper Industry. Analysis of Soda Ash (Anhydrous Sodium Carbonate). Standard T 612 m-44; 1944. For 58 percent grade for paper manufacturing. Covers specifications, sampling, preliminary procedure for tests, total alkalinity, hydroxide, bicarbonate, matter insoluble in water, and loss at 150° C.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Monohydrated Sodium Carbonate. Description, solubility, identification, loss on drying, heavy metals, assay, and storage.

U. S. Gov., Federal Specification O-S-571a; 1939. Amendment 1; 1944. Soda Ash. Covers three types—(I) 58 percent ordinary or light, (II) 58 percent extra-light, and (III) 58 percent dense. Gives requirements for material, chemical composition, loss of weight at 150° to 155° C., and volume; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification O-S-581a; 1939. Sodium-Carbonate; Granular (Monohydrate-Crystals). Covers one grade. Gives detail requirements; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., Treasury Dept., Procurement Div., No. 642; 1943. Sodium Carbonate; Anhydrous (for Photographic Purposes). Covers one grade of uniform white powder. Gives requirements for total alkali calculated as sodium carbonate, sodium bicarbonate content, and matter insoluble in water; methods of sampling, inspection, and tests; and packaging, packing, and marking.

*References.*—Soda ash for boiler compound, *see* 882.2; laundry soda, *see* 834.7; unit weights, *see* 830; Food and Drugs Act and Regulations, *see* 810.

## 834.5 SODIUM BICARBONATE

American Chemical Society. Specifications for Analytical Reagents, 1941. Sodium Bicarbonate. Gives requirements for insoluble matter, assay and carbonate, chloride, sulfur compounds, phosphate, calcium, magnesium and ammonium hydroxide precipitate, potassium, ammonia, heavy metals, and tests.

American Leather Chemists Assn. Methods of Sampling and Analysis. Sodium Bicarbonate, 1942. Gives requirements for water, sodium hydroxide, carbonate, bicarbonate, hydroxide and carbonate, insoluble matter, iron, aluminum, calcium, magnesium, sulfate, and chloride.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Mixture of Rhubarb and Soda. Gives chemical composition, storage, alcohol content, average dose, and preparation.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Solution of Soda and Mint. Gives chemical composition, description, identifications, reaction, storage, alcohol content, average dose, and preparation.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Tablets of Sodium Bicarbonate. Gives chemical composition, identifications, assay, and average dose.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, 1938. Sodium Bichromate. Covers definition, constants, solubility, purity, grades, forms available, containers, uses, and substitutes.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Sodium Bicarbonate (Baking Soda). Description, solubility, identification, insoluble substances, reaction, carbonate, ammonia, arsenic, heavy metals, assay, and storage.

U. S. Gov., Federal Specification O-S-576; 1944. Sodium Bicarbonate; Technical Grade. Covers one type and one grade in powdered form. Gives requirements for total alkali, loss on heating, and chlorides; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

*References.*—Baking soda, laundry soda; *see* 155.2, 834.7; unit weights, *see* 830; Food and Drugs Act and Regulations, *see* 810.

## 834.6 SODIUM SILICATE (WATER GLASS)

American Society for Testing Materials, C 111-36; 1936. Sodium Silicate for Curing Concrete. For application to the surface of concrete for preventing moisture loss during curing. Covers formula and specific gravity, requirements for container size and type, and marking.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, Volume 2; 1944. Sodium Silicate (Water Glass, Soluble Glass, Sodium Metasilicate). Covers definition, derivation, constants, solubility, uses, grades and forms, containers, and substitutes.

U. S. Gov., Federal Specification O-S-604; 1940. Sodium-Metasilicate; Pentahydrate. Covers one type. Gives detail requirements; method of sampling, inspection, and test; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification O-S-605; 1942. Sodium-Silicate; Liquid. Covers one type and one grade. Gives requirements for consistency, specific gravity, and alkali content; methods of sampling, inspection, and test; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., Navy Dept. Specification 51S29; 1939. Sodium-Silicate; Solution (33.5° Baumé).

U. S. Gov., U. S. Army, Ordnance Dept. Specification 4-1035A; 1939. Sodium Silicate (Water Glass).

## 834.7 HYDRATED OR SAL SODA (WASHING SODA)

American Hospital Assn., 7-40. Modified (Washing Soda) Laundry Soap. Covers one grade. Based on U. S. Gov. Federal Specification P-S-641a and Amendment 1.

U. S. Gov., Federal Specification P-S-641a; 1939. Amendment 1; 1940. Soda; Laundry, Modified (Washing Soda). Covers one grade—white uniform powder. Gives requirements for composition, alkalinity, sodium bicarbonate, sodium carbonate, and matter insoluble in water; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

## 834.8 CAUSTIC SODA OR LYE

American Chemical Society. Specifications for Analytical Reagents, 1941. Sodium Hydroxide. Gives requirements for sodium hydroxide, sodium carbonate, chloride, sulfate, phosphate, silica and ammonium hydroxide precipitate, nitrogen, iron, heavy metals, and tests.

American Hospital Assn., 7-37. Caustic (Lye) Soda for Cleaning Purposes. Covers one grade. Based on U. S. Gov. Federal Specification P-S-631a.

American Institute of Homoeopathy. Homoeopathic Pharmacopoeia of U. S., 1941. Sodium Hydrate. Chemical symbol, synonyms, description, and preparations for solutions, dilutions, and medications for use in homoeopathic medicines.

American Leather Chemists Assn. Methods of Sampling and Analysis. Caustic Soda, 1942. Gives requirements for total alkali, sodium hydrate, sodium carbonate, sodium chloride, and sodium sulfate.

American Society for Testing Materials, D 456-39; 1939. Caustic Soda. For various washing, cleaning, and scouring processes, with or without soap, where strongly alkaline material is desired. Includes flake, coarsely powdered, or solid form in air-tight containers, requirements as to chemical composition, and analysis using A.S.T.M. Method D 501.

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis, 1940. Insecticides and Fungicides. Soda Lye. Official methods for determination of carbonate and of hydroxide.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, 1938. Caustic Soda. Covers definition, properties, derivation, impurities, uses, forms available, commercial grades, marketing, shipping regulations, and substitutes.

Technical Assn. of the Pulp and Paper Industry. Analysis of Sodium Hydroxide (Caustic Soda). Standard T 613 m-44; 1944. For standard commercial solid, flake, ground, and liquid material. Covers sampling, apparatus, preparation of solution, total alkali, sodium hydroxide, sodium carbonate, alkalies by double titration, sodium chloride, and sodium sulphate.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Sodium Hydroxide (Caustic Soda). Description, solubility, identification, reaction, heavy metals, potassium, insoluble substances and organic matter, assay, and storage.

U. S. Gov., Army Air Forces. Specification 31315; 1943. Powders; Sodium Hydroxide, Film Reversal (for Photographic Use).

U. S. Gov., Federal Specification P-S-631a; 1939. Soda; Caustic (Lye), (for Cleaning Purposes). Covers one grade in flake, ground, or lump form. Gives requirements for sodium hydroxide and for carbonate; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., Navy Dept. Specification 51S7; 1913. Soda; Caustic, Smokeless Powder.

U. S. Gov., Navy Dept. Specification 51S26b; 1938. Soda Lime.

U. S. Gov., Treasury Dept., Procurement Div., No. 638; 1943. Sodium hydroxide (for Photographic Purposes). Covers one type and one grade of flake, granular, or pellet form and shall not be caked in the container. Gives requirements for sodium hydroxide content, sodium carbonate content, and chlorides; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 4-1006A; 1936. Sodium Hydroxide for Use in Recoil Mechanisms.

U. S. Gov., U. S. Army, Signal Corps. Specification 75-15; 1923. Soda; Caustic.

*References.*—Unit weights, labeling of poisons, *see* 832; Food and Drugs Act and Regulations, *see* 810.

## 834.9 MISCELLANEOUS SODIUM COMPOUNDS

American Chemical Society. Specifications for Analytical Reagents, 1941. Potassium and Sodium Tartrate. Gives requirements for insoluble matter, neutrality, chloride, phosphate, sulfate, ammonia, calcium, heavy metals, iron, and tests.

American Chemical Society. Specifications for Analytical Reagents, 1941. Sodium Acetate. Gives requirements for insoluble matter, neutrality, chloride, phosphate, sulfate, calcium, magnesium, and ammonium hydroxide precipitate; heavy metals, iron, substances reducing permanganate, and tests.

American Chemical Society. Specifications for Analytical Reagents, 1941. Sodium Bismuthate. Gives requirements for assay, chloride, manganese, and tests.

American Chemical Society. Specifications for Analytical Reagents, 1941. Sodium Bisulfate; Fused. Gives requirements for acidity, insoluble matter and ammonium hydroxide precipitate, chloride, phosphate, arsenic, calcium, and magnesium precipitate; heavy metals, iron, and tests.

American Chemical Society. Specifications for Analytical Reagents, 1941. Sodium Chloride. Gives requirements for insoluble matter, neutrality, chlorate and nitrate, nitrogen compounds, phosphate, sulfate, ammonium hydroxide precipitate, barium, calcium, and magnesium precipitate; heavy metals, iron, potassium, and tests.

American Chemical Society. Specifications for Analytical Reagents, 1941. Sodium Fluoride. Gives requirements for insoluble matter, chloride, free acid, free alkali, sodium fluosilicate, sulfate, sulfite, heavy metals, iron, and tests.

American Chemical Society. Specifications for Analytical Reagents, 1941. Sodium Metal. Gives requirements for chloride, nitrogen, phosphate, sulphate, heavy metals, iron, and tests.

American Chemical Society. Specifications for Analytical Reagents, 1941. Sodium Nitrite. Gives requirements for insoluble matter, assay, chloride, sulfate, calcium, heavy metals, iron, potassium, and tests.

American Chemical Society. Specifications for Analytical Reagents, 1941. Sodium Nitroferricyanide. Gives requirements for insoluble matter, chloride, sulfate, and tests.

American Chemical Society. Specifications for Analytical Reagents, 1941. Sodium Oxalate. Gives requirements for moisture, insoluble matter, chloride,

sulfate, neutrality, iron, potassium, substances darkened by hot sulfuric acid, and tests.

American Chemical Society. Specifications for Analytical Reagents, 1941. Sodium Peroxide. Gives requirements for assay, chloride, nitrogen compounds, phosphate, sulfate, heavy metals, iron, and tests.

American Chemical Society. Specifications for Analytical Reagents, 1941. Sodium phosphate; Dibasic (Disodium Hydrogen Phosphate). Gives requirements for insoluble matter, neutrality chloride, nitrogen compounds, sulfate, arsenic, heavy metals, iron, and tests.

American Chemical Society. Specifications for Analytical Reagents, 1941. Sodium Sulfate; Annydrous. Gives requirements for insoluble matter, loss on ignition, neutrality, chloride, nitrogen compounds, arsenic, calcium, magnesium, and ammonium hydroxide precipitate; heavy metals, iron, and tests.

American Chemical Society. Specifications for Analytical Reagents, 1941. Sodium Sulfide. Gives requirements for appearance, ammonium compounds, sulfite, thiosulfate, iron, and tests.

American Chemical Society. Specifications for Analytical Reagents, 1941. Sodium Sulfite; Anhydrous. Gives requirements for assay, insoluble matter, free acid, free alkali, chloride, arsenic, heavy metals, iron, and tests.

American Chemical Society. Specifications for Analytical Reagents, 1941. Sodium Thiosulfate. Gives requirements for insoluble matter, sulfate and sulfite, sulfide, neutrality, and tests.

American Chemical Society. Specifications for Analytical Reagents, 1941. Sodium Tungstate. Gives requirements for insoluble matter, alkalinity, chloride, molybdenum, nitrogen compounds, sulfate, heavy metals, and tests.

American Hospital Assn., 7-43. Technical Trisodium Phosphate (Phosphate Cleaner). Covers one grade and either granular, flake or crystalline. Based on U. S. Gov. Federal Specification O-T-671a.

American Institute of Homoeopathy. Homoeopathic Pharmacopoeia of U. S., 1941. Sodium Arsenate. Sodium Bromid, Sodium Chlorid, Sodium Hypophospnite, Sodium Phosphate, Sodium Salicylate, Sodium Sulfate, Sodium Sulfite, and Sodium Solfo-Carbolate. Chemical symbol, synonyms, description, and preparations for triturations for use in homoeopathic medicines.

American Leather Chemists Assn. Methods of Sampling and Analysis. Sodium Bisulfite (Sodium Metabisulfite), 1942. Gives general requirements and procedure.

American Leather Chemists Assn. Methods of Sampling and Analysis. Sodium Chloride, 1942. Gives requirements for water, inorganic insoluble matter, examination of insoluble matter, iron, colorimetric test for iron, aluminum, calcium, magnesium, sulfates, and chlorides.

American Leather Chemists Assn. Methods of Sampling and Analysis. Sodium Dichromate, 1942. Gives requirements for chromium as chromic trioxide, free chromic acid, sodium dichromate, and sodium chromate.

American Leather Chemists Assn. Methods of Sampling and Analysis. Sodium Sulfate and Sodium Acid Sulfate, 1942. Gives requirements for insoluble matter, iron and aluminum, calcium, magnesium, sulfates, chlorides, and free acid.

American Leather Chemists Assn. Methods of Sampling and Analysis. Sodium Sulfide, 1942. Gives requirements for sodium sulfide, iron, and sodium sulfite-sodium thiosulfate.

American Leather Chemists Assn. Methods of Sampling and Analysis. Sodium Sulfite, 1942. Gives requirements for total sulfur dioxide, sulfurous acid, bisulfite, sulfite, free alkali, carbonate, insoluble matter, iron and aluminum, calcium, magnesium, sulfates, and chlorides.

The American Pharmaceutital Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Ampuls of Sodium Cacodylate. Gives chemical composition, assay, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Ampuls of Sodium Iodide. Gives chemical composition, assay, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Ampuls of Sodium Salicylate. Gives chemical composition, assay, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Ampuls of Sodium Salicylate and Iodide. Gives chemical composition, assay for sodium salicylate and for sodium iodide, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Ampuls of Sodium Salicylate and Iodide With Colchicine. Gives chemical composition, identification, assay for sodium salicylate and for sodium iodide, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Ampuls of Sodium Thiosulfate (Ampuls of Sodium Hyposulfite). Gives chemical composition, assay, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Caffeine With Sodium Salicylate. Gives chemical composition, preparation, assay for caffeine and for sodium salicylate, storage, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Compound Elixir of Sodium Salicylate. Gives chemical composition, storage, alcohol content, preparation, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Diluted Solution of Sodium Hypochlorite (Modified Dakin's Solution). Gives chemical composition, description, specific gravity, total solids, alkalinity, assay, storage, and preparation.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Elixir of Calcium and Sodium Glycerophosphates. Gives chemical composition, preparation, storage, alcohol content, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Elixir of Sodium Bromide. Gives chemical composition, assay, storage, alcohol content, preparation, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Elixir of Sodium Salicylate. Gives chemical composition, assay, storage, alcohol content, preparation, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Elixir of Sodium Thiocyanate (Elixir of Sodium Sulfocyanate). Gives chemical composition, storage, alcohol content, preparation, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Exsiccated Sodium Arsenate. Gives chemical composition, description, solubility, identification, loss on drying, reaction, nitrate, limit of arsenite; lead, copper, or iron; assay, storage, preparation, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Exsiccated Sodium Sulfate. Gives chemical composition, description, solubility, identification, loss on drying, reaction, chloride, arsenic, calcium, heavy metals, magnesium, assay, storage, preparations, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Honey of Rose and Sodium Borate (Honey of Rose and Borax). Gives chemical composition and preparation.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. N. F. Aromatic Sodium Perborate. Gives chemical composition, preparation, and storage.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Sodium Acetate. Gives chemical composition, description, solubility, identifications, loss on drying, free alkali, arsenic, heavy metals, potassium compounds, assay, storage, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Sodium Glycerophosphate. Gives chemical composition, description, solubility, identifications, reaction, free alkali, alcohol-soluble impurities, phosphate, arsenic, heavy metals, assay, storage, preparations, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Sodium Hypophosphite. Gives chemical composition, description, solubility, identification, loss on drying, reaction, free alkali, carbonate, phosphate, arsenic, calcium, heavy metals, assay, storage, preparations, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Sodium Thiocyanate (Sodium Sulfocyanate or Sodium Rhodanate). Gives chemical composition, description, solubility, identification, loss on drying, reaction, chloride, cyanide, sulfate, ammonium salts, arsenic, heavy metals, assay, storage, preparation, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Solution of Sodium Arsenate. Gives chemical composition, description, identification, reaction, assay, storage, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Solution of Sodium Citrate (Potio Riverii, Mistura Sodii Citratis). Gives chemical composition, description, identifications, reaction, assay, storage, average dose, and preparation.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Solution of Sodium Phosphate. Gives chemical composition, description, specific gravity, identification, reaction, arsenic, heavy metals, assay, storage, average dose, and preparation.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Tablets of Caffeine With Sodium Benzoate. Gives chemical composition, identifications, assay, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Tablets of Methenamine and Sodium Biphosphate (Tablets of Methenamine and Acid Sodium Phosphate). Gives chemical composition, edentifications, aluminum and calcium, ammonium salts, assay, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Tablets of Sodium Bromide. Gives chemical composition, identification, chloride, assay, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Theobromine With Sodium Salicylate. Gives chemical composition, description, solubility, identifications, loss on drying, water-insoluble substances, reaction, carbonate, caffeine, assay for theobromine and for salicylic acid, storage, and average dose.

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering. Specifications for Salt To Be Used in Regeneration of Zeolite Water Softening Plants. Covers crushed rock salt and evaporated salt. Gives requirements for chemical and physical properties, tests, packing, marking, inspection, penalization, and rejection.

American Society for Testing Materials, D 457-39; 1939. Modified Soda (Sesquicarbonate Type). For common laundry soda used for washing, cleaning, and scouring, with or without soap, where a mildly alkaline material is desired; in crystal or powder form. Requirements for sodium carbonate and sodium bicarbonate, chemical composition, and tests using A.S.T.M. Method D 501.

American Society for Testing Materials, D 537-41; 1941. Sodium Metasilicate. For various washing,

cleaning, and scouring processes, with or without soap, where a moderately strong alkaline material is desired. Gives chemical composition, basis of purchase, and methods of sampling and analysis.

American Society for Testing Materials, D 538-44; 1944. Trisodium Phosphate. Covers material suitable for various washing, cleaning, and scouring processes, with or without soap, where a moderately strong alkaline material is desired. Covers a white uniform product in either flake, granular, or crystalline form. Gives requirements for chemical composition, bases of purchase, and methods of sampling and testing.

American Society for Testing Materials, D 594-41; 1941. Sodium Sesquisilicate. A strongly alkaline material for washing, cleaning, and scouring processes, with or without soap. Requirements for light colored, uniform, granular product. Chemical composition, basis of purchase, and methods of sampling and analysis.

American Society for Testing Materials, D 595-44 T; 1944. Tentative Specifications for Tetrasodium Pyrophosphate (Anhydrous). A mildly alkaline material with water softening properties for washing, cleaning, and scouring processes with soap or other detergents. Requirements for a white uniform product in granular or powdered form and chemical composition.

American Society for Testing Materials, D 632-43; 1943. Sodium Chloride. Covers sodium chloride to be used for road purposes. Gives requirements for chemical composition, grading, packing, marking, inspection, and rejection.

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis, 1940. Waters, Brine, and Salt. Brine, Tentative Methods. Determination of iodine in presence of chlorine and bromine, of bromine in presence of chlorine but not iodine, and of bromine in presence of chlorine and iodine.

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis, 1940. Waters, Brine, and Salt. Salt. Tentative methods for determination of moisture, matters insoluble in water, sulphate, calcium, and magnesium.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, 1938. Salt Cake. Covers definition, uses, grades, and containers.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, 1938. Sodium Acetate. Covers definition, constants, derivation, solubility, specifications, uses, grades, and packing.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, 1938. Sodium Aluminate. Covers definition, constants, grades, solubility, derivation, uses, and containers.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, 1938. Sodium Bifluoride. Covers definition, constants, specifications, solubility, derivation, uses, and containers.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, 1938. Sodium Fluoride. Covers definition, constants, derivation, grades, specifications, containers, and uses.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, 1938. Sodium Sulphide. Covers definition, constants, derivation, solubility, purity, uses, grades, packing, and shipping regulations.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, Volume 2; 1944. Disodium Phosphate. Covers definition, constants, acidity, solubility, derivation, grades, containers, and uses.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, Volume 2; 1944. Sodium Alginate (Algin). Covers definition, solubility, reaction, uses, derivation, forms, containers, and substitutes.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, Volume 2; 1944. Sodium Chlorite. Covers definition, constants, solubility, stability, uses, grades, packing, hazards, and substitutes.

Technical Assn. of the Pulp and Paper Industry. Analysis of Salt Cake. Standard T 619 m-44; 1944. Salt Cake is an anhydrous sodium sulphate which contains varying amounts of impurities. Covers preparation of sample, complete analysis, and short analysis.

Technical Assn. of the Pulp and Paper Industry. Analysis of Sodium Hydrosulphite. Standard T 622 m-42; 1942. Used as a reducing agent and formed by treating solutions of sodium bisulphite with zinc dust. Covers reagents, sampling, procedure, report, and additional information.

Technical Assn. of the Pulp and Paper Industry. Determination of Sodium by the Uranyl Zinc Acetate Method. Tentative Standard T 623 m-44; 1944. This method is particularly applicable to chemical inventories of soluble sodium compounds about a mill on account of its speed. Covers apparatus, reagents, preparation of sample, procedure, calculation, precision, and notes.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Anticoagulant Solution of Sodium Citrate. Description, identification, hydrogen ion cencentration, limit of sodium chloride, assay for sodium citrate, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Barbital Sodium. Description, solubility, melting point, identification, loss on drying, carbonizable substances, reaction, chloride, sulfate, heavy metals, uncombined barbital, assay, and storage. U.S.P. product of barbital sodium—Tabellae Barbitali Sodici.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Barbital Sodium Tablets (Soluble Barbital Tablets). Identification, assay, storage, and sizes.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Caffeine and Sodium Benzoate. Description, solubility, identification, loss on drying, carbonizable substances, reaction, chlorinated compounds, heavy metals, assay for caffeine, assay for sodium benzoate, and storage. U.S.P. product of caffeine and sodium benzoate—Injectio Caffeinae et Sodii Benzoatis.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Caffeine and Sodium Benzoate Injections (Caffeine and Sodium

Benzoate Ampuls). Identification, assay for caffeine, assay for sodium benzoate, storage, and sizes.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Chloramine-T. Description, solubility, identification, carbonizable substances, reaction, assay, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Dextrose and Sodium Chloride Injection (Dextrose and Sodium Chloride Ampuls). Identification, heavy metals, assay for dextrose, assay for sodium chloride, pyrogens, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Diphenylhydantoin Sodium. Description, solubility, identification, reaction, loss on drying, clarity and color of solution, chloride, sulfate, heavy metals, assay, and storage. U.S.P. product of diphenylhydantoin sodium—Capsulae Diphenylhydantoini Sodici.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Diphenylhydantoin Sodium Capsules. Identification, assay, storage, and sizes.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Effervescent Sodium Phosphate. Preparation and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Exsiccated Sodium Phosphate (Dried Sodium Phosphate). Description, solubility, identification, loss on drying, other tests, assay, and storage. U.S.P. product of exsiccated sodium phosphate—Sodii Phosphas Effervescens.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Exsiccated Sodium Sulfite. Description, solubility, identification, reaction, thiosulfate, arsenic, heavy metals, assay, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Fluorescein Sodium (Soluble Fluorescein). Description, solubility, identification, loss on drying, chloride, sulfate, zinc, acriflavine, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Iodophthalein Sodium (Soluble Iodophthalein, Tetraiodophenolphthalein Sodium, Tetraiodophthalein Sodium, Tetiothalein Sodium). Description, solubility, identification, free phthalein, assay for tetraiodophenolphthalein, assay for iodine, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Isotonic Solution of Sodium Chloride (Physiological Salt Solution, Normal Saline Solution). Description, hydrogen ion concentration, identification, heavy metals, arsenic, assay, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Pentobarbital Sodium (Soluble Pentobarbital). Description, solubility, identification, loss on drying, carbonizable substances, reaction, chloride, sulfate, heavy metals, free pentobarbital, assay, and storage. U.S.P. products of pentobarbital sodium—Capsulae Pentobarbitali Sodici, Tabellae Pentobarbitali Sodici.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Pentobarbital Sodium Capsules (Soluble Pentobarbital Capsules). Identification, assay, storage, and sizes.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Pentobarbital Sodium Tablets (Soluble Pentobarbital Tablets). Identification, assay, storage, and sizes.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Phenobarbital Sodium (Soluble Phenobarbital, Soluble Phenobarbitone). Description, solubility, identification, loss on drying, carbonizable substances, reaction, chloride, sulfate, heavy metals, free phenobarbital, assay, and storage. U.S.P. product of phenobarbital sodium—Tabellae Phenobarbitali Sodici.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Phenobarbital Sodium Tablets (Soluble Phenobarbital Tablets). Identification, assay, storage, and sizes.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Phenolsulfonphthalein Injection (Phenolsulfonphthalein Ampuls). Identification, sensitiveness, assay, storage, and sizes.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Potassium and Sodium Tartrate (Rochelle Salt). Description, solubility, identification, loss on drying, reaction, ammonia, heavy metals, assay, and storage. U.S.P. product of potassium and sodium tartrate—Pulveres Effervescentes Compositi.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Saccharin Sodium (Soluble Saccharin, Soluble Gluside, Sodium Benzosulfimide). Description, solubility, identification, reaction, heavy metals, benzoate and salicylate, other tests, and storage. U.S.P. product of saccharin sodium—Tabellae Saccharini Sodici.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Sodium Benzoate. Description, solubility, identification, loss on drying, alkalinity, heavy metals, chlorinated compounds, assay, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Sodium Biphosphate (Sodium Dihydrogen Phosphate, Monosodium Orthophosphate, Sodium Acid Phosphate). Description, solubility, identification, loss on drying, reaction, free acid and disodium phosphate, chloride, sulfate, ammonium, calcium, arsenic, heavy metals, assay, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Sodium Bromide. Description, solubility, identification, loss on drying, alkalinity, bromate, iodide, sulfate, arsenic, barium, heavy metals, assay, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Sodium Cacodylate. Description, solubility, melting temperature, identification, monomethylarsenate, arsenate or phosphate, chloride, sulfate, alkalinity or acidity, assay, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Sodium Chloride.

Description, solubility, identification, reaction, iodide or bromide, barium, calcium and magnesium, arsenic, heavy metals, assay, and storage. U.S.P. products of sodium chloride—Injectio Dextrosi et Sodii Chloridi, Liquor Chloridorum Trium Isotonicus, Liquor Sodii Chloridi Isotonicus.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Sodium Citrate. Description, solubility, identification, loss on drying, reaction, tartrate, arsenic, heavy metals, assay, and storage. U.S.P. product of sodium citrate—Liquor Sodii Citratis Anticoagulans.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Sodium Iodide. Description, solubility, identification, loss on drying (iodate, nitrite, thiosulfate, and barium), (nitrite, nitrate, and ammonia), alkalinity, heavy metals, potassium, assay, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Sodium Nitrite. Description, solubility, identification, loss on drying, reaction, heavy metals, assay, and storage. U.S.P. product of sodium nitrite—Tabellae Sodii Nitritis.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Sodium Nitrite Tablets. Identification, assay, storage, and sizes.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Sodium Perborate. Description, solubility, identification, heavy metals, assay, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Sodium Phosphate. Description, solubility, identification, loss on drying, insoluble substances, reaction, chloride, sulfate, arsenic, heavy metals, assay, and storage. U.S.P. products of sodium phosphate—Sodii Phosphas Effervescens, Sodii Phosphas Exsiccatus.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Sodium Salicylate. Description, solubility, identification, loss on drying, reaction, sulfite or thiosulfate, heavy metals, assay, and storage. U.S.P. product of sodium salicylate—Tabellae Sodii Salicylatis.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Sodium Salicylate Tablets. Identification, assay, storage, and sizes.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Sodium Stearate. Description, solubility, identification, loss on drying, alcohol-insoluble substances, reaction, free alkali and free acids, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Sodium Sulfate (Glauber's Salt). Description, solubility, identification, loss on drying, reaction, arsenic, heavy metals, assay, and storage.

U. S. Pharmacopoeial Convention Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Sodium Thiosulfate (Sodium Hyposulfite). Description, solubility, identification, loss on drying, reaction, arsenic, calcium, heavy metals, assay, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Solution Sodium Hypochlorite. Description, identification, assay, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Sulfobromophthalein Sodium. Description, solubility, identification, loss on drying, sensitiveness, color and completeness of solution, halide ion, sulfate, arsenic, and storage. U.S.P. product of sulfobromophthalein sodium—Injectio Sulfobromophthaleini Sodici.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Sulfobromophthalein Sodium Injection (Sulfobromophthalein Sodium Ampuls). Identification, sensitiveness, assay, storage, and sizes.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Theobromine and Sodium Acetate. Description, solubility, identification, reaction, alkalinity, color and completeness of solution, caffeine, assay, and storage. U.S.P. product of theobromine and sodium acetate—Capsulae Theobrominae et Sodii Acetatis.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Theobromine and Sodium Acetate Capsules. Identification, assay, storage, and sizes.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Theophylline and Sodium Acetate (Theophylline with Sodium Acetate). Description, solubility, identification, reaction, limit of caffeine, assay, and storage. U.S.P. Product of theophylline and sodium acetate—Tabellae Theophyllinae et Sodii Acetatis.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Theophylline and Sodium Acetate Tablets. Identification, assay, storage, and sizes.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Tryparsamide. Description, solubility, identification, distinction from sodium cacodylate, loss on drying, reaction, arsenate, arsanilic acid, arsphenamine compounds, assay, storage, and labeling.

U. S. Gov., Army Air Forces. Specification 14078-A; 1941. Dibasic Sodium Phosphate; Technical.

U. S. Gov., Army Air Forces. Specification 14126-1; 1945. Compound; Plater's Electrocleaning.

U. S. Gov., Army Air Forces. Specification No. 14134; 1945. Sodium Thiosulphate; Anhydrous (Photographic Hypo).

U. S. Gov., Army Air Forces. Specification 40337 (1); 1942. Salt, for Regeneration of Zeolite Water Softeners.

U. S. Gov., Army Air Forces. Specification, 40616-A (2); 1944. Packet; Fluorescein Dye, Sea Marker.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Circular C381; 1930. Sodium Oxalate as a Standard in Volumetric Analysis. Describes the preparation of sodium oxalate as a primary volumetric standard; tests for impurities, stability; recommended procedure for use in oxidimetry.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Circular C398 and Supplement, 1944. Standard Samples. Sodium Oxalate, Sample 40d. This sample is prepared and sold by the National Bureau of Standards with a certificate of analysis for use in industry and by others as a comparison standard for checking the accuracy of analysis of similar material.

U. S. Gov., Federal Specification O-S-595; 1944. Sodium-Dichromate; Technical Grade. Covers one type and one grade in crystalline form, intended for general use. Gives requirements for volatile matter, sodium-dichromate, water-insoluble matter, and particle size; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification O-S-601; 1930. Amendment 1; 1938. Sodium-Fluoride (Insecticide). Covers one grade. Gives detail requirements; method of sampling, inspection, and test; and requirements for packaging, packing, and marking. Emergency Alternate Federal Specification E-O-S-601; 1942, (issued by Procurement Div., Treasury Dept., U. S. Gov.) deletes requirements for metal cans.

U. S. Gov., Federal Specifications O-S-606; 1930. Sodium-Sulphite; Anhydrous (for) Photography. Covers one grade. Gives detail requirements; method of inspection, sampling, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Federal Specification O-S-616; 1941. Admendment 1; 1942. Sodium-Thiosulfate (Hyposulfite), Technical. Covers two grades—(A) granular and (B) pea crystals. Gives requirements for size and chemical composition; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification O-T-671a; 1940. Trisodium-Phosphate; Technical (Phosphate Cleaner). Covers one grade. Gives detail requirements; method of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., Navy Dept. Specification 51C29a; 1943. Chemicals; Testing, Dissolved-Oxygen.

U. S. Gov., Navy Dept. Specification 51C37; 1943. Compound; Soot-Remover.

U. S. Gov., Navy Dept. Specification 51 C 38; 1944. Chemicals; Fire-Retardant, for Lumber and Timber.

U. S. Gov., Navy Dept. Specification 51D12; 1944. Disodium-Phosphate; Anhydrous.

U. S. Gov., Navy Dept. Specification 51 S 36; 1943. Sodium-Chromate; Technical Corrosion Inhibiting.

U. S. Gov., Treasury Dept., Procurement Div., No.646; 1944. Sodium Citrate; Technical Grade. Covers one type and one grade in crystalline form intended for use in lithographic operations. Not intended for edible or medicinal uses. Gives requirements for sodium citrate content, volatile matter at 150° C., tartrate content, water insoluble material, and particle size; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Treasury Dept., Procurement Div., No.648; 1944. Sodium Chloride (for Photographic Purposes). Covers one type and one grade, in the form of white granules, suitable for photographic purposes. Gives requirements for moisture, chloride content, ammonium hydroxide precipitate, bromides and iodides, water insoluble material, and particle size; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Treasury Dept., Procurement Div., No.653; 1944. Sodium Sulphate; Anhydrous (for Photographic Purposes). Covers one type and one grade in granular form. Gives requirements for solubility, loss on ignition, neutrality, heavy metals, iron, hologens; and calcium, magnesium, and ammonium hydroxide precipitate; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Treasury Dept., Procurement Div., No.654; 1944. Sodium Sulfide (for Photographic Purposes). Covers one type and one grade in flake form. Gives requirements for volatile matter, sodium sulfide. iron, and solubility; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Treasury Dept., Procurement Div., No.659; 1944. Sodium Bisulfite (for Photographic Purposes). Covers one type and one grade in powdered form intended for photographic purposes. Gives requirements for sodium bisulfite content, sulfates, heavy metals, iron, calcium and magnesium, solubility, and particle size; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Treasury Dept., Procurement Div., No.694; 1944. Sodium Phosphates; Glassy (for Water Treatment Purposes). Covers one grade and two types: (I) 64 percent $P_2O_5$—Class A, granules or flakes and class B, beads or plates; and (II) 67 percent $P_2O_5$. Gives requirements for phosphate content, loss on heating, water-insoluble material, hydrogen-ion concentration, and particle size; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Treasury Dept., Procurement Div., No.698; 1944. Sodium Metaborate; Hydrated (for Photographic Purposes). Covers one type and grade in crystalline form. Gives requirements for loss in heating, sodium metaborate content, carbonates and bicarbonates, heavy metals, iron, bromides and iodides, water insoluble matter, and particle size; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Treasury Dept., Procurement Div., No.706; 1944. Sodium Oxalate; Technical Grade. Covers one type and grade in the form of white powder. Gives requirements for sodium oxalate content and acidity; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Treasury Dept., Procurement Div., No.717; 1945. Sodium Bisulfate, for Photographic Purposes. Covers one type and one grade of colorless crystals. Gives requirements for total acidity, water insoluble matter, heavy metals, and iron content; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., U. S. Army, Army Air Forces. Specification 4-1050; 1936. Sodium Metaphosphate.

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-280; 1943. Powder; Tropic, for Photographic Developers.

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-285; 1943. Powder; Hardening, Stop Bath, for Photographic Use.

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-286; 1943. Sodium Thiosulphate (for Photographic Use).

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-287; 1943. Powder; Hardener, Predeveloping, for Photographic Use.

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-300; 1943. Powder; Hardener, Fixing Bath, for Photographic Use.

U. S. Gov., U. S. Army, Chemical Warfare Service. Specification 4-503-336A; 1933. Sodium Acetate; Anhydrous.

U. S. Gov., U. S. Army, Chemical Warfare Service. Specification 4-503-370A; 1938. Sodium Thiosulfate (Technical).

U. S. Gov., U. S. Army, Medical Dept. Specification 4-1067; 1937. Sodium Phosphate; Dibasic, Anhydrous, Reagent Grade.

U. S. Gov., U. S. Army, Medical Dept. Specification 5-1123; 1944. Sodium Sulamyd; Packaged.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 50-11-95; 1940. Sodium Oxalate.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 4-2; 1919. Sodium Hyposulfite.

## 835. BARIUM COMPOUNDS

### 835.1 BARIUM CARBONATE

American Chemical Society. Specifications for Analytical Reagents, 1941. Barium Carbonate. Gives requirements for matter insoluble in hydrochloric acid, chloride, hydroxide and alkali carbonate, nitrate, sulfide, calcium and alkali salts, strontium and calcium salts, heavy metals, iron, and tests.

American Institute of Homoeopathy. Homoeopathic Pharmacopoeia of U. S., 1941. Barium Carbonate. Chemical symbol, synonyms, description, and preparations for triturations for use in homoeopathic medicines.

*References.*—Unit weights, *see* 830.

### 835.2 BARIUM CHLORIDE

American Chemical Society. Specifications for Analytical Reagents, 1941. Barium Chloride. Gives requirements for insoluble matter, nitrate and chlorate, alkali salts, strontium and calcium chlorides, heavy metals, and tests.

American Institute of Homoeopathy. Homoeopathic Pharmacopoeia of U. S., 1941. Barium Chlorid. Chemical symbol, synonyms, description, and preparations for triturations, tincture, dilutions, and medications for use in homeopathic medicines.

*References.*—Unit weights, *see* 830.

### 835.3 BARIUM DIOXIDE

### 835.4 BARIUM HYDROXIDE

American Chemical Society. Specifications for Analytical Reagents, 1941. Barium Hydroxide. Gives requirements for assay and carbonate, insoluble in hydrochloric acid, chloride, sulfide, calcium and alkali salts, heavy metals, iron, and tests.

*References.*—Unit weights, *see* 830.

### 835.5 BARIUM NITRATE

American Chemical Society. Specifications for Analytical Reagents, 1941. Barium Nitrate. Gives requirements for insoluble matter, chloride, calcium and alkali salts, calcium and strontium salts, heavy metals, iron, and tests.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 50-11-20B; 1942. Barium Nitrate.

*References.*—Unit weights, *see* 830.

### 835.6 BARIUM SULPHIDE

### 835.7 BARIUM IODIDE

American Institute of Homoeopathy. Homoeopathic Pharmacopoeia of U. S., 1941. Barium Iodid. Chemical symbol, synonyms, description, and preparations for triturations, tincture, dilutions, and medications for use in homoeopathic medicines.

### 835.8 BARIUM ACETATE

American Chemical Society. Specifications for Analytical Reagents, 1941. Barium Acetate. Gives requirements for insoluble matter, chloride, nitrate, alkali salts, calcium and strontium salts, heavy metals, iron, and tests.

American Institute of Homoeopathy. Homoeopathic Pharmacopoeia of U. S., 1941. Barium Acetate. Chemical symbol, synonyms, description, and preparations for solutions, dilutions, medications, and triturations for use in homoeopathic medicines.

### 835.9 MISCELLANEOUS BARIUM COMPOUNDS

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, Volume 2; 1944. Blanc Fixe (Barium Sulphate). Covers definition, constants, solubility, derivation, uses, grades and forms, containers, shipping, and substitutes.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Barium Sulfate. Description, solubility, bulkiness, identification, sulfide, acid-soluble substances, soluble barium salts, free acid or alkali, phosphate, arsenic, heavy metals, and storage.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 50-11-57; 1931. Barium Chlorate.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 50-11-68A; 1942. Barium Peroxide.

*References.*—Barium sulphate paint pigments, *see* 842.86, 842.87; Food and Drugs Act and Regulations, *see* 810.

## 836. BISMUTH COMPOUNDS

### 836.1 BISMUTH CHLORIDE

### 836.2 BISMUTH NITRATE

### 836.3 BISMUTH SUBNITRATE

American Institute of Homoeopathy. Homoeopathic Pharmacopoeia of U. S., 1941. Bismuth Sub-nitrate. Chemical symbol, synonyms, description, and preparations for triturations for use in homoeopathic medicines.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh

Edition, 1942. Tablets of Bismuth Subnitrate. Gives chemical composition, identifications, ammonium compounds, assay, and average dose.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Bismuth Subnitrate (Basic Bismuth Nitrate). Description, solubility, identification, reaction, loss on drying, carbonate, chloride, ammonia, alkalies and earths, arsenic, lead, copper, sulfate, silver, assay, and storage.

*References.*—Food and Drugs Act and Regulations, *see* 810.

### 836.4 BISMUTH TARTRATE

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Bismuth and Potassium Tartrate. Description, solubility, identification, alcohol-soluble extractive, arsenic, lead, assay, and storage. U.S.P. product of bismuth and potassium tartrate—Injectio Bismuthi et Potassii Tartartis.

### 836.9 MISCELLANEOUS BISMUTH COMPOUNDS

American Institute of Homoeopathy. Homoeopathic Pharmacopoeia of U. S., 1941. Bismuthous Oxid. Chemical symbol, synonyms, description, and preparations for triturations for use in homoeopathic medicines.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Bismuth Subgallate (Basic Bismuth Gallate or Dermatol). Gives chemical composition, description, solubility, identifications, nitrate; alkalies and earths; arsenic; lead, copper, or silver; free gallic acid, assay, storage, preparation, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Elixir of Bismuth. Gives chemical composition, preparation, storage, alcohol content, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Elixir of Pepsin and Bismuth. Gives chemical composition, storage, alcohol content, preparation, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Elixir of Pepsin, Bismuth, and Strychnine. Gives chemical composition, storage, alcohol content, average dose, and preparation.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Glycerite of Bismuth. Gives chemical composition, description, specific gravity, assay, storage, and preparations.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Magma of Bismuth (Milk or Cream of Bismuth). Gives chemical composition, description, miscibility, identifications, soluble salts, alkalies and earths, arsenic, lead, assay, storage, average dose, and preparations.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Paste of Bismuth (Beck's Bismuth Paste). Gives chemical composition, preparation, and storage.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Tablets of Bismuth Subcarbonate. Gives chemical composition, identification, alkaline earths, assay, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Tablets of Bismuth Subgallate. Gives chemical composition, identifications, alkaline earths, assay, and average dose.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Bismuth and Potassium Tartrate Injection (Bismuth and Potassium Tartrate Ampuls). Aqueous solution, identification, and assay. Oil suspension, identification, assay, storage, and sizes.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Bismuth Subcarbonate (Basic Bismuth Carbonate). Description, solubility, identification, loss on drying, alkalies and earths, chloride, nitrate, sulfate, lead, silver, arsenic, assay, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Bismuth Subsalicylate (Basic Bismuth Salicylate). Description, solubility, identification, loss on drying, alkalies and earths, nitrate, other tests, free salicylic acid, arsenic, assay, and storage. U.S.P. product of bismuth subsalicylate—Injectio Bismuthi Subsalicylatis.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Bismuth Subsalicylate Injection (Bismuth Subsalicylate Ampuls). Identification, assay, storage, and sizes.

*References.*—Unit weights, *see* 830; Food and Drugs Act and Regulations, *see* 810.

## 837. CHROMIUM AND MOLYBDENUM COMPOUNDS

### 837.0 GENERAL ITEMS

### 837.1 CHROMIUM POTASSIUM SULPHATE

American Chemical Society. Specifications for Analytical Reagents, 1941. Chromium and Potassium Sulfate. Gives requirements for insoluble matter, chloride, aluminum, ammonia, heavy metals, iron, and tests.

U. S. Gov., Treasury Dept., Procurement Div., No.688; 1944. Chromium-Potassium Sulfate (Chrome Alum), for Photographic Purposes. Covers one type and one grade in the form of dark violet-red particles. Gives requirements for aluminum content, iron content, heavy metals content, water-insoluble matter, loss on heating, and particle size; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

### 837.2 CHROMIUM TRIOXIDE

American Chemical Society. Specifications for Analytical Reagents, 1941. Chromium Trioxide. Gives requirements for assay, insoluble matter chloride, sulfate, alkali salts, iron, aluminum, barium, etc., and tests.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Chromium Trioxide. Description, solubility, identification, alkali salts, sulfate, assay, and storage.

*References.*—Unit weights, labeling of poisons, *see* 830; Food and Drugs Act and Regulations, *see* 810.

### 837.3 MOLYBDIC OXIDE

### 837.9 MISCELLANEOUS CHROMIUM AND MOLYBDENUM COMPOUNDS

American Society for Testing Materials, A 146-39; 1939. Molybdenum Salts and Compounds. Covers the standard grades of material, chemical composition requirements, sampling, and inspection.

American Standards Assn., Z 37.7-1943. U. S. Public Health Service, endorsing sponsor. Allowable Concentration of Chromic Acid and Chromates. To prescribe the maximum permissible concentration of chromic acid mist or dust from chromates or dichromates of the alkali or alkaline earth metals in the atmosphere of work places for guidance in establishing control procedures for the protection of the health of workers. Gives properties of chromic acid and soluble chromates, permissible concentration, sampling procedure, and analytical methods.

*References.*—Unit weights, *see* 830.

## 838. ALUMINUM COMPOUNDS

### 838.1 ALUMINUM HYDROXIDE (REFINED BAUXITE)

American Institute of Homoeopathy. Homoeopathic Pharmacopoeia of U. S., 1941. Aluminum Hydrate and Metallic Aluminum. Chemical symbol, synonyms, description, and preparations for triturations for use in homoeopathic medicines.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, 1938. Aluminum Hydrate. Covers definition, specifications, solubility, derivation, uses, and containers.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Aluminum Hydroxide Gel (Collodial Aluminum Hydroxide). Description, identification, reaction, acid-consuming capacity, chloride, sulfate, arsenic, heavy metals, assay, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Dried Aluminum Hydroxide Gel. Description, solubility, identification, reaction, acid-consuming capacity, chloride, sulfate, assay, and storage. U.S.P. product of dried aluminum hydroxide gel—Gelatum Alumini Hydroxidi.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Circular C398 and Supplement, 1944. Standard Samples. Bauxite, Sample 69. This sample is prepared and sold by the National Bureau of Standards with a certificate of analysis for use in industry and by others as a comparison standard for checking the accuracy of analysis of similar material.

### 838.2 ALUMINUM POTASSIUM SULPHATE (ALUM)

American Chemical Society. Specifications for Analytical Reagents, 1941. Aluminum and Potassium Sulfate. Gives requirements for insoluble matter, chloride, ammonia, arsenic, heavy metals, iron, and tests.

American Institute of Homoeopathy. Homoeopathic Pharmacopoeia of U. S., 1941. Alum. Chemical symbol, synonyms, description, and preparations for trituration and solution for use in homoeopathic medicines.

American Leather Chemists Assn. Methods of Sampling and Analysis. Alum, 1942. Gives requirements for insoluble matter, total soluble alumina, total iron, ferric iron, ferrous iron, sulfur trioxide, basic alumina, combined alumina, and total alumina.

Technical Assn. of the Pulp and Paper Industry. Analysis of Alum. Standard T 614 m-44; 1944. For papermakers grade of commercial and iron-free alum. Covers sampling; complete galvimetric analysis including insoluble matter, total soluble alumina, total iron, ferric iron, ferrous iron, foreign sulphates, sulphur trioxide, and final calculations; and routine analysis including insoluble matter, basic alumina, combined alumina, total alumina, and total iron and ferric iron.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Alum (Ammonium Alum, Potassium Alum). Description, solubility, identification, reaction, alkalies and earths, arsenic, heavy metals, iron, assay, and storage. U.S.P. product of alum—Alumen Exsiccatum.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Exsiccated Alum (Dried Alum, Burnt Alum). Description, solubility, identification, loss on drying, residue insoluble in water, alkalies and earths, arsenic, heavy metals, iron, assay, and storage.

U. S. Gov., Federal Specification O-A-421; 1935. Aluminum-Potassium-Sulfate (Potash-Alum), (for) Photographic Purposes. Covers one grade in two types—(A) crystals and (B) powder. Gives requirements for solubility, litmus paper test, sulfate, heavy metals; iron, sodium and potassium, and ammonia; methods of sampling, inspecting, and testing; and requirements for packaging, packing, and marking.

U. S. Gov., U. S. Army, Corps of Engineers. Specification 42.2-96; 1921. Alum; Powdered.

U. S. Gov., U. S. Army, Medical Dept. Specification 4-1061; 1937. Aluminum and Potassium Sulfate; Reagent Grade.

*References.*—Food and Drugs Act and Regulations, *see* 810.

### 838.3 ALUMINUM SULPHATE

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Aluminum Sulfate. Gives chemical composition, description, solubility, identification, loss on drying, reaction, free acid, alkalies and earths, ammonium salts, arsenic, heavy metals, iron, assay, storage, and preparations.

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering. Specifications for Sulphate of Alumina To Be Used in Water Treatment. Gives requirements for chemical properties, physical properties, and tests; packing and marking; and inspection and rejection.

American Water Works Assn. Emergency Alternate Specifications for Sulfate of Alumina, 1942. Covers chemical requirements, size of lumps or grains, packing and shipment, and sampling and testing. The A.W.W.A. standard specifications for sulfate of alumina will not apply until the war emergency is over.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, 1938. Aluminum Sulphate. Covers definition, constants, derivation, grades, impurities, uses, containers, and specifications for paper trade.

U. S. Gov., Treasury Dept., Procurement Div., No. 704; 1944. Aluminum Sulfate (Sulfate of Alumina), for Water and Sewage Treatment Purposes. Covers one type and one grade in granular form. Gives requirements for water insoluble matter, aluminum oxide content, iron oxide content, free acid, and particle size; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

*References.*—Food and Drugs Act and Regulations, *see* 810.

### 838.4 ALUMINUM AMMONIUM SULPHATE

### 838.5 ALUMINUM CHLORIDE

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Aluminum Chloride. Gives chemical composition, description, solubility, identification, reaction, sulfate, alkalies and earths, arsenic, heavy metals, iron, assay, storage, preparation, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Solution of Aluminum Chloride. Gives chemical composition, description, specific gravity, identification, assay, storage, and external use.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, Volume 2; 1944. Aluminum Chloride (Chloride of Alumina). Covers definition, constants, solubility, derivation, uses, grades, and containers.

U. S. Gov., U. S. Army, Chemical Warfare Service. Specification 4-503-20A; 1940. Aluminum Chloride; Anhydrous.

*References.*—Food and Drugs Act and Regulations, *see* 810.

### 838.6 ALUMINUM OXIDE

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, 1938. Alumina; Activated. Covers definition, constants, solubility, derivation, grades, purity, uses, and containers.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, 1938. Aluminum Oxide. Covers definition, constants, purity, derivation, uses, and containers.

*References.*—Aluminum oxide abrasives, *see* 541.0, 541.3, 541.4.

### 838.7 ALUMINUM FLUORIDE

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, 1938. Aluminum Fluoride. Covers description, constants, purity, solubility, derivation, uses, and containers.

### 838.9 MISCELLANEOUS ALUMINUM COMPOUNDS

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Kaolin. Gives chemical composition, description, solubility, identification, loss on ignition, acid-soluble substances, carbonate, iron, storage, and preparation.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Solution of Aluminum Acetate (Burow's Solution). Gives chemical compositions, preparation for each composition, description, specific gravity, identification, hydrogen-ion concentration, lead, limit for boric acid, assay for aluminum oxide and for acetic acid, storage, and average dilution for external use.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Solution of Aluminum Subacetate. Gives chemical composition, description, identification, reaction, limit for boric acid, assay for aluminum oxide and for acetic acid, storage, average dilution for external use, and preparation.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, 1938. Aluminum Monohydrate. Covers definition, specifications, solubility, derivation, uses, thermal conductivity, and containers.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, Volume 2; 1944. Kyanite. Covers definition, constants, derivation, uses, grades, containers, and substitutes.

U. S. Gov., Navy Dept. Specification 51A11; 1935. Aluminum Stearate.

*References.*—Aluminum bronze paint and powder, *see* 847.1.

## 839. CHEMICALS AND CHEMICAL COMPOUNDS NOT ELSEWHERE CLASSIFIED

### 839.0 GENERAL ITEMS

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Circular C398 and Supplement, 1940. Standard Samples. Arsenic Trioxide, Sample 83.

### 839.1 ACETONE

American Chemical Society. Specifications for Analytical Reagents, 1941. Acetone. Gives requirements for assay, boiling range, nonvolatile matter, solubility in water, acids, alkaline substances, aldehyde, substances reducing permanganate, and tests.

American Hospital Assn., 16-1. Acetone. Covers two grades. Based on U. S. Gov. Federal Specification O-A-51a.

American Society for Testing Materials, D 329-33; 1933. Acetone. Requirements for purity, specific gravity, color, distillation range, nonvolatile matter, water, acidity, water solubility, alkalinity, potassium permanganate test, in accordance with A.S.T.M. Method D 268 for testing.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, Volume 2; 1944. Acetone. Covers definition, constants, solubility, derivation, uses, grades, containers, hazards, shipping regulations, and substitutes.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Acetone. Description, solubility, specific gravity, boiling point, identification, nonvolatile residue, reaction, readily oxidizable substances, assay, and storage.

U. S. Gov., Federal Specification O-A-51a; 1933. Amendment 2; 1939. Acetone. Covers two grades—A and B. Gives detail requirements for each grade; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 50-11-32A; 1938. Acetone; Dimethylketone, for Use in the Manufacture of Smokeless Powder.

*Reference.*—Unit weights, *see* 830; Food and Drugs Act and Regulations, *see* 810; testing of lacquer solvents and diluents, *see* 822.0.

## 839.2 AMYL ACETATE

American Society for Testing Materials, D 318-39; 1939. Amyl Acetate (Synthetic) (85 to 88 Percent Grade). Gives limiting values for specific gravity, color, distillation range, nonvolatile matter, odor, water, acidity, and ester value, with requirements for tests in accordance with A.S.T.M. Method D 268.

American Society for Testing Materials, D 554-39; 1939. Amyl Acetate Made From Fusel Oil (85 to 88 Percent Grade). Covers allowable range for specific gravity, color, distillation range, nonvolatile matter, odor, water, acidity, and ester value, with tests using A.S.T.M. Method D 268.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, Volume 2; 1944. Amyl Acetate (Banana Oil; Isoamyl Acetate). Covers definition, constants, solubility, acidity, derivation, uses, grades, containers, hazards, shipping regulations, and substitutes.

*References.*— Methods of testing lacquer solvents and diluents, *see* 822.0.

## 839.3 COMPOUNDS, MIXTURES, AND SALTS OF METALS

### 839.30 General Items

American Wood-Preservers' Assn., 1d; 1944. Standard Methods of Analysis for Salt Preservatives. Gives general requirements for all classes of salts and determination of the following: insoluble material in zinc chloride, iron and aluminum in zinc chloride, chlorine in zinc chloride and chromated zinc chloride, zinc in zinc chloride, zinc in zinc meta arsenite, zinc in chromated zinc chloride, hexavalent chromium in Tanalith and chromated zinc chloride, total arsenic in Tanalith, trivalent arsenic in zinc meta arsenite, excess acetic acid in zinc meta arsenite, dinitrophenol in Tanalith, and sodium fluoride in Tanalith.

### 839.31 Antimony Compounds and Salts

American Institute of Homoeopathy. Homoeopathic Pharmacopoeia of U. S., 1941. Antimonious Arsenate, Antimonious Iodid, Antimonious Oxid, Antimonious Sulfid, Antimonious Sulfid (Yellow), Calcium Hypophosphite, and Potassium Antimonyl Tartrate. Chemical symbol, synonyms, description, and preparations for triturations for use in homoeopathic medicines.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Tincture of Antimony (Tincture of Tartar Emetic). Gives chemical composition, preparation, alcohol content, and average dose.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Antimony and Potassium Tartrate. Description, solubility, identification, reaction, arsenic, iron, assay, and storage.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 50-11-14C; 1943. Antimony Sulphide.

*References.*—Food and Drugs Act and Regulations, *see* 810.

### 839.32 Cobalt Compounds and Salts

American Chemical Society. Specifications for Analytical Reagents, 1941. Cobalt Nitrate (Not Low in Nickel). Gives requirements for insoluble matter, chloride, sulfate, alkalies and earths, copper, iron, nickel, and tests.

American Institute of Homoeopathy. Homoeopathic Pharmacopoeia of U. S., 1941. Metallic Cobalt. Chemical symbol, synonyms, description, and preparations for triturations for use in homoeopathic medicines.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, 1938. Cobalt Oxide. Covers definition, constants, solubility, derivation, impurities, other forms, range analysis, substitutes, containers, and uses.

*References.*— Unit weights, *see* 830.

### 839.33 Copper Compounds and Salts

American Chemical Society. Specifications for Analytical Reagents, 1941. Cupric Acetate; Normal. Gives requirements for insoluble matter, chloride, sulfate, alkali salts, iron, ammonium sulfide metals, and tests.

American Chemical Society. Specifications for Analytical Reagents, 1941. Cupric Ammonium Chloride. Gives requirements for insoluble matter, free acid, nitrate, sulfate, substances not precipitated by hydrogen sulfide, iron, and tests.

American Chemical Society. Specifications for Analytical Reagents, 1941. Cupric Nitrate. Gives requirements for insoluble matter, chloride, sulfate, alkali salts, iron, ammonium sulfide metals, and tests.

American Chemical Society. Specifications for Analytical Reagents, 1941. Cupric Oxide; Powdered. Gives requirements for insoluble in acid, carbon compounds, chloride, nitrogen, sulfate, free alkali, substances not precipitated by hydrogen sulfide, ammonium hydroxide precipitate, and tests.

American Chemical Society. Specifications for Analytical Reagents, 1941. Cupric Oxide—Wire Form. Gives requirements for carbon compounds, nitrogen, sulfur compounds, and tests.

American Chemical Society. Specifications for Analytical Reagents, 1941. Cupric Sulfate. Gives requirements for insoluble matter, chloride, substances not precipitated by hydrogen sulfide, ammonium hydroxide precipitate, ammonium sulfide metals other than iron, and tests.

American Chemical Society. Specifications for Analytical Reagents, 1941. Cuprous Chloride. Gives requirements for assay, insoluble in acid, sulfate, arsenic, substances not precipitated by hydrogen sulfide, and tests.

American Institute of Homoeopathy. Homoeopathic Pharmacopoeia of U. S., 1941. Cupric Acetate, Cupric Carbonate, Cupric Sulphate, Hydric Cupric Arsenite, and Metallic Copper. Chemical symbol, synonyms, description, and preparations for triturations for use in homoeopathic medicines.

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis, 1940. Insecticides and Fungicides. Copper Carbonate. Official method for determination of copper oxide.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Cupric Sulfate (Copper Sulfate). Description, solubility, identification, reaction, alkali and alkaline earths, assay, and storage.

U. S. Gov., Treasury Dept., Procurement Div., No.610; 1943. Cupric Sulfate; Technical Grade, Crystals. Covers one type and one grade intended for use in electroplating and batteries. Gives requirements for material, cupric sulfate content, insoluble matter, iron compounds, and particle size; sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 50-11-22A; 1938. Copper Sulfocyanate, for Use in Primer Composition.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 50-11-104; 1941. Oxide; Cupric.

*References.*—Unit weights, labeling of poisons, *see* 830; Food and Drugs Act and Regulations, *see* 810; testing canned foods for copper, *see* 120; copper base paint pigments, *see* 842.9; copper carbonate fungicide, *see* 881.9.

## 839.34 Iron Compounds and Salts

American Chemical Society. Specifications for Analytical Reagents, 1941. Ferric Ammonium Sulfate. Gives requirements for appearance, insoluble matter, chloride, copper, ferrous iron, material not precipitated by ammonium hydroxide, zinc, and tests.

American Chemical Society. Specifications for Analytical Reagents, 1941. Ferric Chloride. Gives requirements for insoluble matter, nitrate, phosphorus compounds, sulfate, arsenic, copper, ferrous iron, substances not precipitated by ammonium hydroxide, zinc, and tests.

American Chemical Society. Specifications for Analytical Reagents, 1941. Ferric Nitrate. Gives requirements for insoluble matter, chloride, sulfate, substances not precipitated by ammonium hydroxide, and tests.

American Chemical Society. Specifications for Analytical Reagents, 1941. Ferrous Ammonium Sulfate. Gives requirements for insoluble matter, phosphate, copper, ferric iron, manganese, material not precipitated by ammonium hydroxide, zinc, and tests.

American Institute of Homoeopathy. Homoeopathic Pharmacopoeia of U. S., 1941. Ferric Acetate, Ferric Chlorid, Ferro-Ferric Oxid, Ferroso-Ferric Phosphate, Ferrous Arsenate, Ferrous Bromid, Ferrous Carbonate, Ferrous Iodid, Ferrous Lactate, Ferrous Sulfate, and Iron by Hydrogen. Chemical symbol, synonyms, description, and preparations for triturations, tincture, solutions, and dilutions for use in homoeopathic medicines.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Ampuls of Green Iron and Ammonium Citrates. Gives chemical composition, assay, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Elixir of Beef and Iron. Gives chemical composition, preparation, storage, alcohol content, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Elixir of Gentian and Iron. Gives chemical composition, storage, alcohol content, average dose, and preparation.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Elixir of Iron, Quinine, and Strychnine. Gives chemical composition, preparation, storage, alcohol content, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Elixir of Iron, Quinine, and Strychnine Phosphates. Gives chemical composition, preparation, storage, alcohol content, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Ferric Glycerophosphate. Gives chemical composition, description, solubility, identification, loss on drying, reaction, chloride and sulfate, phosphate, arsenic, assay, storage, preparation, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Ferric Hypophosphite. Gives chemical composition, description, solubility, identification, loss on drying, carbonate and calcium, phosphate, sulfate, arsenic, assay, storage, preparation, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Gargle of Potassium Chlorate With Iron (Golden Gargle). Gives chemical composition, storage, alcohol content, and preparation.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Iron. Gives form, identification, arsenic, storage, and preparation.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Peptonized Iron. Gives description, solubility, identification, reaction, ionic iron, sugar, assay, storage, preparations, average dose, and chemical composition.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Pills of Ferrous Iodide. Gives chemical composition, preparation, tests for purity, storage, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh

Edition, 1942. Pills of Iron, Quinine, Strychnine and Arsenic (Aitken's Pills). Gives chemical composition, preparation, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Red Ferric Oxide. Gives chemical composition, description, solubility, particle size, loss on ignition, water-soluble substances and acid-insoluble substances, assay, storage, and preparation.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Saccharated Ferric Oxide (Ferrum Oxydatum Saccharatum or Eisenzucker). Gives chemical composition, ionic iron, assay, storage, average dose, and preparation.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Saccharated Ferrous Carbonate. Gives chemical composition, description, solubility, identifications, sulfate, assay, storage, and preparation.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Soluble Ferric Phosphate. Gives description, solubility, identifications, reaction, ammonium salts, assay, storage, preparation, average dose, and chemical composition.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Soluble Ferric Pyrophosphate. Gives description, solubility, identifications, reaction, phosphate, ammonium salts, arsenic, assay, storage, average dose, and chemical composition.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Solution of Ferric Chloride (Solution of Iron Perchloride). Gives chemical composition, description, miscibility, specific gravity, identification, alkali and alkaline earth salts, nitrate, ferrous salts, zinc or copper, assay for hydrochloric acid and for iron, storage, preparations, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Solution of Ferric Subsulfate (Solution of Basic Ferric Sulfate). Gives chemical composition, description, miscibility, specific gravity, identification, reaction, nitrate, ferrous salts, assay, storage, average dose, external use as a styptic, and preparation.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Solution of Ferric Sulfate (Solution of Iron Tersulfate). Gives chemical composition, description, miscibility, specific gravity, identification, nitrate, ferrous iron, assay, and storage.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Solution of Iron and Ammonium Acetate (Basham's Mixture). Gives chemical composition, description, identifications, reaction, assay for ammonia and for iron, storage, alcohol content, average dose, and preparation.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Solution of Peptonized Iron. Gives chemical composition, description, specific gravity, identifications, assay, storage, alcohol content, average dose, and preparation.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Solution of Peptonized Iron and Manganese. Gives chemical composition, description, specific gravity, identifications, assay for iron, storage, alcohol content, average dose, and preparation.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Syrup of Ferrous Iodide. Gives chemical composition, description, specific gravity, identification, free iodine, assay, storage, average dose, and preparation.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Tincture of Ferric Chloride (Tincture of Iron). Gives chemical composition, description, specific gravity, identifications, nitrate, assay, alcohol content, preparations, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Tincture of Ferric Citrochloride. Gives chemical composition, assay, alcohol content, preparations, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Yellow Ferric Oxide. Gives description, solubility, particle size, loss on ignition, water-soluble substances, acid-insoluble substances, assay, storage, preparation, and chemical composition.

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering. Specifications for Sulphate of Iron To Be Used in Water Treatment. Covers granular sugar sulphate of iron. Gives requirements for chemical properties and tests, packing and marking, and inspection and rejection.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Exsiccated Ferrous Sulfate (Dried Ferrous Sulfate). Description, solubility, identification, insoluble matter, assay, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Ferrous Sulfate (Iron Sulfate). Description, solubility, identification, reaction, free acid, copper and lead, assay, and storage. U.S.P. products of ferrous sulfate—Ferri Sulfas Exsiccatus, Tabellae Ferri Sulfatis.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Ferrous Sulfate Tablets. Identification, assay, storage, and sizes.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Green Iron and Ammonium Citrates. Description, solubility, identification, reaction, other tests, assay, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Iron and Ammonium Citrates. Description, solubility, identification, reaction, tartrate, ferric citrate, assay, and storage. U.S.P. product of iron and ammonium citrates—Capsulae Ferri et Ammonii Citratum.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Iron and Ammonium Citrates Capsules. Identification, assay, storage, and sizes.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Mass of Ferrous Carbonate (Vallet's Mass). Preparation, assay, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Pills of Ferrous Carbonate (Chalybeate Pills, Blaud's Pills, Ferruginous Pills). Preparation, assay, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Reduced Iron (Iron of Hydrogen). Description, identification, insoluble in diluted sulfuric acid, reaction, sulfide, arsenic, lead, assay, and storage.

U. S. Gov., Treasury Dept., Procurement Div., No. 647; 1944. Ferric Ammonium Oxalate; Technical Grade. Covers one type and one grade of green granules intended for use in the sensitizing of blue print paper. Gives requirements for ferric ammonium oxalate content, water insoluble matter, and particle size; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Treasury Dept., Procurement Div., No. 665; 1944. Ferrous Sulfate (for Photographic Purposes). Covers one type and one grade of bluish-green crystals or granules for wet plate photography. Gives requirements for water insoluble matter, ferrous sulfate, ferric iron, copper and zinc, and particle size; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Treasury Dept., Procurement Div., No. 695; 1944. Ferric Ammonium Citrate (Green); Technical Grade. Covers one type and one grade in the form of yellowish-green granules or scales. Gives requirements for iron content, water soluble matter, and particle size; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., U. S. Army, Chemical Warfare Service. Specification 4-503-190A; 1938. Ferrous Sulfide.

U. S. Gov., U. S. Army, Chemical Warfare Service. Specification 4-503-206; 1926. Hammer Scale (Magnetic Oxide of Iron).

*References.*—Unit weights, labeling of poisons, *see* 830; Food and Drugs Act and Regulations, *see* 810; iron oxide pigments for paints, *see* 841.4; ammonium sulphate, *see* 831.7.

## 839.35 Lead Compounds and Salts

American Chemical Society. Specifications for Analytical Reagents, 1941. Lead Acetate. Gives requirements for insoluble matter, chloride, nitrate, copper, iron, substances not precipitated by hydrogen sulfide, and tests.

American Chemical Society. Specifications for Analytical Reagents, 1941. Lead Carbonate. Gives requirements for insoluble in acetic acid, chloride, nitrate, alkalies and alkaline earths, iron, zinc, and tests.

American Chemical Society. Specifications for Analytical Reagents, 1941. Lead Chromate. Gives requirements for assay, soluble matter, carbon compounds, and tests.

American Chemical Society. Specifications for Analytical Reagents, 1941. Lead Dioxide. Gives requirements for assay, acid-insoluble matter, carbonate, chloride, nitrate, sulfate, manganese, other hydrogen sulfide metals, substances not precipitated by hydrogen sulfide, and tests.

American Chemical Society. Specifications for Analytical Reagents, 1941. Lead Nitrate. Gives requirements for insoluble matter, chloride, copper, iron, substances not precipitated by hydrogen sulfide, and tests.

American Chemical Society. Specifications for Analytical Reagents, 1941. Lead Subacetate. Gives requirements for assay of lead, insoluble in acetic acid, chloride, nitrate, substances not precipitated by hydrogen sulfide, copper, iron, and tests.

American Institute of Homoeopathy. Homoeopathic Pharmacopoeia of U. S., 1941. Metallic Lead, Plumbic Acetate, Plumbic Carbonate, Plumbic Chromate, and Plumbic Iodid. Chemical symbol, synonyms, description, and preparations for triturations, solution, dilutions, and medications for use in homoeopathic medicines.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Cerate of Lead Subacetate. Gives chemical composition, preparation, and storage.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Diluted Solution of Lead Subacetate (Lead Water). Gives chemical composition, description, identifications, reaction, copper or iron, assay, storage, and external use.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Lead Monoxide. Gives chemical composition, description, solubility, identification, loss on ignition, acetic acid-insoluble substances, alkaline earths, assay, storage, and preparations.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Ointment of Lead Oleate. Gives chemical composition, preparation, and storage.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Plaster of Lead Oleate (Lead Plaster or Diachylon Plaster). Gives chemical composition, storage, and preparation.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Solution of Lead Subacetate (Goulard's Extract). Gives chemical composition, description, specific gravity, identifications, reaction, alkaline earths, copper or iron, assay, storage, preparations, and average dilution for external use.

American Standards Assn., Z 37.11-1943. U. S. Public Health Service, endorsing sponsor. Allowable Concentration of Lead and Certain of Its Inorganic Compounds. To prescribe the permissible concentration of metallic lead, lead carbonate, lead sulfate, lead oxides, lead nitrate, and lead chloride in the atmosphere of work places for guidance in establishing control procedures for the protection of the health of workers. Gives toxic properties of lead, permissible concentration, sampling procedure, and analytical methods.

Industrial Hygiene Foundation of America, Inc. Preventive Engineering Series, Bulletin 2, Part 6; 1938. Determination of Lead in the Air. Covers collection of dust sample from the air, analysis of sample, typical example, and microscopic detection of lead.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, 1938. Basic Lead Carbonate; Dry and Paste (White Lead, *see* Basic Lead Sulphate). Covers definition, constants, solubility, grades, substitutes, containers, uses, and ordering instructions; also constants, derivation, grades, containers, uses, and ordering instructions for paste.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, 1938. Basic Lead Sulphate; Dry and Paste (White Lead; Sublimed White Lead, *see* Basic Lead Carbonate). Covers definition, constants, solubility, common form, occurrence, derivation, containers, uses, and ordering instructions.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, Volume 2; 1944. Lead Acetate (Sugar of Lead). Covers definition, constants, solubility, derivation, uses, grades, containers, hazards, and substitutes.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, 1938. Litharge. Covers definition, constants, derivation, grades, specifications, substitutes, containers, and uses.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Lead Acetate (Sugar of Lead). Description, solubility, identification, reaction, carbonate, alkali or earths, iron or copper, assay, and storage.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 50-11-13A; 1938. Lead Sulfocyanate.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 50-11-28A; 1938. Lead Oxide; Litharge, for Primer Composition.

*References.*—Unit weights, labeling of poisons, *see* 830; Food and Drugs Act and Regulations, *see* 810; lead arsenate, insecticide, *see* 881.11; lead pigments for paints, *see* 842.6.

## 839.36 Mercury Compounds and Salts

American Institute of Homoeopathy. Homoeopathic Pharmacopoeia of U. S., 1941. Cinnabar, Hahnemann's Soluble Mercury, Mercur-Ammonium Chlorid, Mercuric Chlorid, Mercuric Cyanid, Mercuric Iodid, Mercuric Nitrate, Mercuric Oxid, Mercuric Sulfate, Mercurous Chlorid, Mercurous Iodid, Mercury, and Potassium Mercuric Iodid. Chemical symbol, synonyms, description, and preparations for tincture, dilutions, medications, and triturations for use in homoeopathic medicines.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Ampuls of Mercuric Succinimide. Gives chemical composition, assay, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Compound Pills of Mild Mercurous Chloride (Compound Cathartic Pills). Gives chemical composition, preparation, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Mass of Mercury (Blue Mass or Blue Pill). Gives chemical composition, assay, storage, average dose, and preparation.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Merbromin. Gives chemical composition, description, solubility, identifications, loss on drying, bromine ions and mercury ions, assay for bromine and for mercury, storage, and preparations.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Ointment of Mercuric Nitrate (Citrine Ointment). Gives chemical composition, preparation, and storage.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Ointment of Mild Mercurous Chloride (Calomel Ointment). Gives chemical composition, preparation, and storage.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Ointment of Red Mercuric Oxide. Gives chemical composition, preparation, and storage.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Red Mercuric Iodide. Gives chemical composition, description, solubility, identifications, loss on drying, residue, residue insoluble in potassium iodide solution, soluble mercury salts, assay, storage, preparations, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Red Mercuric Oxide (Red Precipitate). Gives chemical composition, description, solubility, identification, loss on drying, residue, nitrate, assay, storage, and preparation.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Solution of Arsenic and Mercuric Iodides (Donovan's Solution). Gives chemical composition, description, identifications, assay for arsenic triiodide and for mercuric iodide, storage, average dose, and preparation.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Solution of Merbromin. Gives chemical composition, description, identifications, bromine ions, mercury ions; assay for merbromin, for bromine, and for mercury; and storage.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh

Edition, 1942. Surgical Solution of Merbromin. Gives chemical composition, preparation, description, identification, distinction from solution of merbromin, bromine ions, mercury ions, assay for each, total solids, bromine and mercury, and storage.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Tablets of Mild Mercurous Chloride (Calomel Tablets). Gives chemical composition, identifications, mercuric chloride, assay, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Tablets of Mild Mercurous Chloride and Sodium Bicarbonate (Calomel and Soda Tablets). Gives chemical composition, identifications, assay, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Tablets of Red Mercuric Iodide. Gives chemical composition, identifications, assay, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Tablets of Yellow Mercurous Iodide. Gives chemical composition, identifications, assay, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Yellow Mercurous Iodide. Gives chemical composition, description, solubility, identifications, loss on drying, residue on ignition, mercuric iodide, assay, storage, preparation, and average dose.

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis, 1940. Drugs. Mercuric Iodide in Tablets. Tentative method of determining the amount of mercuric iodide.

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis, 1940. Mercurous Iodide. Tentative method for determining amount of mercurous iodide in tablets.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Ammoniated Mercury (White Precipitate). Description, solubility, identification, residue on ignition, mercurous compounds, assay, and storage. U.S.P. product of ammoniated mercury—Unguentum Hydrargyri Ammoniati.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Ammoniated Mercury Ointment (White Precipitate Ointment). Preparation and assay.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Large Poison Tablets of Mercury Bichloride (Large Corrosive Sublimate Tablets, Large Bichloride Tablets). Regulations and assay.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Mercuric Salicylate. Description, solubility, identification, residue on ignition, alkali-insoluble substances, foreign mercury compounds, assay, and storage. U.S.P. product of mercuric salicylate—Injectio Hydrargyri Salicylatis.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Mercuric Salicylate Injection (Mercuric Salicylate Ampuls). Identification, assay, storage, and sizes.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Mercuric Succinimide. Description, solubility, identification, loss on drying, residue on ignition, reaction, chloride, mercury, assay, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Mercurophylline Injection. Description, identification, mercury ions, assay of mercury, assay of theophylline, storage, and sizes.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Mercury Bichloride (Corrosive Mercuric Chloride, Corrosive Sublimate, Mercuric Chloride). Description, solubility, identification, loss on drying, residue on ignition, ether-insoluble residue, reaction, assay, and storage. U.S.P. products of mercury bichloride—Toxitabellae Hydrargyri Bichloridi Magnae, Toxitabellae Hydrargyri Bichloridi Parvae.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Mercury with Chalk (Gray Powder). Description, identification, mercurous oxide, mercuric oxide, assay, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Mersalyl. Description, solubility, identification, reaction, chloride, sulfate, mercury ions, readily oxidizable substances, assay for mercury, and storage. U.S.P. product of mersalyl—Injectio Mersalylis et Theophyllinae.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Mersalyl and Theophylline Injection (Mersalyl and Theophylline Ampuls). Identification, reaction, mercuric ion, assay for mercury, assay for theophylline, storage, and sizes.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Mild Mercurial Ointment (Diluted Mercurial Ointment, Blue Ointment). Preparation and assay.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Mild Mercurous Chloride (Mercurous Chloride, Calomel, Subchloride of Mercury). Description, solubility, identification, loss on drying, residue on ignition, ammonia, mercury bichloride, assay, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Oleate of Mercury. Description, solubility, assay, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Small Poison Tablets of Mercury Bichloride (Small Corrosive Sublimate Tablets, Small Bichloride Tablets). Regulations and assay.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Strong Mercurial Ointment (Mercurial Ointment). Preparation and assay. U.S.P. product of strong mercurial ointment—Unguentum Hydrargyri Mite.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Yellow Mercuric Oxide (Yellow Precipitate). Description, solubility, identification, loss on drying, residue on ignition, acid-insoluble substances, alkali, distinction from red mercuric oxide, assay, and storage. U.S.P. product of yellow mercuric oxide—Unguentum Hydrargyri Oxidi Flavi.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Yellow Mercuric Oxide Ointment. Preparation and assay.

U. S. Gov., Treasury Dept., Procurement Div., No. 683; 1944. Mercuric Chloride (for Photographic Purposes). Covers one type and one grade in the form of colorless crystals, white granules, or powder. Gives requirements for ether-insoluble matter and residue on heating; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 50-11-103; 1941. Calomel.

*References.*—Unit weights, labeling of poisons, *see* 830; Food and Drugs Act and Regulations, *see* 810; mercury base paint pigments, *see* 842.9; mercurial seed disinfectants, *see* 881.9.

## 839.37 Silver Compounds and Salts

American Chemical Society. Specifications for Analytical Reagents, 1941. Silver Nitrate. Gives requirements for insoluble matter, chloride, free acid, substances not precipitated by hydrochloric acid, sulfate, and tests.

American Chemical Society. Specifications for Analytical Reagents, 1941. Silver Sulfate. Gives requirements for insoluble and chloride, nitrate, substances not precipitated by hydrochloric acid, iron, and tests.

American Institute of Homoeopathy. Homoeopathic Pharmacopoeia of U. S., 1941. Argentum Chlorid, Argentum Cyanid, Argentum Iodid, Argentum Nitrate, Argentum Oxid, Argentum Phosphate, and Metallic Silver. Chemical symbol, synonyms, description, and preparations for solution, dilutions, and triturations for use in homoeopathic medicines.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Ammoniacal Solution of Silver Nitrate. Gives chemical composition, description, specific gravity, identifications, reaction, copper, potassium and sodium, assay for silver and for ammonia, storage, oral use, and preparation.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Mild Protein Silver. Description, solubility, identification, distinction from strong protein silver, assay, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Silver Nitrate. Description, solubility, identification, clarity of solution and reaction, copper, assay, and storage. U.S.P. product of silver nitrate—Argenti Nitras Induratus.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Strong Protein Silver. Description, solubility, identification, distinction from mild protein silver, assay, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Toughened Silver Nitrate. Description, solubility, reaction, other tests, assay, and storage.

U. S. Gov., Treasury Dept. Procurement Div., 701a; 1944. Silver Nitrate (for Wet Plate Photography). Covers one type and one grade in crystalline form. Gives requirements for silver nitrate content, acidity, insoluble matter, lead, copper, iron, chlorides, and bromides and iodides; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., U. S. Army, Medical Dept. Specification 4-1102A; 1941. Silver Nitrate and Formalin, for Howe's Treatment.

*References.*—Unit weights, labeling of poisons, *see* 830; Food and Drugs Act and Regulations, *see* 810.

## 839.38 Zinc Compounds and Salts

American Chemical Society. Specifications for Analytical Reagents, 1941. Zinc Chloride. Gives requirements for assay, oxychloride, insoluble matter, nitrate, sulfate, ammonia, iron, lead, substances not precipitated by ammonium sulfide, and tests.

American Chemical Society. Specifications for Analytical Reagents, 1941. Zinc, Low in Arsenic. Gives requirements for arsenic, iron, insoluble in sulfuric acid, and tests.

American Chemical Society. Specifications for Analytical Reagents, 1941. Zinc, Low in Lead and Iron. Gives requirements for arsenic, iron, lead, and tests.

American Chemical Society. Specifications for Analytical Reagents, 1941. Zinc Oxide. Gives requirements for insoluble in sulfuric acid, alkalinity, chloride, nitrate, sulfur compounds, arsenic, iron, lead, manganese, substances not precipitated by ammonium sulfide, and tests.

American Chemical Society. Specifications for Analytical Reagents, 1941. Zinc Sulfate. Gives requirements for insoluble matter, free acid, chloride, nitrate, ammonia, arsenic, iron, manganese, substances not precipitated by ammonium sulfide, and tests.

American Institute of Homoeopathy. Homoeopathic Pharmacopoeia of U. S., 1941. Argentum Cyanid, Argentum Iodid, Argentum Chlorid, Argentum Oxid, Argentum Phosphate, Metallic Silver, Metallic Zinc, Zinc Acetate, Zinc Bromid, Zinc Carbonate, Zinc Chlorid, Zinc Cyanid, Zinc Iodid, Zinc Oxid, Zinc Phosphid, Zinc Sulfate, and Zinc Valerate. Chemical symbol, synonyms, description, and preparations for triturations for use in homoeopathic medicines.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Cement of Zinc Compounds and Eugenol. Gives chemical compositions of powder and liquid, preparations of the powder, liquid, and cement. The powder—gives description, identifications, assay for rosin and for total zinc as zinc oxide, and storage. The liquid—gives description, miscibility, specific gravity, index of refraction, identification, and storage.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh

Edition, 1942. Compound Powder of Zinc Sulfate. Gives chemical composition, test for antiseptic value, storage, and preparation.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Glycerite of Iodine and Zinc Iodide (Diluted Talbot's Solution). Gives chemical composition, preparation, and storage.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Hard Paste of Zinc Oxide (Unna's Hard Zinc Paste). Gives chemical composition and storage.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Ointment of Zinc Stearate. Gives chemical composition, preparation, and storage.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Paste of Zinc Oxide. Gives chemical composition, assay, storage, and preparation.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Paste of Zinc Oxide With Salicylic Acid. Gives chemical composition, assay, storage, and preparation.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Prepared Calamine. Gives chemical composition, description, solubility, identification, loss on ignition, acid-insoluble substances, alkaline substances, calcium; calcium or magnesium, arsenic, lead, assay, storage, and preparations.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Prepared Neocalamine. Gives chemical composition, description, solubility, identification, loss on ignition, acid-insoluble substances, degree of fineness, alkalies, calcium, calcium or magnesium, arsenic, lead, assay, storage, and preparations.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Soft Paste of Zinc Oxide (Unna's Soft Zinc Paste). Gives chemical composition, preparation, and storage.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Zinc Iodide. Gives chemical composition, description, solubility, identifications, loss on drying, reaction, chloride, sulfate, alkalies and earths, arsenic, assay, storage, and preparation.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Zinc Phenolsulfonate (Zinc Sulfocarbolate). Gives chemical composition, description, solubility, identifications, reaction, sulfate, arsenic, assay, storage, and average dose.

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering, 1926. Methods of Chemical Analysis of Zinc Chloride. Gives preparation and standardization of solutions, determination of insoluble or basic zinc chloride, determination of zinc, estimation of iron and alumina, determining the strength of zinc chloride solution, directions for the use of iodine potassium ferricyanide starch, color reaction test for determining zinc chloride penetration, and determination of zinc in treated timbers.

American Society for Testing Materials, D 199-27; 1927. Methods of Chemical Analysis of Zinc Chloride. For determination of insoluble basic zinc chloride, zinc chloride, and iron present in commercial concentrated solutions, or in fused, or granulated zinc chloride for use in the preservative treatment of wood. Solutions required, volumetric and gravimetric methods, and estimation of iron and aluminum. Conforms to American Railway Engineering Assn. methods of chemical analysis of zinc chloride.

American Society for Testing Materials, D 432-39; 1939. Zinc Chloride. For preservative treatment of timber by use of either commercial concentrated solutions or fused or granulated zinc chloride. Covers acid-free, minimum iron content, and chloride of zinc content requirements, and for tests using A.S.T.M. Method D 199.

American Wood-Preservers' Assn., 17a; 1921. Standard Specification for Zinc Chloride. Shall be acid-free zinc chloride. Gives requirements for iron content, fused or solid zinc chloride, and concentration.

American Wood-Preservers' Assn., 21a; 1922. Properties of Zinc Chloride Solutions at 60 Degrees Fahrenheit Based on Chemically-Pure Zinc Chloride. Gives tables showing percentage of zinc chloride in solutions of various specific gravities and degrees Baumé, weight of solutions, and pounds of zinc chloride per gallon for solutions expressed in percentage strengths.

American Wood-Preservers' Assn., 60b; 1944. Standard Specification for Chromated Zinc Chloride. Gives requirements for chromated zinc chloride in the dry form, chromated zinc chloride in concentrated solution or fresh working solution, and permissible change in composition for treating solution taken from working tanks or treating cylinder.

American Wood-Preservers' Assn., 62b; 1944. Standard Specification for Zinc Meta Arsenite. Shall be prepared at the treating plant under competent technical supervision. Gives requirements for chemical composition and proportion of ingredients and for preparation of solution.

Manufacturing Chemists' Assn. of the U. S. Manual Sheet T-9. Table—Zinc Chloride Solution. Standard. Adopted, 1922. Embodies specific gravity, percentages, Baumé and Tw.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, 1938. Zinc Oxide. Covers definition, constants, uses, properties, containers, specifications, and ordering instructions; also definition, properties, uses, purity, containers, and grades for leaded zinc oxide.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, 1938. Zinc Sulphide. Covers definition, constants, derivation, uses, purity, forms available, and grades.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, Volume 2; 1944. Zinc Stearate. Covers definition, constants, solubility, derivation, uses, grades, containers, and substitutes.

Society of Automotive Engineers. Aeronautical Material Specification 3111; 1943. Compound; Zinc Chromate (Slushing). Liquid for sealing minute leaks and as a protective coating in fuel tanks and for protecting synthetic rubber tanks. Composition (by weight), material, physical properties, requirements, tests, corrosion, containers, identification, approval, reports, and rejection. Similar to Army Air Forces Specification 3595.

Society of Automotive Engineers. Aeronautical Material Specification 3112; 1943. Compound; Zinc Chromate, Sealing (Unthinned), Hot-Oil Resisting. For sealing seams in high-pressure structures (including oil tanks). Composition (by weight), material, tests, corrosion, containers, identification, approval, reports, and rejection.

Society of Automotive Engineers. Aeronautical Material Specification 3113; 1943. Compound; Zinc Chromate, Sealing (Thinned), Hot-Oil Resisting. For sealing seams in high-pressure structures (including oil tanks). Composition (by weight), material, test, corrosion, containers, identification, approval, reports, and rejection.

Society of Automotive Engineers. Aeronautical Material Specification 3114; 1943. Compound; Zinc Chromate, Sealing (Unthinned), Aromatic Fuel-Resisting. For sealing seams in hull structures and in fuel tanks. Composition (by weight), material, tests, corrosion, containers, identification, approval, reports, and rejection. Similar to Army Air Forces Specification 3596, Condition A.

Society of Automotive Engineers. Aeronautical Material Specification 3115; 1943. Compound; Zinc Chromate, Sealing (Thinned), Aromatic Fuel-Resisting. For sealing seams in hull structures and in fuel tanks. Composition (by weight), material, tests, corrosion, containers, identification, approval, reports, and rejection.

Toilet Goods Assn. Inc. Specification No. 14; 1944. Zinc Oxide. Gives requirements for color, odor, identity, particle size, apparent density, loss on ignition, carbonates, alkalis, ZnO, arsenic, and lead.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Zinc Acetate. Description, solubility, identification, reaction, alkalies or alkaline earths, arsenic, heavy metals, assay, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Zinc Chloride. Description, solubility, identification, reaction, oxychloride, sulfate, ammonium salts, alkalies or alkaline earths, heavy metals, assay, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Zinc Oxide. Description, solubility, identification, loss on ignition, carbonate, alkali, arsenic, iron and many other metals, lead, assay, and storage. U.S.P. product of zinc oxide—Unguentum Zinci Oxidi.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Zinc Oxide Ointment (Zinc Ointment). Preparation (calcium, magnesium, and other foreign substances) and assay.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Zinc Stearate. Description, solubility, identification, reaction, alkalies or alkaline earths, fatty acid, solidification temperature, assay, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Zinc Sulfate. Description, solubility, identification, reaction, free acid, alkalies and alkaline earths, arsenic, heavy metals, assay, and storage.

U. S. Gov., Army-Navy Aeronautical Specification AN-O-Z-361; 1938. Zinc-Cyanide.

U. S. Gov., Federal Specification TT-W-576a; 1941. Wood-Preservative; Zinc-Chloride (for) Ties and Structural Timbers. Covers one grade. Gives detail requirements; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification TT-W-581; 1941. Wood-Preservative; Zinc-Meta-Arsenite (ZMA). Covers one grade. Gives detail requirements and methods of sampling, inspection, and tests.

U. S. Gov., Navy Dept. Specification 51C37; 1943. Compound; Soot-Remover.

U. S. Gov., Navy Dept. Specification 51 C 38; 1944. Chemicals; Fire-Retardant, for Lumber and Timber.

U. S. Gov., U. S. Army, Chemical Warfare Service. Specification 4-503-435A; 1936. Zinc Chloride.

U. S. Gov., U. S. Army, Chemical Warfare Service. Specification 4-503-440A; 1926. Zinc Dust.

*References.*—Unit weights, labeling poisons, *see* 830; Food and Drugs Act and Regulations, *see* 810; zinc arsenite, insecticide, *see* 881.19; tests for zinc in canned foods, *see* 120; preservative treatment of lumber, *see* 400.4; zinc paint pigments, *see* 842.7.

## 839.39 Miscellaneous Compounds, Mixtures, and Salts of Metals

American Chemical Society. Specifications for Analytical Reagents, 1941. Cadmium Chloride. Gives requirements for insoluble matter, nitrate, sulfate, ammonia, copper, iron, lead, substances not precipitated by ammonium sulfide, zinc, and tests.

American Chemical Society. Specifications for Analytical Reagents, 1941. Cadmium Sulfate. Gives requirements for insoluble matter, chloride, nitrate, arsenic, copper, iron, lead, substances not precipitated by ammonium sulfide, zinc, and tests.

American Chemical Society. Specifications for Analytical Reagents, 1941. Manganese Sulfate. Gives requirements for water of crystallization, insoluble matter, chloride, alkalies and alkaline earths, iron, heavy metals, nickel, zinc, substances reducing permanganate, and tests.

American Chemical Society. Specifications for Analytical Reagents, 1941. Stannous Chloride. Gives requirements for solution, sulfate, arsenic, substances not precipitated by hydrogen sulfide, iron, other metals, and tests.

American Chemical Society. Specifications for Analytical Reagents, 1941. Uranium Nitrate. Gives requirements for insoluble matter, chloride, sulfate, alkalies and alkaline earths, heavy metals, iron, uranous uranium, and tests.

American Institute of Homoeopathy. Homoeopathic Pharmacopoeia of U. S., 1941. Auric Chlorid, Auric Sulfid, Cadmium Sulfate, Cadmium Sulfid, Cerium Oxalate, Indium, Iridium, Lithium Benzoate, Lithium Bromid, Lithium Carbonate, Magnesium Carbonate, Magnesium Chlorid, Magnesium Phosphate, Magnesium Sulfate, Manganous Acetate, Manganous Carbonate, Manganous Chlorid, Manganous Oxid, Metallic Gold, Metallic Nickel, Metallic Platinum, Metallic Tin, Nickel Carbonate, Nickel Sulfate, Palladium, Platinum Hydrochlorid, Selenium, Sodium Ayro-Chlorid, Sodium Platino Chlorid, Strontium Carbonate, and Tellurium. Chemical symbol, synonyms, description, and preparations for triturations for use in homoeopathic medicines.

American Leather Chemists Assn. Methods of Sampling and Analysis. Epsom Salts, 1942. Gives requirements for magnesium oxide, sulfur trioxide, and iron.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Ampuls of Magnesium Sulfate. Gives chemical composition, assay, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Artificial Carlsbad Salt. Gives chemical composition, storage, preparation, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Artificial Kissingen Salt. Gives chemical composition, storage, preparation, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Artificial Vichy Salt. Gives chemical composition, storage, preparation, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Compound Effervescent Salt of Potassium Bromide (Effervescent Potassium Bromide With Caffeine). Gives chemical composition, preparation, storage, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Effervescent Artificial Carlsbad Salt. Gives chemical composition, preparation, storage, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Effervescent Artificial Kissingen Salt. Gives chemical composition, preparation, storage, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Effervescent Artificial Vichy Salt. Gives chemical composition, preparation, storage, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Effervescent Salt of Lithium Citrate. Gives chemical composition, preparation, storage, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Effervescent Salt of Magnesium Sulfate. Gives chemical composition, preparation, storage, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Effervescent Salts. Gives general processes; directions for granulating in an oven and on a water bath.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Elixir of Hydrangea and Lithium. Gives chemical composition, storage, alcohol content, average dose, and preparation.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Infusion of Senna With Magnesium Sulfate. Gives chemical composition, preparation, storage, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Lithium Benzoate. Gives chemical composition, description, solubility, identifications, loss on drying, reaction, carbonate, other alkalies, coloring matter, chlorinated compounds, heavy metals, assay, storage, preparation, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Lithium Bromide. Gives chemical composition, description, solubility, identification, reaction, chloride, iodide, bromate, sulfate, other alkalies, heavy metals, assay, storage, preparations, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Lithium Carbonate. Gives chemical composition, description, solubility, identification, loss on drying, acetic acid insoluble substances, reaction, other alkalies, chloride, sulfate, aluminum or iron, arsenic, heavy metals, assay, storage, preparation, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Lithium Citrate. Gives chemical composition, description, solubility, identifications, loss on drying, reaction, carbonate, other alkalies, arsenic, heavy metals, assay, storage, preparation, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Lithium Salicylate. Gives chemical composition, description, solubility, identifications, loss on drying, reaction, carbonate, other alkalies, coloring matter, arsenic, heavy metals, assay, storage, preparation, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Manganese Glycerophosphate. Gives chemical composition, description, solubility, identifications, loss on drying, chloride, phosphate, sulfate, arsenic, assay, storage, preparation, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Manganese Hypophosphite. Gives chemical composition, description, solubility, identification, loss on drying, carbonate, phosphate, sulfate, calcium, arsenic, assay, storage, preparation, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Soluble Manganese Citrate. Gives chemical composition, description, solubility, identification, carbonizable impurities, reaction, chloride, sulfate, arsenic, iron, assay, storage, preparation, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Strontium Bromide. Gives chemical composition, description, solubility, identification, loss on drying, reaction, bromate, chloride, iodide, barium, calcium, heavy metals, assay, storage, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Strontium Salicylate. Gives chemical composition, description, solubility, identification, loss on drying, reaction, free salicylic acid, barium, heavy metals, assay, storage, and average dose.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, 1938. Epsom Salt. Covers definition, derivation, solubility, uses, grades, supply, and packing.

Toilet Goods Assn. Inc. Specification No. 10; 1942. Talc. Gives requirements for color, odor, identity, screen test, solubility, slip, lustre, apparent density, lead, arsenic, alkalis and acids, carbonates, sharp particles, loss on ignition, soluble calcium, and acid soluble iron.

Toilet Goods Assn. Inc. Specification No. 12; 1943. Titanium Dioxide. Gives requirements for color, odor, particle size, water soluble, acid soluble, loss on ignition, acid and alkali, moisture, assay, arsenic, and lead.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Butyl Aminobenzoate. Description, solubility, melting point, identification, ash, chloride, sulfate, heavy metals, completeness and color of solution, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Heavy Magnesium Oxide (Heavy Magnesia). Description, other tests, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Magnesia Magma (Milk of Magnesia). Description, identification, reaction, soluble salts, soluble alkalies, carbonate, arsenic, calcium, heavy oils, assay, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Magnesium Carbonate (Carbonate of Magnesia). Description, solubility, identification, soluble salts, arsenic, calcium oxide, heavy metals, iron, assay, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Magnesium Oxide (Magnesia, Light Magnesia). Description, solubility, identification, loss on ignition, soluble salts, carbonate, arsenic, calcium oxide, heavy metals, iron, assay, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Magnesium Sulfate (Epsom Salt). Description, solubility, identification, loss on drying, reaction, chloride, arsenic, heavy metals, assay, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Magnesium Trisilicate. Description, solubility, identification, loss on ignition, soluble salts, chloride, sulfate, free alkali, heavy metals, absorptive power, acid-consuming capacity, assay for magnesium oxide, assay for silicon dioxide, ratio of MgO to $SiO_2$, and storage. U.S.P. product of magnesium trisilicate—Tabellae Magnesii Trisilicatis.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Magnesium Trisilicate Tablets. Identification, free alkali, acid-consuming capacity, absorption of methlene blue, storage, and sizes.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Solution of Magnesium Citrate. Description, identification, chloride, sulfate, tartaric acid, minimum of total citric acid, and assay for magnesium oxide.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Tribasic Magnesium Phosphate. Description, solubility, identification, loss on ignition, acid-insoluble substances, soluble salts, carbonate, chloride, nitrate, sulfate, arsenic, barium, calcium, heavy metals, dibasic salt and magnesium oxide, assay, and storage. U.S.P. product of tribasic magnesium phosphate—Tabellae Magnesii Phosphatis Tribasici.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Tribasic Magnesium Phosphate Tablets. Identification, calcium, soluble salts, assay, storage, and sizes.

U. S. Gov., Federal Specification O-S-61; 1930. Salts; Nickel (for) Electroplating and Electrotyping. Covers three compounds—(A) nickel sulphate (single salt), (B) nickel ammonium sulphate (double salt), and (C) nickel chloride. Gives chemical formulae; methods of sampling, inspection, and test; and requirements for packaging, packing, and marking.

U. S. Gov., Federal Specification TT-R-58; 1941. Amendment 1; 1941. Radio-Active-Luminous Compound and Adhesives. Covers five grades and brightness. Gives detail requirements for radioactive component, initial brightness in micro-lamberts, adhesives, and exposure to radiation; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., Navy Dept. Specification 51B4a; 1942. Baths; Salt, for Heating Metals.

U. S. Gov., Navy Dept., Specification 51 D 11; 1944. Dichlorodifluoromethane (F-12).

U. S. Gov., Navy Dept. Specification 52R8a; 1938. Resinate; Manganese, Precipitated.

U. S. Gov., Navy Dept. Specification 52R9c; 1945. Radioactive-Luminous-Material (Powder Form).

U. S. Gov., U. S. Army, Army Air Forces. Specification 4-1044; 1936. Cadmium Oxide.

U. S. Gov., U. S. Army, Chemical Warfare Service Specification 4-503-260B; 1938. Magnesium Oxide; Light.

U. S. Gov., U. S. Army, Chemical Warfare Service. Specification 96-21-18; 1941. Magnesium Silicate Fibrous.

U. S. Gov., U. S. Army, Chemical Warfare Service. Specification 97-52-29; 1926. Hopcalite.

U. S. Gov., U. S. Army, Chemical Warfare Service. Specification 197-54-172; 1942. Magnesium Arsenide.

U. S. Gov., U. S. Army, Medical Dept. Specification 4-1060; 1937. Gold Chloride; Reagent Grade.

U. S. Gov., U. S. Army, Medical Dept. Specification 4-1063; 1937. Platinic Chloride; Reagent Grade.

*References.*—Unit weights, labeling of poisons, *see* 830; Food and Drugs Act and Regulations, *see* 810; magnesium arsenate, insecticide *see* 881.19; tests for metals in canned foods, *see* 120.

## 839.4 GASES AND TOXIC DUSTS*

### 839.40 General Items

Industrial Hygiene Foundation of America, Inc. Preventive Engineering Series, Bulletin 1; 1936. Measurement and Control of Industrial Dusts. Relates to the preventive engineering aspects of the problems of industrial diseases caused by factory air contaminants. Covers methods of determining dust, analysis of dust, the size of dust particles, dust collection, protective equipment, permissible dustiness, and investigations needed.

Industrial Hygiene Foundation of America, Inc. Preventive Engineering Series, Bulletin 2, Part 3; 1938. The Determination of Chlorinated Hydrocarbon Vapors in the Atmosphere. Covers taking of sample, analysis of sample, sample calculation, chloronaphthalenes and chlorodiphenyls, and brominated compounds.

Industrial Hygiene Foundation of America, Inc. Preventive Engineering Series, Bulletin 2, Part 7; 1938. Identification of Industrial Dusts. Covers chemical examination, petrographic examination, technique, examples of application, variations in composition with size, table showing dust from shakeout, summary, and table showing characteristics of a few minerals commonly found in dusts.

Natural Gasoline Assn. of America. Standard Method for Determining the Specific Gravity of Gases.

### 839.41 Carbon Dioxide

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Carbon Dioxide (Carbonic Acid Gas). Description, solubility, identification, acid and sulfur dioxide, phosphine, hydrogen sulfide, organic reducing substances, carbon monoxide, assay, and storage.

U. S. Gov., Army Air Forces. Specification 14069-A; 1941. Carbon Dioxide; Liquid.

U. S. Gov., Navy Dept. Specification 51C16c; 1943. Carbon Dioxide ($CO_2$); Compressed.

U. S. Gov., Treasury Dept., Procurement Div., No.505; 1941. Carbon Dioxide (Compressed); Technical Grade. Compressed carbon dioxide ($CO_2$) shall be furnished in one grade in cylinders containing 20 to 50 lbs. Gives requirements for odor, carbon dioxide content, moisture content, acidity, separated water, cylinders, and valve outlet; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., Treasury Dept., Procurement Div., No.662; 1944. Carbon Dioxide; Solid (Dry Ice). Covers one type and one grade of solid carbon dioxide intended as a cooling or refrigerating agent. Gives requirements for color and body, weight per cubic foot, moisture content, oil content, and odor; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., U. S. Army, Chemical Warfare Service. Specification 4-503-95; 1926. Carbon Dioxide; Liquid.

### 839.42 Hydrogen

U. S. Gov., Treasury Dept., Procurement Div., No.636; 1943. Hydrogen; Technical Grade. Covers one grade. Gives requirements for capacity of cylinders, dryness, impurities, and cylinders shall have commercial finishes and marking; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., U. S. Army, Army Air Forces. Specification 4-83A; 1942. Hydrogen.

### 839.43 Oxygen

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Oxygen. Description, solubility, identification, acids or alkalies, carbon dioxide, oxidizing substances, halogens, carbon monoxide, assay, and storage.

U. S. Gov., Army-Navy Aeronautical Specification AN-O-1b; 1944. Oxygen; Aviators' Breathing (Gas).

U. S. Gov., Navy Dept. Specification 51G3; 1942. Gas; Oxygen; Cutting and Welding (Shore Use).

U. S. Gov., Treasury Dept., Procurement Div., No.547; 1942. Oxygen; Technical Grade (for Use in Cutting and Welding). Not intended for breathing or medical purposes. Covers one grade compressed within cylinders and free from objectionable odor. Gives requirements for oxygen content, dryness, cylinders, and valves; methods of sampling, inspection, and tests; and packaging, packing, and marking.

*References.*—Food and Drugs Act and Regulations, *see* 810.

### 839.44 Chlorine

Chlorine Institute, Inc. Method for Determination of Hydrogen in Loaded Class I.C.C. 105A300 Tank Cars, 1930. For combustion of sample of the vapor phase of a liquid chlorine container, preparation of absorbent solution, combustion in a Burrell dual ignition gas pipette, measuring burette design, and formula for calculation of hydrogen present.

### 839.45 Nitrous Oxide

American Standards Assn. Z 37.13-1944. Allowable Concentration of Oxides of Nitrogen. To prescribe the permissible concentration of oxides of nitrogen in the atmosphere of work places for guidance in establishing control procedures for the protection of the health of workers. Covers general, physical-

chemical, and toxic properties of nitrogen oxides; permissible concentration; sampling procedure; and qualitative and quantitative analytical methods.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Nitrous Oxide (Nitrogen Monoxide). Description, solubility, acids, or alkalies, carbon dioxide, oxidizing substances, reducing substances, halogens, assay, and storage.

U. S. Gov., U. S. Army, Chemical Warfare Service. Specification 97-54-132; 1940. Nitrogen, for Sealed Storage of Rubber Components.

*References.*—Food and Drugs Act and Regulations, *see* 810.

## 839.49 Miscellaneous Gases and Toxic Dusts

American Standards Assn., Z 37.1-1941. U. S. Public Health Service, endorsing sponsor. Allowable Concentration of Carbon Monoxide. To prescribe the permissible concentration of carbon monoxide in the atmosphere of work places for the protection of the health of all workers. Gives properties of carbon monoxide, permissible concentration, sampling, and analytical methods.

American Standards Assn., Z 37.2-1941. U. S. Public Health Service, endorsing sponsor. Allowable Concentration of Hydrogen Sulfide. To prescribe the permissible concentration of hydrogen sulfide in the atmosphere of work places for the protection of the health of all workers. Gives properties of hydrogen sulfide, permissible concentration, sampling, and analytical methods.

American Standards Assn., Z 37.6-1942. Prepared by the U. S. Public Health Service. Allowable Concentration of Manganese (American War Standard). To prescribe the permissible concentration of manganese dust and fumes in the atmosphere of work places for the protection of the health of all workers. Gives properties of manganese, permissible concentration, sampling procedure, and analytical methods.

Compressed Gas Manufacturers' Assn., Inc. Method of Analysis for Refrigeration Grade Liquid Sulfur Dioxide. Tentative standard, 1932. Covers procedures for determination of minute quantities of moisture, reagents, apparatus, diagrams of types of sampling tubes, requirements for sample container, heat exchanger, drying tubes, sampling, computations, residue test, sulfuric acid test, and procedures for noncondensible gases.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, Volume 2; 1944. Acetylene. Covers definition, constants, solubility, derivation, uses, grades, containers, hazards, shipping regulations, and substitutes.

Technical Assn. of the Pulp and Paper Industry. Analysis of Sulphur-Burner Gas. Standard T 603 m-36; 1936. Requires use of Orsat apparatus for control tests for sulphur dioxide and sulphur trioxide. Describes apparatus and reagents required and method of calculation.

Underwriters' Laboratories, Inc. Standard for Gas Systems for Protection of Vaults Against Burglary, 1929. For door and lock and entire vault; covers design and construction, practicability, durability, reliability, effectiveness, operation, safety control, and marking.

Underwriters' Laboratories, Inc. Standard for Normally Operated Gas Systems for Protection Against Interior Robbery, 1934. For use in banks, post offices, cashiers' cages, etc.; area of coverage, door closers and locks, details of design and construction, reliability, distribution, location of controls, installation, testing, and maintenance.

U. S. Gov., Navy Dept. Specification 51 N 3c; 1943. Nitrogen for Use in Optical Instruments.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 4-4; 1919. Sulphur Dioxide.

*References.*—Illuminating gas, *see* 997.2.

## 839.5 HYDROQUINONE (HYDROCHINONE)

U. S. Gov., Federal Specification O-H-886; 1935. Hydroquinone (Paradihydroxybenzene). Covers one grade. Gives requirements for color, solubility, melting point, ash, sulfate, catechol, and resorcinol; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

## 839.6 CARBON DISULPHIDE

American Chemical Society. Specifications for Analytical Reagents, 1941. Carbon Disulfide. Gives requirements for boiling range, nonvolatile matter, foreign sulfides, sulfite and sulfate, water, and tests.

American Institute of Homoeopathy. Homoeopathic Pharmacopoeia of U. S., 1941. Carbon Disulfid. Chemical symbol, synonyms, description, and preparations for tincture, dilutions, and medications for use in homoeopathic medicines.

American Standards Assn., Z 37.3-1941. U. S. Public Health Service, endorsing sponsor. Allowable Concentration of Carbon Disulfide. To prescribe the permissible concentration of carbon disulfide in the atmosphere of work places for the protection of the health of all workers. Gives properties of carbon disulfide, permissible concentrations, sampling, and analytical methods.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, 1938. Carbon Bisulphide. Covers definition, constants, derivation, solubility, purity, uses, supply, packing, and shipping regulations.

U. S. Gov., Treasury Dept., Procurement Div., No. 624; 1943. Carbon Disulfide; Technical Grade. Covers one type and one grade. Intended for use as a solvent and for other technical uses and is a highly inflammable volatile liquid. Gives requirements for material, appearance, color, odor and residual odor, specific gravity, nonvolatile matter, water, spot test, distillation range, and copper corrosion; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., U. S. Army, Chemical Warfare Service. Specification 96-21-22; 1939. Carbon Disulfide; Technical Grade.

*References.*—Unit weights, *see* 830.

## 839.7 CARBON TETRACHLORIDE

American Chemical Society. Specifications for Analytical Reagents, 1941. Carbon Tetrachloride. Gives requirements for boiling point, nonvolatile

matter, acid, aldehyde, chloride, free chlorine, iodine-consuming substances, substances darkened by sulfuric acid, sulfur compounds, and tests.

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis, 1940. Chloroform and Carbon Tetrachloride. For carbon tetrachloride as a medicinal, carbon tetrachloride in capsules, and carbon tetrachloride mixtures; tentative method for determining amount of carbon tetrachloride.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, 1938. Carbon Tetrachloride. Covers definition, physical properties, solubility, derivation, grades, containers, shipping regulations, uses, and substitutes.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Carbon Tetrachloride. Description, solubility, specific gravity, distillation range, nonvolatile residue, carbonizable substances, acid, chloride ion, free chlorine, carbon disulfide, and storage. U.S.P. product of carbon tetrachloride—Capsulae Carbonei Tetrachloridi.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Carbon Tetrachloride Capsules. Identification, assay, storage, and sizes.

U. S. Gov., Federal Specification O-C-141; 1944. Amendment 1; 1944. Carbon Tetrachloride; Technical Grade. Covers one grade intended for general use as a solvent. Gives requirements for appearance, color, odor, specific gravity, nonvolatile matter, spot test, neutrality, water, distillation range, and copper corrosion; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., U. S. Army, Chemical Warfare Service. Specification 4-503-110B; 1937. Carbon Tetrachloride.

*References.*—Unit weights, *see* 830; Food and Drugs Act and Regulations, *see* 810.

## 839.8 LIQUID CHLORINE

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, 1938. Liquid Chlorine. Covers description, constants, solubility, derivations, purity, grades, specifications, substitutes, containers, shipping regulations, and uses.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 4-1A; 1938. Chlorine; Liquid.

## 839.9 MISCELLANEOUS SPECIFICATIONS FOR CHEMICALS AND CHEMICAL COMPOUNDS

American Chemical Society. Specification for Analytical Reagents, 1941. Arsenic Trioxide. Gives requirements for nonvolatile matter, insoluble in ammonium hydroxide, chloride, sulfide, antimony and other hydrogen sulfide metals, iron, and tests.

American Chemical Society. Specifications for Analytical Reagents, 1941. Bromine. Gives requirements for specific gravity, nonvolatile matter, iodine, organic bromine compounds, sulfur compounds, and tests.

American Chemical Society. Specifications for Analytical Reagents, 1941. 8-Hydroxyquinoline. Gives requirements for melting point range, insoluble in alcohol, residue on ignition, sulfate, suitability for magnesium determinations, and tests.

American Chemical Society. Specifications for Analytical Reagents, 1941. Iodine. Gives requirements for form, nonvolatile matter, chlorine and bromine, and tests.

American Institute of Homoeopathy. Homoeopathic Pharmacopoeia of U. S., 1941. Amyl Nitrite, Bromin, Phosphorous, Red Phosphorous, Silica, Sulfur, Sulfur Di-Iodid, and Uranium Nitrate. Chemical symbol, synonyms, description, and preparations for triturations, tincture, dilutions, and medications for use in homoeopathic medicines.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Ethyl Acetate (Acetic Ether). Gives chemical composition, description, miscibility, specific gravity, boiling point, identification, residue, carbonizable impurities, free acid, butylic or amylic derivatives, methyl compounds, assay, storage, preparation, and average dose.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Phosphorus. Gives description, solubility, identification, sulfate and arsenic, storage, preparations, and average dose.

American Society for Testing Materials, D 302-33; 1933. Ethyl Acetate (85 to 88 Percent Grade). Requirements for specific gravity, distillation range, nonvolatile matter, odor, color, water, acidity and ester value, with tests using A.S.T.M. Method D 268.

American Society for Testing Materials, D 303-40; 1940. Normal Butyl Acetate (88 to 92 Percent Grade). Gives requirements on specific gravity, color, distillation range, nonvolatile matter, odor, water, acidity, ester value, and test using A.S.T.M. Method D 268.

American Society for Testing Materials, D 320-40; 1940. Butyl Propionate (90 to 93 Percent Grade). Specifications cover gravity, color, distillation range, nonvolatile matter, odor, water, acidity, and ester value, using A.S.T.M. Method D 268.

American Society for Testing Materials, D 321-40; 1940. Ethyl Lactate (Synthetic). Specification for gravity, color, distillation range, nonvolatile matter, odor, water, acidity, and ester value, with test using A.S.T.M. Method D 268.

American Society for Testing Materials, D 330-35; 1935. Ethylene Glycol Monobutyl Ether. Also known as butyl glycol. Requirements for specific gravity, color, distillation range, nonvolatile matter, odor, water, and acidity, with tests using A.S.T.M. Method D 268.

American Society for Testing Materials, D 331-35; 1935. Ethylene Glycol Monoethyl Ether. Limiting values for specific gravity, color, distillation range, nonvolatile matter, odor, water, acidity, and for tests using A.S.T.M. Method D 268. This material is also known as ethyl glycol.

American Society for Testing Materials, D 343-35; 1935. Acetate Ester of Ethylene Glycol Monoethyl Ether (95 to 96 Percent Grade). Covers properties including specific gravity, color, distillation range, nonvolatile matter, odor, water, acidity, and ester value, with tests using A.S.T.M. Method D 268. Also known as ethyl glycol acetate.

American Standards Assn., Z37.15-1944. Allowable Concentration of Styrene Monomer (American War Standard). To prescribe the maximum permissible concentration of styrene monomer in the atmosphere of work places. Covers properties of styrene monomer (phenyl ethylene), permissible concentration, and sampling procedure and analytical methods.

American Wood-Preservers' Assn., 61b; 1944. Standard Specification for Tanalith. Gives requirements for chemical composition and proportions of ingredients and tolerances.

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis, 1940. Preservatives and Artificial Sweeteners. Abrastol (Asaprol). Tentative method for tests for presence of.

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis, 1940. Preservatives and Artificial Sweeteners. Insoluble Fluorides, Fluoborates, Fluosilicates, etc. Preparation of sample; test methods for indicating presence of insoluble fluorides.

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis, 1940. Preservatives and Artificial Sweeteners. Saccharin. Preparation of sample, qualitative test methods, quantitative test.

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis, 1940. Preservatives and Artificial Sweeteners. Soluble Fluorides. Qualitative test methods for indicating presence of.

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis, 1940. Preservatives and Artificial Sweeteners. Sucrol or Dulcin. Tentative test methods for indicating presence of.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, 1938. Barite (Baryte, Heavy Spar, Tiff). Covers definition, constants, solubility, occurrence, grades, containers, uses, and substitutes.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, 1938. Ethylene Dichloride. Covers definition, constants, derivation, purity, solubility, uses, and packing.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, 1938. Ortho-Dichlorobenzene (Technical). Covers definition, constants, derivation, solubility, purity, uses, and packing.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, 1938. Tetrachlorethylene. Covers definition, constants, derivation, solubility, uses, grades, and packing.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, Volume 2; 1944. Anthracene. Covers definition, constants, solubility, derivation, grades, uses, and containers.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, Volume 2; 1944. Bromine. Covers definition, constants, solubility, derivation, forms, uses, hazards, and substitutes.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, Volume 2; 1944. Butyl Stearate. Covers definition, constants, acidity, solubility, derivation, uses, containers, grades, and substitutes.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, Volume 2; 1944. Diacetone. Covers definition, constants, solubility, derivation, uses, grades, containers, shipping regulations, and substitutes.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, Volume 2; 1944. Dibutyl Phthalate. Covers definition, constants, solubility, derivation, uses, grades, containers, hazards, and substitutes.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, Volume 2; 1944. Methyl Ethyl Ketone. Covers definition, constants, solubility, derivation, uses, containers, shipping regulations, hazards, and substitutes.

Technical Assn. of the Pulp and Paper Industry. Analysis of Sulphate White and Green Liquors. Tentative Standard T 624 m-44; 1944. Deals with the analysis of both white and green liquors in the sulphate process. Covers gravity, sodium sulphate, alkalinity, reducing agents, total sodium, total sulphur, silica, and aluminum and iron oxides.

Technical Assn. of the Pulp and Paper Industry. Analysis of Sulphate Black Liquor. Tentative Standard T 625 m-44; 1944. Deals with the analysis of black liquor separated from the pulp in the blow pits, diffusers and washers of the sulphate process. Covers gravity, total solids, sulphated ash and organic matter, silica, total sodium, aluminum and iron oxides, sodium sulphate, total sulphur, alkalinity, sodium sulphide, and sodium sulphite and thiosulphate.

Toilet Goods Assn. Inc. Specification No.13; 1944. Propylene Glycol. Gives requirements for odor, solubility, specific gravity, ash, acidity, chloride, sulfate, heavy metals, distillation range, arsenic, and assay.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Aminopyrine. Description, solubility, melting point, identification, loss on drying, ash, carbonizable substances, reaction, chloride, heavy metals, antipyrine, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Amyl Nitrite. Description, solubility, specific gravity, identification, free acid, aldehyde, assay, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Antipyrine (Phenazone). Description, solubility, melting point, identification, loss on drying, ash, reaction, heavy metals, completeness and color of solution, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Ethyl Aminobenzoate (Benzocaine). Description, solubility, melting point, identification, loss on drying, ash, carbonizable substances, free acid, chloride, arsenic, heavy metals, and storage. U.S.P. product ethyl aminobenzoate—Unguentum Aethylis Aminobenzoatis.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Ethyl Aminobenzoate Ointment. Preparation.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Ethyl Carbamate (Urethane). Description, solubility, melting point, identification, loss on drying, ash, reaction,

chloride, nitrate, urea, completeness and color of solution, heavy metals, and storage. U.S.P. product of ethyl carbamate—Injectio Quininae Hydrochloridi et Aethylis Carbamatis.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Ethyl Chaulmoograte. Description, solubility, specific gravity, specific rotation, saponification value, iodine value, free acid, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Ethyl Chloride. Description, solubility, specific gravity, nonvolatile residue, chloride ion, acid, alcohol, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Ethyl Oxide (Solvent Ether). Description, aldehyde, peroxide, other requirements, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Precipitated Sulfur. Description, solubility and identification, loss on drying, residue on ignition, acid or alkali, arsenic, other forms of sulfur, assay, and storage. U. S. P. product of precipitated sulfur—Unguentum Sulfuris.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Saccharin (Gluside, Benzosulfimide). Description, solubility, melting point, identification, loss on drying, ash, carbonizable substances, reaction, ammonium compounds, glucose and lactose, heavy metals, benzoic and salicylic acids, and storage. U.S.P. product of saccharin—Saccharinum Sodicum.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Saccharin Sodium (Soluble Saccharin, Soluble Gluside, Sodium Benzosulfimide). Description, solubility, identification, reaction, heavy metals, benzoate and salicylate, other tests, and storage. U.S.P. product of saccharin sodium—Tabellae Saccharini Sodici.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Saccharin Sodium Tablets (Soluble Saccharin Tablets). Identification, ammonium salts, assay, storage, and sizes.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Sublimed Sulfur (Flowers of Sulfur). Description, solubility, identification, residue on ignition, arsenic, assay, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Sulfur Ointment. Preparation and assay.

U. S. Gov., Army Air Forces. Specification 14116; 1942. Compound; Anti-Frosting (for Aircraft Windows).

U. S. Gov., Army Air Forces. Specification 40828-1; 1945. Packet; Shark Deterrent.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Circular C398 and Supplement, 1944. Standard Samples. Arsenic Trioxide, Sample 83a. This sample is prepared and sold by the National Bureau of Standards with a certificate of analysis for use in industry and by others as a comparison standard for checking the accuracy of analysis of similar material.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Circular C398 and Supplement, 1944. Standard Samples. Refined Silicon, Sample 57. This sample is prepared and sold by the National Bureau of Standards with a certificate of analysis for use in industry and by others as a comparison standard for checking the accuracy of analysis of similar material.

U. S. Gov., Joint Army-Navy Specification JAN-D-56; 1944. Dichlordiphenyl Trichloroethane (DDT) (Technical Grade).

U. S. Gov., Navy Dept. Specification 51C15; 1924. Compound; Cyanide.

U. S. Gov., Navy Dept. Specification 51C 29a; 1943. Chemicals; Testing, Dissolved-Oxygen.

U. S. Gov., Navy Dept. Specification 51M6; 1945. Monoethanolamine (Ethanolamine).

U. S. Gov., Navy Dept. Specification 51 O 1; 1941. Orthodichlorobenzene; Technical.

U. S. Gov., Navy Dept. Specification 51P14; 1937. Pyridine.

U. S. Gov., Navy Dept. Specification 51T3; 1943. Trichloroethylene.

U. S. Gov., Navy Dept. Specification 51T6; 1944. Tetrachlorethane (Acetylene Tetrachloride).

U. S. Gov., Treasury Dept., Procurement Div., 562a; 1942. Diethyl Sulfate (Technical). Covers one type and one grade intended for use as an ethylating agent in the manufacture of drugs and in the manufacture of dyeline sensitized paper. Gives requirements for appearance, color, odor, purity, specific gravity, ash content, distillation range, water, acidity, and solubility; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., Treasury Dept., Procurement Div., No.566; 1942. Ethylene Glycol Mono Ethyl Ether. Covers one type and one grade intended for use in the manufacture of organic protective coatings. Gives requirements for appearance, color, odor, specific gravity, distillation range, nonvolatile matter, acidity, spot test, sulfur, and water test; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., Treasury Dept., Procurement Div., 644a; 1945. Soda-Lime. Covers one grade; two types—(I) dry and (II) moist; and two classes—(A) 4 to 8 mesh and (B) 8 to 16 mesh. Shall be a uniform product consisting of calcium hydroxide, and sodium or potassium hydroxide or both, in granular form. Gives requirements for moisture content, particle sizes, absorption of carbon dioxide, indicator color change, and hardness numbers; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Treasury Dept., Procurement Div., No.852; 1944. Iodine; Technical Grade. Covers one type and one grade in the form of granules, flakes, or plates; intended for use in photography, process engraving, and lithography. Not for pharmaceutical purposes. Gives requirements for iodine content, nonvolatile residue, and particle size; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., U. S. Army, Army Air Forces. Specification 4-1048; 1936. Methyl Butyl Ketone (90-95 Percent Grade).

U. S. Gov., U. S. Army, Army Air Forces. Specification 4-1049; 1936. Secondary Butyl Acetate.

U. S. Gov., U. S. Army, Chemical Warfare Service. Specification 4-502-12; 1933. Acetylene Tetrachloride.

U. S. Gov., U. S. Army, Chemical Warfare Service. Specification 4-503-215; 1924. Hexachlorethane.

U. S. Gov., U. S. Army, Chemical Warfare Service. Specification 4-503-300A; 1939. Phosphorus; Red.

U. S. Gov., U. S. Army, Chemical Warfare Service. Specification 4-503-305A; 1941. Phosphorus; White.

U. S. Gov., U. S. Army, Chemical Warfare Service. Specification 96-21-1A; 1942. Chlorpicrin.

U. S. Gov., U. S. Army, Chemical Warfare Service. Specification 96-21-9; 1939. Sulfur Monochloride.

U. S. Gov., U. S. Army, Chemical Warfare Service. Specification 96-31-5A; 1939. Chlorosulfonic Acid, Sulfur Trioxide Solution, FS.

U. S. Gov., U. S. Army, Chemical Warfare Service. Specification 96-111-8A; 1941. Chloracetophenone.

U. S. Gov., U. S. Army, Chemical Warfare Service. Specification 96-111-16A; 1939. Diphenylaminechlorarsine (DM).

U. S. Gov., U. S. Army, Chemical Warfare Service. Specification 96-111-32; 1940. Diphenylchlorarsine (DA).

U. S. Gov., U. S. Army, Medical Dept. Specification 4-1125; 1944. Amyl Nitrite (Inhalants).

U. S. Gov., U. S. Army, Ordnance Dept. Specification 50-11-45A; 1930. Ether.

*References.*—other chemicals for medicinal purposes, *see* 810-829; iodine for medicinal purposes, *see* 814.1; unit weights, labeling of poisons, *see* 830; Food and Drugs Act and Regulations, *see* 810.

# 840-849 PAINTS, VARNISHES, LACQUERS, AND RELATED PRODUCTS

## 840. GENERAL ITEMS RELATING TO PAINTS AND PAINTING

### 840.1 PAINTS AND PAINTING

American Assn. of State Highway Officials. Standard Specifications for Highway Bridges, 1941. Includes specifications for painting metal structures—requirements for materials (to conform to A.A.S.H.O. Standard Specifications), number of coats and color, mixing of paint, weather conditions, application, spraying, inaccessible surfaces, removal of paint, thinning paint, painting galvanized surfaces, cleaning of surfaces (by hand, sandblasting, and flame), shop painting, and field painting.

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering. Specifications for Buildings for Railroad Purposes: Painting and Glazing. Gives requirements for materials; application; preparing the surface; time for drying; weather and temperature; priming coats; painting and finishing wood surfaces; painting steel, iron, sheet metal, plaster, brick, and concrete surfaces; staining shingles; sign painting; and lettering.

American Water Works Assn. Tentative Recommended Practice—Repainting Elevated Steel Tanks and Water Storage Tanks, With Notes on Repairs, 7H.2-T-1943. Covers frequency of painting, number of coats, inside tank, kind of paint, repairs, rivets, spider rods, leaks, inspections, and precautions.

Assn. of American Railroads. Operations and Maintenance Dept., Engineering Division, Signal Section. Manual of Recommended Practice. Specification 120-40; 1941. Paint and Painting. For railway signal service, workmanship for shop and field work, with approved materials tested by A.A.R., Signal Section standards.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, 1938. Paint. Covers definition, constants, types and uses, components, containers, and ordering instructions.

National Paint, Varnish, and Lacquer Assn., Inc. Circular 668; 1944. This circular consists of abstracts of U. S. Gov. specifications for paints and related materials. An attempt has been made to include all the information that is needed to give to sellers and buyers of paint and related materials, writers of specifications, and paint and varnish technologists; essential data needed for preliminary actions pertaining to them.

Painting and Decorating Contractors of America. Painting Specifications. Cover requirements in general; requirements for interior and exterior painting of concrete, brick, stucco, stone, galvanized iron, sheet metal, shingles, steel sash, structural steel, wood floors, siding trim, plaster, canvased walls, and acoustic material; material definitions; and requirements for refinishing previously painted surfaces.

Portland Cement Assn. Specification for Application of Portland Cement Paint (on Exposed Concrete Masonry Walls), 1940. Requirements for factory prepared and job-mixed cement paint; preparation of surface, for seal coat, and finish coat; and curing.

U. S. Gov., Army Air Forces. Specification 20020-A; 1941. Protective Coatings and Finishes for Automotive Vehicles; General Specification for.

U. S. Gov., Dept. of Agriculture, Technical Bulletin 804; 1942. Classification of House and Barn Paints. This bulletin is to aid in developing the best methods of selecting and applying paint and maintaining painted surfaces on wooden farm buildings. Describes a system of classifying paints by groups, types, and grades. Covers why classification is needed, classification outlined, use of classification, and calculating classification from paint formulas.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R144-43; 1943. Paints, Varnishes, and Related Products (Colors and Containers). This recommendation establishes a schedule for limiting colors and eliminating superfluous sizes or containers in order to conserve metals and materials needed for defense purposes. It lists various items of oil, paints, enamels, varnishes, water mixed paints, etc., and

gives the recommended maximum number of colors and sizes of containers for each. Initiated by National Paint, Varnish and Lacquer Assn.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Building Materials and Structures Report BMS 44; 1940. Surface Treatment of Steel Prior to Painting. A number of surface-treatment processes are described for both plain and galvanized steel.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Building Materials and Structures Report BMS 102; 1944. Painting Steel. A large number of priming and finish-coal paints, representing various types, were tested for durability and protective value against corrosion by means of accelerated laboratory and outdoor-exposure tests. Covers introduction, priming-coat paints, painting plain steel surfaces, painting galvanized-steel surfaces, topcoat paints, summary and conclusions, and selected references.

U. S. Gov., Treasury Dept., Procurement Div., No.360; 1939. Paint (Marine); General Specifications (Methods of Testing). This specification covers technical requirements and the methods are intended for testing various glyceryl phthalate marine enamels and paints. Gives requirements for sampling, general procedure, composition determination, and physical and performance tests.

U. S. Gov., U. S. Army, Army Air Forces. Specification 3-100-1; 1942. Protective Coatings and Finishes for Aircraft and Aircraft Parts; General Specification for.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 3-1F; 1943. Paint and Related Materials; General Specifications.

U. S. Gov., U. S. Maritime Commission. Specification MC-52-A-1; 1939. Amendment 3; 1944. Paint and Paint Materials (Other Than Ships' Bottom Paints). Covers approval, lists 42 classes of paints and paint materials, general requirements, specific requirements for each class, packing, containers, marking of deliveries, and inspection.

U. S. Gov., U. S. Maritime Commission. Specification MC-52-B-1; 1939. Ships' Bottom Paints and the application Thereof. Covers approval; lists four classes—(I) anticorrosive paints, (II) antifouling paint, (III) red boottopping paints, and (IV) hull stern plate coating; general requirements, detail requirements, specific requirements for each class, packing and marking, inspection of paints, and preparation of ships' bottoms for painting and application of paint thereto including general, rigging, scaling of bottoms, cleaning and drying of bottoms, preparation of paints, application of paint, care of opened drums, cooperation in return of empty paint drums, and inspection of services.

## 840.2 SAFETY CODES FOR HANDLING AND STORAGE OF PAINTS AND VARNISHES

Associated Factory Mutual Fire Insurance Companies. Japan Application and Drying. Enamel, Paint, and Varnish, 1938. Recommended safeguards for use in storage and mixing and application of finishes as regards isolation of materials and rooms, ventilation, overflow pipes and drains for dip tanks, construction of drying and baking ovens, etc.

Associated Factory Mutual Fire Insurance Companies. Pyroxylin Lacquer, 1931. Information on hazards present and safeguards recommended in storage, mixing, spraying, dipping, and spreading of pyroxylin lacquer as regards location of buildings or rooms, ventilation, protection of electrical equipment, provision of automatic sprinklers, good housekeeping, etc.

National Board of Fire Underwriters. Paint Spraying and Spray Booths, No.33; 1941. Standards covering application of paint, varnishes, lacquers and similar flammable finishes, by spraying with an air brush or direct pressure. Gives introduction, location, spraying enclosures, booths, blower and exhaust systems, electric equipment, containers, mixing rooms and circulating pipe systems, protection, maintenance, and hydrogen peroxide spraying.

National Fire Protection Assn. National Fire Codes for Flammable Liquids, Gases, Chemicals, and Explosives, 1943. Dip Tanks, Containing Flammable Liquids. Covers classification of tanks, location, storage of flammable liquids, control of hazards, ventilation, construction and installation, hoods and curtains, automatic heat actuated devices, fire protection, and special requirements for various classes.

National Fire Protection Assn. National Fire Codes for Flammable Liquids, Gases, Chemicals, and Explosives, 1943. Paint Spraying and Spray Booths. Standards for paint spraying and spray booths using flammable materials. Covers location, spraying enclosures, booths, blower and exhaust systems, electric equipment, containers, mixing rooms, protection, maintenance and hydrogen peroxide spraying.

*References.*—Dip tanks for application of varnish, *see* 956.2; enameling and japanning ovens, *see* 614.9.

## 840.3 TERMS RELATING TO PAINT

American Society for Testing Materials, D 16-44 T; 1944. Tentative Definitions of Terms Relating to Paint, Varnish, Lacquer, and Related Products. Defines baking finish, baking temperature, color, drier, drying oil, enamel, filler, fineness, flattening agent, forced drying temperature, U. S. gallon, Imperial gallon, hiding power, lake, nondrying oil, nonvolatile oil, opacity, paint, pigment, resin, semidrying oil, shade, size, specific gravity, spreading rate, tint, tinting strength, toner, varnish, vehicle, and volatile thinner.

## 840.4 PAINT COLORS

U. S. Gov., Federal Specification TT-C-591; 1934. Amendment 1; 1934. Colors; (for) Flag of the U. S. Provides a general method for use in the procurement of materials having the red, white and/or blue colors of the flag, and a precise colorimetric definition of the standard colors for purpose of record.

U. S. Gov., Federal Specification TT-P-381; 1944. Pigments-in-Oil; Paint-Colors. Covers one type and colors in blacks, blues, browns, greens, oranges, reds, and yellows. Gives requirements for color, character of tint, tinting, strength, pigment content, coarse particles and skins, properties of vehicle, consistency, and skinning; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Veterans Administration. Specification VA-X-61c; 1941. Colors; Artists Oil.

## 840.5 TESTS OF PAINTS AND VARNISHES

American Society for Testing Materials, D 34-39; 1939. American Standards Assn., K15-1939. Methods of Chemical Analysis of White Pigments. Includes preparation of sample, determination of small amounts of iron, methods of analysis of basic carbonate of lead, basic sulfate of lead, zinc-lead and leaded-zincs, zinc-oxide, lithopone, titanium pigments, calcium pigments, gypsum, terra alba, plaster of Paris, barium pigments, and silica pigments.

American Society for Testing Materials, D 50-36; 1936. American Standards Assn., K44-1937. Methods of Chemical Analysis of Yellow, Orange, Red, and Brown Pigments Containing Iron and Manganese. Methods of test for Indian reds, red oxides, ochers, Venetian red, siennas, and umbers, for chemical composition.

American Society for Testing Materials, D 56-36; 1936. American Petroleum Institute Standard, 509-36. American Standards Assn., Z11.24-1936. Method of Test for Flash Point by Means of the Tag Closed Tester. For all mobile liquids flashing below 175° F., except for fuel oil which is preferable tested with the Pensky-Martens closed tester. Dimensions of tag closed tester, requirements for thermometers, procedure for average value of flash point, and variation for lacquer solvents or diluents of low flash point.

American Society for Testing Materials, D 126-36; 1936. American Standards Assn., K58-1941. Methods of Chemical Analysis of Yellow and Orange Pigments Containing Chromium Compounds, Blue Pigments, and Chrome Green. Includes preparation of sample, methods of chemical analysis of yellow and orange pigments, blue pigments, ultramarine blue, cobalt blue, sublimed blue, chrome green, and chrome oxide green.

American Society for Testing Materials, D 153-39; 1939. American Standards Assn., K41-1939. Methods of Test for Specific Gravity of Pigments. Description of apparatus and methods of procedure for—(a) routine testing of several samples simultaneously, (b) for tests requiring the highest accuracy, and (c) for rapid accurate testing of single samples.

American Society for Testing Materials, D 185-37; 1937. American Standards Assn., K42-1937. Methods of Test for Coarse Particles in Pigments, Pastes, and Paints. Describes apparatus and procedures for insoluble dry pigments, metallic aluminum and bronze powders, water-soluble pigments, pastes in oil or japan, mixed paints, ship-bottom paints containing resins and alcohol, and for cellulose ester lacquers.

American Society for Testing Materials, D 215-41; 1941. Methods of Chemical Analysis of White Linseed Oil Paints. Preparation of sample, reagents, water, volatile thinner, nature of thinner, percentage of pigment, percentage of nonvolatile vehicle, testing nonvolatile vehicle, and analysis of pigment.

American Society for Testing Materials, D 278-31; 1931. American Standards Assn., K51-1941. Method of Test for Alkalinity or Acidity of Pigments. Describes methyl orange test for water filtered through pigment.

