National Institute of
Standards and Technology
Technology Administration
U.S. Department of Commerce

The National Institute of Standards and Technology was established in 1988 by Congress to “assist industry in the development of technology . . . needed to improve product quality, to modernize manufacturing processes, to ensure product reliability . . . and to facilitate rapid commercialization . . . of products based on new scientific discoveries.”

NIST, originally founded as the National Bureau of Standards in 1901, works to strengthen U.S. industry’s competitiveness; advance science and engineering; and improve public health, safety, and the environment. One of the agency’s basic functions is to develop, maintain, and retain custody of the national standards of measurement, and provide the means and methods for comparing standards used in science, engineering, manufacturing, commerce, industry, and education with the standards adopted or recognized by the Federal Government.

As an agency of the U.S. Commerce Department’s Technology Administration, NIST conducts basic and applied research in the physical sciences and engineering, and develops measurement techniques, test methods, standards, and related services. The Institute does generic and precompetitive work on new and advanced technologies. NIST’s research facilities are located at Gaithersburg, MD 20899, and at Boulder, CO 80303. Major technical operating units and their principal activities are listed below. For more information contact the Publications and Program Inquiries Desk, 301-975-3058.

NVLAP AND THE NVLAP LOGO

The term *NVLAP* (represented by the NVLAP logo) is a federally registered certification mark of the National Institute of Standards and Technology and the federal government, who retain exclusive rights to control the use thereof. Permission to use the term and/or logo is granted to NVLAP-accredited laboratories for the limited purposes of announcing their accredited status, and for use on reports that describe only testing and calibration within the scope of accreditation. NIST reserves the right to control the quality of the use of the term *NVLAP* and of the logo itself.

FOREWORD

The 2002 edition of NIST Special Publication 810, *NVLAP Directory of Accredited Laboratories*, lists laboratories that have been found competent by NVLAP to perform specific tests or calibrations, or types of tests or calibrations. Laboratory accreditation provides formal recognition to competent laboratories, thus providing a ready means for customers to find reliable testing and calibration services able to meet their needs. NVLAP-accredited laboratories have the technical foundation needed to meet the requirements of public and private sector regulators, manufacturers, and buyers. They find ready acceptance of their test reports and calibration certificates by both domestic and foreign accrediting bodies that have Mutual Recognition Arrangements with NVLAP.

A description of the NVLAP program is found on pages 1 through 5 of this directory, followed by a summary of the number of current accreditations for each field of testing or calibration. Pages 7 and 8 contain instructions on how to use the directory and describe its organizational structure and content.

The 2002 edition supersedes and replaces the 2001 edition of NIST Special Publication 810.

Potential customers of the laboratories listed in this directory should verify that a laboratory has retained its accreditation at the time its services are to be provided. Current information on the accreditation status of a laboratory can be obtained by contacting NVLAP as follows:

- (1) Mailing address: National Voluntary Laboratory Accreditation Program
National Institute of Standards and Technology
100 Bureau Drive, Stop 2140
Gaithersburg, MD 20899-2140
- (2) Phone: 301-975-4016
- (3) Fax: 301-926-2884
- (4) E-mail: nvlap@nist.gov
- (5) Web site: <http://www.nist.gov/nvlap> (updated quarterly).

PROGRAM DESCRIPTION

The National Institute of Standards and Technology (NIST) administers the National Voluntary Laboratory Accreditation Program (NVLAP). NVLAP is comprised of a series of laboratory accreditation programs (LAPs) which are established on the basis of requests and demonstrated need. Each LAP includes specific calibration and/or test standards and related methods and protocols assembled to satisfy the unique needs for accreditation in a field of testing or calibration. NVLAP accredits public and private laboratories based on evaluation of their technical qualifications and competence to carry out specific tests or calibrations. Accreditation criteria are published in NIST Handbook 150:2001, *NVLAP Procedures and General Requirements*, and encompass the requirements of ISO/IEC 17025:1999 and the relevant requirements of ISO 9002:1994. Accreditation is granted following successful completion of a process that includes submission of an application and payment of fees by the laboratory, an on-site assessment, resolution of any deficiencies identified during the on-site assessment, participation in proficiency testing, and technical evaluation. The accreditation is formalized through issuance of a Certificate of Accreditation and Scope of Accreditation (fig. 1) and publicized by announcement in various government and private media.

NVLAP accreditation is available to commercial laboratories; manufacturers' in-house laboratories; university laboratories; and federal, state, and local government laboratories. Foreign-based laboratories may also be accredited if they meet the same requirements as domestic laboratories and pay any additional fees required for travel expenses.

NVLAP provides an unbiased third party evaluation and recognition of performance, as well as expert technical guidance to upgrade laboratory performance. NVLAP accreditation signifies that a laboratory has demonstrated that it operates in accordance with NVLAP management and technical requirements for accreditation, which include requirements in the areas of quality systems, personnel, accommodation and environmental conditions, test and calibration methods and method validation, equipment, measurement traceability, sampling, handling of test and calibration items, assuring the quality of test and calibration results, and reporting results. NVLAP accreditation does not imply any guarantee (certification) of laboratory performance or test/calibration data; it is solely a finding of laboratory competence. A laboratory may cite its accredited status and use the NVLAP logo on reports, stationery, and in business and trade publications provided that this use does not imply product certification.

This directory of laboratories is published annually and lists the name, address, contact person, phone and fax numbers, e-mail and URL addresses (if available), accreditation renewal date, and scope of accreditation for each laboratory. An updated listing of laboratories is published quarterly on NVLAP's web site: <http://www.nist.gov/nvlap>.

Accreditation Renewal Date

A laboratory accreditation is valid for one year and commences on one of four dates: January 1, April 1, July 1, or October 1. An accreditation will expire after one year unless renewed by the laboratory. Users of this directory who are considering selection of accredited laboratories should be aware of the renewal date and verify that the laboratory has retained its accreditation at the time its services are to be provided.

On-Site Assessment

Before initial accreditation, an on-site assessment of each laboratory is conducted to determine compliance with the NVLAP criteria. After accreditation is granted, an on-site assessment must be conducted during the first renewal year and every two years thereafter in order for the laboratory to maintain accreditation. An assessment is conducted by one or more NVLAP assessors selected on the basis of their expertise in the field of testing or calibration to be reviewed. They may be engineers or scientists currently active in the field, consultants, college professors or retired persons. Their services are generally contracted as required.

For most programs, assessors use checklists provided by NVLAP so that each laboratory receives an assessment comparable to that received by others. However, assessors have some latitude to make judgments about a laboratory's compliance with the NVLAP criteria.

An assessment normally takes one to five days depending on the extent of the laboratory's application. Every effort is made to conduct an assessment with as little disruption as possible to the normal operations of the laboratory. During the assessment, the assessor carries out the following functions:

- meets with management and supervisory personnel responsible for the laboratory's activities to review the assessment process and to set the assessment agenda;
- examines the laboratory's quality system, selects and traces the history of one or more samples from receipt to final issuance of reports, evaluates the training program, examines notebooks or records pertaining to the samples, checks sample identification and tracking procedures, determines whether the appropriate environmental conditions are maintained, and examines copies of completed reports;
- reviews records of internal audits and management reviews, use of check samples or participation in round-robin testing or other similar programs, personnel records including resumes and job descriptions of key personnel, competency evaluations for all staff members who routinely perform the testing or calibration for which accreditation is sought, calibration or verification records for apparatus used, reports, and sample control records;
- observes demonstrations of laboratory techniques and discusses them with the technical personnel to assure their understanding of the procedures; and
- examines major equipment, apparatus, and facilities.

At the conclusion of the assessment, the assessor will conduct an exit briefing with responsible laboratory staff to discuss observations and any deficiencies. The assessor will forward a written assessment report to NVLAP and leave a copy with the laboratory.

