# NATIONAL BUREAU OF STANDARDS

The National Bureau of Standards<sup>1</sup> was established by an act of Congress March 3, 1901. The Bureau's overall goal is to strengthen and advance the Nation's science and technology and facilitate their effective application for public benefit. To this end, the Bureau conducts research and provides: (1) a basis for the Nation's physical measurement system, (2) scientific and technological services for industry and government, (3) a technical basis for equity in trade, and (4) technical services to promote public safety. The Bureau consists of the Institute for Basic Standards, the Institute for Materials Research, the Institute for Applied Technology, the Center for Computer Sciences and Technology, and the Office for Information Programs.

**THE INSTITUTE FOR BASIC STANDARDS** provides the central basis within the United States of a complete and consistent system of physical measurement; coordinates that system with measurement systems of other nations; and furnishes essential services leading to accurate and uniform physical measurements throughout the Nation's scientific community, industry, and commerce. The Institute consists of a Center for Radiation Research, an Office of Measurement Services and the following divisions:

Applied Mathematics—Electricity—Heat—Mechanics—Optical Physics—Linac Radiation<sup>2</sup>—Nuclear Radiation<sup>2</sup>—Applied Radiation<sup>2</sup>—Quantum Electronics<sup>3</sup>—Electromagnetics<sup>3</sup>—Time and Frequency<sup>3</sup>—Laboratory Astrophysics<sup>3</sup>—Cryogenics<sup>3</sup>.

**THE INSTITUTE FOR MATERIALS RESEARCH** conducts materials research leading to improved methods of measurement, standards, and data on the properties of well-characterized materials needed by industry, commerce, educational institutions, and Government; provides advisory and research services to other Government agencies; and develops, produces, and distributes standard reference materials. The Institute consists of the Office of Standard Reference Materials and the following divisions:

Analytical Chemistry—Polymers—Metallurgy—Inorganic Materials—Reactor Radiation—Physical Chemistry.

**THE INSTITUTE FOR APPLIED TECHNOLOGY** provides technical services to promote the use of available technology and to facilitate technological innovation in industry and Government; cooperates with public and private organizations leading to the development of technological standards (including mandatory safety standards), codes and methods of test; and provides technical advice and services to Government agencies upon request. The Institute also monitors NBS engineering standards activities and provides liaison between NBS and national and international engineering standards bodies. The Institute consists of the following divisions and offices:

Engineering Standards Services—Weights and Measures—Invention and Innovation—Product Evaluation Technology—Building Research—Electronic Technology—Technical Analysis—Measurement Engineering—Office of Fire Programs.

**THE CENTER FOR COMPUTER SCIENCES AND TECHNOLOGY** conducts research and provides technical services designed to aid Government agencies in improving cost effectiveness in the conduct of their programs through the selection, acquisition, and effective utilization of automatic data processing equipment; and serves as the principal focus within the executive branch for the development of Federal standards for automatic data processing equipment, techniques, and computer languages. The Center consists of the following offices and divisions:

Information Processing Standards—Computer Information—Computer Services—Systems Development—Information Processing Technology.

**THE OFFICE FOR INFORMATION PROGRAMS** promotes optimum dissemination and accessibility of scientific information generated within NBS and other agencies of the Federal Government; promotes the development of the National Standard Reference Data System and a system of information analysis centers dealing with the broader aspects of the National Measurement System; provides appropriate services to ensure that the NBS staff has optimum accessibility to the scientific information of the world, and directs the public information activities of the Bureau. The Office consists of the following organizational units:

Office of Standard Reference Data—Office of Technical Information and Publications—Library—Office of International Relations.

## The Ideal Lovibond Color System for

### CIE Standard Illuminants A and C Shown in Three Colorimetric Systems

Geraldine W. Haupt, John C. Schleiter, and Kenneth L. Eckerle

Tables are given which list luminous internal transmittances, luminous transmittances, and chromaticity coordinates of the ideal Lovibond color system for CIE standard illuminants A and C according to (1) the CIE 1931 (x,y)-system, (2) the CIE 1960 uniform-chromaticity-scale (UCS) (u,v)-system, and (3) the CIE 1964 (U\*, V\*, W\*,)-system. Chromaticity diagrams for the (x,y)- and (u,v)-systems are shown together with horizontal and vertical cross-sections of the (U\*, V\*, W\*)-color solid for the entire ideal Lovibond color system produced by single-color units and two-color combinations of units for each illuminant. In addition, chromaticity diagrams and cross-sections are shown indicating the single-color units of red, yellow, and blue for each CIE system and illuminant.

Key words: Chromaticity, Lovibond; CIE and Lovibond; color, Lovibond; colorimetry, Lovibond; glass color standards; Lovibond and CIE.

Lovibond glasses were introduced into this country from England at the turn of the century for the purpose of grading vegetable- and cottonseed -oils, i.e., of determining their quality and salability. These glasses together with the Lovibond Tintometer were developed in 1887 by Joseph W. Lovibond. Sets of Lovibond glasses were first made available as color standards sometime after 1896 when the company, The Tintometer Ltd., was organized. This Lovibond color system consists of three scales, each represented by a series of glasses; a red, a yellow and a blue. The scales have been calibrated in arbitrary units, but the three units are related in such a way that for daylight illumination a combination of the same number of units of each of the red, yellow, and blue glasses results in an approximately neutral filter. Each glass in the series is identified by the number of unit glasses to which it is equivalent.

