NATIONAL STANDARD NSRDS REFERENCE DATA SYSTEM

Selected Specific Rates of Reactions of Transients from Water in Aqueous Solution.

III. Hydroxyl Radical and Perhydroxyl Radical and Their Radical Ions

NATIONAL BUREAU OF STANDARDS

The National Bureau of Standards[1] was established by an act of Congress March 3, 1901. The Bureau's overall goal is to strengthen and advance the Nation's science and technology and facilitate their effective application for public benefit. To this end, the Bureau conducts research and provides: (1) a basis for the Nation's physical measurement system, (2) scientific and technological services for industry and government, (3) a technical basis for equity in trade, and (4) technical services to promote public safety. The Bureau consists of the Institute for Basic Standards, the Institute for Materials Research, the Institute for Applied Technology, the Institute for Computer Sciences and Technology, and the Office for Information Programs.

THE INSTITUTE FOR BASIC STANDARDS provides the central basis within the United States of a complete and consistent system of physical measurement; coordinates that system with measurement systems of other nations; and furnishes essential services leading to accurate and uniform physical measurements throughout the Nation's scientific community, industry, and commerce. The Institute consists of the Office of Measurement Services, the Office of Radiation Measurement and the following Center and divisions:

Applied Mathematics — Electricity — Mechanics — Heat — Optical Physics — Center for Radiation Research: Nuclear Sciences; Applied Radiation — Laboratory Astrophysics[2] — Cryogenics[2] — Electromagnetics[2] — Time and Frequency[2].

THE INSTITUTE FOR MATERIALS RESEARCH conducts materials research leading to improved methods of measurement, standards, and data on the properties of well-characterized materials needed by industry, commerce, educational institutions, and Government; provides advisory and research services to other Government agencies; and develops, produces, and distributes standard reference materials. The Institute consists of the Office of Standard Reference Materials, the Office of Air and Water Measurement, and the following divisions:

Analytical Chemistry — Polymers — Metallurgy — Inorganic Materials — Reactor Radiation — Physical Chemistry.

THE INSTITUTE FOR APPLIED TECHNOLOGY provides technical services to promote the use of available technology and to facilitate technological innovation in industry and Government; cooperates with public and private organizations leading to the development of technological standards (including mandatory safety standards), codes and methods of test; and provides technical advice and services to Government agencies upon request. The Institute consists of the following divisions and Centers:

Standards Application and Analysis — Electronic Technology — Center for Consumer Product Technology: Product Systems Analysis; Product Engineering — Center for Building Technology: Structures, Materials, and Life Safety; Building Environment; Technical Evaluation and Application — Center for Fire Research: Fire Science; Fire Safety Engineering.

THE INSTITUTE FOR COMPUTER SCIENCES AND TECHNOLOGY conducts research and provides technical services designed to aid Government agencies in improving cost effectiveness in the conduct of their programs through the selection, acquisition, and effective utilization of automatic data processing equipment; and serves as the principal focus within the executive branch for the development of Federal standards for automatic data processing equipment, techniques, and computer languages. The Institute consists of the following divisions:

Computer Services — Systems and Software — Computer Systems Engineering — Information Technology.

THE OFFICE FOR INFORMATION PROGRAMS promotes optimum dissemination and accessibility of scientific information generated within NBS and other agencies of the Federal Government; promotes the development of the National Standard Reference Data System and a system of information analysis centers dealing with the broader aspects of the National Measurement System; provides appropriate service to ensure that the NBS staff has optimum accessibility to the scientific information of the world. The Office consists of the following organizational units:

Office of Standard Reference Data — Office of Information Activities — Office of Technical Publications — Library — Office of International Relations — Office of International Standards.

Foreword

The National Standard Reference Data System provides access to the quantitative data of physical science, critically evaluated and compiled for convenience and readily accessible through a variety of distribution channels. The System was established in 1963 by action of the President's Office of Science and Technology and the Federal Council for Science and Technology, and responsibility to administer it was assigned to the National Bureau of Standards.

NSRDS receives advice and planning assistance from a Review Committee of the National Research Council of the National Academy of Sciences-National Academy of Engineering. A number of Advisory Panels, each concerned with a single technical area, meet regularly to examine major portions of the program, assign relative priorities, and identify specific key problems in need of further attention. For selected specific topics, the Advisory Panels sponsor subpanels which make detailed studies of users' needs, the present state of knowledge, and existing data resources as a basis for recommending one or more data compilation activities. This assembly of advisory services contributes greatly to the guidance of NSRDS activities.

The System now includes a complex of data centers and other activities in academic institutions and other laboratories. Components of the NSRDS produce compilations of critically evaluated data, reviews of the state of quantitative knowledge in specialized areas, and computations of useful functions derived from standard reference data. The centers and projects also establish criteria for evaluation and compilation of data and recommend improvements in experimental techniques. They are normally associated with research in the relevant field.

The technical scope of NSRDS is indicated by the categories of projects active or being planned: nuclear properties, atomic and molecular properties, solid state properties, thermodynamic and transport properties, chemical kinetics, and colloid and surface properties.

Reliable data on the properties of matter and materials are a major foundation of scientific and technical progress. Such important activities as basic scientific research, industrial quality control, development of new materials for building and other technologies, measuring and correcting environmental pollution depend on quality reference data. In NSRDS, the Bureau's responsibility to support American science, industry, and commerce is vitally fulfilled.

Ernest Ambler, *Acting Director*

Preface

This report is one of a series of data publications on radiation chemistry; the aim of the series is to compile, evaluate, and present the numerical results on processes occurring in systems which have been subjected to ionizing radiation. Various kinds of data are important in radiation chemistry. The quantities which were measured first were the observed radiation yields or G values (molecules formed or destroyed per 100 eV). Various indirect methods based on G values have been used to determine yields of transient species and relative rates of reactions. The spectral properties (optical, electron spin resonance) of transients have provided a direct method for their identification, and rates of the very fast reactions of transients which occur in irradiated systems have been measured directly by spectroscopic methods. Conductivity and luminescence methods have also provided a means of measuring properties of transients and their kinetics. Some reactions which occur in irradiated systems have also been studied by other methods, such as photochemistry, electric discharge, ultrasonics, chemical initiation, electron impact, etc. The emphasis in these publications is on the data of radiation chemistry, but where other pertinent data exist, they are included.

The data of radiation chemistry are voluminous; thousands of systems have been investigated. As a result there are certain collections, *e.g.* rate constants of particular types of reactions or certain properties of transients, for which tabulations of the data are considered essential, but for which critical assessment of each value is impossible. On the other hand, certain systems and properties have been studied so extensively that critical examination of these data is desirable and timely. Authors of this series of data publications have been asked to evaluate the extent to which the data can be critically assessed, to describe their criteria for evaluation, and to designate preferred values whenever possible.

Selected Specific Rates of Reactions of Transients from Water in Aqueous Solution. III. Hydroxyl Radical and Perhydroxyl Radical and their Radical Ions

Farhataziz and Alberta B. Ross

Radiation Chemistry Data Center, Radiation Laboratory,*
University of Notre Dame,
Notre Dame, IN 46556

Rates of reactions of OH and HO_2 with organic and inorganic molecules, ions and transients in aqueous solution have been tabulated, as well as the rates for the corresponding radical ions in aqueous solution (O^- and O_2^-). Most of the rates have been obtained by radiation chemistry methods, both pulsed and steady-state; data from photochemistry and thermal methods are also included. Rates for over one thousand reactions are listed.

Key words: Aqueous solution; chemical kinetics; data compilation; hydroxyl radical; oxide radical ion; perhydroxyl radical; radiation chemistry; rates; superoxide ion.

1. Introduction

The short-lived products of water radiolysis for low LET radiation (cobalt-60 gamma rays, X-rays, and electrons with energies of about 30 keV and above) are e^-_{aq}, H and OH. In the presence of oxygen, hydrated electrons and hydrogen atoms are converted to other short-lived species, O_2^- and HO_2. The pK'_as of OH and HO_2 are 11.9 (65-0386, 66-0424) and 4.88 (70-0304), respectively; *i.e.*, O^- and O_2^- can be produced from the equilibria:

$$OH \rightleftharpoons H^+ + O^-$$
$$HO_2 \rightleftharpoons H^+ + O_2^-$$

Thus, by adjusting only pH and the concentration of O_2 in water, one can produce e^-_{aq}, H, OH, HO_2, O_2^- and O^-. All of these species have been characterized and their reactions with hundreds of inorganic and organic compounds have been studied. In the previous compilations, NSRDS-NBS 43 and Supplement (73-0030, 75-0002) and NSRDS-NBS 51 (75-0001), the specific rate constants for e^-_{aq} and H have been collected. The present compilation is an extension of the series and covers the specific rates for the reactions of OH, HO_2, O^-, and O_2^-. The literature is covered up to the latter part of 1975.

