Transformation matrices required to obtain a conventional cell (Crystal Data cell) from the reduced cell have been applied to 47 000 crystalline compounds in the Crystal Data file. For 97% of the compounds, the calculations from the reduced cells yield conventional cells (lattice parameters, lattice type, and crystal system) that are entirely consistent with those reported in the original literature. In a few instances in which the reduced-cell matrix indicated a higher symmetry, the author has often noted that the crystal was unusual in some way or there was an error in the reported symmetry. Some implications of the results of this survey are: (1) metric symmetry as determined from the reduced cell is usually identical to the crystal-lattice symmetry; (2) determination of precise cell parameters defining any primitive cell of the lattice is valuable because from them one can conveniently determine the crystal system with a high degree of confidence (the results, however, should still be verified by checking equivalent intensities and systematic extinctions); (3) if the metric symmetry obtained from the reduced cell and the symmetry determined by other techniques do not agree, the reason should be sought as there are often important structural implications; (4) the sequence of steps in an automatic procedure for the determination of space groups could be: primitive cell, reduced cell, lattice metric symmetry, crystal-lattice symmetry, extinction conditions.

**19833.** Young, J., Ogburn, F., Ballard, D., **Electroforming a micrometer scale of 50  $\mu\text{m}$  (2 mil) overall length, *Met. Finish.*, pp. 27-29 (Aug. 1980).**

Key words: electroforming; electroplating; micrometer scale; scanning electron microscope.

A procedure is described for constructing an accurate micrometer scale by electroplating methods to form alternate layers of nickel and gold which show good contrast in an electron microscope. The nickel-gold composite is sectioned, mounted and polished using metallographic techniques to reveal thin lines of gold spaced by an accurate thickness of nickel. It is designated as NBS SEM magnification standard SRM 484.

**19834.** Akcasu, A. Z., Benmouna, M., Han, C. C., **Interpretation of dynamic scattering from polymer solutions, *Polymer* 21, 866-890 (Aug. 1980).**

Key words: light scattering; neutron scattering; polymer solutions.

The theoretical results available for the interpretation of the dynamic scattering from polymer solutions have been re-examined. The scattering law  $S(q, t)$  is formulated using the eigenfunction expansion method and the linear response theory. All previously known exact expressions of  $S(q, t)$  for a single unperturbed Gaussian chain have been re-derived using the first method to demonstrate the interrelationships among the various approaches to calculation of  $S(q, t)$ . The results are cast into new forms which, in many cases, are more convenient for both numerical and analytical discussions. The infinite chain results are obtained from the exact closed expression of  $S(q, t)$  for ring polymers as a special case as  $N \rightarrow \infty$ . Questions like the effect of the draining parameter on the shape of  $S(q, t)$ , the positive definiteness of the diffusion tensor, and the possibility of measuring the eigenvalue of the first internal mode through light scattering, have been included in the discussions.

A new method has been proposed for the interpretation of the dynamic scattering experiments in terms of the initial slope,  $\Omega$ , of  $\ln S(q, t)$ . The quantity  $\Omega$  can also be identified as the first cumulant of  $S(q, t)$ . The advantage of this method is that  $\Omega(q)$  can be calculated for all  $q$  values as a function of temperature and concentration by combining the linear response theory and the blob model of chain statistics. Consequently, one is not restricted to the asymptotic small- and intermediate- $q$  regions in order to interpret the scattering experiments. The analytical and numerical results giving  $\Omega(q)$  under various conditions have

been presented. Using infinite chain results it is shown that  $\Omega$  acts as a characteristic frequency in the sense that in both the small- and intermediate- $q$  regions,  $\ln S(q, t)$  can be scaled to a  $q$ -independent shape function when time is expressed as  $\Omega t$ . This property facilitates the measurement of  $\Omega$  from  $S(q, t)$ -data using a known shape function. The feasibility of the method has been demonstrated using light scattering data on polystyrene in toluene in the transition region between small- and intermediate  $q$ -regions.

**19835.** Batts, M. E., Russell, L. R., Simiu, E., **Hurricane wind speeds in the United States, *ASCE J. Structural Div.* 106, No. ST10, 2001-2016 (Oct. 1980).**

Key words: buildings (codes); climatology; hurricanes; statistical analysis; structural engineering; tropical cyclones; wind (meteorology).

A Monte Carlo simulation technique is used to obtain estimates of hurricane wind speeds in the Gulf and East Coasts of the United States. The paper describes the sources of data, the probabilistic models for the climatological characteristics of hurricanes, and the physical models for the hurricane wind speed field used in the estimations. Estimated values of fastest-mile hurricane wind speeds at 10 m above ground in open terrain at the coastline and at 200 km inland are given for various mean recurrence intervals. The estimated hurricane wind speeds were found to be best fitted by Weibull distributions with tail length parameters  $\gamma \geq 4$ . Estimates are given of various errors inherent in the estimated values of the hurricane wind speeds. Owing to uncertainties with respect to the applicability of the physical models used in this work to locations north of Cape Hatteras, estimated hurricane wind speeds given for these locations should be viewed with caution.

**19836.** Ehrlich, D. J., Osgood, R. M., Jr., Turk, G. C., Travis, J. C., **Atomic resonance-line lasers for atomic spectrometry, *Anal. Chem.* 52, No. 8, 1354-1356 (July 1980).**

Key words: atomic resonance laser; atomic resonance-line laser; flame spectrometry; laser enhanced ionization; optical galvanic effect; photodissociation laser.

Atomic resonance-line lasers based on photodissociation of metal-halide molecules have important implications for spectrochemical analysis. Analytical curves of growth and limits of detection have been obtained by laser enhanced ionization (LEI) for two (Ti and Na) of the eight atomic resonance line lasers which have been demonstrated to date. The fixed frequency lasers offer a significant simplicity advantage over tunable dye lasers. In addition, the presence of additional atomic laser lines permits the excitation of high energy electronic levels by means of sequential excitation. Such two-wavelength excitation demonstrated by the Na LEI result reported here, has important implications for both selectivity and sensitivity. Although general applicability will depend on further development of the lasers, they are presently appropriate for many special, dedicated applications.

**19837.** Gadzuk, J. W., Metiu, H., **Theory of electron-hole pair excitations in unimolecular processes at metal surfaces. I. X-ray edge effects, *Phys. Rev. B* 22, No. 6, 2603-2613 (Sept. 15, 1980).**

Key words: electron-hole pairs; molecular processes; surface reactions; x-ray edge.

A theory of the dynamics of molecular processes at solid surfaces must necessarily deal with those aspects of the solid which provide dissipative or irreversible reaction channels, thus giving the particular process a direction in time. While the heat-bath aspects of the solid are often considered from the phonon point of view, there is increasing speculation that the substrate electron-hole pair excitations may be a significant rate-determining factor, at least for metals. This belief is supported by various

conclusions which have emerged from theoretical studies of time-dependent perturbations acting on extended Fermi systems, as physically realized in core-level spectroscopies of solids. We present here one phase of a study of surface reaction dynamics, focusing on the irreversible coupling of nuclear motion of an incident beam of atoms or molecules with the substrate electrons. For the cases in which the incident particle undergoes a substrate-induced diabatic transition in its internal electronic state, a sudden localized perturbation on the electrons is turned on. In analogy with the x-ray edge problem, an infrared divergent spectrum of electron-hole pairs is created which could give rise to irreversibility. Specific examples are considered and the ramifications on such observable quantities as sticking coefficients are detailed.

**19838.** Kayser, R. F., Raveché, H. J., **Emergence of periodic density patterns**, *Phys. Rev. B* **22**, No. 1, 424-435 (July 1, 1980).

**Key words:** BBGKY equation; bifurcation; direct correlation function equation; freezing; periodic crystalline solutions.

Two recent statistical-mechanical theories for the periodic patterns exhibited by the local density  $\rho_1(\vec{r})$  as a uniform fluid crystallizes are analyzed. One theory is based on the direct correlation function, the other on the pair correlation function. In the absence of tractable equations for the angular dependence of these functions in an ordered phase, similar assumptions are made in both theories which lead to similar nonlinear integral equations. The differences between investigating the local stability of the fluid in contrast to the global stability of the predicted ordered phase are considered. Calculations are given for the hard-sphere interaction in one and three dimensions and the global predictions for  $\rho_1(\vec{r})$  and the thermodynamic properties are discussed in terms of the underlying structure of both the exact and the approximate equations. An exact treatment of either theory for an infinite system with no constraints excludes bifurcation. In light of this, the significance of bifurcation in studying phase transitions is discussed.

**19839.** Ausloos, P., Jackson, J. A. A., Lias, S. G., **Reactions of benzyl ions with alkanes, alkenes, and aromatic compounds**, *Int. J. Mass Spectrom. Ion Phys.* **33**, 269-283 (1980).

**Key words:** free radicals; heats of formation; ion cyclotron resonance spectrometer; ion-molecule reactions; ions; rate constants.

Biomolecular chemical reactions of benzyl ions with hydrocarbons and halogenated hydrocarbons have been examined in an ion cyclotron resonance spectrometer. Benzyl ions undergo hydride transfer reactions with linear, branched, and cyclic alkanes. The probability that a collision will lead to reaction is generally low, and is directly dependent on the exothermicity of the reaction. Collision of the benzyl ion with an olefin leads to condensation followed (under the conditions of this study,  $10^{-6}$ – $10^{-5}$  torr) by a dissociation to form a lower olefin. Isotopic labelling experiments demonstrate that extensive rearrangement occurs in the condensation ion prior to dissociation, even when the dissociation regenerates the benzyl ion. Benzyl ions react with alkylbenzenes via "CH<sub>2</sub>-transfer reactions" ( $C_6H_5CH_2^+ + \text{Alkylbenzenes} \rightarrow \text{Alkylbenzyl}^+ + C_6H_6$ ) as well as through hydride transfer reactions involving the side chain; reaction of benzyl ions with halogenated toluenes, however, yields a CH<sub>2</sub>-transfer occasionally at the site of the halogen atom, thereby giving a neutral C<sub>6</sub>H<sub>5</sub>X product.

**19840.** Wolyneć, S., Escalante, E., **Determination of "true" polarization curves for corrosion rate measurements of steel in NaCl stagnant solutions**, *Corrosion-NACE* **36**, No. 7, 327-334 (1980).

**Key words:** carbon steel; chronoamperometry; corrosion rate measurement; polarization.

Determination of corrosion rate for carbon steel in stagnant NaCl solutions was attempted by the linear polarization method, but none of the polarization data obtained by conventional procedures (potentiostatic or potentiodynamic) gave satisfactory results. It was shown that the value of calculated corrosion rate is affected by the direction in which the polarization is undertaken, by the scanning rate for curves determined by potentiodynamic technique, and by the time interval between consecutive steps for curves determined by potentiostatic technique. A new method for obtaining polarization data was derived from chronoamperometric investigations. This method is similar to the potentiostatic one, with two differences: (1) The polarization potential is switched off for some minutes between two consecutive steps so as to allow the corroding system to recover, at least partially, the conditions observed initially, and (2) the current is determined by extrapolating the data of the current decay curves to infinite time. It was observed that in those curves, the current holds an exponential relationship to the inverse of the square root of time. The data generated by this method is in good agreement with weight loss and corrosion potential measurements not only in terms of corrosion rate but also in terms of Tafel slopes.

**19841.** Wise, S. A., Chesler, S. N., Guenther, F. R., Hertz, H. S., Hilpert, L. R., May, W. E., Parris, R. M., **Interlaboratory comparison of determinations of trace level hydrocarbons in mussels**, *Anal. Chem.* **52**, No. 12, 1828-1833 (Oct. 1980).

**Key words:** aliphatic hydrocarbons; aromatic hydrocarbons; gas chromatography; hydrocarbons; interlaboratory comparison; liquid chromatography; mass spectrometry; mussels; polycyclic aromatic hydrocarbons; tissue analyses.

The results of the determination of trace-level hydrocarbons in mussel tissue homogenates from two different sites are compared among eight laboratories. The values for the concentrations of total extractable hydrocarbons, total hydrocarbons in the gas chromatographic elution range, and individual hydrocarbon compounds generally differed by less than a factor of four. Sample inhomogeneity, storage instability over a nine-month period, and analysis uncertainty contributed to an observed intralaboratory precision ( $1\sigma$ ) of  $\pm 40\%$ . The results are discussed with regard to the reliability and comparability of data currently generated in environmental monitoring programs.

**19842.** Waxler, R. M., Feldman, A., **Piezoelectric coefficients of four neodymium-doped laser glasses**, *Appl. Opt.* **19**, No. 15, 2481-2482 (Aug. 1, 1980).

**Key words:** glass; lasers; photoelasticity; piezoelectric; refractive index.

The results of measurements of the piezoelectric coefficients of four new laser glasses, one neodymium-doped phosphate glass and three neodymium-doped fluorophosphate glasses are reported. The measurements were made at 0.6328  $\mu\text{m}$  and 1.15  $\mu\text{m}$ , and, in general, the values are slightly smaller at the longer wavelength. The small values of the coefficients at both wavelengths for certain glasses indicate that these glasses are to be preferred for laser use.

**19843.** Thomson, R., **Theory of chemically assisted fracture. Part 1. General reaction rate theory and thermodynamics**, *J. Mater. Sci.* **15**, 1014-1026 (1980).

**Key words:** environmental fracture; fracture; materials failure; reaction rate theory; slow crack growth; surface energy.

In this first of a two-paper series, we develop a theoretical formulation for chemically assisted fracture in materials. The external environment is assumed to be a diatomic gas, and the chemical attack is at the crack tip. The crack is presumed to be atomically sharp, and the adsorbing chemical species lowers the energy of bond breaking at the crack tip. The formalism is

couched in the language of chemical absolute reaction rate theory, and the results bear a close resemblance to the reaction rate theory of atomic diffusion in solids. Expressions are derived for thermally activated crack growth. The thermodynamic limit is derived, and the connection made to previous macroscopic mechanical treatments. A qualitative discussion is given of more complex forms of fracture chemistry. General conclusions are that atmospherically assisted fracture should be associated with changes in adsorbed surface energy; that details of kinetics will vary widely from one chemical system and material to another; and, that cleavage experiments should be a quantitative tool for surface and interfacial energy measurements. Finally, bridging reactions at the crack tip are shown to lead to possibilities for chemical toughening of the material.

**19844.** Salomone, L. A., *The effect of organization culture on managers, Proc. ASCE Convention and Exposition, Hollywood, FL, Oct. 27-31, 1980*, pp. 1-13 (American Society of Civil Engineers, New York, NY, 1980).

Key words: management theory; managers; organizational development; organization culture; strategic model; theories of behavior.

Systematic examination of management, with few exceptions, is the product of the present century and especially of the past several decades although most students of management would agree that problems of management have existed since the dawn of organized life. Changes in the size, diversity and complexity of projects have reemphasized the need for developing better and more effective techniques in project management. In addition, the unsettled economic environment has reduced the number of new projects, and as a result, has increased the competition in private industry for those projects which are funded. Likewise, in government, similar pressures have been created because of efforts to decrease or hold down government spending.

The management theory which is assisting the National Engineering Laboratory of the National Bureau of Standards in Washington, D.C. and its managers in their search for excellence is presented, and the effect of organization culture on managers is discussed. Using the Managerial Grid developed by Robert R. Blake and Jane S. Mouton, the perceptions of some government employees and corporate managers regarding the soundest organization culture are investigated. Also, results of an experiment in which government employees were asked to rank the alternatives to questions, designed to evaluate organization culture, based on how their organization actually operates are presented.

**19845.** Prialnik, D., Shaviv, G., *The relationship between the envelope composition of a  $6 M_{\odot}$  red-giant model and its future evolution, Astron. Astrophys.* **88**, 127-134 (1980).

Key words: abundances; evolution; planetary nebulae; red giants.

The questions regarding the maximum mass of a main-sequence star that becomes a white-dwarf; the mass of single white dwarfs; the enhanced abundance ratios of N/O and He/H in planetary nebulae and the He<sup>3</sup> abundance in planetaries and in the interstellar medium are shown to be interrelated. We find that a model star of  $6 M_{\odot}$  on the main-sequence develops prior to the double-shell source phase a C—O core of  $0.82 M_{\odot}$  an enrichment of 27% in the He/H ratio and a N/O ratio 5.5 times higher than the solar value. These results indicate that a  $6 M_{\odot}$  star is a plausible planetary-nebula progenitor.

We also show that intermediate mass stars, ejecting most of their mass during the red-giant stage, are important contributors of C and O isotopes and of He<sup>3</sup> to the interstellar medium.

**19846.** Barkigia, K. M., Rajkovic-Blazer, L. M., Pope, M. T., Prince, E., Quicksall, C. O., *Molybdoarsinate heteropoly complexes. Structure of the hydrogen*

*tetramolybdodimethylarsinate(2-) anion by x-ray and neutron diffraction, Inorg. Chem.* **19**, No. 9, 2531-2537 (1980).

Key words: crystal structure; heteropoly complexes; hydrogen bonds; molybdoarsinate; neutron diffraction; x-ray diffraction.

Seven salts of the heteropoly molybdate anions  $R_2AsMo_4O_{15}H^{2-}$  ( $R = CH_3, C_2H_5, C_6H_5$ ) have been synthesized and characterized by spectroscopic measurements. The structure of  $[(CN_3H_6)_2AsMo_4O_{15}H] \cdot H_2O$  ( $P2_1/c$ ,  $a = 8.531$  (2) Å,  $b = 8.527$  (2) Å,  $c = 30.129$  (5) Å,  $\beta = 95.49$  (2)°) has been determined by single-crystal x-ray and neutron diffraction and refined to final consistency indices  $R$  and  $R_w$  of 0.043 and 0.063 for the x-ray data and 0.047 and 0.037 for the neutron data. The anion may be viewed as a ring of face- and edge-shared  $MoO_6$  octahedra capped by the tetrahedral  $(CH_3)_2AsO_2^-$  group. At the base of the anion is an oxygen that is asymmetrically shared by all four Mo atoms ( $Mo-O = 2.360-2.927$  Å). The single anionic proton required by the stoichiometry is located on the basal oxygen, with an O—H bond length of 0.991 (5) Å. The unique hydrogen participates in a hydrogen bond to a water molecule which is 1.779 (5) Å away from the hydrogen.

**19847.** Behrens, J. W., Schrack, R. A., Bowman, C. D., *Nondestructive examination of a defective silver braze using resonance-neutron radiography, Nucl. Technol.* **51**, No. 1, 78-82 (Nov. 1980).

Key words: epithermal neutrons; neutron radiography; non-destructive assay; nondestructive evaluation; position-sensitive proportional counter.

Resonance-neutron radiography is being developed at the National Bureau of Standards (NBS) for use in nondestructive evaluation (NDE) and assay (NDA) applications. To illustrate the method we determined the distribution and thickness of silver between two silver-brazed metal plates. The NBS electron Linac provided a pulsed source of epithermal neutrons. Neutron energy was determined using the time-of-flight technique. Neutrons were detected using a one-dimensional position-sensitive proportional counter containing 4 atm <sup>3</sup>He, 6 atm argon, and 0.5 atm CO<sub>2</sub> and having a spatial resolution of 5 mm. Transmission values, measured over the 5.2-eV resonance in <sup>109</sup>Ag, were used to locate the silver. Simple area analysis of these values yielded the amount of silver that was present.

**19848.** Berman, G. A., *ASTM Committee E-36: Participation in laboratory evaluation and accreditation, Am. Soc. Test. Mater. Stand. News* **8**, No. 12, 8-10 (Dec. 1980).

Key words: evaluation criteria; laboratory accreditation; standards committees.

Laboratory accreditation is widely used for identifying capable testing laboratories. Over 70 formal accreditation systems currently exist in the United States which are sponsored or operated by Federal, State and local governments, trade associations, and professional societies. Some 7000 laboratories are evaluated through these formal systems. It is estimated that up to 8000 private less formal accreditation systems exist which evaluate some 50,000 laboratories to meet contractual requirements of the Department of Defense, National Aeronautics and Space Administration, the Nuclear Regulatory Commission and others.

ASTM Committee E36 on Criteria for the Evaluation of Testing Laboratories and Inspection Agencies was established in 1973 to develop generic standards which could be used by accreditors as a basis for laboratory evaluation. The Committee has prepared a document, E548, "Standard Practice for Use in the Evaluation of Testing and Inspection Agencies" which provides a framework for information disclosure in categories of laboratory organization, management, human and physical resources, operational procedures, and quality assurances prac-

tices. While this standard has done much to provide a basis for information disclosure more work is needed to provide generic information and guidance. To this end the committee is developing criteria for accreditors and accreditation systems.

- 19849.** Blau, P. J., **Use of a two-diagonal measurement method for reducing scatter in Knoop microhardness testing**, *Scr. Metall.* **14**, 719-724 (1980).

Key words: brass; copper; hardness testing; Knoop; microhardness; nondestructive testing.

Knoop indenter microhardness data for Cu and Cu-30 wt%Zn were used to demonstrate the usefulness of a two indentation diagonal measurement method for reducing data scatter. Measuring both major and minor diagonals of the Knoop indentations reduced the variability of the microhardness data more for the large-grained Cu than it did for smaller-grained brass; however, there was a noticeable improvement in numerical reproducibility in both materials. The two-diagonal method may be most useful for cases where large, relatively easy to measure indentations are produced and/or where only a limited sample of material is available and large numbers of microhardness tests cannot easily be performed.

- 19850.** deCandia, F., Russo, R., Vittoria, V., Peterlin, A., **Transport properties of annealed, drawn low-density polyethylene (LDPE)**, *J. Poly. Sci. Polym. Phys. Ed.*, **18**, 2083-2096 (1980).

Key words: annealing; diffusion; drawing; low density polyethylene; sorption.

The specific concentration  $c_a$  of methylene chloride, the zero-concentration diffusion coefficient  $D_0$ , and the concentration coefficient  $\gamma_D$  of the diffusivity in drawn and annealed LDPE were measured. The influence of the drawing rate, of annealing with the ends of the sample free and fixed and the effects of time of standing at room temperature after annealing were investigated. The observed transport properties are in good agreement with the microfibrillar model of fibrous structure, its relaxation during annealing, and the slow crystallization of relaxed tie-molecules upon standing at room temperature.

- 19851.** Cahn, J. W., **Antiphase domain growth in  $\text{Cu}_3\text{Au}$** , *Scr. Metall.* **14**, No. 1, 93-94 (Jan. 1980).

Key words: antiphase domains; copper alloys; diffusion; domain growth; gold alloys; ordered alloys.

Data recently published on domain growth in  $\text{Cu}_3\text{Au}$  fit my published theory better than one the authors try to put forth.

- 19852.** Klose, J. Z., Bridges, J. M., Ott, W. R., **The use of deuterium lamps as radiometric standards between 115 nm and 350 nm, (Extended Abstract)**, (Proc. VI Int. Conf. on Vacuum Ultraviolet Radiation Physics, University of Virginia, Charlottesville, VA, June 2-6, 1980), Paper III-52 in *VUV Lasers, Synchrotron Radiation, Atmospheric & Space, Instrumentation, and Applications III*, 1-3 (U.S. Naval Research Laboratory, Washington, DC, 1980).

Key words: deuterium lamps; radiometry; spectral irradiance; standards; vacuum ultraviolet.

The spectrum of a deuterium lamp has been investigated at wavelengths shorter than 165 nm for use as a radiometric standard. Applications will be discussed.

- 19853.** Egelhoff, W. F., Jr., Tibbetts, G. G., **Photoemission studies of a mixed valent ytterbium aluminum alloy, (Extended Abstract)**, (Proc. VI Int. Conf. on Vacuum Ultraviolet Radiation Physics, University of Virginia, Charlottesville, VA, June 2-6, 1980), Paper I-20 in *VUV Lasers, Synchrotron Radiation, Atmospheric & Space, Instrumentation, and Applications III*, 1-3 (U.S. Naval Research Laboratory, Washington, DC, 1980).

Key words: Auger; core-holes; mixed-valence; photoionization; resonance; ytterbium.

A valence change from  $f^{13}$  to  $f^{14}$  occurs in ytterbium atoms in a mixed-valent ytterbium-aluminum alloy during autoionization and Auger-electron emission. In both of these emission processes the 4f-shell occupancy increases when the shell becomes more tightly bound under the influence of the core hole. The quenching of the core hole, which terminates the process, occurs after the valence change, so that the  $f^{13}$  initial state is not manifest in the spectra.

- 19854.** Peterlin, A., **Chain folding in lamellar crystals**, *Macromolecules* **13**, No. 4, 777-782 (July-Aug. 1980).

Key words: chain folding in polymers; crystal amorphous complex; lamellar crystallization; lamellar morphology; polymer crystallization.

Small-angle neutron scattering yields a gyration radius and a segment distribution of the linear polyethylene molecule which can be best interpreted by a model based on the original suggestion by Frank and the analysis by Flory of chain folding on the boundary between the crystal core and the amorphous surface layer. In order to provide space for the amorphous chains half the stems in the crystal lattice must be connected by regular loops with adjacent reentry. One third of all the stems must be connected by random loops in order to reproduce the small-angle neutron-scattering data on samples quenched from the melt.

- 19855.** Ellingson, W. A., Berger, H., **Three-dimensional radiographic imaging**, Paper in *Research Techniques in Nondestructive Testing IV*, 1-38 (Academic Press Inc., (London Ltd.), London, England, 1980).

Key words: computerized axial tomography; Fresnel zone; holographic reconstruction; imaging; laminagraphy; nondestructive testing; radiography; three-dimensional radiography; tomography; x-ray laser.

In this chapter, the various three-dimensional imaging methods will be described, with selected examples of NDT applications; also, the limitations of the more developed methods with respect to in-plane and plane-to-plane resolution will be pointed out. Although most of these schemes have been used in a limited way as compared to conventional NDT methods, the availability of new devices, techniques, and knowledge may make any or all of the three-dimensional methods more widely applicable to NDT in the future.

- 19856.** Linsky, J. L., **Stellar chromospheres and coronae**, *Trans. IAU (Report of Commission 36 on Theory of Stellar Atmospheres)*, XVIIA, Pt. 2, 197-203 (1979).

Key words: spectroscopy, ultraviolet; spectroscopy, visible; stars, chromospheres; stars, coronae; stars, emission line; stars, late-type.

Important advances have been made recently in this field due to the development of spectroscopic diagnostics and the growth of ultraviolet and x-ray data from space. These data lead to estimates of physical properties in chromospheres and coronae of individual stars, and to a first generation of models. In some cases crude estimates of radiative losses have been made; these pose tests of theoretical estimates of nonradiative heating rates.

- 19857.** Vreeland, R. G., Levin, B. M., **Psychological aspects of firesetting**, Chapter 3 in *Fires and Human Behaviour*, D. Canter, Ed., pp. 31-46 (John Wiley & Sons Ltd., New York, NY, 1980).

Key words: arson; behavior disorder; fire; firesetters; motives; psychiatry; psychopathic personality; psychopathology.

The purpose of this chapter is to examine some of the psychological factors involved in firesetting and arson. Although arson is a major problem and has been an area of behavioral research for over a century, we still know very little about its etiology and even less about its treatment. This paper summarizes the research literature and discusses: 1) types and motives of firesetters; 2) intellectual and academic performance of firesetters; 3) psychopathology of firesetting; and 4) treatment.

**19858.** Penn, D. R., Mean free paths of very-low-energy electrons: The effects of exchange and correlation, *Phys. Rev. B* **22**, No. 6, 2677-2682 (Sept. 15, 1980).

Key words: exchange and correlation; low energy electrons; mean free path.

The mean free paths of low-energy electrons in a free-electron-like material are calculated using a screened electron-electron interaction which is antisymmetrized for the case of parallel-spin electrons. Calculations are carried out for several different approximations of the screening function: Fermi-Thomas, Lindhard, Singwi, and Kukkonen-Overhauser. The first three yield mean free paths that agree to within 10%, while the Kukkonen-Overhauser screening yields mean free paths that are roughly half those given by the other approximations. The effect of the Pauli principle in all cases is that the scattering between antiparallel-spin electrons is roughly three to ten times stronger than between parallel-spin electrons.

**19859.** Ogburn, F., Ballard, D., Thickness of gold coating measured with a calibrated SEM, *Plating Surf. Finish.* **67**, No. 4, 49-53 (Apr. 1980).

Key words: gold coating cross section; magnification calibration; SEM; thickness measurement; video waveform.

The thickness of gold coatings can be measured in a metallographic cross section by examination with a scanning electron microscope (SEM). The SEM magnification is calibrated with a stage micrometer scale and measurements made on conventional photomicrographs or, for improved accuracy, measurements are made on photos of the SEM video waveform signal. The uncertainty of coating thickness measurements at 10,000 magnification is about 0.06  $\mu\text{m}$  (2.4 microinches).

**19860.** Madey, T. E., The role of steps and defects in electron stimulated desorption: Oxygen on stepped W(110) surfaces, *Surf. Sci.* **94**, 483-506 (1980).

Key words: adsorption; chemisorption; electron stimulated desorption; ion angular distribution; oxygen; stepped surfaces; surface bonding; tungsten.

In order to examine the role of atomic steps and defects on electron stimulated desorption (ESD) phenomena, we have studied the adsorption of oxygen on a polyhedral tungsten crystal containing a W(110) flat and 4 flats having orientations 6° and 10° off the (110) plane with rows of steps parallel to the [100] and [110] directions. Upon adsorption at 300 K, there is little or no ESD O<sup>+</sup> emission from the oxygen-covered (110) plane. In contrast, the stepped surfaces yield intense O<sup>+</sup> emission normal to the terraces and in "downstep" directions, as seen using electron stimulated desorption ion angular distributions (ESDIAD). The presence of atomic steps has a major influence on sticking probability, saturation oxygen coverage and the ESDIAD patterns at all adsorption temperatures in the range 100 K to > 1400 K. Adsorption at low coordination sites appears to be a key factor in producing high ESD ion yields.

**19861.** Lias, S. G., Shold, D. M., Ausloos, P., Proton-transfer reactions involving alkyl ions and alkenes. Rate constants, isomerization processes, and the derivation of thermochemical data, *J. Am. Chem. Soc.* **102**, No. 8, 2540-2548 (Apr. 9, 1980).

Key words: aromatic molecules; benzyl ions; hydride ion transfer; ion cyclotron resonance spectrometer; ion-molecule reactions; rate constant.

Rate constants and mechanisms have been determined for proton transfer reactions of the type  $\text{AH}^+ + \text{M} \rightleftharpoons \text{MH}^+ + \text{A}$ , where A is propylene, isobutene, trans-2-butene, cyclopentene and cyclohexene. In order to avoid competing side effects the  $\text{AH}^+$  reactant ions are generated in alkanes and alkylhalides.

It is observed that the rate constants for exothermic direct proton transfer reactions, from  $\text{AH}^+$  to M or from  $\text{MH}^+$  to A, are equal to the collision rate only when the total rotational, vibrational and electronic entropy change associated with the reaction is positive, and when the exothermicity of the reaction exceeds 2-4 kcal/mole. On the basis of rate constants in the forward and reverse direction for multiple reaction pairs, internally consistent values are obtained for the proton affinities of propylene, isobutene and cyclopentene.

Protonation of tr-2-C<sub>4</sub>H<sub>8</sub> by H<sub>3</sub>O<sup>+</sup> ( $\Delta H_{\text{Rn}} = -10$  kcal/mole) yields sec-C<sub>4</sub>H<sub>9</sub><sup>+</sup> exclusively. However, carbon skeletal rearrangement to the t-C<sub>4</sub>H<sub>9</sub><sup>+</sup> configuration becomes important when the  $\Delta H$  of the proton transfer is < 10 kcal/mole. The experimental evidence indicates that the isomerization occurs before departure of C<sub>4</sub>H<sub>9</sub><sup>+</sup> from the reaction complex. Taking a maximum value  $\Delta H_f(\text{t-C}_4\text{H}_9^+) = 164.2 \pm 1.5$  kcal/mole, the values derived for the heats of formation, in kcal/mole, are: sec-C<sub>4</sub>H<sub>9</sub><sup>+</sup>,  $185.7 \pm 2.1$ ; c-C<sub>5</sub>H<sub>9</sub><sup>+</sup>,  $185.5 \pm 1.9$ ; sec-C<sub>4</sub>H<sub>9</sub><sup>+</sup>,  $178.5 \pm 2.9$ ; c-C<sub>6</sub>H<sub>11</sub><sup>+</sup>,  $171 \pm 3$ ; c-C<sub>5</sub>H<sub>8</sub>CH<sub>3</sub><sup>+</sup>,  $166.3 \pm 1.7$ ; t-C<sub>5</sub>H<sub>11</sub><sup>+</sup>,  $156.7 \pm 2.0$ ; c-C<sub>6</sub>H<sub>10</sub>CH<sub>3</sub><sup>+</sup>,  $154.8 \pm 1.7$ ; t-C<sub>6</sub>H<sub>13</sub><sup>+</sup>,  $150.6 \pm 1.8$  (the last four from an analysis of data from the literature).

**19862.** Kusuda, T., Silberstein, S., McNall, P. E., Jr., Modeling of radon and its daughter concentrations in ventilated spaces, *J. Air Pollut. Control. Assoc.* **30**, No. 11, 1201-1207 (Nov. 1980).

Key words: energy conservation; indoor air quality; radioactivity; radon; ventilation.

In order to predict indoor radiation levels due to radon daughters at low building ventilation and air leakage rates, differential equations governing the decay and venting of radon (Rn-222) and its daughters were used. A computer program based on the equations was written to predict radon and daughter concentrations, total potential alpha energy concentration and equilibrium factor. The program can account for time dependence of ventilation and emanation rates and is readily used by building designers.

Sample calculations using the program showed that potential alpha energy levels in tightened buildings can commonly reach about 0.01 working level (WL), a level more than twice as high as concentrations currently found in most houses.

**19863.** Kuriyama, M., Boettinger, W. J., Burdette, H. E., Basic limits in real-time industrial radiographic systems, (Proc. Symp. on Real-Time Radiologic Imaging, Philadelphia, PA, Sept. 1980), Paper in *Am. Soc. Test. Mater. Spec. Tech. Publ. STP 716*, 113-127 (1980).

Key words: background scattering; collimation; high resolution; image intensifier; image signals; microradiography; monochromatic radiography; real-time radiography; x-ray image magnifier.

Industrial applications of radiography presently demand improvements in resolution when radiographic images are viewed on a real-time basis. Unlike medical applications (radiology), the dosage of incoming X-rays or gamma-rays does not impose serious restrictions in industrial applications. In addition, many advances in the area of computer-assisted intensification of image signals allow us to reexamine the present techniques of radiography from a fresh viewpoint. As a consequence, we may be able to make a major advance in the improvement of resolution in real-time radiography. In this paper, we discuss (1) collimation of primary radiation, including apparent size of

sources, (2) monochromatic radiography to obtain true signals, (3) resolution improvement by a magnification of X-ray images before the radiation reaches the detecting (or viewing) system and, briefly, (4) intensification of signals when crystal collimation is used.

**19864.** Kranbuehl, D. E., Verdier, P. H., Monte Carlo studies of polymer chain dynamics: Lattice dependence, *Polymer Preprints* 21, No. 2, 195-196 (Aug. 1980).

Key words: computer simulation; end-to-end length; entanglement effects; excluded volume effects; lattice-model polymer chains; polymer chain dynamics; random-coil polymer chains; relaxation times; self-entanglement effects.

The effects of excluded volume interactions upon the limiting long-time relaxation behavior of vector end-to-end length have been obtained by direct computer simulation for lattice-model chains on simple cubic, body-centered cubic, and face-centered cubic lattices. Results have been obtained for chains employing single-bead moves, double-bead moves, and a mixture of both types of move. The chain-length dependence of the lengthening of the longest relaxation times by excluded volume appears to be very similar for all three lattices. For models employing only single-bead or only double-bead move rules, the lengthening is proportional to about the 6/5 power of chain length; for models employing a mixture of both types of move, the lengthening is proportional to about the 3/5 power of chain length. At a given chain length, the lengthening of the longest relaxation times by excluded volume decreases with increasing lattice coordination number.

**19865.** Kirkpatrick, D., Horlick, J., Proficiency testing: An essential element of laboratory accreditation, *Am. Soc. Test. Mater. Stand. News* 8, No. 12, 14-17, 48 (Dec. 1980).

Key words: laboratory accreditation; laboratory evaluation; laboratory performance; proficiency testing; thermal insulation.

The National Voluntary Laboratory Accreditation Program (NVLAP) is a laboratory performance evaluation program operated by the Department of Commerce which currently accredits, upon request, laboratories that test thermal insulation materials, carpets, and freshly mixed field concrete. Decisions to accredit laboratories are based on a three part approach to laboratory evaluation which includes questionnaires, on-site examination and proficiency testing. Thus, proficiency testing is an essential element of the NVLAP accreditation process. Although a laboratory may have the facilities, equipment and personnel to meet NVLAP criteria, it is of the utmost importance to the users of a testing laboratory's services that the laboratory consistently provide reliable testing results. The actual ability of a laboratory to produce reliable testing results can only be verified by an analysis of its performance. This analysis is accomplished through proficiency testing.

The first year's proficiency testing program showed that the combination of the laboratories, the test materials, and the standard test methods lead to acceptable, well-behaved statistical results which allowed for the comparison of testing laboratories. It should be noted that due to the limited nature of the testing, the identification of outliers did not necessarily mean that those laboratories would not receive accreditation.

**19866.** Kincaid, J. M., Kayser, R. F., Jr., Kinetic perturbation theory for dilute gases, *Phys. Lett.* 78A, No. 3, 215-216 (Aug. 1980).

Key words: Boltzmann equation; collision integral; dilute gas; kinetic perturbation theory; kinetic theory; nonequilibrium perturbation theory; perturbation theory; soft spheres; transport coefficients.

We prove, for two classes of smooth, repulsive interparticle potentials  $\phi(r) = \phi_0(r) + \lambda\phi_1(r)$ , that the collision integrals of

the linearized Boltzmann equation are analytic functions of  $\lambda$  in the neighborhood of  $\lambda = 0$ . It then follows, for example, that the first Enskog approximation for the transport coefficients can be represented by a power series in  $\lambda$ .

**19867.** Myklebust, R. L., Newbury, D. E., Small, J. A., Backscatter loss in the x-ray continuum, (Proc. 15th Annual Conf. Microbeam Analysis Society, Reno, NV, Aug. 4-8, 1980), Paper in *Microbeam Analysis—1980*, D. B. Wittry, Ed., pp. 49-50 (San Francisco Press, Inc., CA, 1980).

Key words: backscattered electrons; continuum x-ray loss; electron probe; Monte Carlo method for electron trajectories; particle analysis; quantitative analysis; x-ray continuum.

The continuum x-ray loss due to backscattered electrons,  $R(\text{continuum})$  has been computed for a large number of elements with the NBS Monte Carlo program for predicting electron trajectories in solids. The results compare favorably with other determinations of  $R(\text{continuum})$  appearing in the literature. An empirical expression has been fitted to the  $R(\text{continuum})$  values as a function of atomic number and overvoltage that predicts  $R(\text{continuum})$  with better than 2% accuracy.

**19868.** McCoubrey, A. O., Metric system, Article in *Academic American Encyclopedia* 13, 345-347 (Arete Publ. Co., Inc., Princeton, NJ, Aug. 1980).

Key words: measurements; metric; metrology; SI; standards; units.

The article reviews the historical development of the Metric System of measurements, the basis for its structure and trends for the future.

**19869.** Newbury, D. E., Report on the U.S.-Japan cooperative analysis of glasses by secondary ion mass spectrometry, *Proc. Secondary Ion Mass Spectrometry Seminar, Tokyo, Japan, Oct. 23-27, 1978*, pp. 52-74 (1980).

Key words: glasses; ion microprobe mass analysis; microanalysis; quantitative analysis; secondary ion mass spectrometry; surface analysis.

Measurements of two glasses by secondary ion mass spectrometry (SIMS) have been made by twenty-two laboratories in the United States, Japan, and Europe. Spectral intensities for positive ions normalized to the ion emission for silicon are reported for each laboratory. The normalized secondary ion yields are found to vary by as much as a factor of fifty when the data of all investigators is compared. For a particular type of instrument, the range is reduced to a factor of five. The range in the normalized yields does not arise because of variation in a single parameter such as primary ion energy. The results imply that quantitative analysis schemes in SIMS rely on local measurements of relative sensitivity variations.

**19870.** Overton, R. L., Cassel, D. E., McCabe, M. E., Evaluation of a proposed modification to the f-chart method to include collector array air leakage, *Proc. Winter Annual Meeting Solar Energy Division, American Society of Mechanical Engineers, Chicago, IL, Nov. 16-21, 1980, Paper 80 WA/Sol-12*, pp. 1-10 (American Society of Mechanical Engineers, New York, NY, 1980).

Key words: air leakage; f-chart method; flat-plate solar collectors; solar energy system; TRNSYS computer program.

Field measurements of air leakage reported for a number of residential and commercial solar air heating systems suggests that air leakage occurs in most collector arrays. However, standard analytical techniques to predict solar energy system performance such as the f-chart method do not consider the effects of air leakage on system thermal performance. A proposed method for incorporating collector array leakage consid-

erations into the f-chart method of system evaluation was determined to be effective. Using modified collector parameters accounting for collector array leakage and the FCHART computer program, the annual thermal performance of a solar space heating system in Madison, Wisconsin was compared with detailed TRNSYS computer program results based on explicit modeling of system air leakage. The modified f-chart method produced annual thermal performance predictions that agreed within five percent of the TRNSYS simulation results when air leakage rates were less than 50 percent of the collector design flow rate.

**19871.** Pella, P. A., *The development of potential thin standards for calibration of x-ray fluorescence spectrometry*, Office of Environmental Engineering and Technology Paper EPA-600/7-80-123, 48 pages (Available from the National Technical Information Service, Springfield, VA 22161, 1980).

Key words: calibration standards; focused-ion beam sputtering; thin films; x-ray fluorescence spectrometry.

Thin films containing known concentrations of metals are important for the calibration of x-ray fluorescence spectrometry (XRF), especially for the analysis of collected airborne particulate matter. A focused ion-beam sputtering technique has been investigated as a candidate method for fabricating thin glass films containing known concentrations of metals on polycarbonate substrates. Glass targets were fabricated at NBS for these studies, and parameters such as ion-acceleration voltage and ion-current were systematically varied to determine any changes in film composition. It was found that rather severe changes in instrumental parameters do not affect the elemental composition of the films appreciably. Up to eight substrates were coated at one time and the compositional reproducibility as measured by XRF for Si, Ca, Zn, and Pb for 13 samples was within 5% relative standard deviation at mass loadings of glass from 160-190 mg/cm<sup>2</sup>. Glass films containing phosphorous and sulfur were also prepared to demonstrate the feasibility of preparing glass films containing such elements of low atomic number. Additional studies consisted of the deposition of finely ground synthetic glasses on membrane filters, and the characterization of some selected commercial thin films prepared by thermal evaporation.

**19872.** Reinhold, T. A., Sparks, P. R., *The influence of wind direction on the response of a square-section tall building*, *Proc. Fifth Int. Conf. on Wind Engineering*, Ft. Collins, CO, July 8-14, 1979, I, Sessions I-V, VI-3-1—VI-3-14 (Pergamon Press, Elmsford, NY, 1980).

Key words: aerodynamics; boundary layers; dynamic response; influence of wind-direction; tall buildings; wind loads; wind tunnels.

This paper describes a wind-tunnel study to determine the effect of wind-direction on the response of a square-section tall building with an 8.33 to 1 aspect ratio. Rigid models instrumented with pressure transducers were used to determine the modal forces for the fundamental translational and torsional modes of the building. Using these forces and typical stiffness and damping values, the influence of wind-direction on the response of a 500:1 scale prototype building was estimated. The maximum response was generally found to occur when the wind was blowing onto a face of the building. Comparisons are made between predicted response levels of the prototype building, based on experimental results on the one hand, and on current design procedures on the other hand.

**19873.** Rubin, R. J., *Energy flow and thermal conductivity in one-dimensional, harmonic, isotopically disordered crystals*, Chapter 7 in *Perspectives in Statistical Physics*, H. J. Raveche, Ed., pp. 112-122 (North-Holland Publ. Co., Amsterdam, The Netherlands, Nov. 1980).

Key words: energy current; isotopic disorder; nonequilibrium; one-dimensional harmonic crystal; random matrix products; steady state; thermal conductivity.

Rubin and Greer established that as the number of defect particles increases, the thermal conductivity increases at least as fast as  $N^{1/2}$ . Subsequently, Verheggen established that the limiting dependence is exactly  $N^{1/2}$ . It appears from the Monte Carlo calculations plotted in fig. 2 for the fixed boundary model that the thermal conductivity decreases with increasing  $N$  for  $N > 800$ . However, no well-defined power law dependence on  $N$  is evident in the range  $800 < N < 3200$ —it is definitely not  $N^{-1/2}$ .

A number of interesting questions meriting further work are raised by the results reported here: (1) If, in the fixed boundary model, the limiting power-law dependence is  $N^{-1/2}$ , why is the approach to the limiting law so slow? (2) If a second fixed-boundary spring is added at the other end of the disordered section of particles, is there a significant change in behavior? (3) What is the limiting power-law dependence in the one and two fixed boundary models?

**19874.** Ruff, A. W., *Debris analysis of erosive and abrasive wear*, *Proc. Int. Conf. on the Fundamentals of Tribology*, Massachusetts Institute of Technology, Cambridge, MA, June 19-22, 1978, pp. 877-885 (1980).

Key words: abrasive particles; electron microscopy; erosive wear; impact; steel; wear; wear debris.

Debris particles have been recovered from dry abrasion and erosion studies of AISI 1015 steel specimens. The size and morphology of the debris particles have been related to the worn surface topography. In both cases it appears that the principal wear mechanism involves removal of plastically deformed, exposed material from the lips of impact craters (erosion) or surface grooves (abrasion). Theoretical models that consider cutting processes on flat surfaces do not appear to properly consider the steady state morphology actually involved. The advantage of obtaining information from studies of both worn surfaces and debris particulates has been demonstrated.

**19875.** Tipson, R. S., Parker, F. S., *Infrared spectroscopy*, Chapter V in *The Carbohydrates: Chemistry and Biochemistry*, 2d Edition, W. Pigman and D. Horton, Eds., 1B, 1394-1436 (Academic Press Inc., New York, NY, 1980).

Key words: attenuated total reflection; determination of structure of carbohydrates; infrared spectra of carbohydrates; interpretation of infrared spectra; plane-polarized radiation; Raman spectra.

A survey has been made of the literature on the infrared spectroscopy of carbohydrates, in which all of the important work in this field has been collected and systematized. This was needed because previous articles in the literature were either out of date or not sufficiently comprehensive, and certain statements that had been made were subject to misinterpretation. The present article discusses principles and instrumentation, sampling techniques, comparison of samples, interpretation of spectra, functional groups of carbohydrates and their derivatives, correlations for the fingerprint region and beyond, and conformational studies. In addition, examples are discussed of the use of infrared spectra for quantitative and qualitative purposes and in the determination of structure. Special techniques are briefly described, including use of plane-polarized radiation, the technique of attenuated total reflection, and Raman spectra.

**19876.** Ott, W. R., Bridges, J. M., Klose, J. Z., *The use of gas discharges as ultraviolet radiometric standards*, *Proc. Int. Conf. on Phenomena in Ionized Gases*, Grenoble, France, July 9-13, 1979, *J. Phys.* 40, Suppl. 7, C7-803—C7-804 (July 1979).

Key words: arc; calibrations; irradiance; radiance; sources; ultraviolet.

19877. Koukhar, V. A., Maksimov, A. A., Berger, H., A comparison of NDT standards in the US and USSR, *Proc. Ninth World Conf. on Non-Destructive Testing, Melbourne, Australia, Nov. 18-23, 1979*, 6-3, 9 pages (1979).

Key words: calibration; image quality indicator; nondestructive testing; radiography; sensitivity; standards; ultrasonics.

An initial comparison and analysis is given for several radiographic and ultrasonic standards of the US (ASTM) and the USSR (GOST). This study is part of a joint US/USSR project on automated information systems in standardization. Differences between standards are pointed out.

19878. Bertocci, U., Detection and analysis of electrochemical noise for corrosion studies, *Proc. 7th Int. Conf. on Metallic Corrosion, Rio de Janeiro, Brazil, Oct. 4-11, 1978*, pp. 2010-2020 (ABRACO, Rio de Janeiro, Brazil, 1979).

Key words: aluminum; corrosion; electrochemical noise; instrumentation; iron; nickel; potentiostat.

This paper describes the work done at NBS for the study of the fluctuations in current and potential of electrochemical systems, commonly referred to as electrochemical noise.

In order to keep unwanted noise caused by the testing circuit to a minimum, a battery-operated potentiostat was developed, with a special amplifier for the detection of the current fluctuations. The results of the testing of such an instrument show that the instability of the control voltage generates a signal of the order of  $5 \cdot 10^{-8} \text{ V}/\sqrt{\text{Hz}}$ , while the amplifying system contributes a noise current of  $3 \cdot 10^{-11} \text{ A}/\sqrt{\text{Hz}}$ .

Two different experimental arrangements are described. With one of them, noise lower than that generated by the instrumentation can be measured.

A number of electrochemical reactions was investigated, such as the electrodeposition of nickel. In this case, the noise detected apparently was related to the charge-transfer process.

Two systems of interest to corrosion science have been investigated, iron and aluminum, both in neutral solution. It is shown that anodic polarization above the pitting potential increases the noise generated by a Fe electrode. In the case of Al, addition of small amounts of chlorides was found to enhance the noise current by two orders of magnitude.

19879. Berger, H., National and international standards for NDT: To achieve improved repeatability and measures related to performance, *Proc. Ninth World Conf. on Non-Destructive Testing, Melbourne, Australia, Nov. 18-23, 1979*, 6-3, 12 pages (1979).

Key words: calibration; international; nondestructive testing; radiography; standards and ultrasonics.

Nondestructive testing (NDT) standards provide a practical procedure to bring some measure of reproducibility to NDT measurements. Nevertheless, better standards are needed both to improve reproducibility and to provide quantitative data for performance-related analyses.

19880. Gadzuk, J. W., Metiu, H., Aspects of reaction dynamics at metal surfaces, (Proc. Fourth Int. Conf. on Solid Surfaces and the Third European Conf. on Surface Science, Cannes, France, Sept. 22-26, 1980), Supplement a la Revue, *Le Vide, les Couches Minces*, No. 201, II, 168-171 (1980).

Key words: molecular processes; reaction dynamics; surface reactions.

Key features are presented of a theory of chemical reaction dynamics at metal surfaces which include: i) diabatic electronic transitions between internal states of an incident beam of atoms or molecules; ii) irreversibility and dissipation through substrate

electron-hole pair excitation, iii) quantum modifications to classical trajectories via appropriate Franck-Condon factors.

19881. Schwarz, F. P., Measurement of the solubilities of slightly soluble organic liquids in water by elution chromatography, *Anal. Chem.* 52, 10-15 (1980).

Key words: elution chromatography; liquid chromatography; organic solution.

A simple method based on liquid phase elution chromatography is presented for determining the solubilities of organic liquids in water. An inert solid support in a transparent tube is coated with the organic liquid. As this solute is eluted with water, a solute depleted zone develops which is different in color than that of the remainder of the support. Measurement of the rate of progress of the boundary of this zone, the flow rate of water, and the mass of solute coated on the support are sufficient to determine the solubility. The method has been tested by measuring the solubilities of benzene, cyclohexene, cyclohexane, 2-heptene, toluene, iodopropane, *m*-dichlorobenzene, 1,1,1-trichloroethane, 1,1,2,2-tetrachloroethane, and dibutylphthalate in water at  $23.5 \pm 1.5^\circ \text{C}$ . These solubility measurements cover a range from 0.296 wt % (1,1,2,2-tetrachloroethane) to 0.00150 wt % (2-heptene) with an accuracy independent of the solubility of the solute.

19882. Bur, A. J., Impregnation and void filling of porous polymer tapes with dielectric oil, (Proc. Conf. on Electrical Insulation and Dielectric Phenomena, Pocono-Hershey, White Haven, PA, Oct. 21-25, 1979), *Proc. 1979 Annual Report*, S. A. Boggs, C. M. Cooke, R. J. Densley, E. Sacher, and J. E. West, Eds., pp. 382-388 (Washington Academy of Sciences, Washington, DC, 1979).

Key words: buoyant force; dielectric insulation; oil permeation; porous polymers; specific volume; void filling; void volume.

Porous polymer tapes are viewed as alternatives to paper tape presently used in the tape-oil insulation system of high-voltage transmission cables. We have recently completed a study which defines the physical property criteria for porous polymer tapes and describes the experimental tests for measuring these properties. One of these tests, the degree of void filling test, was developed in our laboratory for the purpose of measuring the amount of void volume in a tape specimen which remains unfilled by the dielectric oil.

19883. Cunningham, W. C., Etz, E. S., Zoller, W. H., Raman microprobe characterization of South Pole aerosol, (Proc. 14th Annual Conf. of the Microbeam Analysis Society, San Antonio, TX, Aug. 13-17, 1979), Paper in *Microbeam Analysis—1979*, D. E. Newbury, Ed., pp. 148-154 (San Francisco Press, Inc., San Francisco, CA, 1979).

Key words: airborne particles; atmospheric aerosol; atmospheric sulfate environmental pollution; microsampling; molecular microanalysis; particle microanalysis; Raman microprobe; Raman spectra; Raman spectroscopy; South Pole atmosphere.

The NBS laser-Raman microprobe has been applied to the study of the major molecular species present in particulate matter from the South Pole atmosphere. Aerosol samples were collected by ground-based equipment for characterization by optical microscopy, SEM/x-ray microanalysis and micro-Raman spectroscopy. Most of the aerosol is of submicrometer size and shows high concentrations of sulfur. Raman microprobe measurements were made on individual particles ( $> 1 \mu\text{m}$ ) and on microscopic regions (6-20  $\mu\text{m}$  diameter spots) of dense aerosol collections. The Raman spectra of these samples show various crystalline sulfates as dominant constituents, with ammonium sulfate as the major pure component. Other sulfates appear to have a more complex composition. Chemical reactivity of the

aerosol is indicated by its interaction with lithium fluoride substrates used in the impactor-collection of these samples. It is inferred from the spectroscopic results that some fraction of the aerosol also existed in the form of sulfuric acid at the time of sampling. These results are the first direct indication of acid sulfate species in the Antarctic atmospheric aerosol and support the indirect identifications of these compounds made by other workers.

**19884.** Molino, B. B., **Special features of NBS's Omnidata system applicable to the retrieval, analysis, and dissemination of chemical data**, (Division of Chemical Information Symp. on Techniques and Problems in Retrieval of Numerical Data, 178th National Meeting, American Chemical Society, Washington, DC, Sept. 12, 1979), *J. Chem. Inf. Comput. Sci.* **20**, 136-138 (Aug. 1980).

Key words: computer programs; data analysis; data base management; data retrieval; information retrieval; MIS; on-line retrieval.

Omnidata is an interactive, general-purpose system for data retrieval, data analysis, and file maintenance, developed at NBS. The system allows individuals with little background in computers to search and analyze data files and prepare reports. In addition to the "typical" searching, reporting, sorting, and updating, there are roughly 30 modules providing statistical and graphical analysis, data manipulation, and file management. Many are specifically designed and have unique features to aid the chemist in the retrieval, analysis, and dissemination of data. Some of these are discussed and illustrated on files of chemical data.

**19885.** Berger, H., **Nondestructive testing of railroad rail**, *Transportation Res. Record* **744**, 22-26 (1980).

Key words: coupling; magnetic inspection; nondestructive testing; pulsed mode; rail test car; railroad rail; sensitivity; ultrasonic inspection.

Techniques of nondestructive testing (NDT) of railroad rail in service are reviewed with the aim of assessing the state of the art and future needs. The contributions to the industry of the primary NDT methods—ultrasonic and magnetic inspection—are noted, and their limitations are examined. The limitations of ultrasonic inspection include ensuring the coupling of the ultrasonic signal into and out of the rail, setting the sensitivity level of the inspection system reproducibly, and relating the amplitude of the return ultrasonic signal to the size of the defect. Magnetic inspection is generally limited to the railhead. The two systems used together provide the most reliable inspection, the magnetic system providing special assistance with defects located near the edges of the railhead. Recommendations for improving rail NDT include greater use of these two complementary systems (now available on only about 50 percent of U.S. rail test cars), greater attention to operator training and characteristics and to the inspection of new rail before installation, and changes in government regulations that will lead to more effective use of rail test cars. In addition, research is needed to relate defect growth to rail service conditions so that realistic decisions can be made about leaving defective rail in use. Developments leading to improved technology are also discussed.

**19886.** Bernstein, B., Kearsley, E. A., **A theory of the effects of pressure on finite elastic shear**, (Proc. VIII Int. Congress on Rheology, Naples, Italy, Sept. 1-5, 1980), Paper in *Rheology*, G. Astarita, G. Marrucci, and L. Nicolais, Eds., **1**, 305-311 (Plenum Publ. Corp., New York, NY, 1980).

Key words: bulk modulus; compressibility; finite elasticity; modulus; rubber; shear.

Often the theory of finite deformations of an elastic medium is used with the added restriction of incompressibility of the

medium. This restriction makes possible the solution of several classes of problems in terms of an unspecified strain-energy potential, however, it excludes the possibility that the elastic material properties depend on pressure. In this paper, a general theory of materials whose mechanical properties depend on pressure will be derived from the unrestricted theory and the condition for incompressibility of the medium will be added as an approximation.

**19887.** Broadhurst, M. G., Edelman, S., Davis, G. T., **Piezoelectric and pyroelectric applications of plastics**, (Proc. Division of Organic Coatings and Plastics Chemistry, American Chemical Society 179th National Meeting, Houston, TX, Mar. 23-28, 1980), Paper in *Organic Coatings and Plastics Chemistry* **42**, 241-245 (American Chemical Society, Washington, DC, 1980).

Key words: applications; piezoelectric; polymers; pyroelectric transducer.

Synthetic polymeric materials can have large and durable electric dipole polarization. This polarization varies linearly with small applied stresses such as electric fields, mechanical stress and temperature change, and this sensitivity renders them useful as piezoelectric and pyroelectric transducers. That is, they can be used to provide an analog electrical signal to monitor mechanical and thermal signals, and inversely, can provide mechanical motion and changes in heat content in response to applied electric fields.

**19888.** Tilford, C. R., Wood, S. D., Lundquist, A. J., **Survey of altimeter calibration accuracy**, (Proc. 1980 Air Data Systems Conf., U.S. Air Force Academy, Colorado Springs, CO, May 5-8, 1980), *SRDS Tech. Letter Report No. RD-80-6-LR*, 6 pages (U.S. Department of Transportation, Federal Aviation Administration, Systems Research & Development Service, Washington, DC 20590, May 8, 1980).

Key words: altimetry; altimetry accuracy; aviation safety; pressure measurement; pressure transducers.

Limited data exist from which to determine what altimeter accuracies are actually achieved in field use. In order to acquire some information about altimeter accuracy and, in particular, to evaluate whether or not adequate pressure measurement accuracy is available to the aviation community, a limited measurement survey of altimeter repair and calibration shops has been performed.

A commercial transfer-standard quality pressure transducer was modified for field use. It was repeatedly calibrated in the field using a portable calibration unit. This equipment and calibration procedures were able to maintain an uncertainty of .001" Hg + .01% of reading for the transfer standard. Several instrument repair shops were then asked to calibrate the transfer standard in the same manner they would an altimeter. The results of these comparisons and the details and performance of the equipment used are discussed.

**19889.** Wood, S. D., Tilford, C. R., **Survey report—altimeter setting indicators**, (Proc. 1980 Air Data Systems Conf., U.S. Air Force Academy, Colorado Springs, CO, May 5-8, 1980), *SRDS Tech. Letter Report No. RD-80-6-LR*, 17 pages (U.S. Department of Transportation, Federal Aviation Administration, Systems Research & Development Service, Washington, DC 20590, May 8, 1980).

Key words: altimeter setting indicator; aviation instrumentation; aviation safety; barometry; pressure.

The accurate altimetry required for landing approaches and terrain avoidance necessitates that reliable altimeter settings be available to compensate for changes in the local barometric pressure. The procedures and equipment used to provide altimeter settings and maintain their accuracy vary widely. In order to determine the accuracy actually found in the field a limited

survey of altimeter setting indicators and some associated equipment was conducted at several locations. The results of that survey are presented.

**19890.** Menis, O., Mackey, J. A., Garn, P. D., **A study of particulates of environmental interest by differential thermal analysis**, *Proc. Thermal Analysis Symp., Rappersville, Switzerland, Apr. 18-30, 1979*, pp. 321-332 (1979).

Key words: alpha-quartz particulate; chrysotile asbestos particulate; differential thermal analysis; environmental particulates; thermal analytical methods.

In this presentation we describe our current progress using thermoanalytical methods to study particulates of interest in environmental problems. The topics included are: (1) differential thermal analysis (DTA) of current NBS Standard Reference Material (SRM) 1645, River Sediment and NBS SRM 1648, Urban Particulate Matter; (2) studies of a suitable crystalline silica ( $\alpha$ -quartz and cristobalite) as a potential SRM; (3) preparation of mixtures of chrysotile asbestos and quartz in a suitable matrix, and (4) a modified DTA apparatus including a design of a DTA cell for rapid sample changing and operation under regulated steam pressure.

**19891.** Boettinger, W. J., Biancaniello, F. S., Kalonji, G. M., Cahn, J. W., **Eutectic solidification and the formation of metallic glasses**, *Proc. Second Int. Conf. on Rapid Solidification Processing: Principles and Technologies, Reston, VA, Mar. 23-26, 1980*, 6 pages (Claitor's Publ. Div., Baton Rouge, LA, 1980).

Key words: amorphous alloys; coupled growth; eutectic solidification; metallic glasses; palladium-copper-silicon alloys; rapid solidification.

The relationship between eutectic solidification and the ease of formation of metallic glasses is investigated. For many systems, crystallization, including partitionless crystallization, of alloys into a single phase solid is impossible over a wide range of composition near stable or metastable eutectics. This fact forces alloys to crystallize into two-phase solids. Because of the need for diffusional sorting of the components and creation of solid-solid surfaces, the kinetics of eutectic crystallization are relatively slow and may be closely related to the ease of glass formation of these alloys.

Experiments are reported on the directional solidification of Pd-6 at % Cu-17 at % Si alloys which show the evolution of microstructure as a function of interface velocity. A structure of dendrites and interdendritic eutectic at low velocity ( $\leq 0.25$  mm/s) becomes a fine eutectic-like structure at intermediate velocities ( $\sim 1$  mm/s) and finally the alloy forms glass when crystallization is attempted at velocities greater than 2.5 mm/s.

**19892.** Interrante, C. G., **Needed: A fracture mechanics vocabulary**, *Am. Soc. Test. Mater. Stand. News* 7, No. 4, 22-24 (1979).

Key words: definitions; fracture testing; nomenclature; symbols; terminology; terms.

Words, after all, are the single most important tool for ASTM activities, and the importance of precisely defined and clearly understood technical terminology cannot be overrated. In this article, the chairman of E-24's terminology subcommittee details the group's history, present activities, and future plans; lingering over some of the more interesting battles that have developed in fracture mechanics terminology.

**19893.** Rabolt, J. F., Block, S., Piermarini, G. J., **The characterization of polymers under high pressure using Raman spectroscopy**, (Proc. Sixth AIRAPT Conf., University of Colorado, Boulder, CO, July 25-29, 1977), Paper in *High-Pressure Science and Technology, Vol. 1, Physical Properties and Material Synthesis*, K. D. Timmerhaus and M. S. Barber, Eds., pp. 478-481 (Plenum Press, New York, NY, 1979).

Key words: diamond anvil cell; high pressure physics; perfluoro n-alkanes; phase transition; polytetrafluoroethylene; Raman spectroscopy.

The high pressure phase of  $nC_{20}F_{42}$ , polytetrafluoroethylene (PTFE) and a random copolymer of tetrafluoroethylene and hexafluoropropylene (TFE-HFP) has been investigated using Raman spectroscopy. All of these materials transform to the planar zig zag form (as evidenced by the appearance of the  $625\text{ cm}^{-1}$  band) in the 7-9 Kbar range. It was observed that the peak intensity ratio (PIR) of the  $285$  to  $395\text{ cm}^{-1}$  bands, taken as a qualitative measure of pressure induced deformation, increased significantly in PTFE in the 15-30 Kbar range. This behavior of the PIR with pressure was markedly different from that observed in  $nC_{20}F_{42}$  and the TFE-HFP copolymer. This variation in PIR in PTFE has been correlated with a change in sample crystallinity. Morphological differences between the three materials studied suggest that the deformation mechanism at high pressures which results in an increase in PTFE crystallinity could be one of pressure induced nucleation or pressure driven crystal thickening.

**19894.** Hastings, J. R., Sengers, J. M. H. L., Balfour, F. W., **The critical-region equation of state of ethene and the effect of small impurities**, *J. Chem. Thermodyn.* 12, No. 11, 1009-1045 (Nov. 1980).

Key words: Burnett method; coexistence curve; critical exponents; critical isochore; critical parameters; equation of state; ethylene; impurities; isochores; scaling laws.

Accurate measurements are reported of the equation of state of ethene on 16 isochores within  $\pm 40$  per cent of the critical density and at temperatures from 220 to 303 K. Two samples, one of 99.993 and one of 99.999 moles per cent  $C_2H_4$ , have been used. The principal source of experimental error is found to be impurity. A model for predicting the effect of known small impurities is developed and used to explain qualitatively the observed differences between the results for our two samples as well as those between our own and other recently-reported accurate measurements. A scaled fundamental equation, incorporating Ising-like asymptotic behavior, revisions of and corrections to scaling, has been fitted to the results for the 99.993 moles per cent pure sample. The equation, with nine adjustable parameters, represents the measured values to within an estimated uncertainty of  $5 \times 10^{-4}$  K in temperature,  $5 \times 10^{-5}$  MPa in pressure, and  $0.003\text{ mol dm}^{-3}$  in amount-of-substance density. The critical-point parameters resulting from the fit are presented. Comparisons are made with two other sets of measurements recently published. The agreement is generally satisfactory.

**19895.** Rabolt, J. F., Fanconi, B., **Longitudinal acoustic mode in helical polymers: Poly(oxyethylene) and isotactic polypropylene**, *Polymer Lett.* 15, 121-127 (1977).

Key words: longitudinal acoustic mode; polyoxyethylene; polypropylene; Raman spectroscopy; Young's modulus.

A longitudinal acoustic mode (LAM) characteristic of polymer crystalline lamellae has been observed in the low frequency Raman spectra of melt crystallized polyoxyethylene and isotactic polypropylene. The shift in peak frequency of the LAM is correlated with an increase in lamella thickness resulting from annealing. Assuming the applicability of the uniform elastic rod model to helical polymers, values of the elastic modulus are derived and found to be much larger than those obtained from x-ray measurements. The possible origins of this discrepancy are discussed.

**19896.** Polvani, R. S., Christ, B. W., **Microcreep of instrument grade beryllium**, *SAMPE Quart.* 10, No. 4, 37-41 (July 1979).

Key words: beryllium; creep; dimensional instability; inertial guidance; microcreep; optical mirrors.

Inertial guidance system gyroscopes and optical mirrors are designed to be dimensionally stable to better than 1 microinch over long times. New gyroscope designs require still better stability, 0.01 microinch. Uniaxial microcreep experiments at elevated temperature show instrument grade beryllium deforms in excess of both design limitations. However, a microstrain hardening process was observed that seems a possibility for improving microcreep strength. Performing these experiments required development of a test system with better than 0.1 microinch resolution, less than 0.01 microinch thermal noise in the signal at 144 °F, and typically, sample misalignment of about  $10^{-5}$  radians.

- 19897.** Choi, C. S., Prask, H. J., Prince, E., **Phase transitions in ammonium nitrate**, *J. Appl. Cryst.* **13**, 403-409 (1980).

Key words: ammonium nitrate; crystal structure; hydrogen bonding; neutron diffraction; phase transitions; x-ray diffraction.

The phases of ammonium nitrate,  $\text{NH}_4\text{NO}_3$ , doped with small amounts of NiO or CuO have been studied by x-ray and neutron diffraction at various temperatures from 80 to 423 K.  $\text{NH}_4\text{NO}_3$  with metal-oxide additives, which are believed to form complexes, exists as a solid solution. Phase IV is stable down to 140 K in the NiO-doped samples and 210 K in the CuO-doped sample. The thermal expansion of this phase is extremely anisotropic, with the *b* axis expanding rapidly with increasing temperature while the *a* axis contracts slightly. At higher temperatures the doped samples transform directly from phase IV to phase II, bypassing phase III, starting at about 328 K. The structure of phase II, which is disordered, was refined in the space group  $P4/mbm$ . The structure of phase III contains hydrogen-bonded chains parallel to the *b* axis.

- 19898.** Deslattes, R. D., **The Avogadro constant**, *Ann. Rev. Phys. Chem.* **31**, 435-461 (1980).

Key words: atomic masses; fundamental constants; mole; precision measurement.

This review of the Avogadro Constant is prepared in response to an invitation from the Editor of the Annual Reviews of Physical Chemistry. It attempts to deal with some aspects of the history in this field of certain conceptual problems and the present state of experimental measurement.

- 19899.** Cohen, A., Hertz, H. S., Schaffer, R., Sniegowski, L. T., Sun, T., White, E., **The accurate determination of cholesterol in serum by isotope dilution gas chromatography/mass spectrometry**, (Extended Abstract), *Proc. 26th Conf. on Mass Spectrometry and Applied Optics*, St. Louis, MO, May 28-June 2, 1978, pp. 298-300 (American Society for Mass Spectrometry, Bethesda, MD, 1978).

Key words: cholesterol; gas chromatography/mass spectrometry; isotope dilution; serum.

A method for the accurate measurement of total cholesterol in serum has been developed to give values against which the accuracy of clinically appropriate reference methods can be judged. Labelled cholesterol (25,26,26,27,27,27- $\text{d}_7$ ) was added to serum and the mixture subjected to alkaline hydrolysis. Cholesterol was isolated by extraction and converted to the TMS ether. An observed ratio of labelled to unlabelled cholesterol was obtained for each sample by summing over the GC peak the signal generated by selected ion monitoring (SIM) of the molecular ions utilizing magnetic beam switching coupled with continuous viewing of the *m/e* peaks. The observed ratio for each sample was converted to a weight ratio by linear interpolation between standard mixtures which bracketed each sample in both time and in ratio. The eight measurements obtained on five different serum pools (1.3 to 3.4 mg cholesterol per ml serum) had an overall relative standard deviation of 0.33%.

- 19901.** Peterlin, A., **Molecular model of fracture of fibrous polymeric material**, (Proc. 4th Int. Conf. on Fracture, Waterloo, Canada, June 19-24, 1977), *Fracture* **1**, No. ICF4, 471-485 (1977).

Key words: crystalline polymer; elastic modulus; fibrils; fibrous structure; fracture; load-elongation curve; microfibrils; point defects of microfibrillar structure; ruptured chains; strength; tie molecules.

The fibrillar model of fibrous structure assumes a dense packing of long and narrow microfibrils into spindle shaped slightly skewed fibrils. The ends of microfibrils located mainly on the outer boundary of the fibrils represent an interruption of the massive axial connection by taut tie molecules. They are prime candidates for microcrack formation upon tensile loading which deforms the sample by shear displacement of adjacent fibrils and microfibrils. The axial and radial growth of microcracks ruptures the tie molecules in its path. The sample fails as soon as one of cracks reaches critical dimensions. The rest of the sample in a new loading run exhibits a lower load-elongation curve but practically the same or even higher strength because the reopening of old microcracks is easier than their initial formation while the growth of microcracks beyond the limits of the first run requires an increased load.

- 19902.** Madey, T. E., Goodman, D. W., Fisher, G. B., Yates, J. T., Jr., **Structure and kinetics of surface species**, *Proc. Fourth Symp. on Fluid/Solid Surface Interactions*, National Bureau of Standards, Gaithersburg, MD, Oct. 18-20, 1978, pp. 239-243 (Commanding Officer, Naval Research Laboratory, Code 6170, Washington, DC 20375, 1980).

Key words: catalysis; catalytic methanation; electron stimulated desorption; surface kinetics; surface structure.

The ONR-supported research in the Surface Science Division at the National Bureau of Standards has been concentrated in two areas: (a) the characterization of the structure of adsorbed species using the Electron Stimulated Desorption Ion Angular Distribution (ESDIAD) method, and (b) kinetic and spectroscopic studies of surface species, with particular emphasis on molecular species of catalytic interest. Examples from each of these efforts will be discussed.

- 19903.** Peterlin, A., **Mechanical properties of fibrous structure**, (Proc. Mechanical Structure Ultrahigh Modulus Polymers Symp., Santa Margherita Ligure, Italy, May 23-27, 1977), Chapter 10 in *Ultra-High Modulus Polymers*, A. Ciferri and I. M. Ward, Eds., pp. 279-320 (Applied Science Publ. Ltd., Essex, England, 1979).

Key words: annealing; crystallization; elastic modulus; fibrils; fibrous structure; microfibrils; superdrawing; Taut tie molecules.

The drawing of a more or less isotropic semicrystalline polymer solid usually produces a fibrous material with high anisotropy of physical properties, e.g., elastic modulus *E*, strength ( $\sigma_y$  = stress-to-*y*ield,  $\sigma_b$  = stress-to-*b*reak,  $\epsilon_b$  = strain-to-*b*reak), diffusivity (diffusion coefficient). This anisotropy is closely connected with the orientation of chains in crystalline and amorphous regions and with the direction in which the two regions alternate. The former effect shows up in wide-angle x-ray scattering (WAXS) and infrared dichroism, the latter in small-angle x-ray scattering (SAXS). At small draw ratios already, the chains in the crystal lattice are almost completely oriented in the draw (or fibre or axial) direction. The orientation only slightly increases with further drawing. In amorphous regions, the chain orientation is much less perfect but increases steadily over the whole range. The crystalline regions, separated by amorphous layers, are oriented more or less perpendicular to the fibre direction. It is worth while to mention that the long

period  $L$  of the crystalline-amorphous alternation is a unique function of the temperature of drawing with a slight influence of drawing rate, but completely independent of the long period of the isotropic starting material.

**19904.** Peterlin, A., *Crystallization phenomena*, (Proc. Symp. on Flow-Induced Crystallization, Midland Macromolecular Institute, Midland, MI, Aug. 22-26, 1977), *Int. J. Polym. Mater.* **7**, 1-28 (1979).

Key words: crystallization temperature; melting temperature; row nucleation; stirred solution; strained melt.

The minimum requirement of the free enthalpy increase for the formation of any type of critical size nucleus determines the probability for the nucleation from supercooled melt or solution and for the subsequent crystal growth. The minimum demand decreases as the inverse square of the supercooling. This yields a rapid increase of the nucleation and growth rate with decreasing temperature. On the other hand, the viscous resistance of the melt or solution to the chain transfer from the liquid to the crystalline phase increases with the temperature approaching that of the glass transition. Both effects together yield a maximum of the nucleation and growth rates at a finite supercooling with a subsequent drastic drop at a higher supercooling. The extension and alignment of the polymer chains in the liquid by applied mechanical forces lowers the entropy and to some extent also the enthalpy of the liquid state, thus raising the equilibrium melting temperature of the system and increasing the effective supercooling. As a consequence the rate of nucleation and crystal growth is drastically increased. Moreover, the shape of the primary nuclei becomes substantially linear with orientation in the main strain direction. Since these linear elements carry most of the applied load or stress, the rest of the liquid can relax to such an extent that by epitaxial overgrowth the macromolecules are able to be deposited in more or less conventional lamellae perpendicular to the stress. This yields the shish-kebab structure in the stirred or sonicated solutions and the cylindritic structure in hard elastomers solidified from the extruded melt.

**19905.** Berger, P. W., Tucker, J. C., *Standards and guidelines for data*, Chapter 8 in *Data Handling for Science and Technology*, S. A. Rossmassler and D. G. Watson, Eds., pp. 93-113 (North-Holland Publ. Co., Amsterdam, The Netherlands, 1980).

Key words: engineering standards; information interchange; measurement systems; product standards; standard reference data; standard reference materials.

Measurements are made to establish hypotheses, control industrial processes, aid health care, and set standards. These measurements must be precise and must also be compatible. Standard reference data systems provide critically evaluated numerical values of physical and chemical properties. Standard reference materials with accurately assessed properties provide means for comparison of instruments and methods. Engineering and product standards are written by national and international organizations to assure quality and compatibility of industrial output. Finally, major international attention has been focused on standardization of information processing. In addition to describing these levels of standardization, the chapter describes some of the standards organizations in various countries and gives an extensive bibliography.

**19906.** Zupancic, I., Lahajnar, G., Blinc, R., Reneker, D. H., Peterlin, A., *NMR study of diffusion of butane in linear polyethylene*, *J. Polymer. Sci. Polymer Phys. Ed.* **16**, 1399-1407 (1978).

Key words: butane; diffusion; experimental methods; migration; molecular transport; nuclear magnetic resonance; polymers.

The diffusion coefficient of butane in linear polyethylene at room temperature as a function of the vapor pressure of butane was measured by the spin-echo method with a pulsed magnetic field gradient. For the special morphology of randomly oriented stacks of parallel lamellas the detour factor is 1/3. As long as the blocking factor and migration through the lamellas can be neglected, the local diffusion coefficient  $D_a$  of the small molecules through the amorphous layers in the direction parallel to the lamellas is three times the apparent diffusion coefficient  $D$  derived from the decay of the amplitude of the spin echo under the assumption of an infinitely extended homogeneous medium. The diffusion coefficient and the spin-spin relaxation time both increase exponentially with increasing pressure, i.e., butane concentration in the polymer, while the spin-lattice relaxation time is pressure independent and seems to be determined by interactions with the amorphous polyethylene matrix.

**19907.** Ziff, R. M., Kincaid, J. M., *The virial series of the ideal Bose gas*, *J. Math. Phys.* **21**, No. 1, 161-165 (Jan. 1980).

Key words: Bose gas; fugacity expansion; Padé approximants; phase transitions; virial coefficients; virial series.

The radius of convergence  $\rho_R$  of the virial series of the  $d$ -dimensional ideal Bose gas is estimated by the method of Padé approximants, using at least thirty virial coefficients, which were numerically determined. A finite  $\rho_R$  is found for  $d = 1$  and 2, even though no phase transition occurs for these  $d$ . For  $d = 3$ ,  $\rho_R$  is consistent with Fuchs' analytical bounds, and for  $d = 4, 5$ , and 6,  $\rho_R$  is equal to the critical density  $\rho_c$ . These findings are supported by some analytic results for the equation of state.

**19908.** Zalewski, E. F., *Preliminary results of the interlaboratory comparison of detector spectral response transfer capabilities*, *Proc. Electro-Optics/Laser 79 Conf. & Exposition, Anaheim, CA, Oct. 23-25, 1979*, pp. 414-419 (1979).

Key words: absolute spectral response; detector intercomparison; optical radiation measurements; photodetector; photometry; radiometry.

As part of the NBS detector spectral response calibration program, participating laboratories were asked to report the results of several diagnostic and response transfer simulation experiments. The diagnostic tests probed for wavelength inaccuracies and stray light problems. In the response transfer simulation experiments the participants measured, on the basis of the absolute spectral responsivity supplied with the detector, alternative spectral response functions generated by absorbing glass filters placed in front of the detector. The results of these measurements are an assessment of the state of the art of detector spectral response calibrations among the laboratories participating in this program. This paper describes the results of the diagnostic and intercomparison measurements in the visible spectral region.

**19909.** Zalewski, E. F., Geist, J., Willson, R. C., *Cavity radiometer reflectance*, (Proc. 23d Annual Int. Tech. Symp. of the SPIE, San Diego, CA, Aug. 27-30, 1979), Paper in *Measurements of Optical Radiations*, H. P. Field, E. F. Zalewski, and F. Zweibaum, Eds., 196, 152-158 (Society of Photo-Optical Instrumentation Engineers, Bellingham, WA, 1979).

Key words: absolute radiometry; cavity absorptance; cavity reflectance; electrically calibrated radiometer; pyroheliometry; solar constant.

The evolution of absorbing surfaces for electrically calibrated radiometers, and techniques for measuring their absorptance (reflectance) are described. A new reflectometer for cavity reflectance measurements, which is based on a ring-shaped silicon photodiode, is described. The results of reflectance measurements on a series of cavities which represent the evolution of

cavity technology are presented, and the significance of the results for future research are discussed.

- 19910.** Yates, J. T., Jr., Duncan, T. M., Vaughan, R. W., **Infrared spectroscopic study of activated surface processes: CO chemisorption on supported Rh**, *J. Chem. Phys.* **71**, No. 10, 3908-3915 (Nov. 15, 1979).

**Key words:** carbon monoxide; chemisorption; infrared spectroscopy; isotopic exchange; rhodium.

The infrared spectrum of CO chemisorbed on alumina-supported Rh surfaces has been studied following chemisorption at cryogenic temperatures. Major differences are observed in the distribution and spectroscopic character of chemisorbed CO species produced at low temperatures (110-170 K) compared to chemisorbed CO species produced on Rh at 295 K. It has been found that the species  $\text{Rh}(\text{CO})_2$ , formed on isolated Rh sites, is produced rapidly via an activated chemisorption process above  $\sim 200$  K. On more "crystalline"  $\text{Rh}_x$  sites, containing chemisorbed CO, an activated CO adsorbate-conversion process has been detected in which  $\nu_{\text{CO}}$  decreases by  $\sim 50 \text{ cm}^{-1}$  on warming the adsorbed layer above  $\sim 265$  K. Isotopic exchange between  $^{13}\text{CO}(\text{g})$  and  $^{12}\text{CO}(\text{ads})$  has been shown to occur rapidly at low temperature ( $\sim 200$  K) for  $\text{Rh}(\text{CO})_2$  species, whereas  $\text{Rh}_x(\text{CO})$  species exchange rapidly only at higher temperatures ( $\geq 250$  K). These results, taken together, serve to confirm a model in which isolated Rh sites coexist on the alumina support with crystalline  $\text{Rh}_x$  sites; the two kinds of sites are separable on the basis of the spectroscopic character of the chemisorbed CO species they adsorb as well as by means of their chemical properties.

- 19911.** Yagi, K., Roth, R. S., **Electron-microscope study of crystal structures of mixed oxides in the systems  $\text{Rb}_2\text{O}-\text{Ta}_2\text{O}_5$ ,  $\text{Rb}_2\text{O}-\text{Nb}_2\text{O}_5$  and  $\text{K}_2\text{O}-\text{Ta}_2\text{O}_5$  with composition ratios near 1:3. II. Various intergrowth phases and two-dimensional ordering of pentavalent ions**, *Acta Cryst.* **A34**, 773-781 (1978).

**Key words:** crystal structure; electron microscope; lattice images; niobates and tantalates; rubidium and potassium oxides; two-dimensional ordering.

In part I, the preceding paper, structural models were proposed on the basis of high-resolution electron microscopy for phases previously designated as 11L, 9L and 16L, which were found to exist in the title systems. Two types of blocks were found, which are composed of five and six layers of octahedra. In the present paper, various intergrowth phases which are composed of the two types of blocks are described. A new notation is proposed to denote these intergrowth phases as well as the 11L, 9L and 16L structures. Two-dimensional ordering of pentavalent ions in the six-layer block is found, giving rise to diffuse scattering in electron diffraction patterns. Two-dimensional images, calculated on the basis of the proposed model, are found to reproduce the observed images.

- 19912.** Watters, R. L., Jr., Norris, J. A., **Factors influencing precision and accuracy of analysis with inductively coupled plasmas**, *Proc. Eastern Analytical Symp.*, New York, NY, Nov. 31-Dec. 2, 1977, pp. 65-81 (Franklin Inst. Press, Philadelphia, PA, 1978).

**Key words:** emission spectroscopy; inductively coupled plasma; instrumental control; multi-element analysis; plasma system; trace element analysis.

In order to analyze Standard Reference Materials for certification, it is necessary to establish which instrumental factors contribute to the errors of the analysis technique. The first step is to attain adequate control of the random errors in the entire measurement process. Once this is achieved it becomes possible to evaluate the magnitude of the error and thereby to properly estimate accuracy.

This paper describes some of the problems encountered in realizing adequate control of the random errors associated with

the Inductively Coupled Plasma. The effects of some important instrumental parameters on the precision of the analytical signal will be described. Preliminary analysis data will be presented to demonstrate the possible magnitude of systematic errors which arise from instrumental sources.

- 19913.** Wasik, S. P., Brown, R. L., **Analysis of complex aromatic hydrocarbon mixtures with solid silver nitrate columns**, *Anal. Chem.* **48**, No. 14, 2218-2220 (Dec. 1976).

**Key words:** aromatic hydrocarbons; gas-solid chromatography; silver nitrate.

A highly efficient chromatographic column consisting of glass beads coated with solid silver nitrate and modified by water vapor in the carrier gas can be used at room temperature to analyze, in a reasonable time, mixtures containing aromatic hydrocarbons having boiling points up to  $180^\circ\text{C}$ . The construction of this column is described and its properties discussed. Its efficiency is compared with conventional gas-liquid chromatographic columns.

- 19914.** Wasik, S. P., **Determination of transition temperatures on sodium stearate using gas chromatography**, *J. Chromatogr. Sci.* **14**, 516-518 (Nov. 1976).

**Key words:** gas chromatography; sodium stearate; transition temperatures.

A gas chromatographic method is presented for detecting structural changes in a solvent by observing the solubility behavior of a "probe" solute molecule. The transition temperatures of solid and liquid sodium stearate were determined at this point on the  $\log V_g$  vs  $1/T$  plot where the slope changes abruptly. The observed transition temperatures were compared with differential scanning calorimetry measurements on the same compound and the results of other investigators using different physical methods.

- 19915.** Hahn, T. A., **Thermal expansion of single crystal sapphire from 293 to 2000 K Standard Reference Material 732**, *Proc. Int. Symp. on Thermal Expansion, Hecla Island, Manitoba, Canada, Aug. 29-31, 1977*, No. 6, 11 pages (Plenum Press Inc., New York, NY, Aug. 1977).

**Key words:** high temperature; interferometer; sapphire- $\text{Al}_2\text{O}_3$ ; standard reference material; tele-microscope; thermal expansion.

This single crystal sapphire is the fifth Standard Reference Material (SRM) to be certified from thermal expansion by the National Bureau of Standards. Expansion measurements to 1000 K on three samples indicate that the stock of material is of consistent quality suitable for certification. In the temperature range from 293 to 1000 K measurements were made using an interferometer apparatus resulting in  $(L_{1000} - L_{293}) / (L_{293}) = 5500 \times 10^{-6}$  with a standard deviation of  $5 \times 10^{-6}$ . Above 1000 K length measurements were made using twin tele-microscopes with the sample heated in a tungsten mesh furnace. From 293 to 2000 K  $(L_{2000} - L_{293}) / (L_{293}) = 15700 \times 10^{-6}$  with a standard deviation of  $25 \times 10^{-6}$ . Measurements were made parallel to the rod axis which is oriented  $59^\circ$  from the c-axis of the crystal. Smoothed values of the expansion and coefficients of expansion were obtained by fitting the expansion with a variation of Grüneisen's equation.

Final values of the four parameters were obtained by minimizing the standard deviation in a least-squares analysis. The results of this study are generally in good agreement with expansion values found in the literature. Major differences, however, are observed in the comparison with x-ray diffraction studies and with extrapolated data appearing in the literature. No systematic deviations of the data from the final equation were observed. A comparison of the results of this study with data found in the literature will be presented.

**19916.** Turk, G. C., Travis, J. C., DeVoe, J. R., O'Haver, T. C., **Analytical flame spectrometry with laser enhanced ionization**, *Anal. Chem.* **50**, No. 6, 817-820 (1978).

Key words: atomic absorption; atomic detection limits; flame spectrometry; laser enhanced ionization; laser spectrometry; tunable laser.

A new flame spectrometric technique using laser-enhanced ionization is described. The method is based on the increase in flame conductivity resulting from the enhanced thermal ionization of an element following the absorption of laser radiation at a transition wavelength for that element.

Detection limits are reported for Cu, Mg, Mn, Na and Pb. In most cases the detection limits are comparable or better than the best reported values for other flame spectrometric techniques.

Also discussed is the unique ability of laser-enhanced ionization to use nonresonance or weak resonance lines, often with sensitivity comparable or better than the traditional lines used in other flame spectrometric techniques.

**19917.** Tsong, T. T., Yee, S. N., Melmed, A. J., **ToF atom-probe mass spectra of GaAs**, *Surf. Sci. Lett.* **77**, L187-L192 (1978).

Key words: field evaporation; molecular ions; semiconductor mass analysis.

Time-of-flight mass analysis is applied to GaAs. Analyses are done in the presence of hydrogen and argon, as well as in vacuum. Significant differences are found in the spectra obtained under these conditions. Particularly interesting is the apparent specificity of hydrogen to react with As compared to Ga. The existence of the molecular ion  $As_2^+$  is established.

**19918.** Travis, J. C., Turk, G. C., Green, R. B., **Laser-enhanced ionization for trace metal analysis in flames**, (Proc. ACS Division of Analytical Chemistry at the 175th Meeting of the American Chemical Society, Anaheim, CA, Mar. 14-15, 1978), Paper No. 6 in *New Applications of Lasers to Chemistry*, G. M. Hieftje, Ed., *ACS Symp. Series* **85**, pp. 91-101 (American Chemical Society, Washington, DC, 1978).

Key words: atomic spectrometry; flame spectrometry; laser enhanced ionization; laser spectrometry; opto-galvanic effect; trace metal analysis.

A new laser-based flame analytical method, requiring no optical detection, promises to outperform traditional methods in many applications. Detection is based on the enhanced flame ionization of analyte atoms maintained in an excited state by a laser tuned to the desired electrical probes located at the outer edges of the flame. This configuration yields ng/ml detection of Cr, Fe, Ga, In, K, Mg, Mn, Na, Pb, and Tl, with negligible probe deterioration over days of operation. Less impressive results for the few remaining elements studied to date are attributed to the role of the ionization potential, and more appropriate transitions are being explored.

Both precision and accuracy may be affected by the presence of large excesses of easily ionized species in the sample. Operational procedures to minimize and/or correct for such interferences are being developed in conjunction with studies of the basic mechanisms of ionization from excited states, recombination, and electron transport in flames.

Advantages existing or foreseen are: high sensitivity, no optical detection, Doppler-limited spectral resolution, and additional useful atomic transitions.

**19919.** Staples, B. R., **Correlation of thermodynamic properties of aqueous polyvalent electrolytes**, (Proc. 9th Int. Conf. on the Properties of Steam, Technische Universitat, Munchen, Germany, Sept. 10-14, 1979), Paper in *Water and Steam. Their Properties and Current Industrial Applications*, J. Straub and K. Scheffler, Eds., pp. 608-615 (Pergamon Press, Oxford, England, 1979).

Key words: activity coefficient; correlation; critical evaluation; electrolyte theories; excess Gibbs energy; models; osmotic coefficient; polyvalent electrolytes; solutions; thermodynamic properties.

The techniques used in the critical evaluation and correlation of thermodynamic properties of aqueous polyvalent electrolytes will be described. The Electrolyte Data Center at the U.S. National Bureau of Standards is engaged in the correlation of activity and osmotic coefficients, enthalpies of dilution and solution, heat capacities, and ionic equilibrium constants for aqueous salt solutions.

The substances include all inorganic salts for which data are available. The range of concentrations extend from very dilute to saturation. The Debye-Hückel theoretical slopes are used as the basis of correlations in the very dilute region and an empirical equation in powers of  $m^{1/2}$  is used to extend the correlating equation to high concentrations.

Current results for about 100 correlations will be compared and observed periodic trends and trends according to charge-type will be discussed.

Key words: aqueous electrolytes; electrolyte data center; evaluations; reviews; solutions; thermodynamic properties.

A short description of the activities and kinds of output of the Electrolyte Data Center, NBS, is provided.

**19921.** Small, J. A., Heinrich, K. F. J., Newbury, D. E., Myklebust, R. L., **Progress in the development of the peak-to-background method for the quantitative analysis of single particles with the electron probe**, *Scanning Electron Microsc.* **II**, 807-816 (1979).

Key words: electron probe microanalysis; glass particles; mineral particles; Monte Carlo methods; particle; peak-to-background ratios; quantitative analysis; x-ray microanalysis.

A method is described for the quantitative analysis of particles with electron excitation. For this method, the ratios of the characteristic x-ray intensities to the continuous x-ray intensities of the same energy are used to eliminate major particle effects. The procedure consists of scaling the peak intensity of the particle up to a value appropriate to a bulk material. The scaled intensity can then be compared to a standard and the concentration determined by a ZAF routine.

In order to use the analytical procedure it is necessary to calculate a value of the continuous x-ray intensity for a hypothetical bulk material with the same composition as the unknown. To date, two methods have been used to calculate this value. The first method uses Kramers' law with Green's corrections to Kramers' constant. The results from the analysis of both glass and talc particles with this version of the program are in good agreement with the actual concentrations. The second method uses an empirical equation derived at NBS to calculate the continuous x-ray intensity of the bulk. The results on  $FeS_2$  particles with this version of the program decrease the relative error in the Fe concentration from 19 percent for Kramers' equation to six percent.

In addition to calculating the values for the hypothetical bulk material, work is also being done with a Monte Carlo program in an effort to identify those conditions under which the correspondence of the peak-to-background ratio between particles and bulk material of the same composition breaks down. Calculations show that there is a significant deviation in the peak-to-background ratios from particles compared to bulk due to two effects: 1) the anisotropy of the generation of the continuous x-radiation and 2) differences in the energy dependence of the cross-section for characteristic and continuous x-radiation coup-

led with differences in the energy distribution of electrons backscattered from bulk and particle targets.

- 19922.** Madey, T. E., Yates, J. T., Jr., The adsorption of cycloparaffins on Ru(001) as studied by temperature programmed desorption and electron stimulated desorption, *Surf. Sci.* **76**, 397-414 (1978).

Key words: adsorption; angular distribution; cyclohexane; cyclooctane; cyclopropane; desorption; electron stimulated desorption; ethane.

The adsorption of  $C_2H_6$ , and the cycloparaffins  $C_3H_6$ ,  $C_6H_{12}$ , and  $C_8H_{16}$  on Ru(001) at 80 K has been studied using LEED, temperature programmed desorption, and ESDIAD (Electron Stimulated Desorption Ion Angular Distributions). An aim of these studies has been to examine the relationship between ESDIAD ion desorption angles and bond angles in weakly adsorbed species having known internal structure. Fractional monolayers of  $C_2H_6$  and  $C_3H_6$  both yield ESDIAD patterns due to  $H^+$  ions desorbed in wide cones centered on the surface normal, consistent with adsorption into mobile, disordered layers. In contrast, a fractional monolayer of  $C_6H_{12}$  yields a hexagonal  $H^+$  ESDIAD pattern. These results indicate the azimuthal orientation of the C-H bonds and are consistent with a simple model of  $C_6H_{12}$  adsorption. In thermal desorption studies, the weakly adsorbed layer in contact with the substrate is easily distinguished from condensed multilayers. Mass analysis of ESD ions reveals that the only ESD ion product is  $H^+$  for hydrocarbon coverages  $< 1$  monolayer. For multilayers of adsorbed  $C_6H_{12}$  and  $C_8H_{16}$ , the ESD ion products have a mass distribution similar to the gas phase mass spectrometer cracking pattern. For all these fragments, the ESD cross sections are  $\geq 2 \times 10^{-17} \text{ cm}^2$ .

- 19923.** Arens, E., Gonzalez, R., Berglund, L., McNall, P. E., Zeren, L., A new bioclimatic chart for passive solar design, *Proc. American Society of the Int. Solar Energy Society and 5th Natl. Passive Solar Conf. Annual Tech. Conf. Passive Systems Div., University of Massachusetts, Amherst, MA, Oct. 19-26, 1980*, pp. 1202-1206 (American Section ISES, University of Delaware, Newark, DE 19711, Oct. 1980).

Key words: bioclimatic chart; human comfort; indoor environment; outdoor environment; thermal comfort.

This paper presents a substantially revised version of the original bioclimatic chart developed by Olgyay and Yaglou in the 1950s, incorporating recent research results. A thermophysiological model developed at the J. B. Pierce Foundation Laboratory was used to simulate the thermal behavior and resulting comfort sensation of an individual at two clothing levels, and a rate of activity typical of office work, house work, or shopping. The criteria for the boundaries of the comfort zone are based on the ASHRAE Standard 55-74, as currently being proposed for revision. Examples of the chart are presented, in both the original format and in the format of the psychrometric chart.

- 19924.** Madey, T. E., The geometry of CO on Ru(001): Evidence for bending vibrations in adsorbed molecules, *Surf. Sci.* **79**, 575-588 (1979).

Key words: carbon monoxide; chemisorption; electron stimulated desorption; ion angular distribution; nitric oxide; ruthenium; surface.

As a test of the utility of the ESDIAD method (Electron Stimulated Desorption Ion Angular Distributions) in studies of the geometry of adsorbed molecules, the chemisorption of CO on Ru(001) has been examined. Data previously reported using UPS (ultraviolet photoemission spectroscopy) and EELS (electron energy loss spectroscopy) have indicated that CO is terminally bonded to the Ru surface through the C atom, with the CO axis perpendicular to the surface. The ESDIAD results for CO confirm this orientation; for all CO coverages in the tem-

perature range 90 K to  $\sim 350$  K, the angular distributions of  $O^+$  and  $CO^+$  ESD ions are centered about the surface normal. The widths of the ion beams are temperature dependent; for both  $O^+$  and  $CO^+$ , the half widths at half maximum,  $\alpha$ , of the ion cones are  $\sim 16^\circ$  at 300 K, and  $\sim 12^\circ$  at 90 K. This temperature dependence, coupled with a simple model calculation, indicates that the dominant factors contributing to the width of the ESD ion beams are the CO surface bending vibrations, i.e., initial state effects. Thus, the data suggest that both the directions and widths of ESDIAD beams are determined largely by the structure and dynamics of the initial adsorbed state.

- 19925.** Munro, R. G., On a parametrization for solids under hydrostatic pressures, *Phys. Lett.* **66A**, No. 5, 392-394 (June 12, 1978).

Key words: anomalous behavior; frequency shifts; hydrostatic pressure; Knight shift; scaling theory; solids; Van Vleck susceptibility.

A newly developed parametrization successfully used to calculate the hydrostatic pressure dependence of the  $Cr^{3+}$  spectra of ruby is shown to be useful also for describing some cases of hydrostatic pressure shifts of Van Vleck susceptibilities and Knight shifts.

- 19926.** Krishnamurthy, T., Wasik, S. P., Fluorometric determination of partition coefficients of naphthalene homologues in octanol-water mixtures, *J. Environ. Sci. Health* **A13**, No. 8, 595-602 (1978).

Key words: fluorimetry; naphthalene homologues; octanol/water; organic pollutants; partition coefficients.

The octanol/water partition coefficients of 12 naphthalene homologues have been measured using a newly developed fluorometric technique. The log P values of alkyl substituents obtained by this method were found to be in reasonable agreement with the literature values.

- 19927.** Lashmore, D., Melmed, A. J., Field ion microscopy of polycrystalline iron whiskers, *J. Appl. Phys.* **49**, No. 8, 4586-4587 (Aug. 1978).

Key words: chemical vapor deposition; field ion microscopy; iron carbides; microstructure; polycrystalline iron whiskers; whiskers.

Field ion micrographs of polycrystalline iron (steel) whiskers are presented. These micrographs indicate that the whiskers examined here possess a two-phase structure consisting of an ordered iron phase and a randomly imaging phase interpreted to be the iron carbide,  $Fe_3C$ . The iron image indicates not only a high defect density but also the presence of twins.

- 19928.** Linsky, J. L., On the differences at chromospheric levels between RS CVn-type binaries, active and quiet chromosphere single stars, and active and quiet regions in the sun, (Proc. Joint Meeting of Close Binaries and Stellar Activity, Montreal, Canada, Aug. 18, 1979), Paper in *Highlights of Astronomy*, P. A. Wayman, Ed., pp. 861-862 (D. Reidel, Dordrecht, The Netherlands, 1980).

Key words: binary stars; chromospheres, stellar; chromosphere, sun; ultraviolet spectra.

This paper summarizes the differences in the properties of active chromospheres compared with quiet chromospheres by comparing active and quiet regions on the Sun, active and quiet chromosphere stars, and the very active chromospheres seen in close binary systems with chromospheres of single stars. In particular the chromospheres of the RS CVn-type binary systems UX Arietis and HR 1099 and the chromosphere of UX Arietis during a flare are modeled.

**19929.** Stone, J., Thiele, E., Goodman, M. F., Stephenson, J. C., King, D. S., **Collisional effects in the multiphoton dissociation of CF<sub>2</sub>CFCI**, *J. Chem. Phys.* **73**, No. 5, 2259-2270 (Sept. 1, 1980).

Key words: laser chemistry; laser induced fluorescence; molecular spectroscopy; multiphoton chemistry; unimolecular reactions; vibrational energy transfer.

We report results of a combined experimental and theoretical study of the effects of collisions with an inert buffer gas, on the CO<sub>2</sub> laser induced MPD of CF<sub>2</sub>CFCI to form CF<sub>2</sub> and CFCI. Rates of formation of the primary product CF<sub>2</sub> have been determined, in real time using the laser excited fluorescence technique, at four IR laser intensities ( $I_{max} = 35, 47, 73, 220$  MW/cm<sup>2</sup>) and a range of argon buffer gas pressures ( $0 < P_{Ar} < 500$  Torr). The experimental data clearly show the effects of collisional hole filling at low pressures and  $V$ - $T$  collisional deactivation at higher ( $> 100$  Torr) pressures. We present a generally applicable theoretical model for collisional effects in MPD, in which two parameters ( $1/\tau$ ,  $\Delta E$ ) specify the collisional deactivation, two parameters ( $s$ ,  $< \omega >$ ) specify the density of states of the absorber, two parameters ( $A$ ,  $E_{act}$ ) specify the microscopic reaction rates and one parameter ( $\delta$ ) specifies the radiative pumping rates. In applying this model to CF<sub>2</sub>CFCI five of these seven parameters are readily estimated from independent kinetic or spectroscopic data. Treating only the remaining two parameters  $\Delta E$  and  $\delta$  as adjustable, an excellent theoretical fit of the high pressure experimental data is obtained. In this fit a value ( $\Delta E = 2.6$  kcal/mole) is found for the mean energy transferred per collision to the buffer gas molecules. This value lies within the range expected for  $\Delta E$  on the basis of chemical activation studies. The overall closeness of fit confirms the basic soundness of the "single quantum exchange" model for  $T_2$  relaxation, from which expressions are derived for the microscopic radiative pumping rates. Using only parameters determined in the MPD fit, we predict as a function of laser intensity and buffer gas pressure the energy absorbed from the light field. This prediction can be tested in an experiment that measures absorbed energy by the acousto-optic technique.

**19930.** Sieck, L. W., **Fingerprinting and partial quantification of complex hydrocarbon mixtures by chemical ionization mass spectrometry**, *Anal. Chem.* **51**, No. 1, 128-132 (Jan. 1979).

Key words: analysis; chemical ionization; hydrocarbons; ion-molecule reactions; mass spectrometry; photoionization.

A modification of chemical ionization mass spectrometry, which involves photoionization and cyclohexane as the source of the reagent ion, has been used to develop a technique for discriminatory "fingerprinting" of neat liquid fossil fuels. The method provides a 2-min turn-around time between samples and batch introduction, with no requirements for prior separation or fractionation. Depending upon the conditions chosen, the technique may also be extended to the partial quantification of aromatic and olefinic sample components.

**19931.** Shold, D. M., Ausloos, P. J., **The photochemistry of ethyl chloride**, *J. Photochem.* **10**, 237-249 (1979).

Key words: ethyl chloride; halocarbons; photochemistry.

Ethyl chloride and deuterium-labelled ethyl chlorides have been photolyzed at 184.9, 163.3, 147.0 and 123.6 nm in the gas phase and at 163.3 and 147.0 nm in the liquid phase. The use of NO, O<sub>2</sub> and HI as radical scavengers has permitted a determination of the quantum yields of primary photodecomposition processes as a function of wavelength. At low energies, excitation of an electron into an antibonding  $\sigma^*$  orbital leads primarily to C-Cl bond cleavage, while at higher energies this process is largely replaced by loss of HCl and hydrogen. Both 1,1- and 1,2-HCl eliminations are observed. The absence of significant amounts of hydrogen atom production at 163.3 nm and at low

pressures suggests that one excited state may be responsible for HCl elimination and a second for chlorine atom loss, in agreement with the mechanism of Ichimura *et al.*

**19932.** Sengers, J. M. H. L., **Liquidons and gasons; controversies about the continuity of states**, *Physica* **98A**, 363-402 (1979).

Key words: Andrews; condensation; critical point; diffusion; gaseous; history of science; Kamerlingh Onnes; liquidons; liquids; mixtures; van der Waals; vapors.

Two basic ideas about the nature of the gas-liquid transition were voiced around 1870: that in the supercritical state, vapor and liquid are indistinguishable (Andrews), and that condensation and critical behavior can be understood on the basis of a simple assumption about molecular interaction (Van der Waals). For many scientists at the time, however, the notion of continuity of states was almost inconceivable. The older ideas, that liquid and gas molecules were different from each other, and that the liquid "dissolves" in the vapor at the critical point, survived for a long time. Unfamiliarity with the implications of Gibbs' thermodynamics in Europe helped to keep the older ideas alive. This paper describes the controversies that raged between proponents and opponents of the Andrews-Van der Waals view between 1880 and 1907, and how they were fanned by erroneous or incorrectly interpreted experiments carried out all over Europe. Kamerlingh Onnes and his staff in Leiden repeated a number of the controversial experiments in the period 1892-1907 and discovered that impurity was by far the largest source of error. By 1907 the controversy was unequivocally decided by the Leiden group in favor of the Andrews-Van der Waals view. A replay of the old controversy took place in the period 1933-1952.

**19933.** Schwarz, F. P., Braun, W., Wasik, S. P., **Oscillating slit mechanism for the determination of hydrogen isotope ratios in a microwave induced plasma**, *Anal. Chem.* **50**, 1903-1905 (Nov. 1978).

Key words: deuterium; gas chromatography; hydrogen; isotope dilution; microwave plasma; oscillating slit mechanism.

A low pressure microwave discharge through deuterated and hydrogenated hydrocarbon mixtures eluting from a gas chromatograph results in fragmentation of the hydrocarbons and generation of intense atomic hydrogen emission at 6562.8 Å and atomic deuterium emission at 6561.0 Å. By replacing the exit slit mechanism of the monochromator viewing the emissions with an oscillating slit mechanism (OSM), the hydrogen emission is measured alternately with the deuterium emission. The operation of the OSM is based on oscillating mechanically the exit slit aperture twice across the hydrogen line and once across the deuterium line during one cycle of oscillation. Two lock-in amplifiers resolve the modulated emissions into a hydrogen and a deuterium signal. The ratio of the two signals is a linear function of the atomic hydrogen isotope ratio in the isotope hydrocarbon mixtures over one order of magnitude.

**19934.** Schwarz, F. P., **Characterization of the emission from atomic hydrogen in a microwave induced plasma**, *Anal. Chem.* **51**, 1508-1512 (Aug. 1979).

Key words: hydrogen emission; microwave induced plasma detector.

Microwave induced plasma detectors (MPD) are typically operated with small amounts of oxygen added to the helium or argon plasma gas in order to keep the plasma cell walls clean. It is shown, however, that the presence of oxygen in the plasma gas causes a nonlinear response in the hydrogen emission dependence on concentration, as well as the enhancement of the hydrogen background emission upon passage of deuterium through the MPD. Both effects diminish with increasing plasma pressure and disappear in the absence of oxygen. A kinetic scheme, based on radiative charge recombination between pro-

tons and electrons and generation of the protons and electrons via energy transfer from the metastable He 2s<sup>3</sup>S state, is presented to account for these effects. It is suggested that oxygen affects the hydrogen emission through a charge transfer reaction between protons and molecular oxygen.

**19935.** Schaefer, A. R., **Measurement of synchrotron radiation from the NBS SURF II using a silicon radiometer**, (Proc. 23d Annual Int. Tech. Symp. of the SPIE, San Diego, CA, Aug. 27-30, 1979), Paper in *Measurements of Optical Radiations*, H. P. Field, E. F. Zalewski, and F. Zweibaum, Eds., 197, 84-89 (Society of Photo-Optical Instrumentation Engineers, Bellingham, WA, 1979).

Key words: radiometry; silicon photodetector; storage ring; synchrotron radiation.

A project is described in which the synchrotron radiation output from the NBS storage ring known as SURF II, will be measured using a well characterized silicon based radiometer. The radiometer consists of a silicon photodiode coupled with two interference filters to restrict the spectral response to a finite and convenient spectral region for the measurement. Considerations required for the characterization of the radiometer will be discussed. The absolute radiant flux from the storage ring is also calculable from various machine parameters. A measurement of the number of circulating electrons will be derived from electron counting techniques at low levels. This will yield an important intercomparison between two entirely different determinations of the synchrotron radiant flux.

**19936.** Ruff, A. W., **Introductory remarks on erosion**, *Proc. NACE Conf. on Corrosion/Erosion of Coal Conversion System Materials*, Berkeley, CA, Jan. 24-26, 1979, pp. 383-392 (National Association of Corrosion Engineers, Houston, TX 77084 1979).

Key words: deformation; erosion; impact; metals; surfaces.

The status of the science of solid particle erosion of materials is reviewed briefly. Examples of recent studies of single particle and also multiple particle exposures are given. Suggestions of critical needs in the field are presented.

**19937.** Peterlin, A., **Accordion-type laser-Raman (ALR) oscillations in crystalline polymers**, *J. Appl. Phys.* 50, No. 2, 838-844 (Feb. 1979).

Key words: accordion type oscillation; coupled rod oscillation; crystalline polymers; elastic modulus; helical chains; inelastic neutron scattering; laser-Raman scattering; polyethylene; polyethyleneoxide; polyhexafluoropropylene; polyoxymethylene; polypropylene; polytetrafluoroethylene.

If one interprets the ALR absorption lines of crystalline polymers in terms of oscillating elastic rods of length equal to the thickness  $L$  of the crystalline lamellae, or the thickness  $D$  of the crystalline core of the lamellae, one obtains for the elastic modulus of these rods values which are substantially higher than the axial elastic modulus  $E_c$  of the crystal lattice. The effect is particularly conspicuous with polymers which in the crystalline state exhibit a helical-chain conformation. The explanation of this effect seems to be the elastic coupling of longitudinal oscillations of chain stems of subsequent lamellae by the intervening amorphous layers. The apparent increase of the ALR oscillation frequency by such coupling is particularly large if the elastic modulus  $E_a$  of the amorphous layers is equal or even higher than that of the crystal lattice. The high value of  $E_a$  derived from such an analysis is a consequence of the very high ALR frequency ( $\sim 0.3$  THz), which makes the amorphous layer react as a rigid glass.

**19938.** Peterlin, A., **Elastic modulus and strength of fibrous material**, *Polym. Eng. Sci.* 19, No. 2, 118-124 (Feb. 1979).

Key words: elastic modulus; extruded semicrystalline polymers; fibrous materials; polymers; strength.

As a rule, the large increase of elastic modulus with increasing draw ratio obtainable in highly-drawn or extruded semicrystalline polymers is not reflected in a similarly large increase of strength. This is closely connected with the well-known fact that with increasing plastic deformation one obtains fibrous material with decreasing strain to break. The axial elastic modulus is mainly caused by the taut tie molecules which bridge the amorphous layers between consecutive crystal blocks and thus provide an efficient axial force transmission through the sample. The defects at the ends of microfibrils interrupt this transmission because they contain few if any taut tie molecules connecting the end of microfibril with adjacent fibrillar elements. As a consequence of the small number of such ends, they only marginally reduce the elastic modulus. But as the mechanically weakest areas of the fibrous material, they drastically depress the strength. They fail as soon as the strain concentration upon them reaches their strain to break. The growth and coalescence of resulting microcracks finally lead to bulk fracture as the growing crack reaches critical dimensions.

**19939.** Page, S. W., Mazzola, E. P., Himes, V. L., Mighell, A. D., Hubbard, C. R., **Structure of (3-chloro-2-hydroxy-5-nitrophenyl)-(2'-chlorophenyl)iodonium hydroxide inner salt**, *J. Am. Chem. Soc.* 101, No. 19, 5858-5860 (Sept. 12, 1979).

Key words: inner salt; iodonium compound; reaction mechanism; synthetic intermediate; x-ray structure determination; zwitterion.

$C_{12}H_6NO_3Cl_2I_6$  MW = 409.98; monoclinic,  $P2_1/n$ ;  $a = 15.928(9)$ ;  $b = 18.271(6)$ ;  $c = 4.623(2)$  Å,  $\gamma = 105.58^\circ$ ;  $Z = 4$ ;  $D_c = 2.106$  g cm<sup>-3</sup>;  $D_m = 2.11$  (floatation); final  $R = 0.060$  (1787 observed reflections). The molecule exists as a zwitterion with an intramolecular I...O distance of 2.768(8) Å. The I-C bond distances were found to be 2.08(1) and 2.11(1) Å, with a C-I-C angle of 97.8(4)°. Intermolecular ionic attraction between I and O causes the formation of infinite chains along the z-axis of the cell. This zwitterion is the first reported example of a phenoxide-iodonium betaine. The title compound is a key intermediate in the synthesis of O-diphenyl ethers. A reaction mechanism based on the zwitterion formation is proposed.

**19940.** Melmed, A. J., Tung, R. T., Graham, W. R., Smith, G. D. W., **Evidence for reconstructed Y001X tungsten obtained by field-ion microscopy**, *Phys. Rev. Lett.* 43, No. 20, 1521-1524 (Nov. 12, 1979).

Key words: atomic surface structure; field-ion microscopy; surface physics; surface reconstruction.

New results have been obtained, by field-ion microscopy, relating to the atomic structure of clean Y001X W. The evidence supports a reconstruction model with periodic displacements of atoms having vertical components. The reconstructed atomic configuration prevails over the entire temperature range of this investigation ( $\sim 15$ –460 K), suggesting that no phase transition may be needed to account for the structural features of Y001X W.

**19941.** Ives, L. K., Ruff, A. W., **Electron microscopy study of erosion damage in copper**, *Am. Soc. Test. Mater. Spec. Tech. Publ.* 664, pp. 5-35 (1979).

Key words: copper; electron microscopy; erosion; impingement erosion; metal erosion; wear.

Solid-particle erosion data have been reported for many materials. The mechanics of the impact process has also been examined. However, relatively little effort has been expended in studying the microstructural aspects of material response to erosion. Effects such as deformation hardening, plastic flow, and particle embedding are recognized as being important but have

not been subjected to careful study. Understanding the erosion mechanism at large attack angles and accounting for differences in erosion behavior of different metals and alloys are areas where knowledge of materials response factors will be most important. In the present work surface and subsurface erosion damage in copper is investigated by transmission and scanning electron microscopy techniques.

**19942.** Parr, A. C., Jason, A. J., Stockbauer, R., **Photoionization and threshold photoelectron-photoion coincidence study of cyclopropene from onset to 20 eV**, *Int. J. Mass Spectrom. Ion Phys.* 33, 243-251 (1980).

Key words: breakdown curve; cyclopropene; photoionization.

The photoionization efficiency curves have been obtained for cyclopropene and its fragments  $C_3H_3^+$ ,  $C_3H_2^+$ , and  $C_3H^+$  from threshold to 20 eV. The threshold photoelectron spectra and breakdown curves are given over the same energy range. The breakdown curve is almost identical to those obtained previously for allene and propyne when put on a common energy scale. This suggests that all three ions isomerize to a common structure before fragmentation.

**19943.** Parr, A. C., Jason, A. J., Stockbauer, R., **Photoionization and threshold photoelectron-photoion coincidence study of allene from onset to 20 eV**, *Int. J. Mass Spectrom. Ion Phys.* 26, 23-38 (1978).

Key words: allene; autoionization; coincidence; fragmentation; mass spectrometry; photoionization; threshold photoelectron spectroscopy; time of flight mass spectrometry.

The photoionization efficiency curves for allene and its fragments  $C_3H_3^+$ ,  $C_3H_2^+$  and  $C_3H^+$  are given from threshold to 20 eV. The threshold photoelectron spectra and breakdown curves are given over the same energy span. The adiabatic ionization potential is determined to be  $9.69 \pm 0.01$  eV and the heats of formation of the fragments are derived from the appearance potentials. Autoionization is found to be an important factor in the parent ionization and fragmentation.

**19944.** Lindstrom, R. M., Harrison, S. H., Harris, J. M., **Accurate calibration of gold film standards by neutron activation and gravimetry**, *J. Appl. Phys.* 49, No. 12, 5903-5908 (Dec. 1978).

Key words: accuracy and precision; gold films; gravimetry; neutron activation analysis; Rutherford backscattering; standards.

A set of evaporated gold films on silicon substrates has been prepared for use as standards in the measurement of film thickness by Rutherford backscattering. The mass of gold in the films was determined independently by gravimetry and by instrumental neutron activation. The area was measured with an optical comparator; film uniformity was assayed by backscattering. Systematic errors in the single-element comparator method of activation analysis have been assessed and either eliminated or compensated, with the result that the single-sample agreement in mass between the two methods was 0.3% and the mean relative bias was below the random errors, also 0.3%.

**19945.** Surek, T., Coriell, S. R., Chalmers, B., **The growth of shaped crystals from the melt**, *J. Crystal. Growth* 50, 21-32 (1980).

Key words: crystal; Czochralski; edge-defined film-fed growth (EFG); floating zone; meniscus; silicon; stability.

The growth of shaped crystals from the melt occurs by a process referred to as meniscus-controlled growth. In a meniscus-controlled process, the relationship of the crystal shape to that of the liquid-vapor interface is reflected by the observed constancy of the relative angle  $\phi_0$  between the crystal and liquid free-surfaces at the crystal-liquid-vapor junction. An experimen-

tal technique is described for determining the characteristic values of  $\phi_0$  for silicon and germanium. A general theory is presented for the time evolution and stability of the crystal shape in meniscus-controlled growth processes. A linear perturbation analysis of the dynamic crystal growth equations is carried out to derive the necessary and sufficient conditions for crystal shape stability. Application of the analysis is made to the more conventional shaped growth processes such as Czochralski and floating zone growth, and to techniques which utilize a die shaper such as the Stepanov and Edge-defined Film-fed Growth (EFG) methods. The advantages and disadvantages of using wetted and non-wetted dies in the shaping process are discussed. Specific numerical examples deal with the growth of silicon crystals by the various methods.

**19946.** Cahn, J. W., Coriell, S. R., Boettinger, W. J., **Rapid solidification**, (Proc. of Laser and Electron Beam Processing of Materials, Boston, MA, Nov. 27-30, 1979), Paper in *Laser and Electron Beam Processing of Materials*, C. W. White and P. S. Percy, Eds., pp. 89-103 (Academic Press, Inc., New York, NY, 1980).

Key words: interface stability; kinetics; microsegregation; rapid solidification; solute trapping; thermodynamics.

Rapid solidification phenomena are described in terms of a hierarchy of increasing deviation from equilibrium. Results of morphological stability theory applied to silicon regrowth indicates that factors outside of conventional constitutional supercooling can explain the observed absence of lateral segregation. A model for interface response functions applicable to solute trapping is presented and a thermodynamic limit to the amount of solute trapping, which seems to be operating in some systems, is proposed.

**19947.** Ives, L. K., Kasen, M. B., Schramm, R. E., Ruff, A. W., Reed, R. P., **A microstructural study of the Tishomingo meteorite**, *Geochim. Cosmochim. Acta* 42, 1051-1066 (1978).

Key words: electron microscopy; Fe-Ni alloys; martensite; shock deformation; Tishomingo meteorite; x-ray diffraction.

Metallography, electron microscopy and x-ray diffraction techniques were employed to study a fragment of the Tishomingo iron meteorite. The results suggest the following thermal-mechanical history: The fragment was originally a large crystal of taenite ( $\gamma$ ). Cooling through the  $\alpha + \gamma$  phase boundary did not result in accompanying precipitation of kamacite ( $\alpha$ ). Transformation to a martensitic structure initiated between  $-25$  and  $-65$  °C. Transformation continued as the temperature fell to  $-75$  to  $-115$  °C, resulting in approx. 80% martensite ( $\alpha'$ ). Subsequent shock deformation and thermal aging processes substantially modified the taenite and martensite microstructures. Twins in the retained taenite phase are attributed to shock deformation at a pressure estimated for a single event at  $\sim 170$  kbar. The existing complex, altered martensite structure containing both taenite and kamacite (3-15% Ni) particles was apparently the product of both shock deformation and thermal aging processes. The maximum temperature reached during thermal aging is estimated to be less than 400 °C, and perhaps below 310 °C.

**19948.** Peterlin, A., **Fracture of fibrous polymers**, *Polym. Eng. Sci.* 18, No. 14, 1062-1067 (Nov. 1978).

Key words: coalescence of microcracks; end of microfibril; microcrack formation; microfibrillar structure; rupture of taut tie molecules; strain to break; stress to break.

The fibrous material obtained by drawing or extrusion exhibits a more than linear increase in the axial elastic modulus with draw ratio, a much slower increase in tensile strength and a decrease in strain to break. The reason for such a behavior is found in the existence of structural defects of fibrous material, which is composed of very long and narrow microfibrillar ele-

ments. At their ends the axial connection by taut-tie molecules is almost completely interrupted. Hence the transfer of tensile stress through such a defect is only possible by lateral shift of the load to adjacent microfibrils. The incompleteness of this transfer, the excess straining of the material in the defect area, and the relatively easy axial displacement of the ends of microfibrils favor the local formation of microcracks which grow and coalesce with close-by microcracks until a critical size crack is formed and the strained sample fails. The process is favored by a high elastic modulus of microfibrils which is practically identical with that of the drawn or extruded sample. Hence the fibrous polymer fails at lower strain the higher its axial elastic modulus, i.e., the higher the draw ratio.

**19949.** Larche, F. C., Cahn, J. W., *Thermochemical equilibrium of multiphase solids under stress*, *Acta Metall.* **26**, 1579-1589 (1978).

Key words: coherent interfaces; equilibrium; incoherent interfaces; solid-fluid interface; stressed solid; thermodynamics; vacancies.

General conditions are derived for thermochemical equilibrium among multiphase and multicomponent network solids that are stressed nonhydrostatically and nonuniformly, and are in contact with each other and with fluids. Different multiphase equilibrium conditions are obtained depending on whether or not vacancies are present and which of three types of phase contact, coherent or incoherent solid-solid or solid-fluid interfaces, govern the constraints on displacement and mass transfer at these contacts. When no vacancies are present, Gibbs' result for the solid-fluid case is obtained and generalized. When vacancies are present, nonuniform and nonhydrostatic equilibrium is possible, but strong restrictions are placed on solid-fluid (all fluids must have the same pressure) and incoherent boundaries. A local equilibrium condition may be valid in some cases when vacancies prevent global equilibrium. Equilibria at coherent boundaries are unaffected by the presence or absence of vacancies, because vacancies behave like any other conserved chemical species there. The additional constraints at coherent boundaries reduce the number of degrees of freedom for phase equilibria.

**19950.** Ruff, A. W., *Measurements and standards for dry wear*, *Proc. Natl. Symp. on Wear and Corrosion*, Washington, DC, June 1979, 4 pages (American Chemical Society, Washington, DC, 1979).

Key words: corrosion; measurements; metals; standards; wear.

The needs for improved capability in accurately determining the wear rates of materials will be discussed. Activities currently underway to develop and provide reference materials for wear testing, to improve wear measurement procedures and to obtain meaningful wear data will be described. A comparison will be attempted in the current state-of-the-art between wear and corrosion.

**19951.** Rubin, R. J., *Comment on explicit integration method for the time-dependent Schrodinger equation*, *J. Chem. Phys.* **70**, No. 10, 4811 (May 15, 1979).

Key words: numerical integration; stability; time-dependent Schrodinger equation.

An argument is presented which disputes Askar and Cakmak's contention that their outline for a numerical method for explicit integration of the time-dependent Schrodinger equation is new and unconditionally stable.

**19952.** Reneker, D. H., Edelman, S., Dereggi, A., Vanderhart, D. L., *A nondestructive evaluation method using piezoelectric polymer transducers and Fourier transform vibrational spectroscopy*, (Proc. Int. Conf. on Polymer Processing, The Massa-

chusetts Institute of Technology, Cambridge, MA, Aug. 1977), Paper in *Science and Technology of Polymer Processing*, N. P. Suh and N. H. Sung, Eds., pp. 844-856 (The MIT Press, Cambridge, MA, 1979).

Key words: mechanical integrity; nondestructive evaluation; normal modes; orthopedic implants; piezoelectric polymer; plastics; vibrations.

The normal mode vibrational spectrum of a particular object contains a wealth of information about the mechanical integrity of the object. The nondestructive evaluation of objects by observation of such vibrational spectra is facilitated by the combination of recently developed low mass, high compliance piezoelectric polymer transducers, a synchronized method for exciting the sample, and a small minicomputer capable of making digital Fourier transforms. The sensitivity of this method is examined.

**19953.** Rebbert, R. E., Ausloos, P., *Decomposition of N<sub>2</sub>O over particulate matter*, *Geophys. Res. Lett.* **5**, No. 9, 761-764 (Sept. 1978).

Key words: catalysis; nitrous oxide; photochemistry; sand; surface reactions; tropospheric sink.

Nitrous oxide is shown to undergo both a thermal and a photochemical decomposition at 296 K when it is adsorbed on various dry sands. The photochemical process occurs with light of wavelengths greater than 280 nm where gaseous N<sub>2</sub>O does not absorb. At low pressures (< 0.1 torr) the half-life for the thermal decomposition of nitrous oxide to nitrogen when placed in contact with ~5 gms of heat treated Tunisian sand in a one-liter vessel was 350 ± 35 days. Under certain photolytic conditions this half-life was reduced. The efficiency of the photolytic process for a particular sand depends on the pressure (fraction of surface covered) and on the wavelength of light. For Tunisian sand at 1.1 torr and with the full mercury arc (> 280 nm), the destruction efficiency is ~2 × 10<sup>-5</sup> molecules/incident photon.

These results indicate that particulate matter in the troposphere may be responsible for the decomposition of nitrous oxide and hence act as an atmospheric sink for N<sub>2</sub>O. However, moisture causes a drastic reduction in the number of molecules dissociated per incident photon.

**19954.** Ogburn, F., *Preparation of calibration standards for coating thickness instruments*, *Proc. First American Electroplaters Society Symp. on Thickness Testing of Surface Finishing*, New York, NY, Feb. 28-Mar. 1, 1978, pp. 1-9 (American Electroplaters Society, Winter Park, FL, 1978).

Key words: calibration; calibration of thickness gages; calibration standards; coatings; coating thickness; coating thickness gages; coating thickness measurement; electrodeposited coatings; electrodeposition; thickness; thickness gages.

Coating thickness gages can be calibrated with specimens having adherent coatings of known thickness, with foils, or with synthetic standards. To prepare calibration standards with adherent coatings, the coatings must be plated with uniform thickness distribution. This requires a cell geometry providing an uniform primary current distribution and careful control of solution agitation, current efficiency, and polarization. Measurement of new standards with coating thickness gages perpetuates past measurement errors associated with the calibration and use of the measuring gage. It is preferable to use independent measurements such as microscopical measurements of coating cross-sections or coating weight measurements. To use a destructive measurement, each of a group of specimens is measured. The instrument is then calibrated by the destructive measurement of several specimens from the group. The thicknesses of the remaining specimens are obtained by interpolation from the earlier measurements. Microscopical measurements have significant

limitations and the technique of the operator must be checked against independent measurements. The preparation of accurate calibration standards requires careful plating and measurement techniques by a skilled and patient technician.

**19955.** Geist, J., **On the possibility of an absolute radiometric standard based on the quantum efficiency of a silicon photodiode**, (Proc. 23d Annual Int. Tech. Symp. of the SPIE, San Diego, CA, Aug. 27-30, 1979), Paper in *Measurements of Optical Radiations*, H. P. Field, E. F. Zalewski, and F. Zweibaum, Eds., 197, 75-83 (Society of Photo-Optical Instrumentation Engineers, Bellingham, WA, 1979).

Key words: radiometric measurements; silicon photovoltaic; specific adsorption.

The physical mechanisms governing the behavior of silicon photovoltaic p-n junctions are reviewed from the point of view of using the internal quantum efficiency of such devices as absolute radiometric standards.

**19956.** Smyth, K. C., Schenck, P. K., Mallard, W. G., **What really does happen to electronically excited atoms in flames?**, *Proc. American Chemical Society Symp. Series No. 134, Laser Probes of Combustion Chemistry*, Washington, DC, Sept. 1979, pp. 175-181 (American Chemical Society, Washington, DC, 1980).

Key words: collisional ionization; opto-galvanic spectroscopy; sodium; state specific rate constants; two-photon.

In this paper we compare experimental results on the opto-galvanic spectra of high-lying d states in sodium with model calculations which incorporate ionization and quenching rates. The main conclusions are: (1) Hollander's "low" rate constant for sodium ionization is sufficient to model the opto-galvanic signal magnitudes as a function of excitation energy. Abnormally high rates are not required. (2) Essentially all ( $> 90\%$ ) of the sodium atoms excited to  $n \geq 7d$  are ionized at a flame temperature of 2000 K. For  $n = 7$  the energy needed for ionization  $2249 \text{ cm}^{-1}$ , which is approximately  $2kT$  ( $kT = 1390 \text{ cm}^{-1}$ ).

**19957.** Yates, J. T., Jr., Madey, T. E., **Prospectives for surface chemistry**, Paper in *ONR-37, Science, Technology, and the Modern Navy, Thirtieth Anniversary 1946-1976*, pp. 415-432 (Department of the Navy, Office of Naval Research, Arlington, Va, 1976); *Proc. Fourth Symp. on Fluid/Solid Surface Interactions, National Bureau of Standards, Gaithersburg, MD, Oct. 18-20, 1978*, pp. 121-149 (Commanding Officer, Naval Research Laboratory, Code 6170, Washington, DC 20375, 1980).

Key words: alloy catalysts; catalytic reactions; electron diffraction; electron spectroscopy; kinetics of surface processes; surface chemical analysis; surface chemistry; surface spectroscopy.

Recent historical developments in the field of surface chemistry are reviewed as a basis for future work within the field. The relationship of basic studies in surface chemistry and surface physics to technological applications is outlined.

**19958.** Ives, L. K., **Electron microscopy studies of wear in copper**, *Proc. Thirty-Seventh Annual EMSA Meeting, San Antonio, TX, Aug. 13-17, 1979*, pp. 452-543 (Electron Microscopy Society of America, Oak Ridge, TN, 1979).

Key words: abrasive wear; copper; erosive wear; scanning electron microscopy; transmission electron microscopy; wear.

Electron microscopy studies were conducted on copper surfaces worn under conditions of lubricated and nonlubricated sliding against solid contacts, sliding against abrasive sand ( $\text{SiO}_2$ ) particles, and solid particle erosion by  $\text{Al}_2\text{O}_3$  particles. Topographic and subsurface microstructural features associated with

the various wear modes are described. In all cases, the high contact stresses and accompanying strains led to the development of a layer of fine polycrystalline grains at the surface. This layer extended to a depth of a few micrometers below the surface. At greater depths, a dislocation cell structure was observed. Deformation twins were found near the surface of specimens worn by solid particle erosion. Embedment of abrasive particle fragments in the surface was characteristic of both the abrasive and erosive types of wear.

**19959.** Boettinger, W. J., Burdette, H. E., Kuriyama, M., **Energy dispersive XRF composition profiling using crystal collimated incident radiation**, (Proc. Conf. on Advances in X-ray Analysis, Denver, CO, July 30-Aug. 3, 1979), Paper in *Advances in X-ray Analysis* 23, pp. 209-217 (Plenum Publ. Corp., New York, NY, 1980).

Key words: chemical profiling; energy dispersive; macrosegregation; monochromatic incident x-ray beam; multiphase structure; x-ray fluorescence.

In order to measure changes in composition as a function of distance (macrosegregation) in directionally solidified two phase samples, a well collimated incident x-ray beam is required for XRF analysis. This is accomplished using Bragg diffraction of  $\text{AgK}\alpha$  radiation from a highly perfect Si crystal. Because the incident beam is also monochromatic, additional advantages are realized: a) the backgrounds caused by Compton and thermal diffuse scattering (TDS) of the incident beam are well localized in the energy spectrum and do not interfere with the fluorescent peaks, b) the TDS can be used as a monitor of the incident photon flux and hence eliminates often substantial errors caused by incident beam intensity fluctuations.

Using several prepared standards, the ratio of PbL counts to TDS counts was found to be a function of the total Pb content of the two phase microstructure, with a reproducibility determined only by counting statistics. Furthermore, the function was found to be nearly linear over a wide range of compositions. Standard methods of absorption or enhancement correction can be employed using this ratio. The spatial resolution, determined by profiling a sharp discontinuity between two metals, was 0.5 mm.

Macrosegregation data is presented for Pb-Sn two phase alloys whose compositions range from 35 wt % Pb to 70 wt % Pb. Comparison of compositions with those determined by a titration method agrees to within 2 wt % for most of the metallurgical structures present in the work. Somewhat larger deviations were found for samples with high Pb contents with extremely coarse two phase microstructures.

**19960.** Ives, L. K., **Microstructural changes in copper due to abrasive, dry, and lubricated wear**, *Proc. Int. Conf. on Wear of Materials, Dearborn, MI, Apr. 16-18, 1979*, pp. 246-255 (The American Society of Mechanical Engineers, New York, NY, 1979).

Key words: abrasive wear; copper; dry sliding wear; lubricated sliding wear; wear; wear debris.

Copper was exposed to wear under conditions of abrasive, dry, and lubricated sliding contact in air. An examination of surface morphology and subsurface microstructure was conducted by scanning and transmission electron microscopy methods in order to study the detailed nature of the wear process on a microscopic level. Wear debris fragments were also examined and the results correlated with surface and subsurface observations. A number of diverse characteristics specific to the particular wear condition were revealed. However, some features common to all wear conditions were found. In particular, a fine-grained polycrystalline structure was observed immediately below the surface on all specimens. This layer appears significant with regard to many of the wear-related processes.

19961. Crist, B. W., Smith, J. H., Hicho, G. E., **Fracture analysis of a pneumatically burst seamless-steel compressed gas container**, *Am. Soc. Test. Mater. Spec. Tech. Publ.* 667, pp. 734-745 (1979).

Key words: ductile fracture; fracture toughness; part-through crack; pneumatic burst; pressure vessel; steel.

This paper describes the fracture analysis of a seamless steel compressed gas container which burst at a reported pressure of 17.3 MPa (2500 psi) during filling. Design burst pressure was about 35.2 MPa (5100 psi). The container was made of a quenched and tempered carbon-manganese steel with yield and tensile strengths of 517 and 687 MPa (75,000 and 99,800 psi), respectively. The vessel had been in service for about 6 months and had been filled perhaps twice before it burst. The fracture origin was a pair of part-through cracks in a gouged region on the outside surface. Fracture at the origin was ductile and the fast fracture was also ductile. The empirical methodology developed at Battelle-Columbus for analyzing the burst of line pipe was utilized to analyze the ductile fracture initiation of this compressed gas container.  $K_{IC}$ ,  $J_{IC}$  and  $K_{IC}$  were estimated for this carbon-manganese pressure vessel steel.

## 7. LISTING OF NBS PAPERS BY MAJOR SUBJECT AREAS

This section provides a listing of papers organized by primary subject matter as follows:

Acoustics and Sound  
Analytical Chemistry  
Atomic and Molecular Studies  
Building Technology  
Computer Science and Technology  
Consumer Information and Protection  
Electromagnetic Metrology  
Electronic Technology  
Energy Conservation and Production  
Engineering, Product and Information Standards  
Environmental Studies: Pollution Measurement  
Failure Analysis  
Fire Research  
Fluids: Liquids, Gases and Plasmas  
General Theoretical Chemistry and Physics  
Health and Safety  
Instrumentation and Experimental Methods  
Lasers and Their Applications  
Low Temperature Science and Engineering  
Mathematical and Statistical Methods  
Measurement Science and Technology:  
    Policy and State-of-the-Art Surveys  
Measurement Science and Technology:  
    Physical Standards and Fundamental Constants  
Mechanics: Design, Testing and Measurement  
Metrology: Physical Measurements

Nuclear Physics and Radiation Technology  
Operations Analysis and Applications  
Processing and Performance of Materials  
Properties of Materials: Electronic, Magnetic and Optical  
Properties of Materials: Structural and Mechanical  
Properties of Materials: Thermodynamic and Transport  
Standard Reference Data  
Standard Reference Materials  
Surfaces and Interfaces  
Thermodynamics and Chemical Kinetics  
Technology Incentives  
Other Subjects of General Interest

It permits users of this catalog to scan the Bureau's output by major subject category. The user should bear in mind that a paper is listed once by major subject even though it might well contain other secondary subject matters of interest. The key-word index permits the reader to determine the overall context of a paper, and provides an excellent secondary reference source.

The categories currently in use for classifying NBS publications are listed below and are followed by a listing of each paper by category. Full citations (including key-words and abstracts) will be found under the appropriate publication series, which is included in the paper title. Also of use will be the key-word index (mentioned above) and the author index.

