## The National Bureau of Standards

### Functions and Activities

The functions of the National Bureau of Standards are set forth in the Act of Congress, March 3, 1901, as amended by Congress in Public Law 619, 1950. These include the development and maintenance of the national standards of measurement and the provision of means and methods for making measurements consistent with these standards; the determination of physical constants and properties of materials; the development of methods and instruments for testing materials, devices, and structures; advisory services to government agencies on scientific and technical problems; invention and development of devices to serve special needs of the Government; and the development of standard practices, codes, and specifications. The work includes basic and applied research, development, engineering, instrumentation, testing, evaluation, calibration services, and various consultation and information services. Research projects are also performed for other government agencies when the work relates to and supplements the basic program of the Bureau or when the Bureau's unique competence is required. The scope of activities is suggested by the listing of divisions and sections on the inside of the back cover.

### Publications

The results of the Bureau's research are published either in the Bureau's own series of publications or in the journals of professional and scientific societies. The Bureau itself publishes three periodicals available from the Government Printing Office: The Journal of Research, published in four separate sections, presents complete scientific and technical papers; the Technical News Bulletin presents summary and preliminary reports on work in progress; and Basic Radio Propagation Predictions provides data for determining the best frequencies to use for radio communications throughout the world. There are also five series of nonperiodical publications: Monographs, Applied Mathematics Series, Handbooks, Miscellaneous Publications, and Technical Notes.

A complete listing of the Bureau's publications can be found in National Bureau of Standards Circular 460, Publications of the National Bureau of Standards, 1901 to June 1947 (\$1.25), and the Supplement to National Bureau of Standards Circular 460, July 1947 to June 1957 (\$1.50), and Miscellaneous Publication 240, July 1957 to June 1960 (Includes Titles of Papers Published in Outside Journals 1950 to 1959) (\$2.25); available from the Superintendent of Documents, Government Printing Office, Washington 25, D.C.

# Standard Materials

## Issued by the National Bureau of Standards

A descriptive listing of the various Standard Materials issued by the National Bureau of Standards is given. A schedule of fees and weights, as well as directions for ordering, is included. Summarized tables of analyses are presented, to indicate the type of standards of composition presently available. Announcements of new standards will be made in the Federal Register, in scientific and trade journals, and in the Standard Materials column of the National Bureau of Standards Technical News Bulletin. The current status of the various standards will be indicated by an *insert sheet* available from the Bureau.

### 1. General Information

#### 1.1. Introduction

This publication lists the standard materials issued by the National Bureau of Standards and provides information on their procurement. Each of these materials bears a distinguishing name and number, by which it is permanently identified, and each sample bearing a given designation is of identical composition or properties (within the limits required by the use for which the material is intended) with every other sample bearing the same designation.

The first standard materials issued by the Bureau were a small group of metals certified with respect to their chemical composition. Because of their use as standards in chemical analysis, the term *Standard Samples* was applied to them. This term was extended first to similar composition standards, and later to cover materials certified with respect to chemical purity or to some physical or chemical property. By usage the term has been extended also to certain materials that are issued without certification of composition or properties.

The primary purpose of the Standard Materials program is to help provide a central basis for uniformity and accuracy of measurement. Pursuant to this purpose, emphasis is given to providing NBS Standard Materials (a) where attainment of needed accuracy of analysis or accuracy of measurement of characteristics is not economically or technically feasible elsewhere, and where such accuracy is important to users widely, (b) where industry-wide standards for commerce are needed from a disinterested supplier who is not otherwise available, and (c) where continuing availability of material from a common source is important to science or industry.

In this publication the materials are classified into groups according to the purposes for which they are intended and the kind of certification, if any, that applies to them. More than 600 different standards of metals, ores, ceramics, chemicals, and hydrocarbons are now available

for distribution. About 325 of these are certified for chemical composition. Some 150 of the composition standards have been prepared specifically for use in spectroscopic analysis. Other standard materials include those certified for such properties as acidity (*pH*), viscosity, freezing-point, density, index of refraction, and heat of combustion. Recent additions include new point-source radioactivity standards, hydrocarbon blends, metallo-organic materials soluble in lubricating oils, thermometric cells, magnesium-treated irons, zirconium-base alloy, high-temperature alloy, and new white-irons, copper-base, titanium-base, and high-temperature alloys for spectrographic use.

