Directory of Professional / Trade Organization Laboratory Accreditation / Designation Programs

Charles W. Hyer, Editor

United States Department of Commerce Technology Administration National Institute of Standards and Technology he National Institute of Standards and Technology was established in 1988 by Congress to "assist industry in the development of technology . . . needed to improve product quality, to modernize manufacturing processes, to ensure product reliability . . . and to facilitate rapid commercialization . . . of products based on new scientific discoveries."

NIST, originally founded as the National Bureau of Standards in 1901, works to strengthen U.S. industry's competitiveness; advance science and engineering; and improve public health, safety, and the environment. One of the agency's basic functions is to develop, maintain, and retain custody of the national standards of measurement, and provide the means and methods for comparing standards used in science, engineering, manufacturing, commerce, industry, and education with the standards adopted or recognized by the Federal Government.

As an agency of the U.S. Commerce Department's Technology Administration, NIST conducts basic and applied research in the physical sciences and engineering, and develops measurement techniques, test methods, standards, and related services. The Institute does generic and precompetitive work on new and advanced technologies. NIST's research facilities are located at Gaithersburg, MD 20899, and at Boulder, CO 80303. Major technical operating units and their principal activities are listed below. For more information contact the Publications and Program Inquiries Desk, 301-975-3058.

FOREWORD

This directory is a guide to laboratory accreditation and similar types of programs conducted by private sector professionals and trade organizations. These programs accredit or designate laboratories or other entities to conduct testing to assist certification bodies in carrying out their responsibilities. This accreditation, or designation, is based on formal assessment of the capability of the laboratory to conduct the testing. The nature of such assessments varies considerably from agency to agency.

Laboratory accreditation and related efforts provide some assurance regarding the technical proficiency and competence of an entity to assess a product's or service's conformance to a set of prescribed standards. Many sectors of the economy may be interested in laboratory accreditation and related programs for a variety of economic, procurement, safety, or other considerations. Mutual acceptance of laboratory test results among private sector professional and trade organizations, states, local jurisdictions, and at the national and international levels can remove barriers to trade.

This directory (prepared under a contract with the Office of Standards Services, NIST) is an update of information contained in NIST Special Publication 831 of edition 1992, Principal Aspects of U.S. Laboratory Accreditation Systems. This directory identifies professional and trade organization laboratory accreditation/designation programs and notes the appropriate contact points within each organization. It is a reference for all who operate, use, or rely on laboratory services. Entries in this directory are based on information provided by each organization and reflect the organization's view of its activities. Parties in the interested in this subject may wish to review NIST SP 808, Directory of Federal Government Laboratory Accreditation/Designation Programs (a summary of programs conducted by the federal government).

ACKNOWLEDGMENTS

This directory is based on my earlier publications in the field; its format was expanded to be consistent with "NIST Special Publication 808, Directory of Federal Government Laboratory Accreditation/Designation Programs," edited by Maureen Breitenberg. Maureen Breitenberg of NIST's Office of Standard Services has provided important help and cooperation while monitoring this effort for NIST.

Special thanks are due Ruth Schreiber for her help in compiling this directory and managing all aspects of information processing, and to all the program officials who provided the information contained in this directory, without which this publication would not have been possible.

Charles W. Hyer Vice President The Marley Organization, Inc.

Editor

ABSTRACT

This directory is a guide to laboratory accreditation and similar types of programs conducted by professional and trade organizations. These programs accredit or designate laboratories or other entities to assist private sector professional societies, trade associations, related certification bodies, their membership, as well as government agencies, in carrying out their responsibilities. This accreditation or designation is based on an assessment of the capability of the laboratory to conduct the testing. However, the nature of the assessment varies considerably by organization and program.

Entries in this directory are based on information provided by each organization and reflect the organization's view of its activities. Parties interested in laboratory accreditation are referred to NIST SP 808, Directory of Federal Government Laboratory Accreditation/
Designation Programs, and NIST SP 815, Directory of State and Local Government Laboratory Accreditation/Designation Programs, which contain information on similar programs conducted at the federal, state and local government levels.

Publication of this directory is part of ongoing NIST efforts to establish and maintain comprehensive information on standards, regulations, laboratory accreditation, certification programs, and related information. This material answers the needs of government, industry, and the public for information on private sector laboratory accreditation and related programs.

Key Words: accreditation; conformity assessment;
certification; designation; laboratory accreditation;
laboratory designation; listing; proficiency testing;
qualified laboratories; quality systems; standards; testing

INTRODUCTION

Background:

Laboratory¹ accreditation has taken on increased worldwide significance as recognition and acceptance of test results from domestic and foreign laboratories have assumed greater importance in facilitating domestic and international trade. To accept such results, one must have confidence in the competence of the laboratory that produced them. Laboratory accreditation is one means of providing some assurance of the technical competence of a laboratory to assess a product's or service's conformance to a set of prescribed standards or other requirements.²

Laboratory accreditation helps increase confidence in certification program results. While laboratory accreditation and product/service certification are two distinct areas, laboratory accreditation can be vital in increasing the reliability of certification program results and in the confidence that can be placed in that program. The competence of laboratories that perform the required testing within a certification or approval system (e.g., building codes) can be as vital to securing acceptance of that certification/approval as is the adequacy of the standards on which the certification is based. It should be noted that not all laboratory accreditation programs are associated with a certification program and not all certification programs rely on accredited laboratories.

Sampling/testing, accreditation, product or service certification/ approval, assessment and registration of a producer's³ management system by an assessment body,⁴ as well as recognition of an accreditation body's competence can all be elements of what is now generally termed a "conformity assessment" scheme. When evaluating a conformity assessment scheme, one must look at each of the various elements that comprise the

¹ The International Organization for Standardization and the International Electrotechnical Commission (ISO/IEC) Guide 25-1990 General Requirements for the Competence of Calibration and Testing Laboratories defines "laboratory" as a "body that calibrates and/or tests." It further notes: "1) In cases where a laboratory forms part of an organization that carries out other activities besides calibration and testing, the term 'laboratory' refers only to those parts of that organization that are involved in the calibration and testing process. 2) As used herein, the term 'laboratory' refers to a body that carries out calibration or testing at or from a permanent location, at or from a temporary facility, or in or from a mobile facility."

² ISO/IEC Guide 58-1993 General Requirements for Operation and Recognition – *Calibration and Testing Laboratory Accreditation Systems* defines "laboratory" as a "body that calibrates and/or tests." The Guide defines "accreditation" as a "procedure by which an authoritative body gives formal recognition that a body or person is competent to carry out specific tasks."

³ ANSI Z34.1-1993 *Third-Party Certification Program* and its companion ANSI Z34.2-1987 *Self-Certification by Producer or Supplier* defines "producer" as "the manufacturer, distributor, supplier or other party providing the product or service who is responsible for assuring conformity to all requirements of the referenced standards or specifications."

⁴ISO Guide 48-1986 Guidelines for Third-party Assessment and Registration of a Supplier's Quality System defines an "assessment body" as a "third-party body which assesses and registers the Quality Systems of Suppliers with respect to published Quality Systems Standards."

scheme and assess the competence with which each is likely to be performed. If each element is performed properly, overall confidence in the results of a conformity assessment are enhanced and can serve as a basis for increased international trade.

Purpose and Content:

This directory provides information on private sector professional/trade organization laboratory accreditation and similar types of programs (schemes). These programs designate a set of laboratories or related entities as qualified to conduct testing to assist private sector professional societies, trade associations, related certification bodies, and government agencies in carrying out their responsibilities. The programs or schemes include an assessment of the laboratory's/entity's capability to conduct specified testing. However, the type and degree of rigor of such assessments vary greatly among programs. Entries in this directory are based on new and updated information provided by professional/trade organizations, which conduct such programs. The information reflects each organization's view of its program. In the course of compiling this information, some laboratories report an inconsistency in the manner in which some accreditation programs apply various portions of their formal assessment criteria and procedures. No attempt has been made either to confirm or refute such allegations. It should be noted that the criteria of some programs are applied on an optional or discretionary basis based on: the type of approval sought; past experience with the laboratory; fields of testing included in the accreditation scope; or the requirements/needs of the organizations relying on the accreditation.

The editor is unaware of any harmonized set of federal or state government criteria for evaluating private sector laboratory accreditation/ designation programs. In the absence of such criteria, this directory should only be used as one source of information for assessing individual programs. Parties interested in conformity assessment should also review NIST SP 903, Directory of U.S. Private Sector Product Certification Programs, which contains information on a number of closely related programs.

Compilation of this Directory:

In compiling this information, organizations whose laboratory accreditation/designation programs and systems were last reported in the 1992 edition of NIST Special Publication 831, Directory of Professional/Trade Organization Laboratory Accreditation/ Designation Programs, were contacted to update their entries. Most of the organizations listed in NIST SP 903 were also contacted to advise them that SP 831 was being updated and to request information on any relevant programs. In addition, other sources were also used to develop a list of potential organizations that might operate laboratory accreditation programs, and they too were contacted.

The private sector accreditation/designation programs listed in this directory are generally recognized as third-party programs conducted by professional/trade societies, associations and other related types of organizations. There are also numerous first-party (producer/supplier) and second-party designation programs, many of which employ similar criteria. These were not included in this directory.

Directory Format:

The professional and trade organization entries in this directory are organized alphabetically by organization/title. Each entry contains: a description of the program; the date that the program was initiated; the authority under which the program is conducted; the fields of testing being accredited or designated, (employing where applicable ASTM 1224-94 Standard Guide for Categorizing Fields of Capability for Laboratory Accreditation Purposes Testing; the products directly or indirectly affected by the testing; program requirements; availability of related publications; and other information. Programs or systems included within this directory are updated or newly acquired listings based primarily on the 1992 directory, Directory of Professional/Trade Organization Laboratory Accreditation/ Designation Programs.⁵

Appendix I contains several indices, including a product index. A copy of the questionnaire and a description of the format used for each entry are contained in Appendix II. Appendix III, Reconciliation of Professional/Trade Organization Accreditation Systems Appearing in the 1992 Edition of NIST SP 831, provides information on programs which were included in the 1992 edition; but which, for one reason or another, are no longer listed. Appendix IV contains information on other organizations which provided data on their activities in the accreditation area, but which did not qualify for inclusion in the main body of the directory. Appendix V contains a list of acronyms, abbreviations and initializations used in the directory. Appendix VI contains a list of other NIST publications of potential interest to the reader.

Program Differences:

Requirements for private sector professional/trade organization laboratory accreditation/designation programs vary substantially among programs. The American Association for Laboratory Accreditation (A2LA) programs for providing assurance of the competence of its accredited laboratories include: a review of a laboratory's structure; personnel; equipment and facilities; equipment calibration and maintenance procedures; quality control program; record keeping procedures; availability and use of operational/quality manuals; content and quality of actual test reports; testing conditions, methods and procedures; sample handling and selection procedures; an on-site inspection of the laboratory's equipment and facilities and/or the use of a proficiency testing program. On the other

⁵ NIST Special Publication 831 *Directory of Professional/Trade Organization Laboratory Accreditation/ Designation Programs*, Charles W. Hyer, Editor, National Institute for Standards and Technology, Department of Commerce, Gaithersburg, MD 20899.

⁶ Laboratory proficiency testing is defined by ISO/IEC Guide 2 as the: "determination of laboratory testing performance by means of interlaboratory test comparisons."

hand, programs intended to designate laboratories that primarily test products and equipment for procurement purposes (procurements requiring product conformity to specified standards and specifications) tend to concentrate on conducting an initial assessment and have fewer program follow-up or monitoring requirements.

In the case of model code organization laboratory accreditation designation programs, such programs have arisen from the adoption of the codes by state, local, and municipal authorities having jurisdiction. Code officials, who are familiar with the details and intention of specific code requirements, are employed as assessors to review and evaluate laboratories. The depth of such reviews are based on the laboratory's scope of operations. They are also based on the authority's dependence upon test report data to identify products, which conform to code requirements and which are thus acceptable for installation and use. Code organization laboratory accreditation/designation programs are an outgrowth of product evaluation schemes. Participation in such programs is often inappropriately assumed to be equivalent to achieving laboratory approval directly by governmental authorities. That is, such programs are sometimes assumed by laboratories and users of laboratory services to be comparable to such programs as the U.S. Department of Labor's Occupational Safety and Health Administration's Nationally Recognized Testing Laboratory (NRTL) program. In fact, such laboratory accreditations can more appropriately be considered as "recommendations" to some approval authority or authorities. The authority having jurisdiction to recognize/accept a laboratory relies on the recommendation (accreditation/designation) of a private sector assessor organization (code organization) known to be familiar with the requirements of the adopted code. Recognition or acceptance of the accreditation remains the responsibility of the authority (state or local government agency) having jurisdiction. Code organization laboratory accreditation/designation is the responsibility of the code organization, while laboratory recognition, acceptance of test results and product certifications (products that conform to code) are governmental responsibilities. Comprehending the differences among these functions and recognizing who has responsibility for each of them are crucial steps in understanding how the approval process really operates in the building and construction area.

Another difference among listed programs is the importance and use of international standards in the program. Included in the questionnaire, were two specific questions that provided some indication of the importance of international guides and standards concerning conformity assessment activities. The first asked: "Does your program conform to ISO/IEC Guide 58?" The second asked: "Are your requirements for laboratories comparable to ISO/IEC Guide 25?"

In each case, the 38 respondents were able to check "Yes," "No," or "Don't Know." Fourteen respondents indicated that their programs conformed to ISO/IEC Guide 58, while an almost equal number (twelve) indicated that either their program did not conform or they didn't know. For ISO/IEC Guide 25, 22 respondents indicated that their programs' requirements were comparable, while five said they were not and 11 didn't know. As a general observation, use of international conformity assessment guides and standards has grown since the last edition of this directory, though further education in this area is still needed.

