FOREWORD

The National Institute of Standards and Technology's (NIST) has developed a wide range of reference publications which provide ready access to information about organizations responsible for standards development, product certification, and accreditation. While most of these focus on U.S. activities (e.g., *Directory of Private Sector Product Certification Programs*, and *Standards Activities of Organizations in the United States*), some compile information on international or regional organizations (e.g., *Directory of European Regional Standards-Related Organizations*). These directories are very useful to domestic enterprises, and are often-used references outside the United States.

With the expanding global economy, there is an increasing demand from the private sector and government agencies throughout the world for details on metrology and calibration systems, accreditation bodies, and certifying organizations of current and potential trading partners. In many countries, no single body is responsible for all aspects of metrology, standards, testing, and quality (MSTQ); and a wide range of public and private sector organizations may be involved. Obtaining authoritative information can be difficult and time-consuming since there is no single worldwide database of MSTQ activities. To fill this void, NIST has prepared *Profiles of National Standards-Related Activities*.

Users will find in one place a wealth of information about the MSTQ systems of the world's major economies and many less-developed countries. Perusal of the entries will demonstrate that there are many different models for national MSTQ systems. For the first time the information gathered in one place provides names and addresses of a country's metrology center and legal metrology agency; its primary standards and quality organizations; government and private sector accreditors of calibration and testing laboratories; product certifiers; quality and environmental management system registrars; information sources and many other aspects of the country's industrial infrastructure. When all the descriptive information for a country is considered, a clearer picture emerges of the state of development of that country's MSTQ system.

This is the first edition of this directory. Some countries did not respond to requests for information, while others did not provide all the information requested. As this directory becomes more widely used, we trust that existing entries will be updated and expanded and that countries not yet included will submit entries.

ACKNOWLEDGMENTS

More than 200 organizations verified information and submitted additional data for this directory. Special thanks are due Dr. Lawrence D. Eicher, Secretary General of the International Organization for Standardization, for making available data ISO had accumulated from its member bodies, and Carl J. Dahlman, of the World Bank, who first identified the need for this directory.

Maureen Breitenberg ably coordinated and monitored this project for NIST's Office of Standards Services. Special thanks are due the staff of R. B. Toth Associates, who compiled this directory under contract to NIST. In particular, Mary Ellen Hinkley managed all aspects of information gathering and processing.

Robert B. Toth
Editor

ABSTRACT

This directory describes the metrology, standardization, testing, and quality (MSTQ) activities of more than 70 countries. Each entry includes basic data on the country's economy and trade; agencies and institutions responsible for metrology and calibration, standards development, testing, product certification, quality and environmental system registration and accreditation; and key contacts and information sources. Entries are formatted to facilitate access to specific information. An introductory section provides general information on development of the directory and an overview of world-wide MSTQ activities.

Keywords: accreditation; calibration; certification; conformity assessment; metrology; mutual recognition agreements; registration; standards; testing;

INTRODUCTION

As the world moves toward a global economy driven by rapid technological change, standards and conformity assessment have become strategic business issues. Most nations recognize that an effective industrial infrastructure includes not only ready access to capital, energy, and transportation, but the systems and institutions which support metrology, standardization, testing, and quality (MSTQ). The ability to compete in global markets is directly related not only to the availability of MSTQ resources, but the credibility of certification programs, calibration systems, environmental management registration, and accreditation schemes. Attention to MSTQ issues has expanded from coteries of technical specialists to the board rooms of major corporations, conclaves of heads of state, and the front pages of business and financial journals. A basic problem for both experienced technical specialists and those newly involved in MSTQ issues is identifying the responsible MSTQ organizations within the countries in which they are planning to do business. At times it can be difficult identifying these organizations even within their own countries. This directory aims to alleviate this problem by providing information on the primary institutions or agencies which are responsible for, or coordinate, national MSTQ activities.

Scope and Format

This directory profiles the MSTQ systems of the world's major economies and many less-developed countries. The entries are based on information from a wide range of sources together with information provided by the principals. Rather than providing a questionnaire with a request to fill in the blanks, a draft entry was prepared from existing data sources in accordance with the format presented in Appendix I. Each organization received only those sections of the draft entry for which it has responsibility. Recipients were asked to verify or correct the information and, if necessary, coordinate with other organizations within their country to ensure that all relevant national organizations were listed. Entries or portions of entries were sent to more than 300 organizations. Many organizations did not respond despite numerous reminders. Nevertheless, more than 200 responses were received; and the information presented here is the best available at this time. As this directory becomes widely circulated, it is anticipated that missing information will be provided so that all entries will be complete, and those countries which chose not to be included will reconsider and submit entries.