If the on-site assessment reveals deficiencies that pertain to NVLAP requirements, the laboratory must respond in writing to NVLAP within 30 days of the date of the report. The response must provide documentation, signed by the Authorized Representative, that the specified deficiencies have either been corrected or include a plan of corrective actions.

Monitoring Visits

Monitoring visits may be conducted at any time during the accreditation period for cause or on a random selection basis. These visits serve to verify reported changes in the laboratory's personnel, facilities, or operations, or to explore possible reasons for poor performance in proficiency testing. The scope of a monitoring visit may range from checking a few designated items to a complete review.

Proficiency Testing

Proficiency testing is an integral part of the NVLAP accreditation process. On-site demonstration of appropriate facilities, equipment, personnel, etc., is essential, but may not be sufficient for the continuing evaluation of laboratory competence. The production of test/calibration data using special proficiency testing samples or artifacts provides NVLAP with a means to determine the overall competence of the laboratory. Information obtained from proficiency testing helps to identify problems in a laboratory. When problems are found, NVLAP works with the laboratory staff to solve them.

Most fields of accreditation have proficiency testing requirements. Data submitted by the laboratories in response to specific NVLAP requirements are analyzed and reports of the results are made known to the participants. Summary results are available upon request to other interested parties; e.g., professional societies and standards writing bodies. The identity and performance of individual laboratories are kept confidential.

Satisfactory participation is based on specially tailored exercises designed to evaluate the ability of the laboratory to produce the services for which it is accredited. Some methods define pass/fail criteria; in other cases, individual laboratory results must fall within statistically acceptable limits of overall group performance. In a number of programs, NVLAP requires satisfactory participation in proficiency testing as a condition of initial, as well as continuing, accreditation.

Technical Evaluation

To determine if all technical requirements have been fulfilled by a laboratory, a final technical evaluation is performed by NVLAP. The evaluation is based on a review of the record of the laboratory as a whole, including:

- information provided on the application;
- results of quality system documentation review;
- on-site assessment reports;
- actions taken by the laboratory to correct deficiencies;
- results of proficiency testing; and
- information from any monitoring visits to the laboratory.

If the technical evaluation reveals additional deficiencies, written notification of the deficiencies will be sent to the laboratory. The laboratory must respond as specified in the previous section, *On-Site Assessment*. All deficiencies must be resolved to NVLAP's satisfaction before accreditation can be granted.

Accreditation Actions

After the technical evaluation has been completed and all financial and administrative requirements have been satisfied, NVLAP takes one of the following accreditation actions:

Accreditation The laboratory is issued a Certificate of Accreditation and a Scope of Accreditation.

Denial The laboratory is notified of a proposal to deny accreditation and the reason(s).

If an accredited laboratory is found to be out of compliance with the NVLAP criteria, NVLAP may take one of the following actions:

Suspension Suspension is a temporary removal of the accredited status of a laboratory when it is found to be out of compliance with the terms of its accreditation. The laboratory will be notified of the reasons for and conditions of the suspension and the action(s) that the laboratory must take to have the accreditation reinstated.

Examples of reasons for suspension are loss of key personnel, loss of major equipment, damage to laboratory by fire, changing laboratory location, and proficiency test failure.

Revocation Revocation is the removal of the accredited status of a laboratory when it is found to have violated the terms of its accreditation. The laboratory will be notified of the reasons for proposed revocation and the procedure for appealing such a decision. If accreditation is revoked, the laboratory may be given the option of voluntarily terminating the accreditation. A laboratory whose accreditation has been revoked must return its Certificate and Scope of Accreditation and cease use of the NVLAP logo on any of its reports, correspondence, or advertising.

Examples of reasons for revocation are obtaining accreditation through fraud, refusal to resolve deficiencies, and no longer providing the type of calibration or testing service for which accreditation was granted.

If denial or revocation has been proposed, the laboratory may appeal the decision to the Director of NIST. If an appeal is not requested, the action becomes final upon the expiration of the 30-day period following receipt of the notification.