Methods

The majority of the data in this compilation are from investigations in radiation chemistry. However, data from photochemistry, Fenton's reaction, and other methods are also included. The rate constants of short-lived species are measured by *steady-state* and *pulse techniques*. The *steady-state* investigations yield ratios of rate constants which are deduced from an assumed mechanism. Values of specific rates

*The Radiation Laboratory is operated under contract with The Energy Research and Development Administration. The work of the Center is supported jointly by The National Bureau of Standards, Office of Standard Reference Data and The Energy Research and Development Administration. This is ERDA Document COO-38-816.

from steady-state investigations may be as accurate as those measured by other methods. However, in many cases, the mechanisms are complex and the values measured with steady-state techniques must be accepted with caution. By *pulse techniques*, it is possible to study a reaction directly if one can either measure disappearance of a reactant (*decay kinetics*, d.k.) or formation of a product (*product buildup kinetics*, p.b.k.) during the course of a reaction by methods such as optical spectroscopy, electrical conductivity, etc. Unfortunately, due to experimental difficulties, such investigations are possible for only a few of the reactions compiled in these tables. The specific rates for other reactions have been measured by *competition kinetics* (c.k.) using pulse techniques.

In the present compilation an attempt was made to be as comprehensive as possible and include measurements of the rates of the same reaction by various methods, as well as measurements by the same method by different authors; values superseded by later measurements by the same authors have been omitted. Certain relative values are omitted if the standard reactions were not well characterized or if the relative values were in wide disagreement with values measured by several other methods. Examples of such data are those which have been obtained using the decolorization of organic dyes by OH or the oxidation of hydroxylaminedisulfonate ion by OH as the standard reactions.

Extended sections on radiation chemical, photochemical and chemical methods of generating OH and O^-, and on the methods for rate determination, and the mechanisms for the reactions are found in NSRDS-NBS 46 (73-0299). The reader is also referred to that review for an analysis of complications which may occur in various systems.

Arrangement of Tables

In order to provide for internal consistency in the tables, values for rates of a number of competing reactions have been chosen to convert the rate ratios into relative rates. Those values are listed in table 1 and have been taken, whenever possible, from the review of Dorfman and Adams, NSRDS-NBS 46 (73-0299), where a critical analysis of the hydroxyl radical rate data has been made and "most reliable values" selected for a number of reactions; some of the values have been taken from an earlier paper on standardization of OH rate data by Willson, Greenstock, Adams, Wageman and Dorfman (71-0578). Many of the values chosen are the most recent directly determined rates; the references to those determinations are cited in the last column of table 1.

Reactions of OH with other transient species from water are listed in table 2. The reactions of inorganic solutes with OH are listed in table 3 in alphabetical order by main element. The reactions of organic solutes with OH are listed in table 4 in alphabetical order by name. In most cases IUPAC nomenclature has been used. The reactions of O^- and $HO_2(O_2^-)$ are listed by the same arrangement in tables 5 and 6, respectively.

The format of the tables is similar to previous parts of this series. Reactions are included in column 2 when products or mechanism have been studied. When several reactions are given, the reactions are labelled (I), (II), etc. and the rates in columns 4 and 5 are labelled (I), (II), k_I, k_{II}, etc.; if the rate in column 4 or 5 is not so labelled the value represents the sum of the rates for all contributing reactions. Reactions are second order and the rates have the units $dm^3mol^{-1}s^{-1}$ unless otherwise specified in the tables. Values for radical combination and disproportionation rates (entries 3.3, 4.5, 5.4 and 5.35) are for k (and not $2k$ as usually determined) unless it was not clear which was reported, in which case the value is the one given by the authors. Values of k which have been directly measured are given with the error limits as reported by the authors. The ratios of rate constants in the *Ratio* column are given in the form k/k_X where k_X symbolizes the rate of the competing reaction of the same short-lived species with X. In the *Comments* column ratios may be given as k/k_X or k_X/k_Y where k, k_X, and k_Y are rates of the same short-lived species with the reactant in column 2, X, and Y, respectively. For some of the entries only a ratio is given, but in most cases relative rates have been calculated from the ratios and are listed under the k column. The values of k obtained from ratios are designated as relative (rel.) and have been calculated by using the rates in table 1 (or, in a few cases, using a rate given under *Comments*). At the end of each entry for solutes which have been used in competition studies a list of entry numbers is given in which ratios involving that solute are reported.

Columns are included identifying the source of the radical and the method of measurement; other

information is given under *Comments*, such as activation energy, frequency factor, equilibrium constant, deuterium isotope effect (k_H/k_D). Temperature is 20-25°C, or assumed to be at room temperature, unless otherwise specified.

Abbreviations which have been used are tabulated at the end of this section. References are designated by number as assigned by the Radiation Chemistry Data Center; the first two digits of the number specify the year. The references are given at the end of the tables. A formula index for the solutes refers to entry numbers in the various tables and includes references to the tables of e^-_{aq} and H reactions already published.

Abbreviations and Symbols

A	frequency factor
abs.	absorption
abstr.	abstraction
acac	acetylacetone
ala	alanine
anal.	analysis

[a]Number in parentheses indicates the number of the reaction in the following tables.

[b]Most recently reported directly determined rate.

[c]Cited by Dorfman and Adams in NSRDS–NBS 46 (73–0299) as "most reliable values – values of which the accuracy (within the stated experimental uncertainty or lacking such a statement, within ± 30%) seems least open to question"; more than one such value is cited in NSRDS–NBS 46 for some reactions.

[d]Mean value of measured rates with $k(OH + EtOH) = 1.85 \times 10^9 dm^3 mol^{-1} s^{-1}$ as a secondary reference standard: Willson, Greenstock, Adams, Wageman and Dorfman (71–0578).

[e]Mean value of relative rates normalized for values listed in this table for competing reactions.

[f]Reference for the most recently reported directly measured rate.

[g]Recent directly determined rates are 5.1×10^9 at natural pH (71–0578) and 5.5×10^9 at pH 9 (72–0047).

