NATIONAL BUREAU OF STANDARDS

The National Bureau of Standards[1] was established by an act of Congress on March 3, 1901. The Bureau's overall goal is to strengthen and advance the Nation's science and technology and facilitate their effective application for public benefit. To this end, the Bureau conducts research and provides: (1) a basis for the Nation's physical measurement system, (2) scientific and technological services for industry and government, (3) a technical basis for equity in trade, and (4) technical services to promote public safety. The Bureau's technical work is performed by the National Measurement Laboratory, the National Engineering Laboratory, and the Institute for Computer Sciences and Technology.

THE NATIONAL MEASUREMENT LABORATORY provides the national system of physical and chemical and materials measurement; coordinates the system with measurement systems of other nations and furnishes essential services leading to accurate and uniform physical and chemical measurement throughout the Nation's scientific community, industry, and commerce; conducts materials research leading to improved methods of measurement, standards, and data on the properties of materials needed by industry, commerce, educational institutions, and Government; provides advisory and research services to other Government agencies; develops, produces, and distributes Standard Reference Materials; and provides calibration services. The Laboratory consists of the following centers:

Absolute Physical Quantities[2] — Radiation Research — Chemical Physics — Analytical Chemistry — Materials Science

THE NATIONAL ENGINEERING LABORATORY provides technology and technical services to the public and private sectors to address national needs and to solve national problems; conducts research in engineering and applied science in support of these efforts; builds and maintains competence in the necessary disciplines required to carry out this research and technical service; develops engineering data and measurement capabilities; provides engineering measurement traceability services; develops test methods and proposes engineering standards and code changes; develops and proposes new engineering practices; and develops and improves mechanisms to transfer results of its research to the ultimate user. The Laboratory consists of the following centers:

Applied Mathematics — Electronics and Electrical Engineering[2] — Manufacturing Engineering — Building Technology — Fire Research — Chemical Engineering[2]

THE INSTITUTE FOR COMPUTER SCIENCES AND TECHNOLOGY conducts research and provides scientific and technical services to aid Federal agencies in the selection, acquisition, application, and use of computer technology to improve effectiveness and economy in Government operations in accordance with Public Law 89-306 (40 U.S.C. 759), relevant Executive Orders, and other directives; carries out this mission by managing the Federal Information Processing Standards Program, developing Federal ADP standards guidelines, and managing Federal participation in ADP voluntary standardization activities; provides scientific and technological advisory services and assistance to Federal agencies; and provides the technical foundation for computer-related policies of the Federal Government. The Institute consists of the following centers:

Programming Science and Technology — Computer Systems Engineering.

PREFACE

Standard Reference Materials (SRM's) as defined by the National Bureau of Standards are "well-characterized materials, produced in quantity, that calibrate a measurement system to assure compatibility of measurement in the Nation." SRM's are widely used as primary standards in many diverse fields of science, industry and technology, both within the United States and throughout the world. For many of the Nation's scientists and technologists it is of more than passing interest to know the measurements obtained and methods used by the analytical community when analyzing SRM's. An NBS series of papers, of which this publication is a member, called the NBS Special Publication - 260 Series is reserved for this purpose.

This 260 Series is dedicated to the dissemination of elemental concentration data for NBS biological, geological and environmental SRM's. More information will be found in this 260 than is generally found in NBS Certificate of Analysis. This 260 enables the user of these SRM's to assess the validity of data not available in the certificate of analysis. We hope that this 260 will provide sufficient additional information so that new application of these SRM's may be sought and found.

Inquiries concerning the technical content of this compilation should be directed to the authors. Other questions concerned with the availability, delivery, price of specific SRM's should be addressed to:

Concentration data on 88 constituents in 75 NBS Standard Reference Materials have been collected from over 850 journal articles and technical reports. These data are summarized into mean values with uncertainties expressed as +/- one standard deviation and compared with available certification data from NBS. Data are presented on the analytical procedures employed and all raw data are given in the Appendices.

