American Society for Testing Materials, C 19-41; 1941. Joint sponsor with the National Bureau of Standards and A.S.A. Fire Protection Group. American Standards Assn., A2.1-1942. Methods of Fire Tests of Building Construction and Materials. Applicable to assemblies of masonry units and to composite assemblies of structural materials for buildings, including bearing and other walls and partitions, columns, girders, beams, slabs, and composite slab and beam assemblies for floors and roofs, also applicable to other assemblies and structural units that constitute permanent integral parts of a finished building, but not having determined suitability for use after fire exposure. Standard time-temperature curve for control of fire tests, classification as determined by test, fire endurance and hose stream tests, size of sample and condition for acceptance.

American Society for Testing Materials, C 152-41; 1941. Joint sponsor with National Bureau of Standards and A.S.A. Fire Protection Group. American Standards Assn., A2.2-1942. Methods of Fire Tests of Door Assemblies. Covers various types and materials used as protectives against passage of fire, heat, fumes, or smoke; performance during exposure but not for ratings or standards for different uses. Control of fire tests, furnace temperatures, temperature of unexposed surfaces, test structures, test assemblies, fire and hose tests, heat insulation, and fire resistance.

American Society for Testing Materials, C 168-44; 1944. Definitions of Terms Relating to Thermal Insulating Materials. Defines preformed thermal insulating block and thermal insulating cement.

American Society for Testing Materials, C 177-42 T; 1942. Tentative Method of Test for Thermal Conductivity of Materials by Means of the Guarded Hot Plate. Tests obtained on dry specimens only.

American Standards Assn., A10.2-1944. Sponsored by American Institute of Architects and Nat'l Safety Council. Safety Code for Building Construction. Covers demolition,

excavation work, welding and cutting, piling, handling and storing materials, blasting, compressed-air work, derricks, scaffolds, ladders, hoists and elevators, temporary floors, stairs, railings and toe boards, and housekeeping, temporary wiring and lighting, temporary sanitation, and salamanders.

American Wood-Preservers' Assn., 50d; 1944. Recommended Practice for the Use of Pressure Treated Lumber in Protecting Buildings Against Decay and Termites. For protection against decay and against subterranean termites and dry-wood termites. Designates construction in contact with the ground and construction not in contact with the ground. Gives minimum retention (lb.-cu. ft.) required for various kinds of preservatives.

Associated Factory Mutual Fire Insurance Companies. Factory Mutual Bulletin of Loss Prevention, 7.13; 1940. Anchorage for Factory Roofs—Principles and Design Data. Includes basis of design, wind forces, suggested steps for designing roof anchorage, workmanship, foundations, calculations, suggested methods of roof anchorage, and tables of data used in designing roof anchorage.

Associated Factory Mutual Fire Insurance Companies. Factory Mutual Bulletin of Loss Prevention, 21.71; 1938. Winter Protection for Dry-Pipe Valves. Includes recommendations for insulated wood-frame frost enclosures.

Associated Factory Mutual Fire Insurance Companies. Factory Mutual Bulletin of Loss Prevention, 22.70; 1940. Detailed Specifications for Laying Fire Mains. Includes requirements for cast iron pipe, asbestos-cement pipe, pipe linings, fittings, suction pipe, protection, excavation and preparation, foundations, pipe laying, blocking, and jointing, valves, indicator posts and cast iron fittings, plugging dead ends, anchorage of tees, plugs, and bends, hydrostatic test, backfilling, and special type pipe. Factory Mutual Bulletin of Loss Prevention 22.71; 1940. Anchoring Fire Mains. Gives diagrams of various methods of anchoring conditions.

Associated Factory Mutual Fire Insurance Companies. Panphlet 80; 1934. Construction, Fire Resistance of Industrial Buildings. Covers main points in brief and gives types of construction, subdivision by fire stops, protection of floor openings, prevention of water damage, hazardous occupancies, warehouses and storehouses, protection against exposure fires, construction fire hazards, planning fire protection, heavy timber construction, planning construction for effective and economical sprinkler protection, protecting steelwork, noncombustible and fire-resistive roofs, construction of fire cut-offs, waterproofing floors, auxiliary and temporary buildings, miscellaneous details, wind resistance, and earthquake resistance.

Concrete Reinforcing Steel Institute. Reinforced Concrete, 1943. Code of Standard Practice—Concrete Joist Construction Floor Forms. The practice and customs contained in this code are in accordance with good engineering practice, tend to insure safety and economy for concrete joist construction floors, and are standard within the Industry. Covers engineering service, estimating, materials, execution, arbitration, and contracts.

National Assn. of Building Owners and Managers. Sheridan-Kackow Formula for Determining Rental Value of Office Space. Revised, 1941. Includes explanatory data, key to computations, definitions, rental schedule foundation, adjustments required for group comparisons, formula to reflect the relative value of various kinds of space within any given building in relation to the base rate of that building, definition of base rate, and explanatory footnotes on formula.

National Board of Fire Underwriters. Building Codes, Their Scope and Aims, 1940. Covers early codes, art of building, masonry walls as fire stops, windows need protection, height a factor in fires, large areas make large fires, reducing fire areas in buildings, life safety a vital factor, enclosure of stairways and elevator shafts, fireproof construction, equipment to extinguish fires, and enforcement a vital need.

National Board of Fire Underwriters. Recommended Building Code, 1943. Covers administration, definitions, classification, general building restrictions, light and ventilation, means of egress, materials, loads and stresses, construction, safeguards during construction, fire resisting features of construction, chimneys, flues and vents, heat appliances, heating, ventilating, air conditioning, blower and exhaust systems, places of assembly, theatres, motion picture theatres, assembly halls and garages, elevators, escalators, dumbwaiters, and amusement devices; miscellaneous equipment, electrical installations, fire extinguishing equipment, signs and outdoor display structures, and appendices.

National Board of Fire Underwriters. Hose Houses for Mill Yards, No. 25; 1940. Standards for the construction and equipment. Gives sizes, materials, illustrated designs for frame hose housing, hose shelving, hardware, fire equipment, length and size of hose provided.

National Board of Fire Underwriters. Nitrocellulose Motion Picture Film, No. 40; 1939. Storage and handling requirements for construction and arrangement of buildings, electrical equipment, heating, sprinklers, allowable weight of film in cabinets and vaults, construction of film cabinets and film vaults, containers and transportation of film, motion picture projectors, motion picture theaters, film exchanges, laboratories, studios, etc.

National Board of Fire Underwriters. Photographic and X-Ray Nitrocellulose Films, No. 41; 1930. Regulations for the storage and handling in stores, warehouses, commercial studios, hospitals, laboratories, etc., maximum volume of cabinets, vaults, and outside storage houses.

National Board of Fire Underwriters. Pyroxylin Plastic in Factories, No. 42; 1940. Standards for the storage, handling, and use of pyroxylin plastic in factories making articles therefrom. Covers synopsis, application, definitions, general requirements, isolated storage buildings, storage of raw materials, manufacturing, inspection and packing, storage of finished stock, display and sales tables, and factories using finished pyroxylin articles for assembly with other materials.

National Board of Fire Underwriters. Pyroxylin Plastic in Warehouses and Stores, No. 43; 1940. Standards for the storage and handling of pyroxylin plastic in warehouses and wholesale jobbing and retail

stores. Covers introduction, scope of standards, sales and handling, storage of loose or packed articles not in shipping containers, storage of finished articles in shipping containers, storage of raw stock in shipping containers, and general requirements.

National Board of Fire Underwriters. Storage and Handling of Combustible Fibres, No.44; 1941. For cotton, sisal or henequen, ixtle, jute, hemp, tow, cocoa fibre, oakum, baled waste, kapok, Spanish moss, and excelsior. Covers fire-resistive fibre warehouses, fire extinguishing equipment, operation and maintenance, nonfire-resistive warehouses, quantities and storage methods, and appendix.

National Board of Fire Underwriters. Protection of Openings in Walls and Partitions Against Fire, No.80; 1939. Regulations for devices including doors, shutters, windows, etc., designed to resist the passage of fire, in six classes. Number of units, stability, insulation, combustibility, safety, installation, and maintenance. Includes sliding, swinging, rolling shutter doors, hollow metal, tin clad, door closers, elevator doors, shutters, wired glass windows, and diagrams of various types of doors, shutters, and windows.

National Fire Protection Assn. American Standards Assn., A 9.1-1942. Building Exit Codes. Covers definitions, stairs and stair enclosures, outside stairs (fire escapes), ramps, horizontal exits, doors, aisles and corridors, elevators, escalators, slide escapes, alarm systems, fire exit drills, and signs and lighting. Gives general requirements and requirements for schools, department stores, factories, hospitals, sanitariums and corrective institutions, places of public assembly, hotels and apartment houses, and office buildings.

National Safety Council (American Society of Safety Engineers, Engineering Section). American Standards Assn., A12-1932. Safety Code for Floor and Wall Openings, Railings, and Toe Boards. Standards of size, strength, and construction of stair railings, handrails, and guards for floor and wall openings and holes and for open-sided floors, platforms, and runways.

National Safety Council (American Society of Safety Engineers, Engineering Section). American Standards Assn., A14-1935. Safety Code for Construction, Care and Use of Ladders. Definition of terms; kind and quality of materials; specifications and construction of fixed, single, extension, fire, step, trolley and side-rolling, sectional, trestle, and extension trestle ladders; installation of fixed ladders; accessories; care and use.

National Safety Council. American Standards Assn., A39-1933. Recommended Practice for Window Cleaning. Applies to all window cleaning operations performed wholly or partially on the outside of all public buildings more than one story high, or in which the sills of windows are located more than ten feet above grade or adjoining roof. Requirements when to use approved safety devices. Requirements on swinging scaffolds, boatswain's chair, sectional ladder, belts, belt terminals, and anchors.

Pacific Coast Building Officials Conference. Uniform Building Code, 1943. The purpose of this code is to provide certain minimum standards, provisions, and requirements for safe and stable design, methods of construction, and uses of materials in building and structures hereafter erected, constructed, enlarged, altered, repaired, moved, converted to other uses or demolished, and to regulate the equipment, maintenance, use, and occupancy of all buildings and structures. Covers twelve parts—(I)administrative, (II)definitions and abbreviations, (III)requirements based on occupancy, (IV)requirements based on location in fire zone, (V)requirements based on types of construction, (VI)engineering regulations, quality, and design of the materials of construction, (VII)detailed regulations, (VIII)fire-resistive standards for fire protection, (IX)regulators for use of public streets and projections over public property, (X)plastering, (XI)special subjects, and (XII)legislative.

Society of Motion Picture Engineers. Projection Room Plans, 1942. Recommendations for use in designing and remodeling projection rooms so that greater uniformity of construction and greater efficiency in projection will exist in the future. Projection room facilities shall consist of the projection room proper, film rewind and storage space, a power equipment room, and a lavatory. Recommendations cover projection room proper, rewind room, power equipment room, lavatory, exits, conduits and circuits, lighting, ventilation, heating, painting and floor covering, equipment, and miscellaneous.

Underwriters' Laboratories, Inc., American Society for Testing Materials, National Bureau of Standards, and American Standards Assn. Fire Protection Group, joint sponsors. American Standards Assn., A2.1; 1942. Standard Specifications for Fire Tests of Building Construction and Materials, 1942. Gives specification for control of fire tests, classification as determined by test, test structures, test samples, and conduct of fire tests; tests of walls, partitions, columns, floors, and roofs; and tests of protection for combustible framing, or for combustible facings on the unexposed side of walls, partitions, and floors.

Underwriters' Laboratories, Inc. Fire Hazard Classification of Building Materials, 1944. Covers introduction, object of investigation, development program, description of test equipment, test method, interpretation of test results, observations during development tests, classification of untreated lumber, classification of treated lumber, classification of cellulose board, plywoods, felts, and fabrics, and summary.

U. S. Gov., Dept. of Commerce, National Bureau of Standards, H19; 1934. Manual of Fire-Loss Prevention of the Federal Fire Council. It is aimed to present herein the essentials relating to design, materials of construction, and equipment and operation of buildings, that effectively prevent or abate loss by fire. An initial discussion is given of justifiable outlay for fire-loss prevention, considering the values and the degree of hazard present. Sections III to VI, inclusive, deal with the fire resistance of building materials, assemblies, and types; control of spread of fire by structural means; and design and arrangement of buildings to secure exit facilities for occupants in case of fire. In sections VII and VIII, structural and

equipment features having a bearing on safeguarding hazards incidental to heating, lighting, and power supply are discussed, as also those pertaining to lightning protection, fire hazards during construction, and special occupancy hazards. In Section IX protection of records is treated from the standpoint of construction and equipment, and in section XIII from the standpoint of business routine and general fire prevention. Sections X and XI deal with equipment for detecting and extinguishing fire. In section XII general methods for decreasing the ease of origin and initial spread of fire are outlined; and in sections XIV to XVI, inclusive, the effective use of equipment in case of fire by prior training for emergency, and the systematic inspection of property to enable unnecessary fire hazards to be promptly eliminated and defects in construction and equipment remedied. Two general subdivisions of the manual may be noted, namely, construction and equipment up to and including section XI, and fire prevention and maintenance covered in the subsequent sections.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Miscellaneous Publication M151; 1935. Design and Construction of Building Exits. Contains results of surveys of current practice in providing exits and of the rates of speed at which people can effect their escape through different kinds of exits. Presents also the methods employed in the surveys and the results obtained; also suggested requirements are presented to be used when local requirements are under consideration.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R 87-32; 1932. Forms for Concrete Joist Construction Floors. This recommendation covers forms for concrete joist construction floors. Gives tables showing standard forms, specials for filler forms, and standard end taper forms.

U. S. Gov., Dept. of Commerce, National Bureau of Standards, BH7; 1924. Minimum Live Loads Allowable for Use in Design of Buildings. Recommended by building code committee for adoption in state and municipal building codes, covers live loads due to human occupancy, industrial or commercial occupancy, roof loads, movable partition loads, and wind pressures.

U. S. Gov., Dept. of Commerce, National Bureau of Standards, BH14; 1925. Recommended Minimum Requirements for Fire Resistance in Buildings.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Building Materials and Structures Report BMS17; 1939. Sound Insulation of Wall and Floor Constructions and 1940 Supplement. This report summarizes the data obtained in tests at the National Bureau of Standards on the sound transmission of wall, partition, and floor panels and gives a general discussion of the principles of sound insulation. A general discussion is given of the factors which determine the transmission of sound through partitions. Impact noises and methods of insulating against them receive special mention.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Building Materials and Structures Report BMS19; 1939. Preparation and Revision of Building Codes. In this discussion a description is given of how such work is done and useful sources of technical information are indicated. Some of the problems that are encountered by local committees are mentioned, including what basic principles are involved; methods of presentation, arrangement, and numbering; advantages of using national standards and ways of referring to them; methods of recognizing new materials and new methods of construction; extent of delegation of authority to the building official and safeguards against arbitrary action; and other questions of major importance.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Building Materials and Structures Report BMS33; 1939. Plastic Calking Compounds. The purposes of this investigation of calking compounds were: (1) To develop simple test procedures and obtain data for use in specifications, (2) to study compositions and physical properties in relation to performance, and (3) to study the installation and service conditions which have a bearing on performance and durability. A large number of commercial samples were collected and numerous experimental compounds were prepared in the laboratory. Chemical analyses were made of the commercial compounds. Physical tests were made on both commercial and experimental compounds. Laboratory studies have been supplemented, as far as possible, with exposure tests and inspections of actual installations.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Building Materials and Structures Report BMS45; 1940. Air Infiltration Through Windows. Tests were conducted on double-hung wood windows and light steel casements, types frequently specified for low-cost housing construction. Infiltration measurements were made for systematic sets of clearance conditions and correlations between amount of clearance and infiltration are given. The results are summarized, using a concise method for representing the relationship between air infiltration and test pressure. Relationships between average sash clearance and infiltration at the reference pressure of 0.2 in. of water are given and a general type of relation between infiltration and pressure is suggested on the basis of the test results.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Building Materials and Structures Report BMS52; 1940. Effect of Ceiling Insulation Upon Summer Comfort. This investigation deals with the effect of insulation in limiting the temperature rise of the rooms in the upper story of a building with a flat roof. For test purposes a structure was built on the roof of one of the buildings at the National Bureau of Standards. This structure has a "flat" (slightly sloping) roof, below which is a low attic separated from the room below by a ceiling of plasterboard. Various types of insulation were installed just above this ceiling to insulate it from the attic space. The temperature of the ceiling in the room below was measured and the effect of the insulation in limiting the rise in the temperature of the ceiling was determined.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Building Materials and Structures Report BMS 78; 1941. Structural, Heat-Transfer, and Water-Permeability Properties of Five Earth-Wall Constructions.

For the program on the investigation of low-cost house constructions, specimens representing adobe, bitudobe, monolithic terracrete, terracrete-block, and rammed-earth walls were constructed with the Cooperation of the Office of Indian Affairs and the National Youth Administration. These specimens were subjected to structural, heat-transfer, and water-permeability tests. Sixty structural specimens were subjected to compressive, transverse, concentrated, impact, and racking loads. The transverse, concentrated, and impact loads were applied to one face. The loads simulated those to which elements of a house are subjected in actual service. The deformations under load and the sets after the load was removed were measured for each increment of load. Five heat-transfer specimens were subjected to a temperature differential that might occur in actual service. Five water-permeability specimens were tested under conditions that simulated exposure to a heavy, wind-driven rain.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Building Materials and Structures Report BMS81; 1942. Field Inspectors' Check List for Building Construction. Outlines items suggested for periodic inspection. The arrangement of the list was selected for the convenience of the field inspector and to insure that the various steps will be checked in their proper sequence. To amplify specific items in the check list and to avoid unnecessary repetition, the work of certain trades has been treated more fully in the appendixes.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Building Materials and Structures Report BMS87; 1942. A Method for Developing Specifications for Building Construction. Report of Subcommittee on Specifications of the Central Housing Committee on Research, Design, and Construction. Advocates a directive method which, under proper supervision, should condense specifications, bring about important economies, and increase efficiency. Fundamental principles that have proved of value over a period of years have been retained and are coordinated in a basic specification which promotes uniformity and permits choice of those materials and methods of construction best suited to the specific project in hand. Application of the method is made clear by three examples—a model basic specification illustrating the procedure outlined, a typical contemporary specification, and the typical specification rewritten in accordance with the method advocated.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Building Materials and Structures Report BMS 88; 1942. Recommended Building Code Requirements for New Building Construction With Special Reference to War Housing. Includes recommended requirements for general items, definitions, fire-resistance, classifications, general building restrictions, light and ventilation, exits, construction (working stresses, loads, soil-bearing capacity, foundations, masonry, reinforced concrete, reinforced brick, chimney, steel and iron, and wood construction), fire protection, chimneys and heating appliances, safeguards against accidents, electrical work, and plumbing; and an appendix of information to assist in interpreting and enforcing the code requirements.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specifications CAA-397. Storm Entrance for Type "S" Bldg., Construction of.

U. S. Gov., Dept. of Labor, Division of Labor Standards. Special Bulletin 7; 1942. Suggested Standards for Industrial Safeguards. Railing and Toeboards. Covers metal and wood toeboards.

U. S. Gov., Federal Housing Administration. Minimum Construction Requirements. These requirements provide a Minimum Standard of Construction and shall apply to all new construction on which the mortgage is insured by the Federal Housing Administration. They are considered necessary to produce a well-constructed dwelling which will serve as sound security for a long-term mortgage loan. Since these requirements are essentially minimum, they are not to be built down to but form a basis from which to build up. Copies are available in the F.H.A. insuring offices throughout the U. S. Include requirements for excavation, masonry, adobe construction, structural steel and iron, lumber, wood framing, termite prevention, roof coverings, sheet metal, lathing, plastering, stucco, painting, plumbing, heating, electrical work, etc., according to geographical location and local building code requirements.

## 518.51 Buildings and Dwellings

American Foundrymen's Assn. Code of Recommended Practices for Industrial Housekeeping and Sanitation, 1944. Covers scope, requirements, definitions, housekeeping, ventilation, lighting, water for human consumption, toilet rooms, wash and locker rooms, rest rooms for women, lunch rooms, and appendix.

American Transit Assn. Recommended Practice for Operating Bus Garage Layouts, W136-30; 1930. These practices relate to selection of site, architectural features of building proper, location of building on site, heating and ventilation, lighting, details to be considered in layout of garages, location of work areas, gasoline storage, oil and grease storage, and tire service and storage rooms.

American Transit Assn. Recommended Regulations for Construction and Protection of Bus Garages, W137-34; 1934. These regulations are intended to provide reasonable safeguards against the fire hazards of garages. Garages intended to come within the scope of these recommended good practice requirements are bus or truck garages, and other garages in which more than three motor vehicles are housed or kept and/or in which repairs involving open flames, spark emitting devices, or highly heated parts are made.

These regulations, when adopted, to conform to corresponding regulations of the National Fire Protection Assn.

American Transit Assn. Wiring, Construction, Maintenance, and Protection of Car and Trolley Bus Houses, Yards, and Auxiliary Buildings, W141-35; 1935. The rules referred to in these regulations are identical with the regulations of the National Board of Fire Underwriters for electric cars and trolley busses, including houses and yards.

Assn. of American Railroads, Telegraph and Telephone Section, 1-A-22; 1927. Lineman's Tool House. Dimensional drawing of typical floor plan.

Associated Factory Mutual Fire Insurance Companies. Factory Mutual Bulletin of Loss Prevention, 11.71; 1940. Pyroxylin Plastic, Its Hazards, and Special Precautions Needed for Storage and Handling. Includes recommendations for storage cabinets and vaults.

Associated Factory Mutual Fire Insurance Companies. Factory Mutual Bulletin of Loss Prevention, 11.80; 1938. Acetylene and Its Generation. Safeguards for Industrial Installations. Includes recommendations for generator house of fire-resistive construction and for three types of generators.

Associated Factory Mutual Fire Insurance Companies. Specifications for Gravity Water Tanks and Steel Towers, Volume 1. Structural Details, 1938. For buildings supporting tanks, requirements as to footings on brick supporting walls, design of anchorage, allowable bearing pressures for supports of various building materials. Concrete buildings according to A.S.T.M. specifications for concrete.

National Assn. of Building Owners and Managers. Sheridan-Kackow Formula for Determining Rental Value of Office Space. Revised, 1941. Includes explanatory data, key to computations, definitions, rental schedule foundation, adjustments required for group comparisons, formula to reflect the relative value of various kinds of space within any given building in relation to the base rate of that building, definition of base rate, and explanatory footnotes on formula.

National Board of Fire Underwriters. Fire Prevention and Protection as Applied to Hotels, 1936. Covers hazards including lighting, heating, storage of fuels, power plants, ventilation, incinerators, kitchens, refrigeration and air conditioning, shops, painting, laundry, motion pictures, smoking, storage rooms, and decorations; construction including year-round hotels, apartment hotels, and seasonal or resort hotels; new construction; existing construction; and protection including automatic sprinklers, standpipes, chemical extinguishers, private fire brigades, fire alarm system, and outside protection.

National Board of Fire Underwriters. Fire Prevention and Protection as Applied to the Public and Parochial Schools, 1939. Covers limitation of heights, restricting floor areas, danger of floor openings, emergency exits—fire escapes, light and power, heating system as a fire cause, protecting the coal pile, ventilation, auditorium and cafeteria, importance of good housekeeping, automatic sprinkler systems, standpipe as an aid in fire fighting, importance of suitable chemical extinguishers, fire drills, fire alarm system, and safety through self inspection.

National Board of Fire Underwriters. Fire Prevention and Protection as Applied to Hospitals, 1941. Covers construction; fireproof construction; nonfireproof construction; hazards including lighting, heating, incinerators, ventilation, kitchens, refrigeration, laundry, dry cleaning, sewing room, laboratories, X-ray laboratory and film storage, pharmacy, combustible anaesthetics, operating rooms, oxygen chamber, and housekeeping; and protection including automatic sprinklers, standpipes, chemical extinguishers, fire drills, fire alarm system, and outside protection.

National Board of Fire Underwriters. Airplane Hangars, No. 85; 1943. Standard good practice requirements for the construction and protection of airplane hangars. Covers height, area, for sprinkled and unsprinkled hangars; types of construction in order of preference, floor drainage, fire doors, lighting, power, heating, permissible repairs in hangars, construction of doping room, housekeeping and smoking, and fire protection appliances.

National Board of Fire Underwriters. Construction and Protection of Garages, No. 88; 1932. Recommended practice for garages where more than three vehicles are kept, including buses and trucks. Construction, basement garages, lighting, power, heating, ventilation, repair work, storage of flammable liquids, housekeeping, automatic sprinklers, and fire protection.

National Board of Fire Underwriters. Construction of School Buildings and Improvement of Existing Structures, 1937. Recommendations as to fireproof or semifireproof construction, maximum heights, floor areas, and exit facilities; special hazards such as cafeterias, laboratories, shops, etc.; boiler rooms; also the improvement of existing buildings, fire partitions, stair enclosures, fire doors, etc.

National Fire Protection Assn. American Standards Assn., A 9-1940. Building Exits Code. Requirements on width, construction, materials, design, arrangements, inclosure, etc., for stairs, horizontal exits, doors, slide escapes, elevators and escalators, installation of lighting and alarm systems, etc.

National Fire Protection Assn. National Fire Codes for Extinguishing and Alarm Equipment, 1943. Hose Houses for Mill Yards. Standards for hose houses for mill yards. Covers location, foundations, material, size, frame, roof, doors, hose shelves, floors, ventilation, hardware, painting, required apparatus, hose, hydrant gates or cut-off valves, couplings, nozzles, coupling spanners or wrenches, domestic service use prohibited, and rack for washing and drying hose.

National Fire Protection Assn. National Fire Codes for Flammable Liquids, Gases, Chemicals, and Explosives, 1943. Rooms, Cabinets, and Outside Houses for the Storage of Flammable Liquids. Covers standards for the construction of inside storage or mixing room, storage cabinets, and outside storage houses.

National Fire Protection Assn. Protection of Records, 1939. Includes compilation of committee reports. Covers introduction, value of records, classification

of records, record losses, construction equipment and maintenance of buildings, severity, duration and control of exposure, fire exposure conditions for vaults and portable record containers. Protection of records by duplication, document buildings, vaults and vault doors, file storage rooms and doors, fire protection equipment for vaults and file storage rooms, safes, substandard and commercial record containers, salvage of fire damaged records, destruction of records no longer useful, codes for preservation of records, protection of local archives, and use of protective equipment.

National Fire Protection Assn. Protection of Records, 1939. Includes summary of good practice requirements for the protection of records. Covers introduction, protection of records, survey and classification of records, survey of building, providing protection, handling of records, and disposition of useless records.

Portland Cement Assn. Concrete for Industrial Buildings and Garages, 1939. Includes concrete floors on fill, floor framing, columns, live load, stairs, walls, fire resistance, roofs, extensions, expansion anchors, inserts, pipe sleeves, etc.; dimensions of automobiles, layout of parking units, framing plans, ramps, and structural details.

U. S. Gov., Dept. of Agriculture, Forest Service. Specifications No. 469. Shelter; Weather-Instrument, U. S. Weather Bureau Cotton Region.

U. S. Gov., Dept. of Commerce, National Bureau of Standards, BH18; 1932. Recommended Minimum Requirements for Small Dwelling Construction. Recommendations of building code committee on thickness, height, and bonding of exterior walls, proportions of piers, bearing areas of arches and lintels, quality and strength of the building materials used, recommended types and details of construction for economy, strength, and fire protective qualities for various types of masonry and frame construction.

*References.*—Building construction, general items, *see* 518.50; miscellaneous building construction items, *see* 518.59; steel buildings and metal parts of buildings, *see* 605.22; sheet metal work, metal doors and trim, tin clad fire doors, *see* 605.22; sheet metal roofing, *see* 604.3; *see* references under 518.59.

## 518.52 Foundations for Buildings

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering. Specifications for Pile Foundations. Covers the investigation, design, and construction of pile foundations.

Portland Cement Assn. Specifications for Concrete Footings and Concrete Masonry Walls, 1939. Gives general requirements, materials in accordance with A.S.T.M. specifications, construction of footings, and hollow block wall construction. Includes below-grade construction, wood or concrete sill attachment, masonry back-up tile, coping and parapet walls, methods of installing ducts and conduit, and illustrations of procedures.

*References.*— Cement, concrete and mortar, *see* 516.1, 516.3; sand, gravel, broken stone, slag, *see* 512; reinforcement steel, *see* 605.25; building construction, *see* 518.50, 518.51.

## 518.53 Walls and Partitions for Buildings

American Society for Testing Materials, ES-19; 1942. Emergency Specifications for Structural Insulating Board (Thermal Insulation). Cover thermal insulating material made principally of vegetable fiber in the form of insulating board suitable for structural purposes.

Metal Lath Manufacturers' Assn. Standard Metal Lath Specifications for Better Plastering and Concrete Stucco. Includes nomenclature for metal lath construction; requirements for material; size, weight, and spacing of attaching devices; minimum requirements for plastered metal stud partitions and standing or wall furring; minimum requirements for furred contact or suspended ceiling construction for the soffits of steel beams, purlins or joists, or concrete or hollow tile floor arches or roofs; corner and joint reinforcement; erection of metal lath; and appendix of general notes on plastering and stucco, solid and soundproof partition details, and plaster beams and cornices.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Commercial Standard CS 112-43; 1943. Homogeneous Fiber Wallboard. Covers one type of homogeneous fiber wallboard of a nominal thickness of 5/16 in., 4 ft. wide, and 6 to 12 ft. long. Gives requirements for composition, treatment for destruction of rot-producing fungi, surfaces, edge finish, physical properties, standard commercial sizes, and tolerances; method of sampling and testing; and packing and marking.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Building Materials and Structures Report BMS61; 1940. Structural Properties of Two Nonreinforced Monolithic Concrete Wall Constructions. The Masonry Construction Section of the National Bureau of Standards built 24 specimens representing two nonreinforced monolithic concrete wall constructions. The only difference in their construction was in the proportions of the concrete. The specimens were subjected to compressive, transverse, impact, concentrated, and racking loads. For each of these loads, three like specimens were tested. The deformation under load and the set after the load was removed were measured for each increment of load. The results are presented in graphs and a table.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Building Materials and Structures Report BMS63; 1940. Moisture Condensation in Building Walls. Moisture condensation in insulated walls will occur under certain conditions. This paper discusses these conditions in a general way and makes available to architects, builders, and others information concerning factors which control humidity in walls. These factors are presented so as to make possible estimates of the probability of moisture condensation in walls of dwellings if the factors governing it such as design, structural materials, construction details, and moisture conditions inside and outside the building are known.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Building Materials and Structures Report BMS76; 1941. Effect of Outdoor Exposure on the Water Permeability of Masonry Walls. The water

permeabilities of about 100 small masonry-wall specimens were measured before and after exposing them to the weather at Washington, D. C., for a maximum period of 3 yrs. Some of the more permeable walls had been waterproofed before exposure, and the durability of the waterproofing treatments, as well as the structural appearance or condition of the walls was also determined.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specifications CAA-354. Building, Type "S", Prefabricated Partition Panels.

U. S. Gov., Navy Dept., Bureau of Yards and Docks. Specification 7Yg; 1934. For Roofing, Siding, and Sheet Metal Work; Dampproofing and Membrane Waterproofing.

U. S. Gov., Navy Dept., Bureau of Yards and Docks. Specification 11Yc; 1939. Marble and Tile Work. Includes requirements for water closet and shower enclosures and stalls.

U. S. Gov., Navy Dept., Bureau of Yards and Docks. Specification 15Yb; 1934. Standard Methods for Inspection of Materials for Roofing, Siding, Sheet Metal Work, Dampproofing, and Waterproofing.

## 518.54 Inclosures

Associated Factory Mutual Fire Insurance Companies. Factory Mutual Bulletin of Loss Prevention, 11.71; 1940. Pyroxylin Plastic, Its Hazards, and Special Precautions Needed for Storage and Handling. Includes recommendations for storage cabinets and vaults.

Associated Factory Mutual Fire Insurance Companies. Factory Mutual Bulletin of Loss Prevention, 11.80; 1938. Acetylene and Its Generation. Safeguards for Industrial Installations. Includes recommendations for generator house of fire-resistive construction and for three types of generators.

Associated Factory Mutual Fire Insurance Companies. Factory Mutual Bulletin of Loss Prevention, 21.71; 1938. Winter Protection for Dry-Pipe Valves. Includes recommendations for insulated wood-frame frost enclosures.

Society of Motion Picture Engineers, sponsor. American Standards Assn., Z22.28-1941. Recommended Practice for Motion Picture Theater Projection Rooms. Projection lens height, projection angle, observation port, projection lens mounting, projection lens focal length, projection objectives, and focal markings.

Underwriters' Laboratories, Inc. Standard for Bandit Resisting Enclosures, Subject 752; 1942. Applies to the installations of bullet-resisting materials in the form of complete bandit-resisting enclosures designed to protect against robbery of persons handling money or securities within the enclosure during business hours. Gives design and construction, general test procedure, maintenance, and certification of installations.

*References.*— Building construction, *see* 518.50, 518.51; *see* references under 518.50.

## 518.55 Chimneys for Buildings

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering. Specifications for Buildings for Railroad Purposes: Steel Chimneys—Riveted; Steel Chimneys—Welded; Genuine Wrought Iron Chimneys—Welded; Brick Chimneys; Reinforced Concrete Chimney; and Reinforced Brick Masonry Chimney. Gives requirements for design, workmanship, and construction.

Associated Factory Mutual Fire Insurance Companies. Factory Mutual Bulletin of Loss Prevention, 7.62; 1940. Factory Chimneys—Concrete and Brick. Specifications for the erection and repair of chimneys more than 50 ft. high.

Clay Products Assn. Tentative Standards for Vitrified Clay Products, 1937. Includes fire clay flue linings, rectangular and circular, and glazed tile flue or chimney pipe and fittings. Gives weights and standard dimensions of tile.

Clay Sewer Pipe Assn., Inc. Handbook Vitrified Clay Sewer Pipe and Kindred Clay Products, 1942. Includes dimensions and weights of salt glazed vitrified clay flue linings and fittings and chimney tops and bases.

*References.*—Fire clay flue linings, clay stove pipe, *see* 534.29; building construction, *see* 518.50, 518.51; regulations on chimney sizes for house heating boilers, *see* 614.4; *see* references under 518.50.

## 518.56 Floors for Buildings

American Hospital Assn., 25-7. Asphalt Tile. Covers one grade. Based on U. S. Gov. Federal Specifications SS-T-306 for Asphalt Tile.

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering. Specifications for Membrane Waterproofing. Gives requirements for premoulded asphalt blocks.

American Wood-Preservers' Assn., 19b; 1923. Standard Specification for Interior Creosoted Wood-Block Flooring. Gives timber, size of blocks, preservatives, treatment, handling blocks after treatment, inspection, subgrade, foundation, laying the blocks, bituminous filler, and melting point test.

Associated Factory Mutual Fire Insurance Companies. Factory Mutual Bulletin of Loss Prevention, 4.20; 1938. Watertight Floors. Covers methods for improving construction where floor leakage is a serious defect. Includes description of common methods of waterproofing (hot asphalt mastic flooring, emulsified asphalt flooring, magnesite composition flooring, and light weight special surfacing), recent developments in waterproofing, and general precautions.

Maple Flooring Manufactures Assn. Grading Rules for Northern Hard Maple (Acer Saccharum), Beech, and Birch Flooring, 1941. Includes description of individual characteristics of Northern hard maple and of Northern beech and birch flooring; grading rules for First, Second, Third, and three Special grades; standard measurement; kiln-drying; end matching; custom in bundling; thicknesses and faces; rules for

estimating quantity of flooring required; grade-use recommendations; and uses of different thicknesses.

National Board of Fire Underwriters. Waterproofing of Floors and Drainage, and Installation of Scuppers, No.92; 1937. Suggested practice for prevention of water damage during fires and other emergencies by use of asphalt mastic flooring, protected membrane flooring, magnesite flooring, asphalt emulsion flooring, rubber and asphalt tile, and linoleum floors; disposal of water through scuppers in the walls, floor drains, ramps in doorways where flammable liquids may be discharged, skids under stock subject to water damage, etc.

Portland Cement Assn. Concrete Floor Finishes, 1938. Includes standard, heavy-duty, and resurfacing concrete floor finish, decorative concrete floor finishes as terrazzo, concrete tile and art marble, colored pigment cement floors, stained floor finish, painted finish, armored concrete floor finish, acid-proof and nonslip floors, linoleum, rubber and cork tile floors, carpeted floors; specifications for construction, surfacing, and curing; hardening treatments to overcome dusting, cracking, and cleaning of floors.

Portland Cement Assn. Specifications for Precast Joist Concrete Floors (With Cast-in-Place Concrete Slab), 1939. Requirements for precast joists as to strength, curing, and reinforcement; joist hangers, setting joists, cast-in-place slab, finish and curing, with illustrations of methods.

Tile Manufacturers' Assn. Basic Specification for Tile Work, K-300; 1939. Recommendations for the installation of tile in new construction and alterations on vertical and horizontal surfaces; for application over wood, masonry, concrete, or steel joist; for preparation of base, quality of materials, mortar mixtures, etc.

Tile Manufacturers' Assn. Tile Industry Research Bureau, R-TS-51; 1939. Specification for Installing Tile Floors on Thin Mastic Setting Bed. For installation over wood, cement, steel, roof decks, old terrazzo, natural stone, and tile floors, etc.; applicable to interior and exterior horizontal surfaces only (except ceilings) in hot or cold climates. Requirements for flexible binder, preparation of subfloor, priming, laying and grouting of tile, and precautionary measures.

U. S. Gov., Dept. of Commerce, National Bureau of Standards, H31; 1940. American Standards Assn., C2.1-1941. Safety Rules for the Installation and Maintenance of Electrical Supply Stations. For equipment of indoor and outdoor supply stations, provided it is in separate rooms or enclosures, under control of properly qualified persons, and accessible only to such persons. They also apply to similar equipment if installed in factories, mercantile establishments, vehicles, or elsewhere. Exceptions—if voltage does not exceed 150 volts to ground, and if voltage is not more than 550 volts between conductors and power utilized does not exceed 3,200 volts. Recommendations on floors of battery rooms housing large batteries comprised of cells in lead lined tanks.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Building Materials and Structures Report BMS43; 1940. Performance Test of Floor Coverings for Use in Low-Cost Housing: Part 2. In the second series, 40 test installations were subjected to a performance test in the floor-testing chamber of the National Bureau of Standards. Included in the tests were battleship linoleum, rubber in sheet and tile form, felt-base floor coverings having various wearing surfaces, three monolithic floors, and a number of asphalt tiles. The bonding agents used included lignin pastes, resinous cements, latex adhesives, rubber cements, cut-back asphalt, and asphalt emulsions. Installations were made on both concrete and wood subfloors. Descriptions of the testing equipment and test installations are given. Results showing the relative depth of the depressions in the floor coverings during the test are presented in tables. Brief summaries showing the performance of the test panels are given, and the appearance of the different floor coverings after 48,000 cycles of the testing equipment is shown by representative photographs.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Building Materials and Structures Report BMS62; 1940. Structural Properties of a Precast Joist Concrete Floor Construction Sponsored by the Portland Cement Assn. The Portland Cement Assn. submitted six specimens representing a floor construction which consisted of precast concrete joists and bridging and a reinforced-concrete floor slab. The specimens were subjected to transverse, impact, and concentrated loads. All loads were applied to the upper faces of the specimens. For each of these loads, three like specimens were tested. The deformation under load and the set after the load was removed were measured for each increment of load. The results are presented in graphs and in a table.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Building Materials and Structures Report BMS68; 1941. Performance Test of Floor Coverings for Use in Low-Cost Housing: Part 3. A performance test was conducted in the floor-testing chamber of the National Bureau of Standards on a third series of 40 test installations. Included in the test were linoleums in sheet and tile form, cork-composition tile, sheet rubber, rubber tile, asphalt tiles, fiberboard tiles, felt-base floor coverings having various wearing surfaces, three monolithic floors, and a number of wood floors. The bonding agents used included lignin pastes, cumar-resin cement, alumina cement-latex paste, rubber cements, various asphaltic adhesives, and nails. Installations were made on concrete, stripwood, and plywood subfloors. Installations on stripwood subfloors were made with underlays of dry and asphalt-saturated lining felts. Descriptions of the testing equipment and test installations are given. Results showing the relative depth of the depressions in the floor coverings during the test are presented in tables. Brief summaries of the manner in which the various test installations performed are given and photographs of the test panels after 48,000 cycles of the testing equipment are shown.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Building Materials and Structures Report

BMS73; 1941. Indentation Characteristics of Floor Coverings. The indentation characteristics of 64 floor coverings were determined. Tests were conducted on specimens conditioned in an atmosphere of 65-percent relative humidity and 72° F. temperature, on specimens after exposure to accelerated aging, and on specimens at an elevated temperature of 90°F. The floor coverings tested included such general types as linoleum, cork, rubber, felt base, asphalt, wood, fiberboard, and monolithic compositions. Variations in composition and thickness were included in many of the types. The apparatus and the procedure are briefly described. Summaries of the results are presented to show the relative merits of the various floor coverings with respect to comfort value and permanent indentation.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Building Materials and Structures Report BMS80; 1942. Performance Test of Floor Coverings for Use in Low-Cost Housing: Part 4. A performance test was conducted in the floor-testing chamber of the National Bureau of Standards on a fourth series of 40 different installations involving 26 different floor coverings. Specimens of most of the floor coverings were installed on both a concrete and a wood subfloor. Included in the test were cork tiles, rubber tile containing aluminum oxide aggregate, asphalt tile, marbleized linoleums, felt-backed floor coverings having various wearing surfaces, strip maples, maple unit-block, pecan unit-block, asphalt mastic, coal-tar mastic, alumina cement-rubber latex composition, magnesium oxychloride composition, and 1:2:4 Portland cement concrete. Different underlays and adhesives were also included in the test. The test installations are described and results showing the depth of the depressions in the floor coverings made by the equipment are presented in tables. Brief summaries of the manner in which the various installations performed are given, and their appearance at the end of the test, is shown by photographs. A few generalized comments and conclusions are made.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Building Materials and Structures Report BMS85; 1942. Dimensional Changes of Floor Coverings With Changes in Relative Humidity and Temperature. The floor coverings tested included such general types as linoleum, cork, rubber, felt base, asphalt, stripwood, plywood, fiberboard, and several monolithic compositions, such as cement mortar and magnesium oxychloride. Dimensional changes due to a variation in relative humidity from 8 to 86 percent and those due to a variation in temperature from 32° to 90° F. were determined. The floor coverings, testing equipment, and procedure are described and the results are presented in graphic form.

U. S. Gov., Federal Specification SS-T-306a; 1943. Tile; Asphalt. Covers one type and one grade. Gives requirements for material, workmanship, color, finish and surface characteristics, bid sample, size, thickness, identation, impact, flexure, and curling; methods of sampling, inspection, and test; and requirements for packing and marking.

U. S. Gov., Federal Works Agency, Public Roads Administration. Specifications for Construction of Roads and Bridges in National Forests and National Parks, FP-41. Conditioning of Subfloor (for bituminous wearing course).

*References.*—Tile flooring, *see* 518.59, 534.25; wood flooring, *see* 411.2; hollow flooring tile, *see* 534.22; building construction, *see* 518.50, 518.51; *see* references under 518.50.

## 518.57 Ceilings and Roofing for Buildings

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering. Specifications for Buildings for Railroad Purposes: Built-Up Roofing. Gives requirements for materials (pitch, asphalt, asphalt primer, roofing felt, ready or prepared asphalt roofings, flashings, gravel, and slag); tarred rag felt, pitch and gravel (or slag) over wood or precast units (type A-1), and over homogeneous roofs cast in place (type A-2); tarred rag felt, steep roofing pitch and slag for use over wood or precast concrete or gypsum units (type A-3), and over homogeneous roofs cast in place (type A-4); asphalt rag felt, asphalt and gravel (or slag) over wood or precast units (type B-1), and over homogeneous roofs cast in place (type B-2); asphalt impregnated asbestos felt and asphalt (smooth surface) over wood or precast units (type C-1—classes 1, 2, and 3), and over homogeneous roofs cast in place (type C-2—classes 1, 2, and 3); and asphalt rag felt and asphalt (smooth surface) over wood or precast units (type D-1), and over homogeneous roofs cast in place (type D-2).

Concrete Reinforcing Steel Institute. Reinforced Concrete, 1943. Specifications for Metal Lath Ceiling Construction. Includes furred ceiling construction, suspended ceiling construction, and contact ceiling construction with removable and permanent forms, integral ceiling construction, gauge and placing of furring rods, channels, and lathing.

U. S. Gov., Navy Dept., Bureau of Yards and Docks. Specification 7Yg; 1934. Roofing, Siding, and Sheet Metal Work; Dampproofing and Membrane Waterproofing.

U. S. Gov., Navy Dept., Bureau of Yards and Docks. Specification 15Yb; 1934. Standard Methods for Inspection of Materials for Roofing, Siding, Sheet Metal Work; Dampproofing and Waterproofing.

U. S. Gov., U. S. Army, Corps of Engineers. Specification 81-13A; 1933. Roofing; Built-Up, Type 4-AWS, Construction.

U. S. Gov., U. S. Army, Corps of Engineers. Specification 81-14A; 1933. Roofing; Built-Up, Type 5-AWS, Construction.

U. S. Gov., U. S. Army, Corps of Engineers. Specification 81-15A; 1933. Roofing; Built-Up, Type 3ACS, Construction.

U. S. Gov., U. S. Army, Corps of Engineers. Specification 81-16A; 1933. Roofing; Built-Up, Type 4ACS, Construction.

U. S. Gov., U. S. Army, Corps of Engineers. Specification 81-17A; 1933. Roofing; Built-Up, Type 5ACS, Construction.

U. S. Gov., U. S. Army, Corps of Engineers. Specification 81-18A; 1933. Roofing; Build-Up, Type 3TCS, Construction.

U. S. Gov., U. S. Army, Corps of Engineers. Specification 81-19A; 1933. Roofing, Built-Up, Type 4TCS, Construction.

U. S. Gov,, U. S. Army, Corps of Engineers. Specification 81-20A; 1933. Roofing; Built-Up, Type 5TCS, Construction.

U. S. Gov., U. S. Army, Corps of Engineers. Specification 81-21B; 1943. Roofing; Built-Up, Type 4TWS, Construction of.

U. S. Gov., U. S. Army, Corps of Engineers. Specification 81-22A; 1933. Roofing; Built-Up, Type 5TWS, Construction.

U. S. Gov., U. S. Army, Corps of Engineers. Specification 81-23A; 1933. Flashing; Metal, Installation of, With Bituminous Built-Up Roofing.

U. S. Gov., U. S. Army, Corps of Engineers. Specification 81-24A; 1933. Flashing; Plastic, Installation of, With Bituminous Built-Up Roofing.

*References.*—Sheet steel and tin roofing, *see* 604.32, 604.31; asphalt roofing, tar roofing, *see* 505.16, 505.36; slate roofing, *see* 511.52; roofing tiles, *see* 534.23; wood shingles, *see* 402.52; ceiling lumber, *see* 411.3; building construction, *see* 518.50, 518.51; metal ceilings for buildings, *see* 605.22.

## 518.58 Beams and Columns for Buildings

*References.*—Building construction, *see* 518.50, 518.51; *see* references under 518.50.

## 518.59 Miscellaneous Specifications for Building Construction and Materials

Air Conditioning and Refrigerating Machinery Assn., Inc. Equipment Standards, 4.0:1941. Miscellaneous Ammonia Standards. Cold Storage Room Insulation. Gives recommended thicknesses of insulation for certain required temperatures.

American Hospital Assn., 4-1. Prefabricated Acoustical-Units. Covers nine types. Based on U. S. Gov. Federal Specification SS-A-118 for Prefabricated Acoustical-Units; TT-E-506a for Enamel, Interior, Gloss, Light-Tints and White; and TT-P-51a for Paints, Oil, Interior, Eggshell-Flat-Finish, Ready Mixed and Semipaste, Light-Tints and White.

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering. Includes clearance diagrams for railway bridges, turntables, tunnels, buildings and sheds adjacent to side tracks, warehouse and engine house doors, platforms, and equipment.

Associated Factory Mutual Fire Insurance Companies. Factory Mutual Bulletin of Loss Prevention, 7.13; 1940. Anchorage for Factory Roofs—Principles and Design Data. Includes basis of design, wind forces, suggested steps for designing roof anchorage, workmanship, foundations, calculations, suggested methods of roof anchorage, and tables of data used in designing roof anchorage.

Associated Factory Mutual Fire Insurance Companies. Factory Mutual Bulletin of Loss Prevention, 7.16 (1938), 7.17, 7.18, 7.19, and 7.20 (1939). Anchorage of Steel-Deck Roofs. A series of bulletins showing details of wind-anchorage methods for various types of steel-deck roofs.

Evaporated Milk Assn. Standards for Plant and Equipment, 1940. For construction and operation of evaporated milk plant; requirements for floors, walls and ceilings, doors and windows, lighting and ventilation, protection from contamination, toilet facilities, water supply, hand washing facilities, milk piping, construction and repair of containers and equipment; cleaning and bactericidal treatment of milk piping, containers and apparatus, etc.

National Assn. of Marble Dealers. Interior Marble Work, 1926. Explanatory of the material a specification for interior marble work should contain, includes grouping of marbles according to properties for finishing, kinds of finish and where used, standard and minimum thicknesses for marble for different applications, recommended details and methods of construction, 42 plates illustrating typical installations.

National Board of Fire Underwriters. Coloring and Ripening of Fruits and Vegetables, No. 57; 1938. Recommended practice against fire and explosion hazards of process. Includes bananas, citrus fruit, apples, pears, tomatoes, celery, etc. Requirements for use of ethylene gas, open flames, gas heaters, kerosene stoves, electric wiring, and general precautions.

National Board of Fire Underwriters. Construction of Merchandise Vaults, No. 84; 1930. Regulations for storage of fur, silk, and other merchandise, but not intended for highly flammable materials. Requirements as to materials and thickness of walls, floors, and ceilings, under supports, water-tightness, fire resistance of doors, ventilation, lighting, refrigeration, and fire extinguishing equipment.

National Board of Fire Underwriters. Construction and Protection of Piers and Wharves, No. 87; 1935. Recommended practice for two types of substructure depending on harbor conditions; steel and reinforced concrete, sheet iron or asbestos on steel frame, and heavy timber superstructures. Includes also fire walls, fire doors, and fire stops, bulkheads, and requirements for automatic sprinkler systems, watch service, and safeguarding hazards.

National Fire Protection Assn. National Fire Codes for Extinguishing and Alarm Equipment, 1943. Protection of Piers and Wharves. Includes subdivision of combustible substructures, protection of combustible substructures, fire protection, first aid fire appliances, watch service, fire alarm, and fire brigade.

National Fire Protection Assn. National Fire Codes for Flammable Liquids, Gases, Chemicals, and Explosives, 1943. Petroleum Wharves. Suggested ordinance regulating location, design, equipment and protection of piers and wharves at which flammable liquid cargoes are transferred in bulk, and providing safeguards for such transfer operations.

National Fire Protection Assn. Protection of Records, 1939. Includes compilation of committee reports. Covers introduction, value of records, classification of records, record losses, construction equipment and maintenance of buildings, severity, duration and control of exposure, fire exposure conditions for vaults and portable record containers. Protection of records by duplication, document buildings, vaults and vault doors, file storage rooms and doors, fire protection equipment for vaults and file storage rooms, safes, substandard and commercial record containers, salvage of fire damaged records, destruction of records no longer useful, codes for preservation of records, protection

of local archives, and use of protective equipment.

National Fire Protection Assn. Protection of Records, 1939. Includes summary of good practice requirements for the protection of records. Covers introduction, protection of records, survey and classification of records, survey of building, providing protection, handling of records, and disposition of useless records.

Safe Manufacturers' National Assn. Specification for Fire Insulated Vault Doors, F3; 1939. For maximum protection of business records from fire and definite measure of resistance to burglarious attack; three types based on fire resistance, methods of test for fire resistance, and for hose stream test.

Society of Automotive Engineers. 1944 Handbook, Section 6—Tests, Ratings, and Codes. SAE Standard Reference Screen Room for the Inspection and Testing of Radio Noise Suppression. Adopted, 1942. Size and general construction and arrangement of the standard reference screen room and optional construction details and arrangements.

U. S. Gov., Army Air Forces. Specification 24685-A; 1941. Bombing Ranges and Related Equipment.

U. S. Gov., Dept. of Agriculture, Forest Service. Specifications for Lookout Towers.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specifications CAA-50. Buildings; Type "S", Fabrication.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specifications CAA-51. Building; Type "S" Radio Transmitter, Erection.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specifications CAA-52. Building; Type "S" Watch House, Erection.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specifications CAA-53. Building; Type "S" Power Shed, Erection.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specifications CAA-54. Building; Fan Marker, Shed, Erection.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specifications CAA-55. Building; Type "S" Diesel Shed, Erection.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specifications CAA-56. Building; Type "S" Special Transmitter, Erection.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specifications CAA-241. Building; Type "S" Prefabricated, UHF Range, Erection.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specifications CAA-328. Remote Receiving Tuning House.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specifications CAA-381. Buildings; Concrete Foundations for Watch Houses.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specifications CAA-389. Buildings; Prefabricated, for UHF Antenna Housing.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specifications CAA-447. Building; Sectional for UHF Antenna Housing.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specifications CAA-477. Engine-Generator Power Plant; 60-Cycle, 240-V., 5-KVA.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Circular C436; 1942. Low-Cost Glazes for Structural Clay Products. Three groups of clays, consisting of three shales, three surface clays, and two fire clays, were investigated to determine their glaze-making properties when used as integral parts of glaze compositions. The clay-whiting ($CaCO_3$) composition which deformed at the lowest temperature was determined for each clay and served as the major portion of the glaze composition applied to tile made of that clay. Fluxing materials and potter's flint, when needed to control fusibility, texture, and glaze fit, were incorporated. Six different fluxes and eight different materials for producing glaze colors were investigated. The data are presented in 3 figures and 19 tables.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R87-32; 1932. American Standards Assn., A48-1932. Sizes of Removable and Permanent Forms, Pans, or Domes Made of Wood, Steel, or Other Material Used in Concrete Ribbed Floor Construction. Simplified practice recommended and accepted by industry establishing a limited number of standard stock sizes for forms, standard widths and depths.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Miscellaneous Publication M151; 1935. Design and Construction of Building Exits. To aid those interested in the problem, surveys of current practice in providing exits and of the rates at which people can effect their escape through different kinds of exits have been made. The methods employed in the surveys and the results are presented here in detail. To supplement the information thus obtained, opinions have been solicited from numerous architects, building officials, fire-protection experts, and others. Five methods of calculating exit width in current use are discussed. As a useful reference when local requirements are under consideration, suggested requirements are presented, together with notes on the reasoning employed in connection with them.

U. S. Gov., Federal Specification SS-A-118; 1939. Acoustical-Units; Prefabricated. Covers nine types identified by their texture, surface appearance, and composition. Gives requirements for classes for auditorium treatment, noise reduction, material, and workmanship; methods of sampling, inspection, and tests; and requirements for packing and marking for shipment.

U. S. Gov., Marine Corps Specification. Balk Pier; Temporary, 10-Ton, Model 1940.

U. S. Gov., Marine Corps Specification. Chess for Pier; Temporary, 10-Ton, Model 1940.

U. S. Gov., Marine Corps Specification. Sill for Pier; Temporary, 10-Ton, Model 1940.

U. S. Gov., Marine Corps Specification. Trestle for Pier; Temporary, 10-Ton, Model 1940.

U. S. Gov., Navy Dept., Bureau of Yards and Docks. Specification 7Yg; 1934. Roofing, Siding, and Sheet Metal Work; Dampproofing and Membrane Waterproofing.

U. S. Gov., Navy Dept., Bureau of Yards and Docks. Specification E-9Ye; 1943. Electrical Apparatus, Distributing Systems, and Wiring (Emergency Edition). Includes requirements for standard transformer vault.

U. S. Gov., Navy Dept., Bureau of Yards and Docks. Specification 15Yb; 1934. Standard Methods for Inspection of Materials for Roofing, Siding, Sheet Metal Work; Dampproofing and Waterproofing.

U. S. Gov., Navy Dept. Specification 52C12a; 1940. Compound; Calking, for Metal Seams and Airports.

U. S. Gov., Navy Dept. Specification 59B4a; 1945. Blanket; Sound-Absorbing.

U. S. Gov., Navy Dept. Specification 59D1; 1943. Decking-Tile, Composition; and Adhesive (for Wet Spaces) (Shipboard Use).

U. S. Gov., U. S. Maritime Commission. Specification 32-MC-1; 1941. Insulation; Mineral Wool, Blanket Type. Shall be mineral wool felt, blanket form, without covering. Gives requirements for material and workmanship, thickness, density, fire-retardant properties, resistance to corrosion, resistance to bacteria, integrity, miscellaneous properties, sampling, inspection, and tests.

U. S. Gov., U. S. Maritime Commission. Specification 32-MC-2; 1941. Insulation; Mineral Wool, Block Type, for Use Below 225° F. Shall be mineral wool felt in block form with or without moisture-repellent treatment. Gives requirements for material, workmanship, construction, surfaces, dimensions, edge finish, fire-retardant properties, resistance to corrosion, resistance to bacteria, resistance to moisture, miscellaneous properties, sampling, inspection, and tests.

*References.*— Building Construction, *see* 518.50, 518.51; *see* references under 518.50.

## 518.6 DRAINAGE STRUCTURES

### 518.60 General Items

American Assn. of State Highway Officials, T33-42. Standard Methods of Testing Culvert Pipe, Sewer Pipe, and Drain Tile. Covers tests for concrete pipe, cast iron pipe, clay pipe and drain tile. Gives three-edge bearing method, sand-bearing method, absorption test, freezing and thawing test for drain tile, and test for resistance to action of acids for clay pipe.

American Public Works Assn. Sewers, J1-38; 1938. Specifications for complete sewer projects, including excavation, concrete and masonry work, pipe and pipe sewers, manholes, brick, precast concrete, vitrified tile, structural steel, iron and steel castings, piling, cement and aggregates, tables of dimensions of various classes of sewer pipe, etc., with tests for materials using A.S.T.M. methods.

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering. Roadway Drainage. Covers the artificial surface and subsurface drainage of the cuts and fills which make up the roadbed as distinguished from the drainage of the natural surface of the ground by natural waterways.

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering. Specifications for Buildings for Railroad Purposes: Sewers and Drainage. Gives requirements for excavation, pumping and bailing, sheeting, grades, backfilling, vitrified sewer pipe, mortar, cement and sand, brick, manholes and catchbasins, cast iron covers, cast iron and reinforced concrete pipe, foundation drains, and special fittings.

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering, 1938. Sub-Surface Drainage. Covers soil moisture, soils, field test for soils, necessity for drainage, water cut-off, drainage of open soils, drainage of impervious soils, pipe drains, and French or rock drains.

American Society for Testing Materials, C 12-19; 1919. Recommended Practice for Laying Sewer Pipe. Includes preparation of trenches for pipe laying, foundations for pipe, laying of pipe, and backfilling of trenches.

### 518.61 Culverts and Culvert Pipe

American Assn. of State Highway Officials, M41-42. Standard Specifications for Reinforced Concrete Culvert Pipe. Gives scope, materials, design, Curing, physical test requirements, crushing strength tests, sizes and permissible variations, workmanship and finish, marking, inspection and rejection, and methods of testing.

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering. Jacking Culvert Pipe Through Fills. Describes method of jacking, number and size of jacks, protection of pipe against percolation and scour.

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering. Specifications for the Placement of Concrete Culvert Pipe. Gives requirements for bedding, foundation, camber, backfill, embankment, jacking pipe through fills, and constructing culverts in tunnels.

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering. Specifications for Reinforced Concrete Culvert Pipe. Gives requirements for materials and construction and table of coefficients for computing moments and thrusts.

American Society for Testing Materials, C 76-41; 1941. Reinforced Concrete Culvert Pipe. Classes, basis of acceptance, materials, design and strength of standard strength and of extra strength, design, curing, test requirements, tolerances, workmanship and finish, and inspection and rejection.

U. S. Gov., Federal Specification SS-P-371; 1937. Pipe; Concrete, Non-Pressure, Non-Reinforced, and Reinforced. Covers two types—(I) nonreinforced of bell and spigot pattern and (II) reinforced. Gives requirements for materials, workmanship, dimensions, strength, and design; methods of sampling, inspection, and tests; and requirements for packing and marking.

U. S. Gov., Federal Works Agency, Public Roads Administration. Specifications for Construction of Roads

and Bridges in National Forests and National Parks, FP-41. Bituminous Coated Corrugated Sheet Metal Culvert Pipe, Type 1.

U.S. Gov., Federal Works Agency, Public Roads Administration. Specifications for Construction of Roads and Bridges in National Forests and National Parks, FP-41. Bituminous Coated Corrugated Sheet Metal Culvert Pipe, Type 2.

U.S. Gov., Federal Works Agency, Public Roads Administration. Specifications for Construction of Roads and Bridges in National Forests and National Parks, FP-41. Reinforced Concrete Culvert Pipe.

*References.*—Definitions and methods of test, *see* 500, 518.60; other specifications for culverts, *see* 518.41; sand, gravel, broken stone, slag, *see* 512; concrete and mortar, *see* 516.3; rubble and ashlar masonry, *see* 518.81, 518.82; vitrified clay pipe, *see* 531.5; corrugated sheet metal culverts, *see* 607.5; cast-iron culvert pipe, *see* 607.11; brick masonry, *see* 518.83.

## 518.62 Drains, Drain Tile, and Pipe

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering, 1944. Specifications for Buildings for Railroad Purposes: Sewers and Drainage. Gives requirements for cast iron and reinforced concrete pipe.

American Society for Testing Materials, C 4-24; 1924. American Standards Assn., A 6-1925. Drain Tile. Covers farm, standard, and extra quality drain tile of concrete or of clay, disallowed materials in chemical composition, requirements on crushing strength and absorption test, visual inspection, and, where specified, freezing and thawing test requirements.

American Society for Testing Materials, C 75-41; 1941. Reinforced Concrete Sewer Pipe. Covers reinforced concrete pipe intended to be used for the conveyance of sewage, industrial wastes, and storm water. Class, basis of acceptance, aggregates, mixture, minimum and alternate designs, placing reinforcements, longitudinals, laps, welds, and spacing; joints and joint reinforcement; physical, crushing strength, and absorption test requirements and apparatus; sizes and permissible variations; workmanship and finish; marking and inspection and rejection.

American Society for Testing Materials, C 118-39; 1939. Concrete Irrigation Pipe. For conveying irrigation water under low heads; requirements for Portland cement, aggregates, mixture; design and permissible variations in dimensions, test specimen, strength tests by three-edge-bearing or sand-bearing method, hydrostatic test, absorption test, finish, and curing.

U. S. Gov., Federal Specification SS-P-371; 1937. Pipe; Concrete, Non-Pressure, Non-Reinforced, and Reinforced. Covers two types—(I) nonreinforced of bell and spigot pattern and (II) reinforced. Gives requirements for dimensions, strength, and design; methods of sampling, inspection, and tests; and requirements for packing and marking.

U. S. Gov., Federal Works Agency, Public Roads Administration. Specifications for Construction of Roads and Bridges in National Forests and National Parks, FP-41. Underdrains.

*References.*—Definitions, methods of test, *see* 500, 518.60; sand, gravel, broken stone, slag, *see* 512; cement, concrete, and mortar, *see* 516.1, 516.3; vitrified clay pipe, *see* 531.5; clay drain tile, *see* 534.21; sewers and sewer pipe, *see* 518.67; cast iron drain pipe, *see* 607.11; sheet metal pipe, *see* 607.5; plain concrete pipe, *see* 518.67.

## 518.63 Curbs

American Public Works Assn. Specification for Stone and Concrete Curbs, C2-36; 1936. Includes requirements for granite, hard sandstone, bluestone and limestone, soft sandstone and limestone, header or protection curb, tests in accordance with A.S.T.M. methods, dressing and cutting, and setting in concrete. Also includes construction of concrete curb and combined curb and gutter including requirements for cement and aggregates, tested by A.S.T.M. methods, construction, and protection of finished work.

U.S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R102-33; 1933. Granite Curbstone. This recommendation establishes a simplified schedule of sizes of granite curbstone as follows—5 in. wide and 16 in. in depth when set in soil. The lengths shall be not less than 3 ft. for corners and not less than 4 ft. for straight curve, except when closures are required.

*References.*—Granite, limestone, sandstone, *see* 511.1, 511.2, 511.4; sand, gravel, broken stone, slag, *see* 512; cement, concrete and mortar, *see* 516.1, 516.3; brick, *see* 513, 534.11; street pavements, *see* 518.3; sidewalks, *see* 516.5.

## 518.64 Gutters

U. S. Gov., Federal Works Agency, Public Roads Administration. Specifications for Construction of Roads and Bridges in National Forests and National Parks, FP-41. Bituminous Gutter.

U. S. Gov., Federal Works Agency, Public Roads Administration. Specifications for Construction of Roads and Bridges in National Forests and National Parks, FP-41. Concrete Curb and Combination Concrete Curb and Gutter.

U. S. Gov., Federal Works Agency, Public Roads Administration. Specifications for Construction of Roads and Bridges in National Forests and National Parks, FP-41. Grouted Rubble Gutter.

*References.*—*See* references under 518.63.

## 518.65 Catch Basins, Inlets, Manholes

American Public Works Assn. Sewers, J1-38; 1938. Includes specifications for manholes, wellholes and inlets; requirements for concrete and masonry construction, quality of brick, drip-stones, foundations, steps and ladder bars, frames and covers, using A.S.T.M. methods of test for materials.

American Society for Testing Materials, C 139-39; 1939. American Standards Assn., A73.1-1942. Concrete Masonry Units for Construction of Catch Basins and Manholes. For solid, precast, segmental units made from Portland cement and suitable aggregates. Specifies minimum compressive strength, maximum absorption, dimensions and permissible variations, visual inspection, marking, sampling, and testing.

Assn. of American Railroads, Telegraph and Telephone Section, 1-C-1; 1940. Communication Underground Conduit Construction. Includes construction of manholes, requirements for dimensions, junction manholes, excavation, floors, drainage, walls, pulling-in

irons, manhole roofs, frames and covers, concrete work, reinforcement, etc.

U. S. Gov., Federal Works Agency, Public Roads Administration. Specifications for Construction of Roads and Bridges in National Forests and National Parks, FP-41. Drop Inlets and Catch Basins.

U. S. Gov., Navy Dept., Bureau of Yards and Docks. Specification E-9Ye; 1943. Electrical Apparatus, Distributing Systems, and Wiring (Emergency Edition). Includes requirements for standard manholes.

*References.*—Sand, gravel, broken stone, slag, *see* 512; cement, concrete and mortars, *see* 516.1, 516.3; brick, *see* 513, 534.11; brick masonry, *see* 518.83; manhole and conduit castings, *see* 611.12.

## 518.66 Retaining and Head Walls

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering, 1943. Roadway Protection. Covers retaining structures in sliding cuts. Gives requirements for timber, concrete, and metal cribbing; and dry rubble, masonry, and concrete walls.

Portland Cement Assn. Concrete Shore Protection, 1939. For sea walls, revetment, and permeable groins; causes of erosion, theory of wave motion, wave pressure and velocity, factors influencing shore protection, etc.; design of curved face walls, stepped face walls, cellular type walls, light bulkhead walls, and sheet pile sea walls; design of open cellular groins, jetties, and illustrations of applications.

*References.*—Riprap, *see* 511.72; rubble and ashlar masonry, *see* 518.81, 518.82; brick masonry, *see* 518.83; stone masonry retaining walls, *see* 518.89.

## 518.67 Sewers, Sewer Pipe, and Drain Tile

American Assn. of State Highway Officials, M86-42. Standard Specifications for Concrete Sewer Pipe. Gives scope, materials, physical test requirements, acceptance or rejection of results of tests, sizes and permissible variations, workmanship and finish, marking, inspection and rejection, and methods of testing.

American Assn. of State Highway Officials, M87-42. Standard Specification for Reinforced Concrete Sewer Pipe. Gives scope, materials, design, curing, physical test requirements, crushing strength tests, sizes and permissible variations, workmanship and finish, markings, inspection and rejection, and methods of testing.

American Public Works Assn. Sewers, J1-38; 1938. Includes requirements for concrete sewer pipe, plain and reinforced, for conveyance of sewage, industrial wastes, and storm water. Conforms to specifications of the American Society for Testing Materials.

American Public Works Assn. Sewers, J1-38; 1938. Specifications covering complete sewer project, including excavation, open cut and tunnels, concrete, masonry, pipe and pipe sewers, piling, manholes, brick, vitrified tile, precast concrete, structural steel, iron and steel castings, structural timber, Portland cement, aggregates, tables of dimensions of various classes of sewer pipe, etc., using tests for materials as applicable in accordance with A. S.T.M. methods.

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering. Specifications for Buildings for Railroad Purposes: Sewers and Drainage. Gives requirements for vitrified sewer pipe.

American Society for Testing Materials, C 14-41; 1941. Concrete Sewer Pipe. Covers nonreinforced concrete pipe intended to be used for the conveyance of sewage, industrial wastes, and storm water. Class, basis of acceptance, concrete, cement, aggregates; mixture, crushing strength, and absorption; hydrostatic test, test specimens, measurement and observation of specimens, crushing strength tests, apparatus and application of load, three-edge-bearing method, sand-bearing method, absorption test, hydrostatic test, acceptance or rejection, sizes and tolerances, workmanship and finish, marking, inspection, and rejection.

American Society for Testing Materials, C 75-41; 1941. Reinforced Concrete Sewer Pipe. Covers reinforced concrete pipe intended to be used for the conveyance of sewage, industrial wastes, and storm water. Class, basis of acceptance, aggregates, mixture, minimum and alternate designs, placing reinforcements, longitudinals, laps, welds, and spacing; joints and joint reinforcement; physical, crushing strength, and absorption test requirements and apparatus; sizes and permissible variations; workmanship and finish; marking and inspection and rejection.

Clay Products Assn. Tentative Standards for Vitrified Clay Products, 1937. Includes specifications for laying of vitrified salt-glazed clay sewer pipe; requirements for excavation, shoring, foundations, pipe laying, sulfur-silica joints, table of amounts of jute and compound necessary, hot-poured bituminous joints, and backfilling.

Clay Products Assn. Tentative Standards for Vitrified Clay Products, 1937. Includes vitrified salt-glazed sewer pipe and fittings with tables of weights and standard dimensions. Conforms to A.S.T.M. specifications for all pipe, Y's, and T's.

Clay Sewer Pipe Assn., Inc. Handbook Vitrified Clay Sewer Pipe and Kindred Clay Products, 1942. Includes dimensions and weights of salt-glazed vitrified clay sewer pipe and fittings, half traps, traps, grease traps, meter boxes, septic tanks, and liner plates.

U. S. Gov., Federal Specification SS-P-371; 1937. Pipe; Concrete, Non-Pressure, Non-Reinforced, and Reinforced. Covers two types—(I) nonreinforced of bell and spigot pattern and (II) reinforced. Gives requirements for dimensions, strength, and design; methods of sampling, inspection, and tests; and requirements for packing and marking.

*References.*—Definitions, methods of testing, methods of laying pipe, *see* 518.60; sand, gravel, broken stone, slag, *see* 512; cement, concrete and mortars, *see* 516.1, 516.3; brick for sewers, *see* 534.11; brick masonry, *see* 518.83; vitrified clay lining plates, *see* 534.29; reinforcement steel, *see* 605.25; clay drain tile, *see* 534.21; vitrified clay pipe; *see* 531.5; concrete drain pipe, *see* 518.62; cast iron sewer pipe, *see* 607.11.

## 518.68 Dams and Flood Control

Portland Cement Assn. Concrete Structures for Flood Control—Soil and Water Conservation, 1937. Includes

check dams, small-gully dams, medium and large-gully check dams or debris dams, gully-head plugs, drop inlets for culverts, and water storage and diversion structures. Also suggestions for channel lining, revetment, contraction works, channel enclosure, and flood walls.

## 518.7 RESERVOIRS, TANKS, POOLS, ETC.

### 518.70 General Items

American Society of Mechanical Engineers. Hydraulic Structures, 1937. Covers the functional design and detailed analysis of virtually all types of hydraulic structures. Deals with meteorology, hydrology, and hydraulics, soils and soil mechanics, and important building materials of hydraulic structures as to their bearing on other subjects in this book which include general subject of water supply, sewage, dams, outlet works and canal intake works, hydroelectric plants, reclamation, river and waterway engineering.

### 518.71 Fuel Storage Tanks

National Fire Protection Assn. National Fire Codes for Flammable Liquids, Gases, Chemicals, and Explosives, 1943. Concrete Fuel Oil Tanks. Covers general requirements, design, and construction of concrete fuel oil storage tanks.

*References.*—Sand, gravel, broken stone, slag, *see* 512; cement, concrete and mortars, *see* 516.1, 516.3; reinforcing steel, *see* 605.25; steel tanks, *see* 605.23; other tanks, *see* 956.2.

### 518.72 Viaducts

*References.*—Sand, gravel, broken stone, slag, *see* 512; cement, concrete and mortars, *see* 516.1, 516.3; reinforcing steel, *see* 605.25.

### 518.73 Swimming Pools

American Public Health Assn. Recommended Practice for Design, Equipment, and Operation of Swimming Pools and Other Public Bathing Places, 1942. Covers classification of bathing places and general principles of bathing place sanitation; swimming pools including location and layout of pools, design and construction features, proportioning pool area to expected load, inlets and outlets, overflow gutters, steps, ladders and step holes, runways or sidewalks, visitors' galleries, dressing rooms, showers, toilets, lavatories, lighting, ventilation, heating, recirculation system, proportioning the water interchange for recirculation and flowing-through pools, filtration, disinfection, diving towers, spring boards and floats, safety precautions at swimming pools; suits, towels and caps; supervision of bathers, personal regulations, chemical and physical quality of swimming pool water, bacterial quality of swimming pool waters, cleaning pool, bathing load limits, and operating control; and outdoor bathing places including definition, sources of pollution, flowing-through bathing pools along small streams, disinfection of small flowing-through bathing pools, disinfection of large bodies of water, collection of samples from outdoor bathing places, bacteriological classification of bathing waters, relative classification of bathing areas recommended, sanitary appurtenances at outdoor bathing places, and safety precautions at outdoor bathing places.

National Collegiate Athletic Assn. The Official Swimming Guide With Official Rules for Swimming, Fancy Diving, and Water Polo, SW45. Includes recommended dimensions for pools for championship meets.

Tile Manufacturers' Assn. Swimming Pool Information, K-301; 1939. Includes indoor and outdoor pools with tilework specification and details; recommendations of the Amateur Athletic Union, National Collegiate Athletic Assn. and the Y.M.C.A. as to sizes, design and general details; requirements for competitive pools, locker room space, locating of pools, finish and decoration, pool markings, gutters, ladders, walkways, drains, starting grips, underwater lighting and observation window, galleries, cleaning of tile, and detailed specification for tile work.

*References.*—Sand, gravel, broken stone, slag, *see* 512; cement, concrete and mortars, *see* 516.1, 516.3; reinforcing steel, *see* 605.25; glazed tile for tiling, *see* 534.25.

### 518.74 Watering Troughs

### 518.75 Reservoirs

### 518.76 Spillways

U. S. Gov., Federal Works Agency, Public Roads Administration. Specifications for Construction of Roads and Bridges in National Forests and National Parks, FP-41. Embankment Spillways.

### 518.77 Cofferdams

## 518.8 MASONRY

### 518.80 General Items

National Concrete Masonry Assn. Facts About Concrete Masonry With Construction Details and Suggested Specifications, Eighth Edition, 1941. Covers facts about concrete masonry, strength and stability, comparative wall strengths, concrete masonry as fire retardant, heat transmission, sound-absorbing value, sound transmission, economy, water tight walls, cracks in masonry walls, painting, concrete ashlar walls, building codes, construction details, concrete brick walls, and suggested specifications for concrete footings and concrete masonry walls.

Structural Clay Products Institute. Cavity Brick Wall Construction, 1941. Specifications for Cavity Brick Wall Construction. Gives masonry units and mortars, metal ties, drainage, flashings and dampproof courses, and insulation.

Structural Clay Products Institute. Clay Masonry Graphics, undated. This series includes 48 graphic sheets showing various types of brick, tile, and brick and tile masonry construction including walls, floors, window details, termite barriers, walks and terraces, reinforced brick slabs, typical segmental arches, tapered units, common types of brick arches, typical structural clay tile arches, fireplaces, outdoor barbecue grill, and surface insulated and internally insulated masonry walls.

Structural Clay Products Institute. Mason's Handy Guide. Gives mortar recommendations, mortar proportions, weights of materials, and tables for

estimating number of bricks, cubic feet of mortar, number of hollow wall tile, and quantities of lump quicklime, pulverized quicklime, and hydrated lime required.

Structural Clay Products Institute. Plans for Approved Farm Buildings of Brick and Tile, 1943. Gives drawings for construction of dairy barns, hog houses, vegetable storage cellar, and poultry house.

Structural Clay Products Institute. The Heart of the Home With Designs and Construction Details for Indoor and Outdoor Fireplaces, 1939. Gives photographs of various styles of indoor and outdoor fireplaces; essentials of correct fireplace construction including smoke shelf, damper, smoke chamber, separate flue, hearth, rear wall, and flue lining; table of fireplace dimensions, methods of construction; essentials of outdoor fireplace construction including hearth, grid, firebox, and chimney; and high efficiency heating fireplaces.

Structural Clay Products Institute. Watertightness and Transverse Strength of Masonry Walls, 1939. From address delivered at annual meeting of Structural Clay Products Industry by Chief of Masonry Section, National Bureau of Standards. Gives introduction, water permeability of masonry walls, transverse strength of masonry walls, application of results, and conclusion.

U. S. Gov., Dept. of Commerce, National Bureau of Standards, sponsor. American Standard Assn., A41.1-1944. Masonry. Covers general, materials, allowable stresses in masonry, lateral support, solid masonry walls, walls of structural clay tile or hollow concrete masonry units, solid walls of plain concrete, stone walls, cavity walls and hollow walls of solid units, veneered walls, faced walls, foundation walls, piers, structural glass block, parapet walls, partitions, miscellaneous masonry requirements, existing walls, erection, and appendix.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Building Materials and Structures Report BMS5; 1938. Structural Properties of Six Masonry Wall Constructions. Specimens were built representing six masonry wall constructions as follows: High-strength brick, cement mortar, excellent workmanship; medium-strength brick, cement-lime mortar, commercial workmanship; medium-strength brick, cement-lime mortar, excellent workmanship; structural clay tile on end, cement-lime mortar, excellent workmanship; structural clay tile on side, cement-lime mortar, excellent workmanship; and stone-concrete block, cement-lime mortar, excellent workmanship. The specimens were subjected to compressive, transverse, concentrated, impact, and racking loads. For most of these loads, three like specimens were tested. The deformation under load and the set after the load was removed were measured for uniform increments of load up to the maximum load, except for concentrated loads, for which the set only was determined. The results are presented graphically and in a table.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Building Materials and Structures Report BMS7; 1938. Water Permeability of Masonry Walls. Walls of brick, structural clay tile, and hollow concrete unit masonry were tested under conditions resembling exposures to wind and rain and their resistance to the penetration of water determined. Five kinds of workmanship (methods of filling joints), three kinds of brick, six kinds of structural clay tile, two kinds of hollow concrete units, and six different mortars were used in the construction of the walls. The effectiveness of several methods of "waterproofing" were compared by retesting some of the walls after they had been treated.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Building Materials and Structures Report BMS55; 1940. Effects of Wetting and Drying on the Permeability of Masonry Walls. Since the volume changes resulting from the wetting and drying of masonry units and mortars are unequal, changes in the moisture content of a masonry wall may produce differential volume changes between the units and the mortar, resulting in the formation or enlargement of cracks in the joints. The effects of changes in the moisture content of 8 small masonry walls were studied by measuring the permeability of the walls during each of about 12 cycles of wetting and drying. Five of the walls were of all-brick construction, one was a stucco-faced wall, and two were faced with brick and backed with hollow units.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Building Materials and Structures Report BMS76; 1941. Effect of Outdoor Exposure on the Water Permeability of Masonry Walls. The water permeabilities of about 100 small masonry-wall specimens were measured before and after exposing them to the weather at Washington, D. C., for a maximum period of three years. Some of the more permeable walls had been waterproofed before exposure and the durability of the waterproofing treatments, as well as the structural appearance or condition of the walls, was also determined.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Building Materials and Structures Report BMS82; 1942. Water Permeability of Walls Built of Masonry Units. Describes the results obtained from tests on a group of 140 walls, represented by 14 kinds of workmanship, 39 kinds of units, 10 kinds of mortars.

## 518.81 Dry Rubble Masonry

American Assn. of State Highway Officials. Standard Specifications for Highway Bridges, 1941. Includes specifications for dry rubble masonry—requirements for general quality, size, and shape of stone; headers; shaping and laying stone; copings, bridge seats and backwalls; and measurement and payment.

U. S. Gov., Federal Works Agency, Public Roads Administration. Specifications for Construction of Roads and Bridges in National Forests and National Parks, FP-41. Dry Rubble Masonry.

*References.*—Definitions, methods of sampling and of testing, *see* 510; masonry stone, *see* 511.1, 511.2, 511.4, 511.9; riprap, *see* 511.72.

## 518.82 Cement Rubble Masonry

American Assn. of State Highway Officials. Standard Specifications for Highway Bridges, 1941. Includes specifications for mortar rubble masonry—requirements for general quality and size of stone; headers; shaping stone; laying stone; copings; bridge seats and backwalls; arches; pointing, and measurement and payment.

American Public Works Assn. Sewers, J1-38; 1938. Includes specifications for rubble masonry consisting of roughly squared or dressed stone laid in cement mortar; requirements for mortar, headers, shaping of stone, laying of stone, pointing, and basis of payments, using tests in accordance with A.S.T.M. methods for materials.

U. S. Gov., Federal Works Agency, Public Roads Administration. Specifications for Construction of Roads and Bridges in National Forests and National Parks, FP-41. Cement Rubble Masonry.

*References.*—Definitions, methods of sampling and of testing stone, *see* 510; masonry stone, *see* 511.1, 511.2, 511.4, 511.9; cement, concrete and mortars, *see* 516.1, 516.3; building construction, *see* 518.50, 518.51; stone masonry, *see* 518.89.

## 518.83 Brick Masonry

American Assn. of State Highway Officials. Standard Specifications for Highway Bridges, 1941. Includes specifications for brick masonry—requirements for brick (to conform to American Society for Testing Materials Specification C-62); construction methods; copings, bridge seats and backwalls; and measurement and payment.

American Public Works Assn. Sewers, J1-38; 1938. Includes requirements for brick masonry; for sewer brick in three grades, sizes and properties in accordance with A.S.T.M. specification C67, brick masonry for sewers and storm-water conduits, form, line and grade, laying courses, finish, construction of inverts and arches, protection, manholes, wellholes and inlets, using A.S.T.M. methods of test for material.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Building Materials and Structures Report BMS23; 1939. Structural Properties of a Brick Cavity-Wall Construction, sponsored by the Brick Manufacturers Assn. of New York, Inc. The Brick Manufacturers Assn. of New York, Inc., submitted 15 specimens representing a brick cavity-wall construction. The specimens were subjected to compressive, transverse, concentrated, impact, and racking loads. The compressive loads were applied to the facing and backing of three specimens and to the backing only of three other specimens. For each of the loads, three like specimens were tested. The deformation under load and the set after the load was removed were measured for uniform increments of load, except for concentrated loads, for which the set only was determined. The results are presented graphically and in a table.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Building Materials and Structures Report BMS24; 1939. Structural Properties of a Reinforced-Brick Wall Construction and a Brick-Tile Cavity-Wall Construction, sponsored by the Structural Clay Products Institute. The Structural Clay Products Institute submitted 9 specimens representing a reinforced-brick wall construction and 18 specimens representing a brick-tile cavity-wall construction. The reinforced-brick wall specimens were subjected to compressive, transverse, concentrated, and impact loads. The brick-tile cavity-wall specimens were subjected to compressive, transverse, concentrated, impact, and racking loads. The transverse, concentrated, and impact loads were applied to both faces of the brick-tile cavity-wall specimens. For each of these loads, three like specimens were tested. The deformation under load and the set after the load was removed were measured for uniform increments of load, except for concentrated loads, for which the set only was determined. The results are presented graphically and in tables.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Building Materials and Structures Report BMS32; 1939. Structural Properties of Two Brick-Concrete-Block Wall Constructions and a Concrete-Block Wall Construction, sponsored by the National Concrete Masonry Assn. The National Concrete Masonry Assn. submitted 48 specimens representing 3 wall constructions, 2 of which consisted of brick facing and concrete-block backing, the other of concrete blocks only. The specimens were subjected to compressive, transverse, concentrated, impact, and racking loads. The transverse, concentrated, and impact loads were applied to both faces of the brick-concrete-block wall constructions. For each of the loads three like specimens were tested. The deformation under load and the set after the load was removed were measured for uniform increments of load, except for concentrated loads, for which the set only was determined. The results are presented in graphs and in tables.

U. S. Gov., Federal Works Agency, Public Roads Administration. Specifications for Construction of Roads and Bridges in National Forests and National Parks, FP-41. Brick Masonry.

*References.*—Sand lime brick, *see* 513; clay brick, *see* 534.11; fire clay brick, *see* 534.12; concrete brick, *see* 516.4; cement, concrete and mortars, *see* 516.1, 516.3; walls and partitions of buildings, *see* 518.53; building construction, *see* 518.50, 518.51.

## 518.84 Masonry Arches

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering. Specifications for Stone Masonry. Gives requirements for arch masonry—ashlar stone and block rubble.

*References.*—Definitions, methods of sampling and of testing stone, *see* 510; masonry stone, *see* 511.1, 511.2, 511.4, 511.9; cement, concrete and mortars, *see* 516.1, 516.3; bridge arches, *see* 518.46, 518.89; building construction, *see* 518.50, 518.51.

## 518.85 Monuments

U.S. Gov., Federal Works Agency, Public Roads Administration. Specifications for Construction of Roads and Bridges in National Forests and National Parks, FP-41. Concrete Maintenance Marker Posts.

U. S. Gov., Federal Works Agency, Public Roads Administration. Specifications for Construction of Roads and Bridges in National Forests and National Parks, FP-41. Right-of-Way Monuments.

U. S. Gov., Federal Works Agency, Public Roads Administration. Specifications for Construction of Roads and Bridges in National Forests and National Parks, FP-41. Timber Culvert Markers.

## 518.89 Miscellaneous Specifications for Masonry

American Assn. of State Highway Officials. Standard Specifications for Highway Bridges, 1941. Includes specifications for ashlar masonry—requirements for

general quality, size, surface finishes (five types), and dressing of stone; stretchers; headers; cores and backing; mixing mortar; laying stone (face stone), stone backing and cores, and concrete cores and backing; leveling courses; resetting; dowels and cramps; copings; arches; pointing; and measurement and payment.

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering. Specifications for Buildings for Railroad Purposes: Stone Masonry and Cut Stone Work. Gives description of stone; and requirements for carving, cutting and finishing, Lewis holes, mortar, anchor and dowels, setting, protection, cleaning, and pointing.

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering. Specifications for Stone Masonry. Gives requirements for mortar; laying; pointing; ashlar; block rubble; and arch, culvert, and dry masonry.

Indiana Limestone Institute. Cut Stone Masonry, 1940. Covers oolitic limestone wholly fabricated in mill and specifications for fabrication; description of stone, grades and finishes, samples, shop drawings, cutting, back-checking and fitting to structural frame, models, inscriptions, cornerstone, shipping; and stone setting, including delivery and storage, scaffolding, mortar, anchors, back-painting, parging, pointing, and protection; random ashlar, staining and efflorescence, waterproofing compounds; and cleaning, using steam, acids, scrubbing, or sand blast.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Building Materials and Structures Report BMS21; 1939. Structural Properties of a Concrete-Block Cavity-Wall Construction, sponsored by the National Concrete Masonry Assn. The National Concrete Masonry Assn. submitted 12 specimens representing a concrete-block cavity-wall construction. The specimens were subjected to compressive, transverse, concentrated, impact, and racking loads. For each of these loads, three like specimens were tested. The deformation under load and the set after the load was removed were measured for uniform increments of load, except for concentrated loads, for which the set only was determined. The results are presented graphically and in a table.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Building Materials and Structures Report BMS23; 1939. Structural Properties of a Brick Cavity-Wall Construction, sponsored by the Brick Manufacturers Assn. of New York, Inc. The Brick Manufacturers Assn. of New York, Inc. submitted 15 specimens representing a brick cavity-wall construction. The specimens were subjected to compressive, transverse, concentrated, impact, and racking loads. The compressive loads were applied to the facing and backing of three specimens and to the backing only of three other specimens. For each of the loads, three like specimens were tested. The deformation under load and the set after the load was removed were measured for uniform increments of load, except for concentrated loads, for which the set only was determined. The results are presented graphically and in a table.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Building Materials and Structures Report BMS24; 1939. Structural Properties of a Reinforced-Brick Wall Construction and a Brick-Tile Cavity-Wall Construction, sponsored by the Structural Clay Products Institute. The Structural Clay Products Institute submitted 9 specimens representing a reinforced-brick wall construction and 18 specimens representing a brick-tile cavity-wall construction. The reinforced-brick wall specimens were subjected to compressive, transverse, concentrated, and impact loads. The brick-tile cavity-wall specimens were subjected to compressive, transverse, concentrated, impact, and racking loads. The transverse, concentrated, and impact loads were applied to both faces of the brick-tile cavity-wall specimens. For each of these loads, three like specimens were tested. The deformation under load and the set after the load was removed were measured for uniform increments of load, except for concentrated loads, for which the set only was determined. The results are presented graphically and in tables.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Building Materials and Structures Report BMS32; 1939. Structural Properties of Two Brick-Concrete-Block Wall Constructions and a Concrete-Block Wall Construction, sponsored by the National Concrete Masonry Assn. The National Concrete Masonry Assn. submitted 48 specimens representing 3 wall constructions, 2 of which consisted of brick facing and concrete-block backing, the other of concrete blocks only. The specimens were subjected to compressive, transverse, concentrated, impact, and racking loads. The transverse, concentrated, and impact loads were applied to both faces of the brick-concrete-block wall constructions. For each of the loads three like specimens were tested. The deformation under load and the set after the load was removed were measured for uniform increments of load, except for concentrated loads, for which the set only was determined. The results are presented in graphs and in tables.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Building Materials and Structures Report BMS41; 1940. Effect of Heating and Cooling on the Permeability of Masonry Walls. Permeability tests were made on 11 small masonry wall specimens before and after exposing them to a number of cycles of heating and cooling. Seven of the specimens were 12-in. brick walls, two were of clay tile with stucco facings, and two were brick walls with hollow-unit backings.

U. S. Gov., Federal Works Agency, Public Roads Administration. Specifications for Construction of Roads and Bridges in National Forests and National Parks, FP-41. Includes class A and class B stone masonry and stone masonry in parapets.

U. S. Gov., Federal Works Agency, Public Roads Administration. Specifications for Construction of Roads and Bridges in National Forests and National Parks, FP-41. Foundation Masonry.

*References.*—Definitions, methods of sampling and of testing stone, *see* 510; masonry stone, *see* 511.1,

511.2, 511.4, 511.9; sand, gravel, broken stone, slag, *see* 512; cement, concrete and mortars, *see* 516.1, 516.3; cast stone, concrete blocks, *see* 516.4.

## 518.9 MISCELLANEOUS CONSTRUCTION WORK

American Assn. of State Highway Officials. Standard Specifications for Highway Bridges, 1941. Includes specifications for riprap, concrete slab riprap, and concrete cribbing—requirements for general quality and size of materials, dry riprap for slopes (two classes), mortared riprap for slopes, grouted riprap for slopes, concrete riprap in bags, concrete slab riprap (placing, measurement, and payment), and concrete cribbing (crib members, drift bolt casings, construction, and measurement and payment).

American Petroleum Institute, Division of Production. Standard No.4; 1944. Specification for Standard Rigs, Derricks, and Accessory Equipment. This specification covers dimensional and strength requirements of steel and wood derricks, rig and derrick parts, derrick substructures, pumper structures, bolts, and capacity ratings for roller bearings. Covers material, workmanship and finish, steel derrick dimensions, steel derrick strength or capacity requirements, derrick substructures, standard rig parts, capacity rating of pumper structures, allowable unit stresses, specification for bolts, rating of radial bearings, rating of flat thrust bearings, nailed wood derrick dimensions, nailed wood derrick strength or capacity requirements, marking, inspection and rejection, and appendices.

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering. Ballast Sections for Single and Multiple Track—Tangent and Curves.

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering. Specifications for Lining Railway Tunnels With Brick. Gives requirements for materials and design.

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering. Specifications for Lining Railway Tunnels With Metal Liner Plates and Shotcrete. Gives requirements for metal lining, design, and shotcrete.

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering. Specifications for Lining Railway Tunnels With Plain Concrete. Gives requirements for design, concrete, forms, placing concrete, and construction and expansion joints.

American Society for Testing Materials, C 176-44; 1944. Fireclay Plastic Refractories for Boiler and Incinerator Service. Covers scope, high heat duty plastic refractories required for average service conditions, super duty plastic refractories for use in the zone of highest temperature and where severe spalling or slagging occurs, retests, and methods of testing.

Assn. of American Railroads, Telegraph and Telephone Section, 1-C-1; 1940. Communication Underground Conduit Construction. Includes requirements for location and clearances, materials such as couplings, risers, U guard, manholes and covers, cable racks and hooks, concrete work, trenching, grading, creosoted wood duct, clay tile, iron and steel pipe, fiber duct, laterals, excavating, manhole dimensions, drainage, floors, walls and roofs, etc.

Associated Factory Mutual Fire Insurance Companies. Specifications for Gravity Water Tanks and Steel Towers, Volume 1. Structural Details, 1938. For concrete foundations for tanks and towers, requirements as to concrete mixture, construction of piers, anchorage requirements, permissible bearing pressures, details of concrete design according to A.S.T.M. specifications.

National Board of Fire Underwriters. Regulations for Incinerators, No.82; 1938. Requirements for three types of stationary incinerators and portable domestic incinerators. Form of combustion chamber; smoke flue, service openings, fuel-fired types, rubbish and waste types, installation, and operation.

U. S. Gov., Federal Housing Administration. Minimum Construction Requirements. These requirements provide a Minimum Standard of Construction and shall apply to all new construction on which the mortgage is insured by the Federal Housing Administration. They are considered necessary to produce a well-constructed dwelling which will serve as sound security for a long-term mortgage loan. Since these requirements are essentially minimum, they are not to be built down to but form a basis from which to build up. Copies are available in the F.H.A. insuring offices throughout the U. S. Include requirements for excavation, masonry, adobe construction, structural steel and iron, lumber, wood framing, termite prevention, roof coverings, sheet metal, lathing, plastering, stucco, painting, plumbing, heating, electrical work, etc., according to geographical location and local building code requirements.

U. S. Gov., Federal Works Agency, Public Roads Administration. Specifications for Construction of Roads and Bridges in National Forests and National Parks, FP-41. Includes concrete cribbing and timber and log cribbing.

U. S. Gov., Federal Works Agency, Public Roads Administration. Specifications for Construction of Roads and Bridges in National Forests and National Parks, FP-41. Derrick-Placed Rock Retaining Wall.

U. S. Gov., Federal Works Agency, Public Roads Administration. Specifications for Construction of Roads and Bridges in National Forests and National Parks, FP-41. Dimensioned Masonry.

U. S. Gov., Federal Works Agency, Public Roads Administration. Specifications for Construction of Roads and Bridges in National Forests and National Parks, FP-41. Stone Masonry Facing for Concrete.

U. S. Gov., Navy Dept., Bureau of Yards and Docks. Specification 5Yb; 1935. Radial Brick and Concrete Chimneys.

U. S. Gov., Navy Dept., Bureau of Yards and Docks. Specification E-9Ye; 1943. Electrical Apparatus, Distributing Systems, and Wiring (Emergency Edition). Includes requirements for underground conduit.

*References.*—Sand, gravel, broken stone, slag, *see* 512; cement, concrete and mortars, *see* 516.1, 516.3; portable gas incinerator, *see* 997.2.

# 520-529 GLASS AND GLASS PRODUCTS

## 520. GENERAL ITEMS

American Ceramic Society. Journal of A.C.S. for June 1928. Tentative Methods. Analysis of Glass, 1926. Preparation and fusion of sample, method for determination of silica, iron, and alumina, lime, magnesia, and alkalies.

American Society for Testing Materials, C 146-43; 1943. Methods of Chemical Analysis of Glass Sand. For use in referee analysis primarily for glass sand containing not less than 98 percent silica. Covers special solutions required, preparation of sample, loss on ignition, silicon dioxide, ferric oxide, and determination of other oxides.

American Society for Testing Materials, C 147-43; 1943. Method of Hydrostatic Pressure Test on Glass Containers. For determination of breaking strength of narrow-mouth glass containers and serviceability of pressure containers. Covers apparatus, sampling, procedure, and report.

American Society for Testing Materials, C 148-43; 1943. Method of Polariscopic Examination of Glass Containers. For determining the relative annealing stress in glass containers by comparison with reference standards. Covers apparatus, sampling, procedure, and report.

American Society for Testing Materials, C 149-43; 1943. Method of Thermal Shock Test on Glass Containers. For determining relative resistance of commercial glass containers (bottles and jars) to temperature changes (thermal shock) in service such as washing, pasteurization, or "Hot-Pack" processes, etc. Gives requirements for apparatus, sampling, procedure, and report.

American Society for Testing Materials, C 158-43; 1943. Method of Flexure Testing of Glass (Determination of Modulus of Rupture). In practice the modulus of rupture is usually taken as the stress at which the specimen breaks in the flexure tests. Covers apparatus, test specimen of rods, test specimens of flat glass, procedure, calculation, and report.

American Society for Testing Materials, C 162-41T; 1941. Tentative Definition of the Term "Glass."

American Society for Testing Materials, C 169-43; 1943. Methods of Chemical Analysis of Soda-Lime Glass. Covers procedures for use in the referee analysis and in the routine analysis of soda-lime glasses. Covers reagents, filter papers, preparation of sample for analysis, and probable accuracy of results. Also gives procedures for referee analysis and for routine analysis.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Circular C398 and Supplement, 1944. Standard Samples. Glass, Low Boron, Sample 92; Glass, High Boron, Sample 93; Glass, Lead-Barium, Sample 89; Glass, Opal, Sample 91; Glass, Soda-Lime, Sample 80; Glass, Sand, Sample 81; and Glass, Soda-Lime ($B_2O_3$Ba0), Sample 128. These samples are prepared and sold by the National Bureau of Standards with a certificate of analysis for use in industry and by others as a comparison standard for checking the accuracy of analysis of similar materials.

## 521. FLAT GLASS

### 521.0 GENERAL ITEMS

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering. Specifications for Buildings for Railroad Purposes: Painting and Glazing. Gives requirements for glazing windows, doors, transoms, skylights, and marquises.

Society of Automotive Engineers. 1944 Handbook—SAE Recommended Practice for Glazing Glass. Thickness of glass for vehicles normally operating on land. To comply with American Standard Z26.1-1938.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Joint sponsor with National Bureau of Casualty and Surety Underwriters. American Standards Assn., Z26.1-1938. Safety Code for Safety Glass for Glazing Motor Vehicles Operating on Land Highways.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Research Paper RP709; 1934. Opacity Standards. Describes tests of solid-opal glass, ground to nearly uniform thickness, one face fire-polished, the other fine-ground; and flashed-opal glass, the flashed face fire-polished, the other face fine-ground; and outlines the method of checking an opacimeter by its use.

### 521.1 PLATE GLASS

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, Volume 2; 1944. Glass; Window and Plate. Covers definition, constants, solubility, derivation, uses, types, grades and sizes, packing, and substitutes.

U. S. Gov., Federal Specification DD-G-451; 1931. Amendment 1; 1944. Glass; Flat for Glazing Purposes. Includes plate glass. Covers polished plate glass, second silvering quality and glazing quality; and ornamental, figured plate. Gives definitions, general requirements, sizes and thickness, tolerances in thickness, tolerances in dimensions, grades, and details for each type; methods of sampling, inspection, and test; and packaging, packing, and marking.

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-357; 1944. Glass; Selected Plate, Photographic.

*References.*— Methods of analysis, standard samples of glass, *see* 520; sand for glass, *see* 512.12; lime for glass, *see* 517.2; limestone for glass, *see* 511.2.

### 521.2 CLEAR WINDOW GLASS

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, Volume 2; 1944. Glass; Window and Plate. Covers definition, constants, solubility, derivation, uses, types, grades and sizes, packing, and substitutes.

U. S. Gov., Federal Specification DD-G-451; 1931. Amendment 1; 1944. Glass; Flat for Glazing Purposes. Includes clear window glass. Covers single strength, quality A and B; double strength, quality A and B; and heavy sheet, glazing quality and factory-run

quality. Gives definitions, general requirements, requirements for all thicknesses, sizes obtainable, tolerances in thickness, flatness, glazing, dimensions, and details for each type; methods of sampling, inspection, and test; and packaging, packing, and marking.

*References.*—Methods of analysis, standard samples of glass. *see* 520; standard sizes, *see* 521.0; sand, lime, and limestone for glass, *see* 512.12, 517.2, 511.2.

## 521.3 WIRE GLASS

U. S. Gov., Federal Specification DD-G-451; 1931. Amendment 1; 1944. Glass; Flat for Glazing Purposes. Includes wire glass. Covers polished wire; polished, one side; figured; corrugated; and colored. Gives definition, general requirements, quality, tolerance for thickness, dimensions, and details for each type; methods of sampling, inspection, and test; and packaging, packing, and marking.

*References.*—Methods of analysis, standard samples of glass, *see* 520; standard sizes, *see* 521.0; sand, lime, limestone for glass, *see* 512.12, 517.2, 511.2.

## 521.4 ROLLED FIGURED SHEET GLASS

U. S. Gov., Federal Specification DD-G-451; 1931. Amendment 1; 1944. Glass; Flat for Glazing Purposes. Includes rolled figured sheet. Covers figured sheet, large variety of patterns; and colored figured sheet. Gives definition, general requirements, quality, tolerance for thickness, dimensions, and details; methods of sampling, inspection, and test; and packaging, packing, and marking.

*References.*—Methods of analysis, standard samples of glass, *see* 520; standard sizes, *see* 521.0; sand, lime, limestone for glass, *see* 512.12, 517.2, 511.2.

## 521.5 PRISM GLASS

U. S. Gov., Federal Specification DD-G-451; 1931. Amendment 1; 1944. Glass; Flat for Glazing Purposes. Includes prism glass. Covers pressed tile, rolled sheet, and rolled and pressed sheet. Gives definition, general requirements, quality, tolerance for thickness, dimensions, and details for each type; methods of sampling, inspection, and test; and packaging, packing, and marking.

*References.*—Methods of analysis, standard samples of glass, *see* 520; sand, lime, limestone for glass, *see* 515.12, 517.2, 511.2.

## 521.6 SPECIAL QUALITY GLASS

U. S. Gov., Army Air Forces. Specification 12031 (1); 1943. Glass; Bullet Resistant.

U. S. Gov., Army-Navy Aeronautical Specification AN-DD-G-551-1; 1940. Glass; Laminated.

U. S. Gov., Federal Specification DD-G-451; 1931. Amendment 1; 1944. Glass; Flat for Glazing Purposes. Includes glass for absorbing and intercepting ultra-violet and infra-red rays. May be made as rolled figured sheet or wire glass in flat or corrugated sheets. Gives requirements for the exclusion of ultra-violet rays and infra-red rays; methods of sampling, inspection, and test; and packaging, packing, and marking.

U. S. Gov., Federal Specification DD-G-476; 1932. Glass; Flat, Glazing (for) Transmitting Not Less Than 25 Percent of Ultra-Violet Radiation at Wave Length 302 Millimicrons. Covers one type. Gives detail requirements; method of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Navy Dept. Specification 12G6c; 1944. Glasses; Heat-Treated, Circular.

U. S. Gov., Navy Dept. Specification 12G8; 1940. Glasses; Heat-Treated, Disk Type (Clear View Screens).

U. S. Gov., Navy Dept. Specification 59G3; 1940. Glass; Heat-Treated, Glazing, Rectangular (for Bridge Windows).

U. S. Gov., Navy Dept. Specification 60G1a; 1938. Glasses; Port-Light, Evaporator.

U. S. Gov., Post Office Dept., Div. of Motor Vehicle Service, Bureau of the Fourth Assistant Postmaster General. Specifications for Glass; Bulletproof.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 81-11D; 1942. Glass; Laminated.

*References.*—Methods of analysis, standard samples of glass, *see* 520; sand, lime, limestone for glass, *see* 512.12, 517.2, 511.2.

## 521.7 SIDEWALK AND SKYLIGHT GLASS

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R49-26; 1926. Sidewalk, Floor, and Roof Lights. This recommendation establishes simplified sizes, shapes, and styles for sidewalk lights of round and square glass, and floor and roof lights of square glass.

*References.*—Methods of analysis, standard samples of glass, *see* 520; sand, lime, limestone for glass, *see* 512.12, 517.2, 511.2.

## 521.8 GLASS PARTITIONS AND INCLOSURES

*References.*—Methods of analysis, standard samples of glass. *see* 520; sand, lime, limestone for glass, *see* 512.12, 517.2, 511.2.

## 521.9 MISCELLANEOUS FLAT GLASS

National Assn. of Dyers and Cleaners of the U. S. and Canada. The Spotting Department, 1940. Includes recommendations for sizes, shape, and height of glass spotting boards.

U. S. Gov., Federal Specification DD-G-451; 1931. Amendment 1; 1944. Glass; Flat for Glazing Purposes. Includes processed glass. Covers chipped, No.1 processed, and No.2 processed; and ground, acid ground, and sand blasted. Gives definitions and general requirements; methods of sampling, inspection, and test; and packaging, packing, and marking.

U. S. Gov., Federal Specification DD-T-396; 1944. Tiles; Pill, Glass (Pharmaceutical). Covers one type, grade, and class. Gives requirements for material, workmanship, description, and etching; methods of sampling and inspection; and packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification WW-P-541a; 1940. Plumbing Fixtures (for) Land Use. Includes requirements for clear plate glass shelf supported by two bent metal brackets. Emergency Alternate Federal Specification E-WW-P-541a; 1942, (issued by Procurement Div., Treasury Dept., U. S. Gov.) changed requirements for metals and finishes, standard materials, illustrations, selections, and air gaps.

*References.*—Methods of analysis, standard samples of glass, *see* 520; sand, lime, limestone for glass, *see* 512.12, 517.2, 511.2.

## 522. GLASS CONTAINERS

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R91-32; 1932. Glass Containers for Preserves, Jellies, and Apple Butter. This recommendation establishes a list of stock sizes and capacities of glass containers for preserves, jellies, and apple butter. Initiated by National Preservers Assn.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R156-41; 1941. Extracted-Honey Packages. This recommendation establishes a schedule of sizes of containers for use in marketing stock packages of extracted honey. The recommended sizes are 2, 5, and 8 oz. and 1, 1 1/2, 2, 2 1/2, 3, 5, 10, and 60 lbs. Sponsored by American Honey Producers League and American Honey Institute.

*References.*—Bottles, carboys, flasks, jars, and demijohns, *see* 955.

## 523. TABLE GLASSWARE

### 523.0 GENERAL ITEMS

### 523.1 VINEGAR BOTTLES

U. S. Gov., Federal Specification DD-T-101a; 1938. Tableware; Glass. Covers the type of glassware known as blown or pressed ware, and includes six classes—(A) tumblers, (B) vinegar bottles, (C) sirup pitchers, (D) salt shakers, (E) pepper shakers, and (F) special items. Gives requirements for material, glass, design, dimensions, capacity, weight, metal parts, and finish; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking. Emergency Alternate Federal Specification E-DD-T-101a; 1942, changes requirements for design, tolerances, tests, and admits plastic in lieu of metal.

*References.*—Methods of analysis, standard samples of glass, *see* 520; pressed ware (bottles), *see* 523.9.

### 523.2 PITCHERS

U. S. Gov., Federal Specification DD-T-101a; 1938. Tableware; Glass. Covers the type of glassware known as blown or pressed ware, and includes six classes—(A) tumblers, (B) vinegar bottles, (C) sirup pitchers, (D) salt shakers, (E) pepper shakers, and (F) special items. Gives requirements for material, glass, design, dimensions, capacity, weight, metal parts, and finish; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking. Emergency Alternate Federal Specification E-DD-T-101a; 1942, changed requirements for design, tolerances, tests, and admits plastic in lieu of metal.

*References.*—Methods of analysis, standard samples of glass, *see* 520; pressed ware (pitchers), *see* 523.9.

### 523.3 GLASS SALT SHAKERS

U. S. Gov., Federal Specification DD-T-101a; 1938. Tableware; Glass. Covers the type of glassware known as blown or pressed ware, and includes six classes—(A) tumblers, (B) vinegar bottles, (C) sirup pitchers, (D) salt shakers, (E) pepper shakers, and (F) special items. Gives requirements for material, glass, design, dimensions, capacity, weight, metal parts, and finish; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking. Emergency Alternate Federal Specification E-DD-T-101a; 1942, changed requirements for design, tolerances, tests, and admits plastic in lieu of metal.

U. S. Gov., Veterans Administration. Specification VA-G-53j; 1941. Sugar Shakers (for Granulated Sugar).

*References.*—Methods of analysis, standard samples of glass, *see* 520; pressed ware (shakers), *see* 523.9

### 523.4 TUMBLERS

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R91-32; 1932. Glass Containers for Preserves, Jellies, and Apple Butter. This recommendation establishes a list of stock sizes and capacities of glass containers for preserves, jellies, and apple butter. Initiated by National Preservers Assn.

U. S. Gov., Federal Specification DD-T-101a; 1938. Tableware; Glass. Covers the type of glassware known as blown or pressed ware, and includes six classes—(A) tumblers, (B) vinegar bottles, (C) sirup pitchers, (D) salt shakers, (E) pepper shakers, and (F) special items. Gives requirements for material, glass, design, dimensions, capacity, weight, metal parts, and finish; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking. Emergency Alternate Federal Specification E-DD-T-101a; 1942, changed requirements for design, tolerances, tests, and admits plastic in lieu of metal.

U. S. Gov., Navy Dept. Specification 63T10; 1944. Tumblers; Glass (Thin-Blown).

U. S. Gov., Veterans Administration. Specification VA-G-45b; 1935. Tumblers; Lime-Flint Glass.

*References.*—Methods of analysis, standard samples of glass, *see* 520; pressed ware (tumblers), *see* 523.9

### 523.9 MISCELLANEOUS TABLE GLASSWARE

U. S. Gov., Navy Dept. Specification 63T9d; 1944. Tableware; Glass, Officers' Mess-Gear.

## 524. LIGHTING GLOBES AND SHADES

Assn. of American Railroads, Operations and Maintenance Dept., Engineering Div., Signal Section. Manual of Recommended Practice. Specification 59-39; 1939. Kerosene Hand Lantern Globes. Minimum values of luminous transmission and limits of chromacity for red, yellow, green, and blue colors used in railroad signaling. Values given obtained from Colorimetry Section of National Bureau of Standards, maximum deviation from standard limit glasses, with tables and diagrams. Standard size, marking, calibrations by the National Bureau of Standards, hot water and chill tests.

American Society for Testing Materials, D 187-39; 1939. American Petroleum Institute Standard, 502-39. American Standards Assn., Z11.17-1939. Method of Test for Burning Quality of Kerosine Oils. For burning quality of ordinary kerosine used for illuminating purposes, description of standard brass

Saybolt test lamp, Miller No. 2 burner, MacBeth-Evans No.514 pearl top chimney, detailed dimensions of burner, wick, balance and sight gage, and test procedure.

American Society for Testing Materials, D 219-36; 1936. American Petroleum Institute Standard 503-36. American Standards Assn., Z11.19-1936. Method of Test for Burning Quality of Long-Time Burning Oil for Railway Use. For special kerosine oil used in railway semaphore signal lamps, includes standard semaphore lamp, dimensions of burner, gray round felt wick and chimney, sight gage, and test procedure.

American Society for Testing Materials, D 239-30; 1930. American Petroleum Institute Standard 504-30. American Standards Assn., Z11.18-1930. Method of Test for Burning Quality of Mineral Seal Oil. For burning quality of special illuminating oil known as mineral seal oil, 300 oil, or mineral colza oil, used in railway coach lamps. Using Dressel standard No. 520 side lamp; dimensions of font, burner, chimney, and wick; sight gage and outline of procedure.

Illuminating Engineering Society. Specifications for Shades for I.E.S. Portable Lamps, 1935. Applies to shades designed for incorporation in certified I.E.S. table and floor lamps. Includes requirements for effectiveness, construction, and proposed specifications for shades for I.E.S. portable lamps.

Illuminating Engineering Society. Testing Specifications for Lighting Equipment, Sections I and IV. Specification C-1-1940. Luminaires for General Lighting. Includes requirements for materials, diffuse enclosing and semi-indirect enclosing globes; direct, indirect, and semi-direct luminaires; selection, physical measurements, output, candlepower distribution, brightness, and lamp neck cut-off ratio.

U. S. Gov., Army Air Forces. Specification 32021-A (1); 1943. Globe; Field Outline Lamp.

U. S. Gov., Federal Specification DD-C-311; 1935. Amendment 1; 1944. Chimneys and Globes, Lamp and Lantern; Glass. Covers two types—(II) lantern globes for hand lanterns, railway signal lanterns, and similar uses, clear and colored and (II) lamp chimneys for interior lighting. Gives requirements for material and workmanship, quality of glass, design. and details for each type; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., Navy Dept. Specification 17L5g; 1944. Lenses and Globes; Electric Light.

U. S. Gov., Navy Dept. Specification 31B2b; 1934. Chimneys; (Burners; Wicks;) Running- Light (Oil-Burning).

U. S. Gov., Panama Canal, Purchasing Dept. Specification for Enclosing Glassware for Lighting Fixtures, 1941.

U. S. Gov., Treasury Dept., Procurement Div., No. 254. Globes; Lighting, Enclosing. Shall be of one grade, two types— (I) semi-direct and (II) semi-indirect. Gives requirements for material and workmanship, diameters, light output, surface brightness; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., Treasury Dept., Procurement Div., 255E; 1941. Luminaires; Complete. Shall be of two types—(I) indirect, silver mirrored reflector, porcelain enamel reflector, and silvered bowl lamp reflector and (II) semi-indirect, bowl-type. Gives requirements for design, hangers, swivels, stem, wiring, sockets, metal parts of fixture, distribution, angle of cut off, finish, and surface brightness; methods of sampling, inspection, and tests; and packaging, packing, and marking.

## 525. LENSES

*References.*— Binoculars, telescopes and optical goods, *see* 914.

### 525.0 GENERAL ITEMS

### 525.1 LIGHTHOUSE LENSES

### 525.2 REFLECTORS

Illuminating Engineering Society. Testing Specifications for Lighting Equipment, Section III. Specifications for Testing Asymmetric Show-Window Reflectors. Includes instructions for selection of sample, physical measurements, output candlepower distribution, lumen distribution, and gives typical show-window example.

U. S. Gov., U. S. Army, Army Air Forces. Specification 94-40740; 1944. Reflector; Reflex Taxi-Strip-Delineator.

*References.*— Glass reflectors for headlights and searchlights, *see* 716.2.

### 525.3 SIGNAL LAMP LENSES

Assn. of American Railroads, Operations and Maintenance Dept., Engineering Div., Signal Section. Manual of Recommended Practice. Specification 69-40; 1941. Signal Glasses. Except for kerosene hand lantern globes, defines minimum values for luminous transmission and the limits of chromaticity for signal colors. Data obtained by the Colorimetry Section, National Bureau of Standards, maximum deviation from standard limit glasses for red, yellow, green, blue, purple, and white, with tables and diagrams. Roundels, lenses, discs, and slides for railroad signalling, quality of glass, marking, etc.

U. S. Gov., Army-Navy Aeronautical Specification AN-L-2; 1943. Lens; 24-In. Double Beam.

U. S. Gov., Navy Dept. Specification 17L5g; 1944. Lenses and Globes; Electric Light.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-623A; 1931. Filter; Types MC-121 and MC-122, for Signal Lamps.

*References.*— Methods of analysis, standard samples of glass, *see* 520; testing of lenses, *see* 525.0; color definitions of traffic signal lenses, *see* 718.5.

### 525.4 AUTOMOBILE LAMP LENSES

*References.*— Methods of analysis, standard samples of glass, *see* 520.

### 525.5 PHOTOGRAPHIC LENSES

*References.*—*See* 911.6.

### 525.9 MISCELLANEOUS LENSES

U. S. Gov., Army-Navy Aeronautical Specification AN-C-70; 1942. Covers; Light-Transmitting (for Aeronautical Lights).

U. S. Gov., Army-Navy Aeronautical Specification AN-L-3a; 1942. Lens; 24-In. Drum Type Floodlight.

U. S. Gov., U. S. Army, Chemical Warfare Service. Specification 97-101-19E; 1942. Lens; Laminated, 3-Ply.

## 526. CHEMICAL LABORATORY AND OTHER GLASSWARE

### 526.1 GLASS INSULATORS

American Society for Testing Materials, D 468-42; 1942. Methods of Testing Pin-Type, Lime-Glass Insulators. Covers glass insulators for primary and secondary power distribution to 10,000 volts to ground; requirements for sampling, structural defects, resistance to thermal shock, gaging of threads, mechanical strength, electrical tests, and details of thread standards for the power industry.

American Society for Testing Materials, D 550-44; 1944. Methods of Testing Glass Spool Insulators. For secondary power distribution. Sampling, routine tests, structural defects, gaging, report, record, and marking.

American Society for Testing Materials, D 730-43T; 1943. Tentative Specifications for Low and Medium Voltage Pin-Type Lime-Glass Insulators. Covers general requirements, material, definitions, insulator characteristics, marking, packing, manufacturers' production sampling and tests, purchasers' acceptance sampling and tests, inspection tests, mechanical tests, electrical tests, and method of testing.

American Society for Testing Materials, ES-41; 1944. Emergency Specifications for Communication and Signal Pin-Type Lime-Glass Insulators. Gives scope, material, thermal shock, electrical characteristics, dimensions and permissible variations, workmanship and finish, marking, packaging, and methods of testing.

American Standards Assn., C 75.8-1943. Glass Radio Insulators (American War Standard). Covers applicable specifications and drawings, classification, material and workmanship, general and detail requirements, methods of inspection and tests, packing, packaging, marking for shipment; requirements applicable to individual government departments, notes, and drawings.

Assn. of American Railroads, Telegraph and Telephone Section, 1-A-33; 1930. Double-Petticoat Glass Insulators. Includes side groove and top groove line wire insulators of green or colorless transparent glass, dimensional diagrams and thread gage, and finish requirements.

Assn. of American Railroads, Telegraph and Telephone Section, 1-A-34; 1930. Dead-Ending Glass Insulators. For transparent glass dead-ending insulators, requirements for material and finish, with dimensional drawing, and permissible variations.

Edison Electric Institute. Suggestions for Specifications for Low and Medium-Voltage Pin-Type Lime-Glass Insulators, TD-51; 1942. For insulators having a dry flashover of 85,000 volts or less. Gives requirements for material, definitions, insulator characteristics, marking, packing, manufacturer's production sampling and tests, purchaser's acceptance sampling, purchaser's acceptance tests, test procedure, and drawings showing dimensions and correction factors.

U. S. Gov., Joint Army-Navy Specification JAN-1-9; 1944. Insulators; Glass, Radio.

*References.*— Methods of analysis, standard samples of glass, *see* 520; porcelain insulators, *see* 532.22; thread gages for insulators, *see* 615.82.

### 526.2 CHEMICAL LABORATORY GLASSWARE

*References.*— Methods of analysis, standard samples of glass, *see* 520; surgical and medical instruments, *see* 915.2; burettes and pipettes, *see* 918.1; beakers, graduates, funnels, *see* 918.2; glass tubing and tubes, *see* 918.7; hydrometers, thermometers, *see* 919.4, 919.8; biological laboratory apparatus, *see* 918.8; laboratory flasks, *see* 918.9; bottles, jars, *see* 955.1, 955.4.

### 526.3 COVER GLASSES

American Hospital Assn., 43-13. Cover Glasses. Covers one type, one grade, and two classes.

U. S. Gov., Federal Specification DD-G-426; 1941. Glasses; Cover, (for) Microscopy. Covers two types—(I) for blood counting chambers, in two classes—(A) light and (B) heavy, and in one size—20 mm. by 26 mm.; and (II) for routine microscopy, in three classes—22 mm. by 22 mm., 22 mm. by 40 mm., and 25 mm. by 25 mm. Gives requirements for material, workmanship, sizes, and measurements; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

### 526.4 GLASS TUBES AND TUBING

*References.*—Glass tubes and tubing, *see* 918.7.

### 526.6 WATER GAUGES

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Water Gauge and Lubricator Glasses, M-909-42; 1942. Reflex, tubular, and "bull's-eye" water gauge glasses, and "bull's-eye" lubricator gauge glasses. For use on locomotive and stationary boilers, requirements as to physical properties and tests, permissible variations, workmanship, wrapping, and labeling.

U. S. Gov., Federal Specification DD-G-491; 1939. Glasses; Gage, Flat (Plain and Reflex), (for Pressures 125 lbs. and Over). Covers two types—(I) plain and (II) reflex. Gives detail requirements; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification DD-G-496; 1939. Glasses; Gage, Reflex and Round, Tank (for Pressures Under 125 Lbs.). Covers two types—(I) round, (II) reflex, flat. Gives detail requirements; methods of sampling, inspection, and test; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification DD-G-511; 1939. Glasses; Gage, Round, Boiler (for Pressures 125 Lbs. and Over). Covers one grade. Gives detail requirements; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., Navy Dept. Specification 13G1e; 1942. Glasses; Gage, Round (for Pressures up to 200 Lb.).

U. S. Gov., Navy Dept. Specification 13G2e; 1943. Glasses; Gage, Round and Flat, Reflex, Under 125 Lb. Pressure.

U. S. Gov., Navy Dept. Specification 13G3g; 1944. Glasses; Gage, Flat, Plain and Reflex, Over 125 Lb. Pressure.

*References.*—Methods of analysis, standard samples of glass, *see* 520.

### 526.9 MISCELLANEOUS SPECIFICATIONS FOR GLASS

U. S. Gov., Army Air Forces. Specification No.40830; 1944. Glass; Projection, for Projection Trainer.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Circular C-430; 1941. Glass Stopcocks. This general discussion of stopcocks is written from the viewpoint of the user rather than the maker. Various types of cocks, their construction, grinding, lubrication, and care are discussed.

U. S. Gov., Federal Specification DD-S-431; 1944. Slabs; Cement-Mixing, Glass, Plain, Dental. Covers one type, grade, and class. Gives requirements for material, workmanship, surfaces, edges, finish, sizes, and dimensions; method of sampling and inspection; and packaging, packing, and marking for shipment.

U. S. Gov., Navy Dept. Specification 57F1; 1941. Filters; Ray, Glass.

*References.*—Methods of analysis, standard samples of glass, *see* 520; electron vacuum tubes, *see* 718.62.

## 527. MIRRORS

U. S. Gov., Army Air Forces. Specification 40653-A; 1944. Mirror; Emergency Signaling.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Commercial Standard CS27-36; 1936. Mirrors. This standard includes plate glass mirrors made from polished plate glass, as well as so-called "shock" mirrors 6 by 8 in. and larger made from common window glass, which have previously been known as common glass, sheet glass, crystal, or shock mirrors. Detail requirements are given for plate glass mirrors and shock mirrors, standard thicknesses, silvering, quality designation and guarantee for several grades of plate glass mirrors, method of inspection, and glossary of terms. Initiated by Mirror Manufacturers Assn.

U. S. Gov., Navy Dept. Specification 18M8; 1944. Mirrors; Signaling, Emergency.

U. S. Gov., Navy Dept. Specification 26M11; 1944. Mirrors (Shipboard Use).

U. S. Gov., Treasury Dept., Procurement Div., 256B; 1943. Mirrors; Plate Glass, Framed. Covers either No.1 or No.2 quality, and three classes of wood frames—(A)mahogany finish, (B)oak, and (C)walnut finish. Gives requirements for silvering, backing, bevel-edge mirrors, chips, design, construction, back, assembling, sizes and dimensions, tolerances; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., U. S. Army, Medical Dept. Specification 32-13A; 1938. Mirror; Wall, Hospital.

U. S. Gov., Veterans Administration. Specification VA-G-55c; 1939. Mirrors; Wall.

*References.*—Other plate glass, *see* 521.1; methods of analysis, standard samples of glass, *see* 520.

## 528. GLASS CLOTH

American Society for Testing Materials, D 578-44T; 1944. Tentative Methods of Testing and Tolerances for Glass Yarn. For continuous filament and staple glass yarns, both single and plied, and both single and multiple wound. Gives definitions, breaking strength tolerances, glass content, test procedures for single strand, twist, yarn diameter, and glass content.

American Society for Testing Materials, D 579-44; 1944. Methods of Testing and Tolerances for Woven Glass Fabrics. Covers woven continuous filament and staple glass fabrics for electrical purposes, except woven glass tapes. Gives definitions, tolerances, and methods of testing.

American Society for Testing Materials, D 580-44; 1944. Methods of Testing and Tolerances for Woven Glass Tapes. These methods apply to woven continuous filament and staple glass tapes. Gives definitions, tolerances, and methods of testing.

American Society for Testing Materials, D 581-44; 1944. Methods of Testing and Tolerances for Woven Glass Tubular Sleeving and Braids. These methods apply to continuous filiment and staple glass tubular sleeving and braid. Gives definitions, inside diameter, wall thickness, weight, construction, yarn number, glass content, and methods of testing.

U. S. Gov., Navy Dept. Specification 32C15d; 1944. Cloth, Tape, and Thread; Glass, Fibrous (for Lagging Insulation).

# 530-539 CLAY AND CLAY PRODUCTS

## 531. CLAY

### 531.0 GENERAL ITEMS

American Ceramic Society. Journal of A.C.S. for June 1928. Method for Behavior in Firing. For determination of progressive change in porosity and progressive change in volume in the firing process for clay, requirements on preparation of test pieces, placement in furnace, rate of heating, drawing from furnace, cooling, weighing, saturating and weighing, for samples drawn at different temperatures, calculation of apparent porosity, volume change, apparent and bulk specific gravity, and absorption.

American Ceramic Society. Journal of A.C.S. for June 1928. Method for Drying Shrinkage, 1920. Size and preparation of test pieces, method for measurement of plastic volume, dry volume and determination of volume shrinkage, and linear shrinkage.

American Ceramic Society. Journal of A.C.S. for June 1928. Method for Sampling Ceramic Materials As Delivered, 1922. Time for sampling, method of collecting and size for underground material and for

ground or pulverized material, treatment of gross sample.

American Ceramic Society. Journal of A.C.S. for June 1928. Method for Shrinkage and Pore Water, 1928. Method of determination from data on plastic volume and dry volume.

American Ceramic Society. Journal of A.C.S. for June 1928. Method for Slaking Test, 1928. Size and preparation of test piece, procedure for testing time of slaking.

American Ceramic Society. Journal of A.C.S. for June 1928. Method of Testing for Pyrometric Cone Equivalent, 1928. Applicable to fire brick, refractory materials, and clays. Requirements on sampling, size, shape, and preparation of test cones; rate of heating and method for determination of softening point.

American Ceramic Society. Journal of A.C.S. for June 1928. Method for Water Plasticity, 1920. Size and preparation of test piece, method of test by drying test piece and calculating the water of plasticity from loss in weight.

American Ceramic Society. Journal of A.C.S. for June 1928. Specific Gravity. Requirements on sampling and crushing of samples, method for determination of true specific gravity, apparent specific gravity, and bulk specific gravity.

American Ceramic Society. Journal of A.C.S. for June 1928. Tentative Test Method. Sag Tests, 1928. For determination of rate of softening under fixed conditions of load and heat treatment, as evidenced by transverse bending. Requirements on shape and size of test pieces, heating rate and transverse loading for clay and for fine and coarse grog bodies, determination of warpage ratio.

American Ceramic Society. Journal of A.C.S. for June 1928. Tentative Method. Sampling Clay Deposits. Method for preliminary and for extended sampling.

American Ceramic Society. Journal of A.C.S. for June 1928. Tentative Test Method. Transverse Strength, 1928. Preparation, shape, and size of test specimen, drying of specimen, test procedure, calculation of modulus of rupture, for clay specimens.

American Society for Testing Materials, C 71-42; 1942. Definitions of Terms Relating to Refractories. Defines fire-clay, plastic fire-clay, flint fire-clay, diaspore clay, nodular fire-clay, spalling, pyrometric cone equivalent, silica fire-clay, grog fire-clay mortar, and high-temperature bonding mortar.

American Society for Testing Materials, C 92-43T; 1943. Tentative Methods of Test for Sieve Analysis and Water Content of Refractory Materials. Covers procedures for a wet method and a dry method for sieve analysis of refractory materials and also procedures for determining the water content of refractory materials in the wet condition. Gives requirements for sieves, sample, water content, wet sieve analysis, and dry sieve analysis.

American Society for Testing Materials, C 179-43T; 1943. Tentative Method of Test for Combined Drying and Firing Shrinkage of Fireclay Plastic Refractories. Covers a procedure for determining the combined drying and firing shrinkage of high heat duty and super heat duty fireclay plastic refractories. Gives requirements for apparatus, test specimens, procedure, and calculation and report.

American Society for Testing Materials, C 180-43T; 1943. Tentative Method of Panel Test for Resistance to Thermal and Structural Spalling of Fireclay Plastic Refractories. Covers the procedures for determining the resistance of high heat duty and super duty fireclay plastic refractories to the separate and combined effects of structural and thermal spalling. Gives requirements for apparatus, test specimens, procedure, preheating test panels, and spalling procedure.

American Society for Testing Materials, C 181-43T; 1943. Tentative Method of Test for Workability Index of Fireclay Plastic Refractories. Covers a procedure for obtaining the workability index of fireclay plastic refractories materials by measuring the plastic deformation of a molded test specimen when subjected to impacts. Gives requirements for apparatus, test specimens, procedure, calculation, and report.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, 1938. China Clay and Paper Clay. Covers definition, properties, occurrence, purity and grades, uses, containers, and substitutes.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Circular C398 and Supplement, 1944. Standard Samples. Clay, Flint, Sample 97; and Clay, Plastic, Sample 98. These samples are prepared and sold by the National Bureau of Standards with a certificate of analysis, for use in industry and by others as a comparison standard for checking the accuracy of analysis of similar materials.

## 531.1 BALL CLAY

## 531.2 CHINA CLAY

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, 1938. China Clay and Paper Clay. Covers definition, properties, occurrence, purity and grades, uses, containers, and substitutes.

## 531.3 FIRE CLAY

American Society for Testing Materials, C18-41; 1941. Methods of Chemical Analysis of Refractory Materials. Cover procedures for the chemical analysis of fire-clay, silica, high-alumina, and magnesite refractories, and of chrome ore and chrome refractories. Includes the determination of moisture, loss on ignition, silica, iron, aluminum and titanium oxides, lime, magnesia, and alkalies; reagents and special solutions required; preparation of samples; and reproducibility of results.

American Society for Testing Materials, C 105-41; 1941. Ground Fire Clay as a Mortar for Laying-Up Fireclay Brick. For use in the laying-up of refractory brick. Gives quality, commercial and fine grades based on particle size, four classes of fire clay, depending on refractories used; sampling and methods of testing.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, 1938. Fireclay. Covers definition, properties, specifications, and containers.

U. S. Gov., Federal Specification HH-C-451b; 1944. Clay; Fire, Ground. Covers two degrees of fineness—(C)commercial and (F)fine. Covers a heat-resistant

material composed entirely, or principally, of ground plastic fire clay used primarily as a mortar in laying up brick and shapes. Gives requirements for fineness, and pyrometric cone equivalent; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., Federal Specification HH-M-611a; 1943. Mortar; Air-Setting, Refractory, Bonding (Wet and Dry Types). Covers two types—(I) wet and (II) dry; and three grades for each type—(A) high-heat and super-duty, (B) moderate, intermediate, and slag-resistant duty, and (C) back-up duty. Gives requirements for material and workmanship, plasticity and preservation, fineness, troweling, dipping, bonding strength, and heat soaking; methods of sampling, inspection, and tests; and packing and marking.

U. S. Gov., Federal Specification HH-R-191; 1936. Refractories; Fire-Clay, Plastic. Covers one grade. Gives requirements for material and workmanship, silica content, pyrometric cone equivalent, water content, and shrinkage; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Navy Dept. Specification 32C6d; 1942. Clay; Fire.

U. S. Gov., Navy Dept. Specification 32R1c; 1944. Refractories; Fire-Clay, Plastic, Superduty.

U. S. Gov., Navy Dept. Specification 32R3c; 1945. Refractories; Baffle-Material.

*References.*—Definitions, *see* 531.0; methods of sampling and of testing, *see* 531.0; fire brick and tile, *see* 534.12; fire clay flue lining, *see* 534.29.

## 531.4 KAOLIN

U. S. Gov., U. S. Army, Chemical Warfare Service. Specification 97-52-35; 1927. Kaolin Caustic, for Gas Mask Canisters.

## 531.5 CLAY PRODUCTS, PIPE, CONDUIT, ETC.

American Assn. of State Highway Officials, M65-42. Standard Specifications for Clay Pipe. Covers standard-strength clay pipe for the conveyance of sewage, industrial wastes, and storm water; and extra-strength clay pipe for the construction of culverts and where high-strength pipe are desired. Gives materials and manufacture, resistance to action of acids, physical properties, test specimens, measurement and observation of specimens, acceptance and rejection, sizes and dimensions, permissible variations in dimensions, absence of defects, salt glaze, finish of ends, fittings, marking, inspection, rejection, marking of rejected specimens, and methods of testing.

American Assn. of State Highway Officials, T33-42. Standard Methods of Testing Culvert Pipe, Sewer Pipe, and Drain Tile. Covers tests for concrete pipe, cast-iron pipe, clay pipe, and drain tile. Gives three-edge bearing method, sand-bearing method, absorption test, freezing and thawing test for drain tile, and test for resistance to action of acids for clay pipe.

American Public Works Assn. Sewers, J1-38; 1938. Includes vitrified sewer pipe and vitrified liner plates; sewer pipe in accordance with A.S.T.M. Specification C13, salt-glazed vitrified clay or shale liner plates for general quality, finish, size and form, weight, specimen, and absorption test.

American Society for Testing Materials, C 13-44 T; 1944. Tentative Specifications for Standard Strength Clay Sewer Pipe. Intended for the conveyance of sewage, industrial wastes, and storm water. Covers materials and manufacture, resistance to action of acids, physical test requirements, acceptance or rejection of results of test, sizes and dimensions, workmanship and finish, and inspection and rejection.

American Society for Testing Materials, C 200-44 T; 1944. Tentative Specification for Extra Strength Clay Pipe. Covers scope, class, materials and manufacture, resistance to action of acids, physical test requirements, absorption test, acceptance or rejection on results of tests, size and dimensions, workmanship and finish, and inspection and rejection.

Assn. of American Railroads, Telegraph and Telephone Section, 1-C-9. Vitrified Clay Conduit. Includes round or square bore, single duct and square bore two, three, four, six, or nine duct multiple clay conduit for wires and cables. Requirements as to quality of materials, workmanship, dimensions, and tests.

Clay Sewer Pipe Assn., Inc. Handbook Vitrified Clay Sewer Pipe and Kindred Clay Products, 1942. Includes dimensions and weights of salt glazed vitrified clay sewer pipe and fittings, fire clay flue linings and fittings, stove pipe and fittings, wall copings and fittings, chimney tops and bases, half traps, traps, grease traps, meter boxes, septic tanks, and liner plates.

U. S. Gov., Federal Specification SS-P-361a; 1942. Pipe; Clay, Sewer. Covers two grades—standard strength and extra strength; two types—bell and spigot, and butt joint (with separate reinforced concrete or clay collars); sizes—from 4 to 36 in. for standard strength, and 6 to 36 in. for extra strength; and either glazed or not glazed. Gives requirements for materials, workmanship and finish, physical characteristics, fittings, absorption, strength, dimensions, collars, and resistance to action of chemicals; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

U. S. Gov. Federal Works Agency, Public Roads Administration. Specifications for Construction of Roads and Bridges in National Forests and National Parks, FP-41. Vitrified Clay Culvert Pipe.

U. S. Gov., Navy Dept., Bureau of Yards and Docks. Specification E-9Ye; 1943. Electrical Apparatus, Distributing Systems, and Wiring (Emergency Edition). Includes requirements for clay conduit.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-467A; 1932. Conduit; Vitrified Clay.

*References.*—Methods of sampling and of testing clay and clay products, *see* 531.0; porcelain products, *see* 532.2; bricks and tiles, *see* 534; burnt clay ballast, *see* 511.73.

## 531.6 ENAMEL FOR ENAMELWARE

American Ceramic Society. Journal of A.C.S. for September 1930. Method of Test for Determination of Deformation Temperature of Enamel, 1930. Requirements

on preparation of sample, test procedure, rate of heating, etc.

American Ceramic Society. Journal of A.C.S. for September 1930. Method of Test for Fineness of Wet-Milled Enamel, 1930. Standard method for sieve testing of fineness.

American Ceramic Society. Journal of A.C.S. for September 1930. Tentative Test Method. Determination of Resistance of Sheet-Steel Enamel to Deflection, 1930. Requirements for test machine, preparation of test pieces, test procedure.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, 1938. Porcelain Enamel Frit. Covers definition, manufacture, properties, weight per cubic foot, specifications, substitutes, containers, shipping regulations, uses, and order instructions.

Porcelain Enamel Institute, Inc. Reflectance Test for Opaque White Porcelain Enamel, 1937. Includes requirements for manner in which reflectance is determined, manner of applying reflectance data in research and in commercial classification, and diagram showing interrelation of reflectance, reflectivity, and opacity.

Porcelain Enamel Institute, Inc. Specifications for Architectural Porcelain Enameled Parts, 1940. Covers requirements for materials, processing, the finished part, and packing.

Porcelain Enamel Institute, Inc. Specifications for First Quality Tops for Breakfast Sets, Dinette Sets, Kitchen Tables, and Kitchen Cabinets, No. 161; 1940. All tops conforming to these specifications shall be labeled and guaranteed by the manufacturer. Gives requirements for finished top—surface hardness, gloss, acid resistance, heat resistance, color, flat surfaces, straight edges, thickness of porcelain enamel, general requirements, surface texture, uniformity of finish, color match, and workmanship; materials; processing-fabrication of metal and application of porcelain enamel; and protection.

Porcelain Enamel Institute, Inc. Tentative Screen Test for Wet-Milled Porcelain Enamel, 1938. Includes requirements for equipment, sample, and procedure.

Porcelain Enamel Institute, Inc. Tentative Standard Impact Test for Laboratory Specimens of Porcelain Enameled Sheet Iron and Steel, August 1940. The purpose of this test is to provide a method of measuring the relative impact resistance of laboratory specimens prepared from different enamels or from the same enamel under different conditions. Covers specimens, apparatus, test procedure, precautions, treatment of data, and appendix.

Porcelain Enamel Institute, Inc. Tentative Standard Test for Sagging of Iron and Steel Sheets for Porcelain Enameling, October 1940. Sagging may be defined as the inability of the metal to support its own weight at enameling temperatures and should not be confused with warping. Covers equipment, specimens, test procedure, and bibliography.

Porcelain Enamel Institute, Inc. Tentative Standard Torsion Test for Laboratory Specimens of Porcelain Enameled Sheet Iron and Steel, September 1940. This test involves both twisting and, to some extent, bending of the specimen; and is to measure, under the specified conditions, the relative resistance to failure of laboratory specimens prepared from different enamels or from the same enamel under different conditions. Covers specimens, apparatus, test procedure, treatment of data, and appendix.

Porcelain Enamel Institute, Inc. Tentative Standard Test for Warpage of Flatware, 1941. The term warpage is considered to include any deviation of the nominally flat surface of a finished piece from flatness regardless of the source of such deviation. Covers apparatus, test procedure, and precautions.

Porcelain Enamel Institute, Inc. Test for Acid Resistance of Porcelain Enamels, Part 1—Flatware, 1940. Covers requirements for specimens, preparation of specimens, treatment, grading, and precautions for commercial test, umpire test, and research test.

Porcelain Enamel Institute, Inc. Test for Resistance of Porcelain Enamels to Gouging, 1942. The resistance of enamels to mechanical wear may be considered as the resultant of the resistance of the surface layer to abrasion and the resistance of the underlying enamel structure to crushing. Covers type of treatment of specimens, type of specimens required, gouging apparatus and its operation, method and equipment for inspecting tested specimens, procedure of test, and analysis of results.

Porcelain Enamel Institute, Inc. Test for Resistance of Porcelain Enamels to Surface Abrasion, 1942. The resistance of enamels to mechanical wear may be considered as the resultant of the resistance of the surface layer to abrasion and the resistance of the underlying enamel structure to crushing. Covers equipment required, test specimens, test procedure, treatment of data, and precautions and corrections.

U. S. Gov., Army Air Forces. Specification 14121; 1943. Finish; Porcelain Enamel.

U. S. Gov., Army-Navy Aeronautical Specification AN-E-4; 1942. Enamel; Porcelain.

U. S. Gov., Navy Dept. Specification 52 E 3; 1944. Enamel; Porcelain (for Coating).

*References.*—Methods of testing clay and clay products, *see* 531.0; enameled cast-iron bath tubs and sinks, *see* 612.21, 612.23.

### 531.7 BENTONITE

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, 1938. Bentonite (Wilkinite, Colloidal Clay). Covers definition, properties, occurrence, grades, and uses.

## 532. CHINA AND PORCELAIN WARE

### 532.1 TABLE CHINAWARE

American Hospital Assn., 64-4. Vitrified Chinaware. Based on U. S. Gov. Federal Specifications M-C-301 for Vitrified Chinaware.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R5-24; 1924. Hotel Chinaware. This recommendation establishes a simplified list of standard types and sizes of hotel chinaware, covering plates, dishes, butters, bowls, bakers, cups, saucers, etc. Sponsored

by the American Hotel Assn. of U. S. and Canada and the American Vitrified China Manufacturers Assn.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R33-25; 1925. Chinaware (Cafeteria and Restaurant). This recommendation establishes a schedule of types and sizes of restaurant and cafeteria chinaware, including plates, butters, coffee cups, mugs, nappies, bowls, dishes, jugs, etc. Sponsored by the American Hotel Assn. of U. S. and Canada, American Vitrified China Manufacturers Assn., and National Restaurant Assn.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R39-25; 1925. Dining-Car Chinaware. This recommendation establishes a simplified list of standard types, sizes, and capacities of dining-car chinaware, including plates, butters, dishes, cups, bowls, bakers, etc. Sponsored by American Vitrified China Manufacturers Assn.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R40-25; 1925. Hospital Chinaware. This Recommendation establishes a simplified list of standard types and sizes of hospital chinaware, including plates, butters, dishes, cups, bowls, bakers, etc. Sponsored by the American Hospital Assn and the American Vitrified China Manufacturers Assn.

U. S. Gov., Federal Specification M-C-301a; 1943. Chinaware; Vitrified. Shall be three weights known as thick ware, hotel (or rolled-edge) ware, and medium-weight ware. Gives requirements for material, workmanship, design, marking of ware, decoration of ware, absorption, impact, chipping, size and tolerance, method of sampling, inspection, test, packaging, packing, and marking.

U. S. Gov., U. S. Army, Medical Dept. Specification 28-66; 1939. Cup; Custard and Feeding.

*References.*—Methods of sampling and of testing clay and clay products, *see* 531.0; table glassware, *see* 523.

## 532.2 PORCELAIN PRODUCTS

*References.*—Table chinaware, *see* 532.1.

### 532.20 General Items

Porcelain Enamel Institute, Inc. Tentative Standard Impact Test for Laboratory Specimens of Porcelain Enameled Sheet Iron and Steel, August 1940. The purpose of this test is to provide a method of measuring the relative impact resistance of laboratory specimens prepared from different enamels, or from the same enamel under different conditions. Covers specimens, apparatus, test procedure, precautions, treatment of data, and appendix.

Porcelain Enamel Institute, Inc. Tentative Standard Test for Sagging of Iron and Steel Sheets for Porcelain Enameling, October 1940. Sagging may be defined as the inability of the metal to support its own weight at enameling temperatures and should not be confused with warping. Covers equipment, specimens, test procedure, and bibliography.

Porcelain Enamel Institute, Inc. Tentative Standard Torsion Test for Laboratory Specimens of Porcelain Enameled Sheet Iron and Steel, September 1940. This test involves both twisting and, to some extent, bending of the specimen and is to measure, under the specified conditions, the relative resistance to failure of laboratory specimens prepared from different enamels or from the same enamel under different conditions. Covers specimens, apparatus, test procedure, treatment of data, and appendix.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specifications CAA-390. Porcelain Enamel.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Commercial Standard CS30-31; 1931. Colors for Sanitary Ware. This standard designates colors to be used as a guide in production of sanitary ware, plumbing fixtures, and allied products made of vitreous china, porcelain (all-clay) enameled iron, metals, wood, or glass.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Commercial Standard CS63-38; 1938. Colors for Bathroom Accessories. This standard covers seven colors adopted as standard for bathroom accessories, provides a standard sample plan for control of these colors at the source, specifies a method for visual comparison, and supplies a means for identification of standard colors from producer to user. Sponsored by National Retail Dry Goods Assn.

### 532.21 Crucibles and Laboratory Porcelain Ware

American Chemical Society. Standard Sizes and Shapes of Apparatus, 1927. Includes dishes and crucibles, sizes and capacities selected as standard stock items, no detailed dimensions or specifications.

American Hospital Assn., 70-22. Jars for Dressings. Covers one type, one grade, and one class. Based on U. S. Gov., War Dept., Specifications 10-2399 for Jars for Dressings.

Manufacturing Chemists Assn. of the U. S. Laboratory Apparatus, 1922. Laboratory Porcelain Ware. Requirements on general quality, tolerance on capacity, test requirements for resistance to rapid heating and cooling, resistance to hot alkalies, freedom from porous surface, softening at high temperatures, standard sizes and dimensions for annealing cups, boats, casseroles, combustion capsules, high and low form crucibles and crucible covers, dishes, buchner funnels, gooch crucibles and covers, perforated plates for funnels, plates for color reactions, long spatula with knob, dupont nitrometer, requirements on surfaces to be glazed.

U. S. Gov., Navy Dept. Specification 50C11; 1938. Crucibles; Foundry, and Covers.

U. S. Gov., Navy Dept. Specification 50C4; 1938. Crucibles for Melting Aluminum.

U. S. Gov., Navy Dept. Specification 50C5a; 1942. Crucibles for Melting Steel.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2003B; 1941. Dishes; Evaporating, Porcelain.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2291; 1929. Ring; Filtering, Porcelain, Concentric.

*References.*—Methods of sampling and of testing clay and clay products, *see* 531.0; other laboratory apparatus, *see* 918.

### 532.22 Porcelain for Electrical Purposes

American Institute of Electrical Engineers. Standard No. 41; 1930. American Standards Assn., C29a-1930.

Insulator Tests. Definitions, methods of making design and routine tests for both pin and suspension type insulators, including dry and wet flashover tests, corona and puncture tests, thermal and porosity tests.

American Society for Testing Materials, D 116-44; 1944. Methods of Testing Electrical Porcelain. Includes glazed and unglazed ceramic materials, wet process, cast, or dry process porcelain, dimensions of test specimen, apparatus required, and tests for tensile, compressive, flexural, and dielectric strength, impact resistance, effect of heat, porosity, power factor and dielectric constant.

American Society for Testing Materials, D 667-44; 1944. Methods of Testing Steatite Used as Electrical Insulation. Outline procedures for making the various tests described when they are required for an investigation or examination of steatite used as electrical insulation.

American Standards Assn., C 75.14-1944. Porcelain Radio Insulators (American War Standard). For the purpose of facilitating production of porcelain radio insulators. Covers applicable specifications and drawings, classification, material and workmanship, general requirements, detail requirements; methods of inspection and tests; packaging, packing, and marking for shipment; requirements applicable to individual government departments; and notes, drawings, and appendix.

American Transit Assn. Specification for Overhead Line Material for Direct and Catenary Suspension, D102-39; 1939. Porcelain for insulators shall be of the wet process, high grade, fine grained, and dense. The finished insulator shall be true to shape, free from bubbles and other imperfections, and smooth. The glaze shall be of brown color, smooth, firmly adherent, thoroughly vitrified and free from bubbles, cracks, or undissolved particles.

Assn. of American Railroads, Operations and Maintenance Dept., Engineering Div., Signal Section. Manual of Recommended Practice. Specification 144-39; 1939. Dry Process Porcelain Insulation. Electrical insulation for signal apparatus to be enclosed in housings for circuits of 660 volts or less. Compounding of glaze, finish, tolerance, unglazed color, and absorption tests.

Assn. of American Railroads, Operations and Maintenance Dept., Engineering Div., Signal Section. Manual of Recommended Practice. Specification 146-39; 1939. Pin Type Porcelain Insulators. For signal purposes, all voltage ranges, quality of material and workmanship, porosity, mechanical, dry and wet flashover tests, puncture test, and preliminary routine and optional tests.

Assn. of American Railroads, Telegraph and Telephone Section, 1-A-78; 1941. Strain Insulators. For use in communication plant. Gives general requirements, material and workmanship, mechanical requirements, electrical requirements, inspection and tests, packing, marking, and warranty.

Assn. of American Railroads, Telegraph and Telephone Section, 1-A-93; 1943. Porcelain Knob Insulators. For use in the communication plant. Gives general requirements, material and workmanship, inspection and tests, packing, marking, and warranty.

Edison Electric Institute. Suggestions for Specifications for Low and Medium-Voltage Pin-Type Insulators, TD-51; 1937. Covers pin-type insulators made of porcelain and having a dry flashover of 85,000 volts or less. Gives requirements for material, insulator characteristics, insulator threads, tests, marking, packing and shipping, and inspection.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, 1938. Porcelain; Electrical. Covers definition, constants and physical properties, properties, derivations, grades, containers, specifications, uses, and substitutes.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, Volume 2; 1944. Steatite, Cut and Molded Products (Steatite Talc, Lava). Covers definition, constants, solubility, derivation, uses, grades, containers, and substitutes.

National Board of Fire Underwriters. National Electrical Code, 1940. American Standards Assn., C1-1940. Wiring Methods. Includes cleats, knobs and tubes, dimensions for various wire sizes.

National Electrical Manufacturers Assn., 42-83; 1942. High voltage Insulator Standards. Contains manufacturing and rating standards for high and low voltage cap-and-pin type suspension insulators as well as rating standards for outdoor types of switch and bus insulators. The standard ratings for switch and bus insulators fulfill the requirements for 60-cycle dry 1-minute withstand, and 60-cycle 10-second wet withstand tests as established in A.I.E.E. Standard No. 22, Air Switches and Bus Supports, dated June 1940. The impulse withstand voltages for these same insulators fulfill the requirements for the Standard Basic Impulse Insulation Levels as published by the Joint Committee on Coordination of Insulation of A.I.E.E., E.E.I., and N.E.M.A., published January 1941. The rating data given are based on tests made in accordance with the method of test as outlined in A.I.E.E. Standard No. 41-A, Insulator Tests.

Underwriters' Laboratories, Inc. Standard for Porcelain Cleats, Knobs, and Tubes, 1937. Covers insulating cleats, knobs, and tubes for the support of conductors of open wiring or concealed knob-and-tube work of circuits involving potentials of 600 volts or less, in accordance with the National Electrical Code. Does not cover split knobs and multiple-wire cleats for conductors larger than No. 4 Awg, solid knobs for conductors larger than No. 0000 Awg, knobs not intended for over-surface wiring, nor tubes having an internal diameter greater than 2 1/2 in. General; design and construction; absorption; marking; tables and illustrations of single-wire cleats, two-wire cleats, solid knobs, split knobs, and tubes; and inspection of listed product.

U. S. Gov., Dept. of Commerce, National Bureau of Standards, H32; 1941. American Standards Assn., C2.2-1941 (National Electrical Safety Code). Safety Rules for the Installation and Maintenance of Electrical Supply and Communication Lines. For line insulators for grade A and B construction; requirements for wet porcelain insulators for voltages of 2,300 or above, including ratio of flashover to puncture voltages; dry flashover test requirements for insulators for various voltage applications.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R73-27; 1927. One-Piece Porcelain Insulators. This recommendation establishes a list of standard designs and shapes of one-piece porcelain insulators disignated by the various manufacturers and catalogue numbers.

U. S. Gov., Joint Army-Navy Specification JAN-I-21; 1944. Insulators; Porcelain, Radio.

U. S. Gov., Navy Dept. Specification 16I2d; 1944. Insulators; Rigging.

U. S. Gov., Treasury Dept., Procurement Div., No. 716; 1945. Cleats, Knobs, and Tubes; Porcelain, for Electrical Wiring, 0 to 600 Volt Service. Gives requirements for types, classes, sizes, glazing, material, workmanship, moisture-absorption resistance test, color, marking, and details; methods of sampling, inspection, and tests; packaging, packing, and marking for shipment.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-286A; 1941. Insulator; Type IN-56.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-296A; 1925. Insulator; Types IN-25, and IN-26, Pony Porcelain.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-303; 1924. Tube; Porcelain.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-306B; 1930. Insulator; Porcelain Knob.

*References.*—Methods of sampling and of testing clay and clay products, *see* 531.0; other electrical insulating materials and methods of testing, *see* 719.5; thread gauges for insulators, *see* 615.82; glass insulators, *see* 526.1; rosettes for electrical wiring, *see* 715.23; electrical panels and switchboards, *see* 714.4; telephone switchboards, *see* 718.22; fuse blocks, cut-out bases, *see* 714.22, 719.71; switches, sockets, receptacles, *see* 714.52, 715.21, 715.22; porcelain terminal blocks, *see* 718.29; strain insulators and cap and cone insulators for trolley line support, *see* 719.63.

## 532.23 Tubs, Sinks, Water-Closets, and Lavatories

American Public Health Assn. Essential Features in the Design of Sanitary Drinking Fountains, 1934. Fountains should be constructed of impervious material, such as vitreous china, porcelain, enameled cast iron, other metals, or stoneware. Gives essential features for jet, nozzle, bowl, drain, water supply pipe, adjustable valve, height of fountain, and waste opening and pipe.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R106-41; 1941. Hospital Plumbing Fixtures. This recommendation establishes a list of standard stock sizes and types of baby baths, receiving baths, prenatal baths, sitz baths, continuous-flow or prolonged-treatment baths, patients' baths, surgeons' scrub-up sinks, medicine sinks, instrument sinks, clinic sinks, service sinks, bedpan closets, and combination lavatory with integral instrument trays. Covers staple items, tolerances, grading rules, nomenclature, definitions, autoclave test for crazing, kiln support marks, special selection of large pieces, fixtures available in several materials, and back-flow connections. Sponsored by the American Hospital Assn., National Assn. of Master Plumbers, Sanitary Cast Iron Enameled Ware Assn., Vitreous China Plumbing Fixtures Assn., and the Sanitary Brass Institute.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Commercial Standard CS4-29; 1929. Staple Porcelain (All-Clay) Plumbing Fixtures. This standard covers nomenclature and definitions, grading rules, types, sizes, dimensions, and general practices relating to porcelain (all-clay) plumbing fixtures. It includes dimensional diagrams of urinals, sinks, laundry trays, lavatories, receptors, and baths. Initiated by manufacturers, distributors, and users, represented by Advisory Committee on Porcelain (All-Clay) Plumbing Fixtures.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Commercial Standard CS20-42; 1942. Staple Vitreous China Plumbing Fixtures. Covers nomenclature and definitions; detail methods of grading water-closet bowls; low tanks; vitreous china lavatories, pedestals, and legs; and grading rules for other vitreous china plumbing fixtures. Standard dimensions and detail drawings are also given, including a standard system of marking and labeling. Initiated by the Vitreous China Plumbing Fixtures Assn.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Commercial Standard CS29-31; 1931. Staple Seats for Water-Closet Bowls. A commercial standard selected and accepted by industry establishing standard types and finishes for varnished seats, sprayed seats, sheet covered seats, hard rubber seats, and molded composition sheets, permissible defects in wood and size of doweling in wood seats, requirements on thickness of shell or covering for molded seats, thickness of covering and standard colors for sprayed finish and sheet covered seats, standard types, weights, dimensions, spacing, and material of hinges.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Commercial Standard CS30-31; 1931. Colors for Sanitary Ware. This standard designates colors to be used as a guide in production of sanitary ware, plumbing fixtures, and allied products made of vitreous china, porcelain (all-clay) enameled iron, metals, wood, or glass. The standard gives also detail requirements for the six standard colors and method of making color comparisons.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Commercial Standard CS 111-43; 1943. Earthenware (Vitreous—Glazed) Plumbing Fixtures. Covers items such as bath tubs, lavatories, kitchen sinks, laundry trays, and similar products. Gives requirements for material, body and glaze, coatings for unglazed surfaces of body, physical properties determined by test, method of inspection, grading, definitions, and labeling of items which meet the standard.

U. S. Gov., Federal Specification WW-P-541a; 1940. Plumbing Fixtures (for) Land Use. Includes projected, semirecessed and recessed drinking fountains made of one piece of vitreous china or enameled iron; cast iron, soapstone, and concrete laundry trays with or without backs with single, double, and triple compartments; various types of lavatories made of vitreous china and cast iron, together with accessories; sink and laundry tray combinations with fixtures for several types of sinks and trays; enameled cast iron, nickel-copper alloy, or corrosion-resisting steel alloy kitchen sinks covering

several types, including drainboards and legs; service sinks made of vitreous china and cast iron; three types of vitreous china urinals, stall urinal with high tank or flush valve, pedestal, and wall-hanging wash-out urinals; regular weight black and white and light weight black composition seats for water-closet bowls; wood seats for water-closet bowls complete with hinge and bumpers; and various types of water closets including siphon jet water closet with floor outlet, wash-down water closet with floor outlet, siphon jet wall-hanging water closet, blow-out wall-hanging water closet, siphon jet close coupled combination water closet, reverse-trap close-coupled combination water closet, and reverse-trap integral water closet and tank combination. Gives requirements for material, workmanship, finish, trimmings, fittings, supports, nozzle heads, valves, piping, floor flanges, traps, and details for each item; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment. Emergency Alternate Federal Specification E-WW-P-534a; 1942, changed requirements for metals and finishes, standard materials, and illustrations, selections, and air gaps.

U. S. Gov., Navy Dept. Specification 30U1e; 1936. Urinals (Shipboard Use).

U. S. Gov., Navy Dept. Specification 30W1h; 1944. Water-Closets (Shipboard Use).

U. S. Gov., Public Health Service, Federal Security Agency, sponsor. American Standards Assn., Z 4.2-1942. Specifications for Drinking Fountains. Gives detailed requirements in order to provide sanitary conditions at public drinking fountains.

U. S. Gov., Treasury Dept., Procurement Div., 262D; 1943. Fountains; Drinking Water, Portable, Sanitary, Compressed Air Water Feed, Insulated. Shall be of not less than 4-gal. capacity. Gives requirements for water container, cover and pump assembly, bubbler head and water feed tube, insulation, and accessories; methods of sampling, inspection, and tests; and packaging, packing, and marking.

*References.*—Methods of sampling and of testing clay and clay products, *see* 531.0; grinding and general quality of porcelain ware and vitreous ware, *see* 532.20; plumbing symbols and plumbing practice, *see* 800.8; metal bath tubs, water closets, and *sinks*, *see* 612.21, 612.23.

### 532.9 MISCELLANEOUS CHINA AND PORCELAIN WARE

National Assn. of Dyers and Cleaners of the U. S. and Canada. The Spotting Department, 1940. Includes recommendations for size, shape, and height of porcelain spotting boards.

Porcelain Enamel Institute, Inc. Specifications for First Quality Tops for Breakfast Sets, Dinette Sets, Kitchen Tables, and Kitchen Cabinets, No.161; 1940. All tops conforming to these specifications shall be labeled and guaranteed by the manufacturer. Gives requirements for finished top—surface hardness, gloss, acid resistance, heat resistance, color, flat surfaces, straight edges, thickness of porcelain enamel, general requirements, surface texture, uniformity of finish, color match, and workmanship; materials; processing-fabrication of metal and application of porcelain enamel; and protection.

U. S. Gov., Navy Dept., Bureau of Yards and Docks. Specification 11Yc; 1939. Marble and Tile Work. Includes requirements for bathroom accessories.

*References.*—Glazed tile and mosaic, *see* 534.25.

## 533. EARTHENWARE AND STONEWARE

### 533.1 BOWLS

U. S. Gov., U. S. Army, Corps of Engineers. Specification 42-3; 1924. Bowl; Earthenware, Lithographers'.

U. S. Gov., U. S. Maritime Commission. Specification 84-MC-2; 1941. Bowls; Mixing, Yellow-Crockery. There shall be but one type and grade, and sizes shall be as specified. Gives requirements for materials, workmanship, details, methods of inspection, and tests.

### 533.2 CROCKERY

U. S. Gov., Navy Dept. Specification 30C3; 1941. Crockery; Stateroom and Bathroom (Shipboard Use).

U. S. Gov., U. S. Maritime Commission. Specification 64-MC-36; 1941. Crocks; Stoneware, Glazed, Without Cover. There shall be but one type and grade, and sizes shall be as specified. Gives requirements for materials, workmanship, handles, shape, capacities and dimensions, glazing, methods of inspection, and tests.

### 533.3 POTS

U. S. Gov., Navy Dept. Specification 64P14a; 1941. Pots; Bean (Boston).

U. S. Gov., U. S. Maritime Commission. Specification 83-MC-2; 1941. Cooking Ware; Chinaware, Vitrified, Fireproof. Gives requirements for types, grade, colors, materials, workmanship, design, marking, under-glaze colors, thickness, absorption, impact, heat shock test, dimensions, capacities, weights, tolerances, sampling, acceptance and rejection, retest, and drawings.

### 533.4 STOPPERS

Manufacturing Chemists' Assn. of the U. S. Manual Sheet C-4. Carboy Stoppers, Porous Earthenware—Specifications and Method of Testing. Standard Adopted 1938. Includes requirements for design, material, and porosity.

## 534. BRICKS AND TILE

*References.*—Sand lime brick, *see* 513; concrete brick, *see* 516.4; asphalt block, *see* 518.37.

### 534.1 BRICKS

#### 534.10 General Items

American Assn. of State Highway Officials, T31-42. Standard Methods of Sampling and Testing Paving Brick. Gives scope, sampling, apparatus, barrel frame, driving mechanism, preliminary operation, abrasive charge, chemical composition of abrasive charge, scales, test specimen, procedure, percentage loss of weight, and rattler record.

American Ceramic Society. Journal of A.C.S. for June 1928. Method of Testing for Pyrometric Cone Equivalent, 1928. Applicable to fire brick, refractory materials, and clays. Requirements on sampling, size, shape and preparation of test cones, rate of heating, and method for determination of softening point.

American Public Works Assn. Specification for Vitrified Brick Pavement, D1-36; 1936. Requirements for

brick include test in rattler for loss in weight, in accordance with A.S.T.M. Specification C7. Adopted by National Paving Brick Assn.

American Society for Testing Materials, C16-41; 1941. Method of Testing Fireclay Refractories Under Load at High Temperatures. Determination of resistance to deformation under specified compressive load, temperature and period of time. Apparatus, direct-load-type, and lever-type load test furnaces; test specimen, setting the test specimen, time-temperature schedules for heating the test furnace, and procedure.

American Society for Testing Materials, C18-41; 1941. Methods of Chemical Analysis of Refractory Materials. Covers procedures for the chemical analysis of fire-clay, silica, high-alumina, and magnesite refractories, and of chrome ore and chrome refractories. Includes the determination of moisture, loss on ignition, silica, iron, aluminum and titanium oxides, lime, magnesia, and alkalites; reagents and special solutions required, preparation of samples, and reproducibility of results.

American Society for Testing Materials, C20-41; 1941. Methods of Test for Apparent Porosity, Water Absorption, Apparent Specific Gravity, and Bulk Density of Burned Refractory Products. Covers properties of refractory products not attacked by water. Preparation of sample; dry weight, boiling, suspended weight, saturated weight, and volumes for the determination of apparent porosity, water absorption, apparent specific gravity, and bulk density, and report.

American Society for Testing Materials, C 24-42; 1942. Method of Test for Pyrometric Cone Equivalent (P.C.E.) of Refractory Materials. For comparison of test cones with standard pyrometric cones under prescribed conditions. Gives preparation of test cones, mounting, heating, and pyrometric cone equivalent.

American Society for Testing Materials, C 38-42; 1942. Method of Panel Test for Resistance to Thermal and Structural Spalling of Refractory Brick. Method of rapidly heating and cooling fire brick to simulate service conditions; description of preheating furnace and spalling furnace, panel frame and brickwork, temperature measuring instruments, and outline of procedure for test.

American Society for Testing Materials, C 67-44; 1944. American Assn. of State Highway Officials, T 32. American Standards Assn., A82.1; 1944. Methods of Sampling and Testing Brick. Covers procedures for the sampling and testing of brick. Definitions of terms, selection of test specimens, number of specimens, identification, modulus of rupture (flexure test), compressive strength, absorption test, saturation coefficient, and freezing and thawing test.

American Society for Testing Materials, C 71-42; 1942. Definitions of Terms Relating to Refractories. Defines fire-clay, plastic fire-clay, flint fire-clay, diaspore clay, nodular fire-clay, spalling, pyrometric cone equivalent, silica fire-clay, grog fire-clay mortar, and high-temperature bonding mortar.

American Society for Testing Materials, C 92-43T; 1943. Tentative Methods of Test for Sieve Analysis and Water Content of Refractory Materials. Covers procedures for a wet method and a dry method for sieve analysis of refractory materials and also procedures for determining the water content of refractory materials in the wet condition. Gives requirements for sieves, sample, water content, wet sieve analysis, and dry sieve analysis.

American Society for Testing Materials, C 93-42; 1942. Methods of Testing Insulating Fire Brick (Compressive Strength, Flexural Strength, and Permanent Linear Change After Heating). Includes dimensions for arrangement of testing equipment, test specimen, testing routines, and formulas.

American Society for Testing Materials, C 107-42; 1942. Method of Panel Test for Resistance to Thermal and Structural Spalling of High Heat Duty Fireclay Brick. Method of testing firebrick used in stationary boilers, malleable iron furnace bungs, and incinerators, using general requirements and procedure of A.S.T.M. Method C 38 with supplementary procedure for preheating test panels and for spalling test.

American Society for Testing Materials, C 113-36; 1936. Method of Test for Permanent Linear Change After Reheating of Refractory Brick. For determining the permanent linear change of intermediate, high heat, and super duty fireclay brick when heated under prescribed conditions. Requires use of down-draft type kiln and oxidizing atmosphere; location of test specimen in kiln, temperature measurements, and cooling period.

American Society for Testing Materials, C 122-42; 1942. Method of Panel Test for Resistance to Thermal and Structural Spalling of Super Duty Fireclay Brick. Procedure for determining the resistance of super duty fireclay brick to the separate and combined effects of structural and thermal spalling, using general requirements and procedure of A.S.T.M. Method C 38 with supplementary requirements for preheating test panels, and test for spalling.

American Society for Testing Materials, C 133-39; 1939. Methods of Test for Cold Crushing Strength and Modulus of Rupture of Refractory Brick and Shapes. Requirements for testing machine, design of bearing block and bearing edges, preparation of test specimen, and outline of procedure of tests.

American Society for Testing Materials, C 134-41; 1941. Methods of Test for Size and Bulk Density of Refractory Brick. For rectangular refractory brick and shapes. Apparatus, sampling, preparation of specimens, measurement of size, report, retests, and bulk density.

American Society for Testing Materials, C 135-40; 1940. Method of Test for True Specific Gravity of Burned Refractory Materials. For determination of specific gravity under prescribed conditions, but not applicable to materials attacked by water. Covers apparatus necessary, test specimen, and outlines the method of procedure.

American Society for Testing Materials, C 182-43T; 1943. Tentative Method of Test for Thermal Conductivity of Insulating Fire Brick. Outlines the general procedure for determining the comparative thermal conductivity of insulating fire brick under standardized conditions of testing. Gives requirements for apparatus, test specimen and guard brick, preparation of test specimen and guard brick, procedure, record of test data, calculations, and report.

Structural Clay Products Institute. Brick Engineering Handbook of Design, 1943. A 437-page handbook covering brick, mortar, brick masonry, footings, foundations, piers and columns, walls and partitions, chimneys, fireplaces and stacks, floors, walks and garden structures, moisture control, reinforced brick masonry, beams, lintels and slabs, R-B-M columns and piers, footings, foundations and retaining walls, brick sewers, miscellaneous structures of reinforced brick masonry, and appendices covering estimating tables, standard specifications, bibliography, and glossary of terms.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Building Materials and Structures Report BMS80; 1940. Strength, Absorption, and Resistance to Laboratory Freezing and Thawing of Building Bricks Produced in the U. S. This paper reports the compressive and transverse strengths, water absorptions, saturation coefficients, and either the number of cycles of freezing and thawing required to produce failure or the loss in weight after 51 cycles for each of 3,368 bricks representing 525 gradings produced by 209 manufacturers. Average results for all tests except freezing and thawing are given for an additional 197 gradings or samples comprising a total of 1,190 specimens. These 197 gradings include samples from 20 additional manufacturers.

## 534.11 Face, Common, and Vitrified Brick

American Assn. of State Highway Officials. Standard Specifications for Highway Bridges, 1941. Includes specifications for brick wearing surfaces—requirements for brick (conform to A.A.S.H.O. Specification M-40), preparation of subfloor, sand-cement bed, placing bedding course, laying and rolling the brick, testing the surface, applying asphalt filler, surface dressing, opening to traffic, and measurement and payment.

American Assn. of State Highway Officials, M40-42. Standard Specifications for Paving Brick. Covers vitrified clay brick for use in the construction of pavements. Gives manufacture, lugs, types and sizes, permissible variations in size, loss in rattler test, visual inspection, basis of acceptance, retesting, payment for cost of testing, and methods of sampling and testing.

American Assn. of State Highway Officials, M91-42. Standard Specification for Sewer Brick (Made From Clay or Shale). Gives scope, physical properties, size, visual inspection, and methods of sampling and testing.

American Public Works Assn. Sewers, J1-38; 1938. Includes sewer brick in three grades conforming to A.S.T.M. Specification C67.

American Public Works Assn. Specification for Vitrified Brick Pavement, D1-36; 1936. Includes requirements for quality, size and type, allowable variations, lugs, traffic markers, and tests of paving brick in accordance with A.S.T.M. methods. Adopted by National Paving Brick Assn.

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering. Specifications for Buildings for Railroad Purposes: Brick Pavements and Floors. Gives requirements for paving brick, physical characteristics, and sizes.

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering, 1944. Specifications for Buildings for Railroad Purposes: Brickwork. Gives classification of brickwork, face brickwork, detail of brickwork, samples, cement, sand, lime, mortar color, mortar, water supply, wood centering, scaffolding, anchors, backing, flue linings, vitrified tile wall, copings, cast concrete, protection, and pointing up.

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering, 1944. Specifications for Buildings for Railroad Purposes: Sewers and Drainage. Gives requirements for brick.

American Society for Testing Materials, C 7-42; 1942. Paving Brick. Covers brick manufactured from fire clay, semifire clay or shale, or combinations thereof.

American Society for Testing Materials, C 32-42; 1942. Sewer Brick (Made From Clay or Shale). Includes three grades depending on abrasiveness of fluid handled, gives requirements for compressive strength and maximum water absorption, and for sizes, with tests in accordance with A.S.T.M. Method C 67.

American Society for Testing Materials, C 62-44; 1944. American Assn. of State Highway Officials, M 114. Building Brick (Made From Clay or Shale). Covers brick made from clay or shale and burned and intended for use in brick masonry. Three grades of brick are covered—grade SW, brick intended for use where a high degree of resistance to frost action is desired; grade MW, brick intended for use where exposed to temperatures below freezing but unlikely to be permeated with water; grade NW, brick intended for use as back-up or interior masonry, or if exposed, for use where no frost action occurs. Covers physical properties, size and coring, visual inspection, sampling and testing, cost of tests, and explanatory note.

American Society for Testing Materials, C 126-44T; 1944. Tentative Specifications for Glazed Masonry Units. Includes ceramic glazed brick and ceramic glazed structural clay tile of clay, shale, fire clay, or mixtures thereof. Does not include salt glazed ware. Covers basis of purchase, description of units, compressive strength, absorption, properties of finish, color and texture, sizes, number of cells, shell and web thickness, tolerances in dimensions, scoring, coring, workmanship, inspection, test specimens, and methods of test.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R1-40; 1940. Reaffirmed without change, 1943. Vitrified Paving Brick. This recommendation establishes a simplified list of sizes and varieties of repressed lug brick, vertical-fiber lug brick, and wire-cut lug brick. Initiated by National Paving Brick Assn.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R7-23; 1923. Face Brick and Common Brick. This recommendation establishes standard dimensions for

639677 O—45——25

length, thickness, and width of rough and smooth brick. Initiated by the brick industry now represented by the Structural Clay Products Institute.

U. S. Gov., Federal Specification SS-B-656; 1932. Brick; Building (Common), Clay. Covers three grades—(H) hard, (M) medium, and (S) soft; clay or shale. Gives requirements for material, workmanship, strength, and absorption; and methods of sampling, inspection, and tests.

U. S. Gov., Federal Specification SS-B-671a; 1937. Amendment 1; 1941. Brick, Paving. Covers three types—vertical fiber lug, wire-cut lug, and repressed lug. Gives requirements for sizes, tolerances, material, workmanship, and manufacture; methods of sampling and testing; and requirements for packaging, packing, and marking.

U. S. Gov., Federal Specification SS-B-691; 1933. Brick; Sewer, Clay. Covers one type; three grades—(A) vitrified, (B) hard, and (C) medium; and three sizes—1, 2, and 3. Gives requirements for absorption and strength; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

*References.*—Definitions, methods of sampling and of testing brick, *see* 500, 534.10; methods of sampling and testing clay and clay products, *see* 531.0; sand lime brick, *see* 513; brick in building construction, *see* 518.5; brick in draining structures, *see* 518.6; brick in construction of tanks, pools, *see* 518.7; brick masonry, *see* 518.83; brick in bridge construction, *see* 518.4; brick pavement, *see* 518.35.

## 534.12 Fire Brick and Tiles, and Fire Clay Brick

American Refractories Institute. Fireclay Brick (Standard Sizes), 1939. Covers storage, laying, quantities, and standard dimensions of brick, splits, wedges, key, skew, circle, and arch brick, for standard and large standard sizes, and size deviations.

American Society for Testing Materials, C18-41; 1941. Methods of Chemical Analysis of Refractory Materials. Covers procedures for the chemical analysis of fire-clay, silica, high-alumina, and magnesite refractories. Includes the determination of moisture, loss on ignition, silica, iron, aluminum and titanium oxides, lime, magnesia, and alkalites; reagents and special solutions required, preparation of samples, and reproducibility of results.

American Society for Testing Materials, C27-41; 1941. Classification of Fireclay Refractories. Intended principally to group according to resistance to heat. Super duty, high heat duty, intermediate heat duty, and low heat duty fireclay bricks; and methods of testing.

American Society for Testing Materials, C 63-41; 1941. Refractories for Malleable Iron Furnaces With Removable Bungs and for Annealing Ovens. The selection of fireclay refractories for service in malleable furnaces under general conditions of operation and furnace design. Covers only burned products made from fireclay by the usual processes of manufacture and not intended to include products other than those regularly sold as fireclay brick. Malleable furnace bungs, furnace sidewalls and bridgewalls, lining of fire boxes and lower portion of stack, upper stack lining, annealing oven chamber; requirements for the various types of refractories, including size and warpage, test requirements, retests, and methods of testing.

American Society for Testing Materials, C 64-41; 1941. Refractories for Heavy Duty Stationary Boiler Service. The selection of fireclay refractories for heavy duty boiler furnaces in which the temperature of the combustion chamber is continuously, or a significant portion of the time, above 1,315° C. (2,400° F.). They may not apply to special conditions sometimes encountered in high-power utility boilers. Covers only burned products made from fireclay by the usual processes of manufacture and not intended to include products other than those regularly sold as fireclay brick. Zones of highest temperatures, division walls heated on both sides, zones of lower temperatures; requirements for the various types of refractories, including size and warpage, test requirements, and methods of testing.

American Society for Testing Materials, C 106-41; 1941. Refractories for Incinerators. For service in municipal and industrial incinerators under general conditions of operation and furnace design; type A for high heat duty, type F for intermediate, and type G for low heat duty fireclay brick. Requirements for various types as to refractoriness, shrinkage, spalling and modulus of rupture, and methods of testing.

American Society for Testing Materials, C 153-41; 1941. Refractories for Moderate Duty Stationary Boiler Service. For fire-clay brick lining of furnaces in which the temperature does not exceed 2,400° F. Zones of highest and of lowest temperatures, size and warpage, test requirements, methods of testing, and retests.

American Society for Testing Materials, C 154-41; 1941. Method of Test for Warpage of Refractory Brick and Tile. For the determination by measuring wedge and steel straight-edge across diagonals on concave side of brick; the actual maximum warpage.

American Society for Testing Materials, C 155-41T; 1941. Tentative Classification of Insulating Back-Up Block and Insulating Fire Brick. Pertains to two kinds of heat-insulating materials, each of which is intended for different service conditions. The materials included in the broad classification of insulating fire brick are divided into five specific groups.

American Society for Testing Materials, C 176-44; 1944. Fireclay Plastic Refractories for Boiler and Incinerator Service. Covers scope, high heat duty plastic refractories required for average service conditions, super duty plastic refractories for use in the zone of highest temperature and where severe spalling or slagging occurs, retests, and methods of testing.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, 1938. Firebrick. Covers description, silica refractories, and specifications.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, 1938. Firebrick and Fireclay (Refractories, Clay and Silica). Covers definition and occurrence.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Circular C398 and Supplement, 1944. Standard Samples. Burned Refractory (40 Percent $Al_2O_3$), Sample 76; Burned Refractory (60 Percent

$Al_2O_3$), Sample 77; Burned Refractory (70 percent $Al_2O_3$), Sample 78; and Chrome Refractory, Sample 103. These samples are prepared and sold by the National Bureau of Standards with a certificate of analysis for use in industry and by others as a comparison standard for checking the accuracy of analyses of similar materials.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Circular C398 and Supplement,1944. Standard Samples. Silica Brick, Sample 102. This sample is prepared and sold by the National Bureau of Standards with a certificate of analysis for use in industry and by others as a comparison standard for checking the accuracy of analysis of similar material.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R79-28; 1928. Malleable Foundry Refractories. This recommendation establishes a schedule of standard stock shapes and sizes of brick and tile for malleable foundry refractories. Initiated by the American Foundrymen's Assn. and the Malleable Founders Society.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R154-38; 1938. Cupola Refractories. This recommendation establishes standard sizes of cupola, tap-out, and slag-hole blocks. Initiated by American Ceramic Society, American Foundrymen's Assn., and the American Refractories Institute.

U. S. Gov., Federal Specification HH-B-671b; 1936. Brick; Fire Clay. Covers six classes—(1) back-up duty, (2) moderate heat duty, (3) slag resistant duty, (4) intermediate heat duty, (5) high heat duty, and (6) super duty. Gives requirements for material and workmanship, dimensional tolerances, and chemical and physical characteristics; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Federal Specification HH-B-681; 1933. Brick; Silica. Covers one grade. Gives requirements for composition, softening temperatures, apparent specific gravity, and dimension tolerance; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Navy Dept. Specification 32B2c; 1941. Brick; Fire-Clay.

U. S. Gov., Navy Dept. Specification 32B4c; 1942. Brick; Insulating, High-Temperature.

U. S. Gov., Navy Dept. Specification 32B6; 1935. Brick; Magnesite.

U. S. Gov., Navy Dept. Specification 32B7a; 1942. Brick; Refractory, Insulating.

U. S. Gov., Navy Dept. Specification 32B8; 1942. Brick; Silicon-Carbide, Refractory.

U. S. Gov., Navy Dept. Specification 32R2b; 1941. Refractory; Water-Wall, Boiler.

## 534.2 TILE

*References.*—Clay pipe and conduit, *see* also 531.5; refractory tile for foundries, *see* 534.12; concrete building tile, *see* 516.4; concrete drain tile and pipe, culvert pipe, and sewer pipe, *see* 518.62, 518.61, 518.67.

### 534.20 General Items

American Society for Testing Materials, C 43-36; 1936. Definitions of Terms Relating to Structural Clay Tile. Defines various tiles, general terms, raw materials, designation of dimensions, parts, openings, and surface features of hollow clay structural tile.

American Society for Testing Materials, C 112-36; 1936. American Standards Assn., A 83.1; 1942. Methods of Sampling and Testing Structural Clay Tile. Gives method of determination for weight, compressive strength, absorption, freezing, and thawing. For selection of samples, apparatus required, and outline of procedure for tests.

Tile Manufacturers' Assn. Basic Specification for Tile Work, K-300; 1939. Recommendations for the installation of tile in new construction and alterations on vertical and horizontal surfaces; for application over wood, masonry, concrete, or steel joist; for preparation of base, quality of materials, mortar mixtures, etc.

Tile Manufacturers' Assn. Index of Standardized Wall Tile Trimmers, 1932. Chart of 56 trimmers, together with their complementary angles, corners and tops, for normal trimmer requirements.

Tile Manufacturers' Assn. Tile Industry Research Bureau, R-TS-51; 1939. Specification for Installing Tile Floors on Thin Mastic Setting Bed. For installation over wood, cement, steel, roof decks, old terrazzo, natural stone, and tile floors, etc.; applicable to interior or exterior horizontal surfaces only (except ceilings) in hot or cold climates. Requirements for flexible binder, preparation of subfloor, priming, laying and grouting of tile, and precautionary measures.

### 534.21 Drainage Tile

American Assn. of State Highway Officials, M86-42. Standard Specifications for Drain Tile. Covers standard drain tile for ordinary land drainage at moderate depths, and extra quality drain tile for land drainage for considerable depths and where an extra quality is desired. Gives materials, manufacture, chemical test requirements, physical tests, method of determining failure, visual inspection, shape, sizes, color, smoothness, cracks, checks, chips, broken pieces, use of terms vitrified and hard-burned, making and reporting tests, general tests and inspection at factory, and rejection.

American Assn. of State Highway Officials, T33-42. Standard Methods of Testing Culvert Pipe, Sewer Pipe, and Drain Tile. Covers tests for concrete pipe, cast-iron pipe, clay pipe, and drain tile. Gives three-edge bearing method, sand-bearing method, absorption test, freezing and thawing test for drain tile, and test for resistance to action of acids for clay pipe.

American Public Works Assn. Sewers, J1-38; 1938. Includes sewer tile, vitrified conforms to A.S.T.M. Specification C13, concrete (plain) conforms to A.S.T.M. Specification C14, and reinforced-concrete sewer pipe to A.S.T.M. Specification C75. Gives tables to standard sizes with dimensions.

American Society for Testing Materials, C 4-24; 1924. American Standards Assn., A 6-1925. Drain Tile. Covers farm, standard, and extra quality drain tile of concrete or of clay, disallowed materials in chemical composition, requirements on crushing strength and absorption test, visual inspection,

and, where specified, freezing and thawing test requirements.

U. S. Gov., Federal Specification SS-T-310; 1942. Tile; Drain, Clay. Covers tile of sizes from 3 to 30 in. in two grades—standard strength and extra strength; and two types—plain ends and plain ends with separate collars. Gives requirements for materials, workmanship, finish, dimensions, fittings, absorption and saturation coefficient, strength, and collars; method of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

*References.*—Methods of sampling and of testing clay and clay products, *see* 531.0; concrete drain tile and pipe, culvert pipe, and sewer pipe, *see* 518.62, 518.61, 518.67.

## 534.22 Hollow Building Tile

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering, 1944. Specifications for Buildings for Railroad Purposes: Clay Hollow Tile. Gives requirements for material, laying, mortar, and cleaning.

American Society for Testing Materials, C 34-41; 1941. American Standards Assn., A74.1-1942. Structural Clay Load-Bearing Wall Tile. Covers structural clay load-bearing wall tile made from surface clay, shale, fireclay, or mixtures thereof. Two grades of tile are covered: Grade LB-X.—suitable for general use in masonry construction and adapted for use in masonry exposed to weathering, provided they are burned to the normal maturity of the clay. They may also be considered suitable for the direct application of stucco; grade LB.—suitable for general use in masonry where not exposed to frost action, or for use in exposed masonry where protected with a facing of 3 in. or more of stone, brick, terra cotta, or other masonry. Physical properties, number of cells, shell and web thickness, tolerances, scoring, marking, visual inspection, rejection, expense of tests, sampling and testing, and explanatory notes.

American Society for Testing Materials, C 56-41; 1941. American Standards Assn., A76.1-1942. Structural Clay Non-Load-Bearing Tile. Covers structural clay nonload-bearing tile (partition, fire-proofing, and furring) made from surface clay, shale, fire clay, or mixtures thereof. One grade of tile is covered, designated grade NB. Absorption, number of cells and weights, permissible variations in dimensions, fire-proofing tile, scoring, marking, visual inspection, rejection, expense of test, and sampling and testing.

American Society for Testing Materials, C 57-39; 1939. American Standards Assn., A77.1-1942. Structural Clay Floor Tile. For two grades suitable for use in flat or segmental arches or in combination tile and concrete ribbed slab construction. Requirements for absorption, compressive strength, number of cells and weights, permissible variations in dimensions, visual inspection, scoring, and marking.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R12-26; 1926. Hollow Building Tile. This recommendation establishes a simplified list of sizes of hollow building tile covering standard load bearing wall tile, standard partition tile, standard split furring tiles, and standard book tile. Proposed revision being sponsored by the Structural Clay Products Institute.

U. S. Gov., Federal Specification SS-T-316; 1939. Tile; Partition, Gypsum. Covers one type. Gives requirements for shape, thickness, height and length, shell thicknesses, and compressive strength; methods of sampling, inspection, and tests; and requirements for marking.

U. S. Gov., Federal Specification SS-T-321; 1934. Amendment 1; 1936. Tile; Structural, Clay, Floor. Covers two grades— (M) medium and (S) soft. Gives requirements for number of cells, weight, and physical requirements; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Federal Specification SS-T-341; 1943. Tile; Structural, Clay, Load-Bearing, Wall. Covers three grades—(H) hard, (M) medium, and (S) soft. Gives requirements for number of cells, weights, and physical properties; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Federal Specification SS-T-351a; 1943. Tile; Structural, Clay, Non-Load-Bearing. Covers two grades—(M) medium and (S) soft. Gives requirements for number of cells, weight, and physical properties; method of sampling, inspection, and tests; and requirements for packing and marking.

*References.*—Methods of sampling and of testing clay and clay products, *see* 531.0; definitions, *see* 534.20; fire tests, *see* 534.10; use in building construction, *see* 518.5; gypsum building tile, *see* 514.62; concrete building tile and blocks, *see* 516.4.

## 534.23 Roof Tiles

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering. Specifications for Buildings for Railroad Purposes: Clay Roofing Tile. Gives requirements for materials, flashings, roofing felt, laying, and guarantee.

Clay Products Assn. Tentative Standards for Vitrified Clay Products, 1937. Includes wall coping, double slant style, straight sections, ends, starters, tee sections, and corners, with sizes and detail dimension standards.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Building Materials and Structures Report BMS6; 1938. Survey of Roofing Materials in the Southeastern States. A survey of the weathering qualities and extent of use of the various roofing materials on dwellings in the Southeastern States is described. Detailed studies of roofing materials in Greensboro, N. C.; Columbia, S. C.; Savannah and Atlanta, Ga.; Jacksonville and Orlando, Fla.; Birmingham, Ala.; Knoxville, Tenn.; and Charleston, W. Va.; are reported. A tabulation, by states, of the kinds of roofing materials used on more than 10,000 rural and small-town dwellings, along approximately 2,500 miles of highway, is included. Forty-eight photographs, illustrating types of weathering of roofing materials and features of design and construction of roofs, are shown.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Building Materials and Structures Report BMS29; 1939. Survey of Roofing Materials in the Northeastern States. A survey of the weathering qualities and extent of use of the various roofing materials on dwellings in the Northeastern States is described, with numerous comparative references to a similar survey in the Southeastern States. Detailed studies of roofing materials in Wilmington, Del.; Philadelphia, Pa.; New Haven, Conn.; Boston, Mass.; Manchester, N. H.; Portland, Maine; Rutland, Vt.; and Albany and Syracuse, N. Y., are reported. A tabulation, by states, of the kinds of roofing materials used on more than 10,000 rural and small-town dwellings, along approximately 1,600 miles of highway between the cities listed above, is included; also a summary of the kinds of roofing materials used on almost 21,000 rural and small-town dwellings along 4,000 miles of highway in 20 Eastern States. Forty-eight photographs, illustrating types of weathering of roofing materials and features of design and construction of roofs, are shown.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Building Materials and Structures Report BMS75; 1941. Survey of Roofing Materials in the North Central States. A survey of the weathering qualities and extent of use of the various roofing materials on dwellings in the North Central States is described, with numerous references to similar surveys made previously in the Southeastern and Northeastern States. Detailed studies of roofing materials in Pittsburgh, Pa.; Cincinnati and Toledo, Ohio; Grand Rapids and Lansing, Mich.; Chicago, Ill.; Milwaukee, Wis.; St. Paul, Minn.; Bismarck, N. Dak.; Sioux Falls, S. Dak.; Omaha, Nebr.; Kansas City, Moberly, and St. Louis, Mo.; and Indianapolis, Ind., are reported. A tabulation, by states, of the kinds of roofing materials used on more than 8,000 rural and small-town dwellings, along approximately 3,000 miles of highway between the cities listed above, is included; also a summary of the kinds of roofing materials used on almost 29,000 rural and small-town dwellings along 7,000 miles of highway in the 32 states covered by the three surveys. Forty-eight photographs, illustrating type of weathering of roofing materials and features of design and construction of roofs, are shown.

*References.*—Methods of sampling and of testing clay and clay products, *see* 531.0; fire tests, *see* 534.10; concrete roofing tile, *see* 516.4; use in building construction, *see* 518.5.

## 534.24 Terra Cotta

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual of Railway Engineering, 1944. Specifications for Buildings for Railroad Purposes: Architectural Terra Cotta. Gives requirements for material, models, molding and fitting, cement, sand, lime, mortar, setting and anchoring, protection, and cleaning and pointing.

*References.*—Methods of sampling and of testing clay and clay products, *see* 531.0; terra cotta in building construction, *see* 518.51.

## 534.25 Glazed Tile and Mosiac

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering. Specifications for Buildings for Railroad Purposes: Marble and Tile Work. Gives requirements for vitrified tile for walls and floors.

American Society for Testing Materials, C 126-44T; 1944. Tentative Specifications for Glazed Masonry Units. Includes ceramic glazed brick and ceramic glazed structural clay tile of clay, shale, fire clay, or mixtures thereof. Does not include salt glazed ware. Covers basis of purchase, description of units, compressive strength, absorption, properties of finish, color and texture, sizes, number of cells, shell and web thickness, tolerances in dimensions, scoring, coring, workmanship, inspection, test specimens, and methods of test.

Facing Tile Institute. Affiliated with Structural Clay Products Institute. Facing Tile, 1943. Grading Rules. Physical Requirements and Methods of Test for Structural Facing Tile—Glazed and unglazed. Gives tolerance for face dimensions, tolerances for depth of single faced units, tolerances for depth of two faced units, tolerances for distortion of face or edge, maximum permissible chippage, type of units, number of cells, shell and web thickness, scoring, coring, absorption, compressive strength, sampling and inspection, imperviousness test, chemical resistance test, crazing test, opacity test, absorption test, and compressive test.

Facing Tile Institute. Affiliated with Structural Clay Products Institute. Facing Tile, 1943. Specifications for Ceramic Glazed, Clear Glazed, and Salt Glazed Structural Facing Tile. Gives workmanship, sizes and shapes, unit design, and qualities.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R61-30; 1930. Clay Tiles for Floors and Walls. This recommendation establishes a list of standard sizes, shapes, and grades of glazed tiles and ceramic mosaic, including overall dimensions of the standard sizes, definition of grades, permissible warpage, wedging, crooked edge, spots, blots, and other defects for two grades each of white glazed and of colored glazed tiles, capacity of shipping containers. Sponsored by the Tile Manufacturers Assn.

U. S. Gov., Navy Dept. Specification 59T2c; 1939. Tile (Shipboard Use).

U. S. Gov., Navy Dept., Bureau of Yards and Docks. Specification 11Yc; 1939. Marble and Tile Work.

*References.*—Methods of sampling and of testing clay and clay products, *see* 531.0; installation and standard sizes, *see* 534.20; building construction, *see* 518.5.

## 534.29 Miscellaneous Specifications for Tile

American Society for Testing Materials, C 159-41T; 1941. Tentative Specifications for Vitrified Clay Filter Block for Trickling Filters. Cover vitrified clay filter block made from clay or shale or mixtures thereof. Two types of filter block are covered: Type I.—A one-piece filter block suitable

for use in constructing a single-course trickling filter floor, which provides continuous drainage channels through the lower portion and aeration grilles in the upper portion of the blocks. Type II.—A two-piece filter block suitable for use in constructing a two-course trickling filter floor, which provides drainage and aeration. Compressive strength, absorption, shape, permissible variations in dimensions, apertures, shell and web thickness, workmanship and finish, marking, rejection, expense of tests, and sampling and testing.

Clay Products Assn. Tentative Standards for Vitrified Clay Products, 1937. Includes fire clay flue linings, rectangular and circular, and glazed tile flue or chimney pipe and fittings. Gives weights and standard dimensions of tile.

Facing Tile Institute. Affiliated with Structural Clay Products Institute. Facing Tile, 1943. Grading Rules, Physical Requirements and Methods of Test for Structural Facing Tile—Glazed and Unglazed. Gives tolerance for face dimensions, tolerances for depth of single faced units, tolerances for depth of two faced units, tolerances for distortion of face or edge, maximum permissible chippage, type of units, number of cells, shell and web thickness, scoring, coring, absorption, compressive strength, sampling and inspection, imperviousness test, chemical resistance test, crazing test, opacity test, absorption test, and compressive test.

Facing Tile Institute. Affiliated with Structural Clay Products Institute. Facing Tile, 1943. Specifications for Smooth Unglazed Structural Facing Tile. Colors are gray, cream, buff, and manganese and iron spot. Gives workmanship, shapes and sizes, unit design, select quality, and industrial quality.

U. S. Gov., Federal Specification RR-T-421; 1936. Tile; Wall, Enameled Iron. Covers two types—flat and crowned; two grades—acid-resisting, and ordinary; and two classes—sheet iron or sheet steel base and cast-iron base. Gives requirements for material, workmanship, size, and thickness of metal; methods of sampling, inspection and tests; and requirements for packaging, packing, and marking for shipment.

*References.*—Methods of sampling and of testing clay and clay products, *see* 531.0; chimneys, *see* 518.55; sewers, *see* 518.67.

# 540-549 ABRASIVE MATERIALS, ASBESTOS, AND CHALK

## 541. ABRASIVES, NATURAL AND ARTIFICIAL

### 541.0 GENERAL ITEMS

Abrasive Grain Assn. Standard for Measurement of Capillarity of Electrically Fused Aluminum Oxide Abrasives for Polishing Uses, 1940. For determining bonding properties between grain particles and the glue; general requirements for freedom from foreign matter, testing apparatus, sampling, methods of test, cleaning of tubes, and tables of grit numbers.

American Foundrymen's Assn. American Standards Assn., Z43.-1941. Grinding, Polishing, and Buffing Equipment Sanitation. Prescribes the use of exhaust hoods and systems in removing dust, dirt, fumes, and gases generated through the grinding, polishing, and buffing of ferrous and nonferrous metals by means of grinding, polishing, scratch brushing, abrasive cutting-off wheels, grinding and polishing straps and belts.

Grinding Wheel Manufacturers Assn. Standard Markings for Identifying Grinding Wheels and Other Bonded Abrasives, 1944. Covers purpose and scope, sequence and markings, dual marking, wheel manufacturers' name, and chart showing standard marking system.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, 1938. Abrasives; Aluminum Oxide. Covers definition, properties, grades, uses, specifications, containers, and substitutes.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, 1938. Abrasives; Silicon Carbide. Covers definition, properties, uses, specifications, substitutes, and containers.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Circular C398 and Supplement, 1944. Standard Samples. Silicon Carbide, Sample 112. This sample is prepared and sold by the National Bureau of Standards with a certificate of analysis for use in industry and by others as a comparison standard for checking the accuracy of analysis of similar material.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R118-40; 1940. Abrasive Grain Sizes. This recommendation gives a table of allowable limits for the sizing of aluminum-oxide and silicon-carbide abrasives for polishing uses and for grinding wheel manufacture. Initiated by Abrasive Grain Assn. and Grinding Wheel Manufacturers Assn.

U. S. Gov., Treasury Dept., Procurement Div., No. 816; 1943. Silicon Carbide; Abrasive, Polishing-Quality. Covers three classes—(A) coarse, (B) medium, and (C) fine; intended for use as an abrasive in grinding, polishing, and buffing operations. Gives requirements for material and fineness; methods of sampling and tests; and packaging, packing, and marking.

### 541.1 FLINT

*References.*—Flint coated abrasive products, *see* 541.4.

### 541.2 HONES, WHETSTONE, AND OILSTONES

U. S. Gov., Federal Specification SS-S-736; 1934. Stones; Sharpening. Covers five types—(I) stones, sharpening, mounted, (artificial and natural); (II) stones, sharpening, unmounted (artificial and natural); (III) slips, round-edge (artificial and natural); (IV) stones, scythe (artificial); and (V) sharpeners, knife (carving-knife hones, artificial). Gives detail requirements; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., U. S. Army, Corps of Engineers. Specification 42.2-27; 1921. Hone; Scotch.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2573A; 1940. Microtome; Knife Hone.

*References.*—Abrasive grain sizes, *see* 541.0.

## 541.3 ABRASIVE WHEELS

American Society of Mechanical Engineers, Society of Automotive Engineers, and National Machine Tool Builders' Assn. sponsors. American Standards Assn., B 5.17-1943. Markings for Grinding Wheels. This standard was developed to simplify a complicated condition in industry caused by the diversity of grinding wheel markings used by the various manufacturers of grinding wheels. Sequence of markings covers abrasive, grain size, hardness or grade, structure, bond or process. and manufacturer's record.

Grinding Wheel Manufacturers Assn. Chart Showing Mounted Wheels and Mounted Points, Standard Shapes. This chart shows about 85 different mounted wheels and mounted points with dimensions.

Grinding Wheel Manufacturers Assn. Charts Showing Standard Sizes of Wheels and Shapes for Portable Grinders, 1940. Covers standard flaring cups, cones, and threaded bushed plugs. Gives diagram of each type together with notes and table showing various standard sizes.

Grinding Wheel Manufacturers Assn. Chart Showing Standard Types and Special Shapes of Grinding Wheels. Shows diagrams of nine standard types, straight, cylinder, tapered two sides, recessed one side, straight cup, recessed two sides, flaring cup, dish, and saucer; and 24 special shapes. Gives key to letter dimensions for standard and special shapes.

Grinding Wheel Manufacturers Assn. Joint sponsor with International Assn. of Industrial Accident Boards and Commissions. American Standards Assn., B 7-19 43. Safety Code for the Use, Care, and Protection of Abrasive Wheels. Gives details concerning scope and definitions, handling, storage, inspection, general machine requirements, types of protection devices, protection hoods, protection chucks, flanges, mounting, speed, mounted wheels and mounts, general operating rules, and appendices covering speed conversion table, mounted wheels and points, grinding wheel safety, handling and storage, and standard wheel shapes.

U. S. Gov., Dept. of Agriculture, Forest Service. Specifications for Grinder, Emery, for Crosscut Saws.

U. S. Gov., Dept. of Agriculture, Forest Service. Specifications MSF-158. Grinder; Bench, Hand.

U. S. Gov., Dept. of Agriculture, Forest Service. Specifications No. 159. Grinder; Portable Power.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R45-39; 1939. Grinding Wheels. This recommendation establishes a simplified list of standard types, sizes, and dimensions of grinding wheels, covering straight, tapered two sides, cylinder, recessed one side, recessed two sides, straight cup, flaring cup, dish, and saucer types, standard nomenclature for various classes of grinding work. Initiated by the Grinding Wheel Manufacturers Assn.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R115-30; 1930. Full Disk Buffing Wheels. This recommendation establishes a simplified list of diameters for full disk 20-ply buffing wheels. Initiated by the industry now represented by the Buff and Polishing Wheel Manufacturers Assn.

U. S. Gov., Federal Specification SS-G-691; 1934. Amendment 1; 1943. Grindstones; Natural, Mounted. Covers four types—(A) power; (B) foot or hand-power, metal frame; (C) foot or hand-power, wood frame; and (D) hand-power. Covers grindstones of medium grit, natural sandstone. Gives requirements for wood and metal parts, workmanship, marking, finish, mounting, tolerances, and details; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., Navy Dept. Specification 40W1f; 1945. Wheels; Abrasive.

U. S. Gov., Treasury Dept., Procurement Div., No. 371; 1939. Wheels; Abrasive. Cover two classes—(I) aluminum oxide and (II) silicon carbide, of the following types—straight wheels, cylinder wheels, wheels tapered on two sides; wheels recessed on one side, straight cup wheels, wheels recessed on two sides, flaring cup wheels, dish wheels, and saucer wheels. Gives requirements for material, abrasives, bond, operating speed, mounting, arbor holes, bushings, surface condition, washers, and tolerances; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., Treasury Dept., Procurement Div., No. 503; 1941. Grindstones; Natural, Unmounted. Shall be one type, natural sandstone, suitable for general grinding. Gives requirements for arbor holes, surface, tolerances, trade mark, and table showing sizes; methods of sampling, inspection, and tests; and packaging, packing, and marking.

*References.*—Dental grinding wheels, *see* 915.10; electric buffers and grinders, *see* 711.24; abrasive grain sizes, *see* 541.0.

## 541.4 ABRASIVE CLOTHS AND PAPERS

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R89-40; 1940. Coated Abrasive Products. This recommendation establishes a simplified list of flint- and emery-coated abrasives and a simplified list of coated abrasives other than flint and emery. Initiated by Coated Abrasives Assn.

U. S. Gov., Federal Specification P-C-451; 1932. Amendment 2; 1941. Cloth; Abrasive, Aluminum-Oxide. Covers one type. Gives requirements for material (abrasive, backing, adhesive, and workmanship), form and dimensions, grade numbers, backing, tensile strength, and marking of sheets; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Federal Specification P-P-101; 1932. Amendment 1; 1934. Paper; Abrasive, Artificial, Waterproof. Covers one type. Gives requirements for material (abrasive, backing, adhesive, and workmanship); form, dimensions, grain or grit numbers, backing, marking of sheets, and tensile strength; methods of inspection and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Federal Specification P-P-111; 1932. Amendment 3; 1943. Paper; Flint. Covers three

classes—(A) ream flint finishing, (B) ream flint, and (C) roll flint. Gives requirements for material (abrasive, backing, adhesive, and workmanship); form and dimensions, grade numbers, backing, tensile strength, and marking of sheets and rolls; methods of sampling, inspection, and tests; packaging, packing, and marking.

U. S. Gov., Federal Specification P-P-121; 1932. Amendment 2; 1938. Paper; Garnet. Covers one type and three classes—(A) ream garnet finishing, (B) ream garnet, and (C) roll garnet. Gives requirements for material (abrasive, backing, adhesive, and workmanship), form and dimensions, grade numbers, backing, tensile strength, marking of sheets and rolls, and coating; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Federal Specification P-P-126; 1932. Paper; Garnet, Waterproof. Covers one type. Gives requirements for material (abrasive, backing, adhesive, and workmanship), form, dimensions, and grade numbers; backing, marking of sheets, and tensile strength; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Navy Dept. Specification 42C5b; 1939. Cloth; Crocus.

U. S. Gov., Treasury Dept., Procurement Div., No.728; 1945. Paper; Emery. Gives requirements for material, workmanship, comparison sample, sheet dimensions, grit grade numbers, backing, tensile strength, and marking of sheets; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 29-51B; 1929. Cloth; Emery.

U. S. Gov., Veterans Administration. Specification VA-M-273a; 1941. Emery Cloth.

### 541.5 PUMICE

U. S. Gov., Navy Dept. Specification 51P16; 1944. Pumice; Ground (Abrasive Pigment).

U. S. Gov., U. S. Army, Corps of Engineers. Specification 42-5A; 1939. Pumice.

U. S. Gov., U. S. Army, Medical Dept. Specification 4-1086; 1939. Pumice Powder; Dental.

U. S. Gov., Veterans Administration. Specification VA-D-20c; 1942. Laboratory Pumice.

U. S. Gov., Veterans Administration. Specification VA-D-21; 1938. Flour of Pumice.

### 541.6 ABRASIVE CLEANING COMPOUND

U. S. Gov., Army-Navy Aeronautical Specification AN-C-61a; 1944. Compound; Ceramic Spark Plug Cleaning.

### 541.9 MISCELLANEOUS ABRASIVES

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, Volume 2; 1944. Corundum. Covers definition, constants, derivation and characteristics, grades, uses, containers, and substitutes.

U. S. Gov., Army Air Forces. Specification 14136; 1944. Grit; Blasting, for Carbon Removal.

## 545. ASBESTOS

### 545.1 ASBESTOS, UNMANUFACTURED

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, Volume 2; 1944. Asbestos, Crude and Fiber. Covers definition, derivation and characteristics, uses, grades, containers, and substitutes.

### 545.2 ASBESTOS PAPER, MILLBOARD, AND ROLL BOARD

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R19-37; 1937. Asbestos Paper and Asbestos Millboard. This recommendation covers sizes, weights, widths, and thicknesses of asbestos paper and asbestos millboard.

U. S. Gov., Federal Specification HH-M-351a; 1942. Millboard; Asbestos. Covers one grade. Gives detail requirements for material and workmanship, dimensions, thicknesses, weight, and strengths; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., Navy Dept. Specification 17I6d; 1942. Asbestos-Board; Insulating (Electrical), Impregnated.

U. S. Gov., Navy Dept. Specification 32A3; 1944. Asbestos-Composition; Hard, Sheet.

U. S. Gov., Navy Dept. Specification 32M1f; 1942. Millboard; Asbestos.

U. S. Gov., Navy Dept. Specification 32P4a; 1941. Paper; Asbestos, Corrugated.

U. S. Gov., Navy Dept. Specification 32P9; 1944. Paper and Tape; Asbestos, Reinforced With Cotton Mesh.

### 545.3 ASBESTOS PIPE COVERING AND CEMENTS

American Society for Testing Materials, C 194-44 T; 1944. Tentative Specification for Asbestos Thermal Insulating Cement. Covers scope, composition, physical properties, sampling and mixing, methods of testing, and rejection.

Associated Factory Mutual Fire Insurance Companies. Factory Mutual Bulletin of Loss Prevention 22.70; 1940. Detailed Specifications for Laying Fire Mains. Includes requirements for cast iron pipe, asbestos-cement pipe, pipe linings, fittings, suction pipe, protection, excavation and preparation, foundations, pipe laying, blocking, and jointing, valves, indicator posts and cast iron fittings, plugging dead ends, anchorage of tees, plugs, and bends, hydrostatic tests, backfilling, and special type pipe. Factory Mutual Bulletin of Loss Prevention 22.71; 1940. Anchoring Fire Mains. Gives diagrams of various methods of anchoring conditions.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Building Materials and Structures Report BMS6; 1938. Survey of Roofing Materials in the Southeastern States. A survey of the weathering qualities and extent of use of the various roofing materials on dwellings in the Southeastern States is described. Detailed studies of roofing materials

in Greensboro, N. C.; Columbia, S. C.; Savannah and Atlanta, Ga.; Jacksonville and Orlando, Fla.; Birmingham, Ala.; Knoxville, Tenn.; and Charleston, W. Va.; are reported. A tabulation, by states, of the kinds of roofing materials used on more than 10,000 rural and small-town dwellings, along approximately 2,600 miles of highway, is included. Forty-eight photographs, illustrating types of weathering of roofing materials and features of design and construction of roofs, are shown.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Building Materials and Structures Report BMS29; 1939. Survey of Roofing Materials in the Northeastern States. A survey of the weathering qualities and extent of use of the various roofing materials on dwellings in the Northeastern States is described, with numerous comparative references to a similar survey in the Southeastern States. Detailed studies of roofing materials in Wilmington, Del.; Philadelphia, Pa.; New Haven, Conn.; Boston, Mass.; Manchester, N. H.; Portland, Maine; Rutland, Vt.; and Albany and Syracuse, N. Y., are reported. A tabulation, by states, of the kinds of roofing materials used on more than 10,000 rural and small-town dwellings, along approximately 1,600 miles of highway between the cities listed above, is included; also a summary of the kinds of roofing materials used on almost 21,000 rural and small-town dwellings along 4,000 miles of highway in 20 Eastern States. Forty-eight photographs, illustrating types of weathering of roofing materials and features of design and construction of roofs, are shown.

*References.*—Asbestos pipe covering, *see* 707.42.

## 545.4 ASBESTOS TEXTILES, YARNS, AND PACKING

American Society for Testing Materials, D 299-42; 1942. Specifications and Methods of Test for Asbestos Yarns. Gives definitions, requirements for breaking strength, number (cut), size of wire, twist, grades, and methods of test procedure.

American Society for Testing Materials, D 315-44; 1944. Specifications and Methods of Test for Asbestos Tape for Electrical Purposes. Asbestos tape woven from plain asbestos yarn and suitable for electrical purposes. Gives tolerances, width, thickness, weight, weave, construction, breaking strength, electrical properties, asbestos content, sizing, workmanship, finish, rolls, and methods of testing.

American Society for Testing Materials, D 375-44; 1944. Specifications and Methods of Test for Asbestos Roving for Electrical Purposes. Covers asbestos textile product for insulation on heat-resisting fixture wire, flexible cord or heater cord, etc. Gives definitions, number (cut), grades, iron content, methods of testing, and total iron content. A.S.T.M. Emergency Alternate Provision, EA-D 375; 1942, affected section 5 Iron Content, and section 14 Procedure.

American Society for Testing Materials, D 577-42; 1942. Methods of Testing Woven Asbestos Cloth. Apply to six grades of untreated crysotile asbestos cloth over 12 in. in width; requirements for sampling, test condition, width, thickness, and weight determinations; count, warp and filling, breaking strength, and asbestos content.

American Society for Testing Materials, D 628-44; 1944. Methods of Testing Asbestos Tubular Sleeving. Apply to woven and braided sleeving. Gives sampling, test condition, physical properties, and asbestos content.

American Society for Testing Materials, D 677-42 T; 1942. Tentative Specifications for Woven Asbestos Cloth. Apply to plain weave asbestos cloth in a weight range of 1.00 to 3.10 lbs. per square yard and in widths of 36 and 40 in.

U. S. Gov., Army Air Forces. Specification 16115-1; 1941. Fabric; Asbestos.

U. S. Gov., Federal Specification HH-C-536; 1936. Compound; Plumbing-Fixture-Setting. Covers one grade. Compound shall contain no oil. Gives requirements for composition, characteristics, condition in container, workability, behavior at 32 and 180° F., and behavior in water; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Federal Specification HH-P-41; 1931. Amendment 1; 1934. Packing; Asbestos, Rope and Wick. Covers one grade; wick packing, 1/4 in. only, and rope packing, all sizes 3/8 in. and larger. Gives requirements for material and workmanship, asbestos, and weight; methods of sampling, inspection, and test; and requirements for packaging, packing, and marking.

U. S. Gov., Federal Specification HH-P-46; 1930. Amendment 3; 1940. Packing; Asbestos, Sheet, Compressed. Covers one grade. Gives requirements for material and workmanship, construction, composition, asbestos fiber, rubber compound, tensile strength, tolerance, weight, solvents, and branding; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking. Emergency Alternate Federal Specification E-HH-P-46; 1942, (issued by Procurement Div., Treasury Dept., U. S. Gov.) changed requirements for rubber content.

U. S. Gov., Federal Specification HH-P-51; 1930. Packing; Asbestos, Valve-Stem. Covers four types—(A) braided and lubricated with satisfactory oils, (B) braided and frictioned with rubber compound, (C) twisted and lubricated with satisfactory oils, and (D) twisted and frictioned with rubber compound. Gives requirements for material and workmanship, asbestos, yarn, construction, lubricant, and rubber compound; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Navy Dept. Specification 32C11d; 1944. Cloth, Strands, and Tape; Asbestos.

U. S. Gov., U. S. Army, Medical Dept. Specification 8-70C; 1942. Felt; Saddle and Asbestos, for Splints.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2210A; 1937. Mat; Asbestos.

*References.*—Asbestos electrical tape, *see* 719.51; asbestos copper gaskets, *see* 707.11; methods of testing cotton fabrics and yarns, *see* 300.4, 302.10; methods of testing rubber goods, *see* 200.

## 545.5 ASBESTOS BRAKE LINING

Brake Lining Manufacturers' Assn., Inc. Automotive Data Book, 1941, with 1942-43 Supplement. Asbestos Brake Linings and Clutch Facings. Lists name, model and year of car, truck, bus, or trailer and gives B.L.M.A. catalog number and data for clutch facings and for brake lining.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R66-27; 1927. Automobile Brake Lining. This recommendation establishes a list of standard stock sizes of brake linings covering widths and thicknesses. Initiated by the Society of Automotive Engineers.

## 545.6 ASBESTOS CLOTHING

American Standards Assn., L18.7 to L18.12-1944. Protective Occupational (Safety) Clothing. Leather and Asbestos Gloves and Mittens (American War Standard). L18.7-1944, Welders' Leather Gauntlet Gloves; L18.8-1944, Protective Leather Gloves, Steel-Stapled; L18.9-1944, Asbestos Gloves; L18.10-1944, Asbestos Gloves, Leather Reinforced; L18.11-1944, Asbestos Mittens; L18.12-1944, Asbestos Mittens, Leather Reinforced. Covers scope and purpose, types and sizes, pattern and design, construction, material, methods of test, identification, and appendix for breaking strength of asbestos cloth.

American Standards Assn., L18.14 to L18.17; 1944. Protective Occupational (Safety) Clothing (American War Standard). Asbestos Aprons, Cape Sleeves and Bibs, Leggings, and Coats. L18.14, Asbestos Aprons (Bib Type); L18.15, Asbestos Cape Sleeves and Bibs; L18.16, Asbestos Leggings (Knee and Hip Length); L18.17, Asbestos Coats. Covers types, sizes and dimensions, pattern and design, construction, materials, methods of test, identification, and appendix.

U. S. Gov., Federal Specification HH-M-391; 1933. Mittens; Asbestos. Covers one grade of the 1-finger type with special leather reinforcement. For use in steel, iron, and brass foundry work. Gives detail requirements; methods of inspection and tests; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., Navy Dept. Specification 37M1b; 1944. Mittens; Asbestos.

U. S. Gov., Treasury Dept., Procurement Div., 508a; 1943. Gloves; Asbestos. Covers one grade in two types—(I) without gauntlet and (II) with gauntlet. Intended for use by welders, molders, steamfitters, and other workman handling hot tools or materials. Gives requirements for material, asbestos cloth, number of pieces, seams and stitching, and dimensions; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 11-2; 1936. Mittens; Asbestos, M1935.

## 545.9 MISCELLANEOUS MANUFACTURES OF ASBESTOS

American Society for Testing Materials, D 250-44T; 1944. Tentative Specifications for Asphalt-Saturated Asbestos Felt for Use in Waterproofing and in Constructing Built-Up Roofs. Cover quality of felt containing 85 percent asbestos, saturant, character of felt after saturation, surfacing, physical properties, stickiness, sampling, and testing.

American Society for Testing Materials, D 628-44; 1944. Methods of Testing Asbestos Tubular Sleeving. Apply to woven and braided sleeving. Gives sampling, test condition, physical properties, and asbestos content.

American Society for Testing Materials, D 655-44 T; 1944. Tentative Specifications for Asphalt-Saturated and Coated Asbestos Felts for Use in Constructing Built-Up Roofs. Cover asphalt-saturated and asphalt-coated asbestos felts in sheet form for use in the construction of built-up roofs.

Associated Factory Mutual Fire Insurance Companies. Factory Mutual Bulletin of Loss Prevention 22.70; 1940. Detailed Specifications for Laying Fire Mains. Includes requirements for cast iron pipe, asbestos-cement pipe, pipe linings, fittings, suction pipe, protection, excavation and preparation, foundations, pipe laying, blocking, and jointing; valves, indicator posts and cast iron fittings, plugging dead ends, anchorage of tees, plugs, and bends; hydrostatic tests, backfilling, and special type pipe. Factory Mutual Bulletin of Loss Prevention 22.71; 1940. Anchoring Fire Mains. Gives diagrams of various methods of anchoring conditions.

U. S. Gov., Federal Specification SS-P-351; 1940. Amendment 2; 1942. Pipe; Cement-Asbestos. Covers three classes—100, 150, and 200, suitable for 100, 150, and 200 lb. per square inch maximum working pressure, respectively. Gives requirements for material, workmanship, lengths, tolerances, inside diameter, wall thicknesses, and physical characteristics; methods of sampling, inspection, and tests; and requirements for preparation and marking of shipments.

U. S. Gov., Federal Specification SS-R-511; 1933. Roofing; Asphalt and Asbestos-Prepared, Mineral-Surfaced. Covers one type. Gives requirements for color and appearance, chemical and physical properties, and lap cement; methods of inspection, determination of weight and width, sampling and testing; requirements for packaging, packing, and marking.

U. S. Gov., Federal Specification SS-S-284; 1945. Sheets; Corrugated, and Shapes; Cement-Asbestos. Covers two types of sheets with different pitch of corrugations. Gives requirements for materials and workmanship, fasteners, color, size, thickness, corrugations, absorption, and strength; methods of sampling, inspection, and testing; and packing and marking for shipment.

U. S. Gov., Federal Specification SS-S-291a; 1945. Shingles; Roofing, Cement-Asbestos. Covers five types. Give requirements for material and workmanship, breakage, supplementary shapes, nails and fastenings, color and finish, dimensions, holes for fastening and laps, absorption, and strength; methods of sampling, inspection, and tests; and packing and marking for shipment.

U. S. Gov., Federal Specification SS-S-346; 1945. Siding; Cement-Asbestos. Covers two types—(I) shingles and (II) clapboards. Gives requirements for material and workmanship, breakage, holes for fastening and laps, nails and fastenings, color and finish, size and shapes, absorption, and strength; methods of sampling, inspection, and tests; and packing and marking for shipment.

U. S. Gov., Navy Dept. Specification 32F1b; 1943. Felt; Asbestos, Roll.

U. S. Gov., Navy Dept. Specification 32F3; 1939. Felt; Insulating, Asbestos.

U. S. Gov., Navy Dept., Bureau of Yards and Docks. Specification 7Yg; 1934. Roofing, Siding, and Sheet Metal Work; Dampproofing and Membrane Waterproofing. Includes requirements for cement-asbestos

shingles, cement-asbestos sheets, and asbestos-covered metal.

*References.*—Asphalt and tar roofing, *see* 505.16, 505.36; methods of testing saturated roofing felt, *see* 505.0.

### 546. CHALK

American Ceramic Society. Journal of A.C.S. for June 1928. Ceramic Whiting, 1924. Definition and use, requirements on general quality, composition and allowable variations, fineness, sampling, recommended methods of analysis.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, 1938. Whiting. Covers definition, constants, occurrence, specifications, containers, shipping regulations, uses, and ordering instructions.

Toilet Goods Assn., Inc. Specification No. 11; 1942. Precipitated Chalk. Gives requirements for color, odor, taste, identity, assay, acid insoluble, heavy metals, magnesium and alkalis, loss at 105°C., arsenic, lead, iron, barium, apparent density, particle size, rattle point and flow point, and sulfide sulfur.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S.A., Twelfth Revision, 1942. Chalk Mixture. Preparation.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. A., Twelfth Revision, 1942. Prepared Chalk (Drop Chalk). Description, solubility, identification, acid-insoluble residue, heavy metals, assay, and storage. U.S.P. products of prepared chalk—Hydrargyrum cum Creta, Mistura Cretae, Pulvis Cretae Compositus.

U. S. Gov., Federal Specification SS-C-638; 1943. Crayons; Chalk, White. Covers two types—(I) extruded (round and hexagonal) and (II) molded. Gives requirements for material and workmanship, composition, size, weight, and breaking strength; methods of sampling, inspection, and tests; and packaging, packing, and marking.

*References.*—Other calcium carbonate compounds, *see* 833.3.

## 550-559 MICA, RARE MINERALS

### 551. CRUDE MICA

American Society for Testing Materials, D 351-38; 1938. Methods of Test for Grading and Classification of Natural Mica. Covers natural block mica and mica splittings for general use according to size; determination of grade based on the area of usable rectangle and minimum dimensions of one side; A.S.T.M. grading chart, measurement of thickness, and table of properties of various micas for quality.