Each entry is formatted into the following sections, and key information is highlighted to facilitate access:

Basic Data

To enable readers to put the MSTQ information into context, each entry includes comparative data on the country's size and population, basic financial indicators, and primary exports, imports, and trading partners. Most of the data in this section are extracted from the 1995 Central Intelligence Agency (CIA) *World Factbook*, supplemented by data from the World Bank and the U.S. Department of Commerce. As with most data of this type, these are cumulative data which

are one to two years old at time of publication and should, therefore, be used only as relative indicators of each country's capabilities and capacities.

National MSTQ Coordination

Recipients were asked to identify the organization which coordinates, or provides the forum for coordinating, standards-related activities at the national level.

Metrology and Calibration Services

One indicator of a nation's capability to produce manufactured goods of uniform quality, deliver the quantities ordered, and comply with quality system registration and laboratory accreditation criteria is the capability and capacity of its metrology and calibration services. Memberships in the International Bureau of Weights and Measures (BIPM), International Organization of Legal Metrology (OIML), and regional metrology networks provide some measure of experience, proficiency, and knowledge of current practices. Budgetary information and the number of accredited secondary calibration laboratories are not only useful indicators, but can help all countries to benchmark their existing or planned metrology systems.

Standards Development and Adoption

Much of the information in this section had been collected in prior years by the International Organization for Standardization (ISO) from its member bodies and published every four or five years in the *ISO Memento*. ISO had decided to forego publishing the 1996 edition and the accumulated data were made available for this directory. Each ISO member body received a copy of the reformatted data for verification and updating. It was also asked to indicate the number of other government and private sector standards developers within its country and the total number of available standards. The total number of publicly available standards is the combined total of: (a) all standards developed or adopted by the primary (national) standards body; and (b) all other standards developed by other national organizations. Participation in international and regional standardization organizations is listed for each country. Membership may be held by an agency or organization other than the primary standards body.

Testing and Product Certification

This section lists the accreditors of testing laboratories and product certifiers and the number of laboratories and certifiers which have been accredited. In many cases, respondents provided information on existing and pending mutual recognition agreements (MRAs) and memoranda of understanding (MOUs).

Quality Management Registration

This section provides indicators on the extent to which ISO 9001 and ISO 9002 have been implemented, and further insight on the country's accreditation system including certification of quality assessors.

Related Information

Many countries require that certain standards-related activities be performed by certified technicians or accredited organizations. Others provide opportunities for voluntary certification. This section summarizes information on these requirements and the responsible organizations. Additionally, information is provided on environmental management standards and their implementation, and the primary source of information on MSTQ topics. This source is usually the designated World Trade Organization (WTO) Enquiry Point. If the country is not a member of WTO or has not notified the WTO as to the Enquiry point, the source is identified as the Information Center.

An Overview

Gathering related MSTQ information in one location provides an opportunity to consider the national frameworks within which the responsible organizations function and their interrelationship. The most noteworthy observation is that among the listed countries the focus for policy, direction, and coordination has shifted from the primary standards body to the national accrediting authority. The WTO agreement on Technical Barriers to Trade has provided the impetus to create an efficient, transparent, fair and harmonized means of international acceptance of traded goods. To support domestic industries and promote trade, countries have established, or are in the process of establishing, a national infrastructure for accrediting testing and calibration laboratories; inspection bodies; and certifiers of products, personnel, quality systems, and other standards-related activities. Nations are implementing the concept of "one-step conformity assessment" not only to minimize costs, but to achieve recognition by other nations. The national accrediting authority fills the need for a recognized body empowered to formalize agreements with regional organizations and other nations. This development, which centers on the implementation of standards rather than on their preparation, coupled with the enhanced role of regional and international standards organizations, has prompted some primary standards bodies to reassess their role and organizational structure. In many cases, the national accrediting authority is also the national MSTQ coordinator or part of the government agency which serves as the coordinator. Half of the listed countries identified a national body which coordinates or oversees MSTQ activities. Nearly all of these organizations are government agencies. Four members of the European Union have such coordinating bodies: Austria, Belgium, Italy, and the United Kingdom. Canada, Mexico, and the United States did not identify MSTQ coordinating bodies.