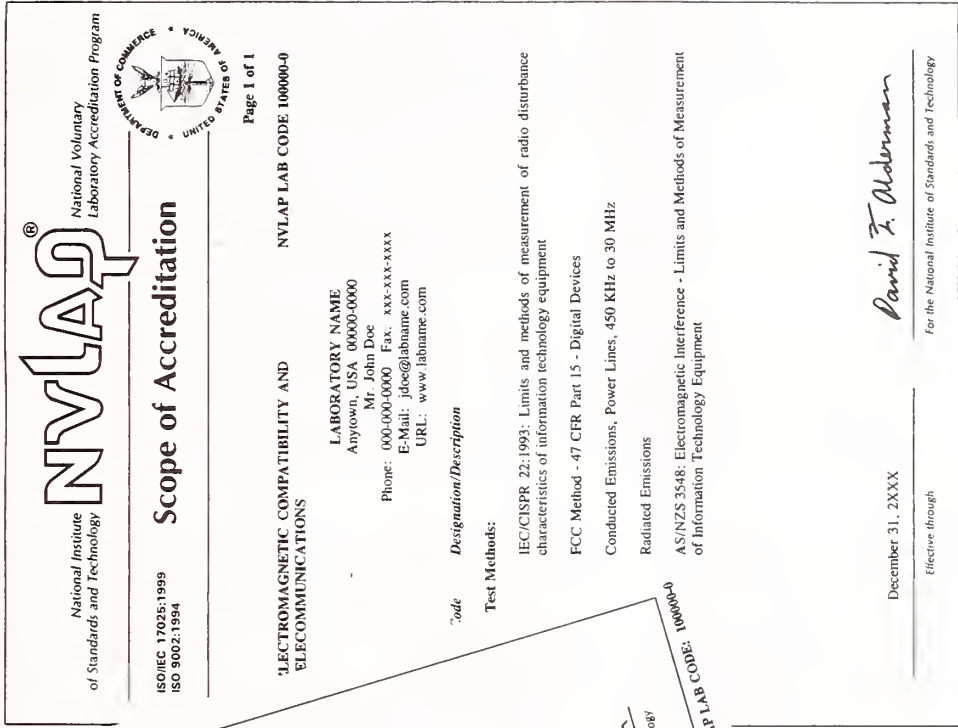

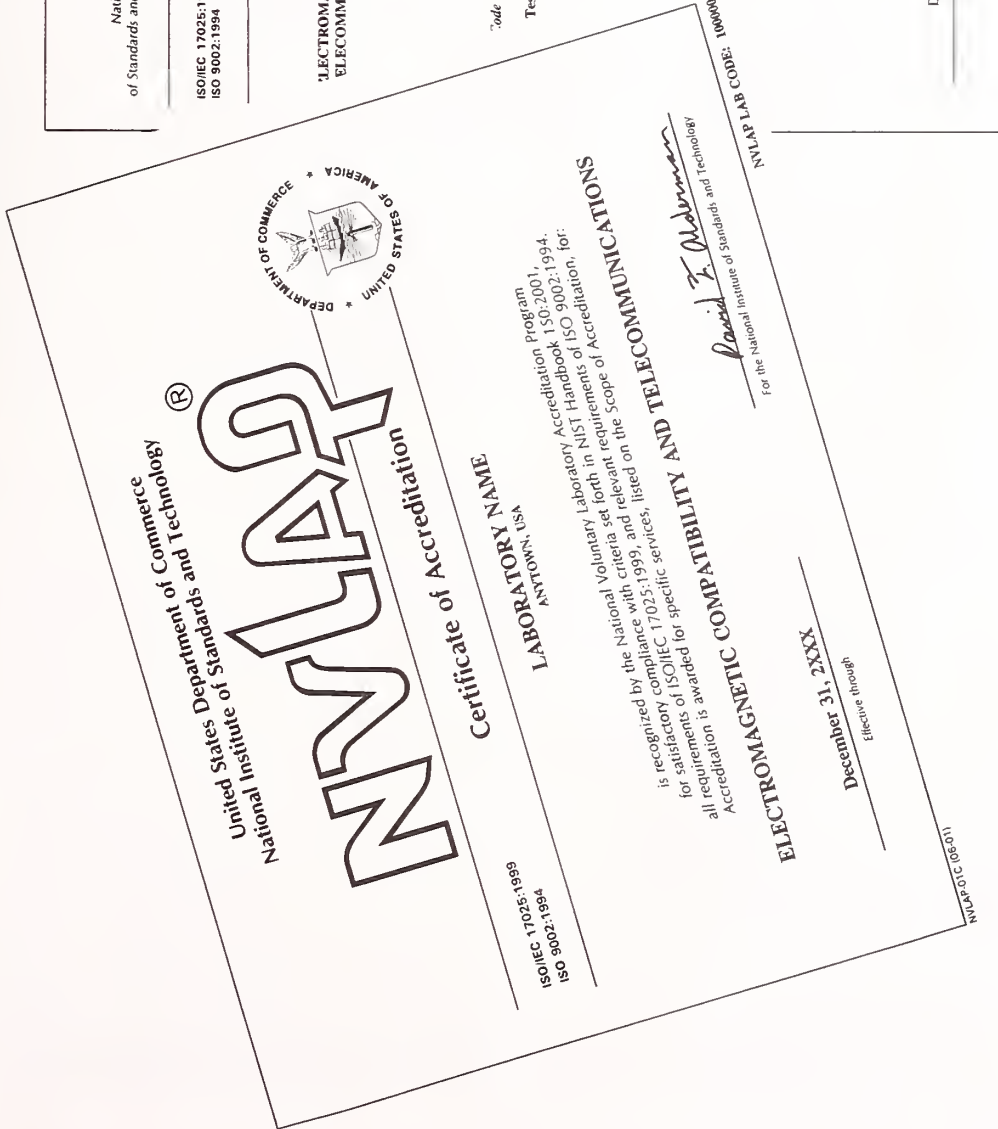

Figure 1. NVLAP Certificate and Scope of Accreditation (sample)

LABORATORY ACCREDITATION SUMMARY

The following table summarizes laboratory accreditations by field of testing or calibration as of the date this directory was prepared for publication. Since some laboratories are accredited in more than one field, the total number of laboratories listed by field of accreditation (see Index B) is greater than the number of laboratories in the system (see Index A).

<i>PROGRAM GROUP/Field of Accreditation</i>	<i>Number of Accreditations</i>
CALIBRATION LABORATORIES GROUP	
Dimensional	20
Electromagnetics - DC/Low Frequency	15
Electromagnetics - RF/Microwave	6
Ionizing Radiation	7
Mechanical	29
Optical Radiation	2
Thermodynamic	15
Time and Frequency	13
CHEMICAL CALIBRATION LABORATORIES GROUP	
NIST Traceable Reference Materials (NTRMs)	1
Providers of Proficiency Testing (PPT)	11
DOSIMETRY GROUP/Ionizing Radiation Dosimetry	35
ELECTROMAGNETIC COMPATIBILITY & TELECOMMUNICATIONS GROUP	188
ENVIRONMENTAL GROUP/Asbestos Fiber Analysis:	
PLM test method	251
TEM test method	77
FASTENERS AND METALS GROUP	40
INFORMATION TECHNOLOGY SECURITY TESTING GROUP	
Common Criteria Testing	6
Cryptographic Module Testing	6
PRODUCT TESTING GROUP	
Acoustical Testing Services	24
Carpet and Carpet Cushion	9
Commercial Products Testing	8
(Paints, Paper, Plastics, Plumbing, Roofing, Seals/Sealants)	
Construction Materials Testing	17
Efficiency of Electric Motors	15
Energy Efficient Lighting Products	12
Thermal Insulation Materials	13
Wood Based Products	5
TOTAL ACCREDITATIONS	825

HOW TO USE THIS DIRECTORY

This directory lists laboratories accredited by NVLAP. It consists of six indexes which are cross-referenced by NVLAP Lab Code, a unique identifier assigned to each laboratory; e.g., 100000-0. The directory enables the user to locate name, address, contact, and accreditation information about laboratories of interest. The user should contact the laboratories directly to get information beyond that provided here.

INDEX A, LISTING BY LABORATORY NAME, lists all laboratories in alphabetical order by laboratory name. The name of each laboratory is listed as it appears on its application for accreditation.

INDEX B, LISTING BY FIELD OF ACCREDITATION, lists all laboratories in alphabetical order by laboratory name within field of accreditation. The index is organized by PROGRAM GROUPS, which are groups of Laboratory Accreditation Programs (LAPs) assembled in categories of technical fields for efficiency in management (see page 6). Listed under each PROGRAM GROUP are the technical fields of accreditation managed within that GROUP. Laboratories accredited in more than one field will have more than one listing in this index.

INDEX C, LISTING BY STATE/COUNTRY, lists all laboratories in alphabetical order by laboratory name within state. The states are designated by the standard two-letter postal abbreviations. Laboratories located outside of the United States are listed at the end of the index. Index C also indicates the field of accreditation for each laboratory.

INDEX D, LISTING OF TESTING LABORATORIES BY NVLAP LAB CODE, lists all testing laboratories in numerical order by NVLAP Lab Code. There is only one listing per Lab Code in Index D.

INDEX E, LISTING OF CALIBRATION LABORATORIES BY NVLAP LAB CODE, lists calibration laboratories in numerical order by NVLAP Lab Code. There is only one listing per Lab Code in Index E.

INDEX F, LISTING OF CHEMICAL CALIBRATION LABORATORIES BY NVLAP LAB CODE, lists chemical calibration laboratories in numerical order by NVLAP Lab Code. There are two fields of accreditation listed in Index F: NIST Traceable Reference Materials (NTRMs) and Providers of Proficiency Testing (PPT).

INFORMATION CONTAINED IN INDEXES D, E, AND F

Each laboratory receives a Certificate of Accreditation and a Scope of Accreditation when accreditation is granted or renewed. The Scope of Accreditation details the methods and services for which accreditation has been granted to a laboratory. Indexes D, E, and F present a condensation of the Scope(s) of Accreditation for testing, calibration, and chemical calibration laboratories, respectively.

The following information is presented for each laboratory listed in Indexes D, E, or F:

- (a) NVLAP Lab Code;
- (b) Laboratory name and address;
- (c) Authorized representative (contact);
- (d) Phone number;
- (e) Fax number;
- (f) E-mail address (if available);
- (g) URL (web site) address (if available);
- (h) Field of accreditation;
- (i) Accreditation expiration date; and

- (j) Scope of accreditation.

HOW TO LOCATE SPECIFIC INFORMATION

For a laboratory whose name is known

Refer to Index A and note the laboratory's NVLAP Lab Code. Look up the Lab Code in Index D, E or F to obtain specific information about the laboratory; e.g., address, phone number, Scope of Accreditation, etc.

For a laboratory in a particular geographic area

Determine the states (or country) included in the geographic area of interest. Refer to Index C to obtain the NVLAP Lab Code of a laboratory within the selected geographic area for a given field of accreditation. Look up the Lab Code in Index D, E, or F to obtain specific information about the laboratory; e.g., address, phone number, Scope of Accreditation, etc.

For a laboratory in a particular field of accreditation

Choose the field of accreditation from the list on page 6. Refer to Index B and note the name and Lab Code of each laboratory of interest. Index B is organized by field of accreditation within major program group. Look up the Lab Code in Index D, E, or F to obtain specific information about the laboratory; e.g., address, phone number, Scope of Accreditation, etc.