Some of the principal uses of NBS standard materials are: Checking methods of analysis and analytical techniques; standardizing solutions for volumetric analysis; developing new or improved methods of analysis; evaluating the accuracy of analytical methods; and calibrating and standardizing spectrometers, spectrographs, colorimeters, *pH* meters, Geiger counters, scintillators, ionization chambers, pyrometers, polarimeters, refractometers, viscometers, and other laboratory and plant instruments.

Standard hydrocarbons, certified for degree of purity, serve to calibrate instruments used in controlling the production of plastics, synthetic rubber, and motor fuels.

Also listed in the publication are a number of standard materials for which it is not feasible to supply numerical values of composition or properties or for which such certification would not be useful. These materials nevertheless provide assurance of identity among all samples bearing a given designation and thus permit standardization of test procedures and referral of physical or chemical data on unknown materials to a common basis.

For information on certain physical standards, individually certified and intended primarily for the calibration of instruments, consult "Test Fee Schedules of the National Bureau of Standards".

## **1.2. Standards Out of Stock**

The preparation of "renewal" standards is intended to be completed at the time each kind of standard becomes exhausted, but owing to delays encountered in obtaining a proper grade of material and for other reasons, this is not always possible. If orders are received for standards that are out of stock, notice will be mailed to that effect. The composition of a "renewal" of an analyzed standard will not usually be identical

with that of its predecessor, but it will be quite similar, especially with regard to the characteristic constituent or constituents.

## **1.3. New Standards**

When new standards or renewals of old ones are issued, announcement will be made in scientific and trade-journals, in the Standard Materials column of National Bureau of Standards Technical News Bulletin, and in the Federal Register.

# **2. Purchase Procedure**

## **2.1. Identification of Standards**

The standards are listed by groups; the numbers represent the issuance of the first representative sample of each kind. Renewals are indicated by the original number with an added letter to denote the relation. Thus, 11a is the first, 11b the second, 11c is the third renewal of No. 11 Basic Open-Hearth Steel, 0.2 percent carbon. In this way, a particular number always represents a material of fixed or approximately fixed composition.

## **2.2. Ordering**

Orders should give the amount, number, and name of the standard desired. For example: 150 grams of No. 11g, Basic Open-Hearth Steel, 0.2% C. The list of standard materials, their numbers, prices, and composition or intended use are given on the pages which follow. Samples are distributed only in the units listed.

## **2.3. Terms and Shipping**

### **2.3.1. Domestic Shipments**

Shipments of material (other than hydrocarbons, organic sulfur compounds and radioactive standards) intended for the United States, Mexico, Canada, and Cuba are normally shipped prepaid parcel post (providing that the parcel does not exceed the weight limits as prescribed by Postal Laws and Regulations) unless the purchaser

requests a different mode of shipment, in which case the shipment will be sent collect. It is impractical for the Bureau to prepay shipping charges and add this cost to the billing invoice. Hydrocarbons, organic sulfur compounds, rubber compounding materials, viscometer calibrating oils, and radioactive standards are shipped express collect. (See pp. 14, 15, and 16.) No discounts are given on NBS Standard Materials.

### **2.3.2. Foreign Shipments**

Small shipments will be forwarded as a United States Government shipment via International Parcel Post, providing that the parcel does not exceed the weight limits as prescribed by Postal Laws and Regulations to foreign countries. Shipments exceeding the parcel post weight limit must be handled through an agent (shipping or brokerage firm) located in the United States as designated by the purchaser. Parcels will be packed for overseas shipment and forwarded via express collect to the United States firm designated as agent.

### **2.3.3. Payment for Foreign Orders**

Remittances in payment of foreign orders must be made payable to the National Bureau of Standards, and are *required in advance*. These remittances must be drawn on a bank in the United States and payable at the standard rate of United States currency.

### 3. Descriptive List of Standard Materials With Weights and Fees

#### 3.1. Standards of Certified Chemical Composition

[For detailed information on compositions and properties certified, see p. 3 to 5, as indicated in the table of contents, p. III. (See mimeographed insert for standards out of stock, renewals, and new standards.)]