TABLE 4. Reactions of OH with organic solutes – Continued

No.	Solute and Reaction	pH	k	Ratio	Source	Method	Comment	Ref.
3.228	1–butene	—	7.7×10^9 (rel.)	$k/k_{I^-} = 0.64$	p.r.	opt.	c.k.; obs. formn. of I_2^- at 400 nm.	67–0041
3.229	1–butene–3–one	—	8.5×10^9 (rel.)	$k/k_{CNS^-} = 0.77$	p.r.	opt.	c.k.	70–0165
3.230	*N*–*tert*–butylacetamide	5–6	1.1×10^9 (rel.)	$k/k_{CNS^-} = 0.103 \pm 0.01$	p.r.	opt.	c.k.	71–0414
	tert–butyl alcohol	*See* 2–methyl–2–propanol (3.546).						
3.231	butylamine	—	7.3×10^9 (rel.)	$k/k_{ferro} = 0.79$	p.r.	opt.	c.k.; calcd. from obs. values at pH 8–13.1.	73–0016
			8.3×10^9 (rel.)	$k/k_{CNS^-} = 0.75$				
			5.4×10^9 (rel.)	$k/k_{NB} = 1.7$				
3.232	*tert*–butylamine $OH + (CH_3)_3CNH_2 \rightarrow H_2O + \cdot CH_2(CH_3)_2CNH_2 + (CH_3)_3CNH$	12	6.0×10^9 (rel.)	—	p.r.	opt.	c.k., extrapolated value based on $k/k_{CNS^-} = 3.64 \times 10^{-1}$ (obs.) at pH 10.9.	71–0585
3.233	butylammonium ion	4	5.5×10^9 (rel.)	$k/k_{CNS^-} = 0.5$	p.r.	opt.	c.k.	70–0371
		—	2.8×10^9 (rel.)	$k/k_{ferro} = 0.3$	p.r.	opt.	c.k.; calcd. from obs. values at pH 8–13.1.	73–0016
			3.1×10^9 (rel.)	$k/k_{CNS^-} = 0.28$				
			2.05×10^9 (rel.)	$k/k_{NB} = 0.64$				
3.234	*tert*–butylammonium ion $OH + (CH_3)_3CNH_3^+ \rightarrow H_2O + \cdot CH_2(CH_3)_2CNH_3^+$	4	2.4×10^8 (rel.)	$k/k_{CNS^-} = 0.022$	p.r.	opt.	c.k.	70–0371
		3.2	7.0×10^8 (rel.)	$k/k_{CNS^-} = 0.0636$	p.r.	opt.	c.k.	71–0585
	butyleneoxide–1,2	*See* 1,2–epoxybutane (3.352).						
3.235	*tert*–butyl mercaptan $OH + (CH_3)_3CSH \rightarrow H_2O + (CH_3)_3CS$	7	1.9×10^{10} (rel.)	$k/k_{RNO} = 1.49 \pm 0.26$	p.r.	opt.	c.k.	69–0553
3.236	*p*–*tert*–butylphenol	9	1.9×10^{10} (rel.)	$k/k_{RNO} = 1.49 \pm 0.26$	γ–r.	opt.	c.k.	72–0837
3.237	butyraldehyde	2.0	3.8×10^9 (rel.)	$k/k_{CNS^-} = 0.35$	p.r.	opt.	c.k.	65–0387
3.238	butyrate ion	9	1.85×10^9 (rel.)	$k/k_{EtOH} = 1$	γ–r.	opt.	c.k. with RNO.	66–0423
3.239	butyric acid	1	1.6×10^8 (rel.)	$k/k_{Fe^{2+}} = 0.72$	Fenton	chem.	c.k.	49–0002
		2–2.2	1.9×10^9 (rel.)	$k/k_{thym} = 0.35 \pm 0.03$	γ–r.	opt.	c.k.	67–0461
3.240	carbon disulfide $OH + CS_2 \rightarrow CS_2OH \rightleftharpoons CSO^- + H^+$	7.6	8.0×10^9 (rel.)	$k/k_{CNS^-} = 0.73$	p.r.	opt.	c.k.; meas. abs. increase at 280 nm (CS_2OH) or at 500 nm.	67–0687, 73–1015
3.241	carboxymethylcellulose (polyanion)	—	2.6×10^9 (rel.)	$k/k_{CNS^-} = 0.24$	p.r.	opt.	c.k.; concn. in monomer units.	68–0352
3.242	carboxypeptidase A	7.8	$(6.9 \pm 1.0) \times 10^{10}$	—	p.r.	opt.	p.b.k. at 320 nm; contains ~ 15% H reaction product.	73–1060
3.243	catalase	—	1.4×10^{11} (rel.)	$k/k_{CNS^-} = 12.58$	p.r.	opt.	c.k.; mol. wt. ≅ 2.5×10^5.	66–0499
3.244	cellobiose	6.5	3.6×10^9 (rel.)	$k/k_{RNO} = 0.29 \pm 0.01$	γ–r.	opt.	c.k.	69–0580
3.245	chloral hydrate	1	1.1×10^9 (rel.)	$k/k_{Fe^{2+}} = 4.7$	Fenton	chem.	c.k.	49–0002
	$OH + CCl_3CH(OH)_2 \rightarrow H_2O + CCl_3C(OH)_2$	—	3.15×10^9 (rel.)	$k/k_{CNS^-} = 0.285$	p.r.	opt.	c.k.	73–0062
3.246	chloroacetate ion	9	5.5×10^7 (rel.)	$k/k_{EtOH} = 0.0296$	γ–r.	opt.	c.k. with RNO.	66–0423
	(I) $OH + ClCH_2COO^- \rightarrow H_2O + ClCHCOO^-$	6.5	6×10^9 (I) (rel.)	$k_I/k_{II} \cong 4.0$	γ–r.	chem.	c.k.	69–0422
	(II) $OH + ClCH_2COO^- \rightarrow Cl^- +$ products		1.5×10^8 (II) (rel.)	$k_{II}/k_{MeOH} \cong 0.08$				

TABLE 4. Reactions of OH with organic solutes – Continued

No.	Solute and Reaction	pH	k	Ratio	Source	Method	Comment	Ref.
3.247	chloroacetic acid	2–2.2	8.1×10^7 (rel.)	$k/k_{thym} = 0.015 \pm 0.0015$	γ–r.	opt.	c.k.	67–0461
		1	4.3×10^7 (rel.)	$k/k_{CNS^-} = 0.00394$	p.r.	opt.	c.k.	65–0387
		~0	—	$k/k_{acrylamide} = 0.012$	Fenton	pol.	c.k.	72–9162
3.248	chlorobenzene	10.7	6.3×10^9 (rel.)	$k/k_{BzO^-} = 1.10$	γ–r.	trac.	c.k.; meas. $^{14}CO_2$.	65–0099
		9	4.5×10^9 (rel.)	$k/k_{RNO} = 0.36 \pm 0.05$	γ–r.	opt.	c.k.	69–0280
3.248a	*o*–chlorobenzoate ion	7	6.8×10^9 (rel.)	$k/k_{2\text{-PrOH}} = 3.1$	γ–r.	chem.	c.k.	74–0167
3.248b	*m*–chlorobenzoate ion	7	6.3×10^9 (rel.)	$k/k_{2\text{-PrOH}} = 2.8$	γ–r.	chem.	c.k.	74–0167
3.249	*p*–chlorobenzoate ion	9	3.2×10^9 (rel.)	$k/k_{EtOH} = 1.75$	γ–r.	opt.	c.k. with RNO.	66–0441
	$OH + ClC_6H_4COO^- \rightarrow Cl(OH)C_6H_4COO^-$	6–9.4	$(5.0 \pm 0.8) \times 10^9$	—	p.r.	opt.	p.b.k. at 345 nm; cor. for (OH + OH) and (H + aromatic).	68–0304
		7	7.3×10^9 (rel.)	$k/k_{2\text{-PrOH}} = 3.3$	γ–r.	chem.	c.k.	74–0167
3.250	2–chloroethanol	—	9.25×10^8 (rel.)	$k/k_{EtOH} = 0.5$	γ–r.	opt.	c.k. with RNO.	67–0050
3.251	chloroform	0.4	1.0×10^7 (rel.)	$k/k_{Fe^{2+}} = 0.043$	β–r.	chem.	c.k.	60–0016
	$OH + CHCl_3 \rightarrow H_2O + CCl_3$	0.4	5.3×10^6 (rel.)	$k/k_{Fe^{2+}} = 0.023$	Fenton	chem.	c.k.	60–0016
		9	1.4×10^7 (rel.)	$k/k_{EtOH} = 0.0077$	γ–r.	opt.	c.k. with RNO.	66–0423
		—	7.4×10^6 (rel.)	—	r.	chem.	c.k. with Fe^{2+}.	66–9002
		5.5–5.8	~ 5×10^6 (rel.)	—	γ–r.	chem.	est. from effect of Fe^{2+} on $G(Cl^-)$.	70–0013
3.252	5–chloroindole	9.0	$(1.91 \pm 0.04) \times 10^{10}$ (rel.)	—	γ–r.	opt.	c.k. with RNO; rel. to k(OH + tryptophan) = 1.25×10^{10}.	71–0556
3.253	*m*–chlorophenol	9	7.2×10^9 (rel.)	$k/k_{RNO} = 0.58 \pm 0.05$	γ–r.	opt.	c.k.	72–0837
3.254	*o*–chlorophenol	9	8.2×10^9 (rel.)	$k/k_{RNO} = 0.66 \pm 0.12$	γ–r.	opt.	c.k.	72–0837
3.255	*m*–chlorophenyl–β–D–glucopyranoside	—	3.2×10^9 (rel.)	—	γ–r.	opt.	c.k. with RNO; rel. to phenyl–β–D–glucopyranoside (X); k(OH + X) = 4.4×10^9.	71–0056
3.256	*p*–chlorophenyl–β–D–glucopyranoside	—	3.4×10^9 (rel.)	—	γ–r.	opt.	c.k. with RNO; relative to phenyl–β–D–glucopyranoside (X); k(OH + X) = 4.4×10^9.	71–0056
		—	5.7×10^9 (rel.)	$k/k_{CNS^-} = 0.515$	p.r.	opt.	c.k.	71–0056
3.257	2–chloropropionate ion	8.5	2.4×10^8 (rel.)	$k/k_{EtOH} = 0.13$	γ–r.	opt.	c.k. with RNO.	67–0050
3.258	3–chloropropionate ion	8.5	3.1×10^8 (rel.)	$k/k_{EtOH} = 0.17$	γ–r.	opt.	c.k. with RNO.	67–0050
3.259	2–chloropyridine	9	1.75×10^9 (rel.)	$k/k_{RNO} = 0.14 \pm 0.01$	γ–r.	opt.	c.k.	69–0280
3.260	4–chloropyridine	9	3.1×10^9 (rel.)	$k/k_{RNO} = 0.25 \pm 0.01$	γ–r.	opt.	c.k.	69–0280
3.261	chlorotrifluoromethane	—	~ 5×10^8 (rel.)	—	—	—	c.k. with BzO^-; cited from unpubl. data.	70–0407
3.262	5–chlorouracil	7	5.2×10^9 (rel.)	$k/k_{CNS^-} = 0.472$	p.r.	opt.	c.k.	72–0049
		7	5.5×10^9	—	p.r.	opt.	p.b.k. at 340 nm.	72–0049
		11	5.8×10^9	—	p.r.	opt.	p.b.k. at 340 nm.	72–0049
3.263	chondroitin 4–sulfate l	—	8.0×10^8 (rel.)	$k/k_{CNS^-} = 0.073$	p.r.	opt.	c.k.; concn. of polyanion in hexose units.	70–3081
3.264	chondroitin 6–sulfate l	—	6.8×10^8 (rel.)	$k/k_{CNS^-} = 0.062$	p.r.	opt.	c.k.; concn. in hexose units.	70–3081