American Society for Testing Materials, D 279-31; 1931. American Standards Assn., K52-1941. Methods of Test for Bleeding of Pigments. Covers procedure for dry pigments used in cellulose ester lacquers, for dry pigments used in oil or oleo-resinous paints and enamels, for pastes in oil, and for pastes in japan.

American Society for Testing Materials, D 280-33; 1933. American Standards Assn., K53-1941. Method of Test for Hydroscopic Moisture (and Other Matter Volatile Under the Test Conditions) in Pigments. Covers method for pigments which decompose at 110° C., and for pigments which do not decompose at 110° C. Description of apparatus and outlines of procedure.

American Society for Testing Materials, D 281-31; 1931. American Standards Assn., K54-1941. Method of Test for Oil Absorption of Pigments. To determine the least quantity of raw linseed oil which will "wet" the pigment to produce a stiff putty-like paste.

American Society for Testing Materials, D 283-39; 1939. Method of Chemical Analysis of Dry Cuprous Oxide. Covers preparation of sample, determination of total copper, metallic copper, and cuprous oxide.

American Society for Testing Materials, D 307-44; 1944. Method of Test for Spectral Characteristics and Color of Objects and Materials. Description of apparatus required, standard reflecting surface, illumination, calibrations, and method of procedure.

American Society for Testing Materials, D 332-36; 1936. American Standards Assn., K56-1941. Method of Test for Tinting Strength of White Pigments. Covers requirements as to apparatus, materials, and procedures for white pigments, pastes, and optional method for pigments varying greatly in tinting strength by comparison with agreed standards; formulas for computing tinting strength.

American Society for Testing Materials, D 333-40; 1940. Methods of Testing Nitrocellulose Clear Lacquers and Lacquer Enamels. Method of procedure for the determination of weight, drying time, gloss, homogeneity, print test, outdoor exposure, nonvolatile matter, consistency, and apparatus assembly required.

American Society for Testing Materials, D 344-39; 1939. Method of Test for Relative Dry Hiding Power of Paints. For comparison and for quantitative determination of relative dry hiding powers of paints. Describes apparatus, materials, method of procedure, and optional procedure with formula for calculation of the hiding power.

American Society for Testing Materials, D 387-36; 1936. American Standards Assn., K57-1941. Method of Test for Mass Color and Tinting Strength of Color Pigments. For dry colors either in form of dry pigments or of pastes in oil or japan; requirements for apparatus, mass color procedure, tinting strength procedures for color pigments and for pastes.

American Society for Testing Materials, D 406-39; 1939. Method of Test for Relative Dry Hiding Power of White Pigments in a Linseed Oil Vehicle. For a comparison of a standard and sample of same type of pigment and also for quantitative difference in two pigments of the same type. Describes apparatus, materials, test for relative dry hiding power, and procedure for determining the quantitative differences in hiding power.

American Society for Testing Materials, D 444-39; 1939. Methods of Chemical Analysis of Zinc Yellow Pigment (Zinc Chromate Yellow). Includes preparation of sample, determination of moisture, chromium, total alkali metals, sodium, calcium, and ammonia.

American Society for Testing Materials, D 479-40; 1940. Method of Test for Reactivity of Paint Liquids. For the determination of reactivity between paint liquids and zinc oxide. Requirements as to apparatus and reagents, outline of procedure for test, and method of grading.

American Society for Testing Materials, D 523-44 T; 1944. Tentative Method of Test for Specular Gloss of Paint Finishes. Describes two procedures for measuring specular gloss of paint finishes as follows: Procedure A may be used for the classification of any surface regardless of the presence of some texture and may also be used for measurement of eggshell and flat finishes. Procedure B is applicable only to surfaces which are free from macroscopic structure or texture and is intended for measurement of specular gloss over a wider gloss range than procedure A. Definition, apparatus, method of measurement, specular gloss standards, preparation and measurement of samples, report, definitions of five types of gloss not involved in present method of test, and discussion of definitions.

American Society for Testing Materials, D 555-41; 1941. Methods of Testing Drying Oils. For drying oils used in paints and varnishes. Reagents, preparation of sample, specific gravity; acid number of linseed oil, raw tung oil, perilla oil, and raw soybean oil; saponification number, unsaponifiable matter, iodine number Wijs and Hanus, loss on heating, appearance, color, foots; and heated and chilled oil tests, heating test, quality test; refractive index, time of drying on glass, ash, lead, and matter insoluble in chloroform.

American Society for Testing Materials, D 562-44; 1944. Method of Test for Consistency of Exterior House Paints and Enamel-Type Paints. For determining the consistency expressed in terms of the weight required to produce a specified speed in a Stormer viscosimeter.

American Society for Testing Materials, D 564-43; 1943. Methods of Testing Liquid Driers. To be applied to driers for use in paints and varnishes. Gives requirements for conditioning, physical tests, chemical analysis, zinc, and iron.

American Society for Testing Materials, D 609-41 T; 1941. Tentative Method for Preparation of Steel Panels for Exposure Tests of Enamels for Exterior Service. Covers two procedures for the preparation of steel panels for exposure tests of enamels for exterior service. Test panels, preparation of panel surface, and application of finishing material.

American Society for Testing Materials, D 610-43; 1943. Method of Evaluating Degree of Resistance to Rusting Obtained With Paint on Iron or Steel Surfaces. The photographic reference standards included in this method are representative of degrees of resistance to rusting obtained from paint on iron or steel surfaces. They are to be used for comparative purposes and are not intended to have a direct relationship to a decision regarding painting requirements. Covers types of rusting and use of photographic reference standards.

American Society for Testing Materials, D 658-44; 1944. Method of Test for Abrasion Resistance of Organic Coatings With the Air Blast Abrasion Tester. Covers coatings applied to flat sheet metal of uniform surface texture.

American Society for Testing Materials, D 659-44; 1944. Method of Evaluating Degree of Resistance to Chalking of Exterior Paints of the Linseed-Oil Type. Chalking is defined as that phenomenon manifested in paint films by the presence of loose removable powder, evolved from the film itself, at or just beneath the surface.

American Society for Testing Materials, D 660-44; 1944. Method of Evaluating Degree of Resistance to Checking of Exterior Paints of the Linseed-Oil Type. Checking is defined as that phenomenon manifested in paint films by slight breaks in the film that do not penetrate to the underlying surface.

American Society for Testing Materials, D 661-44; 1944. Method of Evaluating Degree of Resistance to Cracking of Exterior Paints of the Linseed-Oil Type. Cracking is defined as that phenomenon manifested in paint films by a break extending through to the surface painted.

American Society for Testing Materials, D 662-44; 1944. Method of Evaluating Degree of Resistance to Erosion of Exterior Paints of the Linseed-Oil Type. Erosion is that phenomenon manifested in paint films by the wearing away of the finish to expose the substrate.

American Society for Testing Materials, D 711-43T; 1943. Tentative Method of Test for Dry to No-Pick-Up Time of Traffic Paint. Describes a laboratory test to determine the length of drying time after application for no-pick-up of traffic or pavement-marking paint by the tire of an automobile. Gives requirements for apparatus and procedure.

American Society for Testing Materials, D 712-43T; 1943. Tentative Method of Test for Light Sensitivity of Traffic Paint. Intended for determining the color change produced by sunlight on paint material intended for use as traffic or pavement-marking paint. Covers preparation of test panels and procedure.

American Society for Testing Materials, D 713-43T; 1943. Tentative Method of Conducting Road Service Tests on Traffic Paint. Intended for determining the relative values of service of traffic or pavement-marking paints under actual road conditions. Covers type of location of road surface for tests, conditions at time of application, consistency of paint samples, method and rate of application, and observations.

American Society for Testing Materials, D 714-43T; 1943. Tentative Method for Evaluating the Degree of Resistance to Blistering of Organic Coatings on Metal When Subjected to Immersion or Other Tests Involving Exposure to Moisture or Liquids. The photographic reference standards included in this method are representative of different sizes of blisters that may develop on paint systems on iron, steel, or other metal surfaces when subjected to

immersion tests. Covers types of blistering and use of photographic reference standards.

American Society for Testing Materials, D 715-43T; 1943. Tentative Methods of Analysis of Barium Sulfate Pigments. These methods cover the procedures for the chemical analysis of barium sulfate pigments. Includes procedure for barium sulfate, ferric oxide, hydrogen ion concentration, matter soluble in water, moisture and other volatile matter, coarse particles, and free silica.

American Society for Testing Materials, D 716-43T; 1943. Tentative Methods of Analysis of Mica Pigment. These methods cover the procedures for the chemical analysis of mica pigments. Includes procedure for apparent density, moisture and other volatile matter, grit, coarse particles, and color.

American Society for Testing Materials, D 717-43T; 1943. Tentative Methods of Analysis of Magnesium Silicate Pigment. These methods cover the procedures for the chemical analysis of magnesium silicate pigment. Includes procedure for silicon dioxide, magnesium oxide, loss on ignition, moisture and other volatile matter, coarse particles, and color.

American Society for Testing Materials, D 718-43T; 1943. Tentative Methods of Analysis of Aluminum Silicate Pigment. These methods cover the procedures for the chemical analysis of alumimum silicate pigment. Includes procedure for silicon dioxide, aluminum oxide, loss on ignition, moisture and other volatile matter, coarse particles, and color.

American Society for Testing Materials, D 719-43T; 1943. Tentative Methods of Analysis of Diatomaceous Silica Pigment. These methods cover the procedures for the chemical analysis of diatomaceous silica pigment. Includes procedure for loss on ignition, matter soluble in hydrochloric acid, moisture and other volatile matter, volume of settling in petroleum spirits, coarse particles, and color.

American Society for Testing Materials, D 771-44 T; 1944. Tentative Method of Test for Daylight 45 Degree, 0 Degree Apparent Reflection of Paint Finishes. Covers scope, definition, apparatus, standards, preparation of sample, and report.

American Society for Testing Materials, D 772-44 T; 1944. Tentative Method of Evaluating Degree of Resistance to Flaking (Scaling) of Exterior Paints of the Linseed-Oil Type. Covers scope, definition, types of flaking (scaling), and use of photographic reference standards.

American Society for Testing Materials, E 41-42 T; 1942. Tentative Definitions With Procedures Relating to Conditioning and Weathering. Intended to apply to all cases where combinations of atmospheric influences are an essential part of materials testing. Definitions, relative humidity determination, room temperature determination, and test in standard laboratory atmosphere.

American Society for Testing Materials, E 42-42 T; 1942. Tentative Recommended Practice for Characteristics of Standard Carbon Arc Accelerated Weathering Unit. The characteristics recommended cover those points of fundamental importance that will provide an acceptable accelerated weathering unit for many purposes, and at the same time permit the development of detailed and specific cycles needed for the obtaining of particular data and falling within the general structure of this recommended practice.

American Society for Testing Materials, ES-35; 1944. Emergency Method of Test for Changes in Protective Properties of Organic Coatings on Steel Surfaces When Subjected to Immersion. Intended for use in determining the resistance to failure of organic coatings when immersed in specified test liquids. Gives apparatus, test specimens, preparation of specimens, coating of specimens, and procedure.

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis, 1940. Paints, Varnishes, and Constituent Materials. Includes white linseed oil paints—same (except editing for form) as Specification D215-29 of the American Society for Testing Materials; nonvolatile vehicle—for mineral oil and other unsaponifiable matter, iodine number of fatty acids, rosin, pigment, and specific gravity; single pigments (basic carbonate of lead, basic sulfate of lead, zinc oxide, lithopone, and titanium); mixed or composite pigments—for moisture, loss on ignition, insoluble matter, total lead and antimony, antimony oxide, soluble barium, alumina, total zinc, soluble calcium, soluble magnesium, total soluble sulfur compounds, soluble sulfate, sulfide sulfur, sulfur dioxide, and matter soluble in water, and recommendations for calculations of component pigments; oleoresinous varnishes—for appearance, color, nonvolatile matter, elasticity or toughness, flash point, viscosity, and water; raw linseed oil—specific gravity, iodine absorption number, saponification number, acid number, foots, loss on heating 105°-110°, and color; and boiled linseed oil—specific gravity, iodine absorption number, saponification number, acid number, loss on heating 105°-110°, time of drying on glass, ash, lead, and appearance.

National Fire Protection Assn. National Fire Codes for Flammable Liquids, Gases, Chemicals, and Explosives, 1943. Flash Point Test-Tag Closed Tester. For determining the flash point of mobile liquids flashing below 175° F. and lacquer solvents or diluents of low flash points. Covers apparatus, procedure, repeat tests, average value of flash point, and correction for barometric pressure.

U. S. Gov., Army-Navy Aeronautical Specification AN-QQ-S-91; 1938. Salt-Spray Corrosion Test; Process for.

U. S. Gov., Army-Navy Aeronautical Specification AN-TT-C-516-4; 1944. Coatings; Protective, Organic (for Aircraft); General Specifications (Methods for Sampling and Testing).

U. S. Gov., Federal Specification TT-P-141a; 1944. Paint, Varnish, Lacquer, and Related Materials. General Specifications for Sampling and Test Method. Covers inspection, and sampling, preparation of test panels and application of films, package stability tests, physical tests of materials, chemical tests of materials, properties of coated panels, and analytical tests of ingredients.

## 840.6 PAINTING AND PROTECTIVE COATING EQUIPMENT

American Hospital Assn., 34-133. Paint Sprayers (Outfits). Covers general and special purpose types.

Based on U. S. Gov., Navy Dept., Specifications 41 S 35.

Society of Automotive Engineers. Aeronautical Standard 11a; 1945. Spray Equipment, Corrosion-Preventive Compound. For applying corrosion-preventive compound AMS-3072 to aircraft engines. Gives requirements for equipment, sprayer extension, nozzle, and operation.

U. S. Gov., Army-Navy Aeronautical Specification AN-M-8; 1942. Metal Spraying; Process for.

U. S. Gov., Navy Dept. Specification 41P31; 1942. Pots; Paint.

U. S. Gov., Navy Dept. Specification 41S35d; 1942. Sprayers; Paint (Outfits).

U. S. Gov., Navy Dept. Specification 41S38d; 1942. Sprayers, Dope; Guns and Accessories, Aircraft Use.

U. S. Gov., Navy Dept. Specification 41S41a; 1939. Sprayers, Metal; Guns and Accessories.

U. S. Gov., U. S. Army, Corps of Engineers. Specification 39-7; 1943. Sprayer; Paint, Pneumatic Pressure Type, Trailer Mounted.

U. S. Gov., U. S. Army, Corps of Engineers. Specification 39-8; 1943. Agitator; Paint, Motor-Driven, 1/2 H.P., 110 Volt, 60 Cycle, AC, with 50-Gal. Mixing Tank.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 29-10; 1923. Strainer; Paint.

U. S. Gov., Veterans Administration. Specification VA-M-43b; 1937. Portable Electric Spray Painting Outfit.

U. S. Gov., Veterans Administration. Specification VA-M-44; 1936. 1 H.P. Portable Electric Spray Painting Outfit.

U. S. Gov., Veterans Administration. Specification VA-M-51b; 1938. Automobile Paint Finishing Outfit.

U. S. Gov., Veterans Administration. Specification VA-M-160; 1935. Paint Spray Outfit (Automotive).

U. S. Gov., Veterans Administration. Specification VA-M-209; 1936. Paint Spray Gun (Only) Automotive.

U. S. Gov., Veterans Administration. Specification VA-MC-42a; 1941. 1/2 H.P. Portable Electric Spray Painting Outfit.

### 840.9 MISCELLANEOUS REQUIREMENTS FOR PAINTS

American Society for Testing Materials, D 358-44 T; 1944. Tentative Specifications for Wood To Be Used as Panels in Weathering Tests of Paints and Varnishes. For exterior paints and other materials for similar purpose, either outdoor or accelerated laboratory tests, and for uses of each specie. Includes Western red cedar, white pine, and Southern yellow pine.

*References.*—Lime for use in manufacture of varnish, *see* 517.2.

## 841. MINERAL PIGMENTS, DRY AND PASTE

### 841.1 ASBESTINE PIGMENTS (MAGNESIUM SILICATE)

### 841.2 BARYTES PIGMENTS

American Society for Testing Materials, D 602-42; 1942. Barium Sulfate Pigments. Covers the barium sulfate pigments commercially known as barytes and blanc fixe. Composition and properties, number of tests, and methods of testing.

### 841.3 GRAPHITE PIGMENTS

### 841.4 IRON OXIDE PIGMENTS

### 841.41 Iron Oxide, Red Pigments

American Society for Testing Materials, D 84-43T; 1943. American Assn. of State Highway Officials, M 129. Tentative Specifications for Red and Brown Iron Oxide Pigments. Covers three classes and two types. Gives requirements for total iron oxide, moisture and other volatile matter, sulfur, matter soluble in water, organic coloring matter, and coarse particles for dry pigments; coarse particles and skins, and moisture and other volatile matter for paste in oil; number of tests and methods of testing.

U. S. Gov., Federal Specification TT-I-511a; 1944. Indian-Red and Bright-Red (Iron-Oxide); Dry (Paint-Pigments). Covers one grade and two types—(I) Indian red and (II) bright red. Gives requirements for iron oxide, coarse particles, lime, moisture and other volatile matter, organic colors or lakes, matter soluble in water, and color; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification TT-M-381; 1944. Mineral-Red (Iron-Oxide), Natural; Dry (Paint Pigments). Covers one grade and one type. Gives detail requirements for coarse particles, iron oxide, sulfates, moisture and other volatile matter, organic colors, matter soluble in water, and mass color; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

*References.*—Definitions, methods of testing pigments, *see* 840.3, 840.5.

### 841.42 Iron Oxide, Brown Pigments

American Society for Testing Materials, D 84-43T; 1943. American Assn. of State Highway Officials, M 129. Tentative Specification for Red and Brown Iron Oxide Pigments. Covers three classes and two types. Gives requirements for total iron oxide, moisture and other volatile matter, sulfur, matter soluble in water, organic coloring matter, and coarse particles for dry pigments; coarse particles and skins, and moisture and other volatile matter for paste in oil; number of tests and methods of testing.

U. S. Gov., Federal Specification TT-I-702; 1944. Iron Oxide; Brown, Synthetic, Dry (Paint Pigment). Covers the grade of pigment commercially known as synthetic brown iron oxide. Gives requirements for total ferro-ferric oxide of iron, loss on ignition, moisture and other volatile matter, water-soluble matter, organic colors or lakes, extenders and adulterants, coarse particles, and mass color and character of tint; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

*References.*—Brown pigments, *see* 841.41.

### 841.43 Iron Oxide, Yellow Pigments

American Society for Testing Materials, D 768-44 T; 1944. Tentative Specifications for Yellow Iron Oxide; Hydrated. Covers the pigment commercially

known as yellow iron oxide, hydrated. Gives composition and properties, number of tests, and methods of testing.

U. S. Gov., Federal Specification TT-Y-216; 1943. Amendment 1; 1944. Yellow-Iron-Oxide; Hydrated, Synthetic, Dry (Paint Pigment). Covers the grade of pigment commercially known as synthetic hydrated yellow iron oxide, suitable for use in paints, enamels, lacquers, and similar products. Shall be a manufactured yellow iron oxide obtained by chemical reaction. Gives requirements for chemical composition and the mass color and character of the tint; methods of sampling, inspection, and tests; and packaging, packing, and marking.

### 841.44 Iron Oxide, Black Pigments

American Society for Testing Materials, D 769-44 T; 1944. Tentative Specifications for Black Synthetic Iron Oxide. Covers the pigment commercially known as black synthetic iron oxide. Gives composition and properties, number of tests; and methods of testing.

U. S. Gov., Federal Specification TT-I-698; 1944. Iron Oxide; Black, Synthetic, Dry (Paint Pigment). Covers the grade of pigment commercially known as synthetic black iron oxide. Gives requirements for total ferro-ferric oxide of iron, ferrous oxide, moisture and other volatile matter, water-soluble matter, organic colors or lakes, extenders and adulterants, coarse particles, and mass color and character of tint; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

### 841.49 Miscellaneous Red, Brown, and Maroon Pigments

National Assn. of Purchasing Agents, Handbook of Commodity Data Sheets, Volume 2; 1944. Pigments; Iron (Iron Oxide, Red Iron Oxide, Yellow Iron Oxide, Ocher, Persian Red, Umber, Sienna). Covers definition, derivation, uses, grades, and packing.

U. S. Gov., Federal Specification TT-M-251; 1944. Metallic-Brown; Dry (Paint-Pigment). Covers one grade and one type of dry metallic brown paint pigment. Gives requirements for coarse particles, iron oxide, sulfates, moisture and other volatile matter, organic colors, matter soluble in water, and mass color; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

*References.*—Ocher pigments of iron oxide, *see* 841.5.

### 841.5 Ocher (Pigment)

American Society for Testing Materials, D 85-41; 1941. Ocher. Covers ferrous earthy pigments in dry or paste form, composition of dry ingredients, paste made by thoroughly grinding pigment with linseed oil or grinding japan, mass color, character of tint, number of tests, and methods of test.

U. S. Gov., Federal Specification TT-O-121; 1944. Ocher; Yellow, Dry (Paint-Pigment). Covers one grade and type of hydrated oxide of iron permeating a siliceous base and shall be in the form of a soft, dry powder. Gives requirements for coarse particles, iron oxide, lime, lead chromate, organic colors, moisture, tint, and oil absorption; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

*References.*—Definitions, methods of testing pigments, *see* 840.3, 840.5.

### 841.6 SIENNA (PIGMENT)

American Society for Testing Materials, D 765-44 T; 1944. Tentative Specifications for Raw Sienna. Covers the pigment commercially known as raw sienna. Gives composition and properties, number of tests, and methods of testing.

American Society for Testing Materials, D 766-44 T; 1944. Tentative Specifications for Burnt Sienna. Covers the pigment commercially known as burnt sienna. Gives composition and properties, number of tests, and methods of testing.

U. S. Gov., Federal Specification TT-S-346; 1944. Sienna; Burnt and Raw, Dry (Paint-Pigments). Covers one grade and two types—(I) raw and (II) burnt. Gives detail requirements for iron oxide, calcium compounds, organic colors, coarse particles, moisture, and mass color for each type; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

### 841.7 UMBER (PIGMENT)

American Society for Testing Materials, D 763-44 T; 1944. Tentative Specifications for Raw Umber. Covers the pigment commercially known as raw umber. Gives composition and properties, number of tests, and methods of testing.

American Society for Testing Materials, D 764-44 T; 1944. Tentative Specifications for Burnt Umber. Covers the pigment commercially known as burnt umber. Gives composition and properties, number of tests, and methods of testing.

U. S. Gov., Federal Specification TT-U-481; 1944. Umber; Burnt and Raw, Dry (Paint-Pigments). Covers one grade and two types—(I) raw and (II) burnt. Gives detail requirements for iron oxide, calcium compounds, coarse particles, moisture, and mass color for each type; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

### 841.8 WHITING OR PARIS WHITE

U. S. Gov., Navy Dept. Specification 52W1e; 1942. Whiting.

U. S. Gov., U. S. Maritime Commission. Specification 52-MC-33; 1944. Pigment; Whiting (Calcium Carbonate). Covers one type and one grade of a pigment for use in ready mixed paint. Gives requirements for material, workmanship, form, composition, specific gravity, coarse particles, color, and oil absorption, inspection, sampling, and methods of test; and packaging and marking.

*References.*—Ceramic whiting, calcium carbonate, *see* 546, 833.3.

## 842. CHEMICAL PIGMENTS (DRY AND PASTE)

### 842.1 BLANC FIXE AND TITANIUM OXIDE (PIGMENTS)

American Society for Testing Materials, D 476-41; 1941. American Standards Assn., K45-1941. Titanium

Dioxide Pigments. Includes titanium dioxide, titanium-barium, titanium-calcium, and titanium-magnesium pigments. Composition and properties, number of tests, and methods of test.

American Society for Testing Materials, D 602-42; 1942. Barium Sulfate Pigments. Covers the barium sulfate pigments commercially known as barytes and blanc fixe. Composition and properties, number of tests, and methods of testing.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, 1938. Titanium Dioxide. Covers definition, constants, manufacture, grades, and uses.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, 1938. Titanium Pigments. Covers: (I) Titanium dioxide—definition, physical properties, chemical properties, solubility, grades, derivation, substitutes, containers, uses, and ordering instructions; (II) titanium-barium—definition, constants, solubility, derivation, substitutes, containers, uses, and ordering instructions; (III) titanium-calcium—definition, constants, solubility, derivation, substitutes, containers, uses, and ordering instructions; (IV) lead titanate—definition, constants, chemical formula, solubility, derivation, substitutes, containers, and uses; (V) titanium-magnesium (titanium silicate), definition, constants, solubility, derivation, substitutes, containers, uses, and ordering instructions.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, Volume 2; 1944. Blanc Fixe (Barium Sulphate). Covers definition, constants, solubility, derivation, uses, grades and forms, containers, shipping, and substitutes.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, Volume 2; 1944. Lead Titanate. Covers definition, constants, impurities, derivation, characteristics, uses, grades, and substitutes.

Technical Assn. of the Pulp and Paper Industry. Determiniation of Titanium Dioxide. Tentative Standard T 627 m-43; 1943. Deals with the determination of titantium dioxide in raw materials such as pigments, fillers, and minerals, as well as in various stages of mill process. Covers volumetric method including apparatus, reagents, preparation of sample, and procedure; and colorimetric method including reagents, procedure, interfering elements, and report.

U. S. Gov., Army-Navy Aeronautical Specification AN-TT-T-436a; 1943. Titanium Oxide; Chalk-Resisting, Dry (Pigment).

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Circular C 398 and Supplement, 1944. Standard Samples. Titanium Dioxide, Sample 154. This sample is prepared and sold by the National Bureau of Standards with a certificate of analysis for use in industry and by others as a comparison standard for checking the accuracy of analysis of similar material.

U. S. Gov., Federal Specification TT-T-425; 1944. Amendment 1; 1944. Titanium Dioxide; Dry, Paint-Pigment. Covers one grade of soft, dry powder in three types—(I) free chalking, anatase; (II) semi-chalking in two classes—(A) antimony-aluminum treated, anatase, and (B) aluminum treated, rutile; and (III) chalk-resisting, rutile, in three classes—(A) zinc treated, (B) silicon-aluminum treated, and (C) silicon-aluminum-zinc treated. Gives requirements for composition, specific gravity, oil absorption, color, water solubility, tinting strength, hydrogen ion concentration, moisture, and chalk resistance; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Navy Dept. Specification 52B9c; 1924. Blanc Fixe; Dry and Paste.

U. S. Gov., Navy Dept. Specification 52T10a; 1945. Titanium-Calcium Pigment.

U. S. Gov., U. S. Maritime Commission. Specification 52-MC-9; 1942. Pigment; Titanium Dioxide; Rutile, Chalk-Resisting. Covers one type and grade of dry pigment. Gives requirements for coarse particles, chemical composition, specific gravity, hiding power, color, tinting strength, hydrogen ion concentration; inspection, sampling, and methods of test; and packaging and marking.

U. S. Gov., U. S. Maritime Commission. Specification 52-MC-16; 1943. Pigment; Titanium-Calcium, Rutile. Covers one type and one grade of dry pigment. Gives requirements for coarse particles, chemical composition, specific gravity, hiding power, composition, color, and tinting strength; inspection, sampling, and methods of tests; packaging and marking.

U. S. Gov., U. S. Maritime Commission. Specification 52-MC-19; 1943. Pigment; Titanium Dioxide, Rutile. Covers one type and grade of dry pigment. Gives requirements for coarse particles, chemical composition, specific gravity, hiding power, color, tinting strength, and hydrogen ion concentration; inspection, sampling, and methods of test; and packaging and marking.

*References.*—Titanium mixed pigments, *see* 842.87; Definitions of terms, *see* 840.3.

## 842.2 CHINESE, PRUSSIAN, OR BRONZE BLUE (PIGMENTS)

American Society for Testing Materials, D 261-41; 1941. American Assn. of State Highway Officials, M 131-42. American Standards Assn., K 29-1941. Prussian Blue. For pigment known commercially as Prussian blue, Chinese blue, or iron blue, in dry form or as paste in oil or in japan. Requirements for dry ingredients formed by reaction of solutions of iron salts with ferrocyanide or ferricyanide solutions, paste made by grinding pigment with linseed oil or by grinding in japan, mass color and character of tint, number of tests, and methods of test.

U. S. Gov., Federal Specification TT-I-677; 1944. Iron Blue; Dry (Paint-Pigment). Formerly designated "Prussian Blue." Covers one grade of iron blue (also called Chinese, Prussian, Milori, etc.) in one type only, a fine dry powder. Gives requirements for moisture and other volatile matter, total matter soluble in water, character of tint when diluted with zinc oxide, tint, and oil absorption; methods of sampling, inspection, and tests; and packaging, packing and marking for shipment.

*References.*—Definitions of terms, methods of testing pigments, *see* 840.3, 840.5.

## 842.3 ULTRAMARINE BLUE (PIGMENTS)

American Society for Testing Materials, D 262-41; 1941. Ultramarine Blue. Covers the pigments commercially known as ultramarine blue, suitable for use in paints, enamels, lacquers, and similar products. The pigment may be purchased in the dry form or as a paste in oil or in japan. Composition and properties, number of tests, and methods of testing.

U. S. Gov., Federal Specification TT-U-450; 1944. Ultramarine Blue; Dry (Paint-Pigment). Covers the grade of pigment known commercially as ultramarine blue, in one grade only, the dry pigment. Gives requirements for coarse particles, moisture and other volatile matter, matter soluble in water, organic colors or lakes, tint, and oil absorption; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

*References.*—Definitions of terms, *see* 840.3; methods of testing pigments, *see* 840.5.

## 842.4 CARBON BLACK, LAMPBLACK, BONE BLACK, ETC.

American Society for Testing Materials, D 209-41; 1941. American Standards Assn., K26-1941. Lampblack. For dry pigment made by burning oils or tars in a manner to form carbon or soot and for paste in oil or japan. Limiting percentages of ash, acetone extract, coarse particles; tone when diluted with zinc oxide for dry pigment, for paste in linseed oil, for paste in grinding in japan; number of tests, and methods of test.

American Society for Testing Materials, D 210-41; 1941. American Standards Assn., K36-1941. Bone Black. Covers the pigment commercially known as bone black, ivory black, or drop black. The pigment may be purchased in the dry form or as a paste in oil or in japan. Limiting percentages of ash, ash insoluble in acids; acetone extract, coarse particles; tone when diluted with zinc oxide for dry pigment; for paste in linseed oil and in grinding in japan; number of tests and methods of test.

American Society for Testing Materials, D 305-31; 1931. American Standards Assn., K55-1941. Method of Test for Acetone Extract in Dry Lampblack and Dry Bone Black. Covers arbitrary routine procedure for percentage of acetone extract.

American Society for Testing Materials, D 561-41; 1941. Carbon Black. Covers commercial pigment suitable for use in the manufacture of protective or decorative coatings. Number of tests and methods of testing.

Assn. of American Feed Control Officials. Definitions of Feedingstuffs, 1942. Bone Charcoal or Bone Black. Includes spent bone black, minimum percentage of phosphorus contained in product after charring bones in closed retort.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, Volume 2; 1944. Bone Black (Animal Charcoal). Covers definition, constants, derivation and characteristics, grades, containers, and substitutes.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, Volume 2; 1944. Carbon Black (Gas Black, Channel Black). Covers definition, derivation, constants, uses, grades, containers, and substitutes.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, Volume 2; 1944. Lampblack. Covers definition, constants, derivation, uses, grades, containers, and substitutes.

U. S. Gov., Army-Navy Aeronautical Specification AN-TT-C-121; 1941. Carbon Black; Dry (Pigment).

U. S. Gov., Federal Specification TT-B-600; 1944. Bone Black; Dry (Paint-Pigment). Covers the grade of dry bone black also known as ivory black or drop black and shall be the product made by calcination of bones. Gives requirements for coarse particles, total ash, ash insoluble in acids, acetone extract, tint, and oil absorption; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification TT-C-120; 1944. Carbon Black; Dry (Paint-Pigment). Covers two forms—(I) powder and (II) pellets (dustless); and two classes—(A) high color and (B) standard all-purpose. Gives requirements for ash, acetone extract, coarse particles, moisture, organic dyes, mass color and character of tint, and oil absorption; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification TT-L-70; 1944. Lampblack; Dry (Paint-Pigment). Covers one grade of a fine dry powder made by burning oils or tars. Gives requirements for coarse particles, ash, acetone extract, tint, and oil absorption; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Navy Dept. Specification 52L7c; 1943. Lampblack; Dry.

*References.*—Other black pigments, *see* 842.81, 843.31; definitions, methods of testing pigments, *see* 840.3, 840.5.

## 842.5. CHROMIUM COLORS (PIGMENTS) (GREEN, YELLOW)

American Society for Testing Materials, D 211-43; 1943. American Standards Assn., K27.1; 1943. Chrome Yellow and Chrome Orange. For pigment known commercially as primrose chrome yellow, lemon chrome yellow, medium chrome yellow, light chrome orange, dark chrome orange, and orange chrome yellow. May be purchased in the dry form or as a paste in oil or in japan. Gives requirements for composition and properties, number of tests, and method of testing.

American Society for Testing Materials, D 212-41; 1941. American Assn. of State Highway Officials, M 130-42. Pure Chrome Green. Covers the pigment commercially known as pure chrome green. The pigment may be purchased in the dry form or as a paste in oil or in japan. A precipitated mixture of lead chromate and iron ferrocyanide and ferricyanide blue, with or without other insoluble compounds of lead. Composition and properties, number of tests, and methods of test.

American Society for Testing Materials, D 213-41; 1941. American Standards Assn., K28-1941. Reduced Chrome Green. Covers pigment known commercially as reduced chromium green, also as grinders green. May be purchased in the dry form or as a paste in oil or in japan. A mixture of lead chromate and iron ferrocyanide and ferricyanide blue, with or

without other insoluble compounds of leads, precipitated on a base of barium sulfate or insoluble siliceous material. Composition and properties, number of tests, and methods of test.

American Society for Testing Materials, D 263-41; 1941. American Standards Assn., K37-1941. Chrome Oxide Green. Covers the pigment commercially known as chrome oxide green. The pigment may be purchased in the dry form or as a paste in oil. Composition and properties, number of tests, and methods of test.

American Society for Testing Materials, D 478-41; 1941. American Standards Assn., K50-1941. C. P. Zinc Yellow (Zinc Chromate). Covers pigment known commercially as chemically pure zinc yellow or zinc chromate, in dry or paste form. Composition and properties, number of tests, and methods of test.

U. S. Gov., Army-Navy Aeronautical Specification AN-TT-C-221-1; 1942. Chrome Green; Dry (Pigment), Aircraft.

U. S. Gov., Army-Navy Aeronautical Specification AN-TT-L-116-1; 1942. Lead Chromate (Pigment).

U. S. Gov., Army-Navy Aeronautical Specification AN-TT-Z-416-2; 1942. Zinc Yellow (Zinc Chromate); Dry (Pigment).

U. S. Gov., Federal Specification TT-C-235; 1944. Chrome Green; Pure, Dry (Paint-Pigment). Covers the grade of pure chrome green (blend of chrome yellow and iron blue) for use in paints and shall be supplied in one type only. Gives requirements for coarse particles, total matter soluble in water, moisture and other volatile matter, lead chromate, tint, and oil absorption; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification TT-C-290; 1944. Chrome Yellow and Chrome Orange; Dry (Paint-Pigments). Covers one grade and five types—(I) primrose chrome yellow, (II) lemon chrome yellow, (III) medium chrome yellow, (IV) light chrome orange, and (V) dark chrome orange. Gives requirements for total chromium, total matter soluble in water, total of all substances other than insoluble compounds of lead, volatile including moisture, coarse particles, organic colors or lakes, tint, and oil absorption; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification TT-C-306; 1944. Chromium Oxide Green; Dry (Paint-Pigment). Covers one grade and one type of a fine dry powder and shall be practically pure sesquioxide of chromium ($Cr_2O_3$). Gives requirements for total chromium, coarse particles, total matter soluble in water, moisture and other volatile matter, tint, and oil absorption; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification TT-Z-415; 1944. Zinc Yellow, Zinc Chromate; Dry (Paint-Pigment). Covers one grade and two types—(I) low chloride-sulfate and (II) regular. Gives requirements for material, chemical composition, specific gravity, coarse particles, oil absorption, acetic acid solubility, color, and lightfastness; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

*References.*—Definitions, methods of testing pigments, *see* 840.3, 840.5; green chromium pigments, *see* 842.85.

## 842.6 LEAD PIGMENTS

### 842.61 Blue-Lead Pigments

American Society for Testing Materials, D 405-41; 1941. American Standards Assn., K48-1941. Blue Lead; Basic Sulfate. Covers the pigment commercially known as blue lead, basic sulfate, suitable for use in paints. The pigment may be purchased in the dry form or as a paste in oil. Composition and properties, number of tests, and methods of test.

U. S. Gov., Federal Specification TT-B-486; 1934. Blue Lead; Basic Sulphate; Dry, and Paste-in-Oil. Covers two types—(A) dry pigment and (B) paste-in-oil. Gives requirements for lead sulphate, lead oxide, lead sulphite, zinc oxide, carbon, and coarse particles in dry pigment; pigment, linseed oil, volatile matter, and coarse particles in paste-in-oil; methods of sampling, testing, and basis of purchase; and requirements for packaging, packing, and marking.

### 842.62 Litharge Pigments

U. S. Gov., Navy Dept. Specification 52L10b; 1942. Litharge; Dry.

### 842.63 Red-Lead Pigments

American Assn. of State Highway Officials, M71-42. Standard Specifications for Red Lead (Dry and Paste-in-Oil) and Paint Made Therefrom. Gives scope, general requirements, dry pigment, paste-in-oil, paint, packing and marking, and methods of analysis.

American Society for Testing Materials, D 49-44; 1944. American Standards Assn., K16.1-1944. Methods of Chemical Analysis of Dry Red Lead. Covers treatment of sample and procedure for the determination of moisture, organic color, total lead and insoluble matter, lead peroxide and true red lead, zinc, matter soluble in water, total silica, carbon dioxide, soluble sulfates, and iron oxide.

American Society for Testing Materials, D 83-41; 1941. American Standards Assn., K24-1941. Red Lead. Cover three grades of red lead pigment in paste or dry form for 85, 95, and 97 percent grades, total impurities allowed, lead monoxide, coarse particles and test mixture for properties of dry pigment, formula for mixture of paste in linseed oil, number of tests, and methods of test.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, 1938. Red Lead. Covers definition, constants, derivation, grades, specifications, containers, uses, and substitutes.

U. S. Gov., Federal Specification TT-R-191a; 1938. Red Lead; Dry and Paste-In-Oil. Covers two types—(I) dry (in three grades—85, 95, and 97 percent) and (II) paste-in-oil (in two grades—95 and 97 percent). Gives requirements for true red lead, total impurities, lead monoxide, and coarse particles in dry pigment; and pigment, linseed oil,

volatile matter, and coarse particles in paste; methods of sampling and tests; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., Treasury Dept., Procurement Div., No.356; 1939. Paint; Glyceryl Phthalate, Marine, Exterior, Basic Lead Chromate-Red Lead-Zinc Oxide. Shall be free from toxic ingredients and of one type and grade. For use as a priming coat for ferrous metal surfaces. Gives chemical composition of pigment and vehicle; details of paint including weight, coarse particles and skins, odor, flash point, moisture, working and drying properties, gloss, water resistance, and gasoline resistance; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., Treasury Dept., Procurement Div., No.358; 1939. Paint; Glyceryl Phthalate, Marine, Exterior, Red-Lead. Shall be of one type and grade, free from toxic ingredients. Intended for use as a priming coat for ferrous metal surfaces. Gives chemical composition of pigment and vehicle; details of paint including weight, coarse particles and skins, odor, flash point, moisture, working and drying properties, gloss, gasoline resistance, and moisture impedance; methods of sampling, inspection, and tests; and packaging, packing, and marking.

*References.*—Definitions, methods of testing pigments, *see* 840.3, 840.5.

## 842.64 White-Lead Pigments

American Society for Testing Materials, D 81-43; 1943. American Assn. of State Highway Officials, M 122. American Standards Assn., K23.1; 1943. Basic Carbonate White Lead. Covers the material commercially known as basic carbonate white lead used as a pigment and in putty. The pigment may be purchased in the dry form or as a paste in oil. Gives requirements for composition and properties, number of tests, and methods of testing.

American Society for Testing Materials, D 82-44; 1944. American Assn. of State Highway Officials, M123. American Standards Assn., K47.1; 1944. Basic Sulfate White Lead. Covers the pigment commercially known as basic sulfate white lead. The pigment may be purchased in the dry form or as a paste in oil. Gives composition and properties, number of tests, and methods of test.

U. S. Gov., Federal Specification TT-W-251a; 1934. White Lead; Basic Carbonate, Dry, Paste-in-Oil, and Semipaste Containing Volatile Thinner. Covers three types—(A) dry pigment, (B) paste in oil, and (C) semipaste containing volatile thinner. Gives requirements for composition and color of each type; methods of sampling and testing; and requirements for packaging, packing, and marking.

U. S. Gov., Federal Specification TT-W-261a; 1937. White Lead, Basic Sulphate; Dry and Paste-in-Oil. Covers grade for use in paints in two types—(I) dry pigment and (II) paste-in-oil. Gives requirements for coarse particles, lead oxide, zinc oxide, and total impurities in dry pigment; and pigment, linseed oil, volatile matter, and coarse particles in paste-in-oil; methods of inspection and tests; and requirements for packaging, packing, and marking.

*References.*—Other white lead pigments, *see* 842.87; definitions, methods of testing pigments, *see* 840.3, 840.5.

## 842.69 Miscellaneous Lead Pigments

American Society for Testing Materials, D 806-42; 1942. Lead Titanate. Covers the pigment commercially known as lead titanate. Composition and properties, number of tests, and methods of testing.

*References.*—Lead chromate pigments, *see* 842.5; leaded zinc oxide pigments, *see* 842.7; pigments according to color, *see* 842.8.

## 842.7 ZINC OXIDES AND ZINC SULPHIDES (PIGMENTS)

American Society for Testing Materials, D 79-44; 1944. American Assn. of State Highway Officials, M 124. American Standards Assn., K22.1, 1944. Zinc Oxide. Covers the pigments commercially known as "zinc white" or zinc oxide. The pigment may be purchased in the dry form or as a paste in oil. Gives composition and properties, number of tests, and methods of test.

American Society for Testing Materials, D 80-41; 1941. Leaded Zinc Oxide. Covers the pigment commercially known as leaded zinc oxide. The pigment may be purchased in the dry form or as a paste in oil. Composition and properties, number of tests, and methods of testing.

American Society for Testing Materials, D 477-41; 1941. Zinc Sulfide Pigments. Includes commercially pure zinc sulfide, zinc sulfide-barium pigment, and zinc sulfide-magnesium pigment, lithopone, and titanated lithopone. Composition and properties, number of tests, and methods of test.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, 1938. Lithopone. Covers definition, constants, derivation, uses, purity, forms available, and grades.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, 1938. Zinc Oxide. Covers definition, constants, uses, properties, containers, specifications, and ordering instructions; also definition, properties, uses, purity, containers, and grades for leaded zinc oxide.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, 1938. Zinc Sulphide. Covers definition, constants, derivation, uses, purity, forms available, and grades.

U. S. Gov., Army-Navy Aeronautical Specification AN-TT-Z-416-2; 1942. Zinc Yellow (Zinc Chromate); Dry (Pigment).

U. S. Gov., Federal Specification TT-L-426; 1944. Lithopone; Dry (Paint-Pigment). Covers processed lithopone (zinc sulfide pigment) in one type only—a soft, dry powder. Gives requirements for chemical composition, fineness, mass color and tinting strength, oil absorption, reflectivity, and light resistance; methods of sampling, inspection, and testing; and packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification TT-Z-301; 1931. Zinc Oxide; Dry and Paste-in-Oil. Covers two grades—

American process, made directly from the ore; and French process, made from spelter. Gives requirements for composition; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking. Emergency Alternate Federal Specification E-TT-Z-301; 1942, (issued by Procurement Div., Treasury Dept., U. S. Gov.) changed requirements for iodine number on the fatty acids recovered from the vehicle.

U. S. Gov., Federal Specification TT-Z-321; 1931. Zinc Oxide; Leaded, Dry and Paste-in-Oil. Covers two grades—high-leaded and low-leaded. Gives detail requirements for zinc oxide, water soluble salts, and total impurities in dry pigment; pigment, linseed oil, coarse particles, and volatile matter in paste; methods of sampling, testing, and basis of purchase; and requirements for packaging, packing, and marking.

U. S. Gov., Federal Specification TT-Z-415; 1944. Zinc Yellow, Zinc Chromate; Dry Paint Pigment. Covers one grade and two types—(I) low chloride-sulfate and (II) regular. Gives requirements for material, chemical composition, specific gravity, coarse particles, oil absorption, acetic acid solubility, color, and lightfastness; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Navy Dept. Specification 52Z3e; 1941. Zinc-Dust.

U. S. Gov., Navy Dept. Specification 52Z5; 1939. Zinc Yellow (Zinc Chromate).

U. S. Gov., Navy Dept. Specification 52Z7; 1943. Zinc Oxide.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 50-11-98; 1941. Zinc Oxide.

U. S. Gov., U. S. Maritime Commission. Specification 52-MC-8; 1942. Pigment; Oxide, Acicular. Covers one type and grade of dry pigment. Gives requirements for composition, coarse particles, oil absorption, microscopic appearance, and color; inspection, sampling, and methods of test; and packaging and marking.

*References.*—Definitions, methods of testing pigments, *see* 840.3-840.5; other zinc pigments, *see* 842.87.

## 842.8 MISCELLANEOUS PIGMENTS, DRY AND PASTE, CLASSIFIED BY COLOR

### 842.81 Black and Gray Pigments

*References.*—Specifications and methods of test for lampblack and bone black pigments, *see* 842.4; definitions, methods of testing pigments, *see* 840.3, 840.5.

### 842.82 Blue Pigments

U. S. Gov., Army-Navy Aeronautical Specification AN-TT-I-676; 1941. Iron Blue; Dry.

U. S. Gov., Federal Specification TT-C-610; 1944. Copper-Phthalocyanine Blue; Dry, Paint Pigment. Covers one grade of a dry powdered pigment in two types—(I) toner type and (II) resinated or benzoated type. Gives requirements for material, composition, specific gravity, water solubility, oil absorption, color, lightfastness, and tests for identity; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

### 842.83 Brown Pigments

*References.*—Iron oxide brown pigments, *see* 841.41.

### 842.84 Bluff, Drab, and Slate Pigments

### 842.85 Green and Olive Pigments

U. S. Gov., Navy Dept. Specification 52P55; 1945. Paint; Outside, Haze-Green (Formula No.5HG).

*References.*—Chromium pigments, *see* 842.5; definitions, methods of testing pigments, *see* 840.3, 840.6.

### 842.86 Red Pigments

American Society for Testing Materials, D 264-41; 1941. American Standards Assn., K31-1941. Reduced Para Red. Cover the red pigment commercially known as reduced para red. The pigment may be purchased in the dry form or as a paste in oil or in japan. Composition and properties, number of tests, and methods of test.

American Society for Testing Materials, D 475-41; 1941. American Standards Assn., K49-1941. C. P. Para Red Toner. Cover red pigment known commercially and "chemically pure" para red toner in dry form or paste in oil. Composition and properties, number of tests, and methods of test.

American Society for Testing Materials, D 656-43; 1943. C. P. Toluidine Toner. Covers the red pigment commercially known as "chemically pure" toluidine toner. The pigment may be in the dry form or in a paste in oil. Gives requirements for composition and properties, number of tests, and methods of testing.

American Society for Testing Materials, D 767-44 T; 1944. Tentative Specifications for Venetian Red. Covers the pigment commercially known as venetian red. Gives composition and properties, number of tests, and methods of testing.

U. S. Gov., Army-Navy Aeronautical Specification AN-TT-T-561-1; 1942. Toluidine Red; Dry (Pigment).

U. S. Gov., Federal Specification TT-T 562; 1944. Toluidine-Red Toner; Dry (Paint-Pigment). Covers one grade and type of a soft, dry powder. Gives requirements for coarse particles, ash, moisture and other volatile matter, paranitraniline red, and solubility in chloroform; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification TT-V-226; 1944. Venetian Red; Dry (Paint-Pigment). Covers one grade and type. Gives requirements for ferris oxide, coarse particles, moisture and other volatile matter, organic coloring matter, and mass color and character of tint; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Navy Dept. Specification 52T6b; 1944. Toluidine-Red Toner; Dry.

*References.*—Definitions, methods of testing pigments, *see* 840.3, 830.5; iron oxide pigments, red, *see* 841.41; red lead pigments, *see* 842.63.

### 842.87 White Pigments

American Society for Testing Materials, D 520-41; 1941. Zinc Dust (Metallic Zinc Powder). For use

as pigment in paints. Composition and properties, number of tests, and methods of test.

*References.*—Whiting, *see* 841.8; other titanium, white lead, and zinc pigments, *see* 842.1, 842.64, 842.7; definitions, methods of testing pigments, *see* 840.3, 840.5.

### 842.88 Yellow, Cream, and Straw Pigments

*References.*—Yellow chromium pigments, *see* 842.5; ocher pigments, *see* 841.5.

## 842.9 MINERAL AND CHEMICAL PIGMENTS, DRY AND PASTE, NOT ELSEWHERE CLASSIFIED

American Society for Testing Materials, D 284-33; 1933. American Standards Assn., K59-1941. Method of Chemical Analysis of Dry Mercuric Oxide. For treatment of sample, alkalinity or acidity test by A.S.T.M. Method D-278, microscopic examination for free mercury, and procedure for determination of combined mercuric mercury and for ash.

American Society for Testing Materials, D 603-42; 1942. Aluminum Silicate Pigment. Cover the aluminum silicate pigment commercially known as china clay. Composition and properties, number of tests, and methods of testing.

American Society for Testing Materials, D 604-42; 1942. Diatomaceous Silica Pigment. Cover two types of diatomaceous silica pigments for use in paints—type A, standard fineness for general paint use; type B, extra fine, for special uses. Composition and properties, number of tests, and methods of testing.

American Society for Testing Materials, D 605-42; 1942. Magnesium Silicate Pigment. Cover the magnesium silicate pigment commercially known as talc. Composition and properties, number of tests, and methods of testing.

American Society for Testing Materials, D 607-42; 1942. Mica Pigment. Covers the finely divided mica, commercially known as pigment mica, suitable for use in the manufacture of protective coatings. Gives composition and properties, number of tests, and methods of testing. A.S.T.M. Emergency Alternate Provision EA-D 607; 1942, changed the requirement for total residue.

U. S. Gov., Army-Navy Aeronautical Specification AN-TT-A-566; 1941. Antimony Oxide; Dry (Pigment).

U. S. Gov., Army-Navy Aeronautical Specification AN-TT-L-421; 1941. Lithopone; Cadmium, Dry.

U. S. Gov., Army-Navy Aeronautical Specification AN-TT-M-91; 1941. Magnesium Silicate; Dry (Pigment).

U. S. Gov., Federal Specifications TT-M-90; 1942. Magnesium Silicate; Dry (Paint-Pigment). Covers one type and grade. Gives physical requirements and chemical composition of material; methods of sampling, inspection, and test; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification TT-P-21; 1941. Paint; Cement-Water, Powder, White and Tints (for Interior and Exterior Use). Applies to hydraulic base paints designed for use on porous surfaces of masonry, concrete, stucco, common brick, masonry block, and rough plaster (except gypsum plaster) as a decorative, protective, and water-repellent coating. Covers two types—(I) 65 percent, Portland cement and (II) 80 percent, Portland cement; and two classes—(A) without siliceous aggregate (for general use) and (B) with siliceous aggregate (for open texture walls). Gives requirements for composition, physical properties and working properties; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Navy Dept. Specification 52A1e; 1939. Aluminum Pigment (Paste Form).

U. S. Gov., Navy Dept., Specification 52C4b; 1934. Cuprous Oxide.

U. S. Gov., Navy Dept. Specification 52M1b; 1940. Mercuric Oxide (for Use in the Manufacture of Ships' Bottom Paint).

U. S. Gov., Navy Dept. Specification 52M2a; 1934. Magnesium Silicate (Pigment).

U. S. Gov., Navy Dept. Specification 52 M 3; 1943. Mica (Extender Pigment).

U. S. Gov., Navy Dept. Specification 52T4f; 1944. Titanium Barium, Pigment.

U. S. Gov., Navy Dept. Specification 52A10; 1944. Antimony Sulphide, Pigment, Paint Ingredient.

U. S. Gov., U. S. Maritime Commission. Specification 52-MC-11; 1942. Pigment; Magnesium Silicate. Covers one grade of dry pigment in two types—(I) low oil absorption and (II) high oil absorption. Gives physical and chemical requirements, color, oil absorption, and flattening properties of type II; inspection, sampling, and methods of test; and packaging and marking.

## 843. MIXED PAINTS, ENAMELS, ENAMEL PAINT, AND JAPAN

### 843.1 FLAT FINISH PAINT

U. S. Gov., Federal Specification TT-P-47; 1943. Paint; Oil, Interior, One-Coat Flat, Heavy-Bodied (for Thinning), Light Tints and White (Combined Sealer, Primer, and Finish). Shall be furnished in one grade and one type only. Covers material and workmanship, general requirements, detail requirements, methods of sampling, inspection, tests, packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification TT-P-51a; 1937. Amendment 1; 1943. Paints; Oil, Interior, Eggshell-Flat-Finish, Ready-Mixed, Light Tints and White. Covers one grade. Gives requirements for pigment, liquid, details for ready-mixed paint, and composition; methods of sampling and testing; and packaging, packing, and marking.

U. S. Gov., U. S. Maritime Commission. Specification 52-MC-34; 1944. Paints; Interior, White and Tints (Flat and Eggshell). Covers one grade and two types—(I) white and (II) tints; for interior use over primed surfaces. Gives requirements for materials, workmanship, color, composition, fineness of grind, weight per gallon, nonvolatile, viscosity, coarse particles and skins, odor, flash point, moisture, skinning, working properties, drying properties, appearance after drying, recoating, gloss, wet hiding power, compatibility, and package stability; inspection, sampling, and methods of test; and packaging and marking.

*References.*—Painting practice, safety codes, definitions, colors, methods of testing, *see* 840.1-840.5.

## 843.2 GLOSS FINISH PAINT

*References.*—Painting practice, safety codes, definitions, colors, methods of testing, *see* 840.1-840.5.

## 843.3 ENAMELS AND ENAMEL PAINTS

U. S. Gov., Dept. of Agriculture, Forest Service. Specifications for Synthetic Enamel.

### 843.31 Black and Gray Enamel

American Water Works Assn. Standard Specifications for Coal-Tar Enamel Protective Coatings for Steel Water Pipe of Sizes 30 Inches and Over, 7A.5-1940. Cover the material and application requirements for coal-tar enamel protective coatings for steel water pipe of large diameter where conditions warrant their use. The appendix provides additional exterior protective measures for extraordinary or severe soil conditions.

American Water Works Assn. Standard Specifications for Coal-Tar Enamel Protective Coatings for Steel Water Pipe of Sizes 4 1/2 Inches Outside Diameter up to but Not Including 30 Inches, 7A.6-1940. Cover the material and application requirements for coal-tar enamel protective coatings for steel water pipe of large diameter where conditions warrant their use. The appendix provides additional exterior protective measures for extraordinary or severe soil conditions.

Society of Automotive Engineers. Aeronautical Material Specification 2503; 1940. Black Finishing; Low Baking. For parts which do not exceed a temperature of 350°F. Gives requirements for process, preparation, priming coat, enamel finish, and approved materials.

Society of Automotive Engineers. Aeronautical Material Specification 2510A; 1944. Engine Gray Finishing; Low Baking. For parts which do not exceed a temperature of 300°F. Gives requirements for process, preparation, priming coat, enamel finish, and approved materials.

Society of Automotive Engineers. Aeronautical Material Specification 3120; 1940. Black Enamel; Glyceryl Phthalate. A gloss black as an exterior protective coating for metal surfaces, generally. Includes requirements for composition, components, quality, physical properties, working properties, tests, identification, approval, reports, and rejections.

Society of Automotive Engineers. Aeronautical Material Specification 3125; 1940. Engine Gray Enamel; Glyceryl Phthalate. A gloss engine gray as an exterior protective coating for metal and fabric and also for marking purposes. Includes requirements for composition, components, quality, physical properties, working properties, tests, identification, approval, results, and rejections.

U. S. Gov., Army-Navy Aeronautical Specification AN-TT-E-501-2; 1944. Enamel; Heat-Resisting, Glyceryl Phthalate, Black.

U. S. Gov., Federal Specification TT-E-496; 1941. Amendment 1; 1943. Enamel; Heat-Resisting (400°F.), Black. Covers one type only—a bituminous base (unpigmented) product. Gives requirements for consistency, nonvolatile matter, drying properties, color, finish, flexibility, and flashpoint; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification TT-E-521; 1930. Amendment 3; 1943. Enamel; Pigmented (Air-Drying and Baking), Black. Covers two types—(A) air-drying pigmented black enamel and (B) baking pigmented black enamel. Gives requirements for material, physical properties, performance, and composition; methods of sampling, testing, and basis of purchase; and requirements for packaging, packing, and marking.

U. S. Gov., Navy Dept. Specification 52E7; 1945. Enamel; Gray, Ready-Mixed, for Motor Vehicles.

U. S. Gov., Treasury Dept., Procurement Div., 357; 1939. Enamel; Glyceryl Phthalate, Marine Exterior, Black High Gloss. Shall be of one type and grade, free from toxic ingredients intended for outside or inside use on both wood and metal. Gives requirements for composition, weight, viscosity, coarse particles or skins, odor, flash point, moisture, working properties, drying properties, gloss, flexibility, water and gasoline resistance, and package stability; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., U. S. Maritime Commission. Specification 52-MC-32; 1943. Enamel; Black, Interior (Oleoresinous), Gloss. Covers one type and grade for general interior use over primed surfaces but is not recommended as a deck enamel. Gives requirements for color, composition, weight per gallon, nonvolatile, viscosity, coarse particles and skins, odor, flash point, moisture, skinning, working properties, drying properties, appearance after drying, recoating, gloss, compatibility, and package stability; inspection, sampling, and methods of test; and packaging and marking.

*References.*—Painting practice, safety codes, definitions, methods of testing, *see* 840.1-840.5; elasticity tests of enamel of electric rigid conduit, *see* 715.11.

### 843.32 Brown Enamel

### 843.33 Cream Enamel

### 843.34 Green Enamel

U. S. Gov., Marine Corps Specification, 1934. Enamel; Green, Glyceryl Phthalate (for Motor Vehicles).

### 843.35 Olive-Drab Enamel

U. S. Gov., Federal Specification TT-E-514; 1943. Enamel; Lusterless, Olive-Drab (Primarily for Non-military Use). Covers one grade and class for use as finish coat on motor vehicles, trailers, and similar equipment. Gives requirements for pigment, vehicle, nonvolatile matter, set, gloss, color; working properties and resistance to various conditions; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 3-97; 1927. Enamel; Olive-Drab, for Fire-Control Instruments.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 3-181; 1943. Enamel; Olive-Drab, Rust-Inhibiting.

### 843.36 Red and Maroon Enamels

U. S. Gov., Federal Specification TT-E-531a; 1935. Amendment 3; 1943. Enamel; Water-Resisting, Red. Covers one type suitable primarily for outside use. Gives requirements for pigment, appearance, working properties, and trichromatic coefficients; methods of sampling and testing; and requirements for packaging, packing, and marking.

*References.*—Painting practice, safety codes, definitions, colors, methods of testing, *see* 840.1-840.5.

### 843.37 White Enamels

U. S. Gov., Federal Specification TT-E-506a; 1938, Amendment 1; 1943. Enamel; Interior, Gloss, Light Tints and White. Covers enamels suitable for interior use in two types—(A) quick drying and (B) slow drying. Gives detail requirements for pigment, liquid, enamel, wet hiding power, drying time, and physical characteristics; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., Navy Dept. Specification 52P21; 1945. Paint; White-Enamel (Formula No.30).

U.S. Gov., Treasury Dept., Procurement Div., No. 353; 1939. Enamel; Glyceryl Phthalate, Marine, Interior, White and Light Tints, Eggshell-Gloss. Covers one type and grade, free from toxic ingredients, and intended for interior finish. Gives requirements for chemical composition, weight, viscosity, coarse particles and skins, odor, flash point, moisture, working properties, drying properties, glass flexibility, and package stability, methods of sampling, inspection, and tests; and packaging, packing, and marking.

U.S. Gov., Treasury Dept., Procurement Div., No. 354; 1939. Enamel; Glyceryl Phthalate, Marine, Interior, White, High-Gloss. Shall be of one type and grade, free from toxic ingredients, intended for interior finish. Gives requirements for chemical composition, weight, viscosity, coarse particles and skins, odor, flash point, moisture, working properties, drying properties, gloss, flexibility, and package stability; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., U. S. Army, Medical Dept. Specification 3-170A; 1942. Paint; Ready-Mixed, White Enamel, Acid Proof.

U. S. Gov., U. S. Maritime Commission. Specification 52-MC-30; 1943. Enamels; White and Tints, Interior, (Gloss), Alkyd. Covers one grade and two types—(I) white and (II) tints. For interior use as a finishing enamel. Gives requirements for color, composition, tinting, weight per gallon, nonvolatile, viscosity, coarse particles and skins, odor, flash point, moisture, skinning, working properties, drying properties, after-tack, appearance after drying, recoating, gloss, compatibility, and package stability; inspection, sampling, and methods of test and packaging and marking.

### 843.38 Yellow Enamels

### 843.39 Miscellaneous Enamels and Enamel Paints

American Hospital Assn., 4-16. Enamel; Interior, Gloss, Light-Tint and White. Covers white and light-tint gloss enamels suitable for interior use in quick drying and in slow drying types. Based on U. S. Gov. Federal Specification TT-E-506a.

U. S. Gov., Army Air Forces. Specification 14109-B; 1943. Enamel; Quick Drying, Camouflage.

U. S. Gov., Army-Navy Aeronautical Specification AN-C-133; 1944. Coatings; Fused, High Temperature.

U. S. Gov., Army-Navy Aeronautical Specification AN-E-3—3; 1944. Enamel; Aircraft, Gloss.

U. S. Gov., Army-Navy Aeronautical Specification AN-E-7-4; 1945. Enamel; Camouflage, Quick Drying.

U. S. Gov., Federal Specification TT-E-485; 1944. Enamel; Drum-Coating, Exterior, Rust-Inhibiting, Solvent-Resistant. Covers one grade and one type of combination air-drying and baking enamel for metal, suitable for brush or spray application. Gives requirements for material, toxicity, color, composition, package stability, consistency, brushing properties, spraying properties, appearance, coarse particles, odor, drying time, gloss, hiding power, flexibility, immersion resistance, and recoating; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Marine Corps Specification, 1943. Enamel; Glyceryl Phthalate, Flat.

U. S. Gov., Navy Dept. Specification 52P17a; 1941. Enamel (and Primer); Bituminous.

U. S. Gov., Post Office Dept., Div. of Motor Vehicle Service, Bureau of the Fourth Assistant Postmaster General. Specifications for Paints, Enamels for Truck Painting.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 3-67E; 1943. Enamel; Lustreless, Quick-Drying, for Ammunition.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 3-173; 1944. Enamel; Synthetic, Lustreless.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 3-174; 1944. Enamel; Synthetic, Semi-Gloss.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 3-175A; 1944. Enamel; Synthetic, Gloss.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 3-177; 1943. Enamel; Gloss, for Wood (Cleansing Compound Resistant).

U. S. Gov., U. S. Army, Ordnance Dept. Specification 3-178; 1943. Enamel; Gloss, for Metal (Cleaning Compound Resistant).

U. S. Gov., Veterans Administration. Specification VA-X-66d; 1941. Paint; Enamel.

*References.*—Tests of enamel on magnet wire, *see* 715.44; Elasticity tests of enamel on electric rigid conduit, *see* 715.11.

### 843.4 JAPAN PAINTS

### 843.5 WHITEWASH AND CALCIMINE

National Lime Assn. Lime Hints for the Home. Whitewash. Gives recommended composition for simple mixture and for a durable, nonrubbing whitewash. Also, instructions for mixing, application, and use.

U. S. Gov., Federal Specification TT-C-96; 1940. Calcimine, Cold and Hot Water Types. Covers one grade. Gives requirements for color, odor, daylight reflectance for white, dry hiding properties, working

properties, appearance, and condition of the calcimine film, removal properties, and spreading rate; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification TT-P-23a; 1940. Paint; Cold Water, Interior, Light Tints and White. Covers two types—(I) powder and (II) paste. Gives requirements for application, odor, composition, working properties, and opacity; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

*References.*—Lime, *see* 517.2.

### 843.6 LEAD PAINTS, MIXED

#### 843.61 Red-Lead Paints

American Assn. of State Highway Officials, M71-42. Standard Specifications for Red Lead (Dry and Paste-in-Oil) and Paint Made Therefrom. Gives scope, general requirements, dry pigment, paste-in-oil, paint, packing and marking, and methods of analysis.

American Assn. of State Highway Officials, M72-42. Standard Specifications for Red Lead Ready-Mixed Paint. Gives scope, general requirements, pigment, vehicle, composition, drying time, colors, packing and marking, and methods of analysis.

American Hospital Assn., 4-34. Ready-Mixed Linseed Oil Red-Lead-Base Paint. Covers one grade suitable for either outside or interior use. Based on U. S. Gov. Federal Specifications TT-P-86 for Paint, Red-Lead-Base; RR-S-366 for Standard Testing Sieves; TT-R-191a for Dry and Paste-in-Oil Red-Lead; and VV-L-791a for General Specifications (Methods for Sampling and Testing) Lubricants and Liquid Fuels.

U. S. Gov., Federal Specification TT-P-86; 1939. Amendment 1; 1943. Paint; Red-Lead-Base; Linseed Oil, Ready-Mixed. Covers one grade of paint for either outside or interior use. Gives detail requirements for pigment, vehicle, and properties; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

*References.*—Red lead pigments, lampblack, *see* 842.63, 842.4; linseed oil, turpentine, *see* 848.1, 848.7; painting practice, safety codes, definitions, colors, methods of testing, *see* 840.1-840.5.

#### 843.62 White-Lead Paints

American Hospital Assn., 4-37. Light Tints and White Ready-Mixed Basic-Carbonate White-Lead-Base Paint. Covers ready-mixed linseed oil white and tinted paints made on a basic carbonate white lead base.

U. S. Gov., Federal Specification TT-P-40; 1943. Paint; Oil, Exterior, Ready-Mixed, Light Tints and White. Type I, mixed-pigment base, class A—white, general-purpose, class B—white, special fume-proof (lead-free), class C—tint-base; and type II, white-lead base. Gives requirements for tints, pigment, ingredients, extenders, vehicle, apparent daylight reflectance, drying properties, consistency, working properties and surface appearance, resistance to sulfide fumes; methods of sampling, inspection, and tests; packaging, packing, and marking.

*References.*—White lead pigments, *see* 842.64, 842.87.

#### 843.63 Blue-Lead Paints

U. S. Gov., Federal Specification TT-P-20; 1940. Amendment 1; 1943. Paint; Blue-Lead-Base, Basic Sulfate, Linseed Oil, Ready-Mixed. Covers one grade intended for either outside or interior use. Gives requirements for pigment, vehicle, and details for ready-mixed paint; methods of sampling, testing, and basis of purchase; and requirements for packaging, packing, and marking for shipment.

### 843.7 GRAPHITE PAINTS

American Assn. of State Highway Officials, M67-42. Standard Specifications for Green Graphite Bridge Paint. Covers linseed oil green ready-mixed paint for bridges. Gives general requirements, pigment, vehicle, composition, drying time, weight, packing and marking, and methods of analysis.

U. S. Gov., Federal Specification TT-P-27; 1938. Paint; Graphite, Outside, Ready-Mixed, Black. Covers a ready-mixed, linseed oil, black graphite paint intended for outside use on either wood or metal; and two types—(I) only natural crystalline flake graphite permitted and (II) may be either amorphous graphite, crystalline graphite, mined or manufactured, or a mixture thereof. Gives requirements for pigments, liquid, and details for ready-mixed paint; methods of sampling and testing; and packaging, packing, and marking for shipment.

### 843.8 IRON OXIDE PAINTS

U. S. Gov., Federal Specification TT-P-31a; 1941. Paint; Iron Oxide, Ready-Mixed and Semipaste, Red and Brown. Covers one grade of linseed oil-iron oxide paint. Gives requirements for pigment, liquid, composition, and ingredients; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment. Amendment 1, July 1943, deletes "and Semipaste" from title, changes vehicle, and modifies specification.

*References.*—Iron oxide pigments, *see* 841.41; linseed oil, turpentine, *see* 848.1, 211.1; painting practice, safety codes, definitions, colors, methods of testing, *see* 840.1-840.5.

### 843.9 MISCELLANEOUS PAINTS

U. S. Gov., Army-Navy Aeronautical Specification AN-P-31; 1943. Paint; Blended Type, Coal-Tar Pitch-Base, Bituminous.

## 844. MIXED PAINTS AND PROTECTIVE COMPOUNDS NOT ELSEWHERE CLASSIFIED

### 844.1 ANTIFOULING AND METAL-PROTECTING PAINTS AND COMPOUNDS

American Gear Manufacturers Assn. Standard 254.02; 1944. Data Sheet—Rust Preventatives. Covers scope, preparation of surface for coating, inside preparation of gear cases, coating compounds for interior of cases, machined surfaces, coating compounds for external use, and rust removal from machined and nonmachined surfaces.

American Society for Testing Materials, D 277-31; 1931. Toxic Ingredients in Antifouling Paints (Dry Cuprous Oxide, Dry Mercuric Oxide). Gives requirements for amounts of ingredients for general use, for temperate and tropical waters, fineness and

oxide content of powders, ash, and purity of mercuric oxide.

Society of Automotive Engineers. Aeronautical Material Specification 2574; 1943. Preservations of Engines (Limited Period). Provides preparing aircraft engines to resist corrosion during shipment and limited storage under favorable conditions. Material and equipment, preliminary operation, preparation for storage procedure, recommended procedure for represervation, and general.

Society of Automotive Engineers. Aeronautical Material Specification 3072A; 1943. Compound; Corrosion Preventive (Aircraft Engine). Consists of a mixture of aircraft engine lubricating oil and a corrosion inhibitive agent as an additive and is suitable for the preservation of metal parts of aircraft engines during shipment and storage and for lubricating the engine while operating as specified. Covers quality, physical requirements, tests, reports, identification, approval, and rejection. Similar to Army-Navy Aeronautical Specification AN-VV-C-576.

Society of Automotive Engineers. Aeronautical Material Specification 3075; 1943. Compound; Corrosion-Preventive (Parts and Equipment). Consists of a homogeneous, stable, noncorrosive, nondrying, nonpoisonous, solid grease consisting of refined petrolatum with additives and suitable for the external preservation of miscellaneous metal parts, tools, subassemblies and equipment against corrosion during extended periods of shipment and/or storage. Application, requirements, test procedures, reports, identification, approval, and rejection. Similar to Army-Navy Aeronautical Specification AN-C-52, type II.

Society of Automotive Engineers. Aeronautical Material Specification 3080A; 1944. Compound Anti-Seize (White Lead Base). A paste to be applied to threads on removable plugs when assembling to prevent seizure while assembling or disassembling. Gives requirements for composition, components, quality, corrosion, containers, identification, approval, and rejections. Similar Specification: Army-Navy Aeronautical AN-C-53.

Society of Automotive Engineers. Aeronautical Material Specification 3082A; 1944. Compound; Anti-Seize (Mica Base). A paste primarily for application to threads of aircraft engine spark plugs to prevent seizure while assembling or disassembling but may be used on other threaded fittings where applicable. Gives requirements for composition, components, quality, containers, identification, approval, and rejections. Similar Specification: Army-Navy Aeronautical AN-VV-C-566.

U. S. Gov., Army Air Forces. Specification 20023 (1); 1944. Finishes; Fire Retardant, General Specification for.

U. S. Gov., Army-Navy Aeronautical Specification AN-C-52a-1; 1944. Compound; Exterior Surface, Corrosion Preventive.

U. S. Gov., Army-Navy Aeronautical Specification AN-C-53-2; 1943. Compound; Anti-Seize, White Lead Base, for Threaded Fittings.

U. S. Gov., Army-Navy Aeronautical Specification AN-C-124-3; 1945. Compound; Soft-Film Corrosion Preventive.

U. S. Gov., Army-Navy Aeronautical Specification AN-M-8; 1942. Metal Spraying, Process for.

U. S. Gov., Army-Navy Aeronautical Specification AN-VV-C-566—3; 1943. Compound; Anti-Seize, Mica-Base (for Threaded Fittings).

U. S. Gov., Army-Navy Aeronautical Specification AN-VV-C-576a—2; 1944. Compound; Corrosion Preventive, Aircraft Engine.

U. S. Gov., Navy Dept. Specification 14C6a; 1941. Compound; Rust Preventive, Pigmented.

U. S. Gov., Navy Dept. Specification 52C14; 1941. Compound; Joint-and-Thread, High Temperature.

U. S. Gov., Navy Dept. Specification 52C18; 1945. Compound; Rust Preventive, Thin-Film, Polar Type.

U. S. Gov., Navy Dept. Specification 52C19; 1945. Compound; Antiseize.

U. S. Gov., Navy Dept. Specification 52P19a; 1944. Paint; Heat Resisting.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 2-82C; 1940. Compound; Rust Preventive, Heavy.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 2-84B; 1941. Compound; Rust Preventive, Light. Formerly Designated Medium.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 83-12A; 1939. Flux; Nonacid.

U. S. Gov., U. S. Maritime Commission. Specification 14-MC-1; 1944. Compound; Packing, for Propeller Hub and Cap Void Spaces. Covers one type and grade. Gives requirements for material and workmanship, homogeneity, odor, corrosion of copper, protection of steel, dropping point, penetration, water absorption, water content, free acid, and fillers and abrasive substances; inspection, sampling, and methods of test; and packaging, packing, and marking.

*References.*—Methods of analysis of cuprous oxide and mercuric oxide, *see* 842.9; linseed oil, turpentine, *see* 848.1, 211.1; painting practice, safety codes, definitions, colors, methods of testing, *see* 840.1-840.5.

## 844.2 BUILDING PAINTS NOT ELSEWHERE CLASSIFIED

U. S. Gov., Federal Specification TT-P-24; 1943. Paint; Concrete and Masonry, Exterior, Egg-Shell Finish, Ready-Mixed, White and Tints. Paint shall be furnished in two types and one grade. Type I, white only and Type II, tint-base-white. Shall be ready-mixed and be suitable for use as an exterior finish coat on concrete, brick, stucco, and similar surface material (except floors). Gives requirements for pigment, vehicle, color, drying properties, consistency, flexibility, water resistance, working properties and surface appearance, and chalk resistance; methods of sampling, inspection, tests; packaging, packing, and marking for shipment.

## 844.3 FIELD-COAT PAINTS

U. S. Gov., Treasury Dept., Procurement Div., 439A; 1942. Coating Material; Bituminous (Nonbleeding), Brushing Consistency (for Foundations, Roofs, Walls, Etc.). Shall be composed of suitable inorganic filler, volatile organic solvent, and binder consisting of suitable bituminous materials; intended for use as a dampproofing material in the maintenance of bituminous and metal roofing and for application on walls and foundations. Gives requirements for colors; consistency, nonvolatile matter,

inorganic filler and tinting material, heat and cold test, and paint bleeding test; methods of sampling, inspection, and tests; and packaging, packing, and marking.

*References.*—Paint pigments, *see* also 841, 842; linseed oil, turpentine, *see* 848.1, 211.1; painting practice, safety codes, definitions, colors, methods of testing, *see* 840.1-840.5.

## 844.4 PRIMING PAINTS

Assn. of American Railroads, Operations and Maintenance Dept., Engineering Div., Signal Section. Manual of Recommended Practice. Specification 201-43; 1944. Primer Paint for Steel and Iron Structures. Covers material and workmanship, general composition and properties, application, inspection, tests, shipping containers, packing, marking, and warranty.

Society of Automotive Engineers. Aeronautical Material Specification 3110; 1940. Primer Zinc Chromate. For general use on metal surfaces before enameling. Includes requirements for composition, compounding, quality, physical properties, working properties, tests, identification, approval, reports, and rejections.

U. S. Gov., Army-Navy Aeronautical Specification AN-P-49; 1943. Primer; Zinc Chromate, Reclaimed, Blended.

U. S. Gov., Army-Navy Aeronautical Specification AN-TT-P-656b—1; 1944. Primer; Zinc Chromate.

U. S. Gov., Federal Specification TT-P-25; 1942. Paint; Exterior-Primer, Ready-Mixed, White (Undercoat for Wood). Covers one grade, intended for use as exterior primer for wood. Gives requirements for white lead, titanium dioxide, barium sulfate, matter soluble in water, liquid, kauri reduction, ready-mixed paint, consistency, drying time, pigment volume, and color; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., Federal Specification TT-P-56; 1935. Amendment 1; 1938. Paint; (for) Priming Plaster Surfaces (Plaster Primer and Sealer). Covers one grade of ready-mixed white paint of the bodied oil or varnish type for interior use as a primer on unpainted, old or new, plaster surfaces. Intended to seal and stop the varying "suction" of porous plaster by one coat. Gives detail requirements for composition and properties; methods of sampling and testing; and requirements for packaging, packing, and marking.

U. S. Gov., Federal Specification TT-P-641; 1939. Primer; Paint, Zinc Dust-Zinc Oxide, for Galvanized (Zinc-Coated) or Zinc Surfaces. Covers three types—(I) zinc dust-zinc oxide-linseed oil paint, (II) zinc dust-zinc oxide-glyceryl phthalate paint, and (III) zinc dust-zinc oxide-phenolic resin paint; and two classes—(A) ready-to-mix and (B) ready-mixed. Gives requirements for composition, pigment, liquid, and paint; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment. Amendment 1, Sept. 1943, deletes types II and III, changes vehicle, and makes necessary changes.

U. S. Gov., Navy Dept. Specification 52P17a; 1941. Primer (and Enamel); Bituminous.

U. S. Gov., Navy Dept. Specification 52P85; 1944. Primer; Paint, Iron Oxide, Ready-Mixed, for Motor Vehicles.

U. S. Gov., U. S. Army, Army Air Forces. Specification 3-156; 1932. Primer; Metal, Iron Oxide.

U. S. Gov., U. S. Army, Corps of Engineers. Specification 39-2; 1943. Primer; Camouflage Paint, Oil Type, for Wood.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 3-165A; 1939. Primer; Metal, Quick-Drying.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 3-171; 1944. Primer; Synthetic, for Ferrous Metals.

U. S. Gov., U. S. Maritime Commission. Specification 52-MC-18; 1943. Primer; Red Lead, Modified. Covers one type and grade. For use on bare metal. Gives requirements for color, composition, kettle bodied linseed oil, weight per gallon, nonvolatile, viscosity, coarse particles and skins, odor, flash point, moisture, skinning, working properties, drying properties, after tack, appearance after drying, recoating, gloss, compatibility, and package stability; inspection, sampling, and methods of test; and packaging and marking.

U. S. Gov., U. S. Maritime Commission. Specification 52-MC-17; 1943. Primer; White and Tints, Interior (Wood). Covers two types—(I) white and (II) tints; and two classes—(A) nontoxic and (B) toxic. For interior use on bare wood. Gives requirements for color, composition, varnish, kettle bodied linseed oil, tinting, weight per gallon, nonvolatile, viscosity, coarse particles and skins, odor, flash point, moisture, skinning, working properties, sanding, holdout, and package stability; inspection, sampling, and methods of test; and packaging and marking.

U. S. Gov., U. S. Maritime Commission. Specification 52-MC-20; 1943. Primer; Red Lead and Oil, Ready Mixed. Covers one type and grade. For use over bare metal. Gives requirements for color, composition, weight per gallon, viscosity, moisture, flash point, odor, coarse particles and skins, skinning, working properties, drying properties, recoating, gloss, compatibility, and package stability; inspection, sampling, and methods of test; and packaging and marking.

U. S. Gov., U. S. Maritime Commission. Specification 52-MC-23; 1943. Primer; Red Lead, Quick Drying (Synthetic). Covers one type and grade for use on bare metal. Gives requirements for color, composition, weight per gallon, nonvolatile, viscosity, coarse particles and skins, odor, flash point, moisture, skinning, working properties, drying properties, appearance after drying, recoating, gloss, compatibility, and package stability; inspection, sampling, and methods of test; and packaging and marking.

*References.*—*See* references under 844.3.

## 844.5 STENCIL PAINTS

U. S. Gov., Federal Specification RR-S-714; 1943. Amendment 1; 1944. Stencil-Outfits (Letters and Figures); Metallic. Shall be of the lockedge type, and shall be 1/2, 1, 2, 4, and 6-in. sizes. Covers material, workmanship, and details of stencil-outfit, stencils, ink, brush, stencil box, and marking;

methods of sampling, inspection, tests; and packaging, packing, and marking for shipment.

U. S. Gov., U. S. Army, Army Air Forces. Specification 3-120-D; 1941. Colors; Insignia, in Oil (Semi-Paste).

U. S. Gov., U. S. Army, Ordnance Dept. Specification 3-179; 1943. Paint; Stencil.

## 844.6 PAINTS CLASSIFIED BY COLOR ONLY

### 844.61 Black and Gray Paints

American Assn. of State Highway Officials, M68-42. Standard Specifications for Black Bridge Paint. Covers linseed oil black ready-mixed paint for bridges. Gives general requirements, pigment, vehicle, composition, drying time, weight, packing and marking, and methods of analysis.

U. S. Gov., Federal Specification TT-P-61a; 1944. Paint; Ready-Mixed, Black. Covers one grade and type of black, ready-mixed, linseed oil paint. Gives requirements for pigment, liquid, and ready-mixed paint composition; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Navy Dept. Specification 52P51; 1945. Paint; Outside, Pale-Gray (Formula No.5P).

U. S. Gov., U. S. Army, Ordnance Dept. Specification 3-106E; 1941. Paint; Acid-Proof Black, for Ammunition.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 3-128; 1926. Black Target Paint.

U. S. Gov., U. S. Maritime Commission. Specification 52-MC-5; 1943. Amendment 2; 1944. Paints; Gray, Low-Visibility (Alkyd), Eggshell. Covers one grade and two types—(I) deck gray (horizontal surfaces) and (II) slate gray (vertical surfaces). For interior or exterior finish coat over metal, wood, or composition surfaces. Gives requirements for color, composition, tinting, weight per gallon, total solids, viscosity, coarse particles and skins, odor, flash point, moisture, skinning, working properties, drying properties, appearance after drying, recoating, gloss, flexibility, water resistance, compatibility and package, stability; inspection, sampling, and method of test; and packing and marking.

U. S. Gov., U. S. Maritime Commission. Specification 52-MC-6; 1943 Amendment 2; 1944. Paint; Hull Gray, Low Visibility (Alkyd), Eggshell. Covers one type and one grade. For interior or exterior finish coat over metal, wood, or composition surfaces. Gives requirements for color, composition, tinting, weight per gallon, total solids, viscosity, coarse particles and skins, odor, flash point, moisture, skinning, working properties, appearance after drying, recoating, gloss, flexibility, water resistance, compatibility, and package stability; inspection, sampling, and methods of test; and packaging and marking.

*References.*—Black pigment, *see* 842.4; linseed oil, turpentine, *see* 848.1, 211.1; painting practice, safety codes, definitions, methods of testing, *see* 840.1-840.5.

### 844.62 Blue Paints

U. S. Gov., Navy Dept. Specification 52P43; 1945. Paint; Deck, Blue, Formula No.20B.

U. S. Gov., Navy Dept. Specification 52P47; 1945. Paint; Outside, Thayer-Blue, Formula No.5B.

*References.*—White-lead and zinc-oxide paint, *see* 844.67.

### 844.63 Brown Paints

### 844.64 Buff, Drab, and Slate Paints

### 844.65 Green and Olive Paints

U. S. Gov., Federal Specification TT-P-71a; 1941. Amendment 1; 1943. Paint; Ready-Mixed, Exterior, Chrome-Green. Covers but one grade and type of ready-mixed green trim paint. Gives requirements for pigment, vehicle, semipaste, and ready-mixed paint; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., Federal Specification TT-P-81a; 1943. Paints; Ready-Mixed, Olive-Drab. Covers one grade and one type linseed oil paint suitable for outside use. Gives requirements for pigment (white lead, zinc oxide, tinting colors and extending pigment, organic colors, and sulfide sulfur), vehicle, and ready-mixed paint (pigment, liquid, water, and coarse particles and skins); methods of sampling, inspection and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Marine Corps Specification, 1943. Paint; Ready-Mixed and Semipaste, Exterior, Chrome-Green.

U. S. Gov., Navy Dept. Specification 52P50; 1945. Paint; Tinting, Green (Chromium Oxide), Formula No. 5GTM.

U. S. Gov., Navy Dept. Specification 52P53; 1945. Paint; Outside, Pale-Green, Formula No.5PG.

U. S. Gov., Navy Dept. Specification 52P56; 1945. Paint; Outside, Ocean-Green, Formula No. 5-OG.

*References.*—Lead pigments, zinc pigments, *see* 842.6, 842.7; linseed oil, turpentine, *see* 848.1, 211.1; painting practice, safety codes, definitions, colors, methods of testing, *see* 840.1-840.5.

### 844.66 Red Paints

U. S. Gov., Navy Dept. Specification 52P23; 1945. Paint; Deck, Red, Formula No.23.

*References.*—Red lead pigments, *see* 843.61; red enamel, *see* 843.36; red pigments, *see* 842.63, 842.86.

### 844.67 White and Light-Tinted Paints

American Assn. of State Highway Officials, M70-42. Standard Specifications for White and Tinted Ready-Mixed Paint (Lead and Zinc Base). Covers linseed oil paint, lead-zinc base, for outside use. Gives pigment, vehicle, composition, drying time, weight, packing and marking, and methods of analysis.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Research Paper RP1007; 1937. Some Properties and Tests of Traffic or Zone Paints. This publication describes some properties and tests of traffic paints. These paints are of a different type from ordinary paints and vary greatly in abrasion resistance. Experience gained from actual road tests is cited. An accelerated wearing test is described. A distinct improvement in durability of the traffic paints in actual service has resulted. Specifications for white and yellow traffic paints are suggested.

U. S. Gov., Federal Specification TT-P-40; 1943. Paint; Oil, Exterior, Ready-Mixed, Light Tints and White. Type I, mixed-pigment base, class A—white, general-purpose, class B—white, special fume-proof (lead-free), class C—tint-base; and type II, white-lead base. Gives requirements for tints, pigment, ingredients, extenders, vehicle, apparent daylight reflectance, drying properties, consistency, working properties and surface appearance, resistance to sulfide fumes; methods of sampling, inspection, and tests; packaging, packing, and marking.

U. S. Gov., Federal Specification TT-P-88; 1940. Amendment 1; 1943. Paint; Emulsion, Interior, Paste, Light Tints and White. Covers one grade and type, for use as a decorative coating on interior walls and ceilings. Gives requirements for mixing and application, composition, properties of ready-mixed paste, and details; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., Federal Works Agency, Public Roads Administration. Specification for Construction of Roads and Bridges in National Forests and National Parks, FP-41. Traffic Stripes.

U. S. Gov., Treasury Dept., Procurement Div., No.359; 1939. Paint; Glyceryl Phthalate, Marine, Exterior, White and Light Tints. Shall be one grade, seven types—(I) white, eggshell-gloss; (II) white, high-gloss; (III) gray (Navy); (IV) gray, ship and deck; (V) light-buff; (VI) dark-buff; and (VII) pea-green. Gives requirements for chemical composition, weight, viscosity, coarse particles and skins, odor, flash point, moisture, working and drying properties, gloss, flexibility, gasoline resistance, package stability, and details for each type; methods of sampling, inspection, and tests; and packaging, packing, and marking.

*References.*—Titanium pigments, white lead pigments, zinc pigments, *see* 842.1, 842.64. 842.7; linseed oil, turpentine, *see* 848.1, 211.1; painting practice, safety codes, definitions, colors, methods of testing, *see* 840.1-840.5; paints, *see* 843.1, 843.2.

## 844.68 Yellow, Cream, and Straw Paints

U. S. Gov., Federal Specification TT-P-53; 1937. Paint; Outside, Ready-Mixed, Light-to-Medium Chrome Yellow. Covers a high-grade, linseed oil, chrome yellow paint intended for outside use on either wood or metal. Gives requirements for pigment, liquid, and details for ready-mixed paint; methods of sampling and testing; and packaging, packing, and marking.

## 844.69 Miscellaneous Paints Classified by Color

U. S. Gov., Federal Specification TT-P-59; 1937. Amendment 1; 1943. Paint; Ready-Mixed, International-Orange. Covers one class and one type of ready-mixed chrome orange linseed oil paint. Gives requirements for color, pigment, vehicle, and details for ready-mixed paint; methods of inspection and tests; and packaging, packing, and marking.

*References.*—Tinted paints on white base, *see* 844.87.

## 844.7 LUMINESCENT MATERIAL

U. S. Gov., Army Air Forces. Specification 14102-A (2); 1943. Luminescent Material; Phosphorescent.

U. S. Gov., Army Air Forces. Specification 14112 (1); 1943. Luminescent Material; Fluorescent, Radioactive.

U. S. Gov., Army-Navy Aeronautical Specification AN-L-1a-1; 1944. Luminescent Material; Fluorescent.

U. S. Gov., Army-Navy Aeronautical Specification AN-L-13a; 1944. Luminescent Material; Fluorescent, Radioactive.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-3001; 1944. Markings; Self-Luminous.

## 844.9 MISCELLANEOUS PAINTS

U. S. Gov., Army Air Forces. Specification 14129; 1944. Paint; Bullet Tipping.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Commercial Standard CS98-42; 1942. Artists' Oil Paints. The purposes of this commercial standard are to serve as a guide to artists in the purchase of paints of satisfactory color, working quality, and durability; to eliminate confusion in nomenclature; to promote fair competition among manufacturers by providing criteria for differentiation among paints of known satisfactory composition and others of unknown or inferior quality, and thus to provide a basis for certification of quality. Covers minimum requirements for artists' oil paints of satisfactory color and durability. It is not intended that all paints meeting the requirements shall be identical nor of uniform excellence in all respects. Variations in manufacture and grinding not controlled by the specification may cause some artists to prefer one brand over another, both of which are acceptable under this specification.

U. S. Gov., Federal Specification TT-P-22; 1943. Paint; Cold-Water, Exterior, Powder (With Mixing Liquid). Covers one type of dry powder paint and a supplementary mixing liquid, which when combined with water is suitable for exterior use on concrete, brick, stucco, cinder block, wood, etc. Gives requirements for powder and mixing liquid; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., Federal Specification TT-P-91; 1939. Paint; Rubber-Base (for) Cement Floors. Covers one type and grade, ready-mixed for use. Gives detail requirements for pigment, vehicle, and drying properties; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification TT-P-115; 1942. Paint; Traffic, Exterior, White and Yellow. Covers one grade. Gives requirements for physical properties and performance; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment. Emergency Alternate Federal Specification E-TT-P-115; 1942, (issued by Procurement Div., Treasury Dept., U. S. Gov.) substituted a white traffic paint and gave general and detail requirements for same.

U. S. Gov., Federal Specification TT-P-146, 1942. Paint; Varnish-Base, for Concrete and Wood Floors. Covers one grade, ready-mixed, for use on interior or exterior floors. Gives requirements for material and workmanship, color, composition, and properties; methods of sampling, inspection, and test; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., Marine Corps Specification, 1943. Paint; Ready-Mixed, Sign Painters'.

U. S. Gov., Navy Dept. Specification 52P74; 1944. Paint; Camouflage, Oil Type, Ready-Mixed.

U. S. Gov., Navy Dept. Specification 52P75; 1944. Paint; Camouflage, Resin-Oil-Emulsion Type and Resin-Emulsion Type, Paste.

U. S. Gov., Panama Canal, Purchasing Dept. Specification for Paint; Cold-Water, Interior; 1941.

U. S. Gov., U. S. Army, Corps of Engineers. Specification 39-3; 1943. Paint; Powder, Camouflage, Gasoline Soluble.

U. S. Gov., U. S. Army, Corps of Engineers. Specification 39-12A; 1944. Paint; Face, Camouflage, Stick Form.

U. S. Gov., Veterans Administration. Specification VA-X-69a; 1941. Paint; Artists, Moist Water Color.

*References.*—Painting practice, safety codes, definitions, colors, methods of testing, *see* 840.1-840.5.

## 845. STAINS

### 845.1 SHINGLE STAINS

### 845.2 WOOD STAINS IN TURPENTINE

### 845.3 WOOD STAINS IN OIL

U. S. Gov., Treasury Dept., Procurement Div., No. 615; 1943. Stain; Wood, Interior. Shall be furnished in one type and one grade. Covers materials, general requirements, consistency, drying time, nonvolatile matter, dilution, working properties, odor, methods of sampling, tests, packaging, packing, and marking.

U. S. Gov., Veterans Administration. Specification VA-MC-268f; 1941. Stains; Wood.

## 846 VARNISH AND VARNISH GUMS AND RESINS

### 846.0 GENERAL ITEMS

American Society for Testing Materials, D 154-43; 1943. Methods of Testing Oleoresinous Varnishes. Gives requirements for appearance, color, nonvolatile matter, elasticity or toughness, flash point, viscosity, water test, skinning test of varnish in closed containers, alkali resistance test, and acid number.

Associated Factory Mutual Fire Insurance Companies. Factory Mutual Bulletin of Loss Prevention, 11.71; 1940. Pyroxylin Plastic, Its Hazards, and Special Precautions Needed for Storage and Handling. Includes recommendations for storage cabinets and vaults.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, 1938. Varnish. Covers definition, constants, containers, shipping regulations, ordering instructions, types and uses, components of varnishes, and general classifications.

U. S. Gov., Dept. of Agriculture, Forest Service. Specifications for Lacquer.

U. S. Gov., Federal Specification TT-P-141; 1941. Paint, Varnish, Lacquer, and Related Materials. General Specifications (Methods of Sampling and Testing). Covers methods used officially in sampling and routine testing of paints, including procedure and apparatus.

*References.*—Methods of testing electrical insulating varnishes, *see* 719.57.

### 846.1 SPIRIT VARNISHES

### 846.11 Shellac Varnishes

American Bleached Shellac Manufacturers Assn. and U. S. Shellac Importers Assn. Methods of Sampling and Testing Shellac Varnish, 1934. Gives requirements as to the procedures necessary for sampling and testing.

American Bleached Shellac Manufacturers Assn. and U. S. Shellac Importers Assn. Specifications for Shellac Varnish, 1934. To be furnished as orange—grades A or D; and as bleached—grades regular or refined. Gives requirements as to color, drying time, body, properties, packing and marking, and methods of testing.

American Society for Testing Materials, D 29-40; 1940. Methods of Sampling and Analysis of Shellac. Covers dry shellac and shellac varnish; method for orange shellac, either free, blocky, or matted; bleached shellac; requirements for extraction apparatus for insoluble test and outline of procedure, iodine number and solutions necessary, qualitative tests for rosin and copal, determination of moisture, orpiment in orange shellac, wax, soluble matter, ash and color. For shellac varnish, color, nonvolatile matter, wax, iodine number, insoluble matter, purity, drying time, volatile matter, and weight.

American Society for Testing Materials, D 360-41; 1941. Shellac Varnishes. Includes two grades of both orange and bleached shellac solutions in 190 proof denatured alcohol, formula No. 1 of the U. S. Internal Revenue Bureau, or in other specified solvent. Color, copal, drying time, body properties, packing and marking, and methods of testing.

U. S. Gov., Federal Specification TT-V-91a; 1940. Amendment 2; 1944. Varnish; Shellac. Covers two types—(I) bleached and (II) orange; two grades in type I—(A) regular and (B) refined; two grades in type II—(A) low iodine number and (B) high iodine number; and three bodies in each grade—(1) light, (2) medium, and (3) heavy. Gives requirements for material, workmanship, iodine number, insoluble matter, wax, ash, color, maximum allowable percentage of nonvolatile matter, set to touch, dry hard, and appearance of dried varnish film; methods of sampling, inspection, and tests; and packaging, packing, and marking.

*References.*—Methods of testing varnishes, *see* 846.0; shellac gum, alcohol, *see* 846.62, 822.3, and 822.4; safety codes, definitions, colors, *see* 840.2-840.4.

### 846.12 Damar Varnishes

U. S. Gov., Federal Specification TT-V-61; 1939. Amendment 1; 1944. Varnish; Damar. Covers one grade. Gives requirements for color, nonvolatile matter, nature of volatile matter, acid number, viscosity, appearance, and mixing and baking tests; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

## 846.2 LONG OIL VARNISHES

### 846.21 Spar Varnish

U. S. Gov., Army-Navy Aeronautical Specification AN-TT-V-116—2; 1943. Varnish; Spar, Glyceryl Phthalate.

U. S. Gov., Army-Navy Aeronautical Specification AN-TT-V-118; 1941. Varnish; Spar, Phenol-Formaldehyde.

U. S. Gov., Federal Specification TT-V-121b; 1943. Amendment 1; 1944. Varnish; Spar, Water-Resisting. Shall be of one grade only, and the raw materials and processes of manufacture used shall be such as to produce varnish meeting this specification. Gives requirements for appearance, color, flash point, nonvolatile matter, set to touch, dry hard, viscosity, at 25° C., working properties, safety of working, water resistance, toughness, skinning, and odor; methods of sampling and testing; and packaging, packing, and marking for shipment.

U. S. Gov., U. S. Maritime Commission. Specification 52-MC-7; 1942. Amendment 1; 1943. Varnish; Spar, Water-Resisting. Covers one type and grade. For exterior finishing varnish and as a vehicle for pigmented products. Gives requirements for appearance, color, flash point, nonvolatile matter, set to touch, dry hard, after tack, gloss, viscosity, working properties, safety of working, water resistance, toughness, skinning, odor, and reactivity; inspection, sampling, and methods of test; and packaging and marking.

*References.*—Aluminum powder, *see* 847.1; methods of testing varnishes, *see* 846.0; safety codes, definitions, colors, *see* 840.2-840.4.

### 846.29 Miscellaneous Waterproof Varnishes

U. S. Gov., Federal Specification TT-V-130; 1943. Varnish; Spirit (Shellac Varnish Replacement). Covers one grade and one type. Gives requirements for material, appearance, color, viscosity, nonvolatile matter, ash, drying properties, working properties, adhesion properties, effect on wood, resistance to abrasion, odor, dilution, and sanding properties and sealing properties; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., Veterans Administration. Specification VA-X-64e; 1943. Paint; Lacquer, Brushing.

*References.*—Insulating varnish for electrical wire, *see* 719.57.

## 846.3 SHORT OIL VARNISHES

### 846.31 Rubbing Varnish

U. S. Gov., Federal Specification TT-V-86; 1939. Amendment 1; 1941. Varnish; Rubbing, Cabinet. Covers one type and grade. Gives detail requirements; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., U. S. Maritime Commission. Specification 52-MC-14; 1942. Varnish; Rubbing, Furniture. Covers one type and grade. Gives requirements for appearance, color, flash point, nonvolatile matter, set to touch, dry hard, gloss, viscosity, working properties, safety of working, water resistance, toughness, skinning, odor, rubbing properties, and alcohol resistance; inspection, sampling, and methods of test; and packaging and marking.

*References.*—Interior varnish, rubbing quality, *see* 846.32.

### 846.32 Interior Varnishes Except Floor Varnish

American Hospital Assn., 4-61. Interior Varnish. Covers one grade only. Based on U. S. Gov. Federal Specifications TT-V-71a.

U. S. Gov., Federal Specification TT-V-71a; 1939. Amendment 2; 1943. Varnish; Interior. Covers one grade. Gives requirements for appearance, color, nonvolatile matter, set to touch, dry hard, toughness, working properties, water resistance, viscosity, safety of working, skinning, and odor; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

*References.*—Methods of testing varnishes, *see* 846.0; safety codes, definitions, colors, *see* 840.2-840.4.

### 846.33 Floor Varnishes

Maple Flooring Manufacturers Assn. Finishes for Maple, Beech, and Birch Floors, 1940. Gives specifications for general requirements, detailed requirements, and methods of testing for heavy duty finishes and for gymnasium-type finishes.

*References.*—Interior varnish for floors, *see* 846.32.

## 846.4 ASPHALT VARNISHES

### 846.41 Air Drying Asphalt Varnish

U. S. Gov., Federal Specification TT-V-51a; 1944. Varnish; Asphalt. Covers one grade. Gives requirements for materials, appearance, color, flash point, nonvolatile matter, set to touch, dry, matter insoluble in carbon disulfide, working properties, miscibility with linseed oil, water resistance, toughness, resistance to oil, and odor; methods of sampling and testing; and packaging, packing, and marking for shipment.

*References.*—Methods of testing varnishes, *see* 846.0; linseed oil, *see* 848.1; safety codes, definitions, colors, *see* 840.2-840.4.

### 846.42 Baking Asphalt Varnish

## 846.5 CELLULOSE ACETATE AND CELLULOSE NITRATE PRODUCTS (LACQUERS AND PLASTICS)

*References.*—Soluble guncotton for medicinal purposes, *see* 862; amyl alcohol, butyl alcohol, for use with cellulose ester coatings, *see* 822.1, 822.2; butyl propionate, ethyl acetate, ethyl lactate, normal butyl acetate, for use with cellulose ester coatings, *see* 839.9; methods of testing lacquer solvents and diluents, *see* 839.9; methods of testing varnishes, *see* 846.0; safety codes, definitions, colors, methods of testing pigments in lacquer, *see* 840.2-840.5; storage provisions and requirements for pyroxylin plastic and of motion picture film, *see* 518.50; pyroxylin impregnated shade cloth, *see* 392.22; methods of testing nitrocellulose clear lacquers and lacquer enamels, *see* 840.5; cotton fabrics for pyroxylin coating, *see* 304.71; bakelite, *see* 719.58.

### 846.50 General Items

American Society for Testing Materials, D 301-33; 1933. Specifications and Tests for Soluble Nitrocellulose. Also known as soluble cotton; describes properties, sampling, and methods of testing for ash, nitrogen, stability, consistency, solubility, film test, toluol dilution, and design of apparatus for nitrogen determination; and copper bath for stability test.

American Society for Testing Materials, D 365-39; 1939. Methods of Testing Soluble Nitrocellulose Base Solutions. Gives procedures for determination of consistency (viscosity), nonvolatile matter, appearance, depth of color, with details as to apparatus, special solutions, and preparation of color standards required.

American Society for Testing Materials, D 522-41; 1941. Method of Test for Elongation of Attached Lacquer Coatings With the Conical Mandrel Test Apparatus. For lacquer coatings applied to sheet metal of uniform surface texture. Apparatus, metal specimens, conditioning and number of tests, procedure, and measurement of elongation.

Manufacturing Chemists' Assn. Manual Sheet N-1. Handling of Nitrocellulose Wet With Alcohol (or Other Organic Liquid) or Water While in I.C.C. Containers, in Storage or in Process. Recommended Practice. Adopted, 1940. Revised, 1943. Includes description of nitrocellulose, containers, labels, and I.C.C. classifications, and recommendations for handling containers, storage, handling in process, empty barrels, mechanical work and repairs, and fire prevention and protection.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, 1938. Lacquer. Covers definition, constants, containers, shipping regulations, types and uses, components, and ordering instructions.

### 846.51 Aircraft Varnish

U. S. Gov., Army Air Forces. Specification 14105-C; 1943. Lacquer; Cellulose Nitrate, Camouflage.

U. S. Gov., Army Air Forces. Specification 14106-B; 1943. Dope; Camouflage, Pigmented Nitrate.

U. S. Gov., Army-Navy Aeronautical Specification AN-C-89; 1943. Cellulose Acetate Butyrate.

U. S. Gov., Army-Navy Aeronautical Specification AN-D-1-2; 1944. Dope; Cellulose Acetate Butyrate, Clear.

U. S. Gov., Army-Navy Aeronautical Specification AN-D-2-3; 1944. Dope; Cellulose Acetate Butyrate, Pigmented, Gloss.

U. S. Gov., Army-Navy Aeronautical Specification AN-D-3-1; 1943. Dope; Cellulose Acetate Butyrate, Pigmented, Camouflage.

U. S. Gov., Army-Navy Aeronautical Specification AN-D-8—2; 1944. Dope; Cellulose Nitrate, Pigmented, Camouflage.

U. S. Gov., Army-Navy Aeronautical Specification AN-L-C-181-1; 1943. Cellulose Nitrate.

U. S. Gov., Army-Navy Aeronautical Specification AN-O-B-841; 1941. Butyl Acetate.

U. S. Gov., Army-Navy Aeronautical Specification AN-O-D-361; 1941. Dibutyl Phthalate.

U. S. Gov., Army-Navy Aeronautical Specification AN-O-E-758-1; 1941. Ethyl Acetate.

U. S. Gov., Army-Navy Aeronautical Specification AN-O-E-766; 1941. Ethyl Cellulose.

U. S. Gov., Army-Navy Aeronautical Specification AN-T-29; 1943. Triphenyl Phosphate.

U. S. Gov., Army-Navy Aeronautical Specification AN-T-30; 1943. Tricresyl Phosphate.

U. S. Gov., Army-Navy Aeronautical Specification AN-TT-A-511; 1941. Amyl Acetate.

U. S. Gov., Army-Navy Aeronautical Specification AN-TT-D-514—3; 1944. Dope; Cellulose Nitrate, Clear.

U. S. Gov., Army-Navy Aeronautical Specification AN-TT-D-554-4; 1944. Dope; Cellulose Nitrate, Pigmented.

U. S. Gov., U. S. Army, Army Air Forces. Specification 98-24100U; 1942. Doping Aircraft Surfaces.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 4-27; 1929. Butyl Acetate (for Use in Aircraft Dope).

### 846.52 Ammunition Varnish

U. S. Gov., Army Air Forces. Specification 24114-A; 1942. Camouflage Finishes for Aircraft.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 3-158A; 1942. Lacquer; Cellulose Nitrate, and Thinner (Clear and Pigmented).

U. S. Gov., U. S. Army, Ordnance Dept. Specification 3-162A; 1940. Lacquer Enamel; Nitrocellulose, and Thinner, for Ammunition.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 3-185; 1943. Lacquer; Purple.

### 846.53 Metal Varnish

U. S. Gov., Army-Navy Aeronautical Specification AN-L-29; 1944. Lacquer; Cellulose Nitrate.

### 846.54 Wood Varnish

U. S. Gov., Army-Navy Aeronautical Specification AN-C-83—2; 1943. Coatings, Protective (for Wood).

### 846.59 Miscellaneous Cellulose Products

American Society for Testing Materials, D 657-44; 1944. Isoprophyl Acetate. Covers two grades of isoprophyl acetate, as follows—85 to 88 percent grade and 95 to 98 percent grade.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, Volume 2; 1944. Cellulose Acetate. Covers definition, constants, solubility, derivation, uses, grades and forms, general characteristics, and substitutes.

U. S. Gov., Army Air Forces. Specification No. 14130; 1944. Compound; Protective Plastic Stripping.

U. S. Gov., Army Air Forces. Specification No. 14135; 1944. Cement; Acrylic Base, for Acrylate Base Plastic.

U. S. Gov., Army Air Forces. Specification No. 14137; 1944. Cement; Cellulose Nitrate Base.

U. S. Gov., Army-Navy Aeronautical Specification AN-C-117a; 1944. Compound; Stripping Ethylcellulose Protective, Hot Dipping.

U. S. Gov., Army-Navy Aeronautical Specification AN-D-14; 1944. Diamyl Phthalate.

U. S. Gov., Army-Navy Aeronautical Specification AN-L-21—2; 1944. Lacquer; Camouflage.

U. S. Gov., Army-Navy Aeronautical Specification AN-T-27—1; 1943. Thinner; Cellulose Acetate Butyrate Dope.

U. S. Gov., Army-Navy Aeronautical Specification AN-T-28—1; 1943. Thinner; Cellulose Acetate Butyrate Dope, Blush Retarding.

U. S. Gov., Army-Navy Aeronautical Specification AN-TT-D-551-4; 1944. Dope; Cellulose Nitrate, Clear (for) Aluminum Dope.

U. S. Gov., Army-Navy Aeronautical Specification AN-TT-T-258—6; 1944. Thinner; Cellulose Nitrate Dope and Lacquer.

U. S. Gov., Army-Navy Aeronautical Specification AN-TT-T-258—3; 1943. Thinner; Cellulose Nitrate Dope and Lacquer, Blush Retarding.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Miscellaneous Publication M168; 1940. Protection of Documents With Cellulose Acetate Sheeting. Relative to the lamination of documentary material with cellulose acetate sheeting as a protective measure, a study was made of the quality of various sheetings and of the suitability of the lamination processes used by seven different organizations. Three of the operators used plain sheeting applied with heat and pressure, one used sheeting containing an adhesive and applied the sheeting with heat and pressure, and three used sheeting containing an adhesive and applied the sheeting with pressure at ordinary temperature. The operators used identical papers of four different types. The sheetings were tested for the physical and chemical properties considered of importance relative to laminating quality, resistance to wear, and stability.

U. S. Gov., Treasury Dept., Procurement Div., No.434; 1940. Cement; Adhesive, Cellulose-Base (for Metals, Glass, and Wood). Shall be of one type and grade intended for use as a filler, sealer, or adhesive joining cement; shall be a nonaqueous volatile-solvent cellulose-base material, upon each tube of which a caution or warning should appear, as to inflammability, should the material have a flash point below 86° F. (closed cup). Gives requirement for flexibility of base material and workability and performance; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., Treasury Dept., Procurement Div., No.489; 1941. Cement; Leather, Cellulose-Base, (for Shoe Soling). Shall be one type and one grade and shall be a cellulose-base volatile-solvent material of suitable brushing consistancy for application. Gives requirements for viscosity, nonvolatile matter, benzol, dilution test, flexibility, and workability and performance; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., Treasury Dept., Procurement Div., No.490; 1941. Thinner; Leather-Cement (Cellulose-Base). Shall be one type and one grade, and shall be a clear liquid free from sedimentation or suspended matter intended for use in connection with cellulose-base leather cement. Gives requirements for distillation range, neutralization number (acid value), benzol, water, and performance test; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., U. S. Army, Army Air Forces. Specification 4-1046; 1936. Iso-Propyl Acetate (85 to 88 Percent Grade).

U. S. Gov., U. S. Army, Chemical Warfare Service. Specification 97-54-176; 1942. Ethyl Cellulose.

## 846.6 VARNISH GUMS AND RESINS

### 846.60 General Items

American Gum Importers Assn. Natural Resins. Handbook, 1939. Basic data on the natural resins—their physical and chemical properties, their solubilities in a wide range of paint, varnish, and lacquer solvents and thinners; the compatibility of the natural resins with other resinous products, cellulose derivatives, waxes, pitches, asphalts, drying and nondrying oils; the applications of the resins alone and in combination with other materials in both their original and thermally processed forms.

### 846.61 Ester Gum

U. S. Gov., Navy Dept. Specification 52G5b; 1945. Gum; Ester.

### 846.62 Shellac

American Bleached Shellac Manufacturers Assn. General Specifications on the Use and Application of Shellac, 1941. Covers dampness and drying, thinning and mixing. Includes notes on floor finishing, fillers, stains, preparation, and waxing; specifications for floor finishing, pine and other close grains, oak and other open grains, maple, and birch; specifications for finishing interior woodwork, priming coat, natural wood finishes, varnish base, and priming (sizing) walls.

American Bleached Shellac Manufacturers Assn. How To Use Shellac for Best Results, 1941. Instructions on thinning shellac, application to new and to old floors, finishing furniture, and priming and sealing walls and woodwork.

American Bleached Shellac Manufacturers Assn. and U. S. Shellac Importers Assn. Specifications for Dry Bleached Shellac, 1934. For two grades of shellac known as regular and refined. Gives requirements as to iodine number, percent of moisture, wax, ash, and color.

American Bleached Shellac Manufacturers Assn. and U. S. Shellac Importers Assn. Specifications for Orange Shellac, 1934: For grades A, B, C, and D known in the trade as superfine, fine, good, and heart brands; TN pure and pure TN; and TN which may contain up to 3 percent of rosin, respectively. Contains requirements for the four grades as to iodine number, percent of moisture, wax, matter soluble in water, ash, and color.

American Bleached Shellac Manufacturers Assn. and U. S. Shellac Importers Assn. Specifications for Seedlac, 1934. For three grades, namely—Koosmie, Bisacki, and Rangoon. Gives requirements for the three grades as to iodine number, moisture, percent of wax and ash, and color.

American Society for Testing Materials, D 29-40; 1940. Methods of Sampling and Analysis of Shellac. Covers dry shellac and shellac varnish; method for orange shellac, either free, blocky, or matted; bleached shellac; requirements for extraction apparatus for insoluble test and outline of procedure, iodine number and solutions necessary, qualatative tests for rosin and copal, determination of moisture, orpiment in orange shellac, wax, soluble matter,

ash, and color. For shellac varnish, color, nonvolatile matter, wax, iodine number, insoluble matter, purity, drying time, volatile matter, and weight.

American Society for Testing Materials, D 29-41T; 1941. Tentative Method of Test for Color of Orange Shellac. For the determination of the color of orange shellac when it is desired that the results be expressed in terms of numerical values. Apparatus, reagents, preparation of color standards, and procedure. This method is in effect a tentative revision of, and is intended to be added, when adopted, to the present American Society for Testing Materials. Standard Methods of Sampling and Analysis of Shellac (D 29-40).

American Society for Testing Materials, D 207-36; 1936. Dry Bleached Shellac. For regular and for refined white shellac that has been treated to be nearly free of wax and matter insoluble in hot alcohol. Gives limiting values for iodine number, matter insoluble in hot solvents, moisture, wax, matter soluble in water, ash, and tests in accordance with A.S.T.M. Method D 29.

American Society for Testing Materials, D 237-43T; 1943. Tentative Specifications for Orange Shellac and Other Lacs. Covers six grades but does not include sticklac and seedlac. Gives requirements for matter insoluble in specified hot solvents, iodine number, moisture, wax, orpiment, matter soluble in water, ash, color, and methods of testing.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, Volume 2; 1944. Shellac. Covers definition, derivation, constants, solubility, grades, uses, and substitutes.

U. S. Shellac Importers Assn., Inc. American Bleached Shellac Manufacturers Assn., Inc. Official Methods of Analysis, Specifications, and General Information on Shellac and Bleached Shellac, 1934. Includes specifications for orange shellac, seedlac, dry bleached shellac, and shellac varnish; methods of sampling and testing shellac; methods of sampling and testing shellac varnish; and appendix of general information.

U. S. Gov., Federal Specification TT-S-271; 1930. Amendment 1; 1944. Shellac; Orange. Covers the manufactured products derived entirely from stick lac (the secretion of Tacchardia Lacca) freed from most of the lac dye and originally prepared in flake, button, or chip form. Covers three types—(I) orange shellac (grades A, B, C, and D), (II) button-lac, and (III) garnet-lac. Gives requirements for iodine number, matter insoluble in alcohol, moisture and volatile matter, matter soluble in water, wax, ash, and color; methods of inspecting, sampling, and testing; and packaging, packing and marking.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 50-11-17A; 1932. Shellac; Orange Gum, White Bleached, Refined Bleached.

*References.*—Shellac varnishes, *see* 846.11; methods of testing shellac, *see* 846.0, 846.11.

### 846.63 Resins and Resin Compounds

American Society for Testing Materials, D 269-30; 1930. American Standards Assn., K 21.1-1936. Method of Test for Toluene Insoluble Solid Matter in Rosin (Chiefly Sand, Chips, Dirt, and Bark). Covers the treatment of sample and outlines procedure.

American Society for Testing Materials, D 563-43T; 1943. Tentative Method of Test for Phthalic Anhydride Content of Alkyd Resin Solutions. Covers apparatus required and outlines procedure.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, Volume 2; 1944. Kauri Gum. Covers definition, constants, solubility, derivation, uses, grades, and containers.

U. S. Gov., Army-Navy Aeronautical Specification AN-TT-R-271-1; 1941. Resin; P-Phenyl, Phenol-Formaldehyde.

U. S. Gov., Navy Dept. Specification 52 R 10b; 1943. Resin; Para-Phenyl, Phenol-Formaldehyde.

U. S. Gov., Navy Dept. Specification 52R11; 1944. Resin; Phenolic (Alkyl Phenol, Oil-Soluble).

U. S. Gov., Navy Dept. Specification 52R13; 1944. Resin; Alkyd, Solution.

U. S. Gov., Treasury Dept., Procurement Div., No.456; 1941. Compound; Joint and Thread, High Temperature (Liquid and Paste). Type I, liquid, is intended for high temperature use with smooth joints; and type II, paste, is for high temperature use with rough joints. Composed essentially of suitable resins and a volatile with an inert filler added to type II. Gives requirements for sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., U. S. Maritime Commission. Specification 52-MC-21; 1943. Amendment 1; 1944. Resin; Alkyd, Solution. Covers one type and grade of a linseed oil modified alkyd resin in a volatile petroleum solvent suitable for use in air-drying interior and exterior colored paints and enamels. Gives requirements for appearance, color, odor, flash point, composition of resin solution, specific gravity, acid number, viscosity reduction, compatibility, reactivity with zinc oxide, drying time, water resistance, and safety of working; inspection, sampling, and methods of test; and packaging and marking.

### 846.7 VARNISH FOR PRINTERS AND LITHOGRAPHERS

U. S. Gov., U. S. Army, Corps of Engineers. Specification; 42.2-2; 1921. Asphaltum; Washout Solution.

U. S. Gov., U. S. Army, Corps of Engineers. Specification 42.2-80; 1921. Varnish; 00.

### 846.9 MISCELLANEOUS VARNISH SPECIFICATIONS

U. S. Gov., Army Air Forces. Specification 14123; 1943. Varnish; Decalcomania, Adhesive.

U. S. Gov., Army Air Forces. Specification 14133-1; 1944. Lacquer; Hot Oil Resistant, for Steel Engine Parts.

U. S. Gov., Army Air Forces. Specification 20029; 1942. Coating; Synthetic Varnish, for Metal Containers.

U. S. Gov., Federal Specification TT-L-58; 1942. Lacquer; Spraying, Clear and Pigmented (General Use). Covers one grade and two types—(I) clear and (II) pigmented. Gives requirements for consistency, color, physical properties, working properties, drying properties, hiding power, and water resistance;

methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., Navy Dept. Specification 52V15d; 1942. Varnish; Mixing, for Aluminum Paint.

U. S. Gov., Navy Dept. Specification 52V17; 1944. Varnish-Ingredient; Phenolic.

U. S. Gov., Navy Dept. Specification 52V18; 1944. Varnish; Mixing, Alkyl-Phenolic.

U. S. Gov., Navy Dept. Specification 52V20; 1944. Varnish; Mixing, Linseed Oil-Phenyl-Phenolic Resin.

U. S. Gov., Navy Dept. Specification 52V21; 1944. Varnish; Mixing, Linseed Oil-Alkyl-Phenolic Resin.

U. S. Gov., U. S. Army, Army Air Forces. Specification 3-163; 1935. Lacquer, for Landing Light Reflectors.

U. S. Gov., U. S. Army, Army Air Forces. Specification 3-168; 1937. Lacquer; Acid Proof (for Integrally Shielded Storage Batteries).

U. S. Gov., U. S. Army, Medical Dept. Specification 4-1096A; 1940. Sandarac Varnish.

U. S. Gov., U.S. Army, Medical Dept. Specification 10-2451; 1938. Lacquer for Casts.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2545; 1939. Varnish for Silicate Cement.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 3-167; 1937. Varnish; Phenol-Formaldehyde Resin.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 50-11-106; 1942. Varnish; Special, for Use in Ammunition.

*References.*—Electrical insulating varnishes, *see* 719.57.

## 847. BRONZE POWDERS AND VEHICLES

### 847.1 ALUMINUM BRONZE

American Assn. of State Highway Officials, M69-42. Standard Specifications for Aluminum Paint (Paste-Mixing Vehicle). Covers aluminum paste, mixing vehicle, and aluminum paint for steel structures. Gives paste, mixing vehicle, aluminum paint, packing and marking, and methods of analysis.

American Hospital Assn., 4-6. Mixing Varnish for Aluminum Paint. Covers two types—(I) for priming wood and (II) for general use; and two classes—(A) for powder and (B) for paste. Based on U. S. Gov. Specifications TT-V-81a, and Amendment 1, for Varnish, Mixing (for) Aluminum Paint (referred to below); TT-A-466, and Amendment 1, for Aluminum-Pigment-Paste, (for) Paint; and TT-A-476 and Amendment 3, for Aluminum-Powder, (for) Paints (Aluminum-Bronze-Powder).

American Society for Testing Materials, D 266-41; 1941. Aluminum Powder for Paints (Aluminum Bronze Powder). Covers two types of aluminum powder, commercially known as aluminum bronze powder, for use in paints: Type A, standard fineness, for general paint use; type B, extra fine, for special uses. Composition and properties, number of tests, and methods of test.

American Society for Testing Materials, D 474-41; 1941. Aluminum Pigment Paste for Paint. Covers two types of aluminum pigment paste for use in paints: Type A, standard fineness, for general paint use; Type B, extra fine "lining," for special finishes. Composition and properties, number of tests, and methods of test.

American Society for Testing Materials, D 480-44; 1944. Methods of Sampling and Testing Aluminum Powder and Paste. Cover the procedure for sampling, qualitative analysis, and physical testing of aluminum powder and aluminum paste for paint. Sampling, qualitative analysis, leafing properties, brushing, smoothness, luster, and general appearance; coarse particles, easily extracted fatty and oily matter, stability, and nonvolatile matter.

Assn. of American Railroads, Operations and Maintenance Dept., Engineering Div., Signal Section. Manual of Recommended Practice. Specification 200-43; 1944. Aluminum Paint Suitable for Finishing Coats on Steel Structures. Gives purpose, tender, material, paint, paste, vehicle, glycerol-phthalate resin base varnish, phenolic resin base varnish, mixing, application, inspection, packing, marking, and warranty.

Society of Automotive Engineers. Aeronautical Material Specification 2450A; 1944. Sprayed Metal Finish (Aluminum). For air-cooled cylinder assemblies but may be used on other parts where applicable. Gives requirements for preparation, application, quality, corrosion resistance, and approval. Similar Specification: Army-Navy Aeronautical AN-M-8.

U. S. Gov., Army-Navy Aeronautical Specification AN-TT-A-461a; 1943. Aluminum-Pigment-Paste; Aircraft.

U. S. Gov., Federal Specification TT-A-466; 1942. Amendment 1; 1944. Aluminum-Pigment; Powder and Paste, (for) Paint. Covers two types—(I) powder and (II) paste; two classes—(A) for general paint use and (B) for special finishes; and two grades—(I) made from purest aluminum and (II) made from secondary aluminum. Gives detail requirements for each type, class, and grade; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification TT-V-81a; 1939. Amendment 2; 1943. Varnish; Mixing (for) Aluminum Paint. Covers two types—(I) 120 percent Kauri reduction (for priming wood) and (II) 75 percent Kauri reduction (for general use); and two classes—(A) for aluminum powder and (B) for aluminum paste. Gives requirements for color, viscosity, working properties, and composition; methods of sampling and testing; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., Treasury Dept., Procurement Div., No. 355; 1939. Paint; Glyceryl Phthalate, Marine, Exterior, Aluminum. Shall consist of a pigment paste and a mixing vehicle, free from toxic ingredients. To be used as a top coat over properly primed metal surfaces and as a primer or top coat over exterior wood surfaces. Gives chemical composition and physical properties of paste and vehicle; details of mixed paint including leafing properties, weight per gallon, hiding properties, drying properties, working properties, and surface and self-lifting properties; methods of sampling, inspection, and tests; and packaging, packing, and marking.

*References.*—Spar varnish for making aluminum paint, *see* 846.21; methods of testing varnish, *see* 846.0; safety codes, definitions, colors, *see* 840.2-840.4.

### 847.2 GOLD BRONZE

American Society for Testing Materials, D 267-41; 1941. Gold Bronze Powder. Commercially known as gold bronze, pale gold bronze, and rich gold bronze powders. Composition and properties, number of tests, and methods of test.

### 847.3 COPPER BRONZE

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, Volume 2; 1944. Bronze Powder. Covers definition, constants, derivation, grades, uses, containers, and substitutes.

### 847.4 BRONZING LIQUID

*References.*—Spar varnish for making aluminum paint, *see* 848.21.

## 848. OILS AND THINNERS FOR PAINTS AND VARNISHES

### 848.0 GENERAL ITEMS

American Oil Chemists' Society. Standard Methods for the Sampling and Analysis of Commercial Fats and Oils, 1943. Applies to fats and fatty oils used in the soap, candle, and tanning industries; to edible fats and oils; to fats and fatty oils intended for lubricating and burning purposes; and to the raw oils used in the varnish and paint industry, but not intended for waxes. Covers sampling; analysis for moisture and volatile matter, insoluble impurities, soluble mineral matter, fatty acids combined as mineral soap, free fatty acids, titer, unsaponifiable matter, iodine number, saponification number, melting point, softening point, slipping point, flow test, cloud test, bleach test, Halphen test (for cottonseed oil), modified Vallavecchia test, Reichert-Meissl and Polenske numbers, Kirschner value, index of refraction, specific gravity, acetyl and hydroxyl value, smoke, flash and fire points, F.A.C. standard colors, modified Wiley melting point method, thiocyanogen method, and Twitchell method.

American Society for Testing Materials, D 268-44; 1944. Methods of Sampling and Testing Lacquer Solvents and Diluents. Cover procedures for the sampling and testing of solvents and diluents for use in the manufacture of nitrocellulose lacquer. For specimen from loaded tank car or other large vessel and from barrels and drums; determination of specific gravity, color comparison, distillation test, nonvolatile matter, residual odor, water, acidity, alkalinity, ester value, copper corrosion and mercury corrosion tests, sulfur, dimethylketone, potassium permanganate test, flash point, volatile matter, and free phenols in tricresyl phosphate.

American Society for Testing Materials, D 268-44T; 1944. Tentative Method of Test for Water in Lacquer Solvents and Diluents. For determination of water present in any proportion in most organic liquids, such as lacquer solvents and diluents. Gives principle of test, reagents, standardization of reagent, sample, procedure, and calculation.

American Society for Testing Materials, D 361-36; 1936. Industrial 90 Percent Benzene (Benzol). Covers limiting values for specific gravity, color, distillation range, nonvolatile matter, odor, water, acidity, and sulfur as $H_2SO_4$, with requirements for tests in accordance with A.S.T.M. Method D 268.

### 848.1 LINSEED OIL

#### 848.11 Raw Linseed Oil

American Hospital Assn., 4-31. Raw Linseed Oil. Covers the grade of raw linseed oil for use in paint. Based on U.S. Gov. Federal Specification JJJ-O-336.

American Society for Testing Materials, D 234-28; 1928. American Assn. of State Highway Officials, M 125-42. American Standards Assn., K34-1937. Raw Linseed Oil. For pure oil pressed from flaxseed, limiting values for specific gravity, acid number, saponification number, unsaponifiable matter, iodine number, loss on ignition, color, and foots, using A.S.T.M. Method D-555 for testing.

U. S. Gov., Federal Specification JJJ-O-336; 1931. Oil; Linseed, Raw. Covers the grade of raw linseed oil for use in paint; and two types—(A) normal iodine number and (V) high iodine number. Gives requirements for foots, specific gravity, acid number, saponification number, unsaponifiable matter, iodine number, loss on heating, and color; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking. Amendment 2; 1943, changes iodine number and requirements applicable to Navy Dept. purchases.

*References.*—Linseed oil for medical purposes, *see* 813.5; methods of testing varnish and paint oils, *see* 848.0; methods of testing vegetable oils, *see* 142.0.

#### 848.12 Boiled Linseed Oil

American Hospital Assn., 4-28. Boiled Linseed Oil. Covers the grade of boiled linseed oil for use in paints. Based on U. S. Gov. Federal Specification JJJ-O-331.

American Society for Testing Materials, D 260-33; 1933. American Assn. of State Highway Officials, M 126-42. American Standards Assn., K35-1937. Boiled Linseed Oil. For pure linseed oil treated by heating and incorporating compounds of lead or other suitable drying metals; requirements for specific gravity, acid number, saponification number, unsaponifiable matter, iodine matter, loss on heating, time of drying, ash and lead, using A.S.T.M. Method D-555 for testing.

U. S. Gov., Federal Specification JJJ-O-331; 1931. Oil; Linseed, Boiled. Covers the grade of boiled linseed oil for use in paints; and two types—(A) kettle-boiled and (B) quick process. Gives requirements time of drying, loss on heating, specific gravity, acid number, saponification number, unsaponifiable matter, ash, and lead; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Navy Dept. Specification 52-O-17; 1944. Oil; Linseed, Alkali-Refined.

*References.*—Linseed oil for medical purposes, *see* 813.5; methods of testing varnish and paint oils, *see* 848.0; methods of testing vegetable oils, *see* 142.0.

### 848.2 CHINA WOOD OIL (TUNG OIL)

American Oil Chemists' Society. Recommended Standards for Various Oils, 1943. Tung Oil. Gives

table showing recommended standard for tung oil.

American Society for Testing Materials, D 12-41; 1941. Raw Tung Oil. Sampling during loading of tank cars or filling of containers for shipment, from loaded tank cars or large vessels, and from barrels or drums; and methods of testing.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, 1938. Tung Oil (China Wood Oil). Covers definition, constants, derivation, uses, impurities, forms available, supply, and substitutes.

New York Produce Exchange. Vegetable Oils, Waxes, and Fats. Bulk Oil Section. China Wood Oil. Gives requirements for allowance for moisture, purity of oil, and analysis.

New York Produce Exchange. Vegetable Oils, Waxes, and Fats, 1924. China Wood Oil. For commercially prime oil. Gives requirements for color, foots, dirt, moisture, total impurities, and heat or coagulation test.

U. S. Gov., Army-Navy Aeronautical Specification AN-JJJ-O-354; 1941. Oil; Tung (Chinawood), Raw.

U. S. Gov., Federal Specification JJJ-O-353; 1943. Oil, Tung (China Wood), Raw. Covers one grade intended for use in the manufacture of paints and varnishes. Gives requirements for specific gravity, acid number, saponification number, unsaponifiable matter, refractive index, iodine number, heating test, foots, loss on heating, and color; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

*References.*—Methods of testing, *see* 848.0, 142.0.

## 848.3 SOYBEAN OIL

*References.*—Soybean oil, *see* 143.2.

## 848.4 PERILLA OIL

American Oil Chemists' Society. Recommended Standards for Various Oils, 1943. Perilla Oil. Gives table showing recommended standard for perilla oil.

American Society for Testing Materials, D 125-41; 1941. Perilla Oil, Raw or Refined. Specific gravity, acid number, saponification number, unsaponifiable matter, iodine number, loss on heating, color, foots, and methods of testing.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, 1938. Perilla Oil. Covers definition, constants, solubility, derivation, uses, impurities, forms available, supply, and substitutes.

New York Produce Exchange. Vegetable Oils, Waxes, and Fats, 1924. Perilla Oil. Shall be pure and filtered or settled oil. Gives requirements for country of origin and allowable moisture and impurities.

*References.*—Methods of testing, *see* 848.0, 142.0.

## 848.5 FISH OIL

*References.*—Cod liver oil, *see* 813.2.

## 848.6 Turpentine

American Hospital Assn., 4-55. Gum Spirits and Wood (Steam-Distilled and Sulphate) Turpentine for Paint. Covers one grade only for the three kinds. Based on U. S. Gov. Federal Specification LLL-T-791b.

American Hospital Assn., 4-58. Wood (Destructively-Distilled) Turpentine for Paint. Covers one grade. Based on U. S. Gov. Federal Specification LLL-T-792a.

U. S. Gov., Federal Specification LLL-T-791b; 1941. Turpentine; Gum Spirits and Wood (Steam-Distilled and Sulphate), for Paint. Covers one grade. Gives requirements for appearance, color, odor, and basis of purchase; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Federal Specification LLL-T-792a; 1941. Turpentine; Wood (Destructively Distilled), for Paint. Covers one grade—in Interstate Commerce. Gives requirements for appearance, color, odor, and basis of purchase; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

*References.*—Turpentine, *see* 211.1.

## 848.7 TURPENTINE SUBSTITUTES, MINERAL SPIRITS

American Society for Testing Materials, D 235-39; 1939. American Assn. of State Highway Officials, M 128-42. Petroleum Spirits (Mineral Spirits). Apply only to petroleum distillates. Requirements for appearance, color, flash point, blackening, distillation, dry point, and acidity of distillation residue, using tests by A.S.T.M. methods.

U. S. Gov., Federal Specification TT-T-291; 1931. Thinner; Paint, Volatile Mineral Spirits. Covers that grade of petroleum distillate known as mineral spirits or petroleum spirits for use in paint. Gives requirements for color, appearance, and other properties; methods of sampling, testing, and basis of purchase; and requirements for packaging, packing, and marking.

*References.*—Definitions, methods of testing, *see* 502.2, 503.0.

## 848.9 MISCELLANEOUS OIL AND THINNER SPECIFICATIONS

American Society for Testing Materials, D 364-36; 1938. Industrial Xylene (Xylol) or Solvent Naphtha. Covers values for specific gravity, color, distillation range, nonvolatile matter, odor, water, acidity, sulfur as $H_2SO_4$, copper corrosion test and mercury test, using test procedures of A.S.T.M. Method D 268.

American Society for Testing Materials, D 601-41 T; 1941. Tentative Specifications for Oiticica Oil (Permanently Liquid). Properties and methods of testing.

American Society for Testing Materials, D 740-43T; 1943. Tentative Specifications for Methyl Ethyl Ketone. Gives requirements for purity, specific gravity, color, distillation range, nonvolatile matter, odor, water, acidity, and methods of testing.

American Society for Testing Materials, D 801-44 T; 1944. Tentative Methods of Sampling and Testing Dipentene. Covers scope, sampling, detection and removal of separated water, appearance, color, odor, specific gravity, refractive index, distillation, polymerization, spot test, copper corrosion, flash point, and moisture.

U. S. Gov., Army-Navy Aeronautical Specification AN-M-5; 1942. Methyl-Ethyl Ketone.

U. S. Gov., Army-Navy Aeronautical Specification AN-T-8b—2; 1943. Thinner; Toluene Substitute.

U. S. Gov., Army-Navy Aeronautical Specification AN-LLL-D-386; 1941. Dipentine.

U. S. Gov., Federal Specification TT-O-356a; 1943. Oil; Flatting and Mixing (for Thinning White-Lead-Paste and similar Paste Paints). Covers one grade and two classes—(1) flatting oil (for flat finishes) and (2) mixing oil (for low gloss finishes). Gives requirements for color, nonvolatile matter, drying properties, acid number, toughness, and mixing test; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., Federal Specification TT-O-371; 1943. Amendment 2; 1944. Oil; Linseed—Replacement (for Thinning Paints and Pastes in Oil). Covers one grade and two types—(I) driers added and (II) no driers added. Gives requirements for material, appearance, color, viscosity, nonvolatile matter, acid number, drying properties, toughness, dilution and absorption test; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification TT-T-266; 1942. Amendment 4; 1944. Thinner; Lacquer. Covers one type and one grade. Gives requirements for specific gravity, distillation range, content (esters, hydrocarbons, ketones, and alcohols and ethers), nonvolatile matter, odor, color, water, sulfur, acid value, copper corrosion, and benzol; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., Navy Dept. Specification 52D8a; 1944. Dipentine.

