National Bureau of Standards Miscellaneous Publication 292

Issued September 1, 1967

THE NATIONAL BUREAU OF STANDARDS

The National Bureau of Standards¹ provides measurement and technical information services essential to the efficiency and effectiveness of the work of the Nation's scientists and engineers. The Bureau serves also as a focal point in the Federal Government for assuring maximum application of the physical and engineering sciences to the advancement of technology in industry and commerce. To accomplish this mission, the Bureau is organized into three institutes covering broad program areas of research and services:

THE INSTITUTE FOR BASIC STANDARDS . . . provides the central basis within the United States for a complete and consistent system of physical measurements, coordinates that system with the measurement systems of other nations, and furnishes essential services leading to accurate and uniform physical measurements throughout the Nation's scientific community, industry, and commerce. This Institute comprises a series of divisions, each serving a classical subject matter area:

—Applied Mathematics—Electricity—Metrology—Mechanics—Heat—Atomic Physics—Physical Chemistry—Radiation Physics—Laboratory Astrophysics²—Radio Standards Laboratory,² which includes Radio Standards Physics and Radio Standards Engineering—Office of Standard Reference Data.

THE INSTITUTE FOR MATERIALS RESEARCH . . . conducts materials research and provides associated materials services including mainly reference materials and data on the properties of materials. Beyond its direct interest to the Nation's scientists and engineers, this Institute yields services which are essential to the advancement of technology in industry and commerce. This Institute is organized primarily by technical fields:

—Analytical Chemistry—Metallurgy—Reactor Radiations—Polymers—Inorganic Materials—Cryogenics²—Office of Standard Reference Materials.

THE INSTITUTE FOR APPLIED TECHNOLOGY . . . provides technical services to promote the use of available technology and to facilitate technological innovation in industry and government. The principal elements of this Institute are:

—Building Research—Electronic Instrumentation—Technical Analysis—Center for Computer Sciences and Technology—Textile and Apparel Technology Center—Office of Weights and Measures—Office of Engineering Standards Services—Office of Invention and Innovation—Office of Vehicle Systems Research—Clearinghouse for Federal Scientific and Technical Information³—Materials Evaluation Laboratory—NBS/GSA Testing Laboratory.

Bibliography of Liesegang Rings

(Second Edition)

United States Department of Commerce

National Bureau of Standards

Miscellaneous Publication 292

A bibliography of Liesegang rings (periodic precipitation figures produced by diffusion) and other periodic structures for the period 1855-1965 is compiled in chronological and alphabetical order. An author index and an index to applications of Liesegang rings to extra-chemical fields are also given.

Key Words: Diffusion, Liesegang rings, periodic precipitation.

Library of Congress Catalog Card Number: 67-61858

Preface to the First Edition

In 1896 the photographer Raphael E. Liesegang discovered that when a crystal of silver nitrate is placed on a glass slide covered with a dilute solution of potassium dichromate in gelatin, the precipitate of silver chromate forms in bands or rings around the crystal (17).

Since the discovery of this phenomenon, now named after its discoverer, more than 600 papers have appeared on the subject. In 1932 E. S. Hedges included a bibliography in his book, "Liesegang Rings and Other Periodic Structures." Hedges listed not only papers dealing with Liesegang rings---i.e., structures caused by diffusion---but also a large number of works on periodic structures now known not to be Liesegang rings. Since Hedges' book is out of print, most of his references are included in the present bibliography.

In addition, the author has collected all the papers on true Liesegang rings (but not those on other periodic structures) listed by Chemical Abstracts for the period 1932 to 1952. In nearly all cases the original titles have been translated into English. A subject index listing papers of interest in fields other than chemistry has been included.

Preface to the Second Edition

Since the first edition of this bibliography was published by the University of Arkansas Editorial Service in 1955 approximately one hundred references to Liesegang rings have appeared in Chemical Abstracts. Permission to include the material of the first edition, now out of print, in this revision is greatly appreciated.

The new references, which concern only true Liesegang rings, have been merely added to the original bibliography of 681 references, many of which dealt with other kinds of periodic structures. The subject and author indices have been appropriately amended.

Errors found in the first edition have been corrected. All journal article titles and nearly all book titles have been translated into English. Abbreviations of journal titles are those given in the issue of Chemical Abstracts in which the given reference first appeared.

In the seventy years which have passed since the discovery of Liesegang rings the growing understanding of their formation has found application in fields as diverse as mineralogy, biology, and photography. This bibliography is a small contribution toward lightening the labors of workers in this field.