American Society for Testing Materials, D351-42T; 1942. Tentative Method of Test for Power Factor and Dielectric Constant of Natural Mica. Includes natural block mica and mica splittings; description of test apparatus, selection of specimens, procedure, and information reported.

### 552. MANUFACTURED MICA

American Society for Testing Materials, D 607-42; 1942. Mica Pigment. Covers the finely divided mica commercially known as pigment mica, suitable for use in the manufacture of protective coatings. Gives composition and properties, number of tests, and methods of testing. A.S.T.M. Emergency Alternate Provision EA-D 607; 1942, changed the requirement for total residue.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, Volume 2; 1944. Mica Powder. Covers definition, derivation, uses, grades, and types.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, 1938. Mica; Stove. Covers definition, constants, color and properties, sources, grades, uses, quotations, ordering, and marketing.

National Electrical Manufacturers Assn. Manufactured Electrical Mica Standards, 39-55; 1939. Includes classification of muscovite and phlogopite (amber) mica splittings, composition, tolerances and properties of manufactured mica sheets and wrappers, dimensions of standard sheets, mica tubes, rings, and methods of test in accordance with A.S.T.M. Methods D 352, D 149, and D 348.

U. S. Gov., Navy Dept. Specification 17M5c; 1934. Mica; Plate (Pressed) and Sheet.

U. S. Gov., Navy Dept. Specification 52 M 3; 1943. Mica (Extender Pigment).

*References.*—Asbestos and mica, *see* 719.55.

## 560-569 PRECIOUS STONES AND IMITATION STONES

### 560. GENERAL ITEMS

### 561. DIAMONDS AND PEARLS

### 562. SAPPHIRES

## 570-579 SULPHUR, MAGNESIA, SALT, AND GRAPHITE

### 571. SULPHUR

American Institute of Homoeopathy. Homoeopathic Pharmacopoeia of U.S., 1941. Sulfur. Chemical symbol, synonyms, description, and preparations for triturations, tincture, dilutions, and medications ror use in homoeopathic medicines.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, 1938. Sulphur. Covers definition, constants, solubility, derivation, grades, uses, specifications, substitutes, and containers.

Technical Assn. of the Pulp and Paper Industry. Analysis of Sulphur. Standard T 616 m-44; 1944. For

use in the paper industry in the manufacture of bisulphite liquor. Covers sampling, apparatus, and analysis.

U. S. Gov., U. S. Army, Chemical Warfare Service. Specification 97-54-137; 1940. Sulfur; Lump, Commercial.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 50-11-40B; 1938. Sulphur, for Use in Ammunition.

*References.*—Sulphur insecticides, *see* 881.21.

## 572. MAGNESIA

American Society for Testing Materials, C 193-44 T; 1944. Tentative Specification for 85 Percent Magnesia Thermal Insulating Cement. Covers scope, composition, physical properties, sampling and mixing, methods of testing, and rejection.

U. S. Gov., Federal Specification HH-M-61; 1934. Magnesia; Block, Cement, and Pipe-Covering (Molded). Covers one grade and four types—(I)standard thickness, (II) double standard thickness, (III) blocks, and (IV) cement or plaster. Shall contain not less than 85 percent of pure hydrated magnesium carbonate and not less than 10 percent long-fiber asbestos. Gives requirements for weight, length, thickness, size, cotton sheeting jacket, and bands; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking. Emergency Alternate Federal Specification E-HH-M-61; 1942, changed requirements for cotton sheeting jacket; and deletes use of brass bands and changes their width and thickness.

*References.*—Magnesia pipe covering, *see* 707.43; boiler lagging sizes, *see* 707.40.

## 573. SALT

*References.*—Salt as a condiment, *see* 154.6; salt, sodium chloride, as a chemical reagent, medicinal, or agricultural supply, *see* 834.9.

## 574. GRAPHITE AND MANUFACTURES THEREOF

American Institute of Homoeopathy. Homoeopathic Pharmacopoeia of U. S., 1941. Graphite. Natural order, synonyms, description, habitat, history, parts used, and preparations for tincture, dilutions, and medications for use in homoeopathic medicines.

Crucible Manufacturers Assn. and American Foundrymen's Assn., sponsors. American Standards Assn., H13-1925. Outside Dimensions of Plumbago Crucibles for Non-Tilting Furnaces in Nonferrous Foundry Practice. Standard size numbers, corresponding outside dimensions, and approximate capacities.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, 1938. Electric Furnace Graphite. Covers definition, constants, derivation, uses, purity, and substitutes.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, 1938. Graphite (Plumbago). Covers definition, constants, properties, occurrence, derivations, purity, and grades; specifications, substitutes, containers, and uses.

U. S. Gov., Federal Specification SS-G-659; 1943. Graphite; Lubricating, Flake. Shall be on one grade only but three types differentiated as regards particle size and designated as small, medium, and large. Gives requirements for material, details; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 2-64A; 1939. Graphite.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 50-11-41F; 1942. Graphite, for Use in Ammunition.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 54-1; 1925. Crucible and Cover for Nonferrous Metals.

*References.*—Carbon brushes for electric motors, *see* 711.42.

## 575. CARBONS AND ELECTRODES

### 575.1 CARBON, POWDERED

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, 1938. Active Carbon. Covers definition, properties, derivation, uses, form available, sources, containers, and substitutes.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, Volume 2; 1944. Carbon Black (Gas Black. Channel Black). Covers definition, derivation, constants, uses, grades, containers, and substitutes.

U. S. Gov., Federal Specification SS-F-111; 1930. Facings; Foundry, Carbon-Base. Covers five grades. Wide latitude in selection of raw materials and processes of manufacture is permitted so that products of highest quality may be furnished. Gives detail requirements of each grade and methods of inspection and tests.

U. S. Gov., Navy Dept. Specification 50F2d; 1942. Facings; Foundry.

U. S. Gov., Navy Dept. Specification 51C33; 1943. Carbon; Activated, Granular.

*References.*—Charcoal, *see* 501.6; lampblack and bone black, *see* 842.4.

### 575.2 CARBON ELECTRODES

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, 1938. Graphite Electrodes. Covers definition, constants, occurrence, specifications, and substitutes.

U. S. Gov., Federal Specification W-E-441; 1930. Electrodes; Carbon, Amorphous. Covers one grade. Gives requirements for finish, threading, threads, and dimensions; chemical requirements; methods of sampling, inspection, and tests; and requirements for packing and marking.

U. S. Gov., Navy Dept. Specification 17E1b; 1945. Electrodes; Graphite, for Electric Arc Welding and Cutting.

*References.*—Carbon brushes for electric motors, *see* 711.42.

### 575.3 CARBON PACKING

U. S. Gov., Navy Dept. Specification 33P 18d; 1943. Packing; Carbon.

### 575.4 CARBON FOR WELDING

U. S. Gov., Navy Dept. Specification 32C4a; 1941. Carbon; Block, Paste, and Rod (for Gas and Carbon Arc Welding).

# 590-599 MISCELLANEOUS NONMETALLIC MINERALS

## 591. FLUORSPAR AND CRYOLITE

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, 1938. Flourspar. Covers definition, constants, derivation, uses, impurities, forms available, and containers.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Circular C398 and Supplement, 1944. Standard Samples. Fluorspar, Sample 79. This sample is prepared and sold by the National Bureau of Standards with a certificate of analysis for use in industry and by others as a comparison standard for checking the accuracy of analysis of similar material.

## 592. FELDSPAR

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, Volume 2; 1944. Feldspar. Covers definition, constants, derivation, uses, grades, containers, and substitutes.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Circular C398 and Supplement, 1944. Standard Samples. Feldspar, Potash, Sample 70; and Feldspar, Soda, Sample 99. These samples are prepared and sold by the National Bureau of Standards with a certificate of analysis for use in industry and by others as a comparison standard for checking the accuracy of analysis of similar materials.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Commercial Standard CS23-30; 1930. Feldspar. This commercial standard classification covers ground feldspar used in the production of ceramic products, based on particle size and chemical composition. It is to be regarded as a classification rather than a definite purchase specification. Detail requirements are given for physical classification based on fineness of grindings and chemical classification based on composition as it influences use. This standard sets forth the procedure necessary for making physical and chemical tests. Initiated by National Feldspar Assn.

## 593. SILICA, DIATOMACEOUS EARTH, INFUSORIAL EARTH

American Institute of Homoeopathy. Homoeopathic Pharmacopoeia of U. S., 1941. Silica. Chemical symbol, synonyms, description, and preparation for triturations for use in homoeopathic medicines.

American Society for Testing Materials, C 197-44 T; 1944. Tentative Specification for Diatomaceous Silica Thermal Insulating Cement. Covers scope, physical properties, sampling and mixing, methods of testing, and rejection.

Society of Automotive Engineers. Aeronautical Material Specification 3420A; 1944. Dehydrating Agent, Silica Gel. Covers granular form in three grades, composition, requirements, test procedures, packaging, packing, marking, reports, approval, and rejections. Similar specification, Army-Navy Aeronautical AN-D-6.

U. S. Gov., Army-Navy Aeronautical Specification AN-D-6c-1; 1945. Dehydrating Agent (Activated).

U. S. Gov., Federal Specification SS-M-501a; 1933. Mold-Wash; Silica. Covers two grades—A and B. Gives requirements for material and its composition; methods of inspection and testing; and requirements for packaging, packing, and marking.

U. S. Gov., Navy Dept. Specification 51S32; 1944. Silica-Gel.

U. S. Gov., Navy Dept. Specification 52S5d; 1941. Silica; Pulverized.

U. S. Gov., U. S. Army, Chemical Warfare Service. Specification 4-503-333A; 1941. Silica Gel.

U. S. Gov., U. S. Army, Chemical Warfare Service. Specification 4-504; 1926. Kieselguhr.

*References.*—Silica brick, *see* 534.12.

## 594. SOILS

American Assn. of State Highway Officials, M56-42. Standard Specifications for Materials for Stabilized Base Course. Covers the quality and size of sand-clay mixtures; gravel, stone, or slag screenings; or sand, crusher run coarse aggregate consisting of gravel, crushed stone, or slag combined with soil mortar or any combination of these materials for use in the construction of a stabilized base course. Gives types, general requirements, physical properties, moisture content, admixtures, and methods of sampling and testing.

American Assn. of State Highway Officials, M57-42. Standard Specifications for Materials for Embankments and Subgrades. Gives scope, definitions, general requirements, and methods of testing.

American Assn. of State Highway Officials, M61-42. Standard Specifications for Materials for Stabilized Surface Course. Gives scope, types, general requirements, detail requirements, moisture content, admixtures, and methods of testing.

American Assn. of State Highway Officials, T86-42. Standard Methods of Surveying and Sampling Soils for Highway Subgrades. Gives purpose of subgrade survey, scope of subgrade survey, equipment for subgrade survey, soil profile determination, examination of soil section, selection of samples, mapping the soil profile, and analysis of data.

American Assn. of State Highway Officials, T87-42. Standard Methods of Preparing Disturbed Soil Samples for Test. This method describes the preparation of soil samples as received from the field for mechanical analysis, the determination of the soil characteristics, and the compaction test. Gives apparatus, size of sample, preparation of sample, test sample for mechanical analysis, test sample for subgrade soil constants, and test sample for the compaction test.

American Assn. of State Highway Officials, T88-42. Standard Methods of Mechanical Analysis of Soils. This method describes a procedure for the quantitative determination of the distribution of particle sizes in soils. Gives apparatus, sample, coarse sieve analysis, hygroscopic moisture, hydrometer test, fine sieve analysis, and calculations.

American Assn. of State Highway Officials, T89-42. Standard Methods of Determining the Liquid Limit of Soils. The liquid limit of a soil is that water content at which the soil passes from a plastic to a liquid state. Gives apparatus, mechanical method, hand method, and check or referree tests.

American Assn. of State Highway Officials, T90-42. Standard Methods of Determining the Plastic Limit of Soils. The plastic limit of a soil is the lowest water content at which the soil becomes plastic. Gives apparatus, sample, procedure, and calculations.

American Assn. of State Highway Officials, T91-42. Standard Methods of Calculating the Plasticity Index of Soils. The plasticity index of a soil is the numerical difference between its liquid limit and its plastic limit. Gives calculation and report.

American Assn. of State Highway Officials, T92-42. Standard Methods of Determining the Shrinkage factors of Soils. This procedure furnishes data from which the following soil characteristics may be calculated—(A) shrinkage limit, (B) shrinkage ratio, (C) volumetric change, (D) lineal shrinkage. Gives determination of the volumetric shrinkage, calculation of the shrinkage limit, calculation of the volumetric change, and calculation of the lineal shrinkage.

American Assn. of State Highway Officials, T93-42. Standard Methods of Determining the Field Moisture Equivalent of Soils. The field moisture equivalent of a soil is the minimum water content at which a drop of water placed on a smooth surface of the soil will not be completely absorbed in 30 seconds. Gives apparatus, sample, procedure, and calculation.

American Assn of State Highway Officials, M94-42. Standard Methods of Test for Centrifuge Moisture Equivalent of Soils. The centrifuge moisture equivalent is the amount of water retained by a soil which has been first saturated with water and then subjected to a force equal to one thousand times the force of gravity for one hour. Gives apparatus, sample, number of tests, procedure, calculation, and reproducibility of results.

American Assn. of State Highway Officials, T99-38. Standard Laboratory Method of Test for the Compaction and Density of Soil. The standard density test for soil determines the weight per cubic foot under a standard compaction for varying water contents of such a range as to show the maximum dry weight per cubic foot. Gives apparatus, procedure, calculations, and moisture density relationship.

American Assn. of State Highway Officials, T100-38. Standard Method of Test for Specific Gravity of Soil. To be used for the determination of the specific gravity of soil fractions. Gives apparatus, method, and calculations.

American Assn. of State Highway Officials, T116-42. Standard Method of Test for Determination of Volume Change of Soils. This method describes the procedure to be followed in the testing of soil, soil mixed with admixtures, and any desired fraction of soil-aggregate mixture, to determine the volume change caused by the absorption or loss of water. Gives apparatus and procedure.

American Ceramic Society. Journal of A.C.S. for June 1928. Tentative Method. Sampling Clay Deposits. Method for preliminary and for extended sampling.

American Society for Testing Materials, D 420-42 T; 1942. Tentative Methods of Surveying and Sampling Soils for Highway Subgrades. Covers purpose, scope, and equipment for subgrade survey, soil profile determination, examination of soil section, for roads in service and new roads, typical survey sheets, and analysis of data.

American Society for Testing Materials, D 421-39; 1939. Method of Preparing Soil Samples for Mechanical Analysis and Determination of Subgrade Soil Constants. For samples as received from the field; requirements for preparing sample. apparatus, test samples for mechanical analysis, and for subgrade soil constants.

American Society for Testing Materials, D 422-39; 1939. Method of Mechanical Analysis of Soils. For the quantitative determination of the distribution of particle sizes in soils. Covers design and dimensions of apparatus, selection of sample, hygroscopic moisture and hydrometer tests, sieve analysis, calculations for hygroscopic moisture, coarse material, percentage of soil in suspension, diameter of soil particles in suspension, and for sieve analysis report.

American Society for Testing Materials, D 423-39; 1939. Method of Test for Liquid Limit of Soils. For determining the moisture content, expressed as a percentage of the weight of oven-dry soil, at which the soil just begins to flow when jarred. Describes liquid limit apparatus and hand method of procedure.

American Society for Testing Materials, D 424-39; 1939. Method of Test for Plastic Limit and Plasticity Index of Soils. Defines and describes apparatus, method of sampling, and procedure of test.

American Society for Testing Materials, D 425-39; 1939. Method of Test for Centrifuge Moisture Equivalent of Soils. Covers definition of term, apparatus required for test, sample prepared by A.S.T.M. Method D 421, method of procedure, and calculation of percentage.

American Society for Testing Materials, D 426-39; 1939. Method of Test for Field Moisture Equivalent of Soils. For determination of the minimum moisture content at which a drop of water placed on a smoothed surface of the soil is not immediately absorbed. Describes evaporator, selection of sample, method of adding water, and oven drying to obtain percentage of field moisture.

American Society for Testing Materials, D 427-39; 1939. Method of Test for Shrinkage Factors of Soils. For shrinkage limit, shrinkage ratio, volumetric change, lineal shrinkage, and specific gravity (approximate). Requirements for apparatus, sampling, procedure, and for calculation of factors.

American Society for Testing Materials, D 556-40T; 1940. Tentative Specifications for Materials for Stabilized Base Course. Covers the quality and size of sand-clay mixtures, gravel, stone, or slag screenings, sand, crusher-run coarse aggregate consisting of gravel, crushed stone, or slag combined with soil mortar, or any combination thereof for construction of a stabilized base course. General requirements, sieve analysis, liquid limit, plasticity index, moisture content, admixtures, and methods of testing.

American Society for Testing Materials, D 557-40T; 1940. Tentative Specifications for Materials for Stabilized Surface Course. Covers the quality and size of sand-clay mixtures, gravel, stone, or slag

screenings, sand, crusher-run aggregate, or combinations thereof. Gives general requirements, sieve analysis, liquid limit, plasticity index, moisture content, admixtures, and methods of testing.

American Society for Testing Materials, D 558-44; 1944. Method of Test for Moisture-Density Relations of Soil-Cement Mixtures. For relationship between moisture content of soil-cement mixtures and resulting densities (oven-dry weight) when mixture is compacted in the laboratory, before cement hydration. Gives apparatus required, method of procedure, and calculation of moisture-density relationship.

American Society for Testing Materials, D 559-44; 1944. Method of Wetting-and-Drying Test of Compacted Soil-Cement Mixtures. For determining soil-cement losses, moisture changes, swell and shrinkage produced by repeated wetting and drying of compacted specimen. Covers apparatus required, preparation of material and molding of specimen, and outline of procedure.

American Society for Testing Materials, D 560-44; 1944. Method of Freezing-and-Thawing Test of Compacted Soil-Cement Mixtures. For determining soil-cement losses, moisture changes, swell and shrinkage produced by freezing and thawing compacted specimen. Gives apparatus required, preparation of material and molding of specimen, and outline of procedure.

American Society for Testing Materials, D 653-42 T; 1942. Tentative Definitions of Terms and Symbols Relating to Soil Mechanics.

American Society for Testing Materials, D 698-42 T; 1942. Tentative Method of Test for Moisture-Density Relations of Soils. Intended for determining the relationship between the moisture content of soils and resulting densities (oven-dry weight per cubic foot) when the soil is compacted in the laboratory.

American Society for Testing Materials, D 806-44 T; 1944. Tentative Method of Test for Cement Content of Soil-Cement Mixtures. Covers scope, apparatus, reagent, samples, procedure, and calculations.

Assn. of Official Agricultural Chemists. Official and Tentative Methods of Analysis, 1940. Soils; Tentative, Sampling, preparation of sample and reagents, apparatus and test procedure for determination of moisture, loss on ignition, carbonate carbon, organic carbon, nitrogen, silica, metal oxides, calcium, magnesium, manganese, iodine, sulphur, phosphorus, potassium and sodium, nitrate nitrogen, alkali salts.

*References.*—Soil pavements, *see* 518.38.

## 599. NONMETALLIC MINERALS NOT ELSEWHERE CLASSIFIED

# 600-699 ORES, METALS, AND MANUFACTURES

(Except Machinery, Vehicles, and Electrical Supplies)

## 600-609 IRON AND STEEL

### 600. GENERAL ITEMS RELATING TO BOTH FERROUS AND NONFERROUS METALS

#### 600.0 GENERAL ITEMS

American Gear Manufacturers Assn. Standard 254.03; 1944. Data Sheet—Corrosion of Ferrous Metals, Its Causes, Prevention and Removal. Gives a detailed discussion of the causes of corrosion of iron and steel, prevention of corrosion, and corrosion removal.

American Society for Metals. Metals Handbook, 1939 Edition. Ferrous Section—Constitution of Ferrous Alloys. Covers constitution diagrams; constitution of binary alloys of iron, iron-aluminum, iron-carbon, iron-chromium, iron-copper, iron-manganese, iron-molybdenum, iron-nickel, iron-nitrogen, iron-phosphorus, iron-silicon, iron-sulphur, iron-titanium, iron-tungsten, iron-vanadium, iron-carbon-molybdenum, iron-chromium-carbon, iron-manganese-carbon, iron-nickel-aluminum alloys; alloys of iron and oxygen; and iron-nickel-chromium system.

American Society for Metals. Metals Handbook, 1939 Edition. Ferrous Section—General Data. Covers definitions of heat treating terms, glossary of X-ray terms, tool steel trade names, corrosion and heat resisting alloys, trade names, decimal and metric equivalents of parts of an inch, interconversion table for units of energy, wire and sheet gages, weights of steel bars, temperature conversion data, pyrometric cones, Greek alphabet, specific heat of gases, and periodic arrangement of the elements.

American Society for Metals. Metals Handbook, 1939 Edition. Ferrous Section—Processes, Methods, and Equipment—General. Covers industrial heating furnaces, liquefied petroleum gases, fuel oil, properties of refractories, pyrometry, lead baths, salt baths, quenching equipment, and quenching media.

American Society for Metals. Metals Handbook, 1939 Edition. Ferrous Section—Properties of Iron and Iron Alloys. Covers physical and mechanical properties of iron, plastic deformation of iron, effect of cold work on the properties of iron, wrought iron, alloys of iron and nickel with low expansion coefficients, corrosion of iron and steel, critical temperatures for S.A.E. steels, iron alloys containing from 3-20 percent aluminum, high yield strength low alloy steels, properties of forgings in heavy sections, coefficients of linear expansion of S.A.E. steels, magnetically soft materials, permanent magnet alloys, creep of metals and alloys, mass influence in heat treatment, similarity in tensile properties of S.A.E. steels, the alloying elements in steels, chromium steels, stainless steel, wrought heat resisting steels, heat resisting castings, copper as an alloying element in steel, manganese as an alloying element in pearlitic steels, austenitic manganese steels, molybdenum steels, nickel as an alloying element in steel, properties of iron-nickel alloys, silicon as an alloying element in steel, tungsten as an alloying element in steel, vanadium steels, aging in iron and steel, S.A.E. steel specifications, stainless steel type number and analysis, cast iron, malleable iron, and pearlitic malleable iron.

American Society for Metals. Metals Handbook, 1939 Edition. Ferrous Section—Shaping and Forming of Metals. Covers hot mechanical working of steel, hot die forging, hot upset machine forging, piercing of steel, extrusion of metals, forging by the blacksmith, straightening bars, shapes and tubing, flattening of mild steel sheet and strip, cold drawing steel wire, cold finished carbon steel bar and shafting, swaging, coining, roll threading and knurling, machinability of steel, abrasive wheels for grinding steel, cemented or sintered hard carbides, cutting fluids for machining, and cutting of metals.

American Society for Metals. Metals Handbook, 1939 Edition. Ferrous Section—Structure Properties, and Technology—General. Covers crystal structure of metals, physical constants of the elements, density of alloys, heat contents, properties of metals at low temperatures, fluidity of metals, and powder metallurgy.

American Society for Metals. Metals Handbook, 1939 Edition. Ferrous Section—Technology of Iron and Steel. Covers Bessemer process, open hearth process, basic electric melting, acid electric steel, coreless induction melting, crucible process, metals and ferroalloys, aluminum as a deoxidizer, use of aluminum in commercial steels, ingot and pouring practice, manufacture of hot and cold rolled strip and sheet, heating steel bars for forging, large forgings, fabricating and finishing stainless steels, and forging of stainless steel.

#### 600.1 TESTING OF METALS

American Iron and Steel Institute. Manufacturers' Standard Practice. Supplementary Information. Section—Combined Standard Steel Lists of American Iron and Steel Institute, and American Society of Automotive Engineers.

American Iron and Steel Institute. Manufacturers' Standard Practice. Supplementary Information. Section 10. Alloy Steel. Charts and tables showing Rockwell "C" hardness at distances up to 2 1/2 in. from end under standard end-quench hardenability tests for various alloy steels.

American Railway Engineering Assn., Construction and Maintenance Section, Assn. of American Railroads. Manual of Railway Engineering, 1910. Specifications for Drop Test Machine. Shall be arranged to allow a 2,000-lb tup to fall freely at least 25 ft. on the

center of a rail resting on supports that can be adjusted to spans varying from 3 ft. to 4 ft. 8 in. Gives details for anvil, springs, base-plate, substructure, pedestals, leads, gage, tup, tripping head, and tongs.

American Society for Metals. Metals Handbook, 1939 Edition. Ferrous Section—Testing of Iron and Its Alloys. Covers physical testing of tool steels, notched bar testing of steel, testing bolts and screws, analytical methods for steel, determination of oxygen, nitrogen, hydrogen, etching reagents for microscopic examination, macro etching of iron and steel, nonmetallic inclusions in steel, use of reflected polarized light, McQuaid-Ehn test, austenitic grain size, case depth measurement, magnetic testing, and the spark test.

American Society for Metals. Metals Handbook, 1939 Edition. Testing-General for Ferrous Metals. Covers hydrometers, Brinell hardness test, Rockwell hardness test, scleroscope hardness test, monotron hardness test, Vickers hardness test, microcharacter, file hardness test, hardness conversion table, Moh's scale of hardness, hardness testing at elevated temperatures, test specimens, load conversion table for testing, percentage reduction of area for tensile test specimens, fatigue testing, corrosion fatigue of metals, statistical methods for control, spectrographic analysis, metallographic polishing, photomicrography, radiography of metals, and X-ray diffraction.

American Society for Testing Materials, A34-44; 1944. Methods of Test for Magnetic Properties of Iron and Steel. Includes procedures for determining the normal induction and hysteresis, core loss, normal and incremental permeability and core loss, permeability of feebly magnetic materials, interlamination resistance, and lamination factor.

American Society for Testing Materials, A 224-41; 1941. Recommended Practice for Conducting Plant Corrosion Tests. Procedure of tests under operating conditions, but not for atmospheric or underground corrosion tests. Covers apparatus for mounting specimen, preparation of test specimen, indentification of specimen, duration of test, removal of specimen from test, cleaning and weighing specimen examination of surface, and form of report.

American Society for Testing Materials, A 255-42T; 1942. Tentative Method of End-Quench Test for Hardenability of Steel. Covers determination by the end-quench or Jominy test. Consists of water-quenching one end of a cylindrical test specimen 1 in. in diameter and measuring to what extent from the quenched end the steel hardens. Apparatus, test specimens, procedure, plotting test results, index of hardenability, and report.

American Society for Testing Materials, A 256-42T; 1942. Tentative Method of Compression Testing of Cast Iron. Compression tests of cast iron shall be made in accordance with the Tentative Methods of Compression Testing of Metallic Materials (A.S.T.M. Designation: E9), except for length and dimensions. Two classes of test specimens designated as medium-length specimens and long specimens.

American Society for Testing Materials, A 260-42T; 1942. Tentative Recommended Practice for Torsion Tests of Cast Iron. Covers the procedure for torsion tests of cast iron. Important due to its use for camshaft, crankshaft, couplings, etc.: Test specimens, procedure, and calculation.

American Society for Testing Materials, A 262-44T; 1944. Tentative Recommended Practice for Boiling Nitric Acid Test for Corrosion-Resisting Steels. A method of measuring a quality of corrosion-resisting steels, especially with regard to the effectiveness of heat treatment. Gives requirements for apparatus, nitric acid test solution, preparation of test specimens, procedure, and calculation and report.

American Society for Testing Materials, A 272-44T. Tentative Method of Magnetic Particle Testing and Inspection of Commercial Steel Castings. Covers scope, definition, applications, magnetizing apparatus, magnetic particles, preparation of surface, methods of magnetization, application of particles, demagnetization, interpretation of indications, and report.

American Society for Testing Materials, A 275-44T. Tentative Method of Magnetic Particle Testing and Inspection of Heavy Steel Forgings. Covers scope, definition, applications, magnetizing apparatus, magnetic particles, preparation of surface, methods of magnetization, application of particles, demagnetization, and interpretation of indications.

American Society for Testing Materials, B 63-36; 1936. Method of Test for Resistivity of Metallic Materials. For determining to an accuracy of 1 percent, the electrical resistivity of rolled and drawn materials; preparation of test specimen, length measurement, cross-sectional area measurement, leads, heating of specimen, and form of report.

American Society for Testing Materials, B 77-33; 1933. Method of Test for Thermoelectric Power of Electrical-Resistance Alloys. For determination of thermoelectric power of a metal compared to copper, between 0 and 100 C., for suitability for use in resistance apparatus. Includes preparation of test specimen, measurement of temperature, electromotive force, polarity of metal, and form of report.

American Society for Testing Materials, B 95-39; 1939. Method of Test for Linear Expansion of Metals. Especially for determining expansion of oxidation-resistant alloys at temperatures up to 1,000° C. Describes quartz tube type of dilatometer, accuracy of micrometers, electric furnace and controls, power and temperature measuring instruments, test specimen, calibration of furnace, standard and rapid methods of procedure, and form of report.

American Society for Testing Materials, B 106-40; 1940. Thermostat Metals. Covers procedures for testing flexitivity and electrical resistivity of thermostat metals. Covers change of curvature per unit of temperature change for unit thickness, apparatus required, test specimen, procedure, and form of report.

American Society for Testing Materials, B 110-39T; 1939. Tentative Method of Test for Dielectric Strength of Anodized Aluminum. For anodic coatings applied to aluminum and its alloys, also for measure of thickness of coating where properties are known. Requirements for high-voltage transformer, electrode, test specimens, surrounding medium, condition and position of electrodes, and application of voltage.

American Society for Testing Materials, B113-41; 1941. Method for Bend Testing of Wire (Wire for Radio Tubes and Incandescent Lamps). For evaluation of temper of round wire from 0.25 to 3.0 mm. Nature of bend test, apparatus, test specimen, and procedure.

American Society for Testing Materials, B 114-39; 1939. Method of Test for Temperature-Resistance Constants of Sheet Materials for Shunts and Precision Resistors. For determining constants of materials used in temperature range 0 to 80 C. Requirements for test specimen, terminals, manganin samples, apparatus, baths, temperature and resistance measurements, procedure, and form of report.

American Society for Testing Materials, B117-44T; 1944. Tentative Method of Salt Spray (Fog) Test. Gives scope, apparatus, test specimens, preparation of test specimens, position of specimens during test, salt solution, conditions of salt-spray chamber, continuity of test, period of test, cleaning of tested specimens, evaluation of results, and records and reports.

American Society for Testing Materials, B 118-42 T; 1942. Tentative Methods of Testing Nickel and Nickel-Alloy Wire and Ribbon for Electronic Tube Filaments. For wire or ribbon without chemical coating; method of chemical analysis, density and tensile strength requirements, test specimen, procedure, weight, resistivity, and determination of dimensions.

American Society for Testing Materials, B181-43T; 1943. Tentative Method of Test for Effect of Controlled Atmospheres Upon Alloys in Electric Furnaces. Intended for determining (a) the action of controlled atmospheres upon heat-resisting alloys such as are used for electric-heating elements and other parts in industrial furnaces intended to operate at high temperatures, (b) the temperature at which attack occurs, and (c) the effect of stress upon the nature or rate of attack. Gives requirements for apparatus, test specimens, test atmosphere, procedure, precautions, and report.

American Society for Testing Materials, B 185-43T; 1943. Tentative Method of Total Immersion Corrosion Test of Non-Ferrous Metals. Covers scope, apparatus, test solution, test specimens and their preparation, number of specimens, methods of cleaning specimens after test, duration of test, evaluation of results, report, and appendices.

American Society for Testing Materials, B 191-44 T; 1944. Tentative Method of Test for Equivalent Yield Stress of Thermostat Metals. Gives scope, equivalent yield stress, apparatus, test specimens, preparation of specimens, stabilization of specimen, procedure, calculation, and report.

American Society for Testing Materials, B 192-44 T; 1944. Tentative Method of Alternate Immersion Corrosion Test of Non-Ferrous Metals. Gives scope, apparatus, test solution, test specimens and their preparation, number of specimens, procedure, methods of cleaning specimens after test, duration of test, evaluation of results, report, and appendices.

American Society for Testing Materials, B 193-44T; 1944. Tentative Method of Test for Resistivity of Copper and Copper Alloy Electrical Conductors. Covers the procedure for determining the electrical resistivity of copper and copper-alloy strips, rods, bars, tubes, and shapes used for electrical conductors. Covers resistivity, apparatus, test specimens, procedure, temperature correction, and explanatory notes.

American Society for Testing Materials, E 2-44T; 1944. Tentative Methods of Preparation of Micrographs of Metals and Alloys (including Recommended Practice for Photography as Applied to Metallography). For the examination and photography of ferrous and nonferrous metals and alloys. Gives standard magnifications, reproduction of micrographs, lenses, directions for use of lens combinations, definition of grain, measurement of grain size, numerical expression of grain size, grain size determination of steels, use of grain size in specifications, and recommended practice for photography as applied to metallography.

American Society for Testing Materials, E 3-44T; 1944. Tentative Methods of Preparation of Metallographic Specimens. To reveal constituents and structure of metals and their alloys by means of the miscroscope. Includes selection, size, cutting, cleaning, mounting, polishing, advantages, and apparatus for metallographic specimens. Gives metallographic procedures for aluminum and its alloys, copper and its alloys, iron and steel, lead and its alloys, magnesium and its alloys, nickel and its alloys, precious metals, tin and its alloys, and zinc and its alloys.

American Society for Testing Materials, E 4-36; 1936. American Association of State Highway Officials, T67-42. Methods of Verification of Testing Machines. Includes definitions, methods of verifying machines that measure load by standard weights, by proving levers, by elastic calibration device, and by comparison method; test specimen, procedure, permissible variations, interval between verifications and reports.

American Society for Testing Materials, E 6-36; 1936. Definitions of Terms Relating to Methods of Testing. Covers stress, strain, elastic limit, field strength, tensile strength, compressive strength, and modulus of elasticity.

American Society for Testing Materials, E 7-27; 1927. Definitions of Terms Relating to Metallography. Defines alloy, alpha brass, etching reagent, grain, macrograph, metallography, metal, etc.

American Society for Testing Materials, E 8-42; 1942. American Assn. of State Highway Officials, T68. Methods of Tension Testing of Metallic Materials. Covers the apparatus, test specimen, the outline of method of procedure. Includes cast iron, malleable iron, die castings, rod and wire, tubes, welded joints, gripping devices, speed of testing, and definitions.

American Society for Testing Materials, E 9-33 T; 1933. American Assn. of State Highway Officials, T 69-42. Tentative Methods of Compression Testing of Metallic Materials. For calibration of testing machine by A.S.T.M. method E4, speed of operating, preparation of test specimen, measurement of specimen, bearing blocks, method of procedure for determination of proportional limit, elastic limit, yield strength, yield point, compressive strength, and stress-strain diagrams.

American Society for Testing Materials, E 10-27; 1927. American Assn. of State Highway Officials, T70-42. Method of Test for Brinell Hardness of Metallic Materials. For determination of hardness by measurement of impression in surface of metal, using a 10 mm. ball and 500 and 3,000 kg. loads. Includes table of Brinell hardness numbers, description of apparatus, specimen, and test procedure.

American Society for Testing Materials, E 12-27; 1927. American Assn. of State Highway Officials, M 132-42. Definitions of Terms Relating to Specific Gravity. Defines absolute specific gravity of solids and liquids, specific gravity, apparent specific gravity of solids, and bulk specific gravity of solids.

American Society for Testing Materials, E 14-33; 1933. American Standards Assn. Z30.2-1936. Recommended Practice for Thermal Analysis of Steel. For determining temperature at which physical changes accompanied by abrupt change in heat content occur in metals. Furnace, temperature, and timing apparatus, method of procedure using inverse-rate method, and differential method, precautions, and form of report.

American Society for Testing Materials, E 15-39T; 1939. Tentative Methods of Radiographic Testing of Metal Castings. To reveal by photographic means the internal quality of material under examination. For use in foundry development and final inspection; description of X-ray apparatus, gamma-ray apparatus, radiographic technique and procedure.

American Society for Testing Materials, E 16-39; 1939. American Assn. of State Highway Officials, T 118-42. Method of Bend Testing for Ductility of Metals. For testing of welds primarily by free bending with measurement of the fiber elongation. Preparation of specimen, starting and closing the bend, measurement of fiber elongation, and reproducibility of results.

American Society for Testing Materials, E 18-42; 1942. American Assn. of State Highway Officials, T 80 and T 124. Methods of Test for Rockwell Hardness and Rockwell Superficial Hardness of Metallic Materials. For use in thin strip or sheet material, nitrided or lightly carburized pieces, finished pieces on which large test marks are undesirable, areas near edges, extremely small parts, etc. Employs lighter minor and major loads, and more sensitive depth-measuring system; method of procedure, calibration of test blocks, and hardness scales.

American Society for Testing Materials, E 21-43; 1943. Recommended Practice for Short-Time Elevated-Temperature Tension Tests of Metallic Materials. For tests above atmospheric temperatures and up to 2.000 F. Gives requirements for selection of metals for test, test specimens, tension test apparatus, furnace and heating, temperature measuring apparatus, temperature survey of furnace, temperature control, room temperature, temperature equilibrium, strain measurement, procedure, and recording and reporting data.

American Society for Testing Materials, E 22-41; 1941. Recommended Practice for Conducting Long-Time High-Temperature Tension Tests of Metallic Materials. Covers the determination of the amount of extension of metallic materials due to the combined effects of temperature, tensile stress, and time. Possibilities and limitations, fundamental measurements, test specimens, loading; temperature measurement, control, and variation; extension of measurement, conditions of test, plotting results, form of reporting results, and precautions necessary in applying result.

American Society for Testing Materials, E 23-41T; 1941. Tentative Methods of Impact Testing of Metallic Materials. Intended for comparison of the brittleness and notch sensitivity of metals. The usual test consists of the determination of the energy absorbed in breaking a notched specimen by a single blow. The tests are based on the assumption that resistance to shock and notch effects depends upon the ability of materials to equalize dangerously concentrated stresses by plastic deformation without sudden failure. Mechanics of the test, types of test, types of specimens, apparatus, procedure, calibration, pendulum type machines, experimental procedure, and inspection and precautions for pendulum machines.

American Society for Testing Materials, E 30-42; 1942. Methods of Chemical Analysis of Steel, Cast Iron, Open-Hearth Iron, and Wrought Iron. For use in referee analyses. General instructions and precautions; sampling rolled and forged steel products, pig iron, gray-iron castings, malleable iron, and wrought iron; and methods of analysis—total carbon by the direct combustion method, manganese by the bismuthate method (absence of cobalt), manganese by the persulfate method (presence of cobalt), phosphorus by the molybdate-magnesia method, phosphorus by the alkalimetric method, sulfur by the gravimetric method, sulfur by the evolution method, silicon by the sulfuric acid method, silicon by the perchloric acid method, copper by the electrolytic or gravimetric method, copper by the thiosulfate-iodide method, nickel by the dimethylglyoxime method, nickel by the cyanide titration method, chromium by the persulfate oxidation method, vanadium by the electrolytic separation method, vanadium by reduction with ferrous sulfate and titration with permanganate, molybdenum by the alphabenzoinoxime method, molybdenum by precipitation as sulfide and weighing as oxide, molybdenum by the colorimetric method, cobalt by the zinc oxide-alpha-nitrose-beta-naphthol method, titanium by the cupferron-colorimetric method, and zirconium by the cupferron-phosphate method.

American Society for Testing Materials, E 43-42T; 1942. Tentative Recommended Practice for Indentification of Crystalline Materials by the Hanawalt X-Ray Diffraction Method. This method requires a knowledge of the interplanar spacings in the crystal corresponding to the three most intense lines in the X-ray diffraction pattern of each of the crystal components of the unknown specimen. Advantages and limitations, preparation of test specimens, X-radiation, position of film, photographic films, intensifying screens, measurement of lines on films, interpretation of data, alternative methods, and safety precautions.

American Society for Testing Materials, E 45-42 T; 1942. Tentative Recommended Practice for Determining the Inclusion Content of Steel. Covers determining the inclusion content of steel by a magnetic powder method and two miscroscopic methods. Test specimens, preparation of specimen, procedure, and expression of results.

National District Heating Assn. Proposed Tentative Method for Measurement of Relative Corrosion

Rates—N. D. H. A. Method, 1945. Provides a simple and rapid means for measuring the relative corrosivity of aqueous solutions and of comparing the corrosion resisitivity of different metals when exposed to such environments. Applicable to the making of measurements in municipal water supplies, industrial processes, pilot plant experiments, and laboratory studies, where waters relatively free of suspended materials, at temperatures below about 400°F. and at flow rates below about 5 ft./sec. are encountered. Gives requirements for apparatus; fabrication of frame, helical coils, and couplings; assembling a tester, criteria for installing a tester, period of exposure, cleaning of test specimens, calculation of average corrosion rates, table showing conversion factors and other pertinent data for materials commonly used in water lines, interpretation of data, and drawings.

Society of Automotive Engineers, Aeronautical Material Specifications 2601B, 2602A, 2604B, 2605A, 2606B, and 2607A; 1944; and 2616, 2620, and 2525, 1940. Pressure Testing—10 lb. per sq.in., 25 lb. per sq.in., 40 lb. per sq.in., 55 lb. per sq.in., 70 lb. per sq.in., 100 lb. per sq.in., 200 lb. per sq.in. (hydraulic), 1,000 lb. per sq.in. (hydraulic), and 2,500 lb. per sq.in. (hydraulic). To test the strength of and detect leaks in parts where applicable. Includes details for procedures and dispositions.

Society of Automotive Engineers. Aeronautical Material Specification 2640A; 1944. Magnetic Inspection. To detect the presence of small grinding or quenching cracks, seams, nonmetallic inclusions, and other defects on and immediately below the surfaces, in magnetizable materials. Gives requirements for application, wet process, dry process, procedure, marking, disposition, and check of equipment and procedure. Similar Specification: Army-Navy Aeronautical AN-QQ-M-181.

Society of Automotive Engineers. 1944 Handbook. Section 3—Processed Materials. SAE Standard Steels, The steel compositions included in this standard are considered adequate for practically all parts made of ferrous materials that are necessary for the production of automotive apparatus, and include grades that have been found commercially available and technically adequate for the service required of such parts. Includes general instructions, explanation of SAE numbering system, chemical compositions, methods of sampling for check analysis, method of determining hardenability, grain size charts for classification of steel, magnaflux testing, determination of inclusions, general characteristics and heat treatments, tension test specimens, physical properties, hardness tests, and definition of heat treating terms.

U. S. Gov., Army Air Forces Specification, 20027B; 1944. Certification Procedure for the Certification of Magnetic Inspection Operators, Inspectors, and Supervisors.

U. S. Gov., Army-Navy Aeronautical Specification, AN-I-26; 1944. Inspection; Radiographic.

U. S. Gov., Army-Navy Aeronautical Specification, AN-I-30; 1945. Inspection; Fluorescent Penetrant Method of.

U. S. Gov., Army-Navy Aeronautical Specification, AN-I-31; 1945. Inspection Equipment; Horizontal Magnetic Particle.

U. S. Gov., Army-Navy Aeronautical Specification, AN-QQ-M-188-3; 1943. Metals; Radiographic Inspection of (Process and Application).

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Circular C409; 1936. Production, Heat Treatment, and Properties of Iron Alloys. This circular describes very briefly the reduction or iron ore, the production and properties of cast irons, the production and fabrication of steels, and also discusses the fundamental principles upon which the heat treatment of steel is based. There are also included brief discussions of the equipment used in heat-treatment processes and the major types and chief characteristic properties of alloy steels.

U. S. Gov., Federal Specification QQ-M-151a; 1936. Amendment 2; 1944. Metals; General Specification for Inspection of. Covers requirements which are common to all detail Federal Specifications for metals unless specifically excepted in the detail specification. It does not describe the material or article but provides means for determining whether the material or article conforms to the detail requirements. Individual requirements for the material or article are given in the detail specification.

U. S. Gov., Navy Dept. General Specifications for Inspection of Materials, 1941. Appendix II, Metals, Part A, Definitions and Test, 1941; Appendix II, Metals, Part B, Section 1, Methods of Analysis of Aluminum and Aluminum Alloys, 1936; Appendix II, Metals, Part D, Photomicrographic Standards, Section 1, Photomicrographic Standards for Steel Forgings, 1938; Appendix II, Metals, Part F, Radiography, Section F-1, Definitions and Radiographic Requirements, 1938; Appendix IV, Lumber and Timber (Manufacture, Kiln-Drying, Grading, Inspection, and Shipping), 1941; Appendix VII, Welding, Part A, Section A-2, Symbols for Arc, Gas, and Resistance Welding With Instructions for Use, 1941; Appendix VII, Welding, Part D, Section D-1, General Qualifications of Welding Processes, 1938; Appendix VII, Welding, Part E, Section E-1, Qualification Tests for Metal Arc Welders, 1938; Appendix VII, Welding, Part E, Section E-2, Qualification Tests for Gas Welders, 1939; and Appendix VII, Welding, Part G, Section G-1, General Qualification of Equipment, 1938.

## 600.2 CLASSIFICATION OF METALS

American Society for Testing Materials, E 19-39T; 1939. Tentative Classification of Austenite Grain Size in Steels. Comprises two sets of charts, one for idealized form of austenite grain sizes, the other a series of photo-micrographs found in the carburized case in a carburizing (McQuaid-Ehn) test. Method of revealing grain size, comparison of grain size, and explanatory notes.

American Society for Testing Materials, E 48-43T; 1943. Tentative Hardness Conversion Tables for Steel. (Relationship Between Diamond Pyramid Hardness, Rockwell Hardness, and Brinell Hardness.) Presents data

on the relationship among diamond pyramid hardness, Rockwell hardness, Superficial Rockwell hardness, and Brinell hardness of steel. Covers hardness determinations use of conversion tables, and gives tables for hardness conversion numbers for steel.

National Assn. of Waste Material Dealers, Inc. Standard Classification for Old Metals. Circular O; 1940. Number and code word for each metal waste material, with requirements for composition, limitations on maximum dimensions, permissible foreign matter, and conditions for delivery. Includes brass, copper, pewter, zinc, tin, lead, aluminum, nickel, stainless steel, and babbitt products.

Society of Automotive Engineers. 1942 Handbook, Section 3—Processed Materials. SAE Standard Steels. The steel compositions included in this standard are considered adequate for practically all parts made of ferrous materials that are necessary for the production of automotive apparatus, and include grades that have been found commercially available and technically adequate for the service required of such parts. Includes general instructions, explanation of SAE numbering system, chemical compositions, methods of sampling for check analysis, method of determining hardenability, grain size charts for classification of steel, magnaflux testing, determination of inclusions, general characteristics and heat treatments, tension test specimens, physical properties, hardness tests, and definition of heat treating terms.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R-58-36; 1936. Classification of Iron and Steel Scrap. This recommendation establishes various standard classes and grades of scrap under the general classes of scrap for blast furnaces, for basic open-hearth furnaces, low phosphorus and low sulphur scrap for acid open-hearth furnaces, scrap for electric furnaces, for gray iron foundry practice, for Bessemer converters, and for miscellaneous purposes. Sponsored by the National Assn. of Purchasing Agents and the National Assn. of Waste Material Dealers.

U. S. Gov., Navy Dept. Specification 46M4e; 1943. Metal; Nonferrous (Composition F). For articles to be brazed.

## 600.3 COATING OF METALS

American Assn. of State Highway Officials, T65-42. Standard Methods of Test for Weight of Coating on Zinc-Coated (Galvanized) Iron or Steel Articles. Gives scope; shop weighing method, spot test methods, hydrochlorid acid antimony chloride method, sulfuric acid method, and other alternate methods for galvanized sheets; stripping test and hydrochloric acid antimony chloride method for galvanized wire; and appendix.

American Hot-Dip Galvanizers Assn., Inc. Tentative Standard Specification for Hot-Dipped Coated (Galvanized) Products, CS-1-36; 1936. Cover the protective zinc coatings on various iron and steel articles galvanized. Include chemical and physical properties, tests, workmanship and finish, and inspection and rejection.

American Hot-Dip Galvanizers Assn., Inc. Tentative Standard Specifications for Malleable and Cast Iron; Castings, Fittings, Etc. CS-2-36; 1936. Cover the protective zinc coatings on various articles made out of malleable and cast iron. Zinc used for galvanizing shall conform to A.S.T.M. standard specification B6 for slab zinc. Gives requirements as to weight of coating, uniformity of coating, physical properties and tests, workmanship and finish, packing and marking, inspection, sampling, and rejection.

American Hot-Dip Galvanizers Assn., Inc. Tentative Standard Specifications for Bolts and Nuts, Lag Screws, Washers, Pole-Line Hardware, Etc., CS-3-36; 1936. Cover zinc coatings applied by the hot-dip process on hardware and fastenings, such as builders hardware, pole-line hardware, hardware for farm implements, bolts, nuts, screws, nails, rivets, awning pulleys, etc. Zinc used for galvanizing shall conform to A.S.T.M. standard specification B6 for slab zinc. Contains requirements as to weight of coating, weight of coating test, uniformity of coating, physical properties and tests, workmanship and finish, inspection, sampling, and rejection.

American Hot-Dip Galvanizers Assn., Inc. Tentative Standard Specifications for Turnbuckles, Etc., CS-4-36; 1936. This specification deals primarily with the requirements to be met in hot-dip galvanizing turnbuckles. It deals with various features of the galvanizing bath, zinc used for the coating material, the quality of the zinc coating on the turnbuckles, and the requirements to be met as to finish, etc.

American Hot-Dip Galvanizers Assn., Inc. Tentative Standard Specifications for Range Boilers, Tanks, Etc., CS-5-36; 1936. Specifications cover the protective zinc coatings on various sizes of range boilers and tanks, tanks for water heaters, and various tanks of a similar kind, and for more or less of the same purpose. Requirements as to chemical properties, physical properties and tests, workmanship and finish, inspection and rejection, and storing and shipping.

American Hot-Dip Galvanizers Assn., Inc. Tentative Standard Specifications for Chain-Link Fence; Wire Fabric; Wire Products, Etc., CS-6-36; 1936. These specifications cover zinc-coated chain-link fence fabric, galvanized after weaving, in which the individual pickets are helically wound and interwoven in the form of a continuous link fabric without knots or ties. Requirements as to manufacture, sampling, weight and uniformity of coating, packing and marking, and inspection and rejection.

American Hot-Dip Galvanizers Assn., Inc. Tentative Standard Specifications for Light Steel Boxes and Containers, Cans, Etc., Made Out of Light Sheet Iron, CS-7-36; 1936. These specifications apply to the hot-dip galvanizing of various kinds and types of steel boxes and containers that come to the job galvanizer for coating. They refer to all kinds of articles fabricated out of light steel sheets whether in the form of a container, or otherwise

Requirements as to weight of coating, uniformity of coating, workmanship, finish, packing, marking, inspection, and rejection are given.

American Hot-Dip Galvanizers Assn., Inc. Tentative Standard Specifications for Pipe, CS-8-36; 1936. Pipe under these specifications is intended for ordinary uses such as low-pressure service in steam, water, and gas lines. Galvanized pipe relative to the base metal shall be made and tested in accordance with A.S.T.M. specification A53 and the pipe shall be galvanized and the coating tested in accordance with A.S.T.M. specification A120. Gives requirements as to weight of coating, workmanship and finish, inspection, and rejection.

American Hot-Dip Galvanizers Assn., Inc. Tentative Standard Specifications for Refrigerator Coils and Like Articles Made of Pipe, CS-9-36; 1936. This specification applies to all pipe coils of various types used in refrigerators. Gives requirements as to process of galvanizing, weight of coating, workmanship and finish, inspection, and rejection.

American Hot-Dip Galvanizers Assn., Inc. Tentative Standard Specifications for Gratings, Grills, and Like Articles, CS-10-36; 1936. Gives requirements as to the grade of zinc to be used, method of galvanizing, weight of coating, physical properties and tests, workmanship, finish, inspection, and rejection.

American Hot-Dip Galvanizers Assn., Inc. Tentative Standard Specifications for Hoops and Bands, Strip Steel, Etc., CS-11-36; 1936. These specifications are for hoops and bands, and steel strip or like articles of iron and steel that are zinc coated. It also covers flatnailless, steel, box strapping, etc., that are galvanized. Gives requirements as to process of galvanizing, zinc coating, bending, resistance to corrosion, and methods of inspection and test.

American Hot-Dip Galvanizers Assn., Inc. Tentative Standard Specifications for Chain, CS-12-36; 1936. Cover hot-dip galvanizing of iron and steel chain and like articles. Gives requirements as to condition of base metal, zinc, process of galvanizing, zinc coatings, weight of coating test, weight of coating test after galvanizing, tests, inspection, and rejection.

American Hot-Dip Galvanizers Assn., Inc. Tentative Standard Specifications for Large Smokestacks and Like Articles, CS-13-36; 1936. These specifications apply to very large articles such as smokestacks for ships, or factories, very large sheet steel or plate steel boxes. Give requirements as to base metal, grade of zinc, process of galvanizing, zinc coating, weight of coating, weight of coating test, uniformity of coating, workmanship, finish, inspection, and rejection.

American Hot-Dip Galvanizers Assn., Inc. Tentative Standard Specifications for Very Small Articles—Rivets, Nails, Tacks, Etc., CS-14-36; 1936. Contains requirements as to base metal, grade of zinc, process of galvanizing, zinc coating, weight of coating, weight of coating test, uniformity of coating, physical properties, tests, workmanship, finish, inspection, sampling, and rejection.

American Hot-Dip Galvanizers Assn., Inc. Tentative Standard Specifications for Wiped Articles—Awning Iron, Etc., CS-15-36; 1936. These specifications are for wiped articles, such articles being typically represented by awning iron. Cover a number of different kinds of articles that may be wiped, for example half round, wide flats, small flat strip steel, small angles, etc. Requirements as to base metal, grade of zinc, galvanizing, zinc coating, bending, weight of coating, physical properties and tests, inspection, sampling, and rejection.

American Hot-Dip Galvanizers Assn., Inc. Tentative Standard Specifications for Cans, Metal Ware, Hollow Ware, and Like Articles, CS-16-36; 1936. This set of specifications requires that all metal ware articles, all cans, and all items included are to be hot-dip galvanized after fabrication, hand-dipped, and not any articles fabricated into these articles from galvanized sheets. Requirements as to base metal, zinc coating, weight of coating, stripping test, inspection, sampling, and rejection.

American Hot-Dip Galvanizers Assn., Inc. Tentative Standard Specification for Hot Dipped Zinc Coated (Galvanized) Steel Window Sash, CS-17-38; 1938. The scope of this specification covers the required standard materials, statements regarding the weight of coating, allowances for zinc coating, tests for zinc coating, finish, defects, inspection, and other features of importance.

American Hot-Dip Galvanizers Assn., Inc. Tentative Standard Specifications for Hot-Dip Zinc-Coated (Galvanized) Steel Highway Sign Posts, CS-18-38; 1938. The scope of this specification covers the required standard materials, statement regarding the weight of coating, tests for zinc coating, finish defects, inspection, and other features.

American Hot-Dip Galvanizers Assn., Inc. Tentative Standard Specifications for Method of Test for Uniformity of Coating by the Copper Sulphate Dip Test (Preece Test) on Zinc-Coated (Hot-Dip Galvanized) Steel Castings and Forgings, Gray Iron and Malleable Iron Castings, CS-19-39; 1939. This method covers the procedure by which the Preece test shall be performed to determine the uniformity of the zinc coating (galvanizing) on steel castings and forgings, gray iron and malleable iron castings.

American Iron and Steel Institute. Contributions to the Metallurgy of Steel—No. 4; 1941. Possible Substitutes for Zinc Coatings on Steel. Covers lead base coatings, unavailable metals or those of restricted availability, nonmetallic inorganic coatings, organic coatings, surface preparation of sheets, light metallic treatments, chemical treatment on black sheets, nontreatment on black sheets, paints for treated and untreated sheets, coatings for underground service, coatings subject to atmospheric exposure, coatings for inside of pipe, nonmetallic coatings for pipe, metal ware, and wire products.

American Society for Metals. Metals Handbook, 1939 Edition. Surface Treatments and Cladding of Ferrous Metals. Covers electroplated metal coatings, industrial or "hard" chromium plating, tinning of steel, zinc coatings, sprayed metal coatings, coloring steel, cleaning of metals, cleaning metals with alkaline solutions, pickling iron and steel products, electrolytic pickling of iron and steel, cleaning metals by blast cleaning process, tumbling, rolling, and barrel burnishing, slushing compounds, composite steels,

stainless clad steels, nickel and nickel alloy clad steel, lead coatings, copper covered steel wire, and facing or surfacing by welding.

American Society for Testing Materials, A 90-39; 1939. Methods of Test for Weight of Coating on Zinc-Coated (Galvanized) Iron or Steel Articles. Covers procedures for determining weight of coating; for sheets by shop weighing and shop test methods using (standard) hydrochloric acid-anitmony chloride, or (alternate) sulfuric acid, or (alternate) basic lead acetate, sulfuric acid-permanganate, thermal, and evolution of hydrogen methods. Includes stripping test for galvanized wire, and appendix for determination of iron in zinc coatings.

American Society for Testing Materials, A 123-33; 1933. American Assn. of State Highway Officials, M111-35. American Standards Assn. G8.1-1933. Zinc (Hot-Galvanized) Coatings on Structural Steel Shapes, Plates, and Bars, and Their Products. For dipping articles in molten bath of zinc, minimum impurities in zinc, test samples, embrittlement of material, weight of coating, adherence and uniformity of coating.

American Society for Testing Materials, A 143-35; 1935. Recommended Practice for Safeguarding Against Embrittlement of Hot-Galvanized Structural Steel Products and Procedure for Detecting Embrittlement. For preventing and determining loss of ductility, factors tending to cause embrittlement; steels to use, cold working, and procedure for galvanized angle test.

American Society for Testing Materials, A 153-42T; 1942. Tentative Specifications for Zinc Coating (Hot-Dip) on Iron and Steel Hardware. Includes builders hardware, bolts, screws, rivets, pulleys, etc., but not marine hardware nor articles formed after coating. Gives requirements for zinc, weight of coating, uniformity and adherence of coating, and inspection.

American Society for Testing Materials, A 164-40T; 1940. Tentative Specifications for Electrodeposited Coatings of Zinc on Steel. Includes three types of coatings to withstand corrosion; requirements for manufacture, thickness of coating, significant surfaces, selection of samples, test for thickness of coating, and time required for plating. Prepared jointly by the American Electro-Platers' Society, the National Bureau of Standards, and the A.S.T.M.

American Society for Testing Materials, A 165-40T; 1940. Tentative Specifications for Electrodeposited Coatings of Cadmium on Steel. Includes three types of coatings, cleaning of steel, minimum thickness of coatings, tests for thickness, and finished uniform dull or bright appearance of coatings. Prepared jointly by the American Electro-Platers' Society, the National Bureau of Standards, and the A.S.T.M.

American Society for Testing Materials, A 166-41T; 1941. Tentative Specifications for Electrodeposited Coatings of Nickel and Chromium on Steel. For use for both appearance and protection against corrosion; includes three types of coatings, requirements for manufacture, thickness of coatings, optional copper coating, significant surfaces, tests of coatings, and time required for plating. Prepared jointly by the American Electro-Platers' Society, the National Bureau of Standards, and the A.S.T.M.

American Society for Testing Materials, A 219-40T; 1940. Tentative Methods of Test for Local Thickness of Electrodeposited Coatings. For coatings of nickel, copper, zinc, or cadmium by microscopic test, and for coatings of chromium by spot test. Method of microscopic test procedure, test specimen, etching reagents, and mounting specimens; for spot test specimen, reagent, procedure, time required, and calculations. Prepared jointly by the American Electro-Platers' Society, the National Bureau of Standards, and the A.S.T.M.

American Society for Testing Materials, A 239-41; 1941. American Assn. of State Highway Officials, T 66-42. Method of Test for Uniformity of Coating by the Preece Test, Copper Sulfate Dip, on Zinc-Coated, Galvanized, Iron or Steel Articles. For determination of thinnest portions of coating, but not for relative weight of coatings. Includes solution, test specimen, outline of procedure, end point, and applications of method.

American Society for Testing Materials, A 263-44T; 1944. A.S.M.E. Boiler Construction Code Specification, SA-263. Tentative Specifications for Corrosion-Resisting Chromium Steel Clad Plate, Sheet, and Strip. For carbon steel or low-alloy steel base to which is integrally and continuously bonded on one or both sides a layer of corrosion-resisting chromium steel. Gives requirements for process, heat treatment, thickness of cladding metal, chemical composition, check analysis, physical properties, test specimens, number of tests, permissible variations in thickness and weight, finish, repair of minor defects, marking, inspection, and rejection.

American Society for Testing Materials, A 264-44T; 1944. A.S.M.E. Boiler Construction Code Specification, SA-264. Tentative Specifications for Corrosion-Resisting Chromium-Nickel Steel Clad Plate, Sheet, and Strip. For carbon steel or low-alloy steel base to which is integrally and continuously bonded on one or both sides a layer of corrosion-resisting chromium-nickel steel. Gives requirements for process, heat treatment, thickness of cladding metal, chemical composition, check analysis, physical properties, test specimens, number of tests, permissible variations in thickness and weight, finish, repair of minor defects, marking, inspection, and rejection.

American Society for Testing Materials, A 265-43T; 1943. A.S.M.E. Boiler Construction Code Specification, SA-265. Tentative Specifications for Nickel and Nickel-Base Alloy Clad Steel Plate. For a carbon steel or low-alloy steel base to which is integrally and continuously bonded on one or both sides a layer of nickel or nickel-base alloy. Gives requirements for process, heat treatment, thickness of cladding metal, chemical composition, check analysis, physical properties, test specimens, number of tests, permissible variations in thickness and weight, finish, repair of minor defects, marking, inspection, and rejection.

American Society for Testing Materials, A 267-44T; 1944. Tentative Specifications for Lead Coating (Hot-Dip) on Iron or Steel Hardware. Gives scope, lead, weight of coating, weight of coating test,

acetic acid test for weight of coating, continuity of coating, ferroxyl test for continuity of coating, microscopic test for local thickness of lead coating, workmanship and finish, packing, inspection and rejection.

American Society for Testing Materials, B 136-40T; 1940. Tentative Method of Test for Sealing of Anodically Coated Aluminum. For test for nonadsorption of coloring matter, or non-staining in service. Special solution required and method of procedure.

American Society for Testing Materials, B 137-40T; 1940. Tentative Method of Test for Weight of Coating on Anodically Coated Aluminum. For anodically oxidized aluminum and its alloys and approximate measure of thickness of coating. Reagent necessary, test specimen, and outline of procedure.

American Society for Testing Materials, B 141-41T; 1941. Tentative Specifications for Electrodeposited Coatings of Nickel and Chromium on Copper and Copper-Base Alloys. Cover Requirements for electroplated (three types of) coatings on copper articles, including a final coating of nickel or chromium where both appearance and protection against corrosion of the base metal are important. Manufacture, thickness of coatings, significant surfaces, selection of samples, number of tests, tests for thickness of coatings, acceptance and rejection, retest, costs of tests, and time required for plating. Prepared jointly by American Electro-Platers' Society, National Bureau of Standards, and American Society for Testing Materials.

American Society for Testing Materials, B 142-41T; 1941. Tentative Specifications for Electrodeposited Coatings of Nickel and Chromium on Zinc and Zinc-Base Alloys. Cover requirements for electroplated (three types of) coatings on zinc articles, including a final coating of nickel or chromium where both appearance and protection against corrosion of the base metal are important. Manufacture, thickness and continuity of coating, significant surfaces, selection of samples, number of tests, test for thickness of coating, salt spray test for continuity of coating, acceptance and rejection, retest, cost of tests, and time required for plating. Prepared jointly by American Electro-Platers' Society, National Bureau of Standards, and American Society for Testing Materials.

American Society for Testing Materials, B 177-43T; 1943. Tentative Recommended Practice for Chromium Plating on Steel for Engineering Use. Intended as an aid to such platers and engineers who, although familiar with ordinary electroplating practice, are confronted with new problems inherent in the electrodeposition of chromium for engineering use. Covers nature of steel, cleaning, etching, racks and anodes, chromium plating, treatments of chromium coating, repair of chromium coating, and methods of testing.

American Society for Testing Materials, B 183-43T; 1943. Tentative Recommended Practice for Preparation of Low-Carbon Steel for Electroplating. Intended as an aid to platers in setting up a suitable cleaning cycle preparatory electroplating of low-carbon steel. Covers nature of cleaning and gives requirements for nature of cleaning, cleaning solutions and apparatus, procedure for racked parts, variations in procedure for parts to be racked, procedure for parts in bulk, variations in procedure for parts in bulk, and tests for efficiency of the preparatory cleaning.

American Society for Testing Materials, E S-31; 1943. Emergency Specifications for Electrodeposited Coatings of Lead on Steel. Covers requirements for Electroplated lead coatings on steel articles that are required to withstand corrosion and includes six types. Gives manufacture, thickness of coatings, continuity of coatings, significant surfaces, selection of samples, number of tests, tests for thickness of coating, salt spray test for continuity of coating, acceptance and rejection, retest, cost of tests, and appendices.

American Transit Assn. Specifications for Galvanizing or Sherardizing on Iron and Steel, D8-41; 1941. Lists certain specifications of the American Standards Assn. or the American Society for Testing Materials which should be used for galvanizing under the materials listed.

Assn. of American Railroads, Operations and Maintenance Dept., Engineering Division, Signal Section. Manual of Recommended Practice, 1943. Specification for Metal Plating. Recommends specifications for plating of metals meeting the requirements and tests of the A.S.T.M. Covers steel coatings as follows: Zinc, A 164; cadmium, A 165; and nickel and chromium, A 166. Also covers electro-deposited coatings as follows: Nickel and chromium on copper and copper-base alloys, B 141; and nickel and chromium on zinc and zinc-base alloys, B 142.

Society of Automotive Engineers. Aeronautical Material Specification 2400C; 1944. Cadmium Plating. The purpose of the specification is to protect parts against corrosion. Gives requirements for preparation, procedure, thickness, thickness determination, quality, application, and rejections. Similar specification: Army-Navy Aeronautical AN-QQ-P-421.

Society of Automotive Engineers. Aeronautical Material Specification 2402A; 1944. Zinc Plating. The purpose of this specification is to protect metal parts against corrosion. Covers preparations, procedure, thickness, thickness determination, quality, application, and rejections. Similar specification, Army-Navy Aeronautical AN-P-32.

Society of Automotive Engineers. Aeronautical Material Specification 2470A; 1942. Protective Treatments for Aluminum Base Alloys. The purpose of this specification is to increase corrosion resistance and provide surfaces which will insure maximum paint adherence. Describes process, preparation of material, precautions to be observed, and application to aluminum alloy parts.

Society of Automotive Engineers. Aeronautical Material Specification 2475; 1940. Protective Treatments for Magnesium Base Alloys. The purpose of this specification is to increase corrosion resistance and provide surfaces which will insure maximum paint adherence. Describes both dichromate and chrome pickle processes to be used, preparation of the material, precautions to be observed, and application of the processes to the materials.

Society of Automotive Engineers. Aeronautical Material Specification 2503; 1940. Black Finishing, Low Baking. For parts which do not exceed a temperature of

350°F. Gives requirements for process, preparation, priming coat, enamel finish, and approved materials.

Society of Automotive Engineers. Aeronautical Material Specification 2510A; 1944. Engine Gray Finishing, Low Baking. For parts which do not exceed a temperature of 300°F. Gives requirements for process, preparation, priming coat, enamel finish, and approved materials.

Society of Automotive Engineers. Aeronautical Material Specification 4710; 1942. Brass Wire, Tinned. Gives requirements for composition, condition, quality, tolerances, reports, and rejections.

Society of Automotive Engineers. Aeronautical Material Specification 5033; 1942. Steel Wire; Zinc-Coated (Low-Carbon). Gives requirements for composition, condition, quality, tolerances, reports, packaging, and rejections. Similar specification: Army-Navy Aeronautical AN-QQ-W-435.

Society of Automotive Engineers. Aeronautical Material Specification 5036; 1943. Steel Sheet and Strip—Low-Carbon (Aluminum Coated). Chemical composition, condition, quality, tolerance, reports, identification, and rejection.

U. S. Gov., Army Air Forces Specification 11353; 1943. Steel; Low Carbon, Aluminum Coated, Sheet and Strip.

U. S. Gov., Army Air Forces Specification, 20020-A; 1941. Protective Coatings and Finishes for Automotive Vehicles; General Specification for.

U. S. Gov., Army Air Forces Specification, 20031-A; 1944. Process; Chromium Plating, for Aircraft Engine Cylinders.

U. S. Gov., Army Air Forces Specification, 20034; 1944. Cementing Metal to Metal, Process for.

U. S. Gov., Army Air Forces Specification, 20040; 1945. Anodizing Process. For inspection of forged aluminum alloys.

U. S. Gov., Army-Navy Aeronautical Specification, AN-M-12; 1943. Magnesium Alloy; Processes for Corrosion Protection of.

U. S. Gov., Army-Navy Aeronautical Specification, AN-P-32a; 1944. Plating; Zinc.

U. S. Gov., Army-Navy Aeronautical Specification, AN-P-34a; 1944. Plating; Nickel.

U. S. Gov., Army-Navy Aeronautical Specification, AN-P-39a-1; 1945. Plating; Chromium.

U. S. Gov., Army-Navy Aeronautical Specification, AN-P-61; 1944. Plating; Cadmium.

U. S. Gov., Army-Navy Aeronautical Specification, AN-QQ-A-696a; 1941. Anodic-Films; Corrosion-Protective (for) Aluminum Alloys.

U. S. Gov., Army-Navy Aeronautical Specification, AN-QQ-S-91; 1938. Salt-Spray-Corrosion-Test; Process for.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Research Paper RP1645; 1945. Effects of Polishing of Steel Upon the Protective Value of Electroplated Coatings. Various polished specimens plated with copper, nickel, and chromium of controlled thickness were exposed to the atmosphere at various locations and the extent of rusting observed at periodic inspections. Accelerated tests, such as the salt-spray, hot water, ferroxyl, and condensation tests were also made.

U. S. Gov., Federal Specification, WW-P-541a; 1940. Plumbing Fixtures (for) Land Use. Includes requirements for tests for thickness of electroplated coatings. Covers plated areas to be tested for average thickness of coatings; spot test for minimum thickness of chromium on brass, red metal, white metal and zinc-alloy die-castings; magnetic test for minimum thickness of nickel on brass, red metal and white metal; tests for average thickness of chromium and nickel plating on brass, red metal and white metal; test for cobalt; tests for average thickness of chromium, nickel, and copper on zinc-alloy die-castings; and microscopic tests for minimum thickness of copper and nickel on zinc-alloy die castings. Emergency Alternate Federal Specification E-WW-P-541a; 1942. (issued by Procurement Division, Treasury Dept, U. S. Gov.). Changed requirements for metals and finishes, standard materials, and illustrations, selections, and air gaps.

U. S. Gov., Navy Dept. Specification, 46P1; 1937. Plating; Cadmium.

U. S. Gov., Navy Dept. Specification, 46P2; 1938. Plating, Zinc.

U. S. Gov., Navy Dept. Specification, 46Z3; 1944. Zinc-Coating (Hot-Dip Galvanizing).

U. S. Gov., Navy Dept. Specification, 5112(I); 1930. Inhibitors; Pickling.

U. S. Gov., Navy Dept. Specification, 5113(I); 1939. Indicator, Corrosion-Control.

U. S. Gov., U. S. Army, Army Air Forces. Specification 3-100-1; 1942. Protective Coatings and Finishes for Aircraft and Aircraft Parts, General Specification for.

U. S. Gov., U. S. Army, Army Air Forces. Specification 98-20004C; 1931. Protective Treatment for Aluminum and Aluminum Alloys.

U. S. Gov., U. S. Army, Army Air Forces. Specification 98-20007; 1935. Cleaning of Aircraft Metal Surfaces Prior to Application of Initial Protective Coating.

U. S. Gov., U. S. Army, Medical Department. Specification 10-3011; 1944. Corrosion-Resistant Treatment (for Box-Lock Stainless Steel Surgical Instruments).

U. S. Gov., U. S. Army, Ordnance Department. Specification 57-0-2C; 1943. Finishes, Protective, for Iron and Steel Parts.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 3-124; 1926. Bronze Finish (for Metals).

U. S. Gov., U. S. Army, Signal Corps. Specification 71-253A; 1926. Galvanizing as Applied to Signal Corps Equipment.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-254A; 1929. Tinning Test for Copper Wire as Applied to Signal Corps Equipment.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-263A; 1928. Tinning Test for Iron and Steel Wire.

*References.*—Nickel salts for nickel plating, *see* 839.39, ammonium chloride (sal ammoniac) for galvanizing purposes, *see* 831.4. Other metallic coating requirements and methods of test, *see* specifications under individual commodities.

## 600.4 DEFINITIONS OF METALS

American Society for Testing Materials, A 81-33; 1933. Definitions of Terms Relating to Wrought Iron. Defines wrought iron, bushelling, fagoting, muck bar, common iron, slab pile, box pile, refined bar iron or refined wrought-iron bars, and double-refined iron.

American Society for Testing Materials, A 127-44T; 1944. Tentative Definitions of Terms, With Symbols, Relating to Magnetic Testing. Gives table showing symbols used in magnetic testing and defines a large number of terms used in magnetic testing.

American Society for Testing Materials, E 7-27, 1927. Definitions of Terms Relating to Metallography. Defines alloy, alpha brass, etching reagent, grain, macrograph, metallography, metal, etc.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Circular C398 and Supplement, 1940. Standard Samples. Gives 41 standard samples of steel chemical standards with schedule of weights and fees. These samples are prepared and sold by the National Bureau of Standards with a certificate of analysis, for use in industry and by others as a comparison standard for checking the accuracy of analysis of similar materials.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Circular C398 and Supplement, 1944. Standard Samples. Gives 18 standard samples of steel (spectrographic standards) with schedule of weights and fees. These samples are prepared and sold by the Bureau with a certificate of analysis, for use by industrial organizations and others, for checking the accuracy of analyses of similar steels.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Circular C398 and Supplement, 1944. Standard Samples. Gives a descriptive list of standard samples 4f, 5h, 6e, 7c, for cast iron; 55a for ingot iron; 82 for nickel-chromium cast iron; 107 for nickel-molybdenum cast iron; 115 for nickel-chromium-copper cast iron; and 122 for cast iron (car wheel). These samples are prepared and sold by the National Bureau of Standards with a certificate of analysis, for use in industry and by others as a comparison standard for checking the accuracy of analysis of similar material.

## 600.5 HEAT TREATMENT OF METALS

American Iron and Steel Institute. Joint Sponsor With Society of Automotive Engineers, Inc. Contributions to the Metallurgy of Steel—No. 11; 1944. Tentative Hardenability Bands. Gives grades of steel, chemical composition limits, identification, grain size, use of band limits, general requirements, and tables showing chemical composition ranges, standard permissible variations, end-quench hardenability bands, and Rockwell hardness for various tentative hardenability bands.

American Society for Metals. Metals Handbook, 1939 Edition. Ferrous Section—Case Hardening. Covers carburizing introduction, carburizing methods, mechanism of carburization, selection of carburizing steel, case depth, and heat treatment, pack carburizing, gas carburizing, liquid carburizing, cyaniding, selective carburization of steels, and nitriding.

American Society for Metals. Metals Handbook, 1939 Edition. Heat Treatment of Ferrous Metals. Covers heat treatment of metals, recrystallization, relation of design to heat treatment, principles of heat treatment of iron and steel, flame hardening, and heat treatment of carbon steels including the types of castings, gears, forgings, shafts, springs, tool steels, dies, presses, shears, taps, and molds.

American Society for Testing Materials, A 255-42T; 1942. Tentative Method of End-Quench Test for Hardenability of Steel. Covers determination by the end-quench or Jominy test. Consists of water-quenching one end of a cylindrical test specimen 1 in. in diameter and measuring to what extent from the quenched end the steel hardens. Apparatus, test specimens, procedure, plotting test results, index of hardenability, and report.

American Society for Testing Materials, E 44-43; 1943. Definition of Terms Relating to Heat Treatment of Metals. This standard is intended to be strictly a set of definitions and not a specification. Defines about fifty terms. Prepared jointly by the American Society of Metals, Society of Automotive Engineers, American Foundrymen's Assn., and American Society for Testing Materials.

International Acetylene Assn. Flame Hardening by the Oxy-Acetylene Process. Describes the nature and scope of flame-hardening, the hardness effects obtainable with several types of steels and the techniques used in hardening objects of various size and shape. Contains approximate operating data for the more common flame-hardening operations.

U. S. Gov., Army Air Forces Specification, 10085; 1942. Steels Used in Aircraft Carburizing and Nitriding, Process for.

U. S. Gov., Army-Navy Aeronautical Specification, AN-H-25-2; 1944. Heat Treatment of Magnesium Alloy Castings; Process for.

U. S. Gov., Army-Navy Aeronautical Specification, AN-QQ-H-186a; 1944. Heat Treatment of Aluminum Alloys; Process for.

U. S. Gov., Army-Navy Aeronautical Specification, AN-QQ-H-201-2; 1942. Heat-Treatment-Of-Steels (Aircraft); Process for.

*References.*—Other heat treatment requirements, *see* specifications under individual commodities.

## 600.6 PLUMBING

American Gas Assn. Requirements for House Piping and Appliance Installation, 1928. Fundamental and basic requirements stated that will insure safety and satisfactory service in installation of house piping and appliances. Recommended practice in piping, gas metering, appliance installation, and flue connections to meet requirements.

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering, Specifications for Buildings for Railroad Purposes; Plumbing. Gives requirements for excavation, arrangement of system, sizes and kinds of pipe and fittings, valves, pipe sleeves, soil and vent stacks, meter, pressure regulator, traps and cleanouts, pipe covering, slate compartment work, tests, gas piping, and fire protection.

American Society of Mechanical Engineers. Sponsored by American Public Health Assn. American Standards Assn., A 40.4-1942. Air Gaps in Plumbing Systems. For plumbing fixtures and all water-connected devices. Gives definitions, minimum required air gap dimensions, tanks or vats with water inlets below the floor-level rim, water closet tanks, drinking fountain nozzles, minimum air gaps for generally used plumbing fixtures, and illustrations.

American Society of Mechanical Engineers. Sponsored by American Public Health Assn. American Standards Assn., A 40.6-1943. Backflow Preventers in Plumbing Systems. For plumbing fixtures and all water-connected devices. Gives requirements, definitions, tests, and illustrations.

National Assn. of Master Plumbers of the U. S., Inc. Plumbing Code, 1933. Revised, March 1942. Includes definitions of plumbing and plumbing terms; general regulations; regulations for quality and weights of materials, joints and connections, traps and cleanouts, water supply, and distribution, quality of water supply, plumbing fixtures, hangers and supports for plumbing piping, ventilation of rooms and fixtures, drainage and venting of plumbing systems, safe and special wastes for industrial refrigerator, special conditions, tests of plumbing systems, sewage disposal and covering.

U. S. Gov., Dept. of Commerce, National Bureau of Standards BH13; 1931. Recommended Minimum Requirements for Plumbing. Recommended by building code committee for incorporation in building codes of states and cities; includes definitions of terms, regulations on slope of horizontal piping, change in direction, prohibited fittings, quality of materials in general according to ASTM specifications, requirements on minimum thickness of sheet metals, construction of joints and connections, kinds, sizes, materials, and required installation of traps, pipe cleanouts, back water valves, water supply pipes, waste stacks, vent pipes, house drains and sewers, storm drains, etc., inspection and test requirements for completed installation, recommended construction details.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Building Materials and Structures Report BMS28; 1939. Backflow Prevention in Over-Rim Water Supplies. This report describes the methods used and the results obtained in the investigation of the prevention of backflow from plumbing fixtures with over-rim supply by means of air gaps between the supply opening and the highest possible liquid level in the fixture. The previous work is discussed and the data necessary for a complete understanding of the subject are presented. The treatment has been developed from the point of view of the construction of the supply fitting as well as its location with respect to the fixture. Finally, recommendations are offered in a form suitable for use in field inspection.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Building Materials and Structures Report BMS58; 1940. Strength of Soft-Soldered Joints in Copper Tubing. An extended investigation was made of the strength, under tensile loading, of sleeve joints in copper tubing, with wrought-copper and cast-brass coupling, soldered with (50-50) tin-lead and (95-5) tin-antimony alloys.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Building Materials and Structures Report BMS65; 1940. Methods of Estimating Loads in Plumbing Systems. This report describes a method of estimating the demand and sewage loads for which provision should be made in designing plumbing systems in order that the service may be satisfactory. The characteristics of flow through a plumbing system and of the operation of supply valves and plumbing fixtures are described, and their influence on the method of estimating the load to be expected is discussed. The relative load-producing values of different kinds of commonly used plumbing fixtures are analyzed, and a table is developed giving relative load weights in terms of a load factor called the "fixture unit." An estimate curve developed by means of the probability function is given, and its use in conjunction with the table of fixture units is illustrated.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Building Materials and Structures Report BMS66; 1940. Plumbing Manual (Report of Subcomittee on Plumbing of the Central Housing Committee on Research, Design, and Construction). A manual of recommended plumbing practice is presented by a committee composed of representatives of Federal Agencies most concerned with the subject. The committee has taken into consideration available recommendations of other bodies and results of research performed at the National Bureau of Standards. Part I consists of an introduction explaining the origin of the work. Part II contains recommendations regarding necessary sizes of piping, precautions against pollution of water supply, permissible types of venting, and other matters customarily covered in plumbing codes. Part III contains information useful in applying the recommendations, including illustrative interpretations of the specific requirements in part II. The recommendations are presented as suitable for adoption by Federal agencies engaged in actual plumbing work or in passing upon plans of structures containing plumbing.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Building Materials and Structures Report BMS79; 1941. Water Distributing Systems for Buildings. This report gives information relating to the selection of pipe sizes and design of distributing systems for adequate supply of water in buildings. It contains flow charts showing the capacities of different commercial sizes of pipe in terms of friction loss in head for four degrees of roughness, depending on the pipe material and the character of water with which the pipe is used. A practical procedure is developed for the economical selection of pipe sizes for the different demands for each part, depending on the estimated demand and on the pressure available for friction loss as computed for particular service conditions. Suggested variations in the procedure provide convenient means of allowing for decrease in capacities of pipes in service.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specifications CAA-131. Sanitary System, Septic Tank, Etc.

U. S. Gov., Federal Housing Administration. Minimum Construction Requirements. These requirements provide a minimum standard of construction and shall apply to all new construction on which the mortgage is insured by the Federal Housing Administration. They are considered necessary to produce a well-constructed dwelling which will serve as sound security for a long-term mortgage loan. Since these requirements are essentially minimum, they are not to

be built down to but form a basis from which to build up. Copies are available in the FHA insuring offices throughout the United States. Include requirements for excavation, masonry, adobe construction, structural steel and iron, lumber, wood framing, termite prevention, roof coverings, sheet metal, lathing, plastering, stucco, painting, plumbing, heating, electrical work, etc., according to geographical location and local building code requirements.

U. S. Gov., Navy Dept. Bureau of Yards and Docks. Specification 31Yb; 1943. Plumbing Systems.

*References.*—Plumbing fixtures, *see* 617.7.

### 600.7 WEIGHTS AND TOLERANCES OF IRON AND STEEL

### 600.8 IMPREGNATION OF METALS

American Society for Metals. Metals Handbook, 1939 Edition. Metallic Cementation. Covers aluminum impregnation, chromium impregnation, zinc impregnation, and silicon impregnation.

## 601. ORES, PIG IRON, AND SCRAP

### 601.0 GENERAL ITEMS

### 601.1 IRON ORE

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Circular C398 and Supplement, 1944. Standard Samples. Iron Ore, Crescent, Sample 26; Iron Ore, Magnetite, Sample 29a; Iron Ore, Norrie, Sample 28; Iron Ore, Sibley, Sample 27b; and Manganese Ore, Sample 25b. These samples are prepared and sold by the National Bureau of Standards with a certificate of analysis, for use in industry and by others as a comparison standard for checking the accuracy of analysis of similar materials.

*References.*—Chrome, manganese, and silicon ores, *see* 621.1; ferrochrome, ferromanganese, etc, *see* 621.2; screen testing of ores, *see* 601.0.

### 601.2 PIG IRON

#### 601.20 General Items

American Iron and Steel Institute. Steel Products Manual. Section 1; 1941. Standard Pig Iron Compositions of the American Iron and Steel Industry and Their Grades, Chemical Compositions, and Common Use.

#### 601.21 Charcoal Pig Iron

#### 601.22 Coke Pig Iron

#### 601.23 Foundry Pig Iron

American Society for Testing Materials, A 43-24; 1924. Foundry Pig Iron. Gives permissible variations from specified composition, method of sampling, chemical analysis with suggested coding of compounding elements.

U. S. Gov., Federal Specification QQ-I-676a; 1942. Iron; Pig, Foundry. Covers six classes—AX, A, BX, B, C, and D. Gives requirements for material, workmanship, and chemical composition; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

*References.*—Methods of testing and general requirements for metals, *see* 601.20, 600.1; ferrochrome, ferromanganese, etc., *see* 621.2.

#### 601.24 Malleable Pig Iron

### 601.3 IRON AND STEEL SCRAP

U. S. Gov., Navy Dept. Specification, 42W2; 1943. Weights; Ballast.

*References.*—Classification of scrap metals, *see* 600.2.

## 602. CRUDE AND SEMIFINISHED IRON AND STEEL

### 602.1 IRON BILLETS

American Society for Testing Materials, A 73-39; 1939. Wrought-Iron Rolled or Forged Blooms and Forgings. Includes two classes, for locomotives and railroad cars, and for miscellaneous uses. Requirements for manufacture, chemical compositions, tensile properties, etch test, test specimen, workmanship, and inspection.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Division. Manual of Standard and Recommended Practice, 1942. Includes Wrought Iron—Blooms and Forgings, M-307-42; 1942. For locomotives and cars, requirements as to manufacture, chemical and physical properties and tests, workmanship, finish, and marking.

National Association of Purchasing Agents. Handbook of Commodity Data Sheets, Volume 2, 1944. Iron; Wrought. Covers definition, derivation, constants, uses, forms, and substitutes.

### 602.2 STEEL BARS AND BILLETS

American Iron and Steel Institute. Manufacturers' Standard Practice. Supplementary Information. National Emergency Carbon Steels. Carbon Steel Semifinished Products, 1942. Gives requirements for carbon and manganese for 22 grades.

American Iron and Steel Institute. Steel Products Manual. Section 2; 1937. Revised, 1943. Carbon Steel Semifinished Products. Covers definitions, quality classifications, and manufacturing practices; standard steels and system of identification, chemical limits and ranges for nonstandard steels, and standard methods of sampling for check analysis; and glossary.

American Iron and Steel Institute. Steel Products Manual. Section 8a; 1941. Standard Methods for Packaging, Loading, and Shipping Hot-Rolled Steel Bars.

American Iron and Steel Institute. Steel Products Manual. Section 9a; 1943. Standard Packaging and Shipping Methods of Cold-Finished Bars. General provisions, packaging, boxing, paper or burlap wrapping, wrapping or shrouding, and identification.

American Society for Testing Materials, A 273-44T. Tentative Specification for Carbon-Steel Blooms, Billets and Slabs for Forgings. Covers scope, process, discard, reduction from ingot, chemical composition, ladle analysis, check analysis, finish and soundness, conditioning, permissible variations in weight, marking, inspection, rejection, and rehearing.

Society of Automotive Engineers. Aeronautical Material Specification 5060A; 1942. Carbon Steel (.13-.18 Carbon). For bars, billets, forgings, tubing, or as ordered. Gives requirements for composition, condition, quality, reports, shipments, identification, and rejections. Similar specifications: Navy 46 S 32, Class A; SAE 1015.

Society of Automotive Engineers. Aeronautical Material Specification 5070; 1942. Carbon Steel (.18-.23 Carbon). For bars, rods, billets, or forgings. Covers requirements for composition, grain size, condition, quality, tolerances, reports, shipments, identification, and rejections. Similar specifications: AN-QQ-S-646, No. X1020; SAE 1022.

Society of Automotive Engineers. Aeronautical Material Specification 5080; 1942. Carbon Steel (.32-.38 Carbon). For bars, billets, forgings, or as ordered. Covers requirements for composition, condition, quality, tolerances, reports, identification, and rejections. Similar specification: SAE 1035.

U. S. Gov., Federal Specification QQ-S-671; 1941. Amendment 1; 1942. Steel: Carbon and Alloy, Bars. Covers 22 carbon steels, and 8 free-cutting steels; in 7 conditions—as rolled (hot-rolled or forged), annealed, normalized, normalized and tempered, quenched and tempered, cold-rolled or cold-drawn, and cold-rolled or cold-drawn and stress relief annealed. Gives requirements for material, manufacture, quality, and condition, condition and finish, heat treatment, chemical composition, physical properties, dimensions, and tolerances; methods of inspection and tests; requirements for packing and marking for shipment; tables of chemical requirements; and tables of permissible variations in squares, rounds, hexagons, and flats.

U. S. Gov., Navy Dept. Specification 46S4h; 1939. Steel, Carbon and Alloy: Bars, Billets, Blooms, and Slabs (for Reforging or Other Operations Before Heat Treatment).

U. S. Gov., Navy Dept. Specification 46S11a; 1938. Steel; Ingots.

U. S. Gov., Navy Dept. Specification 46S18d; 1939. Steel, Corrosion-Resisting: Bars, Rods, and Forgings (Except for Reforging).

U. S. Gov., Navy Dept. Specification 46S26a; 1943. Steel, Corrosion-Resisting: Bars and Billets (for Reforging Only).

U. S. Gov., Navy Dept. Specification 46S32a; 1939. Steel; Bars and Billets for Carburizing.

U. S. Gov., Treasury Dept., Procurement Div. 297; 1938. Steel Carbon, Hot-Rolled or Forged. Covers 8 classes of steel made by the open-hearth, electric, or crucible process. Gives requirements for physical properties and chemical composition; methods of sampling, inspection, and tests; and packing and marking.

*References.*—Methods of analysis, general requirements for metals, *see* 600.1; alloy steel billets, *see* 621.31.

## 603. IRON AND STEEL BARS, RODS, AND WIRE

### 603.0 GENERAL ITEMS

Assn. of American Railroads. Operations and Maintenance Dept., Engineering Division, Signal Section. Manual of Recommended Practice, 1941. Specifications for Various Types of Steel. This organization has recommended the use of certain specifications of the Society of Automotive Engineers, namely No. 1020 open hearth carbon steel for forging and general utility, No. 1035 for forged parts, gears, shafts, rods, etc., No. 1112 or X1112 for a free machining Bessemer steel, hot-rolled unless cold-rolled is called for, X1315 for case-hardened parts and superior machining, and No. 3130 for a nickel chromium steel suitable for water quenching where greater strength and toughness are required than possible with plain carbon steel.

Society of Automotive Engineers. 1944 Handbook, Section 3—Processed Materials. SAE Standard Steels. The steel compositions included in this standard are considered adequate for practically all parts made of ferrous materials that are necessary for the production of automotive apparatus, and include grades that have been found commercially available and technically adequate for the service required of such parts. Includes general instructions, explanation of SAE numbering system, chemical compositions, methods of sampling for check analysis, method of determining hardenability, grain size charts for classification of steel, magnaflux testing, determination of inclusions, general characteristics and heat treatments, tension test specimens, physical properties, hardness tests, and definition of heat treating terms.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R166-37; 1937. Color Code for Marking Steel Bars. This recommendation establishes a code of definite color markings for, and location thereof, on various kinds of steel bars. Sponsored by the National Association of Purchasing Agents.

U. S. Gov., Treasury Dept., Procurement Div. 292; 1938. Steel, Machinery, Cold-Rolled or Cold-Drawn, Bars and Rods. Shall be of but one class, free from injurious defects and rust, and have a bright, smooth, and workmanlike finish. Gives requirements for chemical composition, variations in sizes, specified dimensions, and variations in width and thickness; methods of sampling, inspection, and tests; and packaging, packing, and marking.

### 603.1 WROUGHT IRON BARS AND RODS

American Bureau of Shipping. Rules for the Classification and Construction of Steel Vessels. 1944. Steel and Wrought Iron Rivet Bars. Include rules for inspection and tests.

American Bureau of Shipping. Rules for the Classification and Construction of Steel Vessels. 1944. Steel and Wrought Iron Staybolt Bars. Includes rules for inspection and tests.

American Public Works Assn. Sewers, J1-38; 1938. Includes wrought iron steps and ladder bars made from Grade A bars which conform to A.S.T.M. specification for single and double refined wrought iron. To be galvanized in accordance with A.S.T.M. specification for zinc (hot-galvanized) coatings.

American Society of Mechanical Engineers, Boiler Construction Code, 1940. Specifications for Staybolt, Wrought-Iron, Solid (S-16). Includes rivet iron, staybolt iron, and extra-refined iron; requirements as to process, tensile strength, bend tests, etch test, and test specimen. In substantial agreement with American Society for Testing Materials Specification A84-39.

American Society for Testing Materials, A 41-36; 1936. American Standards Assn. G12-1936. Refined Iron Bars.

Made from new wrought iron or with some iron scrap but free from any steel scrap. Gives chemical composition, tensile and bending properties, etch test, test specimen, permissible variations in gage, finish, and inspection.

American Society for Testing Materials, A 84-39; 1939. Staybolt Wrought Iron; Solid. Covers round staybolts. Includes manufacture, chemical composition, tensile and bending properties, etch test, test specimen, permissible variations in size, finish, and inspection.

American Society for Testing Materials, A 85-36; 1936. Common Iron Bars. Made from reworked iron scrap with some steel scrap, requirements as to chemical composition, tensile and bending properties, etch test, test specimen, permissible variations in gage, finish, and inspection.

American Society for Testing Materials, A 86-39; 1939. Staybolt Wrought Iron, Hollow-Rolled. Covers only hollow-rolled staybolts, method of manufacture, chemical composition, tensile and bending properties, splitting test and etch test, test specimen, permissible variations in size, finish, and inspection.

American Society for Testing Materials, A 189-42; 1942. Single and Double Refined Wrought-Iron Bars. Includes two grades of iron bars, from wrought iron without admixture of iron scrap or steel; chemical composition, tensile and bending properties, step and etch tests, test specimen, permissible variations in size, and inspection.

American Society for Testing Materials, A 207-39; 1939. American Association of State Highway Officials, M100-39. Rolled Wrought-Iron Shapes and Bars. Gives requirements as to chemical composition, tensile and bending properties, test specimen, permissible variations in size and weight, finish, and inspection.

American Transit Assn. Standard Specification for Refined Wrought Iron Bars, E16-37; 1937. The bars called for in this specification shall be made from a mixture of new iron and scrap, but shall be free from any admixture of steel. The specification covers chemical composition, physical properties and tests, permissible variations and gages, finish, and inspection and rejection of round and flat bars.

Assn. of American Railroads. Operations and Maintenance Dept., Engineering Division, Signal Section. Manual of Recommended Practice, 1939. Specification for Refined Iron Bars. This organization has adopted the current A.S.T.M. specification A 41 for refined iron bars. The bars shall be made from new wrought iron, or from a mixture of new wrought iron and iron scrap, and shall be free from any admixture of steel.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1944. Refined Wrought Iron Bars. Specifications M-302-41; 1941. Covers two grades—(A) double refined bars, and (B) single refined bars. Gives manufacture, chemical and physical properties and tests, permissible variations, finish, marking, and inspection and rejection.

Assn. of American Railroads. Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Staybolt Iron, Hollow Rolled, M-304-39; 1939. Made from reworked wrought or charcoal iron. Gives requirements as to the chemical and physical properties and tests, permissible variation from true round and size of hole within staybolt, finish, and marking.

Assn. of American Railroads. Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Staybolt Iron, Solid, M-305-39; 1939. Rolled from wrought or charcoal iron. Covers composition, tension and bend tests, etch test, diameter variation, finish, and marking.

National Association of Purchasing Agents. Handbook of Commodity Data Sheets, Volume 2, 1944. Iron, Wrought. Covers definition, derivation, constants, uses, forms, and substitutes.

U. S. Gov., Federal Specification QQ-I-686a; 1938. Amendment 1; 1942. Iron, Wrought (Refined); Bars. Covers three grades—(A) extra refined, (B) refined, and (C) refined (no physical tests). Gives requirements for material, workmanship, permissible variations in dimensions, chemical composition, tensile properties, and physical characteristics; methods of sampling, inspection, and tests; and requirements for packing and marking for shipment.

U. S. Gov., Navy Dept. Specification 18B5; 1931. Bars; Flinders.

U. S. Gov., Navy Dept. Specification 46-I-7c; 1944. Iron, Wrought (Refined): Bars.

U. S. Gov., Navy Dept. U. S. Coast Guard. Bureau of Marine Inspection and Navigation. Marine Engineering Regulations and Material Specifications, 1942. Contains specifications and requirements for materials, design, construction, installation, and inspection of boilers, unfired pressure vessels and appurtenances thereof, also piping, valves, fittings, flanges, safety valves, etc., upon the strength and efficiency of which safety of life is dependent, and are intended for maximum temperatures of 1,000° F. Includes specifications for wrought-iron bars for stays and stay bolts—material, tensile properties, chemical composition and tests, finish, and marking. In substantial agreement with American Society for Testing Materials Standard Specification A 84-39.

*References.*—Standard sizes, marking of type, *see* 603.0; methods of testing, general requirements for metals, *see* 600.1; Classification of metals, *see* 600.2; zinc coatings, *see* 600.3; size and weight tolerances, *see* 600.7.

## 603.2 CARBON STEEL BARS AND RODS

### 603.20 General Items

American Iron and Steel Institute. Steel Products Manual. Section 8; 1940. Revised, 1943. Hot Rolled Carbon-Steel Bars. Covers definitions and manufacturing practices; standard steels including limits and ranges for nonstandard steels; standards relating to check analyses; standard mill practices, glossary of manufacturing terms; and standard methods for marking, packaging, and loading.

### 603.21 Steel Stock for Bolts, Nuts, Rivets, and Screws

American Bureau of Shipping. Rules for the Classification and construction of Steel Vessels, 1944. Steel

and Wrought Iron Rivet Bars. Include rules for inspection and tests.

American Bureau of Shipping. Rules for the Classification and Construction of Steel Vessels, 1944. Steel and Wrought Iron Staybolt Bars. Include rules for inspection and tests.

American Iron and Steel Institute. Steel Products Manual. Carbon Steel Semi-finished Products, Bars, and Wire Rods, 1941. Gives chemical composition limits and ranges and numerical designations for various basic open-hearth and acid Bessemer steels, for basic open-hearth and acid Bessemer sulphurized and phosphorized carbon steels, and methods of sampling for check analysis and standard variations from specified chemical limits of rolled and forged steel products. Also fundamental requirements for physical test properties.

American Society of Mechanical Engineers, Boiler Construction Code, 1940. Specifications for Boiler Rivet Steel, Staybolt Steel, and Rivets S-5. Identical with American Society for Testing Materials Specification A31-40.

American Society of Mechanical Engineers, Boiler Construction Code, 1940. Specifications for Steel Bars, S-7. Based on American Society for Testing Materials Specification A7-39, referred to below.

American Society of Mechanical Engineers, Society of Automotive Engineers, Sponsor. American Standards Assn. B 18g-1929, with 1942 Addendum B 18gi-1942. Tinners', Coopers', and Belt Rivets. The types of small rivets covered by this Standard are designated, respectively, as Tinners', Coopers', and Belt. Recommendations concern proportions, tolerances, composition and physical properties of rivet material, physical tests of rivets, finish, and dimensions.

American Society for Testing Materials, A 7-42; 1942. American Association of State Highway Officials, M 94. American Standards Assn. G24-1942. Steel for Bridges and Buildings. Covers carbon-steel of structural quality for use in the construction of bridges and buildings and for general structural purposes. Requirements as to castings, rivet steel, forgings, structural bolts, and rolled base plates; chemical composition, tensile and bending properties, preparing of test specimen, permissible variations in weight and thickness, finish, and inspection.

American Society for Testing Materials, A 31-40; 1940. A.S.M.E. Boiler Construction Code Specification, SA-31. American Standards Assn. G28-1; 1942. Boiler Rivet Steel and Rivets. For two grades, based on tensile strength, to be used in boilers and other pressure vessels. Gives requirements for chemical composition, analyses, tensile and bending properties, test specimens, permissible variations in diameter, finish, and inspection; for rolled steel bars, and rivets.

American Society for Testing Materials, A 107-42; 1942. Commercial Quality Hot-Rolled Bar Steels. Covers rounds, squared, and hexagons of all sizes, and flats not over 6 in. in width, made from carbon-steel. Requirements as to chemical composition, ladle analysis, permissible variations in dimensions, finish, and inspection.

American Society for Testing Materials, A 108-36; 1936. Commercial Cold-Finished Bar Steels and Cold-Finished Shafting. Covers steel grades in common use including free-cutting steels, also cold-finished shafting and key stock; rounds, squared, and hexagons of all sizes, and flats not over 6 in. in width. Shafting covered are rounds up to 8 in. inclusive. Requirements as to chemical composition, permissible variations in size, workmanship, and inspection.

American Society for Testing Materials, A 141-39; 1939. American Association of State Highway Officials, M 97-39. American Standards Assn. G21-1939. Structural Rivet Steel. Covers soft-carbon steel for rivets for structural purposes. Gives chemical composition, ladle analysis, tensile and bending properties, test specimen, permissible variations in diameter, finish, and inspection.

American Society for Testing Materials, A 195-41; 1941. American Association of State Highway Officials, M 98-41. American Standards Assn. G42.1-1942. High-Strength Structural Rivet Steel. For use with structural silicon steel and equivalent steels; annealing, chemical composition, ladle analysis, tensile properties, upsetting test, test specimen, and permissible variations in size.

American Society for Testing Materials, A 261-44T; 1944. A.S.M.E. Boiler Construction Code Specification SA-261. Tentative Specification for Heat-Treated Carbon-Steel Bolting Material. For material 2 in. and under in diameter for pressure vessels, valves, flanges, and fittings. Gives requirements for basis of purchase, process, heat treatment, chemical composition, analysis, tensile properties, hardness test, test specimens, number of test, retests, finish, nuts and washers, threads, marking, inspection, and rejection.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1943. Emergency Specification E-M-122-43. Modifies AAR Specification M-122-37, Commercial Bar Steels—Hot Rolled and Cold Finished, by changing check analysis, permissible variations, table for grades and chemical composition, eliminating tables II, III, and IV, and new table for information only.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Commercial Bar Steels—Hot Rolled and Cold Finished, M-122-37; 1937. For bolts, bushings, and general purposes, all shapes under 6 in. wide. Requirements for manufacture, chemical composition, analysis, including tables for fifteen S.A.E. grades, carbon and alloy steel, permissible variations, and uses of the various grades of steel.

Hydraulic Institute. Material Specification for Heavy Duty Bolting Materials and Nuts, No. 520; 1939. These specifications cover an alloy steel bolting material and a carbon steel nut material for service where the metal temperature does not exceed 900°F. Includes rolled, forged, or cold-drawn bar bolts, screws, and studs; requirements for manufacture, chemical composition, physical properties, finish, thread standards, and chemical composition same as class B7 of A.S.T.M. A-193-37T; but with physical tests modified to suit standard materials furnished.

National Association of Purchasing Agents. Handbook of Commodity Data Sheets, 1938. Steel, Cold Drawn Bessemer Screw. Covers definition, grades and properties, marketing, uses, substitutes, and packing.

Society of Automotive Engineers. Aeronautical Material Specification 5010A; 1942. Steel Screw Stock. Gives requirements for form (cold-drawn bars), composition, condition, quality, reports, and rejections. Similar specifications: Navy 46S17b; S.A.E. 1112.

U. S. Gov., Federal Specification QQ-S-701; 1932. Steel; Staybolt (Boiler). Covers a single grade of material for either solid or hollow staybolts; made by the open-hearth or electric furnace process. Gives physical and chemical requirements; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Navy Dept. Specification 46S17c; 1942. Steel; Cold-Rolled or Cold-Drawn (Screw Stock).

U. S. Gov., Navy Dept., U. S. Coast Guard. Bureau of Marine Inspection and Navigation. Marine Engineering Regulations and Material Specifications, 1942. Contains specifications and requirements for materials, design, construction, installation, and inspection of boilers, unfired pressure vessels and appurtenances thereof, also piping, valves, fittings, flanges, safety valves, etc., upon the strength and efficiency of which safety of life is dependent, and are intended for maximum temperatures of 1,000° F. Includes specifications for alloy-steel bolting material for boiler and pressure vessel parts or attachments, valves, flanges, and fittings for high-temperature service to 1,000° F.—process, heat treatment, chemical composition, tensile properties, Brinell hardness test, workmanship, finish, and nuts and washers. In substantial agreement with American Society for Testing Materials Standard Specification A96-39.

U. S. Gov., Navy Dept., U. S. Coast Guard Bureau of Marine Inspection and Navigation. Marine Engineering Regulations and Material Specifications, 1942. Contains specifications and requirements for materials, design, construction, installation, and inspection of boilers, unfired pressure vessels and appurtenances thereof, also piping, valves, fittings, flanges, safety valves, etc., upon the strength and efficiency of which safety of life is dependent, and are intended for maximum temperatures of 1,000° F. Includes specifications for three grades of rivet steel—(A) and (B) low carbon and (C) chrome-manganese-silicon alloy-steel—and requirements for rivets—chemical composition, tensile and bending properties, test specimens, tests of finished rivets, permissible variations in diameter, workmanship, and finish. In substantial agreement with American Society for Testing Materials Standard Specifications A31-40 and A202-39.

U. S. Gov., Treasury Dept., Procurement Div., No. 290; 1938. Steel, Cold-Rolled or Cold-Drawn (Screw Stock). Material shall be furnished as rods or bars, free from injurious defects, and shall have a bright, smooth, and workmanlike finish. Gives requirements for chemical analysis, size, and tolerances; methods of sampling, inspection, and tests; and packaging, packing, and marking.

*References.*—Alloy steel stock for bolts, rivets, screws, *see* 621.31: standard sizes, marking of type, of bars, *see* 603.0: methods of testing, general requirements for metals, *see* 600.1; classification of metals, size and weight tolerances, *see* 600.2, 600.7; screws, bolts, rivets, *see* 608.2, 608.3, 608.4.

## 603.22 Steel for Case Hardening

U. S. Gov., U. S. Army, Ordnance Department. Specification 57-107-29; 1940. Steel Bar, for Shell Stock.

*References.*—Standard sizes, marking of type, *see* 603.0, methods of testing, general requirements for metals, *see* 600.1; classification of metals, size and weight tolerances, *see* 600.2, 600.7; alloy steel for casehardening, *see* 621.31.

## 603.23 Commercial Grade Steel Bars and Rods

American Bureau of Shipping. Rules for the Classification and Construction of Steel Vessels, 1944. Round and Flat Iron Bars. Include rules for inspection and testing.

American Iron and Steel Institute. Steel Products Manual. Section 9; 1940. Revised 1943. Cold Finished Steel Bars and Shafting. Covers methods of manufacture, definitions and manufacturing practices, shafting, and special shapes; standard manufacturing tolerances; standard steels—carbon and alloy, nonstandard steels—ranges and limits, permissible variations for check analyses, and methods of sampling; and packaging and loading.

American Society for Testing Materials, A 107-42; 1942. Commercial Quality Hot-Rolled Bar Steels. Covers rounds, squares, and hexagons of all sizes, and flats not over 6 in. in width, made from carbon-steel. Requirements as to chemical composition, ladle analysis, permissible variations in dimensions, finish, and inspection.

American Society for Testing Materials, A 108-36; 1936. Commercial Cold-Finished Bar Steels and Cold-Finished Shafting. Covers steel grades in common use including free-cutting steels, also cold-finished shafting and key stock; rounds, squares, and hexagons of all sizes, and flats not over 6 in. in width. Shafting covered are rounds up to 8 in., inclusive. Requirements as to chemical composition, permissible variations in size, workmanship, and inspection.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, Volume 2, 1944. Steel; Bar (Carbon Steel Bar). Covers definition, derivation, size range, tolerances, characteristics, and ordering.

Society of Automotive Engineers. Aeronautical Material Specification 5070; 1942. Carbon-Steel (.18-.23 Carbon). For bars, rods, billets, or forgings. Covers requirements for composition, grain size, condition, quality, tolerances, reports, shipments, indentification, and rejections. Similar Specifications: AN-QQ-S-646, number X1020; SAE 1022.

U. S. Gov., Army-Navy Aeronautical Specification AN-QQ-S-646a; 1944. Steel; Carbon (1020, 1022, and 1025) Bar and Rod.

U. S. Gov., Army-Navy Aeronautical Specification AN-S-4a; 1944. Steel; Carbon (1035) Bar and Rod.

U. S. Gov., Army-Navy Aeronautical Specification AN-S-5a; 1944. Steel; Carbon (1095) Bar and Rod.

U. S. Gov., Federal Specification QQ-S-671; 1941. Amendment 1; 1942. Steel; Carbon and Alloy, Bars. Covers 22 carbon steels, and 8 free-cutting steels, in seven conditions—as rolled (hot-rolled or forged), annealed, normalized, normalized and tempered, quenched and tempered, cold-rolled or cold-drawn, and stress relief annealed. Gives requirements for material, manufacture, quality, and condition, condition and finish, heat treatment, chemical composition, physical properties, dimensions, and tolerances; methods of inspection and tests; requirements for packing and marking for shipment; tables of chemical requirements; and tables of permissible variations in squares, rounds, hexagons, and flats.

U. S. Gov., Treasury Dept., Procurement Div. 293A; 1941. Steel, Carbon, Mild; Bars and Billets. Shall be either cold-rolled or cold-drawn unless otherwise specified, manufactured by the open-hearth, electric-furnace or crucible process. Gives requirements for chemical composition, physical properties, tolerances, lengths, tensile tests, and methods of sampling, inspection, and tests; and packing and marking.

U. S. Gov., Treasury Dept., Procurement Div. 297; 1938. Steel; Carbon, Hot-Rolled or Forged. Covers 8 classes of steel made by the open-hearth, electric, or crucible process. Gives requirements for physical properties and chemical composition; methods of sampling, inspection, and tests; and packing and marking.

U. S. Gov., U. S. Army, Ordnance Department. Specification 57-107D; 1941. Steel; Bar, Carbon, and Alloy.

U. S. Gov., U. S. Army, Ordnance Department. Specification 57-107-31; 1944. Steel, Carbon, WD-1050 Modified; Bars and Shapes.

*References.*—Standard sizes, marking of type, *see* 603.0; methods of testing, general requirements for metals, *see* 600.1; Classification of metals, size and weight tolerances, *see* 600.2, 600.7; structural grades, *see* 605.1.

## 603.24 Steel for Shafts, Axles, and Forgings

American Iron and Steel Institute. Steel Products Manual. Section 9; 1940. Revised, 1943. Cold-Finished Steel Bars and Shafting. Covers methods of manufacture, definitions and manufacturing practices, shafting, and special shapes; standard manufacturing tolerances; standard steels—carbon and alloy, nonstandard steels—ranges and limits, permissible variations for check analyses, and methods of sampling; and packaging and loading.

American Society for Testing Materials A 108-36; 1936. Commercial Cold-Finished Bar Steels and Cold-Finished Shafting. Covers steel grades in common use including free-cutting steels, also cold-finished shafting and key stock; rounds, squares, and hexagons of all sizes, and flats not over 6 in. in width. Shafting covered are rounds up to 8 in. inclusive. Requirements as to chemical composition, permissible variations in size, workmanship, and inspection.

Drop Forging Assn. Standard Tolerances for Forgings (for Forgings Under 100 Pounds Each), 1937. Gives special and regular tolerances, dividing regular into commercial and close standard classes for thickness, width, draft angle, quantity, fillets and corners; with tables of tolerances for various weights of forgings for both classes.

U. S. Gov., Navy Dept., General Specifications for Inspection of Materials (1941), Appendix II, Metals, Part D, Photomicrographic Standards, Section 1, Photomicrographic Standards for Steel Forgings.

U. S. Gov., Navy Dept. Specification 46S6c; 1940. Steel; Carbon, Hot-Rolled or Forged For use of Naval Gun Factory.

U. S. Gov., Navy Dept. Specification 46S13c; 1937. Steel, Machinery, Cold-Rolled or Cold-Drawn; Bars and Rods.

U. S. Gov., Navy Dept. Specification 46S43; 1944. Steel, Rolled, Heat-treated: Bars (for Shafting).

U. S. Gov., U. S. Army, Ordnance Department. Specification 57-104-1B; 1942. Forging; Steel for Shell Stock.

*References.*—Other steels of forging quality, *see* 611.51 and specifications of commodities made of forged steel: Standard sizes, marking of type, *see* 603.0; methods of testing, general requirements for metals, *see* 600.1; classification of metals, size and weight tolerances, *see* 600.2, 600.7; forged steel, forged steel shafts and axles, *see* 611.51, 611.52, alloy steel for forgings, forged alloy steel and axles, *see* 621.31, 622.6.

## 603.25 Steel Reinforcing Bars and Rods

*References.*—Reinforcement steel, *see* 605.25.

## 603.26 Steel Bars and Rods for Welding

American Society for Testing Materials, A 233-43T; 1943. A.S.M.E. Boiler Construction Code Specification, SA-233. Iron and Steel Arc-Welding Electrodes. Covers lightly coated and covered metal for welding of carbon and low alloy steels. Gives requirements for manufacture, standard sizes and lengths, chemical composition, chemical analysis, all-weld-metal tension tests, weld contour tests, face and root bend tests of welded joints, permissible variations in dimensions, electrode coverings, workmanship, finish, packing, marking, and guarantee.

American Society for Testing Materials, Tentative Specification A 251-42T; 1942. A.S.M.E. Boiler Construction Code Specification, SA-251. Tentative Specifications for Iron and Steel Gas-Welding Rods. Covers gas-welding rods for the welding of carbon and low-alloy steels. Gives manufacture, standard sizes and lengths, chemical composition, tension tests, face and root-bend tests, permissible variations in dimensions, workmanship, finish, packing, marking, and guarantee.

American Transit Assn. Standard Specification for Manganese-Steel Electrodes, W53-35; 1935. This specification covers the kind of material, physical characteristics, recommended sizes and lengths, chemical and physical tests, marking, packing, and inspection of electrodes.

American Transit Assn. Standard Specification for Filler Metal for Use in Building Up Worn Carbon-Steel Rails, W54-35; 1935. The scope of this specification covers the kind of material, physical characteristics, recommended sizes and lengths, uses, testing procedure, test results, contact points, and inspection of filler metal.

American Welding Society. Tentative Specifications for Iron and Steel Gas-Welding Rods, 1942. Covers

gas-welding rods for the welding of carbon and low-alloy steels of weldable quality. Gives requirements for manufacture, standard sizes and length, chemical composition, tension tests, face and root-bend tests of welded joints, permissible variations in dimensions, workmanship and finish, packing, marking, and guarantee. Prepared jointly by A.W.S. and American Society for Testing Materials.

Heating, Piping, and Air Conditioning Contractors National Assn. Standard Manual on Pipe Welding, 1931. Specification for low carbon welding rod, chemical composition, and tensile requirements of metal deposited in weld. Includes flame test for size, and types of welding rods.

Resistance Welder Manufacturers Assn. Seam Welding Electrodes, 1940. Covers seam welding electrodes and replaceable resistance welding electrodes. Gives tables covering recommended electrode materials for spot welding similar and dissimilar metals using conventional spot welding methods; classification of comparative alloys; coding system for pointed, dome, flat and offset standard electrodes; pointed tips with tapered shanks; flat tips with tapered shanks; dome tips with tapered shanks; and offset tips with tapered shanks.

U. S. Gov., Navy Dept. Specification 17E4a; 1942. Electrodes, Welding (Covered), Nickel-Copper-Alloy.

U. S. Gov., Navy Dept. Specification 22W7c; 1936. Electrodes, Welding (Bare, Coated, or Covered), Iron and Steel.

U. S. Gov., Navy Dept. Specification 46R2c; 1940. Rods, Welding (Oxyacetylene), Steel (Corrosion-Resisting, 18-8 Type) (Columbium Bearing) (Aircraft Use).

U. S. Gov., Navy Dept. Specification 46R4b; 1940. Rods (and Wire), Welding, Iron and Steel (for Gas Welding).

U. S. Gov., Treasury Dept., Procurement Div. 542b; 1943. Electrodes, Arc-Welding, Iron and Steel. Covers 30 classes showing welding positions, covering or coating and polarity and current of electrodes, tensile strength, yield point, and elongation. Gives requirements for sizes and lengths, material, finish, and details; methods of sampling, inspection, and test; and packing and marking.

U. S. Gov., Army-Navy Aeronautical Specification AN-E-9; 1944. Electrodes; Mild and Alloy Steel Welding.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 57-114-1A; 1942. Steel, Plain Carbon and Low-Alloy High-Tensile, Plate, Shapes, Sheet, Strip, and Rectangular Bars, for Welded Structure.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 57-203-1B; 1944. Electrodes, Welding, Steel, Covered (Plain-Carbon and Low-Alloy).

U. S. Gov., U. S. Army, Ordnance Dept. Specification 57-203-2A; 1944. Rods, Gas, Welding, Steel.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 57-203-3; 1944. Electrodes, Welding, Steel, Covered, Austenitic.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 57-203-5; 1944. Electrodes, Welding, Steel, Covered (for Hard Surfacing).

*References.*—Methods of testing and general requirements for metals, *see* 600.1; welding apparatus and practice, *see* 767; iron and carbon steel welding wire, *see* 603.41; cast-iron rod for welding, *see* 611.19; brass rod, aluminum rod, for welding, *see* 645.11, 631.31.

## 603.27 Steel Bars and Rods for Automotive and Railway Use

Society of Automotive Engineers. Aeronautical Material Specification 5132; 1941. Steel; High-Carbon. For bars, rods, or as ordered. Gives requirements for composition, condition, quality, tolerance, reports, and rejections.

*References.*—Steels suitable for railway and automotive uses, *see* 603.21, 603.23, 603.24, 603.33; structural steels for railway use, *see* 605.1; alloy steels, *see* 621.3; standard sizes, marking of type, *see* 603.0; methods of testing, general requirements for metals, *see* 600.1: classification of metals, tolerances on size and weight, *see* 600.2, 600.7.

## 603.29 Miscellaneous Steel Bars and Rods

U. S. Gov., U. S. Army, Ordnance Dept. Specification 57-107-30; 1943. Steel, Free-Cutting, Bars or Wire, for Time-Fuze Parts.

## 603.3 SPRING AND TOOL STEEL BARS AND RODS

## 603.31 Drill Tool Steel Bars and Rods

U. S. Gov., Treasury Dept., Procurement Div. 295; 1938. Steel, Tool, High-Speed and Carbon. Covers two classes of tungsten and five classes of carbon steel. Gives requirements for material, workmanship, process, imperfections, lengths, tolerances, chemical requirements, and intended uses of each class; methods of sampling, inspection, and tests; and packaging, packing, and marking.

## 603.32 Hand, High-Speed, and Machine Tool Steels

American Railway Engineering Assn., Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering, 1942. Tool Steel. Shall be made by the open-hearth or the crucible process. Gives chemical requirements.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, 1938. Steel, Tool. Covers definition, classes, types, grades, characteristics, forms available, substitutes, and specifications.

U. S. Gov., Navy Dept. Specification 46S37b; 1945. Steel, Tool, High-Speed.

U. S. Gov., Navy Dept. Specification 46S40a; 1944. Steel, Tool, Carbon.

U. S. Gov., Treasury Dept., Procurement Div. 295; 1938. Steel, Tool; High-Speed and Carbon. Covers two classes of tungsten and five classes of carbon steel. Gives requirements for material, workmanship, process, imperfections, lengths, tolerances, chemical requirements, and intended uses of each class; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 57-108A; 1943. Steel, Tool; Carbon, Alloy, and High Speed.

*References.*—Standard sizes, marking of type, *see 603.0; methods of* testing, general requirements for metals, *see* 600.1; classification of metals, size and weight tolerances, *see* 600.2, 600.7; heat treatment, *see* 600.5; alloy tool steel, *see* 621.35.

### 603.33 Spring Steel Bars and Rods

American Society for Testing Materials, A 14-44; 1944. Carbon-Steel Bars for Springs. Covers three grades of hot-rolled bars determined by carbon ranges based on design of spring and stresses and service intended. Gives requirements for chemical composition, ladle analysis, check analysis, permissible variations in dimensions, finish, marking, inspection, and rejection.

American Society for Testing Materials, A 59-39; 1939. Silicon-Manganese Steel Bars for Springs. Requirements for chemical composition of hot-rolled bars, ladle analysis, permissible variations in dimensions, finish, and inspection.

American Society for Testing Materials, A 60-42; 1942. Chromium-Vanadium Steel Bars for Springs. Requirements for hot-rolled bars, chemical composition, ladle analysis, permissible variations in dimensions, finish, and inspection.

American Society for Testing Materials, A 68-44; 1944. Carbon-Steel Bars for Springs With Special Silicon Requirements. For manufacture of railway and general purpose springs. Gives requirements for chemical composition, ladle analysis, check analysis, permissible variations in dimensions, finish, marking, inspection, and rejection.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1943. Emergency Specification E-M-112-43, modifies AAR Specification M-112-42, Steel Bars, Carbon, for Railway Springs, by the inclusion of round-edge flat spring steel bars of additional sizes.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Steel Bars, Carbon, for Railway Springs, M-112-42; 1942. Manufacture, composition, analysis, permissible variations for rounds, squares, and flat stock.

U. S. Gov., Navy Dept. Specification 47 S 4g; 1943. Steel, Spring, Round or Square (Including Rectangular Sections Having Thicknesses Greater Than Half Their Width).

U. S. Gov., Navy Dept. Specification 47 S 27a; 1943. Steel, Spring, Flat Stock.

*References.*—Standard sizes, marking of type, *see* 603.0; methods of testing, general requirements for metals, *see* 600.1; classification of metals, size and weight tolerances, *see* 600.2, 600.7; heat treatments, *see* 600.5; alloy spring steels, *see* 621.34; carbon steel springs, *see* 611.54.

### 603.34 Spring Steel Strips

U. S. Gov., U. S. Army, Army Air Forces. Specification 57-136-2A; 1941. Steel, Spring, Tempered Strip, 1095.

## 603.4 IRON AND STEEL WIRE

### 603.40 General Items

American Iron and Steel Institute. Steel Products Manual. Section 15; 1941. Revised, 1942. Hot-Rolled Carbon-Steel Wire Rods. Gives definition, size classification, steel making processes, chemical and physical properties, quality classifications, and tolerances.

American Iron and Steel Institute. Steel Products Manual. Section 17; 1942. Flat Steel Wire. Includes requirements for qualities and grades, steel making processes and chemical composition, shape, and dimensions, tempers, temper designations, tolerances, camber, finishes, inspections and tests, packaging and protection, and standard methods of specifying; tubes of composition and identification designations of standard steels, and limits and ranges for nonstandard steels; and glossary of terms for killed, semikilled, and rimming steel.

### 603.41 Bare and Coated Iron and Steel Wire

American Assn. of State Highway Officials. Standard Specifications for Highway Bridges, 1941. Includes specifications for reinforcement—material ("structural steel grade" or "intermediate grade," open hearth to comply with A.A.S.H.O. Standard Specification M-31; with tensile requirements to conform to American Society for Testing Materials Specification A-15; bar mat to conform to A.A.S.H.O. Specification M-54; and will mesh to conform to A.A.S.H.O. Specification M-55), order lists, protection, fabrication, placing and fastening, splicing, lapping, substitutions, measurement, and payment.

American Iron and Steel Institute. Steel Products Manual. Section 16; 1942. Carbon-Steel Wire. For wire, methods of manufacture, classification by size of wire and size of coil, types and finishes of coarse round wire, classification of zinc coated (galvanized) wire, chemical and physical properties, packaging, tolerances, fine round wire, and tables for size and weights.

American Society for Testing Materials, A 82-34; 1934. American Assn. of State Highway Officials, M 32-42. American Standards Assn. A50.3-1936. Cold-Drawn Steel Wire for Concrete Reinforcement. For use as wire or in fabricated form for concrete reinforcement. Gives sizes, tensile and bending properties, preparation of test specimen, permissible variations in gage, finish, and inspection.

American Society for Testing Materials, A 227-41; 1941. Hard-Drawn Steel Spring Wire. Requirements as to chemical composition, ladle analysis, tensile properties, coiling and fracture test, permissible variations in dimensions, surface condition, and inspection.

American Society for Testing Materials, A 228-41; 1941. Steel Music Spring Wire. Gives requirements as to chemical composition, ladle analysis, tensile properties, coiling test, permissible variations in dimensions, surface condition, and inspection.

American Society for Testing Materials, A 229-41; 1941. Oil-Tempered Steel Spring Wire. Covers chemical composition, ladle analysis, requirements for tensile properties, coiling and fracture test, permissible variations in dimensions, surface condition, and inspection.

American Society for Testing Materials, A 230-41; 1941. Carbon-Steel Valve Spring Quality Wire. Covers tempered spring wire for springs requiring high-fatigue properties. Requirements as to chemical composition, ladle analysis, tensile properties, twist test, permissible variations in dimensions, decarburization, surface condition, and inspection.

American Society for Testing Materials, A 231-41; 1941. Chromium-Vanadium Steel Spring Wire. Covers untempered steel wire for use in springs at moderately elevated temperatures. Requirements as to chemical composition, ladle analysis, permissible variations in dimensions, surface condition, and inspection.

American Society for Testing Materials, A 232-41; 1941. Chromium-Vanadium Steel Valve Spring Quality Wire. For highest quality chromium-vanadium valve spring wire requiring high-fatigue properties, especially at moderately elevated temperatures. Chemical composition, ladle analysis, physical requirements, permissible variations in dimensions, decarburization, surface condition, and inspection.

American Society for Testing Materials, A 233-43T; 1943. A.S.M.E. Boiler Construction Code Specification No. SA-233. Tentative Specifications for Iron and Steel Arc-Welding Electrodes. Covers lightly coated and covered metal for welding of carbon and low alloy steels. Gives requirements for manufacture, standard sizes and lengths, chemical composition, chemical analysis, all-weld-metal tension tests, weld contour tests, face and root bend tests of welded joints, permissible variations in dimensions; electrode coverings, workmanship, finish, packing, marking, and guarantee.

Assn. of American Railroads, Telegraph and Telephone Section, 1-A-16; 1927. Galvanized Iron Tie Wires. Includes No. 8 and 9 B.W.G. wire, elongation, and breaking strain of soft wire, galvanized to meet requirements of A.A.R. specification 1-D-5.

National Association of Purchasing Agents. Handbook of Commodity Data Sheets, 1938. Wire; Spring Steel. Covers definition, grades and classes, specifications, finishes, and containers.

Package Research Laboratory. Bulletin 309; 1943. Wire for All-Bound Rock Fastener 4-One Boxes and Crates. Wire is technically described as low carbon steel wire and is divided into two general types, (a) stapling wire and (b) binding wire. Gives details covering physical properties of wire; details for each type including sizes, grades, and finishes; Rockaway wire tester, purchase specifications for wire, and details concerning staples.

Society of Automotive Engineers. Aeronautical Material Specification 5032; 1943. Annealed Steel Wire; Uncoated. Gives requirements for composition, condition, quality, tolerances, reports, packaging, marking, and rejections. Similar Specifications: Army 48-5, type I, grade WD-1020; Federal QQ-W-461, grade FS 1020; SAE 1020.

Society of Automotive Engineers. Aeronautical Material Specification 5033; 1942. Steel Wire; Zinc-Coated (Low-Carbon). Gives requirements for composition, condition, quality, tolerances, reports, packaging, and rejections. Similar specification: Army-Navy Aeronautical AN-QQ-W-435.

Society of Automotive Engineers. Aeronautical Material Specification 5110; 1940. Music Wire (Commercial). Gives requirements for form (cold-drawn wire supplies as coils of wire or as finished springs), composition, condition, quality, tolerance, finished springs, and rejections. Similar Specifications: Army 48-26; Navy 22 W 11.

Society of Automotive Engineers. Aeronautical Material Specification 5112B; 1943. Music Wire (Best Quality). For cold-drawn wire supplies as coils of wire or as finished springs. Gives requirements for composition, diameter, tensile strength, quality, tests, tolerances, finished springs, reports, identification, and rejections. Similar Specifications: Army-Navy Aeronautical AN-QQ-W-441; SAE 1085, ASTM A228-41.

Society of Automotive Engineers. Aeronautical Material Specification 5115A; 1943. Carbon Steel Spring Wire (Valve Spring Quality). For cold-drawn, hardened and tempered wire supplied as coils of wire or as finished springs. Gives requirements for composition, diameter, tensile strength, elongation, quality, tolerances, finished springs, reports, identification, and rejections. Similar Specifications: SAE 1070, ASTM A230-41.

U. S. Gov., Army Air Forces Specification, 10285-A-3; 1943. Wire, Metal; Spray Gun.

U. S. Gov., Army Air Forces Specification, 10286-C; 1945. Wire; Iron and Steel Welding, for Aeronautical Use.

U. S. Gov., Army-Navy Aeronautical Specification AN-QQ-W-429-1; 1942. Wire; Steel, High-Strength, Zinc-Coated.

U. S. Gov., Army-Navy Aeronautical Specification AN-QQ-W-435-3; 1943. Wire; Steel, Soft, Zinc-Coated.

U. S. Gov., Army-Navy Aeronautical Specification AN-W-13-2; 1944. Wire; Aircraft Stitching.

U. S. Gov., Army-Navy Aeronautical Specification AN-W-17; 1944. Wire; Spring Steel, Music Wire.

U. S. Gov., Federal Specification QQ-W-311; 1939. Wire; Bale-Tie, Single-Loop. Covers one type and two classes—(A) black and (B) zinc-coated (galvanized); either Bessemer, electric furnace, or open-hearth steel. Gives requirements for sizes, workmanship, manufacture, details for classes A and B, diameter, length tolerance, and physical properties; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification QQ-W-414; 1941. Wire, Steel; Bookbinders'. Covers two types—(I), flat, coppered or tinned; and (II) round, coppered, tinned, or liquor-finished. Gives chemical composition, width, thickness, tolerances, and strength; methods of inspection, sampling, and tests; and requirements for packaging, packing, and marking for shipment. Emergency Alternate Federal Specification E-QQ-W-414; 1942. (issued by Procurement Div., Treasury Dept. U. S. Gov.) changed requirements for protective finish and deletes all reference to coppered, tinned, and liquor-finished coatings.

U. S. Gov., Federal Specification QQ-W-432; 1941. Wire, Steel; Market. Covers one type and four finishes—(A) bright, (B) coppered, (C) tinned, and (D) zinc-coated; of Bessemer, open-hearth, or electric furnace steel. Gives requirements for sizes, tolerances, tensile strength, ductility, finish, weight of tin and zinc coating, and adherence of coating; methods of inspection, sampling, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification QQ-W-446; 1939. Wire; Steel, Zinc-Coated (for Wire-Bound Boxes). Covers two types—(I) binding wire and (II) stapling wire; either electric furnace or open-hearth steel. Gives requirements for weight and uniformity of zinc coating, size, and physical properties; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., Federal Specification QQ-W-461; 1941. Wire, Steel (Carbon); Bare and Zinc-Coated. Covers four grades—FS 1010, FS 1020, FS 1035, and FS 1045; and three weights—(A) medium, (B) heavy, and (C) extra-heavy. Gives requirements for tempers, finishes, sizes, material, workmanship, chemical composition, diameter of wire, tensile strength, ductility, and finish; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification QQ-W-465; 1942. Wire, Steel (Carbon); Spring, Hard-Drawn. Covers one grade of round hard-drawn spring wire intended for the manufacture of springs. Gives requirements for material, chemical composition, tensile properties, wrapping, permissible variations in diameter; methods of inspection and tests; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification QQ-W-470; 1942. Wire, Steel (Carbon); Spring, Music. Covers one grade of round music spring wire intended for the manufacture of springs. Gives requirements for material, chemical composition, tensile properties, wrapping, permissible variations in diameter; methods of inspection and tests; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification QQ-W-474; 1942. Wire, Steel (Carbon); Spring, Oil-Tempered. Covers one grade of round oil-tempered spring wire intended for the manufacture of springs. Gives requirements for material, chemical composition, tensile properties, wrapping, permissible variations in diameter; methods of inspection and tests; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., Navy Dept. Specification 22W8d; 1944. Wire, Sounding.

U. S. Gov., Navy Dept. Specification 22W11c; 1943. Wire, Steel (High Carbon); Spring (Music Wire).

U. S. Gov., Navy Dept. Specification 22W12b; 1943. Wire, Steel, High Strength, Zinc-Coated.

U. S. Gov., U. S. Army, Army Air Forces. Specification 48-25; 1929. Wire, Cold-Drawn, WD-1045.

U. S. Gov., U. S. Army, Army Air Forces. Specification 48-38; 1941. Wire, Iron and Constantan, Thermocouple.

U. S. Gov., U. S. Army, Chemical Warfare Service. Specification 48-9; 1925. Wire, Bridge, Submarine Gas Mask.

U. S. Gov., U. S. Army, Chemical Warfare Service. Specification 48-11; 1925. Wire, Ring, Submarine Gas Mask.

U. S. Gov., U. S. Army, Medical Dept. Specification 4-1062; 1937. Iron Wire, Standard Reagent Grade.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 48-6A; 1941. Wire, Steel, Spring, Hard-Drawn.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 48-7-1; 1942. Wire, Steel, Spring, for Small Arms Weapons, WD 1085 Special, WD 1095 Special and WD 6150 Special.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 48-7A; 1941. Wire, Steel, Spring, Carbon and Alloy, Oil-Tempered or Annealed.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 48-18A; 1941. Wire, Steel, Music Spring.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 57-107-30; 1943. Steel, Free-Cutting, Bars or Wire, for Time-Fuze Parts.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 48-5A; 1940. Wire, Soft, Iron and Steel, Bare and Coated.

*References.*—Iron and steel welding rod, *see* 603.28, 611.19, 622.4; alloy steel welding wire, *see* 622.4; fence wire, *see* 603.43; telephone, telegraph, signal, track bonding wire of iron or steel, *see* 715.43; methods of testing, general requirements for metals, *see* 600.1; wire gages, *see* 603.40; zinc coatings and tests, *see* 600.3.

## 603.42 Bare and Coated Wire Rope

American Assn. of State Highway Officials, M30-42. Standard Specification for Wire Rope and Fittings for Highway Guard Rail. Covers 3/4-in. and 1-in. wire rope and fittings. Gives general requirements, properties, and marking and shipping for wire rope; and galvanizing and methods of sampling and testing for fittings.

American Assn. of State Highway Officials, T39-42. Standard Method of Test for Wire Rope (Guardrail). The report of the physical test of wire rope shall include diameter of rope, diameter of wire, number of strands and wires, length of lay of strands and wires, cross-sectional area in square inches, and breaking load in pounds. Gives definitions and preparation of specimen for test.

American Bureau of Shipping. Rules for the Classification and Construction of Steel Vessels, 1944. Steel Wire Rope. Include rules for the inspection and testing.

American Mining Congress, sponsor. American Standards Assn., M11-1927. Wire Rope for Mines. Types, material grades according to strength, torsional and wrapping test requirements, galvanizing, fiber core and lubrication requirements, weight, minimum strength, and construction of the various grades of rope, and recommended practice in the use of wire rope at mines, clamping, seizing, socketing, splicing, drums and sheaves, lubrication, safety factor.

American Petroleum Institute, Production Div. Standard 9-A; 1944. Specification for Wire Rope. To provide wire rope of uniform quality in the minimum number of grades of material and types of construction to adequately meet the requirements of the petroleum industry. Includes cable tool drilling lines, rotary drilling or casing lines, sand lines, rotary bailing lines, tubing lines, torpedo lines, well measuring wires, and galvanized wire guy strands. Covers grades of material, properties and tests for wire and wire rope, manufacture and tolerances, type of lines, torpedo lines, well measuring wires, galvanized wire guy strand, packing and marking, inspection and rejection, and appendices.

American Railway Engineering Assn., Construction and Maintenance Section, Assn. of American Railroads. Manual of Railway Engineering, 1944. Specification for Wire Rope Used With Work Equipment. Gives construction, lay, various strand constructions, factors of safety, causes of failure, recommended types for maintenance of way use, lubrication, seizing, and sockets and mandrels.

American Society for Testing Materials, A 122-41; 1941. American Standards Assn. G 8.6-1943. Zinc-Coated

Steel Wire Strand "Galvanized" and Class A ("Extra Galvanized"). For use as guy wire, messenger wire, electrical conductor, etc. Gives requirements as to zinc coating, stranding, ductility of steel and adherence of coating, table of physical properties of strand, sizes and permissible variations, and inspection.

American Society for Testing Materials, A 218-41; 1941. American Standards Assn., G8.11-1944. Zinc-Coated Steel Wire Strand, Class B and Class C Coatings. For use as guy wires, messenger wires, span wires, electrical conductors, overhead ground wires, etc. Gives requirements for zinc, base metal, joints, stranding, weight and uniformity of coating, physical properties, elongation, ductility, adherence of coating, size and permissible variations, workmanship and finish, packing and marking, and inspection.

Assn. of American Railroads. Operations and Maintenance Dept., Engineering Div., Signal Section. Manual of Recommended Practice Specification 173-39; 1939. Copper-Covered Steel Guy and Messenger Strand. Seven-wire and three-wire strand for use as messengers in supporting of aerial cable and guying of overhead lines, in signal service. Tables of sizes, strength and weight, methods of test and marking.

Assn. of American Railroads, Operations and Maintenance Dept., Engineering Div., Signal Section. Manual of Recommended Practice, 1944. Specifications for steel galvanized strand for recommended specification, see manual of A.A.R. Telegraph and Telephone Section 1-A-17.

Assn. of American Railroads, Telegraph and Telephone Section, 1-A-17; 1927. Galvanized Steel Guy and Messenger Strand. Gives requirements of 4 sizes of 7-strand cable, materials and workmanship, dimensions, breaking strain, elongation, and for galvanizing according to A.A.R. specification 1-D-5.

Assn. of American Railroads, Telegraph and Telephone Section, 1-A-53; 1935. Galvanized Copper-Bearing Steel Line Wire. Includes five sizes from 4 to 12 B.W.G., requirements as to composition, permissible variations in size, tensile strength, elongation, torsion, galvanizing, and tests.

Edison Electric Institute. Suggestions for Specifications for Eyenuts and Eyelets, TD-5; 1941. For use in overhead line construction. Gives requirements for material, dimensions, threads, strength, galvanizing, preferred sizes, finish, packing and shipping, inspection, rejections, and dimensional drawing.

International Municipal Signal Association, Inc. Specification No. 32; 1942. 30 Per Cent or 40 Per Cent Conductivity Copper Covered Steel Messenger Strand. Covers copper covered steel strand of two types—high strength and extra high strength for use as messengers in supporting aerial cable, fire alarm, police patrol and traffic signals or other municipal signalling equipment, and for the guying of overhead line poles. Gives requirements for material, properties, samples for test, packing and marking for shipment, payment for reels, inspection and tests, and rejection.

U. S. Gov., Army-Navy Aeronautical Specification AN-C-76a; 1944. Cable; Single Strand Nonflexible Carbon Steel (Preformed).

U. S. Gov., Army-Navy Aeronautical Specification AN-RR-C-43-1; 1942. Cable; Steel (Carbon), Flexible, Preformed.

U. S. Gov., Army-Navy Aeronautical Specification AN-S-23a; 1944. Shackles; Cable.

U. S. Gov., Army-Navy Aeronautical Specification AN-T-26a; 1944. Thimbles; Wire-Cable.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R198-43. Wire Rope. Gives 20 tables of standard items, and its purpose is to conserve strategic materials and available productive capacity. Tables gives diameter, approximate weight per foot, and breaking strength.

U. S. Gov., Federal Specification RR-R-571; 1933. Amendment 6; 1944. Rope; Wire. Covers about 25 types. Gives definitions and general requirements for wire, strand, centers, cores, lubrication, marline, diameter of wire rope, and preforming; details for each type; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., Navy Dept. Specification 12S14; 1916. Sockets; Wire-Rope.

U. S. Gov., Navy Dept. Specification 12T9a; 1942. Thimbles; Rope (Manila and Wire).

U. S. Gov., Navy Dept. Specification 22C3a; 1938. Cable, Steel, 19 Nonflexible.

U. S. Gov., Navy Dept. Specification 22C6a; 1938. Cable, Steel, Tinned, Flexible and Extra Flexible Preformed type.

U. S. Gov., Navy Dept. Specification 22R3h; 1943. Rope; Wire.

U. S. Gov., Navy Dept. Specification 22R4; 1940. Rope; Spring-Lay (Alternate Fiber Strands and Steel Wire Around a Fiber Core).

U. S. Gov., Navy Dept. Specification 22R6a; 1944. Rope, Wire, Steel (Plow), Galvanized (for Target-Towing Hawsers).

U. S. Gov., U. S. Army, Army Air Forces. Specification 48-14A; 1926. Cable, Steel Wire, Flexible 6 by 7.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 48-20a; 1939. Rope, Steel Wire, Galvanized, Marline Covered, for Submarine Mine.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 89-5075; 1942. Thimble, Galvanized Steel, Submarine Mine.

U. S. Gov., U. S. Army, Signal Corps. Specification 48-10-B; 1930. Wire, Messenger, Galvanized, Types W-90, W-115, and W-116.

*References.*—*See* references under 603.43.

## 603.43 Manufactures of Iron and Steel Wire

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering. Specifications for Buildings for Railroad Purposes: Ornamental and Miscellaneous Metal Work. Gives requirements for fabric fences, window guards, elevator enclosures, and grille partitions.

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering. Specifications for Standard Right-of-Way Fences, 1935. Covers four classes—(A) 9 longitudinal wires; (B) 7 longitudinal wires; (C) woven wire fencing, 25 1/2 in. high, with

3 strands of barbed wire above; and (D) 5 strands of galvanized steel ribbon, smooth, round or barbed wire fencing. Gives requirements for wood posts, braces, wire, locks, staples, galvanizing, manufacture, erection, gates, and stock guards.

American Society for Testing Materials, A 116-39; 1939. American Standards Assn. G8.9-1944. Zinc-Coated (Galvanized) Iron or Steel Farm-Field and Railroad Right-of-Way Wire Fencing. For three classes based on weight of coating. Gives requirements for style and size, zinc for coating, base metal, sampling, weight and uniformity of coating, tests of coating, retests and rejection, size and permissible variations, packing and marking, inspection, and billing.

American Society for Testing Materials, A 117-33; 1933. American Standards Assn., G8.5-1935. Zinc-Coated Iron or Steel Chain-Link Fence Fabric Galvanized After Weaving. Covers link fence with helically wound and interwoven without knots or ties, form of square mesh and top and bottom finish. Includes zinc coating, wire, test specimen, tests of coating, and inspection.

American Society for Testing Materials, A 121-39; 1939. American Standards Assn., G8.10-1944. Zinc-Coated (Galvanized) Iron or Steel Barbed Wire. For three classes of wire galvanized before fabrication, based on weight of coating. Gives requirements for size and constructions, zinc for coating, base metal sampling, weight and uniformity of coating, tests of coating, retests and rejection, size and permissible variations, packing and marking, inspection, and billing.

Society of Automotive Engineers. Aeronautical Material Specification 5112B; 1943. Music Wire (Best Quality). For cold-drawn wire supplied as coils of wire or as finished springs. Gives requirements for composition, diameter, tensile strength, quality, tests, tolerances, finished springs, reports, identification, and rejections. Similar Specifications: Army-Navy Aeronautical AN-QQ-W-441, SAE 1085, ASTM A228-41.

Society of Automotive Engineers. Aeronautical Material Specification 5115A; 1943. Carbon Steel Spring Wire (Valve Spring Quality). For cold-drawn, hardened and tempered wire, supplied as coils of wire or as finished springs. Gives requirements for composition, diameter, tensile strength, elongation, quality, tolerances, finished springs, reports, identification, and rejections. Similar Specifications: SAE 1070, ASTM A230-41.

Society of Automotive Engineers. 1944 Handbook, Section 4—Fabricated Materials. S.A.E. Standard Wire Cloth. Adopted, 1924. Table of sizes and dimensions with tolerances and types of weave.

Underwriters' Laboratories, Inc. Marine Backfire Flame Arresters, 1931. Tentative. For use on carburetor air intakes, construction details, width of joints, corrosion, vibration, and explosion tests.

U. S. Gov., Army Air Forces Specification 16106-A, (1); 1944. Cloth; Wire Mesh, Cotton Covered.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R9-28; 1928. Woven-Wire Fencing. This recommendation establishes a schedule of sizes and varieties of woven-wire fencing for several styles of fences, namely—field fence, close-mesh hog and cattle field fence, wolf-proof fence, and poultry fence.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R122-31; 1931. Wire Insect Screen Cloth. This recommendation establishes a number of stock varieties of black painted and electro-galvanized steel wire screen cloth and of copper and commercial bronze wire screen cloth; includes standard mesh openings, sizes of wire, widths of roll, length of roll, packing, required percentage of copper for copper and bronze screen wire.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R147-42; 1942. Wire Diameters for Mineral Aggregate Production Screens. This recommendation establishes a simplified schedule of different wire diameters used for clear openings of screen. Initiated by National Sand and Gravel Assn. and National Slag Assn.

U. S. Gov., Federal Specification RR-C-451a; 1934. Amendment 4; 1944. Cloth; Wire, Screen. Covers four types, including type D, iron or steel, galvanized (zinc coated). Gives requirements for material and workmanship, number of meshes per inch, diameter of wire, construction, length, width, and composition of wire; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., Federal Specification RR-C-451a; 1934. Amendment 4; 1944. Cloth; Wire, Screen. Covers four types, including type H, iron or steel, japanned or painted. Gives requirements for material and workmanship, number of meshes per inch, diameter of wire, construction, length, width, and composition of wire; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., Federal Specification RR-C-596; 1938. Cord; Picture-Wire. Covers two classes—(A) gilt and (B) tinned; gilt cord in sizes 10, 11, 12, 13, 14, 15, 16, 17, and 18; and tinned cord in sizes 0, 1, 2, 3, 4, 5, 6, 7, and 8; twisted or braided, and circular in cross-section. Gives requirements for material, workmanship, strands, and breaking strength; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment. Emergency Alternate Federal Specification E-RR-C-596; 1942 (issued by Procurement Div., Treasury Dept., U. S. Gov.) changed requirements for class B and deletes all reference to class A cord.

U. S. Gov., Federal Specification RR-F-191; 1937. Fencing; Chain-Link or Welded. Covers two types: (A) Zinc-coated (in two classes—(1) chain link, and (2) welded); and (B) copper-coated, chain link. Gives requirements for material, workmanship, permissible variations, and construction; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking. Emergency Alternate Federal Specification E-RR-F-191; 1942 (issued by Procurement Div., Treasury Dept., U. S. Gov.) changed requirements for fencing (wire fabric) and gives requirements for gates, posts, and wire.

U. S. Gov., Federal Specification RR-F-221; 1930. Amendment 1; 1934. Fencing; Wire (Barbed, Netting, and Woven), Black and Galvanized. Covers three types—(A) wire, barbed, zinc-coated; (B) wire, woven,

farm or field fences, black or zinc-coated; and (C) wire, netting, zinc-coated. Gives requirements for material, workmanship, and details for each type; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., Federal Works Agency. Public Roads Administration. Specifications for Construction of Roads and Bridges in National Forests and National Parks FP-41. Barbed Wire Fence.

U. S. Gov., Federal Works Agency. Public Roads Administration. Specifications for Construction of Roads and Bridges in National Forests and National Parks FP-41. Gates.

U. S. Gov., Marine Corps Specification, 1943. Hook; Double, 2 1/2-Inch.

U. S. Gov., Navy Dept., Bureau of Yards and Docks. Specification 19Yb; 1933. Wire Fencing; Nonclimbable.

U. S. Gov., Navy Dept. Specification 57G4; 1941. Gauze, Wire, Iron, with Asbestos Center.

U. S. Gov., Navy Dept. Specification 57S36; 1944. Splints; Wire-Mesh for.

U. S. Gov., Treasury Dept., Procurement Div. 538; 1942. Gates, Posts, Top Rails, and Reinforcing Wire (for Wire Fencing). This specification covers gate, posts, top rails, top reinforcing wire and bottom reinforcing wire. Gates shall be single swing (one gate) or double swing (two gates). Posts shall cover following types: Type I, corner; type II, end; type III, gate; and type IV, line. All structural members shall be steel, and other members shall be steel, malleable iron, or wrought iron. Gives requirements for gate frame, latches, stops, keepers, hinges, and fabric for gates; details for various types of posts; top rails; top and bottom reinforcing wire; finish; details including tables concerning height, width, diameter, dimensions, and weight; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., U. S. Army, Corps of Engineers. Specification 39-1; 1943. Netting, Camouflage, Wire, Steel, Garnished With Fabric.

U. S. Gov., U. S. Army, Medical Department. Specification 10-2169A; 1941. Splint; Wire Gauze.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2979; 1940. Cover, Metal Wire, for Animal Jars.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 29-31; 1922. Trap; Fly.

*References.*—Methods of testing, general requirements for metals, *see* 600.1; zinc coatings and tests, *see* 600.3; wire lath, *see* 605.24; wire fabric for concrete reinforcement, *see* 605.25; motorcycle spokes, *see* 725.2; bed springs and wire fabric for beds, *see* 613.1.

## 603.5 CHAINS AND ATTACHMENTS

### 603.50 General Items

American Bureau of Shipping. Rules for the Classification and Construction of Steel Vessels, 1944. Forged and Cast Steel Chains. Include rules for the inspection and testing.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R100-29; 1929. Welded Chain. Simplified practice recommended and accepted by industry in which the sizes and varieties listed in the publication are eliminated from the list of stock items formerly provided, including sizes of straight link proof coil and BB chain, breast chains, cart back chains, trace chains, wagon chains, chain dogs, ring dogs, heel chains, etc. Initiated by manufacturers now represented by the Chain Institute.

U. S. Gov., Federal Specification RR-C-271; 1931. Amendment 2; 1934. Chain and Attachments; Standard, Miscellaneous. Covers two types: (A) Welded (two grades—I, crane, wrought iron; and II, proof coil, wrought iron, or open-hearth steel); and (B) weldless (steel, copper, brass, or bronze); six classes for type A: (1) Close link, (2a) long link—buoy or submarine net, (2b) long link—conveyor or sprocket wheel, (3a) twist link—plain pattern, (3b) twist link—long-link pattern, and (3c) twist link—short-link pattern; twelve classes for type B: (1) Single-loop pattern, (2) double-loop pattern, (3) sash, (4a) flat link—long pitch, (4b) flat link—short pitch, (5) plumber's, (6) safety, (7) single jack, (8) double jack, (9) ladder, (10) register, and (11) brass—for mechanical communications; and eleven types of attachments: (A) Chain dogs—plain point, diamond point, (B) ring dog—diamond point, Norfolk pattern, plain, (C) hooks—vehicle and harness, slip, grab, hoist or sling, bale and box, barrel and stone hoist, hogshead, and can, (D) connecting links—one class, (E) repair or end-lap links—one class, (F) oval-side lap links—one class, (G) shackles—screw pin, anchor; screw pin, chain; oval pin, anchor; oval pin, chain; round pin, anchor; and round pin, chain, (H) rings—one class, (I) toggles—sheared, forged, (J) swivels—one class, and (K) sash—weight, socket. Gives requirements for material, workmanship, weights, design, and dimensions; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

### 603.51 Long-Link Chains

U. S. Gov., Federal Specification RR-C-271; 1931. Amendment 2; 1934. Chain and Attachments; Standard, Miscellaneous. Covers two types: (A) Welded (two grades—I, crane, wrought iron; and II, proof coil, wrought iron, or open-hearth steel); and (B) weldless (steel, copper, brass, or bronze); six classes for type A: (1) Close link, (2a) long link—buoy or submarine net, (2b) long link—conveyor or sprocket wheel, (3a) twist link—plain pattern, (3b) twist link—long-link pattern, and (3c) twist link—short-link pattern; twelve classes for type B: (1) Single-loop pattern, (2) double-loop pattern, (3) sash, (4a) flat link—long pitch, (4b) flat link—short pitch, (5) plumber's, (6) safety, (7) single jack, (8) double jack, (9) ladder, (10) register, and (11) brass—for mechanical communications; and eleven types of attachments: (A) Chain dogs—plain point, diamond point, (B) ring dogs—diamond point, Norfolk pattern, plain, (C) hooks—vehicle and harness, slip, grab, hoist or sling, bale and box, barrel and stone hoist, hogshead, and can, (D) connecting links—one class, (E) repair or end-lap links—one class, (F) oval-side lap links—one class, (G) shackles—screw pin, anchor; screw pin, chain; oval pin, anchor; oval pin, chain; round pin, anchor; and round pin, chain,

(H) rings—one class, (I) toggles—sheared, forged, (J) swivels—one class, and (K) sash—weight, socket. Gives requirements for material, workmanship, weights, design, and dimensions; methods of sampling, inspection and tests; and requirements for packaging, packing, and marking.

*References.*—Methods of testing, general requirements for metals, *see* 600.1.

## 603.52 Short Link, Straight-Link Chains

American Society for Testing Materials, A 56-39; 1939. Iron and Steel Chain. Covers two classes; crane chain for slings, steam shovels and marine use where all-iron chain is wanted, and proof-coil for railroad cars, construction and forestry work, made from open-hearth steel. Gives method of welding, chemical composition, proof and break tests, elongation, test specimen, nominal weights and dimensions, workmanship and inspection.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1944. Iron and Steel Chain. Specifications M-301-44; 1944. Two classes, iron crane chain for slings, hoists, steam shovels, and marine uses; steel proof coil for railroad cars, construction and forestry work. Gives manufacture, chemical and physical properties and tests, standard weights and dimensions, workmanship and finish, marking, and inspection and rejection.

U. S. Gov., Federal Specification, RR-C-271; 1931. Amendment 2; 1934. Chain and Attachments; Standard, Miscellaneous. Covers two types: (A) Welded (two grades—I, crane, wrought iron; and II, proof coil, wrought iron, or open-hearth steel); and (B) weldless (steel, copper, brass, or bronze); six classes for type A: (1) Close link, (2a) long link—buoy or submarine net, (2b) long link—conveyor or sprocket wheel, (3a) twist link—plain pattern, (3b) twist link—long-link pattern, and (3c) twist link—short-link pattern; twelve classes for type B: (1) Single-loop pattern, (2) double-loop pattern, (3) sash, (4a) flat link—long pitch, (4b) flat link—short pitch, (5) plumber's, (6) safety, (7) single jack, (8) double jack, (9) ladder, (10) register, and (11) brass—for mechanical communications; and eleven types of attachments: (A) Chain dogs—plain point, diamond point, (B) ring dogs—diamond point, Norfolk pattern, plain, (C) hooks—vehicle and harness, slip, grab, hoist or sling, bale and box, barrel and stone hoist, hogshead, and can, (D) connecting links—one class, (E) repair or end-lap links—one class, (F) oval-side lap links—one class, (G) shackles—screw pin, anchor; screw pin, chain; oval pin, anchor; oval pin, chain; round pin, anchor; and round pin, chain, (H) rings—one class, (I) toggles—sheared, forged, (J) swivels—one class, and (k) sash—weight, socket. Gives requirements for material, workmanship, weights, design, and dimensions; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Navy Dept. Specification 6C3c; 1921. Chains; Boat.

*References.*—Standard sizes and varieties, *see* 603.50; methods of testing, general requirements for metals, *see* 600.1; heat treatments, *see* 600.5; classification of metals, *see* 600.2.

## 603.53 Stud-Link Chains

U. S. Gov., Federal Specification RR-C-251; 1933. Chain; Ship. Covers the stud-link type, for use as anchor, mooring, buoy, or towing chain; and three classes—(A) wrought iron, (B) forged steel, and (C) commercial wrought iron or forged steel. Gives requirements for material, workmanship, tolerances, arrangement of links and shackles, chemical composition, and physical properties; methods of sampling, inspection, and tests; and requirements for packing and marking.

*References.*—Standard sizes and varieties of chain, *see* 603.50; methods of testing, general requirements for metals, *see* 600.1; classification of metals, *see* 600.2; heat treatments, *see* 600.5.

## 603.54 Twisted-Link Chains

U. S. Gov., Federal Specification RR-C-271; 1931. Amendment 2; 1934. Chain and Attachments; Standard, Miscellaneous. Covers two types: (A) Welded (two grades—I, crane, wrought iron; and II, proof coil, wrought iron, or open-hearth steel); and (B) weldless (steel, copper, brass, or bronze); six classes for type A: (1) Close link, (2a) long link—buoy or submarine net, (2b) long link—conveyor or sprocket wheel, (3a) twist link—plain pattern, (3b) twist link—long-link pattern, and (3c) twist link—short-link pattern; twelve classes for type B: (1) Single-loop pattern, (2) double-loop pattern, (3) sash, (4a) flat link—long pitch, (4b) flat link—short pitch, (5) plumber's, (6) safety, (7) single jack, (8) double jack, (9) ladder, (10) register, and (11) brass—for mechanical communications; and eleven types of attachments: (A) Chain dogs—plain point, diamond point, (B) ring dogs—diamond point, Norfolk pattern, plain, (C) hooks—vehicle and harness, slip, grab, hoist or sling, bale and box, barrel and stone hoist, hogshead, and can, (D) connecting links—one class, (E) repair or end-lap links—one class, (F) oval-side lap links—one class, (G) shackles—screw pin, anchor; screw pin, chain; oval pin, anchor; oval pin, chain; round pin, anchor; and round pin, chain, (H) rings—one class, (I) toggles—sheared, forged, (J) swivels—one class, and (K) sash—weight, socket. Gives requirements for material, workmanship, weights, design and dimensions; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

*References.*—Standard sizes and varieties, *see* 603.50; methods of testing, general requirements for metals, *see* 600.1.

## 603.55 Straight and Twisted Link Vehicle Chains

Bar Reinforced Tire Chain Manufacturers. Bar Reinforced Tire Chain Specifications 8139; 1939. Covers reinforced tire chains in four types—(A) passenger car, four-link spacing; (B) single pneumatic, four-link spacing; (C) single pneumatic, two-link spacing; and (D) dual pneumatic with three side chains. Gives requirements for material and workmanship, finish and details for each type; and methods of sampling, inspection, and tests.

U. S. Gov., Federal Specification RR-C-271; 1931. Amendment 2; 1934. Chain and Attachments; Standard, Miscellaneous. Covers two types: (A) Welded, two grades—(I) crane, wrought iron; and (II) proof coil, wrought iron, or open-hearth steel; and (B) weldless—steel, copper, brass, or bronze; six classes for type

A—(1) close link; (2a) long link, buoy or submarine net; (2b) long link, conveyor or sprocket wheel; (3a) twist link, plain pattern; (3b) twist link, long-link pattern; and (3c) twist link, short-link pattern; twelve classes for type B—(1) single-loop pattern, (2) double-loop pattern, (3) sash, (4a) flat link, long pitch, (4b) flat link, short pitch, (5) plumber's, (6) safety, (7) single jack, (8) double jack, (9) ladder, (10) register, and (11) brass, for mechanical communications; and eleven types of attachments—(A) chain dogs—plain point, diamond point; (B) ring dogs—diamond point, Norfolk pattern, plain; (C) hooks—vehicle and harness, slip, grab, hoist or sling, bale and box, barrel and stone hoist, hogshead, and can; (D) connecting links, one class; (E) repair or end-lap links, one class; (F) oval-side lap links, one class; (G) shackles—screw pin, anchor; screw pin, chain; oval pin, anchor; oval pin, chain, round pin, anchor; and round pin, chain; (H) rings, one class; (I) toggles—sheared, forged; (J) swivels, one class; and (K) sash—weight, socket. Gives requirements for material, workmanship, weights, design, and dimensions; methods of sampling, inspection, and tests; and requirements for packaging, packing and marking.

U. S. Gov., Treasury Dept., Procurement Div., 437A; 1942. Chains; Tire, Antiskid (Standard and Reinforced Types). Covers two types of tire chains—(I) standard and (II) reinforced; and three classes—(A) passenger car chains, (B) single pneumatic chains, and (C) dual pneumatic chains. Gives requirements for material, finish, side chains, end hooks or lock fasteners, tolerances, physical requirements, sizes, and details for each type and class; methods of sampling, inspection, and tests; and packaging, packing, and marking.

*References.*—Standard sizes and varieties of chain, *see* 603.50; vehicle and harness hooks, *see* 603.57.

## 603.56 Weldless Chain, Various Link Patterns

U. S. Gov., Federal Specification RR-C-271; 1931. Amendment 2; 1934. Chain and Attachments; Standard, Miscellaneous. Covers two types: (A) Welded, two grades—(I) crane, wrought iron; and (II) proof coil, wrought iron, or open-hearth steel; and (B) weldless—steel, copper, brass, or bronze; six classes for type A—(1) close link; (2a) long link, buoy or submarine net; (2b) long link, conveyor or sprocket wheel; (3a) twist link plain pattern; (3b) twist link, long-link pattern; and (3c) twist link, short-link pattern; twelve classes for type B—(1) single-loop pattern; (2) double-loop pattern; (3) sash; (4a) flat link, long pitch; (4b) flat link, short pitch; (5) plumber's; (6) safety; (7) single jack; (8) double jack; (9) ladder; (10) register; and (11) brass, for mechanical communications; and eleven types of attachments—(A) chain dogs—plain point, diamond point; (B) ring dogs—diamond point, Norfolk pattern, plain; (C) hooks—vehicle and harness, slip, grab, hoist or sling, bale and box, barrel and stone hoist, hogshead, and can; (D) connecting links, one class; (E) repair or end-lap links, one class; (F) oval-side lap links, one class; (G) shackles—screw pin, anchor; screw pin, chain; oval pin, anchor; oval pin, chain; round pin, anchor; and round pin, chain; (H) rings, one class; (I) toggles—sheared, forged; (J) swivels, one class; and (K) sash—weight, socket. Gives requirements for material, workmanship, weights, design, and dimensions; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

*References.*—Standard sizes and varieties, *see* 603.50; methods of testing, general requirements for metals, *see* 600.1; classification of metals, *see* 600.2; transom chain, *see* 617.5.

## 603.57 Chain Attachments

U. S. Gov., Federal Specification RR-C-251; 1933. Chain; Ship. Covers the stud-link type, for use as anchor, mooring, buoy, or towing chain; and three classes—(A) wrought iron, (B) forged steel, and (C) commercial wrought iron or forged steel. Gives requirements for material, workmanship, tolerances, arrangement of links and shackles, chemical composition, and physical properties; methods of sampling, inspection, and tests; and requirements for packing and marking.

U. S. Gov., Federal Specification RR-C-271; 1931. Amendment 2; 1934. Chain and Attachments; Standard, Miscellaneous. Covers two types: (A) Welded, two grades—(I) crane, wrought iron; and (II) proof coil, wrought iron, or open-hearth steel; and (B) weldless—steel, copper, brass, or bronze; six classes for type A—(1) close link; (2a) long link, buoy or submarine net; (2b) long link, conveyor or sprocket wheel; (3a) twist link, plain pattern; (3b) twist link, long-link pattern; and (3c) twist link, short-link pattern; twelve classes for type B—(1) single-loop pattern, (2) double-loop pattern, (3) sash, (4a) flat link, long pitch, (4b) flat link, short pitch, (5) plumber's, (6) safety, (7) single jack, (8) double jack, (9) ladder, (10) register, and (11) brass, for mechanical communications; and eleven types of attachments—(A) chain dogs—plain point, diamond point; (B) ring dogs—diamond point, Norfolk pattern, plain; (C) hooks—vehicle and harness, slip, grab, hoist or sling, bale and box, barrel and stone hoist, hogshead, and can; (D) connecting links, one class; (E) repair or end-lap links, one class; (F) oval-side lap links, one class; (G) shackles—screw pin, anchor; screw pin, chain; oval pin, anchor; oval pin, chain; round pin, anchor; and round pin, chain; (H) rings, one class; (I) toggles—sheared, forged; (J) swivels, one class; and (K) sash—weight, socket. Gives requirements for material, workmanship, weights, design, and dimensions; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Federal Specification RR-H-571; 1933. Hooks; Chain. Gives requirements for material, workmanship, sizes, and design; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., U. S. Army, Ordnance Department. Specification 91-57; 1934. Link, Chain Repair.

*References.*—Standard sizes and varieties of chain, *see* 603.50; methods of testing, general requirements for metals, *see* 600.1; heat treatments, *see* 600.5.

## 603.59 Miscellaneous Chains

U. S. Gov., Federal Specification RR-C-271; 1931. Amendment 2; 1934. Chain and attachments; Standard, Miscellaneous. Covers two types: (A) Welded, two

grades—(I) crane, wrought iron; and (II) proof coil, wrought iron, or open-hearth steel; and (B) weldless—steel, copper, brass, or bronze; six classes for type A—(1) close link, (2a) long link, buoy or submarine net; (2b) long link, conveyor or sprocket wheel; (3a) twist link, plain pattern; (3b) twist link, long-link pattern; and (3c) twist link, short-link pattern; twelve classes for type B—(1) single-loop pattern; (2) double-loop pattern; (3) sash; (4a) flat link, long pitch; (4b) flat link, short pitch; (5) plumber's; (6) safety; (7) single jack; (8) double jack; (9) ladder; (10) register; and (11) brass, for mechanical communications; and eleven types of attachments—(A) chain dogs—plain point, diamond point; (B) ring dogs—diamond point, Norfolk pattern, plain; (C) hooks—vehicle and harness, slip, grab, hoist or sling, bale and box, barrel and stone hoist, hogshead, and can; (D) connecting links, one class; (E) repair or end-lap links, one class; (F) oval-side lap links, one class; (G) shackles—screw pin, anchor; screw pin, chain; oval pin, anchor; oval pin, chain; round pin, anchor; and round pin, chain; (H) rings, one class; (I) toggles—sheared, forged; (J) swivels, one class; and (K) sash—weight, socket. Gives requirements for material, workmanship, weights, design, and dimensions; methods of sampling, inspection, and tests; and requirements for packaging, packing and marking.

U. S. Gov., Navy Dept. Specification 23C4; 1939. Chains; Collision-Mat.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 29-79; 1936. Chain; Spur.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 29-97; 1941. Chain; Tie-in, for Range, Field, M-1937.

*References.*—Roller chain, silent transmission chains, *see* 766.1.

### 603.6 HORSESHOES

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 29-69A; 1932. Shoe; Horse and Mule.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 92-59; 1942. Calks; Toe, Horseshoe.

*References.*—Standard shoe for horseshoe pitching, *see* 943.5.

## 604. IRON AND STEEL PLATES AND SHEETS

### 604.0 GENERAL ITEMS

Aeronautical Chamber of Commerce of America, Inc. National Aircraft Standard NAS 195; 1944. Steel Sheet and Strip—Preferred Thicknesses. Gives table showing preferred thicknesses for uncoated metals and alloys. From ASA preferred thicknesses B32.1-1941. Developed by National Aircraft Standards Committee.

American Society of Mechanical Engineers, joint sponsor with Society of Automotive Engineers. American Standards Assn., B32.1-1941. Preferred Thickness for Uncoated Thin Flat Metals (Under 0.250 In.). A simplified system for designating the thickness of uncoated thin flat metals and alloys by decimal parts of an inch, thus eliminating the confusion caused by the various gage number systems.

Associated Factory Mutual Fire Insurance Companies. Factory Mutual Bulletin of Loss Prevention Nos. 7.16 (1938), 7.17 (1939), 7.18 (1939), 7.19 (1939), and 7.20 (1939). Anchorage of Steel-Deck Roofs. A series of bulletins showing details of wind-anchorage methods for various types of steel-deck roofs.

Society of Automotive Engineers. 1942 Handbook, Section 3—Processed Materials. S.A.E. Standard Steels. The steel compositions included in this standard are considered adequate for practically all parts made of ferrous materials that are necessary for the production of automotive apparatus, and include grades that have been found commercially available and technically adequate for the service required of such parts. Includes general instructions, explanation of S.A.E. numbering system, chemical compositions, methods of sampling for check analysis, method of determining hardenability, grain size charts for classification of steel, magnaflux testing, determination of inclusions, general characteristics and heat treatments, tension test specimens, physical properties, hardness tests, and definition of heat treating terms.

### 604.1 IRON AND STEEL PLATES

### 604.10 General Items

American Iron and Steel Institute. Steel Products Manual, Section 6; 1938. Revised, 1943. Carbon-steel Plates. Gives general definitions, rules for ordering, ordinary manufacturing practices, special manufacturing practices, general standard practices, chemical requirements, standard methods of sampling for check analysis, methods of analysis, and standard mill practices.

### 604.11 Steel Plates for Pressure Vessels

American Bureau of Shipping. Rules for the Classification and Construction of Steel Vessels, 1944. Boiler Material. Include rules for inspection and tests.

American Society for Testing Materials, A30-44; 1944. A.S.M.E. Boiler Construction Code Specification SA-30. Boiler and Firebox Steel for Locomotives. Includes steel plates up to 2 in. of flange and firebox qualities for boilers of locomotives. Covers process, chemical composition, ladle analysis, check analysis, physical properties, bending properties, homogeneity test, test specimens, number of tests, permissible variations in weight and thickness, finish, marking, inspection, and rejection.

American Society for Testing Materials, A 70-44; 1944. A.S.M.E. Boiler Construction Code Specification SA-70. American Standards Assn., G29.1-1944. Carbon Steel Plates for Stationary Boilers and Other Pressure Vessels. Covers plates of flange and firebox qualties for boilers and other pressure vessels, suitable for fusion welding. Gives requirements for heat treatment, chemical composition, ladle analysis, check analysis, physical properties, bending properties, homogeneity test, test specimens, number of tests, permissible variations in thickness and weight, finish, marking, inspection, rejection, and rehearing. A.S.T.M. Emergency Alternate Provision EA-A 70a; 1944, affected section 4 chemical composition, and section 7 tensile properties.

American Society for Testing Materials, A 89-43; 1943. A.S.M.E. Boiler Construction Code Specification SA-89. American Standards Assn., G 30.1-1943. Low Tensile Strength Carbon-Steel Plates of Flange and Firebox Qualties. For two grades of steel, suitable for

fusion welding, and with modifications for forge welding. Gives requirements for chemical composition, ladle analysis, tensile and bending properties, homogeneity test, test specimen, permissible variations in thickness and weight, finish and inspection. A.S.T.M. Emergency Alternate Provisions EA-A 89; 1943, affected table I, sulfur content.

American Society for testing Materials, A 129-39; 1939. A.S.M.E. Boiler Construction Code Specification SA-129. Open-Hearth Iron Plates of Flange Quality. Covers three types of iron plates; requirements as to chemical composition, ladle analysis, tensile and bending properties, preparation of test specimen, permissible variations in thickness and weight, finish, and inspection.

American Society for Testing Materials, A 201-44; 1944. A.S.M.E. Boiler Construction Code Specification SA-201. American Standards Assn., G31.1-1944. Carbon-Silicon Steel Plates of Ordinary Tensile Ranges for Fusion-Welded Boilers and Other Pressure Vessels. Covers two grades for use in locomotive and stationany boilers and other pressure vessels. Gives requirements for heat treatment, chemical composition, ladle analysis, check analysis, tensile and bending properties, homogeneity test, test specimens, number of tests, permissible variations in thickness and weight, finish, marking, inspection, and rejection.

American Society for Testing Materials, A 202-44; 1944. A.S.M.E. Boiler Construction Code Specification SA-202. American Standards Assn., G32.1-1944. Chrome-Manganese-Silicon (CMS) Alloy-Steel Plates for Boilers and Other Pressure Vessels. For two ranges of high tensile strength plates, for maximum workability, and for use without heating. Gives requirements for chemical composition, ladle analysis, check analysis, physical and bending properties, homogeneity test, test specimens, number of tests, permissible variations in thickness and weight, marking, inspection, and rejection.

American Society for Testing Materials, A 203-44; 1944. A.S.M.E. Boiler Construction Code Specification SA-203. American Standards Assn., G33.1-1944. Low-Carbon Nickel-Steel Plates for Boilers and Other Pressure Vessels. For three tensile strength ranges of plates not over 2 in. in thickness, of flange and ordinary firebox qualities, for use in locomotive boiler shells, boilers for stationary service, and other pressure vessels. Gives chemical composition, ladle analysis, check analysis, physical properties, bending properties, homogeneity test, test specimens, number of tests, permissible variations in thickness and weight, finish, marking, inspection, and rejection.

American Society for Testing Materials, A 204-44; 1944. A.S.M.E. Boiler Construction Code Specification SA-204. American Standards Assn., G34.1-1944. Molybdenum-Steel Plates for Boilers and Other Pressure Vessels. For three high tensile strength ranges for fusion welding, for use in locomotive boiler shells, stationary boilers, and other pressure vessels. Gives maximum thickness for various grades, heat treatment, chemical composition, ladle analysis, check analysis, physical properties, bending properties, homogeneity test, test specimens, number of tests, permissible variations in thickness and weight, finish, marking, inspection, and rejection.

American Society for Testing Materials, A 212-44; 1944. A.S.M.E. Boiler Construction Code Specification SA-212. American Standards Assn., G35.1-1944. High Tensile Strength Carbon-Silicon Steel Plates for Boilers and Other Pressure Vessels, Plates 4 1/2 In. and Under in Thickness. Covers two ranges of high tensile strength plates, suitable for fusion welding. Gives requirements for heat treatment, chemical composition, ladle analysis, check analysis, tensile and bending properties, homogeneity test, test specimens, number of tests, permissible variations in thickness and weight, finish, marking, inspection, and rejection.

American Society for Testing Materials, A 225-44; 1944. A.S.M.E. Boiler Construction Code Specification SA-225. Manganese-Vanadium Steel Plates for Boilers and Other Pressure Vessels. Covers two grades of plates in high-tensile strength ranges primarily for fusion welding, for use in locomotive boiler shells, boilers for stationary service, and other pressure vessels. Gives heat treatment, chemical composition, ladle analysis, check analysis, tensile and bending properties, homogeneity test, test specimens, number of tests, permissible variations in thickness and weight, finish, marking, inspection, and rejection.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1944. Emergency Specification E-M-115-43; 1943. Changed A.A.R. Specification M-115-38, Steel, Boiler and Fire-Box for Locomotives, section 1 (scope), section 13 (weight), and section 15 (marking).

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1944. Specification M-115-38; 1938. Steel, Carbon, Boiler and Fire-Box for Locomotives. Covers two classes of carbon steel for boilers for locomotives, namely, flange and fire-box. Gives requirements for manufacture, chemical properties and tests, physical properties and tests, permissible variations in weight and thickness, finish, marking, inspection, rejection, and rehearing.

U. S. Gov., Federal Specification QQ-S-691; 1932. Steel; Plates, Marine Boiler. Covers three classes—A, B, and C. A and B shall be made by open-hearth process, and steel for class C may be made by the Bessemer process. Gives requirements for surface defects, shearing, permissible variations, and chemical composition, including methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Navy Dept. Specification 46S19a; 1933. Steel; Staybolt (Boiler).

U. S. Gov., Navy Dept. Specification 47S23; 1939. Steel; Plate, Boiler, Molybdenum-Alloy.

U. S. Gov., Navy Dept. Specification 48P2h; 1939. Steel; Plate, Marine-Boiler.

U. S. Gov., Navy Dept., U. S. Coast Guard. Bureau of Marine Inspection and Navigation. Marine Engineering Regulations and Material Specifications, 1942. Contains specifications and requirements for materials, design, construction, installation, and inspection of boilers, unfired pressure vessels and appurtenances thereof, also piping, valves, fittings, flanges, safety valves, etc., upon the strength and efficiency of which safety of life is dependent, and are intended

for maximum temperatures of 1,000° F. Includes specifications for two grades of carbon-steel of flange and firebox qualities (suitable for fusion and for forge welding)—process, chemical compositions, tensile properties, bending properties, test specimens, number of tests, permissible variations in thickness and weight, finish, marking, and manufacturer's certification. In substantial agreement with American Society for Testing Materials Standard Specification A89.

U. S. Gov., Navy Dept., U. S. Coast Guard. Bureau of Marine Inspection and Navigation. Marine Engineering Regulations and Material Specifications, 1942. Contains specifications and requirements for materials, design, construction, installation, and inspection of boilers, unfired pressure vessels and appurtenances thereof, also piping, valves, fittings, flanges, safety valves, etc., upon the strength and efficiency of which safety of life is dependent, and are intended for maximum temperatures of 1,000° F. Includes specifications for seven grades (two qualities in each) of marine boiler steel plates subject to a class A inspection—(A) and (B) two ordinary tensile-strength ranges in carbon-silicon steel plates; (C) and (D) two high tensile-strength ranges in carbon-silicon steel plates; (E), (F), and (G) three high tensile-strength ranges in carbon-molybdenum steel plates. Gives chemical compositions, tensile properties, modifications in elongation, bending properties, test specimens, number of tests, finish, and marking. In substantial agreement with American Society for Testing Materials Standard Specifications A201, A212, and A204.

*References.*—Methods of testing, general requirements for metals, *see* 600.1; classification of metals, *see* 600.2; standard thicknesses, *see* 604.0; standard sheet sizes, tolerances on weight and thickness, *see* 604.10; powder boilers, water heaters, tanks, *see* 703, 614, 605.23, 956.2.

## 604.12 Steel Plates for Nonpressure Tanks and Stacks

*References.*—Methods of testing, general requirements for metals, *see* 600.1; classification of metals, *see* 600.2; standard thicknesses, *see* 604.0; standard sheet sizes, tolerances on weight and thickness, *see* 604.10; alloy steel plates for tank cars, *see* 621.32; steel tanks, *see* 605.23, 956.2, 726.1.

## 604.13 Steel Plates for Ship Hulls

American Bureau of Shipping. Rules for the Classification and Construction of Steel Vessels, 1944. Iron Plates and Shapes. Include rules for inspection and testing.

*References.*—Methods of testing, general requirements for metals, *see* 600.1; classification of metals, *see* 600.2; standard thicknesses, *see* 604.0; standard sheet sizes, tolerances on thickness and weight, *see* 604.10; other structural steel for ships, *see* 605.15.

## 604.14 Wrought-Iron Plates

American Society for Testing Materials, A 42-39; 1939. American Assn. of State Highway Officials, M 99-39. A.T.E.A. Standard E 20-39. Wrought-Iron Plates. Covers standard and special forming plates for general fabrication purposes, including bending and flanging. Gives method of manufacture, chemical composition, tensile and bending properties, test specimen, variations in thickness and weight permitted, and inspection.

American Transit Assn. Standard Specification for Wrought Iron Plates, E20-39; 1939. This specification covers standard and special forming wrought iron plates for general fabrication purposes, including bending and flanging, in thicknesses 3/16 in. and over. Covers the manufacture of plates, chemical composition, physical properties and tests, variations in weight and thickness, finish, marking, and inspection and rejection.

U. S. Gov., Navy Dept. Specification 47-I-5a; 1945. Iron, Wrought: Plates, Black.

*References.*—Methods of testing, general requirements for metals, *see* 600.1; classification of metals, *see* 600.2; standard thicknesses, *see* 604.0; standard sheet sizes, tolerances on weight and thickness, *see* 604.10.

## 604.19 Miscellaneous Iron and Steel Plates

American Society for Testing Materials, A 10-39; 1939. American Standards Assn., G20-1939. Mild Steel Plates. Covers mild grade of steel for general plate construction. Requirements as to chemical composition, ladle analysis, tensile properties, elongation, bending, method of preparing test specimen, permissible variations in weight and thickness, finish, and inspection.

American Society for Testing Materials, A 78-43; 1943. American Standards Assn., G40.1-1943. Low Tensile Strength Carbon-Steel Plates of Structural Quality for Welding. For two grades of structural steel suitable for welding, including modifications for forge welding. Covers chemical composition, ladle analysis, tensile and bending properties, elongation, test specimen, permissible variations in weight and thickness, finish, and inspection.

U. S. Gov., Army-Navy Aeronautical Specification AN-QQ-S-676-1; 1942. Steel; Carbon-and-Alloy, Low, Plate, Sheet, and Strip.

U. S. Gov., Navy Dept. Specification 47S18b; 1944. Steel Plates and Sheets, Floor, Rolled.

U. S. Gov., Navy Dept. Specification 47S22; 1937. Steel; Corrosion-Resisting, Plate and Sheet, Floor, Rolled.

U. S. Gov., Navy Dept., U. S. Coast Guard. Bureau of Marine Inspection and Navigation. Marine Engineering Regulations and Material Specifications, 1942. Contains specifications and requirements for materials, design, construction, installation, and inspection of boilers, unfired pressure vessels and appuretenances thereof, also piping, valves, fittings, flanges, safety valves, etc., upon the strength and efficiency of which safety of life is dependent, and are intended for maximum temperatures of 1,000° F. Includes specifications for carbon-steel plates up to 4 in. thickness; of flange and firebox qualities (suitable for fusion welding)—process, heat treatment, chemical composition, tensile properties, modifications in elongation, bending properties, test specimens, number of tests, permissible variations in thickness and weight, finish, marking, and manufacturer's certification.

U. S. Gov., U. S. Army, Ordnance Department. Specification 57-113; 1944. Steel; Plates and Sheets, Rolled, Floor.

U. S. Gov., U. S. Army, Ordnance Department. Specification 57-114-1A; 1942. Steel; Plain Carbon and Low-Alloy High-Tensile, Plate, Shape, Sheet, Strip and Rectangular Bars, for Welded Structures.

U. S. Gov., U. S. Army, Ordnance Department. Specification 57-115-1A; 1936. Armor Plate; Light, for Testing Small-Arms Armor-Piercing Bullets.

*References.*—For plates classifiable under sheets, *see* 604.2; structural carbon steel plates, *see* 605.1; structural alloy steel plates, *see* 621.32; methods of testing, general requirements for metals, see 600.1; standard thicknesses, *see* 604.0; standard sheet sizes, tolerances on weight and thickness, *see* 604.10.

## 604.2 IRON AND STEEL SHEETS

### 604.20 General Items

American Iron and Steel Institute. Manufacturers' Standard Practice. Supplementary Information. Section 11. Carbon Steel Sheets. Includes table of approximate thickness equivalent of galvanized sheet gage numbers.

American Iron and Steel Institute. Steel Products Manual. Carbon-Steel Sheets, Hot- and Cold-Rolled, 1940. Manufacturers' standard practice for variations in dimensions and workmanship, with tables of gage numbers, weights, and thicknesses. Includes blued sheets and sheets for porcelain enameling.

American Iron and Steel Institute. Steel Products Manual, Section 11; 1942. Carbon Steel Sheets. Gives general definitions and manufacturing practices; chemical practices; standard mill practices; and standard methods for packaging, loading, and shipping flat steel sheets.

American Iron and Steel Institute. Steel Products Manual, Section 11a; 1941. Sheet Steel, Standard Packages. Methods for packing, loading, and shipping flat steel sheets.

American Iron and Steel Institute. Steel Products Manual. Section 14a; 1940. Standard Packages for Tin Mill Products. Construction of standard platforms, ordinary packaging practices, boxing, and illustrations.

American Society of Mechanical Engineers. American Standards Assn., B32.1-1941. Preferred Thicknesses for Uncoated, Thin Flat Metals (Under 0.250 In.). Provides a simplified system for designating the thickness of uncoated, thin flat metals and alloys by decimal parts of an inch. Gives table of preferred thicknesses.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1943. Emergency Specification E-M-117-43, Modifies A.A.R. Specification M-117-42, Steel Sheets and Thin Plates, Carbon, by changing the check analysis for carbon, phosphorus, and sulphur content.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Steel Sheets and Thin Plates, Carbon, M-117-42; 1942. Covers all uncoated sheet steel, carbon, for locomotives, freight and passenger cars. Size and tolerance, composition, analysis, bend test, limits of variation.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R28-29; 1929. Sheet Metal. This recommendation establishes a schedule of stock sizes of sheet steel in various gages. The recommendation also includes the U. S. Standard Gage for Sheet and Plate Iron and Steel as adopted by Congress, as applied to steel sheets, and the galvanized sheet gage as applied to galvanized steel sheet. Sponsored by the National Association of Sheet Metal Distributors and National Wholesale Hardware Association.

U. S. Gov., Navy Dept. Specification 47M1d; 1943. Metal; Expanded (Steel).

### 604.21 Iron and Steel Sheets for Magneto Electric Apparatus

### 604.22 Iron and Steel Strips, Bands, and Hoops

American Iron and Steel Institute. Steel Products Manual, Section 12; 1942. Hot-Rolled Carbon Strip Steel. Gives definitions and classifications, methods of manufacture, quality classifications, shape and dimensions, chemical composition, physical properties, tolerances, and manufacturing practices.

American Iron and Steel Institute. Steel Products Manual, Section 13; 1942. Cold-Rolled Carbon Strip Steel. Covers flat size classifications, methods of manufacture, manufacturing practices, methods of specifying, and limits for chemical compositions.

American Society for Testing Materials, A 109-38; 1938. Cold-Rolled Strip Steel. For five grades varying from full hard to dead soft; requirements as to chemical composition, bending properties, and permissible size variations. Includes appendix giving approximate physical properties of various tempers of material.

Society of Automotive Engineers. Aeronautical Material Specification 5040 C; 1944. Steel Sheet and Strip; Low Carbon. Gives requirements for composition, condition, quality, tolerance, reports, identification, and rejections. Similar specification: S.A.E. 1010.

Society of Automotive Engineers. Aeronautical Material Specification 5042B; 1942. Steel Sheet and Strip, Forming, Low-Carbon. Gives requirements for composition, condition, quality, tolerance, reports, identification, and rejections. Similar specifications: S.A.E. 1010; A.S.T.M. A109-38, grade No. 4.

Society of Automotive Engineers. Aeronautical Material Specification 5044; 1942. Steel Sheet and Strip, Low-Carbon, Half-Hard. Gives requirements for composition, condition, quality, tolerance, reports, identification, and rejections. Similar specification: S.A.E. 1010; A.S.T.M. A109, grade No. 2.

U. S. Gov., Army-Navy Aeronautical Specification AN-QQ-S-666-1; 1942. Steel; Carbon (1095), Sheet-and-Strip.

U. S. Gov., Army-Navy Aeronautical Specification AN-QQ-S-676-1; 1942. Steel; Carbon-and-Alloy, Low, Plate, Sheet, and Strip.

U. S. Gov., Army-Navy Aeronautical Specification AN-S-11; 1942. Steel; Sheet and Strip Carbon (1020 and 1025).

U. S. Gov., Federal Specification QQ-S-636; 1941. Steel; Carbon (Low-Carbon), Sheets and Strips. Gives classification by size of flat-rolled steel. Covers hot-rolled sheets and strips in two conditions—as rolled and annealed; and three finishes—as rolled or annealed (depending on condition), pickled and oiled, and pickled and limed; cold-rolled strips in five conditions—(1) hard, (2) half-hard, (3) quarter-hard, (4) soft-skin rolled, and (5) dead soft; and three finishes—dull, regular bright, and best bright; and cold-rolled sheets in two conditions—(4) soft-skin rolled, and (5) dead soft; and two finishes—dull and regular bright. Gives requirements for material

and workmanship, finish, chemical composition, physical properties, dimensions and permissible variations, and edges; methods of sampling, inspection, and tests; and requirements for packing and marking for shipment.

U. S. Gov., Federal Specification QQ-S-781a; 1942. Amendment 2; 1944. Strapping, Flat; Steel. Covers two types—(I) nailless and (II) nail-on; and three classes—(A) coated finish, (B) galvanized (zinc coated), and (C) uncoated. Gives requirements for sizes, finish, ductility, material, applicability, breaking strength, tolerances, coils, and cut lengths; methods of sampling, inspection, and tests; and packing and marking for shipment.

U. S. Gov., Federal Specification QQ-S-790; 1944. Strapping, Round; Steel, Bare and Zinc-Coated. Covers two classes—(A) 140,000 lb. per sq. inch. tensile strength and (B) 100,000 lb. per sq. in. tensile strength. Gives requirements for finishes, sizes, material, workmanship, applicability, diameter, breaking strength and elongation, finish, coils, and cut lengths; methods of inspection, sampling, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Navy Dept. Specification 47S11e; 1944. Steel and Iron: Sheets and Strips for Flanging, Cupping, and Drawing.

U. S. Gov., U. S. Army, Ordnance Department. Specification 57-136-1C; 1939. Steel, Strip, for Metallic Belt Links.

*References.*—Methods of testing, general requirements for metals, *see* 600.1; standard thicknesses, *see* 604.0; standard sheet sizes, tolerances on weight and thickness, *see* 604.20; barrels and tanks, *see* 951., 956.2; barrel hoops, *see* 421.3.

## 604.23 Iron and Steel Sheets for Drawing and Forming

Society of Automotive Engineers. Aeronautical Material Specification 5040 C; 1944. Steel Sheet and Strip; Low Carbon. Gives requirements for composition, condition, quality, tolerance, reports, identification, and rejections. Similar Specifications: Federal QQ-I-696, Type I; S.A.E. 1010.

Society of Automotive Engineers. Aeronautical Material Specification 5041; 1944. Steel, Sheet and Strip—Extra Deep Drawing (Special Quality) Low Carbon. Covers composition, condition, tensile strength, yield strength, elongation, quality, tolerances, reports, identification, and rejections. Similar Specification: S.A.E. 1006.

Society of Automotive Engineers. Aeronautical Material Specification 5042B; 1942. Steel Sheet and Strip, Forming, Low-Carbon. Gives requirements for composition, condition, quality, tolerance, reports, identification, and rejections. Similar specifications: S.A.E. 1010; A.S.T.M. A109-38, grade No. 4.

Society of Automotive Engineers. Aeronautical Material Specification 5043; 1944. Steel, Sheet and Strip—Forming (Special Quality) Low Carbon. Covers composition, condition, tensile strength, yield strength, elongation, quality, tolerances, reports, identification, and rejections. Similar Specification: S.A.E. 1010.

Society of Automotive Engineers. Aeronautical Material Specification 5044; 1942. Steel Sheet and Strip, Low-Carbon, Half-Hard. Gives requirements for composition, condition, quality, tolerance, reports, identification, and rejections. Similar Specifications: S.A.E. 1010; A.S.T.M. A109-38, grade No.2.

U. S. Gov., Navy Dept. Specification 47S11e; 1944. Steel and Iron: Sheets and Strips for Flanging, Cupping, and drawing.

U. S. Gov., Navy Dept. Specification 47S16; 1928. Steel, Sheet, for the Manufacture of metal Furniture.

U. S. Gov., Treasury Dept., Procurement Div., 288; 1938. Steel; Sheet, for the Manufacture of Metal Furniture. Sheets shall be of one grade, full pickled, full cold-rolled, reannealed, bright, smooth, free from rust, scale, pits, scratches, and buckles. Gives requirements for weights per sq. ft., thickness, permissible variations in weight, width, and length; methods of sampling, inspection, and tests; and packing and marking.

*References.*—*See* references under 604.22.

## 604.24 Spring and Tool Steel Sheets

Society of Automotive Engineers. Aeronautical Material Specification 5120; 1942. Steel Sheet and Strip (Spring-Annealed). Covers requirements for composition (.65-.75 carbon, etc.) condition, quality, tolerance, reports, and rejection. Similar to Society of Automotive Engineers Specification 1070.

Society of Automotive Engineers. Aeronautical Material Specification 5121; 1942. Steel Sheet and Strip (Spring-Annealed). Covers requirements for composition (.90-1.05 carbon, etc.), condition, quality, tolerances, reports, and rejections. Similar to U. S. Gov., Army-Navy Aeronautical Specification AN-QQ-S-666, and Society of Automotive Engineers Specification 1095.

## 604.25 Iron and Steel Sheets for Automotive and Railway Use

Society of Automotive Engineers. Aeronautical Material Specification 5122; 1940. Steel Sheet or Strip, Hard (High-Carbon, Hard). Gives requirements for composition, condition, quality, tolerances, reports, and rejections.

*References.*—Other iron and steel sheets for automotive and railway use, *see* 604.22 and 604.23; *see* ferro-alloy, 621.32; *see* ferrotungsten, 621.25; *see* references under 604.22.

## 604.26 Iron and Steel Sheets for Roofing

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R78-28; 1928. Iron and Steel Roofing. This recommendation establishes a list of standard sizes, covering widths, lengths, gage thicknesses, and weights for galvanized sheets, and pointed sheets, corrugated, roll, V-crimp, and pressed standing seam types. Initiated by National Wholesale Hardware Assn.

## 604.29 Iron and Steel Sheets for Miscellaneous Purposes

American Society for Testing Materials, A 162-39; 1939. American Standards Assn., G23-1939. Uncoated Wrought-Iron Sheets. For use in roofing, siding, for corrugating and moderate forming, but not for deep drawing or excessive forming. Requirements for manufacture, chemical composition, bending tests, specimen for test, weight, dimensions, and permissible variations, and inspection.

Associated Factory Mutual Fire Insurance Companies. Factory Mutual Bulletin of Loss Prevention Nos. 7.16, 1938; 7.17, 1939; 7.18, 1939; 7.19, 1939; and 7.20, 1939. Anchorage of Steel-Deck Roofs. A series of bulletins showing details of wind-anchorage methods for various types of steel-deck roofs.

Society of Automotive Engineers. Aeronautical Material Specification 5036; 1943. Steel Sheet and Strip; Low-Carbon (Aluminum Coated). Chemical composition, condition, quality, tolerance, reports, identification, and rejection.

U. S. Gov., Army Air Forces. Specification 10246; 1944. Iron; Sheet (for Porcelain Enameling).

U. S. Gov., Navy Dept. Specification 47I4; 1942. Iron, Wrought; Sheet, Black and Zinc-Coated (Galvanized).

U. S. Gov., Navy Dept. Specification 47S28; 1942. Steel; Sheet, Common, Black.

U. S. Gov., U. S. Army, Ordnance Department. Specification 57-114-1A; 1942. Steel; Plain Carbon and Low-Alloy High-Tensile, Plate, Shape, Sheet, Strip, and Rectangular Bars, for Welded Structures.

U. S. Gov., U. S. Army, Ordnance Department. Specification 57-136B; 1941. Steel; Sheet and Strip, Carbon and Alloy.

*References.*—Tin and zinc coated sheets, *see* 604.3; for sheets classifiable under plates, *see* 604.1; structural carbon and alloy steel sheets and plates, *see* 605.1, 621.32; methods of testing, general requirements for metals, *see* 600.1; classification of metals, *see* 600.2; standard thicknesses, *see* 604.0; standard sheet sizes, tolerances on weight and thickness, *see* 604.20.

## 604.3 TIN COATED AND ZINC COATED SHEETS

### 604.31 Tin Coated Sheets (Roofing Tin Terneplate)

American Iron and Steel Institute. Steel Products Manual. Long Terne Sheets, 1940. Manufactures' standard practice for variations in commercial and full finished long terne sheets, in weight of coating, dimensions, camber, and coating weights per double box. Includes roofing ternes of copper steel with table of weights and thickness.

American Iron and Steel Institute. Steel Products Manual, Section 14; 1940. Tin Mill Products. For tin plate, terne plate, and black plate; manufacturing processes, definitions, standard gages, classes of black plate, tin plate, and terne plate.

Underwriters' Laboratories, Inc. Standard for Tin-Clad Fire Doors and Shutters, 1941. For tin-clad fire doors and shutters entitled to classification as being in compliance with Standards of Underwriters' Laboratories, Inc. For one or more of the situations defined in the Standards of the National Board of Fire Underwriters for the Protection of Openings in Walls and Partitions Against Fire. Materials, construction, conduct of factory inspection work and methods and procedures for tests, and standard method for the determination of weight and composition of coating on terne plate for tin-clad doors and shutters.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R30-42; 1942. Roofing Ternes. This recommendation establishes a simplified schedule for roofing ternes, a packaging schedule, and a method of marking roofing ternes in rolls. Initiated by the National Assn. of Sheet Metal Distributors and National Wholesale Hardware Assn.

U. S. Gov., Federal Specification QQ-I-706a; 1941. Amendment 1; 1942. Iron and Steel; Sheet, Tinned (Tin-Plate). Covers three types—(I) standard or general purpose plate, (II) drawing quality, and (III) hard; and two grades—(1) "primes" only, and (2) "primes" with "seconds" up to 25 percent of quantity ordered. Gives requirements for base sheets, tinning, defects, dimensions, base weight, permissible variations in base weight, physical requirements, weight of coating, and grades; methods of sampling, inspection, and tests; packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification QQ-T-191; 1933. Amendment 1; 1934. Terne-Plate (Long Ternes). Covers three types—(I) standard, (II) deep drawing, and (III) extra deep drawing; four classes—(A) standard, (B) 12 lb. (C) 15 lb., and (D) 40 lb.; and two grades—(1) primes only and (2) primes with seconds. Gives requirements for material, workmanship, dimensions, gage weight, and details for physical requirements, coating, and grades; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., Federal Specification QQ-T-201; 1930. Amendment 1; 1941. Terne-Plate (Roofing Tin). Covers one type and the grade shall be prime sheets. Gives requirements for base metal, black sheets, coated sheets, coating, resquaring, tolerances, bending and seaming qualities, and weights of sheets; methods of sampling, inspection, and tests; packaging, packing, and marking.

*References.*—Methods of testing, general requirements for metals, *see* 600.1; coatings and tests of coatings, *see* 600.3; standard sheet sizes, tolerances on weight and thickness, *see* 604.20.

### 604.32 Zinc-Coated (Galvanized) Steel Sheets

American Iron and Steel Institute. Steel Products Manual. Galvanized Sheets, 1940. Manufacturers' standard practice for variations in dimensions and workmanship, with tables of gage numbers, weights, and commercial variations in coating.

American Society for Testing Materials, A 93-27; 1927. American Standards Assn. G8b1-1931. Zinc-Coated (Galvanized) Iron or Steel Sheets. Covers five classes of zinc coatings applied by hot-dip process based on thickness of coating, and amount of bending required. Chemical composition, weight of coating, bend test, test specimen, permissible variations in dimensions, and gage of sheets based on weight.

American Society for Testing Materials, A 93-38 T; 1938. Tentative Specifications for Zinc-Coated (Galvanized) Iron or Steel Sheets. Covers Zinc-coated (galvanized) by the hot-dip process. Does not cover tests of commercial coatings for general utility. Interpretation of numerical requirements, manufacture, chemical composition, weight of coating, bend tests, permissible variations, finish, marking, inspection, rejection, and rehearing.

American Society for Testing Materials, A 163-39; 1939. Zinc-Coated (Galvanized) Wrought-Iron Sheets. For use in culverts, roofing, siding, for corrugating, moderate forming, with four classes of zinc coating applied by the hot-dip process. Gives method of

manufacture, chemical composition, weight of various coatings, bending properties, test specimen, weight, dimensions and permissible variations, finish, and inspection.

American Society for Testing Materials, A 164-40 T; 1940. Tentative Specifications for Electrodeposited Coatings of Zinc on Steel. Includes three types of coatings to withstand corrosion; requirements for manufacture, thickness of coating, significant surfaces, selection of samples, test for thickness of coating, and time required for plating. Prepared jointly by the American Electro-Platers' Society, the National Bureau of Standards, and the A.S.T.M.

American Society for Testing Materials, A 239-41; 1941. American Assn. of State Highway Officials, T 66-42. Method of Test for Uniformity of Coating by the Preece Test, Copper Sulfate Dip, on Zinc-Coated, Galvanized, Iron or Steel Articles. For determination of thinnest portions of coating, but not for relative weight of coatings. Includes solution, test specimen, outline of procedure, end point, and applications of methods.

Assn. of American Railroads. Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Galvanized Sheets, M-119-40; 1940. For all purposes of galvanized steel usage, chemical and physical properties and tests, including a table of standard gages, weights, and weight of coating.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R78-28; 1928. Iron and Steel Roofing. This recommendation establishes a list of standard sizes covering widths, lengths, gage thicknesses, and weights for galvanized sheets and painted sheets, corrugated, roll, V-crimp, and pressed standing seam types. Initiated by the National Wholesale Hardware Assn.

U. S. Gov., Federal Specification QQ-I-716; 1942. Iron and Steel; Sheet, Zinc-Coated (Galvanized). Covers two types—flat and corrugated; and seven classes: (A) Extra heavily coated, (B) heavily coated, (C) moderately heavily coated, (D1) ordinary coated—hot-dipped, (D2) ordinary coated—electroplated, (E1) lightly coated for severe forming—hot-dipped, and (E2) lightly coated for severe forming—electroplated. Gives requirements for preparation for painting, base material, manufacture, workmanship, gage weights, and tolerances, coating weight or thickness, bending, seaming, forming, corrugated sheets, and paint adherence; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., Navy Dept. Specification 47S29b; 1945. Steel; Sheet, Zinc-Coated (Galvanized).

U. S. Gov., Navy Dept. Specification 47-I-4; 1942. Iron, Wrought; Sheet, Black and Zinc-Coated (Galvanized).

U. S. Gov., Panama Canal, Purchasing Dept. Specification for Galvanized, Flat Iron or Steel Sheets for Standing Seam Roofing, 1937.

U. S. Gov., Panama Canal, Purchasing Dept. Specification for Galvanized Iron or Steel Flat Sheets, 1937.

*References.*—Methods of testing, general requirements for metals, *see* 600.1; coatings and tests of coatings, *see* 600.3; standard sheet sizes, tolerances on weight and thickness, *see* 604.20.

## 605. STRUCTURAL IRON AND STEEL

### 605.0 GENERAL ITEMS

American Institute of Architects, Document 172; 1942. Filing Information on Building Materials, Appliances, and Equipment. To simplify the filing problem of architects, engineers, landscape architects, contractors, and others desirous of selecting and filing for convenient reference not only the catalogs and other descriptive literature distributed by manufacturers and producers of building materials, appliances and equipment, but other informative material referring to building and construction and related activities. Classifications and file numbers are arranged under 41 major divisions. Provides a filing system with the necessary flexibility and comphehensive alphabetical index.

American Institute of Steel Construction. Code of Standard Practice for Steel Structures Other than Bridges; 1937. Covers classification of steel and iron, invoicing of weights, drawings and specifications, inspection and delivery, method of erection, delays and extra work, proposals and contracts.

American Iron and Steel Institute. Steel Products Manual, Section 4, 1943. Carbon Steel Structural Sections. Covers part I, general definitions and manufacturing practices; part II, chemical limits and ranges, permissible variations for check analyses, and methods of sampling for check analyses; part III, permissible variations for dimensions and workmanship; part IV, standard methods of loading; and part V, national emergency simplified list of structural shapes.

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering, 1939. Instructions for the Mill Inspection of Structural Steel. A set of general instructions to be used in connection with the mill inspection of structural steel.

National Association of Purchasing Agents. Handbook of Commodity Data Sheets, Volume 2, 1944. Steel; Structural. Covers definition, classification, size ranges, and quotations.

Society of Automotive Engineers. 1944 Handbook, Section 3—Processed Materials. S.A.E. Standard Steels. The steel compositions included in this standard are considered adequate for practically all parts made of ferrous materials that are necessary for the production of automotive apparatus, and include grades that have been found commercially available and technically adequate for the service required of such parts. Includes general instructions, explanation of S.A.E. numbering system, chemical compositions, methods of sampling for check analysis, method of determining hardenability, grain size charts for classification of steel, magnaflux testing, determination of inclusions, general characteristics and heat treatments, tension test specimens, physical properties, hardness tests, and definition of heat treating terms.

### 605.1 STRUCTURAL SHAPES AND PLATES, NOT FABRICATED

American Iron and Steel Institute. National Emergency Specifications, 1943. Simplification of Structural

Steel Shapes. The simplified list of structural steel shapes given herein is that referred to in Paragraph (b) of Schedule 4 to Limitation Order L-211 of the War Production Board. Gives nominal dimensions and weight per foot of beams, columns, channels, angles, zees, tees, and miscellaneous shapes.

## 605.11 Structural Steel for Bridges

American Institute of Steel Construction. Applications of Structural Steels and Light-Weight Alloys for Bridges, Buildings, and Similar Structures, 1943. Gives requirements for physical and mechanical properties, fabrication and usability characteristics, forming and bending, riveting, welding, corrosion, aluminum, magnesium, stainless steel, low-alloy structural steel, sheet steel for structural purposes, standard structural carbon steel, and general conclusion.

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering. Specifications for Buildings for Railroad Purposes: Structural Steel and Iron. Gives requirements for loads and forces, unit stresses, design, fabrication, inspection, weighing, shipping, and erection.

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering, 1938. Structural Silicon Steel. Gives process, discard, chemical composition, ladle analyses, check analyses, physical properties, modification in ductility, yield point, bend tests, test specimens, number of tests, retests, permissible variations in weight and thickness, finish, identification marks, inspection, and rejection. Identical with the requirements for the same material in A.S.T.M. No. A94.

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering, 1944. Welded Structural Steel. Includes the furnishing, fabrication, erection, inspection, and in some instances the design of structural steel. Gives general requirements, material, loads and forces, unit stresses, design, fabrication, inspection, weighing and shipping, and erection.

American Society of Mechanical Engineers, Boiler Construction Code, 1940. Specifications for Steel Bars (S-7). Based on American Society for Testing Materials Specification A7.

American Society for Testing Materials, A 7-42; 1942. American Association of State Highway Officials, M 94. American Standards Assn., G24-1942. Steel for Bridges and Buildings. Covers carbon-steel of structural quality for use in the construction of bridges and buildings and for general structural purposes. Requirements as to castings, rivet steel, forgings, structural bolts, and rolled base plates; chemical composition, tensile and bending properties, preparing of test specimen, permissible variations in weight and thickness, finish, and inspection.

American Society for Testing Materials, A 94-39; 1939. American Association of State Highway Officials, M 95-39. American Standards Assn., G41.1-1942. Structural Silicon Steel. Covers special high strength structural steel for use as main stress-carrying structural members. Gives requirements for chemical composition, ladle analysis, tensile properties, elongation, bending, test specimen, permissible variations in weight and thickness, finish, and inspection.

U. S. Gov., Federal Specification QQ-S-741; 1942. Amendment 2; 1944. Steel, Structural (Including Welding) and Rivet; for Bridges and Buildings. Covers type I, for riveted structures; type II, for welded structures; grade A, bridge steel; grade B, building steel; class 1, noncopper steel; and class 2, copper-bearing steel. Gives material, workmanship, general requirements, manufacture, chemical composition, manufacturer's analyses, tensile properties, modification in elongation, and bending; methods of sampling, inspection, and tests; and packing and marking.

U. S. Gov., Federal Works Agency, Public Works Administration. Specifications for Construction of Roads and Bridges in National Forests and National Parks, FP-41. Steel Bridges.

*References.*—Alloy structural steel, *see* 621.31, 621.32, 621.33; methods of testing, general requirements for metals, *see* 600.1; classification of metals, *see* 600.2; zinc coatings for structural steel, *see* 600.3; tolerances on weight and thickness of plates and bars, *see* 600.7; standard thicknesses of sheets and plates, *see* 604.0; standard sheet sizes, *see* 604.10, 604.20; rivet steel, rivets, *see* 603.21, 608.4; steel castings, *see* 611.41; steel bridges, *see* 605.21.

## 605.12 Structural Steel for Buildings

American Institute of Steel Construction. Applications of Structural Steels and Light-Weight Alloys for Bridges, Buildings, and Similar Structures, 1943. Gives requirements for physical and mechanical properties, fabrication and usability characteristics, forming and bending, riveting, welding, corrosion, aluminum, magnesium, stainless steel, low-alloy structural steel, sheet steel for structural purposes, standard structural carbon steel, and general conclusion.

American Institute of Steel Construction. Design of Rigid Frame Knees, 1943. Covers stresses in rigid frame knees, elastic stability of rectangular plates, rigid frame knee having straight flanges, and rigid frame knee having a curved inner flange. Gives mathematical calculations and diagrams.

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering. Specifications for Pile Foundations. Covers the investigation, design, and construction of pile foundations. Gives requirements for steel piles—H-sections and steel pipes filled with concrete.

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering, 1938. Structural Silicon Steel. Gives process, discard, chemical composition, ladle analyses, check analyses, physical properties, modification in ductility, yield point, bend tests, test specimens, number of tests, retests, permissible variation in weight and thickness, finish, identification marks, inspection, and rejection. Identical with the requirements for the same material in A.S.T.M. No. A94.

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering, 1944. Welded Structural Steel. Includes the furnishing, fabrication, erection, inspection, and in some instances the design of structural steel. Gives general requirements, material, loads and forces, unit stresses, design, fabrication, inspection, weighing and shipping, and erection.

American Society of Mechanical Engineers. Boiler Construction Code, 1940. Specifications for Steel Bars (S-7). Based on American Society for Testing Materials Specification A7.

American Society for Testing Materials, A 7-42; 1942. American Association of State Highway Officials, M 94. American Standards Assn. G24-1942. Steel for Bridges and Buildings. Covers carbon-steel of structural quality for use in the construction of bridges and buildings and for general structural purposes. Requirements as to castings, rivet steel, forgings, structural bolts, and rolled base plates; chemical composition, tensile and bending properties, preparing of test specimen, permissible variations in weight and thickness, finish, and inspection.

American Society for Testing Materials, A 94-39; 1939. American Assn. of State Highway Officials, M 95-39. American Standards Assn. G41.1-1942. Structural Silicon Steel. Covers special high-strength structural steel for use as main stress-carrying structural members. Gives requirements for chemical composition, ladle analysis, tensile properties, elongation, bending, test specimen, permissible variations in weight and thickness, finish, and inspection.

American Society for Testing Materials, A 242-42; 1942. Low-Alloy Structural Steel. Covers open-hearth or electric-furnace low-alloy structural steel suitable for welding or riveting, intended primarily for use as main stress-carrying material of structural members. Material not under 3/16 and not over 2 in. in thickness. Chemical composition, ladle and check analyses, tensile and bending properties, test specimens, number of tests, permissible variations in weight and thickness, marking, inspection, rejection, and rehearing.

American Society for Testing Materials, A 245-44T; 1944. Tentative Specifications for Light Gage Structural Quality Flat Hot-Rolled Carbon Steel 0.2499 to 0.0478 In. in Thickness. Intended for structural purposes where physical test values are required. Gives basis of purchase, process, chemical composition, ladle and check analyses, tensile and bending properties, test specimens, number of tests, permissible variations in weight and dimensions, marking, finish, inspection, and rejection.

American Society for Testing Materials, A 246-44T; 1944. Tentative Specifications for Light Gage Structural Quality Flat Rolled Carbon Steel, 0.0477 to 0.0225 In. in Thickness. Intended for structural purposes where physical test values are required. Gives basis of purchase, process, chemical composition, ladle and check analyses, tensile and bending properties, test specimens, number of tests, permissible variations in weight and dimensions, marking, finish, inspection, and rejection.

American Standards Assn., A 57.1-1943. Sponsored by American Institute of Steel Construction and American Society of Civil Engineers. Steel Construction; Riveted, Bolted, or Welded Construction. Intended to govern the design, fabrication and erection of structural steel for buildings and other structures covered by building code requirements. Gives general requirements and covers materials, allowable stresses, loads, horizontal forces, slenderness ratio, unsupported compression flanges, effective span length, minimum thickness of material, gross and net sections, connections, welds, spacing of welds, rivets and bolts, rivet and bolt spacing, plate girders and rolled beams, composite beams, separators, tie plates, lacing, camber, column bases, anchor bolts, workmanship, shop painting, erection, and symbols.

Steel Joist Institute. Steel Joist Construction, 1936. Standard Specification for Steel Joist, 1941. Gives requirements for scope, definition of steel joist, materials, connections, methods of design and stresses, span, spacing, erection, bridging, uses of steel joist construction, decks and top slabs, deflection, factor of safety, and wood and steel roof decks.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R94-30; 1930. Open Web Steel Joists. This recommendation establishes a standard symbol system, standard resisting moments, end reactions, and allowable uniform loading for various spans and for beam depth of 8 to 16 in. Initiated by the Steel Joist Institute.

U. S. Gov., Federal Specification QQ-S-741; 1942. Amendment 2; 1944. Steel, Structural (Including Welding) and Rivet; for Bridges and Buildings. Covers type I, for riveted structures; type II, for welded structures; grade A, bridge steel; grade B, building steel; class 1, noncopper steel; and class 2, copper-bearing steel. Gives material, workmanship, general requirements, manufacture, chemical composition, manufacturer's analyses, tensile properties, modification in elongation, and bending; methods of sampling, inspection, and tests; and packing and marking.

U. S. Gov., Navy Dept. Specification 48S8c; 1934. Steelwork, Structural, Fabricated (Shore Use).

*References.*—Metal roofing material, *see* also 604.3; steel buildings, *see* 605.22; for other references, *see* references under 605.11.

## 605.13 Structural Steel for Cars and Locomotives

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering, 1944. Welded Structural Steel. Includes the furnishing, fabrication, erection, inspection, and in some instances the design of structural steel. Gives general requirements, material, loads and forces, unit stresses, design, fabrication, inspection, weighing and shipping, and erection.

American Society for Testing Materials, A 113-42; 1942. American Standards Assn., G39.1-1942. Structural Steel for Locomotives and Cars. Covers structural steel shapes, plates (except boiler and firebox plates), and bars intended for use in locomotive and car construction. Requirements as to chemical

composition, ladle analysis, tensile properties, elongation, bending, preparation of test specimen, permissible variations in weight and dimensions, finish, and inspection.

Assn. of American Railroads. Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Center Plates for Freight Cars of 40 and 50 Tons Nominal Capacity. Dimensional drawing of truck bolster center plate, and body bolster center plate.

Assn. of American Railroads. Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Center Plates for Freight Cars of 70 Tons Nominal Capacity and Over. Dimensional Drawing of truck bolster center plate and body bolster center plate.

Assn. of American Railroads. Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Sill, Center, Steel, Section for. For use with cars having center sills of A.A.R. "Z" section. Dimensional drawing and weight per foot for 25 3/4-inch center plate height railway cars.

Assn. of American Railroads. Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Sill, Center, Steel, Section for. Dimensional drawing for 26 3/4-inch center plate height railway cars.

Assn. of American Railroads. Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Sills, Steel; Splicing of. Detailed procedure for the joining of sills by riveting or welding, with fifteen detail drawings for various types.

Assn. of American Railroads. Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1943. Emergency Specification E-M-116-43. Modifies A.A.R. Specification M-116-42, Steel, Structural, Shapes, Plates, and Bars, by changing check analysis for chemical composition.

Assn. of American Railroads. Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1944. Steel, Structural, Shapes, Plates and Bars. Specifications M-116-42; 1942. For use in cars and locomotive structure (not boiler or firebox). Gives manufacture, chemical and physical properties and tests, permissible variations of weights and dimensions, finish, marking, and inspection and rejection.

Assn. of American Railroads. Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Truck Bolsters, M-202-38; 1938. Requirements for freight equipment, integral or separable plate, material by A.A.R. specifications, four sizes of journal, deflections under test loads, and loading diagrams.

U. S. Gov., Federal Specification QQ-S-731; 1933. Amendment 1; 1934. Steel; Structural, for Cars. Covers six classes—(A) structural steel, noncopper; (B) structural steel, copper; (C) steel for cold noncopper; (D) steel for cold pressing, copper; (E) rivet steel, noncopper; and (F) rivet steel, copper; made by the open-hearth process. Gives requirements for chemical composition, tensile properties, and permissible variations; methods of sampling, inspection, and tests; and requirements for packing and marking.

*References.*—Alloy structural steel for cars, *see* 621.31, 621.32, 621.33; methods of testing, general requirements for metals, *see* 600.1; classification of railway materials, *see* 600.2; zinc and other coatings, *see* 600.3. Tolerances on weight and thickness of plates and bars, *see* 600.7; standard thicknesses of plates, *see* 604.0; standard sheet sizes, *see* 604.10, 604.20; rivet steel, rivets, *see* 603.21, 608.4; boiler and firebox steel, *see* 604.11; other cast steel railway materials, *see* 611.4; locomotives and cars, *see* 701.3, 726.

## 605.14 Structural Steel for Machinery

Assn. of American Railroads. Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Shearing Values of Structural, Rivet and Mild Steel. Recommended Practice. Requires that shear in a plane perpendicular to direction of rolling shall not exceed 80 percent of allowable stress for tension.

*References.*—Alloy structural steel, *see* 621.31, 621.32, 621.33; methods of testing, general requirements for metals, *see* 600.1; standard thicknesses of plates, *see* 604.0; boiler and firebox steel, *see* 604.11; steel castings for machinery and boilers, *see* 611.41.

## 605.15 Structural Iron and Steel for Ships

American Bureau of Shipping. Rules for the Classification and Construction of Steel Vessels, 1944. Structural Steel for Hulls. Include rules for inspection and testing, process of manufacture, marking, details of tests, steel rivets, iron plates and shapes, round and flat iron bars, and iron rivets.

American Society for Testing Materials, A 131-39; 1939. Structural Steel for Ships. Covers structural steel shapes, plates, and bars. Gives requirements for chemical composition, ladle analysis, tensile properties, elongation, bending, preparation of test specimen, permissible variations in weight and dimensions, finish, and inspection.

U. S. Gov., Federal Specification QQ-S-751a; 1938. Amendment 1; 1938. Steel; Structural (Including Steel for Cold-Flanging) and Steel, Rivet; for Ships Other Than Naval Vessels. Covers four grades—(A) structural steel, welding quality; (B) structural steel, not welding quality; (C) steel for cold flanging; and (D) rivet steel; made by the open-hearth or electric-furnace process. Gives requirements for chemical composition, physical properties, and permissible variations; methods of sampling, inspection, and tests; and requirements for packing and marking.

U. S. Gov., Navy Dept. Specification 44T1c; 1936. Steel, Tubing, Structural.

U. S. Gov., Navy Dept. Specification 46S11; 1936. Steel; Shapes and Bars for Hull Construction, Including Material for Drop and Miscellaneous Forgings.

U. S. Gov., Navy Dept. Specification 47S20a; 1937. Steel, Corrosion-Resisting: Plates, Sheets, Strips, and Structural Shapes.

U. S. Gov., Navy Dept. Specification 48S5e; 1934. Steel; Plate, Hull, Structural, Black (Uncoated) and Zinc-Coated (Galvanized).

*References.*—Alloy structural steel, *see* 621.31, 621.32, 621.33; plates for ship hulls. *see* 604.13; methods of testing, general requirements for metals, 600.1; zinc and other coatings and tests, *see* 600.3;

tolerances on weights and thickness of plates and bars, *see* 600.7; standard thicknesses of sheets and plates, *see* 604.0; rivet steel, rivets, *see* 603.21, 608.4; steel castings for ships, *see* 611.41; boats, ships, *see* 725.3, 725.4.

### 605.19 Miscellaneous Structural Steel

American Society for Testing Materials, A 78-43; 1943. American Standards Assn., G40.1-1943. Low Tensile Strength Carbon-Steel Plates of Structural Quality for Welding. For two grades of structural steel suitable for welding, including modifications for forge welding. Covers chemical composition, ladle analysis, tensile and bending properties, elongation, test specimen, permissible variations in weight and thickness, finish, and inspection.

American Society for Testing Materials, A 123-33; 1933. American Assn. of State Highway Officials, M 111-35. American Standards Assn., G8.1-1933. Zinc, Hot-Galvanized, Coatings on Structural Steel Shapes, Plates, and Bars, and Their Products. For dipping articles in molten bath of zinc, minimum impurities in zinc, test samples, embrittlement of material, weight of coating, adherence and uniformity of coating.

U. S. Gov., Army Air Forces Specification 40643-A-1; 1944. Beam, Dual Wheel Jacking, 30 Ton.

U. S. Gov., Federal Works Agency. Public Roads Administration. Specifications for Construction of Roads and Bridges in National Forests and National Parks. FP-41. Structural Steel.

U. S. Gov., U. S. Army, Ordnance Department. Specification 57-114C; 1942. Steel; Structural, for Ordnance Material.

U. S. Gov., U. S. Army, Ordnance Department. Specification 57-114-1A; 1942. Steel; Plain Carbon and Low-Alloy High Tensile, Plate, Shape, Sheet, Strip and Rectangular Bars, for Welded Structures.

U. S. Gov., U. S. Army, Ordnance Department. Specification 89-3330; 1940. Cathead; Submarine Mine.

*References.*—Alloy structural steel, *see* 621.31, 621.32, 621.33; methods of testing, general requirements for metals, *see* 600.1; zinc coatings, *see* 600.3; tolerances on weights and thicknesses of plates and bars, *see* 600.7; standard thicknesses of sheets and plates, *see* 604.0; rivet steel, rivets, *see* 603.21, 608.4; other steel track materials, *see* 606.

## 605.2 STRUCTURAL SHAPES AND PLATES, FABRICATED

### 605.20 General Items

American Institute of Steel Construction. Specification for the Design, Fabrication and Erection of Structural Steel for Buildings, 1941. Covers scope, plans and drawings, material, loads and forces, reversal of stresses, combined stresses, members carrying wind only, composite beams, effective span length, allowable unit stresses, slenderness ratio, depth ratio, unsupported compression flanges, minimum thickness of material, gross and net sections, expansion, connections, rivets and bolts, rivet spacing, plate girders and rolled beams, separators, tie plates, lacing, camber, column bases, anchor bolts, workmanship, shop painting, erection, and inspection.

American Institute of Steel Construction. Specification for the Design, Fabrication and Erection of Structural Steel for Buildings by Arc and Gas Welding (Tentative), 1942. For rigid frame, conventional (simple), and semi-rigid framing. Covers requirements for plans and drawings, materials, design loads and stresses, design, erection, and inspection; and includes recommended tentative standard details and selected excerpts from American Welding Society Code for Arc and Gas Welding in Building Construction.