CARBON STEELS AND IRON (CERTIFIED FOR OXYGEN AND NITROGEN ONLY) <sup>a</sup>							
1040	Low-carbon, rimming-----			0.018	0.003	3 in. by 1 in.	\$10.00
1041	Medium-carbon-----			.017	.004	3 in. by 1 in.	10.00
1042	Bessemer, rimming-----			.017	.014	3 in. by 1 in.	10.00
1044	Low-carbon, Si-killed-----			.009	.004	3 in. by 1 in.	10.00
1045	Medium-carbon, Si-killed-----			.007	.004	3 in. by 1 in.	10.00
1047	Low-carbon-----			.017	.004	3 in. by 1 in.	10.00

<sup>a</sup> These standard hydrocarbon blends were prepared for calibration of mass spectrometric and other instrumental procedures used in analysis of gasolines, naphthas and blending stocks. Each sample comprises ten ampoules, each ampoule containing about 0.03 ml of the blend. To retard the effects of possible fractionation of the components after the ampoule is opened, each ampoule is intended to provide material for only one calibration analysis.

Sample No.	Type	O	N	Size of sample	Price per sample

#### URANIUM ISOTOPIC STANDARDS

Fifteen uranium isotopic standards are now available from NBS. They represent the following weight percent U<sup>235</sup>: 0.5, 1, 1.5, 2, 3, 5, 10, 15, 20, 35, 75, 80, 85, 90, and 93. Each isotopic standard issue unit contains a quantity of uranium oxide (U<sub>3</sub>O<sub>8</sub>) equivalent to 1 g of uranium. Charges vary from \$20.50 to \$37.50 per unit, depending

on the enrichment level. These standards are available only to the U.S. Atomic Energy Commission's contractors and licensees. Order forms and further information may be obtained from the National Bureau of Standards, Washington 25, D.C.

##### 3.1.2. Spectroscopic Standards

Sample Nos. <sup>a</sup>	Name	Price per sample <sup>b</sup>	Sample Nos. <sup>a</sup>	Name	Price per sample <sup>b</sup>
INGOT IRON AND LOW-ALLOY STEELS					
402 (e)	802 B.O.H., 0.8C	\$6.00	414 (e)	Cr-Mo (SAE 4140)	\$6.00

905-5S	C <sub>4</sub> H <sub>10</sub> S	2-Methyl-2-propanethiol ( <i>tert</i> -butyl mercaptan)	.08 ± 0.04	5	35
908-5S	C <sub>4</sub> H <sub>10</sub> S <sub>2</sub>	Ethyldithiodisulfide (diethyl disulfide) <sup>k</sup>	.10 ± 0.08	5	35
906-5S	C <sub>5</sub> H <sub>10</sub> S	1-Pentanethiol ( <i>n</i> -pentyl mercaptan)	.08 ± 0.05	5	35

<sup>a</sup> The designations following the sample numbers indicate the following: “-5S” or “-8S”, a sample of 5 ml or 8 ml sealed “in vacuum” in a special Pyrex-glass ampoule with internal “break-off” tip: “-5”, “-25”, or “-50”, a sample of 5, 25, or 50 ml sealed “in vacuum” in a plain-glass ampoule. Sample numbers including small letters designate preparations made to replenish depleted stock. For example, in this list isopropylbenzene 220-5 and 220-25 are from one preparation and 220a-8S is from another.

<sup>b</sup> Unless otherwise indicated, the purity has been evaluated from measurements of freezing points. See J. Research NBS 35, 355 (1945) RP1676.

<sup>c</sup> Tolerance approximately ±10 percent. All volumes have been estimated in the liquid state, including those of compounds normally solid.

<sup>d</sup> Estimated by analogy with isomers subjected to similar purification.

<sup>e</sup> Certified with regard to density and refractive index.

<sup>f</sup> Certified with regard to calorimetric heat of combustion.

<sup>g</sup> This isomer, formerly known as “trans”, see Science 105, 647 (1947), has the following properties: Boiling point at one atmosphere, 120.09 °C; refractive index, *nd* at 25 °C, 1.4206; density at 25 °C, 0.7620 g/ml. See NBS Circular 461, p. 45 (1947).

<sup>h</sup> This isomer, formerly known as “cis”, see Science 105, 647 (1947), has the following properties: Boiling point at one atmosphere, 124.45 °C; refractive index, *nd* at 25 °C, 1.4284; density at 25 °C, 0.7806 g/ml. See NBS Circular 461, p. 45 (1947).