- NBS-GCR-80-205. *An examination and analysis of the dynamics of the human behavior in the fire incident at the Sacred Heart Home, March 19, 1978*, J. L. Bryan and P. J. DiNenno (NBS contact: Nora Jason), 43 pages (July 31, 1978). Order from NTIS as PB80-183212.
- NBS-GCR-80-206. *An examination and analysis of the dynamics of the human behavior in the fire incident at the Manor Care, Hyattsville Nursing Home, January 10, 1978*, J. L. Bryan and P. J. DiNenno (NBS contact: Nora Jason), 53 pages (June 30, 1978). Order from NTIS as PB80-183221.
- NBS-GCR-80-207. *An examination and analysis of the dynamics of the human behavior in the kitchen fire incident at the Manor Care, Adelphi Nursing Home on March 1, 1978*, J. L. Bryan and P. J. DiNenno (NBS contact: Nora Jason), 42 pages (July 31, 1978). Order from NTIS as PB80-185739.
- NBS-GCR-80-208. *An examination and analysis of the dynamics of the human behavior in the patient room incident at the Manor Care, Adelphi Nursing Home on March 1, 1978*, J. L. Bryan and P. J. DiNenno (NBS contact: Nora Jason), 41 pages (July 31, 1978). Order from NTIS as PB80-183205.
- NBS-GCR-80-209. *An examination and analysis of the dynamics of the human behavior in the fire incident at the Harford Memorial Hospital on March 9, 1978*, J. L. Bryan and P. J. DiNenno (NBS contact: Nora Jason), 47 pages (July 31, 1978). Order from NTIS as PB80-181654.
- NBS-GCR-80-211. *An examination and analysis of the dynamics of the human behavior in the fire incident at the Magnolia Gardens Nursing Home on April 2, 1978*, J. L. Bryan and P. J. DiNenno (NBS contact: Nora Jason), 43 pages (July 31, 1978). Order from NTIS as PB80-187578.
- NBS-GCR-80-212. *An examination and analysis of the dynamics of the human behavior in the fire incidents at the University of Maryland Hospital on April 26 to May 8, 1978*, J. L. Bryan and P. J. DiNenno (NBS contact: Nora Jason), 17 pages (Nov. 30, 1978). Order from NTIS as PB80-185770.
- NBS-GCR-80-213. *An examination and analysis of the dynamics of the human behavior in the fire incident at the Anne Arundel General Hospital on May 1, 1978*, J. L. Bryan and P. J. DiNenno (NBS contact: Nora Jason), 27 pages (Oct. 31, 1978). Order from NTIS as PB80-187859.
- NBS-GCR-80-214. *An examination and analysis of the dynamics of the human behavior in the fire incident at the Lorien Nursing Home on May 7, 1978*, J. L. Bryan and P. J. DiNenno (NBS contact: Nora Jason), 35 pages (Aug. 31, 1978). Order from NTIS as PB80-187917.
- NBS-GCR-80-215. *An examination and analysis of the dynamics of the human behavior in the fire incident at the Manor Care, Largo Nursing Home on May 9, 1978*, J. L. Bryan and P. J. DiNenno (NBS contact: Nora Jason), 32 pages (Sept. 30, 1978). Order from NTIS as PB80-187909.
- NBS-GCR-80-216. *An examination and analysis of the dynamics of the human behavior in the fire incident at the American Nursing Home and Convalescent Center on May 11, 1978*, J. L. Bryan and P. J. DiNenno (NBS contact: Nora Jason), 45 pages (Aug. 31, 1978). Order from NTIS as PB80-192677.
- NBS-GCR-80-217. *An examination and analysis of the dynamics of the human behavior in the fire incident at the Anne Arundel General Hospital on May 11, 1978*, J. L. Bryan and P. J. DiNenno (NBS contact: Nora Jason), 31 pages (Nov. 30, 1978). Order from NTIS as PB80-192669.
- NBS-GCR-80-218. *An examination and analysis of the dynamics of the human behavior in the fire incident at the Allegany County Infirmary on May 16, 1978*, J. L. Bryan and P. J. DiNenno (NBS contact: Nora Jason), 47 pages (Aug. 31, 1978). Order from NTIS as PB80-194863.
- NBS-GCR-80-219. *An examination and analysis of the dynamics of the human behavior in the fire incident at the Sligo Gardens Nursing Home on June 10, 1978*, J. L. Bryan and P. J. DiNenno (NBS contact: Nora Jason), 41 pages (Aug. 31, 1978). Order from NTIS as PB80-191018.
- NBS-GCR-80-220. *An examination and analysis of the dynamics of the human behavior in the fire incident at the Avalon Manor Convalescent Center on June 16, 1978*, J. L. Bryan and P. J. DiNenno (NBS contact: Nora Jason), 36 pages (Oct. 31, 1978). Order from NTIS as PB80-191000.
- NBS-GCR-80-221. *An examination and analysis of the dynamics of the human behavior in the fire incident at the St. Annes Infant Home on June 20, 1978*, J. L. Bryan and P. J. DiNenno (NBS contact: Nora Jason), 26 pages (Sept. 30, 1978). Order from NTIS as PB80-197262.
- NBS-GCR-80-222. *An examination and analysis of the dynamics of the human behavior in the fire incident at the Maryland General Hospital on Aug. 8, 1978*, J. L. Bryan and P. J. DiNenno (NBS contact: Nora Jason), 28 pages (May 31, 1979). Order from NTIS as PB80-195704.
- NBS-GCR-80-223. *An examination and analysis of the dynamics of the human behavior in the fire incident at the Manor Care, Largo Nursing Home on Aug. 14, 1978*, J. L. Bryan and P. J. DiNenno (NBS contact: Nora Jason), 36 pages (Sept. 30, 1978). Order from NTIS as PB80-195605.
- NBS-GCR-80-224. *An examination and analysis of the dynamics of the human behavior in the fire incident at the North Arundel Hospital on Sept. 4, 1978*, J. L. Bryan and P. J. DiNenno (NBS contact: Nora Jason), 29 pages (Oct. 31, 1978). Order from NTIS as PB80-197254.
- NBS-GCR-80-225. *An examination and analysis of the human behavior in the fire incident at the Manor Care, Towson Nursing Home on Oct. 18, 1978*, J. L. Bryan and P. J. DiNenno (NBS contact: Nora Jason), 29 pages (Dec. 22, 1978). Order from NTIS as PB80-194293.
- NBS-GCR-80-226. *An examination and analysis of the dynamics of the human behavior in the fire incident at the Lafayette Square Nursing Center on Oct. 24, 1978*, J. L. Bryan and P. J. DiNenno (NBS contact: Nora Jason), 30 pages (Feb. 28, 1979). Order from NTIS as PB80-195621.
- NBS-GCR-80-227. *An examination and analysis of the dynamics of the human behavior in the fire incidents at the Sheppard and Enoch Pratt Hospital on Oct. 25 and 26, 1978*, J. L. Bryan and P. J. DiNenno, 36 pages (Jan. 31, 1979). Order from NTIS as PB80-195944.
- NBS-GCR-80-228. *An examination and analysis of the dynamics of the human behavior in the fire incident at the Anne Arundel General Hospital on Nov. 14, 1978*, J. L. Bryan and P. J. DiNenno (NBS contact: Nora Jason), 30 pages (Dec. 22, 1978). Order from NTIS as PB80-195811.
- NBS-GCR-80-229. *An examination and analysis of the dynamics of the human behavior in the fire incident at the Washington Adventist Hospital on Dec. 9, 1978*, J. L. Bryan and P. J. DiNenno (NBS contact: Nora Jason), 29 pages (Mar. 31, 1979). Order from NTIS as PB80-196025.
- NBS-GCR-80-230. *An examination and analysis of the dynamics of the human behavior in the fire incident at the Spring Grove Hospital Center on December 14, 1978*, J. L. Bryan and P. J. DiNenno (NBS contact: Nora Jason), 30 pages (Jan. 31, 1979). Order from NTIS as PB80-199235.
- NBS-GCR-80-231. *An examination and analysis of the dynamics of the human behavior in the fire incident at the Washington Adventist Hospital on December 22, 1978*, J. L. Bryan and P. J. DiNenno (NBS contact: Nora Jason), 31 pages (Jan. 31, 1979). Order from NTIS as PB80-207905.

- NBS-GCR-80-232. An examination and analysis of the dynamics of the human behavior in the fire incident at the Southern Maryland Hospital Center on January 2, 1979, J. L. Bryan and P. J. DiNenno (NBS contact: Nora Jason), 33 pages (Feb. 28, 1979). Order from NTIS as PB80-207343.
- NBS-GCR-80-233. An examination and analysis of the dynamics of the human behavior in the fire incident at the Crownsville Hospital Center on January 26, 1979, J. L. Bryan and P. J. DiNenno (NBS contact: Nora Jason), 28 pages (June 30, 1979). Order from NTIS as PB80-208986.
- NBS-GCR-80-234. An examination and analysis of the dynamics of the human behavior in the fire incident at the University of Maryland Hospital on February 6, 1979, J. L. Bryan and P. J. DiNenno (NBS contact: Nora Jason), 29 pages (Mar. 31, 1979). Order from NTIS as PB80-204993.
- NBS-GCR-80-235. An examination and analysis of the dynamics of the human behavior in the fire incident at the Sheppard and Enoch Pratt Hospital on February 7, 1979, J. L. Bryan and P. J. DiNenno (NBS contact: Nora Jason), 27 pages (Mar. 31, 1979). Order from NTIS as PB80-207897.
- NBS-GCR-80-236. An examination and analysis of the dynamics of the human behavior in the fire incident at the Pikesville Nursing and Convalescent Center on February 8, 1979, J. L. Bryan and J. A. Milke (NBS contact: Nora Jason), 20 pages (Aug. 31, 1979). Order from NTIS as PB80-204985.
- NBS-GCR-80-237. An examination and analysis of the dynamics of the human behavior in the fire incident at the Ellicott City Middle School on February 14, 1979, J. L. Bryan and P. J. DiNenno (NBS contact: Nora Jason), 28 pages (Mar. 31, 1979). Order from NTIS as PB80-207889.
- NBS-GCR-80-238. An examination and analysis of the dynamics of the human behavior in the fire incident at the Hidden Brook Treatment Center on February 15, 1979, J. L. Bryan and J. A. Milke (NBS contact: Nora Jason), 32 pages (Aug. 31, 1979). Order from NTIS as PB80-209059.
- NBS-GCR-80-239. An examination and analysis of the dynamics of the human behavior in the fire incident at the Montgomery General Hospital on March 28, 1979, J. L. Bryan and P. J. DiNenno (NBS contact: Nora Jason), 28 pages (May 31, 1979). Order from NTIS as PB80-207335.
- NBS-GCR-80-240. An examination and analysis of the dynamics of the human behavior in the fire incident at the University of Maryland Hospital on April 4, 1979, J. L. Bryan and P. J. DiNenno (NBS contact: Nora Jason), 29 pages (May 31, 1979). Order from NTIS as PB80-205651.
- NBS-GCR-80-241. An examination and analysis of the dynamics of the human behavior in the fire incident at the Sheppard and Enoch Pratt Hospital on April 5, 1979, J. L. Bryan and P. J. DiNenno (NBS contact: Nora Jason), 32 pages (July 31, 1979). Order from NTIS as PB80-207236.
- NBS-GCR-80-242. An examination and analysis of the dynamics of the human behavior in the fire incident at the Kensington Gardens Nursing Home on April 14, 1979, J. L. Bryan and P. J. DiNenno (NBS contact: Nora Jason), 26 pages (June 30, 1979). Order from NTIS as PB80-207228.
- NBS-GCR-80-243. An examination and analysis of the dynamics of the human behavior in the fire incident at the Maryland Masonic Home on June 21, 1979, J. L. Bryan and P. J. DiNenno (NBS contact: Nora Jason), 31 pages (Aug. 31, 1979). Order from NTIS as PB80-203672.
- NBS-GCR-80-244. An examination and analysis of the dynamics of the human behavior in the fire incident at the Sheppard and Enoch Pratt Hospital on June 24, 1979, J. L. Bryan and P. J. DiNenno (NBS contact: Nora Jason), 26 pages (Aug. 31, 1979). Order from NTIS as PB80-206204.
- NBS-GCR-80-251. An investigation of fire impingement on a horizontal ceiling, H. Z. You and G. M. Faeth (NBS contact: Nora Jason), 49 pages (July 1980). Order from NTIS as PB80-220437.
- NBS-GCR-80-253. An examination and analysis of the dynamics of the human behavior in the fire incident at the Roosevelt Hotel on April 24, 1979, J. L. Bryan, J. A. Milke, and P. J. DiNenno (NBS contact: Nora Jason), 36 pages (Oct. 1979). Order from NTIS as PB80-220429.
- NBS-GCR-80-260. An examination and analysis of the dynamics of the human behavior in the fire incident at the Franklin Square Hospital on June 13, 1979, J. L. Bryan and J. A. Milke (NBS contact: Nora Jason), 29 pages (Aug. 1980). Order from NTIS as PB80-218076.
- NBS-GCR-80-261. An examination and analysis of the dynamics of the human behavior in the fire incident at the Union Hospital of Cecil County on July 29, 1979, J. L. Bryan and J. A. Milke (NBS contact: Nora Jason), 25 pages (Aug. 1980). Order from NTIS as PB80-218084.
- NBS-GCR-80-262. An examination and analysis of the dynamics of the human behavior in the fire incident at the Mt. Wilson Center on June 10, 1979, J. L. Bryan and J. A. Milke (NBS contact: Nora Jason), 32 pages (Aug. 1980). Order from NTIS as PB80-218092.
- NBS-GCR-80-263. An examination and analysis of the dynamics of the human behavior in the fire incident at the Bethesda Center on June 12, 1979, J. L. Bryan and J. A. Milke (NBS contact: Nora Jason), 27 pages (Aug. 1980). Order from NTIS as PB80-218423.
- NBS-GCR-80-264. An examination and analysis of the dynamics of the human behavior in the fire incident at the Reeder's Memorial Nursing Home, July 29, 1979, J. L. Bryan and J. A. Milke (NBS contact: Nora Jason), 29 pages (Aug. 1980). Order from NTIS as PB80-218100.
- NBS-GCR-80-265. An examination and analysis of the dynamics of the human behavior in the fire incident at the Crownsville Hospital Center on August 19, 1979, J. L. Bryan and J. A. Milke (NBS contact: Nora Jason), 32 pages (Aug. 1980). Order from NTIS as PB80-218118.
- NBS-GCR-80-266. An examination and analysis of the dynamics of the human behavior in the fire incident at the Mount Wilson Center on September 4, 1979, J. L. Bryan and J. A. Milke (NBS contact: Nora Jason), 30 pages (Aug. 1980). Order from NTIS as PB80-218357.
- NBS-GCR-80-267. An examination and analysis of the dynamics of the human behavior in the fire incident at the Thomas B. Finan Center on September 9, 1979, J. L. Bryan and J. A. Milke (NBS contact: Nora Jason), 35 pages (Aug. 1980). Order from NTIS as PB80-218845.
- NBS-GCR-80-268. An examination and analysis of the dynamics of the human behavior in the fire incident at the Crownsville Hospital Center on October 5 and 12, 1979, J. L. Bryan and J. A. Milke (NBS contact: Nora Jason), 41 pages (Aug. 1980). Order from NTIS as PB80-218415.
- NBS-GCR-80-269. An examination and analysis of the dynamics of the human behavior in the fire incident at the Crownsville Hospital Center on October 12, 1979, J. L. Bryan and J. A. Milke (NBS contact: Nora Jason), 30 pages (Aug. 1980). Order from NTIS as PB80-219009.
- NBS-GCR-80-270. An examination and analysis of the dynamics of the human behavior in the fire incident at the Peninsula General Hospital on September 22, 1979, J. L. Bryan and J. A. Milke (NBS contact: Nora Jason), 38 pages (Aug. 1980). Order from NTIS as PB80-218381.
- NBS-GCR-80-271. An examination and analysis of the dynamics of the human behavior in the fire incident at the Gunston School on November 30, 1979, J. L. Bryan and J. A. Milke (NBS contact: Nora Jason), 35 pages (Aug. 1980). Order from NTIS as PB80-218407.
- NBS-GCR-80-272. An examination and analysis of the dynamics of the human behavior in the fire incident at the Sheppard and Enoch Pratt Hospital on December 10, 1979, J. L. Bryan and J. A. Milke (NBS contact: Nora Jason), 32 pages (Aug. 1980). Order from NTIS as PB80-224090.
- NBS-GCR-80-273. An examination and analysis of the dynamics of the human behavior in the fire incident at the Fallston General Hospital, January 27, 1980, J. L. Bryan and J. A.

- Milke (NBS contact: Nora Jason), 40 pages (Aug. 1980). Order from NTIS as PB80-218399.
- NBS-GCR-80-274. An examination and analysis of the dynamics of the human behavior in the fire incident at the Washington Adventist Hospital on March 5, 1980, J. L. Bryan and J. A. Milke (NBS contact: Nora Jason), 25 pages (Sept. 1980). Order from NTIS as PB80-224918.
- NBS-GCR-80-275. An examination and analysis of the dynamics of the human behavior in the fire incident at Chesapeake Hall on February 3, 1980, J. L. Bryan and J. A. Milke (NBS contact: Nora Jason), 43 pages (Aug. 1980). Order from NTIS as PB80-218373.
- NBS-GCR-80-276. An examination and analysis of the dynamics of the human behavior in the fire incident at the Diagnostic Center of the Patuxent Institute on March 5, 1980, J. L. Bryan and J. A. Milke (NBS contact: Nora Jason), 40 pages (Aug. 1980). Order from NTIS as PB80-218365.
- NBS-GCR-80-277. An examination and analysis of the dynamics of the human behavior in the fire incident at the Wilson Health Care Center on June 25, 1980, J. L. Bryan and J. A. Milke (NBS contact: Nora Jason), 50 pages (Sept. 1980). Order from NTIS as PB80-224934.
- NBS-GCR-80-284. Waking effectiveness of household smoke and fire detection devices, E. H. Nober, H. Pierce, A. Well, C. C. Johnson, and C. Clifton (NBS contact: Nora Jason), 85 pages (Oct. 1980). Order from NTIS as PB81-127565.

- Acid-compensated multiwavelength determination of uranium in process streams, D. T. Bostick, *SP582*, pp. 121-128 (June 1980).

LASL analytical chemistry program for fissionable materials safeguards, D. D. Jackson and S. F. Marsh, *SP582*, pp. 129-139 (June 1980).

Low level uranium determination by constant current coulometry, W. G. Mitchell and K. Lewis, *SP582*, pp. 140-146 (June 1980).

Application of a direct method for the determination of trace uranium in safeguards samples by pulsed laser fluorometry, A. C. Zook and L. H. Collins, *SP582*, pp. 147-155 (June 1980).

An automated ion-exchange system for the rapid separation of plutonium from impurities in safeguards analyses, B. P. Freeman, J. R. Weiss, and C. E. Pietri, *SP582*, pp. 156-163 (June 1980).

Computer-assisted controlled-potential coulometric determination of plutonium for safeguards measurements, M. K. Holland, T. L. Frazzini, J. R. Weiss, and C. E. Pietri, *SP582*, pp. 164-168 (June 1980).

Measurement requirements and experience in international safeguards, A. J. G. Ramalho and L. W. Thorne, *SP582*, pp. 169-177 (June 1980).

Inventory verification methods in DOE safeguards inspections, C. S. Smith and R. O. Inlow, *SP582*, pp. 178-188 (June 1980).

Safeguards independent measurements program, W. G. Martin, *SP582*, pp. 189-191 (June 1980).

Instrumentation development for the enhanced utilization of calorimetry for nuclear material assay, C. L. Fellers, W. W. Rodenburg, J. H. Birden, M. F. Duff, and J. R. Wetzel, *SP582*, pp. 192-200 (June 1980).

Experimental comparison of the active well coincidence counter with the random driver, H. O. Menlove, N. Ensslin, and T. E. Sampson, *SP582*, pp. 201-220 (June 1980).

A rapid inventory taking system, P. S. S. F. Marsden, *SP582*, pp. 221-233 (June 1980).

Evaluation of reactor track-etch power monitor, B. S. Carpenter, I. G. Schroder, L. J. Pilione, J. W. Roe, and S. Sanatani, *SP582*, pp. 234-238 (June 1980).

Irradiated fuel monitoring by Cerenkov glow intensity measurements, E. J. Dowdy, N. Nicholson, and J. T. Caldwell, *SP582*, pp. 239-256 (June 1980).

A tamper recorder for unattended safeguards instruments, D. C. Smathers, *SP582*, pp. 257-260 (June 1980).

International safeguards at the feed and withdrawal area of a gas centrifuge uranium enrichment plant, D. M. Gordon and J. B. Sanborn, *SP582*, pp. 261-275 (June 1980).

NDA for the SRP fuel fabrication process, R. V. Studley, *SP582*, pp. 276-307 (June 1980).

An in-line monitor of plutonium holdup in glovebox filters, T. K. Li and R. S. Marshall, *SP582*, pp. 308-312 (June 1980).

Integrated quality status and inventory tracking system for FFTF driver fuel pins, G. P. Gottschalk, *SP582*, pp. 313-323 (June 1980).

The in-plant evaluation of a uranium NDA system, J. K. Sprinkle, Jr., H. R. Baxman, D. G. Langner, T. R. Canada, and T. E. Sampson, *SP582*, pp. 324-341 (June 1980).

Automated in-line measurement of nuclear fuel pellets, D. R. McLemore and D. H. Nyman, *SP582*, pp. 342-364 (June 1980).

Passive nuclear material detection in a personnel portal, P. E. Fehlau and M. J. Eaton, *SP582*, pp. 365-371 (June 1980).

An active neutron technique for detecting attempted special nuclear material diversion, G. W. Smith and L. G. Rice, III, *SP582*, pp. 372-390 (June 1980).

In-situ verification techniques for fast critical assembly cores, S. B. Brumbach, P. I. Amundson, and C. T. Roche, *SP582*, pp. 391-424 (June 1980).

New developments in nondestructive measurement and verification of irradiated LWR fuels, D. M. Lee, J. R. Phillips, J. K. Halbig, S. T. Hsue, L. O. Lindquist, E. M. Ortega, J. C. Caine, J. Swansen, K. Kaieda, and E. Dermendjiev, *SP582*, pp. 426-446 (June 1980).

System for nondestructive assay of spent fuel subassemblies—Comparison of calculations and measurements, G. L. Ragan, C. W. Ricker, M. M. Chiles, D. T. Ingersoll, G. G. Slaughter, and L. R. Williams, *SP582*, pp. 447-456 (June 1980).

A study of gamma-ray spectroscopy for spent fuel verification at the Bruce CANDU reactors, J. J. Lipsett, J. C. Irvine, and W. J. Williams, *SP582*, pp. 457-471 (June 1980).

Monte Carlo calculational design of an NDA instrument for the assay of waste products from high enriched uranium spent fuels, G. W. Eccleston, R. G. Schrandt, J. L. Macdonald, and F. H. Cverna, *SP582*, pp. 472-496 (June 1980).

Spectrophotometric determination of plutonium in irradiated fuels solutions procedures and shielding facilities, M. C. Bouzou and A. A. Brutus, *SP582*, pp. 497-508 (June 1980).

Gamma spectrometric measurements of pressurized water power reactor spent fuel, V. Kupryashkin, T. Haginoya, V. Poroykov, T. Dragnev, and B. Damjanov, *SP582*, pp. 509-516 (June 1980).

Automated tank calibrator, G. P. Baumgarten, V. Brame, D. G. Cooper, and B. Robertson, *SP582*, pp. 517-533 (June 1980).

In-tank measurement of solution density, F. E. Jones, R. M. Schoonover, and J. F. Houser, *SP582*, pp. 534-537 (June 1980).

Analysis of plutonium and uranium by the resin bead-mass spectrometric method, R. L. Walker and D. H. Smith, *SP582*, pp. 538-546 (June 1980).

Demonstration of totally sampled wavelength dispersive XRF for use in the assay of the SNM content of dissolver solutions, C. R. Hudgens and B. D. Craft, *SP582*, pp. 547-554 (June 1980).

Study of a two-detector method for measuring plutonium isotopics, J. G. Fleissner, J. F. Lemming, and J. Y. Jarvis, *SP582*, pp. 555-567 (June 1980).

Gamma ray NDA assay system for total plutonium and isotopics in plutonium product solutions, L. R. Cowder, S. T. Hsue, S. S. Johnson, J. L. Parker, P. A. Russo, J. K. Sprinkle, Y. Asakura, T. Fukuda, and I. Kondo, *SP582*, pp. 568-583 (June 1980).

Nondestructive, energy-dispersive, x-ray fluorescence analysis of product stream concentrations from reprocessed nuclear fuels, D. C. Camp and W. D. Ruhter, *SP582*, pp. 584-601 (June 1980).

Experimental U-233 nondestructive assay with a random driver, P. Goris, *SP582*, pp. 602-616 (June 1980).

Measurement of plutonium and americium in molten salt residues, F. X. Haas, J. L. Lawless, W. E. Herren, and M. E. Hughes, *SP582*, pp. 617-621 (June 1980).

Uranium and plutonium assay of crated waste by gamma ray, singles neutron, and slow neutron coincidence counting, R. A. Harlan, *SP582*, pp. 622-632 (June 1980).

Evaluation of an LIII x-ray absorption-edge densitometer for assay of mixed uranium-plutonium solutions, W. C. Mosley, M. C. Thompson, and L. W. Reynolds, *SP582*, pp. 633-650 (June 1980).

The goals of measurement systems for international safeguards, J. M. de Montmollin and E. V. Weinstock, *SP582*, pp. 651-669 (June 1980).

The evolution of safeguards systems design, J. P. Shipley, E. L. Christensen, and R. J. Dietz, *SP582*, pp. 670-676 (June 1980).

Monte Carlo simulation of MUF distribution for application to Euratom safeguards, F. Argentesi and M. Franklin, *SP582*, pp. 677-689 (June 1980).

Sensitivity analysis of a material balance declaration with respect to measurement error sources, F. Argentesi and G. R. Cullington, *SP582*, pp. 690-701 (June 1980).

Deviations from mass transfer equilibrium and mathematical modeling of mixer-settler contactors, A. L. Beyerlein, J. F. Geldard, H. F. Chung, and J. E. Bennett, *SP582*, pp. 702-711 (June 1980).

Dynamic materials accounting for solvent-extraction systems, D. D. Cobb and C. A. Ostenak, *SP582*, pp. 712-717 (June 1980).

Materials accounting considerations for international safeguards in a light-water reactor fuels reprocessing plant, E. A. Hakkila, D. D. Cobb, H. A. Dayem, R. J. Dietz, E. A. Kern, and J. P. Shipley, *SP582*, pp. 718-729 (June 1980).

Study of the application of semi-dynamic material control concept to safeguarding spent fuel reprocessing plants, K. Ikawa, H. Ihara, H. Nishimura, M. Hirata, H. Sakuragi, M. Iwanaga, N. Suyama, and K. I. Matsumoto, *SP582*, pp. 730-739 (June 1980).

Safeguards system of backend facilities with emphasis on waste management, Y. Akimoto, T. Ishii, S. Yamagami, and T. Shibata, *SP582*, pp. 740-749 (June 1980).

BSS127. Recommended technical provisions for construction practice in shoring and sloping of trenches and excavations, F. Y. Yokel, *Nat. Bur. Stand. (U.S.), Bldg. Sci. Ser. 127*, 84 pages (June 1980) SN003-003-02195-4.

BSS128. Evaluation of electrical connections for branch circuit wiring, W. J. Meese and R. W. Beausoliel, *Nat. Bur. Stand. (U.S.), Bldg. Sci. Ser. 128*, 71 pages (Nov. 1980) SN003-003-02269-1.

NBSIR 78-1578. Investigation of construction failure of reinforced concrete cooling tower at Willow Island, West Virginia, H. S. Lew, S. G. Fattal, J. R. Shaver, T. A. Reinhold, and B. J. Hunt, 195 pages (Nov. 1979). Order from NTIS as PB80-192883.

NBSIR 79-1935. Proceedings, Federal Workshop on Excavation Safety, September 19 and 20, 1978, L. A. Salomone and F. Y. Yokel, 117 pages (Dec. 1979). Order from NTIS as PB80-130511.

NBSIR 79-1936. An analysis of the responses from an Associated General Contractors of America (AGC) Survey of trenching and shoring practices, L. A. Salomone and F. Y. Yokel, 61 pages (Jan. 1980). Order from NTIS as PB80-140817.

NBSIR 79-1937. Review of current codes and standards for scaffolds, S. G. Fattal, C. L. Mullen, H. S. Lew, and B. J. Hunt, 70 pages (Apr. 1980). Order from NTIS as PB80-184369.

NBSIR 79-1943. Properties and interactions of oral structures and restorative materials, J. M. Cassel, J. A. Tesk, G. M. Brauer, J. M. Antonucci, J. E. McKinney, W. P. Whitlock, and G. B. McKenna, 125 pages (Dec. 1979). Order from NTIS as PB80-132020.

NBSIR 79-1955. Analysis of scaffolding accident records and related employee casualties, S. G. Fattal, C. L. Mullen, B. J. Hunt, and H. S. Lew, 56 pages (Jan. 1980). Order from NTIS as PB80-161466.

NBSIR 80-1964. Recommended guidelines for safety inspection of construction of concrete cooling towers, H. S. Lew, S. G. Fattal, and B. J. Hunt, 36 pages (Feb. 1980). Order from NTIS as PB80-170525.

NBSIR 80-1987. A mathematical model for use in evaluating and developing impact test methods for protective headgear, R. E. Berger, 78 pages (Mar. 1980). Order from NTIS as PB80-164957.

NBSIR 80-1988. A study of work practices employed to protect workers in trenches, J. Hinze and N. J. Carino, 124 pages (Mar. 1980). Order from NTIS as PB80-167497.

NBSIR 80-1989. A study of handcuff improvements, J. E. Harris, 25 pages (Apr. 1980). Order from NTIS as PB80-181365.

NBSIR 80-1990. Probabilities of vertical overlap: A sensitivity analysis, H. K. Hung, J. F. Gilsinn, and K. L. Hoffman, 72 pages (Mar. 1980). Order from NTIS as PB80-161151.

NBSIR 80-2008. Physical testing of polymers for use in circulatory assist devices, R. W. Penn, G. B. McKenna, and F. A. Khoury, 61 pages (Mar. 1980). Order from NTIS as PB80-164650.

NBSIR 80-2014. Safe environments—Anthropometric, biomechanical, and activity considerations, C. E. Jones and J. V. Fechter, 155 pages (June 1980). Order from NTIS as PB80-199128.

- NBSIR 80-2038. Psychological deterrents to nuclear theft: An updated literature review and bibliography, G. W. Lapinsky, Jr., and C. Goodman, 46 pages (June 1980). Order from NTIS as PB80-197080.
- NBSIR 80-2049. Emergency egress from mobile homes: Anthropometric and ergonomic considerations, V. J. Pezoldt, 46 pages (May 1980). Order from NTIS as PB80-187321.
- NBSIR 80-2112. Explosion containment for underground coal mine equipment: A bibliography, C. A. Wan and E. Braun, 31 pages (Aug. 1980). Order from NTIS as PB80-224843.
- NBS-GCR-80-202. Trench pressure measurements with hydraulic shores, R. L. Tucker, L. C. Reese, and M. H. Nicholas (NBS contact: Pam Benjamin), 86 pages (May 1980). Order from NTIS as PB80-192800.

## Lasers and Their Applications

- SP568. Laser induced damage in optical materials: 1979. Proceedings of a Symposium Sponsored by: National Bureau of Standards, American Society for Testing and Materials, Office of Naval Research, Department of Energy, and Defense Advanced Research Project Agency, NBS, Boulder, CO, Oct. 30-31, 1979, H. E. Bennett, A. J. Glass, A. H. Guenther, and B. E. Newnam, Eds., *Nat. Bur. Stand. (U.S.), Spec. Publ. 568*, 530 pages (July 1980) SN003-003-02217-9.
- Press forging and optical properties of lithium fluoride, J. F. Ready and H. Vora, *SP568*, pp. 39-46 (July 1980).
- Optical properties of forged  $\text{CaF}_2$ , A. K. Hopkins, R. H. Anderson, J. F. Ready, J. M. Bennett, P. C. Archibald, and D. K. Burge, *SP568*, pp. 47-63 (July 1980).
- Mechanical and optical properties of forged NaCl, G. A. Graves, J. A. Detrio, D. McCullum, and D. A. Dempsey, *SP568*, pp. 65-72 (July 1980).
- Optical, thermal, and mechanical measurements on  $\text{CO}_2$  laser-irradiated ZnSe, J. A. Detrio, J. A. Fox, and J. M. O'Hare, *SP568*, pp. 73-89 (July 1980).
- Electronic, nuclear and total nonlinear indices of liquids, D. C. Brown, J. M. Rinefierd, S. D. Jacobs, and J. A. Abate, *SP568*, pp. 91-98 (July 1980).
- Wavelength modulation spectroscopy of highly transparent solids, R. Braunstein, R. K. Kim, and M. Braunstein, *SP568*, pp. 99-117 (July 1980).
- Synchrotron radiation studies of beryllium fluoride glass, R. T. Williams, D. J. Nagel, P. H. Klein, and M. J. Weber, *SP568*, pp. 119-123 (July 1980).
- The role of Fe in laser-induced damage in ultrapure KBr, D. F. Edwards, B. E. Newnam, and W. J. Fredericks, *SP568*, p. 125 (July 1980).
- Properties and fabrication of crystalline fluoride materials for high power laser applications, T. M. Pollak, R. C. Folweiler, E. P. Chicklis, J. W. Baer, A. Linz, and D. Gabbe, *SP568*, pp. 127-135 (July 1980).
- Laser damage in yttrium orthophosphate, R. Allen, L. Esterowitz, P. H. Klein, V. O. Nicolai, and W. K. Zwickler, *SP568*, pp. 137-140 (July 1980).
- Compressive failure in sapphire under  $\text{CO}_2$  laser heating, P. A. Miles, J. Gallagher, and R. L. Gentilman, *SP568*, pp. 141-149 (July 1980).
- Failure criteria for laser window materials, J. A. Detrio, G.

A. Graves, and J. M. Wimmer, *SP568*, pp. 151-159 (July 1980).

Thermomechanical stress degradation of metal mirror surfaces under pulsed laser irradiation, H. M. Musal, Jr., *SP568*, pp. 159-173 (July 1980).

Defect-damage-resistant copper mirrors, J. O. Porteus, D. L. Decker, D. J. Grandjean, S. C. Seitel, and W. N. Faith, *SP568*, pp. 175-186 (July 1980).

Laser-damage resistant copper surfaces with high reflectivity after oxidation, M. Oron, L. G. Svendsen, and G. Sorensen, *SP568*, pp. 187-193 (July 1980).

Laser-induced breakdown of diamond-machined window surfaces, M. J. Soileau, J. O. Porteus, and D. L. Decker, *SP568*, pp. 195-197 (July 1980).

Optical and surface physical characteristics of diamond-machined infrared window materials, D. L. Decker, D. J. Grandjean, and J. M. Bennett, *SP568*, pp. 199-208 (July 1980).

Short-pulse  $\text{CO}_2$ -laser damage studies of NaCl and KCl windows, B. E. Newnam, A. V. Nowak, and D. H. Gill, *SP568*, pp. 209-227 (July 1980).

$\text{CO}_2$ -laser polishing of fused silica surfaces for increased laser damage resistance at  $1.06 \mu\text{m}$ , P. A. Temple, D. Milam, and W. H. Lowdermilk, *SP568*, pp. 229-236 (July 1980).

The relative importance of interface and volume absorption by water in evaporated films, T. M. Donovan, P. A. Temple, S. C. Wu, and T. A. Tombrello, *SP568*, pp. 237-246 (July 1980).

Characterization of small absorptions in optical coatings, W. N. Hansen, L. Pearson, G. Hansen, and W. J. Anderson, *SP568*, pp. 247-256 (July 1980).

Surface microanalysis techniques for characterization of thin films, T. W. Humpherys, R. L. Lusk, and K. C. Jungling, *SP568*, pp. 257-268 (July 1980).

Pyroelectric measurement of absorption in oxide layers and correlation to damage threshold, H. Kuster and J. Ebert, *SP568*, pp. 269-279 (July 1980).

High-temperature optical characterization of thin film reflector and absorber layers, M. R. Jacobson and R. D. Lamoreaux, *SP568*, pp. 281-286 (July 1980).

CVD molybdenum thin films for high power laser mirrors, G. E. Carver and B. O. Seraphin, *SP568*, pp. 287-292 (July 1980).

Photoacoustic experimental studies on an AR coated laser window and some related theoretical calculations, N. C. Fernelius, *SP568*, pp. 293-300 (July 1980).

Calculations using a two-layer Rosencwaig-Gersho photoacoustic spectroscopy theory applied to an anti-reflective coated laser window, N. C. Fernelius, *SP568*, pp. 301-311 (July 1980).

Pre-pulse identification of localized laser damage sites in thin films using photoacoustic spectroscopy, R. P. Freese and K. J. Teegarden, *SP568*, pp. 313-332 (July 1980).

Examination of laser damage sites of transparent surfaces and films using total internal reflection microscopy, P. A. Temple, *SP568*, pp. 333-341 (July 1980).

Parameters affecting damage threshold in thin film infrared chalcogenide glass for applications in laser optical switching systems, W. E. Kienzle and N. I. Marzwell, *SP568*, pp. 343-355 (July 1980).

Improvements in clarity and environmental stability of TiI<sub>2</sub>-containing antireflective coatings, W. T. Boord, P. P. Chow, W. B. Harrison, and J. E. Starling, *SP568*, pp. 355-357 (July 1980).

Reactively sputtered optical coatings for use at  $1064 \text{ nm}$ , W. T. Pawlewicz, R. Busch, D. D. Hays, P. M. Martin, and N. Laegreid, *SP568*, pp. 359-375 (July 1980).

Recent damage results on silica/titania reflectors at 1 micron, C. K. Carniglia, J. H. Apfel, T. H. Allen, T. A. Tuttle, W. H. Lowdermilk, D. Milam, and F. Rainer, *SP568*, pp. 377-390 (July 1980).

Damage to coatings and surfaces by  $1.06 \mu\text{m}$  pulses, W. H. Lowdermilk, D. Milam, and F. Rainer, *SP568*, pp. 391-403 (July 1980).

- Pulsed damage thresholds of fluoride and oxide thin films from 0.26  $\mu\text{m}$  to 1.06  $\mu\text{m}$ , T. W. Walker, A. H. Guenther, C. G. Fry, and P. Nielson, *SP568*, pp. 405-416 (July 1980).
- Laser-induced damage measurements with 266-nm pulses, T. F. Deaton and W. L. Smith, *SP568*, pp. 417-424 (July 1980).
- High energy laser optical train performance—A reassessment, C. A. Klein, *SP568*, pp. 425-438 (July 1980).
- Analysis of an imperfectly coated conical element for high energy laser resonators, W. P. Latham, Jr., *SP568*, pp. 439-443 (July 1980).
- Nonlinear absorption in direct-gap crystals, A. Vaidyanathan, T. W. Walker, A. H. Guenther, S. S. Mitra, and L. M. Narducci, *SP568*, pp. 445-455 (July 1980).
- Completing mechanisms in laser-induced damage, A. Vaidyanathan, T. W. Walker, and A. H. Guenther, *SP568*, pp. 457-465 (July 1980).
- Theory of electron-avalanche breakdown in solids, M. Sparks, T. Holstein, R. Warren, D. L. Mills, A. A. Maradudin, L. J. Sham, E. Loh, Jr., and F. King, *SP568*, pp. 467-478 (July 1980).
- Impurity breakdown model in thin films, T. W. Walker, A. Vaidyanathan, A. H. Guenther, and P. Nielsen, *SP568*, pp. 479-496 (July 1980).
- Frequency and focal volume dependence of laser-induced breakdown in wide band gap insulators, M. J. Soileau, M. Bass, and P. H. Klein, *SP568*, pp. 497-517 (July 1980).
- SBS influence on laser damage of optical materials, P. Balkevicius, E. Kosenko, J. Lukosius, and E. Maldutis, *SP568*, pp. 519-527 (July 1980).
- Computer simulation of damage morphology, P. Kelly, D. Ritchie, A. Schmid, and P. Braunlich, *SP568*, pp. 529-530 (July 1980).

Mfg. Eng. Tech. Paper MS79-784*, pp. 1-14 (Society of Manufacturing Engineers, One SME Drive, P.O. Box 930, Dearborn, MI 48128, 1979).

## Metrology: Physical Measurements

- In-tank measurement of solution density, F. E. Jones, R. M. Schoonover, and J. F. Houser, *J. Res. Nat. Bur. Stand. (U.S.)*, 85, No. 3, 219-221 (May-June 1980).
- A proposed coil system for the improved realization of the absolute ampere, P. T. Olsen, W. D. Phillips, and E. R. Williams, *J. Res. Nat. Bur. Stand. (U.S.)*, 85, No. 4, 257-272 (July-Aug. 1980).
- A simple gravimetric method to determine barometer corrections, R. M. Schoonover, *J. Res. Nat. Bur. Stand. (U.S.)*, 85, No. 5, 341-346 (Sept. 1980).
- SP597. Technical digest—Symposium on optical fiber measurements, 1980. Digest of a Symposium sponsored by the National Bureau of Standards in cooperation with the IEEE Transmission Systems Sub-Committee on Fiber Optics (COMMSOC) and the Optical Society of America, held at National Bureau of Standards, Boulder, CO, Oct. 28-29, 1980, G. W. Day and D. L. Franzen, Eds., *Nat. Bur. Stand. (U.S.), Spec. Publ. 597*, 148 pages (Oct. 1980) SN003-003-02239-0.
- Multimode waveguide attenuation measurements, R. M. Hawk, *SP597*, pp. 1-9 (Oct. 1980).
- Loss measurements of graded-index fibers: Accuracy versus convenience, P. Kaiser, *SP597*, pp. 11-14 (Oct. 1980).
- An accurate method for the measurement of fiber attenuations, A. B. Sharma, E. J. R. Hubach, and S. J. Halme, *SP597*, pp. 15-18 (Oct. 1980).
- A fiber concatenation experiment using a standardized loss measurement method, A. H. Cherin and E. D. Head, *SP597*, pp. 19-22 (Oct. 1980).
- Automated loss measurement set for optical cables, L. C. Hotchkiss, *SP597*, pp. 23-26 (Oct. 1980).
- Comparative measurements regarding the attenuation of optical fibers for the Eindhoven-Helmond field trial, A. Diekema, L. H. M. Engel, G. A. M. Goltstein, P. Matthijsse, and J. W. Versluis, *SP597*, pp. 27-30 (Oct. 1980).
- Profile characterization of optical fibers and preforms, H. M. Presby and D. Marcuse, *SP597*, pp. 31-36 (Oct. 1980).
- Linearity and resolution of refracted near-field scanning technique, M. Young, *SP597*, pp. 37-40 (Oct. 1980).
- A comparison of techniques to measure the diameter of light-guide fiber, D. H. Smithgall and C. M. Schroeder, *SP597*, pp. 41-44 (Oct. 1980).
- An automatic inspection system for single fiber connector plugs, N. K. Cheung and N. M. Denkin, *SP597*, pp. 45-48 (Oct. 1980).

## Mechanics: Design, Testing, and Measurement

- NBSIR 80-2073.2. Guidelines for exchangeable APT data packages. APT part programmer's manual, B. M. Smith, 24 pages (June 1980). Order from NTIS as AD-A092929.
- NBSIR 80-2073.3. Guidelines for exchangeable APT data packages. APT postprocessor specifications, B. M. Smith, 15 pages (June 1980). Order from NTIS as AD-A092933.
19049. Bloss, R. L., Thoughts on the stability of strain gages and strain gage based transducers under load, *Proc. Tech. Comm. on Strain Gages in Field Test Environments, Silver Spring, MD, May 10, 1976*, P. H. Adams, Ed., pp. 16-18 (Society for Experimental Stress Analysis, Westport, CT, 1976).
19093. VanderBrug, G. J., Nagel, R. N., Vision systems for manufacturing, *Proc. 1979 Joint Automatic Control Conf.*

- Bandwidth measurement in multimode optical fibers, I. Kobayashi, *SP597*, pp. 49-54 (Oct. 1980).
- An interrelationship between loss and dispersion in multimode fibers, L. G. Cohen and S. J. Jang, *SP597*, pp. 55-58 (Oct. 1980).
- Optimization of concatenated fiber bandwidth via differential mode delay, M. J. Buckler, *SP597*, pp. 59-62 (Oct. 1980).
- Attenuation and pulse broadening along concatenated fiber links, F. P. Kapron, F. M. E. Sladen, P. M. Garel-Jones, and D. G. Kneller, *SP597*, pp. 63-66 (Oct. 1980).
- Difficulties encountered in the measurement of optical fiber interconnection performance, K. S. Gordon and F. M. E. Sladen, *SP597*, pp. 67-72 (Oct. 1980).
- Loss characterization of biconic single-fiber connectors, P. Kaiser, W. C. Young, N. K. Cheung, and L. Curtis, *SP597*, pp. 73-76 (Oct. 1980).
- Contribution to splice loss evaluation by the backscattering technique: A statistical comparison with insertion loss data, A. LeBoutet, *SP597*, pp. 77-80 (Oct. 1980).
- Optical cable fault location using a correlation technique, K. Okada, I. Kobayashi, K. Hashimoto, T. Shibata, T. Kosugi, and Y. Nagaki, *SP597*, pp. 81-84 (Oct. 1980).
- Optical time domain reflectometry by photon counting, P. Healey and P. Hensel, *SP597*, pp. 85-88 (Oct. 1980).
- Characterization of single mode fibers, K. I. White, B. P. Nelson, J. V. Wright, M. C. Brierly, and A. Beaumont, *SP597*, pp. 89-92 (Oct. 1980).
- Effect of curvature on the cutoff wavelength of single mode fibers, P. D. Lazay, *SP597*, pp. 93-95 (Oct. 1980).
- Optical time domain reflectometry on single mode fibers using a Q-switched Nd:YAG laser, D. L. Philen, *SP597*, pp. 97-100 (Oct. 1980).
- Interferometric technique for the determination of dispersion in a short length of single mode optical fiber, W. D. Bomberger and J. J. Burke, *SP597*, pp. 101-104 (Oct. 1980).
- Industrialized system for the automated measurements of the optical properties of waveguide fibers, E. F. Murphy, R. W. Lapierre, and C. F. Laing, *SP597*, pp. 105-111 (Oct. 1980).
- Wavelength meters for optical cable transmission systems, K. Sano, K. Okada, and T. Oki, *SP597*, pp. 113-117 (Oct. 1980).
- Fiber measurement techniques in West Germany, J. Feldman, *SP597*, p. 119 (Oct. 1980).
- The preparation of standards for "Optical fibers and cables" within the International Electrotechnical Commission, M. P. Smid, *SP597*, pp. 121-127 (Oct. 1980).
- CCITT studies on optical fibers cables measurements, F. Bigi and G. Bonaventura, *SP597*, pp. 129-134 (Oct. 1980).
- Waveguide fiber standards, R. E. Love, *SP597*, pp. 135-143 (Oct. 1980).
- TN1125. Photometry and colorimetry of retroreflection: State-of-measurement-accuracy report, K. L. Eckerle, *Nat. Bur. Stand. (U.S.), Tech. Note 1125*, 44 pages (July 1980) SN003-003-02208-0.
- NBSIR 80-1967. The calibration of angle blocks by intercomparison, C. P. Reeve, 26 pages (Apr. 1980). Order from NTIS as PB80-182132.
- NBSIR 80-2071. Breakdown between bare electrodes with an oil-paper interface, E. F. Kelley and R. E. Hebner, Jr., 33 pages (June 1980). Order from NTIS as PB80-226699.
- NBSIR 80-2072. X-Cal—A calibration system for electrical measurement devices used with diagnostic x-ray units, R. H. McKnight and R. E. Hebner, Jr., 75 pages (June 1980). Order from NTIS as PB80-197478.
- NBSIR 80-2078. The NBS gage block calibration process using a measurement assurance program, C. D. Tucker, 9 pages (June 1980). Order from NTIS as PB80-200132.
- NBSIR 80-2143. An analysis of the effects of dynamic and static forces present in the NBS SI volt experiment, M. E. Cage, 218 pages (Sept. 1980). Order from NTIS as PB81-115370.
- NBS-GCR-79-185. Colorimetry of fluorescent specimens. A state-of-the-art report, F. W. Billmeyer, Jr., (NBS contact: Pam Jackson), 47 pages (Oct. 1979). Order from NTIS as PB80-165590.
- NBS-GCR-80-282. Alternatives to precision measuring and test equipment (PMTE) out-of-service calibrations, Raytheon Service Company (NBS contact: Ken Edinger), 98 pages (Aug. 12, 1980). Order from NTIS as PB81-110181.
- NBS-GCR-80-283. Optimizing calibration recall intervals and alternatives, Raytheon Service Company (NBS contact: Ken Edinger), 112 pages (Oct. 1980). Order from NTIS as PB81-109597.
- U.S. Patent 4,227,096. Microwave integrated circuit for Josephson voltage standards, L. B. Holdeman, J. Toots, and C. C. Chang, 6 pages (Oct. 7, 1980).

## Nuclear Physics and Radiation Technology

- Standardization of Iridium-192 gamma-ray sources in terms of exposure, T. P. Loftus, *J. Res. Nat. Bur. Stand. (U.S.)*, **85**, No. 1, 19-25 (Jan.-Feb. 1980).
- SP570. Structure shielding against fallout gamma rays from nuclear detonations, L. V. Spencer, A. B. Chilton, and C. M. Eisenhauer, *Nat. Bur. Stand. (U.S.)*, *Spec. Publ. 570*, 984 pages (Sept. 1980) SN003-003-02246-2.
- SP594. Nuclear cross sections for technology. Proceedings of the International Conference on Nuclear Cross Sections for Technology, held at the University of Tennessee, Knoxville, TN, Oct. 22-26, 1979, J. L. Fowler, C. H. Johnson, and C. D. Bowman, Eds., *Nat. Bur. Stand. (U.S.)*, *Spec. Publ. 594*, 1056 pages (Sept. 1980) SN003-003-02237-3.

- Nuclear data needs for LWR applications, O. Ozer, *SP594*, pp. 1-5 (Sept. 1980).
- Nuclear data needs for plutonium breeders, P. Hammer, *SP594*, pp. 6-17 (Sept. 1980).
- Nuclear data needs for the analysis of generation and burn-up of actinide isotopes in nuclear reactors, H. Kusters, *SP594*, pp. 18-24 (Sept. 1980).
- Fission product decay heat for thermal reactors, J. K. Dickens, *SP594*, pp. 25-33 (Sept. 1980).
- Neutron total cross sections of hydrogen, carbon, oxygen and iron from 500 keV to 60 MeV, D. C. Larson, J. A. Harvey, and N. W. Hill, *SP594*, pp. 34-38 (Sept. 1980).
- Elastic scattering of 14.8 MeV neutrons from deuterons, K. Gul, A. Waheed, M. Ahmad, M. S. Sheikh, M. Anwar, and N. A. Khan, *SP594*, pp. 39-42 (Sept. 1980).
- Neutron scattering from  $^7\text{Li}$  at incident energies of 5.1, 6.6 and 15.4 MeV, M. Baba, N. Hayashi, T. Sakase, T. Iwasaki, S. Kamata, and T. Momota, *SP594*, pp. 43-47 (Sept. 1980).
- Total cross section measurements of  $^6\text{Li}$ ,  $^7\text{Li}$ , and C from 3 to 40 MeV, J. D. Kellie, G. P. Lamaze, and R. B. Schwartz, *SP594*, pp. 48-51 (Sept. 1980).
- A coupled channels model for radiative capture of nucleons by  $^{12}\text{C}$ , D. L. Johnson, *SP594*, pp. 52-57 (Sept. 1980).
- Evaluation of  $^{23}\text{Na}$  for ENDF/B-V, D. C. Larson, *SP594*, pp. 58-62 (Sept. 1980).
- Simultaneous evaluation of  $^{32}\text{S}(n,p)$ ,  $^{56}\text{Fe}(n,p)$ ,  $^{65}\text{Cu}(n,2n)$  cross sections, C. Y. Fu, D. M. Hetrick, and F. G. Perey, *SP594*, pp. 63-67 (Sept. 1980).
- Evaluations of the  $\text{Fe}58(n,\gamma)\text{Fe}59$  and  $\text{Fe}54(n,p)\text{Mn}54$  reactions for the ENDF/B-V dosimetry file, R. E. Schenter, F. Schmittroth, and F. M. Mann, *SP594*, pp. 68-72 (Sept. 1980).
- Neutron energy spectra and angular distributions for Al and Nb( $n,xn$ ) reactions at 15.4 MeV, S. Iwasaki, M. Sugimoto, T. Tamura, T. Suzuki, H. Takahashi, and K. Sugiyama, *SP594*, pp. 73-77 (Sept. 1980).
- Scattering of 10 MeV neutrons on silicon, W. Pilz, D. Schmidt, D. Seeliger, and T. Streil, *SP594*, pp. 78-79 (Sept. 1980).
- Doppler broadening effect to neutron resonance cross sections for Ag, AgCl and Ag<sub>2</sub>O, H. I. Liou, R. E. Chrien, and R. Moreh, *SP594*, pp. 80-83 (Sept. 1980).
- Measurement of the  $^{10}\text{B}/^6\text{Li}$  cross section ratio below 1 keV, J. B. Czirr and A. D. Carlson, *SP594*, pp. 84-85, (Sept. 1980).
- The neutron total cross section of single crystal silicon at 21 °K, R. M. Brugger, R. G. Fluharty, P. W. Lisowski, and C. E. Olsen, *SP594*, pp. 86-88 (Sept. 1980).
- A comparison of (n, $\alpha$ ) cross section measurements for  $^{10}\text{BF}_3$  and solid  $^{10}\text{B}$  from 0.5 to 10,000 eV, A. D. Carlson, C. D. Bowman, J. W. Behrens, R. G. Johnson, and J. H. Todd, *SP594*, pp. 89-92 (Sept. 1980).
- Perturbations of nuclear cross sections associated with changes in molecular vibrational energy, C. B. Bowman and R. A. Schrack, *SP594*, pp. 93-96 (Sept. 1980).
- The ratio of the  $^{10}\text{BF}_3$  and  $^3\text{He}(n,p)$  cross sections between 0.025 eV and 25,000 eV, C. D. Bowman, J. W. Behrens, R. Gwin, and J. H. Todd, *SP594*, pp. 97-100 (Sept. 1980).
- Measurements of the total neutron cross-sections of Be, Ni and Cu at room and liquid nitrogen temperatures in the energy range from 2.2 eV to 2.2 MeV, M. Adib, A. Abdel-Kawy, R. M. A. Maayouf, Y. Eid, G. Shuriet, and I. Hamouda, *SP594*, pp. 101-104 (Sept. 1980).
- Chemical dependence of uranium fission, R. A. Schrack and C. D. Bowman, *SP594*, pp. 105-107 (Sept. 1980).
- Advanced converter reactors, P. R. Kasten, *SP594*, pp. 108-114 (Sept. 1980).
- Denatured fuel cycles, C. E. Till, *SP594*, pp. 115-118 (Sept. 1980).
- The use of thorium in fast breeder reactors, D. E. Bartine, *SP594*, pp. 119-121 (Sept. 1980).
- Deep penetration integral experiment for a thorium blanket mockup, D. T. Ingersoll and F. J. Muckenthaler, *SP594*, pp.

122-124 (Sept. 1980).

Analysis of a Swiss thorium blanket integral experiment, J. R. White, D. T. Ingersoll, U. Schmock, and K. Gmur, *SP594*, pp. 127-130 (Sept. 1980).

Data needs for fuel handling and waste management aspects of thorium fuel cycles, S. Nair and H. F. Macdonald, *SP594*, pp. 131-134 (Sept. 1980).

Neutron scattering cross sections from  $(n,n')$  and  $(n,n'\gamma)$  methods—A comparison, F. D. McDaniels, G. P. Glasgow, and M. T. McEllistrem, *SP594*, pp. 135-138 (Sept. 1980).

Double differential neutron scattering cross sections for Fe, Cu, Ni and Pb between 8 and 12 MeV, A. Beyerle, C. Gould, W. Seagondollar, P. Thambidurai, S. El-Kadi, G. Glendinning, C. E. Nelson, F. O. Purser, and R. L. Walter, *SP594*, pp. 139-142 (Sept. 1980).

Elastic neutron scattering from  $^{63}\text{Cu}$ ,  $^{65}\text{Cu}$ ,  $^{54}\text{Fe}$  and  $^{56}\text{Fe}$  from 8 to 12 MeV, S. El-Kadi, R. Pedroni, G. Glendinning, C. E. Nelson, F. O. Purser, R. L. Walter, A. Beyerle, C. Gould, and W. Seagondollar, *SP594*, pp. 143-145 (Sept. 1980).

Elastic and inelastic scattering of 24 MeV neutrons from even isotopes of Ni, Y. Yamanouti, J. Rapoport, S. M. Grimes, V. Kulkarni, R. W. Finlay, D. Bainum, P. Grabmayr, and G. Randers-Pehrson, *SP594*, pp. 146-149 (Sept. 1980).

Measurement of differential elastic and inelastic scattering cross sections with 14 MeV neutrons on barium and chromium, G. Winkler, K. Hansjakob, and G. Staffel, *SP594*, pp. 150-154 (Sept. 1980).

Determination of the capture width of the 27.7 keV s-wave resonance in  $^{56}\text{Fe}$ , K. Wisshak and F. Kappeler, *SP594*, pp. 155-158 (Sept. 1980).

Total neutron cross section measurements on  $^{54}\text{Fe}$ ,  $^{56}\text{Fe}$  and  $^{57}\text{Fe}$ , E. M. R. Cornelis, C. R. Jungmann, L. Mewissen, and F. Poortmans, *SP594*, pp. 159-162 (Sept. 1980).

Neutron capture cross section measurements of  $^{56}\text{Fe}$ , A. Brusegan, F. Corvi, G. Rohr, R. Shelley, and T. van der Veen, *SP594*, pp. 163-167 (Sept. 1980).

Fast-neutron total and scattering cross sections of Cr, Fe and  $^{60}\text{Ni}$ , A. B. Smith, P. T. Guenther, and J. F. Whalen, *SP594*, pp. 168-172 (Sept. 1980).

Neutron resonance parameters of  $^{79}\text{Br}$  and  $^{81}\text{Br}$  up to 15 keV, M. Ohkubo, Y. Kawarasaki, and M. Mizumoto, *SP594*, pp. 173-176 (Sept. 1980).

Cross section adjustment applied to estimation of uncertainty in the breeding ratio of an LMFBFR, J. H. Marable, C. R. Weisbin, and G. de Saussure, *SP594*, pp. 177-181 (Sept. 1980).

Relative consistency of ENDF/B-IV and -V with fast-reactor benchmarks, Y. Yeivin, J. J. Wagschal, J. H. Marable, and C. R. Weisbin, *SP594*, pp. 182-186 (Sept. 1980).

A test of ENDF/B library in the criticality predictions of fast assemblies, V. K. Shukla and S. B. Garg, *SP594*, pp. 187-189 (Sept. 1980).

Basic nuclear data and the fast reactor shielding design—Formulaire PROPANE Do, J. C. Estiot, M. Salvatores, and J. P. Trapp, *SP594*, pp. 190-193 (Sept. 1980).

Nuclear data for shielding calculations: Na cross-section adjustment using propagation experiments, J. C. Estiot, M. Salvatores, J. P. Trapp, A. De Carli, and V. Rado, *SP594*, pp. 194-198 (Sept. 1980).

On the discrepancy between differential and integral results for the  $^{63}\text{Cu}(n,\alpha)^{60}\text{Co}$  cross section, G. Winkler, D. L. Smith, and J. W. Meadows, *SP594*, pp. 199-203 (Sept. 1980).

Vitamin E: A multipurpose ENDF/B-V coupled neutron-gamma cross section library, J. Barhen, D. G. Cacuci, W. E. Ford III, R. W. Roussin, J. J. Wagschal, C. R. Weisbin, J. E. White, and R. Q. Wright, *SP594*, pp. 204-208 (Sept. 1980).

Verification of photon-production processing techniques, R. J. Barrett, W. E. Ford III, Y. Gohar, T. S. Bohn, R. E. MacFarlane, and R. M. Boicourt, *SP594*, pp. 209-212 (Sept. 1980).

The MATXS-TRANSX system and the CLAW-IV nuclear data library, R. J. Barrett and R. E. MacFarlane, *SP594*, pp. 213-216 (Sept. 1980).

ENDF/B-IV and V cross section libraries for thermal power reactor analysis, R. E. MacFarlane, *SP594*, pp. 217-220 (Sept. 1980).

Finite element basis used in consistent nuclear data evaluation, F. Schmittroth, *SP594*, pp. 221-223 (Sept. 1980).

Effect of resonance interference between U-238 and CS-133 on isotopic correlation of fission product, H. Takano, Y. Ishiguro, and S. Matsuura, *SP594*, pp. 224-227 (Sept. 1980).

Neutron cross sections for fusion, R. C. Haight, *SP594*, pp. 228-238 (Sept. 1980).

Shielding of fusion reactors, R. G. Alsmiller, Jr., *SP594*, pp. 239-245 (Sept. 1980).

Tritium breeding in fusion, M. T. Swinhoe, *SP594*, pp. 246-253 (Sept. 1980).

Charged particle cross section requirements for advanced fusion fuel cycles, G. W. Shuy and R. W. Conn, *SP594*, pp. 254-264 (Sept. 1980).

Measurement and analysis of neutron spectra in some assemblies of reactor materials, I. Kimura, *SP594*, pp. 265-274 (Sept. 1980).

Neutron transport in structural materials and shielding design, M. Salvatores, *SP594*, pp. 275-284 (Sept. 1980).

Neutron dosimetry for radiation damage in fission and fusion reactors, D. L. Smith, *SP594*, pp. 285-296 (Sept. 1980).

Discussion of integral experiment C/E discrepancies, L. G. LeSage and R. D. McKnight, *SP594*, pp. 297-306 (Sept. 1980).

Cross sections for fast neutron capture on Se, Cd and Os isotopes, M. Herman and A. Marcinkowski, *SP594*, pp. 307-310 (Sept. 1980).

Optical model calculations of nucleon interactions with  $^{93}\text{Nb}$ , from 10 keV up to 50 MeV, C. Lagrange, *SP594*, pp. 311-314 (Sept. 1980).

Neutron resonance parameters for palladium isotopes, P. Staveloz, E. Cornelis, L. Mewissen, F. Poortmans, G. Rohr, R. Shelley, and T. Van Der Veen, *SP594*, pp. 315-318 (Sept. 1980).

Resonance parameters of  $^{90}\text{Zr}$  below 40 keV, C. Coceva, P. Giacobbe, and M. Magnani, *SP594*, pp. 319-322 (Sept. 1980).

Neutron capture cross sections of Y, Nb, Gd, W and Au between 0.5 and 3.0 MeV, G. Grenier, J. P. Delaroche, S. Joly, C. Lagrange, and J. Voignier, *SP594*, pp. 323-327 (Sept. 1980).

Neutron radiative capture and transmission measurements of  $^{147}\text{Sm}$  and  $^{149}\text{Sm}$ , M. Mizumoto, M. Sugimoto, Y. Nakajima, Y. Kawarasaki, Y. Furuta, and A. Asami, *SP594*, pp. 328-332 (Sept. 1980).

Calculation of neutron cross sections for tungsten isotopes, E. D. Arthur and C. A. Philis, *SP594*, pp. 333-335 (Sept. 1980).

Coherent optical and statistical model analysis of  $^{182, 183, 184, 186}\text{W}$  neutron cross sections, J. P. Delaroche, G. Haouat, J. Lachkar, Y. Patin, J. Sigaud, and J. Chardine, *SP594*, pp. 336-339 (Sept. 1980).

The neutron capture cross sections of natural Yb,  $^{170}\text{Yb}$ ,  $^{172}\text{Lu}$  and  $^{184}\text{W}$  in the energy range from 5 to 200 keV for the  $^{176}\text{Lu}$ -chronometer, H. Beer, F. Kappeler, and K. Wisshak, *SP594*, pp. 340-343 (Sept. 1980).

Stellar nucleosynthesis and the 24-keV neutron capture cross sections of some heavy nuclei, T. Bradley, Z. Parsa, M. L. Stelts, and R. E. Chrien, *SP594*, pp. 344-347 (Sept. 1980).

The measurement of Maxwellian averaged capture cross sections for  $^{136}\text{Ba}$ ,  $^{140}\text{Ce}$ ,  $^{175}\text{Lu}$  and  $^{176}\text{Lu}$  with a special activation technique, H. Beer and F. Kappeler, *SP594*, pp. 348-350 (Sept. 1980).

Nuclear development needs for fusion-fission hybrid reactors, D. L. Jassby, *SP594*, pp. 351-359 (Sept. 1980).

Burning nuclear wastes in fusion reactors, H. W. Meldner and W. M. Howard, *SP594*, pp. 360-363 (Sept. 1980).

Safeguards, W. A. Higinbotham, *SP594*, pp. 364-367 (Sept. 1980).

Fast-neutron capture cross sections of importance in techno-

logical applications, W. P. Poenitz, *SP594*, pp. 368-379 (Sept. 1980).

Measurement of the fast neutron capture cross section of  $^{235}\text{U}$  relative to  $^{235}\text{U}(n,f)$ , L. R. Fawcett, Jr., W. P. Poenitz, and D. L. Smith, *SP594*, pp. 380-384 (Sept. 1980).

Selected topics in research program on IBR-2, V. I. Luschiakov, L. B. Pikelner, Y. P. Popov, I. M. Frank, E. I. Sharapov, and Y. S. Yazvitskii, *SP594*, pp. 385-393 (Sept. 1980).

Thermal neutron capture cross section in deuterium, V. P. Alfimenkov, S. B. Borzakov, J. Wierzbicki, B. P. Osipenko, L. B. Pikelner, V. G. Tishin, and E. I. Sharapov, *SP594*, pp. 394-396 (Sept. 1980).

Status of gamma ray production cross section data, K. Sugiyama, *SP594*, pp. 397-407 (Sept. 1980).

Gamma-ray production cross sections for fast neutron interactions with Al, Ni, Cu and Nb, Y. Hino, T. Yamamoto, S. Itagaki, and K. Sugiyama, *SP594*, pp. 408-412 (Sept. 1980).

Neutron spectrum at 90° from 800 MeV (p,n) reactions on a Ta target, S. D. Howe, P. W. Lisowski, N. S. P. King, G. J. Russell, and H. J. Donnert, *SP594*, pp. 413-416 (Sept. 1980).

Analysis of neutron yield produced by high energy proton, H. Takahashi and Y. Nakahara, *SP594*, pp. 417-421 (Sept. 1980).

Calculated particle production spectra and multiplicities from nucleon-fissile element collisions at medium energies, F. S. Alsmiller, R. G. Alsmiller, Jr., T. A. Gabriel, R. A. Lillie, and J. Barish, *SP594*, pp. 422-426 (Sept. 1980).

Photoneutron leakage from the  $\text{W}(\gamma,n)$  reaction at radiation therapy centers, R. J. Holt, H. E. Jackson, and J. R. Specht, *SP594*, pp. 427-428 (Sept. 1980).

NELMA project. I. Objectives of the methodical aspects, G. C. Madueme, *SP594*, pp. 429-431 (Sept. 1980).

The  $^{127}\text{I}(n,2n)^{126}\text{I}$  reaction as a fast neutron flux monitor, D. C. Santry, *SP594*, pp. 433-435 (Sept. 1980).

Resonance neutron radiography for nondestructive evaluation and assay applications, J. W. Behrens, R. A. Schrack, A. D. Carlson, and C. D. Bowman, *SP594*, pp. 436-439 (Sept. 1980).

Fast neutron radiotherapy: Fundamental aspects and clinical results, J. J. Broerse, *SP594*, pp. 440-446 (Sept. 1980).

Neutron dosimetry, P. R. Almond and J. B. Smathers, *SP594*, pp. 447-455 (Sept. 1980).

The clinical application of *in vivo* neutron activation analysis, S. H. Cohn, K. J. Ellis, I. Zanzi, D. Vartsky, and J. F. Aloia, *SP594*, pp. 456-457 (Sept. 1980).

Accelerators for radionuclide production, J. C. Clark, *SP594*, pp. 458-463 (Sept. 1980).

Evaluation of the fission and capture cross sections of  $^{240}\text{Pu}$  and  $^{241}\text{Pu}$  for ENDF/B-V, L. W. Weston and R. Q. Wright, *SP594*, pp. 464-468 (Sept. 1980).

What can be learned from the channel analysis of the  $^{232}\text{Th}$  neutron fission cross section, H. A. Yehia, J. Jary, J. Trochon, J. W. Boldeman, and A. R. de L. Musgrove, *SP594*, pp. 469-474 (Sept. 1980).

Measurement of the integral capture and fission cross sections for  $^{232}\text{Th}$  in the CFRMF, R. A. Anderl and Y. D. Harker, *SP594*, pp. 475-478 (Sept. 1980).

The fission cross section of  $^{230}\text{Th}$  and  $^{232}\text{Th}$  relative to  $^{235}\text{U}$ , J. W. Meadows, *SP594*, pp. 479-482 (Sept. 1980).

The evaluation of  $^{235}\text{U}(n,f)$  above 100 keV for ENDF/B-V and the implications of a unified  $^{235}\text{U}$  mass scale, W. P. Poenitz, J. W. Meadows, and R. J. Armani, *SP594*, pp. 483-487 (Sept. 1980).

A measurement of U-235 absolute alpha value in the neutron energy range from 0.1 to 30 keV, G. V. Muradyan, Y. G. Schepkin, Y. V. Adamchuk, and M. A. Voskanyan, *SP594*, pp. 488-490 (Sept. 1980).

High-resolution fission cross section of  $^{231}\text{Pa}$ , S. Plattard, G. F. Auchampaugh, N. W. Hill, G. de Saussure, R. B. Perez, and J. A. Harvey, *SP594*, pp. 491-495 (Sept. 1980).

Fission cross section of  $^{245}\text{Cm}$  from  $10^{-3}$  eV to  $10^4$  eV, R. M. White, J. C. Browne, R. E. Howe, J. H. Landrum, and J. A. Becker, *SP594*, pp. 496-499 (Sept. 1980).

First and second chance fission calculations for actinides and related topics, G. Maino, E. Menapace, M. Motta, and A. Ventura, *SP594*, pp. 500-503 (Sept. 1980).

Finite geometry and multiple scattering corrections for neutron cross section measurements, H. H. Hogue and A. G. Beyerle, *SP594*, pp. 504-508 (Sept. 1980).

Fast neutron detection capabilities of NaI(Tl) scintillator and  $\text{HgI}_2$  semiconductor gamma ray spectrometers, F. E. Cecil, K. Killian, and M. Rymes, *SP594*, pp. 509-511 (Sept. 1980).

Fission track recorder techniques for fission rate measurements, H. P. Chou, R. H. Johnson, and F. M. Clikeman, *SP594*, pp. 512-515 (Sept. 1980).

Analysis of particulates for very light elements by forward scattering of alpha particles, G. W. Wolfe, *SP594*, pp. 516-520 (Sept. 1980).

The spectrometry of multiplicity of secondary radiation as a method of measurement of neutron cross-section and investigation of nuclei, G. V. Muradyan, *SP594*, pp. 521-523 (Sept. 1980).

Neutron total cross section measurement at WNR, P. W. Lisowski, M. S. Moore, G. L. Morgan, and R. E. Shamu, *SP594*, pp. 524-526 (Sept. 1980).

Study of neutron-induced charged particle reactions on deuterium using a quadrupole triplet spectrometer, V. Kulkarni, P. Grabmayr, G. Randers-Pehrson, R. W. Finlay, J. Rapaport, and S. M. Grimes, *SP594*, pp. 527-530 (Sept. 1980).

Efficient neutron production using low energy electron beams, C. D. Bowman, *SP594*, pp. 531-533 (Sept. 1980).

Performance improvements of the Geel linac neutron source, J. M. Salome and K. H. Bockhoff, *SP594*, pp. 534-536 (Sept. 1980).

Recent modifications of the TUNL fast neutron cross section facility, L. W. Seagondollar, A. G. Beyerle, C. R. Gould, F. O. Purser, S. El-Kadi, S. G. Glendinning, and C. E. Nelson, *SP594*, pp. 537-541 (Sept. 1980).

A study of source neutron reactions, P. Grabmayr, J. Rapaport, R. W. Finlay, V. Kulkarni, and S. M. Grimes, *SP594*, pp. 542-544 (Sept. 1980).

Neutron spectra measurements upon a spherical assembly of thorium, R. C. Block, M. Becker, D. R. Harris, B. K. Malaviya, S. A. Bokharee, R. W. Emmett, P. S. Feigenbaum, S. H. Levinson, H. T. Maguire, Jr., S. A. Hayashi, and S. Yamamoto, *SP594*, pp. 545-547 (Sept. 1980).

Integral measurements for higher actinides in CFRMF, Y. D. Harker, R. A. Anderl, E. H. Turk, and N. C. Schroeder, *SP594*, pp. 548-551 (Sept. 1980).

Evaluation of actinide cross sections by integral experiments in fast critical assembly FCA, T. Mukaiyama, H. Mitani, K. Koyama, M. Obu, and H. Kuroi, *SP594*, pp. 552-556 (Sept. 1980).

Neodymium, samarium and europium capture cross-section adjustments based on EBR-II integral measurements, R. A. Anderl, Y. D. Harker, and F. Schmittroth, *SP594*, pp. 557-562 (Sept. 1980).

Measurements and analyses of neutron transport through iron, N. E. Hertel, R. H. Johnson, J. J. Dornig, and B. W. Wehring, *SP594*, pp. 563-568 (Sept. 1980).

Neutron energy spectra in the fast breeder blanket facility, D. W. Vehar, R. H. Johnson, and F. M. Clikeman, *SP594*, pp. 568-571 (Sept. 1980).

$^{238}\text{U}$  and  $^{232}\text{Th}$  capture rates in the FBBF, G. A. Harms, F. M. Clikeman, R. H. Johnson, R. C. Borg, and K. O. Ott, *SP594*, pp. 572-575 (Sept. 1980).

Gamma-ray heating in the fast breeder blanket facility, K. R. Koch, F. M. Clikeman, and R. H. Johnson, *SP594*, pp. 576-580 (Sept. 1980).

Benchmark tests of Japanese evaluated nuclear data library (JENDL), Y. Kikuchi, A. Hasegawa, T. Hojuyama, M. Sasaki, Y. Seki, T. Kamei, and I. Otake, *SP594*, pp. 581-585 (Sept. 1980).

Request for evaluating neutron cross section of structural

material for shielding application, M. Kawai, N. Yamano, and K. Koyama, *SP594*, pp. 586-590 (Sept. 1980).

Integral experiments for fusion reactor design: Experimentation, G. T. Chapman and G. L. Morgan, *SP594*, pp. 591-595 (Sept. 1980).

Integral experiments for fusion reactor design: Analysis, R. T. Santoro, R. G. Alsmiller, Jr., J. M. Barnes, and E. M. Obrow, *SP594*, pp. 596-598 (Sept. 1980).

Use of nuclear techniques in oil well logging, K. S. Quisenberry, *SP594*, pp. 599-603 (Sept. 1980).

Neutron induced radioactivity for mineral exploration, F. E. Senfile, *SP594*, pp. 604-614 (Sept. 1980).

Nuclear techniques in marine metal exploration, W. Michaelis, *SP594*, pp. 615-626 (Sept. 1980).

Neutron cross sections of importance to astrophysics, J. C. Browne, *SP594*, pp. 627-633 (Sept. 1980).

Open problems in nuclear data evaluations, S. Pearlstein, *SP594*, pp. 634-638 (Sept. 1980).

Application of nuclear models, P. G. Young, E. D. Arthur, and D. G. Madland, *SP594*, pp. 639-649 (Sept. 1980).

R-Matrix analyses of light-element reactions for fusion applications, G. M. Hale and D. C. Dodder, *SP594*, pp. 650-658 (Sept. 1980).

Evaluated data collections from ENSDF, W. B. Ewbank, *SP594*, pp. 659-661 (Sept. 1980).

Evaluations of fission product capture cross sections for ENDF/B-V, R. E. Schenter, D. L. Johnson, F. M. Mann, F. Schmittroth, and H. Gruppelaar, *SP594*, pp. 662-666 (Sept. 1980).

Beta and gamma decay heat evaluation for the thermal fission of  $^{235}\text{U}$ , G. K. Schenter and F. Schmittroth, *SP594*, pp. 667-671 (Sept. 1980).

Fast neutron scattering cross sections for actinide nuclei, G. Haouat, C. Lagrange, J. Lachkar, J. Jary, Y. Patin, and J. Sigaud, *SP594*, pp. 672-676 (Sept. 1980).

Measurement of  $^{238}\text{U}(n,n'\gamma)^{238}\text{U}$  cross sections, D. K. Olsen, G. L. Morgan, and J. W. McConnell, *SP594*, pp. 677-679 (Sept. 1980).

Neutron inelastic scattering cross sections of  $^{238}\text{U}$  via  $(n,n'\gamma)$ , A. Mittler, G. P. Couchell, W. A. Schier, S. Ashar, J. H. Chang, and A. T. Y. Wang, *SP594*, pp. 680-684 (Sept. 1980).

Neutron inelastic scattering cross sections of  $^{232}\text{Th}$  obtained from  $(n,n'\gamma)$  measurements, J. J. Egan, J. D. Menachery, G. H. R. Kegel, and D. J. Pullen, *SP594*, pp. 685-689 (Sept. 1980).

Neutron total cross section of  $^{233}\text{U}$  from 0.01 to 1.0 eV, J. A. Harvey, C. L. Moore, and N. W. Hill, *SP594*, pp. 690-691 (Sept. 1980).

Transmission and self-indication measurements with U-235 and Pu-239 in the 2 eV-20 energy region, T. Bakalov, G. Ilchev, S. Toshkov, T. K. Mai, N. Janeva, A. A. Van'kov, Y. V. Grigoriev, and V. F. Ukrantsev, *SP594*, pp. 692-697 (Sept. 1980).

Total-neutron cross sections of heavy nuclei, W. P. Poenitz, J. F. Whalen, and A. B. Smith, *SP594*, pp. 698-702 (Sept. 1980).

Total cross section of  $^{242}\text{Pu}$  between 0.7 and 170 MeV, M. S. Moore, P. W. Lisowski, G. L. Morgan, G. F. Auchampaugh, and R. E. Shamu, *SP594*, pp. 703-706 (Sept. 1980).

Neutron total cross section measurements on  $^{248}\text{Cf}$ , R. F. Carlton, J. A. Harvey, N. W. Hill, M. S. Pandey, and R. W. Benjamin, *SP594*, pp. 707-710 (Sept. 1980).

Intercomparison of coupled channel and spherical optical models in the analysis of thorium neutron cross sections, S. B. Garg, A. Sinha, and V. K. Shukla, *SP594*, pp. 711-714 (Sept. 1980).

Simultaneous evaluation of the nuclear data for heavy nuclides, H. Matsunobu, Y. Kanda, M. Kawai, T. Murata, and Y. Kikuchi, *SP594*, pp. 715-719 (Sept. 1980).

Neutron cross section standards, O. A. Wasson, *SP594*, pp. 720-727 (Sept. 1980).

Absolute measurement of  $\nu_p$  for  $^{252}\text{Cf}$  by the large liquid

scintillator tank technique, R. R. Spencer, *SP594*, pp. 728-732 (Sept. 1980).

Data discrepancies in and new experiments for D + D, D + T, and T + T fusion reactions, N. Jarmie, R. A. Hardenkopf, R. E. Brown, F. D. Correll, and G. G. Ohlsen, *SP594*, pp. 733-737 (Sept. 1980).

The  $^{252}\text{Cf}$   $\nu$  discrepancy and the sulfur discrepancy, J. R. Smith, *SP594*, pp. 738-742 (Sept. 1980).

Neutron capture cross section standards for BNL-325, N. E. Holden, *SP594*, pp. 743-746 (Sept. 1980).

NBS neutron monitor and dosimeter calibration facility, K. C. Duvall, O. A. Wasson, and M. M. Meier, *SP594*, pp. 747-751 (Sept. 1980).

Capture cross section and gamma-ray spectrum calculations for medium-weight nuclei, M. A. Gardner and D. G. Gardner, *SP594*, pp. 752-756 (Sept. 1980).

A consistent nuclear model for compound and precompound reactions with conservation of angular momentum, C. Y. Fu, *SP594*, pp. 757-761 (Sept. 1980).

Improved formulas for compound nucleus cross sections, J. W. Tepel, H. M. Hofmann, and M. Herman, *SP594*, pp. 762-764 (Sept. 1980).

Neutron emission spectra induced by 14-MeV neutrons from the evaluated nuclear data file (ENDF/B-V)—A critical review, D. M. Hetrick, D. C. Larson, and C. Y. Fu, *SP594*, pp. 765-769 (Sept. 1980).

A new parameterization of the EI gamma-ray strength function, D. G. Gardner and F. S. Dietrich, *SP594*, pp. 770-774 (Sept. 1980).

Gamma-ray production cross sections for MeV neutrons, H. Kitazawa, Y. Harima, H. Yamakoshi, Y. Sano, T. Kobayashi, and M. Kawai, *SP594*, pp. 775-777 (Sept. 1980).

Semiempirical calculation of excitation functions, E. L. Petersen, *SP594*, pp. 778-782 (Sept. 1980).

R-matrix analysis of neutron elastic and inelastic scattering data, H. D. Knox, R. O. Lane, D. A. Resler, and P. E. Koehler, *SP594*, pp. 783-787 (Sept. 1980).

Calculation of prompt fission neutron spectra, D. G. Madland and J. R. Nix, *SP594*, pp. 788-792 (Sept. 1980).

Simple parameterization for optical reaction cross sections, K. H. N. Murthy, A. Chatterjee, and S. K. Gupta, *SP594*, pp. 793-795 (Sept. 1980).

Exact solution of the exciton model master equations for nuclear reactions, S. K. Gupta and A. Chatterjee, *SP594*, pp. 796-799 (Sept. 1980).

Delayed neutron calculations using ENDF/B-V data, T. R. England, R. E. Schenter, and F. Schmittroth, *SP594*, pp. 800-803 (Sept. 1980).

Utilization of the reaction  $^{10}\text{B}(d,n)^{11}\text{C}$  as a high temperature deute

Measurement of the 2.35-MeV window in  $\text{O} + n$ , C. H. Johnson, J. L. Fowler, N. W. Hill, and J. M. Ortolfo, *SP594*, pp. 807-811 (Sept. 1980).

The status of neutron dosimetry and damage analysis for the fusion materials program, L. R. Greenwood, *SP594*, pp. 812-816 (Sept. 1980).

Nuclear data needs for FMIT, R. E. Schenter, F. M. Mann, and D. L. Johnson, *SP594*, pp. 817-820 (Sept. 1980).

The spatial dependence of flux and damage in the FMIT test cell, F. M. Mann, F. Schmittroth, L. L. Carter, and J. O. Schiffgens, *SP594*, pp. 820-823 (Sept. 1980).

Measurements of neutron spectra from 35 MeV deuterons on thick lithium for the FMIT facility, D. L. Johnson, F. M. Mann, J. W. Watson, J. Ullmann, and W. G. Wyckoff, *SP594*, pp. 824-828 (Sept. 1980).

Measured and evaluated bismuth data for fusion-fission-hybrid and electro-nuclear breeding applications, P. T. Guenther, A. B. Smith, D. L. Smith, J. F. Whalen, and R. Howerton, *SP594*, pp. 829-833 (Sept. 1980).

The influence of nuclear data uncertainties on thorium fusion-fission hybrid blanket nucleonic performance, E. T.

Cheng and D. R. Mathews, *SP594*, pp. 834-838 (Sept. 1980).

Sensitivity of the performance of symbiotic energy systems to tritium production data, J. P. Renier and J. G. Martin, *SP594*, pp. 839-843 (Sept. 1980).

Measurement of  $(n,\alpha)$  cross sections on Cr, Fe and Ni in the 5 to 10 MeV neutron energy range, A. Paulsen, H. Liskien, F. Arnotte, and R. Widera, *SP594*, pp. 844-847 (Sept. 1980).

Neutron nuclear cross section data for fusion technology, C. V. S. Rao and J. R. Rao, *SP594*, pp. 848-852 (Sept. 1980).

Production cross sections for  $(n,t)$  reactions in  $^{40}\text{Ca}$ ,  $^{54}\text{Fe}$ ,  $^{86}\text{Sr}$ ,  $^{89}\text{Y}$ ,  $^{102}\text{Pd}$ ,  $^{112}\text{Sn}$ ,  $^{106,114}\text{Cd}$ ,  $^{130}\text{Te}$ ,  $^{139}\text{La}$ ,  $^{204}\text{Pb}$ , and  $^{207}\text{Tl}$  with 14.6 MeV neutrons, T. W. Woo and G. N. Salaita, *SP594*, pp. 853-856 (Sept. 1980).

KeV neutron capture cross sections for the s-process isotopes of Se, Br and Kr and the abundance of krypton in the solar system, B. Leugers, F. Kappeler, F. Fabbri, and G. Reffo, *SP594*, pp. 857-862 (Sept. 1980).

Complete evaluation of  $^{241}\text{Am}$  between thermal energy and 15 MeV-nuclear models used—Consistency with integral data, E. Fort, M. Darrouzet, H. Derrien, P. Hammer, and L. Martin-Deidier, *SP594*, pp. 862-866 (Sept. 1980).

The branching ratio in  $^{242}\text{Am}$  following neutron capture in  $^{241}\text{Am}$ , K. Wisshak, J. Wickenhauser, and F. Kappeler, *SP594*, pp. 867-871 (Sept. 1980).

Evaluation of the  $^{237}\text{Np}$  neutron cross sections in the energy range from  $10^{-5}$  eV to 5 MeV, H. Derrien and E. Fort, *SP594*, pp. 872-876 (Sept. 1980).

Measurement of the total Nd-145 neutron cross section, V. A. Anufriev, A. G. Kolesov, S. I. Babich, and V. A. Safonov, *SP594*, p. 877 (Sept. 1980).

Automated system for nuclear data measurements and optimization, N. G. Volkov, A. N. Gudkov, V. V. Kovalenko, V. M. Kolobashkin, V. A. Kubjak, N. I. Morozova, E. V. Poljushkina, and K. G. Finogenov, *SP594*, pp. 878-880 (Sept. 1980).

Neutron resonances of odd-odd radioactive isotopes, V. P. Vertebnyi, P. N. Vorona, A. I. Kaltchenko, and V. G. Krivenko, *SP594*, pp. 881-885 (Sept. 1980).

Perturbation theory and sensitivity analysis in fission products kinetics, L. N. Usachev, Y. G. Bobkov, and A. S. Krivtsov, *SP594*, pp. 886-889 (Sept. 1980).

Total neutron cross section of  $^{45}\text{Sc}$  at the 2 keV interference minimum, V. F. Razbudey, A. V. Muravitsky, V. P. Vertebnyi, and A. L. Kiriluk, *SP594*, pp. 890-892 (Sept. 1980).

Scattering cross sections of neutrons up to 3.0 MeV by chromium, iron and nickel isotopes, M. V. Pasechnik, I. A. Korzh, and E. N. Mozhzhukhin, *SP594*, pp. 893-897 (Sept. 1980).

Neutron scattering by nickel isotopes in energy range 5-7 MeV, I. A. Korzh, V. A. Mishchenko, E. N. Mozhzhukhin, M. V. Pasechnik, and N. M. Pravdivy, *SP594*, pp. 898-902 (Sept. 1980).

Neutron-spectrometric analysis of the samples, V. M. Ivanov, L. V. Karin, V. I. Nazarenko, N. I. Kroshkin, and V. A. Safonov, *SP594*, pp. 903-906 (Sept. 1980).

Resonance parameters of Nd-147 ( $T_{1/2} = 11\text{ds}$ ) isotope neutron levels, V. A. Anufriev, S. I. Babich, V. N. Nefedov, V. A. Poruchikov, V. S. Artomonov, R. N. Ivanov, and S. M. Kalebin, *SP594*, p. 907 (Sept. 1980).

Neutron parameters of curium 242, 244-248 isotopes in the resonance region, S. I. Babich, N. G. Kocherygin, A. G. Kolesov, V. A. Poruchikov, V. A. Safonov, V. N. Nefedov, V. S. Artomonov, T. S. Belanova, R. N. Ivanov, and S. M. Kalebin, *SP594*, p. 908 (Sept. 1980).

The OKLO phenomenon and the role of nuclear data in its study, E. Roth, R. Hagemann, and N. N. Ruffenach, *SP594*, pp. 909-915 (Sept. 1980).

Three Mile Island, A. R. Buhl, *SP594*, pp. 916-919 (Sept. 1980).

Status and comparison of new, planned, and upgraded pulsed "white" neutron source facilities since 1970, G. F. Aucham-

paugh, *SP594*, pp. 920-928 (Sept. 1980).

Neutron cross section measurements at ORELA, J. W. T. Dabbs, *SP594*, pp. 929-935 (Sept. 1980).

Use of high resolution  $\gamma$ -ray spectroscopy for neutron cross sections, M. L. Stelts, *SP594*, pp. 936-946 (Sept. 1980).

New fission fragment detectors for cross section and angular distribution measurements at CBNM, H. H. Knitter and C. Budtz-Jørgensen, *SP594*, pp. 947-955 (Sept. 1980).

Least squares methodology applied to LWR-PV damage dosimetry, experience and expectations, J. J. Wagschal, B. L. Broadhead, and R. E. Maerker, *SP594*, pp. 956-960 (Sept. 1980).

$^{235}\text{U}(n,f)$  cross section measurements and normalization problems, C. Wagemans, G. Coddens, and A. J. Deruytter, *SP594*, pp. 961-965 (Sept. 1980).

Absolute measurement of the U-235 fission cross section from 0.2-1.2 MeV, M. M. Meier, O. A. Wasson, and K. C. Duvall, *SP594*, pp. 966-970 (Sept. 1980).

$^{237}\text{Np}$  fission cross section measurements in the MeV energy region, A. D. Carlson and B. H. Patrick, *SP594*, pp. 971-975 (Sept. 1980).

Absolute fast fission cross section measurements on  $^{237}\text{Np}$ , D. J. Grady, G. T. Baldwin, and G. F. Knoll, *SP594*, pp. 976-979 (Sept. 1980).

The cross section for the  $^{56}\text{Fe}(n,p)$  reaction for 14.73 MeV neutrons, T. B. Ryves and E. J. Axton, *SP594*, pp. 980-984 (Sept. 1980).

$^{12}\text{C} + n$  polarization measurements and the carbon standard, J. L. Weil, T. W. Burrows, and F. D. McDaniel, *SP594*, pp. 985-987 (Sept. 1980).

Parasitic absorption and leakage corrections for  $\text{MnSO}_4$  baths, H. Goldstein and L. Chen, *SP594*, pp. 988-989 (Sept. 1980).

The application of a time-correlated associated particle method for absolute cross-section measurements of heavy nuclides, R. Arlt, W. Grimm, M. Josch, G. Musiol, H. G. Ortlepp, G. Pausch, R. Teichner, W. Wagner, I. D. Alkhazov, L. V. Drapchinsky, V. N. Dushin, S. S. Kovalenko, O. I. Kostochkin, K. A. Petrzhak, and V. I. Shpakov, *SP594*, pp. 990-994 (Sept. 1980).

Absolute measurements of induced fission cross sections of heavy nuclides for both  $^{252}\text{Cf}$  fission spectrum neutrons and 14.7-MeV neutrons, V. M. Adamov, I. D. Alkhazov, S. E. Gusev, L. V. Drapchinsky, V. N. Dushin, A. V. Fomichev, S. S. Kovalenko, O. I. Kostochkin, L. Z. Malkin, K. A. Petrzhak, L. A. Pleskachevsky, V. I. Shpakov, R. Arlt, and G. Musiol, *SP594*, pp. 995-999 (Sept. 1980).

TN1116. SHIELDOSE: A computer code for space-shielding radiation dose calculations, S. Seltzer, *Nat. Bur. Stand. (U.S.), Tech. Note 1116*, 72 pages (May 1980) SN003-003-02172-5.

TN1119. A thermoluminescence dosimetry system for use in a survey of high-energy bremsstrahlung dosimetry, M. Ehrlich and C. G. Soares, *Nat. Bur. Stand. (U.S.), Tech. Note 1119*, 47 pages (May 1980) SN003-003-02180-6.

NBSIR 80-2086. An assessment of an experiment in accelerating the development of nuclear standards, J. P. Woodward and S. D. Garrity, 153 pages (June 1980). Order from NTIS as PB80-202104.

## Properties of Materials:

### Electronic, Magnetic, and Optical

- Observations on the mechanisms of high resistance junction formation in aluminum wire connections, D. Newbury and S. Greenwald, *J. Res. Nat. Bur. Stand. (U.S.)*, 85, No. 6, 429-440 (Nov.-Dec. 1980).
- SP574. Basic optical properties of materials—Summaries of papers. Presented at the Topical Conference on Basic Optical

Properties of Materials held at the National Bureau of Standards, Gaithersburg, MD, May 5-7, 1980, A. Feldman, Ed., *Nat. Bur. Stand. (U.S.), Spec. Publ. 574*, 252 pages (May 1980) SN003-003-02173-3.

Properties of low-index laser materials, M. J. Weber, *SP574*, pp. 3-8 (May 1980).

Nonlinear optical susceptibilities of semiconductors and optical bistability, H. M. Gibbs, S. L. McCall, T. N. C. Venkatesan, A. Passner, A. C. Gossard, and W. Wiegmann, *SP574*, pp. 9-12 (May 1980).

Band structure calculations of the two-photon absorption coefficients of InP and CdTe, A. Vaidyanathan, A. H. Guenther, and S. S. Mitra, *SP574*, pp. 13-15 (May 1980).

Measurement and interpretation of ultraviolet properties of solids, D. W. Lynch, *SP574*, pp. 16-19 (May 1980).

The optical properties of Kapton: Measurement and applications, L. R. Painter, E. T. Arakawa, M. W. Williams, and J. C. Ashley, *SP574*, pp. 20-23 (May 1980).

Optical properties of  $\text{TiC}_x$  ( $0.64 < x < 0.90$ ) from 0.1 to 30eV, D. W. Lynch, C. G. Olson, D. J. Peterman, and J. H. Weaver, *SP574*, pp. 24-27 (May 1980).

Superconvergence relations and the analysis of optical data, D. Y. Smith, *SP574*, pp. 28-31 (May 1980).

Measurement of the far infrared optical constants of disordered solids, U. Strom and P. C. Taylor, *SP574*, pp. 32-35 (May 1980).

Infrared impurity absorption spectra of premium-Q quartz, H. G. Lipson, *SP574*, pp. 36-39 (May 1980).

Far infrared study of the reflection spectra of SnS, D. G. Mead and H. R. Chandrasekhar, *SP574*, pp. 40-43 (May 1980).

Infrared absorption in highly transparent cubic zirconia, B. Bendow, H. G. Lipson, R. C. Marshall, and D. Billard, *SP574*, pp. 44-47 (May 1980).

The temperature dependence of the optical absorption of metals, M. Bass, D. Gallant, and S. D. Allen, *SP574*, pp. 48-50 (May 1980).

The statistical description of optical inhomogeneities, E. L. Church, *SP574*, pp. 51-54 (May 1980).

Photoconductivity at 77K in undoped tellurium, N. G. Shyamprasad, C. H. Champness, and I. Shih, *SP574*, pp. 55-58 (May 1980).

Extrinsic states in cinnabar ( $\alpha\text{-HgS}$ ) grown by chemical vapor transport, C. T. Simpson, W. Imano, and W. M. Becker, *SP574*, pp. 59-62 (May 1980).

Differential reflectometry—An optical technique for investigating band structure changes associated with alloying, dealloying, corrosion and ordering, R. J. Nastasi-Andrews, J. B. Andrews, C. W. Shanley, J. Finnegan, and R. E. Hummel, *SP574*, pp. 63-66 (May 1980).

Free carrier absorption in semiconductors in quantizing magnetic fields, H. N. Spector, *SP574*, pp. 67-70 (May 1980).

Multiphoton absorption in direct gap solids, S. S. Mitra, *SP574*, pp. 71-76 (May 1980).

Measurements of two photon absorption, A. F. Stewart and M. Bass, *SP574*, pp. 77-80 (May 1980).

Three-photon absorption in Nd:YAG, R. W. Boyd and M. A. Kramer, *SP574*, pp. 81-84 (May 1980).

Refractive index and thermo-optic coefficients of  $\text{CD}^*\text{A}$ , L. G. DeShazer and K. E. Wilson, *SP574*, pp. 85-86 (May 1980).

On the use of a calorimeter to investigate loss mechanisms in optical fibers, F. T. Stone, *SP574*, pp. 87-90 (May 1980).

Computerized refractive index measurement for fiber optic glasses, D. L. Wood and J. W. Fleming, *SP574*, p. 91 (May 1980).

Stress optic coefficient of optical fibers, N. Lagakos, *SP574*, pp. 92-95 (May 1980).

Chromatic measurements of gradient index materials by multiple wavelength interferometry, D. P. Ryan, *SP574*, pp. 96-99 (May 1980).

Optical coupling coefficients for pulsed  $\text{CO}_2$  laser radiation on bare and painted aluminum surfaces, S. C. Seitel, J. O.

Porteus, and W. N. Faith, *SP574*, pp. 100-103 (May 1980).

Thermomodulation spectra of high-energy interband transitions in Cu, Pd, Ag, Pt, and Au, C. G. Olson, D. W. Lynch, and R. Rosei, *SP574*, pp. 104-107 (May 1980).

Ellipsometric observations on thermally grown oxide films on titanium, A. H. Musa and W. E. J. Neal, *SP574*, pp. 108-113 (May 1980).

Optical properties of A-15 thin films and single crystals, R. C. McKee, D. W. Lynch, C. G. Olson, J. W. Osmun, and J. H. Weaver, *SP574*, pp. 114-117 (May 1980).

IR absorption bands in multilayer thin films of some II/VI, V/VI materials, J. S. Seeley, P. R. Greason, G. T. Johnson, *SP574*, pp. 118-121 (May 1980).

Multiwavelength laser rate calorimetry on various infrared window materials, G. S. Coble, D. V. Dempsey, J. A. Detrio, N. C. Fernelius, J. A. Fox, P. R. Greason, G. T. Johnson, and D. B. O'Quinn, *SP574*, pp. 122-125 (May 1980).

Optical constants of boron carbide in the infrared, J. L. Lauer and H. Adari, *SP574*, pp. 126-130 (May 1980).

Critical point analysis of multiphoton infrared absorption in zinc selenide, C. A. Klein and R. N. Donadio, *SP574*, pp. 131-134 (May 1980).

Multiphoton absorption in infrared glasses based on zirconium and hafnium fluorides, H. G. Lipson, B. Bendow, and M. G. Drexhage, *SP574*, pp. 135-138 (May 1980).

Optical characterization of bulk graded index materials, D. T. Moore, *SP574*, pp. 139-142 (May 1980).

Measurement of axial, Gaussian index distribution, G. W. Johnson, *SP574*, pp. 143-146 (May 1980).

Graded-index AR surfaces for improved laser-damage resistance, W. H. Lowdermilk and D. Milam, *SP574*, pp. 147-148 (May 1980).

Reflectance properties of pressed tetrafluoroethylene powder, J. J. Hsia and V. R. Weidner, *SP574*, pp. 149-151 (May 1980).

Measurements of large optical absorption coefficients by diffuse reflectance, R. K. Waring, *SP574*, pp. 152-155 (May 1980).

Ellipsometric measurements of the optical properties of compacted powders, F. C. Zumsteg, *SP574*, pp. 156-159 (May 1980).

Material properties by spectroscopic ellipsometry, D. E. Aspnes, *SP574*, pp. 160-163 (May 1980).

Dielectric function of superlattice materials, P. J. Price, *SP574*, pp. 164-166 (May 1980).

Determination of thin film optical dispersion from spectrophotometer data, A. L. Bloom and D. Fischer, *SP574*, pp. 167-170 (May 1980).

Optical properties of doped-silica waveguide glasses in the 0.8-1.8  $\mu\text{m}$  region, R. Olshansky, *SP574*, pp. 171-177 (May 1980).

The use of a scattering cube to characterize the spectral loss of optical fibers, D. L. Philen and F. T. Stone, *SP574*, pp. 178-181 (May 1980).

Transition element absorption in molecularly-doped optical fiber glasses, A. Barkatt, D. C. Tran, and J. H. Simmons, *SP574*, pp. 182-184 (May 1980).

Measured pockels coefficients and predicted static pressure sensitivity for interferometric fiber optic hydrophones, R. Hughes, N. Lagakos, H. Dardy, and J. Bucaro, *SP574*, pp. 185-187 (May 1980).

Absorption and scattering phenomena in thin-film- and bulk-materials, M. S. Sparks, *SP574*, pp. 188-193 (May 1980).

The measurement of interface and bulk absorption in thin films and bare substrates, P. A. Temple, *SP574*, pp. 194-200 (May 1980).

Infrared optical properties of silicon monoxide films: Application to radiative cooling, A. Hjortsberg and C. G. Granqvist, *SP574*, pp. 201-203 (May 1980).

The photoelastic effect in optical materials, A. Feldman and R. M. Waxler, *SP574*, pp. 204-208 (May 1980).

The relation of elastooptic and electrostrictive tensors, D. F.

- Nelson, *SP574*, pp. 209-212 (May 1980).
- Photoelastic properties of magnesium fluoride, S. Chung and H. R. Carleton, *SP574*, pp. 213-216 (May 1980).
- A microscopic approach to predict refractive indices and electro- or strain-optic coefficients, M. D. Ewbank, P. R. Newman, and W. A. Harrison, *SP574*, pp. 217-220 (May 1980).
- Dispersion of thermo-optic coefficients of Nd laser materials, K. E. Wilson and L. G. DeShazer, *SP574*, pp. 221-222 (May 1980).
- Temperature dependence of the optical properties of some metals at visible and infrared wavelengths, D. L. Decker and V. A. Hodgkin, *SP574*, pp. 223-224 (May 1980).
- Optical properties of Ti diffused LiNbO<sub>3</sub> waveguides, W. K. Burns, *SP574*, p. 225 (May 1980).
- Optical properties of thin films by guided waves and surface polaritons, J. D. Swalen, *SP574*, pp. 226-229 (May 1980).
- Properties of low loss diffused optical waveguides in glass, T. Findakly and E. Garmire, *SP574*, pp. 230-233 (May 1980).
- Thickness measurement of very thin-films by observing anomalous light absorption, H. Kitajima, K. Hieda, and Y. Suematsu, *SP574*, pp. 234-237 (May 1980).
- Interferometric wavelength measurement of infrared surface waves, Z. Schlesinger and A. J. Sievers, *SP574*, pp. 238-239 (May 1980).

## Properties of Materials:

### Structural and Mechanical

- New bond-delocalized dianions: The crystal structure of 1,3-bis(dicyanomethylene) croconate salt ( $\text{C}_{11}\text{N}_4\text{O}_3\text{K}_2 \cdot 2\text{H}_2\text{O}$ ), V. L. Himes, A. D. Mighell, C. R. Hubbard, and A. J. Fatiadi, *J. Res. Nat. Bur. Stand. (U.S.)*, 85, No. 2, 87-97 (Mar.-Apr. 1980).
- High temperature elastic constants and the evaluation of effective pair potentials, R. D. Mountain and D. C. Knauss, *J. Res. Nat. Bur. Stand. (U.S.)*, 85, No. 2, 109-112 (Mar.-Apr. 1980).
- Dixanthylurea ( $\text{N,N}'$ -di-9H-Xanthen-9-ylurea), C. R. Hubbard, A. D. Mighell, and A. J. Fatiadi, *J. Res. Nat. Bur. Stand. (U.S.)*, 85, No. 3, 205-210 (May-June 1980).
- Investigation of epitaxy relationships between  $\text{Ca}_5(\text{PO}_4)_3\text{OH}$  and other calcium ortho-phosphates, B. Dickens and L. W. Schroeder, *J. Res. Nat. Bur. Stand. (U.S.)*, 85, No. 5, 347-362 (Sept.-Oct. 1980).
- Monogr. 25, Section 17. Standard x-ray diffraction powder patterns. Section 17—Data for 54 substances, M. C. Morris, H. F. McMurdie, E. H. Evans, B. S. Paretzkin, C. R. Hubbard, and S. J. Carmel, *Nat. Bur. Stand. (U.S.)*, Monogr. 25, Sec. 17, 114 pages (Oct. 1980) SN003-003-02253-5.
- SP564. Systematic relationships among binary phase diagrams of the transition elements, R. M. Waterstrat, *Nat. Bur. Stand. (U.S.)*, Spec. Publ. 564 (May 1980) SN003-003-02193-8.
- SP567. Accuracy in powder diffraction. Proceedings of a Symposium on Accuracy in Powder Diffraction held at the National Bureau of Standards, Gaithersburg, MD, June 11-15, 1979, S. Block and C. R. Hubbard, Eds., *Nat. Bur. Stand. (U.S.)*, Spec. Publ. 567, 553 pages (Feb. 1980) SN003-003-02153-9.
- Components of the total x-ray scattering, P. Suortti, *SP567*, pp. 1-20 (Feb. 1980).
- Neutron diffraction—The total powder pattern, T. M. Sabine, *SP567*, pp. 21-32 (Feb. 1980).
- Synchrotron radiation and energy-dispersive diffraction, B. Buras, *SP567*, pp. 33-54 (Feb. 1980).
- Accuracy in x-ray wavelengths, R. Deslattes, A. Henning, and E. G. Kessler, Jr., *SP567*, pp. 55-71 (Feb. 1980).
- Neglected considerations for intensity measurement, L. D. Jennings, *SP567*, pp. 73-83 (Feb. 1980).
- Position-sensitive detectors for powder diffractometry, R. W. Hendricks, M. K. Kopp, and A. H. Narten, *SP567*, p. 85 (Feb. 1980).
- Determination of the spectral intensity of the incident beam in energy dispersive x-ray diffraction, R. Uno and J. Ishigaki, *SP567*, pp. 87-88 (Feb. 1980).
- Time-of-flight neutron powder diffraction at pressures to 35 kilobars, J. D. Jorgensen, *SP567*, pp. 89-90 (Feb. 1980).
- Powder—A computing system for x-ray powder diffraction calculations, B. C. Osgood and R. L. Snyder, *SP567*, p. 91 (Feb. 1980).
- Threshold level determinations from digital x-ray powder diffraction patterns, C. Mallory and R. L. Snyder, *SP567*, p. 93 (Feb. 1980).
- Accuracy of the profile fitting method for x-ray polycrystalline diffractometry, W. Parrish and T. C. Huang, *SP567*, pp. 95-110 (Feb. 1980).
- Profile refinement of neutron powder diffraction patterns, A. W. Hewat, *SP567*, pp. 111-141 (Feb. 1980).
- Structural analysis from x-ray powder diffraction patterns with the Rietveld method, R. A. Young, *SP567*, pp. 143-163 (Feb. 1980).
- A new pattern fitting structure refinement program for x-ray powder data, C. Baerlocher and A. Hepp, *SP567*, p. 165 (Feb. 1980).

1980).

The determination of structural parameters and their standard deviations from powder diffraction patterns, M. J. Cooper, M. Sakata, and K. D. Rouse, *SP567*, pp. 167-187 (Feb. 1980).

Structural refinement of neutron and x-ray data by the Rietveld method: Application to  $\text{Al}_2\text{O}_3$  and  $\text{BiVO}_4$ , D. E. Cox, A. R. Moodenbaugh, A. W. Sleight and H. Y. Chen, *SP567*, pp. 189-201 (Feb. 1980).

Temperature dependence of the atomic thermal displacements in  $\text{UO}_2$ : A test case for the Rietveld profile refinement method, A. Albinati, M. J. Cooper, K. D. Rouse, M. W. Thomas, and B. T. M. Willis, *SP567*, pp. 203-210 (Feb. 1980).

Studies of thermal motion using constrained profile analysis, E. Prince, C. S. Choi, and S. F. Trevino, *SP567*, pp. 211-212 (Feb. 1980).

Accuracy of crystallite size and strain values from x-ray diffraction line profiles using Fourier series, R. Delhez, T. H. de Keijser, and E. J. Mittemeijer, *SP567*, pp. 213-253 (Feb. 1980).

Accuracy of crystallite size and strain determined from the integral breadth of powder diffraction lines, J. I. Langford, *SP567*, pp. 255-269 (Feb. 1980).

Determination of compositional variations by x-ray diffraction line profile analysis, E. J. Mittemeijer and R. Delhez, *SP567*, pp. 271-314 (Feb. 1980).

Structures from powder data: Data sampling, refinement and accuracy, W. J. Mortier, *SP567*, pp. 315-324 (Feb. 1980).

Accuracy in methods of lattice-parameter measurement, A. J. C. Wilson, *SP567*, pp. 325-351 (Feb. 1980).

Some statistical aspects of lattice parameter evaluation, J. Mandel, *SP567*, pp. 353-360 (Feb. 1980).

Data accuracy for powder indexing, R. Shirley, *SP567*, pp. 361-382 (Feb. 1980).

Successive dichotomy method for indexing powder patterns, D. Louer, *SP567*, p. 383 (Feb. 1980).

The determination of the precise lattice parameter of a diffuse minor phase in a dilute binary uranium alloy, D. A. Carpenter and C. M. Davenport, *SP567*, p. 385 (Feb. 1980).

Precision Guinier x-ray powder diffraction data, J. W. Edmonds, *SP567*, pp. 387-389 (Feb. 1980).

A simple graphical method for obtaining reasonably accurate cell dimensions from x-ray powder photographs of hexagonal and tetragonal minerals, E. E. Fejer, *SP567*, p. 391 (Feb. 1980).

The reliability of powder indexing procedures, A. D. Mighell and J. K. Stalick, *SP567*, pp. 393-403 (Feb. 1980).

X-ray powder diffraction identification of crystal phases with superimposed lines by their selective crystallization, I. Mayer, I. Gedalia, and B. Laufer, *SP567*, p. 405 (Feb. 1980).

Comparison between Debye-Scherrer, transmission and reflection measuring modes, E. Woelfel, *SP567*, p. 407 (Feb. 1980).

Statistical analysis of the measurement of grain and particle size with x-rays, J. Hilliard, *SP567*, p. 409 (Feb. 1980).

Analysis and topography of lattice defects in powder diffraction patterns, S. Weissmann, *SP567*, pp. 411-431 (Feb. 1980).

Determination of prefracture damage in fatigued and stress-corroded materials by x-ray double crystal diffractometry, R. N. Pangborn, R. Yazici, T. Tsakalokos, S. Weissman, and I. R. Kramer, *SP567*, pp. 433-450 (Feb. 1980).

High resolution powder diffraction at Argonnes zing-p' prototype pulsed neutron source, J. D. Jorgensen, F. J. Rotella, and M. H. Mueller, *SP567*, pp. 451-452 (Feb. 1980).

Stress analysis from powder diffraction patterns, J. B. Cohen, H. Dolle, and M. R. James, *SP567*, pp. 453-477 (Feb. 1980).

X-ray residual stress evaluation by an energy dispersive system, M. Kuriyama, W. J. Boettinger, and H. E. Burdette, *SP567*, pp. 479-487 (Feb. 1980).

Standard reference materials for quantitative analysis and d-spacing measurement, C. R. Hubbard, *SP567*, pp. 489-502

(Feb. 1980).

Structural analysis from Guinier film data, P. E. Werner, *SP567*, pp. 503-509 (Feb. 1980).

Optimal degree of automation in quantitative x-ray diffraction phase analysis, A. Griger, *SP567*, pp. 511 (Feb. 1980).

Standards for the publication of powder patterns: The American crystallographic association subcommittee's final report, L. D. Calvert, J. L. Flippin-Anderson, C. R. Hubbard, Q. C. Johnson, P. G. Lenhart, M. C. Nickols, W. Parrish, D. K. Smith, G. S. Smith, R. L. Snyder, and R. A. Young, *SP567*, pp. 513-535 (Feb. 1980).

Suggestions for a quantitative evaluation of powder patterns, G. Donnay, *SP567*, pp. 537-541 (Feb. 1980).

X-ray powder diffraction, L. D. Calvert, *SP567*, pp. 543-546 (Feb. 1980).

Future of powder neutron diffraction, M. H. Mueller, *SP567*, pp. 547-549 (Feb. 1980).

JCPDS—International center for diffraction data: Present and future activities, G. McCarthy and D. K. Smith, *SP567*, pp. 551-555 (Feb. 1980).

Design of a high-accuracy goniometer for x-ray powder diffraction at controlled temperature, J. F. Berar, G. Calvarin, J. Chevreul, M. Gramond, and D. Weigel, *SP567*, pp. 557-558 (Feb. 1980).

The effect of twinning on particle size broadening in some oxides derived by dehydration reaction, F. Watari, *SP567*, pp. 559-564 (Feb. 1980).

TN1112. User evaluation of crystal data products and services: Questionnaire analysis and impact, J. K. Stalick, A. D. Mighell, and R. J. Boreni, *Nat. Bur. Stand. (U.S.), Tech. Note 1112*, 42 pages (June 1980) SN003-003-02201-2.

## 8.2 KEY WORD INDEX

### A

- AAR M128 steel; Charpy V-notch; head plates; impact properties; nil-ductility transition temperatures; railroad tank cars; switchyard impact tests; tensile properties; *NBSIR 80-2039*.
- Abbe value; coolant; index-matching liquids; nonlinear refractive index; self-focusing; *SP568*, pp. 91-98 (July 1980).
- Ab initio computation; exchange forces; ion-induced dipole interactions; ion-quadrupole interactions; lithium molecule-ion; long-range interactions; *19084*.
- Abrasive particles; electron microscopy; erosive wear; impact; steel; wear; wear debris; *19874*.
- Abrasive wear; copper; dry sliding wear; lubricated sliding wear; wear; wear debris; *19960*.
- Abrasive wear; copper; erosive wear; scanning electron microscopy; transmission electron microscopy; wear; *19958*.
- Absolute ampere; current balance; magnetic force; radial magnetic field; superconducting coils; *J. Res.* **85**, No. 4, 257-272 (July-Aug. 1980).
- Absolute and physical quantities; analytical chemistry; chemistry research; environmental measurements; materials science; measurement services; molecular science; National Measurement Laboratory; nondestructive evaluation; nuclear measurement technology; physics research; *SP572*.
- Absolute cross section measurement; atom; cross section; excited states; photoionization; sodium; *19510*.
- Absolute cross section measurement; data discrepancies; *SP594*, pp. 733-737 (Sept. 1980).
- Absolute fission cross section; neutron detector; neutron flux monitor; neutron standards; uranium-235 fission cross section; *SP594*, pp. 966-970 (Sept. 1980).
- Absolute fission cross sections; manganese bath; photoneutron sources; *SP594*, pp. 976-979 (Sept. 1980).
- Absolute fluorescent efficiency; characteristic wave impedance; Huygens principle; index of refraction; optical loss constants; *TN1020*.
- Absolute- $g$ ; geodynamic; geophysical instrumentation; geophysics; gravity; *19141*.
- Absolute gravimeter; geophysics; gravity; tectonic processes; *19750*.
- Absolute measurement; activation; electric dipole; electroexcitation; giant resonance;  $^{12}\text{C}$ ; *19763*.
- Absolute measurement; consistency; fission cross section; JENDL-2; nuclear data; optical potential parameter; relative measurement; simultaneous evaluation; *SP594*, pp. 715-719 (Sept. 1980).
- Absolute measurements; fission cross section; time correlated associated particle method; *SP594*, pp. 995-999 (Sept. 1980).
- Absolute measurements; fission cross sections; time correlated associated particle method; *SP594*, pp. 990-994 (Sept. 1980).
- Absolute radiometry; cavity absorptance; cavity reflectance; electrically calibrated radiometer; pyroheliometry; solar constant; *19909*.
- Absolute ratios; atomic weight; isotopic abundance; reference standard; thallium; thallium chromate; *J. Res.* **85**, No. 1, 1-10 (Jan.-Feb. 1980).
- Absolute spectral response; detector intercomparison; optical radiation measurements; photodetector; photometry; radiometry; *19908*.
- Absolute spectral response; laser power measurement; photodetector; radiant power measurement; radiometry; silicon photodiode; spectroradiometry; *19354*.
- Absolute volt; balance equations of motion; D'Alembert's principle; metrology; precision balance; precision electrical measurement; *NBSIR 80-2143*.
- Absorbance accuracy; instrumental standards; method accuracy; multielement analyses; NBS standard reference materials; spectrophotometry; systematic errors; transmittance accuracy; *19818*.
- Absorbed dose; biology and medicine; kerma factors; neutron dosimetry; *19599*.
- Absorbed dose; calorimeter; primary standard; water; *19290*.
- Absorbed dose; ceric sulfate dosimeter; cobalt-60 source; commissioning dosimetry; dosimetry; ferrous sulfate dosimeter; gamma radiation; process control; quality control; radiation sterilization; radiochromic dye dosimeter; red Perspex dosimeter; *19343*.
- Absorber materials; absorptive coatings; accelerated aging; cover plates; durability; environmental exposure; materials; polymeric materials; solar collectors; *19364*.
- Absorptance; blackbody; ellipsoidal reflectometer; emittance; hemispherical mirror reflectometer; integrating spheres; paraboloidal mirror reflectometer; radiometric measurements; reflectance; transmittance; *19299*.
- Absorption; calculated performance;  $\text{CO}_2$  laser; holographic interferometry; measured performance; optical path difference; temperature profile; thermal distortion; thermal lensing;  $\text{ZnSe}$ ; *SP568*, pp. 73-89 (July 1980).
- Absorption; calibration; carbonyl sulfide; infrared; laser calibration; molecular spectra; spectra; spectroscopy; *19368*.
- Absorption; calorimetry; coatings; encapsulation; hydrogen; thin films; water; water absorption; *SP568*, pp. 237-246 (July 1980).
- Absorption; calorimetry; damage; electric field; high energy laser; laser damage; reflectors; thin film; *SP568*, pp. 377-390 (July 1980).
- Absorption; coatings; internal reflectance spectroscopy; silicon monoxide; thorium fluoride; zinc selenide; zinc sulfide; *SP568*, pp. 247-256 (July 1980).
- Absorption; collisional redistribution; emission; line shape; radiative damping; *19710*.
- Absorption; electric-field strength; film materials; impurities; overcoat; polished surfaces; pulsedwidth dependence; thin-film coatings; 1 ns; 1.06  $\mu\text{m}$  damage; *SP568*, pp. 391-403 (July 1980).
- Absorption; Ge; laser damage; optoacoustic spectroscopy; photoacoustic spectroscopy; thin films; *SP568*, pp. 313-332 (July 1980).
- Absorption coefficient; birefringence; crystal optics; dielectric constant; elasto-optic; electro-optic; photoelastic; piezo-optic; refractive index; relative dielectric impermeability; *19257*.
- Absorption coefficient; chalcogenide material; deposition parameters; index of refraction; *SP568*, pp. 343-355 (July 1980).
- Absorption correction; diffractometers; flat-cone; macromolecules; neutrons; single-crystal; Weissenberg methods; x rays; *19509*.
- Absorption cross-section; chlorine chemistry; formaldehyde; ozone; stratosphere; *19535*.
- Absorption cross section; core excitation; electron correlation; heat pipe; lithium vapor; partial photoionization cross section; synchrotron radiation; *19276*.
- Absorption cross section; manganese bath; pile oscillator; small-angle scattering; sulfur; *SP594*, pp. 738-742 (Sept. 1980).
- Absorption edge; damage temperature; damage threshold; microsecond pulses; temperature depending absorption; unstable resonator; *SP568*, pp. 269-279 (July 1980).
- Absorption measurement; combustion measurements; convolution algorithm; diffusion jet; laser diagnostics; reconstruction algorithm; tomography; *19822*.
- Absorption spectra; calcite; flux growth; laser damage; neodymium:glass; polarizer; pyrophosphate; xenotime; yttrium orthophosphate; yttrium phosphate; *SP568*, pp. 137-140 (July 1980).
- Absorption spectroscopy; alkali halides; color centers; darkening of crystals; dosimetry; electron dosimetry; F-centers; gamma-ray dosimetry; lithium fluoride; M-centers; megard dosimetry; N-centers; radiation darkening; radiation processing; R-centers; *19352*.
- Absorption spectroscopy; blue cellophane; cellulose triacetate; dosimetry; dye dosimetry; dyed plastics; film dosimeters; gamma-ray dosimetry; humidity effects; megard dosimetry; nylon polycarbonate; polyethylene terephthalate; polymethyl

methacrylate; polyvinyl chloride; 19326.

Absorptive coatings; accelerated aging; cover plates; durability; environmental exposure; materials; polymeric materials; solar collectors; absorber materials; 19364.

Abstract data types; artificial intelligence; data abstraction; database management systems; data structures; programming languages; software engineering; SP500-59.

Abstracting and indexing services; abstracts; indexes; National Bureau of Standards; NBSIR 80-2009.

Abstracts; Center for Building Technology; key words; publications; SP457-4.

Abstracts; indexes; National Bureau of Standards; abstracting and indexing services; NBSIR 80-2009.

Abstracts; key words; NBS publications; publications; SP305. Supplement 11.

Abundances; evolution; planetary nebulae; red giants; 19845.

AC Stark shifts; AC Stark widths; cesium; hydrogen; intermediate resonances; laser pulses; monochromatic; multiphoton ionization; Rabi oscillation; sodium; 19159.

AC Stark widths; cesium; hydrogen; intermediate resonances; laser pulses; monochromatic; multiphoton ionization; Rabi oscillation; sodium; AC Stark shifts; 19159.

Accelerants; arson; building fires; electrical fires; explosions; fire investigations; fire investigators; hydrocarbons; photography; H134.

Accelerated aging; collector insulation; insulation; solar collector; standard insulation test methods; NBSIR 79-1908.

Accelerated aging; complex reactions; decomposition; degradation; durability; heating rates; initial rates; kinetics; lifetime prediction; polystyrene; polyurethane; pyrolysis; stability; thermal analysis; thermogravimetry; 19752.

Accelerated aging; cover plates; durability; environmental exposure; materials; polymeric materials; solar collectors; absorber materials; absorptive coatings; 19364.

Accelerated aging tests; building components; building materials; durability; life testing; prediction; recommended practice; reliability service life; TN1120.

Accelerated decay; performance criteria; preservative testing; stone decay; stone preservatives; 19348.

Acceleration; buffeting; buildings; buildings (codes); deflection; dynamic response and gust loads; structural engineering; tall buildings; wind forces; wind pressures; 19121.

Accelerator; borehole sonde; capture  $\gamma$ -ray analysis; source-to-detector distance; SP594, pp. 604-614 (Sept. 1980).

Accelerator; radionuclide production; SP594, pp. 458-463 (Sept. 1980).

Accelerators; ambient polymerization; ascorbic acid; dental monomers; initiator systems; organic peroxides; redox reactions; stability; transition metals; 19062.

Accelerators; coincidence measurements; electrons; linac; nuclear reactions; superconducting; 19248.

Accelerograph; codes; design criteria; disaster; earthquakes; ground motion; seismology; standards; storm surge; structural engineering; structural response; tsunamis; wind loads; winds; SP560.

Accelerometers; gravimeters; gravitation; gyroscope; levitation; navigation; 19397.

Acceptable work practices; excavation; geotechnical engineering; safety; shoring; soil classification; trench; workshop; NBSIR 79-1935.

Accident data; fall arresting systems; industrial and construction industries; occupational safety; safety belts; scaffolding; 19233.

Accidents; accident statistics; construction regulations; construction safety; employee casualties; environmental hazards; human factors; occupational safety; scaffold failures; scaffolds; NBSIR 79-1955.

Accidents; anthropometry; biomechanics; disability; disability organizations; home safety; household activities; household design; mobility aids; room use; NBSIR 80-2014.

Accidents; fault trees; loss prevention; risk; safety; 19320.

Accident statistics; construction regulations; construction safety; employee casualties; environmental hazards; human factors; occupational safety; scaffold failures; scaffolds; accidents; NBSIR 79-1955.

Accordion-type longitudinal oscillation; basic node; higher nodes; polyosietylene; Raman; 19655.

Accordion type oscillation; coupled rod oscillation; crystalline polymers; elastic modulus; helical chains; inelastic neutron scattering; laser-Raman scattering; polyethylene; polyethylenoxide; polyhexafluoropropylene; polyoxymethylene; polypropylene; polytetrafluoroethylene; 19937.

Accountability; accuracy; gamma spectrometry; mass spectrometry; nondestructive assay; nuclear safeguards; precision; reference materials; special nuclear materials; x-ray fluorescence; SP582.

Accountability; computer-based system; dynamic concentration measurements; inventory control; nondestructive measurements; on-line real-time measurements; plutonium concentration and isotopics determinations; reprocessing plant process control; SP582, pp. 584-601 (June 1980).

Accountability in fabrication of reactor fuel; active neutron interrogation; material control; neutron activation analysis; nondestructive assay (NDA); safeguards; SP582, pp. 276-307 (June 1980).

Accountability tanks; automated system; diverter correction; turbine meters; volume calibration; SP582, pp. 517-533 (June 1980).

Accountability tanks; differential pressure; in-tank density determination; nuclear process solutions; solution density; 19170.

Accountability tanks; differential pressure; in-tank density determination; nuclear process solutions; solution density; J. Res. 85, No. 3, 219-221 (May-June 1980).

Accountability tanks; differential pressure; in-tank density determination; nuclear process solutions; solution density; SP582, pp. 534-537 (June 1980).

Accountability tanks; differential pressure gage; nuclear materials processing; nuclear safeguards; volume calibration; volumetric test measures; 19053.

Accreditation; American Society of Crime Laboratory Directors (ASCLD); certification; management; on-site visit; personnel qualifications; physical evidence; proficiency testing; standards; SP591, pp. 164-168 (Aug. 1980).

Accreditation; accreditation committee; American Industrial Hygiene Association; coordinator; industrial hygiene laboratories; laboratory; PAT; performance; personnel; proficient; quality control; reaccreditation; site visit; SP591, pp. 67-70 (Aug. 1980).

Accreditation; audit certification; laboratory accreditation; laboratory performance evaluation; quality control; testing laboratories; SP591.

Accreditation; Canada; laboratories; standards; Standards Council of Canada; testing; SP591, pp. 88-91 (Aug. 1980).

Accreditation; College of American Pathologists; criteria; inspection; inspector's manual; pathology; proficiency testing; standards; SP591, pp. 71-74 (Aug. 1980).

Accreditation; certification; colleges; confidence; criteria; evaluation; hospitals; inspectors; marketing; qualification; re-examination; technicians; SP591, pp. 3-5 (Aug. 1980).

Accreditation; certification criteria; evaluation; toxicology laboratories; SP591, pp. 75-76 (Aug. 1980).

Accreditation; compliance testing; laboratory criteria; product certification; proficiency testing; quality control; standardization; testing laboratory; NBSIR 79-1956.

Accreditation; concrete testing laboratories; field concrete licensing; prequalifying agency; testing agency; SP591, pp. 156-163 (Aug. 1980).

Accreditation; costs; economic; prices; testing; SP591, pp. 92-96 (Aug. 1980).

Accreditation committee; American Industrial Hygiene Association; coordinator; industrial hygiene laboratories; laboratory; PAT; performance; personnel; proficient; quality control; reaccreditation; site visit; accreditation; SP591, pp. 67-70

- (Aug. 1980).
- Accreditation of testing laboratories; certification; certification industry; economics; government policy; product certification; standardization research needs; standards; *NBSIR 80-2001*.
- Accreditation systems; certification; evaluation of inspection organizations; evaluation of testing organizations; inspection standards; laboratory accreditation; laboratory evaluation; regulatory liability; test standards; *SP591*, pp. 11-14 (Aug. 1980).
- Accretion; black holes; general relativity; hydrodynamics; magnetic field reconnection; *19717*.
- Accumulation of smoke; dry chemical extinguishers; fire incident; ventilation procedures; *NBS-GCR-80-243*.
- Accuracy; analytical methods; microanalysis; semiconductor materials; sensitivity; trace element analysis; *19314*.
- Accuracy; between-laboratory precision; components of variance; duplicity; ideal conditions; measurement process; omnifariousness; precision; round robin; routine conditions; variance model; within-laboratory precision; *SP591*, pp. 31-40 (Aug. 1980).
- Accuracy; bias; measurement; precision; *19284*.
- Accuracy; bulk measurements; material control and accounting; nondestructive assay; nuclear material measurements; precision; research and development; safeguards; *19705*.
- Accuracy; chromaticity; coefficient of luminous intensity; inter-comparisons; retroreflectance; retroreflector; specifications; test methods; *TN1125*.
- Accuracy; clinical analysis; clinical chemistry; definitive method; electrolytes; flame atomic absorption spectroscopy; interlaboratory testing; precision; reference method; semiautomated pipetting; serum lithium analysis; statistical analysis; *SP260-69*.
- Accuracy; control chart; control limits; corrective action; data validation; precision; proficiency analytical testing; quality control; statistical quality control; *SP591*, pp. 104-108 (Aug. 1980).
- Accuracy; gamma-ray spectroscopy; mass spectroscopy; precision; uranium enrichment measurement; *SP582*, pp. 103-110 (June 1980).
- Accuracy; gamma spectrometry; mass spectrometry; nondestructive assay; nuclear safeguards; precision; reference materials; special nuclear materials; x-ray fluorescence; accountability; *SP582*.
- Accuracy and precision; gold films; gravimetry; neutron activation analysis; Rutherford backscattering; standards; *19944*.

- Alloy phase formation; alloy stability; atomic size; electronegativity; heats of formation; structural stability; *19566*.
- Alloy phase formation; charge transfer; Coulomb energy; d-electrons; Mossbauer isomer shifts; transition metals; *19567*.
- Alloys; alloy stability; amorphous alloys; electron density of states; palladium-silicon alloys; photoelectron; ultraviolet photoelectron spectroscopy; UPS; *19263*.
- Alloys; blend; input concentration; isotope dilution; neodymium; plutonium; safeguards; spike; total mass; uranium; *SP582*, pp. 93-102 (June 1980).
- Alloys; candidate materials; coal slag; materials performance; *19313*.
- Alloys; differential thermal analysis; gas analysis; steel; *SP580*, pp. 33-53 (Aug. 1980).
- Alloys; electrodeposition; electro preparation; foils; iron platinum; *19395*.
- Alloys; magnets; materials; nonmetallics; review; stainless steel; superconductors; *19190*.
- Alloy stability; amorphous alloys; electron density of states; palladium-silicon alloys; photoelectron; ultraviolet photoelectron spectroscopy; UPS; alloys; *19263*.
- Alloy stability; atomic size; electronegativity; heats of formation; structural stability; alloy phase formation; *19566*.
- Alloy theory; crystal chemistry; intermediate phases; phase diagrams; phase equilibria; solid solutions; *SP564*.
- Alloy 800; coal conversion; failure analysis; Incoloy 800; *19736*.
- Allylic resonance energy; allyl radicals; biradical; cyclohexane; decomposition; decyclization; isomerization; olefins; shock tube; 1-hexene; *19784*.

Allyl radicals; biradical; cyclohexane; decomposition; decyclization; isomerization; olefins; shock tube; 1-hexene; allylic resonance energy; 19784.

Al, Ni, Cu and Nb(n,xy) reactions; differential cross sections; discrete lines; unfolding analysis; unresolved gamma-rays; SP594, pp. 408-412 (Sept. 1980).

Al(PO<sub>3</sub>)<sub>3</sub>-AlF<sub>3</sub>-MF-RF<sub>i</sub> system; fluoride glass; fluorophosphate glass; laser glass; low-dispersion glass; optical glass; 19276.

Alpha counting; alpha particle; liquid scintillation; solvent extraction; spectrometer; SP582, pp. 111-120 (June 1980).

Alpha counting; normalization uncertainties; shape evaluation; SP594, pp. 483-487 (Sept. 1980).

Alpha particle; liquid scintillation; solvent extraction; spectrometer; alpha counting; SP582, pp. 111-120 (June 1980).

Alpha-particle activity; alpha-particle sources; calibration; radioactivity; standardization; 19297.

Alpha-particle sources; calibration; radioactivity; standardization; alpha-particle activity; 19297.

Alpha-quartz particulate; chrysotile asbestos particulate; differential thermal analysis; environmental particulates; thermal analytical methods; 19890.

Alphas; energies up to 50 MeV; inputs for further calculations; optical reaction cross sections for neutrons; over the periodic table; protons; SP594, pp. 793-795 (Sept. 1980).

Alpha spectrometry; intercomparison programs; mass spectrometry; plutonium; safeguards; statistical evaluation; uranium; SP582, pp. 42-54 (June 1980).

Alpha-value; multiplicity spectrum; multisectional detector; SP594, pp. 488-490 (Sept. 1980).

Alternate fuels; data communications; energy; erosion; instrument landing; measurements; radio frequency; surface science; tetrafluoroethylene powder; water conservation; DIM/NBS 64, No. 5, 1-28 (1980).

Alternate fuels; gas chromatography; high performance liquid chromatography; N-heterocyclic compounds; phenols; polynuclear aromatic hydrocarbons; priority pollutants; 19097.

Alternate immersion test; aluminum alloys; ductility; elongation; heat treatment; NaCl; plate gage; reduction in area; slow strain rate technique; strain rate; stress corrosion cracking; 2124-T851; 7075; 7075-T6; 7075-T7351; air; 19622.

Alternating bit protocol; communication protocol; file transfer protocol; protocol specification; readability analysis; service specification transport protocol; verification; NBS-GCR-80-281.

Altimeter setting indicator; aviation instrumentation; aviation safety; barometry; pressure; 19889.

Altimetry; altimetry accuracy; aviation safety; pressure measurement; pressure transducers; 19888.

Altimetry accuracy; aviation safety; pressure measurement; pressure transducers; altimetry; 19888.

Alumina; basal slip; cavitation; deformation texture; electron microscopy; grain boundary sliding; plastic deformation; 19582.

Aluminium oxide; chemisorption; infrared spectroscopy; isomerization; methylisocyanide; rhodium; 19831.

Aluminum; anharmonic effects; effective potentials for metals; elastic constants; fluctuations; high temperature properties; Monte Carlo simulations; J. Res. 85, No. 2, 109-112 (Mar.-Apr. 1980).

Aluminum; buildings (codes); concrete (prestressed); concrete (reinforced); design (buildings); limit states; loads (forces); masonry; probability theory; reliability; safety; specifications; standards; statistical analysis; steel; structural engineering; timber; SP577.

Aluminum; coatings; electrodeposition; epitaxy; tin aluminum; zinc; 19730.

Aluminum; configuration interaction; energy levels; sodium; wavelengths; 19562.

Aluminum; copper; impedance measurements; noise measurements; pitting; potentiostat; 19572.

Aluminum; corrosion; electrochemical noise; instrumentation; iron; nickel; potentiostat; 19878.

Aluminum; electrodeposition; epitaxy; plating coatings; zinc; 19657.

Aluminum alloys; ductility; elongation; heat treatment; NaCl; plate gage; reduction in area; slow strain rate technique; strain rate; stress corrosion cracking; 2124-T851; 7075; 7075-T6; 7075-T7351; air; alternate immersion test; 19622.

Aluminum-doped silicon; boron-doped silicon; gallium-doped silicon; p-type silicon; resistivity; silicon; spreading resistance; thyristor; 19422.

Aluminumoxide; brittle fracture; dislocations; electron microscopy; erosion; germanium; hardness measurements; plastic deformation; silicon; silicon carbide; 19731.

Aluminum wiring; duplex connectors; high resistance junctions; junction resistance; scanning electron microscopy; x-ray microanalysis; J. Res. 85, No. 6, 429-440 (Nov.-Dec. 1980).

Amalgam, dental; cements, dental; dental materials; gypsums, dental; impression materials, dental; polymers, dental; refractories, dental; specifications, dental; waxes, dental; alloy, base, dental; alloy, gold, dental; 19052.

Ambient polymerization; ascorbic acid; dental monomers; initiator systems; organic peroxides; redox reactions; stability; transition metals; accelerators; 19062.

Ambiguity; Boolean; database; hierarchical; information; query; query language; semantics; TDMS; tree; tree structures; 19433.

American Industrial Hygiene Association; coordinator; industrial hygiene laboratories; laboratory; PAT; performance; personnel; proficient; quality control; reaccreditation; site visit; accreditation; accreditation committee; SP591, pp. 67-70 (Aug. 1980).

American Society of Crime Laboratory Directors (ASCLD); certification; management; on-site visit; personnel qualifications; physical evidence; proficiency testing; standards; accreditation; SP591, pp. 164-168 (Aug. 1980).

Americium; nondestructive assay; nuclear safeguards; plutonium; waste assay; SP582, pp. 617-621 (June 1980).

Amine accelerators; composite restorative resins; dimethylaminogluthethimide; dimethylaminophenylacetic acid and esters; properties of composites; tertiary aromatic amines; 19072.

Amino acid; centrifugal distortion; glycine; microwave spectrum; rotational constants; structure; 19365.

Ammonium nitrate; crystal structure; hydrogen bonding; neutron diffraction; phase transitions; x-ray diffraction; 19897.

Amorphous alloys; coupled growth; eutectic solidification; metallic glasses; palladium-copper-silicon alloys; rapid solidification; 19891.

Amorphous alloys; electron density of states; palladium-silicon alloys; photoelectron; ultraviolet photoelectron spectroscopy; UPS; alloys; alloy stability; 19263.

Amorphous alloys; magnetism; metallic glasses; neutron scattering; rare earths; structural properties; 19113.

Amplifier; Josephson junction; magnetic gradiometer; magnetometer; quantum interference; superconductivity; aerospace; 19203.

Amplitude; comparator; Josephson junction; risetime; sampler; transition duration; 19056.

ANS FORTRAN; FORTRAN 77; standard programming language; transferability; H131.

ANSI X3.66; bit-oriented; code independence; data; data link control procedures; data transparency; interoperability; teleprocessing; transmission; advanced data communication control procedures; FIPS PUB 71.

Analog recording; C-scan; instrumentation; sound field; ultrasonics; 19061.

Analog-to-digital conversion; computer systems; data processing concurrent with data acquisition; pulse-height analysis, on line; 19131.

Analog-to-digital converter testing; automatic; digital-to-analog converter testing; gain; high resolution; linearity; noise; offset;

static test set; 19075.

Analyses; destructive; nondestructive assay; NRC Safeguards; special nuclear material; *SP582*, pp. 189-191 (June 1980).

Analyses; fluorometry; laser-induced fluorescence; low-level analysis; nuclear safeguards; trace levels; uranium determination; waste solution analysis; *SP582*, pp. 147-155 (June 1980).

Analysis; biophysics; chloride; fluorides; microelectrodes; microvolume; 19280.

Analysis; chemical ionization; hydrocarbons; ion-molecule reactions; mass spectrometry; photoionization; 19930.

Analysis; computer; evaluation; Federal Information Processing Standards Publication; measurement; performance; remote batch; selection; service; *FIPS PUB 72*.

Analysis; electrodes; fluorides; microvolumes; rapid; adapter; 19279.

Analytical chemistry; automation; instrumentation; microcomputer; minicomputer; 19411.

Analytical chemistry; chemistry research; environmental measurements; materials science; measurement services; molecular science; National Measurement Laboratory; nondestructive evaluation; nuclear measurement technology; physics research; radiation research; recycled materials; *SP572*.

Analytical data; mass spectra; organic substances; verified spectra; *NSRDS-NBS63, Supplement 1 and 1980 Index*.

Analytical electron microscope; energy dispersive x-ray spectrometry; scanning electron microscope; silicon (Li) detector; spectral artifacts; x-ray spectrometry; 19631.

Analytical electron microscopy; electron scattering; energy dispersive x-ray spectrometry; microanalysis; Monte Carlo electron trajectory simulation; spatial resolution; 19660.

Analytical flame; discharge tube; laser; opto-galvanic effect; transition frequency; *U.S. Patent 4,184,127*.

Analytical methods; atomic absorption spectrometry; foods; nutrient elements; quality control; standard reference materials; 19419.

Analytical methods; microanalysis; semiconductor materials; sensitivity; trace element analysis; accuracy; 19314.

Analytical standards; electron probe microanalysis; fiber; glass; microsphere; Monte Carlo; particulate; quantitative analysis; 19732.

Andrews; condensation; critical point; diffusion; gaseous; history of science; Kamerlingh Onnes; liquidons; liquids; mixtures; van der Waals; vapors; 19932.

Angiotensin I; high resolution liquid chromatography; non-peptide impurities; peptide hormones; 19496.

Angle block; autocollimator; calibration; flatness; intercomparison; random error; squareness; standard deviation; systematic error; uncertainty; *NBSIR 80-1967*.

Angle resolved photoemission; angular distributions; carbon monoxide; CO; photoelectron spectra; photoionization; shape resonance; synchrotron radiation; 19559.

Angular distribution; atomic; hyperfine structure; multiphoton; photoionization quantum beats; sodium; 19388.

Angular distribution; computer programs; corrections; energy distribution; finite geometry; Monte Carlo method; multiple scattering; neutron; scattering; *SP594*, pp. 504-508 (Sept. 1980).

Angular distribution; cyclohexane; cyclooctane; cyclopropane; desorption; electron stimulated desorption; ethane; adsorption; 19922.

Angular distribution; fusion materials irradiation test (FMIT) facility; Li(d,xn); nuclear reactions; thick target yields and spectra; time-of-flight technique; total yield; *SP594*, pp. 824-828 (Sept. 1980).

Angular distribution of ions; chemisorption; electron stimulated desorption; ESDIAD; ion energy distributions; ion yield; oxygen; photon stimulated desorption; synchrotron radiation; tungsten; 19533.

Angular distributions; Cr, Fe, Ni(n,α) cross sections; 5-10 MeV; *SP594*, pp. 844-847 (Sept. 1980).

Angular distributions; carbon monoxide; CO; photoelectron spectra; photoionization; shape resonance; synchrotron radiation; angle resolved photoemission; 19559.

Angular profiles of superlattice beam; Ising model; LEED; order-disorder phase transition; overlayer; spin-spin correlation functions; adatom-adatom interaction; 19309.

Anharmonic effects; effective potentials for metals; elastic constants; fluctuations; high temperature properties; Monte Carlo simulations; aluminum; *J. Res.* **85**, No. 2, 109-112 (Mar.-Apr. 1980).

Anharmonicity; anomalous specific heat; atomic migration; high temperature; lattice dynamics; Monte Carlo calculations; perfect crystal; perturbation theory; rubidium; vacancies; 19123.

Anionic polystyrenes; column spreading; GPC; liquid size exclusion chromatography; narrow fractions; polydispersity; recycle GPC; recycle liquid size chromatography; 19426.

Anisotropic polarizability; CO<sub>2</sub>; induced absorption spectra; molecular calculations; N<sub>2</sub>; O<sub>2</sub>; spectral moments; three-body contributions; virial coefficients; 19296.

Anisotropic polarizability; collision-induced; induced dipoles; infrared absorption; Raman spectrum; spectra; transient dipoles; 19414.

Anisotropy; BaF<sub>2</sub>; CaF<sub>2</sub>; effective charge; oscillator strength; photoelastic; piezo-birefringence; piezo-optic; SrF<sub>2</sub>; strain; stress; transverse optic-phonon; 19579.

Annealing; crystallization; elastic modulus; fibrils; fibrous structure; microfibrils; superdrawing; Taut tie molecules; 19903.

Annealing; diffusion; drawing; low density polyethylene; sorption; 19850.

Annealing; drawing; fibril; fibrous structure; high elastic modulus material; microfibril; microfibrillar; tie molecules; 19688.

Annealing; drawn; NMR; noncrystalline; orientation; polyethylene; <sup>13</sup>C; 19686.

Annual report; standards activities; standards information; standards participation; *SP573*.