SPECIAL NOTE ABOUT LABORATORIES ACCREDITED IN ASBESTOS FIBER ANALYSIS

The test method designations for Bulk Asbestos Analysis (PLM) and Airborne Asbestos Analysis (TEM) are as follows:

<i>NVLAP Code</i>	<i>Program Title/Test Method Designation</i>
18/A01	BULK ASBESTOS ANALYSIS (PLM) U.S. Environmental Protection Agency (EPA) "Interim Method for the Determination of Asbestos in Bulk Insulation Samples" as found in 40 Code of Federal Regulations (CFR), Part 763, Subpart F, Appendix A, or the current U.S. EPA method for the analysis of asbestos in building material.
18/A02	AIRBORNE ASBESTOS ANALYSIS (TEM) U.S. Environmental Protection Agency (EPA) "Interim Transmission Electron Microscopy Analytical Methods—Mandatory and Nonmandatory—and Mandatory Section to Determine Completion of Response Actions" as found in 40 Code of Federal Regulations (CFR), Part 763, Subpart E, Appendix A.

Thermal Insulation Materials

Accreditation Valid Through: December 31, 2002

*NVLAP**Code Designation***Canadian Standards (Specifications)**

01/W03 CAN/CGSB-51.10-92
01/W04 CAN/CGSB-51.11-92
01/WNOT Note: Scope excludes CGSB 51-GP-52M;
however, ASTM E96 & ASTM D828 are
included where specified in the Canadian
Standards (01/W02-W04)

Corrosiveness

01/C02 16 CFR-Part 1209.5

Flammability

01/F01 TAPPI T461-OM
01/F05 ASTM E136
01/F07 16 CFR-Part 1209.6
01/F08 16 CFR-Part 1209.7

Mass, Density, and Dimensional Stability

01/D01 ASTM C136
01/D02 ASTM C167
01/D09 ASTM C303
01/D11 ASTM C356
01/D12 ASTM C411
01/D24 ASTM C739 (Sec. 12)
01/D26 16 CFR-Part 1209.4
01/D27 ASTM C739 (Sec. 8)
01/D31 MIL-I-22344D (Para. 4.6.3, 4.6.4.)

Related Material Properties

01/V04 ASTM E96
01/V07 ASTM C1104/C1104M

Strength

01/S01b ASTM C165 (Proc. B)
01/S10 ASTM D828
01/S15 ASTM C421
01/S16 ASTM C1101/C1101M

Thermal Resistance

01/T01 ASTM C177
01/T04 ASTM C236
01/T05 ASTM C335
01/T06 ASTM C518
01/T09 ASTM C653
01/T10 ASTM C687

Electromagnetic Compatibility & Telecommunications

Accreditation Valid Through: September 30, 2002

NVLAP

Code Designation

Emissions Test Methods:

- 12/CIS14 CISPR 14-1 (March 30, 2000): Limits and methods of measurement of radio interference characteristics of household electrical appliances, portable tools and similar electrical apparatus - Part 1: Emissions
- 12/CIS14a EN 55014-1 (1993) with Ammendments A1 (1997) & A2 (1999)
- 12/CIS14b AS/NZS 1044 (1995)
- 12/CIS14c CNS 13783-1
- 12/CIS22 IEC/CISPR 22:1997: Limits and methods of measurement of radio disturbance characteristics of information technology equipment
- 12/CIS22a IEC/CISPR 22:1993: Limits and methods of measurement of radio disturbance characteristics of information technology equipment, Amendment 1:1995, and Amendment 2:1996.
- 12/CIS22b CNS 13438:1997: Limits and Methods of Measurement of Radio Interference Characteristics of Information Technology Equipment
- 12/F01 FCC Method - 47 CFR Part 15 - Digital Devices
- 12/F01a Conducted Emissions, Power Lines, 450 KHZ to 30 MHz
- 12/F01b Radiated Emissions
- 12/T51 AS/NZS 3548

Immunity Test Methods:

- 12/I01 IEC 61000-4-2 (1995) and Amendment 1 (1998): Electrostatic Discharge Immunity Test
- 12/I02 IEC 61000-4-3 (1995) and Amendment 1 (1998): Radiated, Radio-Frequency Electromagnetic Field Immunity Test
- 12/I03 IEC 61000-4-4 (1995): Electrical Fast Transient/Burst Immunity Test
- 12/I04 IEC 61000-4-5 (1995): Surge Immunity Test
- 12/I05 IEC 61000-4-6 (1996): Immunity to Conducted Disturbances, Induced Radio-Frequency Fields
- 12/I06 IEC 61000-4-8 (1993): Power Frequency Magnetic Field Immunity Test

IEC 61000-4-11 (1994): Voltage Dips, Short Interruptions and Voltage Variations Immunity Tests

Safety Test Methods:

- 12/T41 ACA TS-001
- 12/T50 AS/NZS 3260

Telecommunications Test Methods:

- 12/CS03 CS-03
- 12/T01 Terminal Equipment Network Protection Standards, FCC Method - 47 CFR Part 68 - Analog and Digital
- 12/T01a 68.302 (Par. c,d,e,f) Environmental simulation; 68.304 Leakage current limit.; 68.306 Hazardous voltage limit.; 68.308 Signal power limit.; 68.310 Longitudinal balance limit.; 68.312 On-hook impedance limit.; 68.314 Billing protection
- 12/T01b 68.316 Hearing Aid Compatibility: technical standards
- 12/T01c 68.302 Environmental simulation (Par. a,b)
- 12/T42 ACA TS-002
- 12/T44 ACA TS-004
- 12/T45 ACA TS-006
- 12/T46 ACA TS-008

INDEX D. LISTING OF TESTING LABORATORIES BY NVLAP LAB CODE - continued

Emissions Test Methods:

- 12/CIS22 IEC/CISPR 22:1997: Limits and methods of measurement of radio disturbance characteristics of information technology equipment
- 12/CIS22a IEC/CISPR 22:1993: Limits and methods of measurement of radio disturbance characteristics of information technology equipment, Amendment I:1995, and Amendment 2:1996.
- 12/CIS22b CNS 13438:1997: Limits and Methods of Measurement of Radio Interference Characteristics of Information Technology Equipment
- 12/F01 FCC Method - 47 CFR Part 15 - Digital Devices
- 12/F01a Conducted Emissions, Power Lines, 450 KHz to 30 MHz
- 12/F01b Radiated Emissions
- 12/T51 AS/NZS 3548

Immunity Test Methods:

- 12/I01 IEC 61000-4-2 (1995) and Amendment 1 (1998): Electrostatic Discharge Immunity Test
- 12/I02 IEC 61000-4-3 (1995) and Amendment 1 (1998): Radiated, Radio-Frequency Electromagnetic Field Immunity Test
- 12/I03 IEC 61000-4-4 (1995): Electrical Fast Transient/Burst Immunity Test
- 12/I04 IEC 61000-4-5 (1995): Surge Immunity Test
- 12/I05 IEC 61000-4-6 (1996): Immunity to Conducted Disturbances, Induced Radio-Frequency Fields
- 12/I07 IEC 61000-4-11 (1994): Voltage Dips, Short Interruptions and Voltage Variations Immunity Tests

Safety Test Methods:

- 12/T41 ACA TS-001
- 12/T50 AS/NZS 3260

Telecommunications Test Methods:

- 12/T42 ACA TS-002
- 12/T44 ACA TS-004
- 12/T45 ACA TS-006
- 12/T46 ACA TS-008

Ionizing Radiation Dosimetry

Accreditation Valid Through: September 30, 2002

This facility has been evaluated and deemed competent to process the radiation dosimeter listed below through employing a Panasonic automatic reader UD710A.

This facility is accredited to process the following dosimeter by virtue of actual demonstration of compliance with ANSI HPS N13.11-1993 through testing.