TABLE 4. Reactions of OH with organic solutes – Continued

No.	Solute and Reaction	pH	k	Ratio	Source	Method	Comment	Ref.
3.265	α–chymotrypsin	6.6	3.5×10^{10} (rel.)	$k/k_{RNO} = 2.8$	γ–r.	opt.	c.k.	73–0548
3.266	citric acid	2–2.2	5.4×10^{8} (rel.)	$k/k_{thym} = 0.10 \pm 0.051$	γ–r.	opt.	c.k.	67–0461
		1	5.0×10^{7} (rel.)	$k/k_{CNS^-} = 0.00455$	p.r.	opt.	c.k.	65–0387
3.267	collagen	—	4.0×10^{11} (rel.)	—	p.r.	opt.	c.k. with CNS^-; reference rate not given; mol. wt. 360,000.	68–3007
3.268	*o*–cresol	9	1.1×10^{10} (rel.)	$k/k_{RNO} = 0.90 \pm 0.15$	γ–r.	opt.	c.k.	72–0837
3.269	*p*–cresol	9	1.3×10^{10} (rel.)	$k/k_{RNO} = 1.04 \pm 0.09$	γ–r.	opt.	c.k.	72–0837
		5.5	$(1.2 \pm 0.2) \times 10^{10}$ (rel.)	$k/k_{CNS^-} = 1.1$	p.r.	opt.	c.k.	73–0003
3.270	crotonaldehyde	—	5.8×10^{9} (rel.)	$k/k_{CNS^-} = 0.53$	p.r.	opt.	c.k.	70–0165
3.271	crotonic acid	1	2.7×10^{9} (rel.)	$k/k_{MeOH} = 2.96$	Fenton	chem.	c.k.; $k_{MeOH}/k_{Fe^{2+}} = 4.3$.	73–9341
3.272	cyanoacetate ion	9	1.6×10^{7} (rel.)	$k/k_{EtOH} = 0.0084$	γ–r.	opt.	c.k. with RNO.	66–0423
3.272a	cyanocobalamin	—	6.5×10^{9}	—	p.r.	opt.	p.b.k. at 310–330 nm.	74–1105
3.273	5–cyanoindole	9.0	$(1.06 \pm 0.24) \times 10^{10}$ (rel.)	—	γ–r.	opt.	c.k. with RNO; rel. to k(OH + tryptophan) $= 1.25 \times 10^{10}$.	71–0556
3.274	1–(*p*–cyanophenyl)–ethanol	1.7–1.8	3.3×10^{9} (rel.)	$k/k_{RNO} = 1.3$	Fenton	chem.	c.k. with 1–phenylethanol.	74–9006
3.275	*p*–cyanophenyl–β–D–glucopyranoside	—	3.5×10^{9} (rel.)	—	γ–r.	opt.	c.k. with RNO; rel. to k(OH + X) $= 4.4 \times 10^{9}$, X = phenyl–β–D–glucopyranoside.	71–0056
3.276	cyclobutanecarboxylate ion	9	3.0×10^{9} (rel.)	$k/k_{EtOH} = 1.6$	γ–r.	opt.	c.k. with RNO.	66–0423
3.277	cycloheptanol	1.7–1.8	2.0×10^{9} (rel.)	$k/k_{2\text{-PrOH}} = 0.91$	Fenton	chem.	c.k.	74–9006
3.278	cycloheptanol–1–*d*	1.7–1.8	1.5×10^{9} (rel.)	$k/k_{2\text{-PrOH}} = 0.70$	Fenton	chem.	c.k. with 1–phenylethanol.	74–9006
3.279	cycloheptatriene	—	$(7 \pm 2) \times 10^{9}$ (rel.)	—	p.r.	opt.	c.k. with CNS^-; reference rate not given.	71–0710
3.280	1,3–cyclohexadiene OH + $C_6H_8 \rightarrow H_2O + C_6H_7$ and C_6H_8OH	7.0	1×10^{10} (rel.)	$k/k_{PNBA^-} = 3.8$	p.r.	opt.	c.k., formn. of $PNBA^-$–OH adduct at 415 nm; 30% H abstraction.	70–0211
3.281	1,4–cyclohexadiene OH + $C_6H_8 \rightarrow H_2O + C_6H_7$ and C_6H_8OH	7.0	7.7×10^{9} (rel.)	$k/k_{PNBA^-} = 2.96$	p.r.	opt.	c.k.; formn. of $PNBA^-$–OH adduct at 415 nm; 45% H abstraction.	70–0211
3.282	cyclohexanecarboxylate ion	9	5.4×10^{9} (rel.)	$k/k_{EtOH} = 2.9$	γ–r.	opt.	c.k. with RNO.	66–0423
3.283	*trans*–1,2–cyclohexanediaminetetraacetic acid	~0	—	$k/k_{acrylamide} = 2.0$	Fenton	pol.	c.k.	72–9162
3.284	cyclohexene OH + $C_6H_{10} \rightarrow H_2O + C_6H_9$	7.0	8.8×10^{9} (rel.)	$k/k_{PNBA^-} = 3.4$	p.r.	opt.	c.k.; formn. of $PNBA^-$–OH adduct at 415 nm.	70–0211

TABLE 4. Reactions of OH with organic solutes – Continued

No.	Solute and Reaction	pH	k	Ratio	Source	Method	Comment	Ref.
3.725b	1,2,4–trimethoxy–benzene	—	$(8.1 \pm 0.8) \times 10^9$	—	p.r.	—	—	75–1171
3.725c	1,3,5–trimethoxy–benzene	—	$(8.1 \pm 0.8) \times 10^9$	—	p.r.	—	—	75–1171
	trimethylacetate ion *See* privalate ion (3.622).							
3.726	trimethylamine OH + $(CH_3)_3N \rightarrow H_2O + CH_2N(CH_3)_2$	—	1.3×10^{10} (rel.)	$k/k_{CNS^-} = 1.2$	p.r.	opt.	c.k.; extrapolated value based on $k/k_{CNS^-} = 1.1$ at pH 10.9.	71–0585
3.727	trimethylammonium ion OH + $(CH_3)_3NH^+ \rightarrow H_2O + CH_2NH^+(CH_3)_2$	7.5	4×10^8 (rel.)	$k/k_{CNS^-} = 0.0364$	p.r.	opt.	c.k.	71–0585
3.727a	1,2,3–trimethyl–benzene	~7	7.0×10^9	—	p.r.	opt.	p.b.k.; OH addn. as well as H abstr.; rate for H abstr. = 1.3×10^9.	75–1009
3.727b	1,2,4–trimethyl–benzene	~7	6.2×10^9	—	p.r.	opt.	p.b.k.; OH addn. and H abstr.; rate for H abstr. = 1.15×10^9.	75–1009
3.727c	1,3,5–trimethyl–benzene (Mesitylene)	~7	6.4×10^9	—	p.r.	opt.	p.b.k.; OH addn. and H abstr.; rate for H abstr. = 1.2×10^9.	75–1009
3.728	2,4,6–trimethyl–3–hydroxypyridine	6.5	2.5×10^9 (rel.)	$k/k_{RNO} = 0.20 \pm 0.03$	γ–r.	opt.	c.k.	69–0580
3.729	2,4,5–trimethyl–phenyl–β–D–glucopyranoside	—	3.2×10^9 (rel.)	—	γ–r.	opt.	c.k. with RNO; rel. to k(OH + X) = 4.4×10^9, X = phenyl–β–D–glucopyranoside.	71–0056
3.730	trimethyl phosphate OH + $(CH_3O)_3PO \rightarrow H_2O + CH_2O(CH_3O)_2PO$	—	1.2×10^8 (rel.)	$k/k_{CNS^-} = 0.011$	p.r.	opt.	c.k.	72–3008
3.731	2,4,6–trimethyl–1,3,5–trioxane	9	1×10^9 (rel.)	$k/k_{EtOH} = 0.546$	γ–r.	opt.	c.k. with RNO.	66–0423
3.732	1,3,5–trioxane	9	4.9×10^8 (rel.)	$k/k_{EtOH} = 0.264$	γ–r.	opt.	c.k. with RNO.	66–0423
	trypaflavin *See* acriflavin (3.141).							
3.733	trypsin	—	2.5×10^{10} (rel.)	—	X–r.	biol	effect on enzyme inact. compared with acetone, glycylglycine, glycerol, glucose, ethanol, formate ion.	67–3044
		~7	$(8.2 \pm 1.2) \times 10^{10}$	—	p.r.	opt.	p.b.k. at 330 nm. or c.k. with glucose ($k = 1 \times 10^9$).	71–3069
		6.3	3.9×10^{10} (rel.)	$k/k_{RNO} = 3.1$	γ–r.	opt.	c.k.	73–0548
3.734	trypsinogen	7.4	$(8.5 \pm 0.5) \times 10^{10}$ (rel.)	—	p.r.	opt.	c.k. with glucose ($k = 1 \times 10^9$); obs. 330 nm abs.	71–3069
3.735	tryptophan, positive ion	2–2.2	1.1×10^{10} (rel.)	$k/k_{CNS^-} = 0.985$	p.r.	opt.	c.k.	65–0388
		2–2.2	7.7×10^9 (rel.)	$k/k_{thym} = 1.42 \pm 0.15$	γ–r.	opt.	c.k.; k from initial slope of competition plot.	65–0388, 67–0461