Key words: Analytical methods, biological, certified, compilation, environmental, geological, information values, literature values, mean values, Standard Reference Materials.

DISCLAIMER

Certain commercial equipment, instruments, or materials are identified in this report in order to adequately specify the procedure used for data compilation. Such identification does not imply recommendation or endorsement by the National Bureau of Standards, nor does it imply that the materials or equipment identified are necessarily the best available for the purpose.

1. Introduction

This compilation is a revised, updated, and expanded version of the first edition which appeared in 1980 (1). The National Bureau of Standards (NBS) has produced over 60 Standard Reference Materials (SRM) for use in biological, geological, and environmental analytical chemistry. The basic goal of the SRM program is to provide homogeneous and stable materials of a variety of natural matrices, for use in technique development and in analytical quality assurance. The function of standard reference materials in the latter role has received recent attention in a series of articles by Taylor (2-4). These standard reference materials carry the full legal weight and authority of NBS and the U. S. Department of Commerce, as they have been specifically authorized by federal legislation.

The concentrations of as many as 39 constituents have been determined at one of two confidence levels in each SRM: certified values and non-certified or informational values. The former is the present best estimate of the true concentration of that constituent and is not expected to deviate from that concentration by more than the stated uncertainty. These certified concentrations are determined at NBS or with cooperating laboratories using either a definitive method, two or more independent methods, or reference methods. These methods and other certification criteria are carefully defined by Uriano and Gravatt (5). Constituent concentrations that are labeled as non-certified or informational are those that NBS has not measured by either a definitive or reference method.

A limitation of many of these standard reference materials has been the restricted number of constituents that NBS can afford to certify in each material. Numerous investigators outside NBS have published concentration data on constituents in these reference materials. Although several brief review articles on NBS standard reference materials have appeared in the literature, we believe that the user should have access to both the summarized mean concentrations and all the data on which they are based. This philosophy was the basis of the previous compilation effort (1). Since no abstracting service has a category "standard reference materials", the widely scattered data in reports, articles, books, and proceedings have been collected only with difficulty.

There has been continuing controversy among compilers concerning the determination and reporting of final compositional information on standard reference materials (6-12). Flanagan has used "recommended", "average", and "magnitude" to characterize his "estimates" for major components and trace elements (13). Abbey has coined the term "usable value" for some of his results and pioneered the "select laboratories" approach to arrive at overall compositional information (11,14). Gladney and Goode elected to report only "mean values" and associated standard deviations without further attempt to assess the varying quality of data determined by different analytical techniques (15). For the French geostandards (CRPG, ANRT), Roubault, et al. (16), have considered "recommended", "preferred", and "proposed" values depending on the degree of confidence one can attach to the data. Steele, et al. (17), have reported "recommended" values in the six NIMROC rock samples using some statistical methods. Gladney, et al. (18), chose the term "consensus values" to describe their mean values calculated for USGS rocks after judgemental elimination of initial outliers.

Approaches to value judgement of data quality can be debated endlessly. The responsibility for the informed end of these compiled data lies with the individual investigator. Each should read our methodology carefully so that he may decide for himself its limitations. The values in the tables must not be used uncritically. All data behind our mean values are presented in the appendices so that any investigator may recalculate them to reflect his own experience whenever desired.

2. Data Compilation

A key to the 75 standard reference materials included in this document is provided in Table 1, along with certification and revised certification dates. All NBS certified and informational values for these standard reference materials are reported in the individual mean value tables for ease of comparison. The certified values have uncertainties stated, while informational values do not.

The 54 major journals in analytical chemistry, geology, petrology, geochemistry, and environmental science that were surveyed are shown in Table 2. Less comprehensive coverage of books and institutional reports for 1972-1982 has been achieved. More than 850 different references containing original data on NBS materials were located. All individual data, their uncertainties (where provided), their references, and the analytical techniques used are given in Appendices A through GGG.

