I. TYPE

This roofing shall consist of three layers or plies of asphalt-saturated rag felt cemented together with asphalt and surfaced with slag, gravel, or similar surfacing material, as called for in the proposal for the work.

Flashings of the type required under the specification for the building shall be included, and shall conform to United States Government Master Specifications for Flashings No. 156 or No. 157.

II. MATERIAL AND WORKMANSHIP

No details.

III. GENERAL REQUIREMENTS

No details.
IV. DETAIL REQUIREMENTS

1. MATERIALS

Roofing of type 3ACS shall contain not less than the following quantities of materials per 100 square feet:

<table>
<thead>
<tr>
<th>Material Description</th>
<th>Over concrete</th>
<th>Over gypsum</th>
</tr>
</thead>
<tbody>
<tr>
<td>Asphalt primer (F. S. B. Spec. No. 87)</td>
<td>7.5 Pounds</td>
<td>15.0 Pounds</td>
</tr>
<tr>
<td>Three layers asphalt-saturated rag felt (F. S. B. Spec. No. 86)</td>
<td>45 Pounds</td>
<td>45 Pounds</td>
</tr>
<tr>
<td>Asphalt for mineral surfaced roofing (F. S. B. Spec. No. 84)</td>
<td>130 Pounds</td>
<td>130 Pounds</td>
</tr>
<tr>
<td>Roofing gravel (F. S. B. Spec. No. 82)</td>
<td>400 Pounds</td>
<td>400 Pounds</td>
</tr>
<tr>
<td>Roofing slag (F. S. B. Spec. No. 82)</td>
<td>300 Pounds</td>
<td>300 Pounds</td>
</tr>
</tbody>
</table>

2. WORKMANSHIP

The asphalt shall not be heated above 400° F., and shall be hot when the felts are laid.

The sheets of felt shall be laid so as to be free from wrinkles and buckles, and so that pronounced ridges are not formed at the laps.

When the roof surface is of gypsum each sheet of felt shall be nailed at approximately 6 inches from its upper edge with nails driven through flat tinned disks.

The surfacing material shall always be dry when applied, and, in addition, shall be heated in cold weather.

Concrete and gypsum surfaces installed by other contractors, before being considered satisfactory for laying the roof covering, shall be smooth, firm, dry, and free from high spots, depressions, and all loose and foreign material. Precast slabs shall be firmly set and well pointed.

When the roof surface is of gypsum apply a second coat of primer after the first coat has dried, using not less than 1 gallon per 100 square feet.

3. APPLICATION

Roofing of type 3ACS shall be laid in the following manner:

(a) Coat the roof surface uniformly with asphalt primer, using not less than 1 gallon per 100 square feet, and allow to dry.

(b) Over this apply a uniform coating of hot asphalt, using not less than 30 pounds per 100 square feet.

(c) Over this coating of asphalt lay three layers of 32-inch asphalt-saturated felt over the entire roof, lapping each sheet 22 inches over the preceding sheet. Lap the ends of the sheets not less than 6 inches. When 36-inch felt is used lap the sheets 24½ inches. Mop each of these three sheets the full width of the lap with hot asphalt, using not less than 20 pounds per 100 square feet in each mopping. Cut off the felts at abutting vertical surfaces.
Specification for Roofing, Type 3ACS

(d) Over the entire surface apply a uniform coating of hot asphalt, using not less than 60 pounds per 100 square feet.
(e) Into this asphalt, while hot, embed the surfacing material.

V. INSPECTION
No details.

VI. PACKING AND MARKING
No details.

VII. ADDITIONAL INFORMATION

Roofing of type 3ACS is adapted to concrete and poured gypsum surfaces with inclines not exceeding 3 inches to the foot, and shall not be used on inclines greater than this.

Roofing constructed in the manner specified is durable, and should not require repairs or renewals on account of the action of the elements for a period of 10 years.

VIII. GENERAL SPECIFICATIONS
No details.
