## NATIONAL BUREAU OF STANDARDS

The National Bureau of Standards<sup>1</sup> was established by an act of Congress March 3, 1901. The Bureau's overall goal is to strengthen and advance the Nation's science and technology and facilitate their effective application for public benefit. To this end, the Bureau conducts research and provides: (1) a basis for the Nation's physical measurement system, (2) scientific and technological services for industry and government, (3) a technical basis for equity in trade, and (4) technical services to promote public safety. The Bureau's technical work is performed by the National Measurement Laboratory, the National Engineering Laboratory, and the Institute for Computer Sciences and Technology.

**THE NATIONAL MEASUREMENT LABORATORY** provides the national system of physical and chemical and materials measurement; coordinates the system with measurement systems of other nations and furnishes essential services leading to accurate and uniform physical and chemical measurement throughout the Nation's scientific community, industry, and commerce; conducts materials research leading to improved methods of measurement, standards, and data on the properties of materials needed by industry, commerce, educational institutions, and Government; provides advisory and research services to other Government Agencies; develops, produces, and distributes Standard Reference Materials; and provides calibration services. The Laboratory consists of the following centers:

Absolute Physical Quantities<sup>2</sup> — Radiation Research — Thermodynamics and Molecular Science — Analytical Chemistry — Materials Science.

**THE NATIONAL ENGINEERING LABORATORY** provides technology and technical services to users in the public and private sectors to address national needs and to solve national problems in the public interest; conducts research in engineering and applied science in support of objectives in these efforts; builds and maintains competence in the necessary disciplines required to carry out this research and technical service; develops engineering data and measurement capabilities; provides engineering measurement traceability services; develops test methods and proposes engineering standards and code changes; develops and proposes new engineering practices; and develops and improves mechanisms to transfer results of its research to the ultimate user. The Laboratory consists of the following centers:

Applied Mathematics — Electronics and Electrical Engineering<sup>2</sup> — Mechanical Engineering and Process Technology<sup>2</sup> — Building Technology — Fire Research — Consumer Product Technology — Field Methods.

**THE INSTITUTE FOR COMPUTER SCIENCES AND TECHNOLOGY** conducts research and provides scientific and technical services to aid Federal Agencies in the selection, acquisition, application, and use of computer technology to improve effectiveness and economy in Government operations in accordance with Public Law 89-306 (40 U.S.C. 759), relevant Executive Orders, and other directives; carries out this mission by managing the Federal Information Processing Standards Program, developing Federal ADP standards guidelines, and managing Federal participation in ADP voluntary standardization activities; provides scientific and technological advisory services and assistance to Federal Agencies; and provides the technical foundation for computer-related policies of the Federal Government. The Institute consists of the following divisions:

Systems and Software — Computer Systems Engineering — Information Technology.

<sup>1</sup>Headquarters and Laboratories at Gaithersburg, Maryland, unless otherwise noted; mailing address Washington, D.C. 20234.

<sup>2</sup>Some divisions within the center are located at Boulder, Colorado, 80303.

## **Foreword**

The National Standard Reference Data System was established in 1963 for the purpose of promoting the critical evaluation and dissemination of numerical data of the physical sciences. The program is coordinated by the Office of Standard Reference Data of the National Bureau of Standards but involves the efforts of many groups in universities, government laboratories, and private industry. The primary aim of the program is to provide compilations of critically evaluated physical and chemical property data. These tables are published in the *Journal of Physical and Chemical Reference Data*, in the NSRDS-NBS series of the National Bureau of Standards, and through other appropriate channels.

The task of critical evaluation is carried out in various data centers, each with a well-defined technical scope. A necessary preliminary step to the critical evaluation process is the retrieval from the world scientific literature of all papers falling within the scope of the center. Each center, therefore, builds up a comprehensive well-indexed bibliographical file which forms the base for the evaluation task. Bibliographies derived from these files are published when they appear to be of value to research workers and others interested in the particular technical area.

Further information on NSRDS and the publications which form the primary output of the program may be obtained by writing to the Office of Standard Reference Data, National Bureau of Standards, Washington, DC 20234.

David R. Lide, Jr., Chief  
Office of Standard Reference Data

# Bibliography of Low Energy Electron and Photon Cross Section Data (January 1975 through December 1977)

J. W. Gallagher, J. R. Rumble, Jr., and E. C. Beaty

*Joint Institute for Laboratory Astrophysics, National Measurement Laboratory,  
National Bureau of Standards, Boulder, Colorado 80303*

A bibliography of original reports of measurements or calculations of electron, positron, and photon cross sections for atoms, small molecules, and their ions is presented. A detailed index to the bibliography facilitates retrieval of cross section data for specific processes and associated atomic or molecular species. A comprehensive author index is included. The bibliography covers the calendar years 1975-1977. This work supplements a previous bibliography which covered the literature through 1974.

