QC 100 U57 No.483 1977

#### NATIONAL BUREAU OF STANDARDS

The National Bureau of Standards<sup>1</sup> was established by an act of Congress March 3, 1901. The Bureau's overall goal is to strengthen and advance the Nation's science and technology and facilitate their effective application for public benefit. To this end, the Bureau conducts research and provides: (1) a basis for the Nation's physical measurement system, (2) scientific and technological services for industry and government, (3) a technical basis for equity in trade, and (4) technical services to promote public safety. The Bureau consists of the Institute for Basic Standards, the Institute for Materials Research, the Institute for Applied Technology, the Institute for Computer Sciences and Technology, the Office for Information Programs, and the Office of Experimental Technology Incentives Program.

THE INSTITUTE FOR BASIC STANDARDS provides the central basis within the United States of a complete and consistent system of physical measurement; coordinates that system with measurement systems of other nations; and furnishes essential services leading to accurate and uniform physical measurements throughout the Nation's scientific community, industry, and commerce. The Institute consists of the Office of Measurement Services, and the following center and divisions:

Applied Mathematics — Electricity — Mechanics — Heat — Optical Physics — Center for Radiation Research — Laboratory Astrophysics<sup>2</sup> — Cryogenics<sup>2</sup> — Electromagnetics<sup>2</sup> — Time and Frequency<sup>2</sup>.

THE INSTITUTE FOR MATERIALS RESEARCH conducts materials research leading to improved methods of measurement, standards, and data on the properties of well-characterized materials needed by industry, commerce, educational institutions, and Government; provides advisory and research services to other Government agencies; and develops, produces, and distributes standard reference materials. The Institute consists of the Office of Standard Reference Materials, the Office of Air and Water Measurement, and the following divisions:

Analytical Chemistry — Polymers — Metallurgy — Inorganic Materials — Reactor Radiation — Physical Chemistry.

THE INSTITUTE FOR APPLIED TECHNOLOGY provides technical services developing and promoting the use of available technology; cooperates with public and private organizations in developing technological standards, codes, and test methods; and provides technical advice services, and information to Government agencies and the public. The Institute consists of the following divisions and centers:

Standards Application and Analysis — Electronic Technology — Center for Consumer Product Technology: Product Systems Analysis; Product Engineering — Center for Building Technology: Structures, Materials, and Safety; Building Environment; Technical Evaluation and Application — Center for Fire Research: Fire Science; Fire Safety Engineering.

THE INSTITUTE FOR COMPUTER SCIENCES AND TECHNOLOGY conducts research and provides technical services designed to aid Government agencies in improving cost effectiveness in the conduct of their programs through the selection, acquisition, and effective utilization of automatic data processing equipment; and serves as the principal focus within the executive branch for the development of Federal standards for automatic data processing equipment, techniques, and computer languages. The Institute consist of the following divisions:

Computer Services — Systems and Software — Computer Systems Engineering — Information Technology.

THE OFFICE OF EXPERIMENTAL TECHNOLOGY INCENTIVES PROGRAM seeks to affect public policy and process to facilitate technological change in the private sector by examining and experimenting with Government policies and practices in order to identify and remove Government-related barriers and to correct inherent market imperfections that impede the innovation process.

THE OFFICE FOR INFORMATION PROGRAMS promotes optimum dissemination and accessibility of scientific information generated within NBS; promotes the development of the National Standard Reference Data System and a system of information analysis centers dealing with the broader aspects of the National Measurement System; provides appropriate services to ensure that the NBS staff has optimum accessibility to the scientific information of the world. The Office consists of the following organizational units:

Office of Standard Reference Data — Office of Information Activities — Office of Technical Publications — Library — Office of International Standards — Office of International Relations.

## National Bureau of Standards Publication 483

Nat. Bur. Stand. (U.S.), Spec. Publ. 483, 127 pages (Aug. 1977) CODEN: XNBSAV

U.S. GOVERNMENT PRINTING OFFICE WASHINGTON: 1977

## Acknowledgements

The editor appreciates the efforts of the following for their contributions to this Index: the American Nuclear Society (ANS) which initiated the idea; Mrs. Annette Rachlin, former Nuclear Coordinator with the American National Standards Institute (ANSI); Ms. Mary Monty, former Assistant Program Administrator, ANSI; Mrs. Mary Crehan Vaca, Assistant Program Administrator-Nuclear, ANSI, for her editorial review of the Index; Mrs. Ethelene Lewis, Library Technician, Standards Information and Analysis Section (SIAS), National Bureau of Standards (NBS), for keypunching the standards data; and Paul Majewski, Computer Specialist (SIAS), for programming assistance.

### Index of U.S. Nuclear Standards

## William J. Slattery, Editor

This Index contains the permuted titles of more than 1,200 nuclear and nuclear-related standards, specifications, test methods, codes and recommended practices published by 34 U.S. government agencies, technical societies, professional organizations and trade associations. Each title can be found under all the significant key words which it contains. These key words are arranged alphabetically down the center of each page together with their surrounding context. Each entry includes the date of publication or last revision, the standard number, an acronym designating the standards-issuing organization, any cross reference standard number, and price.