The following chart summarizes the number of programs requiring each of 25 assessment criteria or procedures, out of a total of 38 programs:

	38	PROGRAMS REPO
REQUIREMENT	WITH	WITHOUT
Must Be A Legal Entity	28	10
Must Be Financially Stable	24	14
Must Be Independent of Manufacturers/Suppliers Of Products Tested	23	15
Must Have An Effective Quality System	33	5
Must Have Procedures To Prevent Conflicts-Of-Interest	26	12
Must Have A Document Control System	31	7
Must Have A Contract Review Process	20	18
Must Have Procedures for Sub-Contracting Tests and Calibrations	21	17
Must Have A Documented Procurement Process	21	17
Must Have A Complaints/Appeals Process	18	20
Must Have A System to Control Nonconforming Testing and/or Calibration Work	22	16
Must Have A Corrective/Preventive Action Process	23	15
Must Have An Effective Recordkeeping Process	32	6
Must Have Documented Record Retention Requirements	23	15
Must Conduct Internal Audits of Its Quality System	28	10
Laboratory Management Must Review Results of Internal Audits	22	16
Must Have Qualified Personnel	35	3
Laboratory Measurements Must Be Traceable To National Standards	25	13
Must (Where Applicable) Use Effective Sampling Techniques	19	19
Must Have a Process for Handling/Transport of Test/Calibration Items	20	18
Must Participate In A Proficiency Testing Program	22	16
Must Have Adequate Instrumentation Facilities and Equipment	30	8
Must Ensure Adequate Equipment Maintenance/Calibration	31	7
Must Attend Program Laboratory Workshops/Conferences	8	30
Must Maintain Other or Related Accreditations/Approvals	7	31

Some programs have additional requirements not included in the above chart. For example, the American Oil Chemists' Society (AOCS), Page 25, requires an AOCS approved chemist to be on the full-time staff of laboratories applying for accreditation. Other requirements (not listed above) include membership by the laboratory in the association. Many of AOCS's formal procedures allow non-member laboratories, such as government laboratories, to be accredited. However, in reality all accreditations are held by members.

A few other important anomalies should also be considered when reviewing the above chart. The American Society for Testing and Materials (ASTM) Cement and Concrete Reference Laboratory (CCRL), Page 43, is considered to be a designation program. CCRL was started in 1929 as a Research Associate Programs at NIST. CCRL designates some 765 laboratories that have been evaluated using standards and test methods contained in NIST Letter Circular 1133. Though this program is not a true laboratory accreditation program because of its limited requirements, it does provide valuable evidence of testing laboratory competence. Such evidence is useful to others, which accredit/designate laboratories. The CCRL Program pre-dates most testing laboratory accreditation programs as well as most laboratory accreditation standards. However, the CCRL Program is often mistakenly identified as a laboratory accreditation program. With the CCRL program information detailed herein, it is now possible for interested parties to . determine what additional requirements, if any, may be appropriate for accrediting laboratories that participate in this program. One can also get a better understanding of the limitations of this program by comparing is requirements with those of NIST's National Voluntary Laboratory Accreditation Program (NVLAP). Information on the NVLAP program is contained in NIST SP 808, Directory of Federal Government Laboratory Accreditation/Designation Programs.

Entries containing information on laboratory designations made by independent testing laboratories that operate third-party certification programs often indicate that "independence (no-conflict-of-interest)" is a requirement. Yet these entries also note that the accreditation of laboratories of participating manufacturers is allowed when such laboratories are needed to perform the in-house quality assurance testing required for certification.

Other anomalies were noted in the category: "Periodic Random Re-audit," which may result from such factors as national security clearance requirements. Some programs may also have checked the requirement, "Participation in Proficiency Testing," when such a requirement may be applicable only to certain types of accreditations or to only limited types of testing within the scope of the accreditation.

Acceptance of Private Sector Accreditation Program Results by Government Agencies and Certification Programs:

Accreditation decisions made by some private sector laboratory accreditation programs can influence the outcome of applications for laboratory accreditation received by federal, state, local and municipal governments. A few of these are even mentioned by name in the category "Other Recognition." However, until there is some formal uniform

governmental procedure for the recognition of private sector testing laboratory accreditation programs, government recognition of private sector laboratory accreditation programs will continue to be a erratic process. Recognition of private sector laboratory accreditation programs raises several major issues:

- Independent third-party private sector accreditation programs may not be needed in specific areas where there is a national government laboratory accreditation program, which can assure the competence of laboratories at a reasonable cost, since government programs are more likely to be widely recognized and accepted than private sector programs.
- Although mutual recognition among comparable programs is desirable to prevent needless, costly duplication, most private sector programs depend upon participating laboratory fees for their existence. Can such programs remain financially viable if mutual recognition among programs occurs?
- Recognition of multiple private sector testing laboratory accreditation programs by certifiers may also be difficult. Most accreditation efforts by certifiers are subtasks, undertaken as part of the operation of product certification programs. Certification programs need to identify laboratories, which are not only competent to conduct the testing, but which are also capable of providing virtually identical test results. The latter requirement is necessary given the competition among participating producers. The need for both types of assurance may cause recognition of multiple accreditation programs by certifiers programs to be infeasible.

Despite these problems, reducing duplicative and unnecessary laboratory accreditation requirements is a worthwhile effort, which should be pursued by government agencies in conjunction with the private sector.

Directory Changes:

Private sector professional and trade organizations are encouraged to notify NIST of any changes in their laboratory accreditation programs or of new programs. Such information should be sent to:

Global Standards Program
National Institute of Standards and Technology
Administration Building, Room 820, MS 2100
Gaithersburg, MD 20899-2100

PROGRAM TITLE: Seal of Excellence.

DESCRIPTION: The Seal of Excellence program was developed in 1996 to recognize laboratories

with exemplary quality performance. The Seal of Excellence program serves as a "better business bureau" for environmental laboratories. It provides clients and regulators impartial information as to the quality of a given environmental

laboratory.

DATE ESTABLISHED: 1996.

PROGRAM SCOPE: Recognizes laboratories for chemical testing.

PRODUCTS TESTED: Environmental: hazardous waste; priority pollutants; solid waste; wastewater;

(Categories) water.

STANDARDS/ ACIL does not publish a list of standards.

TEST METHODS USED:

LABS LISTED/ 65 as of 1998.

ACCREDITED:

ISO/IEC GUIDE 58: Program does not conform to ISO/IEC Guide 58.

VALIDITY/RENEWAL: Program is valid for one year.

ASSESSOR STATUS 1 assessor.

ASSESSOR QUALIFICATIONS: There are no mandatory assessor qualifications.

ASSESSOR TRAINING: There is no assessor training program.

PROGRAM FEES: There is a fee to participate, which is set by ACIL. Contact ACIL or the Seal

of Excellence Program Manager for a fee schedule.

APPEAL PROCEDURES: No appeal procedure.

PUBLICATIONS: None.

LOGO/MARK: ACIL has a logo.

PROGRAM AVAILABILITY: Program available to all U.S. testing laboratories.

LISTS/DIRECTORIES: Not published.

PUBLISHED	There is a published set of requirements for the program, which is available

PROGRAM TITLE:

AAMA Laboratory Accreditation Program

DESCRIPTION:

The program exists to provide competent independent laboratory testing facilities of fenestration products. It forms a basic testing capacity in support of the AAMA Product Certification Programs.

DATE ESTABLISHED:

1979.

PROGRAM SCOPE:

Acoustic and vibration testing; mechanical testing; Thermal testing; and

component testing.

PRODUCTS TESTED: (Categories)

Windows, doors, store fronts, custom walls, skylights, hardware, weatherstrips,

sealants.

STANDARDS/

AAMA offices maintain a list.

TEST METHODS USED:

LABS LISTED/ ACCREDITED: 25 as of June 1999.

ISO/IEC GUIDE 58:

Program conforms to ISO/IEC Guide 58.

VALIDITY/RENEWAL:

Accreditation is valid for one year, with renewals yearly.

ASSESSOR STATUS

Two contract assessors.

ASSESSOR QUALIFICATIONS:

Familiarity with AAMA Laboratory Accreditation Program Procedural Manual, ISO

Guide 58, fenestration testing, AAMA standards, and ASTM standards.

ASSESSOR TRAINING:

No assessor training programs offered.

PROGRAM FEES:

There is a fee to participate, and the fee is set by AAMA staff - Technical

Director. A Fee schedule is available from AAMA offices.

APPEAL PROCEDURES:

Appeals may be made to the Certification Policy Committee, in writing, within 30 days of denial. Hearings are held before Certification Policy Committee at

regular meetings of this committee.

PUBLICATIONS:

" AAMA Laboratory Accreditation Program Procedural Guide."

LOGO/MARK:

AAMA Logo is Federally registered, copyrighted, and trademarked.

PROGRAM AVAILABILITY:

Accreditation program available to all U.S. Testing and Private Sector

Laboratories, and all Foreign Private Sector Laboratories.

LISTS/DIRECTORIES:

List of AAMA Accredited Laboratories available from AAMA offices.

PUBLISHED

Published procedures are available from AAMA offices.

DATE RECEIVED: 1/23/99

PROFESSIONAL/TRADE (PT)ORGANIZATION:

American Association for Laboratory Accreditation [A2LA]

PRIMARY CONTACT:

Peter S. Unger, President

ADDRESS:

5301 Buckeystown Pike, Suite 350

Frederick, MD 21704-8307

PHONE: FAX: E-MAIL: URL: (301) 644-3248 (301) 622-2974 INFO@a2la.org

http://www.a2la.org

PROGRAM TITLE:

A2LA Laboratory Accreditation Program.

DESCRIPTION:

Accreditation of testing and calibration laboratories using ISO/IEC Guide 25 and specific technical criteria.

DATE ESTABLISHED:

1978.

PROGRAM SCOPE:

Acoustics & Vibration; Biological; Calibration; Chemistry; Medical; Electrical; Environmental; Non-Destructive; Mechanical; Thermal.

PRODUCTS TESTED: (Categories)

All types of materials and products.

STANDARDS/

TEST METHODS USED:

National and international voluntary and governmental standards, protocols, and testing/calibration methods appropriate to the field; documented company methods available to the public (must be validated).

LABS LISTED/ ACCREDITED: 1202 laboratories (43 calibration labs, 1159 testing labs) have achieved accreditation as of 1/13/99.

ISO/IEC GUIDE 58:

Program conforms to ISO/IEC Guide 58.

VALIDITY/RENEWAL:

Laboratories undergo a full on-site reassessment every two years. During the mid-point of the two-year accreditation period, laboratories undergo a comprehensive quality system, organizational and proficiency testing review. Additionally, after the first year of accreditation for new laboratories, a one-day surveillance visit is conducted on-site.

ASSESSOR STATUS

Eighty assessors as of 1/13/99.

ASSESSOR

QUALIFICATIONS:

The majority of A2LA assessors are independent technical consultants that work for A2LA on a contractual basis per assignment. Additionally, several of the staff members are qualified quality system assessors. Assessors must be experts in their fields of testing.

ASSESSOR TRAINING:

Assessors must attend a three-day assessor orientation course and pass the final examination. There is an optional 5-day lead assessor course, which most assessors have also completed to qualify as lead auditors. Additionally, senior qualified staff members evaluate assessors on their first assignments and then again one year after initial approval as A2LA assessors. Thereafter, assessors are evaluated every three years. Laboratories being assessed and members of the Accreditation Council also evaluate assessor performance as part of the on-going assessor training and evaluation program.

PROGRAM FEES:

Laboratories pay a fee plus the actual costs of the assessor's on-site assessment. The cost of the on-site assessment is largely dictated by the number of fields, number of test/calibration methods, and the laboratories readiness for the on-site assessment. The A2LA Board of Directors sets the fees. Fee schedules are available.

APPEAL PROCEDURES:

The first appeal is to the Accreditation Council for reconsideration; a second may be made to the Board of Directors.

PUBLICATIONS:

A2LA offers a number of publications, including the following: A2LA Directory; A2LA Annual Report; A2LA Fact Sheet; Membership Brochure; Training Brochure; and a periodic newsletter, the A2LA NEWS..

LOGO/MARK:

A2LA has a registered logo. A copy appears on letterheads. Accredited labs can only use the logo if it appears with the word "accredited" underneath it. Conditions for use of the logo are provided to accredited labs.

PROGRAM AVAILABILITY:

Accreditation is available to all U.S. and foreign testing and calibration labs, including private sector and governmental labs. However, foreign labs are encouraged to use the accreditation bodies in their own country.

LISTS/DIRECTORIES:

An updated list of accreditation laboratories can be found on the web site at www.a2la.org. A2LA also publishes an annual Directory that includes the scopes of accreditation. It is available free of charge upon request.

PUBLISHED
PROCEDURES:

A2LA publishes General and Specific Requirements for accreditation.

LABORATORY ASSESSMENT CRITERIA:

\boxtimes	Must	Вe	Α	Legal	Enti	ity
	Must	Ве	F	inanci	ally	Stable

Must Be Independent Of Manufacturers/Suppliers Of Products

Must Have An Effective Quality System

Must Have Procedures To Prevent Conflicts-Of-Interest

Must Have Procedures For Sub-Contracting Tests And Calibrations

☐ Must Have A Documented Procurement Process
☐ Must Have A Complaints/Appeals Process

Must Have A System To Control Nonconforming Testing and/or Calibration

WORK

Must Conduct Internal Audits Of Its Quality System

☐ Laboratory Management Must Review Results Of Internal Audits

Must Have Qualified Personnel

☐ Laboratory Measurements Must Be Traceable To National Standards

Must (Where Applicable) Use Effective Sampling Techniques

Must Have A Process For Handling/Transport Of Test/Calibration Items

Must Participate In A Proficiency Testing Program

Must Have Adequate Instrumentation Facilities And Equipment

Must Ensure Adequate Equipment Maintenance/Calibration

Must Attend Program Laboratory Workshops/Conferences

Must Maintain Other Or Related Accreditations/Approvals

ISO/IEC GUIDE 25:

Requirements are comparable to ISO/IEC Guide 25.