TABLE 4. Reactions of OH with organic solutes – Continued

No.	Solute and Reaction	pH	k	Ratio	Source	Method	Comment	Ref.
3.736	L–tryptophan, positive ion	1	$(1.25 \pm 0.2) \times 10^{10}$	—	p.r.	opt.	p.b.k. at 560 nm.	69–0459
3.737	tryptophan, zwitterion	6.1–6.3	1.4×10^{10} (rel.)	$k/k_{CNS^-} = 1.29$	p.r.	opt.	c.k.	65–0388
		6.2	7.8×10^{9} (rel.)	$k/k_{RNO} = 0.62$	γ–r.	opt.	c.k.	73–0548
3.738	L–tryptophan, zwitterion	8.8	$(1.2 \pm 0.3) \times 10^{10}$	—	p.r.	opt.	p.b.k. at 310 nm.	69–0459
			For other ratios see: 3.211, 3.252, 3.273, 3.333, 3.334, 3.335, 3.454, 3.468, 3.470, 3.472, 3.517, 3.539, 3.540, 3.541, 3.542.					
3.739	omitted							
3.740	tyramine, negative ion	11.2	$(1.5 \pm 0.2) \times 10^{10}$	$k/k_{CNS^-} = 1.36$	p.r.	opt.	c.k.	73–0003
3.741	tyrosine, positive ion	2–2.2	1×10^{10} (rel.)	$k/k_{thym} = 1.87$	p.r.	opt.	c.k.	65–0388
3.742	L–(–)–tyrosine, positive ion	4.0	1.5×10^{10} (rel.)	$k/k_{HCOO^-} = 4.2$	p.r.	opt.	c.k.; meas. transient at 310–320 nm.	68–0062
3.743	tyrosine, negative ion	5.2	$(1.4 \pm 0.3) \times 10^{10}$ (rel.)	$k/k_{CNS^-} = 1.3$	p.r.	opt.	c.k.	73–0003
		6.5	1.05×10^{10} (rel.)	$k/k_{RNO} = 0.84$	γ–r.	opt.	c.k.	73–0548
3.744	tyrosine, dinegative ion	11.2	$(1.3 \pm 0.3) \times 10^{10}$ (rel.)	$k/k_{CNS^-} = 1.2$	p.r.	opt.	c.k.	73–0003
3.745	L–(–)–tyrosine, negative ion	10.6	2×10^{10} (rel.)	$k/k_{carb} = 53.7$	p.r.	opt.	c.k.	68–0062
3.746	uracil	9.0	6.8×10^{9} (rel.)	$k/k_{RNO} = 0.542 \pm 0.027$	γ–r.	opt.	c.k.	65–0356, 67–0555
	$OH + C_5H_6N_2O_2 \rightarrow C_5H_6N_2O_2{\cdot}OH$	2–2.2	4.8×10^{9} (rel.)	$k/k_{CNS^-} = 0.44$	p.r.	opt.	c.k.	65–0388
		5–5.2	5.2×10^{9} (rel.)	$k/k_{CNS^-} = 0.469$	p.r.	opt.	c.k.	65–0388
		7.3–7.5	5.2×10^{9} (rel.)	$k/k_{CNS^-} = 0.477$	p.r.	opt.	c.k.	65–0388
		7.0	$(7.4 \pm 1.0) \times 10^{9}$	—	p.r.	opt.	d.k. at 270 nm.	68–0316
		6.5	7.4×10^{9} (rel.)	$k/k_{CNS^-} = 0.67$	p.r.	opt.	c.k.; cor. for e^-_{aq} not scav. by 10^{-2} M H_2O_2.	68–0316, 69–0571
		7	$(6.0 \pm 0.3) \times 10^{9}$	—	p.r.	opt.	d.k. at 270 nm.	69–0571
		7	$(6.5 \pm 0.7) \times 10^{9}$	—	p.r.	opt.	p.b.k. at 385 nm.	69–0571
		5.9	$(5.8 \pm 0.2) \times 10^{9}$	—	p.r.	opt.	p.b.k. at 400 nm.	70–3069
		nat.	4.2×10^{9} (rel.)	$k/k_{ferro} = 0.452$	p.r.	opt.	c.k.	71–0578
		—	6.0×10^{9}	—	p.r.	opt.	p.b.k. as well as as d.k.	73–3016
		6–7	4.5×10^{9} (rel.)	$k/k_{RNO} = 0.36$	γ–r.	opt.	c.k.; 17°C.	75–0294
			For other ratios see: 3.289, 3.290.					
3.747	uracil dinucleotide (UpU)	7	$(3.8 \pm 0.2) \times 10^{9}$	—	p.r.	opt.	d.k. at 270 nm.	69–0571
		7	5.3×10^{9} (rel.)	$k/k_{CNS^-} = 0.48 \pm 0.08$	p.r.	opt.	c.k.; rates calcd. per nucleotide base.	69–0571
	uracil mononucleotides *See* uridine monophosphate (3.751).							
3.748	uracil oligonucleotide (oligo U)	7	$(4.3 \pm 0.2) \times 10^{9}$	—	p.r.	opt.	d.k. at 270 nm.	69–0571
		7	4×10^{9} (rel.)	$k/k_{CNS^-} = 0.36 \pm 0.07$	p.r.	opt.	c.k.; rate calcd. per nucleotide base.	69–0571
	uracil polynucleotide (poly U) *See* polyuridylic acid (3.631).							
3.749	urea	9.0	$< 1.25 \times 10^{6}$	$k/k_{RNO} < 10^{-4}$	γ–r.	opt.	c.k.	65–0356
3.749a	uric acid	6–7	7.2×10^{9} (rel.)	$k/k_{RNO} = 0.58$	γ–r.	opt.	c.k.; 17°C.	75–0294
3.750	uridine	7	4.2×10^{9} (rel.)	$k/k_{CNS^-} = 0.38 \pm 0.08$	p.r.	opt.	c.k.; cor. for incomplete scavenging of e^-_{aq} by H_2O_2.	68–0316, 69–0571
		7	$(6.5 \pm 0.5) \times 10^{9}$	—	p.r.	opt.	d.k. at 270 nm.	69–0571
		7	$(4.1 \pm 0.2) \times 10^{9}$	—	p.r.	opt.	p.b.k.; OH adduct obs. at 385 nm.	69–0571
		6.5	2.4×10^{9} (rel.)	$k/k_{RNO} = 0.19$	γ–r.	opt.	c.k.	69–0580