All individual data thus located were assembled using a PDP-11/34 minicomputer with an RSX-11M (version 4.0) operating system, an RA-80 121 Mb fixed-media disc drive, three RL-02 10 Mb cartridge disc drives, and a Datatrieve-11 software package (all are registered trademarks of the Digital Equipment Corporation, Manard, Massachusetts). Datatrieve-11 (version 2.0) is an interactive data storage and maintenance software system which provides facilities for selective data retrival, updating, sorting, formatting, and report generation with a minimum of programming overhead. Data were hand entered into the system via terminal keyboard from copies of the original papers. Details of our Datatrieve-11 based data management system are being published elsewhere (19).

Data were first sorted by material, then constituent, and finally in ascending order of concentration for each constituent (this can be accomplished in a single operation within Datatrieve). Some subjective criteria, as discussed by Abbey (10), were used to eliminate data on either end of the reported concentration spectrum that we judged to be beyond the limits of acceptability. Following these subjective eliminations (less than 0.5% of the total data), an initial mean and standard deviation was computed using all remaining data for a given constituent in each SRM by passing the Datatrieve ASCII output file through a program which encoded numerical values and performed mean and standard deviation calculations.

All data points now outside +/- two standard deviations from the initial mean were dropped and a second mean and standard deviation recomputed. These final means and associated standard deviations are reported in Tables 3 to 24 for up to 88 constituents. The number in parentheses following each entry indicates the number of literature

values used to calculate the final mean. Where sufficient data exist, the median was also determined using all data other than "less-than" values.

The compiled data were then resorted first by material, then constituent, and finally by analytical method. An iterative mean and standard deviation (using +/- 2s for elimination) were again calculated for groups of analytical methods which had more than two data points (i.e., ITNA, IENA, RTNA, RENA, NAA, and DNA were all combined into NAA; WSRF, EXRF, and XRF into XRF, etc.). These analytical method means and standard deviations are also included in the tables when sufficient data exist. The key for analytical methods codes is given in Table 25.

Mean values in Tables 3 to 24 which are based upon less than three data points do not include standard deviations (e.g., B in 1566, Table 3). In a few cases the data reported had such a wide range as to render the mean +/- one standard deviation value meaningless. Such cases are reported as ranges only (no standard deviation specified). Additionally, there are a few elements where only upper limit data exist, and these are given as limit values in the tables (e.g., Be in 1570, Table 5).

3. Discussion

Our mean values for major and minor elements in standard reference materials can be subjected to two tests commonly used by rock analysts. "Whole rock" summations can be calculated from elemental data when oxygen data are available, or the elements can be converted to stoichiometric oxides and then summed. The latter approach is inappropriate for coals, oils, biologicals, and non-silicate rocks where many elements are not in oxide forms. "Iron-oxide compatability" can also be determined when concentration data on the two forms of iron oxide have been established. Since we have not located any reports of oxygen determination in any of the biological standard reference materials, the summation test cannot yet be applied. Furthermore, the absence of reported iron oxide data render that test impossible. There is sufficient oxygen data on five coal and fly ash materials to attempt the "whole rock" summation. It is important that all concentration data used are on a "dry-weight" basis. The large water content of SRM 1635 makes its compiled data suspect in this regard. The results of this calculation are shown in Table 26. Summations of 99 to 101% are considered a good indication that the major and minor element data are reasonably accurate and internally consistent. Three of the five materials investigated fall within this range. The primary reason for the "high" values for 1632A and 1633 is the uncertainty in the carbon (+/- 4%) and silicon (+/- 1.1%) mean values, respectively. In light of these uncertainties, their summations are also quite acceptable. In the future it is hoped that good oxygen data will be available so that this approach can be applied to the biologicals. These calculations will be presented on other geological standard reference materials when the quantity of data is sufficient.