U. S. Gov., Navy Dept. Specification 52K1; 1944. Ketone; Methyl-Ethyl.

U. S. Gov., Navy Dept. Specification 52-O-19; 1944. Oil; Varnish.

U. S. Gov., Navy Dept., Specification 52T9; 1944. Thinner; Paint, Petroleum-Spirits.

U. S. Gov., Panama Canal, Purchasing Dept. Specification for Mixing Oil, 1938.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 3-176; 1943. Thinner, for Synthetic Enamels.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 3-180; 1943. Thinner; Naphtha, Low-Boiling.

U. S. Gov., Veterans Administration. Specification VA-X-65c; 1941. Thinner; Paint Brushing Lacquer.

*References.*—Methods of testing, *see* 848.0, 142.0, 502.2, 503.0.

## 849. MISCELLANEOUS MATERIALS RELATING TO PAINTS AND PRESERVATIVE COATINGS

### 849.1 PAINT DRIERS

### 849.11 Japan Driers

### 849.19 Miscellaneous Paint Driers

American Society for Testing Materials, D 600-43; 1943. Liquid Paint Driers. Covers metallic driers in liquid form for use in paints and similar finishing materials. Covers two classes—(A) driers of the resinate or linoleate types, dispersed in oils, resins, and petroleum spirits or turpentine; and (C) driers of the newer soluble type, which are metallic salts of several types of organic acids, dispersed in suitable media, and usually free of resins. Gives requirements for composition and properties and methods of testing.

U. S. Gov., Army-Navy Aeronautical Specification AN-TT-D-643; 1941. Driers; Naphthenate, Liquid, Concentrated.

U. S. Gov., Federal Specification TT-D-651a; 1942. Drier; Paint, Liquid. Covers two types—(I) lead and manganese and (II) cobalt (lead-free). Gives requirements for color, flash point, nonvolatile matter, volatile matter, ash, action with linseed oil, and drying properties; methods of sampling, testing, and basis of purchase; and requirements for packaging, packing, and marking.

U. S. Gov., Navy Dept. Specification 52 D 7; 1942. Driers; Naphthenate, Concentrated, Liquid.

U. S. Gov., U. S. Maritime Commission. Specification 52-MC-15; 1942. Drier; Paint, Liquid. Covers one grade in four types—(I) cobalt solution, (II) manganese solution, (III) lead solution, and (IV) zinc solution. Gives requirements for color, composition, appearance, flash point, viscosity, and drying power; inspection, sampling, and methods of test; and packaging and marking.

*References.*—Methods of testing, *see* 848.0, 142.0, 502.2, 503.0.

### 849.2 WOOD FILLERS AND OTHER FILLING MATERIALS

U. S. Gov., Army Air Forces. Specification 14115; 1942. Surfacer; Wood, Liquid.

U. S. Gov., Federal Specification TT-F-336a; 1941. Filler; Wood, Paste. Covers one grade and type. Gives requirements for material, workmanship, and working properties; methods of sampling and testing; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification TT-S-171; 1942. Sealer; Floor Lacquer-Type (for Oiled Wood Floors). To provide satisfactory foundation for a finishing material such as varnish, liquid or paste wax, or water emulsion wax. Gives detail requirements; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification TT-S-176a; 1941. Amendment 1; 1944. Sealer; Floor, Varnish-Type (for Wood and Cork). Covers one grade and two classes—(I) minimum nonvolatile content 40 percent and (II) minimum nonvolatile content 25 percent. Gives requirements for nonvolatile matter, set to touch, dry hard and tough, water test, toughness, flashpoint, viscosity, odor, and performance; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Treasury Dept., Procurement Div., No.597; 1943. Filler; Crack and Seam, Paste. Shall be furnished in one type and in one grade. Intended for use in filling cracks in wood, metal, and cement, but not for expansion joints or calking. Gives requirements for material, color, sagging, adhesion, and hardening; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., Navy Dept. Specification 52C25; 1944. Cement; Smoothing (Formula No.62).

U. S. Gov., Navy Dept. Specification 52F1c; 1925. Wood-Filler; Liquid.

U. S. Gov., Navy Dept. Specification 52W4a; 1937. Wood-Substitute; Plastic, and Solvent-Fluid.

*References.*—Priming paints, *see* 844.4.

## 849.3 PUTTY

American Society for Testing Materials, D 317-33; 1933. Pure Linseed Oil Putty for Glazing. Covers whiting putty and white lead whiting putty, requirements for manufacture, composition of dry pigment, properties of finished putty as regards amount of pigment, linseed oil, moisture, alkalinity, coarse particles, and plastic quality.

U. S. Gov., Federal Specification TT-P-781a; 1941. Putty and Elastic-Compound; (for) Metal-Sash Glazing. Covers two types of glazing materials, of the so-called knife-grade, for interior and exterior exposure. Gives requirements for composition and working properties; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification TT-P-791a; 1938. Putty; Pure Linseed Oil, (for) Wood-Sash Glazing. Covers two types for general use on wood sash, interior and exterior exposure—(I) whiting putty and (II) white lead-whiting putty. Gives requirements for pigment, whiting, composition, vehicle, and working qualities; methods of sampling and testing; and requirements for packaging, packing, and marking for shipment. Emergency Alternate Federal Specification TT-T-P-791a; 1942, (issued by Procurement Div., Treasury Dept., U. S. Gov.) changed requirements for pigment.

U. S. Gov., Navy Dept. Specification 52P15; 1928. Putty; Spotting, White.

*References.*—White lead for putty, *see* 842.64; ceramic whiting, calcium carbonate, *see* 546, 833.3; linseed oil, *see* 848.1; method of testing putty, *see* 840.5.

## 849.4 PAINT AND VARNISH REMOVERS

U. S. Gov., Army Air Forces. Specification 14119-2; 1944. Remover; Paint, for Aircraft Finishes.

U. S. Gov., Federal Specification TT-R-251a; 1942. Amendment 2; 1944. Remover; Paint and Varnish, Organic-Solvent Type. Covers two types—(I) flammable and (II) nonflammable. Gives requirements for material, condition in container, nonvolatile matter, ash, loss by evaporation, performance test, stability, alkalies, mineral acids, carbon tetrachloride, retardant residue, effect on wood, and nonflammability; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Navy Dept. Specification 52R12; 1941. Remover; Paint and Varnish, Noninflammable Type.

## 849.5 GOLD LEAF

*References.*—Gold bronze powder, *see* 847.2.

## 849.6 WATERPROOFING COMPOUND FOR TEXTILES AND OTHER FABRICS

Society of Automotive Engineers. Aeronautical Material Specification 361C; 1942. Plastic Film—Transparent, Moisture Resistant. For use in fabrication of envelopes or bags for enclosing aircraft engines and/or spare parts preparatory to shipment or storage. Covers requirements for physical properties, test procedures, quality, approval, and rejections. Similar to U. S. Gov., Navy Dept., Bureau of Aeronautics Specification AN-O-P-406.

U. S. Gov., Navy Dept. Specification 27W3; 1928. Waterproofing-Process for Textiles.

U. S. Gov., Navy Dept. Specification 52C29; 1944. Cement; Synthetic, for Hard Cellular Buoyancy-Material.

U. S. Gov., Treasury Dept., Procurement Div., Specification 277b; 1943. Covers Typewriter; Fabric. Shall be fabric coated with a suitable nonoxidizing plastic material. Grade shall be commercially known as "first" and sizes shall be as specified. Gives requirement for material, workmanship, coating, water permeability, color and finish, and flexibility of coating; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., U. S. Army, Army Air Forces. Specification 3-138-A; 1942. Compound; Waterproofing (for Fabrics).

U. S. Gov., U. S. Army, Ordnance Dept. Specification 50-11-48A; 1943. Compound; Adhesive, Waterproof.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 50-11-76; 1931. Waterproofing Compound.

*References.*—Asphalt for waterproofing, *see* 505.16; waterproofing of raincoats, *see* 392.54; fabric waterproofed with asphalt, *see* 392.4; varnished cloth and tape for electrical purposes, *see* 719.56, spar varnish, electrical insulating varnish, *see* 846.21, 719.57.

## 849.7 WATER COLORS

U. S. Gov., Army Air Forces. Specification 14057-C; 1939. Paint; Water, Dry.

U. S. Gov., U. S. Army, Corps of Engineers. Specification 26-6; 1922. Box; Water Color, Colors, Water.

## 849.8 METAL CEMENT PIGMENTS

## 849.9 MISCELLANEOUS MATERIALS RELATING TO PAINTS NOT ELSEWHERE CLASSIFIED

American Society for Testing Materials, D 363-36; 1936. Tricresyl Phosphate. Limiting values for specific gravity, color, volatile matter, free phenols, potassium permanganate test, ester value, odor, water, and free acid; with methods of test in accordance with A.S.T.M. Method D 268.

American Society for Testing Materials, D 608-43; 1943. Dibutylphthalate. Gives requirements for specific gravity, appearance, color, odor, water, acidity, ester value, and methods of testing.

U. S. Gov., Army Air Forces. Specification No. 14127; 1944. Paste; Masking.

U. S. Gov., Army-Navy Aeronautical Specification AN-F-39; 1944. Fluid; Parachute Marking.

U. S. Gov., Navy Dept. Specification 52P60; 1944. Polymerization-Product of an Organic Dihalide and an Inorganic Polysulphide (Powder).

U. S. Gov., Navy Dept. Specification 52T12; 1944. Tricresyl Phosphate.

U. S. Gov., U. S. Maritime Commission. Specification 31-MC-1; 1944. Tape; Luminescent, Phosphorescent, Adhesive-Backed. Covers one type and one grade. Gives Requirements for materials, workmanship, construction, uniformity, color, base material, pressure-sensitive adhesive backing, luminescent material, brightness, flexibility, stability, and resistance to elevated temperature; inspection, sampling, and methods of test; and packaging and marking.

# 850-859 FERTILIZERS AND FERTILIZER MATERIALS

## 850. GENERAL ITEMS

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis, 1940. Fertilizers. Official methods for sampling, preparation of sample and of reagents, determination of moisture, of total phosphoric acid, water-soluble and citrate-insoluble phosphoric acid, organic and ammoniacal nitrogen only, total nitrogen, nitric and ammoniacal nitrogen, water insoluble organic nitrogen, potash.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, Volume 2; 1944. Bone; Raw (Granulated Bone, Bone Meal). Covers definition, derivation, uses, grades, containers, and substitutes.

*References.*—Other definitions, *see* 851, 852, and 859.

## 851. NITROGENOUS FERTILIZER MATERIALS

U. S. Gov., Treasury Dept., Procurement Div., 617a; 1944. Sodium Nitrate (Nitrate of Soda), for Fertilizer Purposes. Covers one type and one grade in granular or pellet form. Gives requirements for nitrogen content, moisture and other volatile matter, water-insoluble matter, and particle size; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

*References.*—Methods of analysis, *see* 850.

## 852. PHOSPHATE FERTILIZER MATERIALS (ROCK)

U.S. Gov., Dept. of Commerce, National Bureau of Standards. Circular C398 and Supplement, 1944. Standard Samples. Phosphate Rock (Tennessee), Sample 56a, and Phosphate Rock (Florida), Sample 120. These samples are prepared and sold by the National Bureau of Standards with a certificate of analysis for use in industry and by others as a comparison standard for checking the accuracy of analysis of similar materials.

## 853. SUPERPHOSPHATES (ACID)

U. S. Gov., Treasury Dept., Procurement Div., No. 671; 1944. Superphosphate, for Fertilizer Purposes. Covers one type and one grade, free from hard caking. Gives requirements for available phosphoric acid content ($P_2O_5$); methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

## 854. PREPARED FERTILIZER MIXTURES

U. S. Gov., Treasury Dept., Procurement Div., No. 634; 1943. Fertilizer; Commercial, Mixed. Grades shall be as specified in the invitation for bids. Gives requirements for material, nitrogen, phosphoric acid, potash, grade, composition, filler, condition, nonacid forming, and state laws; methods of sampling, inspection, and tests; and packing and marking.

*References.*—Methods of analysis, see *850*.

## 855. POTASH FERTILIZER MIXTURES

U. S. Gov., Treasury Dept., Procurement Div., No. 670; 1944. Potassium Chloride (Muriate of Potash) for Fertilizer Purposes. Covers one grade suitable for the purpose intended. Gives requirements for potash content (calculated as $K_2O$) and water insoluble matter; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

## 859. MISCELLANEOUS FERTILIZER SPECIFICATIONS

Assn. of Official Agricultural Chemists. Definitions Relating to Liming Materials, 1944. The word lime when applied to liming materials means either calcium oxide or calcium and magnesium oxides. Gives definitions for about 16 different types of liming materials.

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis, 1940. Agricultural Liming Materials; Tentative Method.

U. S. Gov., Treasury Dept., Procurement Div., No. 680; 1944. Ammonium Sulfate, for Fertilizer Purposes. Covers one type and one grade in crystalline form. Gives requirements for ammonia content and acid content; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

*References.*— Lime, *see* 517.2; muriate of potash, *see* 832.4; nitrate of soda, *see* 834.2; nitrate of potash, sulphate of potash, and sulphate of potash-magnesia, *see* 832.4.

# 860-869 EXPLOSIVES, FIREWORKS, AND AMMUNITION

## 860. GENERAL ITEMS

Institute of Makers of Explosives. American Table of Distances, 1939. Specifies distances to be maintained between storage magazines for explosives and inhabited buildings, public railways and public highways.

Institute of Makers of Explosives. Pamphlet 17. Safety in the Handling and Use of Explosives, 1940. Covers blasting falls of rock, "dont's," firing shots, handling misfires, loading bore holes, making and handling primers, opening cases of explosives, organization of operations, prevention of misfires, primacord, returning to the face, secondary blasting, storage, tamping bore holes, and transportation.

Institute of Makers of Explosives. Suggested Ordinance for Cities, 1926. This recommendation covers definitions and classifications of explosives, of magazines, and gives general regulations; permits required for use, sale, and manufacture; distance tables for various quantities and classes of explosives, for operation under permits, construction of magazines, inspections, etc.

Institute of Makers of Explosives. Suggested State Law Relating tc the Manufacture, Storage, and Transportation of Explosives, 1926. This recommendation covers definitions, prohibitions, and exceptions; quantity and distance table for various classes of explosives; separation of magazines, containers, classes of magazines; use of blasting caps, manufacture, license, transportation, firearms, etc.

Mine Inspectors' Institute of America. American Standards Assn., M14-1930. Use of Explosives in Bituminous Mines. Recommended practice on type and size of firing cable, handling and storing explosives on surface and underground, transportation, opening of cases, methods and precautions for charging holes and firing, including inspection.

National Fire Protection Assn. National Fire Codes for Flammable Liquids, Gases, Chemicals, and Explosives, 1943. Suggested Explosives Ordinance for Cities. Prescribes rules and regulations for having, keeping, storage, sale, transportation, and use of explosives.

U. S. Gov., Federal Specification W-B-411; 1941. Amendment 1; 1943. Blasting-Apparatus (Machines; Blasting, Galvanometers and Rheostats for Testing Blasting Circuits and Machines). Covers one grade in three types—(I) galvanometers for testing blasting circuits; (II) blasting machines, in four classes—(A) 10-cap capacity, (B) 30-cap capacity, (C) 50-cap capacity, and (D) 100-cap capacity; and (III) rheostats for testing blasting machines. Gives requirements for each type and class; methods of inspection and tests; and packing and marking for shipment.

U. S. Gov., Interstate Commerce Commission. Regulations for Transportation of Explosives and Other Dangerous Articles by Freight. Includes definitions of explosives and dangerous articles other than explosives, accepted and forbidden, for transportation by common carriers by rail freight, rail express, highway, or water. Classification of explosives as—class A, dangerous explosives (ammunition for cannon, ammunition-nonexplosive, ammunition-projectiles, grenades, bombs, mines, and torpedoes, ammunition for small arms with explosive bullets, explosive chemical ammunition, black powder and low explosives, high explosives, and initiating or priming explosives); class B, less dangerous explosives (ammunition for cannon with empty, sand-loaded, or solid projectiles or without projectiles, fireworks, and smokeless powder); and class C, relatively safe explosives (ammunition for small arms, blasting caps, cordeau detonat, fuses, igniters, primers, safety fuse, and toy caps). Classification of dangerous articles other than explosives as—inflammable liquids, inflammable solids, and oxidizing materials; acids and other corrosive liquids, compressed gases, and poisonous articles—class A, extremely dangerous poisons; class B, less dangerous poisons; and class C, tear gas or irritating substances. Published by American Trucking Assns., Inc., Tariff Bureau, and by Assn. of American Railroads, Bureau of Explosives.

U. S. Gov., Navy Dept., Coast Guard, 1941. Explosives or Other Dangerous Articles on Board Vessels. Covers regulations governing the transportation, storage, stowage, or use of explosives or other dangerous articles or substances, and combustible liquids on board vessels.

U. S. Gov., U. S. Army, Chemical Warfare Service. Specification 96-71-48; 1937. Blasting Machine; 100-Cap, Commercial.

*References.*—Storage of motion picture films, *see* 518.50.

## 861. POWDER

U. S. Gov., Navy Dept. Specification 4P3a; 1939. Powder; Black, Navy.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 50-12-2A; 1934. Powder; Smokeless, for Cartridges, Caliber .50, M1.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 50-12-3B; 1943. Powder; Cannon, Smokeless, FNH and NH.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 50-12-4A; 1930. Propellant Powder, for 4-In. Trench Mortar.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 50-12-5A; 1942. Powder; Propellent, 81 Mm., Mortar (for Ignition Cartridges).

U. S. Gov., U. S. Army, Ordnance Dept. Specification 50-12-6; 1939. Powder; Smokeless, Pyrocellulose.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 50-12-9A; 1930. Smokeless Powder, for Caliber .30 Service Ammunition.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 50-12-11A; 1934. Powder; Smokeless, for Cartridges, Caliber .45, M1911.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 50-12-14; 1942. Powder; Propellant, 60 Mm. Mortar (for Ignition Cartridges).

U. S. Gov., U. S. Army, Ordnance Dept. Specification 50-12-15; 1942. Powder; Propellant, for Ground Signals.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 50-12-16; 1942. Powder; Propellent, 4.2-In. Chemical Mortar.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 50-13-8B; 1943. Powder; E.C., for Blank Cartridges and Fragmentation Hand Grenades.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 50-14-1B; 1934. Powder; Black, Army.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 50-14-4; 1933. Powder; Black, Sodium Nitrate.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 50-14-7B; 1942. Pellet; Black Powder.

*References.*—Permissive explosives and blasting machines, *see* 860; use of explosives in mines, *see* 860.

## 862. DYNAMITE AND OTHER HIGH EXPLOSIVES

Assn. of American Railroads, Telegraph and Telephone Section, 1-A-71; 1938. Transportation and Storage

of Dynamite. Instructions limited to handling of dynamite from gang headquarters to the job, and overnight storage. Includes general properties, requirements for supervision, precautions to be observed, laws and ordinances governing transportation, and destruction of surplus material.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, 1938. Dynamite. Covers definition, types, grading, containers, shipping regulations, and uses.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, 1938. Explosives, Commercial. Covers definition, and (I) high explosives, general characteristics, types, grades, and uses; (II) black blasting powder, definition, grades, and containers; and (III) blasting supplies.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Pyroxylin (Soluble Guncotton). Description, solubility, ash, water-soluble substances, and storage. U.S.P. products of pyroxylin—Collodium, Collodium Flexile.

U. S. Gov., Panama Canal, Purchasing Dept. Specification for Dynamite, 1942. Sodium nitrate, sixty percent.

U. S. Gov., Panama Canal, Purchasing Dept. Specification for Dynamite, 1943. Forty percent ammonia gelatin.

U. S. Gov., U. S. Army, Corps of Engineers. Specification 50-13-13A; 1941. Explosive; TNT, Blocked.

U. S. Gov., U. S. Army, Corps of Engineers. Specification 50-13-14A; 1942. Explosive; Demolition, Nitrostarch, Compressed.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 50-13-7B; 1943. Nitroglycerin.

*References.*—Nitroglycerine in tablets, medicinal, *see* 819.9; cellulose acetate and nitrate products, *see* 846.5; picric acid, medicinal, *see* 802.1; metallic cartridges, loaded paper shot shells, *see* 619.1; permissive explosives, recommended use of explosives in mines, *see* 860.

## 863. TRACK TORPEDOES AND FUSES

Assn. of American Railroads, Operations and Maintenance Dept., Operating-Transportation Div., Operating Section. Circular O-143; 1941. Specifications for Standard Track Torpedoes. Gives requirements for metal parts, physical requirements, attachments, and composition.

Assn. of American Railroads, Operations and Maintenance Dept., Operating-Transportation Div., Operating Section. Circular O-151; 1942. Specifications for Standard Five Minute Red Fusee. Gives requirements for size, material, strength, color, plug, head, cap, striking composition, burning qualities, composition, and temperature of ignition.

U. S. Gov., Dept. of Agriculture, Forest Service. Specification No.360. Torch; Railroad Fusee.

## 864. FUSES, DETONATORS, AND FIRING DEVICES

U. S. Gov., Treasury Dept., Procurement Div., 299a; 1938. Caps; Blasting (Exploders), Electric and Fuse, Hexanitromannite-Type. Shall be of the improved type which provides a greater factor of safety in handling and use than the usual fulminate of mercury and similar types. Two classes of blasting caps—(A) electric and (B) fuse. Gives requirements for material, workmanship, strength, deterioration, wrapping, lead wire for electric caps, and fuse; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., U. S. Army, Corps of Engineers. Specification 49-8B; 1944. Lighter; Fuse, Friction Type, M1.

U. S. Gov., U. S. Army, Corps of Engineers. Specification 49-10A; 1943. Cord; Detonating (Petn).

U. S. Gov., U. S. Army, Corps of Engineers. Specification 49-15; 1943. Firing Device; Release Type, M-1.

U. S. Gov., U. S. Army, Corps of Engineers. Specification 49-17; 1943. Firing Device; Pull Type, M-1.

U. S. Gov., U. S. Army, Corps of Engineers. Specification 49-18; 1943. Firing Device; Pressure Type, M-1A1.

## 865. FIREWORKS

National Fire Protection Assn. National Fire Codes for Flammable Liquids, Gases, Chemicals, and Explosives, 1943. Model State Fireworks Law. Regulations of the State Fire Marshal for the public display of fireworks.

## 866. AMMUNITION

U. S. Gov., U. S. Army, Ordnance Dept. Specification 50-0-2; 1933. Ammunition; General Specifications, Small Arms.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 50-5-1B; 1942. Cartridge; Shotgun, 12-Gage.

## 867. POWDER FOR FUSES, PRIMER DETONATORS, FLARES, AND PYROTECHNICS

U. S. Gov., U. S. Army, Ordnance Dept. Specification 50-13-6B; 1942. Mercury Fulminate.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 50-13-11A; 1937. Pentaerythrite Tetranitrate (PETN).

U. S. Gov., U. S. Army, Ordnance Dept. Specification 50-13-12B; 1943. Lead Azide.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 50-14-5A; 1941. Quickmatch.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 50-14-6; 1939. Powder; Fuze.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 50-14-10; 1942. Powder; Black, Slow Burning.

## 868. CHEMICALS NOT OTHERWISE CLASSIFIED FOR USE IN MANUFACTURING PYROTECHNICS, EXPLOSIVES, AND AMMUNITION

U. S. Gov., U. S. Army, Ordnance Dept. Specification 50-11-30C; 1943. Dimethylaniline.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 50-11-58C; 1943. Strontium Nitrate; Anhydrous.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 50-11-61A; 1941. Dibutylphthalate.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 50-11-62; 1936. Strontium Oxalate.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 50-11-63A; 1943. Strontium Carbonate.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 50-11-64A; 1939. Strontium Peroxide.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 50-11-72A; 1943. Lanolin; Anhydrous (for Use in Ammunition).

U. S. Gov., U. S. Army, Ordnance Dept. Specification 50-11-75; 1936. Triacetin, Glyceryl Triacetate.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 50-11-90; 1937. Cement; Nitrocellulose, for Use in Ammunition.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 50-11-91; 1938. Diethylphthalate.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 50-11-92; 1939. Cellulose Acetate, for Use in Propellent Powder.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 50-11-94; 1940. Mononitronaphthalene.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 50-11-97; 1941. Hexachlorbenzene.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 50-11-107; 1942. Dinitromethylaniline.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 50-11-109; 1942. Manganese Dioxide.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 50-14-2A; 1939. Nitrocellulose; Long Fiber.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 50-14-3C; 1943. Nitrocellulose.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 57-25A; 1942. Silicon; Refined.

### 869. MISCELLANEOUS EXPLOSIVES, FIREWORKS, AND AMMUNITION

U. S. Gov., Dept. of Agriculture, Forest Service. Specification No. 59. Bomb; Test-Smoke.

U. S. Gov., Dept. of Agriculture, Forest Service. Specification No. 60. Bomb; Fire-Starting.

U. S. Gov., Dept. of Agriculture, Forest Service. Specification MSF-138. Flame Thrower.

## 870-879 SOAPS, COSMETICS, AND TOILET PREPARATIONS

### 871. SOAPS AND OTHER DETERGENTS

#### 871.0 GENERAL ITEMS

American Hotel Assn. Soaps and Cleaning Methods for Hotels, 1944. Discusses importance of proper cleaning: Part I—soaps, cleaning compounds, and solutions; covers importance of soft water, calcium hardness, magnesium hardness, soap destruction, table of water softeners, how hard water is made soft, waters throughout the country, cleansing or detergent action of soap, soap moisture content, and types of soap; part II—cleaning methods; covers painted walls and woodwork, cleaning and polishing hardwood floors, cleaning painted wood floors, cleaning methods for marble, effect of scouring grits, soap and water, how to remove stains from marble; cleaning and treatment of floors, bath tubs and wash basins, bathroom fittings, carpet and rug renovation, wet or shampooing process for upholstery, renovation of sandstone, caenstone and granite, resurfacing process, cleaning and polishing furniture and woodwork, and cleaning wall paper; and part III—stain removal; covers detailed instructions for removing various stains.

American Leather Chemists Assn. Metnods of Sampling and Analysis. Commercial Soap and Soap Products, 1942. Methods of the American Oil Chemists Society for sampling and analysis of commercial soaps and soap products have been adopted as official methods of the A.L.C.A.

American Leather Chemists Assn. Methods of Sampling and Analysis. Sponging Compounds, 1942. Gives requirements for consistency, moisture, ash, total grease, unsaponifiable matter, nitrogen, total alkali, pH of 10 percent emulsion, and stability of 10 percent emulsion.

American Oil Chemists' Society. Soap Stock and Acidulated Soap Stock, 1942. Covers preservation of samples; dry-extraction method of total fatty acids of all soap stock and acidulated soap stock, except from copra or palm kernel oils; wet extraction of total fatty acids of all soap stock and acidulated soap stock, except from copra and palm kernel oil; total fatty acids of soap stock or acidulated soap stock from copra, palm kernel, and other oils of similar characteristics; and neutral fat in oil soap.

American Oil Chemists' Society. Standard Methods for the Sampling and Analysis of Commercial Fats and Oils, 1943. Applies to fats and fatty oils used in the soap, candle, and tanning industries; to edible fats and oils; to fats and fatty oils intended for lubricating and burning purposes; and to the raw oils used in the varnish and paint industry; but not intended for waxes. Covers sampling; analysis for moisture and volatile matter, insoluble impurities, soluble mineral matter, fatty acids combined as mineral soap, free fatty acids, titer, unsaponifiable matter, iodine number, saponification number, melting point, softening point, slipping point, flow test, cloud test, bleach test, Halphen test (for cottonseed oil), modified Vallavecchia test, Reichert-Meissl and Polenske numbers, Kirschner value, index of refraction, specific gravity, acetyl and hydroxyl value, smoke, flash and fire points, F.A.C. standard colors, modified Wiley melting point method, thiocyanogen method, and Twitchell method.

American Oil Chemists' Society. Standard Methods for the Sampling and Analysis of Soap and Soap Products, 1943. Covers sampling, preparation of samples, and methods of analysis for moisture, total matter insoluble in alconol, combined alkali, chloride, unsaponified and unsaponifiable matter, rosin, titer test, acid number of fatty acids, borax determination; determination of silica present as alkaline silicates; determination of carbon dioxide, determination of phosphates, determination of sulphates, determination of glycerol, sugar, and starch; volatile hydrocarbons, screen tests, and determination of combined sodium and potassium oxides in soaps.

American Society for Testing Materials, D 459-44T; 1944. Tentative Definitions of Terms Relating to Soaps and Other Detergents. Defines soap, alkali detergent, anhydrous soap, blended soap, builder, built soap, cleaning, scouring, soap powder, soil, straight soap, washing, and various other terms.

American Society for Testing Materials, D 460-44; 1944. Methods of Sampling, and Chemical Analysis of Soaps and Soap Products. Sampling methods of chemical analysis, moisture, matter insoluble in alcohol, free alkali or free acid, matter insoluble in water, total alkalinity of matter insoluble in alcohol, alkaline salts, combined alkali, total anhydrous soap, chlorides, unsaponified plus unsaponifiable matter, rosin, total fatty matter, titer test, acid number, iodine number, borax, silica, carbonates, phosphates, sulfates, glycerol, sugars, starch, volatile hydrocarbons. These methods are identical in substance with the standard methods of the American Oil Chemists Society and with those of the American Chemical Society.

American Society for Testing Materials, D 501-43; 1943. Methods of Sampling and Chemical Analysis of Special Detergents. Covers inorganic alkaline detergents. Gives procedure for sampling and testing caustic soda, soda ash, modified soda (sesquicarbonate type), sodium metasilicate and sodium sesquisilicate, trisodium phosphate, and tetrasodium pyrophosphate.

American Society for Testing Materials, D 502-39; 1939. Method of Test for Particle Size of Soaps and Other Detergents. Includes hand and machine sieving methods, using A.S.T.M. standard sieves; requirements for sampling and outlines of procedures and calculations.

American Society for Testing Materials, D 800-44 T; 1944. Tentative Methods of Chemical Analysis of Industrial Metal Cleaning Compositions. Gives scope, preparation of samples, reagents, procedures, calculations, and reports for total alkalinity, total fatty acids, anhydrous soap, rosin, total silica, phosphates, combined sodium and potassium oxides, chlorides, sulfates, water, total matter insoluble in alcohol, and free alkali.

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis, 1940. Insecticides and Fungicides. Soap. Official methods for determination of moisture, potassium, and sodium.

National Cottonseed Products Assn. Rules, 1945. Definitions of Grade and Quality, Article 19. Soap Stock and Acidulated Soap Stock. Rules 137 and 138. Covers soap stock and acidulated soap stock.

National Cottonseed Products Assn. Rules, 1945. Sampling and Methods of Chemical Analysis. Soap Stock and Acidulated Soap Stock. Rules 243 and 276. Covers drawing samples, handling samples, preservation of samples, dry-extraction method (except from copra or palm kernel oils), optional wet-extraction method (except from copra and palm kernel oils), and total fatty acids of soap stock or acidulated soap stock from copra and palm kernel oils.

Underwear Institute. Specification G-3; 1935. Methods of Washing Rayon and Wool Underwear. Gives suggested methods of washing rayon knit underwear, wool knitted underwear, and wool-cotton knitted underwear.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Commercial Standard CS43-32; 1932. Grading of Sulfonated (Sulfated) Oils, Saponifiable Types. This specification covers the method of grading sulfonated (sulfated) oils, saponifiable types, which split off their organically combined $SO_3$ upon boiling with mineral acids; and includes definition, nomenclature, and method of analysis.

U. S. Gov., Federal Specification P-S-536a; 1942. Soap and Soap-Products; General Specifications (Methods for Sampling and Testing). Gives methods of sampling and testing corresponding in all technical details with methods of the American Chemical Society or the American Oil Chemists' Society for sampling, preparation of samples, moisture and volatile matter, matter insoluble in alcohol, free alkali or free acid, matter insoluble in water, alkaline salts, combined alkali, total anhydrous soap, chloride, and unsponifiable matter, rosin, qualitative test for rosin, titer test of total fatty matter, acid number of fatty acids, borax, silica present as alkaline silicates, carbon dioxide (carbonates), phosphates, sulfates, glycerol in the absence of sugar, sugar, glycerol in the presence of sugars, starch, and volatile hydrocarbons. Also gives methods of testing for potassium and sodium in soft soap, qualitative test for sugar, iodine number (Wijs) of fatty acids, solubility and sudsing of soft soap and sieve tests.

## 871.1 TOILET SOAPS

### 871.11 Castile Soap

American Hospital Assn., 7-19. Olive Oil-Soda (Castile) Soap. Covers one grade only. Based on U. S. Gov., Navy Dept., Specification 51 S 3f and Federal Specification P-S-536 for General Specifications for Sampling and Testing Soap and Soap-Products.

American Society for Testing Materials, D535-41; 1941. Palm Oil Solid Soap (Type A, Pure; Type B, Blended). Includes pure palm oil solid soap, and blended solid soap of not less than 51 percent palm oil, uniform in color and texture and free from rancid or objectionable odor. Chemical composition, basis of purchase, and methods of sampling and analysis. A.S.T.M. Emergency Alternate Provision EA-D535; 1942, affected requirements for palm oil solid soap.

U. S. Gov., Navy Dept. Specification 51S3f; 1939. Soap; Olive Oil-Soda (Castile).

*References.*—Olive oil, *see* 813.6, 142.5; soap stock, methods of testing soap and soap stock, *see* 871.0.

### 871.12 Liquid Toilet Soap

American Hospital Assn., 7-28. Liquid Toilet Soap. Covers one grade. Based on U. S. Gov. Federal Specifications P-S-618.

American Society for Testing Materials, D 799-44T; 1944. Tentative Specification for Liquid Toilet Soap. Gives scope, general requirements, chemical composition, basis of purchase, and methods of sampling and analysis.

U. S. Gov., Federal Specification P-S-618a; 1942. Soap; Toilet, Liquid. Covers one type. Gives requirements for composition, odor, color, and consistency; anhydrous soap, matter insoluble in alcohol, free alkali, chloride, sulfates, methods of sampling, inspection, tests, packaging, packing, and marking.

U. S. Gov., Navy Dept. Specification 51 S 35; 1943. Soap; Toilet, Paste (for Liquid Soap).

*References.*—Soap stock, vegetable oils, *see* 871.0, 142; methods of testing soap and soap stock, *see* 871.0.

## 871.13 Milled Toilet Soap

American Hospital Assn., 7-31. Milled Toilet Soap. Covers one grade. Based on U. S. Gov. Federal Specification P-S-621.

American Society for Testing Materials, D 455-39; 1939. Milled Toilet Soap. Describes a high grade milled cake soap, colored or uncolored, mildly perfumed unless otherwise specified, as free as possible from water, free lathering in cold, soft water. Requirements for chemical composition, maximum water, basis of weight, and tests using A.S.T.M. Method D 460. A.S.T.M. Emergency Alternate Provision, EA-D 455; 1942, affected section 3, Chemical Composition.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Circular C424; 1939. Washing, Cleaning, and Polishing Materials. This publication discusses briefly the use of water in laundering, pointing out the effects of impurities in water and means of their elimination. A brief description of the general composition of soap, soap-manufacturing processes, and the common varieties of soap products is followed by short discussions of alkaline cleansers and miscellaneous detergents and detergent or laundry aids, such as alkyl sulfates and sulfonates, sulfonated oils, special phosphates, bleaches, sours, bluings, and starch. Brief discussions are also included on dry-cleaning operations, solvents, dry-cleaning soaps, stain removal, finishing, reclamation of solvent, elimination of static electricity in dry-cleaning plants, and carpet and upholstery cleaners. Sections are devoted to furniture and automobile polishes, metal polish, floor wax and polish, glass polish and cleaner, stove polish, shoe polish, polishing cloths, dust cloths, sweeping compounds, wallpaper cleaner, and floor oils. A list of the government specifications for the products covered, numerous literature references, and suggested formulas for some items are also given.

U. S. Gov., Federal Specification P-S-621a; 1942. Soap; Toilet, Milled. Covers one type. Includes requirements for moisture and volatile matter, sum of free alkali (total matter insoluble in alcohol and sodium chloride), free alkali (calculated as sodium hydroxide), matter insoluble in water, unsaponified saponifiable matter, anhydrous soap; sugar and foreign matter, rosin, glycerol; and computation; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

*References.*—Soap stock, vegetable oils, *see* 871.0, 142; methods of testing soap and soap stock, *see* 871.0.

## 871.14 Shaving Soap

U. S. Gov., Federal Specification FFF-C-641; 1938. Cream and Soap; Shaving. Covers two types—(I) soap (cakes, stick, and powder) and (II) cream (lather and brushless). Gives requirements for volatile matter, matter insoluble in ethyl alcohol, free alkali, free fatty acids, matter insoluble in hot distilled water, anhydrous soap, glycerol content, and computation; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

## 871.15 White Floating Soap

American Hospital Assn., 7-25. Floating White Toilet Soap. Covers one type. Based on U. S. Gov. Federal Specification P-S. 616a.

American Society for Testing Materials, D 499-39; 1939. White Floating Toilet Soap. Requires light color cake soap prepared to float on water, gives chemical composition, adjustment for net weight, and tests using A.S.T.M. Method D 460. A.S.T.M. Emergency Alternate Provision, EA-D 499; 1942, affected Title and Test (omitting the word "white") and section 3, Chemical Composition.

U. S. Gov., Federal Specification P-S-616a; 1941. Soap; Toilet, Floating, White. Covers one type. Includes requirements for moisture and volatile matter, sum of free alkali (total matter insoluble in alcohol and sodium chloride), free alkali (calculated as sodium chloride), free alkali (calculated as sodium hydroxide), matter insoluble in water, anhydrous soap, sugar and foreign matter, rosin, glycerol, and computation; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

*References.*—Soft soap, *see* 871.3; soap stock, vegetable oils, *see* 871.0, 142; methods of testing soap and soap stock, *see* 871.0.

## 871.19 Miscellaneous Toilet Soaps

U. S. Gov., Federal Specification P-D-221; 1934. Detergent; Hand, Paste and Powder (for) Mechanics' Use. Shall be of one type only. Gives requirements for odor, volatile matter, alkaline salts, free alkali, free acid, anhydrous soap, insoluble siliceous material, rosin or sugar, computation and glycerol; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Federal Specification P-S-576; 1930. Soap; Grit, Hand. Covers one grade of cake soap. Gives detail requirements for volatile matter, alkali as alkaline salts, free alkali, insoluble siliceous material, sugar, foreign, matter, anhydrous soda soap; glycerol content; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Federal Specification P-S-628; 1942. Amendment 1; 1943. Soap-Borax Compound; Toilet, (for) Dispensers. Covers one type. Gives requirements for composition, condition, application, odor, color, anhydrous soda soap, borax, hydrogen (ion) content, matter insoluble in water, rosin, sugar, foreign matter, fineness, computation; methods of sampling, inspection, tests; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., Navy Dept. Specification 51S37; 1944. Soap; Powdered, Hand, With Vegetable Abrasive.

U. S. Gov., Treasury Dept., Procurement Div., No. 626; 1943. Cleanser; Hand, Duplicating Ink Remover (Hectograph-Type Inks). Covers one type and one grade intended for use in removing hectograph-type

duplicating ink stains from the hands. Cleanser shall be in the form of a smooth paste without separation of liquid. Gives requirements for odor, free acid, free alkali, alkaline salts, sieve test, grit test, heat stability test, and practical performance test; methods of sampling, inspection, and tests; and packaging, packing, and marking.

*References.*—Soap stock, vegetable oils, *see* 871.0, 142; methods of testing soap stock and soap, *see* 871.0.

## 871.2 LAUNDRY AND KITCHEN SOAP, CHIPS, AND POWDER

### 871.21 Ordinary Laundry and Kitchen Soap

American Hospital Assn., 7-13. Ordinary Laundry Soap. Covers one grade. Based on U. S. Gov. Federal Specification P-S-591.

American Society for Testing Materials, D 497-39; 1939. Ordinary Bar Soap. For use with moderately hard water for general cleaning and laundry purposes. Requirements for general composition, odor, moisture and volatile matter, alkali, acid, matter insoluble in water, rosin, sodium chloride, and anhydrous matter; basis of weight; and tests in accordance with A.S.T.M. Method D 460.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Circular C424; 1939. Washing, Cleaning, and Polishing Materials. This publication discusses briefly the use of water in laundering, pointing out the effects of impurities in water and means of their elimination. A brief description of the general composition of soap, soap-manufacturing processes, and the common varieties of soap products is followed by short discussions of alkaline cleansers and miscellaneous detergents and detergent or laundry aids, such as alkyl sulfates and sulfonates, sulfonated oils, special phosphates, bleaches, sours, bluings, and starch. Brief discussions are also included on dry-cleaning operations, solvents, dry-cleaning soaps, stain removal, finishing, reclamation of solvent, elimination of static electricity in dry-cleaning plants, and carpet and upholstery cleaners. Sections are devoted to furniture and automobile polishes, metal polish, floor wax and polish, glass polish, stove polish, shoe polish, polishing cloths, dust cloths, sweeping compounds, wallpaper cleaner, and floor oils. A list of the government specifications for the products covered, numerous literature references, and suggested formulas for some items are given.

U. S. Gov., Federal Specification P-S-591a; 1942. Soap; Laundry, Ordinary, Bar. Covers one type suitable for moderately hard water. Gives requirements for composition, odor, moisture and volatile matter, sum of free alkali or free acid (total matter insoluble in alcohol and sodium chloride), free alkali, free acid, matter insoluble in water, chloride, rosin, anhydrous soap, and glycerol content; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

*References.*—Soda ash, *see* 834.4, 834.7; caustic soda, caustic potash, *see* 834.8, 832.3; soap stock, methods of testing soap and soap stock, *see* 871.0.

### 871.22 Soap Chips

American Hospital Assn., 7-10. Chip Soap. Covers one grade. Based on U. S. Gov. Federal Specification P-S-566.

American Society for Testing Materials, D 496-39; 1939. Chip Soap. For washing, cleaning, and scouring purposes with soft water, when the presence of alkaline salts is not desirable. Requires soap to be made from soda and fats, without rosin, as free as possible from water and all substances other than true soap, light uniform color, and free from disagreeable odor; gives chemical composition, basis of weight, and tests using A.S.T.M. Method D 460. A.S.T.M. Emergency Alternate Provision EA-D496a; 1943, affected section 3, Chemical Composition.

American Society for Testing Materials, D536-42; 1942. Palm Oil Chip Soap (Type A, Pure; Type B, Blended). General and chemical requirements, basis of purchase, and methods of sampling and analysis. A.S.T.M. Emergency Alternate Provision EA-D536; 1943, affected requirements for palm oil chip soap.

American Society for Testing Materials, D 690-44; 1944. Compound Chip Soap (With Rosin). Cover soap suitable for washing, cleaning, and scouring purposes.

U. S. Gov., Federal Specification P-S-566a; 1942. Soap; Chip. Covers one type for laundering and other washing, cleaning, and scouring processes with soft water, where the presence of alkaline salts is not desirable. Includes requirements for moisture and volatile matter, sum of free alkali (total matter insoluble in alcohol and sodium chloride), free alkali (calculated as sodium hydroxide), matter insoluble in water, anhydrous soap, titer of the mixed fatty acids prepared from the soap, rosin, glycerol content, and computation; methods of sampling, inspection, and tests.

U. S. Gov., Federal Specification P-S-581; 1942. Soap; Laundry, Chip, Rosin-Type. Suitable for moderately hard water. Gives requirements for odor; bid samples, moisture and volatile matter, sum of free alkali or free acid (insoluble in alcohol and sodium chloride), free alkali, free acid, matter insoluble in water, chloride, rosin, anhydrous soap, and glycerol content; methods of sampling, inspection, and test; and requirements for packaging, packing, and marking for shipment.

*References.*—Soda ash, *see* 834.4, 834.7; caustic soda, caustic potash, *see* 834.8, 832.3; soap stock, methods of testing soap and soap stock, *see* 871.0.

### 871.23 Soap Powders

American Hospital Assn., 7-1. Dishwashing Compound. Covers one type, one grade, and one class. Based on U. S. Army Specification 4-1092.

American Hospital Assn., 7-16. Powdered Laundry Soap. Covers one type. Based on U. S. Gov. Federal Specification P-S-596.

American Hospital Assn., 7-22. Soap Powder. Covers one grade. Based on U. S. Gov. Federal Specification P-S-606.

American Hospital Assn., 7-34. Powdered Toilet Soap for Dispensers. Covers one type. Based on U. S. Gov. Federal Specifications P-S-626 for Powdered Toilet Soap for Dispensers, RR-S-366 for Standard Testing Sieves, and FF-D-396b for Soap Dispensers.

American Hospital Assn., 7-43. Technical Trisodium Phosphate (Phosphate Cleaner). Covers one grade and either granular, flake, or crystalline. Based on U. S. Gov. Federal Specification O-T-671a.

American Society for Testing Materials, D 498-39; 1939. Powdered Soap (Nonalkaline Soap Powder). Suitable for washing, cleaning, and scouring purposes with soft water, when presence of alkaline salts is not desirable. Requires soap in powder form to be made from soda and fats, without rosin, as free as possible from water and substances other than true soap, light uniform color, and free from objectionable odor; gives chemical composition, determination of net weight, and tests using A.S.T.M. Method D 460 for soap and D 502 for sieve analysis. A.S.T.M. Emergency Alternate Provision EA-D498a; 1943, affected section 3, Chemical Analysis.

American Society for Testing Materials, D 534-42; 1942. Alkaline Soap Powder. Covers a uniform mixture of soap and sodium carbonate, with or without other alkaline salts, in powdered form, readily soluble in tepid water, and containing no free caustic or inert fillers. Chemical composition, basis of purchase, and methods of sampling and analysis.

American Society for Testing Materials, D 691-44; 1944. Compound Powdered Soap (Granulated, With Rosin). Covers soap suitable for washing, cleaning, and scouring purposes.

U. S. Gov., Federal Specification O-T-671a; 1940. Trisodium-Phosphate; Technical (Phosphate Cleaner). Covers one grade. Gives detail requirements; method of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification P-S-583; 1942. Soap; Laundry, Granulated, Rosin-Type. Suitable for moderately hard water. Gives requirements for odor, bid sample, moisture and volatile matter, sum of free alkali or free acid (insoluble in alcohol and sodium chloride), free alkali, free acid, matter insoluble in water, chloride, rosin, anhydrous soap, glycerol content, and residue; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification P-S-596a; 1942. Soap; Laundry, Powdered. Covers one type, suitable for laundering and other washing, cleaning, and scouring processes with soft water, when the presence of alkaline salts is not desirable. Includes requirements for moisture and volatile matter, sum of free alkali (total matter insoluble in alcohol and sodium chloride), free alkali (calculated as sodium hydroxide), matter insoluble in water, anhydrous soap, titer of the mixed fatty acids prepared from the soap, rosin, glycerol content, and computation; methods of sampling, inspection, and tests.

U. S. Gov., Federal Specification P-S-606a; 1942. Amendment 2; 1944. Soap Powder. Covers one type of a uniform mixture of soap and sodium carbonate, and/or other alkaline salts, in powdered form. Gives requirements for anhydrous soap, alkaline salts, and glycerol content; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification P-S-626a; 1942. for Soap; Toilet, Powdered, (for) Dispensers. Covers one type. Gives requirements for composition, odor, color, volatile matter, sum of free alkali (total matter insoluble in alcohol and sodium chloride), free alkali, matter insoluble in water, anhydrous soda soap, rosin, sugar, foreign matter, glycerol content, fineness, and computation; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., U. S. Army, Medical Dept. Specification 4-1092; 1939. Dishwashing Compound.

*References.*—Soda ash, *see* 834.4, 834.7; caustic soda, caustic potash, *see* 834.8, 832.3; soap stock, methods of testing soap and soap stock, *see* 871.0; metal polishes, *see* 891; scouring powders, *see* 871.27.

### 871.24 Liquid Laundry Soap

U. S. Gov., Federal Specification P-S-586; 1930. Soap; Laundry, Liquid. Covers one grade. Gives requirements for composition, detail requirements, sampling, testing, total anhydrous soap, matter soluble in alcohol, matter insoluble in water, chloride, volatile solvent, action on fabrics, reagents, packaging, packing, and marking.

*References.*—Soda ash, *see* 834.4, 834.7; caustic soda, caustic potash, *see* 834.8, 832.3; soap stock, methods of testing soap and soap stock, *see* 871.0; metal polishes, *see* 891.

### 871.25 Laundry Sours

*References.*—Acetic acid, oxalic acid, *see* 821.1, 831.6.

### 871.26 Scouring Soaps

U. S. Gov., Federal Specification P-S-571a; 1942. Amendment 2; 1944. Soap; Grit, Cake. Covers two types—(A) for fine work, such as glass and enamel, and (B) for scouring and scrubbing. Gives requirements for moisture and volatile matter, alkali as alkaline salts, free alkali (calculated as sodium hydroxide), insoluble siliceous material, sugar and foreign matter, anhydrous soda soaps, glycerol content, and physical properties; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., Navy Dept. Specification 51S20b; 1944. Soap; Grit, Cake.

*References.*—Soda ash, *see* 834.4, 834.7; caustic soda, caustic potash, *see* 834.8, 832.3; soap stock, methods of testing soap and soap stock, *see* 871.0; metal polishes, *see* 891; scouring powders, *see* 871.27.

### 871.27 Scouring Powders

American Hospital Assn., 7-4. Scouring Powder for Floors. Covers three types—(A) for fine marble floors, (B) for tile or ceramic and terrazzo floors, and (C) soap scouring compound. Based on U. S. Gov. Federal Specification P-P-591.

American Hospital Assn., 7-7. Scouring Powder for Highly Polished Glass. Covers one grade. Based on U. S. Gov. Federal Specifications P-P-596 for Scouring Powder, and RR-S-366 for Standard Testing Sieves.

U. S. Gov., Federal Specification P-P-591; 1930. Powder; Scouring (for) Floors. Covers three types—(A) for fine marble floors, (B) for tile or ceramic and terrazzo floors, and (C) soap scouring compound.

Gives requirements for volatile matter, sodium carbonate, anhydrous soap, free alkali, insoluble siliceous matter, carbonated alkali, glycerol content, and physical properties; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Federal Specification P-P-596a; 1942. Powder; Scouring (for) Highly Polished Glass. Covers one type. Gives requirements; volatile matter, alkaline salts, free alkali, insoluble siliceous matter, rosin, sugar, foreign matter, anhydrous soap, and glycerol content; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

*References.*—Soda ash, *see* 834.4, 834.7; caustic soda, caustic potash, *see* 834.8, 832.3; soap stock, methods of testing soap and soap stock, *see* 871.0; other laundry soap powders, *see* 871.23; metal polishes, *see* 891.

## 871.29 Miscellaneous Specifications for Laundry and Kitchen Soaps

U. S. Gov., Federal Specification P-S-600; 1943. Amendment 2; 1944. Soap; Low-Titer (for Low-Temperature Washing). Shall be of the following types and classes: Type I, bar form; type II, other forms; class A, granular; class B, powdered; class C, flake. Gives requirements for color, odor, bid sample, and details of chemical and physical requirements; methods of sampling, inspection, tests; and packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification P-S-603; 1941. Soap; Potash-Linseed Oil; Liquid and Paste, (for) Floor and General Cleaning. Shall be a paste soap. For use on all kinds of floor finishes where cleaner is specified, except on rubber flooring. Gives requirements for consistency, color, and odor; bid samples, keeping qualities, moisture, total matter insoluble in alcohol, free alkali, free acid, alkaline salts, matter insoluble in distilled water, chloride, unsaponified and unsaponifiable matter, anhydrous soap, total sodium compounds, glycerol, iodine number, acid number of mixed fatty acids derived from the soap, rosin, and sugar; methods of sampling, inspection, and tests; packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification P-S-613; 1937. Amendment 1; 1938. Soap; Soft, Potash-Linseed Oil. Covers one type. Gives requirements for consistency, color, and odor, bid samples, keeping qualities, moisture, total matter insoluble in alcohol, free alkali, free acid, alkaline salts, matter insoluble in distilled water, chloride, unsaponified and unsaponifiable matter, anhydrous soap, total sodium compounds, glycerol, iodine number, acid number of mixed fatty acids derived from the soap, rosin, and sugar; methods of sampling, inspection, and tests—according to U. S. Federal Specification P-S-536; 1937, for Methods of Sampling and Testing Soap and Soap Products.

U. S. Gov., Navy Dept. Specification 51C49; 1944. Compound; Dishwashing.

*References.*—Caustic soda, lye, *see* 834.8.

## 871.3 SOAPS FOR MEDICINAL AND SURGICAL USE

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Hard Soap (Soap). Description, solubility, reaction, loss on drying, limit of saturated acids, heavy metals (sodium chloride, carbonate, silica, or other alcohol-insoluble substances), silica or other water-insoluble substances, alkali hydroxides or free fatty acids, alkali carbonates, characteristics of the combined fatty acids, and storage. U.S.P. products of hard soap—Linimentum Camphorae et Saponis, Linimentum Chloroformi.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Liniment of Soft Soap (Tincture of Green Soap). Preparation and alcohol content.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Medicinal Soft Soap (Soft Soap, Green Soap). Description, reaction, water, alcohol-insoluble substances, free alkali hydroxides, alkali carbonates, unsaponified matter, characteristics of the liberated fatty acids, and storage. U.S.P. product of medicinal soft soap—Linimentum Saponis Mollis.

U. S. Gov., U. S. Army, Medical Dept. Specification 4-1027B; 1944. Soap; Soft (Hospital Grade).

*References.*—Soap stock, vegetable oils, *see* 871.0, 142; methods of testing soap and soap stock, *see* 871.0.

## 871.4 AUTOMOBILE SOAP

U. S. Gov., Federal Specification P-S-598; 1941. Amendment 3; 1944. Soap; Liquid and Paste, (for) Automobile, Floor, and General Cleaning. Covers two types—(I) liquid and (II) paste. Gives requirements for consistency, color, odor, moisture, solubility and sudsing, bid samples, keeping qualities, and details; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

*References.*—Soap stock, vegetable oils, *see* 871.0, 142; methods of testing soap and soap stock, *see* 871.0; metal polishes, *see* 891.

## 871.5 SALT-WATER SOAP

American Society for Testing Materials, D 593-42; 1942. Salt-Water Soap. Soap for use in salt water, made from cocoanut oil, palm kernel oil, or mixture thereof and soda, entirely soluble in salt and fresh water, white in color, and free from objectionable odor. Requirements for chemical composition, basis of settlement by weight of nonvolatile matter, and for tests using A.S.T.M. Method D 460. Emergency Alternate Provision EA-D593; 1942. (No substitute for salt-water soap is available at present.)

U. S. Gov., Federal Specification P-S-611a; 1942. Amendment 3; 1944. Soap; Salt-Water. Covers one type, entirely soluble in both sea water and fresh water. Gives requirements for composition, moisture and volatile matter, total matter insoluble in alcohol, free alkali, chloride, anhydrous soap, matter insoluble in water, acid number of the mixed fatty acids prepared from the soap, sugar and foreign matter, rosin, and glycerol; methods of sampling,

inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Navy Dept. Specification 51S46; 1945. Soap; Salt-Water, Bar-Form, Containing Synthetic Detergent.

*References.*—Soap stock, vegetable oils, *see* 871.0, 142; methods of testing soap and soap stock, *see* 871.0; soda ash, caustic soda, caustic potash, *see* 834.4, 834.8, 832.3.

## 871.6 HARNESS SOAP

U. S. Gov., Federal Specification P-S-609; 1943. Amendment 1; 1944. Soap; Saddle. Covers only one grade and shall be a homogeneous paste consisting of soap, waxes, and oils in aqueous emulsion. Gives general requirements, consistency, matter volatile at 105° C., free alkali as sodium hydroxide, free acid as oleic acid, alkaline salts as sodium carbonate, anhydrous soap, unsaponified matter, unsaponifiable matter, and matter insoluble in water; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 4-9C; 1938. Soap; Saddle.

*References.*—Leather dressings and cleaners, *see* 891.

## 871.7 DRY-CLEANING SOAP

National Assn. of Dyers and Cleaners of the U. S. and Canada. The Dry Cleaning Department, 1940. Includes petroleum solvents and soaps used in them for dry cleaning purposes and methods for clarifying solvents.

National Assn. of Dyers and Cleaners of the U. S. and Canada. The Spotting Department, 1940. Includes formulae for prespotting soap, wet spotters, and pyridine spotting solutions, synthetic wetting agents, and other lubricating agents—methods of preparation and recommended uses.

*References.*—Dry-cleaning solvent, *see* 503.2; bleaches, *see* 891.

## 871.8 GREASE-CLEANING SOAP

U. S. Gov., Federal Specification P-C-576; 1942. Compound; Grease-Cleaning, Solvent-Emulsion Type. Intended for use in the cleaning of automobile engine blocks and for general cleaning of oily surfaces. Covers one grade and two types—(I) nonphenolic and (II) phenolic. Gives requirements for flash point, acid value, free alkali, pour point, volatile matter, phenols, and physical and performance tests; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

## 871.9 MISCELLANEOUS SOAP AND CLEANING COMPOUNDS

American Hospital Assn., 34-88. Sweeping Compound. Based on U. S. Gov. Federal Specifications P-C-591a for Sweeping Compound and RR-S-366 for Standard Testing Sieves.

American Society for Testing Materials, D533-44; 1944. Built Soap; Powdered. Covers three types of built soap in form of powder suitable for use at high, medium, or low temperatures, where presence of alkaline salts is desirable. General requirements, chemical composition, basis of purchase, and methods of sampling and analysis.

American Society for Testing Materials, D 537-41; 1941. Sodium Metasilicate. For various washing, cleaning, and scouring processes, with or without soap, where a moderately strong alkaline material is desired. Gives chemical composition, basis of purchase, and methods of sampling and analysis.

American Society for Testing Materials, D 538-44; 1944. Trisodium Phosphate. Covers material suitable for various washing, cleaning, and scouring processes, with or without soap, where a moderately strong alkaline material is desired. Covers a white uniform product in either flake, granular, or crystalline form. Gives requirements for chemical composition, bases of purchase, and methods of sampling and testing.

American Society for Testing Materials, D592-42; 1942. Olive Oil Solid Soap (Type A, Pure; Type B, Blended). Includes pure olive oil solid soap, and blended solid soap of not less than 51 percent olive oil or olive oil foots. Chemical composition, basis of purchase, and methods of sampling and analysis. A.S.T.M. Emergency Alternate Provision EA-D592; 1942, affected title and text by omitting all references to "pure" and "olive oil," and changing the requirements for titer of the mixed fatty acids for type A soap.

American Society for Testing Materials, D 594-41; 1941. Sodium Sesquisilicate. A strongly alkaline material for washing, cleaning, and scouring processes, with or without soap. Requirements for light colored, uniform, granular product. Chemical composition, basis of purchase, and methods of sampling and analysis.

American Society for Testing Materials, D 595-44 T; 1944. Tentative Specifications for Tetrasodium Pyrophosphate (Anhydrous). A mildly alkaline material with water softening properties for washing, cleaning, and scouring processes, with soap or other detergents. Requirements for a white uniform product in granular or powdered form and chemical composition.

American Society for Testing Materials, D630-42; 1942. Olive Oil Chip Soap (Type A, Pure; Type B, Blended). Olive oil soap in chip form suitable for textile and other purposes. General requirements, chemical composition, basis of purchase, and methods of sampling and analysis. A.S.T.M. Emergency Alternate Provision EA-D630; 1942, affected title and text by omitting all reference to "pure" and "olive oil" and changing the requirements for titer of the mixed fatty acids for type A soap (table I).

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, Volume 2; 1944. Soap; Industrial. Covers definition, derivation, types and classes, composition, grades and uses, containers, and substitutes.

U. S. Gov., Army Air Forces. Specification 14128-A; 1945. Compound; Steam Cleaning.

U. S. Gov., Army Air Forces. Specification 14131-A-1; 1945. Compound; Cleaning, for Aluminum Parts.

U. S. Gov., Army Air Forces. Specification 20015-C; 1943. Compound; Aircraft Cleaning.

U. S. Gov., Federal Specification P-C-565; 1943. Compound; Cleaning, Soap—Abrasive Type (for Painted Surfaces). Shall be furnished in one type and one grade, and shall be suitable for use in the cleaning of painted surfaces. Covers general requirements, detail requirements, composition, methods of sampling, inspection, tests, packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification P-C-591a; 1941. Amendment 3; 1944. Compound; Sweeping. Covers one grade in two types—(I) sawdust-sand-mineral oil and (II) sawdust-sand-water-wax emulsion. Gives requirements for odor, test for flammable vapors, volatile matter, refined mineral oil, and sand; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification P-D-236; 1941. Detergents; Special, (for Aluminumware, Dishwashing Machines, and Manual Cleaning). Covers two types—(I) for use in mechanical dishwashing machines and (II) for manual cleaning; in two classes—(A) nonabrasive and (B) abrasive. Gives detail requirements for turbidity, foaming, corrosion, water-softening capacity, hydrogen ion content and buffer index, cleaning ability, relative cost, abrasion, corrosion, glycerol content, and rinsibility; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., Navy Dept. Specification 51C20c; 1944. Compound; Cleaning, for Painted Surfaces.

## 872. TOILET PREPARATIONS

### 872.0 GENERAL ITEMS

### 872.1 TALCUM POWDER

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Purified Talc. Description, identification, loss on ignition, acid-soluble substances, reaction and soluble substances, water-soluble iron, and storage.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 22-255B; 1942. Powder; Talcum and Toilet, Borated, Perfumed.

### 872.2 TOOTH PASTE AND TOOTH POWDER

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. N. F. Dentifrice. Gives chemical composition, preparation, and storage.

U. S. Gov., Federal Specification FFF-D-191a; 1940. Dentifrice; Tooth Paste. Gives detail requirements for composition; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

### 872.3 FOOT POWDER

U. S. Gov., U. S. Army, Medical Dept. Specification 4-1030; 1939. Foot Powder.

# 880-889 DISINFECTANTS AND WATER TREATMENTS

## 881. DISINFECTANTS AND INSECTICIDES

### 881.0 GENERAL ITEMS

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis, 1940. Insecticides and Fungicides. Official methods for sampling; preparation of reagents; determination of total arsenic, water-soluble arsenic, lead oxide, copper, zinc oxide, fluorine; covers general methods.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R41-42; 1942. Package Sizes for Agricultural Insecticides and Fungicides. This recommendation establishes standard retail package sizes for agricultural insecticides and fungicides. Packages or containers so used must comply with the specifications prescribed in the Interstate Commerce Commission's regulations for the transportation of explosives and other dangerous articles. Initiated by the Agricultural Insecticide and Fungicide Assn.

### 881.1 INSECT STOMACH POISONS

#### 881.11 Arsenate and Arsenite of Lead

Assn. of Offical Agricultural Chemists. Official and Tentative Methods of Analysis, 1940. Insecticides and Fungicides. Lead Arsenate. Official methods for determination of moisture, total arsenic, total arsenious oxide, arsenic oxide, water-soluble arsenic, total lead oxide.

U. S. Gov., Treasury Dept., Procurement Div., No. 686; 1944. Lead Arsenate; Acid Type, Powder. Covers one type and one grade. Gives requirements for material, application, arsenic content, lead content, water soluble arsenic content, and total water soluble matter; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

*References.*—Package sizes, *see* 881.0.

#### 881.12 Arsenate and Arsenite of Lime

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis, 1940. Insecticides and Fungicides. Calcium Arsenate. Official methods for determination of moisture, total arsenic, total arsenious oxide, water-soluble arsenic, total calcium oxide.

*References.*—Labeling requirements, package sizes, *see* 881.0.

#### 881.13 Arsenate and Arsenite of Soda

#### 881.14 Hellebore (Plant Root)

#### 881.15 Paris Green, Schlee's Green, London Purple

Assn. of Official Argicultural Chemists. Official and Tentative Methods of Analysis, 1940. Insecticides and Fungicides. Paris Green. Official methods for determination of moisture, total arsenic, total arsenious oxide, total arsenic oxide, water-soluble arsenious oxide, water-soluble arsenic oxide.

U. S. Gov., Navy Dept. Specification 52G7; 1924. Paris Green.

*References.*—Package sizes, see 881.0.

### 881.16 Poisoned Grain

### 881.17 Powders For Dusting

American Hospital Assn., 34-94. Roach and Water Bug Exterminators. Covers powder and tablets.

U. S. Gov., Federal Specification O-S-601; 1930. Amendment 1; 1938. Sodium-Fluoride (Insecticide). Covers one grade. Gives detail requirements; method of sampling, inspection, and test; and requirements for packaging, packing, and marking. Emergency Alternate Federal Specification E-O-S-601; 1942, (issued by Procurement Div., Treasury Dept., U. S. Gov.) deleted requirements for metal cans.

*References.*—Methods of testing, labeling requirements, see 881.0.

### 881.18 White Arsenic (Arsenic Trioxide)

American Standards Assn., Z 37.9-1943. Developed by the U. S. Public Health Service. Allowable Concentration of Metallic Arsenic and Arsenic Trioxide (American War Standard). To prescribe the maximum permissible concentration of metallic arsenic and of arsenic trioxide in the atmosphere of work places for guidance in establishing control procedures for the protection of the health of workers. Gives properties of arsenic, permissible concentration, sampling procedure, and analytical methods.

*References.*—Methods of testing, labeling requirements, see 881.0; arsenic trioxide for medicinal purposes, see 814.2; arsenic troixide as chemical reagent, see 839.9.

### 881.19 Miscellaneous Insect Stomach Poisons

American Hospital Assn., 34-94. Roach and Water Bug Exterminators. Covers powder and tablets.

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis, 1940. Insecticides and Fungicides. Magnesium Arsenate. Official methods for determination of moisture, total arsenic, total arsenious oxide, water-soluble arsenic.

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis, 1940. Insecticides and Fungicides. Zinc Arsenite. Official methods for determination of moisture, total arsenic, total arsenious oxide, water-soluble arsenic, total zinc oxide.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, Volume 2; 1944. Derris (Rotenone Roots, including Timbo, Cube, and Barbasco). Covers definition, constants, solubility, characteristics, uses, forms and grades, containers, hazards, and substitutes.

*References.*—Labeling requirements, see 881.0.

### 881.2 CONTACT INSECTICIDES

American Hospital Assn., 16-13. Household Insecticide (Liquid Spray Type). Covers methods of test and certification of quality. Based on U. S. Gov., Dept. of Commerce, National Bureau of Standards, Commercial Standard CS72-38.

U. S. Gov., Dept of Commerce, National Bureau of Standards. Commercial Standard CS72-38; 1938. Household Insecticide (Liquid Spray Type). This standard covers the methods of test, biological, physical, and chemical properties, and certification of quality of liquid spray type household insecticide. Sponsored by the National Assn. of Insecticide and Disinfectant Manufacturers.

### 881.21 Sulphur Insecticides

Agricultural Insecticide and Fungicide Assn. Lime Sulphur Solution, 1928. Requirements on density of solution and percentage of calcium polysulphide.

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis, 1940. Insecticides and Fungicides. Lime-Sulphur Solutions. Official methods for determination of total sulphur, thiosulphate sulphur, sulphide sulphur, sulphate sulphur, total lime; tentative method for determining monosulphide equivalent.

### 881.22 Soap and Oil Sprays

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis, 1940. Insecticides and Fungicides. Mineral Oils. Method for determination of unsulphonated residue.

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis, 1940. Insecticides and Fungicides. Mineral Oil and Soap Emulsions. Methods for determination of water, total oil, soap, unsulphonated residue, and ash.

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis, 1940. Insecticides and Fungicides. Soap. Official methods for determination of moisture, potassium, and sodium.

U. S. Gov., Federal Specification O-I-541a; 1944. Insecticide; Liquid, Fly Spray. Covers one type and one grade. Gives requirements for material, odor, distillation range, flash point, residual odor, staining properties, corrosion test, and performance; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U.S. Gov., Federal Specification O-I-546a; 1944. Insecticide; Liquid, for Roaches and Carpet Beetles. Covers one type and one grade. Gives requirements for material; distillation range, flash point, residual odor, staining properties, corrosion test, and performance; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

### 881.23 Bordeaux Mixture

Agricultural Insecticide and Fungicide Assn. Bulletin 5; 1926. Bordeaux Mixture. Allowable metallic copper content and tolerance.

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis, 1940. Insecticides and Fungicides. Bordeaux Mixture. Official methods for determination of moisture, carbon dioxide, and copper.

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis, 1940. Insecticides and Fungicides. Bordeaux Mixture With Lead Arsenate. Bordeaux Mixture With Calcium Arsenate. Official methods for determination of moisture, carbon dioxide, total arsenic, water-soluble arsenic, copper, lead oxide.

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis, 1940. Insecticides and Fungicides. Bordeaux Mixture With Paris Green. Official methods for determination of moisture, carbon dioxide, total arsenic, total arsenious oxide, water-soluble arsenious oxide, and copper.

*References.*—Labeling requirements, package sizes, *see* 881.0.

### 881.24 Nicotine Insecticides

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis, 1940. Insecticides and Fungicides. Tobacco and Tobacco Extract. Official methods for determination of nicotine.

*References.*—Labeling requirements, *see* 881.0; tobacco, *see* 261.

### 881.25 Mercuric Chloride

*References.*—Mercuric chloride, *see* 839.36.

### 881.26 Insect Powder (Pyrethrum)

U. S. Gov., Federal Specification O-P-571a; 1930. Powder; Insect (Pyrethrum-Powder). Gives detail requirements; methods of sampling, inspection, and test; and requirements for packaging, packing, and marking. Emergency Alternate Federal Specification E-O-P-571; 1942, (issued by Procurement Div., Treasury Dept., U. S. Gov.) deleted requirements for metal cans.

U. S. Gov., Navy Dept. Specification 51P15; 1937. Pyrethrum Concentrate, for Use in Insecticide.

*References.*—Sodium fluoride, insect powder, *see* 834.9; labeling requirements, *see* 881.0.

### 881.27 Flour Paste

### 881.28 Naphthalene

*References.*—Naphthalene for medicinal purposes, *see* 801.4.

### 881.29 Miscellaneous Contact Insecticides

U. S. Gov., Navy Dept. Specification 51-I-4; 1944. Insecticide-Ingredients; Aliphatic Thiocyanates, Straight-Chain.

## 881.3 FUMIGANTS

### 881.30 General Items

National Fire Protection Assn. National Fire Codes for Flammable Liquids, Gases, Chemicals, and Explosives, 1943. Fumigation of Grain Storage. Suggested good practices for fumigation of grain storage and grain processing plants. Covers construction, cleanliness, protection, heat method of insect control, coal method of insect control, hydrocyanic acid gas fumigation, chloropictin gas fumigation, carbon bisulphide gas fumigation, commercial fumigants sold under trade names, fumigation of grain in storage, and conclusion.

National Fire Protection Assn. National Fire Codes for Flammable Liquids, Gases, Chemicals, and Explosives, 1943. Model Fumigation Ordinance. Good practice regulations recommended for adoption by regulatory body. Covers definitions, restrictions, permits, notification, premises to be vacated, notice to occupants, precautions against fire, sealing cracks or openings, materials and operators, danger signs, watchman, special room, vault or tank, and ventilation and clean-up.

### 881.31 Hydrocyanic Acid Gas

### 881.32 Carbon Disulphide

American Standards Assn., Z 37.3-1941. U. S. Public Health Service, endorsing sponsor. Allowable Concentration of Carbon Disulfide. To prescribe the permissible concentration of carbon disulfide in the atmosphere of work places for the protection of the health of all workers. Gives properties of carbon disulfide, permissible concentrations, sampling, and analytical methods.

*References.*—Carbon disulphide as a reagent for chemical analysis, *see* 839.6.

### 881.33 Sulphuric Acid

*References.*—Sulphuric acid, *see* 821.7.

### 881.34 Sodium Cyanide

*References.*—Sodium cyanide, insecticide, *see* 834.1; labeling requirements, *see* 881.0.

### 881.35 Sodium Fluoride

*References.*—Sodium fluoride, insect powder, *see* 834.9; labeling requirements, *see* 881.0.

### 881.39 Miscellaneous Fumigants

U. S. Gov., Navy Dept. Specification 51F9a; 1943. Fumigant; Ships'.

U. S. Gov., Treasury Dept., Procurement Div., No. 699; 1944. Methyl Bromide, for Fumigation Purposes. Covers one grade and shall be clear, colorless, or pale-straw colored liquid. Gives requirements for methyl bromide content and containers; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

## 881.4 CAUSTIC WASHES FOR BORERS

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis, 1940. Insecticides and Fungicides. Formaldehyde Solutions. Official methods for determination of formaldehyde.

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis, 1940. Insecticides and Fungicides. Soda Lye. Official methods for determination of carbonate and hydroxide.

*References.*—Formaldehyde solution; *see* 881.9; labeling requirements, *see* 881.0.

## 881.5 DISINFECTANTS FOR BUILDINGS

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Commercial Standard CS69-38; 1938. Pine Oil Disinfectant. This standard covers materials, physical and chemical properties, and certification of quality of pine oil disinfectant. Initiated by the National Assn. of Insecticide and Disinfectant Manufacturers.

U. S. Gov., Treasury Dept., Procurement Div., 651a; 1944. Disinfectant; Hospital Use. Covers one type and one grade of a free flowing liquid. Gives requirements for odor action on bacteria, toxicity, dermatitis, solubility in water, and hydrogen ion concentration; methods of sampling, inspection, and

tests; and packaging, packing, and marking for shipment.

*References.*—Fumigants, *see* 881.3; carbolic acid, *see* 802.1.

### 881.9 MISCELLANEOUS DISINFECTANTS AND INSECTICIDES

American Hospital Assn., 16-16. Liquid Hypochlorite Disinfectant, Deodorant, and Germicide. Based on U. S. Gov., Dept. of Commerce, National Bureau of Standards, Commercial Standard CS68-38.

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis, 1940. Insecticides and Fungicides. Copper Carbonate. Official method for determination of copper oxide.

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis, 1940. Insecticides and Fungicides. Organic Mercurial Seed Disinfectants. Methods for the determination of mercury.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, 1938. Para-Dichlorobenzene. Covers definition, constants, derivation, solubility, uses, and packing.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Commercial Standard CS68-38; 1938. Liquid Hypochlorite Disinfectant, Deodorant, and Germicide. This standard covers the composition, physical and chemical properties, identification, method of packing, and certification of quality of liquid hypochlorites. Initiated by the National Assn. of Insecticide and Disinfectant Manufacturers.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Commercial Standard CS70-38; 1938. Coal Tar Disinfectant (Emulsifying Type). This standard covers materials, physical and chemical properties, and certification of quality of emulsifying type coal-tar disinfectant. Sponsored by the National Assn. of Insecticide and Disinfectant Manufacturers.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Commercial Standard CS71-38; 1938. Cresylic Disinfectants. This standard covers materials, physical and chemical properties, and certification of quality of cresylic disinfectants. Sponsored by the National Assn. of Insecticide and Disinfectant Manufacturers.

U. S. Gov., Navy Dept. Specification 14K1b; 1942. Kerosene; Water-White, for Use in Insecticide.

U. S. Gov., Navy Dept. Specification 51C28a; 1945. Compound; Cleaning, for Toilet Bowls.

U. S. Gov., Navy Dept. Specification 51D6; 1944. Disinfectant, Germicide, and Fungicide.

U. S. Gov., Navy Dept. Specification 51E2; 1934. Exterminators; Roach and Water-Bug.

U. S. Gov., Treasury Dept., Procurement Div., 431B; 1941. Fungicide; Liquid, Concentrated (for General Sanitation Purposes in the Maintenance of Field Projects, Sterilization of Industrial Garments, Etc.). Shall effectively and safely serve as sanitation requisite in maintenance of field project toilet facilities; shall not be irritating to skin of persons wearing clothing or using facilities after disinfection, and shall act as a body deodorizer. Shall be clear liquid and show no separation of dissolved constituents between 40° F. to 100° F., and shall not decompose in prolonged storage. Gives requirements for dilution properties, ash content, and performance test; methods of sampling, inspection, and tests; packaging, packing, and marking.

U. S. Gov., Treasury Dept., Procurement Div., No. 640; 1943. Paradichlorbenzene (Dichlorbenzene, Para); Technical Grade. Covers one grade and one type of white crystals free from hard caking in the container. Gives requirements for appearance, crystallizing point, and particle size; method of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., Treasury Dept., Procurement Div., No. 703; 1944. Disinfectant; General-Use. Covers one type and one grade in a free flowing liquid. Gives requirements for odor, bactericidal action, dermatitis, miscibility with water, oxidizing agents, hydrogen ion concentration, and corrosion effect; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

*References.*—Coal-tar disinfectants, *see* 803.4; labeling requirements, *see* 881.0.

## 882. WATER TREATMENTS, SEWAGE TREATMENTS

### 882.0 GENERAL ITEMS

American Public Health Assn. Standard Methods for the Examination of Water and Sewage, 1941. The methods detailed in part I are adapted to the sanitary examination of waters which are not grossly polluted. The methods detailed in part II are adapted to the mineral examination of normally mineralized fresh waters, stationary boiler waters, and railway boiler waters. They are generally not applicable to the study of brines. The methods detailed in parts III and IV are adapted to the examination of polluted waters, sewage, effluents and industrial wastes. The methods detailed in parts V, VI and VII are respectively adapted to the microscopical and bacteriological examination of polluted and/or unpolluted waters. The methods outlined in appendix I are provisional methods only, as yet not being recognized as standard. The methods outlined in appendix II are provisionally proposed for the examination of swimming pools and bathing places.

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering. Standard Methods for the Analysis of Chemicals Used in Water Treatment. Covers analyses of soda ash, hydrated lime, sulphate of iron, and sulphate of alumina.

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering. Standard Methods of Water Analysis and Interpretation of Results. Gives field survey or rapid check tests, rapid field tests, and laboratory methods.

American Society of Civil Engineers. Manuals of Engineering Practice, No. 2; 1928. Definitions of Terms Used in Sewage and Sewage Disposal Practice. Lists alphabetically and defines approximately three hundred terms.

American Society for Testing Materials, D 510-41; 1941. Methods of Sampling Plant or Confined Waters for

Industrial Uses. For water in pipe, conduit, or tank, to be conveyed to an industrial operation. General principles for sampling, list of tests to be made and volume of sample for each test, frequency and duration of sampling, composite samples, containers for samples, point of sampling, precedure in taking sample, cooling hot samples, suspended solids, labeling, and transporting of samples.

American Society for Testing Materials, D 511-42; 1942. Method for Determination of the Calcium Ion and Magnesium Ion in Industrial Waters. Covers the gravimetric determination of the calcium and magnesium ions, the first by precipitation as calcium oxalate and ignition to calcium oxide, and the second by precipitation as magnesium ammonium orthophosphate and ignition to magnesium pyrophosphate; including preliminary removal of silica, phosphates, iron, and aluminum, together with removal of manganese when necessary.

American Society for Testing Materials, D 512-42; 1942. Method for Determination of the Chloride Ion in Industrial Waters. Procedure for the volumetric determination of chloride ion by titration of the sample with a solution of silver nitrate in the presence of potassium chromate as an internal indicator. A double titration is specified to eliminate end point error, and directions for clarifying samples of high turbidity or color, are for eliminating interference of sulfite and given.

American Society for Testing Materials, D 513-43; 1943. Method for Determination of Total Carbon Dioxide and Calculation of the Carbonate and Bicarbonate Ions in Industrial Waters. Covers method of decomposing carbonates by an excess of acid and absorption of carbon dioxide in barium hydroxide solution and titration with standard acid, but is not applicable to water containing sulfides, sulfites, or other salts of volatile acids. Describes apparatus, special solutions required, procedure, and calculation.

American Society for Testing Materials, D 514-41; 1941. Method for Determination of the Hydroxide Ion in Industrial Waters. Covers the titration of water to which strontium chloride has been added to remove carbonate and phosphate ions. Minimizes turbidity and permits the direct titration of the hydroxide ion with decreased interference. For the examination of alkaline industrial waters such as boiler waters and boiler feed-waters under conditions where the water is practically free from organic matter, silicates, and aluminates. Application, special solutions required, procedure, and calculation.

American Society for Testing Materials, D 515-43; 1943. Method for Determination of the Total Orthophosphate and Calculation of the Respective Ortnophosphate Ions in Industrial Waters. For two successive separations of the phosphate ion, as ammonium phosphomolybdate and as magnesium ammonium phosphate, respectively. The magnesium ammonium phosphate is ignited to magnesium pyrophosphate and weighed. Gives application, reagents, procedure, and calculation.

American Society for Testing Materials, D 516-42; 1942. Method for Determination of the Sulfate Ion in Industrial Waters. Covers procedure for the precipitation and weighing of the sulfate ion as barium sulfate. Where no ion other than sulfate is to be determined on the sample, removal of dissolved silica is usually unnecessary.

American Society for Testing Materials, D 596-41; 1941. Method of Reporting Results of Analysis of Industrial Waters. Recommendations as to nature, extent, and form of results of analysis. Definitions, history of sample, completeness and accuracy of analysis, hydrogen ion concentration, suspended solids, dissolved solids, dissolved gases, and conversion factors.

American Society for Testing Materials, D 807-44 T; 1944. Tentative Method for Embrittlement Testing of Boiler Water. Gives scope, embrittlement cracking, apparatus, principle of method, test specimens, preparation of test specimen, assembly of specimen and detector, installation of detector, procedure, test interval, inspection of the tested specimen, and interpretation of results.

American Water Works Assn. Tentative Standard Specifications for Filtering Material, 5C-T-1943. Provides a general basis for choosing underdrain gravel and filtering material and placing such material in the filter. Gives requirements for underdrain gravel, filtering material, testing and sampling, payment, and appendixes.

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis, 1940. Waters, Brine, and Salt. Industrial Water. Determination of solids in solution chlorine, combined carbonic and bicarbonic acids, nitrates, silica, iron, aluminum, calcium, magnesium, sulfuric acid, alkalinity before and after boiling, total hardness, and permanent hardness.

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis, 1940. Waters, Brine, and Salt. Irrigating Water. Determination of solids in solution, chlorine, carbonic and bicarbonic acids, sulphuric acid, calcium, magnesium, and black alkali.

National District Heating Assn. Proposed Tentative Method for Measurement of Relative Corrosion Rates—N.D.H.A. Method, 1945. Provides a simple and rapid means for measuring the relative corrosivity of aqueous solutions and of comparing the corrosion resistivity of different metals when exposed to such environments. Applicable to the making of measurements in municipal water supplies, industrial processes, pilot plant experiments, and laboratory studies, where waters relatively free of suspended materials, at temperatures below about 400° F. and at flow rates below about 5 ft. per second are encountered. Gives requirements for apparatus, fabrication of frame, helical coils, and couplings, assembling a tester, criteria for installing a tester, period of exposure, cleaning of test specimens, calculation of average corrosion rates, conversion factors, table showing conversion factors and other pertinent data for materials commonly used in water lines, interpretation of data, and drawings.

Technical Assn. of the Pulp and Paper Industry. Analysis of Industrial Process Water. Tentative Standard T 620 m-44; 1944. Method of mineral analysis

of water for use in boilers and manufacturing purposes in pulp, paper, and paperboard industry. Covers analysis for turbidity, color, solids, hydrogen ion concentration, alkalinity, acidity, dissolved oxygen and B.O.D., oil, and hardness.

U. S. Gov., Federal Specification SS-C-744; 1942. Crushed Stone, Crushed Slag, and Gravel; (for) Sewage-Trickling-Filter-Media. Gives requirements for material, soundness, and grading; and methods of sampling, inspection, and tests.

## 882.1 ANTIFOAMING BOILER COMPOUND

*References.*—Boiler compounds, *see* 882.2.

## 882.2 ANTISCALE BOILER COMPOUND

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering. Specifications for Hydrated Lime To Be Used in Water Treatment. Covers two grades—high-calcium and calcium. Gives requirements for chemical and physical properties and tests, packing, inspection, penalization, and rejection.

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering. Specifications for Quicklime To Be Used in Water Treatment. Covers two grades—high-calcium and calcium; and four forms—lump, pebble, ground, and pulverized. Gives requirements for chemical properties and tests, packing, inspection, and rejection.

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering. Specifications for Soda Ash To Be Used in Water Treatment. Gives requirements for chemical and physical properties and tests, packing and marking, and inspection and rejection.

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering. Specifications for Sulphate of Alumina To Be Used in Water Treatment. Gives requirements for chemical properties, physical properties, and tests; packing and marking; and inspection and rejection.

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering. Specifications for Sulphate of Iron To Be Used in Water Treatment. Covers granular sugar sulphate of iron. Gives requirements for chemical properties and tests, packing and marking, and inspection and rejection.

U. S. Gov., Navy Dept. Specification 13C31; 1944. Compound; Boiler, Navy, 1941.

*References.*—Methods of water analysis, *see* 882.0; other specifications for lime, for soda ash, *see* 517.2, 834.4; salt for water softening plants, *see* 834.9.

## 882.3 DRINKING WATER AND TREATMENT OF DRINKING WATER

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering. Specifications for Hydrated Lime To Be Used in Water Treatment. Covers two grades—high-calcium and calcium. Gives requirements for chemical and physical properties and tests, packing, inspection, penalization, and rejection.

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering. Specifications for Quicklime To Be Used in Water Treatment. Covers two grades—high-calcium and calcium; and four forms—lump, pebble, ground, and pulverized. Gives requirements for chemical properties and tests, packing, inspection, and rejection.

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering. Specifications for Salt To Be Used in Regeneration of Zeolite Water Softening Plants. Covers crushed rock salt and evaporated salt. Gives requirements for chemical and physical properties, tests, packing, marking, inspection, penalization, and rejection.

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering, 1920. Water for Drinking Purposes. Must comply with requirements issued by Public Health Service. It is preferable that drinking water should be secured from municipal supplies. Where municipal water is impossible or impractical to secure it gives methods of procuring and treating water.

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis, 1940. Waters, Brine, and Salt. For potable water, determination of turbidity, color, odor, solids in solution and suspended, nitrogen as ammonia, nitrite, and nitrate; chlorine, oxygen required, dissolved oxygen, tentative methods for lead, copper, and zinc.

U. S. Gov., Army Air Forces. Specification 40874; 1944. Kit; Sea Water Desalting, Type JJ-1.

U. S. Gov., Army-Navy Aeronautical Specification AN-W-5b-1; 1944. Water; Emergency Drinking (in Sealed Cans).

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 22-177; 1929. Ice.

*References.*—Methods of water analysis, *see* 882.0.

## 882.4 WATER FOR CHEMICAL AND MEDICINAL PURPOSES

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Ampuls of Redistilled Water. Gives description, clearness, residue, and other tests.

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Redistilled Water. Gives clearness, residue, reaction, chloride, sulfate, ammonia, calcium, metals, carbon dioxide, oxidizable substances, and preparation.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Distilled Water. Description, dissolved solids, reaction, chloride, sulfate, ammonia, calcium, carbon dioxide, and heavy metals.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Sterilized Distilled Water. Description and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Water (Aqua). Description, reaction, heavy metals, zinc, foreign volatile matters, dissolved solids, and B. coli. U.S.P. products of water—Aqua Destillata, Aqua Destillata Sterilisata, Aqua Pro Injectione.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Water for Injection. Use in preparation, physical and chemical standards, pyrogens, and added substances.

U. S. Gov., Navy Dept. Specification 51W10; 1945. Water; Distilled.

*References.*—Methods of water analysis, *see* 882.0; chemicals used in water purification, *see* 517.2, 833.2, 834.4, 834.8, 838.3, 839.33, 839.34, 839.8.

### 882.5 SEWAGE CHLORINATORS

## 890-899 MISCELLANEOUS CHEMICAL PRODUCTS

### 891. BLEACHES, POLISHES, DRESSINGS

Abrasive Grain Assn. Standard for Measurement of Capillarity of Electrically Fused Aluminum Oxide Abrasives for Polishing Uses, 1940. For determining bonding properties between grain particles and the glue; general requirements for freedom from foreign matter, testing apparatus, sampling, methods of test, cleaning of tubes, and table of grit numbers.

American Chemical Society. Specifications for Analytical Reagents, 1941. Hydrogen Peroxide. Gives requirements for strength, nonvolatile matter, free acid, chloride, nitrogen, phosphate, sulfate, and tests.

American Hospital Assn., 7-43. Technical Trisodium Phosphate (Phosphate Cleaner). Covers one grade and either granular, flake, or crystalline. Based on U. S. Gov., Federal Specification O-T-671a.

American Hospital Assn., 34-118. Liquid Furniture Polish. Covers one type and grade.

American Hospital Assn., 34-121. Metal Polish. Covers one grade in powder, liquid, and paste types. Based on U. S. Gov. Federal Specification P-P-556a.

American Hospital Assn., 34-124. Liquid Metal Polish. Covers one grade. Based on U. S. Gov., Navy Dept., Specifications 51P5.

American Hospital Assn., 34-127. Silver Polish. Covers one grade in liquid, paste, and powder types. Based on U. S. Gov., Federal Specification P-P-571b.

American Hospital Assn., 34-142. Liquid and Paste Floor Wax. Covers one grade.

American Hospital Assn., 34-145. Water-Emulsion Floor Wax. Covers one grade in regular and concentrated types. Based on U. S. Gov., Federal Specification P-W-151.

Technical Assn. of the Pulp and Paper Industry. Analysis of Bleaching Powder, Bleach Liquor, and Bleach Sludge. Standard T 611 m-44; 1944. For chloride of lime, hypochlorite solution, and loss of chlorine in sludge. Sampling, methods of testing, and determination of quantities.

U. S. Gov., Army Air Forces. Specification 14099 (1); 1942. Cleaner; Liquid (for Glass).

U. S. Gov., Army Air Forces. Specification No. 14125; 1944. Compound; Metal Cleaner (Heavy Duty).

U. S. Gov., Army Air Forces. Specification No. 14132; 1944. Compound; Shearling Refinishing.

U. S. Gov., Army Air Forces. Specification 20014B; 1944. Compound; Polishing, for Acrylate Base Plastic.

U. S. Gov., Army Air Forces. Specification 20024; 1940. Compound; Polishing (for Metal Aircraft Surfaces).

U. S. Gov., Army Air Forces. Specification 21266 (1); 1943. Bleaching Powder; Film Reversal (for Photographic Use).

U. S. Gov., Dept. of Interior, Purchasing Office. Standard Specification No. 64. Liquid Cleaner With Dispensers.

U. S. Gov., Federal Specification O-B-441a; 1937. Amendment 1; 1942. Bleaching-Material (Chlorinating Agents). Covers five grades—(A) calcium hypochlorite and calcium hypochlorite in tubes, (B) bleaching powder (35 percent available chlorine), (C) bleaching powder (30 percent available chlorine), (D) sodium hypochlorite solution, and (AA) calcium hypochlorite, special granulated. Gives requirements for available chlorine in grade A, tubes, and contents of tube; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Federal Specification O-T-671a; 1940. Trisodium-Phosphate; Technical (Phosphate Cleaner). Covers one grade. Gives detail requirements; method of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification P-P-546; 1942. Polish; Automobile, Liquid. Covers one type and grade. Gives requirements for nonvolatile matter, ash content, free caustic alkali, neutralization number, particle size, and volatile matter; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification P-P-552; 1942. Polish; Furniture, Liquid. Covers one type and grade. Gives detail requirements for nonvolatile matter, ash content, free caustic acid, volatile matter, and saponification number; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification P-P-556a; 1939. Amendment 2; 1943. Polish, Metal. Covers one grade and three types—(I) powder, (II) liquid, and (III) paste. Gives requirements for properties, abrasive material, removal of tarnish, protection of polished surface, keeping qualities, volatile matter, and flammability; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification P-P-567; 1943. Polish; Shoe, Paste. Shall consist of wax mixed with a volatile solvent to form a paste and shall be black, tan, brown, or oxblood. Gives requirements for being free from flammable materials; odor, polish, consistency, wax content, properties of wax,

and properties of volatile solvents; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., Federal Specification P-P-571b; 1939. Polish; Silver. Covers one grade, in three types—(I) liquid, (II) paste, and (III) powder. Gives requirements for properties, removal of tarnish, keeping qualities, volatile matter, and flammability; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification P-P-576; 1933. Polish; Stove. Covers one grade and four types—(I) liquid, (II) paste, (III) powder, and (IV) cake. Gives methods of inspection, sampling, and tests.

U. S. Gov., Federal Specification P-W-134; 1942. Wax; Floor, Solvent-Type, Liquid (With Resins). Covers one type and one grade. Gives requirements for material, total solids, and vehicle; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification P-W-151a; 1942. Wax; Floor, Water-Emulsion. Covers one grade of free-flowing fluid that can be readily applied with an applicator, such as lamb's wool, cotton cloth, or a mop. For use on sealed floors and floorings. Gives requirements for nonvolatile matter, wax content, and softening point; ash content, free caustic alkali, volatile solvents, and dilution properties; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Federal Specification P-W-158; 1942. Wax; General-Purpose, Solvent-Type, Liquid and Paste (for Floors, Furniture, Etc.) Covers one grade in two types—(I) liquid and (II) paste. Gives requirements for softening point, acid value, saponification value, ash content, volatile organic solvent, and physical and performance tests; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification TT-D-636; 1943. Amendment 1; 1944. Dressing; Leather, Transmission-Belt. Covers two types—(I) liquid or paste and (II) stick. Gives general requirements, physical requirements, and performance requirements; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Joint Army-Navy Specification JAN-D-51; 1944. Dubbing.

U. S. Gov. Marine Corps Specification, 1926. Blanco; White and Khaki.

U. S. Gov., Navy Dept. Specification 51C18b; 1941. Compound; Polishing.

U. S. Gov., Navy Dept. Specification 51P5f; 1944. Polish; Metal, Liquid.

U. S. Gov., Navy Dept. Specification 52D10; 1944. Dressing; Leather, Belt.

U. S. Gov., Treasury Dept., Procurement Div., 428A; 1940. Polish; Shoe, Paste. Shall be of the wax-turpentine type, one grade, black or tan, and shall be free from toxic materials such as nitro-benzene (oil of mirbane), etc., and have no rancid or objectionable odor. Gives requirements for consistency, flashpoint, color, free acid or free alkali, drying properties, and workability and performance; methods of sampling, inspection, and tests; and packaging, packing, and marking.

## 892. PRESERVATIVES AND ARTIFICIAL SWEETENERS FOR FOODS

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis, 1940. Preservatives and Artificial Sweeteners. Methods for determination of presence and amount of salicylic acid, of benzoic acid, saccharin, boric acid; for presence of formaldehyde, of soluble and insoluble fluorides, of beta-naphthol, of abrastol, of sucrol or dulcin; of presence and amount of sulphurous or formic acid.

*References.*—Salicylic acid, benzoic acid, *see* 812.1; formaldehyde, *see* 824; insoluble fluorides, soluble fluorides, saccharin, abrastol, sucrol, dulcin, *see* 839.9.

## 893. PLASTICS

### 893.0 GENERAL ITEMS

American Society for Testing Materials, D 256-43T; 1943. Tentative Methods of Test for Impact Resistance of Plastics and Electrical Insulating Materials. Intended to determine the relative susceptibility to fracture by shock of plastic materials and electrical insulating materials as indicated by the energy expended by a standard pendulum type impact machine in breaking a standard specimen in one blow. Gives requirements for apparatus, test specimen, conditioning test specimens, procedure, and report for both cantilever beam (Izod type) and simple beam (Charpy type) tests.

American Society for Testing Materials, D 543-43; 1943. Method of Test for Resistance of Plastics to Chemical Reagents. Applicable to all organic plastic materials, including cast, molded, laminated resinous products, and sheet materials, for resistance to chemical reagents. Gives requirements for apparatus, reagents, test specimens, procedure, and report.

American Society for Testing Materials, D568-43; 1943. Method of Test for Flammability of Plastics 0.050 Inch and Under in Thickness. Covers the procedure for determining the flammability of plastics in the form of thin sheets or films 0.050 in. and under in thickness. Gives requirements for apparatus, test specimens, fusee method, benzol drop method, and report.

American Society for Testing Materials, D569-44T; 1944. Tentative Method of Test for Measuring the Flow Properties of Thermoplastic Molding Materials. Covers the procedure for determining the temperature at which a thermoplastic material attains a specified degree of flow when subjected to a prescribed pressure in a specified extrusion mold for a definite time. Measurements of flow are made at three or more temperatures, and the temperature for the specified flow is obtained by graphic interpolation. Gives requirements for apparatus, test specimens, conditioning, procedure, plotting results, and report.

American Society for Testing Materials, D 570-42; 1942. Method of Test for Water Absorption of Plastics. Covers immersion test for guide to electrical

and mechanical properties and as a control test for uniformity of product. Describes apparatus, preparation of specimen, and procedure including reconditioning, calculation, and report.

American Society for Testing Materials, D618-44T; 1944. Tentative Methods of Conditioning and Classifying for Conditioning Plastics and Electrical Insulating Materials for Testing, Cover procedures for establishing standard periods of time, temperatures, and relative humidities to be used in the pretreatment of plastics and electrical insulating materials prior to testing, as well as in the actual testing of such plastics whose physical properties are subject to rapid change as a result of variations in atmospheric conditions. Classification of materials for conditioning, apparatus, procedure, and report.

American Society for Testing Materials, D620-41T; 1941. Tentative Method of Test for Colorfastness of Plastics to Light. To establish a laboratory procedure for evaluating the relative resistance of plastics to change in color when exposed to sunlight. Apparatus, test specimen, procedure, and report.

American Society for Testing Msterials, D621-44T; 1944. Tentative Method of Test for Deformation of Plastics Under Load. Covers the procedure for determining the deformation under compression of nonmetallic sheet and molded plastic materials, of all classes and all commercial thicknesses, intended for structural and insulating purposes. Gives requirements for nature of test apparatus, test specimens, conditioning, procedure, and report.

American Society for Testing Materials, D635-44; 1944. Method of Test for Flammability of Plastics Over 0.050 Inch in Thickness. Covers the procedure for determining the flammability of plastics in the form of sheets or plates. Apparatus, test specimens, procedure, and report.

American Society for Testing Materials, D 636-43; 1943. Method of Test for Diffusion of Light by Plastics. To differentiate the relative ability of plastics to diffuse light and is applicable to materials that scatter incident light to an appreciable extent (diffusion). It is not successfully applicable to the measurement of low ranges of scattering (haze) which are associated with slight departures from optical clarity. Gives requirements for apparatus, test specimens, procedure, numerical evaluation of diffusion, and report.

American Society for Testing Materials, D 637-43; 1943. Method of Test for Surface Irregularities of Flat Transparent Plastic Sheet. For the measurement of the surface irregularities of flat transparent plastic sheets that are ordinarily used to cover openings through which visual and instrumental observations are made. Measures the distortion and the deviation of line of sight through flat sheets of transparent plastics. Gives description of terms, apparatus, assembly of apparatus, test specimen, procedure, and report.

American Society for Testing Materials, D 638-44 T; 1944. Tentative Method of Test for Tensile Properties of Plastics. Intended for use in determining the comparative tensile properties of organic plastics when tested in the form of test specimens of standard shapes and under defined conditions of pretreatment, temperature, humidity, and testing machine speed. Definitions of terms, apparatus, classification of materials, test specimens, number of test specimens, conditioning test specimens, speed of testing, procedure, calculations, report, and appendix of definitions of terms and symbols relating to tension testing of plastics.

American Society for Testing Materials, D648-44T; 1944. Tentative Method of Test for Heat Distortion Temperature of Plastics. Gives scope, apparatus, preparation of apparatus, test specimens, conditioning test specimens, procedure, and report.

American Society for Testing Materials, D 671-42 T; 1942. Tentative Method of Test for Repeated Flexural Stress (Fatigue) of Plastics. Covers the test procedure for determining the effect of repetitions of stress by a fixed-cantilever type of testing machine designed to produce the same maximum deflection of the specimen in each cycle. This test is also applicable to plastic impregnated wood and plastic bonded plywood.

American Society for Testing Materials, D 673-44; 1944. Method of Test for Mar Resistance of Plastics. Designed to measure the resistance of glossy surfaces to abrasive action. Such materials as molded and laminated plastics, paint and lacquer films, and plated coatings may be evaluated by this method.

American Society for Testing Materials, D 674-42 T; 1942. Tentative Recommended Practice for Long-Time Tension Tests of Plastics. Covers the determination of the amount of extension of plastics due to the combined effects of tensile stress, time, temperature, and relative humidity, when tested in the form of specimens of standard shape.

American Society for Testing Materials, D 675-43T; 1943. Tentative Descriptive Nomenclature of Objects Made From Plastics. Provides simple terms, adequate to convey with maximum brevity and certainty, an accurate description of any visible characteristic of a plastic object which can be seen, but which cannot be expressed in numerical values. Gives terms relating to color characteristics, surface characteristics, clarity, soundness or structure, and shape. Defines recommended nomenclature terms and lists terms not recommended.

American Society for Testing Materials, D 695-44 T; 1944. Tentative Method of Test for Compressive Strength of Plastics. Intended for use in determining the comparative compressive properties of organic plastics in the form of test specimens of standard shape and when tested under defined conditions of pretreatment, temperature, humidity, and testing machine speed.

American Society for Testing Materials, D 696-44; 1944. Method of Test for Coefficient of Linear Thermal Expansion of Plastics. Intended for determining the reversible linear thermal expansion under exclusion of accidental factors. In general, it will not be possible to exclude all accidental factors and for this reason the method can be expected to give only approximate values.

American Society for Testing Materials, D 697-42 T; 1942. Tentative Method of Test for Water Vapor

Permeability of Plastic Sheets. Describes procedures for determining the water vapor permeability of plastic sheet made with paper, paperboard, transparent sheeting, plastic sheeting, and other sheet materials suitably bonded together with plastics.

American Society for Testing Materials, D 731-44T; 1944. Tentative Method of Test for Measuring Relative Mobility of Thermosetting Molding Powder. Designed to measure the mobility of thermosetting plastics under certain specified conditions of mold design and applied temperature and pressure. Gives requirements for apparatus, conditioning, test sample, procedure, and report.

American Society for Testing Materials, D 732-43T; 1943. Tentative Method of Test for Shear Strength of Plastics. Covers the punch type of shear test and is intended for use in determining the shear strength of test specimens of organic plastics in thicknesses from 0.005 to 0.500 in. Gives definition and requirements for apparatus, test specimen, conditioning, procedure, and report.

American Society for Testing Materials, D746-44T; 1944. Tentative Method of Test for Brittle Temperature of Plastics and Elastomers. Establishes a temperature above which a normal nonrigid plastic is not brittle in its reaction to sudden deformation. Gives requirements for apparatus, test specimens, procedure with liquid coolant, procedure with air as a coolant, and report.

American Society for Testing Materials, D 747-43T; 1943. Tentative Method of Test for Stiffness in Flexure of Nonrigid Plastics. Describes a procedure well suited for determining the relative flexibility over a wide range. Gives requirements for apparatus, test specimens, conditioning test specimens, procedure, calculations, report, and appendix.

American Society for Testing Materials, D756-44T; 1944. Tentative Methods of Tests for Resistance of Plastics to Accelerated Service Conditions. Gives scope, apparatus, test specimens, conditioning, measurements of test specimens, visual examination, procedures, physical tests, and report.

American Society for Testing Materials, D757-44T; 1944. Tentative Method of Test for Flammability of Plastics, Self-Extinguishing Type. Gives scope, apparatus, test specimens, procedure, and report.

American Society for Testing Materials, D758-44T; 1944. Tentative Method of Test for Impact Resistance of Plastics at Subnormal and Supernormal Temperatures. Gives scope, apparatus, test specimens, conditioning, procedure, and report.

American Society for Testing Materials, D759-44T; 1944. Tentative Methods of Test for Tensile and Compressive Properties of Plastics at Subnormal and Supernormal Temperatures. Gives scope, apparatus, test specimens, conditioning, procedure, and report.

American Society for Testing Materials, D 785-44 T; 1944. Tentative Method of Test for Indentation Hardness of Plastic. Gives scope, apparatus, conditioning, procedure, and report.

American Society for Testing Materials, D 790-44 T; 1944. Tentative Methods of Flexural Test of Plastics. Gives scope, apparatus, test specimens, number of test specimens, conditioning test specimens, procedure, retests, calculations, and report.

American Society for Testing Materials, D 792-44 T; 1944. Tentative Methods of Test for Specific Gravity of Plastics. Gives scope, specific gravity, apparatus, test specimens, conditioning test specimens, procedure, and calculations for plastics in final form for use and for plastics in preformed conditions.

American Society for Testing Materials, D 793-44 T; 1944. Tentative Method of Test for Short-Time Stability at Elevated Temperatures of Plastics Containing Chlorine. Gives scope, apparatus, reagents, test specimens, procedure, precautions, and calculations.

American Society for Testing Materials, D 794-44 T; 1944. Tentative Recommended Practice for Determining Permanent Effect of Heat on Plastics. Gives scope, apparatus, test specimens, determination of properties prior to heat exposure, exposure of specimens for heat effect, heat exposure schedule, and report.

American Society for Testing Materials, D 795-44 T; 1944. Tentative Recommended Practice for Accelerated Weathering of Plastics Using S-1 Bulb and Fog Chamber. Gives scope, apparatus, test specimens, procedure, and report.

American Society for Testing Materials, D 796-44 T; 1944. Tentative Recommended Practice for Molding Specimens of Phenolic Materials. Gives scope, apparatus, conditioning, and procedure.

American Society for Testing Materials, D 797-44T; 1944. Tentative Method of Test for Young's Modulus in Flexure of Natural and Synthetic Elastomers at Normal and Subnormal Temperatures. Gives scope, apparatus, test specimens, procedure, calculations, and report.

American Society for Testing Materials, D817-44T; 1944. Tentative Method of Test for Acetyl and Butyryl Content of Cellulose Acetate Butyrate. Gives scope, outline of method, apparatus, reagents, determination of total acyl content, alternative determination of total acyl content, isolation of mixed acids, determination of the molar ratios of the acids, and calculation of acetyl and butyryl content.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, 1938. Plastics; Molding (Synthetic). Covers definition, classes, characteristics, uses, marketing forms, marketing customs, and substitutes.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, Volume 2; 1944. Plastics; Laminated. Covers definition, characteristics, constants, construction, chemical resistance, grades, uses, forms and marketing, and substitutes.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, Volume 2; 1944. Plastics; Polystyrene. Covers definition, constants, solubility, derivation and characteristics, uses, grades and forms, containers, and substitutes.

National Board of Fire Underwriters. Pyroxylin Plastic in Factories, No. 42; 1940. Standards for the storage, handling, and use of pyroxylin plastic in factories making articles therefrom. Covers synopsis, application, definitions, general requirements, isolated storage buildings, storage of raw materials, manufacturing, inspection and packing, storage of finished stock, display and sales tables, and

factories using finished pyroxylin articles for assembly with other materials.

National Board of Fire Underwriters. Pyroxylin Plastic in Warehouses and Stores, No. 43; 1940. Standards for the storage and handling of pyroxylin plastic in warehouses and wholesale jobbing and retail stores. Covers introduction, scope of standards, sales and handling, storage of loose or packed articles not in shipping containers, storage of finished articles in shipping containers, storage of raw stock in shipping containers, and general requirements.

National Fire Protection Assn. National Fire Codes for Extinguishing and Alarm Equipment, 1943. Protection of Pyroxylin Plastic. Covers buildings, dry rooms or boxes, fire protection, isolated storage buildings, and storage of raw materials in factories, including vaults and cabinets.

National Fire Protection Assn. National Fire Codes for Flammable Liquids, Gases, Chemicals, and Explosives, 1943. Pyroxylin Plastic in Factories. Standards for the storage, handling, and the use of pyroxylin plastics in factories making articles therefrom. Covers synopsis, application, definitions, general requirements for buildings, isolated storage buildings, storage of raw materials, manufacturing, inspection and packing, storage of finished stock, display and sales tables, and factories using finished pyroxylin articles for assembly with other materials.

National Fire Protection Assn. National Fire Codes for Flammable Liquids, Gases, Chemicals, and Explosives, 1943. Pyroxylin Plastic Storage and Sale. Storage and handling of pyroxylin plastic in warehouses and wholesale jobbing and retail stores. Covers sales and handling, storage of loose or packed articles not in shipping containers, storage of finished articles in shipping containers, storage of raw stock in shipping containers, and general items.

U. S. Gov., Army Air Forces. Specification No. 12043; 1944. Plastic Parts; Molded, General Specification for, Inspection of.

U. S. Gov., Federal Specification L-P-406a; 1944. Plastics; Organic, General Specifications, Test Methods. This specification establishes standard methods for testing organic plastics for conformance with the requirements of Federal specifications and was prepared in order to eliminate unnecessary or undesirable variation in testing procedure. Covers mechanical tests, thermal tests, optical tests, electrical tests, miscellaneous physical tests, performance tests, and chemical tests. Gives necessary details, notes, drawings, and photographs.

U. S. Gov., Treasury Dept., Procurement Div., No. 583; 1942. Nozzles; Garden Hose. Covers one type and size made of nonwater absorbent plastic compound. Gives requirements for construction, stem, body, discharge, adjustment, and finish; methods of sampling, inspection, and tests; and packaging, packing and marking.

U. S. Gov., Treasury Dept., Procurement Div., No. 620; 1943. Shields; Face, Plastic. Covers two types—(I) without crown protector, (II) with crown protector; and two styles—(A) clear transparent visor and (B) shaded transparent visor. Gives requirements for sizes, visor length, visor thickness, material, workmanship, general design, visor optical properties, visor temperature and moisture resistance, flammability, face clearance, visor construction, headgear, crown protector, weight, and finish; methods of sampling, inspection, and tests; packaging, packing, and marking.

## 893.1 INSULATING PLASTICS

*References.*—Insulating materials, *see* 296.3.

## 893.2 ELECTRICAL INSULATING PLASTICS

*References.*—Electrical insulating materials, *see* 719.58.

## 893.3 PLASTIC TABLEWARE

U. S. Gov., Federal Specification L-T-48; 1942. Tableware; Plastic. Covers three types—(I) melamine-formaldehyde resin (alpha-cellulose filler), (II) melamine-formaldehyde resin (cellulose fabric filler), and (III) any other synthetic plastics meeting the requirements of this specification. Gives requirements for color, design, uniformity, thickness, tolerances, resistance to boiling water, resistance to staining, water absorption, impact strength, discoloration by light, and odor; methods of sampling, inspection, and tests; and packaging, packing, and marking.

## 893.4 PLASTIC SHEETS

American Hospital Assn., 10-31. Cellulose Acetate (or Similar Material); Flame-Resisting Transparent, Sheet. Gives requirements for material, workmanship, dimensions, finish, flexibility, transparency, flame resistance, marking, light transmission, brittleness, permeability to water, and permeability to oil and gasoline.

American Society for Testing Materials, D617-44; 1944. Standard Method of Test for Punching Quality of Phenolic Laminated Sheets. Gives scope, apparatus, test specimens, preparation of apparatus, procedure for punching, rating punching quality, procedure for Rockwell hardness control test, and report; and appendices.

American Society for Testing Materials, D634-44; 1944. Standard Methods of Test for Product Uniformity of Phenolic Laminated Sheets. Gives scope, nature of test, sampling, thread count and ply thickness, acetone extractable matter, water absorption, dielectric strength parallel with laminations (step-by-step method), hot Rockwell hardness, and density.

American Society for Testing Materials, D 701-44T; 1944. Tentative Specifications for Cellulose Nitrate (Pyroxylin) Plastic Sheets, Rods, and Tubes. Gives type, general requirements, detail requirements, sampling, methods of testing, number of tests, retest and rejection, and packing and marking.

American Society for Testing Materials, D 702-43T; 1943. Tentative Specifications for Cast Methacrylate Plastic Sheets, Rods, Tubes, and Shapes. Gives types and grades, general requirements, detail requirements, sampling, methods of testing, number of tests, retest and rejection, and packing and marking.

American Society for Testing Materials, D 708-44T; 1944. Tentative Specifications for Vinyl Chloride-Acetate Resin Sheets. Gives type, general requirements, detail requirements, sampling, methods of testing, number of tests, retest and rejection, packing and marking.

American Society for Testing Materials, D 786-44 T; 1944. Tentative Specification for Cellulose Acetate Plastic Sheets. Gives scope, type, general requirements, detail requirements, sampling, methods of testing, number of tests, retest and rejection, and packing and marking.

U. S. Gov., Army Air Forces. Specification 12025-C; 1945. Plastic-Sheet; Transparent Cellulose Acetate Base.

U. S. Gov., Army Air Forces. Specification 12032; 1942. Phenolic Sheets, Rods, Tubes, and Shapes (Fabric Base, Graphite Impregnated).

U. S. Gov., Army Air Forces. Specification 12036 (1); 1944. Phenolic Sheet; Laminated High Strength Paper Base.

U. S. Gov., Army Air Forces. Specification No.12042; 1944. Plastic; Sheet, Self Sealing Tank Backing.

U. S. Gov., Army Air Forces. Specification 12044-2; 1945. Plastic Sheet, for Instrument Flying Enclosures and Goggles.

U. S. Gov., Army-Navy Aeronautical Specification AN-P-44; 1944. Plastic; Acrylic Sheet.

U. S. Gov., Army-Navy Aeronautical Specification AN-P-63; 1944. Plastic Materials; Molded Thermosetting.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Miscellaneous Publication M168; 1940. Protection of Documents With Cellulose Acetate Sheeting. Relative to the lamination of documentary material with cellulose acetate sheeting as a protective measure, a study was made of the quality of various sheetings and of the suitability of the lamination processes used by seven different organizations. Three of the operators used plain sheeting applied with heat and pressure, one used sheeting containing an adhesive and applied the sheeting with heat and pressure, and three used sheeting containing an adhesive and applied the sheeting with pressure at ordinary temperature. The operators used identical papers of four different types. The sheetings were tested for the physical and chemical properties considered of importance relative to laminating quality, resistance to wear, and stability.

U. S. Gov., Navy Dept. Specification 33M1; 1941. Methacrylate, or Similar Plastic Glazing Material. Sheets for bulletin boards. Disks for airport lenses.

U. S. Gov., Navy Dept. Specification 33 P 39; 1944. Plastic; Transparent, Sheet, Vinyl Chloride-Vinyl Acetate Copolymer.

U. S. Gov., Navy Dept. Specification 33P40; 1944. Plastic; Transparent, Sheet, Cellulose Acetate.

U. S. Gov., Treasury Dept., Procurement Div., No.727; 1945. Cellulosic-Sheet; Photographic (Clear and Frosted). Covers two types—(I) acetate base (class A, clear and class B, frosted) and (II) nitrate base, clear (grade A, general use and grade B, superior mechanical and optical use). Gives requirements for material, flammability, thermal expansion, tensile strength, elongation, flexibility, water absorption, optical displacement, and warpage; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., U. S. Army, Chemical Warfare Service. Specification 97-54-68; 1933. Sheet; Cellulose, Regenerated.

U. S. Gov., U. S. Army, Corps of Engineers. Specification 42.1-11A; 1934. Celluloid; Sheet.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2970; 1940. Cellophane; Sheets.

## 893.5 TRANSPARENT PLASTICS

American Hospital Assn., 10-31. Cellulose Acetate (or Similar Material), Flame-Resisting Transparent, Sheet. Gives requirements for material, workmanship, dimensions, finish, flexibility, transparency, flame resistance, marking, light transmission, brittleness, permeability to water, and permeability to oil and gasoline.

American Society for Testing Materials, D 542-42, 1942. Methods of Test for Index of Refraction of Transparent Organic Plastics. Covers refractometric and microscopic methods for cast, hot-molded, and sheet materials; description of apparatus, test specimen, methods of procedure, and form of report.

American Society for Testing Materials, D 672-44 T; 1944. Tentative Method of Test for Haze of Transparent Plastics by Photoelectric Cell. Designed to measure photoelectrically the haze of transparent plastics, using specimens with substantially plane, parallel faces. This method provides a rapid and readily available means of obtaining quantitative values for haze arising from internal nonhomogeneous particles, surface scratches, and other imperfections.

U. S. Gov., Army-Navy Aeronautical Specification AN-C-70; 1942. Covers; Light-Transmitting (for Aeronautical Lights).

U. S. Gov., Army-Navy Aeronautical Specification AN-D-7-2; 1944. Domes; Navigator's, Observing.

U. S. Gov., Dept. of Agriculture, Forest Service. Specification 233-S. Material; Transparent.

U. S. Gov., Joint Army-Navy Specification JAN-P-90; 1944. Protractors; Three-Arm, Transparent, Mark 2.

U. S. Gov., Navy Dept. Specification 33M1; 1941. Methacrylate, or Similar Plastic Glazing Material. Sheets for bulletin boards. Disks for airport lenses.

## 893.6 PLASTIC CONTAINERS

U. S. Gov., Army-Navy Aeronautical Specification AN-P-54-1; 1945. Plastic Film; Transparent, Moisture Impervious.

## 893.7 PLASTIC FOR LIGHTING FIXTURES

U. S. Gov., Federal Specification L-P-384; 1944. Plastic; Light-Diffusing (for) Lighting Fixtures. Covers two forms—(A) moulded and (B) sheets, rods, and tubes; five classes—indirect, semi-indirect, general diffusing, semi-direct, or direct; and type shall be furnished in designs, shapes, and colors as specified. Gives requirements for material, workmanship, uniformity, surface finish, machining

ability, diffused illumination, operating temperature, surface brightness, over-all efficiency, light distribution, color, and cure; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

## 893.8 PLASTIC MATERIALS AND COMPOUNDS

American Society for Testing Materials, D 700-43T; 1943. Tentative Specifications for Phenolic Molding Compounds. Covers hot-molding thermosetting compounds consisting of essentially a phenol-formaldehyde resin either alone or intimately combined in the uncured or partially cured condition with fillers, pigments, and dyes, as required, to obtain the properties desired. Gives types, general requirements, detail requirements, sampling, methods of testing, number of tests, retest and rejection, and packing and marking.

American Society for Testing Materials, D 703-44T; 1944. Tentative Specifications for Polystyrene Molding Compounds. Gives types, general requirements, detail requirements, sampling, methods of testing, number of tests, retest and rejection, and packing and marking.

American Society for Testing Materials, D 704-44 T; 1944. Tentative Specifications for Melamine-Formaldehyde Molding Compounds. Gives types, general requirements, detail requirements, sampling, methods of testing, number of tests, retest and rejection, and packing and marking.

American Society for Testing Materials, D 705-43T; 1943. Tentative Specifications for Urea-Formaldehyde Molding Compounds. Gives grades and types, general requirements, detail requirements, sampling, methods of testing, number of tests, retest and rejection, and packing and marking.

American Society for Testing Materials, D 706-44T; 1944. Tentative Specifications for Cellulose Acetate Molding Compounds. Gives types and grades, general requirements, detail requirements, sampling, methods of testing, number of tests, retests and rejection, and packing and marking.

American Society for Testing Materials, D 707-44T; 1944. Tentative Specifications for Cellulose Acetate Butyrate Molding Compounds. Gives types, general requirements, detail requirements, sampling, methods of testing, number of tests, retests and rejection, and packing and marking.

American Society for Testing Materials, D 709-44T; 1944. Tentative Specifications for Laminated Thermosetting Materials. Gives types and grades, forms, general requirements, detail requirements, permissible variations, sampling and number of tests, conditioning, methods of testing, retest and rejection, packing and marking, and appendix.

American Society for Testing Materials, D 728-44T; 1944. Tentative Specifications for Vinyl Chloride-Acetate Molding Compounds. Gives type, general requirements, detail requirements, sampling, methods of testing, number of tests, retest and rejection, and packing and marking.

American Society for Testing Materials, D 729-44T; 1944. Tentative Specifications for Vinylidene Chloride Molding Compounds. Gives types and forms, general requirements, detail requirements, sampling, methods of testing, number of tests, retest and rejection, and packing and marking.

American Society for Testing Materials, D 742-44T; 1944. Tentative Specifications for Nonrigid Vinyl Chloride-Acetate Plastics. Gives types and grades, general requirements, detail requirements, sampling, methods of testing, number of tests, retest and rejection, and packing and marking.

American Society for Testing Materials, D 743-44T; 1944. Tentative Specifications for Nonrigid Ethyl Cellulose Plastics. Gives types and grades, general requirements, detail requirements, sampling, methods of testing, number of tests, retest and rejection, and packaging and marking.

American Society for Testing Materials, D 744-44T; 1944. Tentative Specifications for Nonrigid Vinyl Chloride Plastics. Gives types and grades, general requirements, detail requirements, sampling, methods of testing, number of tests, retest and rejection, and packing and marking.

American Society for Testing Materials, D 745-44T; 1944. Tentative Specifications for Nonrigid Vinyl Butyral Plastics. Gives types and grades, general requirements, detail requirements, sampling, methods of testing, number of tests, retest and rejection, and packing and marking.

American Society for Testing Materials, D 787-44 T; 1944. Tentative Specification for Ethyl Cellulose Molding Compounds. Gives scope, types and grades, general requirements, detail requirements, sampling, methods of testing, number of tests, retest and rejection, and packing and marking.

American Society for Testing Materials, D 788-44 T; 1944. Tentative Specification for Methacrylate Molding Compounds. Gives scope, types, general requirements, detail requirements, sampling, methods of testing, number of tests, retest and rejection, and packing and marking.

American Society for Testing Materials, D 789-44 T; 1944. Tentative Specification for Nylon Injection Molding Compound. Gives scope, types and grades, general requirements, detail requirements, sampling, methods of testing, number of tests, retest and rejection, and packing and marking.

American Society for Testing Materials, D 791-44 T; 1944. Tentative Method of Test for Luminous Reflectance and Transmission Characteristics and Color of Plastic Materials. Gives scope, apparatus, test specimens, procedure, calculations, illuminant, and report.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, Volume 2; 1944. Casein and Casein Plastics. Covers definition, derivation and characteristics, uses, grades and forms, containers, and substitutes.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, Volume 2; 1944. Cellulose Acetate. Covers definition, constants, solubility, derivation, uses, grades and forms, general characteristics, and substitutes.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, Volume 2; 1944. Vulcanized Fiber. Covers definition, constants, solubility, derivation, uses, grades and forms, containers, and substitutes.

U. S. Gov., Joint Army-Navy Specification JAN-P-13; 1944. Plastic-Materials; Laminated Thermosetting Sheets and Plates.

## 893.9 MISCELLANEOUS PLASTIC ARTICLES

American Society for Testing Materials, D 701-44T; 1944. Tentative Specifications for Cellulose Nitrate (Pyroxylin) Plastic Sheets, Rods, and Tubes. Gives type, general requirements, detail requirements, sampling, methods of testing, number of tests, retest and rejection, and packing and marking.

American Society for Testing Materials, D 702-43T; 1943. Tentative Specifications for Cast Methacrylate Plastic Sheets, Rods, Tubes, and Shapes. Gives types and grades, general requirements, detail requirements, sampling, methods of testing, number of tests, retest and rejection, and packing and marking.

Society of Automotive Engineers. Aeronautical Material Specification 3630; 1944. Flexible Plastic Extrusions. Gives requirements for form and color, application, quality, requirements, samples, dimensions and tolerances, reports, identification, packing and marking, approvals, and rejections.

Society of Automotive Engineers. Aeronautical Standard 42; 1944. Cap; Thread Protector, Single and Dual Propeller Shafts. Black cellulose acetate material. Drawing with table giving dimensions.

U. S. Gov., Army Air Forces. Specification 12032; 1942. Phenolic Sheets, Rods, Tubes, and Shapes (Fabric Base, Graphite Impregnated).

U. S. Gov., Army Air Forces. Specification 12035; 1943. Rod, Cellulose-Nitrate-Base, Extruded.

U. S. Gov., Army Air Forces. Specification 32212-A; 1940. Phenolic-Material; Molded.

U. S. Gov., Army Air Forces. Specification 40726 (2); 1944. Trainer; Map Projection, Type O-51 (Globe).

U. S. Gov., Army-Navy Aeronautical Specification AN-K-3; 1944. Knobs; Pointer.

U. S. Gov., Army-Navy Aeronautical Specification AN-P-48a; 1944. Pumps; Plastic, Hand, Air.

U. S. Gov., Federal Specification L-C-586; 1942. Amendment 3; 1944. Combs; Plastic. Covers one type and one grade. Gives requirements for material, workmanship, design, sizes, color, deformation in hot water, stiffness of teeth, thumb test, flammability, and accelerated aging test; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Joint Army-Navy Specification JAN-R-83; 1944. Rulers; Parallel.

U. S. Gov., Navy Dept. Specification 12T10a; 1944. Treads; Safety, Plastic.

U. S. Gov., Navy Dept. Specification 18T27; 1944. Trays; Photographic, Plastic.

U. S. Gov., Navy Dept. Specification 30A1; 1944. Accessories; Lavatory and Shower-Stall, Plastic.

U. S. Gov., Navy Dept. Specification 30P2; 1944. Plugs; Drain, Plastic.

U. S. Gov., Navy Dept. Specification 33T5; 1944. Tubing; Plastic (Elastomer).

U. S. Gov., Navy Dept. Specification 42C24; 1944. Cuspidors; Plastic.

U. S. Gov., Navy Dept. Specification 42P15; 1944. Plastic-Ware (Alternate for Hardware).

U. S. Gov., Navy Dept. Specification 42 T 1e; 1943. Tags; Key, and Rings; Key.

U. S. Gov., Navy Dept. Specification 45P3; 1944. Plugs; Heat-Exchanger-Tube (Phenolic-Material, Laminated).

U. S. Gov., Navy Dept. Specification 64T8; 1944. Trays; Serving, Plastic.

U. S. Gov., U. S. Army, Army Air Forces. Specification 94-40780; 1944. Syringe; Oil-Dispensing, Plastic.

U. S. Gov., U. S. Maritime Commission. Specification 64-MC-39a; 1944. Trays; Serving, Non-Metallic. Covers one grade and three types—(I) rectangular trays, (II) oval trays, and (III) round trays. Gives requirements for sizes, material, workmanship, construction, finish, color, odor, resistance to impact, impact strength, rigidity, chemical resistance, resistance to hot water, marking, and details for each type; sampling, inspection, and methods of test; and packaging, packing, and marking for shipment.

# 900-999 COMMODITIES NOT ELSEWHERE CLASSIFIED

## 910-919 SCIENTIFIC AND PROFESSIONAL APPARATUS AND SUPPLIES

### 910. GENERAL ITEMS

American Institute of Chemical Engineers. Standard System of Nomenclature for Chemical Engineering Unit Operations, 1944. Covers general principles of letter symbol standardization and gives symbols and nomenclature of chemical engineering with typical units and recommended abbreviations.

American Institute of Electrical Engineers, endorsing sponsor. American Standards Assn., Z17.1-1936. Preferred Numbers. Tables of preferred numbers for use in size standardization with definite relations between the numbers in each of four standard series.

American Institute of Electrical Engineers, 17f; 1928. Joint sponsor with American Assn. for the Advancement of Science, American Society of Civil Engineers, American Society of Mechanical Engineers, and Society for the Promotion of Engineering Education. Mathematical Symbols. Approved as American standard Z 10f-1928 by the American Standards Assn. List of letter symbols for mathematical terms.

American Society of Mechanical Engineers. American Standards Assn., Z 15.1-1932. Engineering and Scientific Charts for Lantern Slides. A valuable set of rules for drawing the original charts and for their reproduction as lantern slides. Standard also specifies types and sizes of lettering, different line widths, and sizes of symbols commonly used in graphs. An appendix contains a table of commercial lettering templates and lettering pens with which charts may be easily reproduced in the manner recommended.

American Society of Mechanical Engineers. American Standards Assn., Z 15.3-1943. Engineering and Scientific Graphs for Publication. Intended for the guidance of authors and draftsmen who are preparing graphs for reproduction in engineering and technical publications. Covers design and layout, construction of original graph to be used for reproduction, handling of finished illustrations, and appendices.

American Society of Mechanical Engineers, joint sponsor with American Gear Manufacturers Assn. American Standards Assn., B 6.5-1943. Letter Symbols for Gear Engineering. To establish a uniform practice in mathematical notation for equations and formulas dealing with toothed gearing. Covers manuscripts, symbols, subscripts, conflicts, topography, lists English alphabet for gear engineering symbols, lists Greek letters employed, lists recommended plan for subscripts, and lists general and special letter symbols for gear engineering.

American Society of Mechanical Engineers, joint sponsor with American Assn. for the Advancement of Science, American Institute of Electrical Engineers, American Society of Civil Engineers, Society for the Promotion of Engineering Education. American Standards Assn., Z 10.1-1941. Abbreviations for Scientific and Engineering Terms.

American Society of Mechanical Engineers, Co-sponsors with American Assn. for the Advancement of Science, American Institute of Electrical Engineers, American Society of Civil Engineers, and Society for the Promotion of Engineering Education. American Standards Assn., Z 10.3-1942. Letter Symbols for Mechanics of Solid Bodies. Includes general principles of letter symbol standardization and letter symbols for concepts in mechanics of solid bodies.

American Society of Mechanical Engineers, joint sponsor with American Assn. for Advancement of Science, American Society of Civil Engineers, American Institute of Electrical Engineers, and Society for Promotion of Engineering Education. American Standards Assn., Z10f-1928. Mathematical Symbols. List of standard mathematical letter symbols.

American Society of Mechanical Engineers, sponsor. American Standards Assn., Z15.2-1938. Time Series Charts. A manual of design and construction including line charts, girds, scale, selection, and designations; curves, curve selection, and designations; and supplementary column, surface, and rate-of-change charts.

American Society of Mechanical Engineers. Power Test Code, Auxiliary Section. Part 2—Pressure Measurement, Chapters 2 and 3; 1936. Pressure reduction to Bernoulli's Theorem, static holes, static tubes, impact tubes are subjects dealt with in chapter 2. In chapter 3 are instructions for screwed pipe and tubing for pressure measurement.

American Society of Mechanical Engineers. Power Test Code, Auxiliary Section. Part 16—Density Determinations, 1931. Discusses available methods for determining specific gravity.

American Society for Testing Materials, E 29-40 T; 1940. Tentative Recommended Practices for Designation of Numerical Requirements in Standards. To assist the various standing committees in the use of uniform terms and conventions in expressing numerical requirements in specifications and methods of testing.

American Standards Assn., B48.1-1933. American Standard Practice for Inch-Millimeter Conversion for Industrial Use.

American Standards Assn. Defense Emergency Standards Z1.1-1941 and Z1.2-1941. Guide for Quality Control and Control Chart Method of Analyzing Data. A guide for handling problems concerning the economic control of quality of materials and manufactured products. It has particular reference to methods of collecting, arranging, and analyzing inspection and test records in a manner designed to detect lack of uniformity of quality. It provides also a graphical summary of the data that are being analyzed to assist judgment in determining whether there is evidence of lack of control, and whether there is justification in using the summary as a basis for predicting the

future performance of the processes that give rise to the data that are being analyzed.

American Standards Assn., Z 1.3-1942. Control Chart Method of Controlling Quality During Production. The principles of procedure are given in general terms and illustrations show how these principles might be applied in specific cases. Covers preliminary steps in setting up a control precedure, starting the control chart, using the control chart during production, illustrative examples, glossary of symbols and terms, and appendices.

American Standards Assn., Z25.1-1940. Rules for Rounding Off Numerical Values. Covers problem of rounding, recommended rules, explanation of rules, illustration, sum and average unchanged, places retained, and gives table for rounding off numbers in 6, 5, 4, 3, 2, and 1 places.

Heating, Piping and Air Conditioning Contractors National Assn. Engineering Standards, Part V; 1945. Graphic Symbols for Use on Drawings and Scheme for the Identification of Piping Systems. Contains two sections. The first gives graphical symbols for use on drawings and the second methods of identifying piping systems.

Industrial Management Society. An Occupational Rating Plan for Hourly and Salaried Occupations, 1937. Gives basic principles of uniformly rating or classifying various industrial operations as: Job conditions or environment, physical requirements, and mental requirements; grading of job—not operator—index values of various characteristics, rate range, and seasonal employment; hourly occupational master sheets, conversion curve for hourly rated occupations, for additional characteristics of salaried office and executive employees, list of sample occupations and gradings, and specimen of job requirements analysis sheet.

National Safety Council, joint sponsor with International Assn. of Industrial Accident Boards and Commissions and National Council on Compensation Insurance. American Standards Assn., Z16.1-1937. Method of Compiling Industrial Injury Rates.

National Safety Council, joint sponsor with National Council on Compensation Insurance and International Assn. of Industrial Accident Boards and Commissions. American Standards Assn., Z16.2-1941. Recommended Practice for Compiling Industrial Accident Causes. Part I, Selection of Accident Factors—defines the various classes of disabilities, the time charges to be assigned to the disabilities, definitions of frequency and severity rates, and general rules for the compilation of rate statistics. Part II, Detailed Classification of Accident Factors—presented in five sections: (1) Agency and agency part, (2) the unsafe mechanical or physical condition, (3) the accident type, (4) the unsafe act, and (5) the unsafe personal factor.

## 911. PHOTOGRAPHIC GOODS

### 911.0 GENERAL ITEMS

American Standards Assn. Z 38.2.2-1942. Photographic Exposure Computer (American Emergency Standard). Covers latitude, time of year, hour of day, sky conditions, shaded scenes, scene structure, lens opening and shutter time, doubtful conditions, interiors or very dim exteriors, electrically lighted interiors, dawn and dusk, smoke, snow, extreme close-ups, copying, night flash pictures, outdoor night flashbulb, and flood lamp exposures.

American Standards Assn., Z52.15-1944. Method of Making Intermodulation Tests on Variable Density 16-Mm. Sound Motion Picture Prints (American War Standard). Describes the intermodulation method of measuring the sound distortion introduced during the processing of 16-mm. variable density sound motion picture release prints. Gives test method and test equipment.

American Standards Assn., Z52.24-1944. Reduction Printing from 35-Mm. to 16-Mm. Motion Picture Film—16-Mm. Positive Aperture Dimensions and Image Size for Positive Prints made From 35-Mm. Negatives (American War Standard). Gives drawing and table showing dimensions.

American Standards Assn., Z52.25-1944. Reduction printing From 35-Mm. to 16-Mm. Motion Picture Film—Negative Aperture Dimensions and Image Size for 16-Mm. Duplicate Negatives Made From 35-Mm. Positive Prints (American War Standard). Gives drawing and table showing dimensions.

American Standards Assn., Z52.26-1944. Contact Printing of 16-Mm. Motion Picture Film—Printer Aperture Dimensions for Contact Printing 16-Mm. Positive Prints From 16-Mm. Negatives (American War Standard). Gives drawing and table showing dimensions.

American Standards Assn., Z52.27-1944. Contact Printing of 16-Mm. Motion Picture Film—Printer Aperture Dimensions for Reversal and Color Reversal Duplicate Prints (American War Standard). Gives drawing and table showing dimensions.

American Standards Assn., Z52.39-1944. Method of Making Cross-Modulation Tests on Variable Area 16-Mm. Sound Motion Picture Prints (American War Standard). Describes the cross-modulation method of measuring high-frequency distortion introduced during the processing of 16-mm. variable area sound motion picture release prints. Gives test method and test equipment.

Optical Society of America, sponsor. American Standards Assn., Z 38.2.1-1943. Standard Method for Determining Photographic Speed and Speed Number. This method of determining speed and speed number applies to roll films, film packs, and miniature camera films intended for the making of monochromatic, continuous-tone negatives in pictoral photography, exclusive of photography in the infrared. Covers discussion of problem and explanation of terms, determination of speed and speed numbers of a specific sample, and determination of speed and speed number of a product.

Society of Motion Picture Engineers, sponsor. American Standards Assn., Z22.33-1941. Recommended Practice for Motion Picture. Nomenclature for Electrical Filters.

Society of Motion Picture Engineers, sponsor. American Standards Assn., Z38.8.1-1944. Practice for Temperature of Processing Solutions. Gives temperature of photographic processing solutions.

## 911.1 CAMERAS AND CAMERA DEVICES

Society of Motion Picture Engineers, sponsor. American Standards Assn., Z22.7-1941. 16-Mm. Silent Motion Picture Film, Camera Aperture. Dimensional Standards.

Society of Motion Picture Engineers, sponsor. American Standards Assn., Z22.9-1941. 16-Mm. Silent Motion Picture Film, Emulsion Position in Camera—Negative.