Annual reports; diffusion in metals; fire; journals; library holdings; NBS library; NBS periodicals; periodicals; proceedings; serials; standards; transactions; *NBSIR 79-1932*.

Anomalous behavior; frequency shifts; hydrostatic pressure; Knight shift; scaling theory; solids; Van Vleck susceptibility; 19925.

Anomalous specific heat; atomic migration; high temperature; lattice dynamics; Monte Carlo calculations; perfect crystal; perturbation theory; rubidium; vacancies; anharmonicity; 19123.

Anthropometry; biomechanics; disability; disability organizations; home safety; household activities; household design; mobility aids; room use; accidents; *NBSIR 80-2014*.

Anthropometry; emergency egress; escape behavior; HUD; mobile home; safety; standard; window; *NBSIR 80-2049*.

Antifouling coating; communication; gamma-ray measurement; human serum; industrial development; industrial furnace; measurement; polarized electrons; secondary standards; signs; symbols; *DIM/NBS 64*, No. 2, 1-36 (1980).

Antiphase boundaries; grain boundaries; lattice gas; phase transitions; surface melting; adsorbed layers; 19468.

Antiphase domains; copper alloys; diffusion; domain growth; gold alloys; ordered alloys; 19851.

Antireflective coating; deposition technique; environmental stability; masking layer; potassium chloride window; scattering; thallium iodide; *SP568*, pp. 355-357 (July 1980).

Anti-Stokes Raman scattering; atomic physics; laser scattering; laser spectroscopy; Mossbauer effect; optical pumping; radiation pressure; radiative cooling; Raman scattering; spectroscopy; 19055.

Antisocial behavior; arson; cognition; firesetters; human behavior; social environments; social learning theory; *NBS-GCR-80-194*.

Antitrust; certification; competition; economics of standards; law; standards; *NBSIR 79-1921*.

Antitrust; certification; France; French standards system; government policy; product; standards systems; AFNOR; *NBSIR*

- 79-1959.
- APT; automation; computer aided manufacturing; NC machining; NC programming; numerical control; part programming; *NBSIR 80-2073*.
- APT; automation; computer aided manufacturing; NC machining; NC programming; numerical control; part programming; software specifications; *NBSIR 80-2073.3*.
- APT; automation; computer aided manufacturing; NC machining; NC programming; numerical control; part programming; *NBSIR 80-2073.2*.
- Apartments; building fires; doors; egress; evacuation; fire departments; fire fighters; fire investigations; mattresses; smoke; *NBS-GCR-79-187*.
- Apatite; carbonate apatite; hydrolysis; impurities; octacalcium phosphate; sodium; tooth enamel; 19647.
- Apatitic fluoride; sodium fluoride; stannous fluoride; topical fluoridation; acid pretreatment; acidulated phosphate fluoride; 19645.
- Apollo-15 and -16; gamma-ray spectrometers; lunar chemical analysis; x-ray proportional-counter; 19129.
- Apparatus spectrum; data library; fission products; full energy peak; gamma-ray spectrum; multiplets; optimization; peak/Compton ratio; simulation; *SP594*, pp. 878-880 (Sept. 1980).
- Appeals process; architect; certification; checklists; code official; consultant; engineer; equivalent life safety; municipal attorney; product endorsement; professional liability; variances; *SP586*, pp. 45-57 (June 1980).
- Appearance energy; coincident ion mass spectrometry; deuterated water; deuterium oxide; photoelectron spectroscopy; threshold photoelectron spectroscopy; water; 19345.
- Appearance potential; electron impact; electron spectroscopy; gaseous ion photoionization; ionization potential; spectroscopy; *NSRDS-NBS66, Part I*.
- Appliances; conservation; costs; energy; EPCA; residential; usage; *NBSIR 80-1994*.
- Application prototyping; Congressional Budget Office; interactive systems; user requirements; *SP500-65*, pp. 311-315 (Oct. 1980).
- Applications; kinetics; thermal analysis; *SP580*, pp. 1-31 (Aug. 1980).
- Applications; lattice parameters; peak shape; powder diffraction; profile fitting; x-ray neutron; *SP567*.
- Applications; piezoelectric; polymers; pyroelectric transducer; 19887.
- Applications; remote terminal emulators (RTEs); technology; *SP500-65*, pp. 303-310 (Oct. 1980).

- Aromatic polyamide fiber; autoclave stability; biomaterial; composites; degradation resistance; fiberglass/epoxy; fiber reinforced composites; graphite/polysulfone; orthopedic materials; PECF; polymer matrix; polypropylene; polysulfone; 19689.
- Arrhenius parameters; chemical kinetics; combustion; decomposition; free radicals; gas phase; hydrocarbons; hydrogen; nitro-

gen; oxygen; rate of reaction; sulfur; *NSRDS-67*.

Arrhenius parameters; chemical kinetics; combustion; decomposition; free radicals; gas phase; hydrocarbons; hydrogen; nitrogen oxygen; rate of reaction; sulfur; *NBSIR 80-2118*.

Arson; behavior disorder; fire; firesetters; motives; psychiatry; psychopathic personality; psychopathology; *19857*.

Arson; building fires; electrical fires; explosions; fire investigations; fire investigators; hydrocarbons; photography; accelerants; *H134*.

Arson; cognition; firesetters; human behavior; social environments; social learning theory; antisocial behavior; *NBS-GCR-80-194*.

Artificial intelligence; data abstraction; database management systems; data structures; programming languages; software engineering; abstract data types; *SP500-59*.

Artificial satellites; distance measurements; geodesy; geodynamics; lasers; station positions; *19742*.

ASHRAE Standard 62-73; building ventilation; carbon dioxide and ventilation; energy-efficient building; *19218*.

ASHRAE Standard 93; collector rating; environmental influence; outdoor testing; solar collectors; solar simulators; thermal testing; *19366*.

ASHRAE standard 94-77; Glauber's salt; latent heat storage; pebble-bed; phase-change unit; solar energy storage; thermal storage device; *19175*.

ASME Boiler Code; data; fabrication; failure analysis; fatigue; fracture; materials science; nondestructive evaluation; piping; pressure vessels; product liability; pumps and valves; standards; statistical modeling; welding; *SP588*.

Ascorbic acid; dental monomers; initiator systems; organic peroxides; redox reactions; stability; transition metals; accelerators; ambient polymerization; *19062*.

Assay; contaminated waste; delayed neutrons; Monte Carlo; spent fuel; *SP582*, pp. 472-496 (June 1980).

Assay accuracy; calculations; criticality control; material accountability; measurements; neutron interrogation; nondestructive assay; nuclear fuel subassembly; nuclear safeguards; process control; spent nuclear fuel; *SP582*, pp. 447-456 (June 1980).

Assay of uranium; automated controlled-potential analyzer; automated spectrophotometer; complexometric titration of uranium and thorium; dissolution of nuclear fuel-cycle materials; half lives plutonium isotopes; plutonium and thorium; *SP582*, pp. 129-139 (June 1980).

Assessment; documentation; econometric models; energy modeling forum; energy models; evaluation; mathematical models; model access; model management; sensitivity analysis; validation; *SP569*.

Assessment; documentation; energy; forecasting; mathematical models; sensitivity analysis; *NBSIR 80-2128*.

Assistance; developing economies; foreign relations; industrializing nations; international relations; measures; weights; weights and measures; *AID; NBSIR 80-2022*.

Assistance; developing economies; foreign relations; industrializing nations; international relations; LDC's; measurement services; standardization; *AID; NBSIR 80-2021*.

Associative detachment; flowing afterglow; infrared chemiluminescence; ion molecule reactions; vibrational excitation; *19362*.

Associative detachment; flowing afterglow; infrared chemiluminescence; ion molecule reactions; vibrational excitation; *19378*.

Astronomy; astrophysics; crustal movements; geophysics; interferometry; stellar diameters; *19144*.

Astronomy; hyperfine structure; interstellar molecules; microwave spectra; rotational transitions; spectroscopy; *19370*.

Astrophysics; crustal movements; geophysics; interferometry; stellar diameters; astronomy; *19144*.

Astrophysics; dimethyl ether; interstellar microwave spectra; Orion Nebula; *19446*.

Asymmetries; quasistatic wings; resonance lines; self-broadening of alkali lines; *19228*.

Asymptotic bound analysis; benchmark tests; capacity planning; configuration analysis; queueing network modeling; *SP500-65*, pp. 165-171 (Oct. 1980).

Asymptotic expansions; confluent hypergeometric functions; error bounds; parabolic cylinder functions; turning points; Whittaker functions; *19773*.

Atmosphere-assisted slow crack growth; chemically assisted fracture; fracture; fracture models; reaction rate theory; slow crack growth; surface chemistry; *19588*.

Atmospheric; flash photolysis; kinetics; ozone  $O_2(^1\Delta)$ ; vibrational deactivation; *19618*.

Atmospheric aerosol; atmospheric sulfate environmental pollution; microsampling; molecular microanalysis; particle microanalysis; Raman microprobe; Raman spectra; Raman spectroscopy; South Pole atmosphere; airborne particles; *19883*.

Atmospheric chemistry; bare electrodes; multichannel detectors; nondestructive evaluation; optical; temperature; trace elements; water; Alaskan pipeline; *DIM/NBS 64*, No. 9, 1-28 (1980).

Atmospheric chemistry; chemical kinetics; data evaluation; gas phase; photoabsorption cross section; photochemistry; quantum yield; rate constant; air pollution; *19513*.

Atmospheric chemistry; chemical kinetics; data evaluation; gas phase; photoabsorption cross section; photochemistry; quantum yield; rate coefficient; air pollution; *JPCRD 9*, No. 2, 295-472 (1980).

Atmospheric chemistry; chemical kinetics; data evaluation; nitrogen oxides; photoabsorption cross section; photochemistry; quantum yield; rate coefficient; *NBSIR 80-2032*.

Atmospheric chemistry; methyl chloroform; OH radicals; rate constant; resonance fluorescence; stratospheric ozone; *19092*.

Atmospheric electricity; charge density; direct-current transmission; electric field strength; high-voltage transmission lines; air ions currents; *19238*.

Atmospheric modeling; oxygen atoms; ozone; rate constants; resonance fluorescence; *19526*.

Atmospheric particulate measurements; Doppler shift spectrometry; fine particles; micro Raman spectrometry; Raman scattering theory; standard reference materials; urban particulate standards; aerosols; *19581*.

Atmospheric pollutants; figure of merit; low-level counting; natural radiocarbon; small gas proportional and liquid scintillation counters; *19677*.

Atmospheric pollution; carbonaceous particles; fossil carbon; insoluble carbonaceous material; low level counting; pyrolysis/gas chromatography/mass spectrometry; radiocarbon; *19593*.

Atmospheric reactions; combustion; methyl radicals; modeling; oxidation; oxygen; rate constant; *19149*.

Atmospheric sulfate environmental pollution; microsampling; molecular microanalysis; particle microanalysis; Raman microprobe; Raman spectra; Raman spectroscopy; South Pole atmosphere; airborne particles; atmospheric aerosol; *19883*.

Atom; cross section; excited states; photoionization; sodium; absolute cross section measurement; *19510*.

Atomic; discrete; forbidden; intensity; lifetime; line strength; oscillator strength; transition probability; allowed; *SP505-1*.

Atomic; hyperfine structure; multiphoton; photoionization quantum beats; sodium; angular distribution; *19388*.

Atomic absorption; atomic detection limits; flame spectrometry; laser enhanced ionization; laser spectrometry; tunable laser; *19916*.

Atomic absorption spectrometry; foods; nutrient elements; quality control; standard reference materials; analytical methods; *19419*.

Atomic clocks; atomic frequency standards; frequency metrology; frequency standards; high resolution spectroscopy; time metrology; time standards; *19430*.

Atomic clocks; atomic spectroscopy; Doppler effects; frequency standards; ion storage; laser cooling; laser spectroscopy; radiation pressure; *19799*.

- Avalanche ionization; film thickness dependence; impurity damage; laser damage; multiphoton induced damage; pulse duration dependence of damage; thin films; wavelength dependence of damage; *SP568*, pp. 405-416 (July 1980).
- Avalanche ionization; laser-induced damage; multiphoton ionization; *SP568*, pp. 457-465 (July 1980).

Average capture cross sections; resonance parameters; *SP594*, pp. 328-332 (Sept. 1980).  
 Average resonance capture; gamma-ray spectra; neutron capture; neutron strength functions; photon strength functions; *SP594*, pp. 936-946 (Sept. 1980).  
 Aviation instrumentation; aviation safety; barometry; pressure; altimeter setting indicator; *19889*.  
 Aviation safety; barometry; pressure; altimeter setting indicator; aviation instrumentation; *19889*.  
 Aviation safety; pressure measurement; pressure transducers; altimetry; altimetry accuracy; *19888*.  
 Avogadro's constant; gamma-ray spectroscopy; stabilized lasers; wavelength standards; x-ray interferometry; atomic weights; *19488*.  
 Awards; computers; didymium glass filters; energy efficiency; inventors; innovation; labels; standards; sulfuric acid; tools; *DIM/NBS 64*, No. 7, 1-28 (1980).  
 Axial profiles; fission chamber; instrumentation; ion chamber; irradiated (spent) fuel; nondestructive assay; *SP582*, pp. 426-446 (June 1980).  
 Aztec paper; Egyptian papyrus; paper technology; thermal analysis; *SP580*, pp. 201-217 (Aug. 1980).  
 A-150 plastic; calorimeter; density; thermal properties; tissue equivalent plastic; *19208*.

## B

Backend facilities; containment and surveillance; detection probability; evaluation of safeguards effectiveness; waste management; *SP582*, pp. 740-749 (June 1980).  
 Background scattering; collimation; high resolution; image intensifier; image signals; microradiography; monochromatic radiography; real-time radiography; x-ray image magnifier; *19863*.  
 Backing; connection; environment; gage element; leads; load; protective coating; resistance; sensitivity change; stability; strain gages; structure; transducers; zero shift; adhesive; *19049*.  
 Backplane bus; component level bus; local area networks; microcomputer bus; microcomputer interfacing; microcomputer standards; *NBS-GCR-80-288*.  
 Back pressurization hermetic test; helium mass spectrometer leak test; hermeticity; hybrid microcircuits; leak testing; semiconductor device packages; *19821*.  
 Backscatter; electrons; range; reflection; scaling parameter; transport mean free path; albedo; *19391*.  
 Backscattered electrons; continuum x-ray loss; electron probe; Monte Carlo method for electron trajectories; particle analysis; quantitative analysis; x-ray continuum; *19867*.  
 Backscattering; fiber attenuation; fiber loss; fiber scattering; optical time domain reflectometry; Rayleigh scattering; *TN1018*.  
 BaF<sub>2</sub>; CaF<sub>2</sub>; effective charge; oscillator strength; photoelastic; piezo-birefringence; piezo-optic; SrF<sub>2</sub>; strain; stress; transverse optic-phonon; anisotropy; *19579*.  
 Bailey criterion; damage accumulation; failure; fatigue; mechanical properties; PMMA; polyethylene; poly(methyl methacrylate); time-dependent behavior; additivity of damage; *19690*.  
 Balance equations of motion; D'Alembert's principle; metrology; precision balance; precision electrical measurement; absolute volt; *NBSIR 80-2143*.  
 Balmer; diagnostics; hydrogen; line-broadening; plasma; Stark; *19281*.  
 Bandwidth; fiber optic joints; fiber optics; fiber optics-single mode; index profile; measurements; attenuation; *SP597*.  
 Bandwidth; laser diodes; material dispersion; mode scramblers; optical detectors; optical fibers; transfer function; *TN1019*.  
 Bandwidth; laser diodes; material dispersion; optical fibers; *19458*.  
 Bare electrodes; multichannel detectors; nondestructive evaluation; optical; temperature; trace elements; water; Alaskan pipeline; atmospheric chemistry; *DIM/NBS 64*, No. 9, 1-28 (1980).

Barometer calibration; barometric pressure; displacement volume; gravimetric method; mass artifacts; weighing; air density; air density equation; *J. Res. 85*, No. 5, 341-346 (Sept.-Oct. 1980).  
 Barometric pressure; displacement volume; gravimetric method; mass artifacts; weighing; air density; air density equation; barometer calibration; *J. Res. 85*, No. 5, 341-346 (Sept.-Oct. 1980).  
 Barometry; pressure; altimeter setting indicator; aviation instrumentation; aviation safety; *19889*.  
 Barrier/incentives; hydrogen energy systems; impacts of hydrogen fuel; policy options; societal aspects; workshop; *19699*.  
 Baryon resonances; delta-nucleus interaction; nuclear structure; pion absorption; pion nucleus interaction; pion scattering; *19221*.  
 Basal slip; cavitation; deformation texture; electron microscopy; grain boundary sliding; plastic deformation; alumina; *19582*.  
 Base metal; casting; composite; cyanoacrylate; dental alloy; initiator; rator; resin; wear; alloy; *NBSIR 79-1943*.  
 Base units; convention of the meter; economic benefits; epistemology; measurement system; metric system; SI; *19639*.  
 BASIC; data processing; Federal Information Processing Standard; interactive programming; programming language; software; standards; time-sharing; *FIPS PUB 68*.  
 BASIC; language processor testing; minimal basic; programming language standards; software standards; software testing; *SP500-70/2*.  
 BASIC; language processor testing; minimal basic; programming language standards; software standards; software testing; *SP500-70/1*.  
 Basic node; higher nodes; polyisethylene; Raman; accordion-type longitudinal oscillation; *19655*.  
 Basic research; challenge to the analytical chemist; chemical measurement process; energy; environment; health; modelling; scientific uncertainty; societal decisions; socioscientific problems; theory; time constants; *19666*.  
 Basic weights and measures law; method of sale of commodities; open dating; packaging and labeling; registration of servicemen; unit pricing; weighmaster law; *H130, 1979 Edition*.  
 Basic weights & measures law; method of sale of commodities; open dating; packaging & labeling; registration of servicemen; unit pricing; weighmaster law; *H130, 1980 Edition*.  
 Battery; microcalorimeter; pacemaker; power cell; self-discharge; *J. Res. 85*, No. 3, 193-203 (May-June 1980).  
 BBGKY equation; bifurcation; direct correlation function equation; freezing; periodic crystalline solutions; *19838*.  
 Be<sup>+</sup>; crossed beams; cross sections; electron impact; excitation; polarization; *19512*.  
 Beam deformation; computer simulation; damage morphology; dielectric function; *SP568*, pp. 529-530 (July 1980).  
 Beam diameter; insertion loss; optical detectors; photon drag detector; pyroelectric detector; responsivity; single longitudinal mode pulse; TEA laser; *TN1023*.  
 Beam-foil method; cascading; core-excited states; yrast states; atomic transition probabilities; *19347*.  
 Beam instabilities; beam lifetime; bunch shape oscillations; electron storage ring; particle accelerator; synchrotron light source; *19437*.  
 Beam lead devices; electronic devices; hermeticity; hybrids; nondestructive tests; semiconductor; tape bonded devices; acoustic emission; *19108*.  
 Beam lifetime; bunch shape oscillations; electron storage ring; particle accelerator; synchrotron light source; beam instabilities; *19437*.  
 Beam transport; high current ion beams; inertially-confined fusion; numerical simulation; space charge; *19626*.  
 Bedding; fire departments; fire investigations; hospitals; nursing staff; patients; smoke; smoldering; *NBS-GCR-80-239*.  
 Beds (furniture); evacuation; fire departments; fire extinguishers; fire investigations; hospitals; patients; *NBS-GCR-80-241*.

- Body composition; clinical application; elemental analysis; *in vivo* measurement; neutron activation; *SP594*, pp. 456-457 (Sept. 1980).
- Boilers; central heating equipment; economic analysis; furnaces; incremental savings; life-cycle costs; minimum efficiency levels; minimum efficiency standards; *NBSIR 80-2079*.
- Boltzmann equation; collision integral; dilute gas; kinetic perturbation theory; kinetic theory; nonequilibrium perturbation theory; perturbation theory; soft spheres; transport coefficients; 19866.
- Bomb calorimetry; gross calorific values; refuse-derived-fuels; sample characterization; sample processing effects; 25 gram capacity bomb calorimeter; *NBSIR 80-1968*.
- Bond-delocalized; croconic; dianion; malononitrile; nonbenzenoid; oxocarbon; salt; synthesis; acid; aromatic; *J. Res.* 85, No. 2, 73-86 (Mar.-Apr. 1980).
- Bond-delocalized; croconic; dianion; malononitrile; nonbenzenoid; pseudooxocarbons; salt; synthesis; acid; aromatic; 19560.
- Bond delocalized dianion; oxocarbon; single-crystal; structure refinement; x-ray diffraction; *J. Res.* 85, No. 2, 87-97 (Mar.-Apr. 1980).
- Bonded storage; Bruce reactors; gamma-ray spectroscopy; nuclear safeguards; spent fuel; verification; *SP582*, pp. 457-471 (June 1980).
- Bond energies; neutrons; nondestructive evaluations; nuclear fuel; oyster tissue; SRMs; weights and measures; acoustic emission; additive migration; *DIM/NBS 64*, No. 4, 1-28 (1980).
- Bonding; calcium phosphates; crystal structure; dental; hydroxyapatites; tooth mineral; adhesion; 19262.
- Bond polarizabilities; calculated frequencies; Fermi resonance; longitudinal acoustic modes; *n*-alkanes; Raman intensities; structural defects; transverse acoustic modes; 19692.
- Boolean; database; hierarchical; information; query; query language; semantics; TDMS; tree; tree structures; ambiguity; 19433.
- Bootleg R&D; government laboratories; industrial management; R&D; R&D in World War II; 19506.
- Borax; boric acid; cellulose; critical radiant flux; fire; fire retardants; fire tests; loose fill insulation; smoldering ignition; thermal analysis; thermal insulation; activation energy; *NBSIR 80-2085*.
- Borehole sonde; capture  $\gamma$ -ray analysis; source-to-detector distance; accelerator; *SP594*, pp. 604-614 (Sept. 1980).
- Boric acid; cellulose; critical radiant flux; fire; fire retardants; fire tests; loose fill insulation; smoldering ignition; thermal analysis; thermal insulation; activation energy; borax; *NBSIR 80-2085*.
- Boron-aluminum; composite; elastic constants; sound velocity; 19212.
- Boron-doped silicon; gallium-doped silicon; p-type silicon; resistivity; silicon; spreading resistance; thyristor; aluminum-doped silicon; 19422.
- Bose gas; fugacity expansion; Pade approximants; phase transitions; virial coefficients; virial series; 19907.
- Botanical samples; energy-dispersive x-ray spectrometry; NBS-SRM 1571 Orchard Leaves; automated borate fusion; 19083.
- Boundary layers; dynamic response; influence of wind-direction;

- tall buildings; wind loads; wind tunnels; aerodynamics; 19872.
- Bovine liver; certified reference materials; chromium; foods; interlaboratory study; standard reference materials; yeast; biological matrix; 19420.
- Box-Jenkins; forecasting; multiple regression; sensitivity analysis; simultaneous equations; *SP500-65*, pp. 215-229 (Oct. 1980).
- Braced excavation; construction; retaining structures; shoring; slope stability; soil classification; soil pressure; standards; trenching; *BSSI27*.
- Braced excavations; construction; excavation; geotechnical engineering; retaining structures; shoring; slope stability; soil classification; soil pressure; soil testing; trenching; *BSSI21*.
- Bragg cut-off; coherent and incoherent scattering; Be, Ni, Cu; *SP594*, pp. 101-104 (Sept. 1980).
- Bragg diffraction; double crystal diffraction; nickel single crystal; process of crystal growth; subgrain misorientation; surface reflection; x-ray topography; 19727.
- Branched polymers; expansion factor; mean-square radius of gyration; Monte-Carlo; reduced moments; star-branched polymers; 19656.
- Branching ratios; Franck-Condon factors; ion; nitrogen;  $N_2$ ; photoelectron spectra; photoionization; shape resonance; synchrotron radiation; vibrational intensity distribution; 19607.
- Brannerite; cerium niobate; cerium tantalate; cerium titanate; crystal chemistry; crystallography; fergusonite; scheelite; 19676.
- Brass; copper; hardness testing; Knoop; microhardness; nondestructive testing; 19849.
- Bravais lattice; classification; crystal data; reduced forms; space group frequency; symmetry; 19832.
- Breakdown; electrical breakdown; impulse testing; interfacial breakdown; oil-paper interfaces; transformer oil; *NBSIR 80-2071*.
- Breakdown curve; cyclopropane; photoionization; 19942.
- Break-even analysis; building economics; commercial buildings; economic feasibility; economic optimization; solar energy systems; active solar energy; 19350.
- Breathing apparatus; evacuation; fire departments; fire fatalities; flashover; hotels; room fires; senior citizens; smoke; *NBS-GCR-80-253*.
- Breeding; capture rates; fast breeder blanket facility; fast reactors; foil activation; blankets; *SP594*, pp. 572-575 (Sept. 1980).
- Breeding blankets; DT fusion tritium breeding ratio; ENDF/B; integral and differential experiments; LiOH; liquid scintillator; quenching; activation; *SP594*, pp. 246-253 (Sept. 1980).
- Breeding ratio; calculational bias uncertainties; fast reactors; group cross sections; integral experiments; least-squares adjustment; LMFBR; sensitivity analysis; uncertainty analysis; *SP594*, pp. 177-181 (Sept. 1980).
- Breit-Wigner resonances; R-matrix; time-of-flight; *SP594*, pp. 159-162 (Sept. 1980).
- Bremsstrahlung; dose; electrons; proton; shielding; spacecraft; 19226.
- Bremsstrahlung; electron beams; linear accelerator; neutron physics; neutron radiography; neutrons; 19373.
- Bremsstrahlung; electron beams; linear accelerator; neutron physics; neutron radiography; neutrons; *SP594*, pp. 531-533 (Sept. 1980).
- Bridge deck corrosion; corrosion in concrete; corrosion of steel; polarization technique; rebar corrosion; *NBSIR 80-2012*.
- Bridges; buildings; dikes; earthquakes; foreign engineering; geology; highways; housing; landslides; liquefaction; power plants; railroads; rock slides; seismicity; structural engineering; *SP592*.
- Bridges; calibration; current comparator; dissipation factor; electrical measurements; energy loss; shunt reactors; 19767.
- Brittle failure; failure criteria; flaws; fracture;  $K_{Ic}$ ; laser windows; Weibull; yield stress; *SP568*, pp. 151-159 (July 1980).
- Brittle fracture; dislocations; electron microscopy; erosion; germanium; hardness measurements; plastic deformation; silicon; silicon carbide; aluminumoxide; 19731.
- Broadcast of standard frequencies; frequency calibrations; GOES satellite; high frequency; low frequency; satellite time code; standard frequencies; television color subcarrier; time calibrations; time signals; *SP432, 1979 Edition*.
- Broida; combustion; flames; free radicals; medical physics; spectroscopy; 19680.
- Bromine; resonance parameters; *SP594*, pp. 173-176 (Sept. 1980).
- Brownian motion; diffusion; Fick's Law; Fokker-Planck equation; process modeling; semiconductors; silicon; vacancies; 19726.
- Bruce reactors; gamma-ray spectroscopy; nuclear safeguards; spent fuel; verification; bonded storage; *SP582*, pp. 457-471 (June 1980).
- Buckets; hashing; open addressing; worst case retrievals; 19060.
- Budget; calibration service; chain reactions; gamma rays; gas flow meters; microwaves; radio antennas; trace characterization; *DIM/NBS 64*, No. 3, 1-24 (1980).
- Budgets; economic analysis; enforcement; housing codes; personnel; *SP586*, pp. 135-148 (June 1980).
- Buffer gas; cavity pulling; frequency dependence; line inhomogeneity;  $Rb^{87}$  frequency standard; wall coating; 19517.
- Buffeting; buildings; buildings (codes); deflection; dynamic response and gust loads; structural engineering; tall buildings; wind forces; wind pressures; acceleration; 19121.
- Building; building codes; building design; disaster mitigation; earthquakes; engineering; standards; *NBSIR 80-2111-9*.
- Building; building codes; building design; earthquakes; engineering; standards; structural engineering; *NBSIR 80-2111-2*.
- Building; ice; load; roof; roof load; snow; solar collector; structural engineering; *NBS-GCR-79-180*.
- Building acoustics; environmental pollution; noise control; noise isolation; sound; acoustics; *TN1113-2*.
- Building automation; building controls; building energy management systems; chiller controls; distributed control systems; energy conservation; energy conservation devices; microcomputers and minicomputers; microprocessor applications; programmable controllers; *NBSIR 80-2065*.
- Building code; code official; demonstration program; institutional constraints; solar builder/developer; solar energy; 19729.
- Building code; code official; demonstration program; institutional constraints; solar builder/developer; solar energy; *SP586*, pp. 181-185 (June 1980).
- Building code; code official; demonstration program; institutional constraints; solar builder/developer; solar energy; *NBSIR 79-1957*.
- Building code enforcement; buildings; design; energy conservation; housing codes; regulatory approaches; *SP586*.
- Building codes; building construction; Delphi Method; fire safety; health care facilities; hospitals; interior finishes; Life Safety Code; nursing homes; risk analysis; safety equivalency; safety evaluation; smoke detection; automatic sprinklers; *NBSIR 78-1555-1*.
- Building codes; building design; building fires; building management; egress; emergencies; escape; evacuation; fire alarm systems; fire departments; fire safety; handicapped; life safety; refuge; *SP585*.
- Building codes; building design; building fires; building management; egress; emergencies; escape; evacuation; fire alarm systems; fire departments; fire safety; handicapped; life safety; refuge; *NBSIR 80-1965*.
- Building codes; building design; disaster mitigation; earthquakes; engineering; standards; building; *NBSIR 80-2111-9*.
- Building codes; building design; earthquakes; engineering; standards; structural engineering; building; *NBSIR 80-2111-2*.
- Building codes; building economics; cost estimation; economic analysis; engineering economics; housing; mathematical programming; optimization; rehabilitation; renovation; applied economics; *BSSI29*.
- Building codes; building fires; computer-aided design; computer simulation; fire research; human performance; modeling; regulatory process; simulation; *SP586*, pp. 205-224 (June 1980).
- Building codes; building inspectors; code enforcement; course

- development; educational requirements; inspection; licensing; testing; training code officials; *SP586*, pp. 71-83 (June 1980).
- Building codes; building laws and regulations; code development; court decisions; legal basis; liability; regulation; regulatory impacts; technology; *NBS-GCR-80-286*.
- Building codes; building regulations; building technology; economics; rehabilitation; *19160*.
- Building codes; building standards; dimensional coordination; metrication; regulatory coordination; standardization and international harmonization; *19518*.
- Building (codes); climatology; hurricanes; statistical analysis; structural engineering; tropical cyclones; wind (meteorology); *BSS124*.
- Building codes; conversion strategies; harmonization; metrication; metric transition; *SP586*, pp. 227-251 (June 1980).
- Building codes; economic analysis; fire safety; health care facilities; hospitals; life safety; mathematical programming; nursing homes; optimization; renovation; applied economics; *NBSIR 79-1929*.
- Building collapse; ice; snow; wind; *SP586*, pp. 259-270 (June 1980).
- Building components; building materials; durability; life testing; prediction; recommended practice; reliability service life; accelerated aging tests; *TN1120*.
- Building construction; Delphi Method; fire safety; health care facilities; hospitals; interior finishes; Life Safety Code; nursing homes; risk analysis; safety equivalency; safety evaluation; smoke detection; automatic sprinklers; building codes; *NBSIR 78-1555-1*.
- Building controls; building energy management systems; chiller controls; distributed control systems; energy conservation; energy conservation devices; microcomputers and minicomputers; microprocessor applications; programmable controllers; building automation; *NBSIR 80-2065*.
- Building departments; building inspection; code administration; Indiana building code enforcement; local government; political appointments; survey of local building departments; *SP586*, pp. 33-42 (June 1980).

- Building fires; building management; egress; emergencies; escape; evacuation; fire alarm systems; fire departments; fire safety; handicapped; life safety; refuge; building codes; building design; *NBSIR 80-1965*.
- Building fires; cable fires; compartment fires; decision analysis; fabric flammability; fire suppression; fire tests; flame research; smoke detectors; toxicity; bibliographies; *NBSIR 80-2114*.
- Building fires; compartment fires; doors; egress; fire tests; high-rise buildings; leakage; life safety; smoke; smoke movement; stack effects; test methods; *NBSIR 80-2004*.
- Building fires; computer-aided design; computer simulation; fire research; human performance; modeling; regulatory process; simulation; building codes; *SP586*, pp. 205-224 (June 1980).
- Building fires; computer-aided design; environmental psychology; fire research; fire safety; human behavior in fires; modeling technique; programming; simulation of human behavior; architectural research; *NBSIR 80-1982*.
- Building fires; doors; egress; evacuation; fire departments; fire fighters; fire investigations; mattresses; smoke; apartments; *NBS-GCR-79-187*.
- Building fires; electrical fires; explosions; fire investigations; fire investigators; hydrocarbons; photography; accelerants; arson; *H134*.
- Building fires; fire resistance; fire tests; flow measurement; gas temperatures; heat release rate; interior finishes; residential buildings; room fires; *NBSIR 80-2120*.

Building fires; fire tests; flow measurement; furniture; interior finishes; residential buildings; room fires; static pressure; *NBSIR 80-1984*.

Building heat transfer; energy conservation; passive solar heating, cooling, and performance monitoring; *19819*.

Building illumination systems; energy budget; energy conservation; energy performance criteria; illumination; lighting; power budget; *NBSIR 80-2052*.

Building inspection; code administration; Indiana building code enforcement; local government; political appointments; survey of local building departments; building departments; *SP586*, pp. 33-42 (June 1980).

Building inspectors; code enforcement; course development; educational requirements; inspection; licensing; testing; training code officials; building codes; *SP586*, pp. 71-83 (June 1980).

Building laws and regulations; code development; court decisions; legal basis; liability; regulation; regulatory impacts; technology; building codes; *NBS-GCR-80-286*.

Building management; egress; emergencies; escape; evacuation; fire alarm systems; fire departments; fire safety; handicapped; life safety; refuge; building codes; building design; building fires; *SP585*.

Building management; egress; emergencies; escape; evacuation; fire alarm systems; fire departments; fire safety; handicapped; life safety; refuge; building codes; building design; building fires; *NBSIR 80-1965*.

Building materials; durability; life testing; prediction; recommended practice; reliability service life; accelerated aging tests; building components; *TN1120*.

Building materials; economic analysis; housing; lead-based paint; lead poisoning; applied economics; building economics; *NBSIR 80-1977*.

Building models; building performance data; computer simulations, building; energy conservation in commercial buildings; heat pumps; validation of computer models, buildings; *NBSIR 80-2093*.

Building module; controlling dimensions; coordinating sizes; dimensional coordination; metric building design; metric building products; modular coordination; *19516*.

Building module; dimensional coordination; metric design and construction; modular coordination; standards; *SP595*.

Building performance data; computer simulations, building; energy conservation in commercial buildings; heat pumps; validation of computer models, buildings; building models; *NBSIR 80-2093*.

Building products; certification; laboratory accreditation; *SP591*, pp. 146-155 (Aug. 1980).

Building regulations; building standards development; consensus standards; development of standards; structural design standards; *19091*.

Building regulations; building technology; economics; rehabilitation; building codes; *19160*.

Building regulations; housing policies; housing standards; minimum property standards; *SP586*, pp. 87-102 (June 1980).

Building research; building technology; codes; criteria; project summaries; standards; technical bases; *SP446-4*.

Building research; building technology; codes; criteria; project summaries; standards; technical bases; *SP446-3*.

Buildings; buildings (codes); deflection; dynamic response and gust loads; structural engineering; tall buildings; wind forces; wind pressures; acceleration; buffeting; *19121*.

Buildings; building systems standard; cost; discounting; economic analysis; inflation; life-cycle cost; present worth analysis; recommended practice; benefit-cost analysis; building economics; *NBSIR 80-2040*.

Buildings; climatology; hurricanes; structural engineering; tornadoes; winds; *19360*.

Buildings; cooling; durability/reliability; performance criteria; safety; solar collectors; solar energy; standards; thermal performance; *SP586*, pp. 151-160 (June 1980).

Buildings; cost-effective; energy conservation; investment problems; life-cycle costing; *19102*.

Buildings; design; energy conservation; housing codes; regulatory approaches; building code enforcement; *SP586*.

Buildings; dikes; earthquakes; foreign engineering; geology; highways; housing; landslides; liquefaction; power plants; railroads; rock slides; seismicity; structural engineering; bridges; *SP592*.

Buildings; environment; health; measurements; radiation; radon; radon daughters; ventilation; *SP581*.

Buildings (codes); climatology; hurricanes; statistical analysis; structural engineering; tropical cyclones; wind (meteorology); *19835*.

Buildings (codes); concrete (prestressed); concrete (reinforced); design (buildings); limit states; loads (forces); masonry; probability theory; reliability; safety; specifications; standards; statistical analysis; steel; structural engineering; timber; aluminum; *SP577*.

Buildings (codes); deflection; dynamic response and gust loads; structural engineering; tall buildings; wind forces; wind pressures; acceleration; buffeting; buildings; *19121*.

Buildings (codes); dynamics; structural engineering; towers; turbulence; wind (meteorology); aerodynamics; *19143*.

Building standards; classification; decision tables; information networks; modeling; standards; standards-writers; systems analysis; *NBSIR 80-1979*.

Building standards; component performance standards; energy conservation; housing; building design; building energy performance standards; *NBSIR 80-2161*.

Building standards; dimensional coordination; metrication; regulatory coordination; standardization and international harmonization; building codes; *19518*.

Building standards development; consensus standards; development of standards; structural design standards; building regulations; *19091*.

Building systems standard; cost; discounting; economic analysis; inflation; life-cycle cost; present worth analysis; recommended practice; benefit-cost analysis; building economics; buildings; *NBSIR 80-2040*.

Building technology; codes; criteria; project summaries; standards; technical bases; building research; *SP446-3*.

Building technology; codes; criteria; project summaries; standards; technical bases; building research; *SP446-4*.

Building technology; economics; rehabilitation; building codes; building regulations; *19160*.

Building ventilation; carbon dioxide and ventilation; energy-efficient building; ASHRAE Standard 62-73; *19218*.

Buildup factors; gamma rays; iron; photons; point sources; water; air; *19294*.

Built environment; color; environmental psychology; illumination; perception; questionnaires; research methodology; sensory environment; social sciences; thermal environment; architecture; audition; *SP474*.

Built-up roofing; insulation; moisture; roofing; thermal conductance; thermal conductivity; thermal resistance; *BSS123*.

Built-up roofs; measurement technology; moisture accumulation; nondestructive tests; thermal resistance; *NBSIR 80-2100*.

Bulk measurements; material control and accounting; nondestructive assay; nuclear material measurements; precision; research and development; safeguards; accuracy; *19705*.

Bulk modulus; compressibility; finite elasticity; modulus; rubber; shear; *19886*.

Bulk modulus; elastic constants; physical-property variability; Poisson's ratio; shear modulus; sound velocity; stainless steel; Young's modulus; *19246*.

Bulk optical absorption coefficient; optoacoustic spectroscopy; photoacoustic spectroscopy; surface optical absorption coefficient; ZnSe; *SP568*, pp. 293-300 (July 1980).

Bulk optical absorption coefficient; optoacoustic spectroscopy; photoacoustic spectroscopy; surface optical absorption coefficient;

cient;  $\text{ThF}_4$ ;  $\text{ZnSe}$ ; *SP568*, pp. 301-311 (July 1980).  
 Bunch shape oscillations; electron storage ring; particle accelerator; synchrotron light source; beam instabilities; beam lifetime; 19437.  
 Buoyancy correction; double substitution weighing; uncertainty in weighing; air density equation; *J. Res.* **85**, No. 1, 27-38 (Jan.-Feb. 1980).  
 Buoyant force; dielectric insulation; dielectric oil; impregnation; porosity; porous polymers; 19376.  
 Buoyant force; dielectric insulation; oil permeation; porous polymers; specific volume; void filling; void volume; 19882.  
 Burglar alarm; detector; intrusion alarm; standard; test method; window foil; alarm; 19697.  
 Burglary resistance; forced entry; patio door; performance criteria; performance standard; sliding glass door; test methods; 19702.  
 Burglary resistance; frames; hardware; hinges; locks; performance standard; test methods; window; window assemblies; window components; 19698.  
 Burnett method; coexistence curve; critical exponents; critical isochore; critical parameters; equation of state; ethylene; impurities; isochores; scaling laws; 19894.  
 Burnett PVT measurements; coefficient; ethylene; second virial; state-of-the-art; temperature; 19115.  
 Burn injury; evaporation rate; fabric; flammability; garments; gasoline; heat output; ignition; 19114.  
 Burns (injuries); char strength; convective energy; cotton fabrics; fabrics; heat flux; insulative properties; modacrylics; polyesters; protective clothing; radiant energy; wool fabrics; aramids; 19120.  
 Burn-up; cooling time; Cs-134/Cs-137 ratios; Pu/U; spent fuel; Zr-95/Cs-137; *SP582*, pp. 509-516 (June 1980).  
 Burnup; fission product; JPDR-I reactor; resonance integral; resonance interference effect; spent fuel; *SP594*, pp. 224-227 (Sept. 1980).  
 Bus networks; bus performance; computer programs; contention; CSMA; GPSS; local area networks; packet switching; simulation; *SP500-65*, pp. 79-85 (Oct. 1980).  
 Bus performance; computer programs; contention; CSMA; GPSS; local area networks; packet switching; simulation; bus networks; *SP500-65*, pp. 79-85 (Oct. 1980).  
 Butane; diffusion; experimental methods; migration; molecular transport; nuclear magnetic resonance; polymers; 19906.  
 Butyl rubber; elastomers; polyolefin rubber; segmented polyurethane; time dependent failure; urethane-silicone copolymer; biomaterials; blood pump materials; *NBSIR 80-2008*.  
 $\text{C}_2$ ;  $\text{CO}$ ;  $\text{C}_2$ ;  $\text{F}_2$ ;  $\text{H}_2$ ; local density models;  $\text{N}_2$ ;  $\text{O}_2$ ;  $\chi_\alpha$ ; 19289.

## C

Cable fires; compartment fires; decision analysis; fabric flammability; fire suppression; fire tests; flame research; smoke detectors; toxicity; bibliographies; building fires; *NBSIR 80-2114*.  
 Cadmium; mercury; radiochemical; separation; solvent extraction; activation analysis; 19283.  
 $\text{CaF}_2$ ; effective charge; oscillator strength; photoelastic; piezobirefringence; piezo-optic;  $\text{SrF}_2$ ; strain; stress; transverse optic-phonon; anisotropy;  $\text{BaF}_2$ ; 19579.  
 $\text{CaF}_2$ :Dy; fast breeder reactors; FBBF; gamma-ray heating; thermoluminescent dosimeters; TLD; blankets; *SP594*, pp. 576-580 (Sept. 1980).  
 Cahn-Hilliard theory; chemical potential; density gradient; equation of state; inhomogeneous fluid; lattice fluid; long-range interactions; surface entropy; 19653.  
 Call emission, stars; chromospheres, stars; circumstellar shells; late type, stars; 19119.  
 Calcite; flux growth; laser damage; neodymium:glass; polarizer; pyrophosphate; xenotime; yttrium orthophosphate; yttrium phosphate; absorption spectra; *SP568*, pp. 137-140 (July 1980).

Calcium; collision physics; dimer lasers; energy transfer; lasers; 19775.  
 Calcium ammonium phosphate; calcium phosphate; crystal structure; sheet type structure; symmetric hydrogen bonds; 19386.  
 Calcium fluoride; hot isostatic forging; hot isostatic pressing; laser windows; optical absorption; optical homogeneity; optical scattering; stress birefringence; *SP568*, pp. 47-63 (July 1980).  
 Calcium phosphate; crystal structure; sheet type structure; symmetric hydrogen bonds; calcium ammonium phosphate; 19386.  
 Calcium phosphates; crystal structure; dental; hydroxyapatites; tooth mineral; adhesion; bonding; 19262.  
 Calculated direct-interaction and compound-nucleus cross sections; deduced coupled-channel optical potential parameters; enriched targets; nuclear reactions; quadrupole and hexadecapole deformation parameters; *SP594*, pp. 672-676 (Sept. 1980).  
 Calculated  $\text{El}$   $\gamma$ -ray strength functions; calculated  $\sigma(n,\gamma)$  and  $\gamma$ -ray spectra; calculated  $\sigma(n,\gamma)$  for  $^{89}\text{Y}$  and  $^{90}\text{Zr}$ ; *SP594*, pp. 752-756 (Sept. 1980).  
 Calculate deuterium plasma neutron spectrum; fusion; measured  $\sigma_T$  for  $\text{O}(n,n)$ ; *SP594*, pp. 807-811 (Sept. 1980).  
 Calculated frequencies; Fermi resonance; longitudinal acoustic modes;  $n$ -alkanes; Raman intensities; structural defects; transverse acoustic modes; bond polarizabilities; 19692.  
 Calculated neutron spectrum; fast breeder blanket facility; fast reactor; neutron spectrum; proton-recoil; 2DB; *SP594*, pp. 568-571 (Sept. 1980).  
 Calculated performance;  $\text{CO}_2$  laser; holographic interferometry; measured performance; optical path difference; temperature profile; thermal distortion; thermal lensing;  $\text{ZnSe}$ ; absorption; *SP568*, pp. 73-89 (July 1980).  
 Calculated scattering phase shifts; measured asymmetry; *SP594*, pp. 985-987 (Sept. 1980).  
 Calculated  $\sigma(n,\gamma)$  and  $\gamma$ -ray spectra; calculated  $\sigma(n,\gamma)$  for  $^{89}\text{Y}$  and  $^{90}\text{Zr}$ ; calculated  $\text{El}$   $\gamma$ -ray strength functions; *SP594*, pp. 752-756 (Sept. 1980).  
 Calculated  $\sigma(n,\gamma)$  and  $\gamma$ -ray spectra for  $^{181}\text{Ta}$  and  $^{197}\text{Au}$ ; calculated  $\sigma(n,\gamma)$  for  $^{186,187,188}\text{Os}$ ; gamma-ray strength functions; GD parameter systematics; *SP594*, pp. 770-774 (Sept. 1980).  
 Calculated  $\sigma(n,\gamma)$  for  $^{186,187,188}\text{Os}$ ; gamma-ray strength functions; GD parameter systematics; calculated  $\sigma(n,\gamma)$  and  $\gamma$ -ray spectra for  $^{181}\text{Ta}$  and  $^{197}\text{Au}$ ; *SP594*, pp. 770-774 (Sept. 1980).  
 Calculated  $\sigma(n,\gamma)$  for  $^{89}\text{Y}$  and  $^{90}\text{Zr}$ ; calculated  $\text{El}$   $\gamma$ -ray strength functions; calculated  $\sigma(n,\gamma)$  and  $\gamma$ -ray spectra; *SP594*, pp. 752-756 (Sept. 1980).  
 Calculational bias uncertainties; fast reactors; group cross sections; integral experiments; least-squares adjustment; LMFBR; sensitivity analysis; uncertainty analysis; breeding ratio; *SP594*, pp. 177-181 (Sept. 1980).  
 Calculation procedures; computer simulation; energy analysis; energy conservation; *NBSIR 80-2068*.  
 Calculations; criticality control; material accountability; measurements; neutron interrogation; nondestructive assay; nuclear fuel subassembly; nuclear safeguards; process control; spent nuclear fuel; assay accuracy; *SP582*, pp. 447-456 (June 1980).  
 Calculations; gamma-ray spectrometers; germanium; induced radioactivity; sodium-iodide; spaceflight; 19749.  
 Calculations; ion-molecule collision;  $J$ -dependence; transitions;  $\Lambda$ -doublets; 19462.  
 Calibration; calibration laboratory; certification; evaluation; inspection; audit; *SP591*, pp. 41-44 (Aug. 1980).  
 Calibration; calibration of thickness gages; calibration standards; coatings; coating thickness; coating thickness gages; coating thickness measurement; electrodeposited coatings; electrodeposition; thickness; thickness gages; 19954.  
 Calibration; capacitance; four-terminal pair capacitance; imittance standards; inductance; residual series inductance; resonance techniques; three-terminal capacitance; *TN1024*.  
 Calibration; carbonyl sulfide; infrared; laser calibration; molecular spectra; spectra; spectroscopy; absorption; 19368.

- Calibration; check thermometers; fixed points; International Practical Temperature Scale of 1968; measurement assurance program; platinum resistance thermometer; reference thermometer; thermometer; *SP591*, pp. 137-145 (Aug. 1980).
- Calibration; coincidence counter; neutron; nondestructive assay; precision; random driver; stability; uranium; *SP582*, pp. 201-220 (June 1980).
- Calibration; current comparator; dissipation factor; electrical measurements; energy loss; shunt reactors; bridges; *19767*.
- Calibration; detection; dosimetry; facilities; fluence; flux; monitor; neutron; sources; standardization; *SP594*, pp. 747-751 (Sept. 1980).
- Calibration; detectors; irradiance; light source; photodiode; radiometry; *19592*.
- Calibration; development; Indonesia; industrialization; instrumentation; less developed country; metrology; standardization; Third World; *NBSIR 78-1583*.
- Calibration; diagnostic x-rays; electrical measurements; health; radiation; radiation safety; safety; x rays; *NBSIR 80-2072*.
- Calibration; distance; fifth wheel; inspection; measured course; odometer; taximeter; test procedure; tire pressure; tolerances; *H137*.
- Calibration; dosimetry; high-energy bremsstrahlung; operational characteristics; radiation therapy; recommendations; selection of thermoluminescence dosimetry system; survey; thermoluminescence; United States; *TN1119*.
- Calibration; eddy currents; magnetic particles; nondestructive evaluation; radiography; traceability; ultrasonics; visual testing; acoustic emission; *NBSIR 80-2109*.
- Calibration; environments; homogeneity; natural materials; nondestructive assay; particles; quality assurance; radiation; radioactivity; radiochemical assay; radionuclide; segregation; standard; *19298*.
- Calibration; equipment; evaluation; laboratory; manual; personnel; quality assurance; quality control; systems; *SP591*, pp. 99-103 (Aug. 1980).
- Calibration; Federal Government; laboratory; measurement; metrology; precision; test equipment; *SP546, 1980 Edition*.
- Calibration; flatness; intercomparison; random error; squareness; standard deviation; systematic error; uncertainty; angle block; autocollimator; *NBSIR 80-1967*.
- Calibration; image quality indicator; nondestructive testing; radiography; sensitivity; standards; ultrasonics; *19877*.
- Calibration; international; nondestructive testing; radiography; standards and ultrasonics; *19879*.
- Calibration; laser measurements; laser metrology; laser standards; transfer standards; *19211*.
- Calibration; microwave; microwave measurements; six-port; automatic network analyzer; *19303*.
- Calibration; radioactivity; standardization; alpha-particle activity; alpha-particle sources; *19297*.
- Calibration curve; experiments; finite elements; Scheffe, design; spline; volume; *J. Res. 85*, No. 4, 295-304 (July-Aug. 1980).
- Calibration interval; calibration interval algorithms; calibration requirements; decision table; interval adjustment; measurement; metrology; PMTE; recall intervals; *NBS-GCR-80-283*.
- Calibration interval algorithms; calibration requirements; decision table; interval adjustment; measurement; metrology; PMTE; recall intervals; calibration interval; *NBS-GCR-80-283*.
- Calibration laboratory; certification; evaluation; inspection; audit; calibration; *SP591*, pp. 41-44 (Aug. 1980).
- Calibration labs; calibration, out-of-service; central calibration; in situ calibration; measurement; metrology; on-site calibration; PMTE; *NBS-GCR-80-282*.
- Calibration of thickness gages; calibration standards; coatings; coating thickness; coating thickness gages; coating thickness measurement; electrodeposited coatings; electrodeposition; thickness; thickness gages; calibration; *19954*.
- Calibration, out-of-service; central calibration; in situ calibration; measurement; metrology; on-site calibration; PMTE; calibration labs; *NBS-GCR-80-282*.
- Calibration-quality standards; density; electrical conductance; molten salts; potassium nitrate; sodium chloride; surface tension; viscosity; *JPCRD 9*, No. 4, 791-830 (1980).
- Calibration report; correction to mass measurements; error checking; FORTRAN program; least squares solution; mass calibration; mass measurement; *TN1127*.
- Calibration requirements; decision table; interval adjustment; measurement; metrology; PMTE; recall intervals; calibration interval; calibration interval algorithms; *NBS-GCR-80-283*.
- Calibrations; collaborative reference programs; laboratory performance; measurement assurance; measurement evaluation technology; measurement services; physical standards; proficiency testing; standard reference materials; testing; traceability; *SP591*, pp. 15-22 (Aug. 1980).
- Calibrations; irradiance; radiance; sources; ultraviolet; arc; *19876*.
- Calibration service; chain reactions; gamma rays; gas flow meters; microwaves; radio antennas; trace characterization; budget; *DIM/NBS 64*, No. 3, 1-24 (1980).
- Calibration standards; coatings; coating thickness; coating thickness gages; coating thickness measurement; electrodeposited coatings; electrodeposition; thickness; thickness gages; calibration; calibration of thickness gages; *19954*.
- Calibration standards; focused-ion beam sputtering; thin films; x-ray fluorescence spectrometry; *19871*.
- Calorimeter; density; thermal properties; tissue equivalent plastic; A-150 plastic; *19208*.
- Calorimeter; primary standard; water; absorbed dose; *19290*.
- Calorimetric assay; calorimetry; plutonium assay; plutonium safeguards; *SP582*, pp. 192-200 (June 1980).
- Calorimetry; coatings; encapsulation; hydrogen; thin films; water; water absorption; absorption; *SP568*, pp. 237-246 (July 1980).
- Calorimetry; damage; electric field; high energy laser; laser damage; reflectors; thin film; absorption; *SP568*, pp. 377-390 (July 1980).
- Calorimetry; electrolytes; enthalpy of dilution; heat; hydrochloric acid; lithium chloride; relative apparent molal enthalpy; relative partial molal enthalpy; sulfuric acid; thermochemistry; *J. Res. 85*, No. 1, 11-17 (Jan.-Feb. 1980).
- Calorimetry; enthalpy of solution; KCl; solution calorimetry; standard reference materials; thermochemistry; tris(hydroxymethyl)aminomethane; *J. Res. 85*, No. 6, 467-481 (Nov.-Dec. 1980).
- Calorimetry; fire test; heat of combustion; heat release; oxygen consumption; oxygen consumption calorimetry; rate of heat release; *19600*.
- Calorimetry; gamma-ray spectrometry; neutron interrogation; safeguards; *SP594*, pp. 364-367 (Sept. 1980).
- Calorimetry; plutonium assay; plutonium safeguards; calorimetric assay; *SP582*, pp. 192-200 (June 1980).
- Calorimetry,  $\Delta C_p$ , endothermic reaction; enthalpy of dilution; enthalpy of solution; KCl; SRM 1655; standard reference material; thermochemistry; adiabatic calorimeter; *J. Res. 85*, No. 6, 449-465 (Nov.-Dec. 1980).
- Cameras; exposure meters; film; filters; law enforcement photography; lenses; lighting equipment; photographic equipment; *SP480-23*.
- Canada; laboratories; standards; Standards Council of Canada; testing; accreditation; *SP591*, pp. 88-91 (Aug. 1980).

- Ceric sulfate dosimeter; cobalt-60 source; commissioning dosimetry; dosimetry; ferrous sulfate dosimeter; gamma radiation; process control; quality control; radiation sterilization; radiochromic dye dosimeter; red Perspex dosimeter; absorbed dose; *19343*.
- Cerium dioxide; electrocatalysis; fuel cells; impedance; solid electrolyte; tungsten carbide; catalyst; *NBSIR 80-1991*.
- Cerium niobate; cerium tantalate; cerium titanate; crystal chemistry; crystallography; fergusonite; scheelite; brannerite; *19676*.
- Cerium niobate; cerium tantalate; fergusonite; oxidation-reduction; scheelite; thermogravimetric analysis; *19638*.
- Cerium tantalate; cerium titanate; crystal chemistry; crystallography; fergusonite; scheelite; brannerite; cerium niobate; *19676*.
- Cerium tantalate; fergusonite; oxidation-reduction; scheelite; thermogravimetric analysis; cerium niobate; *19638*.
- Cerium titanate; crystal chemistry; crystallography; fergusonite; scheelite; brannerite; cerium niobate; cerium tantalate; *19676*.
- Certification; certification industry; economics; government policy; product certification; standardization research needs; standards; accreditation of testing laboratories; *NBSIR 80-2001*.
- Certification; checklists; code official; consultant; engineer; equivalent life safety; municipal attorney; product endorsement; professional liability; variances; appeals process; architect; *SP586*, pp. 45-57 (June 1980).
- Certification; colleges; confidence; criteria; evaluation; hospitals; inspectors; marketing; qualification; re-examination; technicians; accreditation; *SP591*, pp. 3-5 (Aug. 1980).
- Certification; competition; economics of standards; law; standards; antitrust; *NBSIR 79-1921*.
- Certification; evaluation; inspection; audit; calibration; calibration laboratory; *SP591*, pp. 41-44 (Aug. 1980).
- Certification; evaluation of inspection organizations; evaluation of testing organizations; inspection standards; laboratory accreditation; laboratory evaluation; regulatory liability; test standards; voluntary consensus standards; *SP591*, pp. 11-14 (Aug. 1980).
- Certification; France; French standards system; government policy; product; standards systems; AFNOR; antitrust; *NBSIR 79-1959*.
- Certification; laboratory accreditation; building products; *SP591*, pp. 146-155 (Aug. 1980).
- Certification; management; on-site visit; personnel qualifications; physical evidence; proficiency testing; standards; accreditation; American Society of Crime Laboratory Directors (ASCLD); *SP591*, pp. 164-168 (Aug. 1980).
- Certification criteria; evaluation; toxicology laboratories; accreditation; *SP591*, pp. 75-76 (Aug. 1980).
- Certification industry; economics; government policy; product certification; standardization research needs; standards; accreditation of testing laboratories; certification; *NBSIR 80-2001*.
- Certified reference materials; chromium; foods; interlaboratory study; standard reference materials; yeast; biological matrix; bovine liver; *19420*.
- Cesium; hydrogen; intermediate resonances; laser pulses; monochromatic; multiphoton ionization; Rabi oscillation; sodium; AC Stark shifts; AC Stark widths; *19159*.
- Cesium atomic resonator; frequency retrace accuracy; frequency stability; passive/active hydrogen atomic resonator; rubidium atomic resonator; stored ions; *19432*.
- CFRME; ENDF/B; integral cross sections; *SP594*, pp. 475-478 (Sept. 1980).
- CF<sub>2</sub>; C<sub>2</sub>F<sub>4</sub>; kinetics; laser; mass spectrometry; photolysis; *19722*.
- CF<sub>2</sub>; difluorocarbene; fluorescence excitation spectroscopy; Franck-Condon factors; laser excited fluorescence; radiative lifetime; single vibronic level spectroscopy; *19371*.
- CF<sub>2</sub>I; CF<sub>2</sub>S; H atom reaction; HCF<sub>2</sub>; I atom reaction; infrared spectrum; matrix isolation; S atom reaction; CF<sub>2</sub> reaction; *19410*.
- CF<sub>2</sub> reaction; CF<sub>2</sub>I; CF<sub>2</sub>S; H atom reaction; HCF<sub>2</sub>; I atom reaction; infrared spectrum; matrix isolation; S atom reaction; *19410*.
- CF<sub>2</sub>S; H atom reaction; HCF<sub>2</sub>; I atom reaction; infrared spectrum; matrix isolation; S atom reaction; CF<sub>2</sub> reaction; CF<sub>2</sub>I; *19410*.
- CF<sub>3</sub>Br; CF<sub>4</sub>Br; CF<sub>3</sub>Cl; CF<sub>4</sub>Cl; CF<sub>3</sub>I; CF<sub>4</sub>I; F-atom reactions; infrared spectrum; matrix isolation; photodecomposition; *19760*.
- CF<sub>3</sub>Cl; CF<sub>4</sub>Cl; CF<sub>3</sub>I; CF<sub>4</sub>I; F-atom reactions; infrared spectrum; matrix isolation; photodecomposition; CF<sub>3</sub>Br; CF<sub>4</sub>Br; *19760*.
- CF<sub>3</sub>I; CF<sub>4</sub>I; F-atom reactions; infrared spectrum; matrix isolation; photodecomposition; CF<sub>3</sub>Br; CF<sub>4</sub>Br; CF<sub>3</sub>Cl; CF<sub>4</sub>Cl; *19760*.
- CF<sub>4</sub>Br; CF<sub>3</sub>Cl; CF<sub>4</sub>Cl; CF<sub>3</sub>I; CF<sub>4</sub>I; F-atom reactions; infrared spectrum; matrix isolation; photodecomposition; CF<sub>3</sub>Br; *19760*.
- CF<sub>4</sub>Cl; CF<sub>3</sub>I; CF<sub>4</sub>I; F-atom reactions; infrared spectrum; matrix isolation; photodecomposition; CF<sub>3</sub>Br; CF<sub>4</sub>Br; CF<sub>3</sub>Cl; *19760*.
- CF<sub>4</sub>I; F-atom reactions; infrared spectrum; matrix isolation; photodecomposition; CF<sub>3</sub>Br; CF<sub>4</sub>Br; CF<sub>3</sub>Cl; CF<sub>4</sub>Cl; CF<sub>3</sub>I; *19760*.
- CH<sub>2</sub>; laser; magnetic resonance; rotational transitions; *19720*.

CH<sub>2</sub>DOH; CO<sub>2</sub> laser; FIR laser; laser frequency measurement; new laser lines; relative intensity; relative polarization; 19460.

CH<sub>2</sub>F<sub>2</sub>; difluoromethane; FIR frequency synthesis; laser frequency measurement; optically pumped FIR laser; stabilized CO<sub>2</sub> lasers; 19452.

Chain folding in polymers; crystal amorphous complex; lamellar crystallization; lamellar morphology; polymer crystallization; 19854.

Chain reaction; combustion; laser; photochemistry; radical; 19198.

Chain reaction; laser; laser chemistry; radical; 19399.

Chain reactions; gamma rays; gas flow meters; microwaves; radio antennas; trace characterization; budget; calibration service; DIM/NBS 64, No. 3, 1-24 (1980).

Chalcogenide material; deposition parameters; index of refraction; absorption coefficient; SP568, pp. 343-355 (July 1980).

Challenge to the analytical chemist; chemical measurement process; energy; environment; health; modelling; scientific uncertainty; societal decisions; socioscientific problems; theory; time constants; basic research; 19666.

Channeling; charged particles; crystals; radiation; 19139.

Channel level power control interface; computer peripherals; computers; Federal Information Processing Standard; input/output; interfaces; automatic data processing (ADP); FIPS PUB 61.

Channel level power control interface; computer peripherals; computers; Federal Information Processing Standard; input/output; interfaces; automatic data processing (ADP); FIPS PUB 60-1.

Channel level power control interface; computer peripherals; computers; Federal Information Processing Standard; input/output; interfaces; operational specifications for magnetic tape subsystems; automatic data processing (ADP); FIPS PUB 62.

Characteristic wave impedance; Huygens principle; index of refraction; optical loss constants; absolute fluorescent efficiency; TN1020.

Characterization; graphite; nomenclature; standards; terminology; test methods; carbon; 19486.

Character set encryption; digital signatures; key notarization; 19142.

Charge; compressibility; piezoelectricity; plasma; polarization; poly(vinylidene fluoride); pyroelectricity; thermal expansion; 19324.

Charge density; direct-current transmission; electric field strength; high-voltage transmission lines; air ions currents; atmospheric electricity; 19238.

Charged particle; electron; energy deposition; Monte Carlo; multiple scatter; tracklength; 19273.

Charged particle cross section needs; fusion; fusion reactivity; SP594, pp. 254-264 (Sept. 1980).

Charged particle reactions; deuterium; quadrupole triplet spectrometer; SP594, pp. 527-530 (Sept. 1980).

Charged-particle reactions; evaluated fusion cross sections; multichannel R-matrix analyses; nucleon systems; SP594, pp. 650-658 (Sept. 1980).

Charged particles; crystals; radiation; channeling; 19139.

Charge exchange reactions; exotic nuclei; heavy ion collision; mass formula; quartets; SU<sub>4</sub>; 19265.

Charge transfer; Coulomb energy; d-electrons; Mossbauer isomer shifts; transition metals; alloy phase formation; 19567.

Charge transfer; electron affinity; electron scattering resonances; LiF<sup>-</sup>; molecular anions; polarizability; autodetachment; 19197.

Charpy V-notch; head plates; impact properties; nil-ductility transition temperatures; railroad tank cars; switchyard impact tests; tensile properties; AAR M128 steel; NBSIR 80-2039.

Char strength; convective energy; cotton fabrics; fabrics; heat flux; insulative properties; modacrylics; polyesters; protective clothing; radiant energy; wool fabrics; aramids; burns (injuries); 19120.

Checklist; CLIA '67; Clinical Laboratories Improvement Act of 1967; clinical laboratory evaluation; evaluation, internal quality control; evaluation, performance; evaluation, qualifications of laboratory personnel; improvement; proficiency testing; SP591, pp. 53-62 (Aug. 1980).

Checklists; code official; consultant; engineer; equivalent life safety; municipal attorney; product endorsement; professional liability; variances; appeals process; architect; certification; SP586, pp. 45-57 (June 1980).

Check standard; gage blocks; measurement assurance; random errors; standard deviation; systematic errors; uncertainty; NBSIR 80-2078.

Check thermometers; fixed points; International Practical Temperature Scale of 1968; measurement assurance program; platinum resistance thermometer; reference thermometer; thermometer; calibration; SP591, pp. 137-145 (Aug. 1980).

Chemical analysis; fluid inclusions; gemmology; microanalysis; mineralogy; Raman spectroscopy; 19577.

Chemical analysis; rainwater analysis; reference materials; NBSIR 79-1953.

Chemical complexes; chemical equilibrium; kinetics; thermal analysis; SP580, pp. 183-198 (Aug. 1980).

Chemical contactors; mass transfer equilibrium; mass transfer rates; mathematical models; mixer-settlers; plutonium holdup; uranium holdup; SP582, pp. 702-711 (June 1980).

Chemical data; data banks; data bases; data networks; interactive systems; numerical data bases; on-line data; physical data; spectroscopic data systems; TN1122.

Chemical dependence; delayed neutrons; fission yield; thermal neutrons; SP594, pp. 105-107 (Sept. 1980).

Chemical equilibrium; kinetics; thermal analysis; chemical complexes; SP580, pp. 183-198 (Aug. 1980).

Chemical impurities; deep level studies; ion implantation; predeposition technique; sulfur impurities in silicon; thermally-stimulated measurements; 19429.

Chemical impurities; deep level studies; ion implantation; predeposition technique; sulfur impurities in silicon; thermally-stimulated measurements; 19231.

Chemical ionization; hydrocarbons; ion-molecule reactions; mass spectrometry; photoionization; analysis; 19930.

Chemical kinetics; combustion; decomposition; free radicals; gas phase; hydrocarbons; hydrogen; nitrogen; oxygen; rate of reaction; sulfur; Arrhenius parameters; NSRDS-67.

Chemical kinetics; combustion; decomposition; free radicals; gas phase; hydrocarbons; hydrogen; nitrogen oxygen; rate of reaction; sulfur; Arrhenius parameters; NBSIR 80-2118.

Chemical kinetics; data evaluation; gas phase; photoabsorption cross section; photochemistry; quantum yield; rate constant; air pollution; atmospheric chemistry; 19513.

Chemical kinetics; data evaluation; gas phase; photoabsorption cross section; photochemistry; quantum yield; rate coefficient; air pollution; atmospheric chemistry; JPCRD 9, No. 2, 295-472 (1980).

Chemical kinetics; data evaluation; nitrogen oxides; photoabsorption cross section; photochemistry; quantum yield; rate coefficient; atmospheric chemistry; NBSIR 80-2032.

Chemical kinetics; decomposition; disproportionation; H-transfer; initiation; isomerization; n-alkane pyrolysis; rate constants; recombination; addition; JPCRD 9, No. 3, 523-560 (1980).

Chemical kinetics; exposure; exposure reciprocity; kinetic equations; photochemistry; photon intensity; photoresist exposure; rate constants; saturation effect; 19418.

Chemically assisted fracture; fracture; fracture models; reaction rate theory; slow crack growth; surface chemistry; atmosphere-assisted slow crack growth; 19588.

Chemical measurement process; energy; environment; health; modelling; scientific uncertainty; societal decisions; socioscientific problems; theory; time constants; basic research; challenge to the analytical chemist; 19666.

Chemical modeling; dynamic materials accounting; in-process inventory; solvent-extraction contactors; SP582, pp. 712-717 (June 1980).

Chemical petrology; closure correlation; principal components

analysis; statistics; 19778.

Chemical potential; combinatorial entropy; equation of state; interfacial tension; lattice fluid; miscibility; spinodal; 19652.

Chemical potential; density gradient; equation of state; inhomogeneous fluid; lattice fluid; long-range interactions; surface entropy; Cahn-Hilliard theory; 19653.

Chemical processing; coordination compounds; enthalpimetry; glass processing; instrumentation; paper technology; polymer ignition; rubber processing; thermal analysis; thermogravimetry; adsorbents; SP580.

Chemical profiling; energy dispersive; macrosegregation; monochromatic incident x-ray beam; multiphase structure; x-ray fluorescence; 19959.

Chemical shifts; coupling constants; mass spectrometry; nitrogen-15 NMR; proton NMR; xanthen-0-yl derivatives of urea; carbon-13 NMR; 19312.

Chemical state; delayed neutron; fission; phonon distribution;  $U_3O_8$ ;  $UO_2$ ; 19683.

Chemical vapor deposition; composition; crystal structure; grain size; molybdenum thin films; reflectance; SP568, pp. 287-292 (July 1980).

Chemical vapor deposition; field ion microscopy; iron carbides; microstructure; polycrystalline iron whiskers; whiskers; 19927.

Chemisorbed  $C_2H_4$ ; neutron inelastic scattering; Raney nickel; vibrational spectrum; catalyst; 19573.

Chemisorption; composites; coupling agent; dental adhesion; PolySAM; adsorption; 19658.

Chemisorption; dielectric response theory; photoemission; relaxation energy; surface spectroscopy; 19372.

Chemisorption; EELS; electron spectroscopy; photoemission; UPS; XPS; AES; 19176.

Chemisorption; ESCA; oxygen; ruthenium; ruthenium oxide; surface reactions; 19254.

Chemisorption; electrochemistry; infrared spectra; rhodium; carbon monoxide; 19739.

Chemisorption; electron energy loss spectroscopy; ethylene; physisorption; surface; tungsten; acetylene; 19390.

Chemisorption; electron energy loss spectroscopy; Ni(111); NO; vibrational spectroscopy; 19800.

Chemisorption; electron stimulated desorption; ESDIAD; ion energy distributions; ion yield; oxygen; photon stimulated desorption; synchrotron radiation; tungsten; angular distribution of ions; 19533.

Chemisorption; electron stimulated desorption; ion angular distribution; nitric oxide; ruthenium; surface; carbon monoxide; 19924.

Chemisorption; electron stimulated desorption; ion angular distribution; oxygen; stepped surfaces; surface bonding; tungsten; adsorption; 19860.

Chemisorption; electron stimulated desorption; molecular orientation; palladium (210); surface science; carbon monoxide; 19195.

Chemisorption; infrared spectroscopy; isomerization; methylisocyanide; rhodium; aluminium oxide; 19831.

Chemisorption; infrared spectroscopy; isotopic exchange; rhodium; carbon monoxide; 19910.

Chemisorption; nitrous oxide; ruthenium; surface reaction; thermal desorption; 19241.

Chemistry of fire; combustion products; detection; fire hazards; fire modeling; fire protection; fire research; fire suppression; human behavior in fires; physics of fire; toxicity of combustion products; NBSIR 80-2127.

Chemistry research; environmental measurements; materials science; measurement services; molecular science; National Measurement Laboratory; nondestructive evaluation; nuclear measurement technology; physics research; radiation research; recycled materials; SP572.

Chevrete phase; crystal fields; Laves-phase; magnetic superconductor; neutron scattering; reentrant superconductor; 19629.

Chevrete-phase; crystal fields; magnetic impurities; magnetic superconductors; rare earths; 19504.

Chiller controls; distributed control systems; energy conservation; energy conservation devices; microcomputers and minicomputers; microprocessor applications; programmable controllers; building automation; building controls; building energy management systems; NBSIR 80-2065.

Chimneys; fire models; fire safety; fire tests; flues; heating equipment; heat transfer; literature reviews; radiant energy; stoves; wood; NBSIR 80-2140, Vol. 1.

China syndrome myth; hydrogen bubble myth; reactor cooling; reactor safety system; sequence of events; Three Mile Island; SP594, pp. 916-919 (Sept. 1980).

Chi-square; data consistency; data testing; ENDF/B-IV; ENDF/B-V; fast reactors; group cross sections; integral experiments; least-squares adjustment; SP594, pp. 182-186 (Sept. 1980).

Chloride; fluorides; microelectrodes; microvolume; analysis; biophysics; 19280.

Chlorine; Hartree-Fock; K-matrix; photoionization; rare gases; 19304.

Chlorine chemistry; formaldehyde; ozone; stratosphere; absorption cross-section; 19535.

Chlorine isotopes; isotope separation; laser chemistry; 19759.

Chlorobenzene; coincidence; fragmentation; ion energetics; phenyl ion; photoionization; 19177.

Cholesterol; College of American Pathologists; definitive methods; glucose; human serum; isotope dilution; mass spectrometry; research associate; urea; uric acid; 19706.

Cholesterol; definitive method; gas chromatography/mass spectrometry; isotope dilution/mass spectrometry; reference method; statistical analysis; total serum cholesterol; 19554.

Cholesterol; gas chromatography/mass spectrometry; isotope dilution; serum; 19899.

Chromate; electrochemistry; ellipsometry; field ion microscopy; hydrogen; inhibitors; iron; organic coatings; titanium-palladium alloys; vanadium; NBSIR 80-2101 (Navy).

Chromate ore; environmental effects; lead chromate pigments; storm water runoff; toxicity; water pollution; air pollution; NBSIR 80-1974.

Chromates; coated metals; corrosion inhibitor; corrosion mechanisms; ellipsometry; simulated paint films; 19659.

Chromaticity; coefficient of luminous intensity; intercomparisons; retroreflectance; retroreflector; specifications; test methods; accuracy; TN1125.

Chromium; foods; interlaboratory study; standard reference materials; yeast; biological matrix; bovine liver; certified reference materials; 19420.

Chromospheres, stars; circumstellar shells; late type, stars; CaII emission, stars; 19119.

Chromospheres, stellar; chromosphere, sun; ultraviolet spectra; binary stars; 19928.

Chromosphere sun; emission-line stars; late-type stars; stellar chromospheres; stellar winds; ultraviolet spectra; x-ray sources; 19523.

Chromosphere, sun; ultraviolet spectra; binary stars; chromospheres, stellar; 19928.

Chronoamperometry; corrosion rate measurement; polarization; carbon steel; 19840.

Chrysotile asbestos particulate; differential thermal analysis; environmental particulates; thermal analytical methods; alpha-quartz particulate; 19890.

Circuit characterization; cross-bridge sheet resistor; electrical alignment test structure; gated diode; integrated test structure; microelectronic test structure; process validation wafer; random fault test structure; sheet resistor; test methods; test pattern; test structure; 19165.

Circumstellar shells; late type, stars; CaII emission, stars; chromospheres, stars; 19119.

Civil defense; fallout protection; gamma-ray shielding; nuclear detonations; nuclear war; radiation shielding; SP570.

Civil service; code administration agencies; idealized system; reorganization; SP586, pp. 59-70 (June 1980).

- CLIA '67; Clinical Laboratories Improvement Act of 1967; clinical laboratory evaluation; evaluation, internal quality control; evaluation, performance; evaluation, qualifications of laboratory personnel; improvement; proficiency testing; checklist; *SP591*, pp. 53-62 (Aug. 1980).
- Classes of tests; directory of accredited laboratories; discipline; laboratory accreditation; *SP591*, pp. 85-87 (Aug. 1980).
- Classical scattering angle; dilute gases; inverse power potential; logarithmic terms; softness expansion; thermal conductivity; viscosity; *19194*.

Coincidence; cyclopropene; fragmentation; mass spectrometry; photoionization; threshold photoelectron spectroscopy; time of flight mass spectrometry; 19196.

Coincidence; cyclopropene; fragmentation; photoionization; propyne; threshold photoelectron spectroscopy; allene; 19803.

Coincidence; fragmentation; ion energetics; phenyl ion; photoionization; chlorobenzene; 19177.

Coincidence; fragmentation; kinetics; photoelectron; photoionization; unimolecular; benzene; benzonitrile ion; 19603.

Coincidence; fragmentation; mass spectrometry; photoionization; threshold photoelectron spectroscopy; time of flight mass spectrometry; allene; autoionization; 19943.

Coincidence counter; neutron; nondestructive assay; precision; random driver; stability; uranium; calibration; *SP582*, pp. 201-220 (June 1980).

Coincidence mass spectrometry; field ionization mass spectrometry; ion fragmentation; mass spectrometry; perfluoroethane; photoelectron spectroscopy; quasiequilibrium theory; threshold photoelectron spectroscopy;  $C_2F_6$ ; 19291.

Coincidence measurements; electrons; linac; nuclear reactions; superconducting; accelerators; 19248.

Coincident ion mass spectrometry; deuterated water; deuterium oxide; photoelectron spectroscopy; threshold photoelectron spectroscopy; water; appearance energy; 19345.

Collaborative reference programs; history; interlaboratory testing program; laboratory evaluation; National Bureau of Standards; paper; paperboard; TAPPI; test methods; Youden graphical analysis; 19321.

Collaborative reference programs; laboratory performance; measurement assurance; measurement evaluation technology; measurement services; physical standards; proficiency testing; standard reference materials; testing; traceability; calibrations; *SP591*, pp. 15-22 (Aug. 1980).

Collaborative reference program, test method; interlaboratory testing; laboratory evaluation; linear model; measuring process; proficiency testing; Youden two-sample analysis; *SP591*, pp. 25-30 (Aug. 1980).

Collapse; concrete; concrete strength; construction; construction loads; cooling tower; dynamic effects; failure; failure investigation; hoisting loads; hyperbolic shell; *NBSIR 80-2010*.

Collapse; concrete; concrete strength; construction; cooling tower; failure; hyperbolic shell; shell; *NBSIR 78-1578*.

Collection efficiency; quantum efficiency; silicon photodiode; surface recombination; 19738.

Collector efficiency; comparison German BSE vs ASHRAE 93-77 test procedures; environmental simulation for solar collector testing; optical and thermal loss characteristics of solar collectors; solar collectors; wind speed and sky temperature effects on solar collector performance; 19239.

Collector efficiency; comparison German BSE vs ASHRAE 93-77 test procedures; environmental simulation for solar collector testing; optical and thermal loss characteristics of solar collectors; solar collectors; wind speed and sky temperature effects on solar collector performance; 19325.

Collector installation; field survey; guidelines; low-sloped roofs; roofing performance; solar collectors; *TN1134*.

Collector insulation; insulation; solar collector; standard insulation test methods; accelerated aging; *NBSIR 79-1908*.

Collector rating; environmental influence; outdoor testing; solar collectors; solar simulators; thermal testing; ASHRAE Standard 93; 19366.

College of American Pathologists; criteria; inspection; inspector's manual; pathology; proficiency testing; standards; accreditation; *SP591*, pp. 71-74 (Aug. 1980).

College of American Pathologists; definitive methods; glucose; human serum; isotope dilution; mass spectrometry; research associate; urea; uric acid; cholesterol; 19706.

Colleges; confidence; criteria; evaluation; hospitals; inspectors; marketing; qualification; re-examination; technicians; accreditation; certification; *SP591*, pp. 3-5 (Aug. 1980).

Collimation; high resolution; image intensifier; image signals; microradiography; monochromatic radiography; real-time radiography; x-ray image magnifier; background scattering; 19863.

Collisional ionization; opto-galvanic spectroscopy; sodium; state specific rate constants; two-photon; 19956.

Collisional redistribution; emission; line shape; radiative damping; absorption; 19710.

Collision-induced; induced dipoles; infrared absorption; Raman spectrum; spectra; transient dipoles; anisotropic polarizability; 19414.

Collision-induced spectra; dielectric virial; intermolecular transactions; molecular constance; spectral shape; coefficient induced dipoles; 19413.

Collision integral; dilute gas; kinetic perturbation theory; kinetic theory; nonequilibrium perturbation theory; perturbation theory; soft spheres; transport coefficients; Boltzmann equation; 19866.

Collision physics; dimer lasers; energy transfer; lasers; calcium; 19775.

Collision probability; probability distribution; sensitivity analysis; separation standard; vertical error; vertical overlap; air safety; *NBSIR 80-1990*.

Collisions; electron-molecule; exchange potentials; model potential; 19747.

Collision strength; effective Gaunt-factor; electron impact excitation; magnesium sequence; zinc sequence; beryllium sequence; 19353.

Color; colorimetry; fluorescent; fluorescent specimens; measurement; *NBS-GCR-79-185*.

Color; environmental psychology; illumination; perception; questionnaires; research methodology; sensory environment; social sciences; thermal environment; architecture; audition; built environment; *SP474*.

Color centers; darkening of crystals; dosimetry; electron dosimetry; F-centers; gamma-ray dosimetry; lithium fluoride; M-centers; megard dosimetry; N-centers; radiation darkening; radiation processing; R-centers; absorption spectroscopy; alkali halides; 19352.

Colorimetry; fluorescent; fluorescent specimens; measurement; color; *NBS-GCR-79-185*.

Column spreading; GPC; liquid size exclusion chromatography; narrow fractions; polydispersity; recycle GPC; recycle liquid size chromatography; anionic polystyrenes; 19426.

Combination reaction; discharge; hydrogen atoms; nitrogen atoms; 19716.

Combinatorial entropy; equation of state; interfacial tension; lattice fluid; miscibility; spinodal; chemical potential; 19652.

Combinatorial optimization; high-speed rail; mathematical models; modal split; network analysis; benefit-cost analysis; *NBSIR 79-1724*.

Combined analysis; electron scattering; high accuracy; low and high momentum transfer; rms radius; carbon; 19374.

Combustibles; ferrous scrap; resource recovery; temperature; test procedure; time; 19285.

Combustion; decomposition; degradation; electron capture; gas chromatography; infrared spectroscopy; mass spectroscopy; phosgene; polymer; poly(vinyl chloride); PVC; pyrolysis; carbonyl chloride; 19503.

Combustion; decomposition; free radicals; gas phase; hydrocarbons; hydrogen; nitrogen; oxygen; rate of reaction; sulfur; Arrhenius parameters; chemical kinetics; *NSRDS-67*.

Combustion; decomposition; free radicals; gas phase; hydrocarbons; hydrogen; nitrogen oxygen; rate of reaction; sulfur; Arrhenius parameters; chemical kinetics; *NBSIR 80-2118*.

Combustion; fatality ( $LC_{50}$ ); hydrogen cyanide; incapacitation; inhalation; test method; toxicology; *NBSIR 80-2077*.

Combustion; fire; heat release; oxygen consumption; polymers; 19322.

Combustion; flames; free radicals; medical physics; spectroscopy; Broida; 19680.

Combustion; laser; photochemistry; radical; chain reaction;

19198.

- Combustion; methyl radicals; modeling; oxidation; oxygen; rate constant; atmospheric reactions; 19149.
- Combustion measurements; convolution algorithm; diffusion jet; laser diagnostics; reconstruction algorithm; tomography; absorption measurement; 19822.
- Combustion products; detection; fire hazards; fire modeling; fire protection; fire research; fire suppression; human behavior in fires; physics of fire; toxicity of combustion products; chemistry of fire; *NBSIR 80-2127*.
- Command codes; disk drives; Federal Information Processing Standard; format track; operational specification; rotating mass storage subsystems; sense information; status byte; *FIPS PUB 63*.
- Command language; interaction language; language transformation; language uniformity; user-computer interaction; user-oriented system design; bibliographic retrieval systems; *SP500-63*.
- Command languages; communications; computer access; computer networks; minicomputers; protocols; user interfaces; *SP500-68*.
- Commercial buildings; economic feasibility; economic optimization; solar energy systems; active solar energy; break-even analysis; building economics; 19350.
- Commercial buildings; investment analysis; life-cycle cost analysis; passive solar energy; retrofit; revitalization; solar energy systems; benefit-cost analysis; building economics; *BSS125*.
- Commissioning dosimetry; dosimetry; ferrous sulfate dosimeter; gamma radiation; process control; quality control; radiation sterilization; radiochromic dye dosimeter; red Perspex dosimeter; absorbed dose; ceric sulfate dosimeter; cobalt-60 source; 19343.
- Committee; concentration; department; formaldehyde; formaldehyde-based chemicals; formaldehyde level; standards; urea-formaldehyde resins; *SP586*, pp. 253-258 (June 1980).
- Common command language; communication protocols; computer network protocols; feature analysis; file access function; file manipulation function; network architecture; *NBS-GCR-80-256*.
- Common data formatting; Experimental Technology Incentives Program; hearing procedures; regulatory lag; utility commissions; caseload management; case scheduling; *NBS-GCR-ETIP 79-72*.
- Communication; gamma-ray measurement; human serum; industrial development; industrial furnace; measurement; polarized electrons; secondary standards; signs; symbols; antifouling coating; *DIM/NBS 64*, No. 2, 1-36 (1980).
- Communication protocol; file transfer protocol; protocol specification; readability analysis; service specification transport protocol; verification; alternating bit protocol; *NBS-GCR-80-281*.
- Communication protocols; computer network protocols; design specification; formal specification; network architecture; networking; session protocols; transport protocols; *NBS-GCR-80-246*.
- Communication protocols; computer network protocols; feature analysis; file access function; file manipulation function; network architecture; common command language; *NBS-GCR-80-256*.
- Communication protocols; computer network protocols; feature analysis; network architecture; networking; session protocol; transport protocols; *NBS-GCR-80-245*.
- Communication protocols; computer network protocols; network architecture; networking; protocol design specification; session protocols; transport protocols; *NBS-GCR-80-289*.
- Communications; Computer-Based Message Systems; computer based office systems; office automation; CBMS; *NBS-GCR-80-210*.
- Communications; comparative study; local area network; performance; *SP500-65*, pp. 87-97 (Oct. 1980).
- Communications; computer access; computer networks; minicomputers; protocols; user interfaces; command languages; *SP500-68*.
- Communications; computer communications; computer networks; data communications; data networks; local area networks; networks; 19125.
- Communications; evacuation; fire alarms; fire safety; human behavior; human factors; panic; safety; smoke; symbols; *NBSIR 80-2070*.
- Communications; fiber optics; guided wave transmission; optical cable; optical communication; optical fiber; optical fiber waveguide; optical transmission; optical waveguide; telecommunications; waveguide; 19495.
- Communications; navigation; precise time; precision oscillators; atomic clocks; 19439.
- Communications equipment standard; compatibility; interchangeability; law enforcement; microphone cable; microphone connector; mobile FM transceiver; 19701.
- Communications networks; CROSSFIRE; link protocols; local survivability; *NBSIR 80-2149*.
- Communications security; computer security; cryptography; Data Encryption Standard; in-service testing; maintenance tests; Monte-Carlo testing; stuck-fault testing; test cases; validation vs. maintenance; *SP500-61*.
- Communications security; computer security; cryptography; encryption standard; interface requirements; Monte-Carlo testing; testbed; test cases; validating correctness; *SP500-20, Revised 1980*.
- Communications technology; computer networks; computer technology; data entry; distributed processing; Educational Resources Information Center (ERIC); information systems; intelligent terminals; mass storage technology; microfiche; micrographics; *NBSIR 80-2005*.
- Community noise; measurement errors; noise; noise exposure; sampling (temporal); statistics; time-varying signals; 19116.
- Compact range; data; daylighting; energy; environmental; shale oil; SRM; weights and measures; x-ray exams; *DIM/NBS 64*, No. 6, 1-24 (1980).
- Compact tabulation; critical evaluation; hydrogen through iron; selected transition probabilities; atomic oscillator strengths; 19824.
- Comparative study; local area network; performance; communications; *SP500-65*, pp. 87-97 (Oct. 1980).
- Comparison; existing buildings; housing codes; model codes; performance levels; regulations; rehabilitation; code provisions; *SP586*, pp. 117-133 (June 1980).
- Comparison; performance of computer systems; UNIX; upgrading changes; *SP500-65*, pp. 233-243 (Oct. 1980).
- Comparison; total neutron spectra; Al and Nb; *SP594*, pp. 73-77 (Sept. 1980).
- Comparison German BSE vs ASHRAE 93-77 test procedures; environmental simulation for solar collector testing; optical and thermal loss characteristics of solar collectors; solar collectors; wind speed and sky temperature effects on solar collector performance; collector efficiency; 19239.
- Comparison German BSE vs ASHRAE 93-77 test procedures; environmental simulation for solar collector testing; optical and thermal loss characteristics of solar collectors; solar collectors; wind speed and sky temperature effects on solar collector performance; collector efficiency; 19325.
- Comparison neutron yields; GELINA; HELIOS; KFK; ORELA; PSR; "white" neutron sources; WNR; *SP594*, pp. 920-928 (Sept. 1980).
- Comparisons to  $^{235}\text{U}(\text{n},\text{f})$  and  $^{252}\text{Cf}(\text{sf})$ ; experimental prompt neutron spectra; fermi-gas model; fission calculation of prompt fission neutron spectrum as function of fissioning nucleus and excitation energy; *SP594*, pp. 788-792 (Sept. 1980).
- Comparison to experimental data; coupled channels model calculation; nuclear reactions; *SP594*, pp. 52-57 (Sept. 1980).
- Comparison with calculated excitation functions; inferred level cross sections for 22 states; measured  $\sigma_{\gamma}(\text{E}_{\gamma}, 125^{\circ})$ ; nuclear reactions  $^{232}\text{Th}(\text{n},\text{n}'\gamma)$ ; time-of-flight; *SP594*, pp. 685-689 (Sept. 1980).

Comparison with He<sup>3</sup>, Ne; critical anomaly; dielectric constant; differential capacitance cell; SF<sub>6</sub>; 20 microK thermostat; 19484.

Compartment fires; decision analysis; fabric flammability; fire suppression; fire tests; flame research; smoke detectors; toxicity; bibliographies; building fires; cable fires; *NBSIR 80-2114*.

Compartment fires; doors; egress; fire tests; high-rise buildings; leakage; life safety; smoke; smoke movement; stack effects; test methods; building fires; *NBSIR 80-2004*.

Compatibility; interchangeability; law enforcement; microphone cable; microphone connector; mobile FM transceiver; communications equipment standard; 19701.

Competition; Experimental Technology Incentives Program; government policy; innovation; semiconductor industry; technological change; *NBS-GCR-ETIP 80-91*.

Competition; economics of standards; law; standards; antitrust; certification; *NBSIR 79-1921*.

Competitive reactions; complex reactions; heating rate; independent reactions; kinetics; lifetime prediction; nonisothermal kinetics; thermal analysis; activation energy; 19267.

Compilation of solubility data; disproportionation of mercury (I); electromotive force measurements; mercury (I) chloride; solubility; solubility product; standard electrode potentials; standard thermodynamic functions; *JPCRD 9*, No. 4, 1307-1330 (1980).

Complete damping; consistency; coupled channels; integral data; microscopic data analysis; *SP594*, pp. 862-866 (Sept. 1980).

Complexometric titration of uranium and thorium; dissolution of nuclear fuel-cycle materials; half lives plutonium isotopes; plutonium and thorium; plutonium reference materials; assay of uranium; automated controlled-potential analyzer; *SP582*, pp. 129-139 (June 1980).

Complex reactions; decomposition; degradation; durability; heating rates; initial rates; kinetics; lifetime prediction; polystyrene; polyurethane; pyrolysis; stability; thermal analysis; thermogravimetry; accelerated aging; 19752.

Complex reactions; heating rate; independent reactions; kinetics; lifetime prediction; nonisothermal kinetics; thermal analysis; activation energy; competitive reactions; 19267.

Compliance; discriminant analysis; game theory; law enforcement; taxation; utility; audit; behavior; *NBSIR 79-1711*.

Compliance analysis; curved crack profile; double-torsion testing; fracture (materials); fracture toughness; side grooves; three-dimensional crack; torsional beam; 19693.

Compliance analysis; curved crack profile; double-torsion testing; fracture (materials); fracture toughness; side grooves; three-dimensional crack; torsional beam; 19684.

Compliance testing; laboratory criteria; product certification; proficiency testing; quality control; standardization; testing laboratory; accreditation; *NBSIR 79-1956*.

Component level bus; local area networks; microcomputer bus; microcomputer interfacing; microcomputer standards; backplane bus; *NBS-GCR-80-288*.

Component performance standards; energy conservation; housing; building design; building energy performance standards; building standards; *NBSIR 80-2161*.

Components of variance; duplicity; ideal conditions; measurement process; omnifariousness; precision; round robin; routine conditions; variance model; within-laboratory precision; accuracy; between-laboratory precision; *SP591*, pp. 31-40 (Aug. 1980).

Composite; cyanoacrylate; dental alloy; initiator; rator; resin; wear; alloy; base metal; casting; *NBSIR 79-1943*.

Composite; elastic constants; sound velocity; boron-aluminum; 19212.

Composite materials; corrosion fatigue; dislocations; fatigue mechanism; fracture mechanics; mathematical modeling; micromechanics; polymers; quantitative microscopy; slip bands; statistical aspects of fatigue; striations; 19087.

Composite materials; corrosion fatigue; durability; fatigue; fatigue mechanism; fatigue research; fracture mechanics; mathematical modeling; metals fatigue; plastics fatigue; quantitative microscopy; statistical aspects of fatigue; 19448.

Composite restorative resins; dimethylaminogluthethimide; dimethylaminophenylacetic acid and esters; properties of composites; tertiary aromatic amines; amine accelerators; 19072.

Composites; coupling agent; dental adhesion; PolySAM; adsorption; chemisorption; 19658.

Composites; degradation resistance; fiberglass/epoxy; fiber reinforced composites; graphite/polysulfone; orthopedic materials; PECF; polymer matrix; polypropylene; polysulfone; aromatic polyamide fiber; autoclave stability; biomaterial; 19689.

Composites; durability; eutectics; Rayleigh waves; stability; surface anisotropy; 19153.

Composition; crystal structure; grain size; molybdenum thin films; reflectance; chemical vapor deposition; *SP568*, pp. 287-292 (July 1980).

Compound interest; inequalities; rearrangements inequality; arithmetic-geometric mean inequality; 19381.

Compound-nucleus reactions; cross sections; elastic enhancement factors; factorization; Hauser-Feshbach theory; statistical models; width fluctuation correction factor; *SP594*, pp. 762-764 (Sept. 1980).

Comprehensive evaluation; ENDF format; optical-model interpretations; *SP594*, pp. 829-833 (Sept. 1980).

Comprehensive strength of amalgam; density of dental amalgam; dental amalgam; dimensional change in dental amalgam; mercury/alloy ration in dental amalgam; mercury content in dental amalgam; zinc in dental amalgam; 19632.

Compressed gas; corona; electron avalanche; inception voltage; ionization; ion mobilities; partial discharge; photodetachment; space charge; sulfur hexafluoride (SF<sub>6</sub>); uv radiation; 60 Hz ac and dc; 19786.

Compressibility; density; ethylene; melting pressures; PVT; vapor pressure; 19682.

Compressibility; finite elasticity; modulus; rubber; shear; bulk modulus; 19886.

Compressibility; piezoelectricity; plasma; polarization; poly(vinylidene fluoride); pyroelectricity; thermal expansion; charge; 19324.

Compressional (P) modes; cracks; defect characterization; dimensioning; one-transducer technique; shear (S) mode; ultrasonic diffraction; welds; *NBSIR 80-1983*.

Compressive failure; laser damage; plastic flow; sapphire; thermomechanical analysis; *SP568*, pp. 141-149 (July 1980).

Compressive strength; control charts; in-house quality control; quality control system; cement and concrete reference laboratory; cement and concrete testing; *SP591*, pp. 109-123 (Aug. 1980).

Compressive strength; exposure to geothermal fluids; geothermal-well cements; permeability to water; shear-bond strength to steel; splitting tensile strength; *NBSIR 80-2099-2*.

Compressive strength; geothermal well; hydrothermal exposure; splitting-tensile strength; cement; *NBSIR 80-2099-1*.

Compton scattering; gamma rays; pair production; photoelectric absorption; photons; triplet production; x rays; attenuation coefficient; coherent scattering; *JPCRD 9*, No. 4, 1023-1148 (1980).

Compute-and-test loop; CPU transfer rates; I/O performance; overhead CPU; *SP500-65*, pp. 245-254 (Oct. 1980).

Computer; data; digital; Ethernet; local; network; terminal; area; 19126.

Computer; energy; heat transfer; hot water; measurement; modeling; solar; testing; 19375.

Computer; energy; heat transfer; hot water; measurement; modeling; solar; testing; 19459.

Computer; energy; heat transfer; hot water; measurement; modeling; solar; testing; 19498.

Computer; evaluation; Federal Information Processing Standards Publication; measurement; performance; remote batch; selection; service; analysis; *FIPS PUB 72*.

Computer; instrumentation; laboratory automation; scientific

- computation; *19133*.
- Computer access; computer networks; minicomputers; protocols; user interfaces; command languages; communications; *SP500-68*.
- Computer-aided design; computer simulation; fire research; human performance; modeling; regulatory process; simulation; building codes; building fires; *SP586*, pp. 205-224 (June 1980).
- Computer-aided design; environmental psychology; fire research; fire safety; human behavior in fires; modeling technique; programming; simulation of human behavior; architectural research; building fires; *NBSIR 80-1982*.

- Concentration distribution; diffusion; glass-gel boundary; sphere weight gain; 19667.
- Concentrator; electrically heated inlet; gas chromatography; injector; vapor sampler; capillary columns; 19667.
- Concrete; concrete strength; construction; construction loads; cooling tower; dynamic effects; failure; failure investigation; hoisting loads; hyperbolic shell; collapse; *NBSIR 80-2010*.
- Concrete; concrete strength; construction; cooling tower; failure; hyperbolic shell; shell; collapse; *NBSIR 78-1578*.
- Concrete; construction; cooling tower; formwork; hoisting system; regulations; safety; standards; *NBSIR 80-1964*.
- Concrete (prestressed); concrete (reinforced); design (buildings); limit states; loads (forces); masonry; probability theory; reliability; safety; specifications; standards; statistical analysis; steel; structural engineering; timber; aluminum; buildings (codes); *SP577*.
- Concrete (reinforced); creep tests; evaluation; organic coating; pullout tests; reinforcing steels; structural engineering; 19077.
- Concrete (reinforced); design (buildings); limit states; loads (forces); masonry; probability theory; reliability; safety; specifications; standards; statistical analysis; steel; structural engineering; timber; aluminum; buildings (codes); concrete (prestressed); *SP577*.
- Concrete strength; construction; construction loads; cooling tower; dynamic effects; failure; failure investigation; hoisting loads; hyperbolic shell; collapse; concrete; *NBSIR 80-2010*.
- Concrete strength; construction; cooling tower; failure; hyperbolic shell; shell; collapse; concrete; *NBSIR 78-1578*.
- Concrete testing laboratories; field concrete licensing; prequalifying agency; testing agency; accreditation; *SP591*, pp. 156-163 (Aug. 1980).
- Condensation; critical point; diffusion; gaseous; history of science; Kamerlingh Onnes; liquidons; liquids; mixtures; van der Waals; vapors; Andrews; 19932.
- Condensation in walls; effect of moisture on heat transmission; moisture within wood-frame cavity walls; 19147.
- Condensed phase; emission; laser absorption; molecules; site selection; 19111.
- Conducting ceramic; conductivity; diffusion; oxygen conductor; slow transient effect; transport; Y-doped CeO<sub>2</sub>; CeO<sub>2</sub>; 19444.
- Conductivity; diffusion; oxygen conductor; slow transient effect; transport; Y-doped CeO<sub>2</sub>; CeO<sub>2</sub>; conducting ceramic; 19444.
- Conductivity; disordered alloy; localization; phonon; strong scattering; transport anomalies; 19755.
- Conductivity; electrical; electrical conductivity; ferric; ferric/ferrous ratio; ferrous; ionic; ionic conductivity; magnetohydrodynamics iron; MHD; silicates; coal slag; 19576.
- Conductivity anomalies; differential magnetic measurements; geomagnetism; induced currents; Sq current system variations; tectonomagnetism; 19181.
- Conference; fission; fusion; nuclear cross sections; reactors; standards; technology; biomedical; *SP594*.
- Confidence; criteria; evaluation; hospitals; inspectors; marketing; qualification; re-examination; technicians; accreditation; certification; colleges; *SP591*, pp. 3-5 (Aug. 1980).
- Configuration analysis; queuing network modeling; asymptotic bound analysis; benchmark tests; capacity planning; *SP500-65*, pp. 165-171 (Oct. 1980).
- Configuration interaction; energy levels; magnesium; wavelengths; 19556.
- Configuration interaction; energy levels; sodium; wavelengths; aluminum; 19562.
- Configuration interaction theory; perturbations; quantum defect

theory; Rydberg states; spectra; atomic spectroscopy; Cd; 19369.

Configuration mixing; gauge theory; glueball; hyperball; quark; spectroscopy; 19327.

Configuration planning; file assignment problem; optimization; performance evaluation; performance oriented design; queueing networks; capacity planning; *SP500-65*, pp. 129-135 (Oct. 1980).

Confluent hypergeometric functions; error bounds; parabolic cylinder functions; turning points; Whittaker functions; asymptotic expansions; 19773.

Conformal solution theory; corresponding states; critical point; gas/gas equilibria; mixtures; Van der Waals one fluid model; *J. Res.* 85, No. 6, 441-448 (Nov.-Dec. 1980).

Conformal solution theory; mixing rules; mixture; nonequilibrium molecular dynamics; Van der Waals 1 theory; viscosity; computer simulation; 19180.

Conformal solution theory; mixture; molecular dynamics; radial distribution function; soft spheres; computer simulation; 19538.

Conformation; crystal; electron; helix; irrational; Phase II; polytetrafluoroethylene; units per turn; 19797.

Conformationally irregular polymers; Green's functions; molecular vibrations; normal mode calculations; numerical methods; polymer review; Raman and infrared spectroscopy; 19713.

Conglomerates; innovation; invention; large corporations; productivity; small business; 19230.

Congressional Budget Office; interactive systems; user requirements; application prototyping; *SP500-65*, pp. 311-315 (Oct. 1980).

Conical antenna; effective length; FFT; moment method; resistively loaded antenna; TEM horn; time domain measurement; transient response; 19464.

Conjugate gradient algorithm; elliptic partial differential equations; iterative methods for linear algebraic equations; Neumann boundary conditions; sparse matrices; *J. Res.* 85, No. 5, 367-390 (Sept.-Oct. 1980).

Connection; environment; gage element; leads; load; protective coating; resistance; sensitivity change; stability; strain gages; structure; transducers; zero shift; adhesive; backing; 19049.

Consensus standards; development of standards; structural design standards; building regulations; building standards development; 19091.

Consensus standards; measurement technology; photovoltaic energy conversion; photovoltaics; solar cells; test method preparation; *NBSIR 80-2060*.

Conservation; consolidating materials; deterioration of stone; preservation; stone; stone consolidation; *TN1118*.

Conservation; costs; energy; EPCA; residential; usage; appliances; *NBSIR 80-1994*.

Conservation; energy; field survey; insulation; moisture content; residences; retrofit; thermal resistivity; *TN1131*.

Conservation equations; cool-down; numerical solutions; superconducting transmission lines; 19761.

Consistency; coupled channels; integral data; microscopic data analysis; complete damping; *SP594*, pp. 862-866 (Sept. 1980).

Consistency; fission cross section; JENDL-2; nuclear data; optical potential parameter; relative measurement; simultaneous evaluation; absolute measurement; *SP594*, pp. 715-719 (Sept. 1980).

Consolidating materials; deterioration of stone; preservation; stone; stone consolidation; conservation; *TN1118*.

Conspicuity; contrast; energy conservation; illumination; illumination levels; lighting; suprathreshold seeing; visibility; vision; *NBSIR 79-1925*.

Constant current coulometry; low level titration; uranium titration; vanadium (V) titrant; *SP582*, pp. 140-146 (June 1980).

Constitutional supercooling; local equilibrium; perturbation; solidification; solid-liquid interface; stability; alloy; 19748.

Constitution diagram; intermetallic compounds; palladium alloys; phase diagram; phase transformations; tantalum alloys; 19595.

Constitution diagrams; crystal chemistry; intermetallic compounds; niobium alloys; palladium alloys; phase diagrams; 19330.

Constrained polymer; polymer; polymer in a cone; polymer interference; small polymer crystal; surface free energy; *J. Res.* 85, No. 4, 273-282 (July-Aug. 1980).

Constraints on composition; orbital evolution; Saturn's satellites; 19774.

Constriction resistance; contact resistance; electrical connections; 19531.

Constructing program; DBMS benchmarking; interface functions; *SP500-65*, pp. 11-20 (Oct. 1980).

Construction; construction loads; cooling tower; dynamic effects; failure; failure investigation; hoisting loads; hyperbolic shell; collapse; concrete; concrete strength; *NBSIR 80-2010*.

Construction; cooling tower; failure; hyperbolic shell; shell; collapse; concrete; concrete strength; *NBSIR 78-1578*.

Construction; cooling tower; formwork; hoisting system; regulations; safety; standards; concrete; *NBSIR 80-1964*.

Construction; cost estimation; econometric models; economic analysis; engineering economics; mathematical models; program planning; building economics; *NBS-GCR-80-197*.

Construction; excavation; geotechnical engineering; retaining structures; shoring; slope stability; soil classification; soil pressure; soil testing; trenching; braced excavations; *BSS121*.

Construction; excavation; geotechnical engineering; retaining structures; shoring; slope stability; *NBS-GCR-80-202*.

Construction; retaining structures; shoring; slope stability; soil classification; soil pressure; standards; trenching; braced excavation; *BSS127*.

Construction economics; discounting; economics; energy conservation; life-cycle cost; payback; rate-of-return; savings-to-investment ratio; benefit-cost; building design; *SP544*.

Construction industries; dimensional coordination; metric bibliography; metric conversion timetable; metric decision; metric product sizes; metric system (SI); *SP598*.

Construction loads; cooling tower; dynamic effects; failure; failure investigation; hoisting loads; hyperbolic shell; collapse; concrete; concrete strength; construction; *NBSIR 80-2010*.

Construction lumber; construction safety; excavation; hardwood; lumber grading; shoring; softwood; timber engineering; trench bracing; trenching; *BSS122*.

Construction practices; construction safety; excavation; shoring; trenching; *NBSIR 79-1936*.

Construction regulations; construction safety; employee casualties; environmental hazards; human factors; occupational safety; scaffold failures; scaffolds; accidents; accident statistics; *NBSIR 79-1955*.

Construction safety; construction standards; excavation; safety regulations; shoring; trenching; *NBSIR 80-1988*.

Construction safety; design; loads; maintenance; occupational hazards; scaffolds; stiffness; strength; structural safety; work surfaces; codes and standards; *NBSIR 79-1937*.

Construction safety; employee casualties; environmental hazards; human factors; occupational safety; scaffold failures; scaffolds; accidents; accident statistics; construction regulations; *NBSIR 79-1955*.

Construction safety; excavation; hardwood; lumber grading; shoring; softwood; timber engineering; trench bracing; trenching; construction lumber; *BSS122*.

Construction safety; excavation; shoring; trenching; construction practices; *NBSIR 79-1936*.

Construction standards; excavation; safety regulations; shoring; trenching; construction safety; *NBSIR 80-1988*.

Consultant; engineer; equivalent life safety; municipal attorney; product endorsement; professional liability; variances; appeals process; architect; certification; checklists; code official; *SP586*, pp. 45-57 (June 1980).

Consumer; information; label; product; testing; benefits; *NBSIR 80-2016*.

- Consumer affairs; education; electronic devices; International Organization of Legal Metrology; legal metrology; measurement assurance; metrication; model laws and regulations; moisture loss; packaging and labeling; specifications and tolerances; weights and measures; *SP566*.
- Consumer awareness and legality; customer and laboratory responsibilities; Institute of Electrical and Electronic Engineers Specifications; laboratory capabilities; laboratory performance evaluation; manufacturers response to laws and consumers; *SP591*, pp. 131-134 (Aug. 1980).
- Consumer education; energy conservation; feedback; incentives; metering; rate structures; water conservation; *NBSIR 80-2119*.
- Consumer product; laboratory-test development; life cycle; performance; reliability; *19191*.
- Consumer products; life-cycle performance; methodology; reliability; terminology; testing; useful life; *NBSIR 76-1157*.
- Contact angle; critical point; cyclohexane; interface; methanol; phase transition; surface; surface tension; wetting; *19306*.
- Contact resistance; electrical codes; fire safety; glowing electrical connections; house wiring; innovative electrical connections; performance testing; *BSS128*.
- Contact resistance; electrical connections; constriction resistance; *19531*.
- Containment and surveillance; detection probability; evaluation of safeguards effectiveness; waste management; backend facilities; *SP582*, pp. 740-749 (June 1980).
- Contaminants from building materials; engineering and health effects; environmental contaminants; health science; air quality; *19156*.
- Contaminated waste; delayed neutrons; Monte Carlo; spent fuel; assay; *SP582*, pp. 472-496 (June 1980).
- Contention; CSMA; GPSS; local area networks; packet switching; simulation; bus networks; bus performance; computer programs; *SP500-65*, pp. 79-85 (Oct. 1980).
- Continuous monitoring; nondestructive testing; radiography; signal processing; tomography; ultrasonics; automated testing; *19475*.
- Continuum intensity; electron probe; microanalysis; particle analysis x-ray; quantitative analysis; *19679*.
- Continuum model; correction factor; Laplace's equation; nonlinear differential equations; resistivity; spreading resistance; *19796*.
- Continuum model; critical strain; instability point; molecular weight distribution; necking; polyethylene; stress relaxation; uniaxial creep; *19681*.
- Continuum x-ray loss; electron probe; Monte Carlo method for electron trajectories; particle analysis; quantitative analysis; x-ray continuum; backscattered electrons; *19867*.
- Contrast; energy conservation; illumination; illumination levels; lighting; suprathreshold seeing; visibility; vision; conspicuity; *NBSIR 79-1925*.
- Control chart; control limits; corrective action; data validation; precision; proficiency analytical testing; quality control; statistical quality control; accuracy; *SP591*, pp. 104-108 (Aug. 1980).
- Control charts; in-house quality control; quality control system; cement and concrete reference laboratory; cement and concrete testing; compressive strength; *SP591*, pp. 109-123 (Aug. 1980).
- Controllable weak link; cryoelectronic; Josephson effect; nonequilibrium superconductivity; quasiparticle injection; superconducting tunnel junction; superconducting weak link; *19416*.
- Controlled access; identification; passwords; personal authentication; computer networking; computer security; *19825*.
- Controlled doping profile; critical channeling angle; crystallographic orientation effects; ion channeling; random equivalent implants; capacitance-voltage profiling; *19428*.
- Controlled doping profile; critical channeling angle; crystallographic orientation effects; ion channeling; random equivalent implants; capacitance-voltage profiling; *19232*.
- Controlled-potential coulometry; control-potential adjustment; electrical calibration; plutonium; plutonium determination; computer-assisted coulometry; *SP582*, pp. 164-168 (June 1980).
- Control limits; corrective action; data validation; precision; proficiency analytical testing; quality control; statistical quality control; accuracy; control chart; *SP591*, pp. 104-108 (Aug. 1980).
- Controlling dimensions; coordinating sizes; dimensional coordination; metric building design; metric building products; modular coordination; building module; *19516*.
- Control-potential adjustment; electrical calibration; plutonium; plutonium determination; computer-assisted coulometry; controlled-potential coulometry; *SP582*, pp. 164-168 (June 1980).
- Control rod worth; Doppler coefficient; JENDL-1; reaction rate distribution; reaction rate ratio; reactivity worth; sodium void coefficient; structural materials; benchmark tests; *SP594*, pp. 581-585 (Sept. 1980).
- Control units; queueing model; capacity; *SP500-65*, pp. 189-198 (Oct. 1980).
- Convection; field; flame impingement; heat transfer; radiation; temperature; velocity; ceilings; *NBS-GCR-80-251*.
- Convection; gallium; heat capacity; lead-tin alloys; magnetic field effect; phase diagram; potassium-iron-silicon oxides; solidification; surface tension; thermodynamic properties; Auger measurements on liquids; *NBSIR 80-2082*.
- Convection; interface; solidification; solute; alloy; *19264*.
- Convective energy; cotton fabrics; fabrics; heat flux; insulative properties; modacrylics; polyesters; protective clothing; radiant energy; wool fabrics; aramids; burns (injuries); char strength; *19120*.
- Convenient values; metric conversion; preferred dimensions; preferred values; SI units for building; *19519*.
- Convention of the meter; economic benefits; epistemology; measurement system; metric system; SI; base units; *19639*.
- Conversion; data base; data-description; data-dictionary; data-directory; data-manipulation; DBMS; languages; query; *SP500-64*.
- Conversion costs; conversion problems; conversion tools; database management; Federal agencies; language translators; maintenance; portability; *SP500-62*.
- Conversion loss; diode measurement; intermediate-frequency (i-f) output conductance; measurement uncertainties; microwave mixer diodes; modulation; point-contact diodes; reflectometer; return loss; Schottky-barrier diodes; semiconductor diodes; standing-wave ratio (SWR); *SP400-16*.
- Conversion problems; conversion tools; database management; Federal agencies; language translators; maintenance; portability; conversion costs; *SP500-62*.
- Conversion strategies; harmonization; metrication; metric transition; building codes; *SP586*, pp. 227-251 (June 1980).
- Conversion tools; database management; Federal agencies; language translators; maintenance; portability; conversion costs; conversion problems; *SP500-62*.
- Convexity; derivatives; inequalities; intermediate point; mean-value theorem; Taylor's theorem; *19421*.
- Convolution algorithm; diffusion jet; laser diagnostics; reconstruction algorithm; tomography; absorption measurement; combustion measurements; *19822*.
- Coolant; index-matching liquids; nonlinear refractive index; self-focusing; Abbe value; *SP568*, pp. 91-98 (July 1980).
- Cool-down; numerical solutions; superconducting transmission lines; conservation equations; *19761*.
- Cool environments; microclimatic prediction; pedestrian comfort; wind; wind environment; *19106*.
- Cooling; durability/reliability; performance criteria; safety; solar collectors; solar energy; standards; thermal performance; buildings; *SP586*, pp. 151-160 (June 1980).
- Cooling power; dilution refrigerator; liquid He<sup>3</sup>; refrigeration; thermometry; *19074*.
- Cooling time; Cs-134/Cs-137 ratios; Pu/U; spent fuel; Zr-95/Cs-

137; burn-up; *SP582*, pp. 509-516 (June 1980).

Cooling tower; dynamic effects; failure; failure investigation; hoisting loads; hyperbolic shell; collapse; concrete; concrete strength; construction; construction loads; *NBSIR 80-2010*.

Cooling tower; failure; hyperbolic shell; shell; collapse; concrete; concrete strength; construction; *NBSIR 78-1578*.

Cooling tower; formwork; hoisting system; regulations; safety; standards; concrete; construction; *NBSIR 80-1964*.

Cool stars; radiation pressure; stellar winds; ultraviolet spectra; *19095*.

Coordinate system; elevation; Federal Information Processing Standard; geographic point location; latitude; Latitude and Longitude; longitude; mapping; State Plane Coordinate System; surveying; Universal Transverse Mercator (UTM); *FIPS PUB 70*.

Coordinating sizes; dimensional coordination; metric building design; metric building products; modular coordination; building module; controlling dimensions; *19516*.

Coordination complex; metalloenzymes, single crystal; 12-membered cage, x-ray diffraction;  $((C_7H_7)_3P)_4Cu_4W_2O_{28}S_6$ ; *19173*.

Coordination compounds; enthalpimetry; glass processing; instrumentation; paper technology; polymer ignition; rubber processing; thermal analysis; thermogravimetry; adsorbents; chemical processing; *SP580*.

Coordination polyhedra; crystal structure; thallium lead chloride;  $Tl_3PbBr_5$ ;  $Tl_3PbCl_5$ ; cation disorder; *19624*.

Coordinator; industrial hygiene laboratories; laboratory; PAT; performance; personnel; proficient; quality control; reaccreditation; site visit; accreditation; accreditation committee; American Industrial Hygiene Association; *SP591*, pp. 67-70 (Aug. 1980).

Copper; copper alloys; friction; microstructure; solid contact; wear; *19708*.

Copper; Debye temperature; elastic constants; polycrystals; sound velocities; tensor-property averaging; *19696*.

Copper; dry sliding wear; lubricated sliding wear; wear; wear debris; abrasive wear; *19960*.

Copper; ESCA; gold; relative intensities; round robin; x-ray photoelectron spectroscopy; binding energies; *19202*.

Copper; electron microscopy; erosion; impingement erosion; metal erosion; wear; *19941*.

Copper; electron microscopy; friction; metals; plastic deformation; steel; surfaces; wear; wear debris; *NBSIR 80-2058 (ONR)*.

Copper; erosive wear; scanning electron microscopy; transmission electron microscopy; wear; abrasive wear; *19958*.

Copper; hardness testing; Knoop; microhardness; nondestructive testing; brass; *19849*.

Copper; impedance measurements; noise measurements; pitting; potentiostat; aluminum; *19572*.

Copper alloys; corrosion behavior; creep properties; dental amalgam; manganese alloys; marginal stability; silver alloys; *19247*.

Copper alloys; diffusion; domain growth; gold alloys; ordered alloys; antiphase domains; *19851*.

Copper alloys; friction; metallic materials; microstructure; sliding wear; wear; wear models; *19826*.

Copper alloys; friction; microstructure; solid contact; wear; copper; *19708*.

Copper crystal; fatigue; persistent slip band; plastic strain; random cycling; single crystal copper; *19694*.

Copper wire; cross linking; dose distribution; dosimetry; electron beams; isodose curves; polyethylene; polyvinyl butyral; radiation curing; radiation processing; radiochromic dye film; wire and cable; *19333*.

Core excitation; electron correlation; heat pipe; lithium vapor; partial photoionization cross section; synchrotron radiation; absorption cross section; *19276*.

Core-excited states; yrast states; atomic transition probabilities; beam-foil method; cascading; *19347*.

Core-holes; mixed-valence; photoionization; resonance; ytterbium; Auger; *19853*.

Core level; photoemission; transition metal; *19385*.

Corona; electron avalanche; inception voltage; ionization; ion mobilities; partial discharge; photodetachment; space charge; sulfur hexafluoride ( $SF_6$ ); uv radiation; 60 Hz ac and dc; compressed gas; *19786*.

Corona; partial-discharge; point-plane electrodes; pulse height distributions;  $SF_6$ ;  $SF_6-N_2$  mixtures; *19785*.

Correction factor; depth profiling; Laplace's equation; local slope analysis; multilayer analysis; resistivity; sheet resistance; spreading resistance; *19703*.

Correction factor; Laplace's equation; nonlinear differential equations; resistivity; spreading resistance; continuum model; *19796*.

Corrections; energy distribution; finite geometry; Monte Carlo method; multiple scattering; neutron; scattering; angular distribution; computer programs; *SP594*, pp. 504-508 (Sept. 1980).

Correction to mass measurements; error checking; FORTRAN program; least squares solution; mass calibration; mass measurement; calibration report; *TN1127*.

Corrective action; data validation; precision; proficiency analytical testing; quality control; statistical quality control; accuracy; control chart; control limits; *SP591*, pp. 104-108 (Aug. 1980).

Correlation; critical evaluation; electrolyte theories; excess Gibbs energy; models; osmotic coefficient; polyvalent electrolytes; solutions; thermodynamic properties; activity coefficient; *19919*.

Correlation length; critical region equation of state; critical viscosity enhancement; steam; viscosity; water; water vapor; *JPCRD 9*, No. 4, 1255-1290 (1980).

Correlation length; mean field; sum rule; susceptibility; three coexistence phases; tricritical point; *19135*.

Correlation model; glass transition; pressure; ruby  $R_1$  linewidth; viscosity; *19068*.

Corresponding states; critical point; gas/gas equilibria; mixtures; Van der Waals one fluid model; conformal solution theory; *J. Res. 85*, No. 6, 441-448 (Nov.-Dec. 1980).

Corrosion; corrosion noise; electrochemistry; polarization techniques; underground corrosion; *NBSIR 80-2083*.

Corrosion; electrochemical noise; instrumentation; iron; nickel; potentiostat; aluminum; *19878*.

Corrosion; elevated temperature; heat transfer; liquid flow rate; solar-heat transfer liquid containment; stagnation; *NBSIR 79-1919*.

Corrosion; measurements; metals; standards; wear; *19950*.

Corrosion behavior; creep properties; dental amalgam; manganese alloys; marginal stability; silver alloys; copper alloys; *19247*.

Corrosion fatigue; dislocations; fatigue mechanism; fracture mechanics; mathematical modeling; micromechanics; polymers; quantitative microscopy; slip bands; statistical aspects of fatigue; striations; composite materials; *19087*.

Corrosion fatigue; durability; fatigue; fatigue mechanism; fatigue research; fracture mechanics; mathematical modeling; metals fatigue; plastics fatigue; quantitative microscopy; statistical aspects of fatigue; composite materials; *19448*.

Corrosion-fatigue; fatigue; stainless steel; surgical implant metals; titanium alloy; cobalt-chromium alloy; *19100*.

Corrosion in concrete; corrosion of steel; polarization technique; rebar corrosion; bridge deck corrosion; *NBSIR 80-2012*.

Corrosion inhibition; ion implantation; laser damage; mirror surfaces; *SP568*, pp. 187-193 (July 1980).

Corrosion inhibitor; corrosion mechanisms; ellipsometry; simulated paint films; chromates; coated metals; *19659*.

Corrosion mechanisms; ellipsometry; simulated paint films; chromates; coated metals; corrosion inhibitor; *19659*.

Corrosion noise; electrochemistry; polarization techniques; underground corrosion; corrosion; *NBSIR 80-2083*.

Corrosion of steel; polarization technique; rebar corrosion;

- bridge deck corrosion; corrosion in concrete; *NBSIR 80-2012*.  
Corrosion rate measurement; polarization; carbon steel; chronopotentiometry; 19840.
- Cost; discounting; economic analysis; inflation; life-cycle cost; present worth analysis; recommended practice; benefit-cost analysis; building economics; buildings; building systems standard; *NBSIR 80-2040*.
- Cost analysis; decision analysis; dielectric fluids; fire safety; flammable liquids; standards; transformers; *NBS-GCR-80-198*.
- Cost benefit analysis; cost effectiveness; fire departments; fire losses; fire models; fire protection; marine transportation; merchant vessels; shipboard fires; *NBS-GCR-79-173*.
- Cost components; data analysis; data collection; demonstration; economic analysis; energy conservation; insulation; low-income housing; statistics; unit costs; weatherization; building economics; *NBSIR 80-2167*.
- Cost-effective; energy conservation; investment problems; life-cycle costing; buildings; 19102.
- Cost effectiveness; economic evaluations; energy conservation; Federal energy management program; life-cycle costing; public buildings; renewable energy; solar energy; solar photovoltaic; *H135*.
- Cost effectiveness; economics; energy conservation; internal rate of return; life-cycle costing; marginal analysis; optimal design; residential buildings; space cooling; space heating; building envelope; 19235.
- Cost effectiveness; environmental laboratories; licensure; performance evaluation; physician's office laboratories; proficiency testing; public health; recombinant DNA; registration and approval; voluntary standards; clinical laboratories; *SP591*, pp. 63-66 (Aug. 1980).
- Cost effectiveness; fire departments; fire losses; fire models; fire protection; marine transportation; merchant vessels; shipboard fires; cost benefit analysis; *NBS-GCR-79-173*.
- Cost effectiveness; typewriter evaluation; typewriter productivity; typewriters; word processing; automatic typewriters; 19565.
- Cost estimation; econometric models; economic analysis; engineering economics; mathematical models; program planning; building economics; construction; *NBS-GCR-80-197*.
- Cost estimation; economic analysis; engineering economics; housing; mathematical programming; optimization; rehabilitation; renovation; applied economics; building codes; building economics; *BSS129*.
- Costs; economic; prices; testing; accreditation; *SP591*, pp. 92-96 (Aug. 1980).
- Costs; economic analysis; energy consumption; HVAC systems; Total Energy systems; cogeneration; *NBS-GCR-80-164*.
- Costs; economic analysis; HVAC systems; Total Energy system; cogeneration; *NBS-GCR-80-165*.
- Costs; economics; evaluation; literature search; regulation; standardization; standards; benefit-cost analysis; benefit-risk analysis; benefits; bibliography; *NBSIR 80-2015*.
- Costs; energy; EPCA; residential; usage; appliances; conservation; *NBSIR 80-1994*.
- Cotton fabrics; fabrics; heat flux; insulative properties; modacrylics; polyesters; protective clothing; radiant energy; wool fabrics; aramids; burns (injuries); char strength; convective energy; 19120.
- Coulomb effects; intermediate energy calculation; three-nucleon photodisintegration of  $^3\text{He}$ ; 19557.
- Coulomb energy; d-electrons; Mossbauer isomer shifts; transition metals; alloy phase formation; charge transfer; 19567.
- Coulometer; coulometry; electrochemistry; Faraday constant; silver; 19472.
- Coulometry; electrochemical equivalent; electrochemistry; Faraday; fundamental constants; silver; *J. Res.* 85, No. 3, 175-191 (May-June 1980).
- Coulometry; electrochemistry; Faraday constant; silver; coulometer; 19472.
- Coulometry; Faraday constant; 4-aminopyridine; 19814.
- Counter; estimates; gamma rays; neutrons; nondestructive assay; plutonium waste; safeguards; uranium waste; verification; *SP582*, pp. 622-632 (June 1980).
- Countercheck reference tests; critical control features; feedback; implementation; inspections; laboratory accreditation; laboratory performance evaluation; noncompliance; proficiency; *SP591*, pp. 79-84 (Aug. 1980).
- Coupled-channel; deformation parameter; differential cross sections; DWBA; elastic scattering; global optical potential; inelastic scattering; neutron; *SP594*, pp. 146-149 (Sept. 1980).
- Coupled-channel methods; Hauser-Feshbach; neutron cross-section calculations; preequilibrium; *SP594*, pp. 333-335 (Sept. 1980).
- Coupled channels; integral data; microscopic data analysis; complete damping; consistency; *SP594*, pp. 862-866 (Sept. 1980).
- Coupled channels and Hauser-Feshbach analysis; optical model; *SP594*, pp. 78-79 (Sept. 1980).
- Coupled channels model calculation; nuclear reactions; comparison to experimental data; *SP594*, pp. 52-57 (Sept. 1980).
- Coupled growth; eutectic solidification; metallic glasses; palladium-copper-silicon alloys; rapid solidification; amorphous alloys; 19891.
- Coupled rod oscillation; crystalline polymers; elastic modulus; helical chains; inelastic neutron scattering; laser-Raman scattering; polyethylene; polyethyleneoxide; polyhexafluoropropylene; polyoxymethylene; polypropylene; polytetrafluoroethylene; accordion type oscillation; 19937.
- Coupling; magnetic inspection; nondestructive testing; pulsed mode; rail test car; railroad rail; sensitivity; ultrasonic inspection; 19885.
- Coupling agent; dental adhesion; PolySAM; adsorption; chemisorption; composites; 19658.
- Coupling agents; dentin; mordants; smear layer; acid etch; adhesion; 19329.
- Coupling constants; mass spectrometry; nitrogen-15 NMR; proton NMR; xanthene-0-yl derivatives of urea; carbon-13 NMR; chemical shifts; 19312.

chi-square; data consistency; *SP594*, pp. 182-186 (Sept. 1980).

Data transfer; data transformation; data translation; network operating systems; computer networking; data conversion; *SP500-71*.

Data transformation; data translation; network operating systems; computer networking; data conversion; data transfer; *SP500-71*.

Data translation; network operating systems; computer networking; data conversion; data transfer; data transformation; *SP500-71*.

Data transparency; interoperability; teleprocessing; transmission; advanced data communication control procedures; ANSI X3.66; bit-oriented; code independence; data; data link control procedures; *FIPS PUB 71*.

Data unfolding; energy spectra; integral experiment; pulse-shape discrimination; *SP594*, pp. 591-595 (Sept. 1980).

Data validation; precision; proficiency analytical testing; quality control; statistical quality control; accuracy; control chart; control limits; corrective action; *SP591*, pp. 104-108 (Aug. 1980).

Daylighting; energy; environmental; shale oil; SRM; weights and measures; x-ray exams; compact range; data; *DIM/NBS 64*, No. 6, 1-24 (1980).

DBMS; languages; query; conversion; data base; data-description; data-dictionary; data-directory; data-manipulation; *SP500-64*.

DBMS benchmarking; interface functions; constructing program; *SP500-65*, pp. 11-20 (Oct. 1980).

D-c MOSFET dopant profile method; dopant profile method; MOSFET, d-c; *19425*.

Dc transmission; deep-level measurements; energy conservation; measurement methods; neutron transmutation doped silicon; power-device grade silicon; resistivity variations; silicon; spreading resistance measurements; thermally stimulated measurements; *NBSIR 80-2061*.

DES; encryption; modes of operation; computer security; cryptography; data security; *NBSIR 80-2019*.

Death; doors; egress; evacuation; fire alarm systems; fire departments; fire fighters; flashover; nursing homes; nursing staff; patients; room fires; smoke detectors; *NBS-GCR-80-191*.

Debye temperature; elastic constants; polycrystals; sound velocities; tensor-property averaging; copper; *19696*.

Debye theory; equation of state; ideal gas; Van der Waals equation; virial coefficient; virial equation; *19772*.

Decay heat; evaluation; fission-products; *SP594*, pp. 667-671 (Sept. 1980).

Decay heat; fission beta energy; fission gamma energy; *SP594*, pp. 25-33 (Sept. 1980).

Decibal levels; fire departments; frequency distribution; noise (sound); sleep; smoke detectors; wakefulness; adults; alarm responses; auditory perception; *NBS-GCR-80-284*.

Decision analysis; dielectric fluids; fire safety; flammable liquids; standards; transformers; cost analysis; *NBS-GCR-80-198*.

Decision analysis; fabric flammability; fire suppression; fire tests; flame research; smoke detectors; toxicity; bibliographies; building fires; cable fires; compartment fires; *NBSIR 80-2114*.

Decision table; interval adjustment; measurement; metrology; PMTE; recall intervals; calibration interval; calibration interval algorithms; calibration requirements; *NBS-GCR-80-283*.

Decision table; network; performance requirements; software; specifications; standards; systems analysis/engineering; codes; computer program; *NBS-GCR-80-258*.

Decision table; network; performance requirements; software; specifications; standards; systems analysis/engineering; codes; computer program; *NBS-GCR-80-257*.

Decision tables; information networks; modeling; standards; standards-writers; systems analysis; building standards; classification; *NBSIR 80-1979*.

Decision theory; editing; networks; specifications standards; systems analysis/engineering; codes; *NBS-GCR-80-259*.

Decomposition; decyclization; isomerization; olefins; shock tube; 1-hexene; allylic resonance energy; allyl radicals; biradical; cyclohexane; *19784*.

Decomposition; degradation; durability; heating rates; initial rates; kinetics; lifetime prediction; polystyrene; polyurethane; pyrolysis; stability; thermal analysis; thermogravimetry; accelerated aging; complex reactions; *19752*.

Decomposition; degradation; electron capture; gas chromatography; infrared spectroscopy; mass spectroscopy; phosgene; polymer; poly(vinyl chloride); PVC; pyrolysis; carbonyl chloride; combustion; *19503*.

Decomposition; disproportionation; H-transfer; initiation; isomerization; *n*-alkane pyrolysis; rate constants; recombination; addition; chemical kinetics; *JPCRD 9*, No. 3, 523-560 (1980).

Decomposition; free radicals; gas phase; hydrocarbons; hydrogen; nitrogen; oxygen; rate of reaction; sulfur; Arrhenius parameters; chemical kinetics; combustion; *NSRDS-67*.

Decomposition; free radicals; gas phase; hydrocarbons; hydrogen; nitrogen oxygen; rate of reaction; sulfur; Arrhenius parameters; chemical kinetics; combustion; *NBSIR 80-2118*.

Decomposition temperatures; polymeric solids; thermogravimetry; *SP580*, pp. 89-97 (Aug. 1980).

Decyclization; isomerization; olefins; shock tube; 1-hexene; allylic resonance energy; allyl radicals; biradical; cyclohexane; decomposition; *19784*.

Deduced coupled-channel optical potential parameters; enriched targets; nuclear reactions; quadrupole and hexadecapole deformation parameters; calculated direct-interaction and compound-nucleus cross sections; *SP594*, pp. 672-676 (Sept. 1980).

Deduced  $J$ ,  $\pi$ ,  $B(CL)$ ; enriched  $^{22}\text{Ne}$  target;  $E = 60$  to  $110$  MeV; measured  $\sigma(E)$  at  $110^\circ$  and  $128^\circ$  up to  $8.6$  MeV in excitation energy; nuclear reactions; *19691*.

Deduced levels; multilevel R-matrix analysis; *SP594*, pp. 496-499 (Sept. 1980).

Deep-level measurements; energy conservation; measurement methods; neutron transmutation doped silicon; power-device grade silicon; resistivity variations; silicon; spreading resistance measurements; thermally stimulated measurements; thyristor materials measurements; *NBSIR 80-2061*.

Deep level studies; ion implantation; predeposition technique; sulfur impurities in silicon; thermally-stimulated measurements; chemical impurities; *19429*.

Deep level studies; ion implantation; predeposition technique; sulfur impurities in silicon; thermally-stimulated measurements; chemical impurities; *19231*.

Deep level transient spectroscopy; electrical properties; electronics; electron irradiation. hole mobility; integrated circuits; ion knock-on effect; ion microprobe mass analysis; Irvin's curves; isothermal transient capacitance method; linewidth measurements; *SP400-45*.

Defect; diffuse scattering; neutron; niobium; strain; alloy; *19307*.

Defect; KBr; KCN; libration; translation-rotation coupling; tunnelling; *19612*.

Defect characterization; dimensioning; one-transducer technique; shear (S) mode; ultrasonic diffraction; welds; compressional (P) modes; cracks; *NBSIR 80-1983*.

Defect characterization; flaws; materials characterization; non-destructive testing; residual stress; ultrasonics; velocity; attenuation; *SP596*.

Defects; neutron transmutation doping; power device materials; radiation damage; silicon; thyristors; *SP400-60*.

Defining temperature fixed point; gallium; gallium melting-point temperature; gallium triple-point temperature; secondary temperature fixed point; thermometry; *19058*.

Definitions; directory of accreditation systems; international; laboratory accreditation; legal constraints; *SP591*, pp. 173-178 (Aug. 1980).

Definitions; flux phenomena; Josephson phenomena; stabilization; superconductors; terminology; critical parameters; *19539*.

Definitions; fracture testing; nomenclature; symbols; terminology; terms; *19892*.