In the 1920's, the NBS undertook the standardization of one set of Lovibond glasses at the request of those interested in the use of similar glasses in the vegetable- and cottonseed-oil trade. The need or desire for an ideal scale had arisen long before 1927 when the first NBS paper on the Lovibond Color System was published [1]<sup>1</sup>. This paper included, along with tables and graphs showing the fundamental spectrophotometric data for some of the glasses of NBS set BS9940 (purchased in 1912), a prefatory statement by Irwin G. Priest, first Chief of the

---

<sup>1</sup>Figures in brackets indicate the literature references at on page 11.

Colorimetry and Spectrophotometry Section of the National Bureau of Standards. It was here that Priest first alluded to the ideal scale by stating as one of the objectives of that standardization: "2. To specify in reproducible colorimetric terms a standard Lovibond scale which shall represent the present actual colors (BS9940) as closely as possible, subject to the condition that the irregularities or erratic variations (which are obviously departures from what might be called an ideal scale) are eliminated". These obvious departures may be seen in figures 1 and 2 of the paper published in 1947 [2]. These Lovibond "network" graphs were prepared to supply additional colorimetric data about the set BS9940.

In 1962, the ideal units for the red (R), yellow (Y), and blue (B) glasses of the Lovibond Color System were defined in the paper by Judd, Chamberlin, and Haupt, "The Ideal Lovibond System" [3]. Table I of the 1962 paper gives the spectral internal transmittances of each of the unit glasses defining the ideal Lovibond Color System. These transmittances are based on fundamental spectrophotometric data determined for 20 glasses of each series (1, 2, 3, ..., 20). Some of the data were obtained at the NBS for the glasses of set BS9940 and others were obtained by the Tintometer, Ltd., for glasses retained by them as standards.

The method of computation of the chromaticities of the colors of the ideal Lovibond system has been published [3] and need not be described here. The values of chromaticity have been specified in the standard colorimetric coordinate system recommended by the International Commission on Illumination (CIE) in 1931. The values of luminous

internal transmittance and chromaticity coordinates for CIE standard illuminant A are listed in Table 2 [3] for single-color and two-color combinations of ideal Lovibond glasses.

The present publication presents tables and graphs of the ideal Lovibond color system, for both CIE standard illuminants A and C. The tables give the luminous internal transmittances, luminous transmittances and chromaticity coordinates for the single-color and various two-color combinations of units. The chromaticity coordinates are given in terms of the three coordinate systems recommended by the CIE: (1) the basic (x,y)-system [4] recommended in 1931, (2) the (u,v)-system proposed by MacAdam [5] as an approximation to uniform spacing, recommended in 1960 [6], and (3) the (U\*, V\*, W\*)-system proposed by Wyszecki [7] to show the interdependence of lightness index (W\*) and chromaticness indexes (U\*, V\*), recommended in 1964 [8].

In the CIE 1960 uniform chromaticity scale (UCS) system, the terms (u,v) are defined as follows:

$$u = \frac{4x}{-2x + 12y + 3} \quad v = \frac{6y}{-2x + 12y + 3} \quad (1)$$

where x,y are the chromaticity coordinates defined according to the CIE 1931 system.

In the CIE 1964 system, the terms (W\*,U\*,V\*) are defined as follows:

$$\begin{aligned} W^* &= 25Y^{1/3} - 17 \quad (1 \leq Y \leq 100), \\ U^* &= 13W^*(u - u_0), \\ V^* &= 13W^*(v - v_0), \end{aligned} \quad (2)$$

where Y is the luminous transmittance, u and v are defined by equation

(1), and  $(u_0, v_0)$  are the values of the variables  $u, v$  for the achromatic point. The CIE 1964 system is based upon object colors, i.e. reflecting materials, where the term "lightness" index strictly applies. This system was verified using data obtained by means of observations of color differences in terms of Munsell object colors. When one attempts to apply the CIE 1964 system to the use of Lovibond glasses, additional restrictions must be made. These restrictions are: (1) the observer must be adapted to the illuminant of the achromatic point  $(u_0, v_0)$ ; (2) the angular subtense of the field of view must be sufficiently large that the viewed area appears as a luminous surface; and (3) the luminance of the source, viewed through the transmitting materials, must be constant for a given set of determinations. If any of the above restrictions are not met, the use of the CIE 1964 system is not valid. However, in usual practice with Lovibond glasses, the criteria can be met and the use of the CIE 1964 system is valid. It must be remembered then that additional restrictions are needed in the general case of the application of the CIE 1964 system to transmitting materials.

When the data were prepared by means of a high-speed computer for the 1962 paper [3], the results of the calculations were determined to 9 decimals for the tristimulus values  $(X, Y, Z)$  and 5 decimals for the chromaticity coordinates  $(x, y, z)$ . The calculations were performed for both CIE standard illuminants A and C, using the CIE 1931 observed  $(2^\circ)$ , but the results of the calculation for CIE standard illuminant C were never published. The resulting computer output, however, was stored on computer punched-cards and these cards were retained at the NBS.

These punched-cards were used for input to a high-speed digital computer currently in use at the NBS which was programmed to perform the conversion of internal luminous transmittance to luminous transmittance and the chromaticity data into terms of the CIE 1960 UCS system and the CIE 1964 system. The conversion of the internal luminous transmittance to luminous transmittance was made in accord with the method given in the 1962 paper, maintaining 8 significant places in the computer. A like number of significant places was maintained in the computer for the conversion of the chromaticity data.