Society of Motion Picture Engineers, sponsor. American Standards Assn., Z22.19-1941. 8-Mm. Silent Motion Picture Film, Camera Aperture. Dimensional Standards.

U. S. Gov., Army Air Forces. Specification 31013-C; 1944. Camera; Aircraft, Type B-1 (16-Mm. Silent Motion Picture).

U. S. Gov., Army Air Forces. Specification No. 31293; 1944. Camera; Ground, Type C-4.

U. S. Gov., Army Air Forces. Specification No. 31298; 1943. Camera; Aircraft, Type K-27 (12-In. Lens, 9- by 18-In. Negative).

U. S. Gov., Army Air Forces. Specification 31300A-1944. Camera; Aircraft, Type A-6, 35-Mm. Silent Motion Picture.

U. S. Gov., Army Air Forces. Specification No. 31301; 1945. Camera; Aircraft, Type A-7 (35-Mm. Silent Motion Picture).

U. S. Gov., Army Air Forces. Specification 31336-A; 1943. Control; Multi-Camera, Type A-2 (Aircraft).

U. S. Gov., Army Air Forces. Specification No. 31339; 1943. Control; Integral Overrun (Gun Camera, 16-Mm. 24 Volts, D.C.).

U. S. Gov., Army Air Forces. Specification No. 31355; 1944. Camera; Aircraft, Type S-7.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Circular C428; 1940. A Test of Lens Resolution for the Photographer. This circular provides the photographer with a set of charts by which the resolving power of a photographic lens may be numerically measured with respect to a definite scale of values. A detailed description is given of the procedure and technique to be followed in order that comparable values may be obtained by different observers. The test provides an objective method of testing a photographic lens.

U. S. Gov., U. S. Army Army Air Forces. Specification 75-23C; 1940. Camera; Aircraft, Type K-3.

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-52; 1939. Camera; Aircraft, Type K-7C.

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-54; 1939. Camera; Machine Gun, Type H-2, Aircraft, 16-Mm.

U. S. Gov., U. S. Army, Signal Corps. Specification 75-56; 1940. Camera; Motion Picture.

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-60; 1940. Camera; Ground, Type C-1.

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-61; 1940. Camera; Ground, Type A-2.

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-68-A; 1944. Camera; Aircraft, Type A-1B, 35-Mm. Silent Motion Picture.

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-70A; 1942. Camera; Ground, Type C-3.

U. S. Gov., U. S. Army, Army Air Corps. Specification 75-72; 1940. Camera; Machine Gun, Type H-3, Aircraft, 16-Mm., 24-Volt.

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-75; 1940. Camera; Machine Gun, Type H-1, Aircraft, 16-Mm.

U. S. Gov., U. S. Army, Army Air Corps. Specification 75-92B; 1943. Camera; Type K-18A, Aircraft.

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-94-C; 1944. Camera; Aircraft, Type K-17C.

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-97C; 1943. Camera; Type K-19B, Aircraft.

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-152; 1941. Cameras; Aircraft, Type A-3, 35-Mm., Motion Picture.

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-183; 1942. Camera; Aircraft, Type L-2A.

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-188A; 1942. Intervalometer; Camera, Type B-3B, Aircraft.

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-202; 1942. Camera; Aircraft, Type A-4, Bomb Spotting, 35-Mm., Motion Picture.

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-210; 1942. Camera; Aircraft, Type K-21.

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-211; 1942. Intervalometer; Camera, Type B-4, Aircraft.

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-218; 1942. Camera; Aircraft, Type K-25.

U. S. Gov., U. S. Army, Army Air Corps. Specification 75-221; 1943. Camera; Aircraft, Type K-22.

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-227; 1943. Camera; Aircraft, Type K-20, 4- by 5-Inch.

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-234; 1943. Camera; Aircraft, Type K-24.

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-238; 1943. Camera; Torpedo Training, Type U-1.

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-239A; 1943. Magazine; Camera, Type A-8, Aircraft.

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-243; 1943. Camera; Aircraft, Type B-2, 16-Mm., Motion Picture.

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-246B; 1944. Camera; Aircraft, Type A-5, 35-Mm., Motion Picture.

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-251; 1943. Camera; Gun, Type AN-N-4, 35-Mm. Lens, Plain, 16-Mm., 24-Volt, D.C.

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-260; 1943. Adapter; Camera, Type A-1.

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-279; 1943. Intervalometer; Camera, Type B-5, Aircraft.

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-282; 1943. Camera; Aircraft, Type T-5.

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-341; 1943. Cover; Camera, Type B-1, Electrically Heated, Type K-21 Camera.

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-344; 1943. Cover; Camera, Type B-3, Electrically Heated, Type K-18 Camera.

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-360; 1944. Shutter; Auxiliary, Night Camera, Photoelectric.

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-366-A; 1945. Camera; Gun, Type AN-N6 (35-Mm. Lens, 16-Mm., 24 Volts, D.C.).

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-422A; 1944. Camera; Aircraft, Type A-8 (35-Mm. Silent Motion Picture).

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-426; 1944. Cover; Camera, Type B-7 (Electrically Heated, Type K-24 Camera).

*References.*—Sound recording and reproducing equipment, *see* 718.7; testing of lenses, *see* 914.0.

## 911.2 FILMS, PLATES, AND REELS

American Standards Assn., Z52.2-1944. Test Film for Checking Adjustment of 16-Mm. Sound Motion Picture Projection Equipment (American War Standard). Gives scope and purpose, test film, instructions for use of film, and appendix.

American Standards Assn., Z52.8-1944. Specification for Multi-Frequency Test Film Used for Field Testing 16-Mm. Sound Motion Picture Projection Equipment (American War Standard). Gives scope and purpose and test film details.

American Standards Assn., Z52.9-1944. Specification for 3000-Cycle Flutter Test Film for 16-Mm. Sound Motion Picture Projectors (American War Standard) Gives scope and purpose and test film details.

American Standards Assn., Z52.10-1944. Specification for Buzz-Track Test Film for 16-Mm. Sound Motion Picture Projectors (American War Standard). Gives scope and purpose, test film, inspection of prints, and figure showing buzz-track dimensions.

American Standards Assn., Z52.11-1944. Specification for Sound-Focusing Test films for 16-Mm. Sound Motion Picture Projection Equipment (American War Standard) Gives scope and purpose and test films.

American Standards Assn., Z52.16-1944. Sound Records and Scanning Area of 16-Mm. Sound Motion Picture Prints (American War Standard). Gives drawings with dimensions for printed area, variable area and variable density squeeze records, full width variable density record, and scanned area.

American Standards Assn., Z52.17-1944. Specification for 400-Cycle Signal Level Test Film for 16-Mm. Sound Motion Picture Projection Equipment (American War Standard). Gives scope and purpose and test film details.

American Standards Assn., Z52.19-1944. Leaders, Cues, and Trailers for 16-Mm. Sound Motion Picture Release Prints Made From 35-Mm. Preprint Material (American War Standard). Gives protective leader, test leader, identification leader, synchronizing leader, picture section, runout trailer, identification trailer (end-of-part title), and protective trailer.

American Standards Assn., Z52.20-1944. Positive and Negative Splices for Processed 16-Mm. Sound Motion Picture Film (American War Standard). Gives drawing showing diagonal, straight, and curved splice together with table giving dimensions.

National Board of Fire Underwriters. Nitrocellulose Motion Picture Film, No. 40; 1939. Storage and handling of film includes construction of containers and transportation of film.

National Board of Fire Underwriters. Photographic and X-Ray Nitrocellulose Films, No. 41; 1930. Regulations for storage and handling in stores, warehouses, commercial studios, hospitals, and laboratories, etc; maximum volume of cabinets, vaults, and outside storage houses.

National Fire Protection Assn. National Fire Codes for Extinguishing and Alarm Equipment, 1943. Protection of Nitrocellulose Motion-Picture Film. Covers sprinklers and other fire protection appliances, film cabinets, film vaults, motion picture film exchanges, motion picture film laboratories, and motion picture studios.

National Fire Protection Assn. National Fire Codes for Extinguishing and Alarm Equipment, 1943. Protection of Photographic and X-Ray Nitrocellulose Films. Covers general storage of unexposed films including stores, warehouses and wholesale storage, and portrait and commercial studios; storage of film negatives including vented cabinets, vented storage vaults (inside), and outside storage houses; and general requirements for both unexposed films and film negatives.

National Fire Protection Assn. National Fire Codes for Flammable Liquids, Gases, Chemicals, and Explosives, 1943. Nitrocellulose Motion Picture Film. Standards for the storage and handling of nitrocellulose motion picture film. Covers construction and arrangement of buildings, electrical equipment, heating equipment, sprinklers and other fire protection appliances, storage of film, film cabinets, film vaults, handling of film, motion picture projection and special processes, and special provisions for special occupancies.

National Fire Protection Assn. National Fire Codes for Flammable Liquids, Gases, Chemicals, and Explosives, 1943. Photographic and X-Ray Nitrocellulose Films. Standards for the storage and handling of photographic and X-ray nitrocellulose films. Covers general storage of unexposed films, storage of film negatives, and general items applying to both unexposed films and film negatives.

Optical Society of America. American Standards Assn., Z 38.1.1-1941. Film Pack Tabs and Films. Gives diagram and table showing dimensions.

Optical Society of America. American Standards Assn., Z 38.1.2-1941. Film Pack Cases. Gives diagram and table showing dimensions.

Optical Society of America. American Standards Assn., Z 38.1.3-1941. 70-Mm. Perforated (and Unperforated) Film (Cutting and Perforating Standard). Gives diagram and table showing dimensions and tolerances.

Optical Society of America, sponsor. American Standards Assn., Z 38.1.16-1943 to Z 38.1.24-1943, inclusive. Dimensions for Amateur Roll Film, Backing Paper, and Film Spools. Gives diagrams and tables showing dimensions for amateur roll film spools—numbers 1 to 9, inclusive.

Optical Society of America, sponsor. American Standards Assn., Z38.1.25-1944. American Standard Dimensions for Industrial X-Ray Sheet Film (Inch Sizes). Gives table showing nominal, minimum, and maximum dimensions for various film sizes.

Optical Society of America, sponsor. American Standards Assn., Z38.1.26-1944. American Standard Dimensions for Graphic Arts Sheet Film (Inch Sizes). Gives table showing nominal, minimum, and maximum dimensions for various film sizes.

Optical Society of America, sponsor. American Standards Assn., Z38.1.27-1944. American Standard Dimensions for Medical X-Ray Sheet Film (Inches and Centimeter Sizes). Gives tables showing nominal, minimum,

and maximum dimensions, in inches and centimeters, for various film sizes.

Optical Society of America, sponsor. American Standards Assn., Z38.1.28-1944. American Standard Dimensions for Professional Portrait and Commercial Sheet Film (Inch Sizes). This standard omits obsolete and seldom used sizes. Gives table showing nominal, minimum, and maximum dimensions for various film sizes.

Optical Society of America, sponsor. American Standards Assn., Z38.1.29-1944. American Standard Dimensions for Professional Portrait and Commercial Sheet Film (Centimeter Sizes). Gives table showing nominal, minimum, and maximum dimensions for various film sizes.

Optical Society of America, sponsor. American Standards Assn., Z38.1.30-1944. American Standard Dimensions for Photographic Dry Plates (Inch Sizes). Gives table showing cutting size including nominal size, standard, tolerance, and minimum and maximum thickness for various sizes; and squareness.

Optical Society of America, sponsor. American Standards Assn., Z38.1.31-1944. American Standard Dimensions for Photographic Dry Plates (Centimeter Sizes). Gives table showing cutting size including nominal size, standard, tolerance, and minimum and maximum thickness for various sizes; and squareness.

Optical Society of America. American Standards Assn., Z 38.31-1943. Definition of Safety Photographic Film. Photographic films are classified as safety photographic film if they are difficult to ignite, slow burning, and low in nitrogen content. Covers ignition time, burning time, and nitrogen content.

Optical Society of America, sponsor. American Standards Assn., Z38.7.8-1944. Proposed American Standard Practice for Microfilms. Microfilm shall mean a transparent flexible material carrying microphotographs for optical, but not cinematographic, projection or viewing. Covers material, format and placement, leader and trailer, title frame, and reels.

Society of Motion Picture Engineers, sponsor. American Standards Assn., Z22.2-1941. 35-Mm. Sound Motion Picture Film, Emulsion and Sound Record Positions in Camera—Negative.

Society of Motion Picture Engineers, sponsor. American Standards Assn., Z22.3-1941. 35-Mm. Sound Motion Picture Film, Emulsion and Sound Record Positions in Projector—Positive (for Direct Front Projection).

Society of Motion Picture Engineers, sponsor. American Standards Assn., Z22.5-1941. 16-Mm. Silent Motion Picture Film, Cutting and Perforating Negative and Positive Raw Stock. Dimensions and tolerances.

Society of Motion Picture Engineers, sponsor. American Standards Assn., Z22.12-1941. 16-Mm. Sound Motion Picture Film, Cutting and Perforating Negative and Positive Raw Stock. Dimensions and tolerances.

Society of Motion Picture Engineers, sponsor. American Standards Assn., Z22.13-1941. 16-Mm. Sound Motion Picture Film, Camera Aperture. Dimensional standards.

Society of Motion Picture Engineers, sponsor. American Standards Assn., Z22.14-1941. 16-Mm. Sound Motion Picture Film, Projector Aperture Dimensional Standards.

Society of Motion Picture Engineers, sponsor. American Standards Assn., Z22.15-1941. 16-Mm. Sound Motion Picture Film, Emulsion and Sound Record Positions in Camera—Negative.

Society of Motion Picture Engineers, sponsor. American Standards Assn., Z22.16-1941. 16-Mm. Sound Motion Picture Film, Emulsion and Sound Record Positions in Projector—Positive (for Direct Front Projection).

Society of Motion Picture Engineers, sponsor. American Standards Assn., Z22.17-1941. 8-Mm. Motion Picture Film, Cutting and Perforating Negative and Positive Raw Stock. Dimensions and tolerances.

Society of Motion Picture Engineers, sponsor. American Standards Assn., Z22.21-1941. 8-Mm. Silent Motion Picture Film, Emulsion Position in Camera—Negative.

Society of Motion Picture Engineers, sponsor. American Standards Assn., Z22.24-1941. 16-Mm. Silent Motion Picture Film, Film Splices, Negative and Positive.

Society of Motion Picture Engineers, sponsor. American Standards Assn., Z22.25-1941. 16-Mm. Sound Motion Picture Film, Film Splices—Negative and Positive.

Society of Motion Picture Engineers, sponsor. American Standards Assn., Z22.26-1941 and Z22.27-1941. Sensitometry. Photographic Density.

Society of Motion Picture Engineers, sponsor. American Standards Assn., Z22.31-1941. Recommended Practice for Motion Picture Film. Safety Film.

Society of Motion Picture Engineers, sponsor. American Standards Assn., Z22.32-1941. Recommended Practice for Motion Picture Film, Theater Sound Fader Setting Instructions.

Society of Motion Picture Engineers, sponsor. American Standards Assn., Z22.34-1944. Cutting and Perforating Negative Raw Stock. For 35-mm. motion picture film. Gives drawing and table showing dimensions and tolerances.

Society of Motion Picture Engineers, sponsor. American Standards Assn., Z22.36-1944. Cutting and Perforating Positive Raw Stock. For 35-mm. motion picture film. Gives drawing and table showing dimensions and tolerances.

Society of Motion Picture Engineers, sponsor. American Standards Assn., Z22.37-1944. Raw Stock Cores. For 35-mm. motion picture film. Gives drawing and table showing dimensions and recommended practice.

Society of Motion Picture Engineers, sponsor. American Standards Assn., Z22.38-1944. Raw Stock Cores. For 16-mm. motion picture film. Gives drawing and table showing dimensions and recommended practice.

Society of Motion Picture Engineers, sponsor. American Standards Assn., Z38.1.41-1944. Dimensions for Leaders, Trailers, and Roll Film for Aerial Photography. Gives table showing nominal film width, actual film width, and leader and trailer width.

Society of Motion Picture Engineers, sponsor. American Standards Assn., Z38.1.42-1944. Designation of Emulsion side of Photographic Sheet Films. Gives drawing and data for size of notches and location of notches.

U. S. Gov., Army-Navy Aeronautical Specification AN-F-40; 1944. Film; Aerial Photographic.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R165-36; 1936. Photographic Film for Miniature Copies of Records. This recommendation establishes a simplified list of stock widths of photographic film.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Standard for Permanent Record Photographic

Microcopying Film, Gelatin-Silver Halide Emulsion Type, 1943. The exposed and processed film shall be of such a type that the quality of the image shall remain permanent under ordinary storage conditions. Gives requirements for emulsion, processing, hypo content of emulsion, flexibility, film base, relative viscosity, pH stability, and nitrogen content.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Standard for Temporary Record Photographic Microcopying Film, Gelatin-Silver Halide Emulsion Type, 1943. The exposed and processed film shall be of such a type that no serious loss in the quality of the image shall result within five years after processing when the film is kept under ordinary storage conditions. Gives requirements for film base, emulsion, processing, hypo content of emulsion, flexibility, and burning time test.

U. S. Gov., Joint Army-Navy Specification JAN-F-31; 1944. Film; Photographic, General Specification for.

U. S. Gov., Joint Army-Navy Specification JAN-F-32; 1944. Film; Photographic, Aerial.

U. S. Gov., Joint Army-Navy Specification JAN-F-33; 1944. Film; Photographic, Motion-Picture.

U. S. Gov., Joint Army-Navy Specification JAN-F-34; 1944. Film; Photographic, Miscellaneous Roll.

U. S. Gov., Joint Army-Navy Specification JAN-F-35; 1944. Film; Photographic, Cut-Sheet and Pack.

U. S. Gov., Joint Army-Navy Specification JAN-F-36; 1944. Film; Photographic, Photomechanical.

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-189; 1942. Reel; Film, 35-Mm. Motion Picture.

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-190A; 1943. Reel; Film, 16-Mm. Motion Picture.

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-203; 1942. Film; Photographic.

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-258; 1943. Clip; Photographic Film.

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-284; 1943. Spool; Roll, Film, Storage, 9 1/2-In.

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-290; 1943. Leader; Film, Motion-Picture, Film Processing Machine.

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-296; 1943. Plate; Photographic, Lantern Slide, in three Degrees of Contrast.

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-336; 1943. Film; Direct Copy Photographic.

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-340; 1943. Film; Transparency, Photographic.

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-362; 1944. Film; Direct Positive Sensitized, Dry Processing.

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-364; 1944. Film, Filters, and Chemicals (for Reversal, Ground Color Photography).

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-373; 1944. Plates; Photographic Ferrotype (Size 22 by 26 In., Chrome Plated).

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-386; 1944. Reel; 35-Mm. Film Storage (100-Ft. Capacity).

U. S. Gov., U. S. Army, Signal Corps. Specification 75-57; 1941. Sound Motion Picture Prints.

*References.*—Shipping containers for film, *see* 954.21, 958.3; storage of motion picture film, *see* 518.50; cellulose acetate and cellulose nitrate products, *see* 846.5; lantern slides, *see* 482.

## 911.3 PHOTOGRAPHIC PAPER

Optical Society of America. American Standards Assn., Z38.1.4-1942. Dimensions of Photographic Paper. For leaders for sensitized photographic paper rolls (where leaders are required). Refers to those commonly used for light protective purposes where the length of the leader has no particular bearing on the operation of an exposing machine. Covers geophysical recording roll leaders, photocopy roll leaders, and limit signals for geophysical recording rolls.

Optical Society of America. American Standards Assn., Z 38.1.5-1943. Dimensions of Photographic Papers (Inch Width Rolls). Gives requirements for width, length, allowance for splices, and method of measuring.

Optical Society of America. American Standards Assn., Z 38.1.6-1943. Dimensions of Photographic Papers (Centimeter Size Sheets and Rolls). Gives requirements for nominal size, tolerance, and method of measuring cut sheets and for nominal width, tolerance, length of rolls, allowance for splices, and method of measuring rolls.

Optical Society of America, sponsor. American Standards Assn., Z 38.1.7-1943 to Z 38.1.15-1943, inclusive. Dimensions for Amateur Roll Film, Backing Paper, and Film Spools. Gives diagram and dimensions for amateur roll film and backing paper—numbers 1 to 9, inclusive.

Society of Motion-Picture Engineers, sponsor. American Standards Assn., Z38.1.44-1944. Designation for Thickness of Photographic Paper. Gives table showing weight designation and thickness.

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-157B; 1943. Paper; Photographic.

U. S. Gov., U. S. Army, Signal Corps. Specification 75-6; 1923. Paper; Bromide, PMC No. 5, 36-In., 50-Yd. Roll.

*References.*—Standard sizes of photographic paper, *see* 478.34; photographic blotting paper, *see* 471.1.

## 911.4 PHOTOGRAPHIC APPARATUS

American Standards Assn., Z52.35-1944. Photographing Aperture of 35-Mm. Motion Picture Cameras (American War Standard). Gives drawing and table showing dimensions.

Optical Society of America. American Standards Assn., Standards Assn., Z38.4.3-1942. Distance Scales Marked in Feet. Covers requirements for distance scales marking or the focusing scale, and within the limits of the range or form of the camera and lens the distance markings shall be indicated in feet selected from those given.

Optical Society of America. American Standards Assn., Z38.4.5-1942. Shutter Cable Release Tip and Socket with Taper Thread. Diagrammatical dimensional drawing.

Optical Society of America. American Standards Assn., Z38.4.6-1942. Shutter Cable Release Tip and Socket With Straight Thread. Diagrammatical dimensional drawing.

U. S. Gov., Army Air Forces Specification No. 31376; 1944. Control; Camera Intervalometer, Type F-1, Bombardment Aircraft.

U. S. Gov., Army-Navy Aeronautical Specification AN-I-25; 1944. Intervalometers; Camera.

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-53B; 1943. Filter; Photographic, for Aircraft Cameras.

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-78; 1940. Magazine; Aircraft, Camera, Type B-1.

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-126B; 1942. Magazine; Camera, Type A-5A, Aircraft.

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-188-A; 1942. Intervalometer; Camera, Type B-3B (Aircraft).

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-195A; 1943. Computer; Type F-2, Time Interval, Photographic.

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-211; 1942. Intervalometer; Camera, Type B-4, Aircraft.

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-242; 1943. Cover; Camera, Electrically Heated, General Specification for.

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-261; 1943. Intervalometer; Camera, Type B-7, Aircraft.

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-265; 1943. Timer; Photographic, Interval.

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-269; 1943. Timer; Photographic, Continuous.

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-275; 1943. Director; Pilot, Type C-1, Solar Photographic.

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-281; 1943. Unit; Filter, Photographic, Ground Camera.

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-342; 1943. Cover; Camera, Type B-2 (Electrically Heated—Type K-19 Series Cameras).

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-343; 1943. Cover; Camera, Type B-4 (Electrically Heated—Types K-17 and K-17B Cameras With 6-In. Lens Cone).

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-345; 1943. Cover; Camera, Type B-6 (Electrically Heated—Types K-17 and K-17B Cameras With 24-In. Lens Cones).

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-346; 1943. Cover; Camera, Type B-5 (Electrically Heated—Types K-17 and K-17B Cameras With 12-In. Lens Cones).

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-354; 1944. Filters; Photographic, Vignetting Correction, 6-In., F/6.3 Lens.

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-355; 1944. Magazine; Aircraft Camera, Type A-9, 9 by 9-In. Capacity.

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-363; 1944. Erector; Assembly, "AN" Gun Camera.

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-367; 1944. Filters; Photographic, for Ground Cameras.

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-421; 1944. Filter Unit; Type A-9 (for 24-In. F/6 Lens), Types K-17 and K-18 Cameras.

U. S. Gov., U. S. Army, Signal Corps. Specification 75-41B; 1942. Meter; Exposure PH-77-C for Still Photography.

U. S. Gov., U. S. Army, Signal Corps. Specification 75-77A; 1941. Exposure Meter PH-252-( ), for Use With Motion Picture Cameras.

## 911.5 CAMERA MOUNTS

Optical Society of America. American Standards Assn., Z38.4.1-1942. Cameras (Tripod Connections for American Cameras). Diagrammatical dimensional drawings showing camera socket, spacer, and tripod screw.

Optical Society of America. American Standards Assn., Z38.4.2-1942. Cameras (Tripod Connections for European Cameras With Adapter for American Tripods). Diagrammatical dimensional drawings showing camera, adapter, and tripod screw.

U. S. Gov., Army Air Forces. Specification No. 24883; 1943. Mount; Gun Camera, Type B-1.

U. S. Gov., Army Air Forces. Specification 24959-1; 1944. Mount; Gun Camera, Type C-1.

U. S. Gov., Army Air Forces. Specification No. 31389; 1944. Mount; Vertical Camera, Type A-27A.

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-37B; 1944. Mount; Vertical Camera, General Specification for.

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-137-A; 1944. Mount; Camera, Type A-6.

U. S. Gov., U. S. Army, Army Air Corps. Specification 75-181B; 1944. Mount; Vertical Camera, Type A-11A.

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-245-B; 1944. Mount; Vertical Camera, Type A-17A.

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-349; 1943. Mount; Camera, Type A-23.

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-462; 1944. Mount; Automatically Stabilized Vertical Camera, Type A-15B.

## 911.6 PHOTOGRAPHIC LENSES

Optical Society of America. American Standards Assn., Z38.4.4-1942. Focal Lengths of Lenses, Marking. Focal length of lenses marked on the lens mounts shall be in either mm. (millimeters) or cm. (centimeters).

Optical Society of America. American Standards Assn., Z38.4.7-1943. Lens Aperture Markings. Covers symbol for relative aperture of lens, measured diameter of the maximum aperture as seen from the front of the lens, standard series of diaphragm marking, and maximum relative aperture marked on a lens.

Society of Motion Picture Engineers, sponsor. American Standards Assn., Z38.4.10-1944. Dimensions of Front Lens Mounts for Cameras. Gives table showing preferred standard diameters, secondary standard diameters, and tolerances.

U. S. Gov., Army Air Forces. Specification No. 31374; 1944. Lens; Photographic, 48 In. F/6.3 Telephoto.

U. S. Gov., Army Air Forces. Specification No. 31386; 1945. Posts; Lens Focusing, for Aerial Cameras.

U. S. Gov., Navy Dept. Specification 18 G 7; 1943. Glass Surfaces; Optical, Treatment of.

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-50; 1939. Filter Unit; Lens, Type A-4, for Type K-7C Aircraft Camera.

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-93; 1940. Filter Unit; Lens, Type A-6, for Type K-18 Aircraft Camera.

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-95; 1941. Filter Unit; Lens, Type A-5, for Type K-17, Aircraft Camera.

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-144D; 1944. Lens Cone; Aircraft Camera 6, 12, and 24-In. (K-17 Camera Series).

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-145A; 1943. Lens; Photographic, 24-In., F/6.0.

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-146-B; 1945. Lens; Photographic, 6-In., F/6.3.

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-184; 1941. Lens; Photographic, 12-In., F/5.0.

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-149; 1941. Lens; Photographic, 8 1/4-In., F/5.

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-154; 1941. Lens Cone; Aircraft Camera, Type K-3B.

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-184; 1942. Shutter and Lens Assembly; 30-Cm., F/4.5 Lens.

U. S. Gov., U. S. Army, Army Air Corps. Specification 75-196; 1942. Lens; Photographic, 12-In., F/2.5.

U. S. Gov., U. S. Army, Army Air Corps. Specification 75-197; 1942. Lens; Photographic, 7-In., F/2.5.

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-212; 1942. Lens; Photographic, 6 3/8-In., F/4.5.

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-213; 1942. Lens; Photographic, 13 1/2-In., F/3.5.

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-214; 1942. Lens; Photographic, 20-In., Telephoto.

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-216; 1942. Lens; Photographic, 40-In., Telephoto.

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-217; 1942. Lens; Photographic, 3 1/4-In., F/5.5.

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-222-A; 1944. Lens Cone; 6, 12, 24, 40, and 48-In. (for Type K-22 Camera).

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-230; 1943. Lens Cone; Aircraft Camera, 7, 12, and 20-In., for Type K-24 Cameras.

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-232; 1943. Control; Diaphragm Actuating, Type A-1, 6-In., F/6.3 Lens Cone.

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-233; 1943. Control; Diaphragm Actuating, Type A-3, 24-In., F/6.0 Lens Cone.

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-236; 1943. Control; Diaphragm Actuating, Type A-2, 12-In., F/5.0 Lens Cone.

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-240; 1943. Lens Cone; Aircraft, Camera, 6 3/8-In., for Type K-24 Camera.

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-248; 1943. Lens Assembly (Gun Camera, 35-Mm. Lens, F/3.5 Aperture—90 Degree Erecting System).

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-273; 1943. Shutter and Lens Assembly; 12-In., F/7.0 Lens.

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-278; 1943. Shutter and Lens Assembly; 6 1/4-In., F/9.5 Lens.

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-289; 1943. Lens; Photographic, Charting and Reconnaissance, 12-In., F/6.3.

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-352-A; 1944. Lens; Photographic, 40-In., F/5 Telephoto.

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-361; 1944. Lens Assembly; "AN" Gun Camera, 16-Mm., 25-Mm., E.F.L. Lens F/3.5 Aperture.

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-370; 1944. Lens; Photographic, 40-In., F/5.6 Telephoto.

U. S. Gov., U. S. Army, Signal Corps. Specification 75-150B; 1944. Lenses; Photographic, General Specification for.

## 911.9 MISCELLANEOUS PHOTOGRAPHIC GOODS

American Standards Assn., Z52.21-1944. Acceptance of Photographic Exposure Meters (Reflected-Light, Photoelectric Type) (American War Standard). Gives definition of acceptance, minimum acceptance, and determination of acceptance.

American Standards Assn., Z52.22-1944. Calibration of Photographic Exposure Meters (Reflected-Light, Photoelectric Type) (American War Standard). Gives calibration and uniformity of screen brightness.

American Standards Assn., Z52.30-1944. Abuse-Testing Mechanism for Photographic Exposure Meters (American War Standard). Gives scope and purpose, general design, theory of operation, use, construction, mounting and care of mechanism, and drawings.

Society of Motion Picture Engineers, sponsor. American Standards Assn., Z38.7.10-1944. Specifications for Contact Printers. Gives scope and purpose, size accommodation, aperture angles, illumination, contact, and temperature.

Society of Motion Picture Engineers, sponsor. American Standards Assn., Z38.7.11-1944. Specifications for Printing Frames. Gives size accommodation, aperture angles, and contact.

Society of Motion Picture Engineers, sponsor. American Standards Assn., Z38.7.12-1944. Specifications for Masks (Separate) for Use in Photographic Contact Printing. Gives aperture angles, light control, size, and thickness.

U. S. Gov., Army Air Forces. Specification No. 17005; 1937. Mount; Photographic.

U. S. Gov., Army Air Forces. Specification 24767 (1); 1943. Recorder; Film Identification (for Use With Type A-4 Aircraft Cameras).

U. S. Gov., Army Air Forces. Specification 24792; 1942. Equipment; Torpedo Training, Camera Assessing.

U. S. Gov., Army Air Forces. Specification 24885 (2); 1944. Kit; Film Assessing, Type W-1.

U. S. Gov., Army Air Forces. Specification No. 24900; 1944. Pictures; Three Dimension (Stereoscopic).

U. S. Gov., Army Air Forces. Specification 24906A; 1944. Photoplate; Bombing Trainer.

U. S. Gov., Army Air Forces. Specification 24952-A; 1945. Kit; Film Assessing, Type W-2.

U. S. Gov., Army Air Forces. Specification 31012-B; 1943. Background; Studio, Portable.

U. S. Gov., Army Air Forces. Specification No. 31167; 1941. Mask; Border, Photographic (for Type A-1A Contact Printer).

U. S. Gov., Army Air Forces. Specification No. 31205; 1942. Developer and Dryer; Continuous Duty; Type L-1 (Photo Paper).

U. S. Gov., Army Air Forces. Specification No. 31206; 1942. Developer and Dryer; Photographic Film, Type M-1 (Continuous Duty).

U. S. Gov., Army Air Forces. Specification No. 31268; 1942. Dryer; Film, Type A9 (Collapsible, 35-Mm. Film).

U. S. Gov., Army Air Forces. Specification 31283-1; 1944. Printer; Continuous Contact, Type C-1, Photographic.

U. S. Gov., Army Air Forces. Specification 31324-A; 1944. Timer; Photographic, Type C-1A (Automatic Interval).

U. S. Gov., Army Air Forces. Specification 31342-A; 1944. Machine; Photographic Negative Identification Stamping, Type A-3.

U. S. Gov., Army Air Forces. Specification 31350-1; 1944. Kit; Photographic Processing, Type N-3, Negative Marking.

U. S. Gov., Army Air Forces. Specification 31352-2; 1944. Kit; Darkroom Photographic, Type U-2, Portable by Air.

U. S. Gov., Army Air Forces. Specification No. 31361; 1944. Powders; Bleaching and Clearing, Film Reversal (for Photographic Use).

U. S. Gov., Army Air Forces. Specification No. 31363; 1944. Viewer; Continuous-Strip Stereo (Prints and Transparencies).

U. S. Gov., Army Air Forces. Specification 31365-1; 1945. Kit; Field Processing, Type N-6, Print Washing—Photographic.

U. S. Gov., Army Air Forces. Specification, 31367-1; 1945. Kit; Photographic Processing, Type N-8 (Contact Printing).

U. S. Gov., Army Air Forces. Specification 31368-1; 1944. Kit; Photographic Processing, Type N-9, Refrigerated Water Bath.

U. S. Gov., Army Air Forces. Specification No. 31375; 1944. Binder; Slide 2- by 2-In. (35-Mm. Film).

U. S. Gov., Army Air Forces. Specification No. 31379; 1944. Easel; Photographic Roll Paper.

U. S. Gov., Army Air Forces. Specification No. 31381; 1944. Dryer; Film, Type A-12, for Collapsible Motion Picture Film.

U. S. Gov., Army Air Forces. Specification No. 31382; 1944. Splicer; Positive Film, for 35-Mm. Motion Picture Film.

U. S. Gov., Army Air Forces. Specification No. 31385; 1945. Developer; Test-Strip Film, Type N-1 (35-Mm. Motion Picture).

U. S. Gov., Army Air Forces. Specification 31388-1; 1945. Developer; Film, Type K-3 (Photographic).

U. S. Gov., Federal Specification RR-T-646; 1933. Amendment 1; 1944. Trays; Photographic, Enameled. Covers one grade. Gives requirements for material, workmanship, dimensions, tolerances, and details; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Joint Army-Navy Specification JAN-P-55; 1944. Prints; Release, Motion Picture, 16-Mm. American Standards Assn., Z52.3-1944.

U. S. Gov., Joint Army-Navy Specification JAN-M-58; 1944. Meters; Photographic Exposure (Reflected Light, Photoelectric Type).

U. S. Gov., Treasury Dept., Procurement Div., 599a; 1944. Opaquing-Compound; Photographic-Negatives. Covers type I—liquid and type II—paste. Intended for the correction of photographic negatives. Gives requirements for consistency and working properties, opaquing, drying, dilution, stability on standing, stability to evaporation, and stability to heat; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Treasury Dept., Procurement Div., No. 631; 1943. Paraformaldehyde; Technical Grade. Shall be in one type and one grade in powdered form free from hard lumps and foreign particles. Intended for use in photographic processes. Gives requirements for paraformaldehyde content, ash, acidity, solubility, and particle size; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., Treasury Dept., Procurement Div., No. 633; 1943. Developer; Photographic, X-Ray Film, Powder. Shall be one type and one grade in powder or crystalline form consisting of a developer proper and of a separate reducing agent. Intended for use in the developing of standard medical X-ray film. Gives requirements for solubility and developing properties; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., Treasury Dept., Procurement Div., No. 658; 1944. Collodion; Plain (for Wet Plate Photography). Covers one type and one grade of clear liquid. Gives requirements for appearance, color, nonvolatile matter, drying time, viscosity, and dilution test; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Treasury Dept., Procurement Div., No. 667; 1944. Thinner; Collodion (for Wet Plate Photography). Covers one type and one grade. Gives requirements for color, specific gravity, distillation range, nonvolatile matter, odor, and spot test; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Treasury Dept., Procurement Div., No. 669; 1944. Fixer; Photographic, X-Ray Film, Powder. Covers one type and one grade in powder or crystalline form consisting of a unit made up of a fixer and of a separate hardener. Gives requirements for solubility, fixing properties, hardening properties, sulfurization life at 120° F., and developer capacity; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Treasury Dept., Procurement Div., 676a; 1944. Fixer; Photocopying-Machines, Powder. Covers one type and one grade in powder or crystalline form. Gives requirements for solubility, fixing properties, hardening properties, sulfurization life, and developer capacity; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Treasury Dept., Procurement Div., 679a; 1944. Developer; Photocopying-Machines, Powder. Covers one grade and two types—(I) daylight development and (II) dark development. Shall be in powder or crystalline form consisting of developer proper and a reducing agent. Gives requirements for solubility and developing properties; methods of sampling, inspection, and tests; packaging, packing, and marking for shipment.

U. S. Gov., Treasury Dept. Procurement Div., No. 693; 1944. Adhesive Coating; Temporary, Ready-Mixed (for Use With Photographic Film). Covers one grade and two types—(I) clear and (II) translucent (matte). Gives requirements for nonvolatile content, viscosity, set to touch, accelerated aging, performance, and settling test; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Treasury Dept., Procurement Div., No. 707; 1944. Fixer; Photographic (Film, Liquid, High-Speed). Covers one type and one grade of a liquid form consisting of a fixer and separate hardener. Gives requirements for miscibility, fixing properties, hardening properties, sulfurization life at 120° F., and developer capacity; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-30A; 1930. Table; Film, Plotting, Type A-1, and Packing Case.

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-31; 1930. Printer; Type A-2.

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-33; 1930. Printer, Photographic, Type A-1A.

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-34; 1930. Printer; Projection, Type B-3, Resistutional.

U. S. Gov., U. S. Army, Army Air Forces. Specification 91-61B; 1940. Laboratory; Photographic, Portable, Type A-1A.

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-64; 1940. Straightener; Photographic Print, Type A-2.

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-66; 1940. Dryer; Aerial Roll Film; Type A-3.

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-69A; 1943. Washer; Photographic Print, Type A-1A.

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-71; 1940. Wringer; Print, Photographic, Motor Driven, Type A-1.

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-96; 1941. Holder; Photographic, Film and Paper, Type A-1.

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-98; 1941. Album; Photoprint, Type A-2.

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-99; 1941. Washer; Print, Type A-3, Photographic.

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-127; 1941. Album; Photoprint, Type A-1.

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-130; 1941. Printer; Contact, Type A-7.

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-131; 1941. Dryer; Photoprint, Type B-4A.

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-132; 1941. Indicator; Mosaic-Map Control Point, Type A-1.

U. S. Gov., U. S. Army, Army Air Corps. Specification 75-136A; 1944. Printer; Contact, Type A-8 (Portable).

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-138-A; 1943. Table; Film Plotting, Type A-2A.

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-139; 1941. Dryer; Photographic Print, Type B-7.

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-140; 1941. Press; Photographic, Dry Mounting, Type A-1.

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-142A; 1944. Developer; Film, Type E-3, Photographic.

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-143; 1941. Developer; Film, Type B-4, Portable.

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-147; 1941. Dryer; Aerial, Roll Film, Type A-5.

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-151; 1941. Straightener; Photographic Print, Type A-1a;

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-155; 1941. Dryer; Film, Photographic, Type A-6.

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-156; 1941. Laboratory; Photographic, Type A-2, Portable.

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-200; 1942. Developer; Film, Type B-5, Portable.

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-201; 1942. Washer; Photographic Print, Type A-2A.

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-205; 1943. Developer; Film, Type K-1a, Photographic.

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-219A; 1943. Printer; Contact, Type A-11.

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-220; 1942. Kit; Interperter's Photo, Type F-2.

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-224; 1943. Kit; Interpreter's Photo, Type F-1.

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-226; 1943. Laboratory; Photographic, Type F-1, Portable by Air.

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-228; 1943. Dryer; Photographic, Print, Type B-8.

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-235; 1943. Switch; Selector, Diaphragm, Actuating, Type A-1, Manually Operated.

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-237; 1943. Printer; Projection, Automatic, Type B-12, Photographic.

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-244; 1943. Developer; Film, Type G-3, 16- and 35-Mm. Film.

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-247; 1943. Dryer; Aerial Roll Film, Type A-10.

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-249; 1943. Laboratory; Portable, Type F-3, Portable by Air.

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-252; 1943. Washer; Print, Type A-4, Photographic.

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-253; 1943. Printer; Contact, Type A-10.

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-254A; 1944. Safelight; Plastic, Photographic.

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-255; 1943. Laboratory; Photographic, Demountable, Type E-2.

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-256; 1943. Editor; Film, 16-Mm., Motion Picture.

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-257; 1943. Safelight; Photographic.

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-259; 1943. Dryer; Film, Photographic, Type A-8, 16-Mm., Manually Operated.

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-262; 1943. Hangar; Photographic, Film Processing.

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-263; 1943. Dryer; Aerial Roll Film, Type A-7.

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-266; 1943. Album; Photographic, Type A-3, Loose-Leaf.

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-274; 1943. Plate; Ferrotype, for Photographic Use.

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-276; 1943. Trimmer; Photographic Print, Wood.

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-292; 1943. Holder; Cut Film, 8 by 10 In.

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-293; 1943. Holder; Cut Film, 4 by 5 In.

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-347; 1943. Developer; Roll Film, Type D-3 Portable, Quick Work.

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-348; 1943. Printer; Contact, Type C-3 (Continuous).

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-351; 1943. Finder; Height, Type C-1, Photo Interpreter's.

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-353; 1944. Trimmer; Paper and Photographic Print.

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-358; 1944. Kit; Photographic Copying and Enlarging, Type P-1, Airborne.

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-359; 1944. Splicer; Aerial Roll Film, Type A-1.

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-365; 1944. Trimmer; Photographic Print, Type A-2, Hand Operated.

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-368; 1944. Easel; Photographic Retouching, 8 by 10 Negative.

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-369; 1944. Kit; Photographic Darkroom, Type U-1, Portable by Air.

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-371; 1944. Dryer; Photographic Glossy Print, Type B-10.

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-381; 1944. Pack; Portable Photographic Power.

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-383; 1944. Kit; Photographic Processing and Printing, Type N-2.

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-389; 1944. Kit; Photographic, Water Supply, Type O-2.

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-420; 1944. Kit; Photographic, Water Supply, Type O-1.

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-463; 1944. Medium; Transparent, Photographic.

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-464; 1944. Medium; Photographic Masking, Red Cellulose Nitrate Base.

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-465; 1944. Dryer; Photographic Print, Type B-11.

U. S. Gov., U. S. Army, Medical Dept. Specification 4-1042B-1944. Powder; Developer, X-Ray.

U. S. Gov., U. S. Army, Medical Dept. Specification 4-1043B; 1944. Powder; Fixer, X-Ray.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2700; 1939. Chimney, for Dark Room.

U. S. Gov., U. S. Army, Signal Corps. Specification 75-3; 1923. Timer; Type PH-29, Photographic.

U. S. Gov., U. S. Army, Signal Corps. Specification 75-5; 1923. Celluloid; Ruby, 5 by 7 In. Sheet, Dark Room.

U. S. Gov., U. S. Army, Signal Corps. Specification 75-27; 1928. Rack; Developing, for Motion Picture Films.

U. S. Gov., U. S. Army, Signal Corps. Specification 75-36B; 1938. Projector Equipment, Type PH-40; Developing Equipment, Type PH-41; Drying Rack, Type PH-42.

U. S. Gov., U. S. Army, Signal Corps. Specification 75-44-A; 1940. Motion Picture Film Developing Machine.

U. S. Gov., U. S. Army, Signal Corps. Specification 75-47B; 1939. Emulsion; Light Sensitive, for Motion Picture Film.

U. S. Gov., U. S. Army, Signal Corps. Specification 75-48; 1939. Printer; Motion Picture.

U. S. Gov., U. S. Army, Signal Corps. Specification 75-49; 1939. Printer; Reduction, Motion Picture.

U. S. Gov., U. S. Army, Signal Corps. Specification 75-67; 1941. Sound Recorder for Motion Picture Film.

U. S. Gov., U. S. Army, Signal Corps. Specification 75-81; 1941. Time Interval Device, Type PH-103.

U. S. Gov., U. S. Army, Signal Corps. Specification 75-82; 1942. Film Viewer, PH-97-( ).

U. S. Gov., U. S. Army, Signal Corps. Specification 75-105A; 1944. Bag BG-140 and Associated Equipment (Lightproof Operating).

U. S. Gov., U. S. Army, Signal Corps. Specification 75-186; 1942. Recorder PH-271; Sound Motion Picture.

U. S. Gov., Veterans Administration, Medical and Hospital Supply Section, VA-H-21c; 1942. Developing Powder.

## 912. PROJECTION APPARATUS

American Society of Mechanical Engineers. American Standards Assn., Z 15.1-1932. Engineering and Scientific Charts for Lantern Slides. A valuable set of rules for drawing the original charts and for their reproduction as lantern slides. Standard also specifies types and sizes of lettering, different line widths, and sizes of symbols commonly used in graphs. An appendix contains a table of commercial lettering templates and lettering pens with which charts may be easily reproduced in the manner recommended.

American Standards Assn., Z52.4-1944. Method of Determining Freedom From Travel Ghost in 16-Mm. Sound Motion Picture Projectors (American War Standard). Gives scope and purpose, definition, test film, test method, and figure showing typical test pattern.

American Standards Assn., Z52.5-1944. Method of Determining Resolving Power of 16-Mm. Motion Picture Projector Lenses (American War Standard). Gives scope and purpose, test method, test projector, test object, and figures showing resolution test patterns, resolving power test object, and identification of test patterns in frame area.

American Standards Assn., Z52.6-1944. Method of Determining Picture Unsteadiness of 16-Mm. Sound Motion Picture Projectors (American War Standard). Gives scope and purpose, test film, test method, and expression of picture unsteadiness.

American Standards Assn., Z52.7-1944. Method of Determining Uniformity of Scanning Beam Illumination of 16-Mm. Sound Motion Picture Projectors (American War Standard). Gives scope and purpose, test method, and test films.

American Standards Assn., Z52.37-1944. Picture Projection Aperture of 35-Mm. Motion Picture Projectors (American War Standard). Gives drawing and table showing dimensions.

National Board of Fire Underwriters. National Electrical Code, 1940. American Standards Assn., C1-1940. Motion Picture Projectors and Equipment. Requirements on inclosure of live parts, grounding, thickness of metal in arc light housing, minimum wire sizes, general construction of film magazines and automatic shutters, requirements for fireproof projector room, sizes of vent pipes and fans, storage and rewinding of films.

Optical Society of America. American Standards Assn., Z 38.7.5-1943. Methods of Testing Printing and Projection Equipment. Covers test for uniformity of contact between negative and positive in printing equipment, measurement of film or slide temperature, and measurement of the uniformity of illumination of the screen.

Optical Society of America, sponsor. American Standards Assn., Z38.7.9-1944. Proposed American Standard Specifications for Microfilm Readers. A microfilm reader is defined as a projection device for showing a readable image of a microfilm. Covers dimensions, lens, magnification, illumination, temperature, reels, and sprockets.

Society of Motion Picture Engineers. Recommended Procedure and Equipment Specifications for Educational 16-Mm. Projection, 1941. This is a report of the committee on nontechnical equipment and is in three parts: Part I is a general discussion of the problems that enter into the selection and use of 16-Mm. motion picture equipment for educational institutions. It includes recommendations for such comparative tests of equipment as can properly be made without testing laboratory facilities. Part II is a report on the optical characteristics of the screens available at the present time for nontheatrical projection. Part III consists of a set of detailed technical specifications defining acceptable performance of 16-Mm. projection equipment for educational uses. The character of these specifications is necessarily such that they can be interpreted and applied only by a fully equipped testing laboratory.

Society of Motion Picture Engineers, sponsor. American Standards Assn., Z22.4-1941. 35-Mm. Motion Picture Film, Projector Reels. Dimensional standards.

Society of Motion Picture Engineers, sponsor. American Standards Assn., Z22.6-1941. 16-Mm. Motion Picture Film, Projector Sprockets. Dimensional standards.

Society of Motion Picture Engineers, sponsor. American Standards Assn., Z22.8-1941. 16-Mm. Silent Motion Picture Film, Projector Aperture. Dimensional standards.

Society of Motion Picture Engineers, sponsor. American Standards Assn., Z22.10-1941. 16-Mm. Silent Motion Picture Film, Emulsion Position in Projector—Positive (for Direct Front Projection).

Society of Motion Picture Engineers, sponsor. American Standards Assn., Z22.11-1941. 16-Mm. Motion Picture Film, Projection Reels. Dimensional standards

Society of Motion Picture Engineers, sponsor. American Standards Assn., Z22.18-1941. 8-Mm. Motion Picture Film, 8-tooth Projector Sprockets. Dimensional standards.

Society of Motion Picture Engineers, sponsor. American Standards Assn., Z22.20-1941. 8-Mm. Silent Motion Picture Film, Projector Aperture. Dimensional standards.

Society of Motion Picture Engineers, sponsor. American Standards Assn., Z22.22-1941. 8-Mm. Silent Motion Picture Film, Emulsion Position in Projector—Positive (for Direct Front Projection).

Society of Motion Picture Engineers, sponsor. American Standards Assn., Z22.23-1941. 8-Mm. Silent Motion Picture Film, Projection Reels. Dimensional standards.

Society of Motion Picture Engineers, sponsor. American Standards Assn., Z22.29-1941. Recommended Practice for Motion Picture Theater Projection Screens. Recommended sizes.

Society of Motion Picture Engineers, sponsor. American Standards Assn., Z22.30-1941. Recommended Practice for Motion Picture Engineering Nomenclature. Teeth in Contact.

Society of Motion Picture Engineers, sponsor. American Standards Assn., Z22.39-1944. Screen Brightness for 35-Mm. Motion Pictures. Gives requirement for brightness at center of screen when the projector is running with no film in the gate.

Society of Motion Picture Engineers, sponsor. American Standards Assn., Z38.7.4-1944. Specifications for Projectors for Opaque Materials for Use in Small Auditoriums. Gives size of aperture, focusing, lens, illumination, and temperature.

Society of Motion Picture Engineers, sponsor. American Standards Assn., Z38.7.13-1944. Dimensions for Lantern Slides. Gives size, thickness, projection portion, thumb mark, and other holders for standard lantern slides and standard miniature lantern slides.

Society of Motion Picture Engineers, sponsor. American Standards Assn., Z38.7.14-1944. Specifications for Lantern Slide Projectors. Gives uniformity of screen illumination, lenses, stray light, and slide temperature.

Society of Motion Picture Engineers, sponsor. American Standards Assn., Z22.35-1941. 35-Mm. Motion Picture Film, 16-Tooth Projector Sprockets. Dimensional standards.

U. S. Gov., Army Air Forces. Specification—24923 (1); 1944. Scoring Device (for Type E-14 Aerial Gunnery Trainer).

U. S. Gov., Army Air Forces. Specification 31006-D; 1943. Screen; Projection, Type A-2 (Beaded).

U. S. Gov., Army Air Forces. Specification 31158 (1); 1941. Screen; Portable Projection (Photographic).

U. S. Gov., Army Air Forces. Specification 31296; 1943. Screen; Projection, Type A-3 (3-Dimension Stereoscopic).

U. S. Gov., Army Air Forces. Specification 31343-1; 1943. Projector; 35-Mm. Slide Film, Type O-4 (Draft and Rate Bombing Trainer).

U. S. Gov., Army Air Forces. Specification 40726(2); 1944. Trainer; Map Projection, Type O-51 (Globe).

U. S. Gov., Army Air Forces. Specification 40865-2; 1945. Trainer; General Purpose, Type R-2, Opaque Objects.

U. S. Gov., Army Air Forces. Specification No.40890; 1944. Trainer; General Purpose, Type R-1 (Stereoscopic Viewer).

U. S. Gov., Federal Specification G-M-111; 1931. Mats; Lantern Slide. Covers on grade. Gives requirements for quality, size, openings, manufacture, stock, thickness, opacity, finish, and printing; method of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Joint Army-Navy Specification JAN-P-1944. Projection Equipment; Sound Motion Picture, 16-Mm., Class I.

U. S. Gov., Navy Dept. Specification 17M18a; 1944. Machine and Equipment; Sound Motion Pictures (35-Mm.), for shipboard use.

U. S. Gov., Navy Dept. Specification 17M19a; 1944. Machines and Equipment; Sound Motion Picture, 35-Mm.

U. S. Gov., Navy Dept. Specification 17 M 20; 1943. Machines and Equipment; Sound Motion Picture, 16-Mm.

U. S. Gov., Navy Dept. Specification 17P9a; 1944. Projectors; Opaque-Object, Strip-Films, and Slides.

U. S. Gov., Treasury Dept., Procurement Div., 429C; 1943. Projectors; Motion Picture, 16-Mm., Silent and Sound. Covers three types—(I) silent film projector, (II) silent and sound film projector, and (III) sound film projector, which shall be furnished in two classes—(A) 85 db above reference sound level and (B) 90 db above reference sound level. Gives requirements for housing, projection lamp and cooling system, illumination, optical system, enclosure, motor and speed regulation, controls and carrying case; methods of inspection and tests; and packing and marking.

U. S. Gov., Treasury Dept., Procurement Div., No. 612; 1943. Projection Screens and Accessories. Shall be suitable for suspension from wall, ceiling, tripods, or other suspension device. Gives requirements for glass beaded screen, backboard, screen housing, tripods, screen suspension device, metal, wood, sizes, and cover bag; methods of sampling, inspection, and tests; and packing and marking.

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-63A; 1940. Projector; Lantern Slide, Type B-1.

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-73; 1940. Projector; Motion Picture, Sound Film, 35-Mm., Incandescent Lamp, Type A-3.

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-74; 1940. Projector; Motion Picture, Sound Film, 35-Mm., Arc Lamp, Type A-2.

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-141-A; 1944. Projector; Motion Picture, Type D-1B (16-Mm.).

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-225; 1942. Projector; 35-Mm., Type C-3, Bomb Spotting.

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-264A; 1943. Printer; projection, Type B-11.

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-267-A; 1944. Projector; Type C-2, (35-Mm., Still Film and Slide).

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-298; 1944. Background; Portable Unitary Studio.

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-299; 1944. Daylight Projection Box.

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-356; 1944. Glass; Lantern Slide Cover.

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-387; 1944. Projector; Type B-2 (Lantern Slide, Opaque Objects, and Film Strip).

U. S. Gov., U. S. Army, Signal Corps. Specification 75-36B; 1938. Projector Equipment, Type PH-40; Developing Equipment, Type PH-41; Drying Rack, Type PH-42.

U. S. Gov., U. S. Army, Signal Corps. Specification 75-45C; 1940. Motion Picture Film—Projecting Machine, 16-Mm.

U. S. Gov., U. S. Army, Signal Corps. Specification 75-79; 1942. Projection Equipment; Motion Picture, 35-Mm., Sound on Film.

U. S. Gov., U. S. Army, Signal Corps. Specification 75-83; 1942. Projector; PH-331, Motion Picture.

U. S. Gov., U. S. Army, Signal Corps. Specification 75-91; 1942. Douser; PH-357, Motion Picture Projector.

*References.*—Booths for projectors, *see* 518.54; storage of motion picture films, *see* 518.50; sound recording and reproducing equipment, *see* 718.7; testing of lenses, *see* 914.0; motion picture films, *see* 911.2; lantern slide charts, *see* 482.

## 914. OPTICAL GOODS

### 914.0 GENERAL ITEMS

American Standards Assn., Z 44-1942, War Standard Specification and Description of Color. To recognize and recommend a basic method for the specification of color, and to facilitate its popular interpretation. The spectrophotometer shall be recognized as the basic instrument in the fundamental standardization of color.

National Conservation Bureau, No. 322, Goggles Versus Glass Eyes. An article describing the value of safety goggles in preventing industrial accidents. Covers: Glass Eyes Don't See, Laying Down the Law, What, No Glamour?, Import Supply Curtailed, and Dividends Guaranteed.

### 914.1 LENSES (NOT FITTED TO INSTRUMENTS)

U. S. Gov., Army Air Forces. Specification No. 3228; 1944. Lens; Electrically Heated.

U. S. Gov., Army-Navy Aeronautical Specification AN-DD-L-236-1; 1944. Lenses; Goggle, Flying.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Commercial Standard CS78-40; 1940. Ground-and-Polished Lenses for Sun Glasses. This commercial standard covers the accuracy of grinding and polishing, as well as freedom from defects that impair serviceability of ground-and-polished sun-glass lenses of curved and flat types made entirely of glass. The lenses covered by this commercial standard are eye-protective (not eye-corrective) devices. They are not a substitute for prescription lenses but may be worn therewith. Sponsored by Sun Glass Institute.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Commercial Standard CS79-40; 1940. Blown, Drawn, and Dropped Lenses for Sun Glasses. This commercial standard covers workmanship, dimensional precision, and freedom from defects that impair serviceability of blown, drawn, and dropped sun-glass lenses. The lenses covered by this commercial standard are eye-protective (not eye-corrective) devices. They are not a substitute for prescription lenses but may be worn therewith. It covers blown-glass lenses of the micoquille type, drawn-glass lenses of the flat type, and blown or dropped lenses of the coquille type. Sponsored by Sun Glass Institute.

U. S. Gov., Treasury Dept., Procurement Div., No. 650; 1944. Magnifiers and Magnifying Glasses. Covers four types—(I) reading glasses—class A, round and class B, rectangular; (II) folding pocket magnifiers—class A, one lens, class B, two lenses, and class C, three lenses; (III) watchmaker's loupes; and (IV) linen testers. Gives requirements for glass, plastics, metal parts, workmanship, lenses, focus and magnifying power, tolerance, finish, identification, and details for each type and class; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2287A; 1944. Case; Trial Lenses.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2874A; 1944. Case; Trial Lenses. Pocket Set.

*References.*—Railway signal lenses, automobile headlamp lenses, *see* 525.3, 525.4.

## 914.2 BINOCULARS AND TELESCOPES

U. S. Gov., Dept. of Agriculture, Forest Service. Specification MSF-41. Binoculars.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-511. Binoculars; Prismatic—8 x 10, With Carrying Case.

U. S. Gov., Marine Corps Specification, revised 1943. Glass; Field, 6 x 30 Power, Independent Focus.

U. S. Gov., Marine Corps Specification, adopted 1937. Telescope.

U. S. Gov., Navy Dept. Specification 18B2c; 1934. Binoculars; Prismatic, 6 by 30 Power.

U. S. Gov., Navy Dept. Specification 18B4a; 1930. Binoculars; Prismatic, 7 by 50 Power.

U. S. Gov., Navy Dept. Specification 18T10a; 1930. Telescopes; Ship, With Stands.

U. S. Gov., Navy Dept. Specification 57L9; 1941. Loupes; Binocular (Beebe Type).

*References.*—Standard tests and methods of testing, *see* 914.0.

## 914.3 MICROSCOPES

American Hospital Assn., 43-34. Miscroscope Slides. Covers one type, one grade, and three classes.

U. S. Gov., Federal Specification GG-S-446; 1940. Admendment 1; 1942. Slides; Glass (for Microscopy). Covers four types—(I) plain, (II) concave (Microculture), (III) dark field, and (IV) frosted end. Gives requirements for dimensions, color, sizes, and thicknesses; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2050C; 1941. Microscope; Dark Field Apparatus.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2254A; 1941. Microscope; Stage, Micrometer.

## 914.4 READING GLASSES

U. S. Gov., Navy Dept. Specification 18G9; 1944. Glasses; Magnifying, Reading.

U. S. Gov., Treasury Dept., Procurement Div., No. 650; 1944. Magnifiers and Magnifying Glasses. Covers four types—(I) reading glasses—class A, round and class B, rectangular; (II) folding pocket magnifiers—class A, one lens, class B, two lenses, and class C, three lenses; (III) watchmaker's loupes; and (IV) linen testers. Gives requirements for glass, plastics, metal parts, workmanship, lenses, focus and magnifying power, tolerance, finish, identification, and details for each type and class; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2502; 1939. Magnifier; Folding.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2706; 1939. Glass; Reading, Magnifying.

*References.*—Standard tests and methods of testing, *see* 914.0.

## 914.5 EYE AND FACE SHIELDS AND GOGGLES

Industrial Safety Equipment Assn. Proposed Standard Optical Specifications for Lenses, Plates, and Covers for Industrial Eye-Protective Devices, 1942. The purpose of this specification is to guarantee satisfactory optical performance in all types of industrial eye-protective devices such as chipper's goggles, welder's goggles, welder's helmets, welder's hand-shields, etc. Covers definitions, requirements, inspection methods, and table giving shades intended for various types of work.

U. S. Gov., Army Air Forces. Specification 3200-3; 1945. Goggle; Flying, Type B-8.

U. S. Gov., Army Air Forces. Specification No. 3207; 1944. Goggles; Contrast, Type G-1.

U. S. Gov., Army-Navy Aeronautical Specification AN-C-119; 1944. Cushions; Goggle, Flying.

U. S. Gov., Army-Navy Aeronautical Specification AN-F-37; 1944. Frames; Flying Goggle.

U. S. Gov., Army-Navy Aeronautical Specification AN-G-22; 1944. Glasses; Flying Sun.

U. S. Gov., Dept. of Agriculture, Forest Service. Specification MSF-155. Goggles; Glare-Reducing.

U. S. Gov., Dept. of Agriculture. Forest Service. Specification No. 156. Goggles; Horse.

U. S. Gov., Dept. of Commerce, National Bureau of Standards, H24; 1938. American Standards Assn., Z2-1938. Standard Safety Code for the Protection of the Heads, Eyes, and Respiratory Organs. Protectors for chipping, riveting, calking; scaling, grinding; exposure to dust and wind; babbitting; handling corrosive chemicals, dipping, brush coating; exposure to glare; oxyacetylene welding, furnace work; arc welding and cutting; exposure to dust fumes, mist, smokes, or other atmospheric particulate matter; abrasive blasting; exposure to irrespirable gases and vapors; and exposures to heavy falling objects. Operating rules and tests for protectors.

U. S. Gov., Federal Specification GG-S-328; 1943. Shields; Eye, Single. Covers one type, one shape, one size, and one grade. Gives requirements for material, workmanship, shield, covering, and tying tapes; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification GGG-G-501b; 1944. Amendment 1; 1944. Goggles; Eyecup, Protective, Impact-Resisting, Chippers', Grinders', etc. Covers curved and flat lenses. Gives requirements for material, workmanship, marking of eyecups and lenses, bid samples, eyecups, lens seat, lens-retaining ring, lenses, nose bridges, and headbands; methods of

sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification GGG-G-511a; 1944. Goggles; Eyecup Protective (Welders). Gives requirements for materials, workmanship, tests, marking of eyecups and filter lenses, bid samples, eyecups, filter lens and cover lens retaining ring, filter lenses, transmissions and tolerances in transmission of various shades of glasses, cover lenses, nose bridge, and headbands; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification GGG-G-521; 1933. Amendment 1; 1935. Goggles; Rubber-Frame. Covers the single piece, flexible, rubber-frame type. Gives requirements for design and construction, goggle frame, headband, ventilation and contact, rubber compound, and lenses; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Navy Dept. Specification 37G7d; 1942. Goggles; Spectacle Type, for Protection Against Flying Particles and Chips.

U. S. Gov., Navy Dept. Specification 37G11b; 1942. Goggles; Cover.

U. S. Gov., Navy Dept. Specification 37G13; 1939. Goggles; Combustion.

U. S. Gov., Navy Dept. Specification 37G16; 1942. Goggles (Frames and Lenses), Protective (Glare and Welders').

U. S. Gov., Navy Dept. Specification 37G17; 1942. Goggles; Eyecup, Chippers'.

U. S. Gov., Navy Dept. Specification 37G18; 1943. Goggles; Variable-Density (Lookout).

U. S. Gov., Navy Dept. Specification 37M7a; 1942. Masks; Face, Wool-Felt (Special Winter Clothing).

U. S. Gov., Navy Dept. Specification 49M1; 1926. Masks; Aviators', Face, Leather.

U. S. Gov., Treasury Dept., Procurement Div., No. 620; 1943. Shields; Face, Plastic. Covers two types—(I) without crown protector and (II) with crown protector; and two styles—(A) clear transparent visor and (B) shaded transparent visor. Gives requirements for sizes, visor length, visor thickness, material, workmanship, general design, visor optical properties, visor temperature and moisture resistance, flammability, face clearance, visor construction, headgear, crown protector, weight, and finish; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2404A; 1941. Spectacles; Ultraviolet, Patients', Protective.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2407A; 1941. Goggles; Operators', for Fluoroscopy and Heliotherapy, Protective.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2608; 1939. Shade; Eye.

U. S. Gov., U. S. Army, Transportation Corps. Specification 43-12; 1929. Goggles; Railroad.

*References.*—Gas masks, *see* 993; oxygen breathing apparatus, *see* 993; methods of testing rubber goods, *see* 200; methods of analysis and standard samples of glass, *see* 520.

### 914.6 LOVIBOND GLASSES

### 914.9 MISCELLANEOUS OPTICAL GOODS

U. S. Gov., Army Air Forces. Specification No. 40882; 1944. Trainer; Demonstrator, Type Q-22, Night Vision.

U. S. Gov., Navy Dept. Specification 18S17a; 1944. Spectacles; Smoked-Glass.

U. S. Gov., U. S. Army, Army Air Forces. Specification 42-65; 1944. Stereoscope; Magnifying, Mirror, W/Binoculars and Case.

U. S. Gov., U. S. Army, Corps of Engineers. Specification 42-25; 1936. Stereoscope; Magnifying, Lens, Prism.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 51-70-4B; 1944. Films; Reflection-Reducing, for Glass Optical Elements.

*References.*—Marine sextants, *see* 916.22.

## 915. DENTAL, SURGICAL, AND MEDICINAL EQUIPMENT AND SUPPLIES

### 915.0 GENERAL ITEMS

American College of Surgeons. Manual of Hospital Standardization and Approved Lists of Hospitals, 1944. Minimum requirements as to equipment and provision of a staff, eligibility to staff, staff rules for hospital, complete records, diagnostic and therapeutic facilities.

American Medical Assn. Council on Industrial Health. Medical Service in Industry, 1941. Gives a check list of equipment for a small plant dispensary including general furnishings, instruments and supplies, and physical examination equipment.

American Medical Assn. Council on Industrial Health. Standing Orders for Nurses in Industry, 1943. Gives a list of furnishings and supplies for nurses in industry including general furnishings, instruments and supplies, and drugs.

American Public Health Assn. The Control of Communicable Diseases, Sixth Edition, 1945. An informative text on communicable diseases. Gives definitions and gives a summary of each communicable disease including recognition of the disease, etiologic agent, source of infection, mode of transmission, incubation period, period of communicability, susceptibility and immunity, prevalence, and methods of control.

Assn. of American Railroads, Operations and Maintenance Dept., Operating-Transportation Div., Medical and Surgical Section. Circular M. and S.-216; 1939. Recommended Physical Standards for Railroad Employes. Covers regulations and requirements governing physical examinations (including sight, color sense, and hearing tests) for entrance to service, promotion, periodic and special examinations, with method of conduction.

U. S. Gov., Navy Dept. Specification 51M4b; 1941. Medicinal Products, Clinical Laboratory Reagents and Containers.

### 915.1 DENTAL EQUIPMENT AND SUPPLIES

#### 915.10 General Items

American Dental Assn. Accepted Dental Remedies, 1944. The Council on Dental Therapeutics, which is a standing committee of the American Dental Assn., was organized in January 1930. Since its founding, it has given

consideration to thousands of dental products of which approximately 600 are currently accepted and are described in this book.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R108-44; 1944. Dental Hypodermic Needles. This recommendation establishes a simplified list of stock sizes of dental hypodermic needles. Gives table showing various kinds, wire gage, length, and material.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R116-30; 1930. Dental Brush Wheels. This recommendation establishes a simplified schedule for stock varieties of dental brush wheels made of straight bristles, converging bristles, and cup-shape bristles. Sponsored by the American Dental Trade Assn.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R117-30; 1930. Packaging of Dental Plaster, Investment and Artificial Stone. This recommendation establishes a simplified schedule for packaging of dental plaster, investment and artifical stone. Sponsored by the American Dental Trade Assn.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R130-32; 1932. Dental Lathe Grinding Wheels. This recommendation establishes a simplified list of stock varieties of dental lathe grinding wheels having diameters from 1 1/2 to 3 in. Sponsored by American Dental Trade Assn.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R137-32; 1932. Dental Cone-Socket Mirrors. This recommendation establishes a simplified schedule of four diameters for cone-socket mirrors for regular stock purposes. Sponsored by the American Dental Trade Assn.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R195-42; 1942. Dental Excavating Burs. Reduces the standard bur members from approximately 75 to 18. Proposed by the Health Supplies Branch, War Production Board.

U. S. Gov., Federal Specification AA-C-326; 1934. Amendment 1; 1939. Chairs; Operating, Dental, Motorless. Covers one type and one grade. Gives requirements for base, elevator mechanism, speed regulator, rotating mechanism, operating levers, metal castings, seat and back, arm rests, head rest, foot platform and toe plate, and finish; methods of inspection, tests; and requirements for packing and marking.

## 915.11 Dental Instruments

U. S. Gov., Federal Specification GG-H-577; 1944. Holders; Nerve Broach, Dental. Covers one grade, one class, and two types—(I) four-jaw and (II) two-jaw. Gives requirements for material, workmanship, dimensions, corrosion-resistance, stamping, and physical and mechanical requirements; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification GG-I-526; 1943. Instruments; Dental and Surgical; General Specifications. Covers five grades—(1) carbon steel, (2) corrosion-resisting steel, (3) cobalt-chromium-tungsten alloy, (4) miscellaneous, and (5) unclassified. Gives detail requirements as to dimensions, style and design, construction, methods of sampling, inspection and tests, and packaging and packing.

U. S. Gov., Navy Dept. Specification 57D4; 1941. Disks; Polishing, Rubber (Impregnated), Assorted (Dental).

U. S. Gov., Navy Dept. Specification 57N7; 1944. Nozzles; Metal, for Syringe, Chip (Dental).

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2129A; 1939. Forceps; Tooth Extracting.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2130A; 1941. Scissors; Surgical and Dental.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2384A; 1941. Knife; Finishing.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2426B; 1940. Elevator; Dental.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2427; 1934. Cutter; Ligature, Dental.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2428A; 1940. Carvers; Amalgam.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2433B; 1941. Excavator; Dental.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2439A; 1940. Chisel; Dental.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2440A; 1940. Plugger; Plastic, Dental.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2450A; 1940. File; Finishing, Dental.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2455; 1938. Finisher; Vulcanite, Dental.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2457A; 1940. Curette; Dental.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2475; 1939. File, for Gold.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2476; 1939. Forceps; Rubber Dam, Punch.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2540; 1939. Burr; Dental, Surgical.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2544; 1939. Screw-Driver; Dental.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2581; 1939. Carrier; Amalgam.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2582; 1939. Dentimeter.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2583B; 1944. Explorers; Dental.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2584A; 1940. Forceps; Bone, Rongeur, Dental.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2585; 1939. Holder; Nerve Broach.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2586; 1939. Knife; Gum, Resecting.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2587A; 1940. Lancet; Dental.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2588A; 1940. Pliers; Dental, Prosthetic.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2595; 1939. Plugger; Plastic, No.39.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2596A; 1941. Scaler.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2603; 1939. Crown Remover; Simplex.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2617; 1939. Hammer; Riveting, Dental.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2619; 1939. Saw; Dental.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2630; 1939. Forceps; Crown Slitting.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2634; 1939. Separator; Elliott.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2635; 1939. Tweezer; Soldering.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2648; 1939. Blade; Float, Dental, Veterinary.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2651; 1939. Punch; Dental, Veterinary.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2656; 1939. File; Bone, Dental.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2657; 1939. Tongs; Flask and Soldering.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2664; 1939. Frame; Saw, Dental.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2677; 1939. Crown and Splint Remover.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2708; 1939. Instrument; Gum Resecting, Ward.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2769; 1939. Puller; Post, Dental.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2818A; 1940. Plugger; Root Canal.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2862A; 1940. Point; Carborundum, Mounted, for Dental Handpiece.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2868; 1939. Point; Root Canal.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2881; 1939. Forceps; Wolf-Tooth, Veterinary.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2883; 1939. Cutter, Extractor, and Universal Handle; Molar, Veterinary.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2889; 1939. Reamer, Root Canal.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2907; 1939. File; Root Canal.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2938; 1939. Burr; Dental, Excavating.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2939; 1939. Burr; Dental, Plug, Finishing and Vulcanite.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2940; 1939. Mandrels; Dental.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2951; 1939. Pick; Dental, Veterinary.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2960; 1939. Burnisher; Dental.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2961; 1939. Plugger; Amalgam.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2963; 1939. Trimmer; Vulcanite, Dental.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2968; 1940. Chisel; Osseous, Dental.

## 915.12 Dental Alloys

American Dental Assn. Specification No. 1; 1934. Dental Amalgam Alloy. Technical requirements are similar to those of U. S. Gov., Federal Specification U-A-451a, Alloy; Dental, Amalgam.

U. S. Gov., Federal Specification U-A-451a; 1937. Alloy; Dental, Amalgam. Covers two types—(A) shavings and (B) filings. Gives requirements for chemical composition, flow and setting changes; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2602; 1939. Amalgam; Copper.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2618; 1939. Metal; Fusible, Dental.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2867; 1939. Flux; Reducing, for Gold Alloys, Dental.

*References.*—Dental gold alloys, *see* 662; dental amalgam alloys, *see* 691.1.

## 915.13 Dental Rubber Goods

U. S. Gov., Navy Dept. Specification 57B23; 1941. Bands; Rubber, Ligature, Dental.

*References.*—Rubber dam, *see* 204.4.

## 915.14 Dental Films

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2740A; 1940. Carrier; Dental Films.

## 915.19 Miscellaneous Dental Supplies

American Dental Assn. Specification No. 2; 1930. Inlay Casting Investment. Technical requirements are similar to those of U. S. Gov., Federal Specification U-I-546, Investment; Casting, Inlay, Dental.

American Dental Assn. Specification No. 3; 1940. Impression Compounds. Technical requirements are similar to those of U. S. Gov., Federal Specification U-M-506, Modeling-Compound; Dental.

American Dental Assn. Specification No. 4; 1940. Inlay Casting Wax. Technical requirements are similar to those of U. S. Gov., Federal Specification U-W-141, Wax; Casting, Inlay, Dental.

American Dental Assn. Specification No. 8; 1938. Zinc Phosphate Cement. Technical requirements are similar to those of U. S. Gov., Federal Specification U-C-211, Cement; Zinc-Phosphate, Dental.

American Dental Assn. Specification No. 9; 1938. Silicate Cement. Covers material, general requirements, detail requirements, methods of inspection and test, time of setting, ultimate compressive strength, opacity, solubility and disintegration, arsenic content, and packaging.

American Dental Assn. Specification No. 11; 1940. Hydrocolloidal Impression Material. Technical requirements are similar to those of U. S. Gov., Federal Specification U-I-496, Impression-Material; Hydrocolloidal, Dental.

American Dental Assn. Specification No. 12; 1941. Acrylic Resin. Technical requirements are similar to those of U. S. Gov., Federal Specification U-D-226, Denture-Base Material, Acrylic Resin or Mixtures of Acrylic and Other Resins.

American Society for Testing Materials, C 72-40; 1940. American Standards Assn., A 65.1-1941. Calcined Gypsum for Dental Plasters. Covers three grades—(Q) quick setting, (M) medium setting, and (S) slow setting. Gives requirements for composition, time of setting, tensile strength, fineness, sampling,

laboratory samples; methods of testing, packing and marking; inspection, rejection, and rehearing.

U. S. Gov., Federal Specification U-C-205; 1943. Cement; silicate, Powder; and Accessories (Dental). Silicate cement shall be of but one type, grade, and class and of ten shades (six natural tooth shades and four blend tooth shades). Accessories shall be but one type, grade, and class. Gives requirements for workmanship, liquid, powder, testing consistency, time of setting, ultimate compressive strength, opacity, solubility and disintegration, arsenic content, accessories, shade guide, measuring device, and instruction; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification U-C-211; 1940. Cement; Zinc-Phosphate, Dental. Covers one type and grade. Gives requirements for time of setting, ultimate compressive strength, film thickness, disintegration and arsenic; methods of inspection and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Federal Specification U-D-226; 1941. Amendment 1; 1942. Denture-Base Material (Acrylic Resin or Mixtures of Acrylic and Other Resins). Covers three types—(I) powder and liquid, (II) plastic cake, and (III) powder; and two classes—(A) pink and (B) clear. Gives requirements for material, toxicity and irritation, certification, workmanship, translucency, satisfactory working qualities, porosity, color, uncured material and cured resin; methods of inspection and test; and packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification U-I-496; 1940. Impression Material; Hydro Colloidal, Dental. Covers one type, one grade, and one class. Gives requirements for material, workmanship, temperature of gel formation, and strain in compression; methods of inspection and test; and packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification U-I-456; 1940. Investment; Casting, Inlay, Dental. Covers one grade in two types—(I) medium expanding and (II) high expanding. Gives requirements for material, workmanship, setting expansion, thermal expansion, compressive strength, setting time, and fineness; methods of inspection and test; and packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification U-M-506; 1940. Modeling-Compound; Dental. Covers one grade in two types—(I) impression and (II) tray; in cakes, sticks, wafers, or cones. Gives requirements for material and workmanship, physical properties, color, and flow; methods of inspection and test; and packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification U-S-746; 1945. Stone; Artificial, Quick-Setting (Dental). Covers one type, grade, and class. Gives requirements for material, workmanship, instructions, description, fineness, time of set, compressive strength, setting expansion, and color; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification U-W-141; 1943. Wax; Casting, Inlay, Dental. Covers two types—(I) cones and (II) sticks. Gives requirements for material, workmanship, working range and thermal expansion, properties, and flow; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification DD-S-431; 1944. Slabs; Cement-Mixing, Glass, Plain, Dental. Covers one type, grade, and class. Gives requirements for material, workmanship, surfaces, edges, finish, sizes, and dimensions; method of sampling and inspection; and packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification GG-B-120; 1944. Base-Plates; Dental. Covers one type, one grade, and two classes—(A) upper form and (B) lower form. Gives requirements for material, workmanship, adaptability, cooling, transverse strength, bending, color, dimensions, and tolerances; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification GG-B-476; 1945. Blocks; Soldering, Asbestos, Dental. Covers one type and grade. Gives requirements for material, workmanship, description, dimensions, tolerance, and marking; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification GG-H-572; 1944. Holders; Mercury (Dental). Covers one type, grade, and class. Gives requirements for material, workmanship, description, internal construction, and marking; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification GG-P-106; 1941. Paper; Articulating. Covers two types—(I) blue and (II) red; and two classes—(A) sheets and (B) rolls. Gives detail requirements; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification UU-C-611; 1944. Covers; Bracket-Table, Dental, Paper. Covers one grade, one class, and two types—(I) square and (II) round. Gives requirements for material, workmanship, shapes, thickness, color, weight, bursting strength, and absorption; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification DDD-N-101; 1943. Napkins, Gauze; Sterile, Dental. Covers one type, grade, size, and color. Gives requirements for material, workmanship, cutting, size, and sterilization; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., Navy Dept. Specification 57C19; 1941. Covers; Headrest, Paper, Dental.

U. S. Gov., Navy Dept. Specification 57F7; 1941. Floss; Silk (Waxed), Dental.

U. S. Gov., Navy Dept. Specification 57M3; 1941. Mandrels; Dental, Compensating.

U. S. Gov., Navy Dept. Specification 57R1; 1940. Receptacles; Waste, Dental.

U. S. Gov., Navy Dept. Specification 57R3a; 1944. Rolls; Dental-Instrument, Canvas, Empty.

U. S. Gov., Navy Dept. Specification 57S16; 1941. Screw Posts, for Amalgam Restorations (Dental).

U. S. Gov., Navy Dept. Specification 62P3; 1941. Platinum-Foil; Dental.

U. S. Gov., Treasury Dept., Procurement Div., No.366. 1939. Plaster of Paris; Orthopedic and Impression

(Dental). Shall contain not less than 93 percent calcined gypsum, dry, and free from foreign material and partly set or caked lumps. Gives detail requirements as to fineness, setting expansion, testing consistency, compressive strength, and setting time; methods of inspection and tests; and packing and marking.

U. S. Gov., U. S. Army, Medical Dept. Specification 4-1089A; 1944. Rouge; Sticks, Dental.

U. S. Gov., U. S. Army, Medical Dept. Specification 4-1093; 1939. Gutta-percha; Dental.

U. S. Gov., U. S. Army, Medical Dept. Specification 4-1095; 1939. Moldine.

U. S. Gov., U. S. Army, Medical Dept. Specification 4-1098; 1939. Powder; Control, Dental.

U. S. Gov., U. S. Army, Medical Dept. Specification 4-1099A; 1940. Wax; Base Plate, Dental.

U. S. Gov., U. S. Army, Medical Dept. Specification 4-1100; 1939. Wax; Boxing, Dental.

U. S. Gov., U. S. Army, Medical Dept. Specification 4-1101; 1939. Wax; Casting, Dental.

U. S. Gov., U. S. Army, Medical Dept. Specification 4-1103A; 1941. Wax; Crown, Dental.

U. S. Gov., U. S. Army, Medical Dept. Specification 4-1104; 1939. Wax; Impression, Dental.

U. S. Gov., U. S. Army, Medical Dept. Specification 4-1106; 1939. Cement; Silicate, Dental.

U. S. Gov., U. S. Army, Medical Dept. Specification 4-1107; 1939. Investment Compound.

U. S. Gov., U. S. Army, Medical Dept. Specification 4-1111; 1940. Cement; Temporary, Anodyne.

U. S. Gov., U. S. Army, Medical Dept. Specification 4-1115; 1941. Wax; Casting, Inlay, Dental.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2128B; 1942. Facing and Backing Assortment; Dental.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2336A; 1941. Wheel, Brush, for Dental Laboratory Lathe.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2434B; 1942. Stone; Artificial, Dental Modeling.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2435A; 1941. Box; Viewing, for Dental Films.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2436B; 1942. Mount; Dental Film.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2468; 1939. Napkin; Dental.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2478A; 1944. Cleaners; Pulp Canal.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2479; 1939. Floss; Dental, Waxed Silk.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2480; 1939. Paste; Dental, Abrasive.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2481; 1939. Cement; Germicidal.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2505; 1939. Articular; Crown and Bridge.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2526; 1939. Anvil; Cast Base, Dental.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2538; 1939. Paste; Antiflux.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2577; 1939. Pot; White, Dental.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2580; 1939. Articulator Outfit.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2590A; 1941. Retainer; Matrix.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2591; 1939. Band; Retainer, Matrix.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2620; 1939. Tray; Metal, Dental.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2629; 1939. Clamp; Rubber Dam.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2631; 1939. Forceps; Rubber Dam, Clamp.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2632; 1939. Holder; Rubber Dam.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2633; 1939. Weight; Rubber Dam.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2674A; 1941. Tray; Impression, Dental.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2678; 1939. Wire; Dentimeter.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2679; 1939. Celluloid Strips; Dental.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2689; 1939. Speculum; Mouth, Equine.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2693; 1939. Engine; Dental, Electric, With Folding Bracket.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2694; 1939. Frame; Heating, Dental.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2695; 1939. Solder; Soft, Dental.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2709A; 1945. Pan; Pickling.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2711; 1939. Tap and Die Sets; Dental.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2722; 1939. Ladle; Melting, Dental.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2723; 1939. Roller; Gold.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2725; 1939. Swager.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2726; 1939. Teeth; Shade Guide.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2727A; 1940. Wire; Nickel Silver, Dental.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2748A; 1941. Solder; Gold.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2749; 1939. Outfit; Repair, Dental.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2765; 1939. Splasher; Dust, for Lathe; Electric, Dental.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2767A; 1944. Points; Aseptic, Absorbent.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2768A; 1940. Press; Flask, Dental.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2813; 1939. Crown; Assortment No. 10.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2814; 1939. Heater for Modeling Compound.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2815; 1939. Scale; Inlay Investment.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2816; 1939. Lamp; Alcohol, Dental.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2817; 1939. Machine; Casting, Centrifugal, Dental.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2819; 1939. Compress for Flasks; Vulcanizer, Dental.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2820; 1939. Vulcanizer, With Attachments for Gas and Kerosene, Dental.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2821A; 1940. Wheel; Cloth, Buffing, Dental.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2840A; 1940. Bowl; Rubber, for Plaster, Dental.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2841; 1939. Broach; Smooth, Dental.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2842; 1939. Mortar and Pestle; Amalgam, Dental.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2843; 1939. Polisher; Rubber Cup, Dental.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2845; 1939. Wheel; Chamois, for Dental Laboratory Lathe.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2859; 1939. Brush; Tooth Polishing, Dental.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2860; 1939. Cervical-Matrix; Dental.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2861; 1939. Cone and Wheel; Felt, for Dental Laboratory Lathe.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2865; 1939. Chair; Dental, Portable.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2869; 1939. Solder; Silver, Dental.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2870; 1939. Wheel; Flexible, Engine, Abrasive, Dental.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2878; 1939. Aspirating Unit; Dental Operating Unit.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2886; 1939. Bench; Laboratory, Dental.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2887-A; 1944. Cabinet; Dental.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2898A; 1940. Cover; Paper, Round, Dental.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2904; 1939. Disk; Carborundum, Dental.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2905; 1939. Disk; Paper, Dental.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2906; 1939. Disk; Metal, Abrasive, Dental.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2908; 1939. Wheel; Carborundum, Dental.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2913C; 1945. Trays; Impression Compound.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2917A; 1940. Strip; Polishing, Dental.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2918; 1939. Strip; Metal, Abrasive, Dental.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2936A; 1940. Wire; Ligature, Dental.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2943; 1939. Band; Copper, and Chest for, Dental.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2944; 1939. Base Plate; Dental.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2946; 1939. Handpiece; Dental Engine.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2949B; 1942. Lathe; Electric, Dental.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2950; 1939. Float; Dental, Veterinary.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2965A; 1941. Unit; Operating, Dental.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2980A; 1945. Investment; Dental.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2990; 1941. Teeth; Vulcanite.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-3015; 1944. Clasp; Loop.

U. S. Gov., Veterans Administration. Specification VA-D-4e; 1942. Dental Model Plaster.

U. S. Gov., Veterans Administration. Specification VA-D-8h; 1943. Artificial Stone; Quick Setting.

U. S. Gov., Veterans Administration. Specification VA-D-14; 1935. Base Plate Forms for Trial Plates.

U. S. Gov., Veterans Administration. Specification VA-D-22a; 1942. Wax; Base Plate, Pink.

U. S. Gov., Veterans Administration. Specification VA-D-26a; 1943. Compound Impression; Elastic (Without Agar).

U. S. Gov., Veterans Administration. Specification VA-DM-101a; 1942. Dental Lathe.

*References.*—Calcined gypsum for use in preparation of dental plasters, *see* 514.2.

## 915.2 SURGICAL AND MEDICAL INSTRUMENTS

U. S. Gov., Federal Specification GG-I-526; 1943. Instruments; Dental and Surgical; General Specifications. Covers five grades—(1) carbon steel, (2) corrosion-resisting steel, (3) cobalt-chromium-tungsten alloy, (4) miscellaneous, and (5) unclassified. Gives detail requirements as to dimensions, style and design, construction, methods of sampling, inspection and tests, and packaging and packing.

### 915.20 General Items

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2996; 1941. Surgical Instruments; Composition of, General Material Specifications.

### 915.21 Bougies

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2149A; 1941. Bougie a Boule; Metal.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2180A; 1941. Bougie; Filiform, Whalebone.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2204A; 1941. Bougie a Boule; Woven, Boilable.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2205A; 1941. Bougie; Urethral, Olivary, Woven, Boilable.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2732; 1939. Bougie; Eustachian.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2993; 1941. Filiform Bougie, With Screw.

### 915.22 Catheters

American Hospital Assn., 10-22. Female Urethral Glass Catheter. Covers one type (three sizes in set). Based on U. S. Army Specifications 10-2176A.

American Hospital Assn., 10-25. Regular Non-Graduated Urethral Catheters. Covers one type in three sizes.

American Hospital Assn., 43-7. Non-Graduated X-Ray Urethral Catheters. Covers one type in three sizes.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2109A; 1942. Catheter; Urethral, Metal, Double Flow.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2110A; 1942. Catheter; Urethral, X-Ray.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2162 A; 1941. Catheter (Urethral) Guide.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2176A; 1941. Catheter; Urethral, Female, Glass.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2206A; 1941. Catheter; Urethral, Woven.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2307A; 1942. Catheters; Eustachian.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2640; 1939. Catheter; Mare, Metal.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2672; 1939. Catheter; Urethral, Self Retaining.

*References.*—Catheters, rubber, *see* 204.55.

## 915.23 Depressors

American Hospital Assn., 10-34. Wood Tongue Depressor. Covers one type, one grade, and one class.

U. S. Gov., Federal Specification GG-D-226; 1942. Depressors; Tongue, Wood. Covers one type, grade, and size. Gives requirements for variations and construction; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2105A; 1942. Depressor; Tongue, Bosworth.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2174A; 1941. Depressor; Tongue, Folding, Fenestrated, Snowden.

## 915.24 Mirrors

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2165C; 1942. Mirrors; Laryngeal.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2219A; 1942. Mirror; Headband.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2429A; 1941. Mirror; Hand.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2472; 1939. Mirror; Mouth.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2507; 1939. Shield; Mirror.

## 915.25 Sphygmomanometers

American Hospital Assn., 10-40. Mercurial Sphygmomanometer. Covers one type, one grade, and one class. Based on U. S. Army Specifications 10-2804 for Mercurial Sphygmomanometer and U. S. Gov. Federal Specification ZZ-R-601a for Methods of Physical Tests and Chemical Analysis of Rubber Goods.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Technologic Paper T352; 1927. Use and Testing of Sphygmomanometers. Includes methods of testing against a standard instrument, tolerances allowed for mercurial and for aneroid instruments, standard required for issuance of certificate for instruments tested.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2125B; 1940. Sphygmomanometer; Aneroid.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2804; 1939. Sphygmomanometer; Mercurial.

## 915.26 Stethoscopes

U. S. Gov., Navy Dept. Specification 57S13; 1941. Stethoscopes.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2856A; 1944. Stethoscope; Edward-Ford, Bell-Shaped.

## 915.27 Syringes and Needles

American Hospital Assn., 10-43. Ear and Dose Syringe. Covers one type, one grade, and two classes—ear, 2 oz.; dose, 1 oz.; dose, 2 oz.; and dose, 4 oz. Based on U. S. Army Specification 10-2431.

American Hospital Assn., 10-46. Luer All-Glass Syringes. Covers three types in several sizes and models. Based on U. S. Gov. Federal Specification GG-S-921a.

American Hospital Assn., 10-55. Plungerless Glass Syringes. Covers one type, one grade, and two classes—(I) ear and ulcer and (II) Dakin's Solution. Based on U. S. Army Specifications 10-2807A.

American Hospital Assn., 10-58. Intramuscular Glass Syringes. Covers one type, one grade, and five classes (Luer).

American Hospital Assn., 10-61. All-Glass Tuberculin Syringes. Covers Luer type, 1 cc. capacity, graduated in minims and 1/100 cc.

U. S. Gov., Dept. of Interior, Purchasing Office. Standard Specification No. 62. Syringes; Hypodermic, Glass, Luer Type.

U. S. Gov., Federal Specification GG-N-196; 1940. Amendment No. 3; 1944. Needles; Hypodermic, for Luer Syringes. Covers two types—(I) having a canula of high chromium, high nickel, and low carbon type corrosion resisting steel and (II) having a canula of high carbon, low chromium, and low nickel type corrosion resistant steel; three styles for points—(A) regular bevel, (B) short bevel, and (C) very short bevel; and two styles for hubs—(1) without flange or lug to engage locking device on syringe and (2) with a flange or lug to engage locking device on syringe. Gives requirements for material and workmanship, canula, point, hub, locking flange or lug, marking, and details for each type and style; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification GG-N-211; 1943. Needles; Surgeons' (Suture). Needles shall be of twelve types, four classes, five points, two grades, and sizes as listed. Covers material and workmanship, general requirements, detail requirements, methods of sampling, inspection, tests, packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification GG-S-921a; 1940. Amendment 1; 1944. Syringes; All-Glass, Luer. Covers three types—(I) general purpose (small Luer tip), (II) general purpose (large Luer tip), and (III) special purpose. Gives requirements for material and workmanship, syringe, barrel, flange, tip, graduations and other markings, plunger, plunger brake, capacities and dimensions, and details for each type; methods of sampling, inspection, and tests; packaging, packing, and marking for shipment.

U. S. Gov., Navy Dept. Specification 57S57; 1944. Syringes; Urethral, Glass, With Elastomer Bulb.

U. S. Gov., Navy Dept. Specification 57W11; 1944. Wires; Hypodermic Needle.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2071B; 1942. Needle; Aneurism, Copper.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2085A; 1941. Needles; Paracentesis, Desmarres.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2086D; 1941. Needles; Spinal Puncture.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2175A; 1941. Syringe; Urethral, Prophylaxis.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2213A; 1941. Syringe; Glass.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2223C; 1940. Syringe; Water.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2243A; 1940. Holder; Needle.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2318A; 1942. Needle; Post-Mortem.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2416A; 1941. Blower, Chip, and Hot-Air Syringe.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2431A; 1942. Syringe; Ear and Nose.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2628A; 1942. Needle; Surgical.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2754; 1939. Needle; Aneurism, Little.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2779; 1939. Needle; Seton.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2791; 1939. Syringe; Hypodermic, Hog Cholera Type.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2796A; 1942. Needle; Infusion, Straight.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2807A; 1940. Syringe; Glass, Plungerless.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2916; 1939. Syringe, for Impression Compound.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2925; 1939. Syringe; Hypodermic, Metal, Veterinary.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2926; 1939. Needle for Syringe; Hypodermic, Metal, Veterinary.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2948; 1939. Block; Container for Mallein Syringes and Needles.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2954; 1939. Case; Hypodermic Tablets, Veterinary, Empty.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2978; 1940. Needle; Pedicle, Ivy.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-3006; 1942. Introducer; Needle.

U. S. Gov., Veterans Administration. Specification VA-D-12d; 1944. Dental Hypodermic Needles.

U. S. Gov., Veterans Administration. Specification VA-D-25; 1942. Dental Hypodermic Needles; Platinum-Ruthenium.

U. S. Gov., Veterans Administration. Medical and Hospital Supply Section, VA-H-25b; 1936. Anesthesia Hypodermic Needle With Insertion Stop.

U. S. Gov., Veterans Administration. Medical and Hospital Supply Section, VA-H-26c; 1936. Spinal Anesthesia Hypodermic Needle—Pitkin.

U. S. Gov., Veterans Administration, Medical and Hospital Supply Section, VA-H-27c; 1936. Spinal Anesthesia Hypodermic Needle—Quincke.

U. S. Gov., Veterans Administration, Medical and Hospital Supply Section, VA-H-28b; 1936. Straight and Curved Tonsil Hypodermic Needle.

U. S. Gov., Veterans Administration. Medical and Hospital Supply Section, VA-H-86; 1936. Allergen Syringes.

*References.*—Dental hypodermic needle sizes and varieties, *see* 915.10; rubber fountain syringe, *see* 204.28.

## 915.28 Wooden Applicators

American Hospital Assn., 10-1. Metal Applicators. Covers four types, one grade, and one class. Type I, nasal aluminum; type II, nasal steel; type III, pharyngeal, and type IV, surgical. Based on U. S. Army Specifications 10-2087A.

American Hospital Assn., 10-4. Wood Applicators. Covers one type, one grade, and one class.

U. S. Gov., Federal Specification GG-A-616; 1942. Applicators; Wood. Covers two types—(I) plain and (II) cotton tipped; and two classes—(A) short length and (B) long length. Gives requirements for material and dimensions; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2087A; 1941. Applicators.

## 915.29 Miscellaneous Surgical and Medical Instruments

American Medical Assn. Council on Physical Medicine. Minimum Requirements for Acceptable Audiometers, 1942. Gives requirements for frequencies, attenuation, range, wave form, extraneous noises, power supply, ruggedness of construction, uniformity of calibration, standard for reference, audiogram or auditory chart, definition of threshold of hearing, and marketing and advertising.

U. S. Gov., Federal Specification GG-H-166; 1945. Head-Bands (for Mirror); Leather; (for Medical and Surgical Use). Covers one type, one grade, and two classes—(A) narrow and (B) wide. Gives requirements for material, workmanship, marking, description, leather band, buckle, metal shield, clamp, and finish; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification GG-T-746; 1943. Tubes; Diagnostic, Ear (Toynbee). Shall be of one type and one grade and of the style and design as specified in the invitation for bids. Gives requirements for material, workmanship, tubing, and ear tips; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., Navy Dept. Specification 57F8; 1941. Forceps; Cover-Glass (Stewart).

U. S. Gov., Navy Dept. Specification 57 L 10; 1943. Lamps; Antral.

U. S. Gov., Navy Dept. Specification 57S18; 1941. Syringes; Urethral, Piston Type.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-1070A; 1941. Specula; Ear, Brown, Set of Three.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-1083A; 1941. Retractor; Abdominal, Self-Retaining, Balfour.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2022A; 1939. Microtome Knives, With Backs and Handles.

U. S. Gov., U. S. Army, Medical Dept.. Specification 10-2074A; 1941. Elevators; Nasal.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2077A; 1941. Forceps; Bone, Rongeur and Cranial.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2078; 1926. Forceps; Bone, Mastoid.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2079A; 1941. Forceps; Bone Holding.

U. S. Gov.. U. S. Army, Medical Dept. Specification 10-2080B; 1942. Specula; Nasal.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2081A; 1941. Speculum; Nasal, Septal, Goldstein.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2082A; 1941. Sound; Uterine, Simpson.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2084A; 1942. Elevator; Dura.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2088A; 1941. Bronchoscopes; Electric, Jackson.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2089A; 1941. Canulas; General.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2090B; 1941. Curettes; Surgical.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2091A; 1941. Drum; Test.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2092A; 1942. Dissector; Tonsil, Blunt, and Pillar Retractor.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2093A; 1941. Hammer; Percussion, Taylor.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2094A; 1942. Hammer; Steel With Hook, Post Mortem.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2095A; 1941. Otoscope; Pneumatic, Metal.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2097B; 1941. Procto-Sigmoidoscope; Electric, Proximally Illuminated.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2099B; 1941. Repositors and Probe; Iris.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2101B; 1942. Snare; Nasal, Krause.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2103A; 1941. Speculum; Nasal, Bivalve, Sims's.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2104B; 1942. Tractor; Prostatic.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2106A; 1941. Vein Stripper; Mayo.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2107B; 1941. Carrier; Ligature, Right.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2112B; 1941. Clamp; Hemorrhoidal, Kelsey,

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2113A; 1942. Dilator; Lachrymal, Ziegler.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2114A; 1941. Dilator; Trachea.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2115A; 1941. Elevators; Periosteum.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2116A; 1942. Gag; Mouth, Denhardt.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2118A; 1941. Mallet; Hardwood, With Seamless Metal Rings.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2119A; 1942. Pelvimeter; Martin.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2120A; 1941. Saws; Surgical and Post-Mortem.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2121A; 1942. Screw Driver; Sherman.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2122A; 1941. Screw; Oral.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2123A; 1941. Speculum; Eye, Ziegler,

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2124A; 1941. Speculum; Nasal, Bosworth.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2130A; 1941. Scissors, Surgical and Dental.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2131A; 1941. Raspatory, Mastoid and Sinus.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2132A; 1942. Rachiotome.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2134B; 1942. Drill; Cranial, Brace With Burr and drill.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2137V; 1942. Drill; Bone, Complete With Drill and Three Points.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2139A; 1942. Spuds; Eye.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2141A; 1941. Plate; Lid, Jaeger.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2142A; 1942. Dilator; Uterine.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2143B; 1944. Hook; Strabismus.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2145A; 1941. Lens; Eye, Condensing.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2146B; 1942. Saw; Stille-Gigli.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2147A; 1941. Saws; Gigli, Handle.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2150A; 1941. Retinoscope; Plain, Thorington.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2151A; 1941. Screw Driver; Lane.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2152B; 1941. Speculum; Vaginal, Weighted.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2153B; 1942. Spoons; Lens.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2154B; 1944. Trephine; Cranial, Galt.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2161B; 1941. Adenotome; La Force.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2166B; 1942. Retractors; Surgical.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2177C; 1944. Cystotome; Eye.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2179B; 1942. Director; Grooved, Probe Pointed.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2181A; 1941. Hemostat; Tonsil, Boettcher.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2182A; 1941. Hook; Iris.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2184A; 1939. Mallets; Lead Filled.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2185A; 1941. Probe; Uterine, Sims's.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2186A; 1941. Rasps; Frontal Sinus.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2188A; 1941. Speculum; Vaginal, Veterinary.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2191B; 1942. Probe; Surgical.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2192A; 1941. Saw; Plaster of Paris.
U. S. Gov., U. S. Army, Medical Dept. Specification 10-2196B; 1942. Cystoscope; Braasch.
U. S. Gov., U. S. Army, Medical Dept. Specification 10-2197B; 1941. Forks; Tuning.
U. S. Gov., U. S. Army, Medical Dept. Specification 10-2198A; 1941. Hook; Dura, Frazier.
U. S. Gov., U. S. Army, Medical Dept. Specification 10-2199A; 1941. Speculum; Eye, Nonmagnetic, Weeks.
U. S. Gov., U. S. Army, Medical Dept. Specification 10-2200A; 1941. Speculum; Vaginal, Sims's.
U. S. Gov., U. S. Army, Medical Dept. Specification 10-2216A; 1941. Speculum; Eye, Veterinary.
U. S. Gov., U. S. Army, Medical Dept. Specification 10-2217A; 1941. Speculum; Vaginal, Bivalve, Graves.
U. S. Gov., U. S. Army, Medical Dept. Specification 10-2218; 1928. Tube; Trachea.
U. S. Gov., U. S. Army, Medical Dept. Specification 10-2225B; 1942. Intubation Set.
U. S. Gov., U. S. Army, Medical Dept. Specification 10-2230B; 1942. Forceps; Hemostatic.
U. S. Gov., U. S. Army, Medical Dept. Specification 10-2240A; 1942. Forceps; Surgical, Miscellaneous, No. 1.
U. S. Gov., U. S. Army, Medical Dept. Specification 10-2241B; 1942. Forceps; Surgical, Spring, Special.
U. S. Gov., U. S. Army, Medical Dept. Specification 10-2242B; 1941. Forceps; Surgical. Miscellaneous, No. 2.
U. S. Gov., U. S. Army, Medical Dept. Specification 10-2277B; 1942. Knife; Surgical.
U. S. Gov., U. S. Army, Medical Dept. Specification 10-2308A; 1942. Chisel and Osteotome; Surgical.
U. S. Gov., U. S. Army, Medical Dept. Specification 10-2314A; 1942. Gag; Mouth, Hennings.
U. S. Gov., U. S. Army, Medical Dept. Specification 10-2327; 1938. Ophthalmoscope; Electric.
U. S. Gov., U. S. Army, Medical Dept. Specification 10-2328A; 1941. Otoscope; Electric.
U. S. Gov., U. S. Army, Medical Dept. Specification 10-2330B; 1942. Spreader; Rib, McGuire.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2643; 1939. Curette; Nail Hole.
U. S. Gov., U. S. Army, Medical Dept. Specification 10-2644; 1939. Curette; Fistula.
U. S. Gov., U. S. Army, Medical Dept. Specification 10-2645; 1939. Curette; Double End.
U. S. Gov., U. S. Army, Medical Dept. Specification 10-2649; 1939. Forceps; Splinter, 8-In., Veterinary
U. S. Gov., U. S. Army, Medical Dept. Specification 10-2650; 1939. Mallet; Lead, Veterinary.
U. S. Gov., U. S. Army, Medical Dept. Specification 10-2652; 1939. Splitter; Hoof.
U. S. Gov., U. S. Army, Medical Dept. Specification 10-2653; 1939. Tester; Hoof.
U. S. Gov., U. S. Army, Medical Dept. Specification 10-2665; 1939. Mallet; Aluminum, Meyerding.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2680A; 1941. Strops; Microtome Knife, Laboratory.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2683A; 1942. Adapter; Eynard.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2686; 1939. Hook; Neurectomy, Veterinary.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2687; 1939. Parer; Hoof, 12-In.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2688; 1939. Pump; Combination, Veterinary.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2698A; 1939. Forceps; Tenaculum, Straight.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2699; 1939. Shear; Rib.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2701; 1939. Perimeter; Brombach.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2716; 1939. Tonometer; McLean.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2735; 1939. Cord; Cautery, Heavy.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2736; 1939. Iron; Cautery.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2738; 1939. Punch; Forceps.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2750; 1939. Forceps; Bone Cutting, Straight.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2755A; 1942. Retinoscope; Electric.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2776; 1939. Case; Bone Operating, Electric, Albee.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2781; 1939. Stylet; Reed.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2783; 1939. Clipper; Two Hand, Veterinary.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2784; 1939. Shear; Fetlock.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2785; 1939. Ecraseur; Spaying.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2786; 1939. Emasculator; Veterinary.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2789; 1939. Retractor; Laryngeal, Self Retainer, Veterinary.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2792; 1939. Trocar and Canula; Veterinary.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2794; 1939. Tube; Tracheal, Metal, Veterinary.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2795; 1939. Cystoscope.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2797A; 1942. Shear; Plaster of Paris.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2800; 1939. Cord; Cautery, Regular.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2802; 1939. Monometer; Spinal.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2803; 1939. Phorometer.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2809A; 1940. Tube; Duodenal, Rehfuss.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2836; 1939. Fluoroscope; Operating.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2847; 1939. Gun; Balling.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2850; 1939. Hook; Gland, Veterinary.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2851; 1939. Knife; Hoof, Three Blades and Iron Handle, in Canvas Roll.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2852; 1939. Probe; Surgical, Jointed, 10-In. Veterinary.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2855A; 1941. Audiometer.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2858; 1939. Tube; Duodenal, Buckstein, Tip.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2864; 1939. Localization-Eye; Complete, X-Ray.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2882; 1939. Knife; Operating, Hoof.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2914; 1939. Bistoury; Surgical, 2-In. Blade, Veterinary.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2920; 1939. Clipper; Complete.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2934A; 1940. Knife; Operating, Handle.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2935; 1939. Knife; Operating, Detachable Blade, Blade Only.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2969A; 1941. Wire; Corrosion Resisting Steel, Surgical.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2976; 1940. Elevator; Malar, Ivy.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2986; 1941. Scoop; Gall-Bladder.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2999; 1941. Case; Bronchoscopic, Complete.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-3005; 1942. Tong; Skull Traction.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-3016; 1944. Knife; Skin Grafting, Large, and Blade.

U. S. Gov., U. S. Army, Medical Dept. Specification 17-179; 1939. File; Hoof Knife.

U. S. Gov., U. S. Maritime Commission. Specification 57-MC-1; 1944. Resuscitators; Hand Operated, Portable. Covers one type and grade. Gives requirements for materials, workmanship, construction, carrying case, physical requirements, finish, weight, instructions, and marking; inspection, sampling, and methods of tests; and packaging, packing, and marking for shipment.

U. S. Gov., Veterans Administration. Specification VA-X-181c; 1943. Suction-Pressure Therapy Unit.

U. S. Gov., Veterans Administration, Medical and Hospital Supply Section, VA-HM-98b; 1944. Audiometer.

*References.*—Clinical thermometers, *see* 919.83.

## 915.3 MEDICAL AND HOSPITAL EQUIPMENT

### 915.30 General Items

American Medical Assn., Council on Physical Therapy. Regulations to Govern Advertising of Ultraviolet Generators to the Public Only, 1932. Regulations To Govern Advertising of Ultraviolet Generators to the Medical Profession Only, 1934.

National Fire Protection Assn. National Fire Codes for Flammable Liquids, Gases, Chemicals, and Explosives, 1943. Anaesthetic Gases and Oxygen in Hospitals.

Recommended good practice for construction and installation of piping systems for the distribution of anaesthetic gases and oxygen in hospitals and similar occupancies, and for construction and operation of oxygen chambers. General requirements, including color identification of pipe lines, manifold anaesthetic cylinders to headers for distribution, emergency shut-off valves, lighting, heating and air conditioning apparatus, static precautions, open flames, fire protection, and oxygen tents.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R176-41; 1941. Color Marking for Anesthetic Gas Cylinders. This recommendation covers the marking of gas cylinders of approximately 4 1/2 in. in diameter and 26 in. long, and smaller, for use on anesthesia machines, with certain colors or color combinations, covering various kinds of gases. This recommendation does not apply to compressed gas cylinders used in hospitals for any purpose other than anesthesia. Sponsored by the American Hospital Assn. and American Society of Anesthetists.

## 915.31 Disinfectors, Inhalers and Irrigators

American Medical Assn., Council on Physical Therapy. Acceptance of Ultraviolet Lamps for Disinfecting Purposes, 1942. Includes physical data on germicidal lamps and tentative requirements for acceptance of ultraviolet lamps for disinfecting air.

U. S. Gov., Federal Specification GG-D-416; 1941. Disinfectors; Steam-Jacketed. For pressure sterilization of large articles, such as mattresses, pillows, blankets, and clothing, at not less than 15 lb. per square inch, as well as for drawing a vacuum. Covers two types—(I) having one door and (II) having two doors. Gives requirements for size, thickness of shell and back head plates, thickness of doors, and locking arms per door; methods of sampling, inspection, and tests; and requirements for packing and marking for shipment.

U. S. Gov., Federal Specification, RR-I-681; 1940. Irrigators; Corrosion-Resisting Steel. Covers two classes—(A) 1-qt. capacity and (B) 2-qt. capacity; one grade; and two types—(I) with handle and (II) without handle. Gives requirements for material, workmanship, construction, design, measurements; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., Navy Dept. Specification 57D1c; 1944. Disinfectors; Steam-Jacketed, Rectangular, With Formaldehyde-Ammonia Attachment.

U. S. Gov., Navy Dept. Specification 57I2; 1941. Inhalers; Vapor, Electric.

U. S. Gov., Navy Dept. Specification 57N1; 1941. Nozzles; Irrigating, Glass.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2164A; 1942. Douche; Uterine.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2183B; 1942. Irrigator; Anterior Chamber.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2220A; 1942. Inhaler; Yankauer, Metal.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2226A; 1939. Irrigator; Valentine, Complete.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2646; 1939. Disinfector; 50-Gal., With Spray Pump.

## 915.32 Sterilizers

American Medical Assn., Council on Physical Therapy. Acceptance of Ultraviolet Lamps for Disinfecting Purposes, 1942. Includes physical data on germicidal lamps and tentative requirements for acceptance of ultraviolet lamps for disinfecting air.

American Hospital Assn., 70-22. Jars for Dressings. Covers one type, one grade, and one class. Based on U. S. Gov., War Dept., Specifications 10-2399.

U. S. Gov., Federal Specification GG-S-751a; 1940. Sterilizers; Accessories and Portable Lockers (for Sterilizers). Covers five types—(I) dressing sterilizers, (II) instrument sterilizers (pressure and boiling), (III) utensil sterilizers (pressure and boiling), (IV) water sterilizers, and (V) combination sterilizers; accessories for pressure sterilizers; and lockers for use with combination sterilizers. Gives detail requirements; methods of sampling, inspection, and tests; and requirements for packing and marking for shipment.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2399; 1939. Jar for Dressings.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2477; 1939. Sterilizer; Hypodermic.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2492; 1939. Sterilizer; Instruments, Field.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2496; 1939. Sterilizer; Hypodermic Needle.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2625; 1939. Sterilizer Drum.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2662B; 1941. Sterilizer; Hot Air.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2751; 1939. Sterilizer; Dressing and Utensil, Field.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2832; 1939. Sterilizer; Instrument, Field, With Alcohol Stove.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2901; 1939. Sterilizer; Controls.

U. S. Gov., Veterans Administration, Medical and Hospital Supply Section, VA-H-67c; 1942. Bed Pan Sterilizers.

*References.*—Electric heaters, *see* 717.1.

## 915.33 Litters and Stretchers

U. S. Gov., Navy Dept. Specification 57L2c; 1943. Litters; Metal.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2002; 1927. Litter; Metal.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2279A; 1941. Litter, With Slings.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2453A; 1941. Litter; Aluminum Pole.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2981; 1940. Carrier; Field, Collapsible.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2994; 1941. Litter; Aluminum Pole, Folding.

U. S. Gov., Veterans Administration, Medical and Hospital Supply Section, VA-H-47; 1933. Adjustable Leg Rest.

U. S. Gov., Veterans Administration, Medical and Hospital Supply Section, VA-H-82a; 1935. Litters Without Slings.

U. S. Gov., Veterans Administration, Medical and Hospital Supply Section, VA-HM-110; 1940. Wheel Stretchers—Adjustable Type.

U. S. Gov., Veterans Administration, Medical and Hospital Supply Section, VA-HM-111; 1940. Wheel Stretchers.

## 915.34 Atomizers

American Hospital Assn., 10-7. Hand Atomizers. Covers two types—(I) with metal collar on neck and (II) with glass threaded neck. Based on U. S. Gov. Federal Specification GG-A-761.

U. S. Gov., Federal Specification GG-A-761; 1938. Amendment 4; 1944. Atomizers; Hand. Covers one type capable of spraying heavy oils as well as aqueous solutions and withstanding frequent sterilizations by boiling water without damage. Gives requirements for material, workmanship, reservoir, spraying device, spray tip, spray cap, nasal guard, bulb and tubing, and details; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., Navy Dept. Specification 57A17; 1944. Atomizers, for Use With Air Compressor.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2658A; 1941. Atomizer Set.

## 915.35 Rubber Goods

American Hospital Assn., 70-7. Cloth-Inserted Ring Cushions. Covers one type. Based on U. S. Gov. Federal Specifications ZZ-C-791.

*References.*—Rubber bandages, adhesive plaster, *see* 204.1; rubber ice bags, hot water bottles, cushions, pillows and pillow cases, syringes, politzer bags, *see* 204.2; rubber sheeting, *see* 204.33; dental rubber dam, *see* 204.4; rubber aprons, gloves, finger cots, operating pads, stomach and colon tubes, catheters, *see* 204.5; rubber tubing for laboratory use, *see* 204.6; rubber cement, stoppers, crutch tips, *see* 204.9

## 915.36 Hospital Furniture

U. S. Gov., Dept. of Interior, Purchasing Office. Standard Specification No. 44. Tables; Over-Bed, Hospital.

U. S. Gov., Dept. of Interior, Purchasing Office. Standard Specification No. 61. Locker Tables; Bedside, Hospital.

U. S. Gov., Navy Dept. Specification 26T3b; 1942. Tables; Bedside (Locker), Hospital.

U. S. Gov., Navy Dept. Specification 57T13; 1942. Tables; Overbed, Adjustable.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2392B; 1944. Table; Instrument, Adjustable.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2405; 1939. Chair; Specialist's.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2452A; 1941. Table; Examining.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2454; 1938. Table; Instrument.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2482A; 1940. Table; Operating, Pedestal Type.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2499A; 1939. Table; Tilting for Radiography and Fluoroscopy, Light Duty, Complete With Bucky Diaphragm.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2520A; 1941. Carriage; Wheeled.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2607A; 1941. Table; Instrument, Folding.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2667; 1939. Table; Operating, Folding.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2682; 1939. Table; Bedside, Folding.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2775; 1939. Chair; Barany.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2911; 1939. Carriage; Dressing, Knocked-Down.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2912; 1939. Carriage; Wheeled, Knocked-Down.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2915; 1939. Table; Operating, Equine.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2931A; 1941. Table; Operating.

U. S. Gov., U. S. Army, Medical Dept. Specification 32-36; 1939. Bar; Mosquito, Spreader.

U. S. Gov., U. S. Army, Medical Dept. Specification 32-41A; 1940. Screen; Bed.

U. S. Gov., Veterans Administration, Medical and Hospital Supply Section, VA-H-36f; 1942. Circular Instrument Table.

U. S. Gov., Veterans Administration, Medical and Hospital Supply Section, VA-H-37a; 1940. Utility Table, With Three Glass Shelves.

U. S. Gov., Veterans Administration. Specification VA-H-38f; 1942. Instrument Table; Unit Type.

U. S. Gov., Veterans Administration, Medical and Hospital Supply Section, VA-H-40h; 1942. Ward Dressing Carriage With Bucket and Basin Attachment.

U. S. Gov., Veterans Administration, Medical and Hospital Supply Section, VA-H-53e; 1942. Anesthesia Table With Removable Trays and With Racks for Masks.

U. S. Gov., Veterans Administration, Medical and Hospital Supply Section, VA-H-54a; 1939. Steel Examining Table.

U. S. Gov., Veterans Administration, Medical and Hospital Supply Section, VA-H-55d; 1942. Instrument and Dressing Table.

U. S. Gov., Veterans Administration, Medical and Hospital Supply Section, VA-H-621; 1942. Cabinet Type Bedside Table.

U. S. Gov., Veterans Administration, Medical and Hospital Supply Section, VA-H-70a; 1939. Tray Type Bedside Tables.

U. S. Gov., Veterans Administration, Medical and Hospital Supply Section, VA-H-87a; 1940. Treatment and Dressing Table.

U. S. Gov., Veterans Administration, Medical and Hospital Supply Section, VA-H-92a; 1939. Utility Table.

U. S. Gov., Veterans Administration. Specification VA-X-119a; 1936. Massage Tables.

U. S. Gov., Veterans Administration, Medical and Hospital Supply Section, VA-HM-107; 1939. Combination Chair-Table—Ear, Eye, Nose, and Throat Surgery.

U. S. Gov., Veterans Administration, Medical and Hospital Supply Section, VA-HM-117; 1941. Mobile Type Barber Chair.

*References.*—Hospital and surgical beds and cots, *see* 613.1.

## 915.37 Bottles

U. S. Gov., Navy Dept. Specification 57P4; 1941. Pots; Ointment, Glass.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2432A; 1941. Bottle; Balsam, Dropping, Specimen, Sputum and Citrate of Magnesia Type.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2987; 1941. Bottle; Aspirator.

*References.*—Blake tablet bottle sizes, *see* 955.1.

## 915.39 Miscellaneous Medical and Hospital Equipment

American Hospital Assn., 10-70. Murphy Drip Tube. Covers one type, one grade, and one class. Based on U. S. Army Specifications 10-2837.

American Hospital Assn., 43-10. Levy Counting Chamber With Covers. For examination of the spinal fluid.

American Hospital Assn., Council on Physical Therapy. Evidence Required by the Council on Physical Therapy for Consideration of Apparatus Used in Fever Therapy, 1937.

American Medical Assn., Council on Physical Therapy. Acceptance of Sunlamps, 1940. Utilizes the erythemal reaction as a basis of judging the effectiveness of ultraviolet ray sunlamps and includes requirements for acceptance of sunlamps and regulations to control advertising of sunlamps sold to the public.

U. S. Gov., Dept. of Interior, Purchasing Office. Standard Specification No. 74. Electro-Surgical Unit.

U. S. Gov., Dept. of Interior, Purchasing Office. Standard Specification No. 75. Electro-Cardiograph.

U. S. Gov., Dept. of Interior, Purchasing Office. Standard Specification No. 77. Diathermy; Short Wave, Dual Frequency.

U. S. Gov., Federal Specification O-P-46; 1942. Pads; Heating, Chemical. Covers one type and one grade. Gives detail requirements for material, workmanship, inner case, size, outer case, jacket, heating materials, and refill; methods of sampling, inspection, and test; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification W-D-286; 1943. Amendment 2; 1944. Diathermy-Apparatus; Short-Wave. Covers two types—(I) single-frequency, (II) dual-frequency, for heating tissues beneath the surface of the skin. Gives requirements as to apparatus, generator, frequency-control device, radio-frequency power output stage, power supply, controls and indicators, cabinet and chassis, output, bid samples, and details for each type; methods of sampling, inspection, and tests; and packing and marking for shipment.

U. S. Gov., Federal Specification GG-C-716; 1942. Crutches; Adjustable. Covers one type and one grade. Gives requirements for material, workmanship, construction, armpiece, bows, handpiece, footpiece, bolts, assembly, finish, and strength; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification GG-W-101; 1944. Washers; Bedpan, Steam-Flushing. Covers one grade and three types—(I) floor mounted (class A, with vertical front door and class B, with horizontal top cover); (2) wall hung; and (3) wall recessed. Gives requirements for material, workmanship, general requirements, and detail requirements; methods of sampling, inspection, and test; and packing and marking for shipment.

U. S. Gov., Federal Specification RR-J-131; 1940. Jars; Dressing, Corrosion-Resisting Steel. Covers one type, one grade, and five sizes. Gives requirements for material, workmanship, construction, design, measurements, and finish; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., Marine Corps Specification, 1933. Sprayers; 1 Qt.

U. S. Gov., Navy Dept. Specification 41S44; 1944. Sprayers; Insecticide (Liquid), Hand-Operated.

U. S. Gov., Navy Dept. Specification 57B14; 1941. Baths; Eye Glass.

U. S. Gov., Navy Dept. Specification 57S14; 1941. Splints, Appliances, and Accessories.

U. S. Gov., Navy Dept. Specification 57T7; 1941. Test-Sets; Vision, Color-Sense (Pseudo-Isochromatic Plates).

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2005A; 1929. Spoon; Metal, for Typhoid-Carrier Examination.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2189A; 1942. Headband; Metal, Folding.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2203A; 1941. Case; Aspirating, Complete.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2207C; 1941. Apparatus; Extension, Steinmann.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2227A; 1937. Tube; Adapter, Y-Shaped.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2234A; 1941. Block; Bite; Adult's, Adolescent's and Child's.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2256A; 1941. Block; Embedding.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2347; 1939. Intravenous Apparatus (Salvarsan).

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2389; 1939. Back Rest.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2425; 1935. Screen; Intensifying.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2487B; 1941. Cocoa Unit; Complete.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2490; 1939. Tile, Pill.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2495; 1939. Arbor; Expanding, for Abrasive Bands.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2498; 1939. Urinalysis Set.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2500A; 1944. Bath; Leg, Whirlpool, With Electric Turbine Ejector.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2501; 1939. Bath; Arm.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2529; 1939. Cane; Walking.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2533; 1939. Bell; Call.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2537; 1939. Lamp; Alcohol.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2548A; 1940. Vision Test Set.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2549; 1939. Knives; Office and Plaster.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2562; 1939. Holder; Cotton.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2606A; 1941. Pad for Operating and Examining Table.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2612; 1939. Buckshot; Coarse, for Balkan Frame.
U. S. Gov., U. S. Army, Medical Dept. Specification 10-2613; 1939. Bandage Winder.
U. S. Gov., U. S. Army, Medical Dept. Specification 10-2614; 1939. Headlight; Murphy.
U. S. Gov., U. S. Army, Medical Dept. Specification 10-2624; 1939. Tile; Pill, Dispensary.
U. S. Gov., U. S. Army, Medical Dept. Specification 10-2626; 1939. Strap and Buckle; Orthopedic.
U. S. Gov., U. S. Army, Medical Dept. Specification 10-2642; 1939. Cradle; Neck.
U. S. Gov., U. S. Army, Medical Dept. Specification 10-2660; 1939. Poles; Balkan Frame.
U. S. Gov., U. S. Army, Medical Dept. Specification 10-2661; 1939. Pulley Assembly; Balkan Frame.
U. S. Gov., U. S. Army, Medical Dept. Specification 10-2668; 1939. Cassette Changer.
U. S. Gov., U. S. Army, Medical Dept. Specification 10-2681; 1939. Restraint Apparatus.
U. S. Gov., U. S. Army, Medical Dept. Specification 10-2691; 1939. Trier; Meat and Dairy.
U. S. Gov., U. S. Army, Medical Dept. Specification 10-2705; 1939. Dissolver; Hypodermic Tablet.
U. S. Gov., U. S. Army, Medical Dept. Specification 10-2715; 1939. Warmer; Dish.
U. S. Gov., U. S. Army, Medical Dept. Specification 10-2717; 1939. Headband; Leather Strap.
U. S. Gov., U. S. Army, Medical Dept. Specification 10-2729; 1939. Apparatus; Diathermy.
U. S. Gov., U. S. Army, Medical Dept. Specification 10-2731; 1940. Buckle for Webbing; Orthopedic.
U. S. Gov., U. S. Army, Medical Dept. Specification 10-2737; 1939. Color Test Book; Stilling.
U. S. Gov., U. S. Army, Medical Dept. Specification 10-2752; 1939. Case; Eye, Complete.
U. S. Gov., U. S. Army, Medical Dept. Specification 10-2756A; 1940. Clamp for Balkan Frame.
U. S. Gov., U. S. Army, Medical Dept. Specification 10-2757; 1939. Color Test Book; Ishihara.
U. S. Gov., U. S. Army, Medical Dept. Specification 10-2758; 1939. Lantern; Muscle Test.
U. S. Gov., U. S. Army, Medical Dept. Specification 10-2759; 1939. Reflector; Angle.
U. S. Gov., U. S. Army, Medical Dept. Specification 10-2760A; 1944. Support; Pelvic.
U. S. Gov., U. S. Army, Medical Dept. Specification 10-2762A; 1940. Transilluminator.
U. S. Gov., U. S. Army, Medical Dept. Specification 10-2763A; 1940. Cuspidor; Fountain.
U. S. Gov., U. S. Army, Medical Dept. Specification 10-2766A; 1945. Dam; Mechanical.
U. S. Gov., U. S. Army, Medical Dept. Specification 10-2770; 1939. Table; Aseptic and Gas Attachment.
U. S. Gov., U. S. Army, Medical Dept. Specification 10-2782; 1939. Chart; Anatomical, Veterinary.
U. S. Gov., U. S. Army, Medical Dept. Specification 10-2798; 1939. Anesthesia and Suction Apparatus.
U. S. Gov., U. S. Army, Medical Dept. Specification 10-2799A; 1942. Frame; Bradford.
U. S. Gov., U. S. Army, Medical Dept. Specification 10-2805; 1939. Splint Strap; Adjustable Traction.
U. S. Gov., U. S. Army, Medical Dept. Specification 10-2806A; 1942. Splint Support and Foot Rest.
U. S. Gov., U. S. Army, Medical Dept. Specification 10-2808; 1939. Curtain; Tangent, Roller, and Folder Types.
U. S. Gov., U. S. Army, Medical Dept. Specification 10-2835; 1939. Apparatus; Anesthesia.
U. S. Gov., U, S. Army, Medical Dept. Specification 10-2837; 1939. Tube; Murphy Drip.
U. S. Gov., U. S. Army, Medical Dept. Specification 10-2838; 1939. Apparatus; Vision Test.
U. S. Gov., U. S. Army, Medical Dept. Specification 10-2839; 1939. Band; Arbor, Emery.
U. S. Gov., U. S. Army, Medical Dept. Specification 10-2854; 1939. Stocks; Metal, Veterinary.
U. S. Gov., U. S. Army, Medical Dept. Specification 10-2871A; 1941. Cabinet; Electric Light, Bath.
U. S. Gov., U. S. Army, Medical Dept. Specification 10-2872; 1939. Lamp; Therapeutic, Carbon Arc.
U. S. Gov., U. S. Army, Medical Dept. Specification 10-2873; 1939. Cart; Food, Drinkwater.
U. S. Gov., U. S. Army, Medical Dept. Specification 10-2877; 1939. Cardiograph; Electric.
U. S. Gov., U. S. Army, Medical Dept. Specification 10-2879B; 1942. Baker; Electric, Portable, Therapeutic.
U. S. Gov., U. S. Army, Medical Dept. Specification 10-2884; 1939. Engine; Foot and Case.
U. S. Gov., U. S. Army, Medical Dept. Specification 10-2885; 1939. Warmer; Blanket.
U. S. Gov., U. S. Army, Medical Dept. Specification 10-2890; 1939. Screen; Lead, Protective.
U. S. Gov., U. S. Army, Medical Dept. Specification 10-2891; 1939. Lamp; Therapeutic, Mercury Arc, Water-cooled, and Applicators.
U. S. Gov., U. S. Army, Medical Dept. Specification 10-2892; 1939. Pad; Fingerprint, Complete.
U. S. Gov., U. S. Army, Medical Dept. Specification 10-2894A; 1941. Chart; Anatomical, Human Body.
U. S. Gov., U. S. Army, Medical Dept. Specification 10-2895A; 1942. Jacket; Camisole, Restraint.
U. S. Gov., U. S. Army, Medical Dept. Specification 10-2899; 1939. Apparatus; High Frequency, Therapeutic, Portable Type.
U. S. Gov., U. S. Army, Medical Dept. Specification 10-2900A; 1940. Stamp; Anatomical.
U. S. Gov., U. S. Army, Medical Dept. Specification 10-2909A; 1942. Lamp; Therapeutic, Infra-Red.
U. S. Gov., U. S. Army, Medical Dept. Specification 10-2910A; 1941. Machine; Sinusoidal.
U. S. Gov., U. S. Army, Medical Dept. Specification 10-2923; 1939. Retainer; Dressing, Foot, Metal.
U. S. Gov., U. S. Army, Medical Dept. Specification 10-2927; 1939. Tackle Block; Safety Hoist, Medium Size, 2,000-lb. Capacity, Veterinary.
U. S. Gov., U. S. Army, Medical Dept. Specification 10-2929; 1939. Applicator and Conductor Tube for Howe's Treatment.
U. S. Gov., U. S. Army, Medical Dept. Specification 10-2930; 1939. Heater for Spray Bottles.
U. S. Gov., U. S. Army, Medical Dept. Specification 10-2941; 1939. Lamp; Therapeutic, Mercury Arc, Air-Cooled, and Burner.
U. S. Gov., U. S. Army, Medical Dept. Specification 10-2947; 1939. Stamp; Meat Inspection, Veterinary.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2966; 1939. Tent; Oxygen.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2988; 1941. Chlorine Test Set; Veterinary.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2992; 1941. Suction Apparatus; Portable, Electric.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-3000; 1942. Holder; Chart.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-3004; 1942. Holder; Card.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-3008; 1942. Tray Set; Type 8, for Gas Casualty, Chest.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 16-5; 1939. Sprayer; Insect, Electric, Large.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 16-6; 1939. Sprayer; Insect, Electric, Small.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 16-7; 1939. Sprayer; Hand, Knapsack Type.

U. S. Gov., Veterans Administration. Specification VA-G-115a; 1935. Liquid Insecticide Sprayer (Small Size)—Motor Blower-Vacuum Atomizer Type.

U. S. Gov., Veterans Administration, Medical and Hospital Supply Section, VA-H-23; 1933. Pack Bed.

U. S. Gov., Veterans Administration, Medical and Hospital Supply Section, VA-H-32a; 1934. Model With Mobile Table Immersion Bowl and Stand (Single).

U. S. Gov., Veterans Administration, Medical and Hospital Supply Section, VA-H-83b; 1942. Anesthetists or Operators Revolving Stools.

U. S. Gov., Veterans Administration, Medical and Hospital Supply Section, VA-H-99b; 1944. Surgical Operating Room Lighting Fixture.

U. S. Gov., Veterans Administration. Specification VA-M-148c; 1940. Nine Shelf Serving Truck—36 Tray Type.

U. S. Gov., Veterans Administration, Medical and Hospital Supply Section, VA-HM-93a; 1941. Electric Gauze and Bandage Cutter.

U. S. Gov., Veterans Administration, Medical and Hospital Supply Section, VA-HM-108; 1939. Electrocardiograph.

## 915.4 HOSPITAL UTENSILS

### 915.41 Basins

American Hospital Assn., 10-10. Corrosion-Resisting Steel Pus Basins. Covers four sizes—extra small, small, medium, and large; all in one grade.

American Hospital Assn., 10-13. Corrosion-Resisting Deep Solution Basin. Covers one type and one grade.

American Hospital Assn., 10-19. Corrosion-Resisting Steel Sponge Bowls. Covers two sizes in one grade.

U. S. Gov., Federal Specification RR-B-126; 1940. Basins; Pus, Corrosion-Resisting Steel. Covers one grade, one type, and six sizes. Gives requirements for chemical composition, design, and dimensions; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification RR-B-128; 1940. Basins; Solution, Corrosion-Resisting Steel. Covers one grade and five sizes. Gives requirements for chemical composition, construction, design, dimensions, tolerances, and grinding; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Federal Specification RR-B-616; 1940. Amendmant 1; 1941. Bowls; Sponge, Corrosion-Resisting Steel. Covers one type, one grade, and three sizes. Gives requirements for material, workmanship, chemical composition, construction, and measurements; methods of sampling, inspection, and tests; and requirements for packing and marking for shipment.

U. S. Gov., Federal Specification RR-T-771; 1940. Tubs; Foot, Corrosion-Resisting Steel. Covers one type, grade, and size. Gives requirements for material, workmanship, construction, design, measurements, tolerances, and finish; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., Treasury Dept., Procurement Div., No.528; 1941. Enamelware; Hospital and Sickroom. Covers twenty types and a number of classes intended to include all kinds of enamelware vessels for hospital sickroom use. Color generally white. Gives requirements for material, thickness of metal, thickness of enamel, capacity, dimensions, handles, ears, bail, finish, impact resistance, solubility, welds, processing, trade mark, and pouring lips; methods of sampling, inspection, and tests; packaging, packing, and marking.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2034A; 1940. Basin; Staining.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2394A; 1941. Basin; Enamelware, Hand and Operating Room.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2396; 1939. Basin; Sponge.

### 915.42 Cups, Pouches, and Holders

American Hospital Assn., 55-16. Paper Cups. Covers three types—(A) flat bottom (1-piece), (B) flat bottom (2-piece), and (C) conical or wedge-shape. Gives requirements for material, capacity, weight, thickness, bursting strength, leakage, and construction.

American Hospital Assn., 55-19. Paper Sputum Cups. Covers three types in two grades each. Based on U. S. Gov., Federal Specifications UU-C-821a.

U. S. Gov., Federal Specification GG-H-555; 1944. Holders; Clinical-Chart. Covers two types—(I) single board and (II) book form; and two grades—(A) aluminum and (B) hardwood. Gives requirements for material, workmanship, marking, and details for each type and grade; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification UU-C-821a; 1939. Amendment 1; 1944. Cups; Sputum, Paper. Covers three types—(I) knocked-down type with cover, (II) knocked-down type, refills, and (III) knocked-down type for pocket use; and two grades—(A) for general use and (B) for tropical use. Gives requirements for material, workmanship, bursting strength, leakage test, and details for each type; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Navy Dept. Specification 57Hld; 1943. Holders; Clinical-Chart, Navy-Standard.

U. S. Gov., Treasury Dept., Procurement Div., No. 528; 1941. Enamelware; Hospital and Sickroom. Covers twenty types and a number of classes intended to include all kinds of enamelware vessels for hospital sickroom use. Color generally white. Gives requirements for material, thickness of metal, thickness of enamel, capacity, dimension, handles, ears, bail, finish, impact resistance, solubility, welds, processing, trade mark, and pouring lips; methods of sampling, inspection, and tests; packaging, packing, and marking.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2031B; 1941. Holder; Petri Dishes.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2238; 1928. Cup; Spit, Holder.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2566; 1939. Cup; Paper, Holder, Dental.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2570; 1939. Holder; Mercury.