Definitive method; electrolytes; flame atomic absorption spec-

- troscopy; interlaboratory testing; precision; reference method; semiautomated pipetting; serum lithium analysis; statistical analysis; accuracy; clinical analysis; clinical chemistry; *SP260-69*.
- Definitive method; gas chromatography/mass spectrometry; isotope dilution/mass spectrometry; reference method; statistical analysis; total serum cholesterol; cholesterol; *19554*.
- Definitive methods; environmental measurements; quality assurance; reference methods; standard reference materials; *19574*.
- Definitive methods; glucose; human serum; isotope dilution; mass spectrometry; research associate; urea; uric acid; cholesterol; College of American Pathologists; *19706*.
- Definitive methods; measurement compatibility; protocol; reference methods; SI units; standard reference materials; traceability; *SP582*, pp. 15-24 (June 1980).
- Definitive methods; measurement compatibility; reference methods; standard methods; standard reference materials; *19575*.
- Deflection; dynamic response and gust loads; structural engineering; tall buildings; wind forces; wind pressures; acceleration; buffeting; buildings; buildings (codes); *19121*.
- Deformation; erosion; impact; metals; surfaces; *19936*.
- Deformation parameter; differential cross sections; DWBA; elastic scattering; global optical potential; inelastic scattering; neutron; coupled-channel; *SP594*, pp. 146-149 (Sept. 1980).
- Deformation texture; electron microscopy; grain boundary sliding; plastic deformation; alumina; basal slip; cavitation; *19582*.
- Degradation; durability; heating rates; initial rates; kinetics; lifetime prediction; polystyrene; polyurethane; pyrolysis; stability; thermal analysis; thermogravimetry; accelerated aging; complex reactions; decomposition; *19752*.
- Degradation; electron capture; gas chromatography; infrared spectroscopy; mass spectroscopy; phosgene; polymer; poly(vinyl chloride); PVC; pyrolysis; carbonyl chloride; combustion; decomposition; *19503*.
- Degradation resistance; fiberglass/epoxy; fiber reinforced composites; graphite/polysulfone; orthopedic materials; PEFC; polymer matrix; polypropylene; polysulfone; aromatic polyamide fiber; autoclave stability; biomaterial; composites; *19689*.
- Delayed failure; fracture; mechanical reliability; mechanics; strength; ceramics; crack growth; *19636*.
- Delayed neutron; fission; phonon distribution;  $U_3O_8$ ;  $UO_2$ ; chemical state; *19683*.
- Delayed neutron data; eigenvalue; ENDF/B-IV; integral experiments; reaction rate ratios; reactivity worths; ZPR critical assembly; *SP594*, pp. 297-306 (Sept. 1980).
- Delayed neutrons; fission yield; thermal neutrons; chemical dependence; *SP594*, pp. 105-107 (Sept. 1980).
- Delayed neutrons; Monte Carlo; spent fuel; assay; contaminated waste; *SP582*, pp. 472-496 (June 1980).
- D-electrons; Mossbauer isomer shifts; transition metals; alloy phase formation; charge transfer; Coulomb energy; *19567*.
- Delphi Method; fire safety; health care facilities; hospitals; interior finishes; Life Safety Code; nursing homes; risk analysis; safety equivalency; safety evaluation; smoke detection; automatic sprinklers; building codes; building construction; *NBSIR 78-1555-1*.
- Delta Cephei; H $\alpha$  profiles; *19259*.
- Delta ferrite; ferrite content; fracture; mechanical properties; stainless steel; strength; toughness; welds; cryogenic; *19673*.
- Delta function; hyperviral theorems; *19712*.
- Delta-nucleus interaction; nuclear structure; pion absorption; pion nucleus interaction; pion scattering; baryon resonances; *19221*.
- Demonstration; economic analysis; energy conservation; insulation; low-income housing; statistics; unit costs; weatherization; building economics; cost components; data analysis; data collection; *NBSIR 80-2167*.
- Demonstration program; institutional constraints; solar builder/developer; solar energy; building code; code official; *19729*.
- Demonstration program; institutional constraints; solar builder/developer; solar energy; building code; code official; *SP586*, pp. 181-185 (June 1980).
- Demonstration program; institutional constraints; solar builder/developer; solar energy; building code; code official; *NBSIR 79-1957*.
- Denatured fuel; denatured Pu; nuclear proliferation; once-through cycles; *SP594*, pp. 115-118 (Sept. 1980).
- Denatured fuel; economics; ENDF/B-V; fuel cycle; symbiotic energy system; tritium breeding; cross-section uncertainty; CTR; *SP594*, pp. 839-843 (Sept. 1980).
- Denatured Pu; nuclear proliferation; once-through cycles; denatured fuel; *SP594*, pp. 115-118 (Sept. 1980).
- Denatured uranium-thorium fuel cycles; fuel cycles; nuclear data needs; thorium reactor introduction; thorium reactors; advanced converters; *SP594*, pp. 108-114 (Sept. 1980).
- Densities; equation of state; fluids; orthobaric densities; propane; specific heats; thermodynamic properties; vapor pressures; coexistence boundary; critical point; *19204*.
- Densities; excess volumes; liquid mixtures; LNG components; multicomponent systems; orthobaric; *19537*.
- Densitometer evaluation; uranium and plutonium solutions assay; x-ray absorption-edge densitometry; *SP582*, pp. 633-650 (June 1980).
- Densitometry; gamma-ray NDA; product solutions; reprocessing; transmission-corrected gamma-ray assay; *SP582*, pp. 568-583 (June 1980).
- Densitometry; uranium assay; *SP582*, pp. 324-341 (June 1980).
- Density; electrical conductance; hexafluoroaluminates; metaphosphates; molten salts; molybdates; sulfates; sulfides; surface tension; tungstates; viscosity; carbonates; *JPCRD 9*, No. 4, 831-1022 (1980).
- Density; electrical conductance; molten salts; potassium nitrate; sodium chloride; surface tension; viscosity; calibration-quality standards; *JPCRD 9*, No. 4, 791-830 (1980).
- Density; enthalpy; entropy; equation of state; heat capacity at constant pressure; heat capacity at constant volume; helium; hydrogen; methane; neon; nitrogen; oxygen; thermal conductivity; velocity of sound; viscosity; argon; computer programs; *TN1025*.
- Density; ethylene; melting pressures; PVT; vapor pressure; compressibility; *19682*.
- Density; long-period variable; model; nebosity; R Aquarii; spectrum; temperature; *19507*.
- Density; thermal properties; tissue equivalent plastic; A-150 plastic; calorimeter; *19208*.
- Density fluctuations; Lennard-Jones liquid; liquid rubidium; liquid state; molecular dynamics; velocity autocorrelation function; *19489*.
- Density gradient; equation of state; inhomogeneous fluid; lattice fluid; long-range interactions; surface entropy; Cahn-Hilliard theory; chemical potential; *19653*.
- Density of dental amalgam; dental amalgam; dimensional change in dental amalgam; mercury/alloy ratio in dental amalgam; mercury content in dental amalgam; zinc in dental amalgam; comprehensive strength of amalgam; *19632*.
- Dental; hydroxyapatites; tooth mineral; adhesion; bonding; calcium phosphates; crystal structure; *19262*.
- Dental accomplishments; dental diseases; dental history; dental treatment; prevention of dental diseases; *19396*.
- Dental adhesion; PolySAM; adsorption; chemisorption; composites; coupling agent; *19658*.
- Dental agencies; devices; history; materials; programs; specifications; *SP571*.
- Dental alloy; initiator; rator; resin; wear; alloy; base metal; casting; composite; cyanoacrylate; *NBSIR 79-1943*.
- Dental amalgam; dimensional change in dental amalgam; mercury/alloy ratio in dental amalgam; mercury content in dental amalgam; zinc in dental amalgam; comprehensive strength of amalgam; density of dental amalgam; *19632*.
- Dental amalgam; high-copper alloy; mercury content; creep; *19107*.
- Dental amalgam; manganese alloys; marginal stability; silver

- alloys; copper alloys; corrosion behavior; creep properties; 19247.
- Dental casting techniques; dental die; porcelain fused to metal alloys; casting accuracy; casting ring liners; crown and bridge castings; 19137.
- Dental composite resin restorations; finishability; gelled inorganic "polymers"; microporous filler; system nontoxicity; x-ray opacification; *U.S. Patent 4,217,264*.
- Dental die; porcelain fused to metal alloys; casting accuracy; casting ring liners; crown and bridge castings; dental casting techniques; 19137.
- Dental diseases; dental history; dental treatment; prevention of dental diseases; dental accomplishments; 19396.
- Dental history; dental treatment; prevention of dental diseases; dental accomplishments; dental diseases; 19396.
- Dental materials; gypsums, dental; impression materials, dental; polymers, dental; refractories, dental; specifications, dental; waxes, dental; alloy, base, dental; alloy, gold, dental; amalgam, dental; cements, dental; 19052.
- Dental monomers; initiator systems; organic peroxides; redox reactions; stability; transition metals; accelerators; ambient polymerization; ascorbic acid; 19062.
- Dental treatment; prevention of dental diseases; dental accomplishments; dental diseases; dental history; 19396.
- Dentin; diisocyanates; hydroxyethyl; isocyanato urethane methacrylates; methacrylate; polymerization; synthesis; adhesion; 19136.
- Dentin; mordants; smear layer; acid etch; adhesion; coupling agents; 19329.
- Department; formaldehyde; formaldehyde-based chemicals; formaldehyde level; standards; urea-formaldehyde resins; committee; concentration; *SP586*, pp. 253-258 (June 1980).
- Department of Commerce; integrated circuits; metrology for semiconductors; National Bureau of Standards; photomasking; resistivity; second breakdown; semiconductors; test structures; thermal resistance; very large scale integration; VLSI; wire bonds; *NBSIR 80-2057*.
- Depletable energy; HUD Demonstration Program; passive solar buildings; performance criteria; statistical evaluation; thermal analysis; 19823.
- Depolarization; polarized electron source; polarized photoemission GaAs; spin-exchange scattering; spin polarization; 19078.
- Depolarized light scattering; lattice-gas; Lorentzian shape; oscillatory; parameters; polarizability; rare-gas; Zwanzig-Mori theory; 19756.
- Deposition parameters; index of refraction; absorption coefficient; chalcogenide material; *SP568*, pp. 343-355 (July 1980).
- Deposition technique; environmental stability; masking layer; potassium chloride window; scattering; thallium iodide; antireflective coating; *SP568*, pp. 355-357 (July 1980).
- Depth-dose data; electron bremsstrahlung; electrons; protons; space shielding; computer code; *TN1116*.
- Depth profiling; Laplace's equation; local slope analysis; multi-layer analysis; resistivity; sheet resistance; spreading resistance; correction factor; 19703.
- Derivative lattices; indexing; lattice relationships; lattices; single-crystal methods; twinning; critical evaluation; 19804.
- Derivatives; inequalities; intermediate point; mean-value theorem; Taylor's theorem; convexity; 19421.
- Design; energy conservation; housing codes; regulatory approaches; building code enforcement; buildings; *SP586*.
- Design; geothermal; process; thermodynamics; transport properties; aerospace; data accuracy; *SP590*.
- Design; loads; maintenance; occupational hazards; scaffolds; stiffness; strength; structural safety; work surfaces; codes and standards; construction safety; *NBSIR 79-1937*.
- Design (buildings); limit states; loads (forces); masonry; probability theory; reliability; safety; specifications; standards; statistical analysis; steel; structural engineering; timber; aluminum; buildings (codes); concrete (prestressed); concrete (reinforced); *SP577*.
- Design criteria; disaster; earthquakes; ground motion; seismology; standards; storm surge; structural engineering; structural response; tsunamis; wind loads; winds; accelerograph; codes; *SP560*.
- Design elements; energy performance of windows; window attributes; window design; window design elements; window performance; *SP575*.
- Design methodology; formal specification; formal verification; hierarchical design; programming methodology; security; *SP500-67*.
- Design specification; formal specification; network architecture; networking; session protocols; transport protocols; communication protocols; computer network protocols; *NBS-GCR-80-246*.
- Design standards; economics of standards; health care standards; innovation; performance standards; standards; automobile standards; *NBS-GCR-80-287*.
- Desorption; electron stimulated; 19192.
- Desorption; electron stimulated desorption; ethane; adsorption; angular distribution; cyclohexane; cyclooctane; cyclopropane; 19922.
- Destructive; nondestructive assay; NRC Safeguards; special nuclear material; analyses; *SP582*, pp. 189-191 (June 1980).
- Destructive; nondestructive measurements; nuclear materials; reference materials; traceability; *SP582*, pp. 1-14 (June 1980).
- Detection; deterrence; diversion of nuclear energy; evolution; safeguards performance criteria; safeguards systems; safeguards technology; *SP582*, pp. 670-676 (June 1980).
- Detection; dosimetry; facilities; fluence; flux; monitor; neutron; sources; standardization; calibration; *SP594*, pp. 747-751 (Sept. 1980).
- Detection; fire hazards; fire modeling; fire protection; fire research; fire suppression; human behavior in fires; physics of fire; toxicity of combustion products; chemistry of fire; combustion products; *NBSIR 80-2127*.
- Detection probability; evaluation of safeguards effectiveness; waste management; backend facilities; containment and surveillance; *SP582*, pp. 740-749 (June 1980).
- Detector; intrusion alarm; standard; test method; window foil; alarm; burglar alarm; 19697.
- Detector efficiency; gamma-ray efficiency; Marinelli beaker; Reentrant beaker; semiconductor detector efficiency; standards; 19408.
- Detector intercomparison; optical radiation measurements; photodetector; photometry; radiometry; absolute spectral response; 19908.
- Detector location; false alarms; health care facilities; hospitals; ionization detectors; maintenance; NFPA 101; nursing homes; photoelectric detectors; smoke detectors; surveys; *NBSIR 80-2130*.
- Detectors; extreme ultraviolet radiation; instrumentation; radiometric transfer standards; radiometry; synchrotron radiation; 19664.
- Detectors; irradiance; light source; photodiode; radiometry; calibration; 19592.
- Detector sensitivity; fire detectors; ionization detectors; light scattering detectors; monodisperse aerosols; particle size; photo-electric detectors; smoke detectors; aerosol generators; aerosols; *J. Res.* 85, No. 3, 223-238 (May-June 1980).
- Deterioration of stone; preservation; stone; stone consolidation; conservation; consolidating materials; *TN1118*.
- Determination; dual wavelength; nitric acid; spectrophotometric; uranium; *SP582*, pp. 121-128 (June 1980).
- Determination of structure of carbohydrates; infrared spectra of carbohydrates; interpretation of infrared spectra; plane-polarized radiation; Raman spectra; attenuated total reflection; 19875.
- Deterrence; diversion of nuclear energy; evolution; safeguards performance criteria; safeguards systems; safeguards technology; detection; *SP582*, pp. 670-676 (June 1980).
- Deuterated water; deuterium oxide; photoelectron spectroscopy;

- threshold photoelectron spectroscopy; water; appearance energy; coincident ion mass spectrometry; 19345.
- Deuterium; Franck-Condon Factors; hydrogen; nitrogen; photoelectron spectra; spectroscopy; threshold photoelectron spectroscopy; autoionization; 19183.
- Deuterium; gas chromatography; hydrogen; isotope dilution; microwave plasma; oscillating slit mechanism; 19933.
- Deuterium; quadrupole triplet spectrometer; charged particle reactions; *SP594*, pp. 527-530 (Sept. 1980).
- Deuterium lamps; radiometry; spectral irradiance; standards; vacuum ultraviolet; 19852.
- Deuterium oxide; photoelectron spectroscopy; threshold photoelectron spectroscopy; water; appearance energy; coincident ion mass spectrometry; deuterated water; 19345.
- Developing economies; foreign relations; industrializing nations; international relations; LDC's; measurement services; standardization; AID; assistance; *NBSIR 80-2021*.
- Developing economies; foreign relations; industrializing nations; international relations; measures; weights; weights and measures; AID; assistance; *NBSIR 80-2022*.
- Development; Indonesia; industrialization; instrumentation; less developed country; metrology; standardization; Third World; calibration; *NBSIR 78-1583*.
- Development assistance; Honduras; legal metrology; metrification; metrology; quality assurance; standardization; test laboratories; weights and measures laws; Agency for International Development; *NBSIR 80-1969*.
- Development assistance; industrialization; less developed countries; measurement technology; Pakistan; standardization; Agency for International Development; *NBSIR 80-2051*.
- Development fee; planning cost; Proposition 13; affordable housing; *SP586*, pp. 13-16 (June 1980).
- Development of standards; structural design standards; building regulations; building standards development; consensus standards; 19091.
- Deviation plots; equation of state; helium II; mathematical model; superfluid; thermodynamic properties; computer program; *TN1029*.
- Device measurements; laser scanning; light biasing; metallization; ohmic contacts; reliability; semiconductor measurements; sheet resistance; solar cells; cell cracks; 19435.
- Device measurements; laser scanning; light-biasing; metallization; ohmic contacts; reliability; semiconductor measurements; sheet resistance; solar cell; solar cell measurements; solar cell stability; *NBSIR 80-2027*.
- Device processing; electron devices; integrated circuit fabrication; ion-beam lithography; lithography; oxide layers; radiation absorbed dose; radiation damage; 19753.
- Devices; history; materials; programs; specifications; dental agencies; *SP571*.
- D-hole pairs; photoemission; satellite; 19271.
- Diagnostics; hydrogen; line-broadening; plasma; Stark; Balmer; 19281.
- Diagnostic x-rays; electrical measurements; health; radiation; radiation safety; safety; x rays; calibration; *NBSIR 80-2072*.
- Diamond anvil cell; high pressure; ruby pressure scale; advances; 19467.
- Diamond anvil cell; high pressure physics; perfluoro n-alkanes; phase transition; polytetrafluoroethylene; Raman spectroscopy; 19893.
- Diamond cell; optical microscopy; phase transition; resistivity; x-ray diffraction; cuprous chloride; 19687.
- Diamond pressure cell; radial distribution functions; truncation error; *J. Res.* **85**, No. 2, 99-108 (Mar.-Apr. 1980).
- Diamond single-point machining; dielectrics; infrared optical components; laser damage; optical properties; *SP568*, pp. 199-208 (July 1980).
- Diamond structure; elastic constants; gallium arsenide; indium antimonide; ionicity; optical phonons; Raman scattering; semiconductors; stress; zinc-blende structure; covalent bonding; 19580.
- Diamond turning; infrared windows; laser breakdown; polishing; surface damage; *SP568*, pp. 195-197 (July 1980).
- Diamond turning; laser-induced slip; polishing; ripples; SiC substrates; surface defects; thermal diffusivity; vapor-deposited mirrors; crystalline disorder; Cu mirrors; *SP568*, pp. 175-186 (July 1980).
- Dianion; malononitrile; nonbenzenoid; oxocarbon; salt; synthesis; acid; aromatic; bond-delocalized; croconic; *J. Res.* **85**, No. 2, 73-86 (Mar.-Apr. 1980).
- Dianion; malononitrile; nonbenzenoid; pseudooxocarbons; salt; synthesis; acid; aromatic; bond-delocalized; croconic; 19560.
- Diatomic molecules; electron energy loss spectroscopy; vibrational spectroscopy; adsorption; CO; 19206.
- Diatomic nitrogen; LCAO  $X\alpha$ ; molecular charge density; 19328.
- Didymium glass filters; energy efficiency; inventors; innovation; labels; standards; sulfuric acid; tools; awards; computers; *DIM/NBS 64*, No. 7, 1-28 (1980).
- Dielectrically loaded cavity; frequency stability; frequency standard; hydrogen maser; teflon coating technique; 19515.
- Dielectric coatings; optical coatings; surface analysis; thin film characterization; thin film impurities; Auger analysis; *SP568*, pp. 257-268 (July 1980).
- Dielectric constant; dielectric loss; dielectric temperature dependence; lunar soil; coaxial bead resonance; coaxial resonator; 19252.
- Dielectric constant; dielectric loss; rf and microwave dielectrics; standard dielectric liquids; coaxial line open circuit; coaxial line support bead; 19542.
- Dielectric constant; dielectric properties; dissipation factor; electrical transmission; partial discharges; polymers; precision electric measurements; pulse-height analysis; superconducting transmission; capacitance; cryogenic; *NBSIR 79-1950*.
- Dielectric constant; differential capacitance cell;  $SF_6$ ; 20 microK thermostat; comparison with  $He^3$ , Ne; critical anomaly; 19484.
- Dielectric constant; elasto-optic; electro-optic; photoelastic; piezo-optic; refractive index; relative dielectric impermeability; absorption coefficient; birefringence; crystal optics; 19257.
- Dielectric constant; electrocaloric effect; entropy; ferroelectrics; glass-ceramics; heat switches; polarization; refrigeration; specific heat strontium titanate; ceramics; cryogenics; 19534.
- Dielectric film; dissipation factor; electrode surface; loss angle; phase angle; power factor; surface loss; capacitor; 19066.
- Dielectric fluids; fire safety; flammable liquids; standards; transformers; cost analysis; decision analysis; *NBS-GCR-80-198*.
- Dielectric function; beam deformation; computer simulation; damage morphology; *SP568*, pp. 529-530 (July 1980).
- Dielectric insulation; dielectric oil; impregnation; porosity; porous polymers; buoyant force; 19376.
- Dielectric insulation; oil permeation; porous polymers; specific volume; void filling; void volume; buoyant force; 19882.
- Dielectric loss; dielectric temperature dependence; lunar soil; coaxial bead resonance; coaxial resonator; dielectric constant; 19252.
- Dielectric loss; rf and microwave dielectrics; standard dielectric liquids; coaxial line open circuit; coaxial line support bead; dielectric constant; 19542.
- Dielectric oil; impregnation; porosity; porous polymers; buoyant force; dielectric insulation; 19376.
- Dielectric properties; dissipation factor; electrical transmission; partial discharges; polymers; precision electric measurements; pulse-height analysis; superconducting transmission; capacitance; cryogenic; dielectric constant; *NBSIR 79-1950*.
- Dielectric response theory; photoemission; relaxation energy; surface spectroscopy; chemisorption; 19372.
- Dielectrics; infrared optical components; laser damage; optical properties; diamond single-point machining; *SP568*, pp. 199-208 (July 1980).
- Dielectric temperature dependence; lunar soil; coaxial bead resonance; coaxial resonator; dielectric constant; dielectric loss; 19252.

- Dielectric virial; intermolecular transactions; molecular con-  
stance; spectral shape; coefficient induced dipoles; collision-  
induced spectra; 19413.
- Dielectronic recombination; electron-ion collisions; excitation;  
ionization; 19219.
- Difference equations; electron optics; fourth-order; Laplace's  
equation; cylindrical coordinates; 19089.
- Differential capacitance cell; SF<sub>6</sub>; 20 microK thermostat; com-  
parison with He<sup>3</sup>, Ne; critical anomaly; dielectric constant;  
19484.
- Differential cross section; optical model comparison; *SP594*, pp.  
143-145 (Sept. 1980).
- Differential cross sections; DWBA; elastic scattering; global op-  
tical potential; inelastic scattering; neutron; coupled-channel;  
deformation parameter; *SP594*, pp. 146-149 (Sept. 1980).
- Differential cross sections; discrete lines; unfolding analysis; un-  
resolved gamma-rays; Al, Ni, Cu and Nb(n,xy) reactions;  
*SP594*, pp. 408-412 (Sept. 1980).
- Differential cross sections; total elastic scattering cross sections;  
*SP594*, pp. 39-42 (Sept. 1980).
- Differential magnetic measurements; geomagnetism; induced  
currents; Sq current system variations; tectonomagnetism;  
conductivity anomalies; 19181.
- Differential pressure; in-tank density determination; nuclear  
process solutions; solution density; accountability tanks;  
19170.
- Differential pressure; in-tank density determination; nuclear  
process solutions; solution density; accountability tanks; *J.  
Res.* 85, No. 3, 219-221 (May-June 1980).
- Differential pressure; in-tank density determination; nuclear  
process solutions; solution density; accountability tanks;  
*SP582*, pp. 534-537 (June 1980).
- Differential pressure gage; nuclear materials processing; nuclear  
safeguards; volume calibration; volumetric test measures; ac-  
countability tanks; 19053.
- Differential scanning calorimeter; lubricating oil; metal surface  
effects; nitrogen dioxide; oxidation; recycled base stocks; ther-  
mal analysis; virgin base stocks; 19788.
- Differential scanning calorimetry; elastomers; polymers; rubber;  
thermal analysis; *SP580*, pp. 55-87 (Aug. 1980).
- Differential thermal analysis; environmental particulates; thermal  
analytical methods; alpha-quartz particulate; chrysotile asbes-  
tos particulate; 19890.
- Differential thermal analysis; gas analysis; steel; alloys; *SP580*,  
pp. 33-53 (Aug. 1980).
- Diffraction; diffraction pattern analysis; Fourier analysis; Four-  
ier spectrum; linewidth; linewidth measurement; photomask;  
*NBS-GCR-79-175*.
- Diffraction; isotopes; molecular dynamics; neutron; neutron ra-  
diography; nondestructive evaluation; nuclear reactor; radi-  
ation; activation analysis; crystal structure; *TN1117*.
- Diffraction pattern analysis; Fourier analysis; Fourier spectrum;  
linewidth; linewidth measurement; photomask; diffraction;  
*NBS-GCR-79-175*.
- Diffraction meters; flat-cone; macromolecules; neutrons; single-  
crystal; Weissenberg methods; x rays; absorption correction;  
19509.
- Diffuseness; in-process; manufacturing engineering; on-line; opti-  
cal Fourier transform; optical techniques; power spectral den-  
sity; production engineering; R<sub>a</sub>; speckle; specular reflectance;  
surface roughness; 19477.
- Diffuse scattering; neutron; niobium; strain; alloy; defect; 19307.
- Diffusion; domain growth; gold alloys; ordered alloys; antiphase  
domains; copper alloys; 19851.
- Diffusion; drawing; low density polyethylene; sorption; anneal-  
ing; 19850.
- Diffusion; energy transfer; laser-excited fluorescence; laser-in-  
duced chemistry; mass transport; multiphoton processes; vi-  
brational relaxation; 19179.
- Diffusion; experimental methods; migration; molecular transport;  
nuclear magnetic resonance; polymers; butane; 19906.
- Diffusion; Fick's Law; Fokker-Planck equation; process model-  
ing; semiconductors; silicon; vacancies; Brownian motion;  
19726.
- Diffusion; food additives; indirect additives; migration; models;  
regulations; additives; *NBSIR 80-1999*.
- Diffusion; gaseous; history of science; Kamerlingh Onnes; liqui-  
dons; liquids; mixtures; van der Waals; vapors; Andrews; con-  
densation; critical point; 19932.
- Diffusion; glass-gel boundary; sphere weight gain; concentration  
distribution; 19661.
- Diffusion; hydride; hydrogen; lanthanum; nickel; nuclear magnet-  
ic; 19229.
- Diffusion; Lennard-Jones fluid; liquid rubidium; liquids; molecu-  
lar dynamics; potential of mean force; relative motion of  
pairs; Smoluchowski's equation; 19145.
- Diffusion; light scattering; Stokes' law; viscosity; binary liquids;  
critical fluctuations; 19827.
- Diffusion; oxygen conductor; slow transient effect; transport; Y-  
doped CeO<sub>2</sub>; CeO<sub>2</sub>; conducting ceramic; conductivity; 19444.
- Diffusion cell; organic parent compound; pyrolyzing tube; reac-  
tive gas; *U.S. Patent 4,224,279*.
- Diffusion convection equations; error estimates; higher order  
finite difference methods; numerical experiments; parabolic  
equations; singular perturbation problems; cell Reynolds  
number; 19490.
- Diffusion in melt; glass; incongruent vaporization; surface deple-  
tion; transpiration; unstirred glass melt; vapor density; vapor-  
ization; carrier gas saturation; 19552.
- Diffusion in metals; fire; journals; library holdings; NBS library;  
NBS periodicals; periodicals; proceedings; serials; standards;  
transactions; annual reports; *NBSIR 79-1932*.
- Diffusion jet; laser diagnostics; reconstruction algorithm; tomo-  
graphy; absorption measurement; combustion measurements;  
convolution algorithm; 19822.
- Diffusion theory; self-shielding factors; spherical model; trans-  
port theory  $k_{eff}$ ; *SP594*, pp. 187-189 (Sept. 1980).
- Diffusivity; elastic deformation; fractional free volume; perme-  
ability; plastic deformation; semicrystalline polymers; sorp-  
tion; 19662.
- Diffusivity; glass-gel boundary; sheets; spheres; type II diffusion;  
19668.
- Difluorocarbene; fluorescence excitation spectroscopy; Franck-  
Condon factors; laser excited fluorescence; radiative lifetime;  
single vibronic level spectroscopy; CF<sub>2</sub>; 19371.

- Duplex connectors; high resistance junctions; junction resistance; scanning electron microscopy; x-ray microanalysis; aluminum wiring; *J. Res.* 85, No. 6, 429-440 (Nov.-Dec. 1980).
- Duplicity; ideal conditions; measurement process; omnifariousness; precision; round robin; routine conditions; variance model; within-laboratory precision; accuracy; between-laboratory precision; components of variance; *SP591*, pp. 31-40 (Aug. 1980).
- Durability; environmental exposure; materials; polymeric materials; solar collectors; absorber materials; absorptive coatings; accelerated aging; cover plates; 19364.
- Durability; eutectics; Rayleigh waves; stability; surface anisotropy; composites; 19153.
- Durability; fatigue; fatigue mechanism; fatigue research; fracture mechanics; mathematical modeling; metals fatigue; plastics fatigue; quantitative microscopy; statistical aspects of fatigue; composite materials; corrosion fatigue; 19448.
- Durability; heating rates; initial rates; kinetics; lifetime prediction; polystyrene; polyurethane; pyrolysis; stability; thermal analysis; thermogravimetry; accelerated aging; complex reactions; decomposition; degradation; 19752.
- Durability; life testing; prediction; recommended practice; reli-

ability service life; accelerated aging tests; building components; building materials; *TN1120*.

Durability/reliability; environmental degradation; materials degradation; solar collector; *19451*.

Durability/reliability; performance criteria; safety; solar collectors; solar energy; standards; thermal performance; buildings; cooling; *SP586*, pp. 151-160 (June 1980).

Duration; fission products; fluence; Gabon; natural fission reactor; temperature; age of deposit; *SP594*, pp. 909-915 (Sept. 1980).

Dust grains; molecular clouds; star formation; supernovae; supernova remnants; x rays; *19384*.

DWBA; elastic scattering; global optical potential; inelastic scattering; neutron; coupled-channel; deformation parameter; differential cross sections; *SP594*, pp. 146-149 (Sept. 1980).

Dyadic Green's functions; electric field; integral equation; source dyadic; *19249*.

Dye dosimeters; electric wires; electron beams; isodose curves; radiation curing; radiation processing; radiochromic dye films; dose distribution; dosimetry; *19340*.

Dye dosimetry; dyed plastics; film dosimeters; gamma-ray dosimetry; humidity effects; megarod dosimetry; nylon polycarbonate; polyethylene terephthalate; polymethyl methacrylate; polyvinyl chloride; polyvinyl fluoride; polyvinyl pyrrolidone radiochromic dyes; *19326*.

Dye dosimetry; electron beams; gamma radiation; leucocyanides; radiation processing; radiation sterilization; radiochromic dyes; red Perspex; dose distributions; dose mapping; dosimetry; *19339*.

Dyed plastic dosimeters; electron beams; gamma rays; plastic dosimeters; polyvinylchloride; radiation processing; radiochromic dye films; blue cellophane; cellulose triacetate; clear Perspex; dose rate dependence; dosimetry; *19338*.

Dyed plastics; film dosimeters; gamma-ray dosimetry; humidity effects; megarod dosimetry; nylon polycarbonate; polyethylene terephthalate; polymethyl methacrylate; polyvinyl chloride; polyvinyl fluoride; polyvinyl pyrrolidone radiochromic dyes; temperature dependence; *19326*.

Dynamic accounting; fuel reprocessing; nuclear safeguards; *SP582*, pp. 718-729 (June 1980).

Dynamic analysis; programming aids; software development; software management; software tools; static analysis; *NBSIR 80-2159*.

Dynamic concentration measurements; inventory control; non-destructive measurements; on-line real-time measurements; plutonium concentration and isotopics determinations; reprocessing plant process control; uranium; x-ray fluorescence analysis; *SP582*, pp. 584-601 (June 1980).

Dynamic effects; failure; failure investigation; hoisting loads; hyperbolic shell; collapse; concrete; concrete strength; construction; construction loads; cooling tower; *NBSIR 80-2010*.

Dynamic fatigue; fracture mechanics; lifetime prediction; proof testing; stress corrosion; subcritical crack growth; *NBSIR 80-2047*.

Dynamic materials accounting; in-process inventory; solvent-extraction contactors; chemical modeling; *SP582*, pp. 712-717 (June 1980).

Dynamic measurements; electrical resistivity; emittance; heat capacity; high temperature; melting point; stainless steel; thermodynamics; *19541*.

Dynamic measurements; high temperature; melting; normal spectral emittance; palladium; radiance temperature; *19063*.

Dynamic response; influence of wind-direction; tall buildings; wind loads; wind tunnels; aerodynamics; boundary layers; *19872*.

Dynamic response and gust loads; structural engineering; tall buildings; wind forces; wind pressures; acceleration; buffeting; buildings; buildings (codes); deflection; *19121*.

Dynamics; structural engineering; towers; turbulence; wind (meteorology); aerodynamics; buildings (codes); *19143*.

Dynamic techniques; heat of fusion; high temperatures; melting;

niobium; *19745*.

Dynamic techniques; high-speed measurements; high temperatures; thermodynamics; thermophysical properties; *19311*.

Dynothermal capacitance responses; dynothermal current response; isotopes; silicon; sulfur; thermally stimulated measurements; *19163*.

Dynothermal current response; isotopes; silicon; sulfur; thermally stimulated measurements; dynothermal capacitance responses; *19163*.

## E

Earthquake; engineers; Florida; inspection; legislation; recertification; architects; codes; *SP586*, pp. 197-203 (June 1980).

Earthquakes; engineering; standards; building; building codes; building design; disaster mitigation; *NBSIR 80-2111-9*.

Earthquakes; engineering; standards; structural engineering; building; building codes; building design; *NBSIR 80-2111-2*.

Earthquakes; foreign engineering; geology; highways; housing; landslides; liquefaction; power plants; railroads; rock slides; seismicity; structural engineering; bridges; buildings; dikes; *SP592*.

Earthquakes; ground motion; seismology; standards; storm surge; structural engineering; structural response; tsunami; wind loads; winds; accelerograph; codes; design criteria; disaster; *SP560*.

EBR-II; Eu isotopes; integral cross sections; Nd; Sm; dosimetry; *SP594*, pp. 557-562 (Sept. 1980).

Econometric models; economic analysis; engineering economics; mathematical models; program planning; building economics; construction; cost estimation; *NBS-GCR-80-197*.

Econometric models; energy modeling forum; energy models; evaluation; mathematical models; model access; model management; sensitivity analysis; validation; assessment; documentation; *SP569*.

Economic; elastomers; materials; ozone; paint; photochemical oxidants; reaction mechanisms; textile dyes; *19768*.

Economic; prices; testing; accreditation; costs; *SP591*, pp. 92-96 (Aug. 1980).

Economic analysis; economic efficiency; energy conservation; incentives; life-cycle cost; payback; rate of return; solar economics; windows; benefit cost; building economics; discounting; *H132*.

Economic analysis; economic efficiency; energy conservation; insulation; life-cycle costs; low-income housing; marginal analysis; thermal efficiency; weatherization; benefit-cost analysis; building economics; building envelope; *NBSIR 79-1948*.

Economic analysis; energy conservation; insulation; low-income housing; statistics; unit costs; weatherization; building economics; cost components; data analysis; data collection; demonstration; *NBSIR 80-2167*.

Economic analysis; energy conservation; windows; building economics; *19073*.

Economic analysis; energy consumption; HVAC systems; Total Energy systems; cogeneration; costs; *NBS-GCR-80-164*.

Economic analysis; enforcement; housing codes; personnel; budgets; *SP586*, pp. 135-148 (June 1980).

Economic analysis; engineering economics; housing; mathematical programming; optimization; rehabilitation; renovation; applied economics; building codes; building economics; cost estimation; *BSS129*.

Economic analysis; engineering economics; mathematical models; program planning; building economics; construction; cost estimation; econometric models; *NBS-GCR-80-197*.

Economic analysis; fire safety; fire safety evaluation system; health care facilities; life cycle; cash flow; *NBS-GCR-79-186*.

Economic analysis; fire safety; health care facilities; hospitals; life safety; mathematical programming; nursing homes; optimization; renovation; applied economics; building codes; *NBSIR 79-1929*.

Economic analysis; furnaces; incremental savings; life-cycle

costs; minimum efficiency levels; minimum efficiency standards; boilers; central heating equipment; *NBSIR 80-2079*.

Economic analysis; HVAC systems; Total Energy system; cogeneration; costs; *NBS-GCR-80-165*.

Economic analysis; housing; lead-based paint; lead poisoning; applied economics; building economics; building materials; *NBSIR 80-1977*.

Economic analysis; incremental savings; life-cycle costs; minimum efficiency standards; minimum energy-efficiency levels; central air conditioners; *NBSIR 80-1993*.

Economic analysis; inflation; life-cycle cost; present worth analysis; recommended practice; benefit-cost analysis; building economics; buildings; building systems standard; cost; discounting; *NBSIR 80-2040*.

Economic analysis; life cycle cost; value management; value study; *SP586*, pp. 189-196 (June 1980).

Economic benefits; epistemology; measurement system; metric system; SI; base units; convention of the meter; 19639.

Economic deregulation; evaluability assessment; evaluation; Experimental Technology Incentives Program; intermodal freight transportation; Interstate Commerce Commission; rail freight transportation; regulatory experimentation; regulatory policy; *NBS-GCR-ETIP 80-85*.

Economic efficiency; energy conservation; incentives; life-cycle cost; payback; rate of return; solar economics; windows; benefit cost; building economics; discounting; economic analysis; *H132*.

Economic efficiency; energy conservation; insulation; life-cycle costs; low-income housing; marginal analysis; thermal efficiency; weatherization; benefit-cost analysis; building economics; building envelope; economic analysis; *NBSIR 79-1948*.

Economic evaluations; energy conservation; Federal energy management program; life-cycle costing; public buildings; renewable energy; solar energy; solar photovoltaic; cost effectiveness; *H135*.

Economic feasibility; economic optimization; solar energy systems; active solar energy; break-even analysis; building economics; commercial buildings; 19350.

Economic impact of regulations; economic impact of standards; economic information on standards; Federal use of voluntary standards; procedural history; rationale; standardization; *NBSIR 80-2123*.

Economic impact of standards; economic information on standards; Federal use of voluntary standards; procedural history; rationale; standardization; economic impact of regulations; *NBSIR 80-2123*.

Economic incentives; Emission Offset Interpretative Ruling; Environmental Protection Agency; market mechanisms; regulation; air pollution; *NBS-GCR-ETIP 80-86*.

Economic incentives; emission offsets; emission reduction trading; enforcement; Environmental Protection Agency; market mechanisms; air pollution; Clean Air Act; *NBS-GCR-ETIP 80-87*.

Economic incentives; emission offsets; emission reduction trading; market mechanisms; regulation; air pollution; *NBS-GCR-ETIP 80-90*.

Economic information on standards; Federal use of voluntary standards; procedural history; rationale; standardization; economic impact of regulations; economic impact of standards; *NBSIR 80-2123*.

Economic optimization; solar energy systems; active solar energy; break-even analysis; building economics; commercial buildings; economic feasibility; 19350.

Economics; ENDF/B-V; fuel cycle; symbiotic energy system; tritium breeding; cross-section uncertainty; CTR; denatured fuel; *SP594*, pp. 839-843 (Sept. 1980).

Economics; energy conservation; internal rate of return; life-cycle costing; marginal analysis; optimal design; residential buildings; space cooling; space heating; building envelope; cost effectiveness; 19235.

Economics; energy conservation; life-cycle cost; payback; rate-of-return; savings-to-investment ratio; benefit-cost; building design; construction economics; discounting; *SP544*.

Economics; evaluation; literature search; regulation; standardization; standards; benefit-cost analysis; benefit-risk analysis; benefits; bibliography; costs; *NBSIR 80-2015*.

Economics; government policy; product certification; standardization research needs; standards; accreditation of testing laboratories; certification; certification industry; *NBSIR 80-2001*.

Economics; rehabilitation; building codes; building regulations; building technology; 19160.

Economics of standards; health care standards; innovation; performance standards; standards; automobile standards; design standards; *NBS-GCR-80-287*.

Economics of standards; law; standards; antitrust; certification; competition; *NBSIR 79-1921*.

EDP audit; internal audit; operating system controls; system controls; system vulnerabilities; terminal controls; applications controls; computer vulnerabilities; data base controls; data base management systems controls; *SP500-57*.

Eddy current; finite element analysis; multifrequency; nuclear applications; pattern recognition; reference standards; 19251.

Eddy currents; imaging; leakage testing; magnetics; material parameters; nondestructive evaluation; optics; penetrants; radiography; ultrasonics; acoustic emission; *NBSIR 80-2162*.

Eddy currents; magnetic particles; nondestructive evaluation; radiography; traceability; ultrasonics; visual testing; acoustic emission; calibration; *NBSIR 80-2109*.

Edge-defined film-fed growth (EFG); floating zone; meniscus; silicon; stability; crystal; Czochralski; 19945.

Editing; networks; specifications standards; systems analysis/engineering; codes; decision theory; *NBS-GCR-80-259*.

Education; electronic devices; International Organization of Legal Metrology; legal metrology; measurement assurance; metrication; model laws and regulations; moisture loss; packaging and labeling; specifications and tolerances; weights and measures; consumer affairs; *SP566*.

Educational Resources Information Center (ERIC); information systems; intelligent terminals; mass storage technology; microfiche; micrographics; optical character recognition; communications technology; computer networks; computer technology; data entry; *NBSIR 80-2005*.

Educational requirements; inspection; licensing; testing; training code officials; building codes; building inspectors; code enforcement; course development; *SP586*, pp. 71-83 (June 1980).

EELS; electron spectroscopy; photoemission; UPS; XPS; AES; chemisorption; 19176.

Effective charge; oscillator strength; photoelastic; piezo-birefringence; piezo-optic; SrF<sub>2</sub>; strain; stress; transverse optic-phonon; anisotropy; BaF<sub>2</sub>; CaF<sub>2</sub>; 19579.

Effective Gaunt-factor; electron impact excitation; magnesium sequence; zinc sequence; beryllium sequence; collision strength; 19353.

Effective length; FFT; moment method; resistively loaded antenna; TEM horn; time domain measurement; transient response; conical antenna; 19464.

Effective potentials for metals; elastic constants; fluctuations; high temperature properties; Monte Carlo simulations; aluminum; anharmonic effects; *J. Res.* 85, No. 2, 109-112 (Mar.-Apr. 1980).

Effective recombination time; nonequilibrium phenomena; phonon-trapping; quasiparticle; superconductor; acoustic mismatch; 19240.

Effective U-value; heat capacity; log home; mass factor; thermal mass;  $\Delta R$  effect; BLAST; *SP586*, pp. 161-179 (June 1980).

Effect of moisture on heat transmission; moisture within wood-frame cavity walls; condensation in walls; 19147.

Efficiency; flow rate; heat transfer fluid; solar collector; thermal performance; *NBS-GCR-79-184*.

Egress; emergencies; escape; evacuation; fire alarm systems; fire departments; fire safety; handicapped; life safety; refuge; building codes; building design; building fires; building man-

agement; *SP585*.

Egress; emergencies; escape; evacuation; fire alarm systems; fire departments; fire safety; handicapped; life safety; refuge; building codes; building design; building fires; building management; *NBSIR 80-1965*.

Egress; evacuation; fire alarm systems; fire departments; fire fighters; flashover; nursing homes; nursing staff; patients; room fires; smoke detectors; death; doors; *NBS-GCR-80-191*.

Egress; evacuation; fire alarm systems; fire departments; fire fighters; hospitals; nursing staff; patients; smoke; *NBS-GCR-80-192*.

Egress; evacuation; fire departments; fire fighters; fire investigations; mattresses; smoke; apartments; building fires; doors; *NBS-GCR-79-187*.

Egress; fire tests; high-rise buildings; leakage; life safety; smoke; smoke movement; stack effects; test methods; building fires; compartment fires; doors; *NBSIR 80-2004*.

Egyptian papyrus; paper technology; thermal analysis; Aztec paper; *SP580*, pp. 201-217 (Aug. 1980).

Eigenvalue; ENDF/B-IV; integral experiments; reaction rate ratios; reactivity worths; ZPR critical assembly; delayed neutron data; *SP594*, pp. 297-306 (Sept. 1980).

Elastic and inelastic scattering cross sections; energy range 10 keV-15 MeV; optical and statistical model calculations; potential scattering radii; s- and p-wave strength functions; total cross sections; W isotopes; *SP594*, pp. 336-339 (Sept. 1980).

Elastic constants; fluctuations; high temperature properties; Monte Carlo simulations; aluminum; anharmonic effects; effective potentials for metals; *J. Res.* 85, No. 2, 109-112 (Mar.-Apr. 1980).

Elastic constants; gallium arsenide; indium antimonide; ionicity; optical phonons; Raman scattering; semiconductors; stress; zinc-blende structure; covalent bonding; diamond structure; *19580*.

Elastic constants; interstitial defect; metal hydride; neutron scattering; phonon; alloy; *19613*.

Elastic constants; iron alloy; Neel transition; stainless steel; *19270*.

Elastic constants; iron alloys; low temperatures; magnetic transitions; sound velocities; stainless steels; *19563*.

Elastic constants; iron-base alloys; low temperatures; magnetic susceptibility; manganese alloys; Neel transition; physical properties; stainless steels; *19568*.

Elastic constants; many-atom effects; superconductivity; transition metals; transition temperature; body-centered-cubic metals; Cauchy discrepancy; *19627*.

Elastic constants; physical-property variability; Poisson's ratio; shear modulus; sound velocity; stainless steel; Young's modulus; bulk modulus; *19246*.

Elastic constants; polycrystals; sound velocities; tensor-property averaging; copper; Debye temperature; *19696*.

Elastic constants; sound velocity; boron-aluminum; composite; *19212*.

Elastic cross section; inelastic cross section; multichannel; multi-level; neutron; R-matrix; *SP594*, pp. 783-787 (Sept. 1980).

Elastic deformation; fractional free volume; permeability; plastic deformation; semicrystalline polymers; sorption; diffusivity; *19662*.

Elastic enhancement factors; factorization; Hauser-Feshbach theory; statistical models; width fluctuation correction factor; compound-nucleus reactions; cross sections; *SP594*, pp. 762-764 (Sept. 1980).

Elasticity; elastomers; extension; rubber; strain-energy function; Valanis-Landel form; biaxial; *19502*.

Elasticity; elastomers; finite deformation; rubber; strain energy; Valanis-Landel form; *19597*.

Elastic modulus; extruded semicrystalline polymers; fibrous materials; polymers; strength; *19938*.

Elastic modulus; fibrils; fibrous structure; fracture; load-elongation curve; microfibrils; point defects of microfibrillar structure; ruptured chains; strength; tie molecules; crystalline polymer; *19901*.

Elastic modulus; fibrils; fibrous structure; microfibrils; superdrawing; Taut tie molecules; annealing; crystallization; *19903*.

Elastic modulus; helical chains; inelastic neutron scattering; laser-Raman scattering; polyethylene; polyethyleneoxide; polyhexafluoropropylene; polyoxymethylene; polypropylene; polytetrafluoroethylene; accordion type oscillation; coupled rod oscillation; crystalline polymers; *19937*.

Elastic-plastic contact; glass; indentation; surface melting; adiabatic heating; *19584*.

Elastic scattering; elemental analysis; PIXE; *SP594*, pp. 516-520 (Sept. 1980).

Elastic scattering; global optical potential; inelastic scattering; neutron; coupled-channel; deformation parameter; differential cross sections; DWBA; *SP594*, pp. 146-149 (Sept. 1980).

Elastic scattering cross section; partial inelastic scattering cross section; resonance self-shielding effect; sensitivity analysis; shielding application; structural material; total cross section; unresolved resonance; *SP594*, pp. 586-590 (Sept. 1980).

Elastomers; extension; rubber; strain-energy function; Valanis-Landel form; biaxial; elasticity; *19502*.

Elastomers; finite deformation; rubber; strain energy; Valanis-Landel form; elasticity; *19597*.

Elastomers; materials; ozone; paint; photochemical oxidants; reaction mechanisms; textile dyes; economic; *19768*.

Elastomers; polymers; rubber; thermal analysis; differential scanning calorimetry; *SP580*, pp. 55-87 (Aug. 1980).

Elastomers; polyolefin rubber; segmented polyurethane; time dependent failure; urethane-silicone copolymer; biomaterials; blood pump materials; butyl rubber; *NBSIR 80-2008*.

Elasto-optic; electro-optic; photoelastic; piezo-optic; refractive index; relative dielectric impermeability; absorption coefficient; birefringence; crystal optics; dielectric constant; *19257*.

Electrets; ferroelectricity; piezoelectric polymers; polarization; poly(vinyl chloride); poly(vinyl fluoride); poly(vinylidene fluoride); pyroelectric polymers; space charge; crystal relaxations; *19734*.

Electrical; electrical conductivity; ferric; ferric/ferrous ratio; ferrous; ionic; ionic conductivity; magnetohydrodynamics iron; MHD; silicates; coal slag; conductivity; *19576*.

Electrical activation of implanted impurities; ion implantation; laser annealing; silicon; capacitance-voltage profiling; damage effects; *19724*.

Electrical alignment test structure; gated diode; integrated test structure; microelectronic test structure; process validation wafer; random fault test structure; sheet resistor; test methods; test pattern; test structure; circuit characterization; cross-bridge sheet resistor; *19165*.

Electrical breakdown; electro-optics; interfacial breakdown; Pockels effect; space charge; surface flashover; vacuum breakdown; *NBS-GCR-80-203*.

Electrical breakdown; impulse testing; interfacial breakdown; oil-paper interfaces; transformer oil; breakdown; *NBSIR 80-2071*.

Electrical calibration; plutonium; plutonium determination; computer-assisted coulometry; controlled-potential coulometry; control-potential adjustment; *SP582*, pp. 164-168 (June 1980).

Electrical codes; fire safety; glowing electrical connections; house wiring; innovative electrical connections; performance testing; contact resistance; *BSSI28*.

Electrical conductance; hexafluoraluminates; metaphosphates; molten salts; molybdates; sulfates; sulfides; surface tension; tungstates; viscosity; carbonates; density; *JPCRD 9*, No. 4, 831-1022 (1980).

Electrical conductance; molten salts; potassium nitrate; sodium chloride; surface tension; viscosity; calibration-quality standards; density; *JPCRD 9*, No. 4, 791-830 (1980).

Electrical conductivity; ferric; ferric/ferrous ratio; ferrous; ionic; ionic conductivity; magnetohydrodynamics iron; MHD; silicates; coal slag; conductivity; electrical; *19576*.

Electrical connections; constriction resistance; contact resist-

- ance; 19531.
- Electrical dipole; electrically small radiators; magnetic dipole; TEM cell; *TN1017*.
- Electrical equipment; enclosures; explosion; explosion containment; mine safety; bibliography; coal mines; *NBSIR 80-2112*.
- Electrical fires; explosions; fire investigations; fire investigators; hydrocarbons; photography; accelerants; arson; building fires; *H134*.
- Electrically calibrated radiometer; pyroheliometry; solar constant; absolute radiometry; cavity absorptance; cavity reflectance; 19909.
- Electrically conducting ceramics; electrical transmission; lightning arresters; nonlinear resistors; semiconductors; surge arresters; varistors; voltage-variable resistors; zinc oxide; *NBSIR 79-1939*.
- Electrically heated inlet; gas chromatography; injector; vapor sampler; capillary columns; concentrator; 19667.
- Electrically-short dipole; iteration method; nonlinear differential equation; nonlinear load; time-stepping finite difference equation technique; Auger function; 19449.
- Electrically small radiators; magnetic dipole; TEM cell; electrical dipole; *TN1017*.
- Electrical measurements; energy loss; shunt reactors; bridges; calibration; current comparator; dissipation factor; 19767.
- Electrical measurements; Hall measurements; semiconductors; silicon; 19415.
- Electrical measurements; health; radiation; radiation safety; safety; x rays; calibration; diagnostic x-rays; *NBSIR 80-2072*.
- Electrical measurements; mobility; resistivity; semiconductors; silicon; dopant density; 19806.
- Electrical measurements; mobility; resistivity; semiconductors; silicon; dopant density; 19783.
- Electrical properties; electronics; electron irradiation. hole mobility; integrated circuits; ion knock-on effect; ion microprobe mass analysis; Irvin's curves; isothermal transient capacitance method; linewidth measurements; measurement technology; microelectronics; *SP400-45*.
- Electrical properties of silicon; Hall effect; mobility; resistivity; silicon; carrier density; computer program; *SP400-63*.
- Electrical resistivity; emittance; heat capacity; high temperature; melting point; stainless steel; thermodynamics; dynamic measurements; 19541.
- Electrical resistivity; heat capacity; high temperature; palladium; pulse method; thermodynamics; 19770.
- Electrical substitution radiometer; infrared radiation measurements; radiometry; spectral irradiance; spectral radiant power; spectroradiometry; ultraviolet radiation measurements; visible radiation measurements; 19300.
- Electrical test structure; gated diode; integrated gated-diode electrometer; integrated test structure; leakage current; test structure; CCD; *NBSIR 80-2000*.
- Electrical transmission; lightning arresters; nonlinear resistors; semiconductors; surge arresters; varistors; voltage-variable resistors; zinc oxide; electrically conducting ceramics; *NBSIR 79-1939*.
- Electrical transmission; partial discharges; polymers; precision electric measurements; pulse-height analysis; superconducting transmission; capacitance; cryogenic; dielectric constant; dielectric properties; dissipation factor; *NBSIR 79-1950*.
- Electrical wiring; radiation exposure; solar absorber coatings; SRM's; structural safety; automation; computers; *DIM/NBS 64*, No. 8, 1-28 (1980).
- Electric dipole; electroexcitation; giant resonance;  $^{13}\text{C}$ ; absolute measurement; activation; 19763.
- Electric field; high energy laser; laser damage; reflectors; thin film; absorption; calorimetry; damage; *SP568*, pp. 377-390 (July 1980).
- Electric field; integral equation; source dyadic; dyadic Green's functions; 19249.
- Electric-field strength; film materials; impurities; overcoat; polished surfaces; pulsedwidth dependence; thin-film coatings; 1 ns; 1.06  $\mu\text{m}$  damage; absorption; *SP568*, pp. 391-403 (July 1980).
- Electric field strength; high-voltage transmission lines; air ions currents; atmospheric electricity; charge density; direct-current transmission; 19238.
- Electric quadrupole; giant resonance; optical theorem; photon scattering; dispersion relation; 19625.
- Electric utilities; ETIP; financial projections; regulatory commissions; regulatory process; technological innovation; computer program; *NBS-GCR-ETIP 79-73*.
- Electric utilities; Experimental Technology Incentives Program; financial projections; productivity; regulatory commissions; regulatory process; technological innovation; computer model; *NBS-GCR-ETIP 79-74*.
- Electric utilities; Experimental Technology Incentives Program; interim adjustment procedures; regulatory commissions; regulatory process; computer programs; *NBS-GCR-ETIP 79-77*.
- Electric utilities; Experimental Technology Incentives Program; marginal costing; rate structure; regulatory commissions; regulatory process; technological innovation; time varying rates; computer models; *NBS-GCR-ETIP 79-79*.
- Electric utilities; Experimental Technology Incentives Program; productivity; regulatory commissions; regulatory process; technological innovation; *NBS-GCR-ETIP 79-82*.
- Electric utilities; Experimental Technology Incentives Program; productivity; regulatory commissions; regulatory process; technological innovation; *NBS-GCR-ETIP 79-81*.
- Electric utility; future test year; regulatory commission; regulatory process; technological innovation; *NBS-GCR-ETIP 79-76*.
- Electric wires; electron beams; isodose curves; radiation curing; radiation processing; radiochromic dye films; dose distribution; dosimetry; dye dosimeters; 19340.
- Electric wiring; resistive heating; thermal insulation; thermal model; wiring system; *NBSIR 80-2129*.
- Electrocaloric effect; entropy; ferroelectrics; glass-ceramics; heat switches; polarization; refrigeration; specific heat strontium titanate; ceramics; cryogenics; dielectric constant; 19534.
- Electrocatalysis; fuel cells; impedance; solid electrolyte; tungsten carbide; catalyst; cerium dioxide; *NBSIR 80-1991*.
- Electrochemical detector; high performance liquid chromatography; methylmercury; organometals; speciation; 19555.
- Electrochemical equivalent; electrochemistry; Faraday; fundamental constants; silver; coulometry; *J. Res. 85*, No. 3, 175-191 (May-June 1980).
- Electrochemical measurements; galvanostat; impedance measurements; noise; potentiostat; *J. Res. 85*, No. 3, 211-217 (May-June 1980).
- Electrochemical noise; instrumentation; iron; nickel; potentiostat; aluminum; corrosion; 19878.
- Electrochemistry; ellipsometry; field ion microscopy; hydrogen; inhibitors; iron; organic coatings; titanium-palladium alloys; vanadium; chromate; *NBSIR 80-2101 (Navy)*.
- Electrochemistry; Faraday; fundamental constants; silver; coulometry; electrochemical equivalent; *J. Res. 85*, No. 3, 175-191 (May-June 1980).
- Electrochemistry; Faraday constant; silver; coulometer; coulometry; 19472.
- Electrochemistry; polarization techniques; underground corrosion; corrosion; corrosion noise; *NBSIR 80-2083*.
- Electrodeposited coatings; electrodeposition; thickness; thickness gages; calibration; calibration of thickness gages; calibration standards; coatings; coating thickness; coating thickness gages; coating thickness measurement; 19954.
- Electrodeposition; electro preparation; foils; iron platinum; alloys; 19395.
- Electrodeposition; epitaxy; plating coatings; zinc; aluminum; 19657.
- Electrodeposition; epitaxy; tin aluminum; zinc; aluminum; coatings; 19730.
- Electrodeposition; thickness; thickness gages; calibration; cali-

bration of thickness gages; calibration standards; coatings; coating thickness; coating thickness gages; coating thickness measurement; electrodeposited coatings; 19954.

Electrodes; fluorides; microvolumes; rapid; adapter; analysis; 19279.

Electrodes;  $\text{LaCrO}_3$ ; magnetohydrodynamics; spinels; zirconia; ceramic oxides; 19644.

Electrode surface; loss angle; phase angle; power factor; surface loss; capacitor; dielectric film; dissipation factor; 19066.

Electrodynamics; infrared spectra; rhodium; carbon monoxide; chemisorption; 19739.

Electroexcitation; giant resonance;  $^{12}\text{C}$ ; absolute measurement; activation; electric dipole; 19763.

Electroforming; electroplating; micrometer scale; scanning electron microscope; 19833.

Electrolyte data center; evaluations; reviews; solutions; thermodynamic properties; aqueous electrolytes; 19920.

Electrolytes; enthalpy of dilution; heat; hydrochloric acid; lithium chloride; relative apparent molal enthalpy; relative partial molal enthalpy; sulfuric acid; thermochemistry; calorimetry; *J. Res.* **85**, No. 1, 11-17 (Jan.-Feb. 1980).

Electrolytes; flame atomic absorption spectroscopy; interlaboratory testing; precision; reference method; semiautomated pipetting; serum lithium analysis; statistical analysis; accuracy; clinical analysis; clinical chemistry; definitive method; *SP260-69*.

Electrolyte theories; excess Gibbs energy; models; osmotic coefficient; polyvalent electrolytes; solutions; thermodynamic properties; activity coefficient; correlation; critical evaluation; 19919.

Electromagnetic field measurement; spherical dipole; standard field radiator; 30 MHz to 180 MHz; dipole radiator for EMI measurements; 19737.

Electromagnetic metrology; lasers; microwaves; optical fibers; time domain metrology; cryoelectronics; *NBSIR* 79-1625.

Electromotive force measurements; mercury (I) chloride; solubility; solubility product; standard electrode potentials; standard thermodynamic functions; compilation of solubility data; disproportionation of mercury (I); *JPCRD* **9**, No. 4, 1307-1330 (1980).

Electron; energy deposition; Monte Carlo; multiple scatter; tracklength; charged particle; 19273.

Electron; energy-generation; lasers; molecules; air; 19318.

Electron; frequency divider; ion trap; laser; microwave; relativistic; synchrotron radiation; 19529.

Electron; helix; irrational; Phase II; polytetrafluoroethylene; units per turn; conformation; crystal; 19797.

Electron accelerators; microtron; recirculating accelerators; room-temperature rf systems; cw accelerators; 19494.

Electron affinity; electron scattering resonances;  $\text{LiF}^-$ ; molecular anions; polarizability; autodetachment; charge transfer; 19197.

Electron atom scattering; electron impact ionization; helium isoelectronic sequence; distorted wave method; 19794.

Electron atom scattering; electron impact ionization; hydrogen isoelectronic sequence; lithium isoelectronic sequence; distorted wave approximation; 19474.

Electron avalanche; inception voltage; ionization; ion mobilities; partial discharge; photodetachment; space charge; sulfur hexafluoride ( $\text{SF}_6$ ); uv radiation; 60 Hz ac and dc; compressed gas; corona; 19786.

Electron-avalanche breakdown; electron-phonon scattering; Fokker-Planck equation; laser damage; multiphoton absorption; theory; alkali halides; *SP568*, pp. 467-478 (July 1980).

Electron-beam lithography; metal-oxide-semiconductor device; process-induced radiation damage; radiation damage; semiconductor devices; very large scale integration; x-ray lithography; 19162.

Electron beams; gamma radiation; leucocyanides; radiation processing; radiation sterilization; radiochromic dyes; red Perspex; dose distributions; dose mapping; dosimetry; dye dosimetry; 19339.

Electron beams; gamma rays; plastic dosimeters; polyvinylchloride; radiation processing; radiochromic dye films; blue cellophane; cellulose triacetate; clear Perspex; dose rate dependence; dosimetry; dyed plastic dosimeters; 19338.

Electron beams; isodose curves; polyethylene; polyvinyl butyral; radiation curing; radiation processing; radiochromic dye film; wire and cable; copper wire; cross linking; dose distribution; dosimetry; 19333.

Electron beams; isodose curves; radiation curing; radiation processing; radiochromic dye films; dose distribution; dosimetry; dye dosimeters; electric wires; 19340.

Electron beams; linear accelerator; neutron physics; neutron radiography; neutrons; bremsstrahlung; 19373.

Electron beams; linear accelerator; neutron physics; neutron radiography; neutrons; bremsstrahlung; *SP594*, pp. 531-533 (Sept. 1980).

Electron bremsstrahlung; electrons; protons; space shielding; computer code; depth-dose data; *TN1116*.

Electron capture; gas chromatography; infrared spectroscopy; mass spectroscopy; phosgene; polymer; poly(vinyl chloride); PVC; pyrolysis; carbonyl chloride; combustion; decomposition; degradation; 19503.

Electron collisions; model potentials; polar molecules; 19497.

Electron configurations; ionization potentials; magnesium; atomic energy levels; atomic spectra; *JPCRD* **9**, No. 1, 1-58 (1980).

Electron correlation; heat pipe; lithium vapor; partial photoionization cross section; synchrotron radiation; absorption cross section; core excitation; 19276.

Electron correlation; many-body perturbation theory; atomic correlation energy; atomic structure theory; atomic transition probabilities; 19346.

Electron density of states; palladium-silicon alloys; photoelectron; ultraviolet photoelectron spectroscopy; UPS; alloys; alloy stability; amorphous alloys; 19263.

Electron devices; integrated circuit fabrication; ion-beam lithography; lithography; oxide layers; radiation absorbed dose; radiation damage; device processing; 19753.

Electron diffraction; electron spectroscopy; kinetics of surface processes; surface chemical analysis; surface chemistry; surface spectroscopy; alloy catalysts; catalytic reactions; 19957.

Electron dosimetry; F-centers; gamma-ray dosimetry; lithium fluoride; M-centers; megaread dosimetry; N-centers; radiation darkening; radiation processing; R-centers; absorption spectroscopy; alkali halides; color centers; darkening of crystals; dosimetry; 19352.

Electronegativity; heats of formation; structural stability; alloy phase formation; alloy stability; atomic size; 19566.

Electron energy loss spectroscopy; ethylene; physisorption; surface; tungsten; acetylene; chemisorption; 19390.

Electron energy loss spectroscopy; Ni(111); NO; vibration $\nu$  spectroscopy; chemisorption; 19800.

Electron energy loss spectroscopy; vibrational spectroscopy; adsorption; CO; diatomic molecules; 19206.

Electron heating; electron seeding; gas breakdown; laser ionization; Na; superelastic; 19779.

Electron-hole pairs; molecular processes; surface reactions; x-ray edge; 19837.

Electronic devices; hermeticity; hybrids; nondestructive tests; semiconductor; tape bonded devices; acoustic emission; beam lead devices; 19108.

Electronic devices; International Organization of Legal Metrology; legal metrology; measurement assurance; metrication; model laws and regulations; moisture loss; packaging and labeling; specifications and tolerances; weights and measures; consumer affairs; education; *SP566*.

Electronic excitation; laser; photodissociation; quantum yield; quenching; reactive collisions; vibrational excitation; 19336.

Electronic heat capacity; enthalpy; heat capacity; high-temperature; standard reference material; thermodynamic functions;

- tungsten; drop calorimetry; 19363.
- Electronics; electron irradiation. hole mobility; integrated circuits; ion knock-on effect; ion microprobe mass analysis; Irvin's curves; isothermal transient capacitance method; linewidth measurements; measurement technology; microelectronics; phosphorus pileup; *SP400-45*.
- Electronics; gravitational experiments; high-Q cavities; interference; Josephson effect; magnets; superconductivity; aerospace; digital; 19054.
- Electronics; integrated circuits; materials characterization; measurement methods; microelectronics; microstructures; semiconductors; dimensional metrology; *SP400-61*.
- Electronics; integrated circuits; materials characterization; microelectronics; semiconductors; dimensional metrology; 19109.
- Electronics; integrated circuits; measurement technology; microelectronics; semiconductor devices; semiconductor materials; semiconductor process control; silicon; *NBSIR 80-2006*.
- Electron impact; electron ionisation; energy distribution functions; excited atoms; cross sections; 19358.
- Electron impact; electron spectroscopy; gaseous ion photoionization; ionization potential; spectroscopy; appearance potential; *NSRDS-NBS66, Part I*.
- Electron impact; excitation; polarization;  $\text{Be}^+$ ; crossed beams; cross sections; 19512.
- Electron impact; He excitation;  $n$   $^1\text{S}$  levels of He; benchmark cross sections; 19787.
- Electron impact excitation; magnesium sequence; zinc sequence; beryllium sequence; collision strength; effective Gaunt-factor; 19353.
- Electron impact ionization; helium isoelectronic sequence; distorted wave method; electron atom scattering; 19794.
- Electron impact ionization; hydrogen isoelectronic sequence; lithium isoelectronic sequence; distorted wave approximation; electron atom scattering; 19474.
- Electron-ion collisions; excitation; ionization; dielectronic recombination; 19219.
- Electron ionisation; energy distribution functions; excited atoms; cross sections; electron impact; 19358.
- Electron irradiation. hole mobility; integrated circuits; ion knock-on effect; ion microprobe mass analysis; Irvin's curves; isothermal transient capacitance method; linewidth measurements; measurement technology; microelectronics; phosphorus pileup; photolithography; *SP400-45*.
- Electron linac; gas scintillator; inelastic neutron scattering; majority logic; neutron cross sections; prebuncher; pulsed neutron source; time-of-flight; computers; data acquisition; *SP594*, pp. 929-935 (Sept. 1980).
- Electron microprobe; electron microscopy; ion probe; light microscopy; microanalysis; microdroplets; particles; particulate matter; biological fluids; *SP533*.
- Electron microprobe; glass; interferometry; ion-exchange; refractive index; strength; striae; 19744.
- Electron microprobe analysis; energy dispersive spectrometry (EDS); L-series x-ray lines; relative x-ray line intensities; spectrometer efficiency; wavelength dispersive spectrometry (WDS); crystal spectrometer calibration; 19678.
- Electron microscope; lattice images; mixed oxides; niobates and tantalates; rubidium and potassium oxides; crystal structure; 19733.
- Electron microscope; lattice images; niobates and tantalates; rubidium and potassium oxides; two-dimensional ordering; crystal structure; 19911.
- Electron microscopy; erosion; germanium; hardness measurements; plastic deformation; silicon; silicon carbide; aluminum oxide; brittle fracture; dislocations; 19731.
- Electron microscopy; erosion; impingement erosion; metal erosion; wear; copper; 19941.
- Electron microscopy; erosive wear; impact; steel; wear; wear debris; abrasive particles; 19874.
- Electron microscopy; Fe-Ni alloys; martensite; shock deformation; Tishomingo meteorite; x-ray diffraction; 19947.
- Electron microscopy; friction; metals; plastic deformation; steel; surfaces; wear; wear debris; copper; *NBSIR 80-2058 (ONR)*.
- Electron microscopy; grain boundary sliding; plastic deformation; alumina; basal slip; cavitation; deformation texture; 19582.
- Electron microscopy; ion probe; light microscopy; microanalysis; microdroplets; particles; particulate matter; biological fluids; electron microprobe; *SP533*.
- Electron-molecule; exchange potentials; model potential; collisions; 19747.
- Electron optics; electron spin polarization; GaAs; negative electron affinity; photoemission; polarization; source of polarized electrons; spin polarization; 19310.
- Electron optics; fourth-order; Laplace's equation; cylindrical coordinates; difference equations; 19089.
- Electron optics; photoelectron emission; spin and energy analysis; spin polarized electron; 19342.
- Electron-phonon scattering; Fokker-Planck equation; laser damage; multiphoton absorption; theory; alkali halides; electron-avalanche breakdown; *SP568*, pp. 467-478 (July 1980).
- Electron probe; Monte Carlo method for electron trajectories; particle analysis; quantitative analysis; x-ray continuum; backscattered electrons; continuum x-ray loss; 19867.
- Electron probe; microanalysis; particle analysis x-ray; quantitative analysis; continuum intensity; 19679.
- Electron probe microanalysis; energy dispersive x-ray spectrometry; microanalysis; qualitative analysis; quantitative analysis; scanning electron microscopy; spectral artifacts; transmission electron microscopy; 19088.
- Electron probe microanalysis; energy dispersive x-ray spectrometry; solid state x-ray detectors; x-ray fluorescence; x-ray microanalysis; x-ray spectrometry; 19434.
- Electron probe microanalysis; fiber; glass; microsphere; Monte Carlo; particulate; quantitative analysis; analytical standards; 19732.
- Electron probe microanalysis; glass particles; mineral particles; Monte Carlo methods; particle; peak-to-background ratios; quantitative analysis; x-ray microanalysis; 19921.
- Electrons; energy degradation spectra; fano factor; ionization yields; stopping power; W-values; 19400.
- Electrons; linac; nuclear reactions; superconducting; accelerators; coincidence measurements; 19248.
- Electrons; nitrogen; oxygen; rare gases; rate coefficients; transport; cross sections; 19387.
- Electrons; proton; shielding; spacecraft; bremsstrahlung; dose; 19226.
- Electrons; protons; space shielding; computer code; depth-dose data; electron bremsstrahlung; *TN1116*.
- Electrons; range; reflection; scaling parameter; transport mean free path; albedo; backscatter; 19391.
- Electron scattering; electron scattering resonances; George Schulz; high energy resolution; temporary negative ions; atoms; 19500.
- Electron scattering; energy dispersive x-ray spectrometry; microanalysis; Monte Carlo electron trajectory simulation; spatial resolution; analytical electron microscopy; 19660.
- Electron scattering; free-free transitions; infrared radiation; 19260.
- Electron scattering; GaAs polarized electron source; polarized electrons; source of polarized electrons; 19308.
- Electron scattering; high accuracy; low and high momentum transfer; rms radius; carbon; combined analysis; 19374.
- Electron scattering cross section; error analysis; MHD; plasma conductivity; 19090.
- Electron scattering resonances; George Schulz; high energy resolution; temporary negative ions; atoms; electron scattering; 19500.
- Electron scattering resonances;  $\text{LiF}^-$ ; molecular anions; polarizability; autodetachment; charge transfer; electron affinity; 19197.
- Electron seeding; gas breakdown; laser ionization; Na; superelas-

- tic; electron heating; 19779.
- Electron spectrometer; photoelectron spectra; synchrotron radiation; 19614.
- Electron spectroscopy; gaseous ion photoionization; ionization potential; spectroscopy; appearance potential; electron impact; *NSRDS-NBS66, Part I*.
- Electron spectroscopy; kinetics of surface processes; surface chemical analysis; surface chemistry; surface spectroscopy; alloy catalysts; catalytic reactions; electron diffraction; 19957.
- Electron spectroscopy; photoemission; relaxation effects; adsorption; 19207.
- Electron spectroscopy; photoemission; UPS; XPS; AES; chemisorption; EELS; 19176.
- Electron spin polarization; GaAs; negative electron affinity; photoemission; polarization; source of polarized electrons; spin polarization; electron optics; 19310.
- Electron stimulated; desorption; 19192.
- Electron stimulated desorption; ESDIAD; ion energy distributions; ion yield; oxygen; photon stimulated desorption; synchrotron radiation; tungsten; angular distribution of ions; chemisorption; 19533.
- Electron stimulated desorption; ethane; adsorption; angular distribution; cyclohexane; cyclooctane; cyclopropane; desorption; 19922.
- Electron stimulated desorption; ion angular distribution; nitric oxide; ruthenium; surface; carbon monoxide; chemisorption; 19924.
- Electron stimulated desorption; ion angular distribution; oxygen; stepped surfaces; surface bonding; tungsten; adsorption; chemisorption; 19860.
- Electron stimulated desorption; ion angular distribution; quantum scattering theory; surface; adsorption; 19193.
- Electron stimulated desorption; molecular orientation; palladium (210); surface science; carbon monoxide; chemisorption; 19195.
- Electron stimulated desorption; surface kinetics; surface structure; catalysis; catalytic methanation; 19902.
- Electron storage ring; particle accelerator; synchrotron light source; beam instabilities; beam lifetime; bunch shape oscillations; 19437.
- Electron temperature; hollow cathode; isotope ratio; optogalvanic effect; oscillator strength; spectroscopy; uranium; 19150.
- Electro-optic; photoelastic; piezo-optic; refractive index; relative dielectric impermeability; absorption coefficient; birefringence; crystal optics; dielectric constant; elasto-optic; 19257.
- Electro-optical detectors; flash x-ray generators; synchrotron x-radiation; x-ray diffraction; 19714.
- Electro-optics; interfacial breakdown; Pockels effect; space charge; surface flashover; vacuum breakdown; electrical breakdown; *NBS-GCR-80-203*.
- Electroplating; micrometer scale; scanning electron microscope; electroforming; 19833.
- Electro preparation; foils; iron-platinum; alloys; electrodeposition; 19395.
- Electrostatics; hydrogen; molecules; neutral atom traps; atoms; 19793.
- Elemental analysis; *in vivo* measurement; neutron activation; body composition; clinical application; *SP594*, pp. 456-457 (Sept. 1980).
- Elemental analysis; PIXE; elastic scattering; *SP594*, pp. 516-520 (Sept. 1980).
- Elements; gamma-ray spectrometry; neutrons; cross section; *SP594*, pp. 853-856 (Sept. 1980).
- Elevated temperature; heat transfer; liquid flow rate; solar-heat transfer liquid containment; stagnation; corrosion; *NBSIR 79-1919*.
- Elevated temperatures; ferritic stainless steels; gaseous environments; nickel alloy 671; nickel alloy 800; oxidizing/sulfidizing gas; premature failure; stress corrosion cracking; austenitic stainless steels; coal gasification; 19623.
- Elevation; Federal Information Processing Standard; geographic point location; latitude; Latitude and Longitude; longitude; mapping; State Plane Coordinate System; surveying; Universal Transverse Mercator (UTM); coordinate system; *FIPS PUB 70*.
- Elevators; fire tests; hospitals; smoke; smoke movement; stairwells; tracers; air movement; *NBS-GCR-79-183*.
- Ellipsoidal reflectometer; emittance; hemispherical mirror reflectometer; integrating spheres; paraboloidal mirror reflectometer; radiometric measurements; reflectance; transmittance; absorptance; blackbody; 19299.
- Ellipsometry; field ion microscopy; hydrogen; inhibitors; iron; organic coatings; titanium-palladium alloys; vanadium; chromate; electrochemistry; *NBSIR 80-2101 (Navy)*.
- Ellipsometry; flash desorption; LEED; ruthenium; 19508.
- Ellipsometry; index of refraction; 19511.
- Ellipsometry; simulated paint films; chromates; coated metals; corrosion inhibitor; corrosion mechanisms; 19659.
- Elliptic partial differential equations; iterative methods for linear algebraic equations; Neumann boundary conditions; sparse matrices; conjugate gradient algorithm; *J. Res.* 85, No. 5, 367-390 (Sept.-Oct. 1980).
- Elongation; heat treatment; NaCl; plate gage; reduction in area; slow strain rate technique; strain rate; stress corrosion cracking; 2124-T851; 7075; 7075-T6; 7075-T7351; air; alternate immersion test; aluminum alloys; ductility; 19622.
- Elution chromatography; liquid chromatography; organic solution; 19881.
- Elvin-Helmholtz; galaxies; clusters; instability; 19766.
- Emergencies; escape; evacuation; fire alarm systems; fire departments; fire safety; handicapped; life safety; refuge; building codes; building design; building fires; building management; egress; *SP585*.
- Emergencies; escape; evacuation; fire alarm systems; fire departments; fire safety; handicapped; life safety; refuge; building codes; building design; building fires; building management; egress; *NBSIR 80-1965*.
- Emergency egress; escape behavior; HUD; mobile home; safety; standard; window; anthropometry; *NBSIR 80-2049*.
- Emission; laser absorption; molecules; site selection; condensed phase; 19111.
- Emission; line shape; radiative damping; absorption; collisional redistribution; 19710.
- Emission; stars; stars, chromospheres; stars, corona; stars, late-type; stars, RS CVn-type; ultraviolet; 19189.
- Emission control technology; Environmental Protection Agency; innovative technology; innovative waivers; regulation; air pollution; Clean Air Act; *NBS-GCR-ETIP 80-88*.
- Emission-line stars; late-type stars; stellar chromospheres; stellar winds; ultraviolet spectra; x-ray sources; chromosphere sun; 19523.
- Emission Offset Interpretative Ruling; Environmental Protection Agency; market mechanisms; regulation; air pollution; economic incentives; *NBS-GCR-ETIP 80-86*.
- Emission offsets; emission reduction trading; enforcement; Environmental Protection Agency; market mechanisms; air pollution; Clean Air Act; economic incentives; *NBS-GCR-ETIP 80-87*.
- Emission offsets; emission reduction trading; market mechanisms; regulation; air pollution; economic incentives; *NBS-GCR-ETIP 80-90*.
- Emission reduction trading; enforcement; Environmental Protection Agency; market mechanisms; air pollution; Clean Air Act; economic incentives; emission offsets; *NBS-GCR-ETIP 80-87*.
- Emission reduction trading; market mechanisms; regulation; air pollution; economic incentives; emission offsets; *NBS-GCR-ETIP 80-90*.
- Emission spectroscopy; inductively coupled plasma; instrumental control; multi-element analysis; plasma system; trace element analysis; 19912.
- Emissions testing; energy; fundamental constants; gas; grants;

- marketplace; measurement seminars; photon-recoil components; SRM's; atomic properties; computers; *DIM/NBS 64*, No. 1, 1-24 (1980).
- Emissance; heat capacity; high temperature; melting point; stainless steel; thermodynamics; dynamic measurements; electrical resistivity; *19541*.
- Emissance; hemispherical mirror reflectometer; integrating spheres; paraboloidal mirror reflectometer; radiometric measurements; reflectance; transmittance; absorptance; blackbody; ellipsoidal reflectometer; *19299*.
- Emissance; high-speed measurements; high temperature; melting; radiance temperature; vanadium; *19349*.
- Empirical peak shape; gamma-ray spectrum fitting; intercomparison of computational methods; International Atomic Energy Agency; longrange interpolation; non-linear least squares; peak resolution; PICO; *19127*.
- Employee casualties; environmental hazards; human factors; occupational safety; scaffold failures; scaffolds; accidents; accident statistics; construction regulations; construction safety; *NBSIR 79-1955*.
- ENDF/B; integral and differential experiments; LiOH; liquid scintillator; quenching; activation; breeding blankets; DT fusion tritium breeding ratio; *SP594*, pp. 246-253 (Sept. 1980).
- ENDF/B; integral cross sections; CFRMF; *SP594*, pp. 475-478 (Sept. 1980).
- ENDF/B; keV; LINAC; MeV; multigroup calculation; neutron flux spectra; thorium; time-of-flight; cross section; *SP594*, pp. 545-547 (Sept. 1980).
- ENDF/B-IV; ENDF/B-V; fast reactors; group cross sections; integral experiments; least-squares adjustment; chi-square; data consistency; data testing; *SP594*, pp. 182-186 (Sept. 1980).
- ENDF/B-IV; integral experiments; reaction rate ratios; reactivity worths; ZPR critical assembly; delayed neutron data; eigenvalue; *SP594*, pp. 297-306 (Sept. 1980).
- ENDF/B-IV; multigroup; photon-production; code comparison; *SP594*, pp. 209-212 (Sept. 1980).
- ENDF/B-IV; neutron and photon transport; processed cross-section library; prompt and delayed nuclear activities; *SP594*, pp. 213-216 (Sept. 1980).
- ENDF/B-V; fast reactors; group cross sections; integral experiments; least-squares adjustment; chi-square; data consistency; data testing; ENDF/B-IV; *SP594*, pp. 182-186 (Sept. 1980).
- ENDF/B-V; fuel cycle; symbiotic energy system; tritium breeding; cross-section uncertainty; CTR; denatured fuel; economics; *SP594*, pp. 839-843 (Sept. 1980).
- ENDF/B-V; fuel cycle sensitivities; LWR data needs; benchmark analysis; *SP594*, pp. 1-5 (Sept. 1980).
- ENDF/B-V; fusion neutronics; LMFBR analysis; LWR shielding and dosimetry; multigroup cross section libraries; weapons applications; *SP594*, pp. 204-208 (Sept. 1980).
- ENDF/B-V; neutron emission spectra; nuclear model codes; *SP594*, pp. 765-769 (Sept. 1980).
- ENDF/B-V; thermal reactor cross sections; *SP594*, pp. 217-220 (Sept. 1980).
- ENDF/B-V data; neutron calculations; neutron precursors; neutron yields; *SP594*, pp. 800-803 (Sept. 1980).
- ENDF/B-5; GCFR; integral experiment; thorium; capture cross section; *SP594*, pp. 127-130 (Sept. 1980).
- ENDF format; optical-model interpretations; comprehensive evaluation; *SP594*, pp. 829-833 (Sept. 1980).
- ENSDF; evaluation; nuclear levels; nuclear reactions; nuclear structure data; radioactivity; reaction gamma rays; *SP594*, pp. 659-661 (Sept. 1980).
- Encapsulation; hydrogen; thin films; water; water absorption; absorption; calorimetry; coatings; *SP568*, pp. 237-246 (July 1980).
- Enclosures; explosion; explosion containment; mine safety; bibliography; coal mines; electrical equipment; *NBSIR 80-2112*.
- Encryption; modes of operation; computer security; cryptography; data security; DES; *NBSIR 80-2019*.
- Encryption standard; interface requirements; Monte-Carlo testing; testbed; test cases; validating correctness; communications security; computer security; cryptography; *SP500-20, Revised 1980*.
- End of microfibril; microcrack formation; microfibrillar structure; rupture of taut tie molecules; strain to break; stress to break; coalescence of microcracks; *19948*.
- End-to-end length; entanglement effects; excluded volume effects; lattice-model polymer chains; polymer chain dynamics; random-coil polymer chains; relaxation times; self-entanglement effects; computer simulation; *19864*.
- Energies up to 50 MeV; inputs for further calculations; optical reaction cross sections for neutrons; over the periodic table; protons; alphas; *SP594*, pp. 793-795 (Sept. 1980).
- Energy; EPCA; residential; usage; appliances; conservation; costs; *NBSIR 80-1994*.
- Energy; energy conservation; process efficiency; Second Law of Thermodynamics; system efficiency; availability analysis; *TN1115*.
- Energy; environment; health; modelling; scientific uncertainty; societal decisions; socioscientific problems; theory; time constants; basic research; challenge to the analytical chemist; chemical measurement process; *19666*.
- Energy; environmental; shale oil; SRM; weights and measures; x-ray exams; compact range; data; daylighting; *DIM/NBS 64*, No. 6, 1-24 (1980).
- Energy; erosion; instrument landing; measurements; radio frequency; surface science; tetrafluoroethylene powder; water conservation; alternate fuels; data communications; *DIM/NBS 64*, No. 5, 1-28 (1980).
- Energy; erosion; metals; pumps; valves; wear; cyclones; *NBSIR 80-2045 (DOE)*.
- Energy; field survey; insulation; moisture content; residences; retrofit; thermal resistivity; conservation; *TN1131*.
- Energy; forecasting; mathematical models; sensitivity analysis; assessment; documentation; *NBSIR 80-2128*.
- Energy; fundamental constants; gas; grants; marketplace; measurement seminars; photon-recoil components; SRM's; atomic properties; computers; emissions testing; *DIM/NBS 64*, No. 1, 1-24 (1980).
- Energy; heat transfer; hot water; measurement; modeling; solar; testing; computer; *19375*.
- Energy; heat transfer; hot water; measurement; modeling; solar; testing; computer; *19459*.
- Energy; heat transfer; hot water; measurement; modeling; solar; testing; computer; *19498*.
- Energy; insulation; temperature reduction; usage patterns; water heaters; *19140*.
- Energy analysis; energy conservation; calculation procedures; computer simulation; *NBSIR 80-2068*.
- Energy analysis calculation; energy retrofit; home audit; thermal time constant; *NBSIR 80-1961*.
- Energy budget; energy conservation; energy performance criteria; illumination; lighting; power budget; building illumination systems; *NBSIR 80-2052*.
- Energy conservation; calculation procedures; computer simulation; energy analysis; *NBSIR 80-2068*.
- Energy conservation; energy conservation devices; microcomputers and minicomputers; microprocessor applications; programmable controllers; building automation; building controls; building energy management systems; chiller controls; distributed control systems; *NBSIR 80-2065*.
- Energy conservation; energy consumption; gas pilot; heat loss; insulation; modifications; recovery efficiency; residential; standby loss; test procedures; water heaters; *NBSIR 79-1783*.
- Energy conservation; energy performance criteria; illumination; lighting; power budget; building illumination systems; energy budget; *NBSIR 80-2052*.
- Energy conservation; environmental impact; feasibility study; integrated utilities; MIUS; on-site utilities; *NBSIR 79-1787*.
- Energy conservation; Federal energy management program; life-cycle costing; public buildings; renewable energy; solar

energy; solar photovoltaic; cost effectiveness; economic evaluations; *H135*.

Energy conservation; federal buildings; life-cycle costing; solar energy; *19067*.

Energy conservation; feedback; incentives; metering; rate structures; water conservation; consumer education; *NBSIR 80-2119*.

Energy conservation; HVAC loads; thermal insulation; thermal performance; building design; computer analysis; *NBSIR 80-2076*.

Energy conservation; housing; building design; building energy performance standards; building standards; component performance standards; *NBSIR 80-2161*.

Energy conservation; housing codes; regulatory approaches; building code enforcement; buildings; design; *SP586*.

Energy conservation; illumination; illumination levels; lighting; suprathreshold seeing; visibility; vision; conspicuity; contrast; *NBSIR 79-1925*.

Energy conservation; illumination levels; lighting; lighting design; lighting education; lighting research; post-occupancy evaluation; power budget; task lighting; visual performance; biological effects of lighting; *SP587*.

Energy conservation; incentives; life-cycle cost; payback; rate of return; solar economics; windows; benefit cost; building economics; discounting; economic analysis; economic efficiency; *H132*.

Energy conservation; indoor air quality; radioactivity; radon; ventilation; *19862*.

Energy conservation; insulation; life-cycle costs; low-income housing; marginal analysis; thermal efficiency; weatherization; benefit-cost analysis; building economics; building envelope; economic analysis; economic efficiency; *NBSIR 79-1948*.

Energy conservation; insulation; low-income housing; statistics; unit costs; weatherization; building economics; cost components; data analysis; data collection; demonstration; economic analysis; *NBSIR 80-2167*.

Energy conservation; internal rate of return; life-cycle costing; marginal analysis; optimal design; residential buildings; space cooling; space heating; building envelope; cost effectiveness; economics; *19235*.

Energy conservation; investment problems; life-cycle costing; buildings; cost-effective; *19102*.

Energy conservation; life-cycle cost; payback; rate-of-return; savings-to-investment ratio; benefit-cost; building design; construction economics; discounting; economics; *SP544*.

Energy conservation; measurement methods; neutron transmutation doped silicon; power-device grade silicon; resistivity variations; silicon; spreading resistance measurements; thermally stimulated measurements; thyristor materials measurements; thyristor measurements; *NBSIR 80-2061*.

Energy conservation; passive solar heating, cooling, and performance monitoring; building heat transfer; *19819*.

Energy conservation; process efficiency; Second Law of Thermodynamics; system efficiency; availability analysis; energy; *TN1115*.

Energy conservation; windows; building economics; economic analysis; *19073*.

Energy conservation devices; microcomputers and minicomputers; microprocessor applications; programmable controllers; building automation; building controls; building energy management systems; chiller controls; distributed control systems; energy conservation; *NBSIR 80-2065*.

Energy conservation in commercial buildings; heat pumps; validation of computer models, buildings; building models; building performance data; computer simulations, building; *NBSIR 80-2093*.

Energy conservation measures for consumer products; Energy Extension Service (EES) program; regulations; standards; State energy conservation office contact personnel; State energy conservation plans and programs; *NBSIR 80-2017*.

Energy consumption; energy measurements; heat pump; laboratory tests; modifications test procedures; water heaters; *NBSIR 79-1951*.

Energy consumption; gas pilot; heat loss; insulation; modifications; recovery efficiency; residential; standby loss; test procedures; water heaters; energy conservation; *NBSIR 79-1783*.

Energy consumption; HVAC systems; Total Energy systems; cogeneration; costs; economic analysis; *NBS-GCR-80-164*.

Energy conversion; laboratory accreditation; photovoltaics; product certification; solar collectors; solar energy; *NBSIR 80-2028*.

Energy current; isotopic disorder; nonequilibrium; one-dimensional harmonic crystal; random matrix products; steady state; thermal conductivity; *19873*.

Energy degradation spectra; fano factor; ionization yields; stopping power; W-values; electrons; *19400*.

Energy deposition; Monte Carlo; multiple scatter; tracklength; charged particle; electron; *19273*.

Energy dispersive; macrosegregation; monochromatic incident x-ray beam; multiphase structure; x-ray fluorescence; chemical profiling; *19959*.

Energy dispersive spectrometry (EDS); L-series x-ray lines; relative x-ray line intensities; spectrometer efficiency; wavelength dispersive spectrometry (WDS); crystal spectrometer calibration; electron microprobe analysis; *19678*.

Energy dispersive x-ray spectrometry; microanalysis; Monte Carlo electron trajectory simulation; spatial resolution; analytical electron microscopy; electron scattering; *19660*.

Energy dispersive x-ray spectrometry; microanalysis; qualitative analysis; quantitative analysis; scanning electron microscopy; spectral artifacts; transmission electron microscopy; electron probe microanalysis; *19088*.

Energy-dispersive x-ray spectrometry; NBS-SRM 1571 Orchard Leaves; automated borate fusion; botanical samples; *19083*.

Energy dispersive x-ray spectrometry; scanning electron microscope; silicon (Li) detector; spectral artifacts; x-ray spectrometry; analytical electron microscope; *19631*.

Energy dispersive x-ray spectrometry; solid state x-ray detectors; x-ray fluorescence; x-ray microanalysis; x-ray spectrometry; electron probe microanalysis; *19434*.

Energy distribution; finite geometry; Monte Carlo method; multiple scattering; neutron; scattering; angular distribution; computer programs; corrections; *SP594*, pp. 504-508 (Sept. 1980).

Energy distribution functions; excited atoms; cross sections; electron impact; electron ionisation; *19358*.

Energy distribution functions; Jovanovich equation; Langmuir equation; monomolecular adsorption; nonlinear regression analysis; adsorption isotherms; *19771*.

Energy Extension Service (EES) program; regulations; standards; State energy conservation office contact personnel; State energy conservation plans and programs; energy conservation measures for consumer products; *NBSIR 80-2017*.

Energy efficiency; inventors; innovation; labels; standards; sulfuric acid; tools; awards; computers; didymium glass filters; *DIM/NBS 64*, No. 7, 1-28 (1980).

Energy-efficient building; ASHRAE Standard 62-73; building ventilation; carbon dioxide and ventilation; *19218*.

Energy estimates; geographical distribution; low temperature collectors; manufacturing activity; medium temperature collector; solar energy; special collectors; *19527*.

Energy-generation; lasers; molecules; air; electron; *19318*.

Energy levels; ion; ionization energy; niobium; spectrum; wavelengths; *19282*.

Energy levels; ion; ionization energy; spectrum; wavelengths; zirconium; *19118*.

Energy levels; isoelectric sequence; VUV spectra; wavelengths; xenon; Ag I; *19069*.

Energy levels; magnesium; wavelengths; configuration interaction; *19556*.

Energy levels; sodium; wavelengths; aluminum; configuration interaction; *19562*.

Energy levels; theta-pinch; wavelengths; Xenon; *19117*.

Energy levels, atomic; spectra, atomic; wavelengths, atoms and ions; atomic energy levels; atomic spectra; bibliography; *SP363. Supplement 2*.

Energy loss; shunt reactors; bridges; calibration; current comparator; dissipation factor; electrical measurements; *19767*.

Energy measurements; heat pump; laboratory tests; modifications test procedures; water heaters; energy consumption; *NBSIR 79-1951*.

Energy modeling forum; energy models; evaluation; mathematical models; model access; model management; sensitivity analysis; validation; assessment; documentation; econometric models; *SP569*.

Energy models; evaluation; mathematical models; model access; model management; sensitivity analysis; validation; assessment; documentation; econometric models; energy modeling forum; *SP569*.

Energy performance criteria; illumination; lighting; power budget; building illumination systems; energy budget; energy conservation; *NBSIR 80-2052*.

Energy performance of windows; window attributes; window design; window design elements; window performance; design elements; *SP575*.

Energy per ion pair; kerma; neutrons; secondary charged particles; tissue-equivalent gas; dosimetry; *19331*.

Energy range 10 keV-15 MeV; optical and statistical model calculations; potential scattering radii; s- and p-wave strength functions; total cross sections; W isotopes; elastic and inelastic scattering cross sections; *SP594*, pp. 336-339 (Sept. 1980).

Energy resolution; hard x-ray; imaging; Lixiscope; soft gamma-ray; spectrometer; *19403*.

Energy resolution; hard x-ray; imaging; Lixiscope; soft gamma-ray; spectrometer; *19404*.

Energy resolution; low-energy gamma rays; microchannel plates; position-sensitive detector; x-ray telescope; CsI scintillator; *19401*.

Energy retrofit; home audit; thermal time constant; energy analysis calculation; *NBSIR 80-1961*.

Energy spectra; integral experiment; pulse-shape discrimination; data unfolding; *SP594*, pp. 591-595 (Sept. 1980).

Energy transfer; laser-excited fluorescence; laser-induced chemistry; mass transport; multiphoton processes; vibrational relaxation; diffusion; *19179*.

Energy transfer; lasers; calcium; collision physics; dimer lasers; *19775*.

Enforcement; Environmental Protection Agency; market mechanisms; air pollution; Clean Air Act; economic incentives; emission offsets; emission reduction trading; *NBS-GCR-ETIP 80-87*.

Enforcement; housing codes; personnel; budgets; economic analysis; *SP586*, pp. 135-148 (June 1980).

Engineer; equivalent life safety; municipal attorney; product endorsement; professional liability; variances; appeals process; architect; certification; checklists; code official; consultant; *SP586*, pp. 45-57 (June 1980).

Engineering; missiles; structural engineering; tornadoes; wind; *NBSIR 80-2117*.

Engineering; standards; building; building codes; building design; disaster mitigation; earthquakes; *NBSIR 80-2111-9*.

Engineering; standards; structural engineering; building; building codes; building design; earthquakes; *NBSIR 80-2111-2*.

Engineering and health effects; environmental contaminants; health science; air quality; contaminants from building materials; *19156*.

Engineering economics; housing; mathematical programming; optimization; rehabilitation; renovation; applied economics; building codes; building economics; cost estimation; economic analysis; *BSS129*.

Engineering economics; mathematical models; program planning; building economics; construction; cost estimation; econometric models; economic analysis; *NBS-GCR-80-197*.

Engineering standards; information interchange; measurement systems; product standards; standard reference data; standard reference materials; *19905*.

Engineers; Florida; inspection; legislation; recertification; architects; codes; earthquake; *SP586*, pp. 197-203 (June 1980).

Engine oil; hydraulic oil; industrial oil; lubricating oil; oil specifications; petroleum standards; petroleum test methods; recycled oil; re-refined oil; used oil; waste oil; *SP584*.

Enriched targets; nuclear reactions; quadrupole and hexadecapole deformation parameters; calculated direct-interaction and compound-nucleus cross sections; deduced coupled-channel optical potential parameters; *SP594*, pp. 672-676 (Sept. 1980).

Enriched targets; palladium isotopes; resonance parameters deduced; *SP594*, pp. 315-318 (Sept. 1980).

Enriched  $^{22}\text{Ne}$  target;  $E = 60$  to  $110$  MeV; measured  $\sigma(E)$  at  $110^\circ$  and  $128^\circ$  up to  $8.6$  MeV in excitation energy; nuclear reactions;  $^{22}\text{Ne}(e, e')$ ; *19691*.

Entanglement effects; excluded volume effects; lattice-model polymer chains; polymer chain dynamics; random-coil polymer chains; relaxation times; self-entanglement effects; computer simulation; end-to-end length; *19864*.

Enthalpimetry; glass processing; instrumentation; paper technology; polymer ignition; rubber processing; thermal analysis; thermogravimetry; adsorbents; chemical processing; coordination compounds; *SP580*.

Enthalpy; entropy; equation of state; heat capacity at constant pressure; heat capacity at constant volume; helium; hydrogen; methane; neon; nitrogen; oxygen; thermal conductivity; velocity of sound; viscosity; argon; computer programs; density; *TN1025*.

Enthalpy; entropy; Gibbs energy; heat capacity; thermochemical tables; uranium-halogen containing compounds; data evaluation; *NBSIR 80-2029*.

Enthalpy; heat capacity; high-temperature; standard reference material; thermodynamic functions; tungsten; drop calorimetry; electronic heat capacity; *19363*.

Enthalpy of dilution; enthalpy of solution; KCl; SRM 1655; standard reference material; thermochemistry; adiabatic calorimeter; calorimetry,  $\Delta C_p$ , endothermic reaction; *J. Res. 85*, No. 6, 449-465 (Nov.-Dec. 1980).

Enthalpy of dilution; heat; hydrochloric acid; lithium chloride; relative apparent molal enthalpy; relative partial molal enthalpy; sulfuric acid; thermochemistry; calorimetry; electrolytes; *J. Res. 85*, No. 1, 11-17 (Jan.-Feb. 1980).

Enthalpy of solution; KCl; SRM 1655; standard reference material; thermochemistry; adiabatic calorimeter; calorimetry,  $\Delta C_p$ , endothermic reaction; enthalpy of dilution; *J. Res. 85*, No. 6, 449-465 (Nov.-Dec. 1980).

Enthalpy of solution; KCl; solution calorimetry; standard reference materials; thermochemistry; tris(hydroxymethyl)aminomethane; calorimetry; *J. Res. 85*, No. 6, 467-481 (Nov.-Dec. 1980).

Enthalpy of water; heavy water;  $PvT$ ; saturation states; thermodynamic properties of water; vapor pressure; virial coefficients; water; *JPCRD 9*, No. 3, 735-750 (1980).

Entrepreneurship; innovation; innovation centers; invention; invention evaluation; Santa Cruz; *19261*.

Entropy; equation of state; heat capacity at constant pressure; heat capacity at constant volume; helium; hydrogen; methane; neon; nitrogen; oxygen; thermal conductivity; velocity of sound; viscosity; argon; computer programs; density; enthalpy; *TN1025*.

Entropy; ferroelectrics; glass-ceramics; heat switches; polarization; refrigeration; specific heat strontium titanate; ceramics; cryogenics; dielectric constant; electrocaloric effect; *19534*.

Entropy; Gibbs energy; heat capacity; thermochemical tables; uranium-halogen containing compounds; data evaluation; enthalpy; *NBSIR 80-2029*.

Environment; Federal programs; laboratory accreditation; monitoring; quality assurance; standard methods; data; *19715*.

Environment; gage element; leads; load; protective coating; resistance; sensitivity change; stability; strain gages; structure;

- transducers; zero shift; adhesive; backing; connection; 19049.
- Environment; health; measurements; radiation; radon; radon daughters; ventilation; buildings; *SP581*.
- Environment; health; modelling; scientific uncertainty; societal decisions; socioscientific problems; theory; time constants; basic research; challenge to the analytical chemist; chemical measurement process; energy; 19666.
- Environmental; measurements; radiation; random uncertainty; systematic uncertainty; data reporting; 19301.
- Environmental; shale oil; SRM; weights and measures; x-ray exams; compact range; data; daylighting; energy; *DIM/NBS 64*, No. 6, 1-24 (1980).
- Environmental analysis; foliar analysis; food analysis; nutrition; plant tissue analysis; standard reference material; trace analysis; agriculture; 19423.
- Environmental analysis; foliar analysis; food analysis; organic solvents; standard reference material; water analysis; 19571.
- Environmental chamber; fan depressurization; mobile home; sulfur hexafluoride; tracer gas; air leakage measurements; *NBSIR 80-2105*.
- Environmental contaminants; health science; air quality; contaminants from building materials; engineering and health effects; 19156.
- Environmental degradation; materials degradation; solar collector; durability/reliability; 19451.
- Environmental effects; lead chromate pigments; storm water runoff; toxicity; water pollution; air pollution; chromate ore; *NBSIR 80-1974*.
- Environmental exposure; materials; polymeric materials; solar collectors; absorber materials; absorptive coatings; accelerated aging; cover plates; durability; 19364.
- Environmental fracture; fracture; materials failure; reaction rate theory; slow crack growth; surface energy; 19843.
- Environmental hazards; human factors; occupational safety; scaffold failures; scaffolds; accidents; accident statistics; construction regulations; construction safety; employee casualties; *NBSIR 79-1955*.
- Environmental impact; feasibility study; integrated utilities; MIUS; on-site utilities; energy conservation; *NBSIR 79-1787*.
- Environmental influence; outdoor testing; solar collectors; solar simulators; thermal testing; ASHRAE Standard 93; collector rating; 19366.
- Environmental laboratories; licensure; performance evaluation; physician's office laboratories; proficiency testing; public health; recombinant DNA; registration and approval; voluntary standards; clinical laboratories; cost effectiveness; *SP591*, pp. 63-66 (Aug. 1980).
- Environmental measurements; materials science; measurement services; molecular science; National Measurement Laboratory; nondestructive evaluation; nuclear measurement technology; physics research; radiation research; recycled materials; standard reference data; *SP572*.
- Environmental measurements; quality assurance; reference methods; standard reference materials; definitive methods; 19574.
- Environmental Protection Agency; innovative technology; innovative waivers; regulation; air pollution; Clean Air Act; emission control technology; *NBS-GCR-ETIP 80-88*.
- Environmental Protection Agency; market mechanisms; air pollution; Clean Air Act; economic incentives; emission offsets; emission reduction trading; enforcement; *NBS-GCR-ETIP 80-87*.
- Environmental Protection Agency; market mechanisms; regulation; air pollution; economic incentives; Emission Offset Interpretative Ruling; *NBS-GCR-ETIP 80-86*.
- Environmental Protection Agency; public comment; regulation; rulemaking; air pollution; Clean Air Act; *NBS-GCR-ETIP 80-89*.
- Environmental particulates; thermal analytical methods; alpha-quartz particulate; chrysotile asbestos particulate; differential thermal analysis; 19890.
- Environmental pollution; highway noise; motor vehicle noise; noise; noise control; sound; traffic noise; transportation noise; acoustics; *TN1113-1*.
- Environmental pollution; noise control; noise isolation; sound; acoustics; building acoustics; *TN1113-2*.
- Environmental psychology; fire research; fire safety; human behavior in fires; modeling technique; programming; simulation of human behavior; architectural research; building fires; computer-aided design; *NBSIR 80-1982*.
- Environmental psychology; illumination; perception; questionnaires; research methodology; sensory environment; social sciences; thermal environment; architecture; audition; built environment; color; *SP474*.
- Environmental simulation for solar collector testing; optical and thermal loss characteristics of solar collectors; solar collectors; wind speed and sky temperature effects on solar collector performance; collector efficiency; comparison German BSE vs ASHRAE 93-77 test procedures; 19239.
- Environmental simulation for solar collector testing; optical and thermal loss characteristics of solar collectors; solar collectors; wind speed and sky temperature effects on solar collector performance; collector efficiency; comparison German BSE vs ASHRAE 93-77 test procedures; 19325.
- Environmental stability; masking layer; potassium chloride window; scattering; thallium iodide; antireflective coating; deposition technique; *SP568*, pp. 355-357 (July 1980).
- Environmental trace elements; NBS standard reference materials; SRM 1567, Wheat Flower; SRM 1568, Rice Flower; trace element nutrients; 19570.
- Environments; homogeneity; natural materials; nondestructive assay; particles; quality assurance; radiation; radioactivity; radiochemical assay; radionuclide; segregation; standard; calibration; 19298.
- Enzyme activity; molar absorptivity (molar absorption coefficient); 19561.
- EPCA; residential; usage; appliances; conservation; costs; energy; *NBSIR 80-1994*.
- Epistemology; measurement system; metric system; SI; base units; convention of the meter; economic benefits; 19639.
- Epitaxial growth; Hall measurements; indium-doped silicon; p-n junction isolation; two-layer structures; 19417.
- Epitaxy; inter-layerings; nonstoichiometry; structural considerations; twinning; computer assessment; crystal structures; *J. Res. 85*, No. 5, 347-362 (Sept.-Oct. 1980).
- Epitaxy; plating coatings; zinc; aluminum; electrodeposition; 19657.
- Epitaxy; tin aluminum; zinc; aluminum; coatings; electrodeposition; 19730.
- Epithermal neutron energy; neutron radiography; nondestructive assay; nondestructive evaluation; position-sensitive proportional counter; *SP594*, pp. 436-439 (Sept. 1980).
- Epithermal neutron energy; neutron radiography; nondestructive assay; position-sensitive proportional counter; uranium; *SP582*, pp. 86-92 (June 1980).
- Epithermal neutrons; neutron radiography; nondestructive assay; nondestructive evaluation; position-sensitive proportional counter; 19847.
- Equation of state; ethylene; impurities; isochores; scaling laws; Burnett method; coexistence curve; critical exponents; critical isochore; critical parameters; 19894.
- Equation of state; extended corresponding states; extended critical region; mathematical model; natural gas components; nitrogen-methane mixtures; PVTx properties measurements; 19782.
- Equation of state; fluids; orthobaric densities; propane; specific heats; thermodynamic properties; vapor pressures; coexistence boundary; critical point; densities; 19204.
- Equation of state; heat capacity at constant pressure; heat capacity at constant volume; helium; hydrogen; methane; neon; nitrogen; oxygen; thermal conductivity; velocity of sound; viscosity; argon; computer programs; density; enthalpy; entropy; *TN1025*.

Equation of state; helium II; mathematical model; superfluid; thermodynamic properties; computer program; deviation plots; *TN1029*.

Equation of state; ideal gas; Van der Waals equation; virial coefficient; virial equation; Debye theory; *19772*.

Equation of state; inhomogeneous fluid; lattice fluid; long-range interactions; surface entropy; Cahn-Hilliard theory; chemical potential; density gradient; *19653*.

Equation of state; interfacial tension; lattice fluid; miscibility; spinodal; chemical potential; combinatorial entropy; *19652*.

Equilibrium; game theory; mathematical economics; noncooperative games; aggregation; *J. Res.* **85**, No. 5, 391-428 (Sept.-Oct. 1980).

Equilibrium; incoherent interfaces; solid-fluid interface; stressed solid; thermodynamics; vacancies; coherent interfaces; *19949*.

Equilibrium partitioning; Fickian diffusion; food package; interaction parameter; migration; partition coefficient; radiolabeled additive; solubility; *19651*.

Equipment; evaluation; laboratory; manual; personnel; quality assurance; quality control; systems; calibration; *SP591*, pp. 99-103 (Aug. 1980).

Equipment; International Atomic Energy Agency; international safeguards; *SP582*, pp. 169-177 (June 1980).

Equivalency; housing standards; minimum standards; space standards; *SP586*, pp. 103-115 (June 1980).

Equivalent life safety; municipal attorney; product endorsement; professional liability; variances; appeals process; architect; certification; checklists; code official; consultant; engineer; *SP586*, pp. 45-57 (June 1980).

Erosion; fracture mechanics; thermal fracture; ceramic strength; crack propagation; *19728*.

Erosion; germanium; hardness measurements; plastic deformation; silicon; silicon carbide; aluminum oxide; brittle fracture; dislocations; electron microscopy; *19731*.

Erosion; glass; impact; indentation fracture; strength; ceramics; *19594*.

Erosion; impact; metals; surfaces; deformation; *19936*.

Erosion; impingement erosion; metal erosion; wear; copper; electron microscopy; *19941*.

Erosion; instrument landing; measurements; radio frequency; surface science; tetrafluoroethylene powder; water conservation; alternate fuels; data communications; energy; *DIM/NBS* **64**, No. 5, 1-28 (1980).

Erosion; metals; pumps; valves; wear; cyclones; energy; *NBSIR 80-2045 (DOE)*.

Erosive wear; impact; steel; wear; wear debris; abrasive particles; electron microscopy; *19874*.

Erosive wear; scanning electron microscopy; transmission electron microscopy; wear; abrasive wear; copper; *19958*.

Error analysis; exponential function; multiprecision calculations; relative precision; unrestricted arguments; unrestricted ranges; *19380*.

Error analysis; MHD; plasma conductivity; electron scattering cross section; *19090*.

Error bounds; parabolic cylinder functions; turning points; Whittaker functions; asymptotic expansions; confluent hypergeometric functions; *19773*.

Error checking; FORTRAN program; least squares solution; mass calibration; mass measurement; calibration report; correction to mass measurements; *TN1127*.

Error estimates; higher order finite difference methods; numerical experiments; parabolic equations; singular perturbation problems; cell Reynolds number; diffusion convection equations; *19490*.

Errors; isotope ratios; mass spectroscopy; pulse counting; resin beads; thermal ionization; uranium; *19816*.

ESCA; gold; relative intensities; round robin; x-ray photoelectron spectroscopy; binding energies; copper; *19202*.

ESCA; oxygen; ruthenium; ruthenium oxide; surface reactions; chemisorption; *19254*.

ESDIAD; ion energy distributions; ion yield; oxygen; photon stimulated desorption; synchrotron radiation; tungsten; angular distribution of ions; chemisorption; electron stimulated desorption; *19533*.

Escape; evacuation; fire alarm systems; fire departments; fire safety; handicapped; life safety; refuge; building codes; building design; building fires; building management; egress; emergencies; *SP585*.

Escape; evacuation; fire alarm systems; fire departments; fire safety; handicapped; life safety; refuge; building codes; building design; building fires; building management; egress; emergencies; *NBSIR 80-1965*.

Escape behavior; HUD; mobile home; safety; standard; window; anthropometry; emergency egress; *NBSIR 80-2049*.

Estimates; gamma rays; neutrons; nondestructive assay; plutonium waste; safeguards; uranium waste; verification; counter; *SP582*, pp. 622-632 (June 1980).

ETIP; financial projections; regulatory commissions; regulatory process; technological innovation; computer program; electric utilities; *NBS-GCR-ETIP 79-73*.

Etchant bath; light absorption; microscopic pores; nickel-phosphorus alloy; solar collector; surface morphology; ultra-black surface coating; *U.S. Patent 4,233,107*.

Ethane; adsorption; angular distribution; cyclohexane; cyclooctane; cyclopropane; desorption; electron stimulated desorption; *19922*.

Ethane; group theory; internal rotation; perturbations; torsion; vibration-rotation; *19412*.

Ethernet; local; network; terminal; area; computer; data; digital; *19126*.

Ethyl chloride; halocarbons; photochemistry; *19931*.

Ethylene; impurities; isochores; scaling laws; Burnett method; coexistence curve; critical exponents; critical isochore; critical parameters; equation of state; *19894*.

Ethylene; melting pressures; PVT; vapor pressure; compressibility; density; *19682*.

Ethylene; physisorption; surface; tungsten; acetylene; chemisorption; electron energy loss spectroscopy; *19390*.

Ethylene; second virial; state-of-the-art; temperature; Burnett PVT measurements; coefficient; *19115*.

Ethylidenimine; hyperfine and internal rotations; microwave spectra; pyrolysis of ethylamine; Stark effects; synthesis and microwave spectrum of; *19447*.

[Et<sub>3</sub>P]<sub>2</sub>PtWS<sub>4</sub>; molecular structure; Pt-W complex; single crystal; ternary metal sulfide; x-ray diffraction; *19172*.

Eu isotopes; integral cross sections; Nd; Sm; dosimetry; EBR-II; *SP594*, pp. 557-562 (Sept. 1980).

Euratom safeguards; MUF simulation; MUF statistical inference; *SP582*, pp. 677-689 (June 1980).

Europium lithium borate glass; fluorescence line narrowing; glass; laser; laser glass; laser-induced fluorescence; *19545*.

Eutectics; Rayleigh waves; stability; surface anisotropy; composites; durability; *19153*.

Eutectic solidification; metallic glasses; palladium-copper-silicon alloys; rapid solidification; amorphous alloys; coupled growth; *19891*.

EV neutron energy; neutron imaging techniques; pinhole camera; position-sensitive proportional counter; *19383*.

EV neutrons; ratio; standards; cross sections; *SP594*, pp. 97-100 (Sept. 1980).

Evacuation; fire alarms; fire safety; human behavior; human factors; panic; safety; smoke; symbols; communications; *NBSIR 80-2070*.

Evacuation; fire alarm systems; fire departments; fire extinguishers; fire investigations; nursing homes; patients; *NBS-GCR-80-218*.

Evacuation; fire alarm systems; fire departments; fire fighters; flashover; nursing homes; nursing staff; patients; room fires; smoke detectors; death; doors; egress; *NBS-GCR-80-191*.

Evacuation; fire alarm systems; fire departments; fire fighters; hospitals; nursing staff; patients; smoke; egress; *NBS-GCR-80-192*.

- Evacuation; fire alarm systems; fire departments; fire investigations; smoke; *NBS-GCR-80-272*.
- Evacuation; fire alarm systems; fire departments; fire safety; handicapped; life safety; refuge; building codes; building design; building fires; building management; egress; emergencies; escape; *SP585*.
- Evacuation; fire alarm systems; fire departments; fire safety; handicapped; life safety; refuge; building codes; building design; building fires; building management; egress; emergencies; escape; *NBSIR 80-1965*.
- Evacuation; fire department; fire investigations; mattresses; smoke; *NBS-GCR-80-262*.
- Evacuation; fire departments; fire extinguishers; fire investigations; hospitals; patients; *NBS-GCR-80-240*.
- Evacuation; fire departments; fire extinguishers; fire investigations; hospitals; patients; smoke; sprinkler systems; *NBS-GCR-80-233*.
- Evacuation; fire departments; fire extinguishers; fire investigations; hospitals; patients; beds (furniture); *NBS-GCR-80-241*.
- Evacuation; fire departments; fire extinguishers; fire investigations; mattresses; nursing homes; nursing staff; *NBS-GCR-80-216*.
- Evacuation; fire departments; fire extinguishers; fire investigations; nursing homes; nursing staff; smoke; *NBS-GCR-80-223*.
- Evacuation; fire departments; fire extinguishers; fire investigations; patients; smoke; *NBS-GCR-80-273*.
- Evacuation; fire departments; fire fatalities; fire fighters; flashover; ladders; room fires; smoke; students; doors; dormitories; *NBS-GCR-80-193*.
- Evacuation; fire departments; fire fatalities; fire investigations; flashover; group homes; halfway houses; mental disorders; smoke; upholstered furniture; *NBS-GCR-80-200*.
- Evacuation; fire departments; fire fatalities; flashover; hotels; room fires; senior citizens; smoke; breathing apparatus; *NBS-GCR-80-253*.
- Evacuation; fire departments; fire fighters; fire investigations; mattresses; smoke; apartments; building fires; doors; egress; *NBS-GCR-79-187*.
- Evacuation; fire departments; fire investigations; flashover; schools; smoke; *NBS-GCR-80-237*.
- Evacuation; fire departments; fire investigations; hospitals; nursing staff; patients; *NBS-GCR-80-217*.
- Evacuation; fire departments; fire investigations; hospitals; smoke; *NBS-GCR-80-230*.
- Evacuation; fire departments; fire investigations; mattresses; patients; smoke; *NBS-GCR-80-266*.
- Evacuation; fire departments; fire investigations; nursing homes; nursing staff; patients; room fires; sprinkler systems; *NBS-GCR-80-206*.
- Evacuation; fire departments; fire investigations; nursing homes; nursing staff; patients; smoke; *NBS-GCR-80-205*.
- Evacuation; fire departments; fire investigations; nursing homes; nursing staff; patients; smoke; *NBS-GCR-80-214*.
- Evacuation; fire departments; fire investigations; nursing homes; nursing staff; patients; smoke; *NBS-GCR-80-242*.
- Evacuation; fire departments; fire investigations; nursing homes; patients; *NBS-GCR-80-208*.
- Evacuation; fire departments; fire investigations; nursing staff; patients; smoke; smoke detectors; *NBS-GCR-80-238*.
- Evacuation; fire extinguishers; fire investigations; hospitals; nursing staff; patients; smoke; doors; *NBS-GCR-80-231*.
- Evacuation; fire extinguishers; fire investigations; smoke; *NBS-GCR-80-276*.
- Evacuation; fire investigations; doors; *NBS-GCR-80-264*.
- Evacuation; fire investigations; smoke; *NBS-GCR-80-271*.
- Evacuations; fire alarm systems; fire departments; fire investigations; mattresses; nursing staff; smoke; *NBS-GCR-80-268*.
- Evacuations; fire alarm systems; fire extinguishers; fire investigations; nursing homes; nursing staff; patients; room fires; doors; *NBS-GCR-80-219*.
- Evacuations; fire departments; fire extinguishers; nursing staff; patients; room fires; smoke; upholstered furniture; doors; *NBS-GCR-80-220*.
- Evaluability assessment; evaluation; Experimental Technology Incentives Program; experimental variance; Occupational Safety and Health Administration; regulatory experimentation; regulatory policy; standards; technological innovation; administrative experimentation; *TN1114*.
- Evaluability assessment; evaluation; Experimental Technology Incentives Program; intermodal freight transportation; Interstate Commerce Commission; rail freight transportation; regulatory experimentation; regulatory policy; technological innovation; *NBS-GCR-ETIP 80-85*.
- Evaluated fusion cross sections; multichannel R-matrix analyses; nucleon systems; charged-particle reactions; *SP594*, pp. 650-658 (Sept. 1980).

- Evaluation; mathematical models; model access; model management; sensitivity analysis; validation; assessment; documentation; econometric models; energy modeling forum; energy models; *SP569*.
- Evaluation; neutron cross-sections; optical model; resonances; statistical model; *SP594*, pp. 872-876 (Sept. 1980).
- Evaluation; neutrons; sodium; cross sections; *SP594*, pp. 58-62 (Sept. 1980).
- Evaluation; nuclear levels; nuclear reactions; nuclear structure data; radioactivity; reaction gamma rays; ENSDF; *SP594*, pp. 659-661 (Sept. 1980).
- Evaluation; organic coating; pullout tests; reinforcing steels; structural engineering; concrete (reinforced); creep tests; *19077*.
- Evaluation; toxicology laboratories; accreditation; certification criteria; *SP591*, pp. 75-76 (Aug. 1980).
- Evaluation; 14.73 MeV;  $^{56}\text{Fe}(n,p)$  cross section; *SP594*, pp. 980-984 (Sept. 1980).
- Evaluation criteria; laboratory accreditation; standards committees; *19848*.
- Evaluation environments; statistical pattern recognition; test environments; test workload generation; benchmark; *19059*.
- Evaluation, internal quality control; evaluation, performance; evaluation, qualifications of laboratory personnel; improvement; proficiency testing; checklist; CLIA '67; Clinical Labo-

- ratories Improvement Act of 1967; clinical laboratory evaluation; *SP591*, pp. 53-62 (Aug. 1980).
- Evaluation of inspection organizations; evaluation of testing organizations; inspection standards; laboratory accreditation; laboratory evaluation; regulatory liability; test standards; voluntary consensus standards; accreditation systems; *SP591*, pp. 11-14 (Aug. 1980).
- Evaluation of safeguards effectiveness; waste management; back-end facilities; containment and surveillance; detection probability; *SP582*, pp. 740-749 (June 1980).
- Evaluation of testing organizations; inspection standards; laboratory accreditation; laboratory evaluation; regulatory liability; test standards; voluntary consensus standards; accreditation systems; certification; *SP591*, pp. 11-14 (Aug. 1980).
- Evaluation, performance; evaluation, qualifications of laboratory personnel; improvement; proficiency testing; checklist; CLIA '67; Clinical Laboratories Improvement Act of 1967; clinical laboratory evaluation; evaluation, internal quality control; *SP591*, pp. 53-62 (Aug. 1980).
- Evaluation, qualifications of laboratory personnel; improvement; proficiency testing; checklist; CLIA '67; Clinical Laboratories Improvement Act of 1967; clinical laboratory evaluation; evaluation, internal quality control; evaluation, performance; *SP591*, pp. 53-62 (Aug. 1980).
- Evaluations; reviews; solutions; thermodynamic properties; aqueous electrolytes; electrolyte data center; *19920*.
- Evaporation; fission; high energy proton; neutron yield analysis; spallation; *SP594*, pp. 417-421 (Sept. 1980).
- Evaporation rate; fabric; flammability; garments; gasoline; heat output; ignition; burn injury; *19114*.
- Events; hardware configuration; model validation; queue; scheduling policies; simulation model; system performance; workloads; cumulative distribution function; *SP500-65*, pp. 111-128 (Oct. 1980).
- Evolution; planetary nebulae; red giants; abundances; *19845*.
- Evolution; safeguards performance criteria; safeguards systems; safeguards technology; detection; deterrence; diversion of nuclear energy; *SP582*, pp. 670-676 (June 1980).
- Evolution-stars; open-stars; stellar statistics; clusters; *19138*.
- Excavation; geotechnical engineering; retaining structures; shoring; slope stability; construction; *NBS-GCR-80-202*.
- Excavation; geotechnical engineering; retaining structures; shoring; slope stability; soil classification; soil pressure; soil testing; trenching; braced excavations; construction; *BSS121*.
- Excavation; geotechnical engineering; safety; shoring; soil classification; trench; workshop; acceptable work practices; *NBSIR 79-1935*.
- Excavation; hardwood; lumber grading; shoring; softwood; timber engineering; trench bracing; trenching; construction lumber; construction safety; *BSS122*.
- Excavation; safety regulations; shoring; trenching; construction safety; construction standards; *NBSIR 80-1988*.
- Excavation; shoring; trenching; construction practices; construction safety; *NBSIR 79-1936*.
- Excess Gibbs energy; models; osmotic coefficient; polyvalent electrolytes; solutions; thermodynamic properties; activity coefficient; correlation; critical evaluation; electrolyte theories; *19919*.
- Excess Gibbs energy for electrolytes; osmotic coefficients; sodium nitrate; activity coefficients; critically evaluated data; *JPCRD 9*, No. 2, 513-518 (1980).
- Excess volumes; heat of mixing; liquid-vapor equilibria; methane + propane; binary mixtures; data correlation; *JPCRD 9*, No. 3, 721-734 (1980).
- Excess volumes; liquid mixtures; LNG components; multicomponent systems; orthobaric; densities; *19537*.
- Exchange and correlation; low energy electrons; mean free path; *19858*.
- Exchange forces; ion-induced dipole interactions; ion-quadrupole interactions; lithium molecule-ion; long-range interactions; ab initio computation; *19084*.
- Exchange interaction; magnetism; neutron scattering; rare earth compounds; spin excitations; crystal fields; *19256*.
- Exchange interaction; magnetism; neutron scattering; rare earth compounds; spin excitations; crystal fields; *19604*.
- Exchange potentials; model potential; collisions; electron-molecule; *19747*.
- Excimer; magnesium; discharge; *19453*.
- Excimer; thallium; discharge; *19152*.
- Excimer laser; excited state absorption; group II dimer; *19187*.
- Excimer laser; free-bond absorption; gain cross section; alkali dimers; *19479*.
- Excimer laser; metal atoms; discharges; *19334*.
- Excitation; ionization; dielectronic recombination; electron-ion collisions; *19219*.
- Excitation; polarization; Be<sup>+</sup>; crossed beams; cross sections; electron impact; *19512*.
- Excitation function; fluence monitor; reactor dosimetry; threshold reactions; U-fission spectrum averaged cross sections; *SP594*, pp. 199-203 (Sept. 1980).
- Excitation functions E = 5-80 MeV; nuclear reactions; semiempirical model; *SP594*, pp. 778-782 (Sept. 1980).
- Excited atoms; cross sections; electron impact; electron ionization; energy distribution functions; *19358*.
- Excited state; ketene; photochemistry; spectroscopy; transient; vacuum ultraviolet; acetylene; *19493*.
- Excited state absorption; group II dimer; excimer laser; *19187*.
- Excited states; high magnetic fields; molecular structure; *19319*.
- Excited states; NaI detector; *SP594*, pp. 509-511 (Sept. 1980).
- Excited states; photoionization; sodium; absolute cross section measurement; atom; cross section; *19510*.
- Exciton model; Hauser-Feshbach and precompound analysis; nuclear reactions; *SP594*, pp. 757-761 (Sept. 1980).
- Exciton model; master equations; neutron angular distributions; preequilibrium and equilibrium components; *SP594*, pp. 796-799 (Sept. 1980).
- Exciton resonance; photoelectron spectra; reflectance; synchrotron radiation; vacuum ultraviolet; BeF<sub>2</sub> glass; *SP568*, pp. 119-123 (July 1980).
- Excluded volume effects; lattice-model polymer chains; polymer chain dynamics; random-coil polymer chains; relaxation times; self-entanglement effects; computer simulation; end-to-end length; entanglement effects; *19864*.
- Existing buildings; housing codes; model codes; performance levels; regulations; rehabilitation; code provisions; comparison; *SP586*, pp. 117-133 (June 1980).
- Exotic nuclei; heavy ion collision; mass formula; quartets; SU<sub>4</sub>; charge exchange reactions; *19265*.
- Expansion factor; mean-square radius of gyration; Monte-Carlo; reduced moments; star-branched polymers; branched polymers; *19656*.
- Experimental methods; migration; molecular transport; nuclear magnetic resonance; polymers; butane; diffusion; *19906*.
- Experimental prompt neutron spectra; fermi-gas model; fission calculation of prompt fission neutron spectrum as function of fissioning nucleus and excitation energy; nuclear-evaporation model; radioactivity; *SP594*, pp. 788-792 (Sept. 1980).
- Experimental Technology Incentives Program; experimental variance; Occupational Safety and Health Administration; regulatory experimentation; regulatory policy; standards; technological innovation; administrative experimentation; evaluability assessment; evaluation; *TN1114*.
- Experimental Technology Incentives Program; financial projections; productivity; regulatory commissions; regulatory process; technological innovation; computer model; electric utilities; *NBS-GCR-ETIP 79-74*.
- Experimental Technology Incentives Program; framework; methodology; policy experiments; policy problems; technology-based industries; *NBS-GCR-ETIP 80-92*.
- Experimental Technology Incentives Program; government policy; innovation; semiconductor industry; technological change; competition; *NBS-GCR-ETIP 80-91*.

- Experimental Technology Incentives Program; hearing procedures; regulatory lag; utility commissions; caseload management; case scheduling; common data formatting; *NBS-GCR-ETIP 79-72*.
- Experimental Technology Incentives Program; interim adjustment procedures; regulatory commissions; regulatory process; computer programs; electric utilities; *NBS-GCR-ETIP 79-77*.
- Experimental Technology Incentives Program; intermodal freight transportation; Interstate Commerce Commission; rail freight transportation; regulatory experimentation; regulatory policy; technological innovation; administrative experimentation; *NBS-GCR-ETIP 80-85*.
- Experimental Technology Incentives Program; marginal costing; rate structure; regulatory commissions; regulatory process; technological innovation; time varying rates; computer models; electric utilities; *NBS-GCR-ETIP 79-79*.
- Experimental Technology Incentives Program; nuclear regulatory standards; regulatory experimentation; administrative experimentation; evaluation; *NBSIR 80-2086*.
- Experimental Technology Incentives Program; productivity; regulatory commissions; regulatory process; technological innovation; electric utilities; *NBS-GCR-ETIP 79-82*.
- Experimental Technology Incentives Program; productivity; regulatory commissions; regulatory process; technological innovation; electric utilities; *NBS-GCR-ETIP 79-81*.
- Experimental trends; statistical model; *SP594*, pp. 848-852 (Sept. 1980).
- Experimental variance; Occupational Safety and Health Administration; regulatory experimentation; regulatory policy; standards; technological innovation; administrative experimentation; evaluability assessment; evaluation; Experimental Technology Incentives Program; *TN1114*.
- Experiments; finite elements; Scheffe, design; spline; volume; calibration curve; *J. Res.* 85, No. 4, 295-304 (July-Aug. 1980).
- Explosion; explosion containment; mine safety; bibliography; coal mines; electrical equipment; enclosures; *NBSIR 80-2112*.
- Explosion containment; mine safety; bibliography; coal mines; electrical equipment; enclosures; explosion; *NBSIR 80-2112*.
- Explosions; fire investigations; fire investigators; hydrocarbons; photography; accelerants; arson; building fires; electrical fires; *H134*.
- Exponential function; multiprecision calculations; relative precision; unrestricted arguments; unrestricted ranges; error analysis; *19380*.
- Exposure; exposure modeling; photolysis kinetics; photoresist; sensitometry; Van Kreveld's law; *19801*.
- Exposure reciprocity; kinetic equations; photochemistry; photon intensity; photoresist exposure; rate constants; saturation effect; chemical kinetics; *19418*.
- Exposure meters; film; filters; law enforcement photography; lenses; lighting equipment; photographic equipment; cameras; *SP480-23*.
- Exposure modeling; photolysis kinetics; photoresist; sensitometry; Van Kreveld's law; exposure; *19801*.
- Exposure reciprocity; kinetic equations; photochemistry; photon intensity; photoresist exposure; rate constants; saturation effect; chemical kinetics; exposure; *19418*.
- Exposure standard; iridium-192 seeds; NBS standard graphite chambers; open-air geometry; reentrant chamber; *J. Res.* 85, No. 1, 19-25 (Jan.-Feb. 1980).
- Exposure to geothermal fluids; geothermal-well cements; permeability to water; shear-bond strength to steel; splitting tensile strength; compressive strength; *NBSIR 80-2099-2*.
- Extended chain fibrils; polymer crystallization; shish kebabs; crystallization theory flow induced crystallization; *19167*.
- Extended corresponding states; extended critical region; mathematical model; natural gas components; nitrogen-methane mixtures; PVTx properties measurements; equation of state; *19782*.
- Extended critical region; mathematical model; natural gas components; nitrogen-methane mixtures; PVTx properties measurements; equation of state; extended corresponding states; *19782*.
- Extension; rubber; strain-energy function; Valanis-Landel form; biaxial; elasticity; elastomers; *19502*.
- Extreme ultraviolet mirrors; extreme ultraviolet telescopes; optical constants; reflectivity; reflectometer; solid state physics; synchrotron radiation; ultraviolet optical system design; ultraviolet spectroscopy; *19640*.
- Extreme ultraviolet radiation; instrumentation; radiometric transfer standards; radiometry; synchrotron radiation; detectors; *19664*.
- Extreme ultraviolet telescopes; optical constants; reflectivity; reflectometer; solid state physics; synchrotron radiation; ultraviolet optical system design; ultraviolet spectroscopy; extreme ultraviolet mirrors; *19640*.
- Extrinsic infrared absorption; KBr; KCl; laser windows; volume and surface impurities; wavelength modulation spectroscopy; *SP568*, pp. 99-117 (July 1980).
- Extruded semicrystalline polymers; fibrous materials; polymers; strength; elastic modulus; *19938*.
- $E = 60$  to  $110$  MeV; measured  $\sigma(E)$  at  $110^\circ$  and  $128^\circ$  up to  $8.6$  MeV in excitation energy; nuclear reactions;  $^{22}\text{Ne}(e, e')$ ; deduced  $J, \pi, B(CL)$ ; *19691*.

## F

- Fabric; flammability; garments; gasoline; heat output; ignition; burn injury; evaporation rate; *19114*.
- Fabrication; failure analysis; fatigue; fracture; materials science; nondestructive evaluation; piping; pressure vessels; product liability; pumps and valves; standards; statistical modeling; welding; ASME Boiler Code; data; *SP588*.
- Fabric flammability; fire departments; fire investigations; smoke; *NBS-GCR-80-270*.
- Fabric flammability; fire suppression; fire tests; flame research; smoke detectors; toxicity; bibliographies; building fires; cable fires; compartment fires; decision analysis; *NBSIR 80-2114*.
- Fabrics; heat flux; insulative properties; modacrylics; polyesters; protective clothing; radiant energy; wool fabrics; aramids; burns (injuries); char strength; convective energy; cotton fabrics; *19120*.
- Face shield; headgear; helmet; impact; protective equipment; riot helmet; *19700*.
- Facilities; fluence; flux; monitor; neutron; sources; standardization; calibration; detection; dosimetry; *SP594*, pp. 747-751 (Sept. 1980).
- Factorization; Hauser-Feshbach theory; statistical models; width fluctuation correction factor; compound-nucleus reactions; cross sections; elastic enhancement factors; *SP594*, pp. 762-764 (Sept. 1980).
- Factorization methods; linear difference equations; linear recurrence relations; Miller's algorithm; numerical stability; Olver's algorithm; *NBSIR 80-1976*.
- Factor-jump thermogravimetry; oxidation; polystyrene; pyrolysis; thermal degradation; thermogravimetry; activation energy; *19798*.
- Fahrenheit; IPTS-68; Kelvin; temperature; temperature scale; Celsius; *19169*.
- Failure; failure investigation; hoisting loads; hyperbolic shell; collapse; concrete; concrete strength; construction; construction loads; cooling tower; dynamic effects; *NBSIR 80-2010*.
- Failure; fatigue; mechanical properties; PMMA; polyethylene; poly(methyl methacrylate); time-dependent behavior; additivity of damage; Bailey criterion; damage accumulation; *19690*.
- Failure; hyperbolic shell; shell; collapse; concrete; concrete strength; construction; cooling tower; *NBSIR 78-1578*.
- Failure analysis; fatigue; fracture; materials science; nondestructive evaluation; piping; pressure vessels; product liability; pumps and valves; standards; statistical modeling; welding; ASME Boiler Code; data; fabrication; *SP588*.
- Failure analysis; Incoloy 800; alloy 800; coal conversion; *19736*.

- Failure criteria; flaws; fracture;  $K_{Ic}$ ; laser windows; Weibull; yield stress; brittle failure; *SP568*, pp. 151-159 (July 1980).
- Failure data; fatigue; fracture; inservice data; mechanical engineering; nuclear reactors; piping; pressure vessel; pump; reliability; risk analysis; valves; *19085*.
- Failure investigation; hoisting loads; hyperbolic shell; collapse; concrete; concrete strength; construction; construction loads; cooling tower; dynamic effects; failure; *NBSIR 80-2010*.
- Failure prediction; fracture; oxidation; silicon nitride; strength; ceramic turbines; *19792*.
- Fall arresting systems; industrial and construction industries; occupational safety; safety belts; scaffolding; accident data; *19233*.
- Fallout protection; gamma-ray shielding; nuclear detonations; nuclear war; radiation shielding; civil defense; *SP570*.
- False alarms; health care facilities; hospitals; ionization detectors; maintenance; NFPA 101; nursing homes; photoelectric detectors; smoke detectors; surveys; detector location; *NBSIR 80-2130*.
- Fan depressurization; mobile home; sulfur hexafluoride; tracer gas; air leakage measurements; environmental chamber; *NBSIR 80-2105*.
- Fano factor; ionization yields; stopping power; W-values; electrons; energy degradation spectra; *19400*.
- Faraday; fundamental constants; silver; coulometry; electrochemical equivalent; electrochemistry; *J. Res.* **85**, No. 3, 175-191 (May-June 1980).
- Faraday constant; silver; coulometer; coulometry; electrochemistry; *19472*.
- Faraday constant; 4-aminopyridine; coulometry; *19814*.
- Faraday rotator; high power laser materials; optical damage threshold; top-seeded solution technique; two photon absorption; uniaxial crystal; yttrium lithium fluoride; advanced laser materials; crystal growth; crystalline fluorides; *SP568*, pp. 127-135 (July 1980).
- Far ultraviolet; light pulse shape; vacuum spark; *19609*.
- Fast breeder blanket facility; fast reactor; neutron spectrum; proton-recoil; 2DB; calculated neutron spectrum; *SP594*, pp. 568-571 (Sept. 1980).
- Fast breeder blanket facility; fast reactors; foil activation; blankets; breeding; capture rates; *SP594*, pp. 572-575 (Sept. 1980).
- Fast breeder reactors; FBBF; gamma-ray heating; thermoluminescent dosimeters; TLD; blankets;  $\text{CaF}_2\text{:Dy}$ ; *SP594*, pp. 576-580 (Sept. 1980).
- Fast breeders; nuclear data; *SP594*, pp. 6-17 (Sept. 1980).
- Fast chopper; Nd-145; resonance parameters; total cross section; 0.02-350 eV; *SP594*, p. 877 (Sept. 1980).
- Fast chopper; neutron parameters; transmission measurements; Cm isotopes; *SP594*, p. 908 (Sept. 1980).
- Fast critical assemblies; nondestructive assay; plutonium; reactivity; spectral index; uranium; autoradiography; *SP582*, pp. 391-424 (June 1980).
- Fast critical experiments; fast reactors; L.W. reactors; actinide generation chain; actinides cross sections; *SP594*, pp. 18-24 (Sept. 1980).
- Fast critical facility; fast reactor; integral experiment; least square fitting; neutron spectrum; sample perturbation; actinide recycle; cross section evaluation; *SP594*, pp. 552-556 (Sept. 1980).
- Fast Fourier transform; linear load; Newton-Raphson iteration method; nonlinear load; time-domain measurements; time-stepping finite-difference technique; transient; traveling-wave antenna; *19466*.
- Fast neutron; gamma rays of discrete and continuum; *SP594*, pp. 397-407 (Sept. 1980).
- Fast neutron capture; fission product nuclei; *SP594*, pp. 368-379 (Sept. 1980).
- Fast neutrons; laminagraphy; neutrons; radiography; reactor fuel subassemblies; resonance neutrons; thermal neutrons; three-dimensional radiography; *19214*.
- Fast neutron time-of-flight  $\sigma(\theta)$  equipment; movable detectors; D and T gas targets; *SP594*, pp. 537-541 (Sept. 1980).
- Fast reactor; integral experiment; least square fitting; neutron spectrum; sample perturbation; actinide recycle; cross section evaluation; fast critical facility; *SP594*, pp. 552-556 (Sept. 1980).
- Fast reactor; neutron spectrum; proton-recoil; 2DB; calculated neutron spectrum; fast breeder blanket facility; *SP594*, pp. 568-571 (Sept. 1980).
- Fast reactors; capture cross sections; *SP594*, pp. 662-666 (Sept. 1980).
- Fast reactors; foil activation; blankets; breeding; capture rates; fast breeder blanket facility; *SP594*, pp. 572-575 (Sept. 1980).
- Fast reactors; group cross sections; integral experiments; least-squares adjustment; chi-square; data consistency; data testing; ENDF/B-IV; ENDF/B-V; *SP594*, pp. 182-186 (Sept. 1980).
- Fast reactors; group cross sections; integral experiments; least-squares adjustment; LMFBR; sensitivity analysis; uncertainty analysis; breeding ratio; calculational bias uncertainties; *SP594*, pp. 177-181 (Sept. 1980).
- Fast reactors; integral and critical experiments; symbiosis; thorium; cross sections; *SP594*, pp. 119-121 (Sept. 1980).
- Fast reactors; L.W. reactors; actinide generation chain; actinides cross sections; fast critical experiments; *SP594*, pp. 18-24 (Sept. 1980).
- Fatality ( $\text{LC}_{50}$ ); hydrogen cyanide; incapacitation; inhalation; test method; toxicology; combustion; *NBSIR 80-2077*.
- Fatigue; fatigue mechanism; fatigue research; fracture mechanics; mathematical modeling; metals fatigue; plastics fatigue; quantitative microscopy; statistical aspects of fatigue; composite materials; corrosion fatigue; durability; *19448*.
- Fatigue; fracture; inservice data; mechanical engineering; nuclear reactors; piping; pressure vessel; pump; reliability; risk analysis; valves; failure data; *19085*.
- Fatigue; fracture; materials science; nondestructive evaluation; piping; pressure vessels; product liability; pumps and valves; standards; statistical modeling; welding; ASME Boiler Code; data; fabrication; failure analysis; *SP588*.
- Fatigue; fracture; mathematical modeling; micromechanics; microstructure; nuclear fuel element; paper; quantitative microscopy; size effect; solid mechanics; statistical methods; steel; *19086*.
- Fatigue; mechanical properties; PMMA; polyethylene; poly(methyl methacrylate); time-dependent behavior; additivity of damage; Bailey criterion; damage accumulation; failure; *19690*.
- Fatigue; persistent slip band; plastic strain; random cycling; single crystal copper; copper crystal; *19694*.
- Fatigue; stainless steel; surgical implant metals; titanium alloy; cobalt-chromium alloy; corrosion-fatigue; *19100*.
- Fatigue crack; NDE; ultrasonic diffraction; crack closure; crack surfaces; *19648*.
- Fatigue (materials); fracture (materials); low temperature tests; mechanical properties; nickel alloys; steels; *19550*.
- Fatigue mechanism; fatigue research; fracture mechanics; mathematical modeling; metals fatigue; plastics fatigue; quantitative microscopy; statistical aspects of fatigue; composite materials; corrosion fatigue; durability; fatigue; *19448*.
- Fatigue mechanism; fracture mechanics; mathematical modeling; micromechanics; polymers; quantitative microscopy; slip bands; statistical aspects of fatigue; striations; composite materials; corrosion fatigue; dislocations; *19087*.