Panasonic TLD model UD802 in a Panasonic UD874A holder for ANSI-N13.11 categories I, II, IIIA, IIIB, IV, VC, VI, VII, VIII.

Accreditation Valid Through: September 30, 2002

This facility has been evaluated and deemed competent to process the radiation dosimeter listed below through employing Harshaw automatic reader model 6600E.

This facility is accredited to process the following dosimeter by virtue of actual demonstration of compliance with ANSI HPS N13.11-1993 through testing.

Harshaw TLD model 8825 for ANSI-N13.11 categories II, IIIB, IV, VC, VI, VII.

Ionizing Radiation Dosimetry

Accreditation Valid Through: December 31, 2002

This facility has been evaluated and deemed competent to process the radiation dosimeters listed below through employing the Harshaw/Bicron automatic reader models 8800PC and 6600.

This facility is accredited to process the following dosimeters by virtue of actual demonstration of compliance with ANSI HPS N13.11-1993 and ANSI HPS N13.32-1995 through testing.

Harshaw 8801 (DT 648/PD)(Harshaw 4 Chip Card, 3 TLD700, 1 TLD600) in a Harshaw/Bicron model 8802 holder for ANSI-N13.11 categories I, II, IIIA, IV, VA, VI, VII, VIII.

Bicron 8840-8841 (4 chip MCP Copper Doped Intergrated Dosimetry System) in a Harshaw/Bicron model 8840 holder for ANSI.N13.11 categories I, II, IIIA, IV, VA, VI, VII, VIII.

Bicron DXTRAD-707H finger ring for ANSI HPS N13.32 (NIST Handbook 150-4, Table 2) categories I, II, IIIA, IIIB, IVA, IVB, VA, VB, VC, VI, VII.

Ionizing Radiation Dosimetry

Accreditation Valid Through: June 30, 2002

This facility has been evaluated and deemed competent to process the radiation dosimeters listed below through employing the TLD automatic readers: Panasonic model UD710A, UD716, and Harshaw models 8800 and 6600; TLD manual readers: Panasonic model UD702 and Harshaw models 5500 and 3500; MacBeth TD932 densitometer, a custom automatic developer and densitometer for film processing, and a Bicon Autoscan 60 chemical etch system.

WHOLE BODY

This facility is accredited to process the following dosimeters by virtue of actual demonstration of compliance with ANSI HPS N13.11-1993 through testing.

Panasonic TLD model ICN UD-802/822 with a model UD-854 Sofpack custom pouch, or UD-874 hanger (ICN type 3) for ANSI-N13.11 categories I, II, IIIA, IV, VC, VI, VII, VIII.

ICN Film Badge (Kodak Type 2 film/Type 4 holder) (ICN type 1) for ANSI-N13.11 categories I, II, IIIA, IV, VA, VI, VII.

ICN Film Badge (Kodak Type 2 film/Type 4 holder with CR39) for ANSI-N13.11 category VIII by reference to TLD-760 (ICN type 15) dosimeter.

Panasonic TLD model UD-802 (854/874/Sofpack) with CR39 (ICN type 6) for ANSI-N13.11 category VIII.

ICN Remtrack (Bicon/Harshaw) TLD model 100 enclosed in a laminated polyethylene material holder (ICN type 21) for ANSI N13.11 category II and IV.

TLD-100 (ICN type 14) for ANSI-N13.11 categories I, II, IIIA, IV, VA, VI, VII.

TLD-760 (ICN type 16) for ANSI-N13.11 categories I, II, IIIA, IV, VC, VI, VII, VIII.

TLD-760 plus CR39 (ICN type 15) for ANSI-N13.11 category VIII.

EXTREMITY

This facility has been accredited to process the extremity dosimeters listed below by virtue of actual demonstration of compliance with ANSI HPS N13.32-1995 and NIST Handbook 150-4, Page 14, Table 2 categories.

Panasonic extremity TLD UD-807 in flex ring holder (ICN type 5), based on testing, for categories IVA, VA, and VB.

TLD-100 (Ring)(ICN type 19), based on testing, for categories I, II, IIIA, IV, VA, VB, VD, VI, and VII.

TLD-100 (Wrist), based on technical equivalence, for categories I, II, IIIA, IIIB, IV, VA, VI, VII.

TLD-100 1C (Ring), based on technical equivalence, for categories I, II, IIIA, IV, VA, VB, VD.

TLD-760 (Wrist), based on technical equivalence, for categories I, II, IIIA, IIIB, IV, VA, VI, VII.

TLD 802 (Wrist), based on technical equivalence, for categories I, II, IIIA, IV, VC, VI, VII.

TLD 803 (Wrist), based on technical equivalence, for categories I, II, IIIA, IV, VA, VI, VII.

ICN film (Wrist), based on technical equivalence, for categories I, II, IIIA, IV, VA, VI, VII.

Ionizing Radiation Dosimetry

Accreditation Valid Through: September 30, 2002

This facility has been evaluated and deemed competent to process the radiation dosimeters listed below through employing film processing using a computerized custom densitometer.

INDEX D. LISTING OF TESTING LABORATORIES BY NVLAP LAB CODE - continued

This facility is accredited to process the following dosimeters by virtue of actual demonstration of compliance with ANSI HPS N13.11-1993 through testing.

Film Badge B-4 (Kodak Type 2) for ANSI-N13.11 categories I, II, IIIA, IV, VC, VI, VII.

Film Badge N-5 (Kodak Type 2 and A) for ANSI-N13.11 category VIII.

Ionizing Radiation Dosimetry

Accreditation Valid Through: June 30, 2002

This facility has been evaluated and deemed competent to process the radiation dosimeter listed below through employing a Panasonic automatic reader model UD710A.

This facility is accredited to process the following dosimeter by virtue of actual demonstration of compliance with ANSI HPS N13.11-1993 through testing.

Panasonic TLD model UD802 with model UD854 hanger for ANSI-N13.11 category I, II, IIIA, IV, VC, VI, VII, VIIIA.

Ionizing Radiation Dosimetry

Accreditation Valid Through: March 31, 2002

This facility has been evaluated and deemed competent to process the radiation dosimeter listed below through employing a Harshaw manual reader model 4000.

This facility is accredited to process the following dosimeter by virtue of actual demonstration of compliance with ANSI HPS N13.11-1993 through testing.

A Harshaw TLD model 4040, CaF₂Mn Bulb Dosimeter in a model 4039 holder for ANSI HPS N13.11 Category IV.

Ionizing Radiation Dosimetry

Accreditation Valid Through: March 31, 2002

This facility has been evaluated and deemed competent to process the radiation dosimeter listed below through employing a Harshaw automatic reader model 8800.

This facility is accredited to process the following dosimeter by virtue of actual demonstration of compliance with ANSI HPS N13.11-1993 through testing.

Harshaw TLD models 2276-L and LNG-0677, BG (2 TLD 700, 1 TLD 600) in a Type 80 Harshaw cardholder for ANSI HPS N13.11 category IV.

Ionizing Radiation Dosimetry

Accreditation Valid Through: March 31, 2002

The facility listed has been evaluated as a representative site and deemed competent to process the radiation dosimeter listed below through employing a Radiac Computer-Indicator Model No. CP-1112/PD TLD reader.

This facility is accredited to process the following dosimeter by virtue of actual demonstration of compliance with ANSI HPS N13.11-1993 through testing:

CaF₂:Mn Bulb Dosimeter (DT-526/PD) for ANSI-N13.11 categories II, IV.

The accreditation is also extended to include processing performed by other facilities in the Naval Nuclear Propulsion Program which use identical equipment and procedures as listed above.