**Key words:** Atom; collision cross section; detachment; dissociation; elastic scattering; electron; excitation; ion; ionization; molecule; photon; positron.

## Introduction

This bibliography is the result of a continuing literature compilation encompassing electron, positron, and photon collisions with atoms, small molecules, and their ions. It is an update of NBS Special Publication 426<sup>1</sup> which covers these topics up to and through 1974. The organization responsible for this continuation is the Low Energy Atomic Collision Cross Section Information Center which is located in the Joint Institute for Laboratory Astrophysics, University of Colorado, Boulder, Colorado 80309. The Information Center is part of the National Standard Reference Data System (NSRDS) of the National Bureau of Standards. The Center is supported by the Office of Standard Reference Data of the National Bureau of Standards.

The scope of this update is the same as that covered by NBS Special Publication 426. The general criteria for inclusion of species are that they be important in modeling planetary and stellar atmospheres, galactic gas clouds, gas discharges and lasers, or low temperature plasmas.

Papers reporting measurements or calculations of the following quantities are included, since under proper conditions cross sections have been or can be simply derived from them,

### For electron impact:

- (1) scattering phase shifts
- (2) scattering lengths
- (3) ionization efficiencies
- (4) excitation efficiencies

### For photon impact:

- (1) absorption coefficients
- (2) ionization coefficients

Citations contained in the electron bibliography cover an electron energy range of approximately 0-10 keV. The photon papers are primarily restricted to the wavelength range represented by the ultraviolet region of the spectrum (1.0 to 300 nm).

In addition to references from the formal scientific literature we have included theses, reports given at meetings in some cases, and rarely company or agency reports which have been printed and circulated. However, reference is not made to material that is unavailable either through library facilities or government document centers. No classified material is included.

Inclusion of a reference in this bibliography does not imply a value judgment about the accuracy of the data.

References identified on or before February 1978 and bearing a publication date on or before 31 December 1977 are included. This means that the bibliography is essentially complete through calendar year 1977. There are probably some references from obscure or nonstandard sources which have not been identified and included. These are normally found through abstracting services which in some cases are 6 months to 1 year behind publication dates.

<sup>1</sup> Kieffer, Lee J., Bibliography of Low Energy Electron and Photon Cross Section Data (through December 1974), Nat. Bur. Stand. (U.S.), Spec. Publ. 426, 219 pages (March 1976).

## Organization

This report consists of three major parts: the index to the Bibliography, the list of citations in the Bibliography, and the Author Index.

### Index

The index is a list of references which are identified by our citation number, the first author's surname and the last two digits of the year of publication. For example, 75 means 1975. The citation number identifies the reference in the list of citations.

The references are indexed by a hierarchy of terms which identify the cross section data to be found in the reference. First of all there are three large groupings: the electron, positron, and photon lists. Within each of these large groupings the order of the index terms is as follows:

- (1) Process (see Contents).
- (2) Experimental or Theoretical.
- (3) Normalized or Relative (the data are considered normalized if given in absolute units).
- (4) Atomic or Molecular Species (including the degree of ionization of the target). The common chemical symbols for the atomic species come first and are alphabetically ordered. They are followed by diatomics, triatomics, etc. The molecular symbols are alphabetically ordered. If a subscript appears one merely treats it as a repeating symbol for purposes of ordering.
- (5) The states of the target and their ordering are as follows:
  - (a) Neutral unexcited species.
  - (b) Negative ions, indicated by a superscript minus sign following the atomic or molecular symbol.
  - (c) Neutral excited species, indicated by a superscript asterisk following the atomic or molecular symbol.

- (d) Positively charged ions, indicated by a superscript plus sign and an integer indicating the degree of ionization following the atomic or molecular symbol.

### Bibliography

In this section the complete citations for all references are given. The citations are listed in numerical order by number. All authors' surnames and initials and the title are given as well as journal name, volume, inclusive pages, and year of publication. For nonjournal references, standard identifying information used by libraries for cataloging is given.

### Author Index

In this section all authors are listed alphabetically by surname. After each author's name is a list of citation numbers which indicate which references he authored or coauthored.

### Errata

We have included, for completeness, a set of errata for the bibliography through 1974 which was published as NBS Special Publication 426.

### Acknowledgments

The collection of these data was begun in 1962 and, through 1974, was primarily the work of the first director of the Center, Dr. L. J. Kieffer. We would like to thank Drs. Leanne Pitchford, James Land, and A. V. Phelps for their help and advice on the present publication. We especially would like to thank Anita Woehlk and Pat Ruttenberg for their role in the computer work involved in maintaining the files and producing this end product.