American Institute of Steel Construction. Code of Standard Practice for Steel Structures Other Than Bridges, 1941. Covers general requirements, classification, invoicing, drawings and specifications, stock material, inspection and delivery, erection, delays in prosecution of work, extra work, proposals and contracts, and standard documents.

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering, 1939. Instructions for the Inspection of Bridge Erection. Gives a set of general instructions, and covers details of traffic, materials, records and reports, progress and general conduct of work, details of erection, movable bridges, welded work, and cleaning up site.

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering, 1939. Instructions for the Inspection of the Fabrication of Steel Bridges. Gives a set of general instructions and covers details of fabrication, machine shop work, shipments, and reports.

### 605.21 Steel Bridges and Railway Turntables

American Assn. of State Highway Officials. Standard Specifications for Highway Bridges, 1941. Includes general provisions—definition of terms, proposal requirements and conditions, award and execution of contract, scope of work, control of work and materials, legal relations and responsibility to public, prosecution and progress, and measurement and pavement; specifications for construction, excavation and fill, sheet piles, bearing piles, concrete masonry, reinforcement, ashlar masonry, mortar rubble masonry, dry rubble masonry, brick masonry, steel structures, bronze or copper-alloy bearing and expansion plates, steel grid flooring, railings, painting metal structures, riprap, concrete cribbing, waterproofing, dampproofing, name plates, timber structure, preservative treatments for timber, timber cribbing, sectional plate pipe and arches, and wearing surfaces; recommendations for design—general features of design, loads, distribution of loads, unit stresses, pile loads and bearing power of soils, substructure and retaining walls, structural steel design, concrete design, design of timber structures, sectional plate pipe and arches, and rating of existing bridges; specifications and references to other specifications for cement, water for use with cement, aggregates, reinforcement, structural, eyebar and rivet steels, wrought iron, steel forgings and castings, gray-iron and malleable castings, bronze or copper-alloy bearing and expansion plates, sheet piles, steel sheet piling, steel grid floors, paint, welding, sheet metal for water stops and general use, sectional plate pipe and arches, stone for masonry, brick, bituminous materials and joint fillers, asphalt paving blocks, premolded asphalt plank, structural timber, lumber

and piling, and timber preservatives; tables of moments, shears and reactions; formulas for compressive members; and truck train and equipment loadings.

American Assn. of State Highway Officials. Standard Specifications for Highway Bridges. Includes specifications for steel structures—bronze or copper-alloy bearing and expansion plates, steel grid flooring, and railings—requirements for materials (to conform to American Society for Testing Materials specifications); steel structures, also including quality of workmanship, straightening material, finish, rivet holes, punched and reamed or drilled holes, shop assembly, drifting of holes, match-marking, rivets, bolts and bolted connections, riveting, edge planing, flame cutting, facing of bearing surfaces, abutting joints, end connection angles, lacing bars, finished members, web plates, fit of stiffeners, eyebars, annealing, pins and rollers, boring pin holes, pin clearances, welds, screw threads, pilot and driving nuts, notice of beginning of work, facilities for inspection, inspector's authority, mill orders, weighing of members; marking and shipping, erection of structure, plans, plant, delivery of materials, handling and storing materials, falsework, methods and equipment, bearings and anchorage, straightening bent material, assembling steel, riveting, bolted and pin connections, misfits, removal of old structure and falsework, basis of payment, payment for test eyebars, pay weight, variance in weight, computed weight; bronze or copper-alloy bearing and expansion plates, also including bronze plates, copper-alloy plates, placing, and measurement and payment; steel grid flooring, also including type, arrangement of sections, provision for camber, field assembly, connection to supports, welding, repairing damaged galvanized coatings, concrete filler, painting, and method of measurement and basis of payment; and railings, also including general definition, line and grade, construction, and painting.

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering. Specifications for Movable Railway Bridges. Covers chemical requirements for tool steel.

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering, 1943. Specifications for the Design of Rigid Frame Steel Bridges. Gives requirements for definition, articulation at footings, foundations; spacing, deflections, distribution of live load, impact, loads and forces, combined stresses, unit stresses, bracing, stiffeners at points of bearing, and connections.

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering, 1943. Specifications for Movable Railway Bridges. Includes specific and detail rules for the design and manufacture of movable railway bridges. Covers proposals and general requirements, general features of design, loads, unit stresses, proportioning of parts, details of design, wire ropes and attachments, power equipment, materials, workmanship, and erection.

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering, 1944. Specifications for Steel Railway Bridges (for Fixed Spans Not Exceeding 400 Feet in Length). Includes specific and detailed rules for the design and manufacture of bridges. Gives requirements for proposals and drawings, general features of design, loads and stresses, unit stresses, details of design, workmanship, eyebars, weight and shipping. Emergency provisions adopted Sept. 15, 1942, and in effect April 1943 changed stresses to conserve steel during the present emergency for temporary structures.

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering, 1943. Specifications for Steel Railway Turntables. Gives information to be given bidders, other specifications, general features of design, loads, unit stresses and proportioning of parts, details of design, center, end trucks, and pit and tracks.

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering, 1944. Welded Structural Steel. Includes the furnishing, fabrication, erection, inspection, and in some instances the design of structural steel. Gives general requirements, material, loads and forces, unit stresses, design, fabrication, inspection, weighing and shipping, and erection.

American Society for Testing Materials, A 207-39; 1939. American Assn. of State Highway Officials, M 100-39. Rolled Wrought-Iron Shapes and Bars. Gives requirements as to chemical composition, tensile and bending properties, test specimen, permissible variations in size and weight, finish, and inspection.

American Welding Society. Specifications for Welded Highway and Railway Bridges—Design, Construction, and Repair, 1941. The application of metal arc and gas welding to the fabrication, field assembling and repair of highway and railway bridges. Covers general provisions, design of new bridges, strengthening and repairing of existing bridges, filler metal, equipment and processes, workmanship and technique, inspection, qualification, unit stresses for welded design, definitions, welding symbols, and qualification of welding procedures and operators.

U. S. Gov., Federal Works Agency. Public Roads Administration. Specifications for Construction of Roads and Bridges in National Forests and National Parks, FP-41. Structural Steel.

*References.*—Rules for inspection and maintenance of bridges, *see* 605.20; methods of testing; general requirements for metals, *see* 600.1; structural steel for bridges, *see* 605.11, 621.31, 621.32, 621.33; rivet steel, rivets, *see* 603.21, 608.4.

## 605.22 Steel Buildings and Metal Parts of Buildings

American Institute of Steel Construction. Specification for the Design, Fabrication, and Erection of Structural Steel for Buildings, 1937. Requirements for steel to meet A.S.T.M. specifications, loads and stresses, for wind only composite beams, span length, allowable unit stresses, sections and connections, rivet spacing, plate girders and rolled beams, tolerances, painting, bolting up, and inspection.

American Institute of Steel Construction. Specification for Fireproofing Structural Steel Buildings, 1934. Requirements for insulation to protect steel from fire hazards; classification of intensity and duration of fires and test procedure in accordance with A.S.T.M. Specification C 19, steel variation for temperature based on fire hazard, fireproofing materials, and alternate method of test.

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering. Includes metal doors and fire doors, metal clad doors and fire doors, and metal frames for doors and windows.

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering. Specifications for Buildings for Railroad Purposes: Metal Screens. Gives requirements for metal work, hardware, number tags, and types.

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering. Specifications for Buildings for Railroad Purposes: Ornamental and Miscellaneous Metal Work. Gives requirements for working stresses (tension, compression, shearing, bearing) of the cast, rolled, drawn, or extruded metals used.

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering. Specifications for Buildings for Railroad Purposes: Sheet Metal Work. Gives requirements for materials (copper, galvanized iron, lead, solder), workmanship, flashings, gutters, eaves strips, gravel stops, leaders or conductors, conductor heads, ridge rolls, hip capping, ventilators, and skylights.

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering, 1944. Welded Structural Steel. Includes the furnishing, fabrication, erection, inspection, and in some instances the design of structural steel. Gives general requirements, material, loads and forces, unit stresses, design, fabrication, inspection, weighing and shipping, and erection.

American Society of Mechanical Engineers. American Standards Assn., B32.1-1941. Preferred Thicknesses for Uncoated Thin Flat Metals (Under 0.250 In.). Provides a simplified system for designating the thickness of uncoated, thin flat metals and alloys by decimal parts of an inch. Gives table of preferred thicknesses.

American Welding Society. Tentative Code for Arc and Gas Welding in Building Construction; 1941. Includes general provisions, design of welded connections, filler metal, workmanship, inspection, qualification, definitions, welding symbols, prequalified welded joints, qualifications of welding procedures and operators, illustrations of acceptable and defective weld profiles, and record of operator qualification tests.

Associated Factory Mutual Fire Insurance Companies. Factory Mutual Bulletin of Loss Prevention No. 7.60; 1938. Metal Stacks. Safeguards against windstorm damage. Gives recommendations for construction of new stacks and for anchorage of self-supporting and guyed stacks.

Associated Factory Mutual Fire Insurance Companies. Pamphlets 82; 1936. Fire Doors, Common Types and Methods of Installation. Gives general requirements, selection of fire doors, installation and maintenance, common types of fire doors, special types of fire doors, and fire shutters.

National Safety Council (American Society of Safety Engineers, Engineering Section). American Standards Assn., A14-1935. Safety Code for Construction, Care and Use of Ladders. Definitions of terms; specifications and construction of fixed, single, extension, fire, step, trolley and side-rolling, sectional trestle and extension trestle ladders; installation of fixed ladders; accessories; care and use.

Open Steel Flooring Institute, Inc. Specifications for Grating. Covers steel gratings of open construction having riveted, welded, or interlocked joints, either of rectangular or reticulated design having parallel bearing bars and either straight or diagonal cross members. Includes requirements for workmanship, thickness and spacings of bars, fasteners, treads, cutting and bending, erection symbols, labeling and finish (Hot Dip Galvanizers Assn. Specification CS-10-36).

Safe Manufacturers' National Assn. Specification for File Storage Room Doors, F4; 1939. For fire-resistant doors, but not for the protection of valuable records; 3 types based on degree of resistance, methods for fire resistance, and hose stream tests.

Underwriters' Laboratories, Inc. Standard for Fire Resistance Classification of Vault and File Storage Room Doors, 1941. General, classification, design and construction, fire endurance test, fire and fire hose stream test, and inspection of listed product.

Underwriters' Laboratories, Inc. Standard for Tin-Clad Fire Doors and Shutters, 1941. For tin-clad fire doors and shutters entitled to classification as being in compliance with Standards of Underwriters' Laboratories, Inc. for one or more of the situations defined in the Standards of the National Board of Fire Underwriters for the Protection of Openings in Walls and Partitions Against Fire. Materials, construction, conduct of factory inspection work and methods and procedures for tests, and standard method for the determination of weight and composition of coating on terne plate for tin-clad doors and shutters.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R29-42; 1942. Eaves Trough, Conductor Pipe, and Fittings, and Ridge Rolls. This recommendation establishes a simplified schedule of sizes and weights of eaves trough, conductor pipe, fittings, and styles of gutters and ridge rolls. Sponsored by the National Assn. of Sheet Metal Distributors and the National Wholesale Hardware Assn.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R72-27; 1927. Solid Section Steel Windows. This recommendation establishes a simplified schedule of nomenclature, sizes, styles, and division of solid section steel windows. Sponsored by the manufacturers now represented by the Metal Window Institute.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R82-28; 1928. Hollow Metal Single-Acting Swing Doors, Frames, and Trim. This recommendation establishes a list of standard stock sizes of hollow metal doors, including door clearances, door dimensions, details of butt mortise, lock mortise, and strike mortise, dimensions of transom, rough buck, cabinet jamb, casing, and combination frame, types of combination frame.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R83-28; 1928. Kalamein Single-Acting Swing Doors, Frames, and Trim. This recommendation establishes a list of standard stock sizes and dimensions for kalamein doors, including types of doors, door clearances, door dimensions, jamb details, gage of metal and butt mortise details.

U. S. Gov., Dept. of Commerce, National Bureau of Standards H19; 1934. Manual of Fire-Loss Prevention of the Federal Fire Council. It is aimed to present herein the essentials relating to design, materials of construction, and equipment and operation of buildings that effectively prevent or abate loss by fire. An initial discussion is given of justifiable outlay for fire-loss prevention, considering the values and the degree of hazard present. Sections III to VI, inclusive, deal with the fire resistance of building materials, assemblies, and types, control of spread of fire by structural means and design and arrangement of buildings to secure exit facilities for occupants in case of fire. In sections VII and VIII, structural and equipment features having a bearing on safeguarding hazards incidental to heating, lighting, and power supply are discussed, as also those pertaining to lightning protection, fire hazards during construction, and special occupancy hazards. In section IX, protection of records is treated from the standpoint of construction and equipment and in section XIII from the standpoint of business routine and general fire prevention. Sections X and XI deal with equipment for detecting and extinguishing fire. In section XII, general methods for decreasing the ease of origin and initial spread of fire are outlined, and in sections XIV to XVI, inclusive, the effective use of equipment in case of fire by prior training for emergency, and the systematic inspection of property to enable unnecessary fire hazards to be promptly eliminated and defects in construction and equipment remedied. Two general subdivisions of the manual may be noted, namely, construction and equipment up to and including section XI, and fire prevention and maintenance covered in the subsequent sections.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Building Materials and Structures Report BMS49; 1940. Metallic Roofing for Low-Cost House Construction. The general aspects and status of metals utilized for roofing purposes are discussed. Considerations which apply in general to all roofing materials and to metals in particular are given. Basic principles of metal-roof construction are listed, together with descriptions of the type of seams, decks, nails, and coverings used. Galvanized sheet steel, terne, and copper roofings are discussed in detail because they constitute the bulk of present-day roofs. The durability of galvanized sheet-steel roofings is shown by the data obtained from outdoor-exposure tests conducted by the American Society for Testing Materials. Information on the maintenance of terne and galvanized roofs is given.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Building Materials and Structures Report BMS75; 1941. Survey of Roofing Materials in the North Central States. A survey of the weathering qualities and extent of use of the various roofing materials on dwellings in the North Central States is described, with numerous references to similar surveys made previously in the Southeastern and Northeastern States. Detailed studies of roofing materials in Pittsburgh, Pa.; Cincinnati and Toledo, Ohio; Grand Rapids and Lansing, Mich.; Chicago, Ill.; Milwaukee, Wis.; St. Paul, Minn.; Bismarck, N. Dak.; Sioux Falls, S. Dak.; Omaha, Nebr.; Kansas City, Moberly, and St. Louis, Mo.; and Indianapolis, Ind., are reported. A tabulation, by states, of the kinds of roofing materials used in more than 8,000 rural and small-town dwellings, along approximately 3,000 mi. of highway between the cities listed above, is included; also a summary of the kinds of roofing materials used on almost 29,000 rural and small-town dwellings along 7,000 mi. of highway in the 32 states covered by the three surveys. Forty-eight photographs, illustrating type of weathering of roofing materials, and features of design and construction of roofs, are shown.

U. S. Gov., Federal Works Agency. Public Roads Administration. Specifications for Construction of Roads and Bridges in National Forests and National Parks 1941; FP-41. Includes structural steel.

U. S. Gov., Navy Dept., Bureau of Yards and Docks. Specification 7Yg; 1934. Roofing, Siding, and Sheet Metal Work; Dampproofing and Membrane Waterproofing.

U. S. Gov., Navy Dept., Bureau of Yards and Docks. Specification 10Yc; 1938. Metal Windows.

U. S. Gov., Navy Dept., Bureau of Yards and Docks. Specification 15Yb; 1934. Standard Methods for Inspection of Materials for Roofing, Siding, Sheet Metal Work, Dampproofing, and Waterproofing.

U. S. Gov., Navy Dept., Bureau of Yards and Docks. Specification No. 17Yb; 1938. Metal Weatherstripping for Wood Doors, Windows, and Transoms.

U. S. Gov., Navy Dept., Bureau of Yards and Docks. Specification 32Ya; 1935. Metal Doors.

U. S. Gov., Panama Canal, Purchasing Dept. Specification for Galvanized, Corrugated Iron or Steel Roofing and Ridge Roll, 1941.

U. S. Gov., Treasury Dept., Procurement Div. 285A; 1939. Steel, Plate, Floor, Rolled. Plates shall be of the raised-figure type, and of one grade, 2 classes—(A) light patterns, and (B) regular patterns, made either of Bessemer or open-hearth steel. Gives requirements for material area covered by raised figures, widths, lengths, thickness at base of raised figure; height of raised figure, weight per square foot, and drawings of various patterns; methods of sampling, inspection, and tests; and packaging and marking.

*References.*—Structural steel for buildings, *see* 605.12, 621.31, 621.32, 621.33; sheet metal roofing, *see* 604.3; sheet metal eves troughs, *see* 607.5; rivet steel, rivets, *see* 603.21, 608.4; masonry and frame buildings, parts of buildings, fire tests of materials, *see* 518.50, 518.51.

## 605.23 Steel Tanks, Towers, and Flumes

American Petroleum Institute, Div. of Production. Standard 12-A; 1941. Specification for Standard Tanks With Riveted Shells for Oil Storage. Provides major design details for 8-ring tanks with 100-in. plates, sizes 36 to 168 ft. in diameter; for 9th and 10th courses of tanks with 72-in. plate, sizes 36 to 144 ft. in diameter; and for all courses (1st to 10th inclusive) 72-in. plates, 168-ft. diameter tanks. These design details are based on drilled holes and hot driven rivets, except where alternate lap joints are shown for hot and cold driven rivets. Slight improvments in design methods, materials, shell design, roof design, bottom design, and tables giving capacities of tanks using 72-in. and 100-in. courses.

American Petroleum Institute, Div. of Production. Standard 12-B; 1944. Specification of Standard Bolted Tanks. Provides the industry with a standard series of bolted steel tanks, comprising an adequate range and variety of sizes to meet oil field requirements, built in accordance with modern manufacturing practice so that decks, bottoms and individual staves as supplied by any manufacturer will be readily interchangeable with those supplied by any other. Covers scope, material, fabrication and erection, cleanouts for production tanks, walkways and stairways, piping flanges and relief valves, marking, inspection and rejection, and appendices.

American Petroleum Institute, Div. of Production. Standard 12-C, 1944. Specification on All-Welded Oil Storage Tanks. This specification covers all-welded steel tanks for oil storage, including allowable plate joint stresses, qualification procedures for welding, and chemical and physical properties of material, including welding rods. Covers design, fabrication, erection, standard appurtenances, testing joints by sectioning methods, qualification procedure, marking, and appendices.

American Petroleum Institute, Div. of Production. Standard 12-D; 1944. Specification for All-Welded Production Tanks, Tentative. This specification covers sizes, materials, plate thicknesses, and design factors for light-weight all-welded steel production tanks. Covers material, design, cleanouts, walkways and stairways, bolting patterns for thief hatches and relief valves, threaded connections, marking, and adjustments.

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering. Specifications for Riveted Steel Water and Oil Tanks. Gives requirements for material, loading, unit stresses, cylindrical rings, workmanship, caulking, minimum thickness of plate, joints, rivets, rivet holes, punching, pitch, tank support, and painting.

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering, 1943. Specifications for Steel Substructures for Wood Water Tank (50,000 and 100,000-gal. capacity). Structure will consist of 12-post steel tower, complete in all details. Gives requirements for material, workmanship, and painting.

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering, 1944. Specifications for Welded Steel Tanks for Railway Water Service. Apply to the construction of fusion arc welded steel water storage tanks. Covers general requirements, materials, design, welding, testing, painting and inspection, and accessories and fittings.

American Society of Mechanical Engineers. Boiler Construction Code. API-ASME Code for Unfired Pressure Vessels, 1943. Applies to unfired pressure vessels constructed of carbon steel for petroleum liquids and/or gases within the limits prescribed in the Code. Gives rules covering the design and construction of vessels subjected to external pressure, fusion-welded, riveted, and integrally forged vessels, periodic inspection, and repair. Also gives a list of approved materials, suggestions regarding internal structures, corrosion allowances, and protective linings.

American Society of Mechanical Engineers. Boiler Construction Code. Unfired Pressure Vessel Code, 1943. Pressure containers for which construction rules are established include vessels subjected to external pressure, and those for gases and liquids at temperatures of -20°F and below. Requirements cover materials, riveted joints, dished and flat heads, working pressures, welding, nozzle openings, brazing, braced and stayed surfaces, hydrostatic tests.

American Water Works Assn. Tentative Standard Specifications for Elevated Steel Water Tanks, Standpipes and Reservoirs, 7H.1-1943. Covers requirements for materials, design, accessories, welding, shop fabrication, erection, inspection, testing, and field painting.

Associated Factory Mutual Fire Insurance Companies. Specifications for Gravity Water Tanks and Steel Towers, Volume I. Structural Details, 1938. For steel tanks for fire protection, standard sizes; plates, shapes and rivets according to A.S.T.M. specifications, dead, live, and wind load computations, allowable stresses, thicknesses of plates, and design details.

Associated Factory Mutual Fire Insurance Companies. Specifications for Gravity Water Tanks and Steel Towers, Volume I. Structural Details, 1938. For steel towers for supporting water tanks, minimum number of columns, materials according to A.S.T.M. specifications, computation of dead, live, and wind load, allowable unit stresses, design details.

Associated Factory Mutual Fire Insurance Companies. Specifications for Gravity Water Tanks and Steel Towers, Volume II; 1940. Piping, Fittings, and Heating Systems. For water tanks, requirements for discharge pipe and fittings, expansion joint, filling, overflow, clean-out and drain, mill-use connections, water level indicator, valve pit or house, frostproof casings for pipes. Specifications for tank heating equipments, including method of determining necessary heater capacities.

National Board of Fire Underwriters. Gravity and Pressure Tanks, No. 22; 1941. Standards for gravity tanks which are usually built of wood or steel and are often supported on towers, ordinarily of steel although reinforced concrete towers are sometimes used. Covers general information and recommendations, steel gravity water tanks, steel towers, wooden water tanks,

foundations, approval, pipe connections and fittings, valve enclosures and frost protection, tank heating equipment, pressure tanks, figures, and tables.

National Fire Protection Assn. National Fire Codes for Extinguishing and Alarm Equipment, 1943. Gravity and Pressure Tanks. Standards for the construction and installation of gravity and pressure tanks. Covers information and recommendations, steel gravity water tanks, steel towers, wooden water tanks, foundations, approval, pipe connections and fittings, valve enclosures and frost protection, tank heating equipments, and pressure tanks.

National Fire Protection Assn. National Fire Codes for Flammable Liquids, Gases, Chemicals, and Explosives, 1943. Freeing Tanks of Flammable Vapors. Standards for freeing oil tanks, bunkers, and compartments of dangerous concentration of flammable explosive or toxic gases previous to entering for any purpose of making repairs on oil burning or oil tank vessels.

Underwriters' Laboratories, Inc. Standard for Design and Construction of Horizontal and Vertical Above-Ground Storage Tanks for Hazardous Liquids, 1922. Requirements for steel tanks not under pressure, design and diagrams for riveted and welded seams, piping, manholes, etc., for horizontal and vertical tanks.

Underwriters' Laboratories. Standard for Underground Storage Tanks, 1937. For the Storage of inflammable liquids, not under pressure, in accordance with the regulations of the National Board of Fire Underwriters. Sizes of vertical and horizontal tanks based on capacity and thickness of metal, to be open-hearth steel or wrought iron, describes riveted and welded joints, pipe connections, manholes, safety relief, asphalt painting, marking, and detail diagrams.

U. S. Gov., Army-Navy Aeronautical Specification AN-T-11a; 1943. Tower; Aerial Navigation Beacon.

U. S. Gov., Dept. of Agriculture, Forest Service. Specifications for Tower, Crow's Nest.

U. S. Gov., Dept. of Agriculture, Forest Service. Specifications for Tower, Temporary, Steel.

U. S. Gov., Dept. of Agriculture, Forest Service. Specifications No. 346. Tanks; Steel, Airplane Delivery.

U. S. Gov., Dept. of Agriculture, Forest Service. Specifications No. 347. Tank; Water, Steel, Demountable.

U. S. Gov., Dept. of Agriculture, Forest Service. Specifications No. 363. Tower, Hose Drying.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specifications CAA-57. Tower, High Counterpoise for UHF Radio Range.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specifications CAA-58. Tower, Low Counterpoise for UHF Radio Range.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specifications CAA-61. Counterpoise and Supports for UHF Fan Marker.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specifications CAA-97. Tower, Counterpoise, UHF, Erection of.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specifications CAA-98. Adcock Tower and Counterpoise.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specifications CAA-104. Masts; Steel, Galvanized Latticed.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specifications CAA-156. Alaska-Type Steel Tower Antenna System; Erection and Construction.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specifications CAA- 167. Antenna Poles and Fittings; Installation of Receiving.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specifications CAA-186. Antenna Tower; Heavy-Duty, Self-Supporting, Insulated.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specifications CAA-221. Tanks, 515-Gal., Inspection of.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specifications CAA-239. Counterpoise and Tower; UHF Range, Erection.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specifications CAA-252. Beacon, Airways, Steel Tower Skeleton Form 7A.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specifications CAA-252. Beacon, Towers, Form 7A, Steel, Skeleton.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specifications CAA-256. Mast; Steel, Galvanized Latticed, Guyed, Triangular.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specifications CAA-404. Counterpoise and 30' Tower for UHF Range Stations.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specifications CAA-514. Antenna Towers, Self-Supporting.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specifications CAA-517. Counterpoise for L. P. Fan Marker Bldg. and Incidental Construction.

U. S. Gov., Dept. of Commerce, National Bureau of Standards H32; 1941. American Standards Assn., C2.2-1941. Safety Rules for the Installation and Maintenance of Electrical Supply and Communication Lines. Comprising part 2 of the fifth edition, National Electrical Safety Code. Includes strength requirements for steel tower construction.

U. S. Gov., Dept. of Interior, Purchasing Office. Standard Specifications No. 11. Lookout Towers; Steel.

U. S. Gov., Navy Dept., Bureau of Yards and Docks. Specification 8Yd; 1934. Tanks; Steel and Wood.

U. S. Gov., U. S. Army, Corps of Engineers. Specification 45-1; 1943. Tower; Searchlight, Demountable.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-479; 1930. Tower; Radio, Self-Supporting.

*References.*—Structural steel for bridges and buildings, *see* 605.11, 605.12; alloy structural steel, *see* 621.31, 621.32, 621.33; plates for tanks, *see* 604.1; zinc coatings and tests, *see* 600.3; other tanks, *see* 956.2; range boilers, expansion tanks, fuel tanks, *see* 614.1, 614.3; railway tank cars, *see* 726.1.

## 605.24 Metal Lath

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering. Specifications for Buildings for for Railroad Purposes: Lathing and Plastering. Gives requirements for metal lath and metal lathing.

Contracting Plasterers' International Assn. Standard Specification. Includes requirements for metal lath.

Metal Lath Manufacturers Assn. Metal Lath Specifications, 1936. Covers quality of materials and method of application, nomenclature, weights per square yard for flat expanded, flat rib, 3/8-in. rib, and sheet lath; tables for support spacings on ceiling and on walls, size, weights, and spacing of attaching devices; requirements for plastered metal stud partitions and wall furring, suspended ceiling and soffit construction, corner and joint reinforcement; plastering and stucco work, with diagrams of construction details.

Metal Lath Manufacturers Assn. Standard Metal Lath Specifications for Better Plastering and Concrete Stucco. Includes nomenclature for metal lath construction; requirements for material; size, weight, and spacing of attaching devices; minimum requirements for plastered metal stud partitions and standing on wall furring; minimum requirements for furred contact or suspended ceiling construction for the soffits of steel beams, purlins or joists, or concrete or hollow tile floor arches or roofs; corner and joint reinforcement; erection of metal lath; and appendix of general notes on plastering and stucco, solid and soundproof partition details, and plaster beams and cornices.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R3-44; 1944. Metal Lath (Expanded and Sheet) and Metal Plastering Accessories. This recommendation simplifies the types, weight, and sizes of expanded and sheet metal lath and accessories including bull-nose corner bead, corner lath, strip lath, base screeds, metal casings, concealed picture mould, tie wire, hanger wire, and metal studs for hollow partitions. Sponsored by the Metal Lath Manufacturers Association.

U. S. Gov., Federal Specification QQ-B-101c; 1938. Bases, Metal; for Plaster and Stucco Construction. Permits either expanded metal, perforated sheet metal, woven or welded wire, or combinations of these. Covers eight types—(F) flat, (SF) self-furring, (FR) flat rib, (F 3/8 R) 3/8-in. rib, (F 3/4 R) 3/4-in. rib, (FB) flat rib with backing, (SFB) self-furring with backing, and (SRB) stiffened or ribbed with backing. Gives requirements for finish, material, workmanship, thicknesses of metal in sheets, width of strands, attachment of strands and stiffening rods or ribs, mechanical band for plaster or stucco, sizes of openings, weights, and backing; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

*References.*—Standard thicknesses of sheets, *see* 604.0; tolerances on weights and thickness of sheets, *see* 600.7; building construction, *see* 518.50, 518.51; wire sizes, *see* 603.40.

## 605.25 Steel for Concrete Reinforcement

American Assn. of State Highway Officials, M31-42. Standard Specifications for Billet-Steel Bars for Concrete Reinforcement. Gives scope, basis of purchase, process, cold-twisted bars, chemical composition, ladle analysis, check analysis, tensile properties, bending properties, test specimens, number of tests, permissible variations in weight, finish, marking, inspection, rejection, rehearing, and methods of test.

American Assn. of State Highway Officials, M42-42. Standard Specifications for Rail-Steel Bars for Concrete Reinforcement. Gives scope, manufacture, hot-twisted bars, tensile properties, bending properties, test specimens, number of tests, permissible variations in weight, finish, inspection, rejection, and methods of testing.

American Assn. of State Highway Officials, M52-42. Standard Specifications for Axle-Steel Bars for Concrete Reinforcement. Gives scope, manufacture, carbon determination, tensile properties, bending properties, test specimens, number of tests, permissible variations in weight, finish, marking, inspection, rejection, and methods of testing.

American Assn. of State Highway Officials. Standard Specifications for Highway Bridges, 1941. Includes specifications for reinforcement—material "structural steel grade" or "intermediate grade," open hearth to comply with A. A. S. H. O. Standard Specification M-31; with tensile requirements to conform to American Society for Testing Materials Specification A-15; bar mat to conform to A. A. S. H. O. Specification M-54; and will mesh to conform to A. A. S. H. O. Specification M-55, order lists, protection, fabrication, placing and fastening, splicing, lapping, substitutions, measurement, and payment.

American Concrete Institute. Proposed Recommended Practice for Use of Metal Supports for Reinforcement, 1941. Includes requirements for supports and their number and locations by means of tables and diagrams.

American Iron and Steel Institute. Steel Products Manual. Section 21, 1940. Concrete Reinforcing Bars. Gives definitions, grades and specifications, weight tolerances, lengths, loading, and inspection.

American Public Works Assn. Specification for Portland Cement Concrete Pavement, F1-39; 1939. For reinforcement steel this organization has adopted the specifications of the A. S. T. M.—(a) wire fabric A185; (b) bars A15; and bar mats A184.

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering, 1944. Specifications for Concrete and Reinforced Concrete Railroad Bridges and Other Structures, Metal Reinforcement. Gives requirements for quality, deformed bars, and size of bars.

American Society for Testing Materials, A 15-39; 1939. American Standards Assn., A50.1-1939. Billet-Steel Bars for Concrete Reinforcement. Covers plain, deformed, and cold twisted bars, plain and deformed in 3 grades, and structural steel, intermediate and hard. Requirements on chemical composition and tensile requirements, bend tests, and permissible variation in weight.

American Society for Testing Materials, A 16-35; 1935. American Standards Assn. A50.2-1936. Rail-Steel Bars for Concrete Reinforcement. Covers plain, deformed, and hot-twisted bars rolled from standard section tee rails. Requirements for tensile and bending properties, preparation of test specimen, permissible variations in weight, finish, and inspection.

American Society for Testing Materials, A 82-34; 1934. American Association of State Highway Officials, M 32-42. American Standards Assn., A50.3-1936. Cold-Drawn Steel Wire for Concrete Reinforcement. For use as wire or in fabricated form for concrete reinforcement. Gives sizes, tensile and bending properties, preparation of test specimen, permissible variations in gage, finish, and inspection.

American Society for Testing Materials, A 160-39; 1939. American Standards Assn., G 43.1-1942. Axle-Steel Bars for Concrete Reinforcement. Covers structural, intermediate, and hard grades of plain and deformed bars, rolled from certain carbon-steel railroad axles. Includes carbon determination, tensile and bending properties, preparation of test specimen, and permissible variations in weight. A.S.T.M. Emergency Alternate Provision EA-A 160; 1942, affected section 2 (Manufacture), section 3 (Carbon Determination), and section 7 (Number of Tests).

American Society for Testing Materials, A 184-37; 1937. American Assn. of State Highway Officials, M54-37. American Standards Assn., G44.1-1942. Fabricated Steel Bar or Rod Mats for Concrete Reinforcement. Covers material in mat (or sheet) form fabricated from steel bars, or rods, in two layers at right angles to each other and clipped or welded to form a grid. Lists suitable bar materials, and gives requirements for clips, fabrication, welds, size and spacing, strength and tests of connections, finish, and inspection.

American Society for Testing Materials, A 185-37; 1937. American Assn. of State Highway Officials, M 55-37. American Standards Assn., G45.1-1942. Welded Steel Wire Fabric for Concrete Reinforcement. Covers welded wire fabric composed of cold-drawn steel wire welded at intersections. Gives method of fabrication, physical properties, tension and bend tests, preparation of specimen, gages and spacings, and inspection.

Concrete Reinforcing Steel Institute. Reinforced Concrete, 1943. Standard Reinforcing Bars. Table of standard sizes, areas, and weights, based on U. S. Dept. of Commerce, National Bureau of Standards Simplified Practice Recommendation R 26-42.

Concrete Reinforcing Steel Institute. Reinforced Concrete, 1943. Standard Specifications for Axle-Steel Concrete Reinforcement Bars. A.S.T.M. Designation; A 160-39. Covers scope, manufacture, carbon determination, tensile properties, bending properties, test specimens, number of tests, permissible variations in weight, finish, marking, inspection, and rejection.

Concrete Reinforcing Steel Institute. Reinforced Concrete, 1943. Standard Specifications for Billit-Steel Concrete Reinforcement Bars. A.S.T.M. Designation, A 15-39. Covers scope, basis of purchase, process, cold-twisted bars, chemical composition, ladle analysis, check analysis, tensile properties, bending properties, test specimens, number of tests, permissible variations in weight, finish, marking, inspection, rejection, and rehearing.

Concrete Reinforcing Steel Institute. Reinforced Concrete, 1943. Standard Specifications for Rail-Steel Concrete Reinforcement Bars. A.S.T.M. Designation, A 16-35. Covers scope, manufacture, hot-twisted bars, tensile properties, bending properties, test specimens, number of tests, permissible variations in weight, finish, inspection, and rejection.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R26-42; 1942. Steel Reinforcing Bars. Simplified practice recommended and accepted by industry establishing a limited list of standard areas of reinforcing bars and the equivalent sizes of round and square bars.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R53-32; 1932. American Standards Assn., A38-1933. Steel Reinforcing Spirals. Simplified practice recommended and accepted by industry establishing a limited list of standard round rod sizes for spiral reinforcement and standard pitches of spiral for various column core sizes and percentages of reinforcement area to concrete area.

U. S. Gov., Federal Specification QQ-B-71a; 1938. Amendment 1; 1940. Bars; Reinforcement, for Concrete. Covers four types—(A) plain, (B) deformed, (C) hot-twisted, and (D) cold-twisted; and five grades; (1) structural, billet-steel; (2) intermediate, billet-steel; (3) intermediate car-axle-steel; (4) hard, billet-steel; and (5) hard, rail-steel. Gives requirements for material, workmanship, twisted bars, permissible variations, chemical composition, manufacturer's analysis, tensile properties, modification in elongation, and bending; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking. Emergency Alternate Federal Specification E-QQ-B-71a; 1942 (issued by Procurement Div., Treasury Dept., U. S. Gov.) added two grades—(6) structural, car-axle-steel and (7) hard, car-axle-steel.

U. S. Gov., Federal Works Agency. Public Roads Administration. Specifications for Construction of Roads and Bridges in National Forests and National Parks, FP-41. Includes reinforcing steel.

*References.*—Methods of testing, general requirements for metals, *see* 600.1; classification of metals, *see* 600.2; concrete building construction, *see* 518.50, 518.51; concrete bridge construction, *see* 518.4.

## 605.26 Iron and Steel Castings and Forgings

American Society for Testing Materials, A 148-44; 1944. American Standards Assn., G52.1-1944. Alloy-Steel Castings for Structural Purposes. For use where mechanical stresses unaccompanied by high temperatures predominate, including full annealed, normalized and tempered, and liquid quenched and tempered or drawn castings. Gives requirements for heat treatment, temperature control, chemical composition, ladle analysis, check analysis, tensile properties, bending properties, magnetic particle testing, test specimens, number of tests, retests, workmenship, finish, marking, inspection, and rejection. A.S.T.M. Emergency Alternate Provision EA-A 148a; 1944, affected section 1, a fourth grade added under class C.

*References.*—Iron castings, *see* 611.1, 611.2; steel castings, *see* 611.4; iron forgings, steel forgings, *see* 611.3, 611.5.

## 605.27 Steel Scaffolds and Grandstands

International Assn. of Governmental Labor Officials, endorsing sponsor. American Standards Assn., Z20.1-1941. Specifications for Portable Steel and Wood

Grandstands. (Applicable to all portable grandstands any of whose main structural members are of steel or wood.) Definitions of terms and specifications on approval, design, workmanship, loading, foundations, materials of construction, allowable stresses, and special requirements.

U. S. Gov., Treasury Dept., Procurement Div. 447A; 1941. Scaffold, Steel. Covers the parts of steel scaffolding of knock-down construction, designed to be readily dismantled and assembled without aid of special tools. Gives requirements for sizes, material, tubing, finish, construction, dimensions, frames and braces; methods of sampling, inspection, and tests; and packing and marking.

### 605.28 Metal Cribbing

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering, 1943. Roadway Protection. Covers retaining structures in sliding cuts. Gives requirements for timber, concrete, and metal cribbing; and dry rubble, masonry, and concrete walls.

U. S. Gov., Federal Works Agency. Public Roads Administration. Specifications for Construction of Roads and Bridges in National Forests and National Parks, FP-41. Includes metal cribbing.

## 606. RAILWAY TRACK MATERIAL

### 606.0 GENERAL ITEMS

American Iron and Steel Institute. Steel Products Manual. Section 19; 1938. Revised, 1943. Railway Track Materials. Covers tee and girder rails, joint bars, track bolts, track spikes, and tie plates. Gives definitions and types, chemical and physical requirements, classification of rails, manufacturing tolerances, marking, loading, definitions relating to manufacture, and specifications for rails; and description and standards, and specifications for joint bars, track bolts, track spikes, and tie plates.

American Mining Congress, Sponsor. American Standards Assn., M7.1-1933 and M7.2-1935. Recommended Practice for Frogs, Switches, and Turnouts for Coal Mine Tracks. Recommendations are shown in detail by a series of drawings divided into section (1) riveted frogs, (2) cast frogs, (3) switches, (4) guard rails, (5) turnouts, and (6) switch stands; and include drawings for light rail, 20 to 60 lb., turnouts (M7.1-1933), and drawings for heavy rails, 70 and 80 lb., turnouts (M7.2-1935).

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering, 1942. Specifications for the Laying of New Track, 1940; and Specifications for Laying Rail, 1941.

American Transit Assn. Standard Third-Rail Terminology, W2-15; 1915. Defines the meaning of the terms "Bond" and "Third-Rail Gauge."

American Transit Assn. Standard Designs and Engineering Data for Turnouts and Crossovers for Tongue Switch Construction, W10-21; 1921. Contains dimensional designs relative to standard lateral or side turnouts, standard equilateral or Diamond turnouts, and standard crossovers for tongue switch construction.

American Transit Assn. Standard Method of Designating Compromise Joints, W12-23; 1923. Includes a diagram illustrating proper method of naming compromise joints.

American Transit Assn. Standard Special Trackwork Layouts, W13-37; 1937. Covers standard system of uniform track spirals, simplified system of single branchoff frogs, and car clearance easements with standardized frogs for various gages, and includes numerous drawings and tables covering these subjects.

American Transit Assn. Standard Diagram Showing Proper Location of Tongue Switches. W14-22; 1922.

American Transit Assn. Standard Recommended Distances Between Tangent Track Centers Through Special Trackwork Layouts for All Track Gauges. W35-28; 1928.

American Transit Assn. Standard Rules for the Determination of Flangeways and Gauges on Curves, W40-35; 1935. This specification presents the necessary information and rules for determining the flangeways and guard distances that are proper for actual use under the conditions covered by the rules. Allowance has been made for permissible variations in the manufacture and installation of the special trackwork as well as for other similar variations in the flange dimensions and wheel setting.

American Transit Assn. Standard Protection of Contact-Rail Where Protected Third-Rail is Used, W45-29; 1929. The two types represent the general standards for protection as established by roads using the third-rail distribution system for over-running contact third-rail and for under-running contact third-rail.

American Transit Assn. Recommended Specification for Street Railway Track Construction, W113-28; 1928. This specification covers the construction of electric railway track in paved city streets. It covers items relating to excavation, sub-soil and surface drainage, types of foundation, kind of rails, rail joints, bonds, rail fastenings, ties, pavement base, rail filler, and method of paving the street.

American Transit Assn. Recommended Specification and Preferred Names for Rail Joints and Parts, W125-30; 1930. Gives a recommended list of preferred names and definitions therefor covering rail joints and parts.

American Transit Assn. Recommended Design for Girder Grooved and Girder Guard Rail Sections and Splice Bars for A.A.R. (Mechanical Div.) Flanges, W127-31; 1931. Gives dimensions, designs for various types of girder grooved rail sections and splice bars for girder grooved rails.

American Transit Assn. Recommended Design for Branding and Stamping for Rails, W128-31; 1931. Includes design of letters and numerals to be used in stamping.

*References.*—Wood ties, *see* 401; rock and stone ballast, *see* 511.73; track bonds and bonding, *see* 718.49; track tools, *see* 616.8.

### 606.1 STEEL RAILS, TEE, AND GIRDER

American Iron and Steel Institute. Steel Products Manual. Section 19; 1938. Revised, 1943. Railway Track Materials. Covers tee and girder rails, joint bars, track bolts, track spikes, and tie plates. Gives definitions and types, chemical and physical requirements, classification of rails manufacturing tolerances, marking, loading, definitions relating to

manufacture, and specifications for rails; and description and standards, and specifications for joint bars, track bolts, track spikes, and tie plates.

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering. Revised, 1944. Emergency Provisions adopted March 19, 1942, for Specifications for Open-Hearth Steel Rails. Provides for changes in requirements for chemical composition, ductility and resistance to impact, interior condition and finishing; and adds requirements for control cooling.

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering. Specifications for Open-Hearth Steel Girder Rails of Plain, Grooved, and Guard Types, 1936. Gives requirements for manufacture, chemical and physical properties and tests, standard sections, lengths, widths, workmanship, finish, drilling, milling, punching, classification, marking, loading, and inspection. Prepared in cooperation with the American Transit Engineering Assn. and Rail Manufacturers.

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering. Specifications for Open-Hearth Steel Rails, 1942. Gives requirements for chemical composition, average carbon, analyses, ductility and resistance to impact, elongation and permanent set, interior condition, classification (No. 1 rails, X-rails, No. 2 rails), and details of manufacture.

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering. Standard Rail Sections (R.A.-A 90-lb., R.E. 100-lb., R.E. 112-lb., and R.E. 131-lb.).

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering. Standard Sections for Grooved and Guard Girder Rails (128-lb. R.E., 149-lb. R.E., 159-lb. R.E., and 174-lb. R.E.; and joint bars—128-lb. R.E., and 159-lb. R.E.)

American Society for Testing Materials, A1-39; 1939. American Railway Engineering Association Specification for Carbon-Steel Rails. Open-Hearth Carbon-Steel Rails. For Standard tee rails. Gives requirements as to chemical composition, mill practices, ladle analysis, drop test, elongation, Brinell indentation, section, weight, finish, classification of rails and inspection. A.S.T.M. Emergency Alternate Provision (EA-A 1a; 1943) affected Section 5 (Chemical Composition), section 10d (Supports for the Test Specimens), section 11a (Height of Free Fall of Tup), section 13 (Interior Condition), section 15 (Brinell Indentation), section 20 (Finish), and section 21b (Classification of X-Rayls); and adds a new section covering requirements for control cooling.

American Society for Testing Materials, A 2-27; 1927. American Railway Engineering Assn. Specification for Steel Girder Rails. American Transit Engineering Assn., Standard W1-31. Open-Hearth Steel Girder Rails of Plain, Grooved, and Guard Types. For 3 classes of steel girder rails; requirements as to chemical composition, mill practices, impression test, section, weight, drilling, milling, punching, classification of rails, and inspection.

American Transit Assn. American Standards Assn., E4-1933. Standard Design for Seven-Inch Girder Grooved Rail, W6-31; 1931.

American Transit Assn. American Standards Assn., E5-1933. Standard Design for Nine-Inch Girder Grooved Rails, W7-31; 1931.

American Transit Assn. American Standards Assn., E6-1933. Standard Design for Seven-Inch Girder Guard Rail, W8-31; 1931.

American Transit Assn. American Standards Assn., E7-1933. Standard Design for Nine-Inch Girder Guard Rail, W9-31; 1931.

American Transit Assn. American Standards Assn., E8-1933. Seven-Inch 82-Lb. Plain Girder Rail and Splice Bars.

American Transit Assn. American Standards Assn., E9-1933. Seven-Inch 92-Lb. Plain Girder Rail and Splice Bars.

American Transit Assn. American Standards Assn., E11-1933. Seven-Inch 102-Lb. Plain Girder Rail and Splice Bars.

American Transit Assn. Standard Specification for the Manufacture of Open-Hearth Steel Girder Rails of Plain, Grooved and Guard Types, W1-31; 1931. This specification covers the manufacture of open-hearth steel girder rails for classes A, B, and C. Specification gives detailed requirements concerning manufacture, chemical and physical properties and tests, workmanship and finish, drilling, milling and punching, classification of rails, marking, and inspection. Substantially the same as American Society for Testing Materials Specification A2.

American Transit Assn. Standard Design for Seven-Inch Girder Grooved Rail, W6-31; 1931. Gives diagram showing dimensions and table showing details.

American Transit Assn. Standard Design for Nine-Inch Girder Grooved Rail, W7-31; 1931. Gives diagram showing dimensions and table showing details.

American Transit Assn. Standard Design for Seven-Inch Girder Guard Rail, W8-31; 1931. Gives diagram showing dimensions and table showing details.

American Transit Assn. Standard Design for Nine-Inch Girder Guard Rail, W9-31; 1931. Gives diagram showing dimensions and table showing details.

American Transit Assn. Standard Specification for Carbon-Steel Rails of Standard Section, W16-37; 1937. This specification covers the manufacture of steel rails of standard section, as distinguished from girder grooved, girder guard, and plain girder rails. Gives detailed requirements as to manufacture; chemical and physical properties and tests; length and weight of standard section; holes for bolt, bond and tie rods; classification of rails; marking; and inspection and rejection. This specification is identical in substance with A.S.T.M. Specification A-1, except for certain sections.

American Transit Assn. Standard Design for Light Seven-Inch Girder-Grooved Rail, W28-31; 1931.

American Transit Assn. Standard Design of Plain Girder Rails and Splice Bars, W31-31; 1931. Includes splice bars for 7-in. rails, 80-, 90-, and 100-lb. weights, standard dimensions, drilling of splice bars, and sizes of bolts.

American Transit Assn. Recommended Design for Four and One Half Inch Girder Grooved Rail, W142-35; 1935.

National Association of Purchasing Agents. Handbook of Commodity Data Sheets, 1938. Steel; Rail or Re-rolled. Covers definition, properties, raw material specification, products available, and uses.

U. S. Gov., Dept. of Commerce, National Bureau of Standards Research Paper RP408; 1932. Tensile Properties of Rail Steels at Elevated Temperatures. In continuation of previously reported work on a study of transverse fissure failures in railroad rails, a further series of tensile tests at elevated temperatures has been made on a number of rails representing different conditions of manufacture and service to determine the extent to which secondary brittleness occurred in these materials.

U. S. Gov., U. S. Army, Transportation Corps. Specification 43-2A; 1937. Rail, Open Hearth Carbon Steel.

*References.*—Alloy steel rails, *see* 622.2; methods of testing, general requirements for metals, *see* 600.1; classification of railway materials, *see* 600.2; track construction, *see* 606.0.

## 606.2 RAIL JOINT PLATES AND TIE PLATES

American Iron and Steel Institute. Steel Products Manual. Section 19; 1938. Revised, 1943. Railway Track Materials. Covers tee and girder rails, joint bars, track bolts, track spikes, and tie plates. Gives definitions and types, chemical and physical requirements, classification of rails manufacturing tolerances, marking, loading, definitions relating to manufacture, and specifications for rails; and description and standards, and specifications for joint bars, track bolts, track spikes, and tie plates.

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering. Emergency Provisions adopted March 19, 1942, for Specifications for Medium-Carbon Steel Tie Plates. Provides for elimination of copper content.

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering, 1942. Specifications for High-Carbon-Steel Joint Bars, 1936. Gives requirements for process, chemical composition, ladle and check analyses, tension and bend tests, finish, marking and stamping, inspection, and rejection.

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering, 1942. Specifications for Quenched Carbon-Steel Joint Bars, 1936. Gives requirements for process, chemical composition, ladle and check analyses, tension and bend tests, finish, marking and stamping, inspection, and rejection.

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering, 1942. Standard Sections—Designs of Tie Plates for R.A.-A and R.E. Rail Sections, 1937. Emergency Provisions Adopted June 15, 1942, and in effect April 1943 admitted additional designs permitting manufacturers to use existing equipment and eliminates use of copper-bearing steel.

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering. Standard Sections for Joint Bar and Assembly (90-lb. R.A.-A rail, 100-lb. R.E. rail, 112-lb. R.E. rail, and 131-lb. R.E. rail).

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering, 1944. Specifications for Medium-Carbon Steel Tie Plates. Gives requirements for manufacture, chemical and physical properties and tests, workmanship and finish, marking, and inspection. Emergency Specifications for Soft and Medium Steel Tie Plates, adopted Dec. 31, 1942, and revised July 1, 1944, superseded the above specifications for the duration of the emergency.

American Society for Testing Materials, A 3-33; 1933. A.T.E.A. Standard, W17-37. Low-Carbon Steel Joint Bars. Gives requirements for chemical composition, ladle analysis, tensile and bending properties, preparation of test specimen, workmanship, and inspection.

American Society for Testing Materials, A 4-14; 1914. American Transit Engineering Association Standard W18-22. Medium-Carbon Steel Joint Bars. Requirements as to finishing, chemical composition, ladle analysis, tensile and bending properties, preparation of test specimen, workmanship, and inspection.

American Society for Testing Materials, A 5-39; 1939. High-Carbon Steel Joint Bars. For general use in standard railroad tracks; requirements for chemical composition, ladle analysis, tensile and bending properties, preparing of test specimen, workmanship, and inspection.

American Society for Testing Materials, A 49-39; 1939. Quenched Carbon-Steel Joint Bars. For general use in standard railroad tracks; requirements as to chemical composition, heating and quenching, ladle analysis, tensile and bending properties, preparing of test specimen, workmanship, finish, and inspection.

American Society for Testing Materials, A 67-33; 1933. A.T.E.A. Standard W23-37. Steel Tie Plates. Includes soft and medium grade of steel tie plates. Gives requirements for chemical composition, ladle analysis, bending properties, preparation of test specimen, permissible variations in dimension, workmanship, and inspection.

American Society for Testing Materials, A 241-41; 1941. Hot-Worked High-Carbon Steel Tie Plates. For general use in standard railroad tracks. Gives chemical composition, ladle analysis, bending properties, test specimens, number of tests, permissible variations in dimensions, weight, workmanship and finish, marking, inspection, and rejection.

American Transit Assn. American Standards Assn., E2-1923. Standard Design for Splice Bars for Seven-Inch Girder Grooved and Guard Rails, W4-1922.

American Transit Assn. American Standards Assn., E3-1923. Standard Design for Splice Bars for Nine-Inch Girder Grooved and Guard Rails, W5-22; 1922.

American Transit Assn. American Standards Assn., E8-1933. Seven-Inch 82-lb. Plain Girder Rail and Splice Bars.

American Transit Assn. American Standards Assn. E9-1933. Seven-Inch 92-Lb. Plain Girder Rail and Splice Bars.

American Transit Assn. American Standards Assn., E11-1933. Seven-Inch 102-Lb. Plain Girder Rail and Splice Bars.

American Transit Assn. Standard Design for Splice Bars for Seven-Inch Girder Grooved and Guard Rails, W4-22; 1922. Gives diagram showing angles, dimensions, rail drilling, and splice punching.

American Transit Assn. Standard Design for Splice Bars for Nine-Inch Girder Grooved and Guard Rails, W5-22; 1922. Gives diagram showing angles, dimensions, rail drilling, and splice punching.

American Transit Assn. Standard Specification for Low Carbon-Steel Splice Bars, W17-37; 1937. Gives detailed requirements as to method of manufacture, chemical and physical properties and tests, workmanship and finish, marking, and inspection and rejection. This specification is identical with A.S.T.M. Specification A3.

American Transit Assn. Standard Specification for Medium Carbon-Steel Splice Bars, W18-22; 1922. Gives detailed requirements as to method of manufacture, chemical and physical properties and tests, workmanship and finish, marking, and inspection and rejection. This specification is identical with A.S.T.M. Specification A4.

American Transit Assn. Standard Specification for High Carbon-Steel Splice Bars, W19-22; 1922. Gives detailed requirements as to method of manufacture, chemical and physical properties and tests, workmanship and finish, marking, and inspection and rejection. This specification is identical with A.S.T.M. Specification A5.

American Transit Assn. Standard Specification for Extra High Carbon-Steel Splice Bars, W20-22; 1922. Gives detailed requirements as to method of manufacture, chemical and physical properties and tests, workmanship and finish, marking, and inspection and rejection.

American Transit Assn. Standard Specification for Steel Tie Plates, W23-37; 1937. This specification covers two grades of steel tie plates, namely—soft and medium. Gives detailed requirements as to method of manufacture, chemical and physical properties and tests, permissible variations, workmanship and finish, marking, and inspection and rejection. This specification is identical in substance with A.S.T.M. Specification A67-33.

U. S. Gov., U. S. Army, Transportation Corps. Specification 43-3; 1926. Bar; Splice, Carbon Steel.

U. S. Gov., U. S. Army, Transportation Corps. Specification 43-6; 1927. Plate; Tie, Steel.

*References.*—Methods of testing, general requirements for metals, *see* 600.1; classification of railway materials, *see* 600.2; track construction, *see* 606.0.

## 606.3 SWITCHES AND SPECIAL TRACK WORK

American Mining Congress, sponsor. American Standards Assn., M7.1-1933 and M7.2-1935. Recommended Practice for Frogs, Switches, and Turnouts for Coal Mine Tracks. Recommendations are shown in detail by a series of drawings divided into section (1) Riveted Frogs, (2) Cast frogs, (3) Switches, (4) Guard Rails, (5) Turnouts, and (6) Switch Stands; and include drawings for light rail, 20 to 60 lb., turnouts M7.1-1933; and drawings for heavy rail, 70 and 80 lb., turnouts M7.2-1935.

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering, 1944. Specifications for One, Two, Three and Four-Track Overhead Metal Warning and Metal Side Warning. Covers the design, materials, and erection of metal overhead warnings. Gives footing; materials including base casting and pipe cap, iron pipe and fittings, including collars, straps and hanger clamps, galvanized steel pipe and fittings, steel guy and messenger strand, galvanized cable clamps and thimbles, hook and eye galvanized turnbuckles, wood lash bars and fingers, telltales for overhead warnings, spring finger for side warning, spring for side warning brackets, bolts, and steel bar; erection; and painting.

American Railway Engineering Assn. Construction and Maintenance Section., Assn. of American Railroads in collaboration with Manganese Track Society. Trackwork Plans. Includes plans showing standard designs, construction, and materials for switches, switch stands, bolted rigid frogs, spring rail frogs, guard rails, rail bound and solid manganese frogs, bolted rail crossings, manganese insert crossings, solid manganese crossings, turnout and cross-over data, and track construction for paved streets; and data for rail sections.

American Transit Assn. Standard Dimensions of Switches and Mates, W11-30; 1930.

American Transit Assn. Standard Dimensions of Frogs for Crossovers and Turnouts, W15-37; 1937.

American Transit Assn. Standard Specification for Solid Manganese-Steel Special Trackwork for Girder Rail, W32-30; 1930. This specification covers the manufacture of special trackwork wherein the tongue switches, mates, frogs and crossings are made of solid manganese-steel. The term "solid manganese" shall be considered as distinguishing such special trackwork from other types wherein manganese-steel is used only for inserts at points receiving the principal wear. Specification includes chemical and physical properties and tests, design, workmanship, assembly and finish, marking and shipping, and inspection.

American Transit Assn. Standard Specification for Plain Bolted Special Trackwork, W33-30; 1930. This specification covers the manufacture of special trackwork wherein switches, mates, frogs, crossings, curves, guard rails and connecting rails are made of rolled steel rails properly shaped by machining or grinding and secured together by means of cast-iron, cast, forged or rolled steel fillers, bolts, rivets and plates. This specification includes chemical and physical properties and tests, design, workmanship, assembly and finish, marking and shipping, and inspection.

American Transit Assn. Standard Specification for Rail-Bound Insert Type Special Trackwork, W34-30; 1930. This specification covers the manufacture of special trackwork wherein the switches, mates, frogs, and crossings are made of cast manganese steel

inserts, at the points of greatest wear, secured in place by rolled steel rails properly machined and bolted thereto. This specification includes chemical and physical properties and tests, design, workmanship, assembly and finish, marking and shipping, and inspection.

American Transit Assn. Standard Design of Bolted Rail Crossings; Steam Railroad Over Electric Railway, W39-35; 1935. Gives dimensional designs of bolted rail crossings for angles 90 deg. to 50 deg. inclusive.

American Transit Assn. Standard Design of Bolted Rail Crossings; Steam Railroad Over Electric Railway, W43-35; 1935. Gives dimensional designs of bolted rail crossings for angles below 50 deg. to 30 deg. inclusive.

American Transit Assn. Recommended Specification for Materials for Use in the Manufacture of Special Trackwork, W104-37; 1937. This specification covers the manufacture, chemical and physical properties, and tests of materials entering into the manufacture and assembly of special trackwork for steam electric and industrial tracks of all gages and types, for rail of 50 lb. per yard and over, under any motive power, and in either open or paved track.

American Transit Assn. Recommended Specification for Cast-Steel Construction Hard-Center Special Trackwork, W106-27; 1927. This specification covers the manufacture of special trackwork wherein the tongue switches, mates, frogs, and crossings are made of steel castings with hard centers of special steel inserted at points receiving the principal wear. It gives detailed requirements as to kind of materials, chemical and physical properties and tests, designs, workmanship and finish, marking, and inspection of materials referred to.

American Transit Assn. Recommended Specification for Iron-Bound Hard-Center Special Trackwork, W107-29; 1929. This specification covers the manufacture of special trackwork wherein the tongue switches, mates, frogs, and crossings are made principally of rolled rail arms bound together by cast iron bodies having recesses to receive the hard steel centers which form the running portions between the rolled rail arms, and at points receiving the principal wear. It gives detailed requirements as to kind of materials, chemical and physical properties and tests, designs, workmanship and finish, marking, and inspection of materials referred to.

American Transit Assn. Recommended Design for Minimum Dimensions for Center Plates for Single and Middle Frogs, W122-27; 1927.

American Transit Assn. Recommended Designs for Covering All Switches of the Radii Shown in Manual, Section W11-30; W129-33; 1933. Gives dimensional diagrams of solid manganese steel lateral tongue switch, 100 ft. radius and 200 ft. center radius; equilateral tongue switch, 200 and 350 ft. center radius; lateral tongue switch, 50 and 75 ft. center radius, and equilateral tongue switch, 100 ft. center radius; heel of tongue switches, cross section at heel; bending and grinding directions for converting tongue from standard 200 ft. lateral switch for use in standard 350 ft. equilateral switch, and heel tightening bar and cover for tongue switches.

American Transit Assn. Recommended Design for Mates, W130-34; 1934. Includes dimensional diagram for formation of flangeways for mates.

Assn. of American Railroads. Operations and Maintenance Dept., Engineering Div., Signal Section. Manual of Recommended Practice, 1927. Derails. Not to be used in main tracks, but on heavy grades, where necessary, properly designed deflecting tracks may be used.

U. S. Gov., U. S. Army, Transportation Corps. Specification 43-8; 1929. Frog, Bolted Rigid, No. 8, 85-Pound Rail.

*References.*—Manganese steel track work, *see* 622.5, 622.9; methods of testing, general requirements for metals, *see* 600.1; classification of railway materials, *see* 600.2; heat treatments, *see* 600.5; track construction, *see* 606.0.

## 606.4 TRACK BOLTS, NUTS, AND WASHERS

American Iron and Steel Institute. Steel Products Manual. Section 19, 1938. Revised, 1943. Railway Track Materials. Covers tee and girder rails, joint bars, track bolts, track spikes, and tie plates. Gives definitions and types, chemical and physical requirements, classification of rails manufacturing tolerances, marking, loading, definitions relating to manufacture, and specifications for rails; and description and standards and specifications for joint bars, track bolts, track spikes, and tie plates.

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual of Railway Engineering, 1936. Design for Track Bolts. Gives drawings for oval neck track bolts and elliptic neck track bolts; and tables showing dimensions for oval neck track bolts with special sizes for use during transition period, elliptic neck track bolts special type and sizes for use during transition period, and square and hexagonal nuts for track bolts with special sizes for use during transition period.

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering. Revised, 1944. Emergency Provisions adopted March 19, 1942, for Specifications for Heat-Treated Carbon-Steel and Alloy-Steel Track Bolts. Provided that alloy-steel track bolts need not be supplied during the emergency, and permitted other wrench-tight fits than those specified.

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering, 1942. Specifications for Heat-Treated Carbon-Steel and Alloy-Steel Track Bolts, 1939. Gives requirements for process, chemical properties and tests, physical requirements, design and tolerances, manufacture, and marking and inspection.

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering Specifications for Spring Washers, 1936. Gives requirements for material, physical properties, manufacture, identification, and acceptance.

American Society for Testing Materials, A 76-33; 1933. A.T.E.A. Standard W36-37. Low-Carbon Steel Track Bolts and Nuts. Gives requirements for chemical composition, ladle analysis, tensile and bending properties, preparation of test specimen, permissible variations in dimensions, threads and thread fit, and inspection.

American Society for Testing Materials, A 183-40T; 1940. Tentative Specifications for Heat-Treated Carbon and Alloy-Steel Track Bolts and Nuts. For two grades of carbon-steel track bolts, alloy-steel track bolts, and nuts; requirements as to chemical compositions, tensile and bending properties, test specimen, strip tests, permissible variations in dimensions, threads and thread fit. A.S.T.M. Emergency Alternate Provision EA-A 183; 1942, affected section 1 (Scope), section 3 (Chemical Composition), section 4 (Ladle Analysis), section 6 (Tensile Properties), section 8 (Bending Properties), and section 14 (Threads and Thread Fit).

American Transit Assn. Standard Specification for Quenched, Carbon-Steel Track Bolts, W21-37; 1937. Gives detailed requirements as to method of manufacture, chemical and physical properties and tests, permissible variations, workmanship and finish, marking, and inspection and rejection. This specification is identical in substance with A.S.T.M. Specification A183.

American Transit Assn. Standard Specification for Low Carbon-Steel Track Bolts, W36-37; 1937. This specification covers detailed requirements as to method of manufacture, chemical and physical properties and tests, permissible variations, workmanship and finish, marking, inspection and rejection of bolts. This specification is identical in substance with A.S.T.M. Specification A76.

American Transit Assn. Recommended Design for Track Bolts and Track Bolt Nuts, W126-31; 1931. Includes dimensions for various sizes of oval neck track bolts and square and hexagonal nuts.

Society of Automotive Engineers and American Society of Mechanical Engineers, sponsors. American Standards Assn., B18d-1930. Track Bolts and Nuts. Dimensions, thread length, and number of threads for oval neck and elliptic neck track bolts and for square and hexagonal nuts, tables of special sizes for use during transition from present usage to standard sizes.

*References.*—Alloy steel track bolts, *see* 622.1; methods of testing, general requirements for metals, *see* 600.1; classification of railway materials, *see* 600.2; heat treatments, *see* 600.5; track construction, *see* 606.0.

### 606.5 TRACK SPIKES

American Iron and Steel Institute. Steel Products Manual. Section 19; 1938. Revised, 1943. Railway Track Materials. Covers tee and girder rails, joint bars, track bolts, track spikes, and tie plates. Gives definitions and types, chemical and physical requirements, classification of rails manufacturing tolerances, marking, loading, definitions relating to manufacture, and specifications for rails; and description and standards, and specifications for joint bars, track bolts, track spikes, and tie plates.

American Society for Testing Materials, A 65-33; 1933. A.T.E.A. Standard, W 25-37. Soft Steel Track Spikes. Gives requirements for chemical composition, ladle analysis, tensile and bending properties, permissible variations in dimensions, finish, and inspection.

American Society for Testing Materials, A 66-33; 1933. A.T.E.A. Standard, W 24-37. Steel Screw Spikes. Gives requirements for finishing, tensile and bending properties, permissible variations in dimensions, finish, marking, inspection, and rejection.

American Transit Assn. Standard Specification for Steel Screw Spikes, W24-37; 1937. Gives detailed requirements as to method of manufacture, physical properties and tests, workmanship and finish, permissible variations, marking, and inspection and rejection. This specification is identical in substance with A.S.T.M. Specification A66.

American Transit Assn. Standard Specification for Steel Track Spikes, W25-37; 1937. Gives detailed requirements as to method of manufacture, chemical and physical properties and tests, workmanship and finish, permissible variations, marking, and inspection and rejection. This specification is identical in substance with A.S.T.M. Specification A65.

American Transit Assn. Standard Design for 5 1/2 In. by 9/16 In. Track Spike, W41-30; 1930.

*References.*—Methods of testing, general requirements for metals, *see* 600.1; heat treatments, *see* 600.5; track construction, *see* 606.0.

### 606.6 TRACK TIE RODS

American Transit Assn. Standard Specification for Design and Manufacture of Tie Rods, W42-37; 1937. This specification covers the design and manufacture of low carbon steel tie rods of the round or flat types, for use in street railway track. It includes requirements as to method of manufacture, chemical properties, workmanship and finish, permissible variations, marking, and inspection of tie rods.

*References.*—Methods of testing, general requirements for metals, *see* 600.1; commercial quality bar steel, *see* 603.23.

### 606.7 TRACK BRACES

U. S. Gov., U. S. Army, Transportation Corps. Specification 43-7; 1929. Brace; Rail.

## 607. TUBULAR PRODUCTS AND FITTINGS, COCKS, AND VALVES

### 607.0 GENERAL ITEMS

American Bureau of Shipping. Rules for the Classification and Construction of Steel Vessels, 1944. Pumps and Piping Systems. Include requirements for bilge and ballast systems, boiler feed system, steam and exhaust piping, lubricating oil systems, fuel oil transfer and filling systems, fuel oil service systems, cargo oil systems, vent, sounding and overflow pipes, piping details, and fire protection.

American Gas Assn. Requirements and Recommended Practice for House Piping and Appliance Installation, 1940. These requirements should be construed as basic standards governing the installation of house piping and gas appliances and they have been prepared to specify results rather than outline in detail how such results shall be obtained. Covers

general requirements for house piping, recommended practice for house piping, recommended practice for gas meters, general requirements for appliance installation, recommended practice for appliance installation, recommended practice for flue connections, and appendix.

American Petroleum Institute, Div. of Production, Standard 5-B; 1941. Specifications for the Inspection of Threads on Oil Country Tubular Goods. Covers the instruments and methods for the inspection of all thread dimensions, such as lead, taper, thread height, angle, and thread form.

American Petroleum Institute, Div. of Production, Code 5-C-1; 1938. Supplement 1; 1941. Code of Recommended Field Practice on Care and Use of Oil Country Tubular Goods—Transportation, Storage, Handling, and Reconditioning of Casting, Drill Pipe, and Tubing.

American Petroleum Institute, Div. of Production, Code 5-C-2; 1944. Performance Properties of Casing and Tubing. Gives minimum performance properties for casing and tubing. The values shown herein for casings are final, and are based mainly upon tests; and the values for tubing are tentative, and are calculated. Gives tables showing outside diameter, nominal weight, inside diameter, wall thickness, drift diameter, collapse resistance, internal yield pressure, and joint strength for various sizes.

American Petroleum Institute, Div. of Production, Standard 7-B; 1944. Specification for Rotary Drilling Equipment. Gives final dimensional standards, including gages, for regular and full-hole rotary drilling tool joints, tentative standards for internal-flush rotary drilling tool joints, and standards on auxiliary equipment. Covers material, workmanship and finish, marking, rotary drilling tool joints, drill collars, grief stems, couplings, and subs, bits, gaging practice, swivel gooseneck connections and rotary hose, rotary table, brake blocks, slush pumps, recommended practice on measurement, inspection and rejection, gages and appendices.

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering, 1942. Specifications for Pipe Line Crossings Under Railway Tracks. Pipe lines are those installed to carry oil, gas, gasoline, or other inflammable or highly volatile substance, under pressure. Gives requirements for carrier pipe, casing pipe, seals, depth of casing, length of casing, shut-off valves, location, and topography.

American Society of Mechanical Engineers, joint sponsor with National Safety Council. American Standards Assn., A 13-1928. Scheme for the Identification of Piping Systems. Classification of piping according to the character of material carried, assignment of one color to each main class, use of a color band and auxiliary color strip or legend to identify each pipe as to main class and subclass.

American Society of Mechanical Engineers and American Gas Association, joint sponsors. American Standards Assn., B 2.1-1942. Pipe Threads. Covers dimensions and specifications for taper and straight pipe thread for railing fittings, for assembly with flanges for high pressure-temperature service, pressure tight joints, mechanical joints, and locknut connections.

American Society of Mechanical Engineers, sponsor, American Standards Assn., B31.1-1942. Code for Pressure Piping. Represents a standard of minimum safety requirements for—(1) the selection of suitable materials and reference to standard specifications by which they may be secured, (2) the designation of proper dimensional standards for the elements comprising piping systems, (3) the design of the component parts as well as the assembled unit including necessary supports, (4) the erection of these systems, and (5) the test of the elements before erection and of the completed systems after erection. Section 4—District Heating Piping Systems, endorsed by the National District Heating Assn.

American Society of Mechanical Engineers, sponsor. American Standards Assn., B33.1-1935. Hose Coupling Screw Threads. For all connections having nominal inside diameters of 1/2, 5/8, 3/4, 1, 1 1/4, 1 1/2, and 2 in.

American Society of Mechanical Engineers. Flow of Water in Pipes and Pipe Fittings, 1941. Covers accurate data on flow of water in pipe, friction losses, and artificial roughness. Tests were made with five sizes of brass pipe ranging from 1/2 in. in diameter to 4 in. thirteen sizes of new wrought iron pipe ranging from 1/4 in. in diameter to 8 in., 4 in. and 8 in. new cast iron pipe, and old rusty pipe and pipes containing two types of artificial roughness. Also reports experiments made to determine the friction loss in various pipe fittings arranged in a variety of ways relative to each other.

American Water Works Assn. Specifications for Uniform Marking for Fire Hydrants, 7F.3-1940. Hydrants are rated in terms of their relative capacity and divided into three classes—(A) flow capacity of 1,000 g.p.m. or greater, (B) flow capacity of 500 to 1,000 g.p.m., and (C) flow capacity of less than 500 g.p.m. All barrels of public hydrants are to be painted chrome yellow and the top and nozzle caps of class (A) green, class (B) orange, and class (C) red.

Associated Factory Mutual Fire Insurance Companies. Factory Mutual Bulletin of Loss Prevention 13.21; 1941. Piping Systems for Flammable Liquids. Covers general conditions, flexible connections, outdoor piping, indoor piping, and valves and emergency shut-off devices.

Associated Factory Mutual Fire Insurance Companies. Pamphlet 71; 1939. Double Check Valves on Fire-Device Connections. Covers introduction, installation of double check valves, maintenance of double check valves, testing, and cleaning.

Assn. of American Railroads, Operations and Maintenance Dept., Engineering Div., Signal Section. Manual of Recommended Practice, 1942. Specification for Pipe Thread. Refers to Specifications 122 and 123 for pipe thread for 1-in. signal pipe and adopts American Standards Assn. B2 for pipe threads for other than 1-in. signal pipe.

International Association of Milk Sanitarians jointly with International Association of Milk Dealers and Dairy Industries Supply Assn. Three Associations Standards (undated). The committees from the three

associations have accepted standards for—(1) recessless sanitary union for sanitary milk pipe lines, (2) threaded fittings including bends for use with this union, and (3) improved indicating and recording thermometer connections for tanks, vats, and pipe lines. Gives drawings of the sanitary union and drawings with tables showing dimensions for various threaded fittings including bends and thermometer connections.

Manufacturers Standardization Society of the Valve and Fittings Industry. By-Pass Size Standard, SP-5; 1937. This standard covers fabricated by-pass equipment for cast iron and steel valves in two series, for steam, and for gases or liquids, 4-to-24-in. main valve sizes; locations for gate valves, globe valves, and angle valves.

Manufacturers Standardization Society of the Valve and Fittings Industry. Roughing-In Dimensions for Low Pressure Radiator Valves, Union Elbows and Return-Line Vacuum Valves, SP-3; 1944. Gives roughing-in measurements for standard 1/2 to 2-in. low pressure radiator valves, union elbows, and return-line vacuum valves.

Manufacturers Standardization Society of the Valve and Fittings Industry. Standard Finishes for Contact Faces of the Connecting-End Flanges of Ferrous Valves and Fittings, SP-6; 1939. Includes a plain face, raised face, double male, large male and female, small male and female, large and small tongue and groove, and ring joint flanges. Applications and definitions of finishes for cast iron and steel contact faces.

Manufacturers Standardization Society of the Valve and Fittings Industry. Spot Facing Standard for Bronze, Iron and Steel Flanges, SP-9; 1942. To establish maximum and minimum dimensions that reflect the tools and equipment now in common use and to set up a table of dimensions for convenient reference. Applies primarily to the spot facing of pipe flanges in brass, iron or steel when cast integral with valves and fittings, as well as the companion flanges used with this product. Gives diagram and table showing maximum and minimum spot face diameter for standard bolt sizes from 1/2 in. to 3 1/2 in.

Manufacturers Standardization Society of the Valve and Fittings Industry. Standard Marking System for Valves, Fittings, Flanges, and Unions, SP-25; 1936. Addendum 1; 1938. This marking system indicates materials and temperature-pressure service ratings, gives primary and mandatory markings, method of application, rules for marking, and tables which apply to each specific product. Includes gas, air, liquid, oil, steam, and water service; also valves, fittings, and flanges, unions and union fittings.

Manufacturers Standardization Society of the Valve and Fittings Industry. Railing Fittings, Male and Female Threads, SP-35; 1936. Description and dimensional drawings of modified short thread for use in pipe railings, basically same as the American standard taper pipe thread, using the larger end of the thread, and recessing the fitting to cover the imperfect threads on the pipe.

National Board of Boiler and Pressure Vessel Inspectors. Safety Valve Capacity Tests, 1944. Gives detailed data on the capacities of safety valves as manufactured by the leading companies and certified by the N.B.B.P.V.I. Capacities determined in accordance with the rules formulated by the A.S.T.M. Boiler Code Committee.

National Board of Fire Underwriters. Supervision and Care of Valves Controlling Water Supplies for Fire Protection, No. 26; 1931. Requirements for open valves in proper operating conditions, and for supervision of reopening after necessary repairs or alterations. Identification of valves, supervisory service classifications, by central station service, proprietary signal, and local, sealing, and notification systems, and suggested precautions while water is shut off.

National Board of Fire Underwriters. City Gas Piping and Fittings, No. 54; 1943. Standards for the installation, maintenance and use of piping, appliances and fittings for city gas. Covers general requirements, inspection and tests, services and meters, piping valves and fittings, appliances, turning gas on and off, and appendix.

National Fire Protection Assn. National Fire Codes for Flammable Liquids, Gases, Chemicals, and Explosives, 1943. Anaesthetic Gases and Oxygen in Hospitals. Recommended good practice for construction and installation of piping systems for the distribution of anaesthetic gases and oxygen in hospitals and similar occupancies, and for construction and operation of oxygen chambers. General requirements, including color identification of pipe lines, manifolding anaesthetic cylinders to headers for distribution, emergency shut-off valves, lighting, heating and air conditioning apparatus, static precautions, open flames, fire protection, and oxygen tents.

National Fire Protection Assn. National Fire Codes for Flammable Liquids, Gases, Chemicals, and Explosives, 1943. Refrigeration Safety Code, Safety Code for Mechanical Refrigeration. Covers definitions, building occupancy classification, refrigerating system classification by type, refrigerant classification, institutional occupancies, public assembly occupancies, residential occupancies, commercial occupancies, industrial occupancies, installation requirements, refrigerant piping, valves, fittings, design, construction, safety devices, tests, and instructions.

National Fire Protection Assn., sponsor. American Standards Assn., Z27-1933. Recommended Practice for the Installation, Maintenance, and Use of Piping and Fittings for City Gas. These provisions are intended to apply to the installation of gas piping in buildings and the use of city gas, that is, natural, and manufactured or mixed. They do not apply to large underground gas distributing systems leading up to buildings and such parts of a gas system as the manufacturing plants, etc., which are the properties of gas companies.

Society of Automotive Engineers. 1944 Handbook, Section 5—Screws, Bolts, and Washers. SAE Standard Pipe Threads. Revised, 1944. Gives taper and form of thread, diameter and length of thread, length of engagement, straight pipe threads, gaging, tools, and gives diagrams and tables showing dimensions for various types of standard threads.

Technical Assn. of the Pulp and Paper Industry. Piping Systems Color Code. Standard E1 p-34; 1934. Gives a list of color bands and color stripes on bands for piping systems using steam, water, oil, compressed air, size, sulphite pulps, black liquor, sludge, etc.

U. S. Gov., Army-Navy Aeronautical Specification AN-GGG-P-363-2; 1942. Pipe-Threads; Taper, Aircraft (American National Form Symbol NPT).

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specifications CAA-367. Flagpole; Tubular Steel.

U. S. Gov., Dept. of Commerce, National Bureau of Standards Handbook H28; 1944. Screw-Thread Standards for Federal Services. Presents complete dimensional data upon which specifications may be based for threaded products for government requirements. Includes terminology (definitions and symbols); American National pipe threads, (taper pipe threads, modified taper pipe threads, and straight pipe threads); American National hose-coupling and fire-hose coupling threads; and appendixes containing supplementary information of both a general and a technical nature, including such specifications as are not intended to be mandatory.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Joint sponsor with American Gas Assn. American Standards Assn., K2-1927. Gas Safety Code for Installations and Work in Buildings. Definitions, rules for gas fitting and for installation of gas appliances with notes amplifying the rules.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R57-32; 1932. Wrought Iron and Wrought Steel Pipe Valves, and Fittings. This recommendation establishes a schedule of diameters and thicknesses of wrought iron and wrought steel pipe valves, and fittings. It covers nominal inside and outside diameters and approximate thicknesses for standard weight, and extra strong and double extra strong pipe. Sponsored by Manufacturers Standardization Society of the Valve and Fittings Industry.

U. S. Gov., Federal Specification GGG-P-351a; 1944. Pipe-Threads; Taper, American-National. Covers American-National taper pipe-threads, gages for inspection, and methods of gaging the product. Pipe-threads shall be right-hand taper threads unless otherwise specified. Gives detail requirements for taper pipe-threads, tolerances on taper pipe-threads, gages, and table showing dimensions for various size of pipe; and methods of inspection.

U. S. Gov., Joint Army-Navy Specification, JAN-P-3; 1944. Packaging and Packing for Overseas Shipment; Valves and Pipe Fittings; General Specifications for.

U. S. Gov., Navy Dept. Specification 44T2c; 1936. Threads, Standard, Pipe and Pipe-Fitting.

*References.*—Pipe gaskets, *see* 707.1; fire hose coupling threads, *see* 974.0.

## 607.1 CAST-IRON PIPE, FITTINGS, AND CONNECTIONS

### 607.10 General Items

American Petroleum Institute, Div. of Production. Code 26; 1936. Recommended Practice on Form of Agreement and Specifications for Pipe-Line Crossings Under Railroad Tracks.

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering, 1943. Specifications for Laying Cast-Iron Pipe. Gives requirements for material, alinement and grade, excavation, classification, measurement, pipe laying, making joints, special pipe, couplings and fittings, testing, and back-filling.

American Water Works Assn., joint sponsor with American Gas Assn., American Society for Testing Materials, and New England Water Works Assn. American Standards Assn., A21.1-1939. Manual for the Computation of Strength and Thickness of Cast-Iron Pipe With Historical Foreword on Specifications Relating to Cast-Iron Pipe and Fittings. Explanation of the new principles and methods used in computation of standard pipe thicknesses included with specifications for pit cast and other types of cast iron pipe. Part 1 of the manual shows how the methods may be used to compute the necessary thickness of a pipe under known conditions of internal pressure, earth cover and method of laying, for any specified strength of iron.

American Water Works Assn. Joint sponsor with American Gas Assn., American Society for Testing Materials, and New England Water Works Association. Cement Mortar Lining for Cast-Iron Pipe and Fittings; 1939. Approved as American Standard A21.4-1939 by the American Standards Association. Gives requirements for Portland cement, and sand meeting A.S.T.M. specifications, for mixture of mortar, preparation of pipe for lining, method of application and thickness of lining, curing, tests of lining for water absorption, finish; for optional bituminous outside coatings, whitewash for protection from the sun, and bituminous seal coat.

American Water Works Assn. Standard Specifications for Laying Cast-Iron Pipe, 7D.1-1938. Covers inspection, contractor's responsibility for material, handling pipe and accessories, alignment and grade, excavation and preparation of trench, pipe laying, blocking pipe, jointing pipe, setting valves, valve boxes, fittings, blow-offs, setting hydrants, plugging dead ends, anchorage for fittings, hydrostatic tests, backfilling, chlorination of pipe line, and qualifying alternative procedure.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, 1938. Pipe; Cast-Iron, Pressure. Covers definition, use, sizes, general types and characteristics, joints, specifications, trade customs, and ordering.

### 607.11 Cast-Iron Pipe Culverts, Drains, and Sewers

American Assn. of State Highway Officials, M64-42. Standard Specifications for Cast-Iron Culvert Pipe. Gives scope, classes, type of pipe, material, casting, coating, chemical composition, strength requirements, number of tests, test specimens, testing of specimens, retests, diameter, length, dimensions and weight, waiver of strength tests, workmanship and finish, weighing, marking, inspection, rejection, and testing.

American Assn. of State Highway Officials, T33-42. Standard Methods of Testing Culvert Pipe,

Sewer Pipe, and Drain Tile. Covers tests for concrete pipe, cast-iron pipe, clay pipe and drain pipe. Gives three-edge bearing method, sand-bearing method, absorption test, freezing and thawing test for drain tile, and test for resistance to action of acids for clay pipe.

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering, 1942. Specifications for Cast-Iron Culvert Pipe.

American Society of Mechanical Engineers and American Public Health Assn., sponsors. American Standards Assn., A 40.5-1943. Threaded Cast-Iron Pipe for Drainage, Vent, and Waste Services. Covers two types—(A) with external threads on both ends, and (B) with external threads on one end and with internal threaded drainage hubs on the other. Gives size, marking, chemical and physical properties, transverse test requirements, lengths, threading, tolerances, hydrostatic tests, coating, and dimensions of pipe and drainage hubs.

American Society of Sanitary Engineering and American Society of Mechanical Engineers, sponsors. American Standards Assn., A40.1-1935. Cast Iron Soil Pipe and Fittings. Covers extra heavy grade of soil pipe, hub and spigot type, coated or uncoated. Required thicknesses of walls and parts and permissible variation, design of hub and spigot ends, standard weights and dimensions for pipe, bends, sweeps, Y branches, T branches, vent branches, offsets, hubs, reducers, increasers, S traps, running traps, vent and cleanout tappings, ferrules, brass plugs, and tapping bosses.

American Society for Testing Materials, A 74-42; 1942. Cast-Iron Soil Pipe and Fittings. For pipe with hub and spigot ends, or hub ends only, hubs provided with lead grooves, and spigots with beads. Requirements for quality of iron, chemical composition, transverse strength, tensile strength, hydrostatic test, coating, workmanship, and inspection.

American Society for Testing Materials, A 142-38; 1938. American Standards Assn., G26.1-1942. Cast-Iron Culvert Pipe. Includes standard, heavy, and extra-heavy culvert pipe; types of pipe, materials, casting, coating, chemical composition, strength requirements, method of test and test specimen, dimensions, and weight.

Associated Factory Mutual Fire Insurance Companies. Factory Mutual Bulletin of Loss Prevention 22.70; 1940. Detailed Specifications for Laying Fire Mains. Includes requirements for cast iron pipe, asbestos-cement pipe, pipe linings, fittings, suction pipe, protection, excavation and preparation, foundations, pipe laying, blocking, and jointing, valves, indicator posts and cast iron fittings, plugging dead ends, anchorage of tees, plugs, and bends, hydrostatic tests, backfilling, and special type pipe. Factory Mutual Bulletin of Loss Prevention 22.71; 1940. Anchoring Fire Mains. Gives diagrams of various methods of anchoring conditions.

U. S. Gov., Federal Specification WW-P-356; 1936. Pipe, Cast-Iron; Drainage, Vent, and Waste (Threaded). Covers two types—(A) with external threads on both ends, and (B) with external threads on one end and with internal threads on the other; and sizes from 1 1/4 to 8 in. Gives requirements for minimum load and deflection for sizes 3 in. and smaller, gaging, tolerances on straightness, dimensions, and weights; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Federal Works Agency. Public Roads Administration. Specifications for Construction of Roads and Bridges in National Forests and National Parks, FP-41. Cast-Iron Culvert Pipe.

*References.*—Methods of testing, general requirements for metals, *see* 600.1; installation rules for pipe, *see* 607.0, 607.10; other specifications for cast iron, *see* 611.11.

## 607.12 Cast-Iron Gas and Water Pipe

American Society for Testing Materials, A 44-41; 1941. American Standards Assn. A21.2-1939. Cast-Iron Pit-Cast Pipe for Water or Other Liquids. For pipe cast vertically with dry sand molds and cores, made with bell and spigot ends, plain ends, or as agreed. Requirements for casting of pipe, quality of iron, foundry records, marking, standard dimensions, tolerances, hydrostatic test, weighing, linings and exterior coatings, Talbot strip and ring tests, etc.

American Water Works Assn. Cast Iron Water Pipe and Special Castings, 1908. Covers hub and spigot jointed pipe for 8 classes of pressure service, allowable variations in thickness and weight, marking, quality of iron, test specimen and strength requirements, coal-tar coating, hydrostatic test, and tables of dimensions and weights for standard pipe and special castings as curves, branches, Y's, reducers, caps, and plugs.

American Water Works Assn., joint sponsor with American Gas Association, American Society for Testing Materials, and New England Water Works Assn. Cast Iron Pit Cast Pipe for Water or Other Liquids, 1939. Approved as American Standard A21.2-1939 by the American Standards Assn. For pipe cast vertically with dry sand molds and cores, with bell and spigot ends, plain ends, or otherwise; requirements for quality of iron, castings, marking, tolerances, hydrostatic test, coatings of cement mortar for linings, coal-tar dip, or bituminous enamel, test bars and strength requirements, Talbot strip tests and ring tests, and tables of dimensions.

U. S. Gov., Federal Specification WW-P-421; 1931. Amendment 3; 1940. Pipe; Water, Cast-Iron (Bell and Spigot, and Bolted-Joint). Covers 5 types—(I) centrifugally cast in metal contact mold, (II) centrifugally cast in sand lined molds, (III) horizontally cast in green sand molds, (IV) cast in sand molds, (V) vertically cast in dry sand molds. Gives physical requirements, dimensions, tolerances, and weights; methods of sampling, inspection, and tests; and requirements for packing and marking of shipments. Emergency Alternate Federal Specification E-WW-P-421; 1942 (issued by Procurement Div., Treasury Dept., U. S. Gov.) changed requirements for dimensions, weights, lengths, and pressures of the several classes.

*References.*—Methods of testing, general requirements for metals, *see* 600.1; installation of pipe, *see* 607.0, 607.10; other specifications for cast iron, *see* 611.11.

## 607.13 Cast-Iron Pipe for Railings and Poles

## 607.14 Cast-Iron Pipe Fittings and Connections

American Society of Mechanical Engineers, joint sponsor with Heating, Piping, and Air Conditioning Contractors' National Assn. and Manufacturers' Standardization Society of the Valve and Fittings Industry. American Standards Assn., B16a-1939. Cast-Iron Pipe Flanges and Flanged Fittings, Class 125. Specifications on materials, requirements for dimensions and tolerances and theoretical weights.

American Society of Mechanical Engineers, joint sponsor with Heating, Piping, and Air Conditioning Contractors' National Assn. and Manufacturers' Standardization Society of Valve and Fittings Industry. American Standards Assn., B16b-1944, B16b1-1931, and B16b2-1931. Cast-Iron Pipe Flanges and Flanged Fittings. Serial B16b-1944 for fittings, class 250. Serial B16b1-1931 for fittings rated at 800-lb. hydraulic pressure. Serial B16b2-1931 for fittings rated at 25-lb. steam pressure. Requirements on chemical composition of cast-iron, standard dimensions and thickness of metal for flanges, elbows, tees, etc., dimensions of drilling templates for flanges, theoretical weights. Covers sizes up to 30-in. diameter for the 250-lb. steam pressure class, sizes up to 12-in. diameter for the 800-lb. hydraulic pressure class, and sizes up to 72 in. for the 25-lb. steam pressure class. Requirements on raised faces, number, dimensions, and spacing of bolt holes, sizes of bolts.

American Society of Mechanical Engineers, joint sponsor with Heating, Piping, and Air Conditioning Contractors' National Assn. and Manufacturers' Standardization Society of Valve and Fittings Industry. American Standards Assn., B16d-1941. Cast-Iron Screwed Fittings. For steam pressures of 125 and 250 lb. Tables of dimensions of fittings, including center-to-end dimension and inspection limits for this dimension.

American Society of Mechanical Engineers, joint sponsor with Heating, Piping, and Air Conditioning Contractors' National Assn. and Manufacturers' Standardization Society of the Valve and Fittings Industry. American Standards Assn., B 16.12-1942. Cast-Iron Screwed Drainage Fittings. Marking, materials, tolerance, threading, ribs, coatings are included in this Standard's recommendations. Also given are two tables of inspection limits, nine tables showing dimensions, and a table of dimensions of welded and seamless steel pipe.

American Society of Mechanical Engineers, joint sponsor with Heating, Piping, and Air Conditioning Contractors' National Assn. and Manufacturers' Standardization Society of the Valve and Fittings Industry. American Standards Assn., B 16.14-1943. Ferrous plugs, Bushings, Locknuts, and Caps with Pipe Threads. Covers pressure ratings, size, marking, material, metal thickness tolerance, and threading; and gives illustrative drawings and tables showing dimensions for plugs, pipe bushings, locknuts, and caps.

American Society of Mechanical Engineers, joint sponsor with Heating, Piping, and Air Conditioning Contractors' National Assn. and Manufacturers' Standardization Society of Valve and Fittings Industry. American Standards Assn., B 16g-1929. Cast-Iron Long Turn Sprinkler Fittings (Screwed and Flanged). For maximum hydraulic working pressures of 150 and 250 lb. per square inch. Designates pressure ratings, size, types, material, facings, bolting, metal thickness, reducing fittings, threading, fitting dimensions, etc.

American Society for Testing Materials, A 74-42; 1942. Cast-Iron Soil Pipe and Fittings. For pipe with hub and spigot ends, or hub ends only, hubs provided with lead grooves, and spigots with beads. Requirements for quality of iron, chemical composition, transverse strength, tensile strength, hydrostatic test, coating, workmanship, and inspection.

American Society for Testing Materials, A 126-42; 1942. Gray Iron Castings for Valves, Flanges, and Pipe Fittings. Covers regular, higher-strength gray or semisteels, and high-test regular or alloy composition. Requirements for chemical composition, tensile properties, transverse test, mold, test specimen, etc.

American Standards Assn., B 16a 1-1943. Pressure ratings for Cast-Iron Pipe Flanges and Flanged Fittings—Class 125 (American War Standard). A revision of paragraph 1, "pressure rating," and paragraph 3, "marking," on page 3 of American Standard B 16a-1939, published by the American Society of Mechanical Engineers and sponsored by the Heating, Piping, and Air Conditioning Contractors National Assn. and the Manufacturers' Standardization Society of the Valve and Fittings Industry.

Manufacturers' Standardization Society of the Valve and Fittings Industry. Pipe Bushings Standard (Cast Iron and Malleable Iron); SP-16, 1937. Amendments 1939 and 1940. Includes dimensional drawings of standard outside and inside hexagon bushings, face bushings from 1/4 to by 1/8 to 12 by 6 in. for pattern sizes only.

Manufacturers' Standardization Society of the Valve and Fittings Industry. Locknut Standard (Cast Iron and Malleable Iron), SP-17; 1937. Covers threaded hexagonal locknuts for piping 1/8 to 3 1/2 in. and hexagonal or octagonal 4-in. or larger sizes, dimensional drawings of standard sizes.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, 1938. Valves and Fittings. Covers definition, classification, and standards of the industry.

Society of Automotive Engineers. 1944 Handbook, Section 2—Units, Parts and Fittings. SAE Recommended Practice, Crankcase Drain Plugs. Revised, 1932. Gives drawing with table of dimensions for sizes 1/2, 3/4, and 7/8 in. in diameter.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R185-42; 1942. Pipe Fittings (grey cast iron, malleable iron, and brass or bronze). This recommendation covers the reduction of stock varieties to 35 percent of their former number. Sponsored by the Pipe Fittings Manufacturers Assn.

U. S. Gov., Federal Specification WW-F-406a; 1941. Amendment 1; 1943. Flange-Dimensions, Standard; Classes 125 and 250 Cast Iron Flanges; Classes 150, 250, and 300 Bronze Flanges; (for Land Use). Covers standard dimensions for flanges and includes flanges integral with the pipe, pipe-fittings, and valves; companion flanges; and blind flanges. Gives requirements for class and description, sizes (cast iron and bronze), marking, materials, threads, brazing hubs, silver brazing alloy, and details for each class including facing and dimensions; method of inspection; and packing of shipments.

U. S. Gov., Federal Specification WW-P-401; 1935. Amendment 1; 1937. Pipe and Pipe-Fittings; Soil, Cast-Iron. Covers a single grade which is known as "extra heavy," 2 in. to 15 in., in 5-ft. lengths. Gives permissible variations in laying lengths, dimensions of hubs and spigots, weights, and physical and chemical requirements, methods of inspection and tests; and requirements for packing and marking of shipments. Emergency Alternate Federal Specification E-WW-P-401; 1942 (issued by Procurement Div., Treasury Dept., U. S. Gov.) gave requirements for "Victory" class soil pipe and for standard of medium fittings as to markings, weights, and dimensions.

U. S. Gov., Federal Specification WW-P-491; 1938. Pipe-Fittings; Cast-Iron, Drainage. Covers couplings, crosses, elbows, increasers, offset, tees, traps, tucker connections, Y-branches 90° and 45°; black (uncoated), black—(japan) coated, and zinc-coated (galvanized). Gives requirements for dimensions, pitched openings, and water seal; methods of sampling, inspection, and tests; and requirements for packaging, and packing for shipment. Emergency Alternate Federal Specification E-WW-P-491; 1942 (issued by Procurement Div., Treasury Dept., U. S. Gov.) eliminated basin crosses, offsets, and half S traps from table of fittings and changes dimensions of fittings.

U. S. Gov., Federal Specification WW-P-501a; 1939. Pipe-Fittings; Cast-Iron (Threaded). Covers two types—(A) 125-lb., and (B) 250-lb., black and zinc-coated; caps, couplings, crosses, elbows, pipe plugs, return bends, and tees. Gives tolerances, dimensions, methods of inspection, and tests; and requirements for packaging, packing, and marking for shipment. Emergency Alternate Federal Specification E-WW-P-501a; 1942 (issued by Procurement Div., Treasury Dept., U. S. Gov.) changed dimensions of fittings.

U. S. Gov., Navy Dept. Specification 45F3f; 1940. Fittings; Pipe, Iron (Cast), Threaded.

*References:*—Methods of testing, general requirements for metals, *see* 600.1; installation of pipe, *see* 607.0, 607.10; threading standards, *see* 607.0; other specifications for cast iron, *see* 611.11; other cast-iron fittings, *see* 607.11.

## 607.2 MALLEABLE IRON PIPE, FITTINGS, AND CONNECTIONS

American Society of Mechanical Engineers, joint sponsor with Heating, Piping, and Air Conditioning Contractors' National Assn. and Manufacturers' Standardization Society of the Valve and Fittings Industry. American Standards Assn., B-16c-1939. General Requirements, materials, thickness tolerance, threading, and dimensions of elbows, tees, crosses, elbows, branches, street tees, couplings, caps, return bends, lock nuts, pipe bushings, pipe plugs, and an appendix containing table of dimensions of welded and seamless steel pipe.

American Society of Mechanical Engineers, joint sponsor with Heating, Piping, and Air Conditioning Contractors' National Assn. and Manufacturers' Standardization Society of the Valve and Fittings Industry. American Standards Assn., B 16.14-1943. Ferrous Plugs, Bushings, Locknuts, and Caps With Pipe Threads. Covers pressure ratings, size, marking, material, metal thickness, tolerance, and threading; and gives illustrative drawings and tables showing dimensions for plugs, pipe bushings, locknuts, and caps.

American Society for Testing Materials, A 277-44 T. Tentative Specification for Malleable Iron Flanges, Pipe Fittings, and Valve Parts. Gives scope, certification, process, manufacture, manufacture control and records, tests, and marking.

Assn. of American Railroads. Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Pipe Unions. Standard. Dimensional drawing of design, with table of standard sizes covering 1/8-in. to 4-in. malleable pipe unions.

Assn. of American Railroads. Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Screwed Pipe Fittings for 300-Lb. Pressure. Recommended Practice. Covers dimensional diagrams and tables for reducing elbows, reducing tees, tees and crosses, union tees, air pump union reducers, caps, couplings, and street elbows.

Assn. of American Railroads. Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Steel Welding Neck Flanges. Recommended Practice. For maximum steam service pressure, in various types, in pounds per square inch, from 150 to 500 degrees F., 300, 400, 600, 900, and 1,500 at 750 degrees F. Diagrams and tables of dimensions, for 1 to 24-in. pipe size, except higher pressures are limited to smaller pipe ranges.

Assn. of American Railroads. Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Unions and Pipe Fittings, 300-Lb. Pressure, M-404-42; 1942. Malleable iron or steel fittings for use on locomotives, requirements as to manufacture, tensile strength of 1/8 to 3-in. sizes, method of test, workmanship, finish, and marking.

Manufacturers Standardization Society of the Valve and Fittings Industry. Pipe Bushings Standard (Cast Iron and Malleable Iron), SP-16; 1937. Amendments, 1939 and 1940. Includes dimensional drawings of standard outside and inside hexagon bushings, face bushings from 1/4 x 1/8 to 12 x 6 in. for pattern sizes only.

Manufacturers Standardization Society of the Valve and Fittings Industry. Locknut Standard (Cast Iron and Malleable Iron), SP-17; 1937. Covers threaded hexagonal locknuts for piping 1/8 to 3 1/2 in., and hexagonal or octagonal 4-in. or larger sizes, dimensional drawings of standard sizes.

Underwriters' Laboratories, Inc. Standard for Construction and Performance of Hazardous Liquid Pipe Unions, 1937. For use with standard-weight pipe, to convey gasoline, kerosene, fuel oil, etc. So-called 250-lb. unions, metal-to-metal seat type malleable iron or steel, galvanized, with brass or bronze ring seat.

Unions may have brass or bronze pipe ends where equivalent strength is provided. Includes tensile and hydrostatic tests for 1/4 to 3-in. unions, and dimensional drawing.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R185-42; 1942. Pipe Fittings (grey cast iron, malleable iron and brass or bronze). This recommendation covers the reduction of stock varieties to 35 percent of their former number. Sponsored by the Pipe Fittings Manufacturers Assn.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Commercial Standard CS7-29; 1929. Standard Weight Malleable Iron or Steel Screwed Unions. This standard covers malleable iron or steel unions for use with standard-weight pipe, furnished in black, brass seated; galvanized, brass seated types.

U. S. Gov., Federal Specification WW-P-404; 1944. Pipe; Steel and Ferrous Alloy for Bending, Flanging, etc. (Iron-Pipe Size). Covers black and coated pipe in three types—I, steel (carbon, welded and seamless); II, steel (copper-bearing, welded and seamless); III, open-hearth iron (copper molybdenum, welded); and three classes—A, standard weight; B, extra strong; and C, double extra strong. Gives requirements for material and workmanship, marking, lengths, diameter and thickness, weight tolerances, black pipe, zinc-coated pipe, pipe ends and couplings, pipe threads, and details for each type and class; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification WW-P-406; 1944. Pipe; Steel and Ferrous Alloy for Ordinary Uses (Iron-Pipe Size). Covers black, coated, or lined pipe in three types—I, steel (carbon, welded and seamless); II, steel (copper-bearing, welded and seamless); III, open-hearth iron (copper-molybdenum, welded); and three classes—A, standard weight; B, extra strong; and C, double extra strong. Gives requirements for material and workmanship, marking, lengths, diameter and thickness, weight tolerances, black pipe, zinc-coated pipe, cement lined pipe, pipe ends and couplings, pipe threads, and details for each type and class; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification WW-P-521a; 1939. Pipe-Fittings; Malleable-Iron (Threaded), 150-Pound. Covers two classes—black and zinc-coated; bushings, caps, couplings, crosses, elbows, return bends, tees, and Y-branches. Gives requirements for tolerances and dimensions; methods of inspection and tests; and requirements for packaging, packing, and marking for shipment. Emergency Alternate Federal Specification E-WW-P-521a; 1942 (issued by Procurement Div., Treasury Dept., U. S. Gov.) changed sizes of fittings.

U. S. Gov., Federal Specification WW-U-531; 1932. Unions; Malleable Iron or Steel, 250-Pound. Covers two threaded types—(A) black, brass seated; and (B) zinc-coated (galvanized), brass seated. Gives requirements for tensile strength and dimensions; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking. Emergency Alternate Federal Specification E-WW-U-531; 1942 (issued by Procurement Div., Treasury Dept., U. S. Gov.) changed requirements for dimensions and packaging.

U. S. Gov., Federal Specification WW-U-536; 1932. Unions; Malleable Iron or Steel, 300-Pound. Covers four types—(XA) black, brass or copper seated; (XB) galvanized, brass or copper seated; (XC) black, all iron or steel; and (XD) galvanized, all iron or steel. Gives requirements for dimensions and tensile strength; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking. Emergency Alternate Federal Specification E-WW-U-536; 1942 (issued by Procurement Div., Treasury Dept., U. S. Gov.) changed requirements for dimensions, ultimate loads, marking, and packaging.

U. S. Gov., Navy Dept. Specification 45B5d; 1942. Bushings; Pipe.

U. S. Gov., Navy Dept. Specification 45F5d; 1940. Fittings; Pipe, Iron, (Malleable), Threaded, 150-Pound.

U. S. Gov., Navy Dept. Specification 45F6b; 1934. Flanges; Iron (Malleable).

U. S. Gov., Navy Dept. Specification 45U3d; 1935. Unions; Iron (Malleable) or Steel, 250-Pound.

U. S. Gov., Navy Dept. Specification 45U6a; 1935. Unions; Iron (Malleable) or Steel, 300-Pound.

*References.*—Methods of testing, general requirements for metals, *see* 600.1; zinc coatings and tests, *see* 600.3; installation, identification, and care of piping, *see* 607.0; standard threading of pipe, *see* 607.0; other malleable iron castings, *see* 611.2.

## 607.3 WROUGHT-IRON PIPE, FITTINGS, AND CONNECTIONS

Air Conditioning and Refrigerating Machinery Assn., Inc., 4.0; 1941. Miscellaneous Ammonia Standards. Includes—(4.3) Steel and Wrought Iron Pipe. Recommendations for minimum centers for bending pipe, painting of coils, spacing of hangers, protection of exposed threads, treatment of pipe joints, welding flanges to pipe, test pressures, and cleaning of pipe.

American Bureau of Shipping. Rules for the Classification and Construction of Steel Vessels, 1944. Wrought Iron Pipe. Include rules for inspection and tests.

American Petroleum Institute, Division of Production. Standard 5-A, 1944. Specification for Casing, Drill Pipe, and Tubing. This specification covers chemical and physical properties and processes of manufacture of casing, drill pipe, and tubing, with dimensions on diameters, thicknesses, lengths, threads, etc., and master gages. Covers material, manufacture, chemical properties and tests, physical properties and tests, dimensions, weights, and lengths, threads, couplings, marking, inspection and rejection, tables, gaging practice, gages, and appendices.

American Petroleum Institute, Div. of Production. Standard 5-L; 1944. Specification for Line Pipe. This specification covers chemical and physical properties and processes of manufacture of line pipe, with dimensions on diameters, thicknesses, lengths, threads, etc., and master gages. Covers material, manufacture, chemical properties and tests, physical properties and tests, dimensions, weights, and lengths, threads, couplings, marking, inspection and rejection, tables, gaging practice, gages, and appendices.

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering, 1942. Specifications

for Buildings for Railroad Purposes: Ornamental and Miscellaneous Metal Work. Gives requirements for pipe railing.

American Society of Mechanical Engineers. American Standards Assn., B 36.10-1939. Wrought-Iron and Wrought-Steel Pipe. Standard consists of ten weight and thickness schedules of which lightest wall is schedule 10 and the heaviest is schedule 160, although schedule 80 is heaviest wall so far contemplated for wrought iron. Thicknesses suitable for welding are given and provisions have been made for suitable thicknesses in anticipation of development of new processes and materials for manufacturing and erecting piping.

American Society for Testing Materials, A 72-39; 1939. A.S.M.E. Boiler Construction Code Specification, SA-72. American Assn. of State Highway Officials, M101-39. American Standards Assn., B36.2-1939. Welded Wrought-Iron Pipe. Covers standard weight, extra strong, and double extra strong pipe. Tension, hydrostatic, fracture, and bend test requirements, standard weights and lengths, and permissible variations in weight.

American Welding Society. Rules for Fusion Welding, Steam, Oil, or Air Piping in Marine Construction, 1938. These rules apply to piping for working pressures in excess of 100 lb. per square inch. They do not apply to piping for water and oil at normal temperatures. Includes qualification of welding process, rules for qualification of welding operators, design of piping, layout and dimensions of piping, stress relieving of plain carbon steels, tests, and stamping of work.

Associated Factory Mutual Fire Insurance Companies. Factory Mutual Bulletin of Loss Prevention 22.70; 1940. Detailed Specifications for Laying Fire Mains. Includes requirements for cast iron pipe, asbestos-cement pipe, pipe linings, fittings, suction pipe, protection, excavation and preparation, foundations, pipe laying, blocking, and jointing, valves, indicator posts and cast iron fittings, plugging dead ends, anchorage of tees, plugs, and bends, hydrostatic tests, backfilling, and special type pipe. Factory Mutual Bulletin of Loss Prevention 22.71; 1940. Anchoring Fire Mains. Gives diagrams of various methods of anchoring conditions.

Assn. of American Railroads. Operations and Maintenance Dept., Engineering Div., Signal Section. Manual of Recommended Practice, Specification 123-39; 1939. One-Inch Welded Wrought Iron Pipe. For units mechanically operated in railway signal service. Composition of iron, physical properties, special thread details, galvanizing, etc.

Assn. of American Railroads. Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Dimensions and Threads of Wrought Pipe. Standard. Includes wrought iron and steel pipe, standard section to be Briggs Standard table of dimensions for pipe from 1/8-in. to 12-in. nominal inside diameter, actual sizes, length of perfect screw and number of threads per inch.

Assn. of American Railroads. Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Pipe Unions of the Nut and Nipple Type for Locomotives—300-Lbs. Pressure. Recommended Practice. Dimensional drawings of elbows and tees, for screwed fittings, 1/4-in. to 3-in. sizes, details for tail piece, union ring, and thread piece.

Assn. of American Railroads. Operations and maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Welded Wrought Iron Pipe, M-360-38; 1938. Covers three weights of black and galvanized pipe, for coiling, bending, flanging and other special purposes. Butt welded pipe is not intended for flanging or recommended for coiling in sizes 1 1/4 in. or over. Galvanizing tested by standard of A.S.T.M., A-120. Tension, bend, and hydrostatic pressure tests, standard weights, and sizes.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, 1938. Pipe; Wrought Iron. Covers definition, types and sizes, mill standards, ordering wrought iron pipe, and trade customs.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, Volume II, 1944. Iron; Wrought. Covers definition, derivation, constants, uses, forms, and substitutes.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Commercial Standard CS5-40; 1940. Pipe Nipples; Brass, Copper, Steel, and Wrought-Iron. This standard covers steel, ferrous-alloy, and wrought-iron nipples, black- and zinc-coated (hot dip galvanized), in iron-pipe sizes from 1/8 to 12 in., of standard length; and brass and copper nipples in standard sizes 1/8 to 6 in. Gives tables showing pipe sizes and various lengths, packaging, and labeling. Initiated by manufacturers, now represented by National Assn. of Pipe Nipples Manufacturers.

U. S. Gov., Federal Specification WW-N-351; 1930. Amendment 1; 1936. Nipples, Pipe; Brass, Steel, and Wrought Iron. Covers coated and uncoated nipples, in iron pipe sizes from 1/8 to 12 in., of standard lengths; brass nipples in iron pipe sizes from 1/8 to 6 in.; and three types—(A) standard weight, (B) extra strong, and (C) double extra strong. Gives detail requirements; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification WW-P-441a; 1939. Pipe; Wrought-Iron, Welded, Black, and Zinc-Coated. Covers three classes—(A) standard weight, (B) extra strong, and (C) double extra strong. Gives chemical and physical requirements; methods of sampling, inspection, and tests; and requirements for packing, packaging, and marking for shipment.

U. S. Gov., Navy Dept. Specification 44P11k; 1945. Pipe; Iron, Wrought.

U. S. Gov., Navy Dept. Specification 4585d; 1942. Bushings; Pipe.

U. S. Gov., Navy Dept. Specification 45N3; 1941. Nipples, Pipe; Brass, Steel, and Wrought-Iron.

U. S. Gov., Navy Dept., U. S. Coast Guard. Bureau of Marine Inspection and Navigation. Marine Engineering Regulations and Material Specifications, 1942. Contains specifications and requirements for materials, design, construction, installation, and inspection of boilers, unfired pressure vessels and appurtenances thereof, also piping, valves, fittings, flanges, safety valves, etc., upon the strength and efficiency of which safety of life is dependent, and are intended for maximum temperatures of 1,000° F. Includes

specifications for welded wrought-iron pipe—material, chemical composition, tensile properties, tests, test specimens, permissible variations and dimensions, inspection and rejection, and marking. In substantial agreement with American Society for Testing Materials Standard Specification A72.

*References.*—Methods of testing, general requirements for metals, *see* 600.1; zinc coatings and tests, *see* 600.3; standard pipe sizes, *see* 607.0; installation, identification, care of piping, *see* 607.0; iron-boiler tubes, *see* 703.2; wrought-iron conduit for electric wiring, *see* 715.11.

## 607.4 STEEL PIPE, FITTINGS, AND CONNECTIONS

Aeronautical Chamber of Commerce of America, Inc. National Aircraft Standard NAS 102; 1942. Tube Control. 3/8 O. D., and 1/2 O. D., Steel. Gives drawing with dimensions and notes. Developed by National Aircraft Standard Committee.

Air Conditioning and Refrigerating Machinery Assn., Inc., 4.0; 1941. Miscellaneous Ammonia Standards. Steel and Wrought Iron Pipe. Recommendations for minimum centers for bending pipe, painting of coils, spacing of hangers, protection of exposed threads, treatment of pipe joints, welding flanges to pipe, test pressures, and cleaning of pipe.

American Bureau of Shipping. Rules for the Classification and Construction of Steel Vessels, 1944. Steel Pipe. Include rules for inspection and testing.

American Iron and Steel Institute. Steel Products Manual, 1944. Specifications for English Standard Gas and Steam Pipe. For welded and seamless, threaded and coupled, and plain end pipe, of nominal diameters from 1/8 in. to 6 in. inclusive, gas and steam pipe. Pipe made to this specification is interchangeable with pipe made to British Standards 789-1938. Gives definitions, designation of coupling, process of manufacture, quality of material, dimensions of pipe and couplings, joints, lengths, galvanizing, tolerances, hydrostatic test, tests on finished pipe, retests, workmanship, marking for indication of quality, packing for export, and table showing nominal size, dimensions, and weight of English gas and steam pipe.

American Iron and Steel Institute. Steel Products Manual, 1943. Standard Machining Allowances for Seamless Steel Tubing for Aircraft Shock Struts and Landing Gear. Mechanical tubing is produced with either hot finish or cold-drawn finish. Such tubing is machined true to the outside diameter of the tube or machined true to the inside diameter of the tube. Gives machining allowances, examples of calculation, and camber allowance.

American Iron and Steel Institute. Steel Products Manual, Section 18, 1938. Revised, 1944. Steel Tubular Products. Gives definitions, classifications and manufacturing practices; stainless tubular products; tables of dimensions, weights, and hydrostatic test pressures; basic threading data; methods of calculating weights of couplings and upsets; standard machining allowances for seaming tubing for aircraft stock struts and landing gear; and standard method of packing and loading steel tubular products.

American Petroleum Institute, Div. of Production. Standard 5-A; 1944. Specification for Casing, Drill Pipe, and Tubing. This specification covers chemical and physical properties and processes of manufacture of casing, drill pipe, and tubing, with dimensions on diameters, thicknesses, lengths, threads, etc., and master gauges. Covers material, manufacture, chemical properties and tests, physical properties and tests, dimensions, weights, and lengths, threads, couplings, marking, inspection and rejection, tables, gaging practice, gages, and appendices.

American Petroleum Institute, Div. of Production. Standard 5-L; 1944. Specification for Line Pipe. This specification covers chemical and physical properties and processes of manufacture of line pipe, with dimensions on diameters, thicknesses, lengths, threads, etc., and master gages. Covers material, manufacture, chemical properties and tests, physical properties and tests, dimensions, weights, and lengths, threads, coupling, marking, inspection and rejection, tables, gaging practice, gages, and appendices.

American Society of Mechanical Engineers. Boiler Construction Code, 1940. Specifications for Carbon-Steel Casings Suitable for Fusion Welding for Service at Temperatures up to 850 F. (S-56). Identical with American Society for Testing Materials Specification A216.

American Society of Mechanical Engineers, joint sponsor with Heating, Piping, and Air Conditioning Contractors' National Assn. and Manufacturers' Standardization Society of the Valve and Fittings Industry. American Standards Assn., B 16e-1939. Steel Pipe Flanges and Flanged Fittings. This Standard contains dimensions of—(1) the 150, 300, 400, 600, 900, 1,500, and 2,500-lb. flanges; (2) welding neck flanges and fittings for all pressures; (3) slip-on welding flanges for 150 and 300-lb. pressures; (4) for blind flanges for all pressures; and (5) for ring joints. The standard gives details of welding level for all welding neck flanges, wall thicknesses of pipe, and bolt lengths for flanges. There are also dimensions of reducing screwed flanges for pressures of 150 to 2,500-lb. temperature-pressure ratings for carbon steel, carbon-molybdenum, and equivalent alloy steels. Other specifications cover size, marking, materials, and their physical and chemical requirements.

American Society of Mechanical Engineers, joint sponsor with Heating, Piping, and Air Conditioning Contractors' National Assn. and Manufacturers' Standardization Society of Valve and Fittings Industry. American Standards Assn., B16e2-1936. Pipe Plugs of Cast-Iron, Malleable Iron, Cast Steel, or Forged Steel. For use in connection with fittings covered by American Standard 125-lb. and 250-lb. Cast Iron Screwed Fittings and American Standard 150-lb. Malleable Iron Screwed Fittings.

American Society of Mechanical Engineers, joint sponsor with Heating, Piping, and Air Conditioning Contractors' National Assn. and Manufacturers' Standardization Society of the Valve and Fittings Industry. American Standards Assn., B16.9-1940. Steel Butt-Welding Fittings. Covers over-all dimensions, tolerances, and marking for wrought and cast carbon- and alloy-steel welding fittings, with appendix table of dimensions of welded and seamless steel pipe.

American Society of Mechanical Engineers, joint sponsor with Heating, Piping, and Air Conditioning Contractors' National Assn. and Manufacturers' Standardization Society of the Valve and Fittings Industry. American Standards Assn., B 16.14 1943. Ferrous Plugs,

Bushings, Locknuts, and Caps With Pipe Threads. Covers pressure ratings, size, marking, material, metal thickness tolerance, and threading; and gives illustrative drawings and tables showing dimensions for plugs, pipe bushings, locknuts, and caps.

American Society of Mechanical Engineers. American Standards Assn,, B 36.10-1939. Wrought-Iron and Wrought-Steel Pipe. Standard consists of ten weight and thickness schedules of which lightest wall is schedule 10 and the heaviest is schedule 160, although schedule 80 is heaviest wall so far contemplated for wrought iron. Thicknesses suitable for welding are given and provisions have been made for suitable thicknesses in anticipation of development of new processes and materials for manufacturing and erecting piping.

American Society for Testing Materials, A 53-44; 1944. A.S.M.E. Boiler Construction Code Specification, SA-53. American Standards Assn., B36.1; 1944. Welded and Seamless Steel Pipe. Covers black and hot-dipped-galvanized furnace welded and seamless steel pipe. Gives chemical composition, check analysis, tensile properties, bending properties, flattening test, hydrostatic test, test specimens, number of tests, retests, standard weights, permissible variations in weight and dimensions, lengths, workmanship, finish, marking, inspection, and rejection. A.S.T.M. Emergency Alternate Provision EA-A 53; 1943, affected section 1, scope, table I tensile requirements; section 7, flattening test; and section 8, hydrostatic test.

American Society for Testing Materials, A 95-44; 1944. A.S.M.E. Boiler Construction Code Specification, SA-95. American Standards Assn., G17.1; 1944. Carbon-Steel Castings and Valves, Flanges, and Fittings for High-Temperature Service. For pressure containing parts for high temperature service. Gives requirements for heat treatment, temperature control, chemical composition, ladle analysis, check analysis, tensile properties, bending properties, hydrostatic tests, magnetic particle testing, test specimens, number of tests, retests, workmanship, finish, marking, inspection, and rejection. A.S.T.M. Emergency Alternate Provision EA-A 95; 1944, affected section 5, chemical composition; section 8, tensile properties; and section 10, hydrostatic tests.

American Society for Testing Materials, A 105-40; 1940. A.S.M.E. Boiler Construction Code Specification, SA-105. American Standards Assn., G17.3-1940. Forged or Rolled Steel Pipe Flanges, Forged Fittings, and Values and Parts for High-Temperature Service. Includes two grades of material based on tensile strength; grades requirements for manufacture, heat treatment, chemical composition, ladle analysis, tensile properties, test specimen, finish, and inspection.

American Society for Testing Materials, A 106-44T; 1944. A.S.M.E. Boiler Construction Code Specification, SA-106. Tentative Specifications for Lap-Welded and Seamless Steel Pipe for High-Temperature Service. Covers pipe suitable for bending, flanging, and similar forming operations for steam service pressures of 400 psi. and over, the metal temperatures up to 850 F., or other applications where a superior grade of pipe is required. Gives requirements for process, chemical composition, check analysis, tensile and bending properties, test specimens, tests, dimensions, permissible variations in weight and dimensions, lengths, ends, finish, marking, inspection, and rejection.

American Society for Testing Materials, A 120-44; 1944. American Standards Assn., G8.7; 1944. Black and Hot-Dipped Zinc-Coated (Galvanized) Welded and Seamless Steel Pipe for Ordinary Uses. For ordinary uses in steam, water, gas, and air lines, but not for close coiling, bending, or high temperature service. Gives requirements for galvanized pipe, hydrostatic test, weight of coating, weight of coating test, test specimens, number of tests, retests, standard weights, permissible variations in weight and dimensions, lengths, workmanship, finish, marking, inspection, and rejection. A.S.T.M. Emergency Alternate Provision EA-A 120; 1942, affected section 1, scope; and section 14, finish.

American Society for Testing Materials, A 134-42; 1942. American Standards Assn., B36.4; 1942. Electric-Fusion-Welded Steel Pipe, Sizes 30 In. and Over. Covers straight-seam or spiral-seam pipe with wall thickness up to 3/4 in. for conveying liquid, gas, or vapor at temperatures below 450° F. Gives requirements for materials, manufacture, tensile and bending properties, hydrostatic test, test specimen, permissible variations in weights and dimensions, finish, and inspection. A.S.T.M. Emergency Alternate Provision, EA-A 134; 1942, affected section 2, material; and section 13, protective coating.

American Society for Testing Materials, A 135-44; 1944. A.S.M.E. Boiler Construction Code Specification, SA-135. American Standards Assn., B36.5; 1944. Electric-Resistance-Welded Steel Pipe. Covers two grades of pipe under 30 in. in diameter for conveying liquid, gas, or vapor. Gives requirements for chemical composition, ladle analysis, check analysis, tensile properties, flattening and hydrostatic tests, test specimens, number of tests, retests, permissible variations in weight and dimensions, lengths, workmanship, finish, marking, protective coating, inspection, and rejection. A.S.T.M. Emergency Alternate Provision EA-A 135; 1942, affected section 17, protective coating.

American Society for Testing Materials, A 139-42; 1942. American Standards Assn., B36.9; 1942. Electric-Fusion-Welded Steel Pipe (sizes 8 in. to but not including 30 in.). Covers two grades of electric-fusion-welded straight-seam or spiral-seam pipe with wall thicknesses up to 5/8 in. inclusive. The pipe is intended for conveying liquid, gas, or vapor at temperatures below 450° F.; and only grade A is adapted for flanging and bending. A.S.T.M. Emergency Alternate Provision, EA-A 139a; 1943, affected section 1, size; section 5, chemical analysis; section 6, tensile properties; section 10, number of tests; section 12, weight; section 14, workmanship; and section 17, protective coating.

American Society for Testing Materials, A 155-42; 1942. American Standards Assn., B36.11-1942. Electric-Fusion-Welded Steel Pipe for High-Temperature and High-Pressure Service. Cover electric-fusion-welded steel pipe 18 in. in outside diameter and over, for high-temperature and high-pressure service. This

contemplates, in particular, pipe subjected to pressures above 250 psi. and temperatures from 450 to 850° F., or at the discretion of the designing engineer, higher temperatures with appropriate working stresses may be used. This also contemplates pipe carrying liquids materially above their boiling temperature at atmospheric pressure, as well as all liquids and gages of a lethal nature, at any pressure or temperature. Recommended work-stresses for pipe made in accordance with these specifications correspond to the S-values given in section 1 of the Code for Pressure Piping, ASA B31.1, prepared by Sectional Committee B 31 on Code for Pressure Piping, functioning under the procedure of the American Standards Assn., and also as given in paragraph P23 of the A.S.M.E. Boiler Construction Code. Pipe ordered under these specifications shall be suitable for bending, flanging, corrugating, and similar forming operations. Supplementary requirements of an optional nature are provided for pipe intended for use in central stations having steam service pressures of 400 psi. and over and metal temperatures up to 850° F., or other applications where a superior grade of pipe is required.

American Society for Testing Materials, A 157-44; 1944. A.S.M.E. Boiler Construction Code Specification, SA-157. American Standards Assn., G36.1; 1944. Alloy-Steel Castings for Valves, Flanges, and Fittings for Service at Temperatures from 750 to 1,100° F. Includes nine ferritic and two austenitic grades, selection dependent on design and service. Gives requirements for heat treatment, temperature control, chemical composition, ladle analysis, check analysis, number of tests, retests, tensile and bending properties, hydrostatic tests, magnetic particle testing, test specimens, radiographic or destruction tests, workmanship, marking, finish, inspection, and rejection. A.S.T.M. Emergency Alternate Provision EA-A 157; 1944, affected section 10, hydrostatic tests.

American Society for Testing Materials, A 158-44T; 1944. A.S.M.E. Boiler Construction Code Specification, SA-158. Tentative Specifications for Seamless Alloy-Steel Pipe for Service at Temperatures from 750 to 1,100° F. Includes 8 ferritic and 3 austentic steels. Gives heat treatment, chemical composition, ladle analysis, check analysis, tensile properties, bending properties, flattening test, hydrostatic test, test specimens, number of tests, retests, retreatment, permissible variations in weight and dimensions, lengths, ends, finish, marking, inspection, and rejection. A.S.T.M. Emergency Alternate Provision, EA-158a; 1944, affected section 1, scope; and table 1, chemical requirements.

American Society for Testing Materials, A 161-44; 1944. Seamless Low-Carbon and Carbon-Molybdenum Steel Still Tubes for Refinery Service. Covers 2 in. and over outside diameter, thicker than No. 5 B.W.G., for use in carrying oil at elevated temperatures and pressures in oil stills. Gives manufacture, chemical composition, check analysis, tensile properties, flattening test, flaring test, hardness test, hydrostatic test, test specimens, number of tests, retests, permissible variations in dimensions and weight, finish, marking, inspection, and rejection. A.S.T.M. Emergency Alternate Provision, EA-A 161; 1942, affected section 4, chemical composition.

American Society for Testing Materials, A 181-42; 1942. A.S.M.E. Boiler Construction Code Specification, SA-181. American Standards Assn., G46.1-1942. Forged or Rolled Steel Pipe Flanges for General Service. Covers flanges to be attached to piping or pressure vessels for two classes for general service. Gives requirements as to grain flow, chemical composition, ladle analysis, tensile properties, test specimen, workmanship, finish, and inspection.

American Society for Testing Materials, A 182-44; 1944. A.S.M.E. Boiler Construction Code Specification, SA-182. American Standards Assn., G37.1; 1944. Forged or Rolled Alloy-Steel Pipe Flanges, Forged Fittings, and Valves and Parts for Service at Temperatures from 750 to 1,100° F. Includes seven ferritic and three austenitic steels, selection dependent on design and service. Gives requirements for manufacture, heat treatment, chemical composition, ladle analysis, check analysis, tensile properties, hydrostatic tests, test specimens, number of tests, retests, macroetch tests, workmanship, finish, marking, inspection, and rejection.

American Society for Testing Materials, A 214-44; 1944. A.S.M.E. Boiler Construction Code Specification, SA-214. Electric-Resistance-Welded Steel Heat-Exchanger and Condenser Tubes. For tubes up to 2 in. outside diameter. Gives manufacture, chemical composition, check analysis, flattening test, flaring test, hardness test, hydrostatic test, test specimens, number of tests, retests, retreatment, permissible variations in dimensions, finish, marking, inspection, and rejection. A.S.T.M. Emergency Alternate Provision EA-A 214a; 1943, affected section 3, manufacture; section 6, flattening test; section 8, hardness test; and section 9, hydrostatic tests.

American Society for Testing Materials, A 234-44; 1944. Factory-Made Wrought Carbon-Steel and Carbon-Molybdenum-Steel Welding Fittings. For pressure piping, including butt welding or socket-end parts such as elbows, return bends, caps, tees, reducers, etc., but not including cast welding fittings. Gives requirements for material, manufacture, chemical composition, check analysis, heat treatment, tensile properties, hydrostatic tests, retests, workmanship and finish, marking, inspection, and rejection.

American Society for Testing Materials, A 252-44; 1944. Welded and Seamless Steel Pipe Piles. Covers furnace-welded, electric-welded, and seamless steel black pipe piles. Applies only to piles in which the steel section acts as a permanent load-carrying member and is not intended to apply to pipe for general structural purposes. Gives process, tensile properties, test specimens, number of tests, retests, standard weights, permissible variations in weights and dimensions, lengths, ends, finish, marking and inspection.

American Society for Testing Materials, A 253-44; 1944. Welded Alloyed Open-Hearth Iron Pipe. Covers black and galvanized furnace butt-welded and electric-resistance-welded alloyed open-hearth iron pipe. Gives process, chemical composition, check analysis, tensile properties, bending properties, flattening test, hydrostatic test, test specimens, number of tests, retests, standard weights, permissible variations in weights and dimensions, lengths, workmanship, finish, marking, inspection, and rejection.

American Society for Testing Materials, A 254-44; 1944. Copper Brazed Steel Tubing. Covers copper brazed steel tubing 3/16 in. and over in outside diameter, particularly suitable for use in automobile, refrigerator, and stove industries; for fuel lines, brake lines, oil lines, etc. Gives process, manufacture, chemical composition, check analysis, tensile properties, combined flattening and bend tests, flaring tests, bending properties, hardness test, hydrostatic test, soundness of braze, cleanliness, tests, retest, permissible variations, coating, finish, marking, inspection, rejection, and rehearing.

American Standards Assn., B 16e 5-1943. Pressure-Temperature Ratings for Steel Pipe Flanges, Flanged Fittings, and Valves (American War Standard). A revision of tables 6 to 11, inclusive, American Standard B 16e-1939, published by the American Society of Mechanical Engineers and sponsored by the Heating, Piping, and Air Conditioning Contractors National Assn. and the Manufacturers' Standardization Society of the Valve and Fittings Industry.

American Transit Assn. Specification for Tubular Steel Poles, D11-39; 1939. These specifications cover material for, and the manufacture of, tubular steel poles for electric line construction. Gives detailed requirements for construction of poles, testing, permissible variations in weight and dimensions, workmanship and finish, and inspection and rejection. This specification has been approved by the American Standards Assn. as American Tentative Standard C13-1926.

American Transit Assn. Recommended Practice for Selection of Poles for Trolley Line Construction, D119-36; 1936. Describes method for selection and use of line poles for overhead construction, and method to be used in selecting proper poles when loading is known.

American Transit Assn. Recommended Specification for Single-Section Tapered Tubular Steel Poles, D125-41; 1941. This specification covers material for, and the manufacture of, single-section, single and double-thickness, tapered tubular steel poles for electric line construction; covering (a) embedded type poles, (b) anchor rod type poles. Covers construction of pole, tests, permissible variations in weight and dimensions, and inspection and rejection.

American Transit Assn. Recommended Specification for High Strength Sectional Tubular Steel Poles, D126-41; 1941. This specification covers material for, and the manufacture of, high strength, sectional tubular steel poles for electric line construction. Covers construction of pole, tests, permissible variations in weight and dimensions, workmanship and finish, and inspection and rejection..

American Water Works Assn. Standard Specifications for Riveted Steel Pipe, 7A.1-1940. Cover the manufacture of pipe, intended for the conveyance of water, which is made from steel plates with riveted seams. The pipe shall be shop fabricated into sections having laying lengths of approximately 30 ft. except where shorter lengths are required for closures, curves, changed in alignment or grade, or to meet special conditions. Each section shall be made up of not more than four courses. In general, longitudinal seams shall be double riveted lap and circular seams single riveted lap. Field joints shall be single riveted lap unless otherwise specified.

American Water Works Assn. Tentative Standard Specifications for Lock-Bar Pipe, 7A.2-1940. Cover the manufacture of lock-bar pipe intended for the conveyance of water which is made from steel plates rolled or formed to a circular cross section, having longitudinal edges planed and upset to a dovetail form which engages in the groove of an "H-shape" steel lock-bar to form the longitudinal joint of the pipe. After assembly of the plates and the lock-bars the latter are closed by cold pressing thus making a tight fit over the dovetail edges of the plates. Pipes are shop fabricated into sections having laying lenghts of approximately 30 ft. except where shorter lengths are required for closure, curves, changes in alignment or grade to meet special conditions. Circumferential field joints are single riveted unless otherwise specified.

American Water Works Assn. Standard Specifications for Electric Fusion Welded Steel Water Pipe of Sizes 30 Inches and Over, 7A.3-1940. Covers straight sections or other special sections which are required for closures, curves, changes in alignment or grade to meet special conditions. Gives requirements for description of pipe, fabrication, tolerances, cleaning, sand blasting, and coating pipe surfaces.

American Water Works Assn. Tentative Revision of Standard Specifications for Steel Water Pipe of Sizes up to but Not Including 30 Inches, 7A.4-TR-1943. Covers steel pipe intended for the conveyance of water, in sizes up to but not including 30 in. in diameter, and in random, double random or specified laying lengths, straight sections, or other special sections which are required for closures, curves, changes in alignment or grade to meet special conditions and with ends prepared for type of joint specified. Gives requirements for description of pipe, fabrication, tolerances, tests, and delivery.

American Welding Society. Rules for Fusion Welding, Steam, Oil, or Air Piping in Marine Construction, 1938. These rules apply to piping for working pressures in excess of 100 lb. per square inch. They do not apply to piping for water and oil at normal temperatures. Includes qualification of welding process, rules for qualification of welding operators, design of piping, layout and dimensions of piping, stress relieving of plain carbon steels, tests, and stamping of work.

Associated Factory Mutual Fire Insurance Companies. Factory Mutual Bulletin of Loss Prevention 22.70; 1940. Detailed Specifications for Laying Fire Mains. Includes requirements for cast iron pipe, asbestos-cement pipe, pipe linings, fittings, suction pipe, protection, excavation and preparation, foundations, pipe laying, blocking, and jointing, valves, indicator posts and cast iron fittings, plugging dead ends, anchorage of tees, plugs, and bends, hydrostatic tests, backfilling, and special type pipe. Factory Mutual Bulletin of Loss Prevention 22.71; 1940. Anchoring Fire Mains. Gives also diagrams of various methods of anchoring conditions.

Assn. of American Railroads, Operations and Maintenance Dept., Engineering Div., Signal Section. Manual of

Recommended Practice, Specification 122-39; 1939. One-Inch Welded Steel Pipe. For use in mechanically operated units in railway signal service. Gives chemical and physical properties, threads, couplings, plugs, galvanizing, and tests.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1943. Emergency Specification E-M-111-43 modifies AAR Specification M-111-42, Pipe, Furnace Welded, Electric Resistance Welded and Seamless Steel, to conform with A.S.T.M. Specifications A-53-42 and EA-53-43, Welded and Seamless Steel Pipe.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Pipe, Furnace Welded, Electric Resistance Welded and Seamless Steel, M-111-42, 1942. Covers three weights of black and galvanized pipe, coiling, bending, flanging qualities, manufacture, composition and test, pressures, weights, and dimensions.

Formed Steel Tube Institute. Handbook of Welded Steel Tubing, 1943. To give the user a knowledge of the physical, chemical, and metallurgical properties of welded carbon and alloy steel tubing together with commercial tolerance limitations and extensive engineering data. Has sections covering general process, size tolerances, inspection procedure, internal pressures, squares and rectangles, physical properties, weight tables, how to order, length tolerances, fabricating (incl. bending), elements of sections and index.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, 1938. Pipe; Steel. Covers definition, types and size ranges, specifications, sizes and uses, and length standards.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, 1938. Valves and Fittings. Covers definition, classification, and standards of the industry.

National Board of Fire Underwriters. Petroleum Pipe Lines, No. 38; 1932. Recommended practice for the transportation of crude oil and liquid petroleum products. Does not include lines within refineries, oil fields, or industrial plants. Includes construction of pipe, valves, and fittings; flanged and welded joints, depth of line within cities and extra gage of pipe, railroad crossings, encasement, emergency valves at large rivers, and towns; maintenance and pumping stations.

Society of Automotive Engineers. Aeronautical Material Specification 5050B; 1944. Steel Tubing (Seamless); Low Carbon (Annealed). Gives requirements for composition, condition, quality, tolerances, reports, identification, and rejections. Similar specifications, Army 57-180, type I, WD 1010; SAE 1010.

Society of Automotive Engineers. Aeronautical Material Specification 5053; 1942. Steel Tubing (Welded); Low-Carbon. Gives requirements for type, composition, grain size, condition, quality, tolerances, tests, reports, identification, and rejections.

Society of Automotive Engineers. Aeronautical Material Specification 5060A; 1942. Carbon Steel (.13-.18 Carbon). For bars, billets, forgings, tubing, or as ordered. Gives requirements for composition, condition, quality, reports, shipments, identification, and rejections. Similar Specifications: Navy 46 S 32, Class A; SAE 1015.

Society of Automotive Engineers. Aeronautical Material Specification 5075; 1942. Steel Tubing (Seamless); (.22-.28) Carbon. Covers composition, grain size, condition, quality, tolerances, reports, identification, and rejections. Similar to U. S. Gov., Navy Dept., Bureau of Aeronautics Specification AN-WW-T-846, and Society of Automotive Engineers Specification 1025.

Society of Automotive Engineers. Aeronautical Material Specification 5077; 1942. Steel Tubing (Welded); (.22-.28) Carbon. Gives requirements for type, composition, grain size, condition, quality, tolerances, tests, reports, identification, and rejections. Similar to U. S. Gov., Army-Navy Aeronautical Specification AN-T-4 and Society of Automotive Engineers Specification 1025.

Society of Automotive Engineers. Aeronautical Material Specification 5082; 1944. Steel Tubing (Seamless); (.32-.38) Carbon. Gives requirements for composition, grain size, condition, quality, tolerances, reports, identification, and rejections. Similar specifications, SAE 1035.

Society of Automotive Engineers. 1944 Handbook Section 1—Aeronautical Parts, Materials and Codes. S.A.E. Recommended Practice for Aircraft Steel Streamline Structural Tubing. Adopted, 1931. Diagram with table of streamline dimensions for sizes developed from round tubing 2 to 5 in. in diameter; table of progressive section width diameters; table of round tubing sizes available in aluminum alloy, carbon steel, and alloy steel; and tables of round tubing and round and streamline tubing characteristics for aluminum alloy, carbon steel, and alloy steel.

Underwriters' Laboratories, Inc. Standard for Steel Pipe Lines for Underground Water Service, 1940. Covers 1 1/2 to 3-in. butt-welded, 1 1/2 to 24-in. lap-welded, 14 to 96-in. hammer-welded, 1 1/2 to 26-in. resistance-welded, 4 to 72-in. fusion-welded, 6 to 48-in. spiral-welded, and 1 1/2 to 24-in. seamless steel pipe. Gives requirements for manufacture, chemical and physical properties and tests, weights and dimensions, permissible variations, workmanship and finish, marking, inspection and rejection, protective coating, and appendices.

U. S. Gov., Army Air Forces Specification 10244 (1); 1942. Tubing; Rail Carbon Steel Round, Welded.

U. S. Gov., Army Air Forces Specification 10245 (1); 1942. Tubing; Steel, Carbon, Welded (1025) for Gliders.

U. S. Gov., Army Air Forces Specification 40479; 1944. Pipe Line, Fuel Dispensing, Portable.

U. S. Gov., Army-Navy Aeronautical Specification AN-T-4-1; 1942. Tubing; Steel, Carbon (1025), Welded.

U. S. Gov., Army-Navy Aeronautical Specification AN-FF-C-406a-1; 1944. Clamps; Hose.

U. S. Gov., Army-Navy Aeronautical Specification AN-WW-T-846-1; 1942. Tubing; Steel, Carbon (1025), Seamless.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R29-42; 1942. Eaves Trough; Conductor Pipe and Fittings,

and Ridge Rolls. This recommendation establishes a simplified schedule of sizes and weights of eaves trough, conductor pipe, fittings, and styles of gutters and ridge rolls. Sponsored by the National Assn. of Sheet Metal Distributors and the National Wholesale Hardware Assn.

U. S. Gov., Dept. of Commerce, National Bureau of Standards Commercial Standard CS5-40; 1940. Pipe Nipples; Brass, Copper, Steel and Wrought-Iron. This standard covers steel, ferrous-alloy, and wrought-iron nipples, black- and zinc-coated (hot dip galvanized), in iron-pipe sizes from 1/8 to 12 in., of standard length; and brass and copper nipples in standard sizes 1/8 to 6 in.. Gives tables showing pipe sizes and various lengths, packaging, and labeling. Initiated by manufacturers, now represented by National Assn. of Pipe Nipples Manufacturers.

U. S. Gov., Dept. of Commerce, National Bureau of Standards Commercial Standard CS7-29; 1929. Standard Weight Malleable Iron or Steel Screwed Unions. This standard covers malleable iron or steel unions for use with standard-weight pipe, and are furnished in black, brass seated and galvanized, brass seated types. It covers general and detail requirements, material and workmanship, and tensile test requirements.

U. S. Gov., Federal Specification WW-N-351; 1930. Amendment 1; 1936. Nipples, Pipe; Brass, Steel, and Wrought Iron. Covers coated and uncoated nipples, in iron pipe sizes from 1/8 to 12 in., of standard lengths; brass nipples in iron pipe sizes from 1/8 to 6 in.; and three types—(A) standard weight, (B) extra strong, and (C) double extra strong. Gives detail requirements; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification WW-P-404; 1944. Pipe; Steel and Ferrous Alloy for Bending, Flanging, etc. (Iron-Pipe Size). Covers black and coated pipe in three types: (I) Steel—carbon, welded and seamless; (II) steel—copper-bearing, welded and seamless; (III) open-hearth iron—copper molybdenum, welded; and three classes—(A) standard weight, (B) extra strong, (C) double extra strong. Gives requirements for material and workmanship, marking, lengths, diameter and thickness, weight tolerances, black pipe, zinc-coated pipe, pipe ends and couplings, pipe threads, and details for each type and class; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification WW-P-406; 1944. Pipe; Steel and Ferrous Alloy for Ordinary Uses (Iron-Pipe Size). Covers black, coated, or lined pipe in three types: (I) Steel—carbon, welded and seamless; (II) steel—copper-bearing, welded and seamless; (III) open-hearth iron—copper-molybdenum, welded; and three classes—(A) standard weight, (B) extra strong, and (C) double extra strong. Gives requirements for material and workmanship, marking, lengths, diameter and thickness, weight tolerances, black pipe, zinc-coated pipe, cement lined pipe, pipe ends and couplings, pipe threads, and details for each type and class; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification WW-U-531; 1932. Unions; Malleable Iron or Steel, 250-Pound. Covers two threaded types—(A) black, brass seated; and (B) zinc-coated (galvanized), brass seated. Gives requirements for tensile strength and dimensions; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking. Emergency Alternate Federal Specification E-WW-U-531; 1942 (issued by Procurement Div., Treasury Dept., U. S. Gov.) changed requirements for dimensions and packaging.

U. S. Gov., Federal Specification WW-U-536; 1932. Unions; Malleable Iron or Steel, 300-Pound. Covers four types—(XA) black, brass or copper seated; (XB) galvanized, brass or copper seated; (XC) black, all iron or steel; and (XD) galvanized, all iron or steel. Gives requirements for dimensions and tensile strength; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking. Emergency Alternate Federal Specification E-WW-U-536; 1942 (issued by Procurement Div., Treasury Dept., U. S. Gov.) changed requirements for dimensions, ultimate loads, marking, and packaging.

U. S. Gov., Navy Dept. Specification 44P10k; 1945. Pipe, Steel; Seamless and Welded, Black and Zinc-Coated (Galvanized).

U. S. Gov., Navy Dept. Specification 44T1c; 1936. Tubing, Steel; Structural.

U. S. Gov., Navy Dept. Specification 44T4d; 1941. Tubing, Steel; Seamless or Welded.

U. S. Gov., Navy Dept. Specification 44T5e; 1943. Tubing, Voice; Brass and Steel.

U. S. Gov., Navy Dept. Specification 44T13b; 1938. Tubing, Steel; Seamless, for Oil, Steam, or Water.

U. S. Gov., Navy Dept. Specification 44T34; 1939. Tubing, Steel; Seamless, Diesel-Engine-Fuel-Injection.

U. S. Gov., Navy Dept. Specification 44T36; 1938. Tubing, Steel; Black, Suitable for Lining With Rubber (for Salt-Water Systems on Naval Vessels).

U. S. Gov., Navy Dept. Specification 44T41a; 1944. Tubing, Steel; Resistance-Welded for Oil, Steam, or Water.

U. S. Gov., Navy Dept. Specification 44T44a; 1944. Tubing, Steel; Rail Carbon, Structural.

U. S. Gov., Navy Dept. Specification 45B5d; 1942. Bushings; Pipe.

U. S. Gov., Navy Dept. Specification 45F7e; 1942. Flanges, Steel; for Steel Tubing, 300 Pounds W.S.P.

U. S. Gov., Navy Dept. Specification 45F15, 1942. Flanges, Steel; for Steel Tubing, 150 Pounds W.S.P.

U. S. Gov., Navy Dept. Specification 45J1; 1938. Joints, Steel; Flexible, for Temporary Pipe Connections.

U. S. Gov., Navy Dept. Specification 45N3; 1941. Nipples, Pipe; Brass, Steel, and Wrought-Iron.

U. S. Gov., Navy Dept., U. S. Coast Guard. Bureau of Marine Inspection and Navigation. Marine Engineering Regulations and Material Specifications, 1942. Contains specifications and requirements for materials, design, construction, installation, and inspection of boilers, unfired pressure vessels and appurtenances thereof, also piping, valves, fittings, flanges, safety valves, etc., upon the strength and efficiency of which safety of life is dependent, and are intended for maximum temperatures of 1,000° F. Includes specifications for lap-welded and seamless

steel and lap-welded iron boiler tubes, electric-resistance-welded steel and open-hearth iron boiler and superheater tubes (3 grades), seamless steel boiler tubes for high-pressure service, medium-carbon seamless steel boiler and superheater tubes, and carbon-molybdenum alloy-steel boiler and superheater tubes—material, manufacture, chemical composition, tensile properties, check analysis, tests, test specimens, number of tests, retests, forming operations, permissible variations in dimensions and weights, finish, and marking. In substantial agreement with American Society for Testing Materials Standard Specifications A83-40, A178-40, A226-40, A192-40, A210-40, and A209-41T respectively.

U. S. Gov., Navy Dept., U. S. Coast Guard. Bureau of Marine Inspection and Navigation. Marine Engineering Regulations and Material Specifications, 1942. Contains specifications and requirements for materials, design, construction, installation, and inspection of boilers, unfired pressure vessels and appurtenances thereof, also piping, valves, fittings, flanges, safety valves, etc., upon the strength and efficiency of which safety of life is dependent, and are intended for maximum temperatures of 1,000° F. Includes specifications for steel pipe—material, chemical composition, tensile requirements, bending properties, tests, finish, and marking.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 57-180D; 1942. Tubing; Mechanical or Structural Steel, Carbon, and Alloy, Seamless, Welded, and Brazed.

*References.*—Alloy steel tubes and pipe, *see* 622.3; methods of testing, general requirements for metals, *see* 600.1; zinc coatings and tests, *see* 600.3; heat treatments, *see* 600.5; standard threading of tubular goods, *see* 607.0; installation, identification, care of piping, *see* 607.0; steel conduit for electric wiring, *see* 715.11; steel boiler tubes, *see* 703.2; copper slip joints for steam pipes, *see* 642.9; tubular steel trolley poles, *see* 726.2.

## 607.5 SHEET IRON AND STEEL PIPE

American Assn. of State Highway Officials, M36-42. Standard Specifications for Corrugated Metal Culvert Pipe. Gives scope, materials, fabrication, size and permissible variations, workmanship and finish, marking, inspection and rejection, and testing.

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering, 1943. Specification for Corrugated Metal Culverts. Gives requirements for material—base metal, rivets, weight of zinc coating, sampling, analysis of finished sheet, tests for zinc coating, identification, corrugations, gage determination, and tolerance; fabrication—shape, dimensions, and weight, rivets and riveting, coupling bands, workmanship, mill inspection, field inspection, and acceptance.

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering, 1944. Specifications for Corrugated Metal Pipe for Subdrainage. For use as underdrains and shall be perforated unless otherwise specified. Gives requirements for material, corrugations, perforations, gage and weight, and coupling bands.

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering, 1944. Specifications for Corrugated Structural Plate Culverts and Arches. Includes Materials used in field construction of culvert structures which are too large for transportation as finished structures. Gives description of plates, base metal, spelter coating, sampling, chemical analysis and tests for spelter coating, identification, bolts, gage determination and tolerance, field inspection and acceptance of plates, forming and punching plates, minimum gage of side and top plates for pipe structures, minimum and maximum heights of cover for pipes, gage of bottom plates for pipes, gage of plates for arches, number of bolts, skewed pipes and arches, arch substructures and headwalls, multiple pipes, multiple arches, bedding and backfilling pipe structures, backfilling arch structures under new fills, strutting of pipe, and basis of payment.

American Society for Testing Materials, A 211-44; 1944. American Standards Assn., B36.16; 1944. Spiral-Welded Steel or Iron Pipe. Covers 4 to 48-in. diameter, and 1/16 to 11/64-in. wall thickness pipe for conveying liquid, gas, or vapor. Gives requirements for material, manufacture, hydrostatic test, permissible variations in weight and dimensions, length, finish, protective coating, marking, inspection, and rejection. A.S.T.M. Emergency Alternate Provision EA-A 211; 1942, affected section 1, scope; section 2, material; and section 8, protective coating.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R29-42; 1942. Eaves Trough, Conductor Pipe, Fittings, and Ridge Rolls. This recommendation establishes a simplified schedule of sizes and weights of eaves trough, conductor pipe, fittings, and styles of gutters and ridge rolls. Sponsored by the National Association of Sheet Metal Distributors and the National Wholesale Hardware Assn.

U. S. Gov., Federal Specification QQ-C-806; 1934. Amendment 2; 1940. Culverts; Iron or Steel, Zinc-Coated. Covers four types—(I) full circle riveted with lap-joint construction; (II) half-circle; (III) wedge lock, lap-joint; and (IV) part-circle with flat bottoms. Gives requirements for material, workmanship, identification, chemical composition, rivets, weight of zinc coating, and construction; methods of sampling, inspection, and tests; packing and marking.

U. S. Gov., Federal Works Agency. Public Roads Administration. Specifications for Construction of Roads and Bridges in National Forests and National Parks, FP-41. Corrugated Galvanized Sheet Metal Culvert Pipe.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 28-39; 1939. Pipe, Stove; Elbows and Joints.

*References.*—Iron and steel sheets, *see* 604.12, 604.29, 604.32; standard thicknesses of plates and sheets, *see* 604.0; tolerances on weights and thickness of sheets, *see* 600.7; zinc coatings and tests, *see* 600.3; rivet steel, rivets, *see* 603.21, 608.4; sheet metal piping for warm air heating, *see* 614.0, 614.4; masonry culverts, *see* 518.61; copper eaves troughs and conductor pipe, *see* 642.9.

## 607.6 VALVES, COCKS, AND HYDRANTS, FERROUS AND NONFERROUS

American Gas Assn. American Standards Assn., Z 21.15-1942. Listing Requirements for Gas Valves. Represents

basic standards for safe operation, substantial and durable construction, and acceptable performance for gas valves. Addenda to American Standard Listing Requirements for Gas Valves effective Jan. 1, 1944.

American Gas Assn. American Standards Assn. Z 21.21-1935. Listing Requirements for Automatic Main Gas-Control Valves. Represents minimum standards for the performance, safe operation, and substantial and durable construction of gas appliance accessories.

American Gas Assn. American Standards Assn. Z 21.22-1935. Listing Requirements for Relief and Automatic Gas Shut-Off Valves for Use on Water Heating Systems. Includes construction requirements; performance requirements on pressure relief valves, pressure relief elements of combination valves, temperature relief valves, temperature relief elements of combination valves, vacuum relief valves, and vacuum relief elements of comoination valves; definitions; and arrangement of apparatus for testing temperature relief valves.

American Petroleum Institute, Div. of Production. Standard 5-F; 1940. Supplement 1; 1941. Specification for Threads in Valves, Fittings, and Flanges (Tentative). Covers dimensional standards for threads and gauges, and gauging practice, for valves, fittings, and flanges intended for use with A.P.I. tubular material, including line pipe, casing, drill pipe, and tubing.

American Petroleum Institute, Div. of Production. Standard 5-G-1; 1938. Standards on Pipe Line Valves (Tentative). Covers contact-face to contact-face dimensions for flanged pipe-line valves, and includes, by reference, minimum chemical and physical properties.

American Petroleum Institute, Div. of Production. Standard 5-G-2; 1941. Standard on Control Valves for Drilling and Production, Well-Control, Repressuring, and Recycling Services—Solid-Wedge and Double-Disc Gate Valves (Tentative). Covers flanged nonrising stem steel drilling-through and flow-line gate valves having integrally forged or cast flanges. Metal other than the parent metal used for valve body seats and wedge faces is not included. Requirements as to material, sizes, design, testing, and marking and for interchangeability, as units, between the products of different manufacturers.

American Petroleum Institute, Div. of Production. Standard 5-G-2A; 1941. Standard on Control Valves for Drilling and Production—Well-Control, Repressuring, and Recycling Services—Flanged Round-Opening Steel Plug Valves (Tentative). Requirements for steel drilling-through and flow-line plug valves with integrally cast or forged steel flanges, having a single through-circular passage, with two-way co-axial bore, tapered or parallel-sided solid or one-piece plug, and integral or separable plug stems. Includes material, sizes, design, testing, and marking, and for interchangeability, as units, between the products of different manufacturers.

American Petroleum Institute, Div. of Refining. Standard 600A-42; 1942. Standard on Flanged Steel Outside-Screw-and-Yoke Wedge Gate Valves. Includes, by reference, requirements on chemical and physical properties and covers the major dimensions for flanged steel wedge gate valves. Dimensions given herein for 150-, 300-, 400-, and 600-lb. classes with raised-face flanges are in agreement with those given in A.P.I. Standards 5-G-1 on Pipe-Line-Valves (tentative). Valves furnished in accordance with this standard will fully meet the requirements for steel wedge gate valves of the corresponding sizes and cold pressure ratings of A.P.I. Standards 5-G-1. The ring-joint requirements and dimensions in this standard are in conformity with A.P.I. Standards 5-G-3 on Ring Joints for Steel Flanges and Flange Unions for general use (Section III, Emergency Revision of A.P.I. Standard 600A issued July 1943 as First Supplement).

American Petroleum Institute, Div. of Refining. Standard 600 B-42; 1942. Standard on Flanged Steel Plug Valves. Includes, by reference, requirements on chemical analysis and physical properties, and covers the major dimensions for flanged steel lubricated and non-lubricated plug valves of either antifriction or plain-stem design. The ring-joint requirements and dimensions in this standard are in conformity with A.P.I. Standards 5-G-3 on Ring Joints for Steel Flanges and Flange Unions for General Use. This standard has been prepared to cover requirements of refineries, natural-gas and natural-gasoline plants, and for any other service for which this type of valve may be considered suitable. Emergency Revision of A.P.I. Standard 600 B, issued July 1943, as First Supplement.

American Society of Mechanical Engineers, joint sponsor with Heating, Piping, and Air Conditioning Contractors' National Assn. and Manufacturers' Standardization Society of the Valve and Fittings Industry. American Standards Assn., B16.10-1939. Face-to-Face Dimensions of Ferrous Flanged and Welding End Valves. Covers: (1) Wedge gate valves—cast-iron, for 125, 175, and 250-lb. steam service pressure and 800-lb. hydraulic pressure; and steel, for 150, 300, 400, 600, 900, and 1,500-lb. steam service pressures; (2) double disc gate valves—cast-iron, for 125, 175, and 250-lb. steam service pressure and 800-lb. hydraulic pressure; (3) globe and angle valves—cast-iron, for 125 and 250-lb. steam service pressure; and steel, for 150, 300, 400, 600, 900, and 1,500-lb. steam service pressures; and (4) swing check valves-cast-iron, for 125 and 250-lb. steam service pressure and 800-lb. hydraulic pressure; and steel, for 150, 300, 400, and 600-lb. steam service pressures.

American Society of Refrigerating Engineers. A.S.R.E. Circular 17; 1939. Standard Method of Rating and Testing Refrigerant Expansion Valves. Includes methods of rating and testing thermostatic and automatic expansion valves.

American Society for Testing Materials, A 95-44; 1944. A.S.M.E. Boiler Construction Code Specification SA-95. American Standards Assn., G17.1; 1944. Carbon-Steel Castings for Valves, Flanges, and Fittings for High-Temperature Service. For pressure containing parts for high temperature service. Gives requirements for heat treatment, temperature control, chemical composition, ladle analysis, check analysis, tensile properties, bending properties, hydrostatic tests, magnetic particle testing, test specimens, number of tests, retests, workmanship, finish, marking, inspection, and rejection. A.S.T.M. Emergency Alternate Provision EA-A 95; 1944, affected section 5, chemical composition; section 8, tensile properties; and section 10, hydrostatic tests.

American Society for Testing Materials, A 105-40; 1940. A.S.M.E. Boiler Construction Code Specification SA-105.

American Standards Assn., G17.3-1940. Forged or Rolled Steel Pipe Flanges, Forged Fittings, and Valves and Parts for High-Temperature Service. Includes two grades of material based on tensile strength; requirements for manufacture, heat treatment, chemical composition, ladle analysis, tensile properties, test specimen, finish, and inspection.

American Society for Testing Materials, A 126-42; 1942. Gray Iron Castings for Valves, Flanges, and Pipe Fittings. Covers regular, higher-strength gray or semisteels, and high-test regular or alloy composition. Requirements for chemical composition, tensile properties, transverse test, mold, test specimen, etc.

American Society for Testing Materials, A 157-44; 1944. A.S.M.E. Boiler Construction Code Specification SA-157. American Standards Assn., G36.1; 1944. Alloy-Steel Castings for Valves, Flanges, and Fittings for Service at Temperatures From 750 to 1,100° F. Includes nine ferritic and two austenitic grades, selection dependent on design and service. Gives requirements for heat treatment, temperature control, chemical composition, ladle analysis, check analysis, number of tests, retests, tensile and bending properties, hydrostatic tests, magnetic particle testing, test specimens, radiographic or destruction tests, workmanship, marking, finish, inspection, and rejection. A.S.T.M. Emergency Alternate Provision EA-A 157; 1944, affected section 10, hydrostatic tests.

American Society for Testing Materials, A 182-44; 1944. A.S.M.E. Boiler Construction Code Specification SA-182. American Standards Assn., G37.1; 1944. Forged or Rolled Alloy-Steel Pipe Flanges, Forged Fittings, and Valves and Parts for Service at Temperatures From 750 to 1,100° F. Includes seven ferritic and three austenitic steels, selection dependent on design and service. Gives requirements for manufacture, heat treatment, chemical composition, ladle analysis, check analysis, tensile properties, hydrostatic tests, test specimens, number of tests, retests, macroetch tests, workmanship, finish, marking, inspection, and rejection.

American Water Works Assn. Specifications for Gate Valves for Ordinary Water Works Service, 7F.1-1939. Covers type of valve and character of service, supplementary details, data to be furnished by manufacturer, size of waterway, basis of structural design, iron castings, bronze, workmanship, bell and flanged ends, bodies and bonnets, gates, gate and body rings, wedging device, guides, rollers and tracks for horizontal valves, stem and stem nuts, thrust bearings, stuffing boxes, wrench-nuts, cast-iron gears, encased steel gears, indicators, by-passes, gaskets, bolts and nuts, cast markings, painting, testing, inspection, and preparing for shipment.

American Water Works Assn. Standard Specifications for Fire Hydrants for Ordinary Water Service, 7F.3-1940. Covers kind, type, capacity, size, thickness of wall of barrel, barrel sections, waterway, hydrant inlet, lugs, hose threads, joining nozzles to barrel, nozzle caps, valves readily removable, main valve closed after accident, operating mechanism, stuffing boxes, drain valve mechanism, drain or waste outlet, hydrant top, operating and cap nuts, direction of opening, interchangeability, machined surfaces, water hammer, friction losses, parts of cast-iron, cast-iron, wrought-iron, steel, parts of noncorrodible metal, characteristics of noncorrodible metal, facing of main gate valves against seats, bolts and nuts, test bars, shop inspection, shop tests, marking, coating, and shop coating above ground line.

Assn. of American Railroads. Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Brine Valve and Operating Rigging, Rules for. Requirements for size of rods, materials for levers, rubber seats, malleable iron castings galvanizing, finish, etc., hand-hole castings design of bripe tank, materials, and inspection.

Assn. of American Railroads. Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Globe and Angle Valves for Steam Locomotives for 300-Lb. Pressure. Recommended Practice. Materials for valves to follow A.S.T.M. Specification B-61, except stem for outside screw type, seat, gland, and handwheel. Gives detailed drawings and tables for globe and angle valves, valve parts, and marking. Emergency Specification 1942, changed requirements.

Assn. of American Railroads. Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Specifications for Determining the Size of Safety Valves, Their Application to Locomotives, and Their Repairs. Formula, number required, materials, marking, capacity, location, tests, diagrams, and standard connections.

Assn. of American Railroads. Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Tank Car Safety Appliances and Safety Valves for Tank Cars. Detail dimensions and design of valves, 2 and 5-in. sizes, design and dimensions for valve springs, dome cover, safety vent, and I.C.C. requirements. Included in specifications for tank cars.

Chlorine Institute, Inc. Revision of Chlorine Institute, Inc. Drawings Inclusive of Specifications for Valves for I.C.C. Specification 3A 480, Chlorine Cylinders; and for I.C.C. Specification 106 A 500, Containers; also for I.C.C. Specification 106 A 500, Fusible Plugs and Engagement in Heads; 1942.

Chlorine Institute, Inc. Safety Valve for Handling Corrosive Gases, 1 1/2-Inch Valve Size; Style JQ, 1940. Includes dimensional requirements of details and assembly, materials required for each part, and instruction for testing procedure and reconditioning.

Chlorine Institute, Inc. Standard Angle Valve for Chlorine Tank Cars No. 3-B347; 1938. Requirements for design, materials, and details of parts and assembly.

Compressed Gas Manufacturers' Assn. Safety Device Schedule; 1936. Includes classification as frangible disc, fusible plugs, combination frangible dis-fusible plugs, and pop valves; requirements for design and construction, applications for compressed gas cylinders, and definitions.

Heating, Piping, and Air Conditioning Contractors National Assn. Engineering Standards, 1939. Standard dimensions of valves and fittings and materials. Roughing-in dimensions conform to the Manufacturers Standardization Society of the Valves and Fittings Industry; welding neck flanges conform to A.S.A. Standard 836.10, 1935; and cast iron screwed and flanged fittings to A.S.M.E. Standard B16d, 1927; B16a, 1938; and B16d, 1928.

Manufacturing Chemists' Assn. of the U. S. Manual Sheet D-32. Faucets, Metal, for Discharging Contents of

Steel Barrels or Drums. Recommended Practice. Adopted, 1939. Revised, 1943. Includes diagram of faucet and recommendations for threads, gaskets, shank, and material.

Manufacturers Standardization Society of the Valve and Fittings Industry. Drain Tapping Standard, SP-28; 1937. Applies to ferrous flanged fittings and valve bodies regardless of material or pressure; method of designating location of tapped holes, standard size of drain connection, and maximum pipe thread sizes which may be tapped without boss. Gives symbols, tables of drain sizes and maximum unbossed tappings, and diagrams for fittings and various types of valves.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, 1938. Valves and Fittings. Covers definition, classification, and standards of the industry.

National Fire Protection Assn. National Fire Codes for Extinguishing and Alarm Equipment, 1943. Recommendations for Uniform Marking of Fire Hydrants. Covers three classes—(A) flow capacity of 1,000 g.p.m. or greater, (B) flow capacity of 500-1,000 g.p.m., and (C) flow capacity of less than 500 g.p.m. Class (A) tops and nozzle caps—green, class (B) tops and nozzle caps—orange, and class (C) tops and nozzle caps—red. All barrels to be chrome yellow. Also covers private hydrants.

National Fire Protection Assn. National Fire Codes for Extinguishing and Alarm Equipments, 1943. Supervision and Care of Valves. For controlling water supplies for fire protection. Covers introduction of valves, maintenance, notification, inspection after opening, methods of supervision, approved devices and installation, attachment and operation of devices, various systems, emergency sealing, and suggested precautions while water is shut off sprinklers for repairs or alterations.

National Fire Protection Assn. National Fire Codes for Extinguishing and Alarm Equipment, 1943. Valves, Indicator Posts, and Hydrants. Specifications for valves, indicator posts, and hydrants. Covers gate and check valves including outside-screw-and-yoke valves, inside-screw-valves, straightway hose valves, angle hose valves, and swing check valves; indicator posts including vertically moving target type and rotating target type; and hydrants.

National Fire Protection Assn. National Fire Codes for Flammable Liquids, Gases, Chemicals, and Explosives, 1943. Gas Shut-Off Valves. Standards for installation, maintenance, and use of emergency gas shut-off valves. Covers valves, pull boxes, operating handles, connection of valve to operating handle, supplementary control, installation, tests, and inspection.

Society of Automotive Engineers. 1944 Handbook, Section 2—Units, Parts, and Fittings. S.A.E. Recommended Practice for Drain Cocks. Adopted, 1921. Table of taper pipe thread sizes with equivalent minimum passage diameters.

Underwriters' Laboratories, Inc. Adjustable Pressure Reducers for 2 1/2-Inch Outlets on Interior Standpipes, 1932. Gives requirements for material, range of adjustment, adjustability, adjustment index, operating performance, strength, vanes or baffles, threads, and marking.

Underwriters' Laboratories, Inc. Specification for Indicator Posts (no date). For fire protection gate valve construction standardization of the target mechanism. Covers requirements for vertically moving type, details of barrel, extension rod, post cap, operating stem, handwheel, and target; also variations for rising stem type such as stem diameter, visibility of stem, and marking.

Underwriters' Laboratories, Inc. Standard for Alarm Valves (Section III), Subject 193; 1927. Gives size, type, body and cover, main check, auxiliary check, valve rings and seat rings, valve mechanism, hinge, clearances, drains, retarding chamber, circuit closer or opener, water motor and gongs, marking, construction, practicability, durability, strength, reliability of operation, and uniformity.

Underwriters' Laboratories, Inc. Standard for Angle Hose Valves, Subject 668a; 1937. Sizes of valves for use on standpipes are 1, 1 1/4, 1 1/2, 2, and 2 1/2 in. Gives body and bonnet, seat, disc, stem, stuffing box, hand-wheel, hose nipples, and tests.

Underwriters' Laboratories, Inc. Standard for Construction and Performance of Hazardous Liquid Valves, 1930. For dispensing motor fuel at automobile filling stations installed in accordance with regulations of the National Board of Fire Underwriters. Includes shut-off valves (gate, globe, angle, needle), hose-nozzle valves, and hose drain valves. Design and construction of body, stuffing box, and stem, nozzles, operating parts, and tests. Detail dimensional drawings of valves.

Underwriters' Laboratories, Inc. Standard for Hydrants (Private and Municipal Fire Department Service), 1938. Includes compression and gate type valves, two-way, two-way and pumper, three-way, three-way and pumper, four-way or double pumper operating up to 170-lb. pressure. Requirements as to design, materials, hose nipples and valves, operating stem, stuffing box and gland, hydrant top, hose caps, and marking.

Underwriters' Laboratories, Inc. Standard for Inside Screw Valves for Underground Work, 1931. For fire protection gate valves, solid, split wedge, or built-up parallel seat gate types, rated at 175-lb. working pressure. Requirements for design and construction of cast iron body and bonnet, dimensional details, gates, seat rings, thread standards, stem sizes, stuffing boxes, indicator post flange details, and tests.

Underwriters' Laboratories, Inc. Standard for Outside Screw and Yoke Gate Valves, 1931. For fire protection work; standard sizes, types, working pressure, design and construction, and tests.

Underwriters' Laboratories, Inc. Standard for Pressure Regulators or Reducing Valves, 1928. Devices of oxy-acetylene, etc., control of cylinder pressure, in welding and cutting operations. Covers general construction and performance tests.

Underwriters' Laboratories, Inc. Standard for Straightway Hose Valves, Subject 668b; 1937. Size of valves for use on fire pumps and hydrants is 2 1/2 in. and for standpipes 1, 1 1/4, 1 1/2, 2, and 2 1/2 in. Gives type, body and bonnet, gate and seat rings, stem, stuffing box, handwheel, hose nipples, hose caps, and tests.

Underwriters' Laboratories, Inc. Standard for Swing Check Valves (Regular Type), 1931. For fire protection work, requirements as to design and construction of body and bonnet, table of dimensions, seat rings, clapper, hinge, and clearance.

U. S. Gov., Army Air Forces. Specification 40276-A (1); 1940. Valve; Four-Way, De-Icing system, Controlling.

U. S. Gov., Army Air Forces. Specification 40293; 1940. Valve; Four-Way, De-Icing System, Controlling, 3/4-Inch Ports.

U. S. Gov., Army Air Forces. Specification 40383-A; 1942. Valve; Oxygen, Pressure Reduction.

U. S. Gov., Army Air Forces. Specification 40405; 1942. Valve; Oxygen Needle, High Pressure.

U. S. Gov., Army Air Forces. Specification 40406; 1942. Valve; Oxygen Dump.

U. S. Gov., Army Air Forces. Specification 40680; 1944. Valve; Oxygen Cylinder, Emergency.

U. S. Gov., Army Air Forces. Specification 40747-A; 1945. Valve; Vacuum Selector.

U. S. Gov., Army Air Forces. Specification 40779-2; 1945. Valve; Purge (Manifold Pressure Gage Line).

U. S. Gov., Army-Navy Aeronautical Specification AN-C-71a-2; 1944. Cores; High Pressure Air Valve.

U. S. Gov., Army-Navy Aeronautical Specification AN-V-1-1; 1943. Valves; Hydraulic Pressure Relief.

U. S. Gov., Army-Navy Aeronautical Specification AN-V-3-1; 1943. Valves; Hydraulic, Shuttle.

U. S. Gov., Army-Navy Aeronautical Specification AN-V-4-1; 1943. Valves; Hydraulic Directional Control.

U. S. Gov., Army-Navy Aeronautical Specification AN-V-5b; 1944. Valves; Hydraulic Check.

U. S. Gov., Army-Navy Aeronautical Specification AN-V-6; 1944. Valves; Power Brake.

U. S. Gov., Army-Navy Aeronautical Specification AN-V-8-1; 1943. Valves; Vacuum and Pressure System Check.

U. S. Gov., Army-Navy Aeronautical Specification AN-V-9-1943. Valves; Hydraulic Controllable Check.

U. S. Gov., Army-Navy Aeronautical Specification AN-V-10a; 1944. Valves; Static Pressure Selector.

U. S. Gov., Army-Navy Aeronautical Specification AN-V-11; 1943. Valves; High Pressure Oxygen Filler.

U. S. Gov., Army-Navy Aeronautical Specification AN-V-12; 1943. Valves; High Pressure Oxygen Line.

U. S. Gov., Army-Navy Aeronautical Specification AN-V-13a; 1944. Valves; High Pressure Oxygen Check.

U. S. Gov., Army-Navy Aeronautical Specification AN-V-14a; 1944. Valves; Low Pressure Oxygen Filler.

U. S. Gov., Army-Navy Aeronautical Specification AN-V-15-1; 1944. Valves; Low Pressure Oxygen Check.

U. S. Gov., Army-Navy Aeronautical Specification AN-V-16a; 1944. Valves; Oil Dilution and Separately Mounted Priming Solenoid.

U. S. Gov., Army-Navy Aeronautical Specification AN-V-17-1; 1944. Valves; Oxygen Cylinder.

U. S. Gov., Army-Navy Aeronautical Specification AN-V-20; 1943. Valves; Air Pump Safety.

U. S. Gov., Army-Navy Aeronautical Specification AN-V-21-1; 1944. Valves; Air Pump Suction Relief.

U. S. Gov., Army-Navy Aeronautical Specification AN-V-22; 1944. Valves; Air Vacuum Regulating (Throttling).

U. S. Gov., Army-Navy Aeronautical Specification AN-V-23; 1944. Valves; Hydraulic Restrictor.

U. S. Gov., Army-Navy Aeronautical Specification AN-V-24-1; 1945. Valves; Vacuum Restricter.

U. S. Gov., Dept. of Agriculture, Forest Service. Specifications MSF-380. Valve; Siamese Control.

U. S. Gov., Dept. of Agriculture, Forest Service. Specifications No. 381. Valve; Pressure-Relief and Check.

U. S. Gov., Dept. of Agriculture, Forest Service. Specifications No. 382. Valve; Swinging Check and Bleeder.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R57-32; 1932. Wrought Iron and Wrought Steel Pipe Valves, and Fittings. This recommendation establishes a schedule of diameters and thicknesses of wrought iron and wrought steel pipe valves, and fittings. It covers nominal inside and outside diameters and approximate thicknesses for standard weight, and extra strong and double extra strong pipe. Initiated by Manufacturers Standardization Society of the Valve and Fittings Industry.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R183-42; 1942. Bronze or Brass Valves. This recommendation covers the working steam pressure and sizes of steam rated gate, globe, angle, and check valves. Initiated by the Valve Manufacturers Association.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R184-42, 1942. Iron Body Valves. This recommendation covers the working steam pressure and sizes of steam rated gate, globe, angle, and check valves. Sponsored by the Valve Manufacturers Association.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R 201-43; 1943. Iron and Steel Pop Safety Valves. This recommendation greatly reduces the variety of pop safety valves of iron and steel and does not include valves for pressures above 900 lb. per square/inch or temperatures above 900° F. Gives three tables showing details—(1) iron-body valves, (2) carbon-steel-body valves, and (3) alloy-steel-body valves.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R 204-44; 1944. Bronze Pop Safety Valves, and Bronze, Iron, and Steel Relief Valves. For steam, oil, water, air, gas, and liquids in industrial service, and for marine service where applicable. Covers materials, construction, springs, maximum service pressure, maximum service temperature, approximate seat diameter, inlet connections, and outlet connections for various sizes and types of bronze pop safety valves, bronze relief valves, iron body relief valves, and steel relief valves.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R205-44; 1944. Iron and Steel Relief Valves for Petroleum, Chemical, and General Industrial Services. Intended primarily for air, gas, vapor, and liquid service requirements for oil refineries, gasoline plants, synthetic rubber projects, and chemical plants. Covers general construction, trim materials, top construction, discharge areas, abbreviations, and identification numbers. Gives tables showing identification number, inlet size, outlet size, discharge area, maximum service pressure, maximum service temperature,

inlet flange, and outlet flange for iron-body valves, carbon-steel-body valves, and alloy-steel-body valves.

U. S. Gov., Federal Specification WW-P-541a; 1940. Plumbing Fixtures for Land Use. Includes requirements for nickel-plated rough or polished brass, compression type lawn faucet, straight or angle pattern, with integral flange tapped for 3/4-in. pipe and with detachable wheel or T-handle key. Emergency Alternate Federal Specification E-WW-P-541a; 1942 (issued by Procurement Div., Treasury Dept., U. S. Gov.) changed requirements for metals and finishes, standard materials, illustrations, selections, and air gaps.

U. S. Gov., Federal Specification WW-P-541a; 1940. Plumbing Fixtures for Land Use. Includes requirements for four types of large and small flush valves for water closets, pedestal urinals, and wall and stall urinals. Gives requirements for performance features, backflow preventers, fittings, connections; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment. Emergency Alternate Federal Specification E-WW-P-541a; 1942 (issued by Procurement Div., Treasury Dept., U. S. Gov.) changed requirements for metals and finishes, standard materials, illustrations, selections, and air gaps.

U. S. Gov., Federal Specification WW-P-541a; 1940. Plumbing Fixtures for Land Use. Includes requirements for lavatory self-closing and double faucets; also faucets with drain and supply fittings; bath, for free standing tubs; kitchen, scullery, and service sinks; single faucet with shoulder, shank, and flange type; and faucets for laundry trays. Gives requirements for size, threads, and weight; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipments. Emergency Alternate Federal Specification E-WW-P-541a; 1942 (issued by Procurement Div., Treasury Dept., U. S. Gov.) changed requirements for metals and finishes, standard materials, illustrations, selections, and air gaps.

U. S. Gov., Federal Specification WW-P-541a; 1940. Plumbing Fixtures for Land Use. Includes requirements for street washers with automatic nonfreezing drain. Valves shall be connected by two red brass pipes to a cast iron box. Each washer shall be provided with a short T-handle key. Emergency Alternate Federal Specification E-WW-P-541a; 1942 (issued by Procurement Div., Treasury Dept., U. S. Gov.) changed requirements for metals and finishes, standard materials, illustrations, selections, and air gaps.

U. S. Gov., Federal Specification WW-P-541a; 1940. Plumbing Fixtures for Land Use. Includes requirements for wall hydrant. Gives requirements for material, design, workmanship, and construction; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment. Emergency Alternate Federal Specification E-WW-P-541a; 1942 (issued by Procurement Div., Treasury Dept., U. S. Gov.) changed requirements for metals and finishes, standard materials, illustrations, selections, and air gaps.

U. S. Gov., Federal Specification WW-V-51; 1936. Amendment 1; 1938. Valves, Brass or Bronze; Angle and Globe, 150-Pound, Threaded and Flanged (for Land Use). Covers valves having renewable nonmetallic disc and raised integral seats; up to and including 2 1/2-in. iron pipe size; for general service with steam, hot water, cold water, sea water, air, and gas. Gives requirements for chemical composition, dimensions, and physical properties; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking. Emergency Alternate Federal Specification E-WW-V-51; 1942 (issued by Procurement Div., Treasury Dept., U. S. Gov.) changed requirements for sizes, valve stems, handwheels, stuffing boxes, threaded ends, parts, disk holders, composition, physical properties, and dimensions and tests.

U. S. Gov., Federal Specification WW-V-61; 1940. Amendment 1; 1941. Valves, Cylinder; Oxygen (for Standard Industrial Cylinders). Covers four types suitable for working pressure of 2,000 lb. per square inch—(I) flat seat, packed; (II) flat seat, packless; (III) conical seat, packed; and (IV) conical seat, packless. Gives requirements for composition, threads, and dimensions; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Federal Specification WW-V-76b; 1938. Valves, Gate; 125-Pound, Threaded and Flanged (for Land Use). Covers two types—(I) single wedge disk, and (II) double disk. Gives requirements for chemical composition, physical properties of valve stems, and dimensions; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking. Emergency Alternate Federal Specification E-WW-V-76B; 1942 (issued by Procurement Div., Treasury Dept., U. S. Gov.) changed requirements for construction, stems, bronze-body valves (designation B), iron-body valves (designation I), rising stem (designation R), threaded ends (designation T), physical properties of valve stems, and methods of sampling, inspection, and tests.

U. S. Gov., Federal Specification WW-V-151; 1937. Amendment 1; 1938. Valves, Radiator; Air, Thermostatic (Gravity Steam-Heating Systems). Covers two types—(I) nonadjustable, and (II) adjustable air vent. Gives requirements for pattern and plating; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Joint Army-Navy Specification JAN-F-163; 1944. Faucets; Compression and Self-Closing Types for Shipboard Use.

U. S. Gov., Navy Dept. Specification 23V2; 1944. Valves; Escape, Air-Regulating, for Navy Standard Diving Helmets.

U. S. Gov., Navy Dept. Specification 30V1g; 1944. Valves; Water-Closet, Flush (Shipboard Use).

U. S. Gov., Navy Dept. Specification 40R1a; 1923. Valve-reseating Outfits.

U. S. Gov., Navy Dept. Specification 45C5b; 1935. Cocks; Ground-Key.

U. S. Gov., Navy Dept. Specification 45R1G; 1943. Regulators; Gas (Acetylene, Hydrogen, and Oxygen Cylinders).

U. S. Gov., Navy Dept. Specification 45R3; 1941. Regulators; Gas (Acetylene, Hydrogen, and Oxygen Cylinder), Two-Stage.

U. S. Gov., Navy Dept. Specification 45V1f; 1939. Valves; Bronze, 100 W.S.P., Gate (Shipboard Use).

U. S. Gov., Navy Dept. Specification 45V4c; 1934. Valves; Hose, Magazine Flood and Sprinkling.

U. S. Gov., Navy Dept. Specification 45V5e; 1938. Valves; Check, for Pressures Not Exceeding 100 Pounds.

U. S. Gov., Navy Dept. Specification 45V8h; 1938. Valves; Pressure-Reducing, Steam (or Air), Pilot Valve Operated, 600-Pound Gage and Less (Shipboard Use).

U. S. Gov., Navy Dept. Specification 45V9e; 1930. Valves; Bronze, 100 W.S.P., Angle, Cross, and Globe.

U. S. Gov., Navy Dept. Specification 45V10e; 1941. Valves; Radiator (Shipboard).

U. S. Gov., Navy Dept. Specification 45V13e; 1941. Valves; Cylinder Gas, Compressed and Liquefied.

U. S. Gov., Navy Dept. Specification 45V14; 1933. Valves; Bronze, 300 W.S.P., Globe, and Angle, Threaded.

U. S. Gov., Navy Dept. Specification 45V16a; 1941. Valves; Sprinkling and Flooding, Electrically (Motor) Operated, and Their Control.

U. S. Gov., Navy Dept. Specification 45V19; 1938. Valves; Forged-Steel, High-Pressure, Angle and Globe, Welding-Ends; Sizes 1/4 Inch to 1 Inch, Inclusive 600 Pounds W.S.P. and 850° F., Maximum Temperature (Shipboard Use).

U. S. Gov., Navy Dept. Specification 45V30; 1944. Valves; Regulating, Fuel-Oil-Pressure.

U. S. Gov., Navy Dept. Specification 57P5; 1941. Pinch-cocks, for Rubber Tubing.

U. S. Gov., Navy Dept., U. S. Coast Guard. Bureau of Marine Inspection and Navigation. Marine Engineering Regulations and Material Specifications, 1942. Contains specifications and requirements for materials, design, construction, installation, and inspection of boilers, unfired pressure vessels and appurtenances thereof, also piping, valves, fittings, flanges, safety valves, etc., upon the strength and efficiency of which safety of life is dependent, and are intended for maximum temperatures of 1,000° F. Includes specifications for construction of safety valves and relief valves.

U. S. Gov., Panama Canal, Purchasing Dept. Specification for Gate Valves, 1942.

U. S. Gov., Panama Canal, Purchasing Dept. Specification for Standard-Weight, Flanged Globe, Angle and Cross Valves (undated).

U. S. Gov., Treasury Dept., Procurement Div., 240A; 1942. Valves, Flush; Automatic, Quiet Operating. Gives requirements for type, piston assembly, relief valve, by-pass, threaded connection, handle, flush, pipe, finish, operation, adjustments, quietness, and backflow preventer; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., U. S. Army, Chemical Warfare Service. Specification 98-91-4; 1933. Valve; Portable Chemical Cylinder, MIII.

### 607.7 METALLIC HOSE, FERROUS AND NONFERROUS

American Gas Assn. American Standards Assn., Z 21.32-1942. Listing Requirements for Gas Appliance Connectors of Flexible Metal Tubing and Fittings; Effective January 1, 1943. These requirements apply to gas appliance connectors consisting of a suitable length of braided or nonbraided flexible all-metal tubing of 1/2 to 1 in. nominal internal diameter and having a fitting at each end provided with standard pipe threads for connection to gas appliance and house piping. Includes construction and performance requirements and illustration of bending test.

Society of Automotive Engineers. 1944 Handbook, Section 4—Fabricated Materials. S.A.E. Recommended Practice for Flexible Steel Conduit, Tubing, and Ferrules. Revised, 1941. General Specifications, dimensions and physical properties, and corrosion test for flexible steel conduit, flexible steel exhaust, heater tubing, and flexible conduit ferrules.

U. S. Gov., Army Air Forces. Specification 10238; 1938. Hose; Metal, Flexible (Corrosion Resisting).

U. S. Gov., Army-Navy Aeronautical Specification AN-T-14-2; 1944. Tubing; Corrosion-Resisting Steel Flexible.

U. S. Gov., Army-Navy Aeronautical Specification AN-WW-C-561a—2; 1944. Conduit; Flexible, Shielded.

U. S. Gov., Federal Specification RR-H-651; 1940. Hose; Metallic, Flexible, Interlocking. Galvanized steel or bronze. Gives requirements for material, inside diameter, minimum thickness of metal, pitch per foot, hydrostatic test pressure, inside diameter of coil circle, and fittings; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification WW-C-566; 1941. Conduit; Steel, Flexible. Stipulates compliance with Underwriters' Laboratories "Standard for Flexible Steel Conduit." Gives requirements for types, sizes, material and workmanship, thickness, internal diameter, weight, corrosion protection, strength, and flexibility; methods of sampling, and tests; packaging, packing, and marking for shipment.

U. S. Gov., Navy Dept. Specification 33H10; 1944. Hose; Flexible- Metallic, High-Pressure.

U. S. Gov., Navy Dept. Specification 33H15b; 1944. Hose; Metallic, Flexible.

*References.*—Methods of testing, general requirements for metals, *see* 600.1; rust-proof coatings, *see* 600.3; rubber metal gasoline hose, *see* 202.32; flexible metallic conduit for electric wiring, *see* 715.11; flexible metallic casing for tachometer drive, *see* 724.22.

## 608. NAILS, SCREWS, BOLTS, NUTS, AND RIVETS

### 608.0 GENERAL ITEMS

American Institute of Bolt, Nut and Rivet Manufacturers. Bolt, Nut and Rivet Standards; 1941. Screw-Thread Dimensions and Tolerances (American Standard B1.1-1935). Threads for bolts and nuts, description and definitions, and tables of dimensions and tolerances for coarse-thread, fine-thread, 8-pitch-thread, and 12-pitch-thread series.

American Standards Assn. B 1.4-1942. Straight Screw Threads for High-Temperature Bolting (American War Standard). For use with pressure vessels and steel pipe flanges, fittings, and valves. Covers form of thread, screw thread series, definitions, detail specifications, gaging, and gives tables showing limiting dimensions and tolerances for threads on screws and nuts.

American Standards Assn., B1.6-1944. Screw Threads of Truncated Whitworth Form (American Truncated Whitworth Threads) (American War Standard). Gives scope, interchangeability with British Standard Whitworth Threads, thread specifications, gages and gaging, tap drill sizes, example of interchangeability, figures, and tables giving data.

Assn. of American Railroads. Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1944. Screw Thread Standards. Revised, 1938. The Sellers or Franklin Institute (U. S. Standard) system of screw threads, bolt heads and nuts, is the standard of the A.A.R. except for pipe work and special locomotive work. Gives diagram and formula.

Manufacturers Standardization Society of the Valve and Fittings Industry. Screw Thread Standard for Straight Screw Threads for High Temperature Bolting SP-29; 1943. Covers the limiting dimensions and tolerances for screw threads on high temperature bolting for use with pressure vessels and steel flanges, fittings, and valves. Gives form of thread, screw thread series, definitions, detail specifications, gaging, and tables for straight screw threads for high-temperature bolting with limiting dimensions and tolerances for threads on screws and threads on nuts in standard sizes from 1/4 in. to 3 1/2 in.

Society of Automotive Engineers. Aeronautical Standard 82; 1942. Screw Thread Form, American National, Modified (National Round—NR). An external screw thread form with rounded root for application to highly stressed parts. Diagrammatic dimensional drawing and table of pitches, etc.

Society of Automotive Engineers. Aeronautical Standard 83; 1942. Screw Threads, Aeronautical. Table of coarse, fine, extra fine, 8-thread series, 12-thread series, and 16-thread series for sizes from 0 to 4.

Society of Automotive Engineers and American Society of Mechanical Engineers, sponsors. American Standards Assn., B1.1-1935. National Standard Screw Threads for Bolts, Nuts, Machine Screws, and Threaded Parts. Similar to corresponding portion of U. S. Gov., Dept. of Commerce, National Bureau of Standards Handbook H28, Screw-Thread Standards for Federal Services.

Society of Automotive Engineers and American Society of Mechanical Engineers, sponsors. American Standards Assn., B1.3-1941. Acme and Other Translating Threads. Similar to corresponding portion of U. S. Gov., Dept. of Commerce, National Bureau of Standards Handbook H28, Screw-Thread Standards for Federal Services.

Society of Automotive Engineers. 1944 Handbook, Section 5—Screws, Bolts, and Washers. S.A.E. Recommended Practice for Slots and Cotter Pin Holes, Cap Screws, and Bolts. Revised, 1942. Table of sizes and dimensions.

Society of Automotive Engineers. 1944 Handbook, Section 5—Screws, Bolts, and Washers. S.A.E. Standard Screw Threads. Revised, 1942. Standard screw thread series table of threads per inch in coarse, fine, extra fine, 8-thread series, 12-thread series, and 16-thread series for sizes 0 to 6; general dimensions for screws (classes 2 and 3 fits) and nuts (classes 1, 2, and 3 fits) in coarse threads and screws (classes 2 and 3 fits) and nuts (classes 2 and 3 fits) in fine threads; screws (classes 2 and 3 fits) and nuts (classes 2 and 3 fits) for extra fine, 8-, 12-, and 16-thread series; and class 2 fit screws and nuts for special pitch series.

Society of Automotive Engineers. 1944 Handbook, Section 5—Screws, Bolts, and Washers. S.A.E. Standard Wrench Head Screw and Bolt Heads, Nuts, and Wrench Openings. Revised, 1942. Diagrams and tables of sizes and dimensions for regular and heavy bolt heads, cap screw heads, set screw heads; regular, heavy, and light nuts and jam nuts; regular, heavy, light, and light thick slotted nuts, machine screw and stove bolt nuts; light thick nuts, light castle nuts, and wrench openings for same.

U. S. Gov., Army-Navy Aeronautical Specification AN-GGG-S-126a; 1943. Screw-Threads; Standard, Aircraft.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Handbook H28; 1944. Screw-Thread Standards for Federal Services. Presents complete dimensional data upon which specifications may be based for threaded products for government requirements. Includes terminology (definitions and symbols); American National form of thread; American National thread series; screw threads of special diameters, pitches, and lengths of engagement; wrench-head bolts and nuts, and wrench openings; round unslotted head bolts; machine screws, machine-screw and stove-bolt nuts, and set screws; socket set screws, socket-head cap screws, and socket-head shoulder screws; Acme threads; and appendixes containing supplementary information of both a general and a technical nature, including such specifications as are not intended to be mandatory.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Commercial Standard CS24-43; 1943. Screw Threads and Tap-Drill Sizes. The purpose of this standard is to make available for convenient shop use and acceptance inspection the essential specifications, definitions, and dimensional data on screw threads and tap-drills, which are recorded more completely in Screw Thread Standards for Federal Services—1942, National Bureau of Standards Handbook H28. Sponsored by the National Screw Thread Commission (succeeded by Interdepartmental Screw Thread Committee).

## 608.1 NAILS, BRADS, STAPLES, AND TACKS

### 608.11 Nails

American Iron and Steel Institute. Wire Nails, 1939. Identification Marks Used by Representative American Producers. Detail illustrations of the markings used on roofing and common nails to distinguish the products of various manufacturers.

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering, 1942. Specifications for Buildings for Railroad Purposes: Slate Roofing. Gives requirements for nails.

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering, 1942. Specifications

for Dating Nails. Gives requirements for material, design, and inspection.

American Society for Testing Materials, D 249-44T; 1944. Tentative Specifications for Asphalt Roofing Surfaced With Coarse Mineral Granules. Covers asphalt roofing in sheet form surfaced with colored mineral granules, either 36 or 32 in. in width, composed of roofing-felt saturated and coated on both sides with asphalt and surfaced on the weather side with granulated slate or equivalent mineral material (of solid or mixed colors as may be agreed upon by the purchaser and the seller), and on the reverse side with powdered talc or mica. Manufacture, character of felt, saturant, and coatings; physical properties, surface finish, gage, saturation, packing, nails and lap-cement, sampling and testing, inspection, and basis of rejection. A.S.T.M. Emergency Alternate Provision EA-D 249b; 1944, affected section 6, surface finish; table I, physical requirements of asphalt roofing; section 10, packing; and section 12, nails and lap-cement.

Assn. of American Railroads, Telegraph and Telephone Section, 1-A-55; 1935. Dating Nail AAR-1-A. For flat headed copper nail, for dating purposes, with dimensional requirements.

Contracting Plasterers' International Assn. Standard Specification. Includes requirements for nails.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R47-28; 1928. Cut Tacks and Small Cut Nails. This recommendation establishes a schedule of standard sizes, style, and finishes for bill posters tacks, carpet, upholsterer, trimmer, basket, trunk, solid head lining, gimp, lace, hide tacks, clout nails, trunk and basket nails, copper and galvanized tacks, shoe nails and tacks.

U. S. Gov., Federal Specification FF-N-101; 1932, Amendment 6; 1944. Nails, Spikes, Staples, and Tacks. Nails. Covers 44 different types. Gives requirements for materials, quality of various metals, workmanship, dimensions, tolerances, and tables covering details; methods of inspection and tests; and packing and marking.

U. S. Gov., U. S. Army. Quartermaster Corps. Specification 29-84; 1939. Nails; Horseshoe.

*References.*—Methods of testing, general requirements for metals, *see* 600.1; noncorrosive coatings and test, *see* 600.3; steel and iron wire gages, *see* 603.40.

## 608.12 Brads

*References.*—Methods of testing, general requirements for metals, *see* 600.1; noncorrosive coatings and test, *see* 600.3; steel and iron wire gages, *see* 603.40.

## 608.13 Staples

Package Research Laboratory. Bulletin 309; 1943. Wire for All-Bound Rock Fastener 4-One Boxes and Crates. Wire is technically described as low carbon steel wire and is divided into two general types—(a) stapling wire and (b) binding wire. Gives details covering physical properties of wire; details for each type including sizes, grades, and finishes; Rockaway wire tester, purchase specifications for wire, and details concerning staples.

U. S. Gov., Federal Specification FF-N-101; 1932. Amendment 6; 1944. Nails, Spikes, Staples, and Tacks. Staples. Covers electrician's, metal lath, poultry netting, and wire fence staples. Gives requirements for materials, quality of various metals, workmanship, dimensions, tolerances, and tables covering details; methods of inspection and tests; and packing and marking.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-297B; 1933. Staple; Insulated for Inside Wiring.

*References.*—Methods of testing, general requirements for metals, *see* 600.1; noncorrosive coatings and tests, *see* 600.3; steel and iron wire gages, *see* 603.40.

## 608.14 Tacks

U. S. Gov., Federal Specification FF-N-101; 1932. Amendment 6; 1944. Nails, Spikes, Staples, and Tacks. Tacks. Covers billposters, carpet, copper, galvanized, double pointed, gimp, saddle, shoe, and upholsterer's tacks. Gives requirements for materials, quality of various metals, workmanship, dimensions, tolerances, and tables covering details; methods of inspection and tests; and packing and marking.

U. S. Gov., Federal Specification FF-T-311a; 1943. Thumb-Tacks. Covers two types: (I) Draftsmen steel head and (II) general purpose, in four classes—A, solid head; B, head with pin extended through; C, colored head; and D, stamped steel (cut out). Gives requirements for material, workmanship, sizes, bid samples, and details; sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., Treasury Dept., Procurement Div., 649; 1944. Tacks; Map. Covers two types—(I) spherical head, and (II) flat head. Type II shall have three classes—A, round; B, square; and C, triangular; and three styles—1, plain; 2, numbered; and 3, lettered. Gives requirements for metal, glass, plastic, workmanship, design heads, tolerances in the dimensions of heads, pins, finish, and details for each type including shape, sizes, and colors; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., U. S. Army, Corps of Engineers. Specification 42.2-7; 1923. Pin; Push.

U. S. Gov., U. S. Army, Corps of Engineers. Specification 42-8; 1926. Pin; Map Tack, Colored Head.

U. S. Gov., U. S. Army, Medical Department. Specification 42-38; 1939. Pin; White Head.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-298A; 1933. Tack; Types IW-9 and IW-10, for Inside Wiring.

*References.*—Methods of testing, general requirements for metals, *see* 600.1; noncorrosive coatings and tests, *see* 600.3; steel and iron wire gage, *see* 603.40.

## 608.15 Spikes

U. S. Gov,, Federal Specification FF-N-101; 1932. Amendment 6; 1944. Nails, Spikes, Staples, and Tacks. Spikes. Covers barge, boat, common, gutter, round wire, and track spikes. Gives requirements for materials, quality of various metals, workmanship, dimensions, tolerances, and tables covering details; methods of inspection and tests; and packing and marking.

*References.*—Railway track spikes, *see* 606.5; methods of testing, general requirements for metals, *see* 600.1; steel and iron wire gages, *see* 603.40.

## 608.2 SCREWS

Aeronautical Chamber of Commerce of America, Inc. National Aircraft Standard NAS 20; 1943. Screw—Post, Connector Panel, Electrical. Gives drawings with dimensions and notes. Developed by National Aircraft Standards Committee.

Aeronautical Chamber of Commerce of America, Inc. National Aircraft Standard NAS 192; 1944. Screw—Post, Molded Connector Panel, Electrical. Gives drawings with dimensions and notes. Developed by National Aircraft Standards Committee.

Aeronautical Chamber of Commerce of America, Inc. National Aircraft Standard NAS 200 and 202; 1944. Screws—Flush Head, 100° Countersunk and Round Head, Phillips Recess, Low Carbon Steel and Brass. Gives drawings with dimensions and notes. Developed by National Aircraft Standards Committee.

Aeronautical Chamber of Commerce of America, Inc. National Aircraft Standard NAS 201 and 203; 1944. Screws—Flush Head, 100° Countersunk and Round Head, Frearson Recess, Low Carbon Steel and Brass. Gives drawings with dimensions and notes. Developed by National Aircraft Standards Committee.

Aeronautical Chamber of Commerce of America, Inc. National Aircraft Standard NAS 204, 205, 206, 207, 208, 209, 210, and 211; 1944. Screws—100° Flush Head, Phillips, Recess, Aluminum Alloy, Bronze and Alloy Steel. Gives drawings with dimensions and notes for Nos. 8-32, 10-32, 1/4-28, 5/16-24, 3/8-24, 7/16-20, 1/2-20, and 9/16-18. Developed by National Aircraft Standards Committee.

Aeronautical Chamber of Commerce of America, Inc. National Aircraft Standard NAS 212, 213, 214, 215, 216, 217, 218, and 219; 1944. Screws—100° Flush Head, Frearson Recess, Aluminum Alloy, Bronze and Alloy Steel. Gives drawings with dimensions and notes for Nos. 8-32, 10-32, 1/2-28, 5/16-24, 3/8-24, 7/16-20, 1/2-20, and 9/16-18. Developed by National Aircraft Standards Committee.

Aeronautical Chamber of Commerce of America, Inc. National Aircraft Standard NAS 220, 221, 222, 223, 224, 225, 226, and 227; 1944. Screws—Brazier Head, Phillips Recess. Gives drawings with dimensions and notes for Nos. 8-32, 10-32, 1/4-28, 5/16-24, 3/8-24, 7/16-20, 1/2-20, and 9/16-18. Developed by National Aircraft Standards Committee.

Aeronautical Chamber of Commerce of America, Inc. National Aircraft Standard NAS 228, 229, 230, 231, 232, 233, 234, and 235; 1944. Screws—Brazier Head, Frearson Recess. Gives drawings with dimensions and notes for Nos. 8-32, 10-32, 1/4-28, 5/16-24, 3/8-24, 7/16-20, 1/2-20, and 9/16-18. Developed by National Aircraft Standards Committee.

American Institute of Bolt, Nut and Rivet Manufacturers. Bolt, Nut and Rivet Standards, 1941. Includes tables of sizes and dimensions (American Standards B18c-1930) for machine screws—flat, round, oval, and fillister head; and wood screws—round, flat, and oval head.

Edison Electric Institute. Suggestions for Lag Screws, No. TD-3; 1938. For use in overhead construction. Gives requirements for material, dimensions, threads, strength, preferred sizes and kinds, finish, packing and shipping, inspection, rejections, and dimensional drawings.

Radio Manufacturers Assn. Machine Screws, M4-101, M4-115, and M4-116; 1942. For split knurl shaft end and medium fit screws in the fine thread series, table of dimensions for 1/4 to 7/8 in. screws. Conforms to S.A.E. standards. Standard machine screws conform to American Standard approved by the American Standards Assn.

Society of Automotive Engineers. Aeronautical Standards 31 and 32; 1941. Screw Heads, Flat Fillister (Aircraft Engine). Diagrammatic dimensional drawings of (31) regular type and (32) lockwire type, cadmium plated, nickel molybdenum steel screw heads No. 10 to 3/8 in. in size.

Society of Automotive Engineers. Aeronautical Standard 77; 1942. Screw; De-Icer Attachment. Diagrammatic dimensional drawing.

Society of Automotive Engineers. Aeronautical Standard 78; 1942. Screw; De-Icer Rivnut Plug. Diagrammatic dimensional drawing.

Society of Automotive Engineers. Aeronautical Standard 135; 1943. Screw Heads, Flat Fillister—Large Fillet Aircraft Engine. Diagrammatic drawing.

Society of Automotive Engineers and American Society of Mechanical Engineers, sponsors. American Standards Assn., B18c-1930. Slotted Head Proportions of Machine Screws, Cap Screws, and Wood Screws. Similar to corresponding portion of U. S. Gov., Dept. of Commerce, National Bureau of Standards Handbook H28, Screw-Thread Standards for Federal Services, listed below.

Society of Automotive Engineers and American Society of Mechanical Engineers, sponsors. American Standards Assn., B18.3-1936. Socket Set Screws and Socket Head Cap Screws. Similar to corresponding portion of U. S. Gov., Dept. of Commerce, National Bureau of Standards Handbook H28, Screw-Thread Standards for Federal Services, listed below.

Society of Automotive Engineers and American Society of Mechanical Engineers, sponsors. American Standards Assn. B18.3a-1944. Supplement to American Standard Socket Set Screws and Socket Head Cap Screws. Gives drawings and table showing data for hexagonal and fluted type socket head shoulder screws (stripper bolts) optional.

Society of Automotive Engineers. 1944 Handbook, Section 5—Screws, Bolts, and Washers. S.A.E. Standard Slotted Head Screws. Adopted, 1930. Diagrams and tables of sizes, tolerances and dimensions for flat head machine and cap screws, fillister head machine and cap screws, button head cap screws, flat head machine screws, oval head machine screws, round head machine screws, and round and oval head wood screws.

U. S. Gov., Army-Navy Aeronautical Specification AN-S-24a; 1944. Screws; Self-Tapping Steel.

U. S. Gov., Army-Navy Aeronautical Specification AN-S-52; 1944. Screws; Machine, Cap and Set.

U. S. Gov., Dept. of Commerce, National Bureau of Standards Handbook H28; 1944. Screw-Thread Standards for Federal Services. Presents complete dimensional data upon which specifications may be based for threaded products for government requirements. Includes terminology (definitions and symbols); machine screws, machine-screw and stove-bolt nuts, and set screws; socket set screws and socket-head cap screws; and appendixes containing supplementary information or

both a general and a technical nature, including such specifications as are not intended to be mandatory.

U. S. Gov., Dept. of Commerce, National Bureau of Standards Commercial Standard CS37-31; 1931. Steel Bone Plates and Screws. A commercial standard selected and adopted by industry for Sherman type bone plates made of chromium-vanadium steel, requirements on chemical composition of plates and screws corresponding to S.A.E. steel No. 6150, hardness, dimensions and design for 14 plate sizes, and 11 screw sizes. Sponsored by the American College of Surgeons.

U. S. Gov., Federal Specification FF-H-136, 1936. Hardware and Fittings; for Lavatory Partitions and Inclosures. Covers hardware and fittings for lavatory stall and shower partitions and inclosures of marble, slate, or glass. Types for marine use are not included. Includes bolts, latches, screw fastenings, partition fittings, gravity and spring hinges, hooks, top and bottom partition standards, strikes, top rail and shower curtain rods and fittings. Gives requirements covering dimensions, illustrations, composition of material used, workmanship, fastenings, finish, and details; methods of inspection and tests; and packing and marking. Emergency Alternate Federal Specification E-FF-H-136; July 1943, changed requirements for material and finish in order to conserve metal, especially bronze.

U. S. Gov., Federal Specification FF-S-91; 1934. Screws, Machine; Including Screws, Set. Covers five types of machine screws—(I) flat head, (II) round head, (III) oval head, (IV) oval fillister head, and (V) flat fillister head; and nine types of set screws—(A) square head, cup point; (B) square head, round point; (C) square head, cone point; (D) headless, cup point; (E) headless, round point, (F) headless, cone point; (G) socket head, cup point; (H) socket head, round point; and (I) socket head, cone point. Covers material and workmanship; general requirements; detail requirements for each type; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., Navy Dept. Specification 42S1h; 1942. Screws; Wood, Lag or Coach and Hanger.

U. S. Gov., Navy Dept. Specification 42S5e; 1944. Screws—Machine, Cap and Set; and Nuts.

U. S. Gov., Navy Dept. Specification 43S4; 1936. Screws, Machine; and Nuts, Aluminum-Alloy and Steel (Corrosion-Resisting) (Aircraft Use).

U. S. Gov., Treasury Dept., Procurement Div., 530; 1942. Screw-Eyes. Covers five classes—(A) Large eye, regular shank; (B) medium eye, regular shank; (C) medium eye, short shank; (D) small eye, regular shank; and (E) small eye, short shank. Shall be formed of smooth wire stock. Gives requirements for sizes, tolerances, and finish; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., Treasury Dept., Procurement Div., 660; 1944. Screws; Thumb, Steel. Covers one type and two classes—(A) with shoulder and (B) without shoulder. Gives requirements for sizes, material, workmanship, threads, manufacture, style of point, flattening test, case hardening, surface finish, marking, and details for each class; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., U. S. Army, Signal Corps. Specification 29-37A; 1934. Screw; Lag, for Telephone Line Construction.

*References.*—Methods of testing, general requirements for metals, *see* 600.1; noncorrosive coatings and tests, *see* 600.3; standard threads, *see* 608.0; bolt and screw stock steel, *see* 603.21; brass screw stock, *see* 645.11; rigging screws, *see* 608.7; packaging of lag bolts, *see* 608.31.

## 608.3 BOLTS AND NUTS, EXCEPT RAILWAY TRACK BOLTS

### 608.30 General Items

American Society of Mechanical Engineers, Society of Automotive Engineers, sponsors. American Standards Assn., B 18.2-1941. American Standard Wrench-Head Bolts and Nuts and Wrench Openings. Similar to corresponding portion of U. S. Gov., Dept. of Commerce, National Bureau of Standards Handbook H 28, Screw-Thread Standards for Federal Services, listed below. This 1941 Standard is a comprehensive revision of the 1933 Report, with many of the dimensions changed, footnotes amplified, much new material added, and some 65 illustrations included. Dimensions are for—regular series; heavy series; cap screw heads; set screw heads; regular nuts, jam nuts, and slotted nuts; machine screw and stove bolt nuts; heavy nuts and jam nuts; heavy slotted nuts; light nuts and light jam nuts; light thick nuts; light slotted nuts; light thick slotted nuts; light castle nuts; and open end wrench openings for regular, heavy, and light series bolts and nuts. An appendix gives the formulas upon which dimension and tolerance are based and the thread length.

Society of Automotive Engineers and American Society of Mechanical Engineers, sponsors. American Standards Assn., B18.2-1941. American Standard Wrench-Head Bolts and Nuts and Wrench Openings. Similar to corresponding portion of U. S. Gov., Dept. of Commerce, National Bureau of Standards Handbook H28, Screw-Thread Standards for Federal Services.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Handbook H28; 1944. Screw-Thread Standards for Federal Services. Presents complete dimensional data upon which specifications may be based for threaded products for government requirements. Includes terminology (definitions and symbols); American National form of thread; American National thread series; wrench-head bolts and nuts; round unslotted head bolts; and appendixes containing supplementary information of both a general and a technical nature, including such specifications as are not intended to be mandatory.

### 608.31 Bolts

Aeronautical Chamber of Commerce of America, Inc. National Aircraft Standard NAS 28; 1941. Bolt—Tank Strap; Adjustment. Gives drawings with dimensions and notes. Developed by National Aircraft Standards Committee.

Aeronautical Chamber of Commerce of America, Inc. National Aircraft Standard NAS 144, 145, 146, 147, 148, 149, 150, 152, 154, 156, and 158; 1943. Bolts—Internal Wrenching, Steel. Gives drawings with dimensions and notes for Nos. 1/4-28, 5/16-24, 3/8-24, 7/16-20, 1/2-20, 9/16-18, 5/8-18, 3/4-16, 7/8-14, 1-14, and 1 1/8-12. Developed by National Aircraft Standards Committee.

Aeronautical Chamber of Commerce of America, Inc. National Aircraft Standard NAS 172, 174, 176; 1944. Bolt—Interval Wrenching; Steel. Gives drawings with dimensions and notes for Nos. 1 1/4-12, 1 3/8-12, and 1 1/2-12. Developed by National Aircraft Standards Committee.

American Institute of Bolt, Nut and Rivet Manufacturers. Bolt, Nut and Rivet Standards, 1941. Includes tables of dimensions for regular bolt heads (American Standard B18.2-1941) (unfinished square and hexagon, semi-finished hexagon); heavy bolt heads (American Standard B18.2-1941) (unfinished square and hexagon, semi-finished hexagon); cap screw heads (hexagon); set screw heads (American Standard B18.2-1941) (square); tap bolts (square and hexagon); body bolts (turned or ground); joint bolts; lag bolts; square neck, ribbed neck, fin neck, and countersunk carriage bolts (American Standard B18.5-1939); button head, step, and countersunk bolts (American Standard B18.5-1939); plow bolts (round head, square neck, countersunk; square head, countersunk; round head, heavy key countersunk; round head, reverse key, countersunk); stud bolts (tap end, double end, continuous thread); hanger bolts (plain or ribbed shoulder); elevator bolts (flat head, countersunk; ribbed headslotted and unslotted); T-head bolts; bent bolts (J, hook round bend, hook square bend, hook right angle bend, hook special, eye closed, eye open, U round bend, U square bend); deck bolts; askew head bolts; T-bolts for use in American Standard T-slots (Tentative American Standard B5a-1927); and thread length and length tolerance of bolts (standard, lag, and tap).

American Society of Mechanical Engineers. Joint sponsor with National Machine Tool Builders Assn. and Society of Automotive Engineers. American Standards Assn., B5.1-1941. T Slots, Their Bolts, Nuts, Tongues, and Cutters. Tables of dimensions and tolerances of standard sizes.

American Society of Mechanical Engineers. Joint sponsor with Society of Automotive Engineers. American Standards Assn., B18f-1928. Plow Bolts. Tables of dimensions and threads for round head, square neck; for square head; for round head, heavy key; for round head reverse key countersunk plow bolts.

Assn. of American Railroads, Operations and Maintenance Dept., Engineering Div., Signal Section. Manual of Recommended Practice. Specification for Bolts, Nuts, and Threads, 1943. The recommended specifications are current American Standards B18.2 (Wrench-Head Bolts and Nuts and Wrench Openings) and B1.1 (Screw Threads) issued by A. S. A. Unless otherwise specified, bolts and nuts shall be of steel, hot-rolled or cold-finished, and shall be American Standard regular, unfinished.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1944. Boiler Studs. Recommended Practice, adopted 1943. Gives drawings and tables showing dimensions for standard studs and studs with oversize butts.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1944. Cylinder and Valve Head Studs. Recommended Practice, revised 1943. Gives drawings and table showing dimensions.

Edison Electric Institute. Suggestions for Specifications for Bolts and Nuts, TD-1; 1937. Covers machine bolts, double arm bolts, carriage bolts, guy clamp bolts and nuts, and other small bolts commonly used in overhead line construction. Gives requirements for material, dimensions, threads, strength, galvanizing, preferred sizes, finish, packing and shipping, inspection, rejection, and dimensional drawing.

Edison Electric Institute. Suggestions for Specifications for Eye Bolts, TD-4; 1939. For use in overhead line construction. Gives requirements for material, dimensions, threads, strength, galvanizing, preferred sizes, finish, packing and shipping, inspection, rejections, and dimensional drawing.

Plain Washer Manufacturers' Assn. Expansion Plugs—Steel, 1938. Gives diameters, thickness of metal, radius, and number of pieces per pound for various standard sizes.

Society of Automotive Engineers. Aeronautical Standard 30; 1941. Bolt Heads; Hexagon (Aircraft Engine). Diagrammatic dimensional drawings for cadmium plated steel bolts 1/4 in. to 3/4 in. in size.

Society of Automotive Engineers. Aeronautical Standard 134; 1943. Bolt Heads; Hexagonal—Large Fillet Aircraft Engine. Diagrammatic drawing.

Society of Automotive Engineers and American Society of Mechanical Engineers, Sponsors. American Standards Assn., B18.5-1939. Round Unslotted Head Bolts; Carriage Bolts; Button-Head, Step, and Countersunk Bolts; Bolt and Thread Lengths. Similar to corresponding portion of U. S. Gov., Dept. of Commerce, National Bureau of Standards Handbook H28, Screw-Thread Standards for Federal Services, listed below.

Society of Automotive Engineers. 1944 Handbook, Section 5—Screws, Bolts, and Washers. S. A. E. Standard Connecting Rod Bolts, revised 1941. Gives diagram and table of sizes and dimensions.

Society of Automotive Engineers. 1944 Handbook, Section 5—Screws, Bolts, and Washers. S. A. E. Standard Round Unslotted Head Bolts, corrected 1942. Diagrams and tables of sizes, dimensions and tolerances for square, fin and ribbed neck carriage bolts, step bolts, button head bolts, countersunk carriage bolts and countersunk bolts; and table of minimum usable thread lengths of round unslotted head bolts.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Handbook H28; 1942. Screw-Thread Standards for Federal Services. Presents complete dimensional data upon which specifications may be based for threaded products for government requirements. Includes terminology (definitions and symbols); American National coarse- and fine-thread series for bolts, nuts, tapped holes, and general application (form of thread, thread series, classification and tolerances, tables of limiting dimensions, and gages); wrench-head bolts and nuts (series of bolt heads and nuts, recommended requirements for bolts and cap screws, tables of dimensions for bolts and cap screws, recommended requirements and tables of dimensions for nuts); round unslotted head bolts (recommended requirements for workmanship, thread series, and details of design, and tables of dimensions for square-neck, ribbed-neck, fin-neck, and countersunk carriage bolts, button-head bolts, stay bolts, and countersunk bolts); and appendixes containing supplementary

information of both a general and a technical nature, including such specifications as are not intended to be mandatory.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R23-24; 1924. Plow Bolts. This recommendation establishes a simplified list of types and sizes of plow bolts. Sponsored by Farm Equipment Institute.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R60-43; 1943. Packaging of Carriage, Machine, and Lag Bolts. This recommendation establishes packing lists showing full-container quantity and approximate gross weight for each size and type of bolt covered, also the approximate weight per 100 bolts for each type and size of bolt. Sponsored by the American Institute of Bolt, Nut, and Rivet Manufacturers.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R169-37; 1937. Machine, Carriage, and Lag Bolts (Steel) (Stock-Production Sizes). This recommendation establishes a simplified schedule of stock-production sizes of square-head and hexagon-head machine bolts, square-neck carriage bolts, and lag bolts. Sponsored by the American Institute of Bolt, Nut, and Rivet Manufacturers.

U. S. Gov., Federal Specification FF-B-561; 1937. Bolts; Lag, Steel (Lag-Screws). Covers uncoated and zinc-coated, square head lag-bolts in four types—(1) gimlet point, cut thread, unfinished; (2) gimlet point, rolled thread, unfinished, shouldered; (3) cone point, cut thread, unfinished; and (4) cone point, rolled thread, unfinished, shouldered; three grades—(A) alloy or carbon steel, (B) carbon steel, and (C) commercial steel; in standard sizes—No. 10 to 1 1/4-in. nominal diameter, inclusive; and in lengths from 1 to 16 in., inclusive. Gives general and detail requirements; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Federal Specification FF-B-571a; 1934. Amendment 1; 1935. Bolts; Nuts; Studs; and Tap Rivets (and Material for Same). Includes three types of bolts—(A) square head (unfinished, semifinished, and finished), (B) hexagonal head (unfinished, semifinished, and finished); and (C) round unslotted head (button head and square neck carriage). Gives general and detail requirements; methods of sampling, inspection, and test; and requirements for packaging, packing, and marking.

U. S. Gov., Navy Dept. Specification 1B2c; 1942. Bolts and Clips, Alloy Steel; and Nuts, Carbon-Steel; Holding-Down, for Ordnance Mounts.

U. S. Gov., Navy Dept. Specification 43B2d; 1937. Bolts (and Nuts); Deck.

U. S. Gov., Navy Dept. Specification 43B11c; 1936. Studs; Bolts; Nuts; and Tap Rivets (and Material for Same).

U. S. Gov., Navy Dept. Specification 43B14d; 1943. Bolt-Studs, Nuts, and Bars; Round, Steel, for Service at Temperatures Up to 850° F.

U. S. Gov., Navy Dept., U. S. Coast Guard, Bureau of Marine Inspection and Navigation. Marine Engineering Regulations and Material Specifications, 1942. Contains specifications and requirements for materials, design, construction, installation, and inspection of boilers, unfired pressure vessels and appurtenances thereof, also piping, valves, fittings, flanges, safety valves, etc., upon the strength and efficiency of which safety of life is dependent, and are intended for maximum temperatures of 1,000° F. Includes specifications for alloy-steel bolting material for boiler and pressure vessel parts or attachments, valves, flanges, and fittings for high-temperature service to 1,000° F.—process, heat treatment, chemical composition, tensile properties, Brinell hardness test, workmanship, finish, and nuts and washers.

U. S. Gov., Navy Dept., U. S. Coast Guard, Bureau of Marine Inspection and Navigation. Marine Engineering Regulations and Material Specifications, 1942. Contains specifications and requirements for materials, design, construction, installation, and inspection of boilers, unfired pressure vessels, and appurtenances thereof, also piping, valves, fittings, flanges, safety valves, etc., upon the strength and efficiency of which safety of life is dependent, and are intended for maximum temperatures of 1,000° F. Includes specifications for two grades (A and B) of stay-bolt steel—process, chemical composition, bending properties, test specimens, number of tests, permissible variation in diameter, finish, and marking.

U. S. Gov., Treasury Dept., Procurement Div., No. 553; 1942. Bolts; Toggle. Covers—type I, two-piece wing, trunnion nut on wing; and type II, one-piece (solid) wing; each with four styles—(1) round head bolt, (2) flat head bolt, (3) oven (mushroom) head bolt, (4) threaded rod with nut. Two classes—(A) trunnion nut on wing, and (B) riveted wing threaded rod with nut. Gives requirements for material, finish, threaded members, diameter of bolt, length of bolt, threads per inch, spread of wing, thickness of steel of wing, wing, removable bolt, and threaded rod; methods of sampling and inspection; and packaging, packing, and marking.

U. S. Gov., Treasury Dept., Procurement Div., No. 576; 1942. Anchors; Bolt, Concrete and Masonry (for Use With Caulking Tool). Covers—type I, head out, and type II, nut out; class A, with stud bolt: class B, without bolt, long; and class C, without bolt, short. Gives requirements for material, caulking tool, measurement of screws, threading, finish, size, threads per inch, length of anchor, length of bolt, proof load, and recommended safe load; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., Treasury Dept., Procurement Div., No. 584; 1942. Shields; Expansion, Metal. Covers—type I, lag screw; type II, machine bolt; class A, closed end (bottom bearing); class B, open end; style 1, single, and style 2, double. Gives requirements for material, finish, threaded members, marking, screws, diameter of lag screw or bolt, outside diameter of shield, length of shield, and proof load; methods of sampling, inspection, and tests; and packaging, packing, and marking.

*References.*—Alloy steel bolts, *see* 622.1; methods of testing, general requirements for metals, *see* 600.1; noncorrosive coatings and tests; *see* 600.3; standard threads and threading, *see* 608.0, 608.30; stock for steel and alloy steel bolts, *see* 603.21, 622.1.

## 608.32 Nuts

American Institute of Bolt, Nut and Rivet Manufacturers. Bolt, Nut and Rivet Standards, 1941. Include tables of dimensions (American Standard B18.2-1941) for regular, heavy, and light nuts and jamb nuts (unfinished and semifinished); regular, heavy, light, and thick light semifinished slotted nuts; light thick semifinished hexagon nuts; light semifinished hexagon castle nuts; and square and hexagon machine screw and stove bolt nuts.

American Society of Mechanical Engineers. Joint sponsor with National Machine Tool Builders Assn. and Society of Automotive Engineers. American Standards Assn., B5.1-1941. T Slots, Their Bolts, Nuts, Tongues, and Cutters. Tables of dimensions and tolerances of standard sizes.

Assn. of American Railroads, Operations and Maintenance Dept., Engineering Div., Signal Section. Manual of Recommended Practice. Specification for Bolts, Nuts, and Threads, 1943. The recommended specifications are current American Standards B18.2 (Wrench-Head Bolts and Nuts and Wrench Openings) and B1.1 (Screw Threads) issued by A.S.A. Unless otherwise specified, bolts and nuts shall be of steel, hot-rolled or cold-finished, and shall be American Standard regular, unfinished.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Castle Nuts, Cotter Pins, and Location of Cotter Pin Holes in Projecting Bolt Ends. Table of dimensions and standard designs for bolt ends, castle nut, cotter and taper pins.

Edison Electric Institute. Specifications for Bolts and Nuts, TD-1; 1937. Includes machine bolts, double arm bolts, carriage bolts, guy clamp bolts and nuts, and other small bolts commonly used in overhead line construction. Requirements as to materials and galvanizing in accordance with A.S.T.M. specifications listed, dimensions follow American Standards, except guy clamp bolt as per dimensional diagram, thread, strength, preferred sizes, finish, and packaging.