In tables 1 and 2 of this Technical Note, are listed the results of these conversions for CIE standard illuminants A and C respectively.

Tables 1 and 2 are reproduced directly from the computer output and, therefore, the column headings are of necessity limited to the upper case font available on the printer. The column headings in the tables have the following significance: "R", "Y", "B", the number of unit Lovibond red, yellow and blue glasses respectively; "T(IN)", the internal luminous transmittance; "T", the luminous transmittance (reduced by reflection losses)<sup>2</sup>; "1931 XY", CIE 1931 system chromaticity coordinates (x,y); "1960 UV", CIE 1960 system chromaticity coordinates (u,v); and "1964 W\*U\*V\*", the CIE 1964 system lightness index and chromaticness indexes respectively. The data of internal luminous transmittance

---

<sup>2</sup>The notation "T" for luminous transmittance is used in this Technical Note, rather than the usual notation "Y", in order to avoid confusion with the notation indicating the number of unit Lovibond yellow glasses in the various combinations.

(T(IN)) and luminous transmittance (T) are given to 4 significant places (T > 1%) or 4 decimals (T < 1%); the chromaticity coordinates for both the CIE 1931 and 1960 systems are given to 4 decimals; and the lightness and chromaticness indexes of the CIE 1964 system are given to 2 decimals. Since the computer maintains 8 significant places for all computations, it is not possible to compute exactly the results shown in the last five columns of tables 1 and 2 from the data given in columns headed "T", "X", and "Y". It will be noted, in tables 1 and 2 that the CIE 1964 system chromaticness indexes (U\*,V\*), are not given when the values of luminous transmittance, T, are less than 1% since by definition the range of T is between 1% and 100%.

At the same time that the data were generated to produce tables 1 and 2, the data of R, Y, B, x, y, u, v, W\*, U\*, and V\*, were punched into computer cards. These cards were used as input to be processed by the computer to produce a magnetic tape to control the functions of a digital-incremental plotter. The diagrams for both CIE standard illuminants A and C for the three CIE systems are shown in figures 1 through 20; for CIE standard illuminant A in figures 1 through 10 and for CIE standard illuminant C in figures 11 through 20. The odd-numbered figures show the coordinate positions, in the particular CIE system, of the indicated units of ideal Lovibond red (R), yellow (Y), and blue (B) on each of the single-color scales. The even-numbered figures show, for the particular CIE system, the entire Lovibond color system or "network", with the exceptions described below, of the single-color and two-color combinations of ideal Lovibond glasses. The achromatic point is represented in all of the figures by the solid dot. By studying the

figures showing the entire network, with the aid of the corresponding figure showing the single-color scale, one can deduce the number of ideal Lovibond units indicated for the two-color combinations shown for each CIE system.

Figures 1, 2, 11, and 12 show the data plotted on an  $(x,y)$ -chromaticity diagram in accord with the CIE 1931 system. Figures 3, 4, 13, and 14 show the data in terms of the CIE 1960 UCS system on a  $(u,v)$ -chromaticity diagram. The data are plotted in terms of the chromaticness indexes  $(U^*,V^*)$ , of the CIE 1964 system in figures 5, 6, 15, and 16. The remaining eight figures show the data, in terms of the CIE 1964 system, plotted on the  $(U^*,W^*)$ - and  $(V^*,W^*)$ - cross sections of the  $(U^*,V^*,W^*)$ -color solid (figures 7, 8, 17, and 18 and figures 9, 10, 19, and 20 respectively). A perspective view for a given illuminant, of the ideal Lovibond system in color space may be visualized if one considers the  $(U^*,V^*)$ -,  $(U^*,W^*)$ -, and  $(V^*,W^*)$ -figures as forming the three intersecting orthogonal planes of the color solid (for example, figures 5, 7, 9; 6, 8, 10; 15, 17, 19; or 16, 18, 20).

In figures 2, 4, 12, and 14 all of the data listed in tables 1 and 2 are not shown because the chromaticity coordinates of the two-color combinations for the greatest number of Lovibond units (for example 100Y50B) "fold under" the network and tend to make the more useful portions of the diagrams confusing. Since the same chromaticities can be obtained with fewer Lovibond units, it was felt that including the high-unit combinations would be of little interest. However, the characteristic "folding under" is an essential property of the CIE 1964 system, the lightness index being included in the chromaticness-indexes

(see equation 2). Therefore, all of the data which are listed in tables 1 and 2 for the  $U^*V^*W^*$  system are shown in figures 6, 8, 10, 16, 18, and 20. The interdependence of the lightness and chromaticness-indexes is clearly shown in figures 7 through 10 and in 17 through 20.