Ionizing Radiation Dosimetry

Accreditation Valid Through: December 31, 2002

This facility has been evaluated and deemed competent to process the radiation dosimeters listed below employing (1) USDT TLD Card Reader (2) Bar-Ray Film Developing System and USDT/Mini film densitometer, and (3) Harshaw Model 2000A TLD Chip Reader.

This facility is accredited to process the following dosimeters by virtue of actual demonstration of compliance with ANSI HPS N13.11-1993 through testing.

USDT-F (TLD-600) and USDT-U (TLD-700) for ANSI-N13.11 categories I, II, IIIA, IV, VA, VI, VII, VIII using (1).

USDT-3 Kodak type 2 film for ANSI-13.11 categories I, II, IIIA, IV, VA, VI, VII using (2).

This facility is accredited to process the following dosimeters by virtue of actual demonstration of compliance with ANSI N13.32 through testing:

USDT-R finger ring dosimeter for ANSI N13.32 category IV using (3).

Ionizing Radiation Dosimetry

Accreditation Valid Through: June 30, 2002

This facility has been evaluated and deemed competent to process the radiation dosimeters listed below through employing film processing using a Victoreen 07-440 densitometer and TLD processing using a Panasonic UD710A and UD717AS.

This facility is accredited to process the following dosimeters by virtue of actual demonstration of compliance with ANSI HPS N13.11-1993 through testing.

Film Badge (Kodak Type II) in Proxtronic custom holders GDS 400, for ANSI N13.11 categories IIIA, IV and VC.

Panasonic TLD model UD802-AS2 in an ISA 831, GDS 500, or UD875-ATM1 hanger for ANSI N13.11 categories I, II, IIIA, IV, VC, VI, VII, VIII.

Panasonic TLD model UD-817 in a Wallet Card Holder (Proxtronic Series 300) for ANSI N13.11 categories II and IV.

This facility has been accredited to process the extremity dosimeters listed below by virtue of actual demonstration of compliance with ANSI N13.32 - 1995 and NIST Handbook 150-4, page 14, Table 12 categories.

Panasonic extremity TLD model UD-817 in a finger ring strip holder (Proxtronic GSD 300) for categories I, II, IIIA, IVA, VA, VB, and VD.

 12/I06 IEC 61000-4-8 (1993): Power Frequency Magnetic Field Immunity Test

Telecommunications Test Methods:

12/CS03 CS-03
 12/T01 Terminal Equipment Network Protection Standards, FCC Method - 47 CFR Part 68 -

Analog and Digital
 12/T01a 68.302 (Par. c,d,e,f) Environmental simulation; 68.304 Leakage current limit.; 68.306 Hazardous voltage limit.; 68.308 Signal power limit.; 68.310 Longitudinal balance limit.; 68.312 On-hook impedance limit.; 68.314 Billing protection
 12/T01b 68.316 Hearing Aid Compatibility: technical standards
 12/T01c 68.302 Environmental simulation (Par. a,b)

Accreditation Valid Through: September 30, 2002

NVLAP

Code Designation

Chemical Analysis

Optical emission spectrochemical analysis

FA/457 ASTM E415

Dimensional Inspection

Dimensions of ISO grade A and B fasteners

FA/589 JIS B1071

Dimensions of fasteners - straightness

FA/428 ANSI/ASME B18.2.3.5M

External thread parameters - ISO

FA/390 ISO 1502

External thread parameters - system 21

FA/379 ANSI/ASME B1.3M

External thread parameters - system 22

FA/381 ANSI/ASME B1.3M

Mechanical and Physical Testing and Inspection

Axial tensile strength of full-size threaded fasteners

FA/270 ISO 898-1 Sec. 8.2

Fatigue of full-size threaded fasteners

FA/182 ISO 3800-1

Head soundness testing

FA/614 ISO 898-1 Sec. 8.7

FA/615 JIS B1051 Sec. 4.2.6

Measurement of fastener coating thickness - magnetic methods

FA/153 ASTM B499

Measurement of fastener coating thickness - microscopical method

FA/160 ASTM B487

Microhardness of fasteners

FA/191 ISO 6507-2

Proof load of full-size externally threaded fasteners

FA/228 ISO 898-1 Sec. 8.4

Rockwell hardness of fasteners

FA/197 ASTM E18

FA/200 ISO 6508

INDEX D. LISTING OF TESTING LABORATORIES BY NVLAP LAB CODE - continued

Rockwell superficial hardness of fasteners
 FA/205 ASTM E18
Salt spray testing of fasteners
 FA/166 ASTM B117
Tension testing of machined specimens from externally threaded fasteners
 FA/282 ISO 898-1
Torque-tension of full-size threaded fasteners
 FA/576 JIS B1084
Total extension at fracture of externally threaded fasteners
 FA/285 ASTM F606 Sec. 3.7
Vickers hardness - test forces from 9.807 to 1176 N (1 to 120 kgf)
 FA/571 JIS Z2244
Wedge tensile strength of full-size threaded fasteners
 FA/294 ISO 898-1 Sec. 8.5
Yield strength of full-size externally threaded fasteners
 FA/298 ASTM F606 Sec. 3.2.4

Metallography

Decarburization and case depth measurement in fasteners
 FA/323 ASTM E1077
Determination of grain size of fasteners
 FA/331 ASTM E112
Macroscopic examination of fasteners by etching
 FA/511 ASTM E340
Microscopic examination of fasteners by etching
 FA/512 ASTM E407
Surface discontinuities of externally threaded fasteners
 FA/359 ISO 6157-1

Ionizing Radiation Dosimetry

Accreditation Valid Through: September 30, 2002

This facility has been evaluated and deemed competent to process the radiation dosimeters listed below through employing the Harshaw automatic reader model 8800 and manual reader model 6600.

This facility is accredited to process the following dosimeters by virtue of actual demonstration of compliance with ANSI HPS N13.11-1993 and ANSI HPS N13.32-1995 through testing.

Harshaw Card 7776 (15, 15, 6, 15) in a Type 8825 holder for ANSI-N13.11 categories I, II, IIIA, IV, VC, VI, VII, VIII.

Harshaw Combo 7666 (15, 15, 6, 15) in a type 8816 holder for ANSI-N13.11 category VIII.

Harshaw extremity TLD XD-740 (TLD-700) in a finger ring holder for ANSI HPS N13.32 (NIST Handbook 150-4, Table 2) categories I, II, IIIA, IVA, VC.

Fasteners & Metals

Accreditation Valid Through: September 30, 2002

NVLAP

Code Designation

Dimensional Inspection

*Dimensions of fasteners - hexagon and double hexagon
(12 point) and spline sockets*

FA/411 ANSI/ASME B18.3

Dimensions of fasteners - straightness

FA/423 ANSI/ASME B18.2.1

*Dimensions of general purpose fasteners and
high-volume machine assembly fasteners*

