UNITED STATES GOVERNMENT MASTER SPECIFICATION FOR
THE CONSTRUCTION OF BUILT-UP ROOFING, TYPE 4TCS

FEDERAL SPECIFICATIONS BOARD, SPECIFICATION No. 152

This specification was officially adopted by the Federal Specifications Board on June 1, 1924, for the use of the Departments and Independent Establishments of the Government in the construction of built-up roofing, type 4TCS.

I. TYPE

This roofing shall consist of four layers or plies of coal-tar saturated rag felt cemented together with coal-tar pitch and surfaced with slag, gravel, or similar surfacing materials, as called for in the proposal for the work.

Flashings of the type required under the specification for the building shall be included and shall conform to United States Government Master Specifications for Flashing No. 156 or No. 157.

II. MATERIAL AND WORKMANSHIP

No details.

III. GENERAL REQUIREMENTS

No details.

IV. DETAIL REQUIREMENTS

1. MATERIALS

Roofing of type 4TCS shall contain not less than the following quantities of materials per 100 square feet:

	Pounds
Four layers coal-tar saturated rag felt (F. S. B. Spec. No. 81)-----	60
Coal-tar pitch (F. S. B. Spec. No. 80)-----	185
Roofing gravel (F. S. B. Spec. No. 82)-----	400
or	
Roofing slag (F. S. B. Spec. No. 82)-----	300

2. WORKMANSHIP

The coal-tar pitch shall not be heated above 375° F., and shall be hot when the felts are laid.

The sheets of felt shall be laid so as to be free from wrinkles and buckles, and so that pronounced ridges are not formed at the laps.

When the roof surface is of gypsum, each sheet of felt shall be nailed at approximately 6 inches from its upper edge with nails driven through flat tinned disks.

The surfacing material shall always be dry when applied, and, in addition, shall be heated in cold weather.

Concrete and gypsum roof surfaces installed by other contractors, before being considered satisfactory for laying the roof covering, shall be smooth, firm, dry, and free from high spots, depressions, and all loose and foreign material. Precast concrete slabs shall be firmly set and well pointed.

3. APPLICATION

Roofing of type 4TCS shall be laid in the following manner:

(a) Mop the roof slab uniformly with hot coal-tar pitch, using not less than 40 pounds per 100 square feet.

(b) Over this coating of coal-tar pitch lay four layers of 32-inch coal-tar saturated felt over the entire roof surface, lapping each sheet 24½ inches over the preceding sheet. Lap the ends of the sheets not less than 6 inches. When 36-inch felt is used, lap the sheets 27½ inches. Mop each of these four sheets the full width of the lap with hot coal-tar pitch, using not less than 25 pounds per 100 square feet in each mopping. Cut off these layers of felt at abutting vertical surfaces.

(c) Over the entire surface apply a uniform coating of hot coal-tar pitch, using not less than 70 pounds per 100 square feet.

(d) Into this pitch, while hot, embed the surfacing material.

V. INSPECTION

No details.

VI. PACKING AND MARKING

No details.

VII. ADDITIONAL INFORMATION

Roofing of type 4TCS is adapted to concrete and poured gypsum surfaces with inclines not exceeding 1 inch to the foot and shall not be used on inclines greater than this.

Roofing constructed in the manner specified is durable and should not require repairs or renewals on account of the action of the elements for a period of 20 years.

VIII. GENERAL SPECIFICATIONS

No details.