- Fire tests; high-rise buildings; leakage; life safety; smoke; smoke movement; stack effects; test methods; building fires; compartment fires; doors; egress; *NBSIR 80-2004*.
- Fire tests; hospitals; smoke; smoke movement; stairwells; tracers; air movement; elevators; *NBS-GCR-79-183*.
- Fire tests; loose fill insulation; smoldering ignition; thermal analysis; thermal insulation; activation energy; borax; boric acid; cellulose; critical radiant flux; fire; fire retardants; *NBSIR 80-2085*.
- Fischer-Tropsch synthesis; hydrogenation; methanation; nickel; poisoning; catalyst; *19201*.
- Fission; fusion; heat transfer; hybrid blanket; tokamak; cross-section data; *SP594*, pp. 351-359 (Sept. 1980).
- Fission; fusion; neutron dosimetry; radiation damage; radioactivity; reactors; cross sections; *SP594*, pp. 285-296 (Sept. 1980).
- Fission; fusion; nuclear cross sections; reactors; standards; technology; biomedical; conference; *SP594*.
- Fission; gas target; molecular vibrations; neutron reactions;  $^{238}\text{U}$ ; Doppler effect; *19146*.
- Fission; high energy proton; neutron yield analysis; spallation; evaporation; *SP594*, pp. 417-421 (Sept. 1980).
- Fission; high-resolution; cross section; *SP594*, pp. 491-495 (Sept. 1980).
- Fission; large liquid scintillator; neutron multiplicity; proton-recoil detector; *SP594*, pp. 728-732 (Sept. 1980).
- Fission; level spacing; multilevel analysis; neutron total cross section; strength function; *SP594*, pp. 707-710 (Sept. 1980).
- Fission; MeV neutrons; neptunium-237; standard; uranium-235; cross section; *SP594*, pp. 971-975 (Sept. 1980).
- Fission; neutron nuclear data evaluations; capture; *SP594*, pp. 464-468 (Sept. 1980).
- Fission; phonon distribution;  $\text{U}_3\text{O}_8$ ;  $\text{UO}_2$ ; chemical state; delayed neutron; *19683*.
- Fission barriers derived; fission channel analysis; statistical model; triple humped shapes; *SP594*, pp. 469-474 (Sept. 1980).
- Fission beta energy; fission gamma energy; decay heat; *SP594*, pp. 25-33 (Sept. 1980).
- Fission calculation of prompt fission neutron spectrum as function of fissioning nucleus and excitation energy; nuclear-evaporation model; radioactivity; comparisons to  $^{235}\text{U}(n,f)$  and  $^{252}\text{Cf}(sf)$ ; *SP594*, pp. 788-792 (Sept. 1980).
- Fission chamber; instrumentation; ion chamber; irradiated (spent) fuel; nondestructive assay; axial profiles; *SP582*, pp. 426-446 (June 1980).
- Fission chamber; self-indication; self-shielding and fission factors; time-of-flight; He proportional counter; *SP594*, pp. 692-697 (Sept. 1980).
- Fission channel analysis; statistical model; triple humped shapes; fission barriers derived; *SP594*, pp. 469-474 (Sept. 1980).
- Fission cross section; JENDL-2; nuclear data; optical potential parameter; relative measurement; simultaneous evaluation; absolute measurement; consistency; *SP594*, pp. 715-719 (Sept. 1980).
- Fission cross section; time correlated associated particle method; absolute measurements; *SP594*, pp. 995-999 (Sept. 1980).
- Fission cross sections; MeV range; neutron-induced; systematics; *19553*.
- Fission cross sections; time correlated associated particle method; absolute measurements; *SP594*, pp. 990-994 (Sept. 1980).
- Fission fragment desorption; isotope ratio measurement; plasma desorption; time-of-flight mass spectrometer; *SP582*, pp. 66-78 (June 1980).
- Fission fragments; ionization chambers; mass distribution; actinides; *SP594*, pp. 947-955 (Sept. 1980).
- Fission gamma energy; decay heat; fission beta energy; *SP594*, pp. 25-33 (Sept. 1980).
- Fission integrals; measured 0.02 eV to 30 keV; *SP594*, pp. 961-965 (Sept. 1980).
- Fission probabilities; Hauser-Feshbach formalism; optical model; *SP594*, pp. 500-503 (Sept. 1980).
- Fission product; JPDR-I reactor; resonance integral; resonance interference effect; spent fuel; burnup; *SP594*, pp. 224-227 (Sept. 1980).
- Fission product nuclei; fast neutron capture; *SP594*, pp. 368-379 (Sept. 1980).
- Fission-products; decay heat; evaluation; *SP594*, pp. 667-671 (Sept. 1980).
- Fission products; fluence; Gabon; natural fission reactor; temperature; age of deposit; duration; *SP594*, pp. 909-915 (Sept. 1980).
- Fission products; full energy peak; gamma-ray spectrum; multiplets; optimization; peak/Compton ratio; simulation; apparatus spectrum; data library; *SP594*, pp. 878-880 (Sept. 1980).
- Fission products kinetics; ratio  $^{134}\text{Cs}/^{137}\text{Cs}$ ; residual decay heat; sensitivity analysis; capture cross section of pseudo fission product; *SP594*, pp. 886-889 (Sept. 1980).
- Fission rate; fused quartz track recorder; microcomputer; track counting; *SP594*, pp. 512-515 (Sept. 1980).
- Fission yield; thermal neutrons; chemical dependence; delayed neutrons; *SP594*, pp. 105-107 (Sept. 1980).
- Fitted thick target yield; nuclear models; *SP594*, pp. 820-823 (Sept. 1980).
- Fitting Gaussian profiles; incomplete charge collection; lithium-drifted silicon detector; sequential simplex procedure; x-ray spectra; computer program; *19130*.
- Fixed point; freezing point; zinc point; *19081*.
- Fixed point; transportable fixed point; argon triple point; *19080*.
- Fixed points; International Practical Temperature Scale of 1968; measurement assurance program; platinum resistance thermometer; reference thermometer; thermometer; calibration; check thermometers; *SP591*, pp. 137-145 (Aug. 1980).
- Fixed points; pure materials; superconductivity; temperature scale; thermometry; cryogenics; *19101*.
- Fixed points; standard reference material; superconductivity; temperature; *19098*.
- Fixed service time; queueing network; *SP500-65*, pp. 101-109 (Oct. 1980).
- Flame atomic absorption spectroscopy; interlaboratory testing; precision; reference method; semiautomated pipetting; serum lithium analysis; statistical analysis; accuracy; clinical analysis; clinical chemistry; definitive method; electrolytes; *SP260-69*.

- Flame impingement; heat transfer; radiation; temperature; velocity; ceilings; convection; field; *NBS-GCR-80-251*.
- Flame research; smoke detectors; toxicity; bibliographies; building fires; cable fires; compartment fires; decision analysis; fabric flammability; fire suppression; fire tests; *NBSIR 80-2114*.
- Flames; free radicals; medical physics; spectroscopy; Broida; combustion; 19680.
- Flame spectrometry; laser enhanced ionization; laser spectrometry; opto-galvanic effect; trace metal analysis; atomic spectrometry; 19918.
- Flame spectrometry; laser enhanced ionization; laser spectrometry; tunable laser; atomic absorption; atomic detection limits; 19916.
- Flame spectrometry; laser enhanced ionization; opto-galvanic effect; photodissociation laser; atomic resonance laser; atomic resonance-line laser; 19836.
- Flame spread; flammability; floor coverings; flooring radiant panel test; test method; critical radiant flux; fire safety; *NBSIR 79-1954*.
- Flame spread; flashover; heat release rate; ignition; interior finish; oxygen depletion; room fires; fire tests; *TN1128*.
- Flame spread; interlaboratory evaluation; precision; test methods; tunnel test; cellulosic insulation; *NBSIR 79-1922*.
- Flame through; floors; furniture; interior finishes; joists; room fires; steel; wood; fire endurance; fire tests; *NBSIR 80-2134*.
- Flammability; flash point; heat transfer fluids; insulation; leakage; solar collectors; solar energy; fire prevention; fire tests; *NBSIR 79-1931*.
- Flammability; floor coverings; flooring radiant panel test; test method; critical radiant flux; fire safety; flame spread; *NBSIR 79-1954*.
- Flammability; garments; gasoline; heat output; ignition; burn injury; evaporation rate; fabric; 19114.
- Flammability; granulars; hazardous substances; pastes; powders; shredded and slit films; solids; sparks; test methods; Federal Hazardous Substances Act; *NBSIR 78-1580*.
- Flammable liquids; standards; transformers; cost analysis; decision analysis; dielectric fluids; fire safety; *NBS-GCR-80-198*.
- Flare stars; stellar chromospheres; stellar coronae; ultraviolet spectra; x-ray sources; 19269.
- Flash desorption; LEED; ruthenium; ellipsometry; 19508.
- Flashover; group homes; halfway houses; mental disorders; smoke; upholstered furniture; evacuation; fire departments; fire fatalities; fire investigations; *NBS-GCR-80-200*.
- Flashover; heat release rate; ignition; interior finish; oxygen depletion; room fires; fire tests; flame spread; *TN1128*.
- Flashover; hotels; room fires; senior citizens; smoke; breathing apparatus; evacuation; fire departments; fire fatalities; *NBS-GCR-80-253*.
- Flashover; ladders; room fires; smoke; students; doors; dormitories; evacuation; fire departments; fire fatalities; fire fighters; *NBS-GCR-80-193*.
- Flashover; nursing homes; nursing staff; patients; room fires; smoke detectors; death; doors; egress; evacuation; fire alarm systems; fire departments; fire fighters; *NBS-GCR-80-191*.
- Flashover; schools; smoke; evacuation; fire departments; fire investigations; *NBS-GCR-80-237*.
- Flash photolysis; kinetics; ozone  $O_2(^1\Delta)$ ; vibrational deactivation; atmospheric; 19618.
- Flash point; heat transfer fluids; insulation; leakage; solar collectors; solar energy; fire prevention; fire tests; flammability; *NBSIR 79-1931*.
- Flash x-ray generators; synchrotron x-radiation; x-ray diffraction; electro-optical detectors; 19714.
- Flat-cone; macromolecules; neutrons; single-crystal; Weissenberg methods; x rays; absorption correction; diffractometers; 19509.
- Flat-cone geometry; neutron diffraction; protein structure; ribonuclease-A; structure refinement; atomic models; 19808.
- Flatness; intercomparison; random error; squareness; standard deviation; systematic error; uncertainty; angle block; autocollimator; calibration; *NBSIR 80-1967*.
- Flat plate collectors; preferred sizes; solar installations; standardization; dimensions; *NBSIR 80-2116*.
- Flat-plate solar collectors; solar energy system; TRNSYS computer program; air leakage; f-chart method; 19870.
- Flaws; fracture;  $K_{Ic}$ ; laser windows; Weibull; yield stress; brittle failure; failure criteria; *SP568*, pp. 151-159 (July 1980).
- Flaws; materials characterization; nondestructive testing; residual stress; ultrasonics; velocity; attenuation; defect characterization; *SP596*.
- Floating zone; materials processing; microgravity; morphological stability; similarity principle; crystal; double-diffusive convection; 19178.
- Floating zone; meniscus; silicon; stability; crystal; Czochralski; edge-defined film-fed growth (EFG); 19945.
- Floor coverings; flooring radiant panel test; test method; critical radiant flux; fire safety; flame spread; flammability; *NBSIR 79-1954*.
- Flooring radiant panel test; test method; critical radiant flux; fire safety; flame spread; flammability; floor coverings; *NBSIR 79-1954*.
- Floors; furniture; interior finishes; joists; room fires; steel; wood; fire endurance; fire tests; flame through; *NBSIR 80-2134*.
- Florida; inspection; legislation; recertification; architects; codes; earthquake; engineers; *SP586*, pp. 197-203 (June 1980).
- Flowing afterglow; infrared chemiluminescence; ion molecule reactions; vibrational excitation; associative detachment; 19362.
- Flowing afterglow; infrared chemiluminescence; ion molecule reactions; vibrational excitation; associative detachment; 19378.
- Flow measurement; furniture; interior finishes; residential buildings; room fires; static pressure; building fires; fire tests; *NBSIR 80-1984*.
- Flow measurement; gas temperatures; heat release rate; interior finishes; residential buildings; room fires; building fires; fire resistance; fire tests; *NBSIR 80-2120*.
- Flow rate; heat transfer fluid; solar collector; thermal performance; efficiency; *NBS-GCR-79-184*.
- Fluctuations; high temperature properties; Monte Carlo simulations; aluminum; anharmonic effects; effective potentials for metals; elastic constants; *J. Res. 85*, No. 2, 109-112 (Mar.-Apr. 1980).
- Fluence; flux; monitor; neutron; sources; standardization; calibration; detection; dosimetry; facilities; *SP594*, pp. 747-751 (Sept. 1980).
- Fluence; Gabon; natural fission reactor; temperature; age of deposit; duration; fission products; *SP594*, pp. 909-915 (Sept. 1980).
- Fluence monitor; reactor dosimetry; threshold reactions; U-fission spectrum averaged cross sections; excitation function; *SP594*, pp. 199-203 (Sept. 1980).
- Flues; heating equipment; heat transfer; literature reviews; radiant energy; stoves; wood; chimneys; fire models; fire safety; fire tests; *NBSIR 80-2140*, Vol. 1.
- Fluid flow generated by settling aerosol; low Reynolds number fluid flow; particle Doppler shift spectrometer; particle induced air circulation; particle induced fluid flow; 19649.
- Fluidic sensors; ionizing radiation; neutron; passive solar; radiography; safety; temperature; trace alloy; vapor detectors; wood heating; fire; *DIM/NBS 64*, No. 10, 1-32 (1980).
- Fluid inclusions; gemmology; microanalysis; mineralogy; Raman spectroscopy; chemical analysis; 19577.
- Fluid mechanics; hydraulic engineering; hydraulic research; hydraulics; hydrodynamics; model studies; research summaries; *SP583*.
- Fluids; orthobaric densities; propane; specific heats; thermodynamic properties; vapor pressures; coexistence boundary; critical point; densities; equation of state; 19204.
- Fluids; pool fires; transformers; fire; *NBSIR 80-1992*.

Fluorescence excitation spectroscopy; Franck-Condon factors; laser excited fluorescence; radiative lifetime; single vibronic level spectroscopy;  $\text{CF}_2$ ; difluorocarbene; 19371.

Fluorescence line narrowing; glass; laser; laser glass; laser-induced fluorescence; europium lithium borate glass; 19545.

Fluorescence spectrum; laser excitation; multi-photon processes; non-stationary processes; resonance fluorescence; strong laser field; time-dependent spectrum; transient spectrum; 19220.

Fluorescent; fluorescent specimens; measurement; color; colorimetry; *NBS-GCR-79-185*.

Fluorescent screens; intensifier screen standards; radiographic intensifier screen efficiency; screen evaluations; sensitivity of screens; spectroradiometry of screens; x-radiation of intensifier screens; 19234.

Fluorescent specimens; measurement; color; colorimetry; fluorescent; *NBS-GCR-79-185*.

Fluoride glass; fluorophosphate glass; laser glass; low-dispersion glass; optical glass;  $\text{Al}(\text{PO}_3)_3\text{-AlF}_3\text{-MF-RF}_1$  system; 19216.

Fluorides; forging; laser windows; lithium fluoride; mechanical properties; optical properties; ultraviolet transmission; *SP568*, pp. 39-46 (July 1980).

Fluorides; microelectrodes; microvolume; analysis; biophysics; chloride; 19280.

Fluorides; microvolumes; rapid; adapter; analysis; electrodes; 19279.

Fluorimetry; naphthalene homologues; octanol/water; organic pollutants; partition coefficients; 19926.

Fluorometry; laser-induced fluorescence; low-level analysis; nuclear safeguards; trace levels; uranium determination; waste solution analysis; analyses; *SP582*, pp. 147-155 (June 1980).

Fluorophosphate glass; laser glass; low-dispersion glass; optical glass;  $\text{Al}(\text{PO}_3)_3\text{-AlF}_3\text{-MF-RF}_1$  system; fluoride glass; 19216.

Flux; monitor; neutron; sources; standardization; calibration; detection; dosimetry; facilities; fluence; *SP594*, pp. 747-751 (Sept. 1980).

Flux growth; laser damage; neodymium:glass; polarizer; pyrophosphate; xenotime; yttrium orthophosphate; yttrium phosphate; absorption spectra; calcite; *SP568*, pp. 137-140 (July 1980).

Flux monitors; standards; cross sections; *SP594*, pp. 84-85, (Sept. 1980).

Flux phenomena; Josephson phenomena; stabilization; superconductors; terminology; critical parameters; definitions; 19539.

FORTAN; numeric methods; programming language; scientific computing engineering; software; standards; data processing; Federal Information Processing Standard; *FIPS PUB 69*.

FORTAN program; least squares solution; mass calibration; mass measurement; calibration report; correction to mass measurements; error checking; *TN1127*.

FORTAN 77; standard programming language; transferability; ANS FORTRAN; *H131*.

Focal intensity; high-energy laser; irradiance mapping; mirror/window materials; on-target fluence; optical train; phase aberration; power optics; thermal lensing; *SP568*, pp. 425-438 (July 1980).

Focused-ion beam sputtering; thin films; x-ray fluorescence spectrometry; calibration standards; 19871.

Focusing, current; measurement, nondestructive; second breakdown, reverse-bias; transistor, power; turn-off, transistor; 19161.

Foil activation; blankets; breeding; capture rates; fast breeder blanket facility; fast reactors; *SP594*, pp. 572-575 (Sept. 1980).

Foils; iron platinum; alloys; electrodeposition; electro preparation; 19395.

Fokker-Planck equation; laser damage; multiphoton absorption; theory; alkali halides; electron-avalanche breakdown; electron-phonon scattering; *SP568*, pp. 467-478 (July 1980).

Fokker-Planck equation; process modeling; semiconductors; silicon; vacancies; Brownian motion; diffusion; Fick's Law; 19726.

Foliar analysis; food analysis; nutrition; plant tissue analysis; standard reference material; trace analysis; agriculture; environmental analysis; 19423.

Foliar analysis; food analysis; organic solvents; standard reference material; water analysis; environmental analysis; 19571.

Food additives; indirect additives; migration; models; regulations; additives; diffusion; *NBSIR 80-1999*.

Food analysis; nutrition; plant tissue analysis; standard reference material; trace analysis; agriculture; environmental analysis; foliar analysis; 19423.

Food analysis; organic solvents; standard reference material; water analysis; environmental analysis; foliar analysis; 19571.

Food package; interaction parameter; migration; partition coefficient; radiolabeled additive; solubility; equilibrium partitioning; Fickian diffusion; 19651.

Foods; interlaboratory study; standard reference materials; yeast; biological matrix; bovine liver; certified reference materials; chromium; 19420.

Foods; nutrient elements; quality control; standard reference materials; analytical methods; atomic absorption spectrometry; 19419.

Forbidden; intensity; lifetime; line strength; oscillator strength; transition probability; allowed; atomic; discrete; *SP505-1*.

Forbidden lines; iron; nickel; transition probabilities; wavelengths; allowed lines; atomic energy levels; cobalt; 19807.

Force constants; fundamental frequencies; infrared spectra; normal vibrations; polyatomic molecules; Raman spectra; vibrational frequencies; *JPCRD 9*, No. 4, 1149-1254 (1980).

Forced entry; patio door; performance criteria; performance standard; sliding glass door; test methods; burglary resistance; 19702.

Forecasting; mathematical models; sensitivity analysis; assessment; documentation; energy; *NBSIR 80-2128*.

Forecasting; multiple regression; sensitivity analysis; simultaneous equations; Box-Jenkins; *SP500-65*, pp. 215-229 (Oct. 1980).

Forecasts; Maunder minimum, models; simulation; statistics; sunspots; ARMA models; *TN1022*.

Foreign engineering; geology; highways; housing; landslides; liquefaction; power plants; railroads; rock slides; seismicity; structural engineering; bridges; buildings; dikes; earthquakes; *SP592*.

Foreign relations; industrializing nations; international relations; LDC's; measurement services; standardization; AID; assistance; developing economies; *NBSIR 80-2021*.

Foreign relations; industrializing nations; international relations; measures; weights; weights and measures; AID; assistance; developing economies; *NBSIR 80-2022*.

Forging; laser windows; lithium fluoride; mechanical properties; optical properties; ultraviolet transmission; fluorides; *SP568*, pp. 39-46 (July 1980).

Formaldehyde; formaldehyde-based chemicals; formaldehyde level; standards; urea-formaldehyde resins; committee; concentration; department; *SP586*, pp. 253-258 (June 1980).

Formaldehyde; kinetics; ozone; resonance fluorescence; stratosphere; Cl atoms; 19704.

Formaldehyde; ozone; stratosphere; absorption cross-section; chlorine chemistry; 19535.

Formaldehyde-based chemicals; formaldehyde level; standards; urea-formaldehyde resins; committee; concentration; department; formaldehyde; *SP586*, pp. 253-258 (June 1980).

Formaldehyde level; standards; urea-formaldehyde resins; committee; concentration; department; formaldehyde; formaldehyde-based chemicals; *SP586*, pp. 253-258 (June 1980).

Formal description technique; graphs; natural language; Petri net; state diagram; action table; computer program; finite automata; *NBS-GCR-80-247*.

Formal specification; formal verification; hierarchical design; programming methodology; security; design methodology; *SP500-67*.

Formal specification; network architecture; networking; session protocols; transport protocols; communication protocols; computer network protocols; design specification; *NBS-GCR-*

- Formal verification; hierarchical design; programming methodology; security; design methodology; formal specification; *SP500-67*.
- Format track; operational specification; rotating mass storage subsystems; sense information; status byte; command codes; disk drives; Federal Information Processing Standard; *FIPS PUB 63*.
- Formic acid; interstellar molecules; line strengths; microwave spectra; molecular constants; radioastronomy; rotational transitions; *JPCRD 9*, No. 1, 59-160 (1980).
- Formwork; hoisting system; regulations; safety; standards; concrete; construction; cooling tower; *NBSIR 80-1964*.
- Fossil carbon; insoluble carbonaceous material; low level counting; pyrolysis/gas chromatography/mass spectrometry; carbon; atmospheric pollution; carbonaceous particles; *19593*.
- Fourier analysis; Fourier spectrum; linewidth; linewidth measurement; photomask; diffraction; diffraction pattern analysis; *NBS-GCR-79-175*.
- Fourier coefficients; linear model; nonlinear model; phase spectrum transformation; spectrum; VOR aircraft navigation system; white noise; *TN1021*.
- Fourier spectrum; linewidth; linewidth measurement; photomask; diffraction; diffraction pattern analysis; Fourier analysis; *NBS-GCR-79-175*.
- Four-terminal pair capacitance; immittance standards; inductance; residual series inductance; resonance techniques; three-terminal capacitance; calibration; capacitance; *TN1024*.
- Fourth-order; Laplace's equation; cylindrical coordinates; difference equations; electron optics; *19089*.
- Four-wave mixing; heterodyne spectroscopy; iodine spectroscopy; non-linear spectroscopy; phase conjugate spectroscopy; saturation spectroscopy; *19287*.
- Fractional free volume; permeability; plastic deformation; semicrystalline polymers; sorption; diffusivity; elastic deformation; *19662*.
- Fractionation; graphite furnace atomic absorption; high pressure liquid chromatography; organometallic polymers; organotin silicate; refractive index; reverse bonded phase chromatography; silicon analysis; size exclusion chromatography; tin analysis; *19398*.
- Fracture; fracture models; reaction rate theory; slow crack growth; surface chemistry; atmosphere-assisted slow crack growth; chemically assisted fracture; *19588*.
- Fracture; glass; strength; stress-corrosion cracking; sub-critical crack growth; ceramics; *19791*.
- Fracture; impact energy; strength degradation; ceramics; *19589*.
- Fracture; inservice data; mechanical engineering; nuclear reactors; piping; pressure vessel; pump; reliability; risk analysis; valves; failure data; fatigue; *19085*.
- Fracture;  $K_{Ic}$ ; laser windows; Weibull; yield stress; brittle failure; failure criteria; flaws; *SP568*, pp. 151-159 (July 1980).
- Fracture; load-elongation curve; microfibrils; point defects of microfibrillar structure; ruptured chains; strength; tie molecules; crystalline polymer; elastic modulus; fibrils; fibrous structure; *19901*.
- Fracture; materials failure; reaction rate theory; slow crack growth; surface energy; environmental fracture; *19843*.
- Fracture; materials science; nondestructive evaluation; piping; pressure vessels; product liability; pumps and valves; standards; statistical modeling; welding; ASME Boiler Code; data; fabrication; failure analysis; fatigue; *SP588*.
- Fracture; mathematical modeling; micromechanics; microstructure; nuclear fuel element; paper; quantitative microscopy; size effect; solid mechanics; statistical methods; steel; fatigue; *19086*.
- Fracture; mechanical properties; stainless steel; strength; toughness; welds; cryogenic; delta ferrite; ferrite content; *19673*.
- Fracture; mechanical reliability; mechanics; strength; ceramics; crack growth; delayed failure; *19636*.
- Fracture; oxidation; silicon nitride; strength; ceramic turbines; failure prediction; *19792*.
- Fracture (materials); fracture toughness; side grooves; three-dimensional crack; torsional beam; compliance analysis; curved crack profile; double-torsion testing; *19684*.
- Fracture (materials); fracture toughness; side grooves; three-dimensional crack; torsional beam; compliance analysis; curved crack profile; double-torsion testing; *19693*.
- Fracture (materials); low temperature tests; mechanical properties; nickel alloys; steels; fatigue (materials); *19550*.
- Fracture mechanics; hydrogen-assisted cracking; low-cycle fatigue; porosity; preparing flawed weldments; slag; three-dimensional flaws; arc strikes; blunt flaws; *19762*.
- Fracture mechanics; lifetime prediction; proof testing; stress corrosion; subcritical crack growth; dynamic fatigue; *NBSIR 80-2047*.
- Fracture mechanics; mathematical modeling; metals fatigue; plastics fatigue; quantitative microscopy; statistical aspects of fatigue; composite materials; corrosion fatigue; durability; fatigue; fatigue mechanism; fatigue research; *19448*.
- Fracture mechanics; mathematical modeling; micromechanics; polymers; quantitative microscopy; slip bands; statistical aspects of fatigue; striations; composite materials; corrosion fatigue; dislocations; fatigue mechanism; *19087*.
- Fracture mechanics; thermal fracture; ceramic strength; crack propagation; erosion; *19728*.
- Fracture models; reaction rate theory; slow crack growth; surface chemistry; atmosphere-assisted slow crack growth; chemically assisted fracture; fracture; *19588*.
- Fracture testing; nomenclature; symbols; terminology; terms; definitions; *19892*.
- Fracture toughness; part-through crack; pneumatic burst; pressure vessel; steel; ductile fracture; *19961*.
- Fracture toughness; side grooves; three-dimensional crack; torsional beam; compliance analysis; curved crack profile; double-torsion testing; fracture (materials); *19684*.
- Fracture toughness; side grooves; three-dimensional crack; torsional beam; compliance analysis; curved crack profile; double-torsion testing; fracture (materials); *19693*.
- Fragmentation; ion energetics; phenyl ion; photoionization; chlorobenzene; coincidence; *19177*.
- Fragmentation; kinetics; photoelectron; photoionization; unimolecular; benzene; benzonitrile ion; coincidence; *19603*.
- Fragmentation; mass spectrometry; photoionization; threshold photoelectron spectroscopy; time of flight mass spectrometry; coincidence; cyclopropene; *19196*.
- Fragmentation; mass spectrometry; photoionization; threshold photoelectron spectroscopy; time of flight mass spectrometry; allene; autoionization; coincidence; *19943*.
- Fragmentation; photoionization; propyne; threshold photoelectron spectroscopy; allene; coincidence; cyclopropene; *19803*.
- Frames; hardware; hinges; locks; performance standard; test methods; window; window assemblies; window components; burglary resistance; *19698*.
- Framework; methodology; policy experiments; policy problems; technology-based industries; Experimental Technology Incentives Program; *NBS-GCR-ETIP 80-92*.
- France; French standards system; government policy; product; standards systems; AFNOR; antitrust; certification; *NBSIR 79-1959*.
- Franck-Condon; lineshapes; photoelectron spectroscopy; x-ray spectroscopy; adsorption; *19209*.
- Franck-Condon Factors; hydrogen; nitrogen; photoelectron spectra; spectroscopy; threshold photoelectron spectroscopy; autoionization; deuterium; *19183*.
- Franck-Condon factors; ion; nitrogen;  $N_2$ ; photoelectron spectra; photoionization; shape resonance; synchrotron radiation; vibrational intensity distribution; branching ratios; *19607*.
- Franck-Condon factors; ion; photoelectron spectra; photoionization; shape resonance; synchrotron radiation; vibrational intensity distribution; carbon monoxide; CO; *19184*.
- Franck-Condon factors; laser excited fluorescence; radiative life-

time; single vibronic level spectroscopy; CF<sub>2</sub>; difluorocarbene; fluorescence excitation spectroscopy; 19371.

Free-bond absorption; gain cross section; alkali dimers; excimer laser; 19479.

Free-free transitions; infrared radiation; electron<sup>-</sup> scattering; 19260.

Free radicals; gas phase; hydrocarbons; hydrogen; nitrogen; oxygen; rate of reaction; sulfur; Arrhenius parameters; chemical kinetics; combustion; decomposition; NSRDS-67.

Free radicals; gas phase; hydrocarbons; hydrogen; nitrogen; oxygen; rate of reaction; sulfur; Arrhenius parameters; chemical kinetics; combustion; decomposition; NBSIR 80-2118.

Free radicals; heats of formation; ion cyclotron resonance spectrometer; ion-molecule reactions; ions; rate constants; 19839.

Free radicals; medical physics; spectroscopy; Broida; combustion; flames; 19680.

Freezing; periodic crystalline solutions; BBGKY equation; bifurcation; direct correlation function equation; 19838.

Freezing point; zinc point; fixed point; 19081.

French standards system; government policy; product; standards systems; AFNOR; antitrust; certification; France; NBSIR 79-1959.

Frequency; He-Ne laser; nonlinear optics; visible frequencies; 1.15  $\mu\text{m}$ ; 19709.

Frequency calibrations; GOES satellite; high frequency; low frequency; satellite time code; standard frequencies; television color subcarrier; time calibrations; time signals; broadcast of standard frequencies; SP432, 1979 Edition.

Frequency dependence; line inhomogeneity; Rb<sup>87</sup> frequency standard; wall coating; buffer gas; cavity pulling; 19517.

Frequency distribution; noise (sound); sleep; smoke detectors; wakefulness; adults; alarm responses; auditory perception; decibel levels; fire departments; NBS-GCR-80-284.

Frequency divider; ion trap; laser; microwave; relativistic; synchrotron radiation; electron; 19529.

Frequency metrology; frequency standards; high resolution spectroscopy; time metrology; time standards; atomic clocks; atomic frequency standards; 19430.

Frequency retrace accuracy; frequency stability; passive/active hydrogen atomic resonator; rubidium atomic resonator; stored ions; cesium atomic resonator; 19432.

Frequency shifts; hydrostatic pressure; Knight shift; scaling theory; solids; Van Vleck susceptibility; anomalous behavior; 19925.

Frequency stability; frequency standard; hydrogen maser; teflon coating technique; dielectrically loaded cavity; 19515.

Frequency stability; microwave power dependence; optical pumping; Rb frequency standards; wall coating; cavity pulling; 19777.

Frequency stability; passive/active hydrogen atomic resonator; rubidium atomic resonator; stored ions; cesium atomic resonator; frequency retrace accuracy; 19432.

Frequency standard; hydrogen maser; teflon coating technique; dielectrically loaded cavity; frequency stability; 19515.

Frequency standards; high-Q cavities; navigation; oscillator; ranging; resonators; superconductivity; aerospace; 19586.

Frequency standards; high resolution spectroscopy; time metrology; time standards; atomic clocks; atomic frequency standards; frequency metrology; 19430.

Frequency standards; ion storage; laser cooling; laser spectroscopy; radiation pressure; atomic clocks; atomic spectroscopy; Doppler effects; 19799.

Fresnel zone; holographic reconstruction; imaging; lamina-graphy; nondestructive testing; radiography; three-dimensional radiography; tomography; x-ray laser; computerized axial tomography; 19855.

Friction; metallic materials; microstructure; sliding wear; wear; wear models; copper alloys; 19826.

Friction; metals; plastic deformation; steel; surfaces; wear; wear debris; copper; electron microscopy; NBSIR 80-2058 (ONR).

Friction; microstructure; solid contact; wear; copper; copper alloys; 19708.

Friction factor; Hazen-Williams coefficient; NBSIR 80-2041.

Fringing fields; magnetohydrodynamics, MHD; nonuniform fields; pipe flow; 19050.

Fuel cells; impedance; solid electrolyte; tungsten carbide; catalyst; cerium dioxide; electrocatalysis; NBSIR 80-1991.

Fuel cycle; symbiotic energy system; tritium breeding; cross-section uncertainty; CTR; denatured fuel; economics; ENDF/B-V; SP594, pp. 839-843 (Sept. 1980).

Fuel cycles; nuclear data needs; thorium reactor introduction; thorium reactors; advanced converters; denatured uranium-thorium fuel cycles; SP594, pp. 108-114 (Sept. 1980).

Fuel cycle sensitivities; LWR data needs; benchmark analysis; ENDF/B-V; SP594, pp. 1-5 (Sept. 1980).

Fuel handling; high-level waste management; thorium HTR fuel cycles; cross-section accuracy requirements; SP594, pp. 131-134 (Sept. 1980).

Fuel oil; petroleum standards; petroleum test methods; recycled burner fuel oil; substantial equivalency; used oil; waste oil; TN1130.

Fuel pin identification system; fuel pins; inventory tracking system; manufacturing information system; quality status tracking system; SP582, pp. 313-323 (June 1980).

Fuel pins; inventory tracking system; manufacturing information system; quality status tracking system; fuel pin identification system; SP582, pp. 313-323 (June 1980).

Fuel reprocessing; nuclear safeguards; dynamic accounting; SP582, pp. 718-729 (June 1980).

Fugacity expansion; Pade approximants; phase transitions; virial coefficients; virial series; Bose gas; 19907.

Full energy peak; gamma-ray spectrum; multiplets; optimization; peak/Compton ratio; simulation; apparatus spectrum; data library; fission products; SP594, pp. 878-880 (Sept. 1980).

Fundamental constants; gas; grants; marketplace; measurement seminars; photon-recoil components; SRM's; atomic properties; computers; emissions testing; energy; DIM/NBS 64, No. 1, 1-24 (1980).

Fundamental constants; mole; precision measurement; atomic masses; 19898.

Fundamental constants; silver; coulometry; electrochemical equivalent; electrochemistry; Faraday; J. Res. 85, No. 3, 175-191 (May-June 1980).

Fundamental frequencies; infrared spectra; normal vibrations; polyatomic molecules; Raman spectra; vibrational frequencies; force constants; JPCRD 9, No. 4, 1149-1254 (1980).

Furnaces; heat pumps; hybrid heat pumps; hybrid systems; rating procedure; seasonal cost of operation; add-on heat pumps; NBSIR 80-2090.

Furnaces; incremental savings; life-cycle costs; minimum efficiency levels; minimum efficiency standards; boilers; central heating equipment; economic analysis; NBSIR 80-2079.

Furniture; interior finishes; joists; room fires; steel; wood; fire endurance; fire tests; flame through; floors; NBSIR 80-2134.

Furniture; interior finishes; residential buildings; room fires; static pressure; building fires; fire tests; flow measurement; NBSIR 80-1984.

Fused quartz track recorder; microcomputer; track counting; fission rate; SP594, pp. 512-515 (Sept. 1980).

Fused silica; laser damage; optical microscopy; total internal reflection; SP568, pp. 333-341 (July 1980).

Fused silica; laser damage; surface finishing; surface polishing; SP568, pp. 229-236 (July 1980).

Fusion; fusion reactivity; charged particle cross section needs; SP594, pp. 254-264 (Sept. 1980).

Fusion; heat transfer; hybrid blanket; tokamak; cross-section data; fission; SP594, pp. 351-359 (Sept. 1980).

Fusion; measured  $\sigma_r$  for O(n,n); calculate deuterium plasma neutron spectrum; SP594, pp. 807-811 (Sept. 1980).

Fusion; neutral beam injection; neutrons; nuclear heating; photon dose rate; photons; shielding; SP594, pp. 239-245 (Sept. 1980).

Fusion; neutron dosimetry; radiation damage; radioactivity; reactors; cross sections; fission; *SP594*, pp. 285-296 (Sept. 1980).  
 Fusion; neutron heating; neutron transport; radiation damage; tritium breeding; activation; dosimetry; *SP594*, pp. 228-238 (Sept. 1980).  
 Fusion; nuclear cross sections; reactors; standards; technology; biomedical; conference; fission; *SP594*.  
 Fusion-fission hybrid blanket; tritium breeding; uranium production; blanket energy multiplication; cross section sensitivity; cross section uncertainty; *SP594*, pp. 834-838 (Sept. 1980).  
 Fusion materials irradiation test (FMIT) facility;  $\text{Li(d,xn)}$ ; nuclear reactions; thick target yields and spectra; time-of-flight technique; total yield; angular distribution; *SP594*, pp. 824-828 (Sept. 1980).  
 Fusion neutronics; LMFBR analysis; LWR shielding and dosimetry; multigroup cross section libraries; weapons applications; ENDF/B-V; *SP594*, pp. 204-208 (Sept. 1980).  
 Fusion pellets; neutron cross sections; neutron spectra; actinide burn-up; *SP594*, pp. 360-363 (Sept. 1980).  
 Fusion reactivity; charged particle cross section needs; fusion; *SP594*, pp. 254-264 (Sept. 1980).  
 Future test year; regulatory commission; regulatory process; technological innovation; electric utility; *NBS-GCR-ETIP 79-76*.  
 $\text{F}_2$ ;  $\text{H}_2$ ; local density models;  $\text{N}_2$ ;  $\text{O}_2$ ;  $\text{X}\alpha$ ;  $\text{B}_2$ ;  $\text{CO}$ ;  $\text{C}_2$ ; 19289.  
 $\text{F}_2\text{CO}$ ; infrared spectrum; matrix isolation;  $\text{NF}_3$ ; normal coordinate analysis; photodissociation; ultraviolet spectrum;  $\text{CO}$ ; discharge sampling; F-atom reactions;  $\text{FCO}$ ; 19393.

## G

GaAs; negative electron affinity; photoemission; polarization; source of polarized electrons; spin polarization; electron optics; electron spin polarization; 19310.  
 GaAs polarized electron source; polarized electrons; source of polarized electrons; electron scattering; 19308.  
 Gabon; natural fission reactor; temperature; age of deposit; duration; fission products; fluence; *SP594*, pp. 909-915 (Sept. 1980).  
 Gage blocks; measurement assurance; random errors; standard deviation; systematic errors; uncertainty; check standard; *NBSIR 80-2078*.  
 Gage element; leads; load; protective coating; resistance; sensitivity change; stability; strain gages; structure; transducers; zero shift; adhesive; backing; connection; environment; 19049.  
 Gain; high resolution; linearity; noise; offset; static test set; analog-to-digital converter testing; automatic; digital-to-analog converter testing; 19075.  
 Gain cross section; alkali dimers; excimer laser; free-bond absorption; 19479.  
 Galaxies; clusters; instability; Elvin-Helmholtz; 19766.  
 Gallium; gallium melting-point temperature; gallium triple-point temperature; secondary temperature fixed point; thermometry; defining temperature fixed point; 19058.  
 Gallium; heat capacity; lead-tin alloys; magnetic field effect; phase diagram; potassium-iron-silicon oxides; solidification; surface tension; thermodynamic properties; Auger measurements on liquids; convection; *NBSIR 80-2082*.  
 Gallium arsenide; indium antimonide; ionicity; optical phonons; Raman scattering; semiconductors; stress; zinc-blende structure; covalent bonding; diamond structure; elastic constants; 19580.  
 Gallium-doped silicon; p-type silicon; resistivity; silicon; spreading resistance; thyristor; aluminum-doped silicon; boron-doped silicon; 19422.  
 Gallium melting-point temperature; gallium triple-point temperature; secondary temperature fixed point; thermometry; defining temperature fixed point; gallium; 19058.  
 Gallium triple-point temperature; secondary temperature fixed point; thermometry; defining temperature fixed point; gallium; gallium melting-point temperature; 19058.  
 Galvanostat; impedance measurements; noise; potentiostat; electrochemical measurements; *J. Res.* 85, No. 3, 211-217 (May-June 1980).  
 Game theory; law enforcement; taxation; utility; audit; behavior; compliance; discriminant analysis; *NBSIR 79-1711*.  
 Game theory; mathematical economics; noncooperative games; aggregation; equilibrium; *J. Res.* 85, No. 5, 391-428 (Sept.-Oct. 1980).  
 Gamma counting; activation; *SP594*, pp. 380-384 (Sept. 1980).  
 Gamma radiation; leucocyanides; radiation processing; radiation sterilization; radiochromic dyes; red Perspex; dose distributions; dose mapping; dosimetry; dye dosimetry; electron beams; 19339.  
 Gamma radiation; process control; quality control; radiation sterilization; radiochromic dye dosimeter; red Perspex dosimeter; absorbed dose; ceric sulfate dosimeter; cobalt-60 source; commissioning dosimetry; dosimetry; ferrous sulfate dosimeter; 19343.  
 Gamma-ray dosimetry; humidity effects; megarad dosimetry; nylon polycarbonate; polyethylene terephthalate; polymethyl methacrylate; polyvinyl chloride; polyvinyl fluoride; polyvinyl pyrrolidone radiochromic dyes; temperature dependence; absorption spectroscopy; blue cellophane; 19326.  
 Gamma-ray dosimetry; lithium fluoride; M-centers; megarad dosimetry; N-centers; radiation darkening; radiation processing; R-centers; absorption spectroscopy; alkali halides; color centers; darkening of crystals; dosimetry; electron dosimetry; F-centers; 19352.  
 Gamma-ray efficiency; Marinelli beaker; Reentrant beaker; semiconductor detector efficiency; standards; detector efficiency; 19408.  
 Gamma-ray energy standards; x rays; crystal diffraction; 19302.  
 Gamma-ray heating; thermoluminescent dosimeters; TLD; blankets;  $\text{CaF}_2\text{:Dy}$ ; fast breeder reactors; FBBF; *SP594*, pp. 576-580 (Sept. 1980).  
 Gamma-ray measurement; human serum; industrial development; industrial furnace; measurement; polarized electrons; secondary standards; signs; symbols; antifouling coating; communication; *DIM/NBS 64*, No. 2, 1-36 (1980).  
 Gamma-ray NDA; product solutions; reprocessing; transmission-corrected gamma-ray assay; densitometry; *SP582*, pp. 568-583 (June 1980).  
 Gamma-ray production cross section; gamma-ray strength function; spin-dependent evaporation model; yrast level; *SP594*, pp. 775-777 (Sept. 1980).  
 Gamma rays; gas flow meters; microwaves; radio antennas; trace characterization; budget; calibration service; chain reactions; *DIM/NBS 64*, No. 3, 1-24 (1980).  
 Gamma rays; iron; photons; point sources; water; air; buildup factors; 19294.  
 Gamma rays; low temperatures; multiaxial nuclear spin system;  $\gamma$ -ray multipolarity;  $^{165}\text{Ho}$  single crystal;  $^{166m}\text{Ho}$ ; 19620.  
 Gamma rays; neutrons; nondestructive assay; plutonium waste; safeguards; uranium waste; verification; counter; estimates; *SP582*, pp. 622-632 (June 1980).  
 Gamma rays; pair production; photoelectric absorption; photons; triplet production; x rays; attenuation coefficient; coherent scattering; Compton scattering; *JPCRD 9*, No. 4, 1023-1148 (1980).  
 Gamma rays; plastic dosimeters; polyvinylchloride; radiation processing; radiochromic dye films; blue cellophane; cellulose triacetate; clear Perspex; dose rate dependence; dosimetry; dyed plastic dosimeters; electron beams; 19338.  
 Gamma-ray shielding; nuclear detonations; nuclear war; radiation shielding; civil defense; fallout protection; *SP570*.  
 Gamma rays of discrete and continuum; fast neutron; *SP594*, pp. 397-407 (Sept. 1980).  
 Gamma ray spectra; integral experiments; neutron spectra; radiation transport; *SP594*, pp. 596-598 (Sept. 1980).  
 Gamma-ray spectra; neutron capture; neutron strength functions; photon strength functions; average resonance capture;

SP594, pp. 936-946 (Sept. 1980).

Gamma-ray spectrometers; germanium; induced radioactivity; sodium-iodide; spaceflight; calculations; 19749.

Gamma-ray spectrometers; lunar chemical analysis; x-ray proportional-counter; Apollo-15 and -16; 19129.

Gamma-ray spectrometry; neutron interrogation; safeguards; calorimetry; SP594, pp. 364-367 (Sept. 1980).

Gamma-ray spectrometry; neutrons; cross section; elements; SP594, pp. 853-856 (Sept. 1980).

Gamma-ray spectrometry; nondestructive isotopic analysis; plutonium safeguards; SP582, pp. 555-567 (June 1980).

Gamma-ray spectroscopy; mass spectroscopy; precision; uranium enrichment measurement; accuracy; SP582, pp. 103-110 (June 1980).

Gamma-ray spectroscopy; nuclear safeguards; spent fuel; verification; bonded storage; Bruce reactors; SP582, pp. 457-471 (June 1980).

Gamma-ray spectroscopy; stabilized lasers; wavelength standards; x-ray interferometry; atomic weights; Avogadro's constant; 19488.

Gamma-ray spectroscopy; x-ray spectroscopy; activation analysis; computers; data processing; 19128.

Gamma-ray spectrum; multiplets; optimization; peak/Compton ratio; simulation; apparatus spectrum; data library; fission products; full energy peak; SP594, pp. 878-880 (Sept. 1980).

Gamma-ray spectrum fitting; intercomparison of computational methods; International Atomic Energy Agency; longrange interpolation; non-linear least squares; peak resolution; PICO; empirical peak shape; 19127.

Gamma-ray strength function; spin-dependent evaporation model; yrast level; gamma-ray production cross section; SP594, pp. 775-777 (Sept. 1980).

Gamma-ray strength functions; GD parameter systematics; calculated  $\sigma(n,\gamma)$  and  $\gamma$ -ray spectra for  $^{181}\text{Ta}$  and  $^{197}\text{Au}$ ; calculated  $\sigma(n,\gamma)$  for  $^{186,187,188}\text{Os}$ ; SP594, pp. 770-774 (Sept. 1980).

Gamma-ray transitions; inelastic scattering; cross sections; SP594, pp. 677-679 (Sept. 1980).

Gamma spectrometry; mass spectrometry; nondestructive assay; nuclear safeguards; precision; reference materials; special nuclear materials; x-ray fluorescence; accountability; accuracy; SP582.

Garments; gasoline; heat output; ignition; burn injury; evaporation rate; fabric; flammability; 19114.

Gas; grants; marketplace; measurement seminars; photon-recoil components; SRM's; atomic properties; computers; emissions testing; energy; fundamental constants; DIM/NBS 64, No. 1, 1-24 (1980).

Gas; kinetics; ozone; stopped-flow; sulfur dioxide; thiirane; 19427.

Gas analysis; steel; alloys; differential thermal analysis; SP580, pp. 33-53 (Aug. 1980).

Gas breakdown; laser ionization; Na; superelastic; electron heating; electron seeding; 19779.

Gas centrifuges; IAEA safeguards; isotope separation; material balance; material unaccounted for; nondestructive analysis; safeguards; uranium; uranium hexafluoride; uranium 235; SP582, pp. 261-275 (June 1980).

Gas chromatography; headspace sampling; high-performance liquid chromatography; interlaboratory comparison; polycyclic aromatic hydrocarbons; aliphatic hydrocarbons; aromatic hydrocarbons; 19635.

Gas chromatography; high performance liquid chromatography; N-heterocyclic compounds; phenols; polynuclear aromatic hydrocarbons; priority pollutants; alternate fuels; 19097.

Gas chromatography; hydrocarbons; interlaboratory comparison; liquid chromatography; mass spectrometry; mussels; polycyclic aromatic hydrocarbons; tissue analyses; aliphatic hydrocarbons; aromatic hydrocarbons; 19841.

Gas chromatography; hydrogen; isotope dilution; microwave plasma; oscillating slit mechanism; deuterium; 19933.

Gas chromatography; infrared spectroscopy; mass spectroscopy; phosgene; polymer; poly(vinyl chloride); PVC; pyrolysis; carbonyl chloride; combustion; decomposition; degradation; electron capture; 19503.

Gas chromatography; injector; vapor sampler; capillary columns; concentrator; electrically heated inlet; 19667.

Gas chromatography; liquid chromatography; mass spectrometry; quantitation; shale oil; trace organic analysis; 19598.

Gas chromatography; sodium stearate; transition temperatures; 19914.

Gas chromatography/mass spectrometry; isotope dilution; serum; cholesterol; 19899.

Gas chromatography/mass spectrometry; isotope dilution/mass spectrometry; reference method; statistical analysis; total serum cholesterol; cholesterol; definitive method; 19554.

Gaseous; history of science; Kamerlingh Onnes; liquidons; liquids; mixtures; van der Waals; vapors; Andrews; condensation; critical point; diffusion; 19932.

Gaseous cyclopropane; Henry's constant; solubility; aqueous potassium chloride; 19795.

Gaseous environments; nickel alloy 671; nickel alloy 800; oxidizing/sulfidizing gas; premature failure; stress corrosion cracking; austenitic stainless steels; coal gasification; elevated temperatures; ferritic stainless steels; 19623.

Gaseous ion photoionization; ionization potential; spectroscopy; appearance potential; electron impact; electron spectroscopy; NSRDS-NBS66, Part I.

Gas exchange; surface areas; thermal analysis; adsorbents; SP580, pp. 133-147 (Aug. 1980).

Gas flow meters; microwaves; radio antennas; trace characterization; budget; calibration service; chain reactions; gamma rays; DIM/NBS 64, No. 3, 1-24 (1980).

Gas/gas equilibria; mixtures; Van der Waals one fluid model; conformal solution theory; corresponding states; critical point; J. Res. 85, No. 6, 441-448 (Nov.-Dec. 1980).

Gas mixture composition; gravimetrically prepared gas mixtures; molar intensity ratios; natural gas components; Raman spectroscopic method; spectral line intensity measurements; 19540.

Gasoline; heat output; ignition; burn injury; evaporation rate; fabric; flammability; garments; 19114.

Gas phase; hydrocarbons; hydrogen; nitrogen; oxygen; rate of reaction; sulfur; Arrhenius parameters; chemical kinetics; combustion; decomposition; free radicals; NSRDS-67.

Gas phase; hydrocarbons; hydrogen; nitrogen oxygen; rate of reaction; sulfur; Arrhenius parameters; chemical kinetics; combustion; decomposition; free radicals; NBSIR 80-2118.

Gas phase; photoabsorption cross section; photochemistry; quantum yield; rate coefficient; air pollution; atmospheric chemistry; chemical kinetics; data evaluation; JPCRD 9, No. 2, 295-472 (1980).

Gas phase; photoabsorption cross section; photochemistry; quantum yield; rate constant; air pollution; atmospheric chemistry; chemical kinetics; data evaluation; 19513.

Gas pilot; heat loss; insulation; modifications; recovery efficiency; residential; standby loss; test procedures; water heaters; energy conservation; energy consumption; NBSIR 79-1783.

Gas scintillator; inelastic neutron scattering; majority logic; neutron cross sections; prebuncher; pulsed neutron source; time-of-flight; computers; data acquisition; electron linac; SP594, pp. 929-935 (Sept. 1980).

Gas-solid chromatography; silver nitrate; aromatic hydrocarbons; 19913.

Gas target; measured  $\sigma(E_n, 0^\circ)$ ; nuclear reactions; SP594, pp. 542-544 (Sept. 1980).

Gas target; molecular vibrations; neutron reactions;  $^{238}\text{U}$ ; Doppler effect; fission; 19146.

Gas temperatures; heat release rate; interior finishes; residential buildings; room fires; building fires; fire resistance; fire tests; flow measurement; NBSIR 80-2120.

Gas thermometers; low temperature; microwave temperature sensor; temperature transducer; thermometer; tunnel diode oscillators; 19236.

- Gas thermometry; International Practical Temperature Scale; platinum resistance thermometers; temperature scales; thermodynamic temperature; 19215.
- Gated diode; integrated gated-diode electrometer; integrated test structure; leakage current; test structure; CCD; electrical test structure; *NBSIR 80-2000*.
- Gated diode; integrated test structure; microelectronic test structure; process validation wafer; random fault test structure; sheet resistor; test methods; test pattern; test structure; circuit characterization; cross-bridge sheet resistor; electrical alignment test structure; 19165.
- Gauge theory; glueball; hyperball; quark; spectroscopy; configuration mixing; 19327.
- GCFR; integral experiment; neutron transmission; thorium; total cross section; blanket; *SP594*, pp. 122-124 (Sept. 1980).
- GCFR; integral experiment; thorium; capture cross section; ENDF/B-5; *SP594*, pp. 127-130 (Sept. 1980).
- GD parameter systematics; calculated  $\sigma(n,\gamma)$  and  $\gamma$ -ray spectra for  $^{181}\text{Ta}$  and  $^{197}\text{Au}$ ; calculated  $\sigma(n,\gamma)$  for  $^{186,187,188}\text{Os}$ ; gamma-ray strength functions; *SP594*, pp. 770-774 (Sept. 1980).
- GELINA; HELIOS; KFK; ORELA; PSR; "white" neutron sources; WNR; comparison neutron yields; *SP594*, pp. 920-928 (Sept. 1980).
- Ge; laser damage; optoacoustic spectroscopy; photoacoustic spectroscopy; thin films; absorption; *SP568*, pp. 313-332 (July 1980).
- Gelled inorganic "polymers"; microporous filler; system nontoxicity; x-ray opacification; dental composite resin restorations; finishability; *U.S. Patent 4,217,264*.
- Gemmology; microanalysis; mineralogy; Raman spectroscopy; chemical analysis; fluid inclusions; 19577.
- Generalized asymptotic expansions; irregular singularities; Liouville-Green approximation; multiple asymptotic expansions; Stokes Phenomenon; WKB approximation; Bessel functions; 19379.
- General relativity; hydrodynamics; magnetic field reconnection; accretion; black holes; 19717.
- Geodesy; geodynamics; lasers; station positions; artificial satellites; distance measurements; 19742.
- Geodynamic; geophysical instrumentation; geophysics; gravity; absolute-g; 19141.
- Geodynamics; lasers; station positions; artificial satellites; distance measurements; geodesy; 19742.
- Geographical distribution; low temperature collectors; manufacturing activity; medium temperature collector; solar energy; special collectors; energy estimates; 19527.
- Geographic point location; latitude; Latitude and Longitude; longitude; mapping; State Plane Coordinate System; surveying; Universal Transverse Mercator (UTM); coordinate system; elevation; Federal Information Processing Standard; *FIPS PUB 70*.
- Geography; information processing standards; information systems; national government; representations and codes; standards; statistical data; ADP standards; computers; data elements and codes; data processing; Federal Information Processing Standards; *FIPS PUB 6-3*.
- Geology; highways; housing; landslides; liquefaction; power plants; railroads; rock slides; seismicity; structural engineering; bridges; buildings; dikes; earthquakes; foreign engineering; *SP592*.
- Geomagnetism; induced currents; Sq current system variations; tectonomagnetism; conductivity anomalies; differential magnetic measurements; 19181.
- Geometric mean; Jensen's inequality; blood lead levels; concave; *J. Res.* 85, No. 5, 363-366 (Sept.-Oct. 1980).
- Geophysical instrumentation; geophysics; gravity; absolute-g; geodynamic; 19141.
- Geophysics; gravity; absolute-g; geodynamic; geophysical instrumentation; 19141.
- Geophysics; gravity; tectonic processes; absolute gravimeter; 19750.
- Geophysics; interferometry; stellar diameters; astronomy; astrophysics; crustal movements; 19144.
- George Schulz; high energy resolution; temporary negative ions; atoms; electron scattering; electron scattering resonances; 19500.
- Geotechnical engineering; retaining structures; shoring; slope stability; construction; excavation; *NBS-GCR-80-202*.
- Geotechnical engineering; retaining structures; shoring; slope stability; soil classification; soil pressure; soil testing; trenching; braced excavations; construction; excavation; *BSS121*.
- Geotechnical engineering; safety; shoring; soil classification; trench; workshop; acceptable work practices; excavation; *NBSIR 79-1935*.
- Geothermal; process; thermodynamics; transport properties; aeroscience; data accuracy; design; *SP590*.
- Geothermal well; hydrothermal exposure; splitting-tensile strength; cement; compressive strength; *NBSIR 80-2099-1*.
- Geothermal-well cements; high pressure vessel; high temperature furnace; permeability; shear-bond strength; simulated geothermal fluids; *NBSIR 80-2099-3*.
- Geothermal-well cements; permeability to water; shear-bond strength to steel; splitting tensile strength; compressive strength; exposure to geothermal fluids; *NBSIR 80-2099-2*.
- Germanium; hardness measurements; plastic deformation; silicon; silicon carbide; aluminumoxide; brittle fracture; dislocations; electron microscopy; erosion; 19731.
- Germanium; induced radioactivity; sodium-iodide; spaceflight; calculations; gamma-ray spectrometers; 19749.
- Germanium; optical constants; refractive index; silicon; temperature coefficient of refractive index; *JPCRD 9*, No. 3, 561-658 (1980).
- Giant quadrupole resonance; photon scattering;  $^{12}\text{C}$ ; dispersion relation; 19735.
- Giant resonance; optical theorem; photon scattering; dispersion relation; electric quadrupole; 19625.
- Giant resonance;  $^{12}\text{C}$ ; absolute measurement; activation; electric dipole; electroexcitation; 19763.
- Gibbs energy; heat capacity; thermochemical tables; uranium-halogen containing compounds; data evaluation; enthalpy; entropy; *NBSIR 80-2029*.
- Glass; impact; indentation fracture; strength; ceramics; erosion; 19594.
- Glass; incongruent vaporization; surface depletion; transpiration; unstirred glass melt; vapor density; vaporization; carrier gas saturation; diffusion in melt; 19552.
- Glass; indentation; surface melting; adiabatic heating; elastic-plastic contact; 19584.
- Glass; interferometry; ion-exchange; refractive index; strength; striae; electron microprobe; 19744.
- Glass; laser; laser glass; laser-induced fluorescence; europium lithium borate glass; fluorescence line narrowing; 19545.
- Glass; lasers; photoelasticity; piezooptic; refractive index; 19842.
- Glass; microsphere; Monte Carlo; particulate; quantitative analysis; analytical standards; electron probe microanalysis; fiber; 19732.
- Glass; oxygen dependence; sodium disilicate; 19188.
- Glass; strength; stress-corrosion cracking; sub-critical crack growth; ceramics; fracture; 19791.
- Glass-ceramics; heat switches; polarization; refrigeration; specific heat strontium titanate; ceramics; cryogenics; dielectric constant; electrocaloric effect; entropy; ferroelectrics; 19534.
- Glasses; industrial processes; thermal analysis; cements; ceramics; *SP580*, pp. 99-130 (Aug. 1980).
- Glasses; ion microprobe mass analysis; microanalysis; quantitative analysis; secondary ion mass spectrometry; surface analysis; 19869.
- Glasses; photoelastic constants; refractive index; thermal coefficient of refractive index; ultraviolet; alkali halides; crystalline materials; 19275.
- Glass-gel boundary; sheets; spheres; type II diffusion; diffusivity;

- 19668.
- Glass-gel boundary; sphere weight gain; concentration distribution; diffusion; 19661.
- Glass particles; mineral particles; Monte Carlo methods; particle; peak-to-background ratios; quantitative analysis; x-ray microanalysis; electron probe microanalysis; 19921.
- Glass processing; instrumentation; paper technology; polymer ignition; rubber processing; thermal analysis; thermogravimetry; adsorbents; chemical processing; coordination compounds; enthalpimetry; SP580.
- Glass transition; pressure; ruby  $R_1$  linewidth; viscosity; correlation model; 19068.
- Glassy structure; laser damage resistance; materials properties; oxide coatings; reactive sputtering; transparent-conductive coatings; SP568, pp. 359-375 (July 1980).
- Glauber's salt; latent heat storage; pebble-bed; phase-change unit; solar energy storage; thermal storage device; ASHRAE standard 94-77; 19175.
- Global optical potential; inelastic scattering; neutron; coupled-channel; deformation parameter; differential cross sections; DWBA; elastic scattering; SP594, pp. 146-149 (Sept. 1980).
- Glovebox filter; in-line holdup monitor; NaI detector; nondestructive assay; real-time accountability; SP582, pp. 308-312 (June 1980).
- Glowing electrical connections; house wiring; innovative electrical connections; performance testing; contact resistance; electrical codes; fire safety; BSS128.
- Glucose; human serum; isotope dilution; mass spectrometry; research associate; urea; uric acid; cholesterol; College of American Pathologists; definitive methods; 19706.
- Glueball; hyperball; quark; spectroscopy; configuration mixing; gauge theory; 19327.
- Glycine; microwave spectrum; rotational constants; structure; amino acid; centrifugal distortion; 19365.
- GOES satellite; high frequency; low frequency; satellite time code; standard frequencies; television color subcarrier; time calibrations; time signals; broadcast of standard frequencies; frequency calibrations; SP432, 1979 Edition.
- Gold; relative intensities; round robin; x-ray photoelectron spectroscopy; binding energies; copper; ESCA; 19202.
- Gold alloys; ordered alloys; antiphase domains; copper alloys; diffusion; domain growth; 19851.
- Gold coating cross section; magnification calibration; SEM; thickness measurement; video waveform; 19859.
- Gold films; gravimetry; neutron activation analysis; Rutherford backscattering; standards; accuracy and precision; 19944.
- Government laboratories; industrial management; R&D; R&D in World War II; bootleg R&D; 19506.
- Government policy; innovation; semiconductor industry; technological change; competition; Experimental Technology Incentives Program; NBS-GCR-ETIP 80-91.
- Government policy; product; standards systems; AFNOR; anti-trust; certification; France; French standards system; NBSIR 79-1959.
- Government policy; product certification; standardization research needs; standards; accreditation of testing laboratories; certification; certification industry; economics; NBSIR 80-2001.
- GPC; liquid size exclusion chromatography; narrow fractions; polydispersity; recycle GPC; recycle liquid size chromatography; anionic polystyrenes; column spreading; 19426.
- GPSS; local area networks; packet switching; simulation; bus networks; bus performance; computer programs; contention; CSMA; SP500-65, pp. 79-85 (Oct. 1980).
- Graded index materials; infrared; magneto-optics; nonlinear optics; piezo-optics; planar waveguides; thermo-optics; thin films; ultraviolet; fiber optics; SP574.
- Grain boundaries; lattice gas; phase transitions; surface melting; adsorbed layers; antiphase boundaries; 19468.
- Grain boundary sliding; plastic deformation; alumina; basal slip; cavitation; deformation texture; electron microscopy; 19582.
- Grain size; molybdenum thin films; reflectance; chemical vapor deposition; composition; crystal structure; SP568, pp. 287-292 (July 1980).
- Grants; marketplace; measurement seminars; photon-recoil components; SRM's; atomic properties; computers; emissions testing; energy; fundamental constants; gas; DIM/NBS 64, No. 1, 1-24 (1980).
- Granulars; hazardous substances; pastes; powders; shredded and slit films; solids; sparks; test methods; Federal Hazardous Substances Act; flammability; NBSIR 78-1580.
- Graphite; nomenclature; standards; terminology; test methods; carbon; characterization; 19486.
- Graphite furnace atomic absorption; high pressure liquid chromatography; organometallic polymers; organotin silicate; refractive index; reverse bonded phase chromatography; silicon analysis; size exclusion chromatography; tin analysis; fractionation; 19398.
- Graphite/polysulfone; orthopedic materials; PECTF; polymer matrix; polypropylene; polysulfone; aromatic polyamide fiber; autoclave stability; biomaterial; composites; degradation resistance; fiberglass/epoxy; fiber reinforced composites; 19689.
- Graphs; natural language; Petri net; state diagram; action table; computer program; finite automata; formal description technique; NBS-GCR-80-247.
- Gravimeters; gravitation; gyroscope; levitation; navigation; accelerometers; 19397.
- Gravimetrically prepared gas mixtures; molar intensity ratios; natural gas components; Raman spectrometric method; spectral line intensity measurements; gas mixture composition; 19540.
- Gravimetric method; mass artifacts; weighing; air density; air density equation; barometer calibration; barometric pressure; displacement volume; J. Res. 85, No. 5, 341-346 (Sept.-Oct. 1980).
- Gravimetry; neutron activation analysis; Rutherford backscattering; standards; accuracy and precision; gold films; 19944.
- Gravitation; gyroscope; levitation; navigation; accelerometers; gravimeters; 19397.
- Gravitational experiments; high-Q cavities; interference; Josephson effect; magnets; superconductivity; aerospace; digital; electronics; 19054.
- Gravity; absolute-g; geodynamic; geophysical instrumentation; geophysics; 19141.
- Gravity; tectonic processes; absolute gravimeter; geophysics; 19750.
- Green's functions; molecular vibrations; normal mode calculations; numerical methods; polymer review; Raman and infrared spectroscopy; conformationally irregular polymers; 19713.
- Gross calorific values; refuse-derived-fuels; sample characterization; sample processing effects; 25 gram capacity bomb calorimeter; bomb calorimetry; NBSIR 80-1968.
- Ground motion; seismology; standards; storm surge; structural engineering; structural response; tsunami; wind loads; winds; accelerometer; codes; design criteria; disaster; earthquakes; SP560.
- Group constants; neutron spectrum; sensitivity coefficient; time-of-flight; transport calculation; SP594, pp. 265-274 (Sept. 1980).
- Group cross sections; integral experiments; least-squares adjustment; chi-square; data consistency; data testing; ENDF/B-IV; ENDF/B-V; fast reactors; SP594, pp. 182-186 (Sept. 1980).
- Group cross sections; integral experiments; least-squares adjustment; LMFBR; sensitivity analysis; uncertainty analysis; breeding ratio; calculational bias uncertainties; fast reactors; SP594, pp. 177-181 (Sept. 1980).
- Group homes; halfway houses; mental disorders; smoke; upholstered furniture; evacuation; fire departments; fire fatalities; fire investigations; flashover; NBS-GCR-80-200.
- Group II dimer; excimer laser; excited state absorption; 19187.
- Group index; material dispersion; optical fibers; propagation;

19469.

Group theory; internal rotation; perturbations; torsion; vibration-rotation; ethane; 19412.  
Group theory; nuclear spin; ro-vibronic species; statistical weights; symmetric top molecules; 19789.  
Growth chambers; horticulture; measurement of controlled environments; agricultural engineering; 19112.  
Guided wave transmission; optical cable; optical communication; optical fiber; optical fiber waveguide; optical transmission; optical waveguide; telecommunications; waveguide; communications; fiber optics; 19495.  
Guidelines; low-sloped roofs; roofing performance; solar collectors; collector installation; field survey; *TN1134*.  
Gypsums, dental; impression materials, dental; polymers, dental; refractories, dental; specifications, dental; waxes, dental; alloy, base, dental; alloy, gold, dental; amalgam, dental; cements, dental; dental materials; 19052.  
Gyroscope; levitation; navigation; accelerometers; gravimeters; gravitation; 19397.  
 $\gamma$ -ray multipolarity;  $^{165}\text{Ho}$  single crystal;  $^{166m}\text{Ho}$ ; gamma rays; low temperatures; multiaxes nuclear spin system; 19620.

## H

Half-life; internal gas proportional counting; tritiated water standards; tritium; 19621.  
Half-life; mass spectrometry; plutonium-241; thermal ionization; *SP582*, pp. 34-41 (June 1980).  
Half lives plutonium isotopes; plutonium and thorium; plutonium reference materials; assay of uranium; automated controlled-potential analyzer; automated spectrophotometer; complexometric titration of uranium and thorium; *SP582*, pp. 129-139 (June 1980).  
Halfway houses; mental disorders; smoke; upholstered furniture; evacuation; fire departments; fire fatalities; fire investigations; flashover; group homes; *NBS-GCR-80-200*.  
Hall effect; junction C-V measurements; neutron activation analysis; phosphorus density; photometric technique; silicon; 19431.  
Hall effect; mobility; resistivity; silicon; carrier density; computer program; electrical properties of silicon; *SP400-63*.  
Hall measurements; indium-doped silicon; p-n junction isolation; two-layer structures; epitaxial growth; 19417.  
Hall measurements; semiconductors; silicon; electrical measurements; 19415.  
Halocarbons; photochemistry; ethyl chloride; 19931.  
Handcuff; lock security; *NBSIR 80-1989*.  
Handicapped; life safety; refuge; building codes; building design; building fires; building management; egress; emergencies; escape; evacuation; fire alarm systems; fire departments; fire safety; *SP585*.  
Handicapped; life safety; refuge; building codes; building design; building fires; building management; egress; emergencies; escape; evacuation; fire alarm systems; fire departments; fire safety; *NBSIR 80-1965*.  
Ha profiles; delta Cephei; 19259.  
Hardness; homogeneity; infrared laser absorption properties; mechanical properties; specific heat; thermal expansion; *SP568*, pp. 65-72 (July 1980).  
Hardness measurements; plastic deformation; silicon; silicon carbide; aluminumoxide; brittle fracture; dislocations; electron microscopy; erosion; germanium; 19731.  
Hardness testing; Knoop; microhardness; nondestructive testing; brass; copper; 19849.  
Hardware; hinges; locks; performance standard; test methods; window; window assemblies; window components; burglary resistance; frames; 19698.  
Hardware configuration; model validation; queue; scheduling policies; simulation model; system performance; workloads; cumulative distribution function; events; *SP500-65*, pp. 111-128 (Oct. 1980).

Hardwood; lumber grading; shoring; softwood; timber engineering; trench bracing; trenching; construction lumber; construction safety; excavation; *BSS122*.  
Hard x-ray; imaging; Lixiscope; soft gamma-ray; spectrometer; energy resolution; 19403.  
Hard x-ray; imaging; Lixiscope; soft gamma-ray; spectrometer; energy resolution; 19404.  
Harmonization; metrication; metric transition; building codes; conversion strategies; *SP586*, pp. 227-251 (June 1980).  
Hartree-Fock; *K*-matrix; photoionization; rare gases; chlorine; 19304.  
Hashing; open addressing; worst case retrievals; buckets; 19060.  
Hashing; resource allocation; scatter tables; 19242.  
H atom reaction;  $\text{HCF}_2$ ; I atom reaction; infrared spectrum; matrix isolation; S atom reaction;  $\text{CF}_2$  reaction;  $\text{CF}_2\text{I}$ ;  $\text{CF}_2\text{S}$ ; 19410.  
Hauser-Feshbach; neutron cross-section calculations; preequilibrium; coupled-channel methods; *SP594*, pp. 333-335 (Sept. 1980).  
Hauser-Feshbach and precompound analysis; nuclear reactions; exciton model; *SP594*, pp. 757-761 (Sept. 1980).  
Hauser-Feshbach formalism; optical model; fission probabilities; *SP594*, pp. 500-503 (Sept. 1980).  
Hauser-Feshbach theory; statistical models; width fluctuation correction factor; compound-nucleus reactions; cross sections; elastic enhancement factors; factorization; *SP594*, pp. 762-764 (Sept. 1980).  
Hazardous substances; pastes; powders; shredded and slit films; solids; sparks; test methods; Federal Hazardous Substances Act; flammability; granulars; *NBSIR 78-1580*.  
Hazen-Williams coefficient; friction factor; *NBSIR 80-2041*.  
 $\text{HCF}_2$ ; I atom reaction; infrared spectrum; matrix isolation; S atom reaction;  $\text{CF}_2$  reaction;  $\text{CF}_2\text{I}$ ;  $\text{CF}_2\text{S}$ ; H atom reaction; 19410.  
HELIOS; KFK; ORELA; PSR; "white" neutron sources; WNR; comparison neutron yields; GELINA; *SP594*, pp. 920-928 (Sept. 1980).  
Headform; headgear; head injury; helmet; impact; test method; 19168.  
Headgear; head injury; helmet; impact; test method; headform; 19168.  
Headgear; helmet; impact; protective equipment; riot helmet; face shield; 19700.  
Head injury; helmet; impact; test method; headform; headgear; 19168.  
Head injury; helmet; injury criteria; mathematical model; test methods; drop test parameter; *NBSIR 80-1987*.  
Head plates; impact properties; nil-ductility transition temperatures; railroad tank cars; switchyard impact tests; tensile properties; AAR M128 steel; Charpy V-notch; *NBSIR 80-2039*.  
Headspace sampling; high-performance liquid chromatography; interlaboratory comparison; polycyclic aromatic hydrocarbons; aliphatic hydrocarbons; aromatic hydrocarbons; gas chromatography; 19635.  
Health; measurements; radiation; radon; radon daughters; ventilation; buildings; environment; *SP581*.  
Health; modelling; scientific uncertainty; societal decisions; socio-scientific problems; theory; time constants; basic research; challenge to the analytical chemist; chemical measurement process; energy; environment; 19666.  
Health; radiation; radiation safety; safety; x rays; calibration; diagnostic x-rays; electrical measurements; *NBSIR 80-2072*.  
Health care facilities; hospitals; interior finishes; Life Safety Code; nursing homes; risk analysis; safety equivalency; safety evaluation; smoke detection; automatic sprinklers; building codes; building construction; Delphi Method; fire safety; *NBSIR 78-1555-1*.  
Health care facilities; hospitals; ionization detectors; maintenance; NFPA 101; nursing homes; photoelectric detectors; smoke detectors; surveys; detector location; false alarms; *NBSIR 80-2130*.

Health care facilities; hospitals; life safety; mathematical programming; nursing homes; optimization; renovation; applied economics; building codes; economic analysis; fire safety; *NBSIR 79-1929*.

Health care facilities; hospitals; mattresses; smoke movement; sprinkler systems; clothing wardrobes; *NBSIR 80-2097*.

Health care facilities; life cycle; cash flow; economic analysis; fire safety; fire safety evaluation system; *NBS-GCR-79-186*.

Health care standards; innovation; performance standards; standards; automobile standards; design standards; economics of standards; *NBS-GCR-80-287*.

Health science; air quality; contaminants from building materials; engineering and health effects; environmental contaminants; *19156*.

Hearing procedures; regulatory lag; utility commissions; case-load management; case scheduling; common data formatting; Experimental Technology Incentives Program; *NBS-GCR-ETIP 79-72*.

Heat; hydrochloric acid; lithium chloride; relative apparent molal enthalpy; relative partial molal enthalpy; sulfuric acid; thermochemistry; calorimetry; electrolytes; enthalpy of dilution; *J. Res. 85*, No. 1, 11-17 (Jan.-Feb. 1980).

Heat balance; industrial furnaces; infrared; thermography; *TN1129*.

Heat capacity; high temperature; melting point; stainless steel; thermodynamics; dynamic measurements; electrical resistivity; emittance; *19541*.

Heat capacity; high temperature; palladium; pulse method; thermodynamics; electrical resistivity; *19770*.

Heat capacity; high-temperature; standard reference material; thermodynamic functions; tungsten; drop calorimetry; electronic heat capacity; enthalpy; *19363*.

Heat capacity; lead-tin alloys; magnetic field effect; phase diagram; potassium-iron-silicon oxides; solidification; surface tension; thermodynamic properties; Auger measurements on liquids; convection; gallium; *NBSIR 80-2082*.

Heat capacity; log home; mass factor; thermal mass;  $\Delta R$  effect; BLAST; effective U-value; *SP586*, pp. 161-179 (June 1980).

Heat capacity; thermochemical tables; uranium-halogen containing compounds; data evaluation; enthalpy; entropy; Gibbs energy; *NBSIR 80-2029*.

Heat capacity at constant pressure; heat capacity at constant volume; helium; hydrogen; methane; neon; nitrogen; oxygen; thermal conductivity; velocity of sound; viscosity; argon; computer programs; density; enthalpy; entropy; equation of state; *TN1025*.

Heat capacity at constant volume; helium; hydrogen; methane; neon; nitrogen; oxygen; thermal conductivity; velocity of sound; viscosity; argon; computer programs; density; enthalpy; entropy; equation of state; heat capacity at constant pressure; *TN1025*.

Heat flux; insulative properties; modacrylics; polyesters; protective clothing; radiant energy; wool fabrics; aramids; burns (injuries); char strength; convective energy; cotton fabrics; fabrics; *19120*.

Heating and cooling performance; solar energy system; thermal performance evaluation; *NBS-GCR-79-189*.

Heating and cooling performance; solar energy system; thermal performance evaluation; *NBSIR 80-1980*.

Heating equipment; heat transfer; literature reviews; radiant energy; stoves; wood; chimneys; fire models; fire safety; fire tests; flues; *NBSIR 80-2140, Vol. 1*.

Heating rate; independent reactions; kinetics; lifetime prediction; nonisothermal kinetics; thermal analysis; activation energy; competitive reactions; complex reactions; *19267*.

Heating rates; initial rates; kinetics; lifetime prediction; polystyrene; polyurethane; pyrolysis; stability; thermal analysis; thermogravimetry; accelerated aging; complex reactions; decomposition; degradation; durability; *19752*.

Heating seasonal performance; heat pumps; rating procedure; residential heating; seasonal performance; test method; central air conditioners; central heating equipment; *NBSIR 80-2002*.

Heat loss; insulation; modifications; recovery efficiency; residential; standby loss; test procedures; water heaters; energy conservation; energy consumption; gas pilot; *NBSIR 79-1783*.

Heat loss; standard; thermal insulation; U-value; *SP586*, pp. 19-31 (June 1980).

Heat of combustion; heat release; oxygen consumption; oxygen consumption calorimetry; rate of heat release; calorimetry; fire test; *19600*.

Heat of fusion; high temperatures; melting; niobium; dynamic techniques; *19745*.

Heat of mixing; liquid-vapor equilibria; methane + propane; binary mixtures; data correlation; excess volumes; *JPCRD 9*, No. 3, 721-734 (1980).

Heat output; ignition; burn injury; evaporation rate; fabric; flammability; garments; gasoline; *19114*.

Heat pipe; lithium vapor; partial photoionization cross section; synchrotron radiation; absorption cross section; core excitation; electron correlation; *19276*.

Heat pump; laboratory tests; modifications test procedures; water heaters; energy consumption; energy measurements; *NBSIR 79-1951*.

Heat pumps; hybrid heat pumps; hybrid systems; rating procedure; seasonal cost of operation; add-on heat pumps; furnaces; *NBSIR 80-2090*.

Heat pumps; rating procedure; residential heating; seasonal performance; test method; central air conditioners; central heating equipment; heating seasonal performance; *NBSIR 80-2002*.

Heat pumps; validation of computer models, buildings; building models; building performance data; computer simulations, building; energy conservation in commercial buildings; *NBSIR 80-2093*.

Heat release; oxygen consumption; oxygen consumption calorimetry; rate of heat release; calorimetry; fire test; heat of combustion; *19600*.

Heat release; oxygen consumption; polymers; combustion; fire; *19322*.

Heat release rate; ignition; interior finish; oxygen depletion; room fires; fire tests; flame spread; flashover; *TN1128*.

Heat release rate; interior finishes; residential buildings; room fires; building fires; fire resistance; fire tests; flow measurement; gas temperatures; *NBSIR 80-2120*.

Heats of formation; ion cyclotron resonance spectrometer; ion-molecule reactions; ions; rate constants; free radicals; *19839*.

Heats of formation; structural stability; alloy phase formation; alloy stability; atomic size; electronegativity; *19566*.

Heat switches; polarization; refrigeration; specific heat strontium titanate; ceramics; cryogenics; dielectric constant; electrocaloric effect; entropy; ferroelectrics; glass-ceramics; *19534*.

Heat transfer; hot water; measurement; modeling; solar; testing; computer; energy; *19375*.

Heat transfer; hot water; measurement; modeling; solar; testing; computer; energy; *19459*.

Heat transfer; hot water; measurement; modeling; solar; testing; computer; energy; *19498*.

Heat transfer; hybrid blanket; tokamak; cross-section data; fission; fusion; *SP594*, pp. 351-359 (Sept. 1980).

Heat transfer; liquid flow rate; solar-heat transfer liquid containment; stagnation; corrosion; elevated temperature; *NBSIR 79-1919*.

Heat transfer; literature reviews; radiant energy; stoves; wood; chimneys; fire models; fire safety; fire tests; flues; heating equipment; *NBSIR 80-2140, Vol. 1*.

Heat transfer; radiation; temperature; velocity; ceilings; convection; field; flame impingement; *NBS-GCR-80-251*.

Heat transfer fluid; solar collector; thermal performance; efficiency; flow rate; *NBS-GCR-79-184*.

Heat transfer fluids; insulation; leakage; solar collectors; solar energy; fire prevention; fire tests; flammability; flash point; *NBSIR 79-1931*.

Heat treatment; NaCl; plate gage; reduction in area; slow strain

- rate technique; strain rate; stress corrosion cracking; 2124-T851; 7075; 7075-T6; 7075-T7351; air; alternate immersion test; aluminum alloys; ductility; elongation; 19622.
- Heavy ion collision; Monte Carlo method; nuclear compressibility; nuclear shock waves; relativistic field theory; cascade calculations; 19441.
- Heavy ion collision; mass formula; quartets; SU4; charge exchange reactions; exotic nuclei; 19265.
- Heavy nuclei; total neutron cross section; *SP594*, pp. 698-702 (Sept. 1980).
- Heavy water;  $P_vT$ ; saturation states; thermodynamic properties of water; vapor pressure; virial coefficients; water; enthalpy of water; *JPCRD* 9, No. 3, 735-750 (1980).
- He excitation;  $n$  'S levels of He; benchmark cross sections; electron impact; 19787.
- HeH<sup>+</sup>; infrared spectra; ion beams; laser spectroscopy; molecular spectroscopy; 19463.
- Helical chains; inelastic neutron scattering; laser-Raman scattering; polyethylene; polyethyleneoxide; polyhexafluoropropylene; polyoxymethylene; polypropylene; polytetrafluoroethylene; accordion type oscillation; coupled rod oscillation; crystalline polymers; elastic modulus; 19937.
- Helium; hydrogen; methane; neon; nitrogen; oxygen; thermal conductivity; velocity of sound; viscosity; argon; computer programs; density; enthalpy; entropy; equation of state; heat capacity at constant pressure; heat capacity at constant volume; *TN1025*.
- Helium II; mathematical model; superfluid; thermodynamic properties; computer program; deviation plots; equation of state; *TN1029*.
- Helium isoelectronic sequence; distorted wave method; electron atom scattering; electron impact ionization; 19794.
- Helium liquefaction; refrigerator; regenerator materials; Stirling cycle; cryocoolers; 19359.
- Helium mass spectrometer leak test; hermeticity; hybrid microcircuits; leak testing; semiconductor device packages; back pressurization hermetic test; 19821.
- Helium stars; R CrB Stars; stellar evolution; stellar pulsation; 19711.
- Helix; irrational; Phase II; polytetrafluoroethylene; units per turn; conformation; crystal; electron; 19797.
- Helmet; impact; protective equipment; riot helmet; face shield; headgear; 19700.
- Helmet; impact; test method; headform; headgear; head injury; 19168.
- Helmet; injury criteria; mathematical model; test methods; drop test parameter; head injury; *NBSIR* 80-1987.
- Hemispherical mirror reflectometer; integrating spheres; paraboloidal mirror reflectometer; radiometric measurements; reflectance; transmittance; absorptance; blackbody; ellipsoidal reflectometer; emittance; 19299.
- He-Ne laser; nonlinear optics; visible frequencies; 1.15  $\mu\text{m}$ ; frequency; 19709.
- Henry's constant; solubility; aqueous potassium chloride; gaseous cyclopropane; 19795.
- He proportional counter; fission chamber; self-indication; self-shielding and fission factors; time-of-flight; *SP594*, pp. 692-697 (Sept. 1980).
- Hermes/CTS; international time comparison; precise time transfer; satellite; time; time scales; 19530.
- Hermeticity; hybrid microcircuits; leak testing; semiconductor device packages; back pressurization hermetic test; helium mass spectrometer leak test; 19821.
- Hermeticity; hybrids; nondestructive tests; semiconductor; tape bonded devices; acoustic emission; beam lead devices; electronic devices; 19108.
- Hermitian part; Jordan form; positive definite; square root; field of values; 19499.
- Heterodyne measurement; high-precision; line assignments; line frequencies; rapid measurement technique; 1,1-difluoroethylene; diode laser spectroscopy; 19186.
- Heterodyne spectroscopy; iodine spectroscopy; non-linear spectroscopy; phase conjugate spectroscopy; saturation spectroscopy; four-wave mixing; 19287.
- Heterogeneous; in-house; laboratory; preparation; riffle; sample; standards; *SP591*, pp. 45-49 (Aug. 1980).
- Heteropoly complexes; hydrogen bonds; molybdoarsinate; neutron diffraction; x-ray diffraction; crystal structure; 19846.
- Hexafluoroaluminates; metaphosphates; molten salts; molybdates; sulfates; sulfides; surface tension; tungstates; viscosity; carbonates; density; electrical conductance; *JPCRD* 9, No. 4, 831-1022 (1980).
- HF; interference; satellite; spectrum; spectrum conservation; standard; time broadcast stations; voice announcements; clocks; 19525.
- Hierarchical; information; query; query language; semantics; TDMS; tree; tree structures; ambiguity; Boolean; database; 19433.
- Hierarchical design; programming methodology; security; design methodology; formal specification; formal verification; *SP500-67*.
- High accuracy; low and high momentum transfer; rms radius; carbon; combined analysis; electron scattering; 19374.
- High-copper alloy; mercury content; creep; dental amalgam; 19107.
- High current ion beams; inertially-confined fusion; numerical simulation; space charge; beam transport; 19626.
- High elastic modulus material; microfibril; microfibrillar; tie molecules; annealing; drawing; fibril; mirror structure; 19688.
- High electron energy; Maxwell's velocity distribution; rate coefficients; cross sections; 19356.
- High-energy bremsstrahlung; operational characteristics; radiation therapy; recommendations; selection of thermoluminescence dosimetry system; survey; thermoluminescence; United States; calibration; dosimetry; *TN1119*.
- High energy cross sections; intranuclear cascade; statistical model; actinide fission; *SP594*, pp. 422-426 (Sept. 1980).
- High-energy laser; irradiance mapping; mirror/window materials; on-target fluence; optical train; phase aberration; power optics; thermal lensing; focal intensity; *SP568*, pp. 425-438 (July 1980).
- High energy laser; laser damage; reflectors; thin film; absorption; calorimetry; damage; electric field; *SP568*, pp. 377-390 (July 1980).
- High energy proton; neutron yield analysis; spallation; evaporation; fission; *SP594*, pp. 417-421 (Sept. 1980).
- High energy resolution; temporary negative ions; atoms; electron scattering; electron scattering resonances; George Schulz; 19500.
- Higher nodes; polyisethylene; Raman; accordion-type longitudinal oscillation; basic node; 19655.
- Higher order finite difference methods; numerical experiments; parabolic equations; singular perturbation problems; cell Reynolds number; diffusion convection equations; error estimates; 19490.
- High frequency; low frequency; satellite time code; standard frequencies; television color subcarrier; time calibrations; time signals; broadcast of standard frequencies; frequency calibrations; GOES satellite; *SP432*, 1979 Edition.
- High-level waste management; thorium HTR fuel cycles; cross-section accuracy requirements; fuel handling; *SP594*, pp. 131-134 (Sept. 1980).
- Highly ionized atoms; laser-produced plasma; spectrum; ultraviolet; 19608.
- High magnetic fields; molecular structure; excited states; 19319.
- High-performance liquid chromatography; interlaboratory comparison; polycyclic aromatic hydrocarbons; aliphatic hydrocarbons; aromatic hydrocarbons; gas chromatography; head-space sampling; 19635.
- High performance liquid chromatography; methylmercury; organometals; speciation; electrochemical detector; 19555.
- High performance liquid chromatography; N-heterocyclic com-

pounds; phenols; polynuclear aromatic hydrocarbons; priority pollutants; alternate fuels; gas chromatography; 19097.

High performance liquid chromatography (HPLC); normal-phase HPLC; polycyclic aromatic hydrocarbons (PAH); retention data; reverse-phase HPLC; air particulates; 19547.

High power laser materials; optical damage threshold; top-seeded solution technique; two photon absorption; uniaxial crystal; yttrium lithium fluoride; advanced laser materials; crystal growth; crystalline fluorides; Faraday rotator; *SP568*, pp. 127-135 (July 1980).

High-precision; line assignments; line frequencies; rapid measurement technique; 1,1-difluoroethylene; diode laser spectroscopy; heterodyne measurement; 19186.

High pressure; ruby pressure scale; advances; diamond anvil cell; 19467.

High pressure liquid chromatography; organometallic polymers; organotin silicate; refractive index; reverse bonded phase chromatography; silicon analysis; size exclusion chromatography; tin analysis; fractionation; graphite furnace atomic absorption; 19398.

High pressure methods; kinetics; thermogravimetry; *SP580*, pp. 235-250 (Aug. 1980).

High pressure physics; perfluoro n-alkanes; phase transition; polytetrafluoroethylene; Raman spectroscopy; diamond anvil cell; 19893.

High pressure vessel; high temperature furnace; permeability; shear-bond strength; simulated geothermal fluids; geothermal-well cements; *NBSIR 80-2099-3*.

High-Q cavities; interference; Josephson effect; magnets; superconductivity; aerospace; digital; electronics; gravitational experiments; 19054.

High-Q cavities; navigation; oscillator; ranging; resonators; superconductivity; aerospace; frequency standards; 19586.

High resistance junctions; junction resistance; scanning electron microscopy; x-ray microanalysis; aluminum wiring; duplex connectors; *J. Res.* 85, No. 6, 429-440 (Nov.-Dec. 1980).

High-resolution; cross section; fission; *SP594*, pp. 491-495 (Sept. 1980).

High resolution; image intensifier; image signals; microradiography; monochromatic radiography; real-time radiography; x-ray image magnifier; background scattering; collimation; 19863.

High resolution; linearity; noise; offset; static test set; analog-to-digital converter testing; automatic; digital-to-analog converter testing; gain; 19075.

High resolution liquid chromatography; non-peptide impurities; peptide hormones; angiotensin I; 19496.

High-resolution spectroscopy; laser cooling; laser spectroscopy; microwave spectroscopy; optical pumping; stored ions; atomic spectroscopy; double resonance; 19440.

High-resolution spectroscopy; laser spectroscopy; non-linear spectroscopy; saturated absorption; saturation spectroscopy; Doppler-free spectroscopy; 19288.

High resolution spectroscopy; time metrology; time standards; atomic clocks; atomic frequency standards; frequency metrology; frequency standards; 19430.

High-rise buildings; leakage; life safety; smoke; smoke movement; stack effects; test methods; building fires; compartment fires; doors; egress; fire tests; *NBSIR 80-2004*.

High speed instruments; Josephson effect; superconducting electronics; a/d converter; cryogenic electronics; digital instrument; 19057.

High-speed measurements; high temperature; melting; radiance temperature; vanadium; emittance; 19349.

High-speed measurements; high temperatures; thermodynamics; thermophysical properties; dynamic techniques; 19311.

High-speed rail; mathematical models; modal split; network analysis; benefit-cost analysis; combinatorial optimization; *NBSIR 79-1724*.

High-temperature; infrared; optical instrumentation; reflectometers; spectrophotometers; *SP568*, pp. 281-286 (July 1980).

High temperature; interferometer; sapphire- $\text{Al}_2\text{O}_3$ ; standard reference material; tele-microscope; thermal expansion; 19915.

High temperature; lattice dynamics; Monte Carlo calculations; perfect crystal; perturbation theory; rubidium; vacancies; anharmonicity; anomalous specific heat; atomic migration; 19123.

High temperature; lattice structure; Monte Carlo calculations; rubidium; specific heat; atom migration; 19337.

High temperature; melting; normal spectral emittance; palladium; radiance temperature; dynamic measurements; 19063.

High temperature; melting; radiance temperature; vanadium; emittance; high-speed measurements; 19349.

High temperature; melting point; stainless steel; thermodynamics; dynamic measurements; electrical resistivity; emittance; heat capacity; 19541.

High temperature; palladium; pulse method; thermodynamics; electrical resistivity; heat capacity; 19770.

High-temperature; standard reference material; thermodynamic functions; tungsten; drop calorimetry; electronic heat capacity; enthalpy; heat capacity; 19363.

High temperature; steam; viscosity; coal gasification; coal slag; *NBSIR 80-2124*.

High temperature furnace; permeability; shear-bond strength; simulated geothermal fluids; geothermal-well cements; high pressure vessel; *NBSIR 80-2099-3*.

High temperature properties; Monte Carlo simulations; aluminum; anharmonic effects; effective potentials for metals; elastic constants; fluctuations; *J. Res.* 85, No. 2, 109-112 (Mar.-Apr. 1980).

High temperatures; Johnson noise; process instrumentation; thermocouples; thermometry; coal conversion; 19344.

High temperatures; melting; niobium; dynamic techniques; heat of fusion; 19745.

High temperatures; thermodynamics; thermophysical properties; dynamic techniques; high-speed measurements; 19311.

High temperature thermocouples; recommended thermocouples; temperature measurement; thermocouple insulators; thermocouple lead tempering; thermocouple materials; thermocouples; thermocouple thermometry; 19070.

High voltage electron microscopy; *in situ*; oxidation; silicon nitride; yttria-doped silicon nitride; ceramic; 19605.

High voltage electron microscopy; *in situ*; oxidation; silicon nitride; yttria-doped silicon nitride; ceramic; *NBSIR 80-2075*.

High-voltage transmission lines; air ions currents; atmospheric electricity; charge density; direct-current transmission; electric field strength; 19238.

Highway noise; motor vehicle noise; noise; noise control; sound; traffic noise; transportation noise; acoustics; environmental pollution; *TN1113-1*.

Highways; housing; landslides; liquefaction; power plants; railroads; rock slides; seismicity; structural engineering; bridges; buildings; dikes; earthquakes; foreign engineering; geology; *SP592*.

Hinges; locks; performance standard; test methods; window; window assemblies; window components; burglary resistance; frames; hardware; 19698.

History; interlaboratory testing program; laboratory evaluation; National Bureau of Standards; paper; paperboard; TAPPI; test methods; Youden graphical analysis; collaborative reference programs; 19321.

History; ionizing radiation; measurements; measurement standards; radiation; radiation hazards; radiation safety; radiation standards; standardization; standards; 19551.

History; materials; programs; specifications; dental agencies; devices; *SP571*.

History of science; Kamerlingh Onnes; liquidons; liquids; mixtures; van der Waals; vapors; Andrews; condensation; critical point; diffusion; gaseous; 19932.

Hoisting loads; hyperbolic shell; collapse; concrete; concrete strength; construction; construction loads; cooling tower; dynamic effects; failure; failure investigation; *NBSIR 80-2010*.

- Hoisting system; regulations; safety; standards; concrete; construction; cooling tower; formwork; *NBSIR 80-1964*.
- Hole dynamics; lineshapes; photoelectron spectroscopy; *19828*.
- Hollow cathode; isotope ratio; opto-galvanic effect; oscillator strength; spectroscopy; uranium; electron temperature; *19150*.
- Holographic interferometry; measured performance; optical path difference; temperature profile; thermal distortion; thermal lensing; ZnSe; absorption; calculated performance; CO<sub>2</sub> laser; *SP568*, pp. 73-89 (July 1980).
- Holographic reconstruction; imaging; laminagraphy; nondestructive testing; radiography; three-dimensional radiography; tomography; x-ray laser; computerized axial tomography; Fresnel zone; *19855*.
- Home audit; thermal time constant; energy analysis calculation; energy retrofit; *NBSIR 80-1961*.
- Home safety; household activities; household design; mobility aids; room use; accidents; anthropometry; biomechanics; disability; disability organizations; *NBSIR 80-2014*.
- Homogeneity; infrared laser absorption properties; mechanical properties; specific heat; thermal expansion; hardness; *SP568*, pp. 65-72 (July 1980).
- Homogeneity; natural materials; nondestructive assay; particles; quality assurance; radiation; radioactivity; radiochemical assay; radionuclide; segregation; standard; calibration; environments; *19298*.
- Honduras; legal metrology; metrication; metrology; quality assurance; standardization; test laboratories; weights and measures laws; Agency for International Development; development assistance; *NBSIR 80-1969*.
- Horticulture; measurement of controlled environments; agricultural engineering; growth chambers; *19112*.
- Hospitals; fire departments; fire investigations; *NBS-GCR-80-212*.
- Hospitals; inspectors; marketing; qualification; re-examination; technicians; accreditation; certification; colleges; confidence; criteria; evaluation; *SP591*, pp. 3-5 (Aug. 1980).
- Hospitals; interior finishes; Life Safety Code; nursing homes; risk analysis; safety equivalency; safety evaluation; smoke detection; automatic sprinklers; building codes; building construction; Delphi Method; fire safety; health care facilities; *NBSIR 78-1555-1*.
- Hospitals; ionization detectors; maintenance; NFPA 101; nursing homes; photoelectric detectors; smoke detectors; surveys; detector location; false alarms; health care facilities; *NBSIR 80-2130*.
- Hospitals; kitchen fires; fire departments; fire extinguishers; fire investigations; *NBS-GCR-80-235*.
- Hospitals; life safety; mathematical programming; nursing homes; optimization; renovation; applied economics; building codes; economic analysis; fire safety; health care facilities; *NBSIR 79-1929*.
- Hospitals; mattresses; nursing staff; room fires; doors; fire alarm systems; fire departments; fire investigations; *NBS-GCR-80-260*.
- Hospitals; mattresses; smoke movement; sprinkler systems; clothing wardrobes; health care facilities; *NBSIR 80-2097*.
- Hospitals; nursing staff; patients; evacuation; fire departments; fire investigations; *NBS-GCR-80-217*.
- Hospitals; nursing staff; patients; fire departments; fire extinguishers; *NBS-GCR-80-234*.
- Hospitals; nursing staff; patients; fire departments; fire investigations; *NBS-GCR-80-213*.
- Hospitals; nursing staff; patients; fire investigations; *NBS-GCR-80-224*.
- Hospitals; nursing staff; patients; room fires; fire extinguishers; fire investigations; *NBS-GCR-80-209*.
- Hospitals; nursing staff; patients; smoke; doors; evacuation; fire extinguishers; fire investigations; *NBS-GCR-80-231*.
- Hospitals; nursing staff; patients; smoke; egress; evacuation; fire alarm systems; fire departments; fire fighters; *NBS-GCR-80-192*.
- Hospitals; nursing staff; patients; smoke; smoldering; bedding; fire departments; fire investigations; *NBS-GCR-80-239*.
- Hospitals; nursing staff; smoke; fire departments; fire investigations; *NBS-GCR-80-222*.
- Hospitals; nursing staff; smoke; smoke detectors; fire departments; fire extinguishers; fire investigations; *NBS-GCR-80-232*.
- Hospitals; patients; beds (furniture); evacuation; fire departments; fire extinguishers; fire investigations; *NBS-GCR-80-241*.
- Hospitals; patients; evacuation; fire departments; fire extinguishers; fire investigations; *NBS-GCR-80-240*.
- Hospitals; patients; smoke; sprinkler systems; evacuation; fire departments; fire extinguishers; fire investigations; *NBS-GCR-80-233*.
- Hospitals; smoke; evacuation; fire departments; fire investigations; *NBS-GCR-80-230*.
- Hospitals; smoke; fire departments; fire extinguishers; fire investigations; *NBS-GCR-80-227*.
- Hospitals; smoke; fire departments; fire extinguishers; fire investigations; *NBS-GCR-80-244*.
- Hospitals; smoke; smoke detectors; fire departments; fire investigations; *NBS-GCR-80-261*.
- Hospitals; smoke; smoke movement; stairwells; tracers; air movement; elevators; fire tests; *NBS-GCR-79-183*.
- Hotels; room fires; senior citizens; smoke; breathing apparatus; evacuation; fire departments; fire fatalities; flashover; *NBS-GCR-80-253*.
- Hot isostatic forging; hot isostatic pressing; laser windows; optical absorption; optical homogeneity; optical scattering; stress birefringence; calcium fluoride; *SP568*, pp. 47-63 (July 1980).
- Hot isostatic pressing; laser windows; optical absorption; optical homogeneity; optical scattering; stress birefringence; calcium fluoride; hot isostatic forging; *SP568*, pp. 47-63 (July 1980).
- Hot water; measurement; modeling; solar; testing; computer; energy; heat transfer; *19375*.
- Hot water; measurement; modeling; solar; testing; computer; energy; heat transfer; *19459*.
- Hot water; measurement; modeling; solar; testing; computer; energy; heat transfer; *19498*.
- Hourly climate data; test reference (TRY); building energy calculations; *19224*.
- Household activities; household design; mobility aids; room use; accidents; anthropometry; biomechanics; disability; disability organizations; home safety; *NBSIR 80-2014*.
- Household design; mobility aids; room use; accidents; anthropometry; biomechanics; disability; disability organizations; home safety; household activities; *NBSIR 80-2014*.
- House wiring; innovative electrical connections; performance testing; contact resistance; electrical codes; fire safety; glowing electrical connections; *BSS128*.
- Housing; building design; building energy performance standards; building standards; component performance standards; energy conservation; *NBSIR 80-2161*.
- Housing; landslides; liquefaction; power plants; railroads; rock slides; seismicity; structural engineering; bridges; buildings; dikes; earthquakes; foreign engineering; geology; highways; *SP592*.
- Housing; lead-based paint; lead poisoning; applied economics; building economics; building materials; economic analysis; *NBSIR 80-1977*.
- Housing; mathematical programming; optimization; rehabilitation; renovation; applied economics; building codes; building economics; cost estimation; economic analysis; engineering economics; *BSS129*.
- Housing codes; model codes; performance levels; regulations; rehabilitation; code provisions; comparison; existing buildings; *SP586*, pp. 117-133 (June 1980).
- Housing codes; personnel; budgets; economic analysis; enforcement; *SP586*, pp. 135-148 (June 1980).
- Housing codes; regulatory approaches; building code enforce-

- ment; buildings; design; energy conservation; *SP586*.
- Housing policies; housing standards; minimum property standards; building regulations; *SP586*, pp. 87-102 (June 1980).
- Housing standards; minimum property standards; building regulations; housing policies; *SP586*, pp. 87-102 (June 1980).
- Housing standards; minimum standards; space standards; equivalency; *SP586*, pp. 103-115 (June 1980).
- HPO; infrared spectrum; matrix isolation; PO; PO<sub>2</sub>; (PO)<sub>2</sub>; ultraviolet spectrum; vacuum ultraviolet photolysis; discharge sampling; *19082*.
- HTGR spent fuel reprocessing; in-line measurements; off-line measurements; process control; remote pipettors; remote sample preparation; SNM accountability; x-ray fluorescence; automation; data processing; *SP582*, pp. 55-65 (June 1980).
- H-transfer; initiation; isomerization; *n*-alkane pyrolysis; rate constants; recombination; addition; chemical kinetics; decomposition; disproportionation; *JPCRD* 9, No. 3, 523-560 (1980).
- HUD; mobile home; safety; standard; window; anthropometry; emergency egress; escape behavior; *NBSIR 80-2049*.
- HUD Demonstration Program; passive solar buildings; performance criteria; statistical evaluation; thermal analysis; depletable energy; *19823*.
- Human behavior; human factors; panic; safety; smoke; symbols; communications; evacuation; fire alarms; fire safety; *NBSIR 80-2070*.
- Human behavior; social environments; social learning theory; antisocial behavior; arson; cognition; firesetters; *NBS-GCR-80-194*.
- Human behavior in fires; modeling technique; programming; simulation of human behavior; architectural research; building fires; computer-aided design; environmental psychology; fire research; fire safety; *NBSIR 80-1982*.
- Human behavior in fires; physics of fire; toxicity of combustion products; chemistry of fire; combustion products; detection; fire hazards; fire modeling; fire protection; fire research; fire suppression; *NBSIR 80-2127*.
- Human comfort; indoor environment; outdoor environment; thermal comfort; bioclimatic chart; *19923*.
- Human factors; occupational safety; scaffold failures; scaffolds; accidents; accident statistics; construction regulations; construction safety; employee casualties; environmental hazards; *NBSIR 79-1955*.

## I

- IAEA safeguards; isotope separation; material balance; material unaccounted for; nondestructive analysis; safeguards; uranium; uranium hexafluoride; uranium 235; gas centrifuges; SP582, pp. 261-275 (June 1980).
- IAEA safeguards; neutron detectors; portal monitors; radiation detectors; SNM monitors; ZPPR; SP582, pp. 365-371 (June 1980).
- I atom reaction; infrared spectrum; matrix isolation; S atom reaction; CF<sub>2</sub> reaction; CF<sub>2</sub>I; CF<sub>2</sub>S; H atom reaction; HCF<sub>2</sub>; 19410.
- IBR-2 reactor; isomeric shift; neutron resonances; polarized neutrons and nuclei; pulsed neutron source; SP594, pp. 385-393 (Sept. 1980).
- Ice; load; roof; roof load; snow; solar collector; structural engineering; building; NBS-GCR-79-180.
- Ice; snow; wind; building collapse; SP586, pp. 259-270 (June 1980).
- Ideal conditions; measurement process; omnifariousness; precision; round robin; routine conditions; variance model; within-laboratory precision; accuracy; between-laboratory precision; components of variance; duplicity; SP591, pp. 31-40 (Aug. 1980).
- Ideal gas; Van der Waals equation; virial coefficient; virial equation; Debye theory; equation of state; 19772.
- Idealized system; reorganization; civil service; code administration agencies; SP586, pp. 59-70 (June 1980).
- Identification; materials analysis; materials design; NBS crystal data center; user evaluation; computer dissemination; crystal

data; *TN1112*.

Identification; passwords; personal authentication; computer networking; computer security; controlled access; *19825*.

Ignition; burn injury; evaporation rate; fabric; flammability; garments; gasoline; heat output; *19114*.

Ignition; interior finish; oxygen depletion; room fires; fire tests; flame spread; flashover; heat release rate; *TN1128*.

Illumination; illumination levels; lighting; suprathreshold seeing; visibility; vision; conspicuity; contrast; energy conservation; *NBSIR 79-1925*.

Illumination; lighting; power budget; building illumination systems; energy budget; energy conservation; energy performance criteria; *NBSIR 80-2052*.

Illumination; perception; questionnaires; research methodology; sensory environment; social sciences; thermal environment; architecture; audition; built environment; color; environmental psychology; *SP474*.

Illumination levels; lighting; lighting design; lighting education; lighting research; post-occupancy evaluation; power budget; task lighting; visual performance; biological effects of lighting; energy conservation; *SP587*.

Illumination levels; lighting; suprathreshold seeing; visibility; vision; conspicuity; contrast; energy conservation; illumination; *NBSIR 79-1925*.

Image information; information content; medical x-ray image; x-ray image storage; digital image requirement; *19134*.

Image intensifier; image signals; microradiography; monochromatic radiography; real-time radiography; x-ray image magnifier; background scattering; collimation; high resolution; *19863*.

Image processing; inspection; manufacturing; pattern recognition; robotics; vision systems; automation; *19093*.

Image quality indicator; nondestructive testing; radiography; sensitivity; standards; ultrasonics; calibration; *19877*.

Image-shearing eyepiece; integrated circuits; linewidth measurements; microelectronics; micrometrology; optical microscope; photoelectric microscope; photomask; scanning electron microscope; semiconductor technology; filar eyepiece; *SP400-43*.

Image signals; microradiography; monochromatic radiography; real-time radiography; x-ray image magnifier; background scattering; collimation; high resolution; image intensifier; *19863*.

Imaging; Lixiscope; soft gamma-ray; spectrometer; energy resolution; hard x-ray; *19403*.

Imaging; Lixiscope; soft gamma-ray; spectrometer; energy resolution; hard x-ray; *19404*.

Imaging; laminagraphy; nondestructive testing; radiography; three-dimensional radiography; tomography; x-ray laser; computerized axial tomography; Fresnel zone; holographic reconstruction; *19855*.

Imaging; leakage testing; magnetics; material parameters; non-destructive evaluation; optics; penetrants; radiography; ultrasonics; acoustic emission; eddy currents; *NBSIR 80-2162*.

Impedance standards; inductance; residual series inductance; resonance techniques; three-terminal capacitance; calibration; capacitance; four-terminal pair capacitance; *TN1024*.

Impact; indentation fracture; strength; ceramics; erosion; glass; *19594*.

Impact; metals; surfaces; deformation; erosion; *19936*.

Impact; protective equipment; riot helmet; face shield; headgear; helmet; *19700*.

Impact; steel; wear; wear debris; abrasive particles; electron microscopy; erosive wear; *19874*.

Impact; test method; headform; headgear; head injury; helmet; *19168*.

Impact energy; strength degradation; ceramics; fracture; *19589*.

Impact properties; nil-ductility transition temperatures; railroad tank cars; switchyard impact tests; tensile properties; AAR M128 steel; Charpy V-notch; head plates; *NBSIR 80-2039*.

Impacts of hydrogen fuel; policy options; societal aspects; work-shop; barrier/incentives; hydrogen energy systems; *19699*.

Impedance; solid electrolyte; tungsten carbide; catalyst; cerium dioxide; electrocatalysis; fuel cells; *NBSIR 80-1991*.

Impedance measurements; noise; potentiostat; electrochemical measurements; galvanostat; *J. Res. 85, No. 3, 211-217 (May-June 1980)*.

Impedance measurements; noise measurements; pitting; potentiostat; aluminum; copper; *19572*.

Impingement erosion; metal erosion; wear; copper; electron microscopy; erosion; *19941*.

Implementation; inspections; laboratory accreditation; laboratory performance evaluation; noncompliance; proficiency; counter-check reference tests; critical control features; feedback; *SP591, pp. 79-84 (Aug. 1980)*.

Impregnation; porosity; porous polymers; buoyant force; dielectric insulation; dielectric oil; *19376*.

Impression materials, dental; polymers, dental; refractories, dental; specifications, dental; waxes, dental; alloy, base, dental; alloy, gold, dental; amalgam, dental; cements, dental; dental materials; gypsums, dental; *19052*.

Improvement; proficiency testing; checklist; CLIA '67; Clinical Laboratories Improvement Act of 1967; clinical laboratory evaluation; evaluation, internal quality control; evaluation, performance; evaluation, qualifications of laboratory personnel; *SP591, pp. 53-62 (Aug. 1980)*.

Impulse testing; interfacial breakdown; oil-paper interfaces; transformer oil; breakdown; electrical breakdown; *NBSIR 80-2071*.

Impurities; isochores; scaling laws; Burnett method; coexistence curve; critical exponents; critical isochore; critical parameters; equation of state; ethylene; *19894*.

Impurities; nicotine adenine dinucleotides; reversed phase liquid chromatography; *19548*.

Impurities; octacalcium phosphate; sodium; tooth enamel; apatite; carbonate apatite; hydrolysis; *19647*.

Impurities; overcoat; polished surfaces; pulsewidth dependence; thin-film coatings; 1 ns; 1.06  $\mu\text{m}$  damage; absorption; electric-field strength; film materials; *SP568, pp. 391-403 (July 1980)*.

Impurity damage; laser damage; multiphoton induced damage; pulse duration dependence of damage; thin films; wavelength dependence of damage; avalanche ionization; film thickness dependence; *SP568, pp. 405-416 (July 1980)*.

Impurity-induced damage; laser damage; Mie absorption coefficient; pulse duration dependence of damage; *SP568, pp. 479-496 (July 1980)*.

Impurity separation; ion-exchange separation; plutonium; automated ion-exchange; automated plutonium separation; AUTO-SEP; *SP582, pp. 156-163 (June 1980)*.

Incapacitation; inhalation; test method; toxicology; combustion; fatality ( $\text{LC}_{50}$ ); hydrogen cyanide; *NBSIR 80-2077*.

Incentives; life-cycle cost; payback; rate of return; solar economics; windows; benefit cost; building economics; discounting; economic analysis; economic efficiency; energy conservation; *H132*.

Incentives; metering; rate structures; water conservation; consumer education; energy conservation; feedback; *NBSIR 80-2119*.

Inception voltage; ionization; ion mobilities; partial discharge; photodetachment; space charge; sulfur hexafluoride ( $\text{SF}_6$ ); uv radiation; 60 Hz ac and dc; compressed gas; corona; electron avalanche; *19786*.

Incoherent interfaces; solid-fluid interface; stressed solid; thermodynamics; vacancies; coherent interfaces; equilibrium; *19949*.

Incoloy 800; alloy 800; coal conversion; failure analysis; *19736*.

Incomplete charge collection; lithium-drifted silicon detector; sequential simplex procedure; x-ray spectra; computer program; fitting Gaussian profiles; *19130*.

Incongruent vaporization; surface depletion; transpiration; unstirred glass melt; vapor density; vaporization; carrier gas saturation; diffusion in melt; glass; *19552*.

- Incremental savings; life-cycle costs; minimum efficiency levels; minimum efficiency standards; boilers; central heating equipment; economic analysis; furnaces; *NBSIR 80-2079*.
- Incremental savings; life-cycle costs; minimum efficiency standards; minimum energy-efficiency levels; central air conditioners; economic analysis; *NBSIR 80-1993*.
- Indentation; surface melting; adiabatic heating; elastic-plastic contact; glass; *19584*.
- Indentation fracture; strength; ceramics; erosion; glass; impact; *19594*.
- Independent reactions; kinetics; lifetime prediction; nonisothermal kinetics; thermal analysis; activation energy; competitive reactions; complex reactions; heating rate; *19267*.
- Indexes; National Bureau of Standards; abstracting and indexing services; abstracts; *NBSIR 80-2009*.
- Indexing; lattice relationships; lattices; single-crystal methods; twinning; critical evaluation; derivative lattices; *19804*.
- Index-matching liquids; nonlinear refractive index; self-focusing; Abbe value; coolant; *SP568*, pp. 91-98 (July 1980).
- Index of refraction; absorption coefficient; chalcogenide material; deposition parameters; *SP568*, pp. 343-355 (July 1980).
- Index of refraction; ellipsometry; *19511*.
- Index of refraction; optical loss constants; absolute fluorescent efficiency; characteristic wave impedance; Huygens principle; *TN1020*.
- Index profile; measurements; attenuation; bandwidth; fiber optic joints; fiber optics; fiber optics-single mode; *SP597*.
- Indiana building code enforcement; local government; political appointments; survey of local building departments; building departments; building inspection; code administration; *SP586*, pp. 33-42 (June 1980).
- Indirect additives; migration; models; regulations; additives; diffusion; food additives; *NBSIR 80-1999*.
- Indium antimonide; ionicity; optical phonons; Raman scattering; semiconductors; stress; zinc-blende structure; covalent bonding; diamond structure; elastic constants; gallium arsenide; *19580*.
- Indium-doped silicon; p-n junction isolation; two-layer structures; epitaxial growth; Hall measurements; *19417*.

Information technology; library automation; library networks; reprography; special libraries; telecommunications; bibliographic utilities; information revolution; *19392*.

Infrared; laser calibration; molecular spectra; spectra; spectroscopy; absorption; calibration; carbonyl sulfide; *19368*.

Infrared; magneto-optics; nonlinear optics; piezo-optics; planar waveguides; thermo-optics; thin films; ultraviolet; fiber optics; graded index materials; *SP574*.

Infrared; optical instrumentation; reflectometers; spectrophotometers; high-temperature; *SP568*, pp. 281-286 (July 1980).

Infrared; thermography; heat balance; industrial furnaces; *TN1129*.

Infrared absorption; Raman spectrum; spectra; transient dipoles; anisotropic polarizability; collision-induced; induced dipoles; *19414*.

Infrared chemiluminescence; ion molecule reactions; vibrational excitation; associative detachment; flowing afterglow; *19362*.

Infrared chemiluminescence; ion molecule reactions; vibrational excitation; associative detachment; flowing afterglow; *19378*.

Infrared detectors; Josephson effect; microwave detectors; parametric amplifiers; superconductivity; aerospace; *19406*.

Infrared laser absorption properties; mechanical properties; specific heat; thermal expansion; hardness; homogeneity; *SP568*, pp. 65-72 (July 1980).

Infrared optical components; laser damage; optical properties; diamond single-point machining; dielectrics; *SP568*, pp. 199-208 (July 1980).

Infrared radiation; electron scattering; free-free transitions; *19260*.

Infrared radiation measurements; radiometry; spectral irradiance; spectral radiant power; spectroradiometry; ultraviolet radiation measurements; visible radiation measurements; electrical substitution radiometer; *19300*.

Infrared reflectance; optical reflectance; polishing; silicon on sapphire; surface roughness; ultraviolet reflectance; work damage; *SP400-62*.

Infrared spectra; ion beams; laser spectroscopy; molecular spectroscopy;  $\text{HeH}^+$ ; *19463*.

Infrared spectra; normal vibrations; polyatomic molecules; Raman spectra; vibrational frequencies; force constants; fundamental frequencies; *JPCRD 9*, No. 4, 1149-1254 (1980).

Infrared spectra; rhodium; carbon monoxide; chemisorption; electrostatics; *19739*.

Infrared spectra of carbohydrates; interpretation of infrared spectra; plane-polarized radiation; Raman spectra; attenuated total reflection; determination of structure of carbohydrates; *19875*.

Infrared spectroscopy; isomerization; methylisocyanide; rhodium; aluminium oxide; chemisorption; *19831*.

Infrared spectroscopy; isotopic exchange; rhodium; carbon monoxide; chemisorption; *19910*.

Infrared spectroscopy; mass spectroscopy; phosgene; polymer; poly(vinyl chloride); PVC; pyrolysis; carbonyl chloride; combustion; decomposition; degradation; electron capture; gas chromatography; *19503*.

Infrared spectrum; matrix isolation;  $\text{NF}_3$ ; normal coordinate analysis; photodissociation; ultraviolet spectrum; CO; discharge sampling; F-atom reactions; FCO;  $\text{F}_2\text{CO}$ ; *19393*.

Infrared spectrum; matrix isolation; PO;  $\text{PO}_2$ ;  $(\text{PO})_2$ ; ultraviolet spectrum; vacuum ultraviolet photolysis; discharge sampling; HPO; *19082*.

Infrared spectrum; matrix isolation; photodecomposition;  $\text{CF}_3\text{Br}$ ;  $\text{CF}_4\text{Br}$ ;  $\text{CF}_3\text{Cl}$ ;  $\text{CF}_4\text{Cl}$ ;  $\text{CF}_3\text{I}$ ;  $\text{CF}_4\text{I}$ ; F-atom reactions; *19760*.

Infrared spectrum; matrix isolation; S atom reaction;  $\text{CF}_2$  reaction;  $\text{CF}_2\text{I}$ ;  $\text{CF}_2\text{S}$ ; H atom reaction;  $\text{HCF}_2$ ; I atom reaction; *19410*.

Infrared windows; laser breakdown; polishing; surface damage; diamond turning; *SP568*, pp. 195-197 (July 1980).

Inhalation; test method; toxicology; combustion; fatality ( $\text{LC}_{50}$ ); hydrogen cyanide; incapacitation; *NBSIR 80-2077*.

Inhibitors; iron; organic coatings; titanium-palladium alloys; vanadium; chromate; electrochemistry; ellipsometry; field ion microscopy; hydrogen; *NBSIR 80-2101 (Navy)*.

Inhomogeneous fluid; lattice fluid; long-range interactions; surface entropy; Cahn-Hilliard theory; chemical potential; density gradient; equation of state; *19653*.

In-house; laboratory; preparation; riffle; sample; standards; heterogeneous; *SP591*, pp. 45-49 (Aug. 1980).

In-house quality control; quality control system; cement and concrete reference laboratory; cement and concrete testing; compressive strength; control charts; *SP591*, pp. 109-123 (Aug. 1980).

Initial rates; kinetics; lifetime prediction; polystyrene; polyurethane; pyrolysis; stability; thermal analysis; thermogravimetry; accelerated aging; complex reactions; decomposition; degradation; durability; heating rates; *19752*.

Initiation; isomerization; *n*-alkane pyrolysis; rate constants; recombination; addition; chemical kinetics; decomposition; disproportionation; H-transfer; *JPCRD 9*, No. 3, 523-560 (1980).

Initiator; rator; resin; wear; alloy; base metal; casting; composite; cyanoacrylate; dental alloy; *NBSIR 79-1943*.

Initiator systems; organic peroxides; redox reactions; stability; transition metals; accelerators; ambient polymerization; ascor-

bic acid; dental monomers; 19062.

Injector; vapor sampler; capillary columns; concentrator; electrically heated inlet; gas chromatography; 19667.

Injury criteria; mathematical model; test methods; drop test parameter; head injury; helmet; *NBSIR 80-1987*.

In-line holdup monitor; NaI detector; nondestructive assay; real-time accountability; glovebox filter; *SP582*, pp. 308-312 (June 1980).

In-line measurements; off-line measurements; process control; remote pipetters; remote sample preparation; SNM accountability; x-ray fluorescence; automation; data processing; HTGR spent fuel reprocessing; *SP582*, pp. 55-65 (June 1980).

Inner salt; iodonium compound; reaction mechanism; synthetic intermediate; x-ray structure determination; zwitterion; 19939.

Innovation; innovation centers; invention; invention evaluation; Santa Cruz; entrepreneurship; 19261.

Innovation; invention; large corporations; productivity; small business; conglomerates; 19230.

Innovation; labels; standards; sulfuric acid; tools; awards; computers; didymium glass filters; energy efficiency; inventors; *DIM/NBS 64*, No. 7, 1-28 (1980).

Innovation; performance standards; standards; automobile standards; design standards; economics of standards; health care standards; *NBS-GCR-80-287*.

Innovation; semiconductor industry; technological change; competition; Experimental Technology Incentives Program; government policy; *NBS-GCR-ETIP 80-91*.

Innovation centers; invention; invention evaluation; Santa Cruz; entrepreneurship; innovation; 19261.

Innovative electrical connections; performance testing; contact resistance; electrical codes; fire safety; glowing electrical connections; house wiring; *BSS128*.

Innovative technology; innovative waivers; regulation; air pollution; Clean Air Act; emission control technology; Environmental Protection Agency; *NBS-GCR-ETIP 80-88*.

Innovative waivers; regulation; air pollution; Clean Air Act; emission control technology; Environmental Protection Agency; innovative technology; *NBS-GCR-ETIP 80-88*.

Inorganic radiochemical; liquid scintillator; radioactivity; sample preparation; scintillation counting; solgel; 19817.

In-process; manufacturing engineering; on-line; optical Fourier transform; optical techniques; power spectral density; production engineering;  $R_s$ ; speckle; specular reflectance; surface roughness; diffuseness; 19477.

In-process inventory; solvent-extraction contactors; chemical modeling; dynamic materials accounting; *SP582*, pp. 712-717 (June 1980).

Input concentration; isotope dilution; neodymium; plutonium; safeguards; spike; total mass; uranium; alloys; blend; *SP582*, pp. 93-102 (June 1980).

Input/output; interfaces; automatic data processing (ADP); channel level power control interface; computer peripherals; computers; Federal Information Processing Standard; *FIPS PUB 60-1*.

Input/output; interfaces; automatic data processing (ADP); channel level power control interface; computer peripherals; computers; Federal Information Processing Standard; *FIPS PUB 61*.

Input/output; interfaces; operational specifications for magnetic tape subsystems; automatic data processing (ADP); channel level power control interface; computer peripherals; computers; Federal Information Processing Standard; *FIPS PUB 62*.

Input/output system; shared resources; *SP500-65*, pp. 157-163 (Oct. 1980).

Inputs for further calculations; optical reaction cross sections for neutrons; over the periodic table; protons; alphas; energies up to 50 MeV; *SP594*, pp. 793-795 (Sept. 1980).

Insertion loss; optical detectors; photon drag detector; pyroelectric detector; responsivity; single longitudinal mode pulse; TEA laser; beam diameter; *TN1023*.

Inservice data; mechanical engineering; nuclear reactors; piping; pressure vessel; pump; reliability; risk analysis; valves; failure data; fatigue; fracture; 19085.

In-service testing; maintenance tests; Monte-Carlo testing; stuck-fault testing; test cases; validation vs. maintenance; communications security; computer security; cryptography; Data Encryption Standard; *SP500-61*.

In situ calibration; measurement; metrology; on-site calibration; PMTE; calibration labs; calibration, out-of-service; central calibration; *NBS-GCR-80-282*.

Insoluble carbonaceous material; low level counting; pyrolysis/gas chromatography/mass spectrometry; radiocarbon; atmospheric pollution; carbonaceous particles; fossil carbon; 19593.

Inspection; audit; calibration; calibration laboratory; certification; evaluation; *SP591*, pp. 41-44 (Aug. 1980).

Inspection; inspector's manual; pathology; proficiency testing; standards; accreditation; College of American Pathologists; criteria; *SP591*, pp. 71-74 (Aug. 1980).

Inspection; legislation; recertification; architects; codes; earthquake; engineers; Florida; *SP586*, pp. 197-203 (June 1980).

Inspection; licensing; testing; training code officials; building codes; building inspectors; code enforcement; course development; educational requirements; *SP586*, pp. 71-83 (June 1980).

Inspection; manufacturing; pattern recognition; robotics; vision systems; automation; image processing; 19093.

Inspection; measured course; odometer; taximeter; test procedure; tire pressure; tolerances; calibration; distance; fifth wheel; *H137*.

Inspections; laboratory accreditation; laboratory performance evaluation; noncompliance; proficiency; countercheck reference tests; critical control features; feedback; implementation; *SP591*, pp. 79-84 (Aug. 1980).

Inspection standards; laboratory accreditation; laboratory evaluation; regulatory liability; test standards; voluntary consensus standards; accreditation systems; certification; evaluation of inspection organizations; *SP591*, pp. 11-14 (Aug. 1980).

Inspectors; laboratory; metrology; seminars; State/local; training; 19438.

Inspectors; marketing; qualification; re-examination; technicians; accreditation; certification; colleges; confidence; criteria; evaluation; hospitals; *SP591*, pp. 3-5 (Aug. 1980).

Inspector's manual; pathology; proficiency testing; standards; accreditation; College of American Pathologists; criteria; inspection; *SP591*, pp. 71-74 (Aug. 1980).

Instability; necking; nonlinear; simple materials; tensile test; viscoelastic bars; 19746.

Instability point; molecular weight distribution; necking; polyethylene; stress relaxation; uniaxial creep; continuum model; critical strain; 19681.

Installation management; on-line system evaluation; queuing models; simulation; workload definition; benchmarking; capacity planning; computer performance evaluation; computer performance measurement; computer performance prediction; computer system acquisition; *SP500-65*.

Instantaneous efficiency; optical efficiency; solar collectors; thermal losses; thermal performance testing; *NBSIR 80-2087*.

Institute of Electrical and Electronic Engineers Specifications; laboratory capabilities; laboratory performance evaluation; manufacturers response to laws and consumers; pretest quality planning; consumer awareness and legality; *SP591*, pp. 131-134 (Aug. 1980).

Institutional constraints; solar builder/developer; solar energy; building code; code official; demonstration program; 19729.

Institutional constraints; solar builder/developer; solar energy; building code; code official; demonstration program; *SP586*, pp. 181-185 (June 1980).

Institutional constraints; solar builder/developer; solar energy; building code; code official; demonstration program; *NBSIR 79-1957*.

Instrumental analysis; multielement analysis; neutron activation; neutron capture; prompt gamma rays; trace element analysis; 19157.

- Instrumental control; multi-element analysis; plasma system; trace element analysis; emission spectroscopy; inductively coupled plasma; 19912.
- Instrumental standards; method accuracy; multielement analyses; NBS standard reference materials; spectrophotometry; systematic errors; transmittance accuracy; absorbance accuracy; 19818.
- Instrumentation; ion chamber; irradiated (spent) fuel; nondestructive assay; axial profiles; fission chamber; *SP582*, pp. 426-446 (June 1980).
- Instrumentation; iron; nickel; potentiostat; aluminum; corrosion; electrochemical noise; 19878.
- Instrumentation; laboratory automation; scientific computation; computer; 19133.
- Instrumentation; less developed country; metrology; standardization; Third World; calibration; development; Indonesia; industrialization; *NBSIR 78-1583*.
- Instrumentation; microcomputer; minicomputer; analytical chemistry; automation; 19411.
- Instrumentation; paper technology; polymer ignition; rubber processing; thermal analysis; thermogravimetry; adsorbents; chemical processing; coordination compounds; enthalpimetry; glass processing; *SP580*.
- Instrumentation; radiometric transfer standards; radiometry; synchrotron radiation; detectors; extreme ultraviolet radiation; 19664.
- Instrumentation; refrigeration; superconducting devices; cryogenics; 19323.
- Instrumentation; sound field; ultrasonics; analog recording; C-scan; 19061.
- Instrumentation review; methods; thermal analysis; *SP580*, pp. 219-233 (Aug. 1980).
- Instrument landing; measurements; radio frequency; surface science; tetrafluoroethylene powder; water conservation; alternate fuels; data communications; energy; erosion; *DIM/NBS 64*, No. 5, 1-28 (1980).
- Insulation; leakage; solar collectors; solar energy; fire prevention; fire tests; flammability; flash point; heat transfer fluids; *NBSIR 79-1931*.
- Insulation; life-cycle costs; low-income housing; marginal analysis; thermal efficiency; weatherization; benefit-cost analysis; building economics; building envelope; economic analysis; economic efficiency; energy conservation; *NBSIR 79-1948*.
- Insulation; low-income housing; statistics; unit costs; weatherization; building economics; cost components; data analysis; data collection; demonstration; economic analysis; energy conservation; *NBSIR 80-2167*.
- Insulation; modifications; recovery efficiency; residential; standby loss; test procedures; water heaters; energy conservation; energy consumption; gas pilot; heat loss; *NBSIR 79-1783*.
- Insulation; moisture; roofing; thermal conductance; thermal conductivity; thermal resistance; built-up roofing; *BSS123*.
- Insulation; moisture content; residences; retrofit; thermal resistivity; conservation; energy; field survey; *TN1131*.
- Insulation; solar collector; standard insulation test methods; accelerated aging; collector insulation; *NBSIR 79-1908*.
- Insulation; temperature reduction; usage patterns; water heaters; energy; 19140.
- Insulation program plan; mechanical insulation; industrial/commercial thermal insulation; 19725.
- Insulative properties; modacrylics; polyesters; protective clothing; radiant energy; wool fabrics; aramids; burns (injuries); char strength; convective energy; cotton fabrics; fabrics; heat flux; 19120.
- In-tank density determination; nuclear process solutions; solution density; accountability tanks; differential pressure; 19170.
- In-tank density determination; nuclear process solutions; solution density; accountability tanks; differential pressure; *J. Res.* **85**, No. 3, 219-221 (May-June 1980).
- In-tank density determination; nuclear process solutions; solution density; accountability tanks; differential pressure; *SP582*, pp. 534-537 (June 1980).
- Integral and critical experiments; symbiosis; thorium; cross sections; fast reactors; *SP594*, pp. 119-121 (Sept. 1980).
- Integral and differential experiments; LiOH; liquid scintillator; quenching; activation; breeding blankets; DT fusion tritium breeding ratio; ENDF/B; *SP594*, pp. 246-253 (Sept. 1980).
- Integral capture cross section; integral fission cross section; *SP594*, pp. 548-551 (Sept. 1980).
- Integral cross sections; CFRMF; ENDF/B; *SP594*, pp. 475-478 (Sept. 1980).
- Integral cross sections; Nd; Sm; dosimetry; EBR-II; Eu isotopes; *SP594*, pp. 557-562 (Sept. 1980).
- Integral data; microscopic data analysis; complete damping; consistency; coupled channels; *SP594*, pp. 862-866 (Sept. 1980).
- Integral equation; source dyadic; dyadic Green's functions; electric field; 19249.
- Integral experiment; least square fitting; neutron spectrum; sample perturbation; actinide recycle; cross section evaluation; fast critical facility; fast reactor; *SP594*, pp. 552-556 (Sept. 1980).
- Integral experiment; neutron transmission; thorium; total cross section; blanket; GCFR; *SP594*, pp. 122-124 (Sept. 1980).
- Integral experiment; pulse-shape discrimination; data unfolding; energy spectra; *SP594*, pp. 591-595 (Sept. 1980).
- Integral experiment; thorium; capture cross section; ENDF/B-5; GCFR; *SP594*, pp. 127-130 (Sept. 1980).
- Integral experiments; least-squares adjustment; chi-square; data consistency; data testing; ENDF/B-IV; ENDF/B-V; fast reactors; group cross sections; *SP594*, pp. 182-186 (Sept. 1980).
- Integral experiments; least-squares adjustment; LMFBR; sensitivity analysis; uncertainty analysis; breeding ratio; calculational bias uncertainties; fast reactors; group cross sections; *SP594*, pp. 177-181 (Sept. 1980).
- Integral experiments; neutron spectra; radiation transport; gamma ray spectra; *SP594*, pp. 596-598 (Sept. 1980).
- Integral experiments; reaction rate ratios; reactivity worths; ZPR critical assembly; delayed neutron data; eigenvalue; ENDF/B-IV; *SP594*, pp. 297-306 (Sept. 1980).
- Integral fission cross section; integral capture cross section; *SP594*, pp. 548-551 (Sept. 1980).
- Integral tests of ENDF/B-IV; iron; *SP594*, pp. 563-568 (Sept. 1980).
- Integrated circuit; process control; reliability; test pattern; test structure; transistors; yield; 19244.
- Integrated circuit fabrication; ion-beam lithography; lithography; oxide layers; radiation absorbed dose; radiation damage; device processing; electron devices; 19753.
- Integrated circuits; ion knock-on effect; ion microprobe mass analysis; Irvin's curves; isothermal transient capacitance method; linewidth measurements; measurement technology; microelectronics; phosphorus pileup; photolithography; pull test; random fault test structures; *SP400-45*.
- Integrated circuits; linewidth measurements; microelectronics; micrometrology; optical microscope; photoelectric microscope; photomask; scanning electron microscope; semiconductor technology; filar eyepiece; image-shearing eyepiece; *SP400-43*.
- Integrated circuits; materials characterization; measurement methods; microelectronics; microstructures; semiconductors; dimensional metrology; electronics; *SP400-61*.
- Integrated circuits; materials characterization; microelectronics; semiconductors; dimensional metrology; electronics; 19109.
- Integrated circuits; measurement technology; microelectronics; semiconductor devices; semiconductor materials; semiconductor process control; silicon; electronics; *NBSIR 80-2006*.
- Integrated circuits; metrology for semiconductors; National Bureau of Standards; photomasking; resistivity; second breakdown; semiconductors; test structures; thermal resistance; very large scale integration; VLSI; wire bonds; Department of Commerce; *NBSIR 80-2057*.
- Integrated gated-diode electrometer; integrated test structure;

leakage current; test structure; CCD; electrical test structure; gated diode; *NBSIR 80-2000*.

Integrated systems; library automation; automation; information systems; *19361*.

Integrated test structure; leakage current; test structure; CCD; electrical test structure; gated diode; integrated gated-diode electrometer; *NBSIR 80-2000*.

Integrated test structure; microelectronic test structure; process validation wafer; random fault test structure; sheet resistor; test methods; test pattern; test structure; circuit characterization; cross-bridge sheet resistor; electrical alignment test structure; gated diode; *19165*.

Integrated utilities; MIUS; on-site utilities; energy conservation; environmental impact; feasibility study; *NBSIR 79-1787*.

Integrating spheres; paraboloidal mirror reflectometer; radiometric measurements; reflectance; transmittance; absorptance; blackbody; ellipsoidal reflectometer; emittance; hemispherical mirror reflectometer; *19299*.

Intelligent terminals; mass storage technology; microfiche; micrographics; optical character recognition; communications technology; computer networks; computer technology; data entry; distributed processing; Educational Resources Information Center (ERIC); *NBSIR 80-2005*.

Intensifier screen standards; radiographic intensifier screen efficiency; screen evaluations; sensitivity of screens; spectroradiometry of screens; x-radiation of intensifier screens; fluorescent screens; *19234*.

Intensities of lines; line spectra; spectrum lines; tables of spectra; wavelengths; atomic spectra; *19514*.

Intensity; lifetime; line strength; oscillator strength; transition probability; allowed; atomic; discrete; forbidden; *SP505-1*.

Interaction language; language transformation; language uniformity; user-computer interaction; user-oriented system design; bibliographic retrieval systems; command language; *SP500-63*.

Interaction parameter; migration; partition coefficient; radiolabeled additive; solubility; equilibrium partitioning; Fickian diffusion; food package; *19651*.

Interactive processing; data base; information retrieval; *TN1123*.

Interactive processing; data base; information retrieval; *19754*.

Interactive programming; programming language; software; standards; time-sharing; BASIC; data processing; Federal Information Processing Standard; *FIPS PUB 68*.

Interactive systems; numerical data bases; on-line data; physical data; spectroscopic data systems; chemical data; data banks; data bases; data networks; *TN1122*.

Interactive systems; user requirements; application prototyping; Congressional Budget Office; *SP500-65*, pp. 311-315 (Oct. 1980).

Interchain interference; polyisoprene; radius of gyration; single chain scattering form factor; small angle neutron scattering; concentrated solution; *19355*.

Interchangeability; law enforcement; microphone cable; microphone connector; mobile FM transceiver; communications equipment standard; compatibility; *19701*.

Intercombination line; Mg isoelectronic sequence; transition probability; fine structure; *19505*.

Intercomparison; random error; squareness; standard deviation; systematic error; uncertainty; angle block; autocollimator; calibration; flatness; *NBSIR 80-1967*.

Intercomparison of computational methods; International Atomic Energy Agency; longrange interpolation; non-linear least squares; peak resolution; PICO; empirical peak shape; gamma-ray spectrum fitting; *19127*.

Intercomparison programs; mass spectrometry; plutonium; safeguards; statistical evaluation; uranium; alpha spectrometry; *SP582*, pp. 42-54 (June 1980).

Intercomparisons; retroreflectance; retroreflector; specifications; test methods; accuracy; chromaticity; coefficient of luminous intensity; *TN1125*.

Interface; methanol; phase transition; surface; surface tension; wetting; contact angle; critical point; cyclohexane; *19306*.

Interface; solidification; solute; alloy; convection; *19264*.

Interface functions; constructing program; DBMS benchmarking; *SP500-65*, pp. 11-20 (Oct. 1980).

Interface requirements; Monte-Carlo testing; testbed; test cases; validating correctness; communications security; computer security; cryptography; encryption standard; *SP500-20, Revised 1980*.

Interfaces; automatic data processing (ADP); channel level power control interface; computer peripherals; computers; Federal Information Processing Standard; input/output; *FIPS PUB 60-1*.

Interfaces; automatic data processing (ADP); channel level power control interface; computer peripherals; computers; Federal Information Processing Standard; input/output; *FIPS PUB 61*.

Interfaces; operational specifications for magnetic tape subsystems; automatic data processing (ADP); channel level power control interface; computer peripherals; computers; Federal Information Processing Standard; input/output; *FIPS PUB 62*.

Interface stability; kinetics; microsegregation; rapid solidification; solute trapping; thermodynamics; *19946*.

Interface states; measurement interferences; mobile ions; MOS capacitor; silicon; thermally stimulated measurements; *19166*.

Interfacial breakdown; oil-paper interfaces; transformer oil; breakdown; electrical breakdown; impulse testing; *NBSIR 80-2071*.

Interfacial breakdown; Pockels effect; space charge; surface flashover; vacuum breakdown; electrical breakdown; electro-optics; *NBS-GCR-80-203*.

Interfacial tension; lattice fluid; miscibility; spinodal; chemical potential; combinatorial entropy; equation of state; *19652*.

Interference; Josephson effect; magnets; superconductivity; aerospace; digital; electronics; gravitational experiments; high-Q cavities; *19054*.

Interference; satellite; spectrum; spectrum conservation; standard; time broadcast stations; voice announcements; clocks; HF; *19525*.

Interferometer; sapphire-Al<sub>2</sub>O<sub>3</sub>; standard reference material; tele-microscope; thermal expansion; high temperature; *19915*.

Interferometers; Josephson junctions; superconductivity; threshold curves; *19200*.

Interferometry; ion-exchange; refractive index; strength; striae; electron microprobe; glass; *19744*.

Interferometry; stellar diameters; astronomy; astrophysics; crustal movements; geophysics; *19144*.

Interim adjustment procedures; regulatory commissions; regulatory process; computer programs; electric utilities; Experimental Technology Incentives Program; *NBS-GCR-ETIP 79-77*.

Interior finish; oxygen depletion; room fires; fire tests; flame spread; flashover; heat release rate; ignition; *TN1128*.

Interior finishes; joists; room fires; steel; wood; fire endurance; fire tests; flame through; floors; furniture; *NBSIR 80-2134*.

Interior finishes; Life Safety Code; nursing homes; risk analysis; safety equivalency; safety evaluation; smoke detection; automatic sprinklers; building codes; building construction; Delphi Method; fire safety; health care facilities; hospitals; *NBSIR 78-1555-1*.

Interior finishes; residential buildings; room fires; building fires; fire resistance; fire tests; flow measurement; gas temperatures; heat release rate; *NBSIR 80-2120*.

Interior finishes; residential buildings; room fires; static pressure; building fires; fire tests; flow measurement; furniture; *NBSIR 80-1984*.

Interlaboratory comparison; liquid chromatography; mass spectrometry; mussels; polycyclic aromatic hydrocarbons; tissue analyses; aliphatic hydrocarbons; aromatic hydrocarbons; gas chromatography; hydrocarbons; *19841*.

Interlaboratory comparison; polycyclic aromatic hydrocarbons; aliphatic hydrocarbons; aromatic hydrocarbons; gas chroma-

- topography; headspace sampling; high-performance liquid chromatography; 19635.
- Interlaboratory comparisons; measurements; optical communications; quality control; attenuation; fiber optics; 19461.
- Interlaboratory evaluation; precision; test methods; tunnel test; cellulosic insulation; flame spread; *NBSIR 79-1922*.
- Interlaboratory evaluation program; nondestructive assay; uranium reference material; *SP582*, pp. 25-33 (June 1980).
- Interlaboratory study; standard reference materials; yeast; biological matrix; bovine liver; certified reference materials; chromium; foods; 19420.
- Interlaboratory testing; laboratory evaluation; linear model; measuring process; proficiency testing; Youden two-sample analysis; collaborative reference program, test method; *SP591*, pp. 25-30 (Aug. 1980).
- Interlaboratory testing; precision; reference method; semiautomated pipetting; serum lithium analysis; statistical analysis; accuracy; clinical analysis; clinical chemistry; definitive method; electrolytes; flame atomic absorption spectroscopy; *SP260-69*.
- Interlaboratory testing program; laboratory evaluation; National Bureau of Standards; paper; paperboard; TAPPI; test methods; Youden graphical analysis; collaborative reference programs; history; 19321.
- Inter-layerings; nonstoichiometry; structural considerations; twinning; computer assessment; crystal structures; epitaxy; *J. Res. 85*, No. 5, 347-362 (Sept.-Oct. 1980).
- Intermediate care facilities; mattresses; sprinkler systems; *NBS-GCR-80-267*.
- Intermediate energy calculation; three-nucleon photodisintegration of  $^3\text{He}$ ; Coulomb effects; 19557.
- Intermediate-frequency (i-f) output conductance; measurement uncertainties; microwave mixer diodes; modulation; point-contact diodes; reflectometer; return loss; Schottky-barrier diodes; semiconductor diodes; standing-wave ratio (SWR); conversion loss; diode measurement; *SP400-16*.
- Intermediate mapping variables; adaptive control system; *U.S. Patent 4,193,115*.
- Intermediate phases; phase diagrams; phase equilibria; solid solutions; alloy theory; crystal chemistry; *SP564*.
- Intermediate point; mean-value theorem; Taylor's theorem; convexity; derivatives; inequalities; 19421.
- Intermediate resonances; laser pulses; monochromatic; multiphoton ionization; Rabi oscillation; sodium; AC Stark shifts; AC Stark widths; cesium; hydrogen; 19159.
- Intermetallic compounds; niobium alloys; palladium alloys; phase diagrams; constitution diagrams; crystal chemistry; 19330.
- Intermetallic compounds; palladium alloys; phase diagram; phase transformations; tantalum alloys; constitution diagram; 19595.
- Intermodal freight transportation; Interstate Commerce Commission; rail freight transportation; regulatory experimentation; regulatory policy; technological innovation; administrative experimentation; economic deregulation; evaluability assessment; evaluation; *NBS-GCR-ETIP 80-85*.
- Intermolecular transactions; molecular constance; spectral shape; coefficient induced dipoles; collision-induced spectra; dielectric virial; 19413.
- Internal audit; operating system controls; system controls; system vulnerabilities; terminal controls; applications controls; computer vulnerabilities; data base controls; data base management systems controls; EDP audit; *SP500-57*.
- Internal controls; security; audit-in-depth; auditing; auditing aids; *SP500-65*, pp. 23-32 (Oct. 1980).
- Internal friction; ionic transport mechanism; sodium ion; single crystal; interstitials; sodium beta alumina; 19442.
- Internal gas proportional counting; tritiated water standards; tritium; half-life; 19621.
- Internal rate of return; life-cycle costing; marginal analysis; optimal design; residential buildings; space cooling; space heating; building envelope; cost effectiveness; economics; energy conservation; 19235.