In the chromaticness-index-lightness-index ( $U^*,W^*$ )-diagrams (figures 7, 8, 17, and 18), one may become oriented by starting at the apex ( $U^* = 0, W^* = 99$ ), or achromatic point, tracing the unit red glasses in the direction of increasingly positive values of  $U^*$  and the unit blue glasses in the direction of increasingly negative values of  $U^*$  for both standard illuminants. The unit yellow glasses trace a slightly curved line near the  $W^*$ -axis at  $U^* = 0$ ; for CIE standard illuminant A all of the  $U^*$  values are positive except 100Y ( $U^* = -4.77$ ) and for CIE standard illuminant C all of the  $U^*$  values are positive except 1Y, 2Y, 3Y, and 4Y which are negative ( $U^* = -0.67, -0.80, -0.63, \text{ and } -0.26$  respectively). The extent of the Lovibond gamut indicated on the ( $U^*,W^*$ )-diagrams is slightly greater for CIE standard illuminant A than for C. The maximum value of the  $U^*$  chromaticness-index is seen for CIE standard illuminant A, to occur at 28R ( $U^* = 124.40$ ) where the lightness-index  $W^*$  is 48.25; similarly, for CIE standard illuminant C to occur at 32R ( $U^* = 110.03$ ) where  $W^*$  is 37.63. The minimum value of the  $U^*$  chromaticness-index occurs for CIE standard illuminant A, at 9B ( $U^* = -43.16$ ) where the lightness-index  $W^*$  is 49.46. However, for CIE standard illuminant C, the minimum value of  $U^*$  is achieved by a yellow-blue two-color combination 8Y10B ( $U^* = -34.71$ ) having a lightness-index  $W^*$  of 44.38.

For the ( $V^*,W^*$ )-chromaticness-index-lightness-index diagrams (figures 9, 10, 19, and 20) again starting at the achromatic point

( $V^* = 0$ ,  $W^* = 99$ ), one may trace the unit yellow glasses in the direction of increasingly positive values of  $V^*$  and the unit blue glasses in the direction of increasingly negative values of  $V^*$  for both CIE standard illuminants A and C. The unit red glasses trace an S-shaped curve, especially for CIE standard illuminant C, near the  $W^*$ -axis at  $V^* = 0$ . The maximum value of the  $V^*$  chromaticness-index for both CIE standard illuminants A and C, is seen to occur at 30Y. However, the maximum values of  $V^*$  and  $W^*$  differ for the two illuminants; for CIE standard illuminant A ( $V^* = 22.97$ ,  $W^* = 83.21$ ) and for CIE standard illuminant C ( $V^* = 69.35$ ,  $W^* = 81.74$ ). The minimum values of the  $V^*$  chromaticness-index are achieved by nearly the same units of Lovibond blue for both CIE standard illuminants A and C; namely 18B and 16B respectively. These minimum values occur at  $V^*$  equals  $-47.85$ ,  $W^*$  equals  $26.37$  for CIE standard illuminant A and  $V^*$  equals  $-77.25$ ,  $W^*$  equals  $36.52$  for CIE standard illuminant C.

The greater extent of the ideal Lovibond color system for CIE standard illuminant C as compared with CIE standard illuminant A, can readily be seen in the  $(U^*, V^*)$ -chromaticness-index diagrams (figures 5, 6, 15, and 16) which view the  $(U^*, V^*, W^*)$  color solid from above. Thus, the ideal Lovibond color system may be seen to be more useful when used with CIE standard illuminant C rather than with CIE standard illuminant A because of the expanded gamut.

The figures showing the ideal Lovibond color system in terms of the CIE 1960- and CIE 1964-systems serve another purpose. Many readers may not be particularly familiar with these more recent transformations of the CIE 1931-system. By studying the data contained in the tables and

comparing the figures, one can gain a better appreciation of these transformations and a fuller understanding of the value of other sets of data presented in these newer terms.

Fig. 1. Chromaticity diagram for ideal Lovibond scales showing the relationship between the CIE 1931 (x,y)-system and the indicated single-color units of red (R), yellow (Y), and blue (B) for CIE standard illuminant A. The coordinates for the illuminant (solid dot) are:  $x = 0.4476$ ;  $y = 0.4075$ . A portion of the spectrum locus is also shown.

Fig. 2. Chromaticity diagram for ideal Lovibond color system showing the relationship between the CIE 1931 (x,y)-system and single-color units of red, yellow, and blue and two-color combinations of red-yellow, yellow-blue, and red-blue units for CIE standard illuminant A. The coordinates for the illuminant (solid dot) are:  $x = 0.4476$ ;  $y = 0.4075$ . A portion of the spectrum locus is also shown.

Fig. 3. Chromaticity diagram for ideal Lovibond scales showing the relationship between the CIE 1960 (u,v)-system and the indicated single-color units of red (R), yellow (Y), and blue (B) for CIE standard illuminant A. The coordinates for the illuminant (solid dot) are:  $u = 0.02559$ ;  $v = 0.3496$ . The spectrum locus is also shown.

Fig. 4. Chromaticity diagram for ideal Lovibond color system showing the relationship between the CIE 1960 (u,v)-system and single-color units of red, yellow, and blue and two-color combinations of red-yellow, yellow-blue, and red-blue units for CIE standard illuminant A. The coordinates for the illuminant (solid dot) are:  $u = 0.2559$ ;  $v = 0.3496$ . The spectrum locus is also shown.

Fig. 5. Chromaticness-index diagram for ideal Lovibond scales showing the relationship between the CIE 1964 ( $U^*$ ,  $V^*$ )-system and the indicated single-color units of red (R), yellow (Y), and blue (B) for CIE standard illuminant A. The coordinates for the illuminant (solid dot) are:  $U^* = V^* = 0$ .

