U.S. DEPARTMENT OF COMMERCE/National Bureau of Standards

Fifth Annual Report and **Directory of Accredited** Laboratories

100

NO.636

1932

NATIONAL BUREAU OF STANDARDS

The National Bureau of Standards' was established by an act of Congress on March 3, 1901. The Bureau's overall goal is to strengthen and advance the Nation's science and technology and facilitate their effective application for public benefit. To this end, the Bureau conducts research and provides: (1) a basis for the Nation's physical measurement system, (2) scientific and technological services for industry and government, (3) a technical basis for equity in trade, and (4) technical services to promote public safety. The Bureau's technical work is performed by the National Measurement Laboratory, the National Engineering Laboratory, and the Institute for Computer Sciences and Technology.

THE NATIONAL MEASUREMENT LABORATORY provides the national system of physical and chemical and materials measurement; coordinates the system with measurement systems of other nations and furnishes essential services leading to accurate and uniform physical and chemical measurement throughout the Nation's scientific community, industry, and commerce; conducts materials research leading to improved methods of measurement, standards, and data on the properties of materials needed by industry, commerce, educational institutions, and Government; provides advisory and research services to other Government agencies; develops, produces, and distributes Standard Reference Materials; and provides calibration services. The Laboratory consists of the following centers:

Absolute Physical Quantities² — Radiation Research — Chemical Physics — Analytical Chemistry — Materials Science

THE NATIONAL ENGINEERING LABORATORY provides technology and technical services to the public and private sectors to address national needs and to solve national problems; conducts research in engineering and applied science in support of these efforts; builds and maintains competence in the necessary disciplines required to carry out this research and technical service; develops engineering data and measurement capabilities; provides engineering measurement traceability services; develops test methods and proposes engineering standards and code changes; develops and proposes new engineering practices; and develops and improves mechanisms to transfer results of its research to the ultimate user. The Laboratory consists of the following centers:

Applied Mathematics — Electronics and Electrical Engineering² — Manufacturing Engineering — Building Technology — Fire Research — Chemical Engineering²

THE INSTITUTE FOR COMPUTER SCIENCES AND TECHNOLOGY conducts research and provides scientific and technical services to aid Federal agencies in the selection, acquisition, application, and use of computer technology to improve effectiveness and economy in Government operations in accordance with Public Law 89-306 (40 U.S.C. 759), relevant Executive Orders, and other directives; carries out this mission by managing the Federal Information Processing Standards Program, developing Federal ADP standards guidelines, and managing Federal participation in ADP voluntary standardization activities; provides scientific and technological advisory services and assistance to Federal agencies; and provides the technical foundation for computer-related policies of the Federal Government. The Institute consists of the following centers:

Programming Science and Technology - Computer Systems Engineering.

²Some divisions within the center are located at Boulder, CO 80303.

¹Headquarters and Laboratories at Gaithersburg, MD, unless otherwise noted; mailing address Washington, DC 20234.

U.S. GOVERNMENT PRINTING OFFICE WASHINGTON: 1982

PREFACE

This fifth annual report summarizes the activity of the National Voluntary Laboratory Accreditation Program (NVLAP) of the U.S. Department of Commerce (DOC) for calendar year 1981 and provides information about laboratories accredited under the program.

NVLAP is intended to examine the professional and technical competence of public and private testing laboratories at their request. DOC will grant or deny accreditation to testing laboratories based on an assessment of their competence to perform certain test methods. Actions undertaken in this program are specified by formal published procedures.

NVLAP benefits both laboratories and their users. Laboratory users have assurance that laboratories have the personnel, equipment, procedures, and competence to provide reliable test data. Laboratories are encouraged to raise their level of performance and receive recognition of their competence. NVLAP accreditation may reduce the number of audits required by other accrediting bodies. NVLAP can be used as an integral part of product certification programs.

Part I

Report of Program Activities

1. EXECUTIVE SUMMARY

The National Voluntary Laboratory Accreditation Program (NVLAP) undertook significant new activities during 1981, while maintaining last year's number of accreditation actions. At the end of 1981, 94 laboratories were accredited, including 39 laboratories under the laboratory accreditation program (LAP) for thermal insulation materials (the "Insulation LAP"), 42 laboratories under the LAP for freshly mixed field concrete (the "Concrete LAP"), and 23 laboratories under the LAP for carpet (the "Carpet LAP"). (Note that some laboratories are accredited under more than one LAP.)

Five new LAPs are under development or are being considered for development to accredit:

- Processors of personnel radiation dosimeters to serve the needs of the U.S. Nuclear Regulatory Commission;
- (2) Laboratories that test solid fuel room heaters;
- (3) Laboratories that test windows and doors (Note that (2) and (3) serve Federally insured housing programs of the U.S. Department of Housing and Urban Development);
- (4) Laboratories that provide acoustical testing services (LAP requested by an acoustical materials manufacturer); and
- (5) Laboratories that provide electromagnetic calibration services (LAP requested by a small electronics manufacturer).

A total of \$741,000 was allocated for NVLAP activities for fiscal year 1981, down \$68,000 from fiscal year 1980. During the past year, staffing level was equivalent to 13 full-time persons.

Discussions began with the National Association of Testing Authorities (Australia's national laboratory accreditation system) on a possible bilateral agreement for reciprocal recognition of each other's accredited laboratories. Bilateral agreements with other countries' accreditation systems are under consideration by DOC as a result of the activities of the International Laboratory Accreditation Conference. Bilateral agreements such as these are expected to play an important role in fostering international trade.

A workshop held in November provided a public forum for the expression of views on what the appropriate roles of the government and the private sector should be with respect to laboratory accreditation in the United States. An analysis of the issues raised during and pursuant to the workshop is available as NBS Special Publication 632, issued in March 1982.

The NVLAP Procedures (15 CFR Parts 7a, 7b, and 7c) were significantly amended in July 1981. The amendment streamlines NVLAP by adding the accreditation criteria to the NVLAP procedures, eliminating separate criteria committees for each LAP in favor of one advisory committee, and providing for workshops to address technical issues for administering newly established LAPs.

The Appendices to Part I of this report summarize the current NVLAP accreditation process, describe the steps involved in requesting a LAP, and list the major publications prepared by the NVLAP staff during 1981. Part II of this report is a directory of all laboratories accredited under NVLAP. The accredited laboratories are listed alphabetically, and are cross referenced by test method for each LAP and by State.

2. ESTABLISHED LABORATORY ACCREDITATION PROGRAMS

Accreditation Actions.

NVLAP maintained last year's number of accreditation actions during 1981. Nine laboratories were newly accredited and 85 laboratories renewed their accreditation. An alphabetical listing of all accredited laboratories and the test methods for which each is accredited is provided in Part II, Section 1 of this report. Four laboratories voluntarily terminated their accreditation. At the end of the year, evaluations for renewal of accreditation for four laboratories, and evaluations for initial accreditation of thirteen new applicants were in progress.

Insulation LAP.

The LAP for thermal insulation materials has 57 test methods for which accreditation may be sought. As of December 31, 1981, 39 laboratories were accredited to perform one or more of these test methods. Seven regularly scheduled on-site visits and six monitoring visits to the laboratories were conducted during the year. The third through fifth rounds of proficiency testing for insulation test methods involving thermal conductivity, settled density, and

flammability properties were completed. The sixth round is under way. Proficiency testing results are published in "NVLAP Tech Briefs" (see Appendix 1 for publication dates).

Concrete LAP.

Accreditation may be sought for up to seven test methods involving freshly mixed field concrete. The methods are arranged into two groups which address (1) field testing and (2) laboratory and field testing. In addition, a single optional test method may be requested with either of the two groups. As of the end of 1981, 42 laboratories were accredited under the Concrete LAP. Twenty-nine regularly scheduled on-site visits and six monitoring visits to the laboratories were conducted during the year. Laboratories continued to submit data as part of the within-lab and between-lab proficiency testing programs.

Carpet LAP.

The LAP for carpet has 12 test methods for which accreditation may be sought. As of December 31, 1981, 23 laboratories were accredited for one or more of these test methods. HUD is using test results produced by these laboratories as part of its carpet certification program. One regularly scheduled onsite visit and six monitoring visits to the laboratories were conducted during the year. The first through third rounds of proficiency testing for carpet test methods involving colorfastness, pile weight, pile thickness, strength, and flammability properties were completed. The fourth round is under way.

3. LAPS UNDER DEVELOPMENT OR BEING CONSIDERED

Personnel Radiation Dosimetry Processors

The U.S. Nuclear Regulatory Commission (NRC) and DOC signed an interagency agreement on July 17, 1981, to develop a LAP for processors of personnel dosimeters that measure ionizing radiation received by occupationally exposed personnel. This LAP will examine the competence of personnel dosimetry processors (i.e., laboratories) by evaluating the results of their participation in proficiency testing against a Health Physics Society standard and will evaluate, through on-site assessments, elements of quality assurance expected of competent processors of personnel dosimeters. NVLAP accreditation will be accepted by NRC as a demonstration of this competency. The technical details for administering this LAP are being developed. A notice announcing the formal establishment of this LAP is expected during 1982.

Solid Fuel Room Heaters

DOC is proceeding with a U.S. Department of Housing and Urban Development (HUD) request for a

LAP to accredit laboratories that test solid fuel room heaters (46 FR 17073-17074). A public workshop to develop the technical details for administering this LAP was held October 13-14, 1981. The workshop resolved the technical details except for the proficiency testing requirements which are being studied further. A notice announcing the formal establishment of this LAP was published during the spring of 1982.

Acoustical Testing Services

On October 19, 1981, DOC published a final finding of need to accredit laboratories that provide acoustical testing services (46 FR 51267-51271). Public workshops to develop the technical details for administering this LAP were held on February 23-24 and March 10-11, 1982.

Electromagnetic Calibration Services

A final finding of need to accredit laboratories that provide electromagnetic calibration services covering power and attenuation measurements was published on January 14, 1982 (47 FR 2146-2148).

Windows and Doors

On December 16, 1981, HUD requested a LAP to accredit laboratories that test windows and doors. The request, submitted in accordance with NVLAP Part 7b Procedures (15 CFR Part 7b), was published in the *Federal Register* for public comment (47 FR 3025-3026).

4. ADMINISTRATION AND OTHER ACTIVITIES

NVLAP operates under the legal authority vested in the Secretary of Commerce by 15 U.S.C. 272 and Reorganization Plan No. 3 of 1946, Part VI. Rules and regulations governing NVLAP (NVLAP Procedures) are found under Title 15, Parts 7a, 7b, and 7c of the Code of Federal Regulations. The Secretary has delegated the operational responsibility for NVLAP to the Director of the National Bureau of Standards.

Resources.

For fiscal year 1981, beginning October 1, 1980, \$741,000 was allocated for NVLAP activities. For fiscal year 1982, beginning October 1, 1981, \$740,000 was allocated. During the past year staffing level was equivalent to 13 full-time persons. A total of \$112,000 in fees was recovered in fiscal year 1981 from laboratories seeking accreditation to offset the costs associated with their evaluation and accreditation. As more laboratories participate, a larger portion of the program will be funded from fees rather than from appropriated funds.

International Interest in Laboratory Accreditation.

Laboratory accreditation systems are in operation or are being developed in other countries. As a result,

an effort is being made to involve government participation in international discussions of laboratory accreditation systems to facilitate international trade opportunities. The International Laboratory Accreditation Conference (ILAC) is an informal assemblage of approximately 42 nations and 12 international organizations whose overall purpose and objective is to promote the development of national systems for accrediting laboratories, the employment of harmonized accreditation criteria, and the development of bilateral or multilateral agreements which would encourage importers to accept the results of tests and data made by laboratories which have been accredited under a recognized laboratory accreditation system in exporting nations. ILAC has held five annual meetings in an attempt to develop mechanisms to provide mutual recognition of testing capabilities among countries. The fifth ILAC conference was held in Mexico City during the last week of October 1981. Numerous committee meetings also have been held. A worldwide directory of laboratory accreditation systems has been developed by ILAC. Guidelines for system operation, equipment calibrations, and proficiency testing are being developed. Legal impediments to the recognition of foreign laboratories have been identified. Future ILAC efforts will focus on bilateral agreements to accept test data from accredited laboratories between countries. These activities are particularly relevant to the General Agreement on Tariffs and Trade (GATT) to which the United States is a signatory. One of GATT's objectives is to minimize technical barriers to trade, such as requirements for testing in importing countries.

NVLAP staff has held periodic discussions about acceptance of test data from accredited laboratories with representatives of foreign national laboratory accreditation systems and by the end of the year was considering a bilateral agreement with the National Association of Testing Authorities (Australia's national laboratory accreditation system). Bilateral agreements can play an important role in fostering international acceptance of U.S. test data.

Workshop on Future Directions of Laboratory Accreditation

A two-day public workshop concerning present status and future direction of laboratory accreditation activities in the United States was held November 16-17, 1981, at the National Bureau of Standards in Gaithersburg, Maryland. The workshop provided a public forum for the expression of views on what

the appropriate roles of the government and private sector should be with respect to laboratory accreditation in the United States. The workshop program was developed around the following key issues:

- Whether the DOC should cease its present role and substitute in its place a program to accredit organizations which, in turn, would accredit private sector testing laboratories.
- 2) What, if any, additional measures should be taken to assure that an effective U.S. presence remains in international laboratory accreditation activities, including bilateral arrangements.
- 3) What action, if any, can be taken by the private sector and/or the government to reduce the proliferation of inspections and paperwork arising from duplicative accreditation activities within the United States.

The workshop was scheduled in response to requests from the American Association for Laboratory Accreditation and the American Council of Independent Laboratories to amend the NVLAP Procedures by transforming NVLAP from a system that directly accredits laboratories to a system that would accredit organizations which, in turn, would accredit laboratories. An analysis of the issues raised during and pursuant to the workshop is available as NBS Special Publication 632, issued in March 1982.

New Amendment, July 1981.

An amendment to the NVLAP Procedures which streamlines the program was published on July 17, 1981 (46 FR 37029-37040). This amendment revises the Procedures by:

- 1) Adding the current NVLAP accreditation criteria to the NVLAP Procedures in the Code of Federal Regulations (15 CFR Parts 7a, 7b, and 7c);
- Eliminating separate criteria committees for each LAP in favor of one advisory committee to advise the Department on program and policy issues concerning NVLAP and laboratory accreditation; and
- Providing informal public workshops to develop technical issues for administering newly established LAPs.

Appendix 1 summarizes the current accreditation process and Appendix 2 describes the steps now involved in requesting a LAP under these amended NVLAP Procedures.

Appendix 1:

Current Accreditation Process

Requesting NVLAP Accreditation. NVLAP accreditation is offered only for those test methods identified under the established LAPs. A request for a NVLAP application for accreditation should be addressed to the Manager, Laboratory Accreditation, National Bureau of Standards, TECH B06, Washington, DC 20234; telephone: (301) 921-2368.

Application Package. The application package includes an application form with a test method selection list and fee schedule, and a guide to the requirements for accreditation.

Fees. All fees must be paid before any initial decision of accreditation is made. Failure to pay renewal fees on a timely basis will lead to automatic expiration of accreditation at the end of the laboratory's current accreditation period.

Enrollment. After payment of the required fees, the laboratory is scheduled for an on-site laboratory visit and is notified of any additional written information which must be supplied, and of any applicable proficiency testing requirements which must be completed, for the evaluation.

Basic Conditions for Accreditation. In order for a laboratory to be accredited under the NVLAP procedures, it shall agree in writing to the following basic conditions:

- (1) Be examined and audited, initially and on a continuing basis;
- (2) Pay accreditation fees and charges;
- (3) Avoid reference by itself and forbid others utilizing its services from referencing its NVLAP accredited status in consumer media and in product advertising or on product labels, containers and packaging or the contents therein, or in any other way which might convey the concept of product certification by DOC (Note: A NVLAP accredited laboratory may advertise its accredited status on its letterhead, brochures, and test reports as well as in trade publications and other laboratory services advertising media.);
- (4) Maintain compliance with applicable general and specific criteria and with applicable requirements of the NVLAP Procedures (15 CFR Parts 7a, 7b, and 7c);
- (5) Participate in proficiency testing that may be required for attaining or maintaining accreditation.

Criteria. The NVLAP criteria for evaluating laboratories, which are described in sections 7a.19—7a.30 of the NVLAP Procedures (15 CFR Part 7a), address a laboratory's organizational structure, technical management, professional and ethical business

practices, and system for assuring the quality of test results. The criteria also address aspects of a laboratory directly related to the reliable performance of each test method for which the laboratory desires accreditation, including staff competence and training, facilities and equipment, test plans, calibration procedures, record keeping, data handling procedures, and quality control checks and audits.

On-site Visits. Regularly scheduled on-site visits are conducted to assess a laboratory's compliance with the NVLAP criteria. In addition, monitoring visits of limited scope are used to assure that accredited laboratories continue to comply with the criteria or to resolve any testing problems that an accredited laboratory may appear to have. The on-site assessor will conduct an exit interview with the laboratory's management at the conclusion of an on-site visit to summarize his or her findings. A written report is prepared by the NVLAP assessor after each on-site visit. Each laboratory is notified when deficiencies are identified and is given an opportunity to correct them before formal accreditation recommendations are prepared or any action to revoke accreditation is commenced. The laboratory shall permit the on-site assessor to review and examine any records or other documents required by the criteria. Also, if a hearing under 5 U.S.C. 556 has been instituted under the NVLAP Procedures, the laboratory shall permit DOC personnel to review and copy any records or other documents required by the criteria. Failure of the laboratory to cooperate with the on-site assessor will be grounds for adverse accreditation action.

Proficiency Testing. Proficiency testing is an integral part of the NVLAP accreditation process. Of utmost importance to the user of laboratory services is information as to whether or not a laboratory consistently obtains reliable results. While the existence of facilities, equipment, and personnel which meet the criteria establish a laboratory's overall capability to obtain good results, for certain test methods an analysis of actual test results is also necessary to determine if the overall capability does in fact produce the desired results. A laboratory's failure to participate fully in the conduct of required proficiency testing may also be grounds for adverse accreditation action.

Evaluation and Recommendations. A team of evaluators composed primarily of peers in the applicable testing areas uses the following inputs to review each laboratory:

- (1) Written information supplied by the laboratory;
- (2) Results of proficiency testing; and
- (3) Written reports of on-site visits to the laboratory.

If deficiencies are identified, the laboratory is given written notification of them, and a reasonable period (ordinarily 30 days) in which to correct or resolve them. After further review of the above inputs and the laboratory's response to any notification of deficiencies, the team will make an accreditation recommendation for the laboratory.

Accreditation Decision. Based on these recommendations, a decision is made whether to grant or deny initial accreditation for new laboratories or renewal for previously accredited laboratories. When decided, the laboratory is notified by letter of its accreditation status. If accreditation denial is proposed, the notification states the reason.

Appeals. A laboratory for which denial of accreditation is proposed has 30 days from the date of receipt of the notification to request a hearing. The notification will identify to whom a request for a hearing should be sent. If a hearing is not requested, the denial becomes final. If a hearing is requested, it is held pursuant to 5 U.S.C. 556.

Accreditation Period. Laboratories are granted accreditation for one year with individual laboratory anniversary dates occurring on the first of January, April, July, or October. A laboratory will be assigned only one anniversary date which will be closest to the time that its evaluation is completed and which assures that the accreditation period is a minimum of one year.

Accreditation Renewal. Each accredited laboratory is sent a renewal application form before its current accreditation expires (anniversary date). The lead time will be sufficient to complete the evaluation for renewal for the following year. The laboratory may use the renewal application form to add or drop test methods from its current accreditation.

Termination. Any accredited laboratory may voluntarily terminate its accreditation at any time. This option may be used by a laboratory for any reason.

Revocation. If the Secretary of Commerce (or designee) finds that an accredited laboratory has violated the terms of its accreditation, the laboratory may be notified of the proposed revocation of its accreditation, after a thorough consultation. As in the case of a denial, the laboratory has 30 days in which to appeal a proposed revocation by requesting a hearing. A proposed revocation will identify to whom a request for a hearing should be sent. If the hearing is not requested, the revocation becomes final. If a hearing is requested, it is held pursuant to 5 U.S.C. 556.

Public Notification. Accreditation actions are published in the *Federal Register* within 30 days of such action and in NVLAP quarterly and annual reports.

Compliance with Existing Laws. NVLAP accreditation does not relieve the laboratories from the necessity of observing and complying with existing Federal, State, and local statutes, ordinances, or regulations that may be applicable to its operations, including consumer protection and antitrust laws.

Appendix 2:

Requesting a LAP

Part 7a Procedures. The major steps involved in establishing a LAP under the Part 7a procedures are:

- (1) DOC receives a formal request to establish a LAP;
- (2) DOC contacts other parties which may have an interest in or be affected by the proposed LAP;
- (3) DOC decides on the priority of the request;
- (4) DOC publishes in the FEDERAL REGISTER for public comment a preliminary finding of need for the proposed LAP;
- (5) If there is substantial support for establishing the LAP, DOC publishes a final finding of need. If not, a withdrawal of the preliminary finding is published;
- (6) Workshops are arranged to receive expert advice needed to implement the LAP;
- (7) DOC publishes in the FEDERAL REGISTER a notice of the establishment of the LAP and invites interested laboratories to apply for accreditation.

Part 7b and 7c Procedures. Similarly, for the optional procedures for use by Federal agencies (15 CFR Part 7b) and the optional procedures for use by private sector organizations (15 CFR Part 7c), the major steps are:

- (1) A Federal agency (Part 7b) or qualified private sector organization (Part 7c) requests a LAP and cites the basis upon which it determined the need;
- (2) DOC contacts other parties which may have an interest in or be affected by the proposed LAP:
- (3) DOC decides on the priority of the request;
- (4) DOC publishes in the *FEDERAL REGISTER* the request for the LAP asking that any comments regarding the need for the LAP be directed to the requestor with a copy forwarded to DOC;
- (5) If after a 60 day period both DOC and the requestor agree to proceed, workshops may be arranged to acquire expert advice needed to implement the LAP; and
- (6) DOC publishes in the FEDERAL REGISTER a notice of the establishment of the LAP and invites interested laboratories to apply for accreditation.

Section 2

INDEX OF TEST METHODS AND THE LABORATORIES ACCREDITED FOR EACH TEST METHOD

The following index provides a cross reference of accredited laboratories with test methods under each LAP. Each page number under each test method refers to the page number in Section 1 of this Directory in which, for each laboratory, the name, address, primary contact, phone number, and list of accredited test methods are identified.

INSULATION LAP—CORROSIVENESS TEST METHODS

01/CO1 ASTM C739 Corrosiveness; cellulosic fiber (loose-fill) (para. 7.7 in 77 version) 30, 39

01/C02 HH-I-515 Corrosiveness; cellulosic fiber (loose-fill) (para. 4.8.5 in D version, Amendment 1) 13, 14, 15, 18, 19, 23, 25, 30, 37, 38, 39, 42, 43

INSULATION LAP-DIMENSIONS, STABILITY, AND DENSITY PROPERTIES TEST METHODS

01/D01 ASTM C136 Sieve or screen analysis

13, 39

01/D02 ASTM C167 Thickness and density; blanket and batt

13, 27, 29, 30, 32, 32, 32, 32, 33, 33, 33, 39

01/D03 ASTM C209 Thickness; board (cellulosic fiber) (para. 6 in 72 version)

25, 27, 30, 39

01/D04 ASTM C209 Water absorption, 2 hour; board (cellulosic fiber) (para. 13 in 72 version)

25, 27, 30, 39

O1/DO5 ASTM C209 Water absorption, 24 hour; board (cellulosic fiber) (para. 13 in 72 version by D1037; para. 100-106 in 72 version)

25, 27, 30, 39

01/D06 ASTM C209 Linear expansion; board (cellulosic fiber) (para. 13 in 72 version by D1037; para. 107-110 in 72 version)

25, 27, 30, 39

01/D07 ASTM C272 Water absorption; core materials

18, 30

01/D08 ASTM C302 Density; preformed pipe insulation

13, 21, 24, 27, 30, 39

01/D09 ASTM C303 Density; preformed block insulation

13, 24, 25, 27, 30, 32, 32, 33, 33, 33, 39

01/D10 ASTM C355 Water vapor transmission; thick materials; desiccant method

18, 24, 27, 30, 33, 39, 42, 43, 43

01/D11 ASTM C356 Linear shrinkage; soaking heat; preformed high temperature insulation 27, 30

01/D12 ASTM C411 Hot-surface performance; high temperature insulation 24, 27, 30

01/D13 ASTM C519 Density; loose-fill (fibrous)

13, 27, 29, 30, 39, 41

01/D14 ASTM C520 Density; granular loose-fill

27, 39

01/D15 ASTM D756 Weight and shape changes; accelerated service (proc. A); plastics

24, 30

- 01/D16 ASTM D756 Weight and shape changes; accelerated service (proc. B); plastics 24, 30
- 01/D17 ASTM D756 Weight and shape changes; accelerated service (proc. E); plastics 24, 30
- 01/D18 ASTM D1622 Apparent density; rigid cellular plastics 18, 24, 25, 30, 30, 39, 39, 42, 43, 43
- 01/D19 ASTM D2126 Response to thermal and humid; aging (proc. B); rigid cellular plastics 18, 24, 25, 30, 30, 43
- 01/D20 ASTM D2126 Response to thermal and humid; aging (proc. D); rigid cellular plastics 18, 24, 25, 30, 30
- 01/D21 ASTM D2126 Response to thermal and humid; aging (proc. E); rigid cellular plastics 18, 24, 25, 30, 30, 42
- 01/D22 ASTM D2126 Response to thermal and humid; aging (proc. F); rigid cellular plastics 18, 24, 25, 30
- 01/D23 ASTM D2842 Water absorption; rigid cellular plastics 18, 24, 25, 30, 33, 43
- 01/D24 ASTM C739 Moisture absorption; cellulosic fiber (loose-fill) (para. 7.5 in 77 version) 30, 39
- 01/D25 HH-I-515 Moisture absorption; cellulosic fiber (loose-fill) (para. 4.8.3 in D version, Amendment 1) 13, 14, 15, 18, 19, 23, 30, 39, 43
- 01/D26 HH-I-515 Settled density; cellulosic fiber (loose-fill) (para. 4.8.1 in D version, Amendment 1) 13, 14, 15, 18, 19, 23, 25, 30, 37, 38, 39, 41, 42, 43

INSULATION LAP—FIRE PROPERTIES TEST METHODS

- 01/F01 ASTM D777 (as modified by HH-B-100B) Flammability; paper and paperboard 13, 27, 30
- 01/F02 ASTM E84 Surface burning characteristics; building materials 19, 22, 27, 30, 39, 41, 41, 42
- 01/F05 ASTM E136 Behavior of Materials in a Vertical Tube Furnace 13, 23, 27, 30, 42
- 01/F06 ASTM C739 Flame resistance permanency; cellulosic fiber (loose-fill) (para. 10.4 in 77 version)
- 01/F07 HH-I-515 Critical radiant flux; radiant panel (cellulosic fiber, loose-fill) (para. 4.8.7 in D version, Amendment 1)
 - 13, 14, 15, 19, 22, 23, 25, 30, 37, 38, 39, 41, 41, 42
- 01/F08 HH-I-515 Smoldering combustion; cellulosic fiber (loose-fill) (para. 4.8.8 in D version, Amendment 1) 13, 14, 15, 19, 23, 25, 30, 37, 38, 39, 41, 43

INSULATION LAP—STRENGTH PROPERTIES TEST METHODS

- 01/S01 ASTM C165 Compressive properties; thermal insulation (proc. A) 13, 18, 25, 27, 30
- 01/S02 ASTM C203 Breaking load/flexural strength; preformed block insulation 18, 25, 27, 30, 39, 43
- 01/S03 ASTM C209 Transverse strength; board (cellulosic fiber) (para. 9 in 72 version) 25, 27, 30, 39
- 01/S04 ASTM C209 Deflection at specified load; board (cellulosic fiber) (para. 10 in 72 version) 25, 27, 30, 39

- 01/S05 ASTM C209 Tensile strength; parallel to surface; board (cellulosic fiber) (para. 11 in 72 version) 25, 27, 30, 39
- 01/S06 ASTM C209 Tensile strength; perpendicular to surface (para. 12 in 72 Version) 25, 27, 30, 39
- 01/S07 ASTM C273 Shear test; sandwich construction 25, 30, 30, 43
- 01/S08 ASTM C446 Breaking load/modulus of rupture; preformed pipe insulation 13, 27, 30, 39
- 01/S09 ASTM D781 Puncture test; paperboard and fiberboard 13, 27, 30
- 01/S10 ASTM D828 Tensile breaking strength; paper and paperboard 13, 27, 30
- **01/S11 ASTM D1621 Compressive properties; rigid cellular plastics (proc. A-crosshead)** 18, 24, 25, 30, 30, 33, 39, 42, 43

INSULATION LAP—THERMAL PROPERTIES TEST METHODS

- **01/T01** ASTM C177 Thermal transmission properties; low-temperature guarded hot plate 13, 18, 18, 21, 25, 26, 27, 27, 30, 35
- **01/T04 ASTM C236 Thermal conductance; guarded hot box** 12, 13, 18, 18, 25, 27, 30, 35, 35, 39
- **01/T05 ASTM C335 Thermal conductivity**; **pipe insulation** 13, 18, 25, 26, 27, 27, 30
- **01/T06 ASTM C518 Thermal transmission properties; heat flow meter** 12, 13, 15, 18, 18, 23, 24, 25, 27, 29, 30, 30, 32, 32, 32, 33, 33, 33, 35, 37, 39, 41, 43
- 01/T09 ASTM C653 Thermal resistance (rec. practice); blanket (mineral fiber) 13, 23, 27, 29, 30, 39
- 01/T10 ASTM C687 Thermal resistance (rec. practice); loose-fill (fibrous) 13, 27, 29, 30, 39