PROFICIENCY
TESTING PROGRAM:

Laboratories must participate in programs where they are available. If they cannot find suitable programs, they must provide internal performance-based data. Additionally, laboratories participate in proficiency testing conducted through the regional multilateral agreement groups for APLAC and EA.

GOVERNMENT
RECOGNITIONS:

Federal: EPA (under the National Lead Laboratory Accreditation Program [NLLAP]; FCC (as an accreditation program for EMC labs); NAVSEA (recognizing equivalence of data produced by government labs with government labs accredited by Naval Shipyard Laboratory Accreditation Program [NSLAP], NIST (under Fastener Quality Act [FQA]); States: Georgia, New Mexico, Texas (for accreditation of drinking water testing labs); Washington (for nonpotable water testing labs).

MUTUAL RECOGNITION ARRANGEMENTS:

Current cooperative arrangements include: (1) individual Mutual Recognition Agreement with the Standards Council of Canada [SCC]; and (2) Mutual Recognition Arrangement with the Asia Pacific Laboratory Accreditation Cooperation [APLAC].

PROGRAM TITLE: AIHA Laboratory Quality Assurance Programs.

DESCRIPTION: Industrial Hygiene Laboratory Accreditation Program for laboratories, which

analyze samples to evaluate workplace exposure to chemical hazards;

Environmental Lead Laboratory Accreditation Program for laboratories, which conduct analyses for lead in environmental samples; Environmental Microbiology Laboratory Accreditation Program for laboratories specializing in analyses of microorganisms detected in work environment samples; Asbestos Analysts Registry for individuals engaged in the counting and measurement of asbestos in air samples at the job site; Environmental Accreditation for Environmental Labs.

DATE ESTABLISHED: 1973.

PROGRAM SCOPE: Accredits laboratories for chemical testing.

PRODUCTS TESTED: Occupational health and environmental samples. (Categories)

amanna nna /

STANDARDS/ No standards/test methods are published.

TEST METHODS USED:

LABS LISTED/ 579 as of December 10, 1998.

ACCREDITED:

ISO/IEC GUIDE 58: Program conforms to ISO/IEC Guide 58.

VALIDITY/RENEWAL: Accreditation is valid for three years, with renewals every three years.

ASSESSOR STATUS Eleven assessors, all contract employees.

ASSESSOR QUALIFICATIONS: Minimum requirements for all programs: 1) ABA/BS in chemistry or related

science; 2) demonstrated knowledge of quality assurance and quality control measures; and 3) understanding of the technical areas for which they are conducting site assessments. Additional requirements are published in policy

documents that can be obtained from AIHA.

ASSESSOR TRAINING: Assessor training is required; initial training is one week, with subsequent

annual training of one day.

PROGRAM FEES: A fee schedule for all programs is available. Fees are set by the AIHA

Manager, Laboratory Quality Assurance Programs. The fee schedule is also available through the internet at (http://www.aiha.org), or by calling AIHA.

APPEAL PROCEDURES: Appeal procedures are outlined in policy documents, which are available from

AIHA.

PUBLICATIONS: AIHA's description of the programs is published in a document entitled,

"Laboratory Quality Assurance Programs," which is available from AIHA.

LOGO/MARK: The program has a logo, but it is not federally registered.

PROGRAM AVAILABILITY: Program is available to all U.S. private sector and government testing

laboratories and to all foreign, private sector and government laboratories.

LISTS/DIRECTORIES: The following is available in hard copy by request: " IH Accredited Labs List,"

published biannually in the AIHA Journal. Lists are also available on from the internet (http://www.AIHA.org). "Lead Accredited Labs" is available from lead hotline (1-800-424-LEAD).

PUBLISHED PROCEDURES:

A published set of requirements is available, upon request, from AIHA.

LABORATORY
ASSESSMENT

PROGRAM TITLE: Forensic Laboratory Accreditation Program.

DESCRIPTION: Accreditation of Forensic Laboratories.

DATE ESTABLISHED: May 1982.

PROGRAM SCOPE: Forensic Laboratories (crime laboratories).

PRODUCTS TESTED: Forensic type materials/products. (Categories)

STANDARDS/

An accreditation manual with standards is available from Executive Secretary. TEST METHODS USED:

182 as of April 1999. LABS LISTED/

ACCREDITED:

ISO/IEC GUIDE 58: Program does not conform to ISO/IEC Guide 58.

VALIDITY/RENEWAL: Accreditation valid for five years, renewals every five years.

ASSESSOR STATUS Approximately 300 part-time assessors, some volunteers (expenses paid).

ASSESSOR QUALIFICATIONS: Assessors must be trained and certified, must have forensic expertise, and be

in a supervisory capacity.

ASSESSOR TRAINING: A 2 ½ day classroom program and mock inspection exercise is required.

PROGRAM FEES: None.

APPEAL PROCEDURES: Decisions can be appealed to the delegate assembly (body of directors of

accredited labs).

PUBLICATIONS: ASCLD/LAB Accreditation Manual.

LOGO/MARK: ASCLD/LAB has a Federally trademarked logo.

PROGRAM AVAILABILITY: All crime laboratories throughout the world.

LISTS/DIRECTORIES: ASCLD/LAB publishes a list of all ASCLD/LAB accredited labs.

PUBLISHED ASCLD/LAB publishes a set of requirements for accreditation and can be obtained

PROCEDURES: from the Executive Secretary of ASCLD/LAB.

LABORATORY ASSESSMENT CRITERIA:	Must Be A Legal Entity Must Be Financially Stable Must Be Independent Of Manufacturers/Suppliers Of Products Must Have An Effective Quality System Must Have Procedures To Prevent Conflicts-Of-Interest Must Have A Document Control System Must Have A Contract Review Process Must Have Procedures For Sub-Contracting Tests And Calibrations Must Have A Documented Procurement Process Must Have A Complaints/Appeals Process Must Have A System To Control Nonconforming Testing And/Or Calibration Work
	Must Have A Corrective/Preventive Action Process Must Have An Effective Recordkeeping Process Must Have Documented Record Retention Requirements Must Conduct Internal Audits Of Its Quality System Laboratory Management Must Review Results Of Internal Audits Must Have Qualified Personnel Laboratory Measurements Must Be Traceable To National Standards Must (Where Applicable) Use Effective Sampling Techniques Must Have A Process For Handling/Transport Of Test/Calibration Items Must Participate In A Proficiency Testing Program Must Have Adequate Instrumentation Facilities And Equipment Must Ensure Adequate Equipment Maintenance/Calibration Must Attend Program Laboratory Workshops/Conferences Must Maintain Other Or Related Accreditations/Approvals
ISO/IEC GUIDE 25:	Requirements are comparable to ISO/IEC Guide 25.
OTHER COMPARABILITY:	None.
PROFICIENCY TESTING PROGRAM:	Examiners must participate in program testing using ASCLD/LAB approved program testing providers on an annual basis.
GOVERNMENT RECOGNITIONS:	Program is recognized by Federal, State, and local agencies, U.S. Legislature, NATA of Australia, and other foreign countries.
MUTUAL RECOGNITION ARRANGEMENTS:	MOU with NATA Australia.

URL: http://www.aaalac.org.

PROGRAM TITLE: Laboratory Animal Care Facilities Accreditation.

DESCRIPTION: A system for the accreditation of laboratory animal care facilities and

programs concerned with: encouraging high standards for the care and use of laboratory animals; including appropriate veterinary care; controlling variables that might adversely affect animal research; and protecting the

health of animal research workers.

DATE ESTABLISHED: 1965.

PROGRAM SCOPE: Accredits laboratories for biological testing.

PRODUCTS TESTED: Drugs, medicines, veterinary and medical products (tested by institutions

(Categories) AAALAC accredits - not by AAALAC, per se.

STANDARDS/ "Guide for the Care and Use of Laboratory Animals," National Research Council

TEST METHODS USED: 1996.

LABS LISTED/ 627 laboratories as of 6/14/99.

ACCREDITED:

ISO/IEC GUIDE 58: Does not conform.

VALIDITY/RENEWAL: Three years, with an annual report required and site revisits conducted every

three years.

ASSESSOR STATUS Thirty members of the Council on Accreditation. Elected by the Board of

Trustees - small honorarium plus expenses paid. Note: Also maintain pool of

over 100 ad hoc Consultants.

ASSESSOR QUALIFICATIONS: No mandatory assessor qualifications.

ASSESSOR TRAINING: Ad hoc Consultants are "trained" through participation in the on-site visits

with council members.

PROGRAM FEES: There is a fee to participate, which is set by the AAALAC Council. These fee

schedules can be obtained from the AAALAC Executive Director.

APPEAL PROCEDURES: Appeal procedures may be made through the Council to the Board of Trustees.

PUBLICATIONS: AAALAC publishes brochures, a newsletter entitled "CONNECTION," and lists of

accredited laboratories by group classification.

LOGO/MARK: None.

PROGRAM AVAILABILITY: Accreditation is available to all U.S. and foreign facilities.

LISTS/DIRECTORIES: "Directory of Accredited Programs" (also on web site).

PUBLISHED Procedures are published, and can be obtained from AAALAC Associate Director

Automotive Manufacturers Equipment Compliance Agency (AMECA)

PRIMARY CONTACT:

Mr. George E. Walton, Executive Director

ADDRESS:

1101 15th Street, NW, Suite 607

Washington, DC 20005

PHONE:

(202) 898-0145 (202) 898-0148

PROGRAM TITLE:

Laboratory Accreditation and Equipment Compliance.

DESCRIPTION:

The AMECA program is designed to notify government, industry, and the general public about items of motor vehicle safety equipment that have been tested by AMECA and found to be in compliance with applicable U.S. standards.

DATE ESTABLISHED:

1967.

PROGRAM SCOPE:

Accredits laboratories for acoustics and vibration, chemical, electrical, mechanical, nondestructive, optics and photometry, and thermal testing.

PRODUCTS TESTED:
(Categories)

Motor vehicle-related products tested by AMECA include: lighting equipment; auxiliary lighting equipment; glazing materials; and specific safety equipment.

STANDARDS/

TEST METHODS USED:

AMECA publishes a list of standards/test methods used in the program. The list is available from AMECA. The list includes: FMVSS; SAE; ANSI; and various

state standards.

LABS LISTED/ ACCREDITED: 66 as of June 1, 1999.

ISO/IEC GUIDE 58:

Program does not conform to ISO/IEC Guide 58.

VALIDITY/RENEWAL:

Accreditation is valid for two years, with renewals every two years.

ASSESSOR STATUS

2 full-time assessors.

ASSESSOR QUALIFICATIONS:

Assessors are required to have an appropriate degree and experience.

ASSESSOR TRAINING:

AMECA provides training for assessors, which includes an orientation and audit

experience.

PROGRAM FEES:

Fees for accreditation include a base audit fee plus prorated expenses. For a compliance notice for equipment, the fee is set based on the type of product. The fees are set by AMECA administration.

APPEAL PROCEDURES:

There is an administrative review procedure, which is available from AMECA.

PUBLICATIONS:

AMECA publishes the "Manufacturers Guide for Safety Equipment Compliance Services" and the "List of Acceptable Plastics for Optical Lenses and Reflectors Used on Motor Vehicles," as well as other general information.

LOGO/MARK:

AMECA has a logo, which is not federally registered.

PROGRAM AVAILABILITY:

Accreditation is available to all U.S. private sector and government testing laboratories, as well as foreign private sector and government testing laboratories.

LISTS/DIRECTORIES:

AMECA publishes a "Listing of AMECA Accredited Laboratories," which is

available from AMECA on request.

PUBLISHED PROCEDURES:

Requirements for the program are contained in the "Manufacturers Guide for

Safety Equipment Compliance Services" available from AMECA.

Cement and Concrete Reference Laboratory (CCRL) (this program is primarily an inspection program) Management of this program was recently transferred to

ASTM, though it will continue to operate on the NIST campus.

PRIMARY CONTACT:

Mr. James H. Pielert, CCRL Manager

ADDRESS:

NIST

100 Bureau Drive, Stop 8622 Gaithersburg, MD 20899-8622

PHONE: (301) 975-6704
FAX: (301) 330-1956
E-MAIL: jpielert@nist.gov

URL: http://www.bfrl.nist.gov/862/ccrl/front.htm

PROGRAM TITLE:

Cement and Concrete Reference Laboratory.

DESCRIPTION:

The four primary functions of the CCRL are: (1) conducting on-site inspections of apparatus and procedures used in the testing of cement, concrete, aggregates, reinforcing steel and pozzolans; (2) distributing proficiency testing samples; (3) studying testing problems; and (4) participating in the work of technical committees. CCRL does not accredit laboratories, but its on-site inspection, and proficiency sample programs are used by laboratory

accreditation organizations.

DATE ESTABLISHED:

1929.

PROGRAM SCOPE:

Accredits laboratories for construction materials, though accreditation

process is closer to an inspection process.

PRODUCTS TESTED: (Categories)

Cement, concrete, aggregates, reinforcing steel, and pozzolans.

STANDARDS/

TEST METHODS USED:

ASTM methods are used. A list of these methods can be obtained from CCRL.

LABS LISTED/ ACCREDITED: 765 as of January 1, 1999.

ISO/IEC GUIDE 58:

Program does not conform to ISO/IEC Guide 58.

VALIDITY/RENEWAL:

This is an on-going inspection program with no set termination dates.

ASSESSOR STATUS

11 full-time assessors.

ASSESSOR QUALIFICATIONS:

No mandatory requirements.

ASSESSOR TRAINING:

A six-month training program is required. Must complete 20 assessments

accompanied by senior assessor.