Most countries have centralized standardization systems within a single standards body. However, it may be a surprise to some that the standardization systems in many countries are not monolithic. Some of the larger countries have numerous standards developing organizations in addition to the primary standards body. In Germany, for example, 153 private sector standards developers have prepared 15 000 standards, while Deutsches Institut für Normung (DIN) has prepared 22 000. In Japan, more than 200 trade associations and professional societies prepare standards within the Japanese Industrial Standards Committee (JISC) framework. In France, 30

semi-autonomous sectorial bodies (bureaux de normalisation) prepare industry-specific standards, while Association française de normalisation (AFNOR) prepares cross-cutting horizontal standards. In the United States, it is estimated that there are 620 formal and informal developers of standards in the private sector, as well as 80 Federal agencies which develop standards (See NIST SP 806, 1996 Edition).

Figure 1. Some of the world's larger collections of national standards.

Figure 1 compares the number of standards in some of the major collections in the world. (Countries formerly associated with the Soviet bloc generally have large numbers of standards, e.g., Ukraine 21 000, Belarus 19 000, Poland 15 400, Bulgaria 13 000.) The U.S. total includes 8000 Department of Defense standards for uniquely military applications. These should be subtracted from the total for comparisons with the totals of other nations. The number of available standards, however, is not necessarily indicative of their level of implementation or their value to industry and commerce. Some claim that in spite of 5-year reviews, 25 to 30 percent of U.S. standards refer to and document obsolescent technology that, while appropriate for spares and maintenance of older equipment, is no longer appropriate for new designs. This situation probably exists in many other countries.

The number of national standards reported by all respondents exceeds 560 500. The total number of standards published by those ISO member bodies which did not respond is 90 600. On this basis, and taking into account (a) the under-reporting of standards prepared by national organizations other than the ISO member body, and (b) national standards of countries which are not yet members of ISO, it is estimated that there are currently about 780 000 national standards in the world. It is probable that a significant portion are very similar to each other. Those responding report that from 5 to 90 percent of their national standards are identical to, technically equivalent to, or based on international standards; the average is 43 percent.

There are insufficient data from the larger countries to derive useful indicators on the number of secondary calibration laboratories, accredited testing laboratories, or product certifiers. Table 1 illustrates the wide range of data in these categories. There appears to be some correlation between the number of enterprises registered to ISO 9000 and the number of calibration laboratories as shown in Table 2.

Table 1. Comparison of accredited laboratories in selected countries

Country	GDP \$ billions	Accredited Laboratories	
		Calibration	Testing
United Kingdom	1045	570	
Italy	998	72	
Brazil	886	65	70
Mexico	723	36	214
Indonesia	571	19	10
Australia	375	200	2328
Taiwan	257		100
South Africa	194		86
Malaysia	167	18	71
Sweden	163		380
Switzerland	148		145
Finland	82		66
Singapore	57		70
Ireland	49	12	57

Table 2. Comparison of the number of facilities registered to ISO 9001 and 9002 and the number of accredited secondary calibration laboratories

Country	ISO 9000 Facilities	Accredited Calibration Labs
United Kingdom	50 000	570
Australia	10 000	200
Italy	4 000	72
Ireland	2 500	12
Brazil	1 250	65
Malaysia	836	18
Mexico	340	36
Indonesia	38	19

Future Updates

The value of a directory of this type is dependent on the completeness and currency of its information. Now that MSTQ institutions and agencies throughout the world can see the product and test its usefulness, it is hoped that they will keep NIST advised of any changes in their entries. They are particularly encouraged to provide the full range of data that will enable users to have a complete profile of their MSTQ activities. Users are also encouraged to suggest improvements for subsequent editions. Organizations that are not included in this directory are invited to use the form in Appendix I to send pertinent information to:

National Institute of Standards and Technology
Office of Standards Services
Bldg., 820, Room 280
Gaithersburg, Maryland 20899
Fax: (301) 963-2871
e-mail: maureen.breitenberg@nist.gov
Internet website: <http://www.nist.gov>

This directory will in the near future be available on the Internet. The Web site will include forms so that listed organizations can update their entries, and new entries can be submitted by those not yet listed.

METROLOGY AND CALIBRATION SERVICES

Primary laboratory and national coordinator

2.1 National Institute of Metrology (NIM)
No. 18, Bei San Huang Dong LU
Beijing 100013, China

Tel. (86-1) 6421-8703; Fax (86-1) 6421-8703

This is a government body

Annual budget: \$5.6 million; portion of revenue from fees for services 24%; government subvention 76%

