I. INTRODUCTION.

This circular shows simply the legal weights per bushel of various commodities, as fixed by national legislation mainly for customs purposes or by the State legislatures for purposes of commerce within the States. In many cases these weights differ considerably in the different States and in the cases of only a few commodities, such as wheat, oats, and pease, are the legal weights uniform throughout the entire country. It should not be assumed that the legal weights herein given represent a volume equal to the bushel of 2150.42 cubic inches (United States bushel). On account of the variations in the densities of commodities in different localities and in different seasons, it is impossible to fix with any degree of certainty the weight of a given volume. The best that could be done would be to give the average of all localities for a number of years. Inasmuch, however, as the weight of a given volume of any commodity, such as potatoes, apples, coal, corn, etc., can only be approximately fixed, it is important in transactions involving such measures that it be distinctly understood which bushel is meant, viz, the volume of 2150.42 cubic inches or a certain number of pounds called a bushel, which might be quite a different amount. On account of the impossibility of reconciling these two definitions of the bushel, it is recommended that all sales be made by weight, as is now the practice in wheat transactions.

The aim has been to cover all available legislation up to the time of going to press (May 15, 1911).
