CORRECTION FACTOR TABLES FOR FOUR-POINT PROBE RESISTIVITY MEASUREMENTS ON THIN, CIRCULAR SEMICONDUCTOR SAMPLES

Lydon J. Swartzendruber

NBS Technical Notes are designed to supplement the Bureau's regular publications program. They provide a means for making available scientific data that are of transient or limited interest. Technical Notes may be listed or referred to in the open literature.

CORRECTION FACTOR TABLES FOR FOUR-POINT PROBE RESISTIVITY MEASUREMENTS
ON THIN, CIRCULAR SEMICONDUCTOR SAMPLES

Lydon J. Swartzendruber

Extensive tables of the geometrical correction factors for four-point probe resistivity measurements on thin, circular semiconductor samples with all surfaces insulating are given, (1) for an in-line probe array displaced radially with points along a diameter, (2) for an in-line probe array displaced radially with the line of points perpendicular to a diameter, and (3) for a displaced square probe array.

1. INTRODUCTION

When measuring the resistivity of a thin, circular sample of semiconductor material, a four-point probe is often used. This probe may be either the in-line array as described by Valdes^[1]* or the square array as described by Uhlir^[2]. By moving the probe over the semiconductor sample an idea of the sample resistivity variations can be obtained^[3]. However a geometrical correction factor, which is a function of the position of the probe on the sample, must be applied for correct results. The tables below give this correction factor for the cases illustrated in figures 1, 2 and 3. These tables apply to circularly shaped samples having a uniform thickness which is less than about one-half the probe spacing, and having all surfaces of the sample in contact with an insulating medium. For greater sample thicknesses an additional correction factor, as given by Smits,^[4] is necessary. If the sample thickness is less than 0.5 of the probe spacing, the thickness correction is less than 0.3%. If the sample thickness is less than 0.4 of the probe spacing, the thickness correction factor will be less than 0.05%. The tables are given to six significant figures, all of which would seldom be required, and only those necessary to achieve the desired accuracy need be used.

TABLE I

This table applies to the case shown in figure 1. The sample resistivity is given by

$$\rho = \frac{V}{I} t F_1 \quad (1)$$

* Figures in brackets indicate the literature references at the end of this paper.

where ρ is the resistivity in ohm-cm, V is the potential difference measured across the two voltage probes in volts, I is the current being passed through the two current probes in amperes, t is the sample thickness in cm, and F_1 is the correction factor given in table I. Factor F_1 applies when either the two outer probes, or the two inner probes, are being used to pass current, with the two remaining probes being used to measure voltage.

F_1 is given as a function of the dimensionless parameters s over r and Δ over r , where s is the probe spacing, r is the sample radius, and Δ is the probe displacement off center, as defined in figure 1. A sub-table is given for each value of s over r from 0.01 to 0.66 in steps of 0.01. Each sub-table gives the factor F_1 for values of Δ over r from 0.00 to 0.99 in steps of 0.01. For example, when s over r is 0.02 and Δ over r is 0.81, F_1 is 4.49925. When the value 0. appears in the table for F_1 , the value of Δ over r is such that the probe is no longer completely on the sample.

TABLE II

This table applies to the case shown in Figure 2. The sample resistivity is given by

$$\rho = \frac{V}{I} t F_2 \quad (2)$$

where ρ is the resistivity in ohm-cm, V is the potential drop measured across the two voltage probes in volts, I is the current being passed through the two current probes in amperes, t is the sample thickness in cm, and F_2 is the correction factor given in table II. Factor F_2 applies when either the two outer probes, or the two inner probes, are being used to pass current, with the two remaining probes being used to measure voltage.

F_2 is given as a function of the dimensionless parameters s over r and Δ over r , where s is the probe spacing, r is the sample radius, and Δ is the probe displacement off center, as defined in figure 2. A sub-table is given for each value of s over r from 0.01 to 0.66 in steps of 0.01. Each sub-table gives the factor F_2 for values of Δ over r from 0.00 to 0.99 in steps of 0.01. For example, when s over r is 0.02 and Δ over r is 0.81, F_2 is 4.49961. Where the value 0. appears in the table for F_2 , the value of Δ over r is such that the probe is no longer completely on the sample.

TABLE III

This table applies to the case shown in Figure 3. The sample resistivity is given by

$$\rho = \frac{V}{I} t F_3 \quad (3)$$

where ρ is the sample resistivity in ohm-cm, V is the potential drop measured across the two voltage probes in volts, I is the current passing through the two current probes in amperes, t is the sample thickness in cm, and F_3 is the correction factor given in table III. Factor F_3 applies when, in Figure 3, either the pair of probes 1 and 2 or the pair of probes 3 and 4 is being used to pass current, with the remaining pair of probes being used as voltage probes.