Society of Automotive Engineers. Aeronautical Standards 33, 34, and 35. Nuts; Aircraft Engine. Diagrammatic dimensional drawings of (33) plain hexagonal, (34) castellated hexagonal, and (35) shear slotted hexagonal cadmium plated, nickel molybdenum steel nuts 1/4 in. to 1 in. in size.

Society of Automotive Engineers. 1944 Handbook, Section 5—Screws, Bolts, and Washers. S.A.E. Recommended Practice for Slots in Plain Nuts and for Cap or Acorn Nuts, revised 1942. Gives diagrams and tables showing sizes and dimensions.

Society of Automotive Engineers. 1944 Handbook, Section 5—Screws, Bolts, and Washers. S.A.E. Standard High Nuts, revised 1942. Diagram and table of sizes and dimensions.

U. S. Gov., Army Air Forces. Specification 25531-2; 1944. Nuts; Self-Locking (High Temperature).

U. S. Gov., Army Air Forces. Specification No. 25533; 1942. Nuts; Sheet Spring.

U. S. Gov., Army Air Forces. Specification No. 25535; 1944. Nut; Instrument Mounting.

U. S. Gov., Army-Navy Aeronautical Specification AN-N-2; 1943. Nuts; Aircraft.

U. S. Gov., Army-Navy Aeronautical Specification AN-N-5; 1944. Nuts; Self Locking.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Handbook H28; 1942. Screw-Thread Standards for Federal Services. Presents complete dimensional data upon which specifications may be based for threaded products for government requirements. Includes terminology (definitions and symbols); American National coarse- and fine-thread series for bolts, nuts, tapped holes, and general application (form of thread, thread series, classification and tolerances, tables of limiting dimensions, and gages); wrench-head bolts and nuts (series of bolt heads and nuts, recommended requirements for bolts and cap screws, tables of dimensions for bolts and cap screws, recommended requirements and tables of dimensions for nuts); round unslotted head bolts (recommended requirements for workmanship, thread series, and details of design, and tables of dimensions for square-neck, ribbed-neck, fin-neck, and countersunk carriage bolts, button-head bolts, stay bolts, and countersunk bolts); and appendixes containing supplementary information of both a general and a technical nature, including such specifications as are not intended to be mandatory.

U. S. Gov., Federal Specification FF-B-571a; 1934. Amendment 1; 1935. Bolts; Nuts; Studs; and Tap Rivets (and Material for Same). Includes two types of nuts—(A) hexagonal (unfinished regular, semifinished regular, finished regular, castle, semifinished jam, finished jam, and light); and (B) square (unfinished regular, semifinished regular, and semifinished jam). Gives general and detail requirements; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Navy Dept. Specification 43B2d; 1937. Nuts (and Bolts); Deck.

U. S. Gov., Navy Dept. Specification 43B11c; 1936. Nuts; Bolts; Studs; and Tap Rivets (and Material for Same).

U. S. Gov., Navy Dept. Specification 43B14d; 1943. Bolt-Studs, Nuts, and Bars; Round, Steel, for Service at Temperatures Up to 850° F.

U. S. Gov., Navy Dept. Specification 45L1; 1934. Locknuts; Iron (Cast).

U. S. Gov., Navy Dept. Specification 45N1d; 1941. Locknuts; Bronze.

U. S. Gov., Navy Dept. Specification 43S4; 1936. Nuts (and Screws); Machine, Aluminum-Alloy and Steel (Corrosion-Resisting) (Aircraft Use).

U. S. Gov., Navy Dept., U. S. Coast Guard, Bureau of Marine Inspection and Navigation. Marine Engineering Regulations and Material Specifications, 1942. Contains specifications and requirements for materials, design, construction, installation, and inspection of boilers, unfired pressure vessels and appurtenances thereof, also piping, valves, fittings, flanges, safety valves, etc., upon the strength and efficiency of which safety of life is dependent, and are intended for maximum temperatures of 1,000° F. Includes specifications for carbon and alloy-steel nuts for bolts used in high-temperature service up to 1,000° F.—process, fabrication, stress relieving, chemical composition, tests, and finish.

*References.*—Methods of testing, general requirements for metals, *see* 600.1; noncorrosive coatings

and tests, *see* 600.3; standard threads and threading, *see* 608.0, 608.30; stock for steel and alloy steel bolts, *see* 603.21, 622.1; lock nuts for ball bearings, *see* 766.2.

## 608.4 RIVETS, IRON OR STEEL

Aeronautical Chamber of Commerce of America, Inc. National Aircraft Standard NAS 177 and 178; 1943. Pin, 100°C.; Sunk Head Hi-Shear Rivet and Pin; Flat Head Hi-Shear Rivet. Gives drawings with dimensions and notes. Developed by National Aircraft Standards Committee.

Aeronautical Chamber of Commerce of America, Inc. National Aircraft Standard NAS 179; 1944. Collar; Hi-Shear Rivet. Gives drawing with dimensions and notes. Developed by National Aircraft Standards Committee.

American Bureau of Shipping. Rules for the Classification and Construction of Steel Vessels, 1944. Iron Rivets. Includes rules for inspection and tests.

American Institute of Bolt, Nut and Rivet Manufacturers. Bolt, Nut and Rivet Standards, 1941. Includes tables of dimensions (American Standard B18a-1927) for small rivets—flat head, countersunk head, button head, pan head, truss or wagon-box head, tinners', coopers', and belt rivets; and tables of dimensions (American Standard B18.4-1937) for large rivets; hold-on (dolly bar) and rivet set impressions—button head, high button head, cone head, flat-top countersunk head, round-top countersunk head, pan head, and swell neck; and table of weights of rivets.

American Society of Mechanical Engineers and Society of Automotive Engineers, sponsors. American Standards Assn., B 18a-1927, with 1942 addendum, B 18a1-1942. Small Rivets, Under 7/16-Inch Diameter. Chemical composition, strength, ductility, and hardness tests for the rivet material, tables of standard dimensions and tolerances for the standard types, flat head, countersunk head, button-head, pan-head, and truss or wagon-box-head rivets.

American Society of Mechanical Engineers, Society of Automotive Engineers, sponsors. American Standards Assn., B 18g-1929, with 1942 Addendum, B 18g1-1942. Tinners', Coopers', and Belt Rivets. The types of small rivets covered by this standard are designated, respectively, as tinners', coopers', and belt. Recommendations concern proportions, tolerances, composition and physical properties of rivet material, physical tests of rivets, finish, and dimensions.

American Society for Testing Materials, A 31-40; 1940. A.S.M.E. Boiler Construction Code Specification SA-31. American Standards Assn., G28.1-1942. Boiler Rivet Steel and Rivets. For two Grades, based on tensile strength, to be used in boilers and other pressure vessels. Gives requirements for chemical composition, analysis, tensile and bending properties, test specimens, permissible variations in diameter, finish, and inspection; for rolled steel bars and rivets.

American Society for Testing Materials, A 152-39; 1939. Wrought-Iron Rivets and Rivet Rounds. Gives requirements for rolled bars; chemical composition, tensile and bending properties, micrographic examination, permissible variations in diameter; and for finished rivets, flattening, etch test, workmanship, and inspection.

American Society for Testing Materials, A 195-41; 1941. American Assn. of State Highway Officials, M 98-41. American Standards Assn., G42.1-1942. High-Strength Structural Rivet Steel. For use with structural silicon steel and equivalent steels; annealing, chemical composition, ladle analysis, tensile properties, upsetting test, test specimen, and permissible variations in size.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Rivet Steel and Rivets, M-110-40; 1940. Covers carbon steel bars for rivets and finished rivets for boilers, locomotive tanks and underframes, passenger and freight equipment cars. Requirements for chemical and physical properties of steel, bend and flattening tests, and tolerances for finished rivets.

Society of Automotive Engineers. Aeronautical Material Specification No.7225; 1940. Steel Rivets (Annealed). Gives requirements for composition, condition, quality, and rejections.

Society of Automotive Engineers. Aeronautical Material Specification No.7228; 1940. Rivets; Corrosion-Resistant Steel. Gives requirements for composition, condition, quality, reports, and rejections.

Society of Automotive Engineers and American Society of Mechanical Engineers, sponsors. American Standards Assn., B18.4-1937. Large Rivets. These rivets are designed for use in structural work of bridges, buildings, and in ship and boiler construction. Covers button- and high-button heads, flat- and round-top countersunk heads, cone- and pan-heads. Dimensions include the driven shapes of four of the six types of rivets, the corresponding hold-on and rivet-set impressions.

Society of Automotive Engineers. 1944 Handbook, Section 4—Fabricated Materials. S.A.E. Recommended Practice for Split and Tubular Rivets, revised 1929. Gives diagrams and tables of sizes and dimensions for rivet caps, flat head, oval head, cupped countersunk-head, flat countersunk-head, and oval head split and tubular rivets.

U. S. Gov., Federal Specification FF-B-571a; 1934. Amendment 1; 1935. Bolts; Nuts; Studs; and Tap Rivets (and Material for Same). Includes one type of tap rivets. Gives general and detail requirements; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Navy Dept. Specification 43B11c; 1936. Rivets, Tap; Bolts; Nuts; Studs (and Material for Same).

U. S. Gov., Navy Dept. Specification 43R1f; 1943. Rods, Rivet (and Rivets); Steel, for Hull Construction.

U. S. Gov., Navy Dept. Specification 43R2e; 1944. Rivets; Sheet-Metal-Work.

U. S. Gov., Navy Dept. Specification 43R3a; 1941. Rivets, (and Rods, Rivet); Boiler.

U. S. Gov., Navy Dept., U. S. Coast Guard, Bureau of Marine Inspection and Navigation. Marine Engineering Regulations and Material Specifications, 1942. Contains specifications and requirements for materials, design, construction, installation, and inspection of boilers; unfired pressure vessels and appurtenances thereof; also piping, valves, fittings, flanges,

safety valves, etc., upon the strength and efficiency of which safety of life is dependent, and are intended for maximum temperatures of 1,000° F. Includes specifications for rivet iron and iron rivets—material, chemical composition, tensile properties, bend tests, test specimens, number of tests, micrographic tests, physical properties and tests, workmanship and finish, inspection, and rejection.

U. S. Gov., Navy Dept., U. S. Coast Guard, Bureau of Marine Inspection and Navigation. Marine Engineering Regulations and Material Specifications, 1942. Contains specifications and requirements for materials, design, construction, installation, and inspection of boilers; unfire pressure vessels and appurtenances thereof; also piping, valves, fittings, flanges, safety valves, etc., upon the strength and efficiency of which safety of life is dependent, and are intended for maximum temperatures of 1,000° F. Includes specifications for three grades of rivet steel—(A) and (B) low carbon and (C) chrome-manganese-silicon alloy-steel; and requirements for rivets—chemical composition, tensile and bending properties, test specimens, tests of finished rivets, permissible variations in diameter, workmanship, and finish.

U. S. Gov., Treasury Dept., Procurement Div., No.574; 1942. Rivets; Bifurcated. Covers—type I, truss head; and Type II, countersunk head. Gives requirements for material, finish, heads, diameter of shank, diameter of head, height of head, and length; methods of sampling and inspection; and packaging, packing, and marking.

U. S. Gov., Treasury Dept., Procurement Div., No.575; 1942. Rivets; Steel, Structural. Covers—type I, button head; II, high button head (acorn); III, cone head; IV, flat head; V, flat top countersunk head; VI, round top countersunk head; VII, pan head, 7/16-in. nominal diameter and smaller; VIII, pan head, 1/2-in. nominal diameter and larger; and IX, truss (wagon box) head. Gives requirements for material, measurement of lengths, fillets, manufacture, diameter of body, diameter of head, height of head, and length; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., Treasury Dept., Procurement Div., No.582; 1942. Rivets, Belt, and Brake Band; and Burrs, Belt-Rivet. Covers two types—(I) belt rivets, and (II) brake band rivets. Gives requirements for material, finish, burrs, size, shank diameter, diameter under head, diameter of head, height of head, and overall length; methods of sampling and inspection; and packaging, packing, and marking.

*References.*—Alloy steel rivets, *see* 622.9; methods of test, general requirements for metals, *see* 600.1; noncorrosive coatings and tests, *see* 600.3; stock for steel and alloy steel rivets, *see* 603.21, 621.31.

## 608.5 PINS AND SHAFT KEYS

### 608.51 Pins, Cotter, Dowel, Rod End Pins, Etc.

Society of Automotive Engineers. Aeronautical Material Specification No.7210; 1940. Cotter Pins; Corrosion-Resistant Steel. Gives requirements for composition, condition, quality, shape, tolerance, sizes, reports, and rejections. Similar Specifications: Federal FF-P-386, Type C; Navy 42 P7, Type C; S.A.E. 30915.

Society of Automotive Engineers. Aeronautical Material Specification No.7212; 1942. Steel Cotter Pins; Galvanized, Low-Carbon. Gives requirements for composition, condition, quality, shape, tolerances, sizes, reports, and rejections. Similar Specifications: Navy 47P7, Type B; Federal FF-P-386, Type B; S.A.E. 1010.

Society of Automotive Engineers. Aeronautical Material Specification No.7213; 1943. Cotter Pins; Medium-Carbon, Steel-Zinc Plated. Gives requirements for chemical composition, condition, quality, shape, tolerances, sizes, reports, and rejections. Similar Specifications: Navy 42P7, Type B; Federal FF-P-386, Type B; S.A.E. 1040.

Society of Automotive Engineers. Aeronautical Standard 39; 1941. Stainless Steel Cotter Pins; Aircraft Engine. Diagrammatic dimensional drawings showing minimum eye and drill hole diameters of corrosion resistant steel (18 chromium—8 nickel) cotter pins 1/16 in. to 5/16 in. in diameter, .313 in. to 2.500 in. in length.

Society of Automotive Engineers. Aeronautical Standard 40; 1941. Dowel Pins; Aircraft Engine. Diagrammatic dimensional drawing of recommended fits for dowel pins 1/16 in. to 1/2 in. in diameter, .250 in. to 2.000 in. in length.

Society of Automotive Engineers. Aeronautical Standard 132; 1943. Pin-Taper. Gives diagram and table showing dimensions and tolerances for tapered pins.

Society of Automotive Engineers. Aeronautical Standard 133; 1943. Pin-Clevis. Gives diagram and table showing dimensions and tolerances for clevis pins.

Society of Automotive Engineers. 1944 Handbook, Section 5—Screws, Bolts, and Washers. S.A.E. Standard Cotter Pins, revised 1942. Gives diagram and table of sizes and dimensions.

U. S. Gov., Federal Specification FF-P-386a; 1943. Amendment 2; 1944. Pins; Cotter, Split. Covers four types—(A) brass, (B) carbon steel, (C) chromium-nickel corrosion-resisting steel, and (D) chromium corrosion-resisting steel. Gives requirements for material, workmanship, finish, temper, ductility, chemical composition, zinc coating, hardness, and sizes; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Navy Dept. Specification 42P6b; 1937. Pins; Steel, Taper.

U. S. Gov., Navy Dept. Specification 42P7d; 1937. Pins; Cotter, Split.

U. S. Gov., Navy Dept. Specification 49T6b; 1939. Terminals; Tie-Rod, Threaded Clevis Type.

*References.*—Methods of testing general requirements for metals, *see* 600.1; bolt and rivet steel stock, *see* 603.21; rod ends and pins, automotive, *see* 722.33.

### 608.52 Shaft Keys

American Petroleum Institute, Div. of Production. Standard 4-A; 1939. Rig Iron Standards. Includes dimensional standards on four sizes of rig iron and on five sizes of sand reels. Rig Irons covered by this specification are for oil company purposes.

American Petroleum Institute, Div. of Production. Standard 7; 1944. Transmission Standards. For equipment and machinery used for drilling and production purposes in the oil industry. Applies to shafting and bored members, keys and keyways, and chains. Covers material, workmanship and finish, marking, shafting

and keys basic standards, shafting and keys detailed dimensions, chain, inspection and rejection, and appendices.

American Society of Mechanical Engineers. Woodruff Keys, Keyslots, and Cutters. American Standards Assn., B17f-1930. Dimensions and tolerances for standard Woodruff keys, keyslots, and cutters, standard key numbers. For keys ranging from 1/16 by 1/2 in. long to 3/8 by 1 1/2 in. long. Tables give overall dimensions of keys, distance from center of circle forming the key profile to the top of the key, and overall dimensions with maximum and minimum limits for keyslots of the series established. For the two series of keyslot cutters adopted, overall dimensions and number of teeth for both fine and coarse series, tolerances, and general design features are given.

American Society of Mechanical Engineers. American Standards Assn., B 17.1-1943. Shafting and Stock Keys. Dimensions and Tolerances for Finished Steel Shafting, Parallel Stock Keys, and Taper Stock Keys. Covers finished shafting, plain parallel stock keys, plain and gib-head taper stock keys, and tolerances on key and shafting dimensions. Gives illustrative diagrams and tables showing dimensions and tolerances.

Society of Automotive Engineers. 1944 Handbook, Section 2—Units, Parts, and Fittings. S.A.E. Standard Woodruff Keys, adopted 1929. Diagrams and tables of dimensions and details for keys, key-slot, key above shaft, and keyways.

*References.*—Methods of testing general requirements for metals, *see* 600.1; shafts, *see* 611.52; cotter keys, *see* 608.51.

### 608.53 Studs

Society of Automotive Engineers. Aeronautical Recommended Practice, 142; 1943. Stud Fits and Tolerances (Steel in Aluminum or Magnesium Alloys). Gives sizes, number of threads, hole dimensions, standard stud dimensions, data, and diagrammatic drawings showing stud end oversize identifications.

## 608.6 WASHERS

Aeronautical Chamber of Commerce of America, Inc. National Aircraft Standard NAS 70; 1942. Washer—Plain. Gives drawing with dimensions and notes. Developed by National Aircraft Standards Committee.

Aeronautical Chamber of Commerce of America, Inc. National Aircraft Standard NAS 143; 1942. Washers—X-4130 or Equivalent, H.T. 125,000 to 145,000 PSI, Countersunk and Plain Type. Gives drawings with dimensions and notes. Developed by National Aircraft Standards Committee.

Edison Electric Institute. Suggestions for Specifications for Rolled Steel Washers, No. TD-10; 1940. Covers flat, round, and square rolled steel washers commonly used in overhead line construction. Gives requirements for material, kind, dimensions, galvanizing, packing and shipping, inspection, and rejection.

Plain Washer Manufacturers' Assn. Manufacturers Standard Plain Washers, 1938. This specification lists standard outside and hole diameters, thickness of metal, and estimated number per pound for various bolt diameters; and gives permissible tolerances. Also includes narrow rim plain washers, light steel washers, plain timber construction washers, riveting washers, small standard regular plain washers (for screws), round flat washers—steel, brass, malleable, square washers (round hole), malleable iron bevel washers (square outside), formed washers—countersunk type (steel-plain, nickel-plated, brass, etc.) hardened steel tension washers, cupped washers, lock washers—spring, and shakeproof types, and internal type—flat.

Society of Automotive Engineers. Aeronautical Material Specification No. 7240; 1940. Lock-washers. Gives requirements for form (plain helical steel), composition, condition, quality, finish, bend tests, and rejections. Similar to U. S. Gov., War Dept., Specification 25523.

Society of Automotive Engineers. Aeronautical Standard 36; 1941. Plain Washers; Aircraft Engine. Diagrammatic dimensional drawing of cadmium plate, deep drawing and low carbon steel washers No. 10 to 1 in. in size.

Society of Automotive Engineers. 1944 Handbook, Section 5—Screws, Bolts, and Washers. S.A.E. Standard Lock Washers—Carbon Steel, revised 1944. Gives diagram, use and application, washer section, finish, coiling, quality of finish, material and hardness, temper test, toughness test, and table showing sizes and dimensions.

Society of Automotive Engineers. 1944 Handbook, Section 5—Screws, Bolts, and Washers. S.A.E. Standard Plain Washers, revised 1931. Gives table showing sizes and dimensions.

U. S. Gov., Army-Navy Aeronautical Specification AN-W-7a-1; 1944. Washers; Spring Lock.

U. S. Gov., Navy Dept. Specification 43 W 1e; 1944. Washers; Iron and Steel.

U. S. Gov., Navy Dept. Specification 43W2d; 1945. Washers; Brass.

U. S. Gov., Treasury Dept., Procurement Div., No. 307; 1938. Washers; Iron and Steel. Shall be of two types—round and square. Gives requirements for finishes, material, bolt size, hole size, outside dimension, thickness, and variations; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., Treasury Dept., Procurement Div., No. 414; 1940. Washers; Steel, Lock, Spring, Helical. Shall be of three classes—(A) light, (B) heavy, and (C) regular. Gives requirements for design, hardness, widths, thickness, inside diameter, and approximate weight; methods of sampling, inspection, and tests; and packaging, packing, and marking.

*References.*—Lock washers and nuts for ball bearings, *see* 766.2.

## 608.7 TURNBUCKLES

U. S. Gov., Army-Navy Aeronautical Specification AN-T-19a; 1943. Turnbuckles; Aircraft.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R71-28; 1928. Turnbuckles. This recommendation establishes a list of stock sizes of turnbuckles with and without stubs and with hook, eye, and jaw ends.

U. S. Gov., Federal Specification FF-T-791; 1936. Amendment 1; 1944. Turnbuckles. Covers three types—(I) open buckle, (II) pipe buckle, and (III) rigging

buckle; and eight classes. Gives requirements for material, workmanship, size, length of head, thread, tensile strength, bend test, finish, galvanizing, manufacture, and details for each type and class; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., Navy Dept. Specification 12T7b; 1942. Turnbuckles (Aircraft Use).

U. S. Gov., Navy Dept. Specification 12T11; 1944. Turnbuckles, for Wire Rope.

*References.*—Methods of testing, general requirements for metals, *see* 600.1; noncorrosive coatings, *see* 600.3; standard threads, *see* 608.0.

### 608.8 SNAPS AND FASTENERS

U. S. Gov., Army-Navy Aeronautical Specification AN-F-16; 1943. Fasteners; Interlocking Slide.

U. S. Gov., Navy Dept. Specification 27F10; 1941. Fasteners; Trousers (Catch-On).

### 608.9 MISCELLANEOUS MANUFACTURES

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering, 1936. Specifications for Metal Details Used in Wood Bridges and Trestles. Gives requirements for wrought iron, steel, cast iron, cap-stringer straps, spikes, packing spools or separators, cast washers, wrought washers, and special castings.

U. S. Gov., Navy Dept. Specification 42G1e; 1945. Grommets and Grommet Rings.

U. S. Gov., Navy Dept. Specification 42 J 1b; 1944. Joints; Universal, for Use Other Than for Motorboat Shafting.

U. S. Gov., Treasury Dept., Procurement Div., No.543; 1942. Fasteners; Wood Joint, Corrugated. Covers two types—(I) divergent corrugations and (II) parallel corrugations; and two classes—(A) saw edge and (B) plain edge. Gives requirements for material, workmanship, length, thickness, width, and corrugations; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., Treasury Dept., Procurement Div., No.568; 1942. Eyelets; Shoemakers'. Shall cover: Type I—visible; sizes 1, 2, and 3. Type II—invisible; sizes 1, 2, and 3. Base material shall be steel not less than 0.0075 in. in thickness and gives requirements for finish, hole diameter, color, and provision for setting; methods of sampling, inspection, and test; and packaging, packing, and marking.

## 610-619 IRON AND STEEL MANUFACTURES

## 611. CASTINGS AND FORGINGS

### 611.0 GENERAL ITEMS

American Bureau of Shipping. Rules for the Classification and Construction of Steel Vessels, 1944. Hull Castings and Machinery Castings. Include rules for inspection and tests.

American Bureau of Shipping. Rules for the Classification and Construction of Steel Vessels, 1944. Hull Forgings and Machinery Forgings. Include rules for inspection and tests.

American Iron and Steel Institute. Manufacturers' Standard Practice. Supplementary Information. Section—Forgings. Includes tables of standard forging allowances and rough turning allowances.

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering. Specifications for Buildings for Railroad Purposes: Ornamental and Miscellaneous Metal Work. Gives requirements for castings.

American Society for Testing Materials, A196-42T; 1942. Tentative Definitions of Terms Relating to Cast Iron. Gives definitions for cast iron, pig iron, gray cast iron, white cast iron, mottled cast iron, malleable cast iron, and pearlitic malleable cast iron.

American Society for Testing Materials, A 247-41T; 1941. Tentative Recommended Practice for Evaluating the Microstructure of Graphite in Gray Iron. This procedure covers the classification of flake graphite in gray cast iron by comparison with two charts illustrating standard structures. Directions for the use of these charts and a procedure by which specimens of cast iron may be prepared so that the charts can be correctly used are presented. Selection of specimen, polishing, estimation of flake size with chart, use of calibrated oculars, recording graphite structure in gray iron, and recommended procedure for polishing microsections of cast iron. Prepared jointly by the American Foundrymen's Association and the American Society for Testing Materials.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, 1938. Cast Iron. Covers definition, constants, alloying, uses, and general specifications.

Society of Automotive Engineers. 1944 Handbook, Section 3—Processed Materials. S.A.E. Standard Steels. The steel compositions included in this standard are considered adequate for practically all parts made of ferrous materials that are necessary for the production of automotive apparatus and include grades that have been found commercially available and technically adequate for the service required of such parts. Includes general instructions, explanation of S.A.E. numbering system, chemical compositions, methods of sampling for check analysis, method of determining hardenability, grain size charts for classification of steel, magnaflux testing, determination of inclusions, general characteristics and heat treatments, tension test specimens, physical properties, hardness tests, and definition of heat treating terms.

### 611.1 GRAY IRON CASTINGS

#### 611.11 Gray Cast Iron

American Gear Manufactruers Assn. Standard 242.01; 1944. Cast Iron Gear Blanks; Tentative. Covers purpose, scope, classes, material manufacture, chemical composition, heat treatment, general physical property, controlling section, tests, workmanship and finish, and inspection.

American Public Works Assn. Sewers, J1-38; 1938. Includes gray iron castings conforming to A.S.T.M. Specification A48 for manhole and wellhole frames, covers, inlet frames, traps, and other sewer appurtenances.

American Society for Testing Materials, A 48-41; 1941. A.S.M.E. Boiler Construction Code Specification SA-48. American Assn. of State Highway Officials, M-105-41. American Standards Assn., G25.1-1942. Gray Iron Castings. Applies to castings where strength is consideration; tensile strength classes, transverse test, test bars, test procedure, requirements as to chemical composition, and explanatory notes.

American Society for Testing Materials, A 126-42; 1942. Gray Iron Castings for Valves, Flanges, and Pipe Fittings. Covers regular, high-strength gray or semi-steels, and high-test regular or alloy composition. Requirements for chemical composition, tensile properties, transverse test, mold, test specimen, etc.

American Society for Testing Materials, A 159-41; 1941. S.A.E. Recommended Practice for Automotive Gray Iron Castings. Automotive Gray Iron Castings. Gives scope, melting practice, hardness, hardness test, transverse strength, transverse test, tension test, chemical composition, chemical analysis, workmanship and finish, machineability, inspection, and rejection.

American Society for Testing Materials, A 159-44T; 1944. Tentative Specifications for Automotive Gray Iron Castings. Gives scope, hardness, transverse strength, tensile strength, workmanship and finish, machineability, inspection, rejection, and appendix.

American Society for Testing Materials, A 190-44T; 1944. Tentative Specifications for Lightweight and Thin-Sectioned Gray Iron Castings. For castings in which appearance, machineability, and dimension tolerances are primary considerations, based on visual inspection of castings and testing for machineability, but not primarily for strength considerations. Gives sample castings, physical tests, hardness tests, machineability, chemical composition, workmanship and finish, inspection and rejection, and certification.

American Society for Testing Materials, A 278-44T; 1944. Tentative Specification for Gray Iron Castings for Pressure—Containing Parts for Temperatures Up to 650° F. Covers scope, manufacture, tensile strength classification, test bars, correlation of test bar and casting, molding and pouring test bars, tensile strength test procedure, number of tests, retests, chemical composition, workmanship and finish, marking, and inspection.

Assn. of American Railroads, Operations and Maintenance Dept., Engineering Div., Signal Section. Manual of Recommended Practice, 1939. Specification for Gray Iron Castings. This organization has adopted the current A.S.T.M. Specification A 48 for gray iron castings.

Hydraulic Institute. Material Specification for Gray Iron Castings, No. 110; 1939. This specification covers gray iron castings used in manufacture of pumping equipment, not of a corrosive-resistant type, nor modified by heat treatment. Covers only physical properties such as tensile strength and transverse loading requirements, which are equivalent to A.S.T.M. Specification A48. This specification closely parallels A.S.T.M. A48, except that the transverse test is made the basis of acceptance rather than the tensile test.

Society of Automotive Engineers. 1944 Handbook, Section 3—Processed Materials. S.A.E. Recommended Practice for Automotive Gray Iron Castings, revised 1942. Includes general information and requirements for physical properties, compositions, and uses of plain and alloy cast irons. Practically conforms with American Society for Testing Materials Specification A 159-41.

U.S. Gov., Federal Specification QQ-I-652; 1939. Amendment 3; 1942. Iron, Gray; Castings. Covers 8 classes—20, 25, 30, 35, 40, 50, 60, and special. Gives requirements for quality, chemical composition, and physical requirements; methods of sampling, inspection, and tests; requirements for packing and marking for shipment.

U. S. Gov., Navy Dept. Specification 46I5c; 1941. Iron, Gray, High-Test (Semisteel); Castings.

U. S. Gov., Navy Dept. Specification 46I6c; 1940. Iron, Gray; Castings.

U. S. Gov., Navy Dept. Specification 46I9; 1940. Iron, Gray, Alloy; Castings, Scale-Resisting.

U. S. Gov., Navy Dept., U. S. Coast Guard, Bureau of Marine Inspection and Navigation. Marine Engineering Regulations and Material Specifications, 1942. Contains specifications and requirements for materials, design, construction, installation, and inspection of boilers, unfired pressure vessels, and appurtenances thereof; also piping, valves, fittings, flanges, safety valves, etc., upon the strength and efficiency of which safety of life is dependent, and are intended for maximum temperatures of 1,000° F. Includes specifications for three grades of gray iron for castings such as valve bodies, fittings, flanges, including parts to be assembled into valves, manufactured in advance and supplied for sale from stock—process, chemical compositions, tensile properties, mold, test specimens, tension test apparatus, records, workmanship, and finish. Insubstantial agreement with American Society for Testing Materials Standard Specification A126.

*References.*—Methods of testing, general requirements for metals, *see* 600.1; standard samples, *see* 611.0; other specifications for cast iron, *see* specifications of individual commodities made of cast iron.

## 611.12 Manhole and Conduit Castings

American Society of Civil Engineers and American Standards Assn., Telephone Group, co-sponsors. American Standards Assn., A35.1-1941. Manhole Frames and Covers for Sub-Surface Structures. Requirements on design, material, and dimensions.

U. S. Gov., Navy Dept., Bureau of Yards and Docks. Specification E-9Ye; 1943. Electrical Apparatus, Distributing Systems, and Wiring (Emergency Edition). Includes requirements for manhole covers and frames.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-459-D; 1934. Manhole Tops, Types MC-83 and MC-85; Handhole Lid, Type MC-86.

*References.*—Methods of testing, general requirements for metals, *see* 600.1; standard samples, *see* 611.0; other specifications for cast iron, *see* 611.11; masonry sewers, *see* 518.67.

## 611.13 Sluice Gates and Mooring Bitts

American Water Works Assn. Tentative Standard Specifications for Sluice Gates, 7F.2T-1941. Covers type and service, supplementary details, data to be furnished, size of waterway, basis of structural design, iron castings, bronze, bolts, studs and nuts, type of end connections, frames, disc, free rings or facings, wedging devices, guides, stems, wall guides and bearings, thrust bearings, operating mechanism, indicators, workmanship, painting, testing, inspection, and preparing for shipment.

*References.*—Methods of testing, general requirements for metals, *see* 600.1; standard samples of cast iron, *see* 611.0; specifications for gray cast iron, *see* 611.11; cast steel mooring bitt, *see* 611.49; cleats, cast-iron, for docks, *see* 611.49; bollards, for docks, *see* 611.49.

## 611.14 Floor Drains and Traps

Associated Factory Mutual Fire Insurance Companies. Factory Mutual Bulletin of Loss Prevention, 4.21; 1938. Scuppers and Floor Drains. Gives requirements for the number needed for floors of various types and occupancies and includes descriptions of approved types of scuppers and floor drains.

U. S. Gov., Federal Specification WW-P-541a; 1940. Plumbing Fixtures, (for) Land Use. Includes requirements for drain for floor and shower stall—of heavy cast iron, double drainage pattern, with seepage pan for embedding in floor construction, and with weep holes providing drainage from pan to drain pipe. For 2-, 3-, and 4-in. drain pipe. Emergency Alternate Federal Specification E-WW-P-541a; 1942, (issued by Procurement Div., Treasury Dept., U. S. Gov.) changed requirements for metals and finishes, standard materials, illustrations, selections, and air gaps.

*References.*—Methods of testing, general requirements for metals, *see* 600.1; standard samples of cast iron, *see* 611.0; plumbing practice and fixtures, *see* 600.6, 617.7; specifications for gray cast iron, *see* 611.11; brass traps and drains, *see* 645.4.

## 611.15 Grates and Grate Bars

*References.*—House heating boilers, *see* 614.4; power boilers and accessories, *see* 703; locomotives and parts, *see* 701.3, 702.9.

## 611.16 Pulleys

Multiple V-Belt Drive Assn. Horsepower Ratings for Multiple V-Belt Drives, 1940. Gives formula for rating based on consideration of the effect of bending, relative stress in the belt, centrifugal force, and belt speed.

Multiple V-Belt Drive Assn. Standard Groove Dimensions for V-Belt Pulleys, 1940. Dimensional drawing and tolerances of pulleys for use with V-shaped belts. Prepared jointly by the Rubber Manufacturers Assn. and this association.

*References.*—Methods of testing, general requirements for metals, *see* 600.1; standard samples of cast iron, *see* 611.0; specifications for gray cast iron, *see* 611.11; paper pulleys, *see* 493; sash pulleys, *see* 617.5; awning pulleys, clothes line pulleys, etc., *see* 617.9, 766.0.

## 611.17 Heating and Cooking Vessels

U. S. Gov., Dept. of Interior, Purchasing Office. Standard Specifications No. 55. Griddles; Cast Iron.

U. S. Gov., Navy Dept. Specification 41K7; 194 Kettles; Pitch.

U. S. Gov., Navy Dept. Specification 64K5b; 1943. Kettles; Scouse.

*References.*—House heating boilers, *see* 614.4; stoves, *see* 614; power boilers, *see* 703.1; electric heating and cooking devices, *see* 717.1.

## 611.18 Cast-Iron Wheels

American Transit Assn. Standard Design for Tread and Flange of Wheel, E13-38; 1938. Dimensional drawings of tread and flange contours for steel and chilled iron wheels. Emergency Revision E13 (Em); 1942, changed requirements to meet demands of the present national emergency.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Flange Limit Gage for Remounting all Cast Iron and Cast Steel Wheels. Dimensional drawing for the fabrication of gage, finish requirements, and with diagrams showing method of use. Emergency Specification, 1942, changed requirements.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Limit Wear Gages for Condemning A.A.R. Wheel Gages. Dimensional diagram.

Assn. of American Railroads, Operating and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Master Gages for A.A.R. Wheel Gages. Recommended Practice. Master gage for checking tread worn hollow condemning limit gage for cast iron and cast steel wheels. Dimensional drawing.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Master Gages for A.A.R. Wheel Gages. Recommended Practice. Gives detailed dimensional drawings for fabrication and marking of master gages. For remounting cast iron and cast steel wheels. Dimensional drawing showing manufacture and giving finish.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Minimum Flange Thickness, Height, and Throat Radius Gage for New Cast Iron, One-Wear Wrought and Cast Steel Wheels. Dimensional drawing for gage with requirement that gaging surfaces be hardened and ground and chromium-plate finished.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Specification M-403-41; 1941. Wheels; Cast Iron, for Locomotives, Tenders, and Cars. Covers 33-in. cast iron wheels for four loadings. Give manufacture, chemical composition and tests, design, dimensions and weight, physical properties and tests, inspection, rejection, and rehearing, with dimensional drawings.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Wheel Tread Worn Hollow Limit Gage for Remounting Cast Iron and Cast Steel Wheels. Dimensional drawing of gage. Harden and ground on all gaging surfaces. Chromium-plated finish.

Assn. of Manufacturers of Chilled Car Wheels. Manual of Inspection, 1939; revised 1944. Railway Car Wheels. To establish a uniformity of foundry practices which are deemed essential to the manufacture of wheels which will withstand all of the stresses imposed in service and insure long life to the wheels. Gives code of practice for pouring, annealing, and testing; standard forms; and recommended practice for molding and annealing.

*References.*—Methods of testing, general requirements for metals, *see* 600.1; classification of railway materials, *see* 600.2; standard samples of cast iron, *see* 611.0; steel railway car wheels and tires, see 611.49, 611.53; wheel sizes for traveling cranes, *see* 744.1; specifications for cast iron, *see* 611.11.

### 611.19 Miscellaneous Manufactures of Gray Cast Iron

U. S. Gov., Navy Dept. Specification 18S10a; 1944. Sinkers; Sounding-Machines; Navigational.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 89-1110; 1940. Anchor; Cast Iron, Submarine Mine.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 89-2191; 1940. Casting for Clamp, Cable, M-1.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 89-5521; 1940. Collar; Turkshead, Submarine Mine.

*References.*—Methods of testing, general requirements for metals, *see* 600.1; standard samples of cast iron, *see* 611.0; cast iron bath tubs, lavatories, and sinks, *see* 612.21, 612.23; C.I. boilers, radiators, water heaters, *see* 614.4; C.I. fittings for plumbing fixtures, *see* 617.73; C.I. door locks, bolts, catches, fasteners, etc., *see* 617; C.I. pipe and fittings, see 607.1; C.I. valves and hydrants, *see* 607.6; C.I. ship chocks or rope guides, *see* 725.41; C.I. lifting jacks, *see* 616.91; C.I. water meters, *see* 793.4; C.I. journal bearings, *see* 692.3; gray cast iron, see 611.11; C.I. journal boxes, see 611.22; C.I. brake shoes, *see* 611.43; C.I. sash weights, *see* 617.5; C.I. locomotive cylinders, *see* 702.1; C.I. fuel tanks for engines, *see* 956.2; C.I. fire hose fittings, *see* 974.2; C.I. fire hose racks, *see* 974.3; malleable cast iron, *see* 611.2; C.I. washers, *see* 608.6; C.I. evaporators, feed water heaters, separators, see 703.9; ship propeller hubs, studs, and fair-water caps, *see* 725.42; water filters, *see* 819.5.

## 611.2 MALLEABLE IRON CASTINGS

### 611.21 Malleable Cast Iron

American Society of Mechanical Engineers. Boiler Construction Code, 1940. Specifications for Malleable-Iron Castings (S-15). Identical with American Society for Testing Materials Specification A47-33, referred to below for grade No. 35,018 only.

American Society for Testing Materials, A 47-33; 1933. A.S.M.E. Boiler Construction Code Specification SA-47 (Grade No. 35018 Only). American Assn. of State Highway Officials, M 106-35. American Standards Assn., G48.1-1942. Malleable Iron Castings. Covers castings for railroad, motor vehicle, agricultural implement, and general machinery purposes. Includes tensile properties, special tests and test specimen, re-annealing, and permissible variations in dimensions. S.A.E. Standard for Malleable Iron Castings. Endorsed by American Foundrymen's Assn.

American Society for Testing Materials, A 197-39; 1939. A.S.M.E. Boiler Construction Code Specification SA-197. American Standards Assn., G 49.1-1942. Cupola Malleable Iron. For malleable castings. Gives certification, process, manufacture control and records, primary graphite, tensile properties, test specimens, workmanship and finish, and marking. Endorsed by the American Foundrymen's Assn.

American Society for Testing Materials, A 220-44T; 1944. Tentative Specifications for Pearlitic Malleable Iron Castings. Gives scope, process, tensile properties, test specimens, number of tests, reheat treatment, permissible variations in dimensions, workmanship, quality, markings, inspection, and rejection.

Assn. of American Railroads, Operations and Maintenance Dept., Engineering Div., Signal Section. Manual of Recommended Practice, 1935. Specification for Malleable Iron Castings. This organization has adopted the Current A.S.T.M. Specification A 47 for malleable iron castings.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Malleable Iron Castings, M-402-39; 1939. By air furnace, open hearth, or electric furnace process, tension test, annealing test, toughness, workmanship, finish, and marking.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, 1938. Malleable Iron Castings. Covers definition, characteristics and uses, specifications, general properties, uses, inspection, packing, and substitutes.

Society of Automotive Engineers. Aeronautical Material Specification No. 5310; 1944. Pearlitic Malleable Iron Castings. Gives requirements for condition, physical properties, quality, precautions, reports, identification, approval, and rejections. Similar Specification: Ordnance Dept., Specification AXS-623, Class D.

Society of Automotive Engineers. Aeronautical Material Specification No. 7310; 1941. Rings—Piston, Cast Iron. Gives requirements for composition, condition, hardness, quality, finish, elasticity, tension, circularity, light-tightness and periphery, flatness, dimensions and tolerances, marking, identification, rustproofing, drawings, approval, reports, and rejection. Similar specifications: Army 95-28107; Navy 49 R 3.

Society of Automotive Engineers. 1944 Handbook Section 3—Processed Materials. S.A.E. Standard Malleable Iron Castings, Revised 1935. Covers malleable iron castings for general automotive, agricultural implement, railroad, and general machinery purposes. Conforms to American Society for Testing Materials Specification A -47.

U. S. Gov., Federal Specification QQ-I-666a; 1944. Iron, Malleable; Castings. Covers one grade for each of three classes—A, B, and C. Gives requirements for manufacture, workmanship, tensile strength, yield point, and elongation; methods of sampling, inspection, and tests; and packing and marking for shipment.

U. S. Gov., Navy Dept. Specification 46I8c; 1935 Iron, Malleable; Castings.

U. S. Gov., Navy Dept., U. S. Coast Guard, Bureau of Marine Inspection and Navigation. Marine Engineering Regulations and Material Specifications, 1942. Contains specifications and requirements for materials, design, construction, installation, and inspection of boilers, unfired pressure vessels and appurtenances thereof; also piping, valves, fittings,

flanges, safety valves, etc., upon the strength and efficiency of which safety of life is dependent, and are intended for maximum temperatures of 1,000° F. Includes specifications for two grades of malleable iron castings for pipe fittings, valves, manifolds, connections, and miscellaneous appliances for steam pressures not exceeding 250 lb. and temperatures not exceeding 450° F., process, tensile properties, test specimens, tests, re-annealing, workmanship and finish, marking, and inspection and rejection. In substantial agreement with American Society for Testing Materials Standard Specification A47.

U. S. Gov., Navy Dept., U. S. Coast Guard, Bureau of Marine Inspection and Navigation. Marine Engineering Regulations and Material Specifications, 1942. Contains specifications and requirements for materials, design, construction, installation, and inspection of boilers, unfired pressure vessels and appurtenances thereof; also piping, valves, fittings, flanges, safety valves, etc., upon the strength and efficiency of which safety of life is dependent, and are intended for maximum temperatures of 1,000° F. Includes specifications for malleable iron castings such as flanges, pipe fittings, and valve parts, for pressures not exceeding 125 lb., temperatures not exceeding 450° F., and diameters not exceeding 4 in.—process, tensile properties, test specimens, workmanship, and finish. In substantial agreement with American Society for Testing Materials Standard Specification A197.

*References.*—Methods of testing, general requirements for metals, *see* 600.1; zinc coatings and tests, *see* 600.3; other specifications for malleable cast iron, *see* specifications for the individual commodities made of malleable cast iron.

## 611.22 Journal Boxes

American Transit Assn. Recommended Practice of Limits of Wear, E125-39; 1939. Recommends limits of wear for car journals, journal boxes and bearings, axles, flanges, etc. Emergency Revision E125 (Em); 1942, changed requirements to meet demands of the present national emergency.

American Transit Assn. Standard Journal Boxes and Contained Parts, E2-34; 1934. Standard designs and dimensions for journal boxes, bearings and wedges, and dust guards, for seven sizes of bearings.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Condemning Limits for Journal Box Wedges. Dimensional diagram for contour of back, of journal wedge variation, with details for use.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Design Dimensions for Integral Journal Boxes A, B, C, D, E, and F. Recommended Practice. Dimensional drawing with variations for size of journal, tolerance, and manufacturer's foundry.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1944. Design Dimensions for Separable Pedestal Journal Boxes C, D, and E. Revised, 1943. Gives dimensional drawings.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1943. Design Dimensions for Separable Bolted Journal Boxes C, D, E, and F Standard. Gives variations of dimensional drawing for size of journal, from either malleable iron, cast steel, or cast iron.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Driving Boxes and Engine Truck Boxes. Dimensional drawings of recommended designs for various sizes of journals.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Dust Guards for Journal Boxes A, B, C, D, E, and F. Dimensional drawing.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Flat Face Pedestal for Journal Boxes. Recommended Practice, 1931. Dimensional drawing for cast steel pedestal.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Journal Bearing Wedges. Dimensional drawing of wedge, with variations for size of journal, and tolerance.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1939. Journal Box Bolt Hole Gage. Gives dimensional drawings for four sizes of gage.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Journal Box Dust Guard Opening Gage. Dimensional drawing for five sizes of journals.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1939. Journal Box Lid Lug and Face Gage. Gives detailed dimensional drawings of gages for A and B and for C, D, E, and F boxes; also for journal box wedge and brass stop lug gage.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1939. Journal Box Lid Lug and Face Gage for Alternate Hinge Lug. Covers dimensional drawing of two sizes of gage.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1940. Journal Box Pedestal Fit Gage. Gives dimensional drawing for two sizes of gage.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942 Journal Boxes; Standard Method of Packing. Gives requirements for preparation of new packing, preparation of renovated packing, application of packing, body of packing, and cleaning and applying bearings.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Specification M-120-42; 1942. Journal Box Lids. For use on B, C, D, E, and F journal boxes; lids made from cast steel, malleable iron, or pressed steel. Gives requirements as to construction, lid fastening, dust tightness, with dimensional diagram.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Specification M-903-42; 1942. Dust Guards. Covers the general requirements to exclude dust from journal box and retain oil. Gives material, manufacture, dimensions, permissible variations, inspection, rejection, and rehearing.

*References.*—Methods of testing, general requirements for metals, *see* 600.1; malleable cast iron, *see* 611.21; bearings and bearing metals, *see* 692; classification of railway materials, *see* 600.2.

### 611.23 Rowlocks

### 611.29 Miscellaneous Manufactures of Malleable Cast Iron

American Transit Assn. Specification for Overhead Line Material for Direct and Catenary Suspension, D102-39; 1939. Malleable iron castings referred to in this specification shall conform to the current Specification A-47 for Malleable Castings of the American Society for Testing Materials.

*References.*—Malleable cast iron, *see* 611.21; methods of testing, general requirements for metals, *see* 600.1; classification of railway materials, *see* 600.2; zinc coatings and tests, *see* 600.3; malleable iron pipe and fittings, *see* 607.2; M.I. brake beams and parts, *see* 611.42; M.I. stake pockets for flat cars, *see* 726.2; trolley pull-overs and line suspensions of malleable iron, *see* 719.63; pole brackets for trolley wire supports, of malleable iron, *see* 719.63; M.I. tie plates, *see* 606.2; M.I. driving point, *see* 719.62; M.I. hand drills, *see* 615.12; M.I. lifting jacks, *see* 616.91; M.I. spoke shaves, *see* 616.16; M.I. pipe cutters, *see* 615.39.

## 611.3 WROUGHT-IRON FORGINGS

American Society for Testing Materials, A 73-39; 1939. Wrought-Iron Rolled or Forged Blooms and Forgings. Includes two classes—for locomotives and railroad cars and for miscellaneous uses. Requirements for manufacture, chemical compositions, tensile properties, etch test, test specimen, workmanship, and inspection.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, 1938. Forgings. Covers definition, characteristics, classes of forgings, forgable metals, and commercial forging practice.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, Volume 2; 1944. Iron; Wrought. Covers definition, derivation, constants, uses, forms, and substitutes.

*References.*—Methods of testing, general requirements for metals, *see* 600.1; zinc coatings and tests, *see* 600.3; wrought-iron bars and rods, *see* 603.1; W.I. plates, *see* 604.14; W.I. chains, *see* 603.51, 603.52, 603.54; W.I. pipe and fittings, *see* 607.3; W.I. tie plates, *see* 606.2; W.I. stake pockets for flat cars, *see* 726.2; W.I. truck bolsters and coupler yokes for freight cars, *see* 611.49.

## 611.4 STEEL CASTINGS

### 611.40 General Items

### 611.41 Cast Steel

American Public Works Assn. Sewers, J1-38; 1938. Includes steel castings for manhole frames and covers and for other sewer appurtenances conforming to the A.S.T.M. Specification A27 for carbon-steel castings for miscellaneous industrial uses.

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering. Specifications for Movable Railway Bridges. Covers requirements for cast steel—materials and tests.

American Society of Mechanical Engineers. Boiler Construction Code, 1940. Specifications for Carbon-Steel Castings (S-11). Identical with American Society for Testing Materials Specification A27. Cover grades A-2, A-3, B, B-1, and B-2, only.

American Society for Testing Materials, A 27-44; 1944. American Assn. of State Highway Officials, M103. A.S.M.E. Boiler Construction Code Specification SA-27. American Standards Assn., G50.1-1944. Carbon-Steel Castings for Miscellaneous Industrial Uses. Covers ten grades for industrial use, as distinguished from railroad and high-temperature applications. Gives heat treatment, temperature control, chemical composition, ladle analysis, check analysis, tensile properties, magnetic particle testing, test specimens, number of tests, retests, workmanship, finish, marking, inspection, and rejection. A.S.T.M. Emergency Alternate Provision EA-A 27; 1942; affected section 3 (d), Heat Treatment; section 5, Chemical Composition, and section 8 (a), Tensile Properties.

American Society for Testing Materials, A 87-44; 1944. Carbon-Steel and Alloy-Steel Castings for Railroads. Four grades intended for locomotive and car equipment. Gives requirements for heat treatment, temperature control, chemical composition, ladle analysis, check analysis, tensile properties, alternate tests to destruction, magnetic particle testing, test specimens, number of tests, retest, permissible variations in weight, workmanship, finish, marking, inspection, and rejection. A.S.T.M. Emergency Alternate Provision EA-A 87; 1942; affected section 3 (d), Full Annealing; and section 10 (a), Magnetic Particle Testing.

American Society for Testing Materials, A 95-44; 1944. A.S.M.E. Boiler Construction Code Specification SA-95. American Standards Assn., G17.1-1944. Carbon-Steel Castings for Valves, Flanges, and Fittings for High-Temperature Service. For pressure containing parts for high temperature service. Gives requirements for heat treatment, temperature control, chemical composition, ladle analysis, check analysis, tensile properties, bending properties, hydrostatic tests, magnetic particle testing, test specimens, number of tests, retests, workmanship, finish, marking, inspection, and rejection. A.S.T.M. Emergency Alternate Provision EA-A 95; 1944; affected section 5, Chemical Composition; section 8, Tensile Properties; and section 10, Hydrostatic Tests.

American Society for Testing Materials, A 215-44; 1944. American Standards Assn., G51.1-1944. Carbon-Steel Castings Suitable for Fusion Welding for Miscellaneous Industrial Uses. Quality suitable for fusion either by a field welding process or in the construction of weldments made up of cast steel or cast steel in combination with wrought steel members. Covers eight grades, with requirements for process, heat treatment, temperature control, chemical composition, ladle analysis, check analysis, tensile properties, magnetic particle testing, test specimens, number of tests, retests, workmanship, finish, marking,

inspection, and rejection. A.S.T.M. Emergency Alternate Provision EA-A 215; 1942; affected section 1 (b), Number of Grades; section 3, Heat Treatment; section 5, Chemical Composition; table I, Chemical Requirements; and table II, Tensile Requirements.

American Society for Testing Materials, A 216-44T; 1944. A.S.M.E. Boiler Construction Code Specification SA-216. Tentative Specification for Carbon-Steel Castings Suitable for Fusion Welding for Service at Temperatures Up to 850° F. For valves, flanges, fittings, or other pressure containing parts. In two grades, with requirements for heat treatments, temperature control, chemical composition, analyses, tensile and bending properties, hydrostatic tests, magnetic particle testing, test specimens, number of tests, retests, workmanship, finish, marking, inspection, and rejection. A.S.T.M. Emergency Alternate Provision EA-A 216a; 1944; affected section I, Number of Grades; section 5, Chemical Composition; section 8, Tensile Properties; section 10, Hydrostatic Tests; and section 16, Finish.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Emergency Specification E-M-201-42, changed AAR Specification M-201-36, Steel Castings; section III, Physical Properties and Tests; paragraph 9 (a), Test Specimens.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Steel Castings, M-201-36; 1936. Grade A, unannealed and annealed for special uses; grade B, for highly stressed members; and grade C, as called for. Manufacture, requirements as to chemical and physical properties and tests, workmanship, marking, and variation in weight.

Hydraulic Institute. Material Specification for Carbon and Alloy Steel Castings, No. 120; 1939. These specifications cover steel castings used in the manufacture of pumping equipment; five grades—one carbon and four alloy. Gives requirements for manufacture, chemical composition, coupons, heat treatment, physical properties and tests, impact properties and tests, pattern equipment, workmanship, welding, and hydrostatic tests.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, 1938. Steel; Cast. Covers definition, characteristics and uses, grades, specifications, and packing.

U. S. Gov., Federal Specification QQ-S-681b; 1941. Steel; Castings. Covers six classes—(x) common, no heat treatment, no physical tests; (o) common, annealed, no physical tests; (1) soft, annealed, tested; (2) medium, annealed, normalized, or normalized and tempered, tested; (3) hard, annealed, tested; and (4) to meet physical requirements as follows: 4A1 and 4A2—annealed; 4B1, 4B2, and 4B3—either annealed, normalized, or normalized and tempered; and 4C1, 4C2, 4C3, and 4C4—either annealed, normalized, normalized and tempered, or quenched and tempered. Gives requirements for material, workmanship, cleaning, repair of defects by welding, heat treatment, cleaning, marking, chemical requirements, and physical properties; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., Navy Dept. Specification 49S1k; 1939. Steel Castings.

*References.*—Alloy steel castings, *see* 622.5; methods of testing, general requirements for metals, *see* 600.1; classification of metals, *see* 600.2; heat treatment of castings, *see* 600.5; zinc coatings and tests, *see* 600.3; test machine for castings, *see* 611.40; other specifications for cast steel, *see* specifications for individual commodities made of cast steel.

## 611.42 Railway Brake Beams

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Bottom Rod and Brake Beam Safety Support for Four Wheel Freight Car Trucks. Recommended Practice, adopted 1932. Covers design for minimum clearance with detailed drawings of four arrangements of parts.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Brake Beams. Strut for No. 15 Brake Beam. Dimensional drawing of strut with marking.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Brake Beam Gages for Standard No. 15 Brake Beam. Dimensional drawings and use of brake beam gage, "go" gage for brake head, "go" and "no go" gage for brake head, channel opening gage for head and strut, strut keyway gage, strut pin hole gage, angle gage for strut, channel gage, "go" gage for brake shoe, "no go" gage for brake shoe, and gages for reworked and reclaimed brake beams.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Brake Beam Hangers and Attachments. Covers detail drawings of various hanger pins, hangers, and hair-pin cotter.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Brake Beam Specifications and Tests. Covers all complete brake beams A.A.R. equipment cars, manufacture, physical properties and tests, permissible variations, workmanship, and marking. Includes dimensional drawings of limiting outline, complete brake beam, compression and tension members, and head for No. 15 brake beam.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Brake Levers, Rods, Connections, and Pins for Conventional Passenger Equipment Cars Foundation Brake Gear. Design fundamentals for braking force and recommended practice for maximum pressure, stress, shear, etc.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Brake Shoe Key. Dimensional drawing and minimum weight of steel (structural grade) key.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Specifications for Repairs to Freight Equipment Brake Beams. Standard, revised 1942. Used brake beams applied to foreign freight cars.

Gives requirements for dismantling, inspection and reconditioning of dismantled parts, assembling, testing, marking, and gages. Dimensional diagrams.

*References.*—Methods of testing, general requirements for metals, *see* 600.1; classification of railway materials, *see* 600.2; heat treatment of castings, *see* 600.5; testing machine, *see* 611.40; cast steel, *see* 611.41; malleable cast iron, *see* 611.21.

## 611.43 Railway Brake Shoes, Cast Steel and Cast Iron

American Transit Assn. Standard Design of Brake Shoes, Brake Shoe Heads, Brake Shoe Keys and Gauges, E1-35; 1935. Dimensional drawings of brake shoes and parts and their gauges for wheels of various diameters, tread widths, and contours.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1944. Brake Shoes. Specifications M-401-44; 1944. For brake shoes for passenger and freight car equipment. Gives manufacture, physical properties and tests, workmanship and finish, marking, and inspection and rejection.

*References.*—Methods of testing, general requirements for metals, *see* 600.1; classification of railway materials, *see* 600.2; standard samples of cast iron; *see* 611.0; gray cast iron, *see* 611.11.

## 611.44 Railway Couplers, Cast Steel and Forged steel

American Transit Assn. Recommended Specification for Automatic Couplers for Interurban Cars and Radial Draft Rigging, E100-37; 1937. Gives detailed information concerning the manufacture, placement, and operation of couplers, and also requirements as to the quality of steel to be used.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. A.A.R. Alternate Standard Tight Lock Coupler for Passenger Equipment Cars. Detail drawing of coupler and parts.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. A.A.R. Type "D" Coupler—Top Lock Lifter No.3 Design. For replacement of Nos.1 and 2 designs; detail of changed part. Includes direction for building up metal of No.2 to reclaim to No.3 form.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. A.A.R. Type "D" Coupler—Top Lock Lifter Gage for No.3 Design of Top Lock Lifter. Dimensional drawing of gage, including design for reclaiming No.2 top lock lifters to No.3.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Cast Steel Yoke Head for Use With Odd-Length Gear Pockets. Dimensional diagram of construction. Details for various sizes of coupler shanks.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Couplers; Uncoupling Arrangement for. Instructions for arrangement of uncoupling device, locations, etc., for passenger and freight car equipment.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Couplers; Height of. Maximum and minimum heights for drawbars, freight and passenger cars, standard, narrow, and 2-ft. gage track. Instructions for adjusting height of coupler, including metal shims, and where use of liner is permissible.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Coupler Knuckle Pivot Pins and Swivel Pins for Swivel Shank Coupler, M-118-42; 1942. Pins and steel bars for making pins, composition, analysis, drop and hardness tests, tolerance, and marking.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Coupler Limit Gage. Covers dimensional and marking of gage.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Coupler Yokes. Not a substitute for A.A.R. standard keyed yokes. Dimensional drawings for twin spring gear, tandem spring gear, and friction spring gear yokes.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Coupler Yokes; Cast Steel. Vertical plane yokes; standard and alternate standard; dimensional drawings. Also for horizontal yoke.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Coupler Yokes; Forged Steel—Two Key. Dimensional diagram of construction.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Coupler Yokes, M-205-38; 1938. Design test requirements for freight equipment coupler yokes, horizontal or vertical plane type. Material by A.A.R. specifications, design for use with type "E" coupler, test requirements for breaking load, deflection measurements, and loading diagram for measuring test requirements.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Drop Test Machine for A.A.R. Couplers and Axles. Detailed drawings of apparatus, including jerk test, striking test, fact test, knuckle pin test, and separate knuckle test set-ups.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Gages 1, 2, 3, 4, and 5 for Coupler and Yoke. Detailed dimensional drawings for gages.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Gage for Checking A.A.R. Standard "E" and Type "D" Coupler Swivel Shanks After Reclamation. Dimensional drawing of gage and note for use on reclaimed coupler.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Knuckle Nose Wear and Stretch Limit Gage No.24992-A. Dimensional drawing to be marked with letter "A" to indicate latest type.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Knuckle Pins. Fifteen detail drawings of various types of steel pins, including oversize.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Purchase and Acceptance of A.A.R. Standard "E" Couplers, Knuckles, Locks, and Other Parts, M-204-39; 1939. Covers grade B and high tensile cast steel for complete couplers and repair parts. Gives requirements for manufacture, chemical properties and tests, physical tests, variations in weight and gaging practice, limiting weight table, gages to insure interchangeability of parts, workmanship, and marking diagrams.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Purchase and Acceptance of A.A.R. Tight Lock Couplers and Coupler Parts, Radial Connections, Yokes, and Attachment Parts, M-206-40; 1940. Specifications for manufacture chemical and physical properties and tests, variations in weight-gaging practice, table of limiting weights, list of gages, workmanship, shank, yoke and radial connection pins, and bushings with detail illustrations.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Rotary Bottom Operated Uncoupling Rods for Type "E" Couplers. Diagrams illustrating designs for, and the application to, couplers.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Specification for Secondhand Couplers for Repairs to Freight Equipment. For application to cars in interchange service, inspection, gaging, marking, and painting; with an appendix covering coupler reclamation practice, coupler bodies, knuckles, locks, knuckle pivot pins, top lock lifters, etc. Detailed diagrams for restoring worn parts, use of reclamation gages, etc.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Standard "E" Coupler. Covers dimensional drawings for 5 by 7 in. shank, 6 1/4 by 8 in. shank, details of bushings, coupler parts, No. 10-A contour, and pivot pin hole.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Type "E" Pilot Couplers. Gives detailed drawings for 6 by 6-in. shank for repairs only, 6 by 7 1/2 in. shank for repairs only, 6 by 8-in. shank for new equipment and repairs, and includes support of coupler with three shank sizes.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Uncoupling Rigging for Type "E" Passenger Couplers. Two types of rigging, for replacement where existing operating rods are used, and for new cars or where new rods are installed. Dimensional drawing of rigging.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Uncoupling Rods for Tight Lock Couplers. Dimensional drawings for types 3, 4, and 5 mechanisms.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Wheel Defect, Worn Coupler Limit, Worn Journal Collar, and Journal Fillet Gage. Dimensional drawing of gage to be used for gaging knuckle opening for MCB contour (1904) couplers only. Harden and ground on all gaging surfaces. Chromium-plated finish.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Worn Coupler Limit Gage for Types D and E Couplers. Dimensional drawing for fabrication of gage and diagram of use.

*References.*—Methods of testing, general requirements for metals, *see* 600.1; classification of railway materials, *see* 600.2; heat treatment of castings, *see* 600.5; coupler yokes, *see* 611.49; testing machine for castings, *see* 611.40; cast steel, *see* 611.41.

## 611.49 Miscellaneous Manufactures of Cast Steel

American Bureau of Shipping. Rules for the Classification and Construction of Steel Vessels, 1944. Anchors. Includes rules for inspection and tests.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1944. Design Dimensions for Brake Hanger Bracket. Recommended Practice, adopted 1937. Dimensional drawing of bracket.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Design Dimension and Tolerances for Cast Steel Side Frames. Dimensional drawing for 40, 50, and 70 ton capacity.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Design Dimensions and Tolerances for Truck Bolsters. Dimensional drawing and tolerances for 40, 50, and 70 ton capacity.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Hopper Door Operating Shaft; End for. Dimensional drawing of detail.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Side Frame and Bolster Marking. Recommended Practice. Specification for information to be marked on side frame and truck bolster.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Side Frame Spring Seat Gage. Recommended Practice, revised 1939. Two sizes for 40 and 50 ton, and for 70 ton gage.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Miscellaneous Truck Standard and Recommended Practice. Distance between backs

of flanges, height of flange, wheel diameters, designation of axles, journal boxes and parts by letter, and trucks by number of axles.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Truck Side Frames, Cast Steel, M-203-38; 1938. For freight equipment with integral or with separable journal boxes. Requirements for material based on A.A.R. specification, detailed loading diagrams, deflection tests for vertical and transverse loading, four sizes of truck.

U. S. Gov., Navy Dept. Specification 6A2a; 1913. Anchors; Stockless.

U. S. Gov., Navy Dept. Specification 6A3b; 1941. Anchors; Boat.

U. S. Gov., Navy Dept. Specification 6A4c; 1941. Anchors; Steel, Navy Type or Stocked.

U. S. Gov., Navy Dept., U. S. Coast Guard, Bureau of Marine Inspection and Navigation. Marine Engineering Regulations and Material Specifications, 1942. Contains specifications and requirements for materials, design, construction, installation, and inspection of boilers, unfired pressure vessels and appurtenances thereof; also piping, valves, fittings, flanges, safety valves, etc., upon the strength and efficiency of which safety of life is dependent, and are intended for maximum temperatures of 1,000° F. Includes specifications for steel castings for valves, flanges, fittings, or other pressure containing parts of carbon-steel for service temperatures up to and including 850° F. and carbon-molybdenum alloy steel for service temperatures to 1,000° F.—process, heat treatment, chemical compositions, tensile properties, bending properties, tests, re-tests, workmanship, and finish.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 57-66; 1939. Casting; Steel for Guns, Centrifugally Cast.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 89-1900; 1940. Box; Distribution, M2, Submarine Mine.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 29-80; 1936. Spur; M-1911, Pairs.

*References.*—Alloy steel castings, *see* 622.5; methods of testing, general requirements for metals, *see* 600.1; classification of railway materials, *see* 600.2; zinc coatings and test, *see* 600.3; heat treatments, *see* 600.5; cast steel stake pockets for flat cars, *see* 726.2; cast steel chain, *see* 603.53; cast steel pipe fittings, *see* 607.4; cast steel valves, *see* 607.6; cast steel journal boxes, *see* 611.22; locomotive crossheads, cylinder heads, piston heads, of cast steel, *see* 702.9; railroad frogs, crossings, switches, and special trackwork of cast steel, *see* 606.3; cast steel fire hose racks, *see* 974.3; cast steel ship chocks or rope guides, *see* 725.41; cast steel lifting jacks, *see* 616.91; cast steel, *see* 611.41; testing machine for castings, *see* 611.40; wheel sizes for travelling cranes, *see* 744.1.

## 611.5 STEEL FORGINGS

### 611.50 General Items

American Gear Manufacturers Assn. Standard 110.01; 1944. Terms Used in Designating Gear Tooth Wear and Failure; Tentative. Covers introduction, normal wear, initial pitting, progressive pitting, abrasion, scratching, scoring, galling, burning, rolling and peening, cracking and checking, chipping, gouging, overload and breakage, and fatique and breakage.

American Gear Manufacturers Assn. Standard 222.01; 1944. Beam Strength of Straight Bevel and Spiral Bevel Gears. Covers beam strength rating, durability rating, and gives table 1 for tooth form factor of spiral bevel gears and table 2 for tooth form factor of straight bevel gears.

American Gear Manufacturers Assn. Standard 211.01; 1944. Surface Durability of Helical and Herringbone Gears. Covers external gears, internal gears, alternate method for determination, beam strength rating, and figures giving face width, ratio of gears to pinion, and variation of Ds factor with pinion diameter and speed.

American Gear Manufacturers Assn. Standard 212.01; 1944. Surface Durability of Straight Bevel and Spiral Bevel Gears. Covers surface durability, beam strength rating, table showing hardness values, and figure showing variation of Db factor with pinion diameter and speed.

Drop Forging Assn. Standard Tolerances for Forgings (for Forgings Under 100 Pounds Each), 1937. Gives special and regular tolerances, dividing regular into commercial and close standard classes for thickness, width, draft angle, quantity, fillets, and corners; with tables of tolerances for various weights of forgings for both classes.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, 1938. Forgings. Covers definition, characteristics, classes of forgings, forgeable metals, and commercial forging practice.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 57-102-1; 1924. Forging, for Recoil Mechanisms, General.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 57-103A; 1936. Forging; Gun, for U. S. Army and Navy.

### 611.51 Forged Steel

American Iron and Steel Institute. Steel Products Manual, Section 3; 1943. Hot Rolled Rounds and Round Cornered Squares for Forged Shell. Steel for forged shell is defined as hot rolled steel suitable for hot forging and subsequent machining into shell bodies. Covers standard sections, definitions, and standard permissible variations.

American Iron and Steel Institute. Steel Products Manual, Section 22; 1939. Revised, 1943. Forged Axles and Locomotive Forgings. Covers forgings used principally for locomotives and cars for steam and electric railways and also for industrial railway equipment. Manufacturing practices, chemical requirements and tests, physical properties and tests, workmanship and finish, permissible variations and weights, marking and storing, inspection, rejection, and rehearing.

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering, 1942. Specifications for Movable Railway Bridges. Covers requirements for

forged steel and annealed forged steel—chemical properties, analyses, physical properties, tests, annealing, and selecting specimens.

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering, 1942. Specifications for Steel Railway Bridges (for Fixed Spans Not Exceeding 400 Feet in Length). Covers requirements for steel for forgings—process, discard, prolongations for tests, annealing, chemical composition, ladle and check analyses, physical properties, yield point, tension test specimens, number of tests, retests, finish, identification marks, inspection, and rejection.

American Society of Mechanical Engineers. Boiler Construction Code, 1940. Specifications for Seamless Steel Drum Forgings (S-4). Includes three grades of carbon-steel hollow forged drums for use in boilers and for other pressure vessels. Grades 1 and 2 are suitable for fusion welding and grade 3 is not to be welded. Requirements as to material, chemical composition, heat treatment, bend tests, test specimen, and permissible variations.

American Society of Mechanical Engineers. Boiler Construction Code, 1940. Specifications for Carbon-Steel and Alloy-Steel Forgings (S-10). Covers 13 classes of steels for structural and machine forgings. Gives requirements as to heat treatment, chemical composition, various tensile properties, test specimen, workmanship, and marking.

American Society for Testing Materials, A 235-42; 1942. American Assn. of State Highway Officials, M102. Carbon-Steel Forgings for General Industrial Use. Covers untreated, annealed, normalized, normalized and tempered, double normalized and tempered, and quenched and tempered forgings; in nine classes, for soft-steel, structural, ship fittings, bridges, machinery, shafts, axles, etc. Requirements for test specimen, boring and turning, heat treatments, chemical compositions, tensile properties, workmanship, and inspection. A.S.T.M. Emergency Alternate Provision EA-A 235; 1943; affected section 7, Chemical Composition; table I, Tensile Requirements.

American Society for Testing Materials, A 236-42; 1942. Carbon-Steel Forgings for Locomotives and Cars. Covers untreated, annealed, normalized, normalized and tempered, special normalized and tempered, and quenched and tempered forgings in nine classes. Gives requirements for heat treatment, chemical composition, boring and turning, tensile properties, test specimen, microscopic test, workmanship, and inspection. A.S.T.M. Emergency Alternate Provision EA-A 236a; 1943; affected section 1, Scope, table 1, Chemical Requirements; section 7, Chemical Composition; section 9, Check; table II, Tensile Strength; and section 10, Tensile Properties.

American Society for Testing Materials, A 237-42; 1942. Alloy-Steel Forgings for General Industrial Use. Covers annealed, normalized and tempered, and normalized, quenched, and tempered forgings in six classes; requirements as to heat treatment, chemical composition, tensile properties, boring and turning, bending properties, test specimens, and workmanship. A.S.T.M. Emergency Alternate Provision EA-A 237; 1943, affected table I, Tensile Requirements.

American Society for Testing Materials, A 238-42; 1942. Alloy-Steel Forgings for Locomotives and Cars. Includes three classes normalized and tempered, and three classes normalized, quenched, and tempered. Gives requirements as to heat treatment, chemical composition, boring and turning, tensile and bending properties, test specimens, microscopic and macroscopic tests for grain structure, workmanship, and inspection. A.S.T.M. Emergency Alternate Provision EA-A 238; 1942; affected section 7, Chemical Composition; and section 14, Omit Macroscopic Examination.

American Society for Testing Materials, A 266-44T; 1944. A.S.M.E. Boiler Construction Code Specification SA-266. Tentative Specifications for Carbon-Steel Seamless Drum Forgings. Covers three grades of carbon-steel hollow drums and headers for use in boilers and for other pressure vessels. Gives requirements for process, special requirements, manufacture, machining, heat treatment, chemical composition, analysis, tensile and bending properties, test specimens, tests, workmanship, finish, marking, inspection, and rejection.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Emergency Specification E-M-102-42, changed A.A.R. Specification M-102-41, Forgings, Carbon Steel, Annealed and Unannealed; paragraph 1, Scope; section II, Chemical Properties and Tests; paragraph 7, Chemical Composition; and section III, Physical Properties and Tests; paragraph 13, Microscopic Tests.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Specification M-102-41; 1941. Forgings; Carbon Steel, Annealed and Unannealed. Covers three grades of carbon steel forgings. Gives manufacture, physical and chemical properties and tests, workmanship and finish, marking, inspection, rejection, and rehearing.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Emergency Specification E-M-105-42. Blooms, Billets, and Slabs for Forgings. Covered by American Society for Testing Materials Tentative Specification A248-41T for Carbon-Steel and Alloy-Steel Blooms, Billets, and Slabs for Forgings.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Specification M-105-41; 1941. Blooms, Billets, and Slabs for Forgings. Covers carbon, carbon-vanadium, and low-carbon-nickel steel. Gives method of manufacture, chemical properties and tests, workmanship and finish, marking, inspection, rejection, and rehearing.

Society of Automotive Engineers. Aeronautical Material Specification 5060A; 1942. Carbon Steel (.13-.18 Carbon). For bars, billets, forgings, tubing, or as ordered. Gives requirements for composition, condition, quality, reports, shipments, identification, and rejections. Similar Specifications: Navy 46 S 32, class A; S.A.E. 1015.

Society of Automotive Engineers. Aeronautical Material Specification No. 5070; 1942. Carbon Steel (.18-.23

Carbon). For bars, rods, billets, or forgings. Covers requirements for composition, grain size, condition, quality, tolerances, reports, shipments, identification, and rejections. Similar Specifications: AN-QQ-S-646, number X1020; S.A.E. 1022.

Society of Automotive Engineers. Aeronautical Material Specification No.5080; 1942. Carbon Steel (.32-.38 Carbon). For bars, billets, forgings, or as ordered. Covers requirements for composition, condition, quality, tolerances, reports, identification, and rejections. Similar Specification: S.A.E. 1035.

U. S. Gov., Navy Dept. Specification 49S21; 1939. Steel; Forgings and Bars for Hulls, Engines, and Ordnance (Heat Treated).

U. S. Gov., Navy Dept. Specification 46S29c; 1944. Steel; Forgings for Welding.

U. S. Gov., Navy Dept. Specification 46 S 30b; 1943. Steel; Forgings for Nitriding and Nitrided Steel.

U. S. Gov., Treasury Dept., Procurement Div. No.297; 1938. Steel; Carbon, Hot-Rolled or Forged. Covers eight classes of steel made by the open-hearth, electric, or crucible process. Gives requirements for physical properties and chemical composition; methods of sampling, inspection, and tests; and packing and marking.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 57-102; 1923. Forging, Steel; Heavy, Carbon and Alloy.

*References.*—Alloy steel forgings, *see* 622.6; methods of testing, general requirements for metals, *see* 600.1, 611.50; classification of metals, *see* 600.2; heat treatments, *see* 600.5; testing machine for forgings, *see* 611.50; other specifications for forged steel, *see* specifications of individual commodities made of forged steel.

## 611.52 Axles, Shafts, and Similar Forgings

American Iron and Steel Institute. Steel Products Manual, Section 22; 1939. Revised, 1943. Forged Axles and Locomotive Forgings. Covers forgings used principally for locomotives and cars for steam and electric railways and also for industrial railway equipment. Manufacturing practices, chemical requirements and tests, physical properties and tests, workmanship and finish, permissible variations and weights, marking and storing, inspection, rejection, and rehearing.

American Petroleum Institute, Div. of Production. Standard 4-A; 1939. Rig Iron Standards. Includes dimensional standards on four sizes of rig iron and on five sizes of sand reels. Rig irons covered by this specification are for oil company purposes.

American Petroleum Institute, Div. of Production. Standard 7; 1944. Transmission Standards. For equipment and machinery used for drilling and production purposes in the oil industry. Applies to shafting and bored members, keys and keyways, and chains. Covers material, workmanship and finish, marking, shafting and keys basic standards, shafting and keys detailed dimensions, chain, inspection and rejection, and appendices.

American Society of Mechanical Engineers. Approved as American Tentative Standard by American Standards Assn. as B17c-1927. Code of Design of Transmission Shafting. Rational Formulas and Diagrams for Computing shaft Diameters for All Conditions of Loading. Designing formulas for the cases most frequently met in design of transmission shafting, diagrams for use in designing shafting, various stress conditions that may be set up in the shaft, theories of elastic failure, application, and limitation. Recommended working stresses, shock, and fatigue factors; and maximum permissible working stresses.

American Society of Mechanical Engineers. American Standards Assn., B 17.1-1943. Shafting and Stock Keys. Dimensions and Tolerances for Finished Steel Shafting, Parallel Stock Keys, and Taper Stock Keys. Covers finished shafting, plain parallel stock keys, plain and gib-head taper stock keys, and tolerances on key and shafting dimensions. Gives illustrative diagrams and tables showing dimensions and tolerances.

American Society of Mechanical Engineers. American Standards Assn., B 49-1932. Shaft Couplings; Integrally Forged Flange Type for Hydro-Electric Units. These dimensions apply to large integrally forged shaft couplings such as used for connection between generator and turbine in hydro-electric installations. Tables relate to coupling dimensions, drilling layout, and bolt dimensions. Other data given cover flange dimensions, formulas, drilling, and reaming for bolts.

American Society for Testing Materials, A 21-36; 1936. Carbon-Steel Axles for Cars and Tenders. Covers tapered axles not over 6 1/2-in. diameter; requirements for chemical composition, ladle analysis, drop test, permissible variations in dimensions, weights, workmanship, and inspection. A.S.T.M. Emergency Alternate Provision EA-A 21; 1942, affected section 3, Chemical Composition.

American Society for Testing Materials, A 235-42; 1942. American Assn. of State Highway Officials, M102. Carbon-Steel Forgings for General Industrial Use. Covers untreated, annealed, normalized, normalized and tempered, double normalized and tempered, and quenched and tempered forgings; in nine classes, for soft-steel, structural, ship fittings, bridges, machinery, shafts, axles, etc. Requirements for test specimen, boring and turning, heat treatments, chemical compositions, tensile properties, workmanship, and inspection. A.S.T.M. Emergency Alternate Provision EA-A 235; 1943; affected section 7, Chemical Composition; Table I, Tensile Requirements.

American Society for Testing Materials, A 236-42; 1942. Carbon-Steel Forgings for Locomotives and Cars. Covers untreated, annealed, normalized, normalized and tempered, special normalized and tempered, and quenched and tempered forgings in nine classes. Gives requirements for heat treatment, chemical composition, boring and turning, tensile properties, test specimen, microscopic test, workmanship, and inspection. A.S.T.M. Emergency Alternate Provision, EA-A 236a; 1943; affected section 1, Scope; table I, Chemical Requirements; section 7, Chemical Composition; section 9, Check; table II, Tensile Strength; and section 10, Tensile Properties.

American Society for Testing Materials, ES-25; 1943. Emergency Specifications for Carbon-Steel and Alloy-Steel Forgings for Turbine Generator Rotors and Shafts. Cover annealed, normalized and tempered, and double normalized and tempered carbon-steel and

alloy-steel forgings for turbine generator rotors and shafts. Process, discard, manufacture, machining, heat treatment, chemical composition, analysis, tensile properties, test specimens, number of test, retests, magnetic test, workmanship, finish, marking, internal inspection, inspection, and rehearing.

American Society for Testing Materials, ES-26; 1943. Emergency Specifications for Carbon-Steel and Alloy-Steel Forgings for Turbine Rotors and Shafts. Cover annealed, normalized and tempered, and double normalized and tempered carbon-steel and alloy-steel forgings for turbine rotors and shafts. Process, discard, manufacture, heat treatment, chemical composition, analysis, tensile properties, test specimens, number of tests, retests, stability test, magnetic test, workmanship, finish, marking, internal inspection, inspection, and rehearing.

American Transit Assn. Standard Design of Axles for Electric Railway Motors, E3-38; 1938. Motor axles in accordance with this standard are intended for operation under electrically propelled motor cars at a speed not in excess of 70 m.p.h., unless a lower maximum speed is specified. Includes designs of axles for railway motors and a table relative to rate capacity of standard motor axles.

American Transit Assn. Standard Specification for Quenched and Tempered Carbon Steel Axles, Shafts, and Similar Forgings, E5-37; 1937. Covers the manufacture, chemical and physical properties, tests, workmanship and finish, marking, inspection, and rejection of steel used for axles, shafts, and similar forgings. This specification is identical in substance with A.S.T.M. Specification A19-36.

American Transit Assn. Standard Specification for Annealed Carbon Steel Axles, Shafts, and Similar Forgings, E6-37; 1937. Covers the manufacture, chemical and physical properties, tests, workmanship and finish, marking, inspection, and rejection of steel used for axles, shafts, and similar forgings.

American Transit Assn. Recommended Rules for Inspection of Car Axles, E142-37; 1937. Recommendations given as to the methods of testing car axles for cracks when they are removed from trucks for renewal of wheels.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Axles. Designations based on load carrying capacity, by letter A, B, C, D, E, and F. Dimensional drawing of axle with journal sizes.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Designs for Electric Traction Motor Axles Suitable for Gas-Electric and Similar Types of Heavy Traction Rail Motor Cars. In cooperation with the American Transit Engineering Assn. this organization has adopted the designs of the A.T.E.A. covering axles from 3 3/4 by 7 to 6 1/2 by 12 in., for rail cars, to be used in branch or main line local service. Materials for drive axles to be A.A.R. M-104, and for trailer axles to be A.A.R. M-101 grade B or M-102 grade 3. Not for high speed motorized trains for main line service.

Assn. of American Railroads, Operations and Maintenancee Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Driving Axles for Locomotives. Dimensional drawing of axle with allowable bearing pressures for passenger, freight, and switch engines. Details of design and formulae.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Eccentric Cranks and Crank Arms. Recommended and optional layouts for construction of eccentric and crank arms, of forged medium steel, or electric cast steel.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Emergency Specification E-M-101-42, changed A.A.R. Specification M-101-41, Axles, Carbon Steel, for Cars and Locomotive Tenders; section II, Chemical Properties and Tests; paragraph 12, Chemical Composition; and section III, Physical Properties and Tests; paragraph 21 Microscopic Tests.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1944. Specification M-101-41; 1941. Axles; Carbon Steel, for Cars and Locomotive Tenders. Covers three grades of axles; includes forged, annealed, and normalized. Gives manufacture, chemical and physical properties and tests, workmanship and finish, permissible variations and weights, marking and storing, inspection, rejection, and reheating.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Emergency Specification E-M-104-42, changed A.A.R. Specification M-104-37, Normalized and Tempered Steel Forgings; section II, Chemical Properties and Tests; paragraph 7, Chemical Composition; and paragraph 9, Check Analysis; section III, Physical Properties and Tests; paragraph 12, Microscopic Tests; paragraph 14, Number of Tests; and paragraph 13, Macroscopic Test.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Engine Truck Axles. Covers several standard sizes of axles with dimensional drawings.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. New Passenger Car Axles. Dimensional diagrams for five classes of axle and load limits for 100 and 85 m.p.h.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Normalized and Tempered Steel Forgings, M-104-37; 1937. Covers steel shafts, driving engine truck and trailer axles, crank pins, main and side rods, piston rods, valve stems, rod straps, eccentric cranks, and other hard steel forgings for locomotives and cars. Manufacture, chemical and physical properties, and tests for three grades of steel.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Pressures for Mounting Driving, Trailing, and Engine Truck Axles and Crank Pins. Recommended Practice, adopted 1931. Requirements for desired pressure, lubricant mixture, and pressures for 4 to 15 in. diameter axles and pins for cast iron, cast steel, or wrought steel.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Symbols for Marking Defective Axles. Specifies symbol number to be marked on defective part for classified defect.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Trailer Truck Axles; Sizes and Dimensions of, for Trailer Trucks of the Two Wheel Type. For locomotive trailer axles, drawing of standard axles, with optional variations and gives bearing pressures.

Assn. of American Railroads, Mechanical Div. Wheel and Axle Manual, 1942. Includes specifications and designs for wrought steel wheels, multiple-wear, engine truck, two-wear and one-wear, defects, cast steel wheels, spun steel wheels, cast iron wheels, car and tender axles, boring mill practice, axle lathe practice, wheel press, lathe, and grinding practice; gages, reforging, handling, storage, and shipping.

Formed Steel Tube Institute. Handbook of Welded Steel Tubing, 1941. Includes specifications for welded tubing for propeller shafts, diameters, gage, tolerance, classes of steels, table of torque values for automobile propeller shafts, table of critical speeds of welded tubular propeller shafts, limits of taper by taper swage, special shapes, etc.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, 1938. Shafting; Cold Finished. Covers definition, manufacture, properties, sizes, uses, marketing methods, and packing.

*References.*—Alloy steel axles and shafts, *see* 622.6; methods of testing, general requirements for metals, *see* 600.1, 611.50; classification of railway materials, *see* 600.2; heat treatments, *see* 600.5; testing machine, *see* 611.50; shafting for ships, *see* 725.42; steel for shafts and axles, *see* 603.24, 621.31; steel forgings, *see* 611.51.

## 611.53 Wheels and Tires, Steel

American Iron and Steel Institute. Steel Products Manual, Section 20; 1938. Revised, 1943. Wrought Steel Wheels. Covers manufacture, wheel designs, classification according to service, rim thickness, chemical composition, heat treatment, machining, mating, permissible variations, and marking.

American Society for Testing Materials, A 25-41; 1941. Wrought Steel Wheels for Electric Railway Service. Gives requirements for chemical composition, ladle analysis, mating, permissible variations in dimensions, finish, and inspection. A.S.T.M. Emergency Alternate Provision EA-A 25a; 1942; affected section 4, Chemical Composition; section 8, Variations in Dimensions; section 9, Finish; and section 10, Markings; add appendices I and II.

American Society for Testing Materials, A 26-39; 1939. Steel Tires. Covers three classes for driving tires of passenger locomotives, driving tires of freight locomotives and tires for car wheels and miscellaneous service, and driving tires for switching locomotives. Gives chemical composition, tensile properties, test specimen, mating, and permissible variations in dimensions. A.S.T.M. Emergency Alternate Provision EA-A 26; 1942, affected section 4, Chemical Composition.

American Society for Testing Materials, A 57-44; 1944. Multiple-Wear Wrought Steel Wheels. For use under locomotives, tenders, and cars. Gives requirements for temperature regulation, chemical composition, ladle analysis, check analysis, mating, permissible variations in dimensions, finish, marking, inspection, and rejection. A.S.T.M. Emergency Alternate Provision EA-A 57; 1942, affected section 5, Chemical Composition.

American Society for Testing Materials, A 186-39; 1939. One-Wear and Two-Wear Wrought Steel Wheels. For use under cars in freight and industrial service. Requirements for temperature regulation, chemical composition, ladle analysis, permissible variations in dimensions, finish, and inspection. A.S.T.M. Emergency Alternate Provision EA-A 186; 1942, affected section 5, Chemical Composition.

American Society for Testing Materials, A 244-44; 1944. Heat-Treated Wrought Steel Wheels. Covers three classes of heat-treated wrought steel wheels commonly used for locomotives, locomotive tenders, and passenger cars. Gives process, discard, temperature regulation, heat treatment, chemical composition, ladle and check analyses, hardness test, number of tests, retests, mating, permissible variations in dimensions, finish, marking, inspection, and rejection. A.S.T.M. Emergency Alternate Provision EA-A 244; 1942, affected section 6, Chemical Composition.

American Transit Assn. Standard Specification for Steel Wheels for Electric Railway Service, E7-39; 1939. Gives requirements for wrought steel wheels including manufacture, chemical properties and tests, mating, permissible variations in dimensions, finish, marking, and inspection. Also gives requirements for spun steel wheels. Emergency Revision E7 (Em); 1942, changed requirements to meet demands of the present national emergency.

American Transit Assn. Standard Limit of Wear Gauges for A.T.E.A. Standard Flange Contours, E8-37; 1937. Drawings showing dimensions of gauges for worn-out standard wheel contours. Emergency Revision E8(Em); 1942, changed requirements to meet demands of the present national emergency.

American Transit Assn. Standard Plane Ring Gauge for Solid Steel Wheels, E9-37; 1937. Drawing of gauge for use in checking warp in wheel by placing it on the back of the ring.

American Transit Assn. Standard Wheel Mounting Gauge for A.T.E.A. Contours, E10-37; 1937. This gauge is made with a pointer for the center line of the axle so that the first wheel will be pressed on from the center line of the axle, thereby insuring that the wheels will not only be located the proper distance from each other but will be located centrally on the axle. Emergency Revision E10(Em); 1942, changed requirements to meet demands of the present national emergency.

American Transit Assn. Standard Design for Thread and Flange of Wheel, E13-38; 1938. Dimensional drawings of tread and flange contours for steel and chilled iron wheels. Emergency Revision E13 (Em); 1942, changed requirements to meet demands of the present national emergency.

American Transit Assn. Standard Dimensions of A.T.E.A. Steel Wheel Designs, E14-39; 1939. Gives diagram showing points at which dimensions covered by specifications are measured; also eight cables giving

dimensions of parts of wheels 21 to 36 in. in diameter covering flanges, thicknesses, heights, contours, etc. Emergency Revision E14(Em); 1942, changed requirements to meet demands of the present national emergency.

American Transit Assn. Recommended Design for Wheel Checking Gauges for A.T.E.A. Contours A, B, C and D, E112-37; 1937. Drawing of gauge for use only in checking wheels in service and not for mounting wheels. Emergency Revision E112 (Em); 1942, changed requirements to meet demands of the present national emergency.

American Transit Assn. Recommended Specification for Finishing and Mounting of Wheels, Gears, and Axles, E146-38; 1938. Contains recommendations for mounting of wheels, gears, and axles, and gives designs of boring mill cutters for wheel roughing and finishing cutter.

Assn. of American Railroads, Mechanical Div. Wheel and Axle Manual, 1942. Includes specification and designs for wrought steel wheels, multiple-wear, engine truck, two-wear and one-wear, defects, cast steel wheels, spun steel wheels, cast iron wheels, car and tender axles, boring mill practice, axle lathe, wheel press, lathe, and grinding practice; gages, reforging, handling, storage, and shipping.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1944. Emergency Specification E-M-103-42, changed A.A.R. Specification M-103-37, One-Wear Wrought Steel Wheels; section I (b), Design; section IV, Permissible Variations in Dimensions—Dimensions With Tolerances, and section II, Chemical Properties and Tests; paragraph 5, Chemical Composition.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Specification M-103-37; 1937. One-Wear Wrought Steel Wheels. Method of manufacture, chemical composition and test, mating, permissible variations in dimensions, markings, finish, design, inspection, rejection, and rehearing, with dimensional diagram.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Emergency Specification E-M-106-42, changed A.A.R. Specification M-106-42, Tires, Steel, Locomotives and Cars; section II, Physical Properties and Tests; paragraph 3, Chemical Composition.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Tires; Steel, Locomotives and Cars, M-106-42; 1942. Three classes by carbon content of steel, composition, tension test, mating, and permissible variations.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Emergency Specification E-M-107-42, changed A.A.R. Specification M-107-42; section I(b), Design; section IV, Permissible Variations in Dimensions—Dimensions With Tolerances; and section II, Chemical Properties and Tests; paragraph 5, Chemical Composition.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Specification M-107-42; 1942. Wheels; Multiple-Wear Wrought Steel. Covers multiple-wear wrought steel wheels for locomotives, tenders, and cars. Gives manufacture, chemical properties and tests, mating, permissible variations in dimensions, finish, marking, inspection, rejection, and rehearing, with dimensional diagrams.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1944. Emergency Specification E-M-123-42; 1942, changed A.A.R. Specification M-123-42, Heat Treated Multiple Wear Wrought Carbon Steel Wheels; section IV, Permissible Variations in Dimensions; and section II, Chemical Properties and Tests.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Specification M-123-42; 1942. Heat-Treated Multiple-Wear Wrought Carbon Steel Wheels. Covers three classes of wheels for locomotives, locomotive tenders, and passenger cars. Gives manufacture, chemical properties and tests, mating, permissible variations in dimensions, finish, marking, inspection, rejection, and rehearing, with dimensional diagrams.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Driving and Trailer Wheels for Locomotives. Gives requirements for design, limits of weight and counterbalance effects, type of tire, cast steel as per A.A.R. specification. Includes dimensional drawings of wheels.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Flange Limit Gage for Remounting all Cast Iron and Cast Steel Wheels. Dimensional drawing for the fabrication of gage, finish requirements, and with diagrams showing method of use. Emergency Specification, 1942, changes requirements.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Flange Limit Gage for Remounting One-Wear, Wrought Steel Wheels. Dimensional drawing of gage. Hardened and ground on all gaging surfaces. Chromium-plated finish. Emergency Specification, 1942, changes requirements.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Grinding of Wheels. Instruction for type of grinding machine to grind circumference concentric with journal.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Hub Depression Gage for All Wrought Steel Wheels. Dimensional drawing for three sizes of wheel gage.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Limit Wear Gages for Condemning A.A.R. Wheel Gages. Dimensional diagram.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Locomotive Tire Manual. Requirements for steel making, tire manufacture, types of steel for tires for locomotives and cars, minimum thickness, sections of tires, shrinkage allowance,

tire defects illustrated, preparation and application of tires to wheel centers, I.C.C. limits for tire thickness, and dimensional diagrams.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Master Gages for A.A.R. Wheel Gages. Recommended Practice. Master gage for checking tread worn hollow condemning limit gage for cast iron and cast steel wheels. Dimensional drawing.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Master Gages for A.A.R. Wheel Gages. Recommended Practice. Gives detailed dimensional drawings for fabrication and marking of master gages. For remounting cast iron and cast steel wheels. Dimensional drawing showing manufacture and giving finish.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Maximum Flange Thickness, Height, and Throat Gage, New, Multiple-Wear, Roll-Finished, Wrought Steel Wheels and Tires. Dimensional drawing for construction.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Maximum Flange Thickness, Height, and Throat Radius Gage for New, One-Wear Wrought, and One-Wear, Cast Steel Wheels, and Maximum Flange Thickness, and Throat Radius Gage, for New, Cast Iron Wheels. To be used only by inspectors at the foundry, dimensional drawing of gage, with requirement that gaging surfaces be hardened and ground and chromium-plate finish.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Maximum Flange Thickness, Height, and Throat Radius Gage, New, Multiple-Wear, Machine-Finished, Wrought Steel Wheels and Tires. Dimensional drawing for construction.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Mounting Gage for Multiple-Wear, Wrought Steel Wheels, and Multiple-Wear, Cast Steel Wheels. Gives manufacturing tolerances, requirements as to finish of gage, and detailed drawings for gages.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Section of Tire. Dimensional drawing of section showing radii and taper, for steel tired engine, tender truck and trailer wheels, and flanged driving tires of locomotives.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Steel Tires of Locomotive Wheels; Shrinkage Allowances for. Covers sizes from 20 to 78 in. exact center diameter with shrinkage allowance and exact bore.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Steel Wheel Gage. Service gage for measurement of rim and tread wear, diagrams for illustrating method of use, and for manufacture of gage.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Symbols for Marking Defective Cast Iron and One-Wear Cast Steel Wheels. Specifies number to mark on defective part for various types of classified defects.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Symbols for Marking Defective Multiple-Wear Two-Wear and One-Wear Wrought Steel and Steel Tired Wheels. Specifies number to mark on defective part for various types of classified defects.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Tires; Master Gage for Boring. Dimensional drawing for gaging the inside diameter of tire; various sizes of gage.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Tires; Steel, Minimum Thickness for. Dimensional drawing showing condemning limits for five types of steel tires.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1944. Tread and Flange for All Steel-Tired Wheels. Standard, revised 1944. Dimensional drawing showing radii and taper of tread and flange; also limit of wear groove.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Tread and Flange Contour for Multiple- and Two-Wear Wrought and Cast Steel Wheels on Cars and Tenders and for Steel Tired Engine, Tender Truck, and trailer Wheels, and Flanged Driving Tires and Locomotives. Dimensional drawing.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Two-Wear Wrought Steel Wheels, M-121-37; 1937. Covers requirements as to design, manufacture, chemical and physical properties and tests, mating, permissible variation in flange, rim, plate, hub, and bore.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Wheel Centers; Master Gage for Turning. Dimensional drawing for several sizes of gage.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Wheel Circumference Measure for Cast Iron, Cast Steel, Wrought Steel, and Steel Tired Wheels. Covers instructions for the use of measure to insure that wheels mounted on the same axle are of the same diameter. Dimensional drawings and tolerance.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Wheels; Mounting. Table of mounting pressure in tons for steel and cast iron wheels, with specifications covering requirements for wear, gaging, alignment, etc.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Wheel Mounting and Check Gage for Cast Iron, One-Wear Wrought, and Cast Steel Wheels. Dimensional drawing of gage.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and

Recommended Practice, 1942. Wheels; Steel, Rotundity Gage for. Dimensional Drawing for 33, 36, or 38-in. steel wheels.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Wheels; Steel Tired, Tire Fastening for. Dimensional drawing of tire showing method of mounting.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Wheel Tread and Flange for Cast Iron, One-Wear Wrought, and One-Wear Cast Steel Wheel. Dimensional drawing.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Wheel Tread Worn Hollow Limit Gage for Remounting Cast Iron and Cast Steel Wheels. Dimensional drawing of gage. Hardened and ground on all gaging surfaces. Chromium-plated finish.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Wheels; Wrought Steel, Plane Gage for. Dimensional drawing for three sizes of gage.

U. S. Gov., U. S. Army, Transportation Corps. Specification 43-4; 1926. Tires; Steel.

*References.*—Methods of testing, general requirements for metals, *see* 600.1, 611.50; classification of railway materials, *see* 600.2; heat treatments, *see* 600.5; testing machine for forgings, *see* 611.50; cast iron wheels, *see* 611.18; cast steel wheels, *see* 611.49; steel forgings, *see* 611.51.

## 611.54 Springs, Helical and Elliptical, and Parts

American Society for Testing Materials, A 61-39; 1939. Steel Helical Springs. Gives requirements for general purpose springs; including material, physical tests, permissible variations for diameter, solid height, free height, loaded height, and permanent set, table of test loads for given fiber stress, finish, and inspection.

American Society for Testing Materials, A 62-39; 1939. Steel Elliptical Springs. Covers elliptical springs for general purposes; requirements as to materials, check analysis, physical tests for free height, loaded height, loaded length, and permanent set, permissible variations, finish, and inspection.

American Society for Testing Materials, A 125-39; 1939. Heat-Treated Steel Helical Springs. Includes carbon and alloy-steel hot-coiled compression springs made from round bars 1/2 in. and larger in diameter and suitable for use on railway equipment. Requirements for material, check analysis, coiling, heat treatment, physical tests, permissible variations, testing and table of test loads for given fiber stress, finish, and inspection.

American Society for Testing Materials, A 147-39; 1939. Heat-Treated Steel Elliptical Springs. Covers carbon and alloy-steel springs for railway use, also for miscellaneous elliptical and special flat springs. Requirements for material, check analysis, forming, heat treatment, design, physical tests, permissible variations, test loads, finish, and inspection.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Design and Repairs to Locomotive Springs. Recommends that convex die blocks be used in clamping bands in hydraulic press with sketch of arrangement. Also diagrams and table covering nibbing of spring leaves.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Springs; Carbon Steel, Elliptical, M-113-42; 1942. Material, composition, manufacture, physical properties and tests, table of loads to correspond to maximum allowable fiber stress.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Springs; Carbon-Steel, Helical, M-114-42; 1942. Cover hot-coiled, compression springs, 1/2-in. and larger in diameter and suitable for railway equipment. Details as to manufacture, composition, physical properties and tests, load and deflection table, etc.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Springs and Spring Caps for Freight Car Trucks. For nine sizes of spring and spring clusters, standard dimensional drawings of caps and springs, free and solid heights, weights and load capacity.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Spring Hanger Clips for Locomotive Elliptic Springs. For regular and inverted camber locomotive springs, dimensional drawings, and tables for drop forged steel hanger clips.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Pins and Bushings for Brake and Spring Rigging for Locomotives and Tenders. Gives pin, inside and outside bushings diameters, for material which can be case-hardened, for 3/4 to 4 1/2-in. bushings.

U. S. Gov., Marine Corps Specification, 1935. Spring; Helical, for Bedstead.

U. S. Gov., Marine Corps Specification, 1935. Spring; Helical, for Steel Cot.

U. S. Gov., Navy Dept. Specification 1S2a; 1916. Springs; Counter-Recoil, Gun Mount, Steel (for Use of Naval Gun Factory).

U. S. Gov., Navy Dept. Specification 42S10; 1928. Springs; Door, Coil, Torsion Type.

U. S. Gov., Navy Dept. Specification 49S9; 1940. Springs; Helical (Aircraft Use).

U. S. Gov., U. S. Army, Army Air Forces. Specification 98-40092A; 1942. Spring; Helical, Heat-Treated.

*References.*—Alloy steel springs, *see* 622.7; methods of testing, general requirements for metals, *see* 600.1, 611.50; classification of railway materials, *see* 600.2; heat treatments, *see* 600.5; steel for springs, *see* 603.33, 621.34; bed springs, *see* 613.1.

## 611.55 Pinions and Gears

American Gear Manufacturers Assn. American Standards Assn., 86.3-1940. Recommended Practice for Backlash for General Purpose Spur Gearing Measured on Standard Center Distance With Feeler as Indicated in Diagram.

American Gear Manufacturers Assn. Standard 206.01; 1944. Fine Pitch Straight Bevel Gears; Tentative. Covers introduction, scope and limitations, general specifications, nomenclature and symbols, 90-degree axis bevel gears, and angular bevel gears.

American Gear Manufacturers Assn. Standard 207.01; 1944. Twenty-Degree Involute Fine Pitch System for Spur Gears; Tentative. Covers introduction, pressure angle, basic back and standard tooth proportions, pinion enlargements, center distances, standard center distance system, enlarged center distance system, tabulated dimensions, data sheets, fine pitch system for involute spur gears 20-degree basic pressure angle, and tables showing details for standard tooth proportions and 20-degree pressure angle involute fine pitch system for spur gears.

American Gear Manufacturers Assn. Standard 321.01; 1944. Helical and Herringbone Mill Gears; Tentative. Covers scope, rating of gears, service factors, design of gears and shafts, lubrication, marking, and figure showing variation of Wh with differential in hardness between pinion and gear.

American Gear Manufacturers Assn. Standard 420.01; 1944. Helical and Herringbone Gear Speed Reducers. Covers scope and responsibility, rating of gears, design of gearing, service factors, design of speed reducer, lubrication, marking, table giving service factors, and figures showing variation of thermal horsepower capacity with center distance and face width for single reduction units and double reduction units.

American Gear Manufacturers Assn. Standard 421.01; 1944. High Speed Helical and Herringbone Gear Units; Tentative. Covers scope and responsibility, design and gearing, design of gear unit, lubrication, and marking.

American Gear Manufacturers Assn. Standard 460.01; 1944. Concentric and Parallel Shaft Gearmotors. Covers gearmotors only and is applicable to helical, herringbone, spur, and planetary gearmotors of single, compound, double, and triple reduction types. Gives rating of gears, design of gearing, application practice, design of gearmotor, lubrication, standard speeds, marking, table giving applicable classification, and figures showing variation of allowable intensity of shock with frequency and duration of peak loads.

American Society of Mechanical Engineers. American Standards Assn., B 6.1-1932. Spur Gear Tooth Form. This standard is a combination of the data developed in 1927 on the 14 1/2-degree composite system and the 20-degree stub involute system, and the 1932 data on 14 1/2- and 20-degree, full depth involute systems.

American Society of Mechanical Engineers, joint sponsor with American Gear Manufacturers' Assn. American Standards Assn., B 6.2-1933. Gear Materials and Blanks. These specifications are for forged and rolled carbon steel, steel castings, bronze and brass castings, and forged and rolled alloy steel. Recommendations cover—manufacture, ladle, and check analyses, finish, marking, inspection, etc. Also included are tables on chemical composition for each type of material.

American Society for Testing Materials, ES-23a; 1943. Emergency Specifications for Carbon-Steel Forgings for Rings for Main Reduction Gears. Covers three classes for normalized and tempered, and quenched and tempered, carbon-steel forgings for rings for main reduction gears, and for auxiliary drives. Process, discard, manufacture, heat treatment, chemical composition, analysis, hardness, number of tests, retests, workmanship, finish, marking, inspection, and rejection.

American Society for Testing Materials, ES-24; 1943. Emergency Specifications for Carbon-Steel and Alloy-Steel Forgings for Pinions for Main Reduction Gears. Cover normalized and tempered, or quenched and tempered, carbon-steel and alloy-steel forgings for pinions for main reduction gears and for auxiliary drives. Process, discard, manufacture, machining, heat treatment, chemical composition, analysis, tensile properties, hardness, test specimens, tests, retests, workmanship, finish, marking, inspection, and rehearing.

American Transit Assn. Standard Specification for Case Hardened Forged Steel and Quenched and Tempered Forged Steel Gears and Pinions, E19-38; 1938. This specification covers the manufacture of steel, inspection of gears and pinions, permissible variations in dimensions of gears and pinions, and three types of standard tooth forms on gears and pinions which are in accordance with the standards of the American Gear Manufacturers Assn.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Specification M-901-41; 1941. Approved Draft Gears for Freight Service. Covers draft gears for freight cars and freight locomotives having the A.A.R. standard pocket. Gives requirements for manufacture, inspection and tests, diagram of set-up for drop testing, with appendix on certificate of approval from A.A.R. laboratory.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Specification M-902-41; 1941. Purchase Specification for Approved Draft Gears for Freight Service. Covers inspection and test which purchaser may make. Gives manufacture, dimensions to fit standard pocket, coil springs, marking, drop test machine; preliminary, capacity, and sturdiness tests.

*References.*—Methods of testing, general requirements for metals, *see* 600.1, 611.50; heat treatments, *see* 600.5; steel for gears, *see* 603.22, 621.31; pinions and side gears for automobile differentials, *see* 722.34; steel forgings, *see* 611.51; lubrication for gears, *see* 504.0.

## 611.56 Turbine Bucket Wheels

American Society for Testing Materials, ES-27; 1943. Emergency Specifications for Carbon-Steel and Alloy-Steel Forgings for Turbine Bucket Wheels. Cover annealed or annealed, quenched, and tempered carbon-steel and alloy-steel forgings for turbine bucket wheels. Process, discard, manufacture, machining, heat treatment, chemical composition, analysis, tensile properties, hardness, test specimens, number of tests, retests, workmanship, finish, marking, inspection, and rehearing.

## 611.59 Miscellaneous Manufactures of Steel Forgings

American Society for Testing Materials, A 235-42; 1942. American Assn. of State Highway Officials, M102. Carbon-Steel Forgings for General Industrial Use.

Covers untreated, annealed, normalized, normalized and tempered, double normalized and tempered, and quenched and tempered forgings; in nine classes, for soft-steel, structural, ship fittings, bridges, machinery, shafts, axles, etc. Requirements for test specimen, boring and turning, heat treatments, chemical composition, tensile properties, workmanship, and inspection. A.S.T.M. Emergency Alternate Provision EA-A 235; 1943; affected section 7, Chemical Composition; table I, Tensile Requirements.

American Society for Testing Materials, A 243-43; 1943. Carbon-Steel and Alloy-Steel Ring and Disk Forgings. Cover untreated, annealed, normalized, normalized and tempered, quenched and tempered, double normalized and tempered, and normalized; quenched and tempered carbon steel and alloy steel ring and disk forgings for general industrial use. Covers manufacture, machining, heat treatment, chemical composition, analysis, tensile and bending properties, test specimens, testing, workmanship, marking, inspection, and rejection.

American Society for Testing Materials, ES-21; 1943. Emergency Specifications for Carbon-Steel and Alloy-Steel Forgings for Magnetic Retaining Rings for Turbine Generators. Cover annealed, quenched, and tempered carbon-steel and alloy-steel forgings for magnetic retaining rings for turbine generators. Process, discard, manufacture, machining, heat treatment, chemical composition, analysis, tensile properties, test specimens, tests, retests, workmanship, finish, marking, inspection, and rehearing.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Draft Key Retainer. Dimensional drawing; shows application.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Draft Gear Followers. Covers requirements for material, size and tolerance, and finish.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Inspection and Maintenance of Draft Gears and Attachments by Car Owners. Recommends repair tracks where defective, or if total slack exceeds 1 1/2 in., at time of general repair, certified gears to be used if possible, serviceable used other gears not inefficient or obsolete as per A.A.R. interchange rules.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Specification M-901-41; 1941. Approved Draft Gears for Freight Service. Covers draft gears for freight cars and freight locomotives having the A.A.R. standard pocket. Gives requirements for manufacture, inspection and tests, diagram of set-up for drop testing, with appendix on certificate of approval from A.A.R. laboratory.

U. S. Gov., Federal Specification RR-G-661a; 1936. Gratings; Steel, Floor (Except for Naval Vessels). Covers two types—(I) parallel bearing bars, with cross members at right angles; and (II) parallel bearing bars, with diagonal cross members. Gives requirements for material, workmanship, construction, deflection, bearing bars, cross members, fasteners, and finishes; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Marine Corps Specification, 1940. Anchor; Kedge, for Pier, Temporary 10-Ton, Model 1940.

U. S. Gov., Navy Dept. Specification 6G1b; 1944. Grapnels.

U. S. Gov., Navy Dept. Specification 12G7; 1938. Gratings; Floor (Shipboard Use).

U. S. Gov., Navy Dept., U. S. Coast Guard, Bureau of Marine Inspection and Navigation. Marine Engineering Regulations and Material Specifications, 1942. Contains specifications and requirements for materials, design, construction, installation, and inspection of boilers, unfired pressure vessels and appurtenances thereof; also piping, valves, fittings, flanges, safety valves, etc., upon the strength and efficiency of which safety of life is dependent, and are intended for maximum temperatures of 1,000° F. Includes specifications for three grades of forged or rolled steel for pipe flanges, forged fittings, and valves and parts for service temperatures up to 1,000° F.—process, manufacturing practice, heat treatment, chemical composition, tensile properties, tests, retests, macro-tests, workmanship, finish, and marking.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 57-104-2D; 1941. Forging, for Common Steel Shell and Shrapnel.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 57-105-1; 1940. Forging; Steel, for Ordnance.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 57-105B; 1940. Forging; Small-Arms, Automotive, Drop and Miscellaneous, Steel Carbon, and Alloy.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 57-106A; 1945. Steel Forgings for Cannon Tubes.

*References.*—Alloy steel forgings, *see* 622.6; methods of testing, general requirements for metals, *see* 600.1, 611.50; heat treatments, *see* 600.5; steel for axles and shafts, *see* 603.24; spring and tool steel, *see* 603.3; alloy steel for forgings, *see* 621.31, 621.34, 621.35; hand tools, forged, *see* 615, 616; builders' hardware, forged, *see* 617; forged pipe flanges, *see* 607.4; ship couplings, forged, *see* 725.42; tools for metal working machines, *see* 765; automobile parts, *see* 722.3; journal boxes and lids of pressed steel, *see* 611.22; truck bolsters and coupler yokes of forged steel, see 611.49; locomotive crosshead pins, side rod pins and knuckle joints, of forged steel, *see* 702.9; bolts, nuts, screws, of forged steel, *see* 608.31, 608.32, 608.2; forged clevis for insulator attachment, *see* 719.62; insulator pin, drop forged, *see* 719.61; scissors and shears, forged, *see* 612.13; forged chain attachments, *see* 603.57.

## 612. CUTLERY, HOLLOW WARE, AND OTHER HOUSEHOLD UTENSILS

### 612.0 GENERAL ITEMS

U.S. Gov., Dept. of Commerce, National Bureau of Standards. Commercial Standard CS62-38; 1938. Colors for Kitchen Accessories. Covers 6 colors adopted as standard for kitchen accessories, provides a standard sample plan for control of these colors at the source, specifies a method for visual comparison, and supplies a means for identification of standard colors from producer to user. Sponsored by National Retail Dry Goods Assn.

### 612.1 CUTLERY, EXCEPT TOOLS

#### 612.11 Pocket Knives

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R99-30; 1930. Pocketknives. This recommendation establishes standard sizes and shapes of handles for pocketknives and the maximum number of varieties any one

manufacturer may produce, standard colors of celluloid given for celluloid-handled knives.

U. S. Gov., Marine Corps Specification, 1933. Knife; Pocket, Electricians'.

U. S. Gov., Marine Corps Specification, 1944. Knife; Pocket, Utility.

U. S. Gov., Navy Dept. Specification 41J4b; 1942. Jackknives.

U. S. Gov., U. S. Army, Corps of Engineers. Specification 17-170; 1937. Knife; Pocket, Engineer, Four-Blade, With Clevis.

## 612.12 Razors and Razor Blades

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R69-28; 1928. Packaging of Razor Blades. This recommendation establishes a schedule for packing various makes of razor blades, covering the number of blades per package, and the number of packages per carton. Sponsored by the National Wholesale Druggists Assn.

U. S. Gov., Navy Dept. Specification 29R1; 1944. Razors; Straight, Safety Type.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 22-194; 1940. Razor, Safety; and Blade, Safety Razor.

## 612.13 Scissors and Shears

U. S. Gov., Federal Specification GGG-S-101b; 1941. Amendment 1; 1944. Scissors and Shears. Covers three classes of shears—bankers', stationers', or paper; straight trimmers, household, or dressmaking; and bent trimmers; and three classes of scissors—embroidery, double pointed; ladies', one point sharp and one point blunt, and pocket, both points blunt. Gives requirements for size, material, and construction; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment. Emergency Alternate Federal Specification E-GGG-S-101b; 1942, changed requirements for materials, finishes, and weights.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2534; 1939. Shear; Crown, Universal.

U. S. Gov., Veterans Administration. Specification VA-G-299; 1938. Scissors.

*References.*—Methods of testing, general requirements for metals, *see* 600.1; metal cutting shears, *see* 615.33; forged steel, *see* 611.51.

## 612.14 Table and Kitchen Cutlery

American Hospital Assn., 40-4. Mechanical Can Opener. Covers two sizes in table type openers.

U. S. Gov., Dept. of Agriculture, Forest Service. Specifications MSF-247-1-S. Outfit; 1-Man, Nested Mess.

U. S. Gov., Dept. of Agriculture, Forest Service. Specifications MSF-247-2-S. Outfit; 2-Man, Nested Mess.

U. S. Gov., Dept. of Agriculture, Forest Service. Specifications MSF-247-3-S. Outfit; 3-Man, Nested Mess.

U. S. Gov., Dept. of Agriculture, Forest Service. Specifications MSF-247-4-S. Outfit; 6-Man, Nested Mess.

U. S. Gov., Dept. of Agriculture, Forest Service. Specifications MSF-247-5-S. Outfit; 10-Man, Nested Mess.

U. S. Gov., Dept. of Agriculture, Forest Service. Specifications MSF-247-6-S. Outfit; 25-Man, Nested Mess.

U. S. Gov., Dept. of Agriculture, Forest Service. Specifications 247-7-S. Outfit; 50-Man, Nested Mess.

U. S. Gov., Dept. of Agriculture, Forest Service. Specifications 247-8-S. Outfit; 50-Man, Nested Mess.

U. S. Gov., Dept. of Agriculture, Forest Service. Specifications 247-35-S. Knife; Butcher, 8- and 10-Inch Blade.

U. S. Gov., Dept. of Agriculture, Forest Service. Specifications 247-36-S. Knife; Butcher, Folding Blade.

U. S. Gov., Dept. of Agriculture, Forest Service. Specifications 247-37-S. Knife; Paring.

U. S. Gov., Dept. of Agriculture, Forest Service. Specifications 247-38-S. Knife; Table.

U. S. Gov., Dept. of Agriculture, Forest Service. Specifications 247-39-S. Fork; Meat, 10- and 12-Inch.

U. S. Gov., Dept. of Agriculture, Forest Service. Specifications 247-40-S. Fork; Table.

U. S. Gov., Federal Specification RR-T-41a; 1938. Amendment 2; 1944. Tableware; Corrosion-Resisting Steel. Covers three types; (I) table knives—straight-blade, steak, and grille; (II) forks—dessert, flat-handle; and (III) spoons—tea and table (two types). Gives requirements for material, workmanship, size, shape, design, dimensions, tolerances, weights, and chemical composition; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification RR-T-56; 1941. Amendment 1; 1944. Tableware; Steel (Chromium, Nickel, Silver, and Tin) Plated. Covers three types—(I) knives, table (straight-blade and grille); (II) forks (dessert, flat-handle); and (III) spoons (tea and table, medium). Gives requirements for material, workmanship, construction, finish; and details for each type; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification GGG-C-746a; 1944. Cutlery; Galley and Kitchen. Covers 13 types—(I) butchers' cleavers, (II) cooks' forks, (III) boning knives, (IV) bread knives, (V) butchers' knives, (VI) cooks' knives, (VII) fish scaling knives, (VIII) paring knives, (IX) skinning (scimitar) knives, (X) slicing knives, (XI) steak, (scimitar) knives, (XII) spatulas, and (XIII) butchers' steels. Gives requirements for sizes, material, workmanship, finish, handles, marking, and details for each type; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Marine Corps Specification, 1944. Knife, Fork, and Spoon; Haversack, Models of 1926.

U. S. Gov., Navy Dept. Specification 640 7b; 1943. Openers; Can.

U. S. Gov., Navy Dept. Specification 64S5b; 1943. Skimmers.

U. S. Gov., Navy Dept. Specification 64S7b; 1943. Spoons; Basting.

U. S. Gov., Navy Dept. Specification 64S10b; 1943. Strainers; Pot.

U. S. Gov., U. S. Army, Medical Dept. Specification 28-70; 1939. Knife; Butcher.

U. S. Gov., U. S. Army, Medical Dept. Specification 28-97; 1939. Fork; Flesh.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 28-8; 1938. Outfit; Officers' Mess, M-1937, Utensils.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 28-15; 1934. Knife, Fork, and Spoon; M-1926.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 28-31; 1938. Knife; Paring, M-1937, Corrosion-Resisting Steel.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 28-123; 1942. Utensils; Cooking Fork, Spoon, Ladle, Turner, and Skimmer.

U. S. Gov., U. S. Maritime Commission. Specification 63-MC-6; 1941. Tableware; Flatware, Steel, Corrosion-Resisting and Electro-Plated (Crew). Covers three types, three classes, and three grades. Gives requirements for material, workmanship, identification, knives, forks, spoons, shape, sizes, weights, dimensions, sampling, inspection, methods of test, and drawings.

U. S. Gov., U. S. Maritime Commission. Specification 64-MC-13; 1941. Cutlery; Galley. Shall be of five grades and of types and sizes specified. Gives requirements for detail dimensions, materials, workmanship, cleavers, forks, knives, handles, composition of metal, styles, dimensions, weights, inspection, and methods of test.

U. S. Gov., U. S. Maritime Commission. Specification 64-MC-29; 1941. Turners; Cake, Long Handle, Retinned. There shall be but one type and grade. Gives requirements for materials, workmanship, blades, handles, assembly, tinning, finish, sizes, tolerances, inspection and methods of test.

U. S. Gov., U. S. Maritime Commission. Specification 64-MC-30; 1941. Turners and Servers; Plain or Perforated. There shall be seven types and five grades as listed. Gives requirements for materials for all types, workmanship, all types of blades, handle rods, handles or grips, ferrules, perforations, tolerances, sizes and dimensions, inspection, and methods of test.

U. S. Gov., Veterans Administration. Specification VA-G-159; 1936. Turners; Cake, Corrosion-Resisting Steel.

### 612.15 Pins and Needles

Pin, Clip and Fastener Assn. Safety Pin Physical Standards. Covers sizes, all-over lengths, and gages of wire for safety pins classified as—low carbon steel, high carbon steel, and steel furrier.

Pin, Clip and Fastener Assn. Straight Pin Physical Standards. Covers numbers, sizes and counts for steel bank (superplated), dressmaker (superplated), dressmaker (with oversized head), silk (chiffon and satin, superplated), and admontine.

U. S. Gov., Federal Specification FF-P-401b; 1943. Pins; Office. Covers—(I) brass, and (II) steel (tinned or plated); three classes—(A) bank or commerce, (B) pyramid, and (C) T-shaped (one or two piece). Gives requirements for material, workmanship, polishing and finishing, tolerances, size number, length, and diameter of wire; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Federal Specification FF-P-416; 1940. Pins; Safety. Covers one type and grade, in small, medium, and large sizes. Gives requirements for material, workmanship, design, spring, hood, shield, point, finish, tolerances, and dimensions; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment. Emergency Alternate Federal Specification E-FF-P-416; Jan. 1943, changed material, finish, diameter of wire, and packing.

U. S. Gov., Veterans Administration. Specification VA-X-58d; 1941. Needles.

### 612.16 Clippers

U. S. Gov., Marine Corps Specification, 1923. Clippers; Horse.

U. S. Gov., U. S. Army, Medical Dept. Specification 17-178B; 1941. Clipper; Hair.

## 612.2 HOLLOW AND STAMPED WARE, IRON AND STEEL

### 612.20 General Items

American Bakers Assn. Recommended Pan Sizes. Covers four sizes of pans of loaves of bread weighing 12, 16, 20, and 24 oz. baked.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Commercial Standard CS30-31; 1931. Colors for Sanitary Ware. This standard designates colors to be used as a guide in production of sanitary ware, plumbing fixtures, and allied products made of vitreous china, procelain (all-clay) enameled iron, metals, wood, or glass. The standard gives also detail requirements for the six standard colors and method of making color comparisons.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Commercial Standard CS77-40; 1940. Sanitary Cast-Iron Enameled Ware. This standard provides minimum requirements for sanitary cast-iron enameled ware, such as bathtubs, lavatories, kitchen sinks, laundry trays, drinking fountains, and similar fixtures. Requirements include material, thickness, warpage, enameling, acid-resistance, inspection rules, and marking. Sponsored by Sanitary Cast-Iron Enamel Ware Assn. Also printed in Spanish.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Commercial Standard CS-100-44; 1944. Porcelain-Enameled Steel Utensils. The purpose of this commercial standard is to establish standard specifications and methods of test for procelain-enameled steel utensils for the guidance of manufacturers, distributors, and users of this product. This standard provides performance requirements for porcelain-enameled steel utensils, both multiple-coated and single-coated, for cooking, household, food storage, and hospital use. The requirements include material of base, appearance, design, capacity and dimensions, base metal, pouring lips, handles, boiling acid resistance, thermal shock resistance, impact resistance, methods of test, and labeling.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R55-26; 1926. Tinware; Galvanized and Japanned Ware. This recommendation establishes a list of standard stock items for stamped ware, as bowls, covers, cups, dippers, molds, pans, plates, etc.; for metallic sieves; for pieced tinware boilers, buckets, kettles, pans, etc.; for heavy tinware coffee boilers, cake cutters, dippers, etc.; for japanned ware baths, cake boards, etc.; for galvanized baths, buckets, cans, hods, pails, etc.

*References.*—Enamel for enamel ware, *see* 531.6.

### 612.21 Bath Tubs

American Hospital Assn.; 58-1. Sanitary Cast Iron Enameled Ware. Covers minimum requirements.

American Hospital Assn.; 58-10. Enameled Pressed Iron or Steel Plumbing Fixtures.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R106-41;

1941. Hospital Plumbing Fixtures. This recommendation establishes a list of standard stock sizes and types of baby baths, receiving baths, prenatal baths, sitz baths, continuous-flow or prolonged-treatment baths, patients' baths, surgeons' scrub-up sinks, medicine sinks, instrument sinks, clinic sinks, service sinks, bedpan closets, and combination lavatory with integral instrument trays. Covers staple items, tolerances, grading rules, nomenclature, definitions, autoclave test for crazing, kiln support marks, special selection of large pieces, fixtures available in several materials, and back-flow connections. Sponsored by the American Hospital Assn., National Assn. of Master Plumbers, Sanitary Cast Iron Enameled Ware Assn., Vitreous China Plumbing Fixtures Assn., and the Sanitary Brass Institute.

U. S. Gov., Federal Specification WW-P-541a; 1940. Plumbing Fixtures, (for) Land Use. Includes requirements for recessed, corner, and free-standing bathtubs made of enameled cast iron. Includes dimensions for various types; detail relative to trimmings and fittings; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment. Emergency Alternate Federal Specification E-WW-P-541a; 1942, (issued by Procurement Div., Treasury Dept., U. S. Gov.) changed requirements for metals and finishes, standard materials, and illustrations, selections and air gaps.

*References.*—Porcelain and vitreous ware bathtubs, *see* 532.23, 617.76; gray cast iron, *see* 611.11; standard sizes of japanned ware and of galvanized baths, *see* 612.20; standard colors for colored sanitary ware, *see* 612.20.

## 612.22 Hotel and Household Hollow and Stamped Ware

American Hospital Assn., 64-7. Corrosion-Resisting Steel Tableware. Covers three types. Based on U. S. Gov. Federal Specification RR-T-41a for Corrosion-Resisting-Steel Tableware and QQ-M-151a for General Specification for Inspection of Metals.

U. S. Gov., Dept. of Interior, Purchasing Office. Standard Specification No. 41. Platters; Meat, Metal.

U. S. Gov., Dept. of Interior, Purchasing Office. Standard Specification No. 42. Pans; Muffin.

U. S. Gov., Dept. of Interior, Purchasing Office. Standard Specification No. 45. Colanders; Steel.

U. S. Gov., Dept. of Interior, Purchasing Office. Standard Specification No. 46. Pots; Food, Covered.

U. S. Gov., Dept. of Interior, Purchasing Office. Standard Specification No. 48. Dippers; Steel.

U. S. Gov., Dept. of Interior, Purchasing Office. Standard Specification No. 53. Turners; Pancake.

U. S. Gov., Dept. of Interior, Purchasing Office. Standard Specification No. 54. Spoons; Cooking.

U. S. Gov., Dept. of Interior, Purchasing Office. Standard Specification No. 56. Insets; Steel, for Steam Table.

U. S. Gov., Dept. of Interior, Purchasing Office. Standard Specification No. 58. Ladles; Steel.

U. S. Gov., Dept. of Interior, Purchasing Office. Standard Specification No. 59. Dishes; Vegetable, Steel.

U. S. Gov., Dept. of Interior, Purchasing Office. Standard Specification No. 60. Pitchers; Steel.

U. S. Gov., Dept. of Interior, Purchasing Office. Standard Specification No. 66. Pans; Muffin, Retinned.

U. S. Gov., Dept. of Interior, Purchasing Office. Standard Specification No. 67. Plates; Pie, Tinned.

U. S. Gov., Dept. of Interior, Purchasing Office. Standard Specification No. 68. Colanders; Retinned.

U. S. Gov., Federal Specification RR-B-644; 1943. Boxes; Spice. Covers one type and one grade and shall consist of an outer spice box with hinged cover and hasp, enclosing six spice containers of uniform size and shape. Gives requirements for material, workmanship, and details for outer spice box, outer spice box cover, handle, hasp, spice containers, and finish; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., Federal Specification RR-C-526; 1939. Amendment 1; 1940. Colanders; Bakers, Corrosion-Resisting Steel. Covers one type and grade, either 25 or 40 qt. minimum capacity (volume). Gives requirements for material, workmanship, construction, finish, and marking; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Federal Specification RR-C-531; 1939. Amendment 1; 1940. Colanders; Corrosion-Resisting Steel. Covers one type and grade, either 3 1/2, 11, or 16 qt. minimum capacity (volume). Gives requirements for material, workmanship, construction, finish, and marking; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification RR-C-611; 1939. Amendment 1; 1940. Covers; Cake, Corrosion-Resisting Steel. Covers one type and grade and three sizes. Gives requirements for material, workmanship, finish, and marking; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification RR-P-55; 1941. Amendment 1; 1944. Pans; Bake and Roasting, Steel. Covers two types—(I) plain, with handles, steel ears, and without bottom straps, and (II) with steel handles, ears, and bottom straps. Gives requirements for material, workmanship, folds, construction, handles, bottom straps, handle ears, shape, and sizes; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification RR-P-58; 1943. Pans; Bread. Type I—individual pans; type II—multiple pans; classes—(A) two individual pans, (B) three individual pans, (C) four individual pans, and (D) five individual pans. Classes C and D include two or more sizes. Gives requirements for material, workmanship, body material, wire bead, finish, shape, pan construction, and details for each type and class; methods of sampling and inspection; and packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification RR-P-83; 1943. Pans; Fry, Cast-Iron (Skillets). Shall be in one type and grade. Covers three sizes—(A) 10-in., (B) 12-in., and (C) 14-in. Gives requirements for material, workmanship, casting, pouring lips, handle, lacquer coat, and detailed dimensions and weights; methods of sampling and inspection; and packaging, packing, and marking.

U. S. Gov., Federal Specification RR-P-86; 1939. Amendment 2; 1940. Pans; Fry, Corrosion-Resisting Steel-Clad (3-Ply). Covers one type, one grade, and seven sizes. Gives requirements for material, workmanship,

construction, finish, and dimensions; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment. Emergency Alternate Federal Specification E-RR-P-86; 1942, (issued by Procurement Div., Treasury Dept., U. S. Gov.) substituted Federal Specification RR-P-89 for Pans; Fry, Steel.

U. S. Gov., Federal Specification RR-P-89; 1940. Amendment 1; 1944. Pans; Fry, Steel. Covers the round type with handle, and three sizes—6-in., 8 7/8-in., and 12-in. Gives requirements for material, workmanship, construction, sizes, and tolerances; methods of sampling, inspection, and test; and packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification RR-P-101; 1939. Pans; Pudding, Corrosion-Resisting Steel. Covers one type and one grade—first class. Gives requirements for material, workmanship, construction, finish, and capacities; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification RR-P-111; 1939. Amendment 1; 1940. Pans; Sauce, Corrosion-Resisting Steel-Clad (3-Ply). Covers one type and grade of 1 1/2-, 2-, 3 1/2-, and 5-qt. capacities. Gives requirements for material, workmanship, construction, chemical requirements of outside layer, capacities, and dimensions; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification RR-P-386; 1939. Amendment 1; 1940. Pitchers; Water, Corrosion-Resisting Steel. Covers one type and grade, 1 1/8-, 2 1/8-, and 3 1/4-qt. minimum capacity. Gives requirements for material, workmanship, construction, finish, and capacities; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification RR-P-401; 1939. Plates; Pie, Tinned. Covers one type, one grade, and two sizes—10 in. and 9 in. outside diameter at top of plate. Gives requirements for tin plate gage, tolerance, weight of tin coating, tin coating, and finish; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment. Emergency Alternate Federal Specification E-RR-P-401; 1942, (issued by Procurement Div., Treasury Dept., U. S. Gov.) changed requirements for materials and finish.

U. S. Gov., Federal Specification RR-P-416; 1939. Platters; Meat, Corrosion-Resisting Steel. Covers one grade and two types—(I) with flat beaded edge, and (II) with open flange edge. Gives requirements for material, workmanship, construction, tolerances, and finishes; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification RR-S-131; 1939. Amendment 1; 1939. Scoops; Kitchen, Corrosion-Resisting Steel. Covers one type and grade. Gives requirements for material, workmanship, finish, shapes, and dimensions; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification RR-T-46; 1941. Tableware; Nickel-Alloy. Covers three types—(I) forks (flat-handle, dessert; flat-handle, regular; and salad); (II) knives (straight-blade); and (III) spoons (iced tea, soup, round-bowl, sugar, medium table, regular table, and tea). Covers material, workmanship, sizes, and dimensions; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment. Emergency Alternate Federal Specification E-RR-T-46; 1942, (issued by Procurement Div., Treasury Dept., U. S. Gov.) substituted Federal Specification RR-T-56 in lieu of RR-T-46.

U. S. Gov., Federal Specification RR-T-806; 1942. Amendment 1; 1944. Turners; Cake. Covers two types—(I) vitreous enameled steel, and (II) plain steel. Gives requirements for material, workmanship, construction, and sizes and dimensions; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Joint Army-Navy Specification, JAN-T-46; 1944. Trays; Mess, 6-Compartment.

U. S. Gov., Marine Corps Specification, 1919. Pan; Roasting.

U. S. Gov., Marine Corps Specification, 1944. Tray; Mess, Serving, 6-Compartment.

U. S. Gov., Navy Dept. Specification 63L1a; 1944. Linings; Baking-Dish, Steel.

U. S. Gov., Navy Dept. Specification 63P2a; 1944. Platters; Steel.

U. S. Gov., Navy Dept. Specification 63P3; 1941. Plates; Dinner, Steel.

U. S. Gov., Navy Dept. Specification 63T7b; 1944. Tureens.

U. S. Gov., Navy Dept. Specification 64B4e; 1943. Boilers; Coffee.

U. S. Gov., Navy Dept. Specification 64B10b; 1944. Boilers; Fish.

U. S. Gov., Navy Dept. Specification 64B18; 1944. Boxes and Canisters; Galley.

U. S. Gov., Navy Dept. Specification 64C8a; 1944. Colanders.

U. S. Gov., Navy Dept. Specification 64L2a; 1944. Ladles; Galley.

U. S. Gov., Navy Dept. Specification 64P6d; 1944. Pans; Baking, Roasting, and Deep-Fat-Frying.

U. S. Gov., Navy Dept. Specification 64P8b; 1944. Pans; Dish.

U. S. Gov., Navy Dept. Specification 64P19; 1944. Pans and Pots; Sauce, With Covers.

U. S. Gov., Treasury Dept., Procurement Div., No. 474; 1941. Sieves; Flour. Two types—(I) household size (with crank) and (II) institution size (without crank). Gives general description and requirements for sheet metal, hopper or body, wire cloth, agitator or base, handles, finish, and strength; methods of inspection and tests; and packaging, packing, and marking.

U. S. Gov., Treasury Dept., Procurement Div., 523a; 1944. Enamelware; Bakeshop and Kitchen. Covers 25 types and a large number of classes intended to include all kinds of enamelware vessels for bakeshop and kitchen. Gives requirements for colors and finishes, material, workmanship, processing, finish, thickness of metal, thickness of enamel, tolerances, handling facilities, reflectance, impact resistance, resistance to sudden changes in temperature, acid resistance, solubility, adherence, marking, and details for each type and class; methods of sampling,

inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Treasury Dept., Procurement Div., 534a; 1942. Buckets; Mopping Apparatus; Oval, Caster Mounted. This specification covers oval shaped buckets mounted on casters for use with hand operated mop wringers. Buckets furnished in four sizes—16, 26, 35 and 50 qt. Gives requirements for design, fabrication, seams, top rim, ears, bail, casters, dimensions, and thickness of metal; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., U. S. Army, Medical Dept. Specification 28-12A; 1939. Urn, Coffee.

U. S. Gov., U. S. Army, Medical Dept. Specification 28-32; 1938. Pot; Tea and Coffee, Individual, Corrosion-Resisting Steel.

U. S. Gov., U. S. Army, Medical Dept. Specification 28-35; 1939. Dishes; Enamelware.

U. S. Gov., U. S. Army, Medical Dept. Specification 28-40; 1939. Cutter; Baking.

U. S. Gov., U. S. Army, Medical Dept. Specification 28-41; 1939. Grater; Nutmeg.

U. S. Gov., U. S. Army, Medical Dept. Specification 28-44; 1939. Turner; Cake.

U. S. Gov., U. S. Army, Medical Dept. Specification 28-45; 1939. Pot; Tea.

U. S. Gov., U. S. Army, Medical Dept. Specification 28-46; 1939. Grater; Large.

U. S. Gov., U. S. Army, Medical Dept. Specification 28-52; 1939. Steeper; Tea.

U. S. Gov., U. S. Army, Medical Dept. Specification 28-58A; 1940. Bowl; Mixing, Corrosion-Resisting Steel.

U. S. Gov., U. S. Army, Medical Dept. Specification 28-65; 1939. Corer; Apple.

U. S. Gov., U. S. Army, Medical Dept. Specification 28-69; 1939. Grater; Small.

U. S. Gov., U. S. Army, Medical Dept. Specification 28-72A; 1941. Pan; Cake.

U. S. Gov., U. S. Army, Medical Dept. Specification 28-74; 1939. Pot; French Fry.

U. S. Gov., U. S. Army, Medical Dept. Specification 28-81A; 1941. Strainer; 3-Inch and 9-Inch.

U. S. Gov., U. S. Army, Medical Dept. Specification 28-82; 1939. Strainer; Chinese.

U. S. Gov., U. S. Army, Medical Dept. Specification 28-90; 1939. Kettle; Roasting.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 17-9C; 1937. Pan; Bake and Roasting.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 28-30; 1938. Colander; Retinned.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 28-108; 1940. Pan; Muffin, Retinned.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 28-112; 1941. Pan; Tin, Cake, for Range Field, M-1937.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 28-123; 1942. Utensils; Cooking Fork, Spoon, Ladle, Turner, and Skimmer.

U. S. Gov., U. S. Maritime Commission. Specification 63-MC-3; 1941. Covers; Toast, (Nesting) Corrosion-Resisting Steel. There shall be but one type, one grade, and three sizes. Gives requirements for material, workmanship, construction, design and measurements, finish, marking, sampling, inspection, methods of test, and drawing.

U. S. Gov., U. S. Maritime Commission. Specification 64-MC-3; 1941. Amended, 1943. Fry Pans; Heavy Lipped and French Style, Cold-Rolled Steel. Type I—heavy lipped fry pans; type II—French style frypans; and there shall be but one grade. Gives requirements for materials, workmanship, coating, handles, sizes, tolerance, and body; packaging, packing, and marking; inspection and methods of test.

U. S. Gov., U. S. Maritime Commission. Specification 64-MC-7; 1941. Pans; Roasting, Heavy Seamless Steel. Type I—plain; type II—with bottom straps; and the grade shall be that known as "firsts." Gives requirements for material, workmanship, folds, construction, handles, bottom straps and handle bars, inspection, methods of test, and drawing.

U. S. Gov., U. S. Maritime Commission. Specification 64-MC-16a; 1944. Pans; Bread and Cake. Covers five types—(I) biscuit or roll pan (sheet) four sides up; grade (A) tinned sheet and (B) blue annealed sheet; (II) biscuit or roll pan (sheet) three sides up; grade (A) tinned sheet and (B) blue annealed sheet; (III) individual bread pan, tinned; (IV) pullman bread pan with sliding cover, tinned; and (V) cake (layer) pan, tinned. Gives requirements for size, material, workmanship, marking, and details for each type and grade; sampling, inspection, and methods of tests; and packaging, packing, and marking.

U. S. Gov., U. S. Maritime Commission. Specification 64-MC-20a; 1942. Bowls; Mixing, Retinned. There shall be but one type and grade and sizes shall be as given. Gives requirements for materials, workmanship, construction, tinning, tolerances, inspection, methods of test, and drawing.

U. S. Gov., U. S. Maritime Commission. Specification 64-MC-21a; 1942. Bowls; Beating, Retinned. There shall be but one type and one grade and the sizes shall be as specified. Gives requirements for materials, workmanship, construction, hanging ring and ear, tinning, assembly, tolerances, inspection, methods of test, and drawing.

U. S. Gov., U. S. Maritime Commission. Specification 64-MC-22; 1941. Pans; Dish, Round, Retinned. There shall be but one type and grade and sizes shall be as specified. Gives requirements for materials, body, handles, tinning, tolerances, inspection, and methods of test.

U. S. Gov., U. S. Maritime Commission. Specification 64-MC-23; 1941. Fry Pans; Deep, Long Handle. There shall be but one type and grade and sizes shall be as specified. Gives requirements for materials, workmanship, body, handle, sizes, tolerances, inspection, and methods of test.

U. S. Gov., U. S. Maritime Commission. Specification 64-MC-24; 1941. Pots; Sauce, Deep, Retinned. Type I—pots without covers; type II—pots with covers; and there shall be but one grade. Gives requirements for material, workmanship, body, sizes and capacities, tolerances, thickness of sheet, handles, tinning, inspection, and methods of test.

U. S. Gov., U. S. Maritime Commission. Specification 64-MC-25; 1941. Pots; Stock, Retinned. Type I—pots without faucet with cover; type II—pot with faucet and with cover; and there shall be but one grade.

Gives requirements for material, workmanship, body, sizes and capacities, tolerances, thickness of sheet, handles, retinned covers, tinning, inspection, and methods of test.

U. S. Gov., U. S. Maritime Commission. Specification 64-MC-26; 1941. Pans and Pots; Service, Retinned. There shall be seven types as listed and but one grade. Gives requirements for materials, workmanship, thickness of sheet, dimensions, body, handles, retinned covers, tinning, capacities, inspection, and methods of test.

U. S. Gov., U. S. Maritime Commission. Specification 64-MC-27; 1941. Pans; Baking, Oblong, Enamelware. There shall be but one type and grade and sizes shall be as specified. Gives requirements for sheet, enamel, workmanship, pans, sides, corners, top edges, bottoms, enameling, reflectance, color, dimensions, tolerance, capacities, sampling, inspection, and tests.

U. S. Gov., U. S. Maritime Commission. Specification 64-MC-28; 1941. Plates; Pie, Tin Plate. There shall be but one type and grade. Gives requirements for material, workmanship, tin plate gage, weight of tin coating, tinning, sheets, sizes, tolerance, inspection, and methods of test.

U. S. Gov., U. S. Maritime Commission. Specification 64-MC-32; 1941. Pans; Pudding, Enamelware. There shall be but one type and grade and sizes shall be as specified. Gives requirements for sheet metal, enamel, workmanship, pans, sides, top edges, bottoms, enameling, reflectance, color, tolerance, capacities, sampling, inspection, and tests.

U. S. Gov., U. S. Maritime Commission. Specification 64-MC-34a; 1943. Canisters; Round and Square. Covers two types—(I) round (class A, without handles, and class B, with handles) and (II) square. Gives requirements for materials, workmanship, construction, finish, continuity of coating, and marking; details for each type and class including size numbers and dimensions; sampling, inspection, and methods of test; and packaging, packing, and marking for shipment.

U. S. Gov., U. S. Maritime Commission. Specification 64-MC-35; 1941. Colanders; Retinned. Type I—galley colanders; type II—baker colanders; type III—windsor colanders; and there shall be but one grade. Gives requirements for bodies, handles, feet, end supports, workmanship, tinning finish, perforations, tolerances, dimensions, thickness, capacities, sizes, inspection, methods of test, and drawings.

U. S. Gov., U. S. Maritime Commission. Specification 64-MC-40; 1941. Pans; Muffin, Corn or Lemon Cake. Type I—tin plate; type II—retinned; and there shall be but one grade. Gives requirements for materials, workmanship, frames, bead, wire, cups, assembly, cleaning, tin plate sheets, sizes, tolerance, retinning, inspection, methods of tests, and drawings.

U. S. Gov., U. S. Maritime Commission. Specification 64-MC-41; 1941. Percolators; Coffee, Enamelware, Seamless. There shall be but one type and grade and sizes shall be as specified. Gives requirements for colors, material, workmanship, body, bottom, side walls, spout, handle, hinge, cover, top, distribution plate, basket, base, enameling, capacities, thickness, tolerances, sampling, inspection, and tests.

U. S. Gov., U. S. Maritime Commission. Specification 64-MC-42; 1941. Pitchers; Water, Enamelware, Seamless. There shall be but one type and grade and sizes shall be as specified. Gives requirements for colors, materials, workmanship, body, handle, enameling, reflectance, capacities, sampling, inspection, and tests.

U. S. Gov., U. S. Maritime Commission. Specification 64-MC-44; 1941. Ladles; Galley, Retinned. Type I—French ladles; type II—deep ladles; type III—large ladles; class A—solid ladles; class B—strainer ladles; and there shall be but one grade. Gives requirements for materials, workmanship, bowls, handles, rivets, tinning, perforations, capacity, tolerance, inspection, methods of test, and drawing.

U. S. Gov., U. S. Maritime Commission. Specification 64-MC-45; 1941. Skimmers; Galley, Retinned. There shall be but one type and grade. Gives requirements for materials, workmanship, blades, handles, rivets, tinning, design, sizes, inspection, methods of test, and drawing.

U. S. Gov., U. S. Maritime Commission. Specification 64-MC-46; 1941. Spoons; Basting and Mixing, Retinned. Type I—service; type II—commercial; type III—stamped; class A—solid bowl; class B—perforated bowl; class C—slotted bowl; and there shall be but one grade. Gives requirements for material, workmanship, spoons, tinning, finish, figures, tolerance, inspection, methods of test, and drawings.

U. S. Gov., U. S. Maritime Commission. Specification 64-MC-48; 1941. Tray; Messing, Individual, 6 Compartments. There shall be but one type and grade. Gives requirements for compositions, workmanship, construction, metal, bead, finger grip holes, finish, tolerances, sampling, inspection, methods of test, and drawing.

U. S. Gov., U. S. Maritime Commission. Specification 64-MC-49; 1942. Plates; Mess, 6 Compartment, Enamelware. Covers one type, grade, and size. Gives requirements for stock, enamel, workmanship, fabrication, enameling and finishing, acid resistance, and impact resistance; sampling, inspection, and methods of test; and packaging, packing, and marking.

U. S. Gov., Veterans Administration. Specification VA-G-137a; 1936. Bowls; Mixing, Corrosion-Resisting Steel.

U. S. Gov., Veterans Administration. Specification VA-G-138b; 1936. Cooking Spoons; Slotted.

U. S. Gov., Veterans Administration. Specification VA-G-145; 1935. Colander; Baker, Corrosion-Resisting Steel.

U. S. Gov., Veterans Administration. Specification VA-G-146; 1935. Pans; Pudding, Corrosion-Resisting Steel.

U. S. Gov., Veterans Administration. Specification VA-G-149a; 1937. Pans; Roasting, Corrosion-Resisting Steel.

U. S. Gov., Veterans Administration. Specification VA-G-151a; 1937. Pot; Stock, Corrosion-Resisting Steel.

U. S. Gov., Veterans Administration. Specification VA-G-168; 1936. Pans; Bun, Aluminum.

U. S. Gov., Veterans Administration. Specification VA-G-169; 1936. Pans; Baking and Roasting, Aluminum.

U. S. Gov., Veterans Adminstration, Specification VA-G-188c; 1937. Boiler; Coffee, Aluminum, Capacity 14 Quarts.

U. S. Gov., Veterans Administration. Specification VA-G-189; 1936. Pans; Muffin, Aluminum.

U. S. Gov., Veterans Administration. Specification VA-G-191c; 1937. Pans; Roast, Aluminum.

U. S. Gov., Veterans Administration. Specification VA-G-192; 1936. Pots; Baked Beans or Brown Bread, Aluminum.

U. S. Gov., Veterans Administration. Specification VA-G-194; 1936. Boiler; Coffee, Aluminum, Capacity 18 Quarts.

U. S. Gov., Veterans Administration. Specification VA-G-199a; 1938. Pans; Baking and Roasting, Aluminum.

U. S. Gov., Veterans Administration. Specification VA-G-204; 1936. Pans; Baking and Roasting, Aluminum.

U. S. Gov., Veterans Administration. Specification VA-G-205; 1936. Pans; Baking and Roasting, Aluminum.

U. S. Gov., Veterans Administration. Specification VA-G-210a; 1937. Pans; Bake, Aluminum.

U. S. Gov., Veterans Administration. Specification VA-G-211c; 1937. Boiler; Coffee, Aluminum, Capacity 8 Quarts.

U. S. Gov., Veterans Administration. Specification VA-G-212; 1936. Pans; Pudding, Shallow, Aluminum, Capacity 10 Quarts.

U. S. Gov., Veterans Administration. Specification VA-G-213a; 1937. Pans; Pudding, Aluminum, Capacity 10 Quarts.

U. S. Gov., Veterans Administration. Specification VA-G-214a; 1937. Pots; Coffee, Aluminum, Capacity 4 Quarts.

U. S. Gov., Veterans Administration. Specification VA-G-215; 1936. Roaster; Covered, Aluminum.

U. S. Gov., Veterans Administration. Specification VA-G-217c; 1938. Pots; Coffee, Aluminum, Capacity 3 Quarts.

U. S. Gov., Veterans Administration. Specification VA-G-219a, 1937. Pot; Sauce, Aluminum, Capacity 20 Quarts.

U. S. Gov., Veterans Administration. Specification VA-G-224; 1936. Pans; Baking and Roasting, Aluminum.

U. S. Gov., Veterans Administration. Specification VA-G-230; 1936. Boiler; Coffee, Aluminum, Capacity 24 Quarts.

U. S. Gov., Veterans Administration. Specification VA-G-231; 1936. Pans; Sauce, 2 1/2 Quarts.

U. S. Gov., Veterans Administration. Specification VA-G-232; 1936. Pans; Pudding, 1 1/2 Quarts.

U. S. Gov., Veterans Administration. Specification VA-G-234b; 1937. Pans; Baking and Roasting, Aluminum.

U. S. Gov., Veterans Administration. Specification VA-G-235; 1936. Pans; Sauce, Aluminum, Capacity 1 Quart.

U. S. Gov., Veterans Administration. Specification VA-G-236; 1936. Pan; Sauce, Aluminum, Capacity 44 Quarts.

U. S. Gov., Veterans Administration. Specification VA-G-237; 1936. Pans; Baking, Aluminum.

U. S. Gov., Veterans Administration. Specification VA-G-239; 1936. Pans; Roast, Aluminum.

U. S. Gov., Veterans Administration. Specification VA-G-259; 1937. Pan; Saute, Aluminum, 7 1/2 Quarts Capacity.

U. S. Gov., Veterans Administration. Specification VA-G-260; 1937. Pan; Sauce, Aluminum, Capacity 34 Quarts.

U. S. Gov., Veterans Administration. Specification VA-G-261; 1937. Pan; Sauce, Aluminum, Capacity 20 Quarts.

U. S. Gov., Veterans Administration. Specification VA-G-262; 1937. Colander; Aluminum, Capacity 11 Quarts.

U. S. Gov., Veterans Administration. Specification VA-G-264a; 1937. Pan; Roasting, Aluminum.

U. S. Gov., Veterans Administration. Specification VA-G-268; 1937. Pans; Saute, Aluminum, Capacity 11 Quarts.

U. S. Gov., Veterans Administration. Specification VA-G-269; 1937. Baking Sheet; Aluminum.

U. S. Gov., Veterans Administration. Specification VA-G-274; 1937. Pan; Cheese Cake, Aluminum.

U. S. Gov., Veterans Administration. Specification VA-G-278a; 1940. Pans, Sauce; and Covers.

U. S. Gov., Veterans Administration. Specification VA-G-285; 1937. Tubed Cake Pan.

U. S. Gov., Veterans Administration. Specification VA-G-291; 1937. Pots; Sauce, Aluminum, Capacity 26 Quarts.

U. S. Gov., Veterans Administration. Specification VA-G-318; 1938. Steak Pan.

U. S. Gov., Veterans Administration. Specification VA-G-319; 1938. Pans; Muffin, Aluminum.

U. S. Gov., Veterans Administration. Specification VA-G-326; 1938. Pans; Sauce.

U. S. Gov., Veterans Administration. Specification VA-G-333; 1939. Aluminum Roast Pan.

U. S. Gov., Veterans Administration. Specification VA-G-334; 1939. Aluminum Sauce Pan.

*References.*—Standard stock sizes, *see* 612.20.

## 612.23 Water-Closets and Sinks

American Hospital Assn., 58-1. Sanitary Cast Iron Enameled Ware. Covers minimum requirements.

American Hospital Assn., 58-10. Enameled Pressed Iron or Steel Plumbing Fixtures.

U. S. Gov., Federal Specification WW-P-541a; 1940. Plumbing Fixtures, (for) Land Use. Includes requirements for enameled cast iron, nickel-copper alloy or corrosion-resisting steel alloy kitchen sinks covering various types, including drainboards and legs; also requirements for supports, trimmings, and fittings; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment. Emergency Alternate Federal Specification E-WW-P-541a; 1942, (issued by Procurement Div., Treasury Dept., U. S. Gov.) changed requirements for metals and finishes, standard materials, illustrations, selections, and air gaps.

U. S. Gov., Federal Specification WW-P-541a; 1940. Plumbing Fixtures, (for) Land Use. Includes requirements for service sinks made of vitreous china and cast iron. Gives requirements for supports, trap standards, rim guards, and fittings; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment. Emergency Alternate Federal Specification E-WW-P-541a; 1942, (issued by Procurement Div., Treasury Dept., U. S. Gov.) changed requirements for metals and finishes, standard materials, illustrations, selections, and air gaps.

U. S. Gov., Joint Army-Navy Specification JAN-P-170; 1944. Pans and Pots; Sauce, With Covers.

U. S. Gov., Veterans Administration. Specification VA-MC-129g; 1942. Sinks; Light and Heavy Duty, Galvanized Iron or Steel.

U. S. Gov., Veterans Administration. Specification VA-M-130; 1935. Galvanized Steel or Iron Sinks.

U. S. Gov., Veterans Administration. Specification VA-MC-285e; 1942. Sinks; Commercial Type, Galvanized Iron or Steel.

## 612.24 Hotel and Household Gas Kitchen Equipment

## 612.29 Miscellaneous Hollow and Stamped Ware

Assn. of American Railroads, Purchases and Stores Div. Marking Pot, 1934. Gives dimensional requirements and illustration of marking pot made of IX bright tin, or steel of suitable thickness.

Assn. of American Railroads, Purchases and Stores Div. One Quart and One Gallon Funnels, 1934. Gives dimensions, gage of metal, and design of conical shape funnels of tin or sheet metal.

U. S. Gov., Dept. of Agriculture, Forest Service. Specifications 247-23-S. Pot; Coffee, 2 1/2 Quart, Aluminum.

U. S. Gov., Dept. of Agriculture, Forest Service. Specifications 247-42-S. Spoon; Table.

U. S. Gov., Dept. of Agriculture, Forest Service. Specifications 247-43-S. Spoon; Dessert.

U. S. Gov., Dept. of Agriculture, Forest Service. Specifications 247-44-S. Spoon; Tea.

U. S. Gov., Dept. of Agriculture, Forest Service. Specifications 247-45-S. Ladle; Soup.

U. S. Gov., Dept. of Agriculture, Forest Service. Specifications 247-50-S. Can Opener.

U. S. Gov., Dept. of Agriculture, Forest Service. Specifications 247-55-S. Basin; Wash, Retinned.

U. S. Gov., Dept. of Agriculture, Forest Service. Specifications MSF-247-14. Pan; Half-Oval.

U. S. Gov., Dept. of Agriculture, Forest Service. Specifications MSF-247-30-S. Plate; Tin.

U. S. Gov., Dept. of Agriculture, Forest Service. Specifications MSF-247-31-S. Cup; Miner's, Tin, Retinned.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R182-41; 1941. Food Service Equipment. This recommendation is concerned not only with the sizes and dimensions of complete units of equipment but also with the details of construction. Initiated by the food service equipment industry.

U. S. Gov., Federal Specification RR-C-844; 1937. Amendment 2; 1945. Cuspidors, Spittoons. Covers two types—(I) plain, in five classes—brass, with pan; brass, without pan; corrosion-resisting steel or nickel-copper alloy; steel, with top; steel, without top; and (II) self-righting, in five classes—aluminum, formed; aluminum, seamless; brass; iron; steel. Gives requirements for material, workmanship, rim, self-righting, base, marking, tolerance, and details for each type and class; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., Federal Specification RR-P-66; 1939. Amendment 2; 1940. Pans; Dish, Corrosion-Resisting Steel. Covers one type; one grade, and five capacities—12, 15, 20, 24, and 36 qt. Gives requirements for material, workmanship, construction, shapes, dimensions, and finish; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification RR-P-70; 1942. Pans; Dish, Steel. Covers one type in 14, 20, and 30 qt. capacities. Gives requirements for material, workmanship, body, handles, finish, cleaning, marking, and dimensions; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification RR-P-76; 1935. Pans; Dust. Covers two types—(I) hood pattern; in two classes—(A) welded handle, and (B) covered wire handle; and (II) open pattern; in three classes—(A) welded handle, (B) covered wire handle, and (C) one piece. Gives requirements for material, workmanship, construction, finish, and dimensions; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification RR-P-571; 1939. Amendment 1; 1944. Pots; Marking, Ink. Covers one type, grade, and size. Gives requirements for material and workmanship, tinned plate, coating, body, cover, handle, illustration, dimensions, and tolerances; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification RR-T-661; 1936. Threads; Safety, Metallic. Covers two types—(A) filled, and (B) cast; and seven classes. Gives requirements for material, workmanship, and construction; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., Joint Army-Navy Specification JAN-C-82; 1944. Carriers; Food.

U. S. Gov., Joint Army-Navy Specification JAN-C-88; 1944. Cups; Canteen, Corrosion-Resisting Steel.

U. S. Gov., Marine Corps Specification, 1942. Dipper, for No. 1 Field Range.

U. S. Gov., Marine Corps Specification, 1942. Funnels; Large and Small.

U. S. Gov., Marine Corps Specification, 1933. Scuttle; Coal.

U. S. Gov., Navy Dept. Specification 41F6b; 1944. Funnels.

U. S. Gov., Navy Dept. Specification 41T29; 1941. Thimbles; Sewing.

U. S. Gov., Navy Dept. Specification 63D2; 1941. Dishes; Vegetable, Steel.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2483; 1939. Pitchers; Enamelware.

U. S. Gov., U. S. Army, Medical Dept. Specification 28-38; 1939. Pot; Stock, Corrosion-Resisting Steel.

U. S. Gov., U. S. Army, Medical Dept. Specification 28-56; 1939. Dipper; 1-Pint, Enamelware.

U. S. Gov., U. S. Army, Medical Dept. Specification 28-94; 1939. Scoop; Small, Grocers'.

U. S. Gov., U. S. Army, Medical Dept. Specification 28-106; 1939. Dipper; Milk.

U. S. Gov., U. S. Army, Medical Dept. Specification 28-107; 1940. Dipper; 1-Quart.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 28-16; 1934. Canteen and Cup M-1910.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 28-124; 1944. Cup; Canteen, Aluminum.

U. S. Gov., U. S. Maritime Commission. Specification 63-MC-8; 1942. Servers; Insulated, Evacuated. Type

I—coffee server; type II—ship server; six grades, sizes, and three classes. Gives requirements for materials, workmanship, inner shells, finish, marking, seams, handles, capacities, dimensions, metal thickness, design, covers, insulation, sampling, inspection, tests, and drawings.

U. S. Gov., U. S. Maritime Commission. Specification 64-MC-12; 1941. Dog Basket. There shall be one type and grade. Composition I—galvanized; class A, hot-dipped galvanized; class B, galvanized sheet; composition II—tinned; class A, hot-dipped tin, and class B, tin plate. Gives requirements for materials, workmanship, construction, sheet metal, body, foot, handles and bars, watertightness, tolerances, inspection. methods of test. and drawing.

U. S. Gov., U. S. Maritime Commission. Specification 64-MC-37; 1941. Kettles; Tea, Enamelware, Seamless. Type I—large-mouth spout (faucet-fill type); type II—gooseneck spout; and there shall be but one grade. Gives requirements for materials, workmanship, body, cover, spout, ears, bail, handle, enameling, reflectance, color, capacities and dimensions, tolerances, sampling, inspection, and tests.

U. S. Gov., Veterans Administration. Specification VA-G-50; 1932. Pans; Dust.

U. S. Gov., Veterans Administration. Specification Va-G-118c; 1936. Covers; Cake, Corrosion-Resisting Steel.

U. S. Gov., Veterans Administration. Specification VA-G-128b; 1936. Dippers; Corrosion-Resisting Steel.

U. S. Gov., Veterans Administration. Specification VA-G-131b; 1939. Pot; Tea and Coffee, Individual Semi-Deluxe.

U. S. Gov., Veterans Administration. Specification VA-G-143a; 1937. Pitchers; Corrosion-Resisting Steel.

U. S. Gov., Veterans Administration. Specification VA-G-148; 1936. Pot; Coffee, 2-Quarts Capacity.

U. S. Gov., Veterans Administration. Specification VA-G-150a; 1938. Food Container With Clamp Covers.

U. S. Gov., Veterans Administration. Specification VA-G-152a; 1940. Bowls; Baker, Corrosion-Resisting Steel.

U. S. Gov., Veterans Administration. Specification VG-G-154; 1938. Kettles; Sponge, Corrosion-Resisting Steel.

U. S. Gov., Veterans Administration. Specification VA-G-160a; 1940. Containers; Liquid, Corrosion-Resisting Steel.

U. S. Gov., Veterans Administration. Specification VA-G-163a; 1940. Ladle; Corrosion-Resisting Steel.

U. S. Gov., Veterans Administration. Specification VA-G-167b; 1937. Pans; Baking and Roasting, Aluminum.

U. S. Gov., Veterans Administration. Specification Va-G-182a; 1937. Pans; Dish, Aluminum, Capacity 27 Quarts.

U. S. Gov., Veterans Administration. Specification VA-G-186; 1936. Pans; Saute, Aluminum, Capacity 6 Quarts.

U. S. Gov., Veterans Administration. Specification VA-G-187; 1936. Pans; Sauce, Aluminum, Capacity 60 Quarts.

U. S. Gov., Veterans Administration. Specification VA-G-197a; 1937. Tubs; Pie, Aluminum, Capacity 102 Quarts.

U. S. Gov., Veterans Administration. Specification VA-G-206a; 1937. Bowl: Mixing, Aluminum.

U. S. Gov., Veterans Administration. Specification VA-G-208; 1936. Bowls; Mixing, Aluminum, 122 Quarts.

U. S. Gov., Veterans Administration. Specification VA-G-216b; 1937. Kettles; Sponge or Egg, Aluminum, Capacity 16 Quarts.

U. S. Gov., Veterans Administration. Specification VA-G-220b; 1937. Tubs; Pie, Aluminum, 65 Quarts Capacity.

U. S. Gov., Veterans Administration. Specification VA-G-223; 1936. Containers; Inset, Food Truck, Aluminum, Capacity 3 1/2 Quarts.

U. S. Gov., Veterans Administration. Specification VA-G-226; 1936. Pots; Stock, Aluminum, Capacity 20 Quarts.

U. S. Gov., Veterans Administration. Specification VA-G-227; 1936. Pots; Stock, Aluminum, Capacity 12 Quarts.

U. S. Gov., Veterans Administration. Specification VA-G-233a; 1937. Pans; Dish, Capacity 40 Quarts.

U. S. Gov., Veterans Administration. Specification VA-G-238; 1936. Pan; Dish, Aluminum, 26 Quarts.

U. S. Gov., Veterans Administration. Specification VA-G-245a; 1937. Container; Liquid, With Bail Handle, Capacity 4 Quarts.

U. S. Gov., Veterans Administration. Specification VA-G-248; 1936. Candy Kettle; Aluminum, 9 Gallons Capacity.

U. S. Gov., Veterans Administration. Specification VA-G-249; 1936. Candy Kettle; Aluminum, Capacity 25 Gallons.

U. S. Gov., Veterans Administration. Specification VA-G-250; 1936. Trays; Aluminum.

U. S. Gov., Veterans Administration. Specification VA-G-251; 1936. Pots; Tea. Aluminum, Capacity 2 Quarts.

U. S. Gov., Veterans Administration. Specification VA-G-252; 1937. Container; Food Truck, Aluminum, Capacity 9 Quarts.

U. S. Gov., Veterans Administration. Specification VA-G-253; 1937. Steam Table Pot Covers.

U. S. Gov., Veterans Administration. Specification VA-G-254a; 1937. Covers; Aluminum.

U. S. Gov., Veterans Administration. Specification VA-G-256; 1937. Pans; Dish, Aluminum, Capacity 21 Quarts.

U. S. Gov., Veterans Administration. Specification VA-G-257a; 1937. Food Containers; Aluminum.

U. S. Gov., Veterans Administration. Specification VA-G-258; 1937. Pot; Stock, Aluminum, 11 Gallons Capacity.

U. S. Gov., Veterans Administration. Specification VA-G-263; 1937. Plate; Pie.

U. S. Gov., Veterans Administration. Specification VA-G-265; 1937. Suds Dipper.

U. S. Gov., Veterans Administration. Specification VA-G-267a; 1937. Pot; Stock, Aluminum, 20 Quart Capacity.

U. S. Gov., Veterans Administration. Specification VA-G-272; 1937. Pan; Dish, Aluminum, Capacity 16 Quarts.

U. S. Gov., Veterans Administration. Specification VA-G-276; 1937. Pot; Stock, Aluminum, Capacity 120 Quarts.

U. S. Gov., Veterans Administration. Specification VA-G-277; 1927. Bowl; Mixing, Aluminum, Capacity 48 Quarts.

U. S. Gov., Veterans Administration. Specification VA-G-279; 1937. Pans; Refrigerator, Aluminum, With Sliding Cover.

U. S. Gov., Veterans Administration. Specification VA-G-280; 1937. Pot; Sauce, Aluminum, Capacity 34 Quarts.

U. S. Gov., Veterans Administration. Specification VA-G-281; 1937. Pots; Tea, Aluminum.

U. S. Gov., Veterans Administration. Specification VA-G-282; 1937. Bowl; Mixing, Aluminum.

U. S. Gov., Veterans Administration. Specification VA-G-283; 1937. Pan; Baking and Roasting.

U. S. Gov., Veterans Administration. Specification VA-G-286; 1937. Pot; Stock, Aluminum, 20 Quart Capacity.

U. S. Gov., Veterans Administration. Specification VA-G-290; 1937. Pans; Roast, Aluminum.

U. S. Gov., Veterans Administration. Specification VA-G-291; 1937. Pots; Sauce, Aluminum, Capacity 26 Quarts.

U. S. Gov., Veterans Administration. Specification VA-G-292; 1937. Tray; Aluminum, Oval.

U. S. Gov., Veterans Administration. Specification VA-G-295a; 1938. Pots; Stock, Aluminum, Capacity 25 Quarts.

U. S. Gov., Veterans Administration. Specification VA-G-296; 1938. Soup Tureen; Aluminum, Capacity 8 Quarts.

U. S. Gov., Veterans Administration. Specification VA-G-297; 1938. Tureen; Corrosion-Resisting Steel.

U. S. Gov., Veterans Administration. Specification VA-G-298; 1938. Tub; Pie, Aluminum, Capacity 65 Quarts.

U. S. Gov., Veterans Administration. Specification VA-G-306; 1938. Aluminum Brown Bread Pot and Cover.

U. S. Gov., Veterans Administration. Specification VA-G-320; 1938. Tray; Round, Alumilite Finish.

U. S. Gov., Veterans Administration. Specification VA-G-321; 1938. Transfer Ladle.

U. S. Gov., Veterans Administration. Specification VA-G-322; 1938. Stock Pot; Aluminum, Capacity 15 Quarts.

U. S. Gov., Veterans Administration. Specification VA-G-323; 1938. Aluminum Rectangular Pan.

U. S. Gov., Veterans Administration. Specification VA-G-324; 1938. Stock Pot.

U. S. Gov., Veterans Administration. Specification VA-G-325; 1938. Rectangular Pan.

U. S. Gov., Veterans Administration. Specification VA-G-327; 1939. Rectangular Tub.

U. S. Gov., Veterans Administration. Specification VA-G-328; 1939. Bowl; Aluminum.

U. S. Gov., Veterans Administration. Specification VA-G-329e; 1940. Servers; Coffee, Corrosion-Resisting Steel.

U. S. Gov., Veterans Administration. Specification VA-G-330; 1939. Aluminum Cover.

U. S. Gov., Veterans Administration. Specification VA-G-331; 1939. Sauce Pot; Aluminum.

U. S. Gov., Veterans Administration. Specification VA-G-336a; 1940. Corrosion-Resisting Steel Dipper.

U. S. Gov., Veterans Administration. Specification VA-G-337; 1940. Pan; Aluminum.

U. S. Gov., Veterans Administration. Specification VA-G-338; 1940. Bowl; Aluminum, 1 Pint Capacity.

U. S. Gov., Veterans Administration. Specification VA-G-339; 1940. Trays; Aluminum, Rectangular.

U. S. Gov., Veterans Administration. Specification VA-G-345a; 1941. Tray; Aluminum.

U. S. Gov., Veterans Administration. Specification VA-G-346a; 1941. Tray; Aluminum.

U. S. Gov., Veterans Administration. Specification VA-G-347; 1940. Tray; Aluminum, for 13-Hole Rack.

U. S. Gov., Veterans Administration. Specification VA-G-348; 1940. Tray; Aluminum, for 15-Hole Rack.

U. S. Gov., Veterans Administration. Specification VA-M-280; 1938. Corrosion-Resisting Steel Drink Mixing Cups.

U. S. Gov., Veterans Administration. Specification VA-MC-303; 1939. Bowls for Vertical Type Mixers.

U. S. Gov., Veterans Administration. Specification VA-MM-284a; 1940. Food Container With Clamp Cover.

*References.*—Standard sizes of tinware, galvanized ware, and japanned ware, see 612.20; tin hollow ware, see 681.41; metal containers, see 951, 953.1, 954.21, 956; liquid and dry measures of iron or steel, see 919.1; cans of steel, see 959.1.

## 612.3 MISCELLANEOUS HOUSEHOLD UTENSILS

American Bakers Assn. Recommended Maximum Pan Lengths. For loaves weighing 12, 16, 20 and 24 oz. baked.

U. S. Gov., Dept. of Interior, Purchasing Office. Standard Specification No.47. Picks; Ice.

U. S. Gov., Dept. of Interior, Purchasing Office. Standard Specification No.49. Beaters; Egg.

U. S. Gov., Dept. of Interior, Purchasing Office. Standard Specification No.50. Dishers or Scoops, for Mashed Food, Ice Cream, etc.

U. S. Gov., Dept. of Interior, Purchasing Office. Standard Specification No.51. Skimmers; Perforated.

U. S. Gov., Dept. of Interior, Purchasing Office. Standard Specification No.57. Choppers; Food.

U. S. Gov., Dept. of Interior, Purchasing Office. Standard Specification No.63. Can Openers.

U. S. Gov., Dept. of Interior, Purchasing Office. Standard Specification No.80. Sharpener; Knife.

U. S. Gov., Federal Specification FF-O-601; 1942. Openers; Can. Covers three types—(I) household (single leverage operating, wing nut operating, with lever control); (II) household, mechanical (with wall attachment, with table attachment); and (III) institutional, with table attachment (medium size, large size). Gives requirements for materials and workmanship of each style and class; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification OO-M-18a; 1944. Machines; Chopping (Grinding), Meat. Covers two types—(I) hand operated, and (II) motor operated; in two classes—(A) intermittant duty and (B) continuous duty; and various sizes for type I and type II, classes A and B. Type II shall be furnished with or without pedestals. Gives requirements for condition, design, operation, chopper body, feed worm, knives, end plates, thrust bearing, accessibility, finish, marking, and details for each type and class; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification RR-F-646; 1940. Amendment 1; 1944. Freezers; Ice-Cream, Hand-Operated. Covers one grade and three sizes—1, 2 1/2, and 5 gal. Gives requirements for material,

workmanship, gears, beater, tinned steel or iron, construction, covers, tubs, and details; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification RR-G-681; 1940. Amendment 1; 1944. Griddles; Cast-Iron. Covers two types—(I) rectangular, and (II) round. Gives requirements for material, workmanship, design, coating, handles, construction, and sizes; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification GGG-P-323; 1943. Picks; Ice. Covers one type and grade. Gives requirements for blade, handle, and finish; methods of sampling, inspection, and test; and packaging, packing, and marking.

U. S. Gov., Marine Corps Specification. 1918. Broiler.

U. S. Gov., Marine Corps Specification, 1904. Mill; Coffee.

U. S. Gov., Marine Corps Specification, 1933. Picks; Ice.

U. S. Gov., Navy Dept. Specification 64C6b; 1943. Cutters; Cake.

U. S. Gov., Navy Dept. Specification 64M8c; 1937. Machines; Vegetable Cubing and Slicing, Hand-Operated.

U. S. Gov., Navy Dept. Specification 6404c; 1943. Openers; Bottle (Shipboard Use).

U. S. Gov., Navy Dept. Specification 64P18a; 1944. Pans; Corn-Bread and Muffin, Iron (Cast).

U. S. Gov., Navy Dept. Specification 64S9; 1929. Squeezers; Lemon.

U. S. Gov., Navy Dept. Specification 64S11; 1941. Sponges; Metal.

U. S. Gov., U. S. Army, Medical Dept. Specification 28-63; 1939. Opener; Can, Special.

U. S. Gov., U. S. Army, Medical Dept. Specification 28-67; 1939. Cutter; Butter.

U. S. Gov., U. S. Army, Medical Dept. Specification 28-73; 1939. Pick; Ice.

U. S. Gov., U. S. Army, Medical Dept. Specification 28-76; 1939. Sieve; Flour, With Crank.

U. S. Gov., U. S. Army, Medical Dept. Specification 28-79; 1939. Squeezer; Lemon.

U. S. Gov., U. S. Army, Medical Dept. Specification 28-86A; 1940. Beater; Egg.

U. S. Gov., U. S. Army, Medical Dept. Specification 28-88; 1939. Beef Juicer.

U. S. Gov., U. S. Army, Medical Dept. Specification 28-89; 1939. Cutter; French Fry.

U. S. Gov., U. S. Army, Medical Dept. Specification 28-98; 1939. Sieve; Flour, 16-Inch.

U. S. Gov., U. S. Army, Medical Dept. Specification 28-120; 1941. Sharpener; Knife.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 92-60; 1942. Hanger; Outfit, Cooking, Calvalry, Pack.

U. S. Gov., U. S. Maritime Commission. Specification 64-MC-5a; 1944. Openers; Can (Mechanical). Shall be but one type, grade, and size. Gives requirements for materials, workmanship, construction, base plate, operating assembly, vertical shaft, cutting blade, feed gear, locking device, crank, finish, performance, spare parts, and marking; sampling, inspection, and method of test; and packaging, packing, and marking for shipment.

U. S. Gov., U. S. Maritime Commission. Specification 64-MC-14; 1941. Choppers; Meat and Food, Hand-Operated. Type I—exterior shear cutters; type II—interior knife cutter; and there shall be but one grade. Gives requirements for materials, workmanship, condition, design, operation, body, feed worm, crank, marking, cutters, sizes, end plates, inspection, and method of test.

U. S. Gov., U. S. Maritime Commission. Specification 64-MC-43; 1941. Griddles; Cast Iron. Type I—oblong; type II—round; there shall be but one grade, and sizes shall be specified. Gives requirements for material, workmanship, casting, general designs, baking areas, coating, body, handles, sizes, tolerance, inspection, methods of test, and drawing.

U. S. Gov., U. S. Maritime Commission. Specification 64-MC-47; 1941. Skillets; Cast Iron. Skillets shall be but one type and grade, and sizes shall be as specified. Gives requirements for material, workmanship, casting, design, body, handle, finish, coating, inspection, methods of tests, and drawing.

U. S. Gov., Veterans Administration. Specification VA-G-9; 1932. Butter Cutter.

U. S. Gov., Veterans Administration. Specification VA-G-10-b; 1935. Butter and Cheese Cutter.

U. S. Gov., Veterans Administration. Specification VA-G-47-b; 1934. Ice Cream Dishers.

U. S. Gov., Veterans Administration. Specification VA-G-49; 1932. Picks; Ice.

U. S. Gov., Veterans Administration. Specification VA-G-174a; 1936. Pots; Stock, Deep, Aluminum, Capacity 25 Quarts.

U. S. Gov., Veterans Administration. Specification VA-G-175c; 1937. Pot; Stock, Aluminum, Capacity 60 Quarts.

U. S. Gov., Veterans Administration. Specification VA-G-177a; 1937. Pot; Stock, Deep, Aluminum, Capacity 100 Quarts.

U. S. Gov., Veterans Administration. Specification VA-G-178a; 1937. Pots; Stock, Deep, Aluminum, Capacity 60 Quarts.

U. S. Gov., Veterans Administration. Specification VA-G-179; 1936. Pot; Stock, Aluminum, Capacity 100 Quarts.

U. S. Gov., Veterans Administration. Specification VA-G-180; 1936. Pot; Sauce, Aluminum, Capacity 60 Quarts.

U. S. Gov., Veterans Administration. Specification VA-G-183; 1936. Colanders; Aluminum, Capacity 16 Quarts.

U. S. Gov., Veterans Administration. Specification VA-G-184a; 1937. Kettles; Preserving, Aluminum, Capacity 21 Quarts.

U. S. Gov., Veterans Administration. Specification VA-G-190; 1936. Measures; Lipped, Capacity 4 Quarts.

U. S. Gov., Veterans Administration. Specification VA-G-198a; 1938. Container; Liquid, Aluminum, Capacity 4 Quarts.

U. S. Gov., Veterans Administration. Specification VA-G-247; 1936. Pots; Stock, Deep, Aluminum, Capacity 140 Quarts.

U. S. Gov., Veterans Administration. Specification VA-G-293; 1938. Kettles; Preserving, Aluminum.

U. S. Gov., Veterans Administration. Specification VA-G-316; 1938. Corer and Parer; Apple.

U. S. Gov., Veterans Administration. Specification VA-M-47; 1936. Hand Operated Bread Slicers.

U. S. Gov., Veterans Administration. Specification VA-M-88; 1934. Meat Grinders.

U. S. Gov., Veterans Administration. Specification VA-M-100; 1935. Food Separator; Hand Operated.

U. S. Gov., Veterans Administration. Specification VA-M-135a; 1936. Dish Racks.

U. S. Gov., Veterans Administration. Specification VA-M-158; 1935. Vegetable Slicing Machine.

U. S. Gov., Veterans Administration. Specification VA-M-334; 1944. Can Opener; Mechanical.

U. S. Gov., Veterans Administration. Specification VA-MC-317; 1942. Cake and Cookie Cutting Machine.

U. S. Gov., Veterans Administration. Specification VA-MC-327; 1942. Potato Soaking Vat.

*References.*—Tin hollow ware, *see* 681.41; metal and wooden pails, *see* 951.64, 951.65; metal and wooden tubs, *see* 951.71, 951.72; jars, *see* 955.4; brooms and brushes, *see* 981, 982; motor driven household devices, *see* 717.2.

## 613. METAL FURNITURE AND FIXTURES

### 613.1 BEDS, BED SPRINGS, COTS

American Hospital Assn., 1-1. Fracture Bed. For one type, one grade, and one class. Covers material and workmanship, general and detail requirements, and methods of inspections and tests. Based on U. S. Army Specification 10-2825 for Fracture Bed.

American Hospital Assn., 1-4. Hospital Beds. Covers one type, but subject to alternatives in connection with certain detail requirements. Based on U. S. Gov. Federal Specification AA-B-201.

American Hospital Assn., 1-7. Adjustable Spring-Bottom Hospital Beds. One type, but subject to alternatives in connection with certain detailed requirements. Covers material and workmanship, general and detail requirements, and methods of inspections and tests. Based on U. S. Gov. Federal Specification AA-B-211b for Adjustable Spring-Bottom Hospital Beds, referred to below.

American Hospital Assn., 1-25. Inner-Spring Mattresses. Three types—(I) springs in individual pockets, (II) all-wire spring unit, free-end coil construction, and (III) all-wire spring unit, knotted-coil construction. One grade.

American Hospital Assn., 1-28. Cotton-Felt Inner-Spring Mattresses. Type having springs in individual pockets.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R2-32; 1932. Bedsteads, Springs, and Mattresses. Bedsteads: This recommendation establishes a schedule of types and sizes of bedsteads covering straight-foot wood and metal beds. Sponsored by the National Assn. of Bedding Manufacturers and the National Assn. of Furniture Manufacturers.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R24-37; 1937. Hospital Beds. This recommendation establishes a simplified schedule of sizes and varieties of beds for general hospital use, institutional use, and private-room use. Sponsored by American Hospital Assn.

U. S. Gov., Dept. of Interior, Purchasing Office. Standard Specification No. 6. Studio Couches; Twin.

U. S. Gov., Federal Specification V-M-96a; 1941. Mattresses; Inner-Spring. Covers one grade in three types—(I) springs in individual pockets, (II) all-wire spring unit, free-end coil construction, and (III) all-wire spring unit, knotted-coil construction. Covers requirements for felt, ticking, sheeting, sewing, thread, twine, tufting, twine or tape, seams stitching, casing mattress construction, edge construction, border construction, corners, lifting straps, labels, standard samples, contractors inspection, inner-spring construction, coils, folding, sizes, weights, and number of coils; methods of inspection and test; and packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification AA-B-201; 1933. Amendment 4; 1939. Beds; Hospital. Covers one type, but subject to alternatives in connection with certain detail requirements. Gives requirements for material and workmanship, construction, general dimensions, headpiece (continuous post, cross rods, upright rods, towel bar, irrigator attachment, welded connections), footpiece, corner lock, fabric and fabric frame (spring bottom), mosquito bar rods, and wooden shoes or casters; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking. Emergency Alternate Federal Specification E-AA-B-201; 1942, (issued by Procurement Div., Treasury Dept., U. S. Gov.) changed requirements for finish, substituted zinc coating for tinned, and gave requirements for wooden shoes or casters.

U. S. Gov., Federal Specification AA-B-211b; 1940. Amendment 2; 1941. Beds; Hospital, Adjustable Spring-Bottom. Covers two types—(I) round tubing, and (II) square tubing. Gives general requirements for material and workmanship, construction, towel bar, irrigator attachment, welded connections, corner lock, adjustable spring bottom (main frame, adjustable spring-bottom frame, elvating mechanism, spring fabric), wooden shoes or casters, special tools, and manufacturer's name or trade-mark; detail requirements for each type; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking. Emergency Alternate Federal Specification E-AA-B-211b; 1942, (issued by Procurement Div., Treasury Dept., U. S. Gov.) changed requirement for finish, substituted enamel for cranks in lieu of chromium plating and zinc coating for tinned, and gave requirements for wood shoes or casters.

U. S. Gov., Federal Specification AA-C-581a; 1940. Cots; Folding, Hospital, Steel. Covers one type. Gives requirements for ends, cross rods, steel caps, fabric frame, locking device, fabric, support, and canopy; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., Marine Corps Specification, 1939. Bedstead.

U. S. Gov., Marine Corps Specification, 1944. Bunk; Steel, Two Part Double Deck, Convertible Type.

U. S. Gov., Marine Corps Specification, 1935. Fabric, for Bedstead.

U. S. Gov., Marine Corps Specification, 1935. Fabric, for Steel Cot.

U. S. Gov., Navy Dept. Specification 26B1c; 1942. Beds; Stateroom.

U. S. Gov., Navy Dept. Specification 26B4; 1939. Bottoms; Wire, for Pipe Berths.

U. S. Gov., Navy Dept. Specification 26S3a; 1939. Springs; Berth (Built-In), Open-Box.

U. S. Gov., Navy Dept. Specification 57B3; 1925. Bottoms; Spring, Adjustable (Gatch Frame)

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2825A; 1942. Bed; Fracture.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 32-2A; 1941. Bedstead; Single, M-1938.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 32-7A; 1939. Cot; Folding, Steel.

U. S. Gov., U. S. Maritime Commission. Specification 26-MC-1; 1940. Springs; Open-Box for Built-In Berth. Shall be but one type and grade. Gives requirements for material, workmanship, cone-shaped springs, helical springs, finish, sizes, sampling, inspection, and tests.

U. S. Gov., U. S. Maritime Commission. Specification 26-MC-8a; 1942. Berths; Stanchion- and Chain-Supported. Shall be type I—stanchion-supported; and type II—chain-supported. Type I shall be—class A single-tier berth; class B, double-tier berth; or class C, triple-tier berth. There shall be but one grade. Gives requirements for materials, workmanship, construction, finish, color, tolerances, number plate, sampling, inspection, test, and drawings.

U. S. Gov., U. S. Maritime Commission. Specification 27-MC-34; 1941. Amendment 1; 1942. Mattresses; Inner Spring. Shall be type I—all wire spring unit, free-end coil construction; type II—all wire spring unit, knotted-end coil construction; and shall be of but one grade. Gives requirements for sizes, felt, ticking, sheeting, spring wire, workmanship, distribution of felt, stitching, casing, tufting, mattress construction, edge construction, border construction, corners, lifting straps, labels, and details for each type; sampling, inspection, and methods of test; and packaging, packing, and marking.

U. S. Gov., U. S. Maritime Commission. Specification 27-MC-38; 1941. Mattresses; Inner Spring (Individual Pockets). There shall be but one type and grade, and the sizes shall be as specified. Gives requirements for materials, spring wire, workmanship, distribution of felt, stitching, casing, tufting, mattress construction, edge construction, border construction, inner spring construction, lifting straps, labels, sampling, inspection, and tests.

U. S. Gov., Veterans Administration. Specification VA-G-71c; 1939. Dormitory Beds.

U. S. Gov., Veterans Administration. Specification VA-X-185b; 1942. Springs for Hospital Sectional Mattresses.

U. S. Gov., Veterans Administration, Medical and Hospital Supply Section, VA-HM-106c; 1943. Detachable Hospital Bedsides.

*References.*—Steel tubular goods, *see* 607.4; malleable cast iron, *see* 611.21; wooden beds and cots, *see* 431.11, 431.13.

## 613.2 BOOK CASES

*References.*—Iron and steel sheets, *see* 604.0, 604.22, 604.23.

## 613.3 CHAIRS AND STOOLS

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R191-43; 1943. School Tables. Covers the standardization of sizes of school tables other than tables for science and vocational classrooms. Gives sizes and heights for individual pupil table, two-pupil table, general-purpose and library tables, lunchroom and project tables, bookkeeping table, typewriter table, and heights of chairs. Sponsored by the American Council on Education and the Interstate School Building Service.

U. S. Gov., Federal Specification AA-C-291; 1934. Amendment 1; 1934. Chairs; Folding, Metal. Covers four types—(A) tubing (electrically-welded or seamless), (B) double head, channel construction, (C) angle-iron construction, and (D) channel-iron construction; and five classes—(1) plywood seat and metal back, (2) padded seat and metal back, (3) padded seat and padded back, (4) slat-wood seat and metal back, and (5) metal seat and metal back. Gives requirements for material and workmanship, frame and legs, back support, stretchers, seat, and dimensions; method of inspection; and requirements for packaging, packing, and marking.

U. S. Gov., Federal Specification AA-C-326; 1934. Amendment 2; 1944. Chairs; Operating, Dental, Motorless. Covers one type and one grade. Gives requirements for base, elevator mechanism, speed regulator, rotating mechanism, operating levers, metal castings, seat and back, arm rests, head rest, foot platform and toe plate, and finish; methods of inspection, tests, etc., packing and marking.

U. S. Gov., Federal Specification AA-S-691; 1943. Stools; Foot. Covers one type and two classes—(A) metal and (B) wood. Gives requirements for material, workmanship, dimensions, frame, top, legs, rubber tips, and finish; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Navy Dept. Specification 26C6f; 1940. Chairs; Aluminum (Shipboard Use).

U. S. Gov., Treasury Dept., Procurement Div., 204B. Chairs; Office, Metal, Rotary, Without Spring. Shall be of three types—(I) adjustable-back, with arms; (II) adjustable-back, without arms, padded seat; and (III) adjustable-back, without arms (wood seat). Gives requirements for upholstery, base, spindle and seat frame, back rest; back supporting frame, arms, and design; method of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., Treasury Dept., Procurement Div., No. 215. Chairs; Folding, Metal. Shall be of four types—tubing, double bead, angle iron, and channel iron construction. Gives requirements for construction, welding, frame and legs, back support, stretchers, seat, dimensions, and finish.

U. S. Gov., Treasury Dept., Procurement Div., 221B; 1937. Chairs; Office, Metal, Rotary, With Spring. Shall be of the adjustable spring-back type. Gives requirements for design, base, spindle and seat

frame, seat, back, back supporting frame, and arms; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., Treasury Dept., Procurement Div., No. 244. Chairs; Folding, Metal (Channel-Construction, Double Bead, I—Beam-Type. Covers two classes with metal backs—(A) padded seat and (B) plywood seat. Gives requirements for material, workmanship, frame and legs, back support, stretchers, seat, dimensions; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., Treasury Dept., Procurement Div., 263A; 1938. Chairs; Office, Metal, Rotary, Posture Type. Shall be of four types, with three finishes—mahogany, olive-green, and walnut finish. Gives requirements as to material and workmanship, design, swivel, seat, back rest, arm rests, cushions, upholstery, and methods of sampling, inspection, and tests.

U. S. Gov., Treasury Dept., Procurement Div., No. 264; 1937. Chairs; Office, Metal, Rotary, Without Spring, With Ventilated Padded Back and Seat. Shall be of one type. Gives requirements for design, base, spindle and seat frame, seat, back, back supporting frame; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., Treasury Dept., Procurement Div., No. 340; 1939. Chairs; Office, Aluminum-Alloy. Covers six types—(I) leg type with arms, covered seat; (II) leg type without arms; (III) typists, swivel, without arms, adjustable spring back; (IV) swivel type, fixed back, with arms, covered seat; (V) swivel type, fixed back, without arms, covered seat; and (VI) swivel type, adjustable spring back, with arms, covered seat. Gives requirements for aluminum alloy, upholstery, glides, casters, assembling, finish, and details for each type; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., Treasury Dept., Procurement Div., No. 440; 1940. Chairs; Office, Metal, Rotary, Posture Type (Post Back). Covers eight types, with and without arms, in olive green, mahogany, and walnut (not grained) finishes. Gives requirements for material, metal thickness, design, base, spindle, seat, post back support, back rest, titling device, arm rests, casters or gliders, and upholstery covers; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., U. S. Army, Medical Dept. Specification 32-16; 1939. Stool; Revolving.

U. S. Gov., U. S. Army, Medical Dept. Specification 32-39; 1939. Stool; Foot.

U. S. Gov., Veterans Administration. Specification VA-G-90; 1932. Steel Rocking Chair.

U. S. Gov., Veterans Administration. Specification VA-G-310b; 1942. Porch Chair; Spring Steel Frame.

*References.*—Wooden chairs and stools, *see* 435.2, 438.

## 613.4 DESKS

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-144. Desk and Equipment; High Speed Tel. Operators.

U. S. Gov., Federal Specification AA-D-191; 1931. Amendment 1; 1935. Desks; Steel. Covers seven types—flat-top, single-pedestal; flat-top, double-pedestal; flat-top, double; typewriter, drop-center, single-pedestal, flat-top; typewriter, drop-center, double-pedestal, flat-top; typewriter, double-pedestal, pedestal device, flat-top; and roll-top, double-pedestal. Gives requirements for material and workmanship, sizes, construction, finish, hardware, drawers, fittings, tops, sliding shelves, legs, panels, curtains or rolls, and typewriter beds; method of inspection and tests; and requirements for packing and marking. Emergency Alternate Federal Specification E-AA-D-191; 1942, (issued by Procurement Div., Treasury Dept., U. S. Gov.) changed requirements to conform with U. S. Gov. Federal Specification AA-D-201; 1930, and Amendment 2; 1935, for Desks; Wood.

U. S. Gov., U. S. Army, Medical Dept. Specification 32-44; 1939. Desk; Reception Room.

U. S. Gov., U. S. Army, Medical Dept. Specification 32-47; 1941. Desk; Nurses'.

U. S. Gov., Veterans Administration, Medical and Hospital Supply Section, VA-H-33f; 1942. Double Pedestal Nurses' Chart Desk.

U. S. Gov., Veterans Administration, Medical and Hospital Supply Section, VA-H-34c; 1941. Nurses' Writing Desk.

U. S. Gov., Veterans Administration, Medical and Hospital Supply Section, VA-H-61a; 1938. Single Pedestal Nurses' Chart Desk.

*References.*—Sheet iron and steel, *see* 604.0, 604.22, 604.23; desk locks, *see* 617.21; wooden desks, *see* 435.3.

## 613.5 LOCKERS AND SAFES

American Hospital Assn., 34-103. Steel Clothes Lockers. Covers four classes in two types—single-tier and double-tier. Based on U. S. Gov. Federal Specification AA-L-486, for Steel Clothes Lockers, referred to below.

Safe Manufacturers' National Assn. Specification for Fire Insulated Safes, F1-D and F1-ND; 1939. For maximum protection of business records from fire and a definite measure of resistance to burglarious attack; three types based on fire resistance, and for F1-ND to explosion hazard also. Test methods for fire resistance, explosion hazard, and impact.

Safe Manufacturers' National Assn. Specification for Deposit Chute Containers, M1; 1939. Covers any safe container equipped with a deposit slot which is accessible from the exterior when door is closed. The slot voids any fire or burglary rating to which the product is otherwise entitled.

Safe Manufacturers' National Assn. Specification for Robbery-Resistive Containers, R1; 1939. For key-locked containers, such as lockers and trunk boxes, and wall safes not provided with deposit slot accessible when the door is closed; four types including Underwriters' label KL, round or rectangular door chests, wall safes, lockers, and truck boxes. Body and door thickness, materials, and locking mechanism.

Underwriters' Laboratories, Inc. Standard for Burglary-Resisting Safes and Relocking Devices, 1943. Covers burglary-resisting safes of five classes—tool-resisting safes (T-20); key-locked safes (KL); explosive-resisting safes (X-60); torch-resisting safes (TR-60); and torch and explosive-resisting safes (TX-60); and gives design, performance, samples, and test methods for each class. Also, covers design and construction, reliability of operation, strength, and performance of relocking devices. Gives requirements for operation, maintenance, durability, protection against corrosion, strength, uniformity, marking, inspection of listed product, and instructions to inspectors.

Underwriters' Laboratories, Inc. Standard for Fire Resistance Classification of Safes and Insulated Cabinets, 1941. General classification, design and construction, fire endurance test, fire-and-impact and explosion-hazard test, and inspection of listed products.

Underwriters' Laboratories, Inc. Standard for Timelocks (Burglary and Robbery), 1934. Covers automatic and manual setting timelocks for safes, chests, and vaults. Requirements as to practicability of design, durability, positive operation, minimum time delay, workmanship, and marking.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-391. Locker; Counter High, Work Bench.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R35-44; 1944. Steel Lockers (Single, Double, and Multiple Tier). This recommendation applies to steel lockers generally used in washrooms, rest rooms, gymnasiums, and schools for the storage of clothing and personal property. Gives tables of recommended stock sizes for single-tier, double-tier, and multiple-tier lockers showing width, depth, and height for various sizes. Sponsored by the Steel Locker Council.

U. S. Gov., Federal Specification AA-C-31; 1932. Cabinets; Stationery, Storage, and Clothing (Steel). Covers six types—(I) single-door clothing; (II) double-door clothing, (III) single-door stationery and storage, (IV) double-door stationery and storage, (V) janitor's single-door storage, and (VI) janitor's double-door storage. Gives requirements for material, workmanship, construction, finish, sizes, interior equipment, shelves, doors, latching mechanism, and gages of parts; methods of sampling, inspection, and tests; and requirements for packing and marking.

U. S. Gov., Federal Specification AA-L-486; 1932. Amendment 2, 1941. Lockers; Clothes, Steel. Covers two types—(I) single-tier, and (II) double-tier; and four classes—(a) semi-louvered door, (b) full-louvered door, (c) full-perforated door, and (d) open-mesh "tropical." Gives requirements for steel, sheets, hardware, units, strength and rigidity, number plates, locks, finish, sizes, interior equipment, doors, hinges, latching mechanism, and gages; method of sampling, inspection, and tests; and requirements for packing and marking.

U. S. Gov., Federal Specification AA-S-71; 1930. Amendment 3; 1936. Safes; Burglar-Resisting. Covers two types—(A) offering resistance to edge-cutting tools, explosives, and heat destruction by oxyacetylene torch or other heat devices; (B) of the same type but having a higher degree of resistance to heat destruction by oxyacetylene torch or other heat devices. Gives requirements for material, workmanship, dimensions, and construction; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Federal Specification AA-S-81a; 1941. Safes; Insulated. Covers three classes—(A) having 4-hour heat resistance, (B) having 2-hour heat resistance, and (C) having 1-hour heat resistance. Requirements are substantially the same as those of the Underwriters' Laboratories. Gives requirements for material, workmanship, construction, and heat resistance; methods of sampling, inspection, and tests; and requirements for packing and marking for shipment.

U. S. Gov., Federal Specification GG-S-751a; 1940. Sterilizers; Accessories and Portable Lockers (for Sterilizers). Covers five types—(I) dressing sterilizers, (II) instrument sterilizers (pressure and boiling), (III) utensil sterilizers (pressure and boiling), (IV) water sterilizers, and (V) combination sterilizers; accessories for pressure sterilizers; and lockers for use with combination sterilizers. Gives detail requirements; methods of sampling, inspection, and tests; and requirements for packing and marking for shipment.

U. S. Gov., Marine Corps Specification 1944. Safe; Field, M-1942.

U. S. Gov., Navy Dept. Specification 26F4d; 1939. Furniture; Lockers, Clothes, Steel and Aluminum (Shipboard Use).

U. S. Gov., Navy Dept. Specification 26S4a; 1944. Safes; Burglar-Resisting.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 1-33; 1938. Safe; Field.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-1375; 1942. Chest CF-76.

U. S. Gov., U. S. Maritime Commission. Specification 26-MC-3; 1941. Safes; Insulated. Shall be of the fire-insulated type, in but one grade and one class, of the size based on the available space. Gives requirements for materials, workmanship, construction, rollers, insulation, doors, locking requirements, locking mechanism, finish, structural strength, fire resistance, explosion hazard test, impact resistance, safe labels, sampling, inspection, and tests.

U. S. Gov., U. S. Maritime Commission. Specification 26-MC-11; 1943. Strongboxes. Shall be but one type, grade, and size. Gives requirements for sheet steel, workmanship, construction, handles, hardware, weight, finish, sampling, inspection, test, and drawing.

*References.*—Masonry vaults, *see* 518.59; sheet iron and steel, *see* 604.0, 604.21, 604.22; terneplate, *see* 604.31.

## 613.6 TABLES

Assn. of American Railroads, Telegraph and Telephone Section, 2-G-38; 1928. Telegraph Table. Describes construction of steel framed table with top of oak veneer on chestnut core, with drawings showing dimensional requirements and details.

Assn. of American Railroads, Telegraph and Telephone Section, 2-G-39; 1928. Dispatchers' Tables. Includes single and double position tables made from steel angles and metallic furniture stock, with linoleum top, steel shelves and drawers, bronze hardware, and dimensional drawings of assembly and detail requirements.

Assn. of American Railroads, Telegraph and Telephone Section, 2-G-40; 1928. Table Rail. For use on telegraph table, 1 1/2 in. square oak railing and supports, steel bolts and sockets, enamel finish on exposed metal, and varnished wood finish, with drawings of construction details.

Assn. of American Railroads, Telegraph and Telephone Section, 2-G-42 and 2-G-43; 1929. Apparatus Shelf AAR-1-A and AAR-2-A. Requirements as to material and method of construction of wooden shelf with angle iron supports for mounting on standard telegraph tables AAR-1-A and AAR-2-A, respectively; requirements for five-ply veneer of oak with chestnut core, varnish finish, and enameled metalwork, with dimensional drawings.

Assn. of American Railroads, Telegraph and Telephone Section, 2-G-49; 1929. Telegraph Table AAR-2-A. For table assembled of two end units, and intermediate unit for increasing the length by 3 1/2 foot increments; requirements for steel framework, wood tops of oak veneer on chestnut core, typewriter drop, list of parts and finish, with dimensional drawings of assembly and details.

Assn. of American Railroads, Telegraph and Telephone Section, 2-G-64; 1931. Unit Set Repeater Table AAR-2-B. For mounting telegraph equipment or other apparatus requiring supervision by repeater attendants; requirements for design, construction, and finish, with bill of materials and 30 working drawings for table of sheet steel, angles, castings, and wood.

Assn. of American Railroads, Telegraph and Telephone Section, 2-G-66; 1931. Movable Apparatus Table AAR-1-A. For wood top table mounted on steel frame and casters, quality of materials, and working drawings.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-336. Printing Telegraph Unit Metal Table, for Mounting Page Type, per CAA-331.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-337. Printing Telegraph Table; Metal, for Mounting Transmitter-Distributor Units, per CAA-334 and CAA-335.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-338. Printing Telegraph Table; Metal, for Mounting Transmitter-Distributor Units, per CAA-332 and CAA-335.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-512. Operator's Tables (Point-to-Point Radio Communication Facility).

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R191-43; 1943. School Tables. Covers the standardization of sizes of school tables other than tables for science and vocational classrooms. Gives sizes and heights for individual pupil table, two-pupil table, general-purpose and library tables, lunchroom and project tables, bookkeeping table, typewriter table, and heights of chairs. Sponsored by the American Council on Education and the Interstate School Building Service.

U. S. Gov., Federal Specification AA-T-91; 1933. Tables; Office, Steel. Covers flat-top steel tables for office use. Gives detail requirements and methods of inspection; and requirements for packaging, packing, and marking.

U. S. Gov., Navy Dept. Specification 26T1c; 1944. Tables; Card, Metal.

U. S. Gov., Treasury Dept., Procurement Div., No. 205. Pedestal Type Metal Dining Room Table. Gives requirements as to dimensions, construction, top, base, pedestal uprights, adjustable glides, and finish.

U. S. Gov., U. S. Maritime Commission. Specification 66-MC-12; 1940. Table; Imposing, Steel Lockup and Storage, for Print Shop. Type I—size 31 x 39 in.; type II—size 39 x 65 in.; and the tables shall be all steel as specified herein. Gives requirements for materials, workmanship, finish, color, base construction, detail requirements, dimensions, tolerances, inspection, and methods of test.

U. S. Gov., Veterans Administration. Specification VA-G-121a; 1937. Diet Kitchen Dish Tables.

U. S. Gov., Veterans Administration. Specification VA-G-312c; 1942. Steel Porch Table.

U. S. Gov., Veterans Administration. Specification VA-GC-103j; 1942. Tables; Cook, Metal Top.

U. S. Gov., Veterans Administration. Specification VA-GC-111g; 1942. Diet Kitchen Tables.

*References.*—Iron and steel sheets, *see* 604.0, 604.22, 604.23; wooden tables, *see* 431.51, 435.3.

## 613.7 FILING FURNITURE

American Hospital Assn., 49-7. Steel Transfer Cases. Covers four types. Based on U. S. Gov. Federal Specification AA-C-121 for Steel Transfer Cases, referred to below.

American Hospital Assn., 49-22. Steel Sectional Office Furniture and Cabinets. Covers six types in four finishes. Based on U. S. Gov. Federal Specifications AA-F-791b for Steel Sectional Office Furniture and Cabinets, DD-G-451 for Flat Glass for Glazing Purposes, and QQ-M-151a for General Specification for Inspection of Metals.

Safe Manufacturers' National Assn. Specification for Fire Insulated Containers, F2-ND; 1939. For efficient handling of records at point of use, and to provide a measure of fire protection; three types based on fire resistance, method of fire, and impact-resistance tests.

U. S. Gov., Federal Specification AA-C-23; 1942. Amendment 1; 1944. Cabinets; Filing, Insulated, Fire-Resisting. Covers two classes—(D) having 1 hr. fire resistance, and (E) having 1/2 hr. fire resistance. Gives requirements for material, workmanship, insulation, supports, closure details, latches, lock, finish, sizes, structural strength, fire resistance, and weights; methods of sampling, inspection, and tests; and packing and marking for shipment.

U. S. Gov., Federal Specification AA-C-121; 1932. Amendment 1; 1935. Cases; Transfer, Steel. Covers

four types—(I) for invoice-size papers, (II) for letter-size paper, (III) for cap-size paper, and (IV) for sheets 10 by 16 in. Gives requirements for material and workmanship, finish, case body, drawers, and leg bases; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Federal Specification AA-F-791b; 1937 Amendment 2; 1944. Furniture and Cabinets; Office, Sectional, Steel. Covers six types—(I) cabinets, card size; (II) sections, horizontal; (III) sections, horizontal, base; (IV) sections, horizontal, base, truck; (V) sections, horizontal, bookcase; and (VI) sections, upright; and four finishes—(A) mahogany, (B) oak-quartered, (C) olive-green, and (D) walnut. Gives requirements for material; workmanship; finish; bolts, nuts, screws; pulls, label holders, rod heads; latches, door knobs; upright section; drawer suspension; drawers; locks; ball suspension; compressors; tolerances; marking; spot welds; and assembly, dimensions, top and base sections, and details for each type; methods of sampling, inspection, and tests; and packaging, packing, and marking.

*References.*—Iron and steel sheets, *see* 604.0, 604.22, 604.23; wooden filing furniture, *see* 435.5.

## 613.9 MISCELLANEOUS METAL FURNITURE AND FIXTURES

American Hospital Assn., 4-46. Steel Storage Shelving. Covers two types—(A) with closed backs, ends, bases, and common partitions between units or bays, and with or without doors as specified; (B) with closed ends, back, and bases; intermediate sides, open; (C) with closed ends; intermediate sides, and bases—open backs; (D) with closed ends and bases—open backs and open intermediate sides; and (E), open (skeleton) shelving. Based on U. S. Gov. Federal Specification AA-S-271a for Shelving; Steel, Storage.

Assn. of American Railroads, Telegraph and Telephone Section, 2-G-45; 1929. Train Order Table Top AAR-1-A. For use in conjunction with one main and one intermediate unit framework telegraph table AAR-2-A, oak veneer top with chestnut core, varnish finish, and dimensional requirements.

Assn. of Lift Truck and Portable Elevator Manufacturers. Specifications for Storage Racks. Covers structural features including panels, skid rails, accessories, and spacing; for drum and barrel racks, loaded skid platform racks, die racks, etc.

National Assn. of Dyers and Cleaners of the U. S. and Canada. The Dry Cleaning Department, 1940. Includes recommendations for garment storage racks—sizes, spacings and arrangement of posts, flanges, and brackets.

National Fire Protection Assn. National Fire Codes for Flammable Liquids, Gases, Chemicals, and Explosives, 1943. Rooms, Cabinets, and Outside Houses for the Storage of Flammable Liquids. Covers standards for the construction of inside storage or mixing room, storage cabinets, and outside storage houses.

Steel Kitchen Cabinet Institute. Quality Standards for Steel Kitchen Cabinets, 1940. Approval requirements covers: Section I—gages; section II—construction of cabinets including body, welding, doors and drawers, exposed surfaces, and hardware; section III—performance tests for rigidity including drawers, wall cabinets, squeeze tests, load tests, three-point test for doors, squeeze tests for base cabinets, hinge test, and door catches and hinges; section IV—finish specifications including preparation and material; section V—tests for cabinet finishes including water immersion, impact, humidity, salt spray, draw, abrasion, alcohol, hot fat, scratch hardness, and weatherometer tests; and section VI—equipment and conditions for finish tests.

Underwriters' Laboratories, Inc. Standard for Fire Resistance Classification of Safes and Insulated Cabinets, 1941. General classification, design and construction, fire endurance test, fire-and-impact and explosion-hazard test, and inspection of listed products.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R182-41; 1941. Food Service Equipment. This recommendation is concerned not only with the sizes and dimensions of complete units of equipment but also with the details of construction. Initiated by the food service equipment industry.

U. S. Gov., Federal Specification AA-S-271a; 1941. Amendment 1; 1941. Shelving; Steel, Storage. Covers five types—(A) closed shelving with closed backs, sides, ends, and with or without doors; (B) shelving with closed ends, backs, and bases; (C) shelving with closed ends and bases, open backs; (D) shelving with closed ends and bases, open backs and open intermediate sides; and (E) open or skeleton shelving; and three classes—(1) light loads, (2) heavy loads, and (3) extra heavy loads. Gives requirements for material, workmanship, gages, construction, finish, hardware, and accessories; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Federal Specification AA-S-671; 1935. Stands; Dictionary. Covers two types—(I) pedestal-style, and (II) rotary-bookcase-style. Gives requirements as to base, casters, construction, and finish; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Federal Specification FF-C-81; 1937. Casters; Metal-Chair. Covers two types—(I) ball-bearing swivel casters, and (II) top-bearing swivel casters; two sizes—(A) wheel 1 5/8-in. diameter, and (B) wheel 2-in. diameter; and four-wheel. Wheel materials—(1) hard-rubber composition, (2) hard-rubber composition with soft-rubber tread, (3) hard-rubber, and (4) phenolic composition. Covers material and workmanship; general requirements; detail requirements for each type; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification FF-C-91a; 1937. Casters; Wood-Chair. Covers two types—(I) ball-bearing swivel, and (II) top-bearing swivel; two sizes—1 5/8-, and 2-in. diameter wheels; and four materials—hard-rubber composition, hard-rubber composition with soft-rubber tread, hard-rubber, and phenolic-composition. Covers material and workmanship; general

requirements; detail requirements for each type; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment. Emergency Alternate Federal Specification E-FF-C-91a; 1943, (issued by Procurement Div., Treasury Dept., U.S. Gov.) changed type, wheel composition, bearings, and tests.

U. S. Gov., Navy Dept. Specification 30R5; 1943. Rings; Toilet-Set (Crockery, Stateroom).

U. S. Gov., Treasury Dept., Procurement Div., No. 348; 1939. Stands; Smoking. Covers two types—(I) full-rocking and (II) semi-rocking; and are constructed of metal. Gives requirements for tray, bowl, base, stem, snuffer-dips, finish, weight and size; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., U. S. Army, Medical Dept. Specification 32-22A; 1941. Dresser; Steel.

U. S. Gov., U. S. Maritime Commission. Specification 30-MC-1a; 1941. Holders; Berth Cup. Type I—corrosion-resisting steel; type II—tin plate; type III—aluminum; type IV—enamelware; and grade shall be as specified herein. Gives requirements for materials, workmanship, general construction, metal, tolerances, color, dimensions, sampling, inspection, methods of test, and drawings.

U. S. Gov., U. S. Maritime Commission. Specification 66-MC-2; 1940. Cabinet; Wall Type, Steel, for Print Shop. Type I—single-tier (24-case); type II—double-tier (48-case); and the grade shall be as specified. Gives requirements for materials, workmanship, finish, color, base construction, movable parts, top, back, overhead lighting fixture, body, working top, inspection, and methods of test.

U. S. Gov., U. S. Maritime Commission. Specification 66-MC-4; 1940. Cabinet; Letter-board (for Standing Forms), for Print Shop. The cabinet shall be all steel and the grade shall be as herein specified. Gives requirements for materials, workmanship, finish, color, base construction, dimensions, openings, letter-boards, inspection, and methods of test.

U. S. Gov., Veterans Administration. Specification VA-G-95; 1933. Steel Library Shelving.

U. S. Gov., Veterans Administration. Specification VA-G-104c; 1936. Waste Receptacles.

U. S. Gov., Veterans Administration. Specification VA-G-247; 1936. Pots; Stock, Deep, Aluminum, Capacity 140 Quarts.

U. S. Gov., Veterans Administration. Specification VA-G-311c; 1942. Porch Glider.

U. S. Gov., Veterans Administration. Specification VA-G-342; 1941. Chrome Plated Furniture (General Service).

U. S. Gov., Veterans Administration. Specification VA-GC-359; 1942. Drawer Type Proofers.

## 614. STOVES AND FURNACES, EXCEPT ELECTRIC

### 614.0 GENERAL ITEMS

American Gas Assn. Requirements and Recommended Practice for House Piping and Appliance Installation, 1940. These requirements should be construed as basic standards governing the installation of house piping and gas appliances and they have been prepared to specify results rather than outline in detail how such results shall be obtained. Covers general requirements for house piping, recommended practice for house piping, recommended practice for gas meters, general requirements for appliance installation, recommended practice for appliance installation, recommended practice for flue connections, and appendix.

American Gas Assn. American Standards Assn., Z21.12-1937. Listing Requirements for Draft Hoods. Includes—part I, construction requirements; part II, performance requirements for use with gas converted central heating equipment; part III, performance requirements for use with gas water heaters and with gas converted water heating equipment; and appendix; definitions, dimensions for vertical draft and horizontal draft hoods.

American Gas Assn. American Standards Assn., Z 21.13-1943. Approval Requirements for Central Heating Gas Appliances. Includes—part I, construction requirements for use with all gases; part II, performance requirements, gas boilers for use with natural and manufactured gases; part III, performance requirements, gas boilers for use with liquefied petroleum gases; part IV, performance requirements, gas boilers for use with butane-air gas; part V, construction requirements, gas warm air furnaces for use with all gases; part VI, gas warm air furnaces for use with natural and manufactured gases; part VII, gas warm air furnaces for use with liquefied petroleum gases; part VIII, gas warm air furnaces for use with butane-air gas; part IX, construction requirements, gas floor furnaces for use with all gases; part X, gas floor furnaces for use with natural and manufactured gas; part XI, gas floor furnaces for use with liquefied petroleum gases; and part XII, gas floor furnaces for use with butane-air gas; and appendix; definitions, arrangement of apparatus for testing, and types of lock seams considered acceptable.

American Gas Assn. American Standards Assn., Z 21.15-1942. Listing Requirements for Gas Valves. Represents basic standards for safe operation, substantial and durable construction, and acceptable performance for gas valves. Addenda to American Standard Listing Requirements for Gas Valves, effective Jan. 1, 1944.

American Gas Assn. American Standards Assn., Z21.24-1941. Listing Requirements for Semi-Rigid Gas Appliance Tubing and Fittings. Construction and performance requirements including dimensions for tubing; compression and flared type connectors, unions, elbows, tees, and nuts; and compression type ball sleeves and nuts.

American Gas Assn. American Standards Assn., Z21.29-1941. Listing Requirements for Furnace Temperature Limit Controls and Fan Controls. Requirements represent minimum standards for the performance, safe operation, and substantial and durable construction of gas appliance accessories.

American Society of Heating and Ventilating Engineers. Heating, Ventilating, Air Conditioning Guide, 1944. Contains a technical data section of reference

material on the design and specification of heating, ventilating, and air conditioning systems based on—the transactions, the investigations of the research laboratory and cooperating institutions, and professional practice. Includes principles of thermodynamics of air and water mixtures, physiological principles, heating and load calculations, combustion, steam and hot water heating, air conditioning, automatic controls, instruments, and motors. Also special applications such as drying systems, industrial and transportation air conditioning, etc.

American Society of Heating and Ventilating Engineers. Performance Test Code for Steam Heating Solid Fuel Boilers—Code 3; 1929. Specifies the tests to be conducted and provides a standard method for conducting and reporting tests to determine the efficiencies and performance of the boiler. Intended for use with A.S.H.V.E. Code for Rating Steam Heating Solid Fuel Hand Fired Boilers, referred to herein. Includes arrangement of apparatus, table of fuels, tests to be conducted, boiler room log sheets, starting and stopping of test, heating boiler test report forms, and explanation of use of log sheets and test report forms.

American Society of Heating and Ventilating Engineers. Standard and Short Form Heat Balance Codes for Testing Low-Pressure Steam Heating Solid Fuel Boilers—Codes 1 and 2; 1929. A standard method for conducting and reporting tests to determine the heat efficiency and performance characteristics. The code recognizes that tests of boilers may be made under different conditions, for different purposes, and with complete or limited facilities for conducting the test. It is designed to cover the determination of a complete heat balance; if a less complete test is required to satisfy the objectives of the test, observations not required can be omitted. Includes definitions, set up of boiler to be tested, instruments and measuring apparatus, fuel sampling, duration of tests, starting and stopping tests, methods of conducting tests, tables of data and results of tests, and computations for tests.

American Society of Heating and Ventilating Engineers, and Industrial Unit Heater Assn. Standard Code for Testing and Rating Steam Unit Heaters, 1930. Prepared jointly by both organizations. Covers definitions, basis of rating, test procedure, equipment necessary, computations of results, and diagrams of test set-ups.

Anthracite Industries, Inc. Approval Code for Domestic Surface Fired Boilers, 2075A. Requirements for shipments to be complete in one lot, boilers designed for erection with standard plumber's tools, for gas-tight joints, jacket design, maximum size of parts, for removable grates, damper arrangement, adaptability to thermostatic control, area of grate openings, ash pit design, adaptability to automatic fuel burners, insulation, design and furnace and heat absorbing surfaces, and for access doors.

Anthracite Industries, Inc. Laboratory Approval Requirements for Anthracite Tank Heaters, 2075-C. For approval of tank heaters only when used in conjunction with an approved temperature regulator and pressure relief valve. Requirements for grate type and design, fuel and fuel capacity, rating, and determination of performance ability.

Associated Factory Mutual Fire Insurance Companies. Factory Mutual Bulletin of Loss Prevention, 14.45; 1938. Testing Procedure for Oven Safety Devices. Frequent tests help assure safety of equipment and operation. Covers explosions, show need of inspections, test inspections, arranging for the inspection, types of oven safety devices, testing the devices, common trouble, and reporting the inspection.

Institute of Cooking and Heating Appliance Manufacturers. Flue-Connected Oil-Burning Space Heaters. Tentative Standards, 1940. Includes methods for selecting proper size heater using calculated heat loss; and rapid method using construction, design, temperature, volume, and constant obtained from zone map.

Institute of Cooking and Heating Appliance Manufacturers. Flue-Connected Oil-Burning Space Heaters. Tentative Standards, 1940. Includes oil heater rating tests, standard Underwriters' booth, requirements for instruments, heating values of fuels, test procedures, and computations, with plates illustrating equipment.

National Board of Fire Underwriters. Oil Burning Equipments, No. 31; 1941. Standards for installation in furnaces and boilers for heating dwellings, and various commercial and industrial applications. Covers application and scope, approval of plans, approved burners, fuel oil, gravity feed to burners, pressure tank feed, installation of underground tanks, installation of tanks inside buildings, installation of outside aboveground tanks, setting of tanks, construction of tanks, tank vents, tank fill and overflow pipes, oil gaging, oil pumps, piping, valves, preheating of oil, tests of tanks and piping, oil burner controls, electric wiring and equipment, installation of burner, and appendix.

National Fire Protection Assn. National Fire Codes for Flammable Liquids, Gases, Chemicals, and Explosives, 1943. Oil Burner Ordinance, Detailed Form (for Power and Heating Installations). Suggested ordinance regulating installation and operation of oil burning equipments and oil storage in connection therewith. Gives definitions, requirements for approved equipment, installation of tanks, vents, gaging, piping, valves, pumps, preheaters, controls, wiring, and installation of burner.

National Fire Protection Assn. National Fire Codes for Flammable Liquids, Gases, Chemicals, and Explosives, 1943. Oil Burner Ordinance, Short Form. Suggested ordinance for municipalities regulating oil burning equipments and oil storage in connection therewith.

National Fire Protection Assn. National Fire Codes for Flammable Liquids, Gases, Chemicals, and Explosives, 1943. Oil Burning Equipment. Apply to oil-burning equipments for installation in furnaces and boilers used for heating dwellings and for various commercial and industrial applications. Covers the installation of the oil burners and all equipment connected thereto, including tanks, piping, pumps, control devices, and all accessories.

Stoker Manufacturers Assn. Code for Determination of Rated Capacities of Anthracite Underfeed Stokers, 1944

To establish a uniform method of rating anthracite underfeed stokers having a nominal capacity of 1,200 lb./hr. coal feed or less. Gives scope, usage, identification, advertising, qualifications, guarantee, revisions, violations, and chart showing overfire draft inches of water.

Stoker Manufacturers Assn. Code For Determination of Rated Capacities of Bituminous Underfeed Stokers, 1944. To establish a uniform method of rating bituminous single retort underfeed stokers having a nominal capacity of 1,200 lb./hr. coal feed or less. Gives scope, usage, identification, advertising, qualifications, guarantee, revisions, violations, and chart showing overfire draft inches of water.

Underwriters' Laboratories, Inc. Bulletin of Research, 27; 1943. Clearances and Insulation of Heating Appliances. This bulletin describes tests conducted to provide definite technical information as a basis for promoting uniformity in the various ordinances, regulations, and standards bearing on the subject. Covers mechanism of heat transfer, test equipment, tests of protective assemblies, temperature measurements, test procedure, test results, and comments.

## 614.1 COAL STOVES AND RANGE BOILERS

Anthracite Industries, Inc. Requirements for Approval of Cooking Ranges, 2075B. Covers hand-fired, stoker-fired, or magazine fed cooking ranges; specifies oven temperature, banking condition, construction, safety, convenience, fuel intervals, controls, area of cooking top, and efficiencies.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R8-42; 1942. Range Boilers and Expansion Tanks. This establishes a schedule of sizes and capacities of black iron and galvanized range boilers and expansion tanks, diameters and lengths, gallon capacity, construction, working pressure, and tappings. This publication issued in accordance with War Production Board's Limitation Order L-199.

U. S. Gov., Navy Dept. Specification 45I2c; 1937. Indicating-Systems; Tank-Level (Static-Head Type).

U. S. Gov., Navy Dept. Specification 64R5a; 1934. Ranges; Navy Standard, Coal-Burning.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 28-9; 1938. Boiler; Range, Army Field, With Cover.

*References.*—Installation rules, *see* 614.0; unfired pressure tanks, *see* 605.23; other tanks, *see* 956.2; house heating boilers, coal burning, *see* 614.4; coal burning tank heaters, *see* 614.9.

## 614.2 GAS STOVES, RANGES, AND WATER HEATERS

American Gas Assn. American Standards Assn., Z21.1-1942. Approval Requirements for Domestic Gas Ranges. Includes—part I, construction requirements, domestic ranges for use with all types of gases; part II, performance requirements, domestic ranges for use with natural and manufactured gases; part III, performance requirements, domestic gas ranges for use with liquefied petroleum gases; part IV, performance requirements, domestic ranges, for use with butane-air gas; and appendices on definitions, classifications, arrangement of apparatus for determining strength of gas range bodies and stability of pilot and bypass flames.