Member BIPM since 1977

Participate in: APMP, IMEKO

Accreditor

2.2 China National Accreditation Committee for Laboratories (CNACL)

Address same as 1.1

Tel. (86-1) 6236-1005; Fax (86-1) 6203-1010

This is a government body

Number of accredited secondary calibration labs - None

Legal metrology administrator

2.3 Same as 1.1

Tel. (86-1) 6236-9419; Fax (86-1) 6203-1010

This is a government body

Member OIML since 1985; Regional: APLMF

STANDARDS DEVELOPMENT AND ADOPTION

Primary standards body

3.1 Same as 1.1

Tel. (86-1) 6203-2424; Fax (86-1) 6203-3737

This is a government body

Participate in: ISO, IEC, ITU, FAO/Codex; Regional: PASC, APEC

Founded 1957; staff 40; total number of committee members 25 000

Annual budget: \$2.3 million; government subvention 100%

Number of standards published or approved by primary standards body 17 000; voluntary 90%; mandatory 10%

Number of other standards bodies; national government 88, 58 ministries and 30 provincial authorities; private sector - None

TESTING AND PRODUCT CERTIFICATION

National coordinator of laboratory accreditation

- 4.1 China National Accreditation Committee for Product Certification Bodies (CNACP)
Address same as 2.1

This is a government body

Participate in: IECEE, IECQ, IAF, QSAR/ISO;
Regional: PAC

Government accreditors of testing laboratories

- 4.2.1 China National Accreditation Committee for Laboratories
Address same as 1.1

- 4.2.2 State Administration for Import and Export
Commodity Inspection of PRC
Fangcaodi Xijie 15
Beijing 100022

Number of accredited testing laboratories 220

Private-sector accreditor of testing laboratories - None

Number of accredited product certifiers: government agencies and institutions - None; private sector - None
Historically all product certifiers were set up by sectors and ministries. National accreditation service will be operated soon after procedures and criteria are developed

Government accreditor of product certifiers

- 4.3 Same as 4.1

Tel. (86-10) 6202-2288 ext 9001;
Fax (86-10) 6203-1010

Countries with product certification MOUs or MRAs -
None

Private - sector accreditor of product certifiers - None

QUALITY MANAGEMENT REGISTRATION

Coordinator national quality awareness and implementation

- 5.1 China Quality Control Association
P.O. Box 2210
Beijing

Number of facilities registered to ISO 9001 or ISO 9002 or national equivalents: 769

Number of registrars geographically located in China
35. Number of registrars accredited by the national accreditor 25

National accreditor of quality management system registrars:

- 5.2 China National Accreditation Committee for Quality System Registration Bodies (CNAC)
Address same as 1.1

This is a government body

Countries with quality registration MOUs or MRAs -
None

Foreign quality system registrars are required to be registered by the national accreditor

Participate in: ISO/TC 176, IAF, IATCA, QSAR;
Regional: PAC

Certifier of quality assessors

- 5.3 China National Registration Board for Auditors (CRBA)
Address same as 1.1

Tel. (86-10) 6204-6174; Fax (86-10) 6203-1010

This is a government body

Tel. (62-21) 520-6574; Fax (62-21) 520-6574

This is a government body

METROLOGY AND CALIBRATION SERVICES

Primary laboratory and national coordinator

- 2.1 Research & Development Center for
Calibration, Instrumentation and Metrology -
KIM-LIPI
Kompleks PUSPIPTEK
Serpong Tangerang 15310

Tel. (62-21) 756-0533; Fax (62-21) 756-0568

Member BIPM since 1960

Participate in: Asia-Pacific Metrology Program

Accreditor

- 2.2 Metrology Commission (DSN)
National Accreditation Body (KAN)
Address same as 1.1

This is a government body

Number of accredited secondary calibration labs 19
Countries with MRAs - None

Legal metrology administrator

- 2.3 Director General of Domestic Trade
Departemen Perdagangan
Jl. Pasteur 27
Bandung 40171

Tel. (62-22) 443597; Fax (62-22) 420-7035

Member OIML since 1960; Regional: APLMF

STANDARDS DEVELOPMENT AND ADOPTION

Primary standards body

- 3.1 Standardization council of Indonesia - DSN
Address same as 1.1

Participate in: ISO, IEC, ITU, FAO/Codex; Regional: Pacific Area Standards Congress, ASEAN Consultative Committee for Standardization and Quality, APEC Standards and Conformance Subcommittee
Founded 1984; staff 55; total number of committee members 3000
Annual budget: \$350 000; government subvention 100%
Number of standards published or approved by primary standards body 3600; voluntary 97%, mandatory 3%
Identical to, technically equivalent, or based on international standards 90% est.