Josephson junctions; microstrip; microwave integrated circuit; stripline transmission line; *U.S. Patent* 4,227,096.

Josephson junctions; superconductivity; threshold curves; interferometers; 19200.

Josephson phenomena; stabilization; superconductors; terminology; critical parameters; definitions; flux phenomena; 19339.

Journals; library holdings; NBS library; NBS periodicals; periodicals; proceedings; serials; standards; transactions; annual reports; diffusion in metals; fire; *NBSIR* 79-1932.

Jovanovich equation; Langmuir equation; monomolecular adsorption; nonlinear regression analysis; adsorption isotherms; energy distribution functions; 19771.

JPDR-I reactor; resonance integral; resonance interference effect; spent fuel; burnup; fission product; *SP594*, pp. 224-227 (Sept. 1980).

Junction C-V measurements; neutron activation analysis; phosphorus density; photometric technique; silicon; Hall effect; 19431.

Junction resistance; scanning electron microscopy; x-ray microanalysis; aluminum wiring; duplex connectors; high resistance junctions; *J. Res.* **85**, No. 6, 429-440 (Nov.-Dec. 1980).

## K

Kamerlingh Onnes; liquidons; liquids; mixtures; van der Waals; vapors; Andrews; condensation; critical point; diffusion; gaseous; history of science; 19932.

Karl Fischer titration; moisture content; syringe calibration; telescopic viewer; volumetric dispensing; water calibration; 19277.

Karl Fischer water determination; mass fraction of water; rate constant; saturation; titration curve; dissolution; 19591.

KBr; KCl; laser windows; volume and surface impurities; wavelength modulation spectroscopy; extrinsic infrared absorption; *SP568*, pp. 99-117 (July 1980).

KBr; KCN; libration; translation-rotation coupling; tunnelling; defect; 19612.

KCl; laser damage; laser fusion; NaCl; nanosecond pulse; surface damage; alkali halides;  $\text{CO}_2$  laser; *SP568*, pp. 209-227 (July 1980).

KCl; laser windows; volume and surface impurities; wavelength modulation spectroscopy; extrinsic infrared absorption; KBr; *SP568*, pp. 99-117 (July 1980).

KCl; SRM 1655; standard reference material; thermochemistry; adiabatic calorimeter; calorimetry,  $\Delta C_p$ , endothermic reaction; enthalpy of dilution; enthalpy of solution; *J. Res.* **85**, No. 6, 449-465 (Nov.-Dec. 1980).

KCl; solution calorimetry; standard reference materials; thermochemistry; tris(hydroxymethyl)aminomethane; calorimetry; enthalpy of solution; *J. Res.* **85**, No. 6, 467-481 (Nov.-Dec. 1980).

KCN; libration; translation-rotation coupling; tunnelling; defect; KBr; 19612.

(KCN)(KBr); order parameter; orientational; strain dipole; translation-rotation; dipole glass; 19596.

K edge; lithium; photoabsorption; 19272.

Kelvin; temperature; temperature scale; Celsius; Fahrenheit; IPTS-68; 19169.

Kerma; neutron dosimetry; stopping power ratios; tissue equivalence; ionization chambers; *SP594*, pp. 447-455 (Sept. 1980).

Kerma; neutrons; secondary charged particles; tissue-equivalent gas; dosimetry; energy per ion pair; 19331.

Kerma factors; neutron dosimetry; absorbed dose; biology and medicine; 19599.

Ketene; photochemistry; spectroscopy; transient; vacuum ultraviolet; acetylene; excited state; 19493.

KeV; LINAC; MeV; multigroup calculation; neutron flux spectra; thorium; time-of-flight; cross section; ENDF/B; *SP594*, pp. 545-547 (Sept. 1980).

Key notarization; character set encryption; digital signatures; 19142.

Key words; NBS publications; publications; abstracts; *SP305, Supplement 11*.

Key words; publications; abstracts; Center for Building Technology; *SP457-4*.

KFK; ORELA; PSR; "white" neutron sources; WNR; comparison neutron yields; GELINA; HELIOS; *SP594*, pp. 920-928 (Sept. 1980).

K<sub>IC</sub>; laser windows; Weibull; yield stress; brittle failure; failure criteria; flaws; fracture; *SP568*, pp. 151-159 (July 1980).

Kinetic equations; photochemistry; photon intensity; photoresist exposure; rate constants; saturation effect; chemical kinetics; exposure; exposure reciprocity; 19418.

Kinetic perturbation theory; kinetic theory; nonequilibrium perturbation theory; perturbation theory; soft spheres; transport coefficients; Boltzmann equation; collision integral; dilute gas; 19866.

Kinetics; laser; mass spectrometry; photolysis; CF<sub>2</sub>; C<sub>2</sub>F<sub>4</sub>; 19722.

Kinetics; lifetime prediction; nonisothermal kinetics; thermal analysis; activation energy; competitive reactions; complex reactions; heating rate; independent reactions; 19267.

Kinetics; lifetime prediction; polystyrene; polyurethane; pyrolysis; stability; thermal analysis; thermogravimetry; accelerated aging; complex reactions; decomposition; degradation; durability; heating rates; initial rates; 19752.

Kinetics; methanation; nickel; single crystal; carbide; carbon; catalysis; 19480.

Kinetics; methanation; ruthenium; single crystal; carbon; catalysis; hydrogenation; 19492.

Kinetics; microsegregation; rapid solidification; solute trapping; thermodynamics; interface stability; 19946.

Kinetics; nickel; carbon monoxide; catalysis; catalytic methanation; hydrogenation; 19481.

Kinetics; ozone; resonance fluorescence; stratosphere; Cl atoms; formaldehyde; 19704.

Kinetics; ozone; stopped-flow; sulfur dioxide; thiirane; gas; 19427.

Kinetics; ozone O<sub>2</sub>(<sup>1</sup>Δ); vibrational deactivation; atmospheric; flash photolysis; 19618.

Kinetics; photoelectron; photoionization; unimolecular; benzene; benzonitrile ion; coincidence; fragmentation; 19603.

Kinetics; thermal analysis; applications; *SP580*, pp. 1-31 (Aug. 1980).

Kinetics; thermal analysis; chemical complexes; chemical equilibrium; *SP580*, pp. 183-198 (Aug. 1980).

Kinetics; thermal analysis; thermochemical titrations; *SP580*, pp. 149-181 (Aug. 1980).

Kinetics; thermogravimetry; high pressure methods; *SP580*, pp. 235-250 (Aug. 1980).

Kinetics methanation; nickel; ruthenium; single crystal; surface science; carbon monoxide; catalysis; 19482.

Kinetics of surface processes; surface chemical analysis; surface chemistry; surface spectroscopy; alloy catalysts; catalytic reactions; electron diffraction; electron spectroscopy; 19957.

Kinetic theory; nonequilibrium perturbation theory; perturbation theory; soft spheres; transport coefficients; Boltzmann equation; collision integral; dilute gas; kinetic perturbation theory; 19866.

Kitchen fires; fire departments; fire extinguishers; fire investigations; hospitals; *NBS-GCR-80-235*.

Kitchen fires; nursing homes; fire extinguishers; fire investigations; *NBS-GCR-80-207*.

K-matrix; photoionization; rare gases; chlorine; Hartree-Fock; 19304.

Knight shift; scaling theory; solids; Van Vleck susceptibility; anomalous behavior; frequency shifts; hydrostatic pressure; 19925.

Knoop; microhardness; nondestructive testing; brass; copper; hardness testing; 19849.

## L

Label; product; testing; benefits; consumer; information; *NBSIR 80-2016*.

Labels; standards; sulfuric acid; tools; awards; computers; didymium glass filters; energy efficiency; inventors; innovation; *DIM/NBS 64*, No. 7, 1-28 (1980).

Laboratories; standards; Standards Council of Canada; testing; accreditation; Canada; *SP591*, pp. 88-91 (Aug. 1980).

Laboratory; manual; personnel; quality assurance; quality control; systems; calibration; equipment; evaluation; *SP591*, pp. 99-103 (Aug. 1980).

Laboratory; measurement; metrology; precision; test equipment; calibration; Federal Government; *SP546, 1980 Edition*.

Laboratory; metrology; seminars; State/local; training; inspectors; 19438.

Laboratory; PAT; performance; personnel; proficient; quality control; reaccreditation; site visit; accreditation; accreditation committee; American Industrial Hygiene Association; coordinator; industrial hygiene laboratories; *SP591*, pp. 67-70 (Aug. 1980).

Laboratory; preparation; riffle; sample; standards; heterogeneous; in-house; *SP591*, pp. 45-49 (Aug. 1980).

Laboratory accreditation; building products; certification; *SP591*, pp. 146-155 (Aug. 1980).

Laboratory accreditation; classes of tests; directory of accredited laboratories; discipline; *SP591*, pp. 85-87 (Aug. 1980).

Laboratory accreditation; laboratory evaluation; laboratory performance; proficiency testing; thermal insulation; 19865.

Laboratory accreditation; laboratory evaluation; regulatory liability; test standards; voluntary consensus standards; accreditation systems; certification; evaluation of inspection organizations; evaluation of testing organizations; *SP591*, pp. 11-14 (Aug. 1980).

Laboratory accreditation; laboratory performance evaluation; noncompliance; proficiency; countercheck reference tests; critical control features; feedback; implementation; inspections; *SP591*, pp. 79-84 (Aug. 1980).

Laboratory accreditation; laboratory performance evaluation; quality control; testing laboratories; accreditation; audit certification; *SP591*.

Laboratory accreditation; legal constraints; definitions; directory of accreditation systems; international; *SP591*, pp. 173-178 (Aug. 1980).

Laboratory accreditation; monitoring; quality assurance; standard methods; data; environment; Federal programs; 19715.

Laboratory accreditation; photovoltaics; product certification; solar collectors; solar energy; energy conversion; *NBSIR 80-2028*.

Laboratory accreditation; standards committees; evaluation criteria; 19848.

Laboratory accreditation; state-of-the-art in 1979; *SP591*, pp. 6-10 (Aug. 1980).

Laboratory automation; scientific computation; computer; instrumentation; 19133.

Laboratory capabilities; laboratory performance evaluation; manufacturers response to laws and consumers; pretest quality planning; consumer awareness and legality; customer and laboratory responsibilities; *SP591*, pp. 131-134 (Aug. 1980).

Laboratory criteria; product certification; proficiency testing; quality control; standardization; testing laboratory; accreditation; compliance testing; *NBSIR 79-1956*.

Laboratory evaluation; laboratory performance; proficiency testing; thermal insulation; laboratory accreditation; 19865.

Laboratory evaluation; linear model; measuring process; proficiency testing; Youden two-sample analysis; collaborative reference program, test method; interlaboratory testing; *SP591*, pp. 25-30 (Aug. 1980).

Laboratory evaluation; National Bureau of Standards; paper; paperboard; TAPPI; test methods; Youden graphical analysis; collaborative reference programs; history; interlaboratory testing program; 19321.

- Laboratory evaluation; regulatory liability; test standards; voluntary consensus standards; accreditation systems; certification; evaluation of inspection organizations; evaluation of testing organizations; inspection standards; *SP591*, pp. 11-14 (Aug. 1980).
- Laboratory performance; measurement assurance; measurement evaluation technology; measurement services; physical standards; proficiency testing; standard reference materials; testing; traceability; calibrations; collaborative reference programs; *SP591*, pp. 15-22 (Aug. 1980).
- Laboratory performance; proficiency testing; thermal insulation; laboratory accreditation; laboratory evaluation; 19865.
- Laboratory performance evaluation; manufacturers response to laws and consumers; pretest quality planning; consumer awareness and legality; customer and laboratory responsibilities; Institute of Electrical and Electronic Engineers Specifications; *SP591*, pp. 131-134 (Aug. 1980).
- Laboratory performance evaluation; noncompliance; proficiency; countercheck reference tests; critical control features; feedback; implementation; inspections; laboratory accreditation; *SP591*, pp. 79-84 (Aug. 1980).
- Laboratory performance evaluation; quality control; testing laboratories; accreditation; audit certification; laboratory accreditation; *SP591*.
- Laboratory procedures; reliability of the sample collection; tools for laboratory evaluation; accuracy and precision of the checking authority; *SP591*, pp. 169-170 (Aug. 1980).
- Laboratory-test development; life cycle; performance; reliability; consumer product; 19191.
- Laboratory test procedures; quality assurance lab test; standard test methods; thermal performance test; *SP591*, pp. 124-130 (Aug. 1980).
- Laboratory tests; modifications test procedures; water heaters; energy consumption; energy measurements; heat pump; *NBSIR 79-1951*.
- LaCrO<sub>3</sub>; magnetohydrodynamics; spinels; zirconia; ceramic oxides; electrodes; 19644.
- Ladders; room fires; smoke; students; doors; dormitories; evacuation; fire departments; fire fatalities; fire fighters; flashover; *NBS-GCR-80-193*.
- Lamellar crystallization; lamellar morphology; polymer crystallization; chain folding in polymers; crystal amorphous complex; 19854.
- Lamellar morphology; polymer crystallization; chain folding in polymers; crystal amorphous complex; lamellar crystallization; 19854.
- Laminagraphy; neutrons; radiography; reactor fuel subassemblies; resonance neutrons; thermal neutrons; three-dimensional radiography; fast neutrons; 19214.
- Laminagraphy; nondestructive testing; radiography; three-dimensional radiography; tomography; x-ray laser; computerized axial tomography; Fresnel zone; holographic reconstruction; imaging; 19855.
- Landslides; liquefaction; power plants; railroads; rock slides; seismicity; structural engineering; bridges; buildings; dikes; earthquakes; foreign engineering; geology; highways; housing; *SP592*.
- Langmuir equation; monomolecular adsorption; nonlinear regression analysis; adsorption isotherms; energy distribution functions; Jovanovich equation; 19771.
- Language processor testing; minimal basic; programming language standards; software standards; software testing; BASIC; *SP500-70/2*.
- Language processor testing; minimal basic; programming language standards; software standards; software testing; BASIC; *SP500-70/1*.
- Languages; query; conversion; data base; data-description; data-dictionary; data-directory; data-manipulation; DBMS; *SP500-64*.
- Language transformation; language uniformity; user-computer interaction; user-oriented system design; bibliographic retrieval systems; command language; interaction language; *SP500-63*.
- Language translators; maintenance; portability; conversion costs; conversion problems; conversion tools; database management; Federal agencies; *SP500-62*.
- Language uniformity; user-computer interaction; user-oriented system design; bibliographic retrieval systems; command language; interaction language; language transformation; *SP500-63*.
- Laplace's equation; cylindrical coordinates; difference equations; electron optics; fourth-order; 19089.
- Laplace's equation; local slope analysis; multilayer analysis; resistivity; sheet resistance; spreading resistance; correction factor; depth profiling; 19703.
- Laplace's equation; nonlinear differential equations; resistivity; spreading resistance; continuum model; correction factor; 19796.
- La radiation; quasars; 19723.
- Large corporations; productivity; small business; conglomerates; innovation; invention; 19230.
- Large liquid scintillator; neutron multiplicity; proton-recoil detector; fission; *SP594*, pp. 728-732 (Sept. 1980).
- Laser; laser chemistry; radical; chain reaction; 19399.
- Laser; laser glass; laser-induced fluorescence; europium lithium borate glass; fluorescence line narrowing; glass; 19545.
- Laser; magnetic resonance; rotational transitions; CH<sub>2</sub>; 19720.
- Laser; mass spectrometry; photolysis; CF<sub>2</sub>; C<sub>2</sub>F<sub>4</sub>; kinetics; 19722.
- Laser; microwave; relativistic; synchrotron radiation; electron; frequency divider; ion trap; 19529.
- Laser; narrow band laser; Nd:YAG pump; pulsed laser; tunable laser; CW injection; 19266.
- Laser; opto-galvanic effect; transition frequency; analytical flame; discharge tube; *U.S. Patent 4,184,127*.
- Laser; photochemistry; radical; chain reaction; combustion; 19198.
- Laser; photodissociation; quantum yield; quenching; reactive collisions; vibrational excitation; electronic excitation; 19336.
- Laser absorption; molecules; site selection; condensed phase; emission; 19111.
- Laser annealing; silicon; capacitance-voltage profiling; damage effects; electrical activation of implanted impurities; ion implantation; 19724.
- Laser applications; microdensitometry; microlithography; micro-metrology; optical microscopy; partially coherent imaging; coherence; 19164.
- Laser breakdown; polishing; surface damage; diamond turning; infrared windows; *SP568*, pp. 195-197 (July 1980).
- Laser bulk damage; laser surface damage; optical materials; self-focusing; stimulated Brillouin scattering (SBS); damage morphology; damage thresholds; *SP568*, pp. 519-527 (July 1980).
- Laser calibration; molecular spectra; spectra; spectroscopy; absorption; calibration; carbonyl sulfide; infrared; 19368.
- Laser chemistry; chlorine isotopes; isotope separation; 19759.
- Laser chemistry; laser induced fluorescence; molecular spectroscopy; multiphoton chemistry; unimolecular reactions; vibrational energy transfer; 19929.
- Laser chemistry; radical; chain reaction; laser; 19399.
- Laser cooling; laser spectroscopy; microwave spectroscopy; optical pumping; stored ions; atomic spectroscopy; double resonance; high-resolution spectroscopy; 19440.
- Laser cooling; laser spectroscopy; radiation pressure; atomic clocks; atomic spectroscopy; Doppler effects; frequency standards; ion storage; 19799.
- Laser damage; laser fusion; NaCl; nanosecond pulse; surface damage; alkali halides; CO<sub>2</sub> laser; KCl; *SP568*, pp. 209-227 (July 1980).
- Laser damage; laser-induced stress-strain; plastic deformation; surface degradation; Cu mirrors; damage thresholds; *SP568*, pp. 159-173 (July 1980).
- Laser damage; laser interaction; optical components; optical fabrication; optical materials and properties; thin film coatings;

SP568.

- Laser damage; Mie absorption coefficient; pulse duration dependence of damage; impurity-induced damage; SP568, pp. 479-496 (July 1980).
- Laser damage; mirror surfaces; corrosion inhibition; ion implantation; SP568, pp. 187-193 (July 1980).
- Laser damage; multiphoton absorption; theory; alkali halides; electron-avalanche breakdown; electron-phonon scattering; Fokker-Planck equation; SP568, pp. 467-478 (July 1980).
- Laser damage; multiphoton induced damage; pulse duration dependence of damage; thin films; wavelength dependence of damage; avalanche ionization; film thickness dependence; impurity damage; SP568, pp. 405-416 (July 1980).
- Laser damage; neodymium:glass; polarizer; pyrophosphate; xenotime; yttrium orthophosphate; yttrium phosphate; absorption spectra; calcite; flux growth; SP568, pp. 137-140 (July 1980).
- Laser damage; optical microscopy; total internal reflection; fused silica; SP568, pp. 333-341 (July 1980).
- Laser damage; optical properties; diamond single-point machining; dielectrics; infrared optical components; SP568, pp. 199-208 (July 1980).
- Laser damage; photoacoustic spectroscopy; photoacoustic spectroscopy; thin films; absorption; Ge; SP568, pp. 313-332 (July 1980).
- Laser damage; pico-second pulses; pulsewidth dependence; UV lasers; damage thresholds; SP568, pp. 417-424 (July 1980).
- Laser damage; plastic flow; sapphire; thermomechanical analysis; compressive failure; SP568, pp. 141-149 (July 1980).
- Laser damage; reflectors; thin film; absorption; calorimetry; damage; electric field; high energy laser; SP568, pp. 377-390 (July 1980).
- Laser damage; self-focusing; spot size dependence; alkali halides; intrinsic damage; IR windows; SP568, pp. 497-517 (July 1980).

- Lattice fluid; long-range interactions; surface entropy; Cahn-Hilliard theory; chemical potential; density gradient; equation of state; inhomogeneous fluid; 19653.
- Lattice fluid; miscibility; spinodal; chemical potential; combinatorial entropy; equation of state; interfacial tension; 19652.
- Lattice-gas; Lorentzian shape; oscillatory; parameters; polarizability; rare-gas; Zwanzig-Mori theory; depolarized light scattering; 19756.
- Lattice gas; phase transitions; surface melting; adsorbed layers; antiphase boundaries; grain boundaries; 19468.
- Lattice images; mixed oxides; niobates and tantalates; rubidium and potassium oxides; crystal structure; electron microscope; 19733.
- Lattice images; niobates and tantalates; rubidium and potassium oxides; two-dimensional ordering; crystal structure; electron microscope; 19911.
- Lattice-model polymer chains; polymer chain dynamics; random-coil polymer chains; relaxation times; self-entanglement effects; computer simulation; end-to-end length; entanglement effects; excluded volume effects; 19864.
- Lattice parameters; peak shape; powder diffraction; profile fitting; x-ray neutron; applications; *SP567*.
- Lattice relationships; lattices; single-crystal methods; twinning; critical evaluation; derivative lattices; indexing; 19804.
- Lattices; single-crystal methods; twinning; critical evaluation; derivative lattices; indexing; lattice relationships; 19804.
- Lattice structure; Monte Carlo calculations; rubidium; specific heat; atom migration; high temperature; 19337.
- Laves-phase; magnetic superconductor; neutron scattering; reentrant superconductor; Chevrel phase; crystal fields; 19629.
- Laves-phase; magnetism; neutron scattering; physics; rare earths; solid state spin waves; 19616.
- Laves-phase; neutron scattering; rare earth-iron intermetallics; sublattice magnetization; hydrides; 19617.
- Law; legal aspects of standards; regulation; safety regulation; standards organizations; voluntary standards; administrative law; *NBS-GCR-79-171*.
- Law; standards; antitrust; certification; competition; economics of standards; *NBSIR 79-1921*.
- Law enforcement; microphone cable; microphone connector; mobile FM transceiver; communications equipment standard; compatibility; interchangeability; 19701.
- Law enforcement; taxation; utility; audit; behavior; compliance; discriminant analysis; game theory; *NBSIR 79-1711*.
- Law enforcement photography; lenses; lighting equipment; photographic equipment; cameras; exposure meters; film; filters; *SP480-23*.
- LCAO  $X\alpha$ ; molecular charge density; diatomic nitrogen; 19328.
- LDC's; measurement services; standardization; AID; assistance; developing economies; foreign relations; industrializing nations; international relations; *NBSIR 80-2021*.
- A-doublets; calculations; ion-molecule collision;  $J$ -dependence; transitions; 19462.
- LEED; magnetism; nickel; PLEED; polarized LEED; surface magnetism; ferromagnetism; 19104.
- LEED; order-disorder phase transition; overlayer; spin-spin correlation functions; adatom-adatom interaction; angular profiles of superlattice beam; Ising model; 19309.
- LEED; ruthenium; ellipsometry; flash desorption; 19508.
- Lead-based paint; lead poisoning; applied economics; building

- economics; building materials; economic analysis; housing; *NBSIR 80-1977*.
- Lead carbonate; lead halides; lead nitrate; lead phosphates; lead sulfate; lead sulfide; solubility; solubility product; sparingly soluble lead salts; aqueous solubility of lead salts; *JPCRD 9*, No. 3, 751-784 (1980).
- Lead chromate pigments; storm water runoff; toxicity; water pollution; air pollution; chromate ore; environmental effects; *NBSIR 80-1974*.
- Lead halides; lead nitrate; lead phosphates; lead sulfate; lead sulfide; solubility; solubility product; sparingly soluble lead salts; aqueous solubility of lead salts; lead carbonate; *JPCRD 9*, No. 3, 751-784 (1980).
- Lead nitrate; lead phosphates; lead sulfate; lead sulfide; solubility; solubility product; sparingly soluble lead salts; aqueous solubility of lead salts; lead carbonate; lead halides; *JPCRD 9*, No. 3, 751-784 (1980).
- Lead phosphates; lead sulfate; lead sulfide; solubility; solubility product; sparingly soluble lead salts; aqueous solubility of lead salts; lead carbonate; lead halides; lead nitrate; *JPCRD 9*, No. 3, 751-784 (1980).
- Lead poisoning; applied economics; building economics; building materials; economic analysis; housing; lead-based paint; *NBSIR 80-1977*.
- Leads; load; protective coating; resistance; sensitivity change; stability; strain gages; structure; transducers; zero shift; adhesive; backing; connection; environment; gage element; *19049*.
- Lead sulfate; lead sulfide; solubility; solubility product; sparingly soluble lead salts; aqueous solubility of lead salts; lead carbonate; lead halides; lead nitrate; lead phosphates; *JPCRD 9*, No. 3, 751-784 (1980).
- Lead sulfide; solubility; solubility product; sparingly soluble lead salts; aqueous solubility of lead salts; lead carbonate; lead halides; lead nitrate; lead phosphates; lead sulfate; *JPCRD 9*, No. 3, 751-784 (1980).
- Lead-tin alloys; magnetic field effect; phase diagram; potassium-iron-silicon oxides; solidification; surface tension; thermodynamic properties; Auger measurements on liquids; convection; gallium; heat capacity; *NBSIR 80-2082*.
- Leakage; life safety; smoke; smoke movement; stack effects; test methods; building fires; compartment fires; doors; egress; fire tests; high-rise buildings; *NBSIR 80-2004*.
- Leakage;  $\text{MnSO}_4$ -bath; sulfur; *SP594*, pp. 988-989 (Sept. 1980).
- Leakage; solar collectors; solar energy; fire prevention; fire tests; flammability; flash point; heat transfer fluids; insulation; *NBSIR 79-1931*.
- Leakage current; test structure; CCD; electrical test structure; gated diode; integrated gated-diode electrometer; integrated test structure; *NBSIR 80-2000*.
- Leakage testing; magnetics; material parameters; nondestructive evaluation; optics; penetrants; radiography; ultrasonics; acoustic emission; eddy currents; imaging; *NBSIR 80-2162*.
- Leak testing; semiconductor device packages; back pressurization hermetic test; helium mass spectrometer leak test; hermeticity; hybrid microcircuits; *19821*.
- Least absolute deviation; polynomial approximation; spline fitting; test data; test problems; algorithm testing; approximation; curve fitting; *NBSIR 79-1920*.
- Least square fitting; neutron spectrum; sample perturbation; actinide recycle; cross section evaluation; fast critical facility; fast reactor; integral experiment; *SP594*, pp. 552-556 (Sept. 1980).
- Least squares; modified Gram-Schmidt; pseudoinverse; regression; statistics; test problems; test results; algorithms; curve fitting; *TN1126*.
- Least squares; regression; statistics; test problems; algorithms; computer programs; *19158*.
- Least-squares adjustment; chi-square; data consistency; data testing; ENDF/B-IV; ENDF/B-V; fast reactors; group cross sections; integral experiments; *SP594*, pp. 182-186 (Sept. 1980).
- Least-squares adjustment; LMFBR; sensitivity analysis; uncertainty analysis; breeding ratio; calculational bias uncertainties; fast reactors; group cross sections; integral experiments; *SP594*, pp. 177-181 (Sept. 1980).
- Least squares fitting; normalized Gaussian function; photo-peak area determination; photo-peaks data, data analysis; summation method; *19132*.
- Least squares solution; linear constraints; overdetermined system of equations; regression; underdetermined system of equations; covariance matrix; curve fitting; iterative refinement; *19155*.
- Least squares solution; linear constraints; overdetermined system of equations; regression; statistics; covariance matrix; curve fitting; iterative refinement; *19154*.
- Least squares solution; mass calibration; mass measurement; calibration report; correction to mass measurements; error checking; FORTRAN program; *TN1127*.
- Least squares unfolding; LWR-PV damage; standard fields; adjustment; dosimetry; ISNF; *SP594*, pp. 956-960 (Sept. 1980).
- Legal aspects of standards; regulation; safety regulation; standards organizations; voluntary standards; administrative law; law; *NBS-GCR-79-171*.
- Legal basis; liability; regulation; regulatory impacts; technology; building codes; building laws and regulations; code development; court decisions; *NBS-GCR-80-286*.

- LMFBR analysis; LWR shielding and dosimetry; multigroup cross section libraries; weapons applications; ENDF/B-V; fusion neutronics; *SP594*, pp. 204-208 (Sept. 1980).
- LNG components; multicomponent systems; orthobaric; densities; excess volumes; liquid mixtures; 19537.
- Load; protective coating; resistance; sensitivity change; stability; strain gages; structure; transducers; zero shift; adhesive; backing; connection; environment; gage element; leads; 19049.
- Load; roof; load; snow; solar collector; structural engineering; building; ice; *NBS-GCR-79-180*.
- Load control; multiprogramming; operational analysis; optimization; queueing theory; response time; saturation point; throughput rate; *SP500-65*, pp. 207-213 (Oct. 1980).
- Load-elongation curve; microfibrils; point defects of microfibrillar structure; ruptured chains; strength; tie molecules; crystalline polymer; elastic modulus; fibrils; fibrous structure; fracture; 19901.
- Loads; maintenance; occupational hazards; scaffolds; stiffness; strength; structural safety; work surfaces; codes and standards; construction safety; design; *NBSIR 79-1937*.
- Loads (forces); masonry; probability theory; reliability; safety; specifications; standards; statistical analysis; steel; structural engineering; timber; aluminum; buildings (codes); concrete (prestressed); concrete (reinforced); design (buildings); limit states; *SP577*.
- Local; network; terminal; area; computer; data; digital; Ethernet; 19126.
- Local; nonlocal and coupled channel descriptions; optical model analysis; Th(n,n); total and inelastic cross sections; *SP594*, pp. 711-714 (Sept. 1980).
- Local area network; performance; communications; comparative study; *SP500-65*, pp. 87-97 (Oct. 1980).
- Local area networks; computer communications; computer networks; computer protocols; data communications; 19124.
- Local area networks; microcomputer bus; microcomputer interfacing; microcomputer standards; backplane bus; component level bus; *NBS-GCR-80-288*.
- Local area networks; networks; communications; computer communications; computer networks; data communications; data networks; 19125.
- Local area networks; packet switching; simulation; bus networks; bus performance; computer programs; contention; CSMA; GPSS; *SP500-65*, pp. 79-85 (Oct. 1980).
- Local density models; N<sub>2</sub>; O<sub>2</sub>; X<sub>α</sub>; B<sub>2</sub>; CO; C<sub>2</sub>; F<sub>2</sub>; H<sub>2</sub>; 19289.
- Local equilibrium; perturbation; solidification; solid-liquid interface; stability; alloy; constitutional supercooling; 19748.
- Local government; political appointments; survey of local build-

- ing departments; building departments; building inspection; code administration; Indiana building code enforcement; *SP586*, pp. 33-42 (June 1980).
- Localization; phonon; strong scattering; transport anomalies; conductivity; disordered alloy; 19755.
- Local slope analysis; multilayer analysis; resistivity; sheet resistance; spreading resistance; correction factor; depth profiling; Laplace's equation; 19703.
- Local survivability; communications networks; CROSSFIRE; link protocols; *NBSIR 80-2149*.
- Local thermal equilibrium model; microanalysis; relative elemental sensitivity factors; secondary ion mass spectrometry; surface analysis; ion probe microanalysis; 19151.
- Local thermal equilibrium model; microanalysis; secondary ion mass spectrometry; sensitivity factors; sputtering; surface analysis; 19642.
- Locks; performance standard; test methods; window; window assemblies; window components; burglary resistance; frames; hardware; hinges; 19698.
- Lock security; handcuff; *NBSIR 80-1989*.
- Logarithmic terms; perturbation theory; softness expansion; dilute gas transport properties; inverse power potential; 19389.
- Logarithmic terms; softness expansion; thermal conductivity; viscosity; classical scattering angle; dilute gases; inverse power potential; 19194.
- Log home; mass factor; thermal mass;  $\Delta R$  effect; BLAST; effective U-value; heat capacity; *SP586*, pp. 161-179 (June 1980).
- Logical storage to physical device mapping; O.S. performance prediction; O.S. tuning; storage partitioning; systems performance modeling; systems storage restructuring; file binding; I/O resource allocation; *SP500-65*, pp. 175-188 (Oct. 1980).
- Longitude; mapping; State Plane Coordinate System; surveying; Universal Transverse Mercator (UTM); coordinate system; elevation; Federal Information Processing Standard; geographic point location; latitude; Latitude and Longitude; *FIPS PUB 70*.
- Longitudinal acoustic mode; polyoxymethylene; polypropylene; Raman spectroscopy; Young's modulus; 19895.
- Longitudinal acoustic modes; *n*-alkanes; Raman intensities; structural defects; transverse acoustic modes; bond polarizabilities; calculated frequencies; Fermi resonance; 19692.
- Longitudinal gradient; orientational distribution; rigid spheroid; transient; birefringence; jet flow; light scattering; 19409.
- Longitudinal gradient flow; permeability of polymers; plastic deformation of crystalline polymers; plastic deformation of fibrous structure; radical formation upon tensile loading; transverse gradient flow; birefringence of spheroid suspension; fibrous structure; 19663.
- Long-period variable; model; nebosity; R Aquarii; spectrum; temperature; density; 19507.
- Long-range interactions; ab initio computation; exchange forces; ion-induced dipole interactions; ion-quadrupole interactions; lithium molecule-ion; 19084.
- Long-range interactions; surface entropy; Cahn-Hilliard theory; chemical potential; density gradient; equation of state; inhomogeneous fluid; lattice fluid; 19653.
- Longrange interpolation; non-linear least squares; peak resolution; PICO; empirical peak shape; gamma-ray spectrum fitting; intercomparison of computational methods; International Atomic Energy Agency; 19127.
- Loose fill insulation; smoldering ignition; thermal analysis; thermal insulation; activation energy; borax; boric acid; cellulose; critical radiant flux; fire; fire retardants; fire tests; *NBSIR 80-2085*.
- Loran-C; propagation; reciprocity; synchronization; clocks; 19524.
- Lorentzian shape; oscillatory; parameters; polarizability; rare-gas; Zwanzig-Mori theory; depolarized light scattering; lattice-gas; 19756.
- Lorentzian type wing; quasistatic wing; self broadening; Van der Waals type wing; 19776.
- Lorenz-Mie light scattering calculation; particle sizing; Stoke's velocity; aerosol; light scattering; 19695.
- Loss angle; phase angle; power factor; surface loss; capacitor; dielectric film; dissipation factor; electrode surface; 19066.
- Losses; magnetic property; standards; superconductor; critical current; critical temperature; *NBSIR 80-1629*.
- Loss prevention; risk; safety; accidents; fault trees; 19320.
- Low and high momentum transfer; rms radius; carbon; combined analysis; electron scattering; high accuracy; 19374.
- Low-cycle fatigue; porosity; preparing flawed weldments; slag; three-dimensional flaws; arc strikes; blunt flaws; fracture mechanics; hydrogen-assisted cracking; 19762.
- Low density polyethylene; sorption; annealing; diffusion; drawing; 19850.
- Low-dispersion glass; optical glass;  $\text{Al}(\text{PO}_3)_3$ - $\text{AlF}_3$ -MF-RF<sub>1</sub> system; fluoride glass; fluorophosphate glass; laser glass; 19216.
- Low energy electrons; mean free path; exchange and correlation; 19858.
- Low-energy gamma rays; microchannel plates; position-sensitive detector; x-ray telescope; CsI scintillator; energy resolution; 19401.
- Low-frequencies; spherical cavity; thermophysical properties; acoustic radial resonances; acoustic velocity of sound; dilute gases; 19071.
- Low frequency; satellite time code; standard frequencies; television color subcarrier; time calibrations; time signals; broadcast of standard frequencies; frequency calibrations; GOES satellite; high frequency; *SP432*, 1979 Edition.
- Low-income housing; marginal analysis; thermal efficiency; weatherization; benefit-cost analysis; building economics; building envelope; economic analysis; economic efficiency; energy conservation; insulation; life-cycle costs; *NBSIR 79-1948*.
- Low-income housing; statistics; unit costs; weatherization; building economics; cost components; data analysis; data collection; demonstration; economic analysis; energy conservation; insulation; *NBSIR 80-2167*.
- Low-level analysis; nuclear safeguards; trace levels; uranium determination; waste solution analysis; analyses; fluorometry; laser-induced fluorescence; *SP582*, pp. 147-155 (June 1980).
- Low-level counting; natural radiocarbon; small gas proportional and liquid scintillation counters; atmospheric pollutants; figure of merit; 19677.
- Low level counting; pyrolysis/gas chromatography/mass spectrometry; radiocarbon; atmospheric pollution; carbonaceous particles; fossil carbon; insoluble carbonaceous material; 19593.
- Low level titration; uranium titration; vanadium (V) titrant; constant current coulometry; *SP582*, pp. 140-146 (June 1980).
- Low pressures; noble gas broadening; O<sub>2</sub> microwave spectrum; pressure broadening; self broadening; theoretical and experimental comparisons; 19721.
- Low Reynolds number fluid flow; particle Doppler shift spectrometer; particle induced air circulation; particle induced fluid flow; fluid flow generated by settling aerosol; 19649.
- Low-sloped roofs; roofing performance; solar collectors; collector installation; field survey; guidelines; *TN1134*.
- Low temperature; microwave temperature sensor; temperature transducer; thermometer; tunnel diode oscillators; gas thermometers; 19236.
- Low temperature collectors; manufacturing activity; medium temperature collector; solar energy; special collectors; energy estimates; geographical distribution; 19527.
- Low temperature photoionization; mass spectrometry; photoelectron spectra; photoionization; threshold photoelectron spectra; allene; ionization potential; 19182.
- Low temperatures; magnetic susceptibility; manganese alloys; Neel transition; physical properties; stainless steels; elastic constants; iron-base alloys; 19568.
- Low temperatures; magnetic transitions; sound velocities; stain-

less steels; elastic constants; iron alloys; 19563.  
 Low temperatures; multi-axis nuclear spin system;  $\gamma$ -ray multiplicity;  $^{165}\text{Ho}$  single crystal;  $^{166\text{m}}\text{Ho}$ ; gamma rays; 19620.  
 Low temperature tests; mechanical properties; nickel alloys; steels; fatigue (materials); fracture (materials); 19550.  
 L-series x-ray lines; relative x-ray line intensities; spectrometer efficiency; wavelength dispersive spectrometry (WDS); crystal spectrometer calibration; electron microprobe analysis; energy dispersive spectrometry (EDS); 19678.  
 Lubricated sliding wear; wear; wear debris; abrasive wear; copper; dry sliding wear; 19960.  
 Lubricating oil; metal surface effects; nitrogen dioxide; oxidation; recycled base stocks; thermal analysis; virgin base stocks; differential scanning calorimeter; 19788.  
 Lubricating oil; oil specifications; petroleum standards; petroleum test methods; recycled oil; re-refined oil; used oil; waste oil; engine oil; hydraulic oil; industrial oil; SP584.  
 Lu-cosmochronometer; capture cross sections; nucleosynthesis; SP594, pp. 340-343 (Sept. 1980).  
 Lumber grading; shoring; softwood; timber engineering; trench bracing; trenching; construction lumber; construction safety; excavation; hardwood; BSS122.  
 Lunar chemical analysis; x-ray proportional-counter; Apollo-15 and -16; gamma-ray spectrometers; 19129.  
 Lunar soil; coaxial bead resonance; coaxial resonator; dielectric constant; dielectric loss; dielectric temperature dependence; 19252.  
 LWR data needs; benchmark analysis; ENDF/B-V; fuel cycle sensitivities; SP594, pp. 1-5 (Sept. 1980).  
 LWR-PV damage; standard fields; adjustment; dosimetry; ISNF; least squares unfolding; SP594, pp. 956-960 (Sept. 1980).  
 LWR shielding and dosimetry; multigroup cross section libraries; weapons applications; ENDF/B-V; fusion neutronics; LMFBR analysis; SP594, pp. 204-208 (Sept. 1980).  
 L.W. reactors; actinide generation chain; actinides cross sections; fast critical experiments; fast reactors; SP594, pp. 18-24 (Sept. 1980).

## M

Machine-readable bibliographic data; bibliographic data bases; computerized data bases; information storage and retrieval systems; libraries-automation; NBSIR 80-2133.  
 Macromolecules; neutrons; single-crystal; Weissberg methods; x rays; absorption correction; diffractometers; flat-cone; 19509.  
 Macrosegregation; monochromatic incident x-ray beam; multiphase structure; x-ray fluorescence; chemical profiling; energy dispersive; 19959.  
 Magic angle sample spinning; carbon-13 NMR; humic acids; humin; 19217.  
 Magnesium; atomic energy levels; atomic spectra; electron configurations; ionization potentials; JPCRD 9, No. 1, 1-58 (1980).  
 Magnesium; discharge; excimer; 19453.  
 Magnesium; wavelengths; configuration interaction; energy levels; 19556.  
 Magnesium sequence; zinc sequence; beryllium sequence; collision strength; effective Gaunt-factor; electron impact excitation; 19353.  
 Magnetic dipole; TEM cell; electrical dipole; electrically small radiators; TN1017.  
 Magnetic field; magnets; materials; superconductor; aerospace; 19199.  
 Magnetic field effect; phase diagram; potassium-iron-silicon oxides; solidification; surface tension; thermodynamic properties; Auger measurements on liquids; convection; gallium; heat capacity; lead-tin alloys; NBSIR 80-2082.  
 Magnetic field reconnection; accretion; black holes; general relativity; hydrodynamics; 19717.  
 Magnetic force; radial magnetic field; superconducting coils;

absolute ampere; current balance; J. Res. 85, No. 4, 257-272 (July-Aug. 1980).  
 Magnetic gradiometer; magnetometer; quantum interference; superconductivity; aerospace; amplifier; Josephson junction; 19203.  
 Magnetic impurities; magnetic superconductors; rare earths; Chevrel-phase; crystal fields; 19504.  
 Magnetic inspection; nondestructive testing; pulsed mode; rail test car; railroad rail; sensitivity; ultrasonic inspection; coupling; 19885.  
 Magnetic particles; nondestructive evaluation; radiography; traceability; ultrasonics; visual testing; acoustic emission; calibration; eddy currents; NBSIR 80-2109.  
 Magnetic property; standards; superconductor; critical current; critical temperature; losses; NBSIR 80-1629.  
 Magnetic resonance; rotational transitions;  $\text{CH}_2$ ; laser; 19720.  
 Magnetics; material parameters; nondestructive evaluation; optics; penetrants; radiography; ultrasonics; acoustic emission; eddy currents; imaging; leakage testing; NBSIR 80-2162.  
 Magnetic superconductor; neutron scattering; reentrant superconductor; Chevrel phase; crystal fields; Laves-phase; 19629.  
 Magnetic superconductor; neutron scattering phase transition; rare earth; crystal field effects; ferromagnet; 19258.  
 Magnetic superconductors; rare earths; Chevrel-phase; crystal fields; magnetic impurities; 19504.  
 Magnetic superconductors; neutron scattering; rare earth; small angle scattering; superconductivity; crystal field; 19255.  
 Magnetic susceptibility; manganese alloys; Neel transition; physical properties; stainless steels; elastic constants; iron-base alloys; low temperatures; 19568.  
 Magnetic tapes; tape labels; data interchange; Federal Information Processing Standards Publication; file structure; FIPS PUB 79.  
 Magnetic transitions; sound velocities; stainless steels; elastic constants; iron alloys; low temperatures; 19563.  
 Magnetism; Mossbauer effect; Schluditz whiskers; carbon; cementite; hyperfine fields; iron fibers; 19253.  
 Magnetism; metallic glasses; neutron scattering; rare earths; structural properties; amorphous alloys; 19113.  
 Magnetism; Ni; nickel; PLEED; polarized electrons; polarized LEED; surface magnetism; surface magnetization; 19341.  
 Magnetism; neutron scattering; physics; rare earths; solid state spin waves; Laves-phase; 19616.  
 Magnetism; neutron scattering; rare earth compounds; spin excitations; crystal fields; exchange interaction; 19256.  
 Magnetism; neutron scattering; rare earth compounds; spin excitations; crystal fields; exchange interaction; 19604.  
 Magnetism; neutron scattering; rare earths; spin waves; crystal fields; inelastic scattering; 19630.  
 Magnetism; nickel; PLEED; polarized LEED; surface magnetism; ferromagnetism; LEED; 19104.  
 Magnetohydrodynamics; oxidation-reduction; perovskite; phase equilibria; potassium ceria-zirconia system; pyrochlore; ceria-zirconia system; 19637.  
 Magnetohydrodynamics; spinels; zirconia; ceramic oxides; electrodes;  $\text{LaCrO}_3$ ; 19644.  
 Magnetohydrodynamics iron; MHD; silicates; coal slag; conductivity; electrical; electrical conductivity; ferric; ferric/ferrous ratio; ferrous; ionic; ionic conductivity; 19576.  
 Magnetohydrodynamics, MHD; nonuniform fields; pipe flow; fringing fields; 19050.  
 Magnetometer; quantum interference; superconductivity; aerospace; amplifier; Josephson junction; magnetic gradiometer; 19203.  
 Magneto-optics; nonlinear optics; piezo-optics; planar waveguides; thermo-optics; thin films; ultraviolet; fiber optics; graded index materials; infrared; SP574.  
 Magnets; materials; nonmetallics; review; stainless steel; superconductors; alloys; 19190.  
 Magnets; materials; superconductor; aerospace; magnetic field; 19199.

- Maxwell's velocity distribution; rate coefficients; cross sections; high electron energy; 19356.
- M-centers; megared dosimetry; N-centers; radiation darkening; radiation processing; R-centers; absorption spectroscopy; alkali halides; color centers; darkening of crystals; dosimetry; electron dosimetry; F-centers; gamma-ray dosimetry; lithium fluoride; 19352.
- Mean field; sum rule; susceptibility; three coexistence phases; tricritical point; correlation length; 19135.
- Mean free path; exchange and correlation; low energy electrons; 19858.
- Mean-square radius of gyration; Monte-Carlo; reduced moments; star-branched polymers; branched polymers; expansion factor; 19656.
- Mean-value theorem; Taylor's theorem; convexity; derivatives; inequalities; intermediate point; 19421.
- Measured asymmetry; calculated scattering phase shifts; *SP594*, pp. 985-987 (Sept. 1980).
- Measured course; odometer; taximeter; test procedure; tire pressure; tolerances; calibration; distance; fifth wheel; inspection; *H137*.
- Measured cross section; activation method; *SP594*, pp. 433-435 (Sept. 1980).
- Measured performance; optical path difference; temperature profile; thermal distortion; thermal lensing; ZnSe; absorption; calculated performance; CO<sub>2</sub> laser; holographic interferometry; *SP568*, pp. 73-89 (July 1980).
- Measured  $\sigma(E)$  at 110° and 128° up to 8.6 MeV in excitation energy; nuclear reactions; <sup>22</sup>Ne(*e,e'*); deduced *J*,  $\pi$ , *B*(CL); enriched <sup>22</sup>Ne target; 19691.
- Measured  $\sigma(E_n, 0^\circ)$ ; nuclear reactions; gas target; *SP594*, pp. 542-544 (Sept. 1980).
- Measured  $\sigma_g(E_n, 125^\circ)$ ; nuclear reactions, <sup>232</sup>Th(*n,n'* $\gamma$ ); time-of-flight; comparison with calculated excitation functions; inferred level cross sections for 22 states; *SP594*, pp. 685-689 (Sept. 1980).
- Measured  $\sigma_g(E_n, 125^\circ)$ ; nuclear reactions <sup>238</sup>U(*n,n'* $\gamma$ ); time-of-

flight; inferred level cross sections for 20 states; *SP594*, pp. 680-684 (Sept. 1980).

Measured  $\sigma_T$  for O(n,n); calculate deuterium plasma neutron spectrum; fusion; *SP594*, pp. 807-811 (Sept. 1980).

Measured  $\sigma_T$  for  $^{233}\text{U}$ ; resonance at 0.15 eV; *SP594*, pp. 690-691 (Sept. 1980).

Measured 0.02 eV to 30 keV; fission integrals; *SP594*, pp. 961-965 (Sept. 1980).

Measurement; color; colorimetry; fluorescent; fluorescent specimens; *NBS-GCR-79-185*.

Measurement; metrology; on-site calibration; PMTE; calibration labs; calibration, out-of-service; central calibration; in situ calibration; *NBS-GCR-80-282*.

Measurement; metrology; PMTE; recall intervals; calibration interval; calibration interval algorithms; calibration requirements; decision table; interval adjustment; *NBS-GCR-80-283*.

Measurement; metrology; precision; test equipment; calibration; Federal Government; laboratory; *SP546, 1980 Edition*.

Measurement; modeling; solar; testing; computer; energy; heat transfer; hot water; *19375*.

Measurement; modeling; solar; testing; computer; energy; heat transfer; hot water; *19459*.

Measurement; modeling; solar; testing; computer; energy; heat transfer; hot water; *19498*.

Measurement; performance; remote batch; selection; service; analysis; computer; evaluation; Federal Information Processing Standards Publication; *FIPS PUB 72*.

Measurement; polarized electrons; secondary standards; signs; symbols; antifouling coating; communication; gamma-ray measurement; human serum; industrial development; industrial furnace; *DIM/NBS 64*, No. 2, 1-36 (1980).

Measurement; precision; accuracy; bias; *19284*.

Measurement assurance; measurement evaluation technology; measurement services; physical standards; proficiency testing; standard reference materials; testing; traceability; calibrations; collaborative reference programs; laboratory performance; *SP591*, pp. 15-22 (Aug. 1980).

Measurement assurance; metrication; model laws and regulations; moisture loss; packaging and labeling; specifications and tolerances; weights and measures; consumer affairs; education; electronic devices; International Organization of Legal Metrology; legal metrology; *SP566*.

Measurement assurance; random errors; standard deviation; systematic errors; uncertainty; check standard; gage blocks; *NBSIR 80-2078*.

Measurement assurance program; platinum resistance thermometer; reference thermometer; thermometer; calibration; check thermometers; fixed points; International Practical Temperature Scale of 1968; *SP591*, pp. 137-145 (Aug. 1980).

Measurement compatibility; protocol; reference methods; SI units; standard reference materials; traceability; definitive methods; *SP582*, pp. 15-24 (June 1980).

Measurement compatibility; reference methods; standard methods; standard reference materials; definitive methods; *19575*.

Measurement error; nuclear material accounting; referee measurement methods; robust statistical methods; systematic error; robust statistical methods; item-dependent error; *19332*.

Measurement errors; noise; noise exposure; sampling (temporal); statistics; time-varying signals; community noise; *19116*.

Measurement error sources; sensitivity analysis; material balance declaration; *SP582*, pp. 690-701 (June 1980).

Measurement evaluation technology; measurement services; physical standards; proficiency testing; standard reference materials; testing; traceability; calibrations; collaborative reference programs; laboratory performance; measurement assurance; *SP591*, pp. 15-22 (Aug. 1980).

Measurement interferences; mobile ions; MOS capacitor; silicon; thermally stimulated measurements; interface states; *19166*.

Measurement methods; microelectronics; microstructures; semiconductors; dimensional metrology; electronics; integrated circuits; materials characterization; *SP400-61*.

Measurement methods; neutron transmutation doped silicon; power-device grade silicon; resistivity variations; silicon; spreading resistance measurements; thermally stimulated measurements; thyristor materials measurements; thyristor measurements; zinc oxide varistors; *NBSIR 80-2061*.

Measurement, nondestructive; second breakdown, reverse-bias; transistor, power; turn-off, transistor; focusing, current; *19161*.

Measurement of controlled environments; agricultural engineering; growth chambers; horticulture; *19112*.

Measurement of inventory; nuclear materials; safeguards; inventory verification; *SP582*, pp. 178-188 (June 1980).

Measurement process; omnifariousness; precision; round robin; routine conditions; variance model; within-laboratory precision; accuracy; between-laboratory precision; components of variance; duplicity; ideal conditions; *SP591*, pp. 31-40 (Aug. 1980).

Measurements; attenuation; bandwidth; fiber optic joints; fiber optics; fiber optics-single mode; index profile; *SP597*.

Measurements; measurement standards; radiation; radiation hazards; radiation safety; radiation standards; standardization; standards; history; ionizing radiation; *19551*.

Measurements; metals; standards; wear; corrosion; *19950*.

Measurements; metric; metrology; SI; standards; units; *19628*.

Measurements; metric; metrology; SI; standards; units; *19868*.

Measurements; neutron interrogation; nondestructive assay; nuclear fuel subassembly; nuclear safeguards; process control; spent nuclear fuel; assay accuracy; calculations; criticality control; material accountability; *SP582*, pp. 447-456 (June 1980).

Measurements; number of nuclei; samples; spectrometric analysis; transmission; *SP594*, pp. 903-906 (Sept. 1980).

Measurements; operations; performance; *SP500-65*, pp. 279-287 (Oct. 1980).

Measurements; optical communications; quality control; attenuation; fiber optics; interlaboratory comparisons; *19461*.

Measurements; radiation; radon; radon daughters; ventilation; buildings; environment; health; *SP581*.

Measurements; radiation; random uncertainty; systematic uncertainty; data reporting; environmental; *19301*.

Measurements; radio frequency; surface science; tetrafluoroethylene powder; water conservation; alternate fuels; data communications; energy; erosion; instrument landing; *DIM/NBS 64*, No. 5, 1-28 (1980).

Measurement seminars; photon-recoil components; SRM's; atomic properties; computers; emissions testing; energy; fundamental constants; gas; grants; marketplace; *DIM/NBS 64*, No. 1, 1-24 (1980).

Measurement services; molecular science; National Measurement Laboratory; nondestructive evaluation; nuclear measurement technology; physics research; radiation research; recycled materials; standard reference data; standard reference materials; technical activities; *SP572*.

Measurement services; physical standards; proficiency testing; standard reference materials; testing; traceability; calibrations; collaborative reference programs; laboratory performance; measurement assurance; measurement evaluation technology; *SP591*, pp. 15-22 (Aug. 1980).

Measurement services; standardization; AID; assistance; developing economies; foreign relations; industrializing nations; international relations; LDC's; *NBSIR 80-2021*.

Measurement standards; radiation; radiation hazards; radiation safety; radiation standards; standardization; standards; history; ionizing radiation; measurements; *19551*.

Measurement system; metric system; SI; base units; convention of the meter; economic benefits; epistemology; *19639*.

Measurement systems; product standards; standard reference data; standard reference materials; engineering standards; information interchange; *19905*.

Measurement technology; microelectronics; phosphorus pileup; photolithography; pull test; random fault test structures; resistivity; scanning acoustic microscope; scanning electron micro-

- scope; semiconductor devices; semiconductor materials; semiconductor process control; *SP400-45*.
- Measurement technology; microelectronics; semiconductor devices; semiconductor materials; semiconductor process control; silicon; electronics; integrated circuits; *NBSIR 80-2006*.
- Measurement technology; moisture accumulation; nondestructive tests; thermal resistance; built-up roofs; *NBSIR 80-2100*.
- Measurement technology; Pakistan; standardization; Agency for International Development; development assistance; industrialization; less developed countries; *NBSIR 80-2051*.
- Measurement technology; photovoltaic energy conversion; photovoltaics; solar cells; test method preparation; consensus standards; *NBSIR 80-2060*.
- Measurement uncertainties; microwave mixer diodes; modulation; point-contact diodes; reflectometer; return loss; Schottky-barrier diodes; semiconductor diodes; standing-wave ratio (SWR); conversion loss; diode measurement; intermediate-frequency (i-f) output conductance; *SP400-16*.
- Measures; scales; specifications; taximeters; tolerances; volume-measuring devices; weighing devices; weights; length-measuring devices; liquid-measuring devices; *H44, 1980 Edition*.
- Measures; weights; weights and measures; AID; assistance; developing economies; foreign relations; industrializing nations; international relations; *NBSIR 80-2022*.
- Measure time-of-flight spectra; Fe, Cu, Ni, Pb; *SP594*, pp. 139-142 (Sept. 1980).
- Measuring process; proficiency testing; Youden two-sample analysis; collaborative reference program, test method; interlaboratory testing; laboratory evaluation; linear model; *SP591*, pp. 25-30 (Aug. 1980).
- Mechanical conditioning; nonlinear viscoelasticity; normal stresses; poly(methyl methacrylate); shear stresses; BKZ theory; *19707*.
- Mechanical engineering; nuclear reactors; piping; pressure vessel; pump; reliability; risk analysis; valves; failure data; fatigue; fracture; inservice data; *19085*.
- Mechanical insulation; industrial/commercial thermal insulation; insulation program plan; *19725*.
- Mechanical integrity; nondestructive evaluation; normal modes; orthopedic implants; piezoelectric polymer; plastics; vibrations; *19952*.
- Mechanical properties; nickel alloys; steels; fatigue (materials); fracture (materials); low temperature tests; *19550*.
- Mechanical properties; niobium-tin; niobium-titanium; strain; superconducting coil composite; superconducting wire; critical current; fiberglass/epoxy composite; *NBSIR 80-1633*.
- Mechanical properties; optical properties; ultraviolet transmission; fluorides; forging; laser windows; lithium fluoride; *SP568*, pp. 39-46 (July 1980).
- Mechanical properties; PMMA; polyethylene; poly(methyl methacrylate); time-dependent behavior; additivity of damage; Bailey criterion; damage accumulation; failure; fatigue; *19690*.
- Mechanical properties; specific heat; thermal expansion; hardness; homogeneity; infrared laser absorption properties; *SP568*, pp. 65-72 (July 1980).
- Mechanical properties; stainless steel; strength; toughness; welds; cryogenic; delta ferrite; ferrite content; fracture; *19673*.
- Mechanical reliability; mechanics; strength; ceramics; crack growth; delayed failure; fracture; *19636*.
- Mechanics; strength; ceramics; crack growth; delayed failure; fracture; mechanical reliability; *19636*.
- Medical physics; spectroscopy; Broida; combustion; flames; free radicals; *19680*.
- Medical x-ray image; x-ray image storage; digital image requirement; image information; information content; *19134*.
- Medium temperature collector; solar energy; special collectors; energy estimates; geographical distribution; low temperature collectors; manufacturing activity; *19527*.
- Megarad dosimetry; N-centers; radiation darkening; radiation processing; R-centers; absorption spectroscopy; alkali halides; color centers; darkening of crystals; dosimetry; electron dosimetry; F-centers; gamma-ray dosimetry; lithium fluoride; M-centers; *19352*.
- Megarad dosimetry; nylon polycarbonate; polyethylene terephthalate; polymethyl methacrylate; polyvinyl chloride; polyvinyl fluoride; polyvinyl pyrrolidone radiochromic dyes; temperature dependence; absorption spectroscopy; blue cellophane; cellulose triacetate; dosimetry; *19326*.
- Melting; niobium; dynamic techniques; heat of fusion; high temperatures; *19745*.
- Melting; normal spectral emittance; palladium; radiance temperature; dynamic measurements; high temperature; *19063*.
- Melting; radiance temperature; vanadium; emittance; high-speed measurements; high temperature; *19439*.
- Melting; small particles; solid solutions; solubility; surfaces; thermodynamics; vapor pressure; interstitials; *19830*.
- Melting curves; metastability; phase diagram; plastic crystal; pressure; carbon tetrachloride; *19470*.
- Melting line; mercury; pressure; pressure fixed points; pressure metrology; pressure scale; *19286*.
- Melting point; stainless steel; thermodynamics; dynamic measurements; electrical resistivity; emittance; heat capacity; high temperature; *19541*.
- Melting pressures; PVT; vapor pressure; compressibility; density; ethylene; *19682*.
- Melting temperature; row nucleation; stirred solution; strained melt; crystallization temperature; *19904*.
- Meniscus; silicon; stability; crystal; Czochralski; edge-defined film-fed growth (EFG); floating zone; *19945*.
- Mental disorders; smoke; upholstered furniture; evacuation; fire departments; fire fatalities; fire investigations; flashover; group homes; halfway houses; *NBS-GCR-80-200*.
- Merchant vessels; shipboard fires; cost benefit analysis; cost effectiveness; fire departments; fire losses; fire models; fire protection; marine transportation; *NBS-GCR-79-173*.
- Mercury; pressure; pressure fixed points; pressure metrology; pressure scale; melting line; *19286*.
- Mercury; radiochemical; separation; solvent extraction; activation analysis; cadmium; *19283*.
- Mercury/alloy ration in dental amalgam; mercury content in dental amalgam; zinc in dental amalgam; comprehensive strength of amalgam; density of dental amalgam; dental amalgam; dimensional change in dental amalgam; *19632*.

- Mixtures; van der Waals; vapors; Andrews; condensation; critical point; diffusion; gaseous; history of science; Kamerlingh Onnes; liquidons; liquids; 19932.
- MnSO<sub>4</sub>-bath; sulfur; leakage; *SP594*, pp. 988-989 (Sept. 1980).
- MOS capacitor; silicon; thermally stimulated measurements; interface states; measurement interferences; mobile ions; 19166.
- MOSFET, d-c; d-c MOSFET dopant profile method; dopant profile method; 19425.
- Mobile FM transceiver; communications equipment standard; compatibility; interchangeability; law enforcement; microphone cable; microphone connector; 19701.
- Mobile home; safety; standard; window; anthropometry; emer-

agency egress; escape behavior; HUD; *NBSIR 80-2049*.

Mobile home; sulfur hexafluoride; tracer gas; air leakage measurements; environmental chamber; fan depressurization; *NBSIR 80-2105*.

Mobile ions; MOS capacitor; silicon; thermally stimulated measurements; interface states; measurement interferences; *19166*.

Mobility; resistivity; semiconductors; silicon; dopant density; electrical measurements; *19783*.

Mobility; resistivity; semiconductors; silicon; dopant density; electrical measurements; *19806*.

Mobility; resistivity; silicon; carrier density; computer program; electrical properties of silicon; Hall effect; *SP400-63*.

Mobility aids; room use; accidents; anthropometry; biomechanics; disability; disability organizations; home safety; household activities; household design; *NBSIR 80-2014*.

Modacrylics; polyesters; protective clothing; radiant energy; wool fabrics; aramids; burns (injuries); char strength; convective energy; cotton fabrics; fabrics; heat flux; insulative properties; *19120*.

Modal split; network analysis; benefit-cost analysis; combinatorial optimization; high-speed rail; mathematical models; *NBSIR 79-1724*.

Model; nebulosity; R Aquarii; spectrum; temperature; density; long-period variable; *19507*.

Model; stability; strain; transformation; criteria; finite; jellium; martensite; *19243*.

Model access; model management; sensitivity analysis; validation; assessment; documentation; econometric models; energy modeling forum; energy models; evaluation; mathematical models; *SP569*.

Model codes; performance levels; regulations; rehabilitation; code provisions; comparison; existing buildings; housing codes; *SP586*, pp. 117-133 (June 1980).

Modeling; oxidation; oxygen; rate constant; atmospheric reactions; combustion; methyl radicals; *19149*.

Modeling; regulatory process; simulation; building codes; building fires; computer-aided design; computer simulation; fire research; human performance; *SP586*, pp. 205-224 (June 1980).

Modeling; solar; testing; computer; energy; heat transfer; hot water; measurement; *19375*.

Modeling; solar; testing; computer; energy; heat transfer; hot water; measurement; *19459*.

Modeling; solar; testing; computer; energy; heat transfer; hot water; measurement; *19498*.

Modeling; standards; standards-writers; systems analysis; building standards; classification; decision tables; information networks; *NBSIR 80-1979*.

Modeling application; fire; fire engineering; fire safety; mathematical modeling; *NBSIR 80-2107*.

Modeling technique; programming; simulation of human behavior; architectural research; building fires; computer-aided design; environmental psychology; fire research; fire safety; human behavior in fires; *NBSIR 80-1982*.

Model interpretation; nuclear reactions; Cr, Fe and  $^{60}\text{Ni}$ ; *SP594*, pp. 168-172 (Sept. 1980).

Model laws and regulations; moisture loss; packaging and labeling; specifications and tolerances; weights and measures; consumer affairs; education; electronic devices; International Organization of Legal Metrology; legal metrology; measurement assurance; metrication; *SP566*.

Modelling; scientific uncertainty; societal decisions; socioscientific problems; theory; time constants; basic research; challenge to the analytical chemist; chemical measurement process; energy; environment; health; *19666*.

Model management; sensitivity analysis; validation; assessment; documentation; econometric models; energy modeling forum; energy models; evaluation; mathematical models; model access; *SP569*.

Model potential; collisions; electron-molecule; exchange potentials; *19747*.

Model potentials; oscillator strengths; relativistic atomic structure; thallium; lifetimes; *19382*.

Model potentials; polar molecules; electron collisions; *19497*.

Models; osmotic coefficient; polyvalent electrolytes; solutions; thermodynamic properties; activity coefficient; correlation; critical evaluation; electrolyte theories; excess Gibbs energy; *19919*.

Models; regulations; additives; diffusion; food additives; indirect additives; migration; *NBSIR 80-1999*.

Model studies; research summaries; fluid mechanics; hydraulic engineering; hydraulic research; hydraulics; hydrodynamics; *SP583*.

Model validation; queue; scheduling policies; simulation model; system performance; workloads; cumulative distribution function; events; hardware configuration; *SP500-65*, pp. 111-128 (Oct. 1980).

Mode scramblers; optical detectors; optical fibers; transfer function; bandwidth; laser diodes; material dispersion; *TN1019*.

Modes of operation; computer security; cryptography; data security; DES; encryption; *NBSIR 80-2019*.

Modifications; recovery efficiency; residential; standby loss; test procedures; water heaters; energy conservation; energy consumption; gas pilot; heat loss; insulation; *NBSIR 79-1783*.

Modifications test procedures; water heaters; energy consumption; energy measurements; heat pump; laboratory tests; *NBSIR 79-1951*.

Modified Gram-Schmidt; pseudoinverse; regression; statistics; test problems; test results; algorithms; curve fitting; least squares; *TN1126*.

Modular coordination; building module; controlling dimensions; coordinating sizes; dimensional coordination; metric building design; metric building products; *19516*.

Modular coordination; standards; building module; dimensional coordination; metric design and construction; *SP595*.

Modular design; system tuning; capabilities; message overhead; *SP500-65*, pp. 319-330 (Oct. 1980).

Modular expansion analysis; performance evaluation; performance modeling; queueing models; queueing networks; approximate queueing models; computer architecture; *SP500-69*.

Modulation; point-contact diodes; reflectometer; return loss; Schottky-barrier diodes; semiconductor diodes; standing-wave ratio (SWR); conversion loss; diode measurement; intermediate-frequency (i-f) output conductance; measurement uncertainties; microwave mixer diodes; *SP400-16*.

Modulus; rubber; shear; bulk modulus; compressibility; finite elasticity; *19886*.

Moisture; roofing; thermal conductance; thermal conductivity; thermal resistance; built-up roofing; insulation; *BSS123*.

Moisture accumulation; nondestructive tests; thermal resistance; built-up roofs; measurement technology; *NBSIR 80-2100*.

Moisture content; residences; retrofit; thermal resistivity; conservation; energy; field survey; insulation; *TN1131*.

Moisture content; syringe calibration; telescopic viewer; volumetric dispensing; water calibration; Karl Fischer titration; *19277*.

Moisture control in attics; attic condensation; attic ventilation; *19445*.

Moisture loss; packaging and labeling; specifications and tolerances; weights and measures; consumer affairs; education; electronic devices; International Organization of Legal Metrology; legal metrology; measurement assurance; metrication; model laws and regulations; *SP566*.

Moisture within wood-frame cavity walls; condensation in walls; effect of moisture on heat transmission; *19147*.

Molar absorptivity (molar absorption coefficient); enzyme activity; *19561*.

Molar intensity ratios; natural gas components; Raman spectroscopic method; spectral line intensity measurements; gas mixture composition; gravimetrically prepared gas mixtures; *19540*.

Mole; precision measurement; atomic masses; fundamental con-

- stants; 19898.
- Molecular anions; polarizability; autodetachment; charge transfer; electron affinity; electron scattering resonances;  $\text{LiF}^-$ ; 19197.
- Molecular binding; neutron reactions; neutron standards; phonons; cross sections; *SP594*, pp. 89-92 (Sept. 1980).
- Molecular calculations;  $\text{N}_2$ ;  $\text{O}_2$ ; spectral moments; three-body contributions; virial coefficients; anisotropic polarizability;  $\text{CO}_2$ ; induced absorption spectra; 19296.
- Molecular charge density; diatomic nitrogen; LCAO  $X\alpha$ ; 19328.
- Molecular clouds; star formation; supernovae; supernova remnants; x rays; dust grains; 19384.
- Molecular constance; spectral shape; coefficient induced dipoles; collision-induced spectra; dielectric virial; intermolecular transactions; 19413.
- Molecular constants; radioastronomy; rotational transitions; formic acid; interstellar molecules; line strengths; microwave spectra; *JPCRD 9*, No. 1, 59-160 (1980).
- Molecular constants; radio astronomy; rotational transitions; interstellar molecules; line strengths; methyl cyanide; microwave spectra; *JPCRD 9*, No. 3, 659-720 (1980).
- Molecular dynamics; neutron; neutron radiography; nondestructive evaluation; nuclear reactor; radiation; activation analysis; crystal structure; diffraction; isotopes; *TN1117*.
- Molecular dynamics; potential of mean force; relative motion of pairs; Smoluchowski's equation; diffusion; Lennard-Jones fluid; liquid rubidium; liquids; 19145.
- Molecular dynamics; radial distribution function; soft spheres; computer simulation; conformal solution theory; mixture; 19538.
- Molecular dynamics; velocity autocorrelation function; density fluctuations; Lennard-Jones liquid; liquid rubidium; liquid state; 19489.
- Molecular dynamics non-equilibrium processes; second sound; shock wave profile; thermal relaxation; argon; computer simulation; Lennard-Jones potential; liquid; 19487.
- Molecular ions; semiconductor mass analysis; field evaporation; 19917.

- Multichannel detectors; nondestructive evaluation; optical; temperature; trace elements; water; Alaskan pipeline; atmospheric chemistry; bare electrodes; *DIM/NBS 64*, No. 9, 1-28 (1980).
- Multichannel R-matrix analyses; nucleon systems; charged-particle reactions; evaluated fusion cross sections; *SP594*, pp. 650-658 (Sept. 1980).
- Multicomponent systems; orthobaric; densities; excess volumes; liquid mixtures; LNG components; 19537.
- Multielement analyses; NBS standard reference materials; spectrophotometry; systematic errors; transmittance accuracy; absorbance accuracy; instrumental standards; method accuracy; 19818.
- Multielement analysis; neutron activation; neutron capture; prompt gamma rays; trace element analysis; instrumental analysis; 19157.
- Multi-element analysis; plasma system; trace element analysis; emission spectroscopy; inductively coupled plasma; instrumental control; 19912.
- Multifrequency; nuclear applications; pattern recognition; reference standards; eddy current; finite element analysis; 19251.
- Multigroup; photon-production; code comparison; ENDF/B-IV; *SP594*, pp. 209-212 (Sept. 1980).
- Multigroup calculation; neutron flux spectra; thorium; time-of-flight; cross section; ENDF/B; keV; LINAC; MeV; *SP594*, pp. 545-547 (Sept. 1980).
- Multigroup cross section libraries; weapons applications; ENDF/B-V; fusion neutronics; LMFBF analysis; LWR shielding and dosimetry; *SP594*, pp. 204-208 (Sept. 1980).
- Multigroup data; neutron propagation; method approximations; *SP594*, pp. 190-193 (Sept. 1980).
- Multilayer analysis; resistivity; sheet resistance; spreading resistance; correction factor; depth profiling; Laplace's equation; local slope analysis; 19703.
- Multilevel; neutron; R-matrix; elastic cross section; inelastic cross section; multichannel; *SP594*, pp. 783-787 (Sept. 1980).
- Multilevel analysis; capture cross section; *SP594*, pp. 155-158 (Sept. 1980).
- Multilevel analysis; neutron total cross section; strength function; fission; level spacing; *SP594*, pp. 707-710 (Sept. 1980).
- Multilevel R-matrix analysis; deduced levels; *SP594*, pp. 496-499 (Sept. 1980).
- Multiphase structure; x-ray fluorescence; chemical profiling; energy dispersive; macrosegregation; monochromatic incident x-ray beam; 19959.
- Multiphoton; photoionization quantum beats; sodium; angular distribution; atomic; hyperfine structure; 19388.
- Multiphoton absorption; nonlinear absorption; two-photon absorption coefficients; *SP568*, pp. 445-455 (July 1980).
- Multiphoton absorption; theory; alkali halides; electron-avalanche breakdown; electron-phonon scattering; Fokker-Planck equation; laser damage; *SP568*, pp. 467-478 (July 1980).
- Multiphoton chemistry; unimolecular reactions; vibrational energy transfer; laser chemistry; laser induced fluorescence; molecular spectroscopy; 19929.
- Multiphoton induced damage; pulse duration dependence of damage; thin films; wavelength dependence of damage; avalanche ionization; film thickness dependence; impurity damage; laser damage; *SP568*, pp. 405-416 (July 1980).
- Multiphoton ionization; avalanche ionization; laser-induced damage; *SP568*, pp. 457-465 (July 1980).
- Multiphoton ionization; bistability; lasers; 19122.
- Multiphoton ionization; photoelectrons; resonance; lasers; 19305.
- Multiphoton ionization; Rabi oscillation; sodium; AC Stark shifts; AC Stark widths; cesium; hydrogen; intermediate resonances; laser pulses; monochromatic; 19159.
- Multi-photon processes; non-stationary processes; resonance fluorescence; strong laser field; time-dependent spectrum; transient spectrum; fluorescence spectrum; laser excitation; 19220.
- Multiphoton processes; vibrational relaxation; diffusion; energy transfer; laser-excited fluorescence; laser-induced chemistry; mass transport; 19179.
- Multiphoton transitions; scattering in a laser field; stimulated bremsstrahlung; 19227.
- Multiple asymptotic expansions; Stokes Phenomenon; WKBJ approximation; Bessel functions; generalized asymptotic expansions; irregular singularities; Liouville-Green approximation; 19379.
- Multiple regression; sensitivity analysis; simultaneous equations; Box-Jenkins; forecasting; *SP500-65*, pp. 215-229 (Oct. 1980).

Multiple scatter; tracklength; charged particle; electron; energy deposition; Monte Carlo; 19273.

Multiple scattering; neutron; scattering; angular distribution; computer programs; corrections; energy distribution; finite geometry; Monte Carlo method; *SP594*, pp. 504-508 (Sept. 1980).

Multiplets; optimization; peak/Compton ratio; simulation; apparatus spectrum; data library; fission products; full energy peak; gamma-ray spectrum; *SP594*, pp. 878-880 (Sept. 1980).

Multiplet table, Ov; oxygen spectra, Ov; spectrum Ov; wavelengths, Ov; atomic energy levels, Ov; atomic spectra, Ov; *NSRDS-NBS3, Section 9*.

Multiplicity spectrum; multisectional detector; alpha-value; *SP594*, pp. 488-490 (Sept. 1980).

Multiplicity spectrum; neutron cross section; secondary radiation; *SP594*, pp. 521-523 (Sept. 1980).

Multiprecision calculations; relative precision; unrestricted arguments; unrestricted ranges; error analysis; exponential function; 19380.

Multiprogramming; operational analysis; optimization; queueing theory; response time; saturation point; throughput rate; load control; *SP500-65*, pp. 207-213 (Oct. 1980).

Multisectional detector; alpha-value; multiplicity spectrum; *SP594*, pp. 488-490 (Sept. 1980).

Municipal attorney; product endorsement; professional liability; variances; appeals process; architect; certification; checklists; code official; consultant; engineer; equivalent life safety; *SP586*, pp. 45-57 (June 1980).

Mussels; polycyclic aromatic hydrocarbons; tissue analyses; aliphatic hydrocarbons; aromatic hydrocarbons; gas chromatography; hydrocarbons; interlaboratory comparison; liquid chromatography; mass spectrometry; 19841.

## N

Na; superelastic; electron heating; electron seeding; gas breakdown; laser ionization; 19779.

NaCl; nanosecond pulse; surface damage; alkali halides; CO<sub>2</sub> laser; KCl; laser damage; laser fusion; *SP568*, pp. 209-227 (July 1980).

NaCl; plate gage; reduction in area; slow strain rate technique; strain rate; stress corrosion cracking; 2124-T851; 7075; 7075-T6; 7075-T7351; air; alternate immersion test; aluminum alloys; ductility; elongation; heat treatment; 19622.

Na cross-section adjustment; sodium propagation experiments; *SP594*, pp. 194-198 (Sept. 1980).

NaI detector; excited states; *SP594*, pp. 509-511 (Sept. 1980).

NaI detector; nondestructive assay; real-time accountability; glovebox filter; in-line holdup monitor; *SP582*, pp. 308-312 (June 1980).

Nanosecond pulse; surface damage; alkali halides; CO<sub>2</sub> laser; KCl; laser damage; laser fusion; NaCl; *SP568*, pp. 209-227 (July 1980).

Naphthalene homologues; octanol/water; organic pollutants; partition coefficients; fluorimetry; 19926.

Narrow band laser; Nd:YAG pump; pulsed laser; tunable laser; CW injection; laser; 19266.

Narrow fractions; polydispersity; recycle GPC; recycle liquid size chromatography; anionic polystyrenes; column spreading; GPC; liquid size exclusion chromatography; 19426.

National Bureau of Standards; abstracting and indexing services; abstracts; indexes; *NBSIR 80-2009*.

National Bureau of Standards; paper; paperboard; TAPPI; test methods; Youden graphical analysis; collaborative reference programs; history; interlaboratory testing program; laboratory evaluation; 19321.

National Bureau of Standards; photomasking; resistivity; second breakdown; semiconductors; test structures; thermal resistance; very large scale integration; VLSI; wire bonds; Department of Commerce; integrated circuits; metrology for semiconductors; *NBSIR 80-2057*.

National government; representations and codes; standards; statistical data; ADP standards; computers; data elements and codes; data processing; Federal Information Processing Standards; geography; information processing standards; information systems; *FIPS PUB 6-3*.

National Measurement Laboratory; nondestructive evaluation; nuclear measurement technology; physics research; radiation research; recycled materials; standard reference data; standard reference materials; technical activities; thermodynamics; absolute and physical quantities; *SP572*.

Natural fission reactor; temperature; age of deposit; duration; fission products; fluence; Gabon; *SP594*, pp. 909-915 (Sept. 1980).

Natural gamma radiation; neutron activation analysis; neutron inelastic scattering; nuclear cross sections; nuclear reactors; radiative neutron capture; reaction interferences; scattered gamma radiation; XRF analysis. <sup>252</sup>Cf; *SP594*, pp. 615-626 (Sept. 1980).

Natural gas components; nitrogen-methane mixtures; PVTx properties measurements; equation of state; extended corresponding states; extended critical region; mathematical model; 19782.

Natural gas components; Raman spectrometric method; spectral line intensity measurements; gas mixture composition; gravimetrically prepared gas mixtures; molar intensity ratios; 19540.

Natural language; Petri net; state diagram; action table; computer program; finite automata; formal description technique; graphs; *NBS-GCR-80-247*.

Natural materials; nondestructive assay; particles; quality assurance; radiation; radioactivity; radiochemical assay; radionuclide; segregation; standard; calibration; environments; homogeneity; 19298.

Natural radiocarbon; small gas proportional and liquid scintillation counters; atmospheric pollutants; figure of merit; low-level counting; 19677.

Navigation; accelerometers; gravimeters; gravitation; gyroscope; levitation; 19397.

Navigation; oscillator; ranging; resonators; superconductivity; aerospace; frequency standards; high-Q cavities; 19586.

Navigation; precise time; precision oscillators; atomic clocks; communications; 19439.

NBS crystal data center; user evaluation; computer dissemination; crystal data; identification; materials analysis; materials design; *TN1112*.

NBS library; NBS periodicals; periodicals; proceedings; serials; standards; transactions; annual reports; diffusion in metals; fire; journals; library holdings; *NBSIR 79-1932*.

NBS periodicals; periodicals; proceedings; serials; standards; transactions; annual reports; diffusion in metals; fire; journals; library holdings; NBS library; *NBSIR 79-1932*.

NBS publications; publications; abstracts; key words; *SP305. Supplement 11*.

NBS-SRM 1571 Orchard Leaves; automated borate fusion; botanical samples; energy-dispersive x-ray spectrometry; 19083.

NBS standard graphite chambers; open-air geometry; reentrant chamber; exposure standard; iridium-192 seeds; *J. Res. 85*, No. 1, 19-25 (Jan.-Feb. 1980).

NBS standard reference materials; SRM 1567, Wheat Flower; SRM 1568, Rice Flower; trace element nutrients; environmental trace elements; 19570.

NBS standard reference materials; spectrophotometry; systematic errors; transmittance accuracy; absorbance accuracy; instrumental standards; method accuracy; multielement analyses; 19818.

NC machining; NC programming; numerical control; part programming; APT; automation; computer aided manufacturing; *NBSIR 80-2073*.

- Neutron activation; neutron capture; prompt gamma rays; trace element analysis; instrumental analysis; multielement analysis; *19157*.
- Neutron activation analysis; neutron inelastic scattering; nuclear cross sections; nuclear reactors; radiative neutron capture; reaction interferences; scattered gamma radiation; XRF analysis.  $^{252}\text{Cf}$ ; metal exploration; *SP594*, pp. 615-626 (Sept. 1980).
- Neutron activation analysis; nondestructive assay (NDA); safeguards; accountability in fabrication of reactor fuel; active neutron interrogation; material control; *SP582*, pp. 276-307 (June 1980).
- Neutron activation analysis; phosphorus density; photometric technique; silicon; Hall effect; junction C-V measurements; *19431*.
- Neutron activation analysis; Rutherford backscattering; standards; accuracy and precision; gold films; gravimetry; *19944*.
- Neutron and photon transport; processed cross-section library; prompt and delayed nuclear activities; ENDF/B-IV; *SP594*, pp. 213-216 (Sept. 1980).
- Neutron angular distributions; preequilibrium and equilibrium components; exciton model; master equations; *SP594*, pp. 796-799 (Sept. 1980).
- Neutron calculations; neutron precursors; neutron yields; ENDF/B-V data; *SP594*, pp. 800-803 (Sept. 1980).
- Neutron capture; neutron strength functions; photon strength functions; average resonance capture; gamma-ray spectra; *SP594*, pp. 936-946 (Sept. 1980).
- Neutron capture; prompt gamma rays; trace element analysis; instrumental analysis; multielement analysis; neutron activation; *19157*.
- Neutron capture cross sections; solar Kr abundance; s-process systematics; *SP594*, pp. 857-862 (Sept. 1980).
- Neutron capture data; cross section measurements; *SP594*, pp. 163-167 (Sept. 1980).
- Neutron cross section; secondary radiation; multiplicity spectrum; *SP594*, pp. 521-523 (Sept. 1980).
- Neutron cross-section calculations; preequilibrium; coupled-channel methods; Hauser-Feshbach; *SP594*, pp. 333-335 (Sept. 1980).
- Neutron cross sections; neutron spectra; actinide burn-up; fusion pellets; *SP594*, pp. 360-363 (Sept. 1980).
- Neutron cross sections; nuclear clocks; stellar processes; *SP594*, pp. 627-633 (Sept. 1980).
- Neutron cross-sections; optical model; resonances; statistical model; evaluation; *SP594*, pp. 872-876 (Sept. 1980).
- Neutron cross sections; prebuncher; pulsed neutron source; time-of-flight; computers; data acquisition; electron linac; gas scintillator; inelastic neutron scattering; majority logic; *SP594*, pp. 929-935 (Sept. 1980).
- Neutron cross sections; spectrum analysis; *SP594*, pp. 43-47 (Sept. 1980).
- Neutron depth dose; neutron radiotherapy; radiobiology; uncertainties; cross sections; *SP594*, pp. 440-446 (Sept. 1980).
- Neutron detector; neutron flux monitor; neutron standards; uranium-235 fission cross section; absolute fission cross section; *SP594*, pp. 966-970 (Sept. 1980).
- Neutron detectors; portal monitors; radiation detectors; SNM monitors; ZPPR; IAEA safeguards; *SP582*, pp. 365-371 (June 1980).
- Neutron diffraction; octahedral distortions; powder method; rutile-type compounds;  $\beta\text{-PbO}_2$ ; *19812*.
- Neutron diffraction; phase transitions; x-ray diffraction; ammonium nitrate; crystal structure; hydrogen bonding; *19897*.
- Neutron diffraction; protein structure; ribonuclease-A; structure refinement; atomic models; flat-cone geometry; *19808*.
- Neutron diffraction; x-ray diffraction; crystal structure; heteropoly complexes; hydrogen bonds; molybdoarsenate; *19846*.
- Neutron dosimetry; absorbed dose; biology and medicine; kerma factors; *19599*.
- Neutron dosimetry; nuclear activation cross sections; displacement damage; *SP594*, pp. 812-816 (Sept. 1980).
- Neutron dosimetry; radiation damage; radioactivity; reactors; cross sections; fission; fusion; *SP594*, pp. 285-296 (Sept. 1980).
- Neutron dosimetry; stopping power ratios; tissue equivalence; ionization chambers; kerma; *SP594*, pp. 447-455 (Sept. 1980).
- Neutron emission spectra; nuclear model codes; ENDF/B-V; *SP594*, pp. 765-769 (Sept. 1980).
- Neutron flux; review; standard cross section; *SP594*, pp. 720-727 (Sept. 1980).
- Neutron flux monitor; neutron standards; uranium-235 fission cross section; absolute fission cross section; neutron detector; *SP594*, pp. 966-970 (Sept. 1980).
- Neutron flux spectra; thorium; time-of-flight; cross section; ENDF/B; keV; LINAC; MeV; multigroup calculation; *SP594*, pp. 545-547 (Sept. 1980).
- Neutron heating; neutron transport; radiation damage; tritium breeding; activation; dosimetry; fusion; *SP594*, pp. 228-238 (Sept. 1980).
- Neutron imaging techniques; pinhole camera; position-sensitive proportional counter; eV neutron energy; *19383*.
- Neutron-induced; systematics; fission cross sections; MeV range; *19553*.
- Neutron inelastic scattering; nuclear cross sections; nuclear reactors; radiative neutron capture; reaction interferences; scattered gamma radiation; XRF analysis.  $^{252}\text{Cf}$ ; metal exploration; natural gamma radiation; *SP594*, pp. 615-626 (Sept. 1980).
- Neutron inelastic scattering; Raney nickel; vibrational spectrum; catalyst; chemisorbed  $\text{C}_2\text{H}_4$ ; *19573*.
- Neutron interrogation; nondestructive assay; nuclear fuel subassembly; nuclear safeguards; process control; spent nuclear fuel; assay accuracy; calculations; criticality control; material accountability; measurements; *SP582*, pp. 447-456 (June 1980).
- Neutron interrogation; safeguards; calorimetry; gamma-ray spectrometry; *SP594*, pp. 364-367 (Sept. 1980).
- Neutron interrogation; special nuclear material; inventory control; *SP582*, pp. 372-390 (June 1980).
- Neutron multiplicity; proton-recoil detector; fission; large liquid scintillator; *SP594*, pp. 728-732 (Sept. 1980).
- Neutron nuclear data evaluations; capture; fission; *SP594*, pp. 464-468 (Sept. 1980).
- Neutron parameters; transmission measurements; Cm isotopes; fast chopper; *SP594*, p. 908 (Sept. 1980).
- Neutron physics; neutron radiography; neutrons; bremsstrahlung; electron beams; linear accelerator; *19373*.
- Neutron physics; neutron radiography; neutrons; bremsstrahlung; electron beams; linear accelerator; *SP594*, pp. 531-533 (Sept. 1980).
- Neutron precursors; neutron yields; ENDF/B-V data; neutron calculations; *SP594*, pp. 800-803 (Sept. 1980).
- Neutron propagation; method approximations; multigroup data; *SP594*, pp. 190-193 (Sept. 1980).
- Neutron radiography; neutrons; bremsstrahlung; electron beams; linear accelerator; neutron physics; *19373*.
- Neutron radiography; neutrons; bremsstrahlung; electron beams; linear accelerator; neutron physics; *SP594*, pp. 531-533 (Sept. 1980).
- Neutron radiography; nondestructive assay; nondestructive evaluation; position-sensitive proportional counter; epithermal neutrons; *19847*.
- Neutron radiography; nondestructive assay; nondestructive evaluation; position-sensitive proportional counter; epithermal neutron energy; *SP594*, pp. 436-439 (Sept. 1980).
- Neutron radiography; nondestructive assay; position-sensitive proportional counter; uranium; epithermal neutron energy; *SP582*, pp. 86-92 (June 1980).
- Neutron radiography; nondestructive evaluation; nuclear reactor; radiation; activation analysis; crystal structure; diffraction; isotopes; molecular dynamics; neutron; *TN1117*.

- Neutron radiotherapy; radiobiology; uncertainties; cross sections; neutron depth dose; *SP594*, pp. 440-446 (Sept. 1980).
- Neutron reactions; neutron standards; phonons; cross sections; molecular binding; *SP594*, pp. 89-92 (Sept. 1980).
- Neutron reactions; neutron time-of-flight; vibration; cross section; molecules; *SP594*, pp. 93-96 (Sept. 1980).
- Neutron reactions;  $^{235}\text{U}$ ; Doppler effect; fission; gas target; molecular vibrations; *19146*.
- Neutron resonance; radioactive isotopes; *SP594*, pp. 881-885 (Sept. 1980).
- Neutron resonances; polarized neutrons and nuclei; pulsed neutron source; IBR-2 reactor; isomeric shift; *SP594*, pp. 385-393 (Sept. 1980).
- Neutrons; bremsstrahlung; electron beams; linear accelerator; neutron physics; neutron radiography; *19373*.
- Neutrons; bremsstrahlung; electron beams; linear accelerator; neutron physics; neutron radiography; *SP594*, pp. 531-533 (Sept. 1980).
- Neutrons; nondestructive assay; plutonium waste; safeguards; uranium waste; verification; counter; estimates; gamma rays; *SP582*, pp. 622-632 (June 1980).
- Neutrons; nondestructive evaluations; nuclear fuel; oyster tissue; SRMs; weights and measures; acoustic emission; additive migration; bond energies; *DIM/NBS 64*, No. 4, 1-28 (1980).
- Neutrons; nuclear heating; photon dose rate; photons; shielding; fusion; neutral beam injection; *SP594*, pp. 239-245 (Sept. 1980).
- Neutrons; oxygen; total cross sections; 0.5-60 MeV; carbon; hydrogen; iron; *SP594*, pp. 34-38 (Sept. 1980).
- Neutrons; radiography; reactor fuel subassemblies; resonance neutrons; thermal neutrons; three-dimensional radiography; fast neutrons; laminagraphy; *19214*.
- Neutrons; secondary charged particles; tissue-equivalent gas; dosimetry; energy per ion pair; kerma; *19331*.
- Neutrons; single-crystal; Weissenberg methods; x rays; absorption correction; diffractometers; flat-cone; macromolecules; *19509*.
- Neutrons; sodium; cross sections; evaluation; *SP594*, pp. 58-62 (Sept. 1980).
- Neutron scattering; new instruments and methods; nondestructive testing; residual stress; small-angle; texture determination; materials microstructure; *19811*.
- Neutron scattering; nitromethane; quantum tunnelling; x-ray scattering; methyl group; molecular reorientation; *19810*.
- Neutron scattering; nitromethane; quantum tunnelling; x-ray scattering; methyl group; molecular reorientation; *19809*.
- Neutron scattering; phonon; alloy; elastic constants; interstitial defect; metal hydride; *19613*.
- Neutron scattering; physics; rare earths; solid state spin waves; laves-phase; magnetism; *19616*.
- Neutron scattering; polymer solutions; light scattering; *19834*.
- Neutron scattering; profile refinement; rare-earth compounds; atomic ordering; iron-manganese compounds; nearest neighbor distances; *19757*.
- Neutron scattering; rare earth; small angle scattering; superconductivity; crystal field; magnetic superconductors; *19255*.
- Neutron scattering; rare earth compounds; spin excitations; crystal fields; exchange interaction; magnetism; *19256*.
- Neutron scattering; rare earth compounds; spin excitations; crystal fields; exchange interaction; magnetism; *19604*.
- Neutron scattering; rare earth-iron intermetallics; sublattice magnetization; hydrides; Laves-phase; *19617*.
- Neutron scattering; rare earths; spin waves; crystal fields; inelastic scattering; magnetism; *19630*.
- Neutron scattering; rare earths; structural properties; amorphous alloys; magnetism; metallic glasses; *19113*.
- Neutron scattering; reentrant superconductor; Chevrel phase; crystal fields; Laves-phase; magnetic superconductor; *19629*.
- Neutron scattering; structure; vibration spectrum; hydride; interstitial holes; metallic glass; *19606*.
- Neutron scattering phase transition; rare earth; crystal field effects; ferromagnet; magnetic superconductor; *19258*.
- Neutron source shapes; nuclear data; nuclear logging; radiation transport; *SP594*, pp. 599-603 (Sept. 1980).
- Neutron spectra; actinide burn-up; fusion pellets; neutron cross sections; *SP594*, pp. 360-363 (Sept. 1980).
- Neutron spectra; radiation transport; gamma ray spectra; integral experiments; *SP594*, pp. 596-598 (Sept. 1980).
- Neutron spectrum; proton-recoil; 2DB; calculated neutron spectrum; fast breeder blanket facility; fast reactor; *SP594*, pp. 568-571 (Sept. 1980).
- Neutron spectrum; sample perturbation; actinide recycle; cross section evaluation; fast critical facility; fast reactor; integral experiment; least square fitting; *SP594*, pp. 552-556 (Sept. 1980).
- Neutron spectrum; sensitivity coefficient; time-of-flight; transport calculation; group constants; *SP594*, pp. 265-274 (Sept. 1980).
- Neutron standards; phonons; cross sections; molecular binding; neutron reactions; *SP594*, pp. 89-92 (Sept. 1980).
- Neutron standards; uranium-235 fission cross section; absolute fission cross section; neutron detector; neutron flux monitor; *SP594*, pp. 966-970 (Sept. 1980).
- Neutron strength functions; photon strength functions; average resonance capture; gamma-ray spectra; neutron capture; *SP594*, pp. 936-946 (Sept. 1980).
- Neutron time-of-flight; vibration; cross section; molecules; neutron reactions; *SP594*, pp. 93-96 (Sept. 1980).
- Neutron total cross section; strength function; fission; level spacing; multilevel analysis; *SP594*, pp. 707-710 (Sept. 1980).
- Neutron transmission; thorium; total cross section; blanket; GCFR; integral experiment; *SP594*, pp. 122-124 (Sept. 1980).
- Neutron transmutation doped silicon; power-device grade silicon; resistivity variations; silicon; spreading resistance measurements; thermally stimulated measurements; thyristor materials measurements; thyristor measurements; zinc oxide varistors; dc transmission; *NBSIR 80-2061*.
- Neutron transmutation doping; power device materials; radiation damage; silicon; thyristors; defects; *SP400-60*.
- Neutron transport; radiation damage; tritium breeding; activation; dosimetry; fusion; neutron heating; *SP594*, pp. 228-238 (Sept. 1980).
- Neutron transport; shielding; bias factors; *SP594*, pp. 275-284 (Sept. 1980).
- Neutron yield;  $\text{Ta}(p, xn)$ ; intranuclear cascade predictions; *SP594*, pp. 413-416 (Sept. 1980).
- Neutron yield analysis; spallation; evaporation; fission; high energy proton; *SP594*, pp. 417-421 (Sept. 1980).
- Neutron yields; ENDF/B-V data; neutron calculations; neutron precursors; *SP594*, pp. 800-803 (Sept. 1980).
- New instruments and methods; nondestructive testing; residual stress; small-angle; texture determination; materials microstructure; neutron scattering; *19811*.
- New laser lines; relative intensity; relative polarization;  $\text{CH}_2\text{DOH}$ ;  $\text{CO}_2$  laser; FIR laser; laser frequency measurement; *19460*.
- Newton-Raphson iteration method; nonlinear load; time-domain measurements; time-stepping finite-difference technique; transient; traveling-wave antenna; fast Fourier transform; linear load; *19466*.
- New  $^{12}\text{CH}_3\text{OH}$  laser lines; optically pumped FIR lasers; relative power output of  $\text{CH}_3\text{OH}$  laser lines; carbon dioxide laser; laser frequency measurements; *19719*.

- Nondestructive assay; plutonium waste; safeguards; uranium waste; verification; counter; estimates; gamma rays; neutrons; *SP582*, pp. 622-632 (June 1980).
- Nondestructive assay; position-sensitive proportional counter; uranium; epithermal neutron energy; neutron radiography; *SP582*, pp. 86-92 (June 1980).
- Nondestructive assay; precision; random driver; stability; uranium; calibration; coincidence counter; neutron; *SP582*, pp. 201-220 (June 1980).
- Nondestructive assay; real-time accountability; glovebox filter; in-line holdup monitor; NaI detector; *SP582*, pp. 308-312 (June 1980).
- Nondestructive assay; uranium reference material; interlaboratory evaluation program; *SP582*, pp. 25-33 (June 1980).
- Nondestructive assay (NDA); safeguards; accountability in fabrication of reactor fuel; active neutron interrogation; material control; neutron activation analysis; *SP582*, pp. 276-307 (June 1980).
- Nondestructive evaluation; normal modes; orthopedic implants; piezoelectric polymer; plastics; vibrations; mechanical integrity; 19952.
- Nondestructive evaluation; nuclear measurement technology; physics research; radiation research; recycled materials; standard reference data; standard reference materials; technical activities; thermodynamics; absolute and physical quantities; analytical chemistry; *SP572*.
- Nondestructive evaluation; nuclear reactor; radiation; activation analysis; crystal structure; diffraction; isotopes; molecular dynamics; neutron; neutron radiography; *TN1117*.
- Nondestructive evaluation; optical; temperature; trace elements; water; Alaskan pipeline; atmospheric chemistry; bare electrodes; multichannel detectors; *DIM/NBS* **64**, No. 9, 1-28 (1980).
- Nondestructive evaluation; optics; penetrants; radiography; ultrasonics; acoustic emission; eddy currents; imaging; leakage testing; magnetism; material parameters; *NBSIR* **80-2162**.
- Nondestructive evaluation; piping; pressure vessels; product liability; pumps and valves; standards; statistical modeling; welding; ASME Boiler Code; data; fabrication; failure analysis; fatigue; fracture; materials science; *SP588*.
- Nondestructive evaluation; position-sensitive proportional counter; epithermal neutron energy; neutron radiography; nondestructive assay; *SP594*, pp. 436-439 (Sept. 1980).
- Nondestructive evaluation; position-sensitive proportional counter; epithermal neutrons; neutron radiography; nondestructive assay; 19847.
- Nondestructive evaluation; radiography; traceability; ultrasonics; visual testing; acoustic emission; calibration; eddy currents; magnetic particles; *NBSIR* **80-2109**.
- Nondestructive evaluations; nuclear fuel; oyster tissue; SRMs; weights and measures; acoustic emission; additive migration; bond energies; neutrons; *DIM/NBS* **64**, No. 4, 1-28 (1980).
- Nondestructive isotopic analysis; plutonium safeguards; gamma-ray spectrometry; *SP582*, pp. 555-567 (June 1980).

- Nondestructive measurements; nuclear materials; reference materials; traceability; destructive; *SP582*, pp. 1-14 (June 1980).
- Nondestructive measurements; on-line real-time measurements; plutonium concentration and isotopics determinations; reprocessing plant process control; uranium; x-ray fluorescence analysis; accountability; computer-based system; *SP582*, pp. 584-601 (June 1980).
- Nondestructive testing; brass; copper; hardness testing; Knoop; microhardness; *19849*.
- Nondestructive testing; pulsed mode; rail test car; railroad rail; sensitivity; ultrasonic inspection; coupling; magnetic inspection; *19885*.
- Nondestructive testing; radiography; sensitivity; standards; ultrasonics; calibration; image quality indicator; *19877*.
- Nondestructive testing; radiography; signal processing; tomography; ultrasonics; automated testing; continuous monitoring; *19475*.
- Nondestructive testing; radiography; standards and ultrasonics; calibration; international; *19879*.
- Nondestructive testing; radiography; three-dimensional radiography; tomography; x-ray laser; computerized axial tomography; Fresnel zone; holographic reconstruction; imaging; laminagraphy; *19855*.
- Nondestructive testing; residual stress; small-angle; texture determination; materials microstructure; neutron scattering; new instruments and methods; *19811*.
- Nondestructive testing; residual stress; ultrasonics; velocity; attenuation; defect characterization; flaws; materials characterization; *SP596*.
- Nondestructive tests; semiconductor; tape bonded devices; acoustic emission; beam lead devices; electronic devices; hermeticity; hybrids; *19108*.
- Nondestructive tests; thermal resistance; built-up roofs; measurement technology; moisture accumulation; *NBSIR 80-2100*.
- Nonequilibrium; one-dimensional harmonic crystal; random matrix products; steady state; thermal conductivity; energy current; isotopic disorder; *19873*.
- Nonequilibrium molecular dynamics; Van der Waals I theory; viscosity; computer simulation; conformal solution theory; mixing rules; mixture; *19180*.
- Nonequilibrium perturbation theory; perturbation theory; soft spheres; transport coefficients; Boltzmann equation; collision integral; dilute gas; kinetic perturbation theory; kinetic theory; *19866*.
- Nonequilibrium phenomena; phonon-trapping; quasiparticle; superconductor; acoustic mismatch; effective recombination time; *19240*.
- Nonequilibrium superconductivity; quasiparticle injection; superconducting tunnel junction; superconducting weak link; controllable weak link; cryoelectronic; Josephson effect; *19416*.
- Nonisothermal kinetics; thermal analysis; activation energy; competitive reactions; complex reactions; heating rate; independent reactions; kinetics; lifetime prediction; *19267*.
- Nonlinear; simple materials; tensile test; viscoelastic bars; instability; necking; *19746*.
- Nonlinear absorption; two-photon absorption coefficients; multiphoton absorption; *SP568*, pp. 445-455 (July 1980).
- Nonlinear differential equation; nonlinear load; time-stepping finite difference equation technique; Auger function; electrically-short dipole; iteration method; *19449*.
- Nonlinear differential equations; resistivity; spreading resistance; continuum model; correction factor; Laplace's equation; *19796*.
- Non-linear least squares; peak resolution; PICO; empirical peak shape; gamma-ray spectrum fitting; intercomparison of computational methods; International Atomic Energy Agency; longrange interpolation; *19127*.
- Nonlinear load; time-domain measurements; time-stepping finite-difference technique; transient; traveling-wave antenna; fast Fourier transform; linear load; Newton-Raphson iteration method; *19466*.
- Nonlinear load; time-stepping finite difference equation technique; Auger function; electrically-short dipole; iteration method; *19449*.
- Nonlinear model; phase spectrum transformation; spectrum; VOR aircraft navigation system; white noise; Fourier coefficients; linear model; *TN1021*.
- Nonlinear optics; piezo-optics; planar waveguides; thermo-optics; thin films; ultraviolet; fiber optics; graded index materials; infrared; magneto-optics; *SP574*.
- Nonlinear optics; visible frequencies; 1.15  $\mu\text{m}$ ; frequency; He-Ne laser; *19709*.
- Nonlinear refractive index; self-focusing; Abbe value; coolant; index-matching liquids; *SP568*, pp. 91-98 (July 1980).
- Nonlinear regression analysis; adsorption isotherms; energy distribution functions; Jovanovich equation; Langmuir equation; monomolecular adsorption; *19771*.
- Nonlinear resistors; semiconductors; surge arresters; varistors; voltage-variable resistors; zinc oxide; electrically conducting ceramics; electrical transmission; lightning arresters; *NBSIR 79-1939*.
- Non-linear spectroscopy; phase conjugate spectroscopy; saturation spectroscopy; four-wave mixing; heterodyne spectroscopy; iodine spectroscopy; *19287*.
- Non-linear spectroscopy; saturated absorption; saturation spectroscopy; Doppler-free spectroscopy; high-resolution spectroscopy; laser spectroscopy; *19288*.
- Nonlinear spectroscopy; ultra resolution laser spectroscopy; hyperfine structure; methane; *19225*.
- Nonlinear viscoelasticity; normal stresses; poly(methyl methacrylate); shear stresses; BKZ theory; mechanical conditioning; *19707*.
- Non-linear viscoelasticity; normal stresses; PIB; PMMA; poly(isobutylene); poly(methyl methacrylate); time dependent behavior; BKZ theory; *19672*.
- Nonlocal and coupled channel descriptions; optical model analysis;  $\text{Th}(n,n)$ ; total and inelastic cross sections; local; *SP594*, pp. 711-714 (Sept. 1980).
- Nonmetallics; review; stainless steel; superconductors; alloys; magnets; materials; *19190*.
- Non-peptide impurities; peptide hormones; angiotensin I; high resolution liquid chromatography; *19496*.
- Non-stationary processes; resonance fluorescence; strong laser field; time-dependent spectrum; transient spectrum; fluorescence spectrum; laser excitation; multi-photon processes; *19220*.
- Nonstoichiometry; structural considerations; twinning; computer assessment; crystal structures; epitaxy; inter-layerings; *J. Res.* 85, No. 5, 347-362 (Sept.-Oct. 1980).
- Nonuniform fields; pipe flow; fringing fields; magnetohydrodynamics, MHD; *19050*.
- Normal coordinate analysis; photodissociation; ultraviolet spectrum; CO; discharge sampling; F-atom reactions; FCO;  $\text{F}_2\text{CO}$ ; infrared spectrum; matrix isolation;  $\text{NF}_3$ ; *19393*.
- Normalization uncertainties; shape evaluation; alpha counting; *SP594*, pp. 483-487 (Sept. 1980).
- Normalized Gaussian function; photo-peak area determination; photo-peaks data; data analysis; summation method; least squares fitting; *19132*.
- Normal mode calculations; numerical methods; polymer review; Raman and infrared spectroscopy; conformationally irregular polymers; Green's functions; molecular vibrations; *19713*.
- Normal modes; orthopedic implants; piezoelectric polymer; plastics; vibrations; mechanical integrity; nondestructive evaluation; *19952*.
- Normal-phase HPLC; polycyclic aromatic hydrocarbons (PAH); retention data; reverse-phase HPLC; air particulates; high performance liquid chromatography (HPLC); *19547*.
- Normal spectral emittance; palladium; radiance temperature; dynamic measurements; high temperature; melting; *19063*.
- Normal stresses; PIB; PMMA; poly(isobutylene); poly(methyl methacrylate); time dependent behavior; BKZ theory; non-

- linear viscoelasticity; 19672.
- Normal stresses; poly(methyl methacrylate); shear stresses; BKZ theory; mechanical conditioning; nonlinear viscoelasticity; 19707.
- Normal vibrations; polyatomic molecules; Raman spectra; vibrational frequencies; force constants; fundamental frequencies; infrared spectra; *JPCRD* 9, No. 4, 1149-1254 (1980).
- NRC Safeguards; special nuclear material; analyses; destructive; nondestructive assay; *SP582*, pp. 189-191 (June 1980).
- N-scattering; optical potential; (p,p) and (p,n) reactions; isobaric analog; *SP594*, pp. 311-314 (Sept. 1980).
- Nuclear activation cross sections; displacement damage; neutron dosimetry; *SP594*, pp. 812-816 (Sept. 1980).
- Nuclear applications; pattern recognition; reference standards; eddy current; finite element analysis; multifrequency; 19251.
- Nuclear clocks; stellar processes; neutron cross sections; *SP594*, pp. 627-633 (Sept. 1980).
- Nuclear compressibility; nuclear shock waves; relativistic field theory; cascade calculations; heavy ion collision; Monte Carlo method; 19441.
- Nuclear cross sections; nuclear reactors; radiative neutron capture; reaction interferences; scattered gamma radiation; XRF analysis.  $^{252}\text{Cf}$ ; metal exploration; natural gamma radiation; neutron activation analysis; *SP594*, pp. 615-626 (Sept. 1980).
- Nuclear cross sections; reactors; standards; technology; biomedical; conference; fission; fusion; *SP594*.
- Nuclear data; fast breeders; *SP594*, pp. 6-17 (Sept. 1980).
- Nuclear data; nuclear data evaluation; nuclear data measurements; *SP594*, pp. 634-638 (Sept. 1980).
- Nuclear data; nuclear logging; radiation transport; neutron source shapes; *SP594*, pp. 599-603 (Sept. 1980).
- Nuclear data; optical potential parameter; relative measurement; simultaneous evaluation; absolute measurement; consistency; fission cross section; JENDL-2; *SP594*, pp. 715-719 (Sept. 1980).
- Nuclear data evaluation; nuclear data measurements; nuclear data; *SP594*, pp. 634-638 (Sept. 1980).
- Nuclear data evaluation; nuclear model codes; nuclear reaction theory; *SP594*, pp. 639-649 (Sept. 1980).
- Nuclear data measurements; nuclear data; nuclear data evaluation; *SP594*, pp. 634-638 (Sept. 1980).
- Nuclear data needs; thorium reactor introduction; thorium reactors; advanced converters; denatured uranium-thorium fuel cycles; fuel cycles; *SP594*, pp. 108-114 (Sept. 1980).
- Nuclear data needs for FMIT; *SP594*, pp. 817-820 (Sept. 1980).
- Nuclear-decay data; radioactivity; random error; systematic error; weighting factors; data evaluation; 19407.
- Nuclear detonations; nuclear war; radiation shielding; civil defense; fallout protection; gamma-ray shielding; *SP570*.
- Nuclear-evaporation model; radioactivity; comparisons to  $^{235}\text{U}(n,f)$  and  $^{252}\text{Cf}(sf)$ ; experimental prompt neutron spectra; fermi-gas model; *SP594*, pp. 788-792 (Sept. 1980).
- Nuclear fuel; oyster tissue; SRMs; weights and measures; acoustic emission; additive migration; bond energies; neutrons; nondestructive evaluations; *DIM/NBS* 64, No. 4, 1-28 (1980).
- Nuclear fuel element; paper; quantitative microscopy; size effect; solid mechanics; statistical methods; steel; fatigue; fracture; mathematical modeling; micromechanics; microstructure; 19086.
- Nuclear fuel pellets; safeguards/accountability; automated fuel fabrication equipment; *SP582*, pp. 342-364 (June 1980).
- Nuclear fuel subassembly; nuclear safeguards; process control; spent nuclear fuel; assay accuracy; calculations; criticality control; material accountability; measurements; neutron interrogation; nondestructive assay; *SP582*, pp. 447-456 (June 1980).
- Nuclear heating; photon dose rate; photons; shielding; fusion; neutral beam injection; neutrons; *SP594*, pp. 239-245 (Sept. 1980).
- Nuclear levels; nuclear reactions; nuclear structure data; radioactivity; reaction gamma rays; ENSDF; evaluation; *SP594*, pp. 659-661 (Sept. 1980).
- Nuclear logging; radiation transport; neutron source shapes; nuclear data; *SP594*, pp. 599-603 (Sept. 1980).
- Nuclear magnetic; diffusion; hydride; hydrogen; lanthanum; nickel; 19229.
- Nuclear magnetic resonance; polymers; butane; diffusion; experimental methods; migration; molecular transport; 19906.
- Nuclear material; physical inventory; inventory taking; *SP582*, pp. 221-233 (June 1980).
- Nuclear material accounting; referee measurement methods; robust statistical methods; systematic error. robust statistical methods; item-dependent error; measurement error; 19332.
- Nuclear material measurements; precision; research and development; safeguards; accuracy; bulk measurements; material control and accounting; nondestructive assay; 19705.
- Nuclear materials; reference materials; traceability; destructive; nondestructive measurements; *SP582*, pp. 1-14 (June 1980).
- Nuclear materials; safeguards; inventory verification; measurement of inventory; *SP582*, pp. 178-188 (June 1980).
- Nuclear materials processing; nuclear safeguards; volume calibration; volumetric test measures; accountability tanks; differential pressure gage; 19053.
- Nuclear measurement technology; physics research; radiation research; recycled materials; standard reference data; standard reference materials; technical activities; thermodynamics; absolute and physical quantities; analytical chemistry; chemistry research; *SP572*.
- Nuclear methods in agriculture; nuclear methods in medicine; oil well logging; *SP594*, pp. 429-431 (Sept. 1980).
- Nuclear methods in medicine; oil well logging; nuclear methods in agriculture; *SP594*, pp. 429-431 (Sept. 1980).
- Nuclear model codes; ENDF/B-V; neutron emission spectra; *SP594*, pp. 765-769 (Sept. 1980).
- Nuclear model codes; nuclear reaction theory; nuclear data evaluation; *SP594*, pp. 639-649 (Sept. 1980).
- Nuclear models; fitted thick target yield; *SP594*, pp. 820-823 (Sept. 1980).
- Nuclear orientation; thermometry;  $^{60}\text{CoCo}$   $\gamma$ -ray anisotropy thermometry; cryogenic temperature scale; Josephson junction; noise thermometry; 19685.
- Nuclear process solutions; solution density; accountability tanks; differential pressure; in-tank density determination; 19170.
- Nuclear process solutions; solution density; accountability tanks; differential pressure; in-tank density determination; *J. Res.* 85, No. 3, 219-221 (May-June 1980).
- Nuclear process solutions; solution density; accountability tanks; differential pressure; in-tank density determination; *SP582*, pp. 534-537 (June 1980).
- Nuclear proliferation; once-through cycles; denatured fuel; denatured Pu; *SP594*, pp. 115-118 (Sept. 1980).
- Nuclear reactions; Cr, Fe and  $^{60}\text{Ni}$ ; model interpretation; *SP594*, pp. 168-172 (Sept. 1980).
- Nuclear reactions; comparison to experimental data; coupled channels model calculation; *SP594*, pp. 52-57 (Sept. 1980).
- Nuclear reactions; cross sections; *SP594*, pp. 479-482 (Sept. 1980).
- Nuclear reactions; exciton model; Hauser-Feshbach and precompound analysis; *SP594*, pp. 757-761 (Sept. 1980).
- Nuclear reactions; gas target; measured  $\sigma(E_n, 0^\circ)$ ; *SP594*, pp. 542-544 (Sept. 1980).
- Nuclear reactions; nuclear structure data; radioactivity; reaction gamma rays; ENSDF; evaluation; nuclear levels; *SP594*, pp. 659-661 (Sept. 1980).
- Nuclear reactions; optical and statistical model; discrete levels; *SP594*, pp. 150-154 (Sept. 1980).
- Nuclear reactions; quadrupole and hexadecapole deformation parameters; calculated direct-interaction and compound-nucleus cross sections; deduced coupled-channel optical potential parameters; enriched targets; *SP594*, pp. 672-676 (Sept. 1980).
- Nuclear reactions; semiempirical model; excitation functions  $E = 5\text{-}80$  MeV; *SP594*, pp. 778-782 (Sept. 1980).

- Nuclear reactions; superconducting; accelerators; coincidence measurements; electrons; linac; 19248.
- Nuclear reactions; thick target yields and spectra; time-of-flight technique; total yield; angular distribution; fusion materials irradiation test (FMIT) facility; Li(d,xn); SP594, pp. 824-828 (Sept. 1980).
- Nuclear reactions;  $^{22}\text{Ne}(e,e')$ ; deduced  $J$ ,  $\pi$ ,  $B(CL)$ ; enriched  $^{22}\text{Ne}$  target;  $E = 60$  to  $110$  MeV; 19691.
- Nuclear reactions  $^{232}\text{Th}(n,n'\gamma)$ ; time-of-flight; comparison with calculated excitation functions; inferred level cross sections for 22 states; measured  $\sigma_g(E_n, 125^\circ)$ ; SP594, pp. 685-689 (Sept. 1980).
- Nuclear reactions  $^{238}\text{U}(n,n'\gamma)$ ; time-of-flight; inferred level cross sections for 20 states; measured  $\sigma_g(E_n, 125^\circ)$ ; SP594, pp. 680-684 (Sept. 1980).
- Nuclear reaction theory; nuclear data evaluation; nuclear model codes; SP594, pp. 639-649 (Sept. 1980).
- Nuclear reactor; radiation; activation analysis; crystal structure; diffraction; isotopes; molecular dynamics; neutron; neutron radiography; nondestructive evaluation; TN1117.
- Nuclear reactors; piping; pressure vessel; pump; reliability; risk analysis; valves; failure data; fatigue; fracture; inservice data; mechanical engineering; 19085.
- Nuclear reactors; radiative neutron capture; reaction interferences; scattered gamma radiation; XRF analysis.  $^{252}\text{Cf}$ ; metal exploration; natural gamma radiation; neutron activation analysis; neutron inelastic scattering; SP594, pp. 615-626 (Sept. 1980).
- Nuclear regulatory standards; regulatory experimentation; administrative experimentation; evaluation; Experimental Technology Incentives Program; NBSIR 80-2086.
- Nuclear safeguards; dynamic accounting; fuel reprocessing; SP582, pp. 718-729 (June 1980).
- Nuclear safeguards; plutonium; waste assay; americium; nondestructive assay; SP582, pp. 617-621 (June 1980).
- Nuclear safeguards; precision; quadrupole mass spectrometer; uranium hexafluoride; uranium isotope analysis; SP582, pp. 79-85 (June 1980).
- Nuclear safeguards; precision; reference materials; special nuclear materials; x-ray fluorescence; accountability; accuracy; gamma spectrometry; mass spectrometry; nondestructive assay; SP582.
- Nuclear safeguards; process control; spent nuclear fuel; assay accuracy; calculations; criticality control; material accountability; measurements; neutron interrogation; nondestructive assay; nuclear fuel subassembly; SP582, pp. 447-456 (June 1980).
- Nuclear safeguards; spent fuel; verification; bonded storage; Bruce reactors; gamma-ray spectroscopy; SP582, pp. 457-471 (June 1980).
- Nuclear safeguards; trace levels; uranium determination; waste solution analysis; analyses; fluorometry; laser-induced fluorescence; low-level analysis; SP582, pp. 147-155 (June 1980).
- Nuclear safeguards; volume calibration; volumetric test measures; accountability tanks; differential pressure gage; nuclear materials processing; 19053.
- Nuclear shock waves; relativistic field theory; cascade calculations; heavy ion collision; Monte Carlo method; nuclear compressibility; 19441.
- Nuclear spin; ro-vibronic species; statistical weights; symmetric top molecules; group theory; 19789.
- Nuclear structure; pion absorption; pion nucleus interaction; pion scattering; baryon resonances; delta-nucleus interaction; 19221.
- Nuclear structure data; radioactivity; reaction gamma rays; ENSDF; evaluation; nuclear levels; nuclear reactions; SP594, pp. 659-661 (Sept. 1980).
- Nuclear war; radiation shielding; civil defense; fallout protection; gamma-ray shielding; nuclear detonations; SP570.
- Nuclear weapon theft; perceptual processes; psychological deterrence; security systems; sensory processes; cognitive processes; NBSIR 80-2038.
- Nucleon systems; charged-particle reactions; evaluated fusion cross sections; multichannel R-matrix analyses; SP594, pp. 650-658 (Sept. 1980).
- Nucleophilic substitution; paramagnetic broadening; proton n.m.r.; selective coupling; 6-amino-6-deoxy-D-galactose-6- $^{15}\text{N}$  derivatives; carbon-13 n.m.r.; nitrogen-15 coupling constants; 19670.

- (p,p) and (p,n) reactions; isobaric analog; n-scattering; optical potential; *SP594*, pp. 311-314 (Sept. 1980).

## Q

- Quadrupole and hexadecapole deformation parameters; calculated direct-interaction and compound-nucleus cross sections; deduced coupled-channel optical potential parameters; enriched targets; nuclear reactions; *SP594*, pp. 672-676 (Sept.

- 1980).
- Quadrupole mass spectrometer; uranium hexafluoride; uranium isotope analysis; nuclear safeguards; precision; *SP582*, pp. 79-85 (June 1980).
- Quadrupole triplet spectrometer; charged particle reactions; deuterium; *SP594*, pp. 527-530 (Sept. 1980).
- Qualification; re-examination; technicians; accreditation; certification; colleges; confidence; criteria; evaluation; hospitals; inspectors; marketing; *SP591*, pp. 3-5 (Aug. 1980).
- Qualitative analysis; quantitative analysis; scanning electron microscopy; spectral artifacts; transmission electron microscopy; electron probe microanalysis; energy dispersive x-ray spectrometry; microanalysis; 19088.
- Quality assurance; quality control; systems; calibration; equipment; evaluation; laboratory; manual; personnel; *SP591*, pp. 99-103 (Aug. 1980).
- Quality assurance; radiation; radioactivity; radiochemical assay; radionuclide; segregation; standard; calibration; environments; homogeneity; natural materials; nondestructive assay; particles; 19298.
- Quality assurance; reference methods; standard reference materials; definitive methods; environmental measurements; 19574.
- Quality assurance; standardization; test laboratories; weights and measures laws; Agency for International Development; development assistance; Honduras; legal metrology; metrication; metrology; *NBSIR 80-1969*.
- Quality assurance; standard methods; data; environment; Federal programs; laboratory accreditation; monitoring; 19715.
- Quality assurance lab test; standard test methods; thermal performance test; laboratory test procedures; *SP591*, pp. 124-130 (Aug. 1980).
- Quality control; attenuation; fiber optics; interlaboratory comparisons; measurements; optical communications; 19461.
- Quality control; radiation sterilization; radiochromic dye dosimeter; red Perspex dosimeter; absorbed dose; ceric sulfate dosimeter; cobalt-60 source; commissioning dosimetry; dosimetry; ferrous sulfate dosimeter; gamma radiation; process control; 19343.
- Quality control; reaccreditation; site visit; accreditation; accreditation committee; American Industrial Hygiene Association; coordinator; industrial hygiene laboratories; laboratory; PAT; performance; personnel; proficient; *SP591*, pp. 67-70 (Aug. 1980).
- Quality control; standardization; testing laboratory; accreditation; compliance testing; laboratory criteria; product certification; proficiency testing; *NBSIR 79-1956*.
- Quality control; standard reference materials; analytical methods; atomic absorption spectrometry; foods; nutrient elements; 19419.
- Quality control; statistical quality control; accuracy; control chart; control limits; corrective action; data validation; precision; proficiency analytical testing; *SP591*, pp. 104-108 (Aug. 1980).
- Quality control; systems; calibration; equipment; evaluation; laboratory; manual; personnel; quality assurance; *SP591*, pp. 99-103 (Aug. 1980).
- Quality control; testing laboratories; accreditation; audit certification; laboratory accreditation; laboratory performance evaluation; *SP591*.
- Quality control system; cement and concrete reference laboratory; cement and concrete testing; compressive strength; control charts; in-house quality control; *SP591*, pp. 109-123 (Aug. 1980).
- Quality status tracking system; fuel pin identification system; fuel pins; inventory tracking system; manufacturing information system; *SP582*, pp. 313-323 (June 1980).
- Quantitation; shale oil; trace organic analysis; gas chromatography; liquid chromatography; mass spectrometry; 19598.
- Quantitative analysis; analytical standards; electron probe microanalysis; fiber; glass; microsphere; Monte Carlo; particulate; 19732.
- Quantitative analysis; continuum intensity; electron probe; microanalysis; particle analysis x-ray; 19679.
- Quantitative analysis; scanning electron microscopy; spectral artifacts; transmission electron microscopy; electron probe microanalysis; energy dispersive x-ray spectrometry; microanalysis; qualitative analysis; 19088.
- Quantitative analysis; secondary ion mass spectrometry; sputtering; surface analysis; ion microprobe mass analysis; microanalysis; 19532.
- Quantitative analysis; secondary ion mass spectrometry; surface analysis; glasses; ion microprobe mass analysis; microanalysis; 19869.
- Quantitative analysis; secondary ion mass spectrometry; surface analysis; ion microanalysis; ion microprobe; microanalysis; 19643.
- Quantitative analysis; secondary-ion mass spectroscopy; surface analysis; x-ray photoelectron spectroscopy; Auger-electron spectroscopy; ion-scattering spectroscopy; 19293.
- Quantitative analysis; x-ray continuum; backscattered electrons; continuum x-ray loss; electron probe; Monte Carlo method for electron trajectories; particle analysis; 19867.
- Quantitative analysis; x-ray microanalysis; electron probe microanalysis; glass particles; mineral particles; Monte Carlo methods; particle; peak-to-background ratios; 19921.
- Quantitative microscopy; size effect; solid mechanics; statistical methods; steel; fatigue; fracture; mathematical modeling; micromechanics; microstructure; nuclear fuel element; paper; 19086.
- Quantitative microscopy; slip bands; statistical aspects of fatigue; striations; composite materials; corrosion fatigue; dislocations; fatigue mechanism; fracture mechanics; mathematical modeling; micromechanics; polymers; 19087.
- Quantitative microscopy; statistical aspects of fatigue; composite materials; corrosion fatigue; durability; fatigue; fatigue mechanism; fatigue research; fracture mechanics; mathematical modeling; metals fatigue; plastics fatigue; 19448.
- Quantum defects; Rydberg-Ritz series; sodium; spectroscopic series; atomic energy levels; atomic spectra; 19522.
- Quantum defect theory; Rydberg states; spectra; atomic spectroscopy; Cd; configuration interaction theory; perturbations; 19369.
- Quantum efficiency; quantum yield; silicon; silicon photodetector; spectral response; visible; 19646.
- Quantum efficiency; silicon photodiode; surface recombination; collection efficiency; 19738.
- Quantum interference; superconductivity; aerospace; amplifier; Josephson junction; magnetic gradiometer; magnetometer; 19203.
- Quantum interference; superconductivity; aerospace; computers; digital electronics; Josephson effect; 19405.
- Quantum scattering theory; surface; adsorption; electron stimulated desorption; ion angular distribution; 19193.
- Quantum tunnelling; x-ray scattering; methyl group; molecular reorientation; neutron scattering; nitromethane; 19810.
- Quantum tunnelling; x-ray scattering; methyl group; molecular reorientation; neutron scattering; nitromethane; 19809.
- Quantum yield; quenching; reactive collisions; vibrational excitation; electronic excitation; laser; photodissociation; 19336.
- Quantum yield; rate coefficient; air pollution; atmospheric chemistry; chemical kinetics; data evaluation; gas phase; photoabsorption cross section; photochemistry; *JPCRD 9*, No. 2, 295-472 (1980).
- Quantum yield; rate coefficient; atmospheric chemistry; chemical kinetics; data evaluation; nitrogen oxides; photoabsorption cross section; photochemistry; *NBSIR 80-2032*.
- Quantum yield; rate constant; air pollution; atmospheric chemistry; chemical kinetics; data evaluation; gas phase; photoabsorption cross section; photochemistry; 19513.
- Quantum yield; silicon; silicon photodetector; spectral response; visible; quantum efficiency; 19646.
- Quark; spectroscopy; configuration mixing; gauge theory; glue-

- ball; hyperball; 19327.
- Quartets; SU4; charge exchange reactions; exotic nuclei; heavy ion collision; mass formula; 19265.
- Quasars;  $L\alpha$  radiation; 19723.
- Quasars; radiative transfer; 19316.
- Quasiequilibrium theory; threshold photoelectron spectroscopy;  $C_2Fe$ ; coincidence mass spectrometry; field ionization mass spectrometry; ion fragmentation; mass spectrometry; perfluoroethane; photoelectron spectroscopy; 19291.
- Quasiparticle; superconductor; acoustic mismatch; effective recombination time; nonequilibrium phenomena; phonon-trapping; 19240.
- Quasiparticle injection; superconducting tunnel junction; superconducting weak link; controllable weak link; cryoelectronic; Josephson effect; nonequilibrium superconductivity; 19416.
- Quasistatic wing; self broadening; Van der Waals type wing; Lorentzian type wing; 19776.
- Quasistatic wings; resonance lines; self-broadening of alkali lines; asymmetries; 19228.
- Quenching; activation; breeding blankets; DT fusion tritium breeding ratio; ENDF/B; integral and differential experiments; LiOH; liquid scintillator; SP594, pp. 246-253 (Sept. 1980).
- Quenching; reactive collisions; vibrational excitation; electronic excitation; laser; photodissociation; quantum yield; 19336.
- Query; conversion; data base; data-description; data-dictionary; data-directory; data-manipulation; DBMS; languages; SP500-64.
- Query; query language; semantics; TDMS; tree; tree structures; ambiguity; Boolean; database; hierarchical; information; 19433.
- Query language; semantics; TDMS; tree; tree structures; ambiguity; Boolean; database; hierarchical; information; query; 19433.
- Questionnaires; research methodology; sensory environment; social sciences; thermal environment; architecture; audition; built environment; color; environmental psychology; illumination; perception; SP474.
- Queue; scheduling policies; simulation model; system performance; workloads; cumulative distribution function; events; hardware configuration; model validation; SP500-65, pp. 111-128 (Oct. 1980).
- Queueing analysis; system sizing; benchmarking; distributed systems; hybrid models; SP500-60.
- Queueing model; capacity; control units; SP500-65, pp. 189-198 (Oct. 1980).
- Queueing models; capacity; planning; SP500-65, pp. 139-156 (Oct. 1980).
- Queueing models; queueing networks; approximate queueing models; computer architecture; modular expansion analysis; performance evaluation; performance modeling; SP500-69.
- Queueing network; fixed service time; SP500-65, pp. 101-109 (Oct. 1980).
- Queueing network modeling; asymptotic bound analysis; benchmark tests; capacity planning; configuration analysis; SP500-65, pp. 165-171 (Oct. 1980).
- Queueing networks; approximate queueing models; computer architecture; modular expansion analysis; performance evaluation; performance modeling; queueing models; SP500-69.
- Queueing networks; capacity planning; configuration planning; file assignment problem; optimization; performance evaluation; performance oriented design; SP500-65, pp. 129-135 (Oct. 1980).
- Queueing theory; response time; saturation point; throughput rate; load control; multiprogramming; operational analysis; optimization; SP500-65, pp. 207-213 (Oct. 1980).
- Queueing models; simulation; workload definition; benchmarking; capacity planning; computer performance evaluation; computer performance measurement; computer performance prediction; computer system acquisition; CPE in auditing; installation management; SP500-65.
- R Aquarii; spectrum; temperature; density; long-period variable; model; nebulosity; 19507.
- $R_a$ ; speckle; specular reflectance; surface roughness; diffuseness; in-process; manufacturing engineering; on-line; optical Fourier transform; optical techniques; power spectral density; production engineering; 19477.
- Rabi oscillation; sodium; AC Stark shifts; AC Stark widths; cesium; hydrogen; intermediate resonances; laser pulses; monochromatic; multiphoton ionization; 19159.
- Radial distribution function; soft spheres; computer simulation; conformal solution theory; mixture; molecular dynamics; 19538.
- Radial distribution functions; truncation error; diamond pressure cell; *J. Res.* 85, No. 2, 99-108 (Mar.-Apr. 1980).
- Radial magnetic field; superconducting coils; absolute ampere; current balance; magnetic force; *J. Res.* 85, No. 4, 257-272 (July-Aug. 1980).
- Radial velocities; late supergiants; maser stars; 19454.
- Radiance; sources; ultraviolet; arc; calibrations; irradiance; 19876.
- Radiance temperature; dynamic measurements; high temperature; melting; normal spectral emittance; palladium; 19063.
- Radiance temperature; vanadium; emittance; high-speed measurements; high temperature; melting; 19349.
- Radiant energy; stoves; wood; chimneys; fire models; fire safety; fire tests; flues; heating equipment; heat transfer; literature reviews; *NBSIR 80-2140, Vol. 1*.
- Radiant energy; wool fabrics; aramids; burns (injuries); char strength; convective energy; cotton fabrics; fabrics; heat flux; insulative properties; modacrylics; polyesters; protective clothing; 19120.
- Radiant power measurement; radiometry; silicon photodiode; spectroradiometry; absolute spectral response; laser power measurement; photodetector; 19354.
- Radiation; activation analysis; crystal structure; diffraction; isotopes; molecular dynamics; neutron; neutron radiography; nondestructive evaluation; nuclear reactor; *TN1117*.
- Radiation; channeling; charged particles; crystals; 19139.
- Radiation; radiation hazards; radiation safety; radiation standards; standardization; standards; history; ionizing radiation; measurements; measurement standards; 19551.

- Raman microprobe; Raman spectroscopy; laser-induced effects; light scattering; microanalysis; particle analysis; 19650.
- Raman microprobe; Raman spectroscopy; sheet and chain silicates; mineralogy; 19590.
- Raman scattering; semiconductors; stress; zinc-blende structure; covalent bonding; diamond structure; elastic constants; gallium arsenide; indium antimonide; ionicity; optical phonons; 19580.
- Raman scattering; spectroscopy; anti-Stokes Raman scattering; atomic physics; laser scattering; laser spectroscopy; Mossbauer effect; optical pumping; radiation pressure; radiative cooling; 19055.
- Raman scattering theory; standard reference materials; urban particulate standards; aerosols; atmospheric particulate measurements; Doppler shift spectrometry; fine particles; micro Raman spectrometry; 19581.
- Raman spectra; attenuated total reflection; determination of structure of carbohydrates; infrared spectra of carbohydrates; interpretation of infrared spectra; plane-polarized radiation; 19875.
- Raman spectra; Raman spectroscopy; South Pole atmosphere; airborne particles; atmospheric aerosol; atmospheric sulfate environmental pollution; microsampling; molecular microanalysis; particle microanalysis; Raman microprobe; 19883.
- Raman spectra; vibrational frequencies; force constants; fundamental frequencies; infrared spectra; normal vibrations; polyatomic molecules; *JPCRD* 9, No. 4, 1149-1254 (1980).
- Raman spectrometric method; spectral line intensity measurements; gas mixture composition; gravimetrically prepared gas mixtures; molar intensity ratios; natural gas components; 19540.
- Raman spectroscopy; chemical analysis; fluid inclusions; gemology; microanalysis; mineralogy; 19577.
- Raman spectroscopy; diamond anvil cell; high pressure physics; perfluoro *n*-alkanes; phase transition; polytetrafluoroethylene; 19893.
- Raman spectroscopy; laser-induced effects; light scattering; microanalysis; particle analysis; Raman microprobe; 19650.
- Raman spectroscopy; South Pole atmosphere; airborne particles; atmospheric aerosol; atmospheric sulfate environmental pollution; microsampling; molecular microanalysis; particle microanalysis; Raman microprobe; Raman spectra; 19883.
- Raman spectroscopy; sheet and chain silicates; mineralogy; Raman microprobe; 19590.
- Raman spectroscopy; talc; vibrational mode; 19583.
- Raman spectroscopy; tetrafluoroethylene-hexafluoroethylene copolymer; orientation; perfluoro *n*-alkanes; polarization; polytetrafluoroethylene; 19633.
- Raman spectroscopy; Young's modulus; longitudinal acoustic mode; polyoxymethylene; polypropylene; 19895.
- Raman spectrum; spectra; transient dipoles; anisotropic polarizability; collision-induced; induced dipoles; infrared absorption; 19414.
- Random-coil polymer chains; relaxation times; self-entanglement effects; computer simulation; end-to-end length; entanglement effects; excluded volume effects; lattice-model polymer chains; polymer chain dynamics; 19864.
- Random coincidence corrections; U-233 decay chain; *SP582*, pp. 602-616 (June 1980).
- Random cycling; single crystal copper; copper crystal; fatigue; persistent slip band; plastic strain; 19694.
- Random driver; stability; uranium; calibration; coincidence counter; neutron; nondestructive assay; precision; *SP582*, pp. 201-220 (June 1980).
- Random equivalent implants; capacitance-voltage profiling; controlled doping profile; critical channeling angle; crystallographic orientation effects; ion channeling; 19232.
- Random equivalent implants; capacitance-voltage profiling; controlled doping profile; critical channeling angle; crystallographic orientation effects; ion channeling; 19428.
- Random error; squareness; standard deviation; systematic error; uncertainty; angle block; autocollimator; calibration; flatness; intercomparison; *NBSIR* 80-1967.
- Random error; systematic error; weighting factors; data evaluation; nuclear-decay data; radioactivity; 19407.
- Random errors; standard deviation; systematic errors; uncertainty; check standard; gage blocks; measurement assurance; *NBSIR* 80-2078.
- Random fault test structure; sheet resistor; test methods; test pattern; test structure; circuit characterization; cross-bridge sheet resistor; electrical alignment test structure; gated diode; integrated test structure; microelectronic test structure; process validation wafer; 19165.
- Random fault test structures; resistivity; scanning acoustic microscope; scanning electron microscope; semiconductor devices; semiconductor materials; semiconductor process control; silicon; silicon dioxide; spatial filtering microscope; sputter-Auger method; test structures; *SP400-45*.
- Random matrix products; steady state; thermal conductivity; energy current; isotopic disorder; nonequilibrium; one-dimensional harmonic crystal; 19873.
- Random uncertainty; systematic uncertainty; data reporting; environmental; measurements; radiation; 19301.
- Random walks; spans; stable laws; Poisson transformation; polymer configurations; 19654.
- Raney nickel; vibrational spectrum; catalyst; chemisorbed  $C_2H_4$ ; neutron inelastic scattering; 19573.
- Range; reflection; scaling parameter; transport mean free path; albedo; backscatter; electrons; 19391.
- Ranging; resonators; superconductivity; aerospace; frequency standards; high-Q cavities; navigation; oscillator; 19586.
- Ranking and selection; selection methodology; binary selection; computer comparison; computer measurement; computer service; data analysis; performance evaluation; *SP500-58*.
- Rapid; adapter; analysis; electrodes; fluorides; microvolumes; 19279.
- Rapid measurement technique; 1,1-difluoroethylene; diode laser spectroscopy; heterodyne measurement; high-precision; line assignments; line frequencies; 19186.
- Rapid solidification; amorphous alloys; coupled growth; eutectic solidification; metallic glasses; palladium-copper-silicon alloys; 19891.
- Rapid solidification; solute trapping; thermodynamics; interface stability; kinetics; microsegregation; 19946.
- Rare earth; crystal field effects; ferromagnet; magnetic superconductor; neutron scattering phase transition; 19258.
- Rare earth; small angle scattering; superconductivity; crystal field; magnetic superconductors; neutron scattering; 19255.
- Rare-earth compounds; atomic ordering; iron-manganese compounds; nearest neighbor distances; neutron scattering; profile refinement; 19757.
- Rare earth compounds; spin excitations; crystal fields; exchange interaction; magnetism; neutron scattering; 19256.
- Rare earth compounds; spin excitations; crystal fields; exchange interaction; magnetism; neutron scattering; 19604.
- Rare earth-iron intermetallics; sublattice magnetization; hydrides; Laves-phase; neutron scattering; 19617.
- Rare earths; Chevrel-phase; crystal fields; magnetic impurities; magnetic superconductors; 19504.