American Gas Assn. American Standards Assn., Z 21.1 ES-1942. Approval Requirements for Domestic Gas Ranges (American Emergency Standard). Includes—part I, construction requirements, domestic ranges for use with all gases; part II, performance requirements, domestic ranges for use with natural and manufactured gases; and appendix.

American Gas Assn. American Standards Assn., Z21.3-1940. Approval Requirements for Hotel and Restaurant Ranges and Unit Broilers, effective Jan. 1, 1941. Construction requirements for use with all gases. Performance requirements for use with natural and manufactured gases, liquefied petroleum gases, and butane-air gas.

American Gas Assn. American Standards Assn., Z21.4-1932. A.G.A. Approval Requirements for Private Garage Heaters. Construction and performance requirements with appendix on minimum acceptable dimensions for plug type gas cocks.

American Gas Assn. American Standards Assn., Z21.5-1940. Approval Requirements for Clothes Dryers. For gas heated dryers of cabinet type and rack type, requirements on thicknesses of metal parts, dimensions of cocks, sizes of clothes rods, structural features of dryer, test requirements for burner operation, temperature limiting devices, pilot, heating capacity, drying efficiency, fire hazard, draft hoods, etc.

American Gas Assn. American Standards Assn., Z21.6-1932. A.G.A. Approval Requirements for Incinerators. Requirements on thickness of metal parts, materials and construction of parts, strength of incinerator, gas burner construction, test requirements for burner and pilot operation, incinerating efficiency, leakage, and fire hazard.

American Gas Assn. American Standards Assn., Z21.7-1932. A.G.A. Approval Requirements for Gas Heated Ironers. Construction requirements for burners, cocks, combustion chamber, thickness of metal, stability requirements, test requirements for burner operation, heat distribution, pressure distribution, explosion and fire hazards, ironer operation, and efficiency.

American Gas Assn. American Standards Assn., Z21.8-1940. Requirements for Installation of Conversion Burners in House Heating and Water Heating Appliances. Includes requirements on ventilation, flues, heating surfaces, doors, burners and controls, piping and meters, and inspections and tests; and includes definitions, general dimensions for vertical and horizontal draft hoods, and minimum flue sizes.

American Gas Assn. American Standards Assn., Z21.9-1940. Approval Requirements for Hot Plates and Laundry Stoves. Includes—part I, construction requirements for use with all gases; part II, performance requirements for use with natural and manufactured gases; part III, performance requirements for use with liquefied petroleum gases; part IV, performance requirements for use with butane-air gas; and appendix, definitions and hose end nozzle.

American Gas Assn. American Standards Assn., Z21.10-1944. Approval Requirements for Gas Water Heaters. Includes—part I, construction requirements for all types of water heaters; part II, performance requirements for use with natural and manufactured gases; part III, performance requirements for use with

liquefied petroleum gases; part IV, performance requirements for use with butane-air gas; and appendix, definitions, dimensions for plug type burner valves, arrangement of apparatus for testing.

American Gas Assn. American Standards Assn., Z21.11-1942. Approval Requirements for Gas Space Heaters. Includes—part I, construction requirements for use with all gases; part II, performance requirements for use with natural and manufactured gases; part III, performance requirements for use with liquefied petroleum gases, part IV, performance requirements for use with butane-air gas; and appendix, definitions and hose end nozzle.

American Gas Assn. American Standards Assn., Z21.14-1934. Approval Requirements for Industrial Gas Boilers. Represents minimum standards for performance, safe operation, and substantial and durable construction.

American Gas Assn. American Standards Assn., Z21.15-1942. Listing Requirements for Gas Valves. Represents basic standards for safe operation, substantial and durable construction, and acceptable performance for gas valves. Addenda to American Standard Listing Requirements for Gas Valves, effective Jan. 1, 1944.

American Gas Assn. American Standards Assn., Z21.16-1940. Approval Requirements for Gas Unit Heaters. Includes—part I, construction requirements for use with all gases; part II, performance requirements for use with natural and manufactured gases; part III, performance requirements for use with liquefied petroleum gases; part IV, performance requirements for use with butane-air gas; and appendix, definitions.

American Gas Assn. American Standards Assn., Z21.17-1940. Listing Requirements for Gas Conversion Burners. Includes—part I, construction requirements atmospheric and power conversion burners for use with all gases; part II. performance requirements atmospheric and power conversion burners for use with natural and manufactured gases; part III, performance requirements (added) conversion burners for use with liquefied petroleum gases; part IV, performance requirements (added) conversion burners for use with butane-air gas; and appendix, definitions.

American Gas Assn. American Standards Assn., Z21.18-1934. Listing Requirements for Domestic Gas Appliance Pressure Regulators. Represents minimum standards for the performance, safe operation, and substantial and durable construction of gas appliance accessories. Revisions to this standard have been issued by the American Gas Assn., effective June 15, 1935, and July 8, 1938.

American Gas Assn. American Standards Assn., Z21.20-1940. Listing Requirements for Automatic Pilots. Includes—part I, construction requirements for use with all gases; part II, performance requirements for use with natural and manufactured gases; part III, performance requirements for use with liquefied petroleum gases; part IV, performance requirements for use with butane-air gas; and appendix, definitions.

American Gas Assn. American Standards Assn., Z21.21-1935. Listing Requirements for Automatic Main Gas-Control Valves. Represents minimum standards for the performance, safe operation, and substantial and durable construction of gas appliance accessories.

American Gas Assn. American Standards Assn., Z21.22-1935. Listing Requirements for Relief and Automatic Gas Shut-Off Valves for Use on Water Heating Systems. Includes construction requirements; performance requirements on pressure relief valves, pressure relief elements of combination valves, temperature relief valves, temperature relief elements of combination valves, vacuum relief valves, and vacuum relief elements of combination valves; definitions; and arrangement of apparatus for testing temperature relief valves.

American Gas Assn. American Standards Assn., Z21.23-1940. Listing Requirements for Gas Appliance Thermostats. Includes construction requirements; performance requirements for liquid immersion, gaseous immersion, and surface contact thermostats; and definitions.

American Gas Assn. American Standards Assn., Z21.25-1937. Approval Requirements for Gas Hair Dryers. Represents minimum standards for performance, safe operation, and substantial and durable construction for gas hair dryers for use with natural, manufactured, propane, and butane-air gases.

American Gas Assn. American Standards Assn., Z21.26-1941. Listing Requirements for Attachable Gas Water Heating Units. Includes—part I, construction requirements for use with all gases; part II, performance requirements for use with natural and manufactured gases; part III, performance requirements for use with liquefied petroleum gases; part IV, performance requirements for use with butane-air gas; and appendix, definitions, dimensions for plug type gas burner valves, and arrangements of apparatus for determining thermal efficiency and heat losses from storage vessels.

American Gas Assn. American Standards Assn., Z21.27-1940. Approval Requirements for Hotel and Restaurant Deep Fat Fryers; effective Jan. 1, 1941. Construction and installation requirements for use with all gases. Performance requirements for use with natural and manufactured gases; liquefied petroleum gases and butane-air gas.

American Gas Assn. American Standards Assn., Z21.31-1941. Approval requirements for Gas Counter Appliances. Represents basic standards for safe operation, substantial and durable construction, and acceptable performance for gas counter appliances. Includes—part I, construction requirements for use with all gases; part II, performance requirements, coffee brewers and coffee urns for use with natural and manufactured gases; part III, performance requirements, coffee brewers and urns for use with liquefied petroleum gases; part IV, performance requirements for use with butane-air gas; part V, performance requirements, food and dish warmers for use with natural and manufactured gases; part VI, performance requirements, food and dish warmers for use with liquefied petroleum gases; part VII, performance requirements, food and dish warmers for use with butane-air gas; part VIII, performance requirements, gas waffle bakers for use with natural and manufactured gases; part IX, performance requirements, gas waffle bakers for use with liquefied petroleum gases;

part X, performance requirements, gas waffle bakers for use with butane-air gas; part XI, performance requirements, hot water immersion sterilizers, for use with natural or manufactured gases; part XII, performance requirements, hot water immersion sterilizers for use with liquefied petroleum gases; part XIII, performance requirements, hot water immersion sterilizers for use with butane-air gas; part XIV, performance requirements, commercial hot plates and griddles for use with natural and manufactured gases; part XV, performance requirements, commercial hot plates and griddles for use with liquefied petroleum gases; part XVI, performance requirements, commercial hot plates and griddles for use with butane-air gas; and appendix, definitions.

Non-Ferrous Hot Water Tank Manufacturers Assn. Non-Ferrous Range Boilers and Hot Water Storage Tanks Used for Heating Water or Storing Water Under Street Pressure, 1940. Definitions and general requirements for rating, pressure, dating, tolerance, workmanship, solder, and pressure, vacuum, rupture, and pulsating tests.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation, R8-42; 1942. Range Boilers and Expansion Tanks. This establishes a schedule of sizes and capacities of black iron and galvanized range boilers and expansion tanks, diameters and lengths, gallon capacity, construction, working pressure, and tappings. This publication issued in accordance with War Production Board's Limitation Order L-199.

U. S. Gov., Veterans Administration. Specification VA-GC-40c; 1942. Pastry Stove.

U. S. Gov., Veterans Administration. Specification VA-MC-220h; 1942. Heavy Duty Gas Ranges.

U. S. Gov., Veterans Administration. Specification VA-MC-305a; 1942. Gas Fired, Reel Type, (Revolving Tray) Bake Ovens.

U. S. Gov., Veterans Administration. Specification VA-MC-306a; 1942. Gas Ranges; Household and Diet Kitchen Type.

*References.*—Installation rules, *see* 614.0; other heating and ventilating equipment, *see* 792; unfired pressure tanks, *see* 605.23; other tanks, *see* 956.2; gas house heating equipment, *see* 614.4; gas and gas appliances, *see* 997.2; acetylene equipment and lamps, *see* 997.5; gas garage heater, *see* 614.9.

## 614.3 OIL AND GASOLINE STOVES, RANGES, AND WATER HEATERS

Institute of Cooking and Heating Appliance Manufacturers. Flue-Connected Oil-Burning Space Heaters. Tentative Standards, 1940. Includes publication of oil heater ratings in manufacturers' and jobbers' catalogs, for B.T.U. per hour, net heat output at specified draft; fuel consumption at specified draft in gallons per hour, at sea level conditions.

National Board of Fire Underwriters. Installation of Oil Burners in Stoves and Ranges Originally Designed for Solid Fuels and for the Storage and Use of Oil Fuels in Connection Therewith, No. 39; 1932. Conversion burners for fuel having a flash point over 100° F., using a gravity tank with a capacity of less than 6 gal. Permits separate storage tanks of 275 gal. capacity each of two, without enclosure within buildings. Piping, valves, burners, stoves and ranges, ignition device, and installation.

National Board of Fire Underwriters. Small Heating and Cooking Appliances, No. 310; 1937. Regulations covering kerosene and fuel oil stoves, cook stoves, and portable heaters. Minimum flash point, location of tanks, drums, and cans; construction of tank, supports and venting of tanks, oil gaging, piping, wiring, and flue connections.

National Fire Protection Assn. National Fire Codes for Flammable Liquids, Gases, Chemicals, and Explosives, 1943. Gasoline Stoves. Standards for the installation of gasoline stoves for cooking and heating. Classifies stoves and gives location of stoves, location of outside tanks, fuel piping, and care and attendance.

National Fire Protection Assn. National Fire Codes for Flammable Liquids, Gases, Chemicals, and Explosives, 1943. Kerosene or Oil Stoves. Standards for installation, maintenance, and use of small heating and cooking appliances (kerosene or fuel oil). Covers equipment, definitions, grade of fuel, location of and sizes of tanks and construction, vents, gages, piping, wiring, installation of appliances, flue connections, and general precautions.

National Fire Protection Assn. National Fire Codes for Flammable Liquids, Gases, Chemicals, and Explosives, 1943. Range Oil Burner Ordinance. Suggested ordinance regulating installation and operation of stove or range oil burners and oil storage in connection therewith. Definitions, requirements for approved equipment, installation, grade of oil, fuel tanks, and location of various sizes of tanks.

Underwriters' Laboratories, Inc. Standard for Construction and Performance of Gasoline Stoves for Cooking and Heating, 1928. Wickless type stoves for use in accordance with rules of the National Board of Fire Underwriters. Includes gravity and pressure systems, antiflooding devices, portable heaters, design and construction, fuel tanks of lift-out and outside mounting, generators and burners, valves, piping and fittings, etc.

Underwriters' Laboratories, Inc. Standard for Construction and Performance of Kerosene Stoves for Cooking and Heating, 1927. Nonportable type not requiring other fuel for generation. Gives general design requirements for frame and legs, sheet metal supporting parts, fuel supply by gravity or pressure, size of tank, lift-out tank and fount, pressure tanks, generator, burner, valves, piping, antiflooding device, and marking.

Underwriters' Laboratories, Inc. Standard for Construction and Performance of Oil Burners for Installation in Stoves and Ranges, 1932. Covers equipment for conversion of solid fuel stoves and ranges, except warm-air furnaces, steam and hot water boilers. To burn topped or distilled oil having a flash point of not less than 100° F., operating characteristics, workmanship, assembly, regulation, burner, ignition, safety control, antiflooding devices, tanks, electric equipment and wiring, and marking.

Underwriters' Laboratories, Inc. Standard for Oil-Burning Stoves, 1936. For stationary installation with flue connection and for heating and cooking. Requirements as to suitable construction and performance, framework, constant level valve, antiflooding device, draft regulators electrical equipment,

vaporizing units, baffles, ignition, piping, radiating drum, sumps, gravity and vacuum tank sizes and construction, stuffing box details, controls, installation, and operation.

Underwriters' Laboratories, Inc. Standard for Portable Kerosene Heaters, 1924. Wick fuel burning mechanism, sheet metal drum radiator, center section, lower drum and legs, requirements for carrying handle, reservoir, stability, heat output, and leakage test.

U. S. Gov., Army Air Forces. Specification 40317-C (3); 1944. Heater; Utility, Type F-1, Gasoline, Portable.

U. S. Gov., Army Air Forces. Specification No. 40853; 1944. Heater; Lubricating Oil, Type K-1, Servicing.

U. S. Gov., Dept. of Agriculture, Forest Service. Specification No. 289. Range; Field, Liquid Gas.

U. S. Gov., Dept. of Agriculture, Forest Service. Specification No. 331. Stove; Camp, Kimmel.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R8-42; 1942. Range Boilers and Expansion Tanks. This establishes a schedule of sizes and capacities of black iron and galvanized range boilers and expansion tanks, diameters and lengths, gallon capacity, construction, working pressure, and tappings. This publication issued in accordance with War Production Board's Limitation Order L-199.

U. S. Gov., Navy Dept. Specification 65R3; 1939. Ranges; Navy-Standard, Oil-Burning, Light-Weight (for Cruisers, Destroyers, and Other High-Speed Craft).

U. S. Gov., U. S. Army, Army Air Forces. Specification 75-427; 1944. Heater; Photographic, Water, Type G-1.

U. S. Gov., U. S. Army, Corps of Engineers. Specification 28-2A; 1929. Stove; Cooking, Kerosene, Domestic.

U. S. Gov., U. S. Army, Corps of Engineers. Specification 28-3A; 1929. Heater; Water, Kerosene.

U. S. Gov., U. S. Army, Medical Dept. Specification 28-84; 1939. Stove; Gasoline, 1-Burner.

U. S. Gov., U. S. Army, Medical Dept. Specification 28-105; 1939. Stove; Gasoline, 2-Burner.

*References.*—Installation rules, *see* 614.0; unfired pressure tanks, *see* 605.23; other tanks, *see* 956.2; other heating and ventilating equipment, *see* 792; gasoline, fuel oil, kerosene, *see* 503.3, 503.4, 503.5; oil burners and heaters, *see* 614.9.

## 614.4 HOUSE HEATING BOILERS, RADIATORS, AND HOT-WATER TANKS

American Gas Assn. American Standards Assn., Z21.13-1943. Approval Requirements for Central Heating Gas Appliances. Includes—part I, construction requirements for use with all gases; part II, performance requirements, gas boilers for use with natural and manufactured gases; part III, performance requirements, gas boilers for use with liquefied petroleum gases; part IV, performance requirements, gas boilers for use with butane-air gas; part V, construction requirements, gas warm air furnaces for use with all gases; part VI, gas warm air furnaces for use with natural and manufactured gases; part VII, gas warm air furnaces for use with liquefied petroleum gases; part VIII, gas warm air furnaces for use with butane-air gas; part IX, construction requirements, gas floor furnaces for use with all gases; part X, gas floor furnaces for use with natural and manufactured gas; part XI, gas floor furnaces for use with liquefied petroleum gases; part XII, gas floor furnaces for use with butane-air gas; and appendix, definitions, arrangement of apparatus for testing, and types of lock seams considered acceptable.

American Gas Assn. American Standards Assn., Z21.34-1942. Approval Requirements for Gas-Fired Duct Furnaces. Represents basic standards for safe operation, substantial and durable construction, and acceptable performance for duct furnaces using gas fuel. Includes—part I, construction requirements for use with all gases; part II, performance requirements for use with natural and manufactured gases; part III, performance requirements for use with liquefied petroleum gases; part IV, performance requirements for use with butane-air gases; and appendix, definitions and exhibit showing types of lock seams considered acceptable.

American Society of Heating and Ventilating Engineers. Code for Testing Radiators, 1927. Covers test room, air temperatures, steam supply, condensate, air venting, surface of radiator, duration of test, sources of error in radiator testing, results of tests, and example.

American Society of Heating and Ventilating Engineers. Code for Testing and Rating Concealed Gravity Type Radiation (Hot Water Code), 1933. Method for testing and rating convectors, for use in designing of the heating system. This code describes a boiler load method of rating, gives definitions, arrangements of apparatus for steam method and electrical method, test procedure, and formulas for computation of result.

American Society of Heating and Ventilating Engineers. Standard Code for Rating Steam Heating Solid Fuel Hand-Fired Boilers, 1930. To standardize the method to be employed and followed by any person, partnership, firm, corporation or association, who may desire to make use of or employ for any purpose whatsoever the statement: "The rating of the boilers herein listed are in accordance with the provisions of the A.S.H.V.E. Code (year) for Rating Steam Solid Fuel Hand-Fired Boilers." Includes rating designation, range of outputs for each boiler listed, list of conditions, statements of limiting conditions, manufacturers' guarantee, and definitions.

American Society of Mechanical Engineers. A.S.M.E. Boiler Construction Code. Low-Pressure Heating Boiler Code, 1940. These rules apply to steel and cast iron boilers used exclusively for low-pressure steam heating, hot water heating, and hot water supply. Recommendations cover ultimate strength of materials, minimum thickness of plates and tubes, joint efficiency, braced and stayed surfaces, boiler openings, supports, setting and installation, fittings and appliances, stamping, hydrostatic tests, and welding.

Anthracite Industries, Inc. Requirements for Approval of Space Heaters, No. 2075. Requirements for construction and operating characteristics.

Heating, Piping, and Air Conditioning Contractors National Assn. Engineering Standards, 1939. Net square radiation loads in 70° F., recommended for low

pressure heating boilers. Gives assumptions, rules for computing net boiler loads, for various types of radiation, boiler sizes for hot water systems, recommendations for oil and stoker fired boilers, for round and square cast iron boilers, and for chimneys.

Heating, Piping, and Air Conditioning Contractors National Assn. Engineering Standards, 1939. Pipe sizes for steam and hot water heating systems. Requirements and tables covering one-pipe and two-pipe steam, two-pipe vapor, large one-pipe and two-pipe steam, large two-pipe vapor, vacuum pump system, hot water systems, and hot water circulating systems.

Heating, Piping, and Air Conditioning Contractors National Assn. Net Load Recommendations for Heating Boilers, 1943. Published semi-annually. The term net load as used in this book means the total amount of free standing radiation, or its equivalent, that is to be supplied with heat by the boiler. Gives valuable data of a general nature and gives tables showing the latest data from the leading manufacturers of boilers.

Heating, Piping, and Air Conditioning Contractors National Assn. Net Square Feed Radiation Loads in 70° F. Recommended for Low Pressure Heating Boilers, Part II; 1943. Covers net load recommendations for boilers and radiators, hot water heating systems, inside temperatures lower than 70° F., hot blast coils, unit heaters, water for domestic use, chimneys, boilers designed for coal but fired by oil or gas, oil burner capacities, stoker fired boilers, S.M.A. uniform stoker rating, tables showing maximum capacities for oil burners, and tables showing recommendations for round boilers and square boilers.

Institute of Boiler and Radiator Manufacturers. Testing and Rating Code (for Low Pressure Heating Boilers), 1940. Includes methods of rating hand-fired boilers burning bituminous and anthracite coal, automatically-fired oil, and fuel gas; and stoker-fired anthracite and bituminous coal. Gives piping and pick-up table for various sizes of boilers, time limit table, stack height and area charts, methods of testing boilers, instruments required, test data, typical set-up, and definitions.

Non-Ferrous Hot Water Tank Manufacturers Assn. Non-Ferrous Range Boilers and Hot Water Storage Tanks Used for Heating Water or Storing Water Under Street Pressure, 1940. Definitions and general requirements for capacity ratings, pressure, dating, tolerance, workmanship, solder; and pressure, vacuum, rupture, and pulsating tests.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R25-24; 1924. Hot Water Storage Tanks. This recommendation establishes simplified dimensions and capacities of hot water storage tanks. Detail requirements are given for working pressures, factors of safety, placing of tappings, and dimensions of manholes, handholes, and heating coils.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R157-37; 1937. Steel Horizontal Firebox Heating Boilers. This recommendation sets forth ratings of hand and mechanically fired boilers and for pipe-connection openings. Sponsored by the Steel Heating Boiler Institute.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R174-43; 1943. Cast Iron Radiators. This recommendation establishes standard sizes of cast iron radiators giving number of tubes per section, catalog rating per section (sq. ft.), height, width, spacing, and leg height. It includes general provisions covering hydrostatic test pressure, nipples, tappings, pipe fittings, painting, and identification in trade literature. Sponsored by the Institute of Boiler and Radiator Manufacturers.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R181-41; 1941. Nonferrous Range Boilers. This recommendation covers stock sizes of ranges and is for the purpose of simplifying varieties thus achieving economies inherent in the production, distribution, and use of a simplified line. Sponsored by the Non-Ferrous Hot Water Tank Manufacturers Assn.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Commercial Standard CS99-42; 1942. Gas Floor Furnaces—Gravity Circulating Type. The purpose of this standard is—(1) to establish minimum specifications for the guidance of manufacturers, distributors, and users of gravity circulating type, natural draft gas floor furnaces; (2) to avoid delays and misunderstandings; and (3) to provide a uniform basis for guaranteeing compliance through the use of labels or certification.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Commercial Standard CS101-43. Flue-Connected Oil-Burning Space Heaters Equipped With Vaporizing Pot-Type Burners. Provided as a basis for certification of the quality and performance of oil-fired heaters of the types covered, and for the guidance of manufacturers, distributors, installers, contractors, and purchasers. Covers general requirements, heater design and construction, performance, laboratory test code, standard oil-heater rating test, publication of heater ratings, information labeling, and guarantees. Sponsored by the Institute of Cooking and Heating Appliance Manufacturers.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Commercial Standard (Emergency) CS (E) 104-43; 1943. Warm-Air Furnaces Equipped With Vaporizing Pot-Type Oil Burners. This standard is provided as a basis for certification of the quality and performance of warm-air furnaces equipped with vaporizing pot-type oil burners as covered herein, and applies to furnaces arranged with either gravity or forced-air circulation. It does not include floor furnaces. Definitions, general requirements, furnace design and construction, performance, test codes, publication of furnace ratings, informative labeling, and guarantees.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Commercial Standard CS 109-44; 1944. Solid-Fuel-Burning Forced-Air Furnaces. Provides a basis for guaranteeing the construction and performance of solid-fuel-burning forced-air furnaces and covers surface-fired and magazine-fed, solid-fuel-burning warm air furnaces with forced-air circulation in

sizes up to 80,000 B.t.u. output. Gives definitions, general requirements, construction requirements, performance requirements under test, test code, data and report sheet, informative labeling, and appendix showing method of interpolating test results, graphic method of determining flue gas loss, and suggested form of log data sheets.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Commercial Standard CS 115-44; 1944. Porcelain-Enameled Tanks. For porcelain-enameled tanks for domestic water service in sizes 15 to 80 gal., inclusive. Covers base metal, thickness of base material, enameling, operating conditions, standard types, sizes, test pressures, storage-capacity rating, working-pressure rating, rated hydrostatic test pressure, pulsation pressure, enamel coverage, enamel thickness, solubility of enamel, fittings; production, inspection, and sampling; methods of test; and marking and labeling.

U. S. Gov., Veterans Administration. Specification VA-MC-330a; 1944. Steam Heated Water Stills and Storage Tank.

*References.*—Installation rules, *see* 614.0; boiler plates, *see* 604.11; gray cast iron, *see* 611.11; fire brick, *see* 534.12; other heating and ventilating equipment, *see* 792; unfired pressure vessels, *see* 605.23; gas and gas appliances, *see* 997.2.

## 614.9 MISCELLANEOUS HEATING AND COOKING EQUIPMENT

American Gas Assn. American Standards Assn., Z21.28-1941. Approval Requirements for Portable Gas Baking and Roasting Ovens. Part I, for use with all gases—construction requirements; part II, for use with natural and manufactured gases—performance requirements; part III, for use with liquefied petroleum gases—performance requirements; part IV, for use with butane-air gas—performance requirements.

American Oil Chemists' Society. Methods of Analysis, Standard Ovens. Gives requirements for fuming oven, forced draft circulatory oven, F.A.C. standard vacuum oven, and oven jacketed with glycerine and water.

American Society of Heating and Ventilating Engineers. Standard Code for Testing Steam Heating Boilers Burning Oil Fuel, 1932. Provides a standard method for conducting and reporting tests to determine heat efficiency and performance characteristics. The code recognizes that tests of oil burners and boilers may be made under different conditions for different purposes, and with complete or limited facilities for conducting the tests. It is designed to cover the determination of a complete heat balance; if a less complete test is required to satisfy the objectives of the test, observations not required may be omitted. Includes definitions, set up of boiler and oil burner to be tested, instruments and measuring apparatus, fuel sampling, duration of test, starting and stopping continuous and intermittent tests, method of conducting test, performance charts, tables for data and results of tests, and calculations for tables.

American Society of Heating and Ventilating Engineers. Standard Code for Testing Stoker-Fired Steam-Heating Boilers. Adopted by the Stoker Manufacturers' Assn. Provides a standard method for conducting and reporting tests to determine heat efficiency and performance characteristics; this code does not fix the conditions that must be fulfilled for the acceptance or approval of the combination of boiler and stoker. The code recognizes that tests of stokers and boilers may be made under different conditions for different purposes, and with complete or limited facilities for conducting the tests. Includes definitions, set-up of stoker and boiler to be tested, instruments and measuring devices, fuel sampling, duration of tests, starting and stopping of tests, method of conducting tests, performance charts, tables for data and results of tests, and calculations for tables.

Anthracite Industries, Inc. Gravity Ash-Removal Methods. Descriptions and Dimensions, Bulletin MA-1; and Estimates and Construction Details, Bulletin M-2; 1938. Covers dimensional drawings for two types of ash-storage pits, ash-can receivers, and chute to ash-bin in basement, and estimates of average materials and labor required for construction.

Associated Factory Mutual Fire Insurance Companies. Specifications for Gravity Water Tanks and Steel Towers, Volume 2; 1940. Piping, Fittings, and Heating Systems. Includes specifications for tank heating equipments (with method of determining necessary heater capacities) covering requirements for multiple heaters, heating with hot water, steam coils inside tank, methods in southern localities, standpipes, operation, and choice of circulating heaters.

National Board of Fire Underwriters. Acetylene Equipment for Lighting, Heating, and Cooking, No. 50; 1930. Covers six classes of equipment such as stationary, portable, dissolved acetylene, etc., for use in or about dwellings; requirements on location of generator, details for outside generator house, capacity of piping, gas cylinders, flood lights, installation, operation, and storage of calcium carbide.

National Board of Fire Underwriters. Ovens for Japan, Enamel, and Other Flammable Finishes, No. 86; 1931. Regulations cover box and conveyor ovens, location, arrangement, and construction of ovens; ventilation, heating, power and lighting equipment, fire protection, operation, and maintenance.

National Fire Protection Assn. National Fire Codes for Flammable Liquids, Gases, Chemicals, and Explosives, 1943. Acetylene for Lighting, Heating, and Cooking. Covers general precautions, stationary apparatus for outside and for inside installation, semiportable apparatus, dissolved acetylene under pressure, portable apparatus for lighting, and storage of calcium carbide.

Stoker Manufacturers Assn. Minimum Setting Heights, 1940. Recommended headroom from grate to water cooled surface for use under normal conditions as applied to steel heating boilers. Applies also to cast iron boilers with use of correction factor. For fuel burning rates up to 100 lbs. per hour, with coal as fuel, and for 100 to 1,200 lbs. per hour by use of formula.

Stoker Manufacturers Assn. Uniform Stoker Rating, 1937. Includes rating requirements for small domestic coal burning stokers, and for heating loads up to 50,000 sq.ft. of direct steam radiation. Gives definitions, stoker size selection charts, and table

of fuel required of various heat contents for boilers of 3 to 358 boiler horse power.

Underwriters' Laboratories, Inc. Standard for Construction and Performance of Oil Heated Incubator (Class B), 1927. Covers construction of wood case, noncombustible lining near heater, type and mounting of heater, metal gage, galvanizing, joint structure requirements for lamps, and drip pan.

Underwriters' Laboratories, Inc. Standard for Domestic Oil Burners, 1934. Requirements for operation in hot-water, hot-air, and steam heating systems without constant attendance. Does not include burners for stoves or oil burning stoves. Covers simplification of assembly, rigidity from shock, shielding, safety devices, and ignition systems. Also standards of performance, marking, workmanship, design detail, antiflooding devices, gravity systems, electrical and control equipment, pumps, strainers, combustion chambers, gages, etc.

Underwriters' Laboratories, Inc. Standard for Gas Garage Heaters, 1917. Covers requirements as to design, construction, and installation of heat radiating drums, materials, dimensions and perforation of inlet screens, outside casing, rain caps, flue and air inlet pipes, safety devices, piping, supports, and marking.

U. S. Gov., Dept. of Agriculture, Forest Service. Specification 247-41-S. Spoon; Basting, or Stirring, 10- or 12-Inch.

U. S. Gov., Dept. of Agriculture, Forest Service. Specification 247-46-S. Lifter; Pot.

U. S. Gov., Dept. of Agriculture, Forest Service. Specification 247-47-S. Masher; Potato, Wire.

U. S. Gov., Dept. of Agriculture, Forest Service. Specification 47-48-S. Turner; Cake, Heavy Hotel, Steel.

U. S. Gov., Dept. of Agriculture, Forest Service. Specification 247-51-S. Egg Whip; Heavy Wire.

U. S. Gov., Dept. of Agriculture, Forest Service. Specification 247-53-S. Saw; Meat, Detachable Blade.

U. S. Gov., Dept. of Agriculture, Forest Service. Specification 247-56-S. Pan; Dish, Retinned.

U. S. Gov., Dept. of Agriculture, Forest Service. Specification MSF-247-21-S. Pans; Bake and Drip.

U. S. Gov., Dept. of Agriculture, Forest Service. Specification MSF-247-25-S. Pans; Fry, Folding Handle.

U. S. Gov., Dept. of Agriculture, Forest Service. Specification MSF-247-25-S. Pan; Pudding, 3-Quart, Granite.

U. S. Gov., Dept. of Agriculture, Forest Service. Specification MSF-247-26-S. Pan; Pudding, Retinned, 4-Quart.

U. S. Gov., Dept. of Agriculture, Forest Service. Specification MSF-247-27-S. Pan; Pudding, Retinned, 3-Quart.

U. S. Gov., Dept. of Agriculture, Forest Service. Specification MSF-247-28-S. Pan; Pudding, Retinned, 2-Quart.

U. S. Gov., Dept. of Agriculture, Forest Service. Specification MSF-247-29-S. Pan; Pudding, Retinned, 1-Quart.

U. S. Gov., Dept. of Agriculture, Forest Service. Specification MSF-247-52-S. Chain; Kettle, With Hooks.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Commercial Standard CS48-40; 1940. Domestic Burners for Pennsylvania Anthracite (Underfeed Type). This standard covers underfeed-type burners, using Pennsylvania anthracite as a fuel and having a normal capacity between 10 and 100 lb. of coal per hour. Sponsored by Anthracite Industries, Inc.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Commercial Standard CS75-42; 1942. Automatic Mechanical Draft Oil Burners Designed for Domestic Installations. The purpose of this commercial standard is to establish minimum standard specifications and methods of test for automatic mechanical draft oil burners for the guidance of manufacturers, distributors, installing contractors, and users. This standard covers general requirements, manufacturing and production tests, laboratory requirements and test procedure, installation requirements and performance tests, and oil burner certificate placed with each burner installation. Sponsored by Oil Burner Institute.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Commercial Standard CS113-44; 1944. Oil-Burning Floor Furnaces Equipped With Vaporizing Pot-Type Burners. For oil-fired, flue-connected floor furnaces equipped with vaporizing pot-type burners with or without mechanical draft or forced circulation, either manually or automatically controlled. Gives general requirements, design and construction, performance, laboratory test code, publication of furnace ratings, informative labeling, guarantees, general installation requirements, sizing, placement, and venting.

U. S. Gov., Dept. of Interior, Purchasing Office. Standard Specification No. 14. Kettles; Steam Jacketed, Aluminum.

U. S. Gov., Federal Specification RR-C-561; 1939. Amendment 1; 1940. Cookers; Steam-Pressure. Covers the metal-to-metal seal type (four sizes) either cast or wrought aluminum alloy. Gives requirements for material, construction, equipment, body, cover, locking device, safety valve, petcock, thermometers, rack, pans, bails, and lifters; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., Navy Dept. Specification 30H1d; 1944. Heaters; Water (Shipboard Use).

U. S. Gov., Navy Dept. Specification 41P19c; 1932. Pots; Fire, Gasoline.

U. S. Gov., Veterans Administration. Specification VA-G-140a; 1942. Bread Storage Cabinets.

U. S. Gov., Veterans Administration. Specification VA-G-147a; 1937. Insets; Steam Table, Corrosion-Resisting Steel.

U. S. Gov., Veterans Administration. Specification VA-G-229a; 1937. Steam Table Pots.

U. S. Gov., Veterams Administration. Specification VA-G-240a; 1937. Baskets; Steamer, Perforated, Aluminum.

U. S. Gov., Veterans Administration. Specification VA-G-255; 1937. Boiler; Double, Aluminum, Capacity Inside Pot 11 Qts.

U. S. Gov., Veterans Administration. Specification VA-G-271; 1937. Boilers; Double, Aluminum.

U. S. Gov., Veterans Administration. Specification VA-G-355; 1941. Boiler; Pudding, Aluminum.

U. S. Gov., Veterans Administration. Specification VA-M-41; 1935. Portable Gas Bake Ovens.
U. S. Gov., Veterans Administration. Specification VA-GC-98f; 1942. Coffee Filtering Devices.
U. S. Gov., Veterans Administration. Specification VA-GC-102s; 1944. Jacketed Kettles.
U. S. Gov., Veterans Administration. Specification VA-GC-105L; 1942. Pressure Type Vegetable Steamers.
U. S. Gov., Veterans Administration. Specification VA-GC-112a; 1939. Egg Boilers and Timers.
U. S. Gov., Veterans Administration. Specification VA-GC-117n; 1942. Institutional Type Coffee and Tea Urns.
U. S. Gov., Veterans Administration. Specification VA-GC-122g; 1942. Institutional Type Coffee and Tea Units—Siphoning and Agitating Type With Bags and Rings for Tea.
U. S. Gov., Veterans Administration. Specification VA-GC-123f; 1942. Vertical Type Plate Warmers.
U. S. Gov., Veterans Administration. Specification VA-GC-126b; 1942. Portable Pan Racks.
U. S. Gov., Veterans Administration. Specification VA-GC-133c; 1942. Coffee Urn Stands and Cup Warmers.
U. S. Gov., Veterans Administration. Specification VA-GC-134d; 1942. Platewarmers; Bain Marie Pans and Sauce Pan Racks With Cook Tables.
U. S. Gov., Veterans Administration. Specification VA-GC-136e; 1942. Bread Racks.
U. S. Gov., Veterans Administration. Specification VA-GC-358; 1942. Horizontal Type Plate Warmer.
U. S. Gov., Veterans Administration. Specification VA-MC-45e; 1942. Gas Fired Deep Fat Fryers.
U. S. Gov., Veterans Administration. Specification VA-MC-79e; 1940. Sectional Gas Roasters.
U. S. Gov., Veterans Administration. Specification VA-MC-85c; 1942. Gas Toasters.
U. S. Gov., Veterans Administration. Specification VA-MC-202d; 1938. Gas Fired Bread Ovens.
U. S. Gov., U. S. Army, Medical Dept. Specification 28-80A; 1940. Steamer; Vegetable.
U. S. Gov., U. S. Army, Medical Dept. Specification 28-85; 1939. Stove, Alcohol; and Tank.
U. S. Gov., U. S. Army, Medical Dept. Specification 28-93A; 1940. Table; Steam.
U. S. Gov., U. S. Army, Quartermaster Corps. Specification 28-17; 1934. Range; Army Field, No. 1.
U. S. Gov., U. S. Army, Quartermaster Corps. Specification 28-111; 1941. Unit; Fire for Range, M-1937.
U. S. Gov., U. S. Army, Quartermaster Corps. Specification 28-113; 1941. Grate; Wood-Burning, for Range, Field, M-1937.
U. S. Gov., U. S. Army, Quartermaster Corps. Specification 28-114; 1941. Case; Water-Heater, for Range, Field, M-1937.
U. S. Gov., U. S. Army, Quartermaster Corps. Specification 28-115; 1941. Shield; Water-Heater Case, for Range, Field, M-1937.
U. S. Gov., U. S. Army, Quartermaster Corps. Specification 28-116; 1941. Cabinet and Cradle; Cookpot for Range, Field, M-1937.
U. S. Gov., U. S. Army, Quartermaster Corps. Specification 28-121; 1941. Grate; Outfit, Cooking, Cavalry, Pack and Mountain Artillery.
U. S. Gov., U. S. Army, Quartermaster Corps. Specification 28-122; 1942. Boiler; Outfit, Cooking, Mountain Artillery, With Cover.

## 615. HAND TOOLS, METAL-WORKING

### 615.1 CHISELS, DRILLS, PUNCHES, REAMERS, TAPS, AND DIES

### 615.11 Chisels

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R17-43; 1943. Heavy Forged Hand Tools. This recommendation covers the sizes, types, grades, and finishes of heavy forged hand tools that may be manufactured under the provisions of Schedule IV, Limitation Order L-157, as amended. Gives requirements for various kinds of bars, blacksmiths' anvil tools, hammers, mauls, sledges, hoes, mattocks, picks, railway track tools not elsewhere classified, tongs, miscellaneous forged hand tools, mine blasting hand tools, and mine breast drills.
U. S. Gov., Navy Dept. Specification 41C23c; 1939. Chisels; Chisel-Blanks; Tools, Calking; for Metal.

*References.*—Heat treatment of chisels, *see* 600.5; chisels for pneumatic tools, *see* 615.9; wood working chisels, *see* 616.13; railway track chisels, *see* 616.8.

### 615.12 Drills, Bits, and Countersinks

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, 1938. Drills; Twist. Covers definition, classification by material, classification by shape of shank, classification by standard diameter systems, classification of material to be drilled, special types of drills, and specifications.
Society of Automotive Engineers. 1944 Handbook, Section 8—Tools and Production Equipment. S.A.E. Standard Twist Drills—Sizes 1/64 to 1/2 Inch, Inclusive. Revised, 1938. Manufactured list and size designations, and classification of drills with diagrams and tables.
U. S. Gov., Federal Specification GGG-D-651; 1933. Amendment 1; 1944. Drills; Breast. Covers two types—(A) plain, and (B) ratchet. Gives requirements for material, workmanship, design, frame, breast plate, spindle, crank, gears, handles, chuck, finish, overall length, and ratchet mechanism; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.
U. S. Gov., Navy Dept. Specification 40C3; 1943. Countersinks; Steel (Carbon and High-Speed).
U. S. Gov., Navy Dept. Specification 41D6d; 1944. Drills; Ratchet.
U. S. Gov., Navy Dept. Specification 41D11a; 1935. Drills; Twist.
U. S. Gov., Treasury Dept., Procurement Div., 496a; 1942. Countersinks; Rose. Shall be of good quality high carbon steel. Gives requirements for dimensions, length overall, diameter of round, flutes, shank,

finish, and trade mark; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., Treasury Dept., Procurement Div., No.592; 1942. Drills, Drill Bits, and Drill Bit Holders; Stone, Hand. Covers the following types and classes: Type I—drills, one-piece; class A, four point; class B, three point; and type II—drill bits; class A, four point; class B, three point, straight flute; class C, three point, twist drill; and class D, two point, twist drill. Gives requirements for manufacture, bow, longitudinal relief, finish, construction, hardness, and sizes and dimensions; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., U. S. Army, Army Air Forces. Specification 29-81; 1938. Drill; Twist, High-Speed.

U. S. Gov., U. S. Army, Corps of Engineers. Specification 49-2-7; 1921. Drill; Cordeau, Handled.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 17-114A; 1940. Drill; Twist, Carbon Steel.

U. S. Gov., Veterans Administration. Specification VA-M-262a; 1941. Countersinks.

U. S. Gov., Veterans Administration. Specification VA-MC-248a; 1941. Drill Points.

*References.*—Tool steel, alloy tool steel, *see* 603.32, 621.35; heat treatment of tool steels, *see* 600.5; electric drills, *see* 711.24.

## 615.13 Punches

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R17-43; 1943. Heavy Forged Hand Tools. This recommendation covers the sizes, types, grades, and finishes of heavy forged hand tools that may be manufactured under the provisions of Schedule IV, Limitation Order L-157, as amended. Gives requirements for various kinds of bars, blacksmiths' anvil tools, hammers, mauls, sledges, hoes, mattocks, picks, railway track tools not elsewhere classified, tongs, miscellaneous forged hand tools, mine blasting hand tools, and mine breast drills.

U. S. Gov., Federal Specifications GGG-D-641; 1943. Drifts; Drill. Shall be of one type, good quality carbon steel. Gives detail requirements as to design, size, finish, marking; methods of sampling, inspection, and tests; and shipping containers and packing.

U. S. Gov., Federal Specification GGG-P-851; 1933. Amendment 3; 1945. Punches; Bag, Center, Coopers', Coppering, Cutting, Tinners', and Drive-Pin. Covers eight types. Gives requirements for materials, workmanship, marking, hardening and tempering, tolerances, and details for each type; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., Federal Specification GGG-S-246; 1934. Sets-and-Headers; Rivet, Hand. Covers 3 types—(I) blacksmiths'; (II) coppersmiths', tinsmiths', and saddlers'; and (III) blacksmiths', handled. Gives requirements for marking, construction, hardening, finish, tolerances, and dimensions; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

## 615.14 Reamers

U. S. Gov., Navy Dept. Specification 41R7c; 1941. Reamers, Carbon-Steel, and High-Speed-Steel; and Arbors, Shell-Reamer.

U. S. Gov., Treasury Dept. Procurement Div., No.294; 1938. Reamers, Carbon-Steel, and High-Speed-Steel; and Arbors, Shell-Reamer. Covers 22 types of reamers and arbors. Gives requirements for material, workmanship, cutting edges, and details for each type; methods of sampling, inspection, and tests; and packaging, packing, and marking.

*References.*—Electric reamers, *see* 711.24.

## 615.15 Taps and Dies

Metal Cutting Tool Institute, Tap and Die Div. Commercial Standards for Taps and Dies, 1939. Gives standard symbols for marking, general dimensions and tolerances for hand taps, machine screw taps, nut, pipe, pulley, staybolt, and stove bolt taps, and various tapper taps. Also thread limits and tolerances, basic thread dimensions and tap drill sizes, for American, National Acme, British, French, and Whitworth standards, and standard chamfer for dies.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, 1938. Taps. Covers definition, types and kinds, and specification of taps.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, 1938. Threading Dies. Covers definition, types of threading dies, accuracy, standard thread forms, marking, and ordering information.

Society of Automotive Engineers. Joint sponsor with American Society of Mechanical Engineers and the National Machine Tool Builders' Assn. Taps, Cut and Ground Threads. American Standards Assn., B5.4-1939. General dimensions and working tolerances for various types of taps, definitions of the various types, tables of sizes and pitches including the American standard coarse and fine thread series. The S.A.E. standards for straight pipe taps and spark plug taps included are not listed as American standard.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R51-29; 1929. Die Head Chasers (for Self-Opening and Adjustable Die Heads). This recommendation establishes a list of standard stock sizes and threads per inch for national coarse thread and fine thread series, for S.A.E. spark plug and bushing thread, for lighting fixture and fitting thread, for railway sizes, and for pipe thread.

U. S. Gov., Federal Specification GGG-T-581; 1934. Amendment 1; 1935. Tools; Pipe-Threading, Hand. Covers ten types of pipe taps, pipe dies, and diestocks. Gives requirements for thread form, tolerance on lead of threads, imperfections, diestock handles, marking, and dimensions; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Navy Dept. Specification 41T15g; 1936. Taps; Dies; Diestocks; and Wrenches; Tap.

U. S. Gov., Navy Dept. Specification 41 T 19b; 1943. Taps; Ground, Hand.

U. S. Gov., Treasury Dept., Procurement Div., No.308; 1938. Taps, Dies, Tap Wrenches, and Diestocks.

Covers two types and all taps and dies shall have the American National form of thread, made from best quality tool steel. Gives requirements for cutting edges, squares on shanks, taps, dies, tolerances, and details of each type; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., U. S. Maritime Commission. Specification 41-MC-6; 1942. Taps; Dies; Diestocks; and Accessories; Hand. Covers nine types, two classes, and shall be but one grade. Gives requirements for materials, workmanship, threads, marking, heat treatment, squares, clearance, lead error tolerance, form and fit, sampling, inspection, tests, and drawings.

U. S. Gov., U. S. Maritime Commission. Specification 41-MC-7; 1942. Tools; Pipe Threading and Cutting, Hand. Covers twelve types, together with sizes, classes, and shall be but one grade. Gives requirements for materials, workmanship, threads, heat treatment, handles, carrying cases, marking, sampling, inspection, tests, and drawings.

*References.*—Tool steel, alloy tool steel, *see* 603.32, 621.35; heat treatment of taps, *see* 600.5; machine tool elements, *see* 765.

### 615.16 Nail Sets

U. S. Gov., Federal Specification GGG-N-71; 1932. Nail-Sets. Covers one type. Gives requirements for marking, shape, hardening, sizes, tolerances, and sets; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

## 615.2 HAMMERS AND SLEDGES

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R17-43; 1943. Heavy Forged Hand Tools. This recommendation covers the sizes, types, grades, and finishes of heavy forged hand tools that may be manufactured under the provisions of Schedule IV, Limitation Order L-157, as amended. Gives requirements for various kinds of bars, blacksmiths' anvil tools, hammers, mauls, sledges, hoes, mattocks, picks, railway track tools not elsewhere classified, tongs, miscellaneous forged hand tools, mine blasting hand tools, and mine breast drills.

### 615.20 General Items

### 615.21 Hammers

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R159-42; 1942. Forged Hammers. This recommendation establishes a simplified schedule of grade, style, and weight of different kinds of hammers. Conforms with the requirements of Schedule II of Limitation Order L-157, Hand Tools Simplification (War Production Board).

U. S. Gov., Federal Specification GGG-H-86; 1942. Amendment 2; 1943. Hammers, Mauls, and Sledges. Covers 24 types of hammers, 3 types of mauls, and 2 types of sledges. Gives requirements for materials, workmanship, weight, forged heads, shape of head, striking faces, peens, eyes, handles, wedges, steel heads, hardness, finishes, corrosion protective coating, marking, and details for eacn type; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Post Office Dept. Div. of Motor Vehicle Service, Bureau of the Fourth Assistant Postmaster General. Specifications for Hammers; Fender.

*References.*—Standard sizes, *see* 615.20; carbon tool steel, *see* 603.22, 603.32; alloy tool steel, *see* 621.35; forged steel, *see* 611.51, 622.6; wooden handles, *see* 428.20, 428.29; heat treatment, *see* 600.5.

### 615.22 Sledge Hammers

U. S. Gov., Dept. of Agriculture, Forest Service. Specification MSF-169. Hammers; Sledge, 4- and 8-Pound.

U. S. Gov., Federal Specification GGG-H-86; 1942. Amendment 2; 1943. Hammers, Mauls, and Sledges. Covers 24 types of hammers, 3 types of mauls, and 2 types of sledges. Gives requirements for materials, workmanship, weight, forged heads, shape of head, striking faces, peens, eyes, handles, wedges, steel heads, hardness, finishes, corrosion protective coating, marking, and details for each type; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

*References.*—Railway spike maul, *see* 616.8; *see* references under 615.21.

## 615.3 PINCHERS, PLIERS, PLIER CUTTERS, AND SHEARS

### 615.31 Pincers

U. S. Gov., Army Air Forces. Specification No.50459; 1945. Tweezers; Instrument Repair.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 17-59; 1920. Pincers; Carpenters'.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 17-104; 1921. Pincers; Shoeing, Blacksmiths'.

U. S. Gov., U. S. Army, Signal Corps. Specification 17-148; 1924. Grip; Straight Jaws, Wire Pulling for Size 0.

U. S. Gov., U. S. Army, Signal Corps. Specification 17-149A; 1935. Grip; Type LC-28, Eccentric Type for Bare Wire 1/2-Inch Diameter and Smaller.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-77A; 1927. Crimper; Type LC-8, for Cable Hangers.

### 615.32 Pliers and Plier Cutters

U. S. Gov., Army Air Forces. Specification No.50458; 1945. Pliers and Cutters; Instrument Repair.

U. S. Gov., Federal Specification GGG-P-471; 1942. Amendment 2; 1944. Pliers and Nippers. Covers 3 types of nippers and 17 types of pliers. Gives requirements for material, workmanship, design, handles, joints, jaw openings, scoring, finish, tests, marking, and details for each type; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Marine Corps Specification, 1942. Cutter; Wire, Intrenching, M-1938.

U. S. Gov., Marine Corps Specification, 1943. Pliers; Long Flat Nose, Side-Cutting.

U. S. Gov., Post Office Dept., Div. of Motor Vehicle Service, Bureau of the Fourth Assistant Postmaster General. Specifications for Pliers; Side-Cutting.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2589; 1939. Pliers, Laboratory; and Wire Nippers.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 17-40; 1920. Plier; Pincer, Saddlers'.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-477A; 1933. Pliers; Types TL-13, TL-103, TL-107, and TL-126, Communication Electricians'.

U. S. Gov., Veterans Administration. Specification VA-M-233c; 1941. Nippers and Pliers; Jewelers'.

### 615.33 Shears

U. S. Gov., Federal Specification GGG-S-286; 1937. Shears; Roaching. Covers one type. Gives requirements for marking, design, blades, length of cut, screw, handles, finish, weight, length, and shape; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Federal Specification GGG-S-291; 1933. Shears; Tinners', Bench, and Hand (Snips). Covers six types—(A) hand, straight cut; (B) hand, circular cut; (C) hand, combination; (D) hand, straight cut, extra heavy; (E) bench, single lever; and (F) bench, compound lever. Gives requirements for marking, blades, length of cut, bearing, bolts and nuts, handles, tolerances, and dimensions; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Post Office Dept., Div. of Motor Vehicle Service, Bureau of the Fourth Assistant Postmaster General. Specifications for Shears; Metal.

*References.*—Office scissors, *see* 612.13; carbon and alloy tool steels, *see* 603.22, 621.35; forged steel, *see* 611.51, 622.6; heat treatments, *see* 600.5.

### 615.39 Miscellaneous Cutting Tools

U. S. Gov., Federal Specification 00-G-661; 1934. Grinders; Bench, Hand-Power. Covers two types—heavy duty, and medium; composed primarily of a grinding wheel, gear case or frame, wheel and gear shafts, bearings, crank handle, adjustable tool rest, and screw clamp for securing the grinder to a bench. Gives detail requirements; methods of sampling, inspection, tests; and requirements for packaging, packing, and marking.

U. S. Gov., Federal Specification GGG-C-441; 1939. Clippers; Bolt. Covers three types—(I) compact, (II) rigid-head, and (III) swivel-head. Gives requirements for design of jaws, handles, connecting bolts, straps and jaw bolts, interchangeability, marking, and component parts; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification GGG-C-771; 1933. Cutters; Pipe. Covers one type. Gives requirements for marking, design, frame, cutter wheels, rollers, movable jaw, feed rod, handle, and pins; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Navy Dept. Specification 41C6d; 1934. Cutters; Washer.

U. S. Gov., Navy Dept. Specification 41C25b; 1944. Cutters; Cable, Hand-Power, for Electric Cable (Shipboard Use).

U. S. Gov., U. S. Army, Corps of Engineers. Specification 17-199; 1941. Cutter; Wire, 3/8-Inch Capacity.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 17-166; 1936. Cutter; Wire, Light, M-1916.

U. S. Gov., U. S. Maritime Commission. Specification 41-MC-7; 1942. Tools; Pipe Threading and Cutting, Hand. Covers 12 types, together with sizes, classes, and shall be but one grade. Gives requirements for materials, workmanship, threads, heat treatment, handles, carrying cases, marking, sampling, inspection, tests, and drawings.

*References.*—Carbon and alloy tool steels, *see* 603.22, 621.35; malleable cast iron, *see* 611.21; heat treatments, *see* 600.5.

## 615.4 VISES, WRENCHES, AND VISE CLAMPS

### 615.41 Vises

U. S. Gov., Federal Specification GGG-V-436a; 1942. Amendment 1; 1944. Vises. Covers 13 types—(I) bench, (II) blacksmiths', (III) bodymakers', (IV) combination, (V) hand, (VI) jewelers', (VII) machinists', (VIII) pattern-makers', (IX) pin, (X) pipe, (XI) riggers, (XII) saw, and (XIII) woodworkers'. Gives requirements for material, workmanship, finish, marking of vises, interchangeability, and details of each type; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

### 615.42 Wrenches

American Institute of Bolt, Nut and Rivet Manufacturers. American Standards Assn., B18.2-1941. Bolt, Nut, and Rivet Standards. Includes table of open end wrench openings for bolts and nuts.

American Society of Mechanical Engineers, Society of Automotive Engineers, sponsors. American Standards Assn., B 18.2-1941. American Standard Wrench-Head Bolts and Nuts and Wrench Openings. Similar to corresponding portion of U. S. Gov., Dept. of Commerce, National Bureau of Standards Handbook H 28, Screw-Thread Standards for Federal Services, listed below. This 1941 standard is a comprehensive revision of the 1933 report, with many of the dimensions changed, footnotes amplified, much new material added, and some 65 illustrations included. Dimensions are for—regular series; heavy series; cap screw heads; set screw heads; regular nuts, jam nuts, and slotted nuts; machine screw and stove bolt nuts; heavy nuts and jam nuts; heavy slotted nuts; light nuts and light jam nuts; light thick nuts; light slotted nuts; light thick slotted nuts; light castle nuts; and open end wrench openings for regular, heavy, and light series bolts and nuts. An appendix gives the formulas upon which dimension and tolerance are based, and the thread lengths.

U. S. Gov., Army Air Forces. Specification 50030-D (2); 1944. Wrench; Open-End, Double-Head (Electricians' Type).

U. S. Gov., Army-Navy Aeronautical Specification AN-W-19; 1944. Wrenches; Spark Plug Elbow, Square Drive.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Handbook H28; 1944. Screw-Thread Standards for Federal Services. Presents complete dimensional data upon which specifications may be based for threaded products for government requirements. Includes terminology (definitions and symbols); and table of open-end wrench openings for regular, heavy, and light series bolts and nuts and for hexagon socket wrenches and fluted socket wrenches.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R17-43; 1943. Heavy Forged Hand Tools. This recommendation covers the sizes, types, grades, and finishes of heavy forged hand tools that may be manufactured under the provisions of Schedule IV, Limitation Order L-157, as amended. Gives requirements for various kinds of bars, blacksmiths' anvil tools, hammers, mauls, sledges, hoes, mattocks, picks, railway track tools not elsewhere classified, tongs, miscellaneous forged hand tools, mine blasting hand tools, and mine breast drills.

U. S. Gov., Federal Specification GGG-W-631; 1943. Wrenches; Bolt and Nut, Adjustable. Covers five types—(I) open end 22-1/2° angle, (II) auto, (III) monkey, (IV) open end s-handle, and (V) screw (key-Model). Gives requirements for material, workmanship, design, test loads, marking, and details for each type; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., Federal Specification GGG-W-636; 1942. Wrenches; Bolt and Nut, Nonadjustable (Open-End and Box). Covers 11 types. Gives requirements for design, finish, marking, hardness; methods of inspection, sampling, and tests; and requirements for packaging, packing, shipping containers, and marking for shipment.

U. S. Gov., Federal Specification GGG-W-641; 1943. Wrenches; Bolt and Nut, Socket. Covers one type consisting of detachable sockets and drive tools. Gives requirements for drives, sets, material, workmanship, sockets, drive tangs of tools, test loads, boxes for sets, finish, and marking; details for sockets, adapters, extensions, ratchets, screw-driver bits, slide rods, sliding T handles, speeders, and universal joints; methods of sampling, inspection, and test; and packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification GGG-W-651a; 1938. Amendment 3; 1942. Wrenches; Pipe. Covers six types—(I) adjustable, normal duty; (II) adjustable, heavy duty; (III) chain; (IV) girth; (V) strap; and (VI) angle style, adjustable. Gives requirements for design, handle, frame, movable jaws, adjusting nut, springs, frame, operation, marking, and dimensions; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking. Emergency Alternate Federal Specification E-GGG-W-651a; 1942, (issued by Procurement Div., Treasury Dept., U. S. Gov.) changes requirements for type II.

U. S. Gov., Navy Dept. Specification 41T18g; 1936. Wrenches, Tap; Dies; Diestocks; and Taps.

U. S. Gov., Navy Dept. Specification 41W8d; 1934. Wrencnes.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 89-3486; 1940. Wrench; Socket, Special, Submarine Mine.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 89-3488; 1940 Wrench; Special, for Compound Plug, Submarine Mine.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 17-68; 1920. Wrench; Screw, Monkey.

### 615.43 Vise Clamps

U. S. Gov., Federal Specification GGG-C-406; 1934. Amendment 3; 1944. Clamps, and Hand Screws. Covers four types—(I) clamp "C", light service, medium service, and heavy service; (II) clamp, parallel, machinists' and toolmakers'; (III) clamp, screw, quick-adjusting, fixed head, and sliding head; and (IV) screws, hand, adjustable. Gives requirements for suitability, finish, marking, proof test, design and component parts, body, jaws, screws, and dimensions; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

## 615.5 ANVILS, BELLOWS, HARDIES, AND FORGES

### 615.51 Anvils

U. S. Gov., Federal Specification GGG-A-576; 1943. Amendment 1; 1945. Anvils; Blacksmiths'. Covers three classes—(I) all steel, single piece; (II) cast iron body with steel face and horn, and (III) cast steel body with steel face and horn. Gives requirements for weights, material, workmanship, marking, faces, horn, hardness, holes, and shapes and sizes; methods of sampling, inspection and tests; and packaging, packing, and marking for shipment.

### 615.52 Bellows

U. S. Gov., Federal Specification LLL-B-211; 1942. Bellows; Hand, Foundry. Covers two sizes in one type. Gives requirements for materials, workmanship, marking, construction, sizes, packaging, packing, and marking for shipment.

U. S. Gov., Navy Dept. Specification 41B6b; 1934. Bellows; Hand, Foundry.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2303A; 1941. Bellows; Foot Power.

### 615.53 Hardies

*References.*—Standard sizes, *see* 615.55.

### 615.54 Forges

U. S. Gov., Federal Specification S-F-571; 1934. Forges; Portable, Coal-Burning. Covers two types—(I) round hearth, riveting and agriculture; in two classes—(A) 18-in. (agriculture) and (B) 18-in. compressed air (riveting and ship building); and (II) rectangular or square hearth; in four classes—(A) blacksmith, knockdown, or folding case model, (B) light or medium repair work, (C) general work, and (D) blacksmith, cast-iron, or steel hearth. Gives requirements for blower construction, designs, hearth size, tolerance, fan size, hearth thickness, height, and weight tolerance; methods of sampling and inspection; and requirements for packaging, packing, and marking.

U. S. Gov., Navy Dept. Specification 41F9a; 1942. Forges; Oil-Burning (Shipboard Use).

### 615.55 Miscellaneous Blacksmith Tools

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R17-43; 1943. Heavy Forged Hand Tools. This recommendation

covers the sizes, types, grades, and finishes of heavy forged hand tools that may be manufactured under the provisions of Schedule IV, Limitation Order L-157, as amended. Gives requirements for various kinds of bars, blacksmiths' anvil tools, hammers, mauls, sledges, hoes, mattocks, picks, railway track tools not elsewhere classified, tongs, miscellaneous forged hand tools, mine blasting hand tools, and mine breast drills.

U. S. Gov., Navy Dept. Specification 41T17a; 1945. Tongs; Blacksmiths'.

U. S. Gov., Federal Specification GGG-T-561; 1934. Tools; Blacksmiths' and Horseshoers'. Covers 12 types—(I) chisels, (II) creasers, (III) cutters, (IV) flatters, (V) fullers, (VI) hammers, (VII) hardies, (VIII) heading-tools, (IX) irons, horseshoers', clinching, (X) pritchels, (XI) punches, and (XII) swages. Gives requirement for material, durability, forgings, eyes, finish, handles, hardness, cutting edges, and dimensions; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

*References.*—Carbon and alloy tool steels, *see* 603.22, 621.35; forged carbon and alloy steel, *see* 611.51, 622.6; heat treatments, *see* 600.5.

## 615.6 FILES, RASPS, HACK SAWS, AND SCRIBERS

### 615.61 Files

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, 1938. Files and Rasps. Covers definition, material, classification, characteristics, uses, and ordering instructions.

U. S. Gov., Dept. of Agriculture, Forest Service. Specification MSF-128. Files.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R6-44; 1944. Files and Rasps (American Pattern, and Straight- and Curved-Tooth Milled Files). Covers warding files, other files up to and including 6 in. in length, other files over 6 in. in length, horse rasps and shoe rasps, and straight- and curved-tooth milled files. Gives tables showing dimensions and cuts (teeth per inch) for standard types and sizes of files and rasps. Describes various types of files, rasps, and milled-tooth files.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R 206-44; 1944. Swiss Pattern Files. Establishes a recommended simplified list of 38 types for stock production. The sizes and cuts in each type have also been simplified. The width, thickness, or diameter dimensions are given for some of the types, and dimensional tolerances are established. Gives general information, tables showing dimensions and cuts for various types, and description of types.

U. S. Gov., Navy Dept. Specification 41F3e; 1944. Files and Rasps; Hand.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2764; 1939. File; Vulcanite.

U. S. Gov., Veterans Administration. Specification VA-M-231e; 1941. Files; General Purpose.

*References.*—Dental files, *see* 915.10.

### 615.62 Hack Saws

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R90-36; 1936. Hacksaw Blades. This recommendation establishes a list of standard sizes of tungsten alloy and special alloy hacksaw blades. Sponsored by Hack Saw Manufacturers Assn.

U. S. Gov., Federal Specification GGG-B-451; 1944. Blades; Hack Saw, Hand. Covers three classes—(A) general service alloy, all-hard; (B) general service alloy, flexible; and (C) high speed steel, all-hard. Gives requirements for material, workmanship, teeth, straightness, holes, annealing of blade ends, marking, sizes, and details for each class; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification GGG-F-671; 1931. Amendment 2; 1944. Frames; Hack-Saw. Covers three types—(A) straight handle, adjustable; (B) pistol-grip handle, adjustable; and (C) heavy, deep throat, solid. Gives requirements for material and workmanship, marking of frames, handles, finish, threaded parts, saw grips, and details for each type; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., Navy Dept. Specification 41B11c; 1944. Blades; Hacksaw.

U. S. Gov., U. S. Maritime Commission. Specification 64-MC-18a; 1943. Saw; Meat, Butchers'. There shall be but one type and grade. Gives requirements for material, workmanship, construction, sizes, finish of metal parts, and marking; sampling, inspection, and methods of test; packaging, packing, and marking.

U. S. Gov., Veterans Administration. Specification VA-M-52a; 1927. Hack Saw; Power.

*References.*—Carbon and alloy tool steels, *see* 603.22, 603.32, 621.35; heat treatment, *see* 600.5; wood saws, *see* 616.17.

### 615.63 Rasps

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, 1938. Files and Rasps. Covers definition, material, classification, characteristics, uses, and ordering instructions.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R6-44; 1944. Files and Rasps (American Pattern, and Straight- and Curved-Tooth Milled Files). Covers warding files, other files up to and including 6 in. in length, other files over 6 in. in length, horse rasps and shoe rasps, and straight- and curved-tooth milled files. Gives tables showing dimensions and cuts (teeth per inch) for standard types and sizes of files and rasps. Describes various types of files, rasps, and milled-tooth files.

U. S. Gov., Marine Corps Specification, 1926. Rasp; Horse.

U. S. Gov., Navy Dept. Specification 41F3e; 1944. Files and Rasps; Hand.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2647; 1939. File and Rasp; Straight, Incisor, 12-Inch, Veterinary.

### 615.64 Scribers

U. S. Gov., Federal Specification GGG-S-131a; 1938. Scribers; Machinists'. Covers one type. Gives requirements for material, workmanship, marking, design, points, finish, and dimensions; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

*References.*—Carbon tool steel, *see* 603.32; heat treatment, *see* 600.5.

## 615.7 TINNERS' AND COPPERSMITHS' TOOLS

### 615.71 Soldering Coppers

U. S. Gov., Federal Specification W-I-681a; 1943. Amendment 1; 1944. Irons; Soldering, Electric. Covers four types—(I) radio, (II) light, (III) medium, and (IV) heavy. Gives requirements for material, workmanship, general design, tip, tip surface treatment, heating unit, handle, cord and plug cap, terminal connections, finish, marking, and details; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., Federal Specification GGG-C-571a; 1943. Coppers (Irons); Soldering. Covers two classes—(A) solid copper, and (B) composite copper and steel; and two types—(I) regular tinner's point (pyramid), and (II) flat point (wedge). Gives requirements for material, size, marking, handles, and details including design, handle rod, points, and dimensions and weights; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Navy Dept. Specification 41-I-1e; 1944. Irons; Soldering, Electric.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-276A; 1941. Soldering Equipment; Type TE-26.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-535B; 1931. Iron; Soldering, Types TL-117, TL-120, and TL-121.

U. S. Gov., Veterans Administration. Specification VA-M-266; 1936. Irons; Soldering, Electric.

*References.*—Copper rods, *see* 642.11.

### 615.72 Blow Torches and Soldering Pots

National Fire Protection Assn. National Fire Codes for Flammable Liquids, Gases, Chemicals, and Explosives, 1943. Gasoline Blow Torches. Recommended practice for construction, maintenance, and use of blow torches and plumbers' furnaces. Covers requirements for materials, joints, liquid capacity, stability, handles, closures, fount assemblies, needle valves, and tests.

U. S. Gov., Federal Specification RR-P-586; 1938. Pots; Solder. Covers one type—cast-iron, 5-in. or 7-in. diameter. Gives requirements for material, workmanship, dimensions, weights, and capacities; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification GGG-L-51; 1932. Ladles; Plumbers' Gives requirements for material, workmanship, marking, design, and dimensions; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Federal Specification GGG-P-596; 1942. Pots; Fire, Gasoline and Kerosene. Covers two types—(I) gasoline; class A, standard, for heating solder pots; and class B, combination, for heating solder pots and soldering coppers; and (II) kerosene, standard, for heating solder pots. Gives requirements for material, workmanship, finish, marking, and construction; method of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification GGG-T-576; 1944. Torches; Blow, Hand. Covers three types—(I) alcohol (in three classes), (II) gasoline (in two classes and three sizes), and (III) kerosene (in two classes and three sizes). Gives requirements for material, workmanship, marking, and details for each type and class; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Navy Dept. Specification 41P30b; 1944. Pots; Solder, Electrically-Heated, Portable.

U. S. Gov., Navy Dept. Specification 41T4h; 1944. Torches; Blow, Alcohol and Gasoline.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 17-110A; 1943. Torches; Blow, Gasoline.

U. S. Gov., U. S. Army, Signal Corps. Specification 17-168; 1937. Torch; Type TL-130, Gasoline-Burning Blow Torch.

### 615.73 Bench Plates and Stakes

### 615.74 Scrapers

U. S. Gov., Treasury Dept., Procurement Div., No.498; 1941. Scrapers; Tinners', Roofing. Shall be one type of high grade steel furnished in 8, 9, 10, and 12 in. sizes. Gives requirements for design, manufacture, hardness, finish, and trade mark; methods of inspection, sampling, and tests; and packaging, packing, and marking.

## 615.8 MEASURING TOOLS

### 615.80 General Items

*References.*—Levels, plumbs, rules, squares, tapes, *see* 616.3; hydrometers, thermometers, and scientific measuring instruments, *see* 919.

### 615.81 Calipers and Dividers

U. S. Gov., Federal Specification GGG-D-351a; 1944. Dividers. Covers three types—(A) spring, (B) firm-joint, and (C) wing. Gives requirements for material, workmanship, marking, points, smoothness of operation, and details for each type; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Navy Dept. Specification 41C22a; 1936. Calipers.

U. S. Gov., Treasury Dept., Procurement Div., No.454; 1941. Calipers. Covers six types—(I) firm-joint hermaphrodite calipers; (II) lock-joint calipers; (III) micrometer calipers; (IV) spring calipers; (V) thread calipers, and (VI) transfer calipers, lock-joint. Gives requirements for sizes, measuring ends, outside and inside calipers, finish, and details for each type; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., Treasury Dept., Procurement Div., 488a; 1942. Divider; Spacing. Shall be of the firm joint spacing type and shall be only six inch size. Dividers except pins shall be made of steel, treated to

resist corrosion, and pins shall be of nonferrous material. Gives requirements for workmanship, stamped numbers, points, arms, and joints; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2578; 1939. Caliper; Laboratory, Registering.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 17-21; 1920. Caliper; Machinists'.

## 615.82 Gages, Dimension

American Petroleum Institute, Div. of Production. Standard No.3; 1941. Dimensional Standards for Cable Drilling Tools (Taper Joints, Jars, Rope Socket Necks, Etc.). Contains complete dimensional standards only and does not cover chemical or physical properties. Gives requirements for certification of reference master gages, workmanship and finish, marking, basic thread form, method of gaging boxes and pins, size of wrench squares, for drilling and fishing jars, for drilling bits, and for fishing tools, etc.

American Petroleum Institute, Div. of Production. Standard 5-A; 1944. Specification for Casing, Drill Pipe, and Tubing. This specification covers chemical and physical properties and processes of manufacture of casing, drill pipe, and tubing, with dimensions on diameters, thicknesses, lengths, threads, etc., and master gages. Covers material, manufacture, chemical properties and tests, physical properties and tests, dimensions, weights, and lengths, threads, couplings, marking, inspection and rejection, tables, gaging practice, gages, and appendices.

American Petroleum Institute, Div. of Production. Standard 5-L; 1944. Specification for Line Pipe. This specification covers chemical and physical properties and processes of manufacture of line pipe, with dimensions on diameters, thicknesses, lengths, threads, etc., and master gages. Covers material, manufacture, chemical properties and tests, physical properties and tests, dimensions, weights, and lengths, threads, couplings, marking, inspection and rejection, tables, gaging practice, gages, and appendices.

American Petroleum Institute, Div. of Production. Standard 7-B; 1944. Specification for Rotary Drilling Equipment. Gives final dimensional standards, including gages, for regular and full-hole rotary drilling tool joints, tentative standards for internal-flush rotary drilling tool joints, and standards on auxiliary equipment. Covers material, workmanship and finish, marking, rotary drilling tool joints, drill collars, grief stems, couplings, and subs, bits, gaging practice, swivel gooseneck connections and rotary hose, rotary table, brake blocks, slush pumps, recommended practice on measurement, inspection, and rejection, gages, and appendices.

American Petroleum Institute, Div. of Production. Standard 11-B; 1942. Sucker Rod Specifications. Covers dimensional standards, gages and gaging practice, on five sizes of sucker rods. Gives sufficient dimensional standards to insure interchangeability for five sizes of rods (nominal 5/8 in., 3/4 in., 7/8 in., 1 in., and 1 1/8 in.), these including the dimensions of the threaded pin, of the threaded box, of the coupling for use with "double pin" rods, and of the wrench squares.

American Society of Mechanical Engineers, sponsor. American Standards Assn., B4a-1925. Tolerances, Allowances, and Gages for Metal Fits. Definitions, classifications of fits, tables of diameter tolerances for various fits for shaft and hole members, tables of negative tolerances for force fits and the force required for pressing in shaft. Also defines and illustrates ring, plug, receiving, indicating, snap, and caliper gages, formulas, and classification of fits.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Bolster, Truck Side Bearing Gage. Detailed dimensional drawing with important dimensions emphasized.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1940. Center Plate Gages, Body and Truck, 40, 50, and 70 Tons Nominal Capacity. Covers detailed dimensional drawings and marking of gages.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Decimal Gage. For general shop use, not for laboratory and tool room work, solid notch gage, marked in decimals of 1-in. from .002 to .250; size of ellipse and drawing indicating markings.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Gages for Checking the Limit of Wear and Condemning From Service the Operating Parts of "UC" Passenger Brake Control Valves. Instructions for the use of gages and dimensional drawings for thirty special gages.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Instructions for Use of Condemning Gages for Type "K" Triple Valves. Covers use of wear limit gages, including feed groove location device, and device for checking capacity of new graduating spring.

Society of Automotive Engineers and American Society of Mechanical Engineers, sponsors. American Standards Assn., B1.2-1941. Screw Thread Gages and Gaging. Similar to corresponding portion of U. S. Gov., Dept. of Commerce, National Bureau of Standards Handbook H28, Screw-Thread Standards for Federal Services.

Tire and Rim Assn., Inc. 1942 Year Book. Gauge for Checking Valve Holes. Gives sketch of gage.

Tire and Rim Assn., Inc. 1942 Year Book. Gauge for 3-Inch CC Clincher Motorcycle Rims. Gives sketch of "correct contour" gage.

Tire and Rim Assn., Inc. 1942 Year Book. Gauges for Drop Center Passenger Car Rims for Balloon Tires. Gives outline sketches of "correct contour" and "tolerance" gages.

Tire and Rim Assn., Inc. 1942 Year Book. Gauges for Flat Base Passenger Car Rims. Gives sketches of "correct contour" and "tolerance" gages; also statement of tolerances governing flat base straight side passenger car rims.

Tire and Rim Assn., Inc. 1942 Year Book. Gauges for Low Pressure Passenger Car Tire and Agricultural Tire Rims. Gives outline sketches of "correct contour" and "tolerance" gages.

Tire and Rim Assn., Inc. 1941 Year Book. Gauges for Straight Side Truck Rims. Gives sketches of "correct contour" and "tolerance" gages; also instructions for inspection of side rings of the endless and split types.

Tire and Rim Assn., Inc. 1942 Year Book. Gauge for 2.15B Motorcycle Rims. Gives outline sketch. Known as the "correct contour" gage.

U. S. Gov., Dept. of Agriculture, Forest Service. Specification No. 147. Gage; Surface, for Crosscut Saws, Madison Laboratory.

U. S. Gov., Dept. of Agriculture, Forest Service. Specification No. 148. Gage; Raker Length and Set, for Crosscut Saws.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Handbook H28; 1944. Screw-Thread Standards for Federal Services. Presents complete dimensional data upon which specifications may be based for threaded products for government requirements. Includes terminology (definitions and symbols); gages for American National form of thread; American National pipe threads; American National hose-coupling screw threads; and fire-hose coupling threads; miscellaneous standardized product threads; American National rolled threads; and Acme screw threads; and appendixes containing supplementary information of both a general and a technical nature including such specifications as are not intended to be mandatory.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Commercial Standard CS8-41; 1941. Gage Blanks. American Standards Assn., B47.1-1941. This standard covers standard designs for plain and thread plug gage blanks to 12.010 in. maximum gaging diameter; plain and thread ring gage blanks to 12.260 in. maximum gaging diameter; adjustable snap gages to 12 in.; adjustable length gages to any desired length; twin ring gages or combination ring and snap gages for work up to 1.135 in. diameter; dial indicators up to 3 3/4 in. nominal bezel diameter; and master disks up to 8.010 in. in diameter. Recommended general designs covering spline plug and ring gages, taper plug and ring gages, flush-pin gages, and flat plug gages are also included. Initiated by the industry, represented by the American Gage Design Committee.

U. S. Gov., Federal Specification GG-G-86; 1935. Gages; Sheet-Metal, Twist-Drill and Wire. Covers two types: (A) Circular; five classes—(1) U. S. standard for sheet and plate iron and steel, (2) steel wire, (3) American wire, (4) Birmingham wire, and (5) music wire; and (B) rectangular; two classes—(1) U. S. standard for sheet and plate iron and steel, and (2) twist drill and drill-rod. Gives requirements for material and workmanship, appearance and durability, hardness, marking, tolerances, and gaging sections; detail requirements for each type and class; methods of inspection; requirements for packaging, packing, and marking; and table of thicknesses or diameters corresponding to gage numbers.

U. S. Gov., Federal Specification GGG-G-61; 1932. Gages; Plug and Ring, Plain and Thread. Covers two types—(A) plain (cylindrical plug and ring), and (B) screw-thread (plug and ring). Gives requirements for marking, construction, gaging dimensions, and tolerances; methods of inspection; and requirements for packaging, packing, and marking.

U. S. Gov., Navy Dept. Specification 41G4c; 1942. Gages; Carpenters' and Machinists'.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2747; 1939. Gage; Millimeter, Boley.

*References.*—Gages for railway car wheels, *see* 611.53, 611.18; gages for railway car gears, *see* 611.55; gages for railway brake shoes, *see* 611.43; gages for car journal bearings. *see* 692.3; rules and measuring tapes, *see* 616.33, 616.35; gages for railway car truck bolsters, center plates, and truck sides, *see* 605.13; pressure and vacuum gages, *see* 793.2; carbon and alloy tool steels, *see* 603.22, 603.32, 621.35; heat treatment, *see* 600.5; gages for cable drilling tool joints, *see* 754.

## 615.9 MISCELLANEOUS METAL-WORKING TOOLS

American Hospital Assn., 40-4. Mechanical Can Opener. Covers two sizes in table type openers.

American Public Works Assn. Sewers, J1-38; 1938. Includes vibration tools for use in depositing concrete in form work, requirements as to frequencies of vibration, weight and diameter related to volume of concrete being placed, handles to be insulated from operator and arranged for control by operator.

Compressed Air Institute. Trade Standards, 1938. This standard includes pneumatic tools and accessories, rock drills, portable compressors, receivers, aftercoolers, filters, piping, and valves. Portable pneumatic grinders, pneumatic drills, riveting hammers, hoists, sand rammers, and gives requirements as to operating speeds, sizes or types, capacities, safety precautions, hose sizes, operation, and maintenance.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specifications CAA-42. Air Hammer; Compressed, Portable With Compressor, Gasoline.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R17-43; 1943. Heavy Forged Hand Tools. This recommendation covers the sizes, types, grades, and finishes of heavy forged hand tools that may be manufactured under the provisions of Schedule IV, Limitation Order L-157, as amended. Gives requirements for various kinds of bars, blacksmiths' anvil tools, hammers, mauls, sledges, hoes, mattocks, picks, railway track tools not elsewhere classified, tongs, miscellaneous forged hand tools, mine blasting hand tools, and mine breast drills.

U. S. Gov., Federal Specification GGG-E-926; 1933. Extractors; Cotter-Pin. Covers one type. Gives requirements for handle, design, hardness, finish, and marking; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Navy Dept. Specification 40R2c; 1944. Rivet-Sets; Pneumatic-Tool.

U. S. Gov., Navy Dept. Specification 41E1d; 1927. Expanders; Tube.

U. S. Gov., Navy Dept. Specification 41E2; 1924. Expanders; Hose.

U. S. Gov., Navy Dept. Specification 41S3h; 1944. Scrapers; Ship, for Removing Paint and Scale.

U. S. Gov., Navy Dept. Specification 41S4b; 1925. Scrapers; Machinists'.

U. S. Gov , Navy Dept. Specification 41S34B; 1938. Stakes; Coppersmiths', Tinsmiths', and Sheet Metal Workers'.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 17-160; 1952. Block; Dolly.

*References.*—Electric tools, drills, reamers, buffers, and grinders, *see* 711.24.

## 616. HAND TOOLS OTHER THAN METAL-WORKING TOOLS

### 616.0 GENERAL ITEMS

U. S. Gov., U. S. Army, Signal Corps. Specification 17-1644; 1942. Tool Sets; Types TE-6 and TE-11, Mechanics'.

### 616.1 EDGE TOOLS

### 616.11 Adzes, Axes, and Hatchets

U. S. Gov., Dept. of Agriculture, Forest Service. Specification MSF-9-1. Ax; Double-Bit, Western Pattern.

U. S. Gov., Dept. of Agriculture, Forest Service. Specification MSF-9-2. Ax; Double-Bit, Young's Pattern.

U. S. Gov., Dept. of Agriculture, Forest Service. Specification MSF-9-3. Ax; Double-Bit, 2 1/2-Pound Cruiser.

U. S. Gov., Dept. of Agriculture, Forest Service. Specification MSF-9-4. Ax; Single-Bit, 2 1/4-Pound Boys' Pattern.

U. S. Gov., Dept. of Agriculture, Forest Service. Specification MSF-9-5. Ax; 1 1/4-Pound Belt.

U. S. Gov., Dept. of Agriculture, Forest Service. Specification MSF-329. Stone; Ax, Hand.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R17-43; 1943. Heavy Forged Hand Tools. This recommendation covers the sizes, types, grades, and finisnes of heavy forged hand tools that may be manufactured under the provisions of Schedule IV, Limitation Order L-157, as amended. Gives requirements for various kinds of bars, blacksmiths' anvil tools, hammers, mauls, sledges, hoes, mattocks, picks, railway track tools not elsewhere classified, tongs, miscellaneous forged hand tools, mine blasting hand tools, and mine breast drills.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R158-42; 1942. Forged Axes. This recommendation establishes a schedule of sizes, grades, and patterns covering single-bit, double-bit, and miscellaneous axes, and conforms with the requirements of Schedule II of Limitation Order L-157, Hand Tool Simplification (U. S. Gov., War Production Board).

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R160-42; 1942. Forged Hatchets. This recommendation establishes a simplified schedule of grade and size of standard and special patterns of hatchets, broad axes, and adzes; to conform with the requirements of Schedule II of Limitation Order L-157, Hand Tools Simplification (U. S. Gov., War Production Board).

U. S. Gov., Federal Specification GGG-A-151a; 1940. Adzes. Covers three types—(I) carpenters' (full head, half head), (II) railroad (full head), and (III) ship carpenters' (spur head, lipped bit; spur head, plain bit). Gives requirements for hardness, finish, handles, marking, and dimensions; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification GGG-A-926a; 1943. Axes. Covers two types—(I) chopping, 4 lb., and (II) fire, with pick head, 6 lb. Gives requirements for material, workmanship, construction, eye, handles, pattern, hardness, and finish; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Federal Specification GGG-H-131; 1932. Hatchets. Covers five types—(A) axe pattern or hunter's, (B) claw, (C) half, (D) lathing, and (E) shingling. Gives requirements for method of manufacture, bits, eye, head, handles, marking, labeling, finish, tolerances, and dimensions; methods of sampling, inspection, and tests; and requirements for packing, packaging, and marking. Emergency Alternate Federal Specification E-GGG-H-131; 1943, changed requirements for handles.

U. S. Gov., Federal Specification GGG-H-601; 1944. Hooks; Bush (Brush). Covers two types—(I) ax eye; class A, double edge, 12 in. blade; and class B, single edge, 10, 11, or 12 in. blade; and (II) strap eye, 10, 11 1/2, or 12 1/2 in. blade. Gives requirements for material, workmanship, hardness, toughness, handles, finish of blades, marking, and details for each type, class, and size; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 17-44A; 1922. Broadax; Handled.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 17-167; 1936. Ax; Intrenching, With Handle, M-1910.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 17-196; 1940. Machete M-1939.

*References.*—Carbon tool steel, *see* 603.32; forged steel, *see* 611.51; wooden tool handles, *see* 428.20, 428.29.

### 616.12 Augers and Carpenters' Braces

U. S. Gov., Federal Specification GGG-B-383; 1941. Amendment 2; 1943. Bits, Wood-Boring; and Chisels, Mortising, Hollow. Covers type I, fifteen classes of bits—(A) auger; (B) bellhangers'; (C) car; (D) expansive, plain; (E) expansive, screw or gear adjusting; (F) forstner, hand; (G) forstner, machine; (H) gimlet, double cut; (I) machine, with machine shank, with flat; (J) machine, with machine shank, without flat; (K) plug, hand; (L) plug, machine; (M) ship auger, with machine shank, with flat; (N) ship auger, with straight square shank; and (O) ship auger, with ring; type II, chisels, mortising hollow; and type III, two classes of auger bit sets—(A) in canvas rolls, and (B) in wood boxes. Gives requirements for longitudinal relief, bow, cutting edges,

size accuracy, polish finish, marking, and details for each type and class; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification GGG-B-671a; 1940. Amendment 1; 1944. Braces; Ratchet. Covers one type. Gives requirements for design, chuck and jaws, spindle, ratchet mechanism, sweep, head, center grip, marking, finish, sizes, shapes, and dimensions; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., U. S. Army, Medical Dept. Specification 17-191; 1939. Gimlet.

### 616.13 Chisels

U. S. Gov., Federal Specification GGG-C-311; 1932. Chisels, Gouges, and Slicks; Woodworkers'. Covers six types—(A) chisels, sooket firmer; (B) chisels, socket framing; (C) chisels, tanged turning; (D) gouges, socket firmer, outside or inside bevel; (E) gouges, tanged turning; and (F) slicks. Gives requirements for marking, blades, handles, finish, and tolerances; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Treasury Dept., Procurement Div., No.464; 1941. Openers; Box (Box-Chisels). Shall be of the bent tapered-claw pattern, consisting of a straight body and a chisel-edge tapering claw bent at an angle of approximately 15 degrees with the body. Gives requirements as to dimensions, claw hardness, strength, and finish; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 17-87A; 1943. Chisel; Hand, Cold.

*References.*—Heat treatment of chisels, *see* 600.5; chisels for pneumatic tools, *see* 615.9; track chisels, *see* 615.11.

### 616.14 Drills, Bits, and Countersinks

U. S. Gov., Federal Specification GGG-B-383; 1941. Amendment 2; 1943. Bits, Wood-Boring; and Chisels, Mortising, Hollow. Covers type I, fifteen classes of bits—(A) auger; (B) bell-hangers'; (C) car; (D) expansive, plain; (E) expansive, screw or gear adjusting; (F) forstner, hand; (G) forstner, machine; (H) gimlet, double cut; (I) machine, with machine shank, with flat; (J) machine, with machine shank, without flat; (K) plug, hand; (L) plug, machine; (M) ship auger, with machine shank, with flat; (N) ship auger, with straight square shank; and (O) ship auger, with ring; type II, chisels, mortising hollow; and type III, two classes of auger bit sets—(A) in canvas rolls, and (B) in wood boxes. Gives requirements for longitudinal relief, bow, cutting edges, size accuracy, polish finish, marking, and details for each type and class; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification GGG-D-671; 1934. Amendment 1; 1944. Drills; Hand. Covers two types—(A) plain, hollow handle, 0 to 3/8 in. capacity; and (B) ratchet, solid handle, 0 to 1/4 in. capacity. Gives requirements for component parts, frame, spindle, chuck, gears, handles, lubrication, marking, finish, and details for each type; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Treasury Dept., Procurement Div., 232A; 1939. Drills; Pneumatic, Rock, Hand-Held. Covers one type, in two sizes—approximately 45 lb. and 58 lb. Gives requirements as to construction, valves, chuck, rotation, blowing means, handle, lubrication, weight, and bore and stroke; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., Treasury Dept., Procurement Div., No.238. Drills; Rock. Shall be of two types—(I) detachable-bit, and (II) one-piece. Gives detail requirements as to chemical composition, hardness, finish, design, sizes and shape, and tolerances; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., Treasury Dept., Procurement Div., 496a; 1942. Countersinks; Rose. Shall be of good quality high carbon steel. Gives requirements for dimensions, length overall, diameter of round, flutes, shank, finish, and trade mark; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., Treasury Dept., Procurement Div., 507a; 1942. Drills; Hand, Automatic. Covers one type and size of automatic hand push drill. Gives requirements for design and operation, components, spiral and drive nut, return spring, chuck, handle, magazine, drill points, overall length, and finish; methods of inspection, sampling, and tests; and packaging, packing, and marking.

U. S. Gov., U. S. Army, Corps of Engineers. Specification 17-143B; 1940. Drill; Mining, 2 1/2-Inch, Sectional Handles.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 17-97; 1921. Drill; Star.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 17-144B; 1940. Drill; Stone, Hand, Single-Bit.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 17-159; 1932. Borer; Bung or Tap.

### 616.15 Knives

U. S. Gov., Dept. of Agriculture, Forest Service. Specification No.218. Knife; Brush.

U. S. Gov., Federal Specification GGG-K-471; 1932. Knives; Drawing. Covers two types—(A) fixed handle, and (B) folding handle. Gives requirements for sizes, shanks, handles, ferrules, and blades; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Federal Specification GGG-K-481; 1934. Amendment 4; 1943. Knives; Linoleum, Plumbers' Chipping, Putty, Scraping, and Shoe. Covers five types—(I) linoleum, (II) shoe, (III) plumbers' chipping, (IV) putty, (V) scraping. Gives requirements for material, marking, imperfections, hardness, blade, handles, dimensions, and finish; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Marine Corps Specification, 1944. Knife; Fighting and Utility, 7-Inch Blade, Complete With Sheath.

U. S. Gov., Marine Corps Specification, 1943. Knife; Hospital Corps.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 17-103; 1921. Knives; Shoeing.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-569C; 1938. Knife; Type TL-29, Pocket, Electricians'.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-591B; 1941. Knife; Type LC-14-B, Brush Cutting.

U. S. Gov., Veterans Administration. Specification VA-G-119; 1934. Knives; Paring, Corrosion-Resisting Steel.

*References.*—Pocket knives, *see* 612.11; carbon-tool steel, *see* 603.32; heat treatment, *see* 600.5.

### 616.16 Planes and Scrapers

U. S. Gov., Federal Specification GGG-P-436; 1940. Amendment 1; 1944. Planes. Covers ten types—(I) block; (II) bullnose rabbet; (III) circular; (IV) combination; (V) core box; (VI) jack; (VII) jointer; (VIII) match, tongue, and groove; (IX) rabbet; and (X) smooth. Gives requirements for machined surfaces, clamping device, marking, cutter, throat, material, finish, shape, sizes, and dimensions; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification GGG-S-271; 1932. Shaves; Spoke. Covers one type. Gives requirements for component parts, frame, handles, cutters, marking, and dimensions; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Marine Corps Specification, 1918. Scraper; Box.

U. S. Gov., U. S. Army, Medical Dept. Specification 17-188; 1939. Plane; Wood Frame.

*References.*—Carbon-tool steel, *see* 603.32; heat treatment of steel, *see* 600.5.

### 616.17 Saws

U. S. Gov., Dept. of Agriculture, Forest Service. Specification for Saw; Portable Power.

U. S. Gov., Dept. of Agriculture, Forest Service. Specification No. 246. Outfit; Saw-Filing.

U. S. Gov., Dept. of Agriculture, Forest Service. Specification No. 310. Saws; Swedish Buck.

U. S. Gov., Dept. of Agriculture, Forest Service. Specification MSF-309. Saws; Crosscut.

U. S. Gov., Federal Specification GGG-H-101a; 1938. Hand-Saw Sets. Gives requirements for design, anvil, plunger, adjustment, capacity, and marking; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification GGG-S-61a; 1942. Saws. Covers 21 types. Includes back, band (metal-cutting and wood-cutting), buck, butcher, circular, compass, cross-cut, hand cross-cut, hack, rip, hole, keyhole, miter-box, web (felloe), and nest of saws. Gives requirements for material, workmanship, handles, length of cutting edge, set, thickness, screws, nuts, rivets, and details for each type; method of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., Post Office Dept., Div. of Motor Vehicle Service, Bureau of the Fourth Assistant Postmaster General. Specifications for Saws; Band.

U. S. Gov., Treasury Dept., Procurement Div., 422B; 1942. Saws; Woodworking, Motor-Driven, Circular, Overhead Arm. Covers two types and various sizes. Gives requirements for material, construction, safety, gears, column and arm, carriage or ram, motors, motor protection, controllers, cord, grounding tools, instructions, finish, and details of each type; methods of inspection and tests; and packing and marking.

U. S. Gov., Veterans Administration. Specification VA-M-252b; 1941. Saw Blades; Jig or Scroll.

*References.*—Carbon-tool steel, *see* 603.32; heat treatment of steel, *see* 600.5; saw sets for saws, *see* 615.9; hack saws, *see* 615.62.

### 616.18 Glass Cutters

U. S. Gov., Federal Specification GGG-C-751a; 1944. Cutters; Glass, Wheel-Type (for Sheet-Glass and Round-Gage Glass). Covers two types—(I) sheet glass cutters; class A, single, fixed wheel; B, single, renewable wheel, and C, turret head; and (II) gage glass cutters; class A, bar grip handle; and B, plier handle. Gives requirements for material, workmanship, marking, cutting wheels, axles, test requirements, and details for each type and class; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Navy Dept. Specification 41C5e; 1944. Cutters; Gage-Glass.

## 616.2 AWLS, PUNCHES, AND SCREW DRIVERS

### 616.21 Awls

U. S. Gov., Federal Specification GGG-A-891; 1939. Awls. Covers five types—(I) belt, (II) bent-point, (III) brad, (IV) saddlers', and (V) scratch; and six classes for type IV—(A) collar, (B) harness, (C) pad-or-seat, (D) pegging, (E) sewing-and-stitching, automatic, and (F) sewing-and-stitching, common. Gives requirements for material, blades, tolerances, marking, handle, shape, and dimensions; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Veterans Administration. Specification VA-M-264a; 1941. Awls; Scratch.

### 616.22 Punches

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 17-55; 1920. Punch; Revolving, Saddlers'.

U. S. Gov., Veterans Administration. Specification VA-G-351; 1940. Pans; Cake, Aluminum.

U. S. Gov., Veterans Administration. Specification VA-M-236b; 1941. Punch, Belt Revolving Spring; and Extra Tubes.

*References.*—Railway track punches, *see* 616.8; blacksmith punches, *see* 615.13.

### 616.23 Screw Drivers

U. S. Gov., Army-Navy Aeronautical Specification AN-S-30; 1943. Screw Drivers; Cross Pointed.

U. S. Gov., Federal Specification GGG-B-376; 1936. Bits; Screw-Driver. Covers one type. Gives requirements for method of manufacture, shank, hardness, finish, marking, sizes, shape, and tolerances; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Federal Specification GGG-S-121a; 1936. Amendment 2; 1939. Screw-Drivers. Covers eight types—(I) cabinet; (II) close quarter; (III) common; (IV) jewelers'; (V) machinists', extra heavy duty; (VI) offset; (VII) pocket; and (VIII) ratchet. Gives requirements for handles, blades, ferrules, sizes, shape, tolerances, and dimensions; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking. Emergency Alternate Federal Specification E-GGG-S-121A; 1942, (issued by Procurement Div., Treasury Dept., U. S. Gov.) deleted all reference to nickel plating and gave requirements for finish.

## 616.3 LEVELING AND MEASURING TOOLS

### 616.30 General Items

*References.*—Calipers, dividers, dimension gages for metal working, *see* 615.81, 615.82.

### 616.31 Bevels and Miter Boxes

U. S. Gov., Navy Dept. Specification 41B7d; 1943. Bevels.

U. S. Gov., Treasury Dept., Procurement Div., No. 291; 1938. Boxes; Miter. Shall be of the adjustable type, made of high-grade materials. Gives requirements for bed and back, swinging lever, saw guides and posts, length gage, and angle attachment; method of sampling, inspection, and tests; and packaging, packing, and marking.

### 616.32 Levels and Plumbs

U. S. Gov., Federal Specification GGG-L-211; 1936. Amendment 3; 1944. Levels and Plumbs. Covers four types—(I) carpenters', (II) machinists', (III) masons', and (IV) pocket. Gives requirements for frame, vial holders, vials, vial protectors, sizes, shapes, tolerances, and stock; methods of sampling, inspection, and tests; and packaging, packing, and marking. Emergency Alternate Federal Specification E-GGG-L-211; 1942, changed requirements for materials for the various parts.

U. S. Gov., Federal Specification GGG-P-501; 1937. Amendment 1; 1939. Plumb-Bobs. Covers four types—(I) brass (builders' and surveyors'), (II) cast iron, (III) mercury-filled steel, and (IV) solid steel. Gives requirements for marking, size, point, defects, design, finish, and dimensions; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking. Emergency Alternate Federal Specification E-GGG-P-501; 1942, (issued by Procurement Div., Treasury Dept., U. S. Gov.) eliminated all reference to mercury-filled plumb-bobs, brass and nickel plating, and changed requirements for sizes of types I and II.

U. S. Gov., U. S. Army, Corps of Engineers. Specification 42.1-31; 1921. Plumb Bob; Brass, 10-Ounce.

### 616.33 Rules

U. S. Gov., Dept. of Commerce, National Bureau of Standards, H29; 1942. Specifications, Tolerances, and Regulations for Commercial Weighing and Measuring Devices. Linear Measures. Gives detail requirements for measures of length made of metal, wood, and folding types; also allowable tolerances for measures of certain lengths from 6 ft. to 1/2 ft. or less for measures other than tapes of steel, and from 100 to 3 ft. for steel tapes.

U. S. Gov., Federal Specification GGG-R-791; 1933. Amendment 1; 1941. Rules. Covers five types—(A) caliper, (B) carpenters' folding, (C) multiple folding, (D) steel, and (E) tape. Gives requirements for markings, tolerances in widths, and graduations; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking. Emergency Alternate Federal Specification E-GGG-R-791; 1942, (issued by Procurement Div., Treasury Dept., U. S. Gov.) deleted all reference to brass, brass plating, nickel plating, and chromium plating and changed requirements for materials for several parts.

U. S. Gov., U. S. Army, Corps of Engineers. Specification 42-54; 1943. Rule; Steel, Beveled, English and Metric, 50-Inch, Inch and Centimeter Graduations.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2560; 1939. Rule; Ivory.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2714; 1939. Ruler; Wood, Metric.

### 616.34 Squares

U. S. Gov., Federal Specification GGG-S-656; 1941. Squares; Carpenters', Diemakers', and Machinists'. Covers nine types. Gives requirements for sizes, marking, design, graduations, construction, accuracy, interchangeability, and finish; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking. Emergency Alternate Federal Specification E-GGG-S-656; 1943, substituted steel and suitable material for brass.

### 616.35 Tapes

American Transit Assn. Recommended Design for Wheel Circumference Measuring Tape for Contours A, B, C, and D, E115-32; 1932. Gives dimensional drawing of wheel circumference measuring tape for contours. Emergency Revision E115-(Em); 1942, changed requirements to meet demands of the present national emergency.

Tire and Rim Assn., Inc. Agricultural Handbook, 1944. Dimensions of Ball Tapes for Measuring Agricultural Rims Having 5° tapered bead seats, 1944. Gives drawing and table showing nominal rim diameter, specified rim diameter, tape mandrel diameter and tape mandrel circumference for 5/16 in. diameter balls and 5/8 in. diameter balls.

Tire and Rim Assn., Inc. Military Supplement, Nov. 1943. Dimensions of Ball Tapes for Measuring Divided Type Rims or Wheels for Combat Tires. Gives diagram and tables showing dimensions.

Tire and Rim Assn., Inc. Passenger Car Handbook, 1944. Dimensions of Ball Tapes for Measuring Rims Shown in This Handbook Having 5° Tapered Bead Seats.

Tire and Rim Assn., Inc. Truck-Bus Handbook, 1944. Dimensions of Ball Tapes for Measuring Rims Shown in This Handbook Having 5° Tapered Bead Seats. Gives drawing with table showing nominal rim diameter, specified rim diameter, tape mandrel diameter, and tape mandrel circumference for 5/16 in. and 5/8 in. diameter balls.

U. S. Gov., Federal Specification GGG-T-106; 1943. Tapes; Measuring, General-Use. Tapes shall be Type I—linen; type II—steel; and type III—woven, metallic; and of classes and sizes as listed. Covers material, workmanship, marking, graduations and figures,

finish, ribbon, reel, handle, case, accuracy; methods of sampling, inspection, tests; packaging, packing, and marking for shipment.

U. S. Gov., Navy Dept. Specification 41T26; 1940. Tapes; Measuring, Cloth.

U. S. Gov., U. S. Army, Corps of Engineers. Specification 17-173; 1938. Rule; Tape, 6-Foot.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 17-66B; 1927. Measure; Tape.

*References.*—Calibration of engineer and other steel tapes, *see* 916.21; tolerances on standard tapes, *see* 919.1.

## 616.4 HOOKS AND PULLERS

### 616.41 Hooks, for Manual Handling of Commodities

*References.*—Vehicle and harness hooks, *see* 603.57; slip hooks, grab hooks, hoist or sling hooks, bale hooks and box hooks, barrel hooks and stone hoist hooks, hogshead hooks, and can hooks, *see* 603.57.

### 616.42 Nail Pullers

U. S. Gov., Federal Specification GGG-P-791; 1932. Pullers; Nail. Covers one type. Gives requirements for jaws, shanks, rammer, finish, marking, weight, and length; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

*References.*—Pullers for railway track spikes, *see* 616.8.

## 616.5 TOOLS FOR LINE CONSTRUCTION MEN

Assn. of American Railroads, Telegraph and Telephone Section, 1-A-2; 1924. Tools and Equipment Necessary for a General Construction or Repair Gang. Gives general list of requirements for a gang of about 16 men, including tools for a wire stringing gang. Includes hand tools, anvil, belts, auger bits, blocks, boxes, chain, rope, motor and hand car equipment, and materials.

Assn. of American Railroads, Telegraph and Telephone Section, 1-A-68; 1937. Linemen's Climbers, Pads, and Straps. Includes leg iron or shank, gaff or spur, climber pads, and climber straps. Gives dimensional requirements and quality of materials.

U. S. Gov., U. S. Army, Corps of Engineers. Specification 17-129; 1921. Hook; Cant.

U. S. Gov., U. S. Army, Signal Corps. Specification 29-7A; 1940. Climber; Lineman's, Types LC5, LC6, and LC7.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-86A; 1941. Clamp; Type LC-24, Combination Wire and Sleeve.

*References.*—Linemen's safety belts, *see* 069.3, 311.8; rubber lineman's gloves, *see* 203.2; timber tongs, *see* 616.8.

## 616.6 SOIL WORKING TOOLS

### 616.60 General Items

U. S. Gov., Dept. of Agriculture, Forest Service. Specification MSF-385. Wedges; Steel, Falling and Sawing.

U. S. Gov., Dept. of Agriculture, Forest Service. Specification No.386. Wedge; Hardwood Falling.

### 616.61 Bars, Digging and Tamping

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R17-43; 1943. Heavy Forged Hand Tools. This recommendation covers the sizes, types, grades, and finishes of heavy forged hand tools that may be manufactured under the provisions of Schedule IV, Limitation Order L-157, as amended. Gives requirements for various kinds of bars, blacksmiths' anvil tools, hammers, mauls, sledges, hoes, mattocks, picks, railway track tools not elsewhere classified, tongs, miscellaneous forged hand tools, mine blasting hand tools, and mine breast drills.

U. S. Gov., Treasury Dept., Procurement Div., 529a; 1942. Tampers; Asphalt, Concrete, Earth, Etc. Covers one type. Gives requirements for finish, wooden handles, steel pipe handles, head, size, and weight; methods of sampling and inspection; and packaging, packing, and marking.

*References.*—Standard sizes, *see* 616.60; tool steel, *see* 603.32; chisel bars, crow bars, pinch bars, *see* 616.91.

### 616.62 Hoes, Rakes, and Forks

U. S. Gov., Dept. of Agriculture, Forest Service. Specification for Rake; Fire, Lawncomb Type.

U. S. Gov., Dept. of Agriculture, Forest Service. Specification No.283. Rake; Fire, Asphalt Type.

U. S. Gov., Dept. of Agriculture, Forest Service. Specification No. 284. Tool; Rake and Cutting (Council or Rich Type).

U. S. Gov., Dept. of Agriculture, Forest Service. Specification MSF-175. Hoe; Saw-Steel.

U. S. Gov., Dept. of Agriculture, Forest Service. Specification MSF-179. Hoe; Hazel.

U. S. Gov., Dept. of Agriculture, Forest Service. Specification MSF-353. Tool; McLead (Solid-Head Type).

U. S. Gov., Dept. of Agriculture, Forest Service. Specification MSF-355. Tool; Pulaski (Hoe and Ax).

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R17-43; 1943. Heavy Forged Hand Tools. This recommendation covers the sizes, types, grades, and finishes of heavy forged hand tools that may be manufactured under the provisions of Schedule IV, Limitation Order L-157, as amended. Gives requirements for various kinds of bars, blacksmiths' anvil tools, hammers, mauls, sledges, hoes, mattocks, picks, railway track tools not elsewhere classified, tongs, miscellaneous forged hand tools, mine blasting hand tools, and mine breast drills.

U. S. Gov., Federal Specification GGG-F-601; 1933. Forks; Hay and Manure. Covers four types—(I) three-tine hay (bent handle and straight handle), (II) four-tine manure (long handle and D-handle), and (III) five-tine manure (long handle and D-handle), and (IV) six-tine manure (long handle and D-handle); and one grade. Gives requirements for marking, pattern, construction, shape of tines, shape of handles, appearance, finish, and tolerances; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Federal Specification GGG-H-496; 1941. Hoes; Garden and Mortar. Covers three types—(I) garden, (II) mortar, and (III) mortar mixing. Gives requirements for material, design, construction, and dimensions; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification GGG-H-506a; 1942. Hoes; Mattocks, and Picks. Covers three classes of hoes, six classes of mattocks, and eleven classes of picks. Gives requirements for material, workmanship, design, sizes, hardness, eyes, handles, marking, finish, and construction; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification GGG-R-96; 1941. Rakes; Hand. Covers one grade and four types—(I) asphalt (tar), (II) garden, (III) lawn. and (IV) road. Gives requirements for material, workmanship, and measurements; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Treasury Dept., Procurement Div., 462B; 1943. Forks; Mill, Heavy. Shall be heavy type, with bent handle, D-handle grip, and tines that are oval shape in cross-section. Gives requirements for fork head, handles, ferrule, cap, fastening of handle, strength, finish, and trade mark; methods of sampling, inspection. and tests; and packing and marking.

U. S. Gov., Treasury Dept., Procurement Div., 492b; 1943. Forks; Spading. Covers two types of four tine forks—(I) heavy and (II) light. Gives requirements for fork head, handles, ferrule, cap, fastening of handle, rivets, strength, finish, and manufacturers' name or trade mark; methods of sampling, inspection, and tests; and packaging, packing, and marking.

*References.*—Standard sizes, *see* 616.60; wooden handles, *see* 428.1; tool steel, forged steel, *see* 603.22, 611.51.

### 616.63 Scoops, Shovels, and Spades

Assn. of American Railroads, Telegraph and Telephone Section, 1-A-88; 1942. Long Handle Shovels. For use in the communication plant. Gives general requirements, material and workmanship, dimensions, identification, inspection and tests, packing, marking, and warranty. Emergency Alternate 1-A-88EA; 1943, changed 1-A-88, in order to conserve critical and scarce materials during the war period.

Assn. of American Railroads, Telegraph and Telephone Section 1-A-89; 1942. Digging Spoons. For use in the communication plant. Gives general requirements, material and workmanship, dimensions, identification, inspection and tests, packing, marking, and warranty. Emergency Alternate 1-A-89EA; 1943, changed 1-A-89, in order to conserve critical and scarce materials during the war period.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R48-42; 1942. Shovels, Spades, Scoops, and Telegraph Spoons. This recommendation establishes a list of standard types and sizes of shovels, spades, scoops, and telegraph spoons, with dimensions of blade, type of handle, type of back, and kind of finish designated; to conform with the requirements of Schedule I to Limitation Order L-157, Hand Tools Simplification (U. S. Gov., War Production Board).

U. S. Gov., Federal Specification GGG-S-326; 1940. Amendment 3; 1944. Shovels (Scoops, Spades, and Spoons). Covers twelve types. Gives requirements for material, workmanship, construction, blade, finish, handles, shapes, and details for each type; methods of sampling, inspection, and tests; and packing and marking for shipment.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 17-172; 1938. Shovel; Intrenching, M-1910.

*References.*—Wooden handles, *see* 428.1.

### 616.64 Picks and Mattocks

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R17-43; 1943. Heavy Forged Hand Tools. This recommendation covers the sizes, types, grades, and finishes of heavy forged hand tools that may be manufactured under the provisions of Schedule IV, Limitation Order L-157, as amended. Gives requirements for various kinds of bars, blacksmiths' anvil tools, hammers, mauls, sledges, hoes, mattocks, picks, railway track tools not elsewhere classified, tongs, miscellaneous forged hand tools, mine blasting hand tools, and mine breast drills.

U. S. Gov., Federal Specification GGG-H-506a; 1942. Hoes, Mattocks, and Picks. Covers three classes of hoes, six classes of mattocks, and eleven classes of picks. Gives requirements for material, workmanship, design, sizes, hardness, eyes, handles, marking, finish, and construction; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 17-171; 1937. Pick Mattock; Intrenching, M-1910, With Handle.

*References.*—Standard sizes, *see* 616.60; tool steel, forged steel, *see* 603.22, 611.51; wooden handles, *see* 428.1, 428.20.

## 616.7 HARVESTING, PRUNING, AND TRIMMING TOOLS

### 616.71 Sickles and Scythes

U. S. Gov., Federal Specification GGG-H-608; 1944. Hooks; Grass (Sickles). Covers two types—(I) scythe and (II) sickle; and two classes—(A) heavy and (B) medium. Gives requirements for sizes, long handle grass hooks, material, workmanship, hardness, toughness, hand grips and handles, hand grip clearance, cutting edge and point, finish, marking, and details for each type and class; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification GGG-S-186; 1944. Scythes and Snaths. Covers scythes in two types—(I) one-piece blade construction and (II) three-piece welded blade construction; three classes—(A) bush, (B) grass, and (C) weed; and various sizes. Snaths are—class A, bush; and class B, grass and weed. Gives requirements for material, workmanship, hardness, toughness, finish, marking, and details for each type, class, and size; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 17-177; 1944. Hook; Grass.

### 616.72 Shears, Grass and Hedge Cutting

### 616.73 Lawn Mowers

U. S. Gov., Federal Specification 00-M-671a; 1939. Mowers; Lawn, Hand. Covers lawn mowers of one type, commercially designated as double-drive, direct geared; class A, high wheel (10-in. diameter); and class B, low-wheel (8-in. diameter), 14-, 16-, 18-, or 20-in. sizes. Furnished in "regular" and "unbreakable" grades. Gives detail requirements; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Federal Specification 00-M-681; 1937. Amendment 2; 1944. Mowers; Lawn, Power. Covers four types—(I) rotating-reel, (II) rotary flat-knife, (III) sickle-bar, and (IV) combination. Gives requirements for classes, grades, sizes, material and workmanship, condition, construction, service requirements, balance, engine, clutches, controls, handle frame, lubrication, sulky, finish, tools, and details for each type, class, grade, and size; methods of sampling, inspection, and tests; and packaging, packing, and marking.

### 616.74 Tree Trimming Tools

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 17-134A; 1942. Trimmer; Tree.

## 616.8 TRACK TOOLS

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering, 1944. Specifications and Plans for Track Tools. Gives requirements for workmanship and finish, marking, inspection and tests, acceptance, shipment or delivery, and manufacturer's guarantee; and drawings. Includes clay pick, tamping pick, spike mauls, track wrenches, lining bar, rail tongs, tie tongs, timber tongs, spike puller, rail fork, claw bar, track adze, carpenters adze, sledge, tamping bar, chisel, tie plug punch, track gage, track shovel, ballast fork, and track tool handles.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R17-43; 1943. Heavy Forged Hand Tools. This recommendation covers the sizes, types, grades, and finishes of heavy forged hand tools that may be manufactured under the provisions of Schedule IV, Limitation Order L-157, as amended. Gives requirements for various kinds of bars, blacksmiths' anvil tools, hammers, mauls, sledges, hoes, mattocks, picks, railway track tools not elsewhere classified, tongs, miscellaneous forged hand tools, mine blasting hand tools, and mine breast drills.

U. S. Gov., Federal Specification GGG-H-86; 1942. Amendment 2; 1943. Hammers, Mauls, and Sledges. Covers 24 types of hammers, three types of mauls, and two types of sledges. Gives requirements for materials, workmanship, weight, forged heads, shape of head, striking faces, peens, eyes, handles, wedges, steel heads, hardness, finishes, corrosion protective coating, marking, and details for each type; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

*References.*—Clay pick and tamping pick, *see* 616.64; track wrenches, *see* 615.42; lining bar, claw bar, *see* 616.91; track adz, *see* 616.11; double faced sledge, *see* 615.22; tamping bars, *see* 616.61; track gage, *see* 615.82; tool handles, *see* 428.20, 428.29.

## 616.9 MISCELLANEOUS HAND TOOLS OTHER THAN METAL-WORKING

### 616.91 Jacks, Levers, and Leverage Bars

American Society of Mechanical Engineers. Sponsored by Bureau of Yards and Docks, U. S. Navy Dept. American Standards Assn., B 30.1-1943. Safety Code for Jacks. Applies to the construction and use of all portable manually operated jacks except those which are supplied with automobiles as part of their standard tool equipment. Covers purpose, definitions, rating, design and construction, and operating rules.

U. S. Gov., Army Air Forces. Specification 40281-D (5); 1945. Jack; Axle and Folding Tripod, General Specification for.

U. S. Gov., Army Air Forces. Specification 40411 (1); 1942. Jack; 5-Ton Axle.

U. S. Gov., Army Air Forces. Specification 40412 (2); 1943. Jack; 10-Ton Axle.

U. S. Gov., Army Air Forces. Specification 40413 (1); 1942. Jack; 17-Ton Axle.

U. S. Gov., Army Air Forces. Specification 40415-B; 1944. Jack; Tripod, 6 Ton.

U. S. Gov., Army Air Forces. Specification 40417-C; 1945. Jack; Tripod, 20 Ton.

U. S. Gov., Army Air Forces. Specification 40606-A; 1943. Jack; Ball Gun Turret Dolly.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R97-42; 1942. Bell-Bottom Screw Jacks. Establishes a list of 27 standard sizes—stand heights from 6 to 24 in., inclusive, and screw sizes from 1 to 3 in., inclusive.

U. S. Gov., Federal Specification GGG-B-101; 1932. Amendment 3; 1944. Bars; Chisel, Crow, Pinch, and Wrecking. Covers five types—(A) chisel; (B) crow, pinch point; (C) pinch, offset; (D) wrecking, gooseneck, claw and pinch point; and (E) wrecking, offset, claw and pinch point. Gives requirements for material, workmanship, marking, tolerances, and details for each type; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification GGG-J-51a; 1942. Amendment 1; 1944. Jacks. Covers ten types, including level-geared screw jacks, ratchet-lever jacks, planer or leveling jacks, screw jacks, automobile and motor truck jacks, and hydraulic jacks. Gives requirements for material, workmanship, design, warning device, capacities, finish and marking, top surface, bushings, levers, tolerances, hydraulic fluid, illustrations, and details for each type; methods of sampling, inspection, and tests; and packaging, packing, marking for shipment.

U. S. Gov., Post Office Dept., Div. of Motor Vehicle Service, Bureau of the Fourth Assistant Postmaster General. Specifications for Jacks; Garage, Hydraulic.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 17-195; 1940. Jack; Wagon.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-89-B; 1931. Jack, Type LC-13; and Axle, Type LC-31; for Supporting Cable Reels.

*References.*—Methods of testing, and general requirements for metals, *see* 600.1; tool steel, forged steel, *see* 603.32, 611.51; standard sizes, *see* 616.60.

## 616.92 Mallets

U. S. Gov., Marine Corps Specification, 1944. Mallet; Long Handle.

## 616.93 Trowels

U. S. Gov., Federal Specification GGG-T-671; 1932. Trowels; Plastering, Cement, Brick, and Pointing. Covers four types—(A) plastering, (B) cement, (C) brick, and (D) pointing. Gives requirements for marking, handles, tolerances, blade, and dimensions; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

## 616.99 Hand Tools Not Elsewhere Classified

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Specifications for Packing Tools for Journal Boxes. Dimensional drawings of packing iron or horn, and packing hook made of spring steel.

U. S. Gov., Army-Navy Aeronautical Specification AN-T-42-2; 1944. Tools; Special Airframe and Airframe Accessories, Hand.

U. S. Gov., Dept. of Agriculture, Forest Service. Specification for Cache; Fire-Tool, 100-Man, Portable.

U. S. Gov., Dept. of Agriculture, Forest Service. Specification No. 262. Peavy.

U. S. Gov., Dept. of Agriculture, Forest Service. Specification No. 334. Swatter; Fire.

U. S. Gov., Dept. of Agriculture, Forest Service. Specification No. 352. Tool; Brown.

U. S. Gov., Federal Specification W-P-796; 1943. Pullers; Fuse. For use as tools for gripping cartridge fuses while they are being removed or installed and to serve as safeguards against shock by obviating the necessity for placing the hands near live parts. Covers one type; two classes—(A) for shipboard use or for use in damp places, and (B) for land use in dry places; and four sizes. Gives requirements for material, workmanship, design, insulating material, mechanical strength, identification, and details for each class and size; methods of sampling, inspection, and test; and packaging, packing, and marking.

U. S. Gov., Federal Specification GG-B-591; 1944. Borers; Cork. Covers two types—(I) without handles, and (II) with handles; two grades—(A) brass, and (B) stainless steel. Gives requirements for brass, steel, workmanship, tube, cleaning rod, handle, sizes, sets, finish, corrosion, and marking; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification QQ-W-348; 1939. Wire; Fish (for Electricians' and Plumbers' Use). Covers flat, oil-tempered, steel spring wire, in coils of 25, 50, 75, 100, 150, or 200 ft. Gives chemical composition, sizes, physical properties, and permissible variations; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Federal Specification GGG-I-671; 1942. Irons; Calking, Wood. Covers eleven types and classes. Gives requirements for material, workmanship, sets, creases, shanks, hardness, finish, marking, shapes, and sizes; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., Marine Corps Specification, 1943. Hook; Box.

U. S. Gov., Marine Corps Specification, 1928. Iron; Branding, "U.S.M.C.".

U. S. Gov., Marine Corps Specification, 1938. Sword and Scabbards (Noncommissioned Officers).

U. S. Gov., Marine Corps Specification, 1933. Whistle; Complete With Chain (Noncommissioned Officer's).

U. S. Gov., Navy Dept. Specification 41C23c; 1939. Tools, Calking; Chisels; Chisel Blanks; for Metal.

U. S. Gov., Navy Dept. Specification 40T2d; 1936. Tools; Pneumatic, Portable.

U. S. Gov., Navy Dept. Specification 41C24; 1935. Combs; Graining.

U. S. Gov., Navy Dept. Specification 41F7a; 1944. Fids; Hand, Sailmakers'.

U. S. Gov., Navy Dept. Specification 41L2a; 1924. Ladles; Deck-Paying.

U. S. Gov., Navy Dept. Specification 41N2b; 1938. Needles; Sailmakers'.

U. S. Gov., Navy Dept. Specification 41P25a; 1941. Prickers; Sailmakers'.

U. S. Gov., Navy Dept. Specification 41S28a; 1938. Shears; Sailmakers' or Tailors'

U. S. Gov., Navy Dept. Specification 41S39a; 1944. Syringes; Oil.

U. S. Gov., Navy Dept. Specification 41T21a; 1939. Tools; Extracting, Stuffing-Box-Packing.

U. S. Gov., Navy Dept. Specification 41T27; 1942. Tools; Nonsparking.

U. S. Gov., Navy Dept. Specification 57C58; 1944. Corkscrews; Automatic, With Crown-Puller.

U. S. Gov., Navy Dept. Specification 64T5b; 1943. Tongs; Ice.

U. S. Gov., Navy Dept. Specification 74W1; 1944. Whistles; Signaling.

U. S. Gov., Treasury Dept., Procurement Div., 232A; 1939. Drills; Pneumatic, Rock, Hand-Held. Covers one type, in two sizes—approximately 45 lb. and 58 lb. Gives requirements as to construction, valves, chuck, rotation, blowing means, handle, lubrication, weight, and bore and stroke; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., Treasury Dept. Procurement Div., 545A; 1942. Cleaners; Flexible, With Auger Heads. Covers two types—(I) multi-coiled wire construction, and (II) single coiled wire construction, for water closets and drain pipes. Gives requirements for wire member, handle, auger head, and tabular guide for each type; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., U. S. Army, Corps of Engineers. Specification 17-146; 1924. Iron; Calking, Set of 3, Nos. 1, 2, and 3 Crease.

U. S. Gov., U. S. Army, Corps of Engineers. Specification 39-6; 1943. Wringer; Roller Type, Rubber, 42-Inch.

U. S. Gov., U. S. Army, Corps of Engineers. Specification 49-13; 1941. Crimper; Cap, With Fuze-Cutter Combination.

U. S. Gov., U. S. Army, Medical Dept. Specification 17-184; 1939. Presser; Cork.

U. S. Gov., U. S. Army, Medical Dept. Specification 17-185; 1939. Corkscrew.

U. S. Gov., U. S. Army, Medical Dept. Specification 17-186; 1939. Borer; Cork.

U. S. Gov., U. S. Army, Medical Dept. Specification 17-187; 1939. Extractor; Cork.

U. S. Gov., U. S. Army, Medical Dept. Specification 17-189; 1939. Opener; Box.

U. S. Gov., U. S. Army, Medical Dept. Specification 17-190; 1939. Screw; Bench, Iron.

U. S. Gov., U. S. Army, Medical Dept. Specification 28-37; 1939. Corkscrew; Folding.

U. S. Gov., U. S. Army, Medical Dept. Specification 28-83; 1939. Tongs; Ice.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 17-74; 1921. Whistle; Company and Battalion Commander, Thunderer, and Boatswain.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 17-163A; 1938. Iron; Branding.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 17-174; 1938. Stencil-Outfit; Complete, With Figures and Letters, 1/2-Inch and 1 Inch.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 17-175; 1939. Set for Snap Fasteners and Eyelets.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 17-183; 1941. Holder; Tool, Hollow Handle, With Tools.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 17-198; 1942. Clamp; Saddlers', Stitching.

U. S. Gov., Veterans Administration. Specification VA-M-154a; 1938. Faucet Refacing Tool.

*References* —Spring steel, *see* 603.33.

## 617. FURNITURE HARDWARE, BUILDERS HARDWARE, AND PLUMBING

### 617.0 GENERAL ITEMS

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Commercial Standard CS22-40; 1940. Builders' Hardware. This standard records standard nomenclature, definitions, finishes, handing rules, mortises, and general practices for builders' hardware (nontemplate) as regards domestic use. Initiated by manufacturers, represented by Manufacturers Advisory Committee on Standardization of Builders' Hardware.

### 617.1 HANGERS, HINGES, HASPS, AND STAPLES

#### 617.11 Sash-Pole Hangers, Hooks, and Sash-Pole Plates

U. S. Gov., Federal Specification FF-H-111; 1933. Hardware; Builders', Shelf, and Miscellaneous. Includes plates. Covers kick, letter box, and sash pull plates. Gives requirements for material, finish, design, and dimensions for each type. Emergency Alternate Federal Specification E-FF-H-111, July 1943, changed requirements in order to conserve metal, especially bronze.

U. S. Gov., Federal Specification FF-H-111; 1933. Hardware; Builders', Shelf and Miscellaneous. Includes pole hangers. Gives dimensional requirements for two types of hangers made of bronze and case iron. Emergency Alternate Federal Specification E-FF-H-111, July 1943, changed requirements in order to conserve metal, especially bronze.

U. S. Gov., Federal Specification FF-H-111; 1933. Hardware; Builders', Shelf and Miscellaneous. Includes poles, sash. Gives requirements for oak sash pole chucked to fit sash pole hook and for bronze hook on handle of japanned or enameled steel tubing. Emergency Alternate Federal Specification E-FF-H-111, July 1943, changed requirements in order to save steel for handles and bronze for hooks.

*References.*—Gray cast iron, *see* 611.11; cast bronze, *see* 646.41.

#### 617.12 Hinges

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Commercial Standard CS9-33; 1933. Builders' Template Hardware. This standard covers dimensions, clearances, tolerances, screw sizes, and varieties of template hinges and cylinder-lock parts for application to hollow metal doors. Includes dimensional diagrams for cylinder locks and various sizes of template butt hinges.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Commercial Standard CS22-40; 1940. Builders' Hardware (Nontemplate). Includes hands of casement-sash trim, plates for double-acting floor hinges, and loose-joint butt hinges. Recommends sizes for nontemplate butt hinges, number of hinges, paint clearances, weights and thicknesses, definitions, architectural details and lists standard finishes.

U. S. Gov., Federal Specification FF-H-111; 1933. Hardware; Builders', Shelf and Miscellaneous. Includes blind hardware. Gives requirements for material, finish, design, and sizes of hinges, fasteners, and turnbuckles for blinds. Emergency Alternate Federal Specification E-FF-H-111, July 1943, changed requirements in order to conserve metal.

U. S. Gov., Federal Specification FF-H-116b; 1940. Amendment 1; 1945. Hardware; Builders', Hinges (Nontemplate). Covers various types and grades of hinges and spring hinges, including full mortise, full surface, half surface, garage, scuttle, spring, strap, and tee. Gives dimensional and detail requirements, including illustrations; requirements for material and workmanship; tables of expected frequency of operation of doors; standard hardware finishes; type numbers of regular weight and extra heavy butt hinges; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment. Emergency Alternate Federal Specification E-FF-H-116B, July 1943, changed requirements for material and finish in order to conserve metal, especially bronze.

U. S. Gov , Federal Specification FF-H-136; 1936. Hardware and Fittings; (for) Lavatory Partitions and Inclosures. Covers hardware and fittings for lavatory stall and shower partitions and inclosures of marble, slate, or glass. Types for marine use are not included. Includes bolts, latches, screw fastenings, partition fittings, gravity and spring hinges, hooks,

top and bottom partition standards, strikes, top rail and shower curtain rods and fittings. Gives requirements covering dimensions, illustrations, composition of material used, workmanship, fastenings, finish, and details; methods of inspection and tests; and packing and marking. Emergency Alternate Federal Specification E-FF-H-136, July 1943, changed requirements for material and finish in order to conserve metal, especially bronze.

U. S. Gov., Navy Dept. Specification 42H34f; 1944. Hinges; Butt.

U. S. Gov., Navy Dept. Specification 42H35b; 1944. Hinges (Butts); Fast-Pin, Ball-Tipped, for Airtight Metal Joiner Doors.

*References.*—Cast iron, malleable iron, *see* 611.11, 611.21; wrought-iron plates, *see* 604.14; cast brass, *see* 645.21; cast and wrought bronze, *see* 646.41, 646.21; nickel plating, zinc coatings, *see* 600.3.

### 617.13 Hasps and Staples

U. S. Gov., Federal Specification FF-H-111; 1933. Hardware; Builders', Shelf and Miscellaneous. Includes hasps, hinge. Gives sizes of hasps, sizes of screws, and minimum thickness of metal for open and safety patterns. Emergency Alternate Federal Specification E-FF-H-111, July 1943, changed requirements in order to conserve metal.

*References.*—Zinc coatings, *see* 600.3.

## 617.2 LOCKS, LATCHES, AND LOCK PARTS

### 617.21 Locks

Underwriters' Laboratories, Inc. Standards for Elevator Electric Contacts and Elevator Hoistway Door Interlocks, 1942. Covers elevator electric contacts for hoistway and car doors or gates and embodies the requirements of the Safety Code for Elevators, Dumbwaiters and Escalators, ASA17.1-1937. Includes requirements for design, construction, and performance tests.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Commercial Standard CS9-33; 1933. Builders' Template Hardware. This standard covers dimensions, clearances, tolerances, screw sizes, and varieties of template hinges and cylinder lock parts for application to hollow metal doors. Includes dimensional diagrams for standard fronts and strikes, and for various sizes of template butt hinges.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Commercial Standard CS22-40; 1940. Builders' Hardware (Nontemplate). Includes rules for hand of locks; dimensions for regular and special backsets for mortise door locks and latches; recommendations for master keying standard size and larger cylinders, lock fronts, flush bolts, definitions, architectural details, and lists standard finishes.

U. S. Gov., Federal Specification FF-H-106; 1933. Hardware; Builders', Locks and Lock Trim. Includes bit key and cylinder locks, latches, bolts, cylinder collars, escutcheons, handles, knobs, plates, pulls, roses, and dummy trim. Hardware for marine use is not included. Covers general requirements relating to dimensions, illustrations, construction, fastenings, finish, chromium and nickel plating, zinc and cadmium coatings, japan coating, lacquer, and material and workmanship; method of inspection and test; and packaging, packing, and marking. Emergency Alternate Federal Specification E-FF-H-106, June 1943, changed requirements for material and finish in order to conserve metal, especially bronze.

U. S. Gov., Federal Specification FF-P-101b; 1944. Padlocks. Covers eight types of padlocks. Gives requirements for types and sizes, material, workmanship, illustrations, tolerance on size and weight, finish, keys, marking, duplicate keys and change numbers, solid cases, lock mechanism, chain, tests, and details; methods of sampling, inspection, and tests; packaging, packing, and marking for shipment.

U. S. Gov., Navy Dept. Specification 42L6a; 1923. Locks; Desk (Roll-Top).

U. S. Gov., Navy Dept. Specification 42L13f; 1944. Locks; Door and Drawer, Metal and Wood (Shipboard Use).

U. S. Gov., Navy Dept. Specification 42 L 28c; 1944. Locks; Combination, Safe-Locker.

U. S. Gov., Navy Dept. Specification 42L29b; 1944. Locks; Latch, Upright.

U. S Gov., Navy Dept. Specification 42P12g; 1944. Padlocks.

*References.*—Locks for safes, *see* 613.5; desk locks, *see* 613.4; padlock eyes, *see* 617.23; bolt locks, *see* 617.61; methods of testing, general requirements for metals, *see* 600.1; cast iron, *see* 611.11, 611.21; cast bronze, *see* 646.41.

### 617.22 Latches

U. S. Gov., Federal Specification FF-H-106; 1933. Hardware; Builders', Locks and Lock Trim. Includes bit key and cylinder locks, latches, bolts, cylinder collars, escutcheons, handles, knobs, plates, pulls, roses, and dummy trim. Hardware for marine use is not included. Covers general requirements relating to dimensions, illustrations, construction, fastenings, finish, chromium and nickel plating, zinc and cadmium coatings, japan coating, lacquer, and material and workmanship; method of inspection and test; and packaging, packing, and marking. Emergency Alternate Federal Specification E-FF-H-106, June 1943, changed requirements for material and finish in order to conserve metal, especially bronze.

U. S. Gov., Federal Specification FF-H-111; 1933. Hardware; Builders', Shelf and Miscellaneous. Includes latches. Covers one type of secret gate latch made of cast bronze, single-acting; and three types of thumb latches made of wrought steel, zinc-coated. Gives requirements for size, design, and finish. Emergency Alternate Federal Specification E-FF-H-111, July 1943, changed requirements in order to conserve metal, especially bronze.

U. S. Gov., Navy Dept. Specification 42L20c; 1944. Latches; Door (Metal), Rim.

*References.*—Methods of testing, general requirements for metals, *see* 600.1; cast iron, *see* 611.11, 611.21; cast bronze, *see* 646.41; zinc coatings and tests, *see* 600.3.

### 617.23 Lock Parts

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Commercial Standard CS9-33; 1933. Builders' Template Hardware. This standard covers dimensions, clearances, tolerances, screw sizes, and varieties of template hinges and cylinder lock parts for application to hollow metal doors. Includes dimensional

diagrams for standard fronts and strikes, and for various sizes of template butt hinges.

U. S. Gov., Federal Specification FF-H-106; 1933. Hardware; Builders', Locks and Lock Trim. Includes bit key and cylinder locks, latches, bolts, cylinder collars, escutcheons, handles, knobs, plates, pulls, roses, and dummy trim. Hardware for marine use is not included. Covers general requirements relating to dimensions, illustrations, construction, fastenings, finish, chromium and nickel plating, zinc and cadmium coatings, japan coating, lacquer, and material and workmanship; method of inspection and test; and packaging, packing, and marking. Emergency Alternate Federal Specification E-FF-H-106, June 1943, changed requirements for material and finish in order to conserve metal, especially bronze.

*References.*—Knobs and handles, *see* 617.31, 617.32; methods of testing, general requirements for metals, *see* 600.1; zinc coatings and tests, *see* 600.3; cast bronze, *see* 646.41.

## 617.3 KNOBS, HANDLES, AND PULLS

### 617.31 Door Knobs

U. S. Gov., Federal Specification FF-H-106; 1933. Hardware; Builders', Locks and Lock Trim. Includes bit key and cylinder locks, latches, bolts, cylinder collars, escutcheons, handles, knobs, plates, pulls, roses, and dummy trim. Hardware for marine use is not included. Covers general requirements relating to dimensions, illustrations, construction, fastenings, finish, chromium and nickel plating, zinc and cadmium coatings, japan coating, lacquer, and material and workmanship; method of inspection and test; and packaging, packing, and marking. Emergency Alternate Federal Specification E-FF-H-106, June 1943, changed requirements for material and finish in order to conserve metal, especially bronze.

### 617.32 Door and Drawer Handles

*References.*—Door locks and handles for automobiles, *see* 722.33; methods of testing, general requirements for metals, *see* 600.1; cast bronze, *see* 646.41; door and drawer pulls, *see* 617.33.

### 617.33 Door and Drawer Pulls

U. S. Gov., Federal Specification FF-H-111; 1933. Hardware; Builders', Shelf and Miscellaneous. Includes pulls. Covers various types of door, drawer, and knob pulls made of cast bronze and steel. Gives dimensions and drawings for the several types. Emergency Alternate Federal Specification E-FF-H-111, July 1943, changed requirements admitting use of plastic, in order to conserve metal, especially bronze.

*References.*—Cast bronze, *see* 646.41; cast iron, *see* 611.11, 611.21; door and drawer handles, *see* 617.32.

### 617.34 Push and Kick Plates and Bars

U. S. Gov., Federal Specification FF-H-111; 1933. Hardware; Builders', Shelf, and Miscellaneous. Includes bars. Gives requirements for material, finish, design, and dimensions for seven types of push and grab bars for single- and double-acting doors. Similar requirements are also given for door or window-guard bars and clothes-hanger bars. Emergency Alternate Federal Specification E-FF-H-111, July 1943, changed requirements in order to conserve metal, especially bronze.

U. S. Gov., Federal Specification FF-H-111; 1933. Hardware; Builders', Shelf and Miscellaneous. Includes plates. Covers kick, letter box, and sash pull plates. Gives requirements for material, finish, design, and dimensions for each type. Emergency Alternate Federal Specification E-FF-H-111, July 1943, changed requirements in order to conserve metal, especially bronze.

*References.*—Cast bronze, *see* 646.41; bronze plates and sheets, *see* 646.21; bronze bars and rods, *see* 646.12, 646.31.

### 617.35 Sash Lifts

U. S. Gov., Federal Specification FF-H-111; 1933. Hardware; Builders', Shelf and Miscellaneous. Includes lifts. Gives requirements for material, design, finish, and dimensions for various types of lifts including hook sash, flush sash, bar sash, and screen. Emergency Alternate Federal Specification E-FF-H-111, July 1943, changed requirements in order to conserve material, especially bronze.

*References.*—Methods of testing, general requirements for metals, *see* 600.1; cast bronze, *see* 646.41.

## 617.4 CHECKS, CATCHES, AND FASTENERS

### 617.41 Door Closers and Checks

American Hospital Assn., 4-22. Door Closers; Builders' Hardware. Covers mechanical devices for automatically closing and controlling the action of swinging doors by means of a suitable combination of springs and liquid- or air-controlled checks. Based on U. S. Gov., Federal Specification FF-H-121a for Hardware, Builders'; Door-Closers, referred to below.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Commercial Standard CS22-40; 1940. Builders' Hardware (Nontemplate). Recommended applications for six sizes of overhead door closers, checking floor hinge marking, applicable to Federal Specification FF-H-121.

U. S. Gov., Federal Specification FF-H-121a; 1937. Hardware, Builders'; Door Closers. Covers mechanical devices for automatically closing and controlling the action of swinging doors by means of a suitable combination of springs and liquid- or air-controlled checks. Gives requirements for types and sizes, material and workmanship, illustrations, fastenings, checking fluid, marking of door closers, and details; methods of inspection and test; and packaging, packing, and marking. Emergency Alternate Federal Specification E-FF-H-121a, July 1943, changed requirements for material and finish in order to conserve metal, especially bronze.

*References.*—Cast bronze, *see* 646.41; cast iron, *see* 611.11; cast brass, *see* 645.21; checking floor hinges, *see* 617.12.

### 617.42 Catches

U. S. Gov., Federal Specification FF-H-111; 1933. Hardware; Builders', Shelf and Miscellaneous. Includes catches. Gives requirements for material, finish, design, and various sizes of elbow, friction, cupboard, screen door, and transom catches. Emergency Alternate Federal Specification E-FF-H-111, July

1943, changed requirements in order to conserve metal, especially bronze.

U. S. Gov., Navy Dept. Specification 42C11c; 1943. Catches; Cupboard or French-Window.

*References.*—*See* references under 617.41.

### 617.43 Door, Casement, and Sash Fasteners

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Commercial Standard CS22-40; 1940. Builders' Hardware (Nontemplate). Includes casement sash trim, exit bolts, push buttons; gives standard nomenclature, definitions, finishes, handing rules, mortises, and general practices for builders' hardware (nontemplate) as regards domestic use.

U. S. Gov., Federal Specification FF-H-111; 1933. Hardware; Builders', Shelf and Miscellaneous. Includes adjusters. Gives requirements for material, finish, design, lengths, and sizes of rods and bases and other features of casement and window stop adjusters. Emergency Alternate Federal Specification E-FF-H-111, July 1943, changed requirements in order to conserve metal, especially bronze.

U. S. Gov., Federal Specification FF-H-111; 1933. Hardware; Builders', Shelf and Miscellaneous. Includes blind hardware. Gives requirements for material, finish, design, and sizes of hinges, fasteners, and turnbuckles for blinds. Emergency Alternate Federal Specification E-FF-H-111, July 1943, changed requirements in order to conserve metal.

U. S. Gov., Federal Specification FF-H-111; 1933. Hardware; Builders', Shelf and Miscellaneous. Includes fasteners. Gives requirements for material, finish, design, and dimensions for fasteners used for casement, cellar window, door, sash, scuttle, and storm sash. Emergency Alternate Federal Specification E-FF-H-111, July 1943, changed requirements in order to conserve metal, especially bronze.

U. S. Gov., Navy Dept. Specification 42L25e; 1944. Locks; Sash and Blind.

*References.*—Chain for fasteners, *see* 603.56; *see* references under 617.41.

### 617.44 Door Holders and Stops

U. S. Gov., Federal Specification FF-H-111; 1933. Hardware; Builders', Shelf and Miscellaneous. Includes door holders and stops. Gives requirements for material, finish, design, and sizes of several types of door holders and stops including garage doors. Emergency Alternate Federal Specification E-FF-H-111, July 1943, changed requirements in order to conserve metal, especially bronze.

*References.*—*See* references under 617.41.

## 617.5 TRANSOM AND SASH DEVICES

U. S. Gov., Federal Specification FF-H-111; 1933. Hardware; Builders', Shelf and Miscellaneous. Includes adjusters, casement and window stop; transom lifters, 16 types; operators, sash, scuttle, skylight, and transom types; pivots, sash or transom; sash pulleys; sash cord irons; and sash weights. Gives requirements for material, workmanship, finish, design, dimensions, other details, and drawings of each item. Emergency Alternate Federal Specification E-FF-H-111, July 1943, changed requirements in order to conserve critical metals.

*References.*—Sash pull plates, *see* 617.11; sash lifts, *see* 617.35; sash chains, *see* 603.56; window spring bolts, *see* 617.61; sash fasteners, *see* 617.43; transom catches, *see* 617.42; sash pulleys, *see* 617.9; transom eyes, *see* 617.11.

## 617.6 BOLT LOCKS, BRACKETS, AND HOOKS

### 617.61 Bolt Locks

U. S. Gov., Federal Specification FF-H-111; 1933. Hardware; Builders', Shelf and Miscellaneous. Includes bolts. Covers barrel, cane, chain, cremone, espagnolette, flush, foot, garage door, lavatory door, mortise, neck, square, surface, and window spring bolts. Gives requirements for iron, steel, brass, or bronze; and gives dimensional requirements, design, and finish for the various sizes. Emergency Alternate Federal Specification E-FF-H-111, July 1943, changed requirements in order to conserve metal, especially bronze.

*References.*—Cast brass, *see* 645.21; cast bronze, *see* 646.41; cast iron, *see* 611.11, 611.21; nickel plating and zinc coatings, *see* 600.3; nickel bronze, *see* 655.3.

### 617.62 Brackets, Handrail and Shelf

U. S. Gov., Dept. of Agriculture, Forest Service. Specification No. 65. Brackets; Ax and Shovel.

U. S. Gov., Federal Specification FF-H-111; 1933. Hardware; Builders', Shelf and Miscellaneous. Includes brackets. Gives requirements for material, finish, design, and sizes of hand rails and shelf brackets and shelf rests. Emergency Alternate Federal Specification E-FF-H-111, July 1943, changed requirements in order to conserve metal, especially bronze.

U. S. Gov., Federal Specification WW-P-541a; 1940. Plumbing Fixtures (for) Land Use. Includes requirements for corrosion-resisting steel or nickel-copper alloy metal shelf with two metal brackets. Emergency Alternate Federal Specification E-WW-P-541a; 1942, (issued by Procurement Div., Treasury Dept., U. S. Gov.) changed requirements for metals and finishes, standard materials, illustrations, selections, and air gaps.

*References.*—*See* references under 617.61.

### 617.63 Hooks

U. S. Gov., Dept. of Agriculture, Forest Service. Specification No. 180. Hook; Brush.

U. S. Gov., Federal Specification FF-H-111; 1933. Hardware; Builders', Shelf and Miscellaneous. Includes hooks and hooks and eyes. Gives requirements for material, finish, design, and sizes of hooks including ceiling, coat, door, hat, and sash pole, and hooks and eyes. Emergency Alternate Federal Specification E-FF-H-111, July 1943, changed requirements in order to conserve metal, especially bronze.

U. S. Gov., Federal Specification WW-P-541a; 1940. Plumbing Fixtures; (for) Land Use. Includes requirements for three types of coat hooks made of metal, including long and short arm, single arm, and two equal arms. Covers wall flanges of various designs. Emergency Alternate Federal Specification E-WW-P-541a;

1942, (issued by Procurement Div., Treasury Dept., U. S. Gov.) changed requirements for metals and finishes, standard materials, illustrations, selections, and air gaps.

U. S. Gov., Navy Dept. Specification 27H3b; 1944. Hooks, Belt; and Hooks-and-Eyes.

U. S. Gov., Navy Dept. Specification 42H2d; 1943. Hooks; Cup.

U. S. Gov., Navy Dept. Specification 42H5c; 1943. 1945. Hooks; Door.

U. S. Gov., Navy Dept. Specification 42H28c; 1942. Hooks; Snap-Bolt, Swivel-Eye, With Rings.

U. S. Gov., Navy Dept. Specification 64H1a; 1943. Hooks; Meat.

## 617.7 PLUMBING FIXTURES

### 617.70 General Items

### 617.71 Vitreous and Porcelain Ware

*References.*—Plumbing practice and symbols, *see* 600.6; porcelain and vitreous ware tubs, sinks, lavatories, and water closets, *see* 532.23; metal and cast iron bath tubs, lavatories, and sinks, *see* 612.21, 612.23.

### 617.72 Slate, Soapstone, Marble, and Glass Plumbing

*References.*—Plumbing practice and symbols, *see* 600.6; slate laundry trays, sinks, water-closet and bath inclosures, slop hoppers, urinals, *see* 511,52; marble water-closet and bath inclosures, *see* 511.3; soapstone inclosures, *see* 511.6; glass inclosures, *see* 521.8.

### 617.73 Plumbing Trimmings and Fittings

*References.*—Plumbing practice and symbols, *see* 600.6; pipe fittings, *see* 607.14, 607.2, 607.3, 607.4; valves and cocks, *see* 607.6; iron floor drains and traps, *see* 611.14; iron roof drains, *see* 611.19; brass drains and traps, *see* 645.4; brass water-closet floor flanges, *see* 645.4; trimmings for water-closet inclosures and bath rooms, *see* 645.4; floor, wall, and ceiling plates, *see* 645.4; seats and seat hinges for water-closet bowls, *see* 532.23.

### 617.74 Plumbing Stop Cocks and Valves

*References.*—Plumbing practice and symbols, *see* 600.6; valves and cocks, *see* 607.6, 645.4.

### 617.75 Pipe and Pipe Covering, Plumbing

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Commercial Standard CS95-41; 1941. Lead Pipe. This standard covers chemical composition, inside and outside diameters, weight classification, weight per foot, defects, certification and labeling of one grade of lead pipe. Maximum working pressures are included to assist in the selection of the proper classification of lead pipe for various purposes. Sponsored by Lead Industries Assn.

*References.*—Plumbing practice and symbols, *see* 600.6; cast-iron pipe, *see* 607.11, 607.12; malleable iron, wrought iron, and steel pipe, *see* 607.2, 607.3, 607.4; eaves troughs, *see* 607.5, 642.9; copper pipe, brass pipe, *see* 642.23, 645.23; concrete pipe, vitrified clay pipe, *see* 518.67, 531.5; heating and ventilating equipment, *see* 792; house heating boilers and radiators, *see* 614.4; pipe coverings, *see* 707.4.

### 617.76 Bathtubs and Sinks (Enameled Iron or Steel)

*References.*—Hollow ware, *see* 612.2.

### 617.79 Miscellaneous Plumbing Fixtures

American Hospital Assn., 58-7. Metal Partitions for Toilets and Showers. Based on U. S. Gov., Dept. of Commerce, National Bureau of Standards Simplified Practice Recommendation R101-29.

American Society of Mechanical Engineers. Sponsored by American Public Health Assn. American Standards Assn., A 40.4-1942. Air Gaps in Plumbing Systems. For plumbing fixtures and all water-connected devices. Gives definitions, minimum required air gap dimensions, tanks or vats with water inlets below the floor-level rim, water closet tanks, drinking fountain nozzles, minimum air gaps for generally used plumbing fixtures, and illustrations.

American Society of Mechanical Engineers. Sponsored by American Public Health Assn. American Standards Assn., A 40.6-1943. Backflow Preventers in Plumbing Systems. For plumbing fixtures and all water-connected devices. Gives definitions, requirements, tests, and illustrations.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R101-40; 1940. Metal Partitions for Toilets and Showers. This recommendation establishes a simplified schedule of standard stock sizes of partitions, fronts, doors, and posts for metal toilet and dressing-room and shower enclosures, together with recommended dimensions of enclosures. Sponsored by manufacturers now represented by National Metal Compartment Assn.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Commercial Standard CS96-41; 1941. Lead Traps and Bends. This standard covers chemical composition, markings, weights, and dimensions, and provisions for allowable deviations, for one grade in various sizes of full S-traps, 1/2 S- or P-traps, drum traps, and bends. Sponsored by the Lead Industries Assn.

U. S. Gov., Federal Specification FF-D-396b; 1941. Dispensers; Soap. Covers one grade; five types—(I) liquid, rigid; (II) liquid, tilting; (III) powder, rigid; (IV) powder, tilting; and (V) cake, rigid; and three classes—(A) glass, (B) metal, and (C) plastic composition. Covers material and workmanship, general requirements, detail requirements for each type; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification FF-H-136; 1936. Hardware and Fittings; (for) Lavatory Partitions and Inclosures. Covers hardware and fittings for lavatory stall and shower partitions and inclosures of marble, slate, or glass. Types for marine use are not included. Includes bolts, latches, screw fastenings, partition fittings, gravity and spring hinges, hooks, top and bottom partition standards, strikes, top rail and shower curtain rods and fittings. Gives requirements covering dimensions, illustrations, composition of material used, workmanship, fastenings, finish, and details; methods of inspection and tests; and packing and marking. Emergency Alternate Federal Specification E-FF-H-136, July 1943, changed requirements for material and finish in order to conserve metal, especially bronze.

U. S. Gov., Federal Specification WW-P-541a; 1940. Plumbing Fixtures; (for) Land Use. Includes requirements for shower baths. Gives detail requirements

of outfits made of brass and dimensional diagrams of concealed and exposed showers with hand and mixing valves of several types; also requirements for shower heads, piping and stops, hand and thermostatic mixing valves, thermostats, curtains, and curtain rails; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment. Emergency Alternate Federal Specification E-WW-P-541a; 1942, (issued by Procurement Div., Treasury Dept., U. S. Gov.) changed requirements for metals and finishes, standard materials, illustrations, selections, and air gaps.

U. S. Gov., Federal Specification WW-P-542; 1940. Plumbing-Fixtures, for Land Use; Formed-Metal Plumbing-Fixtures. For bathtubs, lavatories, sink and laundry-tray combinations, kitchen sinks, and cabinet sink tops. Covers plumbing fixtures of enameled formed metal. Gives requirements for material of base, enamel, dimensions and variations, rigidity, marking, and details for each item; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment. Emergency Alternate Federal Specification E-WW-P-542; 1942, changed certain requirements in order to conserve certain strategic and critical materials.

U. S. Gov., Navy Dept. Specification 30A1; 1944. Accessories; Lavatory and Shower-Stall, Plastic.

U. S. Gov., Navy Dept. Specification 30D3a; 1944. Dishes; Soap, Metal (Pressed).

U. S. Gov., Navy Dept. Specification 30H3a; 1944. Holders; Toilet-Paper (Roll).

U. S. Gov., Navy Dept. Specification 30P2; 1944. Plugs; Drain, Plastic.

U. S. Gov., Navy Dept. Specification 30R4; 1941. Rings; Toilet-Set (Metal, Stateroom).

U. S. Gov., Navy Dept. Specification 30R5; 1943. Rings; Toilet-Set (Crockery, Stateroom).

U. S. Gov., Treasury Dept., Procurement Div., 545A; 1942. Cleaners; Flexible, With Auger Heads. Covers two types—(I) multi-coiled wire construction, and (II) single coiled wire construction, for water closets and drain pipes. Gives requirements for wire member, handle, auger nead, and tabular guide for each type; methods of sampling, inspection, and tests; and packaging, packing, and marking.

*References.*—Plumbing practice and symbols, *see* 600.6; nickel plating, *see* 600.3; iron and steel sheets and plates, *see* 604.2, 604.1.

## 617.9 MISCELLANEOUS BUILDERS AND FURNITURE HARDWARE

American Hospital Assn., 73-1. Cushion Glides. Covers one type and one grade but with five types of attachments—(1) nail, (2) grip neck item, (3) machine screw and nut, (4) spring socket, and (5) rubber expansion socket; material and workmanship; detail requirements; marking and packing; and general considerations.

American Hospital Assn., 73-4. Light Duty Swivel Casters With 2-Inch Diameter Wheels. Covers ball bearing swivel casters with 2 in. cushion tread, composition wheels, and of two types—(I) for wood furniture and (II) for metal furniture; materials and workmanship; general requirements; detail requirements; testing; marking and packaging; and special considerations.

American Hospital Assn., 73-7. Light Duty Casters With 3-Inch Diameter Wheels, With or Without Brakes. Covers swivel and rigid types; material and workmanship; general requirements; detail requirements; tests; marking and packaging; and special considerations.

American Hospital Assn., 73-10. Swivel Type Plate Casters With 3-Inch or 3 1/2 Inch Diameter, Ball Bearing, Cushion Tread Wheels. Covers one grade, one class, and one type; material and workmanship; general and detail requirements; and marking and packaging.

American Hospital Assn., 73-13. Light Duty Swivel and/or Rigid Casters With 5-Inch Diameter Wheels With and Without Brakes. Covers one grade, one class, and two types—(I) swivel and (II) rigid; material and workmanship; general and detail requirements; tests; marking and packaging; and special considerations.

American Hospital Assn., 73-16. Medium Duty Plate Type Casters, Swivel and Rigid, With 5-Inch Diameter, Ball Bearing, Rubber Tired Wheels. Covers two types—(I) swivel and (II) rigid; materials and workmanship; general and detail requirements; marking and packaging; and special considerations.

American Hospital Assn., 73-19. Ball Bearing Rubber Tired Wheels, 26-Inch Diameter; and Casters Having 10-Inch Diameter, Ball Bearing, Rubber Tired Wheels; for Wheel Chairs. Covers material and workmanship; detail requirements; marking and packaging; and special considerations.

American Hospital Assn., 73-22. Stem Type Casters, Swivel and Rigid, With 8-Inch Diameter, Ball Bearing, and Rubber Tired Wheels. Covers one grade, one class, and two types—(I) swivel and (II) rigid; material and workmanship; general and detail requirements; marking and packaging; and special considerations.

American Hospital Assn., 73-25. Plate Type Caster, Swivel and Rigid, With 8-Inch Diameter, Ball Bearing, Rubber Tired Wheels. Covers material and workmanship; general and detail requirements; marking and packaging; and special consideration.

American Hospital Assn., 73-28. Stem Type Casters, Swivel and Rigid, With 10-Inch Diameter, Ball Bearing, Rubber Tired Wheels. Covers material and workmanship; general and detail requirements; marking and packaging; and special consideration.

American Hospital Assn., 73-31. Ball Bearing, Rubber Tired Wheels, 5-Inch Diameter. Covers material and workmanship; general and detail requirements; marking and packaging; and special consideration.

American Hospital Assn., 73-34. Ball Bearing, Rubber Tired Wheels, 8-Inch Diameter. Covers two types; material and workmanship; general and detail requirements; marking and packaging; and special consideration.

American Hospital Assn., 73-37. Ball Bearing, Rubber Tired Wheels, 10-Inch Diameter. Covers material and workmanship; general and detail requirements; marking and packaging; and special considerations.

American Hospital Assn., 73-40. Ball Bearing, Rubber Tired Wheels, 24-Inch and 26-Inch Diameter. Covers material and workmanship; general and detail requirements; marking and packaging; and special consideration.

Underwriters' Laboratories, Inc. Standard for Sliding Hardware for Standard, Horizontally Mounted Tin-Clad Fire Doors, Subject 14(b); 1943. Covers flat track

hardware for single-slide two- and three-ply standard tin-clad doors horizontally mounted for use in the protection of openings in walls. Gives general requirements, construction and materials, and inspection of listed product.

Underwriters' Laboratories, Inc. Standard for Swinging Hardware for Standard Tin-Clad Fire Doors, Mounted Singly and in Pairs. Covers hardware for swinging two-ply and three-ply standard tin-clad fire doors for use in the protection of openings in walls as designated by the National Board of Fire Underwriters. Gives requirements for hinges for doors mounted singly and in pairs, locking mechanism, nonautomatic double-acting bolt mechanism, installation instructions, painting, marking, inspection of listed product, and instructions to inspectors.

U. S. Gov., Federal Specification FF-H-111; 1933. Hardware; Builders', Shelf and Miscellaneous. Includes blind hardware. Gives requirements for material, finish, design, and sizes of hinges, fasteners, and turnbuckles for blinds. Emergency Alternate Federal Specification E-FF-H-111, July 1943, changed requirements in order to conserve metal.

U. S. Gov., Federal Specification FF-H-111; 1933. Hardware; Builders', Shelf and Miscellaneous. Includes door buttons. Cast iron or wrought steel, zinc-coated, without plates, in lengths of 1 1/2 and 2 in. Emergency Alternate Federal Specification E-FF-H-111, July 1943, changed requirements in order to conserve zinc.

U. S. Gov., Federal Specification FF-H-111; 1933. Hardware; Builders', Shelf and Miscellaneous. Includes operators. Gives requirements for material, finish, design, operation, and dimensions for several types of operators, including sash, scuttle, skylight, and transom types. Emergency Alternate Federal Specification E-FF-H-111, July 1943, changed requirements in order to conserve metal, especially bronze.

U. S. Gov., Federal Specification FF-H-111; 1933. Hardware; Builders', Shelf and Miscellaneous. Includes plates. Covers kick, letter box, and sash pull plates. Gives requirements for material, finish, design, and dimensions for each type. Emergency Alternate Federal Specification E-FF-H-111, July 1943, changed requirements in order to conserve metal, especially bronze.

U. S. Gov., Federal Specification FF-P-806; 1944. Pulleys; Eye, Single-Sheave, With Attachment for Balkan Frame, for Hospitals. Covers one type, one grade and two classes—(A) with clamp attachment and (B) with U attachment. Gives requirements for material, workmanship, general description, pulley block and sheave, rivet, pulley eye, attachment, bolt and nut, finish, assembly, and marking; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Navy Dept. Specification 42B3c; 1943. Buttons; Turn.

U. S. Gov., Navy Dept. Specification 42H38c; 1945. Handles; Chest, Surface.

U. S. Gov., Navy Dept. Specification 42L28c; 1925. Links; Drop-Leaf, Secretary-Bureau.

U. S. Gov., Navy Dept. Specification 42P15; 1944. Plastic-Ware (Alternate for Hardware).

U. S. Gov., Treasury Dept., Procurement Div., No. 420; 1940. Casters; Hospital-Bed. Shall be of the ball-bearing swivel type in two classes—(A) soft rubber tread molded rubber composition wheel and (B) soft rubber tired metal wheel; and two sizes—3 and 5 in. diameter. Gives requirements for wheels, axles, offset of yoke or horn, finish, marking, interchangeability, sockets, brakes, stem, swivel, ball-bearings, shape, and dimensions; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., U. S. Army, Corps of Engineers. Specification 29-76; 1932. Bracket; Flagpole, Metal, Adjustable.

U. S. Gov., U. S. Army, Medical Dept. Specification 29-78; 1937. Caster; Bed, Hospital.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 17-48; 1920. Holder; Card, for Iron Bunks.

U. S. Gov., U. S. Maritime Commission. Specification 27-MC-32a; 1943. Curtains (With Fixtures); Port, Door, and Passageway. Covers three types of curtains and six classes of fixtures. Gives requirements for materials, workmanship, construction, dimensions, hems, thread, stitching, metal fittings, fixtures, installation, sampling, inspection, and tests.

U. S. Gov., Veterans Administration. Specification VA-M-331; 1944. Bed Casters; 3-Inch.

## 619. MISCELLANEOUS IRON AND STEEL MANUFACTURES

### 619.1 FIREARMS AND ORDNANCE

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R31-44; 1944. Loaded Paper Shot Shells. This recommendation establishes a list of standard sizes and varieties of paper shot shells for low cup (smokeless), progressive-burning powder (medium cup), and progressive-burning powder (high cup); and includes trap loads, skeet loads, short-range loads, rifled slug loads, and buck-shot loads. Covers shell gage, weight of powder, weight of shot, shot sizes, length of shell unloaded, and maximum height of brass cup. Sponsored by Sporting Arms and Ammunition Manufacturers Institute.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R82-44; 1944. Metallic Cartridges. This recommendation establishes a list of types and varieties of metallic cartridges including smokeless powder, black powder, and Lesmok powder for rimfire cartridges (ball, shot, and blanks) and smokeless powder and black powder for center-fire cartridges (ball, blanks, and shot). Sponsored by the Sporting Arms and Ammunition Manufacturers Institute.

U. S. Gov., Marine Corps Specification, 1937. Cartridges; Caliber .22, Long Rifle, (Noncorrosive, Nonmercuric).

U. S. Gov., U. S. Army, Ordnance Dept. Specification 60-82-1; 1942. Mount; Combination, Gun, M-23.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 60-82-2; 1942. Mount; Truck, M32.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 89-3510; 1934. Reel, Measuring; and Frame.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 89-5110; 1941. Cutter; Cable, Submarine Mine.

U. S. Gov., U. S. Maritime Commission. Specification 1-MC-1a; 1941. Guns; Line-Throwing, and Equipment. Guns shall be mounted and muzzle-loading. Gives requirements for materials, workmanship, size, weight, mount, equipment, tests, packing, and marking.

*References.*—Methods of testing, general requirements for metals, *see* 600.1; cast bronze, *see* 646.41; forged steel, 611.51; cartridge brass, *see* 644.21, 645.9; explosives, *see* 862, 863; flax shot line, *see* 331.21.

## 619.2 MANUFACTURES OF SHEET IRON AND SHEET STEEL

American Society of Mechanical Engineers. American Standards Assn., B32.1-1941. Preferred Thicknesses for Uncoated, Thin Flat Metals (Under 0.250 Inch). Provides a simplified system for designating the thickness of uncoated, thin flat metals and alloys by decimal parts of an inch. Gives table of preferred thicknesses.

American Transit Assn. Specification for Overhead Line Material for Direct and Catenary Suspension, D102-39; 1939. Steel referred to in this specification shall conform to the current specification A-7 for "Structural Steel for Bridges" of the American Society for Testing Materials.

American Transit Assn. Specification for Overhead Line Material for Direct and Catenary Suspension, D102-39; 1939. This specification covers material used in overhead trolley construction, both direct and catenary suspension, and overhead feeder cable construction. Gives requirements as to general overhead line material, material for feeder construction, material for direct trolley suspension, and material for catenary suspension; also requirements as to workmanship and finish, and inspection and rejection.

American Transit Assn. Specification for Overhead Line Material for Direct and Catenary Suspension, D102-39; 1939. Wrought iron referred to in this specification shall conform to the current specification A-41 for "Refined Wrought-Iron Bars" of the American Society for Testing Materials.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Building Materials and Structures Report BMS6; 1938. Survey of Roofing Materials in the Southeastern States. A survey of the weathering qualities and extent of use of the various roofing materials on dwellings in the Southeastern States is described. Detailed studies of roofing materials in Greensboro, N. C.; Columbia, S. C.; Savannah and Atlanta, Ga.; Jacksonville and Orlando, Fla.; Birmingham, Ala.; Knoxville, Tenn.; and Charleston, W. Va., are reported. A tabulation, by states, of the kinds of roofing materials used on more than 10,000 rural and small-town dwellings, along approximately 2,500 miles of highway, is included. Forty-eight photographs, illustrating types of weathering of roofing materials and features of design and construction of roofs, are shown.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Building Materials and Structures Report BMS29; 1939. Survey of Roofing Materials in the Northeastern States. A survey of the weathering qualities and extent of use of the various roofing materials on dwellings in the Northeastern States is described, with numerous comparative references to a similar survey in the Southeastern States. Detailed studies of roofing materials in Wilmington, Del.; Philadelphia, Pa.; New Haven, Conn.; Boston, Mass.; Manchester, N. H.; Portland, Maine; Rutland, Vt.; and Albany and Syracuse, N. Y., are reported. A tabulation, by states, of the kinds of roofing materials used on more than 10,000 rural and small-town dwellings, along approximately 1,600 miles of highway between the cities listed above, is included; also a summary of the kinds of roofing materials used on almost 21,000 rural and small-town dwellings along 4,000 miles of highway in 20 Eastern States. Forty-eight photographs, illustrating types of weathering of roofing materials and features of design and construction of roofs, are shown.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Building Materials and Structures Report BMS84; 1942. Survey of Roofing Materials in the South Central States. A survey of the weathering qualities and of the extent of use of the various roofing materials on dwellings in the South Central States is described, with numerous references to similar surveys in the Southeastern, Northeastern, and North Central States. Detailed studies of roofing materials in Chattanooga and Memphis, Tenn.; Jackson, Miss.; New Orleans, La.; Houston, Dallas, San Antonio, and Amarillo, Tex.; Oklahoma City, Okla.; Little Rock, Ark.; and Louisville, Ky., are reported. A tabulation, by states, of the kinds of roofing materials used on 9,500 rural and small-town dwellings, along approximately 4,200 miles of highway between the cities listed above, is included; also a summary of the kinds of roofing materials used on more than 38,000 rural and small-town dwellings along approximately 11,000 miles of highway in the 37 states covered by the four surveys. Forty-eight photographs, illustrating types of weathering of roofing materials, and features of the design and construction of roofs, are shown.

U. S. Gov., Joint Army-Navy Specification JAN-M-59; 1944. Mats; Airplane Landing, Steel, Pierced Plank Type, in Bundles.

U. S. Gov., Navy Dept. Specification 23G6b; 1944. Guards; Rat.

*References.*— Iron and steel sheets and plates, *see* 604.2, 604.1; steel desks, lockers and cupboards, and office filing furniture, *see* 613.4, 613.5, 613.7; stoves, ranges, house heating furnaces, *see* 614; metal partitions for shower inclosures, *see* 617.79; switchboard panels of sheet steel, *see* 714.4; raceways of sheet iron or steel for electric wire, *see* 715.11; switch boxes and cabinets, *see* 715.12; electric signs, *see* 716.39; metal barrels, drums, tubs, kits, pails, *see* 951; metal cases, metal cans, *see* 954.21, 959.1; metal tanks, *see* 956.2, 726.1, 605.23; acetylene generators, *see* 997.5; illuminating torch, sheet steel, *see* 997.1; sheet metal hollow ware, *see* 612.20.

## 619.3 SCREW POSTS, METAL FENCE POSTS

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering, 1942. Specifications for Metal Fence Posts. Covers two classes.

Gives requirements for material; strength; ductility; workmanship; coating; special fabrication for line, end, corner, and gate posts; weight; and inspection.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-40. Electric Fence.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-72. Posts; Steel Fence, Classes C and D.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-94. Fence; Wire, Classes C, D, and E, With Steel Posts.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-94. Posts; Steel (Wire Fence With Steel Posts, Classes C, D, and E).

U. S. Gov., Dept. of Interior, Purchasing Office. Standard Specification No. 81. Posts; Fence, Steel.

U. S. Gov., Navy Dept., Bureau of Yards and Docks. Specification 19Yb; 1933. Wire Fencing; Nonclimbable. Includes requirements for metal fence posts.

U. S. Gov., Treasury Dept. Procurement Div., No. 538; 1942. Gates, Posts, Top Rails, and Reinforcing Wire (for Wire Fencing). This specification covers gates, posts, top rails, top reinforcing wire, and bottom reinforcing wire. Gates shall be single swing (one gate) or double swing (two gates). Posts shall cover following types—type I, corner; type II, end; type III, gate; and type IV, line. All structural members shall be steel and other members shall be steel, malleable iron, or wrought iron. Gives requirements for gate frame, latches, stops, keepers, hinges, and fabric for gates; details for various types of posts; top rails; top and bottom reinforcing wire; finish; details including tables concerning height, width, diameter, dimensions, and weight; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., U. S. Army, Corps of Engineers. Specification 49-1; 1930. Post; Screw.

U. S. Gov., U. S. Army, Corps of Engineers. Specification 49-19; 1943. Post; Barbed Wire, Drive Type.

*References.*—Methods of testing and general requirements for metals, *see* 600.1; zinc coatings and tests, *see* 600.3; wooden fence posts, *see* 401.2.

## 619.4 BUOYS OF IRON OR STEEL

U. S. Gov., Army-Navy Aeronautical Specification AN-B-5-2; 1944. Buoys; Seaplane Mooring.

## 619.5 WATER FILTERS

## 619.6 GATES

U. S. Gov., Treasury Dept. Procurement Div. No. 538; 1942. Gates, Posts, Top Rails, and Reinforcing Wire (for Wire Fencing). This specification covers gates, posts, top rails, top reinforcing wire, and bottom reinforcing wire. Gates shall be single swing (one gate) or double swing (two gates). Posts shall cover following types—type I, corner; type II, end; type III, gate; and type IV, line. All structural members shall be steel and other members shall be steel, malleable iron, or wrought iron. Gives requirements for gate frame, latches, stops, keepers, hinges, and fabric for gates; details for various types of posts; top rails; top and bottom reinforcing wire; finish; details including tables concerning height, width, diameter, dimensions, and weight; methods of sampling, inspection, and tests; and packaging, packing, and marking.

## 619.9 MANUFACTURES OF IRON OR STEEL NOT COVERED IN ABOVE CLASSIFICATION

American Hospital Assn., 4-10. Wire Screen Cloth. Covers copper, commercial bronze (brass), bronze, iron or steel, galvanized (zinc coated), copper-nickel alloy, corrosion-resisting steel (chromium-nickel), aluminum alloy, iron or steel, japanned or painted, and chromium-nickel alloy.

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering, 1944. Specifications for Buildings for Railroad Purposes: Ornamental and Miscellaneous Metal Work. Gives requirements for wrought iron fences, stairs, balconies, ladders, fire escapes, flagpoles, column guards, door guards and jambs, metal sash, metal sash operators, sidewalk doors, covers, and gratings; treads and thresholds, gratings and registers, and metal partitions.

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering, 1944. Specifications for Devices to Control the Splitting of Wood Ties. Covers only the type of antisplitting device made from a strip of steel and applied by driving it into an end of a tie. Gives material, chemical requirements, physical requirements, design, manufacture, variations, inspection and delivery.

American Society for Testing Materials, D 609-41 T; 1941. Tentative Method for Preparation of Steel Panels for Exposure Tests of Enamels for Exterior Service. Covers two procedures for the preparation of steel panels for exposure tests of enamels for exterior service. Test panels, preparation of panel surface, and application of finishing material.

American Transit Assn. Specification for Overhead Line Material for Direct and Catenary Suspension, D102-39; 1939. Part of this specification relating to general overhead line material covers items used in overhead line construction of all kinds, including feeder and trolley wire construction. Requirements are given for bolts and nuts, guy clamps, nub guards, guy hooks, porcelain strain insulators, guy plates, anchor rods, lag screws, pole steps, thimbles, and washers.

Open Steel Flooring Institute, Inc. Specifications for Grating. Covers steel gratings of open construction having riveted, welded, or interlocked joints, either of rectangular or reticulated design having parallel bearing bars and either straight or diagonal cross members. Includes requirements for workmanship, thickness and spacings of bars, fasteners, treads, cutting and bending, erection symbols, labeling, and finish.

Pin, Clip and Fastener Assn. Paper Fastener Physical Standards. Covers gages and diameters and widths of caps; gages, widths, and lengths of shank for available sizes of steel paper fasteners.

Pin, Clip and Fastener Assn. Physical Dimensions Brass and Steel Washers. Covers gage, diameter, and slot dimensions of steel washers for use in connection with paper fasteners.

U. S. Gov., Army Air Forces. Specification 14100; 1939. Grit; Steel, for Blast Cleaning.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-46. Louver; Automatic 18-Inch, Cable.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-310. Louver; Automatic, Motor-Operated.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R190-42; 1942. Stove Pipe and Accessories. The recommendation was initiated at the request of the War Production Board, and was developed in cooperation with representatives of the stove pipe industry. The purpose of the recommendation is to conserve metal required for the production of war materials, to simplify manufacture, and to reduce inventories of finished products. It eliminates from production a substantial number of varieties of stove pipe and accessories heretofore manufactured for general use.

U. S. Gov., Federal Specification FF-W-556; 1934. Amendment 1; 1944. Wool; Steel. Covers five Federal grades—00, 0, 1, 2, and 3. Gives requirements for material and workmanship and steel wool details; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., Federal Specification GGG-F-311a; 1944. Figures and Letters; Stamping, Steel. Covers two types—(A) figures, heavy duty and medium duty; and (B) letters, heavy duty and medium duty. Gives requirements for material, workmanship, stock, characters, marking of stamps, sets, and details; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Navy Dept. Specification 12T9a; 1942. Thimbles; Rope (Manila and Wire).

U. S. Gov., Navy Dept. Specification 41S36a; 1942. Spikes; Marline, Wire Rope.

U. S. Gov., Navy Dept. Specification 41T28; 1941. Tools; Tube-System (Shipboard Use).

U. S. Gov., Navy Dept. Specification 42I1d; 1944. Irons, Hand; and Irons, Leg.

U. S. Gov., Navy Dept. Specification 42T1e; 1943. Tags, Key; and Rings, Key.

U. S. Gov., Treasury Dept., Procurement Div., No. 548; 1942. Irons; Hand. Shall be of one grade and one type. Gives requirements for material, size (minimum opening for insertion of wrist and maximum and minimum inside circumference when locked); shape, jaw with lock, jaw without lock, weight, pins, connections, finish, and strength; sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2788; 1939. Muzzle; Horse, Steel Wire.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 29-28A; 1940. Marlinespike; Polished Steel, 12-Inch.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 29-47B; 1940. Shackle; 1-Inch, M-1915, Anchor and Mine, Submarine Mine.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 29-48A; 1935. Sister-Hook; Mine Anchor.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 89-3294; 1940. Trip Hook M-4; 3-Ton, Submarine Mine.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 89-3345; 1940. Iron; Grappling, Submarine Mine.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 89-3440A; 1940. Plug; Compound, Submarine Mine.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 29-68; 1930. Currycomb M-1913.

U. S. Gov., Veterans Administration. Specification VA-G-70; 1933. Noiseless Glides for Furniture.

U. S. Gov., Veterans Administration. Specification VA-G-357; 1941. Sponges; Metal.

# 620-629 FERRO-ALLOYING ORES AND METALS, ALLOY STEELS AND MANUFACTURES

## 621. FERRO-ALLOYING ORES AND METALS

### 621.0 GENERAL ITEMS

Society of Automotive Engineers, Inc. Aeronautical Information Report 8; 1944. U. S. and British Commonwealth of Nations Aircraft Metals. Ferrous Alloys. Gives table showing specifications used in the U. S. and specifications for similar metals used in the United Kingdom, Australia, and Canada for use in the selection of interchangeable and substitute materials for the repair and maintenance of aircraft; and a table showing chemical composition and mechanical properties of these aircraft metals. Covers bars, rods, billets, forgings, wire and welding rod, sheet, strip, and welded and seamless tubing.

### 621.1 ORES, FERRO-ALLOYING

### 621.11 Chrome Ores

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, Volume 2; 1944. Chromite. Covers definition, constants, derivation, uses, grades, containers, and substitutes.

U. S. Gov., Navy Dept. Specification 50-O-1; 1924. Ore; Chrome, Ground.

*References.*—Iron ore, *see* 601.1; screen testing, *see* 601.0.

### 621.12 Manganese Ores

U. S. Gov., Federal Specification QQ-M-71; 1932. Manganese; Ore. Covers one grade. Gives requirements for material, form (lumps, crushed, or screened-to-size), and manganese content; methods of tests and inspection; and requirements for packing and marking.

*References.*—Iron ore, *see* 601.1; screen testing, *see* 601.0.

### 621.13 Silicon Ores

### 621.2 FERRO-ALLOYS

### 621.20 General Items

American Iron and Steel Institute. Contributions to the Metallurgy of Steel, No. 1; 1941. Possible

Substitutes for Nickel Steels. Deals only with constructional steels containing chromium, nickel, molybdenum, manganese, silicon, and vanadium. Covers carburizing steels, thorough-hardening steels, low-carbon alloy steels, and standard methods for sampling for check analysis and standard variations from specified chemical limits.

American Iron and Steel Institute. Contributions to the Metallurgy of Steel, No.2; 1941. Direct Consumption of Aluminum in the Steel Industry. A study of the proper utilization and distribution of aluminum used in the steel industry for purposes of deoxidation and alloying. Covers effect of a decrease in aluminum on steel production, steps taken to decrease aluminum consumption, grades of aluminum, and suggested method of distributing aluminum.

American Iron and Steel Institute. Contributions to the Metallurgy of Steel, No.3; 1941. Problems Involved in the Conservation of Manganese. A plan for evaluating conservation efforts is suggested and individual products are discussed in accordance with that plan. Covers requirements for manganese, high manganese shell steel, commercially high manganese steels, steel bars and forging billets, sheet and strip steel; wheels, axles, and heavy forgings; pipe, seamless tubing, carbon steel plates and structural shapes, steel piling, tin plate, rods and wire, standard tee rails, steel castings, and manganese-sulphur relationships.

American Iron and Steel Institute. Contributions to the Metallurgy of Steel, No.5; 1942. Possible Alternates for Nickel, Chromium, and Chromium-Nickel Constructional Alloy Steels. Covers possible alternates for chromium and nickel constructional alloy steels, possible alternates for the standard carburizing grades of steel, possible alternates for the semithorough hardening steels of the 0.30 percent carbon class, possible substitutes for the thorough-hardening steels of 0.35 percent carbon and higher, and standard steels; and standard methods for sampling for check analyses, and standard variations from specified chemical limits.

American Iron and Steel Institute. Contributions to the Metallurgy of Steel, No.6; 1942. Selection and Conservation of Alloying Elements Used in Steels. Confined to the effect of carbon, manganese, phosphorus, sulphur, silicon, chromium, nickel, molybdenum, vanadium, and copper in certain ranges. Gives various tables to indicate whether the elements have a favorable or unfavorable effect, a weak or strong action, upon the properties of steel.

American Iron and Steel Institute. Contributions to the Metallurgy of Steel, No.7; 1942. The National Emergency Steels, NE 8000 Series. Covers the recovery of nickel from scrap, residual molybdenum, residual nickel, residual chromium, comparative physical properties of semithorough hardening grades, comparative physical property data of carburizing grades, hardenability, relationship between hardness and tensile strength, relationship between hardness and tempering temperature, relationship between Brinell hardness and tensile strength, and the standard end-quench hardenability test.

American Iron and Steel Institute. Contributions to the Metallurgy of Steel, No.8; 1942. Supplementary National Emergency Steels, NE 9400, 9500, and 9600 Series. Covers supplementary national emergency steels (compositions containing different amounts of manganese, silicon, and chromium; and manganese, silicon, nickel, chromium, and molybdenum), physical property data and standard end-quench hardenability data, limitations on alloying elements, standard end-quench hardenability curves, standard end-quench hardenability test, and standard methods for sampling for check analysis and standard variations from specified chemical limits.

American Iron and Steel Institute. Contributions to the Metallurgy of Steel, No.9; 1942. Report on Special Alloy Addition Agents. All the information pertains to special alloy addition agents which do not contain vanadium, and a large part of the available information consists of standard end-quench hardenability tests and mechanical property data on plain carbon and carbon-manganese steels. Covers grain size, hardenability, mechanical properties, general conclusions, summary, and tables showing results of tests.

American Iron and Steel Institute. Contributions to the Metallurgy of Steel, No.10; 1942. Mechanical Properties, NE 9400, 9500, and 9600 Series. The high nickel content of scrap has often prevented alloy steel producers from bringing heats of NE steels within the specified compositions, resulting in last minute switches of heats already in process to steels of higher specified nickel content, necessitating the use of greater quantities of virgin nickel and sometimes of chromium or molybdenum. Covers revised list of NE steels, giving chemical compositions and mechanical properties.

American Iron and Steel Institute. Manufacturers' Standard Practice. Supplementary Information. Alloy Steel, Section 10; 1942. National Emergency Steel Compositions. Gives compositions for five carbon-manganese steels, four manganese-molybdenum steels, thirteen nickel-chromium-molybdenum steels, three silicon-manganese and silicon-manganese-chromium steels, fourteen manganese-silicon-chromium-nickel-molybdenum steels, seven manganese-silicon-chromium steels, and three carbon-chromium steels.

American Iron and Steel Institute. Steel Products Manual, Section 1a; 1940. Ferroalloys. Defines ferroalloys and gives requirements for spiegeleisen, ferromanganese, ferrosilicon, silicomanganese, ferrochromium, high-nitrogen ferrochromium, ferrovanadium, ferrotungsten, zirconium alloys, ferrocolumbium, ferromolybdenum, ferrotitanium and ferrophosphorus. Sampling and analysis in accordance with A.S.T.M. procedures.

American Petroleum Institute, Div. of Production. Code 28; 1937. Code of Metallurgical Terms for Ferrous Alloys. Covers definitions of metallurgical terms arranged in alphabetical order.

American Society for Testing Materials, E 31-42; 1942. Methods of Chemical Analysis of Ferro-Alloys. For use in referee analysis. General instructions and precautions; and analysis for—ferrosilicon (silicon by fusion with sodium peroxide and dehydration with hydrochloric acid, total carbon by the direct-combustion method, phosphorus by the alkalimetric method, and sulphur by the nitric-hydrofluric acid-gravimetric method); ferromanganese, silico-mangenese,

and manganese-silicon (manganese by bismuthate method, total carbon by the direct-combustion method, phosphorus by the perchloric acid-alkalimetric method, sulfur by the oxidation method, and silicon by the nitric-sulfuric acid method); ferrochromium (chromium by the sodium peroxide fusion method, total carbon by the direct-combustion method, and silicon by the sulfuric acid method); ferrovanadium (vanadium by the ammonium persulfate method, total carbon by the direct-combustion method, phosphorus by the cupferron-alkalimetric method, sulfur by the nitric acid-oxidation method, silicon by the nitric-sulfuric acid method, and ammonium by the cupferron-phosphate method); ferrotungsten and tungsten metal (tungsten by the acid digestion-cinchonine method, total carbon by the direct-combustion method, manganese by the persulfate-arsenite method, phosphorus by the tartrate-magnesia-alkalimetric method, sulfur by the nitric-hydrofluoric acid gravimeter method, silicon by the phosphoric-perchloric acid method, arsenic, copper, antimony, and tin); and ferromolybdenum (molybdenum by the permanganate titration method, total carbon by the direct-combustion method, sulfur by the nitric acid-gravimetric method, phosphorus by the alkalimetric method, silicon by the sulfuric acid method, and copper by the thiocyanate method).

American Society for Testing Materials, E 32-42; 1942. Methods of Sampling Ferro-Alloys. Includes procedures for sampling either before or after shipment from the plants of the manufacturers; description of apparatus for preparing samples; unit quantities for sampling and analysis; and methods of sampling—spiegeleisen and 15 percent ferrosilicon; ferrosilicon, standard ferromanganese, silicomanganese, ferrophosphorus, and 12 to 15 percent zirconium alloy; high carbon ferrochromium, medium-carbon ferromanganese, low-carbon ferromanganese, silicon metal, calcium-silicon, and 35 to 40 percent zirconium alloy; and ferrovanadium, ferromolybdenum, ferrotungsten, ferrocolumbium, low-carbon ferrotitanium, and ferrozirconium.

## 621.21 Ferrochrome

American Society for Testing Materials, A 101-42; 1942. Ferrochromium. Includes high-carbon and low-carbon grades; gives requirements as to chemical composition, sizes of materials, sampling, and inspection.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Circular C398 and Supplement, 1944. Standard Samples. Ferrochromium (High Carbon), Sample 64. This sample is prepared and sold by the National Bureau of Standards with a certificate of analysis for use in industry and by others as a comparison standard for checking the accuracy of analysis of similar material.

U. S. Gov., Federal Specification QQ-F-151a; 1941. Ferrochromium. Covers three grades—(A), (B) low carbon, and (C) high carbon. Gives detail requirements for form (lumps, crushed, or screened), and chemical composition; methods of sampling, inspection, and tests; and requirements for packing and marking for shipment.

*References.*—Methods of sampling and testing and general requirements for metals, *see* 600.1, 621.20; pig iron, *see* 601.2.

## 621.22 Ferromanganese, Spiegeleisen

American Society for Testing Materials, A 98-41; 1941. Spiegeleisen. Cover three grades, furnished in pigs or lumps; requirements as to chemical composition, sampling, and inspection.

American Society for Testing Materials, A 99-39; 1939. Ferromanganese. Covers six grades of standard, medium-carbon, and low-carbon ferromanganese. Form as specified, chemical compositions, sampling, and inspection.

American Society for Testing Materials, A 181-42; 1942. A.S.M.E. Boiler Construction Code Specification SA-181. American Standards Assn., G46.1-1942. Forged or Rolled Steel Pipe Flanges for General Service. Covers flanges to be attached to piping or pressure vessels for two classes, for general service. Gives requirements as to grain flow, chemical composition, ladle analysis, tensile properties, test specimen, workmanship, finish, and inspection.

American Society for Testing Materials, A 242-42; 1942. Low-Alloy Structural Steel. Covers open-hearth or electric-furnace low-alloy structural steel suitable for welding or riveting, intended primarily for use as main stress-carrying material of structural members. Material not under 3/16 and not over 2 in. in thickness. Chemical composition, ladle and check analyses, tensile and bending properties, test specimens, number of tests, permissible variations in weight and thickness, marking, inspection, rejection, and rehearing.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, 1938. Ferromanganese. Covers definition, constants, solubility, derivation, specifications, containers, uses, and ordering instructions.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, 1938. Spiegeleisen. Covers definition, constants, occurence, grades, shipping methods, and uses.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Circular C398 and Supplement, 1944. Standard Samples. Spiegeleisen, Sample 66. This sample is prepared and sold by the National Bureau of Standards with a certificate of analysis for use in industry and by others as a comparison standard for checking the accuracy of analysis of similar material.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Circular C398 and Supplement, 1944. Standard Samples. Ferromanganese Metal, Sample 68a. This sample is prepared and sold by the National Bureau of Standards with a certificate of analysis for use in industry and by others as a comparison standard for checking the accuracy of analysis of similar material.

U. S. Gov., Federal Specification QQ-F-161a; 1941. Ferromanganese. Covers seven grades—A, B, C, D, E, F, and G. Gives requirements for form (pigs, lumps, crushed, or screened-to-size), and chemical composition; methods of sampling, inspection, and tests; and requirements for packing and marking for shipment.

U. S. Gov., Federal Specification QQ-S-611a; 1941. Spiegeleisen. Covers three grades—A, B, and C. (Furnished in pigs, lumps, crushed, or screened-to-size.) Gives requirements for chemical composition;

methods of sampling, inspection, and tests; and requirements for packing and marking for shipment.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Circular C398 and Supplement, 1944. Standard Samples. Manganese Metal, Sample 67. This sample is prepared and sold by the National Bureau of Standards with a certificate of analysis for use in industry and by others as a comparison standard for checking the accuracy of analysis of similar material.

*References.*—Methods of testing, general requirements for metals, *see* 600.1, 621.20; pig iron, *see* 601.2; manganese ores, *see* 621.12.

## 621.23 Ferromolybdenum

American Society for Testing Materials, A 132-39; 1939. Ferromolybdenum. Covers two grades; requirements as to chemical composition, basis of purchase, sampling, and inspection.

U. S. Gov., Federal Specification QQ-F-171b; 1942. Ferromolybdenum. Covers two grades—A and B. Gives requirements for form (lumps, crushed, or screened-to-size), and chemical composition; methods of sampling, inspection, and tests; and requirements for packing and marking for shipment.

*References.*—Methods of testing, general requirements for metals, *see* 600.1, 621.20; pig iron, *see* 601.2.

## 621.24 Ferrosilicon

American Society for Testing Materials, A 100-39; 1939. Ferrosilicon. Includes seven grades of material, form as specified, chemical composition requirements, sampling, and inspection.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, Volume 2; 1944. Ferrosilicon. Covers definition, derivation, uses, grades, forms and packing, hazards, and substitutes.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Circular C398 and Supplement, 1944. Standard Samples. Ferrosilicon (75% Silicon), Sample 58; and Ferrosilicon (50% Silicon), Sample 59. These samples are prepared and sold by the National Bureau of Standards with a certificate of analysis for use in industry and by others as a comparison standard for checking the accuracy of analysis of similar materials.

U. S. Gov., Federal Specification QQ-F-181a; 1941. Ferrosilicon. Covers eight grades—A, B, C-Special, C, D, E, F, and G. Gives requirements for form (lump or granular) and chemical composition; methods of sampling, inspection, and tests; and requirements for packing and marking for shipment.

*References.*—Methods of testing, general requirements for metals, *see* 600.1, 621.20; pig iron, *see* 601.2.

## 621.25 Ferrotungsten

American Society for Testing Materials, A 144-39; 1939. Ferrotungsten. Covers standard material crushed under 1 in. size; requirements as to chemical composition, sampling, and inspection.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, 1938. Tungsten and Ferrotungsten. Covers definition, constants, derivation, uses, impurities, and substitutes.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Circular C398 and Supplement, 1944. Standard Samples. Ferrotungsten, Sample 75. This sample is prepared and sold by the National Bureau of Standards with a certificate of analysis for use in industry and by others as a comparison standard for checking the accuracy of analysis of similar material.

*References.*—Methods of testing, general requirements for metals, *see* 600.1, 621.20; pig iron, *see* 601.2; tungsten powder, *see* 696.

## 621.26 Ferrotitanium, Ferrouranium, Ferrovanadium

American Society for Testing Materials, A 102-39; 1939. Ferrovanadium. Covers three grades crushed to specified size, chemical composition requirements, sampling, and inspection.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, 1938. Ferrovanadium. Covers definition, constants, occurrence, derivation, specifications, forms available, containers, shipping regulations, and uses.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Circular C398 and Supplement, 1944. Standard Samples. Ferrotitanium (Low Carbon), Sample 116a. This sample is prepared and sold by the National Bureau of Standards with a certificate of analysis for use in industry and by others as a comparison standard for checking the accuracy of analysis of similar material.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Circular C398 and Supplement, 1944. Standard Samples. Ferrovanadium (High Carbon), Sample 61a. This sample is prepared and sold by the National Bureau of Standards with a certificate of analysis for use in industry and by others as a comparison standard for checking the accuracy of analysis of similar material.

U. S. Gov., Federal Specification QQ-F-191b; 1941. Ferrotitanium. Covers five grades—A, B, C, D, and E. Gives requirements for form (lumps, crushed, or screened-to-size), and chemical composition; methods of sampling, inspection, and tests; and requirements for packing and marking for shipment.

U. S. Gov., Federal Specification QQ-F-201b; 1941. Ferrovanadium. Covers three grades—A, B, and C. Gives requirements for form (lumps, crushed, or screened-to-size), and chemical composition; methods of sampling, inspection, and tests; and requirements for packing and marking for shipment.

*References.*—Methods of testing, general requirements for metals, *see* 600.1, 621.20; pig iron, *see* 601.2.

## 621.27 Ferrophosphorus

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Circular C398 and Supplement, 1944. Standard Samples. Ferrophosphorus, Sample 90. This sample is prepared and sold by the National Bureau of Standards with a certificate of analysis for use in industry and by others as a comparison standard for checking the accuracy of analysis of similar material.

*References.*—Methods of testing, general requirements for metals, *see* 600.1, 621.20; pig iron, *see* 601.2.

## 621.3 CRUDE AND SEMIFINISHED FERRO-ALLOYS

### 621.30 General Items

American Iron and Steel Institute. Contributions to the Metallurgy of Steel, No.1; 1941. Possible Substitutes for Nickel Steels. Deals only with constructional steels containing chromium, nickel, molybdenum, manganese, silicon, and vanadium. Covers carburizing steels, thorough-hardening steels, low-carbon alloy steels, and standard methods for sampling for check analysis and standard variations from specified chemical limits.

American Iron and Steel Institute. Contributions to the Metallurgy of Steel, No.2; 1941. Direct Consumption of Aluminum in the Steel Industry. A study of the proper utilization and distribution of aluminum used in the steel industry for purposes of deoxidation and alloying. Covers effect of a decrease in aluminum on steel production, steps taken to decrease aluminum consumption, grades of aluminum, and suggested method of distributing aluminum.

American Iron and Steel Institute. Contributions to the Metallurgy of Steel, No.3; 1941. Problems Involved in the Conservation of Manganese. A plan for evaluating conservation efforts is suggested and individual products are discussed in accordance with that plan. Covers requirements for manganese, high manganese shell steel, commercially high-manganese steels, steel bars and forging billets, sheet and strip steel; wheels, axles, and heavy forgings; pipe, seamless tubing, carbon steel plates and structural shapes, steel piling, tin plate, rods and wire, standard tee rails, steel castings, and manganese-sulphur relationships.

American Iron and Steel Institute. Contributions to the Metallurgy of Steel, No.5; 1942. Possible Alternates for Nickel, Chromium, and Chromium-Nickel Constructional Alloy Steels. Covers possible alternates for chromium and nickel constructional alloy steels, possible alternates for the standard carburizing grades of steel, possible alternates for the semithorough hardening steels of the 0.30 percent carbon class, possible substitutes for the thorough-hardening steels of 0.35 percent carbon and higher, and standard steels; and standard methods for sampling for check analyses, and standard variations from specified chemical limits.

American Iron and Steel Institute. Contributions to the Metallurgy of Steel, No.6; 1942. Selection and Conservation of Alloying Elements Used in Steels. Confined to the effect of carbon, manganese, phosphorus, sulphur, silicon, chromium, nickel, molybdenum, vanadium, and copper in certain ranges. Gives various tables to indicate whether the elements have a favorable or unfavorable effect, a weak or strong action, upon the properties of steel.

American Iron and Steel Institute. Contributions to the Metallurgy of Steel, No.7; 1942. The National Emergency Steels, NE 8000 Series. Covers the recovery of nickel from scrap, residual molybdenum, residual nickel, residual chromium, comparative physical properties of semithorough hardening grades, comparative physical property data of carburizing grades, hardenability, relationship between hardness and tensile strength, relationship between hardness and tempering temperature, relationship between Brinell hardness and tensile strength, and the standard end-quench hardenability test.

American Iron and Steel Institute. Contributions to the Metallurgy of Steel, No.8; 1942. Supplementary National Emergency Steels, NE 9400, 9500, and 9600 Series. Covers supplementary national emergency steels (compositions containing different amounts of manganese, silicon, and chromium; and manganese, silicon, nickel, chromium, and molybdenum), physical property data and standard end-quench hardenability data, limitations on alloying elements, standard end-quench hardenability curves, standard end-quench hardenability test, and standard methods for sampling for check analysis and standard variations from specified chemical limits.

American Iron and Steel Institute. Contributions to the Metallurgy of Steel, No.9; 1942. Report on Special Alloy Addition Agents. All the information pertains to special alloy addition agents which do not contain vanadium, and a large part of the available information consists of standard end-quench hardenability tests and mechanical property data on plain carbon and carbon-manganese steels. Covers grain size, hardenability, mechanical properties, general conclusions, summary, and tables showing results of tests.

American Iron and Steel Institute. Contributions to the Metallurgy of Steel, No.10; 1942. Mechanical Properties, NE 9400, 9500, and 9600 Series. The high nickel content of scrap has often prevented alloy steel producers from bringing heats of NE steels within the specified compositions, resulting in last minute switches of heats already in process to steels of higher specified nickel content, necessitating the use of greater quantities of virgin nickel and sometimes of chromium or molybdenum. Covers revised list of NE steels, giving chemical compositions and mechanical properties.

American Iron and Steel Institute. Steel Products Manual, 1943. Stainless Steel. Covers standard type numbers and composition ranges of components corresponding thereto.

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering, 1940. Alloy Steels. Covers unit stresses, thickness of material, sizes of rivets, lacing, rivets, alloy and structural steels combined, secondary stresses, holes, sheared and flame-cut edges, and welding.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, Volume 2; 1944. Steels, National Emergency. Covers definition, characteristics, types and specifications, marketing, and substitutes.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, Volume 2; 1944 Steel; Stainless. Covers definition, derivation, properties, constants and grades, uses, forms, marketing, and substitutes.

Society of Automotive Engineers. 1944 Handbook, Section 3—Processed Materials. S.A.E. Standard Steels. The steel compositions included in this standard are considered adequate for practically all parts made of ferrous materials that are necessary for the production of automotive apparatus and

include grades that have been found commercially available and technically adequate for the service required of such parts. Includes general instructions, explanation of S.A.E. numbering system, chemical compositions, methods of sampling for check analysis, method of determining hardenability, grain size charts for classification of steel, magnaflux testing, determination of inclusions, general characteristics and heat treatments, tension test specimens, physical properties, hardness tests, and definition of heat-treating terms.

## 621.31 Ferro-Alloy Billets, Bars, and Rods (Alloy-Steel)

American Iron and Steel Institute. Steel Products Manual, Section 10; 1943. Relates only to alloy steel blooms, billets, slabs, bars, and bar strip. Covers general definitions, standard alloy steels including chemical limits and ranges for nonstandard open-hearth alloy steels and electric furnace carbon and alloy steels, and manufacturing practices.

American Society for Testing Materials, A 274-44 T. Tentative Specification for Alloy-Steel Blooms, Billets, and Slabs for Forgings. Covers scope, process, discard, reduction from ingot, chemical composition, ladle analysis, check analysis, finish and soundness, conditioning, permissible variations in weight, marking, inspection, rejection, and rehearing. A.S.T.M. Emergency Alternate Provision EA-A 274; 1944, affected section 5, Chemical Composition.

American Society for Testing Materials, A 276-44 T. Tentative Specification for Hot-Rolled and Cold-Finished Corrosion-Resisting Steel Bars. Gives scope, basis of purchase, conditions, chemical composition, chemical analysis, physical properties, test specimens, number of tests, permissible variations in dimensions, workmanship and finish, inspection, and rejection.

Society of Automotive Engineers. Aeronautical Material Specification 5022A; 1942. Steel; Free-Cutting Manganese (1.3 Manganese). Gives requirements for form (bars, billets, tubes, or forgings), composition, condition, quality, reports, and rejections.

Society of Automotive Engineers. Aeronautical Material Specification 5024A; 1942. Steel; Free-Cutting Manganese (1.5 Manganese). Gives requirements for form (bars, billets, tubing, or forgings), composition, condition, quality, reports, and rejections.

Society of Automotive Engineers. Aeronautical Material Specification No.5025; 1942. Steel, Free-Cutting Manganese (Heat Treated). Covers requirements for form (bars, billets, forgings, or as ordered), composition, condition, quality, tolerances, reports, and rejections.

Society of Automotive Engineers. Aeronautical Material Specification 5610B; 1944. Steel; Corrosion-Resistant, 13 Chromium (Free Machining) For bars, billets, forgings, or as ordered. Covers composition, condition, hardenability, quality, reports, identification, and rejections.

Society of Automotive Engineers. Aeronautical Material Specification 5615A; 1942. Steel; Corrosion-Resistant, 13 Chromium, 1.5 Nickel. Gives requirements for form (bars, billets, forgings, or as ordered), composition, condition, hardenability, quality, reports, identification, and rejections.

Society of Automotive Engineers. Aeronautical Material Specification 5630A; 1942. Steel; Corrosion-Resistant, 17 Chromium (High-Carbon). Gives requirements for form (bars, billets, forgings, or as ordered), composition, condition, hardenability, quality, reports, identification, and rejections.

Society of Automotive Engineers. Aeronautical Material Specification No.5632; 1942. Steel; Corrosion-Resistant, 17 Chromium, .5 Molybdenum (High-Carbon) (Free Machining). Covers requirements for form (bars, billets, forgings, or as ordered), composition, condition, hardenability, quality, reports, identification, and rejections.

Society of Automotive Engineers. Aeronautical Material Specification 5640A; 1942. Steel; Corrosion-Resistant, 18 Chromium, 8 Nickel (Free Machining). For bars, billets, forgings, or as ordered. Gives requirements for composition, condition, quality, reports, identification, and rejections.

Society of Automotive Engineers. Aeronautical Material Specification No.5641; 1942. Steel; Corrosion-Resistant, 18 Chromium, 8 Nickel (Swaging or Hot-Upsetting Type). For bars, billets, forgings, or as ordered. Covers requirements for composition, condition, quality, reports, identification, and rejections.

Society of Automotive Engineers. Aeronautical Material Specification 5645B; 1942. Steel; Corrosion and Heat-Resistant, 18 Chromium, 8 Nickel. For bars, billets, forgings, or as ordered. Gives requirements for composition, condition, embrittlement, quality, reports, identification, and rejections.

Society of Automotive Engineers. Aeronautical Material Specification No.5700; 1940. Steel; Valve (Chromium-Nickel-Tungsten). For bars, billets, forgings, or as ordered. Gives requirements for composition, condition, quality, reports, identification, and rejections.

Society of Automotive Engineers. Aeronautical Material Specification No. 5705; 1942. Steel; Valve, Chromium-Nickel Silicon. For bars, billets, forgings, or as ordered. Gives requirements for composition, condition, quality, reports, identification, and rejection.

Society of Automotive Engineers. Aeronautical Material Specification No.5710; 1942. Steel; Valve, Chromium-Silicon Nickel. For bars, billets, forgings, or as ordered. Gives requirements for composition, condition, quality, reports, identification, and rejection.

Society of Automotive Engineers. Aeronautical Material Specification 6240B; 1942. Steel; Carburizing (5 Percent Nickel). For bars, billets, forgings, or as ordered. Gives requirements for composition, grain size, hardenability, condition, quality, reports, shipments, identification, and rejections. Similar Specification: Army 57-107-18.

Society of Automotive Engineers. Aeronautical Material Specification 6242B; 1942. Steel; Carburizing (5 Percent Nickel). For bars, billets, forgings, or as ordered. Gives requirements for composition, grain size, hardenability, condition, quality, tolerances, reports, shipments, identification, and rejections.

Society of Automotive Engineers. Aeronautical Material Specification 6250C; 1942. Steel; Carburizing, Nickel-Chromium (Light Section). For bars, billets, forgings, or as ordered. Gives requirements for composition, grain size, hardenability, condition, quality, tolerances, reports, shipments, identification, and rejections.

Society of Automotive Engineers. Aeronautical Material Specification 6252C; 1942. Steel; Carburizing, Nickel-Chromium (Heavy Section). For bars, billets, forgings, or as ordered. Gives requirements for composition, grain size, hardenability, condition, quality, tolerances, reports, shipments, identification, and rejections.

Society of Automotive Engineers. Aeronautical Material Specification 6253D; 1944. Steel; Carburizing, Nickel-Chromium. For bars, billets, forgings, or as ordered. Gives requirements for composition, grain size, hardenability, condition, quality, tolerances, reports, shipments, identification, and rejections.

Society of Automotive Engineers. Aeronautical Material Specification 6254C; 1942. Steel; Carburizing, Nickel-Chromium. For bars, billets, forgings, or as ordered. Gives requirements for composition, grain size, hardenability, condition, quality, tolerances, reports, shipments, identification, and rejections.

Society of Automotive Engineers. Aeronautical Material Specification 6260A; 1944. Steel; 3 Ni, 1 Cr, .1 Mo (.08-.13 C). For bars, billets, forgings, or as ordered. Gives requirements for composition, grain size, hardenability, condition, quality, tolerances, reports, shipments, identification, and rejection.

Society of Automotive Engineers. Aeronautical Material Specification 6262A; 1944. Steel; 3 Ni, 1 Cr, .1 Mo (.08-.13 C). For bars, billets, forgings, or as ordered. Gives requirements for composition, grain size, hardenability, condition, quality, tolerances, reports, shipments, identification, and rejections.

Society of Automotive Engineers. Aeronautical Material Specification 6263A; 1944. Steel; 3 Ni, 1 Cr, .1 Mo (.09-.14 C). For bars, billets, forgings, or as ordered. Gives requirements for composition, grain size, hardenability, condition, quality, tolerances, reports, shipments, identification, and rejections.

Society of Automotive Engineers. Aeronautical Material Specification 6264A; 1944. Steel; 3 Ni, 1 Cr. .1 Mo (.15-.20 C). For bars, billets, forgings, or as ordered. Gives requirements for composition, grain size, hardenability, condition, quality, tolerances, reports, shipments, identification, and rejections.

Society of Automotive Engineers. Aeronautical Material Specification 6270B; 1944. Steel; Carburizing, 5 Ni, .5 Cr, .2 Mo (.12-.17C). For bars, billets, forgings, or as ordered. Gives requirements for chemical composition, grain size, hardenability, condition, quality, tolerances, reports, shipments, identification, and rejections.

Society of Automotive Engineers. Aeronautical Material Specification 6272B; 1944. Steel; Carburizing, .5 Ni, .5 Cr, .2 Mo (.15-.20C). For bars, billets, forgings, or as ordered. Gives requirements for chemical composition, grain size, hardenability, condition, quality, tolerances, reports, shipments, identification, and rejections.

Society of Automotive Engineers. Aeronautical Material Specification 6274B; 1944. Steel; Carburizing, .5 Ni, .5 Cr, .2 Mo (.17-.22C). For bars, billets, forgings, or as ordered. Gives requirements for chemical composition, grain size, hardenability, condition, quality, tolerances, reports, shipments, identification, and rejections.

Society of Automotive Engineers. Aeronautical Material Specification 6280A; 1943. Steel; .55 Ni, .5 Cr, .2 Mo (.27-.33 C). For bars, billets, forgings, or as ordered. Gives requirements for composition, grain size, hardenability, condition, quality, tolerances, reports, shipments, identification, and rejection.

Society of Automotive Engineers. Aeronautical Material Specification 6290C; 1944. Steel; Carburizing, 1.8 Ni, .25 Mo (.11-.17C). For bars, billets, forgings, or as ordered. Gives requirements for composition, grain size, hardenability, condition, quality, tolerances, reports, shipments, identification, and rejections.

Society of Automotive Engineers. Aeronautical Material Specification 6292C; 1944. Steel; Carburizing, 1.8 Ni, .25 Mo (.15-.20C). For bars, billets, forgings, or as ordered. Gives requirements for composition, grain size, hardenability, condition, quality, tolerances, reports, shipments, identification, and rejections.

Society of Automotive Engineers. Aeronautical Material Specification 6294C; 1944. Steel; Carburizing, 1.8 Ni, .25 Mo (.17-.22C). For bars, billets, forgings, or as ordered. Gives requirements for composition, grain size, hardenability, condition, quality, tolerances, reports, shipments, identification, and rejections.

Society of Automotive Engineers. Aeronautical Material Specification No. 6300; 1943. Steel; .25 Mo. (.35-.40 C). For bars, billets, forgings, or as ordered. Gives requirements for composition, grain size, condition, quality, tolerances, reports, shipments, identification, and rejections.

Society of Automotive Engineers. Aeronautical Material Specifications 6310A, 6315A, and 6317A; 1942. Steel; Nickel Molybdenum. For bars, billets, forgings, or as ordered. Gives requirements for composition, grain size, condition, quality, tolerances, reports, shipments, identification, and rejections.

Society of Automotive Engineers. Aeronautical Material Specification 6312A; 1942. Steel; Nickel Molybdenum. For bars, billets, forgings, tubing, or as ordered. Gives requirements for composition, grain size, hardenability, condition, quality, tolerances, reports, shipments, identification, and rejections.

Society of Automotive Engineers. Aeronautical Material Specification 6320A; 1943. Steel; .55 Ni, .5 Cr, .25 Mo (.33-.38 C). For bars, billets, forgings, or as ordered. Chemical composition, grain size, condition, quality, tolerances, reports, shipments, identification, and rejections.

Society of Automotive Engineers. Aeronautical Material Specification 6322A; 1943. Steel; .55 Ni, .5 Cr, .25 Mo (.38-.43 C). For bars, billets, forgings, or as ordered. Chemical composition, grain size, hardenability, condition, quality, tolerances, reports, shipments, identification, and rejections.

Society of Automotive Engineers. Aeronautical Material Specification 6325A; 1943. Steel; .55 Ni, .5 Cr, .25 Mo (.38-.43 C) (105,000 TS). For bars, billets, castings, or as ordered. Chemical composition, grain size, condition, quality, tolerances, reports, shipments, identification, and rejections.

Society of Automotive Engineers. Aeronautical Material Specification 6327A; 1943. Steel; .55 Ni, .5 Cr, .25 Mo (.38-.43 C) (125,000 TS). For bars, billets, forgings, or as ordered. Chemical composition, grain size, condition, quality, tolerances, reports, shipments, identification, and rejections.

Society of Automotive Engineers. Aeronautical Material Specification 6330A; 1942. Steel; Nickel Chromium. For bars, billets, forgings, or as ordered. Gives requirements for composition, grain size, condition, quality, tolerances, reports, shipments, identification, and rejections.

Society of Automotive Engineers. Aeronautical Material Specifications 6332 and 6335, 1939; and 6337, 1940. Steel; Nickel Chromium. For bars, billets, forgings, or as ordered. Gives requirements for composition, grain size, condition, quality, tolerance, reports, shipments, identification, and rejections.

Society of Automotive Engineers. Aeronautical Material Specification No. 6342; 1944. Steel; 1 Ni, .8 Cr, .25 Mo (.38-.43 C). For bars, billets, forgings, or as ordered. Gives requirements for composition, grain size, hardenability, condition, quality, tolerances, reports, shipments, identification, and rejections. Similar specification, NE 9840.

Society of Automotive Engineers. Aeronautical Material Specification 6370A; 1942. Steel; Chromium-Molybdenum (.27-.33 Carbon). For bars, billets, forgings, or as ordered. Gives requirements for composition, grain size, condition, quality, tolerance, reports, shipments, identification, and rejections.

Society of Automotive Engineers. Aeronautical Material Specification 6380A; 1942. Steel; Chromium-Molybdenum (.35-.43 Carbon). For bars, billets, forgings, or as ordered. Covers requirements for composition, grain size, condition, quality, tolerances, reports, shipments, identification, and rejections.

Society of Automotive Engineers. Aeronautical Material Specification 6382A; 1942. Steel; Chromium-Molybdenum (.38-.43 Carbon). For bars, billets, forgings, or as ordered. Covers requirements for composition, grain size, condition, quality, tolerances, reports, shipments, identification, and rejections.

Society of Automotive Engineers. Aeronautical Material Specification 6412A; 1942. Steel; Nickel-Chromium-Molybdenum. For bars, billets, forgings, or as ordered. Gives requirements for composition, grain size, condition, quality, tolerances, reports, shipments, identification, and rejections.

Society of Automotive Engineers. Aeronautical Material Specification 6415A; 1942. Steel; Nickel-Chromium-Molybdenum. For bars, billets, forgings, or as ordered. Gives requirements for composition, grain size, condition, quality, tolerances, reports, shipments, identification, and rejections.

Society of Automotive Engineers. Aeronautical Material Specification 6440A; 1943. Steel; Chromium. For bars, billets, forgings, or as ordered. Gives requirements for composition, condition, quality, tolerances, reports, shipments, identification, and rejections.

Society of Automotive Engineers. Aeronautical Material Specification 6448A; 1944. Steel; Chromium Vanadium. For bars, billets, forgings, or as ordered. Gives requirements for composition, grain size, condition, quality, tolerances, reports, shipments, identification, and rejections. Similar specifications, Army-Navy Aeronautical AN-QQ-S-687 and SAE 6150.

Society of Automotive Engineers. Aeronautical Material Specification 6470A; 1942. Steel; Nitriding (Chromium-Molybdenum-Aluminum). Gives requirements for form (bars, billets, forgings), composition, condition, nitriding, quality, reports, shipments, identification, and rejections.

U. S. Gov., Army Air Forces. Specification 10080-A-1; 1941. Bar; Steel, Low Carbon, High Chromium.

U. S. Gov., Army Air Forces. Specification 10240; 1940. Steel; Carburizing, Bars, Rods and Billets, Nickel-Molybdenum (4615).

U. S. Gov., Army Air Forces. Specification 10243; 1942. Steel; Chromium, High Carbon (52100), Bars.

U. S. Gov., Army-Navy Aeronautical Specification AN-S-9a; 1944. Steel; Molybdenum (4037), Bar and Rod.

U. S. Gov., Army-Navy Aeronautical Specification AN-S-13a; 1943. Steel; Chrome-Nickel-Molybdenum (8620), Bar and Rod.

U. S. Gov., Army-Navy Aeronautical Specification AN-S-14a; 1943. Steel; Chrome-Nickel-Molybdenum (8630), Bar and Rod.

U. S. Gov., Army-Navy Aeronautical Specification AN-S-15a; 1943. Steel; Chrome-Nickel-Molybdenum (8735), Bar and Rod.

U. S. Gov., Army-Navy Aeronautical Specification AN-S-16a; 1943. Steel; Chrome-Nickel-Molybdenum (8740), Bar and Rod.

U. S. Gov., Army-Navy Aeronautical Specification AN-S-19a; 1944. Steel; Chrome-Molybdenum-Aluminum, Bar and Rod (for Nitriding).

U. S. Gov., Army-Navy Aeronautical Specification AN-QQ-S-684a; 1943. Steel; Chrome-Molybdenum (41301), Bar and Rod.

U. S. Gov., Army-Navy Aeronautical Specification AN-QQ-S-687-2; 1942. Steel; Chrome-Vanadium (6150), Bar and Billet.

U. S. Gov., Army-Navy Aeronautical Specification AN-QQ-S-688a; 1944. Steel; Chrome-Vanadium (6195), Bar and Rod.

U. S. Gov., Army-Navy Aeronautical Specification AN-QQ-S-689a; 1944. Steel; Nickel (2330), Bar and Rod.

U. S. Gov., Army-Navy Aeronautical Specification AN-QQ-S-690-1; 1942. Steel; Nickel-Chromium (3140), Bar and Rod.

U. S. Gov., Army-Navy Aeronautical Specification AN-QQ-S-752a; 1943. Steel; Chrome-Molybdenum (4140), Bar and Rod.

U. S. Gov., Army-Navy Aeronautical Specification AN-QQ-S-756a; 1943. Steel; Chrome-Nickel-Molybdenum (4340), Bar and Rod.

U. S. Gov., Army-Navy Aeronautical Specification AN-QQ-S-770a; 1944. Steel; Corrosion-Resisting (16 Cr, 2 Ni), Bar and Rod.

U. S. Gov., Army-Navy Aeronautical Specification AN-QQ-S-771-4; 1943. Steel; Corrosion-Resisting (18 Cr, 8 Ni), Bars and Rods.

U. S. Gov., Federal Specification QQ-S-671; 1941. Amendment 1; 1942. Steel; Carbon and Alloy, Bars. Covers four manganese steels, five nickel steels, fifteen nickel-chromium steels, ten molybdenum steels, four chromium steels, two chromium vanadium steels, and two silicon manganese steels; in seven conditions—as rolled (hot-rolled or forged), annealed, normalized, normalized and tempered, quenched and tempered, cold-rolled or cold-drawn, and cold-rolled or cold-drawn and stress relief annealed. Gives requirements for material, manufacture, quality and condition, condition and finish, heat treatment, chemical composition, physical properties, dimensions, and tolerances; methods of inspection and tests; requirements for packing and marking for shipment; tables of chemical requirements; and tables of permissible variations in squares, rounds, hexagons, and flats.

U. S. Gov., Federal Specification QQ-S-763a; 1943. Steel; Corrosion-Resisting, Bars and Forgings (Except for Reforging). Covers ten classes and six grades and shall be made by the open-hearth or the electric furnace process unless otherwise specified. Gives chemical requirements and physical properties; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Joint Army-Navy Specification JAN-S-43; 1944. Steel Bars for Projectile Stock.

U. S. Gov., Navy Dept. Specification 46N4b; 1943. Nickel-Chromium Alloy; Rods, for Boiler Refractory Anchor Bolts.

U. S. Gov., Navy Dept. Specification 46S25; 1931. Steel; Chrome-Vanadium, Medium Carbon, Bars and Billets (Aircraft Use).

U. S. Gov., Navy Dept. Specification 46S31; 1935. Steel; Chrome-Vanadium and Silicon-Chromium, Rod, for Helical Springs (Aircraft Use).

U. S. Gov., Navy Dept., U. S. Coast Guard, Bureau of Marine Inspection and Navigation. Marine Engineering Regulations and Material Specifications, 1942. Contains specifications and requirements for materials, design, construction, installation, and inspection of boilers, unfired pressure vessels and appurtenances thereof, also piping, valves, fittings, flanges, safety valves, etc., upon the strength and efficiency of which safety of life is dependent, and are intended for maximum temperatures of 1,000° F. Includes specifications for carbon and alloy-steel nuts for bolts used in high-temperature service up to 1,000° F.—process, fabrication, stress relieving, chemical composition, tests, and finish.

U. S. Gov., Navy Dept., U. S. Coast Guard, Bureau of Marine Inspection and Navigation. Marine Engineering Regulations and Material Specifications, 1942. Contains specifications and requirements for materials, design, construction, installation, and inspection of boilers, unfired pressure vessels and appurtenances thereof, also piping, valves, fittings. flanges, safety valves, etc., upon the strength and efficiency of which safety of life is dependent, and are intended for maximum temperatures of 1,000° F. Includes specifications for three grades of rivet steel—(A) and (B) low carbon, and (C) chrome-manganese-silicon alloy-steel—and requirements for rivets; chemical composition, tensile and bending properties, test specimens, tests of finished rivets, permissible variations in diameter, workmanship, and finish.

U. S. Gov., Treasury Dept., Procurement Div., No. 296; 1938. Steel; Alloy, Bars, Billets (for Reforging, or Other Operations Before Heat Treatment). Covers nickel steel, nickel chromium steel, chromium molybdenum steel, and chromium vanadium steel. Gives requirements for chemical composition, manufacturer's analysis, bars, and billets; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., U. S. Army, Army Air Forces. Specification 57-107-13; 1927. Steel Bars; Medium Carbon, High Chromium, 51235.

U. S. Gov., U. S. Army, Army Air Forces. Specification 57-107-18A; 1940. Steel; Carburized, Bar, Rod, and Billet.

U. S. Gov., U. S. Army, Army Air Forces. Specification 57-107-22A; 1940. Steel; Carburized, Bars, Rods, and Billets, Nickel-Chromium (3312).

U. S. Gov., U. S. Army, Ordnance Dept. Specification 57-107-8B; 1940. Steel Rod; Tungsten-Chromium, for Armor-Piercing Bullet Cores, W.D. 74100.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 57-107-25A; 1944. Steel; Bars and Blanks (for Small Arms Gun Barrels).

U. S. Gov., U. S. Army, Ordnance Dept. Specification 57-107-28B; 1943. Steel; Nitriding, Chrome-Molybdenum, Aluminum, Bars.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 57-114-1A; 1942. Steel; Plain Carbon and Low-Alloy High-Tensile, Plate, Shape, Sheet, Strip and Rectangular Bars, for Welded Structures.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 57-116; 1939. Chromium Alloy; Bar, Heat-Resisting.

## 621.32 Ferro-Alloy Plates, Sheets, and Strips

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering, 1938. Structural Nickel Steel. Gives process, discard, chemical composition, ladle analyses, check analyses, physical properties, tests of eye-bars, modification in elongation, yield point, speed of testing machine,

character of fracture, bend tests, drift tests, test specimens, number of tests, retests, finish, permissible variations in weight and thickness, identification marks, inspection, and rejection. Chemical and physical requirements are identical with, and other requirements are similar to, A.S.T.M. A8.

American Society for Testing Materials, A 8-39; 1939. American Assn. of State Highway Officials, M 96-39. Structural Nickel Steel. For high-strength structural nickel steel plates, shapes, and bars up to 1 1/4 in. in thickness, and eyebars up to 2 in. in thickness; for use as main stress-carrying structural members. Requirements as to chemical composition, ladle analysis, tensile properties, elongation, bending, test specimen, permissible variations in weight and thickness, finish, and inspection.

American Society for Testing Materials, A 167-44; 1944. Corrosion-Resisting Chromium-Nickel Steel Plate, Sheet, and Strip. Covers ten grades. Gives requirements for process, chemical composition, analysis, physical properties, bending properties, test specimens, testing, finishes, permissible variations in dimensions and weights, workmanship and finish, inspection, and rejection. A.S.T.M. Emergency Alternate Provision EA-A 167a; 1944, affected table I, Chemical Requirements.

American Society for Testing Materials, A 176-44; 1944. Corrosion-Resisting Chromium Steel Plate, Sheet, and Strip. Covers five grades. Gives requirements for process, chemical composition, analysis, physical properties, bending properties, test specimens, testing, finishes, permissible variations in dimensions and weight, workmanship and finish, inspection, and rejection.

American Society for Testing Materials, A 177-44; 1944. High-Strength Corrosion-Resisting Chromium-Nickel Steel Sheet and Strip. Gives requirements for process, chemical composition, analysis, temper, tensile properties, bending properties, test specimens, tests, permissible variations in thickness, camber, flatness, permissible variations in width, other permissible variations, workmanship and finish, inspection, and rejection. A.S.T.M. Emergency Alternate Provision EA-A 177; 1944, affected section 4, Chemical Composition.

American Society for Testing Materials, A 202-44; 1944. A.S.M.E. Boiler Construction Code Specification SA-202. American Standards Assn., G32.1-1944. Chrome-Manganese-Silicon (CMS) Alloy-Steel Plates for Boilers and Other Pressure Vessels. For two ranges of high tensile strength plates, for maximum workability, and for use without heating. Gives requirements for chemical composition, ladle analysis, check analysis, physical and bending properties, homogeneity test, test specimens, number of tests, permissible variations in thickness and weight, marking, inspection, and rejection.

American Society for Testing Materials, A 203-44; 1944. A.S.M.E. Boiler Construction Code Specification SA-203. American Standards Assn., G33.1-1944. Low-Carbon Nickel-Steel Plates for Boilers and Other Pressure Vessels. For three tensile strength ranges of plates not over 2 in. in thickness, of flange and ordinary firebox qualities, for use in locomotive boiler shells, boilers for stationary service, and other pressure vessels. Gives chemical composition, ladle analysis, check analysis, physical properties, bending properties, homogeneity test, test specimens, number of tests, permissible variations in thickness and weight, finish, marking, inspection, and rejection.