The growth of the body of standard reference material data is shown in Table 27. A summary of total numbers of elemental measurements reported in this compilation as a function of matrix is shown in Figs. 1 and 2 for biological and geological matrices. There are a total of 6088 reports for biological materials 1566 to 1577A, and a total of 5105 reports for geological and environmental materials 278, 610-617, 688, 1630-1635, and 1645-1646. A summary of these two groups of data by general analytical method is given in Table 28. As seen in the first compilation (1) neutron activation techniques continue to lead the field followed at some distance by atomic absorption.

The key to the analytical methods code (ANAL-METH) is given in Table 25. The key to the COMMENT code is given in Table 29. All data reported as oxides in the original references were converted to elemental form using the conversion factors shown in Table 30. The individual data (CONC), their uncertainties when provided (UNCER), analytical technique used (ANAL-METH), the exact data points eliminated during mean value calculations (* under COMMENT), and the individual references are given in Tables A to GGG for each SRM. These tables were generated with the Datatrieve-11 report writing facilities and the DEC Keypad editor, and printed on a Twintrack Qume printer. Data which were reported as "greater-than" values have not been included, and "less-than" values are shown as a blank under concentration with the upper limit given as the uncertainty and with L* under COMMENT. The data have been sorted in ascending order based upon material, constituent, and concentration using Datatrieve-11. All the references (REF-CODE and REF-NUM) have been coded and identified in Table HHH. The code consists of the last two digits of the year of publication plus the first three letters of the first author's last name. The two digit numerical suffix is provided to enable handling of multiple reports by the same first author in the same year. This particular reference coding system was adopted in preference to sequential numbering used in the first edition (1) to permit rapid searching of the reference file using Datatrieve-11 and to permit easy updating of both the reference and data files without the necessity of renumbering the references. Since over 3400 references with data on various NBS, USGS, and CCRMP materials are now in our system, these considerations are extremely important.

4. Conclusion

Although we have endeavored to achieve as wide a coverage of the literature as possible, we realize that this compilation is incomplete. We request that the users of this compilation call our attention to errors or omissions and they will be corrected or included in future editions. Any investigators with unpublished results on NBS, U. S. Geological Survey (USGS), or Canadian Certified Reference Materials Project (CCRMP) reference materials are urged to send their data to the first author and it will be placed in our computer data base with appropriate reference to the source.

We are indebted to all the compilers of reference materials data who have preceeded us. We especially thank Sydney Abbey (Geological Survey of Canada) who has maintained a voluminous correspondence with the first author on various aspects of data compilation. Our effort has greatly benefited from his willingness to share his experience and his informed criticism. We also thank William Goode (DEC) who helped us establish our original data management framework and Kathy Derouin (Los Alamos Group HSE-8) who was instrumental in producing the large mean value tables.

This work was performed under the auspices of the U.S. Department of Energy and the U.S. National Bureau of Standards.

TABLE HHH: REFERENCES FOR NBS SRM COLLECTED DATA

CODE N DESCRIPTION

55COL 01 M. E. COLLER AND R. K. LEININGER (1955)
DETERMINATION OF TOTAL SULFUR CONTENT OF SEDIMENTARY ROCKS BY A COMBUSTION METHOD, ANALYTICAL CHEMISTRY, 27: 949-951.

57SHI 01 N.P. SHIMP, J. CONNOR, A.L. PRINCE, F.E. BEAR (1957)
SPECTROCHEMICAL ANALYSIS OF SOILS AND BIOLOGICAL MATERIALS, SOIL SCIENCE, 83: 51-64.

58CRA 01 R. J. CRABOWSKI AND R. C. UNICE (1958)
QUANTITATIVE SPECTROCHEMICAL DETERMINATION OF BARIUM AND STRONTIUM, ANALYTICAL CHEMISTRY, 30: 1374-1379.