<sup>i</sup> When sealed. Polymer formed may be removed as residue by simple vaporization of the sample “in vacuum” at an appropriate temperature.

<sup>j</sup> In the determination of the purity of these compounds, an apparatus providing no connection with the atmosphere was employed. See Anal. Chem., 22, 1521 (1950).

<sup>k</sup> These compounds are here named in accordance with the recommendations of the International Union of Pure and Applied Chemistry. The samples themselves bear labels in accordance with recommendations made for the naming of sulfur compounds in petroleum. See Chem. and Eng. News 24, 2765 (1946). The samples are labeled as follows: 907-5S, 2,3-dithiabutane; 902-5S, 2-thiabutane; 903-5S, 3-thiapentane; and 908-5S, 3,4-dithiahexane.

#### STANDARDS CERTIFIED FOR DENSITY AND REFRACTIVE INDEX

The following three compounds listed above are certified with respect to values of density, for air-saturated material at 1 atm, at 20, 25, and 30 °C, to ±0.00002 g/ml, and also with respect to values of refractive index, for each of seven wavelengths (helium 668 and 502, hydrogen 656 (C) and 486 (F), mercury 546 (e) and 436 (g), and sodium 589 (D<sub>1</sub>, D<sub>2</sub>) at 20, 25, and 30 °C to ±0.00002):

- No. 217b----- 2,2,4-Trimethylpentane.
- No. 218a----- Methylcyclohexane.
- No. 211a, 211b--- Toluene.

These standards may be used to calibrate refractometers, piezometers, and density balances, as well as spectrometers. A certificate is supplied with each of these samples.

#### STANDARDS CERTIFIED FOR CALORIMETRIC HEAT OF COMBUSTION

Standard Sample 217b, 2,2,4-Trimethylpentane, is also certified with regard to the value for calorimetric heat of combustion, primarily for calibrating apparatus for determining the heating value of gasoline and other liquid fuels.

#### INSTRUCTIONS AND CONNECTING TUBES

A set of instructions for transferring standard samples of hydrocarbons “in vacuum” may be obtained on request.

The unsaturated hydrocarbons are usually sealed in ampoules of Pyrex Red glass. In order to facilitate the handling of these ampoules, the first shipment of those

samples to a laboratory will include one graded connecting tube consisting of Pyrex Red to Pyrex Uranium to Pyrex clear glass.

#### AVAILABILITY

It is not planned to replenish the present stock of any of the hydrocarbons and organic sulfur compounds with new preparations, except those certified for density, refractive index and calorimetric heat of combustion (footnotes e and f).

#### ORDERS

Most of the standard hydrocarbons listed above were purified through a cooperative undertaking between the National Bureau of Standards and the American Petroleum Institute. The preparation of the organic sulfur compounds involved the cooperation of the U.S. Bureau of Mines at Laramie, Wyo. By agreement with the American Petroleum Institute, distribution of these two groups of standards by the National Bureau of Standards is limited to laboratories not directly associated with the petroleum industry. Orders from such laboratories should be sent to the National Bureau of Standards, Washington 25, D.C. Orders from laboratories that are associated with the petroleum industry should be placed with the American Petroleum Institute, Carnegie Institute of Technology, Pittsburgh, Pa.

In all cases, compounds should be specified by both name and sample number.

#### SHIPMENTS

All orders for hydrocarbons or organic sulfur compounds are shipped express collect.

#### 3.2. Standards of Certified Properties or Purity—Continued

##### 3.2.7. Viscometer Calibrating Liquids

These oils are not intended for use as permanent viscosity standards. They are not suitable for stockroom items and should be ordered only for immediate use. They are available only in containers of nominal 1-pint capacity. This quantity is sufficient for the calibration of most viscometers. In cases where a larger quantity (e.g., duplicate samples) is required, a satisfactory explanation of the need for the larger quantity must be given in the order or accompanying letter. All available liquids are hydrocarbon oils and are listed in the tables below.

A) Oils for use with viscometers calibrated in units of absolute or kinematic viscosity. Price covers the sample and a report containing accurate values at the time of shipment, for absolute viscosity, kinematic viscosity, and density at the following temperatures:

Oils D through N-----	20 °C, 25 °C, 100 °F, and 210 °F
Oil OB-----	20 °C, 25 °C, and 40 °C
Oil P-----	30 °C, 40 °C, and 50 °C

Viscosity values at other temperatures in the range 20 to 100 °C (30 to 100 °C for oil P) are supplied as a special service. For oils D through N, the charge for this special service is \$15.00 per sample per temperature. For oils OB and P, the charge is \$32.00 per sample per temperature. These special service charges are in addition to the charge for the sample and usual report.