TABLE 4. Reactions of OH with organic solutes – Continued

No.	Solute and Reaction	pH	k	Ratio	Source	Method	Comment	Ref.
3.750 cont.		5.4	$(4.5 \pm 0.3) \times 10^9$	—	p.r.	opt.	p.b.k. at 400 nm.	70–3069
		7	4.1×10^9 (rel.)	$k/k_{CNS^-} = 0.36$	p.r.	opt.	c.k.; unpubl. data.	73–1071
3.751	uridine monophosphate (uridylic acid)	7	5.2×10^9 (rel.)	$k/k_{CNS^-} = 0.47 \pm 0.1$	p.r.	opt.	c.k.; cor. for incomplete scav. of e_{aq}^- by H_2O_2.	68–0316, 69–0571
		7	$(4.6 \pm 0.3) \times 10^9$	—	p.r.	opt.	d.k. at 270 nm.	69–0571
		7	$(4.0 \pm 0.4) \times 10^9$	—	p.r.	opt.	p.b.k.; OH adduct obs. at 385 nm.	69–0571
		6.5	2.5×10^9 (rel.)	$k/k_{RNO} = 0.2 \pm 0.02$	γ–r.	opt.	c.k.	69–0580
		7.0	$(5.1 \pm 0.3) \times 10^9$	—	p.r.	opt.	p.b.k. at 400 nm.	70–3069
		7	4.5×10^9	—	p.r.	opt.	p.b.k. at 390 nm.	73–1071
3.752	valerate ion	9	2.9×10^9 (rel.)	$k/k_{EtOH} = 1.55$	γ–r.	opt.	c.k. with RNO.	66–0423
3.753	valine	2–2.2	7.2×10^8 (rel.)	$k/k_{thym} = 0.134$	γ–r.	opt.	c.k.	65–0388
		6.6	6.6×10^8 (rel.)	$k/k_{RNO} = 0.053$	γ–r.	opt.	c.k.	73–0548
3.754	vinyl chloride $OH + CH_2{=}CHCl \rightarrow CH_2OHCHCl$	—	$(7.1 \pm 0.5) \times 10^9$ (rel.)	—	p.r.	opt.	c.k. with CNS^-; reference rate not given.	71–0709
	vinyl methyl ketone *See* 1–butene–3–one (3.229).							
	Vitamin B12 *See* cyanocobalamin (3.272a).							
	Vitamin B12a *See* hydroxocobalamin (3.447).							
3.754a	xanthine	8.0	8.9×10^9 (rel.)	$k/k_{RNO} = 0.71$	γ–r.	opt.	c.k.; 17°C.	75–0294
3.755	*o*–xylene	~7	6.7×10^9	—	p.r.	opt.	p.b.k.; OH addn. and H abstr.; rate for H abstr. = 8.0×10^8.	75–1009
3.756	*m*–xylene	~7	7.5×10^9	—	p.r.	opt.	p.b.k.; OH addn. and H abstr.; rate for H abstr. 9.0×10^8.	75–1009
3.757	*p*–xylene	~7	7.0×10^9	—	p.r.	opt.	p.b.k.; OH addn. and H abstr.; rate for H abstr. 8.4×10^8.	75–1009
3.758	xylenol orange	11	2.2×10^{10} (rel.)	$k/k_{MeOH} = 24.5$	γ–r.	opt.	c.k.	71–0437

TABLE 5. Reactions of O^- with water, transients from water, inorganic solutes, and organic solutes

No.	Solute and reaction	pH	k	Ratio	Source	Method	Comment	Ref.
4.1	H_2O							
	$O^- + H_2O \rightarrow OH^- + OH$	11	2×10^6 (rel.)	$k/k_{EtOH} = (9.6 \pm 1.0) \times 10^{-2}$ $M[H_2O]$	p.r.	opt.	c.k. with CO_3^{2-}; N_2O and O_2–satd. solns.	70–0511
		11	1.5×10^6 (rel.)	$k/k_{MeOH} = (1.3 \pm 0.1) \times 10^{-1}$ $M[H_2O]$	p.r.	opt.	c.k. with CO_3^{2-}; N_2O and O_2–satd. solns.	70–0511
		8–8.8	$(1.75 \pm 0.4) \times 10^6$ (rel.)	—	p.r.	opt.	c.k.; soln. contains ferrocyanide with methanol or ethanol; assumed $k(O^- + \text{ferro}) \leq 3 \times 10^7$, $k(O^- + EtOH) = 9.8 \times 10^8$, $k(O^- + MeOH) = 5.3 \times 10^8$.	71–0137
4.2	O^- → 1st order decay	13–13.7	$4.3 \times 10^4\ s^{-1}$ (rel.)	$k/k_{oxy} = (1.2 \pm 0.24) \times 10^{-5} dm^{-3}mol$	f.phot.	opt.	d.k. of O_3^-.	68–7277
		>13	$4.3 \times 10^4\ s^{-1}$ (rel.)	$k/k_{oxy} = (1.2 \pm 0.4) \times 10^{-5}$ $dm^{-3}mol$	p.r.	opt.	d.k. of O_3^-.	69–0002
4.3	e^-_{aq}							
	$O^- + e^-_{aq} \rightarrow 2OH^-$	alk.	$\sim 2 \times 10^{10}$	—	—	—	See 1.9, S1.5, NSRDS–NBS 43 and supplement.	73–0030 75–0002
4.4	OH							
	$O^- + OH \rightarrow HO_2^-$	alk.	$< 2.6 \times 10^{10}$	—	—	—	See 3.4 (Table 2)	—
4.5	O^-							
	$O^- + O^- \rightarrow O_2^{2-}$	12–13	$\sim 1 \times 10^9$	—	p.r.	opt.	curve fitting; N_2O–$Fe(CN)_6^{4-}$ soln.	64–0213
		13	8.3×10^9 (rel.)	$k/k_{oxy} = 2.3$	p.r.	opt.	c.k.; obs. O_3^-.	66–0001
		>12	$\leq 9 \times 10^8$ (rel.)	—	p.r.	opt.	c.k. with $Fe(CN)_6^{4-}$; est. based on numerous assumptions; $pK_a(OH) = 11.9$.	66–0424
4.6	BH_4^-							
	$O^- + BH_4^- + (H_2O) \rightarrow BH_4 + 2OH^-$	11–12.83	$< 4 \times 10^8$	—	p.r.	opt.	calcd. from p.b.k.; assumed $pK_a(OH) = 11.8$ and $k(OH + BH_4^-) = 1.2 \times 10^{10}$.	70–1046
4.7	Br^-							
	$O^- + Br^- \rightleftharpoons BrO^{2-}$ $BrO^{2-}(+H_2O) \rightleftharpoons$	13	4.5×10^7 (rel.)	$k/k_{2\text{-PrOH}} = 0.03$	γ–r.	chem.	c.k.; obs. G(acetone).	68–0602
	$Br + 2OH^-$	6–7	2×10^8 (rel.)	$k/k_{EtOH} = 0.18$ $k/k_{MeOH} = 0.34$	p.r.	opt.	c.k.; soln. contains N_2O ($e^-_{aq} + N_2O \rightarrow N_2 + O^-$).	71–0137
4.8	BrO^-							
	$O^- + BrO^-(+H_2O) \rightarrow BrO + O^{2-}$ or	11–13	4.4×10^9 (rel.)	$k/k(OH + CO_3^{2-}) = 11$	p.r.	opt.	c.k.; $pK_a(OH) = 11.9$; $\mu = 0.4$.	68–0153
	$\rightarrow BrO + 2OH^-$	12–13	$(2.0 \pm 0.4) \times 10^9$ (rel.)	—	f.phot.	opt.	d.k. of O_3^-; anal. of data is complex.	69–7340

TABLE 5. Reactions of O^- with water, transients from water, inorganic solutes, and organic solutes – Continued