- Rare earths; solid state spin waves; laves-phase; magnetism; neutron scattering; physics; 19616.
- Rare earths; spin waves; crystal fields; inelastic scattering; magnetism; neutron scattering; 19630.
- Rare earths; structural properties; amorphous alloys; magnetism; metallic glasses; neutron scattering; 19113.
- Rare-earth scintillator; small-format; x-ray imaging system;  $^{125}\text{I}$  x-ray source; microchannel plate; portable; 19402.
- Rare-gas; Zwanzig-Mori theory; depolarized light scattering; lattice-gas; Lorentzian shape; oscillatory; parameters; polarization; 19756.
- Rare gases; chlorine; Hartree-Fock; K-matrix; photoionization; 19304.
- Rare gases; rate coefficients; transport; cross sections; electrons; nitrogen; oxygen; 19387.
- Rate coefficient; air pollution; atmospheric chemistry; chemical kinetics; data evaluation; gas phase; photoabsorption cross section; photochemistry; quantum yield; *JPCRD* 9, No. 2, 295-472 (1980).
- Rate coefficient; atmospheric chemistry; chemical kinetics; data evaluation; nitrogen oxides; photoabsorption cross section; photochemistry; quantum yield; *NBSIR* 80-2032.
- Rate coefficients; cross sections; high electron energy; Maxwell's velocity distribution; 19356.
- Rate coefficients; transport; cross sections; electrons; nitrogen; oxygen; rare gases; 19387.
- Rate constant; air pollution; atmospheric chemistry; chemical kinetics; data evaluation; gas phase; photoabsorption cross section; photochemistry; quantum yield; 19513.
- Rate constant; aromatic molecules; benzyl ions; hydride ion transfer; ion cyclotron resonance spectrometer; ion-molecule reactions; 19861.
- Rate constant; atmospheric reactions; combustion; methyl radicals; modeling; oxidation; oxygen; 19149.
- Rate constant; resonance fluorescence; stratospheric ozone; atmospheric chemistry; methyl chloroform; OH radicals; 19092.
- Rate constant; saturation; titration curve; dissolution; Karl Fischer water determination; mass fraction of water; 19591.
- Rate constants; free radicals; heats of formation; ion cyclotron resonance spectrometer; ion-molecule reactions; ions; 19839.
- Rate constants; recombination; addition; chemical kinetics; decomposition; disproportionation; H-transfer; initiation; isomerization; *n*-alkane pyrolysis; *JPCRD* 9, No. 3, 523-560 (1980).
- Rate constants; resonance fluorescence; atmospheric modeling; oxygen atoms; ozone; 19526.
- Rate constants; saturation effect; chemical kinetics; exposure; exposure-reciprocity; kinetic equations; photochemistry; photon intensity; photoresist exposure; 19418.
- Rate of heat release; calorimetry; fire test; heat of combustion; heat release; oxygen consumption; oxygen consumption calorimetry; 19600.
- Rate of reaction; sulfur; Arrhenius parameters; chemical kinetics; combustion; decomposition; free radicals; gas phase; hydrocarbons; hydrogen; nitrogen; oxygen; *NSRDS*-67.
- Rate of reaction; sulfur; Arrhenius parameters; chemical kinetics; combustion; decomposition; free radicals; gas phase; hydrocarbons; hydrogen; nitrogen oxygen; *NBSIR* 80-2118.
- Rate-of-return; savings-to-investment ratio; benefit-cost; building design; construction economics; discounting; economics; energy conservation; life-cycle cost; payback; *SP544*.
- Rate of return; solar economics; windows; benefit cost; building economics; discounting; economic analysis; economic efficiency; energy conservation; incentives; life-cycle cost; payback; *H132*.
- Rate structure; regulatory commissions; regulatory process; technological innovation; time varying rates; computer models; electric utilities; Experimental Technology Incentives Program; marginal costing; *NBS-GCR-ETIP* 79-79.
- Rate structures; water conservation; consumer education; energy conservation; feedback; incentives; metering; *NBSIR* 80-2119.
- Rating procedure; residential heating; seasonal performance; test method; central air conditioners; central heating equipment; heating seasonal performance; heat pumps; *NBSIR* 80-2002.
- Rating procedure; seasonal cost of operation; add-on heat pumps; furnaces; heat pumps; hybrid heat pumps; hybrid systems; *NBSIR* 80-2090.
- Ratio; standards; cross sections; eV neutrons; *SP594*, pp. 97-100 (Sept. 1980).
- Ratio data; cross-reaction covariances; *SP594*, pp. 63-67 (Sept. 1980).
- Rationale; standardization; economic impact of regulations; economic impact of standards; economic information on standards; Federal use of voluntary standards; procedural history; *NBSIR* 80-2123.
- Ratio  $^{134}\text{Cs}/^{137}\text{Cs}$ ; residual decay heat; sensitivity analysis; capture cross section of pseudo fission product; fission products kinetics; *SP594*, pp. 886-889 (Sept. 1980).
- Rator; resin; wear; alloy; base metal; casting; composite; cyanoacrylate; dental alloy; initiator; *NBSIR* 79-1943.
- Rayleigh scattering; backscattering; fiber attenuation; fiber loss; fiber scattering; optical time domain reflectometry; *TN1018*.
- Rayleigh waves; stability; surface anisotropy; composites; durability; eutectics; 19153.
- Razor blade; SEM; stylus; surface; surface roughness; surface texture; metrology; profilometer; 19064.
- Rb frequency standards; wall coating; cavity pulling; frequency stability; microwave power dependence; optical pumping; 19777.
- Rb<sup>87</sup> frequency standard; wall coating; buffer gas; cavity pulling; frequency dependence; line inhomogeneity; 19517.
- R CrB Stars; stellar evolution; stellar pulsation; helium stars; 19711.
- R-centers; absorption spectroscopy; alkali halides; color centers; darkening of crystals; dosimetry; electron dosimetry; F-centers; gamma-ray dosimetry; lithium fluoride; M-centers; megard dosimetry; N-centers; radiation darkening; radiation processing; 19352.
- R&D; R&D in World War II; bootleg R&D; government laboratories; industrial management; 19506.

- Residential buildings; room fires; building fires; fire resistance; fire tests; flow measurement; gas temperatures; heat release rate; interior finishes; *NBSIR 80-2120*.
- Residential buildings; room fires; static pressure; building fires; fire tests; flow measurement; furniture; interior finishes; *NBSIR 80-1984*.
- Residential buildings; solar data base; solar energy system; solar heating and cooling; automatic data processing; computer retrieval; data base retrieval; *NBSIR 80-2144*.
- Residential buildings; space cooling; space heating; building envelope; cost effectiveness; economics; energy conservation; internal rate of return; life-cycle costing; marginal analysis; optimal design; *19235*.
- Residential heating; seasonal performance; test method; central air conditioners; central heating equipment; heating seasonal performance; heat pumps; rating procedure; *NBSIR 80-2002*.
- Residual decay heat; sensitivity analysis; capture cross section of pseudo fission product; fission products kinetics; ratio  $^{134}\text{Cs}/^{137}\text{Cs}$ ; *SP594*, pp. 886-889 (Sept. 1980).
- Residual series inductance; resonance techniques; three-terminal capacitance; calibration; capacitance; four-terminal pair capacitance; immittance standards; inductance; *TN1024*.
- Residual stress; small-angle; texture determination; materials microstructure; neutron scattering; new instruments and methods; nondestructive testing; *19811*.
- Residual stress; ultrasonics; velocity; attenuation; defect characterization; flaws; materials characterization; nondestructive testing; *SP596*.
- Resin; wear; alloy; base metal; casting; composite; cyanoacrylate; dental alloy; initiator; rator; *NBSIR 79-1943*.
- Resin bead; safeguards; uranium; isotope dilution; mass spectrometry; plutonium; *SP582*, pp. 538-546 (June 1980).
- Resin beads; thermal ionization; uranium; errors; isotope ratios; mass spectroscopy; pulse counting; *19816*.
- Resistance; sensitivity change; stability; strain gages; structure; transducers; zero shift; adhesive; backing; connection; environment; gage element; leads; load; protective coating; *19049*.
- Resistive heating; thermal insulation; thermal model; wiring system; electric wiring; *NBSIR 80-2129*.
- Resistively loaded antenna; TEM horn; time domain measurement; transient response; conical antenna; effective length; FFT; moment method; *19464*.
- Resistivity; resistivity profiles; semiconductor; silicon; spreading resistance; two probe measurements; dopant profiles; *19105*.
- Resistivity; scanning acoustic microscope; scanning electron microscope; semiconductor devices; semiconductor materials; semiconductor process control; silicon; silicon dioxide; spatial filtering microscope; sputter-Auger method; test structures; transistors; wire bonds; *SP400-45*.
- Resistivity; second breakdown; semiconductors; test structures; thermal resistance; very large scale integration; VLSI; wire bonds; Department of Commerce; integrated circuits; metrology for semiconductors; National Bureau of Standards; photomasking; *NBSIR 80-2057*.
- Resistivity; semiconductors; silicon; dopant density; electrical measurements; mobility; *19806*.
- Resistivity; semiconductors; silicon; dopant density; electrical measurements; mobility; *19783*.
- Resistivity; sheet resistance; spreading resistance; correction factor; depth profiling; Laplace's equation; local slope analysis; multilayer analysis; *19703*.
- Resistivity; silicon; carrier density; computer program; electrical properties of silicon; Hall effect; mobility; *SP400-63*.
- Resistivity; silicon; spreading resistance; thyristor; aluminum-doped silicon; boron-doped silicon; gallium-doped silicon; p-type silicon; *19422*.
- Resistivity; spreading resistance; continuum model; correction factor; Laplace's equation; nonlinear differential equations; *19796*.
- Resistivity; x-ray diffraction; cuprous chloride; diamond cell; optical microscopy; phase transition; *19687*.
- Resistivity gradients; resistivity variations; wafer scanning; photoconductivity variations; photovoltaic technique; *19764*.
- Resistivity profiles; semiconductor; silicon; spreading resistance; two probe measurements; dopant profiles; resistivity; *19105*.
- Resistivity variations; silicon; spreading resistance measurements; thermally stimulated measurements; thyristor materials measurements; thyristor measurements; zinc oxide varistors; dc transmission; deep-level measurements; energy conservation; measurement methods; *NBSIR 80-2061*.
- Resistivity variations; wafer scanning; photoconductivity variations; photovoltaic technique; resistivity gradients; *19764*.
- Resonance; lasers; multiphoton ionization; photoelectrons; *19305*.
- Resonance; ytterbium; Auger; core-holes; mixed-valence; photoionization; *19853*.
- Resonance at 0.15 eV; measured  $\sigma_T$  for  $^{233}\text{U}$ ; *SP594*, pp. 690-691 (Sept. 1980).
- Resonance fluorescence; atmospheric modeling; oxygen atoms; ozone; rate constants; *19526*.
- Resonance fluorescence; resonance Raman scattering; spectral line shapes; *19471*.
- Resonance fluorescence; stratosphere; Cl atoms; formaldehyde; kinetics; ozone; *19704*.
- Resonance fluorescence; stratospheric ozone; atmospheric chemistry; methyl chloroform; OH radicals; rate constant; *19092*.
- Resonance fluorescence; strong laser field; time-dependent spectrum; transient spectrum; fluorescence spectrum; laser excitation; multi-photon processes; non-stationary processes; *19220*.
- Resonance integral; resonance interference effect; spent fuel; burnup; fission product; JPDR-I reactor; *SP594*, pp. 224-227 (Sept. 1980).
- Resonance integral; thermal cross section; *SP594*, pp. 743-746 (Sept. 1980).
- Resonance interference effect; spent fuel; burnup; fission product; JPDR-I reactor; resonance integral; *SP594*, pp. 224-227 (Sept. 1980).
- Resonance lines; self-broadening of alkali lines; asymmetries; quasistatic wings; *19228*.
- Resonance neutrons; thermal neutrons; three-dimensional radiography; fast neutrons; laminagraphy; neutrons; radiography; reactor fuel subassemblies; *19214*.
- Resonance neutrons; total cross sections; *SP594*, pp. 890-892 (Sept. 1980).
- Resonance parameters; average capture cross sections; *SP594*, pp. 328-332 (Sept. 1980).
- Resonance parameters; bromine; *SP594*, pp. 173-176 (Sept. 1980).
- Resonance parameters; time-of-flight method; Nd-147; *SP594*, p. 907 (Sept. 1980).

Resonance parameters; total cross section; 0.02-350 eV; fast chopper; Nd-145; *SP594*, p. 877 (Sept. 1980).

Resonance parameters deduced; enriched targets; palladium isotopes; *SP594*, pp. 315-318 (Sept. 1980).

Resonance Raman scattering; spectral line shapes; resonance fluorescence; *19471*.

Resonances; statistical model; evaluation; neutron cross-sections; optical model; *SP594*, pp. 872-876 (Sept. 1980).

Resonance self-shielding effect; sensitivity analysis; shielding application; structural material; total cross section; unresolved resonance; elastic scattering cross section; partial inelastic scattering cross section; *SP594*, pp. 586-590 (Sept. 1980).

Resonance techniques; three-terminal capacitance; calibration; capacitance; four-terminal pair capacitance; immittance standards; inductance; residual series inductance; *TN1024*.

Resonator analysis; coatings design; polarization effects; *SP568*, pp. 439-443 (July 1980).

Resonators; superconductivity; aerospace; frequency standards; high-Q cavities; navigation; oscillator; ranging; *19586*.

Resource allocation; scatter tables; hashing; *19242*.

Resource recovery; temperature; test procedure; time; combustibles; ferrous scrap; *19285*.

Response time; saturation point; throughput rate; load control; multiprogramming; operational analysis; optimization; queuing theory; *SP500-65*, pp. 207-213 (Oct. 1980).

Responsive coefficients; solar storage walls; testing procedures; thermal performance; finite-difference computer model; passive solar energy; *19815*.

Responsivity; single longitudinal mode pulse; TEA laser; beam diameter; insertion loss; optical detectors; photon drag detector; pyroelectric detector; *TN1023*.

Restructuring; data base; database management; file maintenance; reformatting; reorganization; *19076*.

Retaining structures; shoring; slope stability; construction; excavation; geotechnical engineering; *NBS-GCR-80-202*.

Retaining structures; shoring; slope stability; soil classification; soil pressure; soil testing; trenching; braced excavations; construction; excavation; geotechnical engineering; *BSS121*.

Retaining structures; shoring; slope stability; soil classification; soil pressure; standards; trenching; braced excavation; construction; *BSS127*.

Retention data; reverse-phase HPLC; air particulates; high performance liquid chromatography (HPLC); normal-phase HPLC; polycyclic aromatic hydrocarbons (PAH); *19547*.

Retrofit; revitalization; solar energy systems; benefit-cost analysis; building economics; commercial buildings; investment analysis; life-cycle cost analysis; passive solar energy; *BSS125*.

Retrofit; thermal resistivity; conservation; energy; field survey; insulation; moisture content; residences; *TN1131*.

Retroreflectance; retroreflector; specifications; test methods; accuracy; chromaticity; coefficient of luminous intensity; intercomparisons; *TN1125*.

Retroreflectometer; retroreflector; sample carrier; coefficient of luminous intensity; coefficient of retroreflection; projector; receiver; *19394*.

Retroreflector; sample carrier; coefficient of luminous intensity; coefficient of retroreflection; projector; receiver; retroreflectometer; *19394*.

Retroreflector; specifications; test methods; accuracy; chromaticity; coefficient of luminous intensity; intercomparisons; retroreflectance; *TN1125*.

Return loss; Schottky-barrier diodes; semiconductor diodes; standing-wave ratio (SWR); conversion loss; diode measurement; intermediate-frequency (i-f) output conductance; measurement uncertainties; microwave mixer diodes; modulation; point-contact diodes; reflectometer; *SP400-16*.

Reverse bonded phase chromatography; silicon analysis; size exclusion chromatography; tin analysis; fractionation; graphite furnace atomic absorption; high pressure liquid chromatography; organometallic polymers; organotin silicate; refractive index; *19398*.

Reversed phase liquid chromatography; impurities; nicotine adenine dinucleotides; *19548*.

Reverse-phase HPLC; air particulates; high performance liquid chromatography (HPLC); normal-phase HPLC; polycyclic aromatic hydrocarbons (PAH); retention data; *19547*.

Review; solutions; data compilations; photochemistry; photo-physics; *SP578*.

Review; stainless steel; superconductors; alloys; magnets; materials; nonmetallics; *19190*.

Review; standard cross section; neutron flux; *SP594*, pp. 720-727 (Sept. 1980).

Reviews; solutions; thermodynamic properties; aqueous electrolytes; electrolyte data center; evaluations; *19920*.

Revitalization; solar energy systems; benefit-cost analysis; building economics; commercial buildings; investment analysis; life-cycle cost analysis; passive solar energy; retrofit; *BSS125*.

Rf and microwave dielectrics; standard dielectric liquids; coaxial line open circuit; coaxial line support bead; dielectric constant; dielectric loss; *19542*.

Rf voltage comparator; Schottky-barrier diodes; voltage comparator; wideband comparator; linear voltage response; *19544*.

Rhodium; aluminium oxide; chemisorption; infrared spectroscopy; isomerization; methylisocyanide; *19831*.

Rhodium; carbon; carbon monoxide; dissociated chemisorption; isotopic mixing; *19185*.

Rhodium; carbon monoxide; chemisorption; electrochemistry; infrared spectra; *19739*.

Rhodium; carbon monoxide; chemisorption; infrared spectroscopy; isotopic exchange; *19910*.

Ribonuclease-A; structure refinement; atomic models; flat-cone geometry; neutron diffraction; protein structure; *19808*.

Riffle; sample; standards; heterogeneous; in-house; laboratory; preparation; *SP591*, pp. 45-49 (Aug. 1980).

Rigid spheroid; transient; birefringence; jet flow; light scattering; longitudinal gradient; orientational distribution; *19409*.

Riot helmet; face shield; headgear; helmet; impact; protective equipment; *19700*.

Ripples; SiC substrates; surface defects; thermal diffusivity; vapor-deposited mirrors; crystalline disorder; Cu mirrors; diamond turning; laser-induced slip; polishing; *SP568*, pp. 175-186 (July 1980).

Risetime; sampler; transition duration; amplitude comparator; Josephson junction; *19056*.

Risk; safety; accidents; fault trees; loss prevention; *19320*.

Risk analysis; safety equivalency; safety evaluation; smoke detection; automatic sprinklers; building codes; building construction; Delphi Method; fire safety; health care facilities; hospitals; interior finishes; Life Safety Code; nursing homes; *NBSIR 78-1555-1*.

Risk analysis; valves; failure data; fatigue; fracture; inservice data; mechanical engineering; nuclear reactors; piping; pressure vessel; pump; reliability; *19085*.

R-matrix; elastic cross section; inelastic cross section; multichannel; multilevel; neutron; *SP594*, pp. 783-787 (Sept. 1980).

R-matrix; time-of-flight; Breit-Wigner resonances; *SP594*, pp. 159-162 (Sept. 1980).

Rms radius; carbon; combined analysis; electron scattering; high accuracy; low and high momentum transfer; *19374*.

Rms voltmeter; thermal voltage converter; ac-dc difference; ac-dc transfer; ac voltage calibration; ac voltage calibrator; ac voltage measurements; *19065*.

Robot; sensory feedback; vision system; line following; part acquisition; plane of light; real time; *19096*.

Robotics; robot vision; part manipulation; *19665*.

Robotics; vision systems; automation; image processing; inspection; manufacturing; pattern recognition; *19093*.

Robot vision; part manipulation; robotics; *19665*.

Robust statistical methods; systematic error; robust statistical methods; item-dependent error; measurement error; nuclear material accounting; referee measurement methods; *19332*.

Rock slides; seismicity; structural engineering; bridges; build-

- ings; dikes; earthquakes; foreign engineering; geology; highways; housing; landslides; liquefaction; power plants; railroads; *SP592*.
- Roof; roof load; snow; solar collector; structural engineering; building; ice; load; *NBS-GCR-79-180*.
- Roofing; thermal conductance; thermal conductivity; thermal resistance; built-up roofing; insulation; moisture; *BSS123*.
- Roofing performance; solar collectors; collector installation; field survey; guidelines; low-sloped roofs; *TN1134*.
- Roof load; snow; solar collector; structural engineering; building; ice; load; roof; *NBS-GCR-79-180*.
- Room fires; building fires; fire resistance; fire tests; flow measurement; gas temperatures; heat release rate; interior finishes; residential buildings; *NBSIR 80-2120*.
- Room fires; doors; evacuations; fire alarm systems; fire extinguishers; fire investigations; nursing homes; nursing staff; patients; *NBS-GCR-80-219*.
- Room fires; doors; fire alarm systems; fire departments; fire investigations; hospitals; mattresses; nursing staff; *NBS-GCR-80-260*.
- Room fires; fire extinguishers; fire investigations; hospitals; nursing staff; patients; *NBS-GCR-80-209*.
- Room fires; fire tests; flame spread; flashover; heat release rate; ignition; interior finish; oxygen depletion; *TN1128*.
- Room fires; senior citizens; smoke; breathing apparatus; evacuation; fire departments; fire fatalities; flashover; hotels; *NBS-GCR-80-253*.
- Room fires; smoke; students; doors; dormitories; evacuation; fire departments; fire fatalities; fire fighters; flashover; ladders; *NBS-GCR-80-193*.
- Room fires; smoke; upholstered furniture; doors; evacuations; fire departments; fire extinguishers; nursing staff; patients; *NBS-GCR-80-220*.
- Room fires; smoke detectors; death; doors; egress; evacuation; fire alarm systems; fire departments; fire fighters; flashover; nursing homes; nursing staff; patients; *NBS-GCR-80-191*.
- Room fires; sprinkler systems; evacuation; fire departments; fire investigations; nursing homes; nursing staff; patients; *NBS-GCR-80-206*.
- Room fires; sprinkler systems; fire departments; fire extinguishers; fire investigations; mattresses; nursing homes; nursing staff; *NBS-GCR-80-277*.
- Room fires; static pressure; building fires; fire tests; flow measurement; furniture; interior finishes; residential buildings; *NBSIR 80-1984*.
- Room fires; steel; wood; fire endurance; fire tests; flame through; floors; furniture; interior finishes; joists; *NBSIR 80-2134*.
- Room-temperature rf systems; cw accelerators; electron accelerators; microtron; recirculating accelerators; *19494*.
- Room use; accidents; anthropometry; biomechanics; disability; disability organizations; home safety; household activities; household design; mobility aids; *NBSIR 80-2014*.
- Rotating mass storage subsystems; sense information; status byte; command codes; disk drives; Federal Information Processing Standard; format track; operational specification; *FIPS PUB 63*.
- Rotating U target; stationary U target; linear accelerator; post-acceleration beam compression; *SP594*, pp. 534-536 (Sept. 1980).
- Rotational constants; structure; amino acid; centrifugal distortion; glycine; microwave spectrum; *19365*.
- Rotational transitions; CH<sub>2</sub>; laser; magnetic resonance; *19720*.
- Rotational transitions; formic acid; interstellar molecules; line strengths; microwave spectra; molecular constants; radioastronomy; *JPCRD 9*, No. 1, 59-160 (1980).
- Rotational transitions; interstellar molecules; line strengths; methyl cyanide; microwave spectra; molecular constants; radio astronomy; *JPCRD 9*, No. 3, 659-720 (1980).
- Rotational transitions; spectroscopy; astronomy; hyperfine structure; interstellar molecules; microwave spectra; *19370*.
- Round robin; routine conditions; variance model; within-laboratory precision; accuracy; between-laboratory precision; components of variance; duplicity; ideal conditions; measurement process; omnifariousness; precision; *SP591*, pp. 31-40 (Aug. 1980).
- Round robin; x-ray photoelectron spectroscopy; binding energies; copper; ESCA; gold; relative intensities; *19202*.
- Routine conditions; variance model; within-laboratory precision; accuracy; between-laboratory precision; components of variance; duplicity; ideal conditions; measurement process; omnifariousness; precision; round robin; *SP591*, pp. 31-40 (Aug. 1980).
- Ro-vibronic species; statistical weights; symmetric top molecules; group theory; nuclear spin; *19789*.
- Row nucleation; stirred solution; strained melt; crystallization temperature; melting temperature; *19904*.
- RS Canum Venaticorum; stellar chromospheres; stellar coronae; ultraviolet spectra; binary stars; late-type stars; *19781*.
- Rubber; shear; bulk modulus; compressibility; finite elasticity; modulus; *19886*.
- Rubber; strain energy; Valanis-Landel form; elasticity; elastomers; finite deformation; *19597*.
- Rubber; strain-energy function; Valanis-Landel form; biaxial; elasticity; elastomers; extension; *19502*.
- Rubber; thermal analysis; differential scanning calorimetry; elastomers; polymers; *SP580*, pp. 55-87 (Aug. 1980).
- Rubber; time effects in; rubber, creep of; rubber, long-time creep of; rubber, mechanical properties of; rubber, relaxation of; *J. Res. 85*, No. 4, 283-293 (July-Aug. 1980).
- Rubber, creep of; rubber, long-time creep of; rubber, mechanical properties of; rubber, relaxation of; rubber; time effects in; *J. Res. 85*, No. 4, 283-293 (July-Aug. 1980).
- Rubber, long-time creep of; rubber, mechanical properties of; rubber, relaxation of; rubber; time effects in; rubber, creep of; *J. Res. 85*, No. 4, 283-293 (July-Aug. 1980).
- Rubber, mechanical properties of; rubber, relaxation of; rubber; time effects in; rubber, creep of; rubber, long-time creep of; *J. Res. 85*, No. 4, 283-293 (July-Aug. 1980).
- Rubber processing; thermal analysis; thermogravimetry; adsorbents; chemical processing; coordination compounds; enthalpimetry; glass processing; instrumentation; paper technology; polymer ignition; *SP580*.
- Rubber, relaxation of; rubber; time effects in; rubber, creep of; rubber, long-time creep of; rubber, mechanical properties of; *J. Res. 85*, No. 4, 283-293 (July-Aug. 1980).
- Rubidium; line broadening; *19743*.
- Rubidium; specific heat; atom migration; high temperature; lattice structure; Monte Carlo calculations; *19337*.
- Rubidium; vacancies; anharmonicity; anomalous specific heat; atomic migration; high temperature; lattice dynamics; Monte Carlo calculations; perfect crystal; perturbation theory; *19123*.
- Rubidium and potassium oxides; crystal structure; electron microscope; lattice images; mixed oxides; niobates and tantalates; *19733*.
- Rubidium and potassium oxides; two-dimensional ordering; crystal structure; electron microscope; lattice images; niobates and tantalates; *19911*.
- Rubidium atomic resonator; stored ions; cesium atomic resonator; frequency retrace accuracy; frequency stability; passive/active hydrogen atomic resonator; *19432*.
- Ruby pressure scale; advances; diamond anvil cell; high pressure; *19467*.
- Ruby R<sub>1</sub> linewidth; viscosity; correlation model; glass transition; pressure; *19068*.
- Rulemaking; air pollution; Clean Air Act; Environmental Protection Agency; public comment; regulation; *NBS-GCR-ETIP 80-89*.
- Ruptured chains; strength; tie molecules; crystalline polymer; elastic modulus; fibrils; fibrous structure; fracture; load-elongation curve; microfibrils; point defects of microfibrillar structure; *19901*.

Rupture of taut tie molecules; strain to break; stress to break; coalescence of microcracks; end of microfibril; microcrack formation; microfibrillar structure; 19948.

Ruthenium; ellipsometry; flash desorption; LEED; 19508.

Ruthenium; ruthenium oxide; surface reactions; chemisorption; ESCA; oxygen; 19254.

Ruthenium; single crystal; carbon; catalysis; hydrogenation; kinetics; methanation; 19492.

Ruthenium; single crystal; surface science; carbon monoxide; catalysis; kinetics methanation; nickel; 19482.

Ruthenium; surface; carbon monoxide; chemisorption; electron stimulated desorption; ion angular distribution; nitric oxide; 19924.

Ruthenium; surface reaction; thermal desorption; chemisorption; nitrous oxide; 19241.

Ruthenium oxide; surface reactions; chemisorption; ESCA; oxygen; ruthenium; 19254.

Rutherford backscattering; standards; accuracy and precision; gold films; gravimetry; neutron activation analysis; 19944.

Rutile-type compounds;  $\beta$ -PbO<sub>2</sub>; 19812.

Rydberg-Ritz series; sodium; spectroscopic series; atomic energy levels; atomic spectra; quantum defects; 19522.

Rydberg states; spectra; atomic spectroscopy; Cd; configuration interaction theory; perturbations; quantum defect theory; 19369.

## S

Safeguards; accountability in fabrication of reactor fuel; active neutron interrogation; material control; neutron activation analysis; nondestructive assay (NDA); *SP582*, pp. 276-307 (June 1980).

Safeguards; accuracy; bulk measurements; material control and accounting; nondestructive assay; nuclear material measurements; precision; research and development; 19705.

Safeguards; calorimetry; gamma-ray spectrometry; neutron interrogation; *SP594*, pp. 364-367 (Sept. 1980).

Safeguards; inventory verification; measurement of inventory; nuclear materials; *SP582*, pp. 178-188 (June 1980).

Safeguards; spike; total mass; uranium; alloys; blend; input concentration; isotope dilution; neodymium; plutonium; *SP582*, pp. 93-102 (June 1980).

Safeguards; statistical evaluation; uranium; alpha spectrometry; intercomparison programs; mass spectrometry; plutonium; *SP582*, pp. 42-54 (June 1980).

Safeguards; uranium; isotope dilution; mass spectrometry; plutonium; resin bead; *SP582*, pp. 538-546 (June 1980).

Safeguards; uranium; uranium hexafluoride; uranium 235; gas centrifuges; IAEA safeguards; isotope separation; material balance; material unaccounted for; nondestructive analysis; *SP582*, pp. 261-275 (June 1980).

Safeguards; uranium waste; verification; counter; estimates; gamma rays; neutrons; nondestructive assay; plutonium waste; *SP582*, pp. 622-632 (June 1980).

Safeguards/accountability; automated fuel fabrication equipment; nuclear fuel pellets; *SP582*, pp. 342-364 (June 1980).

Safeguards instrument; seal; tamper; unattended safeguards system; *SP582*, pp. 257-260 (June 1980).

Safeguards objective; safeguards performance criteria; International Atomic Energy Agency; international safeguards; *SP582*, pp. 651-669 (June 1980).

Safeguards performance criteria; International Atomic Energy Agency; international safeguards; safeguards objective; *SP582*, pp. 651-669 (June 1980).

Safeguards performance criteria; safeguards systems; safeguards technology; detection; deterrence; diversion of nuclear energy; evolution; *SP582*, pp. 670-676 (June 1980).

Safeguards systems; safeguards technology; detection; deterrence; diversion of nuclear energy; evolution; safeguards performance criteria; *SP582*, pp. 670-676 (June 1980).

Safeguards technology; detection; deterrence; diversion of nuclear energy; evolution; safeguards performance criteria; safeguards systems; *SP582*, pp. 670-676 (June 1980).

Safety; accidents; fault trees; loss prevention; risk; 19320.

Safety; shoring; soil classification; trench; workshop; acceptable work practices; excavation; geotechnical engineering; *NBSIR 79-1935*.

Safety; signs; standardization; symbols; visual alerting; fire fighting; fire safety; pictograms; 19274.

Safety; smoke; symbols; communications; evacuation; fire alarms; fire safety; human behavior; human factors; panic; *NBSIR 80-2070*.

Safety; solar collectors; solar energy; standards; thermal performance; buildings; cooling; durability/reliability; performance criteria; *SP586*, pp. 151-160 (June 1980).

Safety; specifications; standards; statistical analysis; steel; structural engineering; timber; aluminum; buildings (codes); concrete (prestressed); concrete (reinforced); design (buildings); limit states; loads (forces); masonry; probability theory; reliability; *SP577*.

Safety; standard; window; anthropometry; emergency egress; escape behavior; HUD; mobile home; *NBSIR 80-2049*.

Safety; standards; concrete; construction; cooling tower; formwork; hoisting system; regulations; *NBSIR 80-1964*.

Safety; temperature; tracealloy; vapor detectors; wood heating; fire; fluidic sensors; ionizing radiation; neutron; passive solar; radiography; *DIM/NBS 64*, No. 10, 1-32 (1980).

Safety; x rays; calibration; diagnostic x-rays; electrical measurements; health; radiation; radiation safety; *NBSIR 80-2072*.

Safety belts; scaffolding; accident data; fall arresting systems; industrial and construction industries; occupational safety; 19233.

Safety equivalency; safety evaluation; smoke detection; automatic sprinklers; building codes; building construction; Delphi Method; fire safety; health care facilities; hospitals; interior finishes; Life Safety Code; nursing homes; risk analysis; *NBSIR 78-1555-1*.

Safety evaluation; smoke detection; automatic sprinklers; building codes; building construction; Delphi Method; fire safety; health care facilities; hospitals; interior finishes; Life Safety Code; nursing homes; risk analysis; safety equivalency; *NBSIR 78-1555-1*.

Safety regulation; standards organizations; voluntary standards; administrative law; law; legal aspects of standards; regulation; *NBS-GCR-79-171*.

Safety regulations; shoring; trenching; construction safety; construction standards; excavation; *NBSIR 80-1988*.

Salt; synthesis; acid; aromatic; bond-delocalized; croconic; dianion; malononitrile; nonbenzenoid; pseudooxocarbons; 19560.

Salt; synthesis; acid; aromatic; bond-delocalized; croconic; dianion; malononitrile; nonbenzenoid; oxocarbon; *J. Res.* **85**, No. 2, 73-86 (Mar.-Apr. 1980).

Sample; standards; heterogeneous; in-house; laboratory; preparation; riffle; *SP591*, pp. 45-49 (Aug. 1980).

Sample carrier; coefficient of luminous intensity; coefficient of retroreflection; projector; receiver; retroreflectometer; retroreflector; 19394.

Sample characterization; sample processing effects; 25 gram capacity bomb calorimeter; bomb calorimetry; gross calorific values; refuse-derived-fuels; *NBSIR 80-1968*.

Sample perturbation; actinide recycle; cross section evaluation; fast critical facility; fast reactor; integral experiment; least square fitting; neutron spectrum; *SP594*, pp. 552-556 (Sept. 1980).

Sample preparation; scintillation counting; solgel; inorganic radiochemical; liquid scintillator; radioactivity; 19817.

Sample processing effects; 25 gram capacity bomb calorimeter; bomb calorimetry; gross calorific values; refuse-derived-fuels; sample characterization; *NBSIR 80-1968*.

Sampler; transition duration; amplitude comparator; Josephson junction; risetime; 19056.

- Samples; spectrometric analysis; transmission; measurements; number of nuclei; *SP594*, pp. 903-906 (Sept. 1980).
- Sampling (temporal); statistics; time-varying signals; community noise; measurement errors; noise; noise exposure; *19116*.
- Sand; surface reactions; tropospheric sink; catalysis; nitrous oxide; photochemistry; *19953*.
- S- and p-wave strength functions; total cross sections; W isotopes; elastic and inelastic scattering cross sections; energy range 10 keV-15 MeV; optical and statistical model calculations; potential scattering radii; *SP594*, pp. 336-339 (Sept. 1980).
- Sanduleak 3; Wolf-Rayet stars; OVI stars; *19741*.
- Santa Cruz; entrepreneurship; innovation; innovation centers; invention; invention evaluation; *19261*.
- Sapphire; thermomechanical analysis; compressive failure; laser damage; plastic flow; *SP568*, pp. 141-149 (July 1980).
- Sapphire-Al<sub>2</sub>O<sub>3</sub>; standard reference material; tele-microscope; thermal expansion; high temperature; interferometer; *19915*.
- Satellite; d-hole pairs; photoemission; *19271*.
- Satellite; spectrum; spectrum conservation; standard; time broadcast stations; voice announcements; clocks; HF; interference; *19525*.
- Satellite; time; time scales; Hermes/CTS; international time comparison; precise time transfer; *19530*.
- Satellite; time dissemination; *19528*.
- Satellite time code; standard frequencies; television color subcarrier; time calibrations; time signals; broadcast of standard frequencies; frequency calibrations; GOES satellite; high frequency; low frequency; *SP432*, *1979 Edition*.
- S atom reaction; CF<sub>2</sub> reaction; CF<sub>2</sub>I; CF<sub>2</sub>S; H atom reaction; HCF<sub>2</sub>; I atom reaction; infrared spectrum; matrix isolation; *19410*.
- Saturated absorption; saturation spectroscopy; Doppler-free spectroscopy; high-resolution spectroscopy; laser spectroscopy; non-linear spectroscopy; *19288*.
- Saturation; titration curve; dissolution; Karl Fischer water determination; mass fraction of water; rate constant; *19591*.
- Saturation effect; chemical kinetics; exposure; exposure reciprocity; kinetic equations; photochemistry; photon intensity; photoresist exposure; rate constants; *19418*.
- Saturation point; throughput rate; load control; multiprogramming; operational analysis; optimization; queueing theory; response time; *SP500-65*, pp. 207-213 (Oct. 1980).
- Saturation spectroscopy; Doppler-free spectroscopy; high-resolution spectroscopy; laser spectroscopy; non-linear spectroscopy; saturated absorption; *19288*.
- Saturation spectroscopy; four-wave mixing; heterodyne spectroscopy; iodine spectroscopy; non-linear spectroscopy; phase conjugate spectroscopy; *19287*.
- Saturation states; thermodynamic properties of water; vapor pressure; virial coefficients; water; enthalpy of water; heavy water; *PvT*; *JPCRD 9*, No. 3, 735-750 (1980).
- Saturn's satellites; constraints on composition; orbital evolution; *19774*.
- Savings-to-investment ratio; benefit-cost; building design; construction economics; discounting; economics; energy conservation; life-cycle cost; payback; rate-of-return; *SP544*.
- Scaffold failures; scaffolds; accidents; accident statistics; construction regulations; construction safety; employee casualties; environmental hazards; human factors; occupational safety; *NBSIR 79-1955*.
- Scaffolding; accident data; fall arresting systems; industrial and construction industries; occupational safety; safety belts; *19233*.
- Scaffolds; accidents; accident statistics; construction regulations; construction safety; employee casualties; environmental hazards; human factors; occupational safety; scaffold failures; *NBSIR 79-1955*.
- Scaffolds; stiffness; strength; structural safety; work surfaces; codes and standards; construction safety; design; loads; maintenance; occupational hazards; *NBSIR 79-1937*.
- Scales; specifications; taximeters; tolerances; volume-measuring devices; weighing devices; weights; length-measuring devices; liquid-measuring devices; measures; *H44*, *1980 Edition*.
- Scaling laws; Burnett method; coexistence curve; critical exponents; critical isochore; critical parameters; equation of state; ethylene; impurities; isochores; *19894*.
- Scaling parameter; transport mean free path; albedo; backscatter; electrons; range; reflection; *19391*.
- Scaling theory; solids; Van Vleck susceptibility; anomalous behavior; frequency shifts; hydrostatic pressure; Knight shift; *19925*.
- Scandium energy levels; atomic energy levels; atomic spectra; *JPCRD 9*, No. 2, 473-512 (1980).
- Scanning acoustic microscope; scanning electron microscope; semiconductor devices; semiconductor materials; semiconductor process control; silicon; silicon dioxide; spatial filtering microscope; sputter-Auger method; test structures; transistors; wire bonds; *SP400-45*.
- Scanning electron microscope; semiconductor technology; filar eyepiece; image-shearing eyepiece; integrated circuits; linewidth measurements; microelectronics; micrometrology; optical microscope; photoelectric microscope; photomask; *SP400-43*.
- Scanning electron microscope; electroforming; electroplating; micrometer scale; *19833*.
- Scanning electron microscope; semiconductor devices; semiconductor materials; semiconductor process control; silicon; silicon dioxide; spatial filtering microscope; sputter-Auger method; test structures; transistors; wire bonds; capacitance-voltage methods; *SP400-45*.
- Scanning electron microscope; silicon (Li) detector; spectral artifacts; x-ray spectrometry; analytical electron microscope; energy dispersive x-ray spectrometry; *19631*.
- Scanning electron microscope; spectral artifacts; transmission electron microscopy; electron probe microanalysis; energy dispersive x-ray spectrometry; microanalysis; qualitative analysis; quantitative analysis; *19088*.
- Scanning electron microscopy; transmission electron microscopy; wear; abrasive wear; copper; erosive wear; *19958*.
- Scanning electron microscopy; x-ray microanalysis; aluminum wiring; duplex connectors; high resistance junctions; junction resistance; *J. Res. 85*, No. 6, 429-440 (Nov.-Dec. 1980).
- Scattered gamma radiation; XRF analysis. <sup>252</sup>Cf; metal exploration; natural gamma radiation; neutron activation analysis; neutron inelastic scattering; nuclear cross sections; nuclear reactors; radiative neutron capture; *SP594*, pp. 615-626 (Sept. 1980).
- Scattering; angular distribution; computer programs; corrections; energy distribution; finite geometry; Monte Carlo method; multiple scattering; neutron; *SP594*, pp. 504-508 (Sept. 1980).
- Scattering; thallium iodide; antireflective coating; deposition technique; environmental stability; masking layer; potassium chloride window; *SP568*, pp. 355-357 (July 1980).
- Scattering in a laser field; stimulated bremsstrahlung; multiphoton transitions; *19227*.
- Scatter tables; hashing; resource allocation; *19242*.
- Scheduling policies; simulation model; system performance; workloads; cumulative distribution function; events; hardware configuration; model validation; queue; *SP500-65*, pp. 111-128 (Oct. 1980).
- Scheelite; brannerite; cerium niobate; cerium tantalate; cerium titanate; crystal chemistry; crystallography; fergusonite; *19676*.
- Scheelite; thermogravimetric analysis; cerium niobate; cerium tantalate; fergusonite; oxidation-reduction; *19638*.
- Scheffe, design; spline; volume; calibration curve; experiments; finite elements; *J. Res. 85*, No. 4, 295-304 (July-Aug. 1980).
- Schema; simulation modeling; CODASYL; data base; data base management systems; data description language; data manipulation language; performance evaluation; *SP500-65*, pp. 3-10

(Oct. 1980).

Schladitz whiskers; carbon; cementite; hyperfine fields; iron fibers; magnetism; Mossbauer effect; 19253.

Schools; smoke; evacuation; fire departments; fire investigations; flashover; *NBS-GCR-80-237*.

Schottky-barrier diodes; semiconductor diodes; standing-wave ratio (SWR); conversion loss; diode measurement; intermediate-frequency (i-f) output conductance; measurement uncertainties; microwave mixer diodes; modulation; point-contact diodes; reflectometer; return loss; *SP400-16*.

Schottky-barrier diodes; voltage comparator; wideband comparator; linear voltage response; rf voltage comparator; 19544.

Schottky diode bridge; time controlled sampling; diode bridge sampling gates; diode bridge switches; diode clipping circuits; diode shunt limiters; *TN1121*.

Scientific computation; computer; instrumentation; laboratory automation; 19133.

Scientific computing engineering; software; standards; data processing; Federal Information Processing Standard; FORTRAN; numeric methods; programming language; *FIPS PUB 69*.

Scientific uncertainty; societal decisions; socioscientific problems; theory; time constants; basic research; challenge to the analytical chemist; chemical measurement process; energy; environment; health; modelling; 19666.

Scintillation counting; solgel; inorganic radiochemical; liquid scintillator; radioactivity; sample preparation; 19817.

Screen evaluations; sensitivity of screens; spectroradiometry of screens; x-radiation of intensifier screens; fluorescent screens; intensifier screen standards; radiographic intensifier screen efficiency; 19234.

SEC regulations; venture capital; capital asset; capital market; market model; pricing model; *Monogr. 166*.

SEM; stylus; surface; surface roughness; surface texture; metrology; profilometer; razor blade; 19064.

SEM; thickness measurement; video waveform; gold coating cross section; magnification calibration; 19859.

Seal; tamper; unattended safeguards system; safeguards instrument; *SP582*, pp. 257-260 (June 1980).

Seasonal cost of operation; add-on heat pumps; furnaces; heat pumps; hybrid heat pumps; hybrid systems; rating procedure; *NBSIR 80-2090*.

Seasonal performance; test method; central air conditioners; central heating equipment; heating seasonal performance; heat pumps; rating procedure; residential heating; *NBSIR 80-2002*.

Secondary charged particles; tissue-equivalent gas; dosimetry; energy per ion pair; kerma; neutrons; 19331.

Secondary ion mass spectrometry; sensitivity factors; sputtering; surface analysis; local thermal equilibrium model; microanalysis; 19642.

Secondary ion mass spectrometry; sputtering; surface analysis; ion microprobe mass analysis; microanalysis; quantitative analysis; 19532.

Secondary ion mass spectrometry; surface analysis; glasses; ion microprobe mass analysis; microanalysis; quantitative analysis; 19869.

Secondary ion mass spectrometry; surface analysis; ion microanalysis; ion microprobe; microanalysis; quantitative analysis; 19643.

Secondary ion mass spectrometry; surface analysis; ion probe microanalysis; local thermal equilibrium model; microanalysis; relative elemental sensitivity factors; 19151.

Secondary-ion mass spectroscopy; surface analysis; x-ray photoelectron spectroscopy; Auger-electron spectroscopy; ion-scattering spectroscopy; quantitative analysis; 19293.

Secondary radiation; multiplicity spectrum; neutron cross section; *SP594*, pp. 521-523 (Sept. 1980).

Secondary standards; signs; symbols; antifouling coating; communication; gamma-ray measurement; human serum; industrial development; industrial furnace; measurement; polarized electrons; *DIM/NBS 64*, No. 2, 1-36 (1980).

Secondary temperature fixed point; thermometry; defining temperature fixed point; gallium; gallium melting-point temperature; gallium triple-point temperature; 19058.

Second breakdown; semiconductors; test structures; thermal resistance; very large scale integration; VLSI; wire bonds; Department of Commerce; integrated circuits; metrology for semiconductors; National Bureau of Standards; photomasking; resistivity; *NBSIR 80-2057*.

Second breakdown, reverse-bias; transistor, power; turn-off, transistor; focusing, current; measurement, nondestructive; 19161.

Second Law of Thermodynamics; system efficiency; availability analysis; energy; energy conservation; process efficiency; *TN1115*.

Second sound; shock wave profile; thermal relaxation; argon; computer simulation; Lennard-Jones potential; liquid; molecular dynamics non-equilibrium processes; 19487.

Second virial; state-of-the-art; temperature; Burnett PVT measurements; coefficient; ethylene; 19115.

Security; audit-in-depth; auditing; auditing aids; internal controls; *SP500-65*, pp. 23-32 (Oct. 1980).

Security; design methodology; formal specification; formal verification; hierarchical design; programming methodology; *SP500-67*.

Security controls; system life cycle; system security; ADP availability; ADP security; application system security; computer applications; computer reliability; computer security; data confidentiality; data integrity; data security; *FIPS PUB 73*.

Security systems; sensory processes; cognitive processes; nuclear weapon theft; perceptual processes; psychological deterrence; *NBSIR 80-2038*.

Security violations; SMF retrieval; audit trails; computer fraud; computer security; job tracking; *SP500-65*, pp. 33-46 (Oct. 1980).

Segmented polyurethane; time dependent failure; urethane-silicone copolymer; biomaterials; blood pump materials; butyl rubber; elastomers; polyolefin rubber; *NBSIR 80-2008*.

Segregation; standard; calibration; environments; homogeneity; natural materials; nondestructive assay; particles; quality assurance; radiation; radioactivity; radiochemical assay; radionuclide; 19298.

Seismicity; structural engineering; bridges; buildings; dikes; earthquakes; foreign engineering; geology; highways; housing; landslides; liquefaction; power plants; railroads; rock slides; *SP592*.

Seismology; standards; storm surge; structural engineering; structural response; tsunamis; wind loads; winds; accelerograph; codes; design criteria; disaster; earthquakes; ground motion; *SP560*.

Selected transition probabilities; atomic oscillator strengths; compact tabulation; critical evaluation; hydrogen through iron; 19824.

Selection; service; analysis; computer; evaluation; Federal Information Processing Standards Publication; measurement; performance; remote batch; *FIPS PUB 72*.

Selection methodology; binary selection; computer comparison; computer measurement; computer service; data analysis; performance evaluation; ranking and selection; *SP500-58*.

Selection of thermoluminescence dosimetry system; survey; thermoluminescence; United States; calibration; dosimetry; high-energy bremsstrahlung; operational characteristics; radiation therapy; recommendations; *TN1119*.

Selective coupling; 6-amino-6-deoxy-D-galactose-6-<sup>15</sup>N derivatives; carbon-13 n.m.r.; nitrogen-15 coupling constants; nucleophilic substitution; paramagnetic broadening; proton n.m.r.; 19670.

Self broadening; theoretical and experimental comparisons; low pressures; noble gas broadening; O<sub>2</sub> microwave spectrum; pressure broadening; 19721.

Self broadening; Van der Waals type wing; Lorentzian type wing; quasistatic wing; 19776.

Self-broadening of alkali lines; asymmetries; quasistatic wings; resonance lines; 19228.

Self-discharge; battery; microcalorimeter; pacemaker; power cell; *J. Res.* 85, No. 3, 193-203 (May-June 1980).

Self-entanglement effects; computer simulation; end-to-end length; entanglement effects; excluded volume effects; lattice-model polymer chains; polymer chain dynamics; random-coil polymer chains; relaxation times; 19864.

Self-focusing; Abbe value; coolant; index-matching liquids; nonlinear refractive index; *SP568*, pp. 91-98 (July 1980).

Self-focusing; spot size dependence; alkali halides; intrinsic damage; IR windows; laser damage; *SP568*, pp. 497-517 (July 1980).

Self-focusing; stimulated Brillouin scattering (SBS); damage morphology; damage thresholds; laser bulk damage; laser surface damage; optical materials; *SP568*, pp. 519-527 (July 1980).

Self-indication; self-shielding and fission factors; time-of-flight; He proportional counter; fission chamber; *SP594*, pp. 692-697 (Sept. 1980).

Self-shielding and fission factors; time-of-flight; He proportional counter; fission chamber; self-indication; *SP594*, pp. 692-697 (Sept. 1980).

Self-shielding factors; spherical model; transport theory  $k_{eff}$ ; diffusion theory; *SP594*, pp. 187-189 (Sept. 1980).

Semantics; TDMS; tree; tree structures; ambiguity; Boolean; database; hierarchical; information; query; query language; 19433.

Semiautomated pipetting; serum lithium analysis; statistical analysis; accuracy; clinical analysis; clinical chemistry; definitive method; electrolytes; flame atomic absorption spectroscopy; interlaboratory testing; precision; reference method; *SP260-69*.

Semiconductor; silicon; spreading resistance; two probe measurements; dopant profiles; resistivity; resistivity profiles; 19105.

Semiconductor; tape bonded devices; acoustic emission; beam lead devices; electronic devices; hermeticity; hybrids; nondestructive tests; 19108.

Semiconductor detector efficiency; standards; detector efficiency; gamma-ray efficiency; Marinelli beaker; Reentrant beaker; 19408.

Semiconductor device packages; back pressurization hermetic test; helium mass spectrometer leak test; hermeticity; hybrid microcircuits; leak testing; 19821.

Semiconductor devices; semiconductor materials; semiconductor process control; silicon; silicon dioxide; spatial filtering microscope; sputter-Auger method; test structures; transistors; wire bonds; capacitance-voltage methods; deep level transient spectroscopy; *SP400-45*.

Semiconductor devices; semiconductor materials; semiconductor process control; silicon; electronics; integrated circuits; measurement technology; microelectronics; *NBSIR 80-2006*.

Semiconductor devices; semiconductor materials; semiconductor processing; semiconductor technology; silicon; 19213.

Semiconductor devices; very large scale integration; x-ray lithography; electron-beam lithography; metal-oxide-semiconductor device; process-induced radiation damage; radiation damage; 19162.

Semiconductor diodes; standing-wave ratio (SWR); conversion loss; diode measurement; intermediate-frequency (i-f) output conductance; measurement uncertainties; microwave mixer diodes; modulation; point-contact diodes; reflectometer; return loss; Schottky-barrier diodes; *SP400-16*.

Semiconductor industry; technological change; competition; Experimental Technology Incentives Program; government policy; innovation; *NBS-GCR-ETIP 80-91*.

Semiconductor mass analysis; field evaporation; molecular ions; 19917.

Semiconductor materials; semiconductor process control; silicon; electronics; integrated circuits; measurement technology; microelectronics; semiconductor devices; *NBSIR 80-2006*.

Semiconductor materials; semiconductor process control; silicon; silicon dioxide; spatial filtering microscope; sputter-Auger method; test structures; transistors; wire bonds; capacitance-voltage methods; deep level transient spectroscopy; electrical properties; electronics; *SP400-45*.

Semiconductor materials; semiconductor processing; semiconductor technology; silicon; semiconductor devices; 19213.

Semiconductor materials; sensitivity; trace element analysis; accuracy; analytical methods; microanalysis; 19314.

Semiconductor measurements; sheet resistance; solar cell; solar cell measurements; solar cell stability; device measurements; laser scanning; light-biasing; metallization; ohmic contacts; reliability; *NBSIR 80-2027*.

Semiconductor measurements; sheet resistance; solar cells; cell cracks; device measurements; laser scanning; light biasing; metallization; ohmic contacts; reliability; 19435.

Semiconductor process control; silicon; electronics; integrated circuits; measurement technology; microelectronics; semiconductor devices; semiconductor materials; *NBSIR 80-2006*.

Semiconductor process control; silicon; silicon dioxide; spatial filtering microscope; sputter-Auger method; test structures; transistors; wire bonds; capacitance-voltage methods; deep level transient spectroscopy; electrical properties; electronics; *SP400-45*.

Semiconductor processing; semiconductor technology; silicon; semiconductor devices; semiconductor materials; 19213.

Semiconductors; dimensional metrology; electronics; integrated circuits; materials characterization; microelectronics; 19109.

Semiconductors; dimensional metrology; electronics; integrated circuits; materials characterization; measurement methods; microelectronics; microstructures; *SP400-61*.

Semiconductors; silicon; dopant density; electrical measurements; mobility; resistivity; 19806.

Semiconductors; silicon; dopant density; electrical measurements; mobility; resistivity; 19783.

Semiconductors; silicon; electrical measurements; Hall measurements; 19415.

Semiconductors; silicon; vacancies; Brownian motion; diffusion; Fick's Law; Fokker-Planck equation; process modeling; 19726.

Semiconductors; stress; zinc-blende structure; covalent bonding; diamond structure; elastic constants; gallium arsenide; indium antimonide; ionicity; optical phonons; Raman scattering; 19580.

Semiconductors; surge arresters; varistors; voltage-variable resistors; zinc oxide; electrically conducting ceramics; electrical transmission; lightning arresters; nonlinear resistors; *NBSIR 79-1939*.

Semiconductors; test structures; thermal resistance; very large scale integration; VLSI; wire bonds; Department of Commerce; integrated circuits; metrology for semiconductors; National Bureau of Standards; photomasking; resistivity; second breakdown; *NBSIR 80-2057*.

Semiconductor technology; filar eyepiece; image-shearing eyepiece; integrated circuits; linewidth measurements; microelectronics; micrometrology; optical microscope; photoelectric microscope; photomask; scanning electron microscope; *SP400-43*.

Semiconductor technology; silicon; semiconductor devices; semiconductor materials; semiconductor processing; 19213.

Semicrystalline polymers; sorption; diffusivity; elastic deformation; fractional free volume; permeability; plastic deformation; 19662.

Semi-dynamic material control; diversion sensitivity; reprocessing facilities; *SP582*, pp. 730-739 (June 1980).

Semiempirical model; excitation functions  $E = 5-80$  MeV; nuclear reactions; *SP594*, pp. 778-782 (Sept. 1980).

Seminars; State/local; training; inspectors; laboratory; metrology; 19438.

Senior citizens; smoke; breathing apparatus; evacuation; fire departments; fire fatalities; flashover; hotels; room fires; *NBS-GCR-80-253*.

Sense information; status byte; command codes; disk drives; Federal Information Processing Standard; format track; operational specification; rotating mass storage subsystems; *FIPS PUB 63*.

Sensitivity; standards; ultrasonics; calibration; image quality indicator; nondestructive testing; radiography; 19877.

Sensitivity; trace element analysis; accuracy; analytical methods; microanalysis; semiconductor materials; 19314.

Sensitivity; ultrasonic inspection; coupling; magnetic inspection; nondestructive testing; pulsed mode; rail test car; railroad rail; 19885.

Sensitivity analysis; assessment; documentation; energy; forecasting; mathematical models; *NBSIR 80-2128*.

Sensitivity analysis; capture cross section of pseudo fission product; fission products kinetics; ratio  $^{134}\text{Cs}/^{137}\text{Cs}$ ; residual decay heat; *SP594*, pp. 886-889 (Sept. 1980).

Sensitivity analysis; material balance declaration; measurement error sources; *SP582*, pp. 690-701 (June 1980).

Sensitivity analysis; separation standard; vertical error; vertical overlap; air safety; collision probability; probability distribution; *NBSIR 80-1990*.

Sensitivity analysis; shielding application; structural material; total cross section; unresolved resonance; elastic scattering cross section; partial inelastic scattering cross section; resonance self-shielding effect; *SP594*, pp. 586-590 (Sept. 1980).

Sensitivity analysis; simultaneous equations; Box-Jenkins; forecasting; multiple regression; *SP500-65*, pp. 215-229 (Oct. 1980).

Sensitivity analysis; uncertainty analysis; breeding ratio; calculational bias uncertainties; fast reactors; group cross sections; integral experiments; least-squares adjustment; *LMFBR; SP594*, pp. 177-181 (Sept. 1980).

Sensitivity analysis; validation; assessment; documentation; econometric models; energy modeling forum; energy models; evaluation; mathematical models; model access; model management; *SP569*.

Sensitivity change; stability; strain gages; structure; transducers; zero shift; adhesive; backing; connection; environment; gage element; leads; load; protective coating; resistance; 19049.

Sensitivity coefficient; time-of-flight; transport calculation; group constants; neutron spectrum; *SP594*, pp. 265-274 (Sept. 1980).

Sensitivity factors; sputtering; surface analysis; local thermal equilibrium model; microanalysis; secondary ion mass spectrometry; 19642.

Sensitivity of screens; spectroradiometry of screens; x-radiation of intensifier screens; fluorescent screens; intensifier screen standards; radiographic intensifier screen efficiency; screen evaluations; 19234.

Sensitometry; Van Kreveld's law; exposure; exposure modeling; photolysis kinetics; photoresist; 19801.

Sensory environment; social sciences; thermal environment; architecture; audition; built environment; color; environmental psychology; illumination; perception; questionnaires; research methodology; *SP474*.

Sensory feedback; vision system; line following; part acquisition; plane of light; real time; robot; 19096.

Sensory processes; cognitive processes; nuclear weapon theft; perceptual processes; psychological deterrence; security systems; *NBSIR 80-2038*.

Separation; solvent extraction; activation analysis; cadmium; mercury; radiochemical; 19283.

Separation standard; vertical error; vertical overlap; air safety; collision probability; probability distribution; sensitivity analysis; *NBSIR 80-1990*.

Sequence of events; Three Mile Island; China syndrome myth; hydrogen bubble myth; reactor cooling; reactor safety system; *SP594*, pp. 916-919 (Sept. 1980).

Sequential simplex procedure; x-ray spectra; computer program; fitting Gaussian profiles; incomplete charge collection; lithium-drifted silicon detector; 19130.

Serials; standards; transactions; annual reports; diffusion in metals; fire; journals; library holdings; NBS library; NBS periodicals; periodicals; proceedings; *NBSIR 79-1932*.

Serum; cholesterol; gas chromatography/mass spectrometry; isotope dilution; 19899.

Serum density; specific gravity of blood and serum; blood density; 19558.

Serum lithium analysis; statistical analysis; accuracy; clinical analysis; clinical chemistry; definitive method; electrolytes; flame atomic absorption spectroscopy; interlaboratory testing; precision; reference method; semiautomated pipetting; *SP260-69*.

Service; analysis; computer; evaluation; Federal Information Processing Standards Publication; measurement; performance; remote batch; selection; *FIPS PUB 72*.

Service specification transport protocol; verification; alternating bit protocol; communication protocol; file transfer protocol; protocol specification; readability analysis; *NBS-GCR-80-281*.

Session protocol; transport protocols; communication protocols; computer network protocols; feature analysis; network architecture; networking; *NBS-GCR-80-245*.

Session protocols; transport protocols; communication protocols; computer network protocols; network architecture; networking; protocol design specification; *NBS-GCR-80-289*.

Session protocols; transport protocols; communication protocols; computer network protocols; design specification; formal specification; network architecture; networking; *NBS-GCR-80-246*.

Settling velocity; Stokes law velocity; vibrating orifice aerosol generator; aerosol size calibrations; optical particle counter; particle Doppler shift spectrometer; particle size distribution; 19171.

SF<sub>6</sub>; SF<sub>6</sub>-N<sub>2</sub> mixtures; corona; partial-discharge; point-plane electrodes; pulse height distributions; 19785.

SF<sub>6</sub>; 20 microK thermostat; comparison with He<sup>3</sup>, Ne; critical anomaly; dielectric constant; differential capacitance cell; 19484.

SF<sub>6</sub>-N<sub>2</sub> mixtures; corona; partial-discharge; point-plane electrodes; pulse height distributions; SF<sub>6</sub>; 19785.

Shale oil; SRM; weights and measures; x-ray exams; compact range; data; daylighting; energy; environmental; *DIM/NBS 64*, No. 6, 1-24 (1980).

Shale oil; trace organic analysis; gas chromatography; liquid chromatography; mass spectrometry; quantitation; 19598.

Shape evaluation; alpha counting; normalization uncertainties; *SP594*, pp. 483-487 (Sept. 1980).

Shape resonance; synchrotron radiation; angle resolved photoemission; angular distributions; carbon monoxide; CO; photoelectron spectra; photoionization; 19559.

Shape resonance; synchrotron radiation; vibrational intensity distribution; branching ratios; Franck-Condon factors; ion; nitrogen; N<sub>2</sub>; photoelectron spectra; photoionization; 19607.

Shape resonance; synchrotron radiation; vibrational intensity distribution; carbon monoxide; CO; Franck-Condon factors; ion; photoelectron spectra; photoionization; 19184.

Shared resources; input/output system; *SP500-65*, pp. 157-163 (Oct. 1980).

Shear; bulk modulus; compressibility; finite elasticity; modulus; rubber; 19886.

Shear-bond strength; simulated geothermal fluids; geothermal-well cements; high pressure vessel; high temperature furnace; permeability; *NBSIR 80-2099-3*.

Shear-bond strength to steel; splitting tensile strength; compressive strength; exposure to geothermal fluids; geothermal-well cements; permeability to water; *NBSIR 80-2099-2*.

Shear modulus; sound velocity; stainless steel; Young's modulus; bulk modulus; elastic constants; physical-property variability; Poisson's ratio; 19246.

Shear (S) mode; ultrasonic diffraction; welds; compressional (P) modes; cracks; defect characterization; dimensioning; one-transducer technique; *NBSIR 80-1983*.

- Shear stresses; BKZ theory; mechanical conditioning; nonlinear viscoelasticity; normal stresses; poly(methyl methacrylate); 19707.
- Sheet and chain silicates; mineralogy; Raman microprobe; Raman spectroscopy; 19590.
- Sheet resistance; solar cell; solar cell measurements; solar cell stability; device measurements; laser scanning; light-biasing; metallization; ohmic contacts; reliability; semiconductor measurements; *NBSIR 80-2027*.
- Sheet resistance; solar cells; cell cracks; device measurements; laser scanning; light biasing; metallization; ohmic contacts; reliability; semiconductor measurements; 19435.
- Sheet resistance; spreading resistance; correction factor; depth profiling; Laplace's equation; local slope analysis; multilayer analysis; resistivity; 19703.
- Sheet resistor; test methods; test pattern; test structure; circuit characterization; cross-bridge sheet resistor; electrical alignment test structure; gated diode; integrated test structure; microelectronic test structure; process validation wafer; random fault test structure; 19165.
- Sheets; spheres; type II diffusion; diffusivity; glass-gel boundary; 19668.
- Sheet type structure; symmetric hydrogen bonds; calcium ammonium phosphate; calcium phosphate; crystal structure; 19386.
- Shell; collapse; concrete; concrete strength; construction; cooling tower; failure; hyperbolic shell; *NBSIR 78-1578*.
- Shielding; bias factors; neutron transport; *SP594*, pp. 275-284 (Sept. 1980).
- Shielding; fusion; neutral beam injection; neutrons; nuclear heating; photon dose rate; photons; *SP594*, pp. 239-245 (Sept. 1980).
- Shielding; spacecraft; bremsstrahlung; dose; electrons; proton; 19226.
- Shielding application; structural material; total cross section; unresolved resonance; elastic scattering cross section; partial inelastic scattering cross section; resonance self-shielding effect; sensitivity analysis; *SP594*, pp. 586-590 (Sept. 1980).
- Shipboard fires; cost benefit analysis; cost effectiveness; fire departments; fire losses; fire models; fire protection; marine transportation; merchant vessels; *NBS-GCR-79-173*.
- Shish kebabs; crystallization theory flow induced crystallization; extended chain fibrils; polymer crystallization; 19167.
- Shock deformation; Tishomingo meteorite; x-ray diffraction; electron microscopy; Fe-Ni alloys; martensite; 19947.
- Shock tube; 1-hexene; allylic resonance energy; allyl radicals; biradical; cyclohexane; decomposition; decyclization; isomerization; olefins; 19784.
- Shock wave profile; thermal relaxation; argon; computer simulation; Lennard-Jones potential; liquid; molecular dynamics non-equilibrium processes; second sound; 19487.
- Shoring; slope stability; construction; excavation; geotechnical engineering; retaining structures; *NBS-GCR-80-202*.
- Shoring; slope stability; soil classification; soil pressure; soil testing; trenching; braced excavations; construction; excavation; geotechnical engineering; retaining structures; *BSS121*.
- Shoring; slope stability; soil classification; soil pressure; standards; trenching; braced excavation; construction; retaining structures; *BSS127*.
- Shoring; softwood; timber engineering; trench bracing; trenching; construction lumber; construction safety; excavation; hardwood; lumber grading; *BSS122*.
- Shoring; soil classification; trench; workshop; acceptable work practices; excavation; geotechnical engineering; safety; *NBSIR 79-1935*.
- Shoring; trenching; construction practices; construction safety; excavation; *NBSIR 79-1936*.
- Shoring; trenching; construction safety; construction standards; excavation; safety regulations; *NBSIR 80-1988*.
- Shredded and slit films; solids; sparks; test methods; Federal Hazardous Substances Act; flammability; granulars; hazardous substances; pastes; powders; *NBSIR 78-1580*.
- Shunt reactors; bridges; calibration; current comparator; dissipation factor; electrical measurements; energy loss; 19767.
- SI; base units; convention of the meter; economic benefits; epistemology; measurement system; metric system; 19639.
- SI; standards; units; measurements; metric; metrology; 19628.
- SI; standards; units; measurements; metric; metrology; 19868.
- SI units; standard reference materials; traceability; definitive methods; measurement compatibility; protocol; reference methods; *SP582*, pp. 15-24 (June 1980).
- SI units for building; convenient values; metric conversion; preferred dimensions; preferred values; 19519.
- SiC substrates; surface defects; thermal diffusivity; vapor-deposited mirrors; crystalline disorder; Cu mirrors; diamond turning; laser-induced slip; polishing; ripples; *SP568*, pp. 175-186 (July 1980).
- Side grooves; three-dimensional crack; torsional beam; compliance analysis; curved crack profile; double-torsion testing; fracture (materials); fracture toughness; 19693.
- Side grooves; three-dimensional crack; torsional beam; compliance analysis; curved crack profile; double-torsion testing; fracture (materials); fracture toughness; 19684.
- Signal processing; tomography; ultrasonics; automated testing; continuous monitoring; nondestructive testing; radiography; 19475.
- Signal processing; waves; microwave systems; transmission-line theory; 19367.
- Signs; standardization; symbols; visual alerting; fire fighting; fire safety; pictograms; safety; 19274.
- Signs; symbols; antifouling coating; communication; gamma-ray measurement; human serum; industrial development; industrial furnace; measurement; polarized electrons; secondary standards; *DIM/NBS 64*, No. 2, 1-36 (1980).
- Silicates; coal slag; conductivity; electrical; electrical conductivity; ferric; ferric/ferrous ratio; ferrous; ionic; ionic conductivity; magnetohydrodynamics iron; MHD; 19576.
- Silicon; capacitance-voltage profiling; damage effects; electrical activation of implanted impurities; ion implantation; laser annealing; 19724.
- Silicon; carrier density; computer program; electrical properties of silicon; Hall effect; mobility; resistivity; *SP400-63*.
- Silicon; dopant density; electrical measurements; mobility; resistivity; semiconductors; 19806.
- Silicon; dopant density; electrical measurements; mobility; resistivity; semiconductors; 19783.
- Silicon; electrical measurements; Hall measurements; semiconductors; 19415.
- Silicon; electronics; integrated circuits; measurement technology; microelectronics; semiconductor devices; semiconductor materials; semiconductor process control; *NBSIR 80-2006*.
- Silicon; field ion microscopy; photoillumination effect; 19210.
- Silicon; Hall effect; junction C-V measurements; neutron activation analysis; phosphorus density; photometric technique; 19431.
- Silicon; semiconductor devices; semiconductor materials; semiconductor processing; semiconductor technology; 19213.
- Silicon; silicon carbide; aluminumoxide; brittle fracture; dislocations; electron microscopy; erosion; germanium; hardness measurements; plastic deformation; 19731.
- Silicon; silicon dioxide; spatial filtering microscope; sputter-Auger method; test structures; transistors; wire bonds; capacitance-voltage methods; deep level transient spectroscopy; electrical properties; electronics; electron irradiation. hole mobility; *SP400-45*.
- Silicon; silicon photodetector; spectral response; visible; quantum efficiency; quantum yield; 19646.
- Silicon; spreading resistance; thyristor; aluminum-doped silicon; boron-doped silicon; gallium-doped silicon; p-type silicon; resistivity; 19422.
- Silicon; spreading resistance; two probe measurements; dopant profiles; resistivity; resistivity profiles; semiconductor; 19105.

- Silicon; spreading resistance measurements; thermally stimulated measurements; thyristor materials measurements; thyristor measurements; zinc oxide varistors; dc transmission; deep-level measurements; energy conservation; measurement methods; *NBSIR 80-2061*.
- Silicon; stability; crystal; Czochralski; edge-defined film-fed growth (EFG); floating zone; meniscus; *19945*.
- Silicon; sulfur; thermally stimulated measurements; dynathermal capacitance responses; dynathermal current response; isotopes; *19163*.
- Silicon; temperature coefficient of refractive index; germanium; optical constants; refractive index; *JPCRD 9*, No. 3, 561-658 (1980).
- Silicon; thermally stimulated measurements; interface states; measurement interferences; mobile ions; MOS capacitor; *19166*.
- Silicon; thyristors; defects; neutron transmutation doping; power device materials; radiation damage; *SP400-60*.
- Silicon; vacancies; Brownian motion; diffusion; Fick's Law; Fokker-Planck equation; process modeling; semiconductors; *19726*.
- Silicon analysis; size exclusion chromatography; tin analysis; fractionation; graphite furnace atomic absorption; high pressure liquid chromatography; organometallic polymers; organotin silicate; refractive index; reverse bonded phase chromatography; *19398*.
- Silicon carbide; aluminumoxide; brittle fracture; dislocations; electron microscopy; erosion; germanium; hardness measurements; plastic deformation; silicon; *19731*.
- Silicon cell; solar cell; spectral response; radiometry; *19669*.
- Silicon dioxide; spatial filtering microscope; sputter-Auger method; test structures; transistors; wire bonds; capacitance-voltage methods; deep level transient spectroscopy; electrical properties; electronics; electron irradiation. hole mobility; integrated circuits; *SP400-45*.
- Silicon (Li) detector; spectral artifacts; x-ray spectrometry; analytical electron microscope; energy dispersive x-ray spectrometry; scanning electron microscope; *19631*.
- Silicon monoxide; thorium fluoride; zinc selenide; zinc sulfide; absorption; coatings; internal reflectance spectroscopy; *SP568*, pp. 247-256 (July 1980).
- Silicon nitride; strength; ceramic turbines; failure prediction; fracture; oxidation; *19792*.
- Silicon nitride; yttria-doped silicon nitride; ceramic; high voltage electron microscopy; *in situ*; oxidation; *19605*.
- Silicon nitride; yttria-doped silicon nitride; ceramic; high voltage electron microscopy; *in situ*; oxidation; *NBSIR 80-2075*.
- Silicon on sapphire; surface roughness; ultraviolet reflectance; work damage; infrared reflectance; optical reflectance; polishing; *SP400-62*.
- Silicon photodetector; spectral response; visible; quantum efficiency; quantum yield; silicon; *19646*.
- Silicon photodetector; storage ring; synchrotron radiation; radiometry; *19935*.
- Silicon photodiode; spectroradiometry; absolute spectral response; laser power measurement; photodetector; radiant power measurement; radiometry; *19354*.
- Silicon photodiode; surface recombination; collection efficiency; quantum efficiency; *19738*.
- Silicon photodiodes; cleaning; dirt films; reflectance; *19675*.
- Silicon photovoltaic; specific adsorption; radiometric measurements; *19955*.
- Silver; coulometer; coulometry; electrochemistry; Faraday constant; *19472*.
- Silver; coulometry; electrochemical equivalent; electrochemistry; Faraday; fundamental constants; *J. Res. 85*, No. 3, 175-191 (May-June 1980).
- Silver alloys; copper alloys; corrosion behavior; creep properties; dental amalgam; manganese alloys; marginal stability; *19247*.
- Silver nitrate; aromatic hydrocarbons; gas-solid chromatography; *19913*.
- Similarity principle; crystal; double-diffusive convection; floating zone; materials processing; microgravity; morphological stability; *19178*.
- Simple materials; tensile test; viscoelastic bars; instability; necking; nonlinear; *19746*.
- Simulated geothermal fluids; geothermal-well cements; high pressure vessel; high temperature furnace; permeability; shear-bond strength; *NBSIR 80-2099-3*.
- Simulated paint films; chromates; coated metals; corrosion inhibitor; corrosion mechanisms; ellipsometry; *19659*.
- Simulation; apparatus spectrum; data library; fission products; full energy peak; gamma-ray spectrum; multiplets; optimization; peak/Compton ratio; *SP594*, pp. 878-880 (Sept. 1980).
- Simulation; building codes; building fires; computer-aided design; computer simulation; fire research; human performance; modeling; regulatory process; *SP586*, pp. 205-224 (June 1980).
- Simulation; bus networks; bus performance; computer programs; contention; CSMA; GPSS; local area networks; packet switching; *SP500-65*, pp. 79-85 (Oct. 1980).
- Simulation; statistics; sunspots; ARMA models; forecasts; Maunder minimum, models; *TN1022*.
- Simulation; workload definition; benchmarking; capacity planning; computer performance evaluation; computer performance measurement; computer performance prediction; computer system acquisition; CPE in auditing; installation management; on-line system evaluation; *SP500-65*.
- Simulation model; system performance; workloads; cumulative distribution function; events; hardware configuration; model validation; queue; scheduling policies; *SP500-65*, pp. 111-128 (Oct. 1980).
- Simulation modeling; CODASYL; data base; data base management systems; data description language; data manipulation language; performance evaluation; schema; *SP500-65*, pp. 3-10 (Oct. 1980).
- Simulation of human behavior; architectural research; building fires; computer-aided design; environmental psychology; fire research; fire safety; human behavior in fires; modeling technique; programming; *NBSIR 80-1982*.
- Simulation sampling errors; wind loads; climatological sampling errors; hurricanes; *19549*.
- Simultaneous equations; Box-Jenkins; forecasting; multiple regression; sensitivity analysis; *SP500-65*, pp. 215-229 (Oct. 1980).
- Simultaneous evaluation; absolute measurement; consistency; fission cross section; JENDL-2; nuclear data; optical potential parameter; relative measurement; *SP594*, pp. 715-719 (Sept. 1980).
- Single chain scattering form factor; small angle neutron scattering; concentrated solution; interchain interference; polyisoprene; radius of gyration; *19355*.
- Single crystal; carbide; carbon; catalysis; kinetics; methanation; nickel; *19480*.
- Single crystal; carbon; catalysis; hydrogenation; kinetics; methanation; ruthenium; *19492*.
- Single crystal; interstitials; sodium beta alumina; internal friction; ionic transport mechanism; sodium ion; *19442*.
- Single-crystal; structure refinement; x-ray diffraction; bond delocalized dianion; oxocarbon; *J. Res. 85*, No. 2, 87-97 (Mar.-Apr. 1980).
- Single crystal; surface science; carbon monoxide; catalysis; kinetics methanation; nickel; ruthenium; *19482*.
- Single crystal; ternary metal sulfide; x-ray diffraction; [Et<sub>3</sub>P]<sub>2</sub>PtWS<sub>4</sub>; molecular structure; Pt-W complex; *19172*.
- Single crystal; total cross section; Si(n,n); *SP594*, pp. 86-88 (Sept. 1980).
- Single-crystal; Weissenberg methods; x rays; absorption correction; diffractometers; flat-cone; macromolecules; neutrons; *19509*.
- Single crystal copper; copper crystal; fatigue; persistent slip

band; plastic strain; random cycling; 19694.

Single-crystal methods; twinning; critical evaluation; derivative lattices; indexing; lattice relationships; lattices; 19804.

Single crystal x-ray diffraction; standard test; urea complex; urea in sera; crystal structure; molecular structure; *J. Res.* **85**, No. 3, 205-210 (May-June 1980).

Single crystal x-ray diffraction; synthesis; *cis*-4-phenylcyclophosphamide; cyclophosphamide analogs; *in vivo* anticancer activity; molecular structure determination; 19829.

Single-level analysis; Zr(n,total) cross section; *SP594*, pp. 319-322 (Sept. 1980).

Single longitudinal mode pulse; TEA laser; beam diameter; insertion loss; optical detectors; photon drag detector; pyroelectric detector; responsivity; *TN1023*.

Single vibronic level spectroscopy; CF<sub>2</sub>; difluorocarbene; fluorescence excitation spectroscopy; Franck-Condon factors; laser excited fluorescence; radiative lifetime; 19371.

Singular perturbation problems; cell Reynolds number; diffusion convection equations; error estimates; higher order finite difference methods; numerical experiments; parabolic equations; 19490.

Si(n,n); single crystal; total cross section; *SP594*, pp. 86-88 (Sept. 1980).

Site selection; condensed phase; emission; laser absorption; molecules; 19111.

Site visit; accreditation; accreditation committee; American Industrial Hygiene Association; coordinator; industrial hygiene laboratories; laboratory; PAT; performance; personnel; proficient; quality control; reaccreditation; *SP591*, pp. 67-70 (Aug. 1980).

Six-port; automatic network analyzer; calibration; microwave; microwave measurements; 19303.

Six-port; automatic network analyzer; microwave measurements; 19564.

Size effect; solid mechanics; statistical methods; steel; fatigue; fracture; mathematical modeling; micromechanics; microstructure; nuclear fuel element; paper; quantitative microscopy; 19086.

Size exclusion chromatography; tin analysis; fractionation; graphite furnace atomic absorption; high pressure liquid chromatography; organometallic polymers; organotin silicate; refractive index; reverse bonded phase chromatography; silicon analysis; 19398.

Slag; three-dimensional flaws; arc strikes; blunt flaws; fracture mechanics; hydrogen-assisted cracking; low-cycle fatigue; porosity; preparing flawed weldments; 19762.

Sleep; smoke detectors; wakefulness; adults; alarm responses; auditory perception; decibel levels; fire departments; frequency distribution; noise (sound); *NBS-GCR-80-284*.

Sliding glass door; test methods; burglary resistance; forced entry; patio door; performance criteria; performance standard; 19702.

Sliding wear; wear; wear models; copper alloys; friction; metallic materials; microstructure; 19826.

Slip bands; statistical aspects of fatigue; striations; composite materials; corrosion fatigue; dislocations; fatigue mechanism; fracture mechanics; mathematical modeling; micromechanics; polymers; quantitative microscopy; 19087.

Slope stability; construction; excavation; geotechnical engineering; retaining structures; shoring; *NBS-GCR-80-202*.

Slope stability; soil classification; soil pressure; soil testing; trenching; braced excavations; construction; excavation; geotechnical engineering; retaining structures; shoring; *BSS121*.

Slope stability; soil classification; soil pressure; standards; trenching; braced excavation; construction; retaining structures; shoring; *BSS127*.

Slow crack growth; surface chemistry; atmosphere-assisted slow crack growth; chemically assisted fracture; fracture; fracture models; reaction rate theory; 19588.

Slow crack growth; surface energy; environmental fracture; fracture; materials failure; reaction rate theory; 19843.

Slow strain rate technique; strain rate; stress corrosion cracking; 2124-T851; 7075; 7075-T6; 7075-T7351; air; alternate immersion test; aluminum alloys; ductility; elongation; heat treatment; NaCl; plate gage; reduction in area; 19622.

Slow transient effect; transport; Y-doped CeO<sub>2</sub>; CeO<sub>2</sub>; conducting ceramic; conductivity; diffusion; oxygen conductor; 19444.

Slurry analysis; SNM assay; solution analysis; total sampling; x-ray fluorescence analysis; dissolver solution; *SP582*, pp. 547-554 (June 1980).

SMF retrieval; audit trails; computer fraud; computer security; job tracking; security violations; *SP500-65*, pp. 33-46 (Oct. 1980).

Sm; dosimetry; EBR-II; Eu isotopes; integral cross sections; Nd; *SP594*, pp. 557-562 (Sept. 1980).

Small-angle; texture determination; materials microstructure; neutron scattering; new instruments and methods; nondestructive testing; residual stress; 19811.

Small angle neutron scattering; concentrated solution; interchain interference; polyisoprene; radius of gyration; single chain scattering form factor; 19355.

Small-angle scattering; sulfur; absorption cross section; manganese bath; pile oscillator; *SP594*, pp. 738-742 (Sept. 1980).

Small angle scattering; superconductivity; crystal field; magnetic superconductors; neutron scattering; rare earth; 19255.

Small business; conglomerates; innovation; invention; large corporations; productivity; 19230.

Small-format; x-ray imaging system; <sup>125</sup>I x-ray source; microchannel plate; portable; rare-earth scintillator; 19402.

Small gas proportional and liquid scintillation counters; atmospheric pollutants; figure of merit; low-level counting; natural radiocarbon; 19677.

Small particles; solid solutions; solubility; surfaces; thermodynamics; vapor pressure; interstitials; melting; 19830.

Small polymer crystal; surface free energy; constrained polymer; polymer; polymer in a cone; polymer interference; *J. Res.* **85**, No. 4, 273-282 (July-Aug. 1980).

Smear layer; acid etch; adhesion; coupling agents; dentin; mordants; 19329.

Smoke; apartments; building fires; doors; egress; evacuation; fire departments; fire fighters; fire investigations; mattresses; *NBS-GCR-79-187*.

Smoke; breathing apparatus; evacuation; fire departments; fire fatalities; flashover; hotels; room fires; senior citizens; *NBS-GCR-80-253*.

Smoke; doors; evacuation; fire extinguishers; fire investigations; hospitals; nursing staff; patients; *NBS-GCR-80-231*.

Smoke; doors; fire departments; fire investigations; *NBS-GCR-80-221*.

Smoke; doors; fire departments; fire investigations; nursing staff; patients; *NBS-GCR-80-229*.

Smoke; egress; evacuation; fire alarm systems; fire departments; fire fighters; hospitals; nursing staff; patients; *NBS-GCR-80-192*.

Smoke; smoke detectors; fire departments; fire investigations; hospitals; *NBS-GCR-80-261*.

Smoke; smoke movement; stack effects; test methods; building fires; compartment fires; doors; egress; fire tests; high-rise buildings; leakage; life safety; *NBSIR 80-2004*.

Smoke; smoke movement; stairwells; tracers; air movement; elevators; fire tests; hospitals; *NBS-GCR-79-183*.

Smoke; smoldering; bedding; fire departments; fire investigations; hospitals; nursing staff; patients; *NBS-GCR-80-239*.

Smoke; sprinkler systems; evacuation; fire departments; fire extinguishers; fire investigations; hospitals; patients; *NBS-GCR-80-233*.

Smoke; sprinkler systems; fire alarm systems; fire departments; fire extinguishers; *NBS-GCR-80-274*.

Smoke; sprinkler systems; fire alarm systems; fire departments; fire investigations; *NBS-GCR-80-263*.

Smoke; students; doors; dormitories; evacuation; fire departments; fire fatalities; fire fighters; flashover; ladders; room fires; *NBS-GCR-80-193*.

Smoke; symbols; communications; evacuation; fire alarms; fire safety; human behavior; human factors; panic; safety; *NBSIR 80-2070*.

Smoke; upholstered furniture; doors; evacuations; fire departments; fire extinguishers; nursing staff; patients; room fires; *NBS-GCR-80-220*.

Smoke; upholstered furniture; evacuation; fire departments; fire fatalities; fire investigations; flashover; group homes; halfway houses; mental disorders; *NBS-GCR-80-200*.

Smoke detection; automatic sprinklers; building codes; building construction; Delphi Method; fire safety; health care facilities; hospitals; interior finishes; Life Safety Code; nursing homes; risk analysis; safety equivalency; safety evaluation; *NBSIR 78-1555-1*.

Smoke detectors; aerosol generators; aerosols; detector sensitivity; fire detectors; ionization detectors; light scattering detectors; monodisperse aerosols; particle size; photo-electric detectors; *J. Res.* 85, No. 3, 223-238 (May-June 1980).

Smoke detectors; death; doors; egress; evacuation; fire alarm systems; fire departments; fire fighters; flashover; nursing homes; nursing staff; patients; room fires; *NBS-GCR-80-191*.

Smoke detectors; evacuation; fire departments; fire investigations; nursing staff; patients; smoke; *NBS-GCR-80-238*.

Smoke detectors; fire departments; fire extinguishers; fire investigations; hospitals; nursing staff; smoke; *NBS-GCR-80-232*.

Smoke detectors; fire departments; fire investigations; hospitals; smoke; *NBS-GCR-80-261*.

Smoke detectors; surveys; detector location; false alarms; health care facilities; hospitals; ionization detectors; maintenance; NFPA 101; nursing homes; photoelectric detectors; *NBSIR 80-2130*.

Smoke detectors; toxicity; bibliographies; building fires; cable fires; compartment fires; decision analysis; fabric flammability; fire suppression; fire tests; flame research; *NBSIR 80-2114*.

Smoke detectors; wakefulness; adults; alarm responses; auditory perception; decibal levels; fire departments; frequency distribution; noise (sound); sleep; *NBS-GCR-80-284*.

Smoke movement; sprinkler systems; clothing wardrobes; health care facilities; hospitals; mattresses; *NBSIR 80-2097*.

Smoke movement; stack effects; test methods; building fires; compartment fires; doors; egress; fire tests; high-rise buildings; leakage; life safety; smoke; *NBSIR 80-2004*.

Smoke movement; stairwells; tracers; air movement; elevators; fire tests; hospitals; smoke; *NBS-GCR-79-183*.

Smoldering; bedding; fire departments; fire investigations; hospitals; nursing staff; patients; smoke; *NBS-GCR-80-239*.

Smoldering ignition; thermal analysis; thermal insulation; activation energy; borax; boric acid; cellulose; critical radiant flux; fire; fire retardants; fire tests; loose fill insulation; *NBSIR 80-2085*.

Smoluchowski's equation; diffusion; Lennard-Jones fluid; liquid rubidium; liquids; molecular dynamics; potential of mean force; relative motion of pairs; 19145.

SNM accountancy; x-ray fluorescence; automation; data processing; HTGR spent fuel reprocessing; in-line measurements; off-line measurements; process control; remote pipettors; remote sample preparation; *SP582*, pp. 55-65 (June 1980).

SNM assay; solution analysis; total sampling; x-ray fluorescence analysis; dissolver solution; slurry analysis; *SP582*, pp. 547-554 (June 1980).

SNM monitors; ZPPR; IAEA safeguards; neutron detectors; portal monitors; radiation detectors; *SP582*, pp. 365-371 (June 1980).

Snow; solar collector; structural engineering; building; ice; load; roof; roof load; *NBS-GCR-79-180*.

Snow; wind; building collapse; ice; *SP586*, pp. 259-270 (June 1980).

SO<sub>2</sub>; thiirane; active nitrogen; metastable; olefin; ozone; 19424.

Social environments; social learning theory; antisocial behavior; arson; cognition; firesetters; human behavior; *NBS-GCR-80-194*.

Social learning theory; antisocial behavior; arson; cognition; firesetters; human behavior; social environments; *NBS-GCR-80-194*.

Social sciences; thermal environment; architecture; audition; built environment; color; environmental psychology; illumination; perception; questionnaires; research methodology; sensory environment; *SP474*.

Societal aspects; workshop; barrier/incentives; hydrogen energy systems; impacts of hydrogen fuel; policy options; 19699.

Societal decisions; socioscientific problems; theory; time constants; basic research; challenge to the analytical chemist; chemical measurement process; energy; environment; health; modelling; scientific uncertainty; 19666.

Socioscientific problems; theory; time constants; basic research; challenge to the analytical chemist; chemical measurement process; energy; environment; health; modelling; scientific uncertainty; societal decisions; 19666.

Sodium; AC Stark shifts; AC Stark widths; cesium; hydrogen; intermediate resonances; laser pulses; monochromatic; multi-photon ionization; Rabi oscillation; 19159.

Sodium; absolute cross section measurement; atom; cross section; excited states; photoionization; 19510.

Sodium; angular distribution; atomic; hyperfine structure; multiphoton; photoionization quantum beats; *19388*.

Sodium; cross sections; evaluation; neutrons; *SP594*, pp. 58-62 (Sept. 1980).

Sodium; line broadening; *19174*.

Sodium; line broadening; *19457*.

Sodium; spectroscopic series; atomic energy levels; atomic spectra; quantum defects; Rydberg-Ritz series; *19522*.

Sodium; state specific rate constants; two-photon; collisional ionization; opto-galvanic spectroscopy; *19956*.

Sodium; tooth enamel; apatite; carbonate apatite; hydrolysis; impurities; octacalcium phosphate; *19647*.

Sodium; wavelengths; aluminum; configuration interaction; energy levels; *19562*.

Sodium beta alumina; internal friction; ionic transport mechanism; sodium ion; single crystal; interstitials; *19442*.

Sodium chloride; surface tension; viscosity; calibration-quality standards; density; electrical conductance; molten salts; potassium nitrate; *JPCRD 9*, No. 4, 791-830 (1980).

Sodium disilicate; glass; oxygen dependence; *19188*.

Sodium fluoride; stannous fluoride; topical fluoridation; acid pretreatment; acidulated phosphate fluoride; apatitic fluoride; *19645*.

Sodium-iodide; spaceflight; calculations; gamma-ray spectrometers; germanium; induced radioactivity; *19749*.

Sodium ion; single crystal; interstitials; sodium beta alumina; internal friction; ionic transport mechanism; *19442*.

Sodium nitrate; activity coefficients; critically evaluated data; excess Gibbs energy for electrolytes; osmotic coefficients; *JPCRD 9*, No. 2, 513-518 (1980).

Sodium propagation experiments; Na cross-section adjustment; *SP594*, pp. 194-198 (Sept. 1980).

Sodium stearate; transition temperatures; gas chromatography; *19914*.

Sodium void coefficient; structural materials; benchmark tests; control rod worth; Doppler coefficient; JENDL-1; reaction rate distribution; reaction rate ratio; reactivity worth; *SP594*, pp. 581-585 (Sept. 1980).

Soft gamma-ray; spectrometer; energy resolution; hard x-ray; imaging; Lixscope; *19403*.

Soft gamma-ray; spectrometer; energy resolution; hard x-ray; imaging; Lixscope; *19404*.

Softness expansion; dilute gas transport properties; inverse power potential; logarithmic terms; perturbation theory; *19389*.

Softness expansion; thermal conductivity; viscosity; classical scattering angle; dilute gases; inverse power potential; logarithmic terms; *19194*.

Soft spheres; computer simulation; conformal solution theory; mixture; molecular dynamics; radial distribution function; *19538*.

Soft spheres; transport coefficients; Boltzmann equation; collision integral; dilute gas; kinetic perturbation theory; kinetic theory; nonequilibrium perturbation theory; perturbation theory; *19866*.

Software; computer program; database; database management system; data dictionary system; data inventory; data management; data standards; documentation; Federal Information Processing Standards Publication; *FIPS PUB 76*.

Software; computer program; database; database management system; data dictionary system; data inventory; data management; data standards; documentation; *NBSIR 80-2115*.

- als; gypsums, dental; impression materials, dental; polymers, dental; refractories, dental; 19052.
- Specifications standards; systems analysis/engineering; codes; decision theory; editing; networks; *NBS-GCR-80-259*.
- Specific gravity of blood and serum; blood density; serum density; 19558.
- Specific heat; atom migration; high temperature; lattice structure; Monte Carlo calculations; rubidium; 19337.
- Specific heat; thermal expansion; hardness; homogeneity; infrared laser absorption properties; mechanical properties; *SP568*, pp. 65-72 (July 1980).
- Specific heats; thermodynamic properties; vapor pressures; co-existence boundary; critical point; densities; equation of state; fluids; orthobaric densities; propane; 19204.
- Specific heat strontium titanate; ceramics; cryogenics; dielectric constant; electrocaloric effect; entropy; ferroelectrics; glass-ceramics; heat switches; polarization; refrigeration; 19534.
- Specific volume; void filling; void volume; buoyant force; dielectric insulation; oil permeation; porous polymers; 19882.
- Speckle; specular reflectance; surface roughness; diffuseness; in-process; manufacturing engineering; on-line; optical Fourier transform; optical techniques; power spectral density; production engineering; *Ra*; 19477.
- Spectra; atomic spectroscopy; Cd; configuration interaction theory; perturbations; quantum defect theory; Rydberg states; 19369.
- Spectra; spectroscopy; absorption; calibration; carbonyl sulfide; infrared; laser calibration; molecular spectra; 19368.
- Spectra; transient dipoles; anisotropic polarizability; collision-induced; induced dipoles; infrared absorption; Raman spectrum; 19414.
- Spectra; ultraviolet; zirconium; 19543.
- Spectra, atomic; wavelengths, atoms and ions; atomic energy levels; atomic spectra; bibliography; energy levels, atomic; *SP363. Supplement 2*.
- Spectral artifacts; transmission electron microscopy; electron probe microanalysis; energy dispersive x-ray spectrometry; microanalysis; qualitative analysis; quantitative analysis; scanning electron microscopy; 19088.
- Spectral artifacts; x-ray spectrometry; analytical electron microscope; energy dispersive x-ray spectrometry; scanning electron microscope; silicon (Li) detector; 19631.
- Spectral bandpass; standard reference materials in spectrophotometry; stray radiation; transmittance stability; filters for spectrophotometry; metal-on-fused silica filters; optical transmittance accuracy; polarization; reflections; *SP260-68*.
- Spectral index; uranium; autoradiography; fast critical assemblies; nondestructive assay; plutonium; reactivity; *SP582*, pp. 391-424 (June 1980).
- Spectral irradiance; spectral radiance; vacuum ultraviolet radiation; vacuum ultraviolet sources; radiation standards; 19478.
- Spectral irradiance; spectral radiant power; spectroradiometry; ultraviolet radiation measurements; visible radiation measurements; electrical substitution radiometer; infrared radiation measurements; radiometry; 19300.
- Spectral irradiance; standards; vacuum ultraviolet; deuterium lamps; radiometry; 19852.
- Spectral line intensity measurements; gas mixture composition; gravimetrically prepared gas mixtures; molar intensity ratios; natural gas components; Raman spectrometric method; 19540.
- Spectral line shapes; resonance fluorescence; resonance Raman scattering; 19471.
- Spectral moments; three-body contributions; virial coefficients; anisotropic polarizability; CO<sub>2</sub>; induced absorption spectra; molecular calculations; N<sub>2</sub>; O<sub>2</sub>; 19296.
- Spectral radiance; vacuum ultraviolet radiation; vacuum ultraviolet sources; radiation standards; spectral irradiance; 19478.
- Spectral radiant power; spectroradiometry; ultraviolet radiation measurements; visible radiation measurements; electrical substitution radiometer; infrared radiation measurements; radiometry; spectral irradiance; 19300.
- Spectral response; radiometry; silicon cell; solar cell; 19669.
- Spectral response; visible; quantum efficiency; quantum yield; silicon; silicon photodetector; 19646.
- Spectral shape; coefficient induced dipoles; collision-induced spectra; dielectric virial; intermolecular transactions; molecular constance; 19413.
- Spectrometer; alpha counting; alpha particle; liquid scintillation; solvent extraction; *SP582*, pp. 111-120 (June 1980).
- Spectrometer; energy resolution; hard x-ray; imaging; Lixiscope; soft gamma-ray; 19403.
- Spectrometer; energy resolution; hard x-ray; imaging; Lixiscope; soft gamma-ray; 19404.
- Spectrometer efficiency; wavelength dispersive spectrometry (WDS); crystal spectrometer calibration; electron microprobe analysis; energy dispersive spectrometry (EDS); L-series x-ray lines; relative x-ray line intensities; 19678.
- Spectrometric analysis; transmission; measurements; number of nuclei; samples; *SP594*, pp. 903-906 (Sept. 1980).
- Spectrophotometers; high-temperature; infrared; optical instrumentation; reflectometers; *SP568*, pp. 281-286 (July 1980).
- Spectrophotometric; irradiated fuels; plutonium; *SP582*, pp. 497-508 (June 1980).
- Spectrophotometric; uranium; determination; dual wavelength; nitric acid; *SP582*, pp. 121-128 (June 1980).
- Spectrophotometry; specular; standards; mirrors; reflectance; 19335.
- Spectrophotometry; systematic errors; transmittance accuracy; absorbance accuracy; instrumental standards; method accuracy; multielement analyses; NBS standard reference materials; 19818.
- Spectroradiometry; absolute spectral response; laser power measurement; photodetector; radiant power measurement; radiometry; silicon photodiode; 19354.
- Spectroradiometry; ultraviolet radiation measurements; visible radiation measurements; electrical substitution radiometer; infrared radiation measurements; radiometry; spectral irradiance; spectral radiant power; 19300.
- Spectroradiometry of screens; x-radiation of intensifier screens; fluorescent screens; intensifier screen standards; radiographic intensifier screen efficiency; screen evaluations; sensitivity of screens; 19234.
- Spectroscopic data systems; chemical data; data banks; data bases; data networks; interactive systems; numerical data bases; on-line data; physical data; *TN1122*.
- Spectroscopic series; atomic energy levels; atomic spectra; quantum defects; Rydberg-Ritz series; sodium; 19522.
- Spectroscopy; absorption; calibration; carbonyl sulfide; infrared; laser calibration; molecular spectra; spectra; 19368.
- Spectroscopy; anti-Stokes Raman scattering; atomic physics; laser scattering; laser spectroscopy; Mossbauer effect; optical pumping; radiation pressure; radiative cooling; Raman scattering; 19055.
- Spectroscopy; appearance potential; electron impact; electron spectroscopy; gaseous ion photoionization; ionization potential; *NSRDS-NBS66, Part I*.
- Spectroscopy; astronomy; hyperfine structure; interstellar molecules; microwave spectra; rotational transitions; 19370.
- Spectroscopy; Broida; combustion; flames; free radicals; medical physics; 19680.
- Spectroscopy; configuration mixing; gauge theory; glueball; hyperball; quark; 19327.
- Spectroscopy; surface; hydrogen; neutron; nickel; 19205.
- Spectroscopy; threshold photoelectron spectroscopy; autoionization; deuterium; Franck-Condon Factors; hydrogen; nitrogen; photoelectron spectra; 19183.
- Spectroscopy; transient; vacuum ultraviolet; acetylene; excited state; ketene; photochemistry; 19493.
- Spectroscopy; uranium; electron temperature; hollow cathode; isotope ratio; opto-galvanic effect; oscillator strength; 19150.
- Spectroscopy, ultraviolet; spectroscopy, visible; stars, chromospheres; stars, coronae; stars, emission line; stars, late-type;

- Spectroscopy, visible; stars, chromospheres; stars, coronae; stars, emission line; stars, late-type; spectroscopy, ultraviolet; 19856.
- Spectrum; spectrum conservation; standard; time broadcast stations; voice announcements; clocks; HF; interference; satellite; 19525.
- Spectrum; temperature; density; long-period variable; model; nebulosity; R Aquarii; 19507.
- Spectrum; ultraviolet; highly ionized atoms; laser-produced plasma; 19608.
- Spectrum; VOR aircraft navigation system; white noise; Fourier coefficients; linear model; nonlinear model; phase spectrum transformation; TN1021.
- Spectrum; wavelengths; energy levels; ion; ionization energy; niobium; 19282.
- Spectrum; wavelengths; zirconium; energy levels; ion; ionization energy; 19118.
- Spectrum analysis; neutron cross sections; SP594, pp. 43-47 (Sept. 1980).
- Spectrum conservation; standard; time broadcast stations; voice announcements; clocks; HF; interference; satellite; spectrum; 19525.
- Spectrum lines; tables of spectra; wavelengths; atomic spectra; intensities of lines; line spectra; 19514.
- Spectrum OV; wavelengths, OV; atomic energy levels, OV; atomic spectra, OV; multiplet table, OV; oxygen spectra, OV; NSRDS-NBS3, Section 9.
- Specular; standards; mirrors; reflectance; spectrophotometry; 19335.
- Specular reflectance; surface roughness; diffuseness; in-process; manufacturing engineering; on-line; optical Fourier transform; optical techniques; power spectral density; production engineering;  $R_a$ ; speckle; 19477.
- Spent fuel; assay; contaminated waste; delayed neutrons; Monte Carlo; SP582, pp. 472-496 (June 1980).
- Spent fuel; burnup; fission product; JPDR-I reactor; resonance integral; resonance interference effect; SP594, pp. 224-227 (Sept. 1980).
- Spent fuel; verification; bonded storage; Bruce reactors; gamma-ray spectroscopy; nuclear safeguards; SP582, pp. 457-471 (June 1980).
- Spent fuel; Zr-95/Cs-137; burn-up; cooling time; Cs-134/Cs-137 ratios; Pu/U; SP582, pp. 509-516 (June 1980).
- Spent nuclear fuel; assay accuracy; calculations; criticality control; material accountability; measurements; neutron interrogation; nondestructive assay; nuclear fuel subassembly; nuclear safeguards; process control; SP582, pp. 447-456 (June 1980).
- Spheres; type II diffusion; diffusivity; glass-gel boundary; sheets; 19668.
- Sphere weight gain; concentration distribution; diffusion; glass-gel boundary; 19661.
- Spherical cavity; thermophysical properties; acoustic radial resonances; acoustic velocity of sound; dilute gases; low-frequencies; 19071.
- Spherical dipole; standard field radiator; 30 MHz to 180 MHz; dipole radiator for EMI measurements; electromagnetic field measurement; 19737.
- Spherical model; transport theory  $k_{eff}$ ; diffusion theory; self-shielding factors; SP594, pp. 187-189 (Sept. 1980).
- Spherulitic structure; tie molecule; crystalline polymer; cylindrical structure; fibril; fibrous structure; microfibril; necking; plastic deformation; 19674.
- Spike; total mass; uranium; alloys; blend; input concentration; isotope dilution; neodymium; plutonium; safeguards; SP582, pp. 93-102 (June 1980).
- Spin and energy analysis; spin polarized electron; electron optics; photoelectron emission; 19342.
- Spin-dependent evaporation model; yrast level; gamma-ray production cross section; gamma-ray strength function; SP594, pp. 775-777 (Sept. 1980).
- Spinels; zirconia; ceramic oxides; electrodes;  $\text{LaCrO}_3$ ; magnetohydrodynamics; 19644.
- Spin-exchange scattering; spin polarization; depolarization; polarized electron source; polarized photoemission GaAs; 19078.
- Spin excitations; crystal fields; exchange interaction; magnetism; neutron scattering; rare earth compounds; 19256.
- Spin excitations; crystal fields; exchange interaction; magnetism; neutron scattering; rare earth compounds; 19604.
- Spinodal; chemical potential; combinatorial entropy; equation of state; interfacial tension; lattice fluid; miscibility; 19652.
- Spin polarization; depolarization; polarized electron source; polarized photoemission GaAs; spin-exchange scattering; 19078.
- Spin polarization; electron optics; electron spin polarization; GaAs; negative electron affinity; photoemission; polarization; source of polarized electrons; 19310.
- Spin polarized electron; electron optics; photoelectron emission; spin and energy analysis; 19342.
- Spin-spin correlation functions; atom-atom interaction; angular profiles of superlattice beam; Ising model; LEED; order-disorder phase transition; overlay; 19309.
- Spin waves; crystal fields; inelastic scattering; magnetism; neutron scattering; rare earths; 19630.
- Spline; volume; calibration curve; experiments; finite elements; Scheffe, design; J. Res. 85, No. 4, 295-304 (July-Aug. 1980).
- Spline fitting; test data; test problems; algorithm testing; approximation; curve fitting; least absolute deviation; polynomial approximation; NBSIR 79-1920.
- Splitting-tensile strength; cement; compressive strength; geothermal well; hydrothermal exposure; NBSIR 80-2099-1.
- Splitting tensile strength; compressive strength; exposure to geothermal fluids; geothermal-well cements; permeability to water; shear-bond strength to steel; NBSIR 80-2099-2.
- Spot size dependence; alkali halides; intrinsic damage; IR windows; laser damage; self-focusing; SP568, pp. 497-517 (July 1980).
- Spreading resistance; continuum model; correction factor; Laplace's equation; nonlinear differential equations; resistivity; 19796.
- Spreading resistance; correction factor; depth profiling; Laplace's equation; local slope analysis; multilayer analysis; resistivity; sheet resistance; 19703.
- Spreading resistance; thyristor; aluminum-doped silicon; boron-doped silicon; gallium-doped silicon; p-type silicon; resistivity; silicon; 19422.
- Spreading resistance; two probe measurements; dopant profiles; resistivity; resistivity profiles; semiconductor; silicon; 19105.
- Spreading resistance measurements; thermally stimulated measurements; thyristor materials measurements; thyristor measurements; zinc oxide varistors; dc transmission; deep-level measurements; energy conservation; measurement methods; neutron transmutation doped silicon; NBSIR 80-2061.
- Sprinkler systems; clothing wardrobes; health care facilities; hospitals; mattresses; smoke movement; NBSIR 80-2097.
- Sprinkler systems; evacuation; fire departments; fire extinguishers; fire investigations; hospitals; patients; smoke; NBS-GCR-80-233.
- Sprinkler systems; evacuation; fire departments; fire investigations; nursing homes; nursing staff; patients; room fires; NBS-GCR-80-206.
- Sprinkler systems; fire alarm systems; fire departments; fire extinguishers; smoke; NBS-GCR-80-274.
- Sprinkler systems; fire alarm systems; fire departments; fire investigations; smoke; NBS-GCR-80-263.
- Sprinkler systems; fire departments; fire extinguishers; fire investigations; mattresses; nursing homes; nursing staff; room fires; NBS-GCR-80-277.
- Sprinkler systems; intermediate care facilities; mattresses; NBS-GCR-80-267.
- S-process synthesis; capture cross sections; SP594, pp. 348-350 (Sept. 1980).
- S-process systematics; neutron capture cross sections; solar Kr abundance; SP594, pp. 857-862 (Sept. 1980).

Sputter-Auger method; test structures; transistors; wire bonds; capacitance-voltage methods; deep level transient spectroscopy; electrical properties; electronics; electron irradiation. hole mobility; integrated circuits; ion knock-on effect; ion microprobe mass analysis; *SP400-45*.

Sputtering; surface analysis; ion microprobe mass analysis; microanalysis; quantitative analysis; secondary ion mass spectrometry; *19532*.

Sputtering; surface analysis; local thermal equilibrium model; microanalysis; secondary ion mass spectrometry; sensitivity factors; *19642*.

Sq current system variations; tectonomagnetism; conductivity anomalies; differential magnetic measurements; geomagnetism; induced currents; *19181*.

Squareness; standard deviation; systematic error; uncertainty; angle block; autocollimator; calibration; flatness; intercomparison; random error; *NBSIR 80-1967*.

Square root; field of values; Hermitian part; Jordan form; positive definite; *19499*.

SRM; weights and measures; x-ray exams; compact range; data; daylighting; energy; environmental; shale oil; *DIM/NBS 64*, No. 6, 1-24 (1980).

SRM's; atomic properties; computers; emissions testing; energy; fundamental constants; gas; grants; marketplace; measurement seminars; photon-recoil components; *DIM/NBS 64*, No. 1, 1-24 (1980).

SRM's; structural safety; automation; computers; electrical wiring; radiation exposure; solar absorber coatings; *DIM/NBS 64*, No. 8, 1-28 (1980).

SRMs; weights and measures; acoustic emission; additive migration; bond energies; neutrons; nondestructive evaluations; nuclear fuel; oyster tissue; *DIM/NBS 64*, No. 4, 1-28 (1980).

SRM 1567, Wheat Flower; SRM 1568, Rice Flower; trace element nutrients; environmental trace elements; NBS standard reference materials; *19570*.

SRM 1568, Rice Flower; trace element nutrients; environmental trace elements; NBS standard reference materials; SRM 1567, Wheat Flower; *19570*.

SRM 1655; standard reference material; thermochemistry; adiabatic calorimeter; calorimetry,  $\Delta C_p$ , endothermic reaction; enthalpy of dilution; enthalpy of solution; KCl; *J. Res. 85*, No. 6, 449-465 (Nov.-Dec. 1980).

SrF<sub>2</sub>; strain; stress; transverse optic-phonon; anisotropy; BaF<sub>2</sub>; CaF<sub>2</sub>; effective charge; oscillator strength; photoelastic; piezobirefringence; piezo-optic; *19579*.

Stability; alloy; constitutional supercooling; local equilibrium; perturbation; solidification; solid-liquid interface; *19748*.

Stability; crystal; Czochralski; edge-defined film-fed growth (EFG); floating zone; meniscus; silicon; *19945*.

Stability; strain; transformation; criteria; finite; jellium; martensite; model; *19243*.

Stability; strain gages; structure; transducers; zero shift; adhesive; backing; connection; environment; gage element; leads; load; protective coating; resistance; sensitivity change; *19049*.

Stability; surface anisotropy; composites; durability; eutectics; Rayleigh waves; *19153*.

Stability; thermal analysis; thermogravimetry; accelerated aging; complex reactions; decomposition; degradation; durability; heating rates; initial rates; kinetics; lifetime prediction; polystyrene; polyurethane; pyrolysis; *19752*.

Stability; time-dependent Schrodinger equation; numerical integration; *19951*.

Stability; transition metals; accelerators; ambient polymerization; ascorbic acid; dental monomers; initiator systems; organic peroxides; redox reactions; *19062*.

Stability; uranium; calibration; coincidence counter; neutron; nondestructive assay; precision; random driver; *SP582*, pp. 201-220 (June 1980).

Stabilization; superconductors; terminology; critical parameters; definitions; flux phenomena; Josephson phenomena; *19539*.

Stabilized CO<sub>2</sub> lasers; CH<sub>2</sub>F<sub>2</sub>; difluoromethane; FIR frequency synthesis; laser frequency measurement; optically pumped FIR laser; *19452*.

Stabilized laser; wavelength standards; Zeeman laser; *19740*.

Stabilized lasers; wavelength standards; x-ray interferometry; atomic weights; Avogadro's constant; gamma-ray spectroscopy; *19488*.

Stable laws; Poisson transformation; polymer configurations; random walks; spans; *19654*.

Stack effects; test methods; building fires; compartment fires; doors; egress; fire tests; high-rise buildings; leakage; life safety; smoke; smoke movement; *NBSIR 80-2004*.

Stagnation; corrosion; elevated temperature; heat transfer; liquid flow rate; solar-heat transfer liquid containment; *NBSIR 79-1919*.

Stainless steel; elastic constants; iron alloy; Neel transition; *19270*.

Stainless steel; strength; toughness; welds; cryogenic; delta ferrite; ferrite content; fracture; mechanical properties; *19673*.

Stainless steel; superconductors; alloys; magnets; materials; non-metallics; review; *19190*.

Stainless steel; surgical implant metals; titanium alloy; cobalt-chromium alloy; corrosion-fatigue; fatigue; *19100*.

Stainless steel; thermodynamics; dynamic measurements; electrical resistivity; emittance; heat capacity; high temperature; melting point; *19541*.

Stainless steel; Young's modulus; bulk modulus; elastic constants; physical-property variability; Poisson's ratio; shear modulus; sound velocity; *19246*.

Stainless steels; elastic constants; iron alloys; low temperatures; magnetic transitions; sound velocities; *19563*.

Stainless steels; elastic constants; iron-base alloys; low temperatures; magnetic susceptibility; manganese alloys; Neel transition; physical properties; *19568*.

Stairwells; tracers; air movement; elevators; fire tests; hospitals; smoke; smoke movement; *NBS-GCR-79-183*.

Standard; calibration; environments; homogeneity; natural materials; nondestructive assay; particles; quality assurance; radiation; radioactivity; radiochemical assay; radionuclide; segregation; *19298*.

Standard; test method; window foil; alarm; burglar alarm; detector; intrusion alarm; *19697*.

Standard; thermal insulation; U-value; heat loss; *SP586*, pp. 19-31 (June 1980).

Standard; time broadcast stations; voice announcements; clocks; HF; interference; satellite; spectrum; spectrum conservation; *19525*.

Standard; uranium-235; cross section; fission; MeV neutrons; neptunium-237; *SP594*, pp. 971-975 (Sept. 1980).

Standard; window; anthropometry; emergency egress; escape behavior; HUD; mobile home; safety; *NBSIR 80-2049*.

Standard; x-ray diffraction; crystal structures; lattice constants; powder patterns; reference intensities; *Monogr. 25, Section 17*.

Standard cross section; neutron flux; review; *SP594*, pp. 720-727 (Sept. 1980).

Standard deviation; systematic error; uncertainty; angle block; autocollimator; calibration; flatness; intercomparison; random error; squareness; *NBSIR 80-1967*.

Standard deviation; systematic errors; uncertainty; check standard; gage blocks; measurement assurance; random errors; *NBSIR 80-2078*.

Standard dielectric liquids; coaxial line open circuit; coaxial line support bead; dielectric constant; dielectric loss; rf and microwave dielectrics; *19542*.

Standard electrode potentials; standard thermodynamic functions; compilation of solubility data; disproportionation of mercury (I); electromotive force measurements; mercury (I) chloride; solubility; solubility product; *JPCRD 9*, No. 4, 1307-1330 (1980).

Standard field radiator; 30 MHz to 180 MHz; dipole radiator for EMI measurements; electromagnetic field measurement; spherical dipole; *19737*.

Standard fields; adjustment; dosimetry; ISNF; least squares unfolding; LWR-PV damage; *SP594*, pp. 956-960 (Sept. 1980).

Standard frequencies; television color subcarrier; time calibrations; time signals; broadcast of standard frequencies; frequency calibrations; GOES satellite; high frequency; low frequency; satellite time code; *SP432, 1979 Edition*.

Standard insulation test methods; accelerated aging; collector insulation; insulation; solar collector; *NBSIR 79-1908*.

Standardization; Agency for International Development; development assistance; industrialization; less developed countries; measurement technology; Pakistan; *NBSIR 80-2051*.

Standardization; AID; assistance; developing economies; foreign relations; industrializing nations; international relations; LDC's; measurement services; *NBSIR 80-2021*.

Standardization; alpha-particle activity; alpha-particle sources; calibration; radioactivity; *19297*.

Standardization; calibration; detection; dosimetry; facilities; fluence; flux; monitor; neutron; sources; *SP594*, pp. 747-751 (Sept. 1980).

Standardization; dimensions; flat plate collectors; preferred sizes; solar installations; *NBSIR 80-2116*.

Standardization; economic impact of regulations; economic impact of standards; economic information on standards; Federal use of voluntary standards; procedural history; rationale; *NBSIR 80-2123*.

Standardization; standards; benefit-cost analysis; benefit-risk analysis; benefits; bibliography; costs; economics; evaluation; literature search; regulation; *NBSIR 80-2015*.

Standardization; standards; history; ionizing radiation; measurements; measurement standards; radiation; radiation hazards; radiation safety; radiation standards; *19551*.

Standardization; symbols; visual alerting; fire fighting; fire safety; pictograms; safety; signs; *19274*.

Standardization; Third World; calibration; development; Indonesia; industrialization; instrumentation; less developed country; metrology; *NBSIR 78-1583*.

Standardization; testing laboratory; accreditation; compliance testing; laboratory criteria; product certification; proficiency testing; quality control; *NBSIR 79-1956*.

Standardization; test laboratories; weights and measures laws; Agency for International Development; development assistance; Honduras; legal metrology; metrication; metrology; quality assurance; *NBSIR 80-1969*.

Standardization and international harmonization; building codes; building standards; dimensional coordination; metrication; regulatory coordination; *19518*.

Standardization research needs; standards; accreditation of testing laboratories; certification; certification industry; economics; government policy; product certification; *NBSIR 80-2001*.

Standard methods; data; environment; Federal programs; laboratory accreditation; monitoring; quality assurance; *19715*.

Standard methods; standard reference materials; definitive methods; measurement compatibility; reference methods; *19575*.

Standard performance measures; ADP installation management; ADP installation models; computer performance evaluation; computer performance management; computer performance measurement; *19051*.

Standard programming language; transferability; ANS FORTRAN; FORTRAN 77; *H131*.

Standard reference data; standard reference materials; engineering standards; information interchange; measurement systems; product standards; *19905*.

Standard reference data; standard reference materials; technical activities; thermodynamics; absolute and physical quantities; analytical chemistry; chemistry research; environmental measurements; materials science; measurement services; molecular science; *SP572*.

Standard reference material; superconductivity; temperature; fixed points; *19098*.

Standard reference material; tele-microscope; thermal expansion; high temperature; interferometer; sapphire-Al<sub>2</sub>O<sub>3</sub>; *19915*.

Standard reference material; thermochemistry; adiabatic calorimeter; calorimetry,  $\Delta C_p$ , endothermic reaction; enthalpy of dilution; enthalpy of solution; KCl; SRM 1655; *J. Res. 85*, No. 6, 449-465 (Nov.-Dec. 1980).

Standard reference material; thermodynamic functions; tungsten; drop calorimetry; electronic heat capacity; enthalpy; heat capacity; high-temperature; *19363*.

Standard reference material; trace analysis; agriculture; environmental analysis; foliar analysis; food analysis; nutrition; plant tissue analysis; *19423*.

Standard reference material; water analysis; environmental analysis; foliar analysis; food analysis; organic solvents; *19571*.

Standard reference materials; analytical methods; atomic absorption spectrometry; foods; nutrient elements; quality control; *19419*.

Standard reference materials; definitive methods; environmental measurements; quality assurance; reference methods; *19574*.

Standard reference materials; definitive methods; measurement compatibility; reference methods; standard methods; *19575*.

Standard reference materials; engineering standards; information interchange; measurement systems; product standards; standard reference data; *19905*.

Standard reference materials; technical activities; thermodynamics; absolute and physical quantities; analytical chemistry; chemistry research; environmental measurements; materials science; measurement services; molecular science; National Measurement Laboratory; *SP572*.

Standard reference materials; testing; traceability; calibrations; collaborative reference programs; laboratory performance; measurement assurance; measurement evaluation technology; measurement services; physical standards; proficiency testing; *SP591*, pp. 15-22 (Aug. 1980).

Standard reference materials; thermochemistry; tris(hydroxymethyl)aminomethane; calorimetry; enthalpy of solution; KCl; solution calorimetry; *J. Res. 85*, No. 6, 467-481 (Nov.-Dec. 1980).

Standard reference materials; traceability; definitive methods; measurement compatibility; protocol; reference methods; SI units; *SP582*, pp. 15-24 (June 1980).

Standard reference materials; urban particulate standards; aerosols; atmospheric particulate measurements; Doppler shift spectrometry; fine particles; micro Raman spectrometry; Raman scattering theory; *19581*.

Standard reference materials; yeast; biological matrix; bovine liver; certified reference materials; chromium; foods; interlaboratory study; *19420*.

Standard reference materials in spectrophotometry; stray radiation; transmittance stability; filters for spectrophotometry; metal-on-fused silica filters; optical transmittance accuracy; polarization; reflections; spectral bandpass; *SP260-68*.

Standards; accreditation; American Society of Crime Laboratory Directors (ASCLD); certification; management; on-site visit; personnel qualifications; physical evidence; proficiency testing; *SP591*, pp. 164-168 (Aug. 1980).

Standards; accreditation; College of American Pathologists; criteria; inspection; inspector's manual; pathology; proficiency testing; *SP591*, pp. 71-74 (Aug. 1980).

Standards; accreditation of testing laboratories; certification; certification industry; economics; government policy; product certification; standardization research needs; *NBSIR 80-2001*.

Standards; accuracy and precision; gold films; gravimetry; neutron activation analysis; Rutherford backscattering; *19944*.

Standards; antitrust; certification; competition; economics of standards; law; *NBSIR 79-1921*.

Standards; automobile standards; design standards; economics of standards; health care standards; innovation; performance standards; *NBS-GCR-80-287*.

Standards; benefit-cost analysis; benefit-risk analysis; benefits; bibliography; costs; economics; evaluation; literature search; regulation; standardization; *NBSIR 80-2015*.

Standards; building; building codes; building design; disaster

mitigation; earthquakes; engineering; *NBSIR 80-2111-9*.  
Standards; building module; dimensional coordination; metric design and construction; modular coordination; *SP595*.

Standards; codes; performance criteria; solar heating system; *19377*.  
Standards; concrete; construction; cooling tower; formwork; hoisting system; regulations; safety; *NBSIR 80-1964*.  
Standards; cross sections; eV neutrons; ratio; *SP594*, pp. 97-100 (Sept. 1980).  
Standards; cross sections; flux monitors; *SP594*, pp. 84-85, (Sept. 1980).  
Standards; data processing; Federal Information Processing Standard; FORTRAN; numeric methods; programming language; scientific computing engineering; software; *FIPS PUB 69*.  
Standards; detector efficiency; gamma-ray efficiency; Marinelli beaker; Reentrant beaker; semiconductor detector efficiency; *19408*.  
Standards; heterogeneous; in-house; laboratory; preparation; rifle; sample; *SP591*, pp. 45-49 (Aug. 1980).  
Standards; history; ionizing radiation; measurements; measurement standards; radiation; radiation hazards; radiation safety; radiation standards; standardization; *19551*.  
Standards; mirrors; reflectance; spectrophotometry; specular; *19335*.  
Standards; Standards Council of Canada; testing; accreditation; Canada; laboratories; *SP591*, pp. 88-91 (Aug. 1980).  
Standards; State energy conservation office contact personnel; State energy conservation plans and programs; energy conservation measures for consumer products; Energy Extension Service (EES) program; regulations; *NBSIR 80-2017*.  
Standards; standards-writers; systems analysis; building standards; classification; decision tables; information networks; modeling; *NBSIR 80-1979*.  
Standards; statistical analysis; steel; structural engineering; timber; aluminum; buildings (codes); concrete (prestressed); concrete (reinforced); design (buildings); limit states; loads (forces); masonry; probability theory; reliability; safety; specifications; *SP577*.  
Standards; statistical data; ADP standards; computers; data elements and codes; data processing; Federal Information Processing Standards; geography; information processing standards; information systems; national government; representations and codes; *FIPS PUB 6-3*.  
Standards; statistical modeling; welding; ASME Boiler Code; data; fabrication; failure analysis; fatigue; fracture; materials science; nondestructive evaluation; piping; pressure vessels; product liability; pumps and valves; *SP588*.  
Standards; storm surge; structural engineering; structural response; tsunami; wind loads; winds; accelerograph; codes; design criteria; disaster; earthquakes; ground motion; seismology; *SP560*.  
Standards; structural engineering; building; building codes; building design; earthquakes; engineering; *NBSIR 80-2111-2*.  
Standards; sulfuric acid; tools; awards; computers; didymium glass filters; energy efficiency; inventors; innovation; labels; *DIM/NBS 64*, No. 7, 1-28 (1980).  
Standards; superconductor; critical current; critical temperature; losses; magnetic property; *NBSIR 80-1629*.  
Standards; systems analysis/engineering; codes; computer program; decision table; network; performance requirements; software; specifications; *NBS-GCR-80-258*.  
Standards; systems analysis/engineering; codes; computer program; decision table; network; performance requirements; software; specifications; *NBS-GCR-80-257*.  
Standards; technical bases; building research; building technology; codes; criteria; project summaries; *SP446-3*.  
Standards; technical bases; building research; building technology; codes; criteria; project summaries; *SP446-4*.  
Standards; technological innovation; administrative experimental; evaluability assessment; evaluation; Experimental Technology Incentives Program; experimental variance; Occupational Safety and Health Administration; regulatory experimentation; regulatory policy; *TN1114*.  
Standards; technology; biomedical; conference; fission; fusion; nuclear cross sections; reactors; *SP594*.  
Standards; terminology; test methods; carbon; characterization; graphite; nomenclature; *19486*.  
Standards; testing; solar collector; solar heating and cooling; *19813*.  
Standards; thermal performance; buildings; cooling; durability/reliability; performance criteria; safety; solar collectors; solar energy; *SP586*, pp. 151-160 (June 1980).  
Standards; time-sharing; BASIC; data processing; Federal Information Processing Standard; interactive programming; programming language; software; *FIPS PUB 68*.  
Standards; transactions; annual reports; diffusion in metals; fire; journals; library holdings; NBS library; NBS periodicals; periodicals; proceedings; serials; *NBSIR 79-1932*.  
Standards; transformers; cost analysis; decision analysis; dielectric fluids; fire safety; flammable liquids; *NBS-GCR-80-198*.  
Standards; trenching; braced excavation; construction; retaining structures; shoring; slope stability; soil classification; soil pressure; *BSS127*.  
Standards; ultrasonics; calibration; image quality indicator; non-destructive testing; radiography; sensitivity; *19877*.  
Standards; units; measurements; metric; metrology; SI; *19628*.  
Standards; units; measurements; metric; metrology; SI; *19868*.  
Standards; urea-formaldehyde resins; committee; concentration; department; formaldehyde; formaldehyde-based chemicals; formaldehyde level; *SP586*, pp. 253-258 (June 1980).  
Standards; vacuum ultraviolet; deuterium lamps; radiometry; spectral irradiance; *19852*.  
Standards; wear; corrosion; measurements; metals; *19950*.  
Standards; weathering of cover plates; cover plate durability; cover plate materials; cover plate standards; *TN1132*.  
Standards activities; standards information; standards participation; annual report; *SP573*.  
Standards and ultrasonics; calibration; international; nondestructive testing; radiography; *19879*.  
Standards Council of Canada; testing; accreditation; Canada; laboratories; standards; *SP591*, pp. 88-91 (Aug. 1980).  
Standards committees; evaluation criteria; laboratory accreditation; *19848*.  
Standards information; ISO; ISONET symposium; proceedings; *SP579*.  
Standards information; standards participation; annual report; standards activities; *SP573*.  
Standards organizations; voluntary standards; administrative law; law; legal aspects of standards; regulation; safety regulation; *NBS-GCR-79-171*.  
Standards participation; annual report; standards activities; standards information; *SP573*.  
Standards systems; AFNOR; antitrust; certification; France; French standards system; government policy; product; *NBSIR 79-1959*.  
Standards-writers; systems analysis; building standards; classification; decision tables; information networks; modeling; standards; *NBSIR 80-1979*.  
Standard test; urea complex; urea in sera; crystal structure; molecular structure; single crystal x-ray diffraction; *J. Res. 85*, No. 3, 205-210 (May-June 1980).  
Standard test methods; thermal performance test; laboratory test procedures; quality assurance lab test; *SP591*, pp. 124-130 (Aug. 1980).  
Standard thermodynamic functions; compilation of solubility data; disproportionation of mercury (I); electromotive force measurements; mercury (I) chloride; solubility; solubility product; standard electrode potentials; *JPCRD 9*, No. 4, 1307-1330 (1980).  
Standby loss; test procedures; water heaters; energy conserva-

- tion; energy consumption; gas pilot; heat loss; insulation; modifications; recovery efficiency; residential; *NBSIR 79-1783*.
- Standing-wave ratio (SWR); conversion loss; diode measurement; intermediate-frequency (i-f) output conductance; measurement uncertainties; microwave mixer diodes; modulation; point-contact diodes; reflectometer; return loss; Schottky-barrier diodes; semiconductor diodes; *SP400-16*.
- Stannous fluoride; topical fluoridation; acid pretreatment; acidulated phosphate fluoride; apatitic fluoride; sodium fluoride; *19645*.
- Star-branched polymers; branched polymers; expansion factor; mean-square radius of gyration; Monte-Carlo; reduced moments; *19656*.
- Star formation; supernovae; supernova remnants; x rays; dust grains; molecular clouds; *19384*.
- Stark; Balmer; diagnostics; hydrogen; line-broadening; plasma; *19281*.
- Stark effects; synthesis and microwave spectrum of; ethylenimine; hyperfine and internal rotations; microwave spectra; pyrolysis of ethylamine; *19447*.
- Stars; stars, chromospheres; stars, corona; stars, late-type; stars, RS CVn-type; ultraviolet; emission; *19189*.
- Stars; stellar evolution; supernovae; blue stragglers; *19450*.
- Stars, chromospheres; stars, corona; stars, late-type; stars, RS CVn-type; ultraviolet; emission; stars; *19189*.
- Stars, chromospheres; stars, coronae; stars, emission line; stars, late-type; spectroscopy, ultraviolet; spectroscopy, visible; *19856*.
- Stars, corona; stars, late-type; stars, RS CVn-type; ultraviolet; emission; stars; stars, chromospheres; *19189*.
- Stars, coronae; stars, emission line; stars, late-type; spectroscopy, ultraviolet; spectroscopy, visible; stars, chromospheres; *19856*.
- Stars, coronae; stars, flare; x rays, sources; x rays, spectra; *19476*.
- Stars, coronae-stars; individual, x ray; sources; *19222*.
- Stars, emission line; stars, late-type; spectroscopy, ultraviolet; spectroscopy, visible; stars, chromospheres; stars, coronae; *19856*.
- Stars, flare; x rays, sources; x rays, spectra; stars, coronae; *19476*.
- Stars, late-type; spectroscopy, ultraviolet; spectroscopy, visible; stars, chromospheres; stars, coronae; stars, emission line; *19856*.
- Stars, late-type; stars, RS CVn-type; ultraviolet; emission; stars; stars, chromospheres; stars, corona; *19189*.
- Stars, long period variables; stars, supergiants; interstellar, molecules, masers, polarization; *19536*.
- Stars, RS CVn-type; ultraviolet; emission; stars; stars, chromospheres; stars, corona; stars, late-type; *19189*.
- Stars, supergiants; interstellar, molecules, masers, polarization; stars, long period variables; *19536*.
- State diagram; action table; computer program; finite automata; formal description technique; graphs; natural language; Petri net; *NBS-GCR-80-247*.
- State energy conservation office contact personnel; State energy conservation plans and programs; energy conservation measures for consumer products; Energy Extension Service (EES) program; regulations; standards; *NBSIR 80-2017*.
- State energy conservation plans and programs; energy conservation measures for consumer products; Energy Extension Service (EES) program; regulations; standards; State energy conservation office contact personnel; *NBSIR 80-2017*.
- State/local; training; inspectors; laboratory; metrology; seminars; *19438*.
- State-of-the-art; temperature; Burnett PVT measurements; coefficient; ethylene; second virial; *19115*.
- State-of-the-art in 1979; laboratory accreditation; *SP591*, pp. 6-10 (Aug. 1980).
- State Plane Coordinate System; surveying; Universal Transverse Mercator (UTM); coordinate system; elevation; Federal Information Processing Standard; geographic point location; latitude; Latitude and Longitude; longitude; mapping; *FIPS PUB 70*.
- State specific rate constants; two-photon; collisional ionization; opto-galvanic spectroscopy; sodium; *19956*.
- Static analysis; dynamic analysis; programming aids; software development; software management; software tools; *NBSIR 80-2159*.
- Static dielectric constant; steam; water; critically evaluated data; critical review; data compilation; International Formulation; *JPCRD 9*, No. 4, 1291-1306 (1980).
- Static pressure; building fires; fire tests; flow measurement; furniture; interior finishes; residential buildings; room fires; *NBSIR 80-1984*.
- Static test set; analog-to-digital converter testing; automatic; digital-to-analog converter testing; gain; high resolution; linearity; noise; offset; *19075*.
- Stationary U target; linear accelerator; post-acceleration beam compression; rotating U target; *SP594*, pp. 534-536 (Sept. 1980).
- Station positions; artificial satellites; distance measurements; geodesy; geodynamics; lasers; *19742*.
- Statistical analysis; accuracy; clinical analysis; clinical chemistry; definitive method; electrolytes; flame atomic absorption spectroscopy; interlaboratory testing; precision; reference method; semiautomated pipetting; serum lithium analysis; *SP260-69*.
- Statistical analysis; steel; structural engineering; timber; aluminum; buildings (codes); concrete (prestressed); concrete (reinforced); design (buildings); limit states; loads (forces); masonry; probability theory; reliability; safety; specifications; standards; *SP577*.
- Statistical analysis; structural engineering; tropical cyclones; wind (meteorology); buildings (codes); climatology; hurricanes; *19835*.
- Statistical analysis; structural engineering; tropical cyclones; wind (meteorology); building (codes); climatology; hurricanes; *BSS124*.
- Statistical analysis; total serum cholesterol; cholesterol; definitive method; gas chromatography/mass spectrometry; isotope dilution/mass spectrometry; reference method; *19554*.
- Statistical and coupled-channel analysis; optical model; *SP594*, pp. 893-897 (Sept. 1980).
- Statistical aspects of fatigue; composite materials; corrosion fatigue; durability; fatigue; fatigue mechanism; fatigue research; fracture mechanics; mathematical modeling; metals fatigue; plastics fatigue; quantitative microscopy; *19448*.
- Statistical aspects of fatigue; striations; composite materials; corrosion fatigue; dislocations; fatigue mechanism; fracture mechanics; mathematical modeling; micromechanics; polymers; quantitative microscopy; slip bands; *19087*.
- Statistical data; ADP standards; computers; data elements and codes; data processing; Federal Information Processing Standards; geography; information processing standards; information systems; national government; representations and codes; standards; *FIPS PUB 6-3*.
- Statistical evaluation; thermal analysis; depletable energy; HUD Demonstration Program; passive solar buildings; performance criteria; *19823*.
- Statistical evaluation; uranium; alpha spectrometry; intercomparison programs; mass spectrometry; plutonium; safeguards; *SP582*, pp. 42-54 (June 1980).
- Statistical methods; steel; fatigue; fracture; mathematical modeling; micromechanics; microstructure; nuclear fuel element; paper; quantitative microscopy; size effect; solid mechanics; *19086*.
- Statistical model; actinide fission; high energy cross sections; intranuclear cascade; *SP594*, pp. 422-426 (Sept. 1980).
- Statistical model; evaluation; neutron cross-sections; optical model; resonances; *SP594*, pp. 872-876 (Sept. 1980).
- Statistical model; experimental trends; *SP594*, pp. 848-852 (Sept. 1980).

Statistical model; triple humped shapes; fission barriers derived; fission channel analysis; *SP594*, pp. 469-474 (Sept. 1980).

Statistical model analysis; cross sections on Se, Cd, Os; *SP594*, pp. 307-310 (Sept. 1980).

Statistical model calculations; Y, Nb, Gd, W and Au(n, $\gamma$ ); *SP594*, pp. 323-327 (Sept. 1980).

Statistical modeling; welding; ASME Boiler Code; data; fabrication; failure analysis; fatigue; fracture; materials science; non-destructive evaluation; piping; pressure vessels; product liability; pumps and valves; standards; *SP588*.

Statistical models; width fluctuation correction factor; compound-nucleus reactions; cross sections; elastic enhancement factors; factorization; Hauser-Feshbach theory; *SP594*, pp. 762-764 (Sept. 1980).

Statistical pattern recognition; test environments; test workload generation; benchmark; evaluation environments; *19059*.

Statistical quality control; accuracy; control chart; control limits; corrective action; data validation; precision; proficiency analytical testing; quality control; *SP591*, pp. 104-108 (Aug. 1980).

Statistical weights; symmetric top molecules; group theory; nuclear spin; ro-vibronic species; *19789*.

Statistics; chemical petrology; closure correlation; principal components analysis; *19778*.

Statistics; covariance matrix; curve fitting; iterative refinement; least squares solution; linear constraints; overdetermined system of equations; regression; *19154*.

Statistics; sunspots; ARMA models; forecasts; Maunder minimum, models; simulation; *TN1022*.

Statistics; test problems; algorithms; computer programs; least squares; regression; *19158*.

Statistics; test problems; test results; algorithms; curve fitting; least squares; modified Gram-Schmidt; pseudoinverse; regression; *TN1126*.

Statistics; time-varying signals; community noise; measurement errors; noise; noise exposure; sampling (temporal); *19116*.

Statistics; unit costs; weatherization; building economics; cost components; data analysis; data collection; demonstration; economic analysis; energy conservation; insulation; low-income housing; *NBSIR 80-2167*.

Status byte; command codes; disk drives; Federal Information Processing Standard; format track; operational specification; rotating mass storage subsystems; sense information; *FIPS PUB 63*.

Steady state; thermal conductivity; energy current; isotopic disorder; nonequilibrium; one-dimensional harmonic crystal; random matrix products; *19873*.

Steam; viscosity; coal gasification; coal slag; high temperature; *NBSIR 80-2124*.

Steam; viscosity; water; water vapor; correlation length; critical region equation of state; critical viscosity enhancement; *JPCRD 9*, No. 4, 1255-1290 (1980).

Steam; water; critically evaluated data; critical review; data compilation; International Formulation; static dielectric constant; *JPCRD 9*, No. 4, 1291-1306 (1980).

Steam; water; critically evaluated data; reference data; *19569*.

Steel; alloys; differential thermal analysis; gas analysis; *SP580*, pp. 33-53 (Aug. 1980).

Steel; ductile fracture; fracture toughness; part-through crack; pneumatic burst; pressure vessel; *19961*.

Steel; fatigue; fracture; mathematical modeling; micromechanics; microstructure; nuclear fuel element; paper; quantitative microscopy; size effect; solid mechanics; statistical methods; *19086*.

Steel; structural engineering; timber; aluminum; buildings (codes); concrete (prestressed); concrete (reinforced); design (buildings); limit states; loads (forces); masonry; probability theory; reliability; safety; specifications; standards; statistical analysis; *SP577*.

Steel; surfaces; wear; wear debris; copper; electron microscopy; friction; metals; plastic deformation; *NBSIR 80-2058 (ONR)*.

Steel; wear; wear debris; abrasive particles; electron microscopy; erosive wear; impact; *19874*.

Steel; wood; fire endurance; fire tests; flame through; floors; furniture; interior finishes; joists; room fires; *NBSIR 80-2134*.

Steels; fatigue (materials); fracture (materials); low temperature tests; mechanical properties; nickel alloys; *19550*.

Stellar atmospheres; stellar chromospheres; stellar coronae; stellar winds; ultraviolet spectroscopy; space astrophysics; *19456*.

Stellar atmospheres; stellar chromospheres; ultraviolet spectra; late-type stars; *19357*.

Stellar birthrates; supernovae; nucleosynthesis; *19278*.

Stellar chromospheres; stellar coronae; stellar winds; late-type stars; *19268*.

Stellar chromospheres; stellar coronae; stellar winds; ultraviolet spectroscopy; space astrophysics; stellar atmospheres; *19456*.

Stellar chromospheres; stellar coronae; ultraviolet spectra; binary stars; late-type stars; RS Canum Venaticorum; *19781*.

Stellar chromospheres; stellar coronae; ultraviolet spectra; late-type stars; *19315*.

Stellar chromospheres; stellar coronae; ultraviolet spectra; x-ray sources; flare stars; *19269*.

Stellar chromospheres; stellar winds; ultraviolet spectra; x-ray sources; chromosphere sun; emission-line stars; late-type stars; *19523*.

Stellar chromospheres; ultraviolet spectra; late-type stars; *19765*.

Stellar chromospheres; ultraviolet spectra; late-type stars; stellar atmospheres; *19357*.

Stellar coronae; stellar winds; late-type stars; stellar chromospheres; *19268*.

Stellar coronae; stellar winds; ultraviolet spectroscopy; space astrophysics; stellar atmospheres; stellar chromospheres; *19456*.

Stellar coronae; ultraviolet spectra; binary stars; late-type stars; RS Canum Venaticorum; stellar chromospheres; *19781*.

Stellar coronae; ultraviolet spectra; late-type stars; stellar chromospheres; *19315*.

Stellar coronae; ultraviolet spectra; x-ray sources; flare stars; stellar chromospheres; *19269*.

Stellar coronae; x-ray sources; late-type stars; *19501*.

Stellar diameters; astronomy; astrophysics; crustal movements; geophysics; interferometry; *19144*.

Stellar evolution; stellar pulsation; helium stars; R CrB Stars; *19711*.

Stellar evolution; supernovae; blue stragglers; stars; *19450*.

Stellar nucleosynthesis; activation cross sections at 24 keV; *SP594*, pp. 344-347 (Sept. 1980).