16. ABSTRACT (A 200-word or less factual summary of most significant information. If document includes a significant bibliography or literature survey, mention it here.)  A bibliography of original reports of measurements or calculations of electron, positron and photon cross sections for atoms, small molecules, and their ions is presented. A detailed index to the bibliography facilitates retrieval of cross section data for specific processes and associated atomic or molecular species. A comprehensive author index is included. The bibliography covers the calendar years 1975-1977. This work supplements a previous bibliography which covered the literature through 1974.			
17. KEY WORDS (six to twelve entries; alphabetical order; capitalize only the first letter of the first key word unless a proper name; separated by semicolons)  Atom; collision cross section; detachment; dissociation; elastic scattering; electron; excitation; ion; ionization; molecule; photon; positron

**Where can you find  
all the reference data  
you need?**

**Right in the  
Journal of Physical  
and Chemical  
Reference Data!**

Now in its sixth year, this valuable publication has proved that it fills the important gaps for you in the literature of the physical sciences.

Published by the American Institute of Physics and the American Chemical Society for the National Bureau of Standards, this quarterly gives you quantitative numerical data, with recommended values and uncertainty limits chosen by experts in the field.

Critical commentary on methods of measurement and sources of error, as well as full references to the original literature, is an integral part of each of your four issues a year.

Can you afford to be without this prime source of reliable data on physical and chemical properties? To start receiving your copies, just fill in the order form and drop into the mail. If you do use a purchase order, please attach the printed form as this will help us to expedite your order.

Send for complete list of reprints!

# Subscribe now — The new National Bureau of Standards Journal

The expanded Journal of Research of the National Bureau of Standards reports NBS research and development in those disciplines of the physical and engineering sciences in which the Bureau is active. These include physics, chemistry, engineering, mathematics, and computer sciences. Papers cover a broad range of subjects, with major emphasis on measurement methodology, and the basic technology underlying standardization. Also included from time to time are survey articles on topics closely related to the Bureau's technical and scientific programs. As a special service to subscribers each issue contains complete citations to all recent NBS publications in NBS and non-NBS media. Issued six times a year. Annual subscription: domestic \$17.00; foreign \$21.25. Single copy, \$3.00 domestic; \$3.75 foreign.

- Note: The Journal was formerly published in two sections: Section A "Physics and Chemistry" and Section B "Mathematical Sciences."

NBS Board of Editors  
Churchill Eisenhart,  
Executive Editor (Mathematics)  
John W. Cooper (Physics)  
Donald D. Wagman (Chemistry)  
Andrew J. Fowell (Engineering)  
Joseph O. Harrison (Computer Science)  
Helmut W. Hellwig (Boulder Labs.)

Washington, D.C. 20402

There's  
a new  
look  
to...

. . . the monthly magazine of the National Bureau of Standards.

Still featured are special articles of general interest on current topics such as consumer product safety and building technology. In addition, new sections are designed to . . . PROVIDE SCIENTISTS with illustrated discussions of recent technical developments and work in progress . . . INFORM INDUSTRIAL MANAGERS of technology transfer activities in Federal and private labs. . . DESCRIBE TO MANUFACTURERS advances in the field of voluntary and mandatory standards. The new DIMENSIONS/NBS also carries complete listings of upcoming conferences to be held at NBS and reports on all the latest NBS publications, with information on how to order. Finally, each issue carries a page of News Briefs, aimed at keeping scientist and consumer alike up to date on major developments at the Nation's physical sciences and measurement laboratory.

(please detach here)

SUBSCRIPTION ORDER FORM

Enter my Subscription To DIMENSIONS/NBS at \$11.00. Add \$2.75 for foreign mailing. No additional postage is required for mailing within the United States or its possessions. Domestic remittances should be made either by postal money order, express money order, or check. Foreign remittances should be made either by international money order, draft on an American bank, or by UNESCO coupons.

# NBS TECHNICAL PUBLICATIONS

## PERIODICALS

**JOURNAL OF RESEARCH**—The Journal of Research of the National Bureau of Standards reports NBS research and development in those disciplines of the physical and engineering sciences in which the Bureau is active. These include physics, chemistry, engineering, mathematics, and computer sciences. Papers cover a broad range of subjects, with major emphasis on measurement methodology, and the basic technology underlying standardization. Also included from time to time are survey articles on topics closely related to the Bureau's technical and scientific programs. As a special service to subscribers each issue contains complete citations to all recent NBS publications in NBS and non-NBS media. Issued six times a year. Annual subscription: domestic \$17.00; foreign \$21.25. Single copy, \$3.00 domestic; \$3.75 foreign.