The approximate viscosities and the prices of the calibrating oils are as follows:

Oil	Absolute viscosity, in poises, at—				Kinematic viscosity, in stokes, at—				Price <sup>1</sup> per sample F.O.B. Washington, D.C.	
	20 °C	25 °C	100 °F	210 °F	20 °C	25 °C	100 °F	210 °F		
D	0.020	0.018	0.014	0.006	0.026	0.023	0.019	0.008	\$15.00	
I	.074	.063	.044	.013	.091	.078	.055	.017	15.00	
N	.12	.10	.066	.017	.14	.12	.081	.022	15.00	
P	.21	.17	.11	.023	.25	.21	.13	.028	15.00	
K	.41	.32	.18	.032	.48	.38	.22	.040	15.00	
A	1.0	.74	.37	.049	1.1	.84	.43	.060	15.00	
M	3.0	2.1	1.0	.099	3.4	2.4	1.1	.12	15.00	
V	14	9.6	4.0	.25	16	11	4.6	.30	15.00	
OB	20 °C	25 °C	30 °C	40 °C	50 °C	20 °C	25 °C	30 °C	40 °C	32.00 32.00
	300	200	450	55	200	350	210	510	60	
									220	100

B) Oils for use with Saybolt viscometers. Price covers the sample and a report containing an accurate value at the time of shipment, for viscosity at the indicated temperature. Viscosity values at other temperatures or in other units are not supplied. Saybolt viscosity values are based on determined values for kinematic viscosity and the standard conversion tables published by the American Society for Testing Materials.

The approximate viscosities and the prices of the Saybolt calibrating oils are as follows:

Oil	Tempera-ture °F	Viscosity				Price <sup>1</sup> per sample F.O.B. Washington, D.C.
		100	300 seconds, Saybolt Universal-----	122	110 seconds, Saybolt Furol-----	
B	100					\$6.50
F	122					6.50

<sup>1</sup> Because of the nature of the material, samples of oils for use as viscometer calibrating liquids will be shipped via railway express, express charges collect.

##### 3.2.8. Surface Flammability Standards

Standard 1002-----	Surface Flammability Standard is being issued as follows: Hardboard sheet, 6×18 inches, for checking the operation of the radiant panel test equipment in accordance with Interim Federal Standard No. 00136 and later revisions. Flame Spread Index, $I_s = 150$ ; Heat Evolution Factor, $Q = 33$ ; Smoke Deposit, weight in mg, = 2.6. Price \$8.00 per lot of four specimens.
--------------------	---

4940	$\beta$	Promethium-147	$10^5$ dps/g <sup>e</sup>	(f)	40.00

*Discontinued NBS radioactivity standards.*—The National Bureau of Standards has discontinued distribution of the following radioactivity standards, Nos. 4910, 4911, 4912, 4913, 4914, 4915, 4916, 4917, 4918, 4919, 4920, 4923, 4928, 4931, 4933, 4934, 4936. Standardized samples of these radionuclides may now be obtained commercially.

\* Radioactivity standards are shipped express collect only to destinations in Canada and the United States. In the case of shipments to other countries consignee should appoint an agent to handle shipment abroad, apply to the National Bureau of Standards for pro forma invoices, and establish a credit for the cost of the standards at any bank in the United States.

<sup>a</sup> The disintegration rate as of the reference date is given on a certificate accompanying the standard.

<sup>b</sup> Samples consist of a practically weightless deposit of polonium-210 on a monel disk 1 inch in diameter,  $\frac{1}{16}$ -inch thick. Please note that standard samples Nos. 4900, 4901, and 4902 are now polonium-210. This change makes possible the preparation of small diameter weightless sources with little self-absorption and no beta emission. Corrections for decay may be made accordingly.

<sup>c</sup> Deposited source.

<sup>d</sup> Samples consist of  $\text{U}_3\text{O}_8$  deposited on a 0.1-mm platinum foil and mounted on an aluminum disk,  $1\frac{1}{4}$  inch in diameter and  $\frac{1}{32}$ -inch thick. The alpha-

ray disintegration rate as of the date of calibration is indicated on the certificate accompanying the standard.

