World Index of Plastics Standards Leslie H. Breden, Editor

This computer-produced Index contains the printed titles of more than 9,000 national and international standards on plastics and related materials which were in effect as of December 31, 1970. These standards are published by technical societies, trade associations, government agencies and military organizations. The title of each standard can be found under all the significant key words which it contains. These key words are arranged alphabetically down the center of each page together with their surrounding context. The date of publication or last revision, the standard number, and an acronym designating the standard-issuing organization appear as part of each entry. A list of these acronyms and the names and addresses of the organizations which they represent are found at the beginning of the World Index.

Key words: Index of plastics standards; plastics standards, world index; standards, plastics.

1. Introduction

This World Index of Plastics Standards is a computer-produced index which contains the titles of more than 9,000 national and international standards on plastics and related materials which were in effect as of December 31, 1970. It brings together in one document titles of relevant standards published by technical societies, trade associations, government agencies, and standardization bodies. This Index is intended to serve as a reference for design engineers, purchasing agents, and others who want to know if there are standards covering a particular plastics material, product, or test method.

The standards listed in this Index were selected because their titles indicated either that they were specifically concerned with plastics or that they covered other areas which might be useful to plastics engineers or testing laboratories. No attempt has been made to evaluate the contents of the standards. Translations of international standards titles found in the Index have, in most cases, been taken from information provided by the standards-issuing group involved. However, many of the translations are only approximate.

Requests for copies of all standards referenced in this Index should be addressed to the issuing organization. Suggestions for improving the Index and comments concerning omissions or corrections are welcome. These may be sent to the Office of Engineering and Information Processing Standards, National Bureau of Standards, Washington, D.C. 20234.

2. Instructions for Using the Key-Word-in-Context (KWIC) Index

A KWIC entry may contain as many as six items of information as shown below:

(1) (2) (3) (4) (5) (6) Polyethylene Film (1963) NFX B1 USC CS 227

(1) Title of the standard

(2) Year of publication or last revision

(3) Cross reference acronym for National Flexible Packaging Association

(4) Number assigned by National Flexible Packaging Association

(5) Acronym for U.S. Department of Commerce

(6) Number assigned by the U.S. Department of Commerce

The first item of information given is the title of the standard. The title of each standard is found under all of the significant key words it contains.

These key words are arranged alphabetically down the center of each page together with their surrounding context. There are as many listings of each title as there are key words in the title. It should be noted that, in some instances, the title has been augmented to include additional descriptive terms. Nonessential words have been omitted from the title in some cases.

The second item following the title is the year of publication or last revision of the standard. The letter "T" following this date indicates that the document is a tentative standard and not officially approved by the issuing organization.

The third and fourth items, which will be included only when applicable, consist of cross references, (acronym and number) to other organizations, besides the group originally issuing the standard, which have approved or adopted the standard and have assigned a number to it.

The last two items of information given make up the standard's identification number. This alphanumeric number is always found in the right-hand column. The first item is an acronym identifying the group issuing the standard. The second item is the standard number assigned by the issuing group. The letters "DR" preceding this number indicate that the document is a draft standard and not officially approved by the issuing organization. If an organization has not assigned a number to a standard, there appears the designation "XYZ" before an arbitrary number.

Index entries are read from left to right beginning after the largest blank space. When the title is larger than the programmed space, the additional title words appear in front of the title as shown below:

Resin in Solution (1965) Test for Viscosity Number of Polyvinyl Chloride BSI BD2892

Each title is assigned only one line in the Index; therefore, titles larger than one line have been cut by the computer. This deletion is indicated by a virgule (/) at the point where the title was cut. Missing portions of the title can be found by locating the entries for other key words in the title.

The editor gratefully acknowledges the assistance of the Plastics Technical Evaluation Center at Picatinny Arsenal for help in the compilation of the Federal and Military plastics standards. Also, thanks are given to Michael Keplinger of the Computer Information Section of the National Bureau of Standards for preparing the basic computer programs used in generating this Index.