Fig. 6. Chromaticness-index diagram for ideal Lovibond color system showing the relationship between the CIE 1964 ( $U^*, V^*$ )-system and single-color units of red, yellow, and blue and two-color combinations of red-yellow, yellow-blue, and red-blue units for CIE standard illuminant A. The coordinates for the illuminant (solid dot) are:  $U^* = V^* = 0$ .

Fig. 7. Chromaticity-index-lightness-index diagram for ideal Lovibond scales showing the relationship between the CIE 1964 ( $U^*, W^*$ )-system and the indicated single-color units of red (R), yellow (Y), and blue (B) for CIE standard illuminant A. The coordinates for the illuminant (solid dot) are:  $U^* = 0$ ;  $W^* = 99.04$ .

Fig. 8. Chromaticness-index-lightness-index diagram for ideal Lovibond color system showing the relationship between the CIE 1964 ( $U^*, W^*$ )-system and single-color units of red, yellow, and blue and two-color combinations of red-yellow, yellow-blue, and red-blue units for CIE standard illuminant A. The coordinates for the illuminant (solid dot) are:  $U^* = 0$ ;  $W^* = 99.04$ .

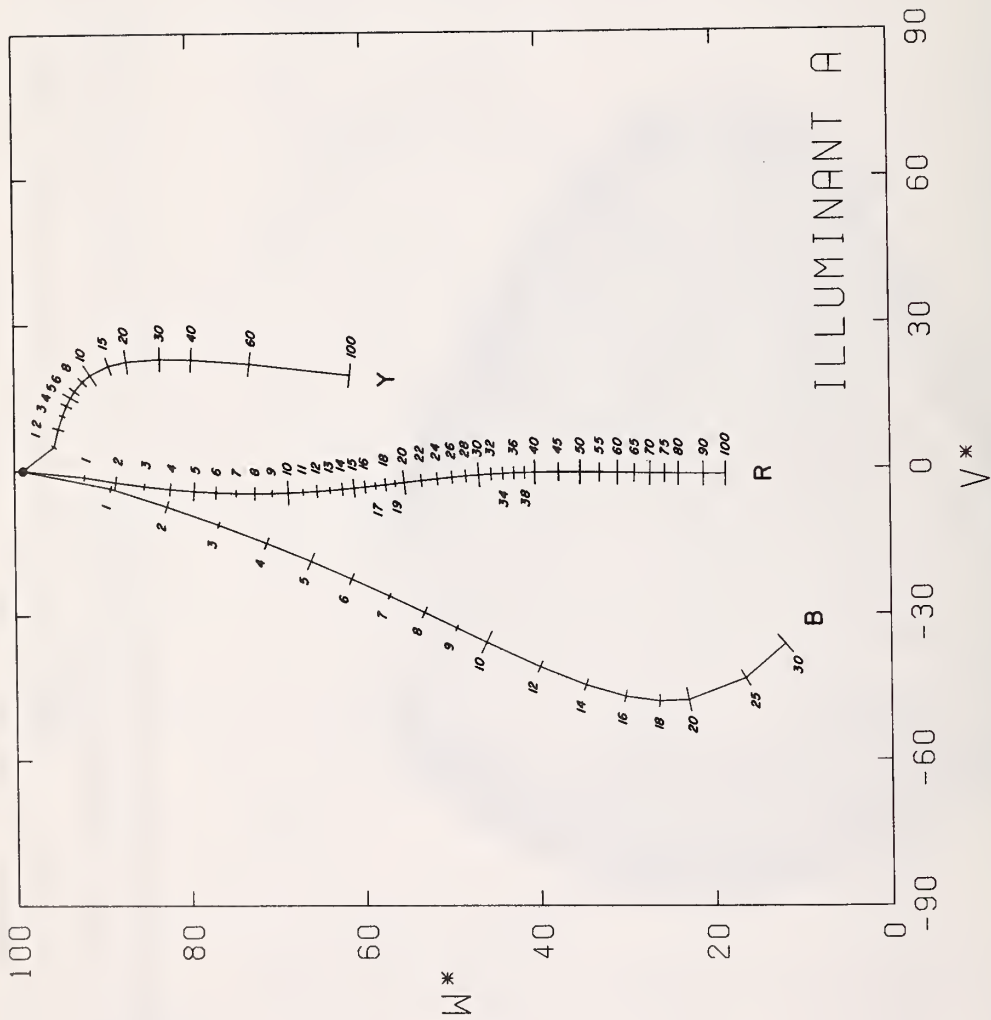

Fig. 9. Chromaticness-index-lightness-index diagram for ideal Lovibond scales showing the relationship between the CIE 1964 ( $V^*$ ,  $W^*$ )-system and the indicated single-color units of red (R), yellow (Y), and blue (B) for CIE standard illuminant A. The coordinates for the illuminant (solid dot) are:  $V^* = 0$ ;  $W^* = 99.04$ .