Stellar processes; neutron cross sections; nuclear clocks; *SP594*, pp. 627-633 (Sept. 1980).

Stellar pulsation; helium stars; R CrB Stars; stellar evolution; *19711*.

Stellar statistics; clusters; evolution-stars; open-stars; *19138*.

Stellar winds; late-type stars; stellar chromospheres; stellar coronae; *19268*.

Stellar winds; ultraviolet spectra; cool stars; radiation pressure; *19095*.

Stellar winds; ultraviolet spectra; x-ray sources; chromosphere sun; emission-line stars; late-type stars; stellar chromospheres; *19523*.

Stellar winds; ultraviolet spectroscopy; space astrophysics; stellar atmospheres; stellar chromospheres; stellar coronae; *19456*.

Stepped surfaces; surface bonding; tungsten; adsorption; chemisorption; electron stimulated desorption; ion angular distribution; oxygen; *19860*.

Stiffness; strength; structural safety; work surfaces; codes and standards; construction safety; design; loads; maintenance; occupational hazards; scaffolds; *NBSIR 79-1937*.

Stimulated Brillouin scattering (SBS); damage morphology; damage thresholds; laser bulk damage; laser surface damage; optical materials; self-focusing; *SP568*, pp. 519-527 (July 1980).

Stimulated bremsstrahlung; multiphoton transitions; scattering in

a laser field; 19227.

Stimulated Raman scattering; double resonance; 19465.

Stirling cycle; cryocoolers; helium liquefaction; refrigerator; regenerator materials; 19359.

Stirred solution; strained melt; crystallization temperature; melting temperature; row nucleation; 19904.

Stokes' law; viscosity; binary liquids; critical fluctuations; diffusion; light scattering; 19827.

Stokes law velocity; vibrating orifice aerosol generator; aerosol size calibrations; optical particle counter; particle Doppler shift spectrometer; particle size distribution; settling velocity; 19171.

Stoke's velocity; aerosol; light scattering; Lorenz-Mie light scattering calculation; particle sizing; 19695.

Stone; stone consolidation; conservation; consolidating materials; deterioration of stone; preservation; *TN1118*.

Stone consolidation; conservation; consolidating materials; deterioration of stone; preservation; stone; *TN1118*.

Stone decay; stone preservatives; accelerated decay; performance criteria; preservative testing; 19348.

Stone preservatives; accelerated decay; performance criteria; preservative testing; stone decay; 19348.

Stopped-flow; sulfur dioxide; thiirane; gas; kinetics; ozone; 19427.

Stopping power; W-values; electrons; energy degradation spectra; fano factor; ionization yields; 19400.

Stopping power ratios; tissue equivalence; ionization chambers; kerma; neutron dosimetry; *SP594*, pp. 447-455 (Sept. 1980).

Storage partitioning; systems performance modeling; systems storage restructuring; file binding; I/O resource allocation; logical storage to physical device mapping; O.S. performance prediction; O.S. tuning; *SP500-65*, pp. 175-188 (Oct. 1980).

Storage ring; synchrotron; vacuum ultraviolet; VUV standards; radiometry; 19641.

Storage ring; synchrotron radiation; radiometry; silicon photodetector; 19935.

Stored ions; atomic spectroscopy; double resonance; high-resolution spectroscopy; laser cooling; laser spectroscopy; microwave spectroscopy; optical pumping; 19440.

Stored ions; cesium atomic resonator; frequency retrace accuracy; frequency stability; passive/active hydrogen atomic resonator; rubidium atomic resonator; 19432.

Storm surge; structural engineering; structural response; tsunami; wind loads; winds; accelerograph; codes; design criteria; disaster; earthquakes; ground motion; seismology; standards; *SP560*.

Storm water runoff; toxicity; water pollution; air pollution; chromate ore; environmental effects; lead chromate pigments; *NBSIR 80-1974*.

Stoves; wood; chimneys; fire models; fire safety; fire tests; flues; heating equipment; heat transfer; literature reviews; radiant energy; *NBSIR 80-2140, Vol. 1*.

Strain; alloy; defect; diffuse scattering; neutron; niobium; 19307.

Strain; stress; transverse optic-phonon; anisotropy;  $\text{BaF}_2$ ;  $\text{CaF}_2$ ; effective charge; oscillator strength; photoelastic; piezo-birefringence; piezo-optic;  $\text{SrF}_2$ ; 19579.

Strain; superconducting coil composite; superconducting wire; critical current; fiberglass/epoxy composite; mechanical properties; niobium-tin; niobium-titanium; *NBSIR 80-1633*.

Strain; transformation; criteria; finite; jellium; martensite; model; stability; 19243.

Strain dipole; translation-rotation; dipole glass;  $(\text{KCN})(\text{KBr})$ ; order parameter; orientational; 19596.

Strained melt; crystallization temperature; melting temperature; row nucleation; stirred solution; 19904.

Strain energy; Valanis-Landel form; elasticity; elastomers; finite deformation; rubber; 19597.

Strain-energy function; Valanis-Landel form; biaxial; elasticity; elastomers; extension; rubber; 19502.

Strain gages; structure; transducers; zero shift; adhesive; backing; connection; environment; gage element; leads; load; protective coating; resistance; sensitivity change; stability; 19049.

Strain rate; stress corrosion cracking; 2124-T851; 7075; 7075-T6; 7075-T7351; air; alternate immersion test; aluminum alloys; ductility; elongation; heat treatment;  $\text{NaCl}$ ; plate gage; reduction in area; slow strain rate technique; 19622.

Strain to break; stress to break; coalescence of microcracks; end of microfibril; microcrack formation; microfibrillar structure; rupture of taut tie molecules; 19948.

Strategic model; theories of behavior; management theory; managers; organizational development; organization culture; 19844.

Stratosphere; absorption cross-section; chlorine chemistry; formaldehyde; ozone; 19535.

Stratosphere; Cl atoms; formaldehyde; kinetics; ozone; resonance fluorescence; 19704.

Stratospheric ozone; atmospheric chemistry; methyl chloroform; OH radicals; rate constant; resonance fluorescence; 19092.

Stray radiation; transmittance stability; filters for spectrophotometry; metal-on-fused silica filters; optical transmittance accuracy; polarization; reflections; spectral bandpass; standard reference materials in spectrophotometry; *SP260-68*.

Strength; ceramics; crack growth; delayed failure; fracture; mechanical reliability; mechanics; 19636.

Strength; ceramics; erosion; glass; impact; indentation fracture; 19594.

Strength; ceramic turbines; failure prediction; fracture; oxidation; silicon nitride; 19792.

Strength; elastic modulus; extruded semicrystalline polymers; fibrous materials; polymers; 19938.

Strength; stress-corrosion cracking; sub-critical crack growth; ceramics; fracture; glass; 19791.

Strength; striae; electron microprobe; glass; interferometry; ion-exchange; refractive index; 19744.

Strength; structural safety; work surfaces; codes and standards; construction safety; design; loads; maintenance; occupational hazards; scaffolds; stiffness; *NBSIR 79-1937*.

Strength; tie molecules; crystalline polymer; elastic modulus; fibrils; fibrous structure; fracture; load-elongation curve; microfibrils; point defects of microfibrillar structure; ruptured chains; 19901.

Strength; toughness; welds; cryogenic; delta ferrite; ferrite content; fracture; mechanical properties; stainless steel; 19673.

Strength degradation; ceramics; fracture; impact energy; 19589.

Strength function; fission; level spacing; multilevel analysis; neutron total cross section; *SP594*, pp. 707-710 (Sept. 1980).

Stress; transverse optic-phonon; anisotropy;  $\text{BaF}_2$ ;  $\text{CaF}_2$ ; effective charge; oscillator strength; photoelastic; piezo-birefringence; piezo-optic;  $\text{SrF}_2$ ; strain; 19579.

Stress; zinc-blende structure; covalent bonding; diamond structure; elastic constants; gallium arsenide; indium antimonide; ionicity; optical phonons; Raman scattering; semiconductors; 19580.

Stress birefringence; calcium fluoride; hot isostatic forging; hot isostatic pressing; laser windows; optical absorption; optical homogeneity; optical scattering; *SP568*, pp. 47-63 (July 1980).

Stress corrosion; subcritical crack growth; dynamic fatigue; fracture mechanics; lifetime prediction; proof testing; *NBSIR 80-2047*.

Stress corrosion cracking; austenitic stainless steels; coal gasification; elevated temperatures; ferritic stainless steels; gaseous environments; nickel alloy 671; nickel alloy 800; oxidizing/sulfidizing gas; premature failure; 19623.

Stress-corrosion cracking; sub-critical crack growth; ceramics; fracture; glass; strength; 19791.

Stress corrosion cracking; 2124-T851; 7075; 7075-T6; 7075-T7351; air; alternate immersion test; aluminum alloys; ductility; elongation; heat treatment;  $\text{NaCl}$ ; plate gage; reduction in area; slow strain rate technique; strain rate; 19622.

Stressed solid; thermodynamics; vacancies; coherent interfaces; equilibrium; incoherent interfaces; solid-fluid interface; 19949.

Stress relaxation; uniaxial creep; continuum model; critical

strain; instability point; molecular weight distribution; necking; polyethylene; 19681.

Stress to break; coalescence of microcracks; end of microfibril; microcrack formation; microfibrillar structure; rupture of taut tie molecules; strain to break; 19948.

Striae; electron microprobe; glass; interferometry; ion-exchange; refractive index; strength; 19744.

Striations; composite materials; corrosion fatigue; dislocations; fatigue mechanism; fracture mechanics; mathematical modeling; micromechanics; polymers; quantitative microscopy; slip bands; statistical aspects of fatigue; 19087.

Stripline transmission line; Josephson junctions; microstrip; microwave integrated circuit; *U.S. Patent 4,227,096*.

Stokes Phenomenon; WKB approximation; Bessel functions; generalized asymptotic expansions; irregular singularities; Liouville-Green approximation; multiple asymptotic expansions; 19379.

Strong laser field; time-dependent spectrum; transient spectrum; fluorescence spectrum; laser excitation; multi-photon processes; non-stationary processes; resonance fluorescence; 19220.

Strong scattering; transport anomalies; conductivity; disordered alloy; localization; phonon; 19755.

Strontium ions; Penning collisions; polarized emission; 19103.

Structural considerations; twinning; computer assessment; crystal structures; epitaxy; inter-layerings; nonstoichiometry; *J. Res. 85, No. 5, 347-362 (Sept.-Oct. 1980)*.

Structural defects; transverse acoustic modes; bond polarizabilities; calculated frequencies; Fermi resonance; longitudinal acoustic modes; *n*-alkanes; Raman intensities; 19692.

Structural design standards; building regulations; building standards development; consensus standards; development of standards; 19091.

Structural engineering; bridges; buildings; dikes; earthquakes; foreign engineering; geology; highways; housing; landslides; liquefaction; power plants; railroads; rock slides; seismicity; *SP592*.

Structural engineering; building; building codes; building design; earthquakes; engineering; standards; *NBSIR 80-2111-2*.

Structural engineering; building; ice; load; roof; roof load; snow; solar collector; *NBS-GCR-79-180*.

Structural engineering; concrete (reinforced); creep tests; evaluation; organic coating; pullout tests; reinforcing steels; 19077.

Structural engineering; structural response; tsunami; wind loads; winds; accelerograph; codes; design criteria; disaster; earthquakes; ground motion; seismology; standards; storm surge; *SP560*.

Structural engineering; tall buildings; wind forces; wind pressures; acceleration; buffeting; buildings; buildings (codes); deflection; dynamic response and gust loads; 19121.

Structural engineering; timber; aluminum; buildings (codes); concrete (prestressed); concrete (reinforced); design (buildings); limit states; loads (forces); masonry; probability theory; reliability; safety; specifications; standards; statistical analysis; steel; *SP577*.

Structural engineering; tornadoes; wind; engineering; missiles; *NBSIR 80-2117*.

Structural engineering; tornadoes; winds; buildings; climatology; hurricanes; 19360.

Structural engineering; towers; turbulence; wind (meteorology); aerodynamics; buildings (codes); dynamics; 19143.

Structural engineering; tropical cyclones; wind (meteorology); building (codes); climatology; hurricanes; statistical analysis; *BSS124*.

Structural engineering; tropical cyclones; wind (meteorology); buildings (codes); climatology; hurricanes; statistical analysis; 19835.

Structural material; total cross section; unresolved resonance; elastic scattering cross section; partial inelastic scattering cross section; resonance self-shielding effect; sensitivity analysis; shielding application; *SP594*, pp. 586-590 (Sept. 1980).

Structural materials; benchmark tests; control rod worth; Doppler coefficient; JENDL-1; reaction rate distribution; reaction rate ratio; reactivity worth; sodium void coefficient; *SP594*, pp. 581-585 (Sept. 1980).

Structural properties; amorphous alloys; magnetism; metallic glasses; neutron scattering; rare earths; 19113.

Structural response; tsunami; wind loads; winds; accelerograph; codes; design criteria; disaster; earthquakes; ground motion; seismology; standards; storm surge; structural engineering; *SP560*.

Structural safety; automation; computers; electrical wiring; radiation exposure; solar absorber coatings; SRM's; *DIM/NBS 64, No. 8, 1-28 (1980)*.

Structural safety; work surfaces; codes and standards; construction safety; design; loads; maintenance; occupational hazards; scaffolds; stiffness; strength; *NBSIR 79-1937*.

Structural stability; alloy phase formation; alloy stability; atomic size; electronegativity; heats of formation; 19566.

Structure; amino acid; centrifugal distortion; glycine; microwave spectrum; rotational constants; 19365.

Structure; transducers; zero shift; adhesive; backing; connection; environment; gage element; leads; load; protective coating; resistance; sensitivity change; stability; strain gages; 19049.

Structure; vibration spectrum; hydride; interstitial holes; metallic glass; neutron scattering; 19606.

Structure refinement; atomic models; flat-cone geometry; neutron diffraction; protein structure; ribonuclease-A; 19808.

Structure refinement; x-ray diffraction; bond delocalized dianion; oxocarbon; single-crystal; *J. Res. 85, No. 2, 87-97 (Mar.-Apr. 1980)*.

Stuck-fault testing; test cases; validation vs. maintenance; communications security; computer security; cryptography; Data Encryption Standard; in-service testing; maintenance tests; Monte-Carlo testing; *SP500-61*.

Students; doors; dormitories; evacuation; fire departments; fire fatalities; fire fighters; flashover; ladders; room fires; smoke; *NBS-GCR-80-193*.

Stylus; surface; surface roughness; surface texture; metrology; profilometer; razor blade; SEM; 19064.

SU4; charge exchange reactions; exotic nuclei; heavy ion collision; mass formula; quartets; 19265.

Sub-critical crack growth; ceramics; fracture; glass; strength; stress-corrosion cracking; 19791.

Subcritical crack growth; dynamic fatigue; fracture mechanics; lifetime prediction; proof testing; stress corrosion; *NBSIR 80-2047*.

Subgrain misorientation; surface reflection; x-ray topography; Bragg diffraction; double crystal diffraction; nickel single crystal; process of crystal growth; 19727.

Sublattice magnetization; hydrides; Laves-phase; neutron scattering; rare earth-iron intermetallics; 19617.

Substantial equivalency; used oil; waste oil; fuel oil; petroleum standards; petroleum test methods; recycled burner fuel oil; *TN1130*.

Sulfates; sulfides; surface tension; tungstates; viscosity; carbonates; density; electrical conductance; hexafluoroaluminates; metaphosphates; molten salts; molybdates; *JPCRD 9, No. 4, 831-1022 (1980)*.

Sulfides; surface tension; tungstates; viscosity; carbonates; density; electrical conductance; hexafluoroaluminates; metaphosphates; molten salts; molybdates; sulfates; *JPCRD 9, No. 4, 831-1022 (1980)*.

Sulfur; Arrhenius parameters; chemical kinetics; combustion; decomposition; free radicals; gas phase; hydrocarbons; hydrogen; nitrogen; oxygen; rate of reaction; *NSRDS-67*.

Sulfur; Arrhenius parameters; chemical kinetics; combustion; decomposition; free radicals; gas phase; hydrocarbons; hydrogen; nitrogen oxygen; rate of reaction; *NBSIR 80-2118*.

Sulfur; absorption cross section; manganese bath; pile oscillator; small-angle scattering; *SP594*, pp. 738-742 (Sept. 1980).

Sulfur; leakage;  $\text{MnSO}_4$ -bath; *SP594*, pp. 988-989 (Sept. 1980).

Sulfur; thermally stimulated measurements; dynathermal capaci-

- tance responses; dynothermal current response; isotopes; silicon; 19163.
- Sulfur dioxide; thiirane; gas; kinetics; ozone; stopped-flow; 19427.
- Sulfur hexafluoride; tracer gas; air leakage measurements; environmental chamber; fan depressurization; mobile home; *NBSIR 80-2105*.
- Sulfur hexafluoride ( $\text{SF}_6$ ); uv radiation; 60 Hz ac and dc; compressed gas; corona; electron avalanche; inception voltage; ionization; ion mobilities; partial discharge; photodetachment; space charge; 19786.
- Sulfuric acid; thermochemistry; calorimetry; electrolytes; enthalpy of dilution; heat; hydrochloric acid; lithium chloride; relative apparent molal enthalpy; relative partial molal enthalpy; *J. Res.* **85**, No. 1, 11-17 (Jan.-Feb. 1980).
- Sulfuric acid; tools; awards; computers; didymium glass filters; energy efficiency; inventors; innovation; labels; standards; *DIM/NBS 64*, No. 7, 1-28 (1980).
- Sulfur impurities in silicon; thermally-stimulated measurements; chemical impurities; deep level studies; ion implantation; pre-deposition technique; 19231.
- Sulfur impurities in silicon; thermally-stimulated measurements; chemical impurities; deep level studies; ion implantation; pre-deposition technique; 19429.
- Summation method; least squares fitting; normalized Gaussian function; photo-peak area determination; photo-peaks data, data analysis; 19132.
- Sum rule; susceptibility; three coexistence phases; tricritical point; correlation length; mean field; 19135.
- Sunspots; ARMA models; forecasts; Maunder minimum, models; simulation; statistics; *TN1022*.
- Superconducting; accelerators; coincidence measurements; electrons; linac; nuclear reactions; 19248.
- Superconducting coil composite; superconducting wire; critical current; fiberglass/epoxy composite; mechanical properties; niobium-tin; niobium-titanium; strain; *NBSIR 80-1633*.
- Superconducting coils; absolute ampere; current balance; magnetic force; radial magnetic field; *J. Res.* **85**, No. 4, 257-272 (July-Aug. 1980).
- Superconducting devices; cryogenics; instrumentation; refrigeration; 19323.
- Superconducting electronics; a/d converter; cryogenic electronics; digital instrument; high speed instruments; Josephson effect; 19057.
- Superconducting transmission; capacitance; cryogenic; dielectric constant; dielectric properties; dissipation factor; electrical transmission; partial discharges; polymers; precision electric measurements; pulse-height analysis; *NBSIR 79-1950*.
- Superconducting transmission lines; conservation equations; cool-down; numerical solutions; 19761.
- Superconducting tunnel junction; superconducting weak link; controllable weak link; cryoelectronic; Josephson effect; nonequilibrium superconductivity; quasiparticle injection; 19416.
- Superconducting weak link; controllable weak link; cryoelectronic; Josephson effect; nonequilibrium superconductivity; quasiparticle injection; superconducting tunnel junction; 19416.
- Superconducting wire; critical current; fiberglass/epoxy composite; mechanical properties; niobium-tin; niobium-titanium; strain; superconducting coil composite; *NBSIR 80-1633*.
- Superconductivity; aerospace; amplifier; Josephson junction; magnetic gradiometer; magnetometer; quantum interference; 19203.
- Superconductivity; aerospace; computers; digital electronics; Josephson effect; quantum interference; 19405.
- Superconductivity; aerospace; digital; electronics; gravitational experiments; high-Q cavities; interference; Josephson effect; magnets; 19054.
- Superconductivity; aerospace; frequency standards; high-Q cavities; navigation; oscillator; ranging; resonators; 19586.
- Superconductivity; aerospace; infrared detectors; Josephson effect; microwave detectors; parametric amplifiers; 19406.
- Superconductivity; crystal field; magnetic superconductors; neutron scattering; rare earth; small angle scattering; 19255.
- Superconductivity; temperature; fixed points; standard reference material; 19098.
- Superconductivity; temperature fixed points; temperature scales; thermometry; cryogenics; pure metals; 19491.
- Superconductivity; temperature scale; thermometry; cryogenics; fixed points; pure materials; 19101.
- Superconductivity; threshold curves; interferometers; Josephson junctions; 19200.
- Superconductivity; transition metals; transition temperature; body-centered-cubic metals; Cauchy discrepancy; elastic constants; many-atom effects; 19627.
- Superconductivity; voltage standard; Josephson effect; phase locking; 19351.
- Superconductor; acoustic mismatch; effective recombination time; nonequilibrium phenomena; phonon-trapping; quasiparticle; 19240.
- Superconductor; aerospace; magnetic field; magnets; materials; 19199.
- Superconductor; critical current; critical temperature; losses; magnetic property; standards; *NBSIR 80-1629*.
- Superconductors; alloys; magnets; materials; nonmetallics; review; stainless steel; 19190.
- Superconductors; terminology; critical parameters; definitions; flux phenomena; Josephson phenomena; stabilization; 19539.
- Superdrawing; Taut tie molecules; annealing; crystallization; elastic modulus; fibrils; fibrous structure; microfibrils; 19903.
- Superelastic; electron heating; electron seeding; gas breakdown; laser ionization; Na; 19779.
- Superfluid; thermodynamic properties; computer program; deviation plots; equation of state; helium II; mathematical model; *TN1029*.
- Supernovae; blue stragglers; stars; stellar evolution; 19450.
- Supernovae; nucleosynthesis; stellar birthrates; 19278.
- Supernovae; supernova remnants; x rays; dust grains; molecular clouds; star formation; 19384.
- Supernova remnants; x rays; dust grains; molecular clouds; star formation; supernovae; 19384.
- Suprathreshold seeing; visibility; vision; conspicuity; contrast; energy conservation; illumination; illumination levels; lighting; *NBSIR 79-1925*.
- Surface; adsorption; electron stimulated desorption; ion angular distribution; quantum scattering theory; 19193.
- Surface; carbon monoxide; chemisorption; electron stimulated desorption; ion angular distribution; nitric oxide; ruthenium; 19924.
- Surface; hydrogen; neutron; nickel; spectroscopy; 19205.
- Surface; surface roughness; surface texture; metrology; profilometer; razor blade; SEM; stylus; 19064.
- Surface; surface tension; wetting; contact angle; critical point; cyclohexane; interface; methanol; phase transition; 19306.
- Surface; tungsten; acetylene; chemisorption; electron energy loss spectroscopy; ethylene; physisorption; 19390.
- Surface analysis; glasses; ion microprobe mass analysis; microanalysis; quantitative analysis; secondary ion mass spectrometry; 19869.
- Surface analysis; ion microanalysis; ion microprobe; microanalysis; quantitative analysis; secondary ion mass spectrometry; 19643.
- Surface analysis; ion microprobe mass analysis; microanalysis; quantitative analysis; secondary ion mass spectrometry; sputtering; 19532.
- Surface analysis; ion probe microanalysis; local thermal equilibrium model; microanalysis; relative elemental sensitivity factors; secondary ion mass spectrometry; 19151.
- Surface analysis; local thermal equilibrium model; microanalysis; secondary ion mass spectrometry; sensitivity factors; sputtering; 19642.
- Surface analysis; thin film characterization; thin film impurities;

- Auger analysis; dielectric coatings; optical coatings; *SP568*, pp. 257-268 (July 1980).
- Surface analysis; x-ray photoelectron spectroscopy; Auger-electron spectroscopy; ion-scattering spectroscopy; quantitative analysis; secondary-ion mass spectroscopy; *19293*.
- Surface anisotropy; composites; durability; eutectics; Rayleigh waves; stability; *19153*.
- Surface areas; thermal analysis; adsorbents; gas exchange; *SP580*, pp. 133-147 (Aug. 1980).
- Surface atomic structure; thorium; field emission microscopy; field ion microscopy; *19223*.
- Surface bonding; tungsten; adsorption; chemisorption; electron stimulated desorption; ion angular distribution; oxygen; stepped surfaces; *19860*.
- Surface chemical analysis; surface chemistry; surface spectroscopy; alloy catalysts; catalytic reactions; electron diffraction; electron spectroscopy; kinetics of surface processes; *19957*.
- Surface chemistry; atmosphere-assisted slow crack growth; chemically assisted fracture; fracture; fracture models; reaction rate theory; slow crack growth; *19588*.
- Surface chemistry; surface spectroscopy; alloy catalysts; catalytic reactions; electron diffraction; electron spectroscopy; kinetics of surface processes; surface chemical analysis; *19957*.
- Surface damage; alkali halides; CO<sub>2</sub> laser; KCl; laser damage; laser fusion; NaCl; nanosecond pulse; *SP568*, pp. 209-227 (July 1980).
- Surface damage; diamond turning; infrared windows; laser breakdown; polishing; *SP568*, pp. 195-197 (July 1980).
- Surface defects; thermal diffusivity; vapor-deposited mirrors; crystalline disorder; Cu mirrors; diamond turning; laser-induced slip; polishing; ripples; SiC substrates; *SP568*, pp. 175-186 (July 1980).
- Surface degradation; Cu mirrors; damage thresholds; laser damage; laser-induced stress-strain; plastic deformation; *SP568*, pp. 159-173 (July 1980).
- Surface depletion; transpiration; unstirred glass melt; vapor density; vaporization; carrier gas saturation; diffusion in melt; glass; incongruent vaporization; *19552*.
- Surface energy; environmental fracture; fracture; materials failure; reaction rate theory; slow crack growth; *19843*.
- Surface entropy; Cahn-Hilliard theory; chemical potential; density gradient; equation of state; inhomogeneous fluid; lattice fluid; long-range interactions; *19653*.
- Surface finishing; surface polishing; fused silica; laser damage; *SP568*, pp. 229-236 (July 1980).
- Surface flashover; vacuum breakdown; electrical breakdown; electro-optics; interfacial breakdown; Pockels effect; space charge; *NBS-GCR-80-203*.
- Surface free energy; constrained polymer; polymer; polymer in a cone; polymer interference; small polymer crystal; *J. Res.* **85**, No. 4, 273-282 (July-Aug. 1980).
- Surface intermediates; thermal programmed desorption; carbon monoxide; hydrogen; methanol; nickel; *19292*.
- Surface kinetics; surface structure; catalysis; catalytic methanation; electron stimulated desorption; *19902*.
- Surface loss; capacitor; dielectric film; dissipation factor; electrode surface; loss angle; phase angle; power factor; *19066*.
- Surface magnetism; ferromagnetism; LEED; magnetism; nickel; PLEED; polarized LEED; *19104*.
- Surface magnetism; surface magnetization; magnetism; Ni; nickel; PLEED; polarized electrons; polarized LEED; *19341*.
- Surface magnetization; magnetism; Ni; nickel; PLEED; polarized electrons; polarized LEED; surface magnetism; *19341*.
- Surface mass transport; ion bombardment; liquid surfaces; *19751*.
- Surface melting; adiabatic heating; elastic-plastic contact; glass; indentation; *19584*.
- Surface melting; adsorbed layers; antiphase boundaries; grain boundaries; lattice gas; phase transitions; *19468*.
- Surface morphology; ultra-black surface coating; etchant bath; light absorption; microscopic pores; nickel-phosphorus alloy; solar collector; *U.S. Patent 4,233,107*.
- Surface optical absorption coefficient; ThF<sub>4</sub>; ZnSe; bulk optical absorption coefficient; optoacoustic spectroscopy; photoacoustic spectroscopy; *SP568*, pp. 301-311 (July 1980).
- Surface optical absorption coefficient; ZnSe; bulk optical absorption coefficient; optoacoustic spectroscopy; photoacoustic spectroscopy; *SP568*, pp. 293-300 (July 1980).
- Surface physics; surface reconstruction; atomic surface structure; field-ion microscopy; *19940*.
- Surface polishing; fused silica; laser damage; surface finishing; *SP568*, pp. 229-236 (July 1980).
- Surface reaction; thermal desorption; chemisorption; nitrous oxide; ruthenium; *19241*.
- Surface reactions; chemisorption; ESCA; oxygen; ruthenium; ruthenium oxide; *19254*.
- Surface reactions; molecular processes; reaction dynamics; *19880*.
- Surface reactions; tropospheric sink; catalysis; nitrous oxide; photochemistry; sand; *19953*.
- Surface reactions; x-ray edge; electron-hole pairs; molecular processes; *19837*.
- Surface recombination; collection efficiency; quantum efficiency; silicon photodiode; *19738*.
- Surface reconstruction; atomic surface structure; field-ion microscopy; surface physics; *19940*.
- Surface reflection; x-ray topography; Bragg diffraction; double crystal diffraction; nickel single crystal; process of crystal growth; subgrain misorientation; *19727*.
- Surface roughness; diffuseness; in-process; manufacturing engineering; on-line; optical Fourier transform; optical techniques; power spectral density; production engineering; R<sub>a</sub>; speckle; specular reflectance; *19477*.
- Surface roughness; surface texture; metrology; profilometer; razor blade; SEM; stylus; surface; *19064*.
- Surface roughness; ultraviolet reflectance; work damage; infrared reflectance; optical reflectance; polishing; silicon on sapphire; *SP400-62*.
- Surfaces; deformation; erosion; impact; metals; *19936*.
- Surfaces; thermodynamics; vapor pressure; interstitials; melting; small particles; solid solutions; solubility; *19830*.
- Surfaces; wear; wear debris; copper; electron microscopy; friction; metals; plastic deformation; steel; *NBSIR 80-2058 (ONR)*.
- Surface science; carbon monoxide; catalysis; kinetics methanation; nickel; ruthenium; single crystal; *19482*.
- Surface science; carbon monoxide; chemisorption; electron stimulated desorption; molecular orientation; palladium (210); *19195*.
- Surface science; tetrafluoroethylene powder; water conservation; alternate fuels; data communications; energy; erosion; instrument landing; measurements; radio frequency; *DIM/NBS 64*, No. 5, 1-28 (1980).
- Surface spectroscopy; alloy catalysts; catalytic reactions; electron diffraction; electron spectroscopy; kinetics of surface processes; surface chemical analysis; surface chemistry; *19957*.
- Surface spectroscopy; chemisorption; dielectric response theory; photoemission; relaxation energy; *19372*.
- Surface structure; catalysis; catalytic methanation; electron stimulated desorption; surface kinetics; *19902*.
- Surface tension; thermodynamic properties; Auger measurements on liquids; convection; gallium; heat capacity; lead-tin alloys; magnetic field effect; phase diagram; potassium-iron-silicon oxides; solidification; *NBSIR 80-2082*.
- Surface tension; tungstates; viscosity; carbonates; density; electrical conductance; hexafluoraluminates; metaphosphates; molten salts; molybdates; sulfates; sulfides; *JPCRD 9*, No. 4, 831-1022 (1980).
- Surface tension; viscosity; calibration-quality standards; density; electrical conductance; molten salts; potassium nitrate; sodium chloride; *JPCRD 9*, No. 4, 791-830 (1980).
- Surface tension; wetting; contact angle; critical point; cyclohexane; interface; methanol; phase transition; surface; *19306*.

- Surface texture; metrology; profilometer; razor blade; SEM; stylus; surface; surface roughness; 19064.
- Surge arresters; varistors; voltage-variable resistors; zinc oxide; electrically conducting ceramics; electrical transmission; lightning arresters; nonlinear resistors; semiconductors; *NBSIR 79-1939*.
- Surgical implant metals; titanium alloy; cobalt-chromium alloy; corrosion-fatigue; fatigue; stainless steel; 19100.
- Survey; thermoluminescence; United States; calibration; dosimetry; high-energy bremsstrahlung; operational characteristics; radiation therapy; recommendations; selection of thermoluminescence dosimetry system; *TN1119*.
- Surveying; Universal Transverse Mercator (UTM); coordinate system; elevation; Federal Information Processing Standard; geographic point location; latitude; Latitude and Longitude; longitude; mapping; State Plane Coordinate System; *FIPS PUB 70*.
- Survey of local building departments; building departments; building inspection; code administration; Indiana building code enforcement; local government; political appointments; *SP586*, pp. 33-42 (June 1980).
- Surveys; detector location; false alarms; health care facilities; hospitals; ionization detectors; maintenance; NFPA 101; nursing homes; photoelectric detectors; smoke detectors; *NBSIR 80-2130*.
- Susceptibility; three coexistence phases; tricritical point; correlation length; mean field; sum rule; 19135.
- Switchyard impact tests; tensile properties; AAR M128 steel; Charpy V-notch; head plates; impact properties; nil-ductility transition temperatures; railroad tank cars; *NBSIR 80-2039*.
- Symbiosis; thorium; cross sections; fast reactors; integral and critical experiments; *SP594*, pp. 119-121 (Sept. 1980).
- Symbiotic energy system; tritium breeding; cross-section uncertainty; CTR; denatured fuel; economics; ENDF/B-V; fuel cycle; *SP594*, pp. 839-843 (Sept. 1980).
- Symbols; antifouling coating; communication; gamma-ray measurement; human serum; industrial development; industrial furnace; measurement; polarized electrons; secondary standards; signs; *DIM/NBS 64*, No. 2, 1-36 (1980).
- Symbols; communications; evacuation; fire alarms; fire safety; human behavior; human factors; panic; safety; smoke; *NBSIR 80-2070*.
- Symbols; terminology; terms; definitions; fracture testing; nomenclature; 19892.
- Symbols; visual alerting; fire fighting; fire safety; pictograms; safety; signs; standardization; 19274.
- Symmetric hydrogen bonds; calcium ammonium phosphate; calcium phosphate; crystal structure; sheet type structure; 19386.
- Symmetric top molecules; group theory; nuclear spin; ro-vibronic species; statistical weights; 19789.
- Symmetry; Bravais lattice; classification; crystal data; reduced forms; space group frequency; 19832.
- Synchronization; clocks; Loran-C; propagation; reciprocity; 19524.
- Synchronous; teleprocessing service evaluation; data communications; protocol validation; *SP500-65*, pp. 63-70 (Oct. 1980).
- Synchrotron radiation; electron; frequency divider; ion trap; laser; microwave; relativistic; 19529.
- Synchrotron; vacuum ultraviolet; VUV standards; radiometry; storage ring; 19641.
- Synchrotron light source; beam instabilities; beam lifetime; bunch shape oscillations; electron storage ring; particle accelerator; 19437.
- Synchrotron radiation; absorption cross section; core excitation; electron correlation; heat pipe; lithium vapor; partial photoionization cross section; 19276.
- Synchrotron radiation; angle resolved photoemission; angular distributions; carbon monoxide; CO; photoelectron spectra; photoionization; shape resonance; 19559.
- Synchrotron radiation; detectors; extreme ultraviolet radiation; instrumentation; radiometric transfer standards; radiometry; 19664.
- Synchrotron radiation; electron spectrometer; photoelectron spectra; 19614.
- Synchrotron radiation; radiometry; silicon photodetector; storage ring; 19935.
- Synchrotron radiation; tungsten; angular distribution of ions; chemisorption; electron stimulated desorption; ESDIAD; ion energy distributions; ion yield; oxygen; photon stimulated desorption; 19533.
- Synchrotron radiation; ultraviolet optical system design; ultraviolet spectroscopy; extreme ultraviolet mirrors; extreme ultraviolet telescopes; optical constants; reflectivity; reflectometer; solid state physics; 19640.
- Synchrotron radiation; vacuum ultraviolet; BeF<sub>2</sub> glass; exciton resonance; photoelectron spectra; reflectance; *SP568*, pp. 119-123 (July 1980).
- Synchrotron radiation; vibrational intensity distribution; branching ratios; Franck-Condon factors; ion; nitrogen; N<sub>2</sub>; photoelectron spectra; photoionization; shape resonance; 19607.
- Synchrotron radiation; vibrational intensity distribution; carbon monoxide; CO; Franck-Condon factors; ion; photoelectron spectra; photoionization; shape resonance; 19184.
- Synchrotron x-radiation; x-ray diffraction; electro-optical detectors; flash x-ray generators; 19714.
- Synthesis; acid; aromatic; bond-delocalized; croconic; dianion; malonitrile; nonbenzenoid; pseudooxocarbons; salt; 19560.
- Synthesis; acid; aromatic; bond-delocalized; croconic; dianion; malonitrile; nonbenzenoid; oxocarbon; salt; *J. Res.* 85, No. 2, 73-86 (Mar.-Apr. 1980).
- Synthesis; adhesion; dentin; diisocyanates; hydroxyethyl; isocyanato urethane methacrylates; methacrylate; polymerization; 19136.
- Synthesis; *cis*-4-phenylcyclophosphamide; cyclophosphamide analogs; *in vivo* anticancer activity; molecular structure determination; single crystal x-ray diffraction; 19829.
- Synthesis and microwave spectrum of; ethylenimine; hyperfine and internal rotations; microwave spectra; pyrolysis of ethylamine; Stark effects; 19447.
- Synthetic intermediate; x-ray structure determination; zwitterion; inner salt; iodonium compound; reaction mechanism; 19939.
- Syringe calibration; telescopic viewer; volumetric dispensing; water calibration; Karl Fischer titration; moisture content; 19277.
- Systematic error; uncertainty; angle block; autocollimator; calibration; flatness; intercomparison; random error; squareness; standard deviation; *NBSIR 80-1967*.
- Systematic error; weighting factors; data evaluation; nuclear-decay data; radioactivity; random error; 19407.
- Systematic error. robust statistical methods; item-dependent error; measurement error; nuclear material accounting; referee measurement methods; robust statistical methods; 19332.
- Systematic errors; transmittance accuracy; absorbance accuracy; instrumental standards; method accuracy; multielement analyses; NBS standard reference materials; spectrophotometry; 19818.
- Systematic errors; uncertainty; check standard; gage blocks; measurement assurance; random errors; standard deviation; *NBSIR 80-2078*.
- Systematics; fission cross sections; MeV range; neutron-induced; 19553.
- Systematic uncertainty; data reporting; environmental; measurements; radiation; random uncertainty; 19301.
- System controls; system vulnerabilities; terminal controls; applications controls; computer vulnerabilities; data base controls; data base management systems controls; EDP audit; internal audit; operating system controls; *SP500-57*.
- System efficiency; availability analysis; energy; energy conservation; process efficiency; Second Law of Thermodynamics; *TN1115*.
- System life cycle; system security; ADP availability; ADP secu-

rity; application system security; computer applications; computer reliability; computer security; data confidentiality; data integrity; data security; Federal Information Processing Standards Publication; *FIPS PUB 73*.  
 System nontoxicity; x-ray opacification; dental composite resin restorations; finishability; gelled inorganic "polymers"; microporous filler; *U.S. Patent 4,217,264*.  
 System performance; workloads; cumulative distribution function; events; hardware configuration; model validation; queue; scheduling policies; simulation model; *SP500-65*, pp. 111-128 (Oct. 1980).  
 Systems; calibration; equipment; evaluation; laboratory; manual; personnel; quality assurance; quality control; *SP591*, pp. 99-103 (Aug. 1980).  
 Systems analysis; building standards; classification; decision tables; information networks; modeling; standards; standards-writers; *NBSIR 80-1979*.  
 Systems analysis/engineering; codes; computer program; decision table; network; performance requirements; software; specifications; standards; *NBS-GCR-80-258*.  
 Systems analysis/engineering; codes; computer program; decision table; network; performance requirements; software; specifications; standards; *NBS-GCR-80-257*.  
 Systems analysis/engineering; codes; decision theory; editing; networks; specifications standards; *NBS-GCR-80-259*.  
 System security; ADP availability; ADP security; application system security; computer applications; computer reliability; computer security; data confidentiality; data integrity; data security; Federal Information Processing Standards Publication; security controls; *FIPS PUB 73*.  
 System sizing; benchmarking; distributed systems; hybrid models; queueing analysis; *SP500-60*.  
 Systems performance modeling; systems storage restructuring; file binding; I/O resource allocation; logical storage to physical device mapping; O.S. performance prediction; O.S. tuning; storage partitioning; *SP500-65*, pp. 175-188 (Oct. 1980).  
 Systems storage restructuring; file binding; I/O resource allocation; logical storage to physical device mapping; O.S. performance prediction; O.S. tuning; storage partitioning; systems performance modeling; *SP500-65*, pp. 175-188 (Oct. 1980).  
 System tuning; capabilities; message overhead; modular design; *SP500-65*, pp. 319-330 (Oct. 1980).  
 System vulnerabilities; terminal controls; applications controls; computer vulnerabilities; data base controls; data base management systems controls; EDP audit; internal audit; operating system controls; system controls; *SP500-57*.

Tables of spectra; wavelengths; atomic spectra; intensities of lines; line spectra; spectrum lines; *19514*.  
 Talc; vibrational mode; Raman spectroscopy; *19583*.  
 Tall buildings; wind forces; wind pressures; acceleration; buffeting; buildings; buildings (codes); deflection; dynamic response and gust loads; structural engineering; *19121*.  
 Tall buildings; wind loads; wind tunnels; aerodynamics; boundary layers; dynamic response; influence of wind-direction; *19872*.  
 Tamper; unattended safeguards system; safeguards instrument; seal; *SP582*, pp. 257-260 (June 1980).  
 Tantalum alloys; constitution diagram; intermetallic compounds; palladium alloys; phase diagram; phase transformations; *19595*.  
 Tape bonded devices; acoustic emission; beam lead devices; electronic devices; hermeticity; hybrids; nondestructive tests; semiconductor; *19108*.  
 Tape labels; data interchange; Federal Information Processing Standards Publication; file structure; magnetic tapes; *FIPS PUB 79*.  
 TAPPI; test methods; Youden graphical analysis; collaborative reference programs; history; interlaboratory testing program; laboratory evaluation; National Bureau of Standards; paper;

paperboard; *19321*.  
 Ta(p,xn); intranuclear cascade predictions; neutron yield; *SP594*, pp. 413-416 (Sept. 1980).  
 Task lighting; visual performance; biological effects of lighting; energy conservation; illumination levels; lighting; lighting design; lighting education; lighting research; post-occupancy evaluation; power budget; *SP587*.  
 Taut tie molecules; annealing; crystallization; elastic modulus; fibrils; fibrous structure; microfibrils; superdrawing; *19903*.  
 Taxation; utility; audit; behavior; compliance; discriminant analysis; game theory; law enforcement; *NBSIR 79-1711*.  
 Taximeter; test procedure; tire pressure; tolerances; calibration; distance; fifth wheel; inspection; measured course; odometer; *H137*.  
 Taximeters; tolerances; volume-measuring devices; weighing devices; weights; length-measuring devices; liquid-measuring devices; measures; scales; specifications; *H44, 1980 Edition*.  
 Taxonomy; automated aids; programming aids; software engineering; software techniques; software tools; *NBS-GCR-80-199*.  
 Taylor's theorem; convexity; derivatives; inequalities; intermediate point; mean-value theorem; *19421*.  
 TDL-CO<sub>2</sub> heterodyne measurements; TDL reference frequencies; tunable diode laser; carbonyl sulfide; OCS calibration frequencies; OCS reference frequencies; *19790*.  
 TDL reference frequencies; tunable diode laser; carbonyl sulfide; OCS calibration frequencies; OCS reference frequencies; TDL-CO<sub>2</sub> heterodyne measurements; *19790*.  
 TDMS; tree; tree structures; ambiguity; Boolean; database; hierarchical; information; query; query language; semantics; *19433*.  
 TEA laser; beam diameter; insertion loss; optical detectors; photon drag detector; pyroelectric detector; responsivity; single longitudinal mode pulse; *TN1023*.  
 TEM cell; electrical dipole; electrically small radiators; magnetic dipole; *TN1017*.  
 TEM horn; time domain measurement; transient response; conical antenna; effective length; FFT; moment method; resistively loaded antenna; *19464*.  
 Technical activities; thermodynamics; absolute and physical quantities; analytical chemistry; chemistry research; environmental measurements; materials science; measurement services; molecular science; National Measurement Laboratory; nondestructive evaluation; *SP572*.  
 Technical bases; building research; building technology; codes; criteria; project summaries; standards; *SP446-4*.  
 Technical bases; building research; building technology; codes; criteria; project summaries; standards; *SP446-3*.  
 Technicians; accreditation; certification; colleges; confidence; criteria; evaluation; hospitals; inspectors; marketing; qualification; re-examination; *SP591*, pp. 3-5 (Aug. 1980).  
 Technological change; competition; Experimental Technology Incentives Program; government policy; innovation; semiconductor industry; *NBS-GCR-ETIP 80-91*.  
 Technological innovation; administrative experimentation; economic deregulation; evaluability assessment; evaluation; Experimental Technology Incentives Program; intermodal freight transportation; Interstate Commerce Commission; rail freight transportation; *NBS-GCR-ETIP 80-85*.  
 Technological innovation; administrative experimentation; evaluability assessment; evaluation; Experimental Technology Incentives Program; experimental variance; Occupational Safety and Health Administration; regulatory experimentation; regulatory policy; standards; *TN1114*.  
 Technological innovation; computer model; electric utilities; Experimental Technology Incentives Program; financial projections; productivity; regulatory commissions; regulatory process; *NBS-GCR-ETIP 79-74*.  
 Technological innovation; computer program; electric utilities; ETIP; financial projections; regulatory commissions; regulatory process; *NBS-GCR-ETIP 79-73*.

Technological innovation; electric utilities; Experimental Technology Incentives Program; productivity; regulatory commissions; regulatory process; *NBS-GCR-ETIP 79-82*.

Technological innovation; electric utilities; Experimental Technology Incentives Program; productivity; regulatory commissions; regulatory process; *NBS-GCR-ETIP 79-81*.

Technological innovation; electric utility; future test year; regulatory commission; regulatory process; *NBS-GCR-ETIP 79-76*.

Technological innovation; time varying rates; computer models; electric utilities; Experimental Technology Incentives Program; marginal costing; rate structure; regulatory commissions; regulatory process; *NBS-GCR-ETIP 79-79*.

Technology; applications; remote terminal emulators (RTEs); *SP500-65*, pp. 303-310 (Oct. 1980).

Technology; biomedical; conference; fission; fusion; nuclear cross sections; reactors; standards; *SP594*.

Technology; building codes; building laws and regulations; code development; court decisions; legal basis; liability; regulation; regulatory impacts; *NBS-GCR-80-286*.

Technology-based industries; Experimental Technology Incentives Program; framework; methodology; policy experiments; policy problems; *NBS-GCR-ETIP 80-92*.

Tectonic processes; absolute gravimeter; geophysics; gravity; *19750*.

Tectonomagnetism; conductivity anomalies; differential magnetic measurements; geomagnetism; induced currents; Sq current system variations; *19181*.

Teflon coating technique; dielectrically loaded cavity; frequency stability; frequency standard; hydrogen maser; *19515*.

Telecommunications; bibliographic utilities; information revolution; information technology; library automation; library networks; reprography; special libraries; *19392*.

Telecommunications; computer communications; computer networking; data communications; networks; performance requirements; *SP500-65*, pp. 71-75 (Oct. 1980).

Telecommunications; waveguide; communications; fiber optics; guided wave transmission; optical cable; optical communication; optical fiber; optical fiber waveguide; optical transmission; optical waveguide; *19495*.

Tele-microscope; thermal expansion; high temperature; interferometer; sapphire-Al<sub>2</sub>O<sub>3</sub>; standard reference material; *19915*.

Teleprocessing; transmission; advanced data communication control procedures; ANSI X3.66; bit-oriented; code independence; data; data link control procedures; data transparency; interoperability; *FIPS PUB 71*.

Teleprocessing service evaluation; data communications; protocol validation; synchronous; *SP500-65*, pp. 63-70 (Oct. 1980).

Telescopic viewer; volumetric dispensing; water calibration; Karl Fischer titration; moisture content; syringe calibration; *19277*.

Television color subcarrier; time calibrations; time signals; broadcast of standard frequencies; frequency calibrations; GOES satellite; high frequency; low frequency; satellite time code; standard frequencies; *SP432, 1979 Edition*.

Temperature; age of deposit; duration; fission products; fluence; Gabon; natural fission reactor; *SP594*, pp. 909-915 (Sept. 1980).

Temperature; Burnett PVT measurements; coefficient; ethylene; second virial; state-of-the-art; *19115*.

Temperature; density; long-period variable; model; nebulousity; R Aquarii; spectrum; *19507*.

Temperature; fixed points; standard reference material; superconductivity; *19098*.

Temperature; temperature scale; Celsius; Fahrenheit; IPTS-68; Kelvin; *19169*.

Temperature; test procedure; time; combustibles; ferrous scrap; resource recovery; *19285*.

Temperature; thermometry; *19455*.

Temperature; tracealloy; vapor detectors; wood heating; fire; fluidic sensors; ionizing radiation; neutron; passive solar; radiography; safety; *DIM/NBS 64*, No. 10, 1-32 (1980).

Temperature; trace elements; water; Alaskan pipeline; atmospheric chemistry; bare electrodes; multichannel detectors; nondestructive evaluation; optical; *DIM/NBS 64*, No. 9, 1-28 (1980).

Temperature; velocity; ceilings; convection; field; flame impingement; heat transfer; radiation; *NBS-GCR-80-251*.

Temperature coefficient of refractive index; alkaline earth halides; optical constants; refractive index; *JPCRD 9*, No. 1, 161-290 (1980).

Temperature coefficient of refractive index; germanium; optical constants; refractive index; silicon; *JPCRD 9*, No. 3, 561-658 (1980).

Temperature dependence; absorption spectroscopy; blue cellophane; cellulose triacetate; dosimetry; dye dosimetry; dyed plastics; film dosimeters; gamma-ray dosimetry; humidity effects; megarod dosimetry; nylon polycarbonate; polyethylene terephthalate; polymethyl methacrylate; *19326*.

Temperature depending absorption; unstable resonator; absorption edge; damage temperature; damage threshold; microsecond pulses; *SP568*, pp. 269-279 (July 1980).

Temperature fixed point; the kelvin; thermometric fixed point; triple point of gallium; triple point of water; International Practical Temperature Scale; SPRTs; *19099*.

Temperature fixed points; temperature scales; thermometry; cryogenics; pure metals; superconductivity; *19491*.

Temperature measurement; thermocouple insulators; thermocouple lead tempering; thermocouple materials; thermocouples; thermocouple thermometry; high temperature thermocouples; recommended thermocouples; *19070*.

Temperature profile; thermal distortion; thermal lensing; ZnSe; absorption; calculated performance; CO<sub>2</sub> laser; holographic interferometry; measured performance; optical path difference; *SP568*, pp. 73-89 (July 1980).

Temperature reduction; usage patterns; water heaters; energy; insulation; *19140*.

Temperature scale; Celsius; Fahrenheit; IPTS-68; Kelvin; temperature; *19169*.

Temperature scale; thermometry; cryogenics; fixed points; pure materials; superconductivity; *19101*.

Temperature scales; thermodynamic temperature; gas thermometry; International Practical Temperature Scale; platinum resistance thermometers; *19215*.

Temperature scales; thermometry; cryogenics; pure metals; superconductivity; temperature fixed points; *19491*.

Temperature transducer; thermometer; tunnel diode oscillators; gas thermometers; low temperature; microwave temperature sensor; *19236*.

Temporary negative ions; atoms; electron scattering; electron scattering resonances; George Schulz; high energy resolution; *19500*.

Tensile properties; AAR M128 steel; Charpy V-notch; head plates; impact properties; nil-ductility transition temperatures; railroad tank cars; switchyard impact tests; *NBSIR 80-2039*.

Tensile test; viscoelastic bars; instability; necking; nonlinear; simple materials; *19746*.

Tensor-property averaging; copper; Debye temperature; elastic constants; polycrystals; sound velocities; *19696*.

Terminal; area; computer; data; digital; Ethernet; local; network; *19126*.

Terminal controls; applications controls; computer vulnerabilities; data base controls; data base management systems controls; EDP audit; internal audit; operating system controls; system controls; system vulnerabilities; *SP500-57*.

Terminology; critical parameters; definitions; flux phenomena; Josephson phenomena; stabilization; superconductors; *19539*.

Terminology; terms; definitions; fracture testing; nomenclature; symbols; *19892*.

Terminology; testing; useful life; consumer products; life-cycle performance; methodology; reliability; *NBSIR 76-1157*.

Terminology; test methods; carbon; characterization; graphite;

nomenclature; standards; 19486.

Terms; definitions; fracture testing; nomenclature; symbols; terminology; 19892.

Ternary metal sulfide; x-ray diffraction;  $[Et_3P]_2PtWS_4$ ; molecular structure; Pt-W complex; single crystal; 19172.

Tertiary aromatic amines; amine accelerators; composite restorative resins; dimethylaminogluthethimide; dimethylaminophenylacetic acid and esters; properties of composites; 19072.

Testbed; test cases; validating correctness; communications security; computer security; cryptography; encryption standard; interface requirements; Monte-Carlo testing; *SP500-20, Revised 1980*.

Test cases; validating correctness; communications security; computer security; cryptography; encryption standard; interface requirements; Monte-Carlo testing; testbed; *SP500-20, Revised 1980*.

Test cases; validation vs. maintenance; communications security; computer security; cryptography; Data Encryption Standard; in-service testing; maintenance tests; Monte-Carlo testing; stuck-fault testing; *SP500-61*.

Test data; test problems; algorithm testing; approximation; curve fitting; least absolute deviation; polynomial approximation; spline fitting; *NBSIR 79-1920*.

Test environments; test workload generation; benchmark; evaluation environments; statistical pattern recognition; 19059.

Test equipment; calibration; Federal Government; laboratory; measurement; metrology; precision; *SP546, 1980 Edition*.

Testing; accreditation; Canada; laboratories; standards; Standards Council of Canada; *SP591*, pp. 88-91 (Aug. 1980).

Testing; accreditation; costs; economic; prices; *SP591*, pp. 92-96 (Aug. 1980).

Testing; benefits; consumer; information; label; product; *NBSIR 80-2016*.

Testing; computer; energy; heat transfer; hot water; measurement; modeling; solar; 19375.

Testing; computer; energy; heat transfer; hot water; measurement; modeling; solar; 19459.

Testing; computer; energy; heat transfer; hot water; measurement; modeling; solar; 19498.

Testing; program verification; software development; *SP500-56*.

Testing; solar collector; solar heating and cooling; standards; 19813.

Testing; traceability; calibrations; collaborative reference programs; laboratory performance; measurement assurance; measurement evaluation technology; measurement services; physical standards; proficiency testing; standard reference materials; *SP591*, pp. 15-22 (Aug. 1980).

Testing; training code officials; building codes; building inspectors; code enforcement; course development; educational requirements; inspection; licensing; *SP586*, pp. 71-83 (June 1980).

Testing; useful life; consumer products; life-cycle performance; methodology; reliability; terminology; *NBSIR 76-1157*.

Testing agency; accreditation; concrete testing laboratories; field concrete licensing; prequalifying agency; *SP591*, pp. 156-163 (Aug. 1980).

Testing laboratories; accreditation; audit certification; laboratory accreditation; laboratory performance evaluation; quality control; *SP591*.

Testing laboratory; accreditation; compliance testing; laboratory criteria; product certification; proficiency testing; quality control; standardization; *NBSIR 79-1956*.

Testing procedures; thermal performance; finite-difference computer model; passive solar energy; responsive coefficients; solar storage walls; 19815.

Test laboratories; weights and measures laws; Agency for International Development; development assistance; Honduras; legal metrology; metrication; metrology; quality assurance; standardization; *NBSIR 80-1969*.

Test method; central air conditioners; central heating equipment; heating seasonal performance; heat pumps; rating procedure; residential heating; seasonal performance; *NBSIR 80-2002*.

Test method; critical radiant flux; fire safety; flame spread; flammability; floor coverings; flooring radiant panel test; *NBSIR 79-1954*.

Test method; headform; headgear; head injury; helmet; impact; 19168.

Test method; toxicology; combustion; fatality ( $LC_{50}$ ); hydrogen cyanide; incapacitation; inhalation; *NBSIR 80-2077*.

Test method; window foil; alarm; burglar alarm; detector; intrusion alarm; standard; 19697.

Test method preparation; consensus standards; measurement technology; photovoltaic energy conversion; photovoltaics; solar cells; *NBSIR 80-2060*.

Test methods; accuracy; chromaticity; coefficient of luminous intensity; intercomparisons; retroreflectance; retroreflector; specifications; *TN1125*.

Test methods; building fires; compartment fires; doors; egress; fire tests; high-rise buildings; leakage; life safety; smoke; smoke movement; stack effects; *NBSIR 80-2004*.

Test methods; burglary resistance; forced entry; patio door; performance criteria; performance standard; sliding glass door; 19702.

Test methods; carbon; characterization; graphite; nomenclature; standards; terminology; 19486.

Test methods; drop test parameter; head injury; helmet; injury criteria; mathematical model; *NBSIR 80-1987*.

Test methods; Federal Hazardous Substances Act; flammability; granulars; hazardous substances; pastes; powders; shredded and slit films; solids; sparks; *NBSIR 78-1580*.

Test methods; test pattern; test structure; circuit characterization; cross-bridge sheet resistor; electrical alignment test structure; gated diode; integrated test structure; microelectronic test structure; process validation wafer; random fault test structure; sheet resistor; 19165.

Test methods; tunnel test; cellulosic insulation; flame spread; interlaboratory evaluation; precision; *NBSIR 79-1922*.

Test methods; window; window assemblies; window components; burglary resistance; frames; hardware; hinges; locks; performance standard; 19698.

Test methods; Youden graphical analysis; collaborative reference programs; history; interlaboratory testing program; laboratory evaluation; National Bureau of Standards; paper; paperboard; TAPPI; 19321.

Test pattern; test structure; circuit characterization; cross-bridge sheet resistor; electrical alignment test structure; gated diode; integrated test structure; microelectronic test structure; process validation wafer; random fault test structure; sheet resistor; test methods; 19165.

Test pattern; test structure; transistors; yield; integrated circuit; process control; reliability; 19244.

Test problems; algorithms; computer programs; least squares; regression; statistics; 19158.

Test problems; algorithm testing; approximation; curve fitting; least absolute deviation; polynomial approximation; spline fitting; test data; *NBSIR 79-1920*.

Test problems; test results; algorithms; curve fitting; least squares; modified Gram-Schmidt; pseudoinverse; regression; statistics; *TN1126*.

Test procedure; time; combustibles; ferrous scrap; resource recovery; temperature; 19285.

Test procedure; tire pressure; tolerances; calibration; distance; fifth wheel; inspection; measured course; odometer; taximeter; *H137*.

Test procedures; water heaters; energy conservation; energy consumption; gas pilot; heat loss; insulation; modifications; recovery efficiency; residential; standby loss; *NBSIR 79-1783*.

Test reference (TRY); building energy calculations; hourly climate date; 19224.

Test results; algorithms; curve fitting; least squares; modified Gram-Schmidt; pseudoinverse; regression; statistics; test prob-

- lems; *TN1126*.
- Test standards; voluntary consensus standards; accreditation systems; certification; evaluation of inspection organizations; evaluation of testing organizations; inspection standards; laboratory accreditation; laboratory evaluation; *SP591*, pp. 11-14 (Aug. 1980).

- Tokamak; cross-section data; fission; fusion; heat transfer; hybrid blanket; *SP594*, pp. 351-359 (Sept. 1980).
- Tokamak; tungsten; AgI sequence; PdT sequence; 19485.
- Tolerances; calibration; distance; fifth wheel; inspection; measured course; odometer; taximeter; test procedure; tire pressure; H137.
- Tolerances; volume-measuring devices; weighing devices; weights; length-measuring devices; liquid-measuring devices; measures; scales; specifications; taximeters; *H44, 1980 Edition*.
- Tomography; absorption measurement; combustion measurements; convolution algorithm; diffusion jet; laser diagnostics; reconstruction algorithm; 19822.
- Tomography; ultrasonics; automated testing; continuous monitoring; nondestructive testing; radiography; signal processing; 19475.
- Tomography; x-ray laser; computerized axial tomography; Fresnel zone; holographic reconstruction; imaging; laminagraphy; nondestructive testing; radiography; three-dimensional radiography; 19855.
- Tools; awards; computers; didymium glass filters; energy efficiency; inventors; innovation; labels; standards; sulfuric acid; *DIM/NBS 64*, No. 7, 1-28 (1980).
- Tools for laboratory evaluation; accuracy and precision of the checking authority; laboratory procedures; reliability of the sample collection; *SP591*, pp. 169-170 (Aug. 1980).
- Tooth enamel; apatite; carbonate apatite; hydrolysis; impurities; octacalcium phosphate; sodium; 19647.
- Tooth mineral; adhesion; bonding; calcium phosphates; crystal structure; dental; hydroxyapatites; 19262.
- Topical fluoridation; acid pretreatment; acidulated phosphate fluoride; apatitic fluoride; sodium fluoride; stannous fluoride; 19645.
- Top-seeded solution technique; two photon absorption; uniaxial crystal; yttrium lithium fluoride; advanced laser materials; crystal growth; crystalline fluorides; Faraday rotator; high power laser materials; optical damage threshold; *SP568*, pp. 127-135 (July 1980).
- Tornadoes; wind; engineering; missiles; structural engineering; *NBSIR 80-2117*.
- Tornadoes; winds; buildings; climatology; hurricanes; structural engineering; 19360.
- Torsion; vibration-rotation; ethane; group theory; internal rotation; perturbations; 19412.
- Torsional beam; compliance analysis; curved crack profile; double-torsion testing; fracture (materials); fracture toughness; side grooves; three-dimensional crack; 19684.
- Torsional beam; compliance analysis; curved crack profile; double-torsion testing; fracture (materials); fracture toughness; side grooves; three-dimensional crack; 19693.
- Total and inelastic cross sections; local; nonlocal and coupled channel descriptions; optical model analysis;  $\text{Th}(n,n)$ ; *SP594*, pp. 711-714 (Sept. 1980).
- Total cross section; blanket; GCFR; integral experiment; neutron transmission; thorium; *SP594*, pp. 122-124 (Sept. 1980).
- Total cross section;  $\text{C}(n,n)$ ; time-of-flight; *SP594*, pp. 48-51 (Sept. 1980).
- Total cross section; carbon; cross section measurements; *SP594*, pp. 524-526 (Sept. 1980).
- Total cross section; critical mass; *SP594*, pp. 703-706 (Sept. 1980).
- Total cross section;  $\text{Si}(n,n)$ ; single crystal; *SP594*, pp. 86-88 (Sept. 1980).
- Total cross section; unresolved resonance; elastic scattering cross section; partial inelastic scattering cross section; resonance self-shielding effect; sensitivity analysis; shielding application; structural material; *SP594*, pp. 586-590 (Sept. 1980).
- Total cross section; 0.02-350 eV; fast chopper; Nd-145; resonance parameters; *SP594*, p. 877 (Sept. 1980).
- Total cross sections; resonance neutrons; *SP594*, pp. 890-892 (Sept. 1980).
- Total cross sections; W isotopes; elastic and inelastic scattering cross sections; energy range 10 keV-15 MeV; optical and statistical model calculations; potential scattering radii; s- and p-wave strength functions; *SP594*, pp. 336-339 (Sept. 1980).
- Total cross sections; 0.5-60 MeV; carbon; hydrogen; iron; neutrons; oxygen; *SP594*, pp. 34-38 (Sept. 1980).
- Total Energy system; cogeneration; costs; economic analysis, HVAC systems; *NBS-GCR-80-165*.
- Total Energy systems; cogeneration; costs; economic analysis; energy consumption; HVAC systems; *NBS-GCR-80-164*.
- Total elastic scattering cross sections; differential cross sections; *SP594*, pp. 39-42 (Sept. 1980).
- Total internal reflection; fused silica; laser damage; optical microscopy; *SP568*, pp. 333-341 (July 1980).
- Total mass; uranium; alloys; blend; input concentration; isotope dilution; neodymium; plutonium; safeguards; spike; *SP582*, pp. 93-102 (June 1980).
- Total neutron cross section; heavy nuclei; *SP594*, pp. 698-702 (Sept. 1980).
- Total neutron spectra; Al and Nb; comparison; *SP594*, pp. 73-77 (Sept. 1980).

Total sampling; x-ray fluorescence analysis; dissolver solution; slurry analysis; SNM assay; solution analysis; *SP582*, pp. 547-554 (June 1980).

Total serum cholesterol; cholesterol; definitive method; gas chromatography/mass spectrometry; isotope dilution/mass spectrometry; reference method; statistical analysis; *19554*.

Total yield; angular distribution; fusion materials irradiation test (FMIT) facility; Li(d,xn); nuclear reactions; thick target yields and spectra; time-of-flight technique; *SP594*, pp. 824-828 (Sept. 1980).

Toughness; welds; cryogenic; delta ferrite; ferrite content; fracture; mechanical properties; stainless steel; strength; *19673*.

Towers; turbulence; wind (meteorology); aerodynamics; buildings (codes); dynamics; structural engineering; *19143*.

Toxicity; bibliographies; building fires; cable fires; compartment fires; decision analysis; fabric flammability; fire suppression; fire tests; flame research; smoke detectors; *NBSIR 80-2114*.

Toxicity; water pollution; air pollution; chromate ore; environmental effects; lead chromate pigments; storm water runoff; *NBSIR 80-1974*.

Toxicity of combustion products; chemistry of fire; combustion products; detection; fire hazards; fire modeling; fire protection; fire research; fire suppression; human behavior in fires; physics of fire; *NBSIR 80-2127*.

Toxicology; combustion; fatality (LC<sub>50</sub>); hydrogen cyanide; incapacitation; inhalation; test method; *NBSIR 80-2077*.

Toxicology laboratories; accreditation; certification criteria; evaluation; *SP591*, pp. 75-76 (Aug. 1980).

TRNSYS computer program; air leakage; f-chart method; flat-plate solar collectors; solar energy system; *19870*.

Traceability; calibrations; collaborative reference programs; laboratory performance; measurement assurance; measurement evaluation technology; measurement services; physical standards; proficiency testing; standard reference materials; testing; *SP591*, pp. 15-22 (Aug. 1980).

Traceability; definitive methods; measurement compatibility; protocol; reference methods; SI units; standard reference materials; *SP582*, pp. 15-24 (June 1980).

Traceability; destructive; nondestructive measurements; nuclear materials; reference materials; *SP582*, pp. 1-14 (June 1980).

Traceability; radioactivity; radiopharmaceuticals; *19483*.

Traceability; ultrasonics; visual testing; acoustic emission; calibration; eddy currents; magnetic particles; nondestructive evaluation; radiography; *NBSIR 80-2109*.

Tracealloy; vapor detectors; wood heating; fire; fluidic sensors; ionizing radiation; neutron; passive solar; radiography; safety; temperature; *DIM/NBS 64*, No. 10, 1-32 (1980).

Trace analysis; agriculture; environmental analysis; foliar analysis; food analysis; nutrition; plant tissue analysis; standard reference material; *19423*.

Trace characterization; budget; calibration service; chain reactions; gamma rays; gas flow meters; microwaves; radio antennas; *DIM/NBS 64*, No. 3, 1-24 (1980).

Trace element analysis; accuracy; analytical methods; microanalysis; semiconductor materials; sensitivity; *19314*.

Trace element analysis; emission spectroscopy; inductively coupled plasma; instrumental control; multi-element analysis; plasma system; *19912*.

Trace element analysis; instrumental analysis; multielement analysis; neutron activation; neutron capture; prompt gamma rays; *19157*.

Trace element nutrients; environmental trace elements; NBS standard reference materials; SRM 1567, Wheat Flower; SRM 1568, Rice Flower; *19570*.

Trace elements; water; Alaskan pipeline; atmospheric chemistry; bare electrodes; multichannel detectors; nondestructive evaluation; optical; temperature; *DIM/NBS 64*, No. 9, 1-28 (1980).

Trace levels; uranium determination; waste solution analysis; analyses; fluorometry; laser-induced fluorescence; low-level analysis; nuclear safeguards; *SP582*, pp. 147-155 (June 1980).

Trace metal analysis; atomic spectrometry; flame spectrometry; laser enhanced ionization; laser spectrometry; opto-galvanic effect; *19918*.

Trace organic analysis; gas chromatography; liquid chromatography; mass spectrometry; quantitation; shale oil; *19598*.

Tracer gas; air leakage measurements; environmental chamber; fan depressurization; mobile home; sulfur hexafluoride; *NBSIR 80-2105*.

Tracers; air movement; elevators; fire tests; hospitals; smoke; smoke movement; stairwells; *NBS-GCR-79-183*.

Track counting; fission rate; fused quartz track recorder; microcomputer; *SP594*, pp. 512-515 (Sept. 1980).

Tracklength; charged particle; electron; energy deposition; Monte Carlo; multiple scatter; *19273*.

Traffic noise; transportation noise; acoustics; environmental pollution; highway noise; motor vehicle noise; noise; noise control; sound; *TN1113-1*.

Training; inspectors; laboratory; metrology; seminars; State/local; *19438*.

Training code officials; building codes; building inspectors; code enforcement; course development; educational requirements; inspection; licensing; testing; *SP586*, pp. 71-83 (June 1980).

Transactions; annual reports; diffusion in metals; fire; journals; library holdings; NBS library; NBS periodicals; periodicals; proceedings; serials; standards; *NBSIR 79-1932*.

Transducers; zero shift; adhesive; backing; connection; environment; gage element; leads; load; protective coating; resistance; sensitivity change; stability; strain gages; structure; *19049*.

Transferability; ANS FORTRAN; FORTRAN 77; standard programming language; *H131*.

Transfer function; bandwidth; laser diodes; material dispersion; mode scramblers; optical detectors; optical fibers; *TN1019*.

Transfer standards; calibration; laser measurements; laser metrology; laser standards; *19211*.

Transformation; criteria; finite; jellium; martensite; model; stability; strain; *19243*.

Transformer oil; breakdown; electrical breakdown; impulse testing; interfacial breakdown; oil-paper interfaces; *NBSIR 80-2071*.

Transformers; cost analysis; decision analysis; dielectric fluids; fire safety; flammable liquids; standards; *NBS-GCR-80-198*.

Transformers; fire; fluids; pool fires; *NBSIR 80-1992*.

Transient; birefringence; jet flow; light scattering; longitudinal gradient; orientational distribution; rigid spheroid; *19409*.

Transient; traveling-wave antenna; fast Fourier transform; linear load; Newton-Raphson iteration method; nonlinear load; time-domain measurements; time-stepping finite-difference technique; *19466*.

Transient; vacuum ultraviolet; acetylene; excited state; ketene; photochemistry; spectroscopy; *19493*.

Transient dipoles; anisotropic polarizability; collision-induced; induced dipoles; infrared absorption; Raman spectrum; spectra; *19414*.

Transient response; conical antenna; effective length; FFT; moment method; resistively loaded antenna; TEM horn; time domain measurement; *19464*.

Transient spectrum; fluorescence spectrum; laser excitation; multi-photon processes; non-stationary processes; resonance fluorescence; strong laser field; time-dependent spectrum; *19220*.

Transistor, power; turn-off; transistor; focusing; current; measurement, nondestructive; second breakdown, reverse-bias; *19161*.

Transistors; wire bonds; capacitance-voltage methods; deep level transient spectroscopy; electrical properties; electronics; electron irradiation. hole mobility; integrated circuits; ion knock-on effect; ion microprobe mass analysis; Irvin's curves; *SP400-45*.

Transistors; yield; integrated circuit; process control; reliability; test pattern; test structure; *19244*.

Transition duration; amplitude comparator; Josephson junction; risetime; sampler; *19056*.

- Transition frequency; analytical flame; discharge tube; laser; opto-galvanic effect; *U.S. Patent 4,184,127*.
- Transition metal; core level; photoemission; *19385*.
- Transition metals; accelerators; ambient polymerization; ascorbic acid; dental monomers; initiator systems; organic peroxides; redox reactions; stability; *19062*.
- Transition metals; alloy phase formation; charge transfer; Coulomb energy; d-electrons; Mossbauer isomer shifts; *19567*.
- Transition metals; transition temperature; body-centered-cubic metals; Cauchy discrepancy; elastic constants; many-atom effects; superconductivity; *19627*.
- Transition probabilities; wavelengths; allowed lines; atomic energy levels; cobalt; forbidden lines; iron; nickel; *19807*.
- Transition probability; allowed; atomic; discrete; forbidden; intensity; lifetime; line strength; oscillator strength; *SP505-1*.
- Transition probability; fine structure; intercombination line; Mg isoelectronic sequence; *19505*.
- Transitions;  $\Lambda$ -doublets; calculations; ion-molecule collision;  $J$ -dependence; *19462*.
- Transition temperature; body-centered-cubic metals; Cauchy discrepancy; elastic constants; many-atom effects; superconductivity; transition metals; *19627*.
- Transition temperatures; gas chromatography; sodium stearate; *19914*.
- Translation-rotation; dipole glass; (KCN)(KBr); order parameter; orientational; strain dipole; *19596*.
- Translation-rotation coupling; tunnelling; defect; KBr; KCN; libration; *19612*.
- Transmission; advanced data communication control procedures; ANSI X3.66; bit-oriented; code independence; data; data link control procedures; data transparency; interoperability; teleprocessing; *FIPS PUB 71*.
- Transmission; measurements; number of nuclei; samples; spectrometric analysis; *SP594*, pp. 903-906 (Sept. 1980).
- Transmission-corrected gamma-ray assay; densitometry; gamma-ray NDA; product solutions; reprocessing; *SP582*, pp. 568-583 (June 1980).
- Transmission electron microscopy; electron probe microanalysis; energy dispersive x-ray spectrometry; microanalysis; qualitative analysis; quantitative analysis; scanning electron microscopy; spectral artifacts; *19088*.
- Transmission electron microscopy; wear; abrasive wear; copper; erosive wear; scanning electron microscopy; *19958*.
- Transmission-line theory; signal processing; waves; microwave systems; *19367*.
- Transmission measurements; Cm isotopes; fast chopper; neutron parameters; *SP594*, p. 908 (Sept. 1980).
- Transmittance; absorptance; blackbody; ellipsoidal reflectometer; emittance; hemispherical mirror reflectometer; integrating spheres; paraboloidal mirror reflectometer; radiometric measurements; reflectance; *19299*.
- Transmittance accuracy; absorbance accuracy; instrumental standards; method accuracy; multielement analyses; NBS standard reference materials; spectrophotometry; systematic errors; *19818*.
- Transmittance stability; filters for spectrophotometry; metal-on-fused silica filters; optical transmittance accuracy; polarization; reflections; spectral bandpass; standard reference materials in spectrophotometry; stray radiation; *SP260-68*.
- Transparent-conductive coatings; glassy structure; laser damage resistance; materials properties; oxide coatings; reactive sputtering; *SP568*, pp. 359-375 (July 1980).
- Transpiration; unstirred glass melt; vapor density; vaporization; carrier gas saturation; diffusion in melt; glass; incongruent vaporization; surface depletion; *19552*.
- Transport; cross sections; electrons; nitrogen; oxygen; rare gases; rate coefficients; *19387*.
- Transport; Y-doped CeO<sub>2</sub>; CeO<sub>2</sub>; conducting ceramic; conductivity; diffusion; oxygen conductor; slow transient effect; *19444*.
- Transportable fixed point; argon triple point; fixed point; *19080*.
- Transport anomalies; conductivity; disordered alloy; localization; phonon; strong scattering; *19755*.
- Transportation noise; acoustics; environmental pollution; highway noise; motor vehicle noise; noise; noise control; sound; traffic noise; *TN1113-1*.
- Transport calculation; group constants; neutron spectrum; sensitivity coefficient; time-of-flight; *SP594*, pp. 265-274 (Sept. 1980).
- Transport coefficients; Boltzmann equation; collision integral; dilute gas; kinetic perturbation theory; kinetic theory; nonequilibrium perturbation theory; perturbation theory; soft spheres; *19866*.
- Transport mean free path; albedo; backscatter; electrons; range; reflection; scaling parameter; *19391*.
- Transport properties; aerospace; data accuracy; design; geo-thermal; process; thermodynamics; *SP590*.
- Transport protocols; communication protocols; computer network protocols; design specification; formal specification; network architecture; networking; session protocols; *NBS-GCR-80-246*.
- Transport protocols; communication protocols; computer network protocols; feature analysis; network architecture; networking; session protocol; *NBS-GCR-80-245*.
- Transport protocols; communication protocols; computer network protocols; network architecture; networking; protocol design specification; session protocols; *NBS-GCR-80-289*.
- Transport theory  $k_{eff}$ ; diffusion theory; self-shielding factors; spherical model; *SP594*, pp. 187-189 (Sept. 1980).
- Transverse acoustic modes; bond polarizabilities; calculated frequencies; Fermi resonance; longitudinal acoustic modes;  $n$ -alkanes; Raman intensities; structural defects; *19692*.
- Transverse gradient flow; birefringence of spheroid suspension; fibrous structure; intrinsic viscosity of macromolecules; intrinsic viscosity of spheroids; longitudinal gradient flow; permeability of polymers; plastic deformation of crystalline polymers; *19663*.
- Transverse optic-phonon; anisotropy; BaF<sub>2</sub>; CaF<sub>2</sub>; effective charge; oscillator strength; photoelastic; piezo-birefringence; piezo-optic; SrF<sub>2</sub>; strain; stress; *19579*.
- Trans-2-butene; hydroxyl radical; nitrates ozone; nitrogen dioxide; reaction; *19521*.
- Traveling-wave antenna; fast Fourier transform; linear load; Newton-Raphson iteration method; nonlinear load; time-domain measurements; time-stepping finite-difference technique; transient; *19466*.
- Tree; tree structures; ambiguity; Boolean; database; hierarchical; information; query; query language; semantics; TDMS; *19433*.
- Tree structures; ambiguity; Boolean; database; hierarchical; information; query; query language; semantics; TDMS; tree; *19433*.
- Trench; workshop; acceptable work practices; excavation; geotechnical engineering; safety; shoring; soil classification; *NBSIR 79-1935*.
- Trench bracing; trenching; construction lumber; construction safety; excavation; hardwood; lumber grading; shoring; softwood; timber engineering; *BSS122*.
- Trenching; braced excavation; construction; retaining structures; shoring; slope stability; soil classification; soil pressure; standards; *BSS127*.
- Trenching; braced excavations; construction; excavation; geotechnical engineering; retaining structures; shoring; slope stability; soil classification; soil pressure; soil testing; *BSS121*.
- Trenching; construction lumber; construction safety; excavation; hardwood; lumber grading; shoring; softwood; timber engineering; trench bracing; *BSS122*.
- Trenching; construction practices; construction safety; excavation; shoring; *NBSIR 79-1936*.
- Trenching; construction safety; construction standards; excavation; safety regulations; shoring; *NBSIR 80-1988*.
- Tricalcium silicate; cement; hydration; mathematical modeling; *19079*.

- Tricritical point; correlation length; mean field; sum rule; susceptibility; three coexistence phases; *19135*.
- Triple humped shapes; fission barriers derived; fission channel analysis; statistical model; *SP594*, pp. 469-474 (Sept. 1980).
- Triple point of gallium; triple point of water; International Practical Temperature Scale; SPRTs; temperature fixed point; the kelvin; thermometric fixed point; *19099*.
- Triple point of water; International Practical Temperature Scale; SPRTs; temperature fixed point; the kelvin; thermometric fixed point; triple point of gallium; *19099*.

- Tsunami; wind loads; winds; accelerograph; codes; design criteria; disaster; earthquakes; ground motion; seismology; standards; storm surge; structural engineering; structural response; *SP560*.
- Tunable diode laser; carbonyl sulfide; OCS calibration frequencies; OCS reference frequencies; TDL-CO<sub>2</sub> heterodyne measurements; TDL reference frequencies; *19790*.
- Tunable laser; atomic absorption; atomic detection limits; flame spectrometry; laser enhanced ionization; laser spectrometry; *19916*.
- Tunable laser; CW injection; laser; narrow band laser; Nd:YAG pump; pulsed laser; *19266*.
- Tungstates; viscosity; carbonates; density; electrical conductance; hexafluoroaluminates; metaphosphates; molten salts; molybdates; sulfates; sulfides; surface tension; *JPCRD 9*, No. 4, 831-1022 (1980).
- Tungsten; AgI sequence; PdI sequence; tokamak; *19485*.
- Tungsten; acetylene; chemisorption; electron energy loss spectroscopy; ethylene; physisorption; surface; *19390*.
- Tungsten; adsorption; chemisorption; electron stimulated desorption; ion angular distribution; oxygen; stepped surfaces; surface bonding; *19860*.
- Tungsten; angular distribution of ions; chemisorption; electron stimulated desorption; ESDIAD; ion energy distributions; ion yield; oxygen; photon stimulated desorption; synchrotron radiation; *19533*.
- Tungsten; drop calorimetry; electronic heat capacity; enthalpy; heat capacity; high-temperature; standard reference material; thermodynamic functions; *19363*.
- Tungsten carbide; catalyst; cerium dioxide; electrocatalysis; fuel cells; impedance; solid electrolyte; *NBSIR 80-1991*.
- Tunnel diode oscillators; gas thermometers; low temperature; microwave temperature sensor; temperature transducer; thermometer; *19236*.
- Tunnelling; defect; KBr; KCN; libration; translation-rotation coupling; *19612*.
- Tunnel test; cellulosic insulation; flame spread; interlaboratory evaluation; precision; test methods; *NBSIR 79-1922*.
- Turbine meters; volume calibration; accountability tanks; automated system; diverter correction; *SP582*, pp. 517-533 (June 1980).
- Turbulence; wind (meteorology); aerodynamics; buildings (codes); dynamics; structural engineering; towers; *19143*.
- Turning points; Whittaker functions; asymptotic expansions; confluent hypergeometric functions; error bounds; parabolic cylinder functions; *19773*.
- Turn-off, transistor; focusing, current; measurement, nondestructive; second breakdown, reverse-bias; transistor, power; *19161*.
- Twinning; computer assessment; crystal structures; epitaxy; inter-layerings; nonstoichiometry; structural considerations; *J. Res.* **85**, No. 5, 347-362 (Sept.-Oct. 1980).
- Twinning; critical evaluation; derivative lattices; indexing; lattice relationships; lattices; single-crystal methods; *19804*.
- Two-dimensional ordering; crystal structure; electron microscope; lattice images; niobates and tantalates; rubidium and potassium oxides; *19911*.
- Two-layer structures; epitaxial growth; Hall measurements; indium-doped silicon; p-n junction isolation; *19417*.
- Two-photon; collisional ionization; opto-galvanic spectroscopy; sodium; state specific rate constants; *19956*.
- Two photon absorption; uniaxial crystal; yttrium lithium fluoride; advanced laser materials; crystal growth; crystalline fluorides; Faraday rotator; high power laser materials; optical damage threshold; top-seeded solution technique; *SP568*, pp. 127-135 (July 1980).
- Two-photon absorption coefficients; multiphoton absorption; nonlinear absorption; *SP568*, pp. 445-455 (July 1980).
- Two probe measurements; dopant profiles; resistivity; resistivity profiles; semiconductor; silicon; spreading resistance; *19105*.
- Type II diffusion; diffusivity; glass-gel boundary; sheets; spheres; *19668*.
- Typewriter evaluation; typewriter productivity; typewriters; word processing; automatic typewriters; cost effectiveness; *19565*.
- Typewriter productivity; typewriters; word processing; automatic typewriters; cost effectiveness; typewriter evaluation; *19565*.
- Typewriters; word processing; automatic typewriters; cost effectiveness; typewriter evaluation; typewriter productivity; *19565*.

## U

- U-fission spectrum averaged cross sections; excitation function; fluence monitor; reactor dosimetry; threshold reactions; *SP594*, pp. 199-203 (Sept. 1980).
- Ultra-black surface coating; etchant bath; light absorption; microscopic pores; nickel-phosphorus alloy; solar collector; surface morphology; *U.S. Patent 4,233,107*.
- Ultralinear modulator; optical bistability; optical power regulator; Pockels cell; *19578*.
- Ultracure KBr; Fe; laser-damage; *SP568*, p. 125 (July 1980).
- Ultra resolution laser spectroscopy; hyperfine structure; methane; nonlinear spectroscopy; *19225*.
- Ultrasonic diffraction; crack closure; crack surfaces; fatigue crack; NDE; *19648*.
- Ultrasonic diffraction; welds; compressional (P) modes; cracks; defect characterization; dimensioning; one-transducer technique; shear (S) mode; *NBSIR 80-1983*.
- Ultrasonic inspection; coupling; magnetic inspection; nondes-

- tructive testing; pulsed mode; rail test car; railroad rail; sensitivity; 19885.
- Ultrasonics; acoustic emission; eddy currents; imaging; leakage testing; magnetics; material parameters; nondestructive evaluation; optics; penetrants; radiography; *NBSIR 80-2162*.
- Ultrasonics; analog recording; C-scan; instrumentation; sound field; 19061.
- Ultrasonics; automated testing; continuous monitoring; nondestructive testing; radiography; signal processing; tomography; 19475.
- Ultrasonics; calibration; image quality indicator; nondestructive testing; radiography; sensitivity; standards; 19877.
- Ultrasonics; velocity; attenuation; defect characterization; flaws; materials characterization; nondestructive testing; residual stress; *SP596*.
- Ultrasonics; visual testing; acoustic emission; calibration; eddy currents; magnetic particles; nondestructive evaluation; radiography; traceability; *NBSIR 80-2109*.
- Ultraviolet; alkali halides; crystalline materials; glasses; photoelastic constants; refractive index; thermal coefficient of refractive index; 19275.
- Ultraviolet; arc; calibrations; irradiance; radiance; sources; 19876.
- Ultraviolet; emission; stars; stars, chromospheres; stars, corona; stars, late-type; stars, RS CVn-type; 19189.
- Ultraviolet; fiber optics; graded index materials; infrared; magneto-optics; nonlinear optics; piezo-optics; planar waveguides; thermo-optics; thin films; *SP574*.
- Ultraviolet; highly ionized atoms; laser-produced plasma; spectrum; 19608.
- Ultraviolet; zirconium; spectra; 19543.
- Ultraviolet optical system design; ultraviolet spectroscopy; extreme ultraviolet mirrors; extreme ultraviolet telescopes; optical constants; reflectivity; reflectometer; solid state physics; synchrotron radiation; 19640.
- Ultraviolet photoelectron spectroscopy; UPS; alloys; alloy stability; amorphous alloys; electron density of states; palladium-silicon alloys; photoelectron; 19263.
- Ultraviolet radiation measurements; visible radiation measurements; electrical substitution radiometer; infrared radiation measurements; radiometry; spectral irradiance; spectral radiant power; spectroradiometry; 19300.
- Ultraviolet reflectance; work damage; infrared reflectance; optical reflectance; polishing; silicon on sapphire; surface roughness; *SP400-62*.
- Ultraviolet spectr; late-type stars; stellar chromospheres; 19765.
- Ultraviolet spectra; binary stars; chromospheres, stellar; chromosphere, sun; 19928.
- Ultraviolet spectra; binary stars; late-type stars; RS Canum Venaticorum; stellar chromospheres; stellar coronae; 19781.
- Ultraviolet spectra; cool stars; radiation pressure; stellar winds; 19095.
- Ultraviolet spectra; late-type stars; stellar atmospheres; stellar chromospheres; 19357.
- Ultraviolet spectra; late-type stars; stellar chromospheres; stellar coronae; 19315.
- Ultraviolet spectra; x-ray sources; chromosphere sun; emission-line stars; late-type stars; stellar chromospheres; stellar winds; 19523.
- Ultraviolet spectra; x-ray sources; flare stars; stellar chromospheres; stellar coronae; 19269.
- Ultraviolet spectroscopy; extreme ultraviolet mirrors; extreme ultraviolet telescopes; optical constants; reflectivity; reflectometer; solid state physics; synchrotron radiation; ultraviolet optical system design; 19640.
- Ultraviolet spectroscopy; space astrophysics; stellar atmospheres; stellar chromospheres; stellar coronae; stellar winds; 19456.
- Ultraviolet spectrum; CO; discharge sampling; F-atom reactions; FCO;  $F_2CO$ ; infrared spectrum; matrix isolation;  $NF_3$ ; normal coordinate analysis; photodissociation; 19393.
- Ultraviolet spectrum; vacuum ultraviolet photolysis; discharge sampling; HPO; infrared spectrum; matrix isolation; PO;  $PO_2$ ;  $(PO)_2$ ; 19082.
- Ultraviolet transmission; fluorides; forging; laser windows; lithium fluoride; mechanical properties; optical properties; *SP568*, pp. 39-46 (July 1980).
- UNIX; upgrading changes; comparison; performance of computer systems; *SP500-65*, pp. 233-243 (Oct. 1980).
- Unattended safeguards system; safeguards instrument; seal; tamper; *SP582*, pp. 257-260 (June 1980).
- Uncertainties; cross sections; neutron depth dose; neutron radiotherapy; radiobiology; *SP594*, pp. 440-446 (Sept. 1980).
- Uncertainty; angle block; autocollimator; calibration; flatness; intercomparison; random error; squareness; standard deviation; systematic error; *NBSIR 80-1967*.
- Uncertainty; check standard; gage blocks; measurement assurance; random errors; standard deviation; systematic errors; *NBSIR 80-2078*.
- Uncertainty analysis; breeding ratio; calculational bias uncertainties; fast reactors; group cross sections; integral experiments; least-squares adjustment; LMFBR; sensitivity analysis; *SP594*, pp. 177-181 (Sept. 1980).
- Uncertainty in weighing; air density equation; buoyancy correction; double substitution weighing; *J. Res. 85*, No. 1, 27-38 (Jan.-Feb. 1980).
- Underdetermined system of equations; covariance matrix; curve fitting; iterative refinement; least squares solution; linear constraints; overdetermined system of equations; regression; 19155.
- Underground corrosion; corrosion; corrosion noise; electrochemistry; polarization techniques; *NBSIR 80-2083*.
- Unfolding analysis; unresolved gamma-rays; Al, Ni, Cu and Nb(n,xy) reactions; differential cross sections; discrete lines; *SP594*, pp. 408-412 (Sept. 1980).
- Uniaxial creep; continuum model; critical strain; instability point; molecular weight distribution; necking; polyethylene; stress relaxation; 19681.
- Uniaxial crystal; yttrium lithium fluoride; advanced laser materials; crystal growth; crystalline fluorides; Faraday rotator; high power laser materials; optical damage threshold; top-seeded solution technique; two photon absorption; *SP568*, pp. 127-135 (July 1980).
- Unimolecular; benzene; benzonitrile ion; coincidence; fragmentation; kinetics; photoelectron; photoionization; 19603.
- Unimolecular reactions; vibrational energy transfer; laser chemistry; laser induced fluorescence; molecular spectroscopy; multiphoton chemistry; 19929.
- Unit costs; weatherization; building economics; cost components; data analysis; data collection; demonstration; economic analysis; energy conservation; insulation; low-income housing; statistics; *NBSIR 80-2167*.
- United States; calibration; dosimetry; high-energy bremsstrahlung; lung; operational characteristics; radiation therapy; recommendations; selection of thermoluminescence dosimetry system; survey; thermoluminescence; *TN1119*.
- Unit pricing; weighmaster law; basic weights and measures law; method of sale of commodities; open dating; packaging and labeling; registration of servicemen; *H130, 1979 Edition*.
- Unit pricing; weighmaster law; basic weights & measures law; method of sale of commodities; open dating; packaging & labeling; registration of servicemen; *H130, 1980 Edition*.
- Units; measurements; metric; metrology; SI; standards; 19628.
- Units; measurements; metric; metrology; SI; standards; 19868.
- Units per turn; conformation; crystal; electron; helix; irrational; Phase II; polytetrafluoroethylene; 19797.
- Universal Transverse Mercator (UTM); coordinate system; elevation; Federal Information Processing Standard; geographic point location; latitude; Latitude and Longitude; longitude; mapping; State Plane Coordinate System; surveying; *FIPS PUB 70*.
- Unresolved gamma-rays; Al, Ni, Cu and Nb(n,xy) reactions;

- differential cross sections; discrete lines; unfolding analysis; *SP594*, pp. 408-412 (Sept. 1980).
- Unresolved resonance; elastic scattering cross section; partial inelastic scattering cross section; resonance self-shielding effect; sensitivity analysis; shielding application; structural material; total cross section; *SP594*, pp. 586-590 (Sept. 1980).
- Unrestricted arguments; unrestricted ranges; error analysis; exponential function; multiprecision calculations; relative precision; *19380*.
- Unrestricted ranges; error analysis; exponential function; multiprecision calculations; relative precision; unrestricted arguments; *19380*.
- Unstable resonator; absorption edge; damage temperature; damage threshold; microsecond pulses; temperature dependent absorption; *SP568*, pp. 269-279 (July 1980).
- Unstirred glass melt; vapor density; vaporization; carrier gas saturation; diffusion in melt; glass; incongruent vaporization; surface depletion; transpiration; *19552*.
- UO<sub>2</sub>; chemical state; delayed neutron; fission; phonon distribution; U<sub>3</sub>O<sub>8</sub>; *19683*.
- UPS; alloys; alloy stability; amorphous alloys; electron density of states; palladium-silicon alloys; photoelectron; ultraviolet photoelectron spectroscopy; *19263*.
- UPS; XPS; AES; chemisorption; EELS; electron spectroscopy; photoemission; *19176*.
- Updating criteria; solar performance criteria; solar standards; *19237*.
- Upgrading changes; comparison; performance of computer systems; UNIX; *SP500-65*, pp. 233-243 (Oct. 1980).
- Upholstered furniture; doors; evacuations; fire departments; fire extinguishers; nursing staff; patients; room fires; smoke; *NBS-GCR-80-220*.
- Upholstered furniture; evacuation; fire departments; fire fatalities; fire investigations; flashover; group homes; halfway houses; mental disorders; smoke; *NBS-GCR-80-200*.
- Uranium; alloys; blend; input concentration; isotope dilution; neodymium; plutonium; safeguards; spike; total mass; *SP582*, pp. 93-102 (June 1980).
- Uranium; alpha spectrometry; intercomparison programs; mass spectrometry; plutonium; safeguards; statistical evaluation; *SP582*, pp. 42-54 (June 1980).
- Uranium; autoradiography; fast critical assemblies; nondestructive assay; plutonium; reactivity; spectral index; *SP582*, pp. 391-424 (June 1980).
- Uranium; calibration; coincidence counter; neutron; nondestructive assay; precision; random driver; stability; *SP582*, pp. 201-220 (June 1980).
- Uranium; determination; dual wavelength; nitric acid; spectrophotometric; *SP582*, pp. 121-128 (June 1980).
- Uranium; electron temperature; hollow cathode; isotope ratio; opto-galvanic effect; oscillator strength; spectroscopy; *19150*.
- Uranium; epithermal neutron energy; neutron radiography; nondestructive assay; position-sensitive proportional counter; *SP582*, pp. 86-92 (June 1980).
- Uranium; errors; isotope ratios; mass spectroscopy; pulse counting; resin beads; thermal ionization; *19816*.
- Uranium; isotope dilution; mass spectrometry; plutonium; resin bead; safeguards; *SP582*, pp. 538-546 (June 1980).
- Uranium; uranium hexafluoride; uranium 235; gas centrifuges; IAEA safeguards; isotope separation; material balance; material unaccounted for; nondestructive analysis; safeguards; *SP582*, pp. 261-275 (June 1980).
- Uranium; x-ray fluorescence analysis; accountability; computer-based system; dynamic concentration measurements; inventory control; nondestructive measurements; on-line real-time measurements; plutonium concentration and isotopics determinations; *SP582*, pp. 584-601 (June 1980).
- Uranium and plutonium solutions assay; x-ray absorption-edge densitometry; densitometer evaluation; *SP582*, pp. 633-650 (June 1980).
- Uranium assay; densitometry; *SP582*, pp. 324-341 (June 1980).
- Uranium determination; waste solution analysis; analyses; fluorometry; laser-induced fluorescence; low-level analysis; nuclear safeguards; trace levels; *SP582*, pp. 147-155 (June 1980).
- Uranium enrichment measurement; accuracy; gamma-ray spectroscopy; mass spectroscopy; precision; *SP582*, pp. 103-110 (June 1980).
- Uranium-halogen containing compounds; data evaluation; enthalpy; entropy; Gibbs energy; heat capacity; thermochemical tables; *NBSIR 80-2029*.
- Uranium hexafluoride; uranium isotope analysis; nuclear safeguards; precision; quadrupole mass spectrometer; *SP582*, pp. 79-85 (June 1980).
- Uranium hexafluoride; uranium 235; gas centrifuges; IAEA safeguards; isotope separation; material balance; material unaccounted for; nondestructive analysis; safeguards; uranium; *SP582*, pp. 261-275 (June 1980).
- Uranium holdup; chemical contactors; mass transfer equilibrium; mass transfer rates; mathematical models; mixer-settlers; plutonium holdup; *SP582*, pp. 702-711 (June 1980).
- Uranium isotope analysis; nuclear safeguards; precision; quadrupole mass spectrometer; uranium hexafluoride; *SP582*, pp. 79-85 (June 1980).
- Uranium production; blanket energy multiplication; cross section sensitivity; cross section uncertainty; fusion-fission hybrid blanket; tritium breeding; *SP594*, pp. 834-838 (Sept. 1980).
- Uranium reference material; interlaboratory evaluation program; nondestructive assay; *SP582*, pp. 25-33 (June 1980).
- Uranium titration; vanadium (V) titrant; constant current coulometry; low level titration; *SP582*, pp. 140-146 (June 1980).
- Uranium waste; verification; counter; estimates; gamma rays; neutrons; nondestructive assay; plutonium waste; safeguards; *SP582*, pp. 622-632 (June 1980).
- Uranium-235; cross section; fission; MeV neutrons; neptunium-237; standard; *SP594*, pp. 971-975 (Sept. 1980).
- Uranium 235; gas centrifuges; IAEA safeguards; isotope separation; material balance; material unaccounted for; nondestructive analysis; safeguards; uranium; uranium hexafluoride; *SP582*, pp. 261-275 (June 1980).
- Uranium-235 fission cross section; absolute fission cross section; neutron detector; neutron flux monitor; neutron standards; *SP594*, pp. 966-970 (Sept. 1980).
- Urban particulate standards; aerosols; atmospheric particulate measurements; Doppler shift spectrometry; fine particles; micro Raman spectrometry; Raman scattering theory; standard reference materials; *19581*.
- Urea; uric acid; cholesterol; College of American Pathologists; definitive methods; glucose; human serum; isotope dilution; mass spectrometry; research associate; *19706*.

- Ventilation; energy conservation; indoor air quality; radioactivity; radon; 19862.
- Ventilation procedures; accumulation of smoke; dry chemical extinguishers; fire incident; *NBS-GCR-80-243*.
- Venture capital; capital asset; capital market; market model; pricing model; SEC regulations; *Monogr.* 166.
- Verification; alternating bit protocol; communication protocol; file transfer protocol; protocol specification; readability analysis; service specification transport protocol; *NBS-GCR-80-281*.
- Verification; bonded storage; Bruce reactors; gamma-ray spectroscopy; nuclear safeguards; spent fuel; *SP582*, pp. 457-471 (June 1980).
- Verification; counter; estimates; gamma rays; neutrons; nondestructive assay; plutonium waste; safeguards; uranium waste; *SP582*, pp. 622-632 (June 1980).
- Verified spectra; analytical data; mass spectra; organic substances; *NSRDS-NBS63, Supplement 1 and 1980 Index*.
- Vertical error; vertical overlap; air safety; collision probability; probability distribution; sensitivity analysis; separation standard; *NBSIR* 80-1990.
- Vertical overlap; air safety; collision probability; probability distribution; sensitivity analysis; separation standard; vertical error; *NBSIR* 80-1990.
- Very large scale integration; VLSI; wire bonds; Department of Commerce; integrated circuits; metrology for semiconductors; National Bureau of Standards; photomasking; resistivity; second breakdown; semiconductors; test structures; thermal resistance; *NBSIR* 80-2057.
- Very large scale integration; x-ray lithography; electron-beam lithography; metal-oxide-semiconductor device; process-induced radiation damage; radiation damage; semiconductor devices; 19162.
- Vibrating orifice aerosol generator; aerosol size calibrations; optical particle counter; particle Doppler shift spectrometer; particle size distribution; settling velocity; Stokes law velocity; 19171.
- Vibration; cross section; molecules; neutron reactions; neutron time-of-flight; *SP594*, pp. 93-96 (Sept. 1980).
- Vibrational deactivation; atmospheric; flash photolysis; kinetics; ozone  $O_2(^1\Delta)$ ; 19618.
- Vibrational energy transfer; laser chemistry; laser induced fluorescence; molecular spectroscopy; multiphoton chemistry; unimolecular reactions; 19929.
- Vibrational excitation; associative detachment; flowing afterglow; infrared chemiluminescence; ion molecule reactions; 19362.
- Vibrational excitation; associative detachment; flowing afterglow; infrared chemiluminescence; ion molecule reactions; 19378.
- Vibrational excitation; electronic excitation; laser; photodissociation; quantum yield; quenching; reactive collisions; 19336.
- Vibrational frequencies; force constants; fundamental frequencies; infrared spectra; normal vibrations; polyatomic molecules; Raman spectra; *JPCRD* 9, No. 4, 1149-1254 (1980).
- Vibrational intensity distribution; branching ratios; Franck-Condon factors; ion; nitrogen;  $N_2$ ; photoelectron spectra; photoionization; shape resonance; synchrotron radiation; 19607.
- Vibrational intensity distribution; carbon monoxide; CO; Franck-Condon factors; ion; photoelectron spectra; photoionization; shape resonance; synchrotron radiation; 19184.
- Vibrational mode; Raman spectroscopy; talc; 19583.
- Vibrational relaxation; diffusion; energy transfer; laser-excited fluorescence; laser-induced chemistry; mass transport; multiphoton processes; 19179.
- Vibrational-rotational states; laser induced excitation; population trapping; 19317.
- Vibrational spectroscopy; adsorption; CO; diatomic molecules; electron energy loss spectroscopy; 19206.
- Vibrational spectroscopy; chemisorption; electron energy loss spectroscopy; Ni(111); NO; 19800.
- Vibrational spectrum; catalyst; chemisorbed  $C_2H_4$ ; neutron inelastic scattering; Raney nickel; 19573.
- Vibration-rotation; ethane; group theory; internal rotation; perturbations; torsion; 19412.
- Vibrations; mechanical integrity; nondestructive evaluation; normal modes; orthopedic implants; piezoelectric polymer; plastics; 19952.
- Vibration spectrum; hydride; interstitial holes; metallic glass; neutron scattering; structure; 19606.
- Video waveform; gold coating cross section; magnification calibration; SEM; thickness measurement; 19859.
- Virgin base stocks; differential scanning calorimeter; lubricating oil; metal surface effects; nitrogen dioxide; oxidation; recycled base stocks; thermal analysis; 19788.
- Virial coefficient; virial equation; Debye theory; equation of state; ideal gas; Van der Waals equation; 19772.
- Virial coefficients; anisotropic polarizability;  $CO_2$ ; induced absorption spectra; molecular calculations;  $N_2$ ;  $O_2$ ; spectral moments; three-body contributions; 19296.
- Virial coefficients; virial series; Bose gas; fugacity expansion; Pade approximants; phase transitions; 19907.
- Virial coefficients; water; enthalpy of water; heavy water;  $PvT$ ; saturation states; thermodynamic properties of water; vapor pressure; *JPCRD* 9, No. 3, 735-750 (1980).
- Virial equation; Debye theory; equation of state; ideal gas; Van der Waals equation; virial coefficient; 19772.
- Virial series; Bose gas; fugacity expansion; Pade approximants; phase transitions; virial coefficients; 19907.

- Viscoelastic bars; instability; necking; nonlinear; simple materials; tensile test; 19746.
- Viscosity; argon; computer programs; density; enthalpy; entropy; equation of state; heat capacity at constant pressure; heat capacity at constant volume; helium; hydrogen; methane; neon; nitrogen; oxygen; thermal conductivity; velocity of sound; *TN1025*.
- Viscosity; binary liquids; critical fluctuations; diffusion; light scattering; Stokes' law; 19827.
- Viscosity; calibration-quality standards; density; electrical conductance; molten salts; potassium nitrate; sodium chloride; surface tension; *JPCRD 9*, No. 4, 791-830 (1980).
- Viscosity; carbonates; density; electrical conductance; hexafluoroaluminates; metaphosphates; molten salts; molybdates; sulfates; sulfides; surface tension; tungstates; *JPCRD 9*, No. 4, 831-1022 (1980).
- Viscosity; classical scattering angle; dilute gases; inverse power potential; logarithmic terms; softness expansion; thermal conductivity; 19194.
- Viscosity; coal gasification; coal slag; high temperature; steam; *NBSIR 80-2124*.
- Viscosity; computer simulation; conformal solution theory; mixing rules; mixture; nonequilibrium molecular dynamics; Van der Waals theory; 19180.
- Viscosity; correlation model; glass transition; pressure; ruby  $R_1$  linewidth; 19068.
- Viscosity; water; water vapor; correlation length; critical region equation of state; critical viscosity enhancement; steam; *JPCRD 9*, No. 4, 1255-1290 (1980).
- Visibility; vision; conspicuity; contrast; energy conservation; illumination; illumination levels; lighting; suprathreshold seeing; *NBSIR 79-1925*.
- Visible; quantum efficiency; quantum yield; silicon; silicon photodetector; spectral response; 19646.
- Visible frequencies; 1.15  $\mu\text{m}$ ; frequency; He-Ne laser; nonlinear optics; 19709.
- Visible radiation measurements; electrical substitution radiometer; infrared radiation measurements; radiometry; spectral irradiance; spectral radiant power; spectroradiometry; ultraviolet radiation measurements; 19300.
- Vision; conspicuity; contrast; energy conservation; illumination; illumination levels; lighting; suprathreshold seeing; visibility; *NBSIR 79-1925*.
- Vision system; line following; part acquisition; plane of light; real time; robot; sensory feedback; 19096.
- Vision systems; automation; image processing; inspection; manufacturing; pattern recognition; robotics; 19093.
- Visual alerting; fire fighting; fire safety; pictograms; safety; signs; standardization; symbols; 19274.
- Visual performance; biological effects of lighting; energy conservation; illumination levels; lighting; lighting design; lighting education; lighting research; post-occupancy evaluation; power budget; task lighting; *SP587*.
- Visual testing; acoustic emission; calibration; eddy currents; magnetic particles; nondestructive evaluation; radiography; traceability; ultrasonics; *NBSIR 80-2109*.
- VLSI; wire bonds; Department of Commerce; integrated circuits; metrology for semiconductors; National Bureau of Standards; photomasking; resistivity; second breakdown; semiconductors; test structures; thermal resistance; very large scale integration; *NBSIR 80-2057*.
- VOR aircraft navigation system; white noise; Fourier coefficients; linear model; nonlinear model; phase spectrum transformation; spectrum; *TN1021*.
- Voice announcements; clocks; HF; interference; satellite; spectrum; spectrum conservation; standard; time broadcast stations; 19525.
- Void filling; void volume; buoyant force; dielectric insulation; oil permeation; porous polymers; specific volume; 19882.
- Void volume; buoyant force; dielectric insulation; oil permeation; porous polymers; specific volume; void filling; 19882.
- Voltage comparator; wideband comparator; linear voltage response; rf voltage comparator; Schottky-barrier diodes; 19544.
- Voltage standard; Josephson effect; phase locking; superconductivity; 19351.
- Voltage-variable resistors; zinc oxide; electrically conducting ceramics; electrical transmission; lightning arresters; nonlinear resistors; semiconductors; surge arresters; varistors; *NBSIR 79-1939*.
- Volume; calibration curve; experiments; finite elements; Scheffe, design; spline; *J. Res. 85*, No. 4, 295-304 (July-Aug. 1980).
- Volume and surface impurities; wavelength modulation spectroscopy; extrinsic infrared absorption; KBr; KCl; laser windows; *SP568*, pp. 99-117 (July 1980).
- Volume calibration; accountability tanks; automated system; diverter correction; turbine meters; *SP582*, pp. 517-533 (June 1980).
- Volume calibration; volumetric test measures; accountability tanks; differential pressure gage; nuclear materials processing; nuclear safeguards; 19053.
- Volume-measuring devices; weighing devices; weights; length-measuring devices; liquid-measuring devices; measures; scales; specifications; taximeters; tolerances; *H44*, 1980 Edition.
- Volumetric dispensing; water calibration; Karl Fischer titration; moisture content; syringe calibration; telescopic viewer; 19277.
- Volumetric test measures; accountability tanks; differential pressure gage; nuclear materials processing; nuclear safeguards; volume calibration; 19053.
- Voluntary consensus standards; accreditation systems; certification; evaluation of inspection organizations; evaluation of testing organizations; inspection standards; laboratory accreditation; laboratory evaluation; regulatory liability; *SP591*, pp. 11-14 (Aug. 1980).
- Voluntary standards; administrative law; law; legal aspects of standards; regulation; safety regulation; standards organizations; *NBS-GCR-79-171*.
- Voluntary standards; clinical laboratories; cost effectiveness; environmental laboratories; licensure; performance evaluation; physician's office laboratories; proficiency testing; public health; recombinant DNA; registration and approval; *SP591*, pp. 63-66 (Aug. 1980).
- VUV spectra; wavelengths; xenon; Ag I; energy levels; isoelectronic sequence; 19069.
- VUV standards; radiometry; storage ring; synchrotron; vacuum ultraviolet; 19641.

## W

- Wafer scanning; photoconductivity variations; photovoltaic technique; resistivity gradients; resistivity variations; 19764.

- Word processing; automatic typewriters; cost effectiveness; typewriter evaluation; typewriter productivity; typewriters; *19565*.
- Work damage; infrared reflectance; optical reflectance; polishing; silicon on sapphire; surface roughness; ultraviolet reflectance; *SP400-62*.
- Workload; capacity planning; computer installation; *SP500-65*, pp. 199-203 (Oct. 1980).
- Workload definition; benchmarking; capacity planning; computer performance evaluation; computer performance measurement; computer performance prediction; computer system acquisition; CPE in auditing; installation management; on-line system evaluation; queuing models; *SP500-65*.
- Workload forecasting; workload update; benchmark; capacity management; capacity planning; *SP500-65*, pp. 255-261 (Oct. 1980).
- Workloads; cumulative distribution function; events; hardware configuration; model validation; queue; scheduling policies; simulation model; system performance; *SP500-65*, pp. 111-128 (Oct. 1980).
- Workload update; benchmark; capacity management; capacity planning; workload forecasting; *SP500-65*, pp. 255-261 (Oct. 1980).
- Workshop; acceptable work practices; excavation; geotechnical engineering; safety; shoring; soil classification; trench; *NBSIR 79-1935*.
- Workshop; barrier/incentives; hydrogen energy systems; impacts of hydrogen fuel; policy options; societal aspects; *19699*.
- Work surfaces; codes and standards; construction safety; design; loads; maintenance; occupational hazards; scaffolds; stiffness; strength; structural safety; *NBSIR 79-1937*.
- Worst case retrievals; buckets; hashing; open addressing; *19060*.
- W-values; electrons; energy degradation spectra; fano factor; ionization yields; stopping power; *19400*.
- "white" neutron sources; WNR; comparison neutron yields; GELINA; HELIOS; KFK; ORELA; PSR; *SP594*, pp. 920-928 (Sept. 1980).

## X

- X $\alpha$ ; B<sub>2</sub>; CO; C<sub>2</sub>; F<sub>2</sub>; H<sub>2</sub>; local density models; N<sub>2</sub>; O<sub>2</sub>; *19289*.
- Xanthen-0-yl derivatives of urea; carbon-13 NMR; chemical shifts; coupling constants; mass spectrometry; nitrogen-15 NMR; proton NMR; *19312*.
- Xenon; Ag I; energy levels; isoelectric sequence; VUV spectra; wavelengths; *19069*.
- Xenon; energy levels; theta-pinch; wavelengths; *19117*.
- Xenotime; yttrium orthophosphate; yttrium phosphate; absorption spectra; calcite; flux growth; laser damage; neodymium:glass; polarizer; pyrophosphate; *SP568*, pp. 137-140 (July 1980).
- XPS; AES; chemisorption; EELS; electron spectroscopy; photoemission; UPS; *19176*.
- XRF analysis. <sup>252</sup>Cf; metal exploration; natural gamma radiation; neutron activation analysis; neutron inelastic scattering; nuclear cross sections; nuclear reactors; radiative neutron capture; reaction interferences; *SP594*, pp. 615-626 (Sept. 1980).
- X-radiation of intensifier screens; fluorescent screens; intensifier screen standards; radiographic intensifier screen efficiency; screen evaluations; sensitivity of screens; spectroradiometry of screens; *19234*.
- X-ray absorption-edge densitometry; densitometer evaluation; uranium and plutonium solutions assay; *SP582*, pp. 633-650 (June 1980).
- X-ray continuum; backscattered electrons; continuum x-ray loss; electron probe; Monte Carlo method for electron trajectories; particle analysis; quantitative analysis; *19867*.
- X-ray diffraction; ammonium nitrate; crystal structure; hydrogen bonding; neutron diffraction; phase transitions; *19897*.
- X-ray diffraction; bond delocalized dianion; oxocarbon; single-crystal; structure refinement; *J. Res.* 85, No. 2, 87-97 (Mar.-Apr. 1980).
- X-ray diffraction; crystal structure; heteropoly complexes; hydrogen bonds; molybdoarsinate; neutron diffraction; *19846*.
- X-ray diffraction; crystal structures; lattice constants; powder patterns; reference intensities; standard; *Monogr. 25, Section 17*.
- X-ray diffraction; cuprous chloride; diamond cell; optical microscopy; phase transition; resistivity; *19687*.
- X-ray diffraction; [Et<sub>3</sub>P]<sub>2</sub>PtWS<sub>4</sub>; molecular structure; Pt-W

- complex; single crystal; ternary metal sulfide; 19172.
- X-ray diffraction; electron microscopy; Fe-Ni alloys; martensite; shock deformation; Tishomingo meteorite; 19947.
- X-ray diffraction; electro-optical detectors; flash x-ray generators; synchrotron x-radiation; 19714.
- X-ray edge; electron-hole pairs; molecular processes; surface reactions; 19837.
- X-ray exams; compact range; data; daylighting; energy; environmental; shale oil; SRM; weights and measures; *DIM/NBS* 64, No. 6, 1-24 (1980).
- X-ray fluorescence; accountability; accuracy; gamma spectrometry; mass spectrometry; nondestructive assay; nuclear safeguards; precision; reference materials; special nuclear materials; SP582.
- X-ray fluorescence; automation; data processing; HTGR spent fuel reprocessing; in-line measurements; off-line measurements; process control; remote pipettors; remote sample preparation; SNM accountability; SP582, pp. 55-65 (June 1980).
- X-ray fluorescence; chemical profiling; energy dispersive; macrosegregation; monochromatic incident x-ray beam; multiphase structure; 19959.
- X-ray fluorescence; x-ray microanalysis; x-ray spectrometry; electron probe microanalysis; energy dispersive x-ray spectrometry; solid state x-ray detectors; 19434.
- X-ray fluorescence analysis; accountability; computer-based system; dynamic concentration measurements; inventory control; nondestructive measurements; on-line real-time measurements; plutonium concentration and isotopics determinations; SP582, pp. 584-601 (June 1980).
- X-ray fluorescence analysis; dissolver solution; slurry analysis; SNM assay; solution analysis; total sampling; SP582, pp. 547-554 (June 1980).
- X-ray fluorescence spectrometry; calibration standards; focused-ion beam sputtering; thin films; 19871.
- X-ray image magnifier; background scattering; collimation; high resolution; image intensifier; image signals; microradiography; monochromatic radiography; real-time radiography; 19863.
- X-ray image storage; digital image requirement; image information; information content; medical x-ray image; 19134.
- X-ray imaging system;  $^{125}\text{I}$  x-ray source; microchannel plate; portable; rare-earth scintillator; small-format; 19402.
- X-ray interferometry; atomic weights; Avogadro's constant; gamma-ray spectroscopy; stabilized lasers; wavelength standards; 19488.
- X-ray laser; computerized axial tomography; Fresnel zone; holographic reconstruction; imaging; laminagraphy; nondestructive testing; radiography; three-dimensional radiography; tomography; 19855.
- X-ray lithography; electron-beam lithography; metal-oxide-semiconductor device; process-induced radiation damage; radiation damage; semiconductor devices; very large scale integration; 19162.
- X-ray microanalysis; aluminum wiring; duplex connectors; high resistance junctions; junction resistance; scanning electron microscopy; *J. Res.* 85, No. 6, 429-440 (Nov.-Dec. 1980).
- X-ray microanalysis; electron probe microanalysis; glass particles; mineral particles; Monte Carlo methods; particle; peak-to-background ratios; quantitative analysis; 19921.
- X-ray microanalysis; x-ray spectrometry; electron probe microanalysis; energy dispersive x-ray spectrometry; solid state x-ray detectors; x-ray fluorescence; 19434.
- X-ray neutron; applications; lattice parameters; peak shape; powder diffraction; profile fitting; SP567.
- X-ray opacification; dental composite resin restorations; finishability; gelled inorganic "polymers"; microporous filler; system nontoxicity; *U.S. Patent* 4,217,264.
- X-ray photoelectron spectroscopy; Auger-electron spectroscopy; ion-scattering spectroscopy; quantitative analysis; secondary-ion mass spectroscopy; surface analysis; 19293.
- X-ray photoelectron spectroscopy; binding energies; copper; ESCA; gold; relative intensities; round robin; 19202.
- X-ray proportional-counter; Apollo-15 and -16; gamma-ray spectrometers; lunar chemical analysis; 19129.
- X rays; absorption correction; diffractometers; flat-cone; macromolecules; neutrons; single-crystal; Weissenberg methods; 19509.
- X rays; attenuation coefficient; coherent scattering; Compton scattering; gamma rays; pair production; photoelectric absorption; photons; triplet production; *JPCRD* 9, No. 4, 1023-1148 (1980).
- X rays; calibration; diagnostic x-rays; electrical measurements; health; radiation; radiation safety; safety; *NBSIR* 80-2072.
- X rays; crystal diffraction; gamma-ray energy standards; 19302.
- X rays; dust grains; molecular clouds; star formation; supernovae; supernova remnants; 19384.
- X-ray scattering; methyl group; molecular reorientation; neutron scattering; nitromethane; quantum tunnelling; 19809.
- X-ray scattering; methyl group; molecular reorientation; neutron scattering; nitromethane; quantum tunnelling; 19810.
- X-ray sources; chromosphere sun; emission-line stars; late-type stars; stellar chromospheres; stellar winds; ultraviolet spectra; 19523.
- X-ray sources; flare stars; stellar chromospheres; stellar coronae; ultraviolet spectra; 19269.
- X-ray sources; late-type stars; stellar coronae; 19501.
- X-ray spectra; computer program; fitting Gaussian profiles; incomplete charge collection; lithium-drifted silicon detector; sequential simplex procedure; 19130.
- X-ray spectrometry; analytical electron microscope; energy dispersive x-ray spectrometry; scanning electron microscope; silicon (Li) detector; spectral artifacts; 19631.
- X-ray spectrometry; electron probe microanalysis; energy dispersive x-ray spectrometry; solid state x-ray detectors; x-ray fluorescence; x-ray microanalysis; 19434.
- X-ray spectroscopy; activation analysis; computers; data processing; gamma-ray spectroscopy; 19128.
- X-ray spectroscopy; adsorption; Franck-Condon; lineshapes; photoelectron spectroscopy; 19209.
- X rays, sources; x rays, spectra; stars, coronae; stars, flare; 19476.
- X rays, spectra; stars, coronae; stars, flare; x rays, sources; 19476.
- X-ray structure determination; zwitterion; inner salt; iodonium compound; reaction mechanism; synthetic intermediate; 19939.
- X-ray telescope; CsI scintillator; energy resolution; low-energy gamma rays; microchannel plates; position-sensitive detector; 19401.
- X-ray topography; Bragg diffraction; double crystal diffraction; nickel single crystal; process of crystal growth; subgrain misorientation; surface reflection; 19727.
- XX Virginis; cepheids; population II cepheids; 19148.

## Y

- Y-doped  $\text{CeO}_2$ ;  $\text{CeO}_2$ ; conducting ceramic; conductivity; diffusion; oxygen conductor; slow transient effect; transport; 19444.
- Yeast; biological matrix; bovine liver; certified reference materials; chromium; foods; interlaboratory study; standard reference materials; 19420.
- Yield; integrated circuit; process control; reliability; test pattern; test structure; transistors; 19244.
- Yield stress; brittle failure; failure criteria; flaws; fracture;  $K_{Ic}$ ; laser windows; Weibull; SP568, pp. 151-159 (July 1980).
- Y, Nb, Gd, W and  $\text{Au}(n, \gamma)$ ; statistical model calculations; SP594, pp. 323-327 (Sept. 1980).
- Youden graphical analysis; collaborative reference programs; history; interlaboratory testing program; laboratory evaluation; National Bureau of Standards; paper; paperboard; TAPPI; test methods; 19321.
- Youden two-sample analysis; collaborative reference program; test method; interlaboratory testing; laboratory evaluation;

linear model; measuring process; proficiency testing; *SP591*, pp. 25-30 (Aug. 1980).

Young's modulus; bulk modulus; elastic constants; physical-property variability; Poisson's ratio; shear modulus; sound velocity; stainless steel; *19246*.

Young's modulus; longitudinal acoustic mode; polyoxymethylene; polypropylene; Raman spectroscopy; *19895*.

Yrast level; gamma-ray production cross section; gamma-ray strength function; spin-dependent evaporation model; *SP594*, pp. 775-777 (Sept. 1980).

Yrast states; atomic transition probabilities; beam-foil method; cascading; core-excited states; *19347*.

Ytterbium; Auger; core-holes; mixed-valence; photoionization; resonance; *19853*.

Yttria-doped silicon nitride; ceramic; high voltage electron microscopy; *in situ*; oxidation; silicon nitride; *19605*.

Yttria-doped silicon nitride; ceramic; high voltage electron microscopy; *in situ*; oxidation; silicon nitride; *NBSIR 80-2075*.

Yttrium lithium fluoride; advanced laser materials; crystal growth; crystalline fluorides; Faraday rotator; high power laser materials; optical damage threshold; top-seeded solution technique; two photon absorption; uniaxial crystal; *SP568*, pp. 127-135 (July 1980).

Yttrium orthophosphate; yttrium phosphate; absorption spectra; calcite; flux growth; laser damage; neodymium:glass; polarizer; pyrophosphate; xenotime; *SP568*, pp. 137-140 (July 1980).

Yttrium phosphate; absorption spectra; calcite; flux growth; laser damage; neodymium:glass; polarizer; pyrophosphate; xenotime; yttrium orthophosphate; *SP568*, pp. 137-140 (July 1980).

## Z

Zeeman laser; stabilized laser; wavelength standards; *19740*.

Zero shift; adhesive; backing; connection; environment; gage element; leads; load; protective coating; resistance; sensitivity change; stability; strain gages; structure; transducers; *19049*.

Zinc; aluminum; coatings; electrodeposition; epitaxy; tin aluminum; *19730*.

Zinc; aluminum; electrodeposition; epitaxy; plating coatings; *19657*.

Zinc-blende structure; covalent bonding; diamond structure; elastic constants; gallium arsenide; indium antimonide; ionicity; optical phonons; Raman scattering; semiconductors; stress; *19580*.

Zinc in dental amalgam; comprehensive strength of amalgam; density of dental amalgam; dental amalgam; dimensional change in dental amalgam; mercury/alloy ration in dental amalgam; mercury content in dental amalgam; *19632*.

Zinc oxide; electrically conducting ceramics; electrical transmission; lightning arresters; nonlinear resistors; semiconductors; surge arresters; varistors; voltage-variable resistors; *NBSIR 79-1939*.

Zinc oxide varistors; dc transmission; deep-level measurements; energy conservation; measurement methods; neutron transmutation doped silicon; power-device grade silicon; resistivity variations; silicon; spreading resistance measurements; *NBSIR 80-2061*.

Zinc point; fixed point; freezing point; *19081*.

Zinc selenide; zinc sulfide; absorption; coatings; internal reflectance spectroscopy; silicon monoxide; thorium fluoride; *SP568*, pp. 247-256 (July 1980).

Zinc sequence; beryllium sequence; collision strength; effective Gaunt-factor; electron impact excitation; magnesium sequence; *19353*.

Zinc sulfide; absorption; coatings; internal reflectance spectroscopy; silicon monoxide; thorium fluoride; zinc selenide; *SP568*, pp. 247-256 (July 1980).

Zirconia; ceramic oxides; electrodes;  $\text{LaCrO}_3$ ; magnetohydrodynamics; spinels; *19644*.

Zirconium; energy levels; ion; ionization energy; spectrum; wa-

lengths; *19118*.

Zirconium; spectra; ultraviolet; *19543*.

ZnSe; absorption; calculated performance;  $\text{CO}_2$  laser; holographic interferometry; measured performance; optical path difference; temperature profile; thermal distortion; thermal lensing; *SP568*, pp. 73-89 (July 1980).

ZnSe; bulk optical absorption coefficient; optoacoustic spectroscopy; photoacoustic spectroscopy; surface optical absorption coefficient; *SP568*, pp. 293-300 (July 1980).

ZnSe; bulk optical absorption coefficient; optoacoustic spectroscopy; photoacoustic spectroscopy; surface optical absorption coefficient;  $\text{ThF}_4$ ; *SP568*, pp. 301-311 (July 1980).

ZPPR; IAEA safeguards; neutron detectors; portal monitors; radiation detectors; SNM monitors; *SP582*, pp. 365-371 (June 1980).

ZPR critical assembly; delayed neutron data; eigenvalue; ENDF/B-IV; integral experiments; reaction rate ratios; reactivity worths; *SP594*, pp. 297-306 (Sept. 1980).

Zr, Mo, and Sm isotopes; *SP594*, pp. 135-138 (Sept. 1980).

Zr(n,total) cross section; single-level analysis; *SP594*, pp. 319-322 (Sept. 1980).

Zr-95/Cs-137; burn-up; cooling time; Cs-134/Cs-137 ratios; Pu/U; spent fuel; *SP582*, pp. 509-516 (June 1980).

Zwanzig-Mori theory; depolarized light scattering; lattice-gas; Lorentzian shape; oscillatory; parameters; polarizability; rare-gas; *19756*.

Zwitterion; inner salt; iodonium compound; reaction mechanism; synthetic intermediate; x-ray structure determination; *19939*.

0.02-350 eV; fast chopper; Nd-145; resonance parameters; total cross section; *SP594*, p. 877 (Sept. 1980).

0.5-60 MeV; carbon; hydrogen; iron; neutrons; oxygen; total cross sections; *SP594*, pp. 34-38 (Sept. 1980).

1-hexene; allylic resonance energy; allyl radicals; biradical; cyclohexane; decomposition; decyclization; isomerization; olefins; shock tube; *19784*.

1 ns; 1.06  $\mu\text{m}$  damage; absorption; electric-field strength; film materials; impurities; overcoat; polished surfaces; pulsedwidth dependence; thin-film coatings; *SP568*, pp. 391-403 (July 1980).

1.06  $\mu\text{m}$  damage; absorption; electric-field strength; film materials; impurities; overcoat; polished surfaces; pulsedwidth dependence; thin-film coatings; 1 ns; *SP568*, pp. 391-403 (July 1980).

1,1-difluoroethylene; diode laser spectroscopy; heterodyne measurement; high-precision; line assignments; line frequencies; rapid measurement technique; *19186*.

1.15  $\mu\text{m}$ ; frequency; He-Ne laser; nonlinear optics; visible frequencies; *19709*.

$^{12}\text{C}$ ; absolute measurement; activation; electric dipole; electroexcitation; giant resonance; *19763*.

$^{12}\text{C}$ ; dispersion relation; giant quadrupole resonance; photon scattering; *19735*.

12-membered cage, x-ray diffraction;  $((\text{C}_7\text{H}_7)_3\text{P})_4\text{Cu}_4\text{W}_2\text{O}_{25}\text{S}_6$ ; coordination complex; metalloenzymes, single crystal; *19173*.

$^{125}\text{I}$  x-ray source; microchannel plate; portable; rare-earth scintillator; small-format; x-ray imaging system; *19402*.

$^{13}\text{C}$ ; annealing; drawn; NMR; noncrystalline; orientation; polyethylene; *19686*.

14.73 MeV;  $^{56}\text{Fe}(n,p)$  cross section; evaluation; *SP594*, pp. 980-984 (Sept. 1980).

$^{165}\text{Ho}$  single crystal;  $^{166m}\text{Ho}$ ; gamma rays; low temperatures; multiaxes nuclear spin system;  $\gamma$ -ray multipolarity; *19620*.

$^{166m}\text{Ho}$ ; gamma rays; low temperatures; multiaxes nuclear spin system;  $\gamma$ -ray multipolarity;  $^{165}\text{Ho}$  single crystal; *19620*.

2DB; calculated neutron spectrum; fast breeder blanket facility; fast reactor; neutron spectrum; proton-recoil; *SP594*, pp. 568-571 (Sept. 1980).

20 microK thermostat; comparison with  $\text{He}^3$ , Ne; critical anomaly; dielectric constant; differential capacitance cell;  $\text{SF}_6$ ; *19484*.

2124-T851; 7075; 7075-T6; 7075-T7351; air; alternate immersion

test; aluminum alloys; ductility; elongation; heat treatment; NaCl; plate gage; reduction in area; slow strain rate technique; strain rate; stress corrosion cracking; 19622.

$^{22}\text{Ne}(e,e')$ ; deduced  $J$ ,  $\pi$ ,  $B(CL)$ ; enriched  $^{22}\text{Ne}$  target;  $E = 60$  to 110 MeV; 19691.

$^{238}\text{U}$ ; Doppler effect; fission; gas target; molecular vibrations; neutron reactions; 19146.

25 gram capacity bomb calorimeter; bomb calorimetry; gross calorific values; refuse-derived-fuels; sample characterization; sample processing effects; *NBSIR 80-1968*.

30 MHz to 180 MHz; dipole radiator for EMI measurements; electromagnetic field measurement; spherical dipole; standard field radiator; 19737.

4-aminopyridine; coulometry; Faraday constant; 19814.

5-10 MeV; angular distributions; Cr, Fe, Ni(n, $\alpha$ ) cross sections; *SP594*, pp. 844-847 (Sept. 1980).

$^{56}\text{Fe}(n,p)$  cross section; evaluation; 14.73 MeV; *SP594*, pp. 980-984 (Sept. 1980).

6-amino-6-deoxy-D-galactose-6- $^{15}\text{N}$  derivatives; carbon-13 n.m.r.; nitrogen-15 coupling constants; nucleophilic substitution; paramagnetic broadening; proton n.m.r.; selective coupling; 19670.

$^{60}\text{CoCo}$   $\gamma$ -ray anisotropy thermometry; cryogenic temperature scale; Josephson junction; noise thermometry; nuclear orientation; thermometry; 19685.

60 Hz ac and dc; compressed gas; corona; electron avalanche; inception voltage; ionization; ion mobilities; partial discharge; photodetachment; space charge; sulfur hexafluoride ( $\text{SF}_6$ ); uv radiation; 19786.

7075; 7075-T6; 7075-T7351; air; alternate immersion test; aluminum alloys; ductility; elongation; heat treatment; NaCl; plate gage; reduction in area; slow strain rate technique; strain rate; stress corrosion cracking; 2124-T851; 19622.

7075-T6; 7075-T7351; air; alternate immersion test; aluminum alloys; ductility; elongation; heat treatment; NaCl; plate gage; reduction in area; slow strain rate technique; strain rate; stress corrosion cracking; 2124-T851; 7075; 19622.

7075-T7351; air; alternate immersion test; aluminum alloys; ductility; elongation; heat treatment; NaCl; plate gage; reduction in area; slow strain rate technique; strain rate; stress corrosion cracking; 2124-T851; 7075; 7075-T6; 19622.

## APPENDIX A. LIST OF DEPOSITORY LIBRARIES IN THE UNITED STATES

### ALABAMA

Alexander City: Alexander City State Junior College, Thomas D. Russell Library (1967).  
Auburn: Auburn University, Ralph Brown Draughon Library (1907).  
Birmingham:  
    Birmingham Public Library (1895).  
    Birmingham-Southern College Library (1932).  
    Jefferson State Junior College, James B. Allen Library (1970).  
    Samford University, Harwell G. Davis Library (1884).  
Enterprise: Enterprise State Junior College, Learning Resource Center (1967).  
Florence: University of North Alabama, Collier Library (1932).  
Gadsden: Gadsden Public Library (1963).  
Huntsville: University of Alabama, Huntsville Campus Library (1964).  
Jacksonville: Jacksonville State University, Ramona Wood Library (1929).  
Maxwell A.F. Base: Air University Library (1963).  
Mobile:  
    Mobile Public Library (1963).  
    Spring Hill College, Thomas Byrne Memorial Library (1937).  
    University of South Alabama Library (1968).  
Montgomery:  
    Alabama State Department of Archives and History Library (1884).  
    Alabama Supreme Court and State Law Library (1884).  
    Auburn University at Montgomery Library (1971)-REGIONAL.  
Normal: Alabama Agricultural and Mechanical College, Drake Memorial Library (1963).  
St. Bernard: St. Bernard College, Herman J. Heidrich Library (1962).  
Troy: Troy State University, Lurleen B. Wallace Educational Resources Center (1963).  
Tuskegee Institute: Tuskegee Institute, Hollis Burke Frissell Library (1907).  
University:  
    University of Alabama, School of Law Library (1967).  
    University of Alabama Library (1860)-REGIONAL

### ALASKA

Anchorage:  
    Supreme Court of Alaska Library (1973).  
    University of Alaska, Anchorage Library (1961).  
College: University of Alaska, Elmer E. Rasmuson Library (1922).  
Juneau: Alaska State Library (1964).  
Ketchikan: Ketchikan Community College Library (1970).

### ARIZONA

Coolidge: Central Arizona College, Instructional Materials Center (1973).  
Flagstaff: Northern Arizona University Library (1937).

### Phoenix:

    Department of Library and Archives (unknown)-REGIONAL.  
    Grand Canyon College, Fleming Library.  
    Phoenix Public Library (1917).  
Prescott: Yavapai College Library (1976).  
Tempe:  
    Arizona State University, Matthews Library (1944).  
    Arizona State University, College of Law Library (1977).  
Thatcher: Eastern Arizona Junior College Library (1963).  
Tucson:  
    Tucson Public Library (1970).  
    University of Arizona Library (1907)-REGIONAL.  
Yuma: Yuma City-County Library (1963).

### ARKANSAS

Arkadelphia: Ouachita Baptist University, Riley Library (1963).  
Batesville: Arkansas College Library (1963).  
Clarksville: College of the Ozarks Library (1925).  
Conway: Hendrix College, O. C. Bailey Library (1903).  
Fayetteville: University of Arkansas Library (1907).  
Little Rock:  
    Arkansas Supreme Court Library (1962).  
    Little Rock Public Library (1953).  
    University of Arkansas at Little Rock Library (1973).  
Magnolia: Southern Arkansas University, Mogale Library (1956).  
Monticello: University of Arkansas at Monticello Library (1956).  
Pine Bluff: University of Arkansas at Pine Bluff, Watson Memorial Library (1976).  
Russellville: Arkansas Tech University, Tomlinson Library (1925).  
Searcy: Harding College, Beaumont Memorial Library (1963).  
State College: Arkansas State University, Dean B. Ellis Library (1913).  
Walnut Ridge: Southern Baptist College, Felix Goodson Library (1967).

### CALIFORNIA

Anaheim: Anaheim Public Library (1963).  
Arcadia: Arcadia Public Library (1975).  
Arcata: Humboldt State College Library (1963).  
Bakersfield:  
    California State College, Bakersfield Library (1974).  
    Kern County Library System (1943).  
Berkeley:  
    University of California, General Library (1907).  
    University of California, Law Library, Earl Warren Legal Center (1963).  
Carson:  
    California State University, Dominguez Hills, Educational Resources Center (1973).  
    Carson Regional Library (1973).  
Chico: Chico State University Library (1962).  
Claremont: Pomona College Documents Collection, Honnold Library (1913).  
Coalinga: West Hills Community College (1978).

Compton: Compton Library (1972).  
 Culver City: Culver City Library (1966).  
 Davis:  
   University of California at Davis Library (1953).  
   University of California at Davis, School of Law Library (1972).  
 Downey: Downey City Library (1963).  
 Fresno:  
   California State University Library (1962).  
   Fresno County Free Library (1920).  
 Fullerton: California State University, Fullerton Library (1963).  
 Garden Grove: Garden Grove Regional Library (1963).  
 Gardena: Gardena Public Library (1966).  
 Hayward: California State College at Hayward Library (1963).  
 Huntington Park: Huntington Park Library, San Antonio Region (1970).  
 Inglewood: Inglewood Public Library (1963).  
 Irvine: University of California at Irvine Library (1963).  
 La Jolla: University of California, San Diego, University Library (1963).  
 Lakewood: Angelo Iacoboni Public Library (1970).  
 Lancaster: Lancaster Regional Library (1967).  
 Long Beach:  
   California State University at Long Beach Library (1962).

## INFORMATION CONCERNING YOUR ORDER OR INQUIRY

Thank you for your interest in U. S. Government publications. If you have made a written inquiry, it is returned herewith for your reference. We have indicated the prices of publications currently available, or have provided the information requested to the best of our ability. Unless otherwise noted, prices are for single copies.

Regulations require payment in advance of shipment of publications. Please make checks or money orders payable to the Superintendent of Documents. You may charge your order using your Deposit Account, Master Charge, or Visa. Do not send currency (bills or coins) or postage stamps.

Shipping is by non-priority mail or United Parcel Service. First class mailing is available at a higher rate. Contact us for rates if you desire this service. (202-783-3238).

With the exception of specially priced publications and subscriptions, a discount of 25 percent is allowed on quantity purchases (100 or more copies of a single publication). The same discount applies to orders from a bookdealer (any quantity) when the publications are mailed to the dealer's normal place of business. No discount will be allowed when publications and subscriptions are mailed to a third party (unless in quantities of 100 or more per title).

**NON U. S. CUSTOMERS:** International mailing regulations require special handling for which we charge an additional 25 percent of the total cost of your order. Remittance is required in advance of shipping by draft on a United States or Canadian bank, by UNESCO coupons, or by International Postal Money Order made payable to the Superintendent of Documents. These orders are mailed via surface mail unless funds are sent to cover airmail postage. Foreign currency or checks will not be accepted. All orders must be in English.

### TO ORDER, USE FORM ON REVERSE SIDE

#### Follow Instructions Below

1. *Please use separate forms for ordering publications and subscriptions.*
2. Type or print your complete name and address, your order number (if any), your Deposit Account number (if applicable), Visa or Master Charge number (if applicable), and date in proper places at the top of the form. If order is to be shipped to a third party, fill in address at bottom of form. We request you order a minimum of \$1.00 worth of materials. Please include office/home telephone no.
3. When ordering **publications**, type or print the stock number, unit of issue (see front), quantity, title, price and total payment enclosed.
4. When ordering **subscriptions**, or single issues of subscriptions, type or print the stock number, quantity, title, price, List ID (when available), and total payment enclosed. Allow 2—6 weeks plus mailing time for processing. All subscriptions are for one year, unless otherwise noted. Subscribers will be notified in ample time to renew.
5. Mail Original of Form to Superintendent of Documents, U. S. Government Printing Office, Washington, D. C. 20402. Retain the copy for your records.
6. If shipment is incorrect, return the shipping documents for adjustment. **DO NOT RETURN BOOKS UNTIL NOTIFIED TO DO SO.** All claims must be submitted within six months.
7. Call 202-783-3238 for publication information or for placing your Deposit Account, Visa or Master Charge order.

### THE FOLLOWING INFORMATION EXPLAINS HOW YOUR REQUEST WAS PROCESSED

**Circle** . . Indicates the quantity of publications enclosed or scheduled for mailing.

**B** . . . The publication is not available at this time but we have scheduled mailing for a later date. Charges have been included on your order.

**C** . . . We are unable to identify the publication from the information furnished.

**I** . . . This publication is not currently in stock. Please inquire as to the availability and price in 60 days. You may inquire and order by telephone (202—783-3238) using your VISA, MASTER CHARGE, or Superintendent of Documents Deposit Account. This will expedite shipment of your publications.

**L** . . . The publication is not currently sold by this Office. We suggest you contact your local library which can refer you to a Federal Depository Library in your area for further assistance.

**S** . . . Publication has been replaced by another with similar but more recent information and it will be included in your shipment.

**T** . . . Publication has been replaced by another with similar but more recent information. Because of a difference in price, we are noting new ordering information on your request.

**Z** . . . Requested or pertinent information has been supplied. See attached.
