LEGAL WEIGHTS PER BUSHEL
FOR VARIOUS COMMODITIES

[Issued January 9, 1940]
PREFACE

One of the functions of the National Bureau of Standards is to disseminate weights and measures information. The frequent requests received by the Bureau for information relative to the bushel weights established by State statutes for fruits, vegetables, and other dry commodities have prompted a revision of the material formerly published by the Bureau on this subject and the publication of this revised material in the present Circular. This Circular supersedes the fourth edition of Circular C10, issued in 1924, and the bushel lists published in the appendix to the third edition of NBS Miscellaneous Publication M20, issued in 1926.

LYMAN J. BRIGGS, Director.
LEGAL WEIGHTS PER BUSHEL FOR VARIOUS COMMODITIES

ABSTRACT

A brief analysis of the character of the bushel-weight statutes of the several States, including a separation of the States into five groups according to the provisions of their laws, followed by a tabulation of all the bushel weights established by State and Federal law according to the latest available information.

I. INTRODUCTION

Notwithstanding the strong trend in recent years toward the sale of dry commodities on a weight basis, the National Bureau of Standards continues to receive many requests for information on the bushel weights established by Federal and State laws. The primary purpose of this circular is to present that information. There are also included some general facts relative to provisions of Federal and State laws which have a direct bearing upon the subject of legal bushel weights.

II. FEDERAL LEGISLATION

The United States standard bushel has a capacity of 2150.42 cubic inches and forms the basis for the measurements of the Federal Standard Container Acts of 1916 and 1928. The containers established by these Federal acts are further based upon the principle of struck measure, and their standardization has been effected primarily to facilitate the shipment of fruits and vegetables.

The Federal Standard Container Act of 1928 is intrastate in its application. The solicitor of the United States Department of Agriculture has expressed the opinion that this Act, in establishing the capacity of a bushel as 2150.42 cubic inches [sec. 1] makes inoperative all State laws establishing weights per bushel so far as they affect fruits and vegetables packed in the containers standardized by that Act.

1 Compiled by Ralph W. Smith.
2 This circular supersedes all editions of Circular 10 and the bushel lists published in the appendix to Miscellaneous Publication M20, third edition, 1926.
Bushel weights have been fixed by Federal law for only a few commodities and only for customs purposes. In this connection, the heaped bushel was recognized in a decision of the Court of Customs Appeals in February 1912, at which time the court decided that a heaped bushel contained 2747.715 cubic inches.

III. STATE LEGISLATION

The standard bushel is recognized by all the States as having a capacity of 2150.42 cubic inches. Among the States there are, however, numerous requirements affecting the sale of commodities by the bushel, ranging from a prohibition of the use of any dry measures in determining amounts of commodities sold, to the establishment of special "heaped bushels" for specific commodities. The most common enactments along this line are the legal weights per bushel for various commodities; a striking characteristic of these lists is the lack of uniformity among the States in the bushel weights established.

In some of the State enactments dealing with the sale of fruits and vegetables, these commodities when packed in original standard containers are specifically exempted from the bushel-weight requirements which would otherwise embrace such packages. The application to other commercial transactions of the weights per bushel fixed by State law is defined by the language of the statute and differs among the States; these requirements are broadly grouped below, and for each group there are named the States, the laws of which conform in general to that group. So that each State may be classified, two groups of States having no weight-per-bushel lists are also included.

Group 1. BUSHEL WEIGHTS FIXED—QUANTITIES TO BE DETERMINED BY WEIGHING

The general requirements are that the legal weights per bushel shall be observed and that quantities shall be determined by weighing. Departure from these requirements is permitted by "special agreement" in six States and by "written agreement" in one State. [Alabama, Idaho, Iowa, Kansas, Michigan, Nebraska, Nevada, South Dakota, Wisconsin.]

Group 2. BUSHEL WEIGHTS FIXED—ESTABLISHED WEIGHTS TO BE DELIVERED

The general requirements are that the bushel "shall weigh" or "shall consist of" the stated number of pounds; but the statutes are silent as to the method of quantity determination, and so long as the proper weight is delivered the legal demands are met. Departure from established bushel weights is permitted by "special agreement" in eight States. [California, Connecticut, Delaware, Florida, Illinois, Minnesota, Missouri, Montana, New Hampshire, New Mexico, North Dakota, Ohio, Oklahoma, Pennsylvania, South Carolina, Tennessee, Texas, Vermont, West Virginia, Wyoming.]