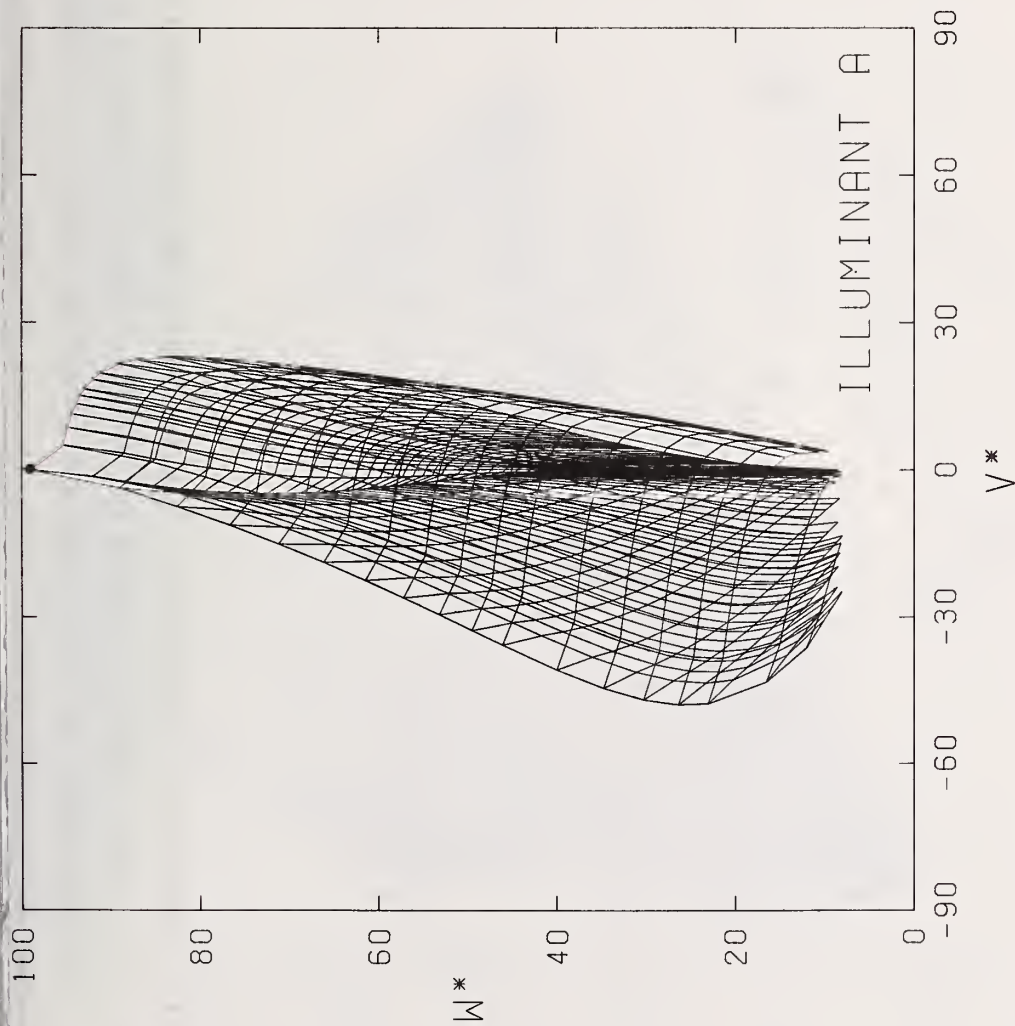

Fig. 10. Chromaticness-index-lightness-index diagram for ideal Lovibond color system showing the relationship between the CIE 1964  $(V^*, W^*)$ -system and single-color units of red, yellow, and blue and two-color combinations of red-yellow, yellow-blue and red-blue units for CIE standard illuminant A. The coordinates for the illuminant (solid dot) are:  $V^* = 0$ ;  $W^* = 99.04$ .

Fig. 11. Chromaticity diagram for ideal Lovibond scales showing the relationship between the CIE 1931 (x,y)-system and the indicated single-color units of red (R), yellow (Y), and blue (B) for CIE standard illuminant C. The coordinates for the illuminant (solid dot) are:  $x = 0.3101$ ;  $y = 0.3163$ . A portion of the spectrum locus is also shown.

