Commerce for Standards and Technology & Director, National Institute of Standards and Technology*

## 5. UTC(NIST) – AT1 PARAMETERS

The table below lists parameters that are used to define UTC(NIST) with respect to our real-time scale AT1. To find the value of UTC(NIST) - AT1 at any time  $T$  (expressed as a Modified Julian Date, including a fraction if needed), the appropriate equation to use is the one for which the desired  $T$  is greater than or equal to the entry in the  $T_0$  column and less than the entry in the last column. The values of  $x_{ls}$ ,  $x$ , and  $y$  for that month are then used in the equation below to find the desired value. The parameters  $x$  and  $y$  represent the offsets in time and frequency, respectively, between UTC(NIST) and AT1; the parameter  $x_{ls}$  is the number of leap seconds applied to both UTC(NIST) and UTC, as specified by the IERS. Leap seconds are not applied to AT1.

UTC(NIST) - AT1 = $x_{ls} + x + y(T - T_0)$					
Month	$x_{ls}$ (s)	$x$ (ns)	$y$ (ns/d)	$T_0$ (MJD)	Valid until 0000 on: (MJD)
