The policy of the NIST is to use the International System of Units (SI) by citing SI units before U.S. customary units in all its publications. In this publication, however, recommendations received by the NCWM technical committees have been printed as they were submitted, and, therefore, may contain references to U.S. customary units where such units are commonly used in industry practice. Opinions expressed in non-NIST papers are those of the authors and not necessarily those of the National Institute of Standards and Technology. Non-NIST speakers or organizations are solely responsible for the content and quality of their material.

**Keywords:** laws and regulations; legal metrology; meters, scales; retail motor-fuel dispensers; grain; specifications and tolerances; training; type evaluation; uniform laws; weights and measures.