58WAT 01 H. L. WATTS (1958)
VOLUMETRIC DETERMINATION OF ALUMINIUM IN PRESENCE OF IRON, TITANIUM, CALCIUM, SILICON, AND OTHER IMPURITIES, ANALYTICAL CHEMISTRY, 30: 967-970.

59COL 01 P. P. COLLINS, H. DIEHL, AND G. F. SMITH (1959)
DETERMINATION OF IRON IN LIMESTONE, SILICATES, AND REFRACTORIES, ANALYTICAL CHEMISTRY, 31: 1862-1867.

61TUR 01 K. K. TUREKIAN AND M. H. CARR (1961)
CHROMIUM, COBALT AND STRONTIUM IN SOME BUREAU OF STANDARDS ROCK REFERENCE SAMPLES, GEOCHIMICA ET COSMOCHIMICA ACTA, 24: 1-9.

62JOE 01 O. I. JOENSUU AND N. H. SUHR (1962)
SPECTROCHEMICAL ANALYSIS OF ROCKS, MINERALS, AND RELATED MATERIALS, APPLIED SPECTROSCOPY, 16: 101-104.

63CLA 01 M. C. CLARK AND D.J. SWAINE (1963)
TRACE-ELEMENT CONTENTS OF THE NATIONAL BUREAU OF STANDARDS REFERENCE SAMPLES NUMBERS 1A, 98 AND 99, GEOCHIMICA ET COSMOCHIMICA ACTA, 27: 1139-1142.

63KOR 01 J. KORKISCH, G. ARRHENIUS AND D. P. KHARKAR (1963)
SPECTROPHOTOMETRIC DETERMINATION OF TITANIUM AFTER SEPARATION BY ANION EXCHANGE, ANALYTICA CHIMICA ACTA, 28: 270-277.

64FIL 01 R. H. FILBY (1964)
THE CONTENTS OF SEVERAL TRACE ELEMENTS IN SOME STANDARD ROCK SAMPLES, GEOCHIMICA ET COSMOCHIMICA ACTA, 28: 265-269.

65BAL 01 T. K. BALL AND R. H. FILBY (1965)
THE ZINC CONTENTS OF SOME GEOCHEMICAL STANDARDS BY NEUTRON ACTIVATION AND X-RAY FLUORESCENCE ANALYSIS, GEOCHIMICA ET COSMOCHIMICA ACTA, 29: 737-740.

65MTA 01 PROCEEDINGS OF THE 1965 INTERNATIONAL CONFERENCE ON MODERN TRENDS IN ACTIVATION ANALYSIS, COLLEGE STATION, TEXAS, APRIL 19-22.

65WAH 01 W. H. WAHL, V. J. MOLINSKI, AND H. ARINO (1965)
RAPID RADIOCHEMICAL SEPARATION PROCEDURES FOR ACTIVATION ANALYSIS INDICATORS, IN 65MTA 01, PP. 44-47.

65WEL 01 N. WELLS (1965)
SELENIUM CONTENT OF SOIL-FORMING ROCKS, NEW ZEALAND JOURNAL OF GEOLOGY AND GEOPHYSICS, 10: 198-208; TAKEN FROM 74CRE 01.

66HAM 01 E. I. HAMILTON (1966)
THE URANIUM CONTENT OF SOME INTERNATIONAL STANDARDS, EARTH AND PLANETARY SCIENCE LETTERS, 1: 317-318.

67KOD 01 H. KODAMA, J. E. BRYDON, AND B. C. STONE (1967)
X-RAY SPECTROCHEMICAL ANALYSIS OF SILICATES USING SYNTHETIC STANDARDS WITH A CORRECTION OF INTERELEMENTAL EFFECTS BY A COMPUTER METHOD, GEOCHIMICA ET COSMOCHIMICA ACTA, 31: 649-659.

69COM 01 W. COMPSTON, B.W. CHAPPELL, P.A. ARRIENS, M.J. VERNON (1969)
ON THE FEASIBILITY OF NBS 70A K-FELDSPAR AS A RB-SR AGE REFERENCE SAMPLE, GEOCHIMICA ET COSMOCHIMICA ACTA, 33: 753-757.