SUBJECT INDEX

Botany 2, 3, 4, 5, 6, 7, 9, 10, 11, 13A, 14, 18, 20, 22, 25, 27, 31, 34, 37, 38, 39, 46, 52, 56, 85, 86, 87, 88, 93, 99, 105, 115, 131, 134, 139, 146, 154, 165, 183, 240, 241, 279, 282, 285, 304, 313, 314, 317, 325, 326, 347, 357, 366, 401.

Industrial Applications 111, 116, 120, 185, 187, 263, 359, 370, 379, 399, 400, 445, 761.

Medicine and Bacteriology 25, 31, 50, 51, 56, 58, 64, 75, 89, 123, 150, 180, 181, 193, 217, 231, 331, 361, 422, 699, 716.

Mineralogy and Geology 15, 61, 72, 83, 95, 97, 101, 103, 107, 108, 111, 119, 152, 158, 160, 168, 185, 187, 200, 211, 263, 315, 316, 325, 343, 344, 348, 360, 394, 447, 669A, 732, 734, 736, 747.

Zoology 13A, 20, 21, 23, 24, 41, 57, 69, 73, 76, 106, 127, 153, 159, 169, 308, 314, 319, 331, 355, 359, 370, 379, 399, 400.

NBS TECHNICAL PUBLICATIONS

PERIODICALS

JOURNAL OF RESEARCH reports National Bureau of Standards research and development in physics, mathematics, chemistry, and engineering. Comprehensive scientific papers give complete details of the work, including laboratory data, experimental procedures, and theoretical and mathematical analyses. Illustrated with photographs, drawings, and charts.

Published in three sections, available separately:

● Physics and Chemistry

Papers of interest primarily to scientists working in these fields. This section covers a broad range of physical and chemical research, with major emphasis on standards of physical measurement, fundamental constants, and properties of matter. Issued six times a year. Annual subscription: Domestic, \$5.00; foreign, \$6.00*.

● Mathematics and Mathematical Physics

Studies and compilations designed mainly for the mathematician and theoretical physicist. Topics in mathematical statistics, theory of experiment design, numerical analysis, theoretical physics and chemistry, logical design and programming of computers and computer systems. Short numerical tables. Issued quarterly. Annual subscription: Domestic, \$2.25; foreign, \$2.75*.

● Engineering and Instrumentation

Reporting results of interest chiefly to the engineer and the applied scientist. This section includes many of the new developments in instrumentation resulting from the Bureau's work in physical measurement, data processing, and development of test methods. It will also cover some of the work in acoustics, applied mechanics, building research, and cryogenic engineering. Issued quarterly. Annual subscription: Domestic, \$2.75; foreign, \$3.50*.

TECHNICAL NEWS BULLETIN

The best single source of information concerning the Bureau's research, developmental, cooperative and publication activities, this monthly publication is designed for the industry-oriented individual whose daily work involves intimate contact with science and technology—for engineers, chemists, physicists, research managers, product-development managers, and company executives. Annual subscription: Domestic, \$1.50; foreign, \$2.25*.

*Difference in price is due to extra cost of foreign mailing.

NONPERIODICALS

Applied Mathematics Series. Mathematical tables, manuals, and studies.

Building Science Series. Research results, test methods, and performance criteria of building materials, components, systems, and structures.

Handbooks. Recommended codes of engineering and industrial practice (including safety codes) developed in cooperation with interested industries, professional organizations, and regulatory bodies.

Miscellaneous Publications. Charts, administrative pamphlets, Annual reports of the Bureau, conference reports, bibliographies, etc.

Monographs. Major contributions to the technical literature on various subjects related to the Bureau's scientific and technical activities.

National Standard Reference Data Series. NSRDS provides quantitative data on the physical and chemical properties of materials, compiled from the world's literature and critically evaluated.

Product Standards. Provide requirements for sizes, types, quality and methods for testing various industrial products. These standards are developed cooperatively with interested Government and industry groups and provide the basis for common understanding of product characteristics for both buyers and sellers. Their use is voluntary.

Technical Notes. This series consists of communications and reports (covering both other agency and NBS-sponsored work) of limited or transitory interest.

CLEARINGHOUSE

The Clearinghouse for Federal Scientific and Technical Information, operated by NBS, supplies unclassified information related to Government-generated science and technology in defense, space, atomic energy, and other national programs. For further information on Clearinghouse services, write:
