## NATIONAL BUREAU OF STANDARDS

The National Bureau of Standards<sup>1</sup> was established by an act of Congress on March 3, 1901. The Bureau's overall goal is to strengthen and advance the Nation's science and technology and facilitate their effective application for public benefit. To this end, the Bureau conducts research and provides: (1) a basis for the Nation's physical measurement system, (2) scientific and technological services for industry and government, (3) a technical basis for equity in trade, and (4) technical services to promote public safety. The Bureau's technical work is performed by the National Measurement Laboratory, the National Engineering Laboratory, and the Institute for Computer Sciences and Technology.

**THE NATIONAL MEASUREMENT LABORATORY** provides the national system of physical and chemical and materials measurement; coordinates the system with measurement systems of other nations and furnishes essential services leading to accurate and uniform physical and chemical measurement throughout the Nation's scientific community, industry, and commerce; conducts materials research leading to improved methods of measurement, standards, and data on the properties of materials needed by industry, commerce, educational institutions, and Government; provides advisory and research services to other Government agencies; develops, produces, and distributes Standard Reference Materials; and provides calibration services. The Laboratory consists of the following centers:

Absolute Physical Quantities<sup>2</sup> — Radiation Research — Chemical Physics — Analytical Chemistry — Materials Science

**THE NATIONAL ENGINEERING LABORATORY** provides technology and technical services to the public and private sectors to address national needs and to solve national problems; conducts research in engineering and applied science in support of these efforts; builds and maintains competence in the necessary disciplines required to carry out this research and technical service; develops engineering data and measurement capabilities; provides engineering measurement traceability services; develops test methods and proposes engineering standards and code changes; develops and proposes new engineering practices; and develops and improves mechanisms to transfer results of its research to the ultimate user. The Laboratory consists of the following centers:

Applied Mathematics — Electronics and Electrical Engineering<sup>2</sup> — Manufacturing Engineering — Building Technology — Fire Research — Chemical Engineering<sup>2</sup>

**THE INSTITUTE FOR COMPUTER SCIENCES AND TECHNOLOGY** conducts research and provides scientific and technical services to aid Federal agencies in the selection, acquisition, application, and use of computer technology to improve effectiveness and economy in Government operations in accordance with Public Law 89-306 (40 U.S.C. 759), relevant Executive Orders, and other directives; carries out this mission by managing the Federal Information Processing Standards Program, developing Federal ADP standards guidelines, and managing Federal participation in ADP voluntary standardization activities; provides scientific and technological advisory services and assistance to Federal agencies; and provides the technical foundation for computer-related policies of the Federal Government. The Institute consists of the following centers:

Programming Science and Technology — Computer Systems Engineering.

<sup>1</sup>Headquarters and Laboratories at Gaithersburg, MD, unless otherwise noted; mailing address Washington, DC 20234.

<sup>2</sup>Some divisions within the center are located at Boulder, CO 80303.

## FOREWORD

With the tremendous investment of the Federal Government in research and development, the need to survey the laboratories where much of the work is done is a recurring requirement. The Stevenson-Wydler Technology Innovations Act of 1980 focused attention on the potential for Federal laboratories to serve users outside of the Federal agencies that manage the laboratories. This Federal Laboratory Directory has been prepared with the need for effective transfer of technology much in mind.

Over the past decade, the Federal Laboratory Consortium for Technology Transfer (FLC) has taken a growing lead in facilitating the sharing of information, products, processes and services between laboratories, the private sector, and governments at the State and local level. It was due to the requests of the FLC that we undertook, at the National Bureau of Standards, the gathering of this data and through the cooperation of the agencies represented we have been able to complete it. At the Bureau, we are pleased to be able to support this process, as like many laboratories, we draw on the strengths of sister organizations to achieve our goals. We also make every effort to serve those Federal agencies, the private sector, and State and local governments with our programs. We hope this document will help in achieving that goal.

Sincerely,

A handwritten signature in cursive script, appearing to read "E. Ambler".

Ernest Ambler  
Director

## ABSTRACT

This Directory provides limited information about some 388 Federal laboratories with ten or more full-time professionals engaged in research and development. Summary data arranged by Federal agency and by State provide a broad overview of the Federal laboratory system. Laboratory lists by staff size, by State and by agency provide a cross reference. For each laboratory, a contact for obtaining technical information is given by name, address, and phone number. Major mission and major scientific or testing equipment is listed for each laboratory.

Key words: contacts; directory; Federal laboratory; research and development; technology transfer.

## INTRODUCTION

The Federal Laboratory Directory, 1982 edition, has been compiled to meet the needs of several audiences. Planners and policymakers, in government and out, need to have a broad view of Federal research and development laboratory resources. For their purposes, summary data on laboratory size and geographical and agency distribution may be particularly useful.

For those who would use the technology from Federal laboratories, this Directory includes individual data sheets on each laboratory including, where available, the name, address, and telephone number of an initial contact for research and technology applications information. The information on the major mission of the laboratory and any major scientific or testing equipment will give some indication of the resources to be expected.

These data may be particularly useful to those in intermediary organizations such as the Department of Commerce's Center for the Utilization of Federal Technology, or the Federal Laboratory Consortium for Technology Transfer which have mandated responsibilities for providing access to Federal laboratory resources to users from State or local governments, or from the private sector.

With minor modifications, the data sheet for each laboratory is patterned after earlier work. Names and addresses are included in spite of the recognition that rather frequent updates will be required. An attempt at showing the organizational relationships of the laboratories has been included although other documents may provide better guidance to such interactions.

The sources of data for this Directory were the individual information sheets which are included, as submitted by each agency, in Section 6. These data have been summarized and organized in several tables in Section 5 by staff size, then by State, and by agency. A list of Research and Technology Application contacts includes data on laboratory staff size. All summary data are stored in a computer database for periodic updating for future editions of the Directory.

## DISCUSSION OF DATA

For this Directory, data have been gathered only for laboratories with ten or more full-time professionals engaged in research and development. This is a significant departure from earlier directories and accounts--in part--for the sharp drop in the total number of laboratories listed. The definition of the term "professional" has been left to each laboratory. For civil service employees, it will have a common meaning, but for other employees, it may vary. For this reason, comparisons between laboratories should be made with caution. The value of "percent research and development" was subjective for those who prepared the data. Defense laboratories provided data with research, development, and testing combined. Once more, these data must be used with caution.

The total staff size is probably one of the most reliable numbers as of the date reported. As that date preceded the change in Administration, it will change in subsequent editions. For some laboratories, large changes may be expected. Current staff counting procedures provide "full-time equivalent" data reflecting an averaging process over the fiscal year and proper weighting for part-time employees. However, not all laboratories have used that procedure so some variations are expected and the totals must be viewed as approximates.

As mentioned, a computer has been used to store some of the data and sort it by laboratory characteristics. One set of data was obtained by a hand-sorting--the listing of facilities rather than laboratories, in order of size. For purposes of technology transfer, that sorting may have more meaning. A facility is defined as a group of laboratories at a single geographical location. In some cases these laboratories have closely related missions but in other cases they simply share common services.

The term laboratory is used in a generic sense in this Directory. A glance at the listings will show that a number of other terms are used: bureau, center, facility, division, institute, activity, office, museum, station, research unit or observatory.

The data on some laboratory description sheets are incomplete. In future editions, every attempt will be made to correct that. Numerical data reflecting staff size are complete and so allow ordering of laboratories by size and summary computations.

Many agencies found it difficult to decide if their facilities could properly be included in this Directory. They have grown in a wide variety of patterns to meet the needs of their constituents and their agencies. The Veterans Administration, for example, conducts research in the clinical setting of many of its hospitals, but proper treatment of the patient is always its primary aim. A letter giving some details of that system is included in Appendix A and some 60 medical centers are listed without detailed staff statistics. The U.S. Geological Survey is another case where extensive

field offices are necessary to gather and apply data related to their mission. Research for that group is very unlike the work centered around large complex facilities in many defense or space laboratories.

Networks of small facilities characterize the U.S. Department of Agriculture's Agricultural Research Service, and U.S. Forest Service. They have been reported as regional facilities by the Forest Service but listed separately by the Agricultural Research Service. The Department of Commerce's National Oceanographic and Atmospheric Administration similarly has a large number of rather small laboratories. For each of these organizations, some laboratories were too small to be included in this Directory.

It is important to point out that many laboratories provide routine, but important, measurement services in the fields of air and water quality, weather, health and safety, clinical, and forensic sciences. They frequently do not meet the "research and development" criteria for inclusion in this Directory.

Another category of activity excluded are the very essential information processing offices that often serve as intermediary organizations for those seeking technical assistance.

Some laboratories serving regulatory agencies, such as the Food and Drug Administration, have not been listed since they are conceived as providing only measurement services related to agency functions.

#### A Final Word

Errors creep into any document of this size and the editor would appreciate having such errors called to his attention so that corrections can be made in future editions. Any suggestions for making this document more useful would be most welcome.

## CREDITS

The task of gathering these data has been coordinated through the Federal Laboratory Consortium for Technology Transfer and the diligence of many individuals is very much appreciated.

USDA	Agriculture	Harold G. Marx and Maurice LeBourhis
USDoC	Commerce	Ferris Webster for NOAA
USDoD	Defense	George F. Linsteadt and Michael Palomar
DoE	Energy	Charles F. Miller
EPA	Environmental Protection Agency	Chris L. West and Michael L. Mastracci
HHS	Health and Human Services	Samuel D. Korper, Ph.D.
DoI	Interior	Don Ralston, BOM Dr. Ethan T. Smith, USGS
DoJ	Justice	James H. Geer
NASA	National Aeronautics and Space Administration	Dr. Paul R. Brockman
NSF	National Science Foundation	Dr. Francis S. Johnson
Smith	Smithsonian	Dr. David Challinor
TVA	Tennessee Valley Authority	Shirley Ray
DoT	Transportation	Alphonso B. Linhares
VA	Veterans Administration	Dr. Earl X. Freed

The continued interest of Dr. Eugene L. Stark, Chairman of the FLC, and Dr. Howard E. Sorrows, Director of the NBS Office of Research and Technology Applications, was essential to the completion of this task. Betty Joyce Molino, co-author of the Omnidata computer program and patient teacher of the system, made the data handling task a manageable one. The dedicated assistance of Linda Chester in each step of preparing this document for publication was indispensable.

## REFERENCES

The last generally available listing of all "Federal R&D Installations" was published by the National Science Foundation in 1970.<sup>1</sup> Since that time, two listings of many Federal laboratories have appeared as part of Congressional committee proceedings<sup>2,3</sup> in 1974 and 1979. Two other works, Directory of Federal Technology Transfer<sup>4,5</sup> 1975 and 1977 provided information submitted by each agency with descriptive material on the type of resources available and mechanisms for obtaining assistance. More detailed and up-to-date information on the organization of all Federal agencies can be obtained from the annual "United States Government Manual"<sup>6</sup>. Individual agencies such as the Departments of Energy and Defense have prepared more detailed listings of their research and development facilities and organization<sup>7,8,9</sup>. The National Aeronautics and Space Administration (NASA) publishes an annual report, Spinoff<sup>10</sup>, which lists both outstanding accomplishments and contact organizations separated somewhat from the laboratory structure.

**Federal Laboratory Information DEPARTMENT OF COMMERCE  
Sheets**

*These sheets, as provided by Federal agencies, have been arranged by agency, by major subelement, and in order of staff size as listed in Table 6 and Table 7.*

Name of Facility National Bureau of Standards  
 Location Gaithersburg, Maryland and Boulder, Colorado  
 Name of Director Dr. Ernest Ambler  
 Name, address and phone number of Research and Technology Applications Contact (301) 921-2226  
Howard E. Sorrows, A402, Adm., National Bureau of Standards, Washington, D.C. 20234  
 Major mission of facility To be the Nation's measurement laboratory in the physical and engineering sciences and to serve government and industry as an independent, authoritative source of technical information and advice.

Personnel\* as of 12/31/80: Professional 1,510 All other 1,562

Percent of effort expended in

Research and Development 65; Testing 25; Other 10

Relationship to other organizations

Parent Agency U.S. Department of Commerce

Parent Agency Subelements Office of Productivity, Technology and Innovation

Subordinate organizations National Engineering Lab.; National Measurement Lab; Institute for Computer Sciences and Technology

Type of Operation

Government owned & operated  Leased & government operated \_\_\_\_\_

Government owned & contractor operated \_\_\_\_\_ Contractor owned & operated \_\_\_\_\_

Major scientific and/or testing equipment Linear accelerator, nuclear reactor, Co-60 source, numerically controlled machine tools, fire research lab and specialized measurement facilities for: acoustic, electrical, mechanical, high and low pressure, high and low temperature, moisture, surface properties, x-rays, surface and environmental quantities.

Name of Facility Albany Metallurgy Research Center  
 Location Albany, Oregon  
 Name of Director Research Director - Frank Block  
 Name, address and phone number of Research and Technology Applications Contact Steven O'Hare, 1450 Queen Avenue SW, P.O. Box 70, Albany, OR 97321  
 Major mission of facility At the largest of the Bureau's metallurgy facilities, the program encompasses the complete scope of metallurgical research from ore to finished shapes. Included are investigations of ore beneficiation, extractive metallurgy, steel production, and electric furnace processing of ores and concentrates. A major part of the program is directed toward minimizing metal needs through development of better materials, including those needed for high-temperature applications. Accurate thermodynamic data on inorganic materials are measured and compiled here.

Name of Facility Avondale Metallurgy Research Center  
 Location College Park, Maryland  
 Name of Director Research Director - William Campbell  
 Name, address and phone number of Research and Technology Applications Contact  
Phone 301/436-7542, Stephen Law, 4900 LaSalle Road, Avondale, MD 20782

Major mission of facility Secondary resource recovery is the primary effort of the center, including the recovery of values from metal scrap and urban refuse. Other research involves studies directed toward providing understanding of surface phenomena in froth flotation, investigations of corrosion (including corrosion by geothermal brines), electrodeposition of metals, and the engineering analysis of metallurgical processes. The Particulate Mineralogy Unit, representing the focal point for expertise on particulate minerals having potential adverse environmental effects, is located here.

Location 9000 Rockville Pike, Bethesda, Maryland 20205

Name of Director Dr. Frederick K. Goodwin

Name, address and phone number of Research and Technology Applications Contact  
Dr. Frederick K. Goodwin, 9000 Rockville Pike, Bethesda, Maryland, (301) 496-3501.

Major mission of facility The NIMH Intramural Research Program integrates basic research  
on brain function and behavior with clinical studies of the major mental illnesses, such  
as the affective disorders and schizophrenia. Using multidisciplinary approaches the  
scientists investigate biological factors in mental illness, study behaviorally disturbed  
children, conduct research on schizophrenia and depression, and evaluate new pharmacological  
physiological and psychotherapeutic research paradigms aimed at improved treatment and  
prevention.

Name of Director Dr. David P. Rall, Director/NIEHS and Director/National Toxicology Program

Name, address and phone number of Research and Technology Applications Contact \_\_\_\_\_

Dr. Charles E. Carter, Scientific Director, NIEHS, Box 12233, RTP, N.C. 27709 (919)541-3205

Major mission of facility The NIEHS conducts and supports research on the effects of environmental agents on human health. This research serves the practical purpose of identifying toxic agents and improving understanding of the manner in which they cause cancer, birth defects, and other damage to human biological systems. This is the necessary first step in preventing disease. A significant portion of the NIEHS research effort goes into the National Toxicology Program (NTP) which is one of the primary mechanisms the Federal Government has to identify, characterize and test toxic chemicals, and to develop realistic alternatives to the costly and time-consuming test methodologies now available.

 Major mission of facility The research program includes all aspects of watershed estuarine investigation with emphasis on land-water relationships and the effects of human use and development. Located on the Rhode River, the site's various features form a mosaic of land usage including forests, 14 miles of shoreline, marshes, fields, and agricultural areas.