American Society for Testing Materials, A 204-44; 1944. A.S.M.E. Boiler Construction Code Specification SA-204. American Standards Assn., G34.1-1944. Molybdenum-Steel Plates for Boilers and Other Pressure Vessels. For three high tensile strength ranges for fusion welding, for use in locomotive boiler shells, stationary boilers, and other pressure vessels. Gives maximum thickness for various grades, heat treatment, chemical composition, ladle analysis, check analysis, physical properties, bending properties, homogeneity test, test specimens, number of tests, permissible variations in thickness and weight, finish, marking, inspection, and rejection.

American Society for Testing Materials, A 225-44; 1944. A.S.M.E. Boiler Construction Code Specification SA-225. Manganese-Vanadium Steel Plates for Boilers and Other Pressure Vessels. Covers two grades of plates in high tensile strength ranges primarily for fusion welding, for use in locomotive boiler shells, boilers for stationary service, and other pressure vessels. Gives heat treatment, chemical composition, ladle analysis, check analysis, tensile and bending properties, homogeneity test, test specimens, number of tests, permissible variations in thickness and weight, finish, marking, inspection, and rejection.

American Society for Testing Materials, A 240-44; 1944. A.S.M.E. Boiler Construction Code Specification SA-240. Corrosion-Resisting Chromium and Chromium-Nickel Steel Plate, Sheet, and Strip for Fusion-Welded Unfired Pressure Vessels. Covers seven grades. Gives requirements for process, heat treatment, chemical composition, analysis, physical properties, bending properties, test specimens, testing, finishes, permissible variations in dimensions and weight, workmanship and finish, marking, inspection, and rejection.

American Society for Testing Materials, A 263-44T; 1944. A.S.M.E. Boiler Construction Code Specification SA-263. Tentative Specifications for Corrosion-Resisting Chromium Steel Clad Plate, Sheet, and Strip. For carbon steel or low-alloy steel base to which is integrally and continously bonded on one or both sides a layer of corrosion-resisting chromium steel. Gives requirements for process, heat treatment, thickness of cladding metal, chemical composition, check analysis, physical properties, test specimens, number of tests, permissible variations in thickness and weight, finish, repair of minor defects, marking, inspection, and rejection.

American Society for Testing Materials, A 264-44T; 1944. A.S.M.E. Boiler Construction Code Specification SA-264. Tentative Specifications for Corrosion-Resisting Chromium-Nickel Steel Clad Plate, Sheet, and Strip. For carbon steel or low-alloy steel base to which is integrally and continuously bonded on one or both sides a layer of corrosion-resisting chromium-nickel steel. Gives requirements for

process, heat treatment, thickness of cladding metal, chemical composition, check analysis, physical properties, test specimens, number of tests, permissible variations in thickness and weight, finish, repair of minor defects, marking, inspection, and rejection.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. High Chrome Steel Tank Plates for Nitric Acid Tank Cars, M-153-29; 1929. Gives requirements for the use of electric furnace steel, composition, analysis, physical tests, permissible variation in thickness, method of pickling plates, finish, and marking.

Society of Automotive Engineers. Aeronautical Material Specification 5510B; 1942. Steel Sheet and Strip; Corrosion-Resistant (18 Chromium, 8 Nickel). Gives requirements for composition, condition, quality, embrittlement, tolerance, reports, identification, and rejections.

Society of Automotive Engineers. Aeronautical Material Specification 5515A; 1942. Steel Sheet and Strip; Corrosion-Resistant (Deep and Shallow Forming Quality, 18 Chromium, 8 Nickel). Covers requirements for composition, condition, quality, tolerances, reports, identification, and rejections.

Society of Automotive Engineers. Aeronautical Material Specification 5516A; 1942. Steel Sheet and Strip; Corrosion-Resistant (18 Chromium, 8 Nickel) (Cold-Rolled). Gives requirements for composition, condition, quality, tolerance, reports, identification, and rejections.

Society of Automotive Engineers. Aeronautical Material Specification 5517A; 1942. Steel Sheet and Strip; Corrosion-Resistant (Cold-Rolled, High Ductility Type, 18 Chromium, 8 Nickel, 125,000 T.S.). Covers requirements for composition, condition, quality, tolerances, reports, identification, and rejections.

Society of Automotive Engineers. Aeronautical Material Specification 5518A; 1942. Steel Sheet and Strip; Corrosion-Resistant (Cold-Rolled, High Ductility Type, 18 Chromium, 8 Nickel, 150,000 T.S.). Covers requirements for composition, condition, quality, tolerances, reports, identification, and rejections.

Society of Automotive Engineers. Aeronautical Material Specification 5519B; 1942. Steel Sheet and Strip; Corrosion-Resistant (Cold-Rolled, High Ductility Type, 18 Chromium, 8 Nickel, 185,000 T.S.). Gives requirements for composition, condition, quality, tolerances, reports, identification, and rejections.

Society of Automotive Engineers. Aeronautical Material Specification No. 6350; 1942. Steel Plate, Sheet, and Strip, Chromium-Molybdenum (.27-.33 Carbon). Gives requirements for composition, grain size, hardenability, condition, quality, tolerances, reports, identification, and rejections.

Society of Automotive Engineers. Aeronautical Material Specification 6352A; 1942. Steel Plate, Sheet, and Strip, Chromium-Molybdenum (.32-.39 Carbon). Gives requirements for composition, grain size, hardenability, condition, quality, tolerances, reports, identification, and rejections.

Society of Automotive Engineers. Aeronautical Material Specification No. 6353; 1943. Steel Plate, Sheet, and Strip, Chromium Molybdenum (.35-.42 Carbon). Chemical composition, grain size, hardenability, condition, quality, tolerances, reports, identification, and rejections.

Society of Automotive Engineers. Aeronautical Material Specification 6355A; 1943. Steel Plate, Sheet, and Strip, .55 Ni, .5 Cr, .2 Mo, (.27-.33 C). Gives requirements for composition, grain size, hardenability, condition, quality, tolerances, reports, identification, and rejections.

Society of Automotive Engineers. Aeronautical Material Specification 6357A; 1943. Steel Plate, Sheet, and Strip, .55 Ni, .5 Cr, .25 Mo, (.33-.38 C). Gives requirements for composition, grain size, hardenability, condition, quality, tolerances, reports, identification, and rejections.

Society of Automotive Engineers. Aeronautical Material Specification No. 6358; 1943. Steel Plate, Sheet, and Strip, .55 Ni, .5 Cr, .25 Mo (.38-.43 C). Gives requirements for composition, grain size, condition, quality, tolerances, reports, identification, and rejections.

Society of Automotive Engineers. Aeronautical Material Specification No. 6359; 1942. Steel Plate, Sheet, and Strip, Nickel-Chromium-Molybdenum. Gives requirements for composition, grain size, condition, quality, tolerances, reports, identification, and rejections.

Society of Automotive Engineers. Aeronautical Material Specification 6455A; 1942. Steel Sheet (Spring) (Chromium Vanadium). For cold-finished sheet or strip. Gives requirements for composition, grain size, condition, quality, tolerance, reports, identification, and rejections.

U. S. Gov., Army Air Forces. Specification 10237; 1936. Steel; Corrosion-Resistant, Corrugated Sheet.

U. S. Gov., Army-Navy Aeronautical Specification AN-S-12-2; 1943. Steel; Chrome-Nickel-Molybdenum (8630), Sheet and Strip.

U. S. Gov., Army-Navy Aeronautical Specification AN-S-22-1; 1943. Steel; Sheet-and-Strip (.33 to .38 Carbon) Chrome-Nickel-Molybdenum.

U. S. Gov., Army-Navy Aeronautical Specification AN-QQ-S-685-4; 1943. Steel; Chrome-Molybdenum (4130), Plate, Sheet, and Strip.

U. S. Gov., Army-Navy Aeronautical Specification AN-QQ-S-686-1; 1942. Steel; Chrome-Molybdenum (X4135), Plate, Sheet, and Strip.

U. S. Gov., Army-Navy Aeronautical Specification AN-QQ-S-757-3; 1943. Steel; Corrosion and Heat-Resisting (18 Cr, 8 Ni), Plate, Sheet, and Strip.

U. S. Gov., Army-Navy Aeronautical Specification AN-QQ-S-772a; 1943. Steel; Corrosion-Resisting (18 Cr, 8 Ni), Plate, Sheet, and Strip.

U. S. Gov., Federal Specification QQ-S-766a; 1943. Steel; Corrosion-Resisting, Plates, Sheets, Strips, and Structural Shapes. Covers six classes; made by the open-hearth or the electric-furnace process and cast in metal molds. Gives requirements for chemical composition, physical properties, permissible variations, and tolerances: methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Navy Dept. Specification 47S20a; 1937. Steel; Corrosion-Resisting, Plates, Sheets, Strips, and Structural Shapes.

U. S. Gov., Navy Dept. Specification 48S6c; 1935. Steel; Nickel, Plate.

U. S. Gov., U. S. Army, Army Air Forces. Specification 57-136-7; 1927. Steel; Alloy, Sheet or Strip, W.D. 6130.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 57-114-1A; 1942. Steel; Plain Carbon and Low-Alloy High-Tensile, Plate Shape, Sheet, Strip, and Rectangular Bars, for Welded Structures.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 57-136-8-C; 1933. Steel; Chrome-Molybdenum, Sheet or Strip, X-4130.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 57-136B; 1941. Steel; Sheet and Strip, Carbon and Alloy.

*References.*—Methods of testing, general requirements for metals, *see* 600.1, 621.30; heat treatments, *see* 600.5; standard thicknesses, *see* 604.0; carbon steel sheets and plates, *see* 604, 605.1; alloy steel structural plates, *see* 621.33.

## 621.33 Structural Shapes of Ferro-Alloys

American Institute of Steel Construction. Applications of Structural Steels and Lightweight Alloys for Bridges, Buildings, and Similar Structures, 1943. Gives requirements for physical and mechanical properties, fabrication and usability characteristics, forming and bending, riveting, welding, corrosion, aluminum, magnesium, stainless steel, low-alloy structural steel, sheet steel for structural purposes, standard structural carbon steel, and general conclusion.

American Iron and Steel Institute. National Emergency Specifications, 1943. Simplification of Structural Steel Shapes. The simplified list of structural steel shapes given herein is that referred to in paragraph (b) of schedule 4 to Limitation Order L-211 of the War Production Board. Gives nominal dimensions and weight per foot of beams, columns, channels, angles, zees, tees, and miscellaneous shapes.

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering, 1943. Specifications for Steel Railway Bridges (for Fixed Spans Not Exceeding 400 Feet in Length). Covers requirements for alloy steels. Covers unit stresses, thickness of material, sizes of rivets, lacing, alloy and structural steels combined, secondary stresses, and workmanship.

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering, 1938. Structural Nickel Steel. Gives process, discard, chemical composition, ladle analyses, check analyses, physical properties, tests of eye-bars, modification in elongation, yield point, speed of testing machine, character of fracture, bend tests, drift tests, test specimens, number of tests, retests, finish, permissible variations in weight and thickness, identification marks, inspection, and rejection. Chemical and physical requirements are identical with, and other requirements are similar to, A.S.T.M. A8.

American Society for Testing Materials, A 8-39; 1939. American Assn. of State Highway Officials, M 96-39. Structural Nickel Steel. For high-strength structural nickel steel plates, shapes, and bars up to 1 1/4 in. in thickness, and eyebars up to 2 in. in thickness; for use as main stress-carrying structural members. Requirements as to chemical composition, ladle analysis, tensile properties, elongation, bending, test specimen, permissible variations in weight and thickness, finish, and inspection.

American Society for Testing Materials, A 148-44; 1944. American Standards Assn., G52.1-1944. Alloy-Steel Castings for Structural Purposes. For use where mechanical stresses unaccompanied by high temperatures predominate, including full annealed, normalized and tempered, and liquid quenched and tempered or drawn castings. Gives requirements for heat treatment, temperature control, chemical composition, ladle analysis, check analysis, tensile properties, bending properties, magnetic particle testing, test specimens, number of tests, retests, workmanship, finish, marking, inspection, and rejection. A.S.T.M. Emergency Alternate Provision EA-A 148a; 1944, affected section 1, a fourth grade added under class C.

U. S. Gov., Federal Specification QQ-S-766a; 1943. Steel; Corrosion-Resisting, Plates, Sheets, Strips, and Structural Shapes. Covers six classes; made by the open-hearth or the electric-furnace process and cast in metal molds. Gives requirements for chemical composition, physical properties, permissible variations, and tolerances; method of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 57-114-1A; 1942. Steel; Plain Carbon and Low-Alloy, High-Tensile, Plate Shape, Sheet, Strip, and Rectangular Bars, for Welded Structures.

*References.*—Methods of testing, general requirements for metals, *see* 600.1, 621.30; standard thicknesses of plates, *see* 604.0; tolerances on weight and thickness, *see* 600.7; carbon structural steel, *see* 605.1.

## 621.34 Alloy Steel for Springs

American Society for Testing Materials, A 59-39; 1939. Silicon-Manganese Steel Bars for Springs. Requirements for chemical composition of hot-rolled bars, ladle analysis, permissible variations in dimensions, finish, and inspection.

American Society for Testing Materials, A 60-42; 1942. Chromium-Vanadium Steel Bars for Springs. Requirements for hot-rolled bars, chemical composition, ladle analysis, permissible variations in dimensions, finish, and inspection.

American Society for Testing Materials, A 231-41; 1941. Chromium-Vanadium Steel Spring Wire. Covers untempered steel wire for use in springs at moderately elevated temperatures. Requirements as to chemical composition, ladle analysis, permissible variations in dimensions, surface condition, and inspection.

American Society for Testing Materials, A 232-41; 1941. Chromium-Vanadium Steel Valve Spring Quality Wire. For highest quality chromium-vanadium valve spring wire requiring high-fatigue properties,

especially at moderately elevated temperatures. Chemical composition, ladle analysis, physical requirements, permissible variations in dimensions, decarburization, surface condition, and inspection.

Society of Automotive Engineers. Aeronautical Material Specification 5688A; 1942. Steel Wire; Corrosion-Resistant, 18 Chromium, 8 Nickel (Spring). Gives requirements for composition, condition, quality, tolerances, reports, and rejections.

Society of Automotive Engineers. Aeronautical Material Specification No. 6450; 1941. Spring Wire; Chromium-Vanadium. For cold-finished round wire and other shapes. Gives requirements for composition, grain size, condition, quality, tolerance, finished parts, identification, reports, approval, and rejections.

Society of Automotive Engineers. Aeronautical Material Specification 6456A; 1942. Steel Sheet (Spring) (Chromium Vanadium). For cold-finished sheet or strip. Gives requirements for composition, grain size, condition, quality, tolerance, reports, identification, and rejections.

U. S. Gov., Navy Dept. Specification 46S31; 1935. Steel; Chrome-Vanadium and Silicon-Chromium, Rod, for Helical Springs (Aircraft Use).

*References.*—Methods of testing, general requirements for metals, *see* 600.1, 621.30; heat treatments, *see* 600.5; tolerances on weight and thickness, *see* 600.7; carbon spring steel, *see* 603.33.

### 621.35 Alloy Steel for Tools

U. S. Gov., Treasury Dept., Procurement Div., No. 295; 1938. Steel; Tool, High-Speed and Carbon. Covers two classes of tungsten and five classes of carbon steel. Gives requirements for material, workmanship, process, imperfections, lengths, tolerances, chemical requirements, and intended uses of each class; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 57-108A; 1943. Steel; Tool, Carbon, Alloy, and High Speed.

*References.*—Methods of testing, general requirements for metals, *see* 600.1, 621.30; heat treatments, *see* 600.5; tolerances on weight and thickness, *see* 600.7; carbon tool steel, *see* 603.32.

### 621.36 Alloy Steel for Magnets

American Society for Testing Materials, A 34-44; 1944. Methods of Test for Magnetic Properties of Iron and Steel. Includes procedures for determining the normal induction and hysteresis, core loss, normal and incremental permeability and core loss, permeability of feebly magnetic materials, interlamination resistance, and lamination factor.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 57-120A; 1942. Alloy; Permanent Magnet.

*References.*—Methods of test for magnetic properties, *see* 600.1.

### 621.37 Alloy Steel for Tubes

### 621.39 Miscellaneous Ferro-Alloys

American Society for Testing Materials, ES-5a; 1942. Emergency Specifications for Carbon-Chromium, Ball and Roller-Bearing Steels. Covers three types of high-carbon-chromium steel bars, rods, wire, and tubes for ball and roller bearings. Requirements for process of manufacture, chemical analyses, usage, analysis, check analysis, workmanship, and tolerances.

U. S. Gov., Navy Dept. Specification 46S12d; 1938. Steel; Corrosion-Resisting, for Turbine Parts.

U. S. Gov., Navy Dept. Specification 46S33; 1939. Steel; Alloy, Molybdenum, Castings.

U. S. Gov., Navy Dept. Specification 46S34b; 1945. Steel; Alloy, Molybdenum Wrought.

## 622. MANUFACTURES OF FERRO-ALLOYS

### 622.1 BOLTS, FERRO-ALLOY

Aeronautical Chamber of Commerce of America, Inc.. National Aircraft Standard NAS 53, 54, 55, 56, 57, 58, 59, 60, 62, 64, and 66; 1944. Bolt; Close Tolerance, Alloy Steel, and Aluminum Alloy. Nos. 10-32, 1/4-28, 5/16-24, 3/8-24, 7/16-20, 1/2-20, 9/16-18, 5/8-18, 3/4-16, 7/8-14, and 1-14. Gives drawings with dimensions and notes for size. Developed by National Aircraft Standard Committee.

Aeronautical Chamber of Commerce of America, Inc. National Aircraft Standard NAS 80, 81, 82, 83, 84, 85, and 86; 1944. Bolt; 100° Flush Head Close Tolerance. Gives drawings, dimensions and notes for Nos. 1/4-28, 5/16-24, 3/8-24, 7/16-20, 1/2-20, 9/16-18, and 5/8-18. Developed by National Aircraft Standard Committee.

American Society for Testing Materials, A 96-44; 1944. A.S.M.E. Boiler Construction Code Specification SA-96. American Standards Assn., G17.2-1944. Alloy-Steel Bolting Material for High-Temperature Service. Covers rolled, forged, or cold-drawn bars, and bolts, screws, and studs. Gives requirements for heat treatment, chemical composition, ladle analysis, check analysis, tensile properties, hardness test, test specimens, number of tests, retests, finish, nuts and washers, threads, marking, inspection, and rejection.

American Society for Testing Materials, A 183-40T; 1940. Tentative Specifications for Heat-Treated Carbon- and Alloy-Steel Track Bolts and Nuts. For two grades of carbon-steel track bolts, alloy-steel track bolts, and nuts; requirements as to chemical compositions, tensile and bending properties, test specimen, strip test, permissible variations in dimensions, threads and thread fit. A.S.T.M. Emergency Alternate Provision EA-A 183; 1942, affected section 1, Scope; section 3, Chemical Composition; section 4, Ladle Analysis; section 6, Tensile Properties; section 8, Bending Properties; and section 14, Threads and Thread Fit.

American Society for Testing Materials, A 193-44T; 1944. Tentative Specifications for Alloy-Steel Bolting Materials for High-Temperature Service From 750 to 1,000° F. Metal Temperatures. For bolting material for pressure vessels, valves, flanges, and fittings, including rolled, forged, or cold-drawn bars; and bolts, screws, and studs. Includes 10 ferritic and 1 austenitic steel. Gives requirements for heat treatment, chemical composition, analyses, tensile properties, test specimens, number of tests, retests, finish, nuts and washers, threads, marking, inspection, and rejection.

American Society for Testing Materials, A 194-40; 1940. A.S.M.E. Boiler Construction Code Specification SA-194. American Standards Assn., G38.1-1942. Carbon and Alloy-Steel Nuts for Bolts for High-Pressure and High-Temperature Service to 1,100° F. Covers five classes of material based on severity of service. Method of fabrication, stress relief, chemical compositions, hardness, drift, and stripping tests, finish, and inspection. A.S.T.M. Emergency Alternate Provision EA-A194; 1942, affected section 1, Scope.

American Transit Assn. Standard Specification for Quenched, Alloy-Steel Track Bolts, W22-37; 1937. Gives detailed requirements as to method of manufacture, chemical and physical properties and tests, permissible variations, workmanship and finish, marking, and inspection and rejection.

Hydraulic Institute. Material Specification for Heavy Duty Bolting Materials and Nuts, No.520; 1939. These specifications cover an alloy steel bolting material and a carbon steel nut material for service where the metal temperature does not exceed 900° F. Includes rolled, forged, or cold-drawn bar bolts, screws, and studs; requirements for manufacture, chemical composition, physical properties, finish, and thread standards.

U. S. Gov., Army-Navy Aeronautical Specification AN-B-3a; 1943. Bolts; Aircraft.

*References.*—Methods of testing, general requirements for metals, *see* 600.1, 621.30; heat treatment, *see* 600.5; tolerances on weight and thickness, *see* 600.7; classification of railway materials, *see* 600.2; carbon steel bolts, track bolts, *see* 608.31, 608.4.

## 622.2 RAILWAY RAILS, FERRO-ALLOY

*References.*—Methods of testing, general requirements for metals, *see* 600.1, 621.30; classification of railway materials, *see* 600.2; track construction, *see* 606.0; carbon steel rails, *see* 606.1.

## 622.3 TUBULAR PRODUCTS AND FITTINGS, FERRO-ALLOY

American Iron and Steel Institute. Steel Products Manual, 1942. Specification P-452-T. Seamless and Welded Seamless Steel Tubing for the Dairy and Food Industry. Covers a grade of seamless and welded austenitic stainless steel tubing in sizes up to and including 3 in. OD intended for use in the dairy and food industry where severe corrosive conditions exist. Includes requirements for process, manufacture, chemical composition, check analysis, hydrostatic test, tolerances, finish, marking, packaging, inspection, certification, rejection, and rehearing.

American Iron and Steel Institute. Steel Products Manual, 1942. Specification P-518-T. Seamless and Welded Ferritic Type Stainless Steel Tubing for General Service. Covers five grades of stainless steel tubing for general corrosive and high temperature service. Includes requirements for process, manufacture, chemical composition, check analysis, tensile properties, flaring test, hardness test, hydrostatic test, test specimens, number of tests, retests, retreatment, tolerances, finish, marking, inspection, rejection, and rehearing.

American Iron and Steel Institute. Steel Products Manual, 1942. Specification P-524-T. Seamless and Welded Austenitic Type Stainless Steel Tubing for General Service. Covers five grades of stainless steel tubing for general corrosive and high temperature service. Includes requirements for process, manufacture, chemical composition, check analysis, flaring test, hydrostatic test, test specimens, number of tests, retests, retreatment, tolerances, finish, marking, inspection, rejection, and rehearing.

American Iron and Steel Institute. Steel Products Manual, 1942. Specification P-525-T. Seamless Chromium-Nickel Austenitic Alloy Steel Still Tubes for Refinery Service. Covers three grades of seamless austenitic chromium-nickel alloy steel still tubes from 2 in. to 7 1/2 in. in outside diameter and heavier than .220 in. in minimum wall or 1/4 in. average wall thickness. These tubes are to be used for carrying oil at elevated temperatures and pressures in various types of oil stills in which the tubes may be subjected to a furnace temperature higher than that of the contained fluid. Includes requirements for process, heat treatment, chemical composition, check analysis, tension test, flattening test, flaring test, hardness test, hydrostatic test, test specimens, number of tests, retests, retreatment, tolerances, finish, marking, inspection, certification, rejection, and rehearing.

American Iron and Steel Institute. Steel Products Manual, Section 18; 1938. Revised, 1944. Steel Tubular Products. Gives definitions, classifications, and manufacturing practices; stainless tubular products; tables of dimensions, weights, and hydrostatic test pressures; basic threading data; methods of calculating weights of couplings and upsets; standard machining allowances for seaming tubing for aircraft stock struts and landing gear; and standard methods of packing and loading steel tubular products.

American Society for Testing Materials, A 158-44T; 1944. A.S.M.E. Boiler Construction Code Specification SA-158. Tentative Specifications for Seamless Alloy-Steel Pipe for Service at Temperatures from 750 to 1,100° F. Includes eight ferritic and three austenitic steels. Gives heat treatment, chemical composition, ladle analysis, check analysis, tensile properties, bending properties, flattening test, hydrostatic test, test specimens, number of tests, retests, retreatment, permissible variations in weight and dimensions, lengths, ends, finish, marking, inspection, and rejection. A.S.T.M. Emergency Alternate Provision, EA-158a; 1944, affected section 1, Scope; and table 1, Chemical Requirements.

American Society for Testing Materials, A 161-44; 1944. Seamless Low-Carbon and Carbon-Molybdenum Steel Still Tubes for Refinery Service. Covers 2 in. and over outside diameter, thicker than No.5 B.W.G., for use in carrying oil at elevated temperatures and pressures in oil stills. Gives manufacture, chemical composition, check analysis, tensile properties, flattening test, flaring test, hardness test, hydrostatic test, test specimens, number of tests, retests, permissible variations in dimensions and weight, finish, marking, inspection, and rejection. A.S.T.M. Emergency Alternate Provision EA-A 161; 1942, affected section 4, Chemical Composition.

American Society for Testing Materials, A 182-44; 1944. A.S.M.E. Boiler Construction Code Specification SA-182. American Standards Assn., G37.1-1944.

Forged or Rolled Alloy-Steel Pipe Flanges, Forged Fittings, and Valves and Parts for Service at Temperatures From 750 to 1,100° F. Includes seven ferritic and three austenitic steels, selection dependent on design and service. Gives requirements for manufacture, heat treatment, chemical composition, ladle analysis, check analysis, tensile properties, hydrostatic tests, test specimens, number of tests, retests, macroetch tests, workmanship, finish, marking, inspection, and rejection.

American Society for Testing Materials, A 199-44; 1944. Seamless Cold-Drawn Intermediate Alloy-Steel Heat-Exchanger and Condenser Tubes. Covers several grades of chromium-molybdenum and chromium-molybdenum-silicon tubes in sizes from 1/2 in. to 2 in. in outside diameter. Gives manufacture, chemical composition, check analysis, tensile properties, flattening test, flaring test, hardness test, hydrostatic test, test specimens, number of tests, retests, retreatment, permissible variations in dimensions, finish, marking, inspection, and rejection. A. S. T. M. Emergency Alternate Provision EA-A 199; 1942, affected table I, Chemical Requirements; section 9, Hardness.

American Society for Testing Materials, A 200-44; 1944. Seamless Intermediate Alloy-Steel Still Tubes for Refinery Service. Covers several grades of chromium-molybdenum and chromium-molybdenum-silicon still tubes, 2 in. and over in outside diameter and thicker than No.5 B.W.G. Gives manufacture, chemical composition, check analysis, tensile properties, flattening test, flaring test, hardness test, hydrostatic test, test specimens, number of tests, retests, retreatment, permissible variations in dimensions and weight, finish, marking, inspection, and rejection. A.S.T.M. Emergency Alternate Provision EA-A 200; 1942, affected table I, Chemical Requirements; section 9, Hardness.

American Society for Testing Materials, A 206-44T; 1944. A.S.M.E. Boiler Construction Code Specification SA-206. Tentative Specifications for Seamless Carbon-Molybdenum Alloy-Steel Pipe for Service at Temperatures From 750 to 1,000° F. For pipe suitable for bending, flanging (vanstoning), and similar forming operations, and fusion welding. Gives requirements for process, heat treatment, chemical composition, tensile and bending properties, flattening and hydrostatic tests, photomicrographs, test specimens, permissible variations in weight and dimensions, finish, and inspection. A.S.T.M. Emergency Alternate Provision EA-A 206; 1943, affected section 5, Chemical Composition.

American Society for Testing Materials, A 209-44; 1944. A.S.M.E. Boiler Construction Code Specification SA-209. Seamless Carbon-Molybdenum Alloy-Steel Boiler and Superheater Tubes. Covers three grades, with requirements for manufacture, chemical composition, tensile properties, flattening, flaring, hardness, and hydrostatic tests; test specimens, number of tests, retests, retreatment, forming operations, standard weights, permissible variations in dimensions and weight, finish, marking, inspection, and rejection. A.S.T.M. Emergency Alternate Provision EA-A 209; 1942, affected table I, Chemical Requirements.

American Society for Testing Materials, A 213-44; 1944. A.S.M.E. Boiler Construction Code Specification SA-213. American Standards Assn., B36.17-1944. Seamless Alloy-Steel Boiler and Superheater Tubes. Includes ferritic and austenitic steels. Gives requirements for manufacture, chemical composition, check analysis, tensile properties, flattening, flaring, hardness, and hydrostatic tests; test specimens, number of tests, retests, retreatment, forming operations, standard weights, permissible variations in dimensions and weight, finish, marking, inspection, and rejection. A.S.T.M. Emergency Alternate Provision EA-A 213a; 1944, affected table I, Chemical Requirements of Ferritic Steel; table II, Chemical Requirements of Austenitic Steel; section 9, Hardness.

American Society for Testing Materials, A 234-44; 1944. Factory-Made Wrought Carbon-Steel and Carbon-Molybdenum-Steel Welding Fittings. For pressure piping, including butt welding or socket-end parts such as elbows, return bends, caps, tees, reducers, etc., but not including cast welding fittings. Gives requirements for material, manufacture, chemical composition, check analysis, heat treatment, tensile properties, hydrostatic tests, retests, workmanship and finish, marking, inspection, and rejection.

American Society for Testing Materials, A 249-44; 1944. A.S.M.E. Boiler Construction Code Specification SA-249. Atomic-Hydrogen-Arc-Welded and Electric-Resistance-Welded Alloy-Steel Boiler and Superheater Tubes. For tubes made from austenitic steels. Gives process, manufacture, chemical composition, check analysis, tensile properties, flattening, flaring, hardness, and hydrostatic tests; test specimens, number of tests, retests, retreatment, forming operations, standard weights, permissible variations in dimensions and weight, finish, marking, inspection, and rejection. A.S.T.M. Emergency Alternate Provision EA-A 249a; 1944, affected table I, Chemical Requirements.

American Society for Testing Materials, A 250-44; 1944. A.S.M.E. Boiler Construction Code Specification SA-250. Electric-Resistance-Welded Carbon-Molybdenum Alloy-Steel Boiler and Superheater Tubes. For three grades of electric resistance-welded, carbon-molybdenum alloy-steel boiler and superheater tubes. Gives process, manufacture, chemical composition, check analysis, tensile properties; flattening, flaring, hardness, and hydrostatic tests; test specimens, number of tests, retests, retreatment, forming operations, standard weights, permissible variations in dimensions and weight, finish, marking, inspection, rejection, and rehearing. A. S. T. M. Emergency Alternate Provision EA-A 250; 1942, affected table I, Chemical Requirements, and section 19, Markings.

American Society for Testing Materials, A 268-44T. Tentative Specification for Seamless and Welded Ferritic Stainless Steel Tubing for General Service. Covers scope, process, manufacture, chemical composition, check analysis, tensile properties, flaring test, hardness test, hydrostatic test, test specimens, number of tests retests, retreatment, permissible variations in dimensions, finish, marking,

inspection, rejection, and rehearing. A. S. T. M. Emergency Alternate Provision EA-A 268; 1944, affected table I, Chemical Composition.

American Society for Testing Materials, A 269-44T. Tentative Specification for Seamless and Welded Austenitic Stainless Steel Tubing for General Service. Covers scope, process, manufacture, chemical composition, check analysis, flaring test, hardness test, hydrostatic test, test specimens, number of tests, retests, retreatment, permissible variations in dimensions, finish, marking, inspection, rejection, and rehearing. A.S.T.M. Emergency Alternate Provision EA-A 269; 1944, affected table I, Chemical Composition.

American Society for Testing Materials, A 270-44T. Tentative Specification for Seamless and Welded Austenitic Stainless Steel Tubing for the Dairy and Food Industry. Covers scope, process, manufacture, chemical composition, check analysis, hydrostatic test, number of tests, permissible variations in dimensions, finish, packaging, marking, inspection, rejection, and rehearing. A.S.T.M. Emergency Alternate Provision EA-A 270; 1944, affected table I, Chemical Requirements.

American Society for Testing Materials, A 271-44T. Tentative Specification for Seamless Austenitic Chromium-Nickel Steel Still Tubes for Refinery Service. Covers scope, process, manufacture, chemical composition, check analysis, tensile properties, flattening test, flaring test, hardness test, hydrostatic test, test specimens, number of tests, retests, retreatment, permissible variations in dimensions and weights, finish, marking, inspection, rejection, and rehearing. A.S.T.M. Emergency Alternate Provision EA-A 271; 1944, affected table I, Chemical Requirements.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, Volume 2; 1944. Pipe; Copper-Molybdenum Iron. Covers definition, types and sizes, ordering copper-molybdenum iron pipe, and trade customs.

Society of Automotive Engineers. Aeronautical Material Specification 5022A; 1942. Steel; Free-Cutting Manganese (1.3 Manganese). Gives requirements for form (bars, billets, tubes, or forgings), composition, condition, quality, reports, and rejections.

Society of Automotive Engineers. Aeronautical Material Specification 5024A; 1942. Steel; Free-Cutting Manganese (1.5 Manganese). Gives requirements for form (bars, billets, tubing, or forgings), composition, condition, quality, reports, and rejections.

Society of Automotive Engineers. Aeronautical Material Specification 5560; 1944. Steel Tubing; Corrosion-Resistant, Seamless. Gives requirements for use, composition, condition, quality, embrittlement, tolerances, reports, identification, and rejections. Similar specifications: ASTM A213-42, grade T8; Army-Navy Aeronautical AN-WW-T-855, condition A; SAE 30905; AISI 304.

Society of Automotive Engineers. Aeronautical Material Specification 5565; 1944. Steel Tubing; Corrosion-Resistant, Welded. Gives requirements for use, composition, condition, quality, embrittlement, tolerances, reports, identification, and rejections. Similar specifications: Army-Navy Aeronautical AN-T-43, comp. 1; SAE 30905; AISI 304; ASTM A249-42, grade T8.

Society of Automotive Engineers. Aeronautical Material Specification 5570C; 1942. Seamless Steel Tubing, Corrosion- and Heat-Resistant (18 Chromium, 8 Nickel). Gives requirements for composition, condition, quality, embrittlement, tolerances, reports, identification, and rejections.

Society of Automotive Engineers. Aeronautical Material Specification 5575B; 1942. Welded Steel Tubing, Corrosion- and Heat-Resistant (18 Chromium, 8 Nickel). Covers requirements for composition, condition, quality, embrittlement, tolerances, reports, identification, and rejections.

Society of Automotive Engineers. Aeronautical Material Specification 6282; 1944. Steel Tubing; Seamless for Machined Parts To Be Heat-Treated, .55 Ni, .50 Cr, .25 Mo (.33-.38 C), Cold Finished or Hot Finished. Gives requirements for use, composition, grain size, condition, quality, tolerances, reports, identification, and rejections. Similar specification, NE 8735.

Society of Automotive Engineers. Aeronautical Material Specification 6283; 1944. Steel Tubing; Seamless for Machined Parts, .55 Ni, .50 Cr, .25 Mo (.33-.38 C), Normalized or Heat-Treated (90,000 T. S.). Gives requirements for composition, grain size, condition, quality, tolerances, reports, identification, and rejections. Similar specification, NE 8735.

Society of Automotive Engineers. Aeronautical Material Specification 6284; 1944. Steel Tubing; Seamless for Machined Parts, .55 Ni, .50 Cr, .25 Mo (.35-.38 C), Heat-Treated (125,000 T.S.). Gives requirements for composition, grain size, condition, quality, tolerances, reports, identification, and rejection. Similar specification, NE 8735.

Society of Automotive Engineers. Aeronautical Material Specification 6285; 1944. Steel Tubing; Seamless for Machined Parts, .55 Ni, .50 Cr, .25 Mo (.33-.38C), Heat-Treated (150,000 T.S.). Gives requirements for composition, grain size, condition, quality, tolerances, reports, identification, and rejection. Similar specification, NE 8735.

Society of Automotive Engineers. Aeronautical Material Specification 6286; 1944. Steel Tubing; Seamless for Machined Parts, .55 Ni, .50 Cr, .25 Mo (.38-.43C) Heat-Treated (180,000 T.S.). Gives requirements for composition, grain size, condition, quality, tolerances, reports, identification, and rejection. Similar specification, NE 8740.

Society of Automotive Engineers. Aeronautical Material Specification 6312A; 1942. Steel; Nickel-Molybdenum. For bars, billets, forgings, tubing, or as ordered. Gives requirements for composition, grain size, hardenability, condition, quality, tolerances, reports, shipments, identification, and rejections.

Society of Automotive Engineers. Aeronautical Material Specification 6323; 1944. Steel Tubing; Seamless for Machined Parts To Be Heat-Treated, .55 Ni, .50 Cr, .25 Mo (.38-.43 C), Cold Finished or

Hot Finished. Gives requirements for composition, grain size, condition, quality, tolerances, reports, identification, and rejections. Similar specification, NE 8740.

Society of Automotive Engineers. Aeronautical Material Specification 6360A; 1942. Steel Tubing (Seamless); Round, Chromium-Molybdenum (.27-.33 Carbon) (Normalized). Gives requirements for composition, grain size, condition, quality, tolerances, reports, identification, and rejections.

Society of Automotive Engineers. Aeronautical Material Specification 6361; 1942. Steel Tubing (Seamless); Round, Chromium-Molybdenum (.27-.33 Carbon) (125,000 T.S.-.188 Maximum Wall Thickness). Covers requirements for composition, grain size, condition, quality, tolerances, reports, identification, and rejections.

Society of Automotive Engineers. Aeronautical Material Specification 6362; 1942. Steel Tubing (Seamless); Round, Chromium-Molybdenum (.27-.33 Carbon) (150,000 T. S.-.188 Maximum Wall Thickness). Covers requirements for composition, grain size, condition, quality, tolerances, reports, identification, and rejections.

Society of Automotive Engineers. Aeronautical Material Specification 6363; 1942. Steel Tubing (Seamless); Round, Chromium-Molybdenum (.27-.33), (180,000 T. S.-.156 Maximum Wall Thickness). Covers requirements for composition, grain size, condition, quality, tolerances, reports, identification, and rejections.

Society of Automotive Engineers. Aeronautical Material Specification 6365; 1942. Steel Tubing (Seamless); Round, Chromium-Molybdenum (.32-.39 Carbon) (Normalized). Covers requirements for composition, grain size, condition, quality, tolerances, reports, identification, and rejections.

Society of Automotive Engineers. Aeronautical Material Specification 6366; 1942. Steel Tubing (Seamless); Reund, Chromium-Molybdenum (.32-.39 Carbon) (125,000 T.S.). Covers requirements for composition, grain size, condition, quality, tolerances, reports, identification, and rejections.

Society of Automotive Engineers. Aeronautical Material Specification 6367; 1942. Steel Tubing (Seamless); Round, Chromium-Molybdenum (.32-.39 Carbon) (150,000 T.S.). Covers requirements for composition, grain size, condition, quality, tolerances, reports, identification, and rejections.

Society of Automotive Engineers. Aeronautical Material Specification 6368; 1942. Steel Tubing (Seamless); Round, Chromium-Molybdenum (.32-.39 Carbon) (180,000 T.S.). Covers requirements for composition, grain size, condition, quality, tolerances, reports, identification, and rejections.

Society of Automotive Engineers. Aeronautical Material Specification 6369; 1942. Steel Tubing (Seamless); Round, Chromium-Molybdenum (.32-.39 Carbon) (200,000 T.S.). Covers requirements for composition, grain size, condition, quality, tolerances, reports, identification, and rejections.

Society of Automotive Engineers. Aeronautical Material Specification 6371; 1942. Steel Tubing (Seamless for Machined Parts); Chromium-Molybdenum (.27-.33 Carbon), Hot-Finish or Cold-Finish. Gives requirements for composition, grain size, condition, quality, tolerances for round seamless tubing, reports, identification, and rejection.

Society of Automotive Engineers. Aeronautical Material Specification 6381; 1942. Steel Tubing (Seamless for Machined Parts); Chromium-Molybdenum (.35-.42 Carbon), Hot-Finish or Cold-Finish. Gives requirements for composition, grain size, condition, quality, tolerances for round seamless tubing, reports, identification, and rejection.

Society of Automotive Engineers. Aeronautical Material Specification 6413; 1942. Steel Tubing (Seamless for Machined Parts); Nickel-Chromium-Molybdenum (.35-.42 Carbon), Hot-Finish or Cold-Finish. Gives requirements for composition, grain size, condition, quality, tolerances for round seamless tubing, reports, identification, and rejection.

Society of Automotive Engineers. Aeronautical Material Specification 6420; 1944. Steel Tubing; Seamless for Machined Parts, 1.8 Ni, .80 Cr, .25 Mo (.38-.43C), Heat Treated (200,000 T.S.). Gives requirements for composition, grain size, condition, quality, tolerances, reports, identification, and rejection. Similar specification, SAE 4340.

Society of Automotive Engineers. Aeronautical Material Specification 6510; 1942. Steel Tubing (Welded); Chromium-Molybdenum (.27-.33 Carbon) (Normalized). Gives requirements for type, composition, grain size, condition, quality, tolerances, tests, reports, identification, and rejections.

Society of Automotive Engineers. Aeronautical Material Specification 6530A; 1943. Steel Tubing (Seamless); Round, .55 Ni, .5 Cr, .2 Mo (.27-.33 C) (Normalized). Gives requirements for composition, grain size, condition, quality, tolerances, reports, identification, and rejections.

Society of Automotive Engineers. Aeronautical Material Specification 6531; 1944. Steel Tubing; Seamless, Round, .55 Ni, .5 Cr, .2 Mo (.27-.33C) Heat Treated (125,000 T.S.). Gives requirements for composition, grain size, condition, quality, tolerances, reports, identification, and rejections. Similar Specifications: Army-Navy Aeronautical AN-T-15, condition HT125; NE 8630.

Society of Automotive Engineers. Aeronautical Material Specification 6535A; 1943. Steel Tubing (Seamless); Round, .55 Ni, .5 Cr, .25 Mo (.33-.38C) (Normalized). Gives requirements for composition, grain size, condition, quality, tolerances, reports, identification, and rejections.

Society of Automotive Engineers. Aeronautical Material Specification 6550A; 1943. Steel Tubing (Welded); .55 Ni, .5 Cr, .2 Mo (.27-.33 C) (Normalized). Covers electric-resistance-welded or gas-welded tubing. Gives requirements for chemical composition, grain size, condition, quality, tolerances, tests, reports, identification, and rejections.

U. S. Gov., Army-Navy Aeronautical Specification AN-T-3; 1942. Tubing; Steel, Chrome-Molybdenum (X4130), Welded.

U. S. Gov., Army-Navy Aeronautical Specification AN-T-14-2; 1944. Tubing; Corrosion-Resisting Steel, Flexible.

U. S. Gov., Army-Navy Aeronautical Specification AN-T-15-2; 1943. Tubing; (.27 to .33 Carbon), Chrome-Nickel-Molybdenum Steel, Seamless.

U. S. Gov., Army-Navy Aeronautical Specification AN-T-22-2; 1943. Tubing; (.33 to .38 Carbon), Chrome-Nickel-Molybdenum Steel, Seamless.

U. S. Gov., Army-Navy Aeronautical Specification AN-T-33-1; 1943. Tubing; (.27 to .33 Carbon), Chrome-Nickel-Molybdenum Steel, Welded.

U. S. Gov., Army-Navy Aeronautical Specification AN-T-43-1; 1944. Tubing; Welded Corrosion-Resisting (18 Cr, 8N1) Steel, Round, for Hydraulic Systems.

U. S. Gov., Army-Navy Aeronautical Specification AN-WW-T-850a-1; 1943. Tubing; Steel, Chrome-Molybdenum (X4130), Seamless.

U. S. Gov., Army-Navy Aeronautical Specification AN-WW-T-852a; 1942. Tubing; Steel, Chrome-Molybdenum (X4135), Seamless.

U. S. Gov., Army-Navy Aeronautical Specification AN-WW-T-855-1; 1942. Tubing; Steel, Corrosion-Resisting (18Cr, 8 N1), Round, Seamless.

U. S. Gov., Army-Navy Aeronautical Specification AN-WW-T-858-1; 1942. Tubing; Steel, Corrosion-and Heat-Resisting (18 Cr, 8 N1), Round, Seamless.

U. S. Gov., Army-Navy Aeronautical Specification AN-WW-T-881-2; 1942. Tubing; Steel, Corrosion- and Heat-Resisting (18 Cr, 8 N1), Welded, Round.

U. S. Gov., Navy Dept. Specification 44T33; 1938. Tubing; Steel, Molybdenum-Alloy, Seamless.

U. S. Gov., Navy Dept. Specification 49T11; 1937. Tubing; Steel, Corrosion-Resisting (18 Percent Chromium and 8 Percent Nickel), Seamless-Drawn, Streamline-Cross-Section (Aircraft Use).

U. S. Gov., U. S. Army, Ordnance Dept. Specification 57-180-3C; 1942. Tubing; Steel, 18 Chrome and 8 Nickel, Corrosion- and Heat-Resistant, Seamless and Welded.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 57-180D; 1942. Tubing; Mechanical or Structural Steel, Carbon, and Alloy, Seamless, Welded and Brazed.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 57-195; 1944. Tubing; Flexible, Corrosion-Resistant Steel and Aluminum Alloy.

## 622.4 FERRO-ALLOY WIRE AND MANUFACTURES

Society of Automotive Engineers. Aeronautical Material Specification 5880; 1939. Steel Wire; Corrosion-Resistant, 18 Chromium, 8 Nickel (Welding). Gives requirements for composition, condition, quality, tolerance, reports, and rejections.

Society of Automotive Engineers. Aeronautical Material Specification 5885A; 1942. Steel Wire; Corrosion-Resistant, 18 Chromium, 8 Nickel (Annealed). Gives requirements for composition, condition, quality, tolerances, reports, and rejections.

Society of Automotive Engineers. Aeronautical Material Specification 5688A; 1942. Steel Wire; Corrosion-Resistant, 18 Chromium, 8 Nickel (Spring). Gives requirements for composition, condition, quality, tolerances, reports, and rejections.

Society of Automotive Engineers. Aeronautical Material Specification 5690B; 1944. Steel Wire; Screen, Corrosion-Resistant, 18 Chromium, 8 Nickel, 2 Molybdenum. For cold drawn wire or cold drawn wire screening. Gives requirements for composition, condition, quality, tolerances, reports, and rejections.

Society of Automotive Engineers. Aeronautical Standard 38; 1941. Seamless Steel Lockwire (Aircraft Engines). Diagrammatic dimensional drawing for corrosion-resistant (18 chromium, 8 nickel, annealed) steel lockwire .032 in., .040 in., and .051 in. in diameter.

U. S. Gov., Army-Navy Aeronautical Specification AN-QQ-W-423-1; 1942. Wire; Steel, Corrosion-Resisting.

U. S. Gov., Army-Navy Aeronautical Specification AN-RR-C-48-2; 1943. Cable; Steel, Corrosion-Resisting, Flexible, Preformed.

U. S. Gov., Navy Dept. Specification 22C4b; 1941. Cable; Steel, Corrosion-Resisting, Flexible and Extra Flexible, Preformed Type (Aircraft Use).

U. S. Gov., Navy Dept. Specification 22C7; 1939. Cable; Steel, Corrosion-Resisting, Nonflexible, 7-Wire or 19-Wire Strand, Preformed Type (Aircraft Use).

U. S. Gov., Navy Dept. Specification 46R4b; 1940. Wire (and Rods); Welding, Iron and Steel, for Gas Welding.

U. S. Gov., Navy Dept. Specification 57S51; 1944. Sutures; Corrosion-Resisting Steel-Alloy-Wire.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2032A 1941. Wire Gauze.

U.S. Gov., U.S. Army, Medical Dept. Specification 10-2969A; 1941. Wire; Corrosion-Resisting Steel, Surgical.

*References.*—Electrical resistance wire, *see* 715.43; methods of testing, general requirements for metals, *see* 600.1, 621.30; wire gages, *see* 603.40; carbon steel wire, *see* 603.41; welding rod and wire, *see* 603.26; Fourdrinier wire cloth of stainless steel wire, *see* 645.39.

## 622.5 FERRO-ALLOY CASTINGS

American Society for Testing Materials, A 128-33; 1933. Austenitic Manganese-Steel Castings. Often referred to as Hadfield's manganese steel. Requirements for heat treatment, chemical composition, ladle analysis, bend test where specified, test specimen, finish, and inspection.

American Society for Testing Materials, A 157-44; 1944. A.S.M.E. Boiler Construction Code Specification SA-157. American Standards Assn., G36.1; 1944. Alloy-Steel Castings for Valves, Flanges, and Fittings for Service at Temperatures From 750 to 1,100° F. Includes nine ferritic and two austenitic grades, selection dependent on design and service. Gives requirements for heat treatment, temperature control, chemical composition, ladle analysis, check analysis, number of tests, retests, tensile and bending properties, hydrostatic tests, magnetic particle testing, test specimens, radiographic or destruction test, workmanship, marking, finish, inspection, and rejection. A.S.T.M. Emergency Alternate

Provision EA-A 157; 1944, affected section 10, Hydrostatic Tests.

American Society for Testing Materials, A 198-39; 1939. 20 Percent Chromium, 9 Percent Nickel Alloy-Steel Castings. For corrosion-resisting service, includes heat treatment, chemical composition, tensile and bending properties, hardness, test specimen, corrosion test, stability of microstructure, finish, and inspection.

American Society for Testing Materials, A 217-44T; 1944. A.S.M.E. Boiler Construction Code Specification SA-217. Tentative Specifications for Alloy-Steel Castings Suitable for Fusion Welding for Service at Temperatures From 750 to 1,100° F. For valves, flanges, fittings, or other pressure containing parts. In four grades, with requirements for process, heat treatments, temperature control, chemical composition, analyses, tensile and bending properties, hydrostatic tests, magnetic particle testing, test specimens, number of tests, retests, radiographic or destruction tests, workmanship, finish, marking, inspection, and rejection. A.S.T.M. Emergency Alternate Provision EA-A 217; 1942, affected section 1 (b) New Grade Added; section 5, Chemical Composition; section 8, Tensile Properties; and section 17, Marking.

American Society for Testing Materials, A 221-39; 1939. American Assn. of State Highway Officials Standard M104-39. Chromium-Alloy-Steel Castings. Covers three classes including stainless, corrosion-resisting and heat-resisting castings. Requirements for heat treatments, chemical compositions, tensile and bending properties, hardness, test specimen, finish, and inspection.

American Society for Testing Materials, A 222-39; 1939. Chromium-Nickel Alloy-Steel Castings. For three classes of alloy, requirements for heat treatment, chemical composition, tensile and bending properties, hardness tests, test specimen, finish, and inspection.

American Society for Testing Materials, A 223-39; 1939. Nickel-Chromium Alloy-Steel Castings. Covers two classes of high nickel castings; requirements for heat treatment, chemical composition, ladle analysis, tensile and bending properties, hardness tests, test specimen, finish, and inspection.

American Society for Testing Materials, B190-44T; 1944. Tentative Specifications for Chromium-Nickel-Iron Alloy Castings (25-12 class) for High-Temperature Service. Gives scope, process, heat treatment, chemical composition, ladle analysis, check analysis, number of tests, tensile properties after aging, magnetic permeability, stress-rupture test; short-time, high-temperature tensile properties; sampling, defective test specimens, retests, report, dimensional tolerances, finish, marking, and inspection.

American Transit Assn. Standard Design of Solid Manganese Steel Crossings; Steam Railroad Over Electric Railway for 7 Inch and 9 Inch Girder Rails, W29-35; 1935. Gives dimensional designs for solid manganese-steel crossings for angles 90° to 60°, inclusive.

American Transit Assn. Standard Design for Solid Manganese-Steel Crossings; Steam Railroad Over Electric Railway for 7 Inch and 9 Inch Girder Rails, W30-35; 1935. Gives dimensional designs for solid manganese-steel crossings for angles below 60° to 40°, inclusive.

American Transit Assn. Standard Design of Solid Manganese-Steel Crossings; Steam Railroad Over Electric Railway, W37-35; 1935. Gives dimensional designs of solid manganese-steel crossings for angles 90° to 60°, inclusive.

American Transit Assn. Standard Design of Solid Manganese-Steel Crossings; Steam Railroad Over Electric Railway, W38-35; 1935. Gives dimensional designs of solid manganese-steel crossings for angles below 60° to 40°, inclusive.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. High Chrome Steel Castings for Valves for Nitric Acid Tank Cars, M-251-29; 1929. Electric furnace steel, requirements for casting alloy, analysis, heat treatment, workmanship, and porosity test.

Hydraulic Institute. Material Specification for Nickel-Base Austenitic Cast Iron (Ni-Resist) No.115; 1939. This specification covers a nickel-base austenitic cast iron, ordinarily containing a substantial percentage of copper, for resistance to many forms of corrosion. Includes manufacture, chemical composition, physical properties and tests, pattern equipment, workmanship, welding, hydrostatic tests, and inspection.

Hydraulic Institute. Material Specification for Carbon and Alloy Steel Castings, No.120; 1939. These specifications cover steel castings used in the manufacture of pumping equipment; castings of one grade of carbon steel and four alloy steels. Gives requirements for manufacture, chemical composition, test coupons, heat treatment, physical properties, and impact properties, methods of test, pattern equipment, workmanship, welding, and for hydrostatic tests.

Society of Automotive Engineers. Aeronautical Material Specification 5345; 1944. Centrifugal Steel Castings, Chromium Molybdenum (.38-.43 Carbon). For cylinder barrel and sleeve castings. Gives requirements for composition, grain size, hardenability, condition, quality, tolerances, reports, identification, and rejections.

Technical Assn. of the Pulp and Paper Industry. Specifications for Chromium-Nickel-Iron Castings for Sulphite Pulp Processing Equipment. Standard E400 s44; 1944. Covers castings for sulphite pulp processing such as relief valves, strainers, pumps, digester fittings, etc. Gives chemical composition, heat treatment, analysis, physical tests, pickling, and finish requirements.

U. S. Gov., Navy Dept. Specification 46S27a; 1936. Steel; Corrosion-Resisting, Castings.

U. S. Gov., Navy Dept. Specification 46S41; 1940. Steel; Chromium-Molybdenum-Alloy, Wrought.

U. S. Gov., Navy Dept. Specification 46S45; 1941. Steel; Alloy (Special), Castings (Aircraft Use).

U. S. Gov., Navy Dept., U. S. Coast Guard, Bureau of Marine Inspection and Navigation. Marine Engineering Regulations and Material Specifications, 1942. Contains specifications and requirements for

materials, design, construction, installation, and inspection of boilers, unfired pressure vessels, and appurtenances thereof, also piping, valves, fittings, flanges, safety valves, etc., upon the strength and efficiency of which safety of life is dependent, and are intended for maximum temperatures of 1,000° F. Includes specifications for steel castings for valves, flanges, fittings, or other pressure containing parts of carbon-steel for service temperatures up to and including 850° F. and carbon-molybdenum alloy steel for service temperatures to 1,000° F.; process, heat treatment, chemical compositions, tensile properties, bending properties, tests, retests, workmanship, and finish.

*References.*—Methods of testing, general requirements for metals, *see* 600.1, 621.30; heat treatments, *see* 600.5; classification of railway materials, *see* 600.2; railway construction and special track work, *see* 606.0, 606.3; carbon steel castings, *see* 611.41; other specifications for cast alloy steel, *see* specifications for individual commodities made of cast alloy steel.

## 622.6 FERRO-ALLOY FORGINGS

American Iron and Steel Institute. Steel Products Manual, Section 22; 1939. Revised, 1943. Forged Axles and Locomotive Forgings. Covers forgings used principally for locomotives and cars for steam and electric railways and also for industrial railway equipment. Manufacturing practices, chemical requirements and texts, physical properties and tests, workmanship and finish, permissible variations and weights, marking and storing, inspection, rejection, and rehearing.

American Society for Testing Materials, A 237-42; 1942. Alloy-Steel Forgings for General Industrial Use. Covers annealed, normalized and tempered, and normalized, quenched, and tempered forgings in six classes; requirements as to heat treatment, chemical composition, tensile properties, boring and turning, bending properties, test specimens, and workmanship. A.S.T.M. Emergency Alternate Provision EA-A 237; 1943, affected table I, Tensile Requirements.

American Society for Testing Materials, A 238-42; 1942. Alloy-Steel Forgings for Locomotives and Cars. Includes three classes normalized and tempered, and three classes normalized, quenched, and tempered. Gives requirements as to heat treatment, chemical composition, boring and turning, tensile and bending properties, test specimens, microscopic and macroscopic tests for grain structure, workmanship, and inspection. A.S.T.M. Emergency Alternate Provision EA-A 238; 1942, affected Section 7, Chemical Composition, and section 14, Omit Macroscopic Examination.

American Society for Testing Materials A 243-43; 1943. Carbon-Steel and Alloy-Steel Ring and Disk Forgings. Cover untreated, annealed, normalized, normalized and tempered, quenched and tempered, double normalized and tempered, and normalized, quenched, and tempered carbon steel and alloy steel ring and disk forgings for general industrial use. Covers manufacture, machining, heat treatment, chemical composition, analysis, tensile and bending properties, test specimens, testing, workmanship, marking, inspection, and rejection.

American Society for Testing Materials, ES-21; 1943. Emergency Specifications for Carbon-Steel and Alloy-Steel Forgings for Magnetic Retaining Rings for Turbine Generators. Cover annealed, quenched, and tempered carbon-steel and alloy-steel forgings for mangetic retaining rings for turbine generators. Process, discard, manufacture, machining, heat treatment, chemical composition, analysis, tensile properties, test specimens, tests, retests, workmanship, finish, marking, inspection, and rehearing.

American Society for Testing Materials, ES-22; 1943. Emergency Specifications for Alloy-Steel Forgings for Nonmagnetic Coil Retaining Rings for Turbine Generators. Cover alloy-steel forgings for coil retaining rings for turbine generators. Process, discard, manufacture, heat treatment, chemical composition, analysis, tensile properties, test specimens, tests, retests, workmanship, finish, marking, inspection, and rehearing.

American Society for Testing Materials, ES-24; 1943. Emergency Specifications for Carbon-Steel and Alloy-Steel Forgings for Pinions for Main Reduction Gears. Cover normalized and tempered, or quenched and tempered, carbon-steel and alloy-steel forgings for pinions for main reduction gears and for auxiliary drives. Process, discard, manufacture, machining, heat treatment, chemical composition, analysis, tensile properties, hardness, test specimens, tests, retests, workmanship, finish, marking, inspection, and rehearing.

American Society for Testing Materials, ES-25; 1943. Emergency Specifications for Carbon-Steel and Alloy-Steel Forgings for Turbine Generator Rotors and Shafts. Cover annealed, normalized and tempered, and double normalized and tempered carbon-steel and alloy-steel forgings for turbine generator rotors and shafts. Process, discard, manufacture, machining, heat treatment, chemical composition, analysis, tensile properties, test specimens, number of tests, retests, magnetic test, workmanship, finish, marking, internal inspection, inspection, and rehearing.

American Society for Testing Materials, ES-26; 1943. Emergency Specifications for Carbon-Steel and Alloy-Steel Forgings for Turbine Rotors and Shafts. Cover annealed, normalized and tempered, and double normalized and tempered carbon-steel and alloy-steel forgings for turbine rotors and shafts. Process, discard, manufacture, heat treatment, chemical composition, analysis, tensile properties, test specimens, number of tests, retests, stability test, magnetic test, workmanship, finish, marking, internal inspection, inspection, and rehearing.

American Society for Testing Materials, ES-27; 1943. Emergency Specifications for Carbon-Steel and Alloy-Steel Forgings for Turbine Bucket Wheels. Cover annealed or annealed, quenched, and tempered carbon-steel and alloy-steel forgings for turbine bucket wheels. Process, discard, manufacture, machining, heat treatment, chemical composition, analysis, tensile properties, hardness, test specimens, number of tests, retests, workmanship, finish, marking, inspection, and rehearing.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, 1938. Forgings. Covers definition, characteristics, classes of forgings,

forgeable metals, and commercial forging practice.

Society of Automotive Engineers. Aeronautical Material Specification 5022A; 1942. Steel; Free-Cutting Manganese (1.3 Manganese). Gives requirements for form (bars, billets, tubes, or forgings), composition, condition, quality, reports, and rejections.

Society of Automotive Engineers. Aeronautical Material Specification 5024A; 1942. Steel; Free-Cutting Manganese (1.5 Manganese). Gives requirements for form (bars, billets, tubing, or forgings), composition, condition, quality, reports, and rejections.

Society of Automotive Engineers. Aeronautical Material Specification 5025; 1942. Steel; Free-Cutting Manganese (Heat Treated). Covers requirements for form (bars, billets, forgings, or as ordered), composition, condition, quality, tolerances, reports, and rejections.

Society of Automotive Engineers. Aeronautical Material Specification 5610B; 1944. Steel; Corrosion Resistant, 13 Chromium (Free Machining). For bars, billets, forgings, or as ordered. Covers composition, condition, hardenability, quality, reports, identification, and rejections.

Society of Automotive Engineers. Aeronautical Material Specification 5615A; 1942. Steel; Corrosion-Resistant, 13 Chromium, 1.5 Nickel. Gives requirements for form (bars, billets, forgings, or as ordered), composition, condition, hardenability, quality, reports, identification, and rejections.

Society of Automotive Engineers. Aeronautical Material Specification 5630A; 1942. Steel; Corrosion-Resistant, 17 Chromium (High-Carbon). Gives requirements for form (bars, billets, forgings, or as ordered), composition, condition, hardenability, quality, reports, identification, and rejections.

Society of Automotive Engineers. Aeronautical Material Specification 5632; 1942. Steel; Corrosion-Resistant, 17 Chromium, .5 Molybdenum (High-Carbon) (Free-Machining). Covers requirements for form (bars, billets, forgings, or as ordered), composition, condition, hardenability, quality, reports, identification, and rejections.

Society of Automotive Engineers. Aeronautical Material Specification 5640A; 1942. Steel; Corrosion-Resistant, 18 Chromium, 8 Nickel (Free-Machining). For bars, billets, forgings, or as ordered. Gives requirements for composition, condition, quality, reports, identification, and rejections.

Society of Automotive Engineers. Aeronautical Material Specification 5641; 1942. Steel; Corrosion-Resistant, 18 Chromium, 8 Nickel (Swaging- or Hot-Upsetting Type). For bars, billets, forgings, or as ordered. Covers requirements for composition, condition, quality, reports, identification, and rejections.

Society of Automotive Engineers. Aeronautical Material Specification 5645B; 1942. Steel; Corrosion- and Heat-Resistant, 18 Chromium, 8 Nickel. For bars, billets, forgings, or as ordered. Gives requirements for composition, condition, embrittlement, quality, reports, identification, and rejections.

Society of Automotive Engineers. Aeronautical Material Specification 5700; 1940. Steel; Valve (Chromium-Nickel-Tungsten). For bars, billets, forgings, or as ordered. Gives requirements for composition, condition, quality, reports, identification, and rejections.

Society of Automotive Engineers. Aeronautical Material Specification 5705; 1942. Steel; Valve, Chromium-Nickel Silicon. For bars, billets, forgings, or as ordered. Gives requirements for composition, condition, quality, reports, identification, and rejection.

Society of Automotive Engineers. Aeronautical Material Specification 5710; 1942. Steel; Valve, Chromium-Silicon Nickel. For bars, billets, forgings, or as ordered. Gives requirements for composition, condition, quality, reports, identification, and rejection.

Society of Automotive Engineers. Aeronautical Material Specification 6240B; 1942. Steel; Carburizing (5 Percent Nickel). For bars, billets, forgings, or as ordered. Gives requirements for composition, grain size, hardenability, condition, quality, reports, shipments, identification, and rejections.

Society of Automotive Engineers. Aeronautical Material Specification 6242B; 1942. Steel; Carburizing (5 Percent Nickel). For bars, billets, forgings, or as ordered. Gives requirements for composition, grain size, hardenability, condition, quality, tolerances, reports, shipments, identification, and rejections.

Society of Automotive Engineers. Aeronautical Material Specification 6250C; 1942. Steel; Carburizing, Nickel-Chromium (Light-Section). For bars, billets, forgings, or as ordered. Gives requirements for composition, grain size, hardenability, condition, quality, tolerances, reports, shipments, identification, and rejections.

Society of Automotive Engineers. Aeronautical Material Specification 6252C; 1942. Steel; Carburizing, Nickel-Chromium (Heavy Section). For bars, billets, forgings, or as ordered. Gives requirements for composition, grain size, hardenability, condition, quality, tolerances, reports, shipments, identification, and rejections.

Society of Automotive Engineers. Aeronautical Material Specification 6253D; 1944. Steel; Carburizing, Nickel-Chromium. For bars, billets, forgings, or as ordered. Gives requirements for composition, grain size, hardenability, condition, quality, tolerances, reports, shipments, identification, and rejections.

Society of Automotive Engineers. Aeronautical Material Specification 6254C; 1942. Steel; Carburizing, Nickel-Chromium. For bars, billets, forgings, or as ordered. Gives requirements for composition, grain size, hardenability, condition, quality, tolerances, reports, shipments, identification, and rejections.

Society of Automotive Engineers. Aeronautical Material Specification 6260A; 1944. Steel; 3 Ni, 1 Cr, .1 Mo (.08-.13C). For bars, billets, forgings, or as ordered. Gives requirements for composition, grain size, hardenability, condition, quality,

tolerances, reports, shipments, identification, and rejection.

Society of Automotive Engineers. Aeronautical Material Specification 6262A; 1944. Steel; 3 Ni, 1 Cr, .1 Mo (.08-.13C). For bars, billets, forgings, or as ordered. Gives requirements for composition, grain size, hardenability, condition, quality, tolerances, reports, shipments, identification, and rejections.

Society of Automotive Engineers. Aeronautical Material Specification 6263A; 1944. Steel; 3 Ni, 1 Cr, .1 Mo (.09-.14C). For bars, billets, forgings, or as ordered. Gives requirements for composition, grain size, hardenability, condition, quality, tolerances, reports, shipments, identification, and rejections.

Society of Automotive Engineers. Aeronautical Material Specification 6264A; 1944. Steel; 3 Ni, 1 Cr, .1 Mo (.15-.20 C). For bars, billets, forgings, or as ordered. Gives requirements for composition, grain size, hardenability, condition, quality, tolerances, reports, shipments, identification, and rejections.

Society of Automotive Engineers. Aeronautical Material Specification 6270B; 1944. Steel; Carburizing, .5 Ni, .5 Cr, .2 Mo (.12-.17C). For bars, billets, forgings, or as ordered. Gives requirements for chemical composition, grain size, hardenability, condition, quality, tolerances, reports, shipments, identification, and rejections.

Society of Automotive Engineers. Aeronautical Material Specification 6272B; 1944. Steel; Carburizing, .5 Ni, .5 Cr, .2 Mo (.15-.20C). For bars, billets, forgings, or as ordered. Gives requirements for chemical composition, grain size, hardenability, condition, quality, tolerances, reports, shipments, identification, and rejection.

Society of Automotive Engineers. Aeronautical Material Specification 6274B; 1944. Steel; Carburizing, .5 Ni, .5 Cr, .2 Mo (.17-.22C). For bars, billets, forgings, or as ordered. Gives requirements for chemical composition, grain size, hardenability, condition, quality, tolerances, reports, shipments, identification, and rejections.

Society of Automotive Engineers. Aeronautical Material Specification 6280A; 1943. Steel; .55 Ni, .5 Cr, .2 Mo (.27-.33 C). For bars, billets, forgings, or as ordered. Gives requirements for composition, grain size, hardenability, condition, quality, tolerances, reports, shipments, identification, and rejection.

Society of Automotive Engineers. Aeronautical Material Specification 6290C; 1944. Steel; Carburizing, 1.8 Ni, .25 Mo (.11-.17C). For bars, billets, forgings, or as ordered. Gives requirements for composition, grain size, hardenability, condition, quality, tolerances, reports, shipments, identification and rejections.

Society of Automotive Engineers. Aeronautical Material Specification 6292C; 1944. Steel; Carburizing, 1.8 Ni, .25 Mo (.15-.20C). For bars, billets, forgings, or as ordered. Gives requirements for composition, grain size, hardenability, condition, quality, tolerances, reports, shipments, identification, and rejections.

Society of Automotive Engineers. Aeronautical Material Specification 6294C; 1944. Steel; Carburizing, 1.8 Ni, .25 Mo (.17-.22C). For bars, billets, forgings, or as ordered. Gives requirements for composition, grain size, hardenability, condition, quality, tolerances, reports, shipments, identification, and rejections.

Society of Automotive Engineers. Aeronautical Material Specification No.6300; 1943. Steel; .25 Mo (.35-.40 C). For bars, billets, forgings, or as ordered. Gives requirements for composition, grain size, condition, quality, tolerances, reports, shipments, identification, and rejection.

Society of Automotive Engineers. Aeronautical Material Specifications 6310A, 6315A, and 6317A; 1942. Steel; Nickel Molybdenum. For bars, billets, forgings, or as ordered. Gives requirements for composition, grain size, condition, quality, tolerances, reports, shipments, identification, and rejections.

Society of Automotive Engineers. Aeronautical Material Specification 6312A; 1942. Steel; Nickel Molybdenum. For bars, billets, forgings, tubing, or as ordered. Gives requirements for composition, grain size, hardenability, condition, quality, tolerances, reports, shipments, identification, and rejections.

Society of Automotive Engineers. Aeronautical Material Specification 6320A; 1943. Steel; .55 Ni, .5 Cr, .25 Mo (.33-.38 C). For bars, billets, forgings, or as ordered. Chemical composition, grain size, condition, quality, tolerances, reports, shipments, identification, and rejection.

Society of Automotive Engineers. Aeronautical Material Specification 6322A; 1943. Steel; .55 Ni, .5 Cr, .25 Mo (.38-.43 C). For bars, billets, forgings, or as ordered. Chemical composition, grain size, hardenability, condition, quality, tolerances, reports, shipments, identification, and rejection.

Society of Automotive Engineers. Aeronautical Material Specification 6325A; 1943. Steel; .55 Ni, .5 Cr, .25 Mo (.38-.43 C) (105,000 T.S.). For bars, billets, castings, or as ordered. Chemical composition, grain size, condition, quality, tolerances, reports, shipments, identification, and rejection.

Society of Automotive Engineers. Aeronautical Material Specification 6327A; 1943. Steel; .55 Ni, .5 Cr, .25 Mo (.38-.43 C) (125,000 T. S.). For bars, billets, forgings, or as ordered. Chemical composition, grain size, condition, quality, tolerances, reports, shipments, identification, and rejection.

Society of Automotive Engineers. Aeronautical Material Specification 6330A; 1942. Steel; Nickel Chromium. For bars, billets, forgings, or as ordered. Gives requirements for composition, grain size, condition, quality, tolerances, reports, shipments, identification, and rejections.

Society of Automotive Engineers. Aeronautical Material Specifications Nos.6332 and 6335, 1939; and 6337, 1940. Steel; Nickel Chromium. For bars, billets, forgings, or as ordered. Gives requirements for composition, grain size, condition, quality, tolerance, reports, shipments, identification, and rejections.

Society of Automotive Engineers. Aeronautical Material Specification No.6342; 1944. Steel; 1 Ni, .8 Cr, .25 Mo (.38-.43 C). For bars, billets, forgings, or as ordered. Gives requirements for composition, grain size, hardenability, condition, quality, tolerances, reports, shipments, identification, and rejections. Similar specification, NE 9840.

Society of Automotive Engineers. Aeronautical Material Specification 6370A; 1942. Steel; Chromium-Molybdenum (.27-.33 Carbon). For bars, billets, forgings, or as ordered. Gives requirements for composition, grain size, condition, quality, tolerance, reports, shipments, identification, and rejections.

Society of Automotive Engineers. Aeronautical Material Specification 6380A; 1942. Steel; Chromium-Molybdenum (.35-.43 Carbon). For bars, billets, forgings, or as ordered. Covers requirements for composition, grain size, condition, quality, tolerances, reports, shipments, identification, and rejections.

Society of Automotive Engineers. Aeronautical Material Specification 6382A; 1942. Steel; Chromium-Molybdenum, (.38-.43 Carbon). For bars, billets, forgings, or as ordered. Covers requirements for composition, grain size, condition, quality, tolerances, reports, shipments, identification, and rejections.

Society of Automotive Engineers. Aeronautical Material Specification 6412A; 1942. Steel; Nickel-Chromium-Molybdenum. For bars, billets, forgings, or as ordered. Gives requirements for composition, grain size, condition, quality, tolerances, reports, shipments, identification, and rejections.

Society of Automotive Engineers. Aeronautical Material Specification 6415A; 1942. Steel; Nickel-Chromium-Molybdenum. For bars, billets, forgings, or as ordered. Gives requirements for composition, grain size, condition, quality, tolerances, reports, shipments, identification, and rejections.

Society of Automotive Engineers. Aeronautical Material Specification 6440A; 1943. Steel; Chromium. For bars, billets, forgings, or as ordered. Gives requirements for composition, condition, quality, tolerances, reports, shipments, identification, and rejections.

Society of Automotive Engineers. Aeronautical Material Specification 6448A; 1944. Steel; Chromium Vanadium. For bars, billets, forgings, or as ordered. Gives requirements for composition, grain size, condition, quality, tolerances, reports, shipments, identification, and rejections. Similar specifications, Army-Navy Aeronautical AN-QQ-S-687 and SAE 6150.

Society of Automotive Engineers. Aeronautical Material Specification 6470A; 1942. Steel; Nitriding (Chromium-Molybdenum-Aluminum). Gives requirements for form (bars, billets, forgings), composition, condition, nitriding, quality, reports, shipments, identification, and rejections.

U. S. Gov., Federal Specification QQ-S-763a; 1943. Steel; Corrosion-Resisting, Bars and Forgings (Except for Reforging). Covers ten classes and six grades and shall be made by the open-hearth or the electric furnace process unless otherwise specified. Gives chemical requirements and physical properties; method of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Navy Dept. Specification 46S39a; 1942. Steel; Forgings for Turbine Rotors (Heat Treated).

U. S. Gov., Navy Dept., U. S. Coast Guard, Bureau of Marine Inspection and Navigation. Marine Engineering Regulations and Material Specifications, 1942. Contains specifications and requirements for materials, design, construction, installation, and inspection of boilers, unfired pressure vessels and appurtenances thereof, also piping, valves, fittings, flanges, safety valves, etc., upon the strength and efficiency of which safety of life is dependent, and are intended for maximum temperatures of 1,000° F. Includes specifications for three grades of forged or rolled steel for pipe flanges, forged fittings, and valves and parts for service temperatures up to 1,000° F.; process, manufacturing practice, heat treatment, chemical composition, tensile properties, tests, retests, macrotests, workmanship, finish, and marking.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 57-103-1; 1938. Steel; Nickel-Chromium, W.D.3415, Forged Bar for Breechblock.

*References.*—Methods of testing, general requirements for metals, *see* 600.1, 621.30; heat treatments, *see* 600.5; classification of railway materials, *see* 600.2; carbon steel forgings, axles, and shafts, *see* 611.51, 611.52.

## 622.7 FERRO-ALLOY SPRINGS

*References.*—Alloy steel stock for springs, *see* 621.34.

## 622.9 MISCELLANEOUS MANUFACTURES OF ALLOY STEEL

American Hospital Assn., 4-10. Wire Screen Cloth. Covers copper, commercial bronze (brass), bronze, iron or steel, galvanized (zinc coated), copper-nickel alloy, corrosion-resisting steel (chromium-nickel), aluminum alloy, iron or steel, japanned or painted, and chromium-nickel alloy.

American Transit Assn. Standard Design of Bolted Manganese-Steel Crossings; Steam Railroad Over Electric Railway, W44-35; 1935. Gives the dimensional designs of bolted manganese-steel crossings for angles below 45° to 30°, inclusive.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div., Manual of Standard and Recommended Practice, 1942. High Chrome Steel Rivet Material and Rivets for Nitric Acid Tank Cars, M-151-29; 1929. Electric furnace steel, composition, analysis, physical properties, permissible variations, requirements for fabrication, tests, workmanship, and finish.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Seamless High Chrome Steel Tubing for Nitric Acid Tank Cars, M-152-29; 1929. Fabricated from electric furnace steel, composition, analysis, flanging, flattening, and bend tests, method of pickling tubes, and finish.

Society of Automotive Engineers. Aeronautical Material Specification No.7210; 1940. Cotter Pins;

Corrosion-Resistant Steel. Gives requirements for composition, condition, quality, shape, tolerance, sizes, reports, and rejections.

Society of Automotive Engineers. Aeronautical Material Specification No.7228; 1940. Rivets; Corrosion-Resistant Steel. Gives requirements for composition, condition, quality, reports, and rejections.

Society of Automotive Engineers. Aeronautical Standard 39; 1941. Stainless Steel Cotter Pins; Aircraft Engine. Diagrammatic dimensional drawings showing minimum eye and drill hole diameters of corrosion resistant steel (18 chromium, 8 nickel) cotter pins 1/16 in. to 5/16 in. in diameter, .313 in. to 2.500 in. in length.

U. S. Gov., Army-Navy Aeronautical Specification AN-P-27-1; 1944. Propeller Blades; General Specification for Steel.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Commercial Standard CS37-31; 1931. Steel Bone Plates and Screws. A commercial standard selected and adopted by industry for Sherman type bone plates made of chromium-vanadium steel, requirements on chemical composition of plates and screws corresponding to S.A.E. steel No.6150, hardness, dimensions, and design of 14 plate sizes, and 11 screw sizes. Sponsored by the American College of Surgeons.

U. S. Gov., Federal Works Agency, Public Roads Administration. Specifications for Construction of Roads and Bridges in National Forests and National Parks, FP-41. Blast Plates.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 89-5672; 1940. Tag; Cable, M-3, Submarine Mine.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 92-16A; 1939. Bit; Curb, M-1909 and M1920.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 92-17B; 1942. Bit; Snaffle, M1909 and M1911.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 92-32A; 1942. Stirrup M1912 and M1938.

U. S. Gov., U. S. Army, Signal Corps. Specification 75-21-G; 1938. Tray; Photographic, Corrosion-Resisting Steel.

*References.*—Methods of testing, general requirements for metals, *see* 600.1, 621.30; heat treatments, *see* 600.5; special trackwork, *see* 606.3; hack saw blades of alloy steel, *see* 615.62; measuring gages of alloy steel, *see* 615.82.

# 630-639 ALUMINUM, ANTIMONY, BISMUTH, CADMIUM, AND COBALT

## 631. ALUMINUM

### 631.0 GENERAL ITEMS

Aluminum Research Institute. Standard Methods for the Sampling and Analyzing of Aluminum and Certain Aluminum Alloys, 1939. The methods are designed primarily for the casting alloys, but with suitable revisions may be employed on pure aluminum and for hardener-type alloys. Includes sampling procedure and methods for analyzing for the determination of chromium, copper, copper plus lead, iron, lead, magnesium and calcium, manganese, nickel, silicon, tin, titanium, and zinc.

American Institute of Homoeopathy. Homoeopathic Pharmacopoeia of U. S., 1941. Metallic Aluminum. Chemical symbol, synonyms, description, and preparations for triturations for use in homoeopathic medicines.

American Iron and Steel Institute. Contributions to the Metallurgy of Steel, No.2; 1941. Direct Consumption of Aluminum in the Steel Industry. A study of the proper utilization and distribution of aluminum used in the steel industry for purposes of deoxidation and alloying. Covers effect of a decrease in aluminum on steel production, steps taken to decrease aluminum consumption, grades of aluminum, and suggested method of distributing aluminum.

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering, 1942. Specifications for Buildings for Railroad Purposes: Ornamental and Miscellaneous Metal Work. Gives requirements for working stresses (tension, compression, shearing, bearing) of the cast, rolled, drawn, or extruded metals used.

American Society for Metals. Metals Handbook, 1939 Edition. Constitution of Aluminum Alloys and Properties of Aluminum and Its Alloys. Covers constitution of aluminum-chromium, aluminum-copper, aluminum-iron, aluminum-magnesium, aluminum-manganese, aluminum-nickel, aluminum-silicon, aluminum-titanium, aluminum-magnesium silicide, and aluminum-magnesium-zinc alloys; physical constants of aluminum and properties of commercially pure wrought aluminum; and properties of the various aluminum alloys.

American Society for Metals. Metals Handbook, 1939 Edition. Micrography and Technology of Aluminum. Covers polishing aluminum for metallographic examination, etching aluminum for metallographic examination, hardeners for aluminum, temperature measurements in molten aluminum, aluminum die castings, cold and hot forming aluminum alloys, heat treatment of wrought aluminum alloys, machining aluminum, spinning of aluminum, and protection of aluminum against corrosion.

American Society for Testing Materials, B 110-39 T; 1939. Tentative Method of Test for Dielectric Strength of Anodized Aluminum. For anodic coatings applied to aluminum and its alloys, also for measure of thickness of coating where properties are known. Requirements for high-voltage transformer, electrode, test specimens, surrounding medium, condition and position of electrodes, and application of voltage.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, 1938. Aluminum. Covers definition, constants, solubility, properties, occurrence, derivation, grades and commercial forms, alloys, and uses.

Society of Automotive Engineers, Inc. Aeronautical Information Report No.8; 1944. U. S. and British Commonwealth of Nations Aircraft Metals. Aluminum Alloys. Gives table showing specifications used in the U.S. and specifications for similar metals used in the United Kingdom, Australia, and Canada for use in the selection of interchangeable and substitute

materials for the repair and maintenance of aircraft; and a table showing chemical composition and mechanical properties of these aircraft metals. Covers bars and shapes, wire and rivets, forgings, sheet and strip, tubing, and castings.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Circular C66; 1917. Standard Samples for Thermometric Fixed Points. Description of preparation of pure samples of aluminum, their chemical analyses, freezing points, and degree of purity, their use for the standardization of thermocouples, pyrometers, etc.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Circular C346; 1927. Light Metals and Alloys, Aluminum and Magnesium. Gives detailed information on the physical and mechanical properties of aluminum and magnesium and of their light alloys; and the variation in properties caused by changing the composition of the alloy, by the presence of impurities, by changes in conditions of manufacturing operations, and by heat treatment. Discusses the metallography, corrosion resistance, and methods of protection against corrosion, the theory of heat treatment, and the application of the alloys to industry.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Circular C398 and Supplement, 1944. Standard Samples. Aluminum, Sample 44c. This sample is prepared and sold by the National Bureau of Standards with a certificate of analysis for use in industry and by others as a comparison standard for checking the accuracy of analysis of similar material.

U. S. Gov., Navy Dept. General Specifications for Inspection of Materials, 1941, Appendix II, Metals, Part B, Section 1, Methods and Analysis of Aluminum and Aluminum Alloys.

## 631.1 ALUMINUM ALLOYS, INGOTS, AND BARS

*References.*—Aluminum bronze, *see* 647.1.

### 631.11 Alloys, Aluminum

American Society for Testing Materials; B 89-44T; 1944. Society of Automotive Engineers Specification No. 26. Tentative Specifications for Aluminum-Alloy (Duralumin) Bars, Rods, Wire, and Shapes (Aluminum-Copper-Magnesium-Manganese). Manufacture, chemical composition, chemical analysis, sampling for chemical analysis, methods of chemical analysis, temper, tensile and bending properties, test specimens, methods of testing, permissible variations in dimensions, workmanship and finish, inspection, and rejection.

Society of Automotive Engineers. Aeronautical Material Specification 4118B; 1943. Aluminum Alloy, Copper-Manganese-Magnesium (17S-T); Rolled. For rods, bars, or shapes. Composition, condition (heat-treated), quality, tolerances, reports, identification, and rejection.

Society of Automotive Engineers. Aeronautical Material Specification 4151A; 1944. Aluminum Alloy, Copper Manganese Magnesium (17S-T); Extruded. For rods, bars, or shapes. Gives requirements for composition, condition, quality, tolerances, reports, identification, and rejections. Similar specifications, Navy 46A4 condition T, Federal QQ-A-351 condition T, SAE 26 temper T, and ASTM B89-42T, heat treated.

Society of Automotive Engineers. Aeronautical Material Specification 4152B; 1943. Aluminum Alloy, Copper Magnesium Manganese (24S-T); Extruded. Gives requirements for composition, tensile strength, yield strength, elongation, quality, tolerances, reports, identification, and rejections.

Society of Automotive Engineers. 1944 Handbook, Section 3—Processed Materials. Notes on Aluminum Alloys, revised 1944. Provides a considerable range in properties and characteristics but all of the alloys commercially available are not included. Gives usual form, general information, cast aluminum alloys, wrought aluminum alloys, and tables covering various types.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Circular C398 and Supplement, 1944. Standard Samples. Aluminum Alloy, Wrought, Sample 85; and Aluminum Base Casting Alloy; Sample 86b. These samples are prepared and sold by the National Bureau of Standards with a certificate of analysis for use in industry and by others as a comparison standard for checking the accuracy of analysis of similar materials.

U. S. Gov., Navy Dept. Specification 46A3e; 1941. Aluminum (AL-2); Bars, Rods, Shapes, and Wire.

U. S. Gov., Navy Dept. Specification 46A4g; 1941. Aluminum Alloy (Aluminum-Copper-Magnesium-Manganese); Bars, Rods, Shapes, and Wire.

U. S. Gov., Navy Dept. Specification 46A7d; 1941. Aluminum-Alloy; Heat-Treated Forgings.

U. S. Gov., Navy Dept. Specification 46A9e; 1942. Aluminum-Alloy (AL-24) (Aluminum-Copper-Magnesium (1.5 Percent)-Manganese); Bars, Rods, Shapes, and Wire.

U. S. Gov., U. S. Army, Signal Corps. Specification 57-152-1; 1924. Aluminum-Copper-Magnesium Alloy; Specification for Parts Made From.

*References.*—Methods of testing, general requirements for metals, *see* 600.1, 631.0; other aluminum alloys, *see* 631.12, 631.23, 631.31, 631.41, magnesium alloy castings, *see* 695.

### 631.12 Ingots, Aluminum

American Society for Testing Materials, B 24-44; 1944. Aluminum Ingots for Remelting. Includes four grades of commercial aluminum ingots for remelting. Gives process, quality, chemical composition, sample, sampling, methods of chemical analysis; inspection, rejection, and rehearing. Endorsed by the American Foundrymen's Assn.

American Society for Testing Materials, B37-42T; 1942. Tentative Specifications for Aluminum for Use in Iron and Steel Manufacture. Includes four grades of commercial ingots, rods, or shot, for use in iron and steel manufacture. Process, quality, chemical composition, method of chemical analysis, inspection, rejection, and rehearing.

American Society for Testing Materials, B 58-44T; 1944. Tentative Specifications for Aluminum-Base Alloys in Ingot Form for Sand Castings. For specific gravity not exceeding 3.0. Gives process, quality, chemical composition, sample for chemical analysis, sampling for chemical analysis, methods of chemical analysis, inspection, rejection, and rehearing.

American Society for Testing Materials, B 112-44T; 1944. Tentative Specifications for Aluminum-Base Alloys in Ingot Form for Permanent Mold Castings. Covers ten commercial alloys in ingot form for remelting for manufacture of permanent mold castings, specific gravity not exceeding 3.0. Gives process, quality, chemical composition, sample for chemical analysis, sampling for chemical analysis, methods of chemical analysis, inspection, rejection, and rehearing.

American Society for Testing Materials, B 125-44T; 1944. Tentative Specifications for Aluminum-Base Alloys in Ingot Form for Die Castings. For remelting for the manufacture of die castings with a specific gravity under 3.0. Gives requirements for chemical composition, chemical analysis, sampling for chemical analysis, methods of chemical analysis, inspection, and rejection.

U. S. Gov., Federal Specification QQ-A-371a; 1939. Amendment 1; 1941. Aluminum-Alloy; Ingots. Covers twelve classes. Gives requirements for material, workmanship, chemical composition, and mechanical properties; methods of sampling, inspection, and tests; and requirements for packing and marking for shipment.

U. S. Gov., Federal Specification QQ-A-451a; 1941. Aluminum; Ingots. Covers five grades—1 to 5. Gives requirements for material, workmanship, chemical composition; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., Navy Dept. Specification 46A2c; 1940. Aluminum Ingot.

U. S. Gov., Navy Dept. Specification 46A5d; 1943. Aluminum Alloy; Ingot.

*References.*—Aluminum alloys, *see* 631.11; methods of testing, general requirements for metals, *see* 600.1, 631.0.

## 631.13 Bars, Aluminum

Society of Automotive Engineers. Aeronautical Material Specification 4120A; 1942. Aluminum Alloy Bars (Rolled) Copper Magnesium Manganese (24S-T). Gives requirements for composition, condition (heat treated), tensile strength, yield strength, elongation, quality, tolerances, identification, and rejection.

Society of Automotive Engineers. Aeronautical Material Specification No.4150; 1944. Aluminum Alloy, Magnesium Silicon Copper (61ST); Extruded. For rods, bars, or shapes. Covers composition, condition, quality, tolerances, reports, identification, and rejections.

Society of Automotive Engineers. 1944 Handbook, Section 3—Processed Materials. S.A.E. Standard Aluminum Wrought Alloys, revised 1944. Specifications indicate the fabricated forms in which each alloy is regularly manufactured, and include compositions in percentages for various wrought aluminum alloys. Gives general information and mechanical properties for 13 alloys including bars, plates, shapes, sheets, rods, wires, tubes, forgings, and extruded aluminum.

U. S. Gov., Army Air Forces. Specification 11330-A-1; 1944. Bars and Rods; Aluminum Alloy, 11S, Free Machining.

U. S. Gov., Federal Specification QQ-A-315; 1943. Aluminum Alloy (A1-52) (Aluminum-Magnesium-Chromium); Bars, Rods, Shapes, and Wire. Covers one grade and following conditions: Wire—(A) soft, (1/2H) half-hard, (3/4H) three-quarters-hard, and (H) hard; and bars, rods, and shapes—(A) soft and (F) as fabricated. Gives requirements for material, workmanship, chemical composition, physical properties, permissible variations, and lengths; methods of sampling, inspection, and tests; and packing and marking.

U. S. Gov., Federal Specification QQ-A-325; 1944. Aluminum-Alloy (AL-61) (Aluminum-Magnesium-Silicon-Copper-Chromium); Bars, Rods, Shapes, and Wire. Covers one grade and three conditions—(A) annealed, (B) quenched, and (C) heat-treated. Gives requirements for material, workmanship, chemical composition, physical properties, permissible variations, various lengths, tolerances, and marking; methods of sampling, inspection, and tests; and packing and marking for shipment.

U. S. Gov., Federal Specification QQ-A-331b; 1942. Aluminum-Alloy (Al-53) (Aluminum-Magnesium-Silicon-Chromium); Bars, Rods, Shapes, and Wire. Covers one grade and five conditions—(A) annealed, (F) as fabricated, (PT) Extruded and aged, (W) quenched, and (T) heat-treated. Gives requirements for material, workmanship, chemical composition, physical properties, permissible variations, lengths, methods of sampling, inspection, tests, packing, and marking.

U. S. Gov., Federal Specification QQ-A-351b; 1943. Aluminum-Alloy (Al-17) (Aluminum-Copper-Magnesium-Manganese); Bars, Rods, Shapes, and Wire. Covers one grade and two conditions—(A) annealed and (T) heat-treated. Gives requirements for material, workmanship, chemical composition, physical properties, permissible variations, tolerances; exact lengths, standard lengths, mill lengths, and random lengths; methods of sampling, inspection, and tests; and requirements for packing and marking for shipment.

U. S. Gov., Federal Specification QQ-A-354a; 1943. Aluminum-Alloy (Al-24) (Aluminum-Copper-Magnesium (1.50 Percent)-Manganese); Bars, Rods, Shapes, and Wire. Covers one grade and two conditions—(A) annealed and (T) heat-treated. Gives requirements for material, workmanship, chemical composition, physical properties, permissible variations, lengths, methods of sampling, inspection, tests, packing, and marking.

U. S. Gov., Federal Specification QQ-A-356b; 1942. Aluminum-Alloy (Al-3) (Aluminum-Manganese); Bars, Rods, Shapes, and Wire. Covers one grade and four conditions for wire—(A) soft, (1/2 H) half-hard, (3/4 H) three-quarters hard, and (H) hard; and two conditions for rolled, cold-finished, and extruded bars, rods, and shapes—(A) soft and (F) as fabricated. Gives requirements for material, workmanship, chemical composition, physical properties, permissible variations, lengths, sampling, inspection, test, packing, and marking.

U. S. Gov., Federal Specification QQ-A-411b; 1942. Aluminum (Al-2); Bars, Rods, Shapes, and Wire. Covers one grade and four conditions for wire—(A) soft, (1/2 H) half-hard, (3/4 H) three-quarters hard,

and (H) hard; and two conditions for bars, rods, and shapes—(A) soft and (F) as fabricated. Gives requirements for material, workmanship, chemical composition, physical properties, permissible variations, lengths, sampling, inspection, tests, packing, and marking.

U. S. Gov., Navy Dept. Specification 46A3e; 1941. Aluminum (AL-2); Bars, Rods, Shapes, and Wire.

U. S. Gov., Navy Dept. Specification 46A4g; 1941. Aluminum Alloy (Aluminum-Copper-Magnesium-Manganese); Bars, Rods, Shapes, and Wire.

U. S. Gov., Navy Dept. Specification 46A6e; 1939. Aluminum Alloy (Aluminum-Manganese); Bars, Rods, Shapes, and Wire (Al-3).

U. S. Gov., Navy Dept. Specification 46A9e; 1942. Aluminum-Alloy (AL-24) (Aluminum-Copper-Magnesium (1.5 Percent)-Manganese); Bars, Rods, Shapes, and Wire.

U. S. Gov., Navy Dept. Specification 46A10c; 1944. Aluminum-Alloy, Aluminum-Magnesium-Silicon-Chromium; Bars, Rods, Shapes, and Wire.

U. S. Gov., Navy Dept. Specification 46A11a; 1945. Aluminum Alloy, Aluminum-Magnesium-Chromium; Bars, Rods, and Wire.

## 631.2 ALUMINUM PLATES, SHEETS, SHAPES, AND STRIPS

### 631.21 Plates, Aluminum

American Society for Testing Materials, B 25-44T; 1944. Society of Automotive Engineers Specification No. 25. Tentative Specifications for Aluminum Sheet and Plate. Gives requirements for manufacture, chemical composition, chemical analysis, sampling for chemical analysis, methods of chemical analysis, temper and tensile properties, bending properties, test specimens, number of tests, methods of testing, permissible variations in thickness, workmanship and finish, inspection, and rejection.

American Society for Testing Materials, B 78-44T; 1944. Society of Automotive Engineers Specification No. 26. Tentative Specifications for Aluminum-Alloy (Duralumin) Sheet and Plate (Aluminum-Copper-Magnesium-Manganese). Manufacture, chemical composition, chemical analysis, sampling for chemical analysis, methods of chemical analysis, physical and bending properties, test specimens, number of tests, methods of testing, permissible variations in thickness, workmanship and finish, inspection, and rejection.

American Society for Testing Materials, B 79-44T; 1944. Society of Automotive Engineers Specification No. 29. Tentative Specifications for Aluminum-Manganese Alloy Sheet and Plate. Gives requirements for manufacture, chemical composition, chemical analysis, sampling for chemical analysis, methods of chemical analysis, temper and tensile properties, bending properties, test specimens, number of tests, methods of testing, permissible variations in thickness, workmanship and finish, inspection, and rejection.

American Society for Testing Materials, B109-44T; 1944. Society of Automotive Engineers Specification No. 201. Tentative Specifications for Aluminum-Magnesium-Chromium Alloy Sheet and Plate. Gives requirements for manufacture, chemical composition, chemical analysis, sampling for chemical analysis, methods of chemical analysis, temper and tensile properties, bending properties, test specimens, number of tests, methods of testing, permissible variations in thickness, workmanship and finish, inspection, rejection, and explanatory notes.

American Society for Testing Materials, B 126-44T; 1944. A.S.M.E. Boiler Construction Code Specification SB-126. Tentative Specifications for Aluminum-Manganese Alloy Sheet and Plate for Use in Welded Pressure Vessels. Gives requirements for manufacture, chemical composition, chemical analysis, sampling for chemical analysis, methods of chemical analysis, temper and tensile properties, bending properties, test specimens, number of tests, methods of testing, permissible variations in thickness, workmanship and finish, inspection, and rejection.

American Society for Testing Materials, B 178-44T; 1944. A.S.M.E. Boiler Construction Code Specification SB-178. Tentative Specifications for Aluminum Sheet and Plate for Use in Welded Pressure Vessels. Gives requirements for manufacture, chemical composition, chemical analysis, sampling for chemical analysis, methods of chemical analysis, temper and tensile properties, bending properties, test specimens, number of tests, methods of testing, permissible variations in thickness, workmanship and finish, inspection, and rejection.

Society of Automotive Engineers, Aeronautical Material Specification 4030B; 1944. Aluminum Alloy Sheet and Plate, Copper Manganese Magnesium (17S-O). Gives requirements for composition, condition, physical properties, quality, tolerances, reports, identification, and rejections. Similar specifications: Navy 47A3, condition A; Federal QQ-A-353, condition A; SAE 26, temper annealed; ASTM B78-42T, annealed; Alloy 17S-O.

Society of Automotive Engineers. Aeronautical Material Specification 4032B; 1944. Aluminum Alloy Sheet and Plate, Copper Manganese Magnesium (17S-T). Gives requirements for composition, condition, quality, tolerance, reports, identification, and rejections. Similar specifications; Navy 47A3, condition T; Federal QQ-A-353, condition T; SAE 26, temper T; ASTM B78-42T, heat treated; Alloy 17S-T.

Society of Automotive Engineers. 1944 Handbook, Section 3—Processed Materials. S.A.E. Standard Aluminum Wrought Alloys, revised 1944. Specifications indicate the fabricated forms in which each alloy is regularly manufactured, and include compositions in percentages for various wrought aluminum alloys. Gives general information and mechanical properties for 13 alloys including bars, plates, shapes, sheets, rods, wires, tubes, forgings, and extruded aluminum.

U. S. Gov., Army-Navy Aeronautical Specification AN-A-9; 1943. Aluminum Alloy (AL-XA75); Plate, Sheet, and Strip.

U. S. Gov., Army-Navy Aeronautical Specification AN-A-12-1; 1943. Aluminum Alloy (AL-24); Plate, Sheet, and Strip.

U. S. Gov., Army-Navy Aeronautical Specification AN-A-13-2; 1944. Aluminum Alloy, Clad, (AL-24C2); Plate, sheet, and Strip.

U. S. Gov., Army-Navy Aeronautical Specification AN-A-22; 1944. Aluminum Alloy (4.5 Copper, 1.0 Silicon, Manganese, Magnesium); Clad, Plate, and Sheet.

U. S. Gov., Federal Specification QQ-A-318; 1938. Aluminum-Alloy (Al-52) (Aluminum-Magnesium-Chromium); Plates, Sheets, and Strips. Covers one grade and three types—(I) flat sheet (commercial finish and gray finish), (II) strip sheet (strip sheet finish), and (III) plate (plate finish); and six tempers—(I) soft (1/4 H) quarter-hard, (1/2 H) half-hard, (3/4 H) three-quarters hard, (H) hard, and (F) as rolled. Gives requirements for material, workmanship, chemical composition, physical properties, tolerances, thickness, width, length, sampling, inspection, tests, packing, and marking.

U. S. Gov., Federal Specification QQ-A-327; 1941. Aluminum-Alloy (Al-61) (Aluminum-Magnesium-Silicon); Plates, Sheets, and Strips. Covers one grade and three conditions—(A) annealed, (W) quenched, and (T) heat-treated and aged. Gives requirements for material, chemical composition, mechanical properties, tolerances, random stock sizes, and lateral bow tolerances; sampling, inspection, tests, packing, and marking.

U. S. Gov., Federal Specification QQ-A-334; 1936. Aluminum-Alloy (Aluminum-Chromium-Magnesium-Silicon); Plates and Sheets. Covers one grade and three conditions—(A) annealed, (W) quenched, and (T) heat-treated and aged. Gives requirements for material, chemical composition, mechanical properties, tolerances, methods of sampling, inspection, tests, packing, and marking.

U. S. Gov., Federal Specification QQ-A-353a; 1939. Aluminum-Alloy (Al-17) (Aluminum-Copper-Magnesium-Manganese); Plates, Sheets, and Strips. Covers one grade and three conditions—(A) annealed, (T) heat-treated, and (TR) rolled after heat-treating. Gives requirements for material, workmanship, chemical composition, physical properties, tolerances, methods of sampling, inspection, tests, packing, and marking.

U. S. Gov., Federal Specification QQ-A-355a; 1941. Aluminum Alloy (Al-24) (Aluminum-Copper-Magnesium (1.5 Percent)-Manganese); Plates, Sheets, and Strips. Covers one grade and four conditions—(A) annealed, (T) heat-treated, (TR) rolled after heat-treating, and (F) as fabricated (strip). Gives requirements for material, workmanship, chemical composition, mechanical properties, tolerances, methods of sampling, inspection, tests, packing, and marking.

U. S. Gov., Federal Specification QQ-A-359a; 1942. Aluminum-Alloy (Al-3) (Aluminum-Manganese); Plates and Sheets. Covers one grade and three types—(1) flat sheet (commercial bright finish and gray finish), (2) coiled sheet (coiled sheet finish), and (3) plate (plate finish); four conditions for types 1 and 2—(A) soft, (1/2 H) half-hard. (3/4 H) three-quarters-hard, and (H) hard; and one condition for type 3—as rolled. Gives requirements for material, workmanship, chemical composition, physical properties, bending test, tolerances, methods of sampling, inspection, tests, packing, and marking.

U. S. Gov., Federal Specification QQ-A-361; 1941. Amendment 2: 1943. Aluminum-Alloy (Aluminum-Surfaced) (AL-17C2), (Aluminum-Copper-Magnesium-Manganese); Plates, Sheets, and Strips. Covers one grade and two conditions—(A) annealed and (T) heat-treated. Gives requirements for material, workmanship, cladding thickness, chemical composition, mechanical properties, and tolerances; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification QQ-A-362; 1941. Amendment 2; 1943. Aluminum-Alloy (Aluminum-Surfaced) (AL-24C2), (Aluminum-Copper-Magnesium (1.5 Percent)-Manganese); Plates, Sheets, and Strips. Covers one grade and three conditions—(A) annealed, (T) heat-treated, and (TR) rolled after heat-treating. Gives requirements for material, workmanship, cladding thickness, chemical composition, mechanical properties, and tolerances; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification QQ-A-561; 1933. Aluminum; Plates and Sheets. Covers one grade and three types—(1) flat sheet (commercial bright finish and gray finish), (2) coiled sheet (coiled sheet finish), and (3) plate (plate finish); four tempers for types 1 and 2—(A) soft, (1/2 H) half-hard, (3/4 H) three-quarters-hard, and (H) hard; and one temper for type 3—as rolled. Gives requirements for material, workmanship, chemical composition, physical properties, tolerances, methods of sampling, physical tests, packing, and marking.

U. S. Gov., Navy Dept. Specification 47A2e; 1944. Aluminum; Plates, Sheets, and Strips.

U. S. Gov., Navy Dept. Specification 47A3c; 1939. Aluminum Alloy (Aluminum-Copper-Magnesium-Manganese); Plate, Sheet, and Strip.

U. S. Gov., Navy Dept. Specification 47A4d; 1944. Aluminum-Alloy (Al-3) (Aluminum-Manganese); Plates, Sheets (Flat and Coiled), and Strips.

U. S. Gov., Navy Dept. Specification 47A7; 1933. Aluminum Alloy (Aluminum-Manganese); Plate, Floor, Rolled.

U. S. Gov., Navy Dept. Specification 47A10e; 1942. Aluminum Alloy (Aluminum-Copper-Magnesium (1.5 Percent)-Manganese); Plate, Sheet, and Strip (AL-24).

U. S. Gov., Navy Dept. Specification 47A11c; 1944. Aluminum Alloy, Aluminum-Magnesium-Chromium; Plate, Sheet, and Strip.

U. S. Gov., Navy Dept. Specification 47A12a; 1936. Aluminum Alloy (Aluminum-Magnesium-Silicon-Chromium); Plates and Sheets.

*References.*—Aluminum alloy plates, *see* 631.11; methods of testing, general requirements for metals, *see* 600.1, 631.0.

## 631.22 Shapes, Aluminum

Aeronautical Chamber of Commerce of America, Inc. National Aircraft Standard NAS 169; 1944. Rolled Formed Sections; Aluminum Alloy. Gives composition and condition, material and workmanship, and detail requirements; method of sampling, inspection, and tests; and packing and marking for shipment. Developed by National Aircraft Standard Committee.

Aeronautical Chamber of Commerce of America, Inc. National Aircraft Standard NAS 180; 1943. Angles; Equal Leg, Rolled form Aluminum Alloy. Gives

drawings with dimensions and notes. Developed by National Aircraft Standard Committee.

Society of Automotive Engineers. Aeronautical Material Specification No.4150; 1944. Aluminum Alloy, Magnesium Silicon Copper (61ST); Extruded. For rods, bars, or shapes. Covers composition, condition, quality, tolerances, reports, identification, and rejections. Similar Specification: Alloy 61S-T.

Society of Automotive Engineers. 1944 Handbook, Section 1—Aeronautical Parts, Materials, and Codes. S.A.E. Recommended Practice for Aluminum Alloy Extruded Structural Shapes for Aircraft, adopted 1931. Diagrams of shapes with tables of sizes, dimensions, area, moments of inertia, section moduli, weight per foot, and radii of gyration for unequal angles, bulb angles, shallow channels, deep channels, bulb channels, tees, and zees.

Society of Automotive Engineers. 1944 Handbook, Section 3—Processed Materials. S.A.E. Standard Aluminum Wrought Alloys, revised 1944. Specifications indicate the fabricated forms in which each alloy is regularly manufactured, and include compositions in percentages for various wrought aluminum alloys. Gives general information and mechanical properties for 13 alloys including bars, plates, shapes, sheets, rods, wires, tubes, forgings, and extruded aluminum.

U. S. Gov., Army-Navy Aeronautical Specification AN-A-8; 1943. Aluminum Alloy (AL-14); Extruded Shapes.

U. S. Gov., Army-Navy Aeronautical Specification AN-A-11a-1943. Aluminum Alloy (AL-XB75); Extruded Shapes.

U. S. Gov., Federal Specification QQ-A-315; 1943. Aluminum Alloy (Al-52) (Aluminum-Magnesium-Chromium); Bars, Rods, Shapes, and Wire. Covers one grade and following conditions: Wire—(A) soft, (1/2H) half-hard, (3/4H) three-quarters-hard, and (H) hard; and bars, rods, and shapes—(A) soft and (F) as fabricated. Gives requirements for material, workmanship, chemical composition, physical properties, permissible variations, and lengths; methods of sampling, inspection, and tests; and packing and marking.

U. S. Gov., Federal Specification QQ-A-325; 1944. Aluminum-Alloy (AL-61) (Aluminum-Magnesium-Silicon-Copper-Chromium); Bars, Rods, Shapes, and Wire. Covers one grade and three conditions—(A) annealed, (B) quenched, and (C) heat-treated. Gives requirements for material, workmanship, chemical composition, physical properties, permissible variations, various lengths, tolerances, and marking; methods of sampling, inspection, and tests; and packing and marking for shipment.

U. S. Gov., Federal Specification QQ-A-331b; 1942. Aluminum-Alloy (Al-53) (Aluminum-Magnesium-Silicon-Chromium); Bars, Rods, Shapes, and Wire. Covers one grade and five conditions—(A) annealed, (F) as fabricated, (PT) extruded and aged, (W) quenched, and (T) heat-treated. Gives requirements for material, workmanship, chemical composition, physical properties, permissible variations, lengths, methods of sampling, inspection, tests, packing, and marking.

U. S. Gov., Federal Specification QQ-A-351b; 1943. Aluminum-Alloy (Al-17) (Aluminum-Copper-Magnesium-Manganese); Bars, Rods, Shapes, and Wire. Covers one grade and two conditions—(A) annealed and (T) heat-treated. Gives requirements for material, workmanship, chemical composition, physical properties, permissible variations, tolerances; exact lengths, standard lengths, mill lengths, and random lengths; methods of sampling, inspection, and tests; and requirements for packing and marking for shipment.

U. S. Gov., Federal Specification QQ-A-354a; 1943. Aluminum-Alloy (Al-24) (Aluminum-Copper-Magnesium (1.50 Percent)-Manganese); Bars, Rods, Shapes, and Wire. Covers one grade and two conditions—(A) annealed and (T) heat-treated. Gives requirements for material, workmanship, chemical composition, physical properties, permissible variations, lengths, methods of sampling, inspection, tests, packing, and marking.

U. S. Gov., Federal Specification QQ-A-356b; 1942. Aluminum-Alloy (Al-3) (Aluminum-Manganese); Bars, Rods, Shapes, and Wire. Covers one grade and four conditions for wire—(A) soft, (1/2 H) half-hard, (3/4 H) three-quarters hard, and (H) hard; and two conditions for rolled, cold-finished, and extruded bars, rods, and shapes—(A) soft and (F) as fabricated. Gives requirements for material, workmanship, chemical composition, physical properties, permissible variations, lengths, sampling, inspection, tests, packing, and marking.

U. S. Gov., Federal Specification QQ-A-411b; 1942. Aluminum (Al-2); Bars, Rods, Shapes, and Wire. Covers one grade and four conditions for wire—(A) soft, (1/2 H) half-hard, (3/4 H) three-quarters hard, and (H) hard; and two conditions for bars, rods, and shapes—(A) soft and (F) as fabricated. Gives requirements for material, workmanship, chemical composition, physical properties, permissible variations, lengths, sampling, inspection, tests, packing, and marking.

U. S. Gov., Navy Dept. Specification 46A3e; 1941. Aluminum (AL-2); Bars, Rods, Shapes, and Wire.

U. S. Gov., Navy Dept. Specification 46A4g; 1941. Aluminum Alloy (Aluminum-Copper-Magnesium-Manganese); Bars, Rods, Shapes, and Wire.

U. S. Gov., Navy Dept. Specification 46A6e; 1939. Aluminum Alloy (Aluminum-Manganese); Bars, Rods, Shapes, and Wire (Al-3).

U. S. Gov., Navy Dept. Specification 46A9e; 1942. Aluminum-Alloy (AL-24) (Aluminum-Copper-Magnesium (1.5 Percent)-Manganese); Bars, Rods, Shapes, and Wire.

U. S. Gov., Navy Dept. Specification 46A10c; 1944. Aluminum-Alloy, Aluminum-Magnesium-Silicon-Chromium; Bars, Rods, Shapes, and Wire.

*References.*—Aluminum alloy, *see* 631.11; methods of testing, general requirements for metals, *see* 600.1, 631.0.

## 631.23 Sheets, Aluminum

American Society for Testing Materials, B 25-44T; 1944. Society of Automotive Engineers Specification No.25. Tentative Specifications for Aluminum Sheet and Plate. Gives requirements for manufacture, chemical composition, chemical analysis, sampling for chemical analysis, methods of chemical analysis.

temper and tensile properties, bending properties, test specimens, number of tests, methods of testing, permissible variations in thickness, workmanship and finish, inspection, and rejection.

American Society for Testing Materials, B 78-44 T; 1944. Society of Automotive Engineers Specification No.26. Tentative Specifications for Aluminum-Alloy (Duralumin) Sheet and Plate (Aluminum-Copper-Mangnesium-Manganese). Manufacture, chemical composition, chemical analysis, sampling for chemical analysis, methods of chemical analysis, physical and bending properties, test specimens, number of tests, methods of testing, permissible variations in thickness, workmanship and finish, inspection, and rejection.

American Society for Testing Materials, B 79-44T; 1944. Society of Automotive Engineers Specification No.29. Tentative Specifications for Aluminum-Manganese Alloy Sheet and Plate. Gives requirements for manufacture, chemical composition, chemical analysis, sampling for chemical analysis, methods of chemical analysis, temper and tensile properties, bending properties, test specimens, number of tests, methods of testing, permissible variations in thickness, workmanship and finish, inspection, and rejection.

American Society for Testing Materials, B 109-44T; 1944. Society of Automotive Engineers Specification No.201. Tentative Specifications for Aluminum-Magnesium-Chromium Alloy Sheet and Plate. Gives requirements for manufacture, chemical composition, chemical analysis, sampling for chemical analysis, methods of chemical analysis, temper and tensile properties, bending properties, test specimens, number of tests, methods of testing, permissible variations in thickness, workmanship and finish, inspection, rejection, and explanatory notes.

American Society for Testing Materials, B 126-44T; 1944. A.S.M.E. Boiler Construction Code Specification SB-126. Tentative Specifications for Aluminum-Manganese Alloy Sheet and Plate for Use in Welded Pressure Vessels. Gives requirements for manufacture, chemical composition, chemical analysis, sampling for chemical analysis; methods of chemical analysis, temper and tensile properties, bending properties, test specimens, number of tests, methods of testing, permissible variations in thickness, workmanship and finish, inspection, and rejection.

American Society for Testing Materials, B 178-44T; 1944. A.S.M.E. Boiler Construction Code Specification SB-178. Tentative Specifications for Aluminum Sheet and Plate for Use in Welded Pressure Vessels. Gives requirements for manufacture, chemical composition, chemical analysis, sampling for chemical analysis, methods of chemical analysis, temper and tensile properties, bending properties, test specimens, number of tests, methods of testing, permissible variations in thickness, workmanship and finish, inspection, and rejection.

Society of Automotive Engineers. Aeronautical Material Specification 4000; 1940. Aluminum Sheet (Annealed). Gives requirements as to composition (99.7 percent aluminum minimum), condition (fully annealed), tensile strength, (12,000 lbs. per square inch maximum), quality, and thickness tolerances.

Society of Automotive Engineers. Aeronautical Material Specification 4001; 1943. Aluminum Sheet and Strip (2S-0). Covers composition, condition, quality, tolerances, reports, identification, and rejections.

Society of Automotive Engineers. Aeronautical Material Specifications 4003; 1940. Aluminum Sheet, 1/2 Hard (Alloy 52S-1/2 H). Gives requirements for composition (99.0 percent aluminum minimum), condition (half-hard), tensile strength (16,000 lbs. per square inch minimum), elongation, quality, tolerances, reports, finished parts, and rejections.

Society of Automotive Engineers. Aeronautical Material Specification 4006; 1941. Aluminum Alloy Sheet and Strip, Manganese (3S-0). Covers composition, condition, thickness, tensile strength, elongation, quality, tolerance, reports, identification, and rejection.

Society of Automotive Engineers. Aeronautical Material Specification 4008; 1941. Aluminum Alloy Sheet and Strip, Manganese (3S-1/2 H). Covers composition, condition, thickness, tensile strength, elongation, quality, tolerance, reports, identification, and rejection.

Society of Automotive Engineers. Aeronautical Material Specification 4015A; 1942. Aluminum Alloy Sheet and Strip, Magnesium Chromium (52S-0). Covers requirements for composition, condition (annealed), thickness, tensile strength, elongation, quality, tolerances, reports, identification, and rejection.

Society of Automotive Engineers. Aeronautical Material Specification 4016A; 1942. Aluminum Alloy Sheet and Strip, Magnesium Chromium (52S-1/4H). Gives requirements for composition, condition (Quarter-hard), thickness, tensile strength, elongation, bend factor, quality, tolerances, reports, identification, and rejection.

Society of Automotive Engineers. Aeronautical Material Specification 4017A; 1942. Aluminum Alloy Sheet and Strip, Magnesium Chromium (52S-1/2H). Gives requirements for composition, condition, quality, tolerances, reports, identification, and rejections.

Society of Automotive Engineers. Aeronautical Material Specification 4025; 1942 Aluminum Alloy Sheet and Strip, Magnesium Silicon Copper (61S-0). Gives requirements for composition, condition, physical properties, quality, tolerances, reports, identification, and rejections.

Society of Automotive Engineers. Aeronautical Material Specification 4026; 1942. Aluminum Alloy Sheet and Strip, Magnesium Silicon Copper (61S-W). Gives requirements for composition, condition, physical properties, quality, tolerances, reports, identification, and rejections.

Society of Automotive Engineers. Aeronautical Material Specification 4027; 1942. Aluminum Alloy Sheet and Strip, Magnesium Silicon Copper (61S-T). Gives requirements for composition, condition, quality, tolerances, reports, identification, and rejections.

Society of Automotive Engineers. Aeronautical Material Specification 4030B; 1944. Aluminum Alloy

Sheet and Plate, Copper Manganese Magnesium (17S-O). Gives requirements for composition, condition, physical properties, quality, tolerances, reports, identification, and rejections. Similar Specifications: Navy 47A3, condition A; Federal QQ-A-353, condition A; SAE 26, temper annealed; ASTM B78-42T, annealed; Alloy 17S-O.

Society of Automotive Engineers. Aeronautical Material Specification 4032B; 1944. Aluminum Alloy Sheet and Plate, Copper Manganese Magnesium (17S-T). Gives requirements for composition, condition, quality, tolerance, reports, identification, and rejections. Similar specifications: Navy 47A3, condition T; Federal QQ-A-353, condition T; SAE 26, temper T; ASTM B78-42T, heat treated; Alloy 17S-T.

Society of Automotive Engineers. Aeronautical Material Specification 4035A; 1942. Aluminum Alloy Sheet and Strip, Copper Magnesium Manganese (24S-O). Gives requirements for composition, condition (annealed), thickness, tensile strength, elongation, bend factor, quality, tolerance, reports, and rejections.

Society of Automotive Engineers. Aeronautical Material Specification 4037A; 1942. Aluminum Alloy, Sheet and Strip, Copper Magnesium Manganese (24S-T). Gives requirements for composition, condition (heat treated), tensile strength, yield strength, elongation, bend factor, quality, tolerances, reports, identification, and rejection.

Society of Automotive Engineers. Aeronautical Material Specification 4040A; 1942. Aluminum Alloy Sheet and Strip, Aluminum-Covered Copper Magnesium Manganese (ALC 24S-O). Gives requirements for composition, condition (annealed), thickness, tensile strength, elongation, bend factor, quality, tolerances, identification, and rejection.

Society of Automotive Engineers. Aeronautical Material Specification 4041A; 1942. Aluminum Alloy Sheet and Strip, Aluminum-Covered Copper Magnesium Manganese (ALC 24S-T). Gives requirements for composition, condition (heat treated), thickness, tensile strength, yield strength, elongation, bend factor, quality, tolerances, identification, and rejection.

Society of Automotive Engineers. Aeronautical Material Specification 4042A; 1942. Aluminum Alloy, Sheet and Strip, Aluminum-Covered Copper Magnesium Manganese (ALC 24S-RT). Gives requirements for composition, condition (heat treated), thickness, tensile strength, yield strength, elongation, bend factor, quality, tolerances, identification, and rejection.

Society of Automotive Engineers. 1944 Handbook, Section 3—Processed Materials. S.A.E. Standard Aluminum Wrought Alloys, revised 1944. Specifications indicate the fabricated forms in which each alloy is regularly manufactured, and include compositions in percentages for various wrought aluminum alloys. Gives general information and mechanical properties for 13 alloys including bars, plates, shapes, sheets, rods, wires, tubes, forgings, and extruded aluminum.

U. S. Gov., Army Air Forces. Specification 11077; 1936. Aluminum and Aluminum Alloy; Corrugated Sheet.

U. S. Gov., Army-Navy Aeronautical Specification AN-A-9; 1943. Aluminum Alloy (AL-XA75); Plate, Sheet, and Strip.

U. S. Gov., Army-Navy Aeronautical Specification AN-A-10a; 1943. Aluminum Alloy, Clad (AL-XB75C2), Sheet and Strip.

U. S. Gov., Army-Navy Aeronautical Specification AN-A-12-1; 1943. Aluminum Alloy (AL-24); Plate, Sheet, and Strip.

U. S. Gov., Army-Navy Aeronautical Specification AN-A-13-2; 1944. Aluminum Alloy, Clad (AL-24C2); Plate, Sheet, and Strip.

U. S. Gov., Army-Navy Aeronautical Specification AN-A-22; 1944. Aluminum Alloy (4.5 Copper, 1.0 Silicon, Manganese, Magnesium); Clad, Plate, and Sheet.

U. S. Gov., Federal Specification QQ-A-318; 1938. Aluminum-Alloy (Al-52) (Aluminum-Magnesium-Chromium); Plates, Sheets, and Strips. Covers one grade and three types—(I) flat sheet (commercial finish and gray finish), (II) strip sheet (strip sheet finish), and (III) plate (plate finish); and six tempers—(A) soft, (1/4 H) quarter-hard, (1/2 H) half-hard, (3/4 H) three-quarters-hard, (H) hard, and (F) as rolled. Gives requirements for material, workmanship, chemical composition, physical properties, tolerances, thickness, width, length, sampling, inspection, tests, packing, and marking.

U. S. Gov., Federal Specification QQ-A-327; 1941. Aluminum-Alloy (Al-61) (Aluminum-Magnesium-Silicon); Plates, Sheets, and Strips. Covers one grade and three conditions—(A) annealed, (W) quenched, and (T) heat-treated and aged. Gives requirements for material, chemical composition, mechanical properties, tolerances, random stock sizes, and lateral bow tolerances; sampling, inspection, tests, packing, and marking.

U. S. Gov., Federal Specification QQ-A-334; 1936. Aluminum-Alloy (Aluminum-Chromium-Magnesium-Silicon); Plates and Sheets. Covers one grade and three conditions—(A) annealed, (W) quenched, and (T) heat-treated and aged. Gives requirements for material, chemical composition, mechanical properties, tolerances, methods of sampling, inspection, tests, packing, and marking.

U. S. Gov., Federal Specification QQ-A-353a; 1939. Aluminum-Alloy (Al-17) (Aluminum-Copper-Magnesium-Manganese); Plates, Sheets, and Strips. Covers one grade and three conditions—(A) annealed, (T) heat-treated, and (TR) rolled after heat-treating. Gives requirements for material, workmanship, chemical composition, physical properties, tolerances, methods of sampling, inspection, tests, packing, and marking.

U. S. Gov., Federal Specification QQ-A-355a; 1941. Aluminum-Alloy (Al-24) (Aluminum-Copper-Magnesium (1.5 Percent)-Manganese); Plates, Sheets, and Strips. Covers one grade and four conditions—(A) annealed, (T) heat-treated, (TR) rolled after heat-treating, and (F) as fabricated (strip). Gives requirements for material, workmanship, chemical composition, mechanical properties, tolerances, methods of sampling, inspection, tests, packing, and marking.

U. S. Gov., Federal Specification QQ-A-359a; 1942. Aluminum-Alloy (Al-3) (Aluminum-Manganese); Plates and Sheets. Covers one grade and three types—(1) flat sheet (commercial bright finish and gray finish), (2) coiled sheet (coiled sheet finish), and (3) plate (plate finish); four conditions for types 1 and 2—(A) soft, (1/2 H) half-hard, (3/4 H) three-quarters-hard, and (H) hard; and one condition for type 3—as rolled. Gives requirements for material, workmanship, chemical composition, physical properties, bending test, tolerances, methods of sampling, inspection, tests, packing, and marking.

U. S. Gov., Federal Specification QQ-A-361; 1941. Amendment 2; 1943. Aluminum-Alloy (Aluminum-Surfaced) (AL-17C2), (Aluminum-Copper- Magnesium-Manganese); Plates, Sheets, and Strips. Covers one grade and two conditions—(A) annealed, and (T) heat-treated. Gives requirements for material, workmanship, cladding thickness, chemical composition, mechanical properties, and tolerances; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification QQ-A-362; 1941. Amendment 2; 1943. Aluminum-Alloy (Aluminum-Surfaced) (AL-24C2), (Aluminum-Copper-Magnesium (1.5 Percent)-Manganese); Plates, Sheets, and Strips. Covers one grade and three conditions—(A) annealed, (T) heat-treated, and (TR) rolled after heat-treating. Gives requirements for material, workmanship, cladding thickness, chemical composition, mechanical properties, and tolerances; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification QQ-A-561; 1933. Aluminum; Plates and Sheets. Covers one grade and three types—(1) flat sheet (commercial bright finish and gray finish), (2) coiled sheet (coiled sheet finish), and (3) plate (plate finish); four tempers for types 1 and 2—(A) soft, (1/2 H) half-hard, (3/4 H) three-quarters-hard, and (H) hard; and one temper for type 3—as rolled. Gives requirements for material, workmanship, chemical composition, physical properties, tolerances, methods of sampling, physical tests, packing, and marking.

U. S. Gov., Navy Dept. Specification 47A2e; 1944. Aluminum; Plates, Sheets, and Strips.

U. S. Gov., Navy Dept. Specification 47A3c; 1939. Aluminum Alloy (Aluminum-Copper-Magnesium-Manganese); Plate, Sheet, and Strip.

U. S. Gov., Navy Dept. Specification 47A4d; 1944. Aluminum-Alloy (Al-3) (Aluminum-Manganese); Plates, Sheets (Flat and Coiled), and Strips.

U. S. Gov., Navy Dept. Specification 47A10e; 1942. Aluminum Alloy (Aluminum-Copper-Magnesium (1.5 Percent)-Manganese); Plate, Sheet, and Strip (AL-24).

U. S. Gov., Navy Dept. Specification 47A11c; 1944. Aluminum Alloy, Aluminum-Magnesium-Chromium; Plate, Sheet, and Strip.

U. S. Gov., Navy Dept. Specification 47A12a; 1936. Aluminum Alloy (Aluminum-Magnesium-Silicon-Chromium); Plates and Sheets.

*References.*—Other aluminum alloy sheet, *see* 631.11; methods of testing, general requirements for metals, *see* 600.1. 631.0: heat treatments, *see* 600.5; standard gage and thicknesses for sheets, *see* 631.21.

## 631.24 Strips, Aluminum

Society of Automotive Engineers. Aeronautical Material Specification 4001; 1943. Aluminum Sheet and Strip (2S-0). Covers composition, condition, quality, tolerances, reports, identification, and rejections.

Society of Automotive Engineers. Aeronautical Material Specification 4006; 1941. Aluminum Alloy Sheet and Strip, Manganese (3S-0). Covers composition, condition, thickness, tensile strength, elongation, quality, tolerance, reports, identification, and rejection.

Society of Automotive Engineers. Aeronautical Material Specification 4008; 1941. Aluminum Alloy Sheet and Strip, Manganese (3S-1/2 H). Covers composition, condition, thickness, tensile strength, elongation, quality, tolerance, reports, identification, and rejection.

Society of Automotive Engineers. Aeronautical Material Specification 4017A; 1942. Aluminum Alloy Sheet and Strip, Magnesium Chromium (52S-1/2H). Gives requirements for composition, condition, quality, tolerances, reports, identification, and rejections.

Society of Automotive Engineers. Aeronautical Material Specification 4025; 1942. Aluminum Alloy Sheet and Strip, Magnesium Silicon Copper (61S-0). Gives requirements for composition, condition, physical properties, quality, tolerances, reports, identification, and rejections.

Society of Automotive Engineers. Aeronautical Material Specification 4026; 1942. Aluminum Alloy Sheet and Strip, Magnesium Silicon Copper (61S-W). Gives requirements for composition, condition, physical properties, quality, tolerances, reports, identification, and rejections.

Society of Automotive Engineers. Aeronautical Material Specification 4027; 1942. Aluminum Alloy Sheet and Strip, Magnesium Silicon Copper (61S-T). Gives requirements for composition, condition, quality, tolerances, reports, identification, and rejections.

Society of Automotive Engineers. Aeronautical Material Specification 4040A; 1942. Aluminum Alloy Sheet and Strip, Aluminum-Covered Copper Magnesium Manganese (ALC 24S-0). Gives requirements for composition, condition (annealed), thickness, tensile strength, elongation, bend factor, quality, tolerances, identification, and rejection.

Society of Automotive Engineers. Aeronautical Material Specification 4041A; 1942. Aluminum Alloy Sheet and Strip, Aluminum-Covered Copper Magnesium Manganese (ALC 24S-T). Gives requirements for composition, condition (heat treated), thickness, tensile strength, yield strength, elongation; bend factor, quality, tolerances, identification, and rejection.

Society of Automotive Engineers. Aeronautical Material Specification 4042A; 1942. Aluminum Alloy Sheet and Strip, Aluminum-Covered Copper Magnesium Manganese (ALC 24S-RT). Gives requirements for composition, condition (heat treated), thickness, tensile strength, yield strength, elongation, bend factor, quality, tolerances, identification, and rejection.

U. S. Gov., Army-Navy Aeronautical Specification AN-A-9; 1943. Aluminum Alloy (AL-XA75); Plate, Sheet, and Strip.

U. S. Gov., Army-Navy Aeronautical Specification AN-A-10a; 1943. Aluminum Alloy, Clad (AL-XB75C2), Sheet and Strip.

U. S. Gov., Army-Navy Aeronautical Specification AN-A-12-1; 1943. Aluminum Alloy (AL-24); Plate, Sheet, and Strip.

U. S. Gov., Army-Navy Aeronautical Specification AN-A-13-2; 1944. Aluminum Alloy, Clad (AL-24C2); Plate, Sheet, and Strip.

U. S. Gov., Federal Specification QQ-A-318; 1938. Aluminum-Alloy (AL-52) (Aluminum-Magnesium-Chromium); Plates, Sheets, and Strips. Covers one grade and three types—(I) flat sheet (commercial finish and gray finish), (II) strip sheet (strip sheet finish), and (III) plate (plate finish); and six tempers—(A) soft, (1/4 H) quarter-hard, (1/2 H) half-hard, (3/4 H) three-quarters-hard, (H) hard, and (F) as rolled. Gives requirements for material, workmanship, chemical composition, physical properties, tolerances, thickness, width, length, sampling, inspection, tests, packing, and marking.

U. S. Gov., Federal Specification QQ-A-327; 1941. Aluminum-Alloy (AL-61) (Aluminum-Magnesium-Silicon); Plates, Sheets, and Strips. Covers one grade and three conditions—(A) annealed, (W) quenched, and (T) heat-treated and aged. Gives requirements for material, chemical composition, mechanical properties, tolerances, random stock sizes, and lateral bow tolerances; sampling, inspection, tests, packing, and marking.

U. S. Gov., Federal Specification QQ-A-353a; 1939. Aluminum-Alloy (AL-17) (Aluminum-Copper-Magnesium-Manganese); Plates, Sheets, and Strips. Covers one grade and three conditions—(A) annealed, (T) heat-treated, and (TR) rolled after heat-treating. Gives requirements for material, workmanship, chemical composition, physical properties, tolerances, methods of sampling, inspection, tests, packing, and marking.

U. S. Gov., Federal Specification QQ-A-355a; 1941. Aluminum-Alloy (AL-24) (Aluminum-Copper-Magnesium (1.5 Percent)-Manganese); Plates, Sheets, and Strips. Covers one grade and four conditions—(A) annealed, (T) heat-treated, (TR) rolled after heat-treating, and (F) as fabricated (strip). Gives requirements for material, workmanship, chemical composition, mechanical properties, tolerances, methods of sampling, inspection, tests, packing, and marking.

U. S. Gov., Federal Specification QQ-A-361; 1941. Amendment 2; 1943. Aluminum-Alloy (Aluminum-Surfaced) (AL-17C2), (Aluminum-Copper-Magnesium-Manganese); Plates, Sheets, and Strips. Covers one grade and two conditions—(A) annealed, and (T) heat-treated. Gives requirements for material, workmanship, cladding thickness, chemical composition, mechanical properties, and tolerances; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification QQ-A-362; 1941. Amendment 2; 1943. Aluminum-Alloy (Aluminum-Surfaced)(AL-24C2), (Aluminum-Copper-Magnesium (1.5 Percent)-Manganese); Plates, Sheets, and Strips. Covers one grade and three conditions—(A) annealed, (T) heat-treated, (TR) rolled after heat-treating. Gives requirements for material, workmanship, cladding thickness, chemical composition, mechanical properties, and tolerances; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Navy Dept. Specification 47A2e; 1944. Aluminum; Plates, Sheets, and Strips.

U. S. Gov., Navy Dept. Specification 47A3c; 1939. Aluminum Alloy (Aluminum-Copper-Magnesium-Manganese); Plate, Sheet, and Strip (AL-17).

U. S. Gov., Navy Dept. Specification 47A10e; 1942. Aluminum Alloy (Aluminum-Copper-Magnesium(1.5 Percent)-Manganese); Plate, Sheet, and Strip (AL-24).

U. S. Gov., Navy Dept. Specification 47A11c; 1944. Aluminum Alloy, Aluminum-Magnesium-Chromium; Plate, Sheet, and Strip.

*References.*—Aluminum alloy strips, *see* 631.11; methods of testing, general requirements for metals, *see* 600.1, 631.0; standard gage and thicknesses for strip, *see* 631.21.

## 631.3 ALUMINUM RODS, WIRES, AND RIVETS

### 631.31 Rods, Aluminum

Society of Automotive Engineers. Aeronautical Material Specification No.4150; 1944. Aluminum Alloy, Magnesium Silicon Copper (61ST); Extruded. For rods, bars, or shapes. Covers composition, condition, quality, tolerances, reports, identification, and rejections. Similar Specification: Alloy 61S-T.

Society of Automotive Engineers. 1944 Handbook, Section 3—Processed Materials. S.A.E. Standard Aluminum Wrought Alloys, revised 1944. Specifications indicate the fabricated forms in which each alloy is regularly manufactured, and include compositions in percentages for various wrought aluminum alloys. Gives general information and mechanical properties for 13 alloys including bars, plates, shapes, sheets, rods, wires, tubes, forgings, and extruded aluminum.

U. S. Gov., Army Air Forces. Specification 11330-A-1; 1944. Bars and Rods; Aluminum Alloy, 11S, Free Machining.

U. S. Gov., Federal Specification QQ-A-315; 1943. Aluminum Alloy (AL-52) (Aluminum-Magnesium-Chromium): Bars, Rods, Shapes, and Wire. Covers one grade and following conditions: Wire—(A) soft, (1/2H) half-hard, (3/4H) three-quarters-hard, and (H) hard; and bars, rods, and shapes—(A) soft and (F) as fabricated. Gives requirements for material, workmanship, chemical composition, physical properties, permissible variations, and lengths; methods of sampling, inspection, and tests; and packing and marking.

U. S. Gov., Federal Specification QQ-A-325; 1944. Aluminum-Alloy (AL-61) (Aluminum-Magnesium-Silicon-Copper-Chromium); Bars, Rods, Shapes, and Wire. Covers one grade and three conditions—(A) annealed, (B) quenched, and (C) heat-treated. Gives requirements for material, workmanship, chemical composition, physical properties, permissible variations, various lengths, tolerances, and marking; methods of sampling, inspection, and tests; and packing and marking for shipment.

U. S. Gov., Federal Specification QQ-A-331b; 1942. Aluminum-Alloy (Al-53) (Aluminum-Magnesium-Silicon-Chromium); Bars, Rods, Shapes, and Wire. Covers one grade and five conditions—(A) annealed, (F) as fabricated, (PT) extruded and aged, (W) quenched, and (T) heat-treated. Gives requirements for material, workmanship, chemical composition, physical properties, permissible variations, lengths, methods of sampling, inspection, tests, packing, and marking.

U. S. Gov., Federal Specification QQ-A-351b; 1943. Aluminum-Alloy (Al-17) (Aluminum-Copper-Magnesium-Manganese); Bars, Rods, Shapes, and Wire. Covers one grade and two conditions—(A) annealed and (T) heat-treated. Gives requirements for material, workmanship, chemical composition, physical properties, permissible variations, tolerances; exact lengths, standard lengths, mill lengths, and random lengths; methods of sampling, inspection, and tests; and requirements for packing and marking for shipment.

U. S. Gov., Federal Specification QQ-A-354a; 1943. Aluminum-Alloy (Al-24) (Aluminum-Copper-Magnesium (1.50 Percent)-Manganese); Bars, Rods, Shapes, and Wire. Covers one grade and two conditions—(A) annealed and (T) heat-treated. Gives requirements for material, workmanship, chemical composition, physical properties, permissible variations, lengths, methods of sampling, inspection, tests, packing, and marking.

U. S. Gov., Federal Specification QQ-A-356b; 1942. Aluminum-Alloy (Al-3) (Aluminum-Manganese); Bars, Rods, Shapes, and Wire. Covers one grade and four conditions for wire—(A) soft, (1/2 H) half-hard, (3/4 H) three-quarters-hard, and (H) hard; and two conditions for rolled, cold-finished, and extruded bars, rods, and shapes—(A) soft and (F) as fabricated. Gives requirements for material, workmanship, chemical composition, physical properties, permissible variations, lengths, sampling, inspection, tests, packing, and marking.

U. S. Gov., Federal Specification QQ-A-411b; 1942. Aluminum (Al-2); Bars, Rods, Shapes, and Wire. Covers one grade and four conditions for wire—(A) soft, (1/2 H) half-hard, (3/4 H) three-quarters-hard, and (H) hard; and two conditions for bars, rods, and shapes—(A) soft and (F) as fabricated. Gives requirements for material, workmanship, chemical composition, physical properties, permissible variations, lengths, sampling, inspection, tests, packing, and marking.

U. S. Gov., Federal Specification QQ-R-571; 1932. Rods; Welding, Nonferrous (for) Gas Welding. Includes type D, aluminum; and type E, aluminum alloy. Gives requirements for chemical composition, weldability, character of weld metal, physical properties, sizes, and lengths; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Navy Dept. Specification 46A3e; 1941. Aluminum (AL-2); Bars, Rods, Shapes, and Wire.

U. S. Gov., Navy Dept. Specification 46A4g; 1941. Aluminum Alloy (Aluminum-Copper-Magnesium-Manganese); Bars, Rods, Shapes, and Wire.

U. S. Gov., Navy Dept. Specification 46A6e; 1939. Aluminum Alloy (Aluminum-Manganese); Bars, Rods, Shapes, and Wire (Al-3).

U. S. Gov., Navy Dept. Specification 46A9e; 1942. Aluminum-Alloy (AL-24) (Aluminum-Copper-Magnesium (1.5 Percent)-Manganese); Bars, Rods, Shapes, and Wire.

U. S. Gov., Navy Dept. Specification 46A10c; 1944. Aluminum-Alloy, Aluminum-Magnesium-Silicon-Chromium; Bars, Rods, Shapes, and Wire.

U. S. Gov., Navy Dept. Specification 46A11a; 1945. Aluminum Alloy, Aluminum-Magnesium-Chromium; Bars, Rods, and Wire.

U. S. Gov., Navy Dept. Specification 46R1b; 1933. Rods; Welding, Nonferrous (for Gas Welding).

*References.*—Other aluminum alloy rods, *see* 631.11; welding apparatus and procedure, *see* 767; methods of testing, general requirements for metals, *see* 600.1, 631.0.

## 631.32 Wires, Aluminum

American Institute of Electrical Engineers. Standard No. 46; 1927. American Standards Assn., C 11-1927. Hard Drawn Aluminum Conductors. Covers the electrical and related properties. Gives normal values for resistivity, resistance-temperature coefficient, density, length-temperature coefficient, change in resistivity with change in temperature, and gives explanatory notes.

American Society for Testing Materials, B 184-43T; 1943. Tentative Specifications for Aluminum and Aluminum-Alloy Metal Arc-Welding Electrodes. These specifications cover coated or covered metal arc-welding electrodes for welding aluminum and aluminum alloys. Gives requirements for manufacture, standard sizes and lengths, chemical composition, weld tests, preparation of test specimens, tension and bend test procedures, test results required, permissible variations in dimensions, electrode coverings, workmanship, packing, marking, and guarantee. This specification prepared jointly by A.S.T.M. and American Welding Society.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, 1938. Wire; Aluminum. Covers definition, properties, specifications, and uses.

Society of Automotive Engineers. 1944 Handbook, Section 3—Processed Materials. S.A.E. Standard Aluminum Wrought Alloys, revised 1944. Specifications indicate the fabricated forms in which each alloy is regularly manufactured, and include compositions in percentages for various wrought aluminum alloys. Gives general information and mechanical properties for 13 alloys including bars, plates, shapes, sheets, rods, wires, tubes, forgings, and extruded aluminum.

U. S. Gov., Army Air Forces. Specification 10285-A-3; 1943. Wire; Metal, Spray Gun.

U. S. Gov., Army-Navy Aeronautical Specification AN-QQ-W-298-2; 1943. Wire; Aluminum and Aluminum Alloy (for Rivets).

U. S. Gov., Federal Specification QQ-A-315; 1943. Aluminum Alloy (Al-52) (Aluminum-Magnesium-Chromium); Bars, Rods, Shapes, and Wire. Covers one grade and following conditions: Wire—(A) soft, (1/2H) half-hard, (3/4H) three-quarters-hard, and (H) hard; and bars, rods, and shapes—(A) soft and (F) as fabricated. Gives requirements for material, workmanship, chemical composition, physical properties, permissible variations, and lengths; methods of sampling, inspection, and tests; and packing and marking.

U. S. Gov., Federal Specification QQ-A-325; 1944. Aluminum-Alloy (AL-61) (Aluminum-Magnesium-Silicon-Copper-Chromium): Bars, Rods, Shapes, and Wire. Covers one grade and three conditions—(A) annealed, (B) quenched, and (C) heat-treated. Gives requirements for material, workmanship, chemical composition, physical properties, permissible variations, various lengths, tolerances, and marking; methods of sampling, inspection, and tests; and packing and marking for shipment.

U. S. Gov., Federal Specification QQ-A-331b; 1942. Aluminum-Alloy (Al-53) (Aluminum-Magnesium-Silicon-Chromium); Bars, Rods, Shapes, and Wire. Covers one grade and five conditions—(A) annealed, (F) as fabricated, (PT) extruded and aged, (W) quenched, and (T) heat-treated. Gives requirements for material, workmanship, chemical composition, physical properties, permissible variations, lengths, methods of sampling, inspection, tests, packing, and marking.

U. S. Gov., Federal Specification QQ-A-351b; 1943. Aluminum-Alloy (Al-17) (Aluminum-Copper-Magnesium-Manganese); Bars, Rods, Shapes, and Wire. Covers one grade and two conditions—(A) annealed and (T) heat-treated. Gives requirements for material, workmanship, chemical composition, physical properties, permissible variations, tolerances; exact lengths, standard lengths, mill lengths, and random lengths; methods of sampling, inspection, and tests; and requirements for packing and marking for shipment.

U. S. Gov., Federal Specification QQ-A-354a; 1943. Aluminum-Alloy (Al-24) (Aluminum-Copper-Magnesium (1.50 Percent)-Manganese; Bars, Rods, Shapes, and Wire. Covers one grade and two conditions—(A) annealed and (T) heat-treated. Gives requirements for material, workmanship, chemical composition, physical properties, permissible variations, lengths, methods of sampling, inspection, tests, packing, and marking.

U. S. Gov., Federal Specification QQ-A-356b; 1942. Aluminum-Alloy (Al-3) (Aluminum-Manganese); Bars, Rods, Shapes, and Wire. Covers one grade and four conditions for wire—(A) soft, (1/2 H) half-hard, (3/4 H) three-quarters-hard, and (H) hard; and two conditions for rolled, cold-finished, and extruded bars, rods, and shapes—(A) soft and (F) as fabricated. Gives requirements for material, workmanship, chemical composition, physical properties, permissible variations, lengths, sampling, inspection, tests, packing, and marking.

U. S. Gov., Federal Specification QQ-A-411b; 1942. Aluminum (Al-2); Bars, Rods, Shapes, and Wire. Covers one grade and four conditions for wire—(A) soft, (1/2 H) half-hard, (3/4 H) three-quarters-hard, and (H) hard; and two conditions for bars, rods, and shapes—(A) soft and (F) as fabricated. Gives requirements for material, workmanship, chemical composition, physical properties, permissible variations, lengths, sampling, inspection, tests, packing, and marking.

U. S. Gov., Navy Dept. Specification 46A3e; 1941. Aluminum (AL-2); Bars, Rods, Shapes, and Wire.

U. S. Gov., Navy Dept. Specification 46A4g; 1941. Wire; Aluminum-Alloy (Aluminum-Copper-Magnesium-Manganese); Bars, Rods, and Shapes.

U. S. Gov., Navy Dept. Specification 46A6e; 1939. Aluminum-Alloy (Aluminum-Manganese); Bars, Rods, Shapes, and Wire (Al-3).

U. S. Gov., Navy Dept. Specification 46A9e; 1942. Aluminum-Alloy (AL-24) (Aluminum-Copper-Magnesium (1.5 Percent)-Manganese); Bars, Rods, Shapes, and Wire.

U. S. Gov., Navy Dept. Specification 46A10c; 1944. Aluminum-Alloy, Aluminum-Magnesium-Silicon-Chromium; Bars, Rods, Shapes, and Wire.

U. S. Gov., Navy Dept. Specification 46A11a; 1945. Aluminum Alloy, Aluminum-Magnesium-Chromium; Bars, Rods, and Wire.

*References.*—Aluminum welding wire, *see* 631.31; electric cables and wire of copper, *see* 715.41, 715.44; methods of testing, general requirements for metals, *see* 600.1, 631.0; aluminum alloys in form of wire, *see* 631.11.

### 631.33 Rivets, Aluminum

Society of Automotive Engineers. Aeronautical Material Specification 7220A; 1944. Rivets; Aluminum (2S-1/2H). Covers composition, condition, quality, reports, identification, and rejections.

Society of Automotive Engineers. Aeronautical Material Specification 7222A; 1944. Rivets; Aluminum Alloy (A17S-T). Covers composition, condition, quality, reports, identification, and rejections.

U. S. Gov., Army-Navy Aeronautical Specification AN-R-19-1; 1945. Rivets; Aluminum and Aluminum Alloy.

U. S. Gov., Navy Dept. Specification 43R5g; 1944. Rivets (and Rods and Wire, Rivet); Aluminum and Aluminum-Alloy.

### 631.34 Screws, Aluminum

Aeronautical Chamber of Commerce of America, Inc. National Aircraft Standard NAS 12; 1941. Screws; Nonlosable, Aluminum Alloy, Nos. 8-32 and 10-32. Gives drawings with dimensions and notes. Developed by National Aircraft Standard Committee.

### 631.35 Bolts, Aluminum

Aeronautical Chamber of Commerce of America, Inc. National Aircraft Standard NAS 53, 54, 55, 56, 57, 58, 59, 60, 62, 64, and 66; 1944. Bolt; Close Tolerance, Alloy Steel and Aluminum Alloy. Nos. 10-32, 1/4-28, 5/16-24, 3/8-24, 7/16-20, 1/2-20, 9/16-18, 5/8-18, 3/4-16, 7/8-14, and 1-14. Gives drawings with dimensions and notes for size. Developed by National Aircraft Standard Committee.

U. S. Gov., Army-Navy Aeronautical Specification AN-B-3a; 1943. Bolts; Aircraft.

## 631.4 ALUMINUM CASTINGS AND TUBES

### 631.40 General Items

U. S. Gov., U. S. Army, Army Air Forces. Specification 57-72-3; 1927. Aluminum Castings; Treatment With Sodium Silicate (Water Glass).

### 631.41 Castings, Aluminum

American Society for Testing Materials, B 26-44T; 1944. Tentative Specifications for Aluminum-Base Alloy Sand Castings. Covers 11 aluminum-base alloy sand castings having a specific gravity of 3 or less. Gives requirements for manufacture, chemical composition, sampling for chemical

analysis, method of chemical analysis, tensile properties, tension tests, test specimens, number of tests, retests, work anship and finish, inspection, and rejection.

American Society for Testing Materials, B85-44T; 1944. Tentative Specifications for Aluminum-Base Alloy Die Castings. Covers eight alloy compositions; requirements for chemical analysis, sampling, density, workmanship, permissible variations, physical properties, and tests.

American Society for Testing Materials, B 108-44T; 1944. Tentative Specifications for Aluminum-Base Alloy Permanent Mold Castings. Covers 10 aluminum-base alloy permanent mold castings having a specific gravity of 3 or less. Gives requirements for classes, chemical composition, sampling for chemical analysis, method of chemical analysis, tensile properties and tests, test specimens, number of tests, retests, workmanship and finish, inspection, rejection, rehearing, and table of principal uses and characteristics of the 10 designated alloys.

American Society for Testing Materials, ES-29; 1943. Emergency Specifications for Special Quality, Aluminum-Base Alloy Castings. Covers controlled quality, aluminum-base alloy pressure-molded castings for applications where breakdown would mean serious interruption of important operations, danger to life, or failure to consummate critical objectives. Gives manufacture, detail drawings, chemical composition, chemical analysis, sample castings, production control, marking, and records.

Society of Automotive Engineers. Aeronautical Material Specification 4210B; 1942. Aluminum Alloy Castings (Sand); 5 Percent Silicon (Aged). Gives requirements for composition, casting, heat treatment, test bars, quality, precautions, reports, identification, approval, and rejections.

Society of Automotive Engineers. Aeronautical Material Specification 4212B; 1942. Aluminum Alloy Castings (Sand); 5 Percent Silicon (Solution and Precipitation). Gives requirements for composition, casting, heat treatment, text bars, quality, precautions, reports, identification, approval, and rejections.

Society of Automotive Engineers. Aeronautical Material Specification 4214A; 1942. Aluminum Alloy Castings (Sand); 5 Percent Silicon (Solution and Overaged). Gives requirements for composition, castings, heat treatment, test bars, quality, precautions, reports, identification, approval, and rejections. Similar specifications: S.A.E. 322; Alloy 355-T71.

Society of Automotive Engineers. Aeronautical Material Specification No.4217; 1942. Aluminum Alloy Castings (Sand); 7 Percent Silicon (356-T6). Gives requirements for composition, casting, heat treatment, test bars, quality, precautions, report, identification, approval, and rejections.

Society of Automotive Engineers. Aeronautical Material Specification 4220A; 1942. Aluminum Alloy Castings (Sand); Copper Nickel Magnesium. Primarily for air-cooled cylinder heads. Gives requirements for composition, casting, heat treatment, hardness, test bars, quality, reports, identification, approval, and rejections.

Society for Automotive Engineers. Aeronautical Material Specification No.4222; 1942. Aluminum Alloy Castings (Sand); Copper Nickel Magnesium (Solution and Stabilized). Primarily for air-cooled cylinder heads. Gives requirements for composition, casting, heat treatment, hardness, test bars, quality, reports, identification, approval, and reports.

Society of Automotive Engineers. Aeronautical Material Specification No.4231; 1942. Cast Aluminum Alloy; 4 Percent Copper (Solution and Precipitation). Gives requirements for composition, casting, heat treatment, test bars, quality, precautions, identification, and rejection.

Society of Automotive Engineers. Aeronautical Material Specification No.4234; 1943. Aluminum Alloy Castings (Sand); Secondary 4 Percent Copper (Solution and Precipitation). Gives requirements for composition, casting, heat treatment, test bars, quality, precautions, reports, identification, approval, and rejections.

Society of Automotive Engineers. Aeronautical Material Specification 4240A; 1942. Aluminum Alloy Castings (Sand); 10 Percent Magnesium (220-T4). Gives requirements for composition, casting, test bars, quality, precautions, reports, identification, approval, and rejections.

Society of Automotive Engineers. Aeronautical Material Specification 4280A; 1943. Aluminum Alloy Castings (Permanent Mold); 5 Percent Silicon (Solution and Overaged). Gives requirements for composition, casting, heat treatment, test bars, quality, precautions, reports, identification, approval, and rejections.

Society of Automotive Engineers. Aeronautical Material Specification 4282A; 1943. Aluminum Alloy Castings (Permanent Mold); 4 Percent Copper, 2 Percent Silicon (Solution Precipitation). Gives requirements for composition, casting, heat treatment, test bars, quality, precautions, reports, identification, approval, and rejections.

Society of Automotive Engineers. Aeronautical Material Specification 4284; 1942. Aluminum Alloy Castings (Permanent Mold); 7 Percent Silicon (Solution and Aged). Gives requirements for type, composition, grain size, condition, quality, tolerances, tests, reports, identification, and rejections.

Society of Automotive Engineers. Aeronautical Material Specification 4290A; 1941. Aluminum Alloy, Die Castings. Gives requirements for composition, quality, reports, identification, and rejection.

Society of Automotive Engineers. Aeronautical Material Specification No.4291; 1943. Aluminum Alloy Castings (Die); Silicon Copper. Gives requirements for composition, quality, reports, identification, approval, and rejections.

Society of Automotive Engineers. Aeronautical Material Specification No.4292; 1942. Cast Aluminum Alloy; Pressure Molded (Aluminum Silicon). Gives requirements for composition, condition, test bars, quality, reports, identification, approval, and rejections.

Society of Automotive Engineers. 1944 Handbook, Section 3—Processed Materials. S.A.E. Standard Aluminum Casting Alloys, revised 1944. Gives table showing composition of S.A.E. aluminum casting

alloys and gives various specifications for permanent mold castings, sand castings, and sand and permanent mold castings.

Society of Automotive Engineers. 1944 Handbook, Section 3—Processed Materials. S.A.E. Standard Aluminum Die Casting Alloys, revised 1944. Gives reference table of similar specifications for aluminum die castings and general information and mechanical properties for various aluminum castings.

U. S. Gov., Army Air Forces. Specification 11324; 1939. Aluminum-Alloy; Sand Castings.

U. S. Gov., Army Air Forces. Specification 11325 (1); 1940. Aluminum-Alloy; Sand Castings (Aluminum, Copper, Tin, Magnesium, Zinc).

U. S. Gov., Army-Navy Aeronautical Specification AN-A-4; 1942. Aluminum-Alloy; Secondary (S-108) Sand-Castings.

U. S. Gov., Army-Navy Aeronautical Specification AN-A-5; 1942. Aluminum-Alloy; Secondary (S-195) Sand-Castings.

U. S. Gov., Army-Navy Aeronautical Specification AN-A-17; 1943. Aluminum-Alloy (5-25 Zinc); Sand Castings.

U. S. Gov., Army-Navy Aeronautical Specification AN-A-23; 1944. Aluminum-Alloy; General Specification for Castings.

U. S. Gov., Army-Navy Aeronautical Specification AN-QQ-A-366-4; 1943. Aluminum-Alloy; Die Castings (Al-13, Al-13X, Al-85, Al-85X, Al-218).

U. S. Gov., Army-Navy Aeronautical Specification AN-QQ-A-376-2; 1942. Aluminum-Alloy (Al-355); Permanent-Mold-and-Sand-Castings.

U. S. Gov., Army-Navy Aeronautical Specification AN-QQ-A-379-2; 1942. Aluminum-Alloy (Al-142); Permanent-Mold-and-Sand-Castings.

U. S. Gov., Army-Navy Aeronautical Specification AN-QQ-A-383-2; 1942. Aluminum-Alloy (Al-B195); Permanent-Mold-Castings.

U. S. Gov., Army-Navy Aeronautical Specification AN-QQ-A-386-2; 1942. Aluminum-Alloy (Al-A132); Permanent-Mold-Castings.

U. S. Gov., Army-Navy Aeronautical Specification AN-QQ-A-390-3; 1943. Aluminum-Alloy (Al-195); Sand Castings.

U. S. Gov., Army-Navy Aeronautical Specification AN-QQ-A-392-2; 1942. Aluminum-Alloy (Al-220); Sand-Castings.

U. S. Gov., Army-Navy Aeronautical Specification AN-QQ-A-394-2; 1942. Aluminum-Alloy (Al-356); Sand-Castings.

U. S. Gov., Army-Navy Aeronautical Specification AN-QQ-A-399-2; 1942. Aluminum-Alloy (Al-212); Sand-Castings.

U. S. Gov., Army-Navy Aeronautical Specification AN-QQ-A-402-2; 1942. Aluminum-Alloy (Al-214); Sand-Castings.

U. S. Gov., Army-Navy Aeronautical Specification AN-QQ-A-405-3; 1942. Aluminum-Alloy (Al-43); Sand-Castings.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Circular C398 and Supplement, 1940. Standard Samples. Aluminum-Base Casting Alloy, Sample 86a.

U. S. Gov., Federal Specification QQ-A-591; 1939. Amendment 2; 1943. Aluminum-Base-Alloy; Die-Castings. Covers 11 classes. Gives requirements for material, manufacture, workmanship, chemical composition, soundness, physical properties, dimensions, and tolerances; methods of inspection and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification QQ-A-596; 1939. Aluminum-Base Alloy; Permanent-Mold Castings. Covers 10 alloys. Gives requirements for material, workmanship, chemical composition, physical properties, methods of sampling, inspection, tests, packing, and marking.

U. S. Gov., Federal Specification QQ-A-601; 1928. Amendment 2; 1941. Aluminum-Base-Alloys; Sand-Castings. Covers 12 alloys. Gives requirements for material, workmanship, chemical composition, and physical properties; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment. Emergency Alternate Federal Specification E-QQ-A-601; 1942, (issued by Procurement Div., Treasury Dept., U. S. Gov.) gave chemical and physical properties for two additional alloys and stated that the following Federal Specifications form a part of this specification: QQ-I-666, Iron, Malleable, Castings; QQ-S-681, Steel, Castings; QQ-I-652, Iron, Gray, Castings; QQ-C-593, Copper-Silicon-Alloy, Castings; QQ-B-621, Brass, Commercial and Naval, Castings; and QQ-B-671 Bronze-Aluminum, Castings.

U. S. Gov., Navy Dept. Specification 46A14; 1940. Aluminum-Base-Alloy Die Castings.

U. S. Gov., Navy Dept. Specification 46A15; 1940. Aluminum-Base-Alloy Permanent Mold Castings.

U. S. Gov., Navy Dept. Specification 46A1e; 1938. Aluminum Alloy; Castings, Light (Resistant to Salt-Water Corrosion).

U. S. Gov., U. S. Army, Ordnance Dept. Specification 57-72-6; 1944. Aluminum-Base-Alloy (10 Percent Magnesium) Sand Castings.

*References.*—Methods of testing, general requirements for metals, *see* 600.1, 631.0; ingot metal for castings, *see* 631.12; other specifications for aluminum castings, *see* specifications of individual commodities made of cast aluminum.

## 631.42 Tubes, Aluminum

Aeronautical Chamber of Commerce of America, Inc. National Aircraft Standard NAS 115; 1942. Tube-Control, 3/8 O.D. and 1/2 O.D., Aluminum Alloy. Gives drawing with dimensions and notes. Developed by National Aircraft Standard Committee.

Society of Automotive Engineers. Aeronautical Material Specification No.4062; 1942. Aluminum Tubing (Seamless) (2S-1/2H). Gives requirements for composition, condition, quality, tolerances, identification, reports, and rejections.

Society of Automotive Engineers. Aeronautical Material Specification 4070B; 1944. Aluminum Alloy Tubing; Magnesium Chromium (52S-O). Gives requirements for composition, condition, quality, tolerances, reports, identification, and rejections.

Society of Automotive Engineers. Aeronautical Material Specification 4076A; 1942. Aluminum Alloy Tubing; Magnesium Silicon Chromium (53S-W). Gives requirements for composition, condition, physical properties, quality, tolerances, reports, identification, and rejections.

Society of Automotive Engineers. Aeronautical Material Specification 4080B; 1944. Aluminum Alloy Tubing; Magnesium Silicon Copper (61S-O). Gives requirements for composition, condition, tensile strength, yield strength, elongation, quality, tolerances, reports, identification, and rejections.

Society of Automotive Engineers. Aeronautical Material Specification 4082B; 1943. Aluminum Alloy Tubing; Magnesium Silicon Copper (61S-T). Gives requirements for composition, condition, heat treated (quenched and aged), tensile strength, yield strength, elongation, quality, tolerances, reports, identification, and rejections.

Society of Automotive Engineers. Aeronautical Material Specification 4088A; 1942. Aluminum Alloy Tubing; Copper Magnesium Manganese (24S-T). Gives requirements for composition, condition, tensile strength, yield strength, elongation, quality, tolerances, identification, and rejection.

Society of Automotive Engineers. 1944 Handbook, Section 3—Processed Materials. S.A.E. Standard Aluminum Wrought Alloys, revised 1944. Specifications indicate the fabricated forms in which each alloy is regularly manufactured, and include compositions in percentages for various wrought aluminum alloys. Gives general information and mechanical properties for 13 alloys including bars, plates, shapes, sheets, rods, wires, tubes, forgings, and extruded aluminum.

U. S. Gov., Army Air Forces. Specification 11327 (1); 1940. Tubing; Aluminum Alloy (Aluminum-Magnesium-Silicon-Chromium), Round, Seamless.

U. S. Gov., Army-Navy Aeronautical Specification AN-T-13-2; 1944. Tubing; Aluminum Alloy, Flexible.

U. S. Gov., Army-Navy Aeronautical Specification AN-T-32; 1943. Tubing; Aluminum Alloy (AL-XA75), Seamless, Round.

U. S. Gov., Federal Specification WW-T-783a; 1939. Tubing; Aluminum (Al-2), Round, Seamless. Covers one grade and four tempers—(A) soft, (1/2 H) half-hard, (3/4 H) three-quarters-hard, and (H) hard. Gives requirements for chemical composition, physical properties, tolerances, methods of sampling, inspection, tests, packing, and marking.

U. S. Gov., Federal Specification WW-T-785; 1943. Tubing; Aluminum-Alloy (Al-24) (Aluminum-Copper-Magnesium (1.5 Percent)-Manganese), Round, Seamless. Shall be of one grade; and condition A, annealed, or condition T, heat-treated. Gives requirements for material, workmanship, chemical composition, physical properties, methods of sampling, inspection, tests, packing, and marking.

U. S. Gov., Federal Specification WW-T-786a; 1942 Amendment 1; 1942. Tubing; Aluminum-Alloy (Al-17) (Aluminum-Copper, Magnesium-Manganese), Round, Seamless. Covers one grade and two conditions—(A) annealed and (T) heat-treated. Gives requirements for material, workmanship, chemical composition, physical properties, tolerances, methods of sampling, inspection, tests, packing, and marking.

U. S. Gov., Federal Specification WW-T-787; 1941. Tubing; Aluminum-Alloy (Al-52) (Aluminum-Magnesium-Chromium), Round, Seamless. Covers one grade in soft condition. Gives requirements for material, workmanship, chemical composition, mechanical properties, tolerances, methods of sampling, inspection, tests, packing, and marking.

U.S. Gov., Federal Specification WW-T-788a; 1939. Tubing; Aluminum-Alloy (Al-3) (Aluminum-Manganese), Round, Seamless. Covers one grade and four tempers—(A) soft, (B) half-hard, (C) three-quarters-hard, and (D) hard. Gives requirements for material, workmanship, chemical composition, physical properties, tolerances, methods of sampling, inspection, tests, packing, and marking.

U. S. Gov., Federal Specification WW-T-789; 1941. Tubing; Aluminum-Alloy (AL-61), (Aluminum-Magnesium-Silicon), Round, Seamless. Covers one grade and three conditions—(A) annealed, (W) quenched, and (T) heat-treated and aged. Gives requirements for chemical composition, mechanical properties, tolerances, and permissible variations; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Federal Specification WW-T-790; 1939. Tubing; Aluminum-Alloy (Al-53) (Aluminum-Magnesium-Silicon-Chromium), Round, Seamless. Covers one grade and three conditions—(A) annealed, (W) quenched, and (T) heat-treated and aged. Gives requirements for material, workmanship, chemical composition, physical properties, tolerances, methods of sampling, inspection, tests, packing, and marking.

U. S. Gov., Navy Dept. Specification 33T3b; 1941. Tubing; Flexible, Aluminum-Alloy and Corrosion-Resisting Steel.

U. S. Gov., Navy Dept. Specification 44T19c; 1944. Tubing; Aluminum (AL-2), Round, Seamless.

U. S. Gov., Navy Dept. Specification 44T20b; 1944. Tubing; Aluminum Alloy (Aluminum-Manganese).

U. S. Gov., Navy Dept. Specification 44T21e; 1944. Tubing; Aluminum-Alloy (AL-17) (Aluminum-Copper-Magnesium-Manganese), Round, Seamless.

U. S. Gov., Navy Dept. Specification 44T22a; 1937. Tubing; Aluminum-Alloy (Aluminum-Copper-Magnesium-Manganese), Streamline (Aircraft Use).

U. S. Gov., Navy Dept. Specification 44T28a; 1937. Tubing; Aluminum-Alloy (Aluminum-Copper-Magnesium (1.5 Percent)-Manganese), Round, Seamless.

U. S. Gov., Navy Dept. Specification 44T30a; 1936. Tubing; Aluminum-Alloy (Aluminum-Magnesium-Silicon-Chromium), Round, Seamless.

U. S. Gov., Navy Dept. Specification 44T31a; 1937. Tubing; Aluminum-Alloy (Aluminum-Copper-Magnesium (1.5 Percent)-Manganese), Streamline (Aircraft Use).

U. S. Gov., U. S. Army, Army Air Forces. Specification 57-187-2B; 1940. Tubing; Streamline, Cross-Section, Aluminum-Alloy.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 57-195; 1944. Tubing; Flexible, Corrosion-Resistant Steel and Aluminum Alloy.

*References.*—Aluminum alloys in form of tubes, *see* 631.11.

## 631.43 Forgings, Aluminum

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, 1938. Forgings. Covers definition, characteristics, classes of forgings, forgeable metals, and commercial forging practice.

Society of Automotive Engineers. Aeronautical Material Specification 4125B; 1944. Aluminum Alloy

Forgings, Silicon Magnesium Chromium (A51S-T). Gives requirements for composition, condition, quality, reports, identification, and rejections. Similar specifications, Navy 46A7 grade 3; Federal QQ-A-367 Grade 3; SAE 280; and Alloy A51S-T.

Society of Automotive Engineers. Aeronautical Material Specification 4130B; 1944. Aluminum Alloy Forgings, Copper Silicon Manganese (25S-T). Gives requirements for composition, condition, quality, reports, identification, and rejections. Similar specifications, Navy 46A7 Grade 2; Federal QQ-A-367 Grade 2; SAE 27; and Alloy 25S-T.

Society of Automotive Engineers. Aeronautical Material Specification 4135B; 1944. Aluminum Alloy Forgings, Copper Silicon Manganese Magnesium (14S-T). Gives requirements for composition, condition, quality, reports, identification, and rejections. Similar specifications, Navy 46A7 Grade 5; Federal QQ-A-367 Grade 5; and Alloy 14S-T.

Society of Automotive Engineers. Aeronautical Material Specification 4140B; 1944. Aluminum Alloy Forgings, Copper Nickel Magnesium (18S-T). For forgings used primarily for pistons. Gives requirements for composition, condition, quality, reports, identification, and rejections. Similar specification, Navy 46A7 Grade 7; Federal QQ-A-367 Grade 7; and Alloy 18S-T.

Society of Automotive Engineers. Aeronautical Material Specification 4145C; 1944. Aluminum Alloy Forgings, Silicon Magnesium Copper Nickel (32S-T). For forgings used primarily for pistons. Gives requirements for composition, condition, quality, reports, identification, and rejections. Similar specification, Navy 46A7 Grade 6; and Federal QQ-A-367; Grade 6.

Society of Automotive Engineers. 1944 Handbook, Section 3—Processed Materials. S.A.E. Standard Aluminum Wrought Alloys, revised 1944. Specifications indicate the fabricated forms in which each alloy is regularly manufactured, and include compositions in percentages for various wrought aluminum alloys. Gives general information and mechanical properties for 13 alloys including bars, plates, shapes, sheets, rods, wires, tubes, forgings, and extruded aluminum.

U. S. Gov., Army Air Forces. Specification 11352-A; 1944. Aluminum Alloy Forgings (Zinc, Magnesium, Copper, Manganese).

U. S. Gov., Federal Specification QQ-A-367b; 1942. Aluminum-Alloy: Forgings, Heat-Treated. Covers seven classes—1, 2, 3, 5, 6, 7, and 8. Gives requirements for material, workmanship, chemical composition, physical properties, microscopic requirements, and tolerances; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., Navy Dept. Specification 46A7d; 1941. Aluminum-Alloy; Heat-Treated Forgings.

## 631.5 ALUMINUM HOLLOW WARE

U. S. Gov., Dept. of Interior, Purchasing Office. Standard Specifications No.38. Coffee Urns; Aluminum.

U. S. Gov., Dept. of Interior, Purchasing Office. Standard Specifications No.76. Pots; Bain Marie, Aluminum.

U. S. Gov., Federal Specification RR-A-466; 1938. Amendment 2; 1940. Aluminum Ware; Bake-Shop and Kitchen. Covers 28 types and various classes thereunder for bake-shop and kitchen aluminum ware made from hard, cold-rolled, wrought aluminum, or aluminum alloy. Gives general and detail requirements for the various types relative to dimensions of ware, thickness of metal, capacities, body, and finish. Includes also requirements for various parts, such as covers, straps, clips, and handles, and methods of sampling, inspection, and tests.

U. S. Gov., Navy Dept. Specification 64P7; 1929. Bowls, Beating; Pots, Stock; Aluminum.

U. S. Gov., Navy Dept. Specification 65K1b; 1937. Kettles; Steam-Jacketed, Aluminum or Steel (Corrosion-Resisting).

U. S. Gov., U. S. Army, Medical Dept. Specification 28-11; 1934. Pot; Coffee, 11 1/2 Quart.

U. S. Gov., U. S. Army, Medical Dept. Specification 28-47; 1939. Kettle; Steam-Jacketed.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 28-19; 1937. Pot; Stock, Aluminum.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 28-117; 1941. Pot, Cook, Aluminum, Heavy, 15-Gallon, Cover, Heavy; and Plate, Splash; for Range, Field, M 1937.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 28-118; 1941. Pan, Aluminum, Bake and Roasting; and Cover; for Range, Field, M-1937.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 29-82; 1936. Basin; Wash, Aluminum.

## 631.6 EXTRUDED ALUMINUM

Aeronautical Chamber of Commerce of America, Inc. National Aircraft Standard NAS 40; 1943. Hinge; Half, Continuous, Extruded Aluminum Alloy. Gives drawings with dimensions and notes. Developed by National Aircraft Standard Committee.

Society of Automotive Engineers. 1944 Handbook, Section 3—Processed Materials. S.A.E. Standard Aluminum Wrought Alloys, revised 1944. Specifications indicate the fabricated forms in which each alloy is regularly manufactured, and include compositions in percentages for various wrought aluminum alloys. Gives general information and mechanical properties for 13 alloys including bars, plates, shapes, sheets, rods, wires, tubes, forgings, and extruded aluminum.

## 631.9 MISCELLANEOUS ALUMUNUM ARTICLES

American Hospital Assn., 4-10. Wire Screen Cloth. Covers copper, commercial bronze (brass), bronze, iron or steel, galvanized (zinc coated), copper-nickel alloy, corrosion-resisting steel (chromium-nickel), aluminum alloy, iron or steel, japanned or painted, and chromium-nickel alloy.

American Hospital Assn., 4-52. Safety Treads. Covers two types—(A) brass-base and (B) aluminum-base.

Society of Automotive Engineers. Aeronautical Standard No.20; 1942. Propeller Blades; Aluminum Alloy, Shank Dimensions for. Diagrammatic dimensional drawing.

U. S. Gov., Army-Navy Aeronautical Specification AN-A-20; 1944. Aluminum; Foil.

U. S. Gov., Army-Navy Aeronautical Specification AN-N-2; 1943. Nuts; Aircraft.

U. S. Gov., Army-Navy Aeronautical Specification AN-N-5; 1944. Nuts; Self Locking.

U. S. Gov., Army-Navy Aeronautical Specification AN-P-25-2; 1944. Propeller Blades; General Specification for, Solid, Aluminum Alloy.

U. S. Gov., Marine Corps Specification, 1938. Scoop; Flour and Sugar, Cast Aluminum.

U. S. Gov., Navy Dept. Specification 12T4f; 1939. Treads; Safety.

U. S. Gov., Navy Dept. Specification 45F13; 1940. Fittings; Pipe, Aluminum-Alloy (Threaded), 125-Pound.

U. S. Gov., Navy Dept. Specification 47A5b; 1936. Aluminum Foil.

U. S. Gov., Navy Dept. Specification 47T2; 1944. Tape; Metal, Colored.

U. S. Gov., Navy Dept. Specification 64E1b; 1944. Extractors; Fruit-Juice.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 29-62A; 1940. Scoop; Loading, Submarine Mine.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 50-11-43A; 1933. Aluminum; Flaked and Grained, for Use in Pyrotechnic Mixtures.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 29-71B; 1937. Can; Meat, M-1932.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 92-39; 1937. Carrier; Top-Load, Saddle, Phillips' Pack, Cargo, Artillery.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-589; 1941. Band; Type PG-16, Pigeon Leg.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-716B; 1938. Cipher Device; Type M-138-A.

U. S. Gov., U. S. Army, Signal Corps. Specification 72-8; 1927. Holder; Message, Type PG-14, Pigeon Leg.

U. S. Gov., U. S. Army, Signal Corps. Specification 72-26C; 1930. Cipher Device; Type M-94.

U. S. Gov., Veterans Administration. Specification VA-G-174a; 1936. Pots; Stock, Deep, Aluminum, Capacity 25 Quarts.

U. S. Gov., Veterans Administration. Specification VA-G-175c; 1937. Pot; Stock, Aluminum, Capacity 60 Quarts.

U. S. Gov., Veterans Administration. Specification VA-G-177a; 1937. Pot; Stock. Deep, Aluminum, Capacity 100 Quarts.

U. S. Gov., Veterans Administration. Specification VA-G-178a; 1937. Pots; Stock, Deep, Aluminum, Capacity 60 Quarts.

U. S. Gov., Veterans Administration. Specification VA-G-179; 1936. Pot; Stock, Aluminum, Capacity 100 Quarts.

U. S. Gov., Veterans Administration. Specification VA-G-180; 1936. Pot; Sauce, Aluminum, Capacity 60 Quarts.

U. S. Gov., Veterans Administration. Specification VA-G-184a; 1937. Kettles; Preserving, Aluminum, Capacity 21 Quarts.

U. S. Gov., Veterans Administration. Specification VA-G-197a; 1937. Tubs; Pie, Aluminum, Capacity 102 Quarts.

U. S. Gov., Veterans Administration. Specification VA-G-293; 1938. Kettles; Preserving, Aluminum.

## 632. ANTIMONY

### 632.1 GENERAL SPECIFICATIONS FOR ANTIMONY

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, 1938. Antimony. Covers definition, constants, derivation, purity, grades or forms available, specification, uses, substitutes, and marketing information.

### 632.2 ANTIMONY INGOT METAL

### 632.3 ANTIMONY ALLOYS

*References.*—Antimony-lead alloys, *see* 651.6, 692, 693.1.

### 632.4 ANTIMONY COMPOUNDS AND SALTS

*References.*—Chemical compounds of antimony, *see* 839.31.

### 632.5 ANTIMONY, POWDERED

## 633. BISMUTH

### 633.0 GENERAL ITEMS

American Society for Metals. Metals Handbook, 1939 edition. Properties of Bismuth Alloys. Covers low melting alloys.

Society of Automotive Engineers, Inc. Aeronautical Information Report 8; 1944. U. S. and British Commonwealth of Nations Aircraft Metals. Bismuth Alloys. Gives table showing specifications used in the U. S. and specifications for similar metals used in the United Kingdom, Australia, and Canada for use in the selection of interchangeable and substitute materials for the repair and maintenance of aircraft; and a table showing chemical composition and mechanical properties of these aircraft metals. Covers bismuth alloys.

### 633.1 BISMUTH METAL

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, Volume 2; 1944. Bismuth. Covers definition, constants, solubility, derivation, uses, and grades and forms.

*References.*—Chemical compounds of bismuth, *see* 836.

## 634. CADMIUM

American Society for Metals. Metals Handbook, 1939 edition. Constitution and Properties of Cadmium. Covers constitution of the cadmium-nickel alloys and properties of the cadmium-nickel alloys.

American Standards Assn., Z37.5-1941. American Defense Emergency Standard, prepared by the U. S. Public Health Service. Allowable Concentration of Cadmium. To prescribe the permissible concentration of cadmium in the atmosphere of work places for the protection of the health of all workers. Gives properties of cadmium, permissible concentration, sampling procedure, and analytical methods.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, 1938. Cadmium. Covers definition, constants, solubility, derivation, forms available, purity, uses, supply, and marketing.

U. S. Gov., Army Air Forces. Specification 10285-A-3; 1943. Wire; Metal, Spray Gun.

U. S. Gov., Army-Navy Aeronautical Specification AN-QQ-A-671a; 1944. Anodes; Cadmium.

U. S. Gov., Navy Dept. Specification 46C7; 1944. Cadium; Ingots.

*References.*—Chemical compounds and medicinals of cadmium, *see* 839.39; cadmium plating, *see* 600.3.

## 635. COBALT

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, 1938. Cobalt. Covers definition, constants, solubility, occurrence, specifications, containers, uses, and marketing.

U. S. Gov., Army Air Forces. Specification 10300-1; 1937. Rods; Welding, Chromium-Cobalt-Tungsten Composition, for Hard-Facing Metal Parts.

U. S. Gov., Navy Dept. Specification 46R5b; 1938. Rods; Welding, Chromium-Cobalt Composition.

### 635.1 COBALT COMPOUNDS AND SALTS

U. S. Gov., Navy Dept. Specification 51C23a; 1939. Cobalt Acetate.

*References.*—Chemical compounds of cobalt, *see* 839.32.

# 640-649 COPPER, BRASS, AND BRONZE

## 640. GENERAL ITEMS

Copper and Brass Research Assn. Data Standards Data-1 to Data-69, inclusive, 1944. Covers standard decimal equivalents in inches for various gages, inches and fractions thereof expressed as decimals of a foot, fractions expressed as decimals, use of weight tables, and weights of flat products, circles, rods, bars, shapes, wire, seamless tubes, and estimating data for condenser and other heat exchange tubes.

Copper and Brass Research Assn. General Standards, 1944. These standards apply to mill products of copper, brass, bronze, and related alloys, including plates, sheets, strips, rods, bars, wire, pipe, tubes, ard shapes; but not wire and cable of copper and copper alloy for electrical transmission. Gives general information and information needed with purchase order.

Copper and Brass Research Assn. Terminology Standards TERM-1 to TERM-11, inclusive, 1944. Covers classification of flat products, classification of products other than flat, edges available, and terminology (definitions).

Society of Automotive Engineers. 1944 Handbook, Section 3—Processed Materials. Notes on Brass, Bronze, and Copper Alloys, revised 1944. The two principal alloys of copper are brass and bronze and they have zinc and tin, respectively, as their other major constituent. Covers wrought copper, copper alloys, and gives table showing classification and uses of copper alloys.

### 640.1 THICKNESS TOLERANCES FOR NONFERROUS SHEETS AND STRIPS

## 641. COPPER

### 641.0 GENERAL ITEMS

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering. Specifications for Buildings for Railroad Purposes: Ornamental and Miscellaneous Metal Work. Gives requirements for working stresses (tension, compression, shearing, bearing) of the cast, rolled, drawn, or extruded metals used.

American Society for Testing Materials, B 154-41T; 1941. Tentative Method of Mercurous Nitrate Test for Copper and Copper Alloys. An accelerated corrosion test for the purpose of determining in copper or copper-base alloy products of assemblies the presence of applied (external) or residual (internal) stresses, or a combination of these stresses, which might bring about failure of the material in service or storage through stress corrosion or season cracking. A suitable specimen is subjected to the effects of mercury corrosion, mercury being provided by displacement of that metal from an acidified aqueous solution of mercurous nitrate by the metal of the specimen. Covers apparatus, mercurous nitrate solution, test specimen, procedure, and report.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, 1938. Copper. Covers definition, constants, derivation, specifications, grades, forms available, impurities, general information, and definition; grades available, gages and sizes, physical properties, and special finishes for copper sheet and strip.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Circular C66; 1917. Standard Samples for Thermometric Fixed Points. Description of preparation of pure samples of copper; their chemical analyses, freezing points, and degree of purity; their use for the standardization of thermocouples, pyrometers, etc.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Circular C398 and Supplement; 1944. Standard Samples. Copper, Sample 45b. This sample is prepared and sold by the National Bureau of Standards with a certificate of analysis for use in industry and by others as a comparison standard for checking the accuracy of analysis of similar material.

### 641.1 COPPER INGOTS AND BARS

#### 641.11 Ingots and Cast Bars, Copper

American Society for Testing Materials, B 4-42; 1942. American Assn. of State Highway Officials, M 109. American Standards Assn., H 17.1-1942. Lake Copper Wire Bars, Cakes, Slabs. Billets, Ingots, and Ingot Bars. Gives chemical composition. chemical analysis, resistivity, resistivity test, physical defects, standard sizes and shapes, permissible variations in weight and dimensions, marking, lots, and claims.

American Society for Testing Materials, B 5-43; 1943. American Assn. of State Highway Officials, M110. American Standards Assn., H 17.2-1943. Electrolytic Copper Wire Bars, Cakes, Slabs, Billets,

Ingots, and Ingot Bars. Gives chemical composition, chemical analysis, resistivity, resistivity test, physical defects, standard sizes and shapes, permissible variations in weight and dimensions, marking, lots, claims, and settlement of claims.

American Society for Testing Materials, B 72-33; 1933. American Assn. of State Highway Officials, M119-35. Fire-Refined Copper Other Than Lake. For use in rolling into sheets and shapes for mechanical purposes, but not for electrical purposes nor wrought alloys. Requirements for chemical composition, physical defects, permissible variations in weight and dimensions, marking, lots, claims, and settlement of claims.

American Society for Testing Materials, B 115-43; 1943. Electrolytic Cathode Copper. Gives requirements for quality, chemical analysis, physical condition, claims, investigation of claims, and settlement of claims.

American Society for Testing Materials, B 133-44T; 1944. Tentative Specifications for Copper Rods, Bars, and Shapes. For general purposes, Type A for hardness and Type B for tensile requirements. Covers materials, manufacture, sampling, hardness of Type A, and tensile properties of Type B, bending properties, electrical resistivity, embrittlement, test specimen, density, tolerances, and finish.

American Society for Testing Materials, B 170-44T; 1944. Tentative Specification for Oxygen-Free Electrolytic Copper Wire Bars, Billets, and Cakes. Covers material produced without the use of residual metallic or metalloidal deoxidizers. Gives requirements for quality, chemical analysis, resistivity, microscopic examination, embrittlement test, weights of individual pieces, workmanship, marking, and investigation and settlement of claims.

American Society for Testing Materials, ES-7; 1942. Emergency Specification for Fire-Refined Copper for Wrought Products and Alloys. Intended for alloying and for sheets and shapes for mechanical purposes, and not for electrical purposes. Requirements for material, analysis, physical defects, permissible variations, markings, and claims.

American Transit Assn. Specification for Overhead Line Material for Direct and Catenary Suspension, D102-39; 1939. Copper required in this specification shall conform to the requirements for "low resistance lake" of current specification Serial B-4 for Lake Copper, or to the current specification Serial B-5 for Electrolytic Copper, both of the American Society for Testing Materials.

U. S. Gov., Federal Specification QQ-C-521a; 1938. Copper; Ingots. Covers two grades—(A) electrolytic and (B) refined from ore or reclaimed from scrap. Gives requirements for purity, electrical resistivity, and complete analysis for grade A; chemical composition for grade B; methods of sampling, inspection, and tests; and requirements for packing and marking for shipment.

U. S. Gov., Navy Dept. Specification 46C5c; 1924. Copper; Ingots.

U. S. Gov., Navy Dept. Specification 47C2f; 1933. Copper; Bars, Plates, Rods, Shapes, Sheets, and Strips.

*References.*—Methods of testing, general requirements for metals, *see* 600.1, 641.0.

### 641.12 Rolled Bars, Copper

American Society for Testing Materials, B12-42; 1942. A.S.M.E. Boiler Construction Code Specification SB-12. Copper Bars for Locomotive Staybolts. For arsenical and nonarsenical copper bars. Gives manufacture, chemical composition, check analysis, tensile and bending properties, test specimens, number of tests, methods of testing, permissible variations in dimensions, workmanship and finish, marking, inspection, and rejection. A.S.T.M. Emergency Alternate Provision EA-B12; 1942. affected section 4, Chemical Composition.

American Society for Testing Materials, B 133-44T; 1944. Tentative Specifications for Copper Rods, Bars, and Shapes. For general purposes, Type A for hardness and Type B for tensile requirements. Covers material, manufacture, sampling, hardness of Type A, and tensile properties of Type B, bending properties, electrical resistivity, embrittlement, test specimen, density, tolerances, and finish.

American Society for Testing Materials, B187-44T; 1944. Tentative Specifications for Copper Bus Bars, Rods, and Shapes. Gives scope, description of terms, basis of purchase, manufacture, physical and electrical requirements, miscroscopic examination, embrittlement, test specimens, number of test specimens, methods of test, diameter, thickness, tolerances, edges, finish, packing, inspection, and rejection.

U. S. Gov., Federal Specification QQ-C-501a; 1940. Amendment 3; 1944. Copper; Bars, Plates, Rods, Shapes, Sheets, and Strips. Includes one grade of bars—soft and hard tempers. Gives requirements for material, workmanship, physical properties, and permissible variations; methods of sampling, inspection, and tests; and packing and marking for shipment.

U. S. Gov., Navy Dept. Specification 47C2f; 1933. Copper; Bars, Plates, Rods, Shapes, Sheets, and Strips.

*References.*—Methods of testing, general requirements for metals, *see* 600.1, 641.0.

## 641.2 COPPER PLATES, SHEETS, SHAPES, AND STRIPS

### 641.21 Plates and Sheets, Copper

American Society for Testing Materials, B 11-41; 1941. A.S.M.E. Boiler Construction Code Specification SB-11. Copper Plates for Locomotives Fireboxes. Covers four grades of copper plates: Tough pitch copper (nonarsenical); phosphorized copper (nonarsenical); tough pitch arsenical copper; and phosphorized arsenical copper. Basis of purchase, manufacture, chemical composition, check analysis, tensile and bending properties, test specimens, number of tests, weight tolerances, workmanship and finish, marking, inspection, rejection, and rehearing.

American Society for Testing Materials, B 100-44; 1944. American Assn. of State Highway Officials, M108-44. Rolled Copper-Alloy Bearing and Expansion Plates for Bridge and Other Structural Uses. For use where motion is slow and intermittent and pressure does not exceed 3,000 psi. Gives requirements for two grades of alloy, manufacture, chemical analysis,

physical properties, methods of testing, thickness and weight tolerances, finish, inspection, and rejection.

American Society for Testing Materials, B 101-40; 1940. Lead-Coated Copper Sheets. For architectural uses, applied molten and electrodeposited, in three classes based on weight of coating. Requirements for copper, lead, manufacture, temper, permissible variations in weight and dimensions, and workmanship.

American Society for Testing Materials, B 152-44T; 1944. Tentative Specifications for Copper Sheet, Strip, and Plate. Covers seven types; i.e., electrolytic tough pitch copper; phosphorized copper, high residual phosphorus; oxygen-free copper without residual metallic deoxidants; silver-bearing copper, tough pitch; silver-bearing copper, phosphorized; silver-bearing copper, oxygen-free; and arsenical tough pitch copper. Basis of purchase, manufacture, chemical composition, sampling for chemical analysis, tempers, tensile properties of cold- and hot-rolled tempers, grain size of cold-rolled annealed tempers, Rockwell hardness, microscopic examination, embrittlement, electrical resistance, number of tests, methods of testing, tolerances, finish, inspection, and rejection.

Copper and Brass Research Assn. Flat Products Standards FP-1 to FP-7, inclusive, 1944. Covers rolled flat products, cold rolled, thickness tolerances; rolled flat products, length, width and straightness tolerances; rolled flat products, copper sheet and strip rolled tc weight; rolled flat products, circles and half circles, diameter tolerances; rolled flat products, hot rolled plates and sheets, weight tolerances; silicon bronze (copper-silicon alloy) A.S.M.E. code tank plates and sheets, weight and thickness tolerances; and drawn strip, bar and flat wire, thickness and width tolerances; rolled flat products, condenser tube plates, tolerances, thickness, diameter, length or width, and flatness.

Society of Automotive Engineers. Aeronautical Material Specification No. 4500; 1940. Copper Sheet. Covers requirements for composition (not less than 99.90 percent copper, silver being counted as copper), condition, quality, tolerances, and rejections. Similar to U. S. Gov. Federal Specification QQ-C-501; U. S. Gov., Navy Dept., Specification 47 C 2; and Society of Automotive Engineers Specification 71.

Society of Automotive Engineers. 1944 Handbook, Section 3—Processed Materials. S.A.E. Standard Wrought Copper Alloys, revised 1944. Gives specification No. 71—Copper Sheet. Covers composition in percentage, general information, physical properties, tensile strength requirements, and grain size requirements.

U. S. Gov., Federal Specification QQ-C-501a; 1940. Amendment 3; 1944. Copper; Bars, Plates, Rods, Shapes, Sheets, and Strips. Includes one grade of sheets—soft, hard, and light cold-rolled; and one grade of plates—soft and hard. Gives requirements for material, workmanship, physical properties, and permissible variations; methods of sampling, inspection, and tests; and packing and marking for shipment.

U. S. Gov., Navy Dept. Specification 47C2f; 1933. Copper; Bars, Plates, Rods, Shapes, Sheets, and Strips.

*References.*—Methods of testing, general requirements for metals, *see* 600.1, 641.0; bar for rolling into sheets, *see* 641.11; thickness tolerances, *see* 640.1.

## 641.22 Shapes, Copper

American Society for Testing Materials, B 133-44T; 1944. Tentative Specifications for Copper Rods, Bars, and Shapes. For general purposes, Type A for hardness and Type B for tensile requirements. Covers material, manufacture, sampling, hardness of Type A, and tensile properties of Type B, bending properties, electrical resistivity, embrittlement, test specimen, density, tolerances, and finish.

American Society for Testing Materials, B187-44T; 1944. Tentative Specifications for Copper Bus Bars, Rods, and Shapes. Gives scope, description of terms, basis of purchase, manufacture, physical and electrical requirements, microscopic examination, embrittlement, test specimens, number of test specimens, methods of test, diameter, thickness, tolerances, edges, finish, packing, inspection, and rejection.

Copper and Brass Research Assn. Rod, Wire, Shapes Standards ROD-1 to ROD-3-A, inclusive, 1944. Covers rod and wire, diameter tolerances, extruded rod, bar and wire, diameter tolerances, hot rolled round rod and wire, diameter tolerances; drawn rod and bar, drawn strip and drawn flat wire, shapes length tolerances and schedule of short lengths; drawn rod and bar, drawn strip and drawn flat wire, shapes straightness tolerances.

U. S. Gov., Federal Specification QQ-C-501a; 1940. Amendment 3; 1944. Copper; Bars, Plates, Rods, Shapes, Sheets, and Strips. Includes one grade of shapes—soft and hard. Gives requirements for material, workmanship, physical properties, and permissible variations; methods of sampling, inspection, and tests; and packing and marking for shipment.

U. S. Gov., Navy Dept. Specification 47C2f; 1933. Copper; Bars, Plates, Rods, Shapes, Sheets, and Strips.

*References.*—Methods of testing, general requirements for metals, *see* 600.1, 641.0; bars for rolling into shape, *see* 641.11.

## 641.23 Strips, Copper

American Society for Testing Materials, B 152-44T; 1944. Tentative Specifications for Copper Sheet, Strip, and Plate. Cover 7 types; i.e., electrolytic tough pitch copper; phosphorized copper, high residual phosphorus; oxygen-free copper without residual metallic deoxidants; silver-bearing copper, tough pitch; silver-bearing copper, phosphorized; silver-bearing copper, oxygen-free; and arsenical tough pitch copper. Basis of purchase, manufacture, chemical composition, sampling for chemical analysis, tempers, tensile properties of cold- and hot-rolled tempers, grain size of cold-rolled annealed tempers, Rockwell hardness, microscopic examination, embrittlement, electrical resistance, number of tests, methods of testing, tolerances, finish, inspection, and rejection.

U. S. Gov,, Federal Specification QQ-C-501a; 1940. Amendment 3; 1944. Copper; Bars, Plates, Rods, Shapes, Sheets, and Strips. Includes one grade of strips—soft, hard, and light cold-rolled. Gives requirements for material, workmanship, physical properties, and permissible variations; methods of sampling, inspection, and tests; and packing and marking for shipment.

U. S. Gov., Navy Dept. Specification 47C2f; 1933. Copper; Bars, Plates, Rods, Shapes, Sheets, and Strips.

*References.*—Methods of testing, general requirements for metals, *see* 600.1, 641.0; standard gage and thicknesses for copper strips, *see* 641.21.

### 641.3 COPPER COMPOUNDS AND SALTS

*References.*—Chemical compounds of copper, *see* 839.33.

## 642. MANUFACTURES OF COPPER

### 642.1 COPPER RODS, WIRES, AND SLEEVES

#### 642.11 Rods, Copper

American Society for Testing Materials, B49-41; 1941. American Standards Assn., H4.7-1942. Hot-Rolled Copper Rods for Electrical Purposes. Covers—(a) black or (b) cleaned hot-rolled copper rods (diameters from 0.250 to 1.375 in.) suitable for further fabrication into electrical conductors; material, manufacture, tensile properties, resistivity, dimensions and permissible variations; density, finish, packing and shipping, and inspection.

American Society for Testing Materials, B 124-44 T; 1944. Tentative Specifications for Copper-Base Alloy Forging Rods, Bars, and Shapes. Covers 12 alloys for hot forging. Basis of purchase, manufacture, chemical composition, sampling for chemical analysis, tolerances, workmanship and finish, inspection, rejection, and probable range of physical properties of forgings, as forged.

American Society for Testing Materials, B187-44T; 1944. Tentative Specifications for Copper Bus Bars, Rods, and Shapes. Gives scope, description of terms, basis of purchase, manufacture, physical and electrical requirements, microscopic examination, embrittlement, test specimens, number of test specimens, methods of test, diameter, thickness, tolerances, edges, finish, packing, inspection, and rejection.

Copper and Brass Research Association. Rod, Wire, Shapes Standards ROD-1 to ROD-3-A, inclusive, 1944. Covers rod and wire, diameter tolerances, extruded rod, bar and wire, diameter tolerances, hot rolled round rod and wire, diameter tolerances; drawn rod and bar, drawn strip and drawn flat wire, shapes length tolerances and schedule of short lengths; drawn rod and bar, drawn strip and drawn flat wire, shapes straightness tolerances.

U. S. Gov., Federal Specification QQ-C-501a; 1940. Amendment 3; 1944. Copper; Bars, Plates, Rods, Shapes, Sheets, and Strips. Includes one grade of rods—soft and hard tempers. Gives requirements for material, workmanship, physical properties, and permissible variations; methods of sampling, inspection, and tests; and packing and marking for shipment.

U. S. Gov., Navy Dept. Specification 46R1b; 1933. Rods; Welding, Nonferrous (for Gas Welding).

U. S. Gov., U. S. Army, Ordnance Dept. Specification 57-154-1B; 1943. Copper Rod; Special, for Pressure Cylinders, All Types.

*References.*—Methods of testing, general requirements for metals, *see* 600.1, 641.0; bars for rolling into rods, *see* 641.12; welding apparatus and procedure, *see* 767.

#### 642.12 Wires, Copper

American Society for Testing Materials, B 99-42; 1942. Copper-Silicon Alloy Wire for General Purposes. For general structural purposes except for electrical transmission cable. Basis of purchase, manufacture, chemical composition, chemical analysis, bending properties, grain size determination, number of tests, dimensional tolerances, workmanship and finish, packing, inspection, rejection, and table of commercially available alloy wire.

Copper and Brass Research Assn. Rod, Wire, Shapes Standard ROD-1 to ROD-3-A inclusive, 1944. Covers rod and wire, diameter tolerances, extruded rod, bar and wire, diameter tolerances, hot rolled round rod and wire, diameter tolerances; drawn rod and bar, drawn strip and drawn flat wire, shapes length tolerances and schedule of short lengths; drawn rod and bar, drawn strip and drawn flat wire, shapes straightness tolerances.

Society of Automotive Engineers. 1944 Handbook, Section 3—Processed Materials. S.A.E. Standard Wrought Copper Alloys, revised 1944. Gives specification No. 83—Soft or Annealed Copper Wire. Covers general information, composition, physical properties, mechanical requirements, shapes, finish, specific gravity, dimensions and permissible variations, and electric resistivity.

U. S. Gov., Army Air Forces. Specification 10285-A-3; 1943. Wire; Metal, Spray Gun.

*References.*—Electric cables, cord, and wire, *see* 715.41, 715.42, 715.44.

#### 642.13 Sleeves, Copper

Assn. of American Railroads, Telegraph and Telephone Section, 1-A-37; 1930. Tinned Copper Sleeves for Cable Conductors. For both straight and butt or bridge joints in sizes for Nos. 10 to 16 A.W.G. conductors, for making soldered joints in cable conductors. Requirements for No. 22 gage copper, tinning, and stops, with dimensional drawing.

Assn. of American Railroads, Telegraph and Telephone Section, 1-A-58; 1936. Splicing and Dead Ending Copper Sleeves for Twist Joints. For use in making twist joints in copper line wire, brazed sleeves formed from sheet metal, and seamless sleeves formed from seamless copper tubing, with dimensional requirements of 4 to 16 gages.

Edison Electric Institute. Specifications for Single Tube Seamless Copper Splicing Sleeves, TD-9; 1942. For use in overhead line construction. Gives requirements for material, electrical properties, shapes and sizes, finish, marking of sleeves, packing and shipping, inspection, rejection, explanatory notes, and dimensional drawing.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-440B; 1937. Sleeve; Copper. Double-Tube, Wire Splicing.

*References.*—Copper tubing, *see* 642.24.

### 642.14 Chain, Copper

U. S. Gov., Federal Specification RR-C-271; 1931. Amendment 2; 1934. Chain and Attachments; Standard, Miscellaneous. Covers two types—(A) welded; two grades—(I) crane, wrought iron; and (II) proof coil, wrought iron, or open-hearth steel; and (B) weldless steel, copper, brass, or bronze; six classes for type A—(1) close link; (2a) long link, buoy or submarine net; (2b) long link, conveyor or sprocket wheel; (3a) twist link, plain pattern; (3b) twist link, long-link pattern; and (3c) twist link, short-link pattern; twelve classes for type B—(1) single-loop pattern, (2) double-loop pattern, (3) sash, (4a) flat link (long pitch), (4b) flat link (short pitch), (5) plumber's, (6) safety, (7) single jack, (8) double jack, (9) ladder, (10) register, and (11) brass, for mechanical communications. Gives requirements for material, workmanship, weights, design, and dimensions; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

## 642.2 COPPER CASTINGS, FERRULES, PIPES, AND TUBES

### 642.21 Castings, Copper

U. S. Gov., U. S. Army, Ordnance Dept. Specification 57-77; 1944. Copper-Base-Alloy; Die-Castings.

*References.*—Other specifications for copper castings, *see* specifications of individual commodities made of cast copper.

### 642.22 Ferrules, Copper

American Society for Testing Materials, B 111-43; 1943. A.S.M.E. Boiler Construction Code Specification SB-111. Copper and Copper-Alloy Seamless Condenser Tubes and Ferrule Stock. For use in surface condensers, evaporators, and heat exchangers. Gives requirements for material, manufacture, chemical composition, sample for chemical analysis, microscopic examination, expanding test, mercurous nitrate test, hydrostatic test, dimension and weight tolerances, workmanship, finish, and inspection. A.S.T.M. Emergency Alternate Provision EA-B-111; 1942, affected section 3, Material.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Copper Flue Ferrules. Gives inside and outside dimensions, and length, for various thicknesses, and for application to flues from 2 to 5 1/2 in. nominal diameter.

### 642.23 Pipes, Copper

American Bureau of Shipping. Rules for the Classification and Construction of Steel Vessels, 1944. Copper Pipes and Tubes; Seamless. Include rules for inspection and tests.

American Society for Testing Materials, B 42-43; 1943. A.S.M.E. Boiler Construction Code Specification SB-42. Copper Pipe; Standard Sizes. Covers seamless copper pipe in all standard pipe sizes, both regular and extra-strong, suitable for use in plumbing, boiler feed lines, and for similar purposes. Gives requirements for basis of purchase, manufacture, condition of temper, chemical composition, sampling for chemical analysis, expansion test, bending properties, microscopic examination, hydrostatic test, dimensions and weights, tolerances, workmanship, inspection, and rejection.

American Society for Testing Materials, B188-44T; 1944. Tentative Specifications for Copper Bus Pipes and Tubes. Gives scope, description of terms, basis of purchase, manufacture, physical and electrical requirements, microscopic examination, embrittlement, test specimens, number of test specimens, methods of test, pipe dimensions and tolerances, tube dimensions and tolerances, finish, packing, inspection, and rejection.

Copper and Brass Research Assn. Round Seamless Tubes, 1939. Includes copper water tube, brass and copper pipe, condenser and other heat exchanger tubes; gage or wall thickness tolerances for refractory and nonrefractory alloys, mean diameter tolerances, length tolerances, weight tolerances, and estimating data for condenser and other heat exchanger tubes.

Copper and Brass Research Assn. Tube, Pipe Standards TUBE-1 to TUBE-8, inclusive, 1944. Covers round seamless tubes, wall thickness and diameter tolerances; round seamless tubes, length tolerances, straightness tolerances; copper water tube, standard dimensions and weights, diameter and wall thickness tolerances, weight tolerances; pipe, dimensions and weights, weight and wall thickness tolerances; condenser and other heat exchanger tubes, dimensions and weight tolerances; and condenser and other heat exchanger tubes, estimating data.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, 1938. Pipe and Tube; Copper. Covers definition, weight, sizes, and marketing customs.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Commercial Standard CS5-40; 1940. Copper Pipe Nipples. Gives detail requirements and chemical composition of nipples for standard weight and extra strong. Copper pipe nipples shall be made only from tested new seamless copper pipe conforming in all respects to the requirements of Federal Specification WW-P-377 or to A.S.T.M. Specification B42. This standard includes also methods of packaging and labeling.

U. S. Gov., Federal Specification WW-P-377; 1932. Pipe; Copper, Seamless, Iron-Pipe Size, Standard. Covers one grade. Gives permissible variations in outside diameter, standard weights, dimensions, and sizes; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Navy Dept. Specification 44P2g; 1938. Pipe; Copper, Seamless, Iron-Pipe Size, Standard.

U. S. Gov., Navy Dept., U. S. Coast Guard, Bureau of Marine Inspection and Navigation. Marine Engineering Regulations and Material Specifications, 1942. Contains specifications and requirements for materials, design, construction, installation, and

inspection of boilers, unfired pressure vessels, and appurtenances thereof; also piping, valves, fittings, flanges, safety valves, etc., upon the strength and efficiency of which safety of life is dependent, and are intended for maximum temperatures of 1,000° F. Includes specifications for seamless copper tubing and seamless copper pipe (at temperatures not exceeding 406° F. for boiler-feed lines, blow-off lines, compressed air lines, salt and fresh water lines, and saturated steam lines for pressures not exceeding 180 lb. p.s.i. gage pressure); process, condition of temper, chemical composition, expansion test, bending properties, microscopic examination, and hydrostatic test.

*References.*—Copper tubing, *see* 642.24; pipe installation and threads, iron or steel pipe, *see* 607.0; methods of testing, general requirements for metals, *see* 600.1, 641.0.

## 642.24 Tubes, Copper

American Bureau of Shipping. Rules for the Classification and Construction of Steel Vessels, 1944. Copper Pipes and Tubes; Seamless. Include rules for inspection and tests.

American Society for Testing Materials, B 13-41; 1941. A.S.M.E. Boiler Construction Code Specification SB-13. Seamless Copper Boiler Tubes. Covers arsenical and nonarsenical tubes for locomotive boilers. Basis of purchase, manufacture, chemical analysis, temper; flange, crush, and hydrostatic tests; test specimens, number of tests, retests, standard weights, weight and dimension tolerances, workmanship and finish, marking, inspection, rejection, and rehearing.

American Society for Testing Materials, B 68-43; 1943. Seamless Copper Tubing; Bright Annealed. For use in refrigerators, oil lines, gasoline lines, etc. where tubing absolutely free from scale dirt is required. Gives requirements for basis of purchase, manufacture, chemical composition, sampling for chemical analysis, grain size, tensile properties, expansion test, microscopic examination, embrittlement, number and methods of test, tolerances, workmanship and finish, packing, marking, and rejection.

American Society for Testing Materials, B 75-43T; 1943. A.S.M.E. Boiler Construction Code Specification SB-75. Tentative Specifications for Seamless Copper Tubes. Covers seamless copper tubes suitable for general engineering purposes in five types. Gives requirements for basis of purchase, manufacture, chemical composition, sampling for chemical analysis, methods of chemical analysis, physical properties, expansion and hydrostatic tests, electrical resistivity, number of tests, microscopic examination, embrittlement, methods of testing, standard weight, tolerances, workmanship and finish, inspection, and rejection.

American Society for Testing Materials, B 88-41; 1941. American Standards Assn., H23.1-1941. Copper Water Tube. Covers seamless tubes designed for plumbing purposes, underground water service, etc., but also suitable for coil water heaters, fuel oil lines, gas lines, etc. Includes annealed, and drawn temper, chemical composition requirements, specimen, tensile, expansion, and hydrostatic tests, standard dimensions and weights, tolerances, and finish.

American Society for Testing Materials, B 111-43; 1943. A.S.M.E. Boiler Construction Code Specification SB-111. Copper and Copper-Alloy Seamless Condenser Tubes and Ferrule Stock. For use in surface condensers, evaporators, and heat exchangers. Gives requirements for material, manufacture, chemical composition, sample for chemical analysis, microscopic examination, expanding test, mercurous nitrate test, hydrostatic test, dimension and weight, tolerances, workmanship, finish, and inspection. A.S.T.M. Emergency Alternate Provision EA-B-111; 1942, affected section 3, Material.

American Society for Testing Materials, B153-44T; 1944. Tentative Method of Test for Expansion (Pin Test) of Copper and Copper-Alloy Tubing. Includes apparatus, test specimen, procedure, and retests.

American Society for Testing Materials, B188-44T; 1944. Tentative Specifications for Copper Bus Pipes and Tubes. Gives scope, description of terms, basis of purchase, manufacture, physical and electrical requirements, microscopic examination, embrittlement, test specimens, number of test specimens, methods of test, pipe dimensions and tolerances, tube dimensions and tolerances, finish, packing, inspection, and rejection.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Copper Tubing for Railroad Service. Standard. Tables of sizes and weight, bursting pressure, and wall thickness for two services; air brake, air conditioning, and miscellaneous; and lubricator lines and saturated steam up to 450° F.

Copper and Brass Research Assn. Tube, Pipe Standards TUBE-1 to TUBE-8, inclusive, 1944. Covers round seamless tubes, wall thickness and diameter tolerances, round seamless tubes, length tolerances, straightness tolerances; copper water tube, standard dimensions and weights, diameter and wall thickness tolerances, weight tolerances; pipe, dimensions and weights, weight and wall thickness tolerances; condenser and other heat exchanger tubes, dimensions and weight tolerances; and condenser and other heat exchanger tubes, estimating data.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, 1938. Pipe and Tube; Copper. Covers definition, weight, sizes, and marketing customs.

Society of Automotive Engineers. Aeronautical Material Specification 4665; 1941. Copper Silicon Bronze, Seamless Tubing. Gives requirements for composition, condition (soft annealed), quality, tolerance, reports, identification, and rejections.

Society of Automotive Engineers. 1944 Handbook, Section 3—Processed Materials. S.A.E. Standard Wrought Copper Alloys, revised 1944. Gives specification No. 75—Copper Tubing. Covers composition in percentage, general information, expanding test, appearance, dimensional tolerances, tensile hardness and grain size requirements, and special limits.

Underwriters' Laboratories, Inc. Standard for Seamless Drawn, Annealed Copper and Brass Tubing and Fittings, 1940. For semiflexible connection between rigid piping and stationary gas-consuming appliances, house piping of compressed gas, except acetylene. Also for oil burner tubing, including

gasoline lines where permitted, 3/8- to 2-in. gas tubing, 1/4- to 7/16-in. oil burner tubing, physical properties, design of fittings, and labeling.

U. S. Gov., Federal Specification WW-T-797; 1932. Tubing; Copper, Seamless (for General Use With I.P.S. Flanged Fittings). Covers one grade and four types—(A) maximum nominal working pressure, 100 lb. per square inch, (B) 200 lb. per square inch, (C) 300 lb. per square inch, and (D) 450 lb. per square inch. Gives requirements for tolerances, permissible variations, weights, and dimensions; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Federal Specification WW-T-799a; 1943. Tubing; Copper, Seamless (for Use With Soldered or Flared Fittings). Covers one grade and four types—(K) for soldered or flared type fittings, (L) for soldered fittings only, (M) for soldered fittings only, and (N) for such use as fuel and lubrication tubes—for soldered or flared type fittings. Gives requirements for material and workmanship, marking, condition and length of tubing, tolerances on length, wall thickness and outside diameter, weight, and tables giving dimensions and minimum test pressure for each type; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Navy Dept. Specification 44T12c; 1938. Tubing; Copper, Seamless, for Pressure Up to 4,000 Pounds Per Square Inch.

U. S. Gov., Navy Dept. Specification 44T39a; 1944. Tubes; Condenser, Copper-Nickel-Alloy.

U. S. Gov., Navy Dept., U. S. Coast Guard, Bureau of Marine Inspection and Navigation, Marine Engineering Regulations and Material Specifications, 1942. Contains specifications and requirements for materials, design, construction, installation, and inspection of boilers, unfired pressure vessels, and appurtenances thereof; also piping, valves, fittings, flanges, safety valves, etc., upon the strength and efficiency of which safety of life is dependent, and are intended for maximum temperatures of 1,000° F. Includes specifications for seamless copper tubing and seamless copper pipe (at temperatures not exceeding 406° F. for boiler-feed lines, blow-off lines, compressed air lines, salt and fresh water lines, and saturated steam lines for pressures not exceeding 180 lb. p.s.i. gage pressure); process, condition of temper, chemical composition, expansion test, bending properties, microscopic examination, and hydrostatic test.

U. S. Gov., U. S. Army, Army Air Forces. Specification 57-192-1E; 1941. Tube; Copper-Silicon Bronze, Seamless, for Aircraft.

*References.*—Copper pipe, *see* 642.23; methods of testing, general requirements for metals, *see* 600.1, 641.0; automobile fuel and lubrication tube fittings, *see* 722.33.

### 642.25 Pipe and Tube Fittings, Copper

American Society of Mechanical Engineers. American Standards Assn., A40.3-1941. Soldered Joint Fittings. Covers certain dimensions of soldered-joint wrought metal and cast brass fittings for copper water tube, including—(1) detailed dimensions of the bore, (2) minimum specifications for materials, (3) minimum inside diameter of the fittings, (4) metal thickness for both wrought metal and cast brass fittings, and (5) general dimensions for cast brass fittings, including center-to-shoulder dimensions for both straight and reducing cast fittings. Due to the variety of methods used for forming wrought metal fittings, the laying length of these fittings (center-to-shoulder) is not given at this time.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Commercial Standard CS5-40; 1940. Pipe Nipples; Brass, Copper, Steel, and Wrought-Iron. This standard covers steel, ferrous-alloy and wrought-iron nipples, black- and zinc-coated (hot dip galvanized), in iron-pipe sizes from 1/8 to 12 in., of standard length; and brass and copper nipples in standard sizes 1/8 to 6 in. Gives tables showing pipe sizes and various lengths, packaging, and labeling. Initiated by manufacturers, now represented by National Assn. of Pipe Nipples Manufacturers.

### 642.3 GRAVITY BATTERY COPPERS

*References.*—Gravity battery copper, *see* 712.5.

### 642.4 COPPER WIRE CLOTH

American Hospital Assn., 4-10. Wire Screen Cloth. Covers copper, commercial bronze (brass), bronze, iron or steel, galvanized (zinc coated), copper-nickel alloy, corrosion-resisting steel (chromium-nickel), aluminum alloy, iron or steel, japanned or painted, and chromium-nickel alloy. Based on U. S. Gov. Federal Specifications RR-C-541a for Wire Screen Cloth and QQ-M-151a for General Specification for Inspection of Metals.

Society of Automotive Engineers. 1944 Handbook, Section 4—Fabricated Materials. S.A.E. Standard Wire Cloth, adopted 1924. Table of sizes and dimensions with tolerances and types of weave.

U. S. Gov., Army Air Forces. Specification 16106-A (1); 1944. Cloth; Wire Mesh, Cotton Covered.

U.S. Gov., Federal Specification RR-C-451a; 1934. Amendment 4; 1944. Cloth; Wire, Screen. Covers four types, including type A—copper. Gives requirements for material and workmanship, number of meshes per inch, diameter of wire, construction, length, width, and composition of wire; methods of sampling, inspection, and tests; and packaging, packing, and marking.

*References.*—Brass sieves, *see* 645.31; brass and bronze wire cloth, *see* 645.39, 646.52; methods of testing, general requirements for metals, *see* 600.1, 641.0.

### 642.5 HOLLOW WARE, COPPER

U. S. Gov., Navy Dept. Specification 41P2c; 1943. Pots; Glue, Copper.

*References.*—Fuel Tanks for internal combustion engines, of copper, *see* 956.2; fuel tanks for kerosene stoves, of copper, *see* 956.2; sterilizers for surgical instruments, dressing containers, *see* 915.32.

### 642.6 BRUSH COPPER AND MATS

### 642.61 Brush Copper

### 642.62 Mats, Copper

### 642.7 COPPER METAL PARTS OF BUILDINGS

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R29-42; 1942. Eaves Trough, Conductor Pipe and Fittings, and Ridge Rolls. This recommendation establishes a simplified schedule of sizes and weights of eaves trough, conductor pipe, fittings, and styles of gutters and ridge rolls. Sponsored by the National Assn. of Sheet Metal Distributors and the National Wholesale Hardware Assn. of U. S.

### 642.9 MISCELLANEOUS MANUFACTURES OF COPPER

American Society for Testing Materials, B 101-40; 1940. Lead-Coated Copper Sheets. For arcnitectural uses, applied molten and electrodeposited, in three classes based on weight of coating. Requirements for copper, lead, manufacture, temper, permissible variations in weight and dimensions, and workmanship.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R150-34; 1934. Copper Wire Nails. This schedule establishes standard sizes and varieties of copper wire nails, flat head, and copper wire slating nails. Sponsored by the Copper and Brass Research Assn.

U. S. Gov., Federal Works Agency, Public Roads Administration. Specifications for Construction of Roads and Bridges in National Forests and National Parks, FP-41. Copper Flashing.

U. S. Gov., Navy Dept. Specification 30T2; 1933. Toilet-Sets; Stateroom, Metal (Ewers; Jars, Waste; Washbowls).

U. S. Gov., Navy Dept. Specification 43R6; 1937. Rivets, Belt, Copper; and Burrs, Copper.

U. S. Gov., U. S. Army, Chemical Warfare Service. Specification 97-54-122; 1939. Copper Scrap.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 57-226A; 1942. Anode; Copper.

*References.*—Methods of testing, general requirements for metals, *see* 600.1, 641.0; chemical fire extinguishers of copper, *see* 973.3; nails, spikes, tacks of copper, *see* 608.1; terminals and soldering lugs of copper, *see* 715.34, 715.35; asbestos copper gaskets, *see* 707.11; electric switches and circuit breakers, *see* 714.52, 714.51; radio antennas, *see* 718.61; soldering coppers, *see* 615.71; lightning rods, *see* 715.50.

## 643. COPPER ALLOYS

### 643.0 GENERAL ITEMS

American Society for Metals. Metals Handbook, 1939 edition. Constitution of Copper Alloys and Properties of Copper and Its Alloys. Covers constitution of copper-aluminum, copper-beryllium, copper-cadmium, copper-chromium, copper-lead, copper-manganese, copper-nickel, copper-phosphorus, copper-silicon, copper-silver, copper-tin, copper-zinc, copper-nickel-tin, and copper-nickel-zinc alloys; the ternary system copper-zinc-tin; physical constants of copper; properties of commercially pure copper; and properties of the various copper alloys.

American Society for Metals. Metals Handbook, 1939 edition. Micrography and Technology of Copper. Covers polisning copper for metallographic examination, etching copper for macroscopic and metallographic examination, hardeners for copper and copper alloys, brass foundry temperature measurements, hot and cold working of copper alloys, machining of copper alloys, and spinning of copper and copper alloys.

American Society for Testing Materials, B 119-40T; 1940. Tentative Classification of Cast Copper-Base Alloys. Defines copper alloys as containing not over 2 percent of other elements, brass as having an appreciable amount of zinc, and bronze as having more of other alloying elements than zinc. Includes copper, 13 brasses, and 9 bronzes. Endorsed by the American Foundrymen's Assn.

American Society for Testing Materials, B153-44T; 1944. Tentative Method of Test for Expansion (Pin Test) of Copper and Copper-Alloy Tubing. Includes apparatus, test specimen, procedure, and retests.

American Society for Testing Materials, B 154-41T; 1941. Tentative Method of Mercurous Nitrate Test for Copper and Copper Alloys. An accelerated corrosion test for the purpose of determining in copper or copper-base alloy products of assemblies the presence of applied (external) or residual (internal) stresses, or a combination of these stresses, which might bring about failure of the material in service or storage through stress corrosion or season cracking. A suitable specimen is subjected to the effects of mercury corrosion, mercury being provided by displacement of that metal from an acidified aqueous solution of mercurous nitrate by the metal of the specimen. Covers apparatus, mercurous nitrate solution, test specimen, procedure, and report.

Copper and Brass Research Assn. Alloy Standards, 1944. Covers standard commercial wrought copper and copper-base alloys. Gives name, composition and forms generally available, including flat rolled products, rod and drawn bar, shapes, wire, and tube.

Non-Ferrous Ingot Metal Institute. 1940 Manual. Classification of Cast Copper-Base Alloys. A Standardized classification and terminology of the different types of alloys.

Non-Ferrous Ingot Metal Institute. 1940 Manual. Nominal Chemical Compositions and Chemical Specifications for Standard Alloys. Gives in tabular form chemical compositions and cnemical specifications of 25 standard alloys adopted by the Institute.

Society of Automotive Engineers, Inc. Aeronautical Information Report 8; 1944. U. S. and British Commonwealth of Nations Aircraft Metals. Copper Alloys. Gives table showing specifications used in the U. S. and specifications for similar metals used in the United Kingdom, Australia, and Canada for use in the selection of interchangeable and substitute materials for the repair and maintenance of aircraft; and a table showing chemical composition and mechanical properties of these aircraft metals. Covers rods, bars, shapes, forgings, plate, sheet, strip, wire, tubing, and castings.

### 643.1 MANGANESE COPPER

### 643.2 PHOSPHOR COPPER

American Society for Testing Materials, B 52-43; 1943. Phosphor Copper. Covers two grades. Gives requirements for material, chemical composition, sampling,

uniformity, marking, claims, and umpire analysis expense. Endorsed by the American Foundrymen's Assn.

U. S. Gov., Federal Specification QQ-C-571; 1932. Copper; Phosphor. Covers two grades—A and B—in the form of notched slabs or ingots. Gives requirements for chemical composition; methods of sampling, inspection, and tests; and requirements for packing and marking for shipment.

*References.*—Methods of testing, general requirements for metals, *see* 600.1, 641.0.

## 643.3 SILICON COPPER

American Society for Testing Materials, B 53-43; 1943. Silicon Copper. Covers three grades. Gives requirements for material, chemical composition, sampling, uniformity, marking, and claims. Endorsed by the American Foundrymen's Assn.

American Society for Testing Materials, B 96-42; 1942. A.S.M.E. Boiler Construction Code Specification SB-96. Copper-Silicon Alloy Plate and Sheet for Pressure Vessels. Basis of purchase, manufacture, chemical composition, chemical analysis, tensile properties, methods of testing, number of tests, tolerances, workmanship and finish, marking, rejection, and table of commercially available alloy plate and sheet for pressure vessels.

American Society for Testing Materials, B 97-44; 1944. Copper-Silicon Alloy Sheet and Strip for General Purposes. For use in drawing, forming, stamping, and bending. Gives basis of purchase, material, chemical composition, chemical analysis, tensile strength, Rockwell hardness and grain size, number of tests, methods of testing, tolerances, finish, inspection, rejection, and table of commercially available copper-silicon alloy sheet for general purposes.

American Society for Testing Materials, B 98-44; 1944. A.S.M.E. Boiler Construction Code Specification SB-98. Copper-Silicon Alloy Rods, Bars, and Shapes. Gives basis of purchase, manufacture, chemical composition, chemical analysis, tensile and bending properties, test specimens, number of tests, dimensional tolerances, workmanship and finish, inspection, rejection, and table of commercially available copper-silicon alloy rods, bars, and shapes.

American Society for Testing Materials, B 99-42; 1942. Copper-Silicon Alloy Wire for General Purposes. For general structural purposes except for electrical transmission cable. Basis of purchase, manufacture, chemical composition, chemical analysis, bending properties, grain size determination, number of tests, dimensional tolerances, workmanship and finish, packing, inspection, rejection, and table of commercially available alloy wire.

U. S. Gov., Federal Specification QQ-C-581; 1932. Copper; Silicon. Covers one grade in the form of notched slabs or ingots. Gives requirements for chemical composition; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Federal Specification QQ-C-591a; 1941. Amendment 1; 1941. Copper-Silicon Alloy; Bars, Plates, Rods, Shapes, Sheets, and Strips. Covers three classes—(A) for general purpose, (B) cold-heading alloy, and (C) free-machining alloy. Gives requirements for forms and conditions of each class, material, workmanship, chemical requirements, cold bending, physical properties, and permissible variations; methods of sampling, inspection, and tests; and requirements for packing, and marking for shipment.