U. S. Gov., Veterans Administration, Medical and Hospital Supply Section, VA-H-81a; 1936. Sputum Cup Holders.

## 915.43 Cabinets, Medicine Chests, and Equipment

U. S. Gov., Dept. of Agriculture, Forest Service. Specification 201-S. Kit; Medicine, Veterinarian's.

U. S. Gov., Dept. of Agriculture, Forest Service. Specification 205-S. Kit; Medicine, List of Contents.

U. S. Gov., Dept. of Agriculture, Forest Service. Specification MSF-205-1. Kit; Medicine, Large-Crew Size.

U. S. Gov., Dept. of Agriculture, Forest Service. Specification MSF-205-2. Kit; Medicine, Medium Size.

U. S. Gov., Dept. of Agriculture, Forest Service. Specification MSF-209. Kit; Medicine, Individual-Pocket Size.

U. S. Gov., Dept. of Agriculture, Forest Service. Specification MSF-209. Kit: Medicine, Snake-Bite Outfit.

U. S. Gov., Dept. of Agriculture, Forest Service. Specification No. 210. Kit; Medicine, Wall or Truck Cab.

U. S. Gov., Dept. of Interior, Purchasing Office. Standard Specification No. 43. Cabinets; Instrument, Hospital.

U. S. Gov., Navy Dept. Specification 57C16; 1941. Chests; Hard-Fiber.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2459; 1938. Container; Metal, Large and Small, for Chest, Medical Pack.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2460; 1938. Insert; Plywood, for Chest, Medical Pack.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2463B; 1941. Chest; Field, Plain, Medical.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2464; 1939. Chest; Field, Modified, Medical.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2465A; 1940. Chest; Medical Pack.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2471; 1939. Container; Dispensing Set, Field.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2474; 1939. Case; Diagnostic, Eye, Ear, Nose, and Throat.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2504; 1939. Cabinet; Instrument, Field.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2509A; 1941. Container; Metal, for Medical Dept. Field Supplies.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2568; 1939. Chest; Flight Service.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2676; 1939. Cabinet; Medicine, Field.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2739; 1939. Cabinet for X-Ray Films.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2896A; 1941. Cabinet; Specialists' Ear, Nose, and Throat, Suction and Pressure.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2989; 1941. Chest; Film, X-Ray Field Unit, Superseding 10-2463A; for Item 96025 Only.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2997; 1941. Cabinet; Medicine.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-3002; 1942. Cabinet; Instrument.

U. S. Gov., Veterans Administration, Medical and Hospital Supply Section, VA-H-41c; 1942. Instrument Cabinet, Single Door Type.

U. S. Gov., Veterans Administration, Medical and Hospital Supply Section, VA-H-42b; 1939. Instrument Cabinet for Oral Surgery.

U. S. Gov., Veterans Administration, Medical and Hospital Supply Section, VA-H-43e; 1941. Medicine Cabinet, Desk Type.

U. S. Gov., Veterans Administration, Medical and Hospital Supply Section, VA-H-44c; 1942. Physicians' Office Cabinets.

U. S. Gov., Veterans Administration, Medical and Hospital Supply Section, VA-H-88c; 1942. Straight Type Instrument Cabinet.

*References.*—Sterilizers, dressing containers, and portable lockers, *see* 613.5, 915.32.

## 915.44 Funnels and Graduates

U. S. Gov., Treasury Dept., Procurement Div., No. 528, 1941. Enamelware; Hospital and Sickroom. Covers twenty types and a number of classes intended to include all kinds of enamelware vessels for hospital sickroom use. Color generally white. Gives requirements for material, thickness of metal, thickness of enamel, capacity, dimension, handles, ears, bail, finish, impact resistance, solubility, welds, processing, trade mark, and pouring lips; methods of sampling, inspection, and tests; packaging, packing, and marking.

*References.*—Laboratory funnels and graduates, *see* 918.2.

## 915.45 Medicine Droppers and Glasses

American Hospital Assn., 70-13. Medicine Glasses. Covers one type, one grade, and one class. Based on U. S. Gov. Federal Specification DD-G-616.

U. S. Gov., Federal Specification DD-D-691; 1936. Droppers; Medicine. Covers one grade and two types—curved and straight. Gives detail requirements; methods of sampling and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Federal Specification DD-G-616; 1936. Glasses; Medicine. Covers one type, one grade, and one class. Gives detail requirements; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

## 915.46 Stands, Trays, and Carriers

American Hospital Assn., 70-37. Corrosion-Resisting Steel Instrument Trays. Covers one grade in three sizes.

U. S. Gov., Federal Specification RR-T-626; 1941. Trays; Catheter, Corrosion-Resisting Steel (With Cover). Covers one grade and two types—(A) deep, with cover, and (B) shallow, with cover. Gives requirements for material, workmanship, design, and construction; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification RR-T-636; 1940. Amendment 1; 1944. Trays; Instrument, Corrosion-Resisting Steel. Covers one type, one grade, and seven sizes. Gives requirements for material, workmanship, construction, design, measurements, tolerances, and finish; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Navy Dept. Specification 57S1b; 1939. Stands; Instrument and Dressing, Operating Room.

U. S. Gov., Treasury Dept., Procurement Div., No. 528; 1941. Enamelware; Hospital and Sickroom. Covers twenty types and a number of classes intended to include all kinds of enamelware vessels for hospital sickroom use. Color generally white. Gives requirements for material, thickness of metal, thickness of enamel, capacity, dimension, handles, ears, bail, finish, impact resistance, solubility, welds, processing, trade mark, and pouring lips; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2026A; 1941. Basket; Culture Tubes.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2037A; 1941. Section Lifter; Pathological.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2282A; 1941. Stand; Support.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2400A; 1939. Tray; Instrument.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2409A; 1942. Stand; Irrigator.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2466A; 1941. Tray Set; Type 3.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2467; 1939. Tray Set; Type 5, Dental.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2503A; 1940. Tray Set; Type 1, Medical.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2518; 1939. Stand; Bowl, Immersion.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2559; 1939. Ring Support Stand.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2831; 1939. Carrier; Food.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2919B; 1941. Stand; Irrigator, Folding.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2932; 1939. Tray No. 6; Plain, Medical.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2933; 1939. Tray No. 7, for Sterilizer; Medical.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2975; 1940. Tray Set; Types 4 and 6.

U. S. Gov., U. S. Army, Medical Dept. Specification 23-95A; 1942. Tray; Bed.

U. S. Gov., U. S. Army, Medical Dept. Specification 23-96; 1939. Tray; Butlers'.

U. S. Gov., U. S. Army, Medical Dept. Specification 28-13-A; 1942. Tray; Serving.

U. S. Gov., Veterans Administration, Medical and Hospital Supply Section, VA-H-35e; 1942. Utensil Stand, Wall Type.

U. S. Gov., Veterans Administration, Medical and Hospital Supply Section, VA-H-48b; 1943. Double Form Basin Stand.

U. S. Gov., Veterans Administration, Medical and Hospital Supply Section, VA-H-49c; 1942. Single Form Basin Stand.

U. S. Gov., Veterans Administration, Medical and Hospital Supply Section, VA-H-50; 1932. Triple Form Basin and Immersion Stand.

U. S. Gov., Veterans Administration, Medical and Hospital Supply Section, VA-H-51e; 1942. Mayo Instrument Stand.

U. S. Gov., Veterans Administration, Medical and Hospital Supply Section, VA-H-65a; 1939. Immersion Bowl and Stand, Double.

U. S. Gov., Veterans Administration, Medical and Hospital Supply Section, VA-H-73a; 1938. Soiled Linen Conveyors.

U. S. Gov., Veterans Administration. Specification VA-X-20h; 1943. Bases; Wooden Tray.

## 915.47 Urinals, Bedpans, Commodes, and Racks

American Hospital Assn., 10-16. Corrosion-Resisting Steel Bedpans. Covers one grade and one type.

American Hospital Assn., 70-40. Graduated Glass Male Urinals. Covers one type and grade. Based on U. S. Gov. Federal Specifications DD-U-686a.

U. S. Gov., Federal Specification DD-U-686a; 1941. Urinals; Glass, Male, Graduated. Covers one size, one type, and one grade. Gives detail requirements; methods of sampling and testing; and requirements for packing and marking for shipment.

U. S. Gov., Federal Specification RR-B-191; 1940. Bedpans; Corrosion-Resisting Steel. Covers one type, grade, and style. Gives requirements for material, composition, construction, design, measurements, tolerances, finish, and marking; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification RR-U-691; 1940. Urinals; Male, Corrosion-Resisting Steel. Covers one grade, type, and capacity. Gives requirements for material, workmanship, construction, finish, and tolerances; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., Treasury Dept., Procurement Div., No. 528; 1941. Enamelware; Hospital and Sickroom. Covers twenty types and a number of classes intended to include all kinds of enamelware vessels for hospital sickroom use. Color generally white. Gives requirements for material, thickness of metal, thickness of enamel, capacity, dimension, handles, ears, bail, finish, impact resistance, solubility, welds, processing, trade mark, and pouring lips; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2397A; 1944. Bedpan.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2564; 1939. Rack for Urinals.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2730; 1939. Urinal; Enamelware.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2742; 1939. Pot; Chamber.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2827; 1939. Commode.

U. S. Gov., Veterans Administration, Medical and Hospital Supply Section, VA-H-94a; 1939. Commode Chair Without Bedpan.

*References.*—Stationary urinals of vitreous ware, *see* 532.23.

## 915.5 MEDICAL AND HOSPITAL SUPPLIES

### 915.50 General Items

### 915.51 Surgical Dressings

American Hospital Assn., 13-1. Canton Flannel Bandage. Covers one type, one grade, and two sizes—3 in. and 5 in.

American Hospital Assn., 13-31. Orthopedic Webbing. Covers one type, one grade, and 3 sizes — 1 in., 1 1/2 in., and 2 in.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R178-41; 1941. Packaging of First-Aid Unit Dressings and Treatments. This recommendation was designed to simplify the packaging of first-aid unit dressings and treatments and thereby to simplify the maintenance of industrial first-aid kits. Sponsored by Industrial Safety Equipment Assn.

U. S. Gov., Federal Specification L-C-166; 1942. Cellulose; Absorbent, Surgical. Covers one type and one grade in rolls or flat packages of 2, 5, or 8 lb. Gives requirements for material, workmanship, absorbency, water-soluble substances, ash, size, weight, moisture, and groundwood and unbleached pulp; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-3001; 1941. Fabric; Impervious, for Surgical Dressings.

U. S. Gov., Veterans Administration, Medical and Hospital Supply Section, VA-HM-116a; 1941. Cellulose Padding.

*References.*—Absorbent cotton, gauze, surgical dressings, *see* 398.1, 398.2, 398.3..

### 915.52 First-Aid Supplies

American Hospital Assn., 37-1. Basswood Splints. Covers one type, one grade, and two sizes—18 in. and 5 to 10 ft.

American Hospital Assn., 37-4. Thomas Hinged Arm Splint. Covers one type, grade, and class.

American Hospital Assn., 37-7. Thomas Leg Splint. Covers one type, grade, and class.

U. S. Gov., Federal Specification GG-K-391; 1941. Amendment 1; 1944. Kits; Empty, First-Aid, Burn-Treatment, and Snake-Bite; and Kit Contents. Covers two types—(I) pocket and (II) cabinet-carrying; two classes—(A) standard and (B) airtight and watertight; and two grades—(A) sheet metal and (B) nonmagnetic metal. Gives requirements for material and workmanship, unit size packages, compression, sterilization, waterproof, finish of kits, marking, instruction sheets, contents of kits, test specimens, and details; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Joint Army-Navy Specification JAN-K-87; 1944. Kits; First-Aid, for Life Rafts.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2056D; 1941. Packet; First Aid, Carlisle Model, Metal Covered.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2058B; 1940. Dressings; First-Aid, Large and Small.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2543; 1939. First-Aid Packet, for Instruction.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2576; 1939. Splint; Wrist, Cock-Up.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-3010; 1944. Packages; First-Aid, Unit Size.

*References.*—*See* references under 915.51.

### 915.53 Medicinal and Pharmaceutical Preparations

*References.*—Standard unit list of supplies, *see* 915.50; medicinal and pharmaceutical preparations, *see* 810-819.

### 915.54 Napkins

### 915.55 Surgical Silk and Tape

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Sterile Surgical Silk. Description, tensile strength, sterility, labeling, and storage.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Surgical Silk. Description, length, diameter, tensile strength, labeling, and storage.

*References.*—Adhesive tape, *see* adhesive plaster under 204.12.

### 915.56 Suture Material

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Surgical Gut (Surgical "Catgut," "Catgut" Suture). Description, length, diameter, tensile strength, soluble chromium compounds, sterility, labeling, and storage.

U. S. Gov., Federal Specification GG-S-816; 1944. Sutures; Surgical, Silk and Nylon. Covers four types—(I) braided, (II) dermal, (III) monofilament, and (IV) twisted; two grades—(A) silk and (B) Nylon; three colors—(W) white, (B) black, and (C) colored; containers; treatment; and sizes. Gives requirements for material and workmanship, control (lot) numbers, general characteristics, impregnation, labels, tolerances, and details for each type; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Navy Dept. Specification 57C13; 1941. Clips; Suture, Metal.

U. S. Gov., Navy Dept. Specification 57G3; 1940. Gut; Surgical.

U. S. Gov., Navy Dept. Specification 57S51; 1944. Sutures; Corrosion-Resisting Steel Alloy Wire.

U. S. Gov., Navy Dept. Specification 57S63; 1944. Sutures; Silver Wire.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2041A; 1941. Needle Holder; Kolle.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2702; 1939. Suture; Tape, Cotton.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2733; 1939. Case; Nasal, Suture.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2790A; 1940. Tape; Suture, Cotton, Veterinary.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2897; 1939. Sutures; Silkworm Gut.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2973A; 1941. Suture; Silk, Braided.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2985; 1941. Suture; Catgut, U. S. Pharmacopoeia Quality.

### 915.57 Absorbent Cotton

*References.*—Absorbent cotton, *see* 398.1.

### 915.58 Bone Plates

American Hospital Assn., 37-10. Sherman Steel Bone Plates and Screws. Covers one type, grade, and class of 14 bone plate sizes and 11 sizes of bone screws. Based on U. S. Gov., War Dept. Specifications 10-2072 D and National Bureau of Standards, Commercial Standard CS37-31.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Commerical Standard CS37-31; 1931. Steel Bone Plates and Screws. A commercial standard selected and adopted by industry for Sherman type bone plates made of chromium-vanadium steel, requirements on chemical composition of plates and screws corresponding to S. A. E. steel No. 6150, hardness, dimensions and design of 14 plate sizes and 11 screw sizes. Initiated by the American College of Surgeons.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2072D; 1941. Steel Bone Plates and Screws; Sherman.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2163; 1927. Clamp; Bone Plating, Lowman.

### 915.59 Miscellaneous Medical and Hospital Supplies

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Commercial Standard CS 114-43; 1943. Hospital Sheeting for Mattress Protection. To serve as a guide to producers, distributors, and users of sheeting impervious to moisture; used for the protection of hospital mattresses. Gives requirements for thickness, breaking strength, tearing strength, resistance to oil and disinfectants, resistance to sterilization, accelerated aging, cracking and moisture penetration, and burning rate.

U. S. Gov., Federal Specification U-C-115; 1943. Amendment 1; 1944. Capsules (Empty); Gelatin, Pharmaceutical. Covers one type, one grade, and size Nos. 000, 00, 0, 1, 2, 3, 4, 5, 10, and 11. Gives requirements for material, workmanship, shape and construction, capacities of sizes, water resistance, acid solubility, and appearance and color; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification GG-P-171; 1943. Pencils; Skin-Making. Covers one grade; two types—(I) single color and (II) two-color combination; and two classes—(A) wood casing and (B) paper casing. Gives requirements for colors, marking mediums, casings, workmanship, instruction sheet, marking, finish, point protector, bid sample, and details for each type and class; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification GG-S-621; 1944. Splints; Basswood. Covers one type and one grade. Gives requirements for sizes, material, workmanship, wood dimensions, and finish; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Navy Dept. Specification 51D3a; 1944. Dispensers; Salt-Tablet.

U. S. Gov., Treasury Dept., Procurement Div., No. 705; 1944. Masks; Surgeons', Cotton Gauze. Covers one type. Gives requirements for gauze, tape, thread, workmanship, design, mask proper, size, and tape; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., U. S. Army, Army Air Forces. Specification 94-40859; 1944. Kit; Carbon Monoxide Blood Testing, Type GG-1.

U. S. Gov., U. S. Army, Chemical Warfare Service. Specification 97-54-69; 1936. Capsule; CN.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2156A; 1941. Splint; Wire Ladder.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2157A; 1939. Splints; Basswood.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2510; 1939. Capsules; Gelatin.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2639; 1939. Capsule; Gelatin, Veterinary.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2696; 1939. Stick; Orangewood.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2866; 1939. Perimeter, Charts; McHardy.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2893; 1939. Pad; Prescription.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2942; 1939. Chain for Bandage Scissors.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2998; 1941. Splint Accessories; Steel.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-3009; 1944. Mask; Face, Surgical, Improved, With Fabric Filter.

## 916. SURVEYORS' AND ENGINEERS' INSTRUMENTS AND SUPPLIES

### 916.0 GENERAL ITEMS

American Society of Civil Engineers. Manuals of Engineering Practice, No. 15; 1938. Definitions of Surveying Terms. In order to produce a manual that would be serviceable, but not too bulky, the attempt was made to limit definitions to terms that are ambiguous or doubtful and terms that are comparatively new. In cases where more than one term is used to mean the same thing, the terms and definitions are adopted as the best usage.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-327. Transit; Engineering, 1-Minute, Large.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-372. Transit; Engineering, Small.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-380. Level; Standard Dumpy.

## 916.1 MATHEMATICAL INSTRUMENTS

U. S. Gov., Army-Navy Aeronautical Specification AN-C-108; 1943. Computers; Balance.

U. S. Gov., U. S. Army, Corps of Engineers. Specification 26-15; 1927. Rule; Slide, Polyphase, 10-In., With Magnifier, With Case.

U. S. Gov., U. S. Army, Corps of Engineers. Specification 42-1; 1921. Rule; Slide, 16-In., With Case.

U. S. Gov., U. S. Army, Corps of Engineers. Specification 42-2; 1921. Rule; Slide, 20-In., With Case.

## 916.2 LENGTH AND ANGLE MEASURING INSTRUMENTS

### 916.21 Length-Measuring Instruments

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Circular C328; 1927. Testing of Measuring Tapes at the National Bureau of Standards. Includes specifications for standard steel tapes; requirements on placing of graduations; permissible error in length for chosen standard tensions. Method of testing steel tapes with description of bench standard; description of geodetic comparator for testing base-line tapes.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Commercial Standard (Emergency) CS(E) 119-45; 1945. Dial Indicators (for Linear Measurements). The purpose is to provide minimum essential requirements for precision dial indicators. Covers four size groups of nominal bezel diameters, type, material, illustrations, dial indicators, dial classes, dial markings (English and metric), dial numbering, repetition of accuracy, repetition of readings, accuracy, packing, and marking.

U. S. Gov., U. S. Army, Corps of Engineers. Specification 42-33; 1939. Chain; Band, 300-Ft., With Reel and Tape Handles.

U. S. Gov., U. S. Army, Corps of Engineers. Specification 42-34; 1939. Tape; Measuring, Steel, 100-Ft., Graduated in Feet and Meters.

U. S. Gov., U. S. Army, Corps of Engineers. Specification 42-35; 1939. Tape; Measuring, Steel, 100-Ft., Graduated in Feet, With Thermometer Scale, Tension Handle, and Base Line Thermometer.

U. S. Gov., U. S. Army, Corps of Engineers. Specification 42-36; 1939. Tape; Steel, Pocket, 2-Meter, Graduated in Inches and Meters.

U. S. Gov., U. S. Army, Corps of Engineers. Specification 42-37; 1939. Tape; Steel, Map, Graduated in Yards, 1/20,000.

*References.*—Caliper rules, carpenters folding rules, steel rules, wood rulers, *see* 616.33; railway wheel measuring tapes, *see* 616.35; standard linear measures, *see* 919.1.

### 916.22 Angle-Measuring Instruments

U. S. Gov., Army Air Forces. Specification 27473 (3); 1944. Sextant; Aircraft, Type A-10 (Bubble Type).

U. S. Gov., Army Air Forces. Specification No. 40834; 1944. Trainer; Sextant, Type V-1.

U. S. Gov., Army-Navy Aeronautical Specification An-C-96; 1944. Collimators; Sextant.

U. S. Gov., Army-Navy Aeronautical Specification AN-S-28; 1943. Sextants; Bubble Type (With Altitude Averaging Device).

U. S. Gov., Army-Navy Aeronautical Specification AN-S-29; 1944. Sextants; Median Type.

U. S. Gov., Dept. of Agriculture, Forest Service. Specification for Protractor; Paper, Glassine, or Opaque.

U. S. Gov., Dept. of Agriculture, Forest Service. Specification No. 2. Alidade; Vertical-Angle.

U. S. Gov., Dept. of Agriculture, Forest Service. Specification 268-1. Protractor; Dispatcher, Metal.

U. S. Gov., Dept. of Agriculture, Forest Service. Specification No. 269. Protractor; Smoke Chaser's, Transparent.

U. S. Gov., Dept. of Agriculture, Forest Service. Specification No. 377. Triangulator; Parallel, Transparent.

U. S. Gov., Dept. of Agriculture, Forest Service. Specification MSF-1. Alidade; Pivot-Type.

U. S. Gov., Dept. of Agriculture, Forest Service. Specification MSF-2-1. Alidade; 18-In., Plain Base.

U. S. Gov., Dept. of Agriculture, Forest Service. Specification MSF-2-2. Alidade, 12-In., Plain Base.

U. S. Gov., Dept. of Interior, Purchasing Office. Standard Specification No. 31. Theodolites; 10 Seconds, 7 Inches.

U. S. Gov., Joint Army-Navy Specification JAN-C-167; 1944. Clinometers (Mark 4).

U. S. Gov., Marine Corps Specification, 1941. Protractors; Xylonite, Semicircular, 6-In., Graduated in Degrees.

U. S. Gov., Navy Dept. Specification 18A4; 1944. Alidades; Telescopic.

U. S. Gov., Navy Dept. Specification 18C12c; 1944. Circles; Azimuth, Mark 111, Model 2.

U. S. Gov., Navy Dept. Specification 18P7; 1943. Protractors; Position-Ploting, Hoey.

U. S. Gov., Navy Dept. Specification 18S6b; 1931. Sextants; Surveying.

U. S. Gov., Navy Dept. Specification 18S11a; 1943. Stadimeters.

U. S. Gov., Navy Dept. Specification 18S14c; 1944. Sextants; High Grade, Endless Tangent Screw, Mark II.

U. S. Gov., U. S. Army, Corps of Engineers. Specification 42.1-2; 1921. Alidade; Brass, Open Sight, With Level Bubble and Declinator, Complete With Case.

U. S. Gov., U. S. Army, Corps of Engineers. Specification 42.1-47; 1921. Sextant; Pocket, With Case.

U. S. Gov., U. S. Army, Corps of Engineers. Specification 42-13-A; 1934. Clinometer; Service, With Case.

U. S. Gov., U. S. Army, Corps of Engineers. Specification 42-17; 1928. Alidade; Telescopic, Complete.

U. S. Gov., U. S. Army, Corps of Engineers. Specification 42-31; 1938. Alidade; Boxwood, Flat, Folding Sights, With Leather Case.

U S. Gov., U. S. Army, Corps of Engineers. Specification 42-32; 1938. Alidade; Boxwood, Triangular, 8 1/2-In.

U. S. Gov., U. S. Army, Corps of Engineers. Specification 42-39; 1939. Compass; Lensatic, With Leather Case.

U. S. Gov., U. S. Army, Signal Corps. Specification 74-1-D; 1940. Theodolite; Type ML-47-( ), and Tripod; Type ML-78-( ).

U. S. Gov., U. S. Army, Signal Corps. Specification 75-32D; 1942. Theodolite; Type PH-( )-33, Associated Equipment.

U. S. Gov., U. S. Maritime Commission. Specification 18-MC-8; 1944. Sextants; Endless-Tangent Screw, Precision. Covers one grade. Gives requirements for materials and workmanship, construction, frame, graduated arc, rack, index arm, tangent screw and micrometer drum, telescope, mirrors, shade glasses, pivot, handle, errors, weight, marking, finish, case, accessories, interchangeability of parts, and spare parts; inspection, sampling, and methods of test; and packaging, packing, and marking for shipment.

### 916.4 GAGES (EXCEPT INDUSTRIAL)

U. S. Gov., U. S. Army, Corps of Engineers. Specification 49-5; 1922. Gage; Tide.

### 916.5 TRANSITS

U. S. Gov., Dept. of Interior, General Land Office. Specification for General Land Office Solar Transit; 1941. Includes requirements for light mountain engineers' transit, with full vertical circle and Smith solar attachment, adapted to the public-land subdivisional surveys.

U. S. Gov., Dept. of Interior, Purchasing Office. Standard Specification No. 19. Transit and Tripods; 20 seconds.

U. S. Gov., Dept. of Interior, Purchasing Office. Standard Specification No. 20. Transit and Tripods; 30 Seconds.

U. S. Gov., Dept. of Interior, Purchasing Office. Standard Specification No. 30. Transits and Tripods; 1 minute.

U. S. Gov., U. S. Army, Corps of Engineers. Specification 42-15A; 1931. Transit; Engineers', Complete.

U. S. Gov., U. S. Army, Corps of Engineers. Specification 42-27; 1937. Rod; Stadia, 12-Ft., Folding.

### 916.6 LEVELS (OTHER THAN CARPENTERS')

U. S. Gov., U. S. Army, Corps of Engineers. Specification 42-16A; 1931. Level; Dumpy Engineers', Complete.

U. S. Gov., U. S. Army, Corps of Engineers. Specification 42-28; 1937. Rod; Level, Philadelphia.

U. S. Gov., U. S. Army, Corps of Engineers. Specification 42-59; 1943. Level; Hand, Locators.

### 916.7 CHESTS AND KITS

### 916.8 PLANE-TABLE OUTFITS

U. S. Gov., Dept. of Agriculture, Forest Service. Specification No. 132. Fire Finder Map Board Table.

U. S. Gov., U. S. Army, Corps of Engineers. Specification 42-21; 1929. Plane Table; Complete, With Board, Etc.

### 916.9 MISCELLANEOUS INSTRUMENTS

U. S. Gov., Army-Navy Aeronautical Specification AN-A-14; 1943. Astrographs.

U. S. Gov., Navy Dept. Specification 18-I-7; 1942. Indicators; Position-Angle (Inclinometers), for Binoculars for Lookout.

U. S. Gov., U. S. Army, Corps of Engineers. Specification 42.1-5; 1921. Arrow; Steel, 10 In., Set of 11.

U. S. Gov., U. S. Army, Corps of Engineers. Specification 42.1-37; 1921. Pole; Ranging, Surveyors' Rods, Metal, Tubular, in two Sections, Maximum Graduation 6 Ft., Complete With Case.

## 917. METEOROLOGICAL INSTRUMENTS

### 917.0 GENERAL ITEMS

American Society for Testing Materials, D 337-34; 1934. Method of Determining Relative Humidity. Definitions for absolute humidity, relative humidity, dew point, vapor pressure, dry and wet bulb temperatures, hygrometer, psychrometer, etc.; description of standard sling psychrometer, alternate instruments, method of procedure, and formulas for calculations of results.

### 917.1 ANEMOMETER AND WIND VANES

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-32. Windcone-Assembly; Internally Lighted.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-507. Weather Instruments; Wind Direction and Velocity.

U. S. Gov., U. S. Army, Signal Corps. Specification 74-13-A; 1925. Anemometer; Type ML-58.

### 917.2 BAROMETERS AND BAROGRAPHS

American Society of Mechanical Engineers. Power Test Code, Auxiliary Section. Part 2—Pressure Measurement, Chapters 1 and 6; 1941. Chapter 1 considers types of barometers; methods of obtaining barometric pressure; range and accuracy of barometers; installation; barometric corrections and reductions; and calibration, etc. Chapter 6 presents information on standard conditions for mercury columns; standard barometric pressure for condensers, engines, and turbines; barometric temperature; temperature corrections; temperature-correction formula; corrections for barometers and pressure gages for decrease of atmospheric pressure with elevation; gravity corrections; data for computing pressures above atmospheric; corrections for head and water columns; density of water and multipliers for water columns; formulas for pressure equivalents of velocity heads; computation of total pressure; formulas for pressure loss due to pipe friction, for friction loss in terms of velocity, and in terms of impact tube reading.

U. S. Gov., Army Air Forces. Specification 27397-1; 1943. Barograph; Type B-2, Aircraft.

U. S. Gov., Army Air Forces. Specification 27989 (1); 1942. Barometer; Laboratory (Altitude Test).

U. S. Gov., Joint Army-Navy Specification JAN-B-84; 1944. Barometers; Mercurial, Marine.

U. S. Gov., Navy Dept. Specification 18B1d; 1944. Barometers; Aneroid.

U. S. Gov., U. S. Army, Corps of Engineers. Specification 42.1-6; 1921. Barometer; Aneroid, With Case.

U. S. Gov., U. S. Army, Signal Corps. Specification 74-4-B; 1922. Barometer; Type ML-9, Aneroid.

U. S. Gov., U. S. Army, Signal Corps. Specification 74-7-D; 1942. Barometers; Type ML-2 and Case, ML-48.

U. S. Gov., U. S. Army, Signal Corps. Specification 74-25; 1938. Barograph; Type ML-3-A.

U. S. Gov., U. S. Maritime Commission. Specification 18-MC-1b; 1943. Barometer; Aneroid. Shall be but one type and grade. Gives requirements for materials, workmanship, construction, and finish; inspection,

sampling, and methods of test; and packaging, packing, and marking.

### 917.3 PSYCHROMETERS, CASE AND SLING

American Society of Mechanical Engineers. Power Test Codes. Ausiliary Section. Part 18—Humidity Determinations, 1932. Contains detailed description and methods of application as well as information on available types of instruments.

American Society for Testing Materials, D 337-34; 1934. Method of Determining Relative Humidity. Definitions for absolute humidity, relative humidity, dew point, vapor pressure, dry and wet bulb temperatures, hygrometer, psychrometer, etc.; description of standard sling psychrometer, alternate instruments, method of procedure, and formulas for calculations of results.

U. S. Gov., Navy Dept. Specification 18P2d; 1943. Psychrometers and Cases.

U. S. Gov., U. S. Army, Signal Corps. Specification 74-17B; 1931. Psychrometer; Type ML-24.

U. S. Gov., U. S. Maritime Commission. Specification 18-MC-4; 1941. Hygrometer; Mason's Form. Shall be but one type and one grade. Gives requirements for materials, workmanship, thermometer, reservoir, wicks, scales, panel, mounting, inspection, and test.

### 917.4 GAGES, METEOROLOGICAL

U. S. Gov., U. S. Army, Signal Corps. Specification 74-9; 1922. Gage; Type ML-17, Rain and Snow.

U. S. Gov., U. S. Army, Signal Corps. Specification 74-60; 1943. Gage; ML-217, Precipitation.

### 917.5 THERMOMETERS

*References.*—Testing of thermometers, *see* 919.80.

### 917.9 MISCELLANEOUS METEOROLOGICAL INSTRUMENTS

U. S. Gov., U. S. Army, Signal Corps. Specification 74-10B; 1941. Hydrograph; Type ML-16, Without Clock.

U. S. Gov., U. S. Army, Signal Corps. Specification 74-11; 1922. Sunshine Recorder; Type ML-20.

U. S. Gov., U. S. Army, Signal Corps. Specification 74-19-A; 1938. Board; Plotting, Type ML-57, Meteorological.

U. S. Gov., U. S. Army, Signal Corps. Specification 74-21A; 1933. Rotor; Type ML-74-A.

U. S. Gov., U. S. Army, Signal Corps. Specification 74-23-A; 1934. Board; Type ML-92, for Meteorological Data.

U. S. Gov., U. S. Army, Signal Corps. Specification 74-24; 1938. Board; Plotting, Type ML-55. Includes Paper Cover and Rules, Type ML-63.

U. S. Gov., U. S. Army, Signal Corps. Specification 74-30B; 1944. Meteorological Scales.

U. S. Gov., U. S. Army, Signal Corps. Specification 74-31-A; 1943. Plotting Boards; ML-120 and ML-122.

U. S. Gov., U. S. Army, Signal Corps. Specification 74-58; 1943. Wind Equipment; SCM-20-( ).

## 918. LABORATORY APPARATUS AND SUPPLIES

### 918.0 GENERAL ITEMS

American Ceramic Society. Journal of A.C.S. for June 1928. Tentative Methods. Analysis of Glass, 1926. Preparation and fusion of sample, method of determination of silica, iron and alumina, lime, magnesia, and alkalies.

American Trudeau Society (Medical Section of the National Tuberculosis Assn.). Report of the Committee on Standard Laboratory Procedure Minimum Laboratory Standards, 1942. Covers the minimum which is the least acceptable effort in searching for the tubercle bacillus and includes technical procedures for making the several tests.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Circular C19; 1924. Standard Density and Volumetric Tables. Includes tables of temperature correction for glass volumetric apparatus.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Circular C398 and Supplement, 1944. Standard Samples. Glass, Low Boron, Sample 92; Glass, High Boron, Sample 93; Glass, Lead-Barium, Sample 89; Glass, Opal, Sample 91; Glass, Soda-Lime, Sample 80; and Glass, Soda-Lime ($B_2O_3B_aO$), Sample 128. These samples are prepared and sold by the National Bureau of Standards with a certificate of analysis for use in industry and by others as a comparison standard for checking the accuracy of analysis of similar materials.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Circular C434; 1941. Testing of Glass Volumetric Apparatus. This circular contains specifications and tolerances for glass volumetric apparatus of precision grade. Detailed information is given as to dimensions, type of graduations, inscriptions, and tolerances for Burettes, flasks, cylinders, and certain kinds of special apparatus. Instructions are given for the method of reading, the test liquid used, the method of test, and the importance of cleanliness of apparatus. An outline of the tests performed, reports of test, and directions for submitting apparatus, are included.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Commercial Standard CS21-39; 1939. Interchangeable Ground-Glass Joints, Stopcocks, and Stoppers. This standard covers interchangeable ground-glass joints for laboratory and industrial glassware in sizes from 5 to 71 mm. approximate diameter at the large end of ground zone for full-length grindings; from 5 to 40 mm. for medium-length grindings; and from 10 to 71 mm. for short-length grindings; interchangeable straight-bore, ground-glass stopcocks from 1- to 10-mm. bore; interchangeable ground-glass stoppers from 9 to 38 mm. approximate diameter at the large end of ground zone for volumetric flasks, stoppered Erlenmeyer flasks, stoppered cylingers, separatory funnels, and iodine determination flasks; and interchangeable ground-glass stoppers from 14 to 45 mm. approximate diameter at the large end of ground zone for reagent bottles. Sponsored by the Vitreous China Plumbing Fixtures Assn. Also printed in Spanish.

### 918.1 BURETTES AND PIPETTES

American Chemical Society. Standard Sizes and Shapes of Apparatus, 1927. Includes burettes and pipettes, sizes and capacities selected as standard stock items, no detailed dimensions or specifications.

Manufacturing Chemists Assn. of the U. S. Laboratory Apparatus, 1922. Burettes. For four standard burettes (funnel top; 3-way stopcock; bulb and 3-way stopcock with 50 ml. bulb; bulb and 3-way stopcock

with 75 ml. bulb), requirements on general quality and annealing of glass, graduation, construction of stopcocks and burette tips, capacity and design of burette, dimensions, time of outflow, error in capacity, calibration according to National Bureau of Standards methods.

Manufacturing Chemists Assn. of the U. S. Laboratory Apparatus, 1922. Mohr Pipettes. Standard sizes, requirements on general quality and annealing of glass, design, graduation, dimensions, limits of error in graduation, calibration in accordance with methods of National Bureau of Standards.

Manufacturing Chemists Assn. of the U. S. Laboratory Apparatus, 1922. Transfer Pipettes. Standard sizes, requirements on general quality and annealing of glass, dimensions, graduation, accuracy of graduation, calibration according to National Bureau of Standards methods.

U. S. Gov., Federal Specification DD-P-386; 1940. Pipettes; Ostwald. Covers one type, one grade, and six sizes—1/2, 1, 2, 3, 5, and 10 cc. Gives detail requirements for dimensions, tolerance, bulb, lumen, ends, and calibration; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Navy Dept. Specification 57P6; 1941. Pipettes; Haemacytometer, Diluting.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2025A; 1941. Burette; Automatic.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2372; 1938. Pipette; Babcock, for Milk Test.

U. S. Gov., Veterans Administration, Medical and Hospital Supply Section, VA-H-8c; 1938. Blood Diluting Pipettes.

*References.*—Analysis of glass, volume correction, ground joints, *see* 918.0.

## 918.2 BEAKERS, GLASSES, GRADUATES, AND FUNNELS

American Chemical Society. Standard Sizes and Shapes of Apparatus, 1927. Includes beakers, glasses, graduates, and funnels; sizes and capacities selected as standard stock items; no detailed dimensions or specifications.

American Wood-Preservers' Assn. Methods for Determination of Tar Acids, 26b; 1939. Includes specification for graduated glass separatory funnel; dimensional drawings for two types.

Manufacturing Chemists Assn. of the U. S. Laboratory Apparatus, 1922. Graduated Cylinders. For lipped cylinders with foot and for glass stoppered cylinders with foot, standard sizes, requirements on general quality and annealing of glass, design, graduation, diameter of neck of stoppered cylinders, limits of error in graduation, calibration in accordance with methods of National Bureau of Standards.

U. S. Gov., Dept. of Commerce, National Bureau of Standards, H29; 1942. Specifications, Tolerances, and Regulations for Commercial Weighing and Measuring Devices. Glass Graduates. Shall be either cylindrical or conical in shape and made of good quality glass, thoroughly annealed, clear and transparent Specification requirements are given relative to construction and capacities of graduates, as well as allowable tolerances for various diameters.

U. S. Gov., Federal Specification DD-F-796; 1941. Funnels; Glass, Fluted or Ribbed. Covers two classes—(A) fluted (in two sizes—32- and 64-ounce) and (B) ribbed (in five sizes—2-, 8-, 16-, 32-, and 64-ounce). Gives requirements for material, workmanship, bowl, stem, fluting, ribbing, and measurements; methods of sampling, inspection, and tests; and requirements for packing and marking for shipment.

U. S. Gov., Federal Specification DD-F-806; 1941. Funnels; Glass, Smooth (Chemical). Covers two classes—(A) short stem, sizes 1 to 11, inclusive; and (B) long stem, sizes 1 to 7, inclusive. Gives requirements for material, workmanship, size, inside diameter, length of stem, and outside diameter; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification DD-G-666; 1941. Amendment 1; 1944. Graduates; Glass, Conical. Covers one grade and three types—(I) graduated in metric scale, (II) graduated in apothecaries scale, and (III) graduated in both metric and apothecaries scales. Gives requirements for capacities, material, workmanship, construction, graduation marking, capacity numerals, marking, and tolerances; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification DD-V-581; 1937. Amendment 1; 1937. Volumetric Apparatus; Glass. Covers volumetric flasks, burettes, transfer pipettes, measuring pipettes, cylindrical graduates, and serological pipettes—Class A and class B. Gives detail requirements; methods of inspection and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Navy Dept. Specification 57B13; 1941. Beakers; Laboratory, Glass.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2012B; 1942. Beaker; 250 Cc.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2253A; 1941. Funnel; Separatory, Squibb.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2264A; 1941. Funnel; Separatory, Cylindrical.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2268A; 1941. Measure; Acid.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2273A; 1941. Glass; Test, Urinalysis.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2489B; 1942. Graduate; Aluminum, 60-Cc.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2494; 1939. Graduate; 500-Cc., Enamelware.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2535; 1939. Funnel; Enamelware.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2561; 1939. Beaker.

U. S. Gov., U. S. Army, Signal Corps. Specification 75-8A; 1938. Graduate; Glass, for Photographic Use.

*References.*—Analysis of glass, volume corrections, ground joints, physical testing methods, *see* 918.0; metal funnels for commercial use, *see* 612.29; Buchner porcelain funnel, *see* 532.21.

## 918.3 CRUCIBLES, BOTTLES, BRUSHES, AND JARS

American Chemical Society. Standard Sizes and Shapes of Apparatus, 1927. Includes crucibles and bottles, sizes and capacities selected as standard stock items, no detailed dimensions or specifications.

American Hospital Assn., 43-25. Museum Jars. Covers one type, one grade, and four sizes. Based on U. S. Gov., War Dept., Specification 10-2004A.

American Hospital Assn., 43-28. Specimen Jar. Covers one type, one grade, and three sizes. Based on U. S. Gov., War Dept., Specification 10-2292.

U. S. Gov., Navy Dept. Specification 57B24; 1943. Bottles; Tablet, Wide-Mouth, Screw-Cap, Flint-Glass (for Cases, Tablet, U.S.N.).

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2004A; 1941. Jars; Museum.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2216A; 1939. Bottle; Specific Gravity.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2248A; 1941. Desiccator; Scheibler.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2257A; 1941. Bottle; Weighing.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2262A; 1941. Holder; Crucible, Walter.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2265A; 1941. Jar; Animal.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2267A; 1941. Bottle; Testing, Cream and Milk.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2283A; 1941. Jar; Coplin.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2292A; 1941. Jar; Specimen.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2306B; 1941. Bottle; Vaccine.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2368A; 1941. Crucible; Porcelain, High Form.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2371-A; 1939. Bottle; Wide Mouth, With Ground Glass Stopper.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2447; 1938. Bottles; Reagent, 8-oz., Narrow Mouth With Vertical, Coin-Shaped Glass Stopper.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2522; 1939. Jar; Ointment.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2525; 1939. Bottle; Office, Preparation.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2655; 1939. Bottle; Narrow Mouth, With Ground Glass Stopper.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2728; 1939. Brush; Camel Hair.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2745; 1939. Brush; Scratch.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2812A; 1941. Vial; 2-Dram.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2828; 1939. Jar for Sutures.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2903; 1939. Vial; Glass, Amber, 60-Cc.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2928; 1939. Vial; Rubber-Stoppered, 6 1/2-Cc.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2964; 1939. Vial; Glass-stoppered, for Container No. 1.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2995; 1941. Vial; Serum.

*References.*—Porcelain crucibles and other laboratory porcelain ware, *see* 532.21; weighing bottles, tablet bottles, *see* 955.1; laboratory and distillation flasks, *see* 918.9; analysis of glass, volume corrections, ground joints, *see* 918.0.

## 918.4 BURNERS AND CLAMPS

American Chemical Society. Standard Sizes and Shapes of Apparatus, 1927. Includes burners and clamps, sizes and capacities selected as standard stock items, no detailed dimensions or specifications.

U. S. Gov., Treasury Dept. Procurement Div., No.577; 1942. Burners; Gas, Laboratory. Covers type I; Regular—class A, Bunsen; class B, Meker (size 1, large; size 2, medium; size 3, small); and class C, Tirrill; and type II; Blast—class A, Bunsen and class B, MIT. Gives requirements for material, control, finish, flame retarder, and dimensions and details for each type and class; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2007B; 1939. Burner; Gasoline (Fire Pot Type).

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2008A; 1941. Burner; Bunsen, Tirrill Type.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2009A; 1941. Burner; Bunsen, High Temperature or Meker.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2010B; 1941. Burner; Bunsen, Blast.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2011A; 1942. Burner; Alcohol, Bunsen Type.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2355A; 1941. Burner; Bunsen, Four Burners, Groupea.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2358; 1939. Burner; Micro.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2366A; 1942. Clamp; Mohr's Pinchcock.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2379; 1939. Clamp; Adjustable.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2380A; 1941. Clamp; Extension.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2381A; 1941. Clamp; Extension, Holder.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2382A; 1942. Clamp; Hoffman, Improved.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2720; 1939. Burner; Bunsen, Laboratory.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2844; 1939. Torch for Prestolite.

## 918.5 DISHES

American Chemical Society. Standard Sizes and Shapes of Apparatus, 1927. Includes dishes, sizes and capacities selected as standard stock items, no detailed dimensions or specifications.

American Hospital Assn., 43-16. Culture and Petri Dishes. Covers one type, two grades, and two sizes.

U. S. Gov., Federal Specification DD-D-411; 1941. Dishes; Culture and Petri. Covers two grades—(A) resistance glass (in two classes—(1) ground edges and (2) reinforced edges); and (B) ordinary glass (in one class—(1) ground edges). Gives detail requirements as to sizes, weights, and tolerances; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., Navy Dept. Specification 57D5; 1941. Dishes; Evaporating, Porcelain.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2249A; 1941. Dish; Evaporating, Glass.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2295A; 1942. Dish; Stender.

*References.*—Porcelain dish, *see* 532.21.

## 918.6 MORTARS AND PESTLES

American Chemical Society. Standard Sizes and Shapes of Apparatus, 1927. Includes mortars, sizes selected as standard stock items, no detailed dimensions or specifications.

U. S. Gov., Navy Dept. Specification 57M4; 1942. Mortars and Pestles; Pharmaceutical.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2491A; 1939. Mortar and Pestle.

## 918.7 TUBES AND TUBING

American Chemical Society. Standard Sizes and Shapes of Apparatus, 1927. Includes tubes and tubing, sizes selected as standard stock items, no detailed specifications.

American Hospital Assn., 43-37. Assorted Test Tubes. Covers three types, two grades, and nine sizes. Based on U. S. Gov., War Dept., Specification 10-2352.

American Hospital Assn., 43-40. Glass Tubing. Covers one type, one grade, and two sizes. Based on U. S. Gov., War Dept., Specification 10-2055B.

U. S. Gov., Navy Dept. Specification 18-T25a; 1942. Tubes; Clinometer, Spirit.

U. S. Gov., Navy Dept. Specification 57T8; 1941. Tubes; Antigen-Dilution, Glass (Kahn).

U. S. Gov., Navy Dept. Specification 57T9; 1941. Tubes; Blood-Sugar, Glass.

U. S. Gov., Navy Dept. Specification 57T10; 1941. Tubes; Centrifuge, Glass.

U. S. Gov., Navy Dept. Specification 57T11; 1941. Tubes; Drip, Glass.

U. S. Gov., Navy Dept. Specification 57T41; 1944. Tubes; Glass, Y-Shaped.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2038A; 1941. Glass Rods.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2055B; 1941. Tubing; Glass.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2067A; 1942. Tubes; Drying, (Calcium Chloride Tubes).

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2259A; 1941. Tube; Glass, 15-Cc., Centrifuge, Graduated and Ungraduated.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2260A; 1941. Tube; Centrifuge, Glass, Ungraduated, 50-Cc.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2274A; 1942. Tube; Color Comparison, Nessler.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2352; 1938. Test Tube; Assorted.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2712; 1939. Tubing; Nickel-Silver.

*References.*—Rubber tubing, *see* 204.6.

## 918.8 BIOLOGICAL APPARATUS AND SUPPLIES

### 918.81 Albuminometers

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2286A; 1941. Albuminometer; Esbach.

### 918.82 Amboceptors

### 918.83 Ampules

The American Pharmaceutical Assn. and The National Formulary Committee. The National Formulary, Seventh Edition, 1942. Ampuls. Gives description; methods of cleansing and sterilizing empty glass ampuls; tests for ampul glass; description of aqueous ampul solutions and of ampul water; clearness of ampul solutions; reaction of ampul solutions; proper use of substances suitable as local anesthetics, or as buffers, or as preservatives in ampul solutions; preparation of ampul solutions or suspensions with ampul oil; description of ampul oil; description of filling of ampuls; volume in each ampul; promptness of sterilization of ampul solution; sterilization of filled ampuls; sterilization processes; testing of ampul solutions for sterility; preparation of culture medium; general sterility tests; sterility tests on bulk products and on solutions in ampuls.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2288A; 1944. Ampuls; Glass, for Vaccine.

### 918.84 Chlorinators

U. S. Gov., Joint Army-Navy Specification JAN-C-97; 1944. Chlorination-Outfits, for Making Water Safe To Drink; Shipboard Use.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2811; 1939. Apparatus; Chlorinating.

### 918.85 Incubators, Biological

U. S. Gov., Federal Specification GG-I-488; 1944. Incubators; Bacteriological, Air-Circulating Type. Covers one type and four classes—(A) exterior and interior walls of asbestos transite board, (B) exterior walls of steel and interior walls of asbestos transite board, (C) exterior walls of wood and interior walls of asbestos transite board, and (D) exterior and interior walls of steel. Gives requirements for sizes, general construction, cabinets, hardware, insulation, shelves, electric heating medium, gasoline heating medium, ventilation, marking, spare parts, finish, and details for each class and size; methods of inspection and test; and packaging, packing, and marking for shipment.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2013C; 1941. Incubators; Bacteriological.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2014A; 1939. Incubator; Field Model.

### 918.86 Haemacytometers

U. S. Gov., Navy Dept. Specification 57C14; 1941. Chambers; Blood-Counting, Glass, for Hemacytometer.

U. S. Gov., Navy Dept. Specification 57H9; 1944. Hemacytometers; Microscopical, Complete, in Carrying Case.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2024B; 1941. Hemacytometer; Complete, and Component Parts.

*References.*—Analysis of glass, *see* 918.0.

### 918.87 Spatulas

Manufacturing Chemists Assn. of the U. S. Laboratory Apparatus, 1922. Porcelain Spatula. Requirements on

general quality of porcelain for long spatula with knob at opposite end, standard sizes and dimensions, tolerance on capacity, test requirements for resistance to rapid heating and cooling, resistance to hot alkalies, freedom from porous surface, and softening at high temperatures, to be entirely glazed.

National Assn. of Dyers and Cleaners of the U. S. and Canada. The Spotting Department, 1940. Includes recommendations for shape of bone spatula used in spotting department.

U. S. Gov., Navy Dept. Specification 57S11; 1940. Spatulas; Pharmaceutical.

U. S. Gov., Navy Dept. Specification 57S19; 1941. Spatulas; Hard-Rubber (Pharmaceutical).

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2102A; 1942. Spatula; Abdominal.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2168A; 1942. Spatulas; Surgical.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2456A; 1940. Spatula; Wax, Dental

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2517; 1939. Spatula; Flexible.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2565A; 1942. Spatula; Brain, Cushing.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2579; 1939. Spatula; Stellite.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2962; 1939. Spatula; Cement, Dental.

## 918.9 MISCELLANEOUS LABORATORY APPARATUS AND SUPPLIES

American Chemical Society. Standard Sizes and Shapes of Apparatus, 1927. Includes absorption bulbs and tubes, adapters, alkalimeters, annealing cups, ball mills, baskets, baths, calcium chloride tubes, capsules, casseroles, centrifuge tubes, color comparison tubes, combustion tubes and boats, condensers, cylinders, desiccators, distilling tubes, extraction apparatus, filter paper, flasks, funnel tubes, gas analysis apparatus, lecture apparatus, potash bulbs, rubber tubing, spatulas, stop cocks, sulphur apparatus, supports, tongs, triangles, urine analysis apparatus, weighing bottles. Sizes and capacities selected as standard stock items; no detailed dimensions or specifications.

American Hospital Assn., 43-19. Miscellaneous Laboratory Flasks. Covers six types and one grade. Based on U. S. Gov., War Dept., Specification 10-2418A.

American Society for Testing Materials, D 270-33; 1933. American Petroleum Institute Standard, 528-33. American Standards Assn., Z11.33-1935. Methods of Sampling Petroleum and Petroleum Products. Includes all petroleum products except gases. Requirements for experienced personnel and description of apparatus; for bottle or beaker sampling of tank cars and trucks; and shore, ship, or barge tanks, continous sampling of pipe lines, dipper sampling of streams; thief sampling of cans, drums, and tank cars; borings sampling of wax, soft solids in cases, cakes, bags, or barrels; and grab sampling of lumpy material in bins, bunkers, sacks, and barrels.

American Society for Testing Materials, D 635-44; 1944. Method of Test for Flammability of Plastics Over 0.050 Inch in Thickness. Covers the procedure for determining the flammability of plastics in the form of sheets or plates. Apparatus, test specimens, procedure, and report.

American Society for Testing Materials, D 647-42 T; 1942. Tentative Specifications for Molds for Test Specimens of Molding Materials Used for Electrical Insulation. Molds for 1/2 by 1/2 by 5 in. specimen and disk test specimen.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-430. Octane Testing Machine.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Commercial Standard CS21-39; 1939. Interchangeable Ground-Glass Joints, Stopcocks, and Stoppers. This standard covers—(1) interchangeable ground-glass joints for laboratory and industrial glassware in sizes from 5 to 71 mm. approximate diameter at the large end of ground zone for full-length grindings, from 5 to 40 mm. for medium-length grindings, and from 10 to 71 mm. for short-length grindings; (2) interchangeable straight-bore, ground-glass stopcocks from 1- to 10-mm. bore; (3) interchangeable ground-glass stoppers from 9 to 38 mm. approximate diameter at the large end of ground zone for volumetric flasks, stoppered Erlenmeyer flasks, stoppered cylinders, separatory funnels, and iodine determination flasks; and (4) interchangeable ground-glass stoppers from 14 to 45 mm. approximate diameter at the large end of ground zone for reagent bottles. Also printed in Spanish.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Miscellaneous Publication M114; 1931. Filters for the Reproduction of Sunlight and Daylight and the Determination of Color Temperature. The paper contains 33 figures and 26 tables giving among other things the energy distributions and fundamental spectrophotometric and colorimetric data used in the computations, auxiliary spectrophotometric and colorimetric information obtained during the investigation, and the trilinear coordinates of the various source-and-filter combinations and of the Planckian radiator from 1,600° to 20,000° K. computed on the basis of the adopted mean sun as the "neutral" stimulus. The filters are further described in 38 charts, each chart giving the chemical formula, the spectral transmission, and the light transmission of the filter, as well as the spectral energy distribution of the source, that of the source and filter combined, and the energy distribution which serves as the ideal in that particular case.

U. S. Gov., Federal Specification GG-C-191; 1944. Centrifuges; Hand. Covers one type, grade, and class. Gives requirements for material, workmanship, general description, driving mechanism, base, head, tube shields, sedimentation tubes, finish, and marking; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification GG-S-801a; 1944. Support; Laboratory Apparatus. Covers the conventional three ring type, consisting of a base, supporting rod, and three rings, and shall be but one grade and class. Gives requirements for material, workmanship, base, supporting rod, rings, finish, and marking; methods of sampling and inspection; and packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification GG-U-681; 1942. Urinometers; Squibb. Covers one grade and class of the Squibb type. Gives detail requirements; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., Navy Dept. Specification 57C17; 1941. Centrifuges; Electric.

U. S. Gov., Navy Dept. Specification 57C18; 1941. Condensers; Water-glass for Laboratory Use.

U. S. Gov., Navy Dept. Specification 57M2; 1941. Measures; Seidlitz-Powder.

U. S. Gov., Navy Dept. Specification 57R2; 1941. Rods; Stirring, Glass, Solid, Pharmaceutical.

U. S. Gov., Navy Dept. Specification 57S12; 1941. Stills; Water, Portable.

U. S. Gov., Navy Dept. Specification 57S22; 1941. Stills; Water, Electric.

U. S. Gov., Navy Dept. Specification 57T6a; 1944. Testing Outfits; Dissolved-Oxygen.

U. S. Gov., Treasury Dept., Procurement Div., No. 573; 1942. Desiccators; Laboratory. Covers three types—(1) plain, (2) tubulated cover, and (3) tubulated side; each having three classes—(A) 150 mm. diameter, (B) 200 mm. diameter, and (C) 250 mm. diameter. Intended for use as an airtight container for dehydration and keeping in an atmosphere of uniform humidity. Gives requirements for material (glass), construction, container, dimensions, cover, porcelain plate, and pressure resistance; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., U. S. Army, Chemical Warfare Service. Specification 97-54-76A; 1940. Set; Gas Identification, Detonation, MI.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2015B; 1942. Water Bath; Inoculating.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2016A; 1941. Water Bath; Serlogical, Field Model.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2017B; 1944. Turbidimeter, Colorimeter.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2030A; 1941. Counting Apparatus; Wolfhuegel.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2043A; 1941. Ambocepter Paper Cutter.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2045A; 1941. Sternberg Field Outfit.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2046A; 1941. Condensor; Hallock.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2048B; 1941. Microtome.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2051A; 1941. Microscope Lamp Substage.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2271A; 1941. Ring; Suberite.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2296B; 1941. Thimble; Extraction.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2298A; 1941. Colorimeter.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2301A; 1938. Tongs; Crucible.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2302A; 1938. Tripod Iron.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2351A; 1941. Test Tube Support.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2376B; 1941. Percolator; Laboratory, Glass.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2418A; 1938. Flask; Laboratory, Miscellaneous.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2445A; 1941. Centrifuge; Electric.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2473; 1939. Autoclave.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2485; 1939. Slab; Mixing.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2497; 1939. Measuring Device; Alloy-Mercury.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2506A; 1942. Autoclave; Laboratory, Field.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2511A; 1940. Flask, With Cup.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2572; 1939. Hemaglobinometer; Tallquist.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2609; 1939. Centrifuge; Hand.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2615; 1939. Box; Paraffin Embedding.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2623; 1939. Machine; Pill.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2627; 1939. Mold; Suppository.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2680A; 1939. Strop; Microtome, Knife, Laboratory.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2703; 1939. Bead; Glass, Laboratory.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2704; 1939. Blowpipe; Mouth.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2718; 1939. Lamp; Condenser.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2719; 1939. Condenser; Liebig.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2721; 1939. Furnace; Electric, Small.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2743; 1939. Blowpipe; Gas.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2744; 1939. Blowpipe Outfit; Acetylene.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2753; 1939. Tongs; Extension.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2787; 1939. Furnace and Caldron; Portable, 45-Gal.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2829; 1939. Pencil; Camel Hair.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2863A; 1941. Flask; Vulcanizer, Tench-Donham 22C.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2982A; 1941. Centrifuge; Electric, Small.

## 919. MISCELLANEOUS SCIENTIFIC AND LABORATORY APPARATUS

### 919.1 WEIGHTS AND MEASURES

Society of Automotive Engineers, Joint sponsor with American Society of Mechanical Engineers. Inch-Millimeter Conversion for Industrial Use. American Standards Assn., B48.1-1933. For industrial use 1 in. = 25.4 mm. in the conversion of inches and millimeters. Rule for number of decimal places retained in conversions for "rounding off" decimal values.

Tables for conversions of decimals and for fractions. Adopted by various technical societies and trade associations.

Technical Assn. of the Pulp and Paper Industry. Calibration of Volumetric Glassware and Analytical Weights. Standard T 608 m-42; 1942. The accuracy of quantitive volumetric analyses depends fundamentally in the accuracy of the volumetric glassware used. Covers volumetric ware, analytical weights, and notes.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Miscellaneous Publication M121; 1936. Units of Weight and Measure (U. S. Customary and Metric)—Definitions and Tables of Equivalents.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Technologic Paper T199; 1921. Method of Precision Test of Large-Capacity Scales. Outlines a scientific and systematic method used by the Bureau for testing railroad master and grain hopper scales; includes means for accurately measuring the position of the beam.

## 919.2 AERONAUTICAL INSTRUMENTS

*References.*—Aeronautical instruments, *see* 724.26.

## 919.3 COMPASSES

American Institute of Electrical Engineers. Recommended Practice for Electrical Installations and Shipboard, No.45; 1940. Addenda, 1942, and Emergency Modification and Supplement, 1943. Gyro Compass Equipment and Gyro Pilot. Includes master compass, repeaters of various types, motor-generator, switchboard, alarm circuit, installation and location, automatic and manual control of steering, two unit, and electric steering engine types, wiring, and spare parts.

U. S. Gov., Army Air Forces. Specification 27457-A; 1944. Compass; Pilot's, Type B-20 (Aircraft).

U. S. Gov., Army Air Forces. Specification 27464; 1943. Compass; Pocket, Type H-1.

U. S. Gov., Army Air Forces. Specification 27471-2; 1944. Compass; Pilot's Standby, Type B-21, Aircraft.

U. S. Gov., Army Air Forces. Specification 27610-1; 1945. Compass; Liquid Filled, Type H-2, With Match Container.

U. S. Gov., Army-Navy Aeronautical Specification AN-A-6a; 1944. Amplifiers; Gyro Flux Gate Compass.

U. S. Gov., Army-Navy Aeronautical Specification AN-C-79-1; 1943. Compasses; Pilot's Card Type, Magnetic.

U. S. Gov., Army-Navy Aeronautical Specification AN-C-81-2; 1943. Compasses; Pilot's Glass Bowl, Card Type, Magnetic.

U. S. Gov., Army-Navy Aeronautical Specification AN-C-92-2; 1944. Compasses; Astro.

U. S. Gov., Army-Navy Aeronautical Specification AN-C-98; 1944. Compasses; Top Reading.

U. S. Gov., Army-Navy Aeronautical Specification AN-C-101a; 1944. Compasses; Match Box.

U. S. Gov., Army-Navy Aeronautical Specification AN-C-106; 1943. Compass Swinging; Aircraft.

U. S. Gov., Army-Navy Aeronautical Specification AN-C-107-1; 1944. Compasses; Installation of.

U. S. Gov., Army-Navy Aeronautical Specification AN-C-116-1; 1944. Compass Liquid; Aircraft.

U. S. Gov., Army-Navy Aeronautical Specification AN-GG-C-555a; 1944. Compasses; Gyro Flux Gate.

U. S. Gov., Army-Navy Aeronautical Specification AN-GG-C-566a-1; 1944. Compasses; Remote Indicating, Magnetic.

U. S. Gov., Dept. of Agriculture, Forest Service. Specification MSF-16. Attachment; Box-Pocket Compass to Shovel Handle.

U. S. Gov., Dept. of Agriculture, Forest Service. Specification MSF-100. Compass; Box Pocket.

U. S. Gov., Marine Corps Specification, adopted, 942. Compass; Marching, With Case.

U. S. Gov., Navy Dept. Specification 18 C 1 c; 1944. Compasses; Ship, Navy Standard No.1, magnetic, 7 1/2-In. Card.

U. S. Gov., Navy Dept. Specification 18C14; 1932. Compasses; Boat, Navy Standard No.3, Magnetic, 5-In. Card, With Compensating Binnacle.

U. S. Gov., Navy Dept. Specification 18C15; 1932. Compasses; Boat, Magnetic, 4-In. Card, With Binnacle.

U. S. Gov., Navy Dept. Specification 18C17b; 1943. Compasses; Ship, Navy Standard No.2, Magnetic, 6 3/4-In. Card.

U. S. Gov., Navy Dept. Specification 18M1a; 1932. Magnetic Sets; Compass Outfit.

U. S. Gov., Navy Dept. Specification 18P3b; 1932. Peloruses; Illuminated and Nonilluminated.

U. S. Gov., U. S. Army, Corps of Engineers. Specification 42-14; 1927. Compass; Watch,

U. S. Gov., U. S. Army, Corps of Engineers. Specification 42.1-22; 1921. Compass; Prismatic, With Case.

U. S. Gov., U. S. Maritime Commission. Specification 18-MC-9a; 1944. Compasses; Magnetic, Liquid-Filled, Mariners', Compensating, With Mounting for Lifeboats. Gives requirements for materials, workmanship, construction, performance requirements, physical requirements, finish, and marking; inspection, sampling, and methods of test; and packaging, packing, and marking for shipment.

U. S. Gov., U. S. Maritime Commission. Specification 18-MC-10; 1944. Peloruses; Wheelhouse, Portable, Non-Illuminated. Covers one type and grade. Gives requirements for materials, workmanship, construction, performance, outer ring, pelorus dial, horizontal bar, sighting vanes, indicators, pivot post, leveling weight, clamping screws, spirit level, gimbals, mounting brackets, screws, interchangeability of parts, finish, markings, and stowage case; inspection; and packaging, packing, and marking for shipment.

*References.*—Radiocompass, *see* 718.66.

## 919.4 HYDROMETERS

American Society for Testing Materials, D 287-39; 1939. American Petroleum Institute Standard, 526-39. American Standards Assn., Z11.31-1939. Method of Test for Gravity of Petroleum and Petroleum Products by Means of the Hydrometer. Covers the determination of the specific gravity and the A.P.I. gravity of crude petroleum and petroleum products normally handled as liquids. The determination of the gravity of mixtures of petroleum products with other substances is treated as a special case owing to the fact that the coefficient of expansion of such mixtures may not be the same as those of petroleum or its products. The

determination of the specific gravity of road oils, road tars, asphalt cements, and soft tar pitches is covered by the Standard Method of Test D 70 of the American Society for Testing Materials, and the testing of these products is, therefore, specifically excluded from the scope of this method.

U. S. Gov., Army Air Forces. Specification 40863; 1944. Trainer: Mock-Up, Type O-10, Navigator's Aperiodic Compass.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Circular C16; 1922. The Testing of Hydrometer. Also Circular C19; 1924. Standard Density and Volumetric Tables. For density and specific gravity hydrometers, Baumé hydrometers, hydrometers for sulphuric acid, alcoholometers, saccharimeters, and thermohydrometers. Requirements to be met by instruments being submitted to the Bureau for test and certification, such as standard temperature of test, structural features and materials, inscription regarding use, range of graduation for various liquids, graduation according to tables in C19, permissible errors.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Technologic Paper T115; 1918. Adopted by Manufacturing Chemists Assn. of the U. S., the National Bureau of Standards, and by all American manufacturers of hydrometers. New Baumé Scale for Sugar Solutions. Scale is based on specific gravity values of Plato, 20° C., and modulus 145. Tables show relation between degrees Brix or percent sucrose, specific gravity, and degrees Baume.

U. S. Gov., Federal Specification GG-H-941; 1940. Amendment 1; 1942. Hydrometers; Syringe, for Lead-Acid Storage Batteries. Covers three classes—(A) with both specific gravity indicating floats and thermometers as an integral part of instrument, (B) with specific gravity indicating floats and separate thermometers, and (C) without thermometers. Gives requirements for material and workmanship and details for each class; methods of sampling, inspection, and test; and packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification GG-T-241; 1944. Testers; Antifreeze Solutions. Covers one grade; two types—(I) combination and (II) single; and three classes—(A) alcohol, (B) methanol, and (C) ethylene glycol. Gives requirements for material, workmanship, rubber fittings, glass parts, marking, identification, and details for each type and class; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Navy Dept. Specification 18 S 18; 1943. Salinometers and Salinometer Pots, for Use With Low-Pressure Evaporators.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2284A; 1941. Hydrometer for Liquid Heavier and Liquid Lighter Than Water.

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-271; 1943. Hydrometer; photographic.

## 919.5 MANOMETERS

American Society of Mechanical Engineers. Power Test Code, Auxiliary Section. Part 4—Head Measuring Apparatus, 1933. Apparatus described includes float gage, flat plate and rod gage, water column, hook gage, stilling box, dial pressure gage, and manometers.

U. S. Gov., Navy Dept. Specification 18M2c; 1943. Manometers; Aneroid.

## 919.6 NAUTICAL INSTRUMENTS

U. S. Gov., Navy Dept. Specification 18C7c; 1931. Chronometers; Ships'.

U. S. Gov., Navy Dept. Specification 18C16a; 1942. Circles; Bearing, Mark I, Model II.

U. S. Gov., Navy Dept. Specification 18C21; 1944. Calculators; Distance-Speed-Time, Navigational.

U. S. Gov., Navy Dept. Specification 18G3b; 1944. Gages; Depth and Draft.

U. S. Gov., Navy Dept. Specification 18H2; 1923. Horizons; Artificial.

U. S. Gov., Navy Dept. Specification 18M6a; 1942. Machines; Sounding, Navigational, Hand-Driven.

U. S. Gov., Navy Dept. Specification 18S12a; 1943. Scales; Measuring, Sounding Machine.

U. S. Gov., Navy Dept. Specification 18S16; 1935. Machines; Sounding, Motor-Driven.

U. S. Gov., Navy Dept. Specification 18S16; 1935. Sounding Machines; Motor-Driven.

U. S. Gov., Navy Dept. Specification 41-I-5b; 1945. Indicators; Test, Dial, and Indicator Sets.

U. S. Gov., Navy Dept. Specification 61-I-1; 1943. Instruments; Gyro Compass, Rotor Balancing.

U. S. Gov., U. S. Maritime Commission. Specification 18-MC-5; 1944. Protractors; Navigational. Covers one type, grade, and size in two compositions—(A) methyl methacrylate resin and (B) vinyl chloride-vinyl acetate copolymer. Gives requirements for material, workmanship, body, thickness, accuracy, identification, folder, and details for each composition including graduations and markings, light transmission and haze value, warpage, flexibility, and indentation hardness; sampling, inspection, and methods of test; and packaging, packing, and marking for shipment.

*References.*—Sextant for marine use, *see* 916.22; radiocompass, *see* 718.66; ship details and equipment, *see* 725.4.

## 919.7 THERMOGRAPHS AND HYDROGRAPHS

## 919.8 THERMOMETERS AND PYROMETERS

### 919.80 General Items

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering. Specifications for Buildings for Railroad Purposes: Steel, Iron, Brick, and Reinforced Concrete Chimneys. Gives requirements for pyrometer.

American Society of Mechanical Engineers. Power Test Code, Auxiliary Section. Part 3—Temperature Measurement, Chapters 1,5,6, and 7; 1931. Describes and illustrates the pyrometric cones, liquid-in-glass thermometers, and Bourdon tube thermometers.

American Society of Mechanical Engineers. Power Test Code, Auxiliary Section. Part 3—Temperature Measurement, Chapter 2; 1936. Describes types of radiation pyrometers. Discusses specific instruments, calibration, and installation.

American Society of Mechanical Engineers. Power Test Code, Auxiliary Section. Part 3—Temperature Measurement, Chapter 3; 1940. This chapter deals with some

of the important details involved in the design, assembly, installation, and maintenance of noble-base and base-metal thermocouple thermometers. These considerations include—description, classification, and use of equipment, when to use protecting tubes, the design and use of selector switches, description and use of millivoltmeters and potentiometers, materials for extension leads, tolerances, measurement precautions, and calibration.

American Society of Mechanical Engineers. Power Test Code, Auxiliary Section. Part 3—Temperature Measurement, Chapter 8; 1940. Describes optical pyrometers, their range and accuracy, installation, calibration, etc.

U. S. Gov., Army Air Forces. Specification No. 40823; 1944. Tester; Electrical Thermometer, Field and Standard.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Circular C8; 1926. Testing of Thermometers. Regulations covering the testing and certification of thermometers by the National Bureau of Standards for laboratory and working standards, clinical standards, calorimetric, Beckmann, hypsometric, hygrometric, flash point, distillation, and viscometer thermometers, and special low temperature thermometers, for household and meteorological thermometers with scales graduated on the glass stem, also platinum-resistance thermometers and thermocouples within certain ranges. Standard comparison, number and choice of test points, requirements on design, placing of reference point on scale, graduation, material, workmanship, annealing, gas filling, and accuracy to be met before the certificate is given.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Circular C66; 1917. Standard Samples for Thermometric Fixed Points. Description of preparation of pure samples of tin, zinc, aluminum, and copper; their chemical analyses, freezing points, and degree of purity; their use for the standardization of thermocouples, platinum-resistance thermometers, pyrometers, precautions in their use, prices.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Miscellaneous Publication M126; 1937. Temperature Interconversion Tables (°C—°F) and Melting Points of the Chemical Elements. Table of melting points of elements and boiling points of some liquids with the values indicated which are used by the Bureau as standard temperatures for calibration of thermometers and pyrometers.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Miscellaneous Publication M143; 1933. Psychrometric Charts. These charts were developed for use in the determination of the pressure of water vapor from psychrometric observations and are based on the psychrometric formula. In their development it was found that the addition of two scales permitted the accurate evaluation of relative humidity as well. In comparison with the customary double interpolation tables, it has been found that the use of these charts increased the precision and halved the time required.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Research Paper RP767; 1935. Standard Tables for Chromel-Alumel Thermocouples. Tables give the temperature-emf relation of the thermocouples now being manufactured as closely as the wires can be reproduced at the present time.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Research Paper RP768; 1935. Methods of Testing Thermocouples and Thermocouple Materials. This paper describes various methods used for testing thermocouples and thermocouple materials, and the precautions which must be observed in order to attain various degrees of accuracy. In particular, it describes in detail the methods developed and used at the National Bureau of Standards. It also provides some guidance to the reader in the selection of the method which is best adapted to a given set of conditions.

U. S. Gov., U. S. Maritime Commission. Specification 18-MC-2; 1941. Thermometers; Shiphold and Utility. Covers types and classes and shall be in but one grade. Gives requirements for materials, workmanship, size, bulb, accuracy, range, inspection, and tests.

## 919.81 Bath Thermometers

American Hospital Assn., 70-28. Bath Thermometer. Covers one type. Based on U. S. Gov., War Dept., Specifications 10-2171.

U. S. Gov., Treasury Dept., Procurement Div., No. 511; 1941. Thermometers; Bath. Covers one grade and two types: (I) Glass bulb and stem; and two classes—(A) common and (B) with enclosing glass tube; and (II) thermostatic metal. Gives requirements for floating and tolerance; bulb, stem, scale, column, and case or holder for type I; construction, scale, hand, and case or holder for type II; sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2171A; 1941. Thermometer; Bath.

U. S. Gov., Veterans Administration, Medical and Hospital Supply Section, VA-H9g; 1941. Bath Thermometer.

*References.*— Bath thermometers for chemical and physical testing, *see* 919.82.

## 919.82 Chemical Thermometers

American Society for Testing Materials, E 1-44; 1944. American Assn. of State Highway Officials, M 93. Specification for A.S.T.M. Thermometers. Covers scope, requirements, type, stem, bulb, graduations, special marking, scale error, standardization, test for permanency of range, and case. A.S.T.M. Emergency Alternate Provision EA-E 1; 1944, affected low cloud and pour test thermometers.

American Society for Testing Materials. E 1-44T; 1944. Tentative Specifications for A.S.T.M. Thermometers. For glass thermometers graduated in centigrade or Fahrenheit degree. Covers type, stem, bulb, graduations, special marking, scale error, standardization, test for permanency of range, case, and gives table showing added requirements.

U. S. Gov., Navy Dept. Specification 18T8c; 1934. Thermometers; Chemical.

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-335; 1943. Thermometer; Photographic, Tray.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2033A; 1941. Thermometers; Chemical.

U. S. Gov., Veterans Administration, Medical and Hospital Supply Section, VA-H-90, 1936. Laboratory Thermometer.

*References.*—Thermometer fixed points, testing and certification rules, *see* 919.80; analysis of glass, *see* 918.0.

## 919.83 Clinical Thermometers

American Hospital Assn., 10-64. Clinical Thermometers. Covers maximum self-registering mercury-type with glass stem having lens, front, and white enamel backing, in four classes—Fahrenheit scale, cylindrical bulb; Fahrenheit scale, pear-shaped bulb; centigrade scale, cylindrical bulb; and centigrade scale, pear-shaped bulb. Based on U. S. Gov., Federal Specifications GG-T-311.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Commercial Standard CS1-42; 1942. Clinical Thermometers. Applies to maximum self-registering thermometers of the types commonly used for measuring body temperatures. Gives construction, aging, test for permanence of pigment, entrapped gas, hard shakers, accuracy, and retreating index. Initiated by manufacturers; now represented by Thermometer Manufacturers Advisory Committee.

U. S. Gov., Federal Specification GG-T-311; 1933. Thermometers; Clinical. Covers four classes—(A) Fahrenheit scale and cylindrical bulb, (B) centigrade scale and cylindrical bulb, (C) Fahrenheit scale and pear-shaped bulb, and (D) centigrade scale and pear-shaped bulb. Gives requirements for stems, bulbs, mercury, pigment, cases, workmanship, length, stem thickness, scale and numerals, aging, hand shakers, identification, range of scales, and accuracy; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2356A; 1941. Thermometer; Clinical, Veterinary.

U. S. Gov., Veterans Administration, Medical and Hospital Supply Section, VA-HM-1b; 1940. Ward Thermometer.

*References.*—Thermometer fixed points, testing and certification rules, *see* 919.80; analysis of glass, *see* 918.0.

## 919.84 Maximum and Minimum Thermometers

U. S. Gov., Dept. of Agriculture, Forest Service. Specifications MSF-471. Thermometer; Maximum, U. S. Weather Bureau Standard.

U. S. Gov., Dept. of Agriculture, Forest Service. Specifications MSF-472. Thermometer; Minimum, U. S. Weather Bureau Standard.

U. S. Gov., Navy Dept. Specification 18 T 3d; 1944. Thermometers; Maximum and Minimum.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 74-22A; 1943. Thermometers; Maximum and Minimum, for Ammunition Magazines.

## 919.85 Household Thermometers

U. S. Gov., Treasury Dept., Procurement Div., No. 510; 1941. Thermometers; Household. Covers one grade and two types: (I) Glass bulb and stem, and three classes—(A) metal case, (B) wood back, and (C) metal back; and (II) thermostatic metal. Gives requirements for tolerance and range; bulb, stem or tube, column, scale, range, and case or holder for type I; material, scale, hand, and case for type II; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., Treasury Dept., Procurement Div., No. 517; 1941. Thermometers; Oven. Covers one grade; two types—(I) glass bulb and stem and (II) thermostatic metal. Gives requirements for material, construction, and base; bulb, stem or tube, column, scale, and tolerance for type I; thermostatic unit, hand, scale, and tolerance for type II; methods of sampling, inspection, and tests; and packaging, packing, and marking.

## 919.89 Miscellaneous Thermometers

American Hospital Assn., 70-31. Dairy Thermometer. Covers mercury type with glass stem and Fahrenheit scale. Based on U. S. Gov., War Dept., Specifications 10-2690.

American Hospital Assn., 70-34. Ward Thermometers. Covers one type. Based on U. S. Gov., War Dept., Specifications 10-2172.

U. S. Gov., Army Air Forces. Specification 27416 (1); 1943. Thermometer; Type C-17 (Cabin Air, Direct Reading).

U. S. Gov., Army Air Forces. Specification 27498-1; 1944. Thermocouple; Engine Cylinder Bayonet, Type A-1.

U. S. Gov., Army Air Forces. Specification No. 27528; 1944. Indicator; Temperature, Type A-1, Aircraft, Thermocouple Type.

U. S. Gov., Army Air Forces. Specification No. 27529; 1944. Indicator; Temperature, Type A-2, Aircraft, Thermocouple Type.

U. S. Gov., Army Air Forces. Specification No. 27530; 1944. Indicator; Temperature, Type B-1, Aircraft, Thermocouple Type.

U. S. Gov., Army Air Forces. Specification No. 27531; 1944. Indicator; Temperature, Type B-2, Aircraft, Thermocouple Type.

U. S. Gov., Army Air Forces. Specification 27538-1; 1944. Indicator; Temperature, General Specification for.

U. S. Gov., Federal Specification GG-T-321; 1931. Thermometers; Industrial. Covers seven classes (A, B, C, D, E, F, and G) with separable metal sockets, for refrigerating brine lines, refrigerator-room, outboard delivery, main injectors, bearing thermometers, lubricating oil, oil-cooler oil and water, fuel oil heater, condensers, feedwater, low-pressure and high-pressure steam, high-pressure superheat, and flue gas. Gives detail requirements; method of sampling, inspection, and test; and requirements for packing and marking for shipments.

U. S. Gov., Marine Corps Specification, 1936. Thermometer; Mercurial, Common.

U. S. Gov., Navy Dept. Specification 18T1d; 1944. Thermometers; Water, Standard.

U. S. Gov., Navy Dept. Specification 18T4c; 1940. Thermometers; Mercurial, Common.

U. S. Gov., Navy Dept. Specification 18T5b; 1918. Thermometers; Air, Standard.

U. S. Gov., Navy Dept. Specification 18T7j; 1944. Thermometers; Industrial.

U. S. Gov., Navy Dept. Specification 18T9e; 1943. Thermometers; Storage Battery.

U. S. Gov., Navy Dept. Specification 18T13b; 1944. Thermometers; Distant Reading, Indicating Dial.

U. S. Gov., Navy Dept. Specification 18T 14f; 1943. Thermometers; Mercurial, Navy Type.

U. S. Gov., Navy Dept. Specification 18T23b; 1945. Thermometers; Indicating Dial, for Superheated Steam.

U. S. Gov., Navy Dept. Specification 18T24a; 1942. Thermometers; Mercurial, for Superheated Steam.

U. S. Gov., Treasury Dept., Procurement Div., No.520; 1941. Thermometers; Candy. Covers one grade and two types—(I) glass bulb and stem and (II) thermostatic metal. Gives requirements for material and metal parts; bulb, stem, column, scale, tolerance, and frame for type I; design, scale, hand, case and tolerance for type II; sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., U. S. Army, Army Air Forces. Specification 94-27224-B; 1937. Thermometers; Aircraft (Round Dial, Free Air), General Specification for.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2172A; 1941. Thermometer; Ward.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2550; 1939. Thermometer; Incubator.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2690; 1939. Thermometer; Dairy.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 55-2; 1923. Thermometer.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 89-5363a; 1940. Thermometer; Cable Tank.

U. S. Gov., U. S. Army, Signal Corps. Specification 74-2-C; 1931. Thermometer; Type ML-4, Maximum, F., Mercury.

U. S. Gov., U. S. Army, Signal Corps. Specification 74-3-C; 1931. Thermometer; Type ML-5, Minimum, F., Alcohol.

U. S. Gov., U. S. Army, Signal Corps. Specification 74-20B; 1931. Thermometer; Type ML-7, Mercurial F.

*References.*—Thermometer connections, methods of testing and certification of thermometers, *see* 919.80; analysis of glass, *see* 918.0.

## 919.9 SCIENTIFIC AND LABORATORY APPARATUS NOT ELSEWHERE CLASSIFIED

Acoustical Society of America, sponsor. American Standards Assn., Z24.3-1944. Sound Level Meters for Measurement of Noise and Other Sounds. For obtaining results which will approximate the loudness level obtained by the more elaborate ear-balance method. Covers purpose and definitions; and appendices cover response-frequency characteristics of sound level meters, tests for root mean square addition, calibration adjustment of individual sound level meter, tolerances in response-frequency characteristic, and correction of reading on specific noises.

American Society of Mechanical Engineers. Power Test Codes, Auxiliary Section. Part 17—Determination of the Viscosity of Liquids, 1931. Outlines procedure to follow and precautions to be observed in taking readings. Describes types of viscometers.

American Society for Testing Materials, D 88-44; 1944. American Petroleum Institute Standard, 518-44. American Assn. of State Highway Officials, T 72-44. American Standards Assn., Z11.2-1944. Method of Test for Viscosity by Means of the Saybolt Viscosimeter. Covers use of Saybolt Universal viscosimeter for general use and of Saybolt Furol viscosimeter for fuel and road oils, dimensions and design of apparatus, temperatures of tests, and outline of procedure.

U. S. Gov., Army Air Forces. Specification No.40819; 1944. Tester; Liquidometer Instrument, Standard and Field.

U. S. Gov., Army Air Forces. Specification No.40833; 1944. Stand; Thermometer Test.

U. S. Gov., Dept. of Agriculture, Forest Service. Specification for Gage; Wind.

U. S. Gov., Dept. of Agriculture, Forest Service. Specification for Hygrometer; Duff.

U. S. Gov., Dept. of Agriculture, Forest Service. Specification for Meter; Forest Fire Danger.

U. S. Gov., Dept. of Agriculture, Forest Service. Specification for Recording Forms.

U. S. Gov., Dept. of Agriculture, Forest Service. Specification for Sticks; Fuel-Moisture-Indicator, R1 Type.

U. S. Gov., Dept. of Agriculture, Forest Service. Specification for Sticks; Fuel-Moisture-Indicator, R6 Type.

U. S. Gov., Dept. of Agriculture, Forest Service. Specification MSF-130, Fire Finder; Osborne.

U. S. Gov., Dept. of Agriculture, Forest Service. Specification No.131. Fire Finder; Wood Type.

U. S. Gov., Dept. of Agriculture, Forest Service. Specification MSF-135. Fire Finder Stand; Metal.

U. S. Gov., Dept. of Agriculture, Forest Service. Specification No.136. Fire Finder Stand; Wood.

U. S. Gov., Dept. of Agriculture, Forest Service. Specification MSF-451. Gage; Rain and Measurement Sticks.

U. S. Gov., Dept. of Agriculture, Forest Service. Specification No.456. Meter; Visibility, Byram.

U. S. Gov., Dept. of Agriculture, Forest Service. Specification MSF-457. Psychrometer; Fan.

U. S. Gov., Dept. of Agriculture, Forest Service. Specification MSF-458. Psychrometer; Sling, Pocket Size.

U. S. Gov., Dept. of Agriculture, Forest Service. Specification MSF-459-S. Psychrometer; Wicking.

U. S. Gov., Dept. of Agriculture, Forest Service. Specification MSF-461. Scale; Fuel-Moisture-Indicator.

U. S. Gov., Dept. of Agriculture, Forest Service. Specification No.466. Screen; Fuel-Moisture-Indicator Stick.

U. S. Gov., Dept. of Agriculture, Forest Service. Specification No.467. Shelter; Weather-Instrument, R1-Type.

U. S. Gov., Dept. of Agriculture, Forest Service. Specification No.468. Shelter; Weather-Instrument, R6-Type.

U. S. Gov., Dept. of Agriculture, Forest Service. Specification MSF-473. Support; Townsend, U. S. Weather Bureau Standard.

U. S. Gov., Dept. of Agriculture, Forest Service. Specification No.477. Vane; Wind.

U. S. Gov., Marine Corps Specification, 1941. Color Comparator. Water Purification Equipment.

U. S. Gov., Marine Corps Specification, 1930. Micrometer Sight Adjuster, for U. S. Rifle, Caliber .30, Model 1903, Springfield.

U. S. Gov., Navy Dept. Specification 18T22; 1940. Tachometers; Portable and Fixed.

U. S. Gov., Navy Dept. Specification 57I4; 1943. Indicators; Carbon-Dioxide, Absorption-Type, Portable.

U. S. Gov., U. S. Army, Corps of Engineers. Specification 87-3; 1941. Color Comparator for Water-Purification Units.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 50-11-102A; 1943. Powder; Flashlight, Photographic.

# 920-929 MUSICAL INSTRUMENTS

## 921. PIANOS

U. S. Gov., Dept. of Interior, Purchasing Office. Standard Specification No. 2. Pianos; Grand.

U. S. Gov., Dept. of Interior, Purchasing Office. Standard Specification No. 3. Pianos; Upright and Spinet Type.

## 922. PIANO ACTIONS, PARTS, AND MUSIC ROLLS

## 923. ORGANS

U. S. Gov., Joint Army-Navy Specification JAN-O-86; 1944. Organs; Folding, Chaplain's.

## 924. PHONOGRAPHS

## 925. BAND INSTRUMENTS

### 925.1 BUGLES

U. S. Gov., Navy Dept. Specification 36I2a; 1944. Instruments, Musical; Bugles; and Stands, Music.

### 925.2 FIFES

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 31-2; 1923. Fife; Metal, Bb, Actual.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 31-15; 1938. Musical Instruments; Flute and Picollo.

### 925.3 TRUMPETS

U. S. Gov., Marine Corps Specification, 1941. Trumpet.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 31-3A; 1938. Musical Instrument; Valve and Slide.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 31-4A; 1938. Musical Instrument; Saxophones.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 31-7A; 1938. Musical Instrument; Clarinet.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 31-19; 1940. Musical Instrument; Trumpet, G With Slide to F.

### 925.4 DRUMS AND TIMPANI

U. S. Gov., Navy Dept. Specification 36I2a; 1944. Instruments, Musical; Bugles; and Stands, Music.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 31-11; 1928. Musical Instrument; Tympanis, Pair.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 31-17; 1938. Musical Instruments; Drums, Bass and Snare.

### 925.9 MISCELLANEOUS

U. S. Gov., Navy Dept. Specification 36I2a; 1944. Instruments, Musical; Bugles; and Stands, Music.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 31-18; 1938. Musical Instruments; Xylophone and Bells.

## 929. STRINGED MUSICAL INSTRUMENTS, EXCEPT PIANOS

U. S. Gov., Navy Dept. Specification 36I2a; 1944. Instruments, Musical; Bugles; and Stands, Music.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 31-16; 1938. Musical Instruments; Violin, Viola, Violoncello, Bass Viol.

# 930-939 OFFICE, PRINTING, LITHOGRAPHIC, AND EDUCATIONAL SUPPLIES

## 931. HANDWRITING SUPPLIES

### 931.1 PENCILS, LEADS, AND CRAYONS

American Hospital Assn., 49-31. Lead Pencils. Covers one grade in four types. Based on U. S. Gov. Federal Specification SS-P-166.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, Volume 2; 1944. Lead Pencils. Covers description, derivation, types and grades, and containers and ordering.

U. S. Gov., Federal Specification GG-P-171; 1943. Pencils; Skin-Marking. Covers one grade; two types—(I) single color and (II) two-color combination; and two classes—(A) wood casing and (B) paper casing. Gives requirements for colors, marking mediums, casings, workmanship, instruction sheet, marking, finish, point protector, bid sample, and details for each type and class; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification SS-C-646; 1943. Crayons; Lumber. Shall be one type suitable for use in writing on green, wet, and dry lumber. Gives requirements for material, workmanship, composition, shape, tolerance, color fastness, bleeding, wrapper, and marking; table showing size, breaking strength, and color; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification SS-P-166; 1935. Amendment 1; 1944. Pencils; Lead. Covers one grade and four types—(I) carpenters'; (II) checking, black; (III) copying; and (IV) general writing. Gives requirements for degree of hardness of lead, leads, casings, workmanship, and details for each type; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., Federal Specification SS-P-186; 1941. Amendment 1; 1944. Pencils, Mechanical; Leads; and Erasers. Covers a type of pencil suitable for 4-in. lead in two classes—(A) polygonal and (B) round.

Gives requirements for 10 hardnesses of black lead and for 10 colored leads, definitions, operating mechanism, barrels, points, clips, eraser, length, finish, lettering, and leads; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification SS-P-196; 1944. Pencils; Spiral-Paper Form, Wax. Covers one type, one grade, and three classes—(A) blue marking, (B) red marking, and (C) other color marking. Gives requirements for material, workmanship, marking medium, lettering, description, size, color, and covering; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification SS-P-201; 1939. Pencils; Wood-Cased, Colored-Lead, (General-Use). Covers two types—(I) pigment-type lead (in two classes—thin-lead and thick-lead) and (II) water-soluble dye-type lead (thin-lead). Gives requirements for leads, casings, workmanship, shapes, and sizes; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., Navy Dept. Specification 53C10b; 1942. Crayons; Metal Workers', Soapstone.

U. S. Gov., Navy Dept. Specification 53P24; 1942. Pencils; Lead, Drawing.

U. S. Gov., U. S. Army, Medical Dept. Specification 1-40; 1939. Pencil; Wax.

U. S. Gov., Veterans Administration. Specification VA-G-110; 1934. Pencils, Automatic; and Pencil-Leads.

*References.*—Cedar lumber stock for pencils, *see* 413.9; blackboard chalk, *see* 937.1.

### 931.2 PENHOLDERS, PENCIL HOLDERS, CRAYON HOLDERS

U. S. Gov., Federal Specification GG-P-181a; 1941. Amendment 1; 1944. Penholders; Wood. Covers one grade and four types—(I) cork tip, metal insert; (IV) wood grip, imbedded metal end, with metal ferrule; (V) wood grip, imbedded metal end, without metal ferrule; and (VI) wood grip, protruding metal center. Gives general and detail requirements; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

### 931.3 PENS

U. S. Gov., Navy Dept. Specification 53P5e; 1941. Pens; Lettering, Mapping, Ruling, and Writing.

U. S. Gov., Treasury Dept., Procurement Div., No. 313; 1939. Pens; Writing, Corrosion Resisting Steel. Covers four types—(I) ball-type point (spoon shape), (II) fine point (short nib), (III) medium point (falcon), and (IV) stub point (falcon). Shall be made of corrosion resisting steel, smooth and free from cutting and slitting burrs. Gives requirements for finish and corrosion resisting properties; methods of sampling, inspection, and tests; and packaging, packing, and marking.

*References.*—Fountain pen stock, pyroxylin, *see* 846.5.

### 931.4 ERADICATORS AND ERASERS

U. S. Gov., Federal Specification GG-E-671; 1933. Amendment 1; 1943. Erasers; Steel. Covers two types—(I) knife blade and (II) arrowhead. Gives detail requirements; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking. Amendment No. 1 deletes type I.

U. S. Gov., Federal Specification GG-S-321; 1938. Shields; Erasing. Covers one type and grade. Gives requirements for material, workmanship, bid sample, finish, thickness, elasticity, design and size, and material; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Treasury Dept., Procurement Div., No. 722; 1945. Eradicators; Ink. Covers one grade and two types—(I) one-solution unit and (II) two-solution unit. Gives requirements for type I ink eradicating properties, type II ink eradicating properties, and feathering; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

*References.*—Solvent for laundry marking inks, *see* 933.0.

### 931.5 DESK PADS, BLOTTER HOLDERS, AND HAND BLOTTERS

U. S. Gov., Federal Specification GG-C-101a; 1939. Calendar Pads and Stands. Covers three types—(I) ordinary folding, (II) bound daily memorandum, and (III) executive large size, folding. Gives requirements for material, workmanship, stand, rubber shoes, pad; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment. Emergency Alternate Federal Specification E-GG-C-101a; 1943, changed requirements for material, binding wires, sample, and specifies protective shoes in lieu of rubber shoes.

U. S. Gov., Federal Specification UU-P-16; 1939. Amendment 2; 1944. Pads; Desk. Covers one grade and three types—(I) cardboard, (II) felt, and (III) linoleum. Gives requirements for sizes, material, workmanship, corners and panels, artificial leather, sample of pads, and colors; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Navy Dept. Specification 53B7; 1929. Blotters; Hand, Wood.

U. S. Gov., Navy Dept. Specification 53P20; 1940. Pads; Inking, Numbering-Machine.

*References.*—Blotting paper, *see* 471.1.

### 931.6 PAPER AND INKS

U. S. Gov., Federal Specification UU-P-21a; 1943. Pads; Memorandum. Covers two types—(I) chemical wood and (II) ground wood. Gives requirements for sizes, material, workmanship, number of sheets, padding and back, ruling, comparison sample, writing quality, stock, weight, and bursting strength; methods of sampling, inspection, and tests; and packaging, packing, and marking.

*References.*—Writing paper, composition books, *see* 478.1, 481; writing inks, *see* 933.1.

## 932. OFFICE DEVICES AND SUPPLIES (EXCEPT HAND-WRITING SUPPLIES)

### 932.1 OFFICE MACHINES

U. S. Gov., Federal Specification GG-M-61; 1937. Amendment 2; 1943. Machines; Numbering, Automatic,

Hand-Operated. Covers the self-inking, automatic type, having six wheels or less, to operate without any manual manipulation of the type wheels. Gives detail requirements; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Federal Specification GG-M-71; 1930. Amendment 1; 1943. Machines; Numbering, Lever-Type. Covers self-inking, portable machines for desk use. Gives detail requirements; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Federal Specification GG-M-81; 1944. Machines, Paper-Fastening; and Staples. Gives requirements for material and workmanship, clinching capacity, staples magazine, stapling reach, raceway, finish, interchangeability of parts, springs, staple drivers, anvils or dies, plungers, base of machine, hinge pin, and handles; staples; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification GG-M-91; 1933. Machines; Stencil-Cutting, Hand-Operated. Covers the portable type for use on a table. Gives detail requirements; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Federal Specification GG-P-191b; 1944. Perforators; Paper, Desk. Covers two types—(I) adjustable and (II) nonadjustable; two classes--(A) 2-hole and (B) 3-hole. Gives requirements for material, workmanship, receptacle for punchings, base, springs, finish, performance, and details; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification GG-T-406; 1936. Time-Stamps. Covers two types—(I) magnetic imprint (trigger operated and push bar operated) and (II) manual imprint. Gives requirements for materials, workmanship, imprints, letters and figures, ribbon, design, stamp, mechanism, stamp frame, and type wheels; method of inspection and test; and requirements for packing and marking for shipment.

U. S. Gov., Federal Specification GGG-P-846; 1939. Amendment 1; 1943. Punches; Paper, One-Hole (With and Without Eyelet Device). Gives requirements for handle grips, thickness of handle steel, hardness of punch, hardness of channel, diameter of spring wire, finish, performance, gage, dimensions, width of jaw, and punch; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., U. S. Army, Corps of Engineers. Specification 42-42; 1940. Machine; Duplicating, Direct Fluid Process Type, Sheet Size 19 by 20 Inches, Printing Area 14 by 16 Inches, Hand Operated.

U. S. Gov., U. S. Army, Corps of Engineers. Specification 42-44; 1940. Machine; Duplicating, Rotary Offset, Sheet Size 20 by 20 Inches, Printing Surface 17 by 19 Inches, Electrically Operated.

U. S. Gov., U. S. Army, Corps of Engineers. Specification 42-49; 1940. Duplicator; Gelatine Process.

U. S. Gov., Veterans Administration. Specification VA-G-69; 1932. Check Feed, Ejector, and Stacking Attachment.

U. S. Gov., Veterans Administration. Specification VA-G-142; 1935. Perforating Machine.

## 932.2 SUPPLIES FOR OFFICE MACHINES

Assn. of American Railroads, Telegraph and Telephone Section, 2-G-81; 1938. Purple Copy Ribbons AAR-1-A and AAR-2-A for Use in Automatic Printers. For inked cotton ribbon tape used in tape and page printers; requirements weave, length, width, and thickness of tape; wear test and impression test.

Assn. of American Railroads, Telegraph and Telephone Section, 2-G-82; 1938. Black Record Ribbons AAR-3-A and AAR-4-A for Use in Automatic Printers. Gives dimensional and quality requirements for inked cotton tape used in tape and page printers, wear resistance test, and impression test.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, 1938. Typewriter Ribbons. Covers general requirements, fabric, ink, and containers.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Circular C426; 1940. Inks. Outlines briefly the history of writing inks, in particular those of the iron gallotannate type; gives formulas for a few of these inks and for three iron gallate inks; discusses the aging of writing, the restoration of faded writing, freezing of inks, and effect of inks upon paper. Formulas are also given for other kinds of inks, including colored writing inks, drawing, stamp pad, recording-instrument, and others. Methods of testing given in Federal specifications for inks are described. Information is given on equipment for making ink in the home and on dyes suitable for making inks.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Circular C431; 1941. Typewriter Ribbons and Carbon Paper. This circular gives general information about the manufacture of typewriter ribbons and carbon paper, and tells about the methods for testing them. The materials used and the principles involved in making the ink for ribbons and the coating for carbon paper are discussed. No formulas are given for either the ink or the coating because none that can be regarded as up-to-date are available.

U. S. Gov., Federal Specification GG-M-81; 1944. Machines, Paper-Fastening; and Staples. Gives requirements for material and workmanship, clinching capacity, staples magazine, stapling reach, raceway, finish, interchangeability of parts, springs, staple drivers, anvils or dies, plungers, base of machine, hinge pin, and handles; staples; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification UU-P-185a; 1943. Paper; Computing-Machine. Covers two types—(I) chemical wood and (II) ground wood. Gives requirements for printing quality, writing quality, finish, widths, rolls, stock, weight, bursting strength, and brightness; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., Federal Specification DDD-R-271; 1930. Amendment 2; 1941. Ribbons; Computing and Recording-Machine. Covers two types—(A) single color and (B) two-color and three-color. Gives requirements for fabric, inking, dimensions, thread count, thickness, breaking strength, edges, character of writing, type filling, press copies, permanence of writing, and special ribbons; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., Federal Specification DDD-R-291; 1930. Amendment 2; 1941. Ribbons; Hectograph. Covers two types—(A) single color, purple; and (B) two colors, purple and red. Gives requirements for fabric, inking, width, length, thread count, thickness, edges, character of writing, and copies; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Federal Specification DDD-R-311a; 1935. Amendment 4; 1944. Ribbons; Typewriter. Covers one grade and three types—(A) single color, (B) two-color, and (C) combined record and copying. Gives requirements for fabric, thread count, width, length, thickness, edges, inking, character of writing, wear-down, recovery, permanency of writing, spools and reversing attachments, and comparison sample; methods of sampling, inspection, and tests; and packaging, packing, and marking. Emergency Alternate Federal Specification E-DDD-R-311A; 1941, changed requirements for thread count and thickness.

U. S. Gov., Treasury Dept., Procurement Div., 436A; 1942. Pads; Typewriter, Felt. Shall be of one type, grade, and size; of a uniform dark color; and made of a good grade of wool and cotton mixture, or animal hair. Gives requirements for hair pads, cotton and wool pads, shape, dimensions, breaking strength, and color fastness; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U.S. Gov., Treasury Dept., Procurement Div., 448b; 1943. Cylinders; Dictating-Machine. Covers two types—(I) cloth-lined and (II) unlined. Gives requirements for material, workmanship, dimensions, internal pressure, cleanliness, and recorded sound and surface noise; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., Treasury Dept., Procurement Div., 554b; 1942. Shields; Erasing, Typist. Shall be an opaque or transparent plastic material, plain or colored, or vulcanized fiber. Cellulose nitrate plastics shall not be used. Gives requirements for finish, thickness, and design; methods of sampling, inspection, and test; and packaging, packing, and marking.

U. S. Gov., Treasury Dept., Procurement Div., 661; 1944. Duplicating-Liquid; Direct-Process, Spirit Type. Covers one type and one grade. Gives requirements for appearance, surface tension, neutralization number, free alkali, nonvolatile matter, miscibility, spot tests, residual odor, copper corrosion, drying properties, and dye solubility; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., U. S. Army, Medical Dept. Specification 1-39; 1939. Pad; Mimeograph.

U. S. Gov., Veterans Administration. Specification VA-G-6; 1932. Addressograph Ribbons.

U. S. Gov., Veterans Administration. Specification VA-G-62a; 1934. Paper; Computing Machine.

*References.*—Methods of testing cotton fabrics, *see* 300.4; inks, *see* 933.

## 932.3 RECEPTACLES, SUPPORTS, AND HOLDERS

U. S. Gov., Federal Specification DD-C-791; 1930. Cups; Pin and Sponge. Covers one size and type. Gives detail requirements; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Federal Specification GG-R-41; 1935, Amendment 1; 1943. Racks; Pen or Pencil. Covers one grade and two types—(I) glass and (II) metal, with spiral spring coil. Gives detail requirements; and methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U.S. Gov., Federal Specification RR-B-131; 1937. Amendment 1; 1944. Baskets; Desk, Steel (Strip and Wire). Covers one grade and four types—(I) woven wire, (II) welded wire, (III) woven strip steel, and (IV) baskets to build in sections. Gives requirements for material, workmanship, dimensions, and details for each type; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., Navy Dept. Specification 42H40; 1944. Holders; Card.

U. S. Gov., Treasury Dept., Procurement Div., No.595; 1942. Holders; Copy, Typists, Side Reading. Covers one type and grade suitable for placing on a desk or table. Gives requirements for reading plate, gripping mechanism, base, guide line bar, wood, composition board, and finish; methods of sampling, inspection, and tests; and packing and marking.

*References.*—Stationery holder, box type, *see* 435.5; card filing trays, *see* 435.5, 613.7.

## 932.4 DESK CUTLERY

U.S. Gov., Federal Specification GG-S-236; 1935. Amendment 1; 1944. Sharpeners; Pencil. Covers two types—(I) draftsmen's and (II) general writing, plain. Gives requirements for material, workmanship, cutters, aperture, receptacle, and details for each type; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U.S. Gov., Federal Specification UU-S-171; 1939. Seals; Notarial. Covers two types—(I) laminated with gold-colored foil and (II) coated. Gives requirements for sizes, depth of serrations, weights, and thickness; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., Treasury Dept., Procurement Div., No.550; 1942. Openers; Envelope, Plastic. Covers one type and grade and shall be slow or nonburning synthetic resinous material. Cellulose nitrate compounds shall not be used. Gives requirements for length, blade, handle, flexibility, impact, warpage, and color; methods of sampling, inspection, and tests; and packaging, packing, and marking.

*References.*—Steel erasers, *see* 931.4.

## 932.5 ADHESIVES, CLIPS, AND FASTENERS

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, Volume 2; 1944. Paste; Office Adhesive. Covers definition, derivation and characteristics, grades, containers, and substitutes.

Pin, Clip, and Fastener Assn. Paper Fastener Physical Standards. Covers gages and diameters and widths of caps; gauges, widths and lengths of shank for available sizes of steel paper fasteners.

Pin, Clip, and Fastener Assn. Physical Dimensions Brass and Steel Washers. Covers gauge, diameter, and slot dimensions of steel washers for use in connection with paper fasteners.

U.S. Gov., Federal Specification N-P-101c; 1944. Paste, Office and Photomounting; Paste Brushes; and Spreaders.

Covers two types—(I) hard white paste (for office and photomounting use) and (II) semiliquid paste (for office use only). Gives requirements for composition, discoloration of paper, adhesive strength, jars and tubes, brushes and spreaders, and details for each type; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U.S. Gov., Federal Specification FF-C-431; 1942. Clips; Paper, Binder. Covers one type and grade in three sizes—large, medium, and small. Gives requirements for clip spring portion, finish, marking, clip handle, and material and workmanship; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

U.S. Gov., Federal Specification FF-C-436; 1935. Amendment 1; 1944. Clips; Paper, Wire. Covers two types—(I) gem-pattern (large and small) and (II) ideal-pattern (large and medium). Gives requirements for material, workmanship, finish, tolerance, and details for each type; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., Federal Specification FF-F-101; 1932. Fasteners; Paper, Brass. Covers two types—(I) flat head and (II) round head. Gives requirements for material and workmanship; length, other dimensions, and chemical composition; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment. Emergency Alternate Federal Specification E-FF-F-101; 1943, required the use of steel or fiber and gave detailed requirements for these materials.

U. S. Gov., Federal Specification FF-F-111; 1942. Fasteners; Paper, Flexible, Metallic (Not for Use With Binder Covers Having Removable Slide Attachments). Covers one type with prongs. Gives requirements for spacings, capacities, material, workmanship, compressor, base, marking, and finish; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification FF-F-118; 1944. Fasteners; Paper, Steel (Flat and Round Head). Covers two types—(I) flat head and (II) round head. Gives requirements for material, workmanship, design, lengths, other dimensions and tolerances, bending endurance, and finish; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification JJJ-M-791a; 1943. Mucilage. Covers one type. Gives requirements for material and workmanship, adhesiveness, quickness of set, preservatives, brush, and viscosity; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., Federal Specification JJJ-W-151a; 1938. Wax; Sealing. Covers two types—(I) stick type to be heated over a flame and (II) in bulk for use in gas or electrically heated melting pots; and four grades—A, B, C, and D. Gives detail requirements; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Marine Corps Specification, 1941. Paste; Target, Dry.

U. S. Gov., Navy Dept. Specification 53C3a; 1941. Clips; Paper, Bulldog Type.

U.S. Gov., Navy Dept. Specification 53C7; 1942. Clips; Plan-File.

U. S. Gov., Treasury Dept., Procurement Div., 341c; 1943. Machines, Paper-Fastening, and "Standard" Staples. Covers paper-fastening machine suitable for use with "standard" staples, and requirements for staples. Gives requirements for material, clinching capacity, staple magazine, stapling reach, raceway, finish, interchangeability of parts, springs, staple drivers, anvils or dies, plungers, base of machine, handles, requirements for staples; methods of sampling, inspection, and tests.

U. S. Gov., Veterans Administration. Specification VA-G-59; 1932. Pins.

U. S. Gov., Veterans Administration. Specification VA-G-60; 1932. Clips; Paper, Wire.

U. S. Gov., Veterans Administration. Specification VA-X-32c; 1941. Cement; Bookbinding, Waterproof.

U. S. Gov., Veterans Administration. Specification VA-X-74c; 1941. Cement; Leather (Paste).

*References.*—Methods of testing and general requirements for metals, *see* 644.11, 600.1; rubber bands, *see* 208.2; methods of testing glue, *see* 093.0.

## 932.6 BINDERS AND STUB FILES

U. S. Gov., Federal Specification UU-B-338; 1944. Binders; Loose-Leaf, Flexible-Tape Type. Covers one grade. Gives requirements for material, workmanship, construction, covers, covering material, binding sticks, hinge, tapes, and gripping device; methods of sampling, inspection, and tests; packaging, packing, and marking for shipment.

U.S. Gov., Federal Specification UU-B-346; 1942. Amendment 1; 1944. Binders; Loose-Leaf, Ring Type. Covers 2-ring, 3-ring, 4-ring, and 6-ring binders, in canvas, leather-bound, and imitation leather. Gives requirements for binders, board, mechanism and metals, ring spacing, and details; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Marine Corps Specification, 1919. Binders; Loose-Leaf.

U. S. Gov., Navy Dept. Specification 53B6a; 1932. Binders; Loose-Leaf, Catalogue.

U. S. Gov., Treasury Dept., Procurement Div., 374B; 1942. Binders; Current-Ledger. Shall be one type and grade. Gives requirements for binders board, lining, canvas binding, leather binding, mechanism, capacity, lining paper, binding material, and sticks; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., Treasury Dept., Procurement Div., No. 675; 1944. Binders; Sectional-Post Type. Gives requirements for material, workmanship, construction, covers, binding material, lining, hinge, post assembly, finish, and index tab allowance; methods of sampling, inspection, and tests; packaging, packing, and marking for shipment.

U. S. Gov., Treasury Dept., Procurement Div., No. 678; 1944. Binders; Permanent, Light Duty. Covers only stock size binders having two locking units in seven classes. Gives requirements for material, workmanship, construction, sizes, covers and backs, binding material, lining, hinge, binding sticks, permanent

locking units, metal finish, index tab allowance, and details for each class; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Treasury Dept., Procurement Div., No.681; 1944. Binders; Permanent, Heavy Duty. Shall be heavy duty permanent type in two classes—(A) cover with cabinet lock and (B) cover without cabinet lock. Gives requirements for sheet sizes, capacity, material, workmanship, construction, covers, backs, binding material, lining, hinge, end sheets, sheet holding bars, pintle bar housing, posts, post locking device, permanent locking units, metal finish, and index tab allowance; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Treasury Dept., Procurement Div., No.682; 1944. Binders; Screw Post, Flexible Cover. Gives requirements for material, workmanship, construction, sizes, screw posts, covers, tongue, finish, and index tab allowances; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Treasury Dept., Procurement Div., No.702; 1944. Binders; Record Type, Self-Aligning. Covers binders of the record type in sheet sizes and capacity as listed in table I. Gives requirements for construction, covers, backs, hubs, binding material, lining, hinges, end sheets, stubs, pintle bar housing, pintle bars, sheet holding bars and permanent locking units, metal finish, and index tab allowance; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Treasury Dept., Procurement Div., No.708; 1944. Files; Board, for Paper. Covers two types—(I) arch board with paper perforator (size B, 9 in. x 14 1/2 in. and C, 9 in. x 17 in.); and (II) clip board (size A, 9 in. x 12 1/2 in. and C, 9 in. x 17 in.). Gives requirements for material and workmanship, backs, finish, and details for each type; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Treasury Dept., Procurement Div., No.719; 1945. Binders; Prong. Covers two types—(I) 3-position catch and (II) 2-position catch; two classes—(A) fabric hinges and (B) steel hinges; nine sheet sizes; and capacities 1, 1 1/2, 2, 3, and 4-in. Gives requirements for material, workmanship, construction, covers, back, catches, hinges, prongs, binding material, lining, index tab allowance, and metal finish; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Treasury Dept., Procurement Div., No.720; 1945. Binders; Angle Back, Lift Ring and End-Lock. Covers two types—(I) lift ring lock and (II) telescoping end-locks; and six classes. Gives requirements for sizes, capacities, material, workmanship, construction, covers, angle backs, aligner, binding material, lining material, hinges, locking device, post assembly, label holders, index tab allowance, metal finish, and details; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., U. S. Army, Medical Dept. Specification 1-38; 1939. Binder; Medical History.

## 932.9 MISCELLANEOUS OFFICE DEVICES AND SUPPLIES

Assn. of American Railroads, Telegraph and Telephone Section, 2-G-54; 1930. Message Rack AAR-1-A. Covers two alternate methods of constructing welded steel message rack, quality of materials, design requirements, finish, and dimensional drawings.

Assn. of American Railroads, Telegraph and Telephone Section, 2-K-24; 1937. Revolving Message Rack AAR-1-A. Gives requirements for 36 compartment message rack for use in telegraph offices, metal parts, welding, finish, and dimensional drawing.

U.S. Gov., Federal Specification DD-I-546; 1935. Amendment 1; 1936. Inkstands, Automatic and Plain; and Desk-Sets. Covers one grade of individual inkstands in two types—(I) automatic, self-closing; in two classes—(A) round, 3-in. and (B) square, 3-in.; (II) Plain, square, 3-in. One grade of desk-sets in two types—(I) double desk and (II) single desk; in two classes—(A) round, 3-in. and (B) square, 3-in. Gives detail requirements; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Federal Specification GG-R-791a; 1941. Amendment 1; 1943. Rules; Desk. Covers four types—(I) with double brass edgings and brass ends, (II) with single brass edgings and brass ends, (III) with brass edging only, and (IV) without brass edging or brass ends. Lengths of 12, 15, 18, and 24 in. for types I, II, and III, and 12 in. for type IV. Gives detail requirements; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

U.S. Gov., Federal Specification RR-S-714; 1943. Amendment 1; 1944. Stencil-Outfits (Letters and Figures); Metallic. Shall be of the lockedge type, and shall be 1/2, 1, 2, 4, and 6-in. sizes. Covers material, workmanship, and details of stencil-outfit, stencils, ink, brush, stencil box, and marking; methods of sampling, inspection, tests; and packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification SS-P-551; 1942. Pointers; Pencil (Abrasive-Paper). Covers one type, one grade, and two classes—(A) emery paper, (B) flint paper. Gives requirements for material, workmanship, pads, holders, and assembly; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification TT-C-621; 1942. Correction-Compound; Stencil. Covers one type and grade. Gives requirements for viscosity, drying properties, thinning properties, film properties, and performance; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification TT-P-16; 1933. Pads; Stamp. Covers one grade; three types—(I) dry; (II) inked, regular; and (III) inked, quick-drying; and two classes—(A) nainsook and (B) cotton plush. Gives requirements for sizes, colors, cover material, construction, inking, and tolerances; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Federal Specification UU-C-93; 1942. Cards; Guide, Pressboard (Card-Size). Covers four types. Gives, requirements for stock, weights, tnicknesses, bursting strength, texture, finish, tabs, sizes, oolor, and grain; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for snipment.

U. S. Gov., Federal Specification UU-R-196; 1939. Reinforcements; Gummed (Cloth). Covers ten types and one grade. Gives requirements for design, sizes for cloth, gumming, tolerances, and holes; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Federal Specification ZZ-P-41; 1937. Pads; Finger, Rubber, (for) Office Use. Covers a single grade and two types—(I) perforated and (II) without perforations. Gives requirements for design, dimensions, accelerated aging test, tensile strength, and ultimate elongation; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking. Emergency Alternate Federal Specification E-ZZ-P-41; 1942, required pads to be made entirely of reclaimed rubber and changed physical tests.

U. S. Gov., Federal Specification DDD-P-51; 1942. Pads; Chair, Felt. Covers one type and two grades—(A) all wool and (B) wool and cotton mixture. Gives requirements for color (tan or green), material, workmanship, dimensions, felt and colors, shape, straps, and details; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment. Emergency Alternate Federal Specification E-DDD-P-51, Jan. 1943, required one type and grade, and changed requirements for color, material, and details.

U. S. Gov., Joint Army-Navy Specification JAN-R-161; 1944. Rules; Rolling, Brass, 18-In.

U. S. Gov., Navy Dept., Specification 53 O 2; 1940. Openers; Envelope.

U. S. Gov., Navy Dept. Specification 53S2a; 1938. Stamps; Rubber.

U. S. Gov., Treasury Dept., Procurement Div., 298B; 1942. Stamps, Rubber. Covers four types of stamps, to be made of sheet rubber. Gives requirements for handles, metal portions, and details of each type; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., Treasury Dept., Procurement Div., No.312; 1939. Holders; Notebook, Stenographers'. Shall be suitable for use with stenographers' notebooks both as a support for notebook when taking dictation and as a stand when transcribing. Gives requirements for sizes, general design, inner board, cover material, lining material, strap material, and finish; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., Treasury Dept., Procurement Div., No. 632; 1943. Cases; Index Card and Storage or Transfer (Wood or Fiber). Covers type I, index card cases—class A, with hinged covers and class B, with hinged cover and hinged drop front; and type II, storage or transfer cases—class A, with detachable cover and follower. Gives requirements for material, tolerance, construction, sizes, and details for each type and class; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., Treasury Dept., Procurement Div., No.677; 1944. Boards; Record-Control, Visible. For the purpose of giving a visual presentation of facts regarding progress, production, scheduling, records, inventory, etc., in quantities and percentages as pertain to time and dates. Covers two types—(I) single-panel board and (II) double-panel board; and two styles—(1) 100 horizontal peg-holes and (2) 200 horizontal peg-holes. Gives requirements for material and workmanship, performance, finish, and details for each type; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., U. S. Army, Medical Dept. Specification 1-41; 1939. Rack; Stamp.

U. S. Gov., U. S. Army, Medical Dept. Specification 1-42; 1939. Stamp; Dating.

*References.*—Fiber waste paper baskets, *see* 952.14.

## 933. INKS

### 933.0 GENERAL ITEMS

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, 1938. Ink. Covers definition, properties, kinds, types, substitutes, containers, uses, and ordering.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Circular C426; 1940. Inks. Outlines briefly the history of writing inks, in particular those of the iron gallotannate type; gives formulas for a few of these inks and for three iron gallate inks; discusses the aging of writing, the restoration of faded writing, freezing of inks, and effect of inks upon paper. Formulas are also given for other kinds of inks, including colored writing inks, drawing, stamp pad, recording-instrument, and others. Methods of testing given in Federal specifications for inks are described. Information is given on equipment for making ink in the home and on dyes suitable for making inks.

### 933.1 WRITING INKS

American Hospital Assn., 49-28. Writing Ink. Covers blue-black in four classes. Based on U. S. Gov. Federal Specification TT-I-563a.

U. S. Gov., Federal Specification TT-I-521; 1930. Amendment 1; 1940. Ink; Copying and Record. Covers the blue-black type, iron gallo-tannate ink. Gives detail requirements for composition; methods of sampling and tests; and requirements for packaging, packing, and marking. Emergency Alternate Federal Specification E-TT-I-521; 1942, (issued by Procurement Div., Treasury Dept., U. S. Gov.) changed requirements for chemical composition of ink.

U. S. Gov., Federal Specification TT-I-563a; 1940. Amendment 3; 1942. Ink; Writing. Covers the blue-black type in four classes—(1) fluid, (2) concentrated, (3) powder, and (4) tablets. Suitable for permanent records. Gives requirements for materials, composition, and physical properties; methods of sampling and tests; and requirements for packaging, packing, and marking for shipment.

*References.*—Methods of testing, *see* 933.0.

## 933.2 PRINTING AND LITHOGRAPHIC INKS

U. S. Gov., Treasury Dept., Procurement Div., No. 364; 1939. Inks; Offset-Duplicating. Covers two types—(I) for direct image duplicating (typewriting, crayon, ruling, etc.) on offset paper mats or mechanically grained duplicating plates; and (II) for photographic duplicating on mechanically grained zinc duplicating plates. Gives detail requirements and methods of sampling, inspection, and tests.

U. S. Gov., Treasury Dept., Procurement Div., No. 603; 1943. Plate Ink (Developing Ink), (for) Offset Duplication. Covers one type and one grade intended for use as a developing ink in the albumen process of offset duplication. Gives requirements for color (black), solubility, and practical performance test; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., U. S. Army, Corps of Engineers. Specification 42-26; 1937. Ink; Hand Press, Lithographic, Black.

U. S. Gov., U. S. Army, Corps of Engineers. Specification 42.2-38; 1922. Ink; Printing, Bright Vermillion.

## 933.3 DRAFTING AND DRAWING INKS

U. S. Gov., Federal Specification TT-I-528a; 1942. Ink; Drawing, Waterproof, Black. Composed of carbon in a permanent state of suspension in a liquid medium, and no aniline dye. Gives requirements for composition; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification TT-I-531; 1934. Amendment 1; 1935. Ink; Drawing, Waterproof, Colored. Composed of a clear solution of a synthetic dye, or of a permanent suspension of a pigment in a liquid medium. Gives detail requirements for composition; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Treasury Dept., Procurement Div., No. 601; 1943. Drawing Ink (Tusche), for Off-set Duplication. Covers one type and one grade intended for use in placing copy directly on metal or other offset duplicating plates. Gives requirements for practical performance test; methods of sampling, inspection, and tests; and packaging, packing, and marking.

*References.*—Methods of testing inks, *see* 933.0.

## 933.4 INKS FOR OFFICE DEVICES

U. S. Gov., Federal Specification TT-I-556; 1930. Amendment 1; 1940. Ink; Stamp-Pad. Covers two types—(I) regular and (II) quick-drying; and in black, blue, green, red, and violet. Gives detail requirements for composition; methods of sampling and tests; and requirements for packaging, packing, and marking.

*References.*— Methods of testing inks, *see* 933.0.

## 933.9 SPECIAL AND MISCELLANEOUS INKS

American Hospital Assn., 49-25. Red Ink. Covers one type. Based on U. S. Gov. Federal Specification TT-I-549.

U. S. Gov., Army Air Forces. Specification No. 31316; 1943. Ink; Stamp Pad, for Photographic Prints.

U. S. Gov., Army Air Forces. Specification No. 31317; 1943. Ink; Numbering Machine, for Photographic Negatives.

U. S. Gov., Federal Specification TT-I-542; 1930. Ink; Marking, Indelible (for) Fabrics. Covers two types—(a) for laundry and household use and (b) for marking blankets and unsized or unstarched materials. Gives detail requirements; method of sampling and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Federal Specification TT-I-549; 1930. Amendment 1; 1940. Ink; Red. Covers one type. Gives detail requirements for composition; method of sampling and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Marine Corps Specification, 1932. Ink; Stencil and Marking.

U. S. Gov., Marine Corps Specification, 1944. Ink; Stencil, Paste.

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-277; 1943. Ink; Quick-drying, Photographic, for Aerial Film, Negative Marking.

U. S. Gov., U. S. Army, Medical Dept. Specification 4-1097; 1939. Ink; Marking, Meat Inspection.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 36-28; 1942. Ink; Marking, Black and White.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 36-3; 1933. Ink; Black, for Wooden Boxes.

*References.*— Methods of testing inks, solvent for marking inks, *see* 933.0; methods of testing textile materials, *see* 300.4.

# 935. DRAFTSMEN'S AND ENGRAVERS' DEVICES AND SUPPLIES

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering, 1943. Office and Drafting Room Practices (General). Gives standard office practices and graphic details and symbols concerning drafting-room practice.

American Society of Mechanical Engineers, joint sponsor with Society for the Promotion of Engineering Education. American Standards Assn., Z 14.1-1935. Drawings and Drafting Room Practice. This standard embodies what is generally agreed to be the best practice. Recommendations include arrangement of line work, dimensioning, sheet sizes, symbols for outside view, and lettering for engineering drawing.

American Society of Mechanical Engineers, joint sponsor with the American Institute of Electrical Engineers. American Standards Assn., Z 32.2-1941. Graphical Symbols for Use on Drawings in Mechanical Engineering. In addition to the symbols for plumbing, piping, pipe fittings and valves, heating and ventilating, heat power apparatus, conventional rivets, there are 150 symbols in the field of air conditioning, sprinklers, pneumatic tubes, ductwork, and refrigeration. An appendix contains symbols for gas, arc and resistance welding, and for location of welding information. There are more than 300 symbols in the collection.

Society of Automotive Engineers. Aircraft Engine Drafting Room Practice, 1944. Includes procedures for preparation of drawings, dimensioning by the decimal system, standardized notes, gears, thread specifications, materials, miscellaneous, and definitions.

U. S. Gov., Army Air Forces. Specification No. 24700; 1941. Board; Bombing Range Plotting.

U. S. Gov., Army-Navy Aeronautical Specification AN-M-6-2; 1942. Machines; Drafting.

U. S. Gov., Army-Navy Aeronautical Specification AN-M-11; 1943. Machines; Vector Plotting.

U. S. Gov., Army-Navy Aeronautical Specification AN-S-25; 1943. Sets; Navigation Drawing.

U. S. Gov., Federal Specification GG-I-531a; 1943. Instruments; Drawing, Nickel-Silver (First Grade). Covers ruling pens, compasses, compass parts, dividers, bow instruments, lead holder, and cases. Gives requirements for material and workmanship, construction of pieces, finish, points, pen blades, threads, adjusting nuts, handles, branding, and detail requirements for each piece; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Federal Specification GG-S-776; 1932. Straightedges; Steel. Covers two types—(I) square-edged and (II) one edge beveled; either corrosion-resisting steel, or nickel-plated, best quality, unannealed tool steel. Gives detail requirements; methods of inspection and tests; and requirements for packaging, packing, and marking. Emergency Alternate Federal Specification E-GG-S-776; 1942. (issued by Procurement Div., Treasury Dept., U. S. Gov.) substituted two types—(I) wood and (II) plastic; and two classes—(A) solid and (B) transparent edges; and gives requirements for same.

U. S. Gov., Federal Specification GG-T-671a; 1944. Triangles; Plastic, Transparent. Covers one grade. Gives requirements for angles and sizes, material, workmanship, design, finish, identification, flexibility, warpage, water absorption, tensile strength, elongation, light transmission, and haze; methods of sampling and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification GG-T-711b; 1944. T-Squares; Plastic, Wood, and Wood-and-Plastic. Covers two types—(I) fixed head and (II) double head (fixed and adjustable); three classes—(A) opaque blade (wood and plastic), (B) opaque blade (wood and plastic), with transparent edges, and (C) transparent blade; and sizes 18, 24, 30, 36, 42, 48, or 60 in. Gives requirements for materials and workmanship, table of dimensions, tolerance, identification, finish, details for transparent plastic, and details for each type and class; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Joint Army-Navy Specification JAN-P-90; 1944. Protractors; Three-Arm, Transparent, Mark 2.

U. S. Gov., Joint Army-Navy Specification JAN-R-83; 1944. Rules; Parallel.

U. S. Gov., Marine Corps Specification, 1923. Board; Sketching.

U. S. Gov., Navy Dept. Specification 18M5; 1928. Machines; Drafting, Navigational.

U. S. Gov., Navy Dept. Specification 18P1c; 1944. Protractors; Three-Arm, Metal.

U. S. Gov., Navy Dept. Specification 18P5b; 1943. Protractors; Parallel-Motion.

U. S. Gov., Navy Dept. Specification 53L1; 1940. Lifters; Thumbtack.

U. S. Gov., Treasury Dept., Procurement Div., 236A; 1942. Machines; Blueprinting, Horizontal Type. Shall be built of metal with a cast iron or steel frame construction. Gives detail requirements as to type, design, illumination, contact, conveyor, feed, speed, control, ventilation, protection, and finish; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., Treasury Dept., Procurement Div., 512a; 1942. Liners; Section. Covers one type and one grade and shall be constructed to permit the drawing of parallel lines. Gives requirements for design and construction, base, mountings, and ruler arm; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., Treasury Dept., procurement Div., 527a; 1942. Scales; Drawing, Boxwood (Architects, Engineer's, and Metric). Covers several types, classes, and sizes of flat and triangular scales. Shall be but one grade of scales from best grade of boxwood. Gives requirements for construction, graduated edge lining, markings, tolerance, cross section, and details for architects, engineer's, and metric scales; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., Treasury Dept., Procurement Div., No. 627; 1943. Lettering Devices. Covers two types—(I) lettering guide, scriber, and lettering pen, and (II) lettering guide, and lettering pen. Gives requirements for general design, bid sample, instructions, templates or lettering guides, construction, characters, pens, pencil adapter, pen-holder socket-adapter, scriber, cases, handle, and lettering pad; methods of sampling, inspection, and test; and packing and marking for shipment.

U. S. Gov., U. S. Army, Corps of Engineers. Specification 26-1B; 1943. Board, Drawing; and Trestles (Horses) for drawing Boards.

U. S. Gov., U. S. Army, Corps of Engineers. Specification 26-2A; 1929. Instrument; Drawing, First Grade, In Sets.

U. S. Gov., U. S. Army, Corps of Engineers. Specification 26-3A; 1940. Compass; Beam, Micrometer Adjustment, In Case.

U. S. Gov., U. S. Army, Corps of Engineers. Specification 26-4; 1921. Divider; Proportional, 10-Inch.

U. S. Gov., U. S. Army, Corps of Engineers. Specification 26-5A; 1940. Scale; Plotting, Boxwood, Triangular.

U. S. Gov., U. S. Army, Corps of Engineers. Specification 26-6; 1922. Box; Water Color, Colors, Water.

U. S. Gov., U. S. Army, Corps of Engineers. Specification 26-10B; 1939. Board; Drawing, 16 by 22 Inches, Drafting and Duplicating.

U. S. Gov., U. S. Army, Corps of Engineers. Specification 26-14; 1926. Scale; Map, Steel, Metric, 60-Cm.

U. S. Gov., U. S. Army, Corps of Engineers. Specification 26-25; 1927. Spline and Weight, Set, in Box.

U. S. Gov., U. S. Army, Corps of Engineers. Specification 26-26A; 1929. Protractor; N.S. Semicircular, With Arm, In Case.

U. S. Gov., U. S. Army, Corps of Engineers. Specification 26-27; 1928. Protractor; N.S. Semicircular, 6-Inch, Without Arm.

U. S. Gov., U. S. Army, Corps of Engineers. Specification 26-38; 1929. Scale; Boxwood, Architects' and Engineers', Triangular.

U. S. Gov., U. S. Army, Corps of Engineers. Specification 26-39; 1929. Protractor; Bronze, Circular, 6 1/2-inch, With 3 Arms.

U. S. Gov., U. S. Army, Corps of Engineers. Specification 26-40A; 1938. Straightedge; Steel, Graduated in Yards, 1:20,000.

U. S. Gov., U. S. Army, Corps of Engineers. Specification 26-41; 1937. Protractor; Xylonite, Semicircular, 12 and 16 Inches, Graduated in Mils and Yards 1:20,000.

U. S. Gov., U. S. Army, Corps of Engineers. Specification 26-42; 1937. Protractor; Xylonite, Fan, Range Deflection, Graduated in Mils and Yards, 1:20,000.

U. S. Gov., U. S. Army, Corps of Engineers. Specification 26-43; 1939. Protractor; Xylonite, Semicircular, Machine Gun, 10-Inch, Graduated in Mils, M-1939.

U. S. Gov., U. S. Army, Corps of Engineers. Specification 26-44; 1939. Board; Drawing, for Machine-Gun Units, with Carrying Case.

U. S. Gov., U. S. Army, Corps of Engineers. Specification 42.1-9; 1921. Book; Note, Field.

U. S. Gov., U. S. Army, Corps of Engineers. Specification 42.1-21; 1921. Measure Map.

U. S. Gov., U. S. Army, Corps of Engineers. Specification 42.1-25; 1921. Curve; for Mechanical Engineers; Xylonite, Set of 10.

U. S. Gov., U. S. Army, Corps of Engineers. Specification 42.1-33; 1921. Protractor; Rectangular, Xylonite 1/8 by 1 3/4 by 6 Inches.

U. S. Gov., U. S. Army, Corps of Engineers. Specification 42.1-34; 1921. Protractor; Pencil Point.

U. S. Gov., U. S. Army, Corps of Engineers. Specification 42.1-39; 1921. Scale; Map, Metric, Boxwood, 30 Centimeters, 1:50,000 and 1:10,000.

U. S. Gov., U. S. Army, Corps of Engineers. Specification 42.1-40; 1921. Scale; Map, Metric, Boxwood, 30 Centimeters, 1:20,000 and 1:50,000.

U. S. Gov., U. S. Army, Corps of Engineers. Specification 42.1-41; 1921. Scale; Map, Boxwood, 10-Inches, Meters and Yards, 1:62,500.

U. S. Gov., U. S. Army, Corps of Engineers. Specification 42.1-42; 1921. Scale; Map, Boxwood, 10-Inches, Meters and Yards, 1:20,000.

U. S. Gov., U. S. Army, Corps of Engineers. Specification 42.1-43; 1921. Scale; Map, Boxwood, 20-Inches, Meters and Yards, 1:10,000.

U. S. Gov., U. S. Army, Corps of Engineers. Specification 42.2-41; 1921. Needle; Etching, Nos. 1, 2, 3, 5, and 6.

U. S. Gov., U. S. Army, Corps of Engineers. Specification 42.3-3; 1921. Rule; Parallel, Rolling, 12 and 15 Inches.

U. S. Gov., U. S. Army, Corps of Engineers. Specification 42.3-4; 1921. Pantograph; Hollow Brass Bars, 28 Inches, With Case.

U. S. Gov., U. S. Army, Corps of Engineers. Specification 42.3-7; 1921. Ruler; Adjustable Curve, 15 and 30 Inches Long.

U. S. Gov., U. S. Army, Corps of Engineers. Specification 42-11A; 1942. Board, Sketching, With Waterproof Cover; and Tripod, Sketching.

U. S. Gov., U. S. Army, Corps of Engineers. Specification 42-22; 1929. Protractor; Xylonite, Circular and Semicircular.

U. S. Gov., U. S. Army, Corps of Engineers. Specification 42-29; 1938. Scale; Plotting, Flat, Boxwood, 6-Inch, Graduated in Feet and Yards, 1:20,000.

U. S. Gov., U. S. Army, Corps of Engineers. Specification 42-40; 1939. Book; Note, Level and Transit.

U. S. Gov., U. S. Army, Corps of Engineers. Specification 42-50; 1943. Needles; Etching, Nos. 1, 2, 3, 5, and 6.

U. S. Gov., U. S. Army, Corps of Engineers. Specification 42-53; 1943. Planimeter; Polar, Amseler's Pattern, 10-Inch Tracer Arm, Nickel Silver, W/Case.

U. S. Gov., U. S. Army, Corps of Engineers. Specification 42-56; 1943. Triangle; Steel, Plated, Open Center.

U. S. Gov., U. S. Army, Corps of Engineers. Specification 43-25; 1921. Curve; Railroad, Set of 30.

U. S. Gov., U. S. Maritime Commission. Specification 18-MC-11; 1945. Rulers; Parallel. Covers one grade; two types—(I) ungraduated and (II) graduated; and two classes—(A) with graduations on blades and (B) with integral semicircular protractor. Gives requirements for sizes, materials, workmanship, construction, blades, bars, grips, parallelism, marking, finish, and details for each type and class; sampling, inspection, and methods of test; and packaging, packing, and marking for shipment.

U. S. Gov., Veterans Administration. Specification VA-G-21a; 1936. Boards; Drawing.

U. S. Gov., Veterans Administration. Specification VA-G-24; 1933. Compass and Divider.

*References.*—Nickel-silver bars, rods, shapes, *see* 655.1; thumb tacks, steel erasers, *see* 608.14, 931.4.