No.	Solute and reaction	pH	k	Ratio	Source	Method	Comment	Ref.
4.9	BrO_2^-							
	$O^- + BrO_2^- (+ H_2O) \rightarrow BrO_2 + 2OH^-$	13	1.7×10^9 (rel.)	$k/k(OH + CO_3^{2-}) = 4.5$	p.r.	opt.	c.k.; assume $k(OH + BrO_2^-) = 1.9 \times 10^9$ and $pK_a(OH) = 11.9$; $\mu = 0.4$.	68–0153
		12–13	$(1.1 \pm 0.2) \times 10^9$ (rel.)	—	f.phot.	opt.	d.k. of O_3^-; data anal. is complex.	69–7340
4.10	BrO_3^-							
	$O^- + BrO_3^- (+ H_2O) \rightarrow BrO_3 + 2OH^-$	12–13	$(1.2 \pm 0.2) \times 10^6$ (rel.)	—	f.phot.	chem.	c.k. of O_3^-; more than one rate involved in calcn.; may be up to 30% lower.	69–7340
4.11	BrO_4^-	7	$< 10^7$	—	p.r.	opt.	very slow or no reaction.	73–0106
4.12	CNS^-							
	$O^- + CNS^- (+ H_2O) \rightarrow CNSOH^- + OH^-$	13.5	1.0×10^9	—	p.r.	opt.	p.b.k.; assume product is CNS.	65–0386
	$CNSOH^- + CNS^- \rightleftharpoons (CNS)_2^- + OH^-$	6–7	1.6×10^9 (rel.) 1.6×10^9 (rel.)	$k/k_{EtOH} = 1.5$ $k/k_{MeOH} = 2.8$	p.r.	opt.	c.k.	71–0137
	$CNSOH^- \rightleftharpoons CNS + OH^-$ $CNS + CNS^- \rightleftharpoons (CNS)_2^-$	alk.	1.1×10^9	—	p.r.	opt.	p.b.k. at 0.36 *M* NaOH; $k = 1.3 \times 10^9$ at 1.08 *M* NaOH.	71–0137
		13	$(3.7 \pm 0.3) \times 10^9$	—	p.r.	opt.	p.b.k.	72–0126
4.13	CO_3^{2-}							
	$O^- + CO_3^{2-} (+ H_2O)$	—	$\leq 10^7$	—	p.r.	opt.	no details given.	66–0139
	$\rightarrow CO_3^- + 2OH^-$	14	$\leq 5 \times 10^5$	—	p.r.	opt.	p.b.k.	70–0247
4.14	Ce^{3+}							
	$O^- + Ce^{3+} \rightarrow Ce^{4+} + 2OH^-$	2.3–2.6	6.6×10^8 (rel.)	$k/k_{EtOH} = 0.6 \pm 0.2$	p.r.	opt.	c.k.; assuming $k(O^- + H_2O) = 1.75 \times 10^6$.	71–0137
4.15	ClO^-							
	$O^- + ClO^- \rightarrow ClO + O^{2-}$	13	$(2.2 \pm 0.1) \times 10^8$ (rel.)	$k/k(OH + CO_3^{2-}) = 0.6$	p.r.	opt.	c.k.	72–0301
4.16	ClO_2^-							
	$O^- + ClO_2^- \rightarrow ClO_2 + O^{2-}$	13	$(1.7 \pm 0.1) \times 10^8$ (rel.)	$k/k(OH + CO_3^{2-}) = 0.48$	p.r.	opt.	c.k.	72–0301
4.17	ClO_3^-	13	$< 10^6$	—	p.r.	opt.	no effect on CO_3^- formn. in carbonate soln.	72–0301

5.55b	duroquinone	7	5×10^6	—	p.r.	opt.	detd. from equil. const. and d.k. of semiquinone.	73–0125
5.55c	horseradish peroxidase Compound I	7–8.8	1.6×10^6	—	p.r.	opt.	d.k. as well as p.b.k., detd. k at pH 3.8 to 8.8.	74–1148, 74–3069
5.56	hydroquinone $O_2^- + OHC_6H_4OH \rightarrow HO_2^- + OHC_6H_4O\cdot \rightarrow O{=}C_6H_4O^- + H^+$	7.0	$(1.6 \pm 0.1) \times 10^7$	—	p.r.	opt.	p.b.k. at 430 nm.	73–0068

TABLE 6. Reactions of HO_2 ($H_2O_2^+$ and O_2^-) with transients from water, inorganic solutes, and organic solutes—Continued

No.	Solute and reaction	pH	k	Ratio	Source	Method	Comment	Ref.
5.57	2-methyl-*p*-benzo-	7.0	8.0×10^8	—	p.r.	opt.	p.b.k. at 430 nm.	73-0068
	quinone	7	$(7.6 \pm 1) \times 10^8$	—	p.r.	opt.	p.b.k. (semiquinone).	73-0125
5.58	1,2-naphthoquinone	7.0	7.2×10^8	—	p.r.	opt.	p.b.k. at 365 nm.	73-0068
5.59	1,2-naphthoquinone 4-sulfonate ion	7.0	8.4×10^8	—	p.r.	opt.	p.b.k. at 365 nm.	73-0068
5.60	1,4-naphthoquinone 2-sulfonate ion	7.0	6.6×10^8	—	p.r.	opt.	p.b.k. at 400 nm.	73-0068
5.61	nicotinamide-adenine dinucleotide, reduced (NADH)							
	$O_2^- + NADH (+ H^+) \rightarrow H_2O_2 + NAD\cdot$	8.6	$<<27$	—	X-r.	biol.	upper limit estd. for soln. contg. KBr and O_2.	71-0158
5.61a	NADH-lactate dehydrogenase	7-9	3.6×10^4	—	p.r.	opt.	d.k.	74-1159
5.62	superoxide dismutase (E)	5.3-9.5	1.8×10^9	—	p.r.	opt.	d.k. at 250 nm (O_2^-) as well as 650 nm (Cu); enzyme from bovine blood.	72-3066
	Dismutation of O_2^- (see 5.35) is catalyzed by E.							
		7	$(1.4 \pm 0.2) \times 10^9$	—	p.r.	opt.	d.k. at 245 nm (O_2^-); enzyme from bovine blood.	72-1007, 72-3078
		7.5	$(1.2 \pm 0.2) \times 10^9$	—	p.r.	opt.	d.k. at 650 nm (E); soln. contains Na formate and EDTA; enzyme from bovine blood.	73-0109
		5.0-9.5	$\sim 2 \times 10^9$ (rel.)	—	chem., biol.	opt.	c.k. (bovine Cu-Zn enzyme); assume $k(O_2^- + \text{cyt C}) = 1.1 \times 10^5$ and $k(O_2^- + C(NO_2)_4) = 1.9 \times 10^9$; rel. rates at pH 6.0-10.2 also detd. for *E.coli* Mn and Fe enzymes and chicken liver mitochondria Mn enzyme.	73-3052
		5.7-10.5	1.5×10^9	—	p.r.	opt.	d.k. at 690 nm; Cu enzyme from human blood.	73-3132
		9.0-9.9	$(2.37 \pm 0.18) \times 10^9$	—	p.r.	opt.	d.k. at 250 nm; bovine Cu-Zn enzyme; supersedes 72-3066.	74-3017
		7.9	$(1.3 \pm 0.15) \times 10^9$	—	p.r.	opt.	d.k. at 248 nm; *E.coli* Mn enzyme.	74-3059
		9-10.2	2.3×10^9	—	elec.	pol.	obs. increased O_2 formn. with enzyme addn.	74-3132
	Paraquat radical *See* 4,4-dimethyl-1,1'-bipyridylium chloride (5.54).							
	2,3,5,6-tetramethylbenzoquinone *See* duroquinone (5.55a).							
5.63	tetranitromethane	—	$(2.0 \pm 0.4) \times 10^9$	—	p.r.	opt.	p.b.k.	64-0133
	$O_2^- + C(NO_2)_4 \rightarrow O_2 + C(NO_2)_3^- + NO_2$	5.6-6.2	$(1.9 \pm 0.4) \times 10^9$	—	p.r.	opt.	p.b.k.	65-0183
5.64	tiron	7	5×10^8	—	p.r.	opt.	p.b.k. at 400 nm.	75-1087
	(1,2-dihydroxybenzene-3,5-disulfonate ion)	7	1.5×10^8 (rel.)	$k/k_{\text{benzoquinone}} = 0.17$	p.r.	opt.	c.k.; assume $k_{\text{benzoquinone}} = 9 \times 10^8$.	75-1087
5.65	Vitamin K_1	7	$< 2 \times 10^5$	—	p.r.	opt.	detd. from equil. const. and d.k. of semiquinone.	73-0125

Formula index

The following formula list refers to entry numbers, not only in the preceding tables, but also in the tables of rates of hydrated electron and hydrogen atom reactions published as part I (and Supplemental data) and part II. The first digit of the entry number identifies the section of the tables where the entry can be found.

1. Part I. Hydrated electron 73–0030 (NSRDS–NBS 43)
S1. Hydrated electron, Supplemental data 75–0002 (NSRDS–NBS 43–Supp)
2. Part II. Hydrogen Atom 75–0001 (NSRDS–NBS 51)
3. Part III. Hydroxyl radical (this work, tables 2–4)
4. Part III. Oxide ion (this work, table 5)
5. Part III. Perhydroxyl radical and superoxide ion (this work, table 6).

Thus, there are entries for Ag^+ in the tables of hydrated electron reactions (1.11), hydrogen atom reactions (2.5) and hydroxyl radical reactions (3.8), while BrO_4^- entries are found in the supplemental tables for hydrated electrons (S1.6), hydroxyl radical reactions (3.17), and oxide ion reactions (4.11).

$C_7H_{16}O$ 1–Heptanol, 3.435
$C_7H_{20}CoN_5O_2^{2+}$ Benzoatopentaamminecobalt(III) ion, 2.39, 3.34
$C_8H_4NO_2^-$ *p*–Cyanobenzoate ion, 1.383
$C_8H_4N_2$ *o*–Dicyanobenzene, 2.213; *m*–Dicyanobenzene, 2.214; *p*–Dicyanobenzene, S1.209, 2.215, 3.304
$C_8H_4O_4^{2-}$ *o*–Phthalate ion, 1.584, 3.618, 4.93; *m*–Phthalate ion, 1.585; *p*–Phthalate ion, 1.586, 3.690

Where can you find all the reference data you need? Right in the Journal of Physical and Chemical Reference Data!