U. S. Gov., Federal Specification QQ-C-593; 1933. Amendment 1; 1942. Copper-Silicon Alloy; Castings. Covers one grade. Gives requirements for quality, condition, repairing of defects, chemical composition, and physical properties; methods of inspection and tests; and requirements for packing and marking.

U. S. Gov., Navy Dept. Specification 46B27a; 1945. Copper-Silicon-Alloy; Wrought: Bars, Forgings, Plates, Rods, Shapes, Sheets, and Strips.

U. S. Gov., Navy Dept. Specification 46B28; 1933. Copper-Silicon-Alloy Castings.

U. S. Gov., Navy Dept. Specification 46C8; 1941. Copper-Nickel-Alloy (70-30); Castings.

U. S. Gov., Navy Dept. Specification 46C9; 1942. Copper-Silicon-Alloy; Ingots (for Remelting).

*References.*—Methods of testing, general requirements for metals, *see* 600.1, 641.0.

## 643.4 COPPER-TIN-ZINC ALLOY

American Society for Testing Materials, B 30-44T; 1944. Tentative Specifications for Copper-Base Alloys in Ingot Form for Sand Castings. Covers 25 copper-base alloys, with A.S.T.M. classifications, numerical and commercial designations, and nominal compositions. Manufacture, chemical composition, samples for analysis, chemical analysis, marking, inspection, rejection and retesting, claims, and settlement of claims. Endorsed by American Foundrymen's Assn.

American Society for Testing Materials, B 124-44T; 1944. Tentative Specifications for Copper-Base Alloy Forging Rods, Bars, and Shapes. Covers 12 alloys for hot forging. Basis of purchase, manufacture, chemical composition, sampling for chemical analysis, tolerances, workmanship and finish, inspection, rejection, and probable range of physical properties of forgings, as forged.

*References.*— Other copper-tin-zinc alloys, *see* 646, methods of testing, general requirements for metals, *see* 600.1, 641.0.

## 643.5 COPPER-NICKEL ALLOY

U. S. Gov., Navy Dept. Specification 44T38; 1939. Tubing; Nickel-Copper-Alloy, Seamless and Welded.

U. S. Gov., Navy Dept. Specification 44T40; 1940. Tubing; Copper-Nickel-Alloy (70:30), Seamless.

U. S. Gov., Navy Dept. Specification 46C6a; 1942. Copper-Nickel-Alloy (70:30); Bars, Plates, Rods, Sheets, and Strips.

*References.*—Monel metal and nickel-copper alloys, *see* 654.

## 643.6 COPPER-NICKEL-ZINC ALLOY

American Society for Testing Materials, B151-44T; 1944. Tentative Specifications for Copper-Nickel-Zinc Alloy Rod, Bar, and Wire. Covers round, rectangular, square, hexagonal, or octagonal sections

in three alloys, i.e., for general use; for use generally in hard or spring temper; and for use where ease of machining is important. Basis of purchase, manufacture, chemical composition, sampling for chemical analysis, tempers of cold-drawn and annealed, tensile properties of drawn tempers, grain size of annealed tempers, number of tests, methods of testing, tolerances, finish, inspection, and rejection.

*References.*—Nickel silver, German silver, nickel-copper-zinc alloys, *see* 655.

### 643.7 COPPER-BEARING METALS

American Society for Testing Materials, B 100-44; 1944. American Assn. of State Highway Officials, M108-44. Rolled Copper-Alloy Bearing and Expansion Plates for Bridge and Other Structural Uses. For use where motion is slow and intermittent, and pressure does not exceed 3,000 psi. Gives requirements for two grades of alloy, manufacture, chemical analysis, physical properties, methods of testing, thickness and weight tolerances, finish, inspection, and rejection.

*References.*—Bearing metals other than babbitt metal, *see* 692.2.

### 643.9 MISCELLANEOUS COPPER ALLOYS

American Society for Testing Materials, B120-41T; 1941. Tentative Specifications for Beryllium-Copper Alloy Bars, Rods, Sheet, Strip, and Wire. Cover rods, bars, sheet, strip, and wire with a nominal beryllium content of 2.05 percent. Basis of purchase, manufacture, chemical composition, sampling for chemical analysis, condition or temper, mechanical properties, number of tests, retests, methods of testing, tolerances, finish, inspection, rejection, and appendix.

American Society for Testing Materials, B 171-42T; 1942. A.S.M.E. Boiler Construction Code Specification SB-171. Tentative Specifications for Copper-Alloy Condenser Tube Plates. Covers rolled plates of five types of copper alloys, for use as tube plates in surface condensers and heat exchangers. Gives manufacture, chemical composition, tensile and bending properties, testing, tolerances, workmanship and finish, marking, and inspection. A.S.T.M. Emergency Alternate Provision EA-B 171: 1942, affected section 3, Manufacture.

Society of Automotive Engineers. Aeronautical Material Specification 4650A; 1941. Beryllium-Copper Alloy; Wrought. Gives requirements for form (rods, bars, forgings, or as ordered), composition, condition, quality, tolerances, length, reports, and rejections. Similar specifications: Army 11070, Type I, Condition H; A.S.T.M.-B-120-40 T, Condition H.

U. S. Gov., Army Air Forces. Specification 11070-A (1); 1940. Beryllium—Copper; Bars, Rods, Sheets, Strips and Wire.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Circular C398 and Supplement, 1944. Standard Samples. Ounce Metal, Sample 124a. This sample is prepared and sold by the National Bureau of Standards with a certificate of analysis for use in industry and by others as a comparison standard for checking the accuracy of analysis of similar material.

U. S. Gov., Navy Dept. Specification 44T23a; 1938. Tubing; Copper-Silicon-Bronze; Round, Seamless.

U. S. Gov., Navy Dept. Specification 46N5a; 1941. Nickel-Copper-Aluminum-Alloy; Forgings, Rods, Strips, and Wire.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 57-171; 1923. Metal; Gilding, Rod, Bar, Shape, Plate, Sheet, and Strip.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 57-171-1B; 1941. Metal; Gilding, Sheet, Strip, and Coil.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 57-171-2; 1939. Metal; Gilding, 95/5 Brass, Sheets and Strips.

*References.*—Silver solder, *see* 693.3.

## 644. BRASS

### 644.0 GENERAL ITEMS

American Society for Testing Materials, E 33-42; 1942. Hardness Conversion Table for Cartridge Brass (Relationship Between Diamond Pyramid Hardness, Rockwell Hardness, and Brinell Hardness). This conversion table presents data on the relationship among diamond pyramid hardness, Rockwell hardness, and Brinell hardness for cartridge brass. Recommended uses of table.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, 1938. Brasses. Covers definition, characteristics, classes and physical properties, wrought alloys, constants (general), uses, forms available, and ordering instructions.

### 644.1 BRASS INGOTS AND BARS

#### 644.11 Ingots, Brass

American Society for Testing Materials, B30-44T; 1944. Tentative Specifications for Copper-Base Alloys in Ingot Form for Sand Castings. Covers 25 copper-base alloys, with A.S.T.M. classifications, numerical and commercial designations, and nominal compositions. Manufacture, chemical composition, samples for analysis, chemical analysis, marking, inspection, rejection and retesting, claims and settlement of claims. Endorsed by American Foundrymen's Assn.

Non-Ferrous Ingot Metal Institute. 1940 Manual. Leaded Red Brass, Designation 4A. Gives chemical analysis and physical properties of the alloy. This standard is similar to Federal Specifications QQ-B-701 (No. 2) and QQ-B-691a (No. 2); A.S.T.M. Specification B30-40T (4A); and S.A.E. Specification No. 40. Nominal chemical composition of this alloy is copper 85.00, tin 5.00, lead 5.00, zinc 5.00.

Non-Ferrous Ingot Metal Institute. 1940 Manual. Leaded Red Brass, Designation 4B. Gives chemical analysis and physical properties of the alloy. This standard is similar to A.S.T.M. Specification B30-40T (4B). Nominal chemical composition of this alloy is copper 83.00, tin 4.00, lead 6.00, zinc 7.00.

Non-Ferrous Ingot Metal Institute. 1940 Manual. Leaded Semi-Red Brass, Designation 5A. Gives

chemical analysis and physical properties of the alloy. This standard is similar to Federal Specifications QQ-B-691a (No. 4) and QQ-B-701 (No. 4); and A.S.T.M. Specification B30-40T (5A). Nominal chemical composition of this alloy is copper 81.00, tin 3.00, lead 7.00, zinc 9.00.

Non-Ferrous Ingot Metal Institute. 1940 Manual. Leaded Semi-Red Brass, Designation 5B. Gives chemical analysis and physical properties of the alloy. This standard if similar to A.S.T.M. Specification B30-40T (5B). Nominal chemical composition of this alloy is copper 76.00, tin 3.00, lead 6.00, zinc 15.00.

Non-Ferrous Ingot Metal Institute. 1940 Manual. Leaded Yellow Brass, Designation 6A. Gives chemical analysis and physical properties of the alloy. This standard is similar to A.S.T.M. Specification B30-40T (6A). Nominal chemical composition of this alloy is copper 71.00, tin 1.00, lead 3.00, zinc 25.00.

Non-Ferrous Ingot Metal Institute. 1940 Manual. Leaded Yellow Brass, Designation 6B. Gives chemical analysis and physical properties of the alloy. This standard is similar to Federal Specification QQ-B-621 (Grade B); A.S.T.M. Specification B30-40T (6B); and S.A.E. Specification No. 41. Nominal chemical composition of this alloy is copper 66.00, tin 1.00, lead 3.00, zinc 30.00.

Non-Ferrous Ingot Metal Institute. 1940 Manual. Leaded Yellow Brass, Designation 6C. Gives chemical analysis and physical properties of the alloy. This standard is similar to Federal Specification QQ-B-621 A; and A.S.T.M. Specification B30-40T (6C). Nominal chemical composition of this alloy is copper 60.00, tin 1.00, lead 1.00, zinc 37.85.

Non-Ferrous Ingot Metal Institute. 1940 Manual. Leaded High Strength Yellow Brass (Manganese Bronze), Designation 7A. Gives chemical analysis and physical properties of the alloy. This standard is similar to A.S.T.M. Specification B30-40T (7A). Nominal chemical composition of this alloy is copper 59.00, zinc 37.50, etc.

Non-Ferrous Ingot Metal Institute. 1940 Manual. High Strength Yellow Brass (Manganese Bronze), Designation 8A. Gives chemical analysis and physical properties of the alloy. This standard is similar to Federal Specifications QQ-B-726a and QQ-B-731a; A.S.T.M. Specification B30-40T (8A); and S.A.E. Specification No. 43. Nominal chemical composition of this alloy is copper 58.00, zinc 39.25, etc.

Non-Ferrous Ingot Metal Institute. 1940 Manual. High Strength Yellow Brass (Manganese Bronze), Designation 8B. Gives chemical analysis and physical properties of the alloy. This standard is similar to A.S.T.M. Specification B30-40T (8B). Nominal chemical composition of this alloy is copper 62.00, zinc 26.50, iron 3.00, aluminum 5.00, manganese 3.50.

*References.*—Brazing solder ingots, *see* 693.2.

## 644.12 Bars, Brass

Society of Automotive Engineers. Aeronautical Material Specification 4610B; 1944. Brass Rods and Bars; Free Cutting, Half Hard. Covers composition, tensile strength, yield point, elongation, quality, tolerances, reports, identification, and rejections. Similar Specifications: Federal QQ-B-611, Composition B, Half Hard; Naval Aircraft Factory EMS41; A.S.T.M. B16-42; and S.A.E. 72.

American Society for Testing Materials, B 19-44T; 1944. Tentative Specifications for Cartridge Brass Sheet, Strip, Plate, Bar, and Disks. For manufacture of ammunition or component parts thereof. Gives requirements for basis of purchase, manufacture, chemical composition, tempers of rolled and annealed brass, tensile strength, hardness, grain size, methods of testing, tolerances, finish, packing, marking, and rejection.

American Society for Testing Materials, B 124-44T; 1944. Tentative Specifications for Copper-Base Alloy Forging Rods, Bars, and Shapes. Covers 12 alloys for hot forging. Basis of purchase, manufacture, chemical composition, sampling for chemical analysis, tolerances, workmanship and finish, inspection, rejection, and probable range of physical properties of forgings, as forged.

American Society for Testing Materials, B 140-43; 1943. Leaded Red Brass (Hardware Bronze) Rods, Bars, and Shapes. Covers two types, suitable for screw machine work. Gives requirements for basis of purchase, manufacture, chemical composition, chemical analysis, tensile properties, test specimens, number of tests, tolerances, lengths, workmanship and finish, inspection, and rejection.

Society of Automotive Engineers. Aeronautical Material Specification 4611; 1942. Naval Brass Rods and Bars (Half-Hard). Gives requirements for composition, condition, quality, tolerances, reports, identification, and rejections. Similar specifications: Federal QQ-B-636, Types I and II, Half-Hard; Navy 46B6, Types I and II, Half-Hard; S.A.E. 73, Half-Hard; A.S.T.M. B21-40T, Grade A, Half-Hard.

Society of Automotive Engineers. Aeronautical Material Specification 4612; 1941. Naval Brass, Rods, and Bars (Hard). Covers requirements for composition, condition, quality, tolerance, reports, identification, and rejections.

Society of Automotive Engineers. 1944 Handbook, Section 3—Processed Materials. S.A.E. Standard Wrought Copper Alloys, revised 1944. Gives specification 73—Naval Brass Rods, Bars, and Shapes. Covers composition in percentage, general information, mechanical requirements, strain test, bend test, dimensions, and tolerances, general information, and uses.

U. S. Gov., Army-Navy Aeronautical Specification AN-QQ-B-646-1; 1944. Brass; Rolled, Bar-and-Rod (for Turnbuckle Barrels).

U. S. Gov., Federal Specification QQ-B-611a; 1938. Amendment 4; 1944. Brass; Commercial, Bars, Plates, Rods, Shapes, Sheets, and Strips. Includes bars in three compositions—(A) for forging; (B) free-cutting; and (D) free-cutting. Gives material, workmanship, chemical requirements, physical requirements, and permissible variations; methods of sampling, inspection, and test; and packing and marking.

U. S. Gov., Federal Specification QQ-B-636a; 1944. Brass; Naval, Bars, Plates, Rods, Shapes, Sheets, and Strips. Covers three classes—A, B, and C. Includes soft, half-hard, hard, and extruded brass.

Gives requirements for material, workmanship, chemical requirements, tensile requirements, physical requirements, and permissible variations; methods of sampling, inspection, and tests; and packing and marking for shipment.

U. S. Gov., Navy Dept. Specification 46B6K; 1944. Brass; Naval, Wrought: Bars, Forgings, Plates, Rods, Shapes, Sheets, and Strips.

U. S. Gov., Navy Dept. Specification 47B2g; 1940. Brass; Commercial Bars, Plates, Rods, Shapes, Sheets, and Strips.

*References.*—Methods of testing, general requirements for metals, *see* 600.1, 644.11; brass shapes, *see* 644.22; brass rods, *see* 645.11; brass brazing rods, *see* 693.2.

## 644.2 BRASS PLATES, SHEETS, SHAPES, AND STRIPS

### 644.21 Plates and Sheets, Brass

American Society for Testing Materials, B 19-44T; 1944. Tentative Specifications for Cartridge Brass Sheet, Strip, Plate, Bar, and Disks. For manufacture of ammunition or component parts thereof. Gives requirements for basis of purchase, manufacture, chemical composition, tempers of rolled and annealed brass, tensile strength, hardness, grain size, methods of testing, tolerances, finish, packing, marking, and rejection.

American Society for Testing Materials, B36-44T; 1944. Tentative Specifications for Brass Sheet and Strip. Includes eight alloys of copper and zinc, annealed or tempered to suit. Gives requirements for basis of purchase, manufacture, chemical composition, sampling for chemical analysis, tempers of rolled and annealed sheet and strip, tensile strength and Rockwell hardness of rolled tempers, grain size, Rockwell hardness of annealed tempers, number of tests, methods of testing, tolerances, finish, inspection, and rejection.

American Society for Testing Materials, B 121-44T; 1944. Tentative Specifications for Leaded Brass Sheet and Strip. Covers six alloys, with nominal compositions, annealed or tempered to suit. Give requirements for basis of purchase, manufacture, chemical composition, sampling for chemical analysis, tempers of rolled sheet and strip, tempers of annealed sheet and strip, tensile strength of rolled tempers, tensile strength and Rockwell hardness of rolled tempers, grain size and Rockwell hardness of annealed tempers, number of tests, methods of test, tolerances, acceptable short lengths, finish, inspection, and rejection.

Copper and Brass Research Assn. Flat Products Standards FP-1 to FP-7, inclusive, 1944. Covers rolled flat products, cold rolled, thickness tolerances; rolled flat products, length, width and straightness tolerances; rolled flat products, copper sheet and strip rolled to weight; rolled flat products, circles and half circles, diameter tolerances; rolled flat products, hot rolled plates and sheets, weight tolerances; silicon bronze (copper-silicon alloy) A.S.M.E. code tank plates and sheets, weight and thickness tolerances; and drawn strip, bar and flat wire, thickness and width tolerances; rolled flat products, condenser tube plates, tolerances, thickness, diameter, length or width, and flatness.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, 1938. High-Brass Sheet. Covers definition, constants, uses, and specifications.

Society of Automotive Engineers. Aeronautical Material Specification 4505A; 1942. Brass Sheet and Strips; Annealed. Gives requirements for composition, condition, hardness, quality, tolerances, reports, and rejections. Similar specifications: Federal QQ-B-611, Composition E; A. S. T. M. B36-41T, Alloy No. 6; S.A.E. 70, Grade A.

Society of Automotive Engineers. 1944 Handbook, Section 3—Processed Materials. S. A. E. Standard Wrought Copper Alloys, revised 1944. Gives specification No. 70—Commercial Brass Sheet and No. 79—Red Brass Sheet. Covers general information, physical properties, Rockwell hardness, ultimate strength, straightness tolerances, and length tolerances.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Circular C398 and Supplement; 1944. Standard Samples. Brass; Sheet, Sample 37c. This sample is prepared and sold by the National Bureau of Standards with a certificate of analysis for use in industry and by others as a comparison standard for checking the accuracy of analysis of similar material

U. S. Gov., Federal Specification QQ-B-611a; 1938. Amendment 4; 1944. Brass; Commercial, Bars, Plates, Rods, Shapes, Sheets, and Strips. Includes plates and sheets in three compositions—C, D, and E, in various tempers. Gives material, workmanship, chemical requirements, physical requirements, and permissible variations; methods of sampling, inspection, and test; and packing and marking.

U. S. Gov., Federal Specification QQ-B-636a; 1944. Brass; Naval, Bars, Plates, Rods, Shapes, Sheets, and Strips. Covers three classes—A, B, and C. Includes soft, half-hard, hard, and as extruded brass. Gives requirements for material, workmanship, chemical requirements, tensile requirements, physical requirements, and permissible variations; methods of sampling, inspection, and tests; and packing and marking for shipment.

U. S. Gov., Navy Dept. Specification 46B6K; 1944. Brass; Naval, Wrought: Bars, Forgings, Plates, Rods, Shapes, Sheets, and Strips.

U. S. Gov., Navy Dept. Specification 47B2g; 1940. Brass; Commercial Bars, Plates, Rods, Shapes, Sheets, and Strips.

U. S. Gov., Navy Dept. Specification 47B3; 1941. Brass; Rolled, Plates (Admiralty Metal).

U. S. Gov., U. S. Army, Ordnance Dept. Specification 57-160; 1923. Sheet and Strip; Brass, Low and Rich Low.

*References.*—Methods of testing, general requirements for metals, *see* 600.1, 644.11; thickness tolerances, *see* 640.1.

### 644.22 Shapes, Brass

American Society for Testing Materials, B 124-44 T; 1944. Tentative Specifications for Copper-Base Alloy Forging Rods, Bars, and Shapes. Covers 12

alloys for hot forging. Basis of purchase, manufacture, chemical composition, sampling for chemical analysis, tolerances, workmanship, and finish; inspection, rejection, and probable range of physical properties of forgings, as forged.

American Society for Testing Materials, B140-43; 1943. Leaded Red Brass (Hardware Bronze) Rods, Bars, and Shapes. Covers two types, suitable for screw machine work. Gives requirements for basis of purchase, manufacture, chemical composition, chemical analysis, tensile properties, test specimens, number of tests, tolerances, lengths, workmanship and finish, inspection, and rejection.

Society of Automotive Engineers. 1944 Handbook, Section 3—Processed Materials. S. A. E. Standard Wrought Copper Alloys, revised 1944. Gives specification No. 73—Naval Brass Rods, Bars and Shapes. Covers composition in percentage, general information, mechanical requirements, strain test, bend test, dimensions and tolerances, general information, and uses.

U. S. Gov., Federal Specification QQ-B-611a; 1938. Amendment 4; 1944. Brass; Commercial, Bars, Plates, Rods, Shapes, Sheets, and Strips. Includes shapes in four compositions—(A) for forging; (B) soft, free cutting; (C) various tempers; and (D) free cutting. Gives material, workmanship, chemical requirements, physical requirements, and permissible variations; methods of sampling, inspection, and test; and packing and marking.

U. S. Gov., Federal Specification QQ-B-636a; 1944. Brass; Naval, Bars, Plates, Rods, Shapes, Sheets, and Strips. Covers three classes—A, B, and C. Includes soft, half-hard, hard, and as extruded brass. Gives requirements for material, workmanship, chemical requirements, tensile requirements, physical requirements, and permissible variations; methods of sampling, inspection, and tests; and packing and marking for shipment.

U. S. Gov., Navy Dept. Specification 46B6k; 1944. Brass; Naval, Wrought: Bars, Forgings, Plates, Rods, Shapes, Sheets, and Strips.

U. S. Gov., Navy Dept. Specification 47B2g; 1940. Brass; Commercial Bars, Plates, Rods, Shapes, Sheets, and Strips.

*References.*—Methods of testing, general requirements for metals, *see* 600.1, 644.11; brass bars and rods, *see* 644.12, 645.11.

## 644.23 Strips, Brass

American Society for Testing Materials, B 19-44T; 1944. Tentative Specifications for Cartridge Brass Sheet, Strip, Plate, Bar, and Disks. For manufacture of ammunition or component parts thereof. Gives requirements for basis of purchase, manufacture, chemical composition, tempers of rolled and annealed brass, tensile strength, hardness, grain size, methods of testing, tolerances, finish, packing, marking, and rejection.

American Society for Testing Materials, B-36-44T; 1944. Tentative Specifications for Brass Sheet and Strip. Includes eight alloys of copper and zinc, annealed or tempered to suit. Gives requirements for basis of purchase, manufacture, chemical composition, sampling for chemical analysis, tempers of rolled and annealed sheet and strip, tensile strength and Rockwell hardness of rolled tempers, grain size, Rockwell hardness of annealed tempers, number of tests, methods of testing, tolerances, finish, inspection, and rejection.

American Society for Testing Materials, B 121-44T; 1944. Tentative Specifications for Leaded Brass Sheet and Strip. Cover six alloys, with nominal compositions, annealed or tempered to suit. Gives requirements for basis of purchase, manufacture, chemical composition, sampling for chemical analysis, tempers of rolled sheet and strip, tempers of annealed sheet and strip, tensile strength of rolled tempers, tensile strength and Rockwell hardness of rolled tempers, grain size and Rockwell hardness of annealed tempers, number of tests, methods of test, tolerances, acceptable short lengths, finish, inspection, and rejection.

American Society for Testing Materials, B 130-44T; 1944. Tentative Specifications for Gilding Metal Strip. For manufacture of bullet jacket cups and ammunition components. Gives requirements for basis of purchase, manufacture, chemical composition, sampling for chemical analysis and for physical testing, tempers of rolled and annealed sheet and strip, tensile strength and hardness of rolled tempers, grain size and tension tests of annealed tempers, methods of testing, tolerances, workmanship and finish, packing, marking, inspection, and rejection.

Copper and Brass Research Assn. Sheet and Strip Metal, 1939. For metal in sheets, strips, and coils; tolerances for length, slit metal, squared, sheared, and sawed metal widths; and straightness tolerances applicable to slit metal.

Society of Automotive Engineers. Aeronautical Material Specification 4505A; 1942. Brass Sheet and Strips; Annealed. Gives requirements for composition, condition, hardness, quality, tolerances, reports, and rejections. Similar specifications: Federal QQ-B-611, Composition E; A.S.T.M. B36-41T, Alloy No. 6; S.A.E. 70, Grade A.

U. S. Gov., Federal Specification QQ-B-611a; 1938. Amendment 4; 1944. Brass; Commercial, Bars, Plates, Rods, Shapes, Sheets, and Strips. Includes strips in three compositions—C, D, and E, in various tempers. Gives material, workmanship, chemical requirements, physical requirements, and permissible variations; methods of sampling, inspection, and test; and packing and marking.

U. S. Gov., Federal Specification QQ-B-636a; 1944. Brass; Naval, Bars, Plates, Rods, Shapes, Sheets, and Strips. Covers three classes—A, B, and C. Includes soft, half-hard, hard, and as extruded brass. Gives requirements for material, workmanship, chemical requirements, tensile requirements, physical requirements, and permissible variations; methods of sampling, inspection, and tests; and packing and marking for shipment.

U. S. Gov., Joint Army-Navy Specification JAN-B-50; 1944. Brass; Cartridge, Sheet and Strip.

U. S. Gov., Navy Dept. Specification 46B6k; 1944. Brass; Naval, Wrought: Bars, Forgings, Plates, Rods, Shapes, Sheets, and Strips.

U. S. Gov., Navy Dept. Specification 47B2g; 1940. Brass; Commercial Bars, Plates, Rods, Shapes, Sheets, and Strips.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 57-160; 1923. Sheet and Strip; Brass, Low and Rich Low.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 57-161-3; 1944. Brass; Leaded, Strip.

*References.*—Methods of testing, general requirements for metals, *see* 600.1, 644.11; thickness tolerances, *see* 640.1; standard gage and thicknesses, *see* 644.21.

## 645. MANUFACTURES OF BRASS

### 645.1 BRASS RODS AND WIRES

#### 645.11 Rods, Brass

American Society for Testing Materials, B 16-44; 1944. Society of Automotive Engineers Specification No. 72. American Standards Assn. H8.1-1944. Free-Cutting Brass Rod and Bar for Use in Screw Machines. Gives manufacture, chemical composition, chemical analysis, check analysis, tensile properties, bending properties, test specimens, number of tests, methods of testing, dimensional tolerances, length, finish, inspection, and rejection. A.S.T.M. Emergency Alternate Provision EA-B16; 1944, affected section 4, Chemical Analysis.

American Society for Testing Materials, B 21-44T; 1944. Tentative Specifications for Naval Brass Rods, Bars, and Shapes. Includes grade A for structural purposes for rods, bolts, etc., and grades B and C for free-cutting, each capable of being forged hot. Requirements for manufacture, chemical compositions, tensile and bending properties, mercurous nitrate test, test specimens, dimensional tolerances, and workmanship.

American Society for Testing Materials, B 124-44T; 1944. Tentative Specifications for Copper-Base Alloy Forging Rods, Bars, and Shapes. Covers 12 alloys for hot forging. Basis of purchase, manufacture, chemical composition, sampling for chemical analysis, tolerances, workmanship and finish, inspection, rejection, and probable range of physical properties of forgings, as forged.

Copper and Brass Research Assn. Rod, Wire, Shapes Standards ROD-1 to ROD-3-A, inclusive, 1944. Covers rod and wire, diameter tolerances, extruded rod, bar and wire, diameter tolerances, hot rolled round rod and wire, diameter tolerances; drawn rod and bar, drawn strip and drawn flat wire, shapes length tolerances and schedule of short lengths; drawn rod and bar, drawn strip and drawn flat wire, shapes straightness tolerances.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, 1938. Brass Rod; High-Speed. Covers definition, forms available, uses, and specifications.

Society of Automotive Engineers. Aeronautical Material Specification 4610B; 1944. Brass Rods and Bars; Free Cutting, Half Hard. Covers composition, tensile strength, yield point, elongation, quality, tolerances, reports, identification, and rejections. Similar Specifications: Federal QQ-B-611, Composition B, Half Hard; Naval Aircraft Factory EMS41; A.S.T.M. B16-42; and S.A.E. 72.

Society of Automotive Engineers. Aeronautical Material Specification 4611; 1942. Naval Brass Rods and Bars (Half-Hard). Gives requirements for composition, condition, quality, tolerances, reports, identification, and rejections. Similar specifications: Federal QQ-B-636, Types I and II, Half-Hard; Navy 46B6, Types I and II, Half-Hard; S.A.E. 73, Half-Hard; A. S. T. M. B21-40T, Grade A, Half-Hard.

Society of Automotive Engineers. Aeronautical Material Specification 4612; 1941. Naval Brass; Rods and Bars (Hard). Covers requirements for composition, condition, quality, tolerance, reports, identification, and rejections.

Society of Automotive Engineers. 1944 Handbook, Section 3—Processed Materials. S. A. E. Standard Wrought Copper Alloys, revised 1944. Gives specification No. 72—Free Cutting Brass Rod and No. 88—Brass Forging Rod. Covers composition in percentage, general information, physical properties, bend tests, and dimensions and tolerances.

Society of Automotive Engineers. 1944 Handbook, Section 3—Processed Materials. S. A. E. Standard Wrought Copper Alloys, revised 1944. Gives specification No. 73—Naval Brass Rods, Bars, and Shapes. Covers composition in percentage, general information, mechanical requirements, strain test, bend test, dimensions and tolerances, general information, and uses.

U. S. Gov., Army-Navy Aeronautical Specification AN-QQ-B-646-1; 1944. Brass; Rolled, Bar-and-Rod (for Turnbuckle Barrels).

U. S. Gov., Federal Specification QQ-B-611a; 1938. Amendment 4; 1944. Brass; Commercial, Bars, Plates, Rods, Shapes, Sheets, and Strips. Includes rods in three compositions—(A) for forging; (B) soft and half-hard, free cutting; and (D) free cutting. Gives material, workmanship, chemical requirements, physical requirements, and permissible variations; methods of sampling, inspection, and test; and packing and marking.

U. S. Gov., Federal Specification QQ-B-636a; 1944. Brass; Naval, Bars, Plates, Rods, Shapes, Sheets, and Strips. Covers three classes—A, B, and C. Includes soft, half-hard, hard, and as extruded brass. Gives requirements for material, workmanship, chemical requirements, tensile requirements, physical requirements, and permissible variations; methods of sampling, inspection, and tests; and packing and marking for shipment.

U. S. Gov., Federal Specification QQ-R-571; 1932. Rods; Welding, Nonferrous (for) Gas Welding. Includes type B, naval brass; and type C, copper. Gives requirements for chemical composition, weldability, character of weld metal, physical properties, sizes, and lengths; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Navy Dept. Specification 46B6k; 1944. Brass; Naval, Wrought: Bars, Forgings, Plates, Rods, Shapes, Sheets, and Strips.

U. S. Gov., Navy Dept. Specification 46R1b; 1933. Rods; Welding, Nonferrous (for Gas Welding).

U. S. Gov., Navy Dept. Specification 47B2g; 1940. Brass; Commerical Bars, Plates, Rods, Shapes, Sheets, and Strips.

*References.*—Methods of testing, general requirements for metals, *see* 600.1, 644.11; welding apparatus and practice, *see* 767; welding wire, brass, *see* 645.12; brass brazing solder, *see* 693.2.

### 645.12 Wires, Brass

American Society for Testing Materials, B 134-44T; 1944. Tentative Specifications for Brass Wire. Covers eight alloys for commerical brass wire. Basis of purchase, manufacture, chemical compositions, sampling for chemical analysis, tempers of drawn and annealed wire, tensile properties of drawn tempers, grain size of annealed tempers, number of tension tests, methods of testing, diameter, tolerances, length, finish, inspection, and rejection.

Copper and Brass Research Assn. Rod, Wire, Shapes Standards ROD-1 to ROD-3-A inclusive, 1944. Covers rod and wire, diameter tolerances, extruded rod, bar and wire, diameter tolerances, hot rolled round rod and wire, diameter tolerances; drawn rod and bar, drawn strip and drawn flat wire, shapes length tolerances and schedule of short lengths, drawn rod and bar, drawn strip and drawn flat wire, shapes straightness tolerances.

Society of Automotive Engineers. Aeronautical Material Specification 4710; 1942. Brass Wire; Tinned. Gives requirements for composition, condition, quality, tolerances, reports, and rejections.

Society of Automotive Engineers. 1944 Handbook, Section 3—Processed Materials. S.A.E. Standard Wrought Copper Alloys, revised 1944. Gives specifications No. 80 and No. 82—Brass Wire. Covers composition in percentage, tensile strength, bend test, tempers, appearance, and dimensional tolerances.

U. S. Gov., Army Air Forces. Specification 10285-A (3); 1943. Wire; Metal, Spray Gun.

U. S. Gov., Federal Specification QQ-W-321; 1930. Wire; Brass. Covers three grades—(A) annealed, soft; (B) as drawn; and (C) spring temper. Gives requirements for material and workmanship, diameter of wire, chemical composition, and physical requirements; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., U. S. Army, Chemical Warfare Service. Specification 48-12; 1925. Wire; Eyelet, Submarine Gas Mask.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 57-217A; 1939. Wire; Low Brass, Arming Wire.

*References.*—Methods of testing, general requirements for metals, *see* 600.1, 644.11; brass brazing wire, *see* 692.3.

## 645.2 BRASS CASTINGS, FERRULES, PIPES, AND TUBES

### 645.21 Castings, Brass

American Society of Mechanical Engineers, joint sponsor with American Gear Manufacturers' Assn. American Standards Assn., B 6.2-1933. Gear Materials and Blanks. These specifications are for forged and rolled carbon steel, steel castings, bronze and brass castings, and forged and rolled alloy steel. Recommendations cover—manufacture, ladle, and check analyses, finish, marking, inspection, etc. Also included are tables on chemical composition for each type of material.

American Society for Testing Materials, B 62-44; 1944. A. S. M. E. Boiler Construction Code Specification SB-62. Composition Brass or Ounce Metal Castings. Commercially known as composition metal, 85-5-5-5, or ounce metal. Gives basis of purchase, manufacture, chemical composition and analysis, tensile properties, test specimens, number of tests, workmanship and finish, marking, inspection, certification, and rejection. Endorsed by the American Foundrymen's Assn. A. S. T. M. Emergency Alternate Provision EA-B 62b; 1944, affected section 7, Test Specimens, and adds figures 3 and 4.

American Society for Testing Materials, B 119-40T; 1940. Tentative Classification of Cast Copper-Base Alloys. Defines copper alloys as containing not over 2 percent of other elements, brass as having an appreciable amount of zinc, and bronze as having more of other alloying elements than zinc. Includes copper, 13 brasses, and 9 bronzes. Endorsed by the American Foundrymen's Assn.

American Society for Testing Materials, B 145-44T; 1944. Tentative Specifications for Leaded Red Brass and Leaded Semi-Red Brass Sand Castings. Cover castings for four alloys. Gives basis of purchase, manufacture, chemical composition and analysis, methods of chemical analysis, tensile properties, pressure and fracture tests, test specimens, number of tests, methods of testing, workmanship and finish, marking, inspection, certification, and rejection. A. S. T. M. Emergency Alternate Provision EA-B 145; 1944, affected section 9, Test Specimens, and added figures 3 and 4.

American Society for Testing Materials, B 146-44T; 1944. Tentative Specifications for Leaded Yellow Brass Sand Castings for General Purposes. Covers castings of three alloys. Gives basis of purchase, manufacture, chemical composition and analysis, methods of chemical analysis, tensile properties, pressure and fracture tests, test specimens, number of tests, methods of testing, workmanship and finish, marking, inspection, and rejection. A. S. T. M. Emergency Alternate Provision EA-B 146; 1944, affected section 9, Test Specimens, and adds figures 3 and 4.

American Society for Testing Materials, B147-44T; 1944. Tentative Specifications for High-Strength Yellow Brass and High-Strength Leaded Yellow Brass Sand Castings. Covers castings of three alloys. Basis of purchase, manufacture, chemical composition, chemical analysis, methods of chemical analysis, tensile properties, test specimens, number of tests, methods of testing, workmanship and finish, marking, inspection, and rejection.

American Society for Testing Materials, B 176-42 T; 1942. Tentative Specifications for Copper-Base (Brass) Alloy Die Castings. Covers two brass alloy compositions for commercial die castings. Manufacture, chemical composition, sampling, physical properties, test specimens, soundness, finish, and rejection.

Society of Automotive Engineers. Aeronautical Material Specification 2560A; 1942. Impregnation of

Castings. To make porous castings pressure tight by suitable cleaning of castings, extraction of air from the porous sections by vacuum, pressure filling the evacuated pores with tung oil, and subsequent polymerization and swelling of the oil retained by the pores. Optional processes permitted. Includes preparation of castings, requirements for materials, impregnation procedure, and identification.

Society of Automotive Engineers. 1944 Handbook, Section 3—Processed Materials. S.A.E. Standard Brass and Bronze Castings, revised 1944. Gives specification No.40—Red Brass Castings, No.41—Yellow Brass Castings, and No.44—Cast Brass To Be Brazed. Covers composition in percentages, general information, and uses.

U. S. Gov., Federal Specification QQ-B-601; 1932. Amendment 1; 1942. Brass; Castings (To Be Brazed). Covers two grades—(A) and (B). Gives requirements for material, workmanship, quality, repairing of defects, chemical composition, and physical properties; methods of inspection and tests; and requirements for packing and marking.

U. S. Gov., Federal Specification QQ-B-621a; 1943. Brass; Commercial-Yellow, High-Copper-Yellow, and Naval, Castings. Covers three compositions—(A) naval brass, (B) commercial yellow brass, and (C) high-copper-yellow brass. Gives requirements for material, workmanship, dimensions, chemical requirements, and tensile requirements; methods of sampling, inspection, and tests; and packing and marking for shipment.

U. S. Gov., Navy Dept. Specification 10S1a; 1944. Strainers; Gasoline, for Motor Boats.

U. S. Gov., Navy Dept. Specification 46B10g; 1943. Brass; Naval (Composition N-c), Castings.

U. S. Gov., Navy Dept. Specification 46B11g; 1943. Brass; Commercial, Castings.

*References.*—Methods of testing, general requirements for metals, *see* 600.1; brass fittings and plumbing fixtures, *see* 645.4; brass valves and hydrants, *see* 607.6; brass builders hardware, *see* 645.6; bronze castings, *see* 646.41; brass telephone plugs, jacks, *see* 718.29; other specifications for brass castings, *see* specifications of individual commodities made of cast brass.

## 645.22 Ferrules, Brass

American Society for Testing Materials, B111-43; 1943. A.S.M.E. Boiler Construction Code Specification SB-111. Copper and Copper-Alloy Seamless Condenser Tubes and Ferrule Stock. For use in surface condensers, evaporators, and heat exchangers. Gives requirements for material, manufacture, chemical composition, sample for chemical analysis, microscopic examination, expanding test, mercurous nitrate test, hydrostatic test, dimension and weight tolerances, workmanship, finish, and inspection. A.S.T.M. Emergency Alternate Provision EA-B-111; 1942, affected section 3, Material.

*References.*—Methods of testing, general requirements for metals, *see* 600.1, 644.11; ferrule stock, *see* 645.24.

## 645.23 Pipes, Brass

American Bureau of Shipping. Rules for the Classification and Construction of Steel Vessels, 1944. Brass Pipes and Tubes (Seamless). Include rules for inspection and tests.

American Society for Testing Materials, B 43-42; 1942. A.S.M.E. Boiler Construction Code Specification SB-43. Brass Pipe; Standard Sizes. Covers seamless Muntz metal, high brass, admiralty metal, and red brass pipe suitable for use in plumbing, boiler feed lines, and for similar purposes. Basis of purchase; manufacture, condition or temper, chemical composition, expansion, strain, and hydrostatic tests; bending properties, dimensions and weights, tolerances, workmanship, finish, inspection, and rejection.

Copper and Brass Research Assn. Round Seamless Tubes, 1939. Includes copper water tube, brass and copper pipe, condenser and other heat exchanger tubes; gage or wall thickness tolerances for refractory and nonrefractory alloys, mean diameter tolerances, length tolerances, weight tolerances, and estimating data for condenser and other heat exchanger tubes.

Copper and Brass Research Assn. Tube, Pipe Standards TUBE-1 to TUBE-8 inclusive, 1944. Covers round seamless tubes, wall thickness and diameter tolerances; round seamless tubes, length tolerances, straightness tolerances; copper water tube, standard dimensions and weights, diameter and wall thickness tolerances, weight tolerances; pipe, dimensions and weights, weight and wall thickness tolerances; condenser and other heat exchanger tubes, dimensions and weight tolerances; and condenser and other heat exchanger tubes, estimating data.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, 1938. Pipe and Tubes; Brass. Covers definition, nominal composition, sizes, uses, and marketing customs.

U. S. Gov., Federal Specification WW-N-351; 1930. Amendment 1; 1936. Nipples; Pipe, Brass, Steel, and Wrought Iron. Covers coated and uncoated nipples, in iron pipe sizes from 1/8 to 12 in., of standard lengths; brass nipples in iron pipe sizes from 1/8 to 6 in.; and three types—(A) standard weight, (B) extra strong, and (C) double extra strong. Gives detail requirements; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification WW-P-351; 1930. Pipe; Brass, Seamless, Iron-Pipe Size, Standard and Extra Strong. Covers three grades—A, B, and C. Gives requirements for chemical composition, weights, dimensions, and sizes; method of sampling, inspection, and tests; and requirements for packing and marking for shipment

U. S. Gov., Navy Dept. Specification 44P12c; 1935. Pipe; Brass, Seamless, Iron Pipe Size, Standard-Weight and Extra Strong.

U. S. Gov., Navy Dept., U. S. Coast Guard, Bureau of Marine Inspection and Navigation. Marine Engineering Regulations and Material Specifications, 1942. Contains specifications and requirements for materials, design, construction, installation, and inspection of boilers, unfired pressure vessels and appurtenances thereof; also piping, valves, fittings, flanges, safety valves, etc., upon the strength and efficiency of which safety of life is dependent, and are intended for maximum temperatures of 1,000° F. Includes specifications for seamless brass pipe muntz metal, high brass, admiralty metal,

and red brass suitable for steam, water, compressed air, sanitary, and boiler-feed lines, and for similar purposes subject to temperatures not exceeding 406° F.); process, temper, chemical composition, tests, bending properties, workmanship, finish, and rejection.

*References.*—Methods of testing, general requirements for metals, *see* 600.1, 644.11; pipe threads and pipe installation, *see* 607.0; brass tubes, *see* 645.24; gas fixture tubing and pipe, *see* 645.9; brass pipe nipples, *see* 607.4.

### 645.24 Tubes, Brass

American Bureau of Shipping. Rules for the Classification and Construction of Steel Vessels, 1944. Brass Pipes and Tubes (Seamless). Include rules for inspection and tests.

American Society for Testing Materials, B 14-18; 1918. Seamless Brass Boiler Tubes. For locomotive boilers; requirements for manufacture, chemical composition, temper, flange test, flattening and doubling-over test, hydrostatic test, specimen, standard weights, permissible variations in dimensions, finish, and inspection.

American Society for Testing Materials, B111-43; 1943. A.S.M.E. Boiler Construction Code Specification SB-111. Copper and Copper-Alloy Seamless Condenser Tubes and Ferrule Stock. For use in surface condensers, evaporators, and heat exchangers. Gives requirements for material, manufacture, chemical composition, sample for chemical analysis, microscopic examination, expanding test, mercurous nitrate test, hydrostatic test, dimension and weight tolerances, workmanship, finish, and inspection. A.S.T.M. Emergency Alternate Provision EA-B-111; 1942, affected section 3, Material.

American Society for Testing Materials, B135-43T; 1943. Tentative Specifications for Miscellaneous Brass Tubes. Covers five alloys for straight tubes. Gives requirements for manufacture, chemical compositions, sampling for chemical analysis, tempers of drawn tubes and annealed tubes, physical properties, expansion test, mercurous nitrate test, methods of testing, number of tests, weight, dimensional tolerances, workmanship, finish, and inspection. A.S.T.M. Emergency Alternate Provision EA-B 135; 1942, affected section 3, Manufacture.

Copper and Brass Research Assn. Tube, Pipe Standards TUBE-1 to TUBE-8 inclusive, 1944. Covers round seamless tubes, wall thickness and diameter tolerances; round seamless tubes, length tolerances, straightness tolerances; copper water tube, standard dimensions and weights, diameter and wall thickness tolerances, weight tolerances; pipe, dimensions and weights, weight and wall thickness tolerances; condenser and other heat exchanger tubes, dimensions and weight tolerances; and condenser and other heat exchanger tubes, estimating data.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, 1938. Pipe and Tubes; Brass. Covers definition, nominal composition, sizes, uses, and marketing customs.

Society of Automotive Engineers. Aeronautical Material Specification 4555; 1941. Brass Tubing, Light Annealed. Covers requirements for composition, condition, quality, tolerance, reports, identification, and rejections.

Society of Automotive Engineers. 1944 Handbook, Section 3—Processed Materials. S.A.E. Standard Wrought Copper Alloys, revised 1944. Gives specification No.74—Annealed Seamless Brass Tubing and No.76—Naval Brass Tubing. Covers composition in percentage, general information, tensile strength and hardness, expanding test, appearance, dimensional tolerances, and special limits.

U. S. Gov., Federal Specification WW-T-756a; 1943. Tubes; Condenser and Ferrule-Stock, Admiralty-Metal. Covers two types—(A) suitable for packing or expanding in tube sheets, and (B) for ferrule stock. Gives requirements for chemical composition and tolerances; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Federal Specification WW-T-791; 1931. Tubing; Brass, Seamless. Covers three grades—1, 2, and 3; and four types—(A) maximum nominal working pressure, 100 lb. per square inch; (B) 200 lb. per square inch; (C) 300 lb. per square inch; and (D) 450 lb. per square inch. Gives requirements for chemical composition, tolerances, permissible variations, weights, and dimensions; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Navy Dept. Specification 34T1e; 1934. Tubing; Voice, Flexible, Metallic.

U. S. Gov., Navy Dept. Specification 44T5e; 1943. Tubing; Voice, Brass and Steel.

U. S. Gov., Navy Dept. Specification 44T7g; 1943. Tubes, Condenser; and Tubing for Ferrule Stock, Admiralty Metal.

U. S. Gov., Navy Dept. Specification 44T15b; 1932. Tubing; Brass, Seamless, 100-450-Pounds-Working-Pressure (Square Inch).

U. S. Gov., Navy Dept. Specification 44T16b; 1944. Tubing; Brass, Seamless, for Pressures From 451 to 4,000 Pounds per Square Inch.

U. S. Gov., Navy Dept. Specification 45F10a; 1937. Fittings; Tube, Brass or Bronze.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 57-191; 1944. Brass, Leaded; Tubing, Round, Seamless.

*References.*—Methods of testing, general requirements for metals, *see* 600.1, 644.11; bronze tubes, *see* 646.42; brass pipe, *see* 645.23; flexible metallic hose, *see* 607.7; gas fixture tubing and pipe, *see* 645.0.

### 645.25 Pipe Fittings, Brass

American Society of Mechanical Engineers, joint sponsor with American Society of Sanitary Engineering. American Standards Assn., A 40.2-1936. Brass Fittings for Flared Copper Tubes. Presents detailed dimensional requirements for the brass fittings used on one type of joint to connect copper tubing. Fittings are designated for maximum cold water service pressure of 175 lb. per square inch gage. Also specified are materials, size, and threading.

*References.*—Brass pipe fittings, *see* 645.4.

## 645.3 BRASS-WIRE MANUFACTURES

### 645.31 Sieves, Brass

American Society for Testing Materials, E 11-39; 1939. American Assn. of State Highway Officials, M 92-42. American Standards Assn., Z23.1-1939. Sieves for Testing Purposes (Wire Cloth Sieves, Round-Hole and Square-Hole Screens or Sieves). For precision testing in classification of materials according to size, and method of calibrating wire cloth sieves. Construction of woven wire sieves of brass, bronze, or other suitable wire, standard 8- and 3-in. sieves, micron designations for fine series and nominal dimensions, permissible variations, and limits for fine and coarse series standard wire cloth sieves, label marking, plates, and frames for round-hole and square-hole sieves, and spacing of openings.

American Society for Testing Materials, E 13-42; 1942. Definition of the Term Screen (Sieve). Includes plate, or sheet, or woven cloth type.

U. S. Gov., Federal Specification RR-S-366; 1932. Sieves; Standard, Testing. Covers sieves with woven wire cloth having frames with a nominal diameter of 8 in. of two types—(A) full-height, and (B) half-height. Wire cloth shall be woven from brass, bronze, or other suitable noncorrosive wire. Gives detail requirements; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., Navy Dept. Specification 64S8a; 1943. Sieves; Flour.

U. S. Gov., Navy Dept. Specification 64S10b; 1943. Strainers; Pot.

*References.*—Other wire cloth, *see* 645.39, 603.43, 642.4.

### 645.32 Rings and Hooks, Brass and Bronze

Society of Automotive Engineers. Aeronautical Material Specification Nos. 7320 and 7322; 1940. Sealing Rings, Bronze Castings. Primarily for drilled oil seal rings but may be used for other purposes. Gives requirements for composition, hardness, quality, finish, reports, approval, and rejections.

*References.*—Door hooks and eyes, brass wire, *see* 617.63; coat hooks, brass, *see* 617.63; hooks, bronze (builders' hardware), *see* 617.63.

### 645.39 Miscellaneous Brass-Wire Manufactures

American Hospital Assn. 4-10. Wire Screen Cloth. Covers copper, commercial bronze (brass), bronze, iron or steel, galvanized (zinc coated), copper-nickel alloy, corrosion-resisting steel (chromium-nickel), aluminum alloy, iron or steel, japanned or painted, and chromium-nickel alloy. Based on U. S. Gov. Federal Specifications RR-C-541a for Wire Screen Cloth and QQ-M-151a for General Specification for Inspection of Metals.

Society of Automotive Engineers. 1944 Handbook, Section 4—Fabricated Materials. S.A.E. Standard Wire Cloth, adopted 1924. Table of sizes and dimensions with tolerances and types of weave.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Commercial Standard CS36-33; 1933. Fourdrinier Cloth. The standard applies to one grade only of fourdrinier wire cloth—a flexible endless woven wire cloth used on paper-making machines. It establishes the number of wires in both directions for the several mesh classifications and the thickness of the wire. It further provides for inspection, labeling, and method of handling. An appendix includes recommendations of the manufacturers on the installation and use of the product. Sponsored by Wire Cloth Manufacturers Assn.

U. S. Gov., Federal Specification RR-C-451a; 1934. Amendment 4; 1944. Cloth; Wire, Screen. Covers four types, including type B—commercial bronze (brass). Gives requirements for material and workmanship, number of meshes per inch, diameter of wire, construction, length, width, and composition of wire; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., Marine Corps Specification, 1942. Hook; Double, 2 1/2-inch.

U. S. Gov., Marine Corps Specification, 1933. Keepers; Brass, for Dress Belts.

*References.*—Methods of testing, general requirements for metals, *see* 600.1, 644.11; other wire cloth, *see* 603.43, 642.4; brass sieves, *see* 645.31.

## 645.4 BRASS FITTINGS AND PLUMBING FIXTURES

American Society of Mechanical Engineers, sponsor. American Standards Assn., A40.3-1941. Soldered Joint Fittings. Covers certain dimensions of soldered-joint wrought metal and cast brass fittings for copper water tube, including—(1) detailed dimensions of the bore, (2) minimum specifications for materials, (3) minimum inside diameter of the fittings, (4) metal thickness for both wrought metal and cast brass fittings, and (5) general dimensions for cast brass fittings, including center-to-shoulder dimensions for both straight and reducing cast fittings. Due to the variety of methods used for forming wrought metal fittings, the laying length of these fittings (center-to-shoulder) is not given at this time.

Underwriters' Laboratories, Inc. Standard for Fittings for Automotive, Gas, Hazardous Liquid, and Refrigeration Applications, 1940. For connecting copper, brass, aluminum, and steel tubing. Covers design and construction of brass body and nut, flare type, compression fittings. Vibration, pull, and season-cracking test requirements.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R21-25; 1925. Brass Lavatory and Sink Traps. This recommendation establishes a schedule of sizes, styles, and gages of brass lavatory and sink traps. Initiated by manufacturers now represented by Tubular Plumbing Goods Institute.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R185-42; 1942. Pipe Fittings (Grey Cast Iron, Malleable Iron, and Brass or Bronze). This recommendation covers the reduction of stock varieties to 35 percent of their former number. Sponsored by the Pipe Fittings Manufacturers Assn.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Commercial Standard CS5-40; 1940. Pipe Nipples; Brass, Copper, Steel, and Wrought-Iron. This standard covers steel, ferrous-alloy, and wrought-iron nipples, black- and zinc-coated (hot dip galvanized), in iron-pipe sizes from 1/8 to 12

in., of standard length; and brass and copper nipples in standard sizes 1/8 to 6 in. Gives tables showing pipe sizes and various lengths, packaging, and labeling. Initiated by manufacturers, now represented by National Assn. of Pipe Nipples Manufacturers.

U. S. Gov., Federal Specification FF-H-136; 1936. Hardware and Fittings; (for) Lavatory Partitions and Inclosures. Covers hardware and fittings for lavatory stall and shower partitions and inclosures of marble, slate, or glass. Types for marine use are not included. Includes bolts, latches, screw fastenings, partition fittings, gravity and spring hinges, hooks, top and bottom partition standards, strikes, top rail and shower curtain rods and fittings. Gives requirements covering dimensions, illustrations, composition of material used, workmanship, fastenings, finish, and details; methods of inspection and tests; and packing and marking. Emergency Alternate Federal Specification E-FF-H-136; July 1943, changed requirements for material and finish in order to conserve metal, especially bronze.

U. S. Gov., Federal Specification WW-N-351; 1930. Amendment 1; 1936. Nipples; Pipe, Brass, Steel, and Wrought Iron. Covers coated and uncoated nipples, in iron pipe sizes from 1/8 to 12 in., of standard lengths; brass nipples in iron pipe sizes from 1/8 to 6 in.; and three types—(A) standard weight, (B) extra strong, and (C) double extra strong. Gives detail requirements; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification WW-P-448a; 1941. Pipe-Fittings; Brass or Bronze (Threaded or Brazed), 125-Pound. Covers bushings, caps, couplings, crosses, elbows, plugs, return bends, tees, and Y-branch, 45°, straight. Gives requirements for chemical composition and dimensions; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment. Emergency Alternate Federal Specification E-WW-P-448a; 1942, (issued by Procurement Div., Treasury Dept., U. S. Gov.) permitted additional compositions for material, changed requirements for type II, Packaging and Sizes.

U. S. Gov., Federal Specification WW-P-461a; 1942. Pipe-Fittings; Brass or Bronze (Threaded), 250-Pound. Covers couplings, crosses, elbows, and tees. Gives requirements for chemical composition and dimensions; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment. Emergency Alternate Federal Specification E-WW-P-461a; 1942, (issued by Procurement Div., Treasury Dept., U. S. Gov.) permitted additional compositions for material and changed requirements for packing and marking.

U. S. Gov., Federal Specification WW-P-541a; 1940. Plumbing Fixtures (for) Land Use. Includes unfinished brass downspout nozzles threaded for pipe connection into drainage elbow at base of downspout; requirements for inspection and tests of backflow and preventives used with flush valves, including three kinds of laboratory tests; requirements for chain stay for lavatories; for metal tumbler and tooth-brush holder with round cup and bracket having round wall flange; for metal toilet paper holders including brackets, rollers, dimensions, and sizes of the various types; for soap dishes for lavatories, wall attachment, and bathtubs; for metal and round cup pattern tumbler holder with bent bracket and round wall flange; for metal towel rack with tubular metal bar with metal brackets; for towel rack with glass rod and metal brackets with round wall flange; and for area drains of heavy cast iron for three and four inch drain pipe. Emergency Alternate Federal Specification E-WW-P-541a; 1942, changed requirements for metals and finishes, standard materials, illustrations, selections, and air gaps.

U. S. Gov., Navy Dept. Specification 30H2; 1940. Holders; Toilet-Accessory (Shipboard Use), Brush-and-Comb, Soap-Dish, Sponge; Towel; Toothbrush-Cup or Tumbler.

U. S. Gov., Navy Dept. Specification 33N1; 1936. Nozzles; Valve, Gasoline-Hose.

U. S. Gov., Navy Dept. Specification 45f2e; 1932. Fittings; Pipe, Brass or Bronze, Threaded, 125-Pound.

U. S. Gov., Navy Dept. Specification 45N3; 1941. Nipples; Pipe, Brass, Steel, and Wrought-Iron.

*References.*—Methods of testing, general requirements for metals, *see* 600.1, 644.11; nickel plating, *see* 600.3; brass valves, *see* 607.6; brass hose couplings and play pipes, *see* 974.2, 202; pipe nipples, *see* 607.4, 645.23.

## 645.5 BRASS OILERS

## 645.6 BRASS BUILDERS' HARDWARE

Plain Washer Manufacturers' Assn. Semi-Standard Washers, 1938. Includes round flat brass washers, outside and hole diameters, thickness of metal, and estimated number per pound. Also includes hollow countersunk type (brass, plain and nickel-plated); hollow flush type (brass, plain and nickel-plated), etc.

U. S. Gov., Navy Dept. Specification 43R4b; 1944. Rivets and Tap-Rivets; Nonferrous, for Hull Construction.

*References.*—Builders' hardware of brass, *see* 617.

## 645.9 MISCELLANEOUS MANUFACTURES OF BRASS

American Hospital Assn., 4-52. Safety Treads. Covers two types—(A) brass-base and (B) aluminum-base. Based on U. S. Navy Dept., Specifications 12T4f for Safety Treads, 46 A 1 for Aluminum Alloy, and 46 S-40 for Tool Carbon Steel.

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering. Specifications for Buildings for Railroad Purposes: Ornamental and Miscellaneous Metal Work. Gives requirements for working stresses (tension, compression, shearing, bearing) of the cast, rolled, drawn, or extruded metals used.

American Society for Testing Materials, B 129-44T; 1944. Tentative Specifications for Cartridge Brass Cartridge Case Cups. For annealed brass; type I, for small arms cartridge case cups; and type II, for artillery cartridge case cups. Gives requirements

for basis of purchase, manufacture, chemical composition, sampling for chemical analysis, physical properties of sheet and strip, grain size, number of tests, methods of testing, tolerances, workmanship, packing, marking, inspection, and rejection.

American Society for Testing Materials, B 131-44T; 1944. Tentative Specifications for Gilding Metal Bullet Jacket Cups. For manufacture of bullet jackets; types I, II, III, and IV; and classes I, II, and III. Gives requirements for basis of purchase, manufacture, chemical composition, sampling, tensile properties, grain size, methods of testing, tolerances, workmanship, packing, marking, inspection, and rejection.

Pin, Clip and Fastener Assn. Paper Fastener Physical Standards. Covers gauges and diameters and widths of caps; gauges, widths and lengths of shank for available sizes of brass paper fasterners.

Pin, Clip and Fastener Assn. Physical Dimensions Brass and Steel Washers. Covers gauge, diameter, and slot dimensions of brass washers for use in connection with paper fasteners.

Pin, Clip and Fastener Assn. Safety Pin Physical Standards. Covers sizes, all-over lengths, and gauges of wire for safety pins classified as—10¢ grade guarded brass, and standard guarded and unguarded brass.

Pin, Clip and Fastener Assn. Straight Pin Physical Standards. Covers numbers, sizes, and counts for brass straight pins classified as—bank, dressmaker, silk, pleating, ribbon, and furrier.

Society of Automotive Engineers. Aeronautical Material Specification 4614B; 1942. Brass Forgings. Gives requirements for composition, condition, quality, reports, and rejections. Similar specifications: Federal QQ-B-611, Composition A; S.A.E. 88; A.S.T.M. B124-42T, Alloy No.2.

U. S. Gov., Army-Navy Aeronautical Specification AN-N-5; 1944. Nuts; Self-Locking.

U. S. Gov., Federal Specification FF-F-101; 1932. Fasteners; Paper, Brass. Covers two types—(I) flat head, and (II) round head. Gives requirements for material and workmanship; length, other dimensions, and chemical composition; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification FF-S-111; 1931. Screws; Wood. Covers three types—flat, oval, and round head. Gives requirements for measurements of length, of diameter, tolerances, and standard sizes; detail requirements; and methods of sampling, inspection, and tests.

U. S. Gov., Federal Specification RR-C-271; 1931. Amendment 2; 1934. Chain and Attachments; Standard, Miscellaneous. Covers two types—(A) welded; two grades—(1) crane, wrought iron; and (II) proof coil, wrought iron, or open-hearth steel; and (B) weldless (steel, copper, brass, or bronze); six classes for type A—(1) close link; (2a) long link, buoy or submarine net; (2b) long link, conveyor or sprocket wheel; (3a) twist link, plain pattern; (3b) twist link, long-link pattern; and (3c) twist link, short-link pattern; twelve classes for type B—(1) single-loop pattern, (2) double-loop pattern, (3) sash, (4a) flat link (long pitch), (4b) flat link (short pitch), (5) plumber's, (6) safety, (7) single jack, (8) double jack, (9) ladder, (10) register, and (11) brass, for mechanical communications. Gives requirements for material, workmanship, weights, design, and dimensions,; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Joint Army-Navy Specification JAN-B-67; 1944. Brass; Cartridge, Disks.

U. S. Gov., Marine Corps Specification, 1936. Buckle; Friction, 5/8-Inch, for Leggings.

U. S. Gov., Marine Corps Specification, 1917. Buckles; Harness.

U. S. Gov., Marine Corps Specification, 1920. Buckle; Headstrap, Field Hat.

U. S. Gov., Marine Corps Specification, 1928. Buckle; 1 7/16-Inch, for Trousers Belt.

U. S. Gov., Marine Corps Specification, 1901. Carriage; Drumstick.

U. S. Gov., Marine Corps Specification, 1944. Clip; End, Ball Type.

U. S. Gov., Marine Corps Specification, 1943. Eyelet; Brass, Bronzed, for Leggings.

U. S. Gov., Marine Corps Specification, 1943. Eyelet; Long, Brass, Bronzed, for Legging Clip.

U. S. Gov., Marine Corps Specification, 1933. Ferrules, for Flagstaff.

U. S. Gov., Marine Corps Specification, 1943. Hook; Brass, Bronzed, for Leggings,

U. S. Gov., Marine Corps Specification, 1937. Plate; Waist, Plain.

U. S. Gov., Marine Corps Specification, 1933. Stencils; Brass (Complete with Brush, Ink, and Sponge).

U. S. Gov., Marine Corps Specification, 1938. Tip; Metal, for 1 3/8-Inch Webbing.

U. S. Gov., Navy Dept. Specification 12T4f; 1939. Treads; Safety.

U. S. Gov., Navy Dept. Specification 27B9a; 1941. Buckles.

U. S. Gov., Navy Dept. Specification 54S4a; 1940. Seals.

U. S. Gov., Treasury Dept., Procurement Div., No.305; 1938. Washers; Brass. Shall be made of sheet brass, clean, bright, flat, smoothly punched, and without burrs. Give requirements for sizes, dimensions, and tolerances; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., U. S. Army, Chemical Warfare Service. Specification 97-101-9B; 1931. Metal Parts; Eyepiece, Gas Mask.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-256B; 1939. Holder; Napkin.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 57-161-2A; 1943. Brass; Free-Machining, Forgings.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 57-171-3A; 1943. Cup; Bullet Jacket, Gilding Metal.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 57-17-2C; 1943. Cup; Case, Cartridge, Brass.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 57-229A; 1942. Anode; Brass.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 89-2152; 1940. Case; Firing Device, Submarine Mine.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 89-4106a; 1940. Plate; Name and Number, for Submarine Mine Material.

U. S. Gov., U. S. Army, Signal Corps. Specification 72-30; 1931. Tray; Type PG-20 and PG-22, Pigeon.

*References.*—Methods of testing, general requirements for metals, *see* 600.1, 644.11; terminals and soldering lugs of brass, *see* 715.34, 715.35; brass telephone equipment, *see* 718.29; chemical fire extinguishers, brass, *see* 973.3; fuel tanks of brass for stoves and gas engines, *see* 956.2; brazing solder, brass, *see* 693.2; nails, spikes, tacks, and staples of brass and Muntz metal, *see* 608.1; brass padlocks, *see* 617.21; turnbuckles of brass, *see* 608.7; trolley ears, brass, *see* 719.63; brass paper fasteners, *see* 932.5; testing screens of brass, *see* 619.2.

## 646. BRONZE

### 646.0 GENERAL ITEMS

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering. Specifications for Buildings for Railroad Purposes: Ornamental and Miscellaneous Metal Work. Gives requirements for working stresses (tension, compression, shearing, bearing) of the cast, rolled, drawn, or extruded metals used.

American Society for Testing Materials, B 119-40T; 1940. Tentative Classification of Cast Copper-Base Alloys. Defines copper alloys as containing not over 2 percent of other elements, brass as having an appreciable amount of zinc, and bronze as having more of other alloying elements than zinc. Includes copper, 13 brasses, and 9 bronzes. Endorsed by the American Foundrymen's Assn.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, 1938. Bronzes. Covers definition, characteristics, types and classes, physical properties, specifications, uses, and forms available.

### 646.1 BRONZE INGOTS AND BARS

#### 646.11 Ingots, Bronze

American Society for Testing Materials, B30-44T; 1944. Tentative Specifications for Copper-Base Alloys in Ingot Form for Sand Castings. Covers 25 copper-base alloys, with A.S.T.M. classifications, numerical, and commercial designations, and nominal compositions. Manufacture, chemical composition, samples for analysis, chemical analysis, marking, inspection, rejection and retesting, claims and settlement of claims. Endorsed by American Foundrymen's Assn.

Non-Ferrous Ingot Metal Institute. 1940 Manual. Leaded Tin Bronze, Designation 2A. Gives chemical analysis and physical properties of the alloy. This standard is similar to Federal Specifications QQ-B-691a (No.1) and QQ-B-701 (No.1); and A.S.T.M. Specification B30-40T (2A). Nominal chemical composition of this alloy is copper 88.00, tin 6.00, lead 1.50, zinc 4.50.

Non-Ferrous Ingot Metal Institute. 1940 Manual. Leaded Tin Bronze, Designation 2B. Gives chemical analysis and physical properties of the alloy. This standard is similar to Federal Specifications QQ-B-691a (No.6 and 6X) and QQ-B-701 (No.6); A.S.T.M. Specification B30-40T (2B); and S.A.E. Specification No.63. Nominal chemical composition of this alloy is copper 87.00, tin 10.00, lead 1.00, zinc 2.00.

Non-Ferrous Ingot Metal Institute. 1940 Manual. High Leaded Tin Bronze, Designation 3A. Gives chemical analysis and physical properties of the alloy. This standard is similar to A.S.T.M. Specification B30-40T (3A) and S.A.E. Specification No. 64. Nominal chemical composition of this alloy is copper 80.00, tin 10.00, lead 10.00.

Non-Ferrous Ingot Metal Institute. 1940 Manual. High Leaded Tin Bronze, Designation 3B. Gives chemical analysis and physical properties of the alloy. This standard is similar to A.S.T.M. Specification B30-40T (3B); and S.A.E. Specification No. 660. Nominal chemical composition of this alloy is copper 83.00, tin 7.00, lead 7.00, zinc 3.00.

Non-Ferrous Ingot Metal Institute. 1940 Manual. High Leaded Tin Bronze, Designation 3C. Gives chemical analysis and physical properties of the alloy. This standard is similar to A.S.T.M. Specification B30-40T (3C); and S.A.E. Specification No.66. Nominal chemical composition of this alloy is copper 85.00, tin 5.00, lead 9.00, zinc 1.00.

Non-Ferrous Ingot Metal Institute. 1940 Manual. High Leaded Tin Bronze, Designation 3D. Gives chemical analysis and physical properties of the alloy. This standard is similar to Federal Specifications QQ-B-701 (No.7) and QQ-B-691a (No.7); A.S.T.M. Specification B30-40T (3D); and S.A.E. Specification No.67. Nominal chemical composition of this alloy is copper 78.00, tin 7.00, lead 15.00.

Non-Ferrous Ingot Metal Institute. 1940 Manual. High Leaded Tin Bronze, Designation 3E. Gives chemical analysis and physical properties of the alloy. This standard is similar to A.S.T.M. Specification B30-40T (3E). Nominal chemical composition of this alloy is copper 70.00, tin 5.00, lead 25.00.

U. S. Gov., Federal Specification QQ-B-701a; 1944. Bronze; Ingots. Covers bronze ingots for remelting in 12 compositions. Gives requirements for material, workmanship, chemical composition for each composition, and physical requirements for each composition; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Navy Dept. Specification 46B9d; 1941. Bronze; Journal, Castings.

*References.*—Methods of testing, general requirements for metals, *see* 600.1, 644.11, 646.0; aluminum bronze ingots, *see* 647.11; manganese bronze ingots, *see* 647.21; phosphor bronze ingots, *see* 647.31.

#### 646.12 Bars, Bronze

Society of Automotive Engineers. Aeronautical Material Specification No. 4615; 1943. Silicon Bronze Rods and Bars; Hard. For rods, bars, or shapes. Chemical composition, condition, quality, tolerance, reports, and rejection. Similar to A.S.T.M. Specification B 98-42, Type D, Temper Hard.

*References.*—Aluminum bronze bars, *see* 647.12; manganese bronze bars, *see* 647.22; phosphor bronze bars, *see* 647.32.

### 646.2 BRONZE PLATES, SHEETS, SHAPES, AND STRIPS

### 646.21 Plates and Sheets, Bronze

Copper and Brass Research Assn. Flat Products Standards FP-1 to FP-7, inclusive, 1944. Covers rolled flat products, cold rolled, thickness tolerances; rolled flat products, length, width and straightness tolerances; rolled flat products, copper sheet and strip rolled to weight; rolled flat products, circles and half circles, diameter tolerances; rolled flat products, hot rolled plates and sheets, weight tolerances; silicon bronze (copper-silicon alloy) A.S.M.E. code tank plates and sheets, weight and thickness tolerances; and drawn strip, bar and flat wire, thickness and width tolerances; rolled flat products, condenser tube plates, tolerances, thickness, diameter, length or width, and flatness.

*References.*—Aluminum bronze plates and sheets, *see* 647.14; manganese bronze plates and sheets, *see* 647.24; phosphor bronze plates and sheets, *see* 647.33; standard gage and thicknesses for plates and sheets, *see* 644.21.

### 646.22 Shapes, Bronze

Copper and Brass Research Assn. Rod, Wire, Shapes Standards ROD-1 to ROD-3-A, inclusive, 1944. Covers rod and wire, diameter tolerances, extruded rod, bar and wire, diameter tolerances, hot rolled round rod and wire, diameter tolerances; drawn rod and bar, drawn strip and drawn flat wire, shapes length tolerances and schedule of short lengths; drawn rod and bar, drawn strip and drawn flat wire, shapes straightness tolerances.

*References.*—Aluminum bronze shapes, *see* 647.16; manganese bronze shapes, *see* 647.25; phosphor bronze shapes, *see* 647.35.

### 646.23 Strips, Bronze

Society of Automotive Engineers. Aeronautical Material Specification 4520B; 1944. Bronze Strip. Gives requirements for composition, condition, quality, reports, tolerance, and rejections. Similar Specification: SAE 791.

*References.*—Aluminum bronze strips, *see* 647.17; manganese bronze strips, *see* 647.24; phosphor bronze strips, *see* 647.36; standard gage and thicknesses for nonferrous alloys, *see* 644.21.

## 646.3 BRONZE RODS AND WIRES

### 646.31 Rods, Bronze

American Society for Testing Materials, B 98-44; 1944. A.S.M.E. Boiler Construction Code Specification SB-98. Copper-Silicon Alloy Rods, Bars, and Shapes. Gives basis of purchase, manufacture, chemical composition, chemical analysis, tensile and bending properties, test specimens, number of tests, dimensional tolerances, workmanship and finish, inspection, rejection, and table of commercially available copper-silicon alloy rods, bars, and shapes.

Copper and Brass Research Assn. Rod, Wire, Shapes Standards ROD-1 to ROD-3-A, inclusive, 1944. Covers rod and wire, diameter tolerances, extruded rod, bar and wire, diameter tolerances, hot rolled round rod and wire, diameter tolerances; drawn rod and bar, drawn strip and drawn flat wire, shapes length tolerances and schedule of short length; drawn rod and bar, drawn strip and drawn flat wire, shapes straightness tolerances.

Society of Automotive Engineers. Aeronautical Material Specification No. 4615; 1943. Silicon Bronze Rods and Bars; Hard. For rods, bars, or shapes. Chemical composition, condition, quality, tolerance, reports, and rejection. Similar to A.S.T.M. Specification B 98-42, Type D, Temper Hard.

*References.*—Tobin bronze (naval brass) rods, *see* 645.11; aluminum bronze rods, *see* 647.13; manganese bronze rods, *see* 647.23; phosphor bronze rods, *see* 647.38.

### 646.32 Wires, Bronze

Assn. of American Railroads, Telegraph and Telephone Section, 1-A-52; 1935. Bronze Guy and Messenger Strand. Includes three sizes of 7-strand copper-base alloy; requirements as to breaking strength, bending, joints, stranding, pitch, and physical tests.

Copper and Brass Research Assn. Rod, Wire, Shapes Standards ROD-1 to ROD-3-A, inclusive, 1944. Covers rod and wire, diameter tolerances, extruded rod, bar and wire, diameter tolerances, hot rolled round rod and wire, diameter tolerances; drawn rod and bar, drawn strip and drawn flat wire, shapes length tolerances and schedule of short lengths; drawn rod and bar, drawn strip and drawn flat wire, shapes straightness tolerances.

International Municipal Signal Assn. Inc. Specification No. 31; 1942. Copper Alloy (Bronze) Messenger Strand. Covers copper alloy (bronze) strand for use as messengers in supporting aerial cable, fire alarm, police patrol and traffic signals or other municipal signalling equipment, and for the guying of overhead line poles. Gives requirements for material, properties, samples for test, packing and marking for shipment, payment for reels, inspection and tests, and rejection.

U. S. Gov., Army Air Forces. Specification 10285-A-3; 1943. Wire; Metal, Spray Gun.

*References.*—Bronze trolley wire, *see* 715.44; manganese bronze wire, *see* 647.27; phosphor bronze wire, *see* 647.38.

## 646.4 BRONZE CASTINGS AND TUBES

### 646.41 Castings, Bronze

American Bureau of Shipping. Rules for the Classification and Construction of Steel Vessels, 1944. Bronze Castings. Include rules for inspection and tests.

American Society of Mechanical Engineers, joint sponsor with American Gear Manufacturers' Assn. American Standards Assn., B 6.2-1933. Gear Materials and Blanks. These specifications are for forged and rolled carbon steel, steel castings, bronze and brass castings, and forged and rolled alloy steel. Recommendations cover—manufacture, ladle, and check analyses, finish, marking, inspection, etc. Also included are tables on chemical composition for each type of material.

American Society for Testing Materials, B 22-44T; 1944. American Assn. of State Highway Officials, M 107. Tentative Specifications for Bronze Castings for Turntables and Movable Bridges and for Bearing and Expansion Plates or Fixed Bridges. Cover four classes of bronze castings for turntables

and movable bridges and two classes of cast-bronze plates used in bridges and other structures for fixed and expansion bearings where motion is slow and intermittent. Give requirements for manufacture, chemical composition, chemical analysis, methods of chemical analysis, physical properties, hardness, test specimens, number of tests, finish, inspection, and rejection. Endorsed by American Foundrymen's Assn. A.S.T.M. Emergency Alternate Provision EA-B22b; 1944, affected table I, Chemical Requirements; table II, Physical Requirements; and Figures.

American Society for Testing Materials, B 61-44; 1944. A.S.M.E. Boiler Construction Code Specification SB-61. Steam or Valve Bronze Castings. Covers alloy composed of copper, tin, lead, zinc, commonly used as a high-grade steam metal or valve bronze. Gives basis of purchase, manufacture, chemical composition, chemical analysis, tensile properties, hydrostatic test, test specimens, number of tests, workmanship and finish, marking, inspection, certification, and rejection. Endorsed by the American Foundrymen's Assn., A.S.T.M. Emergency Alternate Provision EA-B61; 1943; affected section 7, Tests, and adds figures 3 and 4.

American Society for Testing Materials, B 66-44; 1944. Assn. of American Railways A.A.R. Specification M 503-42. Bronze Castings in the Rough for Locomotive Wearing Parts. Includes hard, medium, soft, and phosphor bronze castings, and ordinary uses of each. Gives requirements for chemical composition, chemical analysis, sample for chemical analysis, method of analysis, examination of fracture, number of tests, permissible variations in dimensions, workmanship and finish, marking, inspection, and rejection. Endorsed by the American Foundrymen's Assn.

American Society for Testing Materials, B 143-44T; 1944. Tentative Specifications for Tin-Bronze and Leaded Tin-Bronze Sand Castings. Cover castings of four alloys. Gives basis of purchase, manufacture, chemical composition and analysis, methods of chemical analysis, tensile properties, pressure and fracture tests, test specimens, number of tests, methods of testing, workmanship and finish, marking, inspection, certification, and rejection. A.S.T.M. Emergency Alternate Provision EA-B 143b; 1944, affected section 9, Test Specimens, and adds figures 3 and 4.

American Society for Testing Materials, B 144-44T; 1944. Tentative Specifications for High-Leaded Tin-Bronze Sand Castings. Cover five alloys and are intended for use for conventional bearings and bushings in the cast state. Gives basis of purchase, manufacture, chemical composition and analysis, methods of chemical analysis, tensile properties, pressure and fracture tests, test specimens, number of tests, methods of testing, workmanship and finish, marking, inspection, and rejection. A.S.T.M. Emergency Alternate Provision EA-B 144b; 1944, affected section 9, Test Specimens, and adds figures 3 and 4.

Hydraulic Institute. Material Specification for Bronze Castings, No. 130; 1939. Includes four grades of bronze castings used in the manufacture of pumping equipment; requirements for manufacture, chemical composition, test coupons, physical properties and tests, pattern equipment, workmanship, hydrostatic tests, and inspection.

Manufacturers Standardization Society of the Valve and Fittings Industry. Steam-Bronze Castings for Valves, Flanges, and Pipe Fittings, SP-20; 1943. Covers scope, quality and control, chemical composition, physical properties, tension test specimen, number of tests, records, workmanship and finish, and certification. Gives drawings showing dimensions.

Society of Automotive Engineers. Aeronautical Material Specification 4845A; 1944. Bronze Castings. Gives requirements for composition, hardness, quality, precautions, reports, identification, approval, and rejections. Similar Specifications: Federal QQ-B-691, composition 5; Navy 46M6; S.A.E. 62; A.S.T.M. B 143-41T, numerical designation 1A.

Society of Automotive Engineers. Aeronautical Material Specification No. 4855; 1943. Bronze Castings. Gives requirements for composition, quality, precautions, reports, identification, approval, and rejections. Similar Specifications: Federal QQ-B-691, composition 2; Air Corps 11306, grade A; Navy 46B23; A.S.T.M. B145-41T, designation 4A; S.A.E. 40.

Society of Automotive Engineers. Aeronautical Material Specification Nos. 7320 and 7322; 1940. Sealing Rings, Bronze Castings. Primarily for drilled oil seal rings but may be used for other purposes. Gives requirements for composition, hardness, quality, finish, reports, approval, and rejections.

Society of Automotive Engineers. 1944 Handbook, Section 3—Processed Materials. S.A.E. Standard Brass and Bronze Castings, revised 1944. Gives specification No. 62—Hard Bronze Castings and No. 63—Leaded Gun Metal. Covers composition in percentage, general information, physical characteristics, and uses.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Circular C398 and Supplement, 1944. Standard Samples. Bronze, Cast, Sample 52a. This sample is prepared and sold by the National Bureau of Standards with a certificate of analysis for use in industry and by others as a comparison standard for checking the accuracy of analysis of similar material.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R183-42; 1942. Bronze or Brass Valves. This recommendation covers the working steam pressure and sizes of steam rated gate, globe, angle, and check valves. Sponsored by the Valve Manufacturers Assn.

U. S. Gov., Federal Specification QQ-B-691b; 1944. Bronze; Castings. Covers one grade only for each composition. Gives requirements for material, workmanship, dimensions, chemical requirements, physical requirements, pressure, metallographic requirements, and tolerances; methods of sampling, inspection, and tests; and packing and marking for shipment.

U. S. Gov., Navy Dept. Specification 46B8h; 1943. Bronze; Valve (Composition M), Castings.

U. S. Gov., Navy Dept. Specification 46B21c; 1939. Bronze for Screw Pipe Fittings (Composition S-c) Castings.

U. S. Gov., Navy Dept. Specification 46B23d; 1943. Bronze; Hydraulic (Ounce Metal), Castings (Oz-c).

U. S. Gov., Navy Dept. Specification 46B24d; 1942. Bronze; Castings, Ornamental.

U. S. Gov., Navy Dept. Specification 46M6h; 1944. Metal; Gun (Composition G), Castings.

U. S. Gov., Navy Dept., U. S. Coast Guard, Bureau of Marine Inspection and Navigation. Marine Engineering Regulations and Material Specifications, 1942. Contains specifications and requirements for materials, design, construction, installation, and inspection of boilers, unfired pressure vessels and appurtenances thereof; also piping, valves, fittings, flanges, safety valves, etc., upon the strength and efficiency of which safety of life is dependent, and are intended for maximum temperatures of 1,000° F. Includes specifications for three grades of bronze castings—(A) for pressure containing parts of valves and pipe fittings subjected to working pressures up to 150 lb. p.s.i. or temperatures not exceeding 366° F.; (B) for pressure containing parts of valves and pipe fittings, also boiler mountings, expansion joints, and similar appliances subjected to steam pressures up to 300 lb., or temperatures not exceeding 450° F., and for hydraulic and compressed air services at higher pressures where the temperature does not exceed 150° F.; and (C) for bolts, nuts, and light-pressure vessels where comparatively great tensile strength and resistance to salt-water corrosion are required. Gives requirements for manufacture, chemical compositions, tensile properties, test specimens, number of tests, workmanship, finish, marking, and certification. In substantial agreement with American Society for Testing Materials Standard Specifications B62-41, B61-41, and B60-41.

U. S. Gov., Panama Canal, Purchasing Dept. Specification for Propellers, 1943. Bronze; Right-Hand Drive.

*References.*—Methods of testing, general requirements for metals, *see* 600.1, 644.11, 646.0; bronze bearing metals, and metal bearings, *see* 692.2, 692.3; feed-in yokes of trolley wire, bronze, *see* 719.63; line carrying guns of bronze, *see* 619.1; water meters of cast bronze, *see* 793.4; builders' hardware of bronze, *see* 617; aluminum bronze castings, *see* 647.15; manganese bronze castings, *see* 647.26; phosphor bronze castings, *see* 647.34; other specifications for bronze castings, *see* specifications for individual commodities made of cast bronze.

### 646.42 Tubes, Bronze

Copper and Brass Research Assn. Tube, Pipe Standards TUBE-1 to TUBE-8, inclusive, 1944. Covers round seamless tubes, wall thickness and diameter tolerances; round seamless tubes, length tolerances, straightness tolerances; copper water tube, standard dimensions and weights, diameter and wall thickness tolerances, weight tolerances; pipe, dimensions and weights, weight and wall thickness tolerances; condenser and other heat exchanger tubes, dimensions and weight tolerances; and condenser and other heat exchanger tubes, estimating data.

Society of Automotive Engineers. Aeronautical Material Specification No. 4665; 1941. Copper Silicon Bronze; Seamless Tubing. Gives requirements for composition, condition (soft annealed), quality, tolerance, reports, identification, and rejections.

U. S. Gov., Navy Dept. Specification 45F10a; 1937. Fittings; Tube, Brass, or Bronze.

*References.*—Tobin bronze (naval brass) tubes, *see* 645.24; phosphor bronze tubing, *see* 647.37.

## 646.5 MANUFACTURES OF BRONZE

### 646.50 General Items

Manufacturers Standardization Society of the Valve and Fittings Industry. Spot Facing Standard for Bronze, Iron, and Steel Flanges, SP-9; 1942. To establish maximum and minimum dimensions that reflect the tools and equipment now in common use and to set up a table of dimensions for convenient reference. Applies primarily to the spot facing of pipe flanges in brass, iron, or steel when cast integral with valves and fittings, as well as the companion flanges used with this product. Gives diagram and table showing maximum and minimum spot face diameter for standard bolt sizes from 1/2 in. to 3 1/2 in.

### 646.51 Fittings, Bronze

International Assn. of Milk Sanitarians, jointly with International Assn. of Milk Dealers and Dairy Industries Supply Assn. Three Associations' Standards. The committees from the three associations have accepted standards for—(1) a recessless sanitary union for sanitary milk pipe lines, (2) threaded fittings including bends for use with this union, and (3) improved indicating and recording thermometer connections for tanks, vats, and for pipe lines. Gives drawings of the sanitary union and drawings with tables showing dimensions for various threaded fittings including bends and thermometer connections.

Manufacturers Standardization Society of the Valve and Fittings Industry. 150, 250, and 300 Pound SP Bronze Flange and Flanged Fitting Standard SP-2; 1943. Covers materials, bolting, marking, facings, dimensions, and gaskets, with dimensional diagrams of flanges and flanged fittings.

Manufacturers Standardization Society of the Valve and Fittings Industry. 125 Pound SP Bronze Screw Pipe Fittings Standard, SP-10; 1943. Covers title, pressure-temperature ratings, materials, size, marking, threading, ribs, fitting dimensions, patterns, and tolerances. Gives drawings of various types of fittings together with tables showing sizes and dimensions.

Manufacturers Standardization Society of the Valve and Fittings Industry. 125 Pound SP Bronze Gate Valves, SP-37; 1943. Covers three types in sizes from 1/4 in. to 3 in.—(I) wedge disc, non-rising stem gate valves; (II) double disc, rising stem, inside screw gate valves; and (III) wedge disc, rising stem, inside screw gate valves. Gives pressure-temperature ratings, marking, general design, detail design, materials, and inspection and tests.

Manufacturers Standardization Society of the Valve and Fittings Industry. 100 Pound SP Bronze Gate

Valves, SP-38; 1943. Covers the minimum requirements for 100 lb. bronze gate valves of the wedge disc non-rising stem type in sizes 1/4 in. to 2 in. Gives pressure temperature ratings, marking, general design, detail design, materials, and inspection and tests.

U. S. Gov., Dept. of Commerce National Bureau of Standards. Simplified Practice Recommendation R185-42; 1942. Pipe Fittings (Grey Cast Iron, Malleable Iron and Brass or Bronze). This recommendation covers the reduction of stock varieties to 35 percent of their former number. Sponsored by the Pipe Fittings Manufacturers Assn.

U. S. Gov., Federal Specification WW-F-406a; 1941. Amendment 1; 1943. Flange-Dimensions, Standard (Classes 125 and 250 Cast-Iron Flanges; Classes 150, 250, and 300 Bronze Flanges) (for Land Use). Covers standard dimensions for flanges and includes flanges integral with the pipe, pipe-fittings, and valves; companion flanges; and blind flanges. Gives requirements for class and description, sizes, (cast iron and bronze), marking, materials, threads, brazing hubs, silver brazing alloy, and details for each class including facing and dimensions; method of inspection; and packing of shipments.

U. S. Gov., Federal Specification WW-P-448a; 1941. Pipe-Fittings; Brass or Bronze (Threaded or Brazed), 125-Pound. Covers bushings, caps, couplings, crosses, elbows, plugs, return bends, tees, and Y-branch, 45°, straight. Gives requirements for chemical composition and dimensions; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment. Emergency Alternate Federal Specification E-WW-P-448a; 1942, (issued by Procurement Div., Treasury Dept., U. S. Gov.) permitted additional compositions for material, changed requirements for type II, Packaging and Sizes.

U. S. Gov., Federal Specification WW-P-461a; 1942. Pipe-Fittings; Brass or Bronze (Threaded), 250-Pound. Covers couplings, crosses, elbows, and tees. Gives requirements for chemical composition and dimensions; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment. Emergency Alternate Federal Specification E-WW-P-461a; 1942, (issued by Procurement Div., Treasury Dept., U. S. Gov.) permitted additional compositions for material and changed requirements for packing and marking.

U. S. Gov., Federal Specification WW-U-516; 1931. Unions; Brass or Bronze, 250-Pound. Covers threaded type in three chemical compositions—A, B, and C. Gives requirements for chemical compositions, physical properties, and dimensions; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking. Emergency Alternate Federal Specification E-WW-U-516; 1942, (issued by Procurement Div., Treasury Dept., U. S. Gov.) changed requirements for chemical composition, finish, and packaging.

U. S. Gov., Navy Dept. Specification 45F1f; 1941. Fittings; Pipe, Bronze (Threaded), 250-Pound.

U. S. Gov., Navy Dept. Specification 45f2e; 1932. Fittings; Pipe, Brass or Bronze, Threaded, 125-Pound.

U. S. Gov., Navy Dept. Specification 45F8b; 1935. Fittings; Gage-Glass (Tubular).

U. S. Gov., Navy Dept. Specification 45F12; 1944. Fittings; Tube, Bronze, Cast (Silver-Brazing).

U. S. Gov., Navy Dept. Specification 45U5a; 1935. Unions; Brass or Bronze, 250-Pound.

*References.*—Methods of testing, general requirements for metals, *see* 600.1, 644.11, 646.0; hose valves, gate valves, check valves for fire protection, *see* 607.6; other bronze pipe fittings, *see* 645.4.

## 646.52 Bronze-Wire Manufactures

American Hospital Assn., 4-10. Wire Screen Cloth. Covers copper, commercial bronze (brass), bronze, iron or steel, galvanized (zinc coated), copper-nickel alloy, corrosion-resisting steel (chromium-nickel), aluminum alloy, iron or steel, japanned or painted, and chromium-nickel alloy. Based on U. S. Gov. Federal Specifications RR-C-541a for Wire Screen Cloth and QQ-M-151a for General Specification for Inspection of Metals.

American Society for Testing Materials, E 11-39; 1939. American Assn. of State Highway Officials, M 92-42. American Standards Assn., Z23.1-1939. Sieves for Testing Purposes (Wire Cloth Sieves, Round-Hole and Square-Hole Screens or Sieves). For precision testing in classification of materials according to size, and method of calibrating wire cloth sieves. Construction of woven wire sieves of brass, bronze, or other suitable wire, standard 8- and 3-in. sieves, micron designations for fine series and nominal dimensions, permissible variations, and limits for fine and coarse series standard wire cloth sieves, label marking, plates, and frames for round-hole and square-hole sieves, and spacing of openings.

Society of Automotive Engineers. 1944 Handbook, Section 4—Fabricated Materials. S.A.E. Standard Wire Cloth, adopted 1924. Table of sizes and dimensions with tolerances and types of weave.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R122-31; 1931. Wire Insect Screen Cloth. This recommendation establishes a number of stock varieties of black painted and electro-galvanized steel wire screen cloth and of copper and commercial bronze wire screen cloth; includes standard mesh openings, sizes of wire, widths of roll, length of roll, packing, required percentage of copper for copper and bronze screen wire.

*References.*—Methods of testing sieves, *see* 654.31; copper and brass wire cloth, *see* 642.4, 645.39; fourdrinier wire cloth of bronze or phosphor bronze, *see* 645.39.

## 646.59 Miscellaneous Manufactures of Bronze

Amateur Athletic Union of the U. S. Official Handbook. Athletic Rules Track and Field, 1940-41. Prize Medals. Requirements for size, quality, and weight of gold, silver, and bronze medals for junior, senior, and team.

U. S. Gov., Federal Specification RR-C-271; 1931. Amendment 2; 1934. Chain and Attachments; Standard, Miscellaneous. Covers two types—(A) welded; two grades—(I) crane, wrought iron; and (II) proof coil, wrought iron, or open-hearth steel; and (B)

weldless (steel, copper, brass, or bronze); six classes for type A—(1) close link; (2a) long link, buoy or submarine net; (2b) long link, conveyor or sprocket wheel; (3a) twist link, plain pattern; (3b) twist link, long-link pattern; and (3c) twist link, short-link pattern; twelve classes for type B—(1) single-loop pattern, (2) double-loop pattern, (3) sash, (4a) flat link (long pitch), (4b) flat link (short pitch), (5) plumber's, (6) safety, (7) single jack, (8) double jack, (9) ladder, (10) register, and (11) brass, for mechanical communications. Gives requirements for material, workmanship, weights, design, and dimensions; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Federal Works Agency, Public Roads Administration. Specifications for Construction of Roads and Bridges in National Forests and National Parks, FP-41. Bronze Bearing Plates.

U. S. Gov., Navy Dept. Specification 42S2b; 1938. Sockets; Table.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 89-2152; 1940. Case; Firing Device, Submarine Mine.

*References.*—Methods of testing, general requirements for metals, *see* 600.1, 644.11, 646.0; bronze padlocks, *see* 617.21; fire hose fittings of bronze, *see* 974.2; builders hardware of bronze, *see* 617; aluminum bronze products, *see* 647.1; manganese bronze products, *see* 647.2; phosphor bronze products, *see* 647.3; testing screens, bronze, *see* 619.2.

## 647. SPECIAL BRONZES (BRONZE ALLOYS)

### 647.0 GENERAL ITEMS

Copper and Brass Research Assn. Alloy Standards, 1944. Covers standard commercial wrought copper and copper-base alloys. Gives name, composition, and forms generally available including flat rolled products, rod and drawn bar, shapes, wire, and tube.

### 647.1 ALUMINUM BRONZE

#### 647.11 Ingots, Aluminum Bronze

American Society for Testing Materials, B30-44T; 1944. Tentative Specifications for Copper-Base Alloys in Ingot Form for Sand Castings. Covers 25 copper-base alloys, with A.S.T.M. classifications, numerical, and commercial designations, and nominal compositions. Manufacture, chemical composition, samples for analysis, chemical analysis, marking, inspection, rejection and retesting, claims, and settlement of claims. Endorsed by American Foundrymen's Assn.

Non-Ferrous Ingot Metal Institute. 1940 Manual. Aluminum Bronze, Designation 9A. Gives chemical analysis and physical properties of the alloy. This standard is similar to Federal Specification QQ-B-671 Grade A; A.S.T.M. Specification B30-40T (9A); S.A.E. Specification No. 68, Grade A. Nominal chemical composition of this alloy is copper 87.50, iron 3.50, aluminum 9.00.

Non-Ferrous Ingot Metal Institute. 1940 Manual. Aluminum Bronze, Designation 9B. Gives chemical analysis and physical properties of the alloy. This standard is similar to Federal Specification QQ-B-671 Grade B; A.S.T.M. Specification B30-40T (9B); and S.A.E. Specification No. 68, Grade B. Nominal chemical composition of this alloy is copper 89.00, iron 1.00, aluminum 10.00.

U. S. Gov., Navy Dept. Specification 46B19a; 1925. Bronze; Aluminum (Composition Al-1) Ingots.

*References.*—Methods of testing, general requirements for metals, *see* 600.1, 644.11, 646.0.

#### 647.12 Bars, Aluminum Bronze

American Society for Testing Materials, B150-44T; 1944. Tentative Specifications for Aluminum Bronze Rods, Bars, and Shapes. Cover rods, bars, and shapes of any cross-section, uniform with respect to length. Basis of purchase, manufacture, chemical composition, and analysis, tensile and bending properties, mercurous nitrate test, test specimens, number of tests, methods of testing, tolerances, workmanship and finish, inspection, and rejection.

Society of Automotive Engineers. Aeronautical Material Specification 4630A; 1940. Aluminum Bronze Rods or Bars. Gives requirements for form (rods, bars, forgings, or as ordered), composition, condition, quality, tolerance, reports, and rejections.

Society of Automotive Engineers. Aeronautical Material Specification No. 4631; 1943. Aluminum Bronze; Silicon. For bars, rods, forgings, or as ordered. Gives requirements for tensile strength, yield strength, elongation, quality, tolerances, reports, identification, and rejections.

Society of Automotive Engineers. Aeronautical Material Specification No. 4632; 1941. Aluminum Bronze; Rods and Bars. Gives requirements for composition, condition, quality, tolerance, reports, and rejections.

Society of Automotive Engineers. Aeronautical Material Specification No. 4635; 1941. Aluminum Bronze; Bars and Forgings. Gives requirements for composition, condition, quality, tolerance, reports, identification, and rejection.

Society of Automotive Engineers. Aeronautical Material Specification No. 4640; 1940. Aluminum Bronze (Wrought), Nickel-Iron-Manganese. Gives requirements for form (rod, bars, forgings, or as ordered), composition, condition, quality, reports, and rejections.

Society of Automotive Engineers. 1944 Handbook, Section 3—Processed Materials. S.A.E. Standard Wrought Copper Alloys, revised 1944. Gives specification No. 701—Wrought Aluminum Bronze Rods, Bars, and Shapes. Covers composition in percentage, general information, physical properties, tensile test, bend test, mercurous nitrate test, and tolerances.

U. S. Gov., Army-Navy Aeronautical Specification AN-B-16-1; 1944. Bronze; Aluminum, Bar and Rod.

U. S. Gov., Federal Specification QQ-B-666; 1934. Amendment 3; 1942. Bronze; Aluminum, Bars, Plates, Rods, Shapes, Sheets, and Strips. Includes bars—type II, grade B. Gives requirements for material, workmanship, chemical composition, physical properties, and permissible variations; methods of sampling, inspection, and test; and requirements for packing and marking.

U. S. Gov., Navy Dept. Specification 46B17b; 1937. Bronze; Aluminum Bars, Plates, Rods, Shapes, Sheets, and Strips.

*References.*—Methods of testing, general requirements for metals, *see* 600.1, 644.11, 646.0.

### 647.13 Rods, Aluminum Bronze

American Society for Testing Materials, B150-44T; 1944. Tentative Specifications for Aluminum Bronze Rods, Bars, and Shapes. Cover rods, bars, and shapes of any cross-section, uniform with respect to length. Basis of purchase, manufacture, chemical composition, and analysis, tensile and bending properties, mercurous nitrate test, test specimens, number of tests, methods of testing, tolerances, workmanship and finish, inspection, and rejection.

Society of Automotive Engineers. Aeronautical Material Specification 4630A; 1940. Aluminum Bronze Rods or Bars. Gives requirements for form (rods, bars, forgings, or as ordered), composition, condition, quality, tolerance, reports, and rejections.

Society of Automotive Engineers. Aeronautical Material Specification No.4631; 1943. Aluminum Bronze; Silicon. For bars, rods, forgings, or as ordered. Gives requirements for tensile strength, yield strength, elongation, quality, tolerances, reports, identification, and rejections.

Society of Automotive Engineers. Aeronautical Material Specification No.4632; 1941. Aluminum Bronze; Rods and Bars. Gives requirements for composition, condition, quality, tolerance, reports, and rejections.

Society of Automotive Engineers. Aeronautical Material Specification No.4640; 1940. Aluminum Bronze (Wrought), Nickel-Iron-Manganese. Gives requirements for form (rod, bars, forgings, or as ordered , composition, condition, quality, reports, and rejections.

Society of Automotive Engineers. 1944 Handbook, Section 3—Processed Materials. S.A.E. Standard Wrought Copper Alloys, Revised 1944. Gives specification No.701—Wrought Aluminum Bronze, Rods, Bars, and Shapes. Covers composition in percentage, general information, physical properties, tensile test, bend test, mercurous nitrate test, and tolerances.

U. S. Gov., Army-Navy Aeronautical Specification AN-B-16-1; 1944. Bronze; Aluminum, Bar and Rod.

U. S. Gov., Federal Specification QQ-B-666; 1934. Amendment 3; 1942. Bronze; Aluminum, Bars, Plates, Rods, Shapes, Sheets, and Strips. Includes rods—type I, grade B. Gives requirements for material, workmanship, chemical composition, physical properties, and permissible variations; methods of sampling, inspection, and test; and requirements for packing and marking.

U. S. Gov., Federal Specification QQ-N-286; 1940. Nickel-Copper-Aluminum Alloy; Forgings, Rods, Strips, and Wire. Covers one grade. Includes four classes of rods—(A) hot-rolled or forged, (B) hot-rolled or forged, heat-treated, (C) cold-drawn, and (D) cold-drawn, heat-treated. Gives requirements for material, workmanship, chemical composition, tensile properties, physical properties, and permissible variations in dimensions; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., Navy Dept. Specification 46B17b; 1937. Bronze; Aluminum Bars, Plates, Rods, Shapes, Sheets, and Strips.

*References.*—*See* references under 647.12.

### 647.14 Plates and Sheets, Aluminum Bronze

American Society for Testing Materials, B169-44T; 1944. Tentative Specifications for Aluminum Bronze Sheet and Strip. Covers two alloys of commercial aluminum bronze sheet and strip, commonly used for drawing, forming, stamping, and bending. Gives scope, basis of purchase, manufacture, chemical composition, analysis, tensile and bending properties, tests, tolerances, finish, and inspection.

U. S. Gov., Federal Specification QQ-B-666; 1934. Amendment 3; 1942. Bronze; Aluminum, Bars, Plates, Rods, Shapes, Sheets, and Strips. Includes plates—type IV, grade A; and sheets—type V, grade A. Gives requirements for material, workmanship, chemical composition, physical properties, and permissible variations; methods of sampling, inspection, and test; and requirements for packing and marking.

U. S. Gov., Navy Dept. Specification 46B17b; 1937. Bronze; Aluminum Bars, Plates, Rods, Shapes, Sheets, and Strips.

*References.*—Thickness tolerances, *see* 640.1; standard gage and thicknesses for nonferrous sheets and plates, *see* 644.21; *see* references under 647.12.

### 647.15 Castings, Aluminum Bronze

American Society for Testing Materials, B 148-44 T; 1944. Tentative Specifications for Aluminum-Bronze Sand Castings. Cover castings of two alloys. Basis of purchase, manufacture, chemical composition and analysis, methods of chemical analysis, tensile properties, test specimens, number of tests, methods of testing, workmanship and finish, marking, inspection, and rejection. A.S.T.M. Emergency Alternate Provision EA-B 148a; 1942, affected section 3, Manufacture; table III, Tensile Requirements.

Society of Automotive Engineers. Aeronautical Material Specification No.4870; 1944. Aluminum Bronze Castings, as Cast. Gives requirements for type, composition, condition, physical properties, quality, precautions, reports, identification, approval, and rejections.

Society of Automotive Engineers. Aeronautical Material Specification No.4871; 1942. Aluminum Bronze Castings (Heat Treated). Covers requirements for composition, condition, physical properties, quality, precautions, reports, identification, approval, and rejections. Similar to U. S. Gov., War Dept., Specification 11076.

Society of Automotive Engineers. 1944 Handbook, Section 3—Processed Materials. S.A.E. Standard Brass and Bronze Castings, revised 1944. Gives specification No.68—Aluminum Bronze. Covers composition in percentages, general information, physical properties, and uses.

U. S. Gov., Army-Navy Aeronautical Specification AN-QQ-B-672-1; 1944. Bronze; Aluminum, Castings, Aircraft.

U. S. Gov., Federal Specification QQ-B-671a; 1941. Amendment 2; 1944. Bronze; Aluminum, Castings. Covers four classes—(A) as cast, (B) heat treated, (C) as cast, and (D) heat treated. Gives requirements for material, workmanship, quality, repairing of defects, chemical composition, and physical properties; methods of sampling, inspection, and tests; and packing and marking for shipment.

U. S. Gov., Navy Dept. Specification 46B18c; 1934. Bronze; Aluminum (Composition A1-c) Castings.

U. S. Gov., Navy Dept. Specification 46B29; 1939. Bronze; Aluminum-Manganese Castings (Composition MA-c).

*References.*—Methods of testing, general requirements for metals, *see* 600.1, 644.11, 646.0.

### 647.16 Shapes, Aluminum Bronze

American Society for Testing Materials, B150-44T; 1944. Tentative Specifications for Aluminum Bronze Rods, Bars, and Shapes. Cover rods, bars, and shapes of any cross-section, uniform with respect to length. Basis of purchase, manufacture, chemical composition, and analysis, tensile and bending properties, mercurous nitrate test, test specimens, number of tests, methods of testing, tolerances, workmanship and finish, inspection, and rejection.

Society of Automotive Engineers. Aeronautical Material Specification No. 4631; 1943. Aluminum Bronze; Silicon. For bars, rods, forgings, or as ordered. Gives requirements for tensile strength, yield strength, elongation, quality, tolerances, reports, identification, and rejections.

Society of Automotive Engineers. Aeronautical Material Specification No. 4635; 1941. Aluminum Bronze; Bars and Forgings. Gives requirements for composition, condition, quality, tolerance, reports, identification, and rejection.

Society of Automotive Engineers. Aeronautical Material Specification No. 4640; 1940. Aluminum Bronze (Wrought), Nickel-Iron-Manganese. Gives requirements for form (rod, bars, forgings, or as ordered), composition, condition, quality, reports, and rejections.

Society of Automotive Engineers. 1944 Handbook, Section 3—Processed Materials. S.A.E. Standard Wrought Copper Alloys, revised 1944. Gives Specification No.701—Wrought Aluminum Bronze; Rods, Bars, and Shapes. Covers composition in percentages, general information, physical properties, tensile test, bend test, mercurous nitrate test, and tolerances.

U. S. Gov., Federal Specification QQ-B-666; 1934. Amendment 3; 1942. Bronze; Aluminum, Bars, Plates, Rods, Shapes, Sheets, and Strips. Includes shapes—type III, grade B. Gives requirements for material, workmanship, chemical composition, physical properties, and permissible variations; methods of sampling, inspection, and test; and requirements for packing and marking.

U. S. Gov., Navy Dept. Specification 46B17b; 1937. Bronze; Aluminum Bars, Plates, Rods, Shapes, Sheets, and Strips.

*References.*—*See* references under 647.15.

### 647.17 Strips, Aluminum Bronze

American Society for Testing Materials, B169-44T; 1944. Tentative Specifications for Aluminum Bronze Sheet and Strip. Covers two alloys of commercial aluminum bronze sheet and strip, commonly used for drawing, forming, stamping, and bending. Gives scope, basis of purchase, manufacture, chemical composition, analysis, tensile and bending properties, tests, tolerances, finish, and inspection.

U. S. Gov., Federal Specification QQ-B-666; 1934. Amendment 3; 1942. Bronze; Aluminum, Bars, Plates, Rods, Shapes, Sheets, and Strips. Includes strips—type VI, grade A. Gives requirements for material, workmanship, chemical composition, physical properties, and permissible variations; methods of sampling, inspection, and test; and requirements for packing and marking.

U. S. Gov., Federal Specification QQ-N-286; 1940. Nickel-Copper-Aluminum Alloy; Forgings, Rods, Strips, and Wire. Covers one grade. Includes six classes of cold-rolled strips—(A) soft, (B) soft, heat-treated, (C) half-hard, (D) half-hard, heat-treated, (E) full-hard, and (F) full-hard, heat-treated. Gives requirements for material, workmanship, chemical composition, tensile properties, physical properties, and permissible variations in dimensions; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., Navy Dept. Specification 46B17b; 1937. Bronze; Aluminum Bars, Plates, Rods, Shapes, Sheets, and Strips.

*References.*—Thickness tolerances, *see* 640.1; standard gage and thicknesses for nonferrous strip, *see* 644.21; *see* references under 647.15.

### 647.18 Tubes and Wire, Aluminum Bronze

American Society for Testing Materials, B 111-43; 1943. A.S.M.E. Boiler Construction Code Specification SB-111. Copper and Copper-Alloy Seamless Condenser Tubes and Ferrule Stock. For use in surface condensers, evaporators, and heat exchangers. Gives requirements for material, manufacture, chemical composition, sample for chemical analysis, microscopic examination, expanding test, mercurous nitrate test, hydrostatic test, dimension and weight tolerances, workmanship, finish, and inspection. A.S.T.M. Emergency Alternate Provision EA-B-111; 1942, affected section 3, Material.

U. S. Gov., Federal Specification QQ-N-286; 1940. Nickel-Copper-Aluminum Alloy; Forgings, Rods, Strips, and Wire. Covers one grade. Includes four classes of wire—(A) cold-drawn (B) cold-drawn, heat-treated, (C) cold-drawn, soft, and (D) cold-drawn, soft, heat-treated. Gives requirements for material, workmanship, chemical composition, tensile properties, physical properties, and permissible variations in dimensions; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

## 647.2 MANGANESE BRONZE

### 647.20 General Items

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Circular C398 and Supplement, 1944. Standard Samples. Bronze, Manganese, Sample 62b. This sample is prepared and sold by the National Bureau of Standards with a certificate of analysis for use in industry and by others as a comparison standard for checking the accuracy of analysis of similar material.

### 647.21 Ingots, Manganese Bronze

U. S. Gov., Federal Specification QQ-B-731a; 1938. Bronze; Manganese, Ingots (for Remelting). Covers one grade. Gives requirements for chemical composition, and tensile properties; methods of sampling, inspection, and tests; and requirements for packing and marking for shipment.

*References.*—Methods of chemical analysis, general requirements for metals, *see* 647.20, 600.1.

### 647.22 Bars, Manganese Bronze

American Society for Testing Materials, B-138-43; 1943. Manganese Bronze Rods, Bars, and Shapes. Covers two types of any cross-section uniform with respect to length. Gives basis of purchase, manufacture, chemical composition, chemical analysis, tensile and bending properties, mercurous nitrate test, test specimens, number of tests, methods of testing, tolerances, workmanship and finish, inspection, and rejection.

U. S. Gov., Federal Specification QQ-B-721a; 1937. Amendment 1; 1942. Bronze; Manganese, Bars, Forgings, Plates, Rods, and Shapes. Includes two classes for soft, half-hard, and hard bars—A and B. Gives requirements for material, workmanship, chemical composition, physical properties, and permissible variations; methods of sampling, inspection, and test; and requirements for packing and marking. Emergency Alternate Federal Specification E-QQ-B-721A; 1941, (issued by Procurement Div., Treasury Dept., U. S. Gov.) substituted Federal Specifications (QQ-S-636) Steel, Carbon (Low Carbon), Sheets and Strips; and (QQ-S-671) Steel, Carbon and Alloy, Bars, Steels FS1010, FS1015, FSX1015, FSX1020, FS1025, FSX1025, FS1030, FS1035, FS1040, FS1045.

*References.*—Methods of testing, general requirements for metals, *see* 600.1, 647.20.

### 647.23 Rods, Manganese Bronze

American Society for Testing Materials, B-138-43; 1943. Manganese Bronze Rods, Bars, and Shapes. Covers two types of any cross-section uniform with respect to length. Gives basis of purchase, manufacture, chemical composition, chemical analysis, tensile and bending properties, mercurous nitrate test, test specimens, number of tests, methods of testing, tolerances, workmanship and finish, inspection, and rejection.

U. S. Gov., Federal Specification QQ-B-721a, 1937. Amendment 1; 1942. Bronze; Manganese, Bars, Forgings, Plates, Rods, and Shapes. Includes two classes for soft, half-hard, and hard rods. Gives requirements for material, workmanship, chemical composition, physical properties, and permissible variations; methods of sampling, inspection, and test; and requirements for packing and marking. Emergency Alternate Federal Specification E-QQ-B-721a; 1941, (issued by Procurement Div., Treasury Dept., U. S. Gov.) substituted Federal Specifications (QQ-S-636) Steel, Carbon (Low-Carbon), Sheets and Strips; and (QQ-S-671) Steel, Carbon and Alloy, Bars, Steels FS1010, FS1015, FSX1015, FSX1020, FS1025, FSX1025, FS1030, FS1035, FS1040, FS1045.

U. S. Gov., Federal Specification QQ-R-571; 1932. Rods; Welding, Nonferrous (for) Gas Welding. Includes type A—manganese bronze. Gives requirements for chemical composition, weldability, character of weld metal, physical properties, sizes, and lengths; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Navy Dept. Specification 46B15d; 1939. Composition Mn-r (Bronze, Manganese); Plates, Rods, and Shapes.

U. S. Gov., Navy Dept. Specification 46R1b; 1933. Rods; Welding, Nonferrous (for Gas Welding).

*References.*—Welding equipment and practice, *see* 767; *see* references under 647.22.

### 647.24 Plates and Sheets, Manganese Bronze

U. S. Gov., Federal Specification QQ-B-721a; 1937. Amendment 1; 1942. Bronze; Manganese, Bars, Forgings, Plates, Rods, and Shapes. Includes one class for soft and half-hard plates—A. Gives requirements for material, workmanship, chemical composition, physical properties, and permissible variations; methods of sampling, inspection, and test; and requirements for packing and marking. Emergency Alternate Federal Specification E-QQ-B-721A; 1941, (issued by Procurement Div., Treasury Dept., U. S. Gov.) substituted Federal Specifications (QQ-S-636) Steel, Carbon (Low Carbon), Sheets and Strips; and (QQ-S-671) Steel, Carbon and Alloy, Bars, Steels FS1010, FS1015, FSX1015, FSX1020, FS1025, FSX1025, FS1030, FS1035, FS1040, FS1045.

U. S. Gov., Navy Dept. Specification 46B15d; 1939. Composition Mn-r (Bronze, Manganese); Plates, Rods, and Shapes.

*References.*—Standard gage and thicknesses for plates and sheets, *see* 644.21; *see* references under 647.22.

### 647.25 Shapes, Manganese Bronze

American Society for Testing Materials, B-138-43; 1943. Manganese Bronze Rods, Bars, and Shapes. Covers two types of any cross-section uniform with respect to length. Gives basis of purchase, manufacture, chemical composition, chemical analysis, tensile and bending properties, mercurous nitrate test, test specimens, number of tests, methods of testing, tolerances, workmanship and finish, inspection, and rejection.

Society of Automotive Engineers. Aeronautical Material Specification 2560A; 1942. Impregnation of Castings. To make porous castings pressure tight by suitable cleaning of castings, extraction of air from the porous sections by vacuum, pressure filling the evacuated pores with tung oil, and subsequent polymerization and swelling of the oil retained by the pores. Optional processes permitted. Includes preparation of castings, requirements for materials, impregnation procedure, and identification.

U. S. Gov., Federal Specification QQ-B-721a; 1937. Amendment 1; 1942. Bronze; Manganese, Bars, Forgings, Plates, Rods, and Shapes. Includes one class for soft shapes—A. Gives requirements for material, workmanship, chemical composition, physical properties, and permissible variations; methods of sampling, inspection, and test; and requirements for packing and marking. Emergency Alternate Federal

Specification E-QQ-B-721A; 1941 (issued by Procurement Div., Treasury Dept., U. S. Gov.) substituted Federal Specifications (QQ-S-636) Steel, Carbon (Low Carbon), Sheets and Strips; and (QQ-S-671) Steel, Carbon and Alloy, Bars, Steels FS1010, FS1015, FS1015, FSX1020, FS1025, FSX1025, FS1030, FS1035, FS1040, FS1045.

U. S. Gov., Navy Dept. Specification 46B15d; 1939. Bronze; Manganese (Composition Mn-r) Plates, Rods, and Shapes.

*References.—See* references under 647.22.

### 647.26 Castings, Manganese Bronze

American Society for Testing Materials, B132-44T; 1944. Tentative Specifications for Leaded High-Strength Yellow Brass (Manganese Bronze) Sand Castings. For light or medium and heavy section castings, two classes, known commercially as manganese bronze, for use as structural or nonpressure containing parts of valves. Basis of purchase, manufacture, tensile properties, test specimens, methods of testing, chemical composition, marking, inspection, castings made from stock, and certification.

Society of Automotive Engineers. Aeronautical Material Specification 4619; 1940. Manganese Bronze; Forgings. Covers requirements for composition, condition, quality, reports, and rejections.

Society of Automotive Engineers. Aeronautical Material Specification 4860; 1940. Manganese Bronze; Castings. Gives requirements for composition, test bars, quality, reports, precautions, identification, shipments, approval, and rejections. Similar to U. S. Gov., Navy Dept., Specification 49B3; U. S. Gov. Federal Specification QQ-B-726; A.S.T.M. Specification B54-27; and Society of Automotive Engineers Specification 43.

Society of Automotive Engineers. Aeronautical Material Specification 4862A; 1944. Manganese Bronze Castings (High Strength). Gives requirements for composition, condition, physical properties, quality, precautions, reports, identification, approval, and rejections. Similar Specifications: Federal QQ-B-726, Class C; Navy 46B29, Class A.

Society of Automotive Engineers. 1944 Handbook, Section 3—Processed Materials. S.A.E. Standard Brass and Bronze Castings, revised 1944. Gives specification No. 43—Manganese Bronze and High Tensile Manganese Bronze. Covers composition in percentage, general information, physical characteristics, and intended uses.

U. S. Gov., Federal Specification QQ-B-721a; 1937. Amendment 1; 1942. Bronze; Manganese, Bars, Forgings, Plates, Rods, and Shapes. Includes one class for soft, half-hard, and hard forgings. Gives requirements for material, workmanship, chemical composition, physical properties, and permissible variations; methods of sampling, inspection, and test; and requirements for packing and marking. Emergency Alternate Federal Specification E-QQ-B-721A; 1941, (issued by Procurement Div., Treasury Dept., U. S. Gov.) substituted Federal Specifications QQ-S-636, Steel, Carbon (Low Carbon), Sheets and Strips; and QQ-S-671, Steel, Carbon and Alloy, Bars, Steels FS1010, FS1015, FSX1015, FSX1020, FS1025, FSX1025, FS1030, FS1035, FS1040, FS1045.

U. S. Gov., Federal Specification QQ-B-726c; 1943. Amendment 1; 1944. Bronze; Manganese, Castings (including Manganese Aluminum Bronze). Covers four classes—A, B, C, and D. Gives requirements for material, appearance of castings, repairing of defects, dimensions, chemical composition, and tensile requirements; methods of sampling, inspection, and tests; packing and marking.

U. S. Gov., Navy Dept. Specification 49B3e; 1939. Bronze; Manganese Castings (Composition Mn-c).

*References.—See* references under 647.22; manganese bronze ingots, *see* 647.21.

### 647.27 Wires, Manganese Bronze

## 647.3 PHOSPHOR BRONZE

### 647.31 Ingots and Bearing Metals, Phosphor Bronze

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering. Specifications for Movable Railway Bridges. Covers requirements for phosphor bronze—hardness, casting ingots, grades, chemical and physical properties, test specimens, and compression tests.

*References.*—Bronze bearing metals and metal bearings, *see* 647.34, 692.2, 692.3; methods of testing, general requirements for metals, *see* 600.1.

### 647.32 Bars, Phosphor Bronze

American Society for Testing Materials, B139-44T; 1944. Tentative Specifications for Phosphor Bronze Rods, Bars, and Shapes. Cover five grades of rods, bars, and shapes 0.250 in., and over in diameter or thickness, and of any cross-section uniform with respect to length. Basis of purchase, manufacture, chemical composition, sampling for and methods of chemical analysis, tensile and bending properties, test specimens, number and methods of tests, tolerances, workmanship and finish, inspection, and rejection.

Society of Automotive Engineers. Aeronautical Material Specification 4625B; 1942. Phosphor Bronze; Rods and Bars (Hard). Gives requirements for form (rods, bars, tubes, or shapes), composition, condition, quality, tolerance, reports, identification, and rejections. Similar specifications: Federal QQ-B-746, Types I, II, and III, Grade A, Temper Hard; Navy 46B14; A.S.T.M. B139-42T, Grade A.

U. S. Gov., Federal Specification QQ-B-746; 1934. Amendment 2; 1942. Bronze; Phosphor, Bars, Plates, Rods, Shapes, Sheets, and Strips. Includes (type II) bars, grade A, hard. Gives requirements for material, workmanship, chemical composition, physical properties, and permissible variations; methods of sampling, inspection, and test; and requirements for packing and marking.

U. S. Gov., Navy Dept. Specification 46B14f; 1945. Bronze; Phosphor, Rolled or Drawn, Bars, Plates, Rods, Sheets, and Strips.

### 647.33 Plates and Sheets, Phosphor Bronze

American Society for Testing Materials, B 103-44; 1944. Phosphor Bronze Sheet and Strip. For drawing, forming, stamping, and bending, particularly

in making of spring devices for electrical apparatus. Covers four grades. Gives requirements for manufacture, chemical composition, sampling, analysis, tempers, tensile strength, hardness, testing, tolerances, workmanship and finish, inspection, and rejection.

U. S. Gov., Federal Specification QQ-B-746; 1934. Amendment 2; 1942. Bronze; Phosphor, Bars, Plates, Rods, Shapes, Sheets, and Strips. Includes (type IV) plates, grades A and B; and (type V) sheets, grades A and B. Gives requirements for material, workmanship, chemical composition, physical properties, and permissible variations; methods of sampling, inspection, and test; and requirements for packing and marking.

U. S. Gov., Navy Dept. Specification 46B14f; 1945. Bronze; Phosphor, Rolled or Drawn, Bars, Plates, Rods, Sheets; and Strips.

*References.*—Standard gage and thicknesses for nonferrous sheets and plates, *see* 644.21.

### 647.34 Castings, Phosphor Bronze

Society of Automotive Engineers. 1944 Handbook, Section 3—Processed Materials. S.A.E. Standard Brass and Bronze Castings, revised 1944. Gives specification No.64—Phosphor Bronze, No.640—Nickel Phosphor Bronze, and No.65—Phosphor Gear Bronze. Covers composition in percentage, general information, physical characteristics, and uses.

U. S. Gov., Navy Dept. Specification 46B51; 1943. Bronze; Phosphor Castings (Composition P-c).

*References.*—Phosphor bronze bearing metal castings, *see* 647.31; methods of testing, general requirements for metals, *see* 600.1.

### 647.35 Shapes, Phosphor Bronze

American Society for Testing Materials, B139-44T; 1944. Tentative Specifications for Phosphor Bronze Rods, Bars, and Shapes. Cover five grades of rods, bars, and shapes 0.250 in. and over in diameter or thickness, and of any cross-section uniform with respect to length. Basis of purchase, manufacture, chemical composition, sampling for and methods of chemical analysis, tensile and bending properties, test specimens, number and methods of tests, tolerances, workmanship and finish, inspection, and rejection.

U. S. Gov., Federal Specification QQ-B-746; 1934. Amendment 2; 1942. Bronze; Phosphor, Bars, Plates, Rods, Shapes, Sheets, and Strips. Includes (type III) shapes, grade A, hard. Gives requirements for material, workmanship, chemical composition, physical properties, and permissible variations; methods of sampling, inspection, and test; and requirements for packing and marking.

### 647.36 Strips, Phosphor Bronze

American Society for Testing Materials, B 103-44; 1944. Phosphor Bronze Sheet and Strip. For drawing, forming, stamping, and bending, particularly in making of spring devices for electrical apparatus. Covers four grades. Gives requirements for manufacture, chemical composition, sampling, analysis, tempers, tensile strength, hardness, testing, tolerances, workmanship and finish, inspection, and rejection.

Society of Automotive Engineers. Aeronautical Material Specification 4510A; 1942. Phosphor Bronze Strip. Covers requirements for composition, condition (spring temper), quality, tolerances, reports, and rejections. Similar specifications: Federal QQ-B-746, Type VI, Grade A, Temper Spring; Navy 46B14, Temper Spring; A.S.T.M. B103-42T, Temper Spring; and S.A.E. 77, Grade A.

Society of Automotive Engineers. 1944 Handbook, Section 3—Processed Materials, S.A.E. Standard Wrought Copper Alloys, revised 1944. Gives specification No.77—Phosphor Bronze Strip. Covers composition in percentage, general information, temper and tensile strength, and dimensional tolerances.

U. S. Gov., Federal Specification QQ-B-746; 1934. Amendment 2; 1942. Bronze; Phosphor, Bars, Plates, Rods, Shapes, Sheets, and Strips. Includes (type VI) strips, grades A and B. Gives requirements for material, workmanship, chemical composition, physical properties, and permissible variations; methods of sampling, inspection, and test; and requirements for packing and marking.

U. S. Gov., Navy Dept. Specification 46B14f; 1945. Bronze; Phosphor, Rolled or Drawn, Bars, Plates, Rods, Sheets, and Strips.

*References.*—Methods of testing, general requirements for metals, *see* 600.1; thickness tolerances, see 640.1; standard gage and thicknesses for strip, see 644.21.

### 647.37 Tubing, Phosphor Bronze

### 647.38 Wires and Rods, Phosphor Bronze

American Society for Testing Materials, B139-44T; 1944. Tentative Specifications for Phosphor Bronze Rods, Bars, and Shapes. Cover five grades of rods, bars, and shapes 0.250 in. and over in diameter or thickness, and of any cross-section uniform with respect to length. Basis of purchase, manufacture, chemical composition, sampling for and methods of chemical analysis, tensile and bending properties, test specimens, number and methods of test, tolerances, workmanship and finish, inspection, and rejection.

American Society for Testing Materials, B159-44T; 1944. Tentative Specifications for Phosphor Bronze Wire. Covers three grades of round phosphor bronze wire for general use and for spring purposes. Gives requirements for basis of purchase, manufacture, chemical composition, sampling for chemical analysis, methods of chemical analysis, tensile properties, bending properties, number of tests, diameter tolerances, workmanship and finish, packing, inspection, and rejection.

Society of Automotive Engineers. Aeronautical Material Specification 4625B; 1942. Phosphor Bronze; Rods and Bars (Hard). Gives requirements for form (rods, bars, tubes, or shapes), composition, condition, quality, tolerance, reports, identification, and rejections. Similar specifications: Federal QQ-B-746, Types I, II, and III, Grade A, Temper Hard; Navy 46B14; A.S.T.M. B139-42T, Grade A.

Society of Automotive Engineers. Aeronautical Material Specification 4720A; 1942. Spring Wire; Phosphor Bronze (5 Percent Tin—Solution). Gives requirements for composition, condition, quality, tolerances, reports, and rejections. Similar speci-

fications: Federal QQ-W-401; Navy 22W5; S.A.E. 81; A.S.T.M. B159-42T, Grade A.

Society of Automotive Engineers. 1944 Handbook, Section 3—Processed Materials. S.A.E. Standard Wrought Copper Alloys, revised 1944. Gives specification No. 81—Phosphor Bronze Wire. Covers composition in percentage, physical properties, mechanical requirements, bend test, appearance, and dimensional tolerances.

U. S. Gov., Federal Specification QQ-B-746; 1934. Amendment 2; 1942. Bronze; Phosphor Bars, Plates, Rods, Shapes, Sheets, and Strips. Includes (type I) rods, grade A, hard. Gives requirements for material, workmanship, chemical composition, physical properties, and permissible variations; methods of sampling, inspection and tests; and requirements for packing and marking.

U. S. Gov., Federal Specification QQ-W-401, 1932. Amendment 4; 1943. Wire; Phosphor-Bronze, Spring. Covers one grade, either hard-drawn or hard-rolled. Gives chemical composition and physical properties; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Federal Specification RR-R-571; 1933. Amendment 6; 1944. Rope; Wire. Covers about 25 types. Gives definitions and general requirements for wire, strand, centers, cores, lubrication, marline, diameter of wire rope, and performing; details for each type; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., Navy Dept. Specification 22W5f; 1939. Wire; Spring, Phosphor-Bronze.

U. S. Gov., Navy Dept. Specification 46B14f; 1945. Bronze; Phosphor, Rolled or Drawn, Bars, Plates, Rods, Sheets, and Strips.

*References.*—Methods of testing, general requirements for metals, *see* 600.1; iron and steel wire and wire rope, *see* 603.41, 603.42; wire gages, *see* 603.40; wire cloth of phosphor bronze, *see* 646.52.

# 650-659 LEAD, MERCURY, AND NICKEL

## 651. LEAD

### 651.0 GENERAL ITEMS

American Society for Metals. Metal Handbook, 1939 edition. Constitution of Lead Alloys, Properties of Lead and Its Alloys, and Micrography of Lead. Covers constitution of lead-antimony, lead-bismuth, lead-codmium, lead-calcium, lead-magnesium, lead-silver, and lead-tin alloys; physical constants of lead; properties of lead-antimony, lead-calcium, lead-tin, and lead-tin-antimony alloys; lead-base bearing alloys; preparation of lead for metallographic examinations; and etching lead for metallographic examination.

American Standards Assn., Z 37.11-1943. U. S. Public Health Service, endorsing sponsor. Allowable Concentration of Lead and Certain of Its Inorganic Compounds. To prescribe the permissible concentration of metallic lead, lead carbonate, lead sulfate, lead oxides, lead nitrate, and lead chloride in the atmosphere of work places for guidance in establishing control procedures for the protection of the health of workers. Gives toxic properties of lead, permissible concentration, sampling procedure, and analytical methods.

Industrial Hygiene Foundation of America, Inc. Preventive Engineering Series, Bulletin 2, Part 6; 1938. Determination of Lead in the Air. Covers collection of dust sample from the air, analysis of sample, typical example, and microscopic detection of lead.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, 1938. Lead. Covers definition, constants, solubility, occurrence, grades and specifications, marketing methods, forms available, impurities, uses, and substitutes.

Society of Automotive Engineers, Inc. Aeronautical Information Report 8; 1944. United States and British Commonwealth of Nations Aircraft Metals. Lead Alloys. Gives table showing specifications used in the United States and specifications for similar metals used in the United Kingdom, Australia, and Canada for use in the selection of interchangeable and substitute materials for the repair and maintenance of aircraft; and a table showing chemical composition and mechanical properties of these aircraft metals. Covers lead alloys.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Circular C398 and Supplement. 1944. Standard Samples. Lead, Sample 49b. This sample is prepared and sold by the National Bureau of Standards with a certificate of analysis for use in industry and by others as a comparison standard for checking the accuracy of analysis of similar material.

### 651.1 LEAD INGOTS

U. S. Gov., Federal Specification QQ-L-171; 1931. Lead; Pig. Covers two grades—A and B. Gives requirements for material, weight, marking, and chemical composition; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Navy Dept. Specification 42W2; 1943. Weights; Ballast.

*References.*—Methods of chemical analysis, general requirements for metals, *see* 651.0, 600.1.

### 651.2 BAR LEAD

### 651.3 CASTINGS, LEAD

American Society for Testing Materials, B 102-44; 1944. Lead- and Tin-Base Alloy Die Castings. For pressure die castings from five designated alloys. Gives requirements for chemical compositions, sampling, density, soundness, finish, permissible variations in dimensions, and rejection.

Lead Industries Assn. Hard Lead Closet Floor Flange, 1943. Gives requirements for material, dimensions, weight, workmanship, and drawing.

U. S. Gov., Federal Specification FF-H-111; 1933. Hardware; Builders', Shelf and Miscellaneous. Includes weights, sash. Covers four types of weight made of cast iron or cast lead, round or square. Emergency Alternate Federal Specification E-FF-H-111, July 1943, changed requirements in order to conserve lead.

U. S. Gov., Navy Dept. Specification 12S12b; 1933. Sinkers; Boat-Chest.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 29-27B; 1940. Lead; Sounding, 8-Pound.

U. S. Gov., U. S. Maritime Commission. Specification 23-MC-1; 1941. Leads; Sounding (for) Hand Line. Shall be but one type and grade. Gives requirements for material, workmanship, construction, inspection, tests, and drawing.

## 651.4 STRIPS AND SLEEVES, LEAD

Assn. of American Railroads, Telegraph and Telephone Section, 1-A-51; 1932. Lead and Lead-Alloy Sleeving. For covering splices in lead-sheathed cable, includes lead, lead-tin, and lead-antimony sleeving, requirements as to composition, form, dimensions, and finish.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-439A; 1937. Sleeve; Types FT-75 to FT-85, Inclusive, Lead.

## 651.5 SHEET LEAD

American Society of Mechanical Engineers. American Standards Assn., B32.1-1941. Preferred Thicknesses for Uncoated, Thin Flat Metals (Under 0.250 Inch). Provides a simplified system for designating the thickness of uncoated, thin flat metals and alloys by decimal parts of an inch. Gives table of preferred thicknesses.

U. S. Gov., Federal Specification QQ-L-201; 1933. Amendment 1; 1942. Lead; Sheet. Covers two grades—A and B. Gives requirements for material, chemical composition, thickness, weight, width, and length; methods of sampling, inspection, and tests; and requirements for packing and marking.

U. S. Gov., Navy Dept. Specification 47L1c; 1942. Lead; Sheet.

*References.*—Methods of test, general requirements for metals, *see* 600.1, 651.0.

## 651.6 LEAD ALLOYS

International Assn. of Electrotypers and Stereotypers of America. Standards in Printing Plates, 1930. Includes formula for electrotype backing metal for lead alloyed with tin and antimony.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 57-16-2; 1944. Lead-Base Alloy, for Name Plates.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 57-92-1B; 1942. Lead-Antimony Alloys, for Bullet Cores and Shrapnel Balls.

*References.*—Babbitt metal, *see* 692.1; solder, *see* 693.1; methods of analysis, *see* 692.0.

## 651.7 LEAD COMPOUNDS AND SALTS

*References.*—Chemical compounds of lead, *see* 839.35.

## 651.8 LEAD PIPE

Collapsible Tube Mfrs. Assn. Lead, Tin-Coated and Tin-Lead Alloy Tube Data, 1941. Gives inside and outside dimensions and weights, for seven numbers, minimum wall thickness, and metal and moulded plastic cap data.

Lead Industries Assn. Standard for Lead Fittings. For use with lead pipe, includes regular and extra long straps and bends, medium and extra heavy weight sizes, dimensional diagrams, and requirements for purity of lead, manufacture, weight and weight tolerance, and marking.

Lead Industries Assn. Standard for Lead Pipe. Gives requirements as to purity of lead, wall thickness tolerances, classification, and table of outside dimensions and weight per foot for 3/8- to 6-in. nominal pipe sizes, manufacture, and marking.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, 1938. Pipe; Lead. Covers definition, properties, solubility, grades and specifications, and uses.

U. S. Gov., Federal Specification WW-P-325; 1944. Pipe, Bends, and Traps; Lead (for) Plumbing and Water-Distribution. Covers lead pipe of one grade, one type, and six classes; lead traps of one grade, one class, and two types; drum traps of one grade, one class, and one type; lead bends of one grade, one class, and one type; and sizes to be as required. Gives requirements for material, workmanship, marking, dimensions and weights, screw caps and plugs, tolerances on weight, and details for each item; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Navy Dept. Specification 44P3e; 1944. Pipe; Lead, Lining, for Iron Pipe and Steel Tubing.

## 651.9 MISCELLANEOUS MANUFACTURES OF LEAD

International Assn. of Electrotypers and Stereotypers of America. Standards in Printing Plates, 1930. Includes thickness of unmounted electrotypes (ad plates and patent bases), thickness of curved plates, angle of bevel of patent base plates, quality of shell as to toughness and hardness, and formula for electrotype backing metal.

Lead Industries Assn. Standard for Calking Lead. Includes lead wool and other forms for calking purposes, requirements for purity of lead, maximum percentage of impurities, and marking.

U. S. Gov., Army Air Forces. Specification 10285-A-3; 1943. Wire; Metal, Spray Gun.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Commercial Standard CS94-41; 1941. Calking Lead. This standard covers chemical composition, certification, labeling, and packaging of one grade of calking lead available in pig, ingot, or wool form. Sponsored by Lead Industries Assn.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Commercial Standard CS95-41; 1941. Lead Pipe. This standard covers chemical composition, inside and outside diameters, weight classification, weight per foot, defects, certification, and labeling of one grade of lead pipe. Maximum working pressures are included to assist in the selection of the proper classification of lead pipe for various purposes. Sponsored by Lead Industries Assn.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Commercial Standard CS96-41; 1941. Lead Traps and Bends. This standard covers chemical composition, markings, weights, and dimensions, and provisions for allowable deviations, for one grade in various sizes of full S-traps, 1/2 S- or P-traps, drum traps, and bends. Sponsored by the Lead Industries Assn.

U. S. Gov., Federal Specification QQ-L-156; 1934. Lead; Calking. Covers one grade and two types—(I) pig lead and (II) lead wool. Gives requirements for

material, workmanship, and chemical composition; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2512A; 1942. Letter and Number; Lead.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 57-16-1A; 1933. Washer; Lead, for Plug, Compound.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 89-5678; 1940. Foil; Submarine Mine.

*References.*—Methods of testing, general requirements for metals, *see* 600.1, 651.0, 692.0; lead carboys, *see* 955.2; chemical hand fire extinguishers of lead, *see* 973.3; storage batteries, *see* 712.2; lead pigments and paints, *see* 840-849.

## 652. MERCURY

American Dental Assn. Specification No.6; 1932. Dental Mercury. Technical requirements are identical with those of U. S. Pharmacopoeia.

U. S. Pharmacopoeial Convention. Pharmacopoeia of U. S. Twelfth Revision, 1942. Mercury (Quicksilver). Description, solubility, residue on ignition, foreign substances, and storage. U.S.P. products of mercury—Hydrargyrum cum Creta, Unguentum Hydrargyri Forte, Unguentum Hydrargyri Mite.

### 652.0 GENERAL ITEMS

American Institute of Homoeopathy. Homoeopathic Pharmacopoeia of U. S., 1941. Mercury. Chemical symbol, synonyms, description, and preparations for triturations for use in homoeopathic medicines.

American Standards Assn., Z 37.8-1943. U. S. Public Health Service, endorsing sponsor. Allowable Concentration of Mercury. To prescribe the maximum permissible concentration of mercury in the atmosphere of work places for guidance in establishing control procedures for the protection of the health of workers. Gives properties of mercury, permissible concentration, sampling procedure, and analytical methods.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, 1938. Mercury (Quicksilver). Covers definition, constants, derivation, grades, containers, and uses.

U. S. Gov., Navy Dept. Specification 51M1a; 1930. Mercury.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 50-11-38A; 1938. Mercury.

U. S. Gov., Veterans Administration. Specification VA-D-23; 1940. Mercury.

### 652.1 MERCURY COMPOUNDS AND SALTS

*References.*—Chemical compounds of mercury, *see* 839.36.

## 653. NICKEL

### 653.0 GENERAL ITEMS

American Society for Metals. Metals Handbook, 1939 edition. Constitution of Nickel Alloys and Properties of Nickel and Its Alloys. Covers constitution of nickel-aluminum, nickel-beryllium, nickel-carbon, nickel-chromium, nickel-cobalt, nickel-manganese, nickel-molybdenum, nickel-silicon, nickel-sulphur, nickel-tin, and nickel-zinc alloys; physical constants of pure nickel; properties of commercially pure wrought "A" nickel; properties of cast nickel; and properties of the various nickel alloys.

American Society for Metals. Metals Handbook, 1939 edition. Micrography of Nickel and Its Alloys and Technology of Nickel. Covers polishing nickel for metallographic examination, etching nickel for metallographic examination, forging nickel alloys, machining high nickel alloys, and grinding, polishing, and buffing high nickel alloys.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, 1938. Nickel. Covers definition, constants, derivation, manufacture, impurities, specifications, forms available, uses, substitutes, and marketing.

Society of Automotive Engineers, Inc. Aeronautical Information Report 8; 1944. U. S. and British Commonwealth of Nations Aircraft Metals. Nickel Alloys. Gives table showing specifications used in the U. S. and specifications for similar metals used in the United Kingdom, Australia, and Canada for use in the selection of interchangeable and substitute materials for the repair and maintenance of aircraft; and a table showing chemical composition and mechanical properties of these aircraft metals. Covers nickel alloys.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Circular C398 and Supplement, 1944. Standard Samples. Alumel Wire, No.8 Gauge, Sample 118. This sample is prepared and sold by the National Bureau of Standards with a certificate of analysis for use in industry and by others as a comparison standard for checking the accuracy of analysis of similar material.

### 653.1 NICKEL METAL, INGOTS, AND SHOT

American Institute of Homoeopathy. Homoeopathic Pharmacopoeia of U.S., 1941. Metallic Nickel. Chemical symbol, synonyms, description, and preparations for triturations for use in homoeopathic medicines.

American Iron and Steel Institute. Contributions to the Metallurgy of Steel—No.5. Possible Alternates for Nickel, Chromium, and Chromium-Nickel Constructional Alloy Steels, 1941. Possible alternates are confined to constructional alloy steels containing not more than the following percentages of the following elements—nickel 5.25, chromium 3.99, manganese 2.00, silicon 2.25, vanadium 0.25, and molybdenum 1.00.

American Society for Testing Materials, B 39-22; 1922. Nickel. Covers four grades of virgin nickel—electrolytic, suitable for high grades of malleable alloys; "X" shot, suitable for nonferrous alloys and nickel steel; "A" shot, suitable for manufacture of anodes; and ingot, suitable for open-hearth and electric furnace steel. Gives chemical compositions and methods of sampling each grade. Endorsed by the American Foundrymen's Assn.

U. S. Gov., Federal Specification QQ-N-301; 1932. Amendment 2; 1941. Nickel; (for) Remelting. Covers three grades—A, B, and C. Gives requirements for material, form (in cathodes, plates, pigs, ingots, cubes, or shot form, except grade A, which is in cathodes only), and chemical composition; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

*References.*—Methods of testing, general requirements for metals, *see* 600.1, 853.0; nickel plating, *see* 800.3; chemical compounds of nickel, *see* 839.39.

### 653.2 NICKEL BARS AND RODS

American Society for Testing Materials, B160-41T; 1941. A.S.M.E. Boiler Construction Code Specification SB-160. Tentative Specifications for Nickel Rods and Bars. Gives scope, material, manufacture, chemical composition, lots, sampling, samples for chemical analysis, tensile properties, test specimens, methods of testing, permissible variations in dimensions and weight, straightness, special permissible variations, workmanship and finish, marking, inspection, special tests, and rejection.

### 653.3 NICKEL MANUFACTURES

### 653.31 Nickel Plate, Sheet and Strip

American Society for Testing Materials, B162-41T; 1941. A.S.M.E. Boiler Construction Code Specification SB-162. Tentative Specifications for Nickel Plate, Sheet, and Strip. Gives scope, material, manufacture, chemical composition, lots, sampling, samples for chemical analysis, tensile properties, Rockwell hardness, test specimens, methods of testing, permissible variations in thickness and weight, permissible variations in width and length, straightness, finished edges, squareness, flatness, special permissible variations, workmanship and finish, marking, inspection, special tests, rejection, rehearing.

### 653.32 Nickel Wire

American Society for Testing Materials, B 175-42 T; 1942. Tentative Specifications for Round Nickel Wire for Lamps and Electronic Devices. Cover round nickel wire 0.010 to 0.075 in. in diameter for use as side rods for grids, leads, and supports in lamps and electronic devices. Chemical composition, tensile properties, bending properties, resistivity, testing, dimensions and permissible variations, finish, spooling, marking, and rejection.

U. S. Gov., Army Air Forces. Specification 10285-A-3; 1943. Wire; Metal, Spray Gun.

*References.*—Nickel-chromium wire, *see* 715.43; fourdrinier wire cloth of nickel wire, *see* 645.39.

### 653.33 Nickel Pipe and Tubing

American Society for Testing Materials, B161-41T-1941. A.S.M.E. Boiler Construction Code Specification SB-161. Tentative Specifications for Nickel Cold-Drawn Pipe and Tubing. Gives scope, material, manufacture, chemical composition, lots, sampling, samples for chemical analysis, tensile properties, expansion test, hydrostatic test, test specimens, methods of testing, permissible variations in dimensions and weight, workmanship and finish, marking, inspection, special tests, and rejection.

American Society for Testing Materials, B163-41T; 1941. A.S.M.E. Boiler Construction Code Specification SB-163. Tentative Specifications for Nickel, Nickel-Copper Alloy, and Nickel-Chromium-Iron Alloy Seamless Condenser Tubes and Ferrule Stock. Gives scope, material, manufacture, chemical composition, samples for chemical analysis, tensile properties, expansion test, hydrostatic test, number of tests, retests, methods of testing, permissible variations in dimensions and weight, workmanship and finish, marking, inspection, special tests, and rejection.

### 653.39 Miscellaneous Manufactures of Nickel

U. S. Gov., Federal Specification QQ-N-285; 1944. Amendment 1; 1944. Nickel; Anodes. Covers one grade and two types—(I) carbon and (II) oxide. Gives requirements for material and workmanship, chemical composition, size, shape, means for suspension, and identification; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 57-227A; 1942. Anode; Nickel.

## 654. NICKEL-COPPER ALLOYS (MONEL METAL)

### 654.0 GENERAL ITEMS

American Iron and Steel Institute. Contributions to the Metallurgy of Steel—No.5. Possible Alternates for Nickel, Chromium, and Chromium-Nickel Constructional Alloy Steels, 1941. Possible alternates are confined to constructional alloy steels containing not more than the following percentages of the following elements—nickel 5.25, chromium 3.99, manganese 2.00, silicon 2.25, vanadium 0.25, and molybdenum 1.00.

### 654.1 NICKEL-COPPER METAL, INGOTS, AND SHOT

American Society for Testing Materials, B 30-44T; 1944. Tentative Specifications for Copper-Base Alloys in Ingot Form for Sand Castings. Covers 25 copper-base alloys, with A.S.T.M. classifications, numerical, and commercial designations, and nominal compositions. Includes nickel-bronze. Gives requirements for manufacture, chemical analysis, marking, inspection, rejection and retesting, claims, and settlement of claims. Endorsed by American Foundrymen's Assn.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, 1938. Copper-Nickel Alloy (Monel Metal). Covers definition, properties, constants, impurities, grades and forms available, containers, uses, and ordering instructions.

### 654.2 NICKEL-COPPER BARS

American Society for Testing Materials, B164-41T; 1941. A.S.M.E. Boiler Construction Code Specification SB-164. Tentative Specifications for Nickel-Copper Alloy Rods and Bars. Gives scope, material, manufacture, chemical composition, lots, sampling, samples for chemical analysis, tensile properties, test specimens, methods of testing, permissible variations in dimensions and weight, straightness, special permissible variations, workmanship and finish, marking, inspection, special tests, and rejection.

U. S. Gov., Navy Dept. Specification 46M7f; 1938. Wire, Nickel-Copper-Alloy; Bars, Plates, Rods, Shapes, Sheets, and Strips.

*References.*—Methods of testing, general requirements for metals, *see* 600.1.

### 654.3 STRIPS, NICKEL-COPPER

American Society for Testing Materials, B 122-42T; 1942. Tentative Specifications for Copper-Nickel-Zinc and Copper-Nickel Alloy Sheet and Strip. For seven classes of alloy. Gives requirements for

basis of purchase, manufacture, chemical composition, tempers, tensile strength, hardness, grain size, tests, tolerances, finish, inspection, and rejection. A.S.T.M. Emergency Alternate Provision EA-B 122; 1942, affected section 3, Manufacture.

U. S. Gov., Federal Specification QQ-N-281; 1940. Amendment 1; 1941. Nickel-Copper-Alloy; Forgings, Plates, Rods, Shapes, Sheets, Strips, and Wire. Includes cold-rolled strips (annealed, 1/4 hard, and hard stress relieved). Gives requirements for material, workmanship, chemical composition, tensile properties, physical properties, and permissible variations in dimensions; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., Navy Dept. Specification 46M7f; 1938. Wire, Nickel-Copper-Alloy; Bars, Plates, Rods, Shapes, Sheets, and Strips.

*References.*—Standard gage and thicknesses, *see* 644.21, 654.52; *see* also references under 654.2.

## 654.4 SHAPES, NICKEL-COPPER

U. S. Gov., Federal Specification QQ-N-281; 1940. Amendment 1; 1941. Nickel-Copper Alloy; Forgings, Plates, Rods, Shapes, Sheets, Strips, and Wire. Includes shapes (annealed, cold-rolled, and hot-rolled). Gives requirements for material, workmanship, chemical composition, tensile properties, physical properties, and permissible variations in dimensions; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., Navy Dept. Specification 46M7f; 1938. Wire, Nickel-Copper Alloy; Bars, Plates, Rods, Shapes, Sheets, and Strips.

*References.*—*See* references under 654.2.

## 654.5 NICKEL-COPPER MANUFACTURES

### 654.51 Castings and Forgings, Nickel-Copper

Hydraulic Institute. Material Specification for Cast Nickel-Copper Alloy (Monel), No. 140; 1939. For resistance to corrosion and a reasonable degree of castability in simpler shapes; requirements for manufacture, chemical composition, test coupons, physical properties and tests, pattern equipment, workmanship, welding, hydrostatic tests, and inspection.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, 1938. Forgings. Covers definition, characteristics, classes of forgings, forgeable metals, and commercial forging practice.

U. S. Gov., Army Air Forces. Specification 11084; 1940. Nickel-Copper Alloy; Castings.

U. S. Gov., Federal Specification QQ-C-551; 1933. Copper-Nickel Alloy; Castings. Covers one grade. Gives requirements for quality and condition, repairing of defects, chemical composition, and physical requirements; methods of inspection and tests; and requirements for packing and marking.

U. S. Gov., Federal Specification QQ-N-281; 1940. Amendment 1; 1941. Nickel-Copper Alloy; Forgings, Plates, Rods, Shapes, Sheets, Strips, and Wire. Includes forgings (hot finished and high-tensile). Gives requirements for material, workmanship, chemical composition, tensile properties, physical properties, and permissible variations in dimensions; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., Navy Dept. Specification 46M1g; 1944. Nickel-Copper Alloy; Castings.

*References.*—Methods of testing, general requirements for metals, *see* 600.1.

### 654.52 Sheets and Plates, Nickel-Copper

American Society for Testing Materials, B 122-42T; 1942. Tentative Specifications for Copper-Nickel-Zinc and Copper-Nickel Alloy Sheet and Strip. For seven classes of alloy. Gives requirements for basis of purchase, manufacture, chemical composition, tempers, tensile strength, hardness, grain size, tests, tolerances, finish, inspection, and rejection. A.S.T.M. Emergency Alternate Provision EA-B 122; 1942, affected section 3, Manufacture.

American Society for Testing Materials, B127-41T; 1941. A.S.M.E. Boiler Construction Code Specification SB-127. Tentative Specifications for Nickel-Copper Alloy Plate, Sheet, and Strip. Gives scope, material, manufacture, chemical composition, lots, sampling, samples for chemical analysis, tensile properties, Rockwell hardness, test specimens, methods of testing, permissible variations in thickness and weight, permissible variations in width and length, straightness, finished edges, squareness, flatness, special permissible variations, workmanship and finish, marking, inspection, special tests, rejection, and rehearing.

U. S. Gov., Federal Specification QQ-N-281; 1940. Amendment 1; 1941. Nickel-Copper Alloy; Forgings, Plates, Rods, Shapes, Sheets. Strips, and Wire. Includes cold-rolled sheets (annealed, satin finish, and hard stress relieved), and plates (annealed, hot-rolled, and hot-rolled and stress relief annealed). Gives requirements for material, workmanship, chemical composition, tensile properties, physical properties, and permissible variations in dimensions; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., Navy Dept. Specification 46M7f; 1938. Nickel-Copper Alloy; Bars, Plates, Rods, Shapes, Sheets, Strips, and Wire.

*References.*—Standard gage and thickness for nonferrous alloy plates and sheets, *see* 644.21; *see* references under 654.51.

### 654.53 Rods, Nickel-Copper

American Society for Testing Materials, B164-41T; 1944. A.S.M.E. Boiler Construction Code Specification SB164. Tentative Specifications for Nickel-Copper Alloy Rods and Bars. Gives scope, material, manufacture, chemical composition, lots, sampling, samples for chemical analysis, tensile properties, test specimens, methods of testing, permissible variations in dimensions and weight, straightness, special permissible variations, workmanship and finish, marking, inspection, special tests, and rejection.

U. S. Gov., Federal Specification QQ-N-281; 1940. Amendment 1; 1941. Nickel-Copper Alloy; Forgings,

Plates, Rods, Shapes, Sheets, Strips, and Wire. Includes cold-drawn and hot-drawn rods (class A) nickel-copper-alloy; and cold-drawn and hot-drawn rods (class B) nickel-copper-alloy, free machining. Gives requirements for material, workmanship, chemical composition, tensile properties, physical properties, and permissible variations in dimensions; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification QQ-R-571; 1932. Rods; Welding, Nonferrous (for) Gas Welding. Includes type F—copper-nickel alloy. Gives requirements for chemical composition, weldability, character of weld metal, physical properties, sizes, and lengths; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Navy Dept. Specification 46M7f; 1938. Nickel-Copper Alloy; Bars, Plates, Rods, Shapes, Sheets, Strips, and Wire.

U. S. Gov., Navy Dept. Specification 46R1b; 1933. Rods; Welding, Nonferrous (for Gas Welding).

*References.—See* references under 654.51.

### 654.54 Wires and Cables, Nickel-Copper

U. S. Gov., Army Air Forces. Specification 10285-A-3; 1943. Wire; Metal, Spray Gun.

U. S. Gov., Army Air Forces. Specification 11350; 1942. Wire, Nickel-Copper-Aluminum Alloy; Spring Temper (Non-Magnetic).

U. S. Gov., Federal Specification QQ-N-281; 1940. Amendment 1; 1941. Nickel-Copper Alloy; Forgings, Plates, Rods, Shapes, Sheets, Strips, and Wire. Includes cold-drawn wire (annealed, No.1 temper, regular temper, and four spring tempers). Gives requirements for material, workmanship, chemical composition, tensile properties, physical properties, and permissible variations in dimensions; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., Navy Dept. Specification 46M7f; 1938. Nickel-Copper Alloy; Bars, Plates, Rods, Shapes, Sheets, Strips, and Wire.

U. S. Gov., Navy Dept. Specification 46N5a; 1941. Wire, Nickel-Copper-Aluminum Alloy; Forgings, Rods, Strip.

### 654.59 Miscellaneous Manufactures of Nickel-Copper

American Hospital Assn., 4-10. Wire Screen Cloth. Covers copper, commercial bronze (brass), bronze, iron or steel, galvanized (zinc coated), copper-nickel alloy, corrosion-resisting steel (chromium-nickel), aluminum alloy, iron or steel, japanned or painted, and chromium-nickel alloy. Based on U. S. Gov. Federal Specifications RR-C-541a for Wire Screen Cloth and QQ-M-151a for General Specification for Inspection of Metals.

American Society for Testing Materials, B111-43; 1943. A.S.M.E. Boiler Construction Code Specification SB-111. Copper and Copper-Alloy Seamless Condenser Tubes and Ferrule Stock. For use in surface condensers, evaporators, and heat exchangers. Gives requirements for material, manufacture, chemical composition, sample for chemical analysis, microscopic examination, expanding test, mercurous nitrate test, hydrostatic test, dimension and weight tolerances, workmanship, finish, and inspection. A.S.T.M. Emergency Alternate Provision EA-B-111; 1942, affected section 3, Material.

American Society for Testing Materials, B163-41T; 1941. A.S.M.E. Boiler Construction Code Specification SB-163. Tentative Specifications for Nickel, Nickel-Copper Alloy, and Nickel-Chromium-Iron Alloy Seamless Condenser Tubes and Ferrule Stock. Gives scope, material, manufacture, chemical composition, samples for chemical analysis, tensile properties, expansion test, hydrostatic test, number of tests, retests, methods of testing, permissible variations in dimensions and weight, workmanship and finish, marking, inspection, special tests, and rejection.

American Society for Testing Materials, B165-41T; 1941. A. S. M. E. Boiler Construction Code Specification SB-165. Tentative Specifications for Nickel-Copper Alloy Cold-Drawn Pipe and Tubing. Gives scope, material, manufacture, chemical composition, lots, sampling, samples for chemical analysis, tensile properties, expansion test, hydrostatic test, test specimens, methods of testing, permissible variations in dimensions and weight, workmanship and finish, marking, inspection, special tests, and rejection.

## 655. NICKEL-COPPER-ZINC ALLOYS (NICKEL SILVER AND GERMAN SILVER)

### 655.0 GENERAL ITEMS

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, 1938. Nickle Silver and Cupro-Nickel. Covers definition, grades and characteristics, constants, forms available, specification, and uses.

### 655.1 BARS, NICKEL-COPPER-ZINC ALLOY

Non-Ferrous Ingot Metal Institute. 1940 Manual. Leaded Nickel Brass (Nickel Silver), Designation 10A. Gives chemical analysis and physical properties of the alloy. This standard is similar to A. S.T.M. Specification B30-40T (10A). Nominal chemical composition of this alloy is copper 57.00, tin 2.00, lead 9.00, zinc 20.00, nickel 12.00.

Non-Ferrous Ingot Metal Institute. 1940 Manual. Leaded Nickel Brass (Nickel Silver), Designation 10B. Gives chemical analysis and physical properties of the alloy. This standard is similar to A. S.T.M. Specification B30-40T (10B). Nominal chemical composition of this alloy is copper 60.00, tin 3.00, lead 5.00, zinc 16.00, nickel 16.00.

Non-Ferrous Ingot Metal Institute. 1940 Manual. Leaded Nickel Bronze (Nickel Silver), Designation 11A. Gives chemical analysis and physical properties of the alloy. This standard is similar to A. S.T.M. Specification B30-40T (11A); and Federal Specifications FF-H-106, FF-H-136, FF-H-121a, FF-H-116a, FF-H-111, and WW-P-541. Nominal chemical composition of this alloy is copper 64.00, tin 4.00, lead 4.00, zinc 8.00, nickel 20.00.

Non-Ferrous Ingot Metal Institute. 1940 Manual. Leaded Nickel Bronze (Nickel Silver), Designation 11B. Gives chemical analysis and physical properties of the alloy. This standard is similar to A. S.T.M. Specification B30-40T (11B). Nominal chemical composition of this alloy is copper 66.50, tin 5.00, lead 1.50, zinc 2.00, nickel 25.00.

U. S. Gov., Federal Specification QQ-N-321; 1933. Amendment 2; 1942. Nickel-Silver (German Silver); Bars, Plates, Rods, Shapes, Sheets, and Strips. Includes two compositions (A and B) for bars. Gives requirements for material, workmanship, chemical composition, and permissible variations in dimensions; methods of sampling, inspection, and tests; and requirements for packing and marking.

U. S. Gov., Navy Dept. Specification 46S3d; 1936. Nickel-Silver (German Silver); Bars, Plates, Rods, Shapes, Sheets, and Strips.

*References.*—Methods of testing, general requirements for metals, *see* 600.1.

## 655.2 SHEETS AND PLATES, NICKEL-COPPER-ZINC ALLOY

American Society for Testing Materials, B 122-42T; 1942. Tentative Specifications for Copper-Nickel-Zinc and Copper-Nickel Alloy Sheet and Strip. For seven classes of alloy. Gives requirements for basis of purchase, manufacture, chemical composition, tempers, tensile strength, hardness, grain size, tests, tolerances, finish, inspection, and rejection. A. S. T. M. Emergency Alternate Provision EA-B 122; 1942, affected section 3, Manufacture.

U. S. Gov., Federal Specification QQ-N-321; 1933. Amendment 2; 1942. Nickel-Silver (German Silver); Bars, Plates, Rods, Shapes, Sheets, and Strips. Includes two compositions (A and B) for sheets and plates. Gives requirements for material, workmanship, chemical composition, and permissible variations in dimensions; methods of sampling, inspection, and tests; and requirements for packing and marking.

U. S. Gov., Navy Dept. Specification 46S3d; 1936. Nickel-Silver (German Silver); Bars, Plates, Rods, Shapes, Sheets, and Strips.

*References.*—Standard gage and thicknesses of nonferrous alloy sheets and plates, *see* 644.21; *see* references under 655.1.

## 655.3 SHAPES AND CASTINGS, NICKEL-COPPER-ZINC ALLOY

American Society for Testing Materials, B149-44T; 1944. Tentative Specifications for Leaded Nickel-Brass (Leaded Nickel-Silver) and Leaded Nickel-Bronze (Leaded Nickel-Silver) Sand Castings. Cover castings of four alloys. Basis of purchase, manufacture, chemical composition, chemical analysis, methods of chemical analysis, pressure and fracture tests, test specimens, number of tests, methods of testing, workmanship and finish, marking, inspection and rejection.

U. S. Gov., Federal Specification QQ-N-321; 1933. Amendment 2; 1942. Nickel-Silver (German Silver); Bars, Plates, Rods, Shapes, Sheets, and Strips. Includes two compositions (A and B) for shapes. Gives requirements for material, workmanship, chemical composition, and permissible variations in dimensions; methods of sampling, inspection, and tests; and requirements for packing and marking.

U. S. Gov., Navy Dept. Specification 46S3d; 1936. Nickel-Silver (German Silver); Bars, Plates, Rods, Shapes, Sheets, and Strips.

*References.*—*See* references under 655.1.

## 655.4 STRIPS, NICKEL-COPPER-ZINC ALLOY

American Society for Testing Materials, B 122-42T; 1942. Tentative Specifications for Copper-Nickel-Zinc and Copper-Nickel Alloy Sheet and Strip. For seven classes of alloy. Gives requirements for basis of purchase, manufacture, chemical composition, tempers, tensile strength, hardness, grain size, tests, tolerances, finish, inspection, and rejection. A.S.T.M. Emergency Alternate Provision EA-B 122; 1942, affected section 3, Manufacture.

U. S. Gov., Federal Specification QQ-N-321; 1933. Amendment 2; 1942. Nickel-Silver (German Silver); Bars, Plates, Rods, Shapes, Sheets, and Strips. Includes two compositions (A and B) for strips. Gives requirements for material, workmanship, chemical composition, and permissible variations in dimensions; methods of sampling, inspection, and tests; and requirements for packing and marking.

U. S. Gov., Navy Dept. Specification 46S3d; 1936. Nickel-Silver (German Silver); Bars, Plates, Rods, Shapes, Sheets, and Strips.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 57-220A; 1942. Wire, Copper-Zinc-Nickel; Resistance Alloy.

*References.*—*See* references under 655.1.

## 655.5 WIRES AND RODS, NICKEL-COPPER-ZINC ALLOY

American Society for Testing Materials, B151-44T; 1944. Tentative Specifications for Copper-Nickel-Zinc Alloy Rod, Bar, and Wire. Covers round, rectangular, square, hexagonal, or octagonal sections in three alloys, i.e., for general use; for use generally in hard or spring temper; and for use where ease of machining is important. Basis of purchase, manufacture, chemical composition, sampling for chemical analysis, tempers of cold-drawn and annealed, tensile properties of drawn tempers, grain size of annealed tempers, number of tests, methods of testing, tolerances, finish, inspection, and rejection.

U. S. Gov., Federal Specification QQ-N-321; 1933. Amendment 2; 1942. Nickel-Silver (German Silver); Bars, Plates, Rods, Shapes, Sheets, and Strips. Includes two compositions (A and B) for wires and rods. Gives requirements for material, workmanship, chemical composition, and permissible variations in dimensions; methods of sampling, inspection, and tests; and requirements for packing and marking.

U. S. Gov., Navy Dept. Specification 46S3d; 1936. Nickel-Silver (German Silver); Bars, Plates, Rods, Shapes, Sheets, and Strips.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 57-220A; 1942. Wire, Copper-Zinc-Nickel; Resistance Alloy.

*References.*—Methods of analysis and testing of high resistance electrical wire, *see* 715.43; *see* references under 655.1.

### 655.6 HOLLOW AND STAMPED WARE, NICKEL-COPPER-ZINC ALLOY

*References.*—*See* references under 655.1.

### 655.9 MISCELLANEOUS SPECIFICATIONS FOR NICKEL-COPPER-ZINC ALLOY

*References.*—German silver contacts for telephone jacks, *see* 718.29; drawing instruments of nickel silver, *see* 935; methods of testing, general requirements for metals, *see* 600.1.

## 656. NICKEL-CHROME ALLOY

### 656.0 GENERAL ITEMS

American Society for Testing Materials, B167-41T; 1941. A.S.M.E. Boiler Construction Code Specification SB-167. Tentative Specifications for Nickel-Chromium-Iron Alloy Cold-Drawn Pipe and Tubing. Gives scope, material, manufacture, chemical composition, lots, sampling, samples for chemical analysis, tensile properties, expansion test, hydrostatic test, test specimens, methods of testing, permissible variations in dimensions and weight, workmanship and finish, marking, inspection, special tests, and rejection.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Research Paper RP474; 1932. Tensile Properties of Cast Nickel-Chromium-Iron Alloys and of Some Alloy Steels at Elevated Temperatures. Gives tensile properties, as determined by short-time tests, of cast nickel-chromium-iron alloys and alloy steels.

*References.*—Electrical testing of materials for electrical heating, *see* 715.43; nickel chromium alloys for electrical heating elements, *see* 715.43; ferro alloy castings, *see* 622.5.

### 656.1 NICKEL-CHROME METALS AND ALLOYS

American Society for Testing Materials, B82-41; 1941. Drawn or Rolled Alloy, 80 Percent Nickel, 20 Percent Chromium, for Electrical Heating Elements. Covers annealed drawn or rolled shapes. Gives heat treatment, chemical composition, chemical analysis, elongation, nominal resistivity, test for resistivity, resistance increase with temperature test, for change of resistance, durability, finish, packing, and marking.

American Society for Testing Materials, B83-41; 1941. Drawn or Rolled Alloy, 60 Percent Nickel, 15 Percent Chromium, and Balance Iron, for Electrical Heating Elements. Cover annealed drawn or rolled shapes. Heat treatment, chemical composition, chemical analysis, elongation, nominal resistivity, test for resistivity, resistance increase with temperature, test for change of resistance, durability, finish, packing, and marking.

American Society for Testing Materials, B163-41T-1941. A.S.M.E. Boiler Construction Code Specification SB-163. Tentative Specifications for Nickel, Nickel-Copper Alloy, and Nickel-Chromium-Iron Alloy Seamless Condenser Tubes and Ferrule Stock. Gives scope, material, manufacture, chemical composition, samples for chemical analysis, tensile properties, expansion test, hydrostatic test, number of tests, retests, methods of testing, permissible variations in dimensions and weight, workmanship and finish, marking, inspection, special tests, and rejection.

American Society for Testing Materials, B166-41T; 1941. A.S.M.E. Boiler Construction Code Specification SB-166. Tentative Specifications for Nickel-Chromium-Iron Alloy Rods and Bars. Gives scope, material, manufacture, chemical composition, lots, sampling, samples for chemical analysis, tensile properties, test specimens, methods of testing, permissible variations in dimensions and weight, straightness, special permissible variations, workmanship and finish, marking, inspection, special tests, and rejection.

American Society for Testing Materials, B168-41T; 1941. A.S.M.E. Boiler Construction Code Specification SB-168. Tentative Specifications for Nickel-Chromium-Iron Alloy Plate, Sheet, and Strip. Gives scope, material, manufacture, lots, sampling, samples for chemical analysis, tensile properties, Rockwell hardness, test specimens, methods of testing, permissible variations in thickness and weight, permissible variations in width and length, straightness, finished edges, squareness, flatness, special permissible variations, workmanship and finish, marking, inspection, special tests, rejection, and rehearing.

### 656.2 NICKEL-CHROME PLATES, SHEETS, AND STRIPS

Society of Automotive Engineers. Aeronautical Material Specification 5540A; 1941. Sheet and Strip, Corrosion and Heat Resistant, Nickel-Chromium-Iron Alloy. Gives requirements for composition, condition, quality, tolerance, reports, and rejections. Similar specifications: Army-Navy Aeronautical AN-QQ-N-271.

U. S. Gov., Army Air Forces. Specification 11355; 1944. Nickel-Chromium-Iron Alloy; Plate and Shapes.

U. S. Gov., Army-Navy Aeronautical Specification AN-QQ-N-271a-2; 1942. Nickel-Chromium-Iron Alloy; Sheet and Strip.

U. S. Gov., Navy Dept. Specification 47N1a; 1938. Nickel-Chromium-Iron Alloy; Bars, Forgings, Rods, Shapes, Sheets, Strips, and Wire.

### 656.3 NICKEL-CHROME TUBING

Society of Automotive Engineers. Aeronautical Material Specification 5580A; 1941. Seamless Tubing, Corrosion- and Heat-Resistant Nickel-Chromium-Iron Alloy. Gives requirements for composition, condition (cold drawn annealed), quality, tolerance, reports, identification, and rejections. Similar specifications: Army 57-174, Type IV, Class B; and Navy 49 T 13.

U. S. Gov., Army-Navy Aeronautical Specification AN-WW-T-831-1; 1942. Tubing; Nickel-Chromium-Iron Alloy; Seamless, Round.

U. S. Gov., Army-Navy Aeronautical Specification AN-WW-T-833-1; 1944. Tubing; Nickel-Chromium-Iron Alloy, Welded Round.

U. S. Gov., U. S. Army, Army Air Forces. Specification 57-174A; 1940. Nickel-Chromium-Iron Alloys; Bars, Rods, Tubing, Seamless and Welded, Wire and Welding Rod.

### 656.4 NICKEL-CHROME BARS, RODS, AND SHAPES

Society of Automotive Engineers. Aeronautical Material Specification No.5665; 1940. Nickel-Chromium-

Iron Alloy. For bars, billets, forgings, or as ordered. Gives requirements for composition, condition, quality, tolerance, reports, and rejections. Similar Specifications: Army 57-174, Type I; Navy 47 N 1, Types I and II.

Society of Automotive Engineers. Aeronautical Material Specification No.5682; 1942. Coating Alloy (Nickel-Chromium). For rods, wire, or as ordered. Covers requirements for use, composition, condition, quality, reports, identification, and rejections.

U. S. Gov., Army-Navy Aeronautical Specification AN-QQ-N-268-1; 1942. Nickel-Chromium-Iron Alloy; Bars, Forgings, and Rods.

U. S. Gov., Army Air Forces. Specification No.11355; 1944. Nickel-Chromium-Iron Alloy; Plate and Shapes.

U. S. Gov., Army-Navy Aeronautical Specification AN-N-4-1; 1944. Nickel-Chromium-Iron Alloy; Wire and Welding Rod.

U. S. Gov., Navy Dept. Specification 46N4b; 1943. Nickel-Chromium Alloy; Rods, for Boiler Refractory Anchor Bolts.

U. S. Gov., Navy Dept. Specification 47N1a; 1938. Nickel-Chromium-Iron Alloy; Bars, Forgings, Rods, Shapes, Sheets, Strips, and Wire.

U. S. Gov., U. S. Army, Army Air Forces. Specification 57-174A; 1940. Nickel-Chromium-Iron Alloy; Bars, Rods, Tubing, Seamless and Welded, Wire and Welding Rod.

### 656.5 NICKEL-CHROME CASTINGS

### 656.6 NICKEL-CHROME FORGINGS

Society of Automotive Engineers. Aeronautical Material Specification No.5665; 1940. Nickel-Chromium-Iron Alloy. For bars, billets, forgings, or as ordered. Gives requirements for composition, condition, quality, tolerance, reports, and rejections.

U. S. Gov., Army-Navy Aeronautical Specification AN-QQ-N-268-1; 1942. Nickel-Chromium-Iron Alloy; Bars, Forgings, and Rods.

U. S. Gov., Navy Dept. Specification 47N1a; 1938. Nickel-Chromium-Iron Alloy; Bars, Forgings, Rods, Shapes, Sheets, Strips, and Wire.

### 656.7 NICKEL-CHROME WIRE

American Hospital Assn., 4-10. Wire Screen Cloth. Covers copper, commercial bronze (brass), bronze, iron or steel, galvanized (zinc coated), copper-nickel alloy, corrosion-resisting steel (chromium-nickel), aluminum alloy, iron or steel, japanned or painted, and chromium-nickel alloy. Based on U. S. Gov., Federal Specifications RR-C-541a for Wire Screen Cloth and QQ-M-151a for General Specification for Inspection of Metals.

Society of Automotive Engineers. Aeronautical Material Specification No.5682; 1942. Coating Alloy (Nickel-Chromium). For rods, wire, or as ordered. Covers requirements for use, composition, condition, quality, reports, identification, and rejections.

Society of Automotive Engineers. Aeronautical Material Specification No.5683; 1940. Wire; Corrosion-Resistant, Nickel-Chromium-Iron Alloy (Welding). Covers requirements for composition, condition, quality, tolerance, reports, and rejections. Similar Specifications: Army 57-174, Type IV, Class B; Navy 46 R 6.

U. S. Gov., Army-Navy Aeronautical Specification AN-N-4-1; 1944. Nickel-Chromium-Iron Alloy; Wire and Welding Rod.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Circular C398 and Supplement, 1944. Standard Samples. Chromel Wire, No.8 Gauge, Sample 119. This sample is prepared and sold by the National Bureau of Standards with a certificate of analysis for use in industry and by others as a comparison standard for checking the accuracy of analysis of similar material.

U. S. Gov., Navy Dept. Specification 47N1a; 1938. Nickel-Chromium-Iron Alloy; Bars, Forgings, Rods, Shapes, Sheets, Strips, and Wire.

U. S. Gov., U. S. Army, Army Air Forces. Specification 57-174A; 1940. Nickel-Chromium-Iron Alloy; Bars, Rods, Tubing, seamless and Welded, Wire and Welding Rod.

## 660-669 PRECIOUS METALS, METAL JEWELRY, AND PLATED WARE

### 661. PLATINUM AND PLATINUM JEWELRY

American Gem Society, 1943. Condensed from Commercial Standard CS66-38. Platinum Jewelry. To be stamped "platinum" (or "plat.") articles must contain, if made without solder, 98 1/2 percent of the platinum metals; if made with solder, 95 percent of the platinum metals. In stamping, platinum metals refer to metals of which 90 percent is pure platinum. Articles containing less than 50 percent platinum must be marked with the percentage of other metal and the word "platinum" cannot be used. Platinum or gold articles containing 5 percent or more of platinum may be stamped with the karat of gold followed by the words "and platinum."

American Institute of Homoeopathy. Homoeopathic Pharmacopoeia of U. S., 1941. Metallic Platinum. Chemical symbol, synonyms, description, and preparations for tincture, solution, dilutions, medications, and triturations for use in homoeopathic medicines.

American Society of Metals. Metals Handbook, 1939 edition. Properties of Platinum Metals. Covers physical constants of platinum and platinum group metals and properties of platinum and platinum group metals.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, Volume 2; 1944. Platinum. Covers definition, constants, solubility, derivation, grades and forms, uses, and commercial alloys.

U S. Gov., Dept. of Commerce, National Bureau of Standards. Commercial Standard CS66-38; 1938. Marking of Articles Made Wholly or in Part of Platinum. This standard covers the marking of articles made wholly or in part of platinum, as therein defined, offered for sale in the U. S. A. It includes also

definitions, application of quality marks, contents as to quality, and a recommended wording of quality label or a tag to accompany the article. Sponsored by the Jewelry Crafts Assn.

## 662. GOLD AND DENTAL GOLD ALLOYS

Amateur Athletic Union of the U. S. Official Handbook. Athletic Rules Track and Field. Prize Medals. Requirements for size, quality, and weight of gold, silver, and bronze medals for junior, senior, and team.

American Dental Assn. Specification No. 5; 1932. Inlay Casting Gold Alloys. Technical requirements are similar to those of U. S. Gov. Federal Specification QQ-G-540, Gold; Casting, Inlay, Dental.

American Dental Assn. Specification No. 7; 1932. Wrought Gold Wire Alloys. Covers composition, fusion temperature, ultimate tensile strength, yield strength, elongation, color, methods of inspection and test, and packing.

American Gem Society, 1943. Condensed from Commercial Standard CS47-34. Gold Covered Jewelry. The quality mark "gold filled" or "rolled gold plate" shall refer to articles (except watch cases) made of base metal upon one or more sides of surfaces of which base metal there is affixed by soldering, brazing, welding, or mechanical means a sheet or sheets or shell of karat gold. "Gold filled" mark states correct proportion of alloyed gold to weight of entire metal and the actual karat fineness of the gold covering. If weight of the alloyed gold to the weight of the entire metal is less than 1/20th 12K, such article may be marked "rolled gold plate."

American Gem Society, 1943. Gold Jewelry. "Fine Gold" means gold of 24 karat quality. The term "solid gold" shall be applied only to fine gold. Karat preceded by a whole number indicates the number of 24th parts of fine gold contained in the alloy. No quality mark less than 10 karat fineness is applied. Covers articles with hollow centers, trade mark, and name of manufacturer.

American Institute of Homoeopathy. Homoeopathic Pharmacopoeia of U. S., 1941. Metallic Gold. Chemical symbol, synonyms, description, and preparations for triturations for use in homoeopathic medicines.

American Society for Metals. Metals Handbook, 1939 edition. Constitution of Gold Alloys and properties. Covers constitution of gold-copper alloys, constitution of gold-silver alloys, gold alloys, and properties of gold-copper-nickel-zinc alloys.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Scientific Paper S532; 1926. Analysis of Dental Gold Alloys. Describes methods developed at Bureau for sampling the alloys and for detection and determination of silver, iridium, tin, gold, palladium, copper, rhodium, zinc, nickel, manganese, iron, magnesium, with typical analyses of several alloys.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Commercial Standard CS47-34; 1934. Marking of Gold Filled and Rolled Gold Plate Articles Other Than Watchcases. This standard covers the marking of gold-covered articles therein defined, other than watchcases, offered for sale in the U. S. A. It also gives nomenclature and definitions, refers to quality marks and general requirements relating to tolerances, trade-mark, and style mark. This commercial standard was approved as American Standard Z31-1933 by the American Standards Assn. Sponsored by New England Manufacturing Jewelers' and Silversmiths' Assn. and Rolled Gold Platers Assn.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Commercial Standard CS67-38; 1938. Marking Articles Made of Karat Gold. This standard covers the marking of articles made of karat gold, as therein defined, offered for sale in the U. S. A. It also includes definitions, requirements for quality marks, and general requirements relating to tolerance, trade-mark, class, or style mark. It also includes a recommended wording of quality label or a tag to accompany the article. Sponsored by the New England Manufacturing Jewelers' and Silversmiths' Assn.

U. S. Gov., Federal Specification QQ-G-540; 1940. Amendment 1; 1941. Gold; Casting, Inlay, Dental. Covers four types—(I) soft, (II) medium, (III) hard, and (IV) extra hard. Gives requirements for material, workmanship, color, castings, physical characteristics, and composition; methods of inspection and tests; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification QQ-G-566; 1936. Gold-Leaf. Covers gold alloy (95 percent pure gold) sheets, furnished in books with gold leaf loosely placed between the leaves. Gives detail requirements; methods of sampling and testing; and requirements for packaging, packing, and marking.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2138; 1933. Gold Wire.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2458A; 1944. Gold; Lingual Bars.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2707A; 1945. Gold Plate.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2888; 1939. Gold Foil.

## 663. SILVER

Amateur Athletic Union of the U. S. Official Handbook. Athletic Rules Track and Field. Prize Medals. Requirements for size, quality, and weight of gold, silver, and bronze medals for junior, senior, and team.

American Gem Society, 1943. Condensed from Commercial Standard CS51-35. Jewelry of Sterling Silver in Combination With Gold. An article in which the parts of the two metals are not visibly separable and easily distinguishable may use a quality mark including the term "sterling and" or "sterling +," followed by the weight of the alloyed gold and weight of the entire article. The karat gold mark may not be used unless the alloyed gold content is at least 1/20th of the weight of the entire metal. Where silver and gold are so combined as to be visibly separable and easily distinguishable, the quality mark "sterling" and the karat mark may be used.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Commercial Standard CS51-35; 1935. Marking Articles Made of Silver in Combination With Gold. This standard covers the marking of articles

made of sterling silver in combination with gold, as herein defined, offered for sale in the U. S. A. It includes also definitions, requirements for quality marks, and general requirements relating to tolerance, trade marks, and style marks. This standard was approved as American Recommended Practice by the American Standards Assn. Sponsored by New England Manufacturing Jewelers' and Silversmiths' Assn.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Commercial Standard CS 118-44; 1944. Marking of Jewelry and Novelties of Silver. Covers the marking of silver articles commonly or commercially known as jewelry or novelties (other than flatware, hollow ware and toilet-ware) offered for sale in the U. S. Gives definitions, requirements for quality marks, tolerance, exemptions, trade mark, and class pattern, type, or style mark.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 57-23A; 1942. Silver.

*References.*—Silver and silverware, *see* 691.

# 670-679 CLOCKS, WATCHES, AND DIALS

## 670. GENERAL ITEMS

American Society of Mechanical Engineers. Power Test Code, Auxiliary Section. Part 12—Measurement of Time, 1942. Describes the following time-telling mechanisms or timekeepers and discusses their accuracy, use, and care: General purpose clocks, chronometers, high-grade clocks or regulators, precision clocks, watches and stop watches, timers, chronographs, and oscillographs.

## 671. CLOCKS

U. S. Gov., Army Air Forces. Specification 27470; 1943. Clock; Type A-12 (Aircraft).

U. S. Gov., Army-Navy Aeronautical Specification AN-C-62; 1942. Clocks; 2 3/4-Inch Dial Civil Date Elapsed Time.

U. S. Gov., Army-Navy Aeronautical Specification AN-C-99-1; 1944. Clocks; 1 7/8-Inch Dial.

U. S. Gov., Dept. of Agriculture, Forest Service. Specification 99-S. Clock; Alarm.

U. S. Gov., Federal Specification GG-C-451; 1935. Clocks; Pendulum (for) General Purposes. Covers three types—(I) floor, (II) wall, and (III) shelf; two grades—(B) rate not greater than 30 seconds per week, and (C) rate not greater than 120 seconds per week; and four classes—(1) weight driven, motor wound, (2) Weight driven, hand wound, (3) spring driven, magnet wound, and (4) spring driven, hand wound. Gives requirements for cases, movements, and driving mechanism; method of inspection and tests; and requirements for packing and marking of shipment.

U. S. Gov., Federal Specification GG-C-466; 1935. Clocks; Synchronous-Motor (for) General Purposes. Covers three types—(I) floor, (II) wall, and (III) shelf; two grades—(A) without current failure standby and (B) with current failure standby; and two classes—(1) self-starting motors, (2) nonself-starting motors. Gives requirements for cases and movements; methods of inspection and tests; and requirements for packing and marking of shipments. Amendment No. 3; 1943, changes two grades to one grade, corrosion-resisting metal, finish, construction details, and deletes current failure standby.

U. S. Gov., Marine Corps Specification, 1942. Clock; Alarm.

U. S. Gov., Marine Corps Specification, 1933. Clock; Eight-Day.

U. S. Gov., Navy Dept. Specification 18C5c; 1934. Clocks; Boat.

U. S. Gov., Navy Dept. Specification 18C11c; 1938. Clocks; Mechanical (Shipboard Use Other Than as Deck Clocks).

U. S. Gov., Navy Dept. Specification 18C13; 1931. Clocks; Deck.

U. S. Gov., Navy Dept. Specification 18C19; 1941. Clocks; Interval-Timer, Alarm-Clock Pattern.

U. S. Gov., Navy Dept. Specification 18C22; 1943. Clocks; Small, With Second Hand.

U. S. Gov., Panama Canal, Purchasing Dept. Specification for Clocks; Marine, 1944. Phenolic plastic case, polished, 6-in. dial, nonstriking.

U. S. Gov., Treasury Dept., Procurement Div., 446b; 1942. Clocks; Watchman's. Covers portable clock with carrying case and strap. Gives detail requirements as to case, movement, registering mechanism, and methods of sampling, inspection, and tests.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2222A; 1941. Clock; Interval Timer.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-376A; 1928. Clock; Type 1-55.

U. S. Gov., U. S. Maritime Commission. Specification 18-MC-3a; 1943. Clocks; Marine, Mechanical. Shall be one grade and four types—(I) nonstriking-deck (6-in. dial), (II) ship's bell (6-in. dial-luminous marking), (III) engine room (8 1/2-in. dial), and (IV) radio room (6-in. dial). Gives requirements for materials, workmanship, construction, movement, case, bezel ring, dial, keys, hands, crystal, and details for each type; inspection, sampling, and methods of test; and packaging, packing, and marking for shipment.

U. S. Gov., U. S. Maritime Commission. Specification 18-MC-6 (Tentative) 1943. Clocks; Zigzag Control. Covers one type and grade. Gives requirements for materials, workmanship, construction, movement, dials, hands, audible signal time selector, audible signal system case, finish, and instructions; inspection and methods of test; packaging, packing, and marking.

*References.*—Electric time clock systems, *see* 718.35; testing of timepieces, *see* 672; measurement of time, *see* 700.

## 672. WATCHES

U. S. Gov., Army-Navy Aeronautical Specification AN-W-9; 1943. Watches; Navigational Stop.

U. S. Gov., Army-Navy Aeronautical Specification AN-GG-W-108-1; 1943. Watches; Navigation, Master.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Circular C432; 1941. Testing of Time-

pieces. This circular describes in detail the six standard tests used at the National Bureau of Standards in the testing of watches and chronometers. These tests consist in four tests for pocket watches, namely—class A; class B; railroad precision; and business precision; a test for stop watches of various grades; and a test for ship chronometers. Information is given regarding the use and care of a watch, watch sizes, watch jewels, watch-testing machines, standard time zones and time signals. Directions and general information for the submittal of timepieces for test are also given.

U. S. Gov., Federal Specification DD-W-131; 1943. Watch-Glasses. Covers two classes—(A) resistance glass and (B) ordinary glass; and thirteen sizes. Gives requirements for material, workmanship, physical requirements, shock test, boiling test, annealing, tolerance, and wrapping; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification GG-W-111a; 1934. Amendment 2; 1939. Watches; Stop. Covers stop watches having sweep hands making one revolution a minute; six types—(A) noncontinuous-running; (B) continuous-running, single-action; (C) continuous-running, double-action; (D) combination, single-action; (E) combination, double-action; and (F) noncontinuous-running, time-out. Each class is designated by a number corresponding to the number of jewels in the movement, viz.—classes 0, 6, 7, 11, 15, 17, and 18. Gives detail requirements; method of inspection and test; and requirements for packing and marking shipments.

U. S. Gov., Marine Corps Specification, 1943. Watch; Wrist, Seven to Fifteen-Jewel.

U. S. Gov., Navy Dept. Specification 18W1d; 1943. Watches; Stop, Timer, Navigation.

U. S. Gov., Navy Dept. Specification 18W3d; 1943. Watches; Comparing.

U. S. Gov., Navy Dept. Specification 18W4c; 1931. Watches; Torpedo-Boat.

U. S. Gov., Navy Dept. Specification 18W5; 1931. Watches; Stop, Chronograph.

U. S. Gov., U. S. Army, Army Air Forces. Specification 94-27749; 1940. Watch; Navigation, Type A-8 (Ground Speed).

U. S. Gov., U. S. Army, Ordnance Dept. Specification 55-1B; 1940. Watch; Wrist, 7-Jewel.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 55-4A; 1926. Watch; Pocket, 7-Jewel.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 55-5A; 1926. Watch; Pocket, 15-Jewel or More.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 55-8A; 1926. Watch; Wrist, 15-Jewel or More.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 55-16; 1939. Watch; Pocket, Railroad Grade.

### 673. DIALS

U. S. Gov., Navy Dept. Specification 18D2; 1944. Dials; Pelorus, Plastic.

## 680-689 TIN AND ZINC

### 681. TIN

#### 681.0 GENERAL ITEMS

American Society for Metals. Metals Handbook 1939 edition. Constitution of Tin Alloys, Structure of Tin Alloys, and Properties of Tin and Its Alloys. Covers constitution of tin-antimony, tin-bismuth, tin-cadmium, tin-copper, and tin-phosphorus alloys; constitution of tin-antimony-copper alloys used as bearing metals; structure of tin-antimony-copper alloys used as bearing metals; physical constants of tin; and properties of tin-base bearing alloys.

American Society for Metals. Metals Handbook, 1939 edition. Micrography and Technology of Tin. Covers preparation and etching of tin and tin alloys for metallographic examination and manufacture and properties of tin and tin alloy die castings.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, 1938. Tin. Covers definition, constants, production and consumption, uses, secondary tin, smelters, prices, markets and trading, and packing.

Society of Automotive Engineers, Inc. Aeronautical Information Report 8; 1944. U. S. and British Commonwealth of Nations Aircraft Metals. Tin Alloys. Gives table showing specifications used in the U. S. and specifications for similar metals used in the United Kingdom, Australia, and Canada for use in the selection of interchangeable and substitute materials for the repair and maintenance of aircraft; and a table showing chemical composition and mechanical properties of these aircraft metals. Covers tin alloys, babbitts, solders, and brazing alloys.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Circular C66; 1917. Standard Samples for Thermometric Fixed Points. Description of preparation of pure samples of tin, their chemical analyses, freezing points, and degree of purity, used for the standardization of thermocouples, pyrometers, etc.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Circular C398 and Supplement, 1944. Standard Samples. Tin, Sample 42d. This sample is prepared and sold by the National Bureau of Standards with a certificate of analysis for use in industry and by others as a comparison standard for checking the accuracy of analysis of similar material.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Circular C398 and Supplement, 1944. Standard Samples. Tin Ore (Bolivian Concentrate), Sample 137; and Tin Ore (N.E.I. Concentrate), Sample 138. These samples are prepared and sold by the National Bureau of Standards with a certificate of analysis for use in industry and by others as a comparison standard for checking the accuracy of analysis of similar materials.

#### 681.1 TIN INGOTS AND PIG METAL

American Institute of Homoeopathy. Homoeopathic Pharmacopoeia of U. S., 1941. Metallic Tin. Chemical symbol, synonyms, description, and preparations for triturations for use in homoeopathic medicines.

American Society for Testing Materials, B 29-43; 1943. American Assn. of State Highway Officials, M 112-40. Pig Lead. For refined lead in pig form made from ore or other material by reduction and refining, but not for reclaimed lead. Gives requirements for types, manufacture, chemical composition, samples for chemical analysis, methods of chemical analysis, marking, and claims.

American Society for Testing Materials, E 25-37 T; 1937. Tentative Method of Quantitative Spectrochemical Analysis of High Grade Pig Lead. This method may be applied to any high grade lead, provided the impurities to be determined are not present in quantities over 0.1 percent. Covers preparation of sample, preliminary estimation, final estimation, and testing for compliance with specification.

U. S. Gov., Federal Specification QQ-T-371a; 1944. Tin; Pig. Covers one grade, designated grade A. Gives chemical composition; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Navy Dept. Specification 46T1d; 1924. Tin; Pig.

*References.*—General requirements for metals, *see* 600.1.

### 681.2 TIN SHEETS

*References.*—Roofing tin, terneplate, *see* 604.31.

### 681.3 TIN CASTINGS

American Society for Testing Materials, B 102-44; 1944. Lead- and Tin-Base Alloy Die Castings. For pressure die castings from five designated alloys. Gives requirements for chemical compositions, sampling, density, soundness, finish, permissible variations in dimensions, and rejection.

### 681.4 TIN MANUFACTURES

#### 681.41 Tin Hollow Ware

American Bakers Assn. Recommended Pan Sizes. Covers four sizes of pans for loaves of bread weighing 12, 16, 20, and 24 oz. baked.

Assn. of American Railroads, Purchases and Stores Div. Tin and Sheet Metalware, Standardization of, 1934. Gives dimensional requirements and illustration for torches, squirt cans, valve oilers, tallow pot, oil carriers, card cases, marking pot, funnels, measures, oil cans, coal hod, pails, fire bucket, soil can, refuse and garbage can.

U. S. Gov., Dept. of Agriculture, Forest Service. Specification 144-S. Funnel; Filter-Type.

U. S. Gov., Federal Specification RR-P-62; 1940. Pans; Cake, Tinned, Round. Covers one type, one grade, and two sizes—9 3/8 and 10 3/8 in. outside diameter at top of pan. Gives requirements for material, workmanship, tinned plate gage, tolerance, weight of tin coating, and finish; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment. Emergency Alternate Federal Specification E-RR-P-62; 1942, (issued by Procurement Div., Treasury Dept., U. S. Gov.) changed requirements for materials and finish.

U. S. Gov., Federal Specification RR-P-76; 1935. Pans; Dust. Covers two types—(I) hood pattern; in two classes—(A) welded handle, and (B) covered wire handle; and (II) open pattern; in three classes—(A) welded handle, (B) covered wire handle, and (C) one piece. Gives requirements for material, workmanship, construction, finish, and dimensions; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification RR-P-571; 1939. Amendment 1; 1944. Pots; Marking, Ink. Covers one type, grade, and size. Gives requirements for material and workmanship, tinned plate, coating, body, cover, handle, illustration, dimensions, and tolerances; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Marine Corps Specification, 1918. Boilers; Tin, Nested, for No.1 Field Range.

U. S. Gov., Marine Corps Specification, 1921. Boilers; Tin, Nested, for No.2 Field Range.

U. S. Gov., U. S. Army, Quartermaster Corps. Specification 28-53; 1939. Dipper; Tin.

*References.*—Standard sizes of tin ware, *see* 612.20; liquid and dry measures of tin, *see* 919.1; metal kits and pails, *see* 951.61, 951.64; tin coatings, test of, *see* 600.3; illuminating torch for railways, tin, *see* 997.1; tin cans, *see* 959.1.

#### 681.42 Tin Coatings

*References.*—Test of tin coatings, *see* 600.3; roofing tin, terneplate, *see* 604.31.

#### 681.43 Tin Alloys

*References.*—Bronzes, *see* 643. 646. 647. 692.3; phosphor tin, *see* 682; babbitt metal, *see* 692.1; solder, *see* 693.2.

#### 681.49 Miscellaneous Tin Manufactures

Collapsible Tube Mfrs. Assn. Lead, Tin-Coated and Tin-Lead Alloy Tube Data, 1941. Gives inside and outside dimensions and weights, for seven numbers, minimum wall thickness, and metal and moulded plastic cap data.

Collapsible Tube Mfrs. Assn. Tin Tube Data, 1941. Gives inside and outside dimensions and weights, for seven numbers, minimum wall thickness, and tin and moulded plastic cap data.

U. S. Gov., Army Air Forces. Specification 10285-A-3; 1943. Wire; Metal, Spray Gun.

U. S. Gov., Federal Specification RR-W-456; 1935. Wireware; Bake-Shop and Kitchen. Covers eight types—(I) broilers, (II) chains, pot-cleaning, (III) cleaners, pot, chain, (IV) drainers, (V) potato mashers, (VI) skimmers, (VII) egg whips, and (VIII) pastry whips. Gives requirements for material, workmanship, and dimensions; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., Navy Dept. Specification 64G3b; 1943. Graters.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 50-11-96; 1941. Tin; Pulverized.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 57-18A; 1937. Foil; Tin.

*References.*—Cans made from tin plate, *see* 959.1.

## 682. PHOSPHOR TIN

American Society for Testing Materials, B 51-42; 1942. Phosphor Tin. For material in ingot form; chemical

composition, sampling and uniformity requirements, and marking. Endorsed by the American Foundrymen's Assn.

U. S. Gov., Federal Specification QQ-T-351; 1932. Tin; Phosphor. Covers one grade. Gives requirements for material and chemical composition; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

*References.*—General requirements for metals, *see* 600.1.

## 683. ZINC

### 683.0 GENERAL ITEMS

American Society for Metals. Metals Handbook, 1939 edition. Constitution of Zinc Alloys and Properties of Zinc and Its Alloys. Covers constitution of zinc-aluminum, zinc-cadmium, zinc-iron, zinc-lead, zinc-magnesium, zinc-nickel, zinc-silver, and zinc-tin alloys; zinc-rich portion of the zinc-copper and zinc-magnesium constitution diagram; physical constants of zinc; and properties of wrought zinc and zinc alloys.

American Society for Metals. Metals Handbook, 1939 edition. Micrography of Zinc and Technology of Zinc and Its Alloys. Covers polishing of zinc for metallographic examination, etching of zinc and zinc alloys for metallographic examination, and zinc die castings.

American Society for Testing Materials, D 521-40; 1940. Methods of Chemical Analysis of Zinc Dust (Metallic Zinc Powder). Covers procedure for analysis of form known commercially as zinc dust for use as pigment in paint; mixing for sample, determination of moisture and other volatile matter, reagents for total zinc, and metallic zinc and zinc oxide by difference.

American Society for Testing Materials, E 26-43 T; 1943. Tentative Method of Quantitative Spectrochemical Analysis of Zinc for Lead, Iron, and Cadmium. This method may be applied to any grade of zinc provided the lead, iron, and cadmium contents are less than 0.1 percent. Covers preparation of sample, preparation of electrode, preliminary and final estimation, and testing for compliance with specification.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, 1938. Zinc. Covers definition, constants, occurrence, grades, specifications, uses, and forms available; also I—definition, constants, physical properties, and uses for zinc alloy (die casting); and II—definition, uses, constants, purity, forms available, and grades for zinc powder.

Society of Automotive Engineers, Inc. Aeronautical Information Report 8; 1944. U. S. and British Commonwealth of Nations Aircraft Metals. Zinc Alloys. Gives table showing specifications used in the U. S. and specifications for similar metals used in the United Kingdom, Australia, and Canada for use in the selection of interchangeable and substitute materials for the repair and maintenance of aircraft; and a table showing chemical composition and mechanical properties of these aircraft metals. Covers zinc alloys.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Circular 86; 1917. Standard Samples for Thermometric Fixed Points. Description of preparation of pure samples of zinc; their chemical analyses, freezing point, and degree of purity; their use for the standardization of thermocouples, pyrometers, etc.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Circular C398 and Supplement, 1944. Standard Samples. Zinc Ore (Tri-State Concentrate), Sample 113. This sample is prepared and sold by the National Bureau of Standards with a certificate of analysis for use in industry and by others as a comparison standard for checking the accuracy of analysis of similar material.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Circular C398 and Supplement, 1944. Standard Samples. Zinc, Sample 43e. This sample is prepared and sold by the National Bureau of Standards with a certificate of analysis, for use in industry and by others as a comparison standard for checking the accuracy of analysis of similar material.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Circular C398 and Supplement, 1944. Standard Samples. Zinc Spelter, Samples 108, 109, and 110. These samples are prepared and sold by the National Bureau of Standards with a certificate of analysis for use in industry and by others as a comparison standard for checking the accuracy of analysis of similar materials.

### 683.1 ZINC OR SPELTER INGOT METALS

American Society for Testing Materials, B 6-37; 1937. American Assn. of State Highway Officials, M 120-37. American Standards Assn., H 24.1-1943. Endorsed by American Foundrymen's Assn. Slab Zinc (Spelter). Covers six grades made from ore or other material by a process of distillation or by electrolysis. Gives marking, quality, composition, physical appearance, sampling, claims, plant treatment, and investigation and settlement of claims.

U. S. Gov., Army Air Forces Specification 11328; 1941. Ingots; Zinc Base Alloy (for Forming Dies).

U. S. Gov., Federal Specification QQ-Z-351a; 1940. Zinc; Slab (Spelter). Covers six grades—(A-1) special high grade, (A) high grade, (B) intermediate, (C) brass special, (D) selected, and (E) prime western. Gives chemical composition; methods of sampling, inspection, and tests; and requirements for packing and marking.

*References.*—Methods of test, general requirements for metals, *see* 600.1, 683.0.

### 683.2 ZINC SHEETS AND PLATES

American Society for Testing Materials, B 69-39; 1939. American Assn. of State Highway Officials, M 113-39. American Standards Assn., H 25.1-1943. Rolled Zinc. Covers three types—(I) coils or sheets cut from strip rolled zinc, (II) pack rolled zinc, and (III) zinc plates. Gives requirements for permissible variations in dimensions, coils, bend and curvature, packing, marking, sidewise bend or curvature, gaging, and appendix.

American Zinc Institute. Specification for Hot-Dipped Zinc-Coated Ferrous Sheets Bearing the "Zinc Institute Seal of Quality" Trade-Mark, 1931. For use on sheets of No. 28 and heavier galvanized sheet gages.

Covers gage weights, weight of coating, testing, record of tests, inspection, marking, and forming.

U. S. Gov., Federal Specification QQ-Z-301a; 1938. Zinc; Plates, Sheets, and Strips. Covers three types—(I) coils or sheets cut from strip (ribbon) rolled zinc, (II) pack rolled zinc, and (III) zinc plates, such as boiler and hull plates produced by any rolling method. Gives requirements for material, workmanship, bending, and permissible variations; methods of sampling, inspection, and tests; and requirements for packing and marking.

U. S. Gov., Navy Dept. Specification 47Z6b; 1939. Zinc; Plates, Sheets, and Strips.

*References.*—Methods of testing, general requirements for metals, *see* 600.1, 683.0; zinc coated iron and steel sheets, *see* 604.32.

## 683.3 ZINC STRIPS

U. S. Gov., Federal Specification QQ-Z-301a; 1938. Zinc; Plates, Sheets, and Strips. Covers three types—(I) coils or sheets cut from strip (ribbon) rolled zinc, (II) pack rolled zinc, and (III) zinc plates, such as boiler and hull plates produced by any rolling method. Gives requirements for material, workmanship, bending, and permissible variations; methods of sampling, inspection, and tests; and requirements for packing and marking.

U. S. Gov., Navy Dept. Specification 47Z6b; 1939. Zinc; Plates, Sheets, and Strips.

*References.*—Methods of testing, general requirements for metals, *see* 600.1, 663.0; standard thicknesses, weights, and tolerances, *see* 683.2.

## 683.4 ZINC MANUFACTURES

### 683.41 Zinc-Base Die Castings

American Society for Testing Materials, B 86-43; 1943. Zinc-Base Alloy Die Castings. Covers three alloy compositions. Gives requirements for manufacture, base metal, chemical composition, sampling, physical properties, stability, expansion test, test specimens, number of tests, soundness, optional tests, finish, and rejection.

American Society for Testing Materials, B 186-42 T; 1942. Tentative Specifications for Special Quality Zinc-Base Alloy Die Castings. Covers two alloys where added assurance will be gained against breakdown in service which might entail danger to life or failure to achieve important objectives. Manufacture, base metal, chemical composition, chemical analysis, physical properties, tests, stabilization treatment, production control, workmanship, marking, and records.

American Society for Testing Materials, E 27- 43 T; 1943. Tentative Method of Quantitative Spectrochemical Analysis of Zinc-Alloy Die Castings for Minor Constitutents and Impurities. This method refers particularly to the analysis of zinc-base die-casting Alloy Nos. XXI and XXIII, covered by the Tentative Specifications for Zinc-Base Alloy Die Castings B 86-34 T of the American Society for Testing Materials. The method includes the determination of copper in Alloy No. XXIII and of magnesium, iron, lead, tin, and cadmium in Alloys Nos. XXI and XXIII. The determination of nickel in an alloy differing from Alloy No. XXIII by the presence of nickel as a minor constituent is also included. An arc spectrum is used, employing graphite electrodes, one of which is treated with a solution of the sample to be analyzed. Quantitative estimations are made by the comparison of the spectrum of the sample with the spectra of standard samples of known composition.

Society of Automotive Engineers, Aeronautical Material Specification 4803; 1944. Zinc Alloy Die Castings. Gives requirements for composition, quality, stability, reports, identification, and rejections. Similar specifications: S.A.E. 903; A.S.T.M. B86-41T; and Alloy No. XXIII.

Society of Automotive Engineers. 1944 Handbook, Section 3—Processed Materials. S.A.E. Standard Zinc Alloys Die Casting, revised 1939. Gives specification Nos. 903, 921, and 925. Covers composition in percentage, general information, and typical physical and mechanical properties.

U. S. Gov., Navy Dept. Specification 46Z 2c; 1944. Zinc-Base Alloy; Die-Castings.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 57-93-2A; 1942. Casting; Die, Zinc-Aluminum-Magnesium Alloy.

*References.*—Methods of test, general requirements for metals, *see* 600.1, 683.0.

### 683.42 Gravity Battery Zincs

*References.*—Gravity battery zincs, *see* 712.5.

### 683.49 Miscellaneous Zinc Manufactures

U. S. Gov., Army Air Forces. Specification 10285-A-3; 1943. Wire; Metal, Spray Gun.

U. S. Gov., Army-Navy Aeronautical Specification AN-QQ-A-686a; 1944. Anodes; Zinc.

U. S. Gov., U. S. Army, Chemical Warfare Service. Specification 4-503-440A; 1941. Zinc Dust.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 57-228A; 1942. Anode; Zinc.

*References.*—Nails, spikes, tacks, and staples of zinc, *see* 608.1.

## 683.5 ZINC ALLOYS

U. S. Gov., Army Air Forces. Specification 10302; 1939. Rod; Zinc Alloy, Welding (for Aeronautical Use).

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Circular C395; 1931. Zinc and Its Alloys. Summarizes from technical literature the physical and mechanical properties of zinc, together with results obtained at the National Bureau of Standards; effects of structural conditions of the metal resulting from impurities and from such factors as mechanical working, recrystallization upon measured physical properties; discusses corrosion resistance of zinc, and the die-casting alloys and the properties which determine their usefulness industrially.

*References.*—Zinc base die casting alloys, *see* 683.41; copper-tin-zinc alloys, *see* 643, 646, 647; brass, *see* 644, 645; nickel-copper-zinc alloys, *see* 655; brazing solder, brass, *see* 693.2.

## 683.6 ZINC COMPOUNDS AND SALTS

*References.*—Chemical compounds of zinc, *see* 839.38.

## 684. ZINC COATINGS (GALVANIZING)

*References.*—Zinc coated sheets, *see* 604.32; zinc coatings and tests, *see* 600.3.

### 684.0 GENERAL ITEMS

# 690-699 MISCELLANEOUS ORES, METALS, ALLOYS, AND METAL MANUFACTURES

## 690. GENERAL ITEMS

## 691. SILVER

### 691.0 GENERAL ITEMS

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Circular C412; 1936. Silver; Its properties and Industrial Uses. Information is given concerning variation in physical properties by mechanical working and heat treatment; discussed chemical properties with respect to resistance to corrosion; and describes the bactericidal uses of silver, its employment in chemical equipment, and also its application in electrical switching devices.

### 691.1 SILVER METAL AND ALLOYS

American Institute of Homoeopathy. Homoeopathic Pharmacopoeia of U. S., 1941. Metallic Silver. Natural order, synonyms, description, habitat, history, parts used, and preparations for tincture, dilutions, and medications for use in homoeopathic medicines.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, 1938. Silver. Covers definition and properties, constants, solubility, derivation, purity, forms available, uses, and marketing.

U. S. Gov., Navy Dept. Specification 57S63; 1944. Sutures; Silver-Wire.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2724; 1939. Silver; Pure.

*References.*—Silver solder, *see* 693.3; definition of sterling, *see* 691.0; dental alloys, *see* 915.12.

### 691.2 SILVERWARE

American Hospital Assn., 64-10. Nickel-Silver Tableware.

American Hospital Assn., 64-13. Silver-Plated Tableware. Based on U. S. Gov., Federal Specification RR-T-51a for Silver-Plated Tableware.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R54-26; 1926. Sterling Silver Flatware. This recommendation establishes a schedule of stock items in sterling silver flatware patterns covering various items listed as staples, fancy dozens, carving sets, baby sets, child's sets, and fancy single pieces. Sponsored by Sterling Silversmiths Guild of America.

U. S. Gov., Federal Specification RR-T-51a; 1934. Tableware; Silver-Plated. Covers a grade equal to that required for high-class hotel and restaurant service. Gives requirements for chemical composition of metal, weights of silver used on commonly used articles of flatware; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking. Emergency Alternate Federal Specification E-RR-T-51a; 1942, (issued by Procurement Div., Treasury Dept., U. S. Gov.) substituted Federal Specification (RR-T-56) Tableware; Steel (Chromium, Nickel, Silver, and Tin) Plated.

U. S. Gov., Federal Specification RR-T-56; 1941. Amendment 1; 1944. Tableware; Steel (Chromium, Nickel, Silver, and Tin) Plated. Covers three types—(I) knives, table (straight-blade and grille); (II) forks (dessert, flat-handle); and (III) spoons (tea and table, medium). Gives requirements for material, workmanship, construction, finish, and details for each type; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., U. S. Maritime Commission. Specification 63-MC-1; 1941. Tableware; Silver-Plated, Flatware and Holloware. Type I, flatware; type II, holloware; grade A, extra heavy hotel plate; grade B, triple plate; class I, with overlay; and class II, without overlay. Gives requirements for materials, workmanship, finish, marking, tolerances, design, silverplate, sampling, inspection, and methods of test.

U. S. Gov., U. S. Maritime Commission. Specification 63-MC-7; 1941. Tableware; Flatware, Steel Base, Silver-Plated (Officers'). Type I, knives (table); type II, forks; type III, spoons; type IV, spreaders; seven classes; and two grades. Gives requirements for material, workmanship, identification, finish, plating, sampling, inspection, and methods of test.

*References.*—Definition of sterling, *see* 691.0.

### 691.3 SILVER COMPOUNDS AND SALTS

*References.*—Chemical compounds of silver, *see* 839.37.

## 692. BABBITT AND OTHER BEARING METALS

### 692.0 GENERAL ITEMS

Society of Automotive Engineers, Inc. Aeronautical Information Report 8; 1944. U. S. and British Commonwealth of Nations, Aircraft Metals. Tin Alloys. Gives table showing specifications used in the U. S. and specifications for similar metals used in the United Kingdom, Australia, and Canada for use in the selection of interchangeable and substitute materials for the repair and maintenance of aircraft; and a table showing chemical composition and mechanical properties of these aircraft metals. Covers tin alloys, babbitts, solders, and brazing alloys.

Society of Automotive Engineers, Inc. Report on Engine Bearings; Replacement Technique for Installation or Fitting. Submitted to Vehicle Maintenance Section, Office of Defense Transportation, 1943. Covers section I—types of bearings and materials of engine bearing construction; and II—operational guide for engine bearing replacement.

U. S. Gov., Army-Navy Aeronautical Specification AN-P-36a; 1944. Preservation and Packing of Bearings and Bearing Parts.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Research Paper RP512; 1933. White-Metal Bearing Alloys—Mechanical Properties at Different Temperatures and Service Tests. Gives results of a study made of the wear resistance and other mechanical properties of 11 white-metal bearing alloys.

## 692.1 BABBITT METALS

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering. Specifications for Movable Railway Bridges. Includes requirements for composition of babbitt metal.

American Society for Testing Materials, B 23-26; 1926. White Metal Bearing Alloys (known commercially as "Babbitt Metal"). Covers 12 typical babbitt metals based on tin content, quality, size, chemical composition, permissible variations in composition, samples for analysis, and physical properties. Endorsed by the American Foundrymen's Assn. A.S.T.M. Emergency Alternate Provision EA-B 23b; 1944, affected section 4, Chemical Composition; table I, Chemical Requirements; and appendix, Physical Properties of Alternate Alloys.

American Society for Testing Materials, B 67-44; 1944. Assn. of American Railroads AAR. Specification M501-43. Car and Tender Journal Bearings; Lined. For use on locomotive tenders, passenger, and freight equipment cars. Gives requirements for manufacture, chemical composition, analysis, examination of fracture, permissible variations in dimensions, workmanship and finish, marking, inspection, and rejection. Endorsed by the American Foundrymen's Assn.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, 1938. Babbitt. Covers definition, characteristics, constants, grades, uses, forms available, and marketing customs.

Society of Automotive Engineers. Aeronautical Material Specification 4800; 1940. Bearings; Babbitt. Gives requirements for form, composition, sampling, quality, reports, identification, corrosion, approval, and rejections. Similar to U. S. Gov. Federal Specification QQ-M-161, Grade I; A.S.T.M. Specification B23-26, Alloy Grade 1; and Society of Automotive Engineers Specification 10.

Society of Automotive Engineers. 1944 Handbook, Section 3—Processed Materials. SAE Standard Bearing and Bushing Alloys, revised 1944. Covers main and connecting rod bearings including babbitt metals, silver bearing alloys, cadmium bearing alloys, and copper-lead bearing alloys; wrist pin and miscellaneous bushing alloys; and sintered metal powder bearings.

U. S. Gov., Army Air Forces. Specification 10285-A-3; 1943. Wire; Metal, Spray Gun.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Circular C398 and Supplement, 1944. Standard Samples. Bearing Metal, Tin Base, Sample 54b. This sample is prepared and sold by the National Bureau of Standards with a certificate of analysis for use in industry and by others as a comparison standard for checking the accuracy of analysis of similar material.

U. S. Gov., Federal Specification QQ-M-161; 1932. Metal; Antifriction, Castings and Ingots. Covers seven grades in the form of ingots for remelting or castings. Gives requirements for material, workmanship, and chemical composition; methods of sampling, inspection, and tests; and requirements for packaging, packing, and shipping. Emergency Alternate Federal Specification E-QQ-M-161; 1942, (issued by Procurement Div., Treasury Dept., U. S. Gov.) deleted grades 1, 2, 3, 4, and 5 and gives requirements for grades 6, 7, 8, 9, 10, 11, and 12.

U. S. Gov., Navy Dept. Specification 46M2e; 1933. Metal; Antifriction, Ingots and Castings.

*References.*—Methods of testing, general requirements for metals, *see* 600.1, 692.0; bronze backings of lined bearings, *see* 692.2.

## 692.2 BEARING METALS, OTHER THAN BABBITT

American Society for Testing Materials, B 22-44T; 1944. American Assn. of State Highway Officials, M107. Tentative Specifications for Bronze Castings for Turntables and Movable Bridges and for Bearing and Expansion Plates of Fixed Bridges. Cover four classes of bronze castings for turntables and movable bridges and two classes of cast-bronze plates used in bridges and other structures for fixed and expansion bearings where motion is slow and intermittent. Give requirements for manufacture, chemical composition, chemical analysis, methods of chemical analysis, physical properties, hardness, test specimens, number of tests, finish, inspection, and rejection. Endorsed by American Foundrymen's Assn. A.S.T.M. Emergency Alternate Provision EA-B22b; 1944, affected table I, Chemical Requirements, table II, Physical Requirements and Figures.

American Society for Testing Materials, B 30-44T; 1944. Tentative Specifications for Copper-Base Alloys in Ingot Forms for Sand Castings. Covers 25 copper-base alloys, with A.S.T.M. classifications, numerical, and commercial designations. Includes aluminum-bronze. Gives requirements for manufacture, chemical analysis, marking, inspection, rejection and retesting, claims, and settlement of claims. Endorsed by American Foundrymen's Assn.

American Society for Testing Materials, B 66-44; 1944. Assn. of American Railways' AAR. Specification M 503-42. Bronze Castings in the Rough for Locomotive Wearing Parts. Includes hard, medium, soft, and phosphor bronze castings, and ordinary uses of each. Gives requirements for chemical composition, chemical analysis, sample for chemical analysis, method of analysis, examination of fracture, number of tests, permissible variations in dimensions, workmanship and finish, marking, inspection and rejection. Endorsed by the American Foundrymen's Assn.

American Society for Testing Materials, B 144-44T; 1944. Tentative Specifications for High-Leaded Tin-Bronze Sand Castings. Cover five alloys and are intended for use for conventional bearings and bushings in the cast state. Gives basis of purchase, manufacture, chemical composition and analysis, methods of chemical analysis, tensile properties,

pressure and fracture tests, test specimens, number of tests, methods of testing, workmanship and finish, marking, inspection, and rejection. A.S.T.M. Emergency Alternate Provision EA-B 144b; 1944, affected section 9, Test Specimens, and adds figures 3 and 4.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Emergency Specification E-M-503-43 changed AAR. Specification M-503-42, Bearings, Bronze for Locomotives, section I, Chemical Properties and Tests, paragraph 3, Chemical Composition.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Specification M-503-42; 1942. Bearings; Bronze, for Locomotives. Covers bronze castings in the rough for locomotive wearing parts. Gives requirements for chemical and physical properties and tests, permissible variation, finish, marking, inspection, rejection, and rehearing.

Society of Automotive Engineers. Aeronautical Material Specification 4805; 1941. Sintered Bearings, Bushings. Gives requirements for composition, condition, quality, lubrication, precaution, approval, and rejections.

Society of Automotive Engineers. Aeronautical Material Specification 4820; 1940. Bearings; Copper Lead, Steel Back (Copper-Lead, 73-27). Gives requirements for form (steel back, lined on one or both sides with bearing metal), composition, quality, sampling, reports, identification, corrosion, approval, and rejections. Similar to Society of Automotive Engineers Specification 48.

Society of Automotive Engineers. Aeronautical Material Specification 4822; 1940. Bearings; Copper Lead, Steel Back (Copper-Lead-Tin, 71-25-3). Gives requirements for form (steel back, lined on one or both sides with bearing metal), composition, quality, sampling, reports, identification, corrosion, approval, and rejections. Similar to Society of Automotive Engineers Specification 481.

Society of Automotive Engineers. Aeronautical Material Specification 4825; 1941. Bearings; Copper-Lead-Tin, Steel Back (Copper-Lead-Tin, 74-16-10). Gives requirements for form (steel back, lined on one or both sides with bearing metal), composition, sampling, quality, reports, identification, corrosion, approval, and rejections.

Society of Automotive Engineers. Aeronautical Material Specification 4827; 1942. Bushings; Copper Lead Tin, Steel Backed Castings. Shall consist of a steel back, lined on one or both sides with a bearing metal of the composition specified. Gives requirements for composition, sampling, quality, reports, identification, corrosion, approval, and rejection. Similar specification: S.A.E. 792.

Society of Automotive Engineers. Aeronautical Material Specification 4840; 1940. Bearings; Copper-Lead-Tin Castings (Copper-Lead-Tin, 70-25-5). Gives requirements for composition, condition, quality, reports, identification, precautions, shipments, approval, and rejection. Similar to U. S. Gov., Navy Dept., Specification 46B22, Grade V; and A.S.T.M. Specification B66-38, Soft Bronze Alloy.

Society of Automotive Engineers. Aeronautical Material Specification 4842; 1941. Bushings; Copper-Lead-Tin Castings (Copper-Lead-Tin, 79-10-10) Gives requirements for composition, hardness, quality, precautions, reports, identification, shipments, approval, and rejections.

Society of Automotive Engineers. 1944 Handbook, Section 3—Processed Materials. SAE Standard Bearing and Bushing Alloys, revised 1944. Covers main and connecting rod bearings including babbitt metals, silver bearing alloys, cadmium bearing alloys, and copper-lead bearing alloys; wrist pin and miscellaneous bushing alloys; and sintered metal powder bearings.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Circular C398 and Supplement, 1944. Standard Samples. Bearing Metal, Lead Base, Sample 53a. This sample is prepared and sold by the National Bureau of Standards with a certificate of analysis for use in industry and by others as a comparison standard for checking the accuracy of analysis of similar material.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Circular C398 and Supplement, 1944. Standard Samples. Bearing Metal, Phosphor-Bronze, Sample 63a. This sample is prepared and sold by the National Bureau of Standards with a certificate of analysis for use in industry and by others as a comparison standard for checking the accuracy of analysis of similar material.

U. S. Gov., Navy Dept. Specification 46B22e; 1944. Bronze, Bearing; Castings.

U. S. Gov., Treasury Dept., Procurement Div., No.472; 1941. Bronze, Bearing; Castings, Leaded. Shall be made from best grades of virgin metals, or from best grades of virgin metals and scrap of known composition and cleanliness. Gives requirements for repairing of defects, dimensions, chemical composition, and physical properties; methods of sampling, inspection, and tests; and packaging, packing, and marking.

*References.*—Methods of testing, general requirements for metals, *see* 600.1, 646.0; brass and bronze ingot metals for bearings, *see* 644.11.

## 692.3 METAL BEARINGS

Aeronautical Chamber of Commerce of America, Inc. National Aircraft Standard NAS 72, 73, 74, 75, 76, and 77. Bushing. NAS 72; 1942, Clamp-Up, Steel, Chrome Plated. NAS 73; 1942, Clamp-Up, Steel, Cadmium Plated. NAS 74; 1942, Clamp-Up, Bronze. NAS 75; 1942, Plain, Press-Fit, Steel, Cadmium Plated. NAS 76; 1942, Plain, Press-Fit, Bronze. NAS 77; 1944, Flanged, Press-Fit, Steel. Gives drawings with dimensions and notes. Developed by National Aircraft Standard Committee.

Aeronautical Chamber of Commerce of America, Inc. National Aircraft Standard NAS 181; 1944. Bearings; Plain Spherical (Interchangeable). Gives drawings with dimensions and notes. Developed by National Aircraft Standard Committee.

American Society for Testing Materials, B 67-44; 1944.

Assn. of American Railroads, AAR Specification M501-43. Car and Tender Journal Bearings; Lined. For use on locomotive tenders, passenger, and freight equipment cars. Gives requirements for

manufacture, chemical composition, analysis, examination of fracture, permissible variations in dimensions, workmanship and finish, marking, inspection, and rejection. Endorsed by the American Foundrymen's Assn.

American Transit Assn. Standard Journal Boxes and Contained Parts, E2-34; 1934. Standard designs and dimensions for journal boxes, bearings and wedges, and dust guards for seven sizes of bearings.

American Transit Assn. Standard Design of Gauges for Journal Bearings and Wedges, E12-31; 1931. Gives detailed drawings and dimensions of gauges for journal bearings and wedges.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1944. Bearings; Journal, Lined. Emergency Specification E-M-501-43; 1944, changed A.A.R. Specification M-501-41, section I, Chemical Properties and Tests, and section V, Marking.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1944. Bearings; Journal, Lined. Specification M-501-41; 1941. Covers journal bearings for use on locomotive tenders, passenger and freight cars. Gives manufacture, chemical and physical properties and tests, permissible variations, finish, marking, inspection, rejection and rehearing, with dimensional drawing.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Emergency Specification E-M-502-42, changed A.A.R. Specification M-502-41, Bearings, Journal, Relined, Scope, Dimensions (Relined Journal Bearings), Crown Thickness (Relined Bearings), Inspection, and Marking.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Specification M-502-41; 1941. Bearings; Journal, Relined. Determination of condition, wear limits, reboring operation, tinning, lining, and inspection, with dimensional diagram.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Journal Bearings. Standard, corrected 1942. Dimensional drawing with size variations for A, B, C, D, E, and F journals, tolerance and marking. Emergency Specification, 1942, changed requirements.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Journal Bearing Gages, Journals A to F, Inclusive. Standard, revised 1941. Detailed dimensional drawings of size of journal. Emergency Specification issued in 1942.