<sup>e</sup> Total activity of these standards is such that they may be ordered singly under the general licensing provisions of the Atomic Energy Act of 1954 (please refer to Federal Register, Volume 21, page 213, January 11, 1956).

<sup>f</sup> Approximately 3 ml of low-solids carrier solution containing the active nuclide in a flame-sealed ampoule.

<sup>g</sup> This standard can be issued only under the special licensing provisions of the Atomic Energy Act of 1954, and it is therefore required that a copy of the purchaser's current AEC By-Product Material license be on file at the National Bureau of Standards.

<sup>h</sup> Benzoic acid (7C-14) in about 3 ml of toluene in a flame-sealed glass ampoule.

<sup>i</sup> Approximately 10 ml of Kr<sup>85</sup> in inert krypton at a pressure of approximately one atmosphere in a break-seal glass ampoule.

#### 3.4. Miscellaneous Standard Materials—Continued

##### 3.4.5. Light-Sensitive Papers

Sample No.	Item	Unit of issue	Price per set
700	Light-sensitive paper for calibration of carbon-arc fading lamps for color-fastness tests of textiles. See current NBS Letter Circular 1036 on this subject for directions for use.	Package of 100 pieces.	\$3. 00
701	Booklet of standard faded strips of light-sensitive paper for use with above sample. See the current NBS Letter Circular 1036 for directions for use.	Booklet-----	40. 00

##### 3.4.6. Standard Colors for Kitchen and Bathroom Accessories <sup>a</sup>

Sample No.	Item	Unit of issue	Price per set
1000	Enameled iron plaques, 3 by 5 inches, in accordance with Commercial Standards CS62-38 and CS63-38.	Set of 10-----	\$10. 00

<sup>a</sup> Calibration of these standards for use with three-filter reflectometers may be obtained by applying to the Bureau.

##### 3.4.7. Microcopy Resolution Test Chart <sup>a</sup>

Sample No.	Item	Unit of issue (minimum)	Price per chart
1010	Resolution chart for testing the resolving power of micro copying cameras-----	5 charts-----	\$0. 20

<sup>a</sup> These charts are made photographically, and consist of line patterns, the lines and spaces being of equal width. Each pattern contains two sets of lines, one set at right angles to the other. The patterns range from 1 to 10 lines per millimeter. Instructions for the use of these charts are furnished with each order.

### 4. Summary of Analyses

The values given in the following sections are listed primarily as a guide to purchasers. In some cases provisional values are given which may differ

slightly from those given on the certificates. For this reason *the certificates issued with the standards should always be consulted to obtain the proper values.*

#### 4.1. Averaged Analyses

<sup>a</sup> Sizes: 400 series, rods  $\frac{7}{32}$  in. in diameter, 4 in. long; 800 series, rods  $\frac{1}{2}$  in. in diameter, 2 in. long; 1100 series, disks  $\frac{1}{4}$  in. in diameter,  $\frac{3}{4}$  in. thick (suitable for optical and X-ray analysis); D800 series,  $\frac{1}{4}$  in. in diameter,  $\frac{1}{4}$  in. thick (suitable only for X-ray analysis—prepared from the rods  $\frac{1}{2}$  in. in diameter by upset forging).

<sup>b</sup> The standard is available in only one size.

<sup>c</sup> The carbon contents of this group of steel standards are between 0.1 and 0.9 percent.

<sup>d</sup> Additional information on nitrogen, silver, germanium, and oxygen is available on the provisional certificate.

440	840	D840	Special W High Speed (Cr2-W13-Co12)	.15	.14	.059	2.12	2.11	0.070	13.0	11
441	841	D841	W High Speed (AISI-SAE T1)	.27	.16	.072	4.20	1.13	.84	18.5	-----

<sup>a</sup> Sizes: 400 series, rods  $\frac{1}{32}$  in. in diameter, 4 in. long; 800 series, rods  $\frac{1}{2}$  in. in diameter, 2 in. long; D800 series,  $\frac{1}{4}$  in. in diameter,  $\frac{3}{4}$  in. thick (suitable only for X-ray analysis—prepared from the rods  $\frac{1}{2}$  in. in diameter by upset forging).