69EDM 01 C. R. EDMOND (1969)
DIRECT DETERMINATION OF FLUORIDE IN PHOSPHATE ROCK SAMPLES USING THE SPECIFIC ION ELECTRODE, ANALYTICAL CHEMISTRY, 41: 1327-1328.

CODE N DESCRIPTION

69LAE 01 J. R. DE LAETER, I. D. ABERCROMBIE, AND R. DATE (1969)
MASS SPECTROMETRIC ISOTOPE DILUTION ANALYSES OF BARIUM IN STANDARD ROCKS, EARTH AND PLANETARY SCIENCE LETTERS, 7: 64-66.

69THI 01 G. THIELICKE (1969)
TITRIMETRISCHE BESTIMMUNG DES ALUMINIUMS IN SILICATGESTEINEN MIT POTENTIOMETRISCHER INDIKATION, FRESENIUS ZEITSCHRIFT FUR ANALYTISCHE CHEMIE, 246: 118-122.

69WIC 01 R. WICKBOLD (1969)
EXTRAKTION DES EISENS MIT METHYLISOBUTYLKETON UND SEINE TITRATION IM EXTRAKT MIT ADTA, FRESENIUS ZEITSCHRIFT PUR ANALYTISCHE CHEMIE, 244: 372-375.

70ING 01 B. L. INGRAM (1970)
DETERMINATION OF FLUORIDE IN SILICATE ROCKS WITHOUT SEPARATION OF ALUMINIUM USING A SPECIFIC ION ELECTRODE, ANALYTICAL CHEMISTRY, 42: 1825-1827.

70LAE 01 J. R. DE LAETER AND I. D. ABERCROMBIE (1970)
MASS SPECTROMETRIC ISOTOPE DILUTION ANALYSES OF RUBIDIUM AND STRONTIUM IN STANDARD ROCKS, EARTH AND PLANETARY SCIENCE LETTERS, 9: 327-330.

71FAB 01 B. P. FABBI (1971)
RAPID X-RAY FLUORESCENCE DETERMINATION OF PHOSPHORUS IN GEOLOGICAL SAMPLES, APPLIED SPECTROSCOPY, 25: 41-43.

71PET 01 M. A. PETERS AND D. M. LADD (1971)
DETERMINATION OF FLUORIDE IN OXIDES WITH THE FLUORIDE-ION ACTIVITY ELECTRODE, TALANTA, 18: 655-664.

72ALL 01 W. J. F. ALLEN (1972)
THE DETERMINATION OF RUBIDIUM AND CAESIUM IN GEOLOGICAL MATERIALS BY ATOMIC EMISSION SPECTROPHOTOMETRY WITH A NITROUS OXIDE-ACETYLENE FLAME, ANALYTICA CHIMICA ACTA, 59: 111-117.

72ASH 01 D. G. ASHLEY AND K. W. ANDREWS (1972)
ANALYSIS OF ALUMINOSILICATE MATERIALS BY X-RAY FLUORESCENCE SPECTROMETRY, ANALYST, 97: 841-845.

72AVN 01 R. AVNI, A. HAREL, AND I. B. BRENNER (1972)
A NEW APPROACH TO THE SPECTROCHEMICAL ANALYSIS OF SILICATE ROCKS AND MINERALS, APPLIED SPECTROSCOPY, 26: 641-645.

72BEC 03 D. A. BECKER AND P. D. LAFLEUR (1972)
DETERMINATION OF TRACE QUANTITIES OF URANIUM IN BIOLOGICAL MATERIALS BY NEUTRON ACTIVATION ANALYSIS USING A RAPID RADIOCHEMICAL SEPARATION, ANALYTICAL CHEMISTRY, 44: 1508-1511.