Society of Automotive Engineers. Aeronautical Material Specification 4800; 1940. Bearings; Babbitt. Gives requirements for form, composition, sampling, quality, reports, identification, corrosion, approval, and rejections. Similar to U. S. Gov. Federal Specification QQ-M-161, Grade I; A.S.T.M. Specification B23-26, Alloy Grade 1; and Society of Automotive Engineers Specification 10-

Society of Automotive Engineers. Aeronautical Material Specification 4815A; 1944. Bearings; Silver, Steel Back. Shall consist of silver electroplated on a steel back. Gives requirements for composition, procedure, hardness, quality, reports, identification, corrosion, approval, and rejection.

Society of Automotive Engineers. Aeronautical Material Specification 4817; 1942. Bearings; Cast Silver, Steel Back. Shall consist of silver cast on steel back. Gives requirements for composition, procedure, hardness, quality, reports, identification, corrosion, approval, and rejection.

Society of Automotive Engineers. 1944 Handbook, Section 3—Processed Materials. SAE Standard Brass and Bronze Castings, revised 1944. Gives specification No.66 and No.660—Bronze Bearings. Covers composition in percentage, general information, physical properties, and recommended uses.

U. S. Gov., Army Air Forces. Specification 25534; 1943. Bearings; Plain, Aircraft, General Specification for.

U. S. Gov., Army Air Forces. Specification 25536 (1); 1944. Bearings; Bellcrank.

U. S. Gov., Army-Navy Aeronautical Specification AN-B-4-2; 1944. Bearings; Anti-Friction Air-Frame.

U. S. Gov., Army-Navy Aeronautical Specification AN-B-7; 1942. Bearings; Copper-Tin Sintered (Oil Impregnated).

*References.*—Bearing metals, *see* 692.1, 692.2; journal boxes, *see* 611.22; ball and roller bearings, *see* 766.2.

## 693. SOLDERS AND BRAZING

### 693.0 GENERAL ITEMS

American Society for Metals. Metals Handbook, 1939 Edition. Nonferrous Section General. Covers hot plastic working of nonferrous metals, soldering (soft solders), and brazing and related joining methods.

American Welding Society. Filing Classification of Welding, Brazing, Soldering, and Cutting Processes, Materials and Applications, 1936. Gives complete details for a standard filing or classification system covering the entire welding field and allied processes and may be used as either a filing system or an indexing system.

Society of Automotive Engineers, Inc. Aeronautical Information Report 8; 1944. U. S. and British Commonwealth of Nations Aircraft Metals. Tin Alloys. Gives table showing specifications used in the U. S. and specifications for similar metals used in the United Kingdom, Australia, and Canada for use in the selection of interchangeable and substitute materials for the repair and maintenance of aircraft; and a table showing chemical composition and mechanical properties of these aircraft metals. Covers tin alloys, babbitts, solders, and brazing alloys.

U. S. Gov , Army Air Forces. Specification 20018; 1939. Brazing Process; Furnace, Copper, for Aircraft Parts.

U. S. Gov., U. S. Army, Army Air Forces. Specification 98-20003-B; 1939. Brazing Aircraft Parts.

### 693.1 SOLDER (TIN-LEAD BASE)

American Society for Testing Materials, B32-40T; 1940. Tentative Specifications for Soft Solder Metal.

Covers two grades of tin-lead, and tin-lead-antimony alloy. Gives requirements for quality, chemical composition, permissible variations in chemical composition, sampling for chemical analysis, preparation of sample for analysis, methods of chemical analysis, dimensions, marking, inspection, rejection, claims, and appendix. A.S.T.M. Emergency Alternate Provision EA-B32b; 1944, affected section 1, Scope; section 3, Chemical Composition; section 4, permissible Variations in Chemical Composition; table I, Chemical Requirements; and table II, Properties of Soft Solder Metal.

Assn. of American Railroads, Telegraph and Telephone Section, 1-A-38; 1930. 40-60 and 45-55 Solder. Gives uses for each solder, chemical composition and variations, form and weights.

Assn. of American Railroads, Telegraph and Telephone Section, 2-G-20; 1926. Rosin Core Solder. Seamless tube filled with rosin flux, composition of 38 percent tin solder, in the form of a wire. Requirements as to minimum impurities, diameter of wire and rosin core, and sizes of 1 and 5 lb. spools.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, 1938. Solder. Covers definition, properties, soldering fluxes, grades of solder, sizes, core solders, other solders, impurities, shipping regulations, and ordering instructions.

Society of Automotive Engineers. Aeronautical Material Specification 4750; 1940. Solder; Tin-Lead (50-50). Gives requirements for form (wire strip, bars, and ingots), composition, physical properties, quality, and rejections. Similar to U. S. Gov., Navy Dept., Specification 46 S 14, Grade A; U. S. Gov. Federal Specification QQ-S-571, Grade A; A.S.T.M. Specification B32-21, Grade No.1; and Society of Automotive Engineers Specification 1, Class A.

Society of Automotive Engineers. 1944 Handbook, Section 3—Processed Materials. SAE Standard Solders, Revised 1944. Gives reference table of similar specifications for solders and a table of S.A.E. standard and emergency solders giving chemical composition and temperatures where materials are solid and liquid.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Building Materials and Structures Report BMS58; 1940. Strength of Soft-Soldered Joints in Copper Tubing. An extended investigation was made of the strength, under tensile loading, of sleeve joints in copper tubing, with wrought-copper and cast-brass couplings, soldered with (50-50) tin-lead and (95-5) tin-antimony alloys.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Building Materials and Structures Report BMS83; 1942. Strength of Sleeve Joints in Copper Tubing Made With Various Lead-Base Solders. Solders of the following types were used—lead-silver, lead-tin-antimony, lead-cadmium, high lead-low tin, and high-purity lead. Tensile tests at room temperature (short-time tests) were made, together with long-time tests at temperatures ranging from 85° to 325° F.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Circular C398 and Supplement, 1944. Standard Samples. Solder, 35 Sn-65 Pb, Sample 127. This sample is prepared and sold by the National Bureau of Standards with a certificate of analysis for use in industry and by others as a comparison standard for checking the accuracy of analysis of similar material.

U. S. Gov., Federal Specification QQ-S-571a; 1942. Amendment 1; 1942. Solder; Tin-Lead. Covers seven grades—A, B, D, E, F, G, and H. Gives requirements for material, chemical composition and melting range, and fluxed-cored wire solder; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment. Emergency Alternate Federal Specification E-QQ-S-571a; 1942, (issued by Procurement Div., Treasury Dept., U. S. Gov.) substituted one class of lead-tin-silver solder and one class of lead-silver solder, and gives requirements for same.

U. S. Gov., Navy Dept. Specification 46S14b; 1944. Solder; Tin-Lead.

U. S. Gov., Navy Dept. Specification 46S20a; 1943. Solder; Tin-Lead, Wire, Flux-Cored.

U. S. Gov., Navy Dept. Specification 46S38a; 1945. Solder; Tin-Antimony.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 57-98; 1931. Solder; Low Melting Point.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-332D; 1937. Solder M-31; Rosin Core.

*References.*—Methods of testing, general requirements for metals, *see* 600.1, 692.0.

## 693.2 SOLDERS, COPPER-ZINC BASE

American Society for Testing Materials, B 64-43; 1943. Brazing Solder. Covers two grades of granular brazing solder in three classifications. Gives requirements for manufacture, chemical composition, chemical analysis, sampling, round-grain solder, long-grain solder, lump solder, packing, impurities, marking, inspection, and rejection.

Society of Automotive Engineers. 1944 Handbook, Section 3—Processed Materials. SAE Standard Brass and Bronze Castings, 1944. Gives specification No. 45—Brazing Solder. Covers composition in percentage and general information and use.

U. S. Gov., Federal Specification QQ-S-551; 1932. Amendment 1; 1942. Solder; Brazing. Covers four compositions—A, B, C, and D; one grade each. Gives requirements for material, workmanship, form (granulated, ingots, bars, or wire), and chemical composition; methods of inspection and tests; and requirements for packing and marking.

U. S. Gov., Navy Dept. Specification 46S15a; 1934. Solder; Brazing.

*References.*—Methods of testing, general requirements for metals, *see* 600.1, 644.11; brass welding rod, *see* 645.11.

## 693.3 SILVER SOLDER

American Society for Testing Materials, B 73-29; 1929. Silver Solders. For eight grades of silver-copper-zinc alloys in wire, strip, sheet, or granular form, for brazing purposes; requirements for manufacture, chemical composition, and methods of sampling.

Society of Automotive Engineers. Aeronautical Material Specification 4755; 1940. Solder; Lead-Silver (95-5). Gives requirements for form (wire, strip, bars, and ingots), composition, quality, physical properties, and rejections. Similar to

U. S. Gov., War Dept., Specification 57-99-1; and U. S. Gov. Navy Aeronautical Specification M-254.

Society of Automotive Engineers. Aeronautical Material Specification No.4770; 1940. Brazing Alloy; Silver (50 Percent Silver, Copper, Zinc, Cadmium). For joining nonferrous and ferrous materials, including austenitic steels. Gives requirements for form (wire, strip, pig, or granular); composition, physical properties, condition, quality, size and tolerance, precautions, packaging, and rejections. Similar to U. S. Gov., Navy Dept., Specification 47 S 13, Grade IV; and U. S. Gov. Federal Specification QQ-S-561, Class 4.

U. S. Gov., Federal Specification QQ-S-561d; 1944. Solder; Silver. Covers seven classes-0, 1, 2, 3, 4, 5, and 6. Furnished in strips, wire, pigs, grain, shot, or chips. Gives requirements for materials, workmanship, chemical composition, form, strip, and wire; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Navy Dept. Specification 46S42; 1941. Solder; Lead-Silver.

U. S. Gov., Navy Dept. Specification 47S13c; 1936. Solder; Silver.

U. S. Gov., U. S. Army, Army Air Forces. Specification 57-99-1; 1933. Solder; Lead-Silver.

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2869; 1939. Solder; Silver, Dental.

*References.*—Methods of testing, general requirements for metals, *see* 600.1, 644.11.

### 693.4 SOLDERS FOR ALUMINUM

### 693.5 GOLD SOLDER

U. S. Gov., U. S. Army, Medical Dept. Specification 10-2748A; 1941. Solder; Gold.

## 695. MAGNESIUM AND MAGNESIUM ALLOYS

*References.*—Methods of testing, general requirements for metals, *see* 600.1; other light alloys of aluminum, *see* 631.11, 631.41; magnesia pipe coverings, *see* 707.43; chemical compounds of magnesium, *see* 839.39.

### 695.0 GENERAL ITEMS

American Society for Metals. Metals Handbook, 1939 Edition. Micrography of Magnesium and Technology of Magnesium and Its Alloys. Covers polishing of magnesium alloys for metallographic examination, etching of magnesium alloys for metallographic examination, magnesium alloy die castings, hot and cold working of magnesium, machaning of magnesium, riveting of magnesium, and protection of magnesium against corrosion.

### 695.1 MAGNESIUM METAL AND ALLOYS

American Society for Metals. Metals Handbook, 1939 Edition. Constitution of Magnesium Alloys and Properties of Magnesium and Its Alloys. Covers constitution of magnesium-aluminum, magnesium-copper, magnesium-manganese, and magnesium-zinc alloys; physical constants of magnesium; and physical properties of magnesium-aluminum and magnesium casting alloys.

American Society for Testing Materials, B92-41; 1941. Magnesium Ingot and Stick for Remelting. Covers 99.8 percent commercial form. Manufacture, chemical composition, workmanship and finish, claims, sampling for umpire and analysis, and settlement of claims.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, 1938. Mangesium and Magnesium Alloys. Covers definition, constants, derivation, solubility, purity and forms available, uses, supply, packing, and definition; physical properties, forms available, and marketing for magnesium alloy.

Society of Automotive Engineers, Inc. Aeronautical Information Report 8; 1944. U. S. and British Commonwealth of Nations Aircraft Metals. Magnesium Alloys. Gives table showing specifications used in the U. S. and specifications for similar metals used in the United Kingdom, Australia, and Canada for use in the selection of interchangeable and substitute materials for the repair and maintenance of aircraft; and a table showing chemical composition and mechanical properties of these aircraft metals. Covers bars, rods, shapes, forgings, sheet, tubing, and castings.

Society of Automotive Engineers. 1944 Handbook, Section 3—Processed Materials. Notes on Magnesium Alloys, revised 1944. The outstanding characteristic of magnesium alloys is their lightness. Covers castings, sand castings, die castings, permanent mold castings, wrought alloys, extruded alloys, rolled alloys, and forgings together with tables of dimensions.

Society of Automotive Engineers. 1944 Handbook, Section 3—Processed Materials. S.A.E. Standard Magnesium Alloy Specifications, revised 1944. Gives table showing compositions of S.A.E. magnesium alloys and gives specifications including general information and physical properties for sand castings, die castings, permanent mold castings, wrought alloys, extrusion alloys, and forging alloys.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Circular C346; 1927. Light Metals and Alloys—Aluminum and Magnesium. Gives detailed information on the physical and mechanical properties of aluminum and magnesium and of their light alloys; and the variation in properties caused by changing the composition of the alloy, by the presence of impurities, by changes in conditions of manufacturing operations, and by heat treatment. Discusses the metallography, corrosion resistance, and methods of protection against corrosion, the theory of heat treatment, and the application of the alloys to industry.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 57-21-1C; 1944. Magnesium Powder.

### 695.2 MAGNESIUM ALLOY PLATES, SHEETS, AND STRIPS

Aeronautical Chamber of Commerce of America, Inc. National Aircraft Standard NAS 194; 1944. Magnesium Alloy—Standard Thicknesses for Sheet and Plate. Gives table showing various thicknesses and standard sheet sizes. Thickness sizes based on American Standards Assn. preferred number series B32.1-1941. Developed by National Aircraft Standard Committee.

American Society for Testing Materials, B90-44T; 1944. Tentative Specifications for Magnesium-Base Alloy Sheet. Cover four designated commercial types of

alloy sheet having a specific gravity under 1.8. Manufacture, chemical composition, tensile properties, test specimens, tolerances, workmanship, and explanatory notes.

Society of Automotive Engineers. Aeronautical Material Specification 4370; 1940. Magnesium Alloy Sheet (Annealed). Gives requirements for composition, condition, physical properties, quality, tolerances, reports, and rejections. Similar to U. S. Gov., War Dept., Specification 11317, Grade A; U. S. Gov., Navy Dept., Specification M-111d, Alloy 11, Condition A; A.S.T.M. Specification B90-38T, Alloy 11; and Society of Automotive Engineers Specification 51.

Society of Automotive Engineers. Aeronautical Material Specification 4380; 1941. Magnesium Alloy Sheet, Aluminum Zinc (Annealed). Gives requirements for composition, condition, quality, tolerance, reports, corrosion, rejections, and identification. Similar specifications: Army 11317, Grade II, Condition A; Navy M-111, Alloy 8, Condition A; Alloys C-57S and J-1.

Society of Automotive Engineers. Aeronautical Material Specification 4381; 1941. Magnesium Alloy Sheet, Aluminum Zinc (Hard). Gives requirements for composition, condition, quality, tolerance, reports, corrosion, rejections, and identification. Similar specifications: Army 11317, Grade II, Condition H; Navy M-111, Alloy 8, Condition H; Alloys C-57S and J-1.

U. S. Gov., Army-Navy Aeronautical Specification AN-M-28; 1944. Magnesium Alloy, 6.5 Aluminum, 1.0 Zinc; Sheet and Strip.

U. S. Gov., Army-Navy Aeronautical Specification AN-M-29; 1944. Magnesium Alloy, 3.0 Aluminum, 1.0 Zinc; Sheet and Strip.

U. S. Gov., Army-Navy Aeronautical Specification AN-M-30, 1944. Magnesium Alloy, 1.5 Manganese; Sheet and Strip.

U. S. Gov., Navy Dept. Specification 47M2a; 1942. Magnesium-Base Alloy; Sheet.

U. S. Gov., U. S. Army, Ordance Dept. Specification 57-157; 1944. Magnesium-Base Alloy; Plate and Sheet.

## 695.3 MAGNESIUM ALLOY TUBING

U. S. Gov., Army Air Forces. Specification 11334; 1942. Tubing; Magnesium Alloy (3.0 Aluminum, 3.0 Zinc) Round, Seamless.

U. S. Gov., Army-Navy Aeronautical Specification AN-T-71; 1944. Tubing; Magnesium Alloy (6.5 Aluminum, 1.0 Zinc), Round, Extruded.

U. S. Gov., Army-Navy Aeronautical Specification AN-T-72; 1944. Tubing; Magnesium Alloy (3.0 Aluminum, 1.0 Zinc), Round, Extruded.

U. S. Gov., Army-Navy Aeronautical Specification AN-T-73; 1944. Tubing; Magnesium Alloy (1.5 Manganese) Round, Extruded.

U. S. Gov., Navy Dept. Specification 44T35; 1941 Tubing; Magnesium-Base Alloy.

U. S. Gov., U.S.Army, Ordnance Dept. Specification 57-193; 1944. Magnesium-Base Alloy; Tubing.

## 695.4 MAGNESIUM ALLOY BARS, RODS, AND SHAPES

American Society for Testing Materials, B 107-44T; 1944. Tentative Specifications for Magnesium-Base Alloy Bars, Rods, and Shapes. Covers commercial extruded shapes in five types of alloys. Manufacture, chemical composition, sampling, tensile properties, test specimens, number of tests, methods of testing, permissible variations in dimensions, workmanship and finish, inspection, rejection, and explanatory notes re types of alloys.

Society of Automotive Engineers. Aeronautical Material Specification 4350A; 1941. Wrought Magnesium Alloy Bars and Forgings—Aluminum Zinc. Gives requirements for composition, condition, tensile strength, yield strength, elongation, Brinell, quality, identification, corrosion, and rejections. Similar specifications: Air Corps 11320, Grade 1; Navy M-314, Alloy 8; S.A.E. 520; Alloys J 1; Alloy C 57 S.

U. S. Gov., Army Air Forces. Specification 11322; 1939. Rod; Welding, Magnesium Alloy (for Aeronautical Use).

U. S. Gov., Army-Navy Aeronautical Specification AN-M-24; 1944. Magnesium Alloy, 6.5 Aluminum, 1.0 Zinc; Extruded Bar, Rod, and Shapes.

U. S. Gov., Army-Navy Aeronautical Specification AN-M-25; 1944. Magnesium Alloy, 8.5 Aluminum, 0.5 Zinc; Extruded Bar, Rod, and Shapes.

U. S. Gov., Army-Navy Aeronautical Specification AN-M-26; 1944. Magnesium Alloy, 1.5 Manganese; Extruded Bar. Rod, and Shapes.

U. S. Gov., Army-Navy Aeronautical Specification AN-M-27; 1944. Magnesium Alloy, 3.0 Aluminum, 1.0 Zinc; Extruded Bar, Rod, and Shapes.

## 695.5 MAGNESIUM ALLOY CASTINGS

American Society for Testing Materials, B80-44T; 1944. Tentative Specifications for Magnesium-Base Alloy Sand Castings. For castings of commercial alloy having specific gravity under 1.9; six types of alloys. Manufacture, heat treatment, chemical composition, sampling for chemical analysis, tensile properties, test specimens, number of tests, methods of testing, workmanship and finish, inspection, rejection, and explanatory notes. Endorsed by American Foundrymen's Assn.

American Society for Testing Materials, B 93-44T; 1944. Tentative Specifications for Magnesium-Base Alloys in Ingot Form for Sand Castings and Die Castings. Covers commercial alloys in ingot form with specific gravity under 1.9, for eight designated types of alloys. Gives manufacture, chemical composition, sampling for chemical analysis, and rejection.

American Society for Testing Materials, B 94-44T; 1944. Tentative Specifications for Magnesium-Base Alloy Die Castings. For two alloys having specific gravity about 1.8; requirements for manufacture, chemical composition, sampling, and workmanship. Includes explanatory notes on physical properties.

American Society for Testing Materials, ES-40; 1944. Emergency Specifications for Special Quality, Magnesium-Base Alloy Die Castings. Gives scope, manufacture, detail drawings, chemical composition, chemical analysis, sample castings, production control, marking, and records.

Society of Automotive Engineers. Aeronautical Material Specification 4420B; 1942. Magnesium Alloy Castings (Sand), 6 Al, 3 Zn (As Cast). Gives requirements for composition, casting, hardness, test bars

and analytical samples, quality, precautions, reports, identification, corrosion, approval, and rejections. Similar specifications: Army-Navy Aeronautical AN-QQ-M-56, Composition A, Condition AC, S.A.E. 50, Condition As Cast; A.S.T.M. B80-41T; Alloy No. 4, Condition As Cast.

Society of Automotive Engineers. Aeronautical Material Specification 4422C; 1944. Magnesium Alloy Castings (Sand) 6 Al,3 Zn (Solution). Gives requirements for composition, casting, heat treatment, test bars and analytical samples, quality, precautions, reports, identification, corrosion, approval, and rejections. Similar Specification: Army-Navy Aeronautical AN-QQ-M-56, Composition A, Condition HT; S.A.E. 50, Condition Heat Treated; A.S.T.M. B80-41T, Alloy No. 4, Condition Heat Treated.

Society of Automotive Engineers. Aeronautical Material Specification 4424C; 1944. Magnesium Alloy Castings (Sand) 6 Al,3 Zn (Solution-Precipitation). Gives requirements for composition, casting, heat treatment, test bars and analytical samples, quality, precautions, reports, identification, corrosion, approval, and rejections. Similar Specification: Army-Navy Aeronautical AN-QQ-M-56, Composition A, Condition, H.T.A.; S.A.E. 50; Condition, Heat Treated and Aged; A.S.T.M. B80-41T, Alloy No. 4; Condition, Heat Treated and Aged.

Society of Automotive Engineers. Aeronautical Material Specification 4434B; 1944. Magnesium Alloy Castings (Sand) 9 Al, 2 Zn (Solution-Precipitation). Gives requirements for composition, casting, heat treatment, test bars and analytical samples, quality precautions, reports, identification, corrosion, approval, and rejections. Similar specification: Army-Navy Aeronautical AN-QQ-M-56; Composition C, Condition H.T.A.; S.A.E. 500; Condition Heat Treated and Aged; A.S.T.M. B80-41T; Alloy No. 17, Condition, Heat Treated and Aged.

Society of Automotive Engineers. Aeronautical Material Specification No. 4484; 1944. Magnesium Alloy Castings (Permanent Mold) 9 Al,2 Zn (Solution-Precipitation). Gives requirements for composition, casting, heat treatment, test bars, quality, precautions, reports, identification, corrosion, approval, and rejections. Similar Specification, Army Air Forces 11349, Condition H.T.A.

Society of Automotive Engineers. Aeronautical Material Specification 4490A; 1942. Magnesium Alloy Die Casting. Gives requirements for composition, quality, reports, identification, corrosion, approval, and rejections. Similar specifications: Air Forces 11319; Navy 46M11; Navy Aeronautical M-369; S.A.E. 501; A.S.T.M. - B94-40T, Alloy 13.

U. S. Gov., Army Air Forces. Specification 11348-1; 1944. Magnesium Alloy; 10.0 AL, Permanent Mold Castings.

U. S. Gov., Army Air Forces. Specification 11349-1; 1944. Magnesium Alloy Castings; Permanent Mold, 9.0 Aluminum, 2.0 Zinc.

U. S. Gov., Army-Navy Aeronautical Specification AN-M-16; 1943. Magnesium Alloy; Die Castings.

U. S. Gov., Army-Navy Aeronautical Specification AN-QQ-M-56-1; 1943. Magnesium Alloy; Sand Castings.

U. S. Gov., Navy Dept. Specification 46M11; 1941. Magnesium-Base Alloy; Die Castings.

U. S. Gov., U.S. Army, Ordnance Dept. Specification 57-74-1E; 1943. Magnesium-Base Alloy; Sand Castings.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 57-74-2; 1943. Magnesium-Base Alloy; Permanent Mold Castings.

U. S. Gov., U. S. Army, Ordnance Dept. Specification 57-74-3; 1943. Magnesium-Base Alloy; Die Castings.

### 695.6 MAGNESIUM ALLOY FORGINGS

American Society for Testing Materials, B91-44T; 1944. Tentative Specifications for Magnesium-Base Alloy Forgings. Covers fully worked commercial forgings having a specific gravity under 1.9, for five types of alloy. Manufacture, chemical composition, tensile properties, test specimens, workmanship, and explanatory notes.

Society of Automotive Engineers. Aeronautical Material Specification 4350A; 1941. Wrought Magnesium Alloy Bars and Forgings—Aluminum Zinc. Gives requirements for composition, condition, tensile strength, yield strength, elongation, Brinell, quality, identification, corrosion, and rejections. Similar specifications: Air Corps 11320, Grade 1; Navy M-314, Alloy 8; S.A.E. 520; Alloys J 1; Alloy C 57 S.

Society of Automotive Engineers. Aeronautical Material Specification No. 4360; 1940. Wrought Magnesium Alloy Forgings. Gives requirements for composition, condition, physical properties, quality, reports, corrosion, and rejections. Similar to U. S. Gov., Air Corps, Specification 11321; U. S. Gov., Navy Dept., Specification M-126, Grade 9; A.S.T.M. specification B107-38T, Alloy 9.

U. S. Gov., Army-Navy Aeronautical Specification AN-M-20; 1944. Magnesium Alloy, 6.5 Aluminum, 1.0 Zinc; Forgings.

U. S. Gov., Army-Navy Aeronautical Specification AN-M-21; 1944. Magnesium Alloy, 8.5 Aluminum, 0.5 Zinc; Forgings.

U. S. Gov., Army-Navy Aeronautical Specification AN-M-22; 1944. Magnesium Alloy, 1.5 Manganese; Forgings.

U. S. Gov., Army-Navy Aeronautical Specification AN-M-23; 1944. Magnesium Alloy, 3.5 Aluminum, 5.0 Tin; Forgings.

U. S. Gov., Navy Dept. Specification 46M13; 1941. Magnesium-Base Alloy; Forgings.

## 696. ORES, METALS, AND ALLOYS NOT ELSEWHERE CLASSIFIED

American Society for Metals. Metals Handbook, 1939 edition. Properties of Lithium. Covers properties of lithium and its alloys.

American Standards Assn., Z 37.6-1942. Prepared by the U. S. Public Health Service. Allowable Concentration of Manganese (American War Standard). To prescribe the permissible concentration of manganese dust and fumes in the atmosphere of work places for the protection of the health of all workers. Gives properties of manganese, permissible concentration, sampling procedure, and analytical methods.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, 1938. Beryllium. Covers def-

inition, constants, solubility, properties, occurrence, grades, and uses.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, Volume 2; 1944. Chromium; Metallurgical. Covers definition, constants, solubility, derivation, uses, grades, forms and shipping, and substitutes.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, Volume 2; 1944. Indium. Covers definition, constants, solubility, derivation, uses, grades and forms, and substitutes.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, Volume 2; 1944. Lithium. Covers definition, constants, solubility, uses, derivation, forms and grades, containers, and substitutes.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, Volume 2; 1944. Manganese. Covers definition, constants, derivation, uses, forms and grades, production and imports of ore, and substitutes.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, 1938. Molybdenum. Covers definition, constants, occurrence, forms available, containers, and uses.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, Volume 2; 1944. Tantalum. Covers definition, constants, derivation, mechanical properties, forms, and uses.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, Volume 2; 1944. Titanium; Metallurgical. Covers definition, constants, structure and work-ability, derivation, uses, grades and forms, and containers.

National Assn. of Purchasing Agents. Handbook of Commodity Data Sheets, 1938. Tungsten and Ferrotungsten. Covers definition, constants, derivation, uses, impurities, and substitutes.

U. S. Gov., Army Air Forces. Specification 10300-1; 1937. Rods; Welding, Chromium-Cobalt-Tungsten Composition, for Hard-Facing Metal Parts.

U. S. Gov., Navy Dept. Specification 46R3c; 1945. Rods; Welding, Tungsten-Carbide.

U. S. Gov., Navy Dept. Specification 46R5b; 1938. Rods; Welding, Chromium-Cobalt Composition.

*References.*—Methods of testing, general requirements for metals, *see* 600.1; ferro-tungsten, *see* 621.25.

## 697. FLUX FOR SOLDERING, WELDING, AND BRAZING

### 697.1 SOLDERING FLUX

U. S. Gov., Federal Specification O-F-506; 1943. Flux; Soldering, Paste. Covers one type and one grade and shall not cause burns or irritation on contact with the skin. Gives requirements for consistency, corrosion, volatile matter, and performance; sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., Navy Dept. Specification 51F1c; 1945. Flux; Soldering, Paste.

U. S. Gov., U. S. Army, Army Air Forces. Specification 2-89-1935. Paste; Soldering, Non-Corrosive.

### 697.2 WELDING FLUX

U. S. Gov., Army Air Forces. Specification 11313; 1939. Flux; Gas Welding, (for) Aluminum and Aluminum Alloys (Aircraft Use).

U. S. Gov., Army Air Forces. Specification 11314; 1939. Flux; Gas Welding. (for) Corrosion and Heat Resistant Steel (Aircraft Use).

U. S. Gov., Army Air Forces. Specification 11315; 1939. Flux; Gas Welding (for) Nickel-Chromium Iron Alloy (Aircraft Use).

U. S. Gov., Army Air Forces. Specification 11323-A; 1945. Flux; Gas Welding, for Magnesium Alloys.

U. S. Gov., Navy Dept. Specification 51F3a; 1937. Flux; Gas-Welding, for Corrosion- and Heat-Resisting Steel (Aircraft Use).

U. S. Gov., Navy Dept. Specification 51F6; 1940. Flux; Welding, for Aluminum and Aluminum Alloy.

U. S. Gov., Navy Dept. Specification 51F7; 1940. Flux; Gas-Welding, for Nickel-Chromium-Iron Alloy (Aircraft Use).

U. S. Gov., Navy Dept. Specification 51F8; 1940. Fluxes; Welding.

### 697.3 BRAZING FLUX

Society of Automotive Engineers. Aeronautical Material Specification No.3410; 1940. Flux (Brazing, Silver). This specification covers silver brazing at temperatures from 1,200° to 1,600° F., and silver brazing corrosion-resisting steels (18 chromium, 8 nickel) at 1,200° F. It is a paste containing not more than 30 percent water by weight. Gives requirements as to physical properties, quality, packaging, and rejections. Similar to U. S. Gov., War Dept., Specification 11316; and Navy Dept. Specification 51F4.

U. S. Gov., Army Air Forces. Specification 11316-A; 1940. Flux; Brazing, Silver Alloy.

U. S. Gov., Navy Dept. Specification 51F4a; 1940. Flux; Brazing (Silver).

# 700-799 MACHINERY AND VEHICLES

## 700-709 POWER GENERATING EQUIPMENT

(Except Electrical)

### 700. GENERAL ITEMS

American Bureau of Shipping. Rules for the Classification and Construction of Steel Vessels, 1944. Rules for the Construction and Classification of Machinery. Include conditions of classification, boilers and other pressure containers, steam engines, internal combustion engines, electrical equipment, pumps and piping systems, propellers, refrigerating machinery and insulation of cargo spaces; and rules for the inspection and testing of materials for machinery, boilers, and piping.

American Society of Mechanical Engineers. Letter Symbols for Heat and Thermodynamics Including Heat Flow, 1943. American Standards Assn., Z10.4-1943. Sponsor organizations, American Assn. for the Advancement of Science; American Institute of Electrical Engrs.; American Society of Civil Engrs.; and Society for the Promotion of Engineering Education. Covers general letter symbols, letter symbols primarily for heat and thermodynamics, letter symbols for heat flow, and letter symbols for radiation.

American Society of Mechanical Engineers. Power Test Code, Auxiliary Section. Definitions and Values, 1931. Outlines the units to be employed in reporting the results of tests made in accordance with the various power test codes. Covers table 1 (fundamental units and constants), table 2 (units of output), table 3 (units of performance), and general notes on data and computations of test codes.

American Society of Mechanical Engineers. Power Test Code, Auxiliary Section. General Instructions, 1929. Supplements specific instructions to be found in each code. Covers scope of the codes, the object, the preparations, instruments and testing apparatus, miscellaneous instructions, the starting conditions, the operating conditions, the records, working up the data, and the report.

American Society of Mechanical Engineers. Power Test Code, Auxiliary Section. Part 1—General Considerations, 1935. The instruments and apparatus here considered are those used for measuring physical and chemical quantities in connection with tests of power equipment.

American Society of Mechanical Engineers. Power Test Code, Auxiliary Section. Part 8—Measurement of Indicated Horsepower, 1941. This section treats the direct measurement of the indicated power of piston engines and machines with the aid of engine indicators. Several types of indicators are described and illustrated, along with recommendations for installation of the indicator on an engine and for carrying out the indicating tests. There are also chapters dealing with testing lubrication, accuracy at pressure measurement and evaluation of results.

American Society of Mechanical Engineers. Power Test Code, Auxiliary Section. Part 9—Heat of Combustion, 1943. Treats of calorimetric apparatus for solid, liquid, and gaseous fuels.

American Society of Mechanical Engineers. Power Test Codes, Auxiliary Section. Part 20—Smoke Density Determinations, 1936. Describes methods of measurements, instruments used, and smoke scale. Includes samples of standard smoke charts.

American Society for Testing Materials, C 108-44 T; 1944. Tentative Symbols for Heat Transmission. Gives special practices relating to heat flow terms including terms ending in "ivity," "ance," and "ion"; transmission; and conduction. Also heat flow symbols including area, density, specific heat, temperature, time, weight, flow rate, thermal conductivity, thermal resistivity, thermal resistance, thermal conductance, heat transfer, radiant flux, and thermal diffusivity.

American Standards Assn., B48.1-1933. American Standard Practice for Inch-Millimeter Conversion for Industrial Use.

Assn. of American Railroads, Operations and Maintenance Department, Operating-Transportation Division, Safety Section. Safety Rules Governing Maintenance of Way and Structures Employes, 1942. Includes general provisions; eye protection; motor, hand, trailer, and push cars (track cars), and motor vehicles; protection against train and engine hazards; handling material; derricks, cranes, and roadway material; tools or tackle; working around electrical circuits or equipment; working on poles; ladders, scaffolds, and trestles; working at elevated positions, manhole, well, trench, sewer, turntable pit or other excavation; cutting and welding equipment; preparing and using molten metals or materials; and handling gasoline, other flammables, and explosives. Also includes provisions for signal, telegraph, and telephone, and electrical workers on power circuits and on overhead lines.

Assn. of American Railroads, Operations and Maintenance Department, Operating-Transportation Div., Safety Section. Safety Rules Governing Train, Engine, and other Transportation Employes. Station Employes and Dining Car Service Employes, 1942. Includes general provisions on or about tracks, structures, platforms, and equipment; handling material and freight; and using tools or appliances and working around machinery; provisions for train engine and other transportation employes (except station and dining car employes)—coupling or uncoupling engines and cars and work incident thereto; operating engines, hand brakes, and switches; getting on or off engines or cars; on engines,

cars, or trains; handling freight, baggage, express, mail, etc.; and other train and engine service works; provisions for station employes—trucking; gases, acids, explosives, etc.; tools and equipment; elevators, power cranes, hoists, or derricks; getting on or off equipment; self-propelled trucks or tractors; and miscellaneous; and provisions for dining car employes—dining car, kitchen and pantry; handling and stowing material and supplies; trucking material and supplies; and miscellaneous.

Assn. of American Railroads. Purchases and Stores Div. Manual, 1939. Recommended rules and practices governing use of stock book, requisitions and receiving material, transferring material between stores, handling material manufactured in shops, material released and reclaimed including scrap, working stocks, rails and ties, locomotive fuel, ice, stationery, inventory, safety practice, fire prevention, standard organization and practices, uniform methods of purchase of equipment and large material contracts, stock control, carrying cost of material and supplies investment, and handling of containers.

Assn. of American Railroads. Purchases and Stores Division. Standard Material Classification, 1940. For materials used by railroads under main numbered headings with detail lists of materials under each heading and the unit in which purchased.

National Conference on Uniform Traffic Accident Statistics, Committee on Definitions. Manual of Definitions of Motor Vehicle Accidents, 1942. Includes primary definitions and guiding examples and interpretations for motor-vehicle accident, motor vehicle, motor-vehicle traffic accident, traffic way, motor-vehicle accident death, motor-vehicle traffic accident death, place of accident, and property damage; and classifications of types of motor vehicle traffic accidents and causes of death. Endorsed by U. S. Public Health Service, U. S. Bureau of Census, Division of Statistics Standards, U. S. Bureau of the Budget, and U.S. Public Roads Administration.

National Safety Council, joint sponsor with National Council on Compensation Insurance, and International Assn. of Industrial Accident Boards and Commissions. American Standards Assn., Z16.2-1941. Recommended Practice for Compiling Industrial Accident Causes. Part I, Selection of Accident Factors, defines the various classes of disabilities, the time charges to be assigned to the disabilities, definitions of frequency and severity rates, and general rules for the compilation of rate statistics; Part II, Detailed Classification of Accident Factors, presented in five sections—(1) agency and agency part, (2) the unsafe mechanical or physical condition, (3) the accident type, (4) the unsafe act, and (5) the unsafe personal factor.

U. S. Gov., Dept. of Labor, Division of Labor Standards. Special Bulletin 7; 1942. Standards for Industrial Safeguards. Runways; Elevated. Covers means of access and railings.

U. S. Gov., Navy Dept., U. S. Coast Guard. Bureau of Marine Inspection and Navigation. Marine Engineering Regulations and Material Specifications, 1942. Contains specifications and requirements for materials, design, construction, installation, and inspection of boilers, unfired pressure vessels and appurtenances thereof, also piping, valves, fittings, flanges, safety valves, etc., upon the strength and efficiency of which safety of life is dependent, and are intended for maximum temperatures of 1,000°F. Includes specifications for two grades (A and B) of stay-bolt steel—process, chemical composition, bending properties, test specimens, number of tests, permissible variation in diameter, finish, and marking.

*References.*—Temperature measurements, *see* 919.80; density determination of solids, liquids, and gases, *see* 503.0; liquid fuels, *see* 503.0; coal and coke, *see* 501; tolerances, allowances, and gages for metal fits, *see* 615.82; heat transmission measurements, *see* 792.0.

## 701. STEAM ENGINES AND LOCOMOTIVES

### 701.1 STEAM ENGINES

American Bureau of Shipping. Rules for the Classification and Construction of Steel Vessels, 1944. Steam Reciprocating Engines. Include requirements for construction and installation, drawings and data to be submitted, material, general construction, bedplate, cylinders, shafting, crankshaft, webs, tube shafts, tailshafts, tailshaft liners, hollow shafts, coupling bolts, trial, and spare parts and equipment.

American Society of Mechanical Engineers. Power Test Code. Reciprocating Steam-Driven Displacement Pumps, 1927. For determining the performance of the pump and engine, including reheaters, heaters, and jacket pumps, circulating pumps, condensate pumps, and vacuum pumps, which are concerned in their operation; with auxiliary sections on general considerations, pressure measurement, temperature measurement, electrical measurements, determination of quality of steam, measurement of time, speed measurements, linear measurements, and leakage measurement.

American Society of Mechanical Engineers. Power Test Code. Reciprocating Steam Engines, 1935. Recommends standard methods of determining the performance of an engine, including steam jacket if any; with auxiliary sections covering general considerations, pressure measurement, temperature measurement, electrical measurements, determination of quality of steam, measurement of time, speed measurements, linear measurements, measurement of surface areas, and leakage measurement.

Technical Assn. of the Pulp and Paper Industry. Standard Power Plant Report, E 201 p-44; 1944. Lists data to be obtained, and form of report, for steam, steam-electric power, hydro-electric power, and purchased power paper mills.

*References.*—Donkey engines, *see* 703.1; other ship engineering specifications, *see* 725.42; steel forgings, shafts, *see* 611.51, 611.52; general requirements on power test codes, *see* 700; gaskets, rod packing, *see* 707.1, 707.2.

### 701.2 STEAM TURBINES

American Bureau of Shipping. Rules for the Classification and Construction of Steel Vessels, 1944. Steam Turbines and Gears. Include requirements for construction and installation, drawings, material, general construction, astern power, definition of

speed, governor control, casings, shafting, turbine rotors, blades, tests, and spare parts and equipment.

American Society of Mechanical Engineers. Power Test Code. Steam Turbines, 1941. Appendix, 1943. Provides for the testing and for the computation and tabulation of the results, for condensing, regenerative and non-condensing or back-pressure turbines. Includes object and scope; description and definition of terms applicable to all turbines, emergency governor, reheating, regenerative, and extraction and mixed-pressure turbines; guiding principles embracing agreements to be reached, tolerances, preliminaries to tests, test conditions, instruments, and corrections; instruments and method of measurement; computation of results; and report of tests. Appendix is intended to facilitate the working up of test reports.

National Electrical Manufacturers Assn. Turbine-Generator Recommended Practices, 41-66; 1941. Covers direct connected sets and 25 cycle and direct-current geared sets in types and sizes in current use. Includes requirements for turbine units; synchronous generators for steam turbine drive; and direct-current generators for steam turbine drive.

National Electrical Manufacturers Assn. Recommended Standards for Single-Stage and Multi-Stage Mechanical Drive Steam Turbines, 43-88; 1943. Provides practical information concerning construction, performance, and manufacture of single-stage and multi-stage mechanical drive steam turbines. Covers nomenclature, basis of rating, initial steam pressure and temperature standards, turbine load capacities, overspeed protective devices, relief valves for turbine discharge connections, speed governor, turbines governed by external devices, finish and painting, and standard features and accessories.

*References*—Steel forgings, shafts, *see* 611.51, 611.52; cast iron, cast steel, *see* 611.11, 611.41; general requirements on power test codes, *see* 700; speed governors, *see* 795.

## 701.3 LOCOMOTIVES

American Railway Engineering Assn., Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering, 1940. Steam Locomotives. Gives general principles, locomotive classification, table of horsepower capacities, typical characteristics of steam locomotives, and typical design data pertaining to steam locomotives.

American Society of Mechanical Engineers. Boiler Construction Code. Boilers of Locomotives, 1943. Recommendations here are given for materials, working pressures, thickness of plates and tubes, joint efficiency, braced and stayed surfaces, riveting, safety valves, fittings, hydrostatic tests, fusion welding, stamping, etc.

American Society of Mechanical Engineers. Power Test Code. Steam Locomotives, 1941. These rules are divided into two parts—a code for laboratory tests to determine the coal and steam consumption per unit of power when the locomotive is operated under fixed conditions, and a code for road tests to develop similar information under the conditions of road service. Consideration is given to measurements involved, instruments and apparatus required, preparations, operating conditions, duration of test, calculation of results and method of calculating individual items. Also included are approved forms for reporting data and results; with auxiliary sections on general considerations, pressure measurements, temperature measurements, determination of quality of steam, measurement of time, speed measurement, linear measurement, measurement of surface areas, smoke density determinations, and leakage measurement.

Assn. of American Railroads. Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1943. Counterbalancing of Locomotives. Diagrams and formulae for calculating weight of counterbalance, for the reduction of rail blow and smoother operation. Example gives illustration of principles involved.

Assn. of American Railroads. Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Efficiency Tests of Locomotives. Method of Conducting. Gives detailed method of conducting laboratory and road tests, for determining steam and fuel consumption per unit of power, testing apparatus and method of attachment, test data sheets and computation forms, for calculating horse power and boiler efficiency, etc.

Assn. of American Railroads. Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Inspection and Testing of Locomotive Boilers. Design and construction responsibility, factor of safety, rules for inspection, interior, and exterior inspection, and testing, staybolts, steam gages, safety valves, water gages, injectors, flue plugs, washing boilers, and reports.

Assn. of American Railroads. Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Rules for Fuel Economy on Locomotives. For saving of coal fuel, instructions to prepare fire adding coal and water, firing methods (with ten illustrations of firebox), combustion of mixed fuels, cleaning fires, etc. Also for use of oil fuel, condition of boiler, draft, scale, and suggestions to engineer and fireman.

Assn. of American Railroads. Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Rules and Instructions for Inspecting and Testing of Steam Locomotives and Tenders. Inspection periods, care of ash pans, brakes, cabs, signals, sanders, draft gear, driving gear, lights, running gear, tenders, throttle, and reversing gear. Includes table of minimum thickness for tires on standard and narrow-gage locomotives, inspection reports, and accident reports.

Assn. of American Railroads. Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Tractive Power for Mallet Locomotives. Formulae for tractive power, simple and compound, at 90 and 50 percent cut-off, for four cylinder locomotives. Also includes three cylinder simple locomotives, and locomotive booster.

Assn. of American Railroads. Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. U. S. Safety Appliances for all Classes of Cars and Locomotives. Includes the safety-appliance acts, requirements on number, dimensions, location, and manner of

application of hand brakes, running boards, steps, ladders, hand holds, uncoupling levers, and safety railings, with dimensional drawings.

U. S. Gov., Dept. of Commerce, National Bureau of Standards H5; 1923. American Standards Assn., B13-1924. American Logging and Sawmill Safety Code. For steam locomotives for logging railroads, requirements on minimum allowed factor of safety, number, general location, and protection of water glasses, gauge (try) cocks, and gauges, capacity and type of safety valves, design and dimensions of footboards, and handrails, equipment requisite in lamps, sand boxes, spark arresters, and ash pan.

U. S. Gov., Interstate Commerce Commission, Bureau of Locomotive Inspection. Laws, Rules, and Instructions for Inspection and Testing of Steam Locomotives and Tenders and Their Appurtenances, 1929. Also interpretations, rulings, and explanations on questions raised regarding above laws, rules, and instructions, 1921. Requirements, mandatory by law, for new locomotives and for locomotives in service, as regards permissible factor of safety for boiler, allowable stress on boiler stays and braces, design strength of material and rivets, interior and exterior inspection, hydrostatic pressure test, stay bolt testing, location, siphon connection, and testing of steam gauges, number, capacity, and test of safety valves, number and location of water glass and gauge cocks, provision of glass shields, method of support and height of ash pan, testing of air brake compressors and reservoirs, maximum piston travel for brakes, windows and curtains for cabs, cab apron, provision of mechanically operated fire door, safety chains for draw gear, fit in main and side rod bearings, headlight illumination intensity, cab lighting, minimum diameter of axles for various loads, permissible play in wheel bearings, clearance of pilot, gauge of wheel and their pressing on axles, gangway of tender and relative deck height, etc., permitted wear limits and defects appearing in service.

U. S. Gov., Interstate Commerce Commission, Bureau of Locomotive Inspection. Laws, Rules, and Instructions for Inspection and Testing of Steam Locomotives and Tenders and Their Appurtenances, 1929. Safety Appliance Standards for Locomotives. Requirements, mandatory by law, regarding number, dimensions, location, and application of sill steps, handholds, uncoupling levers, running boards, and handrails, provision of automatic couplers and of hand-brakes, standard height of draw-bars.

U. S. Gov., U. S. Army, Transportation Corps. Specification 43-30; 1937. Locomotive; Steam, Type 280.

## 702. ACCESSORIES AND PARTS FOR STEAM ENGINES AND LOCOMOTIVES

### 702.0 GENERAL ITEMS

American Society of Mechanical Engineers. Power Test Code. Evaporating Apparatus, 1941. Rules for the testing of single or multiple-effect evaporators to determine—(1) adaptability of apparatus, (2) best method of operation, (3) capacity or efficiency or both of new installation preparatory to acceptance. Recommendations include measurements, instruments, and apparatus, precautions to be observed, operating conditions, duration of test, method of recording data obtained, and calculation of result. An approved form for reporting results of test is included; with auxiliary sections on general considerations, pressure measurement, temperature measurement, and measurement of time.

### 702.1 CYLINDERS FOR STEAM LOCOMOTIVES

*References.*—Gray cast iron, *see* 611.11; methods of testing cast iron, *see* 600.1.

### 702.2 FRAMES FOR STEAM ENGINES AND LOCOMOTIVES

American Society for Testing Materials, A 87-44; 1944. Carbon-Steel and Alloy-Steel Castings for Railroads. Four grades intended for locomotive and car equipment. Gives requirements for heat treatment, temperature control, chemical composition, ladle analysis, check analysis, tensile properties, alternate tests to destruction, magnetic particle testing, test specimens, number of tests, retests, permissible variations in weight, workmanship, finish, marking, inspection, and rejection. A. S. T. M. Emergency Alternate Provision EA-A87; 1942. Section 3 (d) full annealing, and section 10 (a) magnetic particle testing.

*References.*—Cast steel, *see* 611.41; methods of testing metal, *see* 600.1.

### 702.3 BOILERS AND FIREBOXES FOR STEAM ENGINES AND LOCOMOTIVES

### 702.9 MISCELLANEOUS PARTS FOR STEAM ENGINES AND LOCOMOTIVES

American Society of Mechanical Engineers. Power Test Code. Compressors and Exhausters, 1935. This code provides standard directions for conducting and reporting tests on centrifugal compressors and exhausters. The information is presented as follows: (1) Object and scope, (2) enumeration and description of terms, (3) guiding principles, (4) instruments and testing apparatus required and measurement methods, (5) computation of results, (6) form for reporting data and results of tests. In addition, the method of measuring flow with nozzles is explained in detail, and formulas are given for flow measuring nozzles. Diagrams are included to show the nozzle shape applying to all arrangement.

Assn. of American Railroads. Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1944. Dry Pipes and Outside Steam Pipes. Recommended Practice. Revised, 1943. For locomotives, recommended diameters, and thickness of ten sizes of pipe.

Assn. of American Railroads. Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Brackets and Other Means of Support for Air Pumps, Water Pumps, Power Reverse Gears Feedwater Heaters, Etc., on

Locomotives. Requirements for design brackets built up from steel bars or made of cast steel, location of boiler braces, reinforcement to prevent vibration, with outline diagrams.

Assn. of American Railroads. Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Crossheads and Guides for Locomotives. Covers use of alligator type cross head and guide, with formulae and drawings. Includes methods of lubrication, taking up wear, and materials.

Assn. of American Railroads. Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Crosshead or Wrist Pins. Recommendations for design of crosshead pins, in several sizes, with dimensional drawings, detailing oil or grease lubrication, maximum bearing pressure, and material to be of forged steel, medium grade, A.A.R. specification.

Assn. of American Railroads. Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Design of Frame Pedestal Toes for Both Built-up Frames and Engine Beds. Diagrams for two styles of pedestal toes, with ratios members to width of frame.

Assn. of American Railroads. Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Front and Back cylinder Heads for Locomotives. Design factors and drawings for cylinders up to 32 in. diameter and boiler pressure up to 300 lb. Material to be cast steel, A.A.R. specification, grade B.

Assn. of American Railroads. Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Knuckle Joints for Locomotive Side Rods. Recommended designs and details for rod ends and pins of forged steel. Gives maximum bearing pressure, and requires material to meet A.A.R. specification.

Assn. of American Railroads. Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Injectors; Dimensions for Flange and Screw Couplings for. Dimensional drawing of various sizes of iron and copper pipe, detailing thread, shoulder, etc. Includes forged steel bolted flanges, coupling nuts, and sleeves, etc.

Assn. of American Railroads. Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Locomotive Rods for Heavy Power. Factors of design, and drawings for two forms of main and side rod.

Assn. of American Railroads. Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1944. Locomotive Sanding System. Gives sanding arrangements for steam, Diesel, and electric locomotives.

Assn. of American Railroads. Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Main and Other Crank Pins for Locomotives. Requirements for designs using A.A.R. specifications for material, with detailed diagrams, and formulas for design of pins.

Assn. Of American Railroads. Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Pistons and Heads for Locomotives. Design recommendations and dimensional drawing of piston head of the conical type, for several sizes of cylinder.

Assn. of American Railroads. Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1944. Piston Rod and Key Taper in Crosshead. Dimensional drawing of taper for rod and key, with alternate.

Assn. of American Railroads. Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Typical Methods of Lubricating Main and Side Rods. For locomotives, lubrication of back end of main rod, end of side rod, crank pin, and cross head pin. Dimensional drawings.

Assn. of American Railroads. Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Universal Joints for Operating Rods of Cab Valves, Injectors, Etc. Recommends use of three styles only for locomotive cab valves. Gives dimensional drawings, of jaws and combinations for screw, extension rod, and square head patterns.

U. S. Gov., Navy Dept. Specification, 60S1a; 1944. Sirens, Steam, Revolving Cylinder Type, 150 to 600 Pounds per Square Inch W.S.P. (Shipboard Use).

*References.*—Locomotives, *see* 701.3; cast iron, cast steel, *see* 611.11, 611.41; cast-iron wheels, cast-steel wheels, *see* 611.18, 611.49; forged-steel wheels and tires, *see* 611.53; journal boxes, bearings, *see* 611.22, 692.3; brake beams, brake shoes, *see* 611.42 and 611.43; couplers and cast-steel parts, *see* 611.44, 611.49; axles, *see* 611.52, 611.51; valves, safety valves, *see* 607.6; hose, *see* 202; lubricator fittings, *see* 794; boiler accessories, *see* 703.9; locomotive headlights, *see* 716.2; power piping, *see* 607.0.

## 703. BOILERS, FURNACES, EVAPORATORS, CONDENSERS

### 703.0 GENERAL ITEMS

American Boiler Manufacturers Assn. and Affiliated Industries. Determination of Design Pressure for Boilers.

American Boiler Manufacturers Assn. and Affiliated Industries. Performance Forms for Steam Generating Equipment, 1937. Contains standard provisions adopted by this association for predicted or guaranteed performance of boilers and appurtences, radiation loss chart, and specifies conditions for tests.

American Boiler Manufacturers Assn. and Affiliated Industries. Standard Contract Forms. Prepared for the information of specification writers for steam generating equipment and covers general conditions and performance.

American Boiler Manufacturers Assn. and Affiliated Industries. Standard Guaranteed Performance Forms. Covers guaranteed performance on boilers with or without water walls, superheaters, air heaters, economizers, stokers, stoker fans, pulverizers, pulverized coal burners, and steam generating units.

American Petroleum Institute, Production Div. Code 2; 1942. Code of Recommended Field Practice on Care and Use of Oil Field Boilers. Applies to horizontal return tubular and locomotive or firebox type boilers. Includes requirements for installation of boiler settings, stacks, pipe and fittings, steam piping, blow-off piping, feed water piping, burners, and fuel piping; and rules for care and operation of boilers in oil fields.

American Petroleum Institute, Production Div. Standard 2; 1942. Specification for Oil Field Boilers

(Locomotive Type). Covers detailed information relative to the installation of oil field boilers, including settings for both firebox type and return tubular type, with paragraphs devoted to stacks, fittings, and piping, illustrated with four full-page diagrams. Also contains sections on the care and operation of boilers, including firing and cutting in, cutting out and shutting down, cleaning out boiler, and repairs.

American Society of Mechanical Engineers. Boiler Construction Code. Low-Pressure Heating Boiler Code, 1943. Rules apply to steel and cast iron boilers used exclusively for low-pressure steam heating, hot water heating, and hot water supply. Recommendations cover materials, thickness of plates and tubes, joint efficiency, braced and stayed surfaces, supports, setting and installation, fittings, safety valves, stamping, hydrostatic tests, and welding.

American Society of Mechanical Engineers. Boiler Construction Code. Material Specifications, 1943. For the important materials used in the construction of boiler and pressure vessels. Recommends chemical composition, outlines the requirements for tensile properties, test specimens, finish, marking, inspection, annealing, heat treatment, etc. Covers boiler steel plates and rivets, steel and iron castings, steel tubes, steel bolting materials, pipe and flanges, wrought iron, and nonferrous metals.

American Society of Mechanical Engineers. Boiler Construction Code. Miniature Boiler Code, 1943. Boilers for which these rules have been formulated do not exceed 16 in. inside diameter of shell, 42 in. over-all length of outside to outside of heads at center, 20 sq. ft. water heat surface, and 100 lb. per sq. in. maximum allowable working pressure. Code provides complete construction details.

American Society of Mechanical Engineers. Boiler Construction Code. Power Boiler Code Including Rules for Inspection, 1943. These rules apply to the boiler proper and piping connections up to and including the valves as required by the code, also to superheaters, reheaters, economizers, and other pressure parts connected directly to the boiler without intervening valves. Recommendations are provided for the materials, thicknesses of plates, joint efficiency, ligament efficiency, domes and manholes, dished and flat heads, braced and stayed surfaces, stays and stay tubes, combustion chambers, headers, riveting, caulking, nozzle openings, safety valves, gages, fittings, piping, setting, inspection, and stamping.

American Society of Mechanical Engineers. Boiler Construction Code. Suggested Rules for Care of Power Boilers, 1943. A set of practical rules for performing the ordinary duties of operating and maintaining steam boilers and appliances, such as handling boilers in and out of service, inspection, preventing causes of boiler failure, and treatment and control of boiler feedwater.

American Society of Mechanical Engineers. Power Test Code. Atmospheric Water-Cooling Equipment, 1930. Applies only to equipment used for cooling of the comparatively large amounts of water required for power or industrial purposes; with auxiliary sections covering general considerations, pressure measurement, temperature measurement, measurement of time, and humid-measurements.

American Society of Mechanical Engineers. Power Test Code, Auxiliary Section. Part 11—Determination of Quality of Steam, 1940. Describes and illustrates the following types of steam calorimeters: Throttling or internal superheating, separating, universal, external superheating, and electric. Sampling nozzles are discussed, and specific instructions given for their design and location.

American Society of Mechanical Engineers. Power Test Code. Evaporating Apparatus, 1941. These rules for the testing of single- or multiple-effect evaporators enable one to determine—(1) adaptability of apparatus, (2) best method of operation, (3) capacity or efficiency or both of new installation preparatory to acceptance. Recommendations include measurements, instruments and apparatus, precautions to be observed, operating conditions, duration of test, method of recording data obtained, and calculation of results. An approved form for reporting results of test is included.

American Society of Mechanical Engineers. Power Test Code, Auxiliary Section. Part 2—Pressure Measurement, chapters 1 and 6; 1941. Chapter 1 considers—types of barometers; methods of obtaining barometric pressure; range and accuracy of barometers; installation; barometric corrections and reductions; and calibration, etc. Chapter 6 presents information on standard conditions for mercury columns; standard barometric pressure for condensers, engines and turbines; barometric temperature; temperature corrections; temperature-correction formula; corrections for barometers and pressure gages for decrease of atmospheric pressure with elevation; gravity corrections; data for computing pressures above atmospheric; corrections for head and water columns; density of water and multipliers for water columns; formulas for pressure equivalents of velocity heads; computation of total pressure; formulas for pressure loss due to pipe friction, for friction loss in terms of velocity, and in terms of impact tube reading.

American Society of Mechanical Engineers. Power Test Code, Auxiliary Section. Part 10—Flue and Exhaust Gas Analyses, 1938. Recommends methods to be used in the analysis of flue gases from furnaces, and exhaust gases from internal-combustion engines.

American Society of Mechanical Engineers. Power Test Codes, Auxiliary Section. Part 21—Leakage Measurements, chapters 1 and 2; 1942. Chapter 1 describes the three recommended methods for determining condenser leakage (silver nitrate, direct-weight and resistance-equality). Specific instructions are given for condenser leakage tests; while the recommended procedure for making these tests is discussed in considerable detail. Chapter 2 shows how to determine the amount of (1) boiler and steam boiler pipe leakage, (2) leakage from feedwater pipe, and (3) leakage from condensate pipe.

American Society of Mechanical Engineers. Power Test Code. Dust Separating Apparatus, 1941. Designed to cover tests on all types of dust separating apparatus installed for operation in conjunction with solid-fuel fired furnaces. Directions are given

for determining over-all efficiency; efficiency according to size of particles; pressure loss; dust concentration at the inlet and outlet of separator; combustible content of dust entering, leaving, and caught by separator; quantity of gas passing through the separator. Instruments to be used are described and methods of measurement given. This code also covers computation of results and provides a form for reporting test results, as well as a description and definition of terms used.

American Society of Mechanical Engineers. Power Test Code: Feedwater Heaters, 1927. Applies to open and closed boiler feedwater heaters. Covers object, instruments and apparatus, open heaters (installation, test, and calculation of results), closed heater (installation, test, and calculation of results), calculation of results, and records.

American Society of Mechanical Engineers. Power Test Code. Stationary Steam-Generating Units, 1936. Covers boiler, water walls, water floor, water screen, super-heaters, reheater, economizers, air heater, furnace and fuel burning equipment; auxiliary sections on general considerations, pressure measurement, temperature measurement, heat of combustion, flue and exhaust gas analyses, determination of quality of steam, measurement of time, smoke density determinations, and leakage measurements.

American Society of Mechanical Engineers. Power Test Code. Steam Condensing Apparatus, 1938. Provides rules for determining—(a) the absolute pressure the apparatus will maintain at the steam inlet nozzle when transferring heat rejected by the prime mover at a given rate in B.T.U. per hour with a given flow and temperature of circulating water, and a given tube cleanliness; (b) thermal transmittance of surface condensers for given operating conditions; (c) the amount of undercooling of the condensate; (d) the percentage of dissolved oxygen in the condensate; with auxiliary sections on general considerations, pressure measurement, temperature measurement, electrical measurements, measurement of time, determination of the viscosity of liquids, and leakage measurement.

Associated Factory Mutual Fire Insurance Companies. Factory Mutual Bulletin of Loss Prevention, 12.90; 1942. Pulverized Coal-Fired Boilers. Covers fire prevention methods for use of pulverized coal for firing boilers, for burning cement and lime in rotary kilns, and for ore roasting and metallurgical furnaces. Gives types and systems, pulverizing equipment, where explosions occur, safeguards, and operating instructions.

Assn. of American Railroads. Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Boiler Connections. Form of thread for washout plugs, arch tube plugs, and all boiler connections. Includes radial crown bolts and stay bolts.

Assn. of American Railroads. Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Rules for Determining Stresses in Locomotive Boilers. For new boilers, design factors for figuring net section, etc., longitudinal barrel seams and patches, gusset braces and flat surfaces, staybolts, etc.

Heat Exchange Institute, Condenser Section, 1939. This standard includes Part I, Surface Condenser Standards, covering nomenclature, definitions, condenser performance, materials of construction, atmospheric relief valve sizes, air pump capacity, and tubing characteristics; and Part II, Barometric and Low Level Jet Condenser Standards, covering nomenclature, types, design, definitions, performance, construction, atmospheric relief valves, air pump capacity, and installation. Also includes air-water vapor mixture data, pressure temperature conversion tables, and logarithms Base "E" applicable to both parts.

Heat Exchange Institute. Deaerator and Deaerating Heater Section, 1940. This standard covers nomenclature, definitions, types and standards of construction, rating standards and guarantees, accessories, and typical specification.

Heat Exchange Institute. Steam Jet Ejector and Vacuum Cooling Section, 1938. This standard includes Part 1, Steam Jet Ejectors, covering nomenclature, operating principles, types of assemblies, capacity, and standard accessories and materials of construction; Part 11, Test Code for Steam Jet Ejectors, covering purpose of code, scope of code, and illustrations; and Part III, Steam Jet Vacuum Refrigerator Equipment, covering nomenclature, definitions, performance, construction, standard units, and special types.

Heat Exchange Institute. Tubular Exchanger Section, 1937. This standard covers nomenclature, heat exchanger shells, tube sheets, baffles and support plates, heat exchanger tubes, standards of construction, fouling factors, table of factors, terminal design data, terminal properties of fluids, and index.

Heating, Piping and Air Conditioning Contractors National Association. Net Load Recommendations for Heating Boilers, 1943. Published semi-annually. The term net load as used in this book means the total amount of free standing radiation, or its equivalent, that is to be supplied with heat by the boiler. Gives valuable data of a general nature and gives tables showing the latest data from the leading manufacturers of boilers.

Hydraulic Institute. Thermodynamics of Boiler Feeding, 1941. Covers description of feed cycles in general, discussion of pumping power and mechanical problems with relation to feedwater temperature, analysis of temperature rise in boiler feed pumps, thermodynamic efficiency of boiler feed pumps, disposal of by-pass and leak-offs, and discussion of minimum permissible capacities.

National Fire Protection Assn. National Fire Codes for Flammable Liquids, Gases, Chemicals, and Explosives, 1943. Oil Burner Ordinance, Detailed Form (for Power and Heating Installations). Suggested ordinance regulating installation and operation of oil burning equipments and oil storage in connection therewith. Gives definitions, requirements for approved equipment, installation of tanks, vents, gauging, piping, valves, pumps, preheaters, controls, wiring, and installation of burner.

Steel Heating Boiler Institute. Code for the Rating of Steel Heating Boilers, 1936. Gives purpose, rating, heating surface, grate area, furnace volume,

table 1 showing standard ratings, and table 2 showing standard pipe connection openings.

## 703.1 BOILERS AND DONKEY ENGINES

American Bureau of Shipping. Rules for the Classification and Construction of Steel Vessels, 1944. Boilers and Other Pressure Containers. Include requirements for construction and installation, materials, strength calculations, cylindrical shells, efficiency, butt straps, details of construction, unstayed heads, stayed surfaces, stays, holes for stays and tubes, manholes and other openings, furnaces and flues, headers and similar fittings, tubes, boiler mountings, steam stop valves, safety valves, feed valves, blow-off valves, water gauges, pressure gauge, salinometer valve; superheaters, economizers, and similar equipment; installation, hydrostatic tests, and spare parts and equipment.

American Gas Assn. Approved by American Standards Assn., Z 21.33-1942. Requirements for Installation of Gas-Burning Equipment in Power Boilers. Gives requirements for boiler room ventilation, accessibility for cleaning and inspection, flues and flue connections, installation of burners and controls, gas piping and meters, and inspections and tests.

American Petroleum Institute, Production Div. Standard 2; 1942. Specification for Oil Field Boilers (Locomotive Type). Covers 6 sizes of locomotive type boilers, and contains stipulations on chemical and physical properties of materials, and dimensional sizes, with standard working pressures. Also complete standards on fittings, stacks, etc., for each size. It also defines a boiler horsepower.

Steel Heating Boiler Institute. Standard Specifications, 1936. Gives construction requirements, trimmings, pipe connection openings, firing tools, grates, base heights, smoke outfits, painting, guarantee, certification, and method of boiler selection.

U. S. Gov., Dept. of Commerce, National Bureau of Standards H5; 1923. American Standards Assn., B13-1924. American Logging and Sawmill Safety Code. For donkey engines and boilers, requirements on minimum factor of safety, number, general location, and protection of water glasses, gauge (try) cocks, and gauges, capacity and type of safety valve, guarding of engine moving parts.

U. S. Gov., Navy Dept., U. S. Coast Guard. Bureau of Marine Inspection and Navigation. Marine Engineering Regulations and Material Specifications, 1942. Contains specifications and requirements for materials, design, construction, installation, and inspection of boilers, unfired pressure vessels and appurtenances thereof, also piping, valves, fittings, flanges, safety valves, etc., upon the strength and efficiency of which safety of life is dependent, and are intended for maximum temperatures of 1,000° F. Includes specifications for construction of cylindrical shells, shell joints, domes and steam chimneys, heads, openings and reinforcements, stays and reinforcements, tube sheets of water-tube boilers, combustion chambers and tube sheets of fire-tube boilers, furnaces, and flues.

U. S. Gov., Navy Dept., U. S. Coast Guard. Bureau of Marine Inspection and Navigation. Marine Engineering Regulations and Material Specifications, 1942. Contains specifications and requirements for materials, design, construction, installation, and inspection of boilers, unfired pressure vessels and appurtenances thereof, also piping, valves, fittings, flanges, safety valves, etc., upon the strength and efficiency of which safety of life is dependent, and are intended for maximum temperatures of 1,000° F. Includes specifications for rivet iron and iron rivets—material, chemical composition, tensile properties, bend tests, test specimens, number of tests, micrographic tests, physical properties and tests, workmanship and finish, inspection, and rejection. In substantial agreement with American Society for Testing Materials Standard Specification A152-39.

U. S. Gov., U. S. Army, Medical Department. Specification 84-44; 1939. Boiler, Steam, Hospital, Cooking and Sterilizing.

*References.*—Locomotives, *see* 701.3; house heating boilers, *see* 614.4; fire brick, *see* 534.12; boiler plates, *see* 604.11; staybolt iron bars, *see* 603.1; boiler tubes, boiler accessories, *see* 703.2, 703.9; boiler rivets, *see* 608.4; operating practice and installation, *see* 703.0; test codes and inspection rules, *see* 700., 703.0; boiler gaskets, *see* 707.11.

## 703.2 BOILER TUBES

American Bureau of Shipping. Rules for the Classification and Construction of Steel Vessels, 1944. Boiler Tubes. Include rules for inspection and tests.

American Society for Testing Materials, B 13-41; 1941. A.S.M.E. Boiler Construction Code Specification SB-13. Seamless Copper Boiler Tubes. Covers arsenical and nonarsenical tubes for locomotive boilers, Basis of purchase, manufacture, chemical analysis, temper; flange, crush, and hydrostatic tests; test specimens, number of tests, retests, standard weights, weight and dimension tolerances, workmanship and finish, marking, inspection, rejection, and rehearing.

American Society for Testing Materials, B 14-18; 1918. Seamless Brass Boiler Tubes. For locomotive boilers; requirements for manufacture, chemical composition, temper, flange test, flattening and doubling-over test, hydrostatic test., specimen, standard weights, permissible variations in dimensions, finish, and inspection.

American Society for Testing Materials, A 83-44; 1944. A.S.M.E. Boiler Construction Code Specification SA-83. American Standards Assn., B36.12; 1944. Lap-Welded and Seamless Steel and Lap-Welded Iron Boiler Tubes. Includes boiler tubes and flues, safe ends, arch and stay tubes, and seamless superheater and small boiler tubes. Gives process, chemical composition, check analysis, flattening test, flange test, crush test, hydrostatic test, etch test for charcoal-iron tubes, test specimens, number of tests, retests, forming operations, standard weights, permissible variations, in dimensions and weight, finish, marking, inspection, and rejection. A.S.T.M. Emergency Alternate Provision EA-A 83; 1942, affected section 17, marking.

American Society for Testing Materials, A 178-44; 1944. A.S.M.E. Boiler Construction Code Specification SA-178. American Standards Assn., B36.13; 1944. Electric-Resistance-Welded Steel and

Open-Hearth Iron Boiler Tubes. Covers boiler tubes, boiler flues, superheater flues, safe ends and arch tubes. Gives manufacture, chemical composition, check analysis, flattening tests, flange test, crush test, tensile properties, hydrostatic test, test specimens, number of tests, retests, forming operations, standard weights, permissible variations in dimensions and weight, finish, marking, inspection, and rejection. A.S.T.M. Emergency Alternate Provision EA-A 178, 1942 affected section 18, marking.

American Society for Testing Materials, A 179-44; 1944. Seamless Cold-Drawn Low-Carbon Steel Heat-Exchanger and Condenser Tubes. Covers 1/2 in. up to 2 in. in outside diameter. Gives chemical composition, check analysis, flattening test, flaring test, hardness test, hydrostatic test, test specimens, number of tests, retests, retreatment, permissible variations in dimensions, finish, marking, inspection, and rejection. A.S.T.M. Emergency Alternate Provision EA-A 179, 1942 affected section 9, hydrostatic test.

American Society for Testing Materials, A 192-44; 1944. A.S.M.E. Boiler Construction Code Specification SA-192. American Standards Assn., B36.14; 1944. Seamless Steel Boiler Tubes for High-Pressure Service. Covers tubes 1/2 in. and larger in diameter. Gives requirements for manufacture, chemical composition, check analysis, flattening test, flaring test, hardness test, hydrostatic test, test specimens, number of tests, retests, forming operations, standard weights, permissible variations in dimensions and weight, finish, marking, inspection, and rejection. A.S.T.M. Emergency Alternate Provision EA-A 192; 1942 affected section 4, chemical composition.

American Society for Testing Materials, A 199-44; 1944. Seamless Cold-Drawn Intermediate Alloy-Steel Heat-Exchanger and Condenser Tubes. Covers several grades of chromium-molybdenum and chromium-molybdenum-silicon tubes in sizes from 1/2 in. to 2 in. in outside diameter. Gives manufacture, chemical composition, check analysis, tensile properties, flattening test, flaring test, hardness test, hydrostatic test, test specimens, number of tests, retests, retreatment, permissible variations in dimensions, finish, marking, inspection, and rejection. A.S.T.M. Emergency Alternate Provision EA-A 199; 1942 affected table I chemical requirements, section 9 hardness.

American Society for Testing Materials, A 200-44; 1944. Seamless Intermediate Alloy-Steel Still Tubes for Refinery Service. Covers several grades of chromium-molybdenum and chromium-molybdenum-silicon still tubes, 2 in. and over in outside diameter and thicker than No. 5 B.W.G. Gives manufacture, chemical composition, check analysis, tensile properties, flattening test, flaring test, hardness test, hydrostatic test, test specimens, number of tests, retests, retreatment, permissible variations, in dimensions and weight, finish, marking, inspection, and rejection. A.S.T.M. Emergency Alternate Provision EA-A 200; 1942 affected table I chemical requirements, section 9 hardness.

American Society for Testing Materials, A 209-44; 1944. A.S.M.E. Boiler Construction Code Specification SA-209. Seamless Carbon-Molybdenum Alloy-Steel Boiler and Superheater Tubes. Covers three grades, with requirements for manufacture, chemical composition, tensile properties, flattening, flaring, hardness and hydrostatic tests; test specimens, number of tests, retests, retreatment, forming operations, standard weights, permissible variations in dimensions and weight, finish, marking, inspection, and rejection. A.S.T.M. Emergency Alternate Provision EA-A 209; 1942 affected table I, chemical requirements.

American Society for Testing Materials, A 210-44; 1944. A.S.M.E. Boiler Construction Code Specification SA-210. American Standards Assn., B36.15; 1944. Medium-Carbon Seamless Steel Boiler and Superheater Tubes. Covers boiler tubes and flues, including safe ends, arch and stay tubes, and superheater tubes. Gives requirements for manufacture, chemical composition, check analysis, tensile properties, flattening, flaring, hardness, and hydrostatic tests; test specimens, number of tests, retests, retreatment, forming operations, standard weights, permissible variations in dimensions and weight, finish, marking, inspection, and rejection.

American Society for Testing Materials, A 213-44; 1944. A.S.M.E. Boiler Construction Code Specification SA-213. American Standards Assn., B36.17; 1944. Seamless Alloy-Steel Boiler and Superheater Tubes. Includes ferritic and austenitic steels. Gives requirements for manufacture, chemical composition, check analysis, tensile properties, flattening, flaring, hardness, and hydrostatic tests; test specimens, number of tests, retests, retreatment, forming operations, standard weights, permissible variations in dimensions and weight, finish, marking, inspection, and rejection. A.S.T.M. Emergency Alternate Provision, EA-A 213a; 1944 affected table I chemical requirements of ferritic steel, table II chemical requirements of austenitic steel, section 9 hardness.

American Society for Testing Materials, A 214-44; 1944. A.S.M.E. Boiler Construction Code Specification SA-214. Electric-Resistance-Welded Steel Heat-Exchanger and Condenser Tubes. For tubes up to 2 in. outside diameter. Gives manufacture, chemical composition, check analysis, flattening test, flaring test, hardness test, hydrostatic test, test specimens, number of tests, retests, retreatment, permissible variations in dimensions, finish, marking, inspection, and rejection. A.S.T.M. Emergency Alternate Provision EA-A 214a; 1943 affected section 3 manufacture, section 6 flattening test, section 8 hardness test, and section 9 hydrostatic tests.

American Society for Testing Materials, A 226-44; 1944. A.S.M.E. Boiler Construction Code Specification SA-226. American Standards Assn., B36.18; 1944. Electric-Resistance-Welded Steel Boiler and Superheater Tubes For High-Pressure Service. Covers tubes 1/2 in. and larger in diameter. Gives manufacture, chemical composition, check analysis, flattening test, flaring test, hardness test, hydrostatic test, test specimens, number of tests, retests, forming operation, standard weights, permissible variations in dimension and weight, finish, marking, inspection, and rejection. A.S.T.M. Emergency Alternate Provision EA-A 226; 1942 affected section 4 chemical composition, and section 17 marking.

American Society for Testing Materials, A 249-44; 1944. A.S.M.E. Boiler Construction Code Specification SA-249. Atomic-Hydrogen-Arc-Welded and Electric-Resistance-Welded Alloy-Steel Boiler and Superheater Tubes. For tubes made from austenitic steels. Gives process, manufacture, chemical composition, check analysis, tensile properties, flattening, flaring, hardness, and hydrostatic tests; test specimens, number of tests, retests, retreatment, forming operations, standard weights, permissible variations in dimensions and weight, finish, marking, inspection, and rejection. A.S.T.M. Emergency Alternate Provision EA-A 249a; 1944 affected table I, chemical requirements.

American Society for Testing Materials, A 250-44; 1944. A.S.M.E. Boiler Construction Code Specification SA-250. Electric-Resistance-Welded Carbon-Molybdenum Alloy-Steel Boiler and Superheater Tubes. For three grades of electric resistance-welded, carbon-molybdenum alloy-steel boiler and superheater tubes. Gives process, manufacture, chemical composition, check analysis, tensile properties; flattening, flaring, hardness, and hydrostatic tests; test specimens, number of tests, retests, retreatment, forming operations, standard weights, permissible variations in dimensions and weight, finish, marking, inspection, rejection, and rehearing. A.S.T.M. Emergency Alternate Provision EA-A 250; 1942 affected table 1 chemical requirements, and section 19 markings.

Assn. of American Railroads. Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1944. Boiler Tubes, Lap-Welded, Electric Resistance Welded and Seamless Steel and Lap-Welded Charcoal Iron. Specification M-108-43; 1944. For boiler tubes, boiler flues, superheater tubes, and safe ends for locomotives. Arch tubes shall be seamless steel. Gives manufacture, chemical and physical properties and tests, weights, dimensions, permissible variations, workmanship and finish, marking, and inspection and rejection.

U. S. Gov., Federal Specification WW-T-721; 1932. Tubes; Boiler, Charcoal-Iron, Lapwelded. Covers one grade of lapwelded, knobbled, hammered, charcoal-iron boiler tubes, boiler flues, superheater tubes, safe ends and arch tubes. Gives detail requirements and standard weights; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Federal Specification WW-T-731a; 1933. Amendment 2; 1935. Tubes; Boiler, Steel. Covers steel boiler tubes, boiler flues, superheater tubes, safe ends, and arch tubes, of two grades—A and B. Gives requirements for chemical properties and standard weights; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Navy Dept. Specification 44T3f; 1944. Tubes; Boiler, Seamless.

U. S. Gov., Navy Dept. Specification 44T11a; 1935. Tubes; Boiler, Steel, Commercial.

U. S. Gov., Navy Dept. Specification 44T42; 1944. Tubes; Boiler, Resistance-Welded.

U. S. Gov., Navy Dept., U. S. Coast Guard. Bureau of Marine Inspection and Navigation. Marine Engineering Regulations and Material Specifications, 1942. Contains specifications and requirements for materials, design, construction, installation, and inspection of boilers, unfired pressure vessels and appurtenances thereof, also piping, valves, fittings, flanges, safety valves, etc., upon the strength and efficiency of which safety of life is dependent, and are intended for maximum temperatures of 1,000° F. Includes specifications for construction of boiler and superheater tubes.

U. S. Gov., United States Maritime Commission. Specification 13-MC-1; 1941. Cleaners; Boiler Tube, Rotary, Water-Driven. Shall be of but one type and grade. Gives requirements for sizes, materials, workmanship, hose couplings, motors, turbine wheel, bearings, lubrication, cutting head, sampling, inspection, and tests, together with drawings.

*References.*—Methods of testing and general requirements for metals, *see* 600.1; methods of testing copper and brass, *see* 641.0, 644.11.

## 703.3 FURNACES AND BURNERS

American Railway Engineering Assn. Construction and Maintenance Section, Assn. of American Railroads. Manual for Railway Engineering, 1942. Specifications for Buildings for Railroad Purposes: Oil Burning Equipment. Gives requirements for oil burner and fuel oil storage tank installations.

U. S. Gov., Navy Dept. Specification 50F3; 1938. Furnaces; Crucible, Tilting, for Shipboard Use.

U. S. Gov., Navy Dept. Specification 60B2; 1943. Burners; Fuel-Oil for Shipboard Use.

## 703.9 MISCELLANEOUS BOILER AND CONDENSER ACCESSORIES

American Society of Mechanical Engineers. Power Test Code. Feedwater Heaters, 1927. Applies to open and closed boiler feedwater heaters, with auxiliary sections on general considerations, pressure measurement, temperature measurement, and measurement of time.

Assn. of American Railroads. Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Rules for Boiler Washing. Frequency of washing, cooling boilers, procedure, detail diagrams of washout nozzels, inspection, and filling.

Assn. of American Railroads. Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Superheater Equipment for Locomotives, Care and Maintenance of. Requirements for installation, detail as to attachment to shell, hydrostatic test, details as to operations, care, and maintenance.

Assn. of American Railroads. Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Wash-out and Fill Systems for Locomotive Boilers. Hot water wash-out systems for washing and testing locomotive boilers, in ejector, pump and heater, and blow-back types.

National Fire Protection Assn. and U. S. Dept. of Agriculture, joint sponsors. Approved by American Standards Assn., Z 12.1-1942. Code for the Installation of Pulverized Fuel Systems. Includes storage and unit type systems; requirements for location and construction of building, ventilation and dust collection, supervision of pulverizer, magnetic

639677 O—45——42

separator, electrical equipment, grounding, blowers, driers, pipe lines, storage bins, ignition, screw conveyors, and for fire protection.

U. S. Gov., Federal Specification WW-T-696; 1934. Amendment 1; 1944. Traps; Radiator, Thermostatic, Brass or Bronze, Low-Pressure, 100-Square-Foot Size (for Land Use). Covers type without bypass (either hot water or steam type) up to and including 100 sq.ft. cast iron direct actual radiation; and shall be the angle, offset corner, or offset straightway pattern. Gives requirements for material and workmanship, marking, threads, machining, thermostatic members, adjustment, and details; methods of inspection and tests; and packaging, packing, and marking.

U. S. Gov., Navy Dept. Specification 13C6c; 1944. Cleaning-Outfits; Boiler-Tube, Air-Driven.

U. S. Gov., Navy Dept. Specification 17C19; 1944. Contact-Makers for Superheated Steam.

U. S. Gov., Navy Dept. Specification 17I19b; 1943. Indicating-Equipment; Salinity for Shipboard Use.

U. S. Gov., Navy Dept. Specification 45T1c; 1938. Traps, Steam; Open Bucket and Continous Flow for Shipboard Use.

U. S. Gov., Navy Dept. Specification 45T2b; 1942. Traps, Steam; Thermostatic for Shipboard Use.

U. S. Gov., Navy Dept. Specification 45T3; 1945. Traps, Radiator, Thermostatic, Low-Pressure, 100-Square-Foot-Size, for Land Use.

U. S. Gov., Navy Dept. Specification 57T5c; 1944. Testing-Outfits; Boiler-Water.

U. S. Gov., Navy Dept., U. S. Coast Guard. Bureau of Marine Inspection and Navigation. Marine Engineering Regulations and Material Specifications, 1942. Contains specifications and requirements for materials, design, construction, installation, and inspection of boilers, unfired pressure vessels and appurtenances thereof, also piping, valves, fittings, flanges, safety valves, etc., upon the strength and efficiency of which safety of life is dependent, and are intended for maximum temperatures of 1,000° F. Includes specifications for construction of superheaters, headers, water walls, economizers, safety valves and relief valves, boiler mountings and attachments, evaporators, heater, traps, separators, and miscellaneous appliances.

*References.*— Brass, Muntz metal, and admiralty metal condenser tubes, *see* 645.24; Muntz metal condenser tube plates, *see* 644.21; condenser tube packing, *see* 707.23, 707.25; cast iron, *see* 611.11; test codes for various steam plant accessories and equipment, *see* 703.0; oil burner ignition transformers, *see* 713.5.

## 704. OIL ENGINES

### 704.0 GENERAL ITEMS

American Society of Mechanical Engineers. Automotive Diesel Engines Cost and Performance Data for 1942. Published, 1944. This tabulation of 1942 data contains information received from 14 owners and operators of Diesel-powered busses and trucks. The costs, here presented, relate specifically to Diesel engines and include cost of fuel delivered, but less tax; fuel taxes; cost of lubricating oil delivered, but less tax; lubricating oil taxes; cost of engine maintenance.

American Society of Mechanical Engineers. Report on Oil Engine Power Cost for 1942. Published, 1944. Presents information on performance cost of 160 oil-engine power plants, also such production costs as fuel, lubrication, attendance and superintendence, supplies and miscellaneous, engine, and other plant repairs. Comparative costs from 1929 to 1942 are also included.

American Society of Mechanical Engineers. Power Test Code. Internal-Combustion Engines, 1930. Tests apply to all forms of internal-combustion engines, but are limited to the engine alone, with auxiliary sections covering general considerations, pressure measurements, temperature measurement, electrical measurements, measurement of time, speed measurements, measurement of surface area, density determinations, and determination of viscosity of liquids.

National Board of Fire Underwriters. Internal Combustion Engines and Coal Gas Producers, No. 37; 1934. Recommended good practice requirements for installation and use. Covers internal combustion engines giving definition of special terms, location of engines, capacity and location of fuel tanks for carburetion engines, capacity and location of fuel tanks for compression ignition engines, withdrawal of fuel from tank, fuel piping and fittings, carburetor, fuel feed cup on mixing valve, ignition and starting, exhaust piping, muffler or exhaust pot, lubricating oil drips, pans, etc., engine base, gas pressure regulators. gas bag, and care and attendance; and covers coal gas producers giving pressure systems and suction systems.

National Fire Protection Assn. National Fire Codes for Flammable Liquids, Gases, Chemicals, and Explosives, 1943. Internal Combustion Engines (Gas, Gasoline, Kerosene, Fuel Oil). Covers recommended good practice requirements for installation and use, including location, capacity of fuel tanks, carburetion, ignition and starting, exhaust piping, mufflers, lubricating oil drips, engine base, gas pressure regulators, gas bag, and care and maintenance.

U. S. Gov., Army-Navy Aeronautical Specification AN-P-64; 1944. Pre-Oiling and Ground Operation of Engines Installed in Aircraft.

U. S. Gov., Dept., of Commerce, National Bureau of Standards. Commercial Standard CS102E-42; 1942. Diesel and Fuel-Oil Engines (Export Classifications). The purpose of this standard is to set up definitions and requirements for fair competition and a better understanding between buyers and sellers of stationary, marine and portable Diesel and fuel-oil engines in export from the United States of America, and to provide a uniform basis for compliance through the use of labels or certificates.

U. S. Gov., Interstate Commerce Commission, Bureau of Locomotive Inspection. Laws, Rules, and Instructions for Inspection and Testing of Locomotives Other Than Steam, 1926. Requirements mandatory by law, regarding provision and capacity of safety valves for air brake reservoir, operating characteristics of compressor governor and testing of air brake compressors and reservoirs, maximum brake cylinder travel, lost motion in articulated connections or between chafing irons or couplers,

permissible side motion and fit requirement at pin and rod bearings, permissible lateral motion in wheel bearings, intermembering of truck center plates, clearance of side bearings, uniform diameter of wheels, pressing of wheels on axle, minimum width of tires, windows in cab, cab heating, location of cab lights, of whistles, bells and sanders, locking and grounding of pantographs, voltage test of jumpers, provision of safety cut-out valve for fuel, grounding of tanks, and provision for starter for internal combustion engines, for boilers the minimum allowed factor of safety, permissible stresses in stay bolts and braces, design strength of materials and rivets, inspection and hydrostatic test of boiler, testing of stay bolts, location, testing and connection of steam gauges, number, location, and setting of safety valves, water glass and gauge equipment, connection of tubes into tube sheets of feed water appliances, etc., permitted wear limits and defects appearing in service.

### 704.1 OIL ENGINES

American Bureau of Shipping. Rules for the Classification and Construction of Steel Vessels, 1944. Internal Combustion Engines. Include requirements for construction and installation, drawings and data to be submitted, supplementary requirements, material requiring test and inspection, general installation, general construction, governor control, bedplate, cylinder, liners, cylinder covers, pistons, crankshafts, crankshaft webs, lineshafts, thrust shafts, tube shafts, tailshafts, tailshaft liners, hollow shafts, coupling bolts, engine auxiliaries, oil transfer and filling system, fuel oil injection system, scavenging air system, lubricating oil system, cooling water system, exhaust system, injection air system, air containers, starting batteries, boilers, hydrostatic tests, trial, and spare parts and equipment.

Assn. of American Railroads, Mechanical Division, Electrical Section. Manual of Standard and Recommended Practice, 1941. Automotive and Electric Rolling Stock. Covers lubricating oil filters for Diesel engines, reclamation and reconditioning of Diesel engine parts, and specifications for Diesel electric switching locomotives of total weight of 95 tons and above.

Diesel Engine Manufacturers' Assn. Marine Diesel Engine Standards, 1940. Includes standard performances, equipment and definitions, design and construction, classification and marine inspection, applications to ships and dredges, fuel oil, foundations and seatings, propellers and torsional vibration, starting systems, cooling-water systems, fuel oil systems, lubrication, air-intake, and exhaust systems.

Diesel Engine Manufacturers' Assn. Standard Practices, 1935. Included power-plant buildings, construction of engines, governors, and speed regulation, erection, fuel-oil storage systems, lubrication, cooling-water systems, intake and exhaust systems, generators and electrical equipment, torsional vibration and critical speeds, outline of specifications for bids; and diagrams and charts covering altitude ratings, fuel consumption, demand curves, plant layouts, fuel storage tank installations, cooling systems, air mufflers, exhaust-heat boilers, and field testing.

Society of Automotive Engineers. 1944 Handbook, Section 6—Tests, Ratings, and Codes. SAE Standard Engine Test Codes. Revised, 1943. For Diesel and gasoline engines. Gives curves, r.p.m., horsepower, torque, and charts.

U. S. Gov., Army Air Forces. Specification 32458; 1944. Power Plant; Diesel-Engine-Driven Electric, Type F-1.

U. S. Gov., Army Air Forces. Specification 32459; 1944. Power Plant; Diesel-Engine-Driven Electric, Type, F-2.

U. S. Gov., Army Air Forces. Specification 32460; 1944. Power Plant; Diesel-Engine-Driven Electric, Type, F-3.

U. S. Gov., Army Air Forces. Specification 32469 (4); 1944. Power Plant; Diesel-Engine-Driven Electric, General Specification for.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specifications CAA-499. Refiners; Oil, Lubricating, Automatic, for "Superior" Diesel Engines.

U. S. Gov., U. S. Army Ordnance Dept. Specification 89-2300; 1939. Power Plant; Diesel-Engine-Driven, 5 k.v.a.

*References.*—Installation and fuel supply, *see* 704.0, 705.0; cast iron, cast steel, forged steel, *see* 611.11, 611.41, 611.51, and 611.52; testing forms, *see* 704.0; test code for internal combustion engine, *see* 705.0; metal fits, *see* 615.82.

## 705. GASOLINE ENGINES AND GAS ENGINES

### 705.0 GENERAL ITEMS

American Society of Mechanical Engineers. Power Test Code, Auxiliary Section. Part 10—Flue and Exhaust Gas Analyses, 1936. Recommends methods to be used in the analysis of flue gases from furnaces, and exhaust gases from internal-combustion engines.

American Society of Mechanical Engineers. Power Test Code. Internal-Combustion Engines, 1930. Tests apply to all forms of internal-combustion engines but are limited to the engine alone. With auxiliary sections on general consideration, pressure measurements, temperature measurement, electrical measurements, measurement of time, speed measurements, measurement of surface areas, density determinations, and determination of viscosity of liquids.

Internal Combustion Engine Institute. Standard Warranties, Field Service, Returns and Expenses, 1933. Gives warranty period for various classes of service, regulations covering field service, return of new material, labor and other expenses.

Internal Combustion Engine Institute. Testing and Rating Procedure for Engines and Power Units, 1934. Conforms to S.A.E. procedure, except for fixed carburetor setting, fan and generator omitted, speed variation, and fuel used; requirements for standard barometer, stripped engine curve, allowable variation for production engines; for power unit ratings for intermittent maximum or variable load, and for continuous load; and example of typical specification sheet.

National Board of Fire Underwriters. Internal Combustion Engines and Coal Gas Producers, No. 37; 1934.

Recommended good practice requirements for installation and use. Covers internal combustion engines giving definition of special terms, location of engines, capacity and location of fuel tanks for carburetion engines, capacity and location of fuel tanks for compression ignition engines, withdrawal of fuel from tank, fuel piping and fittings, carburetor, fuel feed cup on mixing valve, ignition and starting, exhaust piping, muffler or exhaust pot, lubricating oil drips, pans, etc., engine base, gas pressure regulators, gas bag, and care and attendance; and covers coal gas producers giving pressure systems and suction systems.

National Fire Protection Assn. National Fire Codes for Flammable Liquids, Gases, Chemicals, and Explosives, 1943. Internal Combustion Engines (Gas, Gasoline, Kerosene, Fuel Oil). Covers recommended good practice requirements for installation and use, including location, capacity of fuel tanks, carburetion, ignition and starting, exhaust, piping, mufflers, lubricating oil drips, engine base, gas pressure regulators, gas bag, and care and maintenance

Society of Automotive Engineers. 1944 Handbook, Section 6—Tests, Ratings, and Codes. S.A.E. Standard Engine Test Codes. Revised, 1943. For Diesel and gasoline engines. Gives curves, r.p.m., horsepower, torque, and charts.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R161-35; 1935. Packaging of Automotive (Bus) Engine Parts. This recommendation establishes a simplified schedule for packaging of automotive engine parts for busses operated by electric railway companies. Sponsored by the American Transit Engineering Association.

U. S. Gov., Interstate Commerce Commission, Bureau of Locomotive Inspection. Laws, Rules, and Instructions for Inspection and Testing of Locomotives Other Than Steam, 1926. Requirements mandatory by law, regarding provision and capacity of safety valves for air brake reservoir, operating characteristics of compressor governor and testing of air brake compressors and reservoirs, maximum brake cylinder travel, lost motion in articulated connections or between chafing irons or couplers, permissible side motion and fit requirements at pin and rod bearings, permissible lateral motion in wheel bearings, intermembering of truck center plates, clearance of side bearings, uniform diameter of wheels, pressing of wheels on axle, minimum width of tires, windows in cab, cab heating, location of cab lights, of whistles, bells and sanders, locking and grounding of pantographs, voltage test of jumpers, provision of safety cut-out valve for fuel, grounding of tanks, and provision for starter for internal combustion engines, for boilers the minimum allowed factor of safety, permissible stresses in stay bolts and braces, design strength of materials and rivets, inspection and hydrostatic test of boiler, testing of stay bolts, location, testing and connection of steam gauges, number, location, and setting of safety valves, water glass and gauge equipment, connection of tubes into tube sheets of feed water appliances, etc., permitted wear limits and defects appearing in service.

## 705.1 AUTOMOBILE ENGINES

*References.*—Automobile engine parts and accessories, *see* 722.31, 722.32, 722.33; test code and installation rules, *see* 705.0, 700.

## 705.2 MOTORBOAT ENGINES

U. S. Gov., Navy Dept. Specification 10E2a; 1942. Engines; Gasoline, Outboard, Portable.

*References.*—Motorboat requirements, *see* 725.3; standard magneto mountings, *see* 705.5.

## 705.3 PUMPING ENGINES

American Petroleum Institute, Div. of Production. Code 11-B; 1933. Code of Recommended Field Practice—Installation, Operation and Care of Oil Field Gas Engines. Applies to the installation, operation, and care of internal combustion engines for oil field service, similar to the service specified in A.P.I. Standard 11-C.

American Petroleum Institute, Div. of Production. Standard 11-C; 1942. Specifications for Internal-Combustion Engines and Clutches for Oil-Field Service. Covers dimensional standards only on foundation bolts, flange clutch connections, exhaust openings, indicator connections, and I.C. engine rating forms. Dimensional standards are given only on those items wherein interchangeability is essential, these being for the connections between the reverse gear clutch and engine flywheel, for the foundation bolt sizes, and for the exhaust and air intake openings and indicator connections.

American Petroleum Institute, Div. of Production. Standard 11-D; 1943. Supplement 1; 1944. Miscellaneous A.P.I. Pumping Equipment Standards. This specification provides: (a) Complete interchangeability between manufacturers on polished rods, bore of stuffing boxes, pull rods and pull rod couplings; (b) standard openings in screened or slotted pipe with standard method of designation; (c) a recommended standard assembly of well-head pressure gage taps and fittings to avoid confusion and delay in the field.

American Petroleum Institute, Div. of Production. Standard 11-E-1; 1941. Specification for rating of Roller-Chain Speed Reducers for Pumping Machines. Provides a method of rating of roller-chain drives in speed reducers; does not cover chemical properties of material, nor use of the equipment.

U. S. Gov., U. S. Army, Corps of Engineers. Specification 87-1C; 1943. Pumping Set, Centrifugal, Gasoline Engine Driven, Capacity 55 G.P.M.

U. S. Gov., U. S. Army, Corps of Engineers. Specification 90-3; 1930. Engine, Gasoline, 5 h.p.

U. S. Gov., U. S. Army, Corps of Engineers. Specification 90-4; 1930. Engine, Gasoline, 10 h.p.

U. S. Gov., U. S. Army, Corps of Engineers. Specification 90-5; 1930. Engine, Gasoline, 15 h.p.

U. S. Gov., U. S. Army, Corps of Engineers. Specification 90-6; 1930. Engine, Gasoline, 20 h.p.

U. S. Gov., U. S. Army, Corps of Engineers. Specification 90-7; 1930. Engine, Gasoline, 40 h.p.

U. S. Gov., U. S. Army, Corps of Engineers. Specification 90-8; 1930. Engine, Gasoline, 50 h.p.

U. S. Gov., U. S. Army, Corps of Engineers. Specification 90-9; 1930. Engine, Gasoline, 60 h.p.

## 705.4 GASOLINE ENGINES FOR ELECTRIC GENERATORS

American Institute of Electrical Engineers. A.I.E.E. No. 11; 1943. American Standards Assn., C35.1-1943. Rotating Electrical Machinery on Railway Locomotives and Rail Cars and Trolley, Gasoline-Electric and Oil-Electric Coaches. Includes all rotating electrical machinery forming a part of the power equipment of electrically-propelled railway cars and locomotives (including trolley, gasoline-electric, and oil-Electric coaches). Covers definitions, rating, insulation, dielectric tests, insulation resistance, commutation, overspeed tests, efficiency, and characteristic curves.

Underwriters' Laboratories, Inc. Standard Specifications for Electric Lighting Plants, 1921. For isolated use, internal combustion-engine-driven electric generator, with or without auxiliary storage batteries, and accessories. Includes gasoline, kerosene, and fuel oil engines, with inside or outside fuel supply tanks. Capacity, location, materials, construction, vents, fuel feed, valves, piping, ignition, governor, exhaust system, lubrication, generator, switchboard, batteries, enclosure, and marking.

U. S. Gov., Army Air Forces Specification 32397-A-1; 1944. Plant; Electric Power, Type C-13A (Gasoline Engine Driven—Portable).

U.S. Gov., Army Air Forces Specification 32448; 1943. Plant; Electric Power, Type B-8 (Gasoline Engine Driven—Stationary).

U. S. Gov., U. S. Army, Army Air Forces. Specification 94-32287-A; 1941. Plant, Power; Electric Type C-9 (1500 Watt).

U. S. Gov., U. S. Army, Medical Department. Specification 10-2972B; 1941. Power Plant; Electric Gasoline, Portable.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-402B; 1930. Power Unit, Type PE-( )-41, Radio.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-468B; 1931. Power Unit, Type PE-( )-40, Radio.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-688C; 1942. Power Unit, Type PE-49-( ), Gasoline Engine Driven, for Radio Sets and Motors, Types MO-7-( ) and MO-9-( ).

U. S. Gov., U. S. Army, Signal Corps. Specification 71-865; 1938. Power Unit, Type PE-60-( ), Gasoline Engine Driven, 2 Kva., Dual Voltage.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-912A; 1941. Power Unit, Types PE-52-( ) and PE-53-( ), 3 Kilovolt Amperes, Gasoline-Engine-Driven Generator.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-951A; 1938. Power Unit, Type PE-56-( ), Gasoline Engine Driven For Radio Sets.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-952A; 1942. Power Unit, Type PE-75-( ).

U. S. Gov., U. S. Army, Signal Corps. Specification 71-1038A; 1943. Power Unit PE-77-( )'43.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-1061; 1942. Power Unit PE-95-( ),5 kw Gasoline-Electric Power Unit.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-1083; 1942. Power Unit PE-99-( ),120-volt, 60-cycle, 3-phase, 7.5-kva., Gasoline Driven Special Application Feature; Not General Purpose Power Unit.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-1130; 1942. Power Unit, PE-90-( ), Dual Voltage, Gasoline Engine or Electric-Motor Driven.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-3016; 1944. Power Unit PE-197-(5 KW Gasoline-Electric Power Unit).

## 705.5 GASOLINE ENGINE ACCESSORIES AND PARTS

*References.*—Automobile engine parts, *see* 722.31, 722.32; gaskets for gas engine exhaust and fuel and water connections, *see* 707.11.

## 705.6 AIRPLANE ENGINES

Society of Automotive Engineers. Aeronautical Material Specification 2574; 1943. Preservations of Engines (Limited Period). Provides preparing aircraft engines to resist corrosion during shipment and limited storage under favorable conditions. Material and equipment, preliminary operation, preparation for storage procedure, recommended procedure for represervation, and general.

Society of Automotive Engineers. Aeronautical Recommended Practice 2; 1943. Horsepower Correction Formulae. Considered applicable to aircraft engines having integral supercharging without after-cooling, and using gasoline introduced at the entrance to the supercharger. Engines normally single- and two-speed engines. Does not apply to engines having two-stage or exhaust turbo supercharging. Section A applicable to engines having a supercharging less than 500 ft. per second. Section B applicable to engines having a supercharging greater than 500 ft. per second.

Society of Automotive Engineers. Aeronautical Standard 1; 1941. Altitude Graphs, Aircraft Engine Performance. Illustrate the altitude graph sheets that are recommended as standard for the presentation of aircraft engine performance data. Two sizes—(8.5 in. x 11 in. and 11 in. x 19 in.) are shown for 25,000 and 50,000 ft. altitude range respectively. These sheets contain a section which may be used either for presentation of sea level data or for other information.

Society of Automotive Engineers. Aeronautical Standards 16, 17, 18, and 19; 1941. Performance Presentation, Aircraft Engine. Give figures illustrating the use of Aeronautical Standard 1 (Society of Automotive Engineers)—Altitude Graph Sheets, Aircraft Engine Performance—in the preliminary presentation of engine power characteristics of-(16) single speed engines, (17) two speed engines, (18) two-stage engines, and (19) engines for use with an exhaust turbo supercharger.

Society of Automotive Engineers. Aeronautical Standard 20; 1941. Definitions, Aircraft Engine. These definitions are in substantial agreement with those found in military specification, and include additional definitions considered necessary for a more thorough understanding of aircraft engine terms.

Society of Automotive Engineers. Aeronautical Standard 21; 1941. Symbols and Sketches for Pressures and Temperatures in Induction System-Aircraft Engine. Presents a standard terminology for various pressures and temperatures throughout the induction system of an aircraft engine. Figures show, schematically, the location of these pressures and temperatures.

Society of Automotive Engineers. Aeronautical Standard 174; 1944. Service Bulletins for Aircraft Engines (Preparation of). For the purpose of supplying all necessary instructions to accomplish modifications to delivered equipment and to disseminate information on revised operation, service and overhaul procedures. Gives scope, general requirements, and detail requirements.

Society of Automotive Engineers. Aeronautical Standard 176; 1944. Tables of Limits and Limits and Lubrication Charts. To be used in connection with maintenance, service, and repair of aeronautical engines. Gives scope, general requirements, and detail requirements.

Society of Automotive Engineers: Aeronautical Standard 177; 1944. Operating Instructions for Aircraft Engines. Gives purpose, scope, general requirements, detail requirements, and preparation of manuscript copy.

U. S. Gov., Army Air Forces Specification 28144; 1933. Development Test of Aircraft Engines.

U. S. Gov., Army-Navy Aeronautical Specification AN-C-80b; 1944. Corrosion Prevention; Method of Handling Aircraft Engines at Aircraft Plants for.

U. S. Gov., Army-Navy Aeronautical Specification AN-F-E-568c; 1944. Engines, Aircraft; Preparation for Storage, Process of.

U. S. Gov., Army-Navy Aeronautical Specification AN-H-9-1; 1943. Handbooks; Service Instruction (for Aircraft Engines).

U. S. Gov., Army-Navy Aeronautical Specification AN-H-10; 1942. Handbooks; Overhaul Instruction (for Aircraft Engines).

U. S. Gov., Army-Navy Aeronautical Specification AN-T-25-1; 1943. Tables of Limits; Aircraft Engine (With Limits and Lubrication Charts).

U.S. Gov., U.S. Army, Army Air Forces. Specification 95-28205-C; 1937. Engine, Aircraft; Type V-1710 (Allison), Type Specification for.

U. S. Gov., U. S. Army, Army Air Forces. Specification 95-28214-C; 1936. Engine, Aircraft Type V-1570 (Wright) Type Specification for.

U. S. Gov., U. S. Army, Army Air Forces. Sepcification 95-28215; 1934. Engine, Aircraft, V-1570 Type Wright (Direct Drive).

U. S. Gov., U. S. Army, Army Air Forces. Specification 95-28261; 1934. Engine, Aircraft, R-1820 Type Wright (Direct Drive).

U. S. Gov., U. S. Army, Army Air Forces. Specification 95-28263-C; 1936. Engine, Aircraft Type R-975 (Wright) Type Specification for.

U. S. Gov., U. S. Army, Army Air Forces. Specification 95-28264-B; 1936. Engine, Aircraft, Type R-760 Direct-Drive (Wright) Type Specification for.

U. S. Gov., U. S. Army, Army Air Forces. Specification 95-28265; 1936. Engine, Aircraft, Type R-1670 Geared (Wright) Type Specification for.

## 705.7 GASOLINE ENGINES FOR SHIP PROPULSION

American Bureau of Shipping. Rules for the Classification and Construction of Steel Vessels, 1944. Internal Combustion Engines. Include requirements for construction and installation, drawings and data to be submitted, supplementary requirements, material requiring test and inspection, general, installation, general construction, governor control, bedplate, cylinders, liners, cylinder covers, pistons, crankshafts, crankshaft webs, lineshafts, thrust shafts, tube shafts, tailshafts, tailshaft liners, hollow shafts, coupling bolts, engine auxiliaries, oil transfer and filling system, fuel oil injection system, scavenging air system, lubricating oil system, cooling water system, exhaust system, injection air system, air containers, starting batteries, boilers, hydrostatic tests, trial, and spare parts and equipment.

*References.*—Test codes, *see* 705.0, 700; cast iron, cast steel, steel forgings, *see* 611.11, 611.41, 611.51, and 611.52.

# 706. WATER WHEELS AND WATER TURBINES

## 706.0 GENERAL ITEMS

American Society of Mechanical Engineers, co-sponsor with American Assn. for Advancement of Science, American Institute of Electrical Engineers, American Society of Civil Engineers, and Society for Promotion of Engineering Education. American Standards Assn., Z10.2-1942. Symbols for Hydraulics. Hydraulic engineering symbols including those used in design of water turbines and pumps.

American Society of Mechanical Engineers. Power Test Code. Hydraulic Prime Movers, 1938. Amendments, 1942. This Code presents a set of standard rules for the testing of an individual reaction or impulse turbine unit of any type. It includes description and definition of terms, and it discusses in considerable detail the various methods of measurement, and the instruments to be used.

Associated Factory Mutual Fire Insurance Companies. Pamphlet 31; 1939. Hydraulic Tables. Gives notes on testing water supplies, nozzle discharge tables, theoretical discharge through circular orifices, table for converting feet head of water into pressure in pounds, table for converting pressure in pounds into feet head of water, effective reach of fire streams, properties of numbers, rating charts for centrifugal fire pumps, rating chart for 500 and 750 g.p.m. Underwriter fire pumps, rating chart for 1000 and 1500 g.p.m. Underwriter fire pumps, friction loss in cast iron pipe, friction loss in wrought iron pipe, friction loss in cotton rubber-lined hose, friction loss in valves and fittings, friction loss in meters, rotary fire pump tables, discharge of duplex steam fire pumps, discharge of single-cylinder steam fire pumps, conversion factors, miscellaneous hydraulic formulas, and properties of pipe.

## 706.1 WATER TURBINES

American Society of Mechanical Engineers. Power Test Code. Hydraulic Prime Movers, 1938. A set of standard rules for the testing of an individual reaction

or impulse turbine unit of any type. It includes description and definitions of terms, and discusses in detail the various methods of measurement, and the instruments to be used. With auxiliary sections on general considerations, pressure measurement, temperature measurement, head measuring apparatus, electrical measurements, measurement of time, speed measurements, and linear measurements.

*References.*—Speed governors for water turbines, *see* 795; metal fits, *see* 615.82.

### 706.2 TURBINE BUCKET WHEELS

### 706.3 WATER WHEEL SHAFT COUPLINGS

## 707. PACKING, PIPE COVERING, AND GASKETS

### 707.1 GASKETS

#### 707.11 Asbestos and Metallic Gaskets

Society of Automotive Engineers. Aeronautical Material Specification 3230; 1940. Gasket, Oil-Resisting. Gasket material made from selected long fiber asbestos and rubber and/or synthetic rubber compounds which are bonded and felted together, under pressure, into a sheet, which is pliable and resilient. Includes requirements for quality, tests, tolerances, approval, and rejections.

Society of Automotive Engineers. Aeronautical Material Specification 3232D; 1944. Gasket, Oil-Resisting, (High Temperature). Gasket material made from selected long fiber asbestos and special heat resisting compounds, bonded and felted together under pressure into a pliable and resilient sheet. Gives requirements for condition, quality, tests, samples, tolerances, reports, approval, and rejections.

Society of Automotive Engineers. 1944 Handbook, Section 1—Aeronautical Parts, Materials and Codes. S.A.E. Standard Aircraft Engine Copper Asbestos Gaskets. Adopted, 1941. Diagram and table of dimensions for nominal sizes from 3/16 to 4 in. in diameter.

U.S. Gov., Federal Specification HH-G-71; 1931. Gaskets; Asbestos-Copper, Corrugated. Covers one grade. Gives requirements for material, workmanship, copper, cord, dimensions, and compression strength; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking. Emergency Alternate Federal Specification E-HH-G-71; 1942 (issued by Procurement Division, Treasury Dept., U. S. Gov.) substituted metal for annealed copper and requires corrugated disk be made of steel or iron.

U. S. Gov., Federal Specification HH-G-76a; 1944. Gaskets; Asbestos, Metallic-Cloth. Covers one grade and two types, (A) seamless and (B) jointed. Gives requirements for material, workmanship, finish, construction, yarn, weave, wire, cloth, weight, friction compound, steam test, bend test, and tolerances; methods of sampling, inspection and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification HH-G-101; 1930. Gaskets; Metallic-Encased. Covers two types—(A) metallic-asbestos and (B) metallic-cork; furnished with a single jacket without inlay, a single jacket with metal inlay, or a double jacket, so formed as to surround almost completely the asbestos or cork core. Gives requirements for material, construction, metal, and tolerances; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U.S. Gov., Federal Specification HH-G-116; 1936. Gaskets; Plumbing-Fixture-Setting. Covers five types—(A) triangular, (B) triangular skirt, (C) rectangular, (D) round, and (E) round skirt; of one piece or endless design. Gives requirements for material, construction, core; and covering; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., Navy Dept. Specification 33G2e; 1933. Gaskets, Asbestos-Metallic-Cloth (Symbol 2152).

U. S. Gov., Navy Dept. Specification 33G4a; 1941. Gaskets, Metallic-Encased.

U. S. Gov., Navy Dept. Specification 33G5b; 1942. Gaskets, Metallic Asbestos, Spiral-Wound (Symbol 2410) (for Flanged Joints in Piping Systems).

U. S. Gov., Navy Dept. Specification 33G8d; 1944. Gaskets, Asbestos-Metallic-Cover, Rubber-Core.

U. S. Gov., Navy Dept. Specification 33G11; 1942. Gaskets, Metallic-Asbestos, Spiral-wound (Symbol 2410) (for Boilers).

References.—Testing of rubber goods, *see* 200.

#### 707.12 Paper and Fiber Gaskets

Society of Automotive Engineers. Aeronautical Material Specification 3564; 1944. Vulcanized Fiber. Covers material, application, general requirements, detail requirements, tests, quality, tolerance, approval, and rejections.

U. S. Gov., Army Air Forces Specification 40231 (1); 1939. Fibre; Hard Red Vulcanized.

U. S. Gov., U. S. Army Ordnance Department. Specification 50-11-114; 1943. Leather, Fibrated.

*References.*—Fiber packing for gaskets, see 707.28.

#### 707.13 Rubber Gaskets

Assn. of American Railroads, Operations and Maintenance Dept., Machanical Div. Manual of Standard and Recommended Practice, 1944. Gaskets, Air-Brake Hose. Emergency Specifications E-M-602-44; 1944. In accordance with the requirements of Supplementary Order R-1, latest revision, of the War Production Board, to restrict the use of rubber.

Assn. of American Railroads, Operations and Maintenance Dept., Mechanical Div. Manual of Standard and Recommended Practice, 1942. Gaskets, Air-Brake Hose, M-602-38; 1938. For air-brake and air-signal hose couplings in train service, manufacture, requirements as to physical properties and tests dimensions and tolerances, workmanship, and labeling.

Society of Automotive Engineers. Aeronautical Material Specification 3230; 1940. Gasket, Oil-Resisting. Gasket material made from selected long fiber asbestos and rubber and/or synthetic rubber compounds which are bonded and felted together, under pressure, into a sheet, which is pliable and resilient. Includes requirements for quality, test, tolerances, approval, and rejections.

U. S. Gov., Army Air Forces Specification 26539-D; 1941. Rubber; Channels and Trimmings (Molded or Extruded).

U. S. Gov., Army-Navy Aeronautical Specification, AN-G-23; 1944. Gaskets; Aircraft Lighting Equipment.

U. S. Gov., Dept. of Agriculture, Forest Service. Specification MSF-151-S. Gaskets; Fire Hose, All Sizes.

U. S. Gov., Dept. of Agriculture, Forest Service. Specification MSF-152-S. Gasket; Canteen Top.

U. S. Gov., Federal Specification, HH-G-156a; 1944. Gaskets; Rubber (Natural or Synthetic), Molded, Sheet and Strip. Covers one type and may be of any of three classes—(1) compound utilizing polymerized chloroprene as the basic material, (2) compound utilizing a copolymer product of butadiene, and (3) compound utilizing a copolymer product of isobutylene and isoprene. Gives requirements for material workmanship, physical requirements, flexibility, tolerances in width, tolerances in thickness, dimensions of molded and strip rubber (thickness, width, and weight of sheet rubber), gaskets and specific gravity; methods of sampling, inspection and tests; and packaging, packing and marking, for shipment.

U. S. Gov., Federal Specification HH-P-161a; 1936. Packing; Rubber, Wire-Insertion. Covers one grade. Gives requirements for material, workmanship, construction, rubber wire insertion, width, tolerances, weight, bend test, boiling-water test, and steam test; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment. Emergency Alternate Federal Specification E-HH-P-161A; 1941 (issued by Procurement Division, Treasury Dept., U.S. Gov.) changed requirements for rubber content.

U. S. Gov., Navy Dept. Specification 4G1d; 1932. Gaskets; Rubber, Projectile.

U. S. Gov., Navy Dept. Specification 33G6b; 1944. Gaskets; Rubber (for Armored Hatches).

U. S. Gov., Navy Dept. Specification 33G7d; 1944. Gaskets; Oil-Resisting (Sheet, Strip, and Molded).

U. S. Gov., Navy Dept. Specification 33G9; 1941. Gaskets; Rubber, Cloth-Insertion (for Dry-dock Caissons).

U. S. Gov., Navy Dept. Specification, 33G14b; 1945. Gaskets; Rubber-Tubing, for Paint Buckets.

U. S. Gov., Navy Dept. Specification 33R1g; 1944. Rubber, Natural or Synthetic: Gaskets, Packing, Sheets, and Strips.

U. S. Gov., Navy Dept. Specification 33R4c; 1944. Rubber, Medium-Soft (for Airport, Air-Tight- and Watertight-Door, and Hatch Gaskets).

U. S. Gov., U. S. Army, Chemical Warfare Service. Specification 20-40C; 1940. Gasket; Rubber, for Gas Masks.

U. S. Gov., U. S. Army, Medical Department. Specification 10-2304A; 1941. Bellows; Rubber, Disk.

U. S. Gov., U. S. Army, Ordnance Department. Specification 50-11-83; 1935. Gasket; Rubber, for Cartridge Storage Cases and Smokeless Powder Boxes and Tanks.

*References.*—Methods of testing rubber products; *see* 200.

## 707.14 Cork Gaskets

*References.*—Metal encased cork gaskets, *see* 707.11; corkboard and compressed cork, *see* 425.2.

## 707.15 Sealing Compound

Society of Automotive Engineers. Aeronautical Material Specification 3087; 1944. Compound; Insulating and Sealing. A paste primarily for sealing electric joints of aircraft engine ignition systems but may be used where other gas and fluid-tight joints are required. Gives general requirements, physical properties, electrical properties, tests, reports, packing, and marking, approval, and rejections.

U. S. Gov., Army Air Forces Specification 3595 (1); 1942. Compound; Slushing, Fuel Tank.

U. S. Gov., Army Air Forces Specification 3596 (1); 1942. Compound; Sealing, Fuel Tank.

U. S. Gov., Army Air Forces Specification 3597 (1); 1942. Compound; Sealing, Oil Tank.

U. S. Gov., Army Air Forces Specification 3598; 1940. Compound; Caulking and Glazing.

U. S. Gov., Army Air Forces Specification 3603-1; 1944. Compound; Liquid Instrument Sealing.

U. S. Gov., Army-Navy Aeronautical Specification AN-C-86a-1; 1945. Compound; Anti-Seize and Sealing (for Oxygen Systems).

U. S. Gov., Army-Navy Aeronautical Specification AN-C-125; 1944. Compound; Dip Coating Sealing.

U. S. Gov., Army-Navy Aeronautical Specification AN-C-128-1; 1945. Compound; Insulating and Sealing.

U. S. Gov., Federal Specification TT-C-598; 1942. Compound, Calking; Plastic (for Masonry and Other Structures). Covers one type and two grades—(1) for gun application, and (2) for knife application. Gives requirements for material, color, shrinkage, bond, tenacity, rate of hardening, oil retention, slump, and cracking; methods of sampling and testing; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., Joint Army-Navy Specification JAN-C-99; 1944. Cement, Pettman.

U. S. Gov., Joint Army-Navy Specification JAN-P-115; 1944. Packaging and Packing for Overseas Shipment, Compound, Sealing, Dipcoating.

U. S. Gov., Navy Dept. Specification 33C6; 1939. Compound, Sealing, Boiler-Casing.

U. S. Gov., Navy Dept. Specification 52C21; 1944. Cement, Sealing (for Oil Tank Seams).

U. S. Gov., U. S. Army, Army Air Forces. Specification 2-86A; 1941. Compound; Joint Sealing, for Liquid-Cooled Engines.

U. S. Gov., U. S. Army, Army Air Forces. Specification 2-87; 1935. Compound; Sealing, Aircraft Instrument.

## 707.16 Synthetic Gaskets

Society of Automotive Engineers. Aeronautical Material Specification 3231; 1944. Gaskets; Oil Resisting, Synthetic Rubber Binder. This gasket material shall be made from selected long fibre asbestos and heat resisting synthetic rubber compounds. Gives quality, requirements, samples, tolerances, reports, approval, and rejections.

U. S. Gov., Army Air Forces. Specification 26598; 1944. Gasket; Drum Closure.

U. S. Gov., Army-Navy Aeronautical Specification AN-HH-G-171; 1942. Gaskets and Sheets; Gasoline-Oil and High-Temperature-Resisting.

U. S. Gov., Army-Navy Aeronautical Specification AN-HH-P-114b; 1943. Packings and Gaskets; Hydraulic.

### 707.19 Miscellaneous Specifications for Gaskets

*References.*—Gaskets, *see* 303.96.

## 707.2 PACKING

### 707.20 General Items

American Society for Testing Materials, D 733-43T; 1943. Tentative Methods of Testing Compressed Asbestos Sheet Packing. For evaluating the physical properties of the product known commercially as "compressed asbestos sheet packing" manufactured by bonding a large volume of asbestos fiber with a compound of natural or synthetic rubber or a mixture of both. Gives general methods, composition, sampling, measurement of thickness, tensile strength, bending test, compressibility, accelerated aging, immersion test, corrosion test, retests and rejection, and report.

### 707.21 Asbestos Packing

U. S. Gov., Federal Specification HH-P-31a; 1944. Packing; Asbestos, Metallic-Cloth, Sheet, and Tape. Covers one grade. Gives requirements for material, workmanship, sheet, tape, strands, friction compound, construction, tolerances, bending strength, and steam test; methods of sampling, inspection and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification HH-P-34; 1933. Packing; Asbestos, Rod, Braided. Covers two types—(A) plain, no wire; and (B) with wire insertion. Gives requirements for material and workmanship, construction, asbestos, yarn, lubrication; and weight per lineal yard; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Federal Specification HH-P-36a; 1944. Packing; Asbestos, Rod, High-Pressure. Covers one grade. Gives requirements for material, workmanship, construction, cloth, yarn, friction compound, total rubber, lubrication, graphite, coils, and steam test; methods of sampling, inspection and tests; and packaging, packing, and marking.

U. S. Gov., Federal Specification HH-P-41; 1931. Amendment 2; 1944. Packing; Asbestos, Rope and Wick. Covers one grade; wick packing, 1/4 in. only, and rope packing, all sizes 3/8 in. and larger. Gives requirements for material and workmanship, asbestos, and weight; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., Federal Specification HH-P-46a; 1944. Packing, Asbestos, Sheet, Compressed. Covers one grade. Gives requirements for material and workmanship, construction, composition, asbestos fiber, thickness and weight, tolerance, tensile strength, solvents, graphite and branding; methods of sampling, inspection and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification HH-P-51; 1930. Packing; Asbestos, Valve-Stem. Covers four types—(A) braided and lubricated with satisfactory oils; (B) braided and frictioned with rubber compound; (C) twisted and lubricated with satisfactory oils; and (D) twisted and frictioned with rubber compound. Gives requirements for material and workmanship, asbestos, yarn, construction, lubricant, and rubber compound; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking. Emergency Alternate Federal Specification E-HH-P-51, February 1943 (issued by Procurement Div., Treasury Dept., U. S. Gov.), covered changes in paragraphs A-1 and D-2. A pound of single-ply yarn shall contain 1,000 yd. ± 5 percent.

U. S. Gov., Navy Dept. Specification 33P2g; 1945. Packing; Asbestos-Metallic-Cloth, Sheet and Tape.

U. S. Gov., Navy Dept. Specification 33P5f; 1934. Packing; Asbestos, Rope, and Wick (Symbol 1102).

U. S. Gov., Navy Dept. Specification 33P13c; 1944. Packing; Sheet, Asbestos, Compressed (Symbol 2150).

U. S. Gov., Navy Dept. Specification 33P18b; 1944. Packing; Asbestos, Rod, High-Pressure (Symbol 1100).

U. S. Gov., Navy Dept. Specification 33P26b; 1944. Packing; Asbestos, Rod, Braided (Symbols 1103 and 1104).

*References.*—Semimetallic packing (asbestos), *see* 707.23; asbestos cloth and yarn, methods of testing, *see* 545.4; methods of testing rubber goods, *see* 200.

### 707.22 Flax or Hemp Packing

U. S. Gov., Federal Specification HH-P-106b; 1944. Packing; Flax, Hemp, or Cotton. Covers one grade. Gives requirements for material, workmanship, flax and hemp, cotton, cotton yarn, lubrication, and weight per linear yard for various sizes; methods of sampling, inspection, and test; and packaging, packing, and marking for shipment.

U. S. Gov., Navy Dept. Specification 33P11; 1944. Packing, Flax- or Hemp-Fiber, Symbol 1260.

### 707.23 Metallic Packing

U. S. Gov., Federal Specification HH-P-126a; 1933. Amendment 1; 1936. Packing; Metallic, Flexible. Covers one grade. Gives requirements for construction, metal core, lubrication, and coils; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Federal Specification HH-P-128; 1938. Packing; Metallic, Flexible, Condenser-Tube. Covers one grade. Covers material and workmanship, metal rings, fiber rings, tolerances, and sizes of rings; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Federal Specification HH-P-131a; 1933. Packing, Metallic and Nonmetallic, Plastic. Covers two grades—(A) and (B); two classes—(1) metallic and (II) nonmetallic; and four types—(A) bulk form; (B) coil form, cotton covered; (C) coil form, metal foil covered; and (D) coil form, braided wire jacket. Gives requirements for construction, asbestos fiber, graphite, binder, coils, composition, and metal; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking.

U. S. Gov., Federal Specification HH-P-166a; 1944. Packing; Semimetallic. Covers one grade. Gives

requirements for material, workmanship, cross section and size, construction, friction compound, metal, lubricant, coils, and details; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., Navy Dept. Specification 33P12d; 1944. Packing; Spiral, Low-Pressure, Plastic (Symbol 1300).

U. S. Gov., Navy Dept. Specification 33P15e; 1945. Packing, Condenser-Tube, Flexible-Metallic, Symbol 1435.

U. S. Gov., Navy Dept. Specification 33P17e; 1945. Packing; Metallic, Flexible, Symbol 1430.

U. S. Gov., Navy Dept. Specification 33P19e; 1945. Packing; Semimetallic, Symbols 1400 and 1402.

U. S. Gov., Navy Dept. Specification 33P21c; 1943. Packing; Lead, Shredded.

U. S. Gov., Navy Dept. Specification 33P25d; 1944. Packing; Metallic and Nonmetallic, Plastic.

U. S. Gov., Navy Dept. Specification 33P33; 1943. Packing, Semimetallic, for Stern Tubes (Symbol 1405).

U. S. Gov., U. S. Army, Corps of Engineers. Specification 84-21; 1924. Metallic Packing; Fixed-Ring Type.

U. S. Gov., U. S. Army, Corps of Engineers. Specification 84-24; 1924. Packing; Metallic, Solid, Floating-Ring Type.

*References.*—Asbestos metallic cloth sheet packing, *see* 707.21; methods of testing rubber goods, *see* 200.

## 707.24 Rubber Packing

U. S. Gov., Army Air Forces Specification 12023A-3; 1944. Tape; Cork-Synthetic Rubber Sealing, Adhesive Back.

U. S. Gov., Federal Specification HH-P-61c; 1944. Packing; Diaphragm. Covers one type and may be either of two classes—(A) compound utilizing polymerized chloroprene as the basic material, and (B) compound utilizing a copolymer product of butadiene and acrylonitrite. Gives requirements for material, workmanship, construction, fabric, thickness, tolerance, and physical requirements of compound; methods of sampling, inspection and tests; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification HH-P-151a; 1938. Packing, Rubber; Cloth-Insertion. Covers one grade. Gives requirements for material, workmanship, plies, rubber, physical tests, fabric, width, tolerance, and accelerated aging; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment. Emergency Alternate Federal Specification E-HH-P-151a; 1943 changed requirements for composition of rubber and physical tests.

U. S. Gov., Navy Dept. Specification 33P8h; 1944. Packing, Rubber (Reclaimed); Plain and Cloth-Insertion (Symbol 2353).

U. S. Gov., Navy Dept. Specification 33P23b; 1944. Packing, Rubber-Graphite; Unvulcanized (Symbol 2352).

U. S. Gov., Navy Dept. Specification 33P31; 1941. Packing; Diaphragm.

U. S. Gov., Navy Dept. Specification 33R1g; 1944. Rubber, Natural or Synthetic: Gaskets, Packing, Sheets, and Strips.

U. S. Gov., U. S. Army, Ordnance Department. Specification 20-41C; 1940. Packing, Rubber, for Submarine Mines.

*References.*—Testing of rubber goods, *see* 200; methods of testing textile fabrics, *see* 300.4.

## 707.25 Cotton and Canvas Packing

U. S. Gov., Federal Specification HH-P-71; 1933. Amendment 1; 1944. Packing; Fabric, Condenser-Tube. Covers one grade. Gives requirements for material and workmanship, construction, weight, and lubrication; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., Federal Specification HH-P-106b; 1944. Packing; Flax, Hemp, or Cotton. Covers one grade. Gives requirements for material, workmanship, flax and hemp, cotton, cotton yarn, lubrication, and weight per linear yard for various sizes; methods of sampling, inspection, and test; and packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification HH-P-112a; 1944. Packing; Hydraulic. Covers two types, (I) flexible and (II) rock hard. Gives requirements for material, workmanship, construction, fabric, tolerance, expansion, flexibility, friction, and hardness; methods of sampling and tests; and packaging, packing, and marking.

U. S. Gov., Federal Specification HH-P-171a; 1944. Packing; Spiral, Gland, Low-Pressure. Covers one grade. Gives requirements for material, workmanship, construction, cotton fabric, friction compound, friction test, specials, lubrication, and flexibility; methods of sampling, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Navy Dept. Specification 33P7g; 1941. Packing; Hydraulic (formerly Tucks) (Symbols 1301 and 1303).

U. S. Gov., Navy Dept. Specification 33P32a, 1944. Packing; Cotton, Square, Braided, Symbol 1270.

U. S. Gov., Navy Dept. Specification 33P24b; 1945. Packing; Wick, Cotton, Round.

U. S. Gov., Treasury Dept., Procurement Div. 319; 1939. Packing; Wick, Cotton, Round. Shall be made of best new cotton, thoroughtly carded and wholly free from seeds. Gives requirements for plies, weave, weight, and length; methods of sampling, inspection, and tests; and packaging, packing, and marking.

*References.*—Methods of testing rubber goods, *see* 200; methods of testing textile fabrics, *see* 300.4.

## 707.26 Leather Packing

U. S. Gov., Federal Specification KK-L-177; 1942. Leather; Hydraulic-Packing, Mineral-Tanned, (Regular and Non-Corrosive). Covers three classes—(A) medium, (B) heavy, and (C) extra heavy; two types—(I) regular and (II) non-corrosive; and shall be in the form of butt bends. Gives requirements for trim, tannage, selection, thickness, finish, impregnation, crackiness, tensile strength, stretch, shrinkage, and chemical composition; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification KK-L-231; 1943. Leather; Packing, Chrome-Vegetable-Retanned. Gives

requirements for forms (sides, bends, butt bends, or finished packings), classes (light, medium light, medium, medium heavy, or heavy), trim, tannage, selection, thickness, finish, tensile strength, stretch, crackiness, shrinkage, chemical composition, and figure showing location of samples and trim of hide; methods of sampling, inspection, and tests; and packing and marking for shipment.

*References.*—Methods of analysis, *see* 060.

### 707.27 Jute Packing

U. S. Gov., Federal Specification HH-P-117; 1940. Packings; Jute, Twisted. Covers three types—(I) dry, (II) tarred, and (III) oiled. Gives requirements for material, workmanship, and form; methods of sampling, inspection, and tests; and requirements for packing and marking for shipment.

### 707.28 Fiber Packing

U. S. Gov., Federal Specification HH-P-91; 1931. Amendment 3; 1944. Packing; Fiber, Hard, Sheet. Covers one grade, that known commercially as B.H. or "Bone Hard." Gives requirements for material and workmanship, uniformity, color, hardness, specific gravity, thickness, tensile strength, and water absorption; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., Federal Specification HH-P-96a; 1938. Amendment 1; 1940. Packing, Fiber; (for) Lubricating and Fuel-Oil. Covers one grade. Gives detail requirements; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment. Emergency Alternate Federal Specification E-HH-P-96a; 1942 (issued by Procurement Division, Treasury Dept., U. S. Gov.) changed requirements for material.

U. S. Gov., Navy Dept. Specification 33P22b; 1943. Packing, Sheet, Plant- or Animal-Fiber.

U. S. Gov., Navy Dept. Specification 33P27a; 1941. Packing; Fiber, Hard, Sheet (Symbol 2228).

*References.*—Methods of testing rubber goods, *see* 200; methods of testing fiber board, *see* 470.3; other fiber board, *see* 472.93.

### 707.29 Miscellaneous Specifications for Packings

U. S. Gov., Army Air Forces. Specification 12021-A; 1937. Packing; Synthetic Rubber and Cork Composition (Oil-Resistant).

U. S. Gov., Army Air Forces. Specification 26554-E; 1943. Sheet; Synthetic Rubber (for Packing).

U. S. Gov., Army-Navy Aeronautical Specification AN-HH-P-114b; 1943. Packings and Gaskets; Hydraulic.

U. S. Gov., Navy Dept. Specification 33P28b; 1943. Packing; Stuffing-Tube (for Asbestos-Covered and Armored Electric Cables).

U. S. Gov., Navy Dept. Specification 33P29a; 1942. Packing; Plastic (for Dogs for Water-Tight Closures).

U. S. Gov., Navy Dept. Specification 33P37; 1943. Packing; Rayon, Square, Braided (Symbol 1280).

*References.*—Packings, *see* 303.96.

## 707.3 RUBBER VALVES FOR PUMPS

U. S. Gov., Army Air Forces. Specification 26564 (1); 1940. Sheet; Neoprene (for Fuel Pump Diaphragms).

U. S. Gov., Federal Specification ZZ-V-51a; 1940. Valves; Rubber. Covers three classes—(A) hard, (B) medium, and (C) soft. Gives requirements for material hardness, dry heat test, steam test, and boiling-water test; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking. Emergency Alternate Federal Specification E-ZZ-V-51a; 1943 changed requirements for rubber compounds for valves.

U. S. Gov., Navy Dept. Specification 11Vib; 1942. Valves; Pump, Rubber.

*References.*—Methods of testing rubber goods, *see* 200.

## 707.4 PIPE COVERINGS AND BOILER LAGGING

### 707.40 General Items

American Water Works Assn. Tentative Standard Specifications for Cement-Mortar Protective Coating for Steel Water Pipe of Sizes 30 Inches and Over, 7A.7-1940. Cover the material and application requirements to obtain corrosion protection for steel water pipe by the use of portland cement mortar applied by spinning or by centrifugal machine and by guniting. Corrosion protection is provided as follows: (1) The inside of all pipe shall receive a coat of cement-mortar lining applied by spinning and guniting or by centrifugal machine; (2) the outside of all pipe shall receive a coat of steel reinforced cement mortar applied by guniting.

National Association of Purchasing Agents. Handbook of Commodity Data Sheets, 1938. Insulation; Pipe. Covers definition, classes and grades, characteristics, and forms available.

Underwriters' Laboratories, Inc. Bulletin of Research 27; 1943. Clearances and Insulation of Heating Appliances. This bulletin describes tests conducted to provide definite techanical information as a basis for promoting uniformity in the various ordinances, regulations, and standards bearing on the subject. Covers mechanism of heat transfer, test equipment, tests of protective assemblies, temperature measurements, test procedure, test results, and comments.

*References.*—Heat transmission tests, *see* 792.0.

### 707.41 Cork Pipe Coverings

U. S. Gov., Navy Dept. Specification 32C12a; 1941. Cork; Molded, Pipe-Covering.

*References.*—Duck for insulation coverings, *see* 707.40.

### 707.42 Asbestos Coverings, for Pipes and Boilers

U. S. Gov., Federal Specification HH-I-561a; 1944. Insulation; Laminated-Asbestos. Covers three types—(I) nonindented or sponge felt insulation (700°F.); (II) indented asbestos paper insulation (500°F.); (III) corrugated asbestos paper insulation (300°F.); and two classes, (A) blocks and (B) pipe covering. Gives requirements for tolerances and details covering construction, weight, conductivity, thickness, sizes, jackets, bands, and loss on heating; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U.S. Gov., Navy Dept. Specification 32A2e; 1945. Asbestos; Block, Cellular, Heat Insulation.

U. S. Gov., Navy Dept. Specification 32P6; 1938. Pipe-Covering, Molded-Asbestos.

U. S. Gov., Treasury Dept., Procurement Div. 515a; 1942. Pipe Covering; Asbestos, Air-Cell. Covers one type, one grade, and two classes—(A) canvas jacket and (B) glazed paper cover. Intended for insulation where the temperature does not exceed 300°F. Gives requirements for construction, thickness of plies, inside diameter, exterior cover, asbestos paper, sections, bands, thickness, and pipe sizes; methods of sampling, inspection, and tests; and packaging, packing, and marking.

*References.*—Standard sizes of boiler lagging, *see* 707.40; asbestos paper, millboard, and textile, *see* 545.4; duck for insulation covering, *see* 707.40.

## 707.43 Magnesia Coverings for Pipes and Boilers

American Society for Testing Materials, C 193-44 T; 1944. Tentative Specification for 85 Per Cent Magnesia Thermal Insulating Cement. Covers scope, composition, physical properties, sampling and mixing, methods of testing, and rejection.

U.S. Gov., Federal Specification HH-M-61; 1934. Magnesia; Block, Cement, and Pipe-Covering (Molded). Covers one grade and four types—(I) standard thickness, (II) double standard thickness, (III) blocks, and (IV) cement or plaster. Shall contain not less than 85 percent of pure hydrated magnesium carbonate and not less than 10 percent long-fiber asbestos. Gives requirements for weight, length, thickness, size, cotton sheeting jacket, and bands; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking. Emergency Alternate Federal Specification E-HH-M-61; 1942 changed requirements for cotton sheeting jacket; and deletes use of brass bands and changes their width and thickness.

U. S. Gov., Navy Dept. Specification 32P10; 1943. Plaster; Magnesia.

*References.*—Standard sizes of boiler lagging, *see* 707.40; duck for insulation covering, *see* 707.40.

## 707.44 Felt Pipe Coverings—Vegetable and Mineral

American Hospital Assn., 58-4. Hair Felt. Covers one grade and one class, that intended for pipe covering.

U. S. Gov., Federal Specification C-F-201c; 1944. Felt; Hair. Covers one grade and two classes—(A) insulating (plain), and (B) packing, padding (fabric reinforced). Gives requirements for hair felt, cotton fabric, process, thicknesses and densities, form, size of rolls, organic acidity, and alkalinity and mineral acidity; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Treasury Dept., Procurement Div. 516a; 1942. Pipe-Covering; Felt, Wool. Covers one type, one grade, and two classes—(A) canvas jacket and (B) glazed paper jacket. Intended for use as insulation when the temperatures are between 40°F. and 212° F. Gives requirements for material, construction, inside diameter, exterior cover, density, sections, bands, and thickness; methods of sampling, inspection, and tests; and packaging, packing, and marking.

*References.*—Other specifications and methods of testing for felt, *see* 365.98; duck for insulation coverings, *see* 707.40.

## 707.45 Fire Clay Insulation for Boiler Furnaces

*References.*—Fire clay refractories, *see* 534.12.

## 707.46 Glass Fiber Insulation

U. S. Gov., Federal Specification HH-I-556; 1941. Insulation (Glass-Fiber); Semi-Rigid. Covers one grade and four types—(I) standard thickness, pipe covering; (II) double standard thickness, pipe covering; (III) single layer, pipe covering; and (IV) block. Gives requirements for material and workmanship, construction, weight per cubic foot, thicknesses, and finish; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

## 707.47 Mineral or Rock Wool Insulation

American Society for Testing Materials, C 195-44 T; 1944. Tentative Specification for Mineral Wool Thermal Insulation Cement. Covers scope, physical properties, sampling and mixing, methods of testing, and rejection.

American Society for Testing Materials, ES-14; 1942. Emergency Specifications for Blanket Thermal Insulation for Building Purposes. Cover blanket or batt thermal insulating materials furnished in flexible or semirigid form and suitable for building purposes for application to flat or curved surfaces.

American Society for Testing Materials, ES-15; 1942. Emergency Specifications for Blanket Thermal Insulation for Industrial Purposes. Cover blanket insulating materials furnished in flexible or semirigid form and suitable for industrial purposes for application on flat or curved surfaces where surface temperatures exceed 100°F.

American Society for Testing Materials, ES-16; 1942. Emergency Specifications for Blanket Thermal Insulation for Refrigeration Purposes. Cover blanket thermal insulating materials furnished in flexible or semirigid form and suitable for refrigeration purposes for application on flat or curved surfaces.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Commercial Standard CS117-44; 1944. Mineral Wool; Blankets, Blocks, Insulating Cement and Pipe Insulation for Heated Industrial Equipment. To establish minimum specifications for insulating heated surfaces with mineral wool products and provides minimum requirements for mineral wool blankets, blocks, insulating cement, and pipe insulation for insulating heated industrial equipment. Gives general requirements; detail requirements including blanket insulation, block insulation, insulating cement, and pipe insulation (blanket-type and molded-type); recommended installation requirements including auxiliary material, application, blanket insulation, block insulation, insulating cement, and pipe insulation (blanket-type and molded-type); guides for painting, maintenance, and guarantee labels and certificates.

U. S. Gov., Federal Specification HH-M-371; 1938. Mineral-Wool, Impregnated; Blanket, Block, and Pipe Covering, Molded, for Low Temperatures. Includes five types—(I) molded block; (II) molded sectional pipe covering, ice water thickness; (III) molded sectional pipe covering, brine thickness; (IV) molded sectional pipe covering, heavy brine thickness; and (V) felted blanket. Gives detail requirements for material, workmanship, conductivity, and density; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment. Emergency Alternate Federal Specification E-HH-M-371; 1942, substituted ordinary steel in lieu of copperized staples and copper-clad steel wire.

U. S. Gov., Federal Specification HH-P-386a; 1939. Pipe-Covering and Cement; Mineral or Rock-Wool. Covers one grade and three types—(I) molded sectional pipe covering; (II) felted blanket pipe covering; and (III) cement. Gives requirements for material and workmanship, sulfur, shot, stability, thicknesses, tolerance, and density; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment. Emergency Alternate Federal Specification E-HH-P-386a; 1942, changed requirements for cotton sheeting jacket; and deletes use of brass bands and changes their width and thickness.

U. S. Gov., Navy Dept. Specification 32-I-2b; 1944. Insulation; Blanket, Mineral-Wool.

### 707.49 Miscellaneous Coverings for Pipes and Boilers

American Society for Testing Materials, C 196-44 T; 1944. Tentative Specification for Expanded or Exfoliated Vermiculite Thermal Insulating Cement. Covers scope, physical properties, samples and mixing, methods of testing, and rejection.

American Society for Testing Materials, C 197-44 T; 1944. Tentative Specification for Diatomaceous Silica Thermal Insulating Cement. Covers scope, physical properties, sampling and mixing, methods of testing, and rejection.

American Society for Testing Materials, ES-17; 1942. Emergency Specifications for Preformed Pipe Covering Thermal Insulation. Cover preformed (molded or laminated) thermal insulation in the form of semicylindrical pipe covering sections intended for use as an insulation on surfaces at specified temperatures.

American Society for Testing Materials, ES-18; 1942. Emergency Specifications for Preformed Block Thermal Insulation. Cover a rigid or semirigid thermal insulating material, either flat or segmental, for application as received, and excluding brick of the 9-in. series.

U. S. Gov., Federal Specification, HH-I-578; 1941. Insulation, Vermiculite; Block and Pipe—Covering (Molded). Covers four types—(I) standard thickness, pipe-covering; (II) double standard thickness, pipe-covering; (III) solid thickness, pipe-covering, and (IV) block. Expanded or exfoliated mica, long fiber asbestos and a suitable binder. Gives requirements for materials, weight, size, thickness, covering, and bands; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment. Emergency Alternate Federal Specification E-HH-I-578; 1942 use of brass bands, and changes their width and thickness.

U. S. Gov., Navy Dept. Specification 32P8; 1944. Pipe-Covering; Thermal-Insulation.

## 708. HEATING EQUIPMENT FOR POWER PLANTS

*References.*—Heating equipment, *see* 792.1.

## 709. INSULATION, THERMAL POWER

American Hospital Assn., 4-25. Blanket, Felt, and Loose-Fill Insulation (Vegetable or Wood-Fiber). Covers three classes—(A) flexible blanket, (B) semi-rigid felt, and (C) loose-fill.

American Society of Heating and Ventilating Engineers. Standard Test Code for Heat Transmission Through Walls, 1928. This code has not been framed for the purpose of offering detailed instructions for testing the heat transmission of building materials or for constructing testing apparatus, but rather for defining certain standards, the applications of which, it is hoped, will bring the results of different investigations into better conformity than is found at the present time. Includes definitions and formulas, conductivity of homogeneous materials, and over-all heat transmission.

U. S. Gov., Federal Specification HH-I-521b; 1937. Insulation; Bat or Strip-Form and Loose Fill. Type (I) bat or strip form, two classes—(A) light-weight, and (B) medium-weight; and (II) loose-fill form, three classes—(A) light-weight, (B) medium-weight, and (C) heavy-weight. Composed of mineral matter in fibrous form, in granular form, in nodulated fibrous form, in powdered form mixed with cellulose fiber, or in bat form. Gives requirements for materials, sulfur, oil asphalt, wax conductivity, and density; methods of sampling, inspection, and tests; requirements for packaging, packing, and marking.

U. S. Gov., Federal Specification HH-I-556; 1941. Insulation (Glass-Fiber); Semirigid. Covers one grade and four types—(I) standard thickness, pipe covering; (II) double standard thickness, pipe covering; (III) single layer, pipe covering; and (IV) block. Gives requirements for material and workmanship, construction; weight per cubic foot, thicknesses, and finish; methods of sampling, inspection and tests; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification HH-I-578; 1941. Insulation, Vermiculite; Block and Pipe-Covering (Molded). Covers four types—(I) standard thickness, pipe-covering; (II) double standard thickness, pipe-covering; (III) solid thickness, pipe-covering; and (IV) block. Expanded or exfoliated mica, long fiber asbestos and a suitable binder. Gives requirements for materials, weight, size, thickness, covering, and bands; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment. Emergency Alternate Federal Specification E-HH-I-578; 1942 use of brass bands, and changes their width and thickness.

U. S. Gov., Federal Specification HH-M-61; 1934. Magnesia; Block, Cement, and Pipe-Covering (Molded).

Covers one grade and four types—(I) standard thickness, (II) double standard thickness, (III) blocks, and (IV) cement or plaster. Shall contain not less than 85 percent of pure hydrated magnesium carbonate and not less than 10 percent long-fiber asbestos. Gives requirements for weight, length, thickness, size, cotton sheeting jacket, and bands; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking. Emergency Alternate Federal Specification, E-HH-M-61; 1942, changed requirements for cotton sheeting jacket; and deletes use of brass bands and changes their width and thickness.

U. S. Gov., Federal Specification HH-M-371; 1938. Mineral-Wool, Impregnated; Blanket, Block, and Pipe Covering, Molded, for Low Temperatures. Includes five types—(I) molded block; (II) molded sectional pipe covering, ice water thickness; (III) molded sectional pipe covering, brine thickness; (IV) molded sectional pipe covering, heavy brine thickness; and (V) felted blanket. Gives detail requirements for material, workmanship, conductivity, and density; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment. Emergency Alternate Federal Specification E-HH-M-371; 1942, substituted ordinary steel in lieu of copperized staples and copper-clad steel wire.

U. S. Gov., Federal Specification HH-P-386a; 1939. Pipe-Covering and Cement; Mineral or Rock-Wool. Covers one grade and three types—(I) molded sectional pipe covering; (II) felted blanket pipe covering; and (III) cement. Gives requirements for material and workmanship, sulfur, shot, stability, thicknesses, tolerance, and density; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment. Emergency Alternate Federal Specification E-HH-P-386a; 1942, changed requirements for cotton sheeting jacket; and deletes use of brass bands and changes their width and thickness.

*References.*—Thermal insulating materials. *see* 296.2.

# 710-719 ELECTRICAL MACHINERY AND SUPPLIES

## 710. GENERAL ITEMS

American Bureau of Shipping. Rules for the Classification and Construction of Steel Vessels, 1944. Electrical Equipment. Include requirements for construction and installation, generation, application, distribution, control, service trial, spare parts and equipment; and tables of wires and cables, insulation thicknesses and resistance, and conductor sizes and over-current protection for a.c. motors.

American Institute of Electrical Engineers, 1; 1940. General Principles Upon Which Temperature Limits are Based in the Rating of Electrical Machinery and Apparatus. Gives basis of rating, classification of insulating materials, methods of temperature determination, limiting insulation temperatures, ambient temperature, conventional "hot-spot allowances," effects of altitude, limiting observable and preferred values of temperature rise. Appendix contains tables giving temperatures in various American cities.

American Institute of Electrical Engineers, 1B; 1944. Report on Guiding Principles for the Specification of Service Conditions in Electrical Standards. This report has been prepared as a guide to technical committees for use where standards are being prepared or revised, with the object of obtaining consistency, insofar as practicable, among the standards for various kinds of electrical equipment, which must often operate under the same service conditions. Covers usual temperature and altitude service conditions, unusual temperature and altitude service conditions, other conditions which may effect design and application, applications at altitudes greater than 3,300 ft., testing of equipment for altitudes not exceeding 3,300 ft., and testing of equipment designated for altitudes exceeding 3,300 ft.

American Institute of Electrical Engineers, 3; 1943. Standard for Guiding Principles for the Selection of Reference Values for Electrical Standards. For comparative results, it is necessary to standardize the conditions under which tests are made or to which test results are corrected. Covers temperatures, barometric pressure, altitude, relative air density, humidity, absolute humidity, relative humidity, preferred temperature values, preferred numbers, and bibliography.

American Institute of Electrical Engineers, 4; 1943. American Standards Assn., C68.1-1942. Measurement of Test Voltage in Dielectric Tests. Sets forth methods for the measurement of test voltages and wave shapes used in dielectric tests of electrical apparatus or insulating material. These tests are in three classes: 1, Puncture tests; 2, flashover tests; 3, voltage proof tests. Covers dielectric tests, voltage measurements, alternating voltage tests, direct voltage tests, surge voltage tests, and testing equipment and arrangement.

American Institute of Electrical Engineers. Standard 17gl; 1928. American Standards Assn., Z10gl-1929. Letter Symbols for Electrical Quantities.

American Institute of Electrical Engineers. Standard 17glA; 1940. Proposed Revision for Letter Symbols for Electric and Magnetic Quantities.

American Institute of Electrical Engineers, 21; 1942. American Standards Assn., C 76.1-1943. Standards for Apparatus Bushings and Test Code for Apparatus Bushings. Covers outdoor bushings for large apparatus and covers type bushings for small apparatus. Gives service conditions, definitions, rating, heating, dielectric tests, nameplate markings, and appendix covering test procedure.

American Institute of Electrical Engineers, 29; 1941. American Standards Assn., C 77.1-1943. Standard for Wet Test. For use in making high-potential wet tests on insulators, bushings, switches and related apparatus. Covers only the requirements for the spray and the correction factors to be applied to test results. The requirements for specimen mounting

and the method of voltage application for any particular type of equipment are covered by the respective apparatus standards. Standards for the measurement of voltage are covered by A.I.E.E. Standard No. 4.

American Institute of Electrical Engineers, 31; 1944. Standards for Capacitance Potential Devices and Outdoor Coupling Capacitors. Covers scope, definitions and terminology, service conditions, standards for outdoor coupling capacitors, and standards for capacitance potential devices.

American Institute of Electrical Engineers. Recommended Practice for Electrical Installations on Shipboard, 45; 1940. Addenda, 1942. Emergency Modification and Supplement, 1943. For the equipment of merchant vessels with electrical apparatus for lighting, signaling, communication, power, and propulsion, either direct current or alternating current.

American Institute of Electrical Engineers, 501; 1941. Test Code for Direct-Current Machines. Covers insulating resistance, winding resistance measurements, polarity drop and polarity of field coils, brush setting, efficiency, measurement of losses, reference conditions, schedule of losses, magnetic saturation data, telephone interference data, commutation, voltage regulations of a shunt-wound and a compound-wound generator, speed regulation of motor, load test of fractional horsepower motors, temperature test, measurement of the cooling air temperature during tests, method of determining temperature rise by resistance, shaft currents, high-potential test, noise test, and exciter response.

American Institute of Electrical Engineers, sponsor. American Standards Assn., C42-1941. American Standard Definitions of Electrical Terms. Contains definitions of technical terms used in electrical engineering, including correlation of definitions and terms in existing standards. The groups of definitions into which the standard is divided are: General (Fundamental and Derived) Terms (group 05); Control Equipment (group 25); Electric Welding and Cutting (group 50); Electrobiology, including Electrotherapeutics (group 80); Electrochemistry and Electrometallurgy (group 60); Electrocommunication (group 65); Electromechanical Applications (group 45); Electronics (group 70); Generation, Transmission and Distribution (group 35); Illuminating Engineering (group 55); Instruments, Meters and Meter Testing (group 30); Radiology (group 75); Rotating Machinery (group 10); Switching Equipment (group 20); Transformers, Regulators, Reactors, and Rectifiers (group 15); Transportation (groups 40, 41, 42); and Miscellaneous (group 95).

American Institute of Electrical Engineers, joint sponsor with American Society of Mechanical Engineers. American Standards Assn., Z32.9-1943. Assn. of American Railroads, Telegraph and Telephone Section, M-3. Graphical Electrical Symbols for Architectural Plans. This standard, which has the endorsement of the American Institute of Architects, is intended to cover the symbols used for depicting electrical equipment for buildings and are the schematics used by the architectural profession to show the locations of electrical power, light, control, and communication facilities provided for the building.

American Institute of Electrical Engineers, joint sponsor with National Electrical Mfgs. Assn. American Standards Assn., Z32.10; 1944. American Standards for Graphical Symbols for Electronic Devices. Developed to co-ordinate the various basic symbols for electronic devices. Includes types of devices covered, symbol size, new symbols, and illustrations.

American Institute of Electrical Engineers, joint sponsor with American Society of Mechanical Engineers. American Standards Assn., Z32.3-1943. Graphical Symbols for Power, Control and Measurement. Covers basic symbols which seem to have widespread use and application. Gives symbols for alarms, battery, capacitors, circuit breakers, coils, connectors, wiring, electrical contacts, fuse, indicating lights, instruments and meters, lightning arresters, rotating machines, plug connections rectifiers, relays, resistors, rheostats, switches, thermal elements, thermo-couples, and transformers.

American Mining Congress, joint sponsor with U. S. Gov., Dept. of Interior, Bureau of Mines. American Standards Assn., M2-1926. Safety Rules for Installing and Using Electrical Equipment in Coal Mines. Definitions, limitations on voltage and capacity, use of insulated platforms, grounding of frames and sheaths, guarding of circuits, installation and protection of motors and controllers, safety devices for electric hoists, construction of underground stations and switchboards, installation of lamps, requirements for portable electrical equipment, installation and protection of circuits, trolley wires, signal and telephone circuits, and shot-firing circuits.

American Mining Congress, sponsor. American Standards Assn., M-24-1932. Safety Rules for Installing and Using Electrical Equipment in Metal Mines.

American Society of Mechanical Engineers. Power Test Code, Auxiliary Section. Part 6—Electrical Measurements, 1934. Defines standard methods for electrical measurements required by the various test codes. Covers voltage, current, power, energy, resistance, frequency, power factor measurement, etc.

American Society for Testing Materials, A 34-44; 1944. Methods of Test for Magnetic Properties of Iron and Steel. Includes procedures for determining the normal induction and hysteresis, core loss, normal and incremental permeability and core loss, permeability of feebly magnetic materials, interlamination resistance, and lamination factor.

American Society for Testing Materials, A 127-44T; 1944. Tentative Definitions of Terms, With Symbols, Relating to Magnetic Testing. Gives table showing symbols used in magnetic testing and defines a large number of terms used in magnetic testing.

American Society for Testing Materials, B 110-39T; 1939. Tentative Method of Test for Dielectric Strength of Anodized Aluminum. For anodic coatings applied to aluminum and its alloys, also for measure of thickness of coating where properties are known. Requirements for high-voltage transformer, electrode, test specimens, surrounding medium, condition and position of electrodes, and application of voltage.

American Society for Testing Materials, B 155-41T; 1941. Tentative Method of Test for Temper of Strip and Sheet Metals for Electronic Devices (Spring-Back Method). Covers the procedure for determining

the temper of strip and sheet metals for electronic devices, in thicknesses of 0.010 in. or less, by means of measurements of the "spring-back" when the specimen is released after bending in the prescribed manner. Apparatus, test specimen, procedure, and report.

American Society for Testing Materials, B 156-42T; 1942. Tentative Methods of Testing Lateral Wire for Grids of Electronic Devices. Cover the procedures for testing lateral wires from 0.001 to 0.010 in. in diameter, for grids of electronic devices. Chemical composition, size, and tension tests.

American Society for Testing Materials, B 157-41T; 1941. Tentative Methods of Testing Wire for Supports Used in Electronic Devices and Lamps. Cover the procedures for testing round wire (exclusive of molybdenum and tungsten) from 0.010 to 0.075 in. in diameter, used as support wire in electronic devices and lamps. Chemical composition, electrical resistivity, straightness, diameter, out-of-roundness, tension tests, and bend test.

American Standards Association, Z-32.11; 1944. Coordination of Electrical Graphical Symbols (American War Standard). This Standard for the coordination of fundamental electrical graphical symbols has for its object the coordination and simplification of basic electrical symbols now in use for power, control measurement, telephone, telegraph, and radio. Gives various illustrations.

American Transit Assn. Recommended Outlines for Power Contract, D124-37; 1937. Contract referred to in this recommendation covers details relative to general conditions, requirements of service, power supply, determination of maximum demand, rates, metering, operating arrangements, bills and payments, arbitration, and liability.

Associated Factory Mutual Fire Insurance Companies. Specifications for Gravity Water Tanks and Steel Towers, Volume 1. Structural Details, 1938. For buildings supporting tanks, requirements as to footings on brick supporting walls, design for anchorage, allowable bearing pressures for supports of various building materials. Concrete buildings according to A.S.T.M. specifications for concrete.

Assn. of American Railroads, Operations and Maintenance Dept., Engineering Div., Electrical Section. Manual of Recommended Practice, 1-b-42; 1942. Form of Agreement for Purchase of Electrical Energy for Other Than Traction Purposes. Covers form of energy, point of delivery, limits of fluctuation, character of load, capacity, rates, supplying electrical energy to any consumer, prevention of use, meters, rules and regulations, liability, interference with apparatus, arbitration, access to premises, termination of agreement as applied to any point of service by loss of the railway company's plant, regulation by public utility regulatory bodies, term, and successors.

Assn. of American Railroads, Operations and Maintenance Dept., Engineering Div., Electrical Section. Manual of Recommended Practice, 1942. Lubrication of Motors and Inspection and Maintenance of Electrical Equipment (6-a-41). Covers recommended electrical inspection and maintenance practices for light and power installations on railroad fixed facilities; excluding signals, communication systems and electric traction facilities. Electric light and power wiring and apparatus in tunnels, on bridges, piers, coal and ore docks, at passenger and freight facilities, pumping stations, shops, fuel stations, storage warehouses, grain elevators, pole lines, power plants, substations, turntables, ash cranes, shop machinery, etc., are included under this subject.

Assn. of American Railroads, Operations and Maintenance Dept., Engineering Div., Electrical Section. Manual of Recommended Practice, 1942. Repair Shop Practice (6-b-41). Requirements for economical and prompt repairs for shops required to handle repairs to motors, generators, and other electrical equipment that has failed in service.

Assn. of American Railroads, Operations and Maintenance Dept., Engineering Div., Electrical Section. Manual of Recommended Practice, 1942. Recommended Practice for the Prevention of Electric Sparks During the Transfer of Inflammable Liquids (8-a-39).

Assn. of American Railroads, Operations and Maintenance Dept., Engineering Div., Signal Section. Manual of Recommended Practice, 1944. Circuit Nomenclature and Written Circuits. Standard abbreviations for electrically operated signal units and wires, with drawings covering the standard graphical symbols.

Assn. of American Railroads, Operations and Maintenance Dept., Operating-Transportation Div., Safety Section. Safety Rules Governing Maintenance of Equipment and Stores Employees, 1942. Gives requirements for prevention of burns (fires, explosions); handling material, tools, and equipment; operation of trucks, tractors, cranes, hoists, and derricks; working on or about machinery, engines, cars, pipe lines, refrigerating or air conditioning units, and elevators; protection against train and engine hazard; and eye protection.

Assn. of Iron and Steel Engineers. Proposed Safety Regulations When Working on High Tension Lines, 1932.

Electrical Standards Committee of American Standards Assn., sponsor. American Standards Assn., C50-1936. American Institute of Electrical Engineers Standard C50. Rotating Electrical Machinery. Definitions and requirements on direct-current rotating machines, synchronous generators, synchronous motors and synchronous machines in general, synchronous convertors, induction motors and induction machines in general, and direct-current and alternating-current fractional horsepower motors. Appendixes (I) Standard Lettering of Dimension Sheets, (II) Effects of Variation of Voltage and Frequency Upon the Performance of Induction Motors, (III) Standard Form for Making Characteristic Curves on Forms, (IV) Definitions for Brushes, (V) Insulation Resistance, and (VI) Compressor Factors.

International Assn. of Electrical Inspectors. Model Draft for an Electrical Inspection Ordinance, 1944. For safeguarding persons and property and promoting

the welfare of the public. Covers scope, electrical inspector—qualifications and appointment, duties of electrical inspector, authority of electrical inspector, standards for the installation of electrical equipment, standards for electrical equipment, permits, fees for permits and inspections, inspection and certificates, connection to installations, board of review, penalties, liability for damages, validity, repeal of conflicting ordinances, and date to take effect.

National Board of Fire Underwriters. American Standards Assn., C1-1940. National Electrical Code. Definitions; wiring design, protection, methods and materials; equipment for general use; special occupancies; special equipment; special conditions; construction specifications. Fully detailed specifications for construction and for performance under test and in service of electrical equipment and materials for use under this code are given in the Standards of Underwriters' Laboratories, Inc.

National Electrical Manufacturers Assn., 42-74; 1942. Service Equipment Standards. Gives general performance, rating, marking and test standards for devices such as service entrance and meter service switches, service circuit breakers, meter test blocks and combinations of meter service switches and branch circuit fuse holders or branch circuit breakers.

National Electrical Manufacturers Assn., 43-86; 1943. Feeder Voltage Regulator Standards. This publication is a reference work of practical information concerning the manufacture, test and performance of feeder voltage regulators. Gives standards for bushing characteristics, efficiency and losses, general standards, guide for loading induction and step-voltage regulators, manufacturing standards, performance specifications, rating standards, tests, and definitions.

National Electrical Manufacturers Assn. and Edison Electric Institute. Preferred Voltage Ratings for A-C Systems and Equipment, N.E.M.A. 100; 1930. Ten tables show preferred voltage ratings for electrical equipment, generators, motors, distribution transformers, substation transformers, transformers for use with generators for supplying higher voltage systems, transformers for reversible tie purposes, and general apparatus, such as disconnecting switches, fuses, oil circuit breakers, etc.

National Electrical Manufacturers Assn., sponsor. American Standards Assn., C8.1-1944. Terminal Markings for Electrical Apparatus. The purpose of applying markings to the terminals of electric power apparatus according to a standard is to aid in making up connections to other parts of the electric power system and to avoid improper connections. Covers electric power apparatus, rotating apparatus, constant potential transformers, feeder voltage regulators, industrial control, instrument transformers, current-limiting reactors, constant-current transformers of the moving coil type, attachment plugs, and electric water heaters.

U. S. Gov., Army Air Forces. Specification 32298; 1940. Power Plant: Aircraft Accessory, Electric Model Specification (Instructions for Preparation).

U. S. Gov., Army-Navy Aeronautical Specification AN-P-6a; 1942. Power-Plant; General Specification for Electric Alternating Current.

U. S. Gov., Army-Navy Aeronautical Specification AN-P-7a; 1942. Power-Plant; Electric Alternating Current, 60 Cycle, 3 Phase, 2,400 Volts Per Phase.

U. S. Gov., Army-Navy Aeronautical Specification AN-P-8; 1942. Power-Plant; Electric Direct Current 9 Kilowatt, 32 Volt.

U. S. Gov., Army-Navy Aeronautical Specification AN-P-9a; 1942. Power-Plant; Electric Direct Current, 3 Kilowatt, 110 Volt.

U. S. Gov., Army-Navy Aeronautical Specification AN-P-10a; 1942. Power-Plant; Electric Direct Current 600 Watt, 110 Volt, Portable.

U. S. Gov., Army-Navy Aeronautical Specification AN-P-42; 1943. Power-Plant; Electric Alternating Current 10 Kilowatt Single Phase 32/120/240 Volt.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Circular C415; 1937. Magnetic Testing. This circular gives general information regarding magnetic quantities, the magnetic characteristics of materials, the principles employed in magnetic testing apparatus, and a brief discussion of the theory and application of magnetic analysis.

U. S. Gov., Dept. of Commerce, National Bureau of Standards H4; 1928. Discussion of the National Electrical Safety Code (To Accompany the Fourth Edition of the Code). A handbook, to be used in conjunction with the fourth edition of the National Electrical Safety Code, discussing the rules of the safety code and the method of their application.

U. S. Gov., Dept. of Commerce, National Bureau of Standards H31; 1940. American Standards Assn., C2.1-1941. Safety Rules for the Installation and Maintenance of Electrical Supply Stations. Comprising part 1—for equipment of indoor and outdoor supply stations, provided it is in separate rooms or enclosures, under control of properly qualified persons and accessible only to such persons. They also apply to similar equipment if installed in factories, mercantile establishments, vehicles or elsewhere. Exceptions—if voltage does not exceed 150 volts to ground, and if voltage is not more than 550 volts between conductors and power utilized does not exceed 3,200 volts; and the grounding rules of the fifth edition, National Electrical Safety Code. Rules covering protective arrangements of stations and substations, protective arrangements of equipment, requirements on rotating equipment, storage batteries, transformers, induction regulators, rheostats, ground directors, conductors, fuses, circuit-breakers, switches, controllers, switchboards and lightning arrestors.

U. S. Gov., Dept. of Commerce, National Bureau of Standards, H32; 1941. American Standards Assn., C2.2-1941. Safety Rules for the Installation and Maintenance of Electrical Supply and Communication Lines. Comprising part 2 of the fifth edition, National Electrical Safety Code. Rules covering general requirements applying to overhead and underground lines including design and construction, installation and maintenance, accessibility, inspection and test of lines and equipment, isolation and guarding, grounding of circuits and equipment, and arrangement of switches; rules for overhead lines including relations between various classes of lines, clearances, grades of construction, loading for grades A, B, C, D, and E, strength requirements, line insulators, and miscellaneous requirements;

rules for underground lines including location of duct systems and manholes, construction of duct systems, construction and location of manholes, location of conductors, protection of conductors in duct systems and manholes, guarding of live parts in manholes, construction at risers from underground, identification of conductors, and identification of apparatus connected in multiple; and appendixes covering—(A) recommended normal sags of copper overhead line conductors, with corresponding tensions and stresses; (B) minimum permissible sags for line conductors of grades A, B, and C, and corresponding tensions; (C) sags for line conductors strung to the 3,000-lb. limitation; (D) mechanical data for copper, steel, copper-covered steel, and aluminum wires and cables; (E) loads upon conductors and supports; (F) wood poles; and (G) definition of American Society for Testing Materials of dense Southern yellow pine.

U. S. Gov., Dept. of Commerce, National Bureau of Standards H33; 1940. American Standards Assn., C2.3-1941. Safety Rules for the Installation and Maintenance of Electric Utilization Equipment. Comprising part 3 and the grounding rules of the fifth edition, National Electrical Safety Code. For 25- to 750-volt equipment which is accessible to other than qualified electrical operators, rules on installation, grounding, protection, provision of guards, etc., for conductors, fuses, circuit-breakers, switches, controllers, switchboards, motors, electric furnaces, fixtures and signs, portable devices, electric locomotives and cranes, telephone apparatus exposed to supply lines, etc.

U. S. Gov., Dept. of Commerce, National Bureau of Standards H34; 1938. American Standards Assn., C2.4-1939. Safety Rules for the Operation of Electric Equipment and Lines. Comprising part 4 of the fifth edition, National Electrical Safety Code. This part of the code deals with rules for the operation of electric equipment and lines. It includes definitions and safety rules for the protection of employers and for employees working on supply and communication systems.

U. S. Gov., Dept. of Commerce, National Bureau of Standards H36; 1940. Safety Rules for Electric Fences. Comprising part 6 of the fifth edition, National Electrical Safety Code. These rules apply to the installation, use, and identification of electric fences and to the construction and characteristics of the controllers used with them and through which electric energy is delivered to the fence. These rules cover identification of fence wire; conditions of use; types, output, and construction of controlling devices, and dielectric and leakage tests.

U. S. Gov., Dept. of Commerce, National Bureau of Standards H39; 1944. National Electrical Safety Code; Part 2 and Grounding Rules. Discusses rules covering methods of protective grounding of overhead and underground lines and related equipment and safety rules for the installation and maintenance of electric supply and communication lines.

U. S. Gov., Navy Dept. Specification 17E12b; 1944. Electrical-Equipment, Explosion-Proof; Basic Requirements for.

U. S. Gov., Navy Dept. Specification 17E15; 1944. Electrical-Equipment: Rotation, Connections, and Terminal Markings.

# 711. ELECTRIC GENERATORS AND MOTORS

## 711.1 ELECTRIC GENERATORS

### 711.10 General Items

American Institute of Electrical Engineers, sponsor, 11; 1937. American Standards Assn., C35-1936. Tentative Standards for Railway Motors and Other Rotating Electrical Machinery in Rail Cars and Locomotives. Definitions, classification, rating, and methods of test for rotating electrical machinery forming a part of the power equipment of electrically propelled railway cars and locomotives. Machines are classified as railway motors, auxiliary motors, generators, auxiliary generators and dynamotors, motors, and phase convertors.

Associated Factory Mutual Fire Insurance Companies. Specifications for Gravity Water Tanks and Steel Towers, Volume 1. Structural Details; 1938. For buildings supporting tanks, requirements as to footings on brick supporting walls, design for anchorage, allowable bearing pressures for supports of various building materials.

Electrical Standards Committee of American Standards Assn., sponsor. American Standards Assn., C50-1943. Rotating Electrical Machinery. Covers definitions, direct-current rotating machines, synchronous generators, synchronous motors, synchronous machines in general, synchronous convertors, induction motors and induction machines in general, direct-current and alternating-current fractional horsepower motors, and appendices.

National Board of Fire Underwriters. National Electrical Code, 1940. American Standards Assn., C1-1940. Generators. Requirements on protection of terminals and live parts, location of generator, permissible types and arrangement of excessive current protective devices, grounding requirements.

National Electrical Manufacturers Assn. Motor and Generator Standards, 41-64; 1941. Gives basic standards for design and construction, on ratings which set up horse power, kilowatt and voltage ratings for each class of motor and generator, performance specification forms for generators and motors, test forms for polyphase induction motors and direct-current motors, also motor dimension standards for various kinds of motors, and definitions of terms.

Underwriters' Laboratories, Inc. Standard for Electric Motors and Generators for Use in Hazardous Locations; Class I, Group D—Part I, Integral Horsepower Motors, 1943. Applies to electric motors for use in class I locations as defined in article 500, section 5,005 of the 1940 edition of the National Electrical Code. Covers requirements for casing, provision for connection to supply line, fans on totally enclosed fan-cooled motors, plugs in enclosures, marking,

tests, inspection of listed product, description of label service, cost of service, and instructions to inspectors.

Underwriters' Laboratories, Inc. Standard for Electric Motors and Generators for Use in Hazardous Locations; Class I, Group D—Part II, Fractional Horsepower Motors, 1941. Applies to electric motors for use in class I locations as defined in article 500, section 5005 of the 1940 edition of the National Electrical Code. Casing, provision for connection to supply line, fans on totally enclosed fan-cooled motors, plugs in enclosures, marking, tests, and inspection of listed products.

Underwriters' Laboratories, Inc. Standard for Electric Motors and Generators for Use in Atmospheres of Combustible Dust; Class II, Groups F and G, 1943. Applies to electric motors for use in class II locations as defined in article 500, section 5006 of the 1940 edition of the National Electrical Code. Groups F and G casing, leads and connections, provision for connection to supply line, fans on fan-ventilated motors, marking, tests, inspection of listed product, description of label service, cost of service, and instructions to inspectors.

U. S. Gov., Dept. of Commerce. Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-162. Engine-Generator; Diesel, 240-V., 25-KVA.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-178. Engine-Generators; Gasoline, 18.75- and 10-KVA.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-242. Generator; UHF Standard Signal.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-268. Engine-Generator; Gasoline, 12.5-KVA.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-280. Frequency, Radio, Generator for Testing.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-326. Engine-Generator; Gasoline, 350 Watts, Air-Cooled, Portable.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-400. Engine-Generator; 125-KVA Multiple Cylinder, Gasoline, 240-V., 60-Cycle, 3-Phase.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specifications CAA-403. Engine-Generator; 50-KVA, 240-V., 60-Cycle, 3-Phase, 80-Power Factor.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-411. Engine-Generator; 12.5-KVA Duplex for Radio Standby Power, Installation of.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-430. Engine and Generator Variable Compression Test Set.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-462. Engine-Generator; Gasoline, 5-KVA, 120-V.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-463. Engine-Generator; Gasoline, 1.5-KVA, 120-V.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specifications CAA-479. A.C. Generating Plant; Engine-Driven 220-V., 60-Cycle, Single-Phase, 18.75-KVA.

U. S. Gov., Dept. of Commerce, Civil Aeronautics Administration, Bureau of Federal Airways. Specification CAA-503. Engine-Generator; 12.5-KVA in Alaska Buildings (Tentative).

U. S. Gov., Dept. of Commerce, National Bureau of Standards H31; 1940. American Standards Assn., C2.1-1941. Safety Rules for The Installation and Maintenance of Electrical Supply Stations. Comprising part 1—for equipment of indoor and outdoor supply stations, provided it is in separate rooms or enclosures, under control of properly qualified persons and accessible only to such persons. They also apply to similar equipment if installed in factories, mercantile establishments, vehicles or elsewhere. Exceptions—if voltage does not exceed 150 volts to ground, and if voltage is not more than 550 volts between conductors and power utilized does not exceed 3,200 volts; and the grounding rules of the fifth edition, National Electrical Safety Code. For rotating equipment (sec. 12), requirements on speed control, stopping devices, guards for live parts, grounding machine frames, terminal bases and bushings, and deteriorating agencies.

U. S. Gov., Navy Dept. Specification 17C9c; 1942. Conditioning-Devices, Commutator and Slipring.

## 711.11 Alternating Current Generators

American Institute of Electrical Engineers. Recommended Practice for Electrical Installations on Shipboard, 45; 1940. Addenda, 1942. Emergency Modification and Supplement, 1943. Alternating Current Generating Sets Covers installation and location, number and size, exciters, emergency sets, voltage regulators, windings, prime movers, mountings, insulation, lubrications, corrosion resistant parts, terminal arrangements, tests, temperature limits, spare parts, etc.

Electrical Standards Committee of American Standards Assn., sponsor. American Standards Assn., C50-1943. Rotating Electrical Machinery. Covers definitions, direct-current rotating machines, synchronous generators, synchronous motors, synchronous machines in general, synchronous convertors, induction motors and induction machines in general, direct-current and alternating-current fractional horsepower motors, and appendices.

National Electrical Manufacturers Assn. Motor and Generator Standards, 41-64; 1941. Synchronous Generators. (Exclusive of turbo-generators, single phase synchronous, inductor synchronous or induction generators.) Gives standard basis or rating, 25, 50, and 60 cycle frequencies, performance standards, and recommended output and speed ratings for engine type generators, and manufacturing standards.

U. S. Gov., Army Air Forces. Specification 32458; 1944. Power Plant; Diesel-Engine-Driven Electric, Type F-1.

U. S. Gov., Army Air Forces. Specification 32459; 1944. Power Plant; Diesel-Engine-Driven Electric, Type F-2.

U. S. Gov., Army Air Forces. Specification 32460; 1944. Power Plant; Diesel-Engine-Driven Electric, Type F-3.

U. S. Gov., Army Air Forces. Specification 32469 (4); 1944. Power Plant; Diesel-Engine-Driven Electric, General Specification for.

U. S. Gov., Army Air Forces. Specification 32478; 1944. Generator; Engine-Driven, Type V-1, Alternating Current.

U. S. Gov., Army Air Forces. Specification 32509; 1944. Alternator; Engine-Driven, Type A-1, Aircraft.

U. S. Gov., Dept. of Agriculture, Forest Service. Specification 153. Generator; Portable, a.c.

U. S. Gov., Treasury Dept., Procurement Div., 613; 1943. Generating Sets; Diesel-Engine-Driven, Trailer-Mounted. Gives requirements for type, rating and capacities, material, workmanship, general design, mountings, duty rating, tools, instruction manuals, and details; methods of inspection, and tests; and packing and marking.

U. S. Gov., U. S. Army, Army Air Forces. Specification 94-32287-A; 1941. Plant; Power, Electric; Electric, Type C-9 (1,500 Watt).

U. S. Gov., U. S. Army, Medical Department. Specification 10-2972B; 1941. Power Plant; Electric, Gasoline, Portable.

U. S. Gov., U. S. Army, Ordnance Department. Specification 89-2300; 1939. Power Plant; Diesel-Engine-Driven, 5 kva.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-506D; 1940. Generator GN-35; Hand-Driven, Double Voltage.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-706B; 1944. Generator GN-41; Hand.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-865; 1938. Power Unit; Type PE-60-'( ); Gasoline-Engine-Driven, 2 kva., Dual Voltage.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-912A; 1941. Power Unit; Types PE-52-( ) and PE-53-( ), 3 Kilovolt Amperes, Gasoline-Engine-Driven Generator.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-951A; 1938. Power Unit; Type PE-56-( ), Gasoline-Engine-Driven, for Radio Sets.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-952A; 1942. Power Unit; Type PE-75-( ).

U. S. Gov., U. S. Army, Signal Corps. Specification 71-962A; 1942. Power Equipment, for Radio Set SCR-197-( ).

U. S. Gov., U. S. Army, Signal Corps. Specification 71-1038A; 1943. Power Unit PE-77-( )'43.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-1061; 1942. Power Unit PE-95-( ); 5 kw Gasoline-Electric Power Unit,

U. S. Gov., U. S. Army, Signal Corps. Specification 71-1083; 1942. Power Unit PE-99-( ); 120-Volt, 60-Cycle, 3-Phase, 7.5-kva., Gasoline-Driven Special Application Feature; Not General Purpose Power Unit.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-1357; 1942. Generator GN-44-( ); Hand-Driven, Double Voltage.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-3016; 1944. Power Unit PE-197-(5 KW Gasoline-Electric Power Unit).

U. S. Gov., Veterans Administration. Specification VA-X-107-B; 1941. Low Voltage Sine Wave and Galvanic Generator.

*References.*—Protection requirements, *see* 711.10; definitions, symbols, voltage and frequency standards, methods of test, safety codes, *see* 710; cast iron, forged steel, shafts, *see* 611.11, 611.51, 611.52; plain bearings, ball and roller bearings, *see* 692.3, 766.2; copper wire, *see* 715.44; couplings, *see* 706.3.

## 711.12 Direct Current Generators

American Institute of Electrical Engineers. Recommended Practice for Electrical Installations on Shipboard, 45; 1940. Addenda, 1942. Emergency Modification and Supplement, 1943. Direct Current Generating Sets. Covers installation and location, number and size, emergency sets, windings, voltage regulation and compounding, parallel operation, prime movers, mountings, lubrication, corrosion resistant parts, terminal arrangements, tests, temperature limits, sparking, insulation, etc.

Assn. of American Railroads, Mechanical Div., Electrical Section. Manual of Standard and Recommended Practice, 1939. Axle Generator Equipment. Gives requirements for capacity, general construction, armature, bearings, leads, high-speed and insulation tests, suspension, terminal block, regulator, reverse current relay, and dimensional diagrams.

Assn. of American Railroads, Mechanical Div., Electrical Section. Manual of Standard and Recommended Practice. 1941. Turbo-Generator. Gives capacity of 500 watts or larger for locomotive lighting; steam pressure, general construction requirements, bearings and lubrication, location, and maintenance.

Assn. of Iron and Steel Engineers. D-C Mill Motor Standards, 1940. Gives details for enclosed direct current mill motors, protected self-ventilated direct current mill motors, enclosed direct current adjustable speed mill motors, and enclosed forced ventilated direct current mill motors; standardized short mill motor dimensions; and standardized short mill motor back axle details.

Electrical Standards Committee of American Standards Assn., sponsor. American Standards Assn., C50-1943. Rotating Electrical Machinery. Covers definitions, direct-current rotating machines, synchronous generators, synchronous motors, synchronous machines in general, synchronous convertors, induction motors and induction machines in general, direct-current and alternating-current fractional horsepower motors, and appendices.

National Electrical Manufacturers Assn. Motor and Generator Standards 41-64; 1941. Generators; Direct Current. Includes generators built in frames of one horsepower, 1,750 rpm up to frames corresponding to 150 kw, at 450 rpm; also large 200 to 2,500 kw, rating standards, performance, and manufacture.

National Electrical Manufacturers Assn. Motor and Generator Standards 41-64; 1941. Isolated Electric Farm Lighting Plants. Covers plants which furnish power from generator, and generator-battery systems, 32, 64, and 112 volt systems, 500 to 5,000 watts output, basis of rating, performance standards, and

manufacture. The Society of Automotive Engineers cooperated with the N.E.M.A. in the preparation of these standards.

National Electrical Manufacturers Assn. Turbine-Generator Recommended Practices 41-66; 1941. Covers direct connected sets and 25 cycle and direct-current geared sets in types and sizes in current use. Includes requirements for turbine units; synchronous generators for steam turbine drive; and direct-current generators for steam turbine drive.

U. S. Gov., Army Air Forces. Specification 32397-A-1; 1944. Plant; Electric Power, Type C-13A (Gasoline-Engine-Driven, Portable).

U. S. Gov., Army-Navy Aeronautical Specification AN-G-1; 1943. Generators; Engine-Driven Aircraft.

U. S. Gov., U. S. Army, Army Air Forces. Specification 95-32275; 1941. Generator; Engine-Driven, Type P-1 (Aircraft—24 Volts D.C.).

U. S. Gov., U. S. Army, Army Air Forces. Specification 95-32283-A; 1943. Generator; Engine-Driven, Type O-2 (Aircraft—24 Volts. D.C.).

U. S. Gov., U. S. Army, Signal Corps. Specification 71-46-C; 1927. Motor Generator; Type GN-29-A, Component of Radio Set.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-402B; 1930. Power Unit; Type PE-( ) 41 Radio.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-466B; 1931. Power Unit; Type PE-( )-40, Radio.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-620-B; 1944. Generator GN-37-A; Hand-Driven.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-688C; 1942. Power Unit, Type PE-49-( ); Gasoline-Engine-Driven, for Radio Sets and Motors, Types MO-7-( ) and MO-9-( ).

U. S. Gov., U. S. Army, Signal Corps. Specification 71-865; 1938. Power Unit; Type PE-60-( ), Gasoline-Engine-Driven, 2 kva., Dual Voltage.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-1130; 1942. Power Unit; PE-90-( ), Dual Voltage, Gasoline-Engine or Electrical-Motor Driven.

## 711.2 ELECTRIC MOTORS

### 711.20 General Items

American Institute of Electrical Engineers, sponsor, 11; 1937. American Standards Assn., C35-1936. Tentative Standards for Railway Motors and Other Rotating Electrical Machinery in Rail Cars and Locomotives. Definitions, classification, rating and methods of test for rotating electrical machinery forming a part of the power equipment of electrically propelled railway cars and locomotives. Machines are classified as railway motors, auxiliary motors, generators, auxiliary generators and dynamotors, motors, and phase convertors.

American Institute of Electrical Engineers, 500; 1937. Test Code for Polyphase Induction Machines.

American Transit Assn. Recommended Practice for Repair of Armature and Field Coils, E134-39; 1939. Gives recommendation as to the care should be exercised in repairing armature and field coils against any defect that may cause failure.

American Transit Assn. Recommended Practice for Construction and Repair of Commutators, E135-37; 1937. Gives recommendations as to the method of constructing and repairing commutators.

American Transit Assn. Recommended Practice for Armature and Axle Liners, E138-37; 1937. Chemical composition of bronze shells and babbitt metal for armature bearings, recommended clearance for armature and axle bearings and detailed approved method for making babbitt bearings.

American Transit Assn. Recommended Practice for Motor Leads, E140-39; 1939. Recommendations as to the type of cables to be used in connection with the various horsepower motors, marking of motor leads, the use of connectors, and supports.

Assn. of American Railroads, Mechanical Division, Electrical Section. Manual of Standard and Recommended Practice, 1941. Motors and Controls. Gives general factors to consider in selecting motors and controls such as available power supply, surrounding atmosphere, starting, running, and load conditions, code and utility requirements, mechanical features, automatic, hand, and remote control. Includes tables of power requirements for various machine tools, woodworking tools, and types of motors for various load applications. National Electrical Manufacturers' Association standards for motors and control are recommended.

Assn. of American Railroads. Operations and Maintenance Dept., Engineering Div., Electrical Section. Manual of Recommended Practice, 1942. Motor Characteristics (6-c-41). Covers alternating current commercial motors—squirrel cage induction motors (N.E.M.A. classes A, B, C, D, E, F, and multi-speed-pole changing type), wound rotor induction, synchronous, single-phase, and special A.C. motors; and direct-current commercial electric motors—shunt, series, and compound wound.

Electrical Standards Committee of American Standards Assn., sponsor. American Standards Assn., C50-1943. Rotating Electrical Machinery. Covers definitions, direct-current rotating machines, synchronous generators, synchronous motors, synchronous machines in general, synchronous convertors, induction motors and induction machines in general, direct-current and alternating-current fractional horsepower motors, and appendices.

National Board of Fire Underwriters. National Electrical Code, 1940. American Standards Assn., C1-1940. Motors. Protection of terminals and live parts, requirements on type, location and rating of disconnecting means, general requirements on acceptable types of controllers.

National Electrical Manufacturers Assn. Motor and Generator Standards, 41-64; 1941. Application and selection of rotating apparatus conditions of operation, short-time rated machines, speed limitations, general-purpose motors, manufacturing practice, frame numbering standard dimensions, connections and terminal markings, small universal motors, small d-c and a-c motors, large d-c, single-phase, and polyphase motors, synchronous motors, elevator motors, crane motors, buffer and grinder motors rating, performance, manufacture, and commercial standards.

U. S. Gov., Dept. of Commerce, National Bureau of Standards H31; 1940. American Standards Assn., C2.1-1941. Safety Rules for the Installation and Maintenance of Electrical Supply Stations. Comprising part 1—for equipment of indoor and outdoor supply stations, provided it is in separate rooms or enclosures, under control of properly qualified persons and accessible only to such persons. They also apply to similar equipment if installed in factories, mercantile establishments, vehicles or elsewhere. Exceptions—if voltage does not exceed 150 volts to ground, and if voltage is not more than 550 volts between conductors and power utilized does not exceed 3,200 volts; and the grounding rules of the fifth edition, National Electrical Safety Code. For rotating equipment (sec. 12), requirements on speed control, stopping devices, guards for live parts, grounding machine frames, terminal bases and bushings, and deteriorating agencies.

U. S. Gov., Dept. of Commerce, National Bureau of Standards H33; 1940. American Standards Assn., C2.3-1941. Safety Rules for the Installation and Maintenance of Electric Utilization Equipment. Comprising part 3—for 25- to 270-volt equipment which is accessible to other than qualified electrical operators; and the grounding rules of the fifth edition, National Electrical Safety Code. For electric motors (sec. 34), requirements on control devices, deteriorating agencies, guards for live parts, grounding machine frames, and protecting moving parts.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R145-33; 1933. Packaging of Electric Railway Motor and Controller Parts. This recommendation establishes a schedule for packaging of motor and controller parts. It gives in detail the number of units per package of items relating to motor and controller parts. Sponsored by American Transit Engineering Association.

U. S. Gov., Navy Dept. Bureau of Yards and Docks. Specification 16Ye; 1941. Refrigerating Equipment. Includes ice-making equipment—requirements for electric motors, control equipment, and wiring.

## 711.21 Alternating-Current Motors

American Institute of Electrical Engineers. Recommended Practice of Electrical Installations on Shipboard, 45; 1940. Addenda, 1942. Emergency Modification and Supplement, 1943. (I) Alternating Current Motors. All motors should be designed for the voltage, phase, and frequency of the supply system. Covers installation and location, accessibility, insulation and winding, lubrication, corrosion resistant parts, tests, temperature rises, and spare parts. (2) Propulsion Equipment. Includes turbines for electric drive, Diesel engines, a.c. generators and motors for propulsion, exciters, control equipment, temperature limits, tests, cables, installation, operation, and maintenance.

Electrical Standards Committee of American Standards Assn., sponsor. American Standards Assn., C50-1943. Rotating Electrical Machinery. Covers definitions, direct-current rotating machines, synchronous generators, synchronous motors, synchronous machines in general, synchronous convertors, induction motors and induction machines in general, direct-current and alternating-current fractional horsepower motors, and appendices.

National Electrical Manufacturers Assn. Motor and Generator Standards, 41-64; 1941. Alternating Current Motors. Includes standards for small power motors, large single-phase and polyphase induction, synchronous, polyphase for elevator, crane, buffer and grinder motors, standard voltage and frequency ratings, permissible temperature rise, efficiency tables, torque characteristics, dielectric and commerical tests, standard dimension, etc.

U. S. Gov., Federal Specification CC-M-636; 1941. Amendment 1; 1944. Motors; Alternating Current, Fractional-Horsepower, Single-Phase and Universal. Gives types, enclosures, and duty classifications; general requirements for voltage and frequency ratings, speed, ambient temperature of reference, electrical insulation, use, suitability, allowable variations from rated voltage and from rated frequency, noise, balance, torque, dielectric strength, insulation resistance, general construction, enclosing covers, feet, drain plugs, shafts, lubrication, bearings, laminated cores, commutators, slip rings, brushes, connection, terminals, leads, horsepower rating, speeds, efficiencies, and power factors; methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment.

U. S. Gov., Federal Specification CC-M-641; 1943. Amendment 1; 1944. Motors; Alternating-Current, Integral-Horse-Power. Covers single phase and polyphase types. Gives requirements for material and workmanship, voltage rating, electrical insulation, dielectric test, methods of measuring temperature, general construction, bearings, connections and terminals, horsepower rating, speed, shaft extensions, dimensions, and torque characteristics; methods of sampling, inspection and test; and packing and marking.

U. S. Gov., Navy Dept. Specification 17M10a; 1939. Motors, Alternating-Current (Shipboard Use).

U. S. Gov., Panama Canal, Purchasing Dept. Specification for Electric Motors, 1943. Squirrel-cage induction type, 2 h.p., 1,500 r.p.m., 220 volt, constant speed, 3-phase, 3-wire, 25 cycle.

U. S. Gov., Panama Canal, Purchasing Dept. Specification for Motors, 1943. Capacitor type induction, 230 volt, 25 cycle, single-phase, 1,500 r.p.m., open type; for refrigerator use.

U. S. Gov., Panama Canal, Purchasing Dept. Specification for Repulsion-Induction Type Electric Motors, 1940.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-1130; 1942. Power Unit; PE-90-( ), Dual Voltage, Gasoline-Engine or Electric-Motor Driven.

*References.*— Motors for railway signals, *see* 718.41; motors for hazardous locations, *see* 711.25; railway motors, *see* 711.3; definitions, symbols, voltage and frequency standards, rating standards, classification, methods of test, protection, safety codes, *see* 710, 711.20; electric tools, *see* 711.24; brushes, *see* 711.42; synchronous converters, *see* 713.2; impregnation of windings, *see* 719.57, 719.59; cast iron, forged steel, shafts, *see* 611.11, 611.51, 611.52; plain bearings, ball and roller bearings, *see* 692.3, 766.2; copper wire, *see* 715.44.

## 711.22 Direct-Current Motors

American Institute of Electrical Engineers. Recommended Practice for Electrical Installations on

Shipboard, 45; 1940. Addenda, 1942. Emergency Modification and Supplement, 1943. (1) Direct Current Motors. Provides for use of 230 volt motors, except for limited use; waterproof and enclosed ventilated motor application, insulation, windings, lubrication, terminal arrangements, corrosion resistant parts, tests, temperature limits, sparking, and spare parts. Applications as windlass, capstan, winch, steering gear, ventilating, engine room auxiliaries, pumps, etc. (2) Propulsion Equipment. Includes turbines for electric drive, Diesel engines, direct-current generators and motors for propulsion, exciters, control equipment, temperature limits, tests, cables, installation, operation, and maintenance.

Electrical Standards Committee of American Standards Assn., sponsor. American Standards Assn., C50-1943. Rotating Electrical Machinery. Covers definitions, direct-current rotating machines, synchronous generators, synchronous motors, synchronous machines in general, synchronous convertors, induction motors and induction machines in general, direct-current and alternating-current fractional horsepower motors, and appendices.

National Electrical Manufacturers Assn. Motor and Generator Standards, 41-64; 1941. Direct Current Motors. Includes standards for small motors, large motors to 200 horsepower, elevator motors; classification, rating standards, performance, manufacturer, and commercial standards.

U. S. Gov., Army Air Forces. Specification 32503; 1944. Motor; 24 Volts, D.C., Electric, Aircraft—for Radar Dome.

U. S. Gov., Army-Navy Aeronautical Specification AN-M-10; 1943. Motors; Aircraft Direct Current 24 Volt.

U. S. Gov., Army-Navy Aeronautical Specification AN-M-19-1; 1945. Motors; Caging, for Gyro Flux Gate Compass.

U. S. Gov., Navy Dept. Specification 17M9d; 1938. Motors, Direct-Current, for Shipboard Auxiliaries; and Controllers.

U. S. Gov., Navy Dept. Specification 17M14a; 1944. Motors; Direct-Current, for Shipboard and Motorboat Diesel Engine Starting.

U. S. Gov., Panama Canal, Purchasing Dept. Specification for Motors, 1944. Direct Current, constant speed, compound wound, belt-tightener base, 115 volt, 1,725 r.p.m.

*References.*—Motors for railway signals, *see* 718.41; motors for hazardous locations, *see* 711.25; railway motors, *see* 711.3; definitions, symbols, voltage and rating standards, classification, methods of test, protection, safety codes, *see* 710, 711.20; brushes, *see* 711.42; motor driven portable tools, *see* 711.24; automobile starting motor mountings, *see* 722.32; airplane starting motor mountings, *see* 724.21; cast iron, forged steel, shafts, *see* 611.11, 611.51, 611.52; impregnation of windings, *see* 719.57, 719.59; plain bearings, ball and roller bearings, *see* 692.3, 766.2; copper wire, *see* 715.44.

## 711.23 Motor-Driven Fans and Blowers

American Hospital Assn., 19-1. Electric Fans; Bracket and Desk Types, Rigid Blades (for Shore Use). Based on U. S. Gov., Federal Specifications W-F-101a. Amendment 1. Fans; Electric.

National Electrical Manufacturers Assn. Fan Standards, 44-95; 1944. Provides practical information concerning test, rating, performance and manufacture of alternating-current and direct-current electric fans of the desk and bracket type, pedestal type, ceiling type, ventilating type (made from desk or bracket fan parts) and air circulators. Gives requirements for fan standards, performance standards, and manufacturing practice.

Underwriters' Laboratories, Inc. Standard for Motor-Operated Fans, 1938. Covers portable and stationary motor-operated fans of the desk and bracket types and adaptations of such fans for ventilating purposes; and ceiling, pedestal, and air-circulator types for indoor use and designed to be operated from circuits involving potentials of not more than 600 volts in accordance with the National Electrical Code. General, frame and enclosure, mechanical assembly, corrosion protection, supply connections, current carrying parts, wiring, insulating material, motors, spacings, grounding, power input, temperature, dielectric strength, insulation resistance, rating, marking, and inspection of listed product.

U. S. Gov., Federal Specification W-F-101a; 1930. Amendment 1; 1941. Fans, Electric; Bracket and Desk-Types, Rigid-Blades (for Shore Use). Covers fans with blades of diameters 8 to 9, 10, 12, and 16 in. Detail requirement as covered by Underwriters' Laboratories Standard for Motor-Operated Fans. Gives methods of sampling, inspection, and tests; and requirements for packaging, packing, and marking for shipment. Emergency Alternate Federal Specification E-W-F-101a; 1942 (issued by Procurement Div., Treasury Dept., U. S. Gov.) changed detail requirements and requirements for blade sizes.

U. S. Gov., Joint Army-Navy Specification JAN-F-68; 1944. Fans; Electric, Bracket (Shipboard Use).

U. S. Gov., Joint Army-Navy Specification JAN-F-151; 1944. Fans; Electric, Refrigerator-Space, Shipboard Use.

U. S. Gov., Treasury Dept., Procurement Div., 423C; 1942. Fans; Electric, Ceiling, Rigid Blades. Covers 2 types—(I) reversible ceiling fan, and (II) uni-directional ceiling fan, either 36 or 52 in. in diameter. Gives requirements for condition, number of blades, kind of blades, operating voltage, lubrication, bearings, brush holders, capacity, regulating switch, lighting fixtures, and finish; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., U.S. Maritime Commission. Specification 17-MC-5a; 1944. Fans, Marine; Rigid-Blades, Bracket Mounting, Direct Current, Emergency Type. Gives requirements for type, sizes, materials, workmanship, mounting, oscillating mechanism, blades, guard, speed regulation, balance, motor, commutator, brushes, brush holders, dielectric strength, insulation resistance, spacing, bearings and lubrication, regulation switch, speed control element, cord and plug, finish, and detail requirements; sampling, inspection, and methods of test; and packaging, packing, and marking for shipment.

U. S. Gov., U. S. Maritime Commission. Specification 17-MC-8a; 1944. Fans, Marine; Rigid-Blades, Bracket Mounting, Alternating Current, 60 Cycles, Emergency Type. Gives requirements for type, sizes, materials, workmanship, mounting, oscillating mechanism, blades, guard, speed regulation, balance, motor, dielectric strength, insulation resistance, spacing,

bearings and lubrication, regulation switch, speed control element, life, oscillator cord, cord and plug, finish, and details; sampling, inspection, and methods of test; and packaging, packing, and marking for shipment.

*References.*— Fractional horsepower motors, *see* 711.21, 711.22; methods of testing, *see* 710, 711.20; brushes, *see* 711.42; fans and blowers, *see* 791.1; d.c. motors for ventilating fans, *see* 711.22.

## 711.24 Electric Tools

American Standards Assn., C 74-1942. Machine Tool Electrical Standards (American War Standard). Covers power driven, complete metal working machines not portable by hand, having one or more tool and work holding devices, used for progressively removing metal in the form of chips. Gives diagrams, control, motors, wiring, grounding, electrical accessories, and standard wiring diagram symbols.

U. S. Gov., Dept. of Commerce, National Bureau of Standards Commercial Standard CS93-41; 1941. Portable Electric Drills (Exclusive of High Frequency). This standard provides minimum specifications for class A, heavy-duty; and class B, standard, rotary electric drills manufactured in 11 standard sizes ranging from 3/16 in. to 1 1/2 in. It covers design, construction, minimum full-load ampere rating for each class and size of drill; tests name-plates; and a uniform method of certifying compliance with the standards. Sponsored by Electric Tool Institute.

U. S. Gov., Federal Specification W-D-661; 1942. Amendment 1; 1944. Drills; Electric, Portable (Exclusive of High-Frequency Types). Covers four types—(I) for aluminum, (II) for corrosion-resistant steels, (III) for mild steels and various metals other than corrosion resistant steels, and (IV) portable radial drill. Type III includes three classes, (A) heavy, (B) standard, and (C) light. Gives requirements for construction, safety, motors, screws, bolts, nuts, bearings, gears and shafts, lubrication, wiring cord and attachment plug, switch, chuck, dielectric strength, and name plate; detail requirements for each type; methods of inspection and tests; and packing and marking for shipment.

U. S. Gov., Federal Specification W-G-656; 1937. Amendment 2; 1944. Grinders; Bench, Electric. Gives requirements for construction, interchangeability, voltage and current, motor, switch, cord, grinding wheels, length of spindle thread, grinder base, guards, work rests, marking, and sizes and dimensions; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., Federal Specification W-G-663; 1943. Amendment 1; 1944. Grinders; Electric, Portable. Covers one type, one grade, and three sizes—No. 4, up to 4 in. diameter grinding wheel; No. 5, up to 5 in. diameter grinding wheel; and No. 6, up to 6 in. diameter grinding wheel. Gives requirements for material, construction, voltage, horsepower, speed, efficiency, length, weight, safe operation, motors, bearings, gears and shafts, grinding wheels, guards, handle, control, cable, dielectric strength, and spare parts; methods of sampling, inspection, and tests; and packaging, packing, and marking.

U. S. Gov., Federal Specification W-M-46a; 1941. Amendment 1; 1944. Machines, Floor-polishing and Scrubbing; Electric. Covers three types; (1) Polishing; (II) polishing and scrubbing, in three classes—(A) concentrated weight, single brush; (B) concentrated weight, two brush; and (C) divided weight; and (III) polishing, scrubbing and water-absorbing. Gives requirements for material, workmanship, construction, motor, motor bearing, switch, cord handle, mounting, brushes, frame, bumper, drives, lubrication, feed line and water tank, exposed parts, marking and detail requirements for each type; methods of sampling, inspection and tests; and packing and marking for shipment.

U. S. Gov., Federal Specification 00-H-103; 1943. Amendment 1; 1944. Hammers; Electric, Portable. Covers two types—(I) universal current operation, and (II) alternating current operation only; three sizes, (No. 1/2) 1/2-in. capacity, (No. 1) 1-in. capacity, and (No. 1 1/2) 1 1/2 in. capacity; and one grade. Gives requirements for general construction, motivation, voltage, capacity, weight and length, safe operation, and detail requirements; methods of sampling, inspection, and tests; and packaging, packing and marking.

U. S. Gov., Federal Specification 00-S-101; 1943. Amendment 1; 1944. Sanders, Portable; Belt, Disk, and Oscillating. Covers one grade and four types—(I) belt sanders, electric; (II) disk sanders, electric; (III) oscillating sanders, electric; and (IIIa) oscillating sanders, pneumatic; and various sizes. Gives requirements for general construction, voltage, air pressure, horsepower, speed, weight, safe operation, motors, bearings, gears and shafts, spare parts, accessories, and details for each type; methods of sampling, inspection, and tests; and packaging, packing, and marking for shipment.

U. S. Gov., Navy Dept. Specification 40D1c; 1944. Drills; Radial, Motor-Driven (Shipboard Use).

U. S. Gov., Navy Dept. Specification 40D2b; 1942. Drills; Floor-Type, Sensitive, Motor-Driven, 16-Inch (Shipboard Use).

U. S. Gov., Navy Dept. Specification 40D3d; 1942. Drills, Bench-Type, Sensitive, Motor-Driven (Shipboard Use).

U. S. Gov., Navy Dept. Specification 40D4d; 1944. Drills; Upright, Motor-Driven, 21-Inch (Shipboard Use).

U. S. Gov., Navy Dept. Specification 40D5e; 1944. Drills, Upright, Motor-Driven, 28-Inch (Shipboard Use).

U. S. Gov., Navy Dept. Specification 40D6; 1941. Drills (Machines), Radial, Motor-driven, Light- Duty and Heavy-Duty (Shore Use).

U. S. Gov., Navy Dept. Specification 40G2e; 1944. Grinders; Floor-Type, Combined-Wet-and-Dry, Double-Wheel, Motor-Driven (Shipboard Use).

U. S. Gov., Navy Dept. Specification 40G3c; 1944. Grinders; Drill, Floor-Type, Motor-Driven (Shipboard Use).

U. S. Gov., Navy Dept. Specification 40G4c; 1944. Grinders, Tool-and-Cutter, Universal, Motor-Driven (Shipboard Use).

U. S. Gov., Navy Dept. Specification 40S2d; 1944. Saws; Hack, Power, Motor-Driven (Shipboard Use).

U. S. Gov., Navy Dept. Specification 40T3e; 1933. Tools, Electric, Portable Drills, Grinders, and Hammers (Exclusive of High-Frequency Tools).

U. S. Gov., Navy Dept. Specification 40T6b; 1935. Tools, Woodworking (Shipboard Use).

U. S. Gov., Treasury Dept., Procurement Div., 229; 1943. Polishers; Electric, Portable. Shall be on one type first class in every respect. Gives requirements for construction, interchangeability, motor, motor bearings, switch, cord, drive, gears, disk, equipment; methods of sampling, inspection and tests; and packaging, packing, and marking.

U. S. Gov., Treasury Dept., Procurement Div., 230A; 1942. Valve-Refacers; Electric, Portable. Shall be furnished in one type, and first class in every respect. Gives requirements for construction, interchangeability, voltage and current, motor, motor bearings, switch, bearings, clutch, size and dimensions, attachments; methods of sampling, inspection and tests; and packaging, packing, and marking.

U. S. Gov., Treasury Dept., Procurement Div., 349A; 1942. Grinders; Valve-Seat, Engine (Motor-Vehicle). Covers requirements for valve-seat grinder kits. Gives requirements for condition and interchangeability, grinding percision, grinding wheels, dielectric strength, lubrication, driver, motor, switch, cord with plug, handle, and pilots; methods of sampling, inspection, and test; and packaging, packing, and marking.

U. S. Gov., Treasury Dept., Procurement Div., 415D; 1942. Cloth Cutting Machines. Covers 4 types of machines having either rotary or round knife, or straight knives. Gives requirements for machine, handle assembly, base, ball bearings, light fixture, cord with plug, motors, and dielectric strength; method of sampling, inspection, and tests; and packing and marking.

U. S. Gov., Treasury Dept., Procurement Div., 451B; 1942. Drills; Cloth, Electric. Covers 2 types—(I) for light and medium heavy materials, and (II) for use on heavy and extra heavy materials. Gives requirements for drilling machine, handle assembly, base plate frame and housing, cord and plug, switch, motors, and drill accessories; methods of sampling, inspection, and tests; and packaging and marking.

U. S. Gov., Treasury Dept., Procurement Div., 495; 1941. Pots; Glue, Electric. Covers two types—(I) dry type with automatic temperature control, and (II) water-jacketed type with automatic temperature control; and three sizes—one quart, two quarts, and four quarts. Suitable for operation on direct and alternating 115 and 230 volt current. Gives requirements for inner pot, heater housing, flexible cable, thermostat, construction, heating elements, and temperature control; methods of sampling, inspection, and test; and packaging, packing, and marking.

U. S. Gov., U. S. Army, Corps of Engineers. Specification 39-5; 1943. Cutter; Cloth, Rotary, Electric-Operated, 110-Volt, 60-Cycle, a.c.

U. S. Gov., U. S. Maritime Commission. Specification 40-MC-1a; 1942. Drills; Electric, Portable. Shall be of the single-speed, utility type, and shall be but one grade. Gives requirements for sizes, materials, workmanship, aluminum alloys, phenolic material, threaded parts, nuts, screws, bolts, locking device, motor, gears and shafts, lubrication, handles, switch, inspection, sampling, and method of test.

U. S. Gov., U. S. Maritime Commission. Specification 40-MC-2; 1942. Grinders; Electric, Portable. Shall be of the single-speed, general-purpose type, and shall be but one grade. Gives requirements for sizes, materials, workmanship, aluminum, phenolic material, threaded parts, nuts, screws, bolts, locking device, motor, gears and shafts, lubrication, handle, speeds, inspection, sampling, and method of test.

U. S. Gov., Veterans Administration. Specification VA-M-52a; 1927. Hack Saw; Power.

U. S. Gov., Veterans Administration. Specification VA-M-201; 1936. Hammer; Electric, Portable.

U. S. Gov., Veterans Administration. Specification VA-M-215a; 1936. Grinder; Tool, Electric.

*References.*—Fractional horsepower motors, *see* 711.21, 711.22; brushes, *see* 711.42; methods of testing, *see* 710, 711.20; grinding wheels, *see* 541.3.

## 711.25 Motors for Hazardous Locations

National Board of Fire Underwriters. American Standards Assn., C1-1940. National Electrical Code, 1940. Provisions to be observed for motors in locations in which flammable volatile liquids, highly flammable gases, or other highly flammable substances are manufactured, used, handled, or stored in other than their original containers; in locations in which combustible dust is thrown or collects; in locations in which easily ignitable fibers or materials producing combustible flyings are handled, manufactured, or used; and in locations in which easily ignitable combustible fibers are stored or handled.

Underwriters' Laboratories, Inc. Standard for Electric Motors and Generators for Use in Atmospheres of Combustible Dust; Class II, Groups F and G; 1943. Applies to electric motors for use in class II locations as defined in article 500, section 5006 of the 1940 edition of the National Electrical Code. Groups F and G casing, leads and connections, provision for connection to supply line, fans on fan-ventilated motors, marking, tests, inspection of listed product, description of label service, cost of service, and instructions to inspectors.

Underwriters' Laboratories, Inc. Standard for Electric Motors and Generators for Use in Hazardous Locations; Class I, Group D: Part I, Integral Horsepower Motors, 1943. Applies to electric motors for use in class I locations as defined in article 500, section 5005 of the 1940 edition of the National Electrical Code. Covers requirements for casing, provision for connection to supply line, fans on totally enclosed fan-cooled motors, plugs in enclosures, marking, tests, inspection of listed product, description of label service, cost of service, and instructions to inspectors.

*References.*—Motors, a.c. and d.c., *see* 711.21, 711.22; definitions, symbols, voltage and rating standards, classification, methods of test, safety codes, *see* 710, 711.20; brushes, *see* 711.42; cast iron, forged steel, shafts, *see* 611.11, 611.51, 611.52; copper wire, *see* 715.44.

## 711.3 RAILWAY MOTORS

American Institute of Electrical Engineers. A.I.E.E. 11; 1943. American Standards Assn., C35.1-1943. Rotating Electrical Machinery on Railway Locomotives

and Rail Cars and Trolley, Gasoline-Electric and Oil-Electric Coaches. Includes all rotating electrical machinery forming a part of the power equipment of electrically-propelled railway cars and locomotives (including trolley, gasoline-electric and oil-electric coaches). Covers definitions, rating, insulation, dielectric tests, insulation resistance, commutation, overspeed tests, efficiency, and characteristic curves.

*References.--See* references under 711.25.

### 711.4 ACCESSORIES AND PARTS FOR MOTORS AND GENERATORS

U. S. Gov., U. S. Army, Signal Corps. Specification 71-512B; 1935. Leg; Type LG-2-A, Radio Generator.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-513A; 1943. Leg LG-3.

U. S. Gov., U. S. Army, Signal Corps. Specification 71-592; 1931. Leg; Type LG-7, for Supporting Radio Generator.

### 711.42 Carbon Brushes for Motors and Generators

National Electrical Manufacturers Assn. Carbon, Graphite and Metal-Graphite Brushes, 43-85; 1943. Gives dimensions and tolerances for end bevels, toes, chamfers, flexible shunts for brushes, shunt length, shunt cable sizes and ratings, terminals for shunts, terminals for fractional horsepower brushes, coil springs for brushes, rectangular brushes, round brushes, holes, counterboring, countersinking, convexing and concaving, shoulders, slots, grooves, notches, and headed brushes; definitions; brush surfaces; brush connections; and brush clips.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R56-35; 1935. Carbon Brushes (Carbon, Graphite, and Metal Graphite) and Brush Shunts. This recommendation establishes a standard schedule of sizes and dimensions of carbon brushes and brush shunts, dimensions and tolerances of round and rectangular brushes, standard bevels and chamfers, lengths, sizes and stranding of shunts, sizes of terminals on shunts.

U. S. Gov., Navy Dept. Specification 17B8d; 1940. Brushes (and Brush-Material); Carbon, for Electrical Machinery.

## 712. BATTERIES AND ELECTROPLATING APPARATUS

### 712.0 GENERAL ITEMS

American Society for Testing Materials, D 639-43T; 1943. Tentative Methods of Testing Asphalt Composition Battery Containers. Intended for use in testing battery containers made of asphalt compositions as distinguished from those made of hard rubber. Gives chemical analysis for manganese and iron, and physical tests, for tensile strength and elongation, bulge test, sensitivity to hot-cold cycles, and acid absorption.

Assn. of American Railroads. Operations and Maintenance Dept., Engineering Div., Signal Section. Manual of Recommended Practice, 1941. Copper-Oxide Caustic Soda Primary Cells. Protective housing, cells and renewal, precautions in handling caustic soda, treatment, and adjustment of rectifiers used with type A primary cells.

International Assn. of Industrial Accident Boards and Commissions, sponsor. American Standards Assn., Z9.1-1941. Safety in Electroplating Operations. Includes definitions, classifications of systems, specifications for an exhaust system, requirements on personal protection, inspection and maintenance with appendix on threshold limits, other hazardous operations performed in connection with electroplating, and general sanitation.

Society of Automotive Engineers. 1944 Handbook, Section 3—Processed Materials. S.A.E. General Information Electroplating Practice, Revised, 1942. Covers decoration and protection against corrosion, protection against corrosion, protection against wear, buildup of a part or parts undersize, plate for rubber adhesion, protection against carburization and for brazing operatings, and electroforming.

### 712.1 PRIMARY BATTERIES

Assn. of American Railroads. Operations and Maintenance Dept., Engineering Div., Signal Section. Manual of Recommended Practice, 1939. Specification for No. 6 Dry Cell. Shall meet the requirements of the American Standards Assn. for dry cells and batteries.

Assn. of American Railroads. Operations and Maintenance Dept., Engineering Div., Signal Section. Manual of Recommended Practice, Specification 87-39; 1939. Type "A" Copper-Oxide Caustic Soda Primary Cell. For 250, 500, and 1,000 ampere-hour capacity, elements, jars, bolts and nuts, test requirements for capacity and operating voltage.

Assn. of American Railroads. Operations and Maintenance Dept., Engineering Div., Signal Section. Manual of Recommended Practice, Specification 170-39; 1939. Air Depolarized Dry Cell. Salammoniac cells with depolarizer and nonspillable electrolyte in zinc container, sealing compound, capacities, useful life tests, marking, and packing.

Assn. of American Railroads. Operations and Maintenance Dept., Engineering Div., Signal Section. Manual of Recommended Practice, Specification 171-39; 1939. Type "B" Copper-Oxide Caustic Soda Primary Cell. For a 500 ampere-hour battery, covers elements, electrolyte, jars, connections, and tests.

Assn. of American Railroads. Operations and Maintenance Dept., Engineering Div., Signal Section. Manual of Recommended Practice, Specification 172-40; 1941. Air Depolarized Carbon Caustic Soda Primary Cell. Describes a sodium hydroxide primary cell for new installations and where general renewal is desirable. Drawings detail cells of 450, 500, and 1,000 ampere-hour capacity; requirements for carbon block, caustic solution, oil, jars, and fittings.

Assn. of American Railroads, Telegraph and Telephone Section, 2-G-23; 1937. Dry Cells. For standard No. 6 dry cells for use in telegraph and telephone, ignition, and other railway service; requirements as to quality of material and workmanship, inspection, and packing. This specification conforms to the requirements of American Standard C 18-1937 for specifications for dry cells and batteries.

Assn. of American Railroads, Telegraph and Telephone Section, 2-K-1; 1924. Specifications for the Installation and Maintenance of Gravity Batteries. Gives description of wet cell, consisting of copper and zinc electrodes in a copper sulfate solution, dimensions of glass jar, chemical reaction, useful life of each renewal, restoration of charge, design of battery rack with dimensional drawing.

Assn. of American Railroads, Telegraph and Telephone Section, 2-K-2; 1939. Specification for the Installation and Maintenance of Caustic Soda Batteries. Includes self-contained and field assembled types of glass jar, copper and zinc electrode, caustic soda solution cells, or internally connected batteries. Method of installation and maintenance instructions.

Assn. of American Railroads, Telegraph and Telephone Section, 2-K-3; 1924. Specifications for the Installation and Maintenance of Dry Batteries. Construction of zinc and carbon, salammoniac cell sealed in container, installation, battery racks, and useful life tests.

Radio Manufacturers Assn. Dry Cell Batteries M4-431 and M4-432; 1941. Standards for end of life cut-off voltages for dry A and B batteries.

U. S. Gov., Dept. of Agriculture, Forest Service. Specifications MSF-39-S. Batteries; Flashlight.

U. S. Gov., Dept. of Commerce, National Bureau of Standards, sponsor. American Standards Assn., C18-1941. Circular C435. American Standard Specifications for Dry Cells and Batteries. Requirements on cells of salammoniac type with depolarizer and with nonspillable electrolyte. Includes nomenclature; general classification; standard sizes; material and workmanship; jackets; marking, zinc; sealing compound; mechanical top closure; terminal and cell connections; voltage tests; capacity tests; and required performance for No. 6 dry cells, assembled batteries of No. 6 cells, group batteries of small cells (for No. 6 cell applications), flashlight batteries, batteries for hearing aids, radio B batteries, and radio C batteries.

U. S. Gov., Dept. of Commerce, National Bureau of Standards. Simplified Practice Recommendation R104-30; 1930. Packaging of Flash-Light Batteries. This recommendation establishes a standard package for flash-light cells, number of cells per package for small size and large size cells. Sponsored by National Wholesale Druggists Assn.

U. S. Gov., Federal Specification W-B-101a; 1935. Amendment 1; 1935. Batteries and Cells; Dry. Covers the following types and classes—No. 6 general purpose dry cells (includes special grade and radio cells), No. 6 and size E telephone dry cells (light service cells grades A and B), assembled batteries of No. 6 cells (general purpose cells), flash-light cells and batteries, radio B batteries, and radio C batteries. Gives requirements for materials and workmanship, cells jackets, marking, zinc, sealing compound, mechanical closure, nomenclature, sizes an and terminals and cell connections; methods of sampling and test; and requirements for packaging, packing, and marking.

U. S. Gov., Joint Army-Navy Specification, JAN-B-18; 1944. Batteries; Dry.

U. S. Gov., Post Office Dept., Div. of Motor Vehicle Service, Bureau of the Fourth Assistant Postmaster General. Specifications for Batteries for Flashlights.

U. S. Gov., U. S. Army, Signal Corps. Specification 70-19-1924. Battery; type, BA-14, Alkaline Primary Cell.

U. S. Gov., U. S. Army, Signal Corps. Specification 70-101; 1943. Battery BA-1.

U. S. Gov., U. S. Army, Signal Corps. Specification 70-102; 1943. Battery BA-2.

U. S. Gov., U. S. Army, Signal Corps. Specification 70-108; 1943. Battery BA-8.

U. S. Gov., U. S. Army, Signal Corps. Specification 70-109; 1943. Battery BA-9.

U. S. Gov., U. S. Army, Signal Corps. Specification 70-115; 1943. Battery BA-15-A.

U. S. Gov., U. S. Army, Signal Corps, Specification 70-123; 1943. Battery BA-23.

U. S. Gov., U. S. Army, Signal Corps. Specification 70-126; 1943. Battery BA-26.

U. S. Gov., U. S. Army, Signal Corps. Specification 70-127; 1943. Battery BA-27.

U. S. Gov., U. S. Army, Signal Corps. Specification 70-128; 1943. Battery BA-28.

U. S. Gov., U. S. Army, Signal Corps. Specification 70-131; 1943. Battery BA-31.

U. S. Gov., U. S. Army, Signal Corps. Specification 70-132; 1943. Battery BA-32.

U. S. Gov., U. S. Army, Signal Corps. Specification 70-133; 1943. Battery BA-33.

U. S. Gov., U. S. Army, Signal Corps. Specification 70-134; 1943. Battery BA-34.

U. S. Gov., U. S. Army, Signal Corps. Specification 70-135; 1943. Battery BA-35.

U. S. Gov., U. S. Army, Signal Corps. Specification 70-136; 1943. Battery BA-36.

U. S. Gov., U. S. Army, Signal Corps. Specification 70-137; 1943. Battery BA-37.

U. S. Gov., U. S. Army, Signal Corps. Specification 70-138; 1943. Battery BA-38.

U. S. Gov., U. S. Army, Signal Corps. Specification 70-139; 1943. Battery BA-39.

U. S. Gov., U. S. Army, Signal Corps. Specification 70-140; 1943. Battery BA-40.

U. S. Gov., U. S. Army, Signal Corps. Specification 70-141; 1943. Battery BA-41.

U. S. Gov., U. S. Army, Signal Corps. Specification 70-142; 1943. Battery BA-42.

U. S. Gov., U. S. Army, Signal Corps. Specification 70-143; 1943. Battery BA-43.

U. S. Gov., U. S. Army, Signal Corps. Specification 70-144; 1943. Battery BA-44.

U. S. Gov., U. S. Army, Signal Corps. Specification 70-148; 1943. Battery BA-48.

U. S. Gov., U. S. Army, Signal Corps. Specification 70-149; 1943. Battery BA-49,

U. S. Gov., U. S. Army, Signal Corps. Specification 70-151; 1943. Battery BA-51.

U. S. Gov., U. S. Army, Signal Corps. Specification 70-153; 1943. Battery BA-53.

U. S. Gov., U. S. Army, Signal Corps. Specification 70-156; 1943. Battery BA-56.

U. S. Gov., U. S. Army, Signal Corps. Specification 70-157; 1943. Battery BA-57.

U. S. Gov., U. S. Army, Signal Corps. Specification 70-158; 1944. Battery BA-58.

U. S. Gov., U. S. Army, Signal Corps. Specification 70-159; 1944. Battery BA-59.

U. S. Gov., U. S. Army, Signal Corps. Specification 70-163; 1943. Battery BA-63.

U. S. Gov., U. S. Army, Signal Corps. Specification 70-165; 1943. Battery BA-65.