PROGRAM FEES:

There are fees to participate. Fees are set by ASTM C1/C9 Subcommittee on the CCRL. A fee schedule may be obtained from CCRL.

APPEAL PROCEDURES:

Not applicable.

PUBLICATIONS:

NIST LC 1044 Cement and Concrete Reference Laboratory and NIST LC.

LOGO/MARK:

None, but acronym "CCRL" is widely used.

PROGRAM AVAILABILITY:

Inspection available to all laboratories, private sector and government in the

United States, Mexico and Canada.

LISTS/DIRECTORIES:

A list is not published.

PUBLISHED PROCEDURES:

NIST Letter Circular 1133.

SA8000 Accreditation. PROGRAM TITLE:

DESCRIPTION: Accreditation to audit for conformance to SA8000 (Social Accountability 8000).

DATE ESTABLISHED: 1969.

PROGRAM SCOPE: Accreditation of company and individuals to perform inspection audits to the

requirements of SA8000 Social Accountability Standard.

PRODUCTS TESTED: (Categories)

Mechanical and chemical.

STANDARDS/

Standards are published in "SA 8000," which can be obtained from CEPAA.

TEST METHODS USED:

LABS LISTED/ 3 as of June 1999.

ACCREDITED:

ISO/IEC GUIDE 58: Program conforms to ISO/IEC Guide 61.

VALIDITY/RENEWAL: Accreditation is valid for three years, with surveillance audits scheduled

every 6 months.

ASSESSOR STATUS 5 contract assessors.

Assessors must have quality and social conditioning training. ASSESSOR QUALIFICATIONS:

ASSESSOR TRAINING: Assessors receive a four day course of training.

PROGRAM FEES: There is a fee to participate. CEPAA sets the fee. A fee schedule may be

obtained from CEPAA.

APPEAL PROCEDURES: There are appeal procedures.

PUBLICATIONS: Standard SA8000 and a program description is available from CEPAA.

LOGO/MARK: CEPAA has a logo.

Any organization satisfying accreditation requirements: ISO Guide 61 and CEPAA PROGRAM AVAILABILITY:

Guideline 150.

LISTS/DIRECTORIES: A directory of laboratories is published on the internet at

(http://www.cepaa.org).

PUBLISHED There is a published set of requirements for accreditation, and this

PROCEDURES: publication may be obtained from CEPAA. LABORATORY Must Be A Legal Entity ASSESSMENT Must Be Financially Stable CRITERIA: Must Be Independent Of Manufacturers/Suppliers Of Products Must Have An Effective Quality System Must Have Procedures To Prevent Conflicts-Of-Interest Must Have A Document Control System Must Have A Contract Review Process Must Have Procedures For Sub-Contracting Tests And Calibrations Must Have A Documented Procurement Process Must Have A Complaints/Appeals Process Must Have A System To Control Nonconforming Testing And/Or Calibration Work Must Have A Corrective/Preventive Action Process Must Have An Effective Recordkeeping Process Must Have Documented Record Retention Requirements Must Conduct Internal Audits Of Its Quality System Laboratory Management Must Review Results Of Internal Audits Must Have Qualified Personnel Laboratory Measurements Must Be Traceable To National Standards Must (Where Applicable) Use Effective Sampling Techniques Must Have A Process For Handling/Transport Of Test/Calibration Items Must Participate In A Proficiency Testing Program Must Have Adequate Instrumentation Facilities And Equipment Must Ensure Adequate Equipment Maintenance/Calibration Must Attend Program Laboratory Workshops/Conferences Must Maintain Other Or Related Accreditations/Approvals ISO/IEC GUIDE 25: Unfamiliar with Guide's requirements. PROGRAM TITLE: ICBO Evaluation Service Laboratory Accreditation Program.

DESCRIPTION: Laboratories are accredited to perform tests on building products, components, and systems. Program is based on international standards (ISO/IEC Guides 25 and 58) and involves on-site assessments and monitoring of participating

laboratories.

DATE ESTABLISHED: 1977.

PROGRAM SCOPE: Accredits laboratories for acoustic and vibration, electrical, mechanical,

nondestructive, thermal, structural, and fire testing.

PRODUCTS TESTED: (Categories)

Building products, building components, and building systems.

STANDARDS/ ICBO ES Acceptance Criteria, which are available on the ICBO ES website.

TEST METHODS USED:

LABS LISTED/ 80 as of January 15, 1999.

ISO/IEC GUIDE 58:

ACCREDITED:

Program conforms to ISO/IEC Guide 58.

VALIDITY/RENEWAL: Approval is valid for an initial one year period, with renewals every one or

two years, at applicant's option.

ASSESSOR STATUS 4 full-time assessors, and 3-6 contract assessors.

ASSESSOR QUALIFICATIONS: Lead-assessor training by an internationally recognized training organization;

specialized training on ISO/IEC Guide 25; successful participation in an assessment observed by an experienced assessor; past training and experience

indicating ability to perform the job.

ASSESSOR TRAINING: Internationally recognized bodies provide training to ICBO ES Assessors on

contract.

PROGRAM FEES: There is a fee for the program, which is set by the Board of Directors. A fee

schedule may be obtained from ICBO.

APPEAL PROCEDURES: ICBO has appeal procedures, which are outlined in "Rules of Procedure for

Hearings" in the section "Concerning Revocation or Modification of Evaluation

Reports and Listings."

PUBLICATIONS: Publications include "ICBO Evaluation Service" and "Rules of Procedure for

Laboratory Accreditation, " and " Acceptance Criteria for Laboratory

Accreditation (AC89)."

LOGO/MARK: ICBO does not have a logo.

PROGRAM AVAILABILITY: Program is available to all U.S. private sector and government laboratories,

and all foreign private sector and government laboratories.

LISTS/DIRECTORIES:

"Index of Evaluation Reports" and "Field Index of Evaluation Reports" are available from ICBO ES.

PROGRAM TITLE:

Certification Program-Approved Laboratory and Inspection Agency System.

DESCRIPTION:

To approve independent laboratories and inspection agencies to perform necessary initial compliance tests and required follow-up inspections on recreational boats, boating equipment, components, electrical systems, sanitation devices, navigational lighting and trailers.

DATE ESTABLISHED:

1968.

PROGRAM SCOPE:

Accredits laboratories for acoustic/vibration measurement, chemical,

electrical, mechanical, and optics and photometry testing.

PRODUCTS TESTED:

Boats, yachts, trailers, two-cycle gasoline engine lubricants.

(Categories)

STANDARDS/ TEST METHODS USED: Uses ASTM, ANSI, ASME, CGA, NEMA, UL, NEC, IEEE, SAE, ABYC standards, military

specifications, and federal standards including those issued by DOT and the

U.S. Coast Guard.

LABS LISTED/ ACCREDITED: 5 as of June 1991.

ISO/IEC GUIDE 58:

N/A.

VALIDITY/RENEWAL:

Accreditation continues until revoked; on-site services depend on experience

with laboratory.

ASSESSOR STATUS

The technically competent, experienced staff of the NMMA are employed, with the

Manager of Certification playing a leading role.

ASSESSOR QUALIFICATIONS:

No mandatory qualifications provided.

ASSESSOR TRAINING:

Manager of Certification and other staff members train assessors.

PROGRAM FEES:

None,

APPEAL PROCEDURES:

Since the relationship is contractual, normal corporate appeal mechanisms are

employed.

PUBLICATIONS:

NMMA Certification Handbook is the principal publication. In addition, there

are the necessary application forms and other supporting documents.

LOGO/MARK:

None.

PROGRAM AVAILABILITY:

Accreditation is available to all foreign and domestic laboratories.

LISTS/DIRECTORIES:

Laboratories List with Certified Products Directory.

PUBLISHED

NMMA Certification Handbook.

Laboratory Accreditation Program.

DESCRIPTION:

Accreditation of environmental and drinking water analytical laboratories.

DATE ESTABLISHED:

1985.

PROGRAM SCOPE:

Accredits laboratories for microbiological and chemical testing.

PRODUCTS TESTED:

(Categories)

Environmental and drinking water.

STANDARDS/

TEST METHODS USED:

NSF does not publish a list of standards.

LABS LISTED/ ACCREDITED:

6 as of January 1, 1999.

ISO/IEC GUIDE 58:

Program conforms to ISO/IEC Guide 58.

VALIDITY/RENEWAL:

Accreditation is valid for three years. Renewals are required every three

years.

ASSESSOR STATUS

4 full-time assessors.

ASSESSOR QUALIFICATIONS:

Assessors must attend and pass the EPA Drinking Water Training course.

ASSESSOR TRAINING:

There is no NSF assessor training program.

PROGRAM FEES:

There is a fee to participate, and the fee is set by NSF. A Fee Schedule may

be obtained from NSF.

APPEAL PROCEDURES:

Appeal procedures are described in the NSF program policies, which is available

from NSF on request.

URL: http://www.pri.sae.org

PROGRAM TITLE: National Aerospace and Defense Contractors Accreditation Program (NADCAP).

DESCRIPTION: NADCAP is an unprecedented cooperative industry effort to improve quality while

reducing cost throughout the aerospace and defense industries. NADCAP is an industry-managed approach to conformity assessment that brings together technical experts from both industry and government in the NADCAP organization. Prime contractors, suppliers, and representatives from the government work together to establish requirements for accreditation, approve suppliers and

define operational program requirements.

DATE ESTABLISHED: 1990.

PROGRAM SCOPE: Accredits laboratories for chemical, mechanical, metrology, nondestructive, and

thermal testing.

PRODUCTS TESTED:

(Categories)

Aircraft components.

STANDARDS/ The published audit standards are AS7101, AS7114, etc. The Fastener Quality

TEST METHODS USED: Act (FQA) regulations include requirements for fastener testing.

LABS LISTED/

ACCREDITED:

320 NDT, 120 material, and 50 FQA labs.

ISO/IEC GUIDE 58: Program conforms to ISO/IEC Guide 58, and has been audited by NIST under the

FQA.

VALIDITY/RENEWAL: Accreditation is valid for from 12 months to 3 years.

ASSESSOR STATUS 26 contract assessors for MTL, NDT, and FQA.

ASSESSOR QUALIFICATIONS: There are general assessor qualifications. There are also task group specific

requirements. These somewhat lengthy requirements may be obtained by

contracting PRI.

ASSESSOR TRAINING: At least one annual audit training session is conducted. Session usually runs

3-4 days.

PROGRAM FEES: There is a fee to participate. The fees are set by PRI (non-profit trade

association). The fee schedule is determined by answering specific preliminary

questionnaires to define the scope of the audit (length of audit).

APPEAL PROCEDURES: Appeals can be submitted to a specific special process task group, as well as

to NADCAP Management Council and/or its Appeals Committee.

PUBLICATIONS: AS7003 NADCAP Program Document; AS7114 Requirements for NDT Accreditation; and

AS7101 Requirements for Materials Testing Lab Accreditation.

LOGO/MARK: NADCAP has a logo. The logo is a square indicating NADCAP Accreditation with

PRI logo. It is still pending as a registered trademark.

PROGRAM AVAILABILITY: Accreditation available to all U.S. private sector and government laboratories,

and all foreign private sector and government laboratories.

LISTS/DIRECTORIES: NADCAP publishes a quarterly directory, "Qualified Manufacturer's List (QML),"

LISTS/DIRECTORIES:

NADCAP publishes a quarterly directory, "Qualified Manufacturer's List (QML)," which includes a list of laboratories. It is available from PRI.

PUBLISHED PROCEDURES: All standards (audit standards) are available from SAE; and all audit checklists (AC) are available from PRI.

LABORATORY ASSESSMENT CRITERIA:

Must Be A Legal Entity Must Be Financially Stable

Must Be Independent Of Manufacturers/Suppliers Of Products

Must Have An Effective Quality System

Must Have Procedures To Prevent Conflicts-Of-Interest

Must Have A Document Control System Must Have A Contract Review Process

Must Have Procedures For Sub-Contracting Tests And Calibrations

Must Have A Documented Procurement Process

Must Have A Complaints/Appeals Process

Must Have A System To Control Nonconforming Testing And/Or Calibration

Must Have A Corrective/Preventive Action Process Must Have An Effective Recordkeeping Process

Must Have Documented Record Retention Requirements Must Conduct Internal Audits Of Its Quality System

Laboratory Management Must Review Results Of Internal Audits

Must Have Qualified Personnel

Laboratory Measurements Must Be Traceable To National Standards

Must (Where Applicable) Use Effective Sampling Techniques

Must Have A Process For Handling/Transport Of Test/Calibration Items

Must Participate In A Proficiency Testing Program

Must Have Adequate Instrumentation Facilities And Equipment Must Ensure Adequate Equipment Maintenance/Calibration Must Attend Program Laboratory Workshops/Conferences

Must Maintain Other Or Related Accreditations/Approvals

ISO/IEC GUIDE 25:

Requirements are comparable to ISO/IEC Guide 25.

OTHER

COMPARABILITY:

Comparable to any aerospace prime contractor laboratory certification program.

PROFICIENCY TESTING PROGRAM: Annual requirement for proficiency testing from a NADCAP approved provider.

GOVERNMENT RECOGNITIONS: Federal: NIST, as an accreditor under the Fastener Quality Act.

MUTUAL RECOGNITION ARRANGEMENTS:

None.

DATE RECEIVED: 6/28/99

PROFESSIONAL/TRADE (PT)ORGANIZATION:

Precast/Prestressed Concrete Institute (PCI) (Primarily a certification

program)

PRIMARY CONTACT:

Mr. John A. Dick, Director of Certification Programs

ADDRESS:

175 W. Jackson Boulevard, Suite 1859

Chicago, IL 60604

PHONE: FAX: E-MAIL: URL: (312) 786-0300 (312) 786-0353 jdick@pcinst.com

http://www.pci.org

PROGRAM TITLE:

PCI Plant Certification Program.