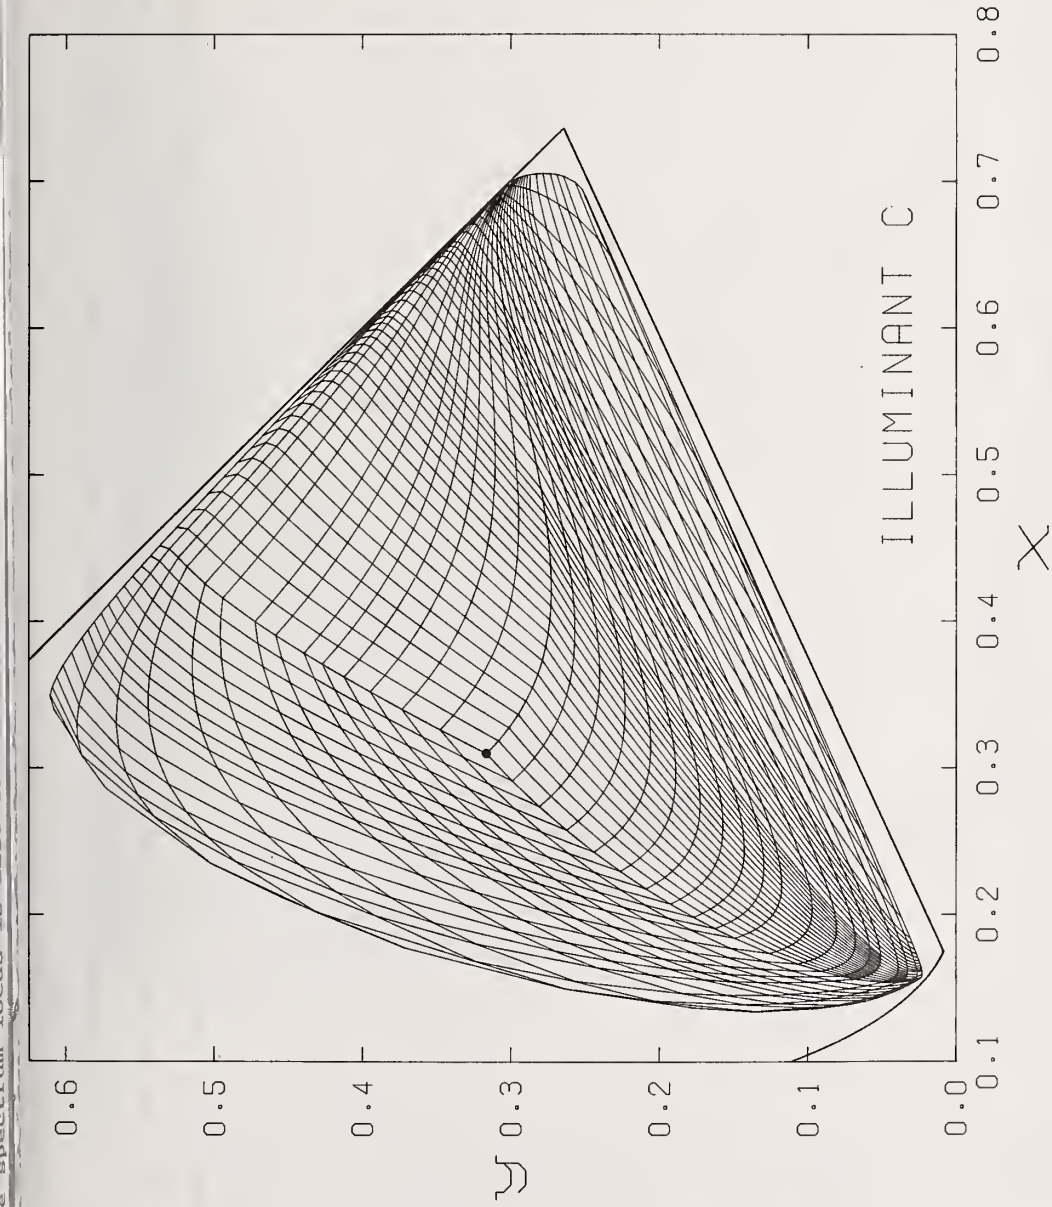

Fig. 12. Chromaticity diagram for ideal Lovibond color system showing the relationship between the CIE 1931 (x,y)-system and single-color units of red, yellow, and blue and two-color combinations of red-yellow, yellow-blue, and red-blue units for CIE standard illuminant C. The coordinates for the illuminant (solid dot) are:  $x = 0.3101$ ;  $y = 0.3163$ . A portion of the spectrum locus is also shown.

Fig. 13. Chromaticity diagram for ideal Lovibond scales showing the relationship between the CIE 1960 (u,v)-system and the indicated single-color units of red (R), yellow (Y), and blue (B) for CIE standard illuminant C. The coordinates for the illuminant (solid dot) are:  $u = 0.2009$ ;  $v = 0.3073$ . The spectrum locus is also shown.

Fig. 14. Chromaticity diagram for ideal Lovibond color system showing the relationship between the CIE 1960 (u,v)-system and single-color units of red, yellow, and blue and two-color combinations of red-yellow, yellow-blue, and red-blue units for CIE standard illuminant C. The coordinates for the illuminant (solid dot) are:  $u = 0.2009$ ;  $v = 0.3073$ . The spectrum locus is also shown.

Fig. 15. Chromaticness-index diagram for ideal Lovibond scales showing the relationship between the CIE 1964 ( $U^*$ ,  $V^*$ )-system and the indicated single-color units of red (R), yellow (Y), and blue (B) for CIE standard illuminant C. The coordinates for the illuminant (solid dot) are:  $U^* = V^* = 0$ .

Fig. 16. Chromaticness-index diagram for ideal Lovibond color system showing the relationship between the CIE 1964 ( $U^*$ ,  $V^*$ )-system and single-color units of red, yellow, and blue and two-color combinations of red-yellow, yellow-blue, and red-blue units for CIE standard illuminant C. The coordinates for the illuminant (solid dot) are:  $U^* = V^* = 0$ .

Fig. 17. Chromaticness-index-lightness-index diagram for ideal Lovibond scales showing the relationship between the CIE 1964 ( $U^*, W^*$ )-system and the indicated single-color units of red (R), yellow (Y), and blue (B) for CIE standard illuminant C. The coordinates for the illuminant (solid dot) are:  $U^* = 0$ ;  $W^* = 99.04$ .

Fig. 18. Chromaticness-index-lightness-index diagram for ideal Lovibond color system showing the relationship between the CIE 1964 ( $U^*, W^*$ )-system and single-color units of red, yellow, and blue and two-color combinations of red-yellow, yellow-blue, and red-blue units for CIE standard illuminant C. The coordinates for the illuminant (solid dot) are:  $U^* = 0$ ;  $W^* = 99.04$ .