Name of Facility Energy Demonstrations & Technology (ED&T)

Location 1000 Chestnut Street Towers II, Chattanooga, Tennessee 37401

Name of Director M. D. High

Name, address and phone number of Research and Technology Applications Contact \_\_\_\_\_

Shirley S. Ray, 1340 Commerce Union Bank Bldg., Chattanooga, TN 37401 (615) 755-2771

Major mission of facility The Division of Energy Demonstrations and Technology (ED&T) plans, develops, coordinates, and manages TVA's energy technology assessment and demonstration activities. It assures that the conduct and implementation of energy technology assessment and demonstration activities will yield the lowest long-term cost for providing electric power consistent with reliability for service, energy conservation, and environmental considerations. As appropriate, it participates in the development of energy technologies and demonstrations to help solve the Nation's energy problems. It recommends participation with other organizations where significant benefits are likely to accrue to the TVA power program and the national energy effort.

 Major mission of facility Perform research on the effects of air pollutants emitted  
from conventional and new energy technologies. This includes research on (1) the effects  
on crop and forest productivity and long-term ecosystem response, (2) the long-range  
transport of air pollutants, (3) the production of secondary pollutants, and (4) the  
causes of visibility impairment. This also includes the development of models predicting/  
describing the dispersion, long-range transport, transformation, and effects of air  
pollutants. Results are used to provide information for (1) setting and/or revising of  
air quality standards, (2) site assessment, and (3) assessment of air pollution control  
strategies.

3401 Edwin Ave., P.O. Box 22909, Savannah, GA 31403 FTS: 248-4337

Major mission of facility Conduct basic and applied research on kenaf, ornamental  
crops for the South, and control of aquatic weeds. Develop biological, physical,  
and chemical methods for preventing or controlling infestation of insects that attack  
food, feed, seed, and fiber after harvest.

 COMM: 509-575-5877

Major mission of facility The mission of this Laboratory is to conduct research in order to develop new, improved, and more effective methods for control of agricultural pest species in the Northwest. Emphasis is on control of insect pests of horticultural and field crops including codling moth, pear psylla, cherry fruit fly, lygus, peach twig borer, Colorado potato beetle, peach aphid, wireworms, and other species.

Personnel as of 12/31/80: Professional 18 All other 13

Percent of effort expended in  
 Research and Development 100%; Testing       ; Other       

Relationship to other organizations

Parent Agency U.S. Department of Agriculture, Science and Education  
 Parent Agency Subelements Agricultural Research Service  
 Subordinate organizations Western Region

Type of Operation  
 Government owned & operated        Leased & government operated X  
 Government owned & contractor operated        Contractor owned & operated         
 Major scientific and/or testing equipment Gas chromatographs, mini-computers, insect rearing and environmental chambers, fumigation chambers, Cobalt-60 gamma irradiator.

Veterans  
Administration

APPENDIX A

APR 8 1981

Mr. James M. Wyckoff  
Liaison Officer  
State and Local Government Affairs  
United States Department of Commerce  
National Bureau of Standards  
Washington, D.C. 20234

Dear Mr. Wyckoff:

This is in response to your letter dated March 24, 1981 requesting information about the Veterans Administration Research and Development program. We understand that this information is needed for preparing an updated reference document on Federal laboratories.

Biomedical, Health Services, and Rehabilitative Engineering research is conducted at approximately 129 VA medical centers and medical clinics. The appended listing identifies 60 VA facilities which have 10 or more principal investigators conducting centrally reviewed and funded research programs. This listing identifies the address of each of these medical centers as well as the name and telephone number of the Associate Chief of Staff for Research and Development.

A brief summation of the VA's Research and Development program, highlighting its unique features, may help to clarify the difficulty we have in providing the requested data as outlined on your Information Sheet. Research and Development within the VA is chiefly an intramural program in which clinician-investigators at VA medical centers study problems arising during their care of veteran patients. Non-clinical scientists in VA medical centers work in close collaboration with clinicians and support their research efforts. The research projects are primarily investigator initiated. Consequently, research conducted at any one VA medical facility covers a broad range of program areas, e.g., cardiovascular, pulmonary, behavioral science. All VA studies are in concert with the overall mission of providing the best available health care for veteran patients.

Equipment and instrumentation needed for the conduct of research is provided as a common resource to be used by several investigators at a medical center or may be purchased for and used by only one investigator. Data on equipment and instrumentation purchased with an

15B1

2.

acquisition cost of \$2,000 or more are available for each medical center. However, we evaluate that a listing for each of the 60 aforementioned VA medical centers, even if limited to equipment and instrumentation with an acquisition cost of over \$10,000, would not be practical for the purpose of your request.