INSULATION LAP—VAPOR BARRIERS PROPERTIES TEST METHODS

- 01/V02 ASTM D591 Starch in paper; qualitative test 30, 39
- 01/V03 ASTM D2020 Mildew (fungus) resistance; paper and paperboard 30, 39
- 01/V04 ASTM E96 Water vapor transmission; thin sheets (proc. A) 13, 25, 27, 30, 42, 43
- 01/V05 HH-I-515 Fungus; cellulosic fiber (loose-fill) (para. 4.8.6 in D version, Amendment 1) 23, 30, 37, 39, 43
- 01/V06 HH-I-515 Starch; cellulosic fiber (loose-fill) (para. 4.8.9 in D version, Amendment 1) 14, 15, 18, 19, 23, 30, 39, 42, 43

CONCRETE LAP TEST METHODS

- 02/M01 ASTM C31 Making and Curing Concrete Test Specimens in the Field
- 02/M03 ASTM C172 Sampling Fresh Concrete
- 02/P01 ASTM C143 Slump of Portland Cement Concrete
- 02/W01 ASTM C138 Unit Weight, Yield, and Air Content (Gravimetric) of Concrete
- 02/A01 ASTM C231 Air Content of Freshly Mixed Concrete by the Pressure Method
 7, 7, 8, 9, 10, 11, 11, 12, 13, 16, 17, 17, 19, 20, 21, 21, 21, 22, 23, 26, 26, 26, 28, 29, 29, 33, 34, 34, 35, 35, 36, 36, 36, 37, 37, 38, 39, 44, 44, 45, 45, 45

02/S01 ASTM C39 Compressive Strength of Cylindrical Concrete Specimens

7, 7, 8, 9, 10, 11, 11, 11, 12, 13, 16, 16, 17, 17, 19, 20, 21, 21, 21, 22, 23, 26, 26, 28, 29, 29, 29, 33, 34, 34, 35, 35, 36, 36, 36, 37, 37, 38, 39, 44, 45, 45, 45

02/A02 ASTM C173 Air Content of Freshly Mixed Concrete by the Volumetric Method

7, 8, 8, 9, 10, 11, 11, 11, 16, 17, 21, 21, 21, 22, 23, 26, 29, 29, 29, 33, 34, 34, 35, 35, 36, 36, 36, 37, 37, 38, 39, 44, 45, 45, 45

CARPET LAP TEST METHODS

03/C01 AATCC 16E Colorfastness to Light (Xenon Arc)

8, 9, 10, 10, 12, 14, 15, 15, 17, 19, 20, 24, 34, 38, 41, 42, 44, 46

03/C02 AATCC 8 Colorfastness to Crocking

8, 9, 10, 10, 12, 14, 15, 15, 17, 19, 20, 24, 24, 28, 41, 42, 44, 46

03/D01 ASTM D418 Methods of Testing Woven and Tufted Pile Floor Coverings: Pile Weight—Uncoated (Para. 10-19); Pile Weight—Coated (Para. 20-29) as modified by UM 44C; Pile Thickness (Para. 30-36); Tuft Height—(Para. 37-45) as modified by UM 44C

8, 9, 10, 10, 12, 14, 15, 15, 17, 19, 20, 24, 34, 38, 41, 42, 44, 46

03/D02 DDD-C-95A Shrinkage

8, 9, 10, 10, 12, 14, 15, 15, 17, 19, 20, 24, 24, 28, 41, 42, 44, 46

03/S01 ASTM D1335 Tuft Bind of Floor Coverings (Federal Test Method: Standard 191-5100, Textile Test Method—Breaking Strength; Standard 191-5950, Textile Test Method—Delamination

8, 9, 10, 10, 12, 14, 15, 15, 17, 19, 20, 24, 34, 38, 41, 42, 44, 46

03/E01 AATCC 134/CRI 102 Electrostatic Propensity of Carpets 9, 10, 14, 24

03/F01 ASTM E84 Surface Flammability (Carpet)

15, 19, 22, 35, 39, 41, 42

03/F02 UL 992 Surface Flammability

35, 39

03/F03 DoC FF1-70 Methenamine Pill Test

8, 9, 10, 10, 12, 14, 15, 15, 17, 19, 20, 24, 34, 35, 38, 39, 41, 42, 44, 46

03/F04 ASTM E648 Radiant Panel (Carpet)

10, 14, 15, 19, 22, 23, 35, 39, 41, 42

03/B01 UM 44C, Addendum 3 Attached Cushion Tests

10, 10

03/B02 UM 44C, Addendum 2 and 3 Attached Cushion Tests

8, 14, 15, 20, 24, 38, 41, 42

Section 3

INDEX OF ACCREDITED LABORATORIES BY STATE

The following index provides a cross reference of accredited laboratories by State. Each page number after each State refers to the page number in Section 1 of this Directory in which, for each laboratory, the name, address, phone number, and list of accredited test methods are identified.