Fig. 19. Chromaticness-index-lightness-index diagram for ideal Lovibond scales showing the relationship between the CIE 1964 ( $V^*, W^*, V^*$ )-system and the indicated single-color units of red (R), yellow (Y), and blue (B) for CIE standard illuminant C. The coordinates for the illuminant (solid dot) are:  $V^* = 0$ ;  $W^* = 99.04$ .

Fig. 20. Chromaticness-index-lightness-index diagram for ideal Lovibond color system showing the relationship between the CIE 1964 ( $V^*$ ,  $W^*$ )-system and single-color units of red, yellow, and blue and two-color combinations of red-yellow, yellow-blue, and red-blue units for CIE standard illuminant C. The coordinates for the illuminant (solid dot) are:  $V^* = 0$ ;  $W^* = 99.04$ .

15. SUPPLEMENTARY NOTES			
16. ABSTRACT (A 200-word or less factual summary of most significant information. If document includes a significant bibliography or literature survey, mention it here.)  Tables are given which list luminous internal transmittances, luminous transmittances, and chromaticity coordinates of the ideal Lovibond color system for CIE standard illuminants A and C according to (1) the CIE 1931 (x,y)-system, (2) the CIE 1960 uniform-chromaticity-scale (UCS) (u,v)-system, and (3) the CIE 1964 (U*, V*, W*,)-system. Chromaticity diagrams for the (x,y)- and (u,v)-systems are shown together with horizontal and vertical cross-sections of the (U*, V*, W*) color solid for the entire ideal Lovibond color system produced by single-color units and two-color combinations of units for each illuminant. In addition, chromaticity diagrams and cross-sections are shown indicating the single-color units of red, yellow, and blue for each CIE system and illuminant.			
17. KEY WORDS (Alphabetical order, separated by semicolons) Chromaticity, Lovibond; CIE and Lovibond; color, Lovibond; colorimetry, Lovibond; glass color standards; Lovibond and CIE.

# NBS TECHNICAL PUBLICATIONS

## PERIODICALS

**JOURNAL OF RESEARCH** reports National Bureau of Standards research and development in physics, mathematics, chemistry, and engineering. Comprehensive scientific papers give complete details of the work, including laboratory data, experimental procedures, and theoretical and mathematical analyses. Illustrated with photographs, drawings, and charts.

*Published in three sections, available separately:*

### • Physics and Chemistry

Papers of interest primarily to scientists working in these fields. This section covers a broad range of physical and chemical research, with major emphasis on standards of physical measurement, fundamental constants, and properties of matter. Issued six times a year. Annual subscription: Domestic, \$9.50; \$2.25 additional for foreign mailing.

### • Mathematical Sciences

Studies and compilations designed mainly for the mathematician and theoretical physicist. Topics in mathematical statistics, theory of experiment design, numerical analysis, theoretical physics and chemistry, logical design and programming of computers and computer systems. Short numerical tables. Issued quarterly. Annual subscription: Domestic, \$5.00; \$1.25 additional for foreign mailing.

### • Engineering and Instrumentation

Reporting results of interest chiefly to the engineer and the applied scientist. This section includes many of the new developments in instrumentation resulting from the Bureau's work in physical measurement, data processing, and development of test methods. It will also cover some of the work in acoustics, applied mechanics, building research, and cryogenic engineering. Issued quarterly. Annual subscription: Domestic, \$5.00; \$1.25 additional for foreign mailing.

## TECHNICAL NEWS BULLETIN

The best single source of information concerning the Bureau's research, developmental, cooperative, and publication activities, this monthly publication is designed for the industry-oriented individual whose daily work involves intimate contact with science and technology—for *engineers, chemists, physicists, research managers, product-development managers, and company executives*. Annual subscription: Domestic, \$3.00; \$1.00 additional for foreign mailing.

## NONPERIODICALS

**Applied Mathematics Series.** Mathematical tables, manuals, and studies.

**Building Science Series.** Research results, test methods, and performance criteria of building materials, components, systems, and structures.

**Handbooks.** Recommended codes of engineering and industrial practice (including safety codes) developed in cooperation with interested industries, professional organizations, and regulatory bodies.

**Special Publications.** Proceedings of NBS conferences, bibliographies, annual reports, wall charts, pamphlets, etc.

**Monographs.** Major contributions to the technical literature on various subjects related to the Bureau's scientific and technical activities.

**National Standard Reference Data Series.** NSRDS provides quantitative data on the physical and chemical properties of materials, compiled from the world's literature and critically evaluated.

**Product Standards.** Provide requirements for sizes, types, quality, and methods for testing various industrial products. These standards are developed cooperatively with interested Government and industry groups and provide the basis for common understanding of product characteristics for both buyers and sellers. Their use is voluntary.

**Technical Notes.** This series consists of communications and reports (covering both other agency and NBS-sponsored work) of limited or transitory interest.

**Federal Information Processing Standards Publications.** This series is the official publication within the Federal Government for information on standards adopted and promulgated under the Public Law 89-306, and Bureau of the Budget Circular A-86 entitled, Standardization of Data Elements and Codes in Data Systems.

**Consumer Information Series.** Practical information, based on NBS research and experience, covering areas of interest to the consumer. Easily understandable language and illustrations provide useful background knowledge for shopping in today's technological marketplace.

**NBS Special Publication 305, Supplement 1, Publications of the NBS, 1968-1969.** When ordering, include Catalog No. C13.10:305. Price \$4.50; \$1.25 additional for foreign mailing.