72BOU 01 J. L. BOUVIER, J. G. SEN GUPTA, AND S. ABBEY (1972)
TITLE UNKNOWN, GEOLOGICAL SURVEY OF CANADA PAPER 72-31, P. 22; TAKEN FROM 77LAN 01.

72BOW 01 H. J. M. BOWEN (1972)
THE DETERMINATION OF TIN IN BIOLOGICAL MATERIAL BY USING NEUTRON-ACTIVATION ANALYSIS, ANALYST, 97: 1003-1005.

72BYR 01 A. R. BYRNE (1972)
THE TOLUENE EXTRACTION OF SOME ELEMENTS AS IODIDES FROM H_2SO_4-KI MEDIA. APPLICATION TO NEUTRON ACTIVATION ANALYSIS, ANALYTICA CHIMICA ACTA, 59: 91-99.

72DAM 01 E. DAMSGAARD, K. HEYDORN, AND B. RIETZ (1972)
DETERMINATION OF VANADIUM IN BIOLOGICAL MATERIALS BY NEUTRON ACTIVATION ANALYSIS, NUCLEAR ACTIVATION TECHNIQUES IN THE LIFE SCIENCES: 1972, IAEA, VIENNA, PP. 119-130, IN 72IAE 01.

72GIB 01 D. GIBBONS, M. PERKINS, T.W. SANDERS, (1972)
DETERMINATION OF LEAD IN BIOLOGICAL MATERIALS BY NEUTRON ACTIVATION ANALYSIS, PP. 131-138, IN 72IAE 01.

72HEI 01 M. W. HEITZMAN AND R. E. SIMPSON (1972)
NEUTRON ACTIVATION ANALYSIS OF MERCURY IN FISH, FLOUR, AND STANDARD REFERENCE ORCHARD LEAVES BY ELECTRODEPOSITION RADIOCHEMISTRY, JOURNAL OF THE ASSOCIATION OF OFFICIAL ANALYTICAL CHEMISTS, 55: 960-965.

CODE N DESCRIPTION

72IAE 01 NUCLEAR ACTIVATION TECHNIQUES IN THE LIFE SCIENCES (1972)
PROCEEDINGS OF A SYMPOSIUM ON NUCLEAR ACTIVATION TECHNIQUES IN THE LIFE SCIENCES HELD BY THE IAEA IN BLED, YUGOSLAVIA, APRIL, 1972, STI/PUB/310.

72LEV 01 M. LEVSTEK AND L. KOSTA, M. DERMELJ, AND A. R. BYRNE (1972)
VANADIUM DETERMINATION IN BIOLOGICAL MATERIALS BY THE USE OF PRECONCENTRATION, NUCLEAR ACTIVATION TECHNIQUES IN THE LIFE SCIENCES, IAEA, VIENNA, PP.111-116, IN 72IAE 01.

72LYO 01 W. S. LYON, L. C. BATE, J.P. EMERY (1972)
ENVIRONMENTAL POLLUTION: USE OF NEUTRON ACTIVATION ANALYSIS TO DETERMINE THE FATE OF TRACE ELEMENTS FROM FOSSIL PUEL COMBUSTION IN THE ECOLOGICAL CYCLE, PP. 253-261, IN 72IAE 01.

72MAG 01 C. W. MAGEE, D. L. DONOHUR, AND W. W. HARRISON (1972)
ADVANTAGES OF DUAL ELECTRODE MOUNTS IN SPARK SOURCE MASS SPECTROMETRY USING ELECTRICAL DETECTION,
ANALYTICAL CHEMISTRY, 44: 2413-2415.

11. ABSTRACT (A 200-word or less factual summary of most significant information. If document includes a significant bibliography or literature survey, mention it here)

Concentration data on 88 constituents in 75 NBS Standard Reference Materials have been collected from over 850 journal articles and technical reports. These data are summarized into mean values with uncertainties expressed as +/- one standard deviation and compared with available certification data from NBS. Data are presented on the analytical procedures employed and all raw data are given in the Appendices.