Please contact me at 389-2616 for any questions you may have or further discussion.

Sincerely,

*fu* HOLLIS G. BOREN, M.D.  
Assistant Chief Medical Director  
for Research and Development

Enclosure

# NBS TECHNICAL PUBLICATIONS

## PERIODICALS

**JOURNAL OF RESEARCH**—The Journal of Research of the National Bureau of Standards reports NBS research and development in those disciplines of the physical and engineering sciences in which the Bureau is active. These include physics, chemistry, engineering, mathematics, and computer sciences. Papers cover a broad range of subjects, with major emphasis on measurement methodology and the basic technology underlying standardization. Also included from time to time are survey articles on topics closely related to the Bureau's technical and scientific programs. As a special service to subscribers each issue contains complete citations to all recent Bureau publications in both NBS and non-NBS media. Issued six times a year. Annual subscription: domestic \$18; foreign \$22.50. Single copy, \$5.50 domestic; \$6.90 foreign.

## NONPERIODICALS

**Monographs**—Major contributions to the technical literature on various subjects related to the Bureau's scientific and technical activities.

**Handbooks**—Recommended codes of engineering and industrial practice (including safety codes) developed in cooperation with interested industries, professional organizations, and regulatory bodies.

**Special Publications**—Include proceedings of conferences sponsored by NBS, NBS annual reports, and other special publications appropriate to this grouping such as wall charts, pocket cards, and bibliographies.

**Applied Mathematics Series**—Mathematical tables, manuals, and studies of special interest to physicists, engineers, chemists, biologists, mathematicians, computer programmers, and others engaged in scientific and technical work.

**National Standard Reference Data Series**—Provides quantitative data on the physical and chemical properties of materials, compiled from the world's literature and critically evaluated. Developed under a worldwide program coordinated by NBS under the authority of the National Standard Data Act (Public Law 90-396).

NOTE: The principal publication outlet for the foregoing data is the Journal of Physical and Chemical Reference Data (JPCRD) published quarterly for NBS by the American Chemical Society (ACS) and the American Institute of Physics (AIP). Subscriptions, reprints, and supplements available from ACS, 1155 Sixteenth St., NW, Washington, DC 20056.

**Building Science Series**—Disseminates technical information developed at the Bureau on building materials, components, systems, and whole structures. The series presents research results, test methods, and performance criteria related to the structural and environmental functions and the durability and safety characteristics of building elements and systems.

**Technical Notes**—Studies or reports which are complete in themselves but restrictive in their treatment of a subject. Analogous to monographs but not so comprehensive in scope or definitive in treatment of the subject area. Often serve as a vehicle for final reports of work performed at NBS under the sponsorship of other government agencies.

**Voluntary Product Standards**—Developed under procedures published by the Department of Commerce in Part 10, Title 15, of the Code of Federal Regulations. The standards establish nationally recognized requirements for products, and provide all concerned interests with a basis for common understanding of the characteristics of the products. NBS administers this program as a supplement to the activities of the private sector standardizing organizations.

**Consumer Information Series**—Practical information, based on NBS research and experience, covering areas of interest to the consumer. Easily understandable language and illustrations provide useful background knowledge for shopping in today's technological marketplace.

*Order the above NBS publications from: Superintendent of Documents, Government Printing Office, Washington, DC 20402.*

*Order the following NBS publications—FIPS and NBSIR's—from the National Technical Information Service, Springfield, VA 22161.*

**Federal Information Processing Standards Publications (FIPS PUB)**—Publications in this series collectively constitute the Federal Information Processing Standards Register. The Register serves as the official source of information in the Federal Government regarding standards issued by NBS pursuant to the Federal Property and Administrative Services Act of 1949 as amended, Public Law 89-306 (79 Stat. 1127), and as implemented by Executive Order 11717 (38 FR 12315, dated May 11, 1973) and Part 6 of Title 15 CFR (Code of Federal Regulations).

**NBS Interagency Reports (NBSIR)**—A special series of interim or final reports on work performed by NBS for outside sponsors (both government and non-government). In general, initial distribution is handled by the sponsor; public distribution is by the National Technical Information Service, Springfield, VA 22161, in paper copy or microfiche form.
