REVISED AUGUST 1975

INTRODUCTION

Without noticing it, Americans have already "gone metric" in many aspects of our daily living. The shutters of 8, 16 and 35 millimeter cameras click busily across the American countryside. Auto mechanics daily work on foreign cars manufactured in metric countries. Many products carry both customary and metric units on their labels.

Pharmaceutical companies went metric in America over 15 years ago. Currently major companies like IBM, General Motors, Caterpillar Tractor, International Harvester and Honeywell are in the midst of publicly-declared metrication programs. Ford Motor Company is producing automobiles with metric engines. The State of Ohio has begun a changeover to metric by using both kilometers and miles on its road signs; at least nine other states have done likewise. Schools in every state are moving towards more and better metric education. In thirteen states, the State School Board has adopted a "go metric" resolution.

Thinking meters, kilograms and liters, instead of yards, pounds and quarts, is not a difficult adjustment because the metric units are nearly the same as the customary units they replace. A shopper can buy two meters of fabric instead of two yards, half a kilogram of butter instead of a pound, and a liter of milk instead of a quart.

This publication provides a listing of items and sources to help those of you who wish to explore and apply the metric system in your lives. Included is a list of publications produced by the National Bureau Standards and available from the Superintendent of Documents, a list of organizations that market metric materials for educators, assembled by the National Council of Teachers of Mathematics, and a list of additional sources of metric information.

This publication and its contents may be reproduced freely. We hope it will prove an effective and useful guide to metric information.

All You Will Need to Know About Metric

(For Your Everyday Life)

10

Metric is based on Decimal system

The metric system is simple to learn. For use in your everyday life you will need to know only ten units. You will also need to get used to a few new temperatures. Of course, there are other units which most persons will not need to learn. There are even some metric units with which you are already familiar: those for time and electricity are the same as you use now.

BASIC UNITS

- METER:** a little longer than a yard (about 1.1 yards)
- LITER:** a little larger than a quart (about 1.06 quarts)
- GRAM:** a little more than the weight of a paper clip

(comparative sizes are shown)

25 DEGREES FAHRENHEIT

COMMON PREFIXES

(to be used with basic units)

- milli:** one-thousandth (0.001)
- centi:** one-hundredth (0.01)
- kilo:** one-thousand times (1000)

For example:

- 1000 millimeters = 1 meter
- 100 centimeters = 1 meter
- 1000 meters = 1 kilometer

25 DEGREES CELSIUS

OTHER COMMONLY USED UNITS

- millimeter:** 0.001 meter diameter of paper clip wire
- centimeter:** 0.01 meter a little more than the width of a paper clip (about 0.4 inch)
- kilometer:** 1000 meters somewhat further than 1/2 mile (about 0.6 mile)
- kilogram:** 1000 grams a little more than 2 pounds (about 2.2 pounds)
- milliliter:** 0.001 liter five of them make a teaspoon

OTHER USEFUL UNITS

- hectare:** about 2 1/2 acres
- metric ton:** about one ton

TEMPERATURE

degrees Celsius are used