Note: The Journal was formerly published in two sections: Section A "Physics and Chemistry" and Section B "Mathematical Sciences."

### DIMENSIONS/NBS

This monthly magazine is published to inform scientists, engineers, businessmen, industry, teachers, students, and consumers of the latest advances in science and technology, with primary emphasis on the work at NBS. The magazine highlights and reviews such issues as energy research, fire protection, building technology, metric conversion, pollution abatement, health and safety, and consumer product performance. In addition, it reports the results of Bureau programs in measurement standards and techniques, properties of matter and materials, engineering standards and services, instrumentation, and automatic data processing.

Annual subscription: Domestic, \$11.00; Foreign \$13.75

## NONPERIODICALS

**Monographs**—Major contributions to the technical literature on various subjects related to the Bureau's scientific and technical activities.

**Handbooks**—Recommended codes of engineering and industrial practice (including safety codes) developed in cooperation with interested industries, professional organizations, and regulatory bodies.

**Special Publications**—Include proceedings of conferences sponsored by NBS, NBS annual reports, and other special publications appropriate to this grouping such as wall charts, pocket cards, and bibliographies.

**Applied Mathematics Series**—Mathematical tables, manuals, and studies of special interest to physicists, engineers, chemists, biologists, mathematicians, computer programmers, and others engaged in scientific and technical work.

**National Standard Reference Data Series**—Provides quantitative data on the physical and chemical properties of materials, compiled from the world's literature and critically evaluated. Developed under a world-wide program co-ordinated by NBS. Program under authority of National Standard Data Act (Public Law 90-396).

**NOTE:** At present the principal publication outlet for these data is the Journal of Physical and Chemical Reference Data (JPCRD) published quarterly for NBS by the American Chemical Society (ACS) and the American Institute of Physics (AIP). Subscriptions, reprints, and supplements available from ACS, 1155 Sixteenth St. N.W., Wash., D.C. 20056.

**Building Science Series**—Disseminates technical information developed at the Bureau on building materials, components, systems, and whole structures. The series presents research results, test methods, and performance criteria related to the structural and environmental functions and the durability and safety characteristics of building elements and systems.

**Technical Notes**—Studies or reports which are complete in themselves but restrictive in their treatment of a subject. Analogous to monographs but not so comprehensive in scope or definitive in treatment of the subject area. Often serve as a vehicle for final reports of work performed at NBS under the sponsorship of other government agencies.

**Voluntary Product Standards**—Developed under procedures published by the Department of Commerce in Part 10, Title 15, of the Code of Federal Regulations. The purpose of the standards is to establish nationally recognized requirements for products, and to provide all concerned interests with a basis for common understanding of the characteristics of the products. NBS administers this program as a supplement to the activities of the private sector standardizing organizations.

**Consumer Information Series**—Practical information, based on NBS research and experience, covering areas of interest to the consumer. Easily understandable language and illustrations provide useful background knowledge for shopping in today's technological marketplace.

*Order above NBS publications from: Superintendent of Documents, Government Printing Office, Washington, D.C. 20402.*

*Order following NBS publications—NBSIR's and FIPS from the National Technical Information Services, Springfield, Va. 22161.*

**Federal Information Processing Standards Publications (FIPS PUB)**—Publications in this series collectively constitute the Federal Information Processing Standards Register. Register serves as the official source of information in the Federal Government regarding standards issued by NBS pursuant to the Federal Property and Administrative Services Act of 1949 as amended, Public Law 89-306 (79 Stat. 1127), and as implemented by Executive Order 11717 (38 FR 12315, dated May 11, 1973) and Part 6 of Title 15 CFR (Code of Federal Regulations).

**NBS Interagency Reports (NBSIR)**—A special series of interim or final reports on work performed by NBS for outside sponsors (both government and non-government). In general, initial distribution is handled by the sponsor; public distribution is by the National Technical Information Services (Springfield, Va. 22161) in paper copy or microfiche form.

## BIBLIOGRAPHIC SUBSCRIPTION SERVICES

The following current-awareness and literature-survey bibliographies are issued periodically by the Bureau:

**Cryogenic Data Center Current Awareness Service.** A literature survey issued biweekly. Annual subscription: Domestic, \$25.00; Foreign, \$30.00.

**Liquified Natural Gas.** A literature survey issued quarterly. Annual subscription: \$20.00.

**Superconducting Devices and Materials.** A literature survey issued quarterly. Annual subscription: \$30.00. Send subscription orders and remittances for the preceding bibliographic services to National Bureau of Standards, Cryogenic Data Center (275.02) Boulder, Colorado 80302.