Now in its fourth year, this valuable publication has proved that it fills the important gaps for you in the literature of the physical sciences.

Published by the American Institute of Physics and the American Chemical Society for the National Bureau of Standards, this quarterly gives you quantitative numerical data, with recommended values and uncertainty limits chosen by experts in the field.

Critical commentary on methods of measurement and sources of error, as well as full references to the original literature, is an integral part of each of your four issues a year.

Can you afford to be without this prime source of reliable data on physical and chemical properties? To start receiving your copies, just fill in the order form and drop into the mail. If you do use a purchase order, please attach the printed form as this will help us to expedite your order.

16. ABSTRACT *(A 200-word or less factual summary of most significant information. If document includes a significant bibliography or literature survey, mention it here.)*

Rates of reactions of OH and HO_2 with organic and inorganic molecules, ions, and transients in aqueous solution have been tabulated, as well as the rates for the corresponding radical ions in aqueous solution (O^- and O_2^-). Most of the rates have been obtained by radiation chemistry methods, both pulsed and steady-state; data from photochemistry and thermal methods are also included. Rates for over one thousand reactions are listed.

17. KEY WORDS *(six to twelve entries; alphabetical order; capitalize only the first letter of the first key word unless a proper name; separated by semicolons)*

Aqueous solution; chemical kinetics; data compilation; hydroxyl radical; oxide radical ion; perhydroxyl radical; radiation chemistry; rates; superoxide ion.

SINGLE CRYSTAL DATA

REVISED! UPDATED!

In 1954, the first edition of CRYSTAL DATA (Determinative Tables and Systematic Tables) was published as Memoir 60 of the Geological Society of America. In 1960, the second edition of the Determinative Tables was issued as Monograph 5 of the American Crystallographic Association, and in 1967, the Systematic Tables were issued as Monograph 6. These editions proved extremely valuable to crystallographers throughout the world. Recognizing the need for updated crystallographic information, the National Bureau of Standards Office of Standard Reference Data has sponsored the issuance of a new edition.

This, the THIRD EDITION, should be of particular interest not only to crystallographers but also to chemists, mineralogists, physicists and individuals in related fields of study. The current edition, which comprises two volumes, Organic and Inorganic, is a thoroughly revised and updated work, containing over 25,000 entries.

The entries are listed, *within each crystal system*, according to increasing values of a determinative number: *a*/*b* ratio in trimetric systems, *c*/*a* ratio in dimetric systems, and cubic cell edge *a*, in the isometric system. In addition, the following information is given:

INORGANIC VOLUME $50.00

ORGANIC VOLUME $30.00

Plus shipping and handling

axial ratio(s) and interaxial angles not fixed by symmetry, cell dimensions, space group or diffraction aspect, number of formula units per unit cell, crystal structure, (whether determined), measured density and x-ray calculated density. Also listed is the name of the compound and synonym(s), chemical formula, literature reference and transformation matrix. When available, the crystal structure type, crystal habit, cleavages, twinning, color, optical properties, indices of refraction, optical orientation, melting point and transition point are also listed.

THIS EDITION culminates years of effort by J. D. H. Donnay, Johns Hopkins University, Helen M. Ondik, National Bureau of Standards, Sten Samson, California Institute of Technology, Quintin Johnson, Lawrence Radiation Laboratory, Melvin H. Mueller, Argonne National Laboratory, Gerard M. Wolten, Aerospace Corporation, Mary E. Mrose, U.S. Geological Survey, Olga Kennard and David G. Watson, Cambridge University, England and Murray Vernon King, Massachusetts General Hospital.

Shipments are made via insured parcel post. Additional charges for shipments by air or commercial carrier.
TERMS: Domestic—30 days Foreign—prepayment required. Address all orders to:
JOINT COMMITTEE ON POWDER DIFFRACTION STANDARDS 1601 Park Lane, Swarthmore, Pennsylvania 19081

Please accept my order for CRYSTAL DATA, DETERMINATIVE TABLES, Third Edition, Donnay/Ondik.

(Notification key N-337)

NBS TECHNICAL PUBLICATIONS

PERIODICALS

JOURNAL OF RESEARCH reports National Bureau of Standards research and development in physics, mathematics, and chemistry. It is published in two sections, available separately:

- **Physics and Chemistry (Section A)**

Papers of interest primarily to scientists working in these fields. This section covers a broad range of physical and chemical research, with major emphasis on standards of physical measurement, fundamental constants, and properties of matter. Issued six times a year. Annual subscription: Domestic, $17.00; Foreign, $21.25.

- **Mathematical Sciences (Section B)**

Studies and compilations designed mainly for the mathematician and theoretical physicist. Topics in mathematical statistics, theory of experiment design, numerical analysis, theoretical physics and chemistry, logical design and programming of computers and computer systems. Short numerical tables. Issued quarterly. Annual subscription: Domestic, $9.00; Foreign, $11.25.

DIMENSIONS/NBS (formerly Technical News Bulletin)—This monthly magazine is published to inform scientists, engineers, businessmen, industry, teachers, students, and consumers of the latest advances in science and technology, with primary emphasis on the work at NBS. The magazine highlights and reviews such issues as energy research, fire protection, building technology, metric conversion, pollution abatement, health and safety, and consumer product performance. In addition, it reports the results of Bureau programs in measurement standards and techniques, properties of matter and materials, engineering standards and services, instrumentation, and automatic data processing.

Annual subscription: Domestic, $9.45; Foreign, $11.85.

NONPERIODICALS

Monographs—Major contributions to the technical literature on various subjects related to the Bureau's scientific and technical activities.

Handbooks—Recommended codes of engineering and industrial practice (including safety codes) developed in cooperation with interested industries, professional organizations, and regulatory bodies.

Special Publications—Include proceedings of conferences sponsored by NBS, NBS annual reports, and other special publications appropriate to this grouping such as wall charts, pocket cards, and bibliographies.

Applied Mathematics Series—Mathematical tables, manuals, and studies of special interest to physicists, engineers, chemists, biologists, mathematicians, computer programmers, and others engaged in scientific and technical work.

National Standard Reference Data Series—Provides quantitative data on the physical and chemical properties of materials, compiled from the world's literature and critically evaluated. Developed under a world-wide program coordinated by NBS Program under authority of National Standard Data Act (Public Law 90-396).

NOTE: At present the principal publication outlet for these data is the Journal of Physical and Chemical Reference Data (JPCRD) published quarterly for NBS by the American Chemical Society (ACS) and the American Institute of Physics (AIP). Subscriptions, reprints, and supplements available from ACS, 1155 Sixteenth St. N.W., Wash. D. C. 20056.

Building Science Series—Disseminates technical information developed at the Bureau on building materials, components, systems, and whole structures. The series presents research results, test methods, and performance criteria related to the structural and environmental functions and the durability and safety characteristics of building elements and systems.

Technical Notes—Studies or reports which are complete in themselves but restrictive in their treatment of a subject. Analogous to monographs but not so comprehensive in scope or definitive in treatment of the subject area. Often serve as a vehicle for final reports of work performed at NBS under the sponsorship of other government agencies.

Voluntary Product Standards—Developed under procedures published by the Department of Commerce in Part 10, Title 15, of the Code of Federal Regulations. The purpose of the standards is to establish nationally recognized requirements for products, and to provide all concerned interests with a basis for common understanding of the characteristics of the products. NBS administers this program as a supplement to the activities of the private sector standardizing organizations.

Consumer Information Series—Practical information, based on NBS research and experience, covering areas of interest to the consumer. Easily understandable language and illustrations provide useful background knowledge for shopping in today's technological marketplace.

Order **above** *NBS publications from: Superintendent of Documents, Government Printing Office, Washington, D.C. 20402.*

Order **following** *NBS publications—NBSIR's and FIPS from the National Technical Information Services, Springfield, Va. 22161.*

Federal Information Processing Standards Publications (FIPS PUBS)—Publications in this series collectively constitute the Federal Information Processing Standards Register. Register serves as the official source of information in the Federal Government regarding standards issued by NBS pursuant to the Federal Property and Administrative Services Act of 1949 as amended, Public Law 89-306 (79 Stat. 1127), and as implemented by Executive Order 11717 (38 FR 12315, dated May 11, 1973) and Part 6 of Title 15 CFR (Code of Federal Regulations).

NBS Interagency Reports (NBSIR)—A special series of interim or final reports on work performed by NBS for outside sponsors (both government and non-government). In general, initial distribution is handled by the sponsor; public distribution is by the National Technical Information Services (Springfield, Va. 22161) in paper copy or microfiche form.