## 936. PRINTING AND LITHOGRAPHING DEVICES AND SUPPLIES

U. S. Gov., Treasury Dept., Procurement Div., 209D; 1942. Type-Cleaner; Liquid (With Dauber). Shall be of one grade. Gives requirements for distillation, burning properties, water, neutrality, residual odor, drying properties, corrosion test, bottles, and daubers; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., Treasury Dept., Procurement Div., 316B; 1942. Wash; Blanket and Roller, for Offset Duplicating Machines. Shall be furnished in one type and one grade, suitable for the cleaning of rubber blankets, rollers, etc. Gives requirements for water, corrosion, distillation, residual odor, drying properties, and flash point; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., Treasury Dept., Procurement Div., 331B; 1943. Plate-Etch; Aluminum and Zinc, (for) Offset Duplication. Covers one type and one grade and shall be suitable for use in the offset duplicating process. Gives requirements for alternate plate-etch and chemical composition of plate-etch; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., Treasury Dept., Procurement Div., 332b; 1943. Coating-Solution (Sensitizing-Solution), (for) Offset Duplication. Covers one type and one grade. Gives general requirements, alternate coating solution, and detail requirements; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Treasury Dept., Procurement Div., 333C; 1943. Plate-Wash (Counter-Etch); Aluminum and Zinc (For) Offset Duplication. Covers one type and one grade. Plate wash shall be technical acetic acid intended for use in the treatment of metal plates

(aluminum and zinc) prior to coating to obtain a clean surface. Gives methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., Treasury Dept., Procurement Div., 334B; 1943. Plates; Offset, Duplicating. Covers two types—type I, patterned edge, integral or detachable—class A, zinc; and B, plastic; and type II, straight edge—class A, zinc; and B, plastic. Gives requirements for mechanical properties and chemical composition of zinc plates, physical properties of plastic plates, workmanship, thickness and sizes, and graining; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Treasury Dept., Procurement Div., 335C; 1943. Fountain Solution; Aluminum or Zinc Plate, (for) Offset Duplication. Two types—(I) aluminum and (II) zinc. Gives requirements for alternate solution, chemical compositions, and concentration; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., Treasury Dept., Procurement Div., 412C; 1944. Blankets; Offset-Press, Lithographic. Shall be of one type and suitable for both dry process printing from deep-etch plates and wet-process printing from coated plates. Gives requirements for material, suitability, construction, surface, over-all thickness, stretch, resistance to tackiness, performance, marking, bid sample, and hardness; methods of inspection and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Treasury Dept., Procurement Div., No. 598; 1943. Gum Arabic Solution, (for) Offset Duplication. Covers one type and one grade intended for use as a "gum" and a protective coating for metal plates in the offset duplicating process. Shall be free from any objectionable odor and gives requirements for appearance and specific gravity; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., Treasury Dept., Procurement Div., No. 600; 1943. Blanket Powder, (for) Offset Duplication. Covers one type and one grade and shall be a mixture of talc and sulfur intended for use on rubber blankets. Gives requirements for soluble material, loss on ignition, fineness, and grit; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., Treasury Dept., Procurement Div., No. 602; 1942. Intensifier, (for) Offset Duplicating Plates. Covers one type and one grade intended for use on offset duplicating plates to provide longer runs. Gives requirements for practical performance test; methods of sampling, inspection, and test; and packaging, packing, and marking.

U. S. Gov., Treasury Dept., Procurement Div., No. 604; 1943. Sealing-Compound (Washout Solution); Print (or Image), (for) Offset Duplication. Covers one type and one grade intended for use as a protective coating for printing of images on offset duplicating plates. Shall be a homogeneous solution of suitable asphalt in turpentine. Gives requirements for non-volatile, water, grit, and performance; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., Treasury Dept., Procurement Div., No. 628; 1943. Ammonium Dichromate; Technical Grade. Covers one type and one grade, in granular form, and not caked in containers. Intended for use in lithographic processes. Gives requirements for chemical composition, water-insoluble matter, and particle size; methods of sampling, inspection, and test; and packaging and marking.

U. S. Gov., U. S. Army, Corps of Engineers. Specification 42.2-68; 1921. Slip; Etching, Gamberger.

U. S. Gov., U. S. Army, Corps of Engineers. Specification 42.2-77; 1921. Touche.

U. S. Gov., U. S. Army, Corps of Engineers. Specification 42-18; 1929. Frame; Printing.

U. S. Gov., U. S. Army, Corps of Engineers. Specification 42-20; 1929. Tray; Zinc.

U. S. Gov., U. S. Army, Corps of Engineers. Specification 42-43; 1940. Machine; Developing, Black and White Printing Process, 30-Inch, Hand Operated, With Chest.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 16-4; 1936. Machine; Photocopying, With Accessories.

U. S. Gov., U. S. Maritime Commission. Specification 66-MC-2; 1940. Cabinet; Wall Type, Steel, for Print Shop. Type I—single-tier (24-case); type II—double-tier (48-case), and the grade shall be as specified. Gives requirements for materials, workmanship, finish, color, base construction, movable parts, top, back, overhead lighting fixture, body, working top, inspection, and methods of test.

U. S. Gov., U. S. Maritime Commission. Specification 66-MC-3; 1940. Cutters; Paper, and Print Shop. There shall be but one type and grade, and two classes; Class A—paper cutter with stand (cabinet), and class B—paper cutter without stand. Gives requirements for material, workmanship, finish, color, base construction, details, knife, stand, inspection, and methods of test.

U. S. Gov., U. S. Maritime Commission. Specification 66-MC-4; 1940. Cabinet; Letterboard (for Standing Forms), for Print Shop. The cabinet shall be all steel and the grade shall be as herein specified. Gives requirements for materials, workmanship, finish, color, base construction, dimensions, openings, letterboards, inspection, and methods of test.

U. S. Gov., U. S. Maritime Commission. Specification 66-MC-6; 1940. Machine; Wirestitching, for Print shop. There shall be but one type and grade. Gives requirements for materials, workmanship, finish, color, base construction, safety devices, spare parts, type and capacity, electrical equipment, inspection, and methods of test.

U. S. Gov., U. S. Maritime Commission. Specification 66-MC-10; 1941. Rack; Chase, for Print Shop. Type I—single-deck, capacity 10 forms; type II—double-deck, capacity 20 forms; and shall be but of one grade described herein. Gives requirements for materials, workmanship, finish, color, base construction, detail requirements, inspection, and methods of test.

U. S. Gov., U. S. Maritime Commission. Specification 66-MC-11; 1941. Saw; Trimmer, for Print Shop. Type I—saw trimmer with stand; type II—saw trimmer without stand (bench model); and the grade shall be as

specified. Gives requirements for materials, workmanship, finish, color, base construction, safety devices, motors, spare parts, detail requirements, inspection, and methods of test.

U. S. Gov., U. S. Maritime Commission. Specification 66-MC-12; 1940. Table; Imposing, Steel Lockup and Storage, for Print Shop. Type I—size 31 x 39 In.; type II—size 39 x 65 in.; and the tables shall be all steel as specified. Gives requirements for materials, workmanship, finish, color, base construction, detail requirements, dimensions, tolerances, inspection, and methods of test.

U. S. Gov., U. S. Maritime Commission. Specification 66-MC-13; 1941. Table; Drying, With Drying Racks, for Print Shop. There shall be but one type and grade. Gives requirements for materials, workmanship, finish, color, base construction, detail requirements, inspection, and methods of test.

*References.*—Printing ink, electrotypes, *see* 933.2, 788; back lining paper for case making machines, plate wiping paper, oiled manila tympan paper, *see* 479.4; stereotype tissue and molding paper, *see* 476.25.

## 937. EDUCATIONAL SUPPLIES

### 937.1 BLACKBOARD CHALK

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R192-42; 1942. Crayons, Chalks, and Modeling Clays for School Use (Types, Sizes, and packaging). Includes drawing crayons, pastels, dustless chalk, molded chalk, colored chalk, and lecturers' chalk.

U. S. Gov., Federal Specification SS-C-636; 1943. Crayons; Chalk, White. Covers two types—(I) extruded (round and hexagonal) and (II) molded. Gives requirements for material and workmanship, composition, size, weight, and breaking strength; methods of sampling, inspection, and tests; and packaging, packing, and marking.

### 937.2 ERASERS

U. S. Gov., Veterans Administration. Specification VA-G-25a; 1936. Erasers; Rubber.

*References.*—Steel erasers, *see* 931.4.

### 937.3 KINDERGARTEN SUPPLIES

### 937.4 BLACKBOARDS

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R75-29; 1929. Composition Blackboard. This recommendation establishes a list of standard stock items covering widths and lengths of black blackboard of cement asbestos backing, of wood-pulp backing, and of gypsum core backing, and green blackboard of wood-pulp backing. Sponsored by the National School Supplies and Equipment Assn.

*References.*—Blackboard slate, *see* 511.51.

### 937.9 MISCELLANEOUS EDUCATIONAL SUPPLIES

*References.*—Handwriting supplies, *see* 931; writing inks, *see* 933.1; composition books, *see* 481.

# 940-949 TOYS, ATHLETIC AND SPORTING GOODS, AND INSIGNIA

## 941. TOYS

Underwriters' Laboratories, Inc. Standard for Electric Toys, 1942. Covers portable toys which are operated, heated, or lighted electrically, and which are designed to be employed on lighting and/or appliance branch circuits of 125 volts or less, in accordance with the National Electrical Code. Does not cover Christmas-tree and decorative-lighting outfits, picture machines and projectors, toy transformers, nor appliances designed to operate from the secondary of a toy transformer at a potential of 25 volts or less. Gives requirements for design, construction, corrosion protection, mechanical assembly, insulating material, switches, transformers, automatic controls, motors, special safety features, supply connections, wiring, performance, rating, and marking.

*References.*—Toy transformers, *see* 713.5.

## 942. INDOOR AMUSEMENTS

## 943. ATHLETIC AND SPORTING GOODS

### 943.1 BALLS

Amateur Athletic Union of the U. S. Official Basketball Rules. Adopted by Jewish Welfare Board, Public Schools Athletic League of New York, American Sokol Union, German-American Athletic Union, Military Athletic League, Slovac Catholic Sokol, and Catholic Youth Organization. Includes material, size, and weight of ball.

American Bowling Congress. Rules and Regulations, 1944-45. Includes weight, size, and balance of balls.

National Basketball Committee of the U. S. and Canada. Representing the National Collegiate Athletic Assn. National Federation of High School Athletic Assn., Young Men's Christian Assn., Canadian Intercollegiate Athletic Union, Canadian Amateur Basketball Assn. Official Basketball Guide, BB45. Includes materials, size, and weights of balls for adults and for players below senior high school age; requirements for height of bounce; testing for resilience at factory; and stamping with air pressure required to give legal bounce.

National Collegiate Athletic Assn. The Official Foot Ball Guide, FB44. Ball. Requirements for materials of cover and bladder, construction, color, inflation pressure, shape, size, dimensions, and weight.

National Collegiate Athletic Assn. The Official Lacrosse Guide, LC44. Ball. Includes requirements for material, circumference, weight, and height of bounce.

National Collegiate Athletic Assn. The Official Soccer Guide, SO44. Ball. Requirements for casing, circumference, weight, and inflation pressure.

National Collegiate Athletic Assn. Official Swimming Guide With Official Rules for Swimming, Fancy Diving, and Water Polo, SW45. Water Polo Ball (Hard Ball). Requirements for size, shape, covering, and weight.

National Football League. Official Football Rules. Ball. Requirements for materials of cover and bladder, construction, color, inflation pressure, shape, size, dimensions, and weight.

U. S. Golf Assn. Rules for Golf, 1944-45. Includes requirements for form and make of golf clubs and balls.

U. S. Volley Ball Assn. Volley Ball Official Guide, VB45. Ball. Includes requirements for shape, covering, size, weight, and air pressure.

*References.*—Volley ball, water polo ball, soccer ball, basket ball, foot ball, *see* 069.1; lacrosse ball, golf ball, water polo ball, code ball, *see* 209.91.

## 943.2 GLOVES AND MITS

National Collegiate Athletic Assn. The Official Boxing Guide, B045. Gloves. Requirements for pattern, weight, thumb length, cuff width, and padding.

*References.*—Baseball gloves, *see* 068.1.

## 943.3 MASKS, BASEBALL

## 943.4 BASES AND PLATES, BASEBALL

## 943.5 QUOITS AND HORSESHOES

## 943.6 MEGAPHONES

U. S. Gov., Navy Dept. Specification 37 M 4c; 1944. Megaphones; Hand.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-268B; 1943. Megaphone; M-64.

U. S. Gov., U. S. Maritime Commission. Specification 37-MC-2; 1943. Megaphones; Hard. Covers one type and grade. Gives requirements for sizes, materials, workmanship, construction, finish, assembly, physical requirements, and marking; sampling, inspection, and methods of test; packaging, packing, and marking.

## 943.7 LEATHER ATHLETIC GOODS

National Collegiate Athletic Assn. The Official Boxing Guide, B045. Gloves. Requirements for pattern, weight, thumb length, cuff width, and padding.

*References.*—Baseball gloves, *see* 068.1; water polo ball, volley ball, soccer ball, basket ball, foot ball, *see* 069.1.

## 943.8 FISHING LINES AND ACCESSORIES

U. S. Gov., Army-Navy Aeronautical Specification AN-K-2; 1943. Kits; Fishing.

U. S. Gov., Navy Dept. Specification 37 H 14a; 1944. Hooks; Fish, Steel.

## 943.9 MISCELLANEOUS ATHLETIC AND SPORTING GOODS

### 943.91 Athletic Clothing

National Collegiate Athletic Assn. The Official Football Guide, FB44. Equipment. Includes requirements for knee pads; elbow pads; hand, wrist, or forearm protectors; thigh guards, shin guards, and braces; shoes and shoe cleats; and head protectors.

National Football League. Official Football Rules. Equipment. Includes requirements for thigh guards, shin guards and braces, knee pads, elbow pads, shoes with cleats, head protectors, and color of jerseys.

*References.*—Rayon knit athletic shirts and track pants, *see* 397.12; knit athletic shirts and polo shirts, *see* 309.4.

### 943.92 Athletic Outfits

### 943.93 Golf Goods

U. S. Golf Assn. Rules for Golf, 1944-45. Includes requirements for form and make of golf clubs and balls.

U. S. Golf Assn. Specifications for Markings on Iron Clubs, 1942. Includes requirements for marking golf clubs where scoring grooves are used, for scoring clubs with punch marks, and for marking clubs with combination of punch markings and groove.

*References.*—Golf Ball, hickory golf shafts, *see* 209.91, 429.9.

### 943.94 Field and Track Goods and Apparatus

Amateur Athletic Union of the U. S. Official Handbook. Athletic Rules Track and Field. Barrel Head for Throwing the Heavy Weight for Height. Requirements for size and position.

Amateur Athletic Union of the U. S. Official Handbook. Athletic Rules Track and Field. Cleats for Tug-of-War. Requirements for material, sizes, locations, and installation.

Amateur Athletic Union of the U. S. Official Handbook. Athletic Rules Track and Field. Pegs and Cross-Bar. Requirements for material, size, and locations.

Amateur Athletic Union of the U. S. Official Handbook. Athletic Rules Track and Field. Rope for Tug-Of-War. Requirements for material, kind, and size.

Amateur Athletic Union of the U. S. Official Handbook. Athletic Rules Track and Field. Scratch Line for Javelin Throwing. Requirements for material, size, and installation.

Amateur Athletic Union of the U. S. Official Handbook. Athletic Rules Track and Field. Take-Off for Pole Vault. Requirements for material, measurements, and installation.

Amateur Athletic Union of the U. S. Official Handbook. Athletic Rules Track and Field. Throwing Circles. Requirements for sizes and interior surface for various throwing events.

Amateur Athletic Union of the U. S. Official Handbook. Athletic Rules Track and Field. Vaulting Standards. Requirements for uprights, cross bar, and pegs.

Amateur Athletic Union of the U. S. Specifications of Apparatus. Hammer Throwing Cage. Suggested requirements on diameter and height, size of opening, size of wire and mesh, size and setting of pipe frame.

Amateur Athletic Union of the U. S. Specifications of Apparatus. Hurdle. Requirements for construction of wood or metal, measurements, and finish.

Amateur Athletic Union of the U. S. Specifications of Apparatus. Jump Standards and Vaulting Standards. Requirements for uprights, for triangular wood cross bar and supports, shape, and dimensions.

Amateur Athletic Union of the U. S. Specifications of Apparatus. Relay Baton. May be made from hollow wood, fiber, or cardboard tube; measurements and weight.

Amateur Athletic Union of the U. S. Specifications of Apparatus. Sector Flags. Gives size and shape of metal flag, and standard to be colored red.

Amateur Athletic Union of the U. S. Specifications of Apparatus. Seven-Foot Circle. For circle made of band iron, steel, or wood; and except for the discus, shall measure 7 ft. inside diameter. For the discus,

shall measure not more than 8 ft. 2 1/2 in. in inside diameter. Gives width and thickness of wood and of metal, and finish.

Amateur Athletic Union of the U. S. Specifications of Apparatus. Stop Board. For construction of wood, measurements, and finish.

Amateur Athletic Union of the U. S. Specifications of Apparatus. Take-Off Board. For construction of wood, measurements, and finish.

Amateur Athletic Union of the U. S. Specifications for Official Implements. Discus. Requirements for construction, measurements, and weight.

Amateur Athletic Union of the U. S. Specifications for Official Implements. Hammer. Requirements for head of lead or brass shell filled with lead or cast gray iron, handle of spring steel wire, grip, connections, weight, shape, and length.

Amateur Athletic Union of the U. S. Specifications for Official Implements. Javelin. Construction of steel or iron pointed wood javelin; requirements for center of gravity, length, grip, and weight.

Amateur Athletic Union of the U. S. Specifications for Official Implements. Pole Vaulting Pole. Material and dimensions not specified; requirements for adhesive tape wrapping and metal spike or wooden plug end.

Amateur Athletic Union of the U. S. Specifications for Official Implements. Shot. Requirements on shape, material, and weight.

Amateur Athletic Union of the U. S. Specifications for Official Implements. Standard (56-lb.) Heavy Weight. Requirements for head of lead or lead in brass shell, for handle, connection, and dimensions. The 35-lb. weight is exactly the same, except that the "S" shaped connection is 1 in. longer to make the overall length same as the heavy weight.

Amateur Athletic Union of the U. S. Specifications for Official Implements. Women's Discus. Gives approved standards for construction, measurement, and weight.

Amateur Athletic Union of the U. S. Specifications for Official Implements. Women's Javelin. Requirements for construction of iron or steel pointed wood javelin, for center of gravity, length, grip, and weight.

Intercollegiate Assn. of Amateur Athletes of America. Official Handbook. Discus. Requirements for construction, measurements, and weight.

Intercollegiate Assn. of Amateur Athletes of America. Official Handbook. Discus Circle. Requirements for diameter, material for ring, and surface within circle.

Intercollegiate Assn. of Amateur Athletes of America. Official Handbook. Hammer. Requirements for head, handle, grip, connections, weight, and length.

Intercollegiate Assn. of Amateur Athletes of America. Official Handbook. Hurdles. Requirements for material, base, uprights, frame, cross bars, width, and weight.

Intercollegiate Assn. of Amateur Athletes of America. Official Handbook. Javelin. Requirements for construction, grip, measurements, and weight.

Intercollegiate Assn. of Amateur Athletes of America. Official Handbook. Javelin Scratch Line. Requirements for material, dimensions, and location.

Intercollegiate Assn. of Amateur Athletes of America. Official Handbook. Pole Vault. Requirements for uprights, cross-bar, supports, pole, and box.

Intercollegiate Assn. of Amateur Athletes of America. Official Handbook. Running Broad Jump. Requirements for take-off area and take-off.

Intercollegiate Assn. of Amateur Athletes of America. Official Handbook. Running High Jump. Requirements for uprights, cross bar, and supports.

Intercollegiate Assn. of Amateur Athletes of America. Official Handbook. Seven-Foot Circle for Throwing Events. Requirements for ring, surface within ring, and toeboard.

Intercollegiate Assn. of Amateur Athletes of America. Official Handbook. Shot. For iron sphere, or spherical brass shell filled with lead. Leather or soft bag or container filled with lead for indoor competition.

Intercollegiate Assn. of Amateur Athletes of America. Official Handbook. Thirty-Five-Pound Weight. Requirements for head, handle, connection, weight, and length.

National Collegiate Athletic Assn. The Official Track and Field Guide, TF44. Broad Jump. Requirements for scratch-line and alighting pit, materials, and dimensions.

National Collegiate Athletic Assn. The Official Track and Field Guide, TF44. Discus. Requirements for shape, size, material, and weight for collegiate and for high school meets.

National Collegiate Athletic Assn. The Official Track and Field Guide. TF44. Hammer. Requirements for head, handle, and grips.

National Collegiate Athletic Assn. The Official Track and Field Guide, TF44. Hurdles. Includes requirements for length, width, and finish of top bar, weight, and spacings for various lengths of races for both high and low hurdles.

National Collegiate Athletic Assn. The Official Track and Field Guide, TF44. Javelin. Requirements for material, length, center of gravity, grip, length, and weight.

National Collegiate Athletic Assn. The Official Track and Field Guide, TF44. Relay Baton. Requirements for material, size, circumference, and weight.

National Collegiate Athletic Assn. The Official Track and Field Guide, TF44. Running High Jump and Pole vault. Requirements for sizes of pits, bar, supports for bar, standards, box for planting pit, and stop-board.

National Collegiate Athletic Assn. The Official Track and Field Guide, TF44. Shot. Requirements for material, shape, and weight.

National Collegiate Athletic Assn. The Official Track and Field Guide, TF44. Thirty-Five-Pound-Weight. Requirements for head, handles, length, and weight.

National Collegiate Athletic Assn. The Official Track and Field Guide, TF44. Throwing Circles. Requirements for sizes and materials for various throwing events.

*References.*—Relay baton, *see* 429.9.

## 943.95 Lacrosse Goods

National Collegiate Athletic Assn. The Official Lacrosse Guide, LC44. The Crosse. Includes requirements for length, material, leading string, and method of weaving.

National Collegiate Athletic Assn. The Official Lacrosse Guide, LC44. Goals. Includes requirements for spacing and height of poles and type and mesh of net.

*References.*—Lacrosse ball, *see* 209.91.

### 943.96 Hockey Goods and Apparatus

National Collegiate Athletic Assn. The Official Ice Hockey Guide, IH45. Goal Cages. Includes requirements for posts, top car or rope, base, and net.

National Collegiate Athletic Assn. The Official Ice Hockey Guide, IH45. Goalkeeper's Pads. Minimum width of leg pads.

National Collegiate Athletic Assn. The Official Ice Hockey Guide, IH45. Hockey Sticks. Includes requirements for material, length, blade heights, and blade length.

National Collegiate Athletic Assn. The Official Ice Hockey Guide, IH45. Puck for Ice Hockey. Includes requirements for material (vulcanized black rubber), thickness, diameter, and weight.

National Collegiate Athletic Assn. The Official Ice Hockey Guide, IH45. Skates. Requirements for blade extensions and blade ends.

*References.*—Hockey ball, hockey stick, puck, *see* 943.1, 429.9, 209.92.

### 943.97 Basket-Ball Goods and Apparatus

Amateur Athletic Union of the U. S. Official Basketball Rules. Adopted by Jewish Welfare Board, Public Schools Athletic League of New York, American Sokol Union, German-American Athletic Union, Military Athletic League, Slovac Catholic Sokol, and Catholic Youth Organization. Includes court dimensions and markings; size, material, and positions of backboards, baskets and basket rings; and materials, size, and weight of ball.

National Basketball Committee of the U. S. and Canada. Representing the National Collegiate Athletic Assn., National Federation of High School Athletic Assns., Young Men's Christian Assn., Canadian Intercollegiate Athletic Union, Canadian Amateur Basketball Assn. Official Basketball Guide, BB45. Includes court dimensions and markings; size, material and position of back boards, basket, and basket rings; materials, size, and weights of balls for adults and for players below senior high school age; height of bounce; and testing of balls for resilience at factory.

*References.*—Basket ball, *see* 069.1.

### 943.98 Bowling Goods and Apparatus

*References.*—Bowling ball, bowling pins, *see* 943.1, 429.9.

### 943.99 Athletic and Sporting Goods Not Elsewhere Classified

National Collegiate Athletic Assn. Official Boxing Guide, BO45. Ring. Requirements for size, padding of posts and turnbuckles, rope enclosure and padding for same, padding and covering for floor.

National Collegiate Athletic Assn. Official Swimming Guide With Official Rules for Swimming, Fancy Diving, and Water Polo, SW45. Springboards. Requirements for distance above water, length, width, material, covering, and location.

National Collegiate Athletic Assn. Official Swimming Guide With Official Rules for Swimming, Fancy Diving, and Water Polo, SW45. Water Polo Goals. Requirements for width, height of cross bar above water, and attachment.

U. S. Volley Ball Assn. Volley Ball Official Guide, VB45. Net. Includes requirements for width, length, mesh size, and material; binding of top, ends, and sides; height; and markers.

*References.*—Baseball bat, spring boards, *see* 429.9; volley ball and tennis nets, *see* 317.7.

## 944. BADGES, INSIGNIA, AND MARKINGS

### 944.1 BADGES

U. S. Gov., Dept. of Agriculture, Forest Service. Specification 26-2. Badges; Fire Overhead.

U. S. Gov., Dept. of Agriculture, Forest Service. Specification MSF-26-1. Badge; Forest Guard.

U. S. Gov., Marine Corps Specification, 1937. Badge; Basic.

U. S. Gov., Marine Corps Specification, 1937. Badge; Expert (Rifle).

U. S. Gov., Marine Corps Specification, 1937. Badge; Marksman (Rifle).

U. S. Gov., Marine Corps Specification, 1937. Badge; Sharpshooter (Rifle).

U. S. Gov., Marine Corps Specification, 1938. Bars; Good Conduct Medal.

U. S. Gov., Marine Corps Specification, 1937. Bar; Requalification, for Badge, Expert (Rifle).

U. S. Gov., Marine Corps Specification, 1940. Bars; Qualification.

U. S. Gov., Navy Dept. Specification 71B6; 1943. Badges; Arm.

U. S. Gov., Post Office Dept., Div. of Motor Vehicle Service, Bureau of the Fourth Assistant Postmaster General. Specifications for Badges for Motor Vehicle Service Employees.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 34-1A; 1929. Badge; Aviation.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 34-13; 1931. Badge, for Excellency in Marksmanship and Bombing.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 34-14; 1931. Badge; Marksmanship, Team.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 34-15; 1931. Badge; Marksmanship, Gunnery, and Swordsmanship, Individual Qualification.

### 944.2 IDENTIFICATION TAGS

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 34-18A; 1941. Tag; Identification, M-1940.

### 944.3 INSIGNIA AND ORNAMENTS

U. S. Gov., Marine Corps Specification, 1942. Insignia; Recruiting, Dress.

U. S. Gov., Marine Corps Specification, 1943. Ornaments; Plastic, Cap and Hat (Enlisted Men).

U. S. Gov., Marine Corps Specification, 1943. Ornaments; Plastic, Collar (Enlisted Men).

U. S. Gov., Navy Dept. Specification 71D2; 1940. Devices; Cap.

U. S. Gov., Navy Dept. Specification 71M3a; 1944. Marks; Sleeve.

U. S. Gov., U. S. Army, Army Air Forces. Specification 94-3210; 1944. Marking Insignia; Flying Clothing and Personal Equipment.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 34-3A; 1938. Insignia; Cap and Collar, Enlisted Men's.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 34-2B; 1942. Cord; Hat, General Officers', Officers', and Warrant Officers'.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 34-8B; 1938. Cord; Hat, Enlisted Men's.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 34-12; 1930. Cord; Hat, for Citizens' Military Training Camp.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 34-S19; 1939. Insignia and Brassard; Embroidered.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 34-20; 1939. Insignia; Cap, for Flying Cadets.

### 944.4 FOURRAGERE

U. S. Gov., Marine Corps Specification, 1937. Fourragere; Wool.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 34-21; 1941. Fourragere; Wool.

### 944.5 DECALCOMANIA

U. S. Gov., Army Air Forces. Specification 14118B; 1944. Decalcomania; Aircraft.

U. S. Gov., Post Office Dept., Div. of Motor Vehicle Service, Bureau of the Fourth Assistant Postmaster General. Specifications for Decalcomania.

U. S. Gov., Treasury Dept., Procurement Div., No. 687; 1944. Decalcomanias, for Interior Use. Covers one type and one grade. Gives requirements for design, size, color, directions for application, working properties and application, gasoline resistant properties, and opaqueness; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

### 944.6 METALS

U. S. Gov., Marine Corps Specification, 1938. Medal; Good Conduct.

U. S. Gov., Navy Dept. Specification 71M2; 1939. Medals (Miniature); Palms; Ribbon-Bars and Mountings; Ribbons; Rosettes; and Stars.

### 944.7 EMBLEMS

U. S. Gov., Post Office Dept., Div. of Motor Vehicle Service, Bureau of the Fourth Assistant Postmaster General. Specifications for Emblems.

## 950-959 CONTAINERS

### 950. GENERAL ITEMS

American Iron and Steel Institute. Packaging, Marking, and Loading Steel Products for Overseas Shipments, 1944. Covers general instructions, packaging detail code, protective coatings, packaging materials, and definitions of terms. Gives detail instructions concerning various types of ingots, blooms, billets, slabs, sheet bar, rods, skelp, plates, sheets, coils, can and drum stock, enameling stock, strip, tin and terne plate, bars, wire, structural shapes, railroad rails, tie plates and joint bars, track bolts and spikes, railroad axles, steel tubular products, tubing, rigid conduit, and finished aircraft and stainless tubing.

Consolidated Freight Classification Committee, No. 16. Rules for Packing and Shipping All Commodities Moving in Freight Transportation. Contains: Official Southern and Western classifications and ratings thereon, with detailed specifications for the required containers. The container specifications include requirements on materials, construction, strength of parts and marking and packing regulations. They cover wooden, metal, paper and fiberboard containers. Uniform bill-of-lading forms and livestock contracts, as prescribed by the Interstate Commerce Commission, are also included in the regulations.

Manufacturing Chemists' Assn. of the U. S. Manual Sheet H-1, for Shippers and Consignees. Hydrofluoric Acid (HF). Recommended Practice for the Safe Handling and Discharging of Containers, 1942. Includes description of acid; recommended precautions; recommendations for containers, labels, rubber drums, lined and unlined steel drums, lead carboys, wood barrels, and tank cars for aqueous hydrofluoric acid; recommendations for unbrazed steel cylinders for anhydrous hydrofluoric acid; and facsimile of labels recommended for application to containers.

Manufacturing Chemists' Assn. of the U.S. Manual Sheet TC-5, for Consignees. Unloading Anhydrous Hydrofluoric Acid From Tank Cars. Recommended Practice, adopted 1943. Includes description of product, general precautions, placement of tank car for unloading, safety rules to be observed by unloaders, dome fittings, valve and fittings specifications, acid storage tank, compressed air when used for discharge of acid, unloading operations, removal or reversal of placards, return of empty cars, railroad defect and bad order cards, and service.

National Board of Fire Underwriters. Discharging Flammable Liquids From Tank Cars, No. 38; 1932. Recommended practice for unloading systems from railroad tank cars to storage tanks located within cities or towns, for liquids having a flash point below 70° F. Unloading distance from buildings, piping to storage tanks, storage tanks, operating requirements, and hazards involved.

Society of Automotive Engineers, Inc. Aeronautical Standard 338; 1945. Shipping Containers—Aircraft Engines and Components. To provide general information on the construction and application of a type of container suitable for either domestic or export shipment of aircraft engines and components. Covers materials and application, construction requirements, and marking.

Society of Automotive Engineers, Inc. Aeronautical Standard 339; 1945. Cover—Shipping Container Log Data and Inspection Port. Gives dimensional drawing with notes.

Society of Automotive Engineers, Inc. Aeronautical Standard 340; 1945. Cover—Shipping Container Inspection Port. Gives dimensional drawing with notes.

U. S. Gov., Army Air Forces. Specification 40569-A; 1944. Packaging and Packing of Miscellaneous Small Aircraft Parts.

U. S. Gov., Army Air Forces. Specification 40737 (1); 1944. Marking; Petroleum-Product Container (Domestic and Export).

U. S. Gov., Army Air Forces. Specification 40755-1; 1944. Marking; Shipment, Beneficiary Governments.

U. S. Gov., Army Air Forces. Specification 40839-A; 1945. Packaging and Packing of Aircraft Materiel in Steel Shipping Containers.

U. S. Gov., Army-Navy Aeronautical Specification AN-P-13a; 1944. Preservation and Packaging; Parts and Equipment, General Specification for.

U. S. Gov., Army-Navy Aeronautical Specification AN-P-62a; 1944. Packaging of Lightweight Aircraft Accessories.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Miscellaneous Publication M165; 1940. Standardization of Packages. The material included in this publication is a direct reprint from the National Bureau of Standards Miscellaneous Publication M164, Report of the Twenty-Ninth National Conference on Weights and Measures, and presents the full text of the report for the fifth and sixth sessions of the conference, which were devoted entirely to the subject of standardization of packages.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R60-43; 1943. Packaging of Carriage, Machine, and Lag Bolts. This recommendation establishes packing lists showing full-container quantity and approximate gross weight for each size and type of bolt covered, also the approximate weight per 100 bolts for each type and size of bolt. Initiated by the American Institute of Bolt, Nut, and Rivet Manufacturers.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R70-42; 1942. Salt Packages. This recommendation establishes a list of standard package sizes for pockets, cartons, burlap or cotton bags, and barrels for salt, sizes expressed in capacity in pounds of salt. Sponsored by the Salt Producers Assn.

U. S. Gov., Federal Security Agency, Food and Drug Administration, S.R.A., F.D.C.2; 1944. Definitions and Standards for Food. Fill of Container. General methods for water capacity and fill of containers. Gives detailed method for determining fill of container for canned goods.

U. S. Gov., Federal Security Agency, Food and Drug Administration, S.R.A., F.D.C.2; 1944. Definitions and Standards for Food. Substandard Quality and Fill of Container. General statements of substandard quality and substandard fill of container. Gives details concerning these terms.

U. S. Gov., Federal Specification U-M-186; 1944. Medicinal Products and Clinical Laboratory Reagents; General Specification for Containers (Packaging and Packing). Gives requirements for types and classes, grades and sizes, material, workmanship, labeling, compatibility of container, and details for glass, metal, fiber, paper, plastic, and wood containers; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U.S. Gov., Interstate Commerce Commission. Regulations for Transportation of Explosives and Other Dangerous Articles by Freight. Includes definitions of explosives and dangerous articles other than explosives, accepted and forbidden, for transportation by common carriers by rail freight, rail express, highway, or water. Classification of explosives as—class A, dangerous explosives (ammunition for cannon, ammunition-nonexplosive, ammunition-projectiles, grenades, bombs, mines, and torpedoes, ammunition for small arms with explosive bullets, explosive chemical ammunition, black powder and low explosives, high explosives, and initiating or priming explosives); class B, less dangerous explosives (ammunition for cannon with empty, sand-loaded, or solid projectiles or without projectiles, fireworks, and smokeless powder); and class C, relatively safe explosives (ammunition for small arms, blasting caps, cordeau detonat, fuses, igniters, primers, safety fuse, and toy caps). Classification of dangerous articles other than explosives as—inflammable liquids, inflammable solids, and oxidizing materials; acids and other corrosive liquids, compressed gases, and poisonous articles—class A, extremely dangerous poisons; class B, less dangerous poisons; and class C, tear gas or irritating substances. Published by American Trucking Assns., Inc., Tariff Bureau, and by Assn. of American Railroads, Bureau of Explosives.

U. S. Gov., Joint Army-Navy Specification JAN-P-131; 1944. Packaging and Packing for Overseas Shipment—Barrier-Material; Moisture-Vaporproof, Flexible.

U.S. Gov., Army-Navy General Specification for Packaging and Packing for Overseas Shipment. U. S. Army 100-14A and U. S. Navy 39P16a; 1944.

*References.*—Skid platforms, *see* 959.9.

## 951. BARRELS, DRUMS, AND TUBS

### 951.1 BARRELS

#### 951.10 General Items

Associated Cooperage Industries of America, Inc. Wooden Barrel Manual, undated. General Barrel Information. Covers loading barrels for railroad shipment, tools used for barrels, measurements and capacities, and dictionary of cooperage terms.

Assn. of American Railroads, Perishable Div., Freight Container Bureau. Freight Container Bureau Tariff No. 3-A Southeast Territory. Specifications of Standard Containers and Loading Rules for Fresh Fruits, Berries, Vegetables, and Melons, effective June 15, 1940 (issued by J. J. Quinn, agent) and Supplements Nos. 8 (effective May 10, 1941), 9 (effective Sept. 12, 1941), 12 (effective Mar. 2, 1942), 13 (effective Apr. 2, 1942), and 14 (effective June 10, 1942).

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Circular C64; 1917. Rules and Regulations for Enforcement of the Lime Barrel Act. Mandatory requirements on shipment or lime in interstate of foreign commerce, net weight requirements for two standard barrel sizes and of other containers of less capacity than small barrel, marking and tagging requirements, copy of act included.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Circular C71; 1917. Rules and Regulations

Promulgated Under Authority of the Federal Standard Barrel Law. Gives the capacity of the standard barrel as fixed by law for fruits, vegetables, and other dry commodities (not including lime barrels) and of the standard barrel for cranberries, establishes dimensions of standard barrels and fractional barrel, length of stave, etc., tolerances. Copy of Standard Barrel Act included.

## 951.11 Fiber Barrels

*References.*—Standard barrel sizes and dimensions, *see* 951.10; container fiberboard, *see* 472.93; standard thicknesses, methods of testing fiberboard, *see* 472.0, 470.3.

## 951.12 Metal Barrels

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R20-28; 1928. Steel Barrels and Drums. This recommendation establishes a schedule of stock types and capacities of steel barrels and drums as follows—standard light shipping drums, standard I.C.C., bolted cover light, friction cover light, and grease drums; and bilge barrels. Sponsored by Steel Barrel Manufacturers Council.

U. S. Gov., Federal Specification RR-B-116a; 1941. Barrels; Steel, Type 5. Covers bilged barrels, 55 gallons rated capacity; four types—(I) brazed chime, (II) seamless chime, (III) welded chime, and (IV) double-seam chime. Stipulates compliance with the Shipping Container Specification 5, Steel Barrels of the U. S. Gov., Interstate Commerce Commission. Gives requirements for material, workmanship, dimensions, weight, capacity, properties, sheet steel, construction, chimes, bung, vent, flanges, plugs, gaskets, removable head, and coating; methods of sampling, inspection, and tests; and requirements for marking.

U. S. Gov., Interstate Commerce Commission. Regulations for Transportation of Explosives and Other Dangerous Articles. Shipping Container Specification 5. Steel Barrels or Drums (Removable Head Containers Authorized). Capacities of not over 5, 10, and 33 gal. for straight side type without rolling hoops; 33, 55, and 110 for straight side type with U-rolling hoops and with I-bar rolling hoops; 33 and 55 gal. for straight side type with rolled or swedged-in rolling hoops; and 33 and 55 gal. for bilge type without rolling hoops. Includes requirements for material, (low carbon, open hearth, or electric steel), construction, marking, and tests. Published by American Trucking Assn., Inc., Tariff Bureau, and by Assn. of American Railroads, Bureau of Explosives.

U. S. Gov., Interstate Commerce Commission. Regulations for Transportation of Explosives and Other Dangerous Articles. Shipping Container Specification 5A. Steel Barrels or Drums (Removable Head Containers Not Authorized). Capacities of not over 10 gal. for straight side type without rolling hoops; 30, 55, and 110 gal. for straight side type with I-bar type rolling hoops; and 30 and 55 gal. for bilge type without rolling hoops. Includes requirements for material (low carbon, open hearth, or electric steel), construction, marking, and tests. Published by American Trucking Assns., Inc., Tariff Bureau, and by Assn. of American Railroads, Bureau of Explosives.

U. S. Gov., Interstate Commerce Commission. Regulations for Transportation of Explosives and Other Dangerous Articles. Shipping Container Specification 5B. Steel Barrels or Drums (Removable Head Containers Authorized). Capacities of not over 5 and 10 gal. for straight side type without rolling hoops; 33, 55, and 110 gal. for straight side type with rolled or swedged-in type rolling hoops; and 33 and 35 gal. for bilge type without rolling hoops. Includes requirements for material (low carbon, open hearth, or electric steel), construction, marking, and tests. Published by American Trucking Assns., Inc., Tariff Bureau, and by Assn. of American Railroads, Bureau of Explosives.

U. S. Gov., Interstate Commerce Commission. Regulations for Transportation of Explosives and Other Dangerous Articles. Shipping Container Specification 5C. Steel Barrels or Drums (Removable Head Containers Not Authorized). Capacities of not over 15 gal. for straight side type without rolling hoops; 30, 55, and 110 gal. for straight side type with I-bar type rolling hoops; and 30 and 55 gal. for bilge type without rolling hoops. Includes requirements for material (18-chrome, 8-nickel alloy) construction, marking, and tests. Published by American Trucking Assns., Inc., Tariff Bureau, and by Assn. of American Railroads, Bureau of Explosives.

U. S. Gov., Interstate Commerce Commission. Regulations for Transportation of Explosives and Other Dangerous Articles. Shipping Container Specification 5D. Steel Barrels or Drums—Rubber-Lined (Removable Head Containers Authorized). Similar to I.C.C. Specification 5A. Steel Barrels or Drums (referred to herein), except rubber-lined. Published by American Trucking Assns., Inc., Tariff Bureau, and by Assn. of American Railroads, Bureau of Explosives.

U. S. Gov., Interstate Commerce Commission. Regulations for Transportation of Explosives and Other Dangerous Articles. Shipping Container Specification 5G. Steel Barrels or Drums (Removable Head Containers Not Authorized). Capacities not over 5, 10, and 33 gal. for straight side type without rolling hoops; 33, 55, and 110 gal. for straight side type with U-type rolling hoops and with I-bar type rolling hoops; 33 and 55 gal. for straight side type with rolled or swedged-in type rolling hoops; and 33 and 55 gal. for bilge type without rolling hoops. Includes requirements for material (austenitic 18- and 8-chrome nickel alloy with carbon content not over 0.08 percent), construction, marking, and tests. Published by American Trucking Assns., Inc., Tariff Bureau, and by Assn. of American Railroads, Bureau of Explosives.

U. S. Gov., Interstate Commerce Commission. Regulations for Transportation of Explosives and Other Dangerous Articles. Shipping Container Specification 5H. Steel Barrels or Drums—Head-Lined (Removable Head Containers Not Authorized). Similar to I.C.C. Specification 5A, Steel Barrels or Drums (referred to herein), except lead-lined. Published by American Trucking Assns., Inc., Tariff Bureau, and by Assn. of American Railroads, Bureau of Explosives.

U. S. Gov., Interstate Commerce Commission. Regulations for Transportation of Explosives and Other Dangerous Articles. Shipping Container Specification 5K.

Nickel Barrels or Drums (Removable Head Containers Not Authorized). Similar to I.C.C. Specification 5A, Steel Barrels or Drums (referred to herein), except material requirement of 99.0 percent pure nickel. Published by American Trucking Assns., Inc., Tariff Bureau, and by Assn. of American Railroads, Bureau of Explosives.

U. S. Gov., Interstate Commerce Commission. Regulations for Transportation of Explosives and Other Dangerous Articles by Freight. Shipping Container Specification 5L. Steel Barrels or Drums (Removable Head Containers Not Authorized). Covers requirements for capacity, material, construction, marking, and tests. Published by American Trucking Assn., Inc., Tariff Bureau, and Assn. of American Railroads, Bureau of Explosives.

U. S. Gov., Interstate Commerce Commission. Regulations for Transportation of Explosives and Other Dangerous Articles. Shipping Container Specification 5X. Steel Drums—Aluminum-Lined (Removable Head Containers Not Authorized). Similar to I.C.C. Specification 5A, Steel Barrels or Drums (referred to herein), except aluminum-lined. Published by American Trucking Assns., Inc., Tariff Bureau, and by Assn. of American Railroads, Bureau of Explosives.

U.S. Gov., Interstate Commerce Commission. Regulations for Transportation of Explosives and Other Dangerous Articles. Shipping Container Specification 6A. Steel Barrels or Drums (Removable Head Containers Authorized). Capacities 5 to 10 gal. for straight side type without rolling hoops; 5 to 30 and 5 to 55 gal. for straight side type with I-bar type rolling hoops; and 5 to 33 and 5 to 55 gal. bilge type without rolling hoops. Includes requirements for material (low carbon, open hearth, or electric steel), construction, marking, and tests. Published by American Trucking Assns., Inc., Tariff Bureau, and by Assn. of American Railroads, Bureau of Explosives.

U. S. Gov., Interstate Commerce Commission. Regulations for Transportation of Explosives and Other Dangerous Articles. Shipping Container Specification 6B. Steel Barrels or Drums (Removable Head Container Authorized). Capacities 5 to 10 gal. for straight side type without rolling hoops; 5 to 30 and 5 to 55 gal. for straight side type with U-type rolling hoops; 5 to 30, 5 to 55, and 5 to 110 gal. for straight side type with I-bar type rolling hoops; and 5 to 33 and 5 to 55 gal. for bilge type without rolling hoops. Includes requirements on material (low carbon, open hearth, or electric steel), construction, marking, and tests. Published by American Trucking Assns., Inc., Tariff Bureau, and by Assn. of American Railroads, Bureau of Explosives.

U. S. Gov., Interstate Commerce Commission. Regulations for Transportation of Explosives and Other Dangerous Articles. Shipping Container Specification 6J. Steel Barrels or Drums (Removable Head Containers Authorized). Capacities 5 to 30 and 5 to 55 gal. for straight side type with rolled or swedged-in type rolling hoops; 5 to 55 gal. for straight side type with U-type rolling hoops; 5 to 55 gal. for straight side type with I-bar type rolling hoops; and 5 to 33 and 5 to 55 gal. for bilge type without rolling hoops. Includes requirements for material (low carbon, open hearth, or electric steel), construction, marking, and tests. Published by American Trucking Assns., Inc., Tariff Bureau, and by Assn. of American Railroads, Bureau of Explosives.

U. S. Gov., Interstate Commerce Commission. Regulations for Transportation of Explosives and Other Dangerous Articles, Shipping Container Specification 17X. Steel Barrels or Drums, Single-Trip Container (Removable Head Containers Not Authorized). Includes requirements for capacity, material, construction, marking, and tests. Published by American Trucking Assns., Inc., Tariff Bureau, and by Assn. of American Railroads, Bureau of Explosives.

U. S. Gov., Interstate Commerce Commission. Regulations for Transportation of Explosives and Other Dangerous Articles. Shipping Container Specification 42C. Aluminum Barrels or Drums. Similar to I.C.C. Specification 42B, Aluminum Drums, except requirements for parts and dimensions and for marking. Published by American Trucking Assns., Inc., Tariff Bureau, and by Assn. of American Railroads, Bureau of Explosives.

U. S. Gov., U. S. Army, Chemical Warfare Service. Specification 100-6; 1927. Container, for Inflammable Liquids, Acids or Solids, Barrels or Drums.

*References.*—Standard barrel sizes and dimensions, *see* 951.10; iron and steel sheets, *see* 604.2; aluminum sheets, *see* 631.23; zinc coatings, *see* 600.3.

## 951.13 Wooden Barrels

American Meat Institute. Standards for Packinghouse Supplies, Packs, and Equipment, 1928. Woodenware and Cooperage. For pork barrels, requirements on kinds of wood, inside coating of paraffin, dimensions of staves and heads, number and dimensions of galvanized iron hoops.

Associated Cooperage Industries of America, Inc. Wooden Barrel Manual, undated. Slack Barrels. Gives slack barrel diagram and covers selecting the proper barrel for your product, opening and closing a barrel, handling and storing barrels, Interstate Commerce Commission regulations, grade rules and specifications for export barrels, export barrels for dried skim milk, and bag liners and head liners.

Associated Cooperage Industries of America, Inc. Wooden Barrel Manual, undated. Tight Barrels. Gives tight barrel diagram and covers selecting the proper barrel for your product, opening and closing a barrel, handling and storing barrels, Interstate Commerce Commission regulations, grade rules and specifications circled tight barrel heading, square tight barrel heading, specifications for export barrels, and use of linings.

Assn. of American Railroads, Freight Container Bureau. Circular 21-1927. Slack Barrels and Inside Packing for Glass Tableware. Gives requirements for slack barrels, inside packing, sizes of barrels being used, grouping of woods, defects in material, manufacture of staves, heading, and hoops; manufacture of the container, discussion of inside packing, and additional important considerations.

U. S. Gov., Federal Specification NN-B-112; 1944. Barrels; Wood, Tight (for Liquids). Covers three types—(I) I.C.C. Type 10A, (II) I.C.C. Type 10B, and (III) I.C.C. Type 10C; five capacities—5, 10, 15, 30, and 50 gal.; and two grades—(A) all heartwood and (B) heartwood and sapwood. Gives requirements for wood species, defects, wood grain, sapwood, moisture content, tensile strength of steel hoops, workmanship, staves, heading, inside surfaces, capacity, pressure test, closure, type test, and details; methods of sampling, inspection, and tests; and marking for shipment.

U. S. Gov., Interstate Commerce Commission. Regulations for Transportation of Explosives and Other Dangerous Articles. Shipping Container Specification 10A. Wooden Barrels and Kegs (Tight). Includes requirements for materials, construction, closures, lining, tests, and marking. Published by American Trucking Assns., Inc., Tariff Bureau, and by Assn. of American Railroads, Bureau of Explosives.

U. S. Gov., Interstate Commerce Commission. Regulations for Transportation of Explosives and Other Dangerous Articles. Shipping Container Specification 10B and 10C. Wooden Barrels and Kegs. Similar to I.C.C. Specification 10A, Wooden Barrels and Kegs (Tight), except thickness of staves, head, and hoops. Published by American Trucking Assns., Inc., Tariff Bureau, and by Assn. of American Railroads, Bureau of Explosives.

U. S. Gov., Interstate Commerce Commission. Regulations for Transportation of Explosives and Other Dangerous Articles. Shipping Container Specifications 11A and 11B. Wooden Barrels and Kegs (Slack). Includes requirements for materials, construction, marking, and closing. Published by American Trucking Assns., Inc., Tariff Bureau, and by Assn. of American Railroads, Bureau of Explosives.

U. S. Gov., Joint Army-Navy Specification JAN-P-122; 1944. Packaging and Packing for Overseas Shipment—Barrels; Slack. For barrels whose weight of contents does not exceed 1,000 lbs.

*References.*—Standard barrel sizes and dimensions, *see* 951.10; staves, headings and hoops, *see* 421.0-421.3; iron and steel hoops, *see* 604.22.

## 951.2 CASKS AND TIERCES

### 951.21 Metal Casks

U. S. Gov., Interstate Commerce Commission. Regulations for Transportation of Explosives and Other Dangerous Articles by Motor, Rail, and Water. Shipping Container Specification MC200. Containers for Liquid Nitroglycerin. Covers requirements for motor vehicle body, inside containers, and boots. Published by American Truck Assns., Inc., Tariff Bureau.

### 951.22 Wooden Casks

American Meat Institute. Standards for Packinghouse Supplies, Packs, and Equipment, 1928. Woodenware and Cooperage. For 1,450-lb. curing casks, requirements on dimensions of oak staves and pine bottoms, with an alternate standard of dimensions, bilge diameter, number, and dimensions of hoops.

*References.*—Staves, headings and hoops, *see* 421.0-421.3; iron and steel hoops, *see* 604.22.

### 951.23 Metal Tierces

### 951.24 Wooden Tierces

American Meat Institute. Standards for Packinghouse Supplies, Packs, and Equipment, 1928. Woodenware and Cooperage. For lard and pickled meat tierces, requirements for kinds of seasoned oak, interior coating, dimensions of staves and head, size and number of iron hoops, and capacity; for pickled meat tierces. White ash or birch may also be used.

U. S. Gov., Marine Corps Specification, 1941. Tierce, New.

*References.*—Staves, headings and hoops, *see* 421.0-421.3; iron and steel hoops, *see* 604.22.

## 951.3 DRUMS

### 951.31 Fiber Drums

U. S. Gov., Interstate Commerce Commission. National Motor Freight Classification No.7. Contains requirements for fiber drums for shipment of licorice. Published by American Trucking Assns., Inc., Tariff Bureau. National Motor Freight Classification No.7-1943.

U. S. Gov., Interstate Commerce Commission. Regulations for Transportation of Explosives and Other Dangerous Articles. Shipping Container Specification 21A. Fiber Drums. Includes requirements for construction, tests, registration of drum specifications, and marking. Published by American Trucking Assns., Inc., Tariff Bureau, and by Assn. of American Railroads, Bureau of Explosives.

U. S. Gov., Interstate Commerce Commission. Regulations for Transportation of Explosives and Other Dangerous Articles. Shipping Container Specification 21B. Fiber Drums. Covers requirements for capacity, construction, tests, registration of drum specification, and marking. Published by American Trucking Assns., Inc., Tariff Bureau, and by Assn. of American Railroads, Bureau of Explosives.

*References.*—Container fiberboard, *see* 472.93; standard thicknesses, methods of testing fiberboard, *see* 472.0, 470.3.

### 951.32 Metal Drums

American Meat Institute. Standards for Packinghouse Supplies, Packs, and Equipment, 1928. Lard Cans. Include round cans for domestic trade; 2-, 4-, and 8-lb. pails with friction slip covers, 45- to 120-lb. metal cans or drums; and square cans for export trade, requirements on dimensions, design, weight of tin plate, gauge of wire handles, and seam details.

Manufacturing Chemists' Assn. of the U. S. Manual Sheet D-30 (for Shippers). Drums; Steel (I.C.C.-5A)—Unlined—Service Requirements (When Used for Shipping Sulphuric Acid and Mixed Sulphuric and Nitric Acids). Recommended Practice, adopted 1932. Includes recommendations for handling; torch flames, sparks, smoking, etc.; serviceability; removal and replacement of body plug; treatment of body plug and body plug flange threads; inspection, classification, and storage of empty drums; draining, cleaning, and interior washing; testing; repairing; filling; outage; storing of filled drums; venting full drums; warning label; and shipping.

Manufacturing Chemists' Assn. Manual Sheet D-31 (for Consignees). Drums, Steel (I.C.C.-5A)—Handling and Storing When Filled With, or Last Containing Acid Corrosive Liquids. Recommended Practice, adopted 1932, revised 1943. Includes recommendations for handling, storing, venting, removal and replacement of body plug, torch flames, sparks, smoking, etc.; emptying, draining and closing, internal washing, and return.

Manufacturing Chemists' Assn. of the U. S. Manual Sheet D-33 (for Shippers and Consignees). Drums, Steel (I.C.C.-5E) (When Used for Shipping Inflammable Liquids Flashing Between 20° and 80° F.). Recommended Practice, adopted 1936. Includes recommendations for outage, removal and replacement of plug, weight limitation, marking, standard dimensions, warning label, handling, storing, and shipping.

Standard, adopted 1932, revised 1935, 1940. D-38—for Drums Containing Inflammable Volatile Liquids; Standard, adopted 1936. D-39—for Drums Containing Aqua Ammonia; Standard, adopted 1938. Facsimile of labels furnished by Manufacturing Chemists' Assn. of the U. S. upon receipt of orders.

U. S. Gov., Army Air Forces. Specification 40667-A (1); 1943. Drum; 55-Gallon Steel, for Fuel and Oil.

U. S. Gov., Army Air Forces. Specification 40854A-1944. Drum; 55-Gallon Aluminum, for Fuel and Oil.

U.S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R 203-44; 1944. Containers and Packages for Household Insecticides (Liquid Spray Type). Gives various dimensions for retail packages (Boston round bottle and glass jug) for pint, quart, gallon bottle, and gallon jug; and covers industrial packages (5-gal. and 54-gal. steel drums). Sponsored by National Assn. of Insecticide and Disinfectant Mfrs., Inc.

U. S. Gov., Federal Specification RR-D-701; 1932. Amendment 2; 1936. Drums; Metal, Types 5A, 5C, and 5D (for Acids and Other Dangerous Articles). Shall comply with Specifications of the U. S. Gov., Interstate Commerce Commission. Gives requirements for capacity, properties of drum, construction, rolling hoops, bung, vent, flanges, plugs, gaskets, coating, dimensions, and lining; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Federal Specification RR-D-726a; 1941. Drums; Steel, Type 5 (for Inflammable or Poisonous Liquids). Covers four types, straight side, cylindrical drum—(I) brazed chime, (II) seamless chime, (III) welded chime, and (IV) double-seam chime. Shall comply with Specifications of the U. S. Gov., Interstate Commerce Commission. Gives requirements for capacity, properties of drum, construction, rolling hoops, bung, vent, flanges, plugs, gaskets, coating, dimensions, and lining; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking. Emergency Alternate Federal Specification E-RR-D-726a; 1942, (issued by Procurement Div., Treasury Dept., U. S. Gov.) changed requirements for weight of drums and coating.

U. S. Gov., Federal Specification RR-D-736; 1932. Drums; Steel, Type 6A (for Phosphorus, White or Yellow). Covers straight side, cylindrical, 30-gal. capacity sheet steel drums. Shall comply with Specifications of the U. S. Gov., Interstate Commerce Commission. Gives requirements for capacity, properties of drum, construction, rolling hoops, bung, vent, flanges, plugs, gaskets, coating, dimensions, and lining; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Federal Specification RR-D-741a; 1941. Drums; Steel, Type 6C (for Inflammable Solids or Oxidizing Materials). Covers straight side, cylindrical, 55- and 110-gal. drums. Shall comply with specifications of the U. S. Gov., Interstate Commerce Commission. Gives requirements for capacity, properties of drum, construction, rolling hoops, bung, vent, flanges, plugs, gaskets, coating, dimensions, and lining; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Federal Specification RR-D-746; 1932. Drums; Steel, Type 6D (for Inflammable Solids or Oxidizing Materials), Single-Trip Container. Covers straight side, cylindrical, 55-gal. capacity drums. Shall comply with Specifications of the U. S. Gov., Interstate Commerce Commission. Gives requirements for capacity, properties of drum, construction, rolling hoops, bung, vent, flanges, plugs, gaskets, coating, dimensions, and lining; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Federal Specification RR-D-761; 1938. Drums and Pails; Steel, I.C.C. Type 5E, 5-Gallon, Single-Trip Container. Covers straight-side, cylindrical form; in three types—(I) drum with flanged-cap closure, (II) with twist cap closure, and (III) pail with cover. Shall comply with Specifications of the U. S. Gov., Interstate Commerce Commission. Gives requirements for capacity, properties of drum, construction, rolling hoops, bung, vent, flanges, plugs, gaskets, coating, dimensions, and lining; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking. Emergency Alternate Federal Specification E-RR-D-761; 1942, (issued by Procurement Div., Treasury Dept., U. S. Gov.) changed requirements for inside coating, spout, closure, and class F ring seal cover.

U. S. Gov., Interstate Commerce Commission. Regulations for Transportation of Explosives and Other Dangerous Articles. Shipping Container Specification 5. Steel Barrels or Drums (Removable Head Containers Authorized). Capacities of not over 5, 10, and 33 gal. for straight side type without rolling hoops; 33, 55, and 110 gal. for straight side type with U-rolling hoops and with I-bar rolling hoops; 33 and 55 gal. for straight side type with rolled or swedged-in rolling hoops; and 33 and 55 gal. for bilge type without rolling hoops. Includes requirements for material (low carbon, open hearth, or electric steel), construction, marking, and tests. Published by American Trucking Assns., Inc., Tariff Bureau, and by Assn. of American Railroads, Bureau of Explosives.

U. S. Gov., Interstate Commerce Commission. Regulations for Transportation of Explosives and Other Dangerous Articles. Shipping Container Specification 5A. Steel Barrels or Drums (Removable Head Containers Not Authorized). Capacities of not over 10 gal. for straight side type without rolling hoops; 30, 55, and 110 gal. for straight side type with I-bar type rolling hoops; and 30 and 55 gal. for bilge type without rolling hoops. Includes requirements for material (low carbon, open hearth, or electric steel), construction, marking, and tests. Published by American Trucking Assns., Inc., Tariff Bureau, and by Assn. of American Railroads, Bureau of Explosives.

U. S. Gov., Interstate Commerce Commission. Regulations for Transportation of Explosives and Other Dangerous Articles. Shipping Container Specification 5B. Steel Barrels or Drums (Removable Head Containers Authorized). Capacities of not over 5 and 10 gal. for straight side type without roller hoops; 33, 55, and 110 gal. for straight side type with rolled or swedged-in type rolling hoops; and 33 and 35 gal. for bilge type without rolling hoops. Includes requirements for material (low carbon, open hearth, or electric steel), construction, marking, and tests. Published by American Trucking Assns., Inc., Tariff Bureau, and by Assn. of American Railroads, Bureau of Explosives.

U. S. Gov., Interstate Commerce Commission. Regulations for Transportation of Explosives and Other Dangerous Articles. Shipping Container Specification 5C. Steel Barrels or Drums (Removable Head Containers Not Authorized). Capacities of not over 15 gal. for straight side type without rolling hoops; 30, 55, and 110 gal. for straight side type with I-bar type rolling hoops; and 30 and 55 gal. for bilge type without rolling hoops. Includes requirements for material (18-chrome, 8-nickel alloy), construction, marking, and tests. Published by American Trucking Assns., Inc., Tariff Bureau, and by Assn. of American Railroads, Bureau of Explosives.

U. S. Gov., Interstate Commerce Commission. Regulations for Transportation of Explosives and Other Dangerous Articles. Shipping Container Specification 5D. Steel Barrels or Drums—Rubber-Lined (Removable Head Containers Authorized). Similar to I.C.C. Specification 5A, Steel Barrels or Drums (referred to herein), except rubber-lined. Published by American Trucking Assns., Inc., Tariff Bureau, and by Assn. of American Railroads, Bureau of Explosives.

U. S. Gov., Interstate Commerce Commission. Regulations for Transportation of Explosives and Other Dangerous Articles. Shipping Container Specification 5F. Steel Drums (Removable Head Containers Not Authorized). Capacity not over 11 gal. Includes requirements for material (low carbon, open hearth, or electric steel), construction, marking, and tests. Published by American Trucking Assns., Inc., Tariff Bureau, and by Assn. of American Railroads, Bureau of Explosives.

U. S. Gov., Interstate Commerce Commission. Regulations for Transportation of Explosives and Other Dangerous Articles. Shipping Container Specification 5G. Steel Barrels or Drums (Removable Head Containers Not Authorized). Capacities not over 5, 10, and 33 gal. for straight side type without rolling hoops; 33, 55, and 110 gal. for straight side type with U-type rolling hoops and with I-bar type rolling hoops; 33 and 55 gal. for straight side type with rolled or swedged-in type rolling hoops; and 33 and 55 gal. for bilge type without rolling hoops. Includes requirements for material (austenitic 18- and 8-chrome nickel alloy with carbon content not over 0.08 percent), construction, marking, and tests. Published by American Trucking Assns., Inc., Tariff Bureau, and by Assn. of American Railroads, Bureau of Explosives.

U. S. Gov., Interstate Commerce Commission. Regulations for Transportation of Explosives and Other Dangerous Articles. Shipping Container Specification 5H. Steel Barrels or Drums—Head-Lined (Removable Head Containers Not Authorized). Similar to I.C.C. Specification 5A, Steel Barrels or Drums (referred to herein), except lead-lined. Published by American Trucking Assns., Inc., Tariff Bureau, and by Assn. of American Railroads, Bureau of Explosives.

U. S. Gov., Interstate Commerce Commission. Regulations for Transportation of Explosives and Other Dangerous Articles. Shipping Container Specification 5K. Nickel Barrels or Drums (Removable Head Containers Not Authorized). Similar to I.C.C. Specification 5A, Steel Barrels or Drums (referred to herein), except material requirement of 99.0 percent pure nickel. Published by American Trucking Assns., Inc. Tariff Bureau, and by Assn. of American Railroads, Bureau of Explosives.

U. S. Gov., Interstate Commerce Commission. Regulations for Transportation of Explosives and Other Dangerous Articles by Freight. Shipping Container Specification 5L. Steel Barrels or Drums (Removable Head Containers Not Authorized). Covers requirements for capacity, material, construction, marking, and tests. Published by American Trucking Assns., Inc., Tariff Bureau, and Assn. of American Railroads, Bureau of Explosives.

U. S. Gov., Interstate Commerce Commission. Regulations for Transportation of Explosives and Other Dangerous Articles. Shipping Container Specification 5X. Steel Drums—Aluminum-Lined (Removable Head Containers Not Authorized). Similar to I.C.C. Specification 5A, Steel Barrels or Drums (referred to herein), except aluminum-lined. Published by American Trucking Assns., Inc., Tariff Bureau, and by Assn. of American Railroads, Bureau of Explosives.

U. S. Gov., Interstate Commerce Commission. Regulations for Transportation of Explosives and Other Dangerous Articles. Shipping Container Specification 6A. Steel Barrels or Drums (Removable Head Containers Authorized). Capacities 5 to 10 gal. for straight side type without rolling hoops; 5 to 30 and 5 to 55 gal. for straight side type with I-bar type rolling hoops; and 5 to 33 and 5 to 55 gal. bilge type without rolling hoops. Includes requirements for material (low carbon, open hearth, or electric steel), construction, marking, and tests. Published by American Trucking Assns., Inc., Tariff Bureau, and by Assn. of American Railroads, Bureau of Explosives.

U. S. Gov., Interstate Commerce Commission. Regulations for Transportation of Explosives and Other Dangerous Articles. Shipping Container Specification 6B. Steel Barrels or Drums (Removable Head Container Authorized). Capacities 5 to 10 gal. for straight side type without rolling hoops; 5 to 30 and 5 to 55 gal. for straight side type with U-type rolling hoops; 5 to 30, 5 to 55, and 5 to 110 gal. for straight side type with I-bar type rolling hoops; and 5 to 33 and 5 to 55 gal. for bilge type without rolling hoops. Includes requirements on material (low carbon, open hearth, or electric steel), construction, marking, and tests. Published by American Trucking Assns., Inc., Tariff Bureau, and by Assn. of American Railroads, Bureau of Explosives.

U. S. Gov., Interstate Commerce Commission. Regulations for Transportation of Explosives and Other Dangerous Articles. Shipping Container Specification 6C. Steel Barrels or Drums (Removable Head Containers Authorized). Capacities 5 and 5 to 10 gal. for straight side type without rolling hoops; 5 to 30, 5 to 55, and 5 to 110 gal. for straight side with U-type rolling hoops; 5 to 30, 5 to 55, and 5 to 110 gal. for straight side type with I-bar type rolling hoops; and 5 to 33 and 5 to 55 gal. for bilge type without rolling hoops. Includes requirements for material (low carbon, open hearth, or electric steel), construction, marking, and tests. Published by American Trucking Assns., Inc., Tariff Bureau, and by Assn. of American Railroads, Bureau of Explosives.

U. S. Gov., Interstate Commerce Commission. Regulations for Transportation of Explosives and Other Dangerous Articles. Shipping Container Specification 6J. Steel Barrels or Drums (Removable Head Containers Authorized). Capacities 5 to 30 and 5 to 55 gal. for

straight side type with rolled or swedged-in type rolling hoops; 5 to 55 gal. for straight side type with U-type rolling hoops; 5 to 55 gal. for straight side type with I-bar type rolling hoops; and 5 to 33 and 5 to 55 gal. for bilge type without rolling hoops. Includes requirements for material (low carbon, open hearth, or electric steel), construction, marking, and tests. Published by American Trucking Assns., Inc., Tariif Bureau, and by Assn. of American Railroads, Bureau of Explosives.

U. S. Gov., Interstate Commerce Commission. Regulations for Transportation of Explosives and Other Dangerous Articles. Shipping Container Specifications 17C and 17E. Steel Drums; Single-Trip Container (Removable Head Containers Authorized). Both similar to I.C.C. Specification 5A, Steel Barrels or Drums (referred to herein). Published by American Trucking Assns., Inc., Tariff Bureau, and by Assn. of American Railroads, Bureau of Explosives.

U. S. Gov., Interstate Commerce Commission. Regulations for Transportation of Explosives and Other Dangerous Articles. Shipping Container Specification 17F. Steel Drums, Single-Trip Containers. Covers composition, chime reinforcement, parts and dimensions, rolling hoops, and convex heads. Published by American Trucking Assns., Inc., Tariff Bureau, and by Assn. of American Railroads, Bureau of Explosives.

U. S. Gov., Interstate Commerce Commission. Regulations for Transportation of Explosives and Other Dangerous Articles. Shipping Container Specification 17X. Steel Barrels or Drums, Single-Trip Container (Removable Head Containers Not Authorized). Includes requirements for capacity, material, construction, marking, and tests. Published by American Trucking Assns., Inc., Tariff Bureau, and by Assn. of American Railroads, Bureau of Explosives.

U. S. Gov., Interstate Commerce Commission. Regulations for Transportation of Explosives and Other Dangerous Articles. Shipping Container Specifications 37D, 37F, 37F, 37G, and 37H. Steel Drums, Single-Trip Containers (Removable Head Containers Authorized). Includes requirements for capacities, material, construction, marking, and tests. Published by American Trucking Assns., Inc., Tariff Bureau, and by Assn. of American Railroads, Bureau of Explosives.

U. S. Gov., Interstate Commerce Commission. Regulations for Transportation of Explosives and Other Dangerous Articles. Shipping Container Specification 42B. Aluminum Drums. Includes requirements for capacity, material, construction, marking, and tests. Published by American Trucking Assns., Inc., Tariff Bureau, and by Assn. of American Railroads, Bureau of Explosives.

U. S. Gov., Interstate Commerce Commission. Regulations for Transportation of Explosives and Other Dangerous Articles. Shipping Container Specification 42C. Aluminum Barrels or Drums. Similar to I.C.C. Specification 42B, Aluminum Drums, except requirements for parts and dimensions, and for marking. Published by American Trucking Assns., Inc., Tariff Bureau, and by Assn. of American Railroads, Bureau of Explosives.

U. S. Gov., Interstate Commerce Commission. Regulations for Transportation of Explosives and Other Dangerous Articles. Shipping Container Specification 42D. Aluminum Drums. Similar to I.C.C. Specification 42B, Aluminum Drums, except requirements for parts and dimensions, closures, marking, and tests. Published by American Trucking Assns., Inc., Tariff Bureau, and by Assn. of American Railroads, Bureau of Explosives.

U. S. Gov., Interstate Commerce Commission. Regulations for Transportation of Explosives and Other Dangerous Articles by Motor, Rail, and Water. Shipping Container Specification MC200. Containers for Liquid Nitroglycerin. Covers requirements for motor vehicle body, inside containers, and boots. Published by American Trucking Assns., Inc., Tariff Bureau.

U. S. Gov., Joint Army-Navy Specification JAN-P-110; 1944. Packaging and Packing for Overseas Shipment—Drums; Metal, 55-Gallon (for Other Than Petroleum Products).

U. S. Gov., Panama Canal, Purchasing Dept. Specification for 10-Gallon Drums for Paint; 1934.

U. S. Gov., Treasury Dept., Procurement Div., No. 630; 1944. Plugs, for Steel Drums. Covers two types—(I) plugs for flat gaskets (class A, pressed steel and class B, cast iron) and (II) plugs for square-and-round-section gaskets (class C, pressed steel; class D, cast iron; and class E, die cast zinc alloy). Gives requirements for sizes, cap seals, material, workmanship, construction, thread, holes for wire seal, cap seals, finish, marking, and details for each type and class; methods of sampling, inspection, and tests; packaging, packing, and marking for shipment.

U. S. Gov., U. S. Army, Chemical Warfare Service. Specification 100-6; 1927. Container, for Inflammable Liquids, Acids or Solids, Barrels or Drums.

*References.*—Iron and steel sheets, *see* 604.2; aluminum sheets, *see* 631.23; zinc coatings, *see* 600.3; sizes and threading of flanges and plugs, *see* 951.12.

### 951.33 Wooden Drums

U. S. Gov., Interstate Commerce Commission. Regulations for Transportation of Explosives and Other Dangerous Articles. Shipping Container Specifications 22A and 22B. Wooden Drums; Glued Plywood. Includes requirements for lumber, construction, tests, marking, and closing for shipment. Published by American Trucking Assns., Inc., Tariff Bureau, and by Assn. of American Railroads, Bureau of Explosives.

U. S. Gov., Joint Army-Navy Specification JAN-P-112; 1944. Drums; Plywood.

### 951.34 Rubber Drums

U. S. Gov., Interstate Commerce Commission. Regulations for Transportation of Explosives and Other Dangerous Articles. Shipping Container Specification 43A. Rubber Drums. Includes requirements for capacity, material, construction, marking, and tests. Published by American Trucking Assns., Inc., Tariff Bureau, and by Assn. of American Railroads, Bureau of Explosives.

## 951.4 FIRKINS AND KEGS

### 951.41 Metal Firkins

### 951.42 Wooden Firkins

### 951.43 Metal Kegs

U. S. Gov., Interstate Commerce Commission. Regulations for Transportation of Explosives and Other Dangerous Articles. Shipping Container Specification 13. Metal

Kegs. Includes requirements for material, closures, marking, tests, filling with contents, and additional kegs. Published by American Trucking Assns., Inc., Tariff Bureau, and by Assn. of American Railroads, Bureau of Explosives.

U. S. Gov., Interstate Commerce Commission. Regulations for Transportation of Explosives and Other Dangerous Articles by Motor, Rail, and Water. Shipping Container Specification MC200. Containers for Liquid Nitroglycerin. Covers requirements for motor vehicle body, inside containers, and boots. Published by American Trucking Assns., Inc., Tariff Bureau.

*References.*—Iron and steel sheets, *see* 604.2; methods of testing, general requirements for metals, *see* 600.1.

### 951.44 Wooden Kegs

U. S. Gov., Interstate Commerce Commission. Regulations for Transportation of Explosives and Other Dangerous Articles. Shipping Container Specification 1C. Carboys in Kegs. Includes requirements for wooden keg outside containers and tests. Published by American Trucking Assn., Inc., Tariff Bureau, and by Assns., of American Railroads, Bureau of Explosives.

U. S. Gov., Interstate Commerce Commission. Regulations for Transportation of Explosives and Other Dangerous Articles. Shipping Container Specification 10A. Wooden Barrels and Kegs (Tight). Includes requirements for materials, construction, closures, lining, tests, and marking. Published by American Trucking Assns.. Inc., Tariff Bureau, and by Assn. of American Railroads, Bureau of Explosives.

U. S. Gov., Interstate Commerce Commission. Regulations for Transportation of Explosives and Other Dangerous Articles. Shipping Container Specifications 10B and 10C. Wooden Barrels and Kegs. Similar to I.C.C. Specification 10A, Wooden Barrels and Kegs (Tight), except thickness of staves, head, and hoops. Published by American Trucking Assns., Inc., Tariff Bureau, and by Assn. of American Railroads, Bureau of Explosives.

U. S. Gov., Interstate Commerce Commission. Regulations for Transportation of Explosives and Other Dangerous Articles. Shipping Container Specifications 11A and 11B. Wooden Barrels and Kegs (Slack). Includes requirements for materials, construction, marking, and closing. Published by American Trucking Assns., Inc., Tariff Bureau, and by Assn. of American Railroads, Bureau of Explosives.

U. S. Gov., Joint Army-Navy Specification JAN-P-134; 1944. Packaging and Packing for Overseas Shipment—Kegs; Slack. For kegs whose weight of contents does not exceed 300 lb.

*References.*—Staves, headings and hoops, *see* 421.0, 421.3; iron and steel hoops, *see* 604.22.

### 951.45 Fiber Firkins

*References.*—Container fiberboard, *see* 472.93; standard thicknesses, methods of testing fiberboard, *see* 472.0, 470.3.

### 951.46 Fiber Kegs

U. S. Gov., Interstate Commerce Commission. Regulations for Transportation of Explosives and Other Dangerous Articles. Shipping Container Specification 13A. Fiber Kegs. Covers requirements for construction, closures, and tests. Published by American Trucking Assns., Inc., Tariff Bureau, and by Assn. of American Railroads, Bureau of Explosives.

### 951.5 HOGSHEADS

*References.*—Staves, headings and hoops, *see* 421.0, 421.3; iron and steel hoops, *see* 604.22.

### 951.6 KITS AND PAILS

### 951.61 Metal Kits

U. S. Gov., Interstate Commerce Commission. Regulations for Transportation of Explosives and Other Dangerous Articles. Shipping Container Specification 2A. Inside Containers—Metal Cans, Pails, and Kits. Includes requirements for capacity, thickness of metal, test, and closure. Published by American Trucking Assns., Inc., Tariff Bureau, and by Assn. of American Railroads, Bureau of Explosives.

*References.*—Iron and steel sheets, *see* 604.2.

### 951.62 Wooden Kits

U. S. Gov., Army Air Forces. Specification 40467 (1); 1943. Kit; Barber's Supply, Type L-1.

U. S. Gov., Interstate Commerce Commission. Regulations for Transportation of Explosives and Other Dangerous Articles. Shipping Container Specification 18B. Wooden Kits. Includes requirements for construction, tests, and marking. Published by American Trucking Assns., Inc., Tariff Bureau, and by Assn. of American Railroads, Bureau of Explosives.

### 951.63 Fiber Pails

*References.*—Container fiberboard, *see* 472.93; standard thicknesses, methods of testing fiberboard, *see* 472.0, 470.3.

### 951.64 Metal Pails

American Meat Institute. Standards for Packinghouse Supplies, Packs, and Equipment, 1928. Lard Cans. Include round cans for domestic trade; 2-, 4-, and 8-lb. pails with friction slip covers, 45- to 120-lb. metal cans or drums; and square cans for export trade, requirements on dimensions, design, weight of tin plate, gage, of wire handles, and seam details.

Assn. of American Railroads, Purchases and Stores Div. Coal Hod, 1934. Covers dimensions, metal gage, and illustration of standard hod conforming to Simplified Practice Recommendation No. 55 of the National Bureau of Standards, U. S. Dept. of Commerce.

Assn. of American Railroads, Purchases and Stores Div. Twelve-Quart Pail and Fire Bucket, 1934. Gives dimensional requirements and illustrations for standard pail, with lid to use as sponge bucket, and with crowned bottom for use as fire bucket. Conforms to Simplified Practice Recommendation No. 55 of the National Bureau of Standards, U. S. Dept. of Commerce.

Underwriters' Laboratories, Inc. Standard for Fire Pails, 1917. Recommends use of 12-qt. size, also covers 10- and 14-qt. size. Wrought iron or steel not less than No. 28 gage, or properly impregnated fiber reinforced where necessary. Lock or equivalent tight joints, soldered or galvanized tight, gage of handles, ears, beaded edge, bottom rim, covers, painting, and marking.

U. S. Gov., Dept. of Agriculture, Forest Service. Specification MSF-247-15. Pail and Cover; Half-Oval.

U. S. Gov., Dept. of Agriculture, Forest Service. Specification MSF-247-16. Pails and Covers; Round, Tin, Nestable.

U. S. Gov., Dept. of Agriculture, Forest Service. Specification NSF-247-17-S. Pails and Covers; Round, Aluminum, Nestable.

U. S. Gov., Federal Specification RR-B-761; 1940. Buckets (Pail); Hospital, Corrosion-Resisting Steel. Covers one grade and two types—(I) with cover and (II) without cover. Gives requirements for material, workmanship, construction, design, dimensions, tolerances, and finish; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification RR-B-771a; 1939. Buckets; Metal, Galvanized. Covers one grade and two types—(I) light weight and (II) heavy weight. Gives requirements for body, bail, ears, galvanizing, capacities, and dimensions; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment. Emergency Alternate Federal Specification E-RR-B-771A; 1942, (issued by Procurement Div., Treasury Dept., U. S. Gov.) changed requirements for finishes and gives requirements for enameled, lacquered, and painted surfaces and finishes.

U. S. Gov., Federal Specification RR-B-784; 1939. Buckets; Metal, Tinned. Covers one type and grade. Gives requirements for weight of coating, capacities, and dimensions; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment. Emergency Alternate Federal Specification E-RR-B-784; 1942, (issued by Procurement Div., Treasury Dept., U. S. Gov.) substituted Federal Specification RR-B-771 for Buckets; Metal, Galvanized.

U. S. Gov., Interstate Commerce Commission. Regulations for Transportation of Explosives and Other Dangerous Articles. Shipping Container Specification 2A. Inside Containers—Metal Cans, Pails, and Kits. Includes requirements for capacity, thickness of metal, test, and closure. Published by American Trucking Assns., Inc., Tariff Bureau, and by Assn. of American Railroads, Bureau of Explosives.

U. S. Gov., Joint Army-Navy Specification JAN-P-124; 1944. Packaging and Packing for Overseas Shipment—Cans and Pails; Metal.

U. S. Gov., Navy Dept. Specification 42P10; 1943. Pails; Putty.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2446; 1938. Bucket; Enamelware.

U. S. Gov., U. S. Army, Medical Dept. Specification 29-49A; 1941. Bucket; Galvanized-Iron, Square.

U. S. Gov., U. S. Maritime Commission. Specification 42-MC-3; 1942. Containers (Pails); Steel, Watertight, (for) Lifeboat and Life Raft Blankets. There shall be but one type and grade. Gives requirements for materials, workmanship, capacity, dimensions, style, sheet steel, construction, handle, cover, lever closure, finish, water-tightness, sampling, inspection, and method of test.

U. S. Gov., U. S. Maritime Commission. Specification 64-MC-8; 1941. Buckets; Water, Galvanized. Type I—light-weight buckets; type II—heavy-weight buckets; and shall be but one grade. Gives requirements for material, workmanship, body, bottom, bail, ears, galvanizing, watertightness, marking, body, bottom, steel thickness, capacity, dimensions, inspection, and methods of test.

U. S. Gov., U. S. Maritime Commission. Specification 64-MC-38; 1941. Pails; Water, Enamelware, Seamless. Pails shall be of one type and grade, and sizes shall be as specified. Gives requirements for sheet steel, workmanship, pails, sides, top edge, bottoms, ears, bail, handle, enameling, reflectance, color, dimensions and capacities, sampling, inspection, and tests.

U. S. Gov., Veterans Administration. Specification VA-G-166a; 1937. Pails; Aluminum, Capacity 14 Qt.

U. S. Gov., Veterans Administration. Specification VA-G-221a; 1937. Pails; Aluminum, Capacity 16 Qt.

U. S. Gov., Veterans Administration. Specification VA-G-289; 1937. Pail; Aluminum, Capacity 10 Qt.

*References.*—Iron and steel sheets, *see* 604.2; zinc coatings, tin coatings, *see* 600.3.

### 951.65 Wooden Pails

U. S. Gov., Post Office Dept., Div. of Motor Vehicle Service, Bureau of the Fourth Assistant Postmaster General. Specifications for Buckets; Grease.

### 951.66 Fiber Kits

*References.*—Container fibre board, *see* 472.93.

### 951.7 TUBS

### 951.71 Metal Tubs

*References.*—Tubs special to laundries, *see* 787.

### 951.72 Wooden Tubs

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R135 32; 1932: Wooden Butter Tubs. This recommendation establishes a simplified schedule of capacities and dimensions for stock varieties of wooden butter tubs. Sponsored by the American Butter Institute.

U. S. Gov., Interstate Commerce Commission. National Motor Freight Classification No. 7. Contains requirements for wooden tubs for shipment of butter. Published by American Trucking Assns., Inc., Tariff Bureau. National Motor Freight Classification No. 7-1943.

U. S. Gov., Interstate Commerce Commission. Regulations for Transportation of Explosives and Other Dangerous Articles. Shipping Container Specification 31. Jugs in Tubs. Includes requirements for material, size, construction, cushioning, and marking. Published by American Trucking Assns., Inc., Tariff Bureau, and by Assn. of American Railroads, Bureau of Explosives.

*References.*—Tubs special to laundries, *see* 787.

### 951.73 Fiber Tubs

## 952. BASKETS AND HAMPERS

### 952.1 BASKETS

### 952.10 General Items

Assn. of American Railroads, Perishable Div., Freight Container Bureau. Freight Container Bureau Tariff No. 3-A Southeast Territory. Specifications of Standard Containers and Loading Rules for Fresh Fruits,

Berries, Vegetables, and Melons, effective June 15, 1940, (issued by J. J. Quinn, agent) and Supplements Nos. 8 (effective May 10, 1941), 9 (effective Sept. 12, 1941), 12 (effective Mar. 2, 1942), 13 (effective Apr. 2, 1942), and 14 (effective June 10, 1942).

*References.*—Baskets used as standard capacity measures, *see* 919.1.

## 952.11 Fruit, Vegetable, and Berry Baskets

Assn. of American Railroads, Freight Container Bureau. Bulletin 25-1932. Climax Basket. For use in shipment of grapes and other fruits and vegetables, mainly in 12-qt. size, but also made in 2-qt. and 4-qt. sizes; requirements of the U. S. Container Act of 1916 for design, and dimensions, illustrations of common failures, loading, wire and wood handles, and suggested improvements.

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. Service and Regulatory Announcement No. 104. Revised, 1941. Rules and Regulations of the Secretary of Agriculture Under the U. S. Standard Container Act of Aug. 31, 1916 (39 Stat. 673), as amended June 11, 1934 (48 Stat. 930). Covers climax baskets, berry boxes, and till baskets. Gives tolerances and variations; and gives definitions and text of act to fix standards for climax baskets for grapes and other fruits and vegetables, and for mushrooms; and baskets or other containers for small fruits, berries, and vegetables.

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. Service and Regulatory Announcement No. 116. Amendments 1 and 2; 1936. Rules and Regulations of the Secretary of Agriculture Under the U. S. Standard Container Act of 1928. Gives definitions, specifications, tolerances, and variations for hampers, round stave baskets, and splint or market baskets for fruits, vegetables, and for other purposes.

U. S. Gov., Dept. of Commerce, National Bureau of Standards, H29; 1942. Specifications, Tolerances, and Regulations for Commercial Weighing and Measuring Devices. Berry Baskets or Boxes. Baskets or boxes for berries or small fruits, of a capacity of 1 dry quart or less, shall be of one of the following sizes: 1 qt., 1 pt., or 1/2 pt., dry measure. Allowable tolerances are given for baskets or boxes made of wood, pasteboard, or fiber.

U. S. Gov., Interstate Commerce Commission. National Motor Freight Classification No. 7. Contains requirements for baskets for shipment of fresh fruits or vegetables, meats, and tobacco. Published by American Trucking Assns., Inc., Tariff Bureau. National Motor Freight Classification No. 7-1943.

*References.*—Round stave baskets, *see* 958.12; standard basket sizes, *see* 952.10; fiberboard baskets for fruit and vegetables, *see* 952.14.

## 952.12 Round-Stave Baskets

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. Service and Regulatory Announcement No. 116. Amendments 1 and 2; 1936. Rules and Regulations of the Secretary of Agriculture Under the U. S. Standard Container Act of 1928. Gives definitions, specifications, tolerances, and variations for hampers, round stave baskets, and splint or market baskets for fruits, vegetables, and for other purposes.

*References.*—Standard basket sizes, *see* 952.10.

## 952.13 Coal Baskets

## 952.14 Fiberboard Baskets

American Hospital Assn., 49-34. Office and Lobby Fiber Waste-Paper Receptacles. Covers two types. Based on U. S. Gov. Federal Specification LLL-R-191.

U. S. Gov., Federal Specification LLL-R-191b; 1943. Receptacles; Waste-Paper, Fiber, Office and Lobby. Covers four types—(I) round office (12 x 10 x 14), (II) round lobby (16 x 14 x 21), (III) oval office (14 x 8 1/2 x 14), and (IV) square office (11 1/2 x 9 1/2 x 15). Gives requirements for material, workmanship, performance, finish, color, and details for each type; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

*References.*—Standard basket sizes, *see* 952.10; container fiberboard, *see* 472.93; standard thicknesses, methods of testing fiberboard, *see* 472.0, 470.3.

## 952.19 Miscellaneous Baskets

American Hospital Assn., 46-1. Metal Frame Laundry Basket. Covers one type, one grade, and one class.

American Hospital Assn., 49-37. Office and Lobby Metal Waste-Paper Receptacles. Covers two types. Based on U. S. Gov. Federal Specification RR-R-191.

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. Service and Regulatory Announcement No. 116. Amendments 1 and 2; 1936. Rules and Regulations of the Secretary of Agriculture Under the U. S. Standard Container Act of 1928. Gives definitions, specifications, tolerances, and variations for hampers, round stave baskets, and splint or market baskets for fruits, vegetables, and for other purposes.

U. S. Gov., Federal Specification RR-R-191; 1932. Amendment 1; 1936. Receptacles; Waste-Paper, Metal, Office and Lobby. Covers two types of steel waste baskets—round and square. Each type having plain sides or corrugated sided. Gives requirements for material, workmanship, finish, colors, and details for each type; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., Navy Dept. Specification 64B8B; 1943. Baskets; Bread, Wire.

U. S. Gov., U. S. Army, Medical Dept. Specification 6-283; 1940. Basket; Laundry (Army Duck Body).

## 952.2 HAMPERS

U. S. Gov., Dept. of Agriculture, War Food Administration, Office of Distribution. Service and Regulatory Announcement No. 116. Amendments 1 and 2; 1936. Rules and Regulations of the Secretary of Agriculture Under the U. S. Standard Container Act of 1928. Gives definitions, specifications, tolerances, and variations for hampers, round stave baskets, and splint or market baskets for fruits, vegetables, and for other purposes.

U. S. Gov., Interstate Commerce Commission. National Motor Freight Classification No. 7. Contains requirements for hampers for shipment of clothing. Published by American Trucking Assns., Inc., Tariff

Bureau. National Motor Freight Classification No. 7-1943.

*References.*—Standard sizes of vegetable and fruit hampers, *see* 952.10.

## 953. BOXES

### 953.1 METAL BOXES

U. S. Gov., Dept. of Agriculture, Forest Service. Specification 61-2. Box; Metal, Fire-Tool Cache No. 1.

U. S. Gov., Dept. of Agriculture, Forest Service. Specification 61-5. Box; Metal, Fire-Tool Cache No. 2.

U. S. Gov., Federal Specification RR-B-623; 1941. Amendment 1; 1945. Boxes; Bread, Hinged Type. Covers plain steel grade; and two sizes. Gives requirements for material, workmanship, finish, body, cover, hinge, sizes, and details; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification RR-B-644; 1943. Boxes; Spice. Covers one type and one grade and shall consist of an outer spice box with hinged cover and hasp, enclosing six spice containers of uniform size and shape. Gives requirements for material, workmanship, and details for outer spice box, outer spice box cover, handle, hasp, spice containers, and finish; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., Navy Dept. Specification 42B11a; 1938. Boxes; Spit, Steel (Galvanized), Crews'.

U. S. Gov., Navy Dept. Specification 54 B 4b; 1944. Boxes; Letter.

U. S. Gov., Navy Dept. Specification 55C24a; 1940. Containers; Dress-Equipment (Metal Box).

U. S. Gov., Navy Dept. Specification 57B16; 1941. Boxes; Ointment, Tin.

U. S. Gov., U. S. Army, Corps of Engineers. Specification 49-12; 1940. Box; Metal, Cavalry, Demolition, With Canvas Case and Carrying Strap.

U. S. Gov., U. S. Army, Medical Dept. Specification 1-34A; 1940. Cash Box; Metal With Lock.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2224A; 1941. Box; Pipette.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2521A; 1939. Box; Ointment.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2527; 1939. Box, for Gold.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2554; 1939. Box; Soap.

U. S. Gov., U. S. Army, Medical Dept. Specification 28-60; 1939. Box; Spice.

U. S. Gov., U. S. Army, Medical Dept. Specification 28-61; 1939. Match Safe.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 89-4501a; 1940. Box; Selector, M4.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 92-36; 1937. Box; Ration, Aluminum, Pack Artillery.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-710A; 1943. Box BX-7, for Radio Tubes.

U. S. Gov., U. S. Maritime Commission. Specification 64-MC-33a; 1943. Boxes; Bread, Portable, Hinged. Shall be of one grade of hinge type made from a good quality low carbon sheet steel. Gives requirements workmanship, construction, color, finish, sizes, and marking; sampling, inspection, and methods of tests packaging, packing, and marking.

*References.*—Metal cases, *see* 954.21.

### 953.2 PAPER AND FIBERBOARD BOXES

American Hospital Assn., 55-4. Pill box. Covers one type, one grade, and three sizes. Based on U. S. Gov., War Dept., Specification 19-52.

American Hospital Assn., 55-7. Powder Box. Covers one type, one grade, and three sizes. Based on U. S. Gov., War Dept., Specification 19-53A.

American Hospital Assn., 55-10. Folding Tablet Box. Covers one type, one grade, and one class. Based on U. S. Gov., War Dept., Specification 19-54.

American Society for Testing Materials, D 641-43; 1943. Method of Conditioning Paper Board, Fiberboard, and Paperboard Containers for Testing. Procedure for conditioning specimens of container grades of paperboard, corrugated board, and solid fiberboard; and containers made from such grades of paperboard, prior to testing. Gives requirements for standard condition, apparatus, procedure, and report.

American Society for Testing Materials, D 642-43; 1943. Method of Compression Testing of Corrugated and Solid Fiber Boxes. Gives requirements for apparatus, test specimens, preparation of specimens, conditioning test specimens, moisture content, procedure, and report.

American Society for Testing Materials, D775-44T; 1944. Technical Assn. of Pulp and Paper Industry Standard Method T802m-44. Tentative Method of Drop Test for Shipping Containers. Gives scope, apparatus, test specimens, identification of container parts, conditioning, height of drop, procedures, and report.

American Society for Testing Materials, D 782-44T; 1944. Technical Assn. of Pulp and Paper Industry Suggested Method T800sm-44. Tentative Method of Drum Test for Containers in Small Revolving Hexagonal Drum Box-Testing Machine. Gives scope, apparatus, test specimen, conditioning, procedures, and report.

Assn. of American Railroads, Freight Container Bureau. Bulletin 36-1940. Packing of Mirrors in Fiberboard Boxes. Describes and illustrates proper methods of packing framed mirrors with standards, unframed, and multiple packing of mirrors, sealing with adhesives or metal staples, and marking.

Assn. of American Railroads, Freight Container Bureau. Bulletin 37-1940. Packing Bedroom Furniture (Case Goods) in Fiberboard Boxes. Describes and illustrates recommended methods for the packing of bedroom furniture (case goods) in double-faced corrugated fiberboard boxes and includes dresser with mirror, vanity and mirror, and chest of drawers.

Assn. of American Railroads, Freight Container Bureau. Bulletins 40, 41, and 42; 1941. Packing Kitchen Enamel Ware in Corrugated Fiberboard Boxes (No. 40), Packing X-Ray Tubes in Wooden and Fiberboard Boxes (No. 41), and Packing of Neon Signs in Fiberboard and Wooden Boxes (No. 42). Describes and illustrates proper methods of packing.

Assn. of American Railroads, Freight Container Bureau. Recommended Methods for Packing Floor and Table Lamps; 1937. Includes floor lamp with glass reflector for indirect lighting, metal table lamp, pottery table

lamp bases, large glass globe, and one or more lamp shades.

Assn. of American Railroads, Freight Container Bureau. A Recommended Method for Packing Metal Utility Cabinets in Double-Faced Corrugated Fibreboard Containers. Gives introduction, recommended method of packing metal utility cabinets constructed without legs, recommended method of packing metal utility cabinets constructed with legs, general recommendations, and illustrations.

Assn. of American Railroads, Perishable Div., Freight Container Bureau. Freight Container Bureau Tariff No. 3-A Southeast Territory. Specifications of Standard Containers and Loading Rules for Fresh Fruits, Berries, Vegetables, and Melons, effective June 15, 1940 (issued by J. J. Quinn, agent) and Supplements Nos. 8 (effective May 10, 1941), 9 (effective Sept. 12, 1941), 12 (effective Mar. 2, 1942), 13 (effective Apr. 2, 1942), and 14 (effective June 10, 1942).

Fibre Box Assn. Handbook of Useful Information. Corrugated and Solid Fibre Shipping Containers for Freight, Express, and Parcel Post, 1937. Edition and Supplement 1; 1939. Includes illustrations and descriptions of corrugated and solid fibreboard products; freight and express container specifications; parcel post regulations; trade practice rules; standard specifications for canned food boxes; and box dimensions, canned food, simplified practice recommendation.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, 1938. Corrugated Shipping Containers. Covers design and selection of materials, materials, types of liners, jointed corners, and printing.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, 1938. Paper Boxes. Covers specifications, grades, derivation, types of assembly, forms of fabrication, ordering instructions, inspection, uses, and substitutes.

Underwear Institute. Specification G-1; 1935. Standardization of Underwear Box Sizes. Gives outside measurements for boxes for various types of underwear.

U. S. Gov., Army Air Forces. Specification 40773 (1); 1944. Packaging of Aircraft Batteries.

U. S. Gov., Army-Navy Aeronautical Specification AN-B-17; 1944. Boxes; General Specification for, Wood-Cleated Solid Fiberboard, for Export Shipment.

U. S. Gov., Army-Navy Aeronautical Specification AN-P-66; 1945. Packaging of Batteries; Storage, Shielded, Aircraft (Charged and Dry, Uncharged and Moist).

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Commercial Standard CS33-43; 1943. Knit Underwear (Exclusive of Rayon). Covers standard methods of measuring and standard measurements for knit underwear (exclusive of rayon) for boys, children, infants, men, and women. Includes standard box sizes for men's and boys' union suits, shirts, and drawers, widths and lengths of full standard sizes, included as recommended practice.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R64-30; 1930. One-Pound Folding Boxes for Coffee. This recommendation establishes a simplified list of dimensions and capacities for folding boxes for coffee. Sponsored by the Folding Paper Box Assn. of America and the National Coffee Assn.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R126-41; 1941. Set-Up Paper Boxes (used by department and specialty stores). This recommendation establishes a simplified list of stock sizes of set-up paper boxes used by department and specialty stores. Gives table showing box number, length, width, depth, lid depth, boxboard, number of boxes in package, and construction specification number; and definitions and requirements. Sponsored by National Retail Dry Goods Assn.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R127-41; 1941. Folding Paper Boxes (used by department and specialty stores). This recommendation establishes a simplified list of stock sizes of folding paper boxes for use by department and specialty stores. Gives tables showing box numbers, length, width, depth, caliper of boxboard and weight per 1,000 boxes for lighter type and heavier type boxes, and number of complete boxes to a bundle for one-piece five-panel folders, lock-corner and automatic folding boxes, and millinery boxes—automatic style. Sponsored by National Retail Dry Goods Assn.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R128-41; 1941. Corrugated Fiber Boxes (used by department and specialty stores). This recommendation establishes a simplified list of stock sizes of corrugated fiber boxes for use by department and specialty stores. Gives table showing box number, length, width, and depth of corrugated fiber boxes; table showing liner, weight, kind of material, and caliper for boxboard requirements for freight classification (rule 41) boxes; and table showing liner, weight, kind of material, caliper, and minimum bursting strength of combined board for boxboard requirements for store-test boxes. Sponsored by National Retail Dry Goods Assn.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R146-41; 1941. Corrugated and Solid Fiber Boxes for Canned Fruits and Vegetables. This recommendation establishes a schedule of box sizes for canned fruits and vegetables. Initiated by National Canners Assn. and the Fiber Box Assn.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R172-38; 1938. Stock Folding Boxes for Garments and Dry Cleaning. This recommendation covers standard sizes of boxes and thicknesses of boxboard for garments and dry cleaning. Sponsored by the Folding Paper Box Association of America.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R173-38; 1938. Stock Folding Boxes for Millinery. This recommendation covers standard dimensions of boxes and thicknesses of boxboard for millinery purposes. Sponsored by the Folding Paper Box Assn. of America.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R192-42; 1942. Crayons, Chalks, and Modeling Clays for School Use (Types, Sizes, and Packaging). Includes recommendations for chip-board set-up and folding boxes.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R200-43;

1943. Paper Boxes for Toiletries and Cosmetics. The purpose of this recommendation is to reduce the amount of paperboard used for packaging toiletries and cosmetics. It establishes the maximum thickness of paperboard used for these boxes, restricts the size of box in relation to the size of contents, and limits the number of protective covers. Also provides for the simplification of designs.

U. S. Gov., Federal Specification UU-B-651a; 1939. Boxes; Chipboard, Laundry. Covers the one type—lock-corner, full-telescope type. Gives detail requirements; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification UU-B-666; 1943. Amendment 1; 1944. Boxes; Powder, Pharmaceutical. Covers one grade and two types—(I) hinged lid boxes and (II) slide boxes; and three sizes—(1) small, (2) medium, and (3) large. Gives requirements for material, workmanship, construction, hinge, thickness, bursting strength, and sizes; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification LLL-B-631a; 1936. Boxes; Fiber, Corrugated. Covers seven styles of empty boxes without wood frames—(1) slotted container, (2) half-slotted container, (3) design box, (4) telescope design box, (5) telescope box, (6) triple-slide box, and (7) three-piece box. Gives requirements for weight, size, kind of board, thickness, bursting strength, gummed tape, metal fastenings, body joints, covers and details, and illustrations of each type; methods of sampling, inspection, and tests; and packaging, packing, and marking. Emergency Alternate Federal Specification E-LLL-B-631a, July 1943, changed table showing weight, size, thickness, and bursting strength.

U. S. Gov., Federal Specification LLL-B-636a; 1936. Boxes; Fiber, Solid. Covers five types of empty solid fiber boxes without wood frames—(A) slotted container, (B) half-slotted container, (C) design box, (D) telescope design box, and (E) three-piece box. Gives requirements for weight, size, thickness of board, bursting strength, body joints, and covers; methods of sampling, inspection, and tests; and requirements for packaging and marking. Emergency Alternate Federal Specification E-LLL-B-636A, 1942, changed requirements for weight, size, thickness, and bursting strength.

U. S. Gov., Interstate Commerce Commission. National Motor Freight Classification No. 7. Contains requirements for fiberboard trays for shipping brick, fiberboard boxes for shipping wood doors, sash, pyroxylin or other plastic rods, sheets, or tubes, cigarettes, butter, fish, honey, vegetables, steel furniture, glassware, ink, and stall partitions. Published by American Trucking Assns., Inc., Tariff Bureau. National Motor Freight Classification No. 7-1943.

U. S. Gov., Interstate Commerce Commission. Regulations for Transportation of Explosives and Other Dangerous Articles. Shipping Container Specification 2G. Inside Containers—Fiber Cans and Boxes. Includes requirements for thicknesses and strengths. Published by American Trucking Assns., Inc., Tariff Bureau, and by Assn. of American Railroads, Bureau of Explosives.

U. S. Gov., Interstate Commerce Commission. Regulations for Transportation of Explosives and Other Dangerous Articles. Shipping Container Specification 12B. Fiberboard Boxes. Includes requirements for materials, tests, construction, closing for shipment, marking, packing, and minimum strengths for fiberboard and parts for boxes having 15, 30, 40, 55, and 65 lb. gross weight when packed. Published by American Trucking Assns., Inc., Tariff Bureau, and by Assn. of American Railroads, Bureau of Explosives.

U. S. Gov., Interstate Commerce Commission. Regulations for Transportation of Explosives and Other Dangerous Articles. Shipping Container Specification 12C. Fiberboard Boxes. Similar to I.C.C. Specification 12B, Fiberboard Boxes (referred to herein), except minimum strengths for fiberboard and parts for boxes having 30, 40, and 65 lb. gross weight and double-faced corrugated fiberboard of at least 175-lb. test is authorized for triple slide boxes for 65 lb. gross weight. Published by American Trucking Assns., Inc., Tariff Bureau, and by Assn. of American Railroads, Bureau of Explosives.

U. S. Gov., Interstate Commerce Commission. Regulations for Transportation of Explosives and Other Dangerous Articles. Shipping Container Specification 12D. Fiberboard Boxes. Similar to I.C.C. Specification 12B, Fiberboard Boxes (referred to herein), except packing liquids or solids in glass or earthenware, types of boxes, inside packing, size limits, and gross weight. Published by American Trucking Assns., Inc., Tariff Bureau, and by Assn. of American Railroads, Bureau of Explosives.

U. S. Gov., Interstate Commerce Commission. Regulations for Transportation of Explosives and Other Dangerous Articles. Shipping Container Specification 12E. Fiberboard Boxes. Similar to I.C.C. Specification 12B, Fiberboard Boxes, except requirements for inside packing, type of box (i.e., one-piece body with separate flanged ends), authorized gross weight of packed box limited to 65 lb. and other exceptions accordingly. Published by American Trucking Assns., Inc., Tariff Bureau, and by Assn. of American Railroads, Bureau of Explosives.

U. S. Gov., Interstate Commerce Commission. Regulations for Transportation of Explosives and Other Dangerous Articles. Shipping Container Specification 12L. Hexagonal Fiberboard Containers. Includes requirements for corrugated fiberboard, parts and dimensions, assembly, type tests, and marking. Published by American Trucking Assns., Inc., Tariff Bureau, and by Assn. of American Railroads, Bureau of Explosives.

U. S. Gov., Interstate Commerce Commission. Regulations for Transportation of Explosives and Other Dangerous Articles. Shipping Container Specification 23F. Solid Fiberboard Boxes. Similar to I.C.C. Specification 12B, Fiberboard Boxes. Published by American Trucking Assns., Inc., Tariff Bureau, and by Assn. of American Railroads, Bureau of Explosives.

U. S. Gov., Joint Army-Navy Specification JAN-P-103; 1944. Packaging and Packing for Overseas Shipment—Boxes; Wood Cleated, Solid Fiberboard. For boxes whose weight of contents does not exceed 200 lb. and whose maximum inside dimensions are 4 ft. length, 3 ft. width, and 3 ft. depth.

U. S. Gov., Joint Army-Navy Specification, JAN-P-108; 1944. Packaging and Packing for Overseas Shipment—Boxes; Fiberboard, V-Board and W-Board, Exterior and Interior.

U. S. Gov., Joint Army-Navy Specification, JAN-P-133; 1944. Packaging and Packing for Overseas Shipment—Boxes; Set-Up, Paperboard.

U. S. Gov., Marine Corps Specification, 1943. Boxes; Fiber, Corrugated.

U. S. Gov., Marine Corps Specification, 1944. Boxes; Fiber, Solid, Water-Resistant (Outer Box for Export Use).

U. S. Gov., Navy Dept. Specification 53B8a; 1944. Boxes; Shipping, Fiber, Corrugated, Heavy-Weight (for Pay Rolls and Returns Only).

U. S. Gov., Navy Dept. Specification 53B10; 1938. Boxes; Filing, Cardboard.

U. S. Gov., U. S. Army, Medical Dept. Specification 19-52; 1939. Box; Pill.

U. S. Gov., U. S. Army, Medical Dept. Specification 19-53A; 1939. Box; Powder.

U. S. Gov., U. S. Army, Medical Dept. Specification 19-54A; 1941. Box; Tablet, Folding.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 100-13A; 1943. Miscellaneous Lubricant, Container and Packaging.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 22-273; 1941. Canned Goods; Subsistence, for Oversea Shipment, Boxes, Strapping, and Marking, General Specifications for Packing.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 100-11; 1942. Box; Fiber, Special.

*References.*—Paperboard and paper cartons, *see* 954.1; standard boxboard thicknesses, *see* 472.0; lined boxboard, corrugated boxboard, fiberboard, *see* 472.16, 472.25, 472.93; methods of testing paper and paperboard, *see* 470.3; gummed paper, *see* 479.2.

## 953.3 WOODEN BOXES

### 953.30 General Items

Assn. of American Railroads, Freight Container Bureau. Bulletin, 14-1930. Nailed Wooden Boxes. For good construction of seven styles of boxes, comparisons in cost and durability, illustrations of boxes, defects, joints, strapping, design factors, lumber dimensions, moisture requirements, corrugated fasteners, cleated ends, nails and nailing, and methods of packing.

Assn. of American Railroads, Perishable Div., Freight Container Bureau. Freight Container Bureau Tariff No. 3-A Southeast Territory. Specifications of Standard Containers and Loading Rules for Fresh Fruits, Berries, Vegetables, and Melons, effective June 15, 1940 (issued by J. J. Quinn, agent) and Supplements Nos. 8 (effective May 10, 1941), 9 (effective Sept. 12, 1941), 12 (effective Mar. 2, 1942), 13 (effective Apr. 2, 1942), and 14 (effective June 10, 1942).

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, 1938. Wire-Bound Boxes. Covers definition, characteristics, ordering instructions, and uses.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, Volume 2; 1944. Boxes; Wooden. Covers classification, characteristics, uses, styles of boxes, and ordering instructions.

Package Research Laboratory. Bulletin 310; 1944. The Design of All-Bound Boxes. Covers how to use tables and chart, definitions of load types, classification of woods, limitations to be observed, tables for designing blanks, chart for designing ends, instructions for positioning wires on ends, minimum dimensions for lined ends made double, style of ends, and ends for loads over 500 lb.

U. S. Gov., U. S. Army, Chemical Warfare Service. Specification 97-54-27B; 1936. Packing; General Specification, Gas Mask.

### 953.31 Fruit Boxes

*References.*—Fruit crates, *see* 954.31; grading rules for box lumber, *see* 413.9; box shook and crating, nails, *see* 421.4, 608.1; box construction, nailing, cover construction, *see* 953.30; shipping boxes, *see* 953.39.

### 953.32 Berry Boxes

U. S. Gov., Dept. of Commerce, National Bureau of Standards H29; 1942. Specifications, Tolerances, and Regulations for Commercial Weighing and Measuring Devices. Berry Baskets or Boxes. Requirements on standard sizes; allowable tolerances on correctness of capacities.

*References.*—Cranberry boxes, *see* 953.34.

### 953.33 Vegetable Boxes

*References.*—Grading rules for box lumber, *see* 413.9; box shook and crating, nails, *see* 421.4, 608.1; box construction, nailing, cover construction, *see* 953.30; shipping boxes, *see* 953.39.

### 953.34 Cranberry Boxes

*References.*—*See* references under 953.33.

### 953.35 Produce (Lug) Boxes

Assn. of American Railroads, Freight Container Bureau. Bulletins 39 and 39A; 1941. Loading and Assembly of Lug Boxes. Include recommended practice for solid load and for divided load.

*References.*—*See* references under 953.33.

### 953.36 Special Shipping Boxes

American Bottlers of Carbonated Beverages. Educational Bulletin 4; 1930. Bottle Boxes. For wooden boxes for holding twenty-four 6 1/2 to 9 oz. bottles, requirements on thickness of ends, sides, bottoms, and partitions; dimensions of metal straps.

American Meat Institute. Standards for Packinghouse Supplies, Packs, and Equipment, 1928. Nailed Wooden Crates and Boxes. For boxes, classification of woods, requirements on thickness for boxes of sundry sizes of various woods, on width of material, surfacing, joining, nailing, size of nails, dimensions and construction of wooden and fiber boxes, for various weights of lard cans or cartons.

U. S. Gov., Army Air Forces. Specification No. 15072; 1945. Plywood Container.

U. S. Gov., Army Air Forces. Specification 40763 (1); 1944. Packaging and Packing of Superchargers for Export Shipment.

U. S. Gov., Army Air Forces. Specification 40824; 1944. Packaging and Packing of Self-Sealing Fuel and Oil Cells in Collapsible Containers.

U. S. Gov., Army Air Forces. Specification 40835-A; 1944. Container; Reusable Collapsible Shipping (Radial Aircraft Engines).

U. S. Gov., Army-Navy Aeronautical Specification AN-C-137; 1944. Container; Reusable Collapsible Shipping (Radial Aircraft Engines).

U. S. Gov., Army-Navy Aeronautical Specification AN-P-30—2; 1944. Packaging and Packing; Aircraft Propeller, for Domestic and Overseas Shipment.

U. S. Gov., Federal Specification EE-S-631a; 1938. Amendment 2; 1941. Spices; Ground and Whole. Includes requirements for shipping cases of nailed or wirebound wood construction.

U. S. Gov., Interstate Commerce Commission. Regulations for Transportation of Explosives and Other Dangerous Articles. Shipping Container—Specification 1A, Boxed Carboys; Specification 1B, Boxed Lead Carboys. Includes requirements for wooden box outside containers and tests for same. Published by American Trucking Assns., Inc., Tariff Bureau, and by Assn. of American Railroads, Bureau of Explosives.

U. S. Gov., Interstate Commerce Commission. Regulations for Transportation of Explosives and Other Dangerous Articles. Shipping Container Specification 1X. Boxed Carboys, 5 to 6 Gallons, for Export Only (Glass, Earthenware, Clay, or Stoneware). Single-Trip Container. Includes requirements for closure devices required, manufacture, marking, and tests. Published by American Trucking Assns., Inc., Tariff Bureau, and by Assn. of American Railroads, Bureau of Explosives.

U. S. Gov., Interstate Commerce Commission, Regulations for Transportation of Explosives and Other Dangerous Articles. Shipping Container Specification 2G. Inside Containers—Fiber Cans and Boxes. Includes requirements for thicknesses and strengths. Published by American Trucking Assns., Inc., Tariff Bureau, and by Assn. of American Railroads, Bureau of Explosives.

U. S. Gov., Interstate Commerce Commission. Regulations for Transportation of Explosives and Other Dangerous Articles. Shipping Container Specifications 14, 15A, 15B, 15C, and 15D. Wooden Boxes; Nailed. Includes requirements for lumber, nails, construction of parts, dimensions of materials, setting up boxes, and marking. Published by American Trucking Assns., Inc., Tariff Bureau, and by Assn. of American Railroads, Bureau of Explosives.

U. S. Gov., Interstate Commerce Commission. Regulations for Transportation of Explosives and Other Dangerous Articles. Shipping Container Specification 15X. Wooden Boxes, for Two 5-Gallon Cans. Includes requirements for lumber, construction, sizes, and marking. Published by American Trucking Assns., Inc., Tariff Bureau, and by Assn. of American Railroads, Bureau of Explosives.

U. S. Gov., Interstate Commerce Commission. Regulations for Transportation of Explosives and Other Dangerous Articles. Shipping Container Specifications 16A and 16B. Wooden Boxes; Wire-Bound. Includes requirements for lumber, construction, marking, setting up, and closing. Published by American Trucking Assns., Inc., Tariff Bureau, and by Assn. of American Railroads, Bureau of Explosives.

U. S. Gov., Interstate Commerce Commission. Regulations for Transportation of Explosives and Other Dangerous Articles. Shipping Container Specification 19A. Wooden Boxes; Glued Plywood, Pleated. Includes requirements for material, construction, marking, setting up, and closing. Published by American Trucking Assns., Inc., Tariff Bureau, and by Assn. of American Railroads, Bureau of Explosives.

U. S. Gov., Joint Army-Navy Specification JAN-P-105; 1944. Packaging and Packing for Overseas Shipment—Boxes; Wood, Cleated, Plywood. For boxes whose weight of contents does not exceed 1,000 lb.

U. S. Gov., Joint Army-Navy Specification JAN-P-106; 1944. Packaging and Packing for Overseas Shipment—Boxes; Wood, Nailed. For weight of contents not in excess of 1,000 lb.

U. S. Gov., Joint Army-Navy Specification, JAN-P-107; 1944. Packaging and Packing for Overseas Shipment—Boxes; Wood, Wire-Bound. For boxes whose weight of contents does not exceed 500 lb.

U. S. Gov., Marine Corps Specification, 1941. Cases; Packing, for Subsistence Stores.

U. S. Gov., Navy Dept. Specification 39B12; 1944. Boxes; Shipping, Periscope.

U. S. Gov., Navy Dept. Specification 42C21b; 1941. Cases, shipping; cans, tin, One-Quart, Half-Gallon, One-Gallon.

U. S. Gov., Navy Dept. Specification 42 C 22d; 1943. Cans, Five-Gallon; and Cases, Shipping.

U. S. Gov., U. S. Army, Army Air Forces. Specification 23-31; 1928. Box; Aircraft Engine, for Domestic and Oversea Shipment.

U. S. Gov., U. S. Army, Army Air Forces. Specification 23-33A; 1936. Box; Aircraft Battery, for Shipment.

U. S. Gov., U. S. Army, Army Air Forces. Specification 23-36A; 1936. Box; Shipping, for Oxygen Supply Tanks.

U. S. Gov., U. S. Army, Chemical Warfare Service. Specification 96-71-47; 1938. Chest; Packing, Livens Projector Accessories.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 100-13A; 1943. Miscellaneous Lubricant Container and Packaging.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-1652; 1943. Chests and Boxes for Radio Direction-Finder Central TC-8 and Radio-Intercept Central TC-9.

*References.*—Shipping boxes for canned foods, *see* 953.37; outside containers for boxed carboys, *see* 955.2; grading rules for box lumber, *see* 413.9; box shook and crating, plywood, *see* 421.4, 413.52; box construction, nailing, cover construction, *see* 953.30; nails, *see* 608.1; plywood, *see* 413.52; wooden shipping boxes, *see* 953.39.

## 953.37 Wooden Boxes for Canned Goods

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R171-38; 1938. Wooden Boxes for Canned Fruits and Vegetables. This recommendation establishes standard inside dimensions of wooden boxes for shipping canned fruits and vegetables. Sponsored by the National Wooden Box Assn.

U. S. Gov., Federal Specification JJJ-O-361; 1930. Amendment 3; 1935. Oil; Vegetable, Salad. Includes specifications for shipping cases. For nailed construction, requirements on thickness of ends and sides. Gives sizes of nails and tensile strength of binding wire or steel straps; strapping.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 22-273; 1941. Canned Goods; Subsistence, for

Overseas Shipment, Boxes, Strapping, and Marking, General Specifications for Packing.

*References.*—Grading rules for box lumber, *see* 413.9; box shook, nails, *see* 421.4, 608.1; box construction, nailing, cover construction, *see* 953.30; boxes suitable for canned goods, *see* 953.39.

## 953.39 Miscellaneous Wooden Boxes

Assn. of American Railroads, Freight Container Bureau. Bulletin 24-1931. Supplement, 1931. Preparation of Monuments, Tombstones, and Markers for Shipment. Methods of protection for raised carving and lettering, requirements for size of lumber for crates, boxes, blocking, quality of lumber, nails, steel straps, wrapping paper, and illustrations of various details.

Assn. of American Railroads, Telegraph and Telephone Section, 1-A-74; 1938. Dynamite Magazine Storage Box, AAR-1-A. For handling and storing small quantities of explosives in railway maintenance or construction cars; dimensional requirements and construction of high grade pine box with hinged lid, hardware, and covered with 16-gage steel.

Package Research Laboratory. Bulletin 247; 1939. Quality Standards for All-Bound Boxes. Gives requirements for thin boards, cleats, binding wire, rock fasteners, stapling wire, staples, manufacture-general, all-bound ends, assembly, and closure.

U. S. Gov., Federal Specification NN-B-591; 1939. Amendment 1; 1941. Boxes; Wood-Cleated-Fiberboard. Covers eleven styles. Gives requirements for wood, fiberboard, workmanship, edge cleats, nails fastening fiberboard to cleats, fabrication of panels and fabrication of box; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment. Emergency Alternate Federal Specification E-NN-B-591; 1942, (issued by Procurement Div. Treasury Dept., U. S. Gov.) changed requirements for nailing and gluing of panels.

U. S. Gov., Federal Specification NN-B-601a; 1941. Amendment 1; 1944. Boxes; Wood-Cleated-Plywood (for Domestic Shipments). Covers eleven styles. Gives requirements for wood, cleats, plywood, workmanship, fastenings, fabrication of panels, and fabrication of box; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification NN-B-621a; 1934. Amendment 1; 1935. Boxes; Wood, Nailed, and Lock Corner. Covers two forms of construction, nailed, styles 1, 2, 2 1/2, 3, 4, and 5, and lock-corner, style 6. Gives requirements for material, workmanship, number of pieces on any part, thickness of parts, uncleated ends, surfacing, nailing, cleats, strapping, construction, and allowable weight; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment. Emergency Alternate Federal Specification E-NN-B-621a; 1942, (issued by Procurement Div., Treasury Dept., U. S. Gov.) substituted requirements of Federal Specification LLL-B-631.

U. S. Gov., Federal Specification NN-B-631b; 1944. Boxes; Wood, Wirebound, for Domestic Shipment. Covers four styles. Gives requirements for wood, wire, workmanship, sawed, veneer and plywood boards, cleats, binding wires, staples, battens, end fastenings, additional fastening of battens, liners, and fastening of liners; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Interstate Commerce Commission. National Motor Freight Classification No.7. Contains requirements for wooden boxes for shipment of tobacco and alcoholic liquors. Published by American Trucking Assns., Inc., Tariff Bureau. National Motor Freight Classification No.7-1943.

U. S. Gov., Interstate Commerce Commission. Regulations for Transportation of Explosives and Other Dangerous Articles by Motor, Rail, and Water. Shipping Container Specification MC201. Container for Blasting Caps, Electric Blasting Caps, and Percussion Caps. Includes general requirements and illustrative line drawings. Published by American Trucking Assns., Inc., Tariff Bureau.

U. S. Gov., Marine Corps Specification, 1940. Chest; Chain Hoist for Pier, Temporary, 10-Ton, Model 1940.

U. S. Gov., Navy Dept. Specification 57B22a; 1944. Boxes; Boat, Empty.

U. S. Gov., Treasury Dept., Procurement Div., No.572; 1942. Boxes; Microscope, Slide. Shall be of one type and grade and the following classes—class A, 25-slide capacity and class B, 100-slide capacity. Gives requirements for bottom, dimensions, rack, top, index, covering, and hinges and catches; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., U. S. Army, Corps of Engineers. Specification 23-1C; 1944. Boxes; Chests, and Crates, Engineer Equipment.

U.S. Gov., U. S. Army, Corps of Engineers. Specification 23-14; 1922. Box; Ax.

U. S. Gov., U.S. Army, Corps of Engineers. Specification 23-15; 1922. Box; Tool Grinder, Etc.

U. S. Gov., U.S. Army, Corps of Engineers. Specification 23-16; 1922. Box; 26-Inch, Handsaw.

U. S. Gov., U.S. Army, Corps of Engineers. Specification 23-17; 1922. Box; One-Man 36-Inch Cross-Cut Saw.

U. S. Gov., U.S. Army, Corps of Engineers. Specification 49-14C; 1943. Box; Cap.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2160A; 1941. Box; Micro Slides.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2746A; 1942. Case; Silicate Cement.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 82-14A; 1940. Plywood Packing Box.

U. S. Gov., U.S. Army, Quartermaster Corps. Specification 92-40; 1937. Box; Ration, Pack.

*References.*—Plywood and Veneer, *see* 413.52; grading rules for box lumber, *see* 413.9; box shook, nails, *see* 421.4, 608.1.

## 953.9 MISCELLANEOUS BOX SPECIFICATIONS

U. S. Gov., Dept. of Agriculture, Forest Service. Specification 61-1. Box; Concrete, Fire-Tool Cache.

U. S. Gov., Dept. of Agriculture, Forest Service. Specification 61-3. Box; Ranch, Fire-Tool Cache No.1.

U. S. Gov., Dept. of Agriculture, Forest Service. Specification 61-4. Box; Ranch, Fire-Tool Cache No.2.

U. S. Gov., Dept. of Agriculture, Forest Service. Specification 61-6. Box; Frame, Fire-Tool Cache.

U. S. Gov., Dept. of Agriculture, Forest Service. Specification No.63. Box; Power-Pump Accessory.

U. S. Gov., Navy Dept. Specification 42B9b; 1944. Boxes; Spare-Part, Electrical and Mechanical, for Shipboard Use.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-15-D; 1928. Box; Type BC-102, Battery Carrying.

*References.*—Battery Boxes, *see* 712.3.

## 954. CARTONS, CASES, CRATES, AND TUBES

### 954.1 CARTONS

American Meat Institute. Standards for Packinghouse Supplies, Packs, and Equipment, 1928. Boxes and Crates. Includes fiber containers for thirty 1-lb. lard cartons, both side and end-opening, dimensions, and weight of fiber.

American Meat Institute. Standards for Packinghouse Supplies, Packs, and Equipment, 1928. Sausage, Lard, and Sliced Bacon Cartons. Include cartons up to 10-lbs. capacity, giving dimensions, kind, and thickness of stock.

Assn. of American Railroads, Freight Container Bureau. Bulletin 28; 1936. Packing of Chinaware, Earthenware, and Glassware in Corrugated fiberboard Boxes. Bulletin 29; 1936. Packing of Small Articles of Furniture in Corrugated and Solid Fiberboard Boxes. Includes requirements of container, interior packing procedure, illustrations of methods, describes extension wrapper, and packing of small tables, etc.

U. S. Gov., Dept. of Agriculture, Forest Service. Specification 94-S. Carton; Gasoline Lantern.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R175-40; 1940. Heavy-Duty, Round, Nesting, Paper, Food, and Beverage Containers and Lids. This recommendation covers standard sizes, shapes, weights, and other dimensions of heavy-duty paper, food, and beverage containers, of the round, nesting type. Sponsored by the Cup and Container Institute.

U. S. Gov., Interstate Commerce Commission. Regulations for Transportation of Explosives and Other Dangerous Articles. Shipping Container Specification 2C. Inside Containers—Corrugated Fiberboard Cartons. Covers requirements for construction and test. Published by American Trucking Assns., Inc., Tariff Bureau, and by Assn. of American Railroads, Bureau of Explosives.

U. S. Gov., Joint Army-Navy Specification JAN-P-120; 1944. Packaging and Packing for Overseas Shipment—Cartons; Folding, Paperboard.

*References.*—Fiberboard boxes, *see* 953.2; standard boxboard thicknesses, *see* 472.0; lined boxboard, corrugated boxboard, fiberboard, *see* 472.16, 472.23, 472.93; methods of testing paper and paperboard, *see* 470.3; gummed paper, *see* 479.2.

### 954.2 CASES

#### 954.21 Metal Cases

Assn. of American Railroads, Purchases and Stores Div. Card Cases (Boiler Inspection and Washout), 1934. Gives dimensional requirements and illustrations for cases made of IX bright tin or steel of suitable thickness.

Assn. of American Railroads, Telegraph and Telephone Section, 1-A-63; 1936. Metal Boxes for Rubber Gloves. Requirements for water tight carrying cases, in two sizes, stamped from No.24 gage galvanized steel, brass-plated suitcase latches, leather handle, and dimensional drawings.

National Board of Fire Underwriters. Nitrocellulose Motion Picture Film, No.40; 1939. Storage and handling requirements for construction and arrangement of buildings, electrical equipment, heating, sprinklers, allowable weight of film in cabinets and vaults, construction of film cabinets, and film vaults; containers and transportation of film, motion picture projectors, motion picture theaters, film exchanges, laboratories, studios, etc.

Safe Manufacturers' National Assn. Specification for Light Insulated Containers, F5-NT; 1939. For containers with fire-resistive expectancy of from 0 to less than 1/2 hr., and not recommended as protection for valuable records.

U. S. Gov., Army Air Forces. Specification 40838-A; 1945. Container; Steel Shipping.

U. S. Gov., Interstate Commerce Commission. Regulations for Transportation of Explosives and Other Dangerous Articles. Shipping Container Specification 32A, 32B, 32C, and 32D. Metal Cases and Trunk. Includes requirements for gauge standards, covers, edge protection, bottom protection, hinges, carrying handles, closing devices, rivets, rivet reinforcement, lining, metal partitions, protective coating, tests, and markings—32A, metal cases, riveted or lock-seamed; 32B, metal cases, welded or riveted; 32C, trunks; and 32D, metal boxes for old and worn-out motion-picture film no longer exhibitable. Published by American Trucking Assns., Inc., Tariff Bureau, and by Assn. of American Railroads, Bureau of Explosives.

U. S. Gov., U. S. Army, Corps of Engineers. Specification 42-55; 1943. Case; Map Filing, Steel, Fireproof, Olive Green Finish, Vertical.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-149; 1922. Case; Type CS-21, for Carrying Vacuum Tubes.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-3030-A; 1944. Case; CS-137.

U. S. Gov., U. S. Army, Signal Corps. Specification 75-13B; 1931. Case; Type CS-22, Metal, for Motion-Picture Film.

U. S. Gov., U. S. Army, Signal Corps. Specification 75-46; 1938. Shipping Case; Motion-Picture Film.

*References.*—Iron and steel sheets, *see* 604.2; standard box board thicknesses, *see* 472.0; lined box board, fiberboard, *see* 472.16, 472.93.

#### 954.22 Paper and Fiber Cases

U. S. Gov., Navy Dept. Specification 54C1a; 1941. Cases; Filing, Transfer.

U. S. Gov., Treasury Dept., Procurement Div., No.625; 1943. Cases; Filing, Transfer (Cardboard, Collapsible). Covers one grade and one type and in sizes specified. Gives requirements for material, workmanship, cardboard, and construction; letter size height, depth and width; cap size height, depth, and width; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., Treasury Dept., Procurement Div., No.632; 1943. Cases; Index Card and Storage or Transfer (Wood or Fiber). Covers type I, Index Card Cases—class A, with hinged covers, and class B, with hinged

cover and hinged drop front; and type II, Storage or Transfer Cases—class A, with detachable cover and follower. Gives requirements for material, tolerances, construction, sizes, and details for each type and class; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U.S. Gov., U.S. Army, Chemical Warfare Service. Specification 19-1; 1926. Case; Carrying, Gas-Mask Repair Kit, Mk. 11.

U. S. Gov., U. S. Army, Medical Dept. Specification 19-62; 1939. Case; Mailing, Dental, Large and Small.

U. S. Gov., U. S. Army, Signal Corps. Specification 75-133; 1941. Case; Type PH-236, for Camera Equipment, Type PH-205.

U. S. Gov., U. S. Army, Signal Corps. Specification 75-134; 1941. Case, PH-237, for Cut-Film Holders, PH-82.

U. S. Gov., U. S. Army, Signal Corps. Specification 75-135; 1941. Case, PH-238, for Cut-Film Holders, PH-84.

U. S. Gov., U. S. Army, Signal Corps. Specification 75-193; 1942. Case; PH-83-B, Camera.

*References.*—Envelopes and file folders, *see* 494.

### 954.23 Wooden Cases

Assn. of American Railroads, Telegraph and Telephone Section, 1-A-85; 1944. Dynamite Carrying Case; AAR-1-A. For use in the communication plant. Gives general requirements, material and workmanship, dimensions, identification, inspection and tests, packing, marking, and warranty.

U.S. Gov., Army Air Forces. Specification 40340-B (1); 1944. Case; Shipping (Air Force Organization Equipment).

U.S. Gov., Army Air Forces. Specification 40397-C (2); 1944. Case; Squadron, Type J-1A (Engineering Technical Supply).

U. S. Gov., Army Air Forces. Specification 40398-B; 1943. Case; Technical Order File.

U. S. Gov., Army Air Forces. Specification 40445-A; 1943. Case; Squadron, Type H-1 (for Armament Spare Parts).

U. S. Gov., Army Air Forces. Specification 40446B-1; 1945. Case; Squadron, Type H-2, for Communications Spare Parts.

U. S. Gov., Army Air Forces. Specification 40716; 1944. Case; Intelligence Officer's Field Kit, Type M-1.

U. S. Gov., Treasury Dept., Procurement Div., No. 632; 1943. Cases; Index Card and Storage or Transfer (Wood or Fiber). Covers type I, Index Card Cases—class A, with hinged covers, and class B, with hinged cover and hinged drop front; and type II, Storage or Transfer Cases—class A, with detachable cover and follower. Gives requirements for material, tolerances, construction, sizes, and details for each type and class; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-288; 1943. Container; Storage, Type A-6, Camera Magazine.

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-372; 1944. Kit; Photographic Processing and Developing, Type N-1.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-997; 1941. Case; Type CS-72.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-998; 1941. Case; Type CS-71.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-999; 1941. Case; Type CS-73.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-1021; 1941. Case; Type CS-58, for Switchboard, Type BD-80.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-1022; 1941. Case, Type CS-59, for Frame, Type FM-19.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-1023; 1941. Case, Type CS-60, for Panel, BD-90.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-1024; 1941. Case; Type CS-61, for Cable Racks.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-1025; 1941. Case, Type CS-64, for Chair, Type M-192.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-1026; 1941. Case, CS-66, for Cabinet, BE-72.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-1027; 1941. Case, CS-69, for 12 Cords, CD-334.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-1044; 1941. Case; Type CS-74.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-1608A; 1943. Case, CS-124; and Case, CS-126.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-1635; 1943. Case; PH-410-( ).

U. S. Gov., U. S. Army, Signal Corps. Specification 75-100; 1942. Case; CS-77-( ), Film Viewer.

### 954.29 Miscellaneous Cases

U. S. Gov., Navy Dept. Specification 18C4b; 1944. Cases; Captain's, Compasses, Dividers, and Reading-Glasses.

U. S. Gov., Navy Dept. Specification 18C9d; 1944. Cases; Navigator's, Compasses, and Dividers.

U. S. Gov., Navy Dept. Specification 57C8a; 1944. Cases; Forceps, Hemostatic.

U. S. Gov., Navy Dept. Specification 57C9; 1941. Cases; Pocket, Surgical-Instrument.

U. S. Gov., U.S. Army, Chemical Warfare Service. Specification 96-61-15; 1941. Container; Packing, Detonation, Gas-Identification Set M1.

U. S. Gov., U. S. Army, Medical Dept. Specification 23-84; 1925. Case; Export, for Two 5-Gallon Alcohol Tins.

U. S. Gov., U. S. Army, Signal Corps. Specification 23-77; 1924. Case; Type CS-8, Carrying, for Dry Batteries.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-993; 1941. Case; Type CS-57.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-994; 1941. Case; Type CS-63.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-1041; 1941. Case; Type CS-78, for Telegraph-Printer Tools.

## 954.3 CRATES

### 954.30 General Items

Assn. of American Railroads, Freight Container Bureau Bulletin 6-1927. The A.B.C. of Good Crating. Gives general information on crating articles for shipment, requirements for lumber seasoning, illustrates allowable defects in lumber and nailing, nail sizes and holding power, construction of three-way corners, sheathing, bracing, packing, and plywood crates.

Assn. of American Railroads, Perishable Div., Freight Container Bureau. Freight Container Bureau Tariff No.3-A Southeast Territory. Specifications of Standard Containers and Loading Rules for Fresh Fruits, Berries, Vegetables, and Melons, effective June 15, 1940 (issued by J. J. Quinn, agent) and Supplements Nos.8 (effective May 10, 1941), 9 (effective Sept. 12, 1941), 12 (effective Mar. 2, 1942), 13 (effective Apr. 2, 1942), and 14 (effective June 10, 1942).

## 954.31 Fruit Crates

*References.*—Basket crates, *see* 954.35; crate construction and crating, cover construction, *see* 954.30; grading rules for box lumber, *see* 413.9; box shook and crating, nails, *see* 421.4, 608.1; drying trays for raisins and fruits, *see* 959.9.

## 954.32 Berry Crates

*References.*—Basket crates, *see* 954.35; crate construction and crating, cover construction, *see* 954.30; grading rules for box lumber, *see* 413.9; box shook and crating, nails, *see* 421.4, 608.1.

## 954.33 Vegetable Crates

U. S. Gov., Federal Specification HHH-P-611. Amendment 2; 1942. Potatoes; Irish. Covers the Crates used for packing and shipping potatoes. Gives dimensions, materials, and strength of materials.

*References.*—Basket crates, *see* 954.35; crate construction and crating, cover construction, *see* 954.30; grading rules for box lumber, *see* 413.9; box shook and crating, nails, *see* 421.4, 608.1.

## 954.35 Basket Crates

*References.*—Fruit and vegetable baskets, *see* 952.11; crate construction and crating, cover construction, *see* 954.30; grading rules for box lumber, *see* 413.9; box shook and crating, *see* 421.4; nails, *see* 608.1; drying trays for raisins and fruits, *see* 959.9.

## 954.36 Shipping Crates

American Iron and Steel Institute. Steel Products Manual, Section 9a; 1943. Standard Packaging and Shipping Methods of Cold-Finished Bars. General Provisions, packaging, boxing, paper or burlap wrapping, wrapping or shrouding, and identification.

American Meat Institute. Standards for Packinghouse Supplies, Packs, and Equipment, 1928. Nailed Wooden Crates and Boxes. For crates, dimensions of crate and of cleats, thickness of sides, ends, etc., number of pieces, size and number of binding wire for wire bound crates, including weight capacities of nailed and wire bound lard can crates, and of pork and smoked meat crates.

Assn. of American Railroads, Freight Container Bureau. A New Method of Cushioning Gas and Electric Ranges. Utilizing Rubber Bushing Washers, 1940. Illustrates and describes special rubber washer devices and methods of installation.

Assn. of American Railroads, Freight Container Bureau. A Recommended Method of Packing and Crating Metal Sink Cabinets. Illustrates and describes construction of base section and method of bolting sink cabinet to same, method of bolting cabinets in crates, standard nailed wood en crate, wire-bound type crates, hinge corner type crate, and the panel box.

Assn. of American Railroads, Freight Container Bureau. Packing Machinery for Export, 1939. Covers fundamentals of general construction of crates, securing of machine to skid unit, preparation of machinery for crating, skid sizes based on weight, number of skins required, side and end units of case, blocking, bracing, securing of small parts, ventilation holes, decking of nonboxed units, hold-down blocking, nailed-on banding, sling marks, stenciling, etc.

Assn. of American Railroads, Freight Container Bureau. Bulletin 5; 1926. Crates for Parlor Heaters. Bulletin 7; 1926. Crating Oak Heaters. Bulletin 8; 1926. Crates for Cast-Iron Warm-Air Furnaces. Recommendations for the proper method of packing, bracing, nailing, and construction of crates, with illustrations, for the heaters covered.