DESCRIPTION:

The PCI Plant Certification Program evaluates plants of precast and/or prestressed concrete manufacturing companies located in the United States, Canada, and Mexico against published standards. Unannounced audits are conducted by independent, professional engineers, which are accredited by PCI. Plants are evaluated on their quality system, documentation, production procedures, management, engineering, personnel, and equipment. PCI Plant Certification ensures a project specifier and owner of approved uniform production methods and an acceptable in-house quality assurance program. Certification confirms the plant's capability to produce quality products.

DATE ESTABLISHED:

1967.

PROGRAM SCOPE:

Accredits laboratories for architectural and structural concrete products for buildings and bridges. Program covers plant manufacturing and quality control procedures, personnel and equipment, company shop drawings, product design, and recordkeeping.

PRODUCTS TESTED: (Categories)

Precast concrete, precast prestressed concrete, and glass fiber reinforced concrete.

STANDARDS/

TEST METHODS USED:

The Standards used for evaluation of a plant are published in PCI's Quality Manuals: "MNL-116, Manual for Quality Control for Plants and Production of Precast and Prestressed Concrete Products;" MNL-117, "Manual for Quality Control for Plants and Production of Architectural Precast Concrete Products;" and MNL-130, "Manual for Quality Control for Plants and Production of Glass Fiber Reinforced Concrete Products."

LABS LISTED/ ACCREDITED: 231 as of June 25, 1999.

ISO/IEC GUIDE 58:

Unfamiliar with Guide's requirements.

VALIDITY/RENEWAL:

Accreditation is valid from audit to audit. Renewals are issued biannually.

ASSESSOR STATUS

19 contract assessors are contracted for with a consulting engineering firm to train and conduct audits to PCI specifications.

ASSESSOR OUALIFICATIONS:

Assessor must be a graduate engineer with construction/design experience.

ASSESSOR TRAINING:

On the job training is provided and trainees assist with three audits with a principal and three audits with an auditor.

PROGRAM FEES:

There is a fee to participate, which is set by PCI Board of Directors. The fee schedule may be obtained from PCI.

APPEAL PROCEDURES:

Appeals have two levels: (1) written appeals must be submitted within time limits and reviewed by a committee; and (2) in-person appeals are heard by an Appeals Board.

PUBLICATIONS:

The program is described in the PCI Certified Plant brochure.

LOGO/MARK:

PCI has a federally copyrighted logo.

PROGRAM AVAILABILITY:

Accreditation is available to all manufacturers of precast/prestressed

concrete, whether or not they are members of PCI.

LISTS/DIRECTORIES:

A List of laboratories is published in *PCI Ascent* magazine and on the internet at (http://www.pci.org).

PUBLISHED PROCEDURES:

Assessment Procedures are published in Section 20.0 of the PCI Policies and Procedures Manual available from PCI.

PROGRAM TITLE: Calibration Cooperative.

DESCRIPTION: Auditor examination and approval of calibration laboratory quality systems and

control of measuring and test equipment.

DATE ESTABLISHED: 1997.

PROGRAM SCOPE: Accredits laboratories for metrology-calibration.

PRODUCTS TESTED: Measurement equipment.

(Categories)

STANDARDS/ Uses the listed specifications for the calibration types covered. Not available

TEST METHODS USED: from PRI.

LABS LISTED/ 4 as of 1/20/99.

ACCREDITED:

ISO/IEC GUIDE 58: Does not conform to ISO/IEC Guide 58.

VALIDITY/RENEWAL: Approval valid for two years with an annual registry fee.

ASSESSOR STATUS 53 2nd party auditors and a limited number of consultants trained and qualified

to submit recommendations.

ASSESSOR QUALIFICATIONS: Mandatory qualifications exist. Details available from PRI.

ASSESSOR TRAINING: There is a mandatory two and one-half day course. Audit and auditor training

and qualification are conducted in accordance with the requirements of PRI

Program Document PD 1000, "Tasks and Procedures of the Calibration

Cooperative" and PRI Audit Criteria AC 7007, "Requirements for Calibration Laboratory Quality Systems and Control of Measuring and Test Equipment."

PROGRAM FEES: There is no fee to participate. However, program is under revision. When

finalized, details will be posted on website along with any fee requirement.

APPEAL PROCEDURES: Industry experts are appointed by the Chairman of the Cooperative to handle

appeals.

PUBLICATIONS: None at this time.

LOGO/MARK: Circle with a check mark in center and "Performance Review" on outside edge of

the circle.

PROGRAM AVAILABILITY: Open to any organization providing external sources of calibration.

LISTS/DIRECTORIES: A "Registry of Approved Suppliers of Calibration Services" is available from

the Calibration Cooperative at PRI.

PUBLISHED Procedures, AC 7007, are published and available from the PRI Calibration

PROCEDURES: Cooperative.

PROGRAM TITLE: Evaluation Services.

DESCRIPTION: To provide members and others with model building codes, lists of products that

comply with these codes and referenced standards, and a list of laboratories whose test reports have been found to meet the Code and standard requirements.

DATE ESTABLISHED: 1971.

PROGRAM SCOPE: Accredits laboratories for acoustic and vibration, chemical, mechanical,

nondestructive, thermal, fire, plumbing and gas testing.

PRODUCTS TESTED: Any product related to the construction industry, with primary emphasis on

(Categories) those products and systems used in the design and construction of buildings.

STANDARDS/ Standards are nationally recognized consensus standards listed in the Standard

TEST METHODS USED: Codes and International Codes, published by the SBCCI.

LABS LISTED/ 29 as of January 1999.

ACCREDITED:

ISO/IEC GUIDE 58: Unfamiliar with ISO/IEC Guide 58.

VALIDITY/RENEWAL: Accreditation program is valid for two years. Renewals are required biennially

- sooner if new code changes might affect accreditation status.

ASSESSOR STATUS 8 full-time assessors from SBCCI PST & ESI's full-time professional staff of

registered architects and engineers.

ASSESSOR QUALIFICATIONS: Must be a registered architect or engineer.

ASSESSOR TRAINING: Trained by working with experienced assessors.

PROGRAM FEES: There is a fee to participate, which is set by SBCCI PST & ESI. An " Evaluation

Report Fee Schedule" is available from SBCCI PST & ESI.

APPEAL PROCEDURES: There is a specified appeals procedure outlined in the "SBCCI PST & ESI

Committee on Evaluation Rules of Procedure," which can be obtained from SBCCI

PST & ESI.

PUBLICATIONS: Quarterly publication, listed products and labs.

LOGO/MARK: SBCCI PST & ESI has a logo.

PROGRAM AVAILABILITY: Accreditation is available to all U.S. private sector and government

laboratories, and all foreign private sector and government laboratories.

LISTS/DIRECTORIES: "SBCCI PST & ESI Evaluation Report Listing" is provided free to members and

for a fee to others.

PUBLISHED Not provided.

PROGRAM TITLE:

Certification After Recognition of Agents Testing (CARAT Program).

DESCRIPTION:

The purpose of the CARAT Program is to assist small and medium-sized manufacturers reduce their overall testing costs while simultaneously speeding up testing and certification of their products. This is accomplished by authorizing selected independent testing laboratories to do testing for companies who do not have the necessary internal testing facilities. Testing from authorized labs is reviewed and approved by TUV Product Service (TPS). This program is valid for both EMC and Product Safety. The basic requirement for admission into the CARAT program is for the independent testing laboratory to pass a TPS audit to EN 45001 (General Criteria for the Operation of Testing Laboratories). A complete ISO 9001 quality audit (with a special emphasis on the requirements of EN 45001) could also qualify the laboratory for the CARAT

program.

DATE ESTABLISHED:

1990.

PROGRAM SCOPE:

Accredits laboratories for electrical and mechanical testing.

PRODUCTS TESTED: (Categories)

Electrical, mechanical, and electronics products.

STANDARDS/

TEST METHODS USED:

No list of standards is published.

LABS LISTED/

ACCREDITED:

15 as of June 1999.

ISO/IEC GUIDE 58:

Program does not conform to ISO/IEC Guide 58.

VALIDITY/RENEWAL:

Certification is valid for 12 months. Renewals are required every 12 months.

ASSESSOR STATUS

5 part-time assessors.

ASSESSOR QUALIFICATIONS:

Internal qualifications, which are on file within the company.

There is a required assessor training program.

PROGRAM FEES:

There is a fee to participate, which is set by TUV Products Service. Fees are based on audit time required and audit related expenses incurred.

APPEAL PROCEDURES:

ASSESSOR TRAINING:

There are no appeal procedures.

PUBLICATIONS:

The program is described in "Certification After Recognition of Agent's Testing, CARAT - 98 Summary," published by TUV.

LOGO/MARK:

Program does not have a logo.

PROGRAM AVAILABILITY:

The program is available to all U.S. private sector and government laboratories, and all foreign private sector and government laboratories.

LISTS/DIRECTORIES:

There is no published list of laboratories.

PUBLISHED Assessment procedures are published in EN 45001 and/or ISO Guide 25. Underwriters Laboratories (UL) as the U.S. National Supervising Inspectorate

(NSI) for the IECQ system (Primarily a certification program)

PRIMARY CONTACT:

Mr. Harvey S. Berman, NSI Manager

ADDRESS:

1285 Walt Whitman Road Melville, NY 11747

PHONE:

(516) 271-6200, Ext. 22229

FAX: E-MAIL: (516) 439-6024 bermann@ul.com

URL:

http://www.iecq.org/

PROGRAM TITLE:

International Electrotechnical Commission (IEC) Quality Assessment System for Electronic Components. Responsibility for the assessment and surveillance of manufacturers, distributors, specialist contractors and independent testing laboratories - including the determination of compliance with ISO 9000 or (for

laboratories) ISO/IEC Guide

25 - rests with supervising inspectorates.

DESCRIPTION:

Third party certification system for electronic component manufacturers, distributors, test labs; and electronic components and assemblies.

DATE ESTABLISHED:

1982.

PROGRAM SCOPE:

Accredits laboratories for acoustic and vibration, electrical, mechanical, metrology, optics and photometry, thermal testing, wire, cable, printed wiring boards, capacitors, resistors, and other electronic components.

PRODUCTS TESTED: (Categories)

At the present time, electronic components and related materials from the following areas or families can be approved under IECQ: passive components; active components; hybrid integrated circuits; electromechanical components; electromagnetic components; electro-optic components; wires and cables; printed boards; photovoltaics.

STANDARDS/

TEST METHODS USED:

Uses specification list QC 001004, which is published by the IEC.

LABS LISTED/ ACCREDITED: 7 as of June 1999.

ISO/IEC GUIDE 58:

Program conforms to most requirements of ISO/IEC Guide 58.

VALIDITY/RENEWAL:

Certification is valid for five years. Renewals are required every five years, with annual reviews.

ASSESSOR STATUS

10 assessors, consisting of both full-time and part-time staff.

ASSESSOR QUALIFICATIONS:

Assessors qualifications consist of educational requirements, lead auditor classroom training, and auditing experience (per UL QRS Procedure Q1807-1).

ASSESSOR TRAINING:

IECQ on-the-job training and "as needed" in-house courses.

PROGRAM FEES:

There is a fee to participate, which is set by The Electronics Components Certification Board (CECCB). The fee is \$781.25 per year for test labs, plus additional charges for engineering time and expenses.

APPEAL PROCEDURES:

Appeal procedures are described in clause 13.4 of the Basic Rules (QC 001001) and Rules of Procedure (QC 001002) clause 16.

PUBLICATIONS:

Publications that describe the program are: QC 001001 IECQ Basic Rules; and QC 001002 IECQ Rules of Procedure.

LOGO/MARK:

ICEQ has a logo, but it is not registered.

PROGRAM AVAILABILITY:

The program is available to all U.S. private sector and government laboratories, all foreign private sector and government laboratories, and to qualified manufacturers and other organizations. Testing laboratory approval (accreditation) is available to independent testing laboratories intending to carry out tests on components within the IECQ. The approval (accreditation) covers the type of tests to be carried out, the component ranges to be tested and the facilities available.

LISTS/DIRECTORIES:

A list of laboratories is published by IEC in QC 001005 Register of Firms, Products and Services Approved Under the IECQ System.

PUBLISHED PROCEDURES: Assessment procedures are published in QC 001002, IECQ Rules of Procedure (includes Guide 25).

LABORATORY ASSESSMENT CRITERIA:

Must Be A Legal Entity Must Be Financially Stable

Must Be Independent Of Manufacturers/Suppliers Of Products

Must Have An Effective Quality System

Must Have Procedures To Prevent Conflicts-Of-Interest

Must Have A Document Control System Must Have A Contract Review Process

Must Have Procedures For Sub-Contracting Tests And Calibrations

Must Have A Documented Procurement Process Must Have A Complaints/Appeals Process

Must Have A System To Control Nonconforming Testing And/Or Calibration

Must Have A Corrective/Preventive Action Process Must Have An Effective Recordkeeping Process Must Have Documented Record Retention Requirements

Must Conduct Internal Audits Of Its Quality System

Laboratory Management Must Review Results Of Internal Audits

Must Have Qualified Personnel

Laboratory Measurements Must Be Traceable To National Standards

Must (Where Applicable) Use Effective Sampling Techniques

Must Have A Process For Handling/Transport Of Test/Calibration Items

Must Participate In A Proficiency Testing Program

Must Have Adequate Instrumentation Facilities And Equipment Must Ensure Adequate Equipment Maintenance/Calibration Must Attend Program Laboratory Workshops/Conferences 卤

Must Maintain Other Or Related Accreditations/Approvals

ISO/IEC GUIDE 25:

Requirements are comparable to ISO/IEC Guide 25.

OTHER COMPARABILITY: ISO/IEC Guide 25 is the requirement; EN45001 is accepted in Europe.

PROFICIENCY TESTING PROGRAM:

None.

GOVERNMENT RECOGNITIONS: None listed.