<sup>b</sup> The carbon contents of this group of standards are between 0.7 and 0.8%. By difference, the approximate iron contents are: 436, 836, and D836—79.7%; 437, 837, and D837—79.7%; 438, 838, and D838—77.6%; 439, 839, and D839—76.0%; 440, 840, and D840—69.1%; 441, 841, and D841—73.6%.

#### WHITE-CAST IRONS (SPECTROSCOPIC STANDARDS)

Sample No. <sup>a</sup>	C <sup>b</sup>	Mn	P	S	Si	Cu	Ni	Cr	V	Mo
1176	3.47	0.63	0.42	0.061	3.19	0.76	0.055	0.51	0.17	0.55
1177	2.74	.37	.61	.037	0.88	.087	2.97	1.39	.005	1.49
1178	3.11	.86	.115	.026	1.91	.16	2.25	0.89	.017	0.94
1179	3.35	.64	.23	.165	1.34	.41	1.31	.23	.036	.31
1180	3.28	1.12	.055	.086	3.04	.20	0.044	.14	.26	.15
1181	3.63	1.32	.29	.052	2.54	1.47	.11	2.04	.11	.04
1182	1.97	0.45	.85	.046	0.31	0.49	.22	.029	.060	.01
1183	3.05	.91	.011	.025	1.76	1.01	.53	.077	.080	.02

<sup>a</sup> Size: Solid sections, approximately  $\frac{1}{4}$  in. square and  $\frac{3}{4}$  in. thick. Suitable for optical and X-ray analysis.

<sup>b</sup> Standard 1180 contains some free graphite (approximately 0.1%); the other standards contain less than 0.01 percent.

<sup>c</sup> The elements Al, As, B, Bi, Co, Pb, Sb, Sn, Te, Ti, and Zr are present in useful concentration ranges. Some of these may be certified at a later date.

#### COPPER-BASE ALLOYS (SPECTROSCOPIC STANDARDS)

Sample Nos. <sup>a</sup>	Kind	Cu	Zn	Pb	Fe	Sn	Ni	Al	Mn	
1106	C1106	Naval Brass A	59.1	40.0	0.034	(b)	0.74	<sup>c</sup> (0.025)	-----	0.00
1107	C1107	Naval Brass B	61.2	37.3	.19	-----	1.05	(.095)	-----	-----
1108	C1108	Naval Brass C	64.9	34.4	.06	-----	0.39	.032	-----	.02

<sup>a</sup> Size and metallurgical condition: 1100 series are wrought samples  $\frac{1}{4}$  in. in diameter,  $\frac{3}{4}$  in. thick. C1100 series are chill-cast samples  $\frac{1}{4}$  in. square,  $\frac{3}{4}$  in. thick.

<sup>b</sup> Dashes indicate elements present but not certified.

<sup>c</sup> Values in parentheses are not certified, but are given for information on the composition.

#### TIN METAL (SPECTROSCOPIC STANDARDS)

Sample Nos. <sup>a</sup>	Cu	Pb	As	Sb	Ni	Zn	Ag	Bi	Cd	Co
431	831	0.19	0.19	0.16	0.19	0.038	0.041	0.015	0.020	0.020

\* Intended use.—While this standard is suitable for general use, it was prepared primarily for application in the spectrographic analysis of nickel by Tentative Method E 129-57T (Methods for Emission Spectrochemical Analysis, ASTM, 1957). When the standard is applied in this method, it is recommended that 0.3 g or more of the standard be dissolved and converted to oxide by the same procedure used for the sample to be analyzed, and preferably at the same time.

<sup>b</sup> Nickel content.—The approximate nickel content of Standard 673 is 77.7 percent. To convert the concentration values in the table from the basis of percent element in nickel oxide to the basis of percent element in total metal present, multiply the values by 1.29.

### List of Cooperating Laboratories

Chemical:

1. National Bureau of Standards, Washington, D.C.
2. W. B. Coleman and Co., Philadelphia, Pa.
3. Sperry Gyroscope Co., Great Neck, N.Y.
4. Superior Tube Co., Norristown, Pa.
5. Sylvania Electric Products Inc., Towanda, Pa.