Assn. of American Railroads, Freight Container Bureau. Bulletins 9 and 10; 1927. The Three-Way Corner Crate. Construction and opening methods illustrated for maximum strength in shipping crates.

Assn. of American Railroads, Freight Container Bureau. Bulletins 11, 12, 13, 16, 17, 18, and 20-1929. Crating of Furniture (Case Goods). Includes crates of plywood, for packing of upholstered furniture, reed and fiber, bed ends, etc., quality and weight requirements of wrapping paper, moisture content, defects, and types of wood for crating lumber, minimum dimensions of parts, nails and nailing, and packing in crates.

Assn. of American Railroads, Freight Container Bureau. Bulletin 15-1928. Packing and Crating of Mirrors. Gives requirements for packing either separately or with other furniture, illustrations of wrapping and crating, size of lumber, sheathing, quality of lumber, nails, and loading of mirrors.

Assn. of American Railroads, Freight Container Bureau. Bulletin 19; 1929. Crating and Packing Commercial Store Fixtures. Bulletin 21; 1930. Commercial Refrigerators. Bulletin 23; 1930. Soda Fountains. Gives descriptions and illustrations of proper methods of wrapping and crating, requirements for quality and size of lumber, nails and nailing, bracing, sheathing, and recommendations for protection of marble tops.

Assn. of American Railroads, Freight Container Bureau. Bulletin 22-1930. Crates for Tables. Recommendations for proper method of crating, bracing, nailing and construction of crates, with illustrations, for dining room and library tables and table tops.

Assn. of American Railroads, Freight Container Bureau. Bulletin 26-1935. Crates for Enameled Iron Sanitary Ware. Bulletin 27-1936. Handling Damages and Manufacturers' Defects in Enameled Iron Sanitary Ware. Recommendations for packing bath tubs, flat rim and apron sinks, laundry trays, etc., methods and illustrations for distinguishing defects and shipping damage, construction of crates, lumber, nailing, and strapping.

Assn. of American Railroads, Freight Container Bureau. Bulletin 30-1936. Crating and Packing Steel Office Furniture. Recommendations for the proper method of packing, bracing, nailing, and construction of crates, with illustrations, for vertical filing case, transfer case, knocked-down table, safe, flat-top desk, typewriter desk, knocked-down lockers, and storage cabinet. Also general information on crating.

Assn. of American Railroads, Freight Container Bureau. Bulletins 40, 41, and 42; 1941. Packing Kitchen Enamel Ware in Corrugated Fiberboard Boxes (No.40); Packing X-Ray Tubes in Wooden and Fiberboard Boxes

(No. 41); and Packing of Neon Signs in Fiberboard and Wooden Boxes (No. 42). Describes and illustrates proper methods of packing.

Assn. of American Railroads, Freight Container Bureau. Circular 20; 1938. Crates for Cook Stoves. Gives requirements for paper and strawboard used in wrapping and packing of parts, woods for crates grouped according to strength and nail holding power, permissible moisture and defects in lumber, dimensions of crate parts, nails and nailing requirements, construction of three-way corner, bracing, cushioning with rubber bushing washers, and methods of packing.

National Furniture Warehousemen's Assn. Household Goods, Packing and Shipping Specifications, undated. Recommendations on padding, wrapping, packing, and crating; itemized lists of kinds and amounts of materials needed for packing and crating each of many kinds of furniture and household articles.

U. S. Gov., Army Air Forces. Specification 40887-1; 1945. Preservation and Packaging of Aircraft Turrets.

U. S. Gov., Army-Navy Aeronautical Specification AN-C-118; 1944. Crate, Shipping and Packing; Aircraft and Aircraft Air-Frame Component Parts, General Specification for.

U. S. Gov., Interstate Commerce Commission. National Motor Freight Classification No. 7. Contains requirements for crates for shipment of glazed doors, sash, furniture, glass, lamp globes, shades or reflectors, crucibles, and mercury vapor lamps. Published by American Trucking Assns., Inc., Tariff Bureau. National Motor Freight Classification No. 7-1943.

U. S. Gov., U. S. Army, Signal Corps. Specification 72-35; 1942. Container; PG-51, Pigeon, 4-Bird, Transportation.

U. S. Gov., U. S. Army, Signal Corps. Specification 72-37; 1942. Crate; PG-49, Pigeon, 30-Bird, Transportation.

*References.*—Crate construction and crating, *see* 954.30; box shook and crating, *see* 421.4; nails, *see* 608.1; lined boxboard, corrugated boxboard, fibreboard, *see* 472.16, 472.23, 472.93; wrapping paper, *see* 477.

### 954.39 Miscellaneous Crate Specifications

U. S. Gov., U. S. Army, Corps of Engineers. Specification 23-1C; 1944. Boxes, Chests, and Crates; Engineer Equipment.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2488; 1939. Crate for Lanterns.

U. S. Gov., U. S. Army, Signal Corps. Specification 72-36; 1941. Cage; PG-50, Pigeon, 15-Bird, Training.

### 954.4 TUBES AS CONTAINERS

U. S. Gov., Interstate Commerce Commission. Regulations for Transportation of Explosives and Other Dangerous Articles. Shipping Container Specification 29. Mailing Tubes. Includes requirements for cushioning, construction, and marking. Published by American Trucking Assns., Inc., Tariff Bureau, and by Assn. of American Railroads, Bureau of Explosives.

U. S. Gov., U. S. Army, Corps of Engineers. Specification 42-7A; 1943. Tubes; Paper Storage.

U. S. Gov., U. S. Army, Medical Dept. Specification 19-7C; 1939. Case; Mailing

## 955. BOTTLES, CARBOYS, FLASKS, JARS, AND DEMIJOHNS

### 955.0 GENERAL ITEMS

American Society for Testing Materials, C 147-43; 1943. Method of Hydrostatic Pressure Test on Glass Containers. For determination of breaking strength of narrow-mouth glass containers and serviceability of pressure containers. Covers apparatus, sampling, procedure, and report.

American Society for Testing Materials, C 148-43; 1943. Method of Polariscopic Examination of Glass Containers. For determining the relative annealing stress in glass containers by comparison with reference standards. Covers apparatus, sampling, procedure, and report.

American Society fot Testing Materials, C 149-43; 1943. Method of Thermal Shock Test on Glass Containers. For determining relative resistance of commercial glass containers (bottles and jars) to temperature changes (thermal shock) in service such as washing, pasteurization, or "hot-pack" processes, etc. Gives requirements for apparatus, sampling, procedure, and report.

Glass Container Assn. of America. Standard Glass Finish Blue Print. Drawing 2; 1935. Capacity, Weight, and Body Tolerances Glass Containers Not Including Milks, Pressure Bottles, or Pressed Ware.

Glass Container Assn. of America. Standard Glass Finish Blue Print. Drawing 42; 1941. Finish Requirements for Half and Gallon Containers With Handles.

Glass Container Assn. of America. Standard Glass Finish Blue Print. Drawing CF-640; 1938. Cork Finish for Narrow Mouth French Square Bottle.

Glass Container Assn. of America. Standard Glass Finish Blue Print. Drawing 1100; 1939. Beacon Finish.

Glass Container Assn. of America. Lug Amerseal Angle Straight Finishes. Standard Glass Finish Blue Prints. Drawing 1204; 1939. Two Lug Amerseal A-S Finish. Drawing 1404; 1939. Four Lug Amerseal A-S Finish. Drawing 1604; 1939. Six Lug Amerseal A-S Finish.

Glass Container Assn. of America. Standard Glass Finish Blue Print. Drawing 1205; 1939. Templates for Cam-Off or Optional Stop.

Glass Container Assn. of America. Combination Screw Cap and Friction Cap Condiment Finishes. Standard Glass Finish Blue Prints. Drawing 2008; 1940. Combination Goldy Crown and Screw Cap Condiment Finish. Drawing 2258; 1940. Combination Goldy Crown and Screw Cap Condiment Finish. Drawing 2352; 1940. Short Combination Goldy Crown and Screw Cap Condiment Finish. Drawing 2506; 1940. Combination Goldy Crown and Friction Cap Condiment Finish. Drawing 2756; 1940. Combination Goldy Crown and Friction Cap Condiment Finish. Drawing 2852; 1940. Short Combination Goldy Crown and Friction Cap Condiment Finish.

Glass Container Assn. of America. All Glass Sprinkler Tops. Standard Glass Finish Blue Prints. Drawing 3006; 1939. All Glass Sprinkler Top. Drawing 3102; 1939. All Glass Sprinkler Top, Drain Back or Concave Style With Sealing Ring. Drawing 3202; 1939. All Glass Sprinkler Top, Nib Opening. Drawing 3300; 1937. All Glass Sprinkler Top, Drain Back or Concave Style.

Glass Container Assn. of America. Thread Finishes. Standard Glass Finish Blue Prints. Drawing 4042; 1941. Shallow Continuous Thread Finish (Sizes 18-120). Drawing 4031; 1933. Diameter Gauges—Shallow Continuous Thread Finish (Sizes 35-120). Drawing

4033; 1936. Diameter Gauges—Shallow Continuous Thread Finish (Sizes 18-33). Drawing 4102; 1935. Medium Continous Thread, Concealed Ball Finish. Drawing 4154; 1943. Tall Continuous Thread, Concealed Ball Glass Finish. Drawing 4258; 1943. Shallow Continuous Thread Finish (Sizes 8-15). Drawing 4255; 1933. Diameter Gauges—Shallow Continuous Thread Finish. Drawing 4300; 1939. Combination Continuous Thread and Pour Out Finish. Drawing 4400; 1942. Pressed Ware Shallow—Continuous Thread Finish. Drawing 4518; 1941. Deep Continuous Thread Finish. Drawing 4513; 1931. Diameter Gauges—Deep Continuous Thread Finish.

Glass Container Assn. of America. Crown Finishes. Standard Glass Finish Blue Prints. Drawing 6008; 1941. Crown Finish, for Carbonated Beverage and Export Beer Bottle. Drawing 6100; 1941. Crown Finish, for Steinie Beer Bottle. Drawing 6200; 1941. Crown Finish, for Stubby Beer Bottle. Drawing 6500; 1944. Crown Glass Finish, for Single Trip Beer Bottles. Drawing 7008; 1944. Large Size Crown Glass Finish.

Glass Container Assn. of America. Standard Glass Finish Blue Print. Drawing 8000; 1941. Anchor Hocking—N Finish.

Glass Container Assn. of America. Standard Glass Finish Blue Prints. Drawing 9000; 1943. Repeal Bead for 28 G.C.A. 400 Finish.

Glass Container Assn. of America. Standard Glass Finish Blue Print. Drawing 9100; 1943. Bail Eyelet Glass Finish.

Glass Container Assn. of America. Kork-N-Seal Finishes. Standard Glass Finish Blue Prints. Drawing 11010; 1941. Kork-N-Seal Standard Finish. Drawing 11102; 1941. English Kork-N-Seal Finish. Drawing 11256; 1941. Kork-N-Seal Tamper-Proof Finish. Drawing 11502; 1941. Kork-N-Seal Pouring Lip Finish.

Glass Container Assn. of America. Standard Glass Finish Blue Print. Drawing 12004; 1944. Flip Seal Glass Finish.

Glass Container Assn. of America. Standard Glass Finish Blue Prints. Drawing 13008; 1936. Three and Four Lobe Duplex Glass Finish. Drawing 13003-A; 1930. Duplex Glass Finish Neck Gauge. Drawing 13003-B; 1930. Duplex Glass Finish Cam Depth Gauge. Drawing 13003-C; 1930. Duplex Glass Finish Over-All Cam Gauge.

Glass Container Assn. of America. Uniplex Seal Finish and Gauges. Standard Glass Finish Blue Prints. Drawing 13102; 1940. Uniplex Seal Finish. Drawing 13101; 1940. Uniplex Finish Gauges—Neck, Cam Depth, and Over-All Cam Gauges.

Glass Container Assn. of America. Cap Band Finishes. Standard Glass Finish Blue Prints. Drawing 14006; 1937. Band Cap Finish. Drawing 14003; 1931. Diameter and Profile Gauges—Band Cap Finish. Drawing 14252; 1937. Band Cap Finish. Drawing 14251; 1937. Band Cap Finish—Diameter and Profile Gauges.

Glass Container Assn. of America. Anchor or Friction Finishes and Anchor Bead Finishes. Standard Glass Finish Blue Prints. Drawing 15004; 1931. Anchor or Friction Finish, for Pressed Tumblers only. Drawing 15005; 1935. Diameter Gauges—Anchor Friction Finish. Drawing 15250; 1931. Anchor or Friction Finish—for Jars Only. Drawing 15508; 1937. Anchor Bead Finish. Drawing 15505; 1935. Diameter Gauges—Anchor Bead Finish.

Glass Container Assn. of America. Roll on Finishes. Standard Glass Finish Blue Prints. Drawing 16008; 1941. Roll On Glass Finish. Drawing 16001; 1929. Diameter Gauges—R.O. Finish (Sizes 18-83). Drawing 16210; 1941. Pilfer-Proof R.O. Glass Finish. Drawing 16306; 1941. Tamper-Proof and Alter-Proof R.O. Glass Finish.

Glass Container Assn. of America. Standard Glass Finish Blue Print. Drawing 16406; 1941. Roverseal Glass Finish.

Glass Container Assn. of America. Friction Pry-Off Finishes. Standard Glass Finish Blue Prints. Drawing 17101; 1944. Diameter Gauges for Friction Pry-Off Glass Finish. Drawing 17106; 1943. Friction Pry-Off Finish. Drawing 17204; 1944. Deep Friction Pry-Off Finish.

Glass Container Assn. of America. Goldy Finishes. Standard Glass Finish Blue Prints. Drawing 18004; 1931. Goldy Glass Finish Style "HS". Drawing 18003; 1934. Goldy Glass Finish—Diameter Gauges. Glass Container Assn. of America. Standard Glass Blue Print. Drawing 50000; 1938. Can Thread Style Finish.

National Assn. of Dyers and Cleaners of the U. S. and Canada. The Spotting Department, 1940. Includes recommendations for types of bottles for use in spotting department.

## 955.1 BOTTLES

American Bottlers of Carbonated Beverages. Educational Bulletin 4; 1930. Bottle Simplification. Recommended practice on sizes of bottles as a result of a conference under auspices of Div. of Simplified Practice of National Bureau of Standards, Standard Capacities, main dimensions, and weight of glass for soda and imported ginger ale shapes, water and water shape ginger ales, beers, export, select or C.S. shape.

American Bottlers of Carbonated Beverages. Educational Bulletin 4; 1930. Crown Finish for Beverages Bottles. Standard dimensions and shape of bottle top, identical with No. 600 glass finish of the Glass Container Assn.

American Hospital Assn., 16-4. Prescription Bottles. Covers one grade; rectangular or oval with narrow mouth and cork stopper closure; rectangular or oval with narrow mouth and screw cap closure; french square with narrow mouth and screw cap closure; and in capacities in fluid ounces of 1/2, 1, 2, 4, 8, 16, and 32. Based on U. S. Federal Specification DD-B-591a.

American Hospital Assn., 64-1. Vacuum and Insulated Bottles and Jugs. Covers three types. Based on U. S. Gov. Federal Specifications RR-B-596.

Glass Container Assn. of America. Standard Glass Container Blue Prints. Drawing C-128-A; 1941. Steinie Shape Beer Bottle. Drawing C-130-A; 1941. Ale Shape Bottle. Drawing C-146-A; 1941. Export Shape Beer Bottle. Drawing C-150-A; 1941. Select Shape Beer Bottle. Drawing C-190-A; 1941. Champagne Shape Beer Bottle. Drawing C-184; 1939. Single Trip Beer Bottle.

Glass Container Assn. of America. Standard Glass Container Blue Prints. Drawing C-202; 1938. Vinty Wine Bottle. Drawing C-240; 1940. Round Wine Bottle.

Glass Container Assn. of America. Standard Glass Container Blue Print. Drawing C-260; 1939. Round Brandy Bottle.

Glass Container Assn. of America. Standard Glass Container Blue Prints. Drawing C-302; 1938. Round Stubby Catsup Bottle. Drawing C-310; 1938. Medium Height Catsup Bottle.

Glass Container Assn. of America. Standard Glass Container Blue Print. Drawing C-324; 1938. Round Tomato Juice, Fruit Juices, Syrup, and Vinegar Bottle.

Glass Container Assn. of America. Standard Glass Container Blue Print. Drawing C-344; 1938. Squat Round Vinegar Bottle.

Glass Container Assn. of America. Standard Glass Container Blue Print. Drawing C-362; 1939. Round Stubby Juice Bottle.

Glass Container Assn. of America. Standard Glass Container Blue Print. Drawing C-408; 1939. Oval Stubby Ammonia Bottle.

Glass Container Assn. of America. Standard Glass Container Blue Print. Drawing C-424; 1938. Round Stubby Hypochloride Bottle.

Glass Container Assn. of America. Standard Glass Container Blue Print. Drawing C-440; 1938. Stubby Rubbing Alcohol Bottle.

Glass Container Assn. of America. Standard Glass Container Blue Print. Drawing C-604; 1939. Castor Oil Oval.

Glass Container Assn. of America. Standard Glass Container Blue Print. Drawing C-624; 1939. Boston Round Bottle.

Glass Container Assn. of America. Standard Glass Container Blue Print. Drawing C-642; 1939. Narrow Mouth French Square Bottle.

Glass Container Assn. of America. Standard Glass Container Blue Print. Drawing C-660; 1939. Round Hydrogen Peroxide Bottle.

Glass Container Assn. of America. Standard Glass Container Blue Prints. Drawing C-680; 1939. N/M Jug Handled Gallon. Drawing C-690; 1939. N/M Round Gallon Bottle.

Glass Container Assn. of America. Standard Glass Container Blue Print. Drawing C-740; 1939. Tapered Oblong Extract Bottle.

U. S. Gov., Dept. of Commerce, National Bureau of Standards, H 29; 1942. Specifications, Tolerances, and Regulations for Commercial Weighing and Measuring Devices. Lubricating-Oil Bottles. Includes all bottles used for the sale of lubricating oils for immediate delivery to the crankcase of a motor vehicle, whether or not the bottle is used to determine the quantity of oil sold and whether or not it is sealed with a cap or some other device. Detail requirements are given relative to the construction of bottles, as well as allowable tolerances.

U. S. Gov., Dept. of Commerce, National Bureau of Standards, H 29; 1942. Specifications, Tolerances, and Regulations for Commercial Weighing and Measuring Devices. Milk Bottles. Shall be construed to include all glass bottles used for the purpose of the measurement and delivery of milk, cream, and buttermilk, at retail, and also other containers which are employed for this purpose. Specification requirements are given for the construction of milk bottles and allowable tolerances.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R10-27; 1927. Milk and Cream Bottles and Bottle Caps. This recommendation establishes a schedule of standard sizes, capacities, and dimensions of milk and cream bottles, and sizes of caps for these bottles. Sponsored by the Glass Container Assn. of America.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R123-43; 1943. Carbonated Beverage Bottles. This recommendation establishes a list of capacities, heights, diameters, and weights of glass as standards for stock (nonreturnable or plain type) carbonated beverage bottles. Covers water shape, steinie shape, and soda shape of round beverage bottles.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R131-35; 1935. Glass Containers for Mayonnaise and Kindred Products. This recommendation establishes a list of stock sizes of glass containers for mayonnaise and kindred products.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R148-33; 1933. Glass Containers for Cottage Cheese and Sour Cream. This recommendation establishes a schedule of sizes and dimensions of glass containers for cottage cheese and sour cream. Initiated by the International Assn. of Milk Dealers, Milk Cap Statistical Bureau, and Glass Container Assn. of America.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R196-42; 1942. Glass Containers for Green Olives (Capacities, Dimensions, and Packaging). Establishes 12 bottle sizes in lieu of at least 90 different varieties of bottles that have been used. Gives requirements for trade designation, style, capacity, maximum weight of glass, dimensions, finish size, and number of packages to shipping case.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R197; 1942. Glass Containers for Maraschino Cherries (Capacities, Dimensions, and Packaging). Covers reduction in variety and sizes for the benefit of packers, bottle manufacturers, distributors, and consumers. Gives requirements for package sizes, capacity, weight of glass, height and dimensions, finish, and number of ~~packages~~ to shipping case for vase-shaped bottle sizes for retail and large utility or institutional sizes.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R 203-44; 1944. Containers and Packages for Household Insecticides (Liquid Spray Type). Gives various dimensions for retail packages (Boston round bottle and glass jug) for pint, quart, gallon bottle, and gallon jug; and covers industrial packages (5-gal. and 54-gal. steel drums). Sponsored by National Assn. of Insecticide and Disinfectant Mfrs., Inc.

U. S. Gov., Federal Specification DD-B-576; 1942. Bottles; Dropping. Covers two types—(I) with ground-in, grooved-glass stoppers; and (II) with ground-in glass pipette dropper with rubber bulb; one grade, two classes—amber and clear glass; and two sizes—30 cc. and 60 cc. Gives requirements for material, workmanship, annealing, composition, construction, and dimensions; methods of sampling, inspection, and test; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification DD-B-591a; 1941. Bottles; Prescription. Covers two types—(I) cork stopper closure, in one class—(A) rectangular or oval, with narrow mouth; and (II) screw cap closure, in two classes—(A) rectangular or oval, with narrow mouth and (B) French square, with narrow mouth; in the following sizes—1/2, 1, 2, 4, 8, 16, and 32 fluid ounces. Gives requirements for material, workmanship, finish, graduations, shape, and variations; methods of sampling and inspection; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification RR-B-596; 1938. Bottles and Jugs; Vacuum and Insulated. Covers three types—(I) cylinder, screw-top; (II) pitcher or carafe; and (III) jug; and two classes—(A) glass—inner container (vacuum) and (B) metal—inner container (insulated). Gives requirements for outer and inner containers and caps; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., Marine Corps Specification, 1923. Bottle; Water, 5-Gallon.

U. S. Gov., Navy Dept. Specification 57B15; 1941. Bottles; Shelf, Pharmaceutical.

U. S. Gov., Navy Dept. Specification 57L8; 1941. Labels; Glass, Shelf-Bottle.

U. S. Gov., U. S. Army, Chemical Warfare Service. Specification 97-54-24; 1929. Bottle; Glass, 4-Ounce.

U. S. Gov., U. S. Maritime Commission. Specification 63-MC-9; 1943. Bottles; Glass, Water. Covers one grade of blown glass water bottles in two types—(I) stateroom and (II) saloon. Gives general requirements, material, workmanship, design, dimensions, and capacity; sampling, inspection, and methods of test; and packaging, packing, and marking.

*References.*—Bottle top finishes, *see* 955.0; vinegar bottle for table use, *see* 523.1; sealing wax for bottles, *see* 719.59; bottles for medicine, *see* 915.37.

## 955.2 CARBOYS

Manufacturing Chemists' Assn. of the U. S. Manual Sheet C-1 (for Shippers). Carboys, Glass-Boxed (I.C.C.-1A)—

Service Requirements. Recommended Practice; adopted 1935, revised 1942. Includes recommendations for plant conditions, storage, handling, inspection, maintenance, testing, washing, filling, closing devices, and loading and bracing boxed carboys filled with inflammable and corrosive liquids; correct method for loading a carload of empty boxed carboys in box car; shipping; and refers to U. S. Dept. of Agriculture, Food, Drug, and Insecticide Administration, "Service and Regulatory Announcements—Caustic Poison No. 2," Sheet S.R.A., C.P. No. 2, Apr. 9, 1928, for Internal and External Antidotes.

Manufacturing Chemists' Assn. of the U. S. Manual Sheet C-2 (for Consignees). Carboys, Glass-Boxed (I.C.C.-1A)—Handling and Storing, When Filled With, or Last Containing Any Product Authorized for Shipment Therein. Recommended Practice, adopted 1935. Includes recommendations for handling, special trucks to handle carboys, storage of filled boxed carboys, opening, emptying, handling, storage, and loading empty boxed carboys, special precautions, and refers to U. S. Dept. of Agriculture, Food, Drug, and Insecticide Administration "Service and Regulatory Announcements—Caustic Poison No. 2," Sheet S.R.A., C.P. No. 2, Apr. 9, 1928, for Internal and External Antidotes.

Manufacturing Chemists' Assn. of the U. S. Manual Sheet C-3. Carboy Bottle, Glass (13-Gallon, Cylindrical, Straight Side—When Used for Any Product Authorized for Shipment Therein). Standard; adopted 1936, revised 1943. Includes specification for two types—(a) with plain mouth; (b) with ground mouth and vented or unvented ground-in glass stopper to fit; covers design, capacity, weight, glass, manufacture, marking, and inspection; and drawings showing dimensions and embossing.

Manufacturing Chemists' Assn. of the U.S. Manual Sheets C-5 and C-6. Carboys, Glass, Boxed—Warning Labels. When used for any product authorized for shipment therein, except nitric acid (C-5). Standard, adopted 1938. For carboys containing nitric acid (C-6). Standard, adopted 1939.

U. S. Gov., Army Air Forces. Specification 40768-1; 1944. Carboy; Five-Gallon Non-Vented (for Shipment and Storage of Acids).

U. S. Gov., Interstate Commerce Commission. Regulations for Transportation of Explosives and Other Dangerous Articles. Shipping Container. Specification 1A, Boxed Carboys (Glass, Earthenware, Clay, or Stoneware); Specification 1B, Boxed Lead Carboys; Specification 1C, Carboys in Kegs (Glass, Earthenware, Clay, or Stoneware). Includes requirements for manufacture of carboys, outside containers, and tests. Published by American Trucking Assns., Inc., Tariff Bureau, and Assn. of American Railroads, Bureau of Explosives.

U. S. Gov., Interstate Commerce Commission. Regulations for Transportation of Explosives and Other Dangerous Articles. Shipping Container Specification 1X. Boxed Carboys, 5 to 6 Gallons, for Export Only (Glass, Earthenware, Clay, or Stoneware). Single-Trip Container. Includes requirements for manufacture, marking, and tests. Published by American Trucking Assns., Inc., Tariff Bureau, and by Assn. American Railroads, Bureau of Explosives.

U. S. Gov., Interstate Commerce Commission. Regulations for Transportation of Explosives and Other Dangerous Articles. Shipping Container Specifications 28 and 28A. Metal Jacketed Head Carboys. Include requirements for size, test, construction, and marking. Published by American Trucking Assns., Inc., Tariff Bureau. and by Assn. of American Railroads, Bureau of Explosives.

U. S. Gov., Interstate Commerce Commission. Regulations for Transportation of Explosives and Other Dangerous Articles. Shipping Container Specification 34B. Aluminum Carboys. Includes requirements for material, construction, marking, and tests. Published by American Trucking Assns., Inc., Tariff Bureau, and by Assn. of American Railroads, Bureau of Explosives.

U. S. Gov., Navy Dept. Specification 51 C 35; 1943. Carboys, Glass, Five-Gallon; and Crates, Tilter-Top.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2280A; 1942. Bottle; Narrow Mouth, 5-Gallon Carboy.

*References.*—Sheet lead, methods of analysis of lead, *see* 651.5, 651.0.

## 955.3 FLASKS

Glass Container Assn. of America. Standard Glass Container Blue Print. Drawing C-222; 1939. Decorated Oval Wine Flask.

*References.*—Laboratory flasks, *see* 918.9.

## 955.4 JARS

Glass Container Assn. of America. Standard Glass Container Blue Print. Drawing C-704; 1939. Plain Round Wide Mouth Food Container Jar.

Glass Container Assn. of America. Standard Glass Container Blue Print. Drawing C-722; 1938. Oval Wide Mouth Food Container Jar.

Glass Container Assn. of America. Standard Glass Container Blue Print. Drawing C-760; 1941. Two-Pound Tabl-Serv Round Preserve Jar.

Glass Container Assn. of America. Standard Glass Container Blue Print. Drawing C-782; 1942. Economy Line Plain Round Jar.

Glass Container Assn. of America. Standard Glass Container Blue Print. Drawing C-800; 1939. Shellac and Paint Jars.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R91-32; 1932. Glass Containers for Preserves, Jellies, and Apple Butter. This recommendation establishes a list of stock sizes and capacities of glass containers for preserves, jellies, and apple butter. Sponsored by National Preservers Assn.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R196-42; 1942. Glass Containers for Green Olives (Capacities, Dimensions, and Packaging). Establishes 12 bottle sizes in lieu of at least 90 different varieties of bottles that have been used. Gives requirements for trade designation, style, capacity, maximum weight of glass, dimensions, finish size, and number of packages to shipping case.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R197; 1942. Glass Containers for Maraschino Cherries (Capacities, Dimensions, and Packaging). Covers reduction in variety and sizes for the benefit of packers,

bottle manufacturers, distributors, and consumers. Gives requirements for package sizes, capacity, weight of glass, height and dimensions, finish, and number of packages to shipping case for vase-shaped bottle sizes for retail and large utility or institutional sizes.

*References.*—Jar top finishes, *see* 955.0; jar for water cooler, *see* 955.6; rubber jar rings, *see* 208.6; sealing wax for jars, *see* 719.59.

### 955.5 DEMIJOHNS

### 955.6 WATER COOLERS

American Hospital Assn., 34-91. Ice-Cooled Water Coolers (Inverted-Bottle Type). Covers two types in 3- and 5-gal. capacities. Based on U. S. Gov. Federal Specification RR-C-571a.

U. S. Gov., Federal Specification 00-C-566a; 1944. Amendment 1; 1944. Coolers; Drinking-Water, Electric. Covers three types—(A) bubbler storage type, for marine use, air cooled; (B) bubbler storage type, for land use, air cooled; and (D) cafeteria storage type, for land use, air cooled. Gives requirements for materials, workmanship, cabinet, finish, top, bubblers, glass fillers, hardware, storage tanks, evaporators, tubing, thermal insulation, refrigerating mechanism, refrigerant, motor and control, piping, condenser, overload requirements, and details for each type; methods of sampling, inspection, and tests; and packing and marking for shipment.

U. S. Gov., Federal Specification RR-C-571a; 1939. Coolers; Water, Ice-Cooled (Inverted-Bottle Type). Covers two types—(I) stand and (II) cabinet; and two sizes—3- and 5-gal. Gives requirements for ice containers, water-cooling container, lid, service faucets, waste faucets, water bottles, stand, and finish; methods of inspection and tests; and requirements for packing and marking for shipment.

U. S. Gov., Navy Dept. Specification 63C4; 1941. Coolers (Fountains); Drinking-Water, Electric, Portable.

U. S. Gov., Panama Canal, Purchasing Dept. Specification for Electric Drinking-Water Coolers, 1941.

### 955.7 JUGS

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R 203-44; 1944. Containers and Packages for Household Insecticides (Liquid Spray Type). Gives various dimensions for retail packages (Boston round bottle and glass jug) for pint, quart, gallon bottle, and gallon jug; and covers industrial packages (5-gal. and 54-gal. steel drums). Sponsored by National Assn. of Insecticide and Disinfectant Mfrs., Inc.

U. S. Gov., Interstate Commerce Commission. Regulations for Transportation of Explosives and Other Dangerous Articles. Shipping Container Specification 31. Jugs in Tubs. Includes requirements for material, size, construction, cushioning, and marking. Published by American Trucking Assns., Inc., Tariff Bureau, and by Assn. of American Railroads, Bureau of Explosives.

### 955.9 MISCELLANEOUS GLASS CONTAINERS

U. S. Gov., U. S. Army, Chemical Warfare Service. Specification 96-61-17; 1941. Bucket; Glass, 5-Gallon.

## 956. CYLINDERS AND TANKS

### 956.1 CYLINDERS AS CONTAINERS

American Bureau of Shipping. Rules for the Classification and Construction of Steel Vessels, 1944. Seamless Steel Containers. Include rules for inspection and tests.

American Standards Assn., Z 48.1-1942. Marking Compressed Gas Cylinders To Identify Content. For Marking portable compressed gas cylinders so that their content may be readily identified to the extent necessary to prevent the probability of explosions or accidents from their misuse.

Compressed Gas Manufacturers' Assn. Safety Device Schedule, 1936. Recommendations for safety devices applied to cylinders of a capacity up to 1,000 lb. of water, in accordance with requirements of the Bureau of Explosives; classification as frangible disc, fusible plubs, combination frangible disc-fusible plugs, and pop valves; definitions, design and construction, and regulations of the Interstate Commerce Commission as to applications for various compressed and liquefied gases.

National Board of Fire Underwriters. Liquefied Petroleum Gases, No. 58; 1940. Standards for the design, installation, and construction of containers and pertinent equipment for storage and handling of liquefied petroleum gas. Gives basic rules and details for systems utilizing containers constructed in accordance with Interstate Commerce Commission Specifications, systems utilizing storage containers other than those constructed in accordance with I.C.C. specifications, containers and pertinent equipment for tank truck and trailers for the transportation of liquefied petroleum gases, containers and pertinent equipment for utilizing liquefied petroleum gas as a motor fuel, and appendices.

U. S. Gov., Army Air Forces. Specification 40754-1; 1944. Cylinder; Oxygen, Type A-6, Low Pressure, Portable.

U. S. Gov., Army-Navy Aeronautical Specification AN-C-51a-2; 1943. Cylinders; Nonshatterable, Oxygen.

U. S. Gov., Army-Navy Aeronautical Specification AN-C-73a; 1944. Cylinders; Nonshatterable, $CO_2$.

U. S. Gov., Army-Navy Aeronautical Specification AN-C-105; 1943. Cylinders; 0.280 Ounce Capacity, $CO_2$.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Handbook, H28; 1944. Screw-Thread Standards for Federal Services. Presents complete dimensional data upon which specifications may be based for threaded products for government requirements. Includes terminology (definitions and symbols); miscellaneous standardized product threads of American National thread form or American National Pipe-Thread form; and appendixes containing supplementary information of both a general and a technical nature, including such specifications as are not intended to be mandatory.

U. S. Gov., Federal Specification RR-C-901; 1936. Cylinders; Steel, Seamless, Type 3a (for Compressed Gases). Minimum capacity of 2,640 cu. in., which when charged with oxygen to a pressure of 2,000 lb. per square inch gage at a temperature of 70° F. (21.1° C.) will deliver 220 cu. ft. of the gas at the same temperature and a pressure of 30 in. of mercury. Gives

requirements for material, workmanship, construction, heat treatment, dimension and weight; methods of sampling, inspection, and tests; and requirements for marking.

U. S. Gov., Interstate Commerce Commission. Regulations for Transportation of Explosives and Other Dangerous Articles. Shipping Container. Specification 3A, Seamless Steel Cylinders (not over 1,000 lb.) water capacity, at least 150 lb. per square inch service pressure; Specification 3B, Seamless Steel Cylinders (service pressure at least 150 to not over 500 lb. per square inch); Specification 3C, Seamless Steel Cylinders (service pressure at least 90 to not over 300 lb. per square inch); Specification 3D, Seamless Steel Cylinders (not over 125 lb. water capacity, service pressure must be 480 lb. per square inch); Specification 3E, Seamless Steel Cylinders (must be 1,800 lb. per square inch). Includes requirements for type and size, service pressure, inspection, material, construction, tests, rejection, and marking. Published by American Trucking Assns., Inc., Tariff Bureau, and by Assn. of American Railroads, Bureau of Explosives.

U. S. Gov., Interstate Commerce Commission. Regulations for Transportation of Explosives and Other Dangerous Articles. Shipping Container Specification 3BN. Seamless Nickel Cylinders (not over 125 lb. water capacity, at least 150 to not over 500 lb. per square inch service pressure). Covers requirements for type, sizes, inspection, manufacture, thickness, heat treatment, and tests. Published by American Trucking Assns., Inc., Tariff Bureau, and by Assn. of American Railroads, Bureau of Explosives.

U. S. Gov., Interstate Commerce Commission. Regulations for Transportation of Explosives and Other Dangerous Articles. Shipping Container. Specification 4, Forge Welded Steel Cylinders (not over 1,000 lb. water capacity, service pressure must be 300 lb. per square inch); Specification 4A, Forge Welded Steel Cylinders (not over 1,000 lb. water capacity, service pressure at least 150 to not over 500 lb. per square inch). Covers requirements for type, size, service pressure, material, wall thicknesses, and tests. Published by American Trucking Assns., Inc., Tariff Bureau, and by Assn. of American Railroads, Bureau of Explosives.

U. S. Gov., Interstate Commerce Commission. Regulations for Transportation of Explosives and Other Dangerous Articles. Shipping Containers. Specification 4B, Welded and Brazed Steel Cylinders (not over 1,000 lb. water capacity, at least 150 to not over 500 lb. per square inch service pressure); Specification 4C, Welded and Brazed Steel Cylinders (not over 1,000 lb. water capacity, at least 90 to not over 300 lb. per square inch service pressure). Covers requirements for type, size, material, inspection, manufacture, wall thicknesses, and test. Published by American Trucking Assns., Inc., Tariff Bureau, and by Assn. of American Railroads, Bureau of Explosives.

U. S. Gov., Interstate Commerce Commission. Regulations for Transportation of Explosives and Other Dangerous Articles. Shipping Container Specification 8. Steel Cylinders With Approved Porous Filling for Acetylene, (service pressure of 250 lb. per square inch at 70° F.). Includes requirements for inspection and report, material, construction, tests, porous filling, rejected cylinders, tare weight, marking, report, and special types. Published by American Trucking Assns., Inc., Tariff Bureau, and by Assn. of American Railroads, Bureau of Explosives.

U. S. Gov., Interstate Commerce Commission. Regulations for Transportation of Explosives and Other Dangerous Articles. Shipping Container Specification 9. Steel Cylinders, Seamless, Welded or Brazen. Includes requirements for type inspection and report, material, construction, tests, porous filling, rejected cylinders, tare weight, marking, report, and additional type. Published by American Trucking Assns., Inc., Tariff Bureau, and by Assn. of American Railroads, Bureau of Explosives.

U. S. Gov., Navy Dept. Specification 51C24e; 1944. Cylinders; $CO_2$-Gas-Filled, for Inflatable Life Jackets.

U. S. Gov., Navy Dept. Specification 51C30a; 1944. Cylinders; Acetylene.

U. S. Gov., Navy Dept. Specification 51C36; 1944. Cylinders, $CO_2$-Gas-Filled, Commercial-Type, for Inflatable Life Belts.

U. S. Gov., Navy Dept. Specification 51F5a; 1943. Flasks; Steel (Nonshatterable), Seamless, for Storing Compressed Air.

U. S. Gov., U. S. Army, Army Air Forces. Specification 94-40321; 1940. Cylinder; Oxygen, Type G-1, Low Pressure.

U. S. Gov., U. S. Army, Army Air Forces. Specification 94-40355-A; 1945. Cylinder; Oxygen, Type D-2, Low Pressure.

U. S. Gov., U. S. Army, Army Air Forces. Specification 94-40356; 1942. Cylinder; Oxygen, Type F-2, Low Pressure.

U. S. Gov., U. S. Army, Army Air Forces. Specification 94-40642; 1944. Cylinder; Oxygen, Type H-2, Emergency.

U. S. Gov., U. S. Army, Army Air Forces. Specification 100-7-A; 1928. Cylinder; Standard Gas, 2,640 Cubic Inches.

U. S. Gov., U. S. Army, Chemical Warefare Service. Specification 96-91-3; 1932. Container; Portable, Chemical Cylinder, M11.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 100-13A; 1943. Miscellaneous Lubricant Container and Packaging.

## 956.2 TANKS

American Petroleum Institute, Div. of Production. Standard 12-E; 1944. Standard for Wooden Tanks, Tentative. This specification covers new material, represents minimum requirements, and is designated to provide the industry with a standard series of wooden tanks comprising adequate ranges of sizes in the various types required to meet oil field requirements, built in accordance with good modern manufacturing and erection practice. Covers types and sizes, materials, design, construction, erection, appurtenances, marking, and inspection and rejection.

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering, 1942. Specifications for Tank Hoops. Gives requirements for material, shape, spacing, threads, nuts, lugs, and workmanship.

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering, 1943. Specifications for Timber Substructures for Water Tank (50,000 and 100,000-Gal. Capacity). Gives requirements for timber, workmanship, painting, and treating; and drawings showing recommended types and designs.

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering, 1943. Specifications for Steel Substructures for Wood Water Tank (50,000 and 100,000-Gal. Capacity). Structure will consist of 12-post steel tower, complete in all details. Gives requirements for material, workmanship, and painting.

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering, 1944. Specifications for Welded Steel Tanks for Railway Water Service. Apply to the construction of fusion arc welded steel water storage tanks. Covers general requirements, materials, design, welding, testing, painting and inspection, and accessories and fittings.

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering, 1942. Specifications for Wood Water Tank (50,000 and 100,000-Gal. Capacity). Gives requirements for material, size, shape, bottom, staves, and workmanship.

Associated Factory Mutual Fire Insurance Companies. Specifications for Gravity Water Tanks and Steel Towers, Volume I. Structural Details, 1938. For wooden water tanks, standard sizes, form, kinds of lumber permitted for staves and bottom, hoops and steel shapes according to A.S.T.M. specifications, dead, live, and wind load computations, allowable unit stresses, details of design.

Associated Factory Mutual Fire Insurance Companies. Specifications for Gravity Water Tanks and Steel Towers, Volume II; 1940. Piping, Fittings, and Heating Systems. For water tanks, requirements for discharge pipe and fittings, expansion joint, filling, overflow, clean-out and drain, mill-use connections, water level indicator, valve pit or house, frostproof casings for pipes. Specifications for tank heating equipments, including method of determining necessary heater capacities.

National Board of Fire Underwriters. Gravity and Pressure Tanks, No.22; 1941. Standards for gravity tanks which are usually built of wood or steel and are often supported on towers, ordinarily of steel although reinforced concrete towers are sometimes used. Covers general information and recommendations, steel gravity water tanks, steel towers, wooden water tanks, foundations, approval, pipe connections and fittings, valve enclosures and frost protection, tank heating equipment, pressure tanks, figures, and tables.

National Board of Fire Underwriters. Dip Tanks, Including Hardening and Tempering Tanks, Flow Coat Work, No.34; 1941. Standards for use of tanks containing flammable liquids. Covers three classes—(A) tanks exceeding 10 sq. ft. in liquid surface area, (B) small tanks up to 10 sq.ft. in liquid surface area, and (C) all tanks which do not contain flammable solvents or with solvents having a flashpoint of over 100° F. Gives introduction, classification, general rules, special requirements, and special protection for dip tanks. Also details for hardening and tempering tanks and for flow coat work.

National Fire Protection Assn. National Fire Codes for Extinguishing and Alarm Equipment, 1943. Gravity and Pressure Tanks. Standards for the construction and installation of gravity and pressure tanks. Covers information and recommendations, steel gravity water tanks, steel towers, wooden water tanks, foundations, approval, pipe connections and fittings, valve enclosures and frost protection, tank heating equipments, and pressure tanks.

National Fire Protection Assn. National Fire Codes for Flammable Liquids, Gases, Chemicals, and Explosives, 1943. Dip Tanks (Containing Flammable Liquids). Covers classification of tanks, location, storage of flammable liquids, control of hazards, ventilation, construction and installation, hoods and curtains, automatic heat actuated devices, fire protection, and special requirements for various classes.

National Fire Protection Assn. National Fire Codes for Flammable Liquids, Gases, Chemicals, and Explosives, 1943. Flammable Liquids Ordinance, Suggested Ordinance Regulating the Use, Handling, Storage, and Sale of Flammable Liquids and the Products Thereof. Includes new and existing installations for three classes of liquids with flash point below 200° F. closed cup tester, definitions, general requirements, capacity and location of storage tanks, piping and appurtenances, petroleum products, paints, varnishes, etc. Appendix on safeguards for tanks in flooded regions.

National Fire Protection Assn. National Fire Codes for Flammable Liquids, Gases, Chemicals, and Explosives, 1943. Leakage From Underground Gasoline Tanks. Describes and analyzes a number of unusual cases of gasoline leakage and covers suggestions for the installation of tanks, suggested procedure for locating the source of underground gasoline leakage, and miscellaneous suggestions.

National Fire Protection Assn. National Fire Codes for Flammable Liquids, Gases, Chemicals, and Explosives, 1943. Liquefied Petroleum Gases. Standards for the design, installation, and construction of containers and pertinent equipment for the storage and handling of liquefied petroleum gases. Covers application of rules, basic rules, systems utilizing I.C.C. containers, systems utilizing containers other than I.C.C., tank trucks for liquefied petroleum gases, liquefied petroleum gas as a motor fuel, storage of containers not installed for use at final utilization point, and required sizes of safety valves for containers.

Underwriters' Laboratories, Inc. Standard for Inside Tanks for Oil Burners, Subject 80; 1934. Applies to steel tanks, of capacities of 275 U. S. gallons and less, intended for use in basements of buildings for the storage and supply of oil fuels for oil burners. Gives size and form, material and thickness, heads and seams, pipe connections, factory test, coating,

preparation for shipment, design test of assembly, drawings of joints, and instructions to inspectors.

U. S. Gov., Army Air Forces. Specification 28419-C (2); 1943. Tank; Fuel, Self-Sealing, Bulletproof, General Specification for.

U. S. Gov., Army Air Forces. Specification 28495-A-3; 1945. Tank; Jettison Fuel, General Specification for.

U. S. Gov., Army Air Forces. Specification No.40609; 1943. Cell; Fuel Storage, 1,000-Gallon.

U. S. Gov., Army Air Forces. Specification 40795; 1944. Tank; Aircraft Engine Preoiler, Type B-1.

U. S. Gov., Army-Navy Aeronautical Specification AN-V-7-2; 1944. Vibration Tests of Fuel Oil, and Miscellaneous Tanks; Process for.

U. S. Gov., Dept. of Agriculture, Forest Service. Specification No.345. Tank; Water, Canvas.

U. S. Gov., Dept. of Commerce, National Bureau of Standards, H29; 1942. Specifications, Tolerances, and Regulations for Commercial Weighing and Measuring Devices. Vehicle Tanks. This is an assembly used for the delivery of liquids, comprising a tank, which may or may not be subdivided into two or more compartments, mounted upon a wagon, automobile truck, or trailer, together with its accessory piping, valves, meters, etc. Covers specifications applicable both to vehicle tanks used as measures and to vehicle tanks equipped with meters. Allowable tolerances are also given on vehicle-tank compartments which are being tested for the first time and on subsequent tests.

U. S. Gov., Interstate Commerce Commission. Motor Vehicle Cargo Tank Specification MC300, MC301, MC302, and MC303. Cargo tanks to be mounted on and to form part of tank motor vehicles for transportation of inflammable liquids and poisonous liquids, class B. Tanks to be constructed of the following types of metal—MC300, mild (open hearth or blue annealed) steel; MC301, welded aluminum alloy, grade 3S; MC302, welded aluminum alloy, grade 52S; and 303, welded ferrous alloy, high-tensile steel. Published by American Trucking Assns., Inc., Tariff Bureau.

U. S. Gov., Interstate Commerce Commission. Motor Vehicle Cargo Tank Specification MC310 and MC320. Cargo tanks to be mounted or to form part of tank motor vehicles. MC310, primarily designed to apply to vehicles used for the transportation of corrosive liquids; and MC320, to apply to vehicles to be used for the transportation of liquid petroleum gases. Published by the American Trucking Assns., Inc., Tariff Bureau.

U. S. Gov., Marine Corps Specification, 1943. Tank, Oil, Pressure, for Burner, Oil, M-1942.

U. S. Gov., Navy Dept., Bureau of Yards and Docks. Specification 8Yd; 1934. Tanks; Steel and Wood.

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-272; 1943. Tank; Processing 4 by 5-Inch Film.

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-295; 1943. Tank; Photographic, Film Developing, 8 by 10-Inch Film.

U. S. Gov., U. S. Army, Army Air Forces. Specification 94-40454-A; 1944. Tank; Collapsible Water, Photographic.

U. S. Gov., U. S. Army, Corps of Engineers. Specification 6-34C; 1943. Tank; Storage, Canvas, Water, 3,000-Gallon.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 28-6C; 1942. Tank; Watering, M-1940.

*References.*—Tank cars, automobile tank trucks, *see* 726.1, 722.1; steel oil storage tanks, water tanks pressure tanks, *see* 605.23; range boilers, expansion tanks, fuel tanks, *see* 614.1, 614.3; concrete fuel oil tanks, *see* 518.71; steel plates for tanks, rivets, *see* 604., 608.4; lumber tank stock, *see* 413.1; steel tank hoops, *see* 604.22; methods of testing, general requirements for metals, *see* 600.1.

## 957. BAGS AND SACKS

### 957.1 CLOTH BAGS AND SACKS

U. S. Gov., Dept. of Agriculture, Forest Service. Specification No.31. Bag; Packsaddle.

U. S. Gov., Dept. of Agriculture, Forest Service. Specification MSF-35. Bag; Water, 2 and 5-Gallon.

U. S. Gov., Dept. of Agriculture, Forest Service. Specification No. 37. Bag; Water, Man Pack.

U. S. Gov., Dept. of Agriculture, Forest Service. Specification 56-2-S. Bag; Pack, for Linen Hose.

U. S. Gov., Dept. of Agriculture, Forest Service. Specification 247-60-S. Bag; Cloth, Lunch.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 6-12C; 1939. Bag; Canvas, Field, Olive-Drab, M1936.

### 957.11 Fuel Bags

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 6-212A; 1938. Bag; Canvas, Coal, 1-Bushel.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 6-213B; 1942. Bag; Canvas, Coal, 2-Bushel.

### 957.12 Mail Bags

U. S. Gov., Navy Dept. Specification 53B3a; 1937. Bags; Mailing, Cotton.

U. S. Gov., Treasury Dept., Procurement Div., No.551; 1942. Bags; Mailing, Cotton. Covers one type and grade in the following sizes—size 1, small, 3 in. wide by 4 in. deep; size 2, large, 4 1/2 in. wide by 8 in. deep. Gives requirements for construction, bag, stitching, seams, printing, on bag; tag; tag dimensions, printing on tag, and drawstring; methods of sampling, inspection, and test; and packaging, packing, and marking.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 6-226B; 1942. Bag; Canvas, Mail, With Leather Bottom, Top, and Locking Strap.

### 957.13 Sand Bags

U. S. Gov., Marine Corps Specification, 1942. Bag; Sand.

U. S. Gov., U. S. Army, Army Air Forces. Specification 6-43A; 1926. Bag; Sand.

U. S. Gov., U. S. Army, Corps of Engineers. Specification 14-7B; 1929. Bag; Sand, Burlap.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2546; 1939. Bag; Sand, X-Ray.

### 957.14 Tool Bags

Assn. of American Railroads, Telegraph and Telephone Section, 1-A-47; 1931. Lineman's Canvas Tool Bag ARA-1-A. Requirements for weight of cotton duck, leather, linen thread, steel frame, hardware, and workmanship, with dimensional drawing of bag.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 6-297; 1942. Bags; Canvas, Hardware, Rivets, Etc., for Chest, Supply, and Tool Sets.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 6-301; 1942. Roll; Tool, Canvas (Empty), for Tools Sets, Horseshoers'.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 6-302; 1942. Roll; Tool, Canvas, Saddlers' and Carpenters' (Empty), for Chest, Supply Saddlers' (Pack Artillery).

U. S. Gov., U. S. Army, Signal Corps. Specification 71-373; 1927. Bag; Type BG-44, Canvas, Tool.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-544; 1930. Tool Roll; Type BG-10, Cotton Duck.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-1054; 1941. Tool Roll; Type BG-30.

## 957.15 Clothes Bags

U. S. Gov., Marine Corps Specification, 1942. Bag; Clothing (Emergency Alternate).

U. S. Gov., Navy Dept. Specification 24 B 8b; 1943. Bags; Clothes.

## 957.19 Miscellaneous Cloth Bags

American Society for Testing Materials, D 205-39; 1939. Specifications and Methods of Test for Osnaburg Cement Sacks. Applies to Osnaburg cement sacks and to fabric used in their construction. Gives tolerances, samples, and details for osnaburg fabric and for osnaburg sacks.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, 1938. Burlap and Burlap Bags. Covers definition, properties, forms available, occurrences, grades, specifications substitutes, uses, and specifications for burlap bags.

U. S. Gov., Interstate Commerce Commission. National Motor Freight Classification No.7. Contains requirements for bags for shipment of calcium chloride, magnesium chloride, deodorants and disinfectants (other than medicinal), dust laying compound, flour, corn meal, rice, sugar, beans, grain flour, and insecticides. Published by American Trucking Assns., Inc., Tariff Bureau. National Motor Freight Classification No.7-1943.

U. S. Gov., Interstate Commerce Commission. Regulations for Transportation of Explosives and Other Dangerous Articles. Shipping Container Specification 36A. Lined Cloth Bags (Triplex). Includes requirements for capacity, material, construction, marking, and closing for shipment. Published by American Trucking Assns., Inc., Tariff Bureau, and by Assn. of American Railroads, Bureau of Explosives.

U. S. Gov., Interstate Commerce Commission. Regulations for Transportation of Explosives and Other Dangerous Articles. Shipping Container Specification 36B. Burlap Bags; Lined. Includes requirements for capacity, construction, marking, and closing for shipment. Published by American Trucking Assns., Inc., Tariff Bureau, and by Assn. of American Railroads, Bureau of Explosives.

U. S. Gov., Interstate Commerce Commission. Regulations for Transportation of Explosives and Other Dangerous Articles. Shipping Container Specification 45B. Bags; Cloth and Paper, Lined. Includes requirements for materials and construction, marking, and closing for shipment. Published by American Trucking Assns., Inc., Tariff Bureau, and by Assn. of American Railroads, Bureau of Explosives.

U. S. Gov., Marine Corps Specification, 1943. Bag; Canvas, Field, Olive-Drab, M-1942 (Complete).

U. S. Gov., Marine Corps Specification, 1944. Bag; Message, Drop and Pick-Up, MBG-1, With Streamer and Cord.

U. S. Gov., Marine Corps Specification, 1942. Bag; Water, Sterilizing, Complete With Cover and Hanger (Emergency Alternate).

U. S. Gov., Navy Dept. Specification 24B9b; 1944. Bags; Canvas, 800-Pound Capacity.

U. S. Gov., Navy Dept. Specification 24B10a; 1942. Bags; Hammock, Canvas.

U. S. Gov., Navy Dept. Specification 56B30c; 1942. Bags; Coffee.

U. S. Gov., Treasury Dept., Procurement Div., No.697; 1944. Covers; Hot-Water Bottle. Covers one type. Gives requirements for material, workmanship, description, fabric, tape, thread, stitching, and tolerance; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Treasury Dept., Procurement Div., No.700; 1944. Bags; Ice-Cap. Covers one type. Gives requirements for material, workmanship, fabrics, tape, thread, stitching, and tolerance; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Treasury Dept., Procurement Div., No.718; 1945. Bags; Cotton, for Seed and Soil Samples. Covers one Type. Gives requirements for material, workmanship, construction, size, minimum dimensions, weight per square yard, threads per inch, minimum breaking strength, and seams and stitching; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., U. S. Army, Corps of Engineers. Specification 6-259; 1939. Bag; Canvas, Carrying (Explosive), With Sling.

U. S. Gov., U. S. Army, Corps of Engineers. Specification 6-303; 1941. Case; Paddle.

U. S. Gov., U. S. Army, Medical Dept. Specification 6-250; 1938. Bags; Conveyor and Laundry.

U. S. Gov., U. S. Army, Medical Dept. Specification 6-272; 1939. Bag; Patient's.

U. S. Gov., U. S. Army, Medical Dept. Specification 6-279; 1939. Bag; Wardrobe.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2734; 1939. Bag; Buckshot, for Balkan Frame.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 6-206C; 1942. Bag; Feed, M-1938.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 6-218A; 1938. Sacks; Supply, Nos.1 and 2.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 6-223A; 1937. Bag; Grain, M-1912.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 6-227B; 1942. Bag; Canvas, Nail.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 6-245; 1937. Bag; Barrack.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 6-290; 1940. Bag, Candle; and Bag, Utensils (Outfit, Cooking, Cavalry Pack).

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 92-3A; 1940. Bag; Spare Parts; and Bag, Hair Canvas, Phillips Pack Saddle.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 92-S-9; 1939. Saddlebag; Canvas, M1924, Substitute.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 92-12; 1933. Sack; Harness, M-1911, for Artillery Harness.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 92-30A; 1942. Bag; Water, 30-Gallon, Pack Mule.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 92-S53; 1939. Bag; Cantle, Canvas, M1936, Substitute.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-510A; 1940. Bag; Type BG-49, Canvas, for Radio Parts.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-511A; 1939. Bag; Type BG-50.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-540; 1930. Cover; Type BG-51, Telephone.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-922B; 1942. Bag; Type BG-71, Radio Equipment.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-982; 1940. Bag; Types BG-72 and BG-73.

U. S. Gov., U. S. Army, Signal Corps. Specification 72-47; 1944. Message Bag; BG-121.

U. S. Gov., U. S. Maritime Commission. Specification 24-MC-2; 1940. Bags; Laundry. Shall be round-bottom type, in one grade, and shall be 57 in. in circumference, and 45 in. high, unless otherwise specified. Gives requirements for material, workmanship, construction, tolerances, sampling, inspection, and tests.

*References.*—Jute burlap, *see* 322.1; tolerances on fabrics, methods of testing, standard sizes and weights, *see* 303.0, 300.4, 300.6; stitches and stitching, *see* 300.7.

## 957.2 PAPER BAGS AND PAPER LINING FOR BOXES

American Hospital Assn., 55-1. Grocers' Kraft Paper Bags. Covers 1 type and 3 classes in 16 sizes each. Based on U. S. Gov. Federal Specification UU-B-36.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, 1938. Bags; Paper. Covers definition and kinds.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R42-43; 1943. Grocers Paper Bags. Covers four types of bags—self-opening (automatic), square, flat, and sack (satchel bottom). Establishes a simplified list showing sizes, minimum capacities, dimensions, and weights of paper for each type of bag; and symbols showing compliance with this recommendation.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R107-31; 1931. Glassine Bags. This recommendation establishes a simplified list of sizes for flat and square glassine paper bags.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R129-41; 1941. Notion and Millinery Paper Bags (used by department and specialty stores). This recommendation establishes a simplified list of stock sizes of notion and millinery paper bags for use by department and specialty stores. Gives tables showing bag number, size of bag, and basic weight of paper for notion and millinery paper bags and tapered paper bags. Sponsored by National Retail Dry Goods Assn.

U. S. Gov., Federal Specification UU-B-36a; 1943. Bags; Paper, Grocers. Covers three types—(I) bags, self-opening; (II) bags, square; and (III) bags, satchel-bottom. Gives requirements for sizes, weights, material, workmanship, and details for each type; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., Federal Specification UU-S-48; 1943. Amendment 2; 1944. Sacks; Paper, Shipping. Covers five types—(I) pasted open mouth, (II) sewn or open, (III) pasted valve, (IV) sewn valve, and (V) sewn open corner; and four classes—(A) unbleached heavy-duty shipping sack kraft paper, (B) asphalted kraft paper, (C) paraffined kraft paper, and (D) other papers as specified by the procuring agency. Gives requirements for paper, details for each type and class; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Interstate Commerce Commission. National Motor Freight Classification No.7. Contains requirements for bags for shipment of calcium chloride, magnesium chloride, deodorants and disinfectants (other than medicinal), dust laying compound, flour, corn meal, rice, sugar, beans, grain flour, and insecticides. Published by American Trucking Assns., Inc., Tariff Bureau. National Motor Freight Classification No.7-1943.

U. S. Gov., Interstate Commerce Commission. Regulations for Transportation of Explosives and Other Dangerous Articles. Shipping Container Specification 2D. Inside Containers—Duplex Paper Bags. Includes requirements for material, construction, and test. Published by American Trucking Assns., Inc., Tariff Bureau, and by Assn. of American Railroads, Bureau of Explosives.

U. S. Gov., Interstate Commerce Commission. Regulations for Transportation of Explosives and Other Dangerous Articles. Shipping Container. Specification 2J, Inside Containers—Waterproof Paper Bags for Linings; Specification 2K, Inside Containers—Paper Bags for Linings; Specification 2L, Lining for Boxes (Kraft Paper Bag Option). Cover requirements for material, test, and construction. Published by American Trucking Assns., Inc., Tariff Bureau, and by Assn. of American Railroads, Bureau of Explosives.

U. S. Gov., Interstate Commerce Commission. Regulations for Transportation of Explosives and Other Dangerous Articles. Shipping Container Specification 2M. Waterproofed Paper Lining. Covers strength, construction, and shall fully protect contents at top of box. Published by American Trucking Assns., Inc., Tariff Bureau, and by Assn. of American Railroads, Bureau of Explosives.

U. S. Gov., Interstate Commerce Commission. Regulations for Transportation of Explosives and Other Dangerous Articles. Shipping Container Specification 44B. Paper Bags. Includes requirements for construction, closure, tests, and marking. Published by American Trucking Assns., Inc., Tariff Bureau, and by Assn. of American Railroads, Bureau of Explosives.

U. S. Gov., Interstate Commerce Commission. Regulations for Transportation of Explosives and Other Dangerous Articles. Shipping Container Specification 45B. Bags; Cloth and Paper, Lined. Includes requirements for materials and construction, marking, and closing for shipment. Published by American Trucking Assns.,

Inc., Tariff Bureau, and by Assn. of American Railroads, Bureau of Explosives.

U. S. Gov., Navy Dept. Specification 53B9e; 1943. Bags; Paper, Multiwall, Portland-Cement.

U. S. Gov., U. S. Army, Chemical Warfare Service. Specification 19-8A; 1929. Liner; Gas-Mask Packing Box.

U. S. Gov., Veterans Administration. Specification VA-G-65; 1933. Bags; Paper, Grocer's.

*References.*—Bag and wrapping paper, *see* 477; methods of testing paper, *see* 470.3.

### 957.3 CARRYING BAGS

U. S. Gov., Dept. of Agriculture, Forest Service. Specification 56-1. Bag; Pack Board.

U. S. Gov., U. S. Army, Army Air Forces. Specification 6-289; 1940. Bag; Clothing, Type B-4, Aircraft.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-640; 1932. Bag; Type GB-53, Canvas, for Carrying Cords.

### 957.4 RUBBER BAGS

*References.*—Rubber bags and bottles, *see* 204.2.

### 957.9 MISCELLANEOUS BAGS AND SACKS

U. S. Gov., Dept. of Agriculture, Forest Service. Specification 247-54-S. Bag; Cellophane, Lunch.

## 958. CHESTS, TRUNKS, AND SUITCASES

### 958.1 ENGINEERS' CHESTS AND KITS

U. S. Gov., U. S. Army, Corps of Engineers. Specification 23-1C; 1944. Boxes, Chests, and Crates; Engineer Equipment.

U. S. Gov., U. S. Army, Corps of Engineers. Specification 23-6; 1922. Chest; Drafting, Company Engineer.

U. S. Gov., U. S. Army, Corps of Engineers. Specification 23-7; 1922. Chest "A"; Drafting, Regimental, Engineer.

U. S. Gov., U. S. Army, Corps of Engineers. Specification 23-8; 1922. Chest "B"; Drafting, Regimental, Engineer.

U. S. Gov., U. S. Army, Corps of Engineers. Specification 23-9; 1922. Chest; Drafting, Batallion, Artillery.

U. S. Gov., U. S. Army, Corps of Engineers. Specification 23-10; 1922. Crate "C"; Drafting, Regimental, Engineer.

U. S. Gov., U. S. Army, Corps of Engineers. Specification 23-13; 1922. Chest; Tool, Pioneer, Engineer.

U. S. Gov., U. S. Army, Corps of Engineers. Specification 23-40; 1926. Chest "A"; Electric Lighting Set, Portable, Engineer.

U. S. Gov., U. S. Army, Corps of Engineers. Specification 23-41; 1926. Chest "B"; Electric Lighting Set, Portable, Engineer.

U. S. Gov., U. S. Army, Corps of Engineers. Specification 23-42; 1926. Chest "C"; Electric Lighting Set, Portable, Engineer.

U. S. Gov., U. S. Army, Corps of Engineers. Specification 23-55A; 1927. Chest; Drafting and Duplicating Equipment.

U. S. Gov., U. S. Army, Corps of Engineers. Specification 42-30; 1938. Chest; Sketching, Equipment.

### 958.2 TOOL CHESTS AND KITS

Assn. of American Railroads, Telegraph and Telephone Section, 2-G-68; 1932. Parts and Tool Carrying Case. Case constructed of three-ply cotton wood, lined with japanned truck iron, covered with black vulcanized case fiber, leather covered handle, and with folding inner tray of the cantilever type, and working drawings of construction.

U. S. Gov., Army Air Forces. Specification 24846 (1); 1943. Kit; Gun Bore Sight, Type J-2.

U. S. Gov., Army Air Forces. Specification 24870; 1943. Kit; Projector Boresight, Type Q-1.

U. S. Gov., Army Air Forces. Specification 40447; 1942. Case; Tool, Mechanics', Type G-2, Grease Gun.

U. S. Gov., Army Air Forces. Specification 40652; 1943. Kit; Tire Removing and Mounting, Type S-1.

U. S. Gov., Army Air Forces. Specification 40684 (1); 1944. Kit; Cable Vulcanizing, Type X-1, Portable, Field Lighting.

U. S. Gov., Army Air Forces. Specification 40696-A-3; 1944. Kit; Acrylate and Cellulose Acetate, Utility Repair, Type Y-1.

U. S. Gov., Army Air Forces. Specification 40714 (3); 1944. Case; Mechanics' Tool, Type G-4.

U. S. Gov., Army Air Forces. Specification 40715 (3); 1944. Case; Mechanics' Tool, Type G-5.

U. S. Gov., Army Air Forces. Specification 40758-4; 1944. Kit; Pressure Demand Oxygen Maintenance, Type CC-1.

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-209; 1942. Kit; Tool and Repair, Photographic, Type G-1, Aerial Camera.

U. S. Gov., U. S. Army, Army Air Forces. Specification 94-40752; 1944. Case; Mechanics' Tool, Type G-6, Grease Gun.

U. S. Gov., U. S. Army, Army Air Forces. Specification 94-40760; 1944. Kit; Oxygen Testing, Type K-2, Squadron-Aircraft.

U. S. Gov., U. S. Army, Chemical Warfare Service. Specification 97-54-1B; 1937. Kit; Repair, Company, Gas-Mask, MII.

U. S. Gov., U. S. Army, Corps of Engineers. Specification 23-60A; 1930. Chest; Blacksmith, Engineer.

U. S. Gov., U. S. Army, Corps of Engineers. Specification 23-63A; 1926. Chest; Pipe-Fitting Tools.

U. S. Gov., U. S. Army, Corps of Engineers. Specification 23-64; 1923. Chest; Sign Painting, Engineer.

U. S. Gov., U. S. Army, Corps of Engineers. Specification 23-65; 1924. Crate; Sign Painting, Engineer.

U. S. Gov., U. S. Army, Corps of Engineers. Specification 23-101; 1930. Chest; Carpenter, Platoon, Engineer.

U. S. Gov., U. S. Army, Corps of Engineers. Specification 23-102A; 1931. Chest; Demolition, Platoon, Engineer.

U. S. Gov., U. S. Army, Corps of Engineers. Specification 23-103; 1930. Box; Tinsmiths' Equipment.

U. S. Gov., U. S. Army, Corps of Engineers. Specification 42.1-4; 1921. Kit; Repair, Steel Tape.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2953; 1939. Chest; Tool, Empty, Medical.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 6-170B; 1942. Kit; Tool, Canvas, M1921.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 6-221; 1934. Kit; Tool, Canvas, Waterproof, Satchel Type, 18-Inch.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 6-296; 1941. Rolls; Tool, Canvas, Bits and Files, and Chisels (Empty), for Tool Set, Carpenters' and Wheelwrights'.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 9-85; 1940. Roll; Pioneer, M-1, Complete With Tools.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 23-24A; 1942. Chest; Tool, Blacksmith, Empty, for Tool Set; Complete With Tool, Blacksmith No. 1.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 23-25A; 1942. Chest; Tool, Carpenters' and Wheelwrights'.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 23-27; 1921. Chest; Tool, Horseshoers' and Saddlers'.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 29-96; 1941. Box; Tool, Metal, Empty, for Range, Field, M-1937.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 92-8A; 1938. Roll; Tool, Canvas, Phillips Pack Saddle, With Contents.

U. S. Gov., U. S. Army, Signal Corps. Specification 17-164A; 1942. Tool Sets; Types TE-6 and TE-11, Mechanics'.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-257A; 1936. Tool Equipment; Type TE-5, Signal Man's Pocket Tool Kit.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-435A; 1936. Tool Equipment; Type TE-29, Pocket Tool Kit.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-619; 1931. Case; Type CS-38, for Carrying Radio Tools.

## 958.3 TRUNKS AND SUITCASES

U. S. Gov., Interstate Commerce Commission. Regulations for Transportation of Explosives and Other Dangerous Articles. Shipping Container Specifications 32A, 32B, 32C, and 32D. Metal Cases and Trunk. Includes requirements for gage standards, covers, edge protection, bottom protection, hinges, carrying handles, closing devices, rivets, rivet reinforcement, lining, metal partitions, protective coating, tests, and marking—32A, metal cases, riveted or lock-seamed; 32B, metal cases, welded or riveted; 32C, trunks; and 32D, metal boxes for old and worn-out motion-picture film no longer exhibitable. Published by American Trucking Assns., Inc., Tariff Bureau, and by Assn. of American Railroads, Bureau of Explosives.

U. S. Gov., Navy Dept. Specification 57S15; 1941. Suitcases; Hard-Fiber.

## 958.9 MISCELLANEOUS CHESTS AND KITS

Safe Manufacturers' National Assn. Specification for Burglary-Resistive Chests, B1; 1939. Covers round door chests, rectangular door chests, cash protective units, etc., but not including chests with a deposit slot accessible when the door is closed; requirements for body and door thickness, locking mechanism, materials, and clearance.

U. S. Gov., Army Air Forces. Specification 40455; 1943. Kit; Emergency Sustenance, Type E-4, Cooking.

U. S. Gov., Army Air Forces. Specification 40681 (2); 1944. Kit; Emergency Sustenance, Type E-14, Desert and Tropic-Aerial Delivery.

U. S. Gov., Army Air Forces. Specification 40685; 1943. Packet; Trading.

U. S. Gov., Army Air Forces. Specification 40753 (1); 1944. Kit; Emergency Sustenance, Type E-16, Aerial Delivery, Northern Ration Replenishing.

U. S. Gov., Army Air Forces. Specification 40791; 1944. Kit; Testing, Type EE-1, Electrical Equipment.

U. S. Gov., Army Air Forces. Specification 40840-1; 1944. Kit; Emergency Sustenance, Type E-17, Personal Aids.

U. S. Gov., Dept. of Agriculture, Forest Service. Specification 210-1. Kit; Roll-Up Container, Canvas.

U. S. Gov., Dept. of Agriculture, Forest Service. Specification 250-S. Outfit; Emergency, Telephone Communication.

U. S. Gov., Dept. of Agriculture, Forest Service. Specification 274-S. Kits; Power Pump Tool and Accessory List.

U. S. Gov., Navy Dept. Specification 27S13; 1941. Sewing Outfits.

U. S. Gov., U. S. Army, Army Air Forces. Specification 94-40443; 1942. Kit; Emergency, Type B-3, Jungle-Parachute Seat Pad.

U. S. Gov., U. S. Army, Army Air Forces. Specification 94-40492; 1944. Kit; Emergency Sustenance, Type E-9A, Desert and Ocean Rations, Aerial Delivery.

U. S. Gov., U. S. Army, Medical Dept. Specification 6-268A; 1940. Kit; Individual, M.D., Component Parts.

U. S. Gov., U. S. Army, Medical Dept. Specification 6-274; 1939. Kit; First Aid, Aeronautic, Empty.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2880; 1939. Chest; Clipping, Empty.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2955; 1939. Container; Metal, for Instruments.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2956; 1939. Chest; Physical Examination Sets, Empty.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2957; 1939. Container; Metal, for Four Knives.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2958; 1939. Chest; Wooden, Empty, Medical.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2983; 1941. Chest; Pioneer, Empty.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 6-231; 1935. Wallet; Pocket, for Wood-Wind Instrument Repair Kit, Without Contents.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 23-107; 1941. Chest; Supply, Pack Artillery, Empty.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 28-1B; 1942. Outfit; Officers' Mess, M-1937, Chest.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 92-25; 1936. Chest; Lantern.

U. S. Gov., U. S. Army, Signal Corps. Specification 23-37C; 1931. Chest; Types BE-49 and BE-50, Components of Radio Sets.

U. S. Gov., U. S. Army, Signal Corps. Specification 46-8; 1944. Chest; CH-40-B, Carrying and Testing, Microphone T-21-B, Sound Ranging.

U. S. Gov., U. S. Army, Signal Corps. Specification 46-12; 1944. Chests; CH-44-A to CH-48-A, Inclusive, Carrying, Sound Ranging Equipment.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-104-A; 1941. Chest; Type BC-5, Part, for General Use.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-200-C; 1927. Chest; Type CH-2, Component of Radio Set.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-208C; 1927. Chest; Type CH-1, Component of Radio Set.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-392A; 1929. Chest; Type CH-4, Radio Set.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-410; 1929. Chest; Type CH-5, Radio Set.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-566A; 1943. Chest; CH-21.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-593; 1931. Chest; Type CH-11, Component of Radio Sets.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-594; 1931. Chest; Type CH-12, Component of Radio Sets.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-595; 1931. Chest; Type CH-13, Component of Radio Sets.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-624A; 1931. Chest; Type CH-24, for Signal Lamp.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-659A; 1940. Chest; Type CH-28, CH-29, CH-38, and CH-39, Radio Carrying.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-663A; 1940. Chest; Type CH-23, Pack Load.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-711; 1935. Box; Types BS-8 and BS-9, for Carrying Spare Vacuum Tubes.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-720B; 1943. Chest; CH-32-A, Radio Equipment.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-908; 1937. Chest; Type CH-27-A, Carrying, Radio Transmitter.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-920; 1937. Chest; Type CH-33, Radio Equipment.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-931; 1937. Box; Type BE-63, Telephone, Outdoor.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-954A; 1943. Chest; CH-49, Carrying, Radio Receiving.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-963; 1939. Chest; Type CH-43, Infantry Pack.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-980; 1940. Chest; Type CH-56.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-981; 1940. Box; Type BX-22.

U. S. Gov., U. S. Army, Signal Corps, Specification 71-1028; 1942. Chest; Type CH-64, Maintenance Equipment.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-1040A; 1943. Chest; CH-53-A'43.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-1042; 1941. Chest; Type CH-30.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-1045; 1941. Chest; CH-65, Maintenance Equipment.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-1047; 1941. Chest; Type CH-69, for Maintenance Equipment, ME-7.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-1160; 1942. Chest; CH-80-( ), 4-Drawer, for 256 Crystal Unit, DC-11-( ).

U. S. Gov., U. S. Army, Signal Corps. Specification 71-1528; 1942. Chest; CH-96; and Box, BX-40.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-1638A; 1943. Chests; CH-116 and CH-117, for Facsimile Equipment, RC-120-( ).

U. S. Gov., U. S. Army, Signal Corps. Specification 71-1652; 1943. Chests and Boxes, for Radio Direction-finder Central TC-8 and Radio-intercept Central TC-9.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-1674; 1944. Chest; CY-64/U.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-1699; 1944. Chest; CH-219.

U. S. Gov., U. S. Maritime Commission. Specification 1-MC-2a; 1942. Chest; Storage, Line-Throwing Gun. Shall be of but one type, grade, and size. Gives requirements for material, workmanship, general construction, size, assembly, hardware, welding, inspection, and tests, with detail drawing.

*References.*—Medicine Chests, *see* 915.43.

## 959. MISCELLANEOUS CONTAINERS

### 959.1 CANS

American Hospital Assn., 34-82. Ash and Garbage Corrugated Cans. Based on U. S. Gov., Federal Specification RR-C-81.

American Hospital Assn., 34-85. Foot-Operated Sanitary Waste Cans. Covers one type of sanitary waste can having an outer container, removable inner container, and a foot-operated hinged cover.

American Meat Institute. Standards for Packing House Supplies, Packs, and Equipment, 1928. Lard Cans. Includes round cans for domestic trade; 2-, 4-, and 8-lb. pails with friction slip covers, 45- to 120-lb. metal cans or drums; and square cans for export trade, requirements on dimensions, design, weight of tin-plate, gage of wire handles, and seam details.

Assn. of American Railroads, Freight Container Bureau. Bulletin 1-1928. Cans (Inside Containers) for Liquids, Semiliquids and Pastes. Recommended weight of tin plate; illustrated construction of seams and likely defects; leakage and drop tests.

Assn. of American Railroads, Purchases and Stores Div. Garbage and Refuse Can, 1934. Gives requirements as to dimensions and gage of galvanized sheet metal can and cover, with illustration showing details as to riveting, and handles.

Assn. of American Railroads, Purchases and Stores Div. Half Pint Squirt Can, 1934. Gives dimensional requirements and illustration for oil can with spring steel bottom.

Assn. of American Railroads, Purchases and Stores Div. Long Spout Valve Oiler and Tallow Pot, 1934. Covers one quart and three pint oilers, and five pint tallow pot (valve oil can); dimensional diagrams for painted sheet metal cans.

Assn. of American Railroads, Purchases and Stores Div. Oil Carriers, 1934. Gives dimensional requirements and illustrations for one, two, and five-gallon oil carriers made of sheet metal.

Assn. of American Railroads, Purchases and Stores Div. Soil Can, 1934. Covers Standard and alternate cheaper

design, with dimensions, metal gage, and wire handle.

Assn. of American Railroads, Purchases and Stores Div. Two-Gallon Journal Oil Can, 1934. Gives dimensional requirements and illustration for long-spout galvanized iron oil can with wooden handle and interchangeable brass tips for summer use.

Underwriters' Laboratories, Inc. Standard for Design and Construction of Safety of Safety Cans, 1930. Covers the design and construction of safety cans to be employed for temporary storage and handling of flammable liquids such as gasoline, naphtha, etc., inside of buildings that are not provided with special storage rooms of proper construction. Materials, seams and joints, handles, spouts and fill fittings, valves, workmanship, marking, and tests.

U. S. Gov., Army Air Forces. Specification No. 40469; 1942. Containers; Fuel, Water, or Oil, 7 1/2-Gallon Capacity.

U. S. Gov., Army Air Forces. Specification 40646 (1); 1944. Container; Fuel or Oil, Portable by Air, 5-Gallon Capacity.

U. S. Gov., Army-Navy Aeronautical Specification AN-W-5b-1; 1944. Water; Emergency Drinking, in Sealed Cans.

U. S. Gov., Dept. of Agriculture, Forest Service. Specification 78-1-S. Can; Kerosene, 1-Pint.

U. S. Gov., Dept. of Agriculture, Forest Service. Specification 78-2-S. Can, Kerosene, 1/2-Gallon.

U. S. Gov., Dept. of Agriculture, Forest Service. Specification 78-3-S. Can; Kerosene, 1-Gallon.

U. S. Gov., Dept. of Agriculture, Forest Service. Specification No. 79. Can; Back Pack, Water.

U. S. Gov., Dept. of Agriculture, Forest Service. Specification No. 81. Can; Water, Horse or Truck Transporting.

U. S. Gov., Dept. of Agriculture, Forest Service. Specification Nos. 87 and 87.1. Carrier, Water Can, Horizental-Type and Vertical-Type, Animal Packing.

U. S. Gov., Dept. of Agriculture, Forest Service. Specification MSF-80. Cans; Milk, 5- and 10-Gallon.

U. S. Gov., Dept. of Agriculture, Forest Service. Specification MSF-83. Canteens; 1-, 2-, 4-, and 8-Quart.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R155-40; 1940. Cans for Fruits and Vegetables (Names and Dimensions). This recommendation establishes a schedule of stock sizes of cans for fruits and vegetables, and nomenclature applying to these cans. Sponsored by the National Canners Assn.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R156-41; 1941. Extracted-Honey Packages. This recommendation establishes a schedule of sizes of containers for use in marketing stock packages of extracted honey. The recommended sizes are 2, 5, and 8 oz. and 1, 1 1/2, 2, 2 1/2, 3, 5, 10, and 60 lb. Sponsored by American Honey Producers League and American Honey Institute.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R164-36; 1936. Tinned Steel Ice Cream Cans. This recommendation establishes a schedule of stock types, sizes, and capacities of tinned steel ice cream cans of the high type and low (squat) type. Sponsored by International Assn. of Ice Cream Manufacturers.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R170-38; 1938. Spice Containers (Tin and Fiber). This recommendation establishes a schedule of sizes of packages and capacities of containers for ground spices, except herbs. Initiated by the American Spice Trade Assn.

U. S. Gov., Dept. of Interior, Purchasing Office. Standard Specification No. 69. Cans; Milk, Steel.

U. S. Gov., Federal Specification RR-C-81; 1935. Amendment 1; 1936. Cans; Corrugated, Ash and Garbage. Covers the fabricated corrugated type and six capacities—5, 10, 17 1/2, 20 1/2, 25 1/2, and 33 gal. Gives requirements for material, workmanship, bodies, bottoms, covers, corrugations, coating, embossing, pails and cans; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., Federal Specification RR-C-83; 1941. Cans; Milk, Steel, Tinned. Covers one type and grade, in 5 and 10 gal. capacities. Gives requirements for black sheet steel, tin, workmanship, construction, thickness of sheet metal, tinning, cover, finish, handles, dimensions, and weights; method of sampling, inspection, and test; and requirements for packaging, packing, and marking for shipment. Emergency Alternate Federal Specification E-RR-C-83; 1942, (issued by Procurement Div., Treasury Dept., U. S. Gov.) changed requirements for material, construction, and sizes.

U. S. Gov., Federal Specification RR-C-85; 1940. Cans; Oil (Kerosene). Covers two types—(I) capped spout and (II) faucet. In 1, 2, 3, and 5-gal. sizes. Zinc-coated (galvanized) sheet steel. Gives requirements for material, workmanship, fabrication, body, bottom, top, carrying bail, fill-opening fitting and cap, oil tightness, finish, dimensions, and thickness of sheet steel; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification RR-C-87; 1938. Amendment 1; 1944. Cans; Oil, Typewriter. Covers one type, grade, and capacity, of steel, either galvanized, painted, or having a black oxide finish. Gives requirements for workmanship and details; methods of sampling and inspection; and packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification RR-C-92; 1941. Amendment 1; 1944. Cans; Safety (for Gasoline, Naphtha, Etc.). Covers one type; two styles—(I) with short pouring nozzle and (II) with metal hose spout; and several sizes—ranging from 1 pt. to 10 gal. Gives requirements for material, workmanship, design, stability, pressure relief, valve operating ability, tightness of valve, joints and seams, tightness of joints and seams, gaskets, castings, finish, marking, and details for each type; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification RR-C-94; 1939. Cans; Sprinkling. Covers one type; and six capacities—4, 6, 8, 10, 12, and 16 qt. Gives requirements for material, workmanship, body, bottom, top, spout, pouring nose, handles, zinc-coating, watertightness, thickness of sheet metal, and details; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification RR-C-96a; 1942. Cans, Steel (Tinned-Plate, Terne-Plate, and Black Sheet); Friction-Covers. Covers one type, cylindrical; and six capacities—1/4 pt., 1/2 pt., 1 pt., 1 qt., 1/2 gal., and 1 gal. Gives requirements for materials, workmanship, cover, joints, top, closure, tightness of joints, tightness of cover, dimensions of cans, thickness of sheet, and bails; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification RR-C-114; 1941. Amendment 1; 1944. Cans; Waste (Oily). Covers two types—(I) foot-operated and (II) hand-operated; and six capacities—6, 8, 10, 14, 21, and 30 gal. Gives requirements for material, workmanship, design, fabrication, dimensions, stability, oil tightness, finish, marking, and details; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification RR-C-121; 1941. Amendment 1; 1944. Cans; Waste, Sanitary, Foot-Operated. Covers one type of can having an outer container, removable inner container, and a hinged cover; five sizes—12, 14, 20, 28, and 40 qt.; and five colors—white, ivory, grained walnut, mahogany, and light green. Gives requirements for material, workmanship, construction, outer container, inner container, cover, lifting mechanism, finish, marking, and details; methods of inspection, sampling, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification RR-O-376; 1938. Amendment 1; 1944. Oilers and Fillers; Hand. Covers three types—(I) oilers, push-bottom, steel; (II) oilers, pump; and (III) fillers. Gives requirements for material, workmanship, finish, spouts, washers, marking, sizes, and dimensions; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Interstate Commerce Commission. National Motor Freight Classification No. 7. Contains requirements for fiber cans for shipment of lubricating oil. Published by American Trucking Assns., Inc., Tariff Bureau. National Motor Freight Classification No. 7-1943.

U. S. Gov., Interstate Commerce Commission. Regulations for Transportation of Explosives and Other Dangerous Articles. Shipping Container Specification 2A. Inside Containers—Metal Cans, Pails, and Kits. Includes requirements for capacity, thickness of metal, test, and closure. Published by American Trucking Assns., Inc., Tariff Bureau, and by Assn. of American Railroads, Bureau of Explosives.

U. S. Gov., Interstate Commerce Commission. Regulations for Transportation of Explosives and Other Dangerous Articles. Shipping Container Specification 2F. Inside Metal Containers and Liners. Includes requirements for gauge and sealing. Published by American Trucking Assns., Inc., Tariff Bureau, and by Assn. of American Railroads, Bureau of Explosives.

U. S. Gov., Interstate Commerce Commission. Regulations for Transportation of Explosives and Other Dangerous Articles. Shipping Container Specification 2G. Inside Containers—Fiber Cans and Boxes. Includes requirements for thicknesses and strengths. Published by American Trucking Assns., Inc., Tariff Bureau, and by Assn. of American Railroads, Bureau of Explosives.

U. S. Gov., Interstate Commerce Commission. Regulations for Transportation of Explosives and Other Dangerous Articles. Shipping Container Specification 2N. Inside Containers—Metal Cans. Covers requirements for material, manufacture, and test. Published by American Trucking Assns., Inc., Tariff Bureau, and by Assn. of American Railroads, Bureau of Explosives.

U. S. Gov., Interstate Commerce Commission. Regulations for Transportation of Explosives and Other Dangerous Articles by Motor, Rail, and Water. Shipping Container Specification MC200. Containers for Liquid Nitroglycerin. Covers requirements for motor vehicle body, inside containers, and boots. Published by American Trucking Assns., Inc., Tariff Bureau.

U. S. Gov., Joint Army-Navy Specification JAN-P-124; 1944. Packaging and Packing for Overseas Shipment—Cans and Pails; Metal.

U. S. Gov., Marine Corps Specification, 1942. Cans, One-Gallon; and Cases, Shipping; for Packing Ready-Mixed Paints.

U. S. Gov., Marine Corps Specification, 1942. Cans, One-Gallon; and Cases, Shipping; for Packing Shellac, Fire-Extinguishing Liquid, Paint Driers, Varnish, Oils, Disinfectant, Etc.

U. S. Gov., Marine Corps Specification, 1924. Oiler; Machinist, 3/4-Pint.

U. S. Gov., Navy Dept. Specification 42C10f; 1942. Cans; Cement.

U. S. Gov., Navy Dept. Specification 42C21b; 1941. Cans, Tin, 1-Quart, 1/2-gallon, 1-Gallon; Cases, Shipping.

U. S. Gov., Navy Dept. Specification 42 C 22d; 1943. Cans, 5-Gallon; and Cases, Shipping.

U. S. Gov., Navy Dept. Specification 42C28; 1944. Cans; Metal, for Export Shipment of Subsistence Items.

U. S. Gov., Navy Dept. Specification 56L9; 1944. Labeling and Marking of Metal Cans, for Subsistence Items.

U. S. Gov., Post Office Dept., Div. of Motor Vehicle Service, Bureau of the Fourth Assistant Postmaster General. Specifications for Cans.

U. S. Gov., Treasury Dept., Procurement Div., No. 421; 1940. Cans; Refuse, Nesting, Corrugated. Covers 10, 16, 24, and 32-gal. cans. Gives requirements for material, workmanship, body, bottom, handles, cover, reinforcing bands, zinc coating, water tightness, and dimensions; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., U. S. Army, Chemical Warfare Service. Specification 97-101-23A; 1926. Can; Antidim.

U. S. Gov., U. S. Army, Corps of Engineers. Specification 42.2-11; 1921. Can; Galvanized Iron, 3-Gallon.

U. S. Gov., U. S. Army, Medical Dept. Specification 29-13; 1925. Tin; 5-Gallon, Alcohol, Export.

U. S. Gov., U. S. Army, Medical Dept. Specification 29-16; 1925. Can; 5-Gallon, Alcohol, Domestic.

U. S. Gov., U. S. Army, Medical Dept. Specification 29-83; 1939. Can; Waste.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 100-13A; 1943. Miscellaneous Lubricant Container and Packaging.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 28-18B; 1940. Can, Sponge, No.18A; Army Field Bake Oven, No. 1.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 29-91A; 1942. Can; Corrugated, Nesting, Galvanized, With Cover.

U. S. Gov., U. S. Maritime Commission. Specification 64-MC-10a; 1944. Cans and Pails; Ash and Garbage, With Covers, Galvanized. Shall be of the fabricated corrugated type with covers, and shall be two classes—(A) with verticle side wall and (B) with nestable side wall. Gives requirements for materials, workmanship, finish, watertightness, marking, sizes, thickness of metal, dimensions, tolerances, body, bottom, bands, cover, and handles; sampling, inspection, and methods of test; packaging, packing, and marking for shipment.

U. S. Gov., Veterans Administration. Specification VA-G-165; 1936. Cans; Milk, Aluminum, Capacity 5 Gallons.

U. S. Gov., Veterans Administration. Specification VA-G-181; 1936. Cans; Milk, Aluminum, Capacity 3 Gallons.

U. S. Gov., Veterans Administration. Specification VA-G-195; 1936. Can; Milk, Aluminum, 2-Gallons Capacity.

U. S. Gov., Veterans Administration. Specification VA-G-228; 1936. Cans; Milk, Aluminum, Capacity 1 Gallon.

U. S. Gov., Veterans Administration. Specification VA-G-242; 1936. Cans; Milk, Aluminum, Capacity 10-Gallons.

U. S. Gov., Veterans Administration. Specification VA-G-243; 1936. Cans; Milk, Aluminum, Capacity 8 Gallons.

U. S. Gov., Veterans Administration. Specification VA-G-244; 1936. Cans; Milk, Aluminum, Capacity 2 Quarts.

U. S. Gov., Veterans Administration. Specification VA-G-246; 1936. Cans; Milk, Aluminum, Capacity 5 Gallons, With Bail Handle.

U. S. Gov., Veterans Administration. Specification VA-M-230b; 1941. Oilers; Steel.

*References.*—Iron and steel sheets, *see* 604.2; methods of testing and general requirements for metals, *see* 600.1; zinc and tin coatings and methods of testing, *see* 600.3; fiberboard, methods of testing fiberboard, *see* 472.93, 470.3.

## 959.2 TANK CARS

*References.*—Tank cars, automobile truck tanks, *see* 726.1, 722.1.

## 959.3 CASKETS AND CASKET BOXES

American Concrete Institute. Tentative Specification for Concrete Burial Vaults, 709-32-T; 1932. These specifications shall apply to reinforced concrete burial vaults. Gives requirements for materials, design, workmanship and finish, markings, physical tests, sealing, and inspection together with illustration. Endorsed by the National Concrete Burial Vault Assn.

U. S. Gov., Federal Specification NN-C-121; 1939. Caskets (Burial) and Outside Boxes. Covers two types of caskets—(I), hinged-cap, (II) dowel-cap; one type of outside-boxes—(III); and two classes of caskets—(A) wooden, and (B) metal-lined. Gives requirements for material, workmanship, wood, glue, design, covering, upholstery, linings, pillow, handles, construction, dimensions; methods of inspection and test; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., Navy Dept. Specification 57C6; 1939. Caskets; Shipping, Metal.

U. S. Gov., Panama Canal, Purchasing Dept. Specification for Caskets; Burial, All Metal, for Shipping, 1941.

U. S. Gov., Veterans Administration. Medical and Hospital Supply Section, VA-H-60g; 1943. Caskets and Outside Burial Boxes.

## 959.4 REFRIGERATORS

American Society of Refrigerating Engineers and U. S. Dept. of Agriculture, Bureau of Human Nutrition and Home Economics, sponsors. American Standards Assn., B38-1-1944. Food-Storage Volume and Shelf Area of Automatic Household Refrigerators. Covers scope and purpose, inside dimensions, food-storage volume determination, shelf-area determination, and data to be reported.

American Society of Refrigerating Engineers and U. S. Dept. of Agriculture, Bureau of Human Nutrition and Home Economics, sponsors. American Standards Assn., B38.2-1944. Household Electric Refrigerators, (Mechanically Operated). Covers scope and purpose, general requirements, no-load test, ice-making test, accuracy, and table showing sample summary sheet for test results.

National Assn. of Ice Refrigerator Manufacturers. Approved also by National Assn. of Ice Industries. Minimum Construction Requirements for Ice Refrigerators Designed To Carry the Seal of Approval. Covers requirements for exteriors where applied over framework, framework, exteriors without framework, interiors, insulation, gaskets, locks and hinges, shelves, drainage systems, finish, and air conditioning principle.

National Electrical Manufacturers Assn. Household Electric Refrigerator Standards, 42-79; 1942. Provides a uniform method of determining the food storage volume and shelf area and a uniform procedure for determining the performance of mechanically operated household refrigerators. Gives inside dimensions, food storage volume, shelf area, and data to be reported; and test conditions, internal cabinet temperatures, no-load tests, and ice-making test.

Underwriters' Laboratories, Inc. Standard for Unit Refrigerating Systems. Covers two systems classified as—class D, containing more than 6 lb. but not more than 20 lb. of refrigerant; and class E, containing 6 lb. or less of refrigerant. Design and construction, examination and test, and inspection of listed product.

U. S. Gov., Army Air Forces. Specification No.40820; 1944. Refrigerator; Portable by Air, Type A-1, 50-Cubic Foot, Reach-In, Knock-Down.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R96-28; 1928. Ice Cake Sizes. This recommendation establishes weights and dimensions of ice cakes for domestic refrigerators, namely—25, 50, 75, 100, and 150 lb. Sponsored by the National Assn. of Ice Industries and American Society of Refrigerating Engineers.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R109-29; 1929. Refrigerator Ice Compartments. This recommendation covers capacities and dimensions of ice compartments for two types of domestic refrigerators known as side icers and front icers. Sponsored by American Institute of Refrigeration and National Assn. of Ice Industries.

U. S. Gov., Dept. of Interior, Purchasing Office. Standard Specification No. 4. Refrigerators; Gas Operated.

U. S. Gov., Dept. of Interior, Purchasing Office. Standard Specification No. 5. Refrigerators; Kerosene Operated.

U. S. Gov., Federal Specification AA-R-211a; 1941. Refrigerators; Electric, Portable. Covers self-contained, air-cooled units, in two classes—(1) open and (2) sealed. Gives requirements as to sizes and capacities, and construction; methods of sampling, inspection, and tests; and requirements for packaging and marking for shipment.

U. S. Gov., Navy Dept. Specification 26R1a; 1944. Refrigerators; Electric, Portable, for Shipboard Installation.

U. S. Gov., Navy Dept., Bureau of Yards and Docks. Specification 16Ye; 1941. Refrigerating Equipment. Includes requirements for built-in refrigerators and display cases. Also includes ice-making equipment.

U. S. Gov., Panama Canal, Purchasing Dept. Specification for Refrigerators, 1943. Commercial reach-in type, capacity not less than 45 cu. ft.

U. S. Gov., Treasury Dept., Procurement Div., No. 282; 1938. Refrigerators; Electric, Dry and Wet Storage. Shall be of one type having a water containing compartment or compartments with top cover or covers and a dry storage compartment with a hinged door on the front face. Gives requirements for sizes, wet storage compartment, dry storage compartment, door, shelves, cabinet insulation, hardware, refrigerating mechanism, refrigerant, and electrical equipment; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 22-177; 1929. Ice.

U. S. Gov., Veterans Administration. Specification VA-M-121b; 1938. Automatic Electric Refrigerators.

U. S. Gov., Veterans Administration. Specification VA-GC-113c; 1942. Utility Room Refrigerators.

U. S. Gov., Veterans Administration. Specification VA-MC-197e; 1942. Electric Mortuary Refrigerators.

## 959.5 SPECIAL CONTAINERS

U. S. Gov., Dept. of Agriculture, Forest Service. Specifications for Outfits; Water, Back Pack, Air-Pressure Type.

U. S. Gov., Dept. of Agriculture, Forest Service. Specification No. 92. Carriers; Back Pack Outfit, for Automobiles.

U. S. Gov., Dept. of Agriculture, Forest Service. Specification No. 95. Case; Smoke, Chaser Map.

U. S. Gov., Dept. of Agriculture, Forest Service. Specification 251-1. Outfit; Camp-Boss, Metal Container, Large.

U. S. Gov., Dept. of Agriculture, Forest Service. Specification 251-2. Outfit; Camp-Boss, Metal Container, Small.

U. S. Gov., Dept. of Agriculture, Forest Service. Specification 251-3. Outfit; Camp-Boss, Canvas, Roll-Up Container.

U. S. Gov., Dept. of Agriculture, Forest Service. Specification MSF-247-10. Outfit Container; 2-, 3-, and 6-Man Nested Mess.

U. S. Gov., Dept. of Agriculture, Forest Service. Specification MSF-247-11. Outfit Container; 10-Man Nested Mess.

U. S. Gov., Dept. of Agriculture, Forest Service. Specification MSF-247-12. Outfit Container; 25- and 50-Man Nested Mess.

U. S. Gov., Dept. of Agriculture, Forest Service. Specification MSF-247-18. Box; Knife and Fork, 25- and 50-Man Size.

U. S. Gov., Navy Dept. Specification 42C13a; 1925. Containers; Soda Lime, for Submarines.

U. S. Gov., Navy Dept. Specification 57C12; 1941. Containers; Tin, Combat-Dressing.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 50-11-85; 1933. Cup; Closing, for Blank Ammunition.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-651A; 1937. Carrier; Type RL-24-A, Wire Pack.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-664; 1933. Carrier, Type FM-11; and Frame, Type FM-12; Pack Load Accessories.

## 959.6 WRAPPINGS AND COVERINGS

American Iron and Steel Institute. Steel Products Manual, Section 9a; 1943. Standard packaging and Shipping Methods of Cold-Finished Bars. General provisions, packaging, boxing, paper or burlap wrapping, wrapping or shrouding, and identification.

Society of Automotive Engineers. Aeronautical Standard 6A; 1944. Enclosure; Storage and Shipping; Aircraft Engine. To provide general information relative to construction and application of a moisture-resistant envelope for enclosing an aircraft engine preparatory to shipment and/or storage. Covers material and accessories, construction, marking, packing, and drawings.

U. S. Gov., Army Air Forces. Specification 17018 (1); 1943. Envelopes; Equipment Preservation, Moisture-Impervious.

U. S. Gov., Army-Navy Aeronautical Specification AN-E-1a-1; 1943. Envelope; Moisture-Impervious.

U. S. Gov., Army-Navy Aeronautical Specification AN-P-54-1; 1945. Plastic Film; Transparent, Moisture-Impervious.

U. S. Gov., Interstate Commerce Commission. National Motor Freight Classification No. 7. Contains requirements for wrapping for shipment of automobile and tractor fenders, canoes, wooden telephone booths, glass blocks, glass bricks, built up wood covered with iron or steel, rods, sheets, or tubes of pyroxylin or other plastic, aluminum foil, rugs, honey, furniture, lawn mowers, shafting and shafts, carbonized print paper, and paper cards. Published by American Trucking Assns., Inc., Tarriff Bureau. National Motor Freight Classification No. 7-1943.

*References.*—Lined boxboard, corrugated boxboard fiberboard. *see* 472.16, 472.23, 472.93; wrapping paper, *see* 477; gummed paper, *see* 479.2; methods of testing fiberboard and paper, *see* 470.3.

## 959.7 DUMP AND STORAGE BINS AND HOPPERS

U. S. Gov., Navy Dept. Specification 26B5; 1942. Bins; Rotary, for Storage Purposes Aboard Ship.

*References.*—Dump, blending, and storage bins for bakeries, *see* 786.

## 959.8 LIQUID AND DRY MEASURES

Assn. of American Railroads, Purchases and Stores Div. One-Quart Graduated and One-Gallon Measures, 1934. Gives general form for liquid measures with handle and lip, conforming to Simplified Practice Recommendation No.55 of the National Bureau of Standards, U. S. Dept. of Commerce.

U. S. Gov., Dept. of Commerce, National Bureau of Standards, H29; 1942. Specifications, Tolerances, and Regulations for Commercial Weighing and Measuring Devices. Dry Capacity Measures. Shall be made of metal, well-dried wood, or composition, or similar or suitable material. Detail requirements are given concerning design, construction, materials, and allowable tolerances.

U. S. Gov., Dept. of Commerce, National Bureau of Standards, H29; 1942. Specifications, Tolerances, and Regulations for Commercial Weighing and Measuring Devices. Liquid Capacity Measures. Shall be made of metal, glass, earthenware, enameled ware, composition, or similar and suitable material. Specification requirements are given relative to construction and capacities of measures, as well as allowable tolerances.

U. S. Gov., Navy Dept. Specification 41M6a; 1943. Measures; Copper.

U. S. Gov., Treasury Dept., Procurement Div., 455A; 1942. Measures; Liquid, Lipped. Covers two types—(A) copper (tinned on inside surface) and (B) iron or steel (tinned on both surfaces). Gives requirements for marking, tightness, finish, body, handle, metal thickness, and dimensions; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., U. S. Army, Medical Dept. Specification 28-71; 1939. Measure; Liquid, 1-Quart, Copper.

*References.*—Liquid measures, dry measures, *see* 919.1.

## 959.9 CONTAINERS NOT ELSEWHERE CLASSIFIED

American Society for Testing Materials, D760-44T; 1944. Tentative Specifications for Enclosures for Small Testing Machines for Tests at Subnormal and Supernormal Temperatures of Electrical Insulating Materials and Plastics. Gives scope, requirements, and materials of construction.

Assn. of Lift Truck and Portable Elevator Manufacturers. Specifications for Skid Platforms. Includes capacities, underclearance (for shipping use Simplified Practice Recommendation of U. S. Dept. of Commerce R95-30), width, length, thickness of top boards, angles and legs, four-way entry, etc.

National Board of Fire Underwriters. Containers for Storing and Handling Flammable Liquids, No. 30; 1941. Standards apply to three classes of flammable liquids—(I) flashpoint below 25° F., (II) flashpoint above class I and below 70° F., and (III) flashpoint above class II and below 200° F. Gives introduction, individual underground storage systems without inside discharge, inside discharge systems, portable tanks, stationary tanks in buildings, storage in drums or other sealed portable containers, above ground storage, concrete fuel oil storage tanks, and tanks in flood regions.

U. S. Gov., Army Air Forces. Specification No.40442; 1942. Container; Aerial Delivery, Type A-7, Sling Assembly Ammunition Box.

U. S. Gov., Army Air Forces. Specification No.40483; 1943. Container; Aerial Delivery, Type A-10.

U. S. Gov., Army-Navy Aeronautical Specification AN-C-67a-1; 1944. Containers; Moisture-Impervious, General Features of Construction.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R95-30; 1930. Skid Platforms. Establishes clearance and over-all dimensions of skid platforms.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R193-42; 1942. Packages for Shortening, Salad Oil, and Cooking Oil. This recommendation gives tables showing sizes of packages and number of packages per case for both shortening packages and for salad and cooking oil packages. The types of containers are not specified because of uncertainty regarding availability of material. Sponsored by the Institute of Shortening Manufacturers, Inc.

U. S. Gov., Federal Specification WW-P-541a; 1940. Plumbing Fixtures, (for) Land Use. Includes requirements for cabinets for folded paper towls. Requirements given for door frame, hinges, dispensing slot, finish, and lock; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment. Emergency Alternate Federal Specification E-WW-P-541a; 1942, (issued by Procurement Div., Treasury Dept., U. S. Gov.) changed requirements for metals and finishes, standard materials, and illustrations; selections and air gaps.

U. S. Gov., Marine Corps Specification, 1943. Carrier; Vacuum, for Food and Liquids.

U. S. Gov., U. S. Army, Army Air Forces. Specification 94-40451; 1944. Container; Message, Type A-8, Illuminated.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2484A; 1940. Container; Hard Rubber or Plastic.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2641; 1939. Container; Ink, Meat Inspection.

*References.*—Box shook and crating, *see* 421.4; nails, see 608.1; grading rules for box lumber, *see* 413.9; sterilizers, *see* 915.32; soap kettles, *see* 787; envelopes, *see* 494.

# 970-979 FIRE EXTINGUISHING APPARATUS AND SUPPLIES

## 970. GENERAL ITEMS

American Bureau of Shipping. Rules for the Classification and Construction of Steel Vessels, 1942. Include requirements for fire protection—general, fire pump systems, steam smothering systems, smothering systems, and portable extinguishers; and special requirements for oil burning vessels, and motor vessels.

American Mining Congress, American Standards Assn., M17-1930. Fire Fighting Equipment in Metal Mines. Recommendations on type and size of hose and water supply systems for surface and for underground fire fighting equipment; equipment of extinguishers, fire pails, sprinkling systems, oxygen breathing apparatus; recommendations on ventilation, handling explosives, signals, etc.

American Transit Assn. Recommended Rules for Instruction to Employees for Fire Protection, W133-23; 1923. Fire protection rules when adopted by the association to conform to corresponding regulations of the National Fire Protection Assn.

Associated Factory Mutual Fire Insurance Companies. Pamphlet 77; 1937. Fire Extinguishers. Gives general information, fire pails, water barrels and bucket tanks, pump tanks, gas-cartridge type water-filled extinguishers, small hose, soda-acid extinguishers, nonfreezing extinguishers, foam extinguishers, vaporizing liquid extinguishers, carbon dioxide extinguishers, dry-chemical extinguishers, sand, sawdust, salt, soda and talc, fire rating guide for approved extinguishers, and extinguisher characteristics.

National Board of Fire Underwriters. Code of Suggested Ordinances for Small Municipalities, 1943. Gives details for a suggested ordinance providing for fire limits, and the construction and equipment of buildings, and a suggested ordinance providing for fire prevention and protection in connection with hazardous materials and processes.

National Board of Fire Underwriters. First-Aid Fire Appliances, No.10; 1938. Regulations governing equipment for three classes of fires, list of appliances, method of operation, distribution of units, maintenance, including fire pails, foam pails, soda-acid foam, pump tank, calcium chloride, and special tetrachloride fire extinguishers, sand pails, soda, and sawdust.

National Board of Fire Underwriters. Standpipe and Hose Systems, No.14; 1938. Regulations for installation inside buildings, for use of trained firemen, and use of building occupants. Covers water and dry standpipe, minimum sizes for various heights of buildings, location of hose stations, water supply, connections, valves, and fittings; tests and maintenance.

National Board of Fire Underwriters. Outside Protection, No.24; 1931. Regulations for private underground piping systems supplying water for fire extinguishment. Types of valves and locations, type, number, location, and setting of hydrants; standard monitor nozzles and application, size and weight of pipe, and layout of piping systems; rules for laying of pipe; and testing.

National Board of Fire Underwriters. Private Fire Brigades, No.27; 1937. Includes suggestions for organization, drilling, and equipment of private fire brigades.

National Board of Fire Underwriters. National Electrical Code, 1940. American Standards Assn., C1-1940. Link Fuses. Allowable capacities, construction of tips, rating, clearances required, approved applications.

National Board of Fire Underwriters. Suggested Fire Prevention Ordinance, 1943. Covers bureau of fire prevention and general provisions, explosives, pyrotechnics and small arms ammunition, nitro-cellulose motion picture film, pyroxylin plastic, photographic and X-ray nitro-cellulose film, calcium carbide and acetylene, compressed and liquefied gases, other than acetylene, flammable liquids, application of flammable finishes, dry cleaning and dry dyeing, prevention of dust explosions, hazardous chemicals, combustible fibres, refrigeration, matches, automobile garages and automobile repair shops, fire exits, fire extinguishing equipment, gas appliances and connections, miscellaneous, tire rebuilding plants, automobile wrecking and junk yard, woodworking plants, and penalties for violation.

National Board of Fire Underwriters. Suggested Ordinance Providing for Safety to Life in Places of Assembly, 1943. Covers application of ordinance, decorative materials, aisles, exits defined, basis for determining exits, exit doorways, exit ways, exit doors, marking of exits, lighting of exits, use of exits, stairways, ash trays, fire appliances, inspection by fire department, and placard indicating capacity.

National Board of Fire Underwriters. Suggested Specifications on Municipal Fire Apparatus, 1941. Requirements for gasoline engine-driven apparatus, including construction, rating of pumps, power requirements of engine, storage batteries, tires, fuel capacity, body construction, auxiliary equipment, and tests. Includes basic equipment for triple combination pumper, ladder truck (city service), ladder truck (aerial), ladder truck pumper (quadruple combination), and lists extra tools and appliances for pumpers and ladder trucks.

National Fire Protection Assn. Industrial Fire Brigades Training Manual, 1943. This report embodies the best material available and the basic fire fighting practices are well standardized and agreed upon. Covers the industrial fire brigade, forcible entry practices, rope work, fire extinguisher practices, ladder practices, hose practices, salvage and overhaul practices, fire streams, ventilation practices, periodic inspections of plant fire protection equipment, care of fire brigade equipment, fire causes and fire hazards, fire fighting procedure, flammable liquid and gas fires and special extinguishing systems, electrical fires, and gas masks and rescue practices.

National Fire Protection Assn. National Fire Codes for Extinguishing and Alarm Equipment, 1943. Community Forest Fire Fighting Equipment. Covers the forest and brush fire problem, hand pumps, power pumps, motorized forest fire truck, hose, hand tools, housing and care of equipment, and availability of parts.

National Fire Protection Assn. National Fire Codes for Extinguishing and Alarm Equipment, 1943. Control of Water Waste From Private Fire Protective Equipment. Covers introduction, waste of water in fire fighting operations, waste from broken pipes and abandoned hydrants, restriction of size of connections, loss of water under normal conditions, and conclusions and recommendations.

National Fire Protection Assn. National Fire Codes for Extinguishing and Alarm Equipment, 1943. Fire Fighting Equipment in Metal Mines. Recommended practice for fire fighting equipment, preventative measures,

fire signals, and fire fighting personnel in metal mines. Covers water and water supply equipment, fire extinguishers, fire pails and sprinkling systems, oxygen breathing apparatus, ventilation and ventilation equipment, explosives, electrical equipment, fire signals, fire fighting personnel, and miscellaneous measures.

National Fire Protection Assn. National Fire Codes for Extinguishing and Alarm Equipment, 1943. First Aid Fire Appliances. Standards for the installation, maintenance, and use of first aid fire appliances. Covers general requirements, classification of first aid fire appliances, distribution of units, plan governing the arrangement of the standards, standard fire pails, chemical solution extinguishers, water type extinguishers, antifreeze solution extinguishers, hand hose, foam extinguishers, loaded steam extinguishers, vaporizing liquid extinguishers, carbon dioxide extinguishers, dry compound extinguishers, sand fire pails, soda and sawdust, and enclosures for protecting chemical extinguishers against freezing.

National Fire Protection Assn. National Fire Codes for Extinguishing and Alarm Equipment, 1943. Marine Fire Protection. Fire protection regulations for motor craft. Fires and extinguishers divided into three classes—(A) in ordinary combustible material (quenching and cooling), (B) in flammable liquids (blanketing, direct smothering), and (C) in electrical equipment (nonconducting). Gives details concerning properties of fire extinguishers, installation and upkeep, recommended hand extinguisher equipment, and smothering systems.

National Fire Protection Assn. National Fire Codes for Extinguishing and Alarm Equipment, 1943. Outside Protection. Standards for outside protection. Private underground piping systems supplying water for fire extinguishment. Covers general information, water supplies, valves, hydrants, heavy caliber hose streams, underground pipe and fittings, rules for laying pipe, and testing.

National Fire Protection Assn. National Fire Codes for Extinguishing and Alarm Equipment, 1943. Private Fire Brigades. Suggestions for the organization, drilling, and equipment of private fire brigades. Covers responsibility of the management, cooperation with public fire departments, fire brigade organization, fire alarm, drills, fire methods, procedure after fire, maintenance, inspections, and equipment.

National Fire Protection Assn. National Fire Codes for Extinguishing and Alarm Equipment, 1943. Protection of Electric Cars, Trolley Buses, Houses, and Yards. Gives requirements for construction, maintenance, and protection of car and trolley bus houses and yards.

National Fire Protection Assn. National Fire Codes for Extinguishing and Alarm Equipment, 1943. Protection of Piers and Wharves. Includes subdivision of combustible substructures, protection of combustible substructures, fire protection, first aid fire appliances, watch service, fire alarm, and fire brigade.

National Fire Protection Assn. National Fire Codes for Extinguishing and Alarm Equipment, 1943. Recommendations for Uniform Marking of Fire Hydrants. Covers three classes—(A) flow capacity of 1,000 g.p.m. or greater, (B) flow capacity of 500-1,000 g.p.m., and (C) flow capacity of less than 500 g.p.m. Class (A) tops and nozzle caps—green, class (B) tops and nozzle caps—orange, and class (C) tops and nozzle caps—red. All barrels to be chrome yellow. Also covers private hydrants.

National Fire Protection Assn. National Fire Codes for Extinguishing and Alarm Equipment, 1943. Standpipe and Hose Systems. Standards for the installation of standpipe and hose systems. Covers general information, size and strength of standpipes, number and location of standpipes, hose stations, water supplies, connections, valves and fittings, tests and maintenance, and appendix.

National Fire Protection Assn. National Fire Codes for Extinguishing and Alarm Equipment, 1943. Steam Extinguishing Systems. With the development of other types of special extinguishing systems, steam is no longer recognized in N.F.P.A. standards except for the protection of ovens and similar high temperature enclosures. Covers steam jets and gives details for this system.

National Fire Protection Assn. National Fire Codes for Extinguishing and Alarm Equipment, 1943. Volunteer Fire Departments. Covers housing, motorized apparatus, hose and other equipment, maintenance, organization and personnel, duties, alarms, drills, public service, model ordinance, rules and regulations for administration, and model law establishing fire protection districts and providing fire protection.

National Fire Protection Assn. National Fire Codes for Extinguishing and Alarm Equipment, 1943. Watchman. Covers a position of trust, get the right man, support him fully, instruct him fully, the watchman must know, the watchmen's route, time recording apparatus, time records, rounds, the watchman's duty, night watch, day watch, and number of watchmen required.

National Fire Protection Assn. National Fire Codes for Extinguishing and Alarm Equipment, 1943. Water Charges. The relation of private fire protective equipment to municipal and privately operated water works with special reference to water charges. Covers the encouragement of automatic sprinkler installations, public fire protection—a governmental function, charges for private fire protection, present practice regarding charges, and conclusions and summary.

National Fire Protection Assn. National Fire Codes for Extinguishing and Alarm Equipment, 1943. Water Systems for Fire Protection on Farms. Effective fire fighting at rural fires depends to a large extent upon the facilities provided by individual property owners. Covers general requirements, gravity systems, wells, pressure systems, fire fighting equipment, water supplies for fire department use, private fire pump, and conclusions.

Underwriters' Laboratories, Inc. Bulletin of Research, 28; 1943. Fire Exposure Tests of Fire Windows. This bulletin records fire exposure and hose stream tests on window frame and wired glass assemblies of five different types. These assemblies are representative of those investigated with a view to establishing their acceptability as fire barriers of the class. Covers test program, test assemblies, record of fire tests, summary, and remarks.

Underwriters' Laboratories, Inc. Bulletin of Research, 29; 1943. Classification of the Hazards of Liquids. Covers hazardous properties of liquids, volatility,

ignition temperature, flammable limits, combustion intensity, hazards by combination, vapor density, nature of products of combustion, toxicity, and chemical stability; relation of hazardous properties to fire hazard, field criteria, mathematical probability, inherent hazard, fundamental physico-chemical data, flash point, and hazard scale; and classification of the hazards of liquids.

Underwriters Laboratories, Inc. Demonstration Lecture on Extinguishing Flame. Covers combustion, three ways to extinguish flame, cooling, the kitchen method, ignition without flame or spark, $H_2O$ plentiful and effective, effect of water spray, dilution—not practical, types of extinguishers using water, vaporizing liquid, dry compound, foam, carbon dioxide, and sound waves.

Underwriters' Laboratories, Inc., 1945. List of Inspected Fire Protection Equipment and Materials. This catalog lists appliances and materials which have been inspected by the Underwriters' primarily with reference to fire preventive and fire protective capabilities, and to such fire hazards and accident hazards as are involved in the groups in which they are listed. There is an index and the items are arranged alphabetically as to the subject and alphabetically by name of manufacturer under each subject.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-415. Auto-Release Fire Extinguishing System, for Pacific Islands.

*References.*—Fire cars for railroad yards, *see* 726.1.

### 970.1 ARRESTERS, SPARK

Underwriters' Laboratories, Inc. Marine Backfire Flame Arresters, 1931. Tentative. For use in carburetor air intakes, construction details, width of joints, corrosion resistance, vibration, and explosion tests.

Underwriters' Laboratories, Inc. Standard for Flame Arresters for Use in Open Vent Pipes of Oil Storage Tanks, 1936. For use alone or combined with vent valves, noncorrosive metal device, encased in a substantial shell. Explosion, continuous flame, and flow capacity test requirements.

## 972. HAND-DRAWN FIRE APPARATUS

## 973. CHEMICAL FIRE EXTINGUISHERS

### 973.1 CHEMICAL ENGINES

*References.*—Methods of testing tin, lead, and zinc coatings, *see* 600.3.

### 973.2 HAND CHEMICAL FIRE EXTINGUISHERS

American Hospital Assn., 22-1. Carbon-Tetrachloride Type, Hand Chemical Fire Extinguishers. Covers one grade. Based on U. S. Gov. Federal Specifications O-F-351.

American Hospital Assn., 22-4. Hand (Soda-and-Acid Type) Chemical Fire Extinguishers. Covers one grade. Based on U. S. Gov. Federal Specification O-F-355a.

American Hospital Assn., 22-7. Foam-Type Portable Hand Fire Extinguishers. Covers one grade. Based on U. S. Gov. Federal Specification O-F-361.

Underwriters' Laboratories, Inc. Standard for Construction of 1 1/4 and 1 1/2-Gallon Foam Extinguishers, 1929. For use in accordance with requirements of the National Board of Fire Underwriters. Capacity, thickness, and strength of copper shell; requirements for design of shell, collar, cap, solution container, etc.; composition of chemical charge, durability of and volume of foam, and distance and extinguishing tests.

Underwriters' Laboratories, Inc. Standard for Construction of 1 1/4 and 1 1/2-Gallon Soda Acid Extinguishers, 1929. To be used in accordance with regulations of the National Board of Fire Underwriters. Gives shell capacities, thickness and strength of copper shell, design requirements for shell, cap, handle, screen, glass bottle, and hose; composition of chemical charge, finish and labeling.

Underwriters' Laboratories, Inc. Standard for 2 1/2 Gallon Foam Extinguishers, 1939. For use in accordance with regulations of the National Board of Fire Underwriters. Gives requirements for construction of copper shell, collar, cap, gasket, screen, coating, capacity, solution container, etc. Includes composition of chemical charge, hydrostatic test, operation, and labeling.

Underwriters' Laboratories, Inc. Standard for 2 1/2 Gallon Loose Stopple Soda-Acid Extinguishers, 1939. To be used in accordance with regulations of the National Board of Fire Underwriters. Gives requirements for construction of copper shell, cap, screen, hose, acid bottle, etc. Includes chemical charge, tests, operation, and marking.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-272. Fire Extinguisher System; Carbon Dioxide.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-495. Fire Extinguishing System, for Alaska Building; Carbon Dioxide.

U. S. Gov., Federal Specification O-F-351; 1931. Fire Extinguishers; Chemical, Hand, Carbon-Tetrachloride Type. Covers one grade. Gives requirements for type, construction, performance, extinguishing liquid, and labeling and marking; method of test; and requirements for packaging, packing, and marking.

U. S. Gov., Federal Specification O-F-355a; 1934. Fire Extinguishers; Chemical, Hand (Soda and Acid Type). Covers one grade. Gives requirements for type, performance, labeling and marking, strength, protection and corrosion, chemical charge, and bracket; detail requirements for capacity, shell, collar, cap, outlet, acid-bottle cage, acid bottle, stopple, nozzle, hose, and handles; method of tests; and requirements for packaging, packing, and marking.

U. S. Gov., Federal Specification O-F-361; 1938. Amendment 1; 1938. Fire Extinguishers; Hand, Portable, Foam Type. Covers one grade. Gives requirements for type, performance, strength, safety release device, protection against corrosion, labeling and marking, chemical charge, and bracket; detail requirements for capacity, shell, collar, cap, safety release

device, outlet, inner container, stopple, nozzle, hose, and handles; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification O-F-367; 1944. Fire Extinguishers; Hand, Portable, Pump-Tank Type. Covers one type and one grade. Gives requirements for material, type, performance, protection against corrosion, finish, antifreeze chemical charge, labeling and marking, bracket, and details including capacity, tank, pump, hose, nozzle, handles, and foothold; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Treasury Dept., Procurement Div., 212D; 1941. Fire Extinguishers; Hand, Portable, Gas-Expelled Liquid Type (commonly known as "Water-Unit," "Anti-Freeze Unit," Etc.). Shall be of one type. Gives requirements for metallic parts, capacity, finish, bracket, shell, collar, cap, outlet, assembly, hose, nozzle, handles, performance, and strength; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., U. S. Army, Army Air Forces. Specification 85-2-H; 1941. Extinguisher; Aircraft, Fire, Type A-2.

U. S. Gov., U. S. Army, Army Air Forces. Specification 85-12; 1939. Extinguisher; Aircraft, Fire, $CO_2$, Type A-14.

U. S. Gov., U. S. Army, Army Air Forces. Specification 85-13; 1940. Extinguisher; Fire, Aircraft, $CO_2$, Type A-15.

*References.*—Protective coatings and methods of testing, *see* 600.3; chemical charges, *see* 973.3; hose for extinguishers, *see* 202.21.

## 973.3 CHEMICAL CHARGES FOR FIRE EXTINGUISHERS

American Hospital Assn., 22-10. Carbon-Tetrachloride Base Fire Extinguishing Liquid. Covers one grade. Based on U. S. Gov. Federal Specifications O-F-380.

Underwriters' Laboratories, Inc. Standard for Extinguishing Liquids for Hand Fire Extinguishers, One-Quart Capacity, Pump and Pressure Types. Requirements for tests for specific gravity, cold test, distillation, water, acid, chloride, carbon disulphide, and impurities.

U. S. Gov., Federal Specification O-F-380a; 1930. Fire Extinguishing Liquid; Carbon-Tetrachloride Base. Covers one grade and two types—(I) regular and (II) colored. Gives requirements for stain test, color, appearance, specific gravity, cold test, distillation range, and impurities; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Navy Dept. Specification 51C25a; 1941. Charges; Fire Extinguisher, Foam Type.

U. S. Gov., Treasury Dept., Procurement Div., No.637; 1943. Charges; Fire Extinguisher, Foam Type, for 2 1/2-Gallon Capacity. Covers one type and one grade. Charges shall be in dry form and shall consist of two separate units. Gives chemical requirements for each charge; methods of sampling, inspection, and tests; and packaging, packing, and marking.

*References.*—Chemical charges for hand fire extinguishers, *see* 973.2; carbon tetrachloride, *see* 839.7; sulphuric acid, *see* 821.7; methods of testing and general requirements for metals, *see* 600.1.

## 973.4 CARBON DIOXIDE FIRE EXTINGUISHING SYSTEMS

National Board of Fire Underwriters. Carbon Dioxide Fire Extinguishing Systems and Inert Gas for Fire and Explosion Prevention, No.12; 1942. Covers the standard methods of fire protection involving the use of carbon dioxide for the protection of fire hazards which are of such a nature that this form of protection is suitable. Does not include hand fire extinguishers or the protection of airplanes and power boats. Gives general rules covering all systems, equipment for protection by the total flooding of enclosed spaces, equipment for the protection by local application of gas on particular hazards, equipment designed to give protection where both an immediate and an extended or secondary discharge of gas are required, systems protecting electrical apparatus, and discusses the use of inert gases which when mixed with air reduce the oxygen percentage of the atmosphere below the combustion limit.

National Fire Protection Assn. National Fire Codes for Extinguishing and Alarm Equipment, 1943. Carbon Dioxide Fire Extinguishing Systems. Standards for carbon dioxide fire extinguishing systems. Gives general rules covering all systems, equipments for protection by the total flooding of enclosed spaces, equipments for protection by local application of gas on particular hazards, equipments where both an immediate and a delayed secondary discharge of gas are required for protection, and additional requirements for electrical apparatus.

Underwriters' Laboratories, Inc. Bulletin of Research, 26; 1942. Electrical Conductivity of Snow and Gas Discharge from First Aid Carbon Dioxide Extinguishers. This bulletin describes the electrical conductivity gas and snow discharged from carbon dioxide extinguishers of the first aid type, when fighting fires in or adjacent to high-voltage electrical equipment. Covers plan of investigation, description of test assemblies, record of tests, summary of test results, conclusions, and recommendations.

U. S. Gov., Army Air Forces. Specification 40459 (1); 1943. Extinguisher; Fire, $CO_2$, Aircraft, Four-Discharge Line, Type A-18.

U. S. Gov., Army Air Forces. Specification 40690-1; 1944. Extinguisher; Aircraft, Fire, Fixed Installation.

U. S. Gov., Treasury Dept., Procurement Div., 207B; 1942. Fire Extinguishers; Portable. Carbon Dioxide (Hand and Wheeled Types). Covers two types—(I) hand (five classes) and (II) wheeled (three classes). Gives requirements for material and workmanship, cylinders, discharge valves, discharge hose, discharge fitting; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., Treasury Dept., Procurement Div., No.242; 1936. Extinguishers; Fire, Portable, Carbon Dioxide, Small. Shall be designed for at least 97 percent discharge without freezing. Gives requirements for weight, capacity, cylinders, discharge valves, discharge fittings, and wall holders; method of sampling, inspection, and tests; packaging, packing, and marking.

U. S. Gov., U. S. Army, Army Air Forces. Specification 85-8A; 1942. Extinguisher; Fire, Carbon Dioxide.

Aircraft, Fixed Installation, General Specification.

U. S. Gov., U. S. Army, Army Air Forces. Specification 85-9; 1937. Extinguisher; Fire, Carbon Dioxide, Aircraft, Single-Discharge Line, Type A-11.

U. S. Gov., U. S. Army, Army Air Forces. Specification 85-10; 1937. Extinguisher; Fire, Carbon Dioxide, Aircraft, Two-Discharge Line, Type A-12.

U. S. Gov., U. S. Army, Army Air Forces. Specification 85-11; 1937. Extinguisher; Fire, Carbon Dioxide, Aircraft, Three-Discharge Line, Type A-13.

U. S. Gov., U. S. Army, Army Air Forces. Specification 85-14; 1942. Extinguisher; Fire, Portable, Carbon Dioxide.

U. S. Gov., U. S. Army, Army Air Forces. Specification 85-15; 1942. Extinguisher; Fire, Aircraft, Carbon Dioxide, Type A-17.

### 973.5 FOAM EXTINGUISHER SYSTEMS

National Board of Fire Underwriters. Foam Extinguisher Systems, No. 11; 1942. These rules indicate the standard method of fire protection by the use of foam for flammable liquids stored and used in processes in industrial plants, and they also include automatic foam extinguishing systems designed to protect other hazards. Covers general rules covering all systems, outdoor foam extinguishing systems, systems for rooms and buildings with hazards not susceptible to ordinary automatic sprinkler protection, and systems for local inside hazards in rooms or buildings having other standard fire protection.

National Fire Protection Assn. National Fire Codes for Extinguishing and Alarm Equipment, 1943. Foam Extinguishing Systems. Standards for foam extinguishing systems. Gives rules covering all systems, outdoor foam extinguishing systems, systems for rooms and buildings with hazards not susceptible to ordinary automatic sprinkler protection, and systems for local inside hazards in rooms or buildings having other standard fire protection.

## 974. FIRE HOSE AND FITTINGS

### 974.0 GENERAL ITEMS

American Society of Mechanical Engineers. American Standards Assn., B33.1-1935. Hose Coupling Screw Threads. For all connections having nominal inside diameters of 1/2, 5/8, 3/4, 1, 1 1/4, 1 1/2, and 2, in.

Associated Factory Mutual Fire Insurance Companies. Factory Mutual Bulletin of Loss Prevention, 24.10; 1940. Fire Hose—Care and Maintenance. Gives suggestions for keeping cotton rubber-lined hose and linen hose in good condition. Also details concerning cotton rubber-lined hose including tearing hose, cleaning hose, and drying hose; and details concerning linen hose.

National Board of Fire Underwriters. Standard for Fire-Hose Coupling Screw Thread, 1925. National (American) standard covers the threaded part of fire-hose couplings, hydrant outlets, and standpipe connections. Includes tables of limiting dimensions of external and internal threads and of plug and ring gages for field inspection of 2 1/2-, 3-, 3 1/2-, and 4 1/2-in. hose sizes. American Standards Assn., B26; 1925. Prepared by Joint committee of the American Society of Mechanical Engineers, American Water Works Assn., and National Board of Fire Underwriters.

National Board of Fire Underwriters. Water Spray and Extinguishing Systems, No. 15; 1941. Standards for the two methods of applying water spray which are by the use of hose lines and by the use of fixed systems of piping. Covers general requirements, manually operated portable hose and spray nozzles, fixed nozzle systems, and maintenance.

National Fire Protection Assn. National Fire Codes for Extinguishing and Alarm Equipment, 1943. Standard Threads for Fire Hose Couplings. Characteristics of national standard fire hose coupling thread. Gives drawings and tables showing dimensions.

Society of Automotive Engineers and American Society of Mechanical Engineers. American Standards Assn., B2-1919. Pipe Threads. Similar to corresponding portion of U. S. Gov., Dept. of Commerce, National Bureau of Standards Handbook H28, Screw-Thread Standards for Federal Services.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Handbook H28; 1944. Screw-Thread Standards for Federal Services. Presents complete dimensional data upon which specifications may be based for threaded products for government requirements. Includes terminology (definitions and symbols); American National hose-coupling and fire-hose coupling threads; and appendixes containing supplementary information of both a general and a technical nature, including such specifications as are not intended to be mandatory.

### 974.1 FIRE HOSE

*References.*—Fire hose, *see* 202.41.

### 974.2 FIRE HOSE FITTINGS

National Board of Fire Underwriters. Fire Department Hose Connections for Sprinkler and Standpipe Systems, No. 23; 1939. Connection coupling of bronze or cast iron, number and inclination of inlets, coupling threads American standard B26; 1925, of the American Standards Assn., diagrams of sprinkler and standpipe connections and check valve clappers, outlet sizes, and marking.

National Fire Protection Assn. National Fire Codes for Extinguishing and Alarm Equipment, 1943. Fire Department Hose Connections for Sprinkler and Standpipe Systems. Covers materials and workmanship, strength, inlets, outlet, and marking.

National Fire Protection Assn. National Fire Codes for Extinguishing and Alarm Equipment, 1943. Standards for Water Spray Nozzles and Extinguishing Systems. Covers general requirements, manually operated-portable hose and spray type nozzles, fixed nozzle systems, and maintenance.

National Fire Protection Assn. National Fire Codes for Extinguishing and Alarm Equipment, 1943. Use of Standard Small Hose Couplings. Recommended practice for the most efficient use of the standard couplings; to permit the maximum degree of interchangeability and flexibility in fire fighting operations.

Underwriters' Laboratories, Inc. Standard for Construction of Play Pipes, 1926. For fire hose nozzle and play pipe, design and construction detail requirements

for materials, length, butt, handles, workmanship, marking, and dimensional drawings.

Underwriters' Laboratories, Inc. Standard for 2 1/2-Inch Couplings for Rubber Lined Fire Hose, 1915. For use on single and double jacketed cotton rubber lined, and rubber fire hose, using National Standard thread. Design and dimensional drawings for couplings, materials, marking, and finish.

U. S. Gov., Dept. of Agriculture, Forest Service. Specification 241-1. Nozzle; Fire Hose, 1-Inch, Shut-Off Type.

U. S. Gov., Dept. of Agriculture, Forest Service. Specification 241-2. Nozzle; Fire Hose, Screw-Tip, Type With Extra Tip Carriers.

U. S. Gov., Dept. of Agriculture, Forest Service. Specification 241-4. Nozzle; Garden Hose.

U. S. Gov., Dept. of Agriculture, Forest Service. Specification 277-1. Nozzle; Back Pack Pump, Combination Fan-Spray.

U. S. Gov., Dept. of Agriculture, Forest Service. Specification 277-2. Nozzle; Back Pack Pump, Combination Three-Spray.

U. S. Gov., Dept. of Agriculture, Forest Service. Specification 277-3. Nozzle; Back Pack Pump, Twin-Nozzle, Type.

U. S. Gov., Dept. of Agriculture, Forest Service. Specification MSF-103. Coupling; 1 1/2-Inch Hose Tee, With 1-Inch Outlet.

U. S. Gov., Dept. of Agriculture, Forest Service. Specification MSF-104. Coupling; Reducer, 1 1/2- to 1-Inch.

U. S. Gov., Federal Specification WW-C-621a; 1941. Couplings; Hose, Cotton (Rubber-Lined) and Linen (Unlined). Covers eight types. Gives requirements for design, pressure, finish, chemical composition, and dimensions; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment. Emergency Alternate Federal Specification E-WW-C-621a; 1942, (issued by Procurement Div., Treasury Dept., U. S. Gov.) changed requirements for finish of metal parts, couplings, expansion rings, and coatings.

U. S. Gov., Federal Specification WW-C-623a; 1933. Couplings; Hose, Garden and Water. Covers two types—(A) slotted expansion (1 1/2-inch only), and (B) lug or ribbed shank. Gives requirements for finish, parts, chemical composition, and dimensions; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking. Emergency Alternate Federal Specification E-WW-C-623a; 1942, (issued by Procurement Div., Treasury Dept., U. S. Gov.) changed requirements for material for all parts except expansion rings.

U. S. Gov., Federal Specification WW-C-626; 1933. Amendment 1; 1934. Couplings; Hose, Oil-Suction and Discharge. Covers three types—(A) slotted expansion (for 4-inch hose only); (B) lug, ribbed shank; and (C) iron pipe nipples. Gives requirements for design, hydrostatic pressure, finish, parts, chemical composition, and dimensions; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking. Emergency Alternate Federal Specification E-WW-C-626; 1942, (issued by Procurement Div., Treasury Dept., U. S. Gov.) changed requirements for material for all parts except expansion rings.

U. S. Gov., Federal Specification WW-C-631; 1933. Couplings; Hose, Pneumatic and Spray (for Working Pressures Up to 150 Pounds Per Square Inch). Covers one type and grade. Gives requirements for hydrostatic pressure, dimensions, parts, chemical composition, and dimensions; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Federal Specification WW-C-636; 1931. Coupling; Hose, Steam. Covers two types—(A) slotted expansion and (B) hexagon shank. Gives requirements for finish, parts, composition, and dimensions; methods of sampling, inspection, and tests; and packaging, packing, and marking. Emergency Alternate Federal Specification E-WW-C-636; 1942, (issued by Procurement Div., Treasury Dept., U. S. Gov.) changed requirements for material for all fittings except expansion rings.

U. S. Gov., Federal Specification WW-C-646; 1934. Couplings; Hose, Water-Suction. Covers five types—(A) slotted expansion, (B1) rocker-lug expansion, (B2) regular pin-lug expansion, (B3) long-handle expansion, and (C) lug-shank. Gives requirements for design, finish, parts, chemical composition, and dimensions; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking. Emergency Alternate Federal Specification E-WW-C-646; 1942, (issued by Procurement Div., Treasury Dept., U. S. Gov.) changed requirements for finish of metal parts, couplings, and expansion rings.