MUTUAL RECOGNITION ARRANGEMENTS:

CECC - CENELEC Electronic Components Committee.

IECQ approvals in the photovoltaics area are used by the Global Approval Program for photovoltaics (PV GAP, a legally independent body) as the basis for licensing the use of the PV GAP " PV Quality Mark/Seal."

PROGRAM TITLE: Slip Resistance Test Certification.

Ensure that test laboratories use VOSI specifications/test methods- V41-21 DESCRIPTION:

"Slip Resistant Walkways," and V41.22 "Slip Resistant Footwear" - correctly.

DATE ESTABLISHED: March 24, 1999.

Accredits laboratories for slip resistance, static coefficient of friction PROGRAM SCOPE:

(SCOF) of walkway materials, coatings, and footwear.

PRODUCTS TESTED: Slip-resistance tested walkway materials, coatings and footwear products.

(Categories)

A list of standards used for the program is published on the internet at TEST METHODS USED: (http://www.voicesofsafety.com).

LABS LISTED/ 1 as of May 24, 1999.

ACCREDITED:

STANDARDS/

ISO/IEC GUIDE 58: Program does conform to ISO/IEC Guide 58.

VALIDITY/RENEWAL: Accreditation is valid for five years. Renewals are issued whenever the lab

operator requires certification.

ASSESSOR STATUS 1 part-time assessor.

ASSESSOR QUALIFICATIONS: Test equipment operators' certification is based on passing SCOF testing of

Polypropylene secondary standard test surface.

ASSESSOR TRAINING: There is no assessor training program.

PROGRAM FEES: There is a fee to participate, and it is set by VOSI. There is no fee schedule

available.

APPEAL PROCEDURES: There is no appeals procedure.

PUBLICATIONS: The program is described in "Certification Procedures for VOSI" V41-21 and

V41-22, which is published on the internet at (http://www.voicesofsafety.com).

LOGO/MARK: VOSI has a logo.

Accreditation is available to all U.S. private sector and government PROGRAM AVAILABILITY:

laboratories, all foreign private sector and government laboratories, and all

purchasers of technical products for floor and footwear friction testing.

LISTS/DIRECTORIES: No directory of laboratories is published.

PUBLISHED Assessment procedures are published in VOSI V41.21 and V41.22.

Are your requirements for laboratories comparable to those contained in any other national, regional or international standard? Yes No_ (Please list which standard(s) and any
significant differences)
Must laboratories participate in a proficiency testing program(s)? Yes No If Yes, please describe:
Is your program recognized by any federal, state or foreign government agencies? (Please identify and describe type of recognition)
Does your program have any mutual recognition arrangements with other organizations? (Please identify and describe)
Would you like additional information on ISO/IEC Guide 25? Yes No
Would you like additional information on ISO/IEC Guide 58? Yes No
Cooperation (ILAC) organization? Yes No

APPENDIX II FORMAT USED FOR EACH ENTRY

DATE RECEIVED: Date received by the Marley Organization, Inc.

PROFESSIONAL/TRADE (PT)ORGANIZATION:

The responsible entity, address, telephone, fax, and if available, electronic mail (E-mail), and Uniform Resource Locator (URL). The last two items

referring to internet numbers.

PRIMARY CONTACT:

ADDRESS:

PHONE: FAX: E-MAIL: URL:

PROGRAM TITLE: The name under which the program is known.

DESCRIPTION: A brief description of the organization's mission, scope, and intent of the

accreditation or designation.

DATE ESTABLISHED: The date the accreditation/designation program was begun.

PROGRAM SCOPE: The fields of testing from ASTM E1224-94 Standard Guide for Categorizing Fields

of Capability for Laboratory Accreditation Purposes, used by the system and/or

other fields, as indicated, by the system.

PRODUCTS TESTED: The products/services or calibration, which laboratories are accredited or

(Categories) designated to test, examine or inspect.

STANDARDS/ The documents (e.g., national, international, voluntary, regulatory, private sector, or governmental standards, protocols, test methods, specifications)

sector, or governmental standards, protocols, test methods, specifications) employed by the accrediting organization to define the terms of accreditation

or designation.

LABS LISTED/ The number of labs accredited as of a specific date.

ACCREDITED:

ISO/IEC GUIDE 58: Requests for opinion of conformity to Guide ISO/IEC Guide 58 " Calibration and

Testing Laboratory Accreditation Systems- General Requirements for Operation

and Recognition."

VALIDITY/RENEWAL: The length of time an accreditation or designation is valid - period to

reaccreditation or to reassessment.

ASSESSOR STATUS Number and identification as to who conducts the assessment.

ASSESSOR QUALIFICATIONS: Details as to qualification for assessors.

ASSESSOR TRAINING: Details as to training provided to assessors.

PROGRAM FEES: The fees and/or other costs* incurred by a laboratory to participate in the

accreditation system or to become a designated facility (*e.g., required: personnel certifications, training services, seminar and convention attendance,

memberships).

APPEAL PROCEDURES: Appeals process/procedures used by the system; if part of a product

certification program.

PUBLICATIONS: Available information on accredited/designated laboratories or other LOGO/MARK: Any program authorized logo or other mark used by accredited or designated labs. PROGRAM AVAILABILITY: Whether the accreditation or designation is open to U.S. profit and/or nonprofit, private sector labs; federal labs; state government labs; and/or private or governmental foreign labs. LISTS/DIRECTORIES: Available directories/lists of accredited or designated laboratories or directories/lists of products which include approved laboratories. PUBLISHED Specific procedures employed by the program and their availability. PROCEDURES: The criteria/procedures used by the program to ensure the competence of a LABORATORY laboratory to conduct a test, or set of tests, or tasks including: ASSESSMENT CRITERIA: Must Be A Legal Entity Must Be Financially Stable Must Be Independent Of Manufacturers/Suppliers Of Products ☐ Must Have An Effective Quality System Must Have Procedures To Prevent Conflicts-Of-Interest Must Have A Document Control System Must Have A Contract Review Process Must Have Procedures For Sub-Contracting Tests And Calibrations Must Have A Documented Procurement Process Must Have A Complaints/Appeals Process Must Have A System To Control Nonconforming Testing And/Or Calibration Must Have A Corrective/Preventive Action Process Must Have An Effective Recordkeeping Process Must Have Documented Record Retention Requirements Must Conduct Internal Audits Of Its Quality System Laboratory Management Must Review Results Of Internal Audits Must Have Qualified Personnel Laboratory Measurements Must Be Traceable To National Standards Must (Where Applicable) Use Effective Sampling Techniques Must Have A Process For Handling/Transport Of Test/Calibration Items Must Participate In A Proficiency Testing Program Must Have Adequate Instrumentation Facilities And Equipment Must Ensure Adequate Equipment Maintenance/Calibration Must Attend Program Laboratory Workshops/Conferences Must Maintain Other Or Related Accreditations/Approvals Opinion as to requirements comparable to ISO/IEC Guide 25, "General ISO/IEC GUIDE 25: Requirements for the Competence of calibration and testing laboratories" Requirement comparability with other national, regional, or international OTHER COMPARABILITY: standards. Methods, if any, used to check lab performance using interlaboratory testing. PROFICIENCY TESTING PROGRAM: GOVERNMENT Any recognition (an/or reciprocity) of the accreditation by federal, state, or RECOGNITIONS: local government. MUTUAL RECOGNITION Any recognition (and/or reciprocity) of the accreditation, or mutual ARRANGEMENTS: recognition of accredited labs, or test results with their basis and limitations, if any.

Information on: ISO/IEC Guide 25; ISO/IEC Guide 58; The National Cooperation for Laboratory Accreditation (NACLA); and/or International Laboratory Accreditation Cooperation (ILAC), offered to questionnaire respondents by the National Institute of Standards and Technology.

Information on: ISO/IEC Guide 25; ISO/IEC Guide 58; The National Cooperation for Laboratory Accreditation (NACLA); and/or International Laboratory Accreditation Cooperation (ILAC), offered to questionnaire respondents by the National Institute of Standards and Technology.

APPENDIX III

RECONCILIATION OF PROFESSIONAL/TRADE ORGANIZATIONS APPEARING IN THE 1992 EDITION OF NBS SP 831 OF MARCH 1992

AAMVA American Association of Motor Vehicle Administrators

No longer involved in certification of vehicle equipment.

See the Automotive Manufacturers Equipment Compliance Agency,

Inc. (AMECA), which continues AAMVA's previous work.

AAP/NIST Accreditation Program and National Institute for Standards

and Technology

AAR Association of American Railroads

No response to survey or inquiries.

AASHTO American Association of State Highway and Transportation Officials

AMRL/NIST Materials Reference Laboratory/National Institute for Standards and

Technology

AASHTO and NIST Activities combined in a single report.

See American Association of State Highway and Transportation Officials

(AASHTO); AASHTO Materials Reference Laboratory.

ASME American Society of Mechanical Engineers

Program discontinued effective June 1999.

AWPB American Wood Preservers Bureau

Organization discontinued.

BACTL Board of Accreditation of Concrete Testing Laboratories of

North Carolina

No response to survey or inquiries.

CABO Council of American Building Officials

Name changed to International Code Council. No response to survey or

inquiries.

CAP College of American Pathologists

No response to survey or inquiries. The following information was obtained

from the CAP website:

The College of American Pathologists (CAP) offers programs to improve quality

in laboratory medicine. The scope of these programs is critical to the operation of laboratories throughout the United States. The goal of the Laboratory Accreditation Program is to improve the quality of clinical

laboratory services, and ensure the accuracy and reliability of test results through an educational and peer review inspection process. The CAP Laboratory Accreditation Program examines all aspects of quality assurance in the laboratory, including methodology, reagents, control media, equipment, specimen handling, procedure manuals, reports and proficiency testing, personnel, safety, and the overall management principles that distinguish a quality laboratory. Upon successful completion of the inspection process, CAP issues an accreditation. More than 5,000 laboratories across the country that have been accredited by CAP. The College of American Pathologists (CAP), in consultation with the American Association for Clinical Chemistry (AACC), identified the need for accreditation programs designed specifically for laboratories engaged in urine drug testing for non-medical purposes. In response to this need the Forensic Urine Drug Testing (FUDT) program was developed for laboratories performing work place drug testing, and the Athletic Drug Testing (ADT) program was developed for laboratories testing for performance enhancing substances. In order to participate a laboratory must first successfully complete several consecutive shipment of CAP proficiency testing samples prior to applying for accreditation. Once the laboratory has successfully completed the required proficiency testing shipments, the Laboratory Accreditation Program will send a letter to the laboratory inviting participation in the FUDT or ADT programs. In response to a need for inspection and accreditation of laboratories involved in fertility testing, the College of American Pathologists (CAP), and the American Society for Reproductive Medicine (ASRM) have developed a national laboratory accreditation program for reproductive laboratories. This unique cooperative effort provides an opportunity for laboratory improvement through voluntary participation, professional peer review, education, and compliance with established performance standards. The CAP/ASRM Reproductive Laboratory Accreditation Program examines all aspects of quality assurance in the laboratory, including methodology, reagents, control media, equipment, specimen handling, procedure manuals, reports and proficiency testing, personnel, safety, and the overall management principles that distinguish a quality laboratory. Upon successful completion of the inspection process, CAP awards accreditation. For more information, contact:

College of American Pathologists
325 Waukegan Road
Northfield, IL 60093-2750
Phone: 800-323-4040 or 847-832-7000 (Northfield, IL office)
or 800-392-9994 or 202-354-7100 (Washington, DC office).

CISEP Cellulose Industry Standards Enforcement Program
Program is no longer active.

COS Corporation for Open Systems International

COS became part of The Open Group. No response to survey or inquiries. The following information was obtained from their website:

While The Open Group does not appear to accredit laboratories, an important part of The Open Group's product range is its family of test suites and related products. These play an essential part in ensuring the proper development and maintenance of quality standards-based products, ensuring conformance to industry standard APIs and interoperability specifications. The Open Group's test suites are used by almost every major vendor creating open products. They enable in-depth testing and analysis of a vendor's products prior to market launch. The Open Group also operates several certification programs. Information on The Open Group's programs in this area is available at: http://www.opengroup.org/testing. While The Open Group does not appear to accredit laboratories, an important part of The Open Group's product range is its family of test suites and related products. These play an essential part in ensuring the proper development and maintenance of quality standards-based products, ensuring conformance to industry standard APIs and interoperability specifications. The Open Group's test suites are used by almost every major vendor creating open products. They enable in-depth testing and analysis of a vendor's products prior to market launch. The Open Group also operates several certification programs. Information on The Open Group's programs in this area is available at: "http://www.opengroup.org/testing" DCE Certification Information is at: http://www.opengroup.org/testing. The OSF DCE (Distributed Computer Environment) Certification program is a vehicle to ensure end users that OSF DCE Certified products provide application, data, and platform interoperability across DCE implementations. The objective of the OSF DCE Certification Program is to ensure a consistent level of DCE functional compliance across all products, where products are defined as a specific hardware and software configuration.

Interoperability Festival (I-FEST) -- A requirement for certification is to attend the OSF Interoperability Festival (I-FEST) with the platform being certified. Participants must successfully pass the testing requirements, in the applicable client and server configurations, during the I-FEST event for certification. Those companies that submit a Statement of Conformance, execute a trademark license agreement and successfully participate in an I-FEST event are authorized to display OSF's DCE certification seal for that product. OSF DCE lists Certified Products on the website. For more information, contact the Testing Team, <ogtesting@opengroup.org>.

ETL Testing Laboratories, Inc.

ETL

Now part of Intertek Testing Services (ITS). No response to survey or inquiries. The following information was obtained from the ITS website. Intertek is one of the world's largest commodities and products testing companies, carrying out a wide range of testing, inspection and certification services. Intertek operates in 83 countries directly and in a further 16 countries through agents. ITS has over 9000 employees and about 7000 subcontractor specialists, working in 229 laboratories and 493 offices around the world. For further information, contact:

Intertek Testing Services NA Inc.