NBS TECHNICAL PUBLICATIONS

PERIODICALS

JOURNAL OF RESEARCH—The Journal of Research of the National Bureau of Standards reports NBS research and development in those disciplines of the physical and engineering sciences in which the Bureau is active. These include physics, chemistry, engineering, mathematics, and computer sciences. Papers cover a broad range of subjects, with major emphasis on measurement methodology and the basic technology underlying standardization. Also included from time to time are survey articles on topics closely related to the Bureau's technical and scientific programs. As a special service to subscribers each issue contains complete citations to all recent Bureau publications in both NBS and non-NBS media. Issued six times a year. Annual subscription: domestic $18; foreign $22.50. Single copy, $5.50 domestic; $6.90 foreign.

NONPERIODICALS

Monographs—Major contributions to the technical literature on various subjects related to the Bureau's scientific and technical activities.

Handbooks—Recommended codes of engineering and industrial practice (including safety codes) developed in cooperation with interested industries, professional organizations, and regulatory bodies.

Special Publications—Include proceedings of conferences sponsored by NBS, NBS annual reports, and other special publications appropriate to this grouping such as wall charts, pocket cards, and bibliographies.

Applied Mathematics Series—Mathematical tables, manuals, and studies of special interest to physicists, engineers, chemists, biologists, mathematicians, computer programmers, and others engaged in scientific and technical work.

National Standard Reference Data Series—Provides quantitative data on the physical and chemical properties of materials, compiled from the world's literature and critically evaluated. Developed under a worldwide program coordinated by NBS under the authority of the National Standard Data Act (Public Law 90-396).

NOTE: The principal publication outlet for the foregoing data is the Journal of Physical and Chemical Reference Data (JPCRD) published quarterly for NBS by the American Chemical Society (ACS) and the American Institute of Physics (AIP). Subscriptions, reprints, and supplements available from ACS, 1155 Sixteenth St., NW, Washington, DC 20056.

Building Science Series—Disseminates technical information developed at the Bureau on building materials, components, systems, and whole structures. The series presents research results, test methods, and performance criteria related to the structural and environmental functions and the durability and safety characteristics of building elements and systems.

Technical Notes—Studies or reports which are complete in themselves but restrictive in their treatment of a subject. Analogous to monographs but not so comprehensive in scope or definitive in treatment of the subject area. Often serve as a vehicle for final reports of work performed at NBS under the sponsorship of other government agencies.

Voluntary Product Standards—Developed under procedures published by the Department of Commerce in Part 10, Title 15, of the Code of Federal Regulations. The standards establish nationally recognized requirements for products, and provide all concerned interests with a basis for common understanding of the characteristics of the products. NBS administers this program as a supplement to the activities of the private sector standardizing organizations.

Consumer Information Series—Practical information, based on NBS research and experience, covering areas of interest to the consumer. Easily understandable language and illustrations provide useful background knowledge for shopping in today's technological marketplace.

Order the **following** *NBS publications—FIPS and NBSIR's—from the National Technical Information Service, Springfield, VA 22161.*

Federal Information Processing Standards Publications (FIPS PUB)—Publications in this series collectively constitute the Federal Information Processing Standards Register. The Register serves as the official source of information in the Federal Government regarding standards issued by NBS pursuant to the Federal Property and Administrative Services Act of 1949 as amended, Public Law 89-306 (79 Stat. 1127), and as implemented by Executive Order 11717 (38 FR 12315, dated May 11, 1973) and Part 6 of Title 15 CFR (Code of Federal Regulations).

NBS Interagency Reports (NBSIR)—A special series of interim or final reports on work performed by NBS for outside sponsors (both government and non-government). In general, initial distribution is handled by the sponsor; public distribution is by the National Technical Information Service, Springfield, VA 22161, in paper copy or microfiche form.