Group 3. BUSHEL WEIGHTS FIXED

In this group "legal" or "standard" weights per bushel are established, but in most cases the statute is not specific to the effect that the established weight shall be delivered; the practical effect of these requirements is probably not essentially different from the effect of the requirements of group 2, except in one State in which the weights are
limited to apply when the commodities are "sold by weight," and in one State which specifically permits sales by measure of commodities named in the bushel list. [Arkansas, Colorado, Georgia, Kentucky, Louisiana, Maine, Maryland, Mississippi, North Carolina, Rhode Island.]

Group 4. NO BUSHEL WEIGHTS FIXED—DRY COMMODITIES TO BE SOLD BY WEIGHT

The characteristic of this group is the elimination of the "bushel," commodities which might otherwise be sold by the bushel being required to be sold by weight or by count or by the bunch. The use of dry measures is specifically forbidden in four States (indicated by italics below). In one State listed below, notwithstanding the requirement for sale by weight, it is not certain that the bushel list has been repealed, but this State is included here because of the enforcement of the sale-by-weight requirement. [District of Columbia, Indiana, Massachusetts, New Jersey, New York, Oregon, Utah, Virginia.]

Group 5. NO BUSHEL WEIGHTS FIXED—NO REQUIREMENTS AS TO SALE BY WEIGHT

The States of Arizona and Washington have no statutes fixing bushel weights or requiring that dry commodities be sold by weight.

Relative to the values of the legal bushel weights it may be said that it is obvious in the case of some commodities that the established weight was not intended to represent a measured bushel. For example, the most common weight for corn in the ear is 70 pounds per bushel; this was probably intended as the amount of ear corn which, when shelled, would measure one struck bushel. In the case of other commodities, notably bulky vegetables and fruits, it is equally obvious that the legal weight approximates the heaped rather than the struck measured bushel.

IV. LEGAL BUSHEL WEIGHTS

In tables 1 and 2 which follow, all available data on the values of legal bushel weights in the United States are tabulated in form convenient for reference. Footnotes are frequently of importance in defining specifically the commodity for which a weight is given or in giving additional data, and these should be consulted whenever references are encountered.

</table>

1 Not defined, except as noted.
2 Not stated whether shelled or unshelled, but presumed from the weight shown to be shelled.
3 Red and white and crimson; burr clover, 10 pounds; Japan clover (lespedeza), 25 pounds.
4 Corn, green, with shucks, 100 pounds per bushel.
5 Husked.
6 Clover seed, sweet, unhulled, 33 pounds, Illinois; 23 pounds, Texas.
7 Field corn.
8 "Stone coal;" the term includes anthracite, cannel, bituminous, and other mined coal.
9 Corn in the ear, in Kentucky, 70 pounds from November 1 to January 1 following, and from January 1 to November 1 following. In Missouri, in connection with public local grain warehouses, "not exceeding 80 pounds" during the months of October and November only.
10 Also alsike (or Swedish), 10 pounds.
11 Field corn, husked.

---

1 Red and white; clover burr, 8 pounds; German clover (also more commonly known as crimson clover), 60 pounds; Japan, lespedeza, 25 pounds.
2 Not stated whether in the ear or not, but from the weight shown it is presumed to be in the ear.
3 Cannel coal.
4 Shelled.
5 Corn in the ear in Texas, 70 pounds after December 1, and 72 pounds for new crop before December 1. Green corn (roasting ears), 50 pounds. "In the event of controversy over the weight of green corn (roasting ears), a tolerance of two pounds more or less than the standard weight as advised herein shall be allowed."
6 Cured, in cob.
7 Corn in the ear in Missouri, 70 pounds from November 1 to January 1 following, and from January 1 to November 1 following. In Missouri, in connection with public local grain warehouses, "not exceeding 80 pounds" during the months of October and November only.
8 For new crop corn, the following values may be used: During October and November, 80 pounds; during December and January, 72 pounds.