F_3 is given as a function of the dimensionless parameters s over r and Δ over r , where s is the probe spacing, r is the sample radius and Δ is the probe displacement. A sub-table is given for each value of s over r from 0.01 to 0.70 in steps of 0.01. Each sub-table gives the value of F_3 for values of Δ over r from 0.00 to 0.99 in steps of 0.01. For example, when s over r is 0.02 and Δ over r is 0.81, F_3 is 9.02097. Where the value 0. appears in the table for F_3 , the value of Δ over r is such that the probe is no longer completely on the sample.

CALCULATIONS

The formulas used to calculate F_1 , F_2 , and F_3 are given elsewhere^[3,5] and are listed below for reference.

$$F_1 = \left(\frac{\pi}{\ln 2} \right) \left(\frac{1}{1 + \eta_1} \right)$$

where

$$\eta_1 = \frac{1}{2 \ln 2} \ln \frac{[1 - (\frac{\Delta}{r} + \frac{s}{2r})(\frac{\Delta}{r} - \frac{3s}{2r})][1 - (\frac{\Delta}{r} - \frac{s}{2r})(\frac{\Delta}{r} + \frac{3s}{2r})]}{[1 - (\frac{\Delta}{r} - \frac{s}{2r})(\frac{\Delta}{r} - \frac{3s}{2r})][1 - (\frac{\Delta}{r} - \frac{s}{2r})(\frac{\Delta}{r} + \frac{3s}{2r})]} \quad (4)$$

$$F_2 = \left(\frac{\pi}{\ln 2} \right) \left(\frac{1}{1 + \eta_2} \right)$$

where

$$\eta_2 = \frac{1}{2 \ln 2} \ln \frac{\alpha_1 \alpha_2}{4 \alpha_3 \alpha_4}$$

$$\alpha_1 = (V_2 - V_1)^2 + (U_1 + U_2)^2$$

$$\alpha_2 = (V_2 + V_1)^2 + (U_1 + U_2)^2$$

$$\alpha_3 = (V_2 - V_1)^2 + (U_2 - U_1)^2$$

$$\alpha_4 = (V_2 + V_1)^2 + (U_2 - U_1)^2$$

$$U_1 = 3 \frac{s/r}{D_1}$$

$$U_2 = \frac{s/r}{D_2}$$

$$V_1 = \frac{1 - \left(\frac{\Delta}{r}\right)^2 - \frac{9}{4} \left(\frac{s}{r}\right)^2}{D_1}$$

$$V_2 = \frac{1 - \left(\frac{\Delta}{r}\right)^2 - \frac{1}{4} \left(\frac{s}{r}\right)^2}{D_2}$$

$$D_1 = \left(1 + \frac{\Delta}{r}\right)^2 + \frac{9}{4} \left(\frac{s}{r}\right)^2$$

$$D_2 = \left(1 + \frac{\Delta}{r}\right)^2 + \frac{1}{4} \left(\frac{s}{r}\right)^2 \quad (5)$$

$$F_3 = \left(\frac{2\pi}{\ln 2}\right) \left(\frac{1}{1 + \eta_3}\right)$$

where

$$\eta_3 = \frac{1}{2 \ln 2} \ln \frac{\beta_1^2 \beta_2^2}{4\beta_3 \beta_4 \beta_5 \beta_6}$$

$$\beta_1 = (y_2 - y_3)^2 + (x_2 + x_3)^2$$

$$\beta_2 = (y_2 + y_3)^2 + (x_2 + x_3)^2$$

$$\beta_3 = 4 x_3^2$$

$$\beta_4 = 4 x_3^2 + 4 y_3^2$$

$$\beta_5 = 4 x_2^2$$

$$\beta_6 = 4 x_2^2 + 4 y_2^2$$

$$x_2 = \frac{s/r}{D_3}$$

$$x_3 = \frac{s/r}{D_4}$$

$$y_2 = \frac{1 - \left(\frac{\Delta}{r} - \frac{1}{2} \frac{s}{r}\right)^2 - \frac{1}{4} \left(\frac{s}{r}\right)^2}{D_3}$$

$$y_3 = \frac{1 - \left(\frac{\Delta}{r} + \frac{1}{2} \frac{s}{r}\right)^2 - \frac{1}{4} \left(\frac{s}{r}\right)^2}{D_4}$$

$$D_3 = \left(1 + \frac{\Delta}{r} - \frac{1}{2} \frac{s}{r}\right)^2 + \frac{1}{4} \left(\frac{s}{r}\right)^2$$

$$D_4 = \left(1 + \frac{\Delta}{r} + \frac{1}{2} \frac{s}{r}\right)^2 + \frac{1}{4} \left(\frac{s}{r}\right)^2$$