3933 US Route 11 Cortland, New York 13045

Telephone: 1-800-967-5352 FAX: 1-800-813-9442 e-mail: info@ETLSEMKO

IECQ International Electrotechnical Commission, Quality Assessment System for Electronic Components

MTL

MTL Certification Services, Inc.
No longer at location, no forwarding address.

NBBPVI

National Board of Boiler and Pressure Vessel Inspectors, American Society of Mechanical Engineers

No response to survey or inquiries. The following information was obtained from their website. The NBBPVI does not accredit laboratories. The National Board accredits qualified organizations to perform repairs and alterations of pressure-retaining items and repair of pressure relief devices. The National Board " R" (Repair), " VR" (Repair of Pressure Relief Valves), and " NR" (Nuclear Repair) Certificates of Authorization and stamps indicate that a repaired or altered pressure-retaining item or pressure relief device meets the requirements of the National Board Inspection Code. Through the accreditation program, a company is evaluated, and if certain criteria are met, the company is accredited to perform repairs and/or alterations. Companies holding National Board certificates are required to notify the National Board of any alteration performed on a boiler or pressure vessel registered with the National Board. The National Board also accredits qualified owner-user inspection organizations so they may perform in service inspection of pressure retaining items owned and/or operated by the company. The accredited owner-user inspection organization may perform in-process and acceptance inspections of repairs and alterations (including signing the NBIC report forms). This includes repairs and alterations performed by the owneruser organization holding an "R" Certificate or by other "R" Certificate Holders performing work on pressure retaining items owned and/or operated by the owner-user organization. The owner-user organization may also hold an "R" certificate. A National Board commission guarantees that a person is qualified to inspect boilers and pressure vessels, having passed the comprehensive National Board Commission Examination. The National Board Commission, when combined with authorization from a jurisdiction and completion of other requirements, authorizes the inspector to perform the inspection requirements defined within the National Board Inspection Code as they apply to in-service inspection, repairs, and alterations. Currently, there are 4,000 National Board commissioned inspectors working worldwide. National Board Capacity Certification is one program administered by the pressure relief department. Through the program, manufacturers and assemblers of pressure relief devices are evaluated in accordance with the ASME Boiler and Pressure Vessel Code. In addition, testing of sample production valves must be successfully completed at a National Board/ASME- accepted testing laboratory before the National Board "NB" mark may be stamped on certified devices. The pressure relief department also administers the National Board "VR" program, which accredits companies that repair pressure relief valves in accordance with the requirements of the National Board Inspection Code. Extensive evaluation and verification testing of sample repaired valves is performed for each applicant. To support these programs, the National Board maintains a testing

laboratory housing the most advanced equipment available for measuring the performance of pressure relief devices. The National Board Testing Laboratory serves as the comparison standard for all facilities of its type, and is available for use by organizations seeking data on the performance of valve designs and concepts. Nearly 1,000 devices are tested annually.

NCTL

National Certified Testing Laboratories. No longer operates the program. See National Accreditation and Management Institute.

NEBB/

National Environmental Balancing Bureau On-Site Testing Adjusting and TAB Balancing

No response to survey or inquiries. The following information was obtained from their website. NEBB's Testing, Adjusting and Balancing Program for air and hydronic systems provides for certification of firms and qualification of individuals that meet criteria established by NEBB. The purpose of NEBB certification is to offer tangible proof of competent firms and supervisors qualified in the proper methods and procedures for the various categories of NEBB certification. The categories of NEBB certification are:

Certification for Performance of both Air and Hydronic TAB.

Certification for Performance of Air TAB only.

Certification for the Performance of Hydronic TAB only.

Certification for Performance of Sound & Vibration Measurement (S&V).

Certification requirements for S&V outlined in this brochure.

Certification for Testing of Cleanrooms.

Certification for Building Systems Commissioning.

In order to become NEBB-certified in TAB, a firm must: (1) have operated for a minimum period of 12 months continuously as an installing piping contractor; installing sheet metal contractor; installing mechanical contractor; or contractor engaged in TAB work; (2) enjoy a reputation for integrity and responsible performance; (3) have letters of endorsement from consulting engineers, architects and contractors in the firm's area; (4) be a member in good standing of a local NEBB Chapter; (5) possess the various TAB instruments, which are required for the category of certification sought; confirm in writing that it will conform to the NEBB guidelines for the calibration and maintenance of the TAB instruments required for the category of certification sought; (7) possess the current NEBB Procedural Standards for Testing, Adjusting and Balancing of Environmental Systems and appropriate NEBB reporting forms for the category of certification sought; and (8) designate in writing one or more supervisors who will represent the firm and be responsible for the supervision of TAB work. The supervisor must meet the following minimum qualifications: (1) be employed by a certified firm or candidate firm on a full time basis; (2) demonstrate knowledge in the field(s) of TAB (air, hydronics, or both) for which the firm is applying for certification by passing appropriate written and practical NEBB examinations; (3) hold a management position in the firm, be able to represent the firm on TAB matters, and (4) have a reputation of integrity with consultants and awarding authorities. The candidate supervisor must have experience equal to either of the following: (a) a Bachelor of Science engineering degree from an accredited college or university with at least four (4) years of experience in HVAC installation or HVAC design work; or (b) a minimum of ten (10) years experience in any (or combination) of the following: HVAC testing-adjustingbalancing, HVAC installation, HVAC design work or HVAC technical education with a minimum of four (4) years PROJECT RESPONSIBILITY. The local NEBB Chapter must biennially verify continued compliance with NEBB certification requirements for each certified firm, as follows: The firm must own the instruments required for TAB certification which had been accepted or their replacements.

The firm must submit records to verify their conformance with NEBB guidelines for calibration and maintenance of required TAB instruments. -The firm must confirm in writing that they employ the designated supervisor full time who previously met the NEBB requirements for TAB qualification. The firm must verify in writing that the designated supervisor has attended at least one six (6) hour approved TAB seminar or refresher course given annually. A firm's certification shall automatically be suspended when the firm no longer meets all of the NEBB certification requirements. The certification of a firm suspended may be reinstated by NEBB at such time as it again meets the requirements for certification. The period of suspension may be no longer than one year at which time the firm will lose its certification automatically. Certification may be terminated for failure of the firm to abide by the objectives and performance standards of NEBB. Termination of certification by NEBB requires vote of the Board of Directors of NEBB provided that by similar vote the Board shall first find that certification is prejudicial, to the best interests of the Bureau and provided further that the certified firm in question shall have had opportunity upon written notice of at least fifteen (15) days to show cause why the certification should not be terminated.

NSTA National Safe Transit Association Technical Verification Program

Name changed to the International Safe Transit Association.

No response to survey or inquiries. The following information was obtained from their website.

ISTA's TRANSIT TESTED program has been a leader in test specification for performance testing of packaged-products since the first US procedures manual was published in 1948. The TRANSIT TESTED program is designed to help shippers of any product reduce transit and handling damage to acceptable minimums. The program succeeds through the cooperation of shippers, carriers, manufacturers, packaging suppliers and Certified testing laboratories. The TRANSIT TESTED program includes preshipment testing, certification and identification. Testing is done in ISTA Certified Laboratories according to one of several ISTA Procedures. When the packaged-product has successfully passed a series of tests, a report is processed and application made for package certification. Once reviewed and approved, shippers who are members of ISTA may have the TRANSIT TESTED seal printed on their certified package. The seal is a symbol of the cooperation between elements of the logistic system to further efficient distribution and further proof that the packaged-product has been designed and tested for the transport packaging environment. ISTA Laboratory Certification is open to independent, third party testing laboratories and to in-house laboratories. The certification process demonstrates that the laboratory is properly equipped to conduct ISTA preshipment testing procedures. ISTA lab certification is available to ISTA members only. ISTA Certification requires that each lab applying for initial certification, or for current ISTA members needing Re-certification, complete an equipment verification form for each piece of testing equipment that will be used for ISTA testing. ISTA also requires the lab to produce a video tape showing that the equipment is as listed on the forms, that it is in working condition and

that the lab technicians understand how to use the equipment. This procedure is required every 2 years after initial certification of the lab.

Publications on Standards and Conformity Assessment Activities
Office of Standards Services
National Institute of Standards and Technology
Gaithersburg, Maryland 20899
(See last page for ordering information)

The ABC's of Standards-Related Activities in the United States (NBSIR 87-3576)

This report is an introduction to voluntary standardization, product certification and laboratory accreditation for readers not fully familiar with these topics. It stresses some of the more important aspects of these fields; furnishes the reader with both historical and current information on these topics; describes the importance and impact of the development and use of standards; and serves as background for using available documents and services.

Order from NTIS by #PB 87-224309.

The ABC's of Certification Activities in the United States (NBSIR 88-3821)

This report, a sequel to The ABC'S of Standards-Related Activities in the United States (NBSIR 87-576), provides an introduction to certification for readers not entirely familiar with this topic. It highlights some of the more important aspects of this field, furnishes the reader with information necessary to make informed purchases, and serves as background for using available documents and services.

Order from NTIS by #PB 88-239793.

The ABC's of the U.S. Conformity Assessment System (NISTIR 6014)

This report is designed to provide the reader with an introduction to conformity assessment and information on how the various conformity assessment activities are interlinked. It highlights some of the field's more important aspects and serves as background for using available documents and services.

Order from NTIS by #PB 97-197107

Laboratory Accreditation Activities in the United States (NISTIR 4576)

This report, a companion to The ABC'S of Standards-Related Activities in the United States (NBSIR 87-3576) and The ABC'S of Certification Activities in the United States (NBSIR 88-3821), is designed to provide information on laboratory accreditation to readers who are new to this field. It discusses some of the more significant facets of this topic, provides information necessary to make informed decisions on the selection and use of laboratories, and serves as background for using other available documents and services.

Order from NTIS by #PB 91-194495.

Questions and Answers on Quality, the ISO 9000 Standard Series, Quality System Registration, and Related Issues (NISTIR 4721)

This report provides information on the development, content and application of the ISO 9000 standards to readers who are unfamiliar with these aspects of the standards. It attempts to answer

some of the most commonly asked questions on quality; quality systems; the content, application and revision of the ISO 9000 standards; quality system approval/registration; European Union requirements for quality system approval/registration; and sources for additional help.

Order from NTIS by #PB 93-152080/AS

More Questions and Answers on the ISO 9000 Standard Series and Related Issues (NISTIR 5122)

This report, a sequel to NISTIR 4721, provides additional information on the ISO 9000 standards and related issues to readers unfamiliar with some of the new developments in this area. It attempts to answer additional questions on ISO 9000 standards related issues which NIST has received since the publication of NISTIR 4721 and identifies sources for further help in this area.

Order from NTIS by #PB 93-140689.

The U.S. Certification System from a Governmental Perspective (NISTIR 6077)

This report is designed to provide the reader with an introduction to the U.S. certification system from a governmental perspective. It highlights some of the relationships that exist between federal and state agencies and the private sector and discusses some of the history and philosophy behind the U.S. system.

Order from NTIS by #PB 98-104086.

The National Technology Transfer and Advancement Act - Plan for Implementation (NISTIR 5967)

The National Technology Transfer and Advancement Act (P.L. 104-113) gives NIST responsibility to coordinate standards and conformity assessment activities with other Federal agencies, state and local governments, and with the private sector. Congress required NIST to submit a plan for implementing the coordination activities. Specific activities in strategic standards management, responsiveness to international trade concerns, greater use of voluntary standards, and conformity assessment procedures are described Responsibilities of governments, standards developers, and private sector interests are outlined, as are a number of specific tasks.

Order from NTIS by #PB 97-153001.

Report on the Open Forum on Establishment of the National Council for Laboratory Accreditation (NACLA) at the National Institute of Standards and Technology January 7, 1997 (NISTIR 6008)

The forum was jointly sponsored by NIST, ACIL (formerly the American Council of Independent Laboratories), and the American National Standards Institute (ANSI). It was attended by more than 300 representatives from private industry and the government. The purpose of the Forum was to discuss a proposal to establish the National Council for Laboratory Accreditation (NACLA), which would be a cooperative partnership between the public and private sectors designed to provide a national infrastructure for laboratory accreditation in the United States.

Order from NTIS by #PB 97-158133.

Examination of Laboratory Accreditation Programs in the United States and the Potential Role for a National Laboratory Accreditation System (NIST GCR 97-714)

This report presents an initial study of existing U.S. laboratory accreditation programs, with a focus on government programs, particularly at the Federal level. The study was conducted in two phases: Phase I established categories of existing laboratory accreditation programs in the Federal government, at the state and local level, and in the private sector. Phase II compared technical standards used by five Federal government laboratory accreditation programs with general standards for laboratory accreditation established by ISO.

Order from NTIS by #PB 97-167365.

Proceedings of the Open Forum on Laboratory Accreditation at the National Institute of Standards and Technology October 13, 1995 (NIST SP 902)

The American National Standards Institute and ACIL requested that NIST work with them in an informal Laboratory Accreditation working group (LAWG) to evaluate the current situation in laboratory accreditation in the United States. This group sponsored a forum to hear reports from various sectors and to arrive at some consensus on the need to improve the current situation and infrastructure for laboratory accreditation in the United States.

Order from NTIS by #PB 96-210141.

Survey on the Implementation of ISO/IEC Guide 25 by National Laboratory Accreditation Programs (NISTIR 5473)

ISO/IEC Guide 25, General Requirements for the Competence of Calibration and Testing Laboratories, has been used by many laboratory accreditation programs worldwide to establish accreditation requirements designed to promote confidence in the calibrations and testing results of laboratories. National delegations to the International Laboratory Accreditation Conference (ILAC) were surveyed to collect information on the implementation and supplementation of the requirements of ISO/IEC Guide 25 within the context of their countries' laboratory accreditation programs. This report summarizes the results of that survey and includes a bibliographic list of publications concerned with ISO/IEC Guide 25 implementation complied from the information by the national delegations.