*References.*—Standard threads for couplings, hydrants, and valves, *see* 974.0; methods of testing and general requirements for metals, *see* 606.1, 644.11; fire hydrants, *see* 607.6.

## 974.3 FIRE HOSE RACKS

U. S. Gov., Federal Specification WW-P-541a; 1940. Plumbing Fixtures (for) Land Use. Includes requirements for fire hose rack and hose. Covers malleable iron, or steel, or brass rack suitable for hanging 1 1/2-inch diameter linen hose in vertical loops on pins or supports. Requirements given for valves, hose, and fittings; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment. Emergency Alternate Federal Specification E-WW-P-541a; 1942, (issued by Procurement Div., Treasury Dept., U. S. Gov.) changed requirements for metals and finishes, standard materials, illustrations, selections, and air gaps.

## 974.4 FIRE APPARATUS HOUSING

Associated Factory Mutual Fire Insurance Companies. Factory Mutual Bulletin of Loss Prevention, 24.20, 1942. Hose Houses and Equipment. Covers suggested designs for hose houses, suggested construction, hardware, knock-down hose houses, equipment, plan and elevation, and framing plan.

National Board of Fire Underwriters. Hose Houses for Mill Yards, No.25; 1940. Standards for the construction and equipment. Gives sizes, materials, illustrated designs, for frame hose housing, hose shelving, hardware, fire equipment, length and size of hose provided.

# 975. FIRE PUMPS AND FITTINGS

*References.*—Fire pumps and accessories, *see* 755.0, 755.1, 755.2; automobile fire trucks, *see* 722.2.

## 976. AUTOMATIC SPRINKLER SYSTEMS

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering, 1942. Specifications for Buildings for Railroad Purposes; Sprinkler System (Dry Pipe, Wet Pipe, or Deluge). Gives requirements for piping system, hangers, supports, control and drain valves, air supply, sprinkler heads, source of water supply, thimbles, sleeves, post indicator valves, electric wiring, fire department connection, tests, painting, and guarantee.

Associated Factory Mutual Fire Insurance Companies. Rules for Installing Dry Pipe Sprinkler Equipment, 1936. Maximum permissible size of system on one valve, installation rules, rules on location of dry pipe valves, construction of valve rooms, by-pass connections, capacity and equipment of air compressor, electrical and mechanical alarms, directions for setting and testing dry pipe valve, care and inspection of system.

Associated Factory Mutual Fire Insurance Companies. Standardization of 2 1/2-Inch Hose Threads for Fire Hose, Couplings, Hydrants, and Valves. Dimensions of standard thread for hose couplings, for coupling swivels and hydrant caps, and for hydrant nipples.

National Board of Fire Underwriters. Care and Maintenance of Sprinkler Systems, 1940. Covers responsibility of owner, details of maintenance, spring inspection, fall inspection, watchman, and public fire department.

National Board of Fire Underwriters. Sprinkler Equipments, No. 13; 1940. These standards are in general the minimum requirements for installation of sprinkler equipments in buildings housing one or more hazard occupancies. Gives general information, preparation of building, water supplies and fire department connections, piping, valves, pipe fittings and pipe hangers, sprinklers, location and spacing of sprinklers, dry-pipe systems, nonfreezing solutions, thermostatically operated systems, sprinkler alarms, outside sprinklers for protection against exposure fires, and appendix.

National Board of Fire Underwriters. Water Spray and Extinguishing Systems, No. 15; 1941. Standards for the two methods of applying water spray which are by the use of hose lines and by the use of fixed systems of piping. Covers general requirements, manually operated portable hose and spray nozzles, fixed nozzle systems, and maintenance.

National Fire Protection Assn. National Fire Codes for Extinguishing and Alarm Equipment, 1943. Automatic Sprinkler Ordinance. Suggested form and requirements for an automatic sprinkler ordinance. Covers definitions, authority, where installed, type of system and approval of plans, exemption and substitution of other fire protection equipment, appeal, maintenance, penalties, effective date, and appendices.

National Fire Protection Assn. National Fire Codes for Extinguishing and Alarm Equipment, 1943. Care and Maintenance of Sprinkler Systems. Covers responsibility of the owner, details of maintenance, spring inspection, fall inspection, watchman, and public fire department.

National Fire Protection Assn. National Fire Codes for Extinguishing and Alarm Equipment, 1943. Sprinkler Equipment. Standards for the installation of sprinkler equipment. Covers general information, preparation of building, water supplies and fire department connections. piping, valves, pipe fittings and pipe hangers. sprinklers, location and spacing of sprinklers, dry-pipe systems, nonfreezing solutions, thermostatically operated systems, sprinkler alarms, outside sprinklers for protection against exposed fires, supplementary details, and reference and explanatory data.

National Fire Protection Assn. National Fire Codes for Extinguishing and Alarm Equipment, 1943. Standards for Water Spray Nozzles and Extinguishing Systems. Covers general requirements, manually operated-portable hose and spray type nozzles, fixed nozzle systems, and maintenance.

Underwriters' Laboratories, Inc. Standard for Automatic Sprinklers, Section III, Subject 199; 1919. Includes general requirements for automatic sprinklers. Gives design and construction, practicability, durability, strength, reliability of operation, uniformity.

*References.*—Wrought-iron pipe and fittings, steel pipe and fittings, *see* 607.3, 607.4; valves, *see* 607.6; cast-iron pipe and long-turn sprinkler fittings, *see* 607.14.

## 977. HYDRANTS AND PARTS

*References.*—Fire hydrants, *see* 607.6.

## 978. FIRE BARRELS AND PAILS

*References.*—Fiber fire bucket, *see* 951.63; shipping barrels and pails, *see* 951.1, 951.6.

## 979. MISCELLANEOUS FIRE EXTINGUISHING APPARATUS

U. S. Gov., Dept. of Agriculture, Forest Service. Specification No. 295. Reel; Live-Hose, High-Pressure.

U. S. Gov., Dept. of Agriculture, Forest Service. Specification MSF-296. Reel; Retracting-String.

### 979.1 FIRE LADDERS

National Safety Council (American Society of Safety Engineers, Engineering Section). American Standards Assn., A14-1935. Code for Construction, Care, and Use of Ladders. Definition of terms; kind and quality of materials; specifications and construction of fixed, single, and extension type fire ladders. Is not intended to include equipment of organized fire departments.

U. S. Gov., Dept. of Agriculture, Forest Service. Specification No. 221. Ladder; Fire-Truck Loading.

*References.*—Ladders for commercial use *see* 429.4.

### 979.2 FIRE LANTERNS

### 979.3 FIRE ALARMS

*References.*—Fire alarm systems, *see* 718.30, 718.32.

# 980-989 BRUSHES AND BROOMS

## 981. BROOMS

### 981.0 GENERAL ITEMS

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R88-37; 1937. Floor Sweeps. This recommendation establishes standard stock sizes of floor sweeps covering length of block and handle, number of holes in block, weight of filling material, and trim for household, institutional, garage, warehouse, and industrial floor sweeps. Sponsored by American Brush Manufacturers Assn.

### 981.1 CORN BROOMS

American Hospital Assn., 34-1. Corn Brooms. Covers one type and two qualities—(B) parlor and (C) warehouse. Based on U. S. Gov. Federal Specification H-B-51.

American Meat Institute. Standards for Packinghouse Supplies, Packs, and Equipment, 1928. Hide Broom. Of corn and rattan, weights per dozen. Warehouse Broom. Of corn, weights per dozen, illustrated.

U. S. Gov., Federal Specification H-B-51a; 1944. Brooms; Corn. Covers two qualities—(B) parlor and (C) warehouse. Gives requirements for type, sizes, material, workmanship, broom corn, fiber, handle, broom body, fastening, and details; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

*References.*—Grades of broom corn, *see* 294; whisk brooms, *see* 981.5.

### 981.2 RATTAN BROOMS

American Hospital Assn., 34-4. Fiber Brooms. Covers one type and three sizes. Based on U. S. Gov. Federal Specification H-B-56.

American Hospital Assn., 34-7. Rattan Push Brooms. Covers one type and grade. Based on U. S. Gov. Federal Specification H-B-71.

American Hospital Assn., 34-10. Rattan Upright Brooms. Covers one type and grade. Based on U. S. Gov. Federal Specification H-B-75.

U. S. Gov., Federal Specification H-B-56; 1931. Amendment 2; 1941. Brooms; Fiber. Covers one in three sizes. Gives requirements for material, workmanship, body, handle fastening, ties and stitches, dry weights, and tolerances; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Federal Specification H-B-71a; 1943. Brooms; Rattan, Push. Covers one type and one grade. Gives requirements for block, handle, stock, holes, and tolerances; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Federal Specification H-B-75; 1933. Amendment 1; 1943. Brooms; Rattan, Upright. Covers one type and one grade. Gives requirements for handle, broom stock, cap, workmanship, broom head, and tolerances; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

### 981.3 WIRE BROOMS

U. S. Gov., Federal Specification H-B-111; 1933. Brooms; Wire, Push. Covers one type, grade, and size. Gives requirements for block and cover, handle, wire, holes, and tolerances; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

### 981.4 HAIR FLOOR SWEEPS

American Hospital Assn., 34-70. Hair Floor Sweeping Brushes. Covers one type and one grade in three sizes. Based on U. S. Gov. Federal Specification H-B-651.

American Meat Institute. Standards for Packinghouse Supplies, Packs, and Equipment, 1928. Floor Brush. No. 16 of black horsehair, requirements on size of block, length of trim, and number of rows, with illustration.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Floor Sweeping Brush, M-911-39; 1939. Hair to be No. 29 grey Russian, or No. 30 Chinese bristle, conforming to standard sample, size of block, and holes for handle, setting and construction, in four sizes.

U. S. Gov., Federal Specification H-B-651; 1930. Amendment 5; 1944. Brushes; Sweeping, Floor, Hair. Covers one type and grade in three sizes, No. 1, 2, and 3. Gives requirements for stock, block, setting, handle, comparison sample, length and diameter of block, number of holes in inside and outside rows, weight of hair and fiber mixture per brush, and length of hair outside of block; methods of sampling, inspection, and tests; and packaging, packing, and marking.

*References.*—Standard sizes, *see* 981.0.

### 981.5 HOUSEHOLD AND WHISK BROOMS

American Hospital Assn., 34-16. Whisk Brooms. Covers one type and grade in 8-in. and 10-in. sizes. Based on U. S. Gov. Federal Specification H-B-101.

U. S. Gov., Federal Specification H-B-101; 1933. Amendment 3; 1944. Brooms; Whisk. Covers one type and grade in two sizes—8-in. and 10-in. Gives requirements for material, workmanship, body, handle, stitching, sizes, winding of handle, and weight; methods of sampling, inspection, and tests; and packaging, packing, and marking.

*References.*—Grades of broom corn, *see* 294; corn brooms, hair floor sweeps, *see* 981.1, 981.4.

### 981.6 BROOMS FOR INDUSTRIAL USE

#### 981.61 Scrubbing Brooms

American Hospital Assn., 34-14. Scrubbing Brooms. Covers one type, grade, and size. Based on U. S. Gov. Federal Specification H-B-91.

U. S. Gov., Federal Specification H-B-91, 1933. Brooms; Scrubbing. Covers one type, grade, and size. Gives requirements for handle, stock, and tolerances; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

*References.*—Deck scrubbing brush or broom, *see* 982.3.

### 981.62 Pavement and Street Sweeping Brooms

U. S. Gov., Panama Canal, Purchasing Dept. Specification for Brooms, 1944. Street-sweeping, 16 in., bass bristles (African bass, or equal), without handles.

*References.*—Standard sizes of floor sweeps, *see* 981.0; corn brooms, rattan brooms, *see* 981.1, 981.2; push brooms, *see* 981.63.

### 981.63 Push Brooms

American Meat Institute. Standards for Packinghouse Supplies, Packs, and Equipment, 1928. Push Brooms. No. 261 of African bass with outer row of Bahia fiber, requirements on size of block, trim, and number of rows, illustrated.

*References.*—Hair floor sweep, *see* 981.4; wire push broom, rattan push broom, *see* 981.3, 981.2; standard sizes of floor sweeps, *see* 981.0.

### 981.64 Factory and Warehouse Brooms

*References.*—Corn warehouse brooms, *see* 981.1; rattan brooms, wire brooms, hair floor sweeps, scrubbing brooms, push brooms, *see* 981.2, 981.3, 981.4, 981.61, 981.63.

## 982. BRUSHES

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Brushes—Bristle, Hair, Fiber, and Wire, M-911-39-1939. Paint and varnish brushes for master and utility purposes; also roof, scrub, wash, duster, and wire brushes for railway use. Samples on file conform to A.A.R. standards, defines Russian bristle, Chinese bristle, French bristle, Indian bristle, civet and ox hair, etc. Details as to manufacture, tolerances, stamping, etc., for all types of brushes.

### 982.1 TOILET BRUSHES

U. S. Gov., Federal Specification H-B-321a; 1942. Brushes; Hair, Military. Covers one size and grade, in two types—(I) solid back and (II) aluminum face. Gives requirements for holes, stock, block, setting; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Federal Specification H-B-571a; 1941. Amendment 1; 1944. Brushes; Shaving. Covers one type and one grade. Gives requirements for handle, handle measurements, finish, ferrule and ring, ferrule, and bristles; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification H-B-671a; 1942. Brushes; Tooth. Covers one grade and five types—(I) tufted end of sloping, (II) tufted ends, (III) oval, (IV) sloping, and (V) straight trim; class A—animal bristle stock and class B—synthetic (plastic) bristles. Gives requirements for stock, handles, holes, and bristle length out of handle; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking. Emergency Alternate Federal Specification E-H-B-671a; 1943, changed requirements for specific gravity and holes.

### 982.2 PAINT BRUSHES

American Hospital Assn., 34-19. Calcimine Brushes. Covers one type and grade. Based on U. S. Gov. Federal Specification H-B-141.

American Hospital Assn., 34-37. Flat Fitch Brushes. Covers one type and grade in six sizes. Based on U. S. Gov., Federal Specification H-B-241.

American Hospital Assn., 34-40. Flat (High-Grade) Metal-Bound Paint Brushes. Covers one type and two grades in two sizes. Based on U. S. Gov. Federal Specification H-B-241 U. S. Gov., Dept. of Commerce, National Bureau of Standards, Simplified Practice Recommendation R43-28.

American Hospital Assn., 34-43. Flat (Medium-Grade) Metal-Bound Paint Brushes. Covers one type and grade in four sizes. Based on U. S. Gov. Federal Specification H-B-431.

American Hospital Assn., 34-46. Radiator Bronzing Brushes. Covers one type and one grade in three sizes— 1 in., 1 1/2 in., and 2 in. Based on U. S. Gov. Federal Specifications H-B-451.

American Hospital Assn., 34-52. Sash-Tool Brushes. Covers one grade in five sizes, oval type, and two sizes, round type. Based on U. S. Gov. Federal Specification H-B-491a.

American Hospital Assn., 34-67. Wall Stippling Brushes. Covers one type and grade. Based on U. S. Gov. Federal Specification H-B-636.

American Hospital Assn., 34-73. Flat Varnish Brushes (Double X Thickness). Covers one type and grade in five sizes. Based on U. S. Gov. Federal Specification H-B-701.

American Hospital Assn., 34-76. Flat Varnish Brushes (Triple X Thickness). Covers one type and one grade in four sizes. Based on U. S. Gov. Federal Specification H-B-706.

American Hospital Assn., 34-79. Whitewash Brushes. Covers one type and grade. Based on U. S. Gov. Federal Specification H-B-731.

American Meat Institute. Standards for Packinghouse Supplies, Packs, and Equipment, 1928. Stencil Brush. Of Chinese bristle, requirements on length of bristle, diameter, vulcanized in rubber, illustrated.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Angular Fresco Liner Brushes, M-911-39; 1939. Good grade of white French bristle set in nickle tin ferrule and formed to an angle; artist style handle.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div., Manual of Standard and Recommended Practice, 1942. Artist or Fitch Brushes, M-911-39; 1939. For French, Polish, or German white bristle; also for Tientsin Chinese black bristle brushes, ferrules, handle, setting, and construction.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Black Sable Lettering and Striping Brushes, M-911-39; 1939. Best quality commercial grade, set in cement in seamless ferrule, with polished handle. Six sizes of lettering; four striping brushes.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Civet Color Brushes, M-911-39; 1939. Civet Cat Tail hair and Tientsin Chinese bristle—1/2- to 4-in. sizes, construction, handle, and finish.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and

Recommended Practice, 1942. Flat Sash Trim Brushes, M-911-39; 1939. From Tientsin Chinese Bristle, conforming to sample, 1 1/2- and 2-in. ferrule, handle, setting, and details of construction.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Flat Varnish Brushes, M-911-39; 1939. No. 4 white bristle to be French, Polish, or German origin, and No. 5 to be Chinese bristle, three sizes in both triple thick and double thick brush. Includes quality of bristle, ferrule, handle, setting, and construction.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Kalsomine Brushes, M-911-39; 1939. Made from white Tampico fiber, set in plain sended kalsomine block, size No. 41, minimum number of holes, size of hole, and length of fiber.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice; 1942. Oval Sashtool Brushes, M-911-39; 1939. Covers quality of Tientsin Chinese bristle, ferrule, handle, setting, and construction.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Oval Varnish and Paint Brushes, M-911-39; 1939. Quality of Chinese bristle, ferrule, handle, setting, and construction, for four sizes of brush.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Ox Hair Color Brushes, M-911-39; 1939. Mixture of Ox hair and Tientsin Chinese bristle in 1/2- to 4-in. sizes, ferrule, handle, setting, and construction.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Round Marking Brush, M-911-39; 1939. For dome point, black Tientsin Chinese or white French or Polish bristle set in bright tin ferrule with unpolished marking handle.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Includes Stencil Brushes, M-911-39; 1939. Four sizes of good yellow bristle, French, Polish, or Russian origin, and one size civit cat tail hair; ferrule, handle, setting, and construction.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Sword Striper Brushes, M-911-39; 1939. From best grade Kazan squirrel tail hair, inserted in a split top handle, and secured with brass brush wire.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Wall Brushes—Metal and Leather Bound, M-911-39; 1939. Quality of Chinese bristle, ferrule, handle, setting, in various sizes, and construction.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R43-28; 1928. Paint and Varnish Brushes. This recommendation establishes a schedule of stock sizes of brushes. Dimensions are also given for the handles and ferrules. Sponsored by the American Brush Manufacturers Assn.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R121-31; 1931. Block Sizes for Calcimine Brushes (Dutch, Semi-Dutch, and Baby Dutch). This recommendation establishes a simplified list of stock sizes for calcimine brush blocks. Sponsored by the American Brush Manufacturers Assn.

U. S. Gov., Federal Specifications H-B-141; 1930. Amendment 2; 1943. Brushes; Calcimine. Covers one type and grade. Gives requirements for bristle and horsetail hair mixture, casing, middle, handle, ferrule, setting, comparison sample, width of brush inside ferrule, depth of ferrule, minimum total weight of bristle in brush, approximate width of strip filler, bristle hole in band, length of bristle outside of band, and tolerances; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Federal Specification H-B-181; 1930. Amendment 1; 1944. Brushes; Dauber, Long-Paddle. Covers one type, grade, and size. Gives requirements for block, holes, brush stock, finish, and tolerances; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., Federal Specification H-B-241; 1930. Amendment 3; 1944. Brushes; Fitch, Flat. Covers one type and grade in three sizes. Gives requirements for stock, handle, ferrule, setting, comparison sample, diameter of oval at bristle, diameter of ferrule at handle, depth of ferrule, minimum weight of bristle in finish brush, minimum of hold of bristle in ferrule, length of bristle outside of ferrule, and tolerances; method of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Federal Specification H-B-256; 1930. Amendment 5; 1944. Brushes; Flowing, Skunk-Hair. Covers one type in five sizes—1 in., 1 1/2 in., 2 in., 2 1/2 in., and 3 in. Gives requirements for hair and bristle, handle, ferrule, setting, comparison sample, washing, and details; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., Federal Specification H-B-351; 1930. Brushes; Lacquering, Flat. Covers one type and grade in three sizes—Nos. 1, 2, and 3. Gives requirements for hair, handle, ferrule, setting, outside diameter of ferrule at handle, outside width and thickness of ferrule at hair, depth of ferrule, length of handle above ferrule, and length of hair outside of ferrule; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking. Emergency Alternate Federal Specification E-H-B-351; 1942, (issued by Procurement Div., Treasury Dept., U. S. Gov.) substituted steel in lieu of tin, changes the requirements for setting compound, and gives tolerance permitted in depth of ferrule.

U. S. Gov., Federal Specification H-B-371; 1930. Amendment 1; 1944. Brushes; Marking. Covers one type and grade in three sizes—Nos. 1, 2, and 3. Gives requirements for bristle, handle, ferrule, setting, diameter of ferrule at bristle, depth of ferrule, minimum hold of bristle in ferrule, and length of bristle outside ferrule; methods of sampling inspection, and tests; and packaging, packing, and marking.

U. S. Gov., Federal Specification H-B-391; 1930. Amendment 1; 1941. Brushes; Mottling. Covers one type and grade, in three sizes—Nos. 1, 2, and 3. Gives requirements for hair handle, ferrule, setting, inside width and thickness of ferrule, depth of ferrule, minimum weight of hair in finished brush, minimum hold of hair in ferrule, and length of hair outside ferrule; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking. Emergency Alternate Federal Specification E-H-B-391; 1942, (issued by Procurement Div., Treasury Dept., U. S. Gov.) substituted steel in lieu of nickled tin and gives tolerance permitted in depth of ferrule.

U. S. Gov., Federal Specification H-B-421; 1930, and Amendment 3-1943. Brushes; Paint, Metal-Bound, Flat (High Grade). Covers one type and two grades in two sizes—No. 1, 3 1/2 in.; and No. 2, 4 in. (width of brush inside of ferrule). Gives requirements for bristle, handle, ferrule, setting, width and thickness of brush inside ferrule, depth of ferrule, minimum weight of bristle, total thickness of strips or filler, bristle hold in ferrule, and minimum length bristle outside of ferrule; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., Federal Specification H-B-431; 1930. Amendment 2; 1943. Brushes; Paint, Metal-Bound, Flat (Medium-Grade). Covers one type and grade in four sizes—3, 3 1/2, 4, and 4 1/2 in. (width of brush inside of ferrule). Gives requirements for bristles, handle, ferrule, setting, width and thickness of brush inside ferrule, depth and thickness of ferrule, minimum weight of bristle in finished brush, thickness of strip or filler; bristle hold in ferrule, and minimum length of bristle outside of ferrule; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., Federal Specification H-B-436; 1941. Brushes; Paint, Metal-Bound, Flat (Utility Wall). Covers one type and one grade in three sizes--3 in., 3 1/2 in., and 4 in. (width of brush inside of ferrule). Gives requirements for stock, handle, ferrule, setting, comparison sample, width and thickness of brush inside ferrule, weight of stock in finished brush, stock hold in ferrule, length of stock outside ferrule, and depth of ferrule; methods of sampling, inspection, and test; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification H-B-451; 1930. Amendment 3; 1944. Brushes; Radiator, Bronzing. Covers one type and one grade in three sizes—1 in., 1 1/2 in., and 2 in. Gives requirements for hair, handle, ferrule, setting, comparison sample, width and thickness of brush inside ferrule, depth of ferrule, minimum weight of hair in finished brush, minimum hold in ferrule, and minimum length of hair outside ferrule; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., Federal Specification H-G-471; 1933. Brushes; Roof, Knotted-Style, Three Knots. Covers one type and size in two grades—A and B. Gives requirements for brush stock, knots, ferrule, block, handle, setting, conformity and standard sample, and required details; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking. Emergency Alternate Federal Specification E-H-B-471; 1942, required brush stock to be 100 percent Tampico fiber.

U. S. Gov., Federal Specification H-B-491a; 1939. Amendment 1; 1941. Brushes; Sash-Tool. Covers one grade, and two types—(I) oval, in five sizes, and (II) round, in two sizes. Gives requirements for bristles, handle, ferrule, setting, dimensions of oval at bristle, diameter of ferrule and depth of ferrule, minimum weight of bristle in brush, minimum length of bristle in and out of ferrule, and length of handle; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment. Emergency Alternate Federal Specification E-H-B-491a; 1942, (issued by Procurement Div., Treasury Dept., U. S. Gov.) substituted one type (oval) and five sizes for the two types and their respective sizes; substituted bristle and horsetail hair mixture for bristles; substituted coated steel for nickel steel pinned; removed requirements for use of hard rubber; and gave tolerance permitted in depth of ferrule.

U. S. Gov., Federal Specification H-B-621a; 1939. Brushes; Stencil (Flag Ends Cut). Covers two types—(I) round sash tool handle (sizes No. 1 and No. 2) and (II) regular stencil handle (sizes Nos. 3, 4, and 5). Gives requirements for bristles, setting, handles, ferrules, diameter and depth of ferrule, minimum weight of bristle in brush, minimum hold of bristle in ferrule, minimum length of bristle outside ferrule, and minimum over-all length; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment. Emergency Alternate Federal Specification E-H-B-621A; 1942, (issued by Procurement Div., Treasury Dept., U. S. Gov.) permitted use of other material in lieu of hard rubber, substituted coated steel in lieu of nickel-plated steel, and gave tolerance permitted in depth of ferrule.

U. S. Gov., Federal Specification H-B-636; 1930. Brushes; Stippling, Wall. Covers one type and grade. Gives requirements for bristle, block, setting, standard sample, diameter of holes, number of holes, number of rows, size of blocks, minimum length of bristle clear of block, and minimum weight of bristle in finished brush; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking. Emergency Alternate Federal Specification E-H-B-636; 1942. (issued by Procurement Div., Treasury Dept., U. S. Gov.) substituted bristle and horsetail hair mixture for bristle stock and removed requirements for use of copper and brass.

U. S. Gov., Federal Specification H-B-696; 1941. Amendment 1; 1941. Brushes; Varnish, Flat. Covers one type and grade in three sizes--Q, 1 1/2, and 2 in. Gives requirements for bristle, handle, setting, ferrule, standard sample, minimum width and thickness of brush inside ferrule, minimum weight of bristle in finished brush, minimum hold of bristle in ferrule, minimum length of bristle out of ferrule, and minimum depth of ferrule; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment. Emergency

Alternate Federal Specification E-H-B-696; 1942, (issued by Procurement Div., Treasury Dept., U. S. Gov.) substituted bristle and horsetail hair mixture in lieu of bristles; and coated steel in lieu of nickel-plated or tin-coated steel; removed requirement to use hard rubber; gave tolerance permitted in depth of ferrule; and changed detail requirements accordingly.

U. S. Gov., Federal Specification H-B-701; 1930. Amendment 2; 1943. Brushes; Varnish, Flat (Double X Thickness). Covers one type and grade in five sizes—1, 1 1/2, 2, 2 1/2, and 3 in. Gives requirements for bristle, handle ferrule, setting, widths and thickness of brush inside ferrule, depth of ferrule, minimum weight of bristle in finished brush, minimum hold of bristle in brush, and minimum length of bristle out of ferrule; methods of sampling, inspection, and tests; requirements for packaging, packing, and marking.

U. S. Gov., Federal Specification H-B-706; 1930. Amendment 1; 1943. Brushes; Varnish, Flat (Triple X Thickness). Covers one grade and type in four sizes—1 1/2, 2, 2 1/2, and 3 in. Gives requirements for bristle, handle, ferrule, setting, comparison sample, width and thickness of brush inside ferrule, depth of ferrule, minimum weight of bristle in finished brush, minimum hold of bristle in ferrule, and minimum length of bristle out of ferrule; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., Federal Specification H-B-711; 1941. Amendment 1; 1943. Burshes; Varnish, Oval. Covers one type and grade and two sizes—2 and 4. Gives requirements for ferrule, setting, handle, bristles, standard sample, minimum inside diameter of ferrule, minimum length out of ferrule, weight and length out of ferrule of bristles, minimum length and hold in ferrule, of handle, greatest width and thickness of handle at plug end, and depths of wooden ring inside of ferrule; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., Federal Specification H-B-731; 1930. Brushes; Whitewash. Covers one type and grade. Gives requirements for bristle, ferrule, block, setting, standard sample, width of brush inside of band, depth of band, minimum weight of bristle in finished brush, width of strip in brush, bristle hold in band, minimum length of bristle out of band, and tolerances; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.
Emergency Alternate Federal Specification E-H-B-731; 1942, (issued by Procurement Div., Treasury Dept., U. S. Gov.) substituted bristle and horsetail hair stock in lieu of bristles; gave tolerance permitted in length of ferrule; and changed detail requirements accordingly.

U. S. Gov., Federal Specification RR-S-714; 1943. Amendment 1; 1944. Stencil-Outfits (Letters and Figures); Metallic. Shall be of the lock-edge type, and shall be 1/2, 1, 2, 4, and 6 in. sizes. Covers material, workmanship, and details of stencil-outfit, stencils, ink, brush, stencil box, and marking; methods of sampling, inspection, tests; and packaging, packing, and marking for shipment.

U. S. Gov., Navy Dept. Specification 38B28d; 1944. Brushes; Lettering.

U. S. Gov., Navy Dept. Specification 38B41; 1944. Brushes; Paint, Flat, Synthetic-Filament Bristles.

U. S. Gov., U. S. Army, Corps of Engineers. Specification 30-36; 1924. Brush; Water Color, Lithographers'.

U. S. Gov., Veterans Administration. Specification VA-X-25b; 1941. Brushes; Artists', Bristle.

U. S. Gov., Veterans Administration. Specification VA-X-26b; 1941. Brushes; Artists', Round Red Sable.

U. S. Gov., Veterans Administration. Specification VA-X-27b; 1941. Brushes; Stencil, Artists.

*References.*—Glue brushes, *see* 982.9; painters' dust brushes, *see* 982.3.

## 982.3 CLEANING BRUSHES

American Hospital Assn., 34-22. Ceiling and Wall Dust Brushes. Covers one type and grade in 8-in. and 12-in. sizes. Based on U. S. Gov. Federal Specification H-B-191.

American Hospital Assn., 34-25. Counter Dust Brushes. Covers one type and size in two grades. Based on U. S. Gov. Federal Specification H-B-201a.

American Hospital Assn., 34-28. Painters' Flat Dust Brushes. Covers one type and two grades. Based on U. S. Gov. Federal Specifications H-B-211.

American Hospital Assn., 34-31. Painters' Round Dust Brushes. Covers one type and grade. Based on U. S. Gov. Federal Specification H-B-216.

American Hospital Assn., 34-34. Radiator Dust Brushes. Covers one size and grade in two types. Based on U. S. Gov. Federal Specification H-B-221.

American Hospital Assn., 34-49. Sanitary or Toilet Brushes. Covers one grade and two types. Based on U. S. Gov. Federal Specification H-B-481.

American Hospital Assn., 34-55. Deck Scrubbing Brushes. Covers one type, grade, and size. Based on U. S. Gov. Federal Specification H-B-531.

American Hospital Assn., 34-58. Hand Floor Scrubbing Brushes. Covers one type, grade, and size. Based on U. S. Gov., Federal Specification H-B-541.

American Hospital Assn., 34-61. White Tampico Hand Scrubbing Brushes. Covers one type, grade, and size. Based on U. S. Gov. Federal Specification H-B-551.

American Hospital Assn., 34-64. Sidewalk Brushes. Covers one type and grade in 18-in., 24-in., and 30-in. sizes. Based on U. S. Gov. Federal Specification H-B-591.

American Hospital Assn., 43-4. Beaker, Burette, Cylinder, and Test-Tube Brushes. Covers one grade in five types. Based on U. S. Gov. Federal Specification H-B-126.

American Hospital Assn., 70-1. Bedpan Brush. Covers one type, one grade, and one class.

American Meat Institute. Standards for Packinghouse Supplies, Packs, and Equipment, 1928. Fiber Brushes. Requirements on size of brush, palmetto or bassine fiber, bristle length, number of rows and number of holes; includes fiber fountain brush for washing beef, fountain sheep nose brush, washing brush for beef necks, washing brush for beef backs, with illustrations.

American Meat Institute. Standards for Packinghouse Supplies, Packs, and Equipment; 1928. Wire Brushes.

Requirements on size of block, flat or round wire, bristle length, ends per hole, number and rows of holes; includes butchers' block brush, metal clearing brush for structural steel and castings, flat wire fountain brush for brushing out beef killing floors and scrubbing chutes and tables, flatback wire brush for kettles, shoe-handle wire scratch brush for cleaning files and dies, with illustrations.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Battery Cleaning Brushes, M-911-39; 1939. Requirements for gage of brass spring wire, stapled into a hardwood curved handle approximately 12 in. long, size of brush part, number of holes, rows of holes, diameter of holes, and length of wire.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Bead Scrub Brush, M-911-39; 1939. Two types—stiff grey Russian bristle with half Indian bristle, and of Chungking Chinese bristle; four-row bead scrub block of hardwood setting and construction.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Counter Duster Brushes, M-911-39; 1939. Two types—from Chungking Chinese bristle, and from grey Russian bristle; hardwood duster block setting compound, and construction.

Assn. of American Railroads, Operations and Maintenance Dept., Mechinical Div. Manual of Standard and Recommended Practice, 1942. File Cleaning Brushes, M-911-39; 1939. Round steel wire, drawn into a fabric backing and nailed to a wooden block; size of block and length of wire.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Hopper Brushes, M-911-39; 1939. Made of good quality grey Tampico, tightly woven in spiral grooves in wooden curved handle, or as approved. Length of brush part, over-all, and diameter.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Machine Shop Bench Brushes, M-911-39; 1939. Made with grey Tampico staple, set in hardwood block 13-in. long with string in handle.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Moulder Double Duster Brush, M-911-39; 1939. One side half-stiff grey Russian, and other side grey Tampico, plain sanded hardwood block, setting, and construction.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Moulder's Wire Brush, M-911-39; 1939. Two sizes, made with flat steel wire pinned or stapled in hardwood block, requirements for sizes of block, number and size of hole, 2- and 4-in. projection of wire out of block.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Oblong Car Wash Brush, M-911-39; 1939. Made from mixture of Russian, Chinese, and Indian bristle, conforming to standard sample, maple or sycamore block with four holes for handle, setting, construction, and dimensions.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Painters' Flat Duster Brush, M-911-39; 1939. Quality of bristle, handle or block, setting, and construction. Includes also counter duster brush, plush duster brush, moulder double duster brush, with sizes listed as standard for railway purposes.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Palmetto Scrub Brushes, M-911-39; 1939. From good palmetto fiber, staple set in oblong block, size, and number of holes.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Plush Duster Brushes, M-911-39; 1939. Grey and black Indian bristle, hardwood duster block with handle, setting compound, and construction.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Round Car Scrub Brush, M-911-39; 1939. From stiff grey Russian Bristle, with half black or grey Indian bristle: round seamless nickled steel ferrule, set in vulcanized rubber; round paint style handle.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Round Car Wash Brushes (A and B), M-911-39; 1939. Good quality grey Russian bristle, stiff and semi-stiff grades, block, setting, and details of construction to conform to standard sample.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. White Tampico Scrub Brush, M-911-39; 1939. No.37 brush set in standard floor scrub block with pointed ends, exact size, number of holes, diameter of hole, and length of fiber given.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Wire Scratch Brush, M-911-39; 1939. Curved and four-row shoe-handle types; requirements for gage of wire, hardwood block, size, and number of holes; and length of wire.

National Assn. of Dyers and Cleaners of the U. S. and Canada. The Spotting Department, 1940. Includes recommendations for the various types of brushes used in the spotting department.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, 1938. Brushes; Cleaning. Covers definition, materials, standard sizes, manufacture, specifications, uses, and ordering instructions.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R167-37; 1937. Counter, Window, and Radiator Brushes. This recommendation establishes a simplified schedule of stock varieties and fillings for counter, window, and radiator brushes. Sponsored by the American Brush Manufacturers Assn.

U.S. Gov., Federal Specification H-B-126; 1938. Brushes; Beaker, Burette, Cylinder, and Test Tube. Covers one grade in five types—(I) beaker, with bristles on wooden or wire handle; (II) burette, with bristles on wire handle; (III) cylinder with brushes on wire handle; (IV) cylinder, with brushes on wooden handle; and (V) test tube, with bristles on wire handles.

Gives requirements for brush stock, wood handles, wire handles, bristles, finish; methods of inspection, sampling, and tests; and requirements for packaging, packing, and marking for shipment. Emergency Alternate Federal Specification E-H-B-126; 1942, (issued by Procurement Div., Treasury Dept. U. S. Gov.) changed requirements for utilization of brass or bronze and gave requirements for steel in lieu thereof.

U. S. Gov., Federal Specification H-B-151; 1930. Brushes; Casting. Covers one type and grade. Gives requirements for block, wire, holes, finish, and tolerances; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Federal Specification H-B-171; 1930. Brushes; Cuspidor. Covers one type, grade, and size. Gives requirements for stick, construction, finish, and tolerances; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Federal Specification H-B-191; 1930. Amendment 1; 1944. Brushes; Dust, Ceiling and Wall. Covers one type and grade in two sizes, 8 in. and 12 in. Gives requirements for stock, block, handle, number of holes, depth of holes, and minimum weight of bristle per brush; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., Federal Specification H-B-201a; 1940. Amendment 2; 1942. Brushes; Dust, Counter. Covers one type and size, and of two grades—(A) with Chinese or Russian bristles and (B) with live horsetail hair. Gives requirements for bristles, block, setting, holes, minimum length of bristles clear of block, minimum weight of bristles, and tolerances; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment. Emergency Alternate Federal Specification E-H-B-201a; 1943, (issued by Procurement Div., Treasury Dept., U. S. Gov.) changed the requirements of grade A brushes.

U. S. Gov., Federal Specification H-B-211; 1930. Amendment 1; 1941. Brushes; Dust, Painters', Flat. Covers one type in two grades—A and B. Gives general and detailed requirements for handle, bristle, setting, standard sample, width of block, thickness of block at bristle, diameter and number of outside and middle holes, number of outside and middle knots, minimum length of bristle clear of block, and minimum weight of bristle in finished brush; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking. Emergency Alternate Federal Specification E-H-B-211; 1943, (issued by Procurement Div., Treasury Dept., U. S. Gov.) changed general requirements and detail requirements.

U. S. Gov., Federal Specification H-B-216; 1930. Brushes; Dust, Painters', Round. Covers one type and grade. Gives detail requirements for bristle, handle, setting, standard sample, diameter and number of inside and outside holes, outside diameter of block, minimum length of bristle clear of block, and weight of bristle in finished brush; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking. Emergency Alternate Federal Specification E-H-B-216; 1943, changed requirements for stock, handle, staple setting, comparison sample, and packing.

U. S. Gov., Federal Specification H-B-221; 1933. Amendment 1; 1939. Brushes; Dust, Radiator. Covers one grade and size in two types—(I) wooden handle and (II) twisted handle. Gives detail requirements for stock, block and handle, holes, setting, and tolerances; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking. Emergency Alternate Federal Specification E-H-B-221; 1942; (issued by Procurement Div., Treasury Dept., U. S. Gov.) changed the requirements for brush wire.

U. S. Gov., Federal Specification H-B-271; 1933. Brushes; Garage, Fiber. Covers one type and grade in three sizes—14-in., 18-in., and 24-in. (length of block). Gives requirements for block, setting, handle, widths and thickness of block; number of rows, number and diameter of holes, depth of holes, and length of turn out of block; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Federal Specification H-B-328; 1943. Brushes; Hand, Scrub. Covers one type of brush with pig and/or hog bristles or synthetic bristles. Gives requirements for block and finish, holes, staples, stock, bristle stock, synthetic bristle stock, fastness to boiling water, fastness to light, and sterilization; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., Federal Specification H-B-481; 1939. Amendment 1; 1944. Brushes; Sanitary or Toilet. Covers one grade and two types—(I) twisted in wire, curved brush head, and (II) spiral wound, straight brush head. Gives requirements for wires, fibers, stock, brush heads, handles, and finish; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

U.S. Gov., Federal Specification H-B-521; 1930. Amendment 3; 1944. Brushes; Scrubbing, Clothes. Covers one type and grade. Gives requirements for material and workmanship, block, stock, holes, finish, ends of block, top edge of block, and tolerances; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., Federal Specification H-B-531; 1930. Amendment 3; 1940. Brushes; Scrubbing, Deck. Covers one type, grade, and size. Gives requirements for block, handle, brush stock; dimensions, holes, tolerances, and finish of block; dimensions, tolerances, and finish of handle; stock, staples, methods of sampling, inspection, tests, and requirements for packaging, packing, and marking. Emergency Alternate Federal Specification E-H-B-531; 1943, changed requirements for block, brush stock, and construction.

U. S. Gov., Federal Specification H-B-541; 1930. Amendment 2; 1938. Brushes; Scrubbing, Floor, Hand. Covers one type, grade, and size. Gives requirements for block, holes, brush stock, methods of sampling, inspection, tests, packaging, packing, and marking. Emergency Alternate Federal Specification E-H-B-541; 1943, changed requirements for block, holes, and brush stock.

U. S. Gov., Federal Specification H-B-551; 1933. Amendment 3; 1939. Brushes; Scrubbing, Hand, White-Tampico. Covers one type, grade, and size. Gives requirements for block, holes, brush stock, finish, tolerances, methods of sampling, inspection, tests, packaging,

packing, and marking. Emergency Alternate Federal Specification E-H-B-551; 1943, changed requirements for block and brush stock.

U. S. Gov., Federal Specification H-B-591; 1933. Brushes; Sidewalk. Covers one type and grade in three sizes—18-in., 24-in., and 30-in. Gives requirements for stock, block, handle, holes, and tolerances; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Federal Specification H-B-681; 1934. Amendment 1; 1939. Brushes; Typewriter. Covers two types: (I) Machine-dusting in three classes—(A) cone style, (B) paint-brush style, wire handle, and (C) paint-brush style, wood handle; and (II) type-cleaning in two classes—(A) tooth-brush style and (B) twisted-in-wire style). Gives requirements for designs, bristles, handles, and ferrules; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Federal Specification H-B-751; 1934. Amendment 1; 1944. Brushes; Window. Covers one grade and size, and two types—(A) horsehair and (B) horsehair-and-fiber (mixture). Gives requirements for block, stock, handle, holes, setting, and tolerance; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., Marine Corps Specification, 1943. Brush; Meat Block.

U. S. Gov., Marine Corps Specification, 1933. Brush; Wire, Brass, for Pistol, Caliber .45.

U. S. Gov., Navy Dept. Specification 13B13g; 1944. Brushes; Boiler-Tube, Wire, Sectional, Push-Brushes.

U. S. Gov., Navy Dept. Specification 13B14d; 1944. Brushes; Boiler-Tube, Wire-Bristle, Expanding-Type, For Use With Cleaning-Outfits, Boiler-Tube, Electric Motor-Driven and Air Motor-Driven.

U. S. Gov., Navy Dept. Specification 13C8d; 1940. Cleaning-Outfits; Boiler-Tube, Motor-Driven.

U. S. Gov., Navy Dept. Specification 38B25c; 1945. Brushes; Cleaning, Steel-Wire, Rectangular, Handled.

U. S. Gov., Navy Dept. Specification 40B5a; 1945. Brushes; Wire, Rotary, Cup, and Radial (Disk).

U. S. Gov., Post Office Dept., Div. of Motor Vehicle Service, Bureau of the Fourth Assistant Postmaster General. Specifications for Brushes; Fountain, for Truck Washing.

U. S. Gov., Treasury Dept., Procurement Div., 526a; 1942. Brushes; Draftsmen's, Dust. Covers one type and one grade. Gives requirements for stock, block and handle, holes, and setting; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 30-62; 1932. Brush; Cleaning, Motor.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 30-60A; 1938. Brush; Horse, M-1912.

U. S. Gov., U. S. Army, Medical Dept. Specification 30-64A; 1940. Brush; Meat Block.

U. S. Gov., U. S. Army, Medical Dept. Specification 30-65; 1939. Brush; Hand.

U. S. Gov., U. S. Maritime Commission. Specification 64-MC-9a; 1943. Brushes; Bakers', Bakers' Bench or Flour, and Butchers' Block. Covers one grade and three types—(I) bakers', (II) bakers' bench or flour (III) butchers' block. Gives requirements for bristles, handles, workmanship, and details for each type; sampling, inspection, and methods of test; and packaging, packing, and marking.

U. S. Gov., Veterans Administration. Specification VA-MM-333; 1944. Sink Brushes.

*References.*—Floor sweeps, *see* 981.4, 981.0.

## 982.4 POLISHING BRUSHES

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Stove Brushes, M-911-39; 1939. Made from good quality Tampico fiber, set in solid block, arched handle fastened to block with two screws, size of block minimum holes, diameter of holes, and length of fiber.

U. S. Gov., Federal Specification H-B-131; 1933. Amendment 2; 1944. Brushes; Blacking and Dauber. Covers one type, size, and three grades—(A) 100 percent horse hair, (B) 50 percent horse hair and 50 percent palma fiber, and (C) 100 percent palma fiber. Gives requirements for block, stock, workmanship, tolerances, and details; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., Navy Dept. Specification 38B26b; 1942. Brushes; Floor, Waxing and Polishing.

U. S. Gov., Navy Dept. Specification 38B27b; 1942. Brushes; Platers'.

## 982.5 BRUSHES FOR INDUSTRIAL USE

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Acid Brushes, M-911-39; 1939. To be yellow flagged Tampico fiber, nickeled tin lock seam ferrule, peerless style varnish hardwood handle, setting in vulcanized rubber, and construction.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Leather Bound White Wash or Roofing Brushes, M-911-39; 1939. Soft grade Tientsin or Manchurian bristle, mixed with superior Hankow, Chungking, or Yunan stiff bristle, 6 1/2-oz. leather welting, extension style block, vulcanized rubber setting.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Roof Brushes (3-Knot); M-911-39; 1939. Good grey or black Tampico center, cased with pure Chinese bristle. Three knot roof type, hardwood block, seamless steel ferrules, setting, and wedging.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Tar Brushes, M-911-39; 1939. Uses grey Russian bristle, semi and stiff grade, ferrule, handle, setting, and construction.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Whitewash Brush, M-911-39. Good white Tampico fiber, staple set in finished whitewash block, with staff holes.

*References.*—Wire and fiber cleaning brushes, *see* 982.3; paint and stencil brushes, *see* 982.2; hair sweeping brushes, *see* 981.4.

## 982.6 CARBON BRUSHES

*References.*—Carbon brushes for electric motors, *see* 711.42.

## 982.9 MISCELLANEOUS BRUSHES

American Hospital Assn., 52-1. Hand Brush. Covers one grade and one class.

American Meat Institute. Standards for Packinghouse Supplies, Packs, and Equipment, 1928. Government Standard Stamping Brush. Of Chinese bristle for ink pad use, size of block, length of bristle, and number of rows.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Dye Brushes, M-911-39; 1939. Made from half Russian and half Indian bristle, set in hardwood block with strong brush wire, size of 42 brush, back of block glued and fastened with six screws.

U. S. Gov., Dept. of Agriculture, Forest Service. Specification 247-49-S. Brush; Pastry.

U. S. Gov., Federal Specification H-B-291; 1930. Amendment 1; 1941. Brushes; Glue, Flat. Covers one type, two grades, and three sizes—Nos. 1, 2, and 3. Gives detail requirements for bristle, handle, ferrule, setting, width inside ferrule, depth and thickness of ferrule, thickness of brush inside ferrule, minimum weight of bristle in finished brush, minimum hold of bristle in brush, and length of bristle outside of brush; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking. Emergency Alternate Federal Specification E-H-B-291; 1942, (issued by Procurement Div., Treasury Dept., U. S. Gov.) substituted steel in lieu of nickeled brass, gave tolerance permitted in depth of ferrule; and changed the requirements for hard rubber.

U. S. Gov., Federal Specification H-B-301; 1930. Amendment 2; 1944. Brushes; Glue, Round. Covers one type, one grade, and three sizes—Nos. 1, 2, and 3. Gives requirements for stock, handle, ferrule, setting, comparison sample, diameter and depth of ferrule inside, minimum weight of bristle in finished brush, diameter of handle widest point in brush, bristle hold in ferrule, and length of bristle outside of ferrule; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Federal Specification H-B-401; 1938. Brushes; Mucilage and Paste. Covers one grade, in two types—(I) brushes with collar and rim, (II) flat brushes without collar. Gives requirements for bristles, ferrules, handles, finish, dimensions for bristles, brushes, and handles; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment. Emergency Alternate Federal Specification E-H-B-401; 1942. substituted horsehair in lieu of bristles and steel in lieu of aluminum or other nonferrous metal; elminated hard rubber; and changed requirements accordingly.

U. S. Gov., Federal Specification H-C-421; 1941. Cleaners; File, Combination (Brush and Card). For removing filings that have become clogged between file teeth. Gives requirements for design, wooden block, handle, wires, file card, packing, brush, scorer; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., Navy Dept. Specification 38 B 29a; 1943. Brushes; Seaming.

U. S. Gov., Treasury Dept., Procurement Div., 284A, 1942. Brushes; Seaming. Shall be of one type, grade, and size. Gives requirements for block, brush stock, stock, holes, dimensions, and tolerances; method of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., U. S. Army, Medical Dept. Specification 30-66; 1939. Brush; Weighted.

U. S. Gov., U. S. Army, Medical Dept. Specification 30-67; 1939. Brush; Bedpan.

*References.*—Dental brush wheels, *see* 915.10; hair sweeping brushes, *see* 981.4.

## 983. MOPS

American Hospital Assn., 34-109. Cotton Mops. Covers narrow and wide band types in six classes. Based on U. S. Gov., Federal Specifications T-M-561a.

American Hospital Assn., 34-112. Oval Shape Cotton Dry Mops Without Handles (Oil Treated and Untreated, for Walls, Ceilings, and Floors). Covers one type natural color cotton in three sizes—8-oz., 12-oz., and 14-oz. Based on U. S. Gov., Treasury Dept., Procurement Div., Specification 407A.

American Hospital Assn., 34-115. Oil-Treated Floor Mops With Handles (Triangular Shape). Covers one grade, type, and size. Based on U. S. Gov., Treasury Dept., Procurement Div. Specification 408A.

U. S. Gov., Federal Specification T-M-561a; 1938. Amendment 1; 1944. Mops; Cotton. Covers one grade in two types—(1) narrow band and (2) wide band; and in six classes—(A) 9 lb. per dozen, (B) 12 lb. per dozen, (C) 15 lb. per dozen, (D) 18 lb. per dozen, (E) 20 lb. per dozen, and (F) 24 lb. per dozen. Gives requirements for material and workmanship; detail requirements for each type; number of strings per mop, widths at center, and lengths; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Navy Dept. Specification 38M1; 1941. Mops; Graving and Pitch.

U. S. Gov., Treasury Dept., Procurement Div., No. 346; 1939. Mops; Cuspidor and Sanitary, Cotton. Only one type and grade of mop is covered, made of clean cotton, combed, and free from sizing or other loading materials, and so treated as to allow it to readily absorb liquids. Gives requirements for handles, length, mop, over-all length, and manner of securing mop to handle; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., Treasury Dept., Procurement Div., 407A; 1939. Mops; Dry, Cotton, Without Handles (Oil Treated and Untreated, for Walls, Ceilings, and Floors) (Oval Shape). Covers three weights—8 oz., 12 oz., and 14-oz., made of natural color cotton. Gives requirements for frame shape, handle clamp, oil, dimensions; method of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., Treasury Dept., Procurement Div., 408B; 1942. Mops; Floor, Oil Treated, With Handles (Triangular Shape). Covers one grade, type, and size.

Shall be made of clean cotton free from lint, sizing, or other loading materials. Gives requirements for mop yarn and colors, tape or band, frame, handle, ferrule, and dyes; method of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., Treasury Dept., Procurement Div., 571a; 1942, Swabs; Deck. Covers one type, grade, and class. Gives requirements for handle, shape, finish, dimensions, swab, cotton twine, substitute for marlin, and securing swab to handle: methods of sampling, inspection, and tests; and packaging, packing, and marking.

### 983.1 MOP STICKS

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Commercial Standard CS2-30; 1930. Mopsticks. This commercial standard is a minimum specification for mopsticks used in domestic, janitor, and like service. Gives general and detail requirements covering domestic and janitor sizes of mopsticks of the spring lever type and screw type; also requirements covering metal fixtures such as head, spring, and lever.

U.S. Gov., Federal Specification NN-H-101: 1934. Amendment 4: 1944. Handles; Mop. Covers one grade and three types—(I) screw type (malleable iron or pressed steel head), (II) spring-lever type (malleable iron or pressed steel head), and (III) alternate types. Gives requirements for material, kind of wood for stick, workmanship, stick, metal fixtures, bail, head, screw-pin, and finish; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., Veterans Administration. Specification VA-G-520: 1933. Handles for Floor Mops.

### 983.2 MOPPING OUTFITS

American Hospital Assn., 34-106. Mopping Outfits. Covers two types in various styles and sizes. Based on U. S. Gov. Federal Specification RR-M-571.

U.S. Gov., Federal Specification RR-M-571; 1938. Amendment 2; 1944. Mopping Outfits. Covers two types—(1) wringers, light-duty, for use either with general utility buckets or without buckets; and (II) wringer and water container combinations. Gives requirements for material, workmanship, cadmium or zinc coating, water-containers, wringers, and details for each type class, style, and size; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Navy Dept. Specification 38S1c: 1944. Swabs; Deck.

U. S. Gov., Treasury Dept., Procurement Div., 534a; 1942. Buckets; Mopping Apparatus; Oval, Caster Mounted. This specification covers oval shaped buckets mounted on casters for use with hand operated mop wringers. Buckets furnished in four sizes—16, 26, 35, and 50 qt. Gives requirements for design, fabrication, seams, top rim, ears, bail, casters, dimensions, and thickness of metal; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., Treasury Dept., Procurement Div., No.726; 1945. Swabs; Hand; Covers one type, grade, and class. Gives requirements for swab, cotton twine, construction, comparison sample, and length; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., U. S. Maritime Commission, Specification 42-MC-1a: 1941. Mopping Outfit; Mechanical. Type I—with galvanized pails; type II—with wooden pails; and there shall be but one grade. Gives requirements for workmanship, capacity, bails, ears, finish of mechanical parts, roller bridges, rollers, foot treadle, pivots, springs, foot brace, inspection, and method of test.

U. S. Gov., Veterans Administration. Specification VA-G-109e; 1937. Mopping Outfit.

### 984. SWEEPERS

U. S. Gov., Treasury Dept., Procurement Div., 524a; 1942. Sweepers; Carpet. Covers one type, one grade, and two sizes—(1) 13 in. and (2) 17 1/2 in. Gives requirements for metal finish, wood, wood finish, color, dimensions, case, driving wheels, brush unit, combs, dirt collector, pan release lever, bumper, handle, bail and handle socket, and performance; methods of sampling, inspection, and test; and packaging, packing, and marking.

## 990-999 MISCELLANEOUS ARTICLES

### 991. MATCHES

U. S. Gov., Federal Specification EE-M-101c: 1944. Matches; Safety (Wood in Boxes; Paper in Books). Covers one grade and two types—(I) wood (in boxes) and (II) paper (in books). Gives general requirements and detail requirements for each type; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Veterans Administration. Specification VA-G-343a; 1944. Matches; Safety, in Books.

### 992. BUTTONS

U.S. Gov., Federal Specification V-B-871; 1934. Amendment 3; 1944. Buttons. Covers three types: (I) Collar, in two classes—(A) hard fiber and (B) plain wood; (II) sewing hole, in nine classes—(A) aluminum, (B) bone, (C) brass, (D) composition, (E) japanned iron, (F) vegetable ivory, (G) salt water pearl, (H) fresh water pearl, and (I) zinc; and (III) staple, in four classes—(A) composition, (B) vegetable ivory, (C) salt water pearl, and (D) fresh water pearl. Gives requirements for material and workmanship, shape, color, sizes, and details for each class; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., Marine Corps Specification, 1943. Button; Honorable Discharge.

U. S. Gov., Marine Corps Specification, 1944. Buttons: Metal, for Officers' Uniforms.

U. S. Gov., Marine Corps Specification, 1944. Buttons: Metal, Uniform and Cap (Enlisted Men).

U. S. Gov., Marine Corps Specification, 1943. Buttons; Plastic, for Uniform and Cap (Enlisted Men).

U. S. Gov., Marine Corps Specification, 1943. Buttons; Sewing, Plastic.

U. S. Gov., Marine Corps Specification, 1938. Button; U. S. Marine Corps Reserve.

U. S. Gov., Navy Dept. Specification 71B3b; 1942. Buttons: Bronze, Eagle, Gilt, Anchor.

U. S. Gov., Navy Dept. Specification 71B4b; 1943. Buttons, Eagle, Gilt and Bronze, for Officers' Uniforms.

## 993. BREATHING AND DIVING APPARATUS

Industrial Hygiene Foundation of America, Inc. Preventive Engineering Series, Bulletin 2, Part 2; 1938. Use and Care of Respirators. Covers use of Respirators, and includes list of respiratory protective devices approved by U. S. Bureau of Mines.

National Safety Council. American Standards Assn., K13-1930. Code for Identification of Gas-Mask Canisters. Published as Bulletin 512 of Bureau of Labor Statistics, U. S. Dept. of Labor. Assigns definite colors to gas mask canister, dependent on kind of gas, smoke, or mist with which it is supposed to be used. For Gas Masks used in industrial plants, mines, rescue work, fire fighting, etc.

Society of Automotive Engineers. Aeronautical Recommended Practice, 171; 1944. Nomenclature, Aircraft Oxygen Equipment, Lists 45 terms alphabetically and defines them.

U. S. Gov., Army Air Forces. Specification 3165-A-1; 1944. Mask; Oxygen, Type A-13.

U. S. Gov., Army Air Forces. Specification 3166-1; 1944. Mask; Oxygen, Type A-7A.

U. S. Gov., Army Air Forces. Specification 40465A; 1944. Regulator; Diluter-Demand Oxygen, Type A-14, Pressure Breathing.

U. S. Gov., Army Air Forces. Specification 40466-1; 1945. Regulator; Diluter-Demand Oxygen, Type A-15.

U. S. Gov., Army Air Forces. Specification 40622A-1; 1944. Kit; Oxygen Mask Maintenance, Type Z-1.

U. S. Gov., Army Air Forces. Specification 40705-2; 1944. Valve; Mask Exhalation, Pressure Compensating.

U. S. Gov., Army-Navy Aeronautical Specification AN-O-134; 1944. Connection Assemblies; Demand Mask to Regulator Tube.

U. S. Gov., Army-Navy Aeronautical Specification AN-M-3; 1942. Masks; Oxygen.

U. S. Gov., Army-Navy Aeronautical Specification AN-R-5; 1942. Regulators; Diluter-Demand Oxygen.

U. S. Gov., Army-Navy Aeronautical Specification AN-R-11; 1942. Regulator Assemblies; Demand Oxygen.

U. S. Gov., Army-Navy Aeronautical Specification AN-T-23a-1; 1944. Tube Assemblies; Oxygen, Mask to Regulator.

U. S. Gov., Dept. of Commerce, National Bureau of Standards, H 24; 1938. American Standards Assn., Z 2-1938. Standard Safety Code for the Protection of the Heads, Eyes, and Respiratory Organs. Protectors for Chipping, riveting, calking; scaling, grinding; exposure to dust and wind; babbitting; handling corrosive chemicals, dipping, brush coating; exposure to glare; oxyacetylene welding, furnace work; arc welding and cutting; exposure to dust fumes, mist, smokes, or other atmospheric particulate matter; abrasive blasting; exposure to irrespirable gases and vapors; and exposures to heavy falling objects. Operating rules and tests for protectors.

U. S. Gov., Navy Dept. Specification 12D1d; 1935. Diving Apparatus.

U. S. Gov., Treasury Dept., Procurement Div., 409D; 1943. Respirators; Dust (Non-Toxic), Mechanical-Filter. Shall be in one type and one grade and shall bear the approval of U. S. Bureau of Mines for protection against type A dusts. Gives requirements for rubber parts, metal parts, sterilization, weight, face piece, valves, filter unit, container, and filtering medium; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., Treasury Dept., Procurement Div. 519d; 1943. Masks; Gas. Hydrocyanic Acid (Hydrogen-Cyanide). Covers one grade, two types—(I) hose-connection canister and (II) direct-connection canister; and two classes—(A) with warning agent and (B) without warning agent. Intended for protection against hydrogen cyanide gas and shall bear the approval of the U. S. Bureau of Mines. Gives requirements for material, workmanship, rubber parts, metal parts, face piece, valves, hose, canister, carrying harness, and carrying case; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., Treasury Dept., Procurement Div., 556c; 1942. Respirators; Dust (Toxic and Non-Toxic), Mechanical-Filter. Covers one type and one grade intended for protection against free silica, asbestos, aluminum, cellulose, cement, charcoal, coal, coke, flour, gypsum, iron ore, limestone,,wood, lead, cadmium, arsenic, chromium, magnesium, selenium, vanadium, and their compounds. Gives requirements for rubber parts, metal parts, sterilization, total weight, face piece, valves, filter unit, container, and filtering medium; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., Treasury Dept., Procurement Div., 557c; 1942. Respiratory; Supplied-Air. Covers—class A, with filter assembly holder; and class B, without filter assembly holder. Intended for use with air supplied by means of a hose line attached to a remote source. Gives requirements for rubber parts, metal parts, face piece, exhalation valve, breathing hose, filter assembly and air regulator, and filter assembly holder; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., Treasury Dept., Procurement Div., No. 823; 1943. Masks; Gas. Universal (Not for Purposes of Warfare). Covers one type and one grade. Intended for respiratory protection in air against acid gases, organic vapors, ammonia, carbon monoxide, smoke from ordinary fires, dust, fumes, mists, and fogs. Gives requirements for material, workmanship, rubber parts, metal parts, face piece, exhalation valve, checking harness, and carrying case; methods of inspection, sampling, and tests; and packaging, packing, and marking.

U. S. Gov., U. S. Army, Army Air Forces. Specification 94-3107; 1940. Mask; Oxygen, Type A-8.

U. S. Gov., U. S. Army, Chemical Warfare Service. Specification 20-30C; 1941. Valve; Outlet, Gas-Mask.

U. S. Gov., U. S. Army, Chemical Warfare Service. Specification 20-32B; 1930. Deflector; Rubber, Gas-Mask Facepiece.

U. S. Gov., U. S. Army, Chemical Warfare Service. Specification 20-34A; 1928. Valve; Canister, Check.

U. S. Gov., U. S. Army, Chemical Warfare Service. Specification 20-75C; 1941. Faceblank; Facepiece, Gas-Mask.

U. S. Gov., U. S. Army, Chemical Warfare Service. Specification 20-84B; 1939. Disc; Inlet Valve, Canister.

U. S. Gov., U. S. Army, Chemical Warfare Service. Specification 97-51-13C; 1938. Castings; Die, for Gas Masks.

U. S. Gov., U. S. Army, Chemical Warfare Service. Specification 97-51-44A; 1933. Harness; Head, MII, Assembly.

U. S. Gov., U. S. Army, Chemical Warfare Service. Specification 97-51-49; 1928. Bridge; Wire, Submarine Face Piece.

U. S. Gov., U. S. Army, Chemical Warfare Service. Specification 97-51-52; 1928. Mask; Gas, Public Health Service, H.C.N.

U. S. Gov., U. S. Army, Chemical Warfare Service. Specification 97-51-56; 1929. Mask; Gas, Ammonia.

U. S. Gov., U. S. Army, Chemical Warfare Service. Specification 97-51-57; 1929. Mask; Gas, Fireman's.

U. S. Gov., U. S. Army, Chemical Warfare Service. Specification 97-51-65; 1929. Mask; Gas, Oil Vapor.

U. S. Gov., U. S. Army, Chemical Warfare Service. Specification 97-51-66; 1935. Facepiece; Service, M1A2.

U. S. Gov., U. S. Army, Chemical Warfare Service. Specification 97-51-94; 1937. Facepiece; Diaphragm, MII, Elastic Type Head Harness.

U. S. Gov., U. S. Army, Chemical Warfare Service. Specification 97-51-112; 1942. Diaphragm; Cellulose Acetate.

U. S. Gov., U. S. Army, Chemical Warfare Service. Specification 97-51-114; 1942. Faceblank; Fully Molded, Army Optical Gas Mask.

U. S. Gov., U. S. Army, Chemical Warfare Service. Specification 97-51-126; 1941. Faceblank; Service, Fully Molded.

U. S. Gov., U. S. Army, Chemical Warfare Service. Specification 97-51-142; 1940. Facepiece; Gas-Mask, Noncombatant, MI.

U. S. Gov., U. S. Army, Chemical Warfare Service. Specification 97-51-143; 1940. Mask; Gas, Noncombatant, MII.

U. S. Gov., U. S. Army, Chemical Warfare Service. Specification 97-51-152; 1942. Fabric, Rubberized; Disc, Inlet Valve.

U. S. Gov., U. S. Army, Chemical Warfare Service. Specification 97-52-24B; 1937. Canister; Gas-Mask, H.C.N., MI.

U. S. Gov., U. S. Army, Chemical Warfare Service. Specification 97-52-26A; 1937. Canister; All Purpose, MI.

U. S. Gov., U. S. Army, Chemical Warfare Service. Specification 97-52-52A; 1937. Canister; Ammonia, MI.

U. S. Gov., U. S. Army, Chemical Warfare Service. Specification 97-52-57A; 1937. Canister; Gas-Mask, Oil-Vapor, MI.

U. S. Gov., U. S. Army, Chemical Warfare Service. Specification 97-52-62; 1930. Canister; Submarine, Respirator, MIAI.

U. S. Gov., U. S. Army, Chemical Warfare Service. Specification 97-52-72; 1937. Canister; Acid Vapor, MI.

U. S. Gov., U. S. Army, Chemical Warfare Service. Specification 97-53-15; 1934. Carrier; MIIIA1, Gas Mask.

U. S. Gov., U. S. Army, Chemical Warfare Service. Specification 97-54-98; 1939. Faceform; Gas Mask, MII.

U. S. Gov., U. S. Army, Chemical Warfare Service. Specification 97-101C; 1938. Facepiece; Service, MIAI.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2126A 1941. Tubes; Breathing.

## 994. PIPES AND SMOKERS' OUTFITS

American Hospital Assn., 34-139. Smoking Stands. Covers full and semi-rocking types.

U. S. Gov., Navy Dept. Specification 25R1a; 1944. Receivers; Ash, Tobacco.

U. S. Gov., Treasury Dept., Procurement Div., No. 348; 1939. Stands; Smoking. Covers two types—(I) full-rocking and (II) semi-rocking, and are constructed of metal. Gives requirements for tray, bowl, base, stem, snuffer-clips, finish, weight, and size; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., Treasury Dept., Procurement Div., No. 696; 1944. Trays; Ash. Shall be made of glass, thermosetting plastic, or metal. Gives requirements for material, workmanship, shape, dimensions, size, weight, design, finish, and details for glass, plastic, and metal trays; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

## 997. LAMPS AND ILLUMINATING DEVICES (EXCEPT ELECTRIC LAMPS)

### 997.1 OIL LAMPS, LANTERNS, TORCHES

American Society for Testing Materials, D 187-39; 1939. American Petroleum Institute Standard, 502-39. American Standards Assn., Z11.17-1939. Method of Test for Burning Quality of Kerosene Oils. For burning quality of ordinary kerosene used for illuminating purposes, description of standard brass Saybolt test lamp, Miller No. 2 burner, MacBeth-Evans No 514 pearl top chimney, detailed dimensions of burner, wick, balance and sight gage, and test procedure.

American Society for Testing Materials, D 219-36; 1936. American Petroleum Institute Standard, 503-36. American Standards Assn., Z11.19-1936. Method of Test for Burning Quality of Long-Time Burning Oil for Railway Use. For special kerosene oil used in railway semaphore signal lamps; includes standard semophore lamp; dimensions of burner; gray round felt wick and chimney; sight gage and test procedure.

American Society for Testing Materials, D 239-30; 1930. American Petroleum Institute Standard, 504-30. American Standards Assn., Z11.18-1930. Method of Test for Burning Quality of Mineral Seal Oil. For burning quality of special illuminating oil known as mineral seal oil, 300 oil, or mineral colza oil, used in railway coach lamps. Using Dressel standard No. 520 side lamp; dimensions of font, burner, chimney, and wick; sight gage and outline of procedure.

Assn. of American Railroads, Operations and Maintenance Dept., Engineering Div., Signal Section. Manual of Recommended Practice. Specification 137-39; 1939. Oil Light Lamp. For railway signal service, interchangeable parts, detailed dimensional drawings, various types of lamps, size of lamp bails,

method of tinning parts, japanning, lamp dics, wind velocity, and temperature test.

Assn. of American Railroads, Purchases and Stores Div. Hand Torch (Upright and Teapot Types), 1934. Gives dimensional requirements and illustrations for oil torches made of sheet steel.

Underwriters' Laboratories, Inc. Standard for Construction and Performance of Gasoline Lanterns, 1933. Covers pressure feed, heat generated, mantle-burner type, for use only on farms and similar locations. Excess temperature control, stability, tank capacity, general construction, air pumps, and testing requirements.

U. S. Gov., Army Air Forces. Specification No. 40860; 1945. Torch; Roadside.

U. S. Gov., Dept. of Agriculture, Forest Service. Specification MSF-225. Lantern; Gasoline.

U. S. Gov., Dept. of Agriculture, Forest Service. Specification MSF-359. Torch; Liquid Gas.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Commercial Standard CS88-41; 1941. Liquid-Burning Flares. This standard covers the requirements and methods for construction, vibration and shock, weatherproof, reliability and life, and photometric tests of liquid-burning flares. Sponsored by Safety Equipment Manufacturers Assn.

U. S. Gov., Federal Specification RR-L-112; 1941. Amendment 1; 1944. Lanterns; Oil-Burning, Hand, Globe. Covers hand lanterns of four types—(I) cold blast; three classes—(A) large size, high globe, burn 45 hr.; (B) small size, short globe, burn 30 hr.; and (C) small size, short globe, burn 60 hr.; (II) cold blast, wire frame, short globe, burn 12 hr.; (III) hot blast, high globe, burn 30 hr.; and (IV) wire frame, short globe, burn 100 hr. Gives requirements for material, workmanship, condition, leakage, fount, burner, globe-lifting mechanism, fill opening and cap, bail, wick, globes, marking, and details for each type; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Navy Dept. Specification 31B2b; 1934. Burners; (Chimneys; Wicks;) Running-Light, Oil-Burning.

U. S. Gov., Navy Dept. Specification 31L13e; 1943. Lanterns; Oil-Burning, Deck.

U. S. Gov., Navy Dept. Specification 31L15c; 1937. Lanterns; Oil-Burning, Boat-Signal.

U. S. Gov., Navy Dept. Specification 31L17a; 1934. Lights; Signal.

U. S. Gov., Navy Dept. Specification 31 L 19c; 1943. Lights; Oil-Burning, Masthead, Range-and-Towing, Battleship Size.

U. S. Gov., Navy Dept. Specification 31 L 20b; 1943. Lights; Running, Oil-Burning, Torpedo Boat-Destroyer, Masthead.

U. S. Gov., Navy Dept. Specification 31 L 21a; 1943. Lights; Running, Oil-Burning, Torpedo Boat-Destroyer, Side.

U. S. Gov., Navy Dept. Specification 31L25b; 1944. Lamps; Safety, Flame.

U. S. Gov., Navy Dept. Specification 41T22b; 1944. Torches; Oil, Portable, Suction.

U. S. Gov., Navy Dept. Specification 57L7; 1941. Lamps; Alcohol, Metal, with Shield.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 29-95; 1940. Lantern; Gasoline, 2-Mantle, Commercial.

*References.*—Iron and steel sheets, *see* 604.2; brass sheets and plates, *see* 644.21; glass lantern globes and lamp chimneys, *see* 524; oil lamps for incubators, *see* 614.9.

## 997.2 GAS AND GAS APPLIANCES

American Gas Assn. American Standards Assn., Z21.2-1938. Listing Requirements for Flexible Gas Tubing. Performance requirements and methods of test for leakage, capacity, strength, flexibility, resistance to heat and freezing, elasticity and gripping power of rubber slip ends, drawing of standard hose end nozzle.

American Gas Assn. American Standards Assn., Z21.3-1940. Approval Requirements for Hotel and Restaurant Ranges and Unit Broilers, effective Jan. 1, 1941. Construction requirements for use with all gases. Performance requirements for use with natural and manufactured gases, liquefied petroleum gases, and butane-air gas.

American Gas Assn. American Standards Assn., Z21.5-1940. Approval Requirements for Clothes Dryers. For gas heated dryers of cabinet type and rack type, requirements on thicknesses of metal parts, dimensions of cocks, sizes of clothes rods, structural features of dryer, test requirements for burner operation, temperature limiting devices, pilot, heating capacity, drying efficiency, fire hazard, draft hoods, etc.

American Gas Assn. American Standards Assn., Z21.6-1932. Approval Requirements for Incinerators. Requirements on thicknesses of metal parts, materials and construction of parts, strength of incinerator, gas burner construction, test requirements for burner and pilot operation, incinerating efficiency, leakage, and fire hazard.

American Gas Assn. American Standards Assn., Z21.7-1932. Approval Requirements for Gas Heated Ironers. Construction requirements for burners, cocks, combustion chamber, thickness of metal, stability requirements, test requirements for burners operation, heat distribution, pressure distribution, explosion and fire hazards, ironer operation, and efficiency.

American Gas Assn. American Standards Assn., Z21.12-1937. Listing Requirements for Draft Hoods. Includes—part I, construction requirements; part II, performance requirements for use with gas converted central heating equipment; part III, performance requirements for use with gas water heaters and with gas converted water heating equipment; and appendix, definitions, dimensions for vertical draft and horizontal draft hoods.

American Gas Assn. American Standards Assn., Z21.18-1934. Listing Requirements for Domestic Gas Appliance Pressure Regulators. Represent minimum standards for the performance, safe operation, and substantial and durable construction of gas appliance accessories. Revisions to this Standard were issued by the American Gas Assn., effective June 15, 1935, and July 8, 1938.

American Gas Assn. American Standards Assn., Z21.19-1942. Approval Requirements for Refrigerators Using

Gas Fuel. Represents basic standards for safe operation, substantial and durable construction, and acceptable performance for refrigerators using gas fuel. Includes—part I, construction requirements for use with all gases; part II, performance requirements for use with natural and manufactured gases; part III, performance requirements for use with liquefied petroleum gases; part IV, performance requirements for use with butane-air gas; and appendix, definitions.

American Gas Assn. American Standards Assn., Z21.20-1940. Listing Requirements for Automatic Pilots. Includes—part I, construction requirements for use with all gases; part II, performance requirements for use with natural and manufactured gases; part III, performance requirements for use with liquefied petroleum gases; part IV, performance requirements for use with butane-air gas; and appendix, definitions.

American Gas Assn. American Standards Assn., Z21.21-1935. Listing Requirements for Automatic Main Gas-Control Valves. Represent minimum standards for the performance, safe operation, and substantial and durable construction of gas appliance accessories.

American Gas Assn. American Standards Assn., Z21.22-1935. Listing Requirements for Relief and Automatic Gas Shut-Off Valves for Use on Water Heating Systems. Includes construction requirements; performance requirements on pressure relief valves, pressure relief elements of combination valves, temperature relief valves, temperature relief elements of combination valves, vacuum relief valves, and vacuum relief elements of combination valves; definitions; and arrangement of apparatus for testing temperature relief valves.

American Gas Assn. American Standards Assn., Z21.23-1940. Listing Requirements for Gas Appliance Thermostats. Includes construction requirements; performance requirements for liquid immersion, gaseous immersion, and surface contact thermostats; and definitions.

American Gas Assn. American Standards Assn., Z21.27-1940. Approval Requirements for Hotel and Restaurant Deep Fat Fryers, effective Jan. 1, 1941. Construction and installation requirements for use with all gases. Performance requirements for use with natural and manufactured gases; liquefied petroleum gases and butane-air gas.

American Gas Assn. American Standards Assn., Z 21.31-1941. Approval requirements for Gas Counter Appliances. Represents basic standards for safe operation, substantial and durable construction, and acceptable performance for gas counter appliances. Includes—part I, construction requirements for use with all gases; part II, performance requirements, coffee brewers and coffee urns for use with natural and manufactured gases; part III, performance requirements, coffee brewers and urns for use with liquefied petroleum gases; part IV, performance requirements for use with butane-air gas; part V, performance requirements, food and dish warmers for use with natural and manufactured gases; part VI, performance requirements, food and dish warmers for use with liquefied petroleum gases; part VII, performance requirements, food and dish warmers for use with butane-air gas; part VIII, performance requirements, gas waffle bakers for use with natural and manufactured gases; part IX, performance requirements, gas waffle bakers for use with liquefied petroleum gases; part X, performance requirements, gas waffle bakers for use with butane-air gas; part XI, performance requirements, hot water immersion sterilizers for use with natural or manufactured gases; part XII, performance requirements, hot water immersion sterilizers for use with liquefied petroleum gases; part XIII, performance requirements, hot water immersion sterilizers for use with butane-air gas; part XIV, performance requirements, commercial hot plates and griddles for use with natural and manufactured gases; part XV, performance requirements, commercial hot plates and griddles for use with liquefied petroleum gases; part XVI, performance requirements, commercial hot plates and griddles for use with butane-air gas; and appendix, definitions.

American Gas Assn. American Standards Assn., Z21.32-1942. Listing Requirements for Gas Appliance Connectors of Flexible Metal Tubing and Fittings, effective Jan. 1, 1943. These requirements apply to gas appliance connectors consisting of a suitable length of braided or nonbraided flexible all-metal tubing of 1/2 to 1 in. nominal internal diameter and having a fitting at each end provided with standard pipe threads for connection to gas appliance and house piping. Includes construction and performance requirements and illustration of bending test.

American Gas Assn. American Standards Assn., Z21.33-1942. Requirements for Installation of Gas-Burning Equipment in Power Boilers, effective Jan. 1, 1943. Gives requirements for boiler room ventilation, accessibility for cleaning and inspection, flues and flue connections, installation of burners and controls, gas piping and meters, and inspections and tests.

American Gas Assn. Requirements for Official Markin of Approved Gas Appliances and Listed Accessories 1940. These requirements are designed to protec the public by providing a means of identificatio of those gas appliances and gas appliance accessor ies which have been tested and certified in accord ance with national basic standards for safety, ef ficiency, and durability. Gives details coverin laboratories approval seal and laboratories listin symbol; and appendix.

National Board of Fire Underwriters. Liquefied Petrc leum Gases, No. 58; 1940. Standards for the desig installation, and construction of containers an pertinent equipment for storage and handling c liquefied petroleum gas. Gives basic rules and de tails for systems utilizing containers constructe in accordance with Interstate Commerce Commissic specifications, systems utilizing storage contair ers other than those constructed in accordance wit I.C.C. specifications, containers and pertinen equipment for tank truck and trailers for th transportation of liquefied petroleum gases, cor tainers and pertinent equipment for utilizing lic uefied petroleum gas as a motor fuel, and appendice

National Fire Protection Assn. National Fire Cod for Flammable Liquids, Gases, Chemicals, and Expl

sives, 1943. City Gas. Standards for the installation, maintenance and use of piping, appliances, and fittings for city gas. Covers general requirements, inspections and tests, services and meters, piping, valves and fittings, appliances, turning gas on and off, and appendix.

National Fire Protection Assn. National Fire Codes for Flammable Liquids, Gases, Chemicals, and Explosives, 1943. Fire-Hazard Properties of Flammable Liquids, Gases, and Volatile Solids. Gives tables showing flash point, ignition temperature, explosive limits, specific gravity, vapor density, boiling point, Underwriters' Laboratories classification, and extinguishing agents.

National Fire Protection Assn. National Fire Codes for Flammable Liquids, Gases, Chemicals, and Explosives, 1943. Odorization of Gas. Odorization as a means for the detection of the escape of gas. Covers odorant characteristics, quantity of warning agent required, method of introducing odorants, value of odorization, odorization of liquefied petroleum gases, and conclusion.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Circular C405; 1934. Standards for Gas Service. This circular covers recommended rules for the guidance or use of state and municipal officials who may have local administrative or legislative authority, and for officers and employees of gas companies who are responsible for the maintenance of good service. This circular gives detailed information on heating values, composition of the gas, pressure, meters and meter testing, general service requirements, enforcement of technical regulations, proposed regulations, composition of gases of various types and their source and methods of manufacture, and summary of rules in effect in various states.

*References.*—Brass pipe and tubing, *see* 645.23, 645.24; iron pipe, *see* 607.1, 607.2, 607.3; insulating joints for combination electric and gas fixtures, *see* 716.32; electric fixtures, *see* 716.32; gas stoves, gas house heating furnaces, *see* 614.2, 614.4; gas producers, *see* 756.

## 997.3 GLOBES, SHADES, LAMP CHIMNEYS

*References.*—Glass lantern globes and lamp chimneys, *see* 524.

## 997.4 GASOLINE VAPOR MACHINES, SYSTEMS, AND LAMPS

National Board of Fire Underwriters. Gasoline Vapor Gas Machines, No.53; 1926. Regulation for installation, maintenance, and use of gas machines, lamps, and systems. Includes five types, outside and inside carburetors, systems with outside tanks and inside generators, gasoline, lamps, etc. Requirements for carburetor, pressure supply, mixer, pressure regulator, piping, regular care and attendance, stability of lamps, capacity, construction, and location of tanks.

National Fire Protection Assn. National Fire Codes for Flammable Liquids, Gases, Chemicals, and Explosives, 1943. Gasoline Vapor Lamps and Systems. Standards for the installation, maintenance and use of gasoline vapor gas machines, lamps and systems. Covers requirements for carburetors, pressure supply, mixer, regulator, piping, tanks, and gives regulations for installation, maintenance, and use.

National Fire Protection Assn. National Fire Codes for Flammable Liquids, Gases, Chemicals, and Explosives, 1943. Liquefied Petroleum Gases. Standards for the design, installation and construction of containers, and pertinent equipment for the storage and handling of liquefied petroleum gases. Covers application of rules, basic rules, systems utilizing I.C.C. containers, systems utilizing containers other than I.C.C., tank trucks for liquefied petroleum gases, liquefied petroleum gas as a motor fuel, storage of containers not installed for use at final utilization point, and required sizes of safety valves for containers.

## 997.5 ACETYLENE EQUIPMENT AND LAMPS

Associated Factory Mutual Fire Insurance Companies. Factory Mutual Bulletin of Loss Prevention, 11.80; 1938. Acetylene and Its Generation. Safeguards for Industrial Installations. Includes recommendations for generator house of fire-resistive construction and for three types of generators.

Associated Factory Mutual Fire Insurance Companies. Factory Mutual Bulletin of Loss Prevention, 11.82; 1938. Acetylene Piping Systems. Standards for Safe Industrial Distribution. Includes recommendations for materials, inside and outside piping, drainage, joints, valves, meters, protection, and testing.

National Board of Fire Underwriters. Acetylene Equipment for Lighting, Heating, and Cooking, No.50; 1930. Covers six classes of equipment such as stationary, portable, dissolved acetylene, etc., for use in or about buildings; requirements on location of generator, details for outside generator house, capacity of piping, gas cylinders, flood lights, installation, operation, and storage of calcium carbide.

National Fire Protection Assn. National Fire Codes for Flammable Liquids, Gases, Chemicals, and Explosives, 1943. Acetylene for Lighting, Heating, and Cooking. Covers general precautions, stationary apparatus for outside and for inside installation, semiportable apparatus, dissolved acetylene under pressure, portable apparatus for lighting, and storage of calcium carbide.

Underwriters' Laboratories, Inc. Standard for Construction and Performance of Acetylene Generators for Lighting, 1926. Covers requirements for construction and performance of stationary automatic and nonautomatic, semiportable automatic and portable, for inside and outside installation and central station service; also dissolved acetylene in cylinders under pressure and portable table lamps. Includes rating, marking, operation, materials, carbide holder, feed mechanism, gas holder, piping, relief valves, purifiers, air mixtures, pressure regulators, water supply, recharging, controls, etc.

Underwriters' Laboratories, Inc. Standard for Construction and Performance of Portable Automatic Acetylene Generators for Oxy-Acetylene Welding and Cutting Systems, 1928. Machine for producing acetylene from calcium carbide, low, medium, and high pressure systems; requirements as to capacity rating and marking, operation, materials, assembly, carbide and gas holders, feed mechanism, relief valves, purifiers, flash-back checks, and stability.

Underwriters' Laboratories, Inc. Standard for Construction and Performance of Stationary Automatic

Acetylene Generators for Oxy-Acetylene Welding and Cutting Systems, 1928. Covers equipment for low, medium, and high pressure generation from calcium carbide; capacity rating and marking, operation, materials, construction, condensation, holder, feed mechanism, piping, flash-back check, etc.

U. S. Gov., Army Air Forces. Specification 40478-A (1); 1944. Generator; Portable, Acetylene.

## 998. SIGNS AND SIGNBOARDS

American Assn. of State Highway Officials, Institute of Traffic Engineers, and National Conference on Street and Highway Safety. Prepared with advice and assistance of the War Dept. and Office of Civilian Defense. War Emergency Edition, 1942. Manual on Uniform Traffic Control Devices of Streets and Highway. Covers definitions, classification, legal authority, application, design, location and markings, and signals. Also covers safety zones and traffic islands.

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering, 1939. Signs. Gives roadway signs required, principles of design and rules for use, and economy of various materials.

Assn. of American Railroads. Bulletin 3; 1942. American Standards Assn., D 8.1-1943. Railroad Highway Grade Crossing Protection. Recommended standards and practices for new installation of railroad-highway grade crossing signs, signals, and automatic gates. Drawings for grade crossing signs, flashing light type and wig-wag type signals, automatic gates, and auxiliary signs.

National Safety Council. American Standards Assn., Z35.1-1941. Specifications for Industrial Accident Prevention Signs. Requirements on purposes, colors, and design with appendices on uses, wordings, maintenance, design sizes, sizes of signs and sign lettering, construction, material, finishes and locations.

Outdoor Advertising Assn. of America, Inc. Standard Outdoor Advertising Structures, 1939. Outdoor advertising structures are standardized giving uniform units of display. Gives diagrams, dimensions, and colors for standard poster panel and for painted bulletins, including streamliner bulletin, modernistic city suburban bulletin, standard city and suburban bulletin, standard roof bulletin, standard store bulletin, special highway bulletin, standard junior highway bulletin, standard highway and railroad bulletin, and standard metropolitan highway or railroad bulletin.

U. S. Gov., Dept. of Agriculture, Forest Service. Specifications for Board; Fire-Danger.

U. S. Gov., Dept. of Agriculture, Forest Service. Specification MSF-327. Signs; Fire-Camp, Directional.

*References.*—Electric signs, *see* 716.31; iron and steel sheets, *see* 604.2, 604.3; zinc coatings on sheets, *see* 604.3; yard lumber, structural timbers, *see* 402.4, 412; sheet steel, *see* 619.2.

## 999. MISCELLANEOUS MANUFACTURED ARTICLES

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 34-22; 1942. Appointment; Ecclesiastical.

## DIRECTIONS FOR OBTAINING COPIES OF SPECIFICATIONS

Copies of specifications issued by technical and trade associations may be obtained directly from the association. A list of these associations, with the addresses of their secretaries, is given below.

Specifications of the Federal Specifications Executive Committee having alphabetical designations, such as JJJ-S-351, may be obtained by purchase from the Superintendent of Documents, Government Printing Office, Washington 25, D. C. For those specifications with numerical designations only, inquiry should be made of the Federal Specifications Executive Committee, Procurement Division, Treasury Department, Washington 25, D. C.

Information on method of procurement of other specifications issued by the various bureaus and agencies of the several departments or establishments of the Federal Government can best be obtained directly from the Washington, D. C., headquarters of the bureaus and agencies concerned.

In making inquiries concerning specifications, care should be taken to give both the title and designating number of the specification. In some cases the specification may be a part of some "manual" and not have any identifying number. In these cases the title of the manual or other publication is usually stated in the Directory immediately following the name of the organization which issues the specification.

Some of the specifications listed in the Directory will become obsolete in a relatively short time because revised specifications will supersede them. However, the information that will be obtained from the Directory will, in part at least, be currently up to date. It is understood that when an issuing agency receives an order for a specification referred to in the Directory, it will supply its current specification unless requested specifically to deliver specification which has been superseded.

---

## NAMES AND ADDRESSES OF STANDARDIZING AGENCIES

Below are listed the trade associations, technical societies, and other standardizing agencies whose specifications and standards will be found listed in the Directory of Commodity Specifications. The numbers appearing after each organization refer to the group classifications in the body of the Directory under which that individual organization's specifications have been listed.

Abrasive Grain Association, Harry B. Lindsay, secretary, 27 Elm Street, Worcester, Mass. 541.0; 891.

Acoustical Society of America, Wallace Waterfall, secretary, 50th Floor, 350 Fifth Avenue, New York 1, N.Y. 296.4; 718.7; 719.93; 919.9.

Aeronautical Chamber of Commerce of America, Inc., Shoreham Building, Washington, D. C. 478.32; 604.0; 607.4; 608.2; 608.31; 608.4; 608.6; 622.1; 631.22; 631.34; 631.35; 631.42; 631.6; 692.3; 695.2; 714.41; 715.11; 715.35; 719.99; 724.20; 724.22; 724.25; 724.29.

Agricultural Insecticide & Fungicide Association, L. S. Hitchner, executive secretary, 285 Madison Avenue, New York, N.Y. 881.0; 881.21; 881.23.

Air Conditioning and Refrigerating Machinery Association, William B. Henderson, executive vice president, Southern Building, Washington, D. C. 425.2; 472.93; 473.3; 518.59; 607.3; 607.4; 622.1; 631.22; 631.34; 631.35; 631.42; 785.1; 791.2; 792.0; 792.2; 792.3.

Aluminum Research Institute, R.D.T. Hollowell, secretary, 308 West Washington Street, Chicago, Ill. 631.0.

Amateur Athletic Union of the United States, Daniel J. Ferris, secretary, 233 Broadway, New York 7, N.Y. 646.59; 662.; 663.; 943.1; 943.94; 943.97.

American Association for the Advancement of Science, Otis W. Caldwell, general secretary; F. R. Moulton, permanent secretary, Smithsonian Institution Building, Washington, D. C. 700.; 706.0; 718.40; 718.5; 719.63; 724.0; 910.

American Association of Cereal Chemists, Oscar Skovholt, president, c/o Quality Bakers of America, 120 West 42nd St., New York 18, N.Y. 100.0.

American Association of Medical Milk Commissions (Inc.), E. P. Brown, secretary, 1265 Broadway, New York, N.Y. 021.1; 021.6.

American Association of Motor Vehicle Administrators, L. S. Harris, executive director, Woodward Building, Washington, D. C. 722.32; 722.33; 722.35; 722.36; 723.0.

American Association of Nurserymen, Richard P. White, executive secretary, 636 Southern Building, Washington, D. C. 259.

American Association of Port Authorities, Tiley S. McChesney, secretary, 2223 Short Street, New Orleans, La. 725.40.

American Association of State Highway Officials, Hal H. Hale, secretary, National Press Building, Washington, D. C. 208.93; 211.1; 319.99; 400.42; 401.40; 401.49; 402.3; 412.1; 412.2; 412.9; 425.2; 429.9; 473.5; 500.; 502.0; 502.2; 503.0; 503.2; 503.3; 504.0; 505.0; 505.13; 505.14; 505.15; 505.16; 505.19; 505.20; 505.30; 505.31; 505.32; 505.33; 505.35; 505.36; 510.; 511.70; 511.71; 512.10; 512.11; 512.12; 512.13; 512.14; 512.15; 512.16; 512.2; 516.0; 516.11; 516.3; 518.10; 518.22; 518.30; 518.34; 518.35; 518.37; 518.41; 518.42; 518.46; 518.60; 518.61; 518.62; 518.67; 618.81; 518.82; 518.83; 518.89; 518.9; 531.5; 534.10; 534.11; 534.21; 594.; 600.1; 600.3; 603.1; 603.21; 603.41; 603.42; 604.32; 605.0; 605.11; 605.12; 605.19; 605.21; 605.25; 607.11; 607.3; 607.5; 608.4;

611.18; 621.21; 621.22; 621.24; 621.26; 621.32; 821.33; 622.5; 641.11; 641.21; 643.7; 645.3; 648.52; 651.1; 683.2; 718.5; 801.3; 840.1; 842.63; 843.61; 843.7; 844.61; 844.67; 847.1; 848.12; 848.7; 918.9; 919.9; 998.

American Association of Textile Chemists and Colorists Harold C. Chapin, secretary, c/o Lowell Textile Institute, Lowell, Mass. 300.4; 392.4; 770.; 803.10; 830.

American Automobile Association, Russell E. Singer, general manager, Pennsylvania Avenue at Seventeenth Street, Washington, D. C. 716.12; 722.32; 722.95.

American Bakers Association, Tom Smith, secretary, 105 West Adams St., Chicago 3, Ill. 108.1; 612.20; 612.3; 681.41; 786.

American Bankers Association, Harold Stonier, exec. mgr., 22 E. 40th Street New York City. 489.

American Bleached Shellac Manufacturers Association, Inc., Paul W. Fisher, executive secretary, 127 Maiden Lane, New York, N.Y. 846.11; 846.62.

American Boiler Manufacturers Association and Affiliated Industries, A. C. Baker, secretary, 264 Rockefeller Building, Cleveland, Ohio. 501.0; 703.0.

American Bottlers of Carbonated Beverages, John J. Riley, secretary, 1128 - 16th St. N.W., Washington, D. C. 176.0; 953.36; 955.1.

American Bowling Congress, J. H. Bruning, 2200 N. Third Street, Milwaukee 12, Wisconsin. 429.9; 943.1.

American Brush Manufacturers Association, George A. Fernley, secretary, 505 Arch Street, Philadelphia, Pa. 981.0; 982.2; 982.3.

American Bureau of Shipping, J. W. Cantillion, secretary, 47 Beaver Street, New York 4, N.Y. 603.1; 603.21; 603.23; 603.42; 603.50; 604.11; 604.13; 605.14; 605.15; 607.0; 607.3; 607.4; 608.4; 611.0; 611.49; 842.23; 642.24; 645.23; 645.24; 646.41; 700.; 701.0; 701.2; 703.1; 703.2; 704.1; 705.7; 710.; 725.40; 725.41; 725.42; 755.0; 767.; 785.0; 958.1; 970.

American Butter Institute, N. W. Hepburn, executive secretary, 110 N. Franklin Street, Chicago, Ill. 951.72.

American Ceramic Society, Inc., Ross C. Purdy, general secretary, 2525 North High Street, Columbus, Ohio. 511.2; 512.12; 517.2; 520.; 531.0; 531.6; 534.10; 534.12; 546.; 594.; 918.0.

American Chemical Society, Charles L. Parsons, secretary, 1155 - 16th Street N.W., Washington, D. C. 093.7; 142.0; 143.0; 471.2; 499.; 503.1; 532.21; 652.0; 801.1; 801.2; 801.8; 802.1; 802.2; 810.; 815.1; 815.2; 821.1; 821.2; 821.3; 821.4; 821.5; 821.6; 821.7; 821.9; 822.1; 822.4; 823.; 831.1; 831.3; 831.4; 831.5; 831.6; 831.7; 831.9; 832.3; 832.4; 833.2; 833.3; 834.1; 834.2; 834.3; 834.4; 834.5; 834.8; 834.9; 835.1; 835.2; 835.4; 835.5; 835.8; 837.1; 837.2; 838.2; 839.1; 839.32; 839.33; 839.34; 839.35; 839.37; 839.38; 839.39; 839.6; 839.7; 839.9; 871.0; 882.; 891.; 918.1; 918.2; 918.3; 918.4; 918.5; 918.6; 918.7; 918.9.

American College of Surgeons, 40 East Eire Street, Chicago, Ill. 398.34; 808.2; 622.9; 915.0; 915.58.

American Concrete Institute, Harvey Whipple, secretary, 7400 Second Boulevard, Detroit, Mich. 516.0; 516.4; 605.25; 959.3.

American Council on Education, George F. Zook, president, 744 Jackson Place, Washington, D. C. 437.; 613.3; 613.6.

American Cranberry Exchange, Inc., C. M. Chaney, secretary, 90 West Broadway, New York, N.Y. 132.11.

American Dental Association, Harry B. Pinney, secretary, 212 East Superior Street, Chicago 11, Ill. 204.4; 652.; 882.; 691.1; 915.10; 915.12; 915.19.

American Dental Trade Association, George A. Lilly, managing director, 1010 Vermont Avenue, N.W., Washington, D. C. 204.4; 915.10.

American Drug Manufacturers Association, Carson P. Frailey, executive vice president and secretary, 506 Albee Building, Washington, D. C. 810.

American Dry Milk Institute, Inc., Roud McCann, director, 221 North La Salle Street, Chicago, 1, Ill. 021.7.

American Electro-Platers' Society, W. J. R. Kennedy, executive secretary, 93 Oak Grove Avenue, Springfield, Mass. 600.3; 805.22; 656.0; 658.1.

American Foundrymen's Association (Inc.), R. E. Kennedy, secretary, 222 West Adams Street, Chicago 8, Ill. 429.9; 510.; 512.10; 512.12; 518.51; 541.0; 543.12; 574.; 643.4; 645.21; 646.0; 646.11; 648.4; 600.5; 811.18; 631.11; 643.0; 643.2; 682.; 683.1; 892.1; 892.2; 692.3; 695.; 711.24; 765.; 768.; 789.; 791.; 791.1; 792.0; 793.2.

American Gas Association, Kurwin R. Boyes, secretary, 420 Lexington Avenue, New York 17, N.Y. *also* Albee Building, Washington, D.C. 202.31; 503.3; 600.6; 607.0; 607.10; 607.12; 607.8; 607.7; 614.0; 614.2; 614.4; 814.9; 703.1; 787.; 915.27; 915.28; 915.30; 915.34; 915.35; 915.39; 915.41; 915.42; 915.45; 915.48; 915.47; 915.51; 915.52; 915.58; 918.3; 918.7; 918.9; 919.81; 919.83; 919.89; 931.1; 933.1; 933.9; 952.14; 952.19; 953.2; 955.1; 955.6; 957.2; 959.1; 973.2; 973.3; 981.0; 981.2; 981.4; 981.5; 981.61; 981.62; 982.2; 982.3; 982.9; 983.; 983.2; 994.; 997.2.

American Gear Manufacturers Association, Newbold C. Goin, executive secretary, Empire Bldg., Pittsburgh 22, Pa. 504.0; 600.0; 808.52; 811.11; 811.50; 611.55; 645.21; 646.41; 705.3; 754.; 765.; 788.0; 844.1.

American Gem Society, Robert M. Shipley, executive director, 541 South Alexandria Avenue, Los Angeles 5, Calif. 881.; 882.; 883.

American Gum Importers Association, Inc., George T. Hawxhurst, secretary, 380 Furman Street, Brooklyn, N.Y. 217.; 848.8.

American Home Economics Association, Miss Lelia M. Massey, executive secretary, 820 Mills Building, Washington 6, D. C. 310.0; 368.0.

American Honey Institute, Harriett M. Grace, director, Commercial Bank Bldg., Madison, Wisconsin. 522.; 959.1.

American Hospital Assn., Bert W. Caldwell, M.D., executive secretary, 18 East Division Street, Chicago, Ill. 043.3; 066.7; 092.1; 108.1; 109.6; 109.9; 142.95; 202.41; 204.11; 204.12; 204.13; 204.21; 204.23; 204.25; 204.26; 204.31; 204.33; 204.4; 204.51; 204.52; 204.53; 204.54; 205.55; 204.8; 204.92; 204.93; 204.96; 206.1; 209.5; 211.3; 281.; 293.; 301.4; 302.46; 303.1; 303.5; 303.6; 303.93; 304.2; 304.3; 304.4; 304.5; 304.8; 304.71; 304.8; 304.9; 304.91; 304.92; 304.93; 304.94; 306.12; 306.17; 306.16; 306.19; 306.22; 308.31; 308.1; 308.5; 309.3; 311.1; 311.3; 311.4; 311.7; 311.92; 312.2; 312.3; 315.0; 315.11; 315.14; 315.2; 315.31; 315.33; 315.4; 315.5; 316.1; 317.8; 319.3; 319.4; 319.7; 319.97; 319.99; 333.3; 333.9; 339.3; 339.53; 382.1; 385.98; 386.3; 389.21; 373.2; 391.; 392.2; 392.23; 392.6; 394.4; 395.1; 397.0; 396.21; 396.31; 423.3; 425.1; 429.4; 434.; 471.3; 472.93; 473.3; 474.2; 474.3; 474.9; 475.74; 478.31; 476.32; 477.3; 477.4; 477.5; 476.11; 478.13; 479.2; 494.; 497.1; 503.4; 514.2; 514.61; 516.58; 516.59; 528.3; 532.1; 532.21; 532.23; 612.14; 812.21; 612.22; 812.23; 813.1; 813.5; 813.7; 613.9; 815.9; 617.41; 817.79; 817.9; 619.9; 822.9; 831.9; 642.4; 645.39; 645.9; 646.2; 654.59; 656.7; 691.2; 707.44; 709.; 711.23; 714.21; 717.1; 717.2; 717.3; 719.92; 767.; 793.5; 803.11; 603.4; 834.4; 834.7; 834.6; 834.9; 839.1; 840.6; 843.39; 843.81; 643.62; 646.32; 847.1; 846.11; 848.12; 646.8; 871.0; 671.11; 671.12; 671.13; 671.15; 871.21; 871.22; 671.23; 871.27; 871.9; 661.17; 861.19; 861.2; 861.9; 691.; 893.4; 893.5; 914.3; 915.22; 915.23; 915.25; 915.27; 915.26; 915.32; 915.34; 915.35; 915.39; 915.41; 915.42; 915.45; 915.48; 915.47; 915.51; 915.52; 915.58; 916.3; 916.5; 916.8; 918.7; 916.9; 919.61; 919.63; 919.69. 931.1; 933.1; 933.9; 952.14; 952.19; 953.2; 955.1; 955.8; 957.2; 959.1; 973.2; 973.3; 981.1; 981.2; 961.4; 981.5; 981.81; 962.2; 982.3; 982.9; 983.; 983.2; 994.

Copper and Brass Research Association, T. E. Veltfort, manager, 420 Lexington Avenue, New York, N.Y. 640.; 641.21; 641.22; 642.11; 642.12; 642.23; 642.24; 643.0; 644.21; 644.23; 645.11; 645.12; 645.23; 645.24; 646.21; 646.22; 646.31; 646.32; 646.42; 647.0.

Copper Wire Engineering Association, Stanton Hertz, executive director, 815 Fifteenth Street, N.W., Washington, D.C. 715.40; 715.41; 715.44; 719.60.

Cordage Institute, J. S. McDaniel, secretary, 350 Madison Avenue, New York 17, N.Y. 302.40; 331.20.

Cotton-Textile Institute (Inc.). Paul B. Halstead, secretary, 320 Broadway, New York, N.Y. 392.3.

Crucible Manufacturers' Association, C. C. Rohrbach, secretary, 90 West Street, New York 6, N.Y. 574.

Cup and Container Institute, Granville P. Rogers, executive director, 1790 Broadway, New York, N.Y. 954.1.

Dairy Industries Supply Association, Roberts Everett, 232 Madison Avenue, New York, N.Y. 607.0; 646.51; 731.

Diamond Core Drill Manufacturers Association, Clifford C. Rohrbach, secretary, 90 West Street, New York 6, N.Y. 741.3.

Diesel Engine Manufacturers' Association, Harvey T. Hill, executive director, 1 North La Salle Street, Chicago 2, Ill. 704.1.

Douglas Fir Plywood Association, N. S. Perkins, technical director, Tacoma Building, Tacoma 2, Washington. 400.23; 413.50.

Drop Forging Association, Raymond M. Seabury, secretary-treasurer, 605 Hanna Building, Cleveland, Ohio. 603.24; 611.50.

Durable Woods Institute, Hal B. Alston, director, 155 E. 44th Street, New York, N.Y. 413.1.

Edison Electric Institute, 420 Lexington Avenue, New York, N.Y. 402.1; 526.1; 532.22; 603.42; 608.2; 608.31; 608.32; 608.6; 642.13; 713.5; 714.34; 714.38; 714.39; 715.30; 715.32; 718.60; 718.62; 718.65; 719.62; 719.72.

Electric Hoist Manufacturers Association, E. Donald Tolles, secretary-counsel, 500 Fifth Avenue, New York 18, N.Y. 744.2.

Electric Tool Institute, Sioux City, Iowa. 711.24.

Employing Bookbinders of America, A. G. Watson, executive secretary, 28 West Forty-fourth Street, New York, N.Y. 392.21.

Evaporated Milk Association, Frank E. Rice, executive secretary, 307 North Michigan Avenue, Chicago 1, Ill. 021.0; 021.6; 518.59; 731.

Facing Tile Institute, Affiliated with Structural Clay Products Institute, Harry C. Plummer, director of engineering and research, 1756 K Street N.W., Washington, D.C. 534.25; 534.29.

Farm Equipment Institute, Robert A. Jones, secretary, 608 South Dearborn Street, Chicago 5, Ill. 413.54.

Felt-Manufacturers Association, Lillian C. McManus, secretary, 17 John Street, New York, N.Y. 365.98; 390.5.

Fibre Box Association, Elmer J. Koch, executive secretary, 224 South Michigan Avenue, Chicago, Ill. 953.2.

Fir Door Institute, W. E. Difford, managing director, Tacoma Building, Tacoma, Washington. 423.1.

Fluorescent Lighting Association, Joseph M. Smith, technical director, 60 Beaver Street, New York, N.Y. 716.18.

Folding Paper Box Association of America, A. E. Murphy, 134 North La Salle Street, Chicago 2, Ill. 953.2.

Formed Steel Tube Institute, N. Myles Brown, secretary, 1621 Euclid Avenue, Cleveland, Ohio. 607.4; 611.52.

Glass Container Association of America, V. L. Hall, assistant business manager, 19 West Forty-fourth Street, New York, N.Y. 522.; 955.0; 955.1; 955.3; 955.4.

Grinding Wheel Manufacturers Association, Harry B. Lindsay, secretary-treasurer, 27 Elm Street, Worcester, Mass. 541.0; 541.3; 765.

Gypsum Association, Henry J. Schweim, general manager, 211 West Wacker Drive, Chicago, Ill. 514.3; 516.3.

Hack Saw Manufacturers Association of America, Inc., Wm. P. Jeffrey, secretary, 50 Broadway, New York 4, N.Y. 615.62.

Hardwood Dimension Manufacturers Association, Inc., Phillips A. Hayward, managing director, Heyburn Building, Louisville 2, Ky. 402.43; 411.42; 411.43; 411.9.

Heat Exchange Institute, C. C. Rohrbach, secretary, 90 West Street, New York 6, N.Y. 703.0; 785.0; 785.1.

Heating, Piping & Air Conditioning Contractors National Association, Joseph C. Fitts, secretary, Suite 1401, Rockefeller Center, 1250 Sixth Avenue, New York, N.Y. 603.26; 607.14; 607.2; 607.4; 607.6; 614.4; 703.0; 767.; 785.1; 792.0; 910.

Hickory Handle Association, Guy E. Basye, secretary, Hope, Ark. 428.1; 428.29.

Highway Research Board, Roy W. Crum, director, 2101 Constitution Avenue, Washington, D.C. 518.30.

Hydraulic Institute, C. C. Rohrbach, secretary, 90 West Street, New York 6, N.Y. 603.21; 611.11; 611.41; 622.1; 622.5; 646.41; 654.61; 703.0; 755.0; 755.1; 793.4.

Illuminating Engineering Society, A. D. Hinckley, executive secretary, 51 Madison Avenue, New York 10, N.Y. 379.9; 524.; 525.; 715.30; 716.19; 716.2; 716.30; 716.39.

Indiana Limestone Institute, E. C. Walters, secretary, Bedford, Ind. 511.2; 518.89.

Industrial Hygiene Foundation of America, Inc., Mrs. Ellen C. Diamond, office manager, 4400 Fifth Avenue, Pittsburgh 13, Pa. 651.0; 792.0; 792.2; 801.1; 839.35; 839.40; 993.

Industrial Management Society, P. H. Weber, president, 421 Engineering Building, 205 West Wacker Drive, Chicago, Ill. 910.

Industrial Safety Equipment Association, W. J. Parker, secretary-treasurer, 366 Madison Avenue, New York, N.Y. 914.5; 915.51.

Industrial Truck Statistical Association, W. S. McCann, secretary, 208 South La Salle Street, Chicago 4, Ill. 713.4; 721.2.

Industrial Unit Heater Association, L. O. Monroe, secretary, 5-208 General Motors Building, Detroit, Mich. 614.0; 792.0; 792.2.

Institute of Boiler and Radiator Manufacturers, R. E. Ferry, general manager, 60 East Forty-second Street, New York, N.Y. 614.4.

Institute of Book Cloth and Impregnated Fabrics Manufacturers, C. Steward Comeaux, secretary, 103 Park Avenue, New York 17, N.Y. 392.21.

Institute of Cooking and Heating Appliance Manufacturers, Samuel Dunckel, managing director, Shoreham Hotel, Washington, D.C. 614.0; 614.3.

Institute of Makers of Explosives, C. Stewart Comeaux, secretary, 103 Park Avenue, New York 17, N.Y. 860.

Institute of Radio Engineers, Inc., Harold P. Westman, secretary, 330 West Forty-second Street, New York, N.Y. 718.60; 718.61; 718.62; 718.63; 718.64; 718.65; 718.69; 719.93.

Institute of Shortening Manufacturers, Inc., Earl S. Haines, executive secretary, Norris Building, Atlanta, Ga. 142.0; 959.9.

Institute of Traffic Engineers, W. Graham Cole, secretary, 60 John Street, New York, N.Y. 718.5.

Insulated Power Cable Engineers Association, G. M. Haskell, secretary, c/o General Cable Corporation, 420 Lexington Avenue, New York, N.Y. 715.41.

Insulation Board Institute, J. B. Blackburn, manager, Paul D. Close, technical secretary, 111 West Washington Street, Chicago, Ill. 472.93; 473.3.

Interstate School Building Service, Ray L. Hamon, director, George Peabody College for Teachers, Nashville, Tenn. 437.; 613.3; 613.6.

Intercollegiate Association of Amateur Athletes of America, c/o American Sports Publishing Company, 45 Rose Street, New York, N.Y. 069.1; 943.94.

Internal Combustion Engine Institute, E. F. Deacon, secretary, 408 Continental Building, Dallas, Texas. 705.0.

International Acetylene Association, H. F. Reinhard, secretary, 30 East Forty-second Street, New York, N.Y. 600.5; 767.

International Association of Electrical Inspectors, V. H. Tousley, secretary, 612 N. Michigan Avenue, Chicago, Ill. 710.; 715.30.

International Association of Electrotypers & Stereotypers, Inc., A. P. Schloegel, field secretary, 949 Leader Building, Cleveland, Ohio. 651.6; 651.9; 788.

International Association of Government Labor Officials, Isador Lubin, secretary, c/o Bureau of Labor Statistics, United States Department of Labor, Washington, D.C. 412.3; 605.27; 787.

International Association of Ice Cream Manufacturers, Robert C. Hibben, executive secretary, Barr Building, Washington, D.C. 491.; 788.2; 959.1; 959.9.

International Association of Industrial Accident Boards and Commissions, V. A. Zimmer, secretary-treasurer, c/o United States Department of Labor, Washington, D.C. 541.3; 712.0; 766.0; 783.; 784.0; 910.

International Association of Milk Dealers, Roscoe E. Little, executive secretary, 309 W. Jackson Boulevard, Chicago, Ill. 607.0; 646.51; 731.; 955.1.

International Association of Milk Sanitarians, Inc., C. Sidney Leete, secretary, State Department of Health, Albany, N.Y. 607.0; 646.51; 731.

International Municipal Signal Association, Inc., Irvin Shulsinger, secretary, 8 East Forty-first Street, New York 17, N.Y. 603.42; 646.32; 715.11; 715.41; 715.43; 715.44; 718.32; 718.5; 719.55; 719.61; 719.64.

Jewelry Crafts Association, Henry L. Sperling, executive secretary, 20 W. 47th Street, New York, N.Y. 661.

Laundry and Cleaners Allied Trades Association, Roger R. Jackson, manager, 95 Liberty Street, New York, N.Y. 787.

Lead Industries Association, Felix Edgar Wormser, secretary, 420 Lexington Avenue, New York 17, N.Y. 617.75; 617.79; 651.3; 651.8; 651.9.

Liquid Tight Paper Container Association, George J. Lincoln, Jr. secretary, 1532 Lincoln-Liberty Building, Philadelphia, Pa. 491.

Mahogany Association, Inc., George N. Lamb, secretary, 75 East Wacker Drive, Chicago, Ill. 411.43.

Malleable Founders' Society, Robert E. Belt, secretary, Union Commerce Building, Cleveland 14, Ohio. 534.12.

Manganese Track Society, R. E. Einstein, secretary, 301 South Main Street, East St. Louis, Ill. 606.3.

Manufacturers Standardization Society of the Valve and Fittings Industry, John J. Harman, general secretary, 420 Lexington Avenue, New York 17, N.Y. 603.21; 606.50; 607.0; 607.14; 607.2; 607.4; 607.6; 608.0; 611.21; 646.41; 646.50; 646.51.

Manufacturing Chemists' Association of the United States, Warren N. Watson, secretary, 608 Woodward Building, Washington, D.C. 532.21; 533.4; 607.6; 726.0; 821.3; 821.4; 821.5; 821.7; 831.1; 839.38; 846.50; 918.1; 918.2; 918.87; 919.4; 950.; 951.32; 955.2.

Maple Flooring Manufacturers Association, E. C. Singler, secretary, 332 South Michigan Avenue, Chicago 4, Ill. 411.25; 411.29; 518.56; 646.33.

Metal Cutting Tool Institute, Harry C. Hungerford, Secretary, 410 Asylum Street, Hartford, Conn. 615.15; 765.

Metal Lath Manufacturers Association, Arthur J. Tuscany, commissioner, Engineers Building, Cleveland 14, Ohio. 518.53; 605.24.

Metal Window Institute, Myron J. Jones, technical assistant, 1427 Eye Street N.W., Washington, D.C. 605.22.

Milk Cap Statistical Bureau, George J. Lincoln, Jr., executive secretary, Lincoln-Liberty Building, Philadelphia, Pa. 955.1.

Mine Inspectors' Institute of America, C. A. McDowell, secretary, 427 Park Street, California, Pa. 860.

Monorail Manufacturers Association, E. Donald Tolles, secretary-treasurer, 500 Fifth Avenue, New York 18, N.Y. 744.2; 745.1.

Multiple V-Belt Drive Association, Philip W. Upp, executive secretary, 140 South Dearborn Street, Chicago, Ill. 611.16.

National Aircraft Standards Committee *see* Aeronautical Chamber of Commerce of America, Inc.

National Association of Bedding Manufacturers, S. J. Mills, secretary, 808 South Dearborn Street, Chicago 5, Ill. 431.1; 813.11.

National Association of Building Owners and Managers, Robert B. Beach, executive secretary, 134 South La Salle Street, Chicago, Ill. 518.50; 518.51.

National Association of Dyers and Cleaners of the United States and Canada, J. M. Matson, managing executive, Silver Spring, Md. 061.7; 142.2; 202.44; 232.; 300.0; 360.; 370.; 392.0; 397.0; 399.9; 502.0; 503.2; 521.9; 532.9; 613.9; 802.1; 820.; 821.9; 830.; 871.7; 881.5; 918.87; 955.0; 982.3.

National Association of Fan Manufacturers, L. O. Monroe, secretary, 5-208 General Motors Building, Detroit, Mich. 791.1.

National Association of Furniture Manufacturers, A. P. Haake, managing director, 886 Lake Shore Drive, Chicago, Ill. 431.1; 813.1.

National Association of Hosiery Manufacturers, Earl Constantine, president, 488 Fourth Avenue, New York, N.Y. Max Schenke, director of research, National Bureau of Standards, Washington 25, D.C. 309.2; 504.35.

National Association of Ice Industries, Mount Taylor, executive secretary, 228 North La Salle Street, Chicago, Ill. 959.4.

National Association of Ice Refrigerator Manufacturers, E. G. Vail, secretary, 1708 L Street, N.W., Washington, D.C. 959.4.

National Association of Insecticide and Disinfectant Manufacturers, Inc., G. M. Baird, chairman, Specifications & Purchases Committee, Suite 1307, 110 East Forty-second St. New York, N.Y. 881.2; 881.9; 951.32; 955.1; 955.7.

National Association of Marble Dealers, R. H. Flint, president, 3208 Shields Avenue, Chicago, Ill. 511.3; 518.591

National Association of Master Plumbers of the United States, Jere L. Murphy, chairman, Standardization Committee, 340 East Forty-fourth Street, New York, N.Y. 532.23; 800.6; 812.21.

National Association of Mutual Casualty Companies, J. M. Eaton, secretary, 919 North Michigan Avenue, Chicago, Ill. 787.

National Association of Pipe Nipples Manufacturers, H. A. Long, Jr., secretary, 501 Fifth Avenue, New York, N.Y. 645.4.

National Association of Printers' Roller Manufacturers, H.H. Colehower, Jr., secretary, c/o Godfrey Roller Company, Philadelphia, Pa. 788.

National Association of Purchasing Agents, George A. Renard, executive secretary, 11 Park Place, New York 7, N.Y. 022.1; 041.1; 041.4; 042.1; 042.2; 043.1; 043.2; 046.; 051.; 061.2; 061.7; 088.3; 089.9; 093.0; 093.7; 095.; 097.; 098.1; 099.5; 101.1; 102.3; 103.1; 106.1; 107.0; 107.1; 109.9; 121.3; 126.11; 131.1; 142.1; 142.2; 142.3; 142.4; 142.5; 142.6; 142.8; 142.91; 142.99; 143.1; 143.2; 151.1; 152.1; 152.2; 153.1; 154.11; 154.12; 154.23; 154.8; 160.; 162.; 163.1; 175.4; 175.9; 200.; 201.0; 201.9; 207.1; 207.3; 211.1; 214.; 216.; 217.; 231.; 232.; 234.; 291.; 293.; 294.; 295.; 296.2; 296.4; 300.0; 301.3; 302.10; 302.39; 304.0; 320.; 322.1; 326.; 330.; 331.18; 331.22; 331.4; 341.1; 341.2; 349.20; 349.4; 349.5; 382.9; 388.2; 370.; 372.0; 373.20; 397.0; 400.20; 400.21; 400.23; 400.24; 400.26; 400.27; 400.29; 400.30; 400.33; 400.35; 400.39; 401.15; 401.16; 401.17; 401.31; 401.34; 401.38; 401.6; 402.1; 414.1; 429.9; 470.1; 472.31; 472.32; 474.9; 478.21; 489.; 501.0; 501.1; 501.2; 501.6; 503.3; 503.4; 504.0; 504.40; 504.54; 505.11; 512.10; 515.0; 518.19; 517.0; 521.1; 521.2; 531.0; 531.2; 531.3; 531.6; 531.7; 532.22; 534.12; 541.0; 541.9; 545.1; 548.; 552.; 571.; 574.; 575.1; 575.2; 591.; 592.; 800.2; 602.1; 603.0; 603.1; 603.21; 603.23; 803.32; 603.41; 605.0; 608.1; 807.10; 807.14; 607.3; 807.4; 607.8; 611.0; 811.21; 611.3; 611.41; 611.50; 811.52; 815.12; 815.15; 815.81; 615.83; 621.11; 821.22; 621.24; 621.25; 621.28; 621.30; 822.3; 622.6; 631.0; 631.32; 831.43; 632.1; 833.1; 634.; 635.; 841.0; 642.23; 842.24; 844.0; 644.21; 845.11; 645.23; 645.24; 646.0; 851.0; 851.8; 852.0; 853.0; 854.1; 654.51; 855.0; 656.0; 881.; 681.0; 683.0; 891.1; 692.1; 693.1; 695.1; 698.; 707.40; 715.41; 715.44; 719.52; 766.2; 801.2; 801.4; 802.1; 802.2; 803.10; 803.24; 811.; 813.2; 816.11; 818.19; 816.35; 821.1; 821.3; 821.5; 821.8; 821.7; 821.9; 822.2; 822.9; 823.; 824.; 831.1; 832.3; 832.9; 833.2; 833.9; 834.3; 834.4; 834.5; 834.8; 834.8; 834.9; 835.9; 838.1; 838.3; 838.5; 838.6; 838.7; 838.9; 839.1; 839.2; 839.32; 839.35; 839.38; 839.39; 839.49; 839.8; 839.7; 839.8; 839.9; 840.1; 841.49; 842.1; 842.4; 842.83; 842.7; 846.0; 848.50; 848.59; 846.82; 846.83; 847.3; 848.2; 848.4; 850.; 882.; 871.9; 881.19; 881.9; 893.0; 893.8; 931.1; 932.2; 932.5; 933.0; 953.2; 953.30; 957.19; 957.2; 982.3.

National Association of Sheet Metal Distributors, George A. Fernley, secretary-treasurer, 505 Arch Street, Philadelphia, Pa. 604.20; 604.31; 605.22; 807.4; 607.5; 842.7.

National Association of Silo Manufacturers, Z. W. Craine, secretary, Box 30, Norwich, N.Y. 111.7.

National Association of Waste Material Dealers, Inc., Chas. M. Haskins, managing director, Times Building, New York, N.Y. 201.2; 319.4; 390.5; 400.50; 470.1; 600.2.

National Association of Wool Manufacturers, Walter Humphreys, secretary, 80 Federal Street, Boston 10, Mass. 041.3; 142.1; 385.19; 369.21; 369.29; 504.9.

National Basketball Committee, c/o A. S. Barnes and Company, Publishers, 67 West 44th Street, New York, N.Y. 069.1; 943.1; 943.97.

National Board of Boiler and Pressure Vessel Inspectors, C. O. Myers, secretary, Brunson Building, 145 North High Street, Columbus, Ohio. 607.0; 767.

National Board of Fire Underwriters, W. E. Mallalieu, general manager, 85 John Street, New York 7, N.Y. 130.; 518.50; 518.51; 518.55; 518.56; 518.59; 518.9; 532.22; 605.23; 807.0; 607.4; 607.6; 614.0; 614.3; 614.4;

614.9; 704.0; 705.0; 710.; 711.10; 711.20; 711.25; 712.2; 713.1; 713.5; 714.11; 714.12; 714.22; 714.30; 714.41; 714.42; 714.51; 714.52; 715.11; 715.12; 715.21; 715.30; 715.41; 715.42; 715.44; 715.50; 716.11; 716.15; 716.16; 716.31; 716.32; 717.0; 717.3; 718.0; 718.30; 718.32; 718.61; 722.1; 722.2; 726.0; 726.1; 745.3; 753.1; 755.0; 756.; 767.; 785.1; 787.; 791.0; 792.0; 840.2; 840.6; 893.0; 911.2; 912.; 950.; 954.21; 956.1; 956.2; 959.9; 970.; 973.4; 973.5; 974.0; 974.2; 974.4; 976.; 997.2; 997.4; 997.5.

National Building Granite Quarries Association, J. J. McGuire, president, 101 Park Avenue, New York 17, N.Y. 511.1.

National Bureau of Casualty and Surety Underwriters, Wm. Leslie, general manager, 60 John Street, New York, N.Y. 722.39; 766.0.

National Canners Association, Carlos Campbell, director, Division of Statistics, 1739 H Street, N.W., Washington 6, D. C. 125.0; 126.0; 127.0; 128.0; 134.0; 160.; 281.; 953.2; 959.1.

National Canvas Goods Manufacturers Association, James E. McGregor, executive secretary, 224 Endicott Building, St. Paul 1, Minn. 319.91; 319.98.

National Coffee Association, W. F. Williamson, secretary, 120 Wall Street, New York, N.Y. 953.2.

National Collegiate Athletic Association, c/o A. S. Barnes & Company, 67 W. 44 Street, New York 18, N.Y. 068.1; 069.1; 209.91; 209.92; 429.9; 518.73; 943.1; 943.2; 943.7; 943.91; 943.94; 943.95; 943.96; 943.97; 943.99.

National Concrete Burial Vault Association, J. R. Van Meter, secretary-treasurer, 2553 Cummins Street, Cincinnati 25, Ohio. 959.3.

National Concrete Masonry Association, E. W. Dienhart, asst. secretary, 33 West Grand Avenue, Chicago, Ill. 516.4; 518.80; 518.89.

National Conference on Street and Highway Safety, A. W. Koehler, secretary, c/o National Association of Motor Bus Operators, Tower Building, Washington, D. C. 718.5; 998.

National Conference on Uniform Traffic Accident Statistics, Dr. Halbert L. Dunn, chairman, Bureau of the Census, Washington 25, D.C. 700; 718.5.

National Conference on Weights and Measures, R. W. Smith, secretary, c/o National Bureau of Standards, United States Department of Commerce, Washington 25, D.C. 793.0; 950.

Oil-Heat Institute of America, (Inc.), C. F. Curtin, secretary, 30 Rockefeller Plaza, New York, N.Y. 603.4; 614.9.

Open Steel Flooring Institute, Inc., Stuart J. Swensson, secretary-treasurer, 1611 First National Bank Building, Pittsburgh, Pa. 605.22; 619.9.

Optical Society of America, A. C. Hardy, secretary, Mass. Inst. of Technology, Boston, Mass. 476.34; 788.; 911.0; 911.2; 911.3; 911.4; 911.5; 911.6; 912.

Outdoor Advertising Association of America, H. E. Fisk, general manager, 165 Wacker Drive, Chicago, Ill. 998.

Pacific Coast Building Officials Conference, Hal Colling, secretary, 124 West Fourth Street, Los Angeles, Calif. 516.50.

Package Research Laboratory, E. A. Srill, Rockaway, New Jersey, 603.4; 606.13; 953.30; 953.39.

Painting and Decorating Contractors of America, G. S. Stuart, secretary, Brown Building, Philadelphia 6, Pa 640.1.

Paper Mill Wire Cloth Manufacturers' Association, A. M. Ferry, secretary, 1427 Eye Street N.W., Washington 5, D. C. 645.39.

Paper Stationery and Tablet Manufacturers Association, Inc., Edgar P. Eaton, executive secretary, 527 Fifth Avenue, New York, N.Y. 481.

Philippine Mahogany Manufacturers Import Association, G. P. Purchase, assistant secretary, 111 S. Seventh Street, Los Angeles, Calif. 411.43.

Pin, Clip, and Fastener Association, Thomas B. Jordan, executive secretary, Trinity Court Building, 74 Trinity Place, New York, N.Y. 612.15; 619.9; 645.9; 932.5.

Pipe Fittings Manufacturers Association, J. L. Giacomino, assistant secretary, 22 E. 40th Street, New York, N.Y. 607.14; 607.2; 645.4; 646.51.

Plain Washer Manufacturers' Association, Eugene Caldwell, secretary, 2100 South Bay Street, Milwaukee, Wisconsin. 606.31; 606.6; 645.6; 722.36.

Pneumatic Automotive Equipment Association, Pittsburgh, Pa. 791.2.

Porcelain Enamel Institute, Inc., Edw. Mackasek, 1010 Vermont Ave., N.W., man. dir. Washington 5, D.C. 531.6; 532.20; 532.9.

Portland Cement Association, 33 West Grand Avenue, Chicago 10, Ill. 511.3; 514.5; 516.0; 516.2; 516.3; 516.5; 518.31; 518.32; 518.33; 518.38; 518.39; 516.42; 518.51; 518.52; 518.56; 518.66; 516.68; 840.1.

Radio Manufacturers Association, Bond Geddes, general manager, 1317 F. Street N.W., Washington 4, D.C. 606.2; 712.1; 712.2; 712.9; 713.1; 713.5; 713.6; 714.12; 714.52; 715.22; 715.30; 715.35; 716.14; 718.60; 716.61; 716.62; 716.64; 718.66; 718.69; 718.7.

Rail Steel Bar Association, H. P. Bigler, director, 228 North La Salle Street, Chicago, Ill. 516.0.

Railway Tie Association, Roy M. Edmonds, secretary-treasurer, 610 Shell Building, St. Louis 3, Mo. 401.10; 401.11; 401.12; 401.13; 401.14; 401.15; 401.16; 401.17; 401.18.

Red Cedar Shingle Bureau, W. W. Woodbridge, secretary-manager, G. A. Brewer, assistant manager, 5508 White Building, Seattle 1, Wash. 402.52.

Resistance Welder Manufacturers Association, George A. Fernley, secretary, 505 Arch Street, Philadelphia, Pa. 603.26; 767.

Rolled Gold Platers' Association, Clarence M. Dunbar, president, c/o Horton Angell Company, Attleboro, Mass. 662.

Rubber Manufacturers Association (Inc.), Warren S. Lockwood, executive vice president, 444 Madison Avenue, New York 22, N.Y. 201.1; 202.0; 202.11; 202.12; 202.21; 202.31; 202.41; 202.42; 202.43; 202.45; 202.46; 202.9; 204.6; 207.0; 207.1; 207.2; 207.3; 208.1; 611.16.

Rubber Reclaimers Association, Allyn I. Brandt, president, 537 E. 86th Street, New York, N.Y. 201.2.

Safe Manufacturers National Association, A. O. Boniface, executive secretary, 366 Madison Avenue, New York 17, N.Y. 518.59; 605.22; 613.5; 613.7; 954.21; 958.9.

Safety Equipment Manufacturers Association, Inc., R. S. Armstrong, manager, 350 Madison Avenue, New York, N.Y. 716.12; 716.13; 997.1.

Salt Producers Association, W. G. Wilcox, chairman, Standardization Committee, 154 Bagley Avenue, Detroit 26, Mich. 950.

Sanitary Brass Institute, J. W. McGarry, chairman, Commercial Standards Committee, Chase Brass and Copper Company, Waterbury, Conn. 532.23; 612.21.

Sanitary Cast Iron Enameled Ware Association, C. W. Carbeau, secretary, South Second Street, Ellwood City, Pa. 532.23; 612.20; 612.21.

Sanitary Institute of America, E.D. Szold, secretary, 105 West Monroe Street, Chicago, Ill. 319.4; 390.5.

Society of Automotive Engineers, (Inc.), John A. C. Warner, secretary and general manager, 29 West Thirty-ninth Street, New York 18, N.Y. 066.7; 066.9; 069.9; 200.; 201.0; 201.1; 201.9; 202.11; 202.43; 202.46; 202.9; 209.99; 319.97; 349.25; 365.98; 396.; 425.9; 472.93; 477.9; 481.; 502.2; 503.0; 503.1; 503.2; 503.3; 504.0; 504.34; 504.9; 518.59; 521.0; 541.3; 545.5; 593.; 600.1; 600.2; 600.3; 600.5; 602.2; 603.0; 603.21; 603.23; 603.27; 603.41; 604.43; 604.0; 604.22; 604.23; 604.24; 604.25; 604.29; 605.0; 606.4; 607.0; 607.14; 607.4; 607.6; 607.7; 608.0; 608.2; 608.30; 608.31; 608.32; 608.4; 608.51; 608.52; 608.53; 608.6; 611.0; 611.11; 611.21; 611.51; 615.12; 615.15; 615.82; 621.0; 621.30; 621.31; 621.32; 621.34; 622.3; 622.4; 622.5; 622.6; 622.9; 631.0; 631.11; 631.13; 631.21; 631.22; 631.23; 631.24; 631.31; 631.32; 631.33; 631.41; 631.42; 631.43; 631.6; 631.9; 633.0; 640.; 641.21; 642.12; 642.24; 642.4; 643.0; 643.9; 644.12; 644.21; 644.22; 644.23; 645.11; 645.12; 645.21; 645.24; 645.32; 645.39; 645.9; 646.12; 646.23; 646.31; 646.41; 646.42; 646.52; 647.12; 647.13; 647.15; 647.16; 647.25; 647.26; 647.32; 647.34; 647.36; 647.38; 651.0; 653.0; 656.2; 656.3; 656.4; 656.6; 656.7; 681.0; 683.0; 683.41; 692.0; 692.1; 692.2; 692.3; 693.0; 693.1; 693.2; 693.3; 695.1; 695.2; 695.4; 695.5; 695.6; 697.3; 704.1; 705.0; 705.6; 707.11; 707.12; 707.13; 707.15; 707.16; 712.0; 712.2; 714.21; 715.11; 715.35; 715.41; 716.12; 719.3; 719.4; 722.0; 722.1; 722.30; 722.31; 722.32; 722.33; 722.34; 722.37; 722.38; 722.39; 723.0; 724.20; 724.21; 724.22; 724.23; 724.24; 724.25; 724.26; 724.29; 725.3; 729.2; 729.5; 755.3; 765.; 766.2; 793.1; 801.2; 839.38; 840.6; 843.31; 844.1; 844.4; 847.1; 849.6; 893.9; 919.1; 935.; 950.; 959.6; 974.0; 993.

Society of Motion Picture Engineers, Harry Smith, Jr., executive secretary, Sylvan Harris, editor and office manager, Hotel Pennsylvania, New York 1, N.Y. 518.50; 518.54; 518.80; 911.0; 911.1; 911.2; 911.3; 911.6; 911.9; 912.

Society for the Promotion of Engineering Education, F. L. Bishop, secretary, University of Pittsburgh, Pittsburgh, Pa. 700.; 706.0; 718.40; 724.0; 910.

Southeastern Peanut Association, J. B. Latimer, executive secretary, 100 N. Washington Street, Albany, Ga. 112.2; 119.9; 135.5; 142.6.

Southern Cypress Manufacturers Association, B. R. Ellis, secretary, 721-24 Barnett National Bank Building, Jacksonville, Fla. 400.22; 402.52; 413.1.

Southern Hardwood Producers, Inc., Ed. R. Linn, secretary-manager, 805 Sterick Building, Memphis, Tenn. 411.43.

Southern Pine Association, H. C. Berckes, secretary-manager, Canal Building, New Orleans, La. 400.26.

Southern Pine Inspection Bureau, A. S. Boisfontaine, secretary, Canal Building, New Orleans, La. 400.26; 402.41; 402.42; 402.43; 402.51; 402.52; 411.0; 411.1; 411.27; 411.3; 411.41; 411.42; 411.43; 411.5; 411.6; 411.7; 411.9; 412.1; 413.0; 413.24; 413.8; 423.5.

Sporting Arms and Ammunition Manufacturers' Institute, C. S. Comeaux, secretary, 103 Park Avenue, New York 17, N.Y. 619.1.

State of California, Dept. of Public Health, Bureau of Food and Drug Inspection, Sacramento, Calif. 173.

Steel Heating Boiler Institute, M. L. Heminway, executive secretary, 336 Madison Avenue, New York 17, N.Y. 614.4; 703.0; 703.1.

Steel Joist Institute, P. E. Griffith, secretary, 200 North Wells Street, Chicago, Illinois. 605.12.

Steel Kitchen Cabinet Institute, S. S. Kenney, executive secretary, 1256 Donald Avenue, Lakewood 7, Ohio. 613.9.

Sterling Silversmiths Guild of America, Alexander Vincent, secretary, 20 W. 47th Street, New York, N.Y. 691.2.

Stoker Manufacturers Association, Marc G. Bluth, secretary, 307 North Michigan Avenue, Chicago, Ill. 614.0; 614.9.

Structural Clay Products Institute, Harry C. Plummer, director of Engineering and Research, 1756 K Street N.W., Washington, D. C. 516.3; 518.30; 518.80; 518.83; 518.89; 534.0; 534.10; 534.11; 534.22.

Sun Glass Institute, Inc., A. C. Boniface, executive secretary, 366 Madison Avenue, New York, N.Y. 914.1.

Tag Manufacturers Institute, Frank H. Baxter, executive director, 370 Lexington Avenue, New York, N.Y. 302.39; 308.9; 326.; 379.1; 474.5; 489.

Tanners' Council of America, J. Louis Nelson, secretary, 100 Gold Street, New York, N.Y. 060.; 066.7.

Technical Association of the Pulp and Paper Industry, R. G.