FA/404 ANSI/ASME B18.18.2M

External thread parameters - system 22

FA/382 FED-STD-H28/20

Surface texture

FA/439 ANSI/ASME B46.1

Mechanical and Physical Testing and Inspection

Axial tensile strength of full-size threaded fasteners

FA/271 MIL-STD-1312-8

Double shear of externally threaded fasteners

FA/257 MIL-STD-1312-13

*Hydrogen embrittlement (stress durability) of externally
threaded fasteners*

FA/176 MIL-STD-1312-5

Magnetic permeability

FA/214 ASTM A342 Test Method 3

*Measurement of fastener coating thickness - dimensional
change method*

FA/495 MIL-STD-1312-12

*Measurement of fastener coating thickness -
microscopical method*

FA/163 MIL-STD-1312-12

Microhardness of fasteners

FA/193 MIL-STD-1312-6

*Recess strength test in both the installation and removal
directions*

FA/476 MIL-STD-1312-25

Rockwell hardness of fasteners

FA/201 MIL-STD-1312-6

Rockwell superficial hardness of fasteners

FA/209 MIL-STD-1312-6

Single shear of externally threaded fasteners

FA/256 MIL-STD-1312-20

*Vickers hardness - test forces from 9.807 to 1176 N (1 to
120 kgf)*

FA/671 MIL-STD-1312-6

Wedge tensile strength of full-size threaded fasteners

FA/295 MIL-STD-1312-8

Metallography

*Decarburization and case depth measurement in
fasteners*

FA/330 SAE J423

FA/483 ASTM A574 Sec. 12

Determination of grain size of fasteners

FA/638 ASTM E112

Macroscopic examination of fasteners by etching

FA/511 ASTM E340

FA/651 ASTM F788/788M

Microscopic examination of fasteners by etching

FA/341 ASTM E1077

FA/345 ASTM F788/788M

FA/351 ASTM E112

FA/512 ASTM E407

FA/552 ASTM E3

FA/679 ASTM A574

Surface discontinuities of externally threaded fasteners

FA/357 ASTM F788/788M

FA/967 GM 6010M

Hydrogen embrittlement (stress durability) of internally threaded fasteners

FA/968 GM 6010M

Intergranular corrosion susceptibility in austenitic stainless steel fasteners - nitric acid

FA/173 ASTM A262 Sec. 15-21, Practice C

Intergranular corrosion susceptibility of austenitic stainless steel fasteners - oxalic acid

FA/174 ASTM A262 Sec. 3-7, Practice A

Measurement of fastener coating thickness - microscopical method

FA/160 ASTM B487

FA/873 NASM 1312-12

Measurement of fastener coating thickness - weight of coating

FA/164 ASTM A90

Microhardness of fasteners

FA/189 ASTM E384

Proof load of full-size externally threaded fasteners

FA/226 ASTM F606 Sec. 3.2.1-3.2.3

FA/229 SAE J429

Proof load of internally threaded fasteners (nuts)

FA/236 ASTM F606 Sec. 4.2

FA/241 SAE J995 Sec. 5.1

Rockwell hardness of fasteners

FA/197 ASTM E18

Rockwell superficial hardness of fasteners

FA/205 ASTM E18

Tension testing of machined specimens from externally threaded fasteners

FA/475 ASTM E8

Torque-tension of full-size threaded fasteners

FA/882 NASM 1312-15

Torsional strength test of thread rolling and self-drilling tapping screws

FA/252 ASTM F738M

FA/254 SAE J81

FA/751 SAE J933

FA/966 ASTM F880M

Wedge tensile strength of full-size threaded fasteners

FA/290 ASTM F606 Sec. 3.5

FA/468 SAE J429

Metallography**Decarburization and case depth measurement in fasteners**

FA/323 ASTM E1077

FA/328 SAE J121

Determination of grain size of fasteners

FA/331 ASTM E112

Macroscopic examination of fasteners by etching

FA/551 ASTM E3

Microscopic examination of fasteners by etching

FA/552 ASTM E3

Surface discontinuities of externally threaded fasteners

FA/361 SAE J123

FA/362 SAE J1061

Surface discontinuities of internally threaded fasteners

FA/365 SAE J122

Ionizing Radiation Dosimetry

Accreditation Valid Through: March 31, 2002

This facility has been evaluated and deemed competent to process the radiation dosimeters listed below employing the Harshaw/Bicron automatic reader model 6600.

This facility is accredited to process the following dosimeters by virtue of actual demonstration of compliance with ANSI HPS N13.11-1993 and ANSI HPS N13.32-1995 through testing.

Harshaw/Bicron 8890 BG (3 TLD100) for ANSI-N13.11 categories I, II, IIIA, IV, VA.

Harshaw/Bicron extremity TLD DXT-RAD in a finger ring holder for ANSI HPS N13.32 (NIST Handbook 150-4, Table 2) categories IIIB, IV, VC.

1. Expanded uncertainty with coverage factor of $k=2$, unless otherwise specified.
2. Approximate value. Actual value determined by test results.
3. The uncertainty ranges are the lowest and highest uncertainty values within the specified frequency range and quantity range.
4. Uncertainty consists of an appropriate combination of the measurement uncertainty (which includes all significant sources of uncertainty associated with the calibration process) and uncertainties due to use, environment, handling or variation with time over the certification interval.
5. Maximum frequency for BNC is 1000 MHz.
6. ASTM loading range classes (e.g., A, AA) are not used or reported.
7. Calibrations to 30,000 lbf versus load cells can be automated; other calibrations are manual.
8. Uncertainties listed are linearized forms ($A^2 + B^2$) of uncertainties calculated as root sum squares of constant and length-dependent terms ($A^2 + (BL)^2$). A' and B' are calculated by fitting a straight line through the RSS uncertainty values at the upper and lower limits of range.
9. Uncertainty is dependent on the specific temperature point tested.
10. Referenced tables in NIST Monograph 175 (April, 1993) provide values for emf E output/input of the thermocouple simulator/readout and the Seebeck coefficient S for the specific temperature points within the specified ranges. The best uncertainty (at $k=2$) of the emf E in μV is equal to the product of $U \cdot S$, where U is the best uncertainty (at $k=2$) of the temperature point tested.

1. Represents expanded uncertainty using a coverage factor, $k = 2$.
2. Approximate value. Actual value determined by the test statistics.
3. Uncertainties at specified test volumes may be greater depending on the range of the unit under test.
4. It is recommended that adjustable volume pipettes not be used below 10% of capacity.

1. Represents an expanded uncertainty at a level of confidence of 99%; coverage factor k is determined by the test statistics.

2. Approximate value. Actual value determined by the test statistics.

3. E = Actual Voltage.

4. 1000 V Limit is 8 kHz.

5. 500 kHz @ 0.33 V

6. 90 kHz @ 30 V

7. 18 kHz @ 300 V, 8 kHz for voltage > = 1000 V

8. 5 kHz @ 1000 V

9. Above 200 μ F the method of calibration is a charge technique with charge currents ranging from 60 μ A at 200 μ F to 30 mA at 110 mF.

MECHANICAL	Best Uncertainty (\pm) ^{year,1,2,3}	Remarks
NVLAP Code: 20/M06		
Force		
Range		
Applied Force in Pounds	0.005%	Primary Standard
130000 to 240000	0.005%	Secondary Standard

1. Represents an expanded uncertainty using a coverage factor, $k=2$.
2. Uncertainty of the voltage ratio is <0.1 microvolt per volt.
3. Uncertainty of the measured value is determined by the statistics of the test and the artifact tested but are typically better than $\pm 0.05\%$ for class AA instruments, $\pm 0.25\%$ for class A instruments and $\pm 0.1\%$ for class A1 instruments.

Neutron		
²⁵² Cf Bare	0.014 to 4.8 rad/h	14.0%
²⁵² Cf Moderated	0.004 to 1.1 rad/h	21.9%

1. Values listed at the 95% confidence level.
2. Uncertainties are valid for nominal intensity range listed.
3. For calibration outside of the nominal intensity range shown, uncertainties would be determined commensurate with the parameters of the reference field calibration.

CALIBRATION LABORATORIES NVLAP LAB CODE 200115-0

BECHTEL B&W IDAHO, STANDARDS AND CALIBRATION LAB

0.01 g	0.21	Repetitive Double Substitution
0.005 g	3.01	Repetitive Double Substitution
0.002 g	0.98	Repetitive Double Substitution
0.001 g	0.71	Repetitive Double Substitution

THERMODYNAMICS

NVLAP Code: 20/T05

Pressure

Range in psi	Best Uncertainty (\pm) in ppm^{mass}	Remarks
Deadweight Pressure Gauge - Direct Pressure Comparison		
0 - 18	41.0	Nitrogen
18 - 700	56.0	Nitrogen
700 - 4000	54.0	Oil
4000 - 40,000	73.0	Oil

1. Represents an expanded uncertainty using a coverage factor, $k=2$.

ELECTROMAGNETIC - RF/MICROWAVE

ANSI C63.5-1998 is applicable to all Broadband, Dipole Horn and Rod Antenna calibrations listed below.