TESTING AND PRODUCT CERTIFICATION

National coordinator of laboratory accreditation

- 4.1 National Accreditation Body (KAN)
Address same as 1.1

This is a government body

Countries with MRAs - None

Participate in : ILAC; Regional: Asia - Pacific Laboratory Accreditation Cooperation

Government accreditor of testing laboratories

- 4.2 Same as 4.1

Countries with test laboratory MRAs - None

Number of government accredited testing laboratories 10; foreign accredited 5

Private-sector accreditor of testing laboratories - None

Number of accredited product certifiers: government agencies and institutions 3; private sector - None

Government accreditor of product certifiers

- 4.3 Same as 4.1

Countries with product certification MOUs or MRAs - None

Private - sector accreditor of product certifiers - None

QUALITY MANAGEMENT REGISTRATION

Coordinator national quality awareness and implementation

- 5.1 Indonesian Quality Management Association - PMMI
Kartika Chandra Buioding, F 502
J1 Gatot Subroto 18 - 20
Jakarta 12930

Tel. (62-21) 525-6671; Fax (62-21) 520-2348

Number of facilities registered to ISO 9001 or ISO 9002 or national equivalents: 30

Number of registrars geographically located in Indonesia 9. Number of registrars accredited by the national accreditor 9

National accreditor of quality management system registrars

- 5.2 Same as 4.1

This is a government body

Countries with quality registration MOUs or MRAs - None

Foreign quality system registrars are required to be registered/listed by the national accreditor

Participate in: ISO/TC 176; Regional ASEAN

Certifier of quality assessors

QSAR	Quality Systems Assessment Recognition (ISO/IEC)
SIM	Sistema Interamericano de Metrologia
TBT	Technical Barriers to Trade
WELMEC	European Cooperation in Legal Metrology
WPO	World Packaging Organization
WTO	World Trade Organization

NIST Technical Publications

Periodical

Journal of Research of the National Institute of Standards and Technology—Reports NIST research and development in those disciplines of the physical and engineering sciences in which the Institute is active. These include physics, chemistry, engineering, mathematics, and computer sciences. Papers cover a broad range of subjects, with major emphasis on measurement methodology and the basic technology underlying standardization. Also included from time to time are survey articles on topics closely related to the Institute's technical and scientific programs. Issued six times a year.

Nonperiodicals

Monographs—Major contributions to the technical literature on various subjects related to the Institute's scientific and technical activities.

Handbooks—Recommended codes of engineering and industrial practice (including safety codes) developed in cooperation with interested industries, professional organizations, and regulatory bodies.

Special Publications—Include proceedings of conferences sponsored by NIST, NIST annual reports, and other special publications appropriate to this grouping such as wall charts, pocket cards, and bibliographies.

National Standard Reference Data Series—Provides quantitative data on the physical and chemical properties of materials, compiled from the world's literature and critically evaluated. Developed under a worldwide program coordinated by NIST under the authority of the National Standard Data Act (Public Law 90-396). NOTE: The Journal of Physical and Chemical Reference Data (JPCRD) is published bimonthly for NIST by the American Chemical Society (ACS) and the American Institute of Physics (AIP). Subscriptions, reprints, and supplements are available from ACS, 1155 Sixteenth St., NW, Washington, DC 20056.

Building Science Series—Disseminates technical information developed at the Institute on building materials, components, systems, and whole structures. The series presents research results, test methods, and performance criteria related to the structural and environmental functions and the durability and safety characteristics of building elements and systems.

Technical Notes—Studies or reports which are complete in themselves but restrictive in their treatment of a subject. Analogous to monographs but not so comprehensive in scope or definitive in treatment of the subject area. Often serve as a vehicle for final reports of work performed at NIST under the sponsorship of other government agencies.

Voluntary Product Standards—Developed under procedures published by the Department of Commerce in Part 10, Title 15, of the Code of Federal Regulations. The standards establish nationally recognized requirements for products, and provide all concerned interests with a basis for common understanding of the characteristics of the products. NIST administers this program in support of the efforts of private-sector standardizing organizations.

Order the following NIST publications—FIPS and NISTIRs—from the National Technical Information Service, Springfield, VA 22161.

Federal Information Processing Standards Publications (FIPS PUB)—Publications in this series collectively constitute the Federal Information Processing Standards Register. The Register serves as the official source of information in the Federal Government regarding standards issued by NIST pursuant to the Federal Property and Administrative Services Act of 1949 as amended, Public Law 89-306 (79 Stat. 1127), and as implemented by Executive Order 11717 (38 FR 12315, dated May 11, 1973) and Part 6 of Title 15 CFR (Code of Federal Regulations).

NIST Interagency Reports (NISTIR)—A special series of interim or final reports on work performed by NIST for outside sponsors (both government and nongovernment). In general, initial distribution is handled by the sponsor; public distribution is by the National Technical Information Service, Springfield, VA 22161, in paper copy or microfiche form.