ALABAMA: 37

ARIZONA: 8, 36, 41, 45, 46

CALIFORNIA: 16, 21, 22, 33, 34, 37, 37, 41, 44

COLORADO: 7, 23, 27, 27, 27 **CONNECTICUT:** 30, 43

FLORIDA: 25

GEORGIA: 8, 10, 14, 15, 17, 19, 20, 24, 32, 34, 38, 46, 47

IDAHO: 29

ILLINOIS: 7, 16, 24, 28, 36, 39, 41, 45

INDIANA: 26, 38 KANSAS: 32, 44 KENTUCKY: 11 MAINE: 35

MARYLAND: 9, 21, 29

MASSACHUSETTS: 18, 19, 44 MINNESOTA: 19, 25, 26, 39

MISSOURI: 12 MONTANA: 29, 29 NEVADA: 22

NEW JERSEY: 9, 32, 41 NEW YORK: 10, 32 NORTH CAROLINA: 36

OHIO: 11, 11, 18, 19, 21, 23, 30, 33, 34

OKLAHOMA: 17, 35, 43

PENNSYLVANIA: 8, 9, 12, 13, 20, 33

SOUTH CAROLINA: 10

NBS TECHNICAL PUBLICATIONS

PERIODICALS

JOURNAL OF RESEARCH—The Journal of Research of the National Bureau of Standards reports NBS research and development in those disciplines of the physical and engineering sciences in which the Bureau is active. These include physics, chemistry, engineering, mathematics, and computer sciences. Papers cover a broad range of subjects, with major emphasis on measurement methodology and the basic technology underlying standardization. Also included from time to time are survey articles on topics closely related to the Bureau's technical and scientific programs. As a special service to subscribers each issue contains complete citations to all recent Bureau publications in both NBS and non-NBS media. Issued six times a year. Annual subscription: domestic \$18; foreign \$22.50. Single copy, \$4.25 domestic; \$5.35 foreign.

NONPERIODICALS

Monographs—Major contributions to the technical literature on various subjects related to the Bureau's scientific and technical activities.

Handbooks—Recommended codes of engineering and industrial practice (including safety codes) developed in cooperation with interested industries, professional organizations, and regulatory bodies.

Special Publications—Include proceedings of conferences sponsored by NBS, NBS annual reports, and other special publications appropriate to this grouping such as wall charts, pocket cards, and bibliographies.

Applied Mathematics Series—Mathematical tables, manuals, and studies of special interest to physicists, engineers, chemists, biologists, mathematicians, computer programmers, and others engaged in scientific and technical work.

National Standard Reference Data Series—Provides quantitative data on the physical and chemical properties of materials, compiled from the world's literature and critically evaluated. Developed under a worldwide program coordinated by NBS under the authority of the National Standard Data Act (Public Law 90-396).

NOTE: The principal publication outlet for the foregoing data is the Journal of Physical and Chemical Reference Data (JPCRD) published quarterly for NBS by the American Chemical Society (ACS) and the American Institute of Physics (AIP). Subscriptions, reprints, and supplements available from ACS, 1155 Sixteenth St., NW, Washington, DC 20056. Building Science Series—Disseminates technical information developed at the Bureau on building materials, components, systems, and whole structures. The series presents research results test methods, and performance criteria related to the structural and environmental functions and the durability and safety characteristics of building elements and systems.

Technical Notes—Studies or reports which are complete in themselves but restrictive in their treatment of a subject. Analogous to monographs but not so comprehensive in scope or definitive in treatment of the subject area. Often serve as a vehicle for final reports of work performed at NBS under the sponsorship of other government agencies.

Voluntary Product Standards—Developed under procedures published by the Department of Commerce in Part 10, Title 15, of the Code of Federal Regulations. The standards establish nationally recognized requirements for products, and provide all concerned interests with a basis for common understanding of the characteristics of the products. NBS administers this program as a supplement to the activities of the private sector standardizing organizations.

Consumer Information Series—Practical information, based on NBS research and experience, covering areas of interest to the consumer. Easily understandable language and illustrations provide useful background knowledge for shopping in today's technological marketplace.

Order the above NBS publications from: Superintendent of Documents, Government Printing Office, Washington, DC 20402.

Order the following NBS publications—FIPS and NBSIR's—from the National Technical Information Services, Springfield, VA 22161.

Federal Information Processing Standards Publications (FIPS PUB)—Publications in this series collectively constitute the Federal Information Processing Standards Register. The Register serves as the official source of information in the Federal Government regarding standards issued by NBS pursuant to the Federal Property and Administrative Services Act of 1949 as amended. Public Law 89-306 (79 Stat. 1127), and as implemented by Executive Order 11717 (38 FR 12315, dated May 11, 1973) and Part 6 of Title 15 CFR (Code of Federal Regulations).

NBS Interagency Reports (NBSIR)—A special series of interim or final reports on work performed by NBS for outside sponsors (both government and non-government). In general, initial distribution is handled by the sponsor; public distribution is by the National Technical Information Services, Springfield, VA 22161, in paper copy or microfiche form.