CISPR 16-1-Oct. 1999 for a CALTS site is applicable to all Broadband and Dipole Antenna calibrations listed below.

NVLAP Code: 20/R08

Microwave Antenna Parameters

Broadband antennas (Biconical or Log-Periodic as specified) using 3 antenna method and a spectrum analyzer on 50x80 meter ground plane.

Biconical Antennas at 3 meter distance

Frequency Range in MHz	Polarization and Height	Best Uncertainty (\pm) in dB_{peak}	Value of K
30 to 72.5	Vertical at 1m	1.41	2
	Vertical at 1.5m	1.50	2.02
	Horizontal at 1m	1.39	2
	Horizontal at 2m	1.38	2

- 1 Represents an expanded uncertainty using a coverage factor, $k=2$.
- 2 The standardized test blocks used for verification are calibrated at the David L. Ellis Company, Inc. Hardness Calibration Laboratory in accordance with ASTM E18-00 section C using N.I.S.T. Rockwell HRC standards reference materials (SRM) 2810, 2811, and 2812. All other Rockwell scales are traceable to David L. Ellis Co., Inc. hardness levels through laboratory standardizing machines. The standardizing machines are directly verified according to ASTM E18-00 using devices that are traceable to N.I.S.T. either directly or through a NVLAP approved laboratory.

INSTRON FIELD CALIBRATION LABORATORY

1. The standardized test blocks used for verification are calibrated at the Wilson Hardness Calibration Laboratory in accordance with ASTM E18-00 section C using N.I.S.T. Rockwell HRC standard reference materials (SRM) 2810, 2811, and 2812. All other Rockwell scales are traceable to Wilson hardness levels thru laboratory standardizing machines. The standardizing machines are directly verified according to ASTM E18-00 using devices that are traceable to N.I.S.T. either directly or through a NVLAP approved laboratory.
2. Represents an expanded uncertainty using a coverage factor, $k=2$.

IONIZING RADIATION DOSIMETRY

NVLAP Code: 20/402
High-Dose Dosimetry

Evaluation of Transfer-standard and Reference-standard Dosimeters for Production Irradiators

Range	Best Uncertainty (\pm) ^{year} 1	Remarks
5 to 50 kGy	4.0 %	Results reported as absorbed dose.

Evaluation of Transfer-standard and Reference-standard Dosimeters for Research Irradiators

Range	Best Uncertainty (\pm) ^{year} 1	Remarks
20 to 400 Gy	2.0 %	Results reported as absorbed dose or absorbed-dose rate.

MDS NORDION DOSIMETRY LABORATORY

Irradiation of Dosimeters for Known Absorbed-dose Levels

Range	Best Uncertainty (\pm) ^{year} 1	Remarks
Specified by the needs of the customer.	2.3 %	Results reported as absorbed-dose values or may be analyzed for dosimeter response and reported as a calibration curve.

Calibration of Routine Dosimeters using Reference-standard or Transfer-standard Dosimeters

Range	Best Uncertainty (\pm) ^{year} 1	Remarks
0.5 to 50 kGy	4.0 %	Results reported as absorbed-dose values or may be analyzed for dosimeter response and reported as a calibration curve.

1. Represents an expanded uncertainty using a coverage factor, $k=2$.

1. Represents an expanded uncertainty using a coverage factor, $k=2$.
2. The uncertainties shown are for radiometric reading only.
3. Uncertainty at 45 to 65 Hz, PF-1, only.
4. Best uncertainty does not include thermocouple error.
5. The uncertainties shown are for both generating and reading.
6. The uncertainty shown is for generating RTD equivalence only.
7. Jitter uncertainty will be treated as random and its influence will vary as to counter design.

GEOCORP INDUSTRIAL CONTROLS, INC.

Range in °C	Best Uncertainty (\pm) in °C ^{95%}	Remarks
0 to 1454	0.43	Type B
0 to 1454	0.40	Type C
0 to 1000	0.39	Type E
0 to 760	0.39	Type J
0 to 1372	0.39	Type K
0 to 1300	0.39	Type N
0 to 1454	0.40	Type R
0 to 1451	0.40	Type S
0 to 400	0.38	Type T

1. Represents an expanded uncertainty using a coverage factor, $k=2$.
2. Thermocouple Types above are defined as per ANSI-MC 96.1 except for Type C. Type C is Tungsten 5% Rhenium vs. Tungsten 26% Rhenium.

NIST Technical Publications

Periodical

Journal of Research of the National Institute of Standards and Technology—Reports NIST research and development in metrology and related fields of physical science, engineering, applied mathematics, statistics, biotechnology, and information technology. Papers cover a broad range of subjects, with major emphasis on measurement methodology and the basic technology underlying standardization. Also included from time to time are survey articles on topics closely related to the Institute's technical and scientific programs. Issued six times a year.

Nonperiodicals

Monographs—Major contributions to the technical literature on various subjects related to the Institute's scientific and technical activities.

Handbooks—Recommended codes of engineering and industrial practice (including safety codes) developed in cooperation with interested industries, professional organizations, and regulatory bodies.

Special Publications—Include proceedings of conferences sponsored by NIST, NIST annual reports, and other special publications appropriate to this grouping such as wall charts, pocket cards, and bibliographies.

National Standard Reference Data Series—Provides quantitative data on the physical and chemical properties of materials, compiled from the world's literature and critically evaluated. Developed under a worldwide program coordinated by NIST under the authority of the National Standard Data Act (Public Law 90-396). NOTE: The Journal of Physical and Chemical Reference Data (JPCRD) is published bimonthly for NIST by the American Institute of Physics (AIP). Subscription orders and renewals are available from AIP, P.O. Box 503284, St. Louis, MO 63150-3284.

Building Science Series—Disseminates technical information developed at the Institute on building materials, components, systems, and whole structures. The series presents research results, test methods, and performance criteria related to the structural and environmental functions and the durability and safety characteristics of building elements and systems.

Technical Notes—Studies or reports which are complete in themselves but restrictive in their treatment of a subject. Analogous to monographs but not so comprehensive in scope or definitive in treatment of the subject area. Often serve as a vehicle for final reports of work performed at NIST under the sponsorship of other government agencies.

Voluntary Product Standards—Developed under procedures published by the Department of Commerce in Part 10, Title 15, of the Code of Federal Regulations. The standards establish nationally recognized requirements for products, and provide all concerned interests with a basis for common understanding of the characteristics of the products. NIST administers this program in support of the efforts of private-sector standardizing organizations.

Order the following NIST publications—FIPS and NISTIRs—from the National Technical Information Service, Springfield, VA 22161.

Federal Information Processing Standards Publications (FIPS PUB)—Publications in this series collectively constitute the Federal Information Processing Standards Register. The Register serves as the official source of information in the Federal Government regarding standards issued by NIST pursuant to the Federal Property and Administrative Services Act of 1949 as amended, Public Law 89-306 (79 Stat. 1127), and as implemented by Executive Order 11717 (38 FR 12315, dated May 11, 1973) and Part 6 of Title 15 CFR (Code of Federal Regulations).

NIST Interagency or Internal Reports (NISTIR)—The series includes interim or final reports on work performed by NIST for outside sponsors (both government and nongovernment). In general, initial distribution is handled by the sponsor; public distribution is handled by sales through the National Technical Information Service, Springfield, VA 22161, in hard copy, electronic media, or microfiche form. NISTIR's may also report results of NIST projects of transitory or limited interest, including those that will be published subsequently in more comprehensive form.