Key words: Engineering standards, index of; index of nuclear standards; nuclear standards; KWIC index of standards

#### 1. Introduction

#### 1.1. Background

In 1974, the American Nuclear Society (ANS) asked NBS to cooperate in the publication of a Key-Word-In-Context (KWIC) Index of U.S., foreign national and international standards. That Index would update the 1974 "Catalog of Nuclear Industry Standards" published by the American National Standards Institute (ANSI). After a series of meetings and correspondence between NBS and ANS, and NBS and ANSI, NBS decided it would compile the present index with ANSI as the co-sponsoring organization.

An earlier publication, the Compilation of Nuclear Standards, was a project of the Nuclear Safety Information Center (NSIC) and was prepared under the auspices of ANSI's Nuclear Technical Advisory Board (NTAB). That compilation, which was published by Oak Ridge National Laboratory (ORNL), consisted of two parts, one on U.S. activities in 1973 and the other on foreign and international activities in 1972. Each part included information on committee activities and projects, and a KWIC Index of the standards themselves. The ORNL compilation was discontinued upon the recommendation of the NTAB Executive Committee and the USAEC Standards Program because a new document was available to replace it. The new document, the "Catalog

of Nuclear Industry Standards," referenced above, was also prepared under the NTAB and published at ANSI. The catalog greatly expanded the information contained in the original compilation and employed subject headings rather than a KWIC index.

#### 1.2. Scope

This Index, which includes only U.S. industry and government standards, is designed to serve as an interim reference tool for the nuclear community. The standards are current as of July 31, 1976. NBS plans to format ANSI's Catalog of Nuclear Standards into a more comprehensive Key-Word-Out-of-Context (KWOC) Index. Both NBS and ANSI hope that this present Index will meet the needs for the immediate future of all who are interested in nuclear standards. NBS plans to prepare a separate Index of foreign national and international standards. Please send all comments on this index to the Editor, William J. Slattery, National Bureau of Standards, Room B-162, Technology Building, Washington, D.C. 20234, or Dr. Irving G. Young, Program Administrator-Nuclear, American National Standards Institute, 1430 Broadway, New York, New York 10018.

#### 2. How To Use The KWIC Index

#### 2.1. Index Entries

An index entry contains at least four items of information, and may contain as many as eight, e.g.,:

(4) (5) (8)		(1)	(2)	(3)	(6)	(7)
d1890 1965 (1971) \$1.75	5 Beta Particle	Radioactivity of Water, Method of T	est for (1973)	ASTM	ANSI	N151
	Beta Particle	Radioactivity of Water, Test for (196	6) (R1971) \$	1.75	ASTM	D1890
	Alpha Particle	Radioactivity of Water, Test for (196	6) (R1971) \$	1.75	ASTM	D1943
ogical Applications (1961	i) \$3.00 a Manual of	Radioactivity Procedures (A) Stds. (	B) Medical an	d Biol	NCRP	R28
chemical, Mass Spec	trometric, Spectrochemical, Nuclear and	Radiochemical Analysis of Nuclear C	rade Plutoniu	m Metal	ANSI	N572

(1) Title

(2) Date of Approval

(3) Acronym for issuing organization(4) Standard no. of issuing organization

(5) Date of Standard of issuing organization

(6) Acronym of organization from which available

(7) Standard no. of organization from which available

(8) Price

Occasionally both ends of a title will be truncated. When this condition occurs, the virgule will be omitted. Missing portions of a title can be found by locating in the Index one or more of the title's other key words.

RG 6.7

D2460

N161

#### SAMPLE ENTRIES—

ement of Patients Who Have Received Therapeutic Amounts of Support a Rule Making Petition Seeking an Exemption for A 1970 \$1.75 Radionuclides of Radionuclides of Radionuclides (1970) \$4.00 Precautions in the Manag Radionuclide-Containing Product (Revision 1, 6/76) /O NRC Radium in Water, Method of Test for (1973) ASTM D2460-ANSI Radium in Water, Test for (1970) \$1.75 ASTM

#### 2.2. Reading the KWIC Index

The title of each standard can be found under all the significant key words which it contains. These key words are arranged alphabetically down the center of each page together with their surrounding context. Each such permuted title is assigned only one line per key word entry in the Index; therefore, titles longer than one line have been cut by the computer. This truncation is indicated by a virgule (/) at the point where the title was cut.

All standards in this index should be ordered from the organizations listed in section 3.2., except standards with CFR (Code of Federal Regulations) as part of their designation, for example, USCG 46 CFR 146. This designation means that the standard was prepared by the U.S. Coast Guard, appears in Title 46, Code of Federal Regulations, Part 146, and is available in that Title for the price shown from the Superintendent of Documents, Government Printing Office, Washington, D.C. 20402. In some cases, it may be possible to obtain such standards directly from the responsible organization.