Order from NIST by #PB 94-210150.

Directory of International and Regional Organizations Conducting Standards-Related Activities (NIST SP 767)

This directory contains information on 338 international and regional organizations which conduct standardization, certification, laboratory accreditation, or other standards-related activities. It describes their work in these areas, as well as the scope of each organization, national affiliations of members, U.S. participants, restrictions on membership, and the availability of any standards in English.

Order from NTIS by #PB 89-221147 or Global Engineering Documents by Order #Cat. SP767.

Directory of European Regional Standards-Related Organizations (NIST SP 795)

This directory identifies more than 150 European regional organizations - both governmental and private - that engage in standards development, certification, laboratory accreditation and other standards-related activities, such as quality assurance. Entries describe the type and purpose of each

organization; acronyms; national affiliations of members; the nature of the standards-related activity; and other related information.

Order from NTIS by #PB 91-107599 or Global Engineering Documents by Order #Cat. 0258-3.

Standards Activities of Organizations in the United States (NIST SP 806, 1996 Edition).

The directory identifies and describes activities of over 700 U.S. public and private sector organizations which develop, publish, and revise standards; participate in this process; or identify standards and make them available through information centers or distribution channels. The revision covers activities related to both mandatory and voluntary U.S. standards. It also contains a subject index and related listings that cover acronyms and initials, defunct bodies and organizations with name changes.

Order from NTIS by #PB 97-124135/AS.

Directory of Federal Government Certification and Related Programs (NIST SP 739 1999 Edition)

This fourth edition describes federal government procurement and regulatory programs which may affect product and services in the marketplace. Entries describe the scope and nature of each program, contact points, testing and inspection practices, standards used, methods of identification and enforcement, reciprocal recognition or acceptance of certification and other relevant details. The entries also describe assessment procedures used by federal agencies to provide assurance that the products and services regulated or procured by federal agencies have the required characteristics and/or perform in a specific manner. The methods used by federal agencies to assure conformance can be very different than those traditionally employed by the private sector and by third party certifiers.

Order from NTIS by #PB 99-154825.

Directory of U.S. Private Sector Product Certification Programs (NIST SP 903)

This directory presents information from 178 private sector organizations in the United States which engage in product certification activities. Entries describe the type and purpose of each organization, the nature of the activity, a pictorial representation of the organization's mark (if available), products certified, standards used, certification requirements, any accreditation or recognition by a U.S. or foreign private sector or government agency, availability of services, methods of cost determination, and other relevant details.

Order from NTIS by #PB 96-215074.

Directory of Federal Government Laboratory Accreditation/Designation Programs (NIST SP 808)

This directory provides updated information on 31 federal government laboratory accreditation and similar type programs conducted by the federal government. These programs, which include some type of assessment regarding laboratory capability, designate sets of laboratories or other entities to conduct testing to assist federal agencies in carrying out their responsibilities. The directory also lists 13 other federal agency programs of possible interest, including programs involving very limited laboratory assessment and programs still under development.

Order from NTIS by #PB 91-167379.

Directory of State and Local Government Laboratory Accreditation/Designation Programs (NIST SP 815)

This directory provides updated information on 21 state and 11 local government laboratory accreditation and similar type programs. These programs, which include some type of assessment regarding laboratory capability, designate private sector laboratories or other entities to conduct testing to assist state and local government agencies in carrying out their responsibilities. Entries describe the scope and nature of each program, laboratory assessment criteria and procedures used in the program, products and fields of testing covered, program authority, and other relevant details.

Order from NTIS by #PB 92-108968.

ISO Environmental Management Standardization Efforts (NISTIR 5638-1)

This report describes the development of planned "environmental management" standards by the International Organization for Standardization (ISO). These standards address management systems and the environmental aspects of products in the areas of life cycle assessment and labeling. The report outlines the current status of the ISO standards and also covers developments relating to third party certification of environmental management systems.

Order from NTIS by #PB 96-158662

Standards Setting in the European Union - Standards Organizations and Officials in EU Standards Activities (NIST SP 891, 1997 Edition)

The guide is designed to help U.S. manufacturers, exporters, and other interested persons in locating contact points for important information on the development of standards and conformity assessment issues. The report includes a history of the role of standards in the European Union (EU) and the latest information on the EU's harmonization directives for implementing the "New Approach" and the "Global Approach" for harmonizing technical regulations and standards to reduce barriers to trade.

Order from NTIS as #PB 97-153738.

Profiles of National Standards-Related Activities (NIST SP 912)

Introduction
Country Profiles
Appendix I & II

This directory describes the metrology, standardization, testing and quality (MSTQ) activities of more than 70 countries. Each entry includes basic data on the country's economy and trade; agencies and institutions responsible for metrology and calibration, standards development, testing, product certification, quality and environmental system registration and accreditation; and key contacts and information sources. Entries are formatted to facilitate access to specific information. An introductory section provides general information on development of the directory and an overview of world-wise MSTQ activities.

Order from NTIS by #PB 97-169874/AS.

TBT Agreement Activities of the National Institute of Standards and Technology

This annual report describes the World Trade Organization (WTO) Agreement on Technical Barriers to Trade (TBT) activities conducted by NIST. NIST receives notifications of proposed foreign technical regulations related to trade, responds to inquiries on proposed technical regulations, participates in

various bilateral and multilateral standards-related trade discussions, and respond to inquiries on the existence, source and availability of standards and standards-related information.

Order from Standards Information Program, (301) 975-4040; fax (301) 926-1559, e-mail: ncsci@nist.gov

Using Voluntary Standards in the Federal Government (NISTIR 6086)

This report is a compilation of presentations given at a NIST-sponsored conference held on September 8, 1997 to foster better understanding among Federal agencies of the private sector standardization process. The conference took place as part of a major effort by NIST to implement the National Technology Transfer and Advancement Act which gives NIST responsibility to coordinate standards and conformity assessment activities with other Federal agenices, state and local governments, and with the private sector.

Order from NTIS by #PB 98-110281.

Environmental Management Systems Voluntary Project Evaluation Guidance (NISTIR 6120)

The intent of this document is to provide a framework for the collection of information of value to regulatory agencies and others interested in determining the impact in several key areas of environmental management systems based on ISO 14001.

Order from NTIS by #PB 98-128890.

National Voluntary Laboratory Accreditation Program (NVLAP) Directory (NIST SP 810)

This annual directory lists laboratories that have been found to be competent to perform certain tests or calibrations as specified. These laboratories are allowed to use the NVLAP logo on their test or calibration certificates or reports, which implies that the processes used to achieve the tests or calibrations have been evaluated by NVLAP as being technically adequate when performed under the conditions specified in the laboratories' quality manuals and associated documentation.

Copies are available from NVLAP at (301) 975-4016; fax: (301) 926-2884 or e-mail - nvlap@nist.gov. A listing of accredited laboratories, updated quarterly, is available on the NVLAP website at http://ts.nist.gov/nvlap.

Toward a National Standards Strategy - Conference Summary Report (NISTIR 6259)

On September 23, 1998, the National Institute of Standards and Technology (NIST) and the American National Standards Institute (ANSI) co-hosted a summit conference, "Toward a National Standards Strategy to Meet Global Needs." NIST Director Ray Kammer and ANSI President Sergio Mazza co-chaired a program that featured keynote addresses by Deputy Secretary of Commerce Robert Mallet and Dana Mead, Chairman and CEO of Tenneco and World Standards Day Chairman; a luncheon address by Evangelos Vardakas, Director, Directorate B, Legislation and Standardization, Telematics Networks, Directorate General (DG)-III: Industrial Affairs, European Commission; three panels comprised of standards experts from industry and government; and discussions of comments and questions raised by some of the 339 registered participants.

Order from NTIS by #PB 99-111239.

Toward a National Standards Strategy - Conference Report (NISTIR 6290)

This more complete report of the September 23, 1998 Summit Proceedings contains full texts, figures, and such background papers as were provided by the speakers; they are presented in the order shown on the agenda. Transcriptions of comments and questions from the floor and the ensuing panelist responses are interspersed appropriately. Information about the speakers appears in Appendix A; the list of Conference attendees may be found in Appendix B; and a glossary of acronyms is provided in Appendix C.

Order from NTIS by #PB 99-129629.

A Selective Review of Testing Laboratory Accreditation Movements in the United States (NIST GCR 98-740)

In conjunction with a cooperative effort by the Laboratory Accreditation Working Group (LAWG), consisting of public and private sector entities that call for laboratories to be accredited, the affected laboratories, and accreditation bodies, the author has conducted a selective review of a number of previous attempts to systemize laboratory accreditation activities in the United States. In conclusion, a number of recommendations are made for the developing National Cooperation on Laboratory Accreditation (NACLA), the proposed formal structure to succeed the planning organization, LAWG.

Towards Strategic Management of Standards Activities at NIST (NISTIR 6292)

This paper describes strategic standards management, its use by U.S. companies, and the potential use of this important methodology by DoC/NIST and other government agencies. It also describes the role of NIST's Standards Advisory Committee (SAC) in defining a plan that each NIST Operating Unit (OU) can tailer to manage its own standards activities, and other agencies can similarly adopt. A checklist is provided for use by NIST OUs as they set priorities and implement activities in support of the standards-related work associated with their missions. This checklist can also be adapted for use by other Federal agencies.

Order from NTIS by #PB 99-127896.

An Overview of the Development of Technical Infrastructure in the Asia-Pacific Region: The Work of the Asia-Pacific Economic Cooperation (APEC) Sub-committee on Standards and Conformance (SCSC) and the Specialist Regional Bodies (SRBs) (NISTIR 6325)

The development and maintenance of an economy's standards and conformance technical infrastructure is critical to its economic health. By increasing the competence of its measurement and testing capabilities, in particular, an economy can provide substantial benefits to its manufacturers and consumers. It is also better equipped to participate in the confidence building requirements of the region to take advantage of increased trade opportunities. Technical infrastructure development is a major focus of the Asia-Pacific Economic Cooperation Sub-committee on Standards and Conformance and the Specialist Regional Bodies which work together closely to develop practical programs to assist this development.

Order from NTIS by #PB 99-142580

Free Trade Area of the Americas (FTAA) Conformity Assessment Infrastructure (NIST SP 941)

This publication summarizes the status of the technical infrastructure for conformity assessment in the Americas. It provides information about inspection and testing, product certification, quality system registration and laboratory accreditation for the countries that will comprise the Free Trade Area of the Americas.

NIST Technical Publications

Periodical

Journal of Research of the National Institute of Standards and Technology—Reports NIST research and development in those disciplines of the physical and engineering sciences in which the Institute is active. These include physics, chemistry, engineering, mathematics, and computer sciences. Papers cover a broad range of subjects, with major emphasis on measurement methodology and the basic technology underlying standardization. Also included from time to time are survey articles on topics closely related to the Institute's technical and scientific programs. Issued six times a year.

Nonperiodicals

Monographs—Major contributions to the technical literature on various subjects related to the Institute's scientific and technical activities.

Handbooks—Recommended codes of engineering and industrial practice (including safety codes) developed in cooperation with interested industries, professional organizations, and regulatory bodies.

Special Publications—Include proceedings of conferences sponsored by NIST, NIST annual reports, and other special publications appropriate to this grouping such as wall charts, pocket cards, and bibliographies.

National Standard Reference Data Series—Provides quantitative data on the physical and chemical properties of materials, compiled from the world's literature and critically evaluated. Developed under a worldwide program coordinated by NIST under the authority of the National Standard Data Act (Public Law 90-396). NOTE: The Journal of Physical and Chemical Reference Data (JPCRD) is published bimonthly for NIST by the American Chemical Society (ACS) and the American Institute of Physics (AIP). Subscriptions, reprints, and supplements are available from ACS, 1155 Sixteenth St., NW, Washington, DC 20056.

Building Science Series—Disseminates technical information developed at the Institute on building materials, components, systems, and whole structures. The series presents research results, test methods, and performance criteria related to the structural and environmental functions and the durability and safety characteristics of building elements and systems.

Technical Notes—Studies or reports which are complete in themselves but restrictive in their treatment of a subject. Analogous to monographs but not so comprehensive in scope or definitive in treatment of the subject area. Often serve as a vehicle for final reports of work performed at NIST under the sponsorship of other government agencies.

Voluntary Product Standards—Developed under procedures published by the Department of Commerce in Part 10, Title 15, of the Code of Federal Regulations. The standards establish nationally recognized requirements for products, and provide all concerned interests with a basis for common understanding of the characteristics of the products. NIST administers this program in support of the efforts of private-sector standardizing organizations.

Order the following NIST publications—FIPS and NISTIRs—from the National Technical Information Service, Springfield, VA 22161.

Federal Information Processing Standards Publications (FIPS PUB)—Publications in this series collectively constitute the Federal Information Processing Standards Register. The Register serves as the official source of information in the Federal Government regarding standards issued by NIST pursuant to the Federal Property and Administrative Services Act of 1949 as amended, Public Law 89-306 (79 Stat. 1127), and as implemented by Executive Order 11717 (38 FR 12315, dated May 11, 1973) and Part 6 of Title 15 CFR (Code of Federal Regulations).

NIST Interagency or Internal Reports (NISTIR)—The scrics includes interim or final reports on work performed by NIST for outside sponsors (both government and nongovernment). In general, initial distribution is handled by the sponsor; public distribution is handled by sales through the National Technical Information Service, Springfield, VA 22161, in hard copy, electronic media, or microfiche form. NISTIR's may also report results of NIST projects of transitory or limited interest, including those that will be published subsequently in more comprehensive form.

U.S. Department of Commerce National Institute of Standards and Technology Gaithersburg, MD 20899–0001

Official Business Penalty for Private Use \$300