Spectrochemical:

6. National Bureau of Standards, Washington, D.C.
7. Bell Telephone Laboratories, Murray Hill, N.J.
8. W. B. Coleman and Co., Philadelphia, Pa.
9. The International Nickel Co., Huntington Works, Huntington, W. Va.
10. The International Nickel Co., Research Lab., Bayonne, N.J.
11. The Mond Nickel Co. Ltd., Birmingham, England.
12. National Research Corp., Cambridge, Mass.
13. Raytheon Manufacturing Co., Newton, Mass.

The nickel oxide was prepared from the metal by the J. T. Baker Chemical Co., Phillipsburg, N.J.

## THE NATIONAL BUREAU OF STANDARDS

The scope of activities of the National Bureau of Standards at its major laboratories in Washington, D.C., and Boulder, Colorado, is suggested in the following listing of the divisions and sections engaged in technical work. In general, each section carries out specialized research, development, and engineering in the field indicated by its title. A brief description of the activities, and of the resultant publications, appears on the inside of the front cover.

### WASHINGTON, D.C.

**Electricity.** Resistance and Reactance. Electrochemistry. Electrical Instruments. Magnetic Measurements. Dielectrics. High Voltage.

**Metrology.** Photometry and Colorimetry. Refractometry. Photographic Research. Length. Engineering Metrology. Mass and Scale. Volumetry and Densimetry.

**Heat.** Temperature Physics. Heat Measurements. Cryogenic Physics. Equation of State. Statistical Physics.

**Radiation Physics.** X-ray. Radioactivity. Radiation Theory. High Energy Radiation. Radiological Equipment. Nucleonic Instrumentation. Neutron Physics.

**Analytical and Inorganic Chemistry.** Pure Substances. Spectrochemistry. Solution Chemistry. Standard Reference Materials. Applied Analytical Research.

**Mechanics.** Sound. Pressure and Vacuum. Fluid Mechanics. Engineering Mechanics. Rheology. Combustion Controls.

**Organic and Fibrous Materials.** Rubber. Textiles. Paper. Leather. Testing and Specifications. Polymer Structure. Plastics. Dental Research.

**Metallurgy.** Engineering Metallurgy. Microscopy and Diffraction. Metal Reactions. Corrosion. Metal Physics. Electrolysis and Metal Deposition.

**Mineral Products.** Engineering Ceramics. Glass. Refractories. Enamelled Metals. Crystal Growth. Physical Properties. Constitution and Microstructure.

**Building Research.** Structural Engineering. Fire Research. Mechanical Systems. Organic Building Materials. Codes and Safety Standards. Heat Transfer. Inorganic Building Materials.

**Applied Mathematics.** Numerical Analysis. Computation. Statistical Engineering. Mathematical Physics. Operations Research.

**Data Processing Systems.** Components and Techniques. Digital Circuitry. Digital Systems. Analog Systems. Applications Engineering.

**Atomic Physics.** Spectroscopy. Infrared Spectroscopy. Solid State Physics. Electron Physics. Atomic Physics.

**Instrumentation.** Engineering Electronics. Electron Devices. Electronic Instrumentation. Mechanical Instruments. Basic Instrumentation.

**Physical Chemistry.** Thermochemistry. Surface Chemistry. Organic Chemistry. Molecular Spectroscopy. Molecular Kinetics. Mass Spectrometry.

### Office of Weights and Measures.

### BOULDER, COLO.

**Cryogenic Engineering.** Cryogenic Equipment. Cryogenic Processes. Properties of Materials. Cryogenic Technical Services.

**Ionosphere Research and Propagation.** Low Frequency and Very Low Frequency Research. Ionosphere Research. Prediction Services. Sun-Earth Relationships. Field Engineering. Radio Warning Services.

**Radio Propagation Engineering.** Data Reduction Instrumentation. Radio Noise. Tropospheric Measurements. Tropospheric Analysis. Propagation-Terrain Effects. Radio-Meteorology. Lower Atmosphere Physics.

**Radio Standards.** High Frequency Electrical Standards. Radio Broadcast Service. Radio and Microwave Materials. Atomic Frequency and Time Interval Standards. Electronic Calibration Center. Millimeter-Wave Research. Microwave Circuit Standards.

**Radio Systems.** High Frequency and Very High Frequency Research. Modulation Research. Antenna Research. Navigation Systems.

**Upper Atmosphere and Space Physics.** Upper Atmosphere and Plasma Physics. Ionosphere and Exosphere Scatter. Airglow and Aurora. Ionospheric Radio Astronomy.
